STATISTICAL SUMMARY OF UNION PROGRESS, 1911 TO 1938.

NOTE.—The table below is intended to provide a ready synopsis of South African progress in various directions during the period stated, and it has therefore been deemed advisable to exclude therefrom all but the most essential explanations of the figures given. Fuller particulars regarding the different items will be obtained on reference to the relative sections of this *Year Book*.

OFFICIAL YEAR BOOK

OF THE

UNION OF SOUTH AFRICA AND OF BASUTOLAND, THE BECHUANALAND PROTECTORATE, AND SWAZILAND.

PART I.

UNION OF SOUTH AFRICA.

(INCLUDING A CHAPTER ON SOUTH WEST AFRICA.)

INTRODUCTORY.

STATISTICAL SERVICE AND SOURCES OF INFORMATION.

§ 1. Statistical Service of the Union.

1. **Statistical Information prior to the Constitution of the Union.**—Apart from the statistics collected at each census of population,* the statistics published up to the constitution of the Union were those procured by various government departments as an incident of the ordinary work of their administration. Special mention may be made of the work of the Customs Statistical Bureau, established by the South African Customs Union in July, 1905, which gathered and published comprehensive statistics in regard to overseas trade and shipping for all the States in British South Africa. Apart, however, from such sources of information as those mentioned, there existed no other organized means of obtaining statistics. When, therefore, the Union was constituted, statistics were lacking in regard to many matters of essential importance to those concerned in the administration and development of the country.

Particulars of early statistical information in South Africa are contained in previous issues (Nos. 1, 2, and 3) of this *Year Book*.

The following official publications indicate the chief printed sources of earlier statistical information for the territories now constituting the Union:—

Cape of Good Hope: Cape Statistical Register (1887-1911).

Natal: Departmental Reports (1896-1900); Blue Book of Natal (1890-1893); Statistical Year Book (1893-1909).

Transvaal: Staats Almanak voor de Zuid Afrikaansche Republiek (1897-1899); Statistics of the Transvaal (1902-1909); Epitome of Transvaal Statistics (1902-1906).

2. **Statistical Service subsequent to the Constitution of the Union.**—The *Census Act* of 1910 provided for the taking of a census in the year 1911 and in any subsequent year determined by the Government. Section 34 (ii) of the *South Africa Act*, 1909, requires, for electoral purposes, that there shall be a quinquennial census of the European population. This section was amended by the *Electoral Quota Act*, No. 21 of 1937, which provides that after the year 1951 censuses shall be taken decennially.

* A table giving the date of the taking of each census in the four Colonies now constituting the Union and of the first and subsequent censuses in the Union will be found in Chapter XXV.

In order to undertake these operations, a Census Office was established in Pretoria in 1910. Subsequently an effort was made by the Director of Census to collect all available statistics in a satisfactory form, and in 1913 the *Statistical Year Book*, superseded in 1918 by the present *Official Year Book*, was inaugurated and gave either in detail or in abstract such information as was available in different government departments. Owing, however, to the fact that legal authority for the collection of statistics was wanting, the work was found in many ways to be unsatisfactory, and, in 1914, the Union Parliament provided the necessary powers for a complete system of statistics by passing the *Statistics Act* (No. 38 of 1914). Provision is made in the Act for the collection and publication of statistics in respect of the following matters:—

(*a*) population;
(*b*) vital, social, educational, and industrial matters, including rates of wages, cost of living, prices of commodities, and rents of habitations;
(*c*) local government;
(*d*) employment and non-employment;
(*e*) imports and exports;
(*f*) immigration and emigration;
(*g*) posts, telegraphs, and telephones;
(*h*) factories, mines, and productive industries generally;
(*i*) agricultural, horticultural, viticultural, dairying, pastoral, and fishing industries;
(*j*) banking, insurance, and finance;
(*k*) railways, tramways, shipping, and transport;
(*l*) the tenure, occupation, and use of land;

and any other matter prescribed by the Minister of the Interior [sect. 1 (1)].

For various reasons the *Statistics Act* was not promulgated until 1st April, 1917, but on that date a central statistical office for the Union, the Office of Census and Statistics, was established. To this office, as a division of the Department of the Interior, was entrusted the administration of the *Census Act*, 1910, and the *Statistics Act*, 1914.

The following is an enumeration of the main provisions of the *Statistics Act*:—

(i) Provision is made for the appointment of an administering officer, and the *Director of Census* was appointed for the purpose [sect. 1 (2)].
(ii) A Statistical Council is provided for, to consist of not fewer than four and not more than eight members. The function of the Council is to advise the Minister in regard to matters connected with the Act [sect. 1 (3)].
(iii) Arrangements, if necessary or convenient, may be entered into with the Provincial Administrations with a view to the collection of statistics by means of officers of such administrations (sect. 2).
(iv) Every person, of whom information is required under the Act, is compelled to supply it on demand (sects. 3 and 4).
(v) Officers under the Act, for the purposes of inspection and making inquiries, are given powers of entry upon any land or premises upon or within which any industrial undertaking is carried on, or persons are employed (sect. 5).
(vi) Any officer appointed under the Act, who divulges irregularly any information collected in pursuance of the Act, is guilty of an offence and is liable on conviction to a fine not exceeding £50, or to imprisonment for a period not exceeding three months without the option of a fine (sect. 7).
(vii) Any person, who wittingly supplies false information in reply to any question asked him under the authority of the Act, is guilty of an offence and on conviction is liable to a fine of £50, or to imprisonment for a period of three months without the option of a fine (sect. 8).

By the *Statistics Amendment Act* (No. 5 of 1919) authority was further granted for the issuing of regulations, if necessary, requiring particulars and information to be furnished by persons in prescribed areas, or as to the addresses and occupations of persons, or in respect of prescribed periods.

3. Organization of Statistical Collection.—(i) *General.*—The principle involved in the statistical organization of the Union under the *Statistics Act* is that of centralization. The statistics of South Africa prior to the promulgation of this Act were open to arraignment on the following grounds, viz.: The restricted and incomplete character of available statistics; the lack of coherence and common purpose; the unevenness of quality; in many cases the lateness of their presentation and their inaccessibility; the duplication of publication and the inevitable conflict occasionally resulting therefrom, due to the detachment of the various government departments concerned with statistics; and the expense of production due to lack of skilled supervision and the absence of mechanical tabulating appliances.

The Office of Census and Statistics collects statistics dealing with a wide diversity of subjects. The following statement is intended as a guide to the nature of the collection and the times and modes of publication of statistics.

Population.—In terms of the *South Africa Act* a census of the European population must be taken every five years beginning with the year 1911; thus there is taken a quinquennial census of the European population, and also a decennial census of the total population.* The usual date selected for enumeration is about the first Tuesday in May, and preliminary results are available for publication about the middle of June. Detailed tables and a report are printed and published in separate parts as they become available.

A decennial census of the entire population was due to be taken in 1931, but owing to the world-wide economic depression, from which South Africa did not escape, the Government decided to postpone the major operation, and to take a census of Europeans only, so as to comply with the requirements of the *South Africa Act*. A census covering all races of the population was taken on the 5th May, 1936, the preliminary results of which were published in December, 1936 (U.G. No. 50, 1936). The final figures became available in December, 1937, and Volume I of the 1936 Census Report, "Distribution of the Population in Provinces, Towns, Villages, Native Areas, etc.", was published early in 1938 (U.G. No. 21, 1938). Volume II (Ages), Volume III (Marital Condition), and Volume IV (Languages) have been published.

Births, Deaths, and Marriages.—Monthly figures for the nine principal towns and the towns of the Witwatersrand and quarterly figures for the whole Union are published in the Monthly Bulletin of Statistics.

The details for a number of years prior to 1926 were issued in neostyle form as special reports. Commencing with the data for the year 1926, fuller information of these events within the Union is contained in a printed publication issued annually, and summaries and analyses of the data are published in the *Official Year Book*.

Migration.—Monthly and half-yearly returns of migration are published in the Monthly Bulletin of Statistics, and since 1927 the figures collected have been issued annually in detail in a printed publication. Summaries and analyses are published in the *Official Year Book*. For some years prior to 1927, the information was published in neostyle form as a special report.

Agricultural Production.—From 1917-18, when the Agricultural Census was instituted, until 1929-30, when the Government for reasons of economy abandoned certain statistical activities, statistics of the main items of agricultural and pastoral production were collected annually, and a complete census of agriculture was undertaken for the years 1917-18, 1920-21, 1925-26, and 1929-30. The 1930 census was taken in conjunction with the World Census of Agriculture of which it formed part. The returns cover the period 1st September to 31st August in each year, except in the case of the first census, when they relate to the twelve months ended 30th June, 1918, and the four censuses from 1918-19 to 1921-22, when they refer to the twelve months ended 30th April in each year.

In 1934 the Government decided to recommence the annual census of agricultural and pastoral production, and the first inquiry, subsequent to that of 1929-30, related to the year 1933-34. The annual censuses are again confined to the main items of agricultural and pastoral production, but a complete census of a scope similar to that of 1929-30 was taken for the year 1936-37. A preliminary total of the maize crop is published about the latter half of December in each year, while preliminary general figures are published about May of the following year in a Special Report. The detailed report of the census is issued a few months later as a separate publication.

*See para. 2 above.

As from 1922-23 a special census of the sugar-cane plantations in Natal has been undertaken each year without interruption. The returns cover the period 1st May to 30th April and are due to be rendered on or before the 30th June following.

Industrial Production.—From 1915-16, when the Industrial Census was introduced, until 1929-30 statistics of industrial production were collected annually. The returns covered the business year ended on any date between 1st July and 30th June and were due to be rendered on or before the 30th September following. For the same reasons as decided the Government to postpone the agricultural and decennial population censuses, the taking of the industrial census was suspended between the years 1930 and 1933.

The first census of industries subsequent to that of 1929-30 referred to business years which ended on any date in the calendar year 1933. The period covered by the later annual censuses is comparable with that adopted for 1933, and the returns are due to be rendered on or before the 31st March following. Certain preliminary figures are published in a Special Report as soon as they become available, and the detailed report of the census is issued a few months later as a separate publication.

Apart from the annual statistics of industrial production, returns of the quantities of certain commodities (additional to the foodstuffs mentioned below) manufactured monthly by certain industrial establishments have been collected as from January, 1937, with comparative figures for 1936. The commodities concerned are pig-iron, cement, building bricks, and soap and candles.

Index of Industrial Employment.—Particulars of employment are collected from a selected number of industrial establishments in each class of industry, and an index is published monthly in the Monthly Bulletin of Statistics.

Return of Certain Foodstuffs.—Monthly returns are obtained from all bacon and ham factories, cold stores, registered butter and cheese factories, and from the principal grain mills. Quarterly returns of butter sold on the principal markets and of cattle slaughtered at the chief abattoirs are collected. Statistics of wheat stocks held by co-operative societies are collected monthly.

Particulars are handed to the press about the 15th of the following month and are also published in the Monthly Bulletin of Statistics.

Fishery Statistics.—Particulars from Natal are collected monthly and published in the Monthly Bulletin of Statistics. The Cape provincial collection has now been suspended for a considerable number of years, but negotiations for obtaining these statistics are in progress, and it is hoped to be able to publish the figures regularly in the near future.

Wool and Mohair Stocks.—Returns of these are collected monthly from the five principal seaports of the Union, and the particulars are published in the Monthly Bulletin of Statistics.

Social.—Wage statistics, as well as details of membership of trade unions and employers' associations, are collected annually. Price statistics, retail and wholesale, are regularly compiled, the former monthly and the latter once a quarter. Retail quotations are secured every month from the following towns, viz.:—Capetown, Port Elizabeth, East London, Kimberley, Pietermaritzburg, Durban, Pretoria, Johannesburg, Benoni, Germiston, Krugersdorp, and Bloemfontein, as well as from Windhoek in South West Africa, while the wholesale price statistics are based on quotations from the four large coastal towns and Johannesburg. The "sundries" item, including clothing, etc., is dealt with once a quarter. Statistics of rents are collected annually.

Educational Statistics.—These statistics are compiled annually for State and State-aided schools, as well as for private schools, and are published, as they become available, in the Monthly Bulletin of Statistics or in the *Official Year Book.*

Local Government.—All local authorities render, once a year, returns of financial transactions, and details thereof appear in the *Official Year Book.* They are also required to submit details of their employees. Statistics of building plans passed and buildings constructed in respect of the nine principal towns are obtained and published monthly in the Monthly Bulletin of Statistics.

Crime, Divorce, and Insolvency.—Crime returns are secured monthly from approximately 700 "A" and "B" class police stations, and the results are summarized in the Monthly Bulletin of Statistics. A Special Report containing preliminary figures is published in advance of the annual report. Divorce and insolvency statistics are collected quarterly and monthly respectively. The former are published annually; the latter, monthly as well as annually.

Motor Vehicles.—Duplicates of all tax receipt forms are submitted by licensing officers each month, and statistics are published annually through the medium of Special Reports. Statistics of new motor vehicles as derived from the duplicate receipt forms are published monthly in the form of Press Releases and in the Monthly Bulletin of Statistics.

Road Vehicle Accidents.—A report on each accident, as it occurs, is obtained from the police station having jurisdiction over the area of occurrence. The statistics are published in the Monthly Bulletin of Statistics and the *Official Year Book*, and, from the year 1938, in a Special Report.

Miscellaneous.—Statistics are collected annually in a variety of subjects, such as savings banks, friendly societies, charitable institutions, art galleries, botanical gardens, museums, public libraries, roads and bridges, tramways, water boards, zoological gardens, etc. Particulars regarding the valuation of rural properties transferred, bonds passed, and deeds registered, are also collected. These statistics are published in the *Official Year Book.*

Trade, Banking, Finance and Insurance, Mining, and Railways.—Statistics dealing with these subjects, which are prepared by government departments and private bodies, are summarized and analysed for publication in the Monthly Bulletin of Statistics and the *Official Year Book.*

Publications.—These include the *Official Year Book* of the Union, which gives the substance of all available statistics and official information; the Monthly Bulletin of Statistics, which is designed to bring the information in the *Year Book* up to the latest possible date; Annual Reports—(i) Census of Agricultural and Pastoral Production, (ii) Census of Industrial Production, (iii) Vital Statistics, (iv) Migration Statistics, (v) Statistics of Crime; Special Reports which include *inter alia*: Farm Mortgage Interest Act Statistics, Mortgage Bonds Passed, Increased, Cancelled, and Part-paid, Motor Vehicle Statistics, Transfers of Rural Immovable Property, Workmen's Compensation, and Road Vehicle Accidents; Reports on the Population Censuses.

(ii) *Office of Census and Statistics.*—The Office of Census and Statistics is organized in the following sections:—

Section.	Scope of Duties.
Administration	General executive work.
Population	Population census (quinquennial); vital statistics; migration; hospitals; rent census.
Production	Agricultural and pastoral censuses; statistics of manufacturing industries (annual and monthly), electrical undertakings, and fisheries.
Social	Labour and wages; retail prices (monthly); wholesale prices (quarterly); crime and penology; insolvencies; divorces; local government; charitable institutions; schools; motor vehicles; workmen's compensation; road vehicle accidents; miscellaneous.
Tabulation	Tabulation by means of mechanical and electrical card-sorting and counting machines.
Compilation and Computing	Tabulation by hand; calculations by calculating machines or otherwise; statistical analyses; tabulation of insurance returns; general statistics in regard to finance, banking, exchange, trade, mining, transportation, land values, mortgage bonds, etc.
Publications	Publications of the Census Office; library; revision of works of reference.

(iii) *Field Organization.*—For certain purposes, such as the censuses of agriculture and manufactures, the Union police force has supplied the necessary field machinery in a most adequate manner. The police organization covers every part of the country and has been perfected to such an extent that, for any operations of this kind, it is able to render efficiently a service, which otherwise would involve a very heavy annual expenditure from public funds. The circumstances inevitably surrounding a population census render it impossible to utilize the assistance of the police force to any great extent, with the result that a complete system of field organization has to be improvised

on the occasion of each census, involving in the Union, as in almost all other countries, a very considerable but unavoidable item of public expenditure. The local supervision of the various censuses is undertaken almost entirely by government officials—electoral officers or magistrates.

(iv) *International Convention relating to Economic Statistics.*—The Union, including the mandated territory of South West Africa, ratified this Convention on the 1st May, 1930. The Convention and the Protocol, which were approved of and signed at Geneva on the 14th December, 1928, by the plenipotentiaries representing most of the principal nations of the world, came into force on the 15th December, 1930, when, in accordance with the provisions of the Convention, ten signatories had deposited their ratifications. The Union Government sent its own representative to Geneva to take part in the discussions.

The object of the Convention is to assure, on a comparable basis, the availability of statistics showing the economic position and development in different countries and in the world as a whole. This aim is to be achieved by simultaneous and concentrated action in regard to the official preparation and publication of various classes of economic statistics, and the general adoption of uniform methods in the preparation of certain statistical returns.

§ 2. Archives.*

1. **Early Organization.**—In 1876 the Government of the Cape of Good Hope appointed the first commission to inquire into the state of the Colonial Archives. A few years later a Keeper of the Colonial Archives was appointed, and the records from 1652 to 1806 were placed in his custody. To these archives were added the documents of the four oldest magistracies. In addition to the usual duties of an archivist, the Keeper published from time to time an English précis of some of the more important archives of the early period under the title of *Précis of the Archives of the Cape of Good Hope.* In the Transvaal an archives branch of the Colonial Secretary's Department was established soon after the grant of Crown Colony Government in 1902, to take custody of and examine that portion of the South African Republic records which was preserved in the late State Secretary's Department, and such other records as might be collected. In addition to these duties the Keeper translated into English and prepared an index of the resolutions of the Executive Council. In neither Natal nor the Orange Free State was there a specially constituted archives department.

2. **Post-Union Organization.**—No definite steps were taken to co-ordinate the archives of the four provinces after Union until 1919, when a Chief Archivist was appointed. He is responsible for both Union and provincial archives. Since then the *Public Archives Act*, No. 9 of 1922, has been passed, which divides the archives into (*a*) Union archives and (*b*) Provincial archives. Those under (*a*) form the records of the Central Government since Union, and are still in the custody of State departments; but when thirty years old they will be transferred to the archives. The provincial archives are those which formed the separate records of each of the four provinces before Union and the records of magisterial offices; to them will be added the records of the Provincial Administrations when thirty years old. The bulk of the pre-Union records has been centralized in the archives depots of the capital of each province. The Union archives will be centralized in the depot in the administrative capital, Pretoria. In terms of the Act an Archives Commission has been appointed, and rules and regulations have been issued for the public use of the archives, the disposal of valueless records, and the transfer of public archives to the depots. Archives depots have been established at Bloemfontein and Pietermaritzburg, and a specially constructed archives building was built in 1925 at Bloemfontein—the first archives building erected in South Africa. The Transvaal archives are housed in the Union Buildings, Pretoria; the Cape archives in a special building in Queen Victoria Street, Capetown. The latter building has a fine reading room for research students, a museum for exhibiting some of the more interesting manuscripts bearing on the early history of the Cape, facilities for photographing documents, and a bindery. There is ample space for future expansion in the vacant ground at the back of the buildings. In Natal the archives are accommodated in an up-to-date archives building erected in 1936. In each province there is an Archivist responsible to the Chief Archivist. The concentration of records in each province, with a staff

* See "The Public Archives of South Africa, 1652–1910", by C. Graham Botha, Chief Archivist for the Union, publ. 1928.

and an officer in charge, and the whole administration centred in the Chief Archivist, secures uniformity in administration, classification, arrangement, indexing, methods of preservation, and general care.

In recent years there has been a marked increase in the use of the archives of the various provinces. The number of research students and of the general public using the archives indicates that their value is being recognized as a national asset and that they are of importance for historical research.

From time to time collections of private papers are acquired by the various archives. Among the most important are the Joubert, the Lauts, the Leyds, and the Burgers Papers in the Transvaal Archives; the Shepstone and the Colenso Papers in the Natal Archives; and the Maclear Papers in the Cape Archives.

In 1933 the Union Government established Film Archives, which are housed in the Archives at Capetown. The collection contains a number of historical films.

The Archives Commission has published a series of volumes, *Kaapsche Archiefstukken:* volumes covering the period 1778 to 1783 have so far been issued, and the work is being continued. A volume, *Voortrekker Archiefstukken*, 1829-1849, has recently been published.

§ 3. Bibliography of the Union of South Africa.

1. **Parliamentary and Government Reports.**—A classified list of the principal reports and similar publications issued by government departments from 1910 to 1929 appeared in *Official Year Book* No. 12. Subsequent issues contain particulars of publications issued in later years. No mention has been made of numerous publications, which have emanated from the Publicity Department of the South African Railways and South African Publicity Agent's Office in London. These, though interesting and informative, are of a special character. It is to be noted also that between 1920 and 1926 the annual reports of a number of government departments were published in abridged form in a combined volume.

(*a*) REPORTS OF PARLIAMENTARY SELECT COMMITTEES, GOVERNMENT COMMISSIONS, ETC., CLASSIFIED ACCORDING TO SUBJECTS.

NOTE.—(S) denotes Senate Reports.

(I) SELECT COMMITTEE REPORTS (1934 to 1938).

Agriculture.
- 1934: 7. Herbert Ainsworth Settlers Trust (Private) Bill.
- 1936: 10. Live Stock and Meat Industries Bill.
- 1936: 3. Co-operative Societies Bill.
- 1936: 4. Dairy Industry Bill.
- 1936: 6. Marketing Bill.
- 1937: 16. Wheat Transactions.

Asiatics.
- 1936: 11. Transvaal Asiatic Land Tenure Amendment Bill.
- 1937: 11. Subject of Provincial Legislative Powers Extension Bill and of Transvaal Asiatic Land Bill.

Commerce and Trade.
- 1934: 16. Trade Coupons Bill.
- 1936: 16. Insolvency Bill.
- 1936: 17. Mine Trading Amendment Bill.
- 1938: 11. Subject of Customs Agents and Clerks Bill.

Education.
- 1936: 5. University of the Witwatersrand, Johannesburg (Private) Act Amendment Bill.

Electorate.
- 1935: 10. Population Registration and Compulsory Registration and Voting

Finance.
- 1934: 1 and 2. Public Accounts and Railways and Harbours.
- 1934: 1. Public Accounts.
- 1934: 11. South African Association Further Amendment (Private) Bill
- 1934: 12. Trust Moneys Protection Bill.
- 1934: 18. Building Societies Bill.
- 1935: (S) 3, 3A, and 3B. Land Grants, Pensions and Gratuities.
- 1935: 1. Public Accounts.
- 1935: (S) 3 and 3A. Land Grants, Pensions and Gratuities.
- 1935: 5. Malmesbury Board of Executors and Trust and Fire Assurance Company (Amendment) (Private) Bill.
- 1935: 9. Insolvency Amendment Bill.
- 1936: 1. Public Accounts.
- 1936: 18. Land Bank Loan, Calvinia.
- 1936: 21. Pensions, Grants and Gratuities.
- 1937: 1. Public Accounts.
- 1937: 3. South African Mutual Life Assurance Society Amendment (Private) Bill.
- 1937: 8. Subject of Insurance Amendment Bill (Burial Societies).
- 1937: 12. British Kaffrarian Savings Bank Society (Private) Bill.
- 1937: 13. Subject of Companies Amendment Bill.
- 1937: 17. Petition of S. J. Gillmor.
- 1937: 21. Pensions, Grants and Gratuities.

1938..... 3 and 8. Public Accounts.
6 and 16. Pensions, Grants and Gratuities.
9. Petition of E. J. E. Lange (and Petition of J. G. W. Leipoldt and two others).
12. Subject of Accountancy Bill.

Industries.
1934..... 10. Live Stock and Meat Industries Bill.

Irrigation and Water Supply.
1934..... 3 and 3A. Irrigation Matters.
4. Sundays River Irrigation District Adjustments Bill (Hybrid Bill).
5. Pretoria Waterworks Further (Private) Bill.
14. Buffelspoort Irrigation District Adjustment Bill.
1935..... 3. Irrigation Matters.
4. Rand Water Board Statutes, 1903-33, Amendment (Private) Bill.
1936..... 14. Irrigation Matters.
1937..... 6. Durban Waterworks (Private) Bill.
7. Ultenhage (Groendal) Water (Private) Bill.
1938..... 9. Irrigation Matters.
2. Rand Water Board Statutes, 1903-1935, Amendment (Private) Bill

Law.
1934..... 8. Attorneys, Notaries and Conveyancers Admission Bill.
19. General Law Amendment Bill.

Labour.
1935..... 7. Unemployment Benefit Bill.
1936..... 7. Workmen's Compensation Amendment Bill.
9. Unemployment Insurance Bill.
1937..... 5. Subject of Wage Bill (and Industrial Conciliation Bill).
1938..... 13. Subject of Shops and Offices Bill.

Lands.
1935..... 6. John Dunn (Distribution of Land) Bill (Hybrid Bill).
8. Vyfhoek Management Bill (Hybrid Bill).
1936..... 12. Deeds Registries Amendment Bill.
20. Crown Lands.
1937..... 14. Subject of Deeds Registries Bill.
1938..... 20. Crown Lands.
5 and 15. Crown Lands.

Mines.
1936..... 8. Orange Free State Metals Mining Bill.

Natives.
1934..... 9. Native Affairs.
1935..... (S) 2 and 2A. Native Affairs.
1. Joint Committee on the Representation of Natives and Coloured Persons in Parliament and Provincial Councils and the Acquisition of Land by Natives.
1. Joint Committee on Natives and Coloured Persons (supplement).
(S) 4 and 4A. Sessional Committee on Native Affairs.
1936..... 12. Native Affairs.
1937..... 10. Native Affairs.
(Joint) S.C. 4. Native Affairs.
1938..... 1. Amendment of Native Laws.
7. Native Affairs.

Parliament and Government.
1934..... (S) 1 and 1A. Standing Orders.
1935..... (S) 1 and 1A. Sessional Committee on Internal Arrangements.
11. Question of Privilege.
1936..... 19. Standing Rules and Orders.
1937..... 18. Standing Rules and Orders.
19. Internal Arrangements.
1938..... 4 and 14. Standing Rules and Orders.

Public.
1934..... 13. Sea Shore Bill.
17. Slums Bill.
1936..... 13. Arms and Ammunition Bill.
15. Public Holidays.
1937..... 10. Subject of Proprietary Medicines and Appliances Bill.
15. Children's Bill.

Railways and Transport.
1934..... 1 and 2. Public Accounts and Railways and Harbours.
1935..... 2. Railways and Harbours.
1936..... 2. Railways and Harbours.
1937..... 2. Railways and Harbours.
1938..... 1 and 10. Railways and Harbours.

(II) GOVERNMENT REPORTS (1932 to 1938).

Agriculture.
Report of the Pre-cooling Commission on Deciduous Fruits (U.G. 51—'36).
Report of the Wine Commission (U.G. 25—'37).

Asiatics.
Report of the Indian Colonization Enquiry Committee, 1933-34 (U.G. 23-'34).
Report of the Transvaal Asiatic Land Tenure Act Commission, Parts I and II (U.G. 7—'34) and and III (U.G. 22—'35).
Report of the Transvaal Asiatic Land Tenure Act Commission, Parts IV, V, and VI (U.G. 50-'35, U.G. 40-'36, and U.G. 42-'36).
Report of the Transvaal Asiatic Land Tenure Act Commission, Part VII (U.G. 11—'37).
Report of the Transvaal Asiatic Land Tenure Act Commission, Part VIII (U.G. 35—'37).

Commerce and Trade.
Report of the Trading on Mining Ground Commission (U.G. 33—'35).

Co-operation and Agricultural Credit.
Report of Commission of Enquiry into Co-operation and Agricultural Credit (U.G. 16—'34).

Education.
Report of Committee of Enquiry into Subsidies paid to Universities, University Colleges, and Technical Colleges (U.G. 8-'34).
Report of Conference on Rural Education, 1934 (U.G. 29—'34).

Finance.
Report of the Provincial Finance Commission appointed in 1933 (U.G. 46—'34).
Report of the Commission on the Economic and Financial Relations between the Union of South Africa and the Mandated Territory of South West Africa (U.G. 16—'35).
Report of the Departmental Committee on Pensions (U.G. 48—'35).

Health.
Report of the Central Housing Board (U.G. 18—'36).
Report of the Central Housing Board (U.G. 23—'37).
Report of Committee on Mental Hospitals (U.G. 36—'37).

Justice.
Report of the Company Law Commission (U.G. 45—'36).
Report on Retention of Bar Licences (U.G. 32—'37).
Report of the Police Commission of Enquiry (U.G. 50—'37).

Labour.
Report of the Unemployment Investigation Committee (U.G. 36—'32).
Report of the Industrial Legislation Commission (U.G. 37—'35).

Mining.
Low Grade Ore Commission (U.G. 16—'32).

Miners' Phthisis.
Inquiry into the Position of Miners' Phthisis Beneficiaries (U.G. 18—'35).

Natives.
Report of Native Economic Commission (U.G. 22—'32).
Report of the Native Education Commission (U.G. 29—'36).
Notes on the Conference between the Municipalities and the Native Affairs Department (U.G. 56—'37).
Report of the Proceedings of The Natives Representative Council, 1937 (U.G. 7—'38).

Population.
Report on 5th (1931) Census of the Union (Europeans) (U.G. 11—'33).
Report of Indian Colonization Enquiry Committee, 1933-34 (U.G. 23—'34).
Report on the 6th (1936) Census of the Union (Preliminary) (U.G. 50—'36); Vol. I, Distribution (U.G. 21—'38); Vol. II, Ages (U.G. 28—'38); Vol. III, Marital Condition (U.G. 39-'38); Vol. IV, Languages (U.G. 44—'38); Ages and Marital Condition of the Bantu Population (U.G. 50—'38); Vol. X, Unemployment (U.G. 14—'39).

Railways, Transport, and Communication.
Report of Post Office-Railways (Electrical Communications) Commission (U.G. 40—'32).
Report concerning Construction of Railway—(i) Springs-Nigel and (ii) Tuinplaats-Marble Hall (U.G. 19—'33).
Report of Committee of Enquiry into Railway Printing (U.G. 18—'34).
Report of the Railway and Harbour Affairs Commission (U.G. 36—'34).
Report of the Harbours Affairs Commission, 1934, Parts A and B (U.G. 27—'35).

South West Africa.
Report to League of Nations concerning Administration of South West Africa, 1933 (U.G. 27—'34), 1934 (U.G. 26—'35), 1935 (U.G. 25—'36), 1936 (U.G. 31—'37), 1937 (U.G. 25—'38).
Report of the Commission on the Economic and Financial Relations between the Union of South Africa and the Mandated Territory of South West Africa (U.G. 16-'35).
Report of the South West Africa Commission (U.G. 26—'36).

General.
Report on Broadcasting Policy and Development (U.G. 14—'35).
Report of the Settlers' Relief Commission, 1934 (U.G. 25—'35).
Report of Interdepartmental Committee on Destitute, Neglected, Maladjusted and Delinquent Children and Young Persons 1934-1937 (U.G. 38—'37).
Report of Inquiry into Expenditure of European Families (U.G. 21—'37).
Report of the Commission of Inquiry regarding Cape Coloured Population of the Union (U.G. 54—'37).
Report of the Committee on Poor Relief and Charitable Institutions (U.G. 61—'37)

(*b*) ANNUAL GOVERNMENT REPORTS.

Agriculture and Forestry.
Census of Agricultural and Pastoral Production, 1917-18 *et seq.**
Report of the Department of Agriculture and Forestry (published in *Farming in South Africa*).
Report of the Division of Forestry.
Report on Low Temperature Research.
Report of Dairy Research Institute.

Archaeology.
Report of the Bureau of Archaeology.

Assize.
Report of Superintendent of Assize.

Aviation.
Report of the Director of Civil Aviation.

Building Societies.
Report of the Registrar of Building Societies.

Central Road Transportation Board.
Annual Report.

Commerce.
Trade Reports—Customs and Excise (Annual and Quarterly).

Crime.
Statistics of Crime. (Census Office.)

Defence.

Report of Provincial Roads Engineer (Transvaal).

Shipping Board.
Annual Report.

South West Africa.
Report of the Government of the Union of South Africa to the League of Nations.
Estimates of Revenue and Expenditure.
Accounts of the Administration of South West Africa for the Financial Year, together with the Report of the Controller and Auditor-General thereon.

Veterinary.
Report of Department of Agriculture and Forestry.

Vital Statistics.
Statistics of Population (1916 to 1918).
Reports, 1926 *et seq.*

*The collection of these statistics was suspended between the years 1930 and 1933.

2. **Works of Reference and Periodicals.**—The list hereunder enumerates the principal publications of a periodical or special character issued in the Union by public and official bodies and societies and by publishing companies. The list does not claim to be exhaustive.

(a) *Year Books, Directories, and General Works of Reference—*

Federation of British Industries—Annual Reports on British South Africa.
Hortors' Diary and Law List for South Africa.
Monthly Bulletin of Statistics.
Official Year Book of the Union of South Africa.
South African Municipal Year Book.
South African Who's Who (*Ken. Donaldson*).
South and East African Year Book and Guide (*Union-Castle Company*).
Year Book of the Rand Airport.
Statistics of Migration (Annually).
Statistics of Production (Annually)*—
(*a*) Agricultural, 1917-18 *et seq.*
(*b*) Industrial, 1915-16 *et seq.*
Trade and Shipping of the Union of South Africa and the Territory of South West Africa (Quarterly and Annually).
Vital Statistics of the Union (Annually).

(b) *Periodicals and other Miscellaneous Trade Reports—*

(i) *Agriculture—*

Agricultura et Industria (*Pretoria*).
Boere Saamwerk Produce Bulletin (*Port Elizabeth, East London, Capetown*).
Bulletins of the Department of Agriculture and Forestry (Official) (*Pretoria*).
Crops and Markets (Department of Agriculture and Forestry—Official) (*Pretoria*).
Die Landbouweekblad (*Bloemfontein*).
Farming in South Africa (Official) (*Pretoria*).
Onderstepoort Journal of Veterinary Science and Animal Industry (*Pretoria*).
S.A. Milk Journal (*Johannesburg*).
S.A. Farmer (Die Suidafrikaanse Boer) (*Pretoria*).
South African Friesland Journal (*Bloemfontein*).
South African Fruit Grower and Smallholder (*Capetown*).
South African Poultry Magazine (*Bloemfontein*).
South African Wool (*Port Elizabeth*).
The Citrus Grower (*Port Elizabeth*).
The Farmer (*Pietermaritzburg*).
The Farmer's Weekly (*Bloemfontein*).

(ii) *Industry—*

Amalgamated Engineering Union Monthly Journal (*Johannesburg*).
Amalgamated Society of Woodworkers—Monthly Report (*Johannesburg*).
Engineer and Foundryman (*Johannesburg*).
Escom—A Magazine for the Electrical Home.
Industrial and Commercial South Africa (*Capetown*).
Industries of South Africa (*Durban*).
Iscor News—Nuus (*Pretoria*).
Journal of the Underground Officials' Association of South Africa (*Johannesburg*).
Mining and Industrial Magazine (*Johannesburg*).
Rhodesian Mining Journal (*Johannesburg*).
South African Builder (*Johannesburg*).
South African Electrical Review (*Johannesburg*).
South African Mining and Engineering Journal (*Johannesburg*).
South African Mining Review (*Johannesburg*).
South African Railways and Harbours Employees' Review.
South African Sugar Journal (*Durban*).
South African Typographical Journal (*Johannesburg*).
The Architect, Builder, and Engineer (*Capetown*).
The Mineworker (*Johannesburg*).
The Primary Producer (*Johannesburg*).
Trades and Labour Journal (*Johannesburg*).

(iii) *Commerce—*

African Chemist and Druggist (*Johannesburg*).
African Insurance Record (*Capetown*).
Barclays Bank—Monthly Trade Report (*Pretoria*).
British Trade in South Africa (*Capetown*).
Commercial Bulletin of South Africa (*Capetown*).
Commercial Opinion (*Capetown*).
Dun's Gazette (*Capetown*).
Financial Review (*Johannesburg*).
Industrial and Commercial South Africa and Storekeepers' Review (*Capetown*).
Insurance, Banking and Finance (*Capetown*).
Journal of the Institute of Bankers (*Capetown*).
Licensed Victuallers' Gazette (*Johannesburg*).
Monthly Bulletin of Chamber of Commerce, Capetown (*Capetown*).
South African Banking Magazine (*Johannesburg*).

3. **General Works.**—*Official Year Book* No. 12 and previous issues of this *Year Book* contained detailed lists of the more important general works that were published in connexion with South Africa up to the year 1930. Books which appeared after that date were noted in *Official Year Book* No. 13 and subsequent issues. Books which have appeared since 1936 are mentioned in the subjoined list under appropriate headings, but the list is by no means exhaustive.

Afrikaans Language and Literature—

Le Roux (T. H.)—Afrikaanse Taalstudies. Pretoria, 1937.

CHAPTER I.

HISTORY AND DESCRIPTION.

§ 1. The Development of South Africa.

In Chapter XXVIII will be found a table of the principal events in South African history.

Articles by various contributors, relating to the history and development of the country, were published in earlier editions of the *Year Book*. A list of such special articles will be found at the end of this volume.

§ 2. Capital Cities.

Under the *South Africa Act*, 1909, it is laid down (section 18) that Pretoria shall be the seat of Government and (section 23) Capetown the seat of the Legislature of the Union, thus practically establishing a system of two capitals, though the Act does not describe either city under that term. Under this arrangement the headquarters of the various departments of State with their staffs are placed in Pretoria; while the Houses of Parliament and the parliamentary establishment are situated in Capetown. In terms of section 94 of the *South Africa Act*, the seats of the Provincial Governments are fixed respectively at Capetown, Pietermaritzburg, Pretoria, and Bloemfontein.

§ 3. Area.

1. **Area.**—The total area of the Union is 472,550* square miles: the area of each province is given hereunder. The area of each magisterial district will be found in the district summary at the beginning of this volume. These figures are subject to correction from time to time as re-surveys of portions of the country are undertaken.

AREA OF PROVINCES.

Cape of Good Hope.	Natal.	Transvaal.	Orange Free State.	Union.
Sq. Miles. 277,169*	Sq. Miles. 35,284	Sq. Miles. 110,450	Sq. Miles. 49,647	Sq. Miles. 472,550*

2. **Comparison with other Countries.**—Particulars are given hereunder as to the total area of the Union in comparison with the area of each self-governing British Dominion and of certain other countries in Europe, America, Asia, and Africa:—

AREA OF UNION AND VARIOUS COUNTRIES.

Union	472,550 square miles*
South West Africa (excluding Walvis Bay—430 sq. miles)	322,450 square miles

Country.	Sq. Miles.	Country.	Sq. Miles.
GREAT BRITAIN	89,041	EUROPE—	
IRELAND—		Germany (including Austria and Sudetenland)	223,300†
Northern Ireland	5,237	France	212,659
Eire	26,592	Spain	196,607
BRITISH DOMINIONS, ETC.—		Sweden	173,347
Canada	3,694,863	Norway	118,752
Newfoundland (with Labrador)	162,734	Italy	119,714
Australia	2,974,581	Denmark (with Iceland)	55,348
India (including Native States)	1,808,679	Portugal	35,490
Rhodesia—		Greece	50,270
Southern and Northern	440,664	Switzerland	15,944
Kenya	224,960	Netherlands	12,692
Tanganyika Territory	360,000	Belgium	11,775
New Zealand (with dependencies)	104,751		

* Walvis Bay (area 430 sq. miles) is included in this total, but the area is administered under Act No. 24 of 1922 as a part of the mandated territory of South West Africa.
† Approximately.

AREA OF UNION AND VARIOUS COUNTRIES—*(continued)*.

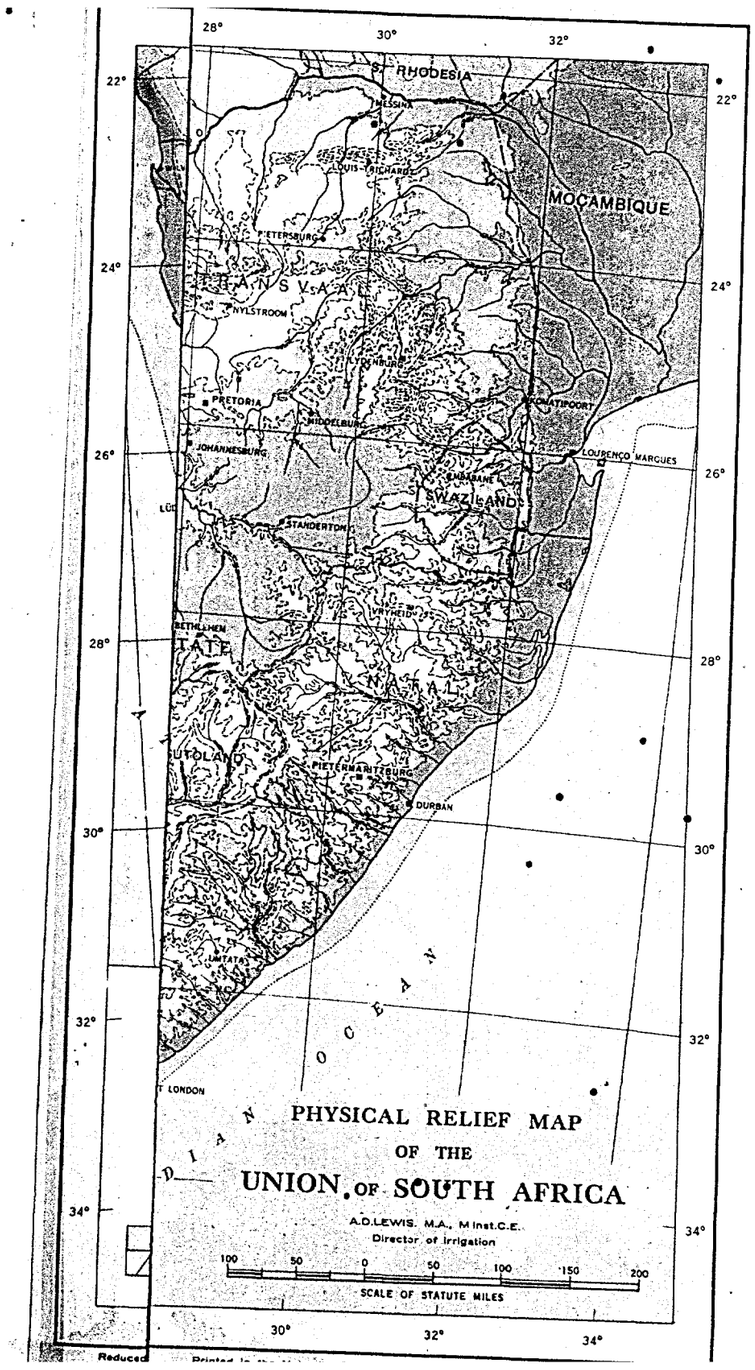
Country.	Sq. Miles.	Country.	Sq. Miles.
ASIA—		AFRICA—	
China (with dependencies)	4,277,170	Egypt and Sudan	1,352,600
Japan (with Korea, Formosa, etc.)	260,662	Belgian Congo	860,233
		Angola	487,788
NORTH AMERICA—		Tripoli (Libya)	420,500
United States	2,973,776	Portuguese East Africa	283,800
Mexico	763,944	Madagascar	228,000
		Cameroons	191,130
SOUTH AMERICA—			
Brazil	3,275,510		
Argentine Republic	1,079,965		

§ 4. Topography and Geology.*

The Union of South Africa occupies an area of 472,120† square miles at the southern extremity of Africa. It is, therefore, only about one-eighth the size of Canada. It lies between latitudes 22° 10′ and 34° 50′ South, so that except for a narrow strip along its northern boundary it is all within the temperate zone. On three sides it is swept by the ocean, while along an irregular boundary on its north lie the territories of South West Africa, Bechuanaland, Southern Rhodesia, and Mozambique.

Of the four provinces that constitute the Union, the Cape of Good Hope is larger than the others combined. From its north-eastern boundary the Orange Free State, Natal, and the Transvaal project northward. The Transvaal, which lies the farthest north, occupies less than one-fourth of the total area of the Union and is by far the richest in mineral wealth. It has produced over 80 per cent. of the total value of the mineral output of the Union and possesses very large reserves of gold, coal, iron, and other ores.

A.—PHYSICAL FEATURES.



The Union of South Africa is divided into an interior plateau and a diversified tract of country between it and the ocean on the east, south, and west; the escarpment which separates the two regions is the Drakensberg of the Transvaal, the Drakensberg or Quathlamba of Natal and the Transkei, the Stormberg of the north-eastern Cape Province, the Sneeuwberg, Nieuweveld, Komsberg, Roggeveld, Bokkeveld, and Kamiesberg farther south and west, and it is continued northwards under less well-known names to beyond the Cunene river. The highest parts of the country are generally on or near the edge of the escarpment; it is only in the south, where the Cape ranges lie, that the ground between the escarpment and the coast rises in places to greater heights than on the escarpment itself. Though the highest point in the sub-continent (Mont-aux-Sources) is only about 11,000 feet above sea-level, some 39½ per cent. of the Union is included within the 4,000-feet contour, and most of this elevated country lies on the interior plateau.

The plateau is generally a country of great plains from which rise flat-topped hills of irregular plan, for it is chiefly made of nearly horizontally bedded shales and sandstones and sheets of dolerite, varying in the resistance they offer to denudation; but where these flat rocks (Karroo beds) have been removed, as in the northern and central Transvaal, Griqualand West, Prieska, Kenhardt, and Namaqualand, the older rocks usually appear in ridges or plains according to the attitude of their beds, or in irregular plains and craggy hills where they are extensive igneous intrusions.

The interior plateau can be divided up into several regions more or less sharply defined from each other by the shape and character of the surface and the climate. The number of these regions can be increased by narrowing the range of characters considered to be distinctive of each, but most of those adopted here are commonly recognized as convenient units. The surface characters are the results of past geological events and climate, but although references to some of these events will be found in this and the succeeding

* Based on a contribution by A. W. Rogers, Sc.D., F.R.S., formerly Director of Geological Survey, revised by S. H. Haughton, D.Sc., Director of Geological Survey.

† Excluding Walvis Bay (area 430 square miles).

the west and the Low Country of the Limpopo valley on the north. The Pilgrims Rest goldfields, the amosite (asbestos) mines, and the corundum deposits of the Pietersburg plateau are in the region, while the chrysotile asbestos near Kaapsche Hoop is just below the escarpment on the east; the undeveloped coalfield of the Waterberg Flats may be important in the future.

10. **The Low Country.**—The Low Country stretches from the Limpopo valley behind the escarpment past the eastern end of Zoutpansberg southwards to meet the South-eastern region below the escarpment east of Carolina; it thus embraces country both behind and below the escarpment, which abuts on the southern flank of Zoutpansberg, west of the area where that range disappears under the Karroo rocks of the Lebombo Flats. Thus defined, the Low Country includes the high ground known as the Barberton Mountain Land, where the heights considerably exceed the 3,000 feet often regarded as the upper limit of the Low Veld. Malaria is prevalent in the lower ground; the rainfall varies from 50 or 70 inches in places on the slope of the escarpment to 20 in the east and in the Limpopo valley. Made chiefly of granite and schists, in which the copper mines of Messina are worked, the Limpopo valley retains large areas of Karroo sediments, basalts, limburgites, and soda-rich basic lavas. The Lebombo range on the east is made of Karroo rocks, including the thickest succession of volcanic beds of that date in the Union; these beds dip seawards. The Barberton Mountain Land owes its prominence to strong quartzites. The gold mines of Barberton are important, and other minerals worked in the region are talc, magnesite, and mica.

The country between the escarpment and the ocean is considerably smaller than the interior plateau, but as regards climate and structure it presents as much diversity. The outstanding difference in structure is due to the existence of the Cape ranges, folded mountains of late Karroo age, whereas in the plateau region all important folding took place in very much earlier—probably pre-Cambrian—times, and the late or post-Karroo earth-movements were either widespread and vertical or, in a few regions, local and vertical. The axes of folding in the Cape ranges do not follow closely the curve of the escarpment, nor are they parallel to the coast, but it is obvious that these three great physical features are to some extent interrelated. The country below the escarpment can be conveniently sub-divided into the following regions:—

11. The Great Karroo.	13. The Folded Belt.
12. The South-eastern Region.	14. The Coast Belt.

11. **The Great Karroo.**—The Great Karroo is the dry country (average rainfall from less than 5 to 15 inches) between the escarpment and the Folded Belt. Its eastern limit is ill-defined, but may be placed on the Sundays river, beyond which the rainfall increases towards the north-east and the Cape ranges disappear, so that the slope to the coast is not broken by a defined mountain range. The region lies between 1,000 and 4,000 feet (Klein Roggeveld) above the sea. The driest parts are the Tanqua Karroo on the west and the Ghoup (or Gouph), the valleys of the Dwyka and Gamka rivers, in the central part. The region is immediately underlain by the lower half of the Karroo formation; thin soils and rock-strewn surfaces between outcrops of sandstone and shale are characteristic. The alluvial soils along the rivers are very fertile where protected from the accumulation of salts. Defined pans are not found in the region, but on the shale flats there are irregularly bounded bare areas covered with a brak silt, which may be regarded as pans in process of formation. The vegetation is drought-resisting scrub; grass appears only in exceptionally wet years. The Great Karroo has gradually become occupied since the early years of the nineteenth century; before that time it was regarded as a desert unfit for man or beast, but well-sinking and motor transport have bettered the conditions.

12. **The South-eastern Region.**—The South-eastern Region consists of the seaward slope of the escarpment from the Graaff-Reinet district north-eastwards to the southern limit of the Low Country. At the western end the Folded Belt lies between it and the coast, but the Cape ranges are finally cut through by the coast near the mouth of the Great Fish river, and beyond that neighbourhood the Lower Karroo beds reach the coast unfolded for many miles, but, in a small tract at the Umgazana mouth, inclined Stormberg beds lie on the coast south of an east and west fault, and in eastern Pondoland the lower Karroo beds dip towards the shore at considerable angles. Farther

north in Natal a wide belt of pre-Karroo rocks appears along the axis of a low anticline flanked on the coast side by remnants of Karroo beds. The middle Ecca beds in Natal contain the coal of the Natal fields. In the interior of the region the country is terraced by thick dolerite sheets and massive sandstones, and remarkable intrusions related to the Karroo dolerites, but more bulky and with a wider range in composition, form the Ingeli, Tonti, Insizwa, and Mount Currie. The rainfall increases (from 15 to 40 inches) towards the north-east, and the streams become more and more permanent in the same direction. The rivers in general have steep grades, but there are numerous instances of long stretches of low grade with ox-bows and meanders above falls or rapids on thick sandstones or dolerite sheets, and the valleys are usually deeply entrenched in the terraced landscape. Grass is the characteristic vegetation, but in the south-west there is a transition to Karroo scrub, and forest and thick bush become conspicuous in the valleys towards the north-east.

13. **The Folded Belt.**—The Folded Belt embraces the mountain ranges in the south of the Cape Province and the wide valleys between them. The Cape ranges owe their existence primarily to the earth-movements of late Karroo times, but they are made of the harder, more weather-resisting portions of the very thick (probably at least 20,000 feet) body of strata known to have been involved in the folding; so these ranges have quartzitic rocks on the surface and sandy soils poor in lime and clay. The valleys are mainly in the synclines, predominantly shales of the folded formations and shales and conglomerates of the Cretaceous beds, which were deposited unconformably on the folded rocks; but extensive tracts of pre-Cape slates, granites, and limestones appear in the cores of certain anticlines and on the west from under the less disturbed flank of the folded rocks. The region ranges from near sea-level to 7,627 feet in the Seven Weeks' Poort mountain on Swartberg, and in soil and climate it presents as great variety as or even greater variety than any other of the regions into which the country is here divided. The Little Karroo of Ladismith (Cape) has a considerable resemblance to the Ghoup, though made of the Bokkeveld beds instead of Karroo strata, for it has a very low rainfall, while close at hand on the south is Tradouw Berg with wet climate, sour soil, and the stretch of forest called Grootvader's Bosch on its southern flank. The mountains on the west trend north-north-west, and their folds flatten out in that direction; where these rocks are cut by the coast and the lower reaches of Olifants river, they are inclined at very low angles. Possibly the inland axis of Cedarberg is represented farther north by the edge of the escarpment of Kamiesberg and, if so, this is the only region where the escarpment and the folded belt coincide, but the amplitude of the fold has decreased so much that denudation has removed the most obvious kind of evidence required to substantiate its existence there. Near Karroo Poort the east-west folds make their appearance and from thence eastwards the numerous axes are, in plan, wide curves concave to the south, and, in general, the height of the mountains above sea-level decreases until they reach the south-eastern coast. The closest folding is probably in the Swartberg region, but towards the east the region where the folds flatten out is covered by the sea. In the Folded Belt there are terraces skirting the mountains, and tablelands separated by deep valleys from the terraces with which they were once continuous. These terraces and outliers are striking features in the region; they slope towards the nearest large valley or the coast from various heights up to about 2,500 feet above the sea, and they are evidently parts of plains from which the mountains rose abruptly. These great plains extended at least from the Albany district westwards as far as the Breede river valley and the Ceres Karroo, and they are of post-Cretaceous date. The climate of the Folded Belt ranges from almost that of a desert (near Prince Albert and Karroo Poort) to one with over 70 inches of rain about the sources of the Berg river. The south-western and southern rivers rising in the mountains are perennial, but the great rivers from the escarpment, the Sundays, Gamtoos, Gouritz, and Tanqua, may become a series of pools in times of drought; they receive insufficient water in their course across the Folded Belt to maintain a constant flow.

14. **The Coast Belt.**—The Coast Belt varies greatly in width and character. In the north-west it is continuous across the Orange river with the Namib of South West Africa, which is the only true desert in the country; though the rainfall is low (average of 2.17 inches at Port Nolloth) the heavy sea fog on that part of the coast maintains a fairly thick cover of bush on the sandy ground. Towards the south and east the rainfall increases steadily, except

for the marked inversion at the Cape Peninsula, as far as the George-Knysna districts; beyond that area of heavy fall it drops sharply near Algoa Bay and rises again towards Durban, where the coast assumes tropical characters. The coast generally is low and shelving, or the shore may be backed by low cliffs behind which the ground rises gradually. Great cliffs fronting the sea are found only round the Cape Peninsula (800 feet at Cape Point), and less conspicuous cliffs occur north of Port Nolloth, near Strandfontein, at Baboon Point, and near Saldanha Bay on the west coast, and to the east near Hermanus, Cape Infanta, Cape St. Blaize, George, and Knysna, and on the coast of Pondoland. The coast is remarkably straight from the Orange river to St. Helena Bay, and again from Algoa Bay to Portuguese territory on the east; the south coast has headlands such as the Peninsula, and the Capes Agulhas, St. Blaize, and St. Francis, made of hard Table Mountain sandstone, but they afford little protection to ships, and the only good natural harbour on the coast is Saldanha Bay, which is probably a drowned valley. Drowned valleys at the mouths of rivers are marked features of the coast, but they have sand bars and are available for ships only when they are kept open by dredging. Raised beaches of various dates, some ranging back into Tertiary times, occur on all parts of the coast, and those in Namaqualand include streaks and patches extremely rich in diamonds.

15. **Drainage System.**—The rivers of the Union can be grouped in three great classes: (*a*) those draining the interior plateau, (*b*) those taking their rise on the escarpment or on the slope to the sea below it, and (*c*) those rising in the Folded Belt. Some features observed in them have been mentioned in the description of the several geographical regions.

(*a*) All the drainage from the interior plateau eventually reaches the ocean by way of the Orange or the Limpopo river. The Orange river drains by far the largest catchment in the country (some 261,000 square miles, including the Nosop and Oup), and the fact that its mouth is closed for months at a time is a comment on the rainfall; it must be remembered that below the confluence of the Vaal river (over 600 miles from its mouth) the Orange receives practically no water during the greater part of the year, and that the river is thus in the main a channel carrying water from a region with an average of over 20 inches of rain through an arid country to the sea. The river goes over a fall of some 400 feet at Aughrabies, 300 miles from the mouth, and rapids occur to within 25 miles of the mouth. The high grade thus indicated is characteristic of all South African rivers, though the Orange is the most striking example. The Limpopo, though it has a much smaller catchment, has a wider valley and a lower grade; it reaches the 2,000-feet contour 530 miles from the coast, while the Orange reaches the same level 300 miles up its valley. The Limpopo is joined below the escarpment by the Olifants river, which drains a large part of the Bushveld and has an independent valley through the escarpment.

(*b*) The rivers rising on the escarpment are largest and most constant in the east, where the Tugela is the most important of them. The characters of their valleys have been mentioned in the description of the South-eastern region. The rivers which rise on the escarpment between the Sneeuwberg and the Roggeveld cross the Cape ranges by a series of great poorts. Beyond the Sneeuwberg the rivers run only for a short time after rain.

(*c*) The chief rivers which have their origin in the Folded Belt are the Berg, Breede, and certain tributaries of the Gouritz, Gamtoos, and Sundays rivers. They are in the main in longitudinal valleys following the strike of the rocks, as contrasted with the transverse rivers draining from the Karroo.

The escarpment which bounds the interior plateau is by far the most important orographical feature in the country, and its significance, as regards the geological structure and history of South Africa, will be briefly discussed in the third portion of this article. Its chief human interest is in the hindrance it offers to roads and railways. The most important mountain ranges of Alpine type, and also the youngest, are those of the Folded Belt (Cape ranges); the older ranges of the same type, the Langeberg and Koranberg in the north, are the comparatively recently exposed remnants of very ancient chains.

The Funduzi, in Zoutpansberg, is the only natural body of water in the Union that can properly be called a lake. The water, held up by a landslide, lies in a valley affected by faults of post-Karroo age; when full, the lake is 2¾ miles long.

The other closed depressions are shallow pans, which are most abundant in those parts of the interior plateau where the Karroo formation lies nearly flat and is being stripped from the older rocks by denudation, but they occur in other parts of the plateau and also in the coast belt. They owe their existence to various circumstances, but the action of the wind, under favourable conditions of rock-structure and weathering, is probably the most potent factor in the production of the inland pans. The largest pans are some 100 square miles in area.

B.—GEOLOGY.

The stratified rocks which build up the territory of the Union have been divided up into the systems and subordinate groups tabulated in Section D, and in this table there is a statement of the chief earth movements and phases of igneous activity so far recognized as having affected this country during the period represented by the succession of sedimentary rocks.

There is still much uncertainty on some of the main points in the geological record in South Africa, especially in the correlation and determination of the relative age of the more ancient sediments and of the great intrusions of granitic rocks in them. Up to the present time no fossils older than those of Devonian age have been determined from South Africa, and therefore it is from the structure and characters of the rocks themselves that the history of the greater part of the South African strata has to be deciphered.

Beds of proved marine origin are restricted to the margin of the subcontinent, and they are thin compared with the great deposits lacking fossils of marine habit and, in the case of the Karroo system, abounding in evidence of deposition under fresh-water or continental conditions.

Owing to the want of fossils in the rocks older than the Bokkeveld (Devonian), there is no means of determining the base of the Palaeozoic in South Africa, and that horizon known as the Cambrian, and recognized in the other continents as one of the most important geological benchmarks, has therefore not been recognized here.

The *Swaziland system* was formerly held to include all sedimentary and volcanic rocks believed to be older than the Witwatersrand beds, but work in the eastern Transvaal and northern Natal has justified the separation of the Pongola and Insuzi beds as the *Pongola system*. This scheme leaves in the Swaziland system the thick and varied groups called the Kraaipan, Kheis, Moodies, Onverwacht, Jamestown, Mfongosi, Nondweni, Nkandhla, and Tugela series, as well as the highly metamorphosed sedimentary and volcanic rocks closely associated with the granites and gneisses of Namaqualand and the northern Transvaal. In general character the Swaziland beds recall the Archaeozoic or Archaean of other lands, while the younger pre-Cape rocks are more like the Proterozoic or Algonkian, the differences being due chiefly to the greater degree of metamorphism shown by the older group.

The recognition of older and newer granites in the Transvaal served for some years to separate extensive stratified formations, and it is now known that the "older granites" in the Transvaal, the Cape Province, and Natal include intrusions of different ages, though petrographical distinctions between them have not been ascertained, so that analogous use of the several older granites cannot yet be made.

There are large bodies of highly metamorphosed sediments and volcanic rocks enclosed in the granite and gneiss of the north-west Cape and the northern Transvaal. It may well be that these will be found to belong to formations in which definite successions have been made out in Prieska and Kenhardt and in Natal.

In the Barberton area of the eastern Transvaal, the oldest group of rocks within the system is the *Onverwacht volcanic series*, which is best exposed in the Komati valley and consists of amygdaloidal lavas, quartz porphyries, tuffs, carbonate rocks, chert, and basic schists. At the base of the succession there are sericitic and quartzitic schists which in part seem to have had a sedimentary origin. Rocks of volcanic origin form the basal part of the succession in the Murchison range syncline.

Overlying the Onverwacht series in Barberton, probably unconformably, is a succession of variegated shales with banded ironstones, greywackes, and some grits to which it is proposed to give the name *Fig Tree series* from the fact that Fig Tree creek cuts right through the succession.

In northern Natal the *Mfongosi series* contains sheared and partly altered lavas and tuffs, with limestone and dolomite, while the *Nondweni series* is composed of amygdaloids and schistose volcanics, cherty quartzite, banded ironstone, chloritic schists and phyllites with cherty bars. These two series seem to be equivalent either to the Onverwacht series entirely or to the Fig Tree series in part.

Lying above the Fig Tree series in Barberton and commencing usually with a conglomerate carrying boulders and pebbles of granite together with fragments of quartz porphyry, chert, jasper, and other material from the underlying series, is a predominantly quartzitic series with intercalated shales and lavas to which the name *Moodies series* can properly be applied. Part of the succession of old rocks in the Murchison range, in Pietersburg and in Mount Maré may be the equivalents of this series: and the *Nkandhla series* of Zululand, consisting of micaceous schists and quartzites, probably represents it.

Intrusive into all the earlier rocks in the Murchison range and in the Barberton area are complexes of basic igneous rocks, strongly serpentinised, which are themselves invaded by granite batholiths. In Barberton these basic rocks are known as the *Jamestown basic rocks*, while in the Murchison range area the name *Rooiwater igneous complex* has recently been given to them.

The *Tugela series* of Natal consists of great bodies of hornblende schist and some metamorphosed sediments invaded by veins of granite and aplite. The rocks are intensely and isoclinally folded, and have been considered to be highly metamorphosed equivalents of the Mfongosi and Nondweni series.

In the divisions of Prieska, Kenhardt, and Gordonia, there is a great group of sedimentary and extrusive rocks known as the *Kheis series*. It is divided into three sub-groups, the Marydale, Kaaien, and Wilgenhout Drift beds, which apparently follow each other conformably upwards in the order named. Gneiss is in intrusive contact with all three sub-groups, and large bodies of the Marydale and Kaaien beds lie entirely surrounded by granite and gneiss. The *Marydale beds* consist of arkose, lavas of acid and basic compositions, tuffs, quartzites of various kinds, including some with very much magnetite in them, limestone, and various schists and granulites. The original nature of some of the granulites is proved by the presence of amygdaloidal structure, but others are of doubtful character. The variety of new minerals developed in these beds is great. Amongst them are pyroxenes, amphiboles, garnet, sillimanite, cyanite, staurolite, and various lime silicates. The *Kaaien beds* are quartzites and quartz schists chiefly, and they form the prominent range of hills on the Prieska-Kenhardt boundary, as well as Scheurberg in the Kalahari. The *Wilgenhout Drift beds* include slates, acid and basic lavas and tuffs, quartzites and limestones.

The *Kraaipan series* of Bechuanaland is older than the Ventersdorp system, but it has not been found to be penetrated by granite or gneiss. It is composed of banded magnetic quartzites, jaspers, various schists, limestones, and altered acid and basic lavas. The very similar beds of Abel's Kop and Goudplaats in the western Transvaal are traversed by offshoots from the neighbouring granite. All these beds present close resemblances to parts of the Kheis series.

The *Pongola system* is divided into two series by an unconformity. The *Lower Pongola* or *Insuzi series* consists of lavas with six groups of interbedded quartzitic sediments and some phyllite. The lavas are mainly andesitic, though more acid and more basic varieties are also present. Fragmental volcanic rocks are rare. The *Upper Pongola* or *Mozaan series* is made up of quartzites, occasionally containing pebble beds, shales, and ironstones, with one thin lava sheet near the top of the succession.

Although the Insuzi series rests with a sedimentary contact on granite-gneiss, the rocks of the Upper Pongola series are invaded by a later granite which seems to be indistinguishable from the older one in macroscopic features.

Between the old granite and the base of the Transvaal system along the eastern side of the escarpment between Godwan river and Sabie is a group of conglomerates, shales, arenaceous rocks and lavas to which the name *Godwan beds* will be applied. The sequence of rocks, and their stratigraphical position, make it possible that these beds represent part of the Pongola system.

Granite and gneiss posterior in age to the *Kheis series* and to the rocks which are represented by the fragments of schists in the Namaqualand and Bechuanaland granites cover an area of many thousand square miles in the north of the Cape Province and the adjoining part of the Transvaal. They are quartz-microcline-orthoclase-biotite rocks as a rule. Amphiboles and pyroxenes are rare. Porphyritic granites are not often seen; pegmatites are abundant. The granites and gneiss of the northern and north-eastern Transvaal, as well as those of the country immediately north of the Witwatersrand, are quartz-microcline-plagioclase-biotite rocks generally, and are distinguishable from the much younger granite of the Bushveld.

A probably later, but pre-Transvaal, group of intrusive rocks is the Palabora Complex of granite, syenite, and pyroxenite, which invaded the older gneiss and Swaziland beds of the north-eastern Transvaal.

An important and interesting feature in the granitic areas north of Pietersburg and in the Low Veld is the abundance of corundum in pegmatites intrusive in ultra-basic magnesian rocks.

In Namaqualand, a group of small intrusions of rocks varying from quartz rocks to nearly pure magnetite, and including pyroxenite, norite, diorite, and anorthosite, is of later age than the gneiss and schists, and probably older than the Nama formation. They are of importance on account of the apparently syngenetic copper ores in them.

The *Witwatersrand system* is found in the southern Transvaal and the adjoining part of the Orange Free State. In the chief area, the Witwatersrand itself, the system is divided into lower and upper groups, and these again into five series.

The *Lower Witwatersrand* beds of the chief area comprise:—

The *Hospital Hill series*, commencing with the Orange Grove beds, quartzites and shales, which form the conspicuous northern escarpment of the Rand overlooking lower ground towards Pretoria. They rest upon a denuded surface of granite and schists, and are followed by thinly laminated siliceous and ferruginous rocks locally called slates or shales. With these beds are two thin but remarkably persistent bands of quartzites, the ripple-marked quartzite and the felspathic speckled bed. Towards the top of the series are the thick Hospital Hill quartzites, sometimes coloured green, and in parts having large well-rounded quartz grains set in a finer-grained quartzite matrix (sago structure). These quartzites, with the shales interbedded with them, form the ridges immediately north of Johannesburg.

The *Government Reef series* lies conformably on the Hospital Hill series, but along the Central Rand the beds are for the most part eliminated by strike-faults, a fact which was responsible for many misunderstandings of the succession of the rocks below the Main Reef group before Dr. Mellor's map appeared. The series consists of quartzites and shales, some of which are very ferruginous rocks, and thin conglomerate beds which have not been found to be worth mining on a large scale.

The *Jeppestown series*, red-weathering argillaceous rocks with subordinate sandstones or quartzites, rarely forms good outcrops; it varies in apparent thickness from place to place owing to faulting and it carries a zone of amygdaloidal lava.

The *Upper Witwatersrand* group follows the lower conformably, and differs from it chiefly in being more arenaceous and in having a greater development of conglomerates. At its base is the *Main-Bird series*, some 3,000 feet of quartzites with subordinate argillaceous beds and persistent bands of conglomerate, notably the Main Reef group of conglomerates in the lower part of the series, which are the important beds from an economic point of view because they yield almost all the gold won on the Witwatersrand gold field. In the Central Rand there are three reefs of banket—the local name for a gold-bearing conglomerate of quartz pebbles set in a matrix of pyritic quartzite. These are known as the Main Reef, the Main Reef Leader, and the South Reef. The Main and South reefs thin out eastwards, leaving the Main Reef Leader as the productive reef there, and the Leader disappears westwards. The beds of conglomerate are not uniformly auriferous, and it has been found in certain areas that rich patches, several thousand feet in length, extend in a south-easterly direction, and are bordered by poorer conglomerate or even by rock formed by the hanging and foot walls coming together to the exclusion of pebble beds. The origin of the gold in the rock was

probably detrital, as in placers, but it has been recrystallized subsequently. Evidence of the great molecular changes which have taken place in the Main-Bird series since their consolidation is seen in the abundance of chloritoid in the sediments and in many of the older dykes of intrusive rocks which traverse them. The conglomerates above the Main Reef group, the Livingstone and Bird reefs, are thin individually, though numerous, and are non-persistent. A band of chloritoid-chlorite rock, known as the Bird Reef Marker, lies a short distance above the Bird Reefs on the Central Rand and andesitic lava, called the Bird amygdaloid, is on the same horizon in the East Rand and Heidelberg.

The *Kimberley-Elsburg series* lies conformably on the beds just described, and at their base is a thick band of argillaceous beds, the Kimberley shales. The Kimberley conglomerates are usually separated from the shales by quartzites, and grits and quartzites some 3,000 feet thick separate the Kimberley from the Elsburg conglomerates. These latter are often large-pebble conglomerates, and in the main area of their occurrence north of the amygdaloids of Klipriviersberg no discordance below them has been detected. The occurrence, however, of very similar conglomerates lying unconformably on Lower Witwatersrand beds at Langermann's Kop and the north side of Bezuidenhout Valley points to the unconformable overlap of the Elsburg beds northwards.

Witwatersrand beds form considerable areas in the Heidelberg and Klerksdorp districts. In Heidelberg the thickness of the system is reduced to 57 per cent. of what it is on the Rand.

In Klerksdorp there is a great unconformity with the overlying Ventersdorp beds which transgress across horizons low down in the Witwatersrand system. Between the old granite and the bottom quartzite of the Hospital Hill series there occurs a series of quartzitic sediments (sometimes with conglomerate bands) and volcanic rocks to which the name *Dominion Reef series* has been applied. In this area, the Lower Witwatersrand beds are highly faulted and are repeated by a series of strike-faults; the Upper Witwatersrand beds are poorly developed in outcrop. On the whole, the system here is more arenaceous than in the Central Rand area.

The *Ventersdorp system* lies on the Elsburg beds conformably in the Klipriviersberg and Heidelberg, and overlaps the Witwatersrand beds unconformably on the Witwatersrand and in Klerksdorp; in the Cape Province it lies on older rocks. It is mainly a volcanic group and three sub-divisions, the *Zoetlief*, the *Kuip*, and the *Pniel series*, have been distinguished, separated from each other by unconformities. The Zoetlief beds are acid lavas, tuffs, quartzites, shales, limestones, conglomerates, and flagstones found in Bechuanaland, Prieska, and in the Kimberley rock-shafts. Acid lavas somewhat resembling those of the Zoetlief beds occur in parts of the Klerksdorp district and have been assigned to the Dominion Reef series. The Kuip series has only been recognized near Omdraaisvlei; it consists of basic lavas, arkose, flagstones, limestones, and chert. The Pniel series covers a much wider area than the two lower groups in the Cape Province. The lavas of the Pniel series are usually blue or green amygdaloidal diabase or andesite, though quartz porphyries also occur, and tuffs and breccias accompany them. Conglomerates, quartzites, and other sedimentary rocks often underlie the volcanic beds in the Cape Province. In the Transvaal the Ventersdorp system covers wide areas south and west of the Witwatersrand; amygdaloidal diabase, such as that in the Klipriviersberg, plays a very important part in the formation, but there are conglomerates and quartzites as well as quartz porphyries and fragmental volcanic rocks in it.

On the western side of the Richtersveld in Namaqualand there is a group of folded rocks divided into four series; the *Stinkfontein series* of quartzites, arkose, thin conglomerates, phyllites, and volcanic rocks is at the base resting on gneiss; it is followed by the *Kaigas series* consisting of limestones and shales, on which lies the *Numees series* of tillite, grit, conglomerate, and slates. The tillite is some 800 feet thick and the boulders are made of gneiss, granite, quartz porphyry, limestone, various other sedimentary rocks, and granulites, but no amygdaloidal rocks have been observed in it. West of the Numees beds there is the *Groot Derm series* of slates, lavas, tuffs, and limestones, which may be younger than the Numees beds, but their position is uncertain. These beds are part of the Konkip formation found by Dr. Range in South West Africa and suspected to be of Ventersdorp age. Beyond the fact that they are intermediate in age between the old gneiss and the Nama system, there is little to support the correlation, so their relation to better known pre-Nama beds of the Union is quite unsettled.

The large intrusion of hornblende granite, rich in lime-soda felspar, which forms the mountain south of Kuboos and which is traversed near that place by part of the great escarpment, is later than the Konkip formation, but its relation to the Nama formation is not decided. Many dykes of bostonite and camptonite are associated with the Kuboos granodiorite.

In the valley of the Orange river, from 12 to 36 miles above Upington, there are several areas of volcanic and sedimentary rocks known as the *Koras series*. They rest unconformably on, or are faulted against, the Kheis beds, but they have suffered little from shearing, and in this respect they offer a great contrast to all the other pre-Karroo rocks of the district. The series consists of two groups; the lower, and mainly volcanic, group is overlain unconformably by the upper group, which is composed of conglomerates and sandstones. The volcanic beds are composed of andesitic and basaltic lavas and tuffs, and there are intercalations of a red quartz porphyry, probably intrusive, in them. The upper group contains much material derived from both the lavas and the porphyry. The correlation of the Koras series is uncertain, but it is possibly part of the Ventersdorp system.

The *Transvaal system* is the most widely distributed of the pre-Karroo sedimentary rocks in the Union. At its base is the *Black Reef series*, a group of quartzites and conglomerates with intercalations of shales. In Vryburg there are also volcanic rocks interbedded with the Black Reef, which, on account of their close resemblance to the underlying Ventersdorp lavas, emphasize the connexion between the two formations. The Black Reef series forms the upper part of the great escarpment of the eastern Transvaal, where it is thicker than elsewhere, giving rise to some of the finest scenery in the province. It received its name from the occurrence of black carbonaceous matter in the conglomerates mined for their gold content in the southern Transvaal. In the west of the Union these beds are very probably represented by the *Nieuwerust series*, which underlies the Malmesbury beds in Namaqualand and Van Rhynsdorp. The Black Reef series is conformably overlain by the *Dolomite* in the Transvaal, and in the neighbouring part of the Cape Province (*Campbell Rand series*). In Little Namaqualand thick limestones lie on the Nieuwerust beds; but a change becomes more marked southwards, the beds forming an argillaceous and arenaceous group, the *Malmesbury beds* of the Cape Province. East of the Cape Peninsula, however, in Oudtshoorn and Humansdorp, there are again limestones (Cango and Hankey limestones), which may prove to be part of this series. R. C. McIntyre has shown that the *Cango series*, consisting of conglomerates, arkose, limestones, and slates, rests unconformably upon an older formation made up of dolomite and chert, foliated sediments, and volcanic rocks which have been invaded by granite and gneiss. In the Transvaal, Bechuanaland, and Griqualand West, the dolomite has a most important influence on the water supply, owing to its taking up large volumes in fissures and cavities, and giving the water out again from large springs. It is, in fact, the only formation in the Union which can be said to be water-bearing on a large scale. The rock is compact and usually crystalline, and the water is not held by the rock itself, but is in the widened joints and other spaces. The dolomite is succeeded conformably by the *Pretoria series* (*Griquatown series* of the Cape Province), which consists of quartzites, shales, highly ferruginous beds, and volcanic rocks, chiefly andesitic (Ongeluk beds). In the Cape Province, and in parts of the Transvaal, asbestos (crocidolite and amosite) is strongly developed in the strata below the volcanic horizon, apparently by the rearrangement of material in the sediments in cross-fibred veins of amphiboles strictly parallel to the bedding. Important deposits of iron ore exist in the Pretoria beds in the Transvaal and Griqualand West. In the Cape Province there is a well-developed tillite with striated boulders just below the Ongeluk lavas, and a less well-developed tillite has been found in a similar position in the Pretoria district.

In the Western Province of the Cape there are two formations younger than the Malmesbury beds and older than the Table Mountain series; the older of the two, the *French Hoek beds*, consists of conglomerates, arkose, grits, and shales with felsitic lavas and tuffs; the younger, *Klipheuvel beds*, sandstones, grits, conglomerates, and shales are tentatively correlated with the Matsap and Waterberg beds, while the French Hoek beds have been regarded as possibly representing the Rooiberg series. The *Ibiquas beds* of Van Rhynsdorp rest unconformably upon the Malmesbury beds and are sandstones and shales with felspathic grits and conglomerates at their base; they may be correlated with the French Hoek beds.

The *Rooiberg series*, consisting of felspathic quartzites, quartzites, shales, and felsitic lavas, was invaded by the Bushveld igneous rocks and in places clearly forms the roof of the Bushveld norite and granite. The Rooiberg series is now provisionally classed with the Transvaal system, but east-north-east of Pilansberg it rests apparently unconformably on lower beds of that system.

A very important feature in the Transvaal is the mass of intrusive rocks which occupies an area some 280 miles long from east to west, and 160 miles wide in the central part of the country, and which is known as the *Bushveld igneous complex*. The rocks are in part covered by fragments of their original roof and partly also by much younger beds belonging to the Karroo system. The mass, as a whole, behaves as a laccolith, with a floor made of the lower members of the Transvaal formation and a roof of the Rooiberg series. It is composed of various rocks, possibly differentiates of a common magma, soda-rich granite (the Red Granite of Transvaal geologists) in the central parts, and more basic rocks, diabase, norite, gabbro, and pyroxenite in the peripheral and lower portions. Intrusions of the granite in the basic rocks prove that the latter solidified first. The mineral and structural changes produced by the Bushveld complex on the surrounding rocks are extensive. The numerous sheets of diabase intruded amongst the Transvaal beds in the southern and central Transvaal are regarded as belonging to the Bushveld complex, as are also the long dykes of syenitic rocks in the Transvaal.

The scattered intrusions of nepheline syenite and related rocks, of which the most important group is that of Pilansberg, are generally believed to be a late product of this great period of igneous activity. In Pilansberg, which covers some 200 square miles and is situated in a region of weakness where the W.S.W. synclinal axis of the Bushveld is crossed by an important group of N.N.W. dykes, the following sequence of events has been elucidated: granite magma left at depth after the intrusion of the red granite reacted with the dolomite and gave rise at the weak place to a group of small volcanoes which threw out a cover of tuff and lava; the alkaline magma then made its way along the base of the volcanic rocks and formed a laccolite with a floor of granite and norite and a roof of volcanic beds; the top of the laccolite carrying the volcanic rocks collapsed, and magma welled up around it. The date of these events is uncertain; the rocks are of pre-Karroo age, as are the related dykes in Heidelberg, but the date relative to the Waterberg system is unknown, though the absence of recognized remains of Waterberg sediments in and about Pilansberg supports the idea that the Pilansberg rocks are the older. There is nothing strictly comparable to the Bushveld complex in other parts of the Union.

The large granite masses of the south-west of the Cape Province (Cape Peninsula and its neighbourhood, Robertson, and Van Rhynsdorp) are normal granites and are post-Malmesbury (Transvaal) and pre-Cape in age.

The *Waterberg system* forms large tracts of country in the northern Transvaal (Waterberg and Zoutpansberg districts), and in the Pretoria and Middelburg districts. In the latter it rests unconformably on the Pretoria beds. It consists of conglomerates and quartzitic sandstones; the colour of the sediments is predominantly red or purplish, and the conglomerates are often coarse. The base of the Waterberg system in the Zoutpansberg is made of volcanic rocks of basaltic type.

The *Matsap series* of Bechuanaland, Griqualand West, and Prieska is regarded as the correlative of the Waterberg system on account of its stratigraphical position and lithological characters. It lies unconformably on beds belonging to the Ventersdorp and Transvaal systems, and is unconformably covered by the Dwyka. It consists of a great thickness of purplish quartzites with conglomerates and shales; but the arenaceous types predominate. In the middle of the series there is, on the eastern side of the Langeberg, a thick volcanic group of andesitic lavas and tuffs. The Matsap and Waterberg beds have not been connected by mapping between the north end of the Langeberg and the Transvaal through Bechuanaland, but they are in all probability parts of one system. In the Postmasburg manganese fields, a group of post-Transvaal sediments bearing some lithological similarities to the Matsap sediments has been separated under the name *Gamagara series*.

The *Cape system* is developed in the south and west of the Cape Province, and it appears again on the south-east coast near Port St. Johns, continuing through the coast belt of Natal. Only the lowest series is found in the east.

The lowest member of the Cape system is the *Table Mountain series*, a group of sandstones and shales, the former predominating, which builds up the mountains of the Cape Peninsula and the long ranges flanking the Karroo on the south and west. In the south-western region there is a thick band of mudstone, containing scattered pebbles and boulders of various kinds of rocks, some of which are striated after the fashion of glaciated stones. This tillite lies about a thousand feet below the top of the series. In the Drakenstein and neighbouring ranges the quartzites immediately below the tillite, as well as part of the tillite, are folded and truncated in an unusual way; the appearances are believed to be due to ice moving in a south-easterly direction. The sandstones are often quartzitic and have a characteristic appearance. They are occasionally conglomeratic, but the pebbles are usually scattered or form layers only one pebble thick.

The second series in the system is the *Bokkeveld* group, consisting of shales and sandstones, in the lower part of which there is a fairly abundant marine fauna closely related to that of the Lower and Middle Devonian of South and North America, and less closely to the Lower Devonian of Europe. Some of the Cape species have also been found in the Sahara. The Bokkeveld beds form the greater part of the cultivated portions of the Ceres district and the valleys between the Zwartberg and the south coast, as well as the valleys immediately north of the Zwartberg.

The third and youngest series is the *Witteberg* group of shales, sandstones, and quartzites, which are well seen along the western line of railway between Touws River and Matjesfontein. These beds have yielded few fossils, only badly preserved plants and a fragment of a eurypterid.

The Cape system is fully developed between Karroo Poort and the region where it is cut off diagonally by the coast near Port Elizabeth. North of Karroo Poort it becomes progressively thinner owing to denudation in pre-Karroo times, and north-west of Calvinia the Karroo beds rest directly on the older Nama rocks or on granite.

The *Karroo system* occupies the whole of the central part of the Cape Province, almost the whole of the Orange Free State, the western side of Natal, and a large area in the south-eastern Transvaal. No evidence has yet been found that marine conditions occurred in this large area of deposition during Karroo times, but in a part of South West Africa marine fossils have been found in the lower beds of the system. In the southern Karroo the Witteberg series passes up conformably into shales, which are taken to be the base of the Karroo system, and these in their turn pass up into a hard boulder-clay or tillite usually without any precise line of division. To the north of Karroo Poort the shales are wanting, and there is an unconformity below the tillite. This has a matrix of mudstone or slightly laminated and sandy, often calcareous, hardened clay, containing pebbles and boulders of many varieties of rocks occurring in places to the north of the spots where they are found in the tillite, and many of them are flattened and striated after the fashion of the stones in glacial deposits of regions which are now, or have within recent times been, covered by sheets of ice. In many districts north of the Karroo the tillite rests upon striated surfaces or characteristically shaped hummocks of rock called *roches moutonnées*. The thickness of the tillite varies from a foot or so up to 1,400 feet in the southern Karroo, or it may even be absent altogether, as in parts of the Transvaal. Four centres of distribution of ice have been recognized: South West Africa, Griqualand West, the central Transvaal, and a region lying east of Natal. The movements of the ice from these centres were southwards in general. The tillite is followed conformably by shales in the west, south, and east, but in the Transvaal there is almost certainly a break of unknown but not great extent at the top of the *Dwyka series*, as the lowest group of Karroo rocks is called.

The *Ecca series* follows the Dwyka conformably in the Cape Province and Natal. It consists of shales and sandstones, and in Natal and the Transvaal the Middle Ecca beds are the main source of coal in the Union, also containing oil-shales. In the south of the Cape Province the Ecca beds reach their greatest thickness—over 6,000 feet. The series decreases in thickness northwards, and in the Transvaal it is probably only a few hundred feet thick. The Ecca beds contain a flora characterized by the genera *Glossopteris* and *Gangamopteris*, which, with their fellows, are found also in the Gondwana beds of India, and in Australia, South America, the Falkland Islands, and in the Antarctic continent.

In five of these regions the *Glossopteris* flora occurs in beds overlying tillite like the Dwyka tillite, and it is this fact which leads to the belief that glacial conditions prevailed over a great region in the southern hemisphere at the remote period when the coal-measures of the northern hemisphere were being formed, or soon afterwards. The evidence as to the age of the beds as compared with the European rocks is obtained from Australia and India, for the marine fauna on which it rests does not occur in South Africa.

The *Beaufort series* lies conformably on the Ecca in the Karroo region, Natal, the southern part of the Orange Free State, and in the south-eastern Transvaal. Its most striking feature is the abundance and variety of its reptilian fossils, which are of exceptional interest because they include forms with mammalian relationships and the habit of walking with the body raised clear of the ground, as is proved by the structure of their legs. With the reptiles are amphibians, fish, lamellibranchs of fresh-water habit, and some plants belonging to the same genera as those in the Ecca below, as well as, in the uppermost beds, a few which are found in the Molteno beds above. Sandstones, shales, and mudstones, with a small amount of limestone, chiefly in the form of nodules, make up the Beaufort beds. In the south-eastern Transvaal the upper coal beds of Volksrust are in the Beaufort series.

The *Stormberg series* follows the uppermost Beaufort beds conformably in the east of the Cape Province and the neighbouring part of Natal and Basutoland, and it is ushered in by the shales and sandstones known as the Molteno beds, which are coal-bearing and include some oil-shales.

The *Molteno beds* contain a flora with Triassic affinities, but none of the reptiles known from the Beaufort series has been found in them. The Molteno beds thin out in the east of the Orange Free State, and have not been found in the north of that Province or in the Transvaal.

The Molteno beds are succeeded in the Cape, Natal, Basutoland, and the south-east of the Orange Free State by the *Red beds*, which are red weathering sandstones and shales containing a few dinosaurs and other reptiles and fish.

The *Cave sandstone*, a rather remarkable formation of thick bedded sandstones, succeeds the Red beds conformably in the Cape, Natal, Basutoland, and the Orange Free State, and it also occurs in the Transvaal, where it is known as the Bushveld sandstone. It contains a few dinosaurs, a crocodile, fish, and some small crustacea. The Cave sandstone makes bold outcrops along the slopes of the Drakensberg in East Griqualand, Natal, and Basutoland; it is very closely associated with the volcanic rocks of the *Drakensberg series* at the top of the Karroo system, which form the precipitous portion of the Drakensberg or Quathlamba range, the Maluti mountains, and also much of the flat country (Springbok Flats) of the Transvaal Bushveld. The lowest volcanic beds are interbedded with the Cave sandstone in places, but elsewhere the lavas rest upon eroded surfaces of the sandstone. They are chiefly andesitic or basaltic, but in the north-east Transvaal limburgite and soda-rich lavas underlie the basalts, and in the Lebombo range great thicknesses of more acid lavas are intercalated with basaltic flows. A large number of the vents or necks from which outbursts took place are known, but it is probable that much of the lava came from long fissures now represented by dykes of dolerite. The volcanic rocks of Zuurberg are of pre-Uitenhage age and are underlain by fine grained sandstone containing fragments of bone; they are basalts, tuffs, and breccias, and are probably of Stormberg age.

To the latest part of the Karroo period belong the *intrusions of dolerite*, which are found traversing nearly all the rocks in the Union older than the Drakensberg series, as well as that group. The only large tract in the Cape Province which is free from dykes and sheets of this dolerite is the Folded Belt. The dolerite sheets give rise to the long lines of cliffs capping the escarpment of the Nieuweveld and its continuations to east and west, and both sheets and dykes form conspicuous features in the Orange Free State, Natal, and the Cape Province. In Griqualand East picrites and other ultra-basic differentiates of the basaltic magma have been discovered, and in the Insizwa, Tonti, and Ingeli masses they form important bodies of rock which may yield metallic ores of value. The acid differentiates are much more widely distributed. They are small bodies of diorite and granophyre, which rarely give rise to any conspicuous feature.

The *Cretaceous system* in the Union comprises beds of marine and continental origin found on or near the south and east coasts. The chief areas of these beds are in the Uitenhage and Alexandria districts (where Dr. W. G. Atherstone first made out their sequence), Oudtshoorn, Riversdale, and Mossel Bay, where the older beds, called the *Uitenhage series*, occur. Narrow strips along the coast of Pondoland, and a wider area on the northern coast of Natal, are made of younger Cretaceous beds.

The lowest beds of the Uitenhage series are conglomerates and sandstones, which are followed by plant-bearing shales. In the Sundays river valley these are succeeded by shales and limestones containing marine fossils of Neocomian age. West of the Uitenhage district marine fossils have only been found in a small outlier of the series near Knysna. All these areas of Uitenhage beds are faulted down against older rocks to the north.

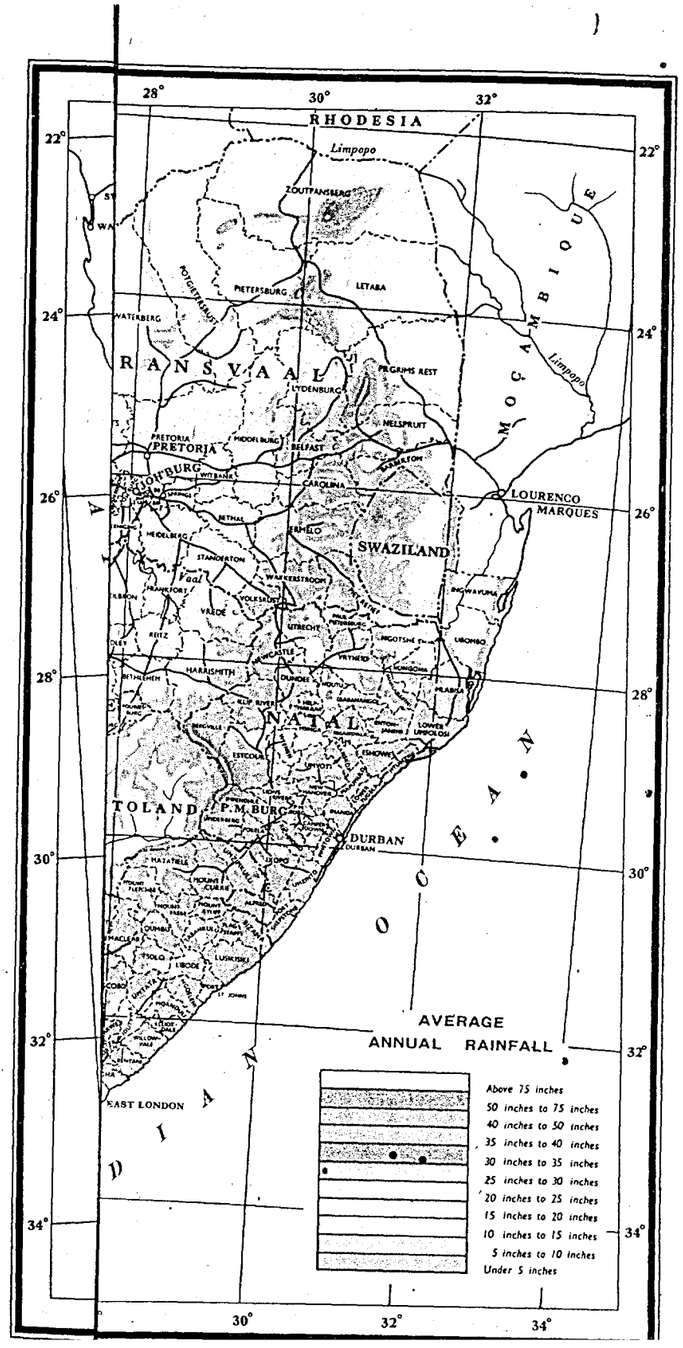
In Zululand unfossiliferous sandstones and conglomerates rest unconformably against the lavas of the Lebombo range and are succeeded by a thick group of shales, limestones, and sandy beds, which have yielded rich faunas of Aptian, Albian, Cenomanian, and Senonian affinities. In the south of Natal and the neighbouring part of Pondoland, Senonian beds (*Umzamba series*) rest on Table Mountain sandstone, while farther south-west conglomerates and sandstones containing plants and a few marine fossils, probably of Neocomian age, are faulted down against older rocks.

Near East London and in Alexandria there are some marine limestones of Danian age, but little is known of them yet.

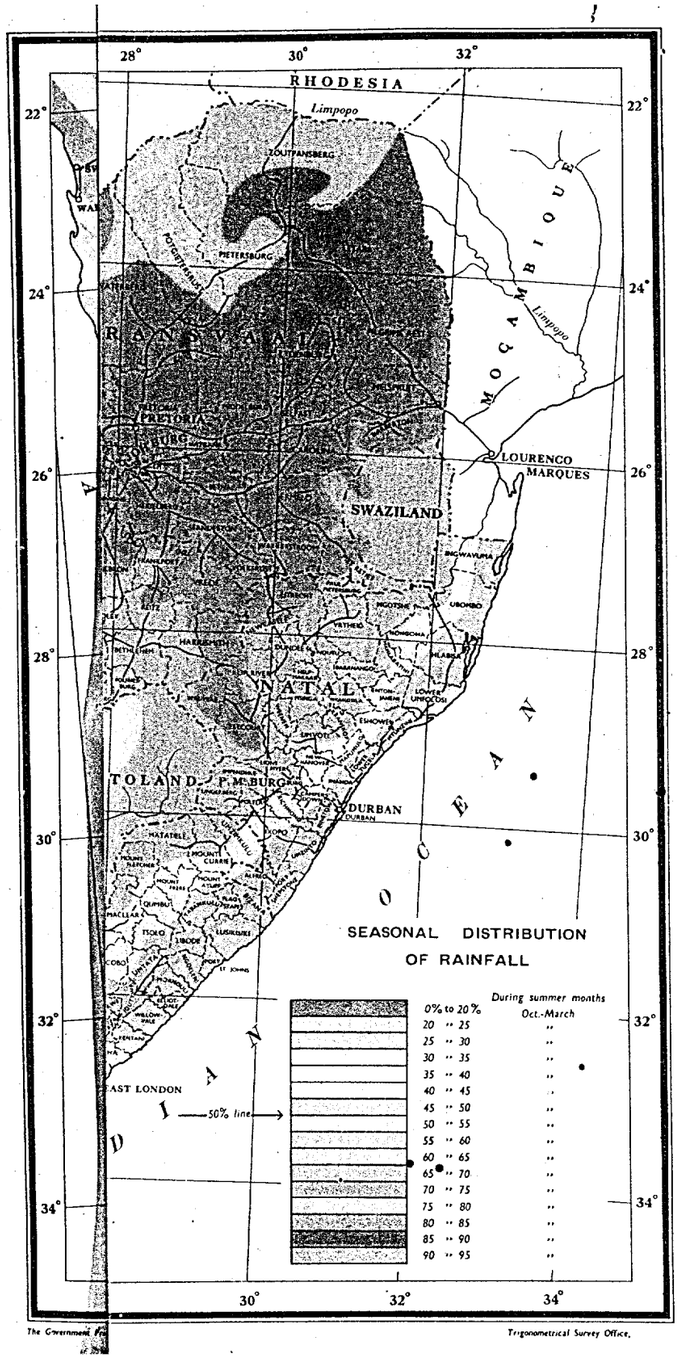
In Bushmanland a remarkable deposit of granite wash containing bones of dinosaurs fills an old valley leading to the Orange river. This may be a remnant of the continental deposits formed when South Africa began to have the type of climate which has led to the formation of the Kalahari, the semi-arid region from which Bushmanland is separated by the valley of the Orange river.

Patches of gravels that lie on top of the northern part of the Lebombo range may be remnants of beds of conglomerate that were contemporaneous with the conglomerates of the plateau sandstones recently described from the south-eastern corner of Southern Rhodesia, to which a Cretaceous age has been tentatively assigned.

At some time after the Uitenhage beds were laid down, perhaps at a much later date, the peculiar phase of volcanic activity began which is represented by the contents of many pipes and fissures distributed through the central portion of the Union, and found also in the Drakensberg, Riversdale, Van Rhynsdorp, Namaqualand, Gordonia, and outside the borders of the Union in Rhodesia and South West Africa. Natal seems to be without them. The age of each occurrence can, of course, only be determined by the surrounding rocks, but there are certain features common to them and connecting links between diverse types of material filling the channels, so that it is probable that they were all related in origin. There can be no doubt that some explosive force produced the channels, or took advantage of pre-existing paths of weakness, and that the channels were filled with fragmentary or molten rock derived from various depths between the lower parts of the earth's crust and the superficial strata. As Dr. Wagner suggested, the explosions seem to have been connected with the marked rise in level of the sub-continent in late geological times. The most striking instance of a large pipe filled with fragments of the rocks traversed, but apparently devoid of minerals derived from contemporaneous rock-magma, is Geitsi Gubib in South West Africa; but similar pipes and fissures exist in Van Rhynsdorp and Ceres. In the Sutherland district there are many vents clustered round Saltpetre kop filled with material derived from the rocks passed through mixed with minerals belonging to volcanic rocks, and in the neighbouring country there are pipes filled with breccia resembling blue-ground in containing minerals derived from great depths, accompanied by masses of melilite-basalt. The pipes and fissures filled with the rocks commonly known as blue-ground have been more thoroughly explored than any other of these channels, because some of them contain diamond in sufficient quantity to repay mining, as at Kimberley, also near Pretoria, and at several places in the Orange Free State. It has been shown that these ultra-basic rocks, kimberlites, comprise basaltic and micaceous varieties, both of which may contain diamond, and that this mineral was almost certainly a component of the magma from which they were derived



by differentiation at great depths. Xenoliths of eclogite in kimberlites and kimberlite tuffs and breccias have been found with diamond in them, and they have been regarded as the source of the diamond and accidentally associated with kimberlite; but the evidence is now very strongly in favour of these being cognate xenoliths formed at depth in the magma which also gave rise to kimberlite. The opinion of Carvill Lewis that kimberlite may have been a melilite-basalt has not been substantiated, but the occurrence of that rock in several pipes in Sutherland, at Spiegel River, and in Namaqualand, where it also contains nepheline, points to some connexion between them.



Beds of *Tertiary* age are known in the Union, but little information concerning them is at present available. The best known are those belonging to the Alexandria formation, and there are inshore marine beds occurring at various heights up to some 1,300 feet above sea-level on the south and east coasts. The oldest beds are now farthest from the sea, and the presence in them of *Orthophragmina* indicates their Eocene age. The fossils from the country behind Algoa Bay are of Mio-Pliocene age according to Bullen-Newton. On the west coast, in Namaqualand and to the south, there is a series of fossiliferous raised beaches extending to over 100 feet above the sea and containing shells of extinct and living species which indicate the former presence of warmer inshore water than is now found on that coast. Diamonds occur in some of these raised beaches. None of the early Miocene species described by Böhm and Weisfermel from near Bogenfels north of the Orange river have been found in the Union, though the fossil cephalopod, *Aturia*, a genus which occurs at Bogenfels, has been dredged off the Cape Province. Late Tertiary or early Pleistocene deposits occur on the coast of Zululand, containing the remains of extinct kinds of hippopotamus, buffalo, buck, and elephant. Inland deposits of Tertiary age are indicated by the occurrence of mastodont remains in the high-level gravels of the Vaal river near Barkly West. Extinct species of buck and buffalo from the Modder river, and a horse from the south-west coast, are probably Pleistocene.

In the Knysna district some valleys in the Table Mountain series are filled in with sands and lignites loosely consolidated; they contain wood and leaves of genera and, in some instances, species still living in the surrounding forest. In certain bays between the Kei and Bashee rivers there are lignite-bearing beds with nodules and veins of pyrites; the plant remains in them have not yet been determined. The age of these beds has not been ascertained, but they are perhaps as old as the Tertiary. Gravels far above the level of the modern rivers, and the superficial deposits cemented by lime or silica, which are widely spread within the Union, perhaps date back to Tertiary times, but proof of age is lacking. The calcareous tufas are extensively developed in the Kalahari region, the Transvaal, and Griqualand West, and less widely in the Karroo and the coast belt. The discovery of the bones of an extinct anthropoid ape in the tufa of the Kaap Rand, near Taungs, and in limestones of Sterkfontein and Kromdraai, near Krugersdorp, points to these deposits being of considerable antiquity. The siliceous deposits, which are closely connected with those cemented by hydrated iron oxides in the Folded Belt of the Cape, are most conspicuous in the country below the great escarpment, though they have not been noticed in the central part of the Great Karroo. They also occur in the Kalahari, Bechuanaland, and Griqualand West.

The gravels which are the site of the diamond-diggings in the Transvaal, Griqualand West, and Aliwal North lie at various levels from that of the modern river-beds to 400 feet above them, and often many miles from their banks. The chief diggings are in the Vaal and Harts river gravels and in gravels in the Lichtenburg and Potchefstroom districts. In a few instances diamond gravels have been found far from the rivers, on the top of the Kaap plateau. The deposition of these highest gravels probably dates back to Tertiary times.

The thick deposits of sand in the Kalahari and Bushmanland are of great age, though they are being formed to-day. The evidence from Bushmanland that dinosaurs lived there at the time when the valleys cut in the granite began to be filled with wash from the neighbourhood, and that since then the climate has allowed the steady levelling up and down of the inequalities of the surface, affords an indication that the development of the features characteristic of that region began in pre-Tertiary times.

C.—GEOLOGICAL STRUCTURE.

The dominating feature in the structure of South Africa is the great syncline of Karroo beds stretching 820 miles from Karroo Poort in the Ceres district north-eastwards to Carolina in the Transvaal, with a width of 340 miles between Kimberley and the Transkei coast. On the north-western side of this irregularly oval area the base of the Karroo rocks maintains an altitude of between 2,500 and 5,500 feet above the sea, and the beds dip at very low angles towards the basin. On the south, between the Tanqua Karroo and the Keiskama, they are folded in a general east-west direction, and their dip carries them deep under the Karroo region. The shore cuts the edge of the syncline from the Qualana to the St. Johns river, and where the base of the system emerges near the latter it is no longer markedly folded but, striking through Natal, is affected by faults. The belt of pre-Karroo rocks trending north-north-east through Natal is on the axis of a low, broad anticline much faulted in its eastern limb, which in Swaziland merges in the easterly dipping beds of the Lebombo. Outliers of Karroo beds north of the syncline prove that they once stretched far beyond the borders of the Union, and that over the northern region there has been no earth-movement of the mountain-building kind since the commencement of Karroo times. The arc-shaped ranges of Griqualand West and Bechuanaland, the Langeberg and Kuruman hills, were undergoing denudation then, and the same statement holds good for much of the Transvaal, where the east-north-easterly trend of the structural lines in the Low Veld of the north and the east-west syncline of the Witwatersrand are of pre-Transvaal date. The broad anticline trending east-north-east from the south-west of the Province to the West Rand is of pre-Karroo and post-Transvaal age, but it is superimposed upon older and more pronounced disturbances along approximately the same lines; and the marked arrangement of the hills about the great Bushveld intrusion, of which the longer axis is directed a little north of east, is a feature of pre-Karroo times. In the Transvaal the trend-lines of pre-Karroo age are chiefly in an east-north-east direction, and this strike, due to forces acting perpendicularly to that direction, was repeated at long intervals. In the north and west of the Cape Province the pre-Karroo movements were nearly at right angles to this, and produced north or north-north-west trends, and they were followed by the later or post-Karroo movements of the Cedarberg region. In the south the east-west trend of the pre-Cape folds was repeated in the late or post-Karroo movements, which gave rise to the southern mountain ranges. South and west of the Karroo the ranges with northerly trend in the west, and easterly trend in the south, are made of the Cape formation, and are due to the folding of the crust in late Karroo times by forces which tended to overfold and thrust the strata towards the Karroo region, and the folds were produced where the Cape and lower Karroo sediments were very thick. The axes of the southern folds are inclined eastwards, so that the folded belt is traversed slantingwise by the coast between Cape St. Francis and the Keiskama.

The whole form of the basin, as it is now seen, has been determined by earth movements, which gave rise to the dip of the beds, and by denudation removing the folded or nearly flat beds from part of the area formerly covered by them. The thickest deposits of the Karroo system were probably much nearer the southern limit than the northern, but whether the southern limit is within 100 miles of the original limit of deposition is unknown. The outliers in Worcester, Robertson, and Uitenhage prove that the rocks once extended south of the mountain ranges, and there is no trace of an unconformity at the base of the Karroo beds till they reappear on the coast of Pondoland.

The outliers of Cretaceous beds within the folded belt, probably remnants of a formerly continuous cover of those beds stretching westwards from Algoa Bay at least as far as Worcester, are faulted down on the south side of fractures parallel to the trend of the pre-existent southern folds. The great Worcester fault, the first of these important features to be discovered, was for long thought to be of pre-Cretaceous date, but it has been shown that it, like the eastern faults of the same group, was of post-Uitenhage age.

The main lines of the structure of Namaqualand were determined in pre-Karroo times; but post-Karroo faulting is proved by the outliers of Dwyka in the valley of the Orange river, not far above sea-level. The flat country of the Kalahari and Bushmanland, now divided by the Orange river, is essentially a pre-Karroo plain, diversified by a few isolated hills, and is being stripped of its cover of Karroo beds, except in the large areas where the accumulating sand protects the underlying rocks from denudation.

The great escarpment which plays such an important part in the geography of the Union commences as a definite feature in the slope of the Woodbush, and from there southwards to the Carolina district the base of the Transvaal system forms the uppermost and steepest part; in that district the Karroo beds come in, and higher and higher beds of the system take part in the face of the escarpment as it is followed southwards into Natal, where the Quathlamba is a rampart of volcanic beds at the top of the Karroo formation; in the Native Territory of the Cape Province the same conditions hold, but the volcanic beds disappear in the Stormberg, and westwards of that region the escarpment is capped by lower and lower beds, until in Van Rhynsdorp the Nama system and still older rocks alone take part in its structure. There is thus a broadly symmetrical character in the escarpment on the two sides of the continent, and the asymmetrical feature due to the presence of the volcanic beds in the east has some relation to the submergence of the south-eastern edge of the Karroo basin in the same quarter. Since the escarpment lies, broadly speaking, parallel to the coast, it is natural to look for a connecting link between the two features. The greatest departure from this correspondence is in the south, where the Cape ranges intervene and the coast-line projects in conformity with the curve of the ranges in the Ceres district (syntaxis of the Zwartberg and Cedarberg folds), and does not follow closely the blunter sweep of the escarpment. In trying to find an explanation of the existence of the escarpment, it is most important to bear in mind the very great age of the interior of South Africa as a land-surface; from the Cape ranges northwards to Central Africa the country has probably been exposed to the air since Triassic times, and for a further period stretching back to Devonian times the sea is not known to have encroached upon it. How far the Devonian sea advanced north of the latitude of Calvinia is unknown. It appears from the present state of our knowledge that the escarpment marks the limit of headward erosion of the rivers draining the coast-belt and the Great Karroo, and that the prominence of the feature for long distances is due to the agents of erosion having encountered resistant horizontal or gently inclined strata or intrusive sheets of dolerite, one or other of which is a prominent feature of the greater part of the margin of the interior plateau. In Namaqualand these flat strata have in part been removed by denudation, but large remnants exist in the Steinkopf plateau, and again in the fragments near Nieuwerust. This view entails the great age of the coast-line as a whole, though it is often held that the straight or smooth shape of the coast indicates a recent origin through faulting. The fact, however, that inshore deposits of various dates from early Cretaceous to late Tertiary and recent age are preserved is in harmony with the supposed great age of the coast as a whole, and no great faults parallel to the coast have yet been found. The great faults with downthrow on the ocean side, those flanking the southern ranges, are cut by the coast slantingwise. The enlargement of the area outside the escarpment in the Cape Province is evidently connected with the folding which took place in the region of the very thick deposits of the Cape and Karroo periods, and that in the north-east of the Union is connected with the extensive rise in level of the sub-continent in post-Cretaceous times.

D.—SYSTEMS OF GEOLOGICAL FORMATION.

	Stratified Formations.	Maximum Thickness.	Igneous Intrusions.	Earth Movements.
	Recent and sub-recent sands, gravels, tufas, ironstones, and surface quartzites; raised beaches	Over 300 ft.		Uplift. Warping of older terraces and depression of part of coast region with production of lagoons.
Cainozoic.	Marine inshore beds of Alexandria, Addo, Bredasdorp, Zululand and the West Coast; lignites of Knysna	Small		Uplifts.
			Volcanic pipes and fissures of kimberlite and melilite - nepheline basalts	

D.—SYSTEMS OF GEOLOGICAL FORMATION—(*continued*).

		Stratified Formations.	Maximum Thickness.	Igneous Intrusions.	Earth Movements.
Mesozoic.	Cretaceous System.	Needs Camp beds (Danian) Umzamba, Itweba and Peroniceras beds (Senonian) Munyuane beds (Turonian ?) Skoenberg beds (Cenomanian) Umsinene beds (Albian) Ndabana beds (Aptian)	Thick.		Encroachments of sea on south-east and east coasts, and faults in region of southern ranges (post-Neocomian).
		Uitenhage series (Neocomian): Sundays River beds; marine clays and limestones Wood beds; sands, and clays Enon beds; sands, clays, and conglomerates			Encroachment of sea over part of area where southern ranges exist.
	Karroo System.	Stormberg Series (Triassic and Rhaetic): Drakensberg volcanic beds; basaltic and andesitic lavas and tuffs of Basutoland area, Springbok Flats and Lebombo rhyolites	4,000 ft.	Intrusion of basic rocks throughout the Union	Emergence of land over Karroo region and denudation throughout Jurassic. Formation of Lebombo monocline and other broad folds in Karroo area.
		Cave sandstone of Basutoland area and Bushveld sandstone of Transvaal	800 ft.		
		Red beds; sandstones and shales	1,600 ft.		
		Molteno beds; sandstones, shales, and conglomerates with thin coals	2,000 ft.		
		Beaufort series (Permian and Trias): Burghersdorp beds; shales and sandstones	3,000 ft.		Mountain building in the south of Cape Province during later Beaufort times.
		Middle Beaufort beds; sandstones and shales	1,000 ft.		
		Lower Beaufort beds; shales and sandstones	7,000 ft.	•	Sinking of Karroo geosyncline.
		Ecca series; shales and sandstones; coal in Transvaal and Natal	6,200 ft.		•
		Dwyka series: Upper shales	800 ft.		
		Dwyka series: Tillite	1,400 ft.	•	
		Dwyka series: Lower shales	1,000 ft.		
Palæozoic.	Cape System.	Witteberg series; quartzites and shales	2,500 ft.		Uplift and denudation north of 32° S.; continuous deposition to the south.
		Bokkeveld series; shales and sandstones; marine (Devonian) fossils in lower half	2,500 ft.		
		Table Mountain series; quartzitic sandstones and shales with a tillite band	5,000 ft.		
	Waterberg System.	Waterberg series in the East; sandstones, shales, and conglomerates; correlated with	5,000 ft.		Mountain building in Griqualand West, etc.
		Matsap series of Griqualand West, etc., quartzites, conglomerates, lavas, and tuffs; correlated with	Over 7,000 ft.		
		Klipheuvel beds of Western Province, conglomerates, quartzites and shales, and	5,000 ft.		
		Gamagara series of Postmasburg...	1,200 ft.		
			• •	Intrusion of Bushveld Complex	Updoming in Vredefort area and accompanying folding and faulting in S. Transvaal.
				Intrusion of younger granites of the Cape Province	Mountain building in south and west of Cape Province.

D.—SYSTEMS OF GEOLOGICAL FORMATION—(*continued*).

	Stratified Formations.	Maximum Thickness.	Igneous Intrusions.	Earth Movements.
Transvaal-Nama System.	Rooiberg series; quartzites, shales and lavas; correlated with French Hoek beds in the south; conglomerates, quartzites and lavas	2,000 ft.		Long period of depression in the north, west, and south of the Union.
	Pretoria series; quartzites, shales, and lavas, possibly correlated with the Ibiquas beds of the west, mainly shales	10,000 ft.		
	Campbell Rand or Dolomite series; dolomite, shales; correlated with Malmesbury beds of Cape Province; quartzites, shales and limestones; and Cango beds of Oudtshoorn; conglomerates, slates, quartzites, limestones	3,500 ft.		
	Black Reef series; quartzites, shales and conglomerates; correlated with	2,550 ft.		
	Nieuwerust beds of Cape Province; arkose and quartzite	500 ft.		Minor uplifts in Griqualand West, Bechuanaland, and Transvaal; folding in Namaqualand.
Ventersdorp System.	Pniel series; lavas, tuffs, conglomerates, shales, and quartzites	5,000 ft.		
	Kulp series; lavas, limestones, cherts, sandstone, arkose			
	Zoetlief series; acid lavas, shales, quartzites, conglomerates			
	Possibly belonging to this system are:—			
	Koras series of Kenhardt and Gordonia; lavas, sandstones, conglomerates; and			
	Grootderm series			
	Numees series			
	Kaigas series			
	Stinkfontein series			
Witwatersrand System. Upper.	Kimberley-Elsburg series; quartzites, conglomerates and shales	12,000 ft.	Intrusion of basic dykes in S. Transvaal	Uplift in the Witwatersrand area. Beginning of folding and fracturing in Klerksdorp, which continued into Ventersdorp times.
	Main-Bird series; quartzite, grits, conglomerates, shales and lavas	3,000 ft.		
Witwatersrand System. Lower.	Jeppestown series; shales, quartzites and lava	3,500 ft.		
	Government Reef series; quartzites, shales, ferruginous beds, grits, conglomerates, tillite	6,220 ft.		
	Hospital Hill series; quartzites, shales, ferruginous beds, arkoses	4,815 ft.		
	Dominion Reef series; mainly lavas with basal arkose, quartzites and conglomerates	3,000 ft.		
			Intrusion of granite and of ultra basic and basic rocks into Pongola beds	Folding of Pongola beds.
			Intrusion of Palabora Complex?	
Pongola System.	Upper Pongola (Mozaan) series; shales and quartzites, with thin conglomerates and ferruginous beds	16,000 ft.		
	Lower Pongola (Insuzi) series; lavas, quartzites and phyllites	20,000 ft.		
			Intrusion of ultra-basic rocks and granite into Mfongosi and Nondweni series (pre-Insuzi) and intrusion of granite and gneiss of north and west of Cape Province, Transvaal and Natal (perhaps post-Pongola)	Mountain building in west and north (perhaps post-Pongola) and in east (pre-Insuzi).

D.—SYSTEMS OF GEOLOGICAL FORMATION—(*continued*).

	Stratified Formations.	Maximum Thickness.	Igneous Intrusions.	Earth Movements.
Swaziland System (Intercorrelation unknown.) Khels series.	*Cape and Bechuanaland.* Kraaipan series and Abels Kop beds; banded ironstones, limestones and volcanic beds			
	Wilgenhoutdrift beds: sedimentary and volcanic rocks			
	Kaalen beds; quartzites and schists			
	Marydale beds; sedimentary and volcanic beds		Intrusion of Jamestown basic rocks and Rooiwater igneous complex	
	Transvaal and Natal. Rocks of the Murchison range; sediments and lavas above the quartz porphyries			
	Nkandhla series; schists and quartzites, and			
	Moodies series; quartzites, shales, lavas and conglomerates			
	Fig Tree series; variegated shales, banded ironstones, greywackes, and grits	25,000 ft.		
	Nondweni and Mfongosi series; volcanic beds, cherty quartzite, phyllites, ironstone and limestones, and			
	Onverwacht series; volcanic beds, cherts and basic schists. Possibly quartz porphyries of the Murchison range			
	Tugela series; basic schists and metamorphosed sediments and volcanics			
	Schists of Northern Transvaal			

E.—BIBLIOGRAPHY.

A complete list of the publications of the Geological Survey can be obtained from the Government Printer, Pretoria. Geological Survey Memoirs 18, 22, 25, 27, and 30 on the bibliography of South African geology up to the end of 1935, and the subject index dealing with twenty volumes of the Transactions and Proceedings of the Geological Society of South Africa covering the period 1911 to 1930, may also be referred to.

In addition, attention may be drawn to the following papers issued during 1937 and 1938 and the latter part of 1936. For other recent papers reference should be made to the previous volume of this *Year Book*:—

§ 5. Climate and Meteorology.

1. **Topography of the Union.**—Both the weather and the climate of the Union of South Africa are profoundly affected by the elevation of its land surface, which rises in four plateaux as follows:—

(1) The Coast Plateau or Coast Flats, having an average elevation of 500 to 600 feet and varying in width from about thirty miles in South West Africa to three or four or even less in the south-east of the Cape Province.

(2) The Southern or Little Karroo, a narrow table-land about fifteen miles in width, crossed from east to west by a series of parallel mountain ranges separated by narrow valleys; its average elevation is about 1,500 feet, and it is separated from the coast belt by the Langeberg and Outeniqua ranges.

(3) The Central or Great Karroo has an average elevation of between 2,000 and 3,000 feet. It is bounded on the west by the Cedarberg and Bokkeveld and on the south by the Witteberg, Zwartberg, and Zuurberg ranges.

(4) The Northern Karroo or High Veld is the innermost plateau, comprising the greater part of the remainder of the Cape Province, the Orange Free State, and the major portion of the Transvaal. It is encircled on the west, south, and east by the mountains of Namaqualand, the Roggeveld, Winterberg, Stormberg, and Drakensberg ranges, constituting the great escarpment. This plain has an elevation of about 4,000 feet, rising in the north-eastern portions to 6,000 feet in the Transvaal High Veld, and 10,000 to 11,000 feet in Basutoland, and forms the main watershed of the country.

Outside of these areas lie the Transvaal low veld, Swaziland, Natal, Zululand, and the eastern uplands of the Cape Province, the native territories of the Transkei, the mountainous south-west, including the Cape Peninsula, and the west coastal area.

The greater portion of South Africa has an elevation of over 3,000 feet, whilst the area below 1,500 feet consists merely of a narrow fringe around the coast.

The most obvious effect of this formation is found in the temperature, which will be referred to later.

2. **Pressure.**—The climate of South Africa is mainly dependent on the secular movements of the sub-tropical high pressure belt. In January, owing to the heating of the land mass, this belt of high pressure is broken up into two separate anticyclones:—The Indian Ocean anticyclone, having its centre near Latitude 37° S., and the Atlantic anticyclone, having its centre near Latitude 35° S. and with the northern boundary of its eastern extremity just touching the west and south Cape coasts. Over the land, pressure is highest in northern Natal and eastern Transvaal with the equatorial tongue of low pressure extending southwards to the centre of the Cape (Chart 1). This distribution of pressure on sea and land favours an influx of warm moist air on the eastern side of the Union during the summer months, and, since the area of the land is small in comparison with the vast surrounding ocean, about 86 per cent. of the land surface receives its rains during that period.

In July the sub-tropical high-pressure belt stretches right across the Continent in the vicinity of the 30th parallel. A prominent anticyclone is now established over the innermost plateau with its axis lying north-east and south-west. *The circumpolar-low*, with its western circulation, also moves northward with its northern boundary touching the south coast (Chart 2). The influx of moisture on the eastern side of the Union is thus excluded during the winter months, and rains are confined to the west, south-west, and south of the Cape Province, now brought within the influence of the cyclones of the Southern Ocean.

From the table on the following page giving the mean monthly pressures (corrected for gravity and reduced to 32° F.) it is seen that the barometric pressure over the greater part of the country lies between twenty-five and twenty-six inches, falling to just over twenty-four inches at the more elevated stations such as Belfast and Johannesburg. The surface density of the air in the interior is consequently low, the mean value at Johannesburg during the hottest part of the day in January being 958 grams per cubic metre as against 1,157 grams per cubic metre under similar conditions at Durban.

3. **Atmospheric Circulation.**—The pressure diagrams included in this article show the general flow of the air over the country near the ground and this conforms more or less with the sea-level isobars. In summer an extensive moisture-laden south-easterly current of air from the Indian Ocean passes over the land. This is gradually deflected by the run of the isobars over the northern Transvaal and southern Rhodesia towards the east and eventually sweeps southwards over the western and central Transvaal, Free State, Bechuanaland, and north-east Cape as a northerly current, whilst along the south, south-east, and east coasts an opposing current sets in from the south-east, penetrating the land only in the south and west of the Cape Province. Part of the northerly flow of air in the centre of the Union moves westwards over the central Cape, and ultimately flows out over the south Atlantic as a south-easterly wind, and part moves over the north-east Cape and south Natal towards the Indian Ocean as a north-westerly wind, passing over a landward current from the south-east, which, in those regions, does not extend far inland.

In winter there is still a slight landward movement of the surface air on the east coast; over the Transvaal and Orange Free State little actual displacement of the air takes place, whilst over the remainder of the Union a very extensive current sets in from the north-west, replacing in parts, such as the south-east Cape, the summer movement from the opposite direction; the general movement of the air is now seawards, excepting in the south-west and south Cape, where moisture is imported by the north-westerly flow of air from the Atlantic Ocean, bringing rain to these areas.

MEAN MONTHLY PRESSURES REDUCED TO 32°F. AND TO STANDARD GRAVITY.

4. **Upper Air Circulation.**—Reference should be made to *Year Book* No. 14 and to previous issues for a description of air movements at higher levels, as determined by pilot balloon observations. Charts showing the wind frequencies and velocities at heights ranging from sea-level up to 10,000 feet are there presented, together with a brief discussion of the upper air circulation.

5. **Hot Winds.**—All along the coastal districts, and inland near the foot of the plateau, hot, dry winds are experienced. These "berg winds" as they are called along the south coast, cause at times a practical inversion of the seasons, the maximum temperatures late in autumn or in early spring frequently being higher than those recorded in summer. They may blow for only a few hours or may continue for two or three days in succession, producing a feeling of great depression; when the wind changes its direction it brings cool, cloudy weather and occasionally rain follows, bringing a welcome feeling of relief. As these winds owe the greater part of their heat to being warmed by compression in passing from the elevated table-land in the interior to the low coastal lands, the directions from which they blow, being more or less at right angles to the coastline, depend on the direction in which the escarpment and mountain ranges extend. Thus, they are easterly along the west coast from Walvis Bay southwards, northerly to north-westerly (very seldom north-easterly) along the south coast and the southern interior Cape, and north-westerly along the Transkei and Natal coastal belt. The hot winds appear to be most frequent on the west coast (Port Nolloth) and least frequent on the east coast (Durban).

6. **Duststorms.**—A disagreeable feature of the South African climate is the occurrence of duststorms, mainly over the drier inland parts of the country. They are most frequent during the second half of the year, usually starting in August, when the high pressure over the interior is beginning to break up; they are also frequently associated with the forefront of advancing thunderstorms which are common over the summer rainfall area. The fine dust, raised by a strong squally wind, rises as an enormous, thick cloud, almost blotting out the landscape, and penetrating everywhere. Fortunately, these duststorms seldom last for any length of time and are usually followed by rain.

7. **Temperature.**—The most noteworthy effect of the plateau structure of South Africa is the remarkable uniformity of mean annual temperature over the greater part of the country. Thus Cape Agulhas, the most southerly point in Latitude 34° 50′ S. and 62 feet above mean sea-level, has a mean yearly temperature of 61·3° F., whilst Johannesburg (Joubert Park), in Latitude 26° 11′ S. at an elevation of 5,735 feet, has an annual mean of 60·4° F., a difference of less than 1 degree.

A factor having a profound influence on the South African climate, particularly along the coastal belt, is the presence of ocean currents. The west coast of South Africa is washed by the cold Benguela current, and its influence on the coastal climate is accentuated by the upwelling of cold waters along the coast under the influence of the prevailing off-shore south-east winds. This current produces important climatic effects, which are in evidence from Capetown almost to the Equator. The coldest water is found in the vicinity of Port Nolloth. The result of this is a cool and foggy seaboard, much of which is at the same time an almost rainless desert. Another consequence of the presence of this current is a decrease of temperature from south to north instead of an increase, the mean annual temperatures of Capetown (33° 56′ S.), Blaauwbergstrand (33° 47′ S.), Port Nolloth (29° 14′ S.), and Walvis Bay (22° 56′ S.) being 62·5, 60·2, 57·6, and 61·1° F. respectively. Conditions on the east coast form a striking contrast to those on the west coast. Owing to the warm Mozambique current which flows down the east coast, there is a more rapid decrease in temperature as we go southwards than would be expected on the basis of difference in latitude only. The mean annual temperatures of Durban (31° 00′ S.), Port St. Johns (31° 38′ S.), East London (33° 00′ S.), Port Elizabeth (33° 58′ S.), and Cape Agulhas (34° 50′ S.) are 69·8, 67·5, 64·9, 63·7, and 61·3° F. respectively. The contrast between the east and west coasts is most striking, if it is borne in mind that Port Nolloth and Durban lie in nearly the same latitude and yet show a difference of no less than 12·2° F. in their mean annual temperatures.

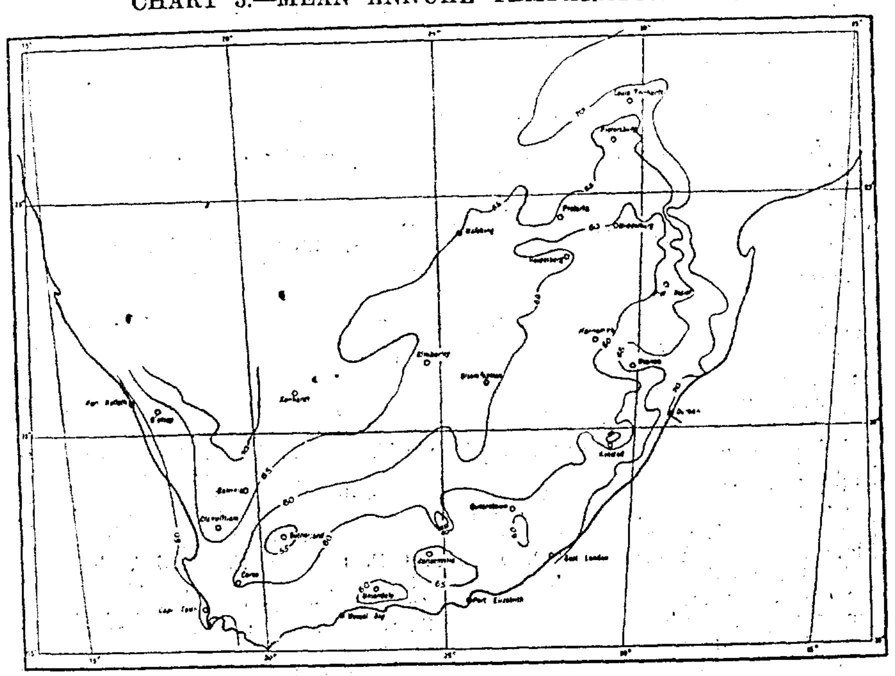

Chart 3 shows the mean annual isothermals at 5° intervals. Although the isothermal lines at first sight appear to be rather irregular, certain distinctive features stand out prominently. Thus by far the greater part of the Union is included between the 55° and 65° lines, and it is interesting to

follow the course of the latter isothermal. Starting just north of East London, it runs north more or less parallel to the coast until Lydenburg in the eastern Transvaal is reached; here it swings around to the west, passing north of Pretoria. Near Mafeking its direction changes once more, and it now runs in a south-westerly direction, until in the neighbourhood of Clanwilliam it turns sharply to the north. The only parts of South Africa which have mean annual temperatures above 65° F. are therefore: The narrow strip along the east coast, which includes the low-lying parts of Natal; the low veld of eastern Transvaal; the greater part of northern Transvaal; and a considerable part of the north-western Cape. Annual temperatures of 70° and over are confined to the coastal fringe of north Natal, the low veld in the eastern Transvaal, the valley of the Limpopo, and the lowlands along the Orange River between the 18th and 20th meridiars.

The 60° F. isothermal includes the whole of the eastern escarpment of the innermost plateau, whilst temperatures below 55° F. are encountered only in a limited area around Sutherland. Similar low temperatures, however, will also be found on the mountains, as is indicated by the mean annual temperature of 54·7° F. at Disa Head on Table Mountain.

The warmest place thus far noted in the Union is Goodhouse, near the mouth of the Orange River. Here, at an elevation of 648 feet above sea-level, the mean annual temperature is 73·8° F. This is followed closely by Komatipoort on the border of Portuguese East Africa, where, at an altitude of 486 feet, the mean temperature amounts to 73·4° F.

CHART 3.—MEAN ANNUAL TEMPERATURE °F.

The coldest station is Sutherland, in the Roggeveld Mountains, at a height of 4,785 feet, where the yearly mean is 54·1° F. The next coldest is Grootvallei, to the east of Graaff-Reinet, at a height of 4,700 feet in the Tandjes Berge. There is thus a difference of 19·7° between the mean annual temperature of the known warmest and coldest parts of the country.

Further information regarding temperatures may be obtained from the table on the following page, which gives mean monthly maximum (M) and minimum (m) temperatures for stations of continuous standing for 15 years and over.

MEAN MAXIMUM (M) AND MEAN MINIMUM (m) TEMPERATURES IN °F FOR STATIONS OF CONTINUOUS STANDING FOR 15 YEARS AND OVER.

8. **Annual Range of Mean Temperatures.**—Notwithstanding the remarkable uniformity in the yearly temperatures, a considerable diversity exists in the mean annual range, i.e. in the temperature difference between the hottest and coldest months. Seeing that the seasons in the southern hemisphere occur in the inverse order to those of the northern hemisphere, it follows that the coolest month occurs in either June, July, or August, and the warmest month in December, January, or February.

So far as has been ascertained up to the present, the annual range of temperature is least (6·2° F.) at Port Nolloth on the west coast, where with a mean annual temperature of 57·6° F., February, the warmest month, has a temperature of 60·6° F., whilst August, the coolest month, has a mean of 54·4° F. Contrasted with this Prieska, in the northern Karroo, altitude 3,030 feet, has a mean annual temperature of 66·0° F., January, the warmest month, showing a temperature of 81·4° F., and July, the coldest, 49·1° F., giving a range of 32·3° F.

Between these two extremes of mean annual range intermediate values are found, as a general rule, increasing from the coast inland, being greater, however, in valleys than on mountains. With the exception of the central and northern parts of the Cape Province, where the largest ranges (25°-32°) are to be found, the mean annual range over the greater part of the Union is not much different from that of Great Britain, where the annual range varies from 14·0° at Lerwick in the Shetland Islands to 24·2° F. at Camden Square, London.

9. **Mean Diurnal Range.**—On a plateau the loss of heat at night by radiation, owing to the dry and rarified state of the atmosphere, is much more pronounced than at sea-level; hence the difference between the day and night temperatures is greater on a plateau than at lower altitudes.

Since South Africa consists mainly of high table-land, it is to be expected that high values of the daily temperature range will be encountered, and this is indeed the case, the daily range for the greater part of the country being 25°-30° F. The daily range at Valencia, Ireland, is only slightly more than 10° F. Warm days and cool nights are therefore characteristic of the South African climate as a whole. Here, again, the coastal belt forms an exception, the diurnal range being on the average in the neighbourhood of 15° F.

Owing to the relatively greater intensity of insolation during the summer months, it is to be expected that the diurnal range would be greater in summer than in winter, and this is the case over the western parts of the Union. The eastern parts, however, receive their rain in summer, and since cloudiness of the sky causes cooler days and warmer nights, the diurnal range is greater in winter than in summer.

10. **Extremes of Temperature.**—Maximum temperatures of 90° to 95° are a fairly common occurrence at most stations during the summer months, whilst temperatures of 100° F. or over are frequently experienced along the Orange River valley and in the Transvaal Low Veld. Such high temperatures occasionally also occur at valley stations near the coast, at the foot of the plateaux, and even at stations with altitudes of 4,000 to 4,500 feet in the more northerly portions of the country.

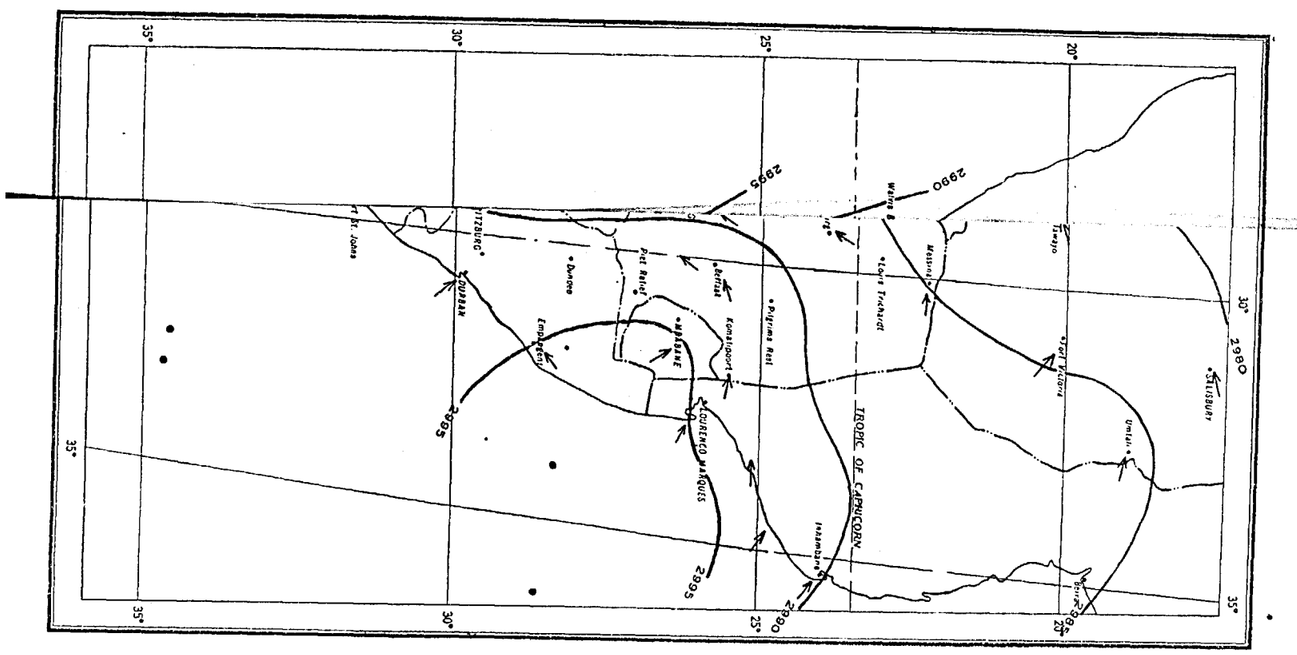
Air temperatures below freezing point, occasionally as low as 15° to 10° F., are liable to occur at inland stations between April and October, but more particularly between the end of May and the middle of September.

The extremes recorded thus far are a maximum of 125° F. at Main, in Tembuland, during the prevalence of a hot wind on the 28th January, 1903, and the unusually low minimum of 5·6° F. at Carolina in the Transvaal on the 23rd July, 1926, during a cold spell, when temperatures below 20° F. were recorded in all provinces, and below 10° F. at places in the Transvaal, Orange Free State, and interior of Natal.

11. **Frosts.**—Frosts may occur over the interior at any time of the year, but outside the period April to October their occurrence is exceptional. Frosts of sufficient severity to freeze water are rare along the coastal belt, and when they occur at night in the interior the ice so formed usually disappears during

The frequency of frost depends a good deal on whether the station is situated in a valley or on a hill or slope, and in the latter event whether on the north or south side. The average number of days per year, on which the temperature of the air four feet above the surface of the ground falls to 32° or below, is sixty-four at Murraysburg, sixty-three near Aliwal North, fifty-two at Bloemfontein, thirty-three at Queenstown, twenty-eight at Kenhardt, twenty-six at Zeerust, and eleven at Pretoria. The period during which such temperatures may occur is greatest (about six months) in the Sutherland, Fraserburg, Carnarvon, Prieska, Hay, Hopetown, Britstown, Philipstown, Colesberg, Albert, Aliwal North, Barkly East, Elliot, Wodehouse, Steynsburg, and Middelburg districts of the Cape, in the Rouxville, Smithfield, Wepener, Thaba 'Nchu, Bloemfontein, and Edenburg districts of the Orange Free State, in the Standerton district of the Transvaal, and in the Utrecht district of Natal. The areas of non-occurrence are the north, north-east, and east of the Transvaal, Zululand, and a narrow belt along the Natal and Cape coasts. Between the temperature of the air at four feet above and that within an inch or two of the ground a difference of ten to twelve degrees is quite common, so that ground frosts are much more frequent and extend over a longer period.

12. **Humidity.**—The relative humidity during the year (at 8.30 a.m. S.A.S.T.) varies from 91 per cent. at Cape Agulhas to 52 per cent. in the Carnarvon division of the Cape. From about 85 per cent. along the west coast there is a decrease to 80 per cent. along the south-west, south, and south-east coasts, then a further fall to 75 per cent. on the Natal coast. From the coast there is a decrease, rapid in the west and south but slow in the east, to between 50 per cent. and 60 per cent. in the interior of the Cape Province. The values lie between 75 per cent. and 70 per cent. over most of Natal and the north and east of the Transvaal and north-east of the Orange Free State, and between 70 per cent. and 65 per cent. over the remainder of the two last-named provinces.



Relative humidity is at its maximum between June and August in the Cape Province west of longitude 23°, and generally in March over the rest of the country; and at a minimum in June on the east and south-east coast, between August and September over the remainder of the country east of longitude 23°, and between October and January west of that meridian.

13. **Rainfall.**—The mean annual precipitation over the Union is about 17½ inches. About three-quarters of the country has a fall of less than 25 inches, and a quarter above that amount. As might be expected from the distribution of pressure, the amount generally decreases from east to west, as the result of the summer rainfall, with an increase in the extreme south-west and south in consequence of the superimposition of the winter rainfall. Natal is the best watered province as a whole. The two coloured maps show the average annual rainfall and the seasonal distribution of the rainfall of the Union.

The area over which the fall during the summer months exceeds that of the winter months is about 406,000 square miles; over about 16,000 square miles the precipitation is fairly equally distributed throughout the year, and about 50,000 square miles receive most during the winter months. The winter-rainfall area is a comparatively narrow belt parallel to the west coast, and the zone of non-seasonal rainfall lies along the south coast. Quantities exceeding 70 inches occur over limited areas; thus, in the north of the Transvaal, in the Zoutpansberg district, the Woodbush Forest station shows an average of 71·97 inches falling on 138 days of the year; occasionally a fall exceeding 100 inches has been recorded in a year. Another outstanding wet area is Evelyn Valley, in the Amatola Mountains in the south-east of the Cape Province, where the average annual fall is 70·20 inches on 150 days of the year, the fall also exceeding 100 inches in some years. By far the wettest area known up to the present time, however, comprises the mountainous districts of Berg River Hoek and Wemmer's Hoek near Paarl, in the south-west of the Cape Province. A few years' observations taken here showed that several stations in this area have annual quantities in the neighbourhood of 200 inches. St. Michael's, on Table Mountain, shows an average of 74·75 inches per annum. Omitting Walvis Bay, where the average annual rainfall is about three-quarters of an inch, the driest station is Port Nolloth, on the west coast, south of the Orange River mouth. There the average for 35 years is only 2·17 inches on 17 days. The driest areas with less than five inches per annum are found along the west coast in the Cape Province, in the western basin of the Orange River, and in the neighbourhood of Van Wyks Vlei and the Gouph.

Considerable variations in annual rainfall are met with at places within a few miles of each other. This is particularly the case in the Cape Peninsula. Thus, the Fire Station in Capetown has an average fall of 25·64 inches, whilst Platteklip, about 1½ miles to the south-east, also in the Capetown valley, on the lower slopes of Table Mountain, has an average yearly total of 45·12 inches, almost double the former amount. Again, Robben Island, in Table Bay, has an annual average of 18·24 inches; Camps Bay, at the foot of Table Mountain on its western side, 24·25 inches; St. Michael's, on Table Mountain (approximate altitude, 3,050 feet), 74·75 inches; and Newlands (Montebello), on the eastern side of Table Mountain, 66·07 inches. The horizontal distance through the mountain between Camps Bay and Newlands is about six miles. The great variation in rainfall over the Cape Peninsula is due to the influence of the Table Mountain range to the west, the rain being largely orographic. Again, George, on the south coast at the foot of the Outeniqua Mountains, has an average of 34·36 inches, whilst Ezeljagt, about 12 miles distant in a north-easterly direction, but on the north side of the same range, has only 14·98 inches or about two-fifths of the amount at George. The village of Balfour, Cape, at an elevation of 2,100 feet, has an average of 28·08 inches, whilst on the top of the Katberg, at a height of 4,490 feet, the average is 53·23 inches.

Further information concerning the distribution may be obtained from Table I in paragraph 13, which gives records for stations of continuous standing for 20 years or over.

As an indication of the great annual fluctuation in the amount of precipitation at the same place, Table II, which contains the yearly records for ten stations since 1866, may be referred to.

It will be noticed that at all these stations the highest annual amount is more than double the lowest.

14. **Thunderstorms.**—The greater part of the precipitation over the summer-rainfall area occurs with thunderstorms, which reach their maximum seasonal frequency in February and their maximum diurnal frequency at about 4 p.m. The greatest number of these storms occurs in Kaffraria and over the north-east of the Orange Free State, the Transvaal High Veld, and the highlands of the Waterberg. From these areas there is a decrease in all directions, the relative frequency falling to about half on the Natal coast and to less than a tenth on the west coast. Precipitation associated with thunderstorms occurs at Johannesburg, on the Transvaal High Veld, on 61 days of the year, which is about two-thirds of the average number of rain days there.

15. **Hail.**—Although all aspects of the origin and growth of hailstones have not as yet been fully explained, it is generally accepted that a hailstone, once it is formed, grows in size owing to the freezing of super-cooled water-drops on its surface. Hail thus originates at great heights, where the temperature of the atmosphere is considerably below freezing point.

An essential condition for the formation of large hailstones is the presence of violent up-currents of air to keep the hailstone in suspension during its period of formation. In thunderstorms such strong vertical currents are always present, as direct observations have proved and as is also evidenced by the towering shape of thunder clouds; and we find that hail often accompanies thunderstorms. Thus hail is most prevalent in those parts which are subject to frequent thunderstorms. The average number of occasions on which hail occurs in some part of the Transvaal is one hundred and six per annum.

Hailstones occasionally reach large dimensions and may cause considerable damage to fruit and crops and even kill small stock and penetrate galvanized-iron roofing. Stones about 4 oz. in weight fell during one period of a destructive storm which passed over Pretoria on Christmas Day, 1923. Fortunately the path pursued by storms such as this is usually narrow and limited in extent.

16. **Intensity of Rainfall.**—Over the areas most subject to thunderstorms the intensity of the daily rainfall is naturally great. Over the central Witwatersrand, for instance, no less than 57 per cent. of the total amount falls in daily quantities of over half-an-inch, which may be compared with 25 per cent. under similar conditions at Greenwich, England. With the exception of the west coast, all parts of the country are liable to falls of two inches in one day, and a fall of ten inches has been exceeded on a number of occasions along the east and south-east coast. Great intensities over short periods may

also be experienced, and over the eastern and central Transvaal three-and-a-half to four inches may fall in one hour. Floods, frequently causing extensive damage in low-lying regions and towns, may result from these intense falls, and also from rains continued for two or three days over wide areas and aggregating in places over 20 inches. These occur more particularly in the south and south-east of the Cape Province.

17. **Snow.**—Falls of snow are comparatively infrequent and are usually confined to the mountainous districts. Snow is rarely met with on the coastal flats, as may be appreciated from the statement that it has been seen even on Table Mountain (Capetown) on only seven occasions in fifty-seven years; and falls were recorded on the High Veld (Transvaal) in only eleven out of fifty-seven years. This form of precipitation, however, is much more frequent on the mountains in the east of the Cape Province, where it may be seen at least three or four times each winter.

18. **Evaporation.**—Over the whole country evaporation from free water surfaces exceeds the mean annual rainfall. At Johannesburg, Capetown (Molteno Reservoir), and Dunbrody (near Port Elizabeth), the mean annual amounts are 74·67, 78·57, and 72·19 inches respectively, as against rainfalls of 30·73, 33·25, and 14·88 inches.

19. **Sunshine.**—The average number of hours of sunshine per day throughout the year is 9·4 at Kimberley, 8·7 at Johannesburg, and 7·5 at Capetown, whereas the periods at London, Bucharest, and New York respectively are 3·8, 6·4, and 6·9 hours. The largest proportion of possible sunshine during the summer months occurs at Capetown, and during the winter months at Kimberley, the former being situated in the winter-rainfall area and the latter in the summer-rainfall area.

20. **Fog and Mist.**—Fog is defined as obscurity in the surface layers of the atmosphere caused by particles of condensed moisture or by solid particles held in suspension in the air. The term "fog" is usually limited to a condition of atmospheric obscurity in which objects at a distance of one kilometre (±1,000 yards) are not visible. When the visibility exceeds one kilometre but is less than two kilometres, the obscuration is called "mist" or "haze" according to whether it is produced by condensed water particles or by solid matter such as dust or smoke. Fog is formed when the air near the earth's surface is cooled to below its dew point.

Radiation Fogs.—On clear, calm nights, after a rainy spell, fogs frequently form in valleys over the interior of South Africa. The cooling and subsequent condensation of the moisture in the lower layers is due to radiation from the earth's surface. Under these conditions a temperature inversion, i.e. an increase of temperature with height, usually takes place near the surface which effectively prevents the air from rising. Normally such fogs reach their maximum intensity about an hour after sunrise and usually disperse shortly afterwards. As a rule they are more frequent in autumn and winter than during the other seasons. These fogs do not occur during cloudy nights because the air near the surface seldom cools sufficiently; neither do they occur during moderate to fresh winds, since the winds through turbulence prevent the formation of large cold lakes of air.

Advection Fogs are mostly due to the slow movement of relatively warm air over a surface colder than itself, which causes the air in contact with the surface to be cooled below its dewpoint. Along the coast these fogs may occur in any month, but are most frequent in late summer and autumn (January to May), except along the northern part of the west coast as at Walvis Bay, where they are most frequent in autumn and winter (April to August).

The mean number of days on which fogs occur is greatest on the west and decreases rapidly towards the south-west and south coasts, reaching a minimum in the east. For example the mean number of foggy days in March is 10 at Port Nolloth, 6 at Cape Point, 3 at Port Elizabeth, and only 0·4 (or 4 in 10 years) at Durban.

In the mist belt of Natal fogs appear to be most frequent in autumn and early spring as the relatively warm moist air from the Indian Ocean passes over the cold and undulating land surface.

21. **Meteorological Service.**—An adequate modern building, erected on the premises of the University of Pretoria and taken into use on 1st July, 1938, serves as the headquarters of the Union's Meteorological Service, which is a branch of the Irrigation Department. There are also ten sub-stations at different centres in the Union, where permanent officers are stationed principally for the purpose of supplying weather information to aircraft.

The work of the meteorological service falls naturally into three main divisions: the climatological, forecasting, and aviation divisions.

Monthly climatological reports are received at the head office from a network of 4,176 stations spread over the Union, Basutoland, Swaziland, and the Bechuanaland Protectorate. Of these, 3,827 are equipped with a rain-gauge only, 349 with a rain-gauge and thermometers, and 115 with a rain-gauge, thermometers, and a barometer. Some of the barometric stations are further equipped with automatic instruments, and continuous records of wind direction and speed are obtained at fourteen, of precipitation at twelve, and of pressure, temperature, humidity, and sunshine at fifty-four stations. Annual reports containing monthly values of rainfall, temperature, and other weather elements have been published since 1926. Many requests for special climatological data are received at head office, and in the course of a year a great deal of such information is supplied to other meteorological services, to government departments, farmers, engineers, industrialists, officers of health, students, etc. A great deal of this service is rendered free of charge, but in the case of private individuals and commercial and industrial concerns a small fee is charged for the labour of extracting the required information from the records.

The main task of the forecasting division is to collect daily telegraphic weather reports from a suitable network of stations distributed over the southern part of Africa and from ships off the coasts, and to disseminate this information, together with forecasts which are based on these reports. With the aid of a teleprinter service, weather messages are received in the central office from 95 stations in the Union, 4 in South West Africa, 17 in the Rhodesias, 21 in Portuguese East Africa, 17 in Madagascar, 5 in Bechuanaland, and from ships at sea. All of these stations send in daily reports based on readings taken at 8.30 a.m. and some of them send a second daily report of observations taken at noon. Forecasts of expected weather, together with rainfall and temperature data from a number of selected stations, are supplied daily to certain public bodies, the press, and the Broadcasting Corporation, and thus the weather information is disseminated to the public at large. Local weather forecasts for the Cape Peninsula are issued from the meteorological sub-station at Wingfield Airport, Capetown. For the benefit of neighbouring meteorological services, shipping, and aviation, similar information is broadcast in code daily from Roberts Heights, Capetown, and Durban. Monthly weather reports and daily weather maps are printed by means of a duplicating machine in the forecasting division, and these are issued to all meteorological offices in the world, and to other interested parties in South Africa and abroad.

The task of the aviation division is to supply the pilots of South African Airways and of other companies operating in the Union with such weather information as is essential for the maintenance of an efficient and regular flying service. For this purpose a number of aerological stations have been erected and are at present in operation at Pietersburg, Germiston, Bloemfontein, Kimberley, Beaufort West, Matroosberg, Capetown, Mossel Bay, Port Elizabeth, and Durban. Lay observers at intermediate points along the different air routes transmit weather messages at appointed times, and whenever a pilot prepares to leave an aerodrome the local meteorological officer provides him with a statement of weather conditions along the proposed route. At the aerological stations the direction and velocity of the wind up to levels of ten or fifteen thousand feet are determined by means of pilot balloons, and this information is also supplied to pilots to enable them to select the most favourable flying heights. During actual flight pilots are also kept informed by means of wireless as to the weather conditions they are likely to encounter. Every aerological station is also a first-order meteorological station, which means that it is equipped with a full set of self-recording instruments by means of which a complete record is kept of the different meteorological elements.

§ 6. The Vegetation of South Africa.

A comprehensive article on the Vegetation of South Africa, contributed by Dr. I. B. Pole Evans, Director of the Botanical Survey of the Union, appeared in Nos. 18 and 19 of the *Official Year Book*. The article has had to be omitted reluctantly for reasons of space, but the map which accompanied it is reproduced in this issue.

The article has also been printed in pamphlet form under the title "A Vegetation Map of South Africa", Botanical Survey of South Africa, Memoir No. 15, and is obtainable from the Government Printer, Pretoria.

§ 7. Fauna and Game Preservation.

1. **General.**—The preservation of game is a function of the Provincial Administrations, and particulars are given below of legislation relating to game in the various provinces.

2. **Cape of Good Hope.**—The preservation of game is regulated by Act No. 11 of 1909, those parts of the First Schedule to Ordinance No. 19 of 1930 entitled "Game", Ordinances Nos. 10 of 1911, 14 of 1916, 17 of 1918, 7 of 1920, 13 of 1932, 24 of 1934, 11 of 1935, 10 of 1936, 14 of 1937, and 11 of 1938. Game is fully protected in the province and the close seasons, which vary as to period according to area, occur generally within the interval 1st July to 30th April. Any person desirous of shooting or capturing royal or big game [except such as may be exempted under Act No. 11 of 1909 and section (2) under the heading of "Game" in the Schedule to Ordinance No. 19 of 1930] is required to obtain an ordinary game licence, a royal game licence, and a special permit from the Administrator. The following species of royal game are found in certain areas:—Elephant, eland, zebra, buffalo, bontebok, blesbok, gemsbok, hartebeest, kudu, rietbok, oribi, wildebeest, and klipspringer. Permits to shoot or capture elephants, eland, bontebok, or zebras, are issued only under the most exceptional circumstances. The undermentioned birds and animals are specially included as game with respect to certain districts:—Namaqua partridge, wild duck and geese, snipe, coot, flamingo, springbok (actually migrating), ant-bear (*Orycteropus capensis*), rock rabbit, and tree-climbing bushbaby. The Zulu hare or Kol-haas and the Cape hare or Vlak-haas are exempted from the operation of the game laws throughout the Cape Province. The shooting of game is prohibited in the game reserves situated in the province. Under Ordinance No. 13 of 1932, the hunting of game of any description with the aid of artificial light is prohibited, while, by Ordinance No. 24 of 1934, the hunting and shooting of game from motor cars is prohibited. Under Ordinance No. 10 of 1936 the Administrator may grant special permits to owners of land, under certain conditions, to shoot game, not being royal game, during the close season or periods of protection, and Ordinance No. 11 of 1938 provides that no elephant tusk weighing less than twenty-two pounds shall be exported.

3. **Natal.**—An Ordinance to amend the laws relating to game was passed in 1912 and practically consolidated all previous legislation on the subject. The game was divided into three classes, viz., ordinary or small game, which can be shot during the open season (1st May to 15th August) on payment of the sum of £1; specially protected game, in respect of which varying fees for the different animals are payable; and royal game, which may not be destroyed at any time, except for scientific or certain public purposes on special permit. Special provision is made by the Ordinance for the destruction by owners or occupiers of land of ordinary or specially protected game during the close season, where damage to standing crops, plants, or trees can be proved, and for the killing by residents in Zululand of a limited number of game for food, more especially during times of scarcity owing to failure of crops.

In the game reserves no hunting is allowed, and the Administrator is empowered to establish or abolish such reserves from time to time.

The fines for contraventions of the *Game Ordinance* range from £20 to £200, with the alternative of periods of imprisonment extending from one month to two years.

Owing to the existence of the tsetse fly or Nagana disease in cattle, the provisions of the *Game Ordinance* have been relaxed considerably in Zululand since the year 1915.

The animals classed as royal game comprise the white and black rhinoceros, elephant, hippopotamus, hartebeest, roan antelope, tsessebe, blesbok, springbok, lion, common fallow deer, and females of the eland, as well as the crested crane and the Stanley crane, the klipspringer and the oribi, and various species in certain districts.

4. **Transvaal.**—Game legislation restricting and regulating the destruction of wild animals and birds is contained in Ordinance No. 11 of 1935.

The "big" game of the Transvaal Province comprises the larger and rarer animals and birds, including roan and sable antelope, gemsbok, tsessebe, kudu, hartebeest, zebra, wildebeest, and ostrich. The elephant, rhinoceros, hippopotamus, buffalo, and eland are now practically unknown in the Transvaal except in the Kruger National Park.

Lions and leopards are not classed as game, but are regarded as vermin. Ordinary game consists of all Transvaal varieties of the smaller and more common kinds of buck and hares and also of the following birds:—All Transvaal varieties of pheasant or francolin, partridge, sandgrouse, guineafowl, wild duck, and wild goose. No game may be shot or hunted by anyone without a game licence, except certain prescribed species by the owner or the lessee of a farm on which the game is pursued, and of course "open" varieties only may be shot. Big game may not, under severe penalties, be shot or hunted without a special big game permit issuable by magistrates of districts, and in the case of Pretoria district by the Receiver of Revenue, Pretoria. A game licence or permit entitles the holder to shoot game during the open season only, which, under normal circumstances, for small game extends from the 1st May to the 15th August and for big game, from the 15th June to the 15th August. The "open season" is, however, determined by proclamation. A game licence may restrict the holder to destroying only a given number of one or both sexes of any kind of game. The destruction of any particular kind of game may be restricted throughout the province or in any particular district for a given period. The possession of a game licence does not give the right to pursue or destroy any game so protected, neither may the owner nor the lessee of a farm destroy on his farm game so protected. Certain areas are proclaimed as game reserves, in which shooting and hunting are entirely prohibited.

There are seven game reserves in the Province: the Pretoria Reserve, the Kruger Reserve, the Pafuri Game Reserve, the Rietvallei Game Reserve, the Rust-der-Winter Game Reserve, the Marico Bosveld Game Reserve, and the Honnet Game Reserve.

5. **Orange Free State.**—Ordinance No. 6 of 1937, which took effect on the 23rd July, 1937, consolidated and amended the laws with reference to the protection of the several kinds of wild animals commonly known as *buck*, comprehending the whole antelope species and including the wildebeest or gnu, the several kinds of birds, not being domesticated, known as ostrich, paauw, korhaan (bustard), guineafowl, partridge, pheasant, dikkop, goose, plover, lapwing, snipe, duck, coot, and other water fowl, and any other wild animals or birds, which the Administrator may, from time to time, by proclamation declare to be game. The period commencing on the first day of August and ending the last day of March in the succeeding year is the close season for game. The Administrator is also empowered to prohibit the hunting of any kind of game or of any other wild animals or birds for any period not exceeding three years in any district of the province. Under this provision, two species of rhebuck (rooi and vaal), which were in danger of becoming extinct, were protected throughout the province for a period of three years, as from March, 1936.

No person, whether an owner of land or not, is allowed to hunt at any time any locust bird or, without the written permission of the Administrator, any hartebeest, kudu, or eland, or any other animal or bird which the Administrator may at any time by proclamation declare to be royal game.

§ 8. National Parks and Game Reserves.*

1. **Preservation of Indigenous Fauna and Flora.**—With a view to ensuring the preservation of the wild fauna characteristic of the Union, many varieties of which, in spite of their immense numbers when the first European pioneers pushed their way into the interior, are in imminent danger of becoming extinct, the Government in the 1926 session of Parliament passed a measure to provide for the merging of the Transvaal or Shingwedzi Game Reserve and the Sabie Reserve into one continuous area to be known as the *Kruger National Park*. In addition, the Act (No. 56 of 1926) provides for the establishment of national parks by Governor-General's proclamation in the *Gazette*, and the purposes of the measure are defined as being for the propagation, protection, and preservation of wild animal life, wild vegetation, and objects of geological, ethnological, historical, or other scientific interest for the benefit, advantage, and enjoyment of the inhabitants of the Union. Provision is made in the Act for a board of trustees, consisting of ten members to be appointed by the Governor-General, whose duties are the control and management of the parks. The address of the Board of Trustees is P.O. Box 787, Pretoria.

In the 1931 session of Parliament, the Legislature authorized the constitution of three areas in the Cape of Good Hope Province to be set aside under the provisions of Act No. 56 of 1926 as national parks. These three areas were

* Compiled principally from data supplied by the National Parks Board of Trustees.

designated the Kalahari National Park, the Addo Elephant National Park, and the Bontebok National Park. In 1937 the Mountain Zebra National Park, also in the Cape Province, was constituted. The following paragraphs give, in brief, some indication as to the size and situation of these reserves and the particular animals to be found in them, but except in the Kruger National Park, and in a less degree the Addo Elephant Reserve and the Natal game reserves, no provision whatever has as yet been made for the convenience of visitors.

Within the last few years more attention has been paid to the question of the preservation of the natural flora and fauna of the country, and the matter has been taken up with greater decision. Societies having this for their object have come into being in various parts of the Union, and are doing good work in deliberating with the Government, the Provincial Administrations, and local bodies, and assisting them in establishing areas where the indigenous fauna and flora can be preserved and maintained against extinction.

In 1934 a further important step to ensure the preservation of the indigenous fauna of the country was taken by Parliament; and Act No. 22, designed for the protection of wild birds, was passed. Under the provisions of this Act it is a punishable offence to capture any wild birds for sale, purchase, or barter, unless a formal permit for the purpose has been granted. Permits for the capture, sale, or purchase of wild birds may be granted only by an officer designated by appointment in writing by the Minister of Lands, and the permit, in addition to giving the name of the person to whom it is issued, contains restrictions as to the locality where the birds are to be captured, the method of capture, the species, and the number of each species which may be captured and disposed of, as well as the period of validity of the permit. A permit for the sale of wild birds must contain the names of the parties to the intended transaction.

The Act should go a long way towards preventing the indiscriminate capture and sale of wild birds, which has been responsible for a heavy mortality in the past.

2. **Cape Province Reserves.**—(i) *Kalahari National Park.*—This reserve, situated approximately 250 miles north of Upington, between the Oup and the Nosop River, is in the district of Gordonia, Cape Province, and borders on South West Africa. From Upington the road is passable for traffic, and within the park, especially along the river beds, the sand of which is level and firm, some of the roads present little difficulty, but it will no doubt be some years before the roads can be made suitable for tourist traffic. The climate is very hot in summer, but in winter the days are genial and temperate, with cold nights and frosts towards morning. The park is an area of sand-dunes, with open flats covered with shrubs and dotted with acacia trees. Boreholes have been sunk, windmills have been erected, and reservoirs and dams are being constructed, in order to ensure a permanent and plentiful supply of drinking water. The district is naturally arid, and in the absence of water the animals, and even human beings when necessity arises, subsist on the "Tsama melon".

The reserve contains thousands of gemsbok, a beautiful species of buck, in their natural home, as well as large numbers of springbok, wildebeest, and red-hartebeest, and a few eland and kudu. Wild ostriches, steenbok, and duiker are also found, besides lion, leopard, hyena, cheetah, jackal, and wild dog; birds of numerous varieties are found. A ranger is stationed in the park, which measures approximately 1,130,414 morgen (2,386,429 acres) in extent.

(ii) *Addo Elephant National Park.*—This reserve is situated in the Cape Province about 35 miles north of Port Elizabeth on the main road to the northern provinces. Part of the park adjoins the Sundays River Settlements. Additional land has recently been granted by the Government, and some 1,000 morgen of privately-owned land has also been acquired by purchase. The extent of the park is now approximately 8,000 morgen (16,932 acres), 90 per cent. of which is covered with beautiful evergreen bush, with an average height of from 10 to 12 feet. The variety of bush and plant life is extraordinary, and the area has rightly been termed a botanist's paradise. As the bush is nearly all edible it makes an ideal area in which to preserve the survivors of the well-known Addo elephants. The herd consists of twenty-five animals and includes some particularly fine specimens. These elephants are slightly smaller in stature and carry less ivory than the equatorial elephant, and very few of the cows have tusks.

In addition to the elephants there are some fairly big thriving herds of Cape buffalo, which are the only ones in the Cape Province. Small game, such as bushbuck, duiker, grysbok, and bushpig, are plentiful throughout the park. An interesting addition is a small herd of kudu, which voluntarily took up its abode in the park two years ago.

The north-eastern corner of the park has open land, and it is possible that in the future game suitable for this type of veld may be introduced.

As a result of the financial assistance rendered by the public and certain local bodies it has been possible to make experiments in connexion with feeding the elephants in open spaces, in order to establish reasonable chances of visitors seeing them more easily, and it has been proved that the elephants can be attracted in this way to any desired area. One regular feeding place is only 200 yards from the resident ranger's quarters.

The park is open to visitors from June to October.

(iii) *Bontebok National Park.*—This park is situated 17 miles south of the village of Bredasdorp, and is distant approximately 100 miles in an easterly direction from Capetown. Bredasdorp is situated not far from the main road from Capetown, via Caledon, to Mossel Bay and Knysna, but can also be reached readily by rail.

The area of the park is about 850 morgen (1,800 acres); it is properly fenced, and windmills make satisfactory provision for a permanent water supply. The area consists of excellent mixed veld, which provides ample grazing, sufficient to meet the needs of any reasonable increase of animals during the next twenty years. One hundred bontebok are confined in the park. This species of buck, which in appearance closely resembles the blesbok, is almost extinct, and in addition to those in the park only one other herd totalling some 30 head, which has been carefully preserved for many years by some local families, is known to exist. A few rhebok, duiker, vlakbok, grysbok, and steenbok also find a habitat in the reserve.

The park may be visited by tourists during the period December to April.

(iv) *Mountain Zebra National Park.*—As a result of representations made regarding the rapidly dwindling numbers of mountain zebra in the Union, the Government in 1935 instituted inquiries and eventually secured options for the purchase of the farms where the zebra were still to be found. These areas are in the districts of Oudtshoorn and Cradock in the Cape of Good Hope Province. Finally the farm Babylons Toren in the Cradock district was selected as affording the zebra the most favourable conditions, and also on account of its accessibility. This area was constituted a National Park as from the 2nd July, 1937. The park is 1,675 morgen (3,545 acres) in extent and is well fenced and provided with windmills and jackal-proof camps. It is situated about 16 miles from Cradock on the Graaff-Reinet road. The area while predominantly mountainous has some mixed shrub veld.

Zebras are known to be slow breeders, but it is hoped that with absolute protection the herd on the farm, which consists of seven animals, will within a few years re-establish itself.

In addition rooi rhebuck, klipspringer, and duiker are found in the reserve. All species of game are protected in the reserve.

3. **Natal Province Reserves (including Zululand).**—There are six game reserves in Zululand and one in Natal proper. Subject to certain rules regarding the carrying of firearms, camp sites, fires, etc., visitors are allowed entry to these reserves on permit. Permits, which are free, may be obtained from the game conservators at Hluhluwe in the case of the Zululand Reserves, and at Rockmount, P.O., via Estcourt, Natal, in the case of the Giants Castle Reserve in Natal proper.

(i) The *Hluhluwe Game Reserve* embraces an area of approximately 40,000 acres. This reserve is situated within 30 miles of Mtubatuba railway station and is easily accessible by motor car, the road being good throughout, especially during the dry season. The reserve lies in a basin surrounded by bush-clad mountains, and the grazing and water supply are adequate throughout the year for all purposes. Nearly every species of game that has its habitat in Zululand may be seen in the reserve, including the white rhinoceros, black rhinoceros, kudu, inyala, impala, waterbuck, wildebeest, zebra, buffalo, and many varieties of small game animals and vermin.

The headquarters of the game conservator for Zululand are situated in the reserve, and every facility to view the animals is given on request. Rest huts with modern conveniences are available for visitors. The facilities include hot and cold water, electric light, bedding, etc., and the charges are very moderate. Full details are obtainable from the Game Conservator, P.O. Mtubatuba.

(ii) The *Umfolozi Game Reserve* covers an area of over 60,000 acres. As this reserve is bounded on two of its three sides by rivers, and on the remaining side by mountainous country, it is difficult of access by motor transport except in very dry seasons, when the rivers may be negotiable, but a motor car can be taken to within a short distance of the river boundaries at any time and the remaining distance performed on foot. The northern boundary is within 30 miles by road of the Mtubatuba railway station, and the southern boundary is within 40 miles by road of Empangeni railway station. The reserve is the main habitat of the white rhinoceros, but it also contains other species of large game, such as kudu, waterbuck, buffalo, wildebeest, and zebra, and also several species of smaller game animals. The area is heavily bushed in parts and, apart from the rivers on the boundaries, water is scarce.

Permits to enter the reserve are not being issued at present in view of the tsetse-fly investigation operations that are being carried out in the area.

(iii) The *Mkuzi Game Reserve* is approximately 62,000 acres in extent. This reserve is situated to the east of the Ubombo village and is bounded on the north by the Mkuzi River. It is connected by road, negotiable by motor transport, with the Mkuzi railway station, a distance of about 30 miles. Water and grazing are rather scarce during dry seasons, and generally speaking the country is densely bushed. The reserve contains black rhinoceros, inyala, impala, kudu, waterbuck, wildebeest, zebra, and numerous varieties of smaller game animals, including the Livingstone antelope. There are also a few lions, which are strictly preserved. The usual facilities for entry are provided.

(iv) The *Ndumu Game Reserve* comprises an area of 24,000 acres. This reserve is situated in the Ingwavuma district on the Portuguese border, is bounded on the north by the Usutu River, and is intersected by the Pongola River. It is accessible by motor car from Mkuzi railway station, via Ubombo and Ingwavuma. The reserve contains hippopotamus, inyala, and numerous small game; and a large fresh water lake has been stocked with black bass.

(v) The *St. Lucia Game Reserve* embraces the St. Lucia Lake and False Bay and the islands situated in these expanses of water. Although established originally for the protection of bird life, it also offers sanctuary to three or four large herds of hippopotami. The reserve, which is within an hour's run by motor car of Mtubatuba, affords some of the finest sea-fishing obtainable in the Union, and excellent facilities are available at the two hotels situated on the St. Lucia estuary. The development of this area as a tourist resort is proceeding apace, and it has become one of the most popular holiday resorts on the north coast of the Natal Province.

(vi) The *Richards Bay Game Reserve* was established solely for the purpose of giving protection to the numerous varieties of water-fowl that visit the area. The reserve offers excellent fishing, and visitors are well catered for by the local hotel. There is a good road from Empangeni, a distance of 18 miles.

(vii) The *Giants Castle Game Reserve* is the only government game reserve in Natal proper and is approximately 50,000 acres in extent. It is situated in the Drakensberg Mountains in the Estcourt magisterial district, and extends along the Drakensberg range and foothills from the Giants Castle peak to the Little Tugela watershed. It is accessible by motor car from Estcourt, Mooi River, or Nottingham Road railway station, the distance in each case being between 40 and 50 miles; but the road from the boundary of the reserve to the game conservator's residence is difficult to negotiate during wet seasons. There is no rest-house in the reserve, but certain hostels and farmers in the vicinity of the reserve cater for visitors, more especially in the Loskop and Mooi River areas. Excellent trout fishing may be had in the Bushman's River, which flows through the reserve. The usual conditions of entry apply to the reserve.

The grazing and the water supply are abundant. The country is mountainous, but there are extensive plateaux on the foothills within the reserve. There is much natural bush on the mountain slopes and in the ravines through which the mountain torrents run. The reserve contains over fifteen hundred head of eland, a few blesbok and red-hartebeest, and innumerable species of small game, birds, and vermin. The small game comprise oribi, klipspringer, grysbok, bushbuck, reedbuck, vaalrhebok, etc.

(viii) The *Natal National Park*, although not essentially a game reserve, is nevertheless of importance as a reserved area, and embraces some 10,000 acres of the finest scenery in the Drakensberg Mountains. Portion of the area was reserved by the old Colonial Government of Natal as a national park, and after Union the administration and development was entrusted to the Natal Provincial Council, which has added several farms to the area. The administration and control of the area is in the hands of an advisory committee, which is responsible to the Provincial Council for the development of the national park.

The protection and preservation of the natural flora and fauna of the Berg, of the Bushman paintings, and other interesting features is one of the prime functions of the committee, as well as opening up and giving access to outstanding vantage points, constructing and maintaining paths, roads, etc., and providing comfortable accommodation and cuisine.

The hostel, which is situated at the foot of the Berg, consists of a main building and about 60 rondavels, garages, stables, etc. The main building, which has recently been enlarged, includes the office, a bar, a dining-room and annexe, two lounges, reading-room accommodation, and an extensive verandah. All the buildings are of stone with thatched roofs; water-borne sewerage, hot and cold water, and electric light are installed. Tennis, bathing, and mountaineering are the chief forms of recreation enjoyed by visitors. There is also a postal and telephone service.

The national park is easily accessible by road, being situated 30 miles from Bergville and 65 from Ladysmith; from this latter point the railway administration has instituted a road motor service, the journey taking five hours. The journey from Durban by motor car takes from 6 to 7 hours, and the roads are generally in good condition.

(ix) *Private Game Reserves.*—In addition to the above, there are seven private game reserves in the Natal Province, which have been duly declared as such by the Administrator at the request of the owners. These private reserves are situated in the Ladysmith (3), New Hanover, Pietermaritzburg, Utrecht, and Ngotshe districts respectively.

4. **Transvaal Province Reserves.**—(i) *Kruger National Park.*—The Kruger Park had its origin in representations made during the republican régime to the late President Kruger for the preservation of various forms of the characteristic fauna of South Africa, and in 1898 an area in the Eastern Transvaal known as the Sabie Game Reserve was set aside for this purpose. After the Anglo-Boer War the area was reproclaimed a game reserve—it had been greatly depleted during the period of hostilities—and there was added a further area called the Shingwedzi. In these reserves existed the remnants of the various species of the rich and wonderful fauna of the Low Veld, some of which were in imminent danger of early extinction, and under the protection afforded them they are establishing themselves and breeding freely in natural surroundings. The park stretches from Komatipoort northwards along the Portuguese East Africa border to the Limpopo River, in the north-east corner of the Transvaal, a distance of about 200 miles; its breadth from east to west averages 40 miles and its area is approximately 8,000 square miles. The terrain consists of flat bush veld and varies from park-like areas to dense bush, with occasional hills and kopjes breaking the surface. The streams traversing the park are fringed with reed and palm, and their rich subtropical vegetation serves as a natural habitat for the animals.

The park is under the control of a warden and for administrative purposes is divided into nine sections, each in charge of a ranger. In any one of these sections may ordinarily be seen wildebeest, waterbuck, zebra, kudu, impala, giraffe, reedbuck, sable and roan antelope, warthog, ostrich, steenbok, duiker, tsessebe, bushbuck, rhebok, klipspringer, monkeys, and baboons. Birds of all varieties are plentiful throughout the reserve. Elephants are found in the north and hippo in all the large rivers, but more especially in the Crocodile River in the vicinity of Komatipoort, where in the pools about a mile distant from the railway station they can invariably be seen to advantage. The black rhinoceros, a species now nearing extinction in South Africa, is found in the neighbourhood of the Lower Sabie River. Buffalo inhabit most sections; while eland and inyala frequent only a limited area in the north.

Most animals can be seen from the roads traversing the park, and as they are comparatively tame can be observed at close quarters, but elephant, rhinoceros, and buffalo, all dangerous animals, frequent the more secluded areas. Lions, leopards, wild dogs, hyenas, jackals, civets, etc., are to be found in all sections, but except for the first-named they are not often seen owing to their nocturnal habits. Recently lions have been met with very frequently on most of the roads traversing the park: their attitude towards cars is one of mild interest.

The park is easily accessible to the public, either by rail or by road, but visitors are required to be in possession of permits, which may be obtained at a prescribed fee from the permit issuers stationed at any one of the park's six entrance gates. During the 1938 tourist season, no fewer than 9,891 motor cars entered the park, representing 38,014 visitors.

The popularity of the park may be adjudged from the fact that the rest camps during the July school holidays are usually crowded with family parties. Therefore persons who can make it convenient to visit the park at other times in the open season, which extends from the 31st May to the 31st October, are advised to do so. Tourists are allowed access to the Pretorius Kop section of the park throughout the year, and are permitted to sleep at the rest camp situated there.

A brochure describing the Union's national parks, which contains a guide to the Kruger National Park, is obtainable gratis from the Secretary, National Parks Board of Trustees, P.O. Box 787, Pretoria.

The roads within the park are good on the whole and can be easily traversed by motor traffic. Each year the trustees have opened up new areas, and much is being done to improve the existing routes. In 1933 a road was built northwards from Letaba to Punda Maria near the Limpopo, making available to visitors a new stretch of 120 miles of park. Inside the park a total of approximately 900 miles of motor roads has been constructed.

The droughts between 1930 and 1935, and particularly in the last mentioned year, were felt with particular severity over a considerable range of the national park, and the drying up of many of the drinking pools caused a migration of the animals towards the better watered areas, especially to those along the sides of the rivers flowing through the park. To avoid a recurrence of these unfavourable conditions the Government, several municipalities, and a number of private persons subscribed towards the sinking of boreholes and the erection of windmills in selected parts of the park. Altogether no fewer than 14 of these boreholes have been sunk and a similar number of windmills has been erected. These have proved to be by far the most efficient means of supplementing the water supply. It has, therefore, been decided to devote £10,000 to provide additional amenities for the game, and the programme includes amongst other items 12 more boreholes and 29 dams.

A map is included in this chapter, showing the situation of and approaches to the park.

(ii) The *Pretoria Reserve.*—This area, approximately 7,700 morgen in extent, which covers the townlands of Pretoria and the farm Groenkloof (Fountains) in the immediate neighbourhood of the city, has been proclaimed a reserve within which it is not lawful to hunt game of any kind without the special permission in writing of the Provincial Administration.

(iii) The *Pafuri Game Reserve.*—This area, established under the provisions of Administrator's Proclamation No. 43, dated the 1st July, 1933, extends from the junction of the Limpopo and Pafuri Rivers to the south-eastern beacon of Makulekse Location, thence north-westwards to the Pafuri River and onwards to its intersection with the Motale River; thence northwards in a straight line to the junction of the Bubye and Limpopo Rivers and eastwards along the Limpopo and the international boundary of the Transvaal and Rhodesia to the point of commencement above mentioned. Within this area it is not lawful to hunt game without the special permission of the Administrator of the Transvaal Province.

(iv) The *Rietvallei Game Reserve.*—This area, which is approximately 5,285 morgen in extent and covers portion of the farm Rietvallei in the immediate neighbourhood of Pretoria, has been proclaimed a game and bird sanctuary within which it is not lawful to hunt without the special permission in writing of the Administrator of the Transvaal Province.

(v) The *Rust-der-Winter Game Reserve.*—This area, established under the provisions of Administrator's Proclamation No. 189 dated the 20th December, 1937, comprises the farms Kliprand 344 and Kameelrivier 75, district Pretoria, and covers the area of the Rust-der-Winter irrigation scheme.

(vi) The *Marico Bosveld Game Reserve.*—This area, comprising the Marico Bosveld Irrigation Scheme, was established as a game reserve under Administrator's Proclamation No. 190 dated the 20th December, 1937. It is not lawful to hunt game within this area without the special permission in writing of the Administrator of the Transvaal.

(vii) The *Honnet Game Reserve.*—This area, which is approximately 2,220 morgen in extent and covers the farm Honnet No. 1190, situate in the district of Zoutpansberg, was established as a reserve under the provisions of Administrator's Proclamation No. 4, dated the 30th December, 1938. It is not lawful to hunt game therein without the special permission in writing of the Administrator.

5. **Orange Free State Reserves.**—(i) *Sommerville Estate Reserve.*—A game reserve has been established by the Provincial Administration on the Sommerville Estate in the Winburg district, which was handed over to the province for that purpose by the Department of Lands in December, 1924. The reserve is 11,464 morgen in extent, and the principal kinds of game at present found are blesbok and springbok. In 1936 the Administration was successful in obtaining and stocking the reserve with a number of black Wildebeest (White-tailed Gnu), with the result that a small herd consisting of six fully grown animals and a couple of calves is now established there. In order to supply living game to farmers and others interested for breeding and zoological purposes, a catching-kraal has been erected on the reserve. Game drives are held for this purpose periodically during open seasons, when it is considered that the stock on the reserve should be slightly decreased in numbers.

(ii) The *Franklin Game Reserve, Bloemfontein.*—For many years the area comprising Naval Hill was set aside as a park for indigenous flora, and in 1930 the logical step of making it a home for natural fauna also was taken. The area is enclosed by a dog-proof fence, with one entrance provided with a grid type opening on the motor road leading to the summit. The whole area of 479 acres is available for the animals, which enjoy complete liberty within this space. Among the animals to be found in the reserve are kudu, eland, blesbok, springbok, steenbok, klipspringer, duiker, waterbuck, zebra, ostriches, and camels. A motor road encircles the top of Naval Hill, and from it excellent panoramic views of the city and surrounding country can be obtained.

§ 9. Natural and Historical Monuments, Relics, and Antiques.

The promulgation of the *Bushman Relics Protection Act*, No. 22 of 1911, was the first step taken by the Government towards the protection and preservation of objects of natural, historical, and scientific interest and value. This Act prohibited the removal of Bushman relics from the Union without the written authority of the Minister of the Interior.

In 1923 the *Natural and Historical Monuments Act* was passed providing for the appointment of a permanent commission and the extension of protection in many directions. This Commission was also required to cause a register to be made of monuments in the Union, which in the opinion of the Commission ought to be preserved, and to act as trustee of any monument acquired or placed under its control.

Both these Acts were repealed by the *Natural and Historical Monuments, Relics and Antiques Act*, No. 4 of 1934, which embodies the provisions of the previous Acts and further extends the scope of the Commission, embracing a wide range of objects which the Minister of the Interior may from time to time on the recommendation of the Commission proclaim to be monuments. Any object or property so proclaimed may not be altered or alienated without the concurrence of the Commission. In the Act a *monument* is described as "any area of land having a distinctive or beautiful scenery or geological formation, any area of land containing a rare or distinctive or beautiful flora and fauna, any area of land containing objects of archaeological interest, any waterfall, cave, grotto, avenue of trees, old tree or old building and any other object (whether natural or constructed by man) of aesthetic, historical, archaeological or scientific value or interest".

In addition, and in similar fashion, the Minister may proclaim as a *relic* "any fossil of any kind, any drawing or painting on stone or petroglyph known or commonly believed to have been executed by Bushmen or other aborigines of South Africa, or by any people who inhabited or visited South

Africa before the advent of the Europeans, and any implement or ornament known or commonly believed to have been used by them", and as an *antique* "any movable object (not being a *monument* or *relic*) of aesthetic, historical, archaeological or scientific value or interest, the whole or more valuable portion whereof has for more than one hundred years been in any part of South Africa included in the Union, or which was made therein more than one hundred years before the publication of the notice in the *Gazette*". No such relic or antique may be removed from the Union without the written consent of the Commission (*vide* Government Notice No. 1571 of the 20th September, 1938).

It was found that the existing Act did not confer sufficiently wide powers on the Commission, and amending legislation was passed during the 1937 session of Parliament enabling the Commission to recommend the proclamation of groups of objects. Thus, for instance, all rock paintings in a defined area may be proclaimed without the necessity of specifically indicating each site in the area. Government Notice No. 1572 of 20th September, 1938, promulgates by-laws and regulations which ensure the employment of proper scientific methods in excavating anthropological or archaeological objects.

It is the policy of the Commission to foster and encourage public interest in objects and sites of historical and national value. In order to stimulate local interest the Commission meets regularly in various centres in the Union, when full publicity is given to its work and members avail themselves of opportunities of inspecting historic sites. In addition to its other activities, the Commission may take steps to protect historic objects by erecting suitable fences and warning notices. It may also mark such sites by the erection of its bronze badge and inscription plates. It is further empowered to act as trustee of any such object and accept, as trustee for the State, any object donated to or bequeathed to the State.

The Commission functions on a grant from the Government of £1,000 per annum, augmented by assistance from the public.

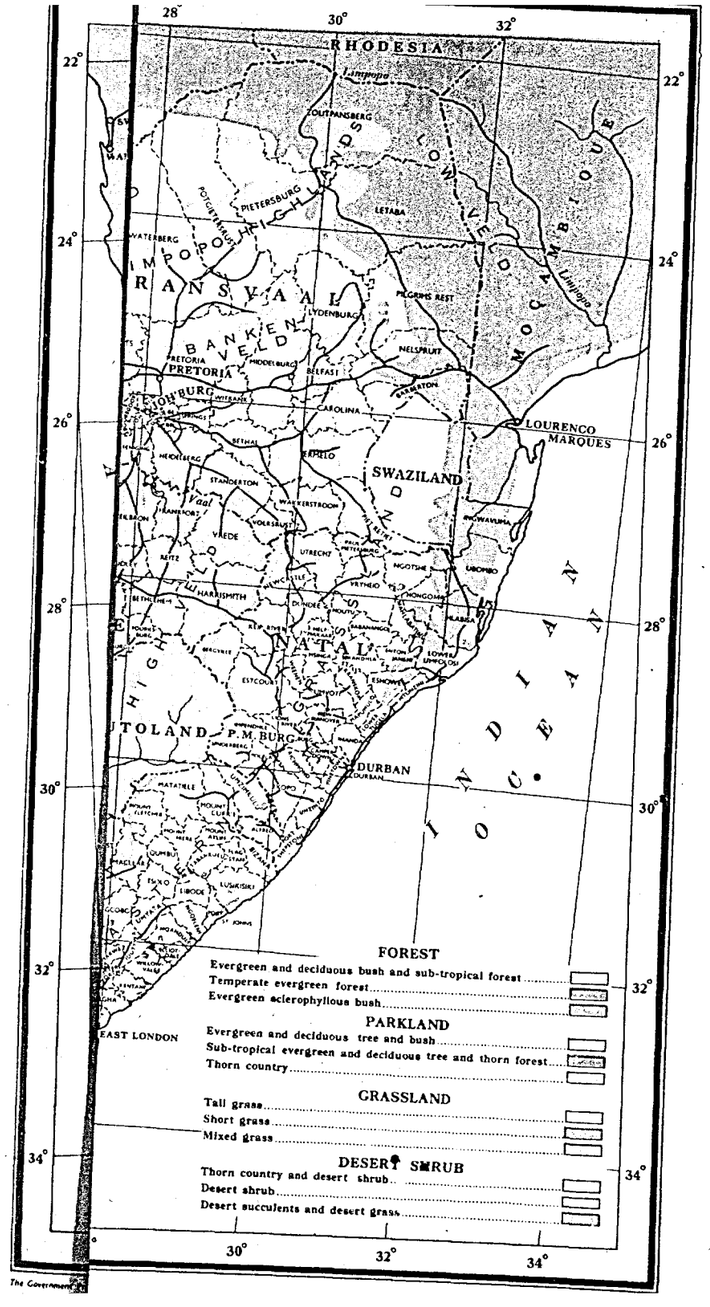
A list of objects proclaimed as monuments up to the end of 1937 appeared in *Official Year Book* No. 19.

The following objects were proclaimed during 1938:—

Cape of Good Hope—

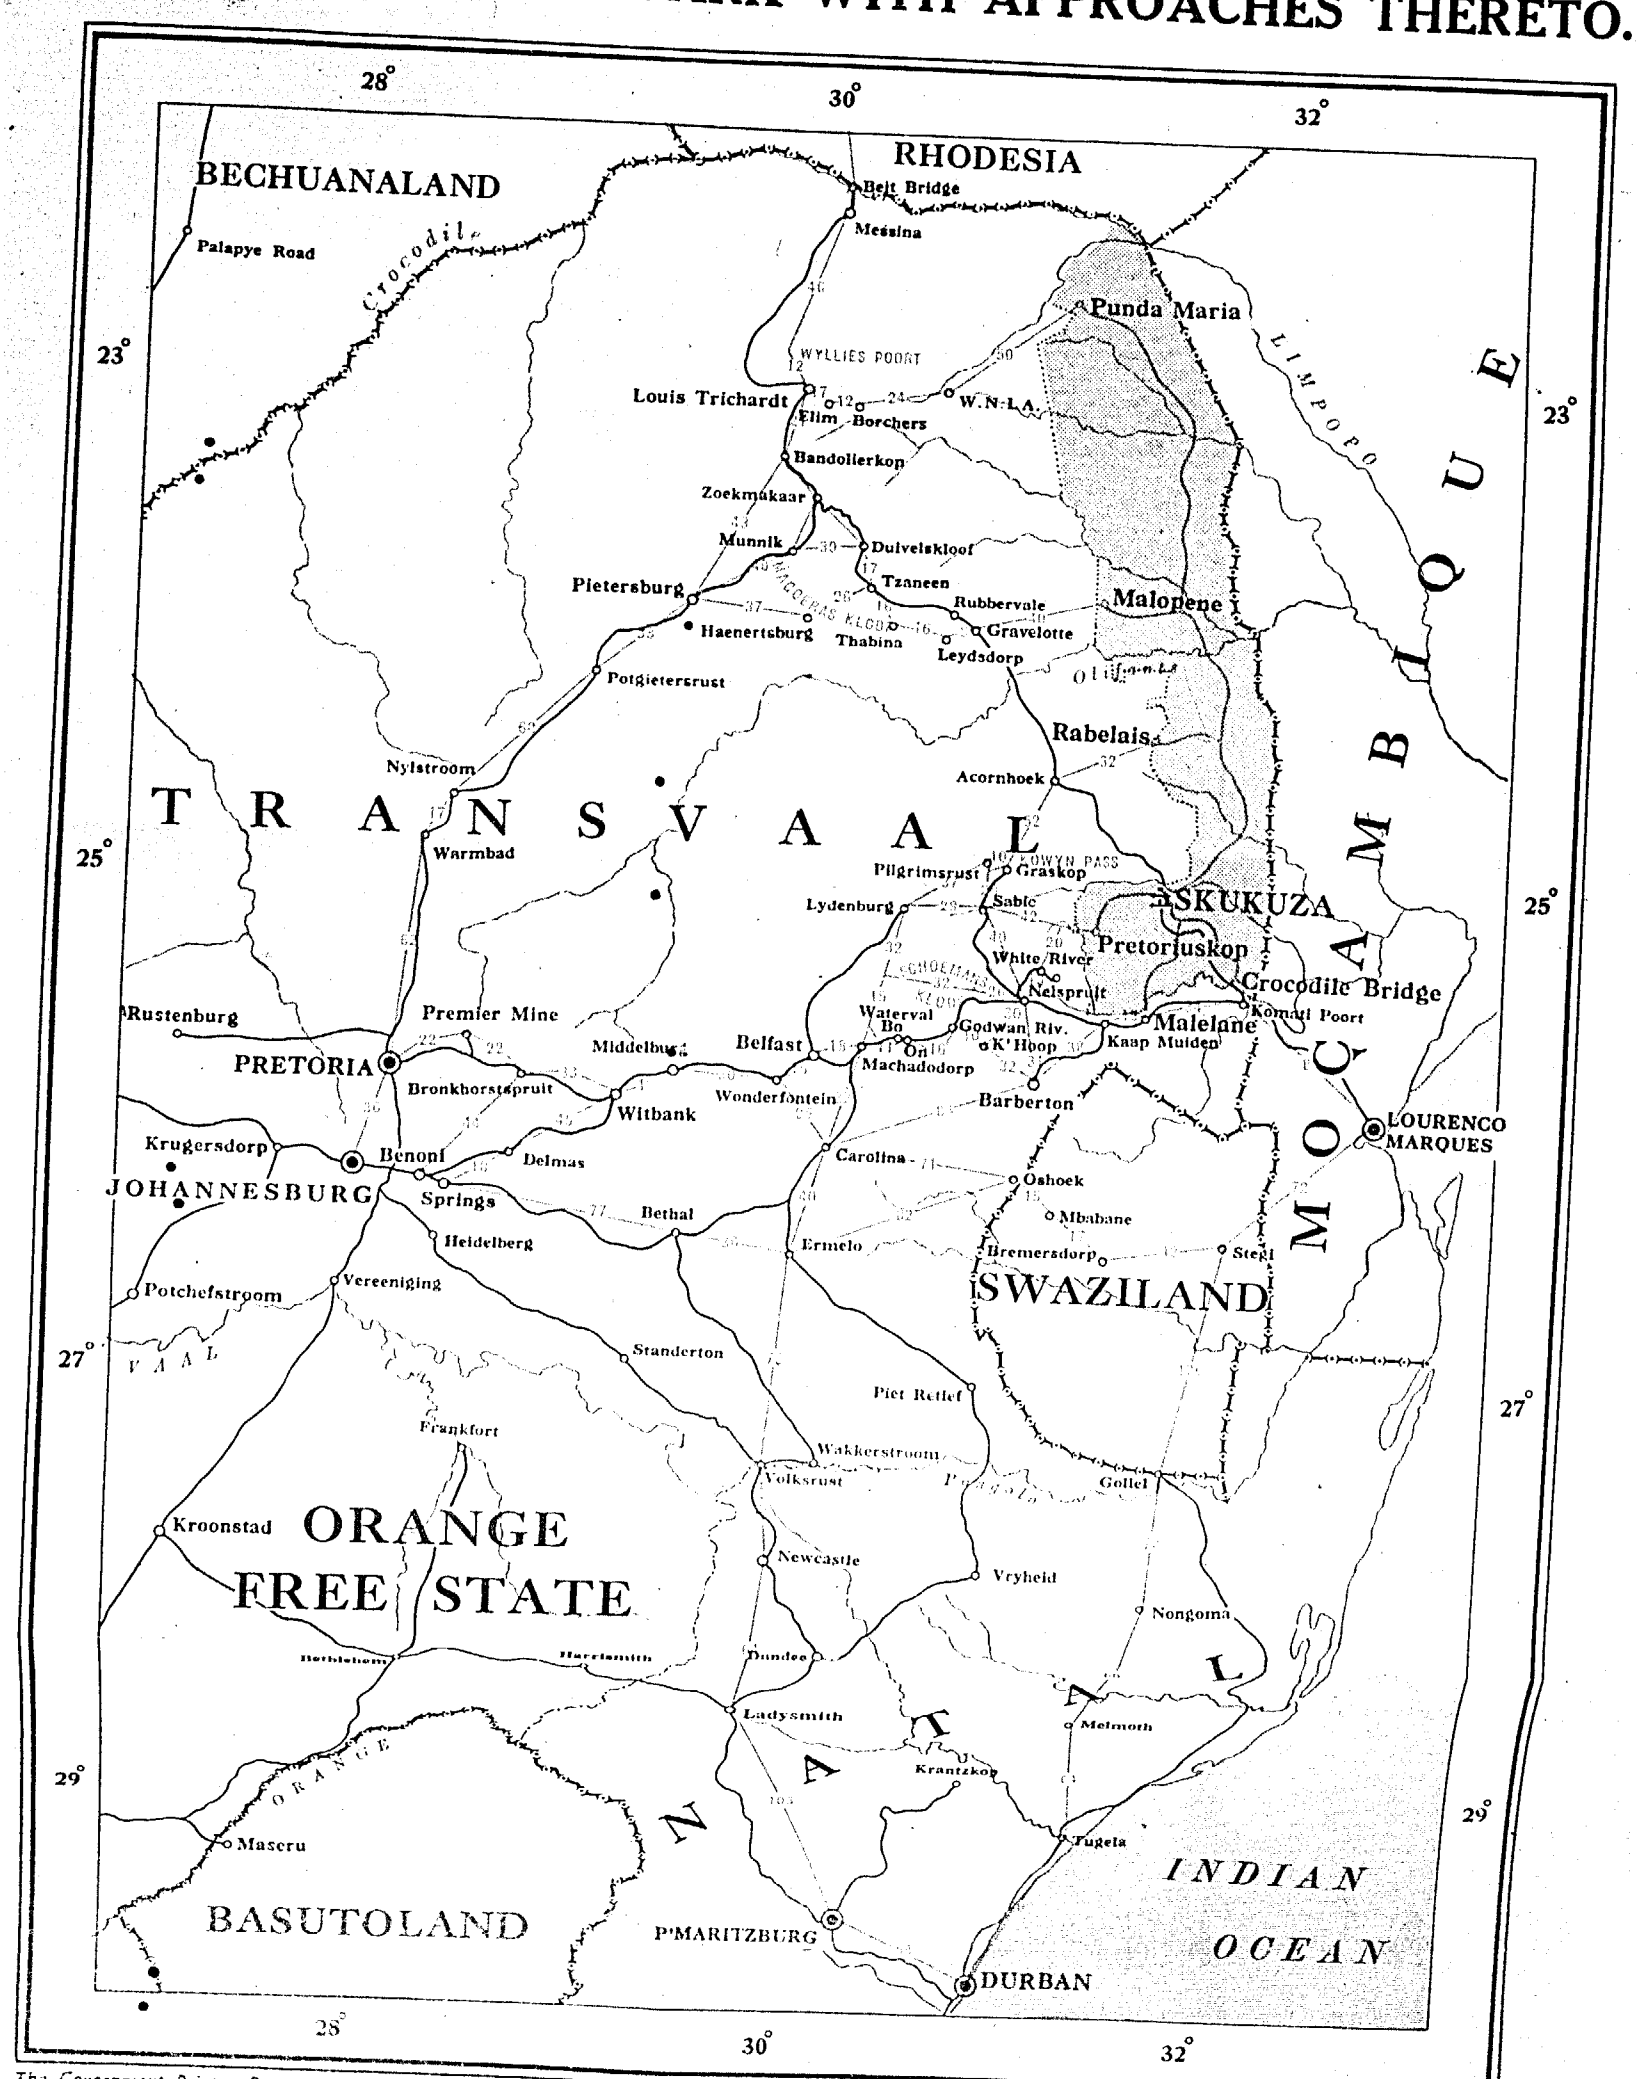
Blockhouse, Tulbagh Road.
The Powder Magazine, Fort Glamorgan, East London.
King's Blockhouse, Devil's Peak, Capetown.
Signal Tower Reserve, district Albany.
Rhodes's Cottage, Muizenberg.
Martello Tower, Fort Beaufort.
Old Drostdy, Swellendam.
Tower and adjacent walls of Fort Brown, Grahamstown.
Donkin Reserve, Port Elizabeth.
Old Drostdy Gates, Grahamstown.
Cango Caves, Oudtshoorn.
Blockhouse, Aliwal North.
Old Bridge over Lourens River, Somerset West.
Old Post Office Tree, Mossel Bay.
Fort Armstrong, district Stockenström.
Fort Murray, district Kingwilliamstown.

Orange Free State—



The Residency, Bloemfontein.
Blockhouse, Harrismith.

Natal—



Voortrekker Kommandant Karel Landman's Home, Ladysmith.
Wagon Hill, Ladysmith.
Shaka Memorial, Stanger.

Transvaal—

Verdun Ruins, district Zoutpansberg.
Old English Fort, Pietersburg.
Dzata Ruins, district Zoutpansberg.
Klapperkop and Skanskop Forts, Pretoria.
First Gold Power Plant Site, Pietersburg.
First Gold Crushing Site, Pietersburg.
Makapan Caves, district Potgietersrust.

KRUGER NATIONAL PARK WITH APPROACHES THERETO.

The Government Printer, Pretoria.

Trigonometrical Survey Office, Pretoria.

The following objects have been recommended for proclamation:—

Cape of Good Hope—

Old Town House, Greenmarket Square, Capetown.
Mostert's Hill, Groot Schuur.
"Rust en Vreugd", Capetown.
Koopmans-de Wet House, Capetown.
Valley of Desolation, Graaff-Reinet.
Heerenlogement Caves, van Rhynsdorp.
Blockhouse, Burghersdorp.
Western Fort, Hout Bay.
Old Dovecot, De Bosch, Somerset West.
Moffat Church, Kuruman.
Beehive Stone Huts, Steynsburg.

Natal—

Cetewayo's and Mpande's Kraals.

Transvaal—

Blockhouse, Hekpoort.
Moorddrift, Potgietersrust.
Rev. Broadbent's House, Wolmaransstad.

Orange Free State—

Painting of Piet Retief's name in the Drakensberg, district Harrismith.

§ 10. Observatories.

A. THE UNION OBSERVATORY.

[Longitude, 1h. 52m. 18·0s. E.; Latitude, 26° 10′ 55″3 S.; Altitude, 1,806 metres (5,925 feet).]

UNION ASTRONOMER: H. E. WOOD, D.Sc., F.R.A.S.

1. **Institution.**—The early history of the Union Observatory is intimately associated with the activities of the South African Association for the Advancement of Science. In 1902 the Johannesburg branch of the association petitioned the Government of the Transvaal, then a Crown Colony, for the establishment of an observatory for the sciences of meteorology and astronomy. As a result the Transvaal Meteorological Department was instituted on 1st April, 1903, and the Transvaal Observatory was erected on the Hospital Hill ridge on the outskirts of Johannesburg. In the selection of the site, the possibilities of the ultimate development of an astronomical observatory were taken into consideration.

In 1905 a number of prominent European astronomers visited South Africa under the auspices of the British Association and, having in view the relatively small number of astronomical observatories in the Southern Hemisphere and, in particular, the excellent conditions for astronomical work which the High Veld offered, urged upon the Government the erection of a powerful telescope at the Transvaal Observatory. The Government took a sympathetic view, but it was not until 1909 that definite steps could be undertaken to carry out the suggestion.

The Union of the four provinces of South Africa brought about a great change in the work and status of the Transvaal Observatory. The meteorological services of the four provinces were combined into a Union Meteorological Department with headquarters in Pretoria, and as from 1st April, 1912, the Transvaal Observatory became officially an astronomical institution, and was renamed the Union Observatory, the officer-in-charge being styled the Union Astronomer. From this time the main activities of the Union Observatory have been astronomical. Certain meteorological observations are still continued and the results communicated to the Union Meteorological Department.

2. **Instruments and Equipment.**—The Union Observatory is at present equipped with the following instruments:—

(i) A 26½-inch visual refractor.
(ii) The Franklin-Adams Star camera (two photographic objectives each of 10 inches aperture).
(iii) The Reunert Telescope (visual refractor of 9 inches aperture).
(iv) The Franklin-Adams Twin Telescope (apertures 6 inches and 7 inches).
(v) A Zenith telescope.

The observatory is also well equipped with auxiliary apparatus, e.g., a Zeiss Stereocomparator and Blink-Microscope.

The 26½-inch refractor is the outcome of recommendations made by European astronomers, who visited South Africa in 1905. The times then were not favourable; but when the question of the provision of a large refracting telescope for the observatory was again raised by a deputation from the South African Association for the Advancement of Science in April, 1909, the Transvaal Government agreed to the proposal, and a contract was at once placed with Sir Howard Grubb, of Dublin, for the supply of a 26-inch visual refractor. It was expected that the telescope would be completed and erected in 1911, but, owing to a number of circumstances, chief amongst which was the difficulty of procuring optical glass in sufficiently large blocks, the telescope did not actually reach Johannesburg until January, 1925.

Under a scheme of co-operation with the Leiden Observatory, Holland, a twin 16-inch photographic telescope has now been installed in the grounds of the observatory in a building which has been erected for the purpose by the Union Government.

3. **General Operations.**—The 26½-inch visual telescope has been used almost entirely for the discovery and measurement of double stars. The general survey of the southern sky south of −19° for the discovery of double stars has now been completed. In this survey the Lamont-Hussey Observatory at Bloemfontein and the Union Observatory have co-operated in order to avoid duplication of work. In future the programme of work with the 26½-inch telescope will be mainly concerned with the systematic measurement of the known double stars of the southern sky.

An eyepiece interferometer has been successfully used in connexion with the telescope in the measurement of very close double stars of suitable magnitude. The telescope has been occasionally used for double-star photography, although it was not designed for this purpose.

Amongst the interesting discoveries made with this telescope may be mentioned the discovery of the duplicity of the new stars Nova Pictoris (1925) and Nova Aquilae 5 (1936) and of the anomalous appearance of the minor planet Eros.

The Franklin-Adams Star-Camera is now chiefly used for the photographic observations of the minor planets when they are in southern declinations. The preparation of a series of star charts covering the southern sky between −19° and the south pole, which was commenced in 1917, has now been completed, and the charts have been distributed to the astronomical observatories of the world. Photographic observations of faint comets are also carried out with this telescope and, in the course of routine work with this instrument, three new comets have been discovered in recent years. Under the arrangement existing between the Leiden Observatory, Holland, and the Union Observatory for an interchange of observers, the telescope has been extensively used by a member of the staff of the Leiden Observatory for variable star research.

The 9-inch refractor is chiefly used for the observation of the occultations of stars by the moon and for the visual observation of the eclipses of the satellites of Jupiter.

The Union Observatory supplies official time (Standard time of the 30th meridian East of Greenwich) to the provinces of the Transvaal and Natal. Wireless rhythmic time signals are received daily from Rugby, England, and other stations and are used for the correction of the Observatory clocks. Automatic hourly time signals are sent from the Observatory to the Central Telegraph Office at Johannesburg. Special hourly time signals, consisting of six dots, of which the last dot marks the exact hour, are sent from the Observatory to the Johannesburg Station of the South African Broadcasting Corporation; from here they are broadcast by an automatic apparatus at various hours of the day.

The Union Observatory publishes at intervals a circular containing the reports of the work in progress. Up to December, 1938, 100 of these circulars had been issued and distributed to astronomical observatories and institutions.

Visitors are admitted to the observatory on Wednesday evenings upon written application, and are shown celestial objects through the 9-inch telescope. During the year 1938, the number of visitors was 1,492.

4. **Meteorological Observations.**—Regular observations of temperature and rainfall are maintained and are communicated to the Union Meteorological Department in Pretoria.

The following tables, containing data for the years 1936-37 and 1937-38, are a continuation of a summary of the records of rainfall and temperature observations made at the observatory without a break since 1904. The figures for prior years will be found in previous issues of this *Year Book*.

EXTREME TEMPERATURES RECORDED AT THE UNION OBSERVATORY.

Year.	Highest Recorded.	Lowest Recorded.
1936–37	87°·5 on 21st Dec., 1936	29°·8 on 15th Sept., 1936.
1937–38	90°·2 on 12th Nov., 1937	23°·1 on 14th July, 1937.
Period 1904–05 to 1937–38	93°·6 on 21st Dec., 1925	20°·8 on 23rd July, 1926.

NOTE.—The thermometers are exposed in a Stevenson screen. The 31st January and the 1st March are added to February in order to make the division of the year more even. January, February, and March thus have thirty days each, except in leap years, when February has thirty-one days.

B. ROYAL OBSERVATORY, CAPETOWN.

H.M. Astronomer: J. JACKSON, M.A., D.Sc., F.R.S.

The Royal Observatory at Capetown was instituted by an Order-in-Council, dated the 20th October, 1820, as the result of a memorial presented by the Lords Commissioners of the Admiralty. The present buildings, erected on grounds covering twenty-five acres, consist of the main building and ten other detached observatories, together with residences for the staff and other necessary buildings. The following instruments form the present equipment:—

(i) Transit circle (aperture 8 inches).
(ii) Reversible transit circle (aperture 6 inches).
(iii) Victoria photographic telescope (aperture 24 inches) with visual telescope (aperture 18 inches) and guiding telescope (aperture 8 inches); also four-prism spectroscope and two objective prisms (aperture 24 inches).
(iv) Astrographic telescope (aperture 13 inches) with guiding telescope (aperture 10 inches).
(v) Wide-angle triplet lens (aperture 5 inches) for the determination of the positions of stars.
(vi) Photographic and photovisual lenses (aperture 5 inches) for photometry.
(vii) Heliometer (aperture 7 inches).
(viii) Photoheliograph.
(ix) Two equatorial telescopes (aperture 7 inches and 6 inches) each with Repsold micrometer.
(x) Polar telescope (aperture 7 inches).
(xi) Three standard sidereal clocks (one Shortt free pendulum and two Riefler); one Shortt free pendulum mean-time clock with Belin apparatus for the automatic emission of wireless time signals.
(xii) Schilt photometer.
(xiii) Various physical, meteorological, and geodetic apparatus.

The following are the names of H.M. Astronomers from the date of institution:—

1820—Rev. F. Fallows.
1832—Thos. Henderson.
1833—Sir Thos. Maclear.
1870—E. J. Stone.
1879—Sir David Gill, K.C.B.
1907—S. S. Hough, M.A., F.R.S.
1923—H. Spencer-Jones, M.A., Sc.D., F.R.S.
1933—J. Jackson, M.A., D.Sc., F.R.S.

The names of Maclear and Gill are intimately associated with the most important geodetic operations carried out in South Africa.

The observatory has been under the control of the British Admiralty from the time of its foundation, and its expenses are defrayed out of naval votes. It was instituted to promote practical astronomy and navigation by observing southern stars, thus supplementing the work done by Greenwich Observatory in the northern hemisphere. The accurate determination of the positions of stars has continued to be the primary work of the observatory, but, with the advance of astronomy, developments in other directions have followed, and the Cape Observatory is now one of the chief observatories in the world.

The fundamental instrument is the transit circle, which is used for the determination of time and of the positions of stars. South African Standard Time is distributed daily throughout the Union, a signal being sent out every hour for regulating the clocks connected with the railway and telegraphic services. Special time signals are sent daily to the various ports, and at 11 p.m. on a 600 metres wave length a wireless time signal of the new International (ONOGO) type is transmitted to ships at sea through the medium of the wireless station at Slangkop. A time signal, sent direct from the observatory, is also distributed several times daily by the South African Broadcasting Corporation.

It was at the Cape Observatory that the idea of employing the telescope for the determination of accurate star positions by means of stellar photography first took practical shape in 1882. The development of this has resulted in (i) the Cape Photographic Durchmusterung, a photographic catalogue of nearly 400,000 stars, and (ii) the international survey of the heavens, in which many of the principal observatories of the world are co-operating. The Cape contribution to the *Carte de Ciel* is a catalogue of about half a million stars, the publication of which was completed in 1927. The zones of the sky observed at the Cape have recently been rephotographed, and the proper motions of the stars have been determined by comparing plates of the early and recent series.

Another important astronomical problem, in which the Cape Observatory has taken a prominent part, has been the determination of the solar parallax, which is equivalent to the determination of the radius of the earth's orbit. This was derived from an extensive series of observations of minor planets made with the heliometer. In collaboration with other observatories, opportunity was taken of redetermining this most important constant at the opposition of the minor planet Eros in 1931.

The Victoria telescope was used until 1926 for the spectroscopic determination of the motions of stars in the line of sight. The spectroscopic observations have also afforded a further determination of the solar parallax, confirming previous Cape results. The telescope is at present employed for the determination by photographic methods of stellar distances, and the distances of more than 950 stars have been measured.

The wide angle triplet lens is used to photograph the sky south of $-30°$. Work on the determination of the positions of the stars from $-30°$ to $-35°$ and $-35°$ to $-40°$ is well advanced. In view of the completeness with which the zone from $-40°$ to $-52°$ has been observed with the astrographic telescope, the next zone to be undertaken is $-52°$ to $-56°$. The photographic and photovisual magnitudes of the stars are being determined on plates taken with the photometric lenses.

Observations of occultations of stars by the moon are undertaken regularly. Photographs of the sun are taken daily, weather permitting. These are sent to the Royal Observatory, Greenwich, for measurement, along with the photographs taken there. As a result of the work at the two observatories the sun is photographed nearly every day.

Regular meteorological observations are taken and forwarded to the Union Meteorological Department in Pretoria.

A supply of chronometers and chronometer watches is kept at the observatory, and regularly rated for issue, as required, to ships of the Royal Navy.

The senior staff is constituted as follows:—

H.M. Astronomer.....	J. Jackson, M.A., D.Sc., F.R.S.
Chief Assistant.....	R. H. Stoy, M.A., Ph.D.
Assistants.....	J. W. Jackson, J. H. Peirce, G. W. Reed, M.Sc.
Secretary.....	H. M. Bale.

There are in addition eight junior assistants and six temporary clerks, an instrument maker, an electrician, and a carpenter; with three labourers and messengers.

C. YALE UNIVERSITY OBSERVATORY—SOUTHERN STATION.

ASTRONOMER IN CHARGE: HAROLD L. ALDEN, M.Sc., PH.D.

The Southern Station of the Yale University Observatory was opened by the then Prince of Wales on 23rd June, 1925, during his visit to Johannesburg. Early in that year, Dr. Frank Schlesinger, Director of the Yale University Observatory, New Haven, Conn., U.S.A., had arrived in South Africa to select the site for the station and superintend the construction of the observatory and the installation of the telescope. The University of the Witwatersrand generously provided a site on the western portion of its grounds in Milner Park and also a combined residence and office building for the accommodation of the staff.

B. ROYAL OBSERVATORY, CAPETOWN.

H.M. Astronomer: J. JACKSON, M.A., D.Sc., F.R.S.

The Royal Observatory at Capetown was instituted by an Order-in-Council, dated the 20th October, 1820, as the result of a memorial presented by the Lords Commissioners of the Admiralty. The present buildings, erected on grounds covering twenty-five acres, consist of the main building and ten other detached observatories, together with residences for the staff and other necessary buildings. The following instruments form the present equipment:—

(i) Transit circle (aperture 8 inches).
(ii) Reversible transit circle (aperture 6 inches).
(iii) Victoria photographic telescope (aperture 24 inches) with visual telescope (aperture 18 inches) and guiding telescope (aperture 8 inches); also four-prism spectroscope and two objective prisms (aperture 24 inches).
(iv) Astrographic telescope (aperture 13 inches) with guiding telescope (aperture 10 inches).
(v) Wide-angle triplet lens (aperture 5 inches) for the determination of the positions of stars.
(vi) Photographic and photovisual lenses (aperture 5 inches) for photometry.
(vii) Heliometer (aperture 7 inches).
(viii) Photoheliograph.
(ix) Two equatorial telescopes (aperture 7 inches and 6 inches) each with Repsold micrometer.
(x) Polar telescope (aperture 7 inches).
(xi) Three standard sidereal clocks (one Shortt free pendulum and two Riefler); one Shortt free pendulum mean-time clock with Belin apparatus for the automatic emission of wireless time signals.
(xii) Schilt photometer.
(xiii) Various physical, meteorological, and geodetic apparatus.

The following are the names of H.M. Astronomers from the date of stitution:—

1820—Rev. F. Fallows.
1832—Thos. Henderson.
1833—Sir Thos. Maclear.
1870—E. J. Stone.
1879—Sir David Gill, K.C.B.
1907—S. S. Hough, M.A., F.R.S.
1923—H. Spencer-Jones, M.A., Sc.D., F.R.S.
1933—J. Jackson, M.A., D.Sc., F.R.S.

The names of Maclear and Gill are intimately associated with the most portant geodetic operations carried out in South Africa.

The observatory has been under the control of the British Admiralty om the time of its foundation, and its expenses are defrayed out of naval otes. It was instituted to promote practical astronomy and navigation observing southern stars, thus supplementing the work done by Greenwich bservatory in the northern hemisphere. The accurate determination of the ositions of stars has continued to be the primary work of the observatory, ut, with the advance of astronomy, developments in other directions have llowed, and the Cape Observatory is now one of the chief observatories in ie world.

The fundamental instrument is the transit circle, which is used for the etermination of time and of the positions of stars. South African Standard ime is distributed daily throughout the Union, a signal being sent out every our for regulating the clocks connected with the railway and telegraphic ervices. Special time signals are sent daily to the various ports, and at 1 p.m. on a 600 metres wave length a wireless time signal of the new International (ONOGO) type is transmitted to ships at sea through the medium f the wireless station at Slangkop. A time signal, sent direct from the bservatory, is also distributed several times daily by the South African Broadasting Corporation.

It was at the Cape Observatory that the idea of employing the telescope for the determination of accurate star positions by means of stellar photography first took practical shape in 1882. The development of this has resulted in (i) the Cape Photographic Durchmusterung, a photographic catalogue of nearly 400,000 stars, and (ii) the international survey of the heavens, in which many of the principal observatories of the world are co-operating. The Cape contribution to the *Carte de Ciel* is a catalogue of about half a million stars, the publication of which was completed in 1927. The zones of the sky observed at the Cape have recently been rephotographed, and the proper motions of the stars have been determined by comparing plates of the early and recent series.

Another important astronomical problem, in which the Cape Observatory has taken a prominent part, has been the determination of the solar parallax, which is equivalent to the determination of the radius of the earth's orbit. This was derived from an extensive series of observations of minor planets made with the heliometer. In collaboration with other observatories, opportunity was taken of redetermining this most important constant at the opposition of the minor planet Eros in 1931.

The Victoria telescope was used until 1926 for the spectroscopic determination of the motions of stars in the line of sight. The spectroscopic observations have also afforded a further determination of the solar parallax, confirming previous Cape results. The telescope is at present employed for the determination by photographic methods of stellar distances, and the distances of more than 950 stars have been measured.

The wide angle triplet lens is used to photograph the sky south of −30°. Work on the determination of the positions of the stars from −30° to −35° and −35° to −40° is well advanced. In view of the completeness with which the zone from −40° to −52° has been observed with the astrographic telescope, the next zone to be undertaken is −52° to −56°. The photographic and photovisual magnitudes of the stars are being determined on plates taken with the photometric lenses.

Observations of occultations of stars by the moon are undertaken regularly. Photographs of the sun are taken daily, weather permitting. These are sent to the Royal Observatory, Greenwich, for measurement, along with the photographs taken there. As a result of the work at the two observatories the sun is photographed nearly every day.

Regular meteorological observations are taken and forwarded to the Union Meteorological Department in Pretoria.

A supply of chronometers and chronometer watches is kept at the observatory, and regularly rated for issue, as required, to ships of the Royal Navy.

The senior staff is constituted as follows:—

H.M. Astronomer.....	J. Jackson, M.A., D.Sc., F.R.S.
Chief Assistant.....	R. H. Stoy, M.A., Ph.D.
Assistants.....	J. W. Jackson, J. H. Peirce, G. W. Reed, M.Sc.
Secretary.....	H. M. Bale.

There are in addition eight junior assistants and six temporary clerks, an instrument maker, an electrician, and a carpenter; with three labourers and messengers.

C. YALE UNIVERSITY OBSERVATORY—SOUTHERN STATION.

ASTRONOMER IN CHARGE: HAROLD L. ALDEN, M.Sc., PH.D.

The Southern Station of the Yale University Observatory was opened by the then Prince of Wales on 23rd June, 1925, during his visit to Johannesburg. Early in that year, Dr. Frank Schlesinger, Director of the Yale University Observatory, New Haven, Conn., U.S.A., had arrived in South Africa to select the site for the station and superintend the construction of the observatory and the installation of the telescope. The University of the Witwatersrand generously provided a site on the western portion of its grounds in Milner Park and also a combined residence and office building for the accommodation of the staff.

The equipment consists of a photographic refractor of 26 inches aperture and 36 feet focal length, to which is attached a 10-inch visual telescope of the same focal length. This instrument is specially designed for the rapid and accurate photography of celestial objects on a scale large enough to permit precise measurements of positions and motions.

In 1931 a special camera of five inches aperture and eighty inches focal length was mounted on the large telescope. The field of this camera covers one hundred and twenty square degrees, about 140 times that of the large telescope. It is used for the determination of the positions of stars south of the equator.

The main programme with the large refractor is devoted to the determination of the parallaxes and proper motions of stars. Other astrometric investigations include measurements of the relative positions of the satellites of Jupiter and Saturn, of the components of double stars, and the study of special stars for orbital motion and mass ratios. Photometric observations are undertaken in cases of variable stars which are components of double stars not well separated on plates of smaller scale.

An extended programme with both the telescope and the camera has been inaugurated for the determination of the errors of star places, by comparing the positions of a selected list of asteroids relative to the stars with their positions computed from purely dynamical considerations.

D. HARVARD OBSERVATORY, BOYDEN STATION.

Longitude 1h. 45m. 37s. E.; Latitude 29° 2′·3 S.; Altitude 4,575 feet (above sea-level).

ASTRONOMER IN CHARGE: Prof. J. S. PARASKEVOPOULOS, Sc.D., F.R.A.S.

The Boyden Station of Harvard Observatory (Department of Harvard University, Cambridge, Mass., U.S.A.) was first established in 1889 in Arequipa, Peru, on the western slopes of the Andes.

In 1927 it was decided to transfer the station to Bloemfontein, where conditions from an astronomical point of view were better. The site selected for the Boyden Station is close to the waterworks at Mazelspoort, 15 miles E.N.E. of Bloemfontein, on a kopje now known as *Harvard Kopje*, the height of which above the veld is about 200 feet.

The establishing of the observatory, with the exception of the building and the dome housing the 60-inch reflector, was finished in July, 1929, when regular work was begun. Preliminary work had been carried out with two of the smaller instruments since September, 1927. The construction of the building to house the 60-inch reflecting telescope was begun in July, 1931, and the instrument was brought into operation in 1933.

The station is equipped with the following instruments:—

(1) One reflecting telescope of 60-inch aperture.
(2) One photographic refractor of 24-inch aperture (doublet).
(3) One photographic and visual refractor of 13-inch aperture, mounted together with an 8-inch refractor.
(4) One photographic refractor of 10-inch aperture (triplet), mounted together with an 8-inch refractor and a 6-inch finder.
(5) One photographic refractor of 8-inch aperture, with 4-inch finder.
(6) One visual refractor of 5-inch aperture.
(7) One photographic refractor of 5-inch aperture.
(8) Two photographic cameras of 3-inch lens.
(9) One photographic camera of 1·5-inch lens.
(10) One transit.
(11) Stellar spectrographs.

The work of the Harvard Observatory and its southern branch is purely research work. It involves investigations on:—

(1) Stellar photometry.
(2) Stellar and nebular spectroscopy.
(3) Astrometry (proper motions and parallaxes of stars).
(4) Photographic survey of nebulae and extragalactic objects.
(5) Various other fields of modern astronomy.

E. LAMONT-HUSSEY OBSERVATORY OF THE UNIVERSITY OF MICHIGAN.

ASTRONOMER IN CHARGE: R. A. ROSSITER, M.A., PH.D., F.R.A.S.

The University of Michigan Astronomical Expedition owes its existence to two former students of the Engineering College of the University. One, Mr. R. P. Lamont of Chicago, furnished funds for building a 27-inch refracting telescope, for building an observatory, for paying the salaries of three observers, and for the maintenance of the observatory for a period of eight to ten years. The other, the late Professor W. J. Hussey, head of the Department of Astronomy in the University of Michigan, was a notable double-star observer at the Lick Observatory of the University of California. Professor Hussey's greatest ambition was to carry out as thorough double-star work in the southern as had been done in the northern sky, and in this he was warmly supported by Mr. Lamont.

A site on Naval Hill, Bloemfontein, was decided upon and the building of the observatory was begun early in June, 1927, and completed in March, 1928. The building consists of a circular wall, 56 feet in diameter, surmounted by a structural steel hemispherical dome, and of two rectangular wings, which house the offices and auxiliary rooms and provide storage space. The flat roofs of the two wings are of concrete covered with broken stone and are well below the level of the dome opening, so that little difficulty with radiation is experienced from them.

The sole instrumental equipment of the observatory is the 27-inch refracting telescope.

Regular work with the Lamont telescope began in May, 1928, with a staff of three observers: Professor R. A. Rossiter, Mr. H. F. Donner, and Mr. M. K. Jessup, but Professor Rositter now continues as the astronomer-in-charge and the sole observer.

The Lamont telescope has been used chiefly for searching for new double stars and for measuring new pairs found. Practically nothing is done in other phases of astronomy. Up to January, 1939, the total number of new double stars found at the Lamont-Hussey Observatory was approximately 6,250. Of these new pairs a first list of 2,232 by Professor Rossiter was published in 1933 in the Memoirs of the Royal Astronomical Society, Volume LXV, Part II. A second list of 1,108 new pairs by Professor Rossiter and first lists of 1,057 new pairs by Mr. Donner and 854 new pairs by Mr. Jessup were published as another part of Volume LXV in 1936. A third list by Professor Rossiter of 800 new pairs was published in 1938 as a part of Volume LXVI.

Thanks to the generosity of the Union Government and of the municipality of Bloemfontein the double-star programme will be continued until the middle of 1942. Plans after that date are as yet uncertain.

When the special double-star programme is completed, the results will be published as a memorial to the late Professor Hussey; for it was mainly by virtue of his personality and his achievements in the observation of double stars that the observatory became a reality.

In the past ten and a half years just over 12,170 visitors have been entertained at the Lamont-Hussey Observatory, of whom 10,510 saw one or more objects with the Lamont telescope. This more than used up 10 hours per month, whereas 6 hours per month was set as an adequate public use of the big refractor. It also reflects the interest shown by the public in the comparatively little-known science, astronomy.

F. THE RADCLIFFE OBSERVATORY, PRETORIA.

RADCLIFFE OBSERVER: H. KNOX-SHAW, M.A., D.Sc.

(Longitude: 1h. 52m. 54·9s. E.; Latitude: 25° 47′ 18″ S.; Altitude: 5,060 feet.)

The Radcliffe Observatory was first established in Oxford, England, in 1771. The circumstances resulting in its transfer to South Africa have been stated in previous issues of this *Year Book*. The new observatory is situate on the town lands of Pretoria, 600 feet above the city, on a site generously presented by the City Council.

In July, 1935, an order was placed with Sir Howard Grubb, Parsons & Co., of Newcastle-on-Tyne, for a 74-inch reflecting telescope. Considerable difficulty was experienced by the Corning Glass Co., of New York, in casting a disc of pyrex glass for the large mirror, but this was at last accomplished in August, 1938, when the disc was shipped to England for grinding and figuring. It is expected that this work will be finished during 1939, when the mirror will be sent to Pasadena, California, on its way out to South Africa, to receive a reflecting surface of aluminium. The five secondary mirrors are of fused silica. Apart from the mirrors, the erection of the telescope was completed during 1938. It is housed in a building 61 feet in diameter and 65 feet high, of which the upper portion is a cylindrical revolving turret. To prevent undue rise of temperature inside the building during the daytime, with consequent bad effect on the figure of the mirrors, it has been constructed with double walls and roof, the outer being of low heat capacity to obviate air currents rising from them during the night and spoiling the definition of objects viewed through the telescope.

Several novel features are embodied in the telescope. It is driven electrically, the frequency of the alternating current being controlled by a tuning fork, and provision is made for sending the beam of light down the polar axis to a stationary spectrograph housed in a constant-temperature room. In addition observations can be made at the Cassegrain focus below the large mirror, and at the Newtonian focus at the top of the tube, access to which is effected by means of a special moving platform designed by Mr. Gordon Leith, F.R.I.B.A., in conjunction with the telescope makers. It is hoped that the telescope will be in action by the end of 1939 or early in 1940. It will be employed mainly on spectroscopic work of a kind which, owing to its size, has not before been possible on the southern stars, and it will, it is hoped, make an important contribution to our knowledge of the structure of the stellar universe.

The project of erecting the telescope, which is the largest telescope in the southern hemisphere, would not have been possible without the help and co-operation of the Union Government and of the Municipality of Pretoria.

§ 11. South African Standard Time.

Uniform time of two hours east of Greenwich is observed in the Union and South West Africa, Portuguese East Africa, and Southern and Northern Rhodesia.

§ 12. The Voortrekker Centenary.*

The year 1938 saw the centenary of the Voortrekkers and celebrations took place on a large scale at Blood River and at Pretoria. At each place the foundation stone of a monument in honour of the Voortrekkers was laid.

In order to understand what these centenary celebrations meant to South Africans, it is necessary to know something of the history of the Voortrekkers.

1. **Before the Great Trek.**—In 1652 Jan van Riebeeck, in the service of the Dutch East India Company, landed with his small following on the shores of Table Bay and laid the foundation of European civilization on the African sub-continent. As the years passed by the European population increased and many became settlers on the land. In 1688 and 1689 they were joined by the Huguenots, who had been compelled to leave their native country, France, by the persecutions they had to endure because of their Protestant faith. Their descendants have become entirely identified with the Afrikaans-speaking section of the population. A long list of Governors followed van Riebeeck and gradually the Europeans spread into the interior. The colonists often had grounds for complaint against the administration of the Dutch East India Company and eventually they rebelled in some districts and set up their own governments in Graaff-Reinet and Swellendam. That was shortly before the first British occupation of the Cape in 1795, which put an end to the rule of the Dutch East India Company in South Africa. The occupation was a result of war with France and, when peace was declared in 1802, it was agreed that the

* Contributed by the Hon. E. G. Jansen, M.P., Chairman of the Central Voortrekker Centenary Committee.

Cape was to be handed over to the Batavian Republic, which had been formed in the Netherlands. This formally took place, amidst scenes of joy on the part of the colonists, early in 1803. War between Britain and France having again broken out, the Cape was occupied a second time by the British in 1806 and they retained possession of the Colony when the Napoleonic wars came to an end in 1814. Meantime the colonists were expecting to be restored to the Mother Country at the conclusion of peace. In this they were disappointed.

In considering later events it must be borne in mind that many of those who took part in the Great Trek were men and women who had seen the establishment of British rule against their own will. It was, however, possible by tolerance, tact, and good government, to gain the confidence of the new subjects. But the attitude of the new rulers towards the colonists and their partiality to the natives brought about an alienation, which eventually led to loss of all confidence in the government. Most of the grievances of the colonists had to do with the native policy of the government. That policy was too often based on one-sided and prejudiced statements which led those responsible for the government of the country to regard the white man as always being in the wrong, and the native as the innocent and injured party. This state of affairs obtained not only with regard to natives within the borders of the Colony, but also with regard to the marauders from without. The result was that eventually the white man despaired of the lawlessness on the part of natives in their midst ever being put down and of protection ever being given against the murders, robberies, and other crimes perpetrated by raiders from the neighbouring native territories. The root cause of the Great Trek was to be found in native policy and the total loss of confidence in the government.

The abolition of slavery was also an element but certainly not a deciding factor. It must be remembered that the slaves were not natives of South Africa but people imported from elsewhere and sold in the Colony. They were legally acquired by their owners and many were mortgaged for debt. The colonists themselves were in favour of abolition provided it took place gradually and without too great loss to the community. The value of slaves was assessed at £3,000,000 sterling. The compensation allocated to the owners was less than half that amount and payment had to be received in London. The result was that many owners of slaves were ruined. The objection was not to the abolition of slavery, but to the manner in which it was carried out. That the slaves, on the whole, were well treated, is shown by the fact that many remained with their former owners even after abolition. Many of them voluntarily accompanied their former masters into the interior with the Great Trek. In 1838 the Government sent a Commissioner to bring these people back who were supposed to have been forced to accompany the Voortrekkers. The Commissioner was everywhere well received. Notwithstanding the fact that some 250 servants, many of them former slaves, had been massacred with their employers by the Zulus, nearly all those who met the Commissioner stated that they preferred to remain with their masters, and even the few who elected to return to the Colony declared that they had accompanied their masters of their own free will.

The causes of the Great Trek were cumulative. There was a deep-felt resentment against the authorities in England, who lent a willing ear to what the colonists considered to be calumnies spread in England by interested parties, whilst the testimony of the Governor, Sir Benjamin D'Urban, was ignored. His opinion of the Voortrekkers was expressed as follows: "a brave, patient, industrious, orderly and religious people, the cultivators, the defenders, and the tax contributors of the country".

There was a large number of grievances which were set out *inter alia* by Piet Retief on the eve of his departure in 1837. The chief grievances may be summarized as follows:—

1. Lack of protection and a virtual denial of the right to protect themselves. In the Kaffir War of 1835 the following losses were recorded:—456 houses and 58 wagons burnt or otherwise destroyed; 5,715 horses, 114,930 cattle, and 161,930 sheep and goats driven off; besides the destruction of household furniture, etc. The attitude of the authorities in England was that the colonists were the aggressors and merited no sympathy. The salutary measures taken by Sir Benjamin D'Urban were reversed, and he was eventually dismissed from office.

2. The colonists, both Dutch and English, resented deeply the slanderous statements made about them in England by people who were prejudiced against them, and who were believed by the authorities in spite of the representations of the Governor. In face of such a state of affairs the people felt absolutely helpless and despaired of ever receiving justice at the hands of the government.

3. The total lack of control of natives and Hottentots who wandered about the country without restraint, often robbing and in some cases murdering the inhabitants.

4. The feeling on the part of the Voortrekkers that they were strangers in their own country. Their language could no longer be used in the courts; their system of government had been done away with and nothing of their own in the government of the country had been left to them. No effective form of representative government had been established, and they were governed from Downing Street by men who were prejudiced against them and knew nothing about their difficulties and requirements. They felt that it was hopeless to expect any consideration from such a government. Their choice lay between rebellion and leaving the country of their birth, and they chose the latter course. It was then that the ideal of founding an independent state of their own in the interior, where their national life could gain expression through their own national institutions, took definite shape.

2. **The Great Trek.**—As far back as 1834 Natal was visited by Stephanus Maritz, P. Uys, G. Rudolph, Hans de Lange, and others who were very favourably impressed with the country. Their party was one of several that had been sent out in different directions to ascertain the possibilities of the interior. At that time a number of English traders had already been established at Port Natal for some ten years.

In 1835 Louis Trigardt and van Rensburg were already proceeding northwards. By May, 1836, they had reached the Zoutpansberg, where they separated. Van Rensburg trekked further north, and all the members of his party were killed by natives in a desparate struggle near the Limpopo River. Trigardt eventually made his way to Delagoa Bay, where he and most of his followers died of fever. The few survivors were taken by sea to Natal after the Voortrekkers had established themselves there. These intrepid pioneers left no trace on the country they had explored except the story of their indomitable courage and perseverance in adversity. Louis Trigardt left a diary, which is of the greatest historical value.

The Great Trek may be said to have commenced in earnest at the end of 1835, when Hendrik Potgieter and his party, consisting mostly of families from the Tarka and Colesberg Districts, and including Sarel Cilliers, left the Cape Colony and proceeded towards the interior. A feature of the Trek was the implicit belief of the emigrants in the word of God and their reliance on His protection. Family worship and divine service were regularly held, and of one commando it was said that it resembled an itinerant prayer meeting. The emigrants, with few exceptions, were a deeply religious people and were profoundly influenced in all their actions by their religion.

In May, 1836, Potgieter with a number of men left the main body of his party near the Vaal River and proceeded to Zoutpansberg in order to get into touch with Trigardt. In this he succeeded and then proceeded even further north beyond the Limpopo and then returned to his people on the Vaal River. There seems to have been some understanding between the two leaders that Potgieter would return to his people and bring them to Zoutpansberg. Potgieter was prevented from making an early return and Trigardt, after waiting in vain for many months, proceeded to Delagoa Bay, where he and most of his followers died of fever as we have seen. He arrived there about April, 1838.

On his return to the Vaal River, Potgieter found that a number of his people had been massacred by the warriors of Mzilikazi, Chief of the Matabele. This chieftan had been one of the officers of Tshaka, King of the Zulus, but having incurred the anger of the king, he fled to the north with his followers, spreading destruction wherever he went. At this time his headquarters were at Mosega in what is now known as the Marico District in the Transvaal. The massacre of Potgieter's people had taken place near Parys, on the Transvaal side of the Vaal River. There is a kopje there bearing the name of Liebenberg's Kopje, the victims having been mostly Liebenbergs.

Potgieter concentrated his party at Vegkop, near Heilbron, where, for the first time, wagons were used to form a laager as a protectoin against the attacks of the enemy. The Matabele fiercely attacked but were repulsed with heavy loss by the 36 defenders of the laager, of whom two were killed and a number wounded. In this battle the women folk of the defenders took an active part. The Matabele went off with all the oxen and stock of the emigrants. A message was sent to Maroko, Chief of the Baralong at Thaba 'Nchu, who sent oxen to bring the men, women and children back to that place. Thaba 'Nchu was the meeting place of all the emigrants who left the Cape Colony.

In the meantime, G. Maritz, with a large following, had reached Thaba 'Nchu from Graaff-Reinet. In December, 1836, a general meeting of emigrants was held in order to regulate the Trek. A council of seven was elected with Maritz as Chairman and Potgieter as Commandant.

In January, 1837, a commando under Potgieter and Maritz took the field against Mzilikazi to punish him for the unprovoked attack on the Liebenbergs and other trekkers. The Matabele were attacked at Mosega and totally defeated.

In April, 1837, Piet Retief arrived with some 100 families and on the 17th day of that month he was elected Governor and Commandant-General of the community. On 6th June, 1837, he took the oath of office and the first Constitution was agreed upon. Some months of discord followed. It was Retief's desire to proceed to Natal but Potgieter was bent on proceeding further north. On arrival of the Uys party, matters were further complicated by their declaring themselves not bound by what had been done with regard to the election of Retief and other officials. After some months, during which numerous meetings were held and further efforts made to compose the differences, it was agreed not to quarrel but to allow the emigrants to follow such leaders as they preferred. Of these there now were Piet Retief, Hendrik Potgieter, G. Maritz, and P. Uys.

(*a*) *In Natal.*—Retief with a few followers proceeded to Port Natal, where he was welcomed by the traders settled there. He then proceeded to Umgungundhlovu, the capital of the Zulu King, Dingaan, in order to endeavour to obtain a grant of land from him. The Zulu King promised him land on condition that he should re-take cattle raided from him by the people of Sikonyella. This Retief promised to do. He returned to Port Natal and sent a message to his people, who were waiting on the Drakensberg, that they could come down the mountains into Natal. Retief rejoined his trek at the Tugela River towards the end of November, 1837. With a small commando he proceeded a month later to deal with Sikonyella, who lived at Imperani, near the present Ficksburg, O.F.S., The raided cattle were taken and on January 11, 1838, Retief returned to his trek, which then stood in the vicinity of Doornkop, near Winterton.

It was from there that Retief with 60 men, four boys, including his own son, and a number of servants, set out with the re-captured cattle on his fatal journey to Dingaan. Thomas Halstead, who had accompanied him as interpreter to Sikonyella, now also went with him in the same capacity. The Zulu King, after having signed the grant of a large portion of the present Natal to the emigrants, invited Retief and his companions, who were on the point of departure, to come and drink beer with him and see his soldiers dance. The unsuspecting farmers, no doubt elated at the success of their mission, readily accepted the invitation and, as was customary, left their weapons outside the enclosure with the servants and saddled horses. Beer was partaken of and the soldiers danced. Suddenly Dingaan rose and shouted the order "Kill the wizards", and thousands of warriors fell on the unfortunate victims, who were all put to death. None of the servants who had been left with the horses were permitted to escape. Immediately afterwards Dingaan sent his impis to attack the unsuspecting men, women, and children, scattered in small groups between the Tugela and Bushmans Rivers.

In the early hours of February 17, 1838, the massacre began and 40 men, 56 women, 185 children, and some 250 servants were cruelly done to death. In most cases the unfortunate victims were fallen upon in their sleep. Where the people were warned and could prepare for the attack, they were able, in most cases, to beat off the enemy and many deeds of heroism were performed by both men and women. Gradually parties of the survivors got together and took the offensive, and eventually the Zulus were compelled to flee. They were pursued to the Tugela River but were able to drive off most of the emigrants' stock. The task of attending to the

wounded and burying the dead was then undertaken, amid scenes of the greatest desolation. Most of the victims of the massacre were found along the Bloukrans River and the Moordspruit, not far from the present Chievely. In 1896 a monument was erected on the scene of the massacre to the memory of the fallen.

When news of the disasters reached the emigrants beyond the Drakensberg, they immediately sent assistance, and early in April a mounted commando under Uys and Potgieter took the field against the Zulus. In a battle at Italeni, not far from the present Babanango, the emigrants suffered a severe reverse losing some ten men including Piet Uys and his brave son Dirk, a boy of about 14 years. Potgieter was blamed for this reverse by many emigrants. Feeling ran very high and eventually Potgieter left Natal with about 160 men and their families. It was estimated that about 600 men and 3,000 women and children with 1,000 wagons remained in Natal.

Before the expedition against Dingaan set out, contact had been established with the British traders at Port Natal who were prepared to attack Dingaan from the south. There does not seem to have been any agreed plan, with the result that the expedition from Port Natal actually left after the battle of Italeni had been fought and lost. The force from Port Natal, consisting of 17 Europeans and about 1,500 natives, was overwhelmed by the Zulus after having crossed the Tugela and 13 Europeans and numbers of natives were killed.

A period of great difficulty now set in for the emigrants and many men began to talk of withdrawing from Natal. This met with an emphatic protest from the women folk, who refused to leave until the blood of innocent men, women, and children had been avenged. Messages were sent to the Cape for assistance and steps were taken to safeguard the laagers.

On 13th and 14th August, 1838, the Zulus made determined attacks on the main laager of the emigrants, which had been established on the Bushmans River about seven miles above the present Estcourt at a place which has since been called "Vechtlaager". The Zulus were, however, beaten off with heavy loss. The main laagers were then moved and established on the Little Tugela River, just above the Gourton Bridge of to-day on the road leading from Estcourt over Loskop to Bergville. Maritz's laager had been established there since the beginning of July. These laagers on both sides of the Little Tugela River were the headquarters of the emigrants until after the battle of Blood River.

A number of emigrants had proceeded towards the coast. Some of them under Greyling established themselves where Pietermaritzburg now stands and laid out the town there. Others proceeded to Port Natal in the vicinity of which three camps under Karel Landman were established.

G. Maritz died on 23rd September, 1838, and in November of the same year Andries Pretorius arrived at the laagers on the Little Tugela. He was elected Commandant-General, and a few days later took the field against the Zulus with some 470 men and 64 wagons. Included in the commando were 123 men under Karel Landman, who had come from Port Natal. There was also Alexander Biggar with a number of Natal natives. *It was on this expedition that the Voortrekkers, by mouth of Sarel Cilliers, made the vow that if God, in His mercy, would vouchsafe them the victory they would build a house to the honour of His name and they would consecrate the day as a sabbath and thanksgiving day for ever and enjoin their children and future generations so to observe the day in honour of Almighty God.* This vow was repeated every evening after divine service. After the victory of Blood River the Voortrekkers' Church at Pietermaritzburg was built, and the 16th day of December is observed by Afrikaans-speaking South Africans throughout the country.

It was on Sunday, 16th December, 1838, that the battle of Blood River was fought against the full forces of the Zulu King, who was at the height of his power. The Zulus were totally defeated and more than 3,000 of them were killed. The commando then proceeded to Umgungundhlovu, the Zulu capital, which they found in flames. Near the great kraal the remains of Retief and his followers were found, and in a pouch worn by Retief the grant of Natal to the emigrants was found intact. A few days after, the commando was ambushed in the ravines of the White Umfolosi valley, and the men had to fight practically the whole day to extricate themselves. Several of them were killed, including the brave Biggar, who fell in an attempt to succour some natives under his command, who were in danger. It was due to the determined leadership of Hans de Lange that the emigrants were not overwhelmed.

Owing to horse sickness the commando then returned to the laagers on the Little Tugela, which soon after broke up, and the settlement of Natal commenced with Pietermaritzburg as capital. In September, 1839, Mpande, a brother of Dingaan, fled with a large portion of the Zulu people into Natal and sought the protection of the Voortrekkers. In January, 1840, another commando took the field against Dingaan, whilst an impi of Mpande's followers under Nongalaza marched on Dingaan's new headquarters near Nongoma. In a battle between the followers of Dingaan and those of Mpande near the Mkuzi River, Dingaan's impi was defeated and he fled across the Pongola River and was shortly after killed by the Swazis in the Lebombo mountains. Mpande was then proclaimed king of the Zulus by Andries Pretorius. The emigrants were now able to turn to the task of building up their state. They were not afforded much opportunity for this purpose as the British Government decided to reoccupy Natal, and Captain Smith was ordered to proceed to Port Natal, where he arrived at the beginning of May, 1842. He had encountered no opposition from the emigrants, who protested against the invasion of their territory. Protests were of no avail and hostilities followed. Smith suffered a severe reverse and was besieged in his camp. It was then that Dick King made his famous ride to Grahamstown and thus secured the relief of Smith and his men. The submission of the Voortrekker leaders followed soon after and this submission was confirmed by a resolution of the Volksraad in August, 1843. That ended the Republic of Natal and most of the emigrants withdrew to the territory beyond the Drakensberg. In 1845 Natal was formally annexed to the Cape and became a British Colony under a Lieut.-Governor.

In the annual celebrations in commemoration of the vow made before the battle of Blood River, the experiences and sufferings of the Voortrekkers in Natal generally figure as the main theme. The activities and sufferings of the pioneers in the Orange Free State and in the Transvaal are, none the less, part of the history of the Voortrekkers. In the short space of ten years (1836-1846) the Voortrekkers established themselves over all the territory now forming the Union of South Africa, outside the Cape Province, and they opened up all that vast country to European civilization. Before their arrival practically the whole country had been devastated and depopulated by the Zulu impis of Tshaka and Dingaan and the Matabele warriors of Mzilikazi. The emigrants entered into agreements with most of the remaining remnants of tribes, who were only too anxious to come under their protection. When their rule had been established over the devastated areas there was a tremendous influx of natives, who either returned to former haunts or settled there because of the security offered by the white man's rule. Later on, when the fear of attacks from the Zulus and Matabele was no longer left, these natives caused endless trouble. In Natal the influx was on such a scale that it was largely responsible for the departure in 1847 and 1848 from that Colony of most of the emigrants who had decided to remain under British rule after the annexation of Natal.

In an article such as this, one cannot deal at length with the whole history of the Voortrekkers, and the events in the Orange Free State and the Transvaal will only be dealt with very briefly.

(*b*) *In the Orange Free State.*—Notwithstanding the defeat of the Matabele in January, 1837, they continued to be a menace to the emigrants in the Free State and those to the north of the Vaal River. When Retief proceeded to Natal, Potgieter and Uys led a commando against the Matabele in November, 1837. In a series of engagements lasting nine days, the Matabele were routed and driven across the Limpopo, where they later on established themselves in Matabeleland with Bulawayo as the chief kraal.

In April, 1838, both Potgieter and Uys were in Natal to assist their countrymen after the disasters of February. We have seen that they were in command of the commando which suffered the reverse at Italeni, where Uys was killed. Subsequently Potgieter left Natal with a large following and settled in the Winburg area of the present Orange Free State, which had been bought from a native Chief. Winburg was so called because of the victory over the Matabele in November, 1837. Later Potgieter crossed the Vaal River and founded Potchefstroom, the first capital of the Transvaal. The policy of the Cape Governor of entering into treaties with native chiefs led to treaties with Moshesh, the Basuto Chief, and Adam Kok, Chief of the Griquas, as well as other chiefs to the north of the Cape Colony. The emigrants, in what is now the Orange Free State, had continual trouble with these treaty chiefs, who were supported by the Colonial Government. In 1845

British troops crossed the Orange River to assist the Griqua Chief, Adam Kok, and an engagement took place at Swartkoppies. An arrangement was then entered into whereby Major Warden was installed as British Resident and later on he established himself at Bloemfontein. The troubles with the natives continued, however, and loss of life and property were usual occurrences. Sir Harry Smith, who became Governor of the Cape in 1847, thought to cut the Gordian knot by proclaiming the whole of the territory south of the Vaal River to be under the sovereignty of the Queen. The territory was named the Orange River Sovereignty. This proclamation, issued early in 1848, was welcomed by some, but resented by a large majority of the residents in the territory. In the same year the emigrants under Andries Pretorius, who had left Natal, seized Winburg and compelled Major Warden and the British officials to leave Bloemfontein. Sir Harry Smith immediately took the field against them, crossed the Orange River at the head of British troops and defeated Pretorius at the battle of Boomplaats on 29th August, 1848. British rule was established and many of the inhabitants trekked across the Vaal River. The British administration had an unhappy time. Wars with the Basutos were not very successful and after the independence of the emigrants north of the Vaal River was acknowledged in 1852 it was decided to end the Orange River Sovereignty and in 1854 the independence of the Orange Free State was also acknowledged.

(c) *In the Transvaal.*—After the Voortrekkers had established themselves in Natal with a Volksraad, which sat at Pietermaritzburg, an agreement was come to whereby all the emigrants, including those beyond the Drakensberg, were subject to the jurisdiction of the Natal Volksraad. At the same time it was agreed that there should be a Local Council (Adjunct Raad) for Winburg and Potchefstroom to deal with all local matters and with the right to sit with the Volksraad at Pietermaritzburg whenever important matters were considered.

Andries Pretorius was acknowledged as Commandant-General over the emigrants and Potgieter as Chief Commandant. We have seen that Potgieter moved from Winburg to Potchefstroom in 1839. After the British occupation of Natal the people of Winburg and Potchefstroom declared themselves no longer bound by the actions of the Volksraad at Pietermaritzburg and Potgieter was their recognized leader. It was Potgieter's desire to establish communication with Delagoa Bay and the sea and to be free of any danger of a collision with the British Government. He also had in mind the *Cape of Good Hope Punishment Act*, passed in England and making crimes committed by British subjects in any part of Africa south of the 25th parallel of latitude cognisable in the courts of the Cape Colony. The emigrants were still looked upon by the British authorities as British subjects, notwithstanding repeated protests, and this Act was specially passed to apply to them.

When the troubles with the treaty chiefs in the Orange Free State followed the annexation of Natal, Potgieter trekked with a large following to a place nearer Delagoa Bay and north of the 25th parallel of latitude. There the town of Andries Ohrigstad was founded and named after Potgieter, whose full name was Andries Hendrik Potgieter, and a certain Ohrig, a business man of Amsterdam who had interested himself on behalf of the emigrants. The place is still called Ohrigstad. It was a fever stricken area and the emigrants after suffering great distress were compelled to move to higher ground. They then founded Lydenburg—the town of suffering. Potgieter himself moved to the Zoutpansberg where Schoemansdal was established and a flourishing trade in ivory, etc., developed, largely with Inhambane in Portuguese territory. Potgieter was still the acknowledged leader of the emigrants north of the Vaal River. He was bitterly opposed by other people, some of whom had come from Natal after the annexation of that area. Andries Pretorius left Natal in the beginning of 1848 and we have seen that he was at the head of the farmers who were defeated by Sir Harry Smith at Boomplaats in August of that year. Pretorius thereafter settled at the Magaliesberg in the Transvaal and made overtures on behalf of the Transvaal emigrants for a treaty of peace with Britain. These eventually led to the Sand River Convention which was signed on 17th January, 1852. In this Convention, the British Government "guaranteed in the fullest manner, to the emigrant farmers beyond the Vaal River, the right to manage their own affairs and to govern themselves according to their own laws, without any interference on the part of the British Government, and that no encroachment should be made by the said government on the territory north of the Vaal River". Amongst other provisions all alliances with native tribes north of the Vaal River were disclaimed by the British Government, and trade in war material with natives was prohibited by both sides.

It had been Potgieter's policy to have nothing to do with the British and to move as far as possible away from them. He had a very large following. The action of Pretorius in negotiating with the British was deeply resented by Potgieter and his followers, and it was openly stated that he had no power to enter into any negotiations, much less to sign a treaty. Both leaders were strongly supported and many feared civil war. In March, 1852, a great meeting was held at Rustenburg. Feeling ran very high. Fortunately the elders induced the two leaders to meet in Potgieter's tent and their differences were peaceably settled. When eventually the tent was thrown open Pretorius and Potgieter were seen clasping hands over an open Bible between them, and great was the joy of the public.

This part of our history may be fittingly closed with the following quotation from Theal*:—

> "The emigrants had at last obtained what they had striven for so long and through so much suffering. To God, the same God who had led from misery to happiness another people whose history was on every tongue, their grateful thanks were due. And so they joined together to praise Him. The Psalms that they sang might have sounded discordant to those whose ears are used to organ and choir, the prayers that the elders uttered might have seemed to modern divines to savour more of the teaching of Moses than of Paul; but psalm and prayer went up to the Throne of God from deeply grateful hearts, and men who had never been moved to shed a tear by all the blows that disaster had struck, were strangely moved that day.
>
> The strife of sixteen years was over, and independence was won."

Both of these great leaders died not long afterwards—Potgieter in March, 1853, and Pretorius in July, 1853.

The foregoing is a bare outline of the principal features of the Great Trek, which was the central theme in all the centenary celebrations last year. The monument, in course of erection near Pretoria, is in honour of the whole Voortrekker community, and is intended to be a worthy memorial to those intrepid pioneers who opened up South Africa and were the actors in perhaps the most important series of events in our history.

3. **The Monument.**—In December, 1895, the late General Joubert laid the foundation stone of the Monument erected near the Bloukrans River about 3 miles from Chieveley, Natal, to the memory of the victims of the massacre of 17th February, 1838. On that occasion a committee was formed for the purpose of collecting funds for a Voortrekker Monument. An amount of money was collected but nothing came of the movement. In 1909 the matter was again mooted by the committee entrusted with the acquisition of the Voortrekker Church at Pietermaritzburg, which had fallen into private hands, and subsequently efforts were made from time to time to move in the matter. Several bodies in different parts of the Union were interested in the movement, and in April, 1931, a conference of delegates from such bodies was held at Bloemfontein. A central committee was formed to co-ordinate all activities in the direction of working for the erection of a central monument in honour of the Voortrekkers to be unveiled on 16th December, 1938. The time was not very propitious as the great depression had set in, and the committee contented itself with the issue of Voortrekker Monument Stamps which the government readily sanctioned. Later on active propaganda for the cause was made and efforts to collect funds were increased. In 1935 the government informed the committee that it considered the erection of a monument in honour of the Voortrekkers and the approaching centenary to be of such national importance that it would take up the matter. After negotiations it was agreed that the government should appoint a number of representatives on the committee and that the committee so enlarged should continue the work.

The committee had to decide where the monument should be erected. A sub-committee was appointed to visit all the places put forward and to report on the whole matter. The following places were involved and were visited by members of the sub-committee:—In Natal: Pietermaritzburg, Weenen, Danskraal (near Ladysmith), and Blood River; in the Orange Free State: The Drakensberg at a point where Retief crossed in 1837, near Oliviers Pass, about 25 miles from Harrismith, Thaba 'Nchu, Bloemfontein, Winburg, and Vegkop, near Heilbron; in the Transvaal: Potchefstroom, Pretoria, and Ohrigstad. The report of the sub-committee was considered at a conference of representatives from all the provinces with the central committee. The

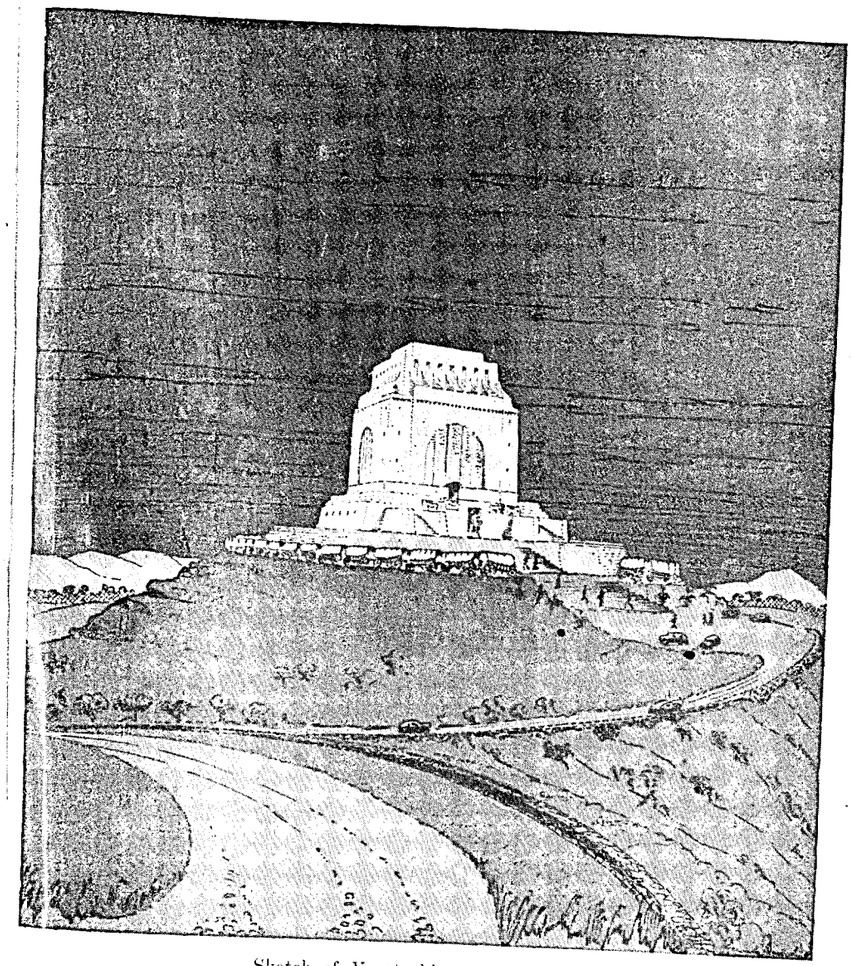
* Theal: History of South Africa, 1834-1854, p. 486.

conference decided by a majority in favour of Pretoria. Although at first there was disappointment and opposition, especially in Natal, this decision was later on generally approved.

The site chosen was a kopje forming part of the ridge running from Skanskop to a point on the road from Pretoria to Johannesburg where it is joined by the road from Voortrekkerhoogte.

The form of the monument was decided upon after careful consideration of a large number of designs, suggestions, photographs, etc., received from all parts of the Union and from overseas. The design ultimately accepted was a combination of two original designs, one of which had come from Pretoria and the other from Stellenbosch. The main feature of the monument will be a massive square structure of granite rising some 130 feet from the summit of the kopje on which it stands (Pretoria design). From the top of the monument there will be a wide view of the surrounding country. The Witwatersrand to the south, the Magaliesberg to the north and west, the Premier Mine to the east, and the Waterberg in the far north, will all be visible on a clear day. Within the structure will be the hall of honour, where the memory of Piet Retief and other Voortrekker leaders will be suitably honoured. On the walls, right round, the history of the Voortrekkers will be portrayed by a frieze in relief 260 feet long and 7½ feet high and showing 32 incidents of the Great Trek. The whole interior will be surmounted by a dome on which mural paintings will show other historic associations. At each of the four corners outside there will be a huge figure of a Voortrekker leader in granite, and before the entrance there will be the bronze figures of a Voortrekker mother with two children. This group will be the work of the well known South African sculptor, Anton van Wouw.

The structure will be surrounded by a laager of 56 wagons, also of granite (Stellenbosch design). The laager was the form of defence adopted by the Voortrekkers. Symbolically the structure will remind us of the rugged and intrepid character of the Voortrekkers; it will contain all that the Afrikaner holds dear and honours in his history, and the laager will represent his determination to defend these things to the utmost.



Work on the monument is proceeding and it is hoped that it will be ready for unveiling on the 16th December, 1943. It proved to be impossible to have it completed by the 16th December, 1938, as was originally contemplated.

4. **The Trek of 1938.**—The Trek of 1938 originated and was carried out by the A.T.K.V. van die S.A.S. & H. (Afrikaanse Taal- en Kultuur-Vereniging van die Suid-Afrikaanse Spoorweë en Hawens, which means Afrikaans Language and Cultural Society of the South African Railways and Harbours).

The A.T.K.V. is a cultural society organized by Afrikaans-speaking railwaymen. This society offered, as a contribution to the centenary celebrations at Pretoria, to have a Voortrekker wagon made of stinkwood, and to send it by road to reach Pretoria in time for the celebrations and the laying of the foundation stone of the monument. The Centenary Committee readily accepted the offer, and the necessary preparations were started for the trek along the actual routes followed by the Voortrekkers more than a hundred years ago. At first it was thought to make the Eastern Cape Province the starting point because the Great Trek had really commenced there, but eventually it was decided to start from Capetown itself. At the request of the Centenary Committee the ox wagon mail was inaugurated in co-operation with the Postal Department, for the carrying of special envelopes bearing Voortrekker Monument stamps from Capetown and other centres, to Pretoria. It was anticipated that provision for some 10,000 envelopes would be sufficient, but eventually a special wagon had to be provided to carry the enormous mail, which was increased by the later inclusion of Blood River as an objective.

So great was the interest aroused by the idea of the ox wagon trek, that people in all parts of the country clamoured for the privilege of a visit from one of wagons. The result was that several other treks besides that from Capetown were organized. Consequently most parts of the Union were visited by ox wagons converging on Pretoria and Blood River. Eventually eight wagons arrived in Pretoria and four at Blood River, it having been decided to send some of the wagons to the scene of the battle of 16th December, 1838, where celebrations on a large scale were also to take place.

Each trek had to be organized in minutest detail. Railwaymen, members of the A.T.K.V., were in charge of the wagons. Oxen, mostly red Afrikanders, were provided by local farmers, who where only too willing to have the honour of their oxen taking the wagons from one centre to another. Everything was organized by the A.T.K.V.

Sketch of Voortrekker Monument.

6th December, 1938. The arrow indicates the site of the Monument.
[*Photograph by the Aircraft Operating Co. of Africa (Pty.), Ltd.*]

On the afternoon of the 8th August, 1938, the trek commenced from Capetown, and two wagons left the mother city on the long trek to the north. Thousands of people gathered by the monument of Jan van Riebeeck at the bottom of Adderley Street, to witness the send-off, and thousands more watched the progress of the wagons as they slowly passed through the streets of Capetown.

The first outspan was at Goodwood, some 8 miles from Capetown, where about 20,000 people gathered that evening for a "braai-vleis-aand", and to listen to speakers who addressed the huge crowd.

The wagons seemed to be very frail and small and there were those who doubted if they could stand the long journey. They were, however, made according to the model and measurements of the light wagons used by the Voortrekkers on commando. At all centres visited by the wagons the enthusiasm of the public was overwhelming. Never before had such interest and universal approval been shown with regard to any movement. Everywhere people gathered in their thousands round the wagons and joined in the festivities arranged for the occasion. This tremendous interest was thoroughly maintained until the treks to Pretoria and Blood River were completed nearly four months after the departure of the two wagons from Capetown.

The Afrikaans-speaking public regarded these ox wagons as symbols of all that they hold dear in the history of their own people, hence the unbounded enthusiasm. The treks of the ox wagons undoubtedly contributed largely to the success of the Centenary Celebrations. The organization of the treks and the way in which they were carried out and conducted redound to the credit of the A.T.K.V. and the trek leaders.

The Voortrekkers of 1838 took possession of the "platteland" and secured a means of livelihood there. Latterly the people who have left the "platteland" to seek a livelihood in the cities and towns have been called the "New Voortrekkers", and they are engaged in a hard struggle to gain a footing for Afrikaans-speaking South Africans in trade and industry. It is significant that the trek of 1938 was organized, not by farmers as was the trek of 1838, but by workers on the railways who belong to the ranks of the "New Voortrekkers". And well did they acquit themselves of the task.

At each centre visited by the ox wagons a programme was arranged for their reception. The celebrations were mostly of a religious nature and the history of the Voortrekkers formed the subject of the speeches. Family worship was a feature of the life of the trekkers, whose families accompanied them in some instances. At most of the centres visited, a monument was erected to commemorate the event and to mark the "Pad van Suid-Afrika" (the Path of South Africa). In many places also the wagon was drawn over a block of wet cement in order to preserve the impression of the wheels.

All the wagons safely reached their destinations at Pretoria and Blood River in time for the celebrations, and so ended one of the most remarkable and unique undertakings that has ever figured in any celebrations of a similar nature.

5. **The Celebrations.**—(*a*) *Arrangements.*—The arrangements for the Centenary Celebrations were in the hands of a committee, which was appointed by the government after consultation with the Central Monument Committee, and which consisted of members of that Committee and other members appointed by the government.

The co-operation of various State Departments was secured, especially the Defence, Police, Railway, and Health Departments, as well as the assistance of the corporation of Pretoria and the Provincial Roads Department. Roads had to be made and parking areas laid out and provision was made for housing some 40,000 people under canvas. Tents and sails, for the construction of huts, were hired from the Defence and Railway Departments, and members of the Special Service Battalion rendered yeoman service in assisting to prepare the ground and to put up the tents and canvas huts. Catering was in the hands of the Suid-Afrikaanse Vroue Federasie (South African Women's Federation), for whose use special refreshment rooms under canvas were provided. A large amphitheatre, to seat some 3,000 people, was constructed (under canvas) and a special parade ground was prepared for displays by members of the Defence Force. The canvas city was divided into laagers named after Voortrekker leaders, and there were also groups of students, factory girls, and others. There was also a laager of some 3,000 Voortrekkers (Afrikaans movement corresponding to the Boy Scouts).

These changes necessitated alterations in the constitution of the Union in order to bring it into agreement with the *Statute of Westminster*, and accordingly during the 1934 session of Parliament legislation was introduced and the *Status of the Union Act*, No. 69, was passed amending certain sections of the *South Africa Act*. The more important of the amendments contained in Act No. 69 are:—

§ 2. Determines that the Parliament of the Union shall be the sovereign legislative power in and over the Union, to the exclusion of all Acts of Parliament of the United Kingdom and Northern Ireland passed after the 11th December, 1931.

§ 4. (1). Invests in the King (or his representative), acting on the advice of His Ministers of State for the Union, the Executive Government of the Union in regard to any aspect of its domestic or external affairs.

§ 5. Establishes that the "heirs and successors" of His Majesty the King shall be taken to mean His Majesty's heirs and successors in the sovereignty of the United Kingdom and Ireland as by law established.

§ 6. Provides for an amendment to sections *twenty-six* and *forty-four* of the *South Africa Act* by the deletion of the words "a British subject of European descent" and the substitution of the words,

> "A person of European descent who has acquired Union Nationality whether (i) by birth or (ii) by domicile as a British subject or (iii) by naturalization, or otherwise, in terms of Act No. 40 of 1927 or of Act No. 14 of 1932."

§ 7. Section *fifty-one* of the *South Africa Act* providing for the Oath or form of affirmation to be taken by a senator or member of Parliament is amended by the deletion of the words "of the United Kingdom of Great Britain and Ireland," and the insertion after "His Majesty" of the words "the King or Queen (as the case may be)".

§ 8. Repeals section *sixty-four* of the *South Africa Act* and substitutes:—

> "64. When a Bill is presented to the Governor-General for the King's assent he shall declare according to his discretion, but subject to the provisions of this Act and to such instructions as may from time to time be given in that behalf by the King, that he assents in the King's name, or that he withholds assent. The Governor-General may return to the House in which it originated any Bill so presented to him, and may transmit therewith any amendments which he may recommend and the House may deal with the recommendation."

§ 9. Amends section *sixty-seven* of the *South Africa Act* by providing for the deletion of the words "or having been reserved for the King's pleasure shall have received his assent."

§ 11. Repeals sections *eight* and *sixty-six* of the *South Africa Act*, and provides for the repeal of section *sixty-five* as from a date to be fixed by the Governor-General by proclamation in the *Gazette*. (A proclamation repealing the section was made on the 2nd November, 1934.)

The *Royal Executive Functions and Seals Act*, No. 70 of 1934, passed during the same session of Parliament and described as being "to provide for the King's Acts as Head of the Executive of the Union, the use of Royal seals in connection therewith and the vesting of certain functions in Union officials and bodies," although not amending the *South Africa Act*, must be read in conjunction with Act No. 69 as amplifying and bearing upon the expansion of the constitutional position.

SYNOPSIS OF THE PRINCIPAL CLAUSES OF THE SOUTH AFRICA ACT, 1909, AND AMENDMENTS.

[Sections marked with an asterisk * are referred to in the table of amending, modifying, or definitive legislation given below.]

PART I—PRELIMINARY (SECTIONS 1 TO 3).

*§ 1. Acknowledgment of Sovereignty and Guidance of Almighty God.

PART II—THE UNION (SECTIONS 4 TO 7).

*§ 4. The Colonies of the Cape of Good Hope, Natal, the Transvaal, and the Orange River Colony are to be united by Royal Proclamation into a legislative union. The Government and Parliament are to have full power within the limits of the Colonies, but the King is to appoint a Governor-General.

PART III—EXECUTIVE GOVERNMENT (SECTIONS 8 TO 18).

§§ 9-11. A Governor-General appointed by the King represents His Majesty in the Union, and exercises, subject to this Act, such powers and functions as His Majesty is pleased to assign to him. The salary of the Governor-General is fixed at £10,000, payable out of the Consolidated Revenue Fund of the Union, and is not to be altered during his continuance in office. The provisions of the Act are to apply to any person appointed as deputy to the Governor-General during his temporary absence.

*§ 14. Ministers of State, not exceeding ten† in number, are to be appointed to administer such departments of State as are established by the Governor-General-in-Council. They are to be members of the Executive Council, and after the first general election of members of the House of Assembly, no Minister is to hold office for more than three months unless he becomes a member of either House of Parliament.

*§ 15. The appointment and removal of all officers of the public service is vested in the Governor-General-in-Council unless delegated to some other authority.

§ 16. All powers and functions vested in the Governor or other authority of a Colony at the date of the establishment of the Union are to be vested in the Governor-General, the Governor-General-in-Council, or in the authority exercising similar powers under the Union.

§ 18. Save as in section 23 excepted, Pretoria is to be the seat of Government of the Union.

PART IV—PARLIAMENT (SECTIONS 19 TO 23).

§ 19. The legislative power of the Union is vested in the Parliament, consisting of the King, a Senate, and a House of Assembly.

§ 22. A period of twelve months may not intervene between the last sitting of Parliament in one session and its first sitting in the next session.

§ 23. Capetown is to be the seat of the Legislature of the Union.

SENATE (SECTIONS 24 TO 31).

*§ 24. For the ten years after the establishment of the Union eight senators are to be nominated by the Governor-General-in-Council, one half of their number being selected mainly on the grounds of their thorough acquaintance with the reasonable wants and wishes of the coloured races in South Africa. Each original province is to elect eight senators. The senators hold their seats for ten years.‡

*§ 25. Parliament may provide for the constitution of the Senate after the expiration of the ten years, and unless and until such provision has been made, the Senate is to consist of the nominated members together with eight senators for each province elected in the prescribed manner and holding office for ten years unless the Senate be sooner dissolved.

*§ 26. The qualifications of a senator are as follows:—
He must—

(*a*) be not less than thirty years of age;
(*b*) be qualified to be registered as a voter for the election of members of the House of Assembly in one of the provinces;
(*c*) have resided for five years within the limits of the Union as existing at the time when he is elected or nominated;
(*d*) be a British subject of European descent;‖
(*e*) in the case of an elected senator, be the registered owner of immovable property within the Union of the value of not less than £500 over and above any special mortgages thereon.

§ 30. The presence of at least twelve senators is necessary to constitute a meeting of the Senate for the exercise of its powers.

---

† Increased to eleven by Act No. 34 of 1925, and to twelve by Act No. 13 of 1938.
‡ Amended by Act No. 54 of 1926.
‖ Amended by Act No. 69 of 1934.

HOUSE OF ASSEMBLY (SECTIONS 32 TO 50).

§§ 32–33. ¶ The House of Assembly is composed of members chosen by the voters of the Union in electoral divisions. The number in any original province may not be diminished until the total number of members of the House of Assembly reaches 150, or until a period of ten years has elapsed.†

*§ 34. Provision is made for the increase, from time to time, of the number of members to be elected in each province.†

*§ 35. Parliament may prescribe the qualifications necessary to entitle persons to vote. No voter registered in the Province of the Cape of Good Hope may be disqualified by reason of his race and colour only except by a Bill passed by a joint sitting of both Houses of Parliament, and at the third reading be agreed to by not less than two-thirds of the total members of both Houses.‡

*§ 36. The qualifications of voters for the election of members of the House of Assembly are the same as existed in the several Colonies at the establishment of the Union.‖

*§ 37. The laws relating to elections in force in the Colonies at the establishment of the Union apply to the election of members of the House of Assembly. All polls are to be taken on the same day throughout the Union.

§§ 38–40. ¶ Provision is made for the setting up of an Electoral Delimitation Commission, and the duties of the Commissioners are defined.

*§§ 41-43. A similar commission is to be appointed after each quinquennial census.

*§ 44. The qualifications of a member of the House of Assembly are as follows:—

He must—

(*a*) be qualified to be registered as a voter for the election of members of the House of Assembly in one of the provinces;

(*b*) have resided for five years within the limits of the Union as existing at the time when he is elected;

(*c*) be a British subject of European descent.**

§ 45. No House of Assembly is to continue for a period longer than five years from the first meeting thereof.

§ 49. The presence of at least 30 members is necessary to constitute a meeting of the House.

BOTH HOUSES OF PARLIAMENT (SECTIONS 51 TO 58).

*§ 51. Every senator and every member of the House of Assembly is required to take an oath or affirmation of allegiance in a form prescribed.**

§ 52. A member of one House of Parliament is incapable of sitting as a member of the other House. Every Minister of State has the right to sit and speak in both Houses but may vote only in the House of which he is a member.

*§§ 53-54. The disqualifications for sitting as a senator or member of the House of Assembly are enumerated.

§ 55. Provides a penalty for any person, not a member, who sits or votes in the Senate or House of Assembly.

*§ 56. Provision is made for an annual allowance to each senator and each member of the House of Assembly.

POWERS OF PARLIAMENT (SECTIONS 59 TO 67).

*§ 59. Parliament has full power to make laws for the peace, order, and good government of the Union.

§§ 60–62. Bills appropriating revenue or imposing taxation must originate in the House of Assembly. The Senate may not amend such Bills nor may it amend any Bills so as to increase any proposed charges or burden on the people. The appropriation of any part of the public revenue must be recommended by message from the Governor-General before it may be originated or passed as a vote, resolution, address, or bill.

§ 63. Provision is made for the joint sitting of the members of the Senate and the House of Assembly in the event of both Houses not agreeing to amendments of a Bill after other prescribed expedients have failed.

† For number of members see § 4 (4) and § 10 (2) of this chapter.
‡ Amended by Act No. 12 of 1936.
‖ Amended by Acts No. 18 of 1930 and No. 41 of 1931.
¶ See § 10, paras. 2 and 3 *seq.*
** Amended by Act No. 69 of 1934.

*§ 64. The Governor-General may assent to, or withhold assent from, a Bill in the King's name, or may reserve the Bill for the signification of the King's pleasure. Bills repealing or amending this section or any of sections 32 to 50, and Bills abolishing provincial councils or abridging their powers, must be so reserved.†

*§ 65. The King may disallow any law within one year after it has been assented to by the Governor-General.

*§ 66. A Bill reserved for the King's pleasure has no force until it has received the King's assent and the fact has been proclaimed within one year from its presentation to the Governor-General.†

*§ 67. Two copies of every law, one in English and one in Dutch ‡ (one to be signed by the Governor-General†), are to be enrolled of record in the office of the Registrar of the Appellate Division of the Supreme Court of South Africa. In case of conflict between the two copies, that signed by the Governor-General shall prevail.

PART V—THE PROVINCES.

ADMINISTRATORS (SECTIONS 68 TO 69).

§§ 68–69. Provision is made for the appointment of an administrator in each province, who holds office for a term of five years. The salaries of the administrators are fixed and provided by Parliament, and may not be reduced during their respective terms of office.

PROVINCIAL COUNCILS (SECTIONS 70 TO 77).

§ 70. In each province there is a provincial council consisting of the same number of members as are elected in the province for the House of Assembly; but in no case is the membership to be less than twenty-five.

§ 72. A member of the provincial council ceases to be a member on being elected to either House of Parliament.

*§ 73. Each provincial council continues for three years from the date of its first sitting.‖

EXECUTIVE COMMITTEES (SECTIONS 78 TO 84).

§ 78. An executive committee of four persons, not necessarily members of the council, together with the administrator as chairman, is elected by the provincial council at its first meeting after each general election.

§ 79. Members of the executive committee who are not members of the provincial council may take part in the proceedings of the council but may not vote.

§ 80. The administration of affairs on behalf of the provincial council is carried on by the executive committee, or, when there are not sufficient members to form a quorum, by the administrator pending the election of members to fill the vacancies.

§ 84. The administrator may, and, when required to do so, must act on behalf of the Governor-General-in-Council in regard to all matters in respect of which no powers are reserved or delegated to the provincial council.

POWERS OF PROVINCIAL COUNCILS (SECTIONS 85 TO 91).

*§ 85. The provincial council may make ordinances in relation to certain specified matters. (See § 6 of this chapter.)

§ 86. Any ordinance made by a provincial council has effect in and for the province as long and as far only as it is not repugnant to any Act of Parliament.

§ 87. A provincial council may recommend to Parliament the passing of any law relating to any matter in respect of which it is not competent to make ordinances.

§ 89. Provides for the formation of a provincial revenue fund in each province and for its appropriation by ordinance for the provincial administration generally or for particular purposes, on the recommendation of the administrator.

§ 90. The Governor-General-in-Council may assent to, or withhold his assent from, a proposed ordinance passed by the provincial council, or may reserve it for further consideration.

† Amended by Act No. 69 of 1934. ‡ Or Afrikaans, *vide* Act No. 8 of 1925.
‖ Now five years, *vide* § 2, Act No. 43 of 1935.

PART VI—THE SUPREME COURT OF SOUTH AFRICA (SECTIONS 95 TO 116).

*§ 95. The Supreme Court of South Africa is to consist of a Chief Justice of South Africa, the ordinary judges of appeal, and the other judges of the several divisions of the Supreme Court of South Africa in the provinces.

*§ 96. The Appellate Division of the Supreme Court of South Africa is to consist of the Chief Justice, two ordinary judges of appeal, and two additional judges of appeal assigned from any of the provincial or local divisions of the Supreme Court.

*§ 98. The several supreme courts of the four Colonies at the establishment of Union are to become provincial divisions of the Supreme Court of South Africa, each presided over by a judge president. The court of the Eastern Districts of the Cape of Good Hope, the High Court of Griqualand, the High Court of Witwatersrand, and the several circuit courts are to become local divisions of the Supreme Court. Provision is made for the jurisdiction of the provincial and local divisions.

*§§ 103–105. Provision is made for appeals in civil and criminal cases.

*§ 106. There is no appeal from the Supreme Court of South Africa to the King-in-Council, but the King-in-Council retains the right to grant special leave to lodge such an appeal.

PART VII—FINANCE AND RAILWAYS (SECTIONS 117 TO 133).

*§ 117. All revenues are vested in the Governor-General-in-Council. Provision is made for the formation of a Railways and Harbours Fund and a Consolidated Revenue Fund.

§ 119. The annual interest of the public debts of the Colonies and any sinking funds constituted by law at the establishment of the Union form a first charge on the Consolidated Revenue Fund.

*§ 120. Money is to be withdrawn from the Consolidated Revenue Fund and from the Railways and Harbours Fund only under appropriation made by law; but expenditure may be incurred from the funds until the expiration of two months after the first meeting of Parliament.

§ 121. All stocks, cash, bankers' balances, and securities for money belonging to each of the Colonies at the establishment of the Union are to be the property of the Union.

*§ 124. The Union is to assume all debts and liabilities of the Colonies existing at its establishment, under certain conditions.

§ 125. No railways and harbours are to be constructed without the sanction of Parliament.

*§ 126. Provides for the control and management of the railways, ports, and harbours of the Union by a board consisting of not more than three commissioners and a minister of State as chairman.

§ 127. The railways, ports, and harbours are to be administered on business principles. The total earnings are not to be more than sufficient to meet the necessary outlay on working, etc., and the payment of interest due on capital.

*§ 128. Provides for the establishment out of railway and harbour revenue of a fund to be used for maintaining uniformity of rates notwithstanding fluctuations in traffic.

*§ 129. All balances standing to the credit of any fund established in any of the Colonies for railway or harbour purposes at the establishment of the Union are to be under sole control of the Board.

*§ 130. Every proposal for construction is to be considered by the Board. The Board is to frame an estimate of the annual loss which in its opinion will result from construction carried out contrary to its advice. The amount of such estimate, when approved by the Controller and Auditor-General, is to be paid annually to the Railways and Harbours Fund from the Consolidated Revenue Fund. If in any year the actual loss incurred is less than the estimate, the amount paid over is to be reduced accordingly.

§ 131. Provides for compensation for any loss incurred by the Board for provision of services gratuitously or at an insufficient rate of charge.

*§ 132. Provides for the appointment of a Controller and Auditor-General by the Governor-General-in-Council, the office to be held during good behaviour.

*§ 133. Provides for compensation of Colonial capitals for diminution of prosperity or decreased rateable value by reason of their having ceased to be seats of government.

PART VIII—GENERAL (SECTIONS 134 TO 148).

§ 134. Provides for the election of senators and of members of the executive committees of the provincial councils according to the principle of proportional representation.

§ 136. Provision is made for free trade throughout the Union.

*§ 137. Both English and Dutch† are the official languages of the Union.

*§ 142. Provides for the appointment of a permanent public service commission with powers relating to the appointment, discipline, retirement, and superannuation of public officers.

§ 144. Any officer of the public service of any of the Colonies who is retained in the service of the Union is to retain all his existing and accruing rights and pension privileges.

§ 145. The services of officers in the public service of any of the Colonies are not to be dispensed with by reason of their want of knowledge of either the English or the Dutch† language.

§ 147. The control and administration of native affairs and matters specially affecting Asiatics is to vest in the Governor-General-in-Council.

§ 148. All rights and obligations under any conventions or agreements which are binding on any of the Colonies are to devolve upon the Union. The provisions of the railway agreement between the Governments of the Transvaal, the Cape of Good Hope, and Natal are to be given effect to by the Government of the Union.

PART IX—NEW PROVINCES AND TERRITORIES (SECTIONS 149 TO 151).

*§ 149. Provision is made for the alteration of boundaries and the formation of new provinces.

§§ 150–151. Provide for the admission into the Union of territories administered by the British South Africa Company, and territories belonging to or under the protection of His Majesty, inhabited wholly or in part by natives, upon the terms embodied in the schedule to the Act.

PART X—AMENDMENT OF THE ACT (SECTION 152).

§ 152. Provides for the amendment of the Act and the procedure to be followed in the repeal or alteration of §§ 33, 34, 35, and 137.

*§ 153. The Act is to be known as the "South Africa Act, 1909."

SOUTH AFRICA ACT, 1909—SCHEDULE OF AMENDING, MODIFYING OR DEFINITIVE LEGISLATION TO 1938.

Section of *South Africa Act.*	Amended, Defined, or Amplified by.	Extent of Amendment, etc.
1. Title	Act No. 9 of 1925	Title transferred to new section, 153, and acknowledgment of sovereignty and guidance of Almighty God substituted in Section 1 therefor.
2. Definitions	§ 5 of Act No. 69 of 1934	By the insertion of a definition of "heirs and successors".
4. Proclamation of Union	Acts No. 49 of 1919, § 2, No. 32 of 1921, No. 42 of 1925	As to the territory of South West Africa.
7. Application of Imperial Statutes	§ 2, Statute of Westminster, 1931	Non-applicability of Colonial Laws Validity Act, 1865, and other Imperial Acts.
8. Executive power	§ 11 of Act No. 69 of 1934	Repealed.
14. Appointment of Ministers of State	Act No. 34 of 1925	Increasing number of Ministers of State from *ten* to *eleven*.
	Act No. 17 of 1933	Appointment of any Member of Executive Committee as Acting Minister of State.
	Act No. 13 of 1938	Increasing number of Ministers of State from *eleven* to *twelve*.
15. Appointment and removal of officers	§ 9, Act No. 27 of 1923	As to appointment of officers in the public service.
	§ 19, Act No. 27 of 1923	As to the removal of such officers.
20, 24, and 25. Original constitution of Senate	§ 1, Act No. 9 of 1920	As to the ending of the period of ten years.
	Act No. 54 of 1926	As to the dissolution of the Senate.

† Including Afrikaans, *vide* Act No. 8 of 1925.

SOUTH AFRICA ACT, 1909—SCHEDULE OF AMENDING, MODIFYING, OR DEFINITIVE LEGISLATION TO 1938—*continued.*

Section of *South Africa Act.*	Amended, Defined, or Amplified by.	Extent of Amendment, etc.
26. Qualifications of senators....	§ 4 (2), Act No. 18 of 1930	As to women married in community of property.
	§ 6, Act No. 69 of 1934....	Substitution "Union National" for "British Subject".
34. Increase of number of members of the House of Assembly	Act No. 2 of 1910.....	As to the taking of a census for the purposes of delimitation of electoral divisions.
	Act No. 15 of 1918.....	As to the taking of a census in May, 1918, to be regarded as the quinquennial census; the next census to be taken in 1921.
	Act No. 31 of 1918.....	As to the inclusion, for the purposes of the parliamentary delimitation based on the census of 1918, of European male adults absent from the Union on war service.
	Act No. 5 of 1935.....	As to the continuation of the quinquennial census until 1941, and thereafter a census every ten years.
	§ 1, Act No. 21 of 1937 ..	As to the continuation of the quinquennial census until 1951 and thereafter a census every ten years. For the purposes of the parliamentary delimitation "European Union nationals 21 years or over" substituted for "European male adults," and the quota of the Union is to be determined by dividing the number of European Union nationals of 21 years and over, as ascertained at the 1936 and subsequent Censuses, by 150.
35. Qualifications of voters.....	§ 44 of Act No. 12 of 1936	As to procedure for legislation dealing with native voters.
36. Application of existing qualifications of voters	Act No. 18 of 1930.....	As to enfranchisement of white women.
	Act No. 41 of 1931.....	As to enfranchisement of white males of 21 years and over.

	§§ 2, 3, 4, 5, 6, 7, and 8 of Act No. 27 of 1923	
149. Alteration of boundaries of provinces	Act No. 45 of 1934.....	Restricting power of Parliament in respect of alteration of boundaries of any province or abolition of or abridgment of powers of any provincial council unless on petition by provincial council concerned.

§ 3. Central Administration.

1. **General.**—Under the *South Africa Act*, the supreme executive authority in the Union is vested in the King, and may be administered by him in person, or by the Governor-General as his representative. There is an Executive Council to advise the Governor-General. The term Governor-General-in-Council is understood as referring to the Governor-General acting with the advice of the Executive Council, the members of which are chosen by him and hold office during his pleasure. These at present are the Ministers charged with the administration of the Departments of State (who may not exceed twelve in number) and the Minister without portfolio. They are appointed by the Governor-General; but the mode of the selection of Ministers and the formation of a ministry conforms to the practice under the British Constitution, as does also the method of government by a cabinet possessing the confidence of a majority in Parliament.

2. **The Governor-General.**—The Governor-General (section 9 of the *South Africa Act*) is appointed by and represents the King, and is also Commander-in-Chief of the naval and military forces within the Union. The salary, to be paid out of the Consolidated Revenue Fund of the Union, is fixed (section 10 of the *South Africa Act*) at £10,000 annually.

3. **The Royal Great Seal.**—Shortly after the inception of Union, provision was made for the sealing of public documents, signed by the Governor-General, with a Great Seal of the Union (see Royal Warrants published under Government Notices No. 422 of 1911 and No. 1011 of 1932), but prior to the enactment by the Union Parliament of the *Royal Executive Functions and Seals Act*, 1934, which was assented to by His Majesty on the 22nd June, 1934, and came into operation on the 3rd December of that year, there was no provision in the Union legislation for the sealing of public documents of the Union which bear the King's sign manual. Section 1 of that Act lays down that:—

(1) There shall be a Royal Great Seal of the Union hereinafter referred to as the Great Seal, which shall show on the obverse the effigy of the Sovereign, with his full titles as circumscription and on the reverse the coat of arms of the Union with supporters and the inscription "Unie van Suid-Afrika" and "Union of South Africa."

(2) There shall be a Royal Signet (hereinafter referred to as the Signet) showing the reverse of the Great Seal with the Tudor Crown for crest and the King's full title in Latin on the outer rim and the words "Unie van Suid-Afrika—Union of South Africa" on the inner rim.

(3) The Great Seal and Signet shall be of a design and size approved of by the King and the Great Seal shall show the effigy of the Sovereign in such manner and of such design as His Majesty may be pleased to approve.

The use of the Royal Seals is prescribed in section 4, which, after providing that the King's will and pleasure as Head of the Executive Government of the Union shall be expressed in writing under his sign manual, and that every such instrument shall be countersigned by one of the King's Ministers for the Union, continues:—

"The King's sign manual shall furthermore be confirmed by the Great Seal on all royal proclamations and he may, by proclamation, prescribe which other public instruments, bearing his sign manual, shall pass either the Great Seal or the Signet."

His Majesty the King by Proclamation (No. 5 of 1935, *Government Gazette* of 11th January, 1935) prescribed the particular public instruments which are required to pass either the Royal Great Seal or the Royal Signet: these are:—

(*a*) *the Royal Great Seal of the Union:*—
Instruments conferring full powers to negotiate on behalf of the Union treaties between Heads of States.
Instruments of ratification in respect of treaties between Heads of States. Letters Patent.

(*b*) *the Royal Signet of the Union:*—
Commissions issued to the Governor-General or Acting Governor-General of the Union.
Commissions issued to Union Diplomatic Agents.
Instruments regulating the Institution and Conferment of Honours, Orders, Decorations, Medals, and Coats of Arms.
Instructions to Governor-General.
Exequaturs to foreign Consular Officers.
Commissions to Union Consular Officers.

In terms of section 5 of the Act the Governor-General issued regulations (see *Government Gazette* of 30th November, 1934) for the making and use of wafer seals representing the Royal Great Seal.

4. **Ministries of the Union:—**

Ministry.	Prime Minister.	Date of Formation.
First Botha Ministry	Right Hon. Louis Botha, P.C.	31st May, 1910.
Second Botha Ministry	Right Hon. Louis Botha, P.C.	20th Dec., 1912.
Smuts Ministry	Right Hon. J. C. Smuts, P.C., C.H., K.C.	3rd Sept., 1919.
" (reconstituted)	Right Hon. J. C. Smuts, P.C., C.H., K.C.	10th March, 1921.
First Hertzog Ministry	The Hon. J. B. M. Hertzog	30th June, 1924.
Second Hertzog Ministry	The Hon. J. B. M. Hertzog	6th Nov., 1928.
Third Hertzog Ministry	The Hon. J. B. M. Hertzog	30th March, 1933.

The names of Ministers who held office in these Ministries are given in para. 5 below.

THIRD HERTZOG MINISTRY (AS CONSTITUTED AT 1st FEBRUARY, 1939).

Department.	*Minister.*
Prime Minister and Minister of External Affairs	Gen. the Hon. J. B. M. Hertzog.
Justice	Gen. the Rt. Hon. J. C. Smuts, P.C., C.H., K.C., D.T.D.
Finance	Hon. N. C. Havenga.
Mines	Col. the Hon. Deneys Reitz.
Commerce and Industries and Defence	Hon. O. Pirow, K.C.
Railways and Harbours	Senator the Hon. A. P. J. Fourie.
Lands	Gen. the Hon. J. C. G. Kemp.

Hon. R. H. Henderson	8.11.38

*New department created 1st October, 1937. Formerly part of Department of Labour and Social Welfare.

6. **Functions of Departments.**—The following statement gives the names of the various departments of State, together with their sub-departments, and indicates in concise form the principal matters dealt with by each.

FUNCTIONS OF DEPARTMENTS OF STATE.

PRIME MINISTER.

Communications between His Excellency the Governor-General, the Governor-General-in-Council and the departments of State; between the Executive and Parliament; between State departments and the press; and with the Mandated Territory of South West Africa.

AGRICULTURE AND FORESTRY.

(*a*) AGRICULTURE.

Agriculture and forestry generally. Control and eradication of diseases of stock. Issue of vaccines for inoculation of live stock. Registration of brands. Improvement of markets for agricultural products. Improvement of cattle, sheep, and wool industry. Improvement of pastures and prevention of soil erosion. Inspection of agricultural produce. Control of plant diseases and insect pests. Control and inspection of cold stores. Prevention of adulteration of wine, spirits, and vinegar. Control of the sale of fertilizers, farm foods, seeds, and pest remedies. Agricultural chemistry and soil survey. Viticulture, tobacco culture, cotton cultivation, horticulture, field husbandry services. Collection and distribution of guano. Agricultural extension work. Agricultural education (including scholarships and bursaries for agricultural study). Home economics. Dairy industry. Issue and publication of a monthly publication *Farming in South Africa* and of popular and scientific bulletins. Agricultural economics, marketing, crop estimates, market reports, etc. Agricultural co-operation. Agricultural research and experiment stations. Locust research and destruction. Eradication of jointed cactus, gifblaar, and other noxious plants and weeds. Control of schemes for the relief of distress amongst farmers. Control boards and levy funds. Marketing Council. Assistance to farmers for the combating of soil erosion and construction of small dams.

(*b*) FORESTRY.

Protection, utilization, and regeneration of the indigenous forests, the aim being to maintain and if possible to increase their productivity. Adding to the timber resources of the country through afforestation so as to make the country as far as possible independent of overseas sources. Protection of catchment areas for the sake of water supplies. Prevention of and reclamation of drift sands. Maintenance of selected spots as nature reserves. Encouraging and assisting private afforestation and treeplanting by providing expert advice and supplying seed and plants at low costs. Inculcating a deeper forest sense by means of lectures to the public and forestry courses at universities and agricultural schools. The training of foresters. Research in forestry matters generally as also in connexion with the seasoning, preservation, and utilization of South African-grown timbers. The grading of all export wattle bark. Welfare work on Forestry Settlements.

COMMERCE AND INDUSTRIES.

Industrial development. Industrial utilization of the Union's natural resources and raw materials. Co-ordination between South African exporters and the Union's overseas representatives to promote the Union's export trade. Investigations by the Board of Trade and Industries. Assize Division: inspection and assizing of weights, measures, and weighing and measuring instruments. Assize Board. Marine fisheries and marine biological survey. Development of fishing harbours. South African Iron and Steel Industrial Corporation. Electricity Supply Commission. Electricity Control Board: supply of power and permits or licences to sell power. Fuel Research Institute: grading of coal for export, etc. Overseas marketing of base minerals. Control of explosives: manufacture, sale, transport, etc. Administration of the *Sugar Act*, 1936 (Act No. 28 of 1936), the *Unlawful Determination of Prices Act*, 1931 (Act No. 24 of 1931), the *Crawfish Export Control Act*, 1934 (Act No. 50 of 1934), and the *Trade Coupons Act*, 1935 (Act No. 18 of 1935).

DEFENCE.

Establishment and maintenance of the Union Defence Forces and cadets, and all matters in relation to the defence of the Union. Regulation of air navigation, and the control, regulation, and encouragement of civil aviation.

EXTERNAL AFFAIRS.

Communication with His Majesty's Governments and Administrations in the British Commonwealth of Nations and with foreign Governments. Communication with League of Nations. Negotiation of treaties and agreements, diplomatic relations, and external matters generally.

EDUCATION (UNION) AND CHILD WELFARE.

Supervision of all higher education. Universities of South Africa, Capetown, Stellenbosch, Witwatersrand, and Pretoria. University colleges (5) and South African Native College. Technical colleges at Durban, Capetown, Johannesburg, East London, Pretoria, Pietermaritzburg, Bloemfontein, and Port Elizabeth, and vocational courses in other centres. Conduct of technical and commercial examinations. Trades and housecraft schools at various centres. Industrial schools (8) and reformatories (5) established under the *Children's Act*, No. 31 of 1937. Education and training of deaf, blind, and sane epileptic children. State-aided schools for the deaf (4), blind (2), and epileptics (1). Grants in aid of research.

FINANCE.

(*a*) TREASURY.

Appropriation and supply (except for the services of the Railways and Harbours Administration). Currency and banking. Building societies. Insurance. Raising and management of loans. Banker for spending departments. Pensions and gratuities. Military pensions and medical work. Old age pensions. Blind persons' pensions. Financial relations with provinces. Powers, functions, and duties previously vested in the Custodian of Enemy Property. General control of finances of the Union (excepting the finances of the Railways and Harbours Administration). Union Tender and Supplies Board. State Advances Recoveries Office.

(*b*) CUSTOMS AND EXCISE.

Customs and excise. Registration of shipping and care of British seamen. Examination of candidates for certificates of competency as masters, mates, and engineers of foreign-going, home trade, and fishing vessels. Protection of trade marks and copyrights so far as imported goods are concerned. Supervising the importation of goods prohibited or restricted under various Acts dealing with adulterated food and drink, agricultural pests, second-hand clothing, arms and ammunition, drugs, disinfectants, fertilizers, objectionable literature, etc. Compilation of trade statistics.

(*c*) INLAND REVENUE.

Assessment and collection of revenues other than Customs and Excise, Postal, and Railways and Harbours revenues. Administration of Act No. 34 of 1933 concerning the payment of interest subsidies on farm mortgage bonds and matters relating thereto.

(*d*) PUBLIC DEBT COMMISSIONERS.

Investment of all available trust and deposit funds which may be held by, for, or on account of the Government of the Union and Provincial Administrations and the Railways and Harbours Administration. Application of sinking funds for the redemption of the public debt. Administering the Local Loans Fund established by Act No. 19 of 1926, and the collection, administration, and investment of moneys belonging to public bodies or institutions which the Minister of Finance may require them to undertake.

(*e*) CONTROLLER AND AUDITOR-GENERAL.

Control of issues from the exchequer. Audit of the public accounts, including those of the Railways and Harbours and South West Africa Administrations and such other accounts as the Governor-General may require to be examined in terms of Act No. 21 of 1911, section 60, and reporting to Parliament thereon.

(*f*) HIGH COMMISSIONER (LONDON).

Representation of the Government of the Union in the United Kingdom. Service as agency for the Union in London for financial, commercial, and other purposes, including service on behalf of the S.A. Railways and Harbours Administration, the Provinces, the Electricity Supply Commission, the South African Iron and Steel Corporation, Ltd., and the Perishable Products Export Control Board.

INTERIOR.

(*a*) VARIOUS OFFICES.

Mental hospitals and contingent matters. Immigration and Asiatic affairs. Electoral matters. Naturalization and questions of nationality. Passports. Newspaper and imprints registration. Missing persons. Libraries, museums, and kindred matters. Union Observatory. Census and statistics (Office of Census and Statistics). Registration of births, marriages, and deaths. Government printing and publications. Copyright of government publications. Archives. Commission for the Preservation of Natural and Historical Monuments, Relics and Antiques, Archaeological Bureau, Translation Bureau. Questions relating to late enemy subjects. General matters involving communication with Public Service Commission. Provincial Administrations. Regulation and control of the public exhibition and advertisement of cinematograph films, and of pictures, and of performances for public entertainment. Registration for the purposes of protection of names, uniforms, and badges. National Road Board. Other miscellaneous matters.

(*b*) PUBLIC SERVICE COMMISSION.

Organization and discipline of the public service (see paragraphs 7 and 8 hereunder).

IRRIGATION.*

Professional advice to farmers and public bodies. Construction and supervision of large works for irrigation boards. Administration and control of major government irrigation works. Advice on water supply to municipalities when requested by Provincial Administrations. Reconnaissance surveys of river valleys. Boring for farmers and public bodies. Collection of hydrographic data of all streams. Loans to farmers and others for irrigation purposes. Administration of water courts. Rainfall records and forecasting of weather. Upper air research.

JUSTICE.

Appointment of judges, attorneys-general, magistrates, special justices of the peace, justices of the peace, and commissioners of oaths. All matters connected with the Supreme Court, including Appellate, Provincial and Local

* Irrigation came under the control of the Minister of Mines as from 25th January, 1939.

Divisions, Native High Court (Natal), Magistrates' Courts, and Courts of Special Justices of the Peace. Sheriffs. Capital punishment. Reprieves. Extradition. Fugitive offenders. Messengers of court. Jurors. Inquests. Liquor laws and appointment of licensing boards, except in the Transkeian Territories. Maintenance orders. Legal advice to government departments and conduct of government litigation. Drafting of government Bills and publication of Statutes. Administration of estates. Authentications. Patents, designs, trade marks, and copyright. Registration of companies. Insolvencies and assignment of estates, including deportations for offences under the *Insolvency Act*. Guardians' funds. Inquiries into shipping casualties (in Natal), railway and harbour accidents. *Performing Animals Protection Act*. Administration of *Riotous Assemblies Act*, Venia Aetatis (O.F.S.). Young persons performing in public—control on behalf of Government of the United Kingdom. Appointment of King's Counsel. *Workmen's Compensation Act*—appointment of medical and technical assessors. Administration of *Arms and Ammunition Act*. Determination of amounts of fines recovered in respect of traffic offences, due to be refunded to municipalities.

LABOUR.

Employment generally (other than native employment), in which are included (*a*) urban and rural employment exchanges, (*b*) recruiting for and replacement of units of the Special Service and Pioneer Battalions, (*c*) the recruiting of such members of the Public Service as are not dealt with by the Public Service Commission, and (*d*) the recruiting of labourers for government departments. International Labour Organization affairs. General control of factories and machinery (other than mining machinery) and the regulation of wages and conditions of labour arising out of the administration of the following Acts, as amended: *Workmen's Wages Protection Act*, 1914; *Factories Act*, 1918; *Juveniles Act*, 1921; *Apprenticeship Act*, 1922; *Workmen's Compensation Act*, 1934; *Industrial Conciliation Act*, 1937; *Wage Act*, 1937; and *Unemployment Benefit Act*, 1937.

LANDS.

Administration, control, and disposal of Crown lands. European land settlements. Land surveys. Trigonometrical Survey of the Union, including triangulation surveys, precise levelling, magnetic survey, topographical survey, and all mapping in the Central Mapping Office. Registration of deeds.

MINES.

General administration and control of mining and prospecting. Issue of claim licences, prospecting permits, mining leases, alluvial diamond licences, surface rights, etc., on mining ground. Trading on mining ground. Geological reports and surveys and geological work generally throughout the Union. Mining engineering and control of mines. Regulations governing underground and surface work on mines. Inspection of mines. Control of explosives on mines. Miners' training schools. Registration of mining titles, mining leases, surface rights, etc. Registration work in connexion with Rand Townships. Control and payment of miners' phthisis compensation. Medical examination of applicants and periodical examination of all mine workers and other matters generally connected with miners' phthisis.

NATIVE AFFAIRS.

Administration of the Native Territories in the Transkei, Zululand, and elsewhere, including native reserves and the direction and supervision of local and general native councils. Training of agricultural students. Control and direction of agricultural activities. Direction and supervision of the recruitment of native labour, especially for mining purposes and control of natives in urban areas. Control of native taxation and pass system. Administration of the *Native Trust and Land Act*, 1936, and of the *Representation of Natives Act*, 1936. General supervision of all matters concerning the welfare and interests of the native races of the Union.

POLICE.

Police administration. Suppression of white slave traffic and traffic in dangerous drugs.

POSTS AND TELEGRAPHS.

Control of all postal, mail, telegraph, and telephone services, as well as money order, postal order, postal draft, savings bank, and Union Loan Certificate business. Control of nomenclature of places; the encashment of civil, military, railway, and old-age pension warrants; the collection of Transvaal (basic) personal and income tax; and the sale of Cape and Orange Free State entertainment-tax labels and Union savings-stock.

PRISONS.

Prisons administration, including road camps, farm colonies, and inebriate reformatories.

PUBLIC HEALTH.

Public health. Venereal diseases. Food adulteration. Port health matters. Habit-forming drugs. District surgeons. Pathological laboratories. Vaccination. Inspection of areas of local authorities, water supplies, drainage schemes, and matters under the *Housing Act* and the *Slums Act*. Leprosy and leper institutions. Medical boards and *Medical, Dental and Pharmacy Act*, 1928. Medical advice and assistance to other government departments, the Public Service Commission, and Provincial Administrations.

PUBLIC WORKS.

Design, erection, and maintenance of (*a*) public buildings for Union and provincial purposes (exclusive of certain buildings in the Cape and Transvaal Provinces) and (*b*) inter-provincial and various provincial bridges. Provision of accommodation for Union Government purposes, and services in connexion therewith, including the hiring of all property required for the use of Union government departments. Letting of official residences, quarters, and government buildings generally. Provision and maintenance of mechanical and electrical equipment. Miscellaneous agency and consulting services for Union departments, Provincial Administrations, and university and hospital authorities.

SOCIAL WELFARE.

Administration of *Children's Act*, 1937, with exception of provisions relating to industrial schools and reformatories; *Rents Act*, 1920; *Work Colonies Act*, 1927. Registration of Blind Welfare Societies, subsidization of workshops, training centres and hostels for the blind, and augmentation of wages of the blind under the *Blind Persons Act*, 1936. Assistance to needy physically unfit European persons. The establishment and control of settlements for needy aged and physically unfit European persons. The supply of rations to indigent European persons on the alluvial diamond diggings. Subsidization of hostels for low-paid workers. Subsidization of salaries of social workers in the employ of private welfare organizations. Subsidization of crèches. Subsidization of social centres. Training centre for needy European girls from rural areas. Control of inebriate retreats. Natal. The Church-State scheme for co-operation between the Church and the State in dealing with the Poor White problem.

7. **The Public Service.**—The organization and discipline of the public service is provided for by the *Public Service and Pensions Act*, No. 27 of 1923, as amended by the *Government Service Pensions Act*, No. 32 of 1936, and the *Public Service Amendment Act*, No. 36 of 1936. By this the public service is classed in five divisions:—

(i) *The Administrative Division.*—This consists of the secretaries and under-secretaries of the several departments of State; the chief clerks, principal clerks, senior clerks, Provincial Secretaries, Provincial Auditors of accounts, and magistrates; and all other persons whose offices or posts are directed by the Governor-General from time to time to be included in the administrative division.

(ii) *The Clerical Division.*—This includes all persons whose offices or posts are directed by the Governor-General to be included in the clerical division.

(iii) *The Professional Division.*—This division consists of a higher and a lower branch, and includes all persons whose offices or posts are directed by the Governor-General to be included in the division, and such persons shall be in the higher or the lower branch, as may be directed by the Governor-General.

(iv) *The General Division.*—This includes all persons whose offices or posts the Governor-General directs to be included in the general division.

(v) *The Services.*—These include the permanent Defence Force, the Police Force, and subordinate officers of the Prisons Department.

The following are not included in the public service:—

Ministers; the Administrator of a province or of a mandated territory; the High Commissioner for the Union in the United Kingdom; the Chief Justice of South Africa or any judge of the Supreme Court, a private secretary to a Minister, a clerk to the Chief Justice or to a judge of the Supreme Court, and an itinerant water-court judge if, at the date of appointment as such private secretary, clerk, or water-court judge, he was not an officer of the public service; officers of Parliament; the personal staff of His Excellency the Governor-General; any member of the Public Service Commission; any person employed in the Railway Administration; any person employed by the Government or by any Provincial Administration or by the Administration of the mandated territory, whose whole time is not at the disposal thereof, or any person remunerated by fees only; any person so employed if by the terms of his appointment made in accordance with law he is not subject to the laws regulating the public service; any teacher serving under any Provincial Administration or under the Administration of the mandated territory; persons temporarily employed under section 16 of the Act, or any person in the employment of the Government of the Union or of the Administration of the provinces or of the mandated territory, not being a member of the services, whose post is not included by the Act or by direction of the Governor-General in the administrative, the clerical, the professional, or the general division.

Regulations in connexion with the classification of posts undertaken in terms of the Act were contained in Government Notices issued in September, 1923. Revised scales of salaries, wages, and allowances under the Act were published in October, 1923, and have been further revised from time to time. The scales of pay at present applicable to certain posts in the administrative, clerical, and professional divisions which are common to all or several departments are given hereunder.

PUBLIC SERVICE—SCALES OF PAY FIXED IN TERMS OF ACT No. 27 OF 1923.

8. **Public Service Commission.**—Section 142 of the *South Africa Act* required the appointment of a permanent Public Service Commission. Section 2 of the *Public Service Act*, No. 27 of 1923, made provision in conformity with such requirement. The Commission appointed consists of three members.

9. **Powers and Duties of Public Service Commission.**—The Commission has certain powers conferred and duties imposed upon it by the Act, relating

N63, N19

N19-20

to the appointment, promotion, discipline, retirement, and superannuation of persons employed in the public service, and is required *inter alia*:—

(i) To make recommendations as to appointments and promotions.
(ii) To keep a record of persons employed in the administrative, clerical, and professional divisions and in prescribed posts in the general division.
(iii) To make recommendations as to the grading and classification or regrading and conversion of posts in the administrative, clerical, professional, and general divisions.
(iv) To make recommendations as to the control, reorganization, and readjustment of any departments or offices in the public service and, further, to make recommendations as to the retirement from the public service of any persons in consequence of any such reorganization or readjustment.
(v) To make recommendations as to the retirement of officers in the administrative, clerical, and professional divisions, and in prescribed posts in the general division on the ground of superannuation, continued ill-health, or inefficiency.
(vi) To make recommendations for effecting economies and promoting efficiency in the management and working of departments, sub-departments, and other offices of the public service.
(vii) To inquire into the grievances of officers.
(viii) To make recommendations as to the provisions of the regulations to be made under the Act.
(ix) To frame for the information of Parliament an annual report and such special reports as the Commission considers desirable.
(x) To recommend action in cases of misconduct of a serious character.
(xi) To exercise such other powers and jurisdiction and perform such other duties not repugnant to the Act as may be assigned to it by the Governor-General.

The general administration of the Public Service Regulations is vested in the Public Service Commission, which also decides all questions regarding their interpretation and effect.

In terms of the Financial Regulations, framed under section 61 of the *Exchequer and Audit Act*, 1911, the recommendation of the Commission is required *inter alia* for—

(i) the appointment of permanent and temporary officials, except when the appointment is to certain specified posts in the lower grades;
(ii) the creation of any new post not provided for in the estimates of expenditure approved by Parliament;
(iii) the alteration of the scale of salary attached to any existing appointment by raising the minimum or maximum of the scale or the rate of annual increment;
(iv) the payment of any gratuity or extra remuneration to any public servant, except when the payment is specifically provided for by regulation.

10. **Public Service Advisory Council.**—In terms of Act No. 27 of 1923, regulations in connexion with a Public Service Advisory Council were issued under Government Notice No. 2203 of 7th December, 1925. The council consists of not more than eight members nominated by the various public service associations from amongst their members, and acts in an advisory capacity to the Public Service Commission. Its functions include advising upon the following matters:—

(i) The best means of utilizing the ideas and experience of the staff.
(ii) The general principles governing conditions of service, recruitment, hours, promotion, advancement, discipline, tenure, remuneration, and superannuation.
(iii) The means for encouraging the further training and education of public servants, and also their training in higher administration and organization.
(iv) The introduction of improvements in office machinery and organization, and the provision of opportunities for the full consideration of suggestions by the staff on this subject.
(v) Legislation so far as it has a bearing upon the position of public servants in relation to their employment.
(vi) Any matter referred to it by the Commission.

12442

An official side, consisting of four permanent members nominated by the Public Service Commission, is attached to the council for consultative purposes.

Rules have been prescribed for the recognition of associations and for the government and the conduct of the business of the council.

The first Public Service Advisory Council was established in December, 1923.

11. **Strength of Staff in Government Service.**—The following tables give particulars of the staff employed in the various departments of the public service. Particulars of the numbers on the staffs of the various Provincial Administrations will be found below in § 5 of this chapter, and on the staff of the Railways and Harbours Administration in Chapter XIII.

The authorized European establishment of the public service, as shown in the estimates presented annually to Parliament, has been for each year since 1912-13 as follows:—

Year.	Authorized Establishment.†	Year.	Authorized Establishment.†
1912-13	20,859	1926-27	27,876
1913-14	21,412	1927-28	28,756
1914-15	22,739*	1928-29	29,650
1915-16	19,700*	1929-30	30,620
1916-17	20,878*	1930-31	31,379
1917-18	20,796*	1931-32	31,130
1918-19	20,832*	1932-33	30,574
1919-20	25,005	1933-34	30,279
1920-21	28,234	1934-35	31,298
1921-22	28,772	1935-36	32,542
1922-23	27,149	1936-37	35,314
1923-24	26,392	1937-38	37,144
1924-25	26,637	1938-39	39,195
1925-26	27,071		

* No figures of the Defence Executive were given between the years 1914-15 and 1918-19.
† Includes from the year 1920-21 onwards the uniformed staff and learners attached to the Department of Posts and Telegraphs.

Particulars of the staff employed in the government service as furnished by departments of State are as follows:—

(i) TOTAL NUMBER OF PERSONS EMPLOYED IN GOVERNMENT SERVICE IN PERMANENT AND TEMPORARY CAPACITIES, 1936-37 AND 1937-38.

§ 4. Parliament and Legislation.

[For list of Members, see Chapter XXVIII.]

1. **Parliament.**—The legislative power of the Union is vested in terms of section 19 of the *South Africa Act* (see § 2 of this chapter) in the King, represented by the Governor-General, a Senate, and a House of Assembly. Sessions of Parliament (section 20 of the *South Africa Act*) may be appointed by the Governor-General, who may also prorogue Parliament, or may dissolve the Senate* and the House of Assembly simultaneously, or the House of Assembly alone. Capetown is constituted as the seat of the Legislature (section 23 of the *South Africa Act*). The powers of Parliament are prescribed in sections 59 to 67 of the Act. Parliament has full powers to make laws for the peace, order, and good government of the Union.

* Under the *South Africa Act* the original Senate held office to 31st May, 1920, and under Act No. 9 of 1920 until 31st October, 1920.

2. **Sessions of Parliament.**—A session of Parliament must be held once at least in every year, so that a period of twelve months shall not intervene between the last sitting of Parliament in one session and its first sitting in the next session. The first Parliament was opened by His Royal Highness the Duke of Connaught and Strathearn on the 4th November, 1910. The following table gives a list of sessions from 1910 to 1938 with the dates of commencement and ending in each case and the duration of each session (Sundays and public holidays included):—

SESSIONS OF PARLIAMENT.

Number of Parliament and of each Session.	Year.	Commencement and Ending.	Duration (In Days).
First Parliament—			
1st Session	1910-11	31.10.10—25. 4.11	177
2nd Session	1912	26. 1.12—24. 6.12	151
3rd Session	1913	24. 1.13—16. 6.13	144
4th Session	1914	30. 1.14— 7. 7.14	159
5th (Extraordinary) Session	1914	9. 9.14—14. 9.14	6
6th Session	1915	26. 2.15—21. 4.15	55
[*House of Assembly dissolved by Proclamation No. 93 of 1915, dated 23rd August, 1915.*]			
Second Parliament—			
1st Session	1915-16	19.11.15—17. 6.16	212
2nd Session	1917	16. 2.17— 3. 7.17	138
3rd Session	1918	18. 1.18— 8. 5.18	111
Joint Sitting of Both Houses	1918	17. 4.18—24. 4.18	8
4th Session	1919	17. 1.19—20. 6.19	155
5th (Special) Session	1919	5. 9.19—17. 9.19	13
[*House of Assembly dissolved by Proclamation No. 24 of 1920, dated 6th February, 1920.*]			
Third Parliament—			
Session	1920	19. 3.20—17. 8.20	152
[*Senate expired by effluxion of time on 31st October, 1920, under sections 24 and 25 of the South Africa Act, 1909, and sections 1 and 2 of the Constitution of the Senate Act, 1920.*]			
[*House of Assembly dissolved by Proclamation No. 225 of 1920, dated 31st December, 1920.*]			
Fourth Parliament—			
1st Session	1921	11. 3.21—14. 7.21	126
2nd Session	1922	17. 2.22—19. 7.22	153
3rd Session	1923	19. 1.23—23. 6.23	156
4th Session	1924	25. 1.24—10. 4.24	77
[*House of Assembly dissolved by Proclamation No. 88 of 1924, dated 9th May, 1924.*]			
Fifth Parliament—			
1st Session	1924	25. 7.24— 6. 9.24	44
2nd Session	1925	13. 2.25—25. 7.25	163
Joint Sitting of Both Houses	1925	6. 5.25— 8. 5.25	3
3rd Session	1926	22. 1.26— 8. 6.26	138
Joint Sitting of Both Houses	1926	7. 5.26—12. 5.26	6
4th Session	1927	28. 1.27—29. 6.27	122
5th Session	1927-28	14.10.27— 1. 6.28	232
Joint Sitting of Both Houses	1928	29. 3.28—30. 3.28	2
6th Session	1929	25. 1.29—27. 3.29	62
Joint Sitting of Both Houses	1929	12. 2.29—25. 2.29	14
[*House of Assembly dissolved by Proclamation No. 94 of 1929, dated 13th April, 1929.*]			
Sixth Parliament—			
1st Session	1929	19. 7.29—16. 8.29	28
2nd Session	1930	17. 1.30— 2. 6.30	137
Joint Session of both Houses	1930	Various dates.	7
3rd Session	1931	30. 1.31— 6. 6.31	128
4th Session	1931-32	17.11.31—27. 5.32	192
5th Session	1933	20. 1.33— 2. 3.33	42
[*House of Assembly dissolved by Proclamation No. 77 of 1933, dated 7th April, 1933.*]			
Seventh Parliament—			
1st Session	1933	26. 5.33—22. 6.33	28
2nd Session	1934	26. 1.34— 4. 6.34	130
3rd Session	1935	11. 1.35— 4. 5.35	114
4th Session	1936	24. 1.36—16. 6.36	144
Joint Sitting of Both Houses	1936	13. 2.36— 6. 4.36	54
5th Session	1937	8. 1.37—17. 5.37	130
6th Session	1938	11. 2.38—16. 3.38	34
[*House of Assembly dissolved by Proclamation No. 84 of 1938, dated 11th April, 1938.*]			
Eighth Parliament—			
1st Session	1938	22. 7.38—24. 9.38	65
2nd Session	1939	3. 2.39—16. 6.39	134

3. **Senate.**—The Senate consists of 44 members, 32 (eight for each province) elected as stated below, eight nominated by the Governor-General-in-Council, and 4 elected by the native population under the provisions of the *Representation of Natives Act*, No. 12 of 1936. The provincial representatives are elected according to the system of proportional representation, with the single transferable vote, by the members of the House of Assembly and of the Provincial Council for each province sitting together and presided over by the Administrator of such province. Vacancies amongst provincial senators are filled in the same manner. The first election of senators under the *Representation of Natives Act* was held in 1937, and the members elected hold their seats for five years.* Under the provisions of Act No. 54 of 1926, the Governor-General is empowered to dissolve the Senate within one hundred and twenty days of the dissolution of the Assembly, and the nominated members, as well as the elected members†, are required to vacate their seats. Originally, under section 24 of the *South Africa Act*, nominated senators held their seats for a definite period of ten years, but this provision has been amended under the Act of 1926, so that, while nominated senators nominally hold their seats for a ten-year period from the date of nomination or until the dissolution of the Senate, they are required to vacate them when a change of government takes place. A change of government is described in the Act as occurring "when another person than the Prime Minister for the time being becomes Prime Minister," and when the Governor-General, by notice published in the *Gazette*, intimates that such a change of government has occurred. In addition to having the qualifications required by members of the House of Assembly, all senators must be not less than thirty years of age, and, in the case of elected senators, must own unencumbered, immovable property within the Union of not less value than £500. Each member receives an allowance of £700 a year, except the President who receives a salary under the Crown. The legislative powers of the Senate are co-ordinate with those of the House of Assembly, except in regard to the origination and amendment of certain monetary provisions in Bills.

Duration of Senates.	*From.*	*To.*
First Senate.....	31st May, 1910.....	31st October, 1920.‡
Second Senate.....	11th March, 1921.....	19th August, 1929.
Third Senate.....	6th September, 1929....	5th September, 1939.

4. **The House of Assembly.**—The House of Assembly is composed of members directly chosen by the voters of the Union in electoral divisions, as laid down by the *South Africa Act*. Matters relating to the delimitation of such divisions, the qualifications of voters, and the election of members are dealt with in § 10 of this chapter. The number of members which was fixed for the first election in 1910 was 121. Provision for an increase in the number of members is made in section 34 of the *South Africa Act*.

The original and the later constituted membership of the House are given hereunder:—

PROVINCIAL REPRESENTATION.

Parliament and Date of Duration.	Cape of Good Hope.	Natal.	Transvaal.	Orange Free State.	Total Representation.
First (1910–15).....	51	17	36	17	121
Second (1915–19)....	51	17	45	17	130
Third and Fourth (1920–24).....	51	17	49	17	134
Fifth (1924–29).....	51	17	50	17	135
Sixth (1929–33).....	58	17	55	18	148
Seventh (1933–1938).	64§	16	57	16	153§
Eighth (1938–)...	62§	16	60	15	153§

§ Includes 3 additional members elected under the provisions of the *Representation of Natives Act*, No. 12 of 1936. For further particulars refer to Chapter XI, § 2.

The qualifications of a member of the House of Assembly are defined in section 44 of the *South Africa Act* and amending legislation. Every House of Assembly has a duration of five years from the date of its first meeting, unless sooner dissolved by the Governor-General. The first business of the House is the election of one of its members as Speaker, who ceases to be Speaker if he ceases to be a member of the House. A member may resign his seat. The presence of thirty members is necessary to constitute a quorum. Each member receives an allowance of £700 a year, except the Speaker and the Ministers, who receive salary under the Crown.

* For further information regarding the *Representation of Natives Act* refer to Chapter XI, § 2.

† This provision does not apply to members elected in terms of the *Representation of Natives Act*, 1936.

‡ Under Section 24 of the *South Africa Act* the duration of the original Senate was fixed for 10 years, but its life was extended until the 31st October under the provisions of Act No. 9 of 1920.

5. **Acts of Parliament.**—A synopsis is given hereunder of the various enactments of the eighth Parliament of the Union in the 1938 Session, excluding Appropriation Acts. Similar information in respect of Acts passed by the first to the seventh Parliament (1910 to 1938) will be found in previous issues of this *Year Book*.

SYNOPSIS OF LEGISLATION, 1938, EIGHTH PARLIAMENT. (FIRST SESSION.)

Session in Which Act was passed: Number and Short Title.	Date of Commencement.	Object and Effect.
Eighth Parliament (First Session), 1938.		
11. Cape of Good Hope Savings Bank Society Further Amendment Act, 1938	22/8/38	To amend Ordinance No. 86 of 1831 (Cape), as amended by Ordinance No. 10 of 1848 (Cape), Act No. 24 of 1894 (Cape) and Act No. 3 of 1924, regulating the affairs of the "Cape of Good Hope Savings Bank Society".
12. Rand Water Board Statutes 1903–35 Amendment (Private) Act, 1938	22/8/38	To amend the Rand Water Board Statutes 1903–1935.
13. South Africa Act Amendment Act, 1938	22/8/38	To amend the South Africa Act, 1909. (Increasing number of Ministers of State from eleven to twelve.)
14. Public Health Amendment Act, 1938.	1/4/38	To amend the Public Health Act, 1919.
15. Tourist Development Corporation Act, 1938.	30/9/38	To establish a corporation the object of which shall be by means of advertisement and the dissemination of information about Southern Africa to encourage persons who reside elsewhere to visit Southern Africa and to travel about therein, and to provide for other incidental matters.
16. Attorneys, Notaries and Conveyancers Admission (Amendment) Act, 1938	30/9/38	To amend the Attorneys, Notaries and Conveyancers Admission Act, 1934.
17. Finance Act, 1938.....	30/9/38	To provide for the disposal of certain surplus state revenues; for the transfer of certain stock held by the Public Debt Commissioners from the registers kept in London to the registers kept in the Union; and for the investment of the capital sums of the Slave Compensation Fund and the Bible and School Commission Fund; to empower provincial councils to authorize the carrying on of professions without licences; to provide for the closing of the fund established by Act No. 29 of 1897 (Natal); for the assessment of interest on uninvested balances of the joint pre-Union fund; for the refund of pension contributions of officers who die leaving no dependants; and for the admittance of certain temporary officers as members of the Government employees' provident fund; to write off certain debts due to the Government; and to amend Act No. 13 of 1855 (Cape), Law No. 23 of 1875 (Natal), and Acts Nos. 10 and 24 of 1913, No. 42 of 1922, No. 64 of 1934, Nos. 48 and 49 of 1935, and Nos. 18, 22, 24 and 35 of 1936.
18. Railways and Harbours Acts Amendment Act, 1938	30/9/38	To amend the Railways and Harbours Service Act, 1912; the Railways and Harbours Regulation, Control and Management Act, 1916; the Railway and Harbours Service Act, 1925; and the Railways and Harbours Superannuation Fund Act, 1925.
19. Marketing Amendment Act, 1938	30/4/37	To amend the Marketing Act, 1937.
20. Income Tax Act, 1938..	30/9/38	To fix the rates of normal income tax and super income tax in respect of the year of assessment ending on the thirtieth day of June, 1938, and to amend the Income Tax Act, 1925.
21. Second Pensions (Supplementary) Act, 1938	30/9/38	To provide for certain pensions, grants, gratuities and other pensionable benefits.
23. Representation of Natives (Amendment) Act, 1938	30/9/38	To amend the Representation of Natives Act, 1936.
24. Land Bank Amendment Act, 1938	30/9/38	To amend the laws relating to the Land and Agricultural Bank of South Africa.

6. **Subjects of Parliamentary Legislation.**—The subjoined table gives a synopsis of the enactments passed by the eighth Parliament of the Union

arranged under a variety of headings according to the subject dealt with. Appropriation Acts are not included.

Official Year Book No. 9 contains a complete list of parliamentary legislation from 1910 to 1927; No. 11 a synopsis of legislation of the fifth Parliament, 1924 to 1929; No. 12 of the sixth Parliament, 1929 to 1933; and No. 19 of the seventh Parliament, 1933 to 1938.

(*d*) *General.*		
Finance Act	17	1938

§ 5. Provincial Administration.

1. **Administrators of the Provinces.**—The *South Africa Act* provides that in each of the four provinces there shall be a chief executive officer, appointed by the Governor-General-in-Council, and styled the Administrator of the Province. All executive acts relating to provincial affairs are done in the name of this officer. In the appointment of an Administrator preference is, as far as possible, given to a person resident in the province. Administrators are appointed for five years, and their salaries are provided for by Parliament.

2. **Executive Committees of the Provinces.**—Each Provincial Council elects at its first meeting, from among its members or otherwise, four persons to form with the Administrator an Executive Committee for the province, the Administrator acting as chairman. A member of a Provincial Executive Committee, who is not also a member of the Provincial Council, is entitled to take part in the proceedings of the Council, but has not the right to vote. The function of Executive Committees is to carry on the administration of provincial affairs on behalf of the Provincial Council. Executive Committees have the power, subject to certain considerations, to appoint officers to the provincial services.

3. **Functions of Provincial Administrations.**—The functions of the Administrations of the several provinces are concerned with the matters in respect of which Provincial Councils possess the power of legislation, and with those matters, the administration of which has been specially assigned to the provinces. (*Cf.* paragraph 2 of § 6 of this chapter.) The control of primary and secondary education comprises an important part of those functions, and references to this subject will be found in Chapter VIII, which

deals with education. The establishment, maintenance, and management of hospitals and charitable institutions are controlled by the provinces, and these phases of provincial supervision are treated of in Chapter IV and Chapter V respectively. Similarly, the question of the control of municipal institutions, divisional councils, and other local governing bodies of a similar nature with which the provinces are concerned, is referred to in Chapter III, which deals with local government. Roads (other than National Roads), outspans, ponts, and bridges (other than bridges connecting two provinces), moreover, come under provincial control (for particulars of these, see Chapter XIII). The preservation of game and fish is likewise under the control of the Provincial Administrations (see Chapters I and XXI respectively).

The Provincial Administrations also deal, among other matters, with the destruction of vermin and the regulation of shop hours and public entertainments.

4. **Staff in the Service of the Provincial Administrations.**—Particulars are given hereunder of the authorized establishments of the Provincial Administrations, excluding teachers, in respect of the financial year 1938-39, together with a statement of the temporary staff actually employed by them at 31st December, 1938:—

NUMBER OF PERSONS IN THE SERVICE OF THE PROVINCIAL ADMINISTRATIONS, 1938-39.

Administration.	Permanent Staff Authorized, 1938-39.			Temporary Staff Employed, 31st December, 1938.			Grand Total.

* Includes the staff of the Conradie Home, Capetown, and the Prince Alfred Infirmary, Grahamstown, but not that of hospitals.
† Excluding casual road employees and teachers employed in government schools.
‡ Excluding hospital staff and casual road employees.
§ Excluding hospital staff.

5. **The Inter-Provincial Consultative Committee.**—As a result of a recommendation by the Provincial Finances Committee, the Government instituted at the beginning of 1935 the Inter-Provincial Consultative Committee, consisting of the Minister of the Interior (Chairman), the Minister of Education (Deputy Chairman), and the four Provincial Administrators. The latter are assisted at the meetings, which take place at quarterly intervals, by members of their respective Executive Committees and by the chief officials of their respective Administrations.

The chief function of this consultative committee is to co-ordinate the various activities of the Union and the Provincial Administrations, with a view to eliminating anomalies and unnecessary overlapping.

The work is done chiefly by means of sub-committees, which deal with the different phases of provincial administration.

§ 6. Provincial Councils and Legislation.

1. **Provincial Councils.**—The Provincial Council of each province consists of the same number of elected members as there are electoral divisions of the House of Assembly, unless that number is under twenty-five, as is the case in Natal and the Orange Free State, when the number of members of the Provincial Council is fixed at twenty-five. In the case of the Cape Province 2 members additional to the number of members provided for in the

South Africa Act, 1909, are elected by the native population under the provisions of the *Representation of Natives Act*, No. 12 of 1936 (see Chapter XI, § 2). Under the provisions of section 73 of the *South Africa Act*, 1909, each Council had a duration of three years and was subject to dissolution only by effluxion of time. This section was amended by Act No. 43 of 1935, which provides for the extension of the life of Provincial Councils to five years. The times for sessions and their prorogation are fixed by the Administrator. There must be a session of the Council once in every year: so that a period of twelve months shall not intervene between the last sitting of a Council in one session and its first sitting in the next. Members receive allowances of £180 each annually, subject to deductions for absences. There is freedom of speech, and members are not liable to action at court for any speech or vote in a Council. (See sections 70-77 of the *South Africa Act*.)

2. **Powers of Provincial Councils.**—The legislative powers of Provincial Councils are defined and limited by sections 85 to 91 of the *South Africa Act* and a series of *Financial Relations Acts*, commencing in 1913, which determined the sphere of action assigned to these bodies and regulated the financial responsibilities and powers of the provinces in relation to the central government. A summary of these enactments in their effect on the system of provincial administration was given in previous issues of this *Year Book* (Nos. 1 to 6). A considerable change was made in the financial relations between the Central Government and the provinces under the provisions of Act No. 46 of 1925 (see Chapter XV). In general, the evolution of the provincial system has been in the direction of extending the authority of the Councils in matters of purely local concern, while limiting more strictly the scope of their activities in directions bordering on wider national issues. The more important developments of the system have centred round the financial aspect, coupled with the question of lower education, the control of which remains the most distinctive function of the Provincial Councils. Commissions of inquiry appointed in 1915 (Jagger Commission), 1922 (Baxter Commission), and 1923 (Education Administration Commission), investigated and reported upon these and other aspects of provincial administration.

The fiscal organization of the provinces, as regulated by Union legislation from time to time, is outlined in Chapter XV of this *Year Book*.

Any Ordinance made by a Provincial Council has effect in and for the province as long and as far as it is not repugnant to any Act of Parliament. Assent to Ordinances passed by a Provincial Council must be obtained from the Governor-General-in-Council (Section 90 of the *South Africa Act*). Provincial Councils may recommend to Parliament the passing of any law relating to any matter in respect of which Councils are not competent to make Ordinances.

3. **Provincial Ordinances, 1938.**—The following is a list of Ordinances, excluding Appropriation Ordinances, passed in the several provinces during 1938:—

PROVINCIAL ORDINANCES, 1938.

(i) CAPE OF GOOD HOPE.

No. of Ordinance.	Title.	No. of Ordinance.	Title.
1	Transkeian Territories Road Tax Amendment.	13	Public Roads Traffic Control.
2	Valuation (Further) Amendment.	14	Cape Municipal Amendment.
3	Wild Flowers Protection (Amendment).	15	Motor Vehicle.
4	Douglas Bridge (Amendment).	16	Vermin Extermination Further Amendment.
5	Validation of Employment of Certain Hospital Nurses.	17	Local Authorities (Audit).
6	Nurses' Salaries Amendment.	18	Pounds.
7	Divisional Councils and Roads (Amendment).	20	City of Cape Town Trackless Tram Private Ordinance, 1934, Amendment.
8	Municipal and Divisional (Pension Scheme) Amendment.	22	Refund of Salary Deductions.
9	Roads Amendment.	23	Education Amendment.
10	Cape Hospitals Amendment.	24	Tax upon Persons and the Incomes of Persons and Companies Amendment.
11	Game Laws Amendment.		
12	Townships Amendment.		

PROVINCIAL ORDINANCES, 1938—(*continued*).

(ii) NATAL.

No. of Ordinance.	Title.	No. of Ordinance.	Title.
4	Motor Vehicle and Road Traffic Regulation Amendment.	8	Cremation.
5	City of Durban Extended Powers.	9	Licences (Control) Amendment.
6	City of Durban Electoral Amendment.	10	Wild Flower Reserves.
7	Margate Health Committee Powers and Loan.	11	Public Roads Motor Grid.
		13	Provincial Hospitals.
		14	Newcastle Corporation.
		15	Pensions (Supplementary).

(iii) TRANSVAAL.

No. of Ordinance.	Title.	No. of Ordinance.	Title.
5	Financial Adjustments.	11	Transvaal Hospital Nurses' Pensions Amendment.
6	Horse Racing and Betting Amendment.	12	Main Reef Road (Repeal).
7	Fish Preservation Amendment.	13	Companies Tax Amendment.
8	Licensing of Bookmakers and Taxation Amendment.	14	Personal and Income Taxes Amendment.
9	Education Act Amendment.	15	Agricultural Schools (Transfer).
10	Townships and Town-planning Amendment.	16	Motor Vehicle Amendment.
		17	Roads Amendment.

(iv) ORANGE FREE STATE.

No. of Ordinance.	Title.	No. of Ordinance.	Title.
4	Wheel Tax Amendment.	10	Roads Ordinance Amendment.
5	Dogs Ordinance Amendment.	11	Shop Hours and Half-Holiday Ordinance Amendment.
6	Licences (Control) Ordinance Amendment.	12	Hospitals Amendment.
7	Dogs Ordinance Further Amendment.	13	Tax on Persons and Companies Amendment.
8	Motor Vehicle Amendment.	14	Local Government Superannuation.
9	Local Government Amendment.	16	Township and Hamlet Ordinance Amendment.

§ 7. South Africa and the League of Nations.

1. **South Africa's Connexion with the League.**—The Union of South Africa's most important connexion with the League of Nations at present is its responsibility as Mandatory Power for South West Africa. As such, in terms of Article 22 of the Covenant of the League of Nations, the Union Government submits annually to the Council of the League a report on the administration of that territory. The resolutions of that body are communicated to the Union Government by the Secretary-General of the League, through the Union's Accredited Representative to the League of Nations at Geneva.

The League invites a representative of each Mandatory Power to be present at the meeting of the Permanent Mandates Commission at which its annual report is considered.

At the Assembly, the annual meeting of delegates from the States Members of the League, which is held at Geneva, the Union is entitled to three representatives. In September, 1933, the first delegate of the Union (Mr. C. T. te Water) was elected President of the fourteenth ordinary session of the Assembly.

The International Labour Office is the largest branch of the League. It holds an annual conference: twenty-three of these have hitherto been held, and South Africa has been represented at twenty. South Africa is entitled to send four delegates to this conference: one workers' delegate, one employers' delegate, and two government delegates. Each delegate may be accompanied by advisers. The conference is held at Geneva and considers conditions of employment and questions connected with the social welfare of the workers from an international aspect; it deals with the industrial and social problems of the day. Each conference has drafted conventions and recommendations, by means of which an endeavour is made to secure improved and uniform social and labour conditions in those States which are members of the League. (See Chapter V of this *Year Book*.)

The Union Government, as a member of the League, receives detailed documents from the Secretariat describing the work of the various committees, and constant correspondence is maintained with the Secretary-General, through the Union's Accredited Representative to the League, on matters in which the League is interested. Such subjects include disarmament, finance, commercial arbitration, customs facilities, freedom of communications and transit, traffic in drugs, traffic in women and children, and health and educational measures. All documents of importance are laid on the table of the House of Assembly.

At the request of the Economic and Financial Section of the League, the Union Office of Census and Statistics supplies the League with all desired statistical information in regard to the finances and economic conditions of the Union, the more important statistics being cabled monthly to the League for the purposes of its *Monthly Bulletin of Statistics*.

2. **Contribution of South Africa to the League.**—The following contributions to the League have been paid by South Africa:—

Year.	*Gold Francs.*	£	s.	d.
1919	—	16,234	0	0
1920	523,000	28,462	17	4
1921*	324,592	15,916	8	5
1922	332,388	14,353	6	11
1923	407,947·68	17,347	12	7
1924	347,613·12	15,061	17	2
1925	363,499·54	14,465	5	3
1926	367,035·91	14,596	13	10
1927	323,711·29	12,865	6	8
1928	333,626·67	13,184	14	4
1929	375,289·11	14,880	3	3
1930	403,598·96	16,016	12	3
1931	449,923·88	17,835	10	1
1932	484,417·81	19,489	3	4
1933	495,246·40	29,910	14	6
1934	456,482·80	29,728	12	2
1935	454,419·55	29,859	3	10
1936	431,656·15	27,975	2	6
1937	368,967·70	24,091	10	4
1938	356,623·60	24,135	18	6

* The total claim for 1921 amounted to 1,041,666 gold francs, which amount has now been paid in full, as follows:—

In 1921	Gold Francs	324,592
March, 1923	,,	109,378·77
March, 1924	,,	153,678·35

* Including credits for (or expenditure of) The Nansen International Office for Refugees and the High Commission for Refugees coming from Germany, which were to be discontinued as from the 31st December, 1938, and which are therefore no longer shown separately in the budget statement.

§ 8. South African Diplomatic Representation Abroad.

During 1929 Union Legations were established in the following countries:—

THE NETHERLANDS	At The Hague.
ITALY	,, Rome.
UNITED STATES OF AMERICA	,, Washington, D.C.

and during 1934 in:—

GERMANY	At Berlin.
SWEDEN	,, Stockholm.
FRANCE	,, Paris.
PORTUGAL	,, Lisbon.
BELGIUM	,, Brussels.

Although there are eight Legations there are only six Ministers Plenipotentiary, as the Union Minister at The Hague is also accredited to Brussels, and the Minister at Berlin also to Stockholm.

The duties falling to Legations include keeping the Union Government advised in regard to political and commercial developments in the countries in which they are situated and in regard to international tendencies in general and their possible political and commercial effect on the Union, acting as the channel of communication between the Union Government and foreign Governments, negotiating agreements, investigating new channels of trade, assisting in the removal of difficulties hampering existing trade, disseminating reliable information in regard to the Union, and advising and assisting Union nationals abroad.

§ 9. Diplomatic Representation of Great Britain and Other Countries in South Africa.*

1. **The High Commissioner in the Union of South Africa for His Majesty's Government in the United Kingdom of Great Britain and Northern Ireland.**—In pursuance of the Resolution adopted by the Imperial Conference of 1926 as to the further development of the existing system of communication between His Majesty's Governments, His Majesty's Government in the United Kingdom

* See Chapter XXVIII for names.

in 1928 appointed a representative in Canada, with the title of High Commissioner. Arrangements were made at the same time whereby the Imperial Secretary in South Africa acted as a supplementary channel of communication between His Majesty's Governments in the United Kingdom and the Union of South Africa.

In 1930 a post of High Commissioner in the Union for His Majesty's Government in the United Kingdom was created; it was combined with the existing post of High Commissioner for South Africa (now His Majesty's High Commissioner for Basutoland, the Bechuanaland Protectorate, and Swaziland), which had been till then held by the Governor-General of the Union.

In 1931, His Majesty's Government in the United Kingdom announced its decision also to create the post of High Commissioner in the Commonwealth of Australia, but the first appointment to this post was not made until 1936. A post of High Commissioner has also now been created in New Zealand.

The Resolution of the Imperial Conference arose from the fact that, by reason of his constitutional position, the Governor-General of a Dominion was no longer the representative in that Dominion of His Majesty's Government in the United Kingdom and that there was therefore no one in the Dominion capitals in a position to represent with authority the views of His Majesty's Government in the United Kingdom. This affords an indication of the general nature of the duties of the High Commissioners; they are, shortly, to supplement, but not to replace, the earlier system of direct intercommunication between His Majesty's Governments and the reciprocal supply of information on affairs requiring joint consideration.

2. **Diplomatic Representatives of other Governments in the Union.**—Towards the end of 1929 the Netherlands opened a legation in the Union in consequence of the establishment of a Union legation at the Hague. Shortly afterwards Italy and the United States of America also established legations in the Union as a result of the establishment of Union legations in those countries. Other legations followed in the course of time and at the present moment the following countries, arranged according to the date of establishment of the legations concerned, have diplomatic representatives in the Union:—

The Netherlands (1929).	France (1934).
Italy (1930).	Portugal (1935).
United States of America (1930).	Japan (1937).
Germany (1933).	Belgium (1938).

§ 10. Electorate.

1. **Qualifications of Parliamentary Voters.**—A.—*General.*—Parliament, in terms of section 35 (i) of the *South Africa Act*, may by law prescribe the qualifications which entitle persons to vote at the elections of members of the House of Assembly: subject to the limitation that no such law shall disqualify, by reason of race or colour only, persons who are or may become registered voters under the law of the Cape of Good Hope, unless passed by a two-thirds majority of both Houses of Parliament sitting together. Act No. 12 of 1918, together with amending Acts Nos. 11 of 1926, 24 of 1928, and 35 of 1931, provides for the registration of voters for the House of Assembly and all Provincial Councils, and for contingent matters. Until the passing of Act No. 18 of 1930, which enfranchised adult white women, and Act No. 41 of 1931, which extended the franchise to all adult white males, the qualifications of voters remained unchanged and as they existed in the four provinces at the date of Union. The *Representation of Natives Act* (No. 12 of 1936) provides that native voters previously registered in the lists for the electoral divisions of the Cape of Good Hope and male natives who may become qualified and apply for registration now appear on a separate list, termed the Cape Native Voters' Roll.

B.—*European or White Franchise.*—By the promulgation of Act No. 18 of 1930, the franchise, which hitherto had been confined to males, was extended throughout the Union, as from the biennial registration of 1931, to adult white females who are Union Nationals. Act No. 41 of 1931 enfranchised in all provinces white males of or over the age of 21, thus removing certain wage and property qualifications previously imposed in the Cape and Natal Provinces.

No person is, however, entitled to be registered as a voter under the provisions of the *Electoral Act*, or if so registered, to vote at any election in the Union or in the mandated territory of South West Africa, if he has been convicted—

(i) of treason, if such conviction took place after the commencement of this Act, unless he has been granted a free pardon; or

(ii) of murder unless he has been granted a free pardon; or

(iii) of any other offence and sentenced therefor to a period of imprisonment without the option of a fine and such period of imprisonment has not expired at least three years before the day of commencement of any registration, as defined in section *four* or section *twenty-one* of the *Electoral Act*, at which he claims to be registered as a voter, unless he has been granted a free pardon.

A person who is subject to an order of court of law declaring him (or her) as of unsound mind, or mentally disordered or defective, or who is lawfully detained as a mentally disordered or defective person under the *Mental Disorders Act*, No. 38 of 1916, is disqualified from registration as a voter, or, if registered, is not entitled to vote.

C.—*Coloured and Native (i.e. non-white) Franchise.**—The following conditions apply to the exercise of the franchise by coloured and native persons resident in the provinces of the Cape of Good Hope and Natal. The conditions in regard to these races remain as they were at the time of Union, except that native voters in the Cape Province are registered in a separate roll in terms of Act No. 12 of 1936. Only *non-white male* adults may be registered as voters and the disqualifications mentioned in B above refer equally to them.

(i) *Cape of Good Hope Province.*—(*a*) *Education.*—Although qualified in every other respect, no non-white person may be registered as a voter, unless he is able to sign his name and write his address and occupation; such persons who were registered as parliamentary voters in any fiscal division of the Cape Province on the 1st January, 1893, are, however, exempt from this provision, provided they can show that they have since continued to reside in such division.

(*b*) *Occupation, Property, or Salary or Wages.*—It is further necessary for a non-white person to possess *either* of the following qualifications:—

(1) *Occupation*—i.e. occupation within the Union or mandated territory of South West Africa (either solely or jointly with other persons) for not less than twelve months next before the day on which the registration commenced, and for the last three months of such period within the electoral division for which such person claims to be registered, of a house, warehouse, shop, or other building which, either separately or jointly with any land within the electoral division, is of the value of £75. If there is more than one joint occupier, the share of each occupier claiming to vote must be of the value of £75.

* A summary of the *Representation of Natives Act*, 1936 which was passed at a Joint Sitting of both Houses of Parliament will be found in Chapter XI, § 2.

Note.—In the case of such persons as were registered on the 1st January, 1893, and have continued to reside in the fiscal division in which they were residing on that date, the value of the premises need be only £25.

Or,

(2) *Salary or Wages*—i.e. real and *bona fide* receipt for not less than twelve months of salary or wages at the rate of not less than £50 per annum. In order to possess this qualification, it is necessary that he shall have really and *bona fide* earned such salary or wages within the Union or the mandated territory of South West Africa for the space of twelve months next before the day on which the registration commenced and that for the last three months of such period he shall have resided within the electoral division for which he claims to be registered.

Note.—In the case of such persons as were registered on the 1st January, 1893, and have continued to reside in the fiscal division in which they were residing on that date, receipt of a salary of £25 per annum plus board and lodging is also a qualification.

(3) *Special provisions in force in the former Province of Griqualand West* (comprising the fiscal divisions of Kimberley, Barkly West, Hay, and Herbert):—

(*a*) *Occupation or salary or wages qualifications.*—In the case of a non-white person who at the date of the taking effect of Act No. 9 of 1892 was registered in any fiscal division formerly comprised in the Province of Griqualand West, and who has continued to reside in the fiscal division in which he was registered when the Act took effect, it is enough to show that—

(i) for the space of six months immediately preceding the day when the registration of voters commenced, he had occupied premises of the value of not less than £25; or

(ii) for the space of six months immediately preceding that date he was in receipt of salary at the rate of not less than £100 a year, or £50 a year in addition to his board and lodging.

(*b*) *Diggers' Qualification.**—Every person not otherwise disqualified by law who, for the space of six months immediately preceding the day when any registration of voters commences, was the duly registered holder of a licence to dig and search for diamonds in any claim or portion of a claim in the Province of the Cape of Good Hope, shall be entitled to be registered as a voter in the division in which such claim or portion of a claim is situate, if he has actually resided in such division during the last three months of the aforementioned six months or if he has during these three months retained his home in that division and was absent therefrom merely for some temporary purpose.

(*ii*) *Natal Province.*—Every male native resident in, or possessing the necessary qualification in, Natal is disqualified for registration as a voter under the provisions of the Natal franchise laws, unless he possesses a certificate from the Governor entitling him to be registered.

Persons, who (not being of European origin) are natives or descendants in the male line of natives of countries which had not, prior to the 23rd May, 1896, possessed elective representative institutions founded upon the parliamentary franchise, are disqualified from being registered as voters unless possessed of certificates of exemption granted by the Governor-General-in-Council.

The qualifications for registration of non-white male persons (other than natives) as voters are (*a*) ownership of property; (*b*) income; (*c*) residence within electoral division.

* Act No. 23 of 1926.

(*a*) *Ownership* of immovable property of the value of £50 or the *renting* of such property of the yearly value of £10 within any electoral division in Natal. In the case of joint occupation, the value or the rent of the property if equally divided among the joint occupiers must be sufficient to entitle each of them to be registered.

(*b*) *Income*, inclusive of allowances equal to £8 per month or £96 per annum, together with a total residence of three years in the Union. Only persons who do not possess the property or rental qualification may claim this qualification.

(*c*) *Residence* of three months out of the last seven months in the electoral division, immediately prior to and including the date of the commencement of registration.

(iii) *Transvaal and Orange Free State Provinces.*—The franchise is confined solely to European, or white persons.

2. **Parliamentary Representation.**—The *Electoral Quota Act*, No. 21 of 1937, amends section 34 of the *South Africa Act*, 1909, and provides that the quota for the Union shall be obtained by dividing the total number of European Union Nationals, both male and female, of and over the age of 21 years, as ascertained at the census taken in 1936 and the following censuses, by 150 (the maximum number of members at present allowed for the House of Assembly). In determining the Union quota, members of His Majesty's (non-Union) regular forces on full pay are excluded.

The quota referred to in the foregoing paragraph, when applied to the total number of adult European Union Nationals in each province of the Union gives the number of parliamentary representatives to be assigned to each province.

Subsequently the number of registered voters (native voters registered in the Cape Native Voters' Roll are not taken into account in this calculation) in each province is divided by the number of parliamentary representatives assigned to it, in order to arrive at a *provincial* quota, for the purpose of delimiting the seats proportionately, and the commissioners in the process of delimitation are required to give due consideration to the following points: (*a*) community or diversity of interests, (*b*) means of communication, (*c*) physical features, (*d*) existing electoral boundaries, and (*e*) sparsity or density of population, in such manner that, while taking the quota of voters as a basis of the division, they may, whenever they deem it necessary, depart therefrom, but in no case to any greater extent than fifteen per centum above or below the quota.

Provision is made for the continuation of the quinquennial census of population until 1951, and thereafter for a decennial census. The figures as ascertained at these censuses will be utilized by future Delimitation Commissions to arrive at the Union quotas.

At the Census of 1936 European adult Union Nationals numbered 1,114,598, distributed in the four provinces as follows:—

EUROPEAN ADULT UNION NATIONALS—CENSUS, 1936.

Province.	South African.		South African Naturalized.		Total Union Nationals.		
	M.	F.	M.	F.	M.	F.	P.
Cape of Good Hope.	209,416	218,077	7,361	5,361	216,777*	223,438*	440,215*
Natal.....	55,673	57,850	1,785	1,298	57,458	59,148	116,606
Transvaal.....	217,815	206,493	13,768	9,105	231,583	215,598	447,181
Orange Free State..	54,404	53,743	1,545	904	55,949	54,647	110,596
UNION.....	537,308	536,163	24,459	16,668	561,767*	552,831*	1,114,598*

* Includes 154 males and 114 females at Walvis Bay

The numbers of seats in the House of Assembly as determined from these figures are as follows:—

Cape of Good Hope	59
Natal	16
Transvaal	60
Orange Free State	15
TOTAL	150

3. **Delimitation Commissions.**—Under the provisions of the *South Africa Act*, 1909, a commission of three judges of the Supreme Court of South Africa is required to be appointed by the Governor-General-in-Council after every quinquennial census of population for the purpose of making any necessary re-division of the electoral divisions. The provision in the *South Africa Act* for the census of population to be taken quinquennially was amended by the *Electoral Quota Act*, 1937, which provides for the continuation of the quinquennial census until 1951, and thereafter for a decennial census. From 1951 onwards a period of ten years will elapse between each re-delimitation of the electoral divisions.

Particulars of the personnel of each commission appointed for this purpose from 1909 to 1932 appeared in *Year Book* No. 19. The personnel of the Seventh Delimitation Commission (1937) was as follows:—

Chairman	The Hon. C. W. H. Lansdown.
Members	The Hon. A. v. d. S. Centlivres.
	The Hon. C. L. Botha.

The seventh Commission in its work of delimitation was guided by certain factors shown in the following table:—

Province.	Number of Seats.	Number of Voters.	Quota.	Maximum.	Minimum.
Cape of Good Hope	59	417,536	7,077	8,139	6,015
Natal	16	93,604	5,850	6,728	4,972
Transvaal	60	359,749	5,996	6,895	5,097
Orange Free State	15	109,822	7,321	8,419	6,223
TOTAL	150	980,711	—	—	—

The final results of the seventh delimitation were published in *Government Gazette Extraordinary*, No. 2479, of the 25th November, 1937.

4. **Parliamentary Elections, 1938.**—The Seventh Parliament of the Union was dissolved on the 11th April, 1938, and the general election for the Eighth was held on the 18th May following.

The constitution of the House of Assembly in regard to party representation was as follows:—

Province.	United Party.	Nationalist Party.	Dominion Party.	Labour Party.	Socialist Party.
Cape of Good Hope	38	20	1	—	—
Natal	7	—	7	1	1
Transvaal	57	1	—	2	—
Orange Free State	9	6	—	—	—
Union	111	27	8	3	1

A statement containing details of the polling in the various constituencies was published in the Appendix to *Year Book* No. 19.

5. **Parliamentary By-elections.**—The following table gives particulars of parliamentary by-elections which have taken place since the general election held on the 18th May, 1938:—

Electoral Division.	Date of Election.	No. of Voters on Register.	No. of Candidates.	No. of votes cast.*	Percentage of votes cast to Voters on Register.	Successful Candidate.	
						Votes cast for.	Percentage of votes cast.
Bethal	22/2/39	5,810	2	5,075	87·35	2,793	55·03
Lichtenburg	4/4/39	5,204	2	4,404	84·63	2,344	53·22
Marico	12/10/38	5,353	2	4,694	87·69	2,358	50·23
Paarl	19/4/39	8,431	2	7,944	94·22	4,006	50·43
Pretoria City	8/3/39	7,133	3	4,952	69·42	2,193	44·29
South Peninsula	15/11/38	—	1	—	—	Unopposed.	

* Including spoilt papers and rejected votes.

6. **Registered Voters in Electoral Divisions.**—The following tables show for the last two biennial registrations the number of male and female voters registered in each parliamentary electoral division. The number of voters recorded at the 1937 registration have been re-allocated to the divisions as determined by the Seventh Delimitation Commission; consequently they do not coincide with the previously published figures.

(i) PROVINCE OF THE CAPE OF GOOD HOPE. NUMBER OF SEATS ALLOTTED BY THE SEVENTH DELIMITATION COMMISSION, 59. PROVINCIAL QUOTA OF VOTERS, 7,077; MAXIMUM QUOTA, 8,139; MINIMUM QUOTA, 6,015. [SEC. 40 (3), SOUTH AFRICA ACT.]

† Excluding natives.

8. **Electoral System for Provincial Councils.**—In the Cape and Transvaal Provinces the electoral divisions for members of the House of Assembly and members of the Provincial Council are coincident. In Natal and the Orange Free State, owing to the fact that only sixteen and fifteen members respectively are returned for the House of Assembly (eighth Parliament), whereas each of these provinces returns twenty-five members to the Provincial Council, the electoral divisions do not coincide, having been determined for each purpose by the Delimitation Commission. In other respects the law relating to elections for the House of Assembly applies to elections for Provincial Councils.

9. **Provincial Council Representatives and Number of Registered Voters.**—The statement below shows, in respect of each province, the number of Provincial Council representatives and registered voters at certain registrations and the average number of registered voters per representative:—

PROVINCIAL COUNCIL REPRESENTATIVES AND VOTERS AND AVERAGE NUMBER OF VOTERS TO EACH REPRESENTATIVE AT CERTAIN BIENNIAL REGISTRATIONS.

10. **Provincial Council Elections.**—The last Provincial Council general elections in all four provinces were held on various dates in 1936, and the names of the representatives are shown in Chapter XXVIII.

Under the provisions of Act No. 43 of 1935, the life of future Provincial Councils is extended to five years. Previously each Council had a duration of three years only.

The following table shows the dates of the various Provincial Council general elections which have taken place since Union:—

No. of Election and Year.	Province and Date of Election.			
	Cape of Good Hope.	Natal.	Transvaal.	Orange Free State.
1st (1910)	15th September...	12th October.....	15th September...	12th October.

CHAPTER III.
LOCAL GOVERNMENT.

§ 1. Powers and Duties of Local Governing Bodies.

1. **General.**—The legislative control of local government is vested in the four Provincial Councils, and information is given hereunder in regard to the administration of local government in each province and the Ordinances under which each type of local authority functions.

Audit.—In each province the accounts of all local authorities are subject to annual audit by the Provincial Auditor.

Native Locations in Urban Areas.—All matters affecting natives in urban areas and urban locations are dealt with under the *Natives (Urban Areas) Act*, No. 21 of 1923, as amended by Act No. 25 of 1930.

Housing and Slum Clearance.—Particulars of legislation under which provision is made enabling local authorities to introduce house-building schemes and to undertake the elimination of slums are given in Chapter V.

2. **Cape of Good Hope.**—Local government in the Province of the Cape of Good Hope is administered primarily by divisional councils, municipal councils, village management boards, and local boards, these bodies being under the legislative control of the Provincial Council.

(i) *Divisional Councils.*—The powers and functions of divisional councils as most recently defined are chiefly embodied in Ordinance No. 13 of 1917 and amending Ordinances and Act No. 36 of 1919, and relate to the maintenance of roads, bridges, pontoons, and ferries, and the control of outspans and trekpaths; local rating; vehicle taxation; and public health. Divisional councils were first established in the year 1855.

(ii) *Municipal Councils.*—Municipal councils are empowered to act under Ordinance No. 10 of 1912 and amending Ordinances. Their functions comprise the rating of immovable property; the control of drainage, water supply, and sanitation; the upkeep of burial grounds, botanical gardens, municipal roads, streets, and bridges; the control of recreation grounds; and a number of other matters specified in those Ordinances. Further functions of municipal councils are set out in *Divisional Council Ordinance* No. 13 of 1917 and Act No. 36 of 1919.

(iii) *Village Management Boards.*—Village management boards are constituted under Ordinance No. 10 of 1921, and these bodies are concerned with the maintenance of public streets, the provision of water supply, the prevention or suppression of disease, the control of common lands, and similar matters. They are also affected by the provisions of Ordinance No. 13 of 1917 and Act No. 36 of 1919.

(iv) *Local Boards.*—Local boards are constituted under Ordinance No. 11 of 1921. They are constituted either in localities adjacent to large municipalities, where, by reason of their proximity to such bodies, it is not considered advisable to establish village management boards, or over small communities, which require some form of local government rather wider in scope than the "local areas" established under the control of divisional councils, and are not sufficiently advanced for the establishment of village management boards. One of the main differences between local boards and village management boards is that in the former case the membership is confined to three—two being appointed by the Administrator and one elected. In the case of village management boards, all members (either three or six) are elected. The functions of the boards are very similar to those of village management boards, and they are also affected by the provisions of Ordinance No. 13 of 1917 and Act No. 36 of 1919.

(v) *Local Areas.*—Local areas may be constituted in districts under the control of divisional councils for the regulation of water supply, the use of slaughter places, the management of burial grounds, the erection of buildings, etc. These areas are constituted under Ordinance No. 13 of 1917.

3. **Natal.**—(i) *Municipal Councils.*—In the Natal Province the municipalities are governed by the *Boroughs Ordinance*, No. 19 of 1924, as amended by Ordinances Nos. 13 of 1929, 4 of 1932, 20 of 1932, and 10 of 1936. Each borough has certain powers of sale, by public auction or in certain cases by private bargain, on freehold or leasehold of its town lands, subject in most instances to the consent of the Administrator. Town councils also have

similar powers with regard to leasing any portion of the town lands for periods not exceeding ninety-nine years. Each borough is divided into not fewer than four wards, each ward returning two town councillors, who are elected by the burgesses for a period of two years, one-half of the councillors retiring annually. The mayor is elected by the councillors from among their number. Town councils are in certain circumstances empowered to raise money by overdraft or otherwise, but in most instances special loan Ordinances are passed, under which the flotation of loans for specific purposes, on the security of the borough rates and revenues, is authorized. With a few exceptions government licences are granted by the Receivers of Revenue only upon a certificate of approval issued by the municipalities. A number of licences of a purely local character are issued by the municipalities. The issue of liquor licences is controlled by licensing boards appointed under Act No. 30 of 1928. Market rights vest absolutely in the municipalities. New by-laws and amendments of existing ones are subject to the consent of the Administrator.

(ii) *Town Boards.*—These boards are governed by the *Townships Ordinance*, No. 11 of 1926, as amended by Ordinances Nos. 14 of 1929, 5 of 1931, 5 of 1934, and 11 of 1936, and have powers similar in nature to those conferred on municipalities, but less extensive. In addition to all matters relating to the sale or lease of town lands, all new by-laws or amendments and particulars of the cancellation of existing ones must be referred to the Administrator for approval.

(iii) *Local Administration and Health Boards.*—These boards have been constituted under Ordinance No. 4 of 1926, mainly for certain areas adjacent to the borough of Durban. Within its area each board exercises the powers of a local authority and carries out the duties conferred or imposed on local authorities under the *Public Health Act*, etc. The Ordinance empowers them to levy rates and impose fees and charges for services rendered. The principal Ordinance has been amended by Ordinances Nos. 8 and 9 of 1927, No. 15 of 1928, Nos. 10 and 23 of 1929, No. 7 of 1931, No. 9 of 1932, No. 4 of 1934, and No. 15 of 1935.

(iv) *Health Committees.*—Ordinance No. 14 of 1930 enables the Administrator to constitute health committees for areas outside the jurisdiction of other local authorities, mainly with a view to the maintenance of healthy conditions in such areas. He may make regulations governing the various matters provided for, including the imposition of rates upon land or buildings or upon both land and buildings. The main Ordinance has been amended by Ordinances Nos. 7 of 1932, 3 of 1933, and 3 of 1934.

(v) *Malaria Committees.*—The duties of these committees are confined mainly to measures for stamping out and preventing malaria, but may be increased to include any of the powers contained in the *Health Committee Ordinance*, No. 14 of 1930, which, as extended by Ordinance No. 11 of 1932, provides for their constitution.

4. **Transvaal.**—The *Local Government Ordinance*, No. 11 of 1926, as amended at various times, consolidated the law relating to municipal government in the Transvaal Province. This Ordinance, a comprehensive measure defining in great detail the organization and functions of each form of local authority, provides for three grades of such authorities—town councils, village councils, and health committees. Two town councils, viz., Johannesburg and Pretoria, have now been designated city councils. Among other main laws affecting municipal government may be mentioned the *Municipal Elections Ordinance*, No. 4 of 1927; the *Local Authorities Rating Ordinance*, No. 20 of 1933, in terms of which all local authorities are empowered to levy an assessment rate; the *Local Authorities Roads Ordinance*, No. 44 of 1904, which is applicable to town and village councils only; the *Municipal Expropriation Ordinance*, No. 64 of 1903, is applicable generally to town councils only, although the provisions of sections 9 to 12 inclusive apply in the case of any arbitration proceedings in connexion with any works which may be undertaken by a village council under sections 81 and 84 of Ordinance No. 11 of 1926. Under section 143 (1) (*b*) of Ordinance No. 11 of 1926, the Executive Committee of the province has power, upon the application of a village council, to apply to such council the provisions of Ordinance No. 64 of 1903 for any specific purpose laid down in the last-mentioned Ordinance. The *Town Lands Ordinances* of 1904 and 1905 are applicable to town and village councils.

The *Local Government Ordinance*, No. 11 of 1926, distinguishes between the powers and duties of the bodies known as town councils and village councils respectively. The Ordinance confers upon town councils special powers enumerated in Parts I, II, and III of Chapter X; village councils cannot under any circumstances exercise the powers under Parts II and III (sewerage, drainage, tramways, etc.), but the powers mentioned in Part I (except the power to appoint additional auditors) may be assigned by the Administrator to village councils on good cause being shown. A form of local government by means of health committees is provided for, such committees to control matters of sanitation and public health. The Administrator may by regulation confer other powers and duties on these committees, and may by proclamation declare any health committee to be a body corporate.

5. **Orange Free State.**—The system of local government in the Orange Free State embraces municipalities and village boards of management. These are established under the powers of Ordinance No. 15 of 1935.

(i) *Municipalities.*—As soon as a community has shown that it is ripe for the grant of somewhat further powers of local self-government than are exercisable by a village board of management, it may be proclaimed by the Administrator as a municipality. The powers of town councils are similar to, but cover a much wider field than, those of village boards of management. No immovable property may be alienated by a town council without the consent of the Administrator.

(ii) *Village Boards of Management.*—In the case of village boards of management the boards are given power to deal with the more necessary matters appertaining to local government, e.g. the passing of regulations relating to grazing, sanitation, pounds, etc., and the raising of loans not exceeding a total of £3,000 for public works. Subject to the approval of the Administrator, boards are empowered to frame, amend, and repeal such regulations from time to time, and their rating powers are limited to a maximum "round sum" rate of £5 p.a. per erf or plot.

6. **Short-Term Borrowings.**—In the Natal and Orange Free State Provinces, provision is made by Local Government Ordinance for the acceptance by municipalities of moneys on deposit, pending the raising of the whole of authorized loans. Additional particulars concerning this provision will be found in *Official Year Books* Nos. 12 to 15.

§ 2. Municipal Rating.

The following tabular statement shows the incidence of rating, the amount leviable, the exemptions, and the Ordinances under which urban local authorities in the several provinces of the Union are empowered to levy taxation for the purpose of obtaining funds to carry out local government services.

Incidence of Rating.	Amount Payable in the £1 (Maximum).	Minimum Amount Payable.	Exemptions.	Ordinances.
Cape of Good Hope—				
*General rate.....	4d.	—	Property of the Crown or property occupied by the Union Government or Provincial Administration as follows:—	No. 10 of 1912 as amended by No. 12 of 1916, No. 17 of 1917, and No. 7 of 1926.
*When rateable valuation exceeds £1,000,000.....	6d.	—	Land which has not been built upon or upon which permanent improvements have not been made; docks, breakwaters, etc., or any immovable property (not being dwelling-houses or other buildings from which revenue is derived by any harbour authority) which forms part of, or is used for the purpose of, harbour works; railways or railway buildings; gaols or convict stations; immovable property occupied by the Crown for naval or military purposes, provided the property belongs to the Union Government or Provincial Administration.	
*Special rate..... Assessed upon the rateable value of immovable property (i.e. site and building valuations) in any particular area served by a special improvement	4d.	—	Places used for public worship and educational purposes, or cemeteries. Land used exclusively for public schools or colleges, public libraries or museums, art galleries, etc. Land used for hospitals, charitable institutions, etc.— (*a*) supported by the Union Government or Provincial Administration, or (*b*) supported by public charity.	

* Municipal councils in the Cape of Good Hope Province cannot exceed these rates nor levy a special rate, unless the enrolled voters on appeal to them have determined that a higher rate be levied.

MUNICIPAL RATING—*continued.*

Incidence of Rating.	Amount Payable in the £1 (Maximum).	Minimum Amount Payable.	Exemptions.	Ordinances.
Cape of Good Hope—(continued)—			Land and buildings used for hospitals, whereof the profits (if any) are devoted entirely to charitable purposes within the area of the local authority concerned.	No. 26 of 1929.
			Lines of telegraph and telephone, etc.	
			Land set out as a mining area.†	
			Land used as public slaughter-houses.	
			In Capetown, Houses of Parliament and immovable property under the control of the Railway Department (exclusive of dwelling-houses) in the docks area.	
			National botanical gardens and improved government forest lands, and land and buildings (other than those used for trading purposes) forming portions of Groot Schuur estate set aside as a park.	No. 12 of 1916.
			Land, together with buildings, vested in trustees on behalf of any sporting organizations and used solely for athletic sports and pastimes or leased from municipal councils or from the Imperial or Union Government or the Provincial Administration for such purpose (excluding racecourses). Land owned or occupied by agricultural societies, or used for the benefit of blinded S.A. ex-soldiers, and church properties subject to certain conditions.	No. 25 of 1920, No. 24 of 1921, No. 17 of 1925, No. 2 of 1928, No. 29 of 1929, and No. 8 of 1930.
			Immovable property owned or occupied by Boy Scouts, Girl Guides, or Voortrekker organizations.	No. 11 of 1931.
			Land or buildings vested in or belonging to municipalities or divisional councils, except where occupied at a rental.	No. 23 of 1931, as amended by No. 25 of 1932, No. 26 of 1933, and No. 29 of 1935.
			Land or buildings used for purposes of school boarding departments.	No. 12 of 1932.
			Lands and buildings owned by public utility companies or similar institutions, if—	No. 22 of 1937.
			(*a*) such company or institution does not distribute profits amongst the members;	
			(*b*) such lands and buildings have been acquired or erected under a scheme of a sub-economic nature approved by the Administrator in terms of the Housing Act, 1920 (Act No. 35 of 1920) as amended; and	
			(*c*) one half of the members of the Council concerned have adopted a resolution exempting such lands and buildings within its division.	
Emergency rate..... (Applicable to East London, Kimberley, and Port Elizabeth, or any other municipality, except Capetown, approved of by the Administrator.)	2d.	—	—	No. 13 of 1921.
Water rate..... Assessed upon the value of rateable property.	½d.	—	—	No. 7 of 1926.

† Ordinance No. 4 of 1913 provided that rates were to be recovered on houses and buildings within any mining area within the Municipality of Kimberley.

MUNICIPAL RATING—*continued.*

Incidence of Rating.	Amount Payable in the £1 (Maximum).	Minimum Amount Payable.	Exemptions.	Ordinances.
Natal— General rate..... Water rate..... Assessed upon immovable property as a whole or upon land and buildings separately.	Amount assessed annually according to the estimated amount of money required for service of municipal year	—	State-owned property, except when let to private tenants.	Law No. 19 of 1872 (Natal). Act No. 15 of 1910 (Natal). No. 19 of 1924. No. 13 of 1929, No. 16 of 1927, No. 20 of 1932, No. 10 of 1936, and Act No. 32 of 1931 (Union).
			Land and/or buildings solely appropriated to, or held in trust for, religious, educational, or charitable purposes, burial ground, infirmary, or hospital; land let under agricultural lease and used only for agricultural, pastoral, and like purposes.	
Transvaal— *Original* rate (compulsory) on the site value of land.	1d.	‡5s.	Any land or interest in land the property of the Crown; provided that all property vested in the Governor-General-in-Council for railway purposes shall be deemed to be rateable if used for residential purposes or let for residential, industrial, or commercial purposes by the South African Railways and Harbours.	No. 20 of 1933.
An *additional* rate may be levied upon the site value of land up to..	6d.	—	Any interest in land used exclusively for public worship or both public worship and education or for a charitable institution supported entirely by voluntary contributions or for a hospital in receipt of a subsidy or grant-in-aid from the Transvaal Provincial Administration in so far as such interest is held for such purposes.	
A rate of an amount in the £1 equal to or less than the additional rate may be levied upon the value of improvements, provided that— (1) where the rate, which is levied upon the value of improvements, is equal to the additional rate, the rate shall not exceed in the aggregate....	3d.	—	Any licence or right to dig for or prospect for precious stones or metals on any portion of land assigned for that purpose; and any portion of land held or occupied exclusively for the exercise of such rights; provided that no land or buildings used for residential purposes or for purposes not incidental to mining operations, whether by persons engaged in mining operations or otherwise, shall be deemed to come within the exception.	
(2) where the rate, which is so levied, is less than the additional rate, such additional rate shall not be of a greater amount in the £1 than is necessary, together with the rate upon the value of improvements, to produce a sum equal to the sum which would be produced by a rate of 3d. in the £1 on the site value of land and the whole value of the improvements thereon taken together.			Any interest in land laid out and used for the purpose of sport or recreation and controlled in accordance with rules approved by the local authority in so far as such interest is held for such purposes as aforesaid, provided that an interest in land used as a recreation ground conducted for profit or as a racecourse shall not be entitled to the benefit of this exemption.	
The Administrator may sanction an additional rate higher than that stipulated. (Special provision has been made in the Ordinance for rating of land held by power companies and for rating of improvements on mining title land, as also freeholders' licence interests.)			Land being not less than three morgen in extent *bona fide* and exclusively used for agricultural purposes as also land, irrespective of size, if laid out under the provisions of the Agricultural Holdings (Transvaal) Act, 1919, and any other land which the owner is precluded by any other law or servitude from using for any other purpose than agriculture, is rated on one-eighth of its site value.	
			Land within the jurisdiction of a health committee, held by the Governor-General or the Government in trust for any future municipal council, or reserved under law for the use and benefit of a health committee.	

‡ Minimum charge in respect of any property or interest in land.

MUNICIPAL RATING—*continued.*

Incidence of Rating.	Amount Payable in the £1 (Maximum).	Minimum Amount Payable.	Exemptions.	Ordinances.
Orange Free State—				
General rate	*1¼d.	†£1	Land or immovable property belonging to the Crown or the Government of the Union or the Provincial Administration; churches or other buildings used for religious worship or educational purposes; libraries, schools, etc.; any land or buildings owned, leased, or held by agricultural societies; burial grounds; hospitals or other buildings supported by public charity or used exclusively for charitable purposes; any land held in trust for religious purposes. These exemptions do not apply to private tenants of Crown or Government property.	No. 15 of 1935.
Water rate	*1¼d.	†£3		
Assessed upon immovable property (site and buildings) or on valuation of land only. *Special rates* may also be imposed by a meeting of registered owners to such amount and for such period as the meeting may lay down.				
Sanitary rate (Bloemfontein only)	*2d.	—	—	No. 15 of 1935.

* These are the maximum rates leviable by a town council without consulting the registered owners of immovable property; with the consent of registered owners the rates may be increased to any figures specified in such consent.

† The minimum amounts shown are leviable only when specially authorized by a meeting of registered owners.

§ 3. Local Governing Bodies.

1. **Municipalities.**—The following table gives a list of all municipalities proclaimed in each province, together with particulars as to area, population, revenue, expenditure, rateable valuation, and indebtedness. The information contained in the table is derived from returns furnished under the *Statistics Act*.

It should be observed that the revenue and expenditure accounts include such items as the gross earnings and payments of trading concerns and native revenue accounts.

The amount of housing loans granted to *individuals* is excluded from the municipal loan accounts in all provinces with the exception of Natal, but bank overdrafts, where they exist, are included.

3. **Statistics.**—Owing to the absence in the past of a compulsory system for the collection of detailed information in regard to local authorities, statistics in this connexion are necessarily incomplete for years prior to 1920. In the exercise of powers conferred by the *Statistics Act* of 1914, regulations were issued in 1920 making it obligatory to render returns of this nature and ensuring full and reliable statistics for future years.

(a) *Revenue, Expenditure, Indebtedness, and Rateable Valuation—Urban Authorities.*—The following tables give for a series of years particulars of the revenue, expenditure, indebtedness, rateable valuation of property, etc., of urban local authorities in the four provinces:—

(i) REVENUE AND EXPENDITURE OF EACH CLASS OF URBAN AUTHORITY, 1934-35 TO 1936-37.

§ Including deficit balance brought forward from previous year.
¶ Including contribution to Union Government in terms of Telephone Agreement.

(v) CITY OF DURBAN—NATIVE ADMINISTRATION ACCOUNT,* 1934-35 TO 1936-37.

Description.	1934-35.	1935-36.	1936-37.
	£	£	£
Revenue	77,484	94,915	127,033
Working Expenses	70,730	76,645	76,149
BALANCE £	6,754	18,270	50,884

* This fund, the revenue for which is obtained from the sale of native beer, lodging-house fees, etc., is held in trust by the Council to be utilized for the benefit of the natives, including the administration and maintenance of a location, the provision of hospital accommodation, schools, etc.

3. **City of Johannesburg.**—The City of Johannesburg acquired augmented municipal institutions in 1897 through the foundation, under a Law enacted in that year, of a *Stadsraad* of twelve members, with a Burgomaster appointed by the Government. This body virtually ceased to exist on the outbreak of war in 1899, but was reconstituted as a nominated council after the occupation of the town by the British. An Ordinance passed two years later gave authority for the election of a Town Council, which met for the first time in December, 1903. Since that date the European population of Johannesburg has increased from 83,902 (Census of April, 1904) to 137,873 in 1918, 150,286 in 1921, 168,545 in 1926, 199,507 in 1931, and 252,718 in 1936, and the non-European population, which in 1904 was 74,678, numbered 117,151 in 1911, 132,685 in 1921, and 222,316 in 1936. The progress recorded in other directions, and particularly in the development of municipal enterprises, has been equally great. Johannesburg received its charter as a city as from 5th September, 1928. The tables hereunder contain details, for a period of years, as to the financial position of the Municipality:—

CHAPTER IV.

PUBLIC HEALTH AND HOSPITALS.

§ 1. Public Health.

1. **Public Health prior to the Constitution of the Union.**—Except in regard to epidemics (mainly of smallpox) the early records contain little information about public health. This is to be expected in a country with a sparse and largely pastoral population. It is only when population increases, and especially as a consequence of its aggregation into towns and villages, that matters of public health assume greater importance and attract increased attention from the writers of the time.

Shortly after the landing of van Riebeeck and his companions in 1652 a hospital was established on the shores of Table Bay. It is recorded that in 1699 a new hospital was completed at Capetown, and " the sick were moved into it from the old building on the beach ". This hospital did duty until 1772, when a new one, accommodating 1,450 patients, was erected on the site which subsequently became known as Caledon Square. This hospital was replaced in 1817 by an institution named later the Old Somerset Hospital, the buildings in Caledon Square being thereafter converted into military barracks.

Responsibility for dealing with outbreaks of infectious disease and other health matters at first rested with the Government, the duties being carried out by the district surgeons in addition to their medical and medico-legal duties. In 1836, the year of the *Great Trek* from the Cape, an Ordinance was passed authorizing the establishment of municipalities. These bodies, and later, in the Cape, the divisional councils (established in 1885, but not vested with public health powers until 1897), largely took over the care of the public health within their areas. The duties continued, however, to be undertaken either by the district surgeons or by other local medical practitioners.

From the establishment of an administration at the Cape, health matters on vessels entering port and at the ports themselves were dealt with by the Government through its district surgeons, and later—in the case of the larger ports—by special port health officers. The first *Quarantine Law* was passed in Natal in 1858, and between that date and 1899 eight amending *Quarantine Laws* were enacted.

In 1883, following a severe epidemic of smallpox, the Cape Parliament passed a *Public Health Act* dealing with infectious disease, vaccination, quarantine, and disinfection. This was supplemented by an amending Act in 1897, which provided for the appointment of a Medical Officer of Health for the Colony and contained important provisions regarding water supply, drainage, housing, and sanitation.

In Natal a *Public Health Act* dealing with infectious disease and sanitation was passed in 1901, and a *Vaccination Act* in 1906. In the Transvaal a Law relating to infectious and contagious diseases and vaccination was passed in 1895. In the Orange Free State a Law was passed in 1899 dealing with plague and other infectious diseases, and another dealing with contagious diseases. A *Vaccination Ordinance* was passed in 1903; but its application was postponed, and in 1909 it was amended in material respects. A comprehensive *Public Health Act* was passed by the Orange River Colony Parliament in 1907, but its adoption was discretionary and few local authorities availed themselves of the privilege.

Whole-time government health officers were first appointed for the Cape in 1892; for the Transvaal in 1900; and for Natal and the Orange River Colony in 1901. About the same dates Public Health and Bacteriological Laboratories were established in Capetown, Durban, Pretoria (transferred to Johannesburg in 1904), and Bloemfontein. The government health officers acted mainly or entirely as advisers and inspectors, the administration of public health being carried out by a government department, usually that of the Colonial Secretary, which also dealt with local government and other matters.

In 1906 a conference of government health officers of the Cape, Natal, Transvaal, Orange River Colony, Southern Rhodesia, Basutoland, and the Bechuanaland Protectorate was held in Capetown, and made important recommendations which were submitted to the several Governments concerned.

2. History of Health Administration from 1910.—The *South Africa Act*, 1909, assigned to the Provincial Councils the administration of all local government matters, of hospitals and charitable institutions, and also of elementary education, which has since been interpreted as including school medical inspection and hygiene. Public health is not mentioned in the Act (indeed it does not appear to have been mentioned during the discussions at the convention), but it was considered to be a matter under the control of the Union Government. After the constitution of the Union, administration was carried on by the Department of the Interior, with an Advisory Medical Officer of Health for the Union at Pretoria, and three assistant health officers, with headquarters at Capetown, Durban, and Bloemfontein, respectively.

Short amending *Public Health Bills* were introduced in the Union Parliament in 1911 and 1912, but were not proceeded with. On 1st December, 1917, following a conference of government health officers held at Capetown in May preceding, a separate sub-Department of Public Health in the Department of the Interior was constituted, under the direction of the Medical Officer of Health for the Union.

A comprehensive consolidating and amending *Public Health Bill*, designed to replace the existing public health legislation of the several provinces, was drafted in 1913; this draft Bill was published and distributed to local authorities for their information and criticism in the following year, but owing to the war and other circumstances it was not proceeded with. Meanwhile, owing to the indefiniteness of the *South Africa Act* in respect of public health and cognate matters, the Administrations of the several provinces had proceeded on lines which were in certain respects divergent, so that a full discussion by all parties concerned had become highly desirable. A conference between the Administrators of the several provinces, representatives of the Government, the provincial municipal associations and divisional councils, and other bodies concerned, was accordingly convened by the Minister of the Interior and met at Bloemfontein in September, 1918, under the chairmanship of the Minister, Sir Thomas Watt. The conference discussed most of the important questions at issue, and unanimously passed a series of resolutions regarding general policy and the respective spheres of the Government and the Provincial Administrations.

Subsequently the draft Bill was revised so as to embody or harmonize with these resolutions. The Bill, so revised, was introduced in January, 1919; and was, with certain amendments, passed by Parliament, receiving assent of His Excellency the Governor-General on 20th June, 1919. Sections 2 to 5 of the Act, relating to the establishment of a Department of Public Health with separate portfolio, the functions and duties of the Department, the establishment of a Council of Public Health, and the appointment and duties of officers of the Department, were proclaimed in force on 1st July, 1919. Gazette Notices were simultaneously published notifying the appointment of the Honourable Sir Thomas Watt, K.C.M.G., as Minister of Public Health, and the establishment of a Department of Public Health, to administer all matters relating to public health, adulteration of food or drugs, district surgeons, medical councils, and pharmacy boards. The remainder of the Act came into force on 1st January, 1920. Matters relating to leper institutions were transferred to the Department in 1924, but the administration of mental institutions and mental patients continues under the Department of the Interior. A further advance was the housing legislation of 1920, which established, within the Department of Public Health, the Central Housing Board. Legislation affecting public health is now complex and is to be found in such enactments as:—

The Public Health Act of 1919.
The Food, Drugs and Disinfectants Act of 1929.
The Medical, Dental and Pharmacy Act of 1928. (Amended 1937.)
The Public Health Amendment Acts of 1927, 1928, 1935, and 1938.
The Native Labour Regulations.
The Mines, Works and Machinery Regulations.
The Factories Act of 1918.
The Natives (Urban Areas) Act of 1923.
The Aviation Health Act of 1935.
The Slaughter of Animals Act of 1934.
The Slums Act of 1934.
The Housing Act of 1920.
The Additional Housing Act, 1937.

3. The Present Public Health System.—The evolutionary processes reviewed above have thus produced a central Department of Public Health, four Provincial Councils possessed of important health duties, local urban and rural authorities concerned with the application of the principle of local responsibility for health conditions, and numerous other organizations, official, semi-official, and private, contributing to medical and health services.

The Department of Public Health undertakes advisory and executive duties laid down by the Act, including the prevention of the entrance of infectious disease, the promotion of the public health, the control of communicable and preventable disease, the advising of provincial and local authorities on health matters, and the investigation and issue of reports on health subjects. The head office is in Pretoria, and through a Senior Assistant Health Officer, who is also Director of Medical Services in the Department of Defence, it is brought into close co-operation with that Department. The Capetown office supervises the Cape area and includes the Biological Control Laboratories, the Vaccine Institute, and one of the pathological laboratories. The Durban office, where there is also a laboratory, undertakes similar charge of Natal. Some of the main functions of the Department will receive reference in later sections.

Mention is made hereunder of other government departments and their activities in regard to the provision of services appertaining to public health:—

(i) The mental hospitals and institutions of the Department of the Interior.

(ii) The health services of the South African Railways and Harbours.

(iii) The South African Medical Corps.

(iv) The Department of Labour which administers the *Workmen's Compensation Act*, the *Factories Act*, and the *Unemployment Benefit Act*.

(v) The Department of Social Welfare with its interest in the health and social conditions of the Poor Whites on the diamond diggings and on forestry and other settlements, and the rehabilitation of the poor. It also administers the *Children's Act* and the *Blind Persons Act*.

(vi) The Veterinary Division, with its magnificent Onderstepoort Laboratories, and the agricultural extension officers, who do much to improve rural social and economic conditions.

(vii) Reformatories and industrial schools of the Department of Education.

(viii) The Miners' Phthisis Bureau and Board of the Department of Mines.

The Provincial Councils are interested in health functions in connexion with local government, hospitals, primary and secondary education, and poor relief. The difficulties which have resulted from certain health activities being administered by the Department of Public Health and others by the Provincial Administrations are being overcome to some extent by co-operation through the Provincial Consultative Committee.

Local authorities number over 700 and, following the principle of local responsibility in health, they are the very foundation of the public health organization. Their health services vary enormously. On the one hand, there are the larger municipalities such as Capetown, Johannesburg, Durban, Pietermaritzburg, Bloemfontein, Port Elizabeth, East London, Kimberley, Pretoria, and the Reef towns, which possess highly organized health departments under the direction of full-time medical officers, and, on the other, health committees and village councils exist with but skeleton organizations.

In addition to the official health organizations there are numerous other bodies contributing effort in public health fields, and subsidized in many instances by the Government. There are the South African Red Cross Society, the St. John Ambulance, the South African National Council for Child Welfare, mission hospitals and church associations, and the various mine medical and health services. A considerable volume of research in epidemiological and health fields is undertaken by the South African Institute for Medical Research, Johannesburg, which is also occupied in performing much of the routine laboratory work required by the public health services. Finally the great medical and nursing professions, as individuals and as corporate associations, are of supreme significance in the public health organization of the country.

4. **Council of Public Health.***—The functions of the Council of Public Health as laid down in section 4 of the *Public Health Act*, No. 36 of 1919, are to advise the Minister and the Department of Public Health on matters described or referred to in section 3 of the Act. The Council consists of:—

(*a*) The Minister (who shall be chairman);

(*b*) the Chief Health Officer;

(*c*) the Director of Veterinary Services; and

(*d*) seven persons (not being officers in the public service) who shall be appointed by the Governor-General. Four of those seven persons shall be medical practitioners, and of those four medical practitioners two shall be selected on account of special knowledge of or practical experience in matters relating to public health or medical research. Three of the seven persons to be appointed shall not be medical practitioners. Subject to regulations as to the circumstances in which office shall be vacated, the seven persons so to be appointed shall hold office for three years and shall be eligible for reappointment for a like term.

5. **Leprosy Advisory Committee.***—The functions of the Leprosy Advisory Committee are to advise the Department of Public Health in respect of matters relating to leprosy.

6. **Central Housing Board.***—The Board is appointed by the Minister of Public Health and consists of not more than five members, including as far as practicable an architect and a municipal or a sanitary engineer. It is appointed for a period of two years or for such longer period as the Minister may decide.

It is the duty of the Board, when required by the Minister, an Administrator, or a local authority, to inquire into and report as to the necessity for the provision of dwellings in the area of a local authority, and it may upon its own initiative institute such an inquiry and make a report thereon to the Minister, the Administrator, or the local authority, as the case may demand. It advises and assists local authorities in the preparation of proposals for dwellings and schemes, and transmits such proposals to the Administrator with its recommendations in regard to the merits, cost, and proposed methods of execution of such proposals.

The duty of the Board is generally to advise the Minister and Administrators in the carrying out of the provisions of the *Housing Act*, No. 35 of 1920, the *Slums Act*, No. 53 of 1934, and the *Additional Housing Act*, No. 41 of 1937, and amendments thereto.

The Board prepares an annual report which is published and laid upon the tables of both Houses of Parliament.

7. **District Surgeons.**—For the carrying out of the health and medical work devolving on the Government in the various districts, medical officers known as district surgeons are employed. A few in large centres devote the whole of their time to the work, but the large majority undertake government work concurrently with their private practice. At the end of June, 1938, there were, in all, 367 district surgeons, of whom 17 were whole-time officers, 7 were whole-time but were employed jointly with local authorities or public bodies, and 343 were part-time.

8. **Port Health Work.**—A port health officer is appointed by the Union Department of Public Health at each port of the Union to carry through the usual inspection and control for public health purposes of vessels arriving at and leaving the Union. Such officers act with the immigration officers in an advisory capacity in determining the physical fitness of immigrants into the Union. Entry is debarred, except under approved conditions, in the case of such persons as are suffering from mental or physical defects, or are afflicted with disease. Tuberculosis is a disease specially cited as a disqualification in the case of an immigrant, and special authority is necessary for a person suffering from the disease to enter the Union. [See section 4 (1) (*g*) and (*h*) of Act No. 22 of 1913; section 19 of that Act, as amended by section 8 of Act No. 37 of 1927; and regulations promulgated under Government Notice No. 1055 of 1928.]

* For personnel see Chapter XXVIII.

9. **Health Inspection of Aircraft.**—Regulations have been framed in terms of Government Notice No. 485 of the 25th March, 1938, in regard to the health inspection of aircraft entering or leaving the Union and the medical examination of crew and passengers. Aircraft entering the Union from beyond the borders of the Union are required to make a first landing at a customs aerodrome, and any aircraft entering the Union from certain specified areas beyond the borders of the Union are required to proceed to a sanitary aerodrome for the medical examination of the crew and passengers and the granting of pratique. The sanitary aerodromes designated as such to date are Rand Airport (Germiston), Durban Bay, and Walvis Bay.

The danger of the introduction of yellow fever into the Union by aircraft is a real one. It has been necessary for the Department therefore to investigate methods of preventing such an occurrence. During 1938 the matter received careful consideration and with the co-operation of Imperial Airways a method has been devised whereby aircraft can be rapidly freed of mosquitoes by an automatic apparatus incorporated in the structure of the machine. This enables disinsectization to be undertaken during flight, and eliminates the delay which previously occurred when machines landed and were subjected to inspection and disinfection processes before evacuation of passengers and baggage.

For a full and detailed account of this work reference should be made to the memorandum entitled "Automatic Emoustication of Aircraft and the Yellow Fever Vector in African Air Travel", presented by Dr. G. Park Ross of the Union Health Department to the Office International d'Hygiène publique.

10. **Food, Drugs and Disinfectants Act.**—Until 1929, the laws in force on the subject of food and drugs adulteration were old, obsolete, and inadequate; those in the Cape Province dated from 1890, in Natal from 1901, and in the Orange Free State from 1906—the last two being based on the Cape Act which, in turn, was based on the English Act of 1875. In the Transvaal there were practically no general laws, but municipalities had power to make regulations under an Ordinance of 1912.

The need for an up-to-date and uniform law for the whole Union had long been recognized, and after some delay Act No. 13 of 1929 was passed during the first session of the sixth Parliament. Regulations framed thereunder were promulgated under Government Notice No. 575 in the *Government Gazette* of the 28th March, 1930, and amended in various respects up to 1938; during 1937 they were consolidated and reprinted in pamphlet form. The Act and the regulations came into force on 1st April, 1930, and provided for regulating the labelling and preventing the importation or sale of food and drugs which are unwholesome or adulterated, or incorrectly or falsely described, and similarly for regulating the labelling and preventing the importation or sale of disinfectants which are incorrectly or falsely described.

The administration and enforcement of the Act vests in the Minister of Public Health and the Health Department, but local authorities are required to co-operate generally, and the Minister may, on the request of a local authority, delegate to it the carrying out and enforcement of the Act and regulations within its area, in respect of such articles or classes of articles as may be specified therein, provision being made for the free examination of a yearly number of samples in the government chemical laboratories.

11. **Biological Control Laboratories.**—An officer was appointed in 1934 to undertake the examination of biological products, and new laboratories under his direction have recently been erected in Capetown. Regulations for the control of therapeutic substances, as laid down under section 83 of the *Medical, Dental and Pharmacy Act*, 1928, have been promulgated and will enable the Department to control the manufacture and import of vaccines, sera, insulin, posterior pituitary, organic arsenicals for treatment of venereal disease, and surgical ligatures. Certain drugs, such as digitalis, strophanthin, and tinctures thereof, will also be controlled, powers to examine these substances being obtained under the *Food, Drugs and Disinfectants Act*, 1929. The staff of the laboratories has been strengthened by the appointment of a pharmacologist. This has made it possible to extend considerably the control which it is necessary to exercise in respect of various biological substances.

12. **Sanitation and Environmental Hygiene.**—In a country of great distances and of sparse, largely primitive population, sanitation is liable to be neglected. The smaller urban communities and rural districts are inspected regularly, and advice and assistance are rendered by officers of the Union Health Department. The larger urban areas are possessed of such technical officers as medical officers of health and sanitary and health inspectors. As a result proper care is given to the provision and maintenance of pure water and milk supplies and adequate sanitary services, and the prevention of nuisances. Water-borne sewage, public slaughterhouses, and piped purified water supplies are now to be found in the larger communities.

13. **Maternity and Child Welfare and District Nursing.**—The training of nurses and midwives is undertaken in provincial and provincial-aided hospitals, while the Union Health Department is responsible for the subsidizing of district nursing and midwifery services. Under section 13 of the *Public Health (Amendment) Act* of 1935, the Department refunds one-half of the expenditure incurred by a Provincial Administration in district nursing or midwifery services connected with one of its hospitals or in subsidizing a hospital board for such services. Under section 14, the Department is authorized to refund in other areas one-third of the salary of any registered nurse or midwife employed by a charitable institution or a local authority, or to subsidize registered nurses or midwives in private practice in any area so as to retain them in practice in such area. Further, under section 15, similar authority is given to the Department to assist to the same extent in native areas, and refunds can now be made on the salaries of any certificated nurse or midwife or uncertificated native nursing assistant employed by any charitable organization, or any body controlling any mission hospital, or any statutory native body which makes provision for such a service, or, alternatively, the Department may similarly subsidize private nurses and midwives and native nursing assistants engaged in private practice, or it may appoint and itself employ nurses and midwives and nursing assistants to undertake district work in such areas. A woman health officer is in charge of this subdivision of the work of the Department, while nurse-lecturers undertake survey and propaganda tours and give advice and assistance. At the end of June, 1938, 306 nurses were being subsidized in the country under this Act. A further work undertaken by this subdivision has been the inspection and registration of nursing and maternity homes, and the supervision of persons practising midwifery in the smaller urban and all rural areas.

The infantile mortality rate is known only for Europeans; for 1937 it was 56·57 per thousand births. Maternal mortality is also calculated only for Europeans, the 1937 rate being 4·38 per thousand live births.

14. **Industrial Hygiene.**—Apart from those associated with gold mining on the Witwatersrand, industrial hygiene problems can hardly be considered to have arisen in South Africa. Compensation for disabilities contracted on the mines is a heavy drain on the resources of the mining companies, and had not considerable strides been made in mining industrial hygiene the compensation payments would have crippled the industry seriously. As would be expected, industrial hygiene legislation has, therefore, been concerned chiefly with gold mining and the phthisis produced thereby. This legislation is more fully treated of in another chapter of this volume.

The Department of Public Health has a health officer stationed in Johannesburg, whose duties are largely composed of investigations, surveys, and reports on the conditions of the mine compounds, and health conditions generally on the Reef.

15. **Health Education and Propaganda.**—During 1938 the Department inaugurated a new policy in regard to health education in an attempt to put this very important subject upon a sound national basis.

The principle of delegation was adopted, as it is considered that South African conditions are such that voluntary agencies have a wider appeal and a better chance of success than departmental efforts, which have necessarily a colder and less intimate attraction. The South African Red Cross Society was approached to undertake this work as by constitution, aims, interests, and distribution, it is considered the body most appropriate and most likely to appeal to all sections, classes, and races of the nation. This organization has established a National Health Education Committee on

which are now represented practically all organizations interested in the matter. Various sub-committees have been constituted to prepare health films, posters, lectures, and health weeks, and to assist in propaganda campaigns throughout the country.

The work being undertaken by the National Committee is most important, as health education is essential to securing the improvement of the health of the nation. However, in addition to the popular health propaganda so undertaken, it is necessary for instruction and education in more technical fields of public health and medicine to be given. This is being achieved by various bulletins and lectures prepared by the Department.

A further important field, which cannot be neglected, is that of the education of the school child. At every opportunity the Department insists on the importance of including health subjects in the general school curriculum.

16. **Health Investigation and Research.**—Many fields have received some attention, but none exhaustively. Such organizations as the South African Institute for Medical Research, the Rand Mines, and various government departments have singly, or in co-operation with the Union Health Department, investigated tuberculosis, malaria, plague, typhus, and other subjects. The Carnegie Commission issued a most valuable social and health report on the Poor White problem. Nevertheless there is a pressing need for study of health problems, especially those of the non-European population. The almost entire absence of medical and vital statistical data concerning this section of the community has a most crippling effect upon the planning of public health policies for the country. Vital statistics are essential for the administration of a national public health department. In the Union fairly complete information concerning the European population has been collected at the various censuses and through the operation of the *Births, Marriages and Deaths Registration Act.* Statistical information regarding the non-European population cannot yet be compiled, as under the above Act registration of non-European births and deaths is compulsory only in urban areas, and in many of these, owing to the large proportion of non-European male adults temporarily resident, computations of death rates and similar statistics are useless and misleading.

In 1937 an inter-departmental committee was appointed to consider the practicability of instituting a complete system of registration of native births and deaths. Its report is still receiving the consideration of the Government.

17. **Nutrition Survey.**—The nutrition survey of European scholars, the initiation of which was mentioned in the last edition of the *Year Book*, was launched in May, 1938. This survey, which was based on the Type 1 method as recommended by the League of Nations, has resulted in the collection of over 140,000 records of school children. The records include simple items giving height, weight, clinical assessment, and a few facts about the diet. The analysis of this material is now proceeding.

In order to collect information of the Bantu section, a second survey is now being conducted. An itinerant team consisting of a medical officer and an anthropologist is visiting the following areas: Pretoria, Bloemfontein, Witzieshoek, Qumbu, Tzaneen, and Balfour. In each area approximately 800 Bantu school children are being medically and anthropologically examined.

Further investigations complementary to the survey of European scholars are under discussion. In these additional investigations it is hoped to undertake in South Africa work similar to that done in such countries as England, Australia, and Ceylon, where careful examination of various factors relating to the incidence of malnutrition, such as production of foodstuffs, economic conditions of various levels of society, the accessibility of foodstuffs, and the ability of families to secure the best dietetic value for their money, have been made.

Before a final and considered opinion on the malnutrition problem in South Africa can be given, it is very necessary to have accurate information on these subjects. The collection of this information, it is hoped, will be commenced during 1939.

18. **Solar Radiation Survey.**—The sunlight survey, which was made possible by the munificence of Dr. Hans Merensky, was reported on in June, 1938, by an Inter-departmental Committee presided over by Sir Spencer Lister of the South African Institute for Medical Research. This committee strongly urged the continuation of the survey because of the important bearing of the findings on human health and agricultural problems. The collection of

data at the following six stations has been continued: Johannesburg, Bloemfontein, Nelspoort, Capetown, Port Elizabeth, and Durban.

The committee found that this data when analysed would be of direct importance in determining the content of ultra violet rays, and so should enable accurate dosage for each type of patient to be prescribed. It further considered that the determination of the nature of solar radiation was of importance in studies of South African grasses and other constituent plants of the veld. The effects of exposure to sunlight, whether beneficial or harmful to animals and human beings, is largely unknown, except that in certain cases disease which may be attributed to sunlight, has made its appearance in animals, e.g. a disease of sheep known in the Karroo as Geeldikkop.

The consideration of the benefit that a fuller knowledge of solar radiation would give in the study of these and similar problems decided the committee to recommend the continuation of the survey for a further period.

19. **Housing and Slums.**—The administration of the *Housing Act* and the *Slums Act* is the particular function of the Central Housing Board, which is incorporated in the Health Department. Under these Acts the Government is providing large sums at extremely low interest rates to stimulate the supply of new houses, especially of the sub-economic class, and, through the adoption by the larger municipalities of the expeditious procedures of the *Slums Act*, slum areas are being materially reduced.

The active enforcement of the *Slums Act*, No. 53 of 1934, is proceeding steadily and apart from its application to the eight centres included in the First Schedule of the Act (viz., Bloemfontein, Capetown, Durban, East London, Johannesburg, Pietermaritzburg, Port Elizabeth, and Pretoria), the provisions have been extended to Kingwilliamstown, George, Randfontein, Mossel Bay, Beaufort West, Germiston, Roodepoort-Maraisburg, Grahamstown, Graaff-Reinet, Oudtshoorn, Barberton, Paarl, Somerset West, Springs, Worcester, Benoni, Boksburg, Steynsburg, Queenstown, Stellenbosch, and Middelburg (Cape).

Further information regarding the Government's loan facilities under the *Housing Act*, No. 35 of 1920, and particulars as regards house construction and loans authorized under the Act will be found in Chapter V.

20. **History and Prevalence of Certain Diseases.**—Particulars are given hereunder as to the occurrence of certain diseases in the Union and the history of past occurrences.

(i) *Acute Poliomyelitis* (Infantile Paralysis).—Occasional sporadic cases occur throughout the Union.

(ii) *Bilharziasis or Human Schistosomiasis.*—Human *Schistosomiasis* has been known in South Africa for nearly a century. In 1864 Dr. John Harley showed that the disease in this country was due to the same parasites as had previously been described in Egypt. In South Africa the type of disease generally found is that due to *Schistosoma haematobium*, though isolated cases due to *Schistosoma mansoni* have been reported.

As far as is at present known, all slow-flowing streams and stagnant pools, especially those with muddy bottoms or sides and with vegetation, in the following areas of South Africa may be considered actually or potentially infested with urinary bilharziasis:—

Cape Province.—The southern and eastern coastal belts, commencing from about Knysna eastwards to the Natal border and varying from 50 to 100 miles in width.

Natal.—Practically the whole of Natal and Zululand, excepting areas at an altitude of more than 4,500 feet.

Transvaal.—All the Low Veld and all the area north of a line drawn from Delagoa Bay to Lichtenburg and beyond, excepting regions over 5,000 feet in altitude.

The commonest snail host of the disease is the fresh water snail *Physopsis africana*, and other intermediaries are *Isidora tropica* and *Limnaea natalensis*.

There is no racial immunity to the disease and natives, Asiatics, and Europeans are all equally liable to infestation. The earliest attempt to carry out mass treatment of infected school children was at Zeerust in 1926. Since that time, through the co-operation of the Department and the Red Cross with the educational authorities, camps for treatment have been held and active propaganda has been pursued in all areas. A Transvaal Bilharzia Committee has been constituted to co-ordinate these activities.

(iii) *Cholera.*—In 1888 the *Quathlamba*, with immigrants from Indian ports, arrived at Durban and reported having had, among the Indians on board, 27 cases of cholera with 9 deaths during the voyage. She was refused pratique, but this was subsequently given when it was ascertained that the disease had died out. In 1890 the *Congella*, with some 400 Indians on board, arrived at Durban from Madras, and reported 9 deaths from "acute diarrhoea" (attributed to fish-poisoning) during the voyage; five persons were still sick. The sick were landed for isolation at the General Hospital; one of them died before reaching the shore and another died on the following day. The immigrants were landed and removed to a depot on shore, where five of them were, on the following day, taken suddenly ill with vomiting and purging; one of them died on the same day and another on the day following. The remainder of the immigrants were then removed to the quarantine station on the Bluff. No further spread of the disease occurred. The outbreak and the circumstances attending the arrival of the vessel were investigated by a committee of inquiry, comprising the Magistrate, the Chairman of the Harbour Board, the Senior Medical Officer of the Imperial troops in Natal, and the Port Health Officer. This Committee reported that they had no doubt that the disease was Asiatic cholera. No other outbreaks of the disease in the Union are recorded.

(iv) *Diphtheria.*—This disease occurs throughout the Union; during the year ended June, 1938, 2,673 cases were notified. Shick tests carried out at Capetown revealed that practically one-half of those tested gave positive reactions, and the municipality has undertaken active immunization for some years past. In 1937 the Department of Public Health in its annual report made a special plea for the more general adoption by local authorities of active immunization against the disease. To secure acceptance of this plea, the *Public Health Act* has been amended to allow of the acceptance for part refund purposes of expenditure incurred by local authorities on such measures.

(v) *Dysentery.*—This disease is not prevalent in any part of the Union, but in some places bacterial dysentery of mild type is not uncommon during the summer months. Amoebic dysentery is comparatively rare.

(vi) *Enteric or Typhoid Fever.*—This disease was formerly very prevalent. With the improvement of water supplies and general sanitation prior to the Anglo-Boer War its prevalence had considerably decreased, but during that war serious mortality from the disease occurred among the troops, and concurrently there was a great increase of prevalence among the civil population. Serious outbreaks are uncommon, the disease chiefly occurring sporadically in the larger centres and in certain areas where the water supplies are specially exposed to pollution. In recent years the number of notifications has been about 4,000 to 5,000 annually. Several urban outbreaks have been traced to "carriers", and urban authorities are increasingly taking measures to protect dairies from such sources of infection. The routine health and sanitary inspections conducted by the Department's officers also direct attention to the radical improvement required in refuse, manure, and night-soil disposal in order to prevent fly breeding, which is undoubtedly contributory to the spread of enteric in many areas.

The appointment of full-time medical officers of health and of sanitary inspectors to local authorities is having marked success in the reduction of incidence of enteric fever, especially as demonstrated in the smaller Reef municipalities during the last two years.

(vii) *Epidemic Cerebro-Spinal Meningitis.*—This disease occurs sporadically, chiefly amongst Indians in Natal and natives on the Rand mines. No serious prevalence of the disease has occurred. During the year ended June, 1938, the number of cases reported was 796.

(viii) *Influenza.*—An epidemic occurred in South Africa in 1890 during the pandemic prevalence of the disease throughout the world. The epidemic began at the ports, the infection having apparently been introduced by passengers from Europe. The disease was of mild type and the mortality trifling.

During the last quarter of 1918, and concurrently with the further world wide pandemic, a devastating wave of the disease swept through South Africa. The infection was introduced by sea—first at Durban *via* the East Coast, and a little later at Capetown by vessels from the West Coast and Europe. On this occasion the disease developed great virulence, with a frequent tendency to pneumonia and other complications, and the mortality was high. Capetown, Kimberley, Bloemfontein, and indeed most of the larger centres, suffered very

heavily. Up to the end of November, 1918, 2,616,805 cases (454,653 European and 2,162,152 coloured and native) were reported, with 139,471 deaths (11,726 European and 127,745 coloured and native). Since 1919 there has been no similar major epidemic, though in 1926 severe cases occurred in several districts.

(ix) *Leprosy.*—This disease existed among the Hottentots of the Cape before the arrival of Europeans. The earliest record of the recognition of the disease in Europeans occurs in 1756. Theal in his *History of South Africa* states: "The coloured races of South Africa, though singularly free from disease, were subject to one of the most dreadful maladies with which mankind is afflicted. There is no means of ascertaining the ravages made by leprosy among the Hottentots, but it is tolerably certain that though they were acquainted with the disease, the number of individuals affected was very small. It is not once named in the early records, and it is only from tradition that it is known to have existed among these people before their intercourse with strangers. Whether the Bushmen were liable to be attacked by it is uncertain. Among the Bantu tribes it was by no means rare, and the slaves of all nationalities who were brought into the colony were subject to it. It was now proved that Europeans also were liable to its attacks. Some cases having been suspected, in May, 1756, a commission of medical men was appointed, who examined the sufferers, and reported that one man, who had been eighteen years ill, was afflicted with leprosy, that his eldest daughter was showing symptoms, and that another man, who had been nine years ill, was suffering from the same disease. The Government recommended isolation of the sufferers, but did nothing more."

A leper asylum was established by the Government of the Cape at Hemel-en-Aarde, in the Caledon district, in 1818. The early records of this institution are scanty, but in 1823, when a Moravian missionary from Genadendal was appointed to administer it, there were 104 inmates, with some 50 healthy persons—wives and children of the patients. These healthy persons were removed from the institution later in the same year, on the orders of the famous Dr. Barry, who was for a time in medical charge. Subsequently the inmates averaged about 100, and the deaths 22, annually. Altogether about 400 lepers died at Hemel-en-Aarde. The asylum was closed in 1845, and the patients were transferred to Robben Island in Table Bay, where a new asylum was established. This asylum was closed in April, 1931.

A leper asylum for natives was established at Emjanyana in the Engcobo district of the Transkei in 1892. At first the inmates were accommodated in huts of the ordinary kaffir type, and the sexes mixed freely. In 1896 the huts were demolished, and separate compounds, about a mile apart, were established for male and female patients respectively. During the fourteen years 1897-1910, the admissions numbered 1,079 males and 717 females, and the deaths 537 males and 339 females.

In the Transvaal, a leper asylum existed at Daspoort, Pretoria, from about 1880. There was another asylum, for natives only, at Pankop, near Pienaars River. In 1898 a third asylum was established at Rietfontein, near Johannesburg. In 1899 a new asylum was established at West Fort, Pretoria, and during the three following years the patients at Daspoort, Rietfontein, and Pankop were removed there, and the old asylums closed.

Up to 1909 leper patients from the Orange Free State were accommodated at Robben Island, but in that year a new asylum was completed at Sydenham, near Bloemfontein, and the Orange Free State patients were removed there. The Sydenham asylum was closed in 1912, the patients having been removed to the Pretoria asylum.

Further leper asylums have since been established at Amatikulu, Zululand, in 1903; at Bochem, northern Transvaal, in 1914; and at Mkambati, Pondoland, in 1922.

In 1924 the administration of the leprosy laws was transferred to the Department of Public Health. Less rigorous interpretation of segregation has resulted in an increase in the number of lepers voluntarily seeking treatment and in cases appearing in the institutions in the earlier stages. During the year ended June, 1938, there were 95 Europeans and 2,170 non-Europeans in the various institutions.

(x) *Malaria.*—Malaria is endemic in the river valleys and coastal belt of Zululand and in the river valleys and the Low Veld of the northern and eastern Transvaal. At intervals of several years, under favourable conditions of season and rainfall, the disease becomes epidemic over wider areas, sometimes involving the whole coastal belt of Natal, or the greater part of the Transvaal (all except the High Veld), or the river valleys of the northern part of the Cape Province.

In 1930 Professor N. H. Swellengrebel reported on the malaria problems of the Union. The senior malaria officer of the Department is stationed at a field station at Tzaneen, and he is in charge of malaria work for the Transvaal; while in Natal an organization has been developed employing a malaria officer assisted by field assistants and Malaria Committees. The last serious epidemics reported were those occurring in Natal and Zululand in 1932, and in the northern Transvaal in 1936 and 1937. During 1938 the personnel dealing with the disease in the northern Transvaal was increased. Especially valuable has been the adoption of a system of native malaria assistants, previously so successful in Natal, for the extension of preventive work in native territories of the Transvaal.

(xi) *Malta Fever.*—Twenty or thirty years ago a form of fever called "Kimberley fever" was of frequent occurrence in the diamond fields and neighbouring parts of the Cape Province, and subsequently, with the development of goat-farming, the disease spread to many other districts. In 1902, following on the discoveries of Sir David Bruce in Malta, the disease was proved by clinical and bacteriological investigation to be Malta, Mediterranean, or undulant fever. Although there has been no considerable prevalence of the disease for many years past, sporadic cases occur from time to time in all districts where goat-farming is carried on. In recent years the notifications have been fewer than 100 annually, but doubtless many cases escape recognition or notification.

(xii) *Measles.*—This disease has existed in the Cape from the earliest times. The natives and coloured people are highly susceptible to it, and the early epidemics caused great mortality amongst them. One serious epidemic occurred in 1839. In recent years the disease has been almost invariably of a mild type.

(xiii) *Pellagra.*—It is curious that in spite of the Bantu's almost exclusive diet of maize so little has been seen of this disease. Only three outbreaks of any importance are known to have occurred: One in 1906, when some 150 pellagrins were found among Zulu rebel prisoners; another in 1912-13 in the Pretoria Mental Hospital, affecting about 60 native inmates; and the third in the Durban prison command during 1927-28. Occasional isolated cases have also been seen amongst the Poor Whites.

(xiv) *Plague.*—Plague was unknown in South Africa prior to 1899, when a small outbreak occurred at Delagoa Bay, with an extension to Middelburg, Transvaal. Infection was introduced from India. In the same year another small outbreak occurred at Mochudi, in Portuguese territory, near Lourenco Marques. During the Anglo-Boer War, large quantities of forage and other articles were imported for military purposes from plague-infected ports in South America and India, with the result that during 1900 and succeeding years the disease was introduced several times. The history of the disease in South Africa, apart from the small outbreaks already mentioned, is summarized in the following table:—

SUMMARY OF OUTBREAKS OF PLAGUE.

(*a*) *Prior to* 1910.

Province.	European.		Non-European.		Total.	
	Cases.	Deaths.	Cases.	Deaths.	Cases.	Deaths.
Cape Colony	328	99	979	566	1,307	665
Natal	*	*	*	*	264	196
Transvaal	*	*	*	*	123	86
TOTAL	*	*	*	*	1,694	947

* No information available.

SUMMARY OF OUTBREAKS OF PLAGUE—(*continued*).

At the ports and in the larger centres, rodents are systematically trapped and poisoned, and specimens are submitted each week for bacteriological examination. The Department of Public Health employs rodent inspectors, who supervise preventive measures and undertake propaganda in infected districts.

In 1938 an ecologist was appointed to the staff of the Department, and a more thorough investigation of the various factors concerned in the transmission of plague from rodent populations to human beings is now possible. This officer has a field station in the Orange Free State, where observations are being made on the behaviour of gerbille colonies and those rodents concerned in transmitting plague from gerbilles to domestic rodents, and on the flea vectors of the disease.

(xv) *Rabies.*—Rabies has manifested itself at intervals in South Africa for over a century. Thunberg in his *Travels* refers to an outbreak in 1772, and Sir Theophilus Shepstone reported one in 1828. In 1857 there was an outbreak at Elmsdale in Natal, when several natives were bitten by mad dogs and died. Many dogs died of the disease in Witteberge in the Orange Free State in 1861. In 1892 rabies was introduced into the country by an Airedale terrier which was landed at Port Elizabeth in September. It became rabid soon after landing and attacked every dog it met. The disease began to appear in dogs the following January. The Cape Government took immediate action after the diagnosis had been confirmed: Parliament passed a *Rabies Act*, and regulations were issued prescribing the measures to be enforced. At least two human deaths from rabies are known to have occurred during this outbreak.

Thereafter no cases of rabies were recorded until from 1916 onwards disquieting evidence of the disease in wild carnivores began to accumulate. Since that date cases have been reported of persons who have died from a condition clinically indistinguishable from rabies some weeks after having been bitten by a yellow mongoose or genet cat. These cases occurred at wide intervals of time and space, and not until 1928 was it possible to obtain brain material suitable for laboratory examination. In November of that year the brains of two boys who had been bitten by a sick mongoose in the Wolmaransstad district were examined at the Veterinary Research Laboratories at Onderstepoort. Typical negri bodies were demonstrated.

Rabies now occurs over a wide area, extending roughly from a line joining Carolina and Vryburg in the north to one joining Cradock and Carnarvon in the South. This area will be seen to include the whole of the Orange Free State, and coincides with the area of distribution of those small wild carnivorous animals, particularly the yellow mongoose, which are mainly concerned in the perpetuation and transmission of the disease.

The Departments of Public Health and of Agriculture and Forestry have prepared jointly a pamphlet setting forth the requirements of both departments in their efforts to control the disease.

(xvi) *Relapsing Fever.*—The insect "carrier" of this disease, the tampan tick, is to be found in many parts of the Union, especially in Zululand, the Transvaal, and the north-western part of the Cape Province. The disease occurs in Zululand, especially in the sandy coastal belt, and in parts of the Transvaal. It is probably of more frequent occurrence in tampan-infested localities than has hitherto been recognized.

(xvii) *Scarlet Fever.*—This has been known in South Africa since the early days of European settlement, and outbreaks from time to time occur in the principal centres. Ordinarily the disease is of a mild type, but virulent outbreaks with a tendency to dangerous complications occasionally occur. A curious circumstance is that the native races are largely immune from the disease, whilst the susceptibility of the Cape Coloured and other classes of mixed European race is much less than that of pure Europeans.

(xviii) *Scurvy and Beriberi.*—Scurvy was formerly of frequent occurrence amongst natives employed on certain mines and diamond diggings, especially where samp or kiln-dried mealies formed their staple diet. In recent years it has been comparatively rare.

Small outbreaks of a form of beriberi occurred in the past in certain institutions, such as the Pretoria and Robben Island Mental Hospitals, but there have been none in recent years. Cases of beriberi are of frequent occurrence on ships at the ports.

(xix) *Sleeping sickness.*—This is unknown in the Union, except for two or three "imported" cases, infected in other parts of Africa. Throughout the greater part of Zululand there is a species of tsetse fly (*Glossina pallipides*) which is associated with Nagana in cattle. The parasite of this disease is very similar to—indeed according to some authorities identical with—that of one variety of sleeping sickness (*Trypanosomiasis rhodesiense*). Up to the present, however, no case of sleeping sickness has been found in the "fly" areas of Zululand where Nagana is prevalent.

(xx) *Smallpox.*—The first invasion of South Africa by smallpox occurred in 1713, when the infection was introduced by infected clothing from a vessel on which cases had occurred on the voyage from India. These had, however, recovered before reaching Table Bay. Clothing from the vessel was washed at the Dutch East India Company's slave lodge, where, out of 570 slaves, nearly 200 died of the disease. The disease rapidly spread to the European population, and a widespread epidemic with high mortality resulted. The death rate was especially high amongst the Hottentots, some of whom fled to the mountains, carrying the infection with them. In some instances these refugees were attacked and killed by their people, with the object of prevent-

ing the spread of the disease. It is recorded that the entire population of many kraals died, and the very names of tribes for a great distance inland disappeared.

A second outbreak occurred in 1755, when the infection was introduced by vessels from Ceylon. The disease was of a virulent type, and it is recorded that in Table Valley, during six months, 963 Europeans and 1,109 natives died of it. The epidemic spread far and wide, and caused great havoc among the Hottentots. A third outbreak occurred in 1767, the disease being introduced by a Danish vessel from Europe. Active precautions were taken, and the spread was limited. It had been noticed in the two previous outbreaks that the disease died out entirely when the hot weather set in, but in this outbreak it persisted, cases occurring up to April, 1769. Some 1,900 persons in all were attacked, of whom 179 Europeans and 396 natives died. Further outbreaks, of a milder type, occurred in 1807, 1812, 1839, and 1868.

Another severe epidemic occurred in 1881 and 1882. Prior to its commencement the steamers *Garonne* and *Drummond Castle* had arrived at Capetown with cases of smallpox on board, or having had smallpox during the voyage. Precautions were instituted, and the vessels sent to Saldanha Bay in quarantine; but by some means the infection had already been conveyed ashore. A devastating epidemic followed, and the large Malay population of Capetown, who on religious grounds were conscientious objectors to vaccination, suffered most severely. The *Public Health Act*, passed by the Cape Parliament in the following year, made vaccination compulsory on all. Since then, although the disease has never been absent from some part or other of the Union, and although considerable local outbreaks have from time to time occurred, there has been no severe or widespread epidemic. These outbreaks have almost all been of a mild type, which has come to be known as "amaas" or "kaffir-pox," natives being principally affected. In this type of the disease the skin symptoms are often fairly well marked, and conform to the classic descriptions of smallpox, but the initial and constitutional symptoms are generally mild, and the death rate is low—as a rule only about 2 per cent. to 5 per cent. Most of the fatalities occur in weak or badly nourished patients. A considerable prevalence of this type of the disease occurred in British Bechuanaland and in the northern and north-western parts of the Union in 1917, with small scattered outbreaks in various other parts.

During 1938 a mild form of smallpox was unduly prevalent in the Transvaal and Orange Free State. Over 600 cases occurred, with seven deaths, the vast majority being non-Europeans. Several cases appeared in the Witwatersrand area, but the prompt action taken by the Union Health Department in co-operation with the municipal health departments in this area prevented any alarming spread of the disease. Both on the Witwatersrand and throughout the country extensive vaccination campaigns were undertaken, as a result of which over two million persons were vaccinated.

The modification in virulence of the disease is probably due in part to the fairly thorough vaccination of the population for several generations, similar mildness of type having been noted in recent years in European countries, even where the patients themselves were unvaccinated. Smallpox is essentially a disease of cold or temperate climates, and in warmer countries is apt to spread during the cool season, and to tail off or disappear when the hot weather sets in. Vaccination is an effective remedy against the disease, and outbreaks can always be limited and arrested by it.

(xxi) *Tuberculosis.*—Very little information exists as to tuberculosis in South Africa up to about forty years ago. Prior to this, although doubtless the disease existed, it certainly was not common either amongst Europeans or natives. References to its existence occur in the records of travellers and historians in 1781, 1796, 1798, and 1820. Moodie (1820-1830) says that the disease was uncommon among the Dutch and English, but frequent among Hottentots. He observes: "The climate of the Cape is found beneficial to incipient consumption, but not in the more advanced stages of the malady." Dr. Livingstone (1857) says: "Pulmonary diseases, in comparison with European statistics, exhibit a remarkably low figure, as, amongst upwards of 1,000 observed cases, only three of confirmed tuberculosis occurred." Writing in 1881, Hirsch says: "In Cape Colony phthisis is oftenest met with among Hottentots inhabiting the plains nearest the coast. In other classes of the population it is much rarer than in the East African Islands within the tropics, whilst in the interior plateaux of southern Africa it hardly occurs at all."

From about 1880 consumptive patients began to come out to South Africa from Europe. The majority of these proceeded to the towns and villages in the dry, elevated areas of the interior. Within the next two decades the infection was widely disseminated, and the disease had taken a firm hold on the coloured and native population in whom it found a virgin and congenial soil. In them it generally runs an acute course, and the percentage of recoveries, even under favourable conditions, is small. The disease is now widely prevalent amongst the coloured and native population, especially in the Cape Peninsula and south-western districts of the Cape Province, and in the other towns of the Union. In some districts it is becoming increasingly prevalent among the natives of the rural areas.

The first Tuberculosis Commission, appointed in 1912, drew attention to the difficulties in devising a scheme for the Union—the vast extent of the country, the different and divergent races to be dealt with, the ignorance of the native population, the absence of organized bodies dealing with local affairs in many parts, and the divided and dual control exercised over matters relating to public health by the Union and Provincial Governments. It suggested a scheme including machinery for the discovery of cases, the care of the patient at his own home, the prevention of spread, the diffusion of information concerning the disease, the improvement of general health conditions, short period treatment, educative training of early cases at a sanatorium, and the farm colony for the continuation treatment of suitable cases. No action, however, resulted.

The *Immigrants Regulation Act* of 1913 prohibits the entrance of persons suffering from tuberculosis in a clinically recognizable form, except by permit and subject to certain conditions.

In 1920 the Nelspoort Sanatorium was established. Funds for this purpose were provided by Mr. John Garlick of Capetown, the Cape local authorities, and the Government. Nelspoort is situated at an altitude of 3,260 feet, has a cool, dry, bracing climate, and is fairly well sheltered from prevailing winds. The sanatorium is administered and managed by the Government, but under the agreement concluded between the trustees and the Government an advisory committee is appointed. The general scheme and layout provided for a total of some 300 beds, but the part first proceeded with comprised a central hospital block of 24 beds, with two detached blocks—one for Europeans, of 32 beds, and one for coloureds, of 36 beds—and a nurses' home for a matron and 15 nurses. The sanatorium was actually opened in 1924. There are two classes of patients, viz., local authority and private. The rate fixed for the first-mentioned as from 1st January, 1938, has been reduced to 10s. per diem for Europeans and 7s. 6d. per diem for non-Europeans. Private patients are admitted at a rate of 12s. 6d. per diem. As a result of the recent intensified campaign adopted by the Health Department, the sanatorium has been further enlarged by the addition of accommodation for 32 beds for Europeans and a new block containing 36 beds for non-Europeans.

A Tuberculosis Research Committee was founded in 1925 through the co-operation of the Government and the Chamber of Mines, and its report was published by the South African Institute for Medical Research in 1932.

A more vigorous attack on tuberculosis was launched in 1934, and, in addition to the expansion of Nelspoort Sanatorium, the accommodation at the Springkell Institution, a sanatorium established by the Chamber of Mines for the treatment of miners affected with miners' phthisis, has been opened to patients from local authorities, and wards for non-European patients have been provided at the Rietfontein Hospital.

At Durban a large tuberculosis hospital has been erected. The site is at Springfield and was given by the Corporation of Durban. An amount of approximately £110,000 was provided by the Government for the construction, equipment, and furnishing of the hospital, which provides accommodation for all races. There are 139 beds and the hospital is equipped on modern lines complete with operating theatre for the surgical treatment of tuberculosis.

Schemes have been put in hand for meeting the urgent needs of the Transkei and Ciskei population, which are suffering to an increasing extent from the disease, and arrangements are also under way providing increased accommodation for tuberculous patients at Capetown and Port Elizabeth.

The King George V Silver Jubilee Fund for Combating Tuberculosis is a national fund administered by a board of trustees. Up to the end of 1938 the fund totalled £104,753, the annual income from which will amount to approximately £3,600. The board has arranged with the provincial branches of the South African Red Cross Society to act as distributors of its funds in the Provinces of the Transvaal and Orange Free State, and with the Natal Anti-Tuberculosis Association and the Cape Province Tuberculosis Council to perform similar functions in Natal and the Cape Province respectively. The board has decided to devote, for the present, its annual income to the relief of dependants of sufferers from tuberculosis who are undergoing treatment in institutions.

(xxii) *Typhus Fever.*—In 1867 an epidemic of what was described as "low fever" occurred in several districts of the Cape Colony, and was worst in Capetown. It was estimated that one in five of the population was attacked. The disease was especially severe amongst the coloured people and the class of European person that consorted with them. Medical men and others in close contact with the sick were frequently attacked. The rate of mortality was high, particularly where overcrowding and underfeeding existed. Fully 1,000 persons died in Capetown alone, and there was considerable loss of life in other parts of the Colony. The outbreak was investigated by a medical committee, which attributed the disease to dirt, want, and overcrowding. The records of symptoms of the disease are scanty, but strongly suggest that it was typhus fever.

Somewhat similar outbreaks, variously referred to as low fever, typho-malarial fever, and Cape typhus, subsequently occurred in several parts of the Cape Colony and Transkei. One medical man in practice in the Transkei for many years first came across the disease in the Tsomo district about 1887. It was first investigated by government health officers in the Kingwilliamstown district of the Cape Province in 1900, and its similarity to typhus was recognized, but none of the cases then seen had any rash. The natives termed the disease "ifiva-mnyama" (black fever), owing to the fact that the tongue often becomes covered with a dark brown fur, or "mbatelala" ("knock-down disease"). Thereafter small outbreaks from time to time occurred in certain Transkeian and Ciskeian districts, but mostly in remote and inaccesible localities.

In 1916 a serious outbreak of fever occurred in the Queenstown native location, with a certain number of cases among Europeans. This was at first considered to be enteric, but further investigation showed that the disease was not enteric; that its course and clinical symptoms (apart from skin symptoms) were identical with those of typhus; and that in a small percentage of native cases and in a large percentage of European cases the typical rash of typhus was present. Several nurses were attacked, and also Dr. D. C. Rees, one of the government medical officers sent to investigate the nature of the disease. The latter had characteristic skin symptoms and a severe and in all respects typical attack of typhus, which unfortunately proved fatal.

From 1919 to 1923 virtually epidemic conditions prevailed, the average number of cases reported annually exceeding 8,000. The great bulk of these cases occurred in the eastern Cape. During this period a large proportion of the susceptible native population must have become immunized.

In 1934 outbreaks occurred in the Orange Free State, where 30 districts were affected and a total of 3,636 cases with 300 deaths was reported. This prevalence is to be ascribed in large measure to the pauperization process affecting the non-European, especially during the depression years. Typhus will disappear in the Union as elsewhere with advancing civilization, when the economic conditions of the native are raised and he is able and willing to adopt standards of hygiene and cleanliness. Combating lousiness at present in the primitive, poverty-stricken Bantu is a formidable proposition. The Health Department employs typhus officers to investigate outbreaks, to deverminize affected groups, and to educate the people in methods of cleanliness.

The type of typhus responsible for the wide-spread epidemics is louse-borne, but evidence has been recently provided that sporadic cases occur where the infection is conveyed by the rat flea.

TYPHUS FEVER—NUMBER OF CASES AND DEATHS REPORTED, HEALTH YEARS ENDED JUNE, 1929 TO 1938.

Year.	European.		Non-European.		Total.	
	Cases.	Deaths.	Cases.	Deaths.	Cases.	Deaths.
1928-29	45	—	1,435	193	1,480	193
1929-30	74	5	1,708	207	1,782	212
1930-31	53	2	1,488	214	1,541	216
1931-32	33	2	1,517	290	1,550	292
1932-33	54	3	2,071	299	2,125	302
1933-34	45	3	5,911	659	5,956	662
1934-35	97	5	6,729	993	6,826	998
1935-36	40	2	1,565	282	1,605	284
1936-37	36	6	971	162	1,007	168
1937-38	37	1	945	167	982	168

(xxiii) *Venereal Diseases.*—It is probable that venereal disease has existed in South Africa since the early days of European settlement, but up to comparatively recent times the references to it are exceedingly scanty. Whether syphilis existed previous to the arrival of Europeans is uncertain. It was doubtless introduced first at Capetown and other ports, and later became disseminated inland. Writing of it in 1857, Livingstone states: "It seems incapable of permanence in any form in persons of pure African blood anywhere in the centre of the country. In persons of mixed blood it is otherwise . . . Among the Korannas and Griquas of mixed breed it produces the same ravages as in Europe". The tradition amongst the Bechuanas is that the disease was first introduced among them by women captured in wars with Korannas, Hottentots, Griquas, and other bastard tribes, from or in touch with the coastal areas. It would appear, however, that the disease was not seriously prevalent in Bechuanaland until after the diamond discoveries at Kimberley. For the development of the diamond fields native labour was procured from all over South Africa, and there was a rush of Europeans from all parts. Immorality was rife, and no regard whatever was paid to the health conditions under which the natives lived and worked. Large numbers of them contracted syphilis and carried it back to their kraals. The official reports in connexion with Warren's expedition in 1885 showed that the natives of Bechuanaland were then badly infected, and the diseased condition of prisoners taken in the Langeberg campaign is historical. The disease rapidly became disseminated among the natives throughout Bechuanaland and the western and northern Transvaal.

At present the disease is especially common in the areas mentioned, and also amongst the coloured and native population of the Cape Peninsula and most of the larger towns. In 1910 it was estimated that at least 5 per cent. of the entire native population of Bechuanaland were suffering from active syphilis, and that a further considerable percentage were tainted with the disease. In certain locations it was estimated that as many as 25 per cent. were infected. Somewhat similar estimates of prevalence were made in respect of a number of Transvaal districts in 1909. Active measures to deal with the disease have been taken by the Government, both before and since the constitution of the Union, and it is believed that in some districts at least prevalence has been appreciably reduced. It is noteworthy that the later sequelae of syphilis, such as locomotor ataxy and general paralysis of the insane, are exceedingly rare in natives. Among Europeans the prevalence of the disease in the coastal towns and large inland centres is probably about the same as that in towns in other countries. In some rural areas Europeans, especially children, have been infected through the agency of infected native or coloured nursemaids or domestic servants. Gonorrhoea is common amongst the natives and coloured population at the ports and in the larger centres, and sometimes considerable prevalences of the disease occur in natives in other parts of the Union.

(xxiv) *Yellow Fever.*—This is unknown in South Africa. Recent discoveries having demonstrated extensive endemic areas of infection in West Africa and the danger of the spread to East Africa, the subject was discussed very fully at the Pan-African Conferences organized by the Health Committee of the

League of Nations in Capetown in 1932, and in Johannesburg in 1935. The last Conference made several important recommendations which included the following:—

(1) That investigation as to the existence of yellow fever be carried out in all endemic regions in Africa.

(2) That an intensive study of the possibility of the existence of jungle yellow fever in Africa should be made in view of the presence of the condition in South America.

(3) That further investigations be made regarding the distribution of *Aëdes aegypti.*

(4) That consideration be given to the organization of measures for the control of *Aëdes aegypti* in all territories included within and bordering upon endemic areas.

(5) That the decision to suspend traffic in an aerodrome which, situated in a region in which yellow fever has appeared, is not organized in accordance with the provisions of Article 38 of the International Sanitary Convention for Aerial Navigation of 1933, and the decision to re-open the aerodrome to traffic be similarly notified direct to the Office International d'Hygiène publique.

(6) That the personnel of aircraft operating in endemic areas be protected by vaccination against yellow fever.

(7) That investigations be made as to the practicability of mosquito-proofing of aircraft used in endemic areas or of taking other measures against mosquito infestation of aircraft.

If yellow fever were to reach the East coast of Africa the Union would be almost bound to become infected as *Aëdes aegypti* are plentiful at most centres in the coastal belt of East Africa down to the north-eastern portion of the Cape Province. All necessary steps are also being taken to prevent the introduction into the Union of yellow fever from Northern African territories through the agency of the Imperial Airways airboat service.

21. **Notifiable Diseases.**—The tables given below show the number of cases of notifiable diseases reported by medical practitioners during a series of years. It is a matter of regret that the prevalence of these diseases among the non-European population is impossible to assess at present.

NOTIFIABLE DISEASES—NUMBER OF CASES REPORTED, 1st JULY, 1933, TO 30th JUNE, 1938.

Diseases.	1933–34.	1934–35.	1935–36.	1936–37.	1937–38.

* Including Transkei.

E. = European. O. = Other.

22. **Vaccination against Smallpox.**—Provision is made in the *Public Health Act*, No. 36 of 1919, for the vaccination of children born in the Union and for the registration of their vaccination certificates within thirteen months of birth; in the case of unvaccinated persons entering the Union, whether children or adults, a period of twelve months from date of entry into the Union is allowed for vaccination and submission of the required vaccination certificates for registration.

One or other of the following medical certificates is required to be submitted to the Registrar of Vaccination: (*a*) certificate of successful vaccination; (*b*) certificate of insusceptibility to vaccination; (*c*) certificate of unfitness for vaccination; (*d*) certificate that the person concerned has suffered from smallpox. A medical certificate to the effect that three unsuccessful attempts at vaccination have been made at intervals of not less than one month is required for proof of insusceptibility to vaccination. A certificate of unfitness for vaccination issued by a medical practitioner may postpone vaccination for a period not exceeding three months and a like certificate for a further period of three months. In special circumstances the Minister may authorize postponement of vaccination for a further specified period exceeding three months.

Under the *Public Health (Amendment) Act*, No. 15 of 1928, provision is made for exemption from vaccination to be granted to *bona fide* conscientious objectors. In order to obtain such exemption in the case of a child, an application to the District Registrar of Births and Deaths must be made by the father personally before the child is six months old, or within six months of its entry into the Union. In the case of an adult, similar procedure must be followed by the applicant himself within six months of entry into the Union.

In the event of the occurrence or threatened outbreak of smallpox, any person who is suspected of having been exposed to infection may be required to be forthwith vaccinated, whether previously exempted or not.

23. **Habit-forming Drugs.**—The Union as signatory to the Versailles Peace Treaty (Article 295) became a party to the International Opium Convention of 1912, and undertook to enact legislation bringing into force the provisions

of the Treaty in respect of opium and other dangerous narcotic drugs. Pending the enactment of specific legislation on the subject, wide powers to make regulations were conferred by section 10 of Act No. 35 of 1922, and a comprehensive series of regulations framed under that section was promulgated under Proclamation No. 181 of 1922, which remained in force until superseded by Act No. 13 of 1928 and the regulations thereunder.

The *Medical, Dental and Pharmacy Act*, No. 13 of 1928, was passed in the 1927-28 session of Parliament, and became law on the 1st January, 1929: Chapter VI thereof (sections 61 to 72) makes effective provision for the regulation of the importation, sale, and use of opium and other habit-forming drugs. That chapter, together with regulations made under section 72 (Government Notice No. 1303 of 27th August, 1937), prohibits the importation of any habit-forming drug, except under special permit issuable only to medical practitioners, dentists, pharmacists, or authorized veterinarians, and also prohibits the sale, supply, or use of any such drug except for medicinal or scientific purposes. The Union Government is also a party to the International Convention of 1925, and the Limitation Convention of 1931 relating to Dangerous Drugs.

24. **International Health Organization and South African Health Intelligence System.**—The Union is a party to the International Health Convention of Rome signed in 1912, and is represented on the committee of that organization by one of the health officers of the Ministry of Health, who has had extensive experience of public health work in South Africa. That office has recently been linked up with the health organization established at Geneva under the League of Nations. Periodical reports and bulletins on matters of international health concern are furnished to the Health Department by these two organizations. Health cablegrams are exchanged fortnightly between the Health Department and the British Ministry of Health, and there is a reciprocal arrangement between the Union and Australia, New Zealand, and India, under which health information of urgent importance is cabled as occasion requires. By arrangement with the British Government, British consuls in foreign countries cable the Union Government, at its cost, information regarding outbreaks of formidable epidemic disease, or other matters likely to be of use to South Africa.

In February, 1925, a conference representing governments and sanitary organizations in the Far East was held at Singapore under the auspices of the League of Nations, and arrangements were made for opening an Epidemic Intelligence Bureau at Singapore. These arrangements have since been completed with the aid of a grant of $25,000 (approximately £5,000) from the Rockefeller Foundation towards the expenses of the Bureau for a period of five years. The Bureau receives telegraphic reports regarding epidemic diseases from all countries in the "Eastern Area," including the East Coast of Africa and the Union of South Africa, and transmits—by telegraph or wireless—from Saigon a weekly summary in code to all countries concerned. This system is of great value in connexion with the port health administration of the Union.

The Union was represented at the International Sanitary Conference held at Paris in 1926, and has since ratified and is a party to the convention. The new convention is a great advance on that of 1912, and goes far to bring international health provisions with regard to shipping and other matters into line with modern conditions and modern knowledge of the epidemiology of disease.

Weekly bulletins, stating the incidence of formidable epidemic disease and particulars as to any undue prevalence of other infectious disease in the Union, together with the latest available data as to the occurrence or prevalence of formidable epidemic diseases in other countries, are published by the Health Department and widely distributed. Weekly abstracts of returns of notification of infectious diseases throughout the Union are also distributed by the Department to the medical officers of health of the major municipalities in the Union and to others specially concerned. Monthly returns of outbreaks and cases of, and deaths from, formidable epidemic diseases are also published by the Health Department.

§ 2. General Hospitals.

1. **Cape of Good Hope Hospitals.**—Under Ordinance No. 5 of 1912, as amended, all divisional council areas in which there is a state-aided hospital, dispensary, or convalescent home, are constituted hospital districts. In every hospital district there is a hospital board, and these boards have control and management of every State-aided hospital, dispensary, or convalescent home within the area for which the board is constituted. The boards are financed by provincial subsidies, calculated on the amount of their revenue derived from patients' fees and voluntary contributions and bequests. Boards may establish, with the approval of the Administrator of the province, any of the following kinds of institutions: (*a*) hospitals for the reception or relief of persons requiring medical treatment; (*b*) dispensaries; (*c*) maternity homes; (*d*) convalescent homes; (*e*) sanatoria; (*f*) institutions established for any other purpose which the Administrator by proclamation in the *Gazette* declares to be a public charitable purpose within the provisions of the Ordinance; (*g*) institutions established for any two or more of the abovementioned purposes.

Committees of management may be established from among the members of a board for the administration of any matters within the power of the board. A board may make regulations in respect of any institutions under its control on certain matters provided for in the Ordinance.

Particulars relating to the hospitals administered by the Cape Hospital Board, and to the Frere Hospital, East London, and the Port Elizabeth Hospital appeared in *Year Book* No. 19.

The following table summarizes certain available statistics in regard to general hospitals which are under the control or supervision of the Cape Provincial Administration:—

GENERAL HOSPITALS—CAPE OF GOOD HOPE, 1933 TO 1937.

Year.	Daily Average Number of Patients.†	Ordinary Revenue.	Provincial Subsidies, Donations, etc.*	Ordinary Expenditure.	Daily Average Cost per Patient.
		£	£	£	s. d.
1933	2,060	175,761‡	184,346	360,241	10 6‡
1934	2,801	198,186	199,194‡	397,986‡	9 10‡
1935	2,403	206,947	217,577	426,036	10 3‡
1936	2,560	225,663‡	233,249‡	459,700‡	11 3
1937	2,742	254,877	268,522	523,925	10 4

* For period ending 31st March of following year.
† A division as between European and non-European is not possible.
‡ Amended figure.

2. **Natal Hospitals.**—There are nine hospitals in Natal directly controlled by the Provincial Administration, viz., Addington Hospital, Durban; King Edward VIII Hospital, Durban; Grey's Hospital, Pietermaritzburg; hospitals at Newcastle, Dundee, Eshowe, Port Shepstone, and Vryheid; and a chronic sick hospital at Hill Crest.

In addition there are other institutions, which receive financial assistance from provincial funds, but are controlled by other than government authority. These are as follows: Pietermaritzburg, Ladysmith, Ixopo, and Estcourt Sanatoria; native mission hospitals at Dundee, Durban, Maputa, Nhlopenkulu, Kwamagwaza, Nkonjeni, Mangwazana, Mlazi, Harding, Hlabisa, Weenen, Hartland (Paulpietersburg), Umtwalumi, Ceza, Nqutu, Emmaus, Mariannhill, Centocow (Bulwer), Mbongolwane, Nongoma, Magut, and Mahlabatini; a hospital at Empangeni and the Church of Scotland Hospital (Tugela Ferry); St. Aidan's Indian Mission Hospital, Durban; King Edward Order of Nurses; Krantzkloof Convalescent Home; Natal Radium and Anti-cancer Fund, Isipingo Beach School of Recovery, and Native Nursing Associations at Howick, Winterskloof, and Mooi River.

Grey's Hospital, Pietermaritzburg, was established under Law No. 4 of 1877, and was taken over by the Provincial Administration under Ordinance No. 9 of 1922. An advisory board of eight members advises the administration in matters concerning the management of the hospital, which contains 413 beds, including the maternity department.

The Addington Hospital, Durban, which deals with European and coloured patients only, is under the control of the Provincial Administration assisted by a hospital board, which is representative of various interests and is appointed annually. The institution was opened in 1879, and contains 500 beds.

The King Edward VIII Hospital, Durban, which deals with native and Indian patients only, is under the control of the Provincial Administration. This hospital has accommodation for approximately 800 patients.

A chronic sick hospital has been established at Hill Crest for the care of persons who are in destitute circumstances, have no relatives or friends who can support them, and are absolutely incapacitated from earning a livelihood by reason of a chronic disease, the treatment of which necessitates constant skilled nursing and medical attendance. The beds available number 184.

The five hospitals at Dundee, Newcastle, Eshowe, Vryheid, and Port Shepstone serve the interior and surrounding districts and are maintained solely at government expense. A local practitioner is in medical charge at each place, and a matron assisted by an adequate nursing staff is in residence.

The following table summarizes certain available statistics in regard to general hospitals which are under the control or supervision of the Provincial Administration:—

GENERAL HOSPITALS AND AIDED INSTITUTIONS—NATAL, 1933-34 TO 1937-38.

Year Ending 31st March.	Average Daily Number of Patients.		Ordinary Revenue (Fees Collected).	Provincial Subsidies, Donations, etc.	Maintenance Expenditure.	Net Daily Average Cost per Patient (General).
	European.	Non-European.	£	£	£	s. d.
1934.....	554	799	45,568	4,122	182,275	6 10·62
1935.....	574	851	48,686	4,498	198,486	7 0·67
1936.....	666	1,042	58,211	5,950	212,769	6 5·16
1937.....	712	1,403	61,340	9,206	255,758	7 6·87
1938.....	822	1,574	71,617	10,040	303,359	7 2·15

3. **Transvaal Public Hospitals.**—Since the coming into operation of the *Public Hospitals Ordinance*, No. 18 of 1928, on 1st January, 1929, there has been a change in the control and management of certain hospitals in this province. The eight hospitals at Barberton, Boksburg, Germiston, Johannesburg, Klerksdorp, Krugersdorp, Pietersburg, and Pretoria, which were formerly provincial hospitals under the *Hospitals Committees Ordinance*, 1917, together with the 14 hospitals formerly in receipt of grants-in-aid from the Provincial Administration, are now all State-aided public hospitals under the Ordinance. A hospital board has been constituted for the control and management of each of these hospitals. Every hospital board is a body corporate, and the number of its members must be either six or twelve, except in the case of the Johannesburg Hospital Board, which has eighteen members. One-third of the members of a board is appointed by the Administrator, one-sixth by the honorary visiting medical officers, one-sixth by approved public bodies (this does not apply to Johannesburg, in which case two are appointed by the Johannesburg City Council, one by the Transvaal Chamber of Mines, one by the Johannesburg Chamber of Commerce, one by the Council of the University of the Witwatersrand, and one by the Transvaal Agricultural Union), and one-third (in the case of Johannesburg one-sixth) is elected by registered contributors.

Public hospitals are classified as:—

(*a*) Central hospitals.
(*b*) First grade hospitals.
(*c*) Second grade hospitals.
(*d*) First class clearing hospitals.
(*e*) Second class clearing hospitals.

The following are the public hospitals in the province, in respect of which hospital boards have been constituted under the Ordinance, classified in accordance with the provisions of section 5 (1) of Ordinance No. 18 of 1928:—

Central Hospitals.—

Johannesburg General Hospital (together with the hospitals placed under the management of the Johannesburg Hospital Board).
Pretoria General Hospital.

First Grade Hospitals.—

Boksburg.
Far East Rand.
Germiston.

Subsidies are paid to every board from moneys appropriated by the Provincial Council on the following basis:—

1. *Free Patients* (treated during the preceding calendar year):—
   Europeans ..... 12s. 6d. per patient day.
   Non-Europeans ..... 5s. 0d. per patient day.

2. *Part-paying Patients* (treated during the preceding calendar year):—
   Europeans.—The difference between the total number of patient days in respect of such patients multiplied by 12s. 6d. and the amount of fees actually received from them during that period.
   Non-Europeans.—The difference between the total number of patient days in respect of such patients multiplied by 5s. and the amount of fees actually received from them during that period.

3. *Out-patients* (treated during the preceding calendar year):—
   6d. for every out-patient attendance.

4. *Fees* (received during the preceding calendar year):—25 per cent. on all fees collected, provided the total number of free European patient days is not less than 25 per cent. of the total European patient days. If the number of free European patient days is less than 25 per cent. of the total European patient days, then the subsidy on European patients' fees is reduced by one-twenty-fifth for every 1 per cent. that the free European patient days fall short of such 25 per cent.

5. *Donations, Subscriptions, and Bequests for Maintenance Purposes:*—£1 for every £1 so received. Subsidies are also paid on the 10s. for £1 basis in respect of bequests for expenditure on specific purposes other than for the maintenance of the hospital. In the case of newly established hospitals the Administrator is empowered to determine the amount of the subsidy during the first, and if necessary the second, year of the existence of such hospital "in such manner as he may decide." The Transvaal Provincial Home at Rietfontein near Johannesburg is managed directly by the Provincial Administration.

The following hospitals are supported by grants-in-aid:—

Bochem Hospital.
Bridgman Memorial Hospital.
Elim Hospital.
Endhlosaan Mission Hospital.
Gooldville Native Hospital.
Hope Convalescent Home for Children.
Jane Furse Memorial Hospital.
League of South African Mothers.
Lichtenburg Diggings Hospital.
Moletzies Location Hospital.
Mphahlele Native Hospital.
South African Hospital.
Warmbaths Mission Native Hospital.

The sums paid as grants-in-aid to these institutions amounted to:—£7,159, 1933; £8,290, 1934; £9,892, 1935; £9,404, 1936; and £11,911, 1937.

Particulars relating to the hospitals administered by the Johannesburg Hospital Board and to the Pretoria Hospital appeared in *Year Book* No. 19.

The following table summarizes certain available statistics in regard to public hospitals which are under the control or supervision of the Transvaal Provincial Administration:—

PUBLIC HOSPITALS—TRANSVAAL, 1933 TO 1937.

Year.	Average Daily Number of Patients.		Ordinary Revenue (Fees).	Provincial Subsidies, Donations, etc.	Maintenance Expenditure.	Daily Average Cost per Patient.
	European.	Non-European.	£	£	£	s. d.
1933	1,474	764	126,772	386,173	460,927	11 3·00

1937	1,793	1,405	211,189	503,800	680,483	10 11·00

4. **Orange Free State Hospitals.**—In 1933 the Provincial Council of the Orange Free State passed an Ordinance (No. 13 of 1933) having as its object the consolidation and amendment of the law relating to the establishment, maintenance, and management of public hospitals and kindred charitable institutions. The Ordinance came into force as from the 1st April, 1934, and deals with the various aspects of hospital administration, control committees, property, finance, staff, pensions, emoluments, etc.

Under the provisions of the Ordinance the province is divided into two central areas, one styled the Bloemfontein Hospital Area, the other the Kroonstad Hospital Area. These areas are divided into hospital districts, conforming largely to the established magisterial districts, each controlled by a hospital board. The Administrator may, on the presentation of a petition signed by not fewer than 25 persons registered as voters in any town in a proposed district, constitute any magisterial district or part of a magisterial district a hospital district. Every board established under the Ordinance is a body corporate, and may sue and be sued. Its membership may consist of six, twelve, eighteen, or such further number of members as the Administrator may determine. Of the members, one-sixth is appointed by the town council or town councils of the town or towns situated within the hospital district, one-sixth is elected by the registered contributors of specified amounts to hospital funds, three-sixths are appointed by the Administrator, and the remaining one-sixth is chosen by the honorary visiting medical staff. The members hold office for certain specified periods.

A board has control over, and the management of, every public hospital or kindred charitable institution existing in its district at the date of promulgation of the Ordinance, and of such institutions as may later be established; it is charged with the duty of appointing members of the staff, subject in certain cases to the ultimate approval of the Administrator, and with the Administrator's consent may close any institution which it controls. In such an event, all property, movable or immovable, becomes vested in the Administrator, who may, after a specified time has elapsed, dispose of such property.

The hospitals are financed by subsidies paid out of moneys appropriated for such purpose by the Provincial Council, from amounts received from investments of trust moneys, from bequests or gifts, and from fees received from patients. The provincial subsidy is calculated on the basis of 5s. in the £1 in respect of fees collected from patients, and at the rate of 12s. 6d. per patient per diem in the case of European non-paying patients, whose admittance to hospital has been authorized by the Provincial Secretary or other person appointed by the Administrator to issue certificates that the persons admitted free are not in a position to contribute towards the cost of hospital treatment. Non-European non-paying patients are subsidized at the rate of 5s. per diem per person. In the case of part-paying European patients, the hospital is subsidized to the extent of the difference between 12s. 6d. per diem and the amount received from the patient in part-payment.

Non-European part-paying patients admitted are subsidized to the extent of the difference between the amount paid and a maximum of 5s. per diem. Out-patients' subsidies are at the rate of sixpence for each attendance.

The Provincial Council further subsidizes from provincial funds at the rate of £1 for each £1 in cash received during the year in the way of subscriptions, donations, and bequests, where the moneys contributed are intended for the maintenance of the hospitals, but in regard to moneys received as a gift or bequest for purposes of endowment no subsidy is paid on the capital amount, except only on the annual sum received by the board as income from the property or as interest from investment. Bequests for expenditure on purposes other than maintenance are subsidized to the extent of 10s. in each pound, subject to a limitation of £1,000 in respect of any single bequest made to a central hospital, and of £500 in the case of other hospitals. All subsidies are payable in such manner as the Administrator may determine.

Funds collected for the specific purpose of meeting the cost of erection or of equipment of buildings may be subsidized on the £1 for £1 basis to the extent of one-half of the actual cost of erection and equipment.

With the approval of the Administrator, a board may raise loans for building, equipment, purchase of land, or for purposes of a capital nature, and the Provincial Council is empowered to grant loans to hospital boards for relatively similar purposes. The repayment of and interest charges on such approved loans are borne in equal proportions by the Administration and the hospital board, with the exception of cases where the amounts raised are for the extension and equipment of buildings intended for full-paying patients.

In regard to other matters of administration, staff regulations, etc., provided for in the enactment, reference should be made to the Ordinance.

Particulars relating to the National Hospital, Bloemfontein, and the Northern Free State General Hospital (now the Voortrekker Hospital), Kroonstad, appeared in *Year Book* No. 19.

The following table shows the expenditure, the revenue, and other particulars of hospitals and kindred institutions under the supervision of the Provincial Administration for a series of years:—

GENERAL HOSPITALS—ORANGE FREE STATE, 1933-34 TO 1937-38.

5. **Statistics of Hospitals.**—Since the 1st January, 1924, all hospitals and nursing and maternity homes have been required to render an annual statistical statement to the Census Office. The following tables give comparative figures for the years 1934 to 1938 in respect of these hospitals. All private nursing and maternity homes must be registered with the Secretary for Public Health and, with a few exceptions, the tables cover all such private institutions; the exceptions, which are few in number, are those where the number of patients treated during the year averages less than six for the year. The general hospitals include all government or government-aided hospitals and chronic sick homes; infectious disease hospitals are all government or municipal institutions.

§ 3. Mentally Disordered or Defective Persons.

1. **Legislation.**—Act No. 38 of 1916 repeals all previous Acts in force in the provinces of the Union on this subject, and covers all cases of mental disorder or defect where, as a result of such disorder or defect, the patient is incapable of managing himself or his affairs, is a danger to himself or others, or requires care, treatment, and control. The provisions of the Act apply to and the procedure is the same for persons of all ages. Detention of patients, whether in public institutions, single care, licensed institutions, general hospitals, or elsewhere, is, with certain exceptions specially provided for, legal only when authorized by a magistrate, a court, or a judge. The Act authorizes the appointment of a commissioner of mentally disordered or defective persons, styled Commissioner for Mental Hygiene, and of boards to visit and report on the institutions and the welfare of the patients. The care and administration of the property of mentally disordered or defective persons is placed in the hands of the Master of the Supreme Court. Other provisions of the Act cover mentally disordered or defective persons under detention in respect of criminal offences, the admission of patients from other states or territories of Africa, voluntary boarders, patients residing in private dwellings, the establishment of licensed institutions, reception of patients in general hospitals and similar institutions, offences and penalties, use of mechanical restraint, recovery of cost of maintenance, and other matters relative to the care and control of mentally disordered persons.

2. **The South African National Council for Mental Hygiene.**—Information regarding this organization is given in Chapter V, § 6, 3.

3. **Mental Hospitals and Institutions for the Feebleminded.**—There are nine mental hospitals and two institutions for the feebleminded. The names and other particulars are given below:—

MENTAL HOSPITALS AND INSTITUTIONS FOR FEEBLEMINDED—CLASS OF ACCOMMODATION, 1937.

Name of Institution.	Province.	Races Treated.
Mental Hospitals—

§ 5. Lepers.

1. **General.**—Information relating to the history and prevalence of leprosy in the Union is given in § 1, paragraph 21 (ix) of this chapter.

A Leprosy Advisory Committee was constituted in 1924. Its functions are to advise the Department of Public Health on matters relating to leprosy.

2. **Legislation.**—Compulsory segregation of lepers is enforced by pre-Union legislation in each province. All cases of leprosy are reported to the Department of Public Health, and when the nature of the disease has been fully established the patients are removed to one of the leper institutions. No uniform legislation for the Union has yet been introduced.

The legislative enactments dealing with the control of lepers in the various provinces are as follows:—

Cape of Good Hope.—Act No. 8 of 1884 as amended by Act No. 31 of 1894. Proclamation No. 180 of 1907.

Natal.—Persons other than natives:—Natal Law No. 44 of 1901, as amended by Laws Nos. 43 of 1903 and 39 of 1906 (Natal), and Acts Nos. 11 of 1914 and 36 of 1919.
Natives:—Section 8 (*bis*) of Proclamation No. 162 of 1933, amending the Natal Code of Native Law.

Transvaal.—Ordinance No. 23 of 1904, as amended by Acts Nos. 5 of 1907 and 2 of 1908. Act No. 4 of 1908.

Orange Free State.—Act No. 26 of 1909.

Union.—Act No. 14 of 1914, amending in certain respects certain laws in force in the several provinces relating to lunatics and persons affected with leprosy.

3. **Leper Institutions.**—The subjoined tables give particulars as to the various leper institutions and as to the number of patients in segregation:—

(i) LEPER HOSPITALS—CLASS OF ACCOMMODATION, TOTAL STAFF, NUMBER OF PATIENTS, 1937 AND 1938.

§ 6. Registration of Medical Practitioners, Dentists, Nurses, and Chemists and Druggists.

1. **Legislation.***—Under the provisions of the *Medical, Dental and Pharmacy Act* of 1928, the South African Medical Council is constituted of twenty-five members, of whom four medical practitioners, one dentist, and two persons not registered under the Act are appointed by the Minister of Public Health. Ten medical practitioners and three dentists are elected by their professional brethren, and two members by the nurses, midwives, and masseurs, while each university in the Union at which a medical faculty is established appoints one member. The mandated territory of South West Africa, to which the provisions of the Act were extended early in 1929, also appoints one member. The South African Pharmacy Board consists of nine members, of whom two chemists and druggists and one medical practitioner are appointed by the Minister, while six chemists and druggists are elected by their colleagues. Provision is made in the Act for each province to receive representation on both bodies. Members, whether appointed or elected, hold office for a term of five years.

Under the Act all registrations of the classes of persons appearing in the tables below are effected by the council and the board, and these bodies keep the necessary registers. The Governor-General may from time to time, after considering a recommendation of the council or the board, prescribe what degrees, diplomas, or certificates shall be recognized for registration of medical practitioners, dentists, and chemists and druggists. These must be of a standard of professional education not lower than that prescribed by the council or the board for medical practitioners, dentists, or chemists and druggists within the Union, and the countries in which they are granted must reciprocate by giving full rights of practice to students who have qualified in South Africa.

In addition to the above degrees, diplomas, or certificates the Governor-General may prescribe others which will entitle the holders to practise, but only if such holders are British subjects who (*a*) were born in any part of the Union, or (*b*) were domiciled in the Union when they commenced their professional studies and proceeded therefrom for the purpose of prosecuting those studies. In regard to such recognition, it is not necessary that the country issuing the degrees, diplomas, or certificates should give rights of practice to students qualified in South Africa.

* A more comprehensive article on the subject by Mr. E. Herbert appeared in the Appendix to the tenth issue of the *Year Book*.

No medical or dental degree, diploma, or certificate is recognized for registration, unless the last three years or two years respectively of professional study to obtain such qualification were taken in the country or state in which it was granted.

The board conducts examinations for chemists and druggists, while the council conducts examinations for nurses and midwives, and may also conduct examinations for masseurs and other classes of persons, such as sanitary inspectors, for whom it may decide to open registers. A person on passing the examination for nurses or midwives is granted a registration certificate.

The penalty for practising as a medical practitioner, dentist, or chemist and druggist, if not registered, is a fine not exceeding one hundred pounds. Any person not registered as a nurse, midwife, or masseur, who holds herself or himself out to be so registered, is liable to a fine not exceeding twenty pounds. The Governor-General may, on the recommendation of the council, proclaim certain areas in which no one but a registered nurse or midwife shall practise in those capacities. The municipal areas of Pretoria, East London, and Bloemfontein have been so proclaimed in regard to the practice of midwifery.

In case of information reaching the council or the board of improper or unprofessional conduct on the part of a registered person, the council or the board shall hold an inquiry into the conduct of such person and, if he be found guilty, may reprimand and caution him under the hand of the president, or suspend him for a specified period from practising or performing acts specially pertaining to his calling or profession, or erase his name from the register. An appeal lies to the Supreme Court against such a decision.

The fees payable under the Act are as appear below, but in addition other fees, e.g. for examinations, may be fixed by the council and the board with the approval of the Minister of Public Health:—

Medical practitioner or dentist, registration of	£25 0 0
Chemist and druggist, registration of	12 10 0
Managing director of a corporate body carrying on business as chemist and druggist, registration of	12 10 0
Nurse, midwife, or masseur, registration of (otherwise than under section *thirty-one*)	2 10 0
Registration of additional degree, diploma, or certificate; restoration of name to register after erasure under section *seventeen*; duplicate certificate of registration or certified extract from a register or certificate by the registrar under section *twenty-one*:—	
Medical practitioner, dentist, or chemist and druggist	1 0 0
Nurse, midwife, or masseur	0 5 0

2. **Number of Registrations.**—The following table shows the number of medical practitioners, dentists, chemists and druggists, nurses, midwives, mental nurses and male nurses registered in the Union during the years indicated. The reduction in the number of nurses, midwives, mental nurses, and male nurses on the register in 1937 is the result of erasures in terms of section 17 (1) (*b*) of Act No. 13 of 1928.

MEDICAL PRACTITIONERS, DENTISTS, NURSES, MIDWIVES, ETC., REGISTERED, 1934 TO 1938.

† Reduction due to completion of indenture.

§ 7. Medical Inspection of Schools.

1. **Cape Province.**—Medical inspection in the schools of the province began in 1918. The method of inspection at present adopted is to inspect certain age groups each year, that is, all children born in certain years are inspected at each visit. These years are so chosen that children of 7-8 years and children of 14-15 years are inspected at a visit, that is, children just entering on their school life and those nearing its end. This ensures that each child is seen twice during its school course. In addition to these age groups, cases specially selected by the teachers are inspected, and those children found to require medical treatment at the last visit are reinspected to see if defects have been remedied.

Parents are notified of the time of the inspection, and are invited to be present, as it is possible to do much educative and preventive work, if the medical inspector can discuss the child with the parent. The medical inspector has legal authority to inspect any child in school, and this power has been used in cases where there was a suspicion of infectious disease or any other urgent reason for the inspection.

Treatment for defects of the teeth, nose and throat, and vision, as well as for minor ailments, is carried out by various services. School clinics have been established at municipal centres in Capetown and Port Elizabeth and are subsidized by the Provincial Administration. Aid on the pound for pound basis is also granted to various charitable agencies undertaking to arrange for medical treatment of necessitous children. In addition funds have been provided by the Administration for the treatment of children throughout the province. This is carried out by local doctors in the case of diseases of the nose and throat and minor ailments, by local dentists in the case of dental caries, and by part-time eye specialists sent to various parts of the province for children suffering from defective vision. The Cape Hospital Board runs a dental clinic for school children, both European and non-European; this clinic does conservative work, as well as extractions.

The Cape Province covers such a wide area and varies so much in climate and conditions of living, that it is very difficult to give a general summary of the physical condition of the children which would be true of all areas. Briefly, it may be said that dental decay is much commoner along the coastline than inland, while rheumatism, chorea, and diseases of the nose and throat are commoner at higher altitudes, being associated with the increased amount of dust inland. Malnutrition is much commoner than is usually credited, and, though in many instances it is due to poverty, it is also largely due to ignorance of food values, an unbalanced diet, and in times of drought and scarcity to a lack of milk and fresh foods. Bilharziasis is found in some of the eastern districts of the province only and malaria rarely occurs, except for occasional outbreaks along the Orange River, owing to the exceptional floods experienced there. Malta fever occurs in certain areas, and trachoma is found in some parts, usually where the Poor White problem is acute. On the whole the children come from healthy stock, and under good conditions develop well. But there is in all classes widespread ignorance as to the essentials for healthy living. With better knowledge of hygiene, an educated public opinion to raise the standard of health, and the provision of a complete service aiming at the prevention of defects, the number of children found defective at medical inspections would diminish rapidly, and the general level of health and efficiency would rise correspondingly.

Special attention is now being paid to the establishment of classes for children suffering from various types of deviation from the normal. There were, at the end of 1938, 82 special classes for subnormal and backward children with a total enrolment of 1,137. There were two schools for children who are crippled, and special teachers have been appointed to deal with the problem of the education of children who suffer from defects of hearing and speech.

The following tables show the number of children examined and the principal defects observed. A large percentage of children examined are handicapped by physical defects, even if minor cases and cases of early dental decay are omitted. It must be emphasized, however, that the figures contained in these tables include the children specially picked out by the teachers, and consequently reflect a higher number and percentage of defects than actually exist in the child population as a whole.

* Amended figures.

2. **Natal.**—From August, 1916, medical inspection was carried on as a voluntary service until the *Medical Inspection Ordinance*, No. 4 of 1918, was passed by the Provincial Council. The necessity for this Ordinance was apparent at a very early stage, as permission to examine verminous children and children suffering from contagious and infectious diseases, etc., i.e. those children who, from the point of view of public health, most needed medical inspection, was very frequently refused. There are two medical inspectors, with headquarters in Pietermaritzburg, and there are three school clinics, one in Pietermaritzburg, one in Durban, and one in Ladysmith. These clinics are attended by six school nurses: two in Pietermaritzburg, three in Durban, and one in Ladysmith. There is also a certificated masseuse in charge of the treatment at the Open Air School in Durban.

In the scheme of the medical inspection of schools are included periodical visits to all the government schools of the province, where about 12,000 children are examined annually. All parents are warned prior to medical inspection and may consult the medical inspector at the school regarding their children's health, free of charge. A notice is forwarded to parents regarding all children found to be defective, and where necessary a note to a family doctor is also included. No treatment or prescriptions, with the exception of minor dressings, are given at the schools. Children who require treatment are referred to their own family doctor or to a school clinic or a hospital. A record is kept of the defective children, and they are followed up by the school nurse at subsequent visits. The head teacher is also advised as to the limitations, etc., which should be placed on the school life of defective children.

Mentally defective children are referred wherever possible to the psychiatrist. A psychiatric clinic is held every week, if necessary, in Durban and once a month in Pietermaritzburg. School buildings and hostels are also inspected from a public health point of view at each visit.

Infectious diseases occurring in schools are notifiable to the Education Department, and after receipt of notification, the medical inspector or the school nurse pays a visit of inspection, if possible, and gives advice to the head teacher.

3. **Transvaal.**—Medical inspection of schools was introduced in this province in 1914, but was interrupted on account of the war. In 1915 inspection of schools was resumed and the personnel has since been gradually increased. At the end of 1938 there were 5 full-time medical officers and 28 nurses in the service.

The medical inspectors of schools are stationed in Johannesburg, Boksburg, Potchefstroom, and Pretoria (2), and the school nurses have their headquarters in Pretoria, Johannesburg, Rustenburg, Ermelo, Lichtenburg, Potchefstroom, Wolmaransstad, Heidelberg, Middelburg, Pietersburg, and at the Merensky, Happy Rest, and Kuschke school farms.

The headquarters of the school medical service is in Pretoria. The service makes provision for inspection and treatment; the inspections are carried out

by the medical officers and treatment facilities are supplied by three school clinics. These clinics are situated in Johannesburg, Pretoria, and Potchefstroom. The Johannesburg and Pretoria clinics supply ophthalmological, otological, and psychological services in addition to the ordinary school clinic minor ailment work, while at the Potchefstroom clinic the usual clinic work only is carried out.

The Johannesburg clinic is still the main treatment centre for the Transvaal, but as soon as the clinic now in course of erection at Pretoria is completed, the cases from the northern areas will receive treatment there. At Johannesburg the specialistic services are performed by 2 ear, throat, and nose specialists, 2 eye specialists, 2 medical officers for minor ailments, and 2 anaesthetists; at Pretoria by 1 eye specialist; and at Potchefstroom by 1 medical officer for minor ailments. These are all part-time officers.

Through the close co-operation between the local hospitals and the School Medical Service, numerous cases are receiving attention at the various hospitals. The recent establishment of the Hope Home for Crippled Children in Johannesburg greatly facilitates the treatment and education of physically handicapped children. The speech clinic attached to the Department of Phonetics of the Witwatersrand University aids considerably in the correction of speech defects in school children.

The school dental work is performed by: Subsidized clinics; part-time dental surgeons in the smaller country towns; full-time travelling dentists in the rural schools.

The subsidized clinics are under the control of a board, on which the Provincial Administration is represented, and at present three such clinics are in operation, viz., at Johannesburg, Pretoria, and Springs. The clinics in Johannesburg and Pretoria each have two full-time dentists on the staff, while the practising dentists in each town render honorary services at regular hours. The Pretoria dental clinic has recently moved into a new building fully equipped with modern apparatus. New premises for the Johannesburg dental clinic are under construction and when these are completed the clinic, which will bear the title of "The Coronation Dental Infirmary", will be the largest institution of its kind in South Africa. The Springs dental clinic is staffed by the local dental practitioners who act for the most part in an honorary capacity.

The small country towns and their immediate surroundings are served by a part-time dental panel, while the rural schools are attended by full-time travelling dentists. This system has proved a great success. The full-time dental officers of the subsidized dental clinics and the full-time travelling dentists do regular inspections and lecture on oral hygiene. The full-time travelling dentists are supplied with motor transport and a portable equipment which enables them to perform the necessary treatment at the schools.

The method of routine medical inspection of schools employed is based on the group system. This system allows for the regular inspection of the *entrant* and *leaver* groups, and, when necessary, of special cases that may be presented for inspection by teachers, parents, or nurses. As far as possible groups are re-inspected during the year in order to determine the results of any treatment that may have been received since the last inspection.

The group system is, and can only be, followed in the larger urban schools. The inadequate staff and the smaller numbers of children in the rural schools, which are scattered over a wide area and are served by very indifferent roads, do not permit of its introduction into these schools. Where the group system cannot be followed the whole school is inspected at each visit.

The Transvaal Education Department has appointed a psychologist to assist in the examination of backward children and the organization of special classes for their education. It is hoped that the services of a psychiatrist may soon also be available for this work.

The school nurses supervise the personal cleanliness in the schools and report any undesirable condition in the children or on the premises which they may discover on their regular visits. They assist at inspections and pay home visits to parents when these are considered necessary. In the clinics the nurses give talks on general personal hygiene and demonstrate the essentials of home nursing and mothercraft to girls in the upper classes of the

schools. On the school farms the nurses supervise the health of the community and lecture, according to a fixed syllabus, on hygiene, nursing, and dietetics to the children. When necessity arises they nurse the sick and also inspect schools in the neighbourhood.

School hostels and school farms are now placed under the supervision of the school medical staff, and advice is given to the Department in respect of hygiene, diet, etc., at these institutions. The medical inspectors of schools also actively participate in the work of the Transvaal Bilharzia Committee and in cases of national emergency they co-operate with the Department of Public Health in dealing with outbreaks of epidemics.

During the first term of each year prospective candidates for the four normal colleges are examined by the school medical officers before they are finally accepted for training as teachers.

4. **Orange Free State.**—A school medical service was instituted in July, 1920. There was one inspector until 1926, when an assistant was appointed. Two nurses were appointed in February, 1929. The staff was increased in 1938 to 3 inspectors and 3 nurses.

The existing methods of medical inspection and treatment are the natural outcome of a necessity to observe economy. The attendance of about one-third of the total school population of 43,000 is spread over some 565 small district schools and 94 town schools. It is estimated that a staff of at least 4 doctors and 8 nurses would be necessary to inspect each pupil three times during its school life.

Much has been achieved in securing the practical interest and co-operation of teachers, welfare workers, charitable organizations, local authorities, and the medical and dental professions. Teachers form the first line of contact with pupils and parents. Indigent parents apply to the magistrate for free treatment, which is as a rule carried out by the district surgeon. For special treatment, indigent pupils are conveyed to the provincial hospitals at the Provincial Administration's expense. During 1937 an agreement was arrived at between the Education Department and the Free State Dental Society, which made possible the institution of a scheme for dental treatment of indigent pupils similar to that existing in the Transvaal Province. A definite co-operative scheme will replace the sporadic efforts of charitable organizations.

To combat malnutrition, school feeding is provided by local committees at most schools. Milk and cheese are available through the scheme introduced by the Department of Agriculture and Forestry.

The estimate of the number of mentally defective children of the primary school population is based upon the examination mainly of a number of children selected by teachers on the ground of alleged mental deficiency, and is the mean average of widely divergent extremes, as the incidence of mental defects varies considerably in different parts of the country.

Seven special classes have recently been formed in Bloemfontein for the education of defective children.

CHAPTER V.
SOCIAL CONDITION.

§ 1. Social Welfare.

1. **General.**—Social Welfare is the concern of the Union Government, the Provincial Administrations, local authorities, and private organizations. There is a separate Department of Social Welfare in the Union Government which administers certain Acts and administrative measures of a welfare nature and co-operates with private welfare bodies in carrying out these measures, but there are in addition various other departments, principally Labour, Education, Pensions, Public Health, and Native Affairs, which also concern themselves with certain specific aspects of the work. The Provincial Administrations deal with social welfare in so far as hospital services, education, poor relief, and the subsidizing of charitable institutions are concerned, but at present consideration is being given to the transfer of the functions of poor relief and the subsidizing of charitable institutions to the Department of Social Welfare. The extent to which local authorities interest themselves in social welfare matters differs from place to place. Some municipalities such as Johannesburg and Capetown are participating to an increasing degree in the work, and in the Cape Province a provincial ordinance requires that all local authorities should bear their share of additional and special poor relief. In so far as private organizations are concerned, nearly every field of social welfare is represented by a national body, which has local branches or affiliated societies. Some of these national bodies receive legislative or administrative recognition and co-operate closely with government machinery in the application of State provisions for social welfare.

2. **Department of Social Welfare.**—(i) *Organization.*—The Department of Social Welfare administers certain Acts such as the *Rents Act*, 1920, the *Work Colonies Act*, 1927, and with certain exceptions the provisions of the *Children's Act*, 1937, and the *Blind Persons Act*, 1936. It is also responsible for certain administrative schemes, such as invalidity grants for needy physically unfit European persons, the Girl's Training Scheme (Kappie Commando), two old age settlements, and welfare work on the alluvial diamond diggings. In addition the Department subsidizes private organizations in respect of crèches, hostels for low-paid wage earners, inebriate retreats, and domestic training schools. The Department makes grants towards the work of certain national welfare bodies, such as the National Councils for Child Welfare, for the Deaf, and for the Blind, and Social Services of South Africa, and subsidizes approved societies in respect of the employment by them of qualified social workers.

(ii) *Probation Service.*—The probation service, which is administered by the Department of Social Welfare, serves a dual purpose. It acts as district representative of the Department, keeping in touch with local welfare needs in each area and assisting the Department in the administration of the work, but principally it is concerned with the rehabilitation of children and young persons who come in conflict with the law, and with the protection of destitute, neglected, and uncontrollable children who are eligible for disposal under the *Children's Act*. To a limited extent probation officers co-operate further in connexion with the supervision of adult offenders who are placed on probation or released from prison.

The work includes the prevention of juvenile delinquency and neglect, the removal of social factors leading to maladjustment, investigation of cases for the courts and children's institutions, the supervision of probation cases and licencees from institutions, co-operation with private welfare organizations and inspections, and reports in connexion with the local administration of the Acts and other measures dealt with by the Department of Social Welfare.

At present there are 10 centres at which probation officers have headquarters, namely, Pretoria, Johannesburg, Benoni, Capetown, Durban, Pietermaritzburg, Port Elizabeth, East London, Kimberley, and Bloemfontein. The personnel consists of 26 probation officers, two native probation assistants, and 11 clerks.

The main private bodies co-operating with the courts and the probation services in connexion with their probation work are Social Services of South Africa, the child welfare societies and societies affiliated to the Nasionale Raad van Vroue Verenigings, and the Salvation Army. These organizations are subsidized by the Department to enable them to co-operate fully in the work.

Social Services of South Africa is an incorporation of the South African Prisoner's Aid Association and the Probation Association of South Africa and was formed at the end of 1935. The headquarters are in Johannesburg (Chairman of Central Council, P.O. Box 1331). The branches of these two constituent organizations exist in all the larger towns and in most cases the local branches have merged their identity and adopted the new name of Social Services of South Africa.

The objects of the Association are to provide for the social rehabilitation of persons and families who have displayed or are in danger of displaying anti-social or delinquent tendencies, or otherwise becoming a charge upon the community; to co-ordinate the activities of persons and organizations interested in social welfare problems and social work; to raise funds to be expended for the purposes of the Association; and to educate public opinion in the problem of social welfare, including delinquency.

The *Salvation Army* was established in South Africa in 1883. Its territorial headquarters, which supervises the work in the Union, is at Johannesburg (131, Commissioner Street). Its centres of work amongst European, Coloured, and native peoples throughout the Union number 317, embracing evangelistic, missionary, educational, and social operations. In the larger cities and towns, homes and hostels for men, youths, women, and girls have been established. There are two large farms for men, two splendidly equipped hospitals, and six homes for children. There are also native hospitals and dispensaries in the reserves.

Spiritual and social aid is rendered to all in need, regardless of race or creed, and the rehabilitation of the destitute, delinquent, and criminal sections of the community is one of the main features of the work of the organization.

(iii) *Welfare Work on Forestry Settlements.*—The welfare work on 18 out of 20 forestry settlements is administered by the Department of Social Welfare. There are 14 welfare officers and 18 nurses caring for an average of 1,131 settlers and their families, a total of 4,767. Some of these officials are responsible for the welfare work on more than one settlement where these are in close proximity to one another.

The services for which the Department is responsible include: Repair and maintenance of buildings; fencing of gardens; development of sports grounds and the organization of recreation and libraries; provision of additional water supplies; medical and nursing services; transport and supply of free firewood; transport of settlers to and from their working places; control of trading rights; administration of thrift and mutual benefit societies; organization of lectures and demonstrations in household economy; and general family and child welfare, including the placement of children in vocational training and work.

	TOTAL	1,347	1,034

* The Department of Social Welfare is not responsible for welfare work at Jonkershoek and Witklip.

(iv) *Compulsory Work Colonies.*—The *Work Colonies Act*, 1927, provides for the detention in work colonies of (*a*) any person over the age of 21 years who, being a habitual beggar or failing to support his family and having no adequate means of support, refuses work offered him, and (*b*) persons over the age of 19 years who are convicted of vagrancy, illegal supply of intoxicating liquor, contravention of sub-section (2) of section 16 of the *Children's Act*, 1937, or theft.

The period of detention is from one to five years and provision is made for the admission of inmates' wives and children.

Work colonies have been established at Simonstown and Swartfontein; the former, which is for coloured persons, was opened on the 1st March, 1938, and the latter, which is for Europeans, on the 1st December, 1938. At Simonstown provision was at the outset made for 20 inmates, but it was found necessary during the course of the year to increase the number to 40. At Swartfontein provision has been made for 25 inmates.

The main value of these institutions is not to be sought in the number of "won't works" accommodated, but rather in the salutary moral effect they have upon persons who would otherwise refuse employment offered. It would appear that the establishment of the Simonstown work colony has had this effect, and it is anticipated that the Swartfontein Colony will similarly act as a deterrent to Europeans.

(v) *Special Battalion for Girls.*—A Girls' Training Centre was established at Pretoria as from the 1st March, 1939, to tide young European women over the period between leaving school and obtaining employment. Instruction is given in domestic science, hygiene, and physical culture, and where some special aptitude is shown arrangements will be made for a transfer to a suitable institution.

Applicants must be South African nationals of strictly European descent, not less than 16 or more than 22 years of age, and unmarried. Enrolment is for a period of one year, which may in certain circumstances be reduced to six months. Board and lodging, clothing, medical attendance, and transport are provided free of charge. In addition there is an allowance of 1s. per day, half of which is payable on discharge.

3. Social Welfare Functions of Provincial Administrations.—The four Provincial Administrations are responsible for poor relief, the subsidization of charitable institutions, and the provision of those medical and educational services which are free. Particulars regarding their expenditure under these heads may be found in Chapter XV.

The Cape and Transvaal Provincial Administrations have accomplished a degree of co-ordination of private welfare work within their respective provinces. In the Cape this has been achieved through the registration of approved agencies, while in the Transvaal provision has been made for the establishment of boards of charities in certain centres.

The Charitable Institutions (Control) Ordinance, No. 5 of 1926, as amended in 1931 and 1933, gives the Administrator of the Transvaal power to constitute advisory boards or boards of control relating to charitable institutions. The Johannesburg Board of Charities is established under this Ordinance. Its functions and duties include:—

(*a*) Directing, stimulating, and controlling social, philanthropic, and charitable effort, and securing co-operation and co-ordination in public assistance.

(*b*) Co-ordinating the activities of charitable institutions so as to prevent overlapping.

(*c*) Establishing an exchange of information between such institutions and combating mendicancy.

(*d*) Advising the Administrator regarding the administration of the Ordinance and the making of grants-in-aid to institutions within its area.

(*e*) Keeping a register of all charitable institutions situated within its area.

In carrying out its duties, the Board has powers of enforcing the giving of information, inspecting the premises owned or occupied by institutions, and of requiring bodies to make use of prescribed forms; it may also prohibit or grant certificates for appeals to the public for funds, and may from time to time make regulations in regard to matters falling within its mandate.

One of the Board's most significant achievements is the establishment of a Social Service Exchange, where records are kept of all cases receiving attention from registered agencies. This service brings various agencies in touch with one another where more than one is concerned with the same case, and thereby promotes co-operative work.

A *Social Welfare Committee*, consisting of two representatives elected by each charitable institution in possession of a certificate issued under Ordinance No. 5 of 1926, was established by the Board in June, 1933. Its functions and duties are to advise the Board as to methods for the co-ordination of the work of all existing charitable institutions and for widening and extending their incidence. The executive of this committee is acting as the district committee for the administration of the government scheme for assistance to needy physically unfit European persons.

The *Jackhammer Work Committee*, consisting of representatives of the City Council, the Department of Labour, and the Board of Charities, was established by the Board in January, 1938, for the purpose of supervising the administration of a fund allocated by the City Council for *ex gratia* payments to the dependants of workmen who contracted silicosis whilst employed by contractors on sewerage works for the City Council.

4. **Private Welfare Organizations.**—The number of private welfare organizations may be estimated at approximately 1,000, not including the social welfare committees of ecclesiastical bodies. Some are purely local, while others have provincial and national ramifications. Their functions are by no means mutually exclusive; indeed, some of these organizations concern themselves with every aspect of social welfare, while others specialize in one particular field. The importance of their work can hardly be over-estimated, including as it does the financing of social welfare undertakings, assistance with the administration of social legislation, provision of poor relief, the rehabilitation of maladjusted families and persons, the formulation of policy with regard to the treatment of social problems, and the co-ordination of social welfare effort. The most important of these organizations are those that have attained national proportions. They include the following: Die Federale Raad van Vroue Verenigings, the National Council for Child Welfare, the National Council for the Blind, the National Council for the Deaf, Social Services of South Africa, the Salvation Army, the Institute of Race Relations, Die Volkskongres Continuation Committee, the Women's Agricultural League, the South African Red Cross Association, the South African Temperance Alliance, the South African National Council for Maternal and Family Welfare, the South African National Council for Mental Hygiene, and the British Empire Service League. Details regarding the work of some of these organizations are given under the appropriate sections later in this chapter.

5. **The Training of Social Workers.**—The distribution of poor relief was at one time looked upon as the main function of charitable bodies; but, while this aspect of the work still receives a great deal of attention, it is gradually being recognized that the emphasis should be upon family reconstruction in preference to mere amelioration of distress and upon the improvement of social conditions, with a view to the prevention of deterioration. Social reconstruction is an exacting task requiring a thorough knowledge of social and economic conditions and individual psychology. It is, therefore, not surprising that charitable organizations are looking increasingly to trained social workers for guidance, while the universities have turned their attention to the provision of the necessary training facilities.

Professional training for social work is now provided at the universities of Stellenbosch, Capetown, Pretoria, and Johannesburg, and at Potchefstroom University College. Other colleges are at present considering the introduction of similar courses: in addition, the Dutch Reformed Church has established a course for church welfare workers at Friedenheim, Wellington, and a school for coloured social workers at Capetown.

The field of employment for professionally qualified social workers includes government service, universities, children's institutions, and private welfare organizations. In the last named sphere trained workers are usually employed as organizers, secretaries, and investigators. The Department of Social Welfare has a scheme whereby national welfare organizations and their affiliated societies or branches may be subsidized in respect of 75 per cent. of the salaries of approved social workers appointed by them. The scheme provides at present for 30 such subsidized workers, but is being extended. This provision has given a needed stimulus to the appointment of qualified persons by societies and has made possible better scales of remuneration than was previously the case where societies were obliged to meet the entire salaries out of their own limited funds.

§ 2. Charitable Institutions.

The following particulars are furnished in respect of government, government-aided, and private institutions, the object of which is to afford relief, protection, or shelter to those persons who are in distress, in need of succour, or homeless. Such institutions include orphanages, children's homes, boarding houses for indigent school children, crèches, homes for convalescents, inebriates and drug addicts, aged, or infirm persons, institutions for deviates, decrepit and chronic sick persons, rescue homes, social farms, shelters for men and women, almshouses, and kindred institutions, but do not include benevolent or friendly societies, charity organizations, hospitals, maternity homes, sanatoria, lazarettos, or infectious diseases hospitals.

§ 3. Family Welfare.

1. **Family Welfare Organizations.**—Apart from the financial relief given to destitute families and individuals by the State, family welfare work is largely conducted by private welfare bodies. Indeed, individual family case-work may be said to be almost entirely in their hands. Two national bodies which are of a non-sectarian nature are the Suid-Afrikaanse Federale Vroue-raad and the South African Women's Agricultural Union. In addition there are church organizations which carry out relief and family welfare wo.. within specific denominational groups. These include the Algemene Armesorg-kommissies of the Dutch Reformed Church; Jewish Benevolent Societies (no national organization); the Catholic Women's League and the Society of St. Vincent de Paul (no national headquarters, but attached to the Vicariate of the Roman Catholic Church in each province); and the Mothers' Unions of the various churches. The Salvation Army is a religious body which does not confine its work to any specific creed.

The *Suid-Afrikaanse Federale Vroueraad* was established in 1921 and is a federation of the four provincial charitable organizations known as the Oranje-Vrouevereniging (O.V.V.); Afrikaanse Christelike Vrouevereniging (A.C.V.V., Cape Province); Suid-Afrikaanse Vroue Federasie (S.A.V.F., Transvaal); and Natalse Christelike Vrouevereniging (N.C.V.V.). Two of these constituent bodies—the A.C.V.V. and the S.A.V.F.—were formed in 1902, the others subsequently. Each of them is composed of a large number of branch societies, both urban and rural. The main functions of the Federation are to co-ordinate the work of the four provincial organizations and when necessary to undertake unified representations to the Government, as well as to co-operate with other national organizations.

The Federale Vroueraad holds conferences at regular intervals. It has sponsored many phases of social work, such as rural and urban nursing services, training of midwives and social workers, child welfare, mothercraft training, rehabilitation of poor white families, housecraft training centres, bursaries for lower and higher education, clinics, clubs and hostels for young people, and fund raising.

There are two publications issued by branches of the Federale Vroueraad, viz., *Vrou en Moeder* by the northern branches and *Eendrag* by the Cape Province branches.

The *South African Women's Agricultural Union* was formed in 1931 and consists of the four provincial women's agricultural organizations: The Women's Section of the Transvaal Agricultural Union, formed in 1925; the Federation of Women's Institutes of Natal, East Griqualand, Zululand, and Pondoland, formed in 1928; the Cape Province Women's Agricultural Association, formed in 1929; and the Orange Free State Women's Agricultural Association, formed in 1930. Each of these provincial bodies is composed of a large number of affiliated branches or institutes, which have the following common objects:—

(*a*) To develop initiative and latent talent in members;

(*b*) to bring expert instruction in home economics, agriculture, co-operation, marketing, handicrafts, health, hygiene, social welfare, etc., to members;

(*c*) to encourage the establishment of rural libraries and other educative aids;

(*d*) to study national economics and other matters of general interest;

(*e*) to assist in establishing depots or market stalls for the sale of members' products;

(*f*) to promote social intercourse and recreation among country women;

(*g*) to establish centres in towns where demonstrations in labour-saving devices, lectures, exhibitions of work, etc., may be held.

Each year the organization stages an inter-provincial handicrafts exhibit at one of the four leading shows of South Africa, viz., the Witwatersrand, Rosebank (Capetown), Bloemfontein, and Pietermaritzburg Shows.

Conferences are held annually by the Agricultural Union and also by its constituent bodies. The Honorary Secretary's address is: Stettyn, Worcester, Cape Province.

2. **Friendly Societies.**—There is no existing legislation governing friendly societies except the *Friendly Societies Act*, No. 5 of 1892 (Cape). A parliamentary Select Committee in 1937 recommended that funeral companies and burial societies should come under the *Insurance Act*, No. 37 of 1923. The subjoined tables contain particulars of friendly societies. The figures relate to all societies, lodges, clubs, and other associations established primarily

for the purpose of granting financial assistance to members or their dependants in case of incapacitation, sickness, death, unemployment, or other causes; insurance companies are not included.

3. **South African Railways and Harbours Sick Fund.**—This fund has been inaugurated entirely for the benefit of the Railways and Harbours staff. The members are required to contribute to the fund in accordance with their marital liabilities, and the Department makes a large annual contribution towards its maintenance. The membership, including dependants, at the last enumeration at the 1st October, 1936, numbered: Europeans, 183,534; and non-Europeans, 20,106. The following tables give information relating to the revenue, expenditure, and credit balances of the fund over a series of five years:—

4. **National Health Insurance.**—A committee of inquiry was appointed in November, 1935, under the chairmanship of Mr. James Collie, O.B.E., to consider and report upon the practicability of the introduction in South Africa of a scheme of National Health Insurance for the purpose of providing adequate medical advice and assistance to any section of the population for which at present inadequate provision is made. The committee's report was published in March, 1937 (U.G. No. 41, 1936).

5. **Unemployment Benefit Act.**—The provisions of the Act, No. 25 of 1937, were outlined in *Official Year Book* No. 18 (see pages 226-228), and a summary of the main features of the regulations framed thereunder appeared on pages 216 and 217 of No. 19 of this publication. The Act and regulations came into operation on the 1st January, 1938, and in terms of section 24 the Minister of Labour appointed the following persons as members of the central authority for unemployment benefit funds:—

W. D. Norval, Under-Secretary for Labour, Chairman.
H. L. Parker, Accountant, Department of Labour.
Ex officio, the Industrial Registrar, Department of Labour.

During the year applications for the establishment of funds were received from a number of organizations registered in respect of the eight scheduled industries, and these received the attention of the Department and the central authority. Although in terms of section 4 (2) of the Act the Minister has authority to establish a fund without reference to the industry, this method of procedure has to date not been resorted to, the method adopted being to interest all bodies concerned in the legislation and to secure applications from

them in terms of sub-section (1) of this section, before the establishment of funds is proceeded with. One fund has so far been established—that for the motor engineering industry in the Transvaal with effect from 1st September, 1938. Contributions to this fund became due with effect from the 3rd October, 1938.

6. **Housing and Slum Clearance.**—(i) *Housing Loan Funds.*—In 1920 a *Housing Act* (No. 35) was passed by the Legislature, which empowered local authorities to borrow money from the State for the purpose of themselves constructing dwellings of limited size or cost or lending to approved borrowers for building. The rate of interest chargeable on the money is determined by the Treasury. The Central Housing Board, constituted under section 18, is required to examine all plans and detailed proposals and to report thereon to the Administrator of the province concerned, who is the approving authority under the Act. A brief summary of the three schemes in operation is given in (*a*), (*b*), and (*c*) hereunder:—

(*a*) *Economic Housing.*—The Government's commitment for this class of housing stands at £5,000,000. To this must be added sums totalling £1,790,553, which represents repayments of capital made by local authorities to Provincial Administrations from the commencement of the Act up to 31st December, 1938, and became available for re-issue. Advances made to local authorities may be utilized for financing their own schemes for the erection of dwellings for sale or letting, or for granting housing loans to approved individuals for the construction of their own houses, or to approved utility companies or societies for building houses for sale or letting. The interest, originally fixed at ¼ per cent. per annum, was increased to 5 per cent., reduced to 4 per cent., and subsequently reduced to 3½ per cent., at which rate it stands at present. On this basis up to the 31st December, 1938, municipal housing schemes and housing loan applications approved on the recommendation of the Central Housing Board involved a total commitment of £5,923,799. Particulars are given hereunder.

HOUSING ACT: CONSTRUCTION AND LOANS AUTHORIZED AND ISSUES MADE FROM ECONOMIC HOUSING LOAN FUNDS TO 31st DECEMBER, 1938.

Province.	Municipal Schemes and Dwellings.	Individual Housing Loans.	Total Loans.	Total Issues.	Dwellings for Occupation by—		Total Dwellings.
					Europeans.	Non-Europeans.

TOTAL	3,221,964	2,701,835	5,923,799	5,537,110*	6,606	9,836	16,442

* Includes a sum of £1,790,553 re-issued out of capital repayments.
† Includes one hostel for European girl employees.
‡ Includes 1,255 single rooms in blocks, 6 barracks, 160 flats, and 1 hostel.
§ Includes 3 barracks and 36 single rooms in blocks.
‖ Includes 1,148 dwellings (representing the number it is estimated to complete out of loans authorized for use exclusively in purchasing materials to be advanced to coloured persons and natives building their own homes) and 24 single rooms in blocks.
¶ Includes 13 hostels, 3 compounds, and 338 single rooms in blocks.

The *Additional Housing Act* (No. 41 of 1937) was passed during the 1937 Session of Parliament and enables assistance to be rendered to persons desirous of constructing houses by means of a loan raised through the medium of a building society. The loan may not exceed 90 per cent. of the cost of the land and the house to be erected thereon. The building society may advance out of its own funds two-thirds of the loan, and the Government will advance one-third, the rate of interest on the loan being determined at two-thirds of the rate charged by the society for loans in the area or locality in which the property tendered as security is situate, together with one-third of the rate payable on the amount advanced by the Government. The rate of interest on amounts advanced by the Government is as fixed by the Treasury and is at present 3½ per cent. The period of the loan may not exceed 20 years. All applications for loans must be made through a building society, which will make advances to the applicant, who will be required to make

all payments of interest and redemption to the society. The maximum building loan and the maximum income of persons who may be assisted under this scheme are as follows:—

(*a*) At all centres in which the wages of the building industry are prescribed in terms of the *Industrial Conciliation Act*, No. 11 of 1924, or the *Wage Act*, No. 27 of 1925 — Maximum loan, £1,350. Maximum income, £500 with an additional £50 for each dependant in excess of three.

(*b*) At other centres — Maximum loan, £1,100. Maximum income, £400 with an additional £30 for each dependant in excess of three.

Every person who obtains a loan under this scheme will be required to complete a mortgage bond covering the land and all improvements thereon and to sign an irrevocable power of attorney in favour of the building society. The Regulations made under the Act provide for certain inspections to be carried out during the progress of construction and on completion of the house.

From March, 1938, when the first applications under this Act were received, to 31st December, 1938, loans totalling £523,682 were approved, of which the Government advances amounted to £174,561. The number of houses erected under this scheme up to the end of 1938 was 478.

(*b*) *Sub-economic Housing.*—The sub-economic housing scheme is designed to assist low-paid workers in receipt of wages too small to permit of their participating under Scheme (*a*). A sum of £13,000,000 has been set aside for this class of housing, the interest originally being fixed at 3 per cent. per annum with subsequent reductions to 2 per cent. and then to the present rate of ¾ of one per cent. Loans are restricted to the building, either by the local authority itself or by an approved utility company or society out of a housing loan received from a local authority, of houses solely for letting purposes. On introduction of this scheme in July, 1930, the condition was laid down that in the case of houses built by a local authority the rentals be fixed at a figure involving the local authority in a loss equal to the Government's loss in advancing the money at the sub-economic rate of interest, this condition being subsequently modified so as to require that the local authority's loss equals half that of the Government. No such loss is required to be borne by utility companies building houses, but, whereas in the case of a local authority scheme an advance covering the full cost thereof may be made, a housing loan for financing a utility company scheme may not exceed 80 per cent. of the cost thereof. Particulars of loans authorized and house construction under these proposals in each province are included in the appended table.

HOUSING ACT: CONSTRUCTION AND LOANS AUTHORIZED AND ISSUES MADE FROM SUB-ECONOMIC HOUSING LOAN FUNDS IN EACH PROVINCE TO 31st DECEMBER, 1938.

TOTAL	1,694,277	3,750,823	5,445,100	2,504,802	2,971	12,885	15,856

(*c*) *Housing of the Aged Poor.*—A sum of £100,000, of which £50,000 was provided as a first instalment on the Loan Estimates for the financial year 1936-37, is earmarked for granting loans for assisting the housing of the aged poor. Interest is fixed at the nominal rate of 1s. per cent. per annum with redemption (calculated on an investment return of 3¼ per cent. per annum) spread over a period not exceeding 40 years. Loans are made to a local authority, or through a local authority to an approved utility company or society, for the erection of dwellings or other suitable accommodation as local circumstances may dictate solely for letting purposes. The local authority (or utility company as the case may be) is responsible for the maintenance and upkeep of the dwellings and also for the loan charges covering interest and redemption, the intention being that, where feasible, the management of the dwellings, including the selection of tenants and the collection of rentals, be

left in the hands of local charitable organizations in consultation with the local authority. No hard and fast rule is laid down as to persons who may be regarded as falling under the designation "aged poor", except that persons who are still capable of doing an ordinary full day's work on an economic basis are excluded from the benefits of the scheme as are also those who, by reason of infirmity or physical or mental disability, are eligible for admission to institutions or for whom other adequate provision is made.

Since the inception of the scheme loans totalling £91,945 have been approved and the balance of £8,055 has been allocated to three local authorities for schemes now under consideration. A sum of £35,603 has been advanced for work done and materials supplied.

(ii) *Slum Clearance.*—The *Elimination of Slums Act*, No. 53 of 1934, places upon the local authority the responsibility of dealing with slum clearance and ensuring the provision of adequate housing. Its provisions were applied to the eight large centres included in the First Schedule of the Act with effect from 25th June, 1934, but application of the Act may be extended by the Governor-General to other local governing bodies after consultation with the Administrator of the province concerned and the councils of such bodies. Under the power referred to, the Act has been extended to the municipalities of Beaufort West, George, Graaff-Reinet, Grahamstown, Kingwilliamstown, Mossel Bay, Oudtshoorn, Paarl, Somerset West, Worcester, Barberton, Germiston, Randfontein, Roodepoort-Maraisburg, Springs, Benoni, Boksburg, Steynsburg, Queenstown, Stellenbosch, and Middelburg (Cape). The chief purpose of the Act was the removal of legislative deficiencies which had previously hindered slum clearance. The more important provisions of the Act include the conferring of increased powers on local authorities for dealing with nuisances as defined in the Act; the laying down of ready, effective, and cheap methods for enforcing the evacuation of slum properties; and the empowering of local authorities to acquire for slum clearance purposes, either voluntarily or by expropriation, both land on which slum properties are situated and land adjacent thereto.

7. **Hostels for Low-paid Wage Earners.**—In spite of the elimination of slums and the provision of suitable housing for low-paid workers at sub-economic rentals and of ample funds at low rates of interest to meet the housing needs of low-paid wage earners, it has been found that a shortage of housing accommodation and consequent overcrowding still exist amongst low-paid wage earners in urban areas. The wages paid, especially to beginners, are low, and in many instances young workers who have migrated from the rural areas and are away from home cannot meet the cost of board and lodging under satisfactory conditions.

In order to remedy this state of affairs the Union Education Department paid grants-in-aid to certain hostels conducted by charitable institutions for the accommodation of working boys and girls. These hostels were taken over by the Department of Labour and Social Welfare in 1937, and the scheme was considerably expanded. The scheme is now administered by the Department of Social Welfare. The co-operation of local authorities and other organizations has been obtained in the direction of providing suitable hostel accommodation for low-paid workers engaged in industry and commerce. The aim is to provide lodging and wholesome board at sub-economic fees and social and recreational amenities for non-resident as well as resident workers, and to give special attention to the social uplift of the residents and members.

Hostels of this description cannot be self-supporting, and the Department of Social Welfare therefore makes grants which should as far as possible be supplemented by contributions from local authorities, employers' and employees' organizations, and charitable societies. Grants are also made to co-operative societies which provide adequate hostel facilities for seasonal female workers.

The basis of subsidy is 2s. 6d. per week per boarder earning not more than 42s. 6d. per week; 50 per cent. of rental or amount paid as interest and redemption, provided interest charges are reasonable; and a grant for the purchase of furniture and fittings on the £ for £ basis to a maximum of £10 per inmate. The number of inmates which hostels can reasonably accommodate is to be fixed.

There are at present 10 subsidized hostels which provide a total authorized accommodation for 528 boarders. In addition there are two co-operative societies subsidized for hostel accommodation of seasonal workers.

8. **Rural Rehabilitation and Housing Scheme.**—The object of the scheme is to assure reasonable living conditions to small-farm owners, bywoners, overseers, and farm assistants, and to encourage the employment of Europeans on the land.

Any registered farm owner who is prepared to engage Europeans under approved conditions of employment may be assisted with a free grant not exceeding £50 (or £60 in certain malarial areas) for the purchase of building material to be used for the construction, enlargement, or repair of dwellings for the employees. The grant is made subject to the condition that the bywoner, farm overseer, farm assistant, or a substitute, be retained on the farm for a minimum period of five years. In addition a subsistence allowance not exceeding £2 per month for a maximum period of twelve months may be granted. Free rail facilities may also be granted to bywoners, farm overseers, or farm assistants to enable them to proceed to the farms on which they are to be employed. The scheme applies to needy small-farm owners only in so far as the building grants are concerned. It must be noted that the scheme ceased to operate with regard to new applications as from 31st December, 1938.

The number of applications under the Rural Rehabilitation and Housing Scheme approved up to 31st December, 1938, was as follows:—

Form of Grant.	Applications approved.		
	Bywoners.	Farm-owners.	Total.
Building grant	6,185	7,419	13,604
Subsistence	3,094	—	3,094
Rail warrants	161	—	161

9. **Divorces, etc.**—Particulars of divorces, judicial separations, and decrees of nullity are given in the tables hereunder.

§ 4. The Dependent Child.

1. **The Children's Act.**—The *Children's Act*, No. 31 of 1937, came into force on 18th May, 1937. It is a consolidating measure embodying *mutatis mutandis* the provisions of:—

(*a*) The *Children's Protection Act*, No. 25 of 1913, as amended.
(*b*) The *Adoption of Children Act*, No. 25 of 1923.
(*c*) Chapter VII of the *Prisons and Reformatories Act*, No. 13 of 1911.
(*d*) The *Prisons and Reformatories Amendment Act*, No. 46 of 1920, in so far as it affects juvenile offenders and the establishment of certified hostels.

The provisions under (*c*) and (*d*) have been partly embodied in the Act as amendments to the *Criminal Procedure and Evidence Act*, No. 31 of 1917.

The Act provides for the appointment of commissioners of child welfare and the establishment of children's courts; for the protection of infants, the prevention of neglect, ill-treatment, and exploitation of children; for the supervision and probation of children who are in need of care, uncontrollable, or delinquent; for the establishment or recognition of institutions for the reception of destitute, neglected, or delinquent children; for the treatment of children in such institutions and for their after-care supervision. The Act further provides for the adoption of children and for contributions by persons responsible for the maintenance of children dealt with under the Act. It amends the law of criminal procedure in so far as the latter relates to juveniles and provides for matters incidental to the above-mentioned subjects.

The new Act, which may be looked upon as a Children's Charter for the Union, reflects certain general principles underlying modern methods of the protection of children and young persons. One of these principles is that there is no essential psychological difference between the child who has actually come in conflict with the law and the child who has developed anti-social tendencies as a result of neglect and destitution. The behaviour of both may be and often is symptomatic of similar environmental factors and requires similar forms of treatment.

The Act is based upon the principle that the treatment of juvenile delinquency cannot be wholly met by purely penal or deterrent measures, but that it must, as in the case of destitution and neglect, emphasize the constructive principles of re-education and social rehabilitation. To attain this object, probation services must be extended in close co-operation with social welfare agencies, and increasing use must be made of trained and enlightened persons capable of approaching the problem scientifically.

Emphasis is also laid upon the causal-preventive aspect of treatment measures. Concentration on origins rather than effects is aimed at throughout, and the centre of gravity is shifted as far as possible from the courts to the home, the school, and the community.

One of the most important features of the new Act is the raising of the maximum age of "a child" from the 16th to the 19th birthday. Psychologically it is not possible to draw a distinct dividing line between childhood and adulthood, and there can be no doubt that the period of transition varies from case to case. The 19th birthday has been accepted as the maximum age, because below that age persons are most susceptible to influences of various kinds in their homes and in their environment. Thereafter they are generally looked upon as being capable of caring for themselves as adults.

The Act also raises the maximum age of "an infant" from seven to ten years. It is impossible to determine scientifically a period of emergence from infancy to childhood which will apply equally well in all cases. It would seem, however, that the helplessness of infancy, which makes special protective measures necessary, extends beyond the seventh year, and the tenth year has been accepted for the purposes of the Act as the stage at which a child may be expected to act, in regard to its own interests, in a more or less independent manner.

Finally mention must be made of the innovation of children's courts and commissioners of child welfare. By the establishment of the courts the Act seeks to dissociate inquiries concerning "children in need of care" from criminal trials and to prevent the stigma which attaches to criminal courts from being associated with proceedings under the *Children's Act*. It also serves to emphasize the educational and rehabilitative aims of that Act.

The following table indicates the extent to which prosecutions in respect of offences under the *Children's Act*, No. 31 of 1937, were carried out in the courts during the year 1937.

PROSECUTIONS UNDER THE CHILDREN'S ACT (No. 31 of 1937), 1937.

Offences.	European.	Non-European.	TOTAL.	
			No.	Per cent.
Cruelty, neglect, and abandonment	615	1,093	1,708	36·83
Failure to give notice in respect of protected infant	19	2	21	1·19
Failure to comply with maintenance orders	23	1	24	1·36
Inducing committed children to desert from institutions	10	1	11	0·62
TOTAL	667	1,097	1,764	100·00

Children who are found to be in need of care may be ordered to remain in their own homes, removed to foster homes, or placed in institutions. Where children are placed in their own or foster homes, supervision may be carried out by probation officers or child welfare societies, and a grant may be paid towards their maintenance and training. If they are committed to an institution, commitment may be to an industrial school or to a certified or non-certified institution, and a maintenance order may be made against the parent. In the case of the industrial school the Union Education Department takes charge of the child, while certified and non-certified institutions are subsidized by the Department of Social Welfare in respect of the children committed to their care.

The frequency of each type of disposal during the year 1937 is presented hereunder. Institutions in which the children are placed include certified and non-certified institutions and industrial schools.

DISPOSAL OF CHILDREN "IN NEED OF CARE" BY CHILDREN'S COURTS, 1937.

2. **The Adoption of Children.**—Provision for the adoption of children is made in the *Children's Act*, No. 31 of 1937, and the registration of adoptions is the function of the Department of Social Welfare.

On 31st December, 1938, there were 8,656 orders of adoption of children registered in the Department of Social Welfare under the provisions of the *Adoption of Children Act*, No. 25 of 1923 (since repealed), and the *Children's Act*.

The following tables give particulars of registrations in each of a series of years.

(i) NEW ORDERS OF ADOPTION REGISTERED, 1934 TO 1938.

Chapter VII of the *Children's Act*, which came into force on 18th May, 1937, and which repeals the *Adoption of Children's Act*, No. 25 of 1923, deals with the adoption of children and makes *inter alia* the following provisions.

A child under 19 years may be adopted by—

(*a*) a husband and his wife jointly;

(*b*) a widower or widow or unmarried or divorced person;

(*c*) a married person whose spouse is at the time of the adoption, and has been for a continuous period of not less than seven years immediately preceding that time, mentally disordered or defective within the meaning of section 2 of the *Mental Disorders Act*, 1916;

(*d*) a married person who is separated from his or her spouse by judicial decree.

Generally speaking no person under the age of twenty-five years shall (whether alone or jointly with his or her spouse) adopt any child. Certain other restrictions concerning the difference in age and sex between the adopting parents and the child are laid down.

The adoption of a child shall be effected by order of the children's court of the district in which the adopted child resides.

Provision exists under which disclosure to the parents of the identity of persons adopting a child can be withheld. Since the Act came into force the Minister's consent was given in 17 cases of non-disclosure of identity of the applicants to the parents.

An order of adoption shall, unless otherwise thereby provided, confer the surname of the adoptive parent on the adopted child who shall, subject to certain provisos, for all purposes whatsoever be deemed in law to be the legitimate child of the adoptive parent.

The court may direct that a parent or the guardian of the child (other than a parent or guardian whose consent to the non-disclosure to him of the identity of the adoptive parents has been accepted) shall during a period of not exceeding two years as from the date of adoption have access to the child at such times and places and under such conditions as the court may determine. The directions so given may be rescinded or varied under certain conditions.

An adoptive parent or the Minister may apply to the court by which the order was made for its rescission thereof on one or more grounds. Only one case has been rescinded since the Act came into force.

An order of adoption and a rescission of an order of adoption and the refusal of an application for the rescission of an order of adoption are subject to an appeal to the competent division of the Supreme Court as if the order, rescission, or refusal were a judgment of a magistrate's court. There has so far been no case of appeal under this provision of the Act. An adopted child may not be removed from the Union before the expiration of a period of twelve months from the date of the order for its adoption, without the consent in writing of the Minister.

It is an offence under the Act if any person who has obtained or applied for an order of adoption of a child gives or undertakes to give or, save with the consent of the court, receives or contracts to receive any consideration in respect of the adoption or if any parent or guardian of a child receives or contracts to receive or, save with the consent of the court, gives or undertakes to give any consideration in respect of the adoption of that child. Provision is made for the fact of adoption to be recorded on the original birth information form and the birth register.

3. **Organizations concerned with Child Welfare.**—In addition to the provision made by the Union Government and the Provincial Administrations in respect of child welfare, there are 91 officially recognized child welfare societies, which carry out various functions in connexion with children and assist with the administration of the *Children's Act;* of these the South African Council for Child Welfare is the official representative body. Many family welfare societies and church organizations also interest themselves in this field.

Mention must also be made here of the so-called character-building organizations, which make an important contribution to child welfare. These include the Young Men's Christian Association and the Young Women's Christian Association, the Boy Scouts and Girl Guides, the Voortrekkers, the Wayfarers, and boys' and girls' clubs. The club movement has expanded considerably during the last few years and a provincial body, the Transvaal Association of Boys' Clubs, has recently been established.

4. **Institutions for Dependent Children.**—Institutions for dependent children include industrial schools, orphanages, children's homes, crèches, lying-in homes, and places of safety. They are in the majority of cases established and maintained by churches and charitable organizations, but are usually not entirely dependent upon private contributions, being subsidized by the Union Government and the Provincial Administrations. At the end of 1937 there were seven government industrial schools and seventy-three certified and forty-two non-certified institutions.

Certified and non-certified institutions accept children who are committed to them under the provisions of the *Children's Act*, as well as those placed by private arrangement. The relative numbers of European and non-European pupils of both types in all these institutions at the end of 1937 were as follows:—

NUMBER OF CHILDREN IN INDUSTRIAL SCHOOLS AND IN CERTIFIED AND NON-CERTIFIED INSTITUTIONS ON 31st DECEMBER, 1937.

The main grounds upon which children in need of care were committed to certified and non-certified institutions during 1937 are classified in the following table, from which it appears that the majority was committed for reasons of destitution.

GROUNDS OF COMMITTAL OF CHILDREN COMMITTED TO INDUSTRIAL SCHOOLS AND TO CERTIFIED AND NON-CERTIFIED INSTITUTIONS, 1937.

TOTAL	617	493	1,110	104	80	184	1,294	100·00

Certified and non-certified institutions cater for the needs of children of all ages, some specializing in the care of infants. Industrial schools on the other hand accept no children under twelve years of age, and only a small percentage of children is committed direct from the courts, the majority being transfers from certified and non-certified institutions. This transfer takes place when the child is old enough to undertake trade training, usually at the age of 14 or 15 years. An analysis of the age and school standard distribution of children in the institutions under consideration in June, 1936, showed that 25 per cent. of European children in Standards III to VI inclusive are educationally retarded. The position as regards non-European children is very much more acute. In so far as European committed pupils are concerned the percentage of retarded pupils is almost double that of the general school population. This is partly to be explained by the fact that all these children have suffered through lack of proper home care, and partly by the fact that the percentage of subnormality in this group is above the average.

The circumstances of the release of pupils from these institutions during 1937 are given in the following table.

RELEASE OF COMMITTED CHILDREN FROM CERTIFIED AND NON-CERTIFIED INSTITUTIONS, 1937.*

Particulars of Release.	European.	Non-European.	Total.	Per cent.

* Particulars regarding children released from industrial schools during 1937 are not available.
† In addition 88 European and 2 non-European children were transferred from one type of institution to another.

§ 5. The Delinquent Child.

1. **Trial of Children and Juveniles.**—(†) *Custody pending trial.*—Under the provisions of the *Children's Act*, No. 31 of 1937, no person under the age of 19 years of age, when accused of any offence, is to be detained in any prison, gaol, or police lock-up, unless a place of safety, approved by the Minister

of Education in terms of section 37 of the Act, is not available, nor may such person associate with any person over the age of 21 who is in custody, whether in any prison, gaol, or lock-up, or in transit to or from the court, or in the court. A female under the age of 19 years must be placed in the care of a woman and, except in the case of a charge of murder, may be detained in a suitable place determined by the Director of Prisons or in the custody of a temporary custodian approved by the magistrate of the district, or released on recognizance with or without sureties for appearance at the trial. In the case of offences other than treason, murder, or rape, the magistrate may release the accused and warn him to attend before the court at a fixed date, or release him to the care of the person in whose custody he is and warn the latter to bring him before the court on the appointed date or place him in a place of safety appointed by the Minister as mentioned above.

(ii) *Preparatory examination.*—Members of the public are excluded from any preparatory examination where the accused is a person under 19 years of age, unless professionally interested or required to be present or authorized by the presiding magistrate to be present, and no person under the age of 19 may attend any preparatory examination unless his presence is required as the accused or as a witness, or his presence at such trial is authorized by the presiding magistrate. No particulars regarding the identity of any person under the age of 19 years against whom a preparatory examination is being held may be published in any way, unless the Minister of Justice authorizes such publication as being just and equitable. The presiding magistrate may also require all persons to leave the court, except the parents or guardians of the accused and his counsel, while a person under the age of 19 is giving evidence. In addition there is a general provision prohibiting publication without the authority of the presiding magistrate of any information disclosed in the preparatory examination relating to offences of indecency or extortion.

(iii) *Trial.*—Where a summons or indictment is being served on a person under the age of 19 or such person has been arrested, the parent or guardian is served with a copy of the summons, indictment, and notice of trial, or is warned to appear at the trial and is guilty of an offence if he fails to attend, unless the Commissioner of Child Welfare for the district has given him written exemption. A superior court may, whenever it thinks fit, direct that a trial be held with closed doors, and so may a magistrate's court, whenever it appears to the latter that it is in the interests of good order or public morals or the administration of justice; nor may any person be present at the trial in any court of persons under the age of 19 years, unless such person is the parent or guardian or his presence is necessary in connexion with the trial, or unless the judge or presiding officer authorizes his presence at the trial. No person under the age of 19 years is allowed to be present at any criminal trial in any court, unless the presiding judge or magistrate has authorized his presence, and the judge or presiding officer in any criminal trial may direct that no person shall be present, except with the authority of such judge or presiding officer, while a person under 19 years of age is giving evidence, unless such person is the parent or guardian of the witness or his presence at the trial is necessary.

(iv) *Sentence.*—A judge or magistrate is authorized, where a person under 19 years of age is charged with an offence other than murder or rape and he is satisfied that the accused is a child in need of care, to stay the trial and order the accused to be brought before a children's court and dealt with in terms of sections 28 and 29 of the *Children's Act*, 1937.

Any person convicted of murder by a superior court must be sentenced to death, except where the offender is under the age of 16 years, or a jury or a court is of opinion that there are extenuating circumstances, in which cases the court may pass any other lawful sentence. In the case of persons under 19 years of age, however, the court, on conviction for any offence, may order such person to be detained in a certified hostel or reformatory or to be placed under the supervision of a probation officer or other suitable person. The term of such detention is then determined by the Minister of Education, who is given wide powers of transferring from one reformatory or hostel to another the persons detained, of releasing these persons on licence, and of apprenticing them until they reach the age of 23. Criminal sanctions are provided for enforcing the arrangements made by the Minister. Further, wide powers to suspend a sentence of imprisonment or payment of a fine,

on condition of good behaviour or payment of compensation, in the case of all offences except certain specified offences, such as murder, robbery, rape, etc., are conferred upon the courts.

When a person under 21 years of age is convicted of any offence, the court before which he is convicted may, in lieu of any other punishment and as well in the case of a first conviction as of any subsequent conviction, sentence such person to receive, in private, a moderate correction of whipping, not exceeding 15 cuts, such correction to be administered by such a person and in such a place as the court may appoint. The parent or guardian of the offender has the right to be present. No female may be whipped.

A child under the age of 7 is conclusively presumed to be *doli incapax*, and a child under the age of 14 is similarly presumed to be *doli incapax*. Such presumption, however, is capable of rebuttal.

2. **Extent and Nature of Juvenile Delinquency.**—Particulars regarding the extent and nature of juvenile crime will be found in the tables in paragraph 4, § 8, and in regard to the number of juvenile offenders admitted to penal establishments in Table (viii). paragraph 6, § 10, of Chapter IX.

3. **The Rehabilitation of Delinquents.**—There is an essential unity in the problems of destitution, neglect, and maladjustment on the one hand, and delinquency on the other hand. If allowed to develop unchecked, the former conditions may lead to delinquency. They may, therefore, not improperly be regarded as constituting pre-delinquent conditions. On the other hand, if the importance of the prevention of delinquency is emphasized, as it should be, it makes the one problem, in a sense, indistinguishable from the other.

The treatment of juvenile delinquency cannot be wholly met by purely penal or deterrent measures, but the constructive principles of re-education must be emphasized. This attitude towards the problem is already implied in the term "reformatory" and is in keeping with the spirit of the *Children's Act*. It is revealed in the existing practice of special juvenile courts and in the allocation of the administration of reformatories and probation services to the Departments of Union Education and Social Welfare respectively, and is in accordance with the practice of some overseas countries. It is significant that 72 per cent. of young offenders who appear before the Johannesburg Juvenile Court come from unfavourable home environment. If maladjustment arises from wrong home and community environment, the surest means of combating it is the removal of the causative factors. It is further necessary to deal with symptoms of maladjustment in their early stages before they have had an opportunity of development. This indicates the need for close co-operation with the school system, because children frequently show during their school career tendencies which may develop into delinquent conduct.

In addition to preventive measures, there should be sustained attempts at the restoration and rehabilitation of those who have become dependent or delinquent. While this principle is generally accepted, social service practice is often predominantly concerned with palliatives and measures of immediate relief. The probation services are doing useful work in this respect, but their efforts need to be greatly extended, in close co-operation with social welfare agencies.

4. **Institutions for Delinquents.**—(i) *Reformatories.*—The Government is authorized to establish reformatories (this term may include training ships in territorial waters) for the reception of young offenders under the age of 21 years. Heads of reformatories are styled principals, and in them are vested, for such time as these young offenders remain under the provisions of the *Children's Act*, the parents' ordinary disciplinary powers, but not the more important powers, e.g., administration of property and consent to marriage.

Instead of imposing any punishment, superior or magistrates' courts may order young offenders to be sent to reformatories. The periods of retention of pupils in reformatories are determined by statute in accordance with their age on admission. The following scale applies:—

Age on Committal.	*Expiration of Retention.*
Under 16 years	18th year.
16 years and over, but under 19	21st year.
19 years and over, but under 21	23rd year.

An important provision of the *Children's Act*, 1937, is the period of further supervision to be exercised by the institutions when pupils leave on expiration of their period of retention. Where the period of retention expires when the pupil attains the age of 18 years, the period of supervision is three years; otherwise the period is two years.

Boards of management of reformatories may grant licences for the release of pupils prior to the expiration of their period of retention, if the behaviour and progress of the pupils concerned justify such an important concession. In addition to release on licence, they may be apprenticed to a suitable trade. Licencees who abscond or otherwise misbehave may be recalled to the institutions.

Young offenders who have been sentenced to imprisonment for a term not less than four months may be transferred to reformatories by the Minister of Justice, after consultation with the Minister of Education. On the other hand, pupils who continually abscond from the institutions may be charged before a competent court and may, on conviction, be sentenced to imprisonment for a term not exceeding six months, and may in addition be discharged from the provisions of the *Children's Act*.

The Minister may, when it is deemed necessary, extend the period of retention of any pupil, but such extension shall not exceed the period of further supervision as determined by statute for that particular case.

The reformatories in existence at present are:—

(1) Tokai Reformatory, Retreat, Cape, consisting of two sections, (*a*) for European male pupils, sixteen years of age and over, and (*b*) for coloured male pupils, for whom there is no minimum age limit.
(2) Houtpoort Reformatory, Heidelberg, Transvaal, for European male pupils under sixteen years of age on admission.
(3) Durbanville Institute, Durbanville, Cape, for European female pupils.
(4) Diepkloof Reformatory, Johannesburg, for Asiatic and native male pupils.
(5) Eshowe Reformatory, Eshowe, Natal, for coloured and native female pupils.

(ii) *Certified Hostels.*—In addition to prisons and reformatories, there is another class of institution, viz., certified hostels, for the treatment of delinquents. These hostels, which are private institutions, certified by the Minister of Social Welfare for the reception, maintenance, and training of young offenders from seven to twenty-one years of age, receive a subsidy on a per head per day basis. As they provide intensive individual treatment, the maximum number of young offenders accommodated at any one of them does not ordinarily exceed twenty.

Admission is granted on order of court or by way of transfer from certified institutions or reformatories. Transfers from hostels to reformatories or certified institutions may also be made under certain circumstances.

There are 18 hostels established in the larger centres: of these 6 are for European boys, 4 for European girls, 2 for non-European boys, 5 for non-European girls, and one mixed for non-European boys and girls. Three of these hostels, one for Europeans and two for non-Europeans, deal with confinement cases only.

TOTAL	175	15	190	420	73	493	683

The educational programme at these institutions must depend to a large extent upon the educational achievements and the mental abilities of pupils. In the case of non-Europeans, 65 per cent. are entirely without education when admitted, while 69 per cent. of the European pupils are still in the primary school. Some indication of the mental ability of the European pupils may be obtained from the results of a psychological survey of pupils at Tokai and Houtpoort Reformatories undertaken in 1935. Of 116 cases tested, the median intelligence quotient was 88·2. This figure is somewhat lower than that obtained at industrial schools, though there is considerable overlap.

The following table gives particulars relating to the release of reformatory and hostel inmates. Placing out on licence is the most usual form of release and should, if proper supervision is assured, have beneficial results in bridging the difficult period during which the delinquent must readjust himself to the community.

Apprenticeship is applied mostly in the case of non-Europeans, for whom it is an important means of disposal.

Transfers occur usually because of uncontrollability of the pupil, but may also be necessary where the pupil becomes too old for the group, or where he has adjusted well in a reformatory but further hostel treatment is required as a stepping stone to complete freedom later.

§ 6. Social Hygiene.

1. **Organizations Concerned.**—Social hygiene, which includes preventive health services and mental hygiene, is the concern of the Departments of Public Health and of Interior, the Provincial Administrations, municipalities, and local authorities. There is, however, a number of professional bodies, such as the South African Medical Council and the South African Trained Nurses' Association, which play an important part in advising as to policy in this field, and in addition there is a number of charitable organizations which specialize in health work generally or some specific aspect of it. It should, further, be pointed out that all charitable bodies, particularly family and child welfare societies, give some attention to health problems, either by supplying medical relief to their cases or by actually training and employing rural health nurses.

The *St. John Ambulance Association* was established in Capetown in 1891, and subsequently in the other provinces. Its main objectives are the organization of classes for training in first-aid, home nursing, ambulance work, home hygiene, and sanitation; rendering of voluntary services in first-aid; providing relief in national and other grave calamities; organizing and training voluntary aid detachments; organizing voluntary service for assistance of medical departments. Its South African headquarters are in Capetown (P.O. Box 2366).

The *South African Red Cross Society* was established in South Africa in 1913 and is linked to the International Committee at Geneva. It aims at combating disease and suffering; providing relief in national and other grave calamities; promoting instruction in first-aid, home nursing, and ambulance work; organizing and training a voluntary aid corps and Junior Red Cross links among school children. The certificates issued by the society are recognized by the Union Government as required by section 277 (5) (*a*) of the *Mines and Works Regulations* and Chapter VI of the *Factories Act Regulations*, and by the South African universities and teachers' training colleges. The headquarters of the Society are in Johannesburg (P.O. Box 3266).

In addition to the organizations whose functions are of a generalized nature, there are three national bodies which interest themselves in certain specific phases of health work, namely, the South African National Council for Mental Hygiene, the South African National Council for Maternal and Family Welfare, and the South African Temperance Alliance.

2. **Birth Control Clinics.**—The *South African National Council for Maternal and Family Welfare* was established in 1935. It consists of affiliated birth control clinics at Benoni, Capetown, East London, Johannesburg, Pietermaritzburg, Port Elizabeth, and Pretoria. At these centres married women in poor health and/or circumstances are given professional advice by qualified medical practitioners. Sound contraceptive instruction is given where family spacing is needed; practical advice also is given to those women who have not borne children and who are anxious to have a family; and many women are referred for medical treatment for gynaecological and other disorders to specialists at hospitals and other institutions.

All clinics are in receipt of support from local authorities, in the form of either grants-in-aid or rent-free use of municipal premises. Two centres receive provincial grants-in-aid, and one receives a grant and rent-free use of premises from the Divisional Council of the Cape. The Department of Public Health has expressed itself strongly in favour of the establishment of further clinics, preferably in conjunction with the health services of local authorities. In 1938 the Department provided a grant-in-aid to the Council. The work of the clinics, two of which have been conducted since 1932, has been recorded in the Reports of the Public Health Department from 1935.

3. **Mental Hygiene.**—The establishment and administration of mental hospitals, the licensing and inspection of private homes for mental patients, and the granting of financial aid to mental hygiene societies, are functions of the Department of the Interior and are under the control of a Commissioner for Mental Hygiene; psychological research and the standardization of mental tests are conducted by the Bureau of Educational and Social Research; while the education and training of subnormals falls to the responsibility of the Provincial Administrations.

The *South African National Council for Mental Hygiene* was established in 1920 and has its headquarters at Johannesburg (P.O. Box 2587). It co-ordinates and directs the work of the local societies, of which there are seven affiliated to the national body, viz., those at Johannesburg, Pretoria, Capetown, Kimberley, Port Elizabeth, Durban, and Bloemfontein. The objects of the Council are to co-operate with the Government in all measures dealing with the care of the mentally disordered and the feebleminded and the prevention of mental disorder and feeblemindedness; to undertake the dissemination of knowledge regarding mental disorder and feeblemindedness; and to direct public opinion into such channels as shall lead to the enactment of suitable legislation dealing with the subject.

The local societies arrange for the psychiatric examination of juvenile delinquents, probationers referred to them by court officials, and children committed under the *Children's Act* before they are admitted to local homes and institutions, as well as cases referred to them by private individuals; they undertake the after-care of patients discharged or on leave from mental hospitals and institutions; and provide general assistance to needy mental cases recommended by the psychiatrist.

During 1938 occupation centres for boys and girls leaving special classes were opened in Johannesburg. The provision of a hostel for men who have become stabilized by institutional care, and who are capable of working in the community, is under consideration.

4. **Liquor Control.**—(i) *Liquor Laws.*—(*a*) *Pre-Union Legislation.*—Prior to the enactment of the *Liquor Act*, No. 30 of 1928, the laws controlling the supply and sale of intoxicating liquor were essentially those in operation in the separate colonial administrations at the time of Union. These laws, in so far as they applied to the European population, were based on English law and practice.

The laws governing the supply of intoxicating liquor to coloured persons and aborigines were framed to suit the conditions peculiar to each province. These conditions varied so considerably and were based upon such divergent practice that they presented formidable obstacles to the construction of a uniform law for the whole Union.

(*b*) *Post-Union Legislation.*—The excise liquor laws of the Union have not as yet been codified and consequently form a somewhat heterogeneous body of provisions governing the production of liquor and its removal from the place of production. An equal degree of divergence is to be found in that subsidiary portion of excise liquor legislation which appertains to the issue and holding of licences. Some measure of uniformity in the matter of excise liquor law may ultimately be expected to result from the administration of Chapter 2 of the *Customs and Excise Duties Amendment Act*, No. 19 of 1928, section 6 of which contains provisions enabling the Governor-General to apply in the inland provinces certain provisions of the excise laws of the coastal provinces, and section 10 of which enables the Governor-General to prescribe conditions governing the excise licensing.

The industrial liquor laws of the Union are contained in the *Wine, Spirits and Vinegar Act*, No. 15 of 1913, as amended by Acts Nos. 7 of 1926, 37 of 1930, and 55 of 1935, and in the legislation for the control and management of the wine and spirit industry, Act No. 5 of 1924, as amended by Act No. 17 of 1928.

The liquor distribution control laws for the Transkeian Territories are contained in Proclamation No. 53 of 1933, as amended or amplified by Proclamations Nos. 166 of 1933 and 159 of 1934, and Government Notice No. 411 of 1933. In the Union, distribution and control of liquor is governed by the *Liquor Act*, No. 30 of 1928, as amended by Acts Nos. 41 of 1934, 46 of 1935, and 39 of 1937.

Licensing or the forbidding of licensing is the principal means by which the restraints of the *Liquor Act* are rendered effective. The Legislature has itself made certain land and certain native areas and their near neighbourhood places at which no liquor licences may exist, though in the latter case the prohibition may be relaxed by the Governor-General. In certain other areas no licence may be issued without the authority of the Executive Government: native, mining, and rural areas are here chiefly concerned. If, in the interest of any section of the population, State veto or restriction is desirable, areas may be constituted within which such may obtain; and in rural areas licensing boards may not entertain applications for new hotel or club liquor licences, unless the Minister of Justice has authorized them to do so.

For the rest, the issue of licences in a district is in the hands of the licensing board, a body which is constituted for each district annually under the *Liquor Act*. These boards have the power to authorize or refuse to issue licences, and within their respective jurisdictions may impose conditions in many directions, more particularly in regard to hours of sale or premises. A number of conditions and restrictions, however, have been imposed directly by the Legislature and these for the most part are immutable.

Aboriginal natives throughout the Union are prohibited persons in regard to liquor supplies, and the exemptions granted to the native parliamentary voters in the Cape Province under prior Acts, and to natives in Natal under certain special grants, are now entirely abrogated.

A summary of the *Liquor Act*, No. 30 of 1928, appeared in *Year Books* Nos. 11 to 19.

(ii) *Liquor Traffic Statistics.*—The following table gives figures of liquor and bottle store licences issued in the various provinces over a series of years. Particulars of convictions for drunkenness are also included; details of other offences under the liquor laws are given in Chapter IX.

1938	2,074	890	553	3,336	6,191	34,652

* Includes coloured persons in the Cape Province only.

(iii) *Illicit Liquor Traffic.*—In the industrial areas of the Transvaal there is still in existence a considerable illicit liquor traffic. In 1938, 251 Europeans and 755 non-Europeans were convicted for illicit sale of liquor to non-Europeans, and of these 155 Europeans and 221 non-Europeans were convicted in the Transvaal. It is a recognized fact that large numbers of residents in the Transvaal trade illicitly in liquor as a means of livelihood, and the problem of dealing with the question has provided almost insuperable difficulties.

§ 7. The Physically Handicapped.

1. **Vocational and Special Education.**—Particulars regarding the provision made for the education and training of physically handicapped persons are given in §1, 13, of Chapter VIII.

2. **Assistance for needy Physically Unfit European Persons.**—A scheme for financial assistance to needy European persons over the age of 16 years, who on account of physical or mental disabilities are permanently unfit to undertake remunerative employment, was instituted in January, 1937, by the then Department of Labour and Social Welfare and is now administered by the Department of Social Welfare.

The scheme is administered through district committees. A district committee representing local social welfare organizations and churches is established in each magisterial district, and all applications for assistance are made to the district committee, which forwards them with a recommendation to the Secretary for Social Welfare, who may approve grants not exceeding the following for a maximum period of 12 months:—

Persons resident in large urban centres: £2. 10s. per person per month.
Persons resident in other towns and villages: £2. 5s. per person per month.
Persons resident on farms: £2 per person per month.

These grants are payable through postmasters to applicants direct, unless otherwise authorized.

In all cases where there is any doubt whether an applicant is unfit to undertake employment, he is required to register his name at an employment exchange. Investigations are then made by the Department of Labour to ascertain whether suitable work can be obtained for the applicant, and if he refuses to accept work offered he is not eligible for assistance under the scheme.

Generally speaking and with certain exceptions, the scheme is not applicable to persons who are not Union nationals, unless they have been resident in the Union for a period of not less than 10 years out of the 15 years immediately prior to the date of application, persons who have an income exceeding £2. 10s. per month, and persons for whom other provision exists, such as old age pensioners, chronic sick for whom institutional care

is desirable and available, blind persons, children who can be assisted under the provisions of the *Children's Act*, 1937, and persons whose near relations are in a position to support them.

The number of applications received since the inception of the scheme up to and including 31st December, 1938, was 13,531. Grants were made in 7,431 cases, while 5,248 applications were refused, 115 were withdrawn, and 737 were still under consideration on the 31st December, 1938, on which date 6,133 grants were in operation, 1,298 grants having been withdrawn for the following reasons: Death of grantees, 291; transferred to old age pensions, 697; transferred to institutions, 53; improved financial position, 88; stopped on review, 169.

The expenditure for certain financial years approved up to 31st December, 1938, was as follows:—

1936-37	£269
1937-38	£57,469
1938-39	£125,801
1939-40	£38,028

3. **Old Age Pensions.**—Provision for the payment of old age pensions is made under Act No. 22 of 1928, as amended by Acts Nos. 34 of 1931 and 34 of 1937. A detailed summary of the *Old Age Pensions Act* was given in *Official Year Book* No. 17 and earlier issues.

The Act as amended applies to white (European) persons and coloured persons (excluding Asiatics and aboriginal natives) of sixty-five years of age and over in the case of a man and sixty years of age and over in the case of a woman, domiciled and resident in the Union, with means not exceeding a prescribed amount.

The following table shows the number and value of old age pensions in payment at the 1st November, 1936 to 1938.

OLD AGE PENSIONS.

NUMBER OF PENSIONERS, WHITE AND COLOURED, AND ANNUAL VALUE AT 1st NOVEMBER, 1936 TO 1938.

TOTAL	16,529	172,668	18,505	203,391	21,971	245,253

4. **Blind Persons' Pensions.**—Provision for the payment of pensions to blind persons and of grants-in-aid for the promotion of the welfare of such persons is made under the *Blind Persons Act*, No. 11 of 1936. A detailed summary of this Act was published in *Year Books* Nos. 17 and 18.

The Act applies to blind white (European) persons and coloured persons (excluding Asiatics and aboriginal natives*) accepted for registration after medical examination, who have attained the age of nineteen years, are domiciled and resident in the Union, are Union nationals, and whose means do not exceed a prescribed amount.

Grants-in-aid may be made under the Act towards (*a*) the provision and maintenance by a registered association or institution of hostels, homes, workshops, or other places for the reception and training of blind persons,

* See paragraph 5 below

and the remuneration of persons employed by such association, and (*b*) the augmentation of the earnings of registered blind persons working in any such home, hostel, etc.

The *Blind Persons Act*, in so far as it concerns the registration of blind welfare societies, subsidization of workshops and other institutions for the blind, and the augmentation of wages, is administered by the Department of Social Welfare. Applications for pensions and all matters connected therewith are dealt with by the Commissioner of Pensions.

Provision is made in the Act for co-operation between the State and the South African National Council for the Blind in connexion with any matter concerning blind persons and the registration of associations for the welfare of blind persons. It also confers such powers and duties on the Council as may be prescribed by regulation.

The Department of Social Welfare has, under section 10 of the Act, registered fifteen associations throughout the Union, whose functions include general attention to the interests of the blind and the provision of schools, workshops, and a library for the blind. Some of these societies cater specifically for the needs of coloured, Bantu, and Indian blind.

The basis on which grants-in-aid under section 9 (*a*) of the Act are made to workshops, training centres, homes, and hostels for the blind, is calculated as follows:—

(i) *Capital Expenditure.*—Fifty per cent. of the cost of purchasing, repairing, or renovating buildings and fifty per cent. of the cost of office and other equipment.

(ii) *Maintenance and Salaries.*
- (*a*) *Workshops.*—66⅔ per cent. of the salaries of instructors and 50 per cent. of other approved expenditure excluding wages of blind workers and the cost of purchasing raw materials.
- (*b*) *Training Centres.*—66⅔ per cent. of the salaries of instructors and 50 per cent. of other approved expenditure.
- (*c*) *Homes and Hostels.*—50 per cent. of the difference between the running costs, as approved, and the payments of the institution by or on behalf of the inmates.

(iii) *Augmentation Grants.*—Augmentation grants are paid in respect of the earnings of blind workers. Societies grade the workers employed in their shops according to their earning capacity and augmentation is paid on a percentage basis. Workers earning at the rate of 1s. per hour, for instance, receive a 25 per cent. augmentation grant, while workers earning only 4d. per hour receive 100 per cent. augmentation grant. Other grades between these two extremes receive grants in proportion.

The following table shows the number and value of pensions being paid to blind persons at the 1st November, 1937 and 1938.

BLIND PERSONS' PENSIONS—NUMBER OF PENSIONERS, WHITE AND COLOURED, AND ANNUAL VALUE AT 1st NOVEMBER, 1937 AND 1938.

1- 6	18	108	19	113
TOTAL	726	11,582	1,112	18,674

5. **State Aid to Native Blind Persons.**—When the *Blind Persons Bill* was discussed in Parliament on the 26th March, 1936, the Minister of Labour and Social Welfare stated that the Government had decided that the question

of assistance to blind natives should be dealt with separately. It was decided that the Minister of Native Affairs should inquire into the matter, with a view to obtaining statistics to enable provision to be made on the estimates of expenditure of his Department for the financial year 1937-38. As a result of inquiries made, an amount of £20,000 was provided for that year, and a scheme was worked out under which blind natives over the age of 18 years would be granted assistance, on production of a certificate from the District Surgeon that the eyesight of the person applying for assistance is so restricted that he is unfitted to do any work for which eyesight is essential and a statement by the Native Commissioner or Magistrate that he is indigent and in need of assistance.

The scheme, unlike that under which pensions are payable to Europeans, is not fettered by any legal provisions and is so simple that its administration has not occasioned any appreciable additional expenditure to the Government.

At first, as it was not known what number of applicants for grants would come forward and as it was felt that provision on the estimates would be totally inadequate if all blind natives applied for grants, a conservative policy was adopted. A definite sum was allocated to each district and the amount payable to individuals was left to the discretion of the district officer, who was, however, not allowed to make to any native a grant higher than 10s. per month. On an average 6s. 8d. per month was paid under this arrangement.

Natives are usually suspicious of any innovation and it was soon evident that the scheme was no exception to the rule. As the money available was not being spent at the rate which was anticipated, it was possible to fix all grants at 10s. per month or £6 per annum per person as from the 1st October, 1937. This rate still applies.

Gradually, as blind natives realized that those who had made application for grants were actually deriving benefit and as the scheme became better known in the isolated native reserves, the stream of applications swelled so that by 1st April, 1938, it was found that the initial provision of £24,000 for the year 1938-39 was totally inadequate, and subsequently the amount provided for this service was increased to £50,000.

At the end of 1938, 9,857 blind natives had been registered and were in receipt of grants. This number is still growing rapidly.

While 10s. per month may appear to be a small sum, it represents more to the native than to a European, particularly where the native resides in a rural location under tribal conditions.

The South African National Council for the Blind collaborates closely with the Department in this matter.

6. **The South African National Council for the Blind.**—The South African National Council for the Blind was established on the 20th March, 1929. The Council is a statutory body under the *Blind Persons Act*, No. 11 of 1936, with powers and duties prescribed by the Act and in the regulations thereunder. The Council encourages, co-ordinates, and where possible assists the activities of societies affiliated to or associated with it. Its efforts are directed towards the welfare of upwards of 10,000 civilian blind of all races, as distinct entirely from blinded ex-soldiers, whose interests are in the care of the South African Committee of St. Dunstan's.

At the 31st December, 1938, the Council's records comprised particulars relating to 10,520 blind persons distributed as follows:—

Area.	European.	Coloured.	Native.	Total.
Western Cape Province	538	976	1,049	2,563
Eastern Cape Province	257	245	2,973	3,475
Natal	84	10	819	913
Orange Free State	175	14	522	711
Transvaal	455	51	2,352	2,858
TOTAL	1,509	1,296	7,715	10,520

The Council is the official channel for communication between registered associations for the blind and the Government and provincial and other authorities in matters of national and general policy.

7. **South African National Council for the Deaf.**—The headquarters of this organization are in Capetown (P.O. Box 493). Its objects are to encourage and assist the formation of local societies for the care of the deaf and to co-ordinate their activities; to investigate conditions of the deaf and protect their interests; to investigate proposals for education, training, and employment of the deaf; to give advice to the deaf and those caring for them.

The Council publishes a monthly journal, *The Silent Messenger—Die Stille Boodskapper.*

8. **Cripples and Cardiopaths.**—There is as yet no national organization dealing specially with the welfare of cripples, but Cripples' Care Associations are established in the Cape, Transvaal, and Natal Provinces, and the formation of a combined national body is under consideration.

The Transvaal Association was established in 1934 to provide for the care of cripples and cardiopaths in that province. The Hope Training Home, erected in Johannesburg in 1934, is now housing 45 crippled boys and girls, and will shortly be able to accommodate the full quota of 72. Sixty per cent. of the maintenance costs of the home are borne by the Transvaal Province, the balance being derived from public subscriptions. An amount has been voted by the Province for the erection of a special school in the grounds adjoining the home. This school is designed to provide general and vocational training for all the crippled children of the Transvaal, with the object of rendering them, as far as possible, self-supporting.

The Cripples Care Association of the Cape Province has its headquarters at Capetown. The objects of the Association are to co-ordinate the work of societies and institutions interested in cripples; to initiate and support action for the early discovery and prompt treatment of children likely to become crippled; to promote schemes for the education, training, and general welfare of cripples; and to encourage the formation of local associations.

The Association works in conjunction with the Cape Hospital Board, the Invalid Children's Aid Committee of the Society for the Protection of Child Life, and the Women's Hospital Auxiliary. Its activities are concerned with:—

(*a*) The Lady Michaelis Home, which provides accommodation for 32 European and 16 coloured children, particularly cases of congenital or traumatic deformity.

(*b*) The Princess Alice Home of Recovery, which provides for the treatment and nursing care of 30 European and 42 coloured patients, principally bone tuberculosis and poliomyelitis cases.

(*c*) The Maitland Cottage Home (maintained and administered by the Invalid Children's Aid Committee), which cares for 72 coloured children who are either awaiting admission to the Princess Alice Home of Recovery or have been removed from surroundings definitely deleterious to their physical condition and progress.

Each of these institutions is in full medical charge of the orthopaedic surgeons of the Groote Schuur Hospital. They are also staffed with fully qualified teachers supplied by the Cape School Board.

The very large field of out-patients amongst crippled children—early cases receiving treatment and cases discharged but under supervision—is covered by the Invalid Children's Aid Committee with nearly 400 active cases on their books. In addition St. Joseph's Home at Philippi, which is maintained by the Palatine Sisters, provides 60 beds for coloured cripple children, chiefly chronic cases.

The present efforts of the Association over and above its general activities are concentrated on providing facilities for housing the large number of early cases on the waiting list, so as to prevent permanent defect, and on providing means for the further education and vocational training of the adolescent who suffers from permanent physical handicap. The Pieter Moll Memorial Fund Committee is responsible for raising a memorial fund, the bulk of which will be used for building in the grounds of the Princess Alice Home a hostel in connexion with the vocational training of cripples.

In East London the Society for Crippled Children, which was established in 1933, provides for the necessary treatment and after-care of cripples. The society is supported entirely by voluntary contributions.

In Durban an Open Air Primary School, opened in 1920, caters for crippled and debilitated children, and provides remedial exercises, special baths, etc., in addition to general education. All charges are met by the Provincial Administration. A Cripples' Care Association is also working in Durban in connexion with the local Benevolent Society.

9. **Epileptics.**—The Rand Epileptic Employment Association, which is the only organization of its kind in the Union, was established in 1935. It employs epileptics in floriculture on a plot of ground granted by the Johannesburg Municipality. The employees are paid a weekly wage for their labour and are in charge of two expert non-epileptic horticulturists. They are housed in a hostel run by the Association, and pay for their board and lodging. The Association accepts applicants (not certifiable under the *Mental Disorders Act* of 1916) from any centre in the Union and Rhodesia.

10. **Statistics of Afflicted Persons.**—An inquiry was instituted concurrently with the enumeration of the population in 1936 regarding the numbers of persons in the Union suffering from certain physical defects, viz., the blind, the deaf, the dumb, and the epileptic.

The questionnaire did not form part of the Census schedule and the information given was, therefore, purely voluntary. Although there is no means of checking the completeness of the figures, the response to the inquiry may be regarded as satisfactory when the information collected is compared with the information in the possession of the benevolent societies working in the interests of afflicted persons. The inquiry extended to Europeans, Asiatics, and coloured persons, but not to natives (Bantu).

Tables giving information regarding the number, age, and race of persons afflicted and the nature of the affliction were published in *Official Year Book* No. 18. A detailed report on this subject (U.G. No. 16—1937) is obtainable from the Government Printer, Pretoria.

AFFLICTED PERSONS—NATURE OF AFFLICTION, 1936.

Affliction.	European.	Asiatic.	Coloured.	Total.
	No.	No.	No.	No.

§ 8. War Veterans.

1. **Military Pensions.**—Act No. 42 of 1919 (as amended by Act No. 41 of 1920) makes provision for the payment of pensionable benefits to persons disabled on military service during the Great War of 1914-1918 and pre-1914 South African wars, and for the dependants of deceased soldiers and burghers whose deaths resulted from war service.

Claims for compensation are dealt with by a board, appointed by the Governor-General and styled the Military Pensions Board, which consists of medical and lay members. Appeals against decisions of this board are dealt with by a Military Pensions Appeal Board, which consists of a barrister (chairman), a soldier's representative, and a representative of the Treasury. Appeals against assessments of percentages of disablement by medical boards are decided by medical appeal boards. Some classes of appeal lie as of right whilst in others leave to appeal has to be obtained by the appellant. The Minister responsible for deciding questions arising out of provisions of the Act is the Minister of Finance.

Particulars regarding pensions payable for disablement, and to widows, parents, and other dependants, were given in *Official Year Book* No. 18.

The following statement shows the number and value of military pensions as at 1st November, 1938:—

PRE-1914 WARS.		GREAT WAR.	
NUMBER.	ANNUAL VALUE.	NUMBER.	ANNUAL VALUE.
	Disability Pensions.		
1,209	£58,115	3,490	£231,819
	Widows' Pensions.		
374	£35,658	1,187	£180,868
	Pensions to other Dependants.		
318	£12,681	2,169	£87,755

2. **The Governor-General's Fund.**—This Fund was inaugurated by the late Mrs. Louis Botha and the first Lord de Villiers in August, 1914, and from that date to 30th November, 1938, the amount of subscriptions and accrued interest on investments reached the sum of £3,765,873. No calls were made on the public for further subscriptions after 1919.

The operations of the fund may be divided into three periods:—

(*a*) War period 1914-1918. Assistance to families and dependants of men on war service	£1,315,249
(*b*) Demobilization and re-establishment period 1919-1921. Assistance to men returned from war service	£1,211,123
(c) Peace Period. On War disablements and dependants of husbands, fathers, and sons who lost their lives in the Great War to 30th November, 1938	£925,152
	£3,451,524

The following table summarizes the distribution of relief during the year 1938:—

Classification.	In Monthly Grants.	In Casual Assistance.	Total.
	£	£	£
War disabled ex-soldiers	7,229	1,470	8,699
War widows and children	6,779	415	7,194
Parents, aged or in need, who lost sons in the War	10,890	84	10,974
Administered by British Empire Service League	—	3,500	3,500
TOTAL £	24,898	5,469	30,367

The balance of the Fund at the 30th November, 1938, was £314,322.

Eighteen South African ex-service men who were blinded in the Great War possess homes purchased for them by the Governor-General's Fund.

At the 30th November, 1938, there were 979 cases on the Fund's books in which permanent monthly grants are being paid. Of this number 57 are paid through the High Commissioner's Office in London for beneficiaries resident in England.

In addition to the central office in Capetown, there are local committees in Johannesburg, Durban, and Pretoria, which administer relief from funds remitted from the central office, and in many of the smaller centres there are advisory committees who investigate applications and submit recommendations. In places where there are no local committees, the investigations are made through magistrates and local branches of the British Empire Service League.

An acutarial investigation is made every three years into the financial position, and it is possible now to feel assured that, unless something unforeseen happens, the Fund is in a position to meet its obligations in full to all its remaining beneficiaries for life.

For several years the Governor-General's Fund has made an annual grant to the Dominion Office of the British Empire Service League for administration by the League in relief of ex-service men who are suffering from war disablements assessed at a low rate, and whose cases do not now fall within the present scope of the operations of the Governor-General's Fund. The total of these grants amounted to £58,000 at 30th November, 1938.

3. **British Empire Service League (South Africa).**—The League, which was established in 1921, and which is affiliated with other ex-service men's organizations throughout the British Commonwealth, has its headquarters in Bloemfontein (P.O. Box 322).

The policy of the League is national, non-sectarian, and non-partisan in relation to party politics. The objects, which are fully set out in a constitution, include making representations to Parliament when necessary in regard to adequate scales of pension for men and women discharged on account of ill-health or incapacity arising from service; assisting in the rehabilitation in civil life and generally safeguarding the interests of all ex-service men and women and their dependants; finding employment and providing relief for ex-service men and their dependants; and helping to secure educational facilities for the children of War widows and of necessitous and deserving ex-service men and women where possible.

The League has fifty branches throughout the Union and South West Africa and publishes a monthly journal, *The Springbok*.

4. **St. Dunstan's After Care Committee for S.A. Blinded Soldiers.**—This Organization, which is affiliated to the parent organization, St. Dunstan's, London, was established in South Africa in 1918, and has for its object the training, settlement, and after-care of blinded ex-service men and their dependants. Facilities are provided whereby blinded soldiers are taught handicrafts and trades, and help is given in the marketing of the goods produced.

Moneys subscribed in South Africa to this Fund are used solely for the benefit of South African blinded soldiers and their dependants.

§ 9. Social Research.

Social Research Bodies.—(i) *The National Bureau of Educational and Social Research.*—Information regarding the institution and functions of the Bureau are given in § 1, 11, of Chapter VIII.

(ii) *The South African Council for Educational and Social Research.*—Particulars with regard to this Council will be found in § 5 of Chapter VIII.

(iii) *The South African Institute of Race Relations (Incorporated).*—The South African Institute of Race Relations was established in 1929 through grants made available by the Carnegie Corporation, New York, the Phelps Stokes Fund (New York), and later the Rhodes Trust. It was incorporated in 1937 under section 21 of the *Companies Act*, 1926.

The main aim of the Institute is to encourage, work for, and foster peace, goodwill, and practical co-operation between the various sections and races of the population of Southern Africa.

In pursuance of this aim the Institute—

(i) Promotes and supports investigations on matters (e.g. social and economic conditions) having a bearing upon the relations between, and the welfare of, the various sections and races of South Africa;

(ii) examines legislative and administrative measures, racial situations, and organized movements likely to affect the racial situation; subject, however, to the limitation imposed in the Memorandum of Association "that the Institute shall not identify or associate itself with any organized political party or concern itself with the election of any parliamentary representative";

(iii) initiates social welfare agencies and makes suggestions intended to assist in (*a*) the creation of social conditions that will make a full and healthy life possible for all sections of the population; (*b*) the education of all sections of the public in a right attitude towards their own responsibility for the general welfare, and (*c*) the training and employment of qualified workers of all races to engage in social services;

(iv) provides opportunities (such as regional conferences and local joint councils) for consultation and co-operation between organizations and individuals engaged upon the matters coming within the scope of the Institute's main object;

(v) issues the following publications: *Race Relations News*, monthly; *Race Relations*, quarterly; an Annual Report; and monographs and memoranda; makes available to interested persons its reference library; and supplies information to inquirers on racial and cognate subjects;

(vi) provides secretarial help to certain scientific bodies and social welfare organizations;

(vii) provides legal defence and assistance for the poor of all races through its Legal Aid Bureau.

The funds of the Institute are now mainly derived from South Africa, its activities being supported by some forty affiliated organizations, by grants from municipalities and other public bodies, and by a considerable personal membership.

The Institute is an unofficial, non-party body, but, while independent of government control, it endeavours to work in close co-operation with governmental and municipal administrations in Southern Africa regarding the several aspects of racial problems, e.g., native affairs, education, health, and labour. It also co-operates with international and other organizations overseas. It has served on several occasions as the headquarters in Southern Africa for expeditions and individual research workers from Europe and America engaged in investigations on the African continent. In such cases it places its office accommodation and library resources at the service of the expedition, arranges conferences with individuals and groups having special knowledge, plans itineraries, and gives help in other ways.

Through the courtesy of the authorities of the University of the Witwatersrand, the Institute's head office and reference library are housed in the central building of the university, and the Institute's officers have free access to the university library and the Gubbins Collection of Africana.

The Institute embodies an attempt to approach the racial problems of Southern Africa in a scientific and co-operative spirit and to apply the results of research to the practical problems of every-day life.

(iv) *The South African Institute of International Affairs.*—The South African Institute of International Affairs was established in 1936 and has its headquarters in Capetown. Its object is to promote through study, discussion, lectures, and public addresses, and by other means, an understanding of international questions and problems. Membership is restricted to Union nationals. The Institute is affiliated to the Royal Institute of International Affairs, London.

§ 10. Ecclesiastical Organizations.

1. **General.**—The numbers of the European population who were recorded at the Censuses of 1926 and 1936 as belonging to certain churches and professing certain forms of religious belief are given in the following table. Although particulars of religions were collected at the Census of 1931, the information was not tabulated. At the time of going to press the tabulation of the 1936 Census returns in respect of religions of the non-European population had not been completed.

RELIGIONS OF THE POPULATION OF THE UNION AND PROPORTION PER CENT. TO TOTAL POPULATION—EUROPEANS, CENSUSES 1926 AND 1936: NON-EUROPEANS, 1921

‡ Indicates for Europeans "No Religion" (so returned), and for non-Europeans covers Bantu religions and non-Christian Hottentots and Bushmen.
§ No census figures are available to show the distribution of the non-European population in 1921 as between the three independent divisions of the Dutch Churches.
‖ Details of these denominations not yet available.

2. **The Dutch Reformed Church (Nederduits-Gereformeerde Kerk).**—The passing of Act No. 23 of 1911 gave authority for the union of the branches of the Nederduits-Gereformeerde Kerk in the various provinces, and made comprehensive provision in regard to organization, the holding of property, and other matters concerning the united church and its component congregations.

Organization—

(a) Each of the four churches (Cape, Orange Free State, Natal, and Transvaal) is ruled by a synod, possessed of the highest legislative, judicial, and administrative power.
(b) To ensure uniformity of church government, the churches are divided into presbyteries (ringe), as fixed from time to time by the synod.
(c) Each congregation has a representative and managing church council.
(d) There is also a federal council, which, guided by certain provisions, interests itself for the general good of the four aforesaid churches.
(e) Arrangements also exist for the connexion of mission churches with the Dutch Reformed Church.

Theological Training.—Candidates for the ministry of the church are trained in the Theological Seminary at Stellenbosch; those entering as preachers of the mission church are trained at the Mission Institute at Wellington. Ministers of the Nederduits or the Gereformeerde Kerk in the Transvaal are also now trained at the University of Pretoria, where there is a Faculty of Theology. For the mission churches native ministers are trained at the Stofberg-Gedenkskool, Orange Free State, and coloured ministers at Wellington.

Publications.—*Die Kerkbode* (weekly) and *Jaarboek van die Nederduits-Gereformeerde Kerke in Suid-Afrika.*

Statistics.—The following statistics have been furnished by the archivist for the year 1938-39:—

DUTCH REFORMED CHURCH STATISTICS, 1938-39.

Particulars.	Cape of Good Hope.	Transvaal.	Orange Free State.	Natal.	Total.
	No.	No.	No.	No.	No.
European—					
Congregations	206	112	84	11	413
Adherents	405,267	232,904	157,871	18,299	814,341

Congregations	94	48	68	7	217
Adherents	130,006	54,371	63,864	8,507	256,748
Members	37,876	21,899	21,311	2,113	83,199

† In addition mission work is carried on at 9 stations in Bechuanaland (2,335 members), 288 stations in Mashonaland (4,988 members), 1,003 stations in Nyasaland (20,089 members), 542 stations in Rhodesia (8,000 members), and 7 stations in the Sudan (67 members).

3. **The Reformed Church of South Africa (Die Gereformeerde Kerk).**—The Reformed Church of South Africa is governed according to the church regulations laid down by the Dordrecht Church Assembly of 1618-19, as far as they can be applied in the various countries, with due regard to the individual requirements of the communities. At the Synod of Steynsburg in 1913, it was decided to review and modify the church regulations of Dordrecht on the basis of the revision adopted by the Reformed Churches in the Netherlands at the Synod of Utrecht in 1905.

According to these church regulations, which do not represent an absolute law for every church or community, the functions of government rest mainly in the hands of every individual "kerkraad" or church council for every local congregation. Until recently it was the custom for the congregations of each province of the Union to assemble once annually in general assembly. This is still the case in the Orange Free State, but a change has been made with regard to the Transvaal and Cape Provinces. More in agreement with the church regulations referred to above, the Transvaal is divided into four presbyteries (*klasses*), namely Rustenburg, Pretoria, Potchefstroom, and Middelburg. Representatives of these presbyteries assemble once or twice every year to deal with matters which are too difficult for the church council to dispose of. Once a year every presbytery (*klassis*) sends five representatives to the provincial synod, and once in three years the representatives of all church councils assemble for the general synod. A synod was held in March, 1939. The Reformed Church has no moderator or permanent executive.

Every presbytery, general assembly, provincial synod, or general synod at the commencement of its deliberations elects an executive consisting of four members At the close of the proceedings the executive is dissolved. Every congregation has its correspondent, and every province has its corresponding church council: for the Transvaal, Heidelberg; for the Orange Free State, Bloemfontein; and for the Cape Province, Burghersdorp.

The training of ministers takes place at the theological school at Potchefstroom. Three theological professors work in this institution.

The *Almanak* for 1939 contains the following church statistics: Congregations, 131; confirmed members, 31,937; baptized members, 25,108; total, 57,045.

Mission communities are to be found in South West Africa; at Ventersstad, in the Cape Province; and in the Transvaal at Sileam, with twelve outstations, administered by the Pretoria East Congregation. The Cape Province has charge of the first two and the Transvaal and Orange Free State of the others.

Twice a month the church issues *Die Kerkblad.* Once a year an *Almanak* is published.

4. **Die Nederduits-Hervormde Kerk.**—At the establishment of the South African Republic, the Nederduits Hervormde Kerk was the only church of the country, and the first constitution of 1858 provided in section 20 that this church should be the Church of the State. Its first minister, the first in the Transvaal, was the Rev. D. van der Hoff, who arrived in 1853 direct from Holland. In 1885 the church lost a number of its members through amalgamation with the Dutch Reformed Church (Netherduits-Gereformeerde Kerk), founded in 1866. The history of the church is given in the publication *Geskiedenis van die Nederduits Hervormde Kerk van Afrika*, 2nd Edition, 1936, by Dr. S. P. Engelbrecht.

Its ministers are trained at the University of Pretoria. The church publications are represented by a monthly paper, *Die Hervormer*, and a Church Almanac, which appears annually. The church has an orphanage at Krugersdorp.

Die Hervormde Kerk is governed according to Presbyterian Church regulations by a General Church Assembly, which meets at least once every three years, and in the intervening period by a commission of the General Church Assembly; and further by the six circuits (ringe) into which the community is divided, and by the individual church councils concerned.

The following are the statistics for the year 1937-38: Congregations, 88; members, 73,339; members confirmed during the year, 2,173; members baptized during the year 3,315.

5. **Church of the Province of South Africa.**—(i) *Organization and Government.*—The official title of the English Church in South Africa is the Church of the Province of South Africa, and it is in communion with the Church of England and the other Provinces of the Anglican Communion throughout the world. It is a voluntary association and has its own constitution and its own rules and regulations. It is governed by a provincial synod, which meets every five years under the presidency of the Archbishop of Capetown and in which every diocese in the province has its representatives, both clergy and laity, and no resolution, rule, canon, or constitution is regarded as a law of the Church of the Province, but such as shall have received the concurrent assent of all orders of the church—bishops, priests, and laymen. The Church of the Province is divided into fourteen dioceses constituted in the following years: Capetown, 1847; Grahamstown, 1853; Natal, 1853; St. Helena, 1859; Bloemfontein, 1863; Zululand, 1870; St. John's, 1873; Pretoria, 1878; Southern Rhodesia, 1891; Lebombo, 1893; George, 1911; Kimberley and Kuruman, 1911; Johannesburg, 1922; Damaraland, 1924. Each of the above dioceses has the right to send clerical and lay representatives to the provincial synod on the basis of one of each order for every ten (or part of ten) licensed priests in the diocese. The enactments of the provincial synod are binding upon all members of the church in South Africa, though it is expressly stated in Article II of the constitution that the provincial synod of the Church of the Province shall be subordinate to a higher authority of a general synod of the church of the Anglican Communion, to which such province shall be invited to send representatives whenever such general synod shall be convened. The Church of the Province has accepted the consultative body of the Lambeth Conference as its court of final appeal. The organization of the various dioceses is very similar to that of the Province. All the dioceses have their synods, but all acts and resolutions passed by the diocesan synods are subject to revision by the provincial synod. There are at the present time some 700 clergy working in the Province, of whom the majority are employed in parochial or missionary work, but some few are engaged in educational and extra-parochial work.

(ii) *Colleges and Schools.*—In connexion with the church there are several schools and colleges for Europeans. For boys: Diocesan College, Capetown; St. Andrew's College, Grahamstown; Michaelhouse, Balgowan, Natal; St. John's School, Johannesburg; St. Andrew's School, Bloemfontein; St. George's Grammar School, Capetown. For girls: St. Cyprian's School and Herschel School, Capetown; St. Anne's School, Hilton Road, Natal; Diocesan School, Grahamstown; Diocesan School, Pretoria; St. Michael's High School, Bloemfontein; and St. Mark's School, Mbabane, Swaziland (co-educational). At Grahamstown there are a training college for women teachers and a theological college (St. Paul's) for the training of ordinands. There are also various

training colleges for native or coloured clergy and teachers, the chief of which are at Capetown, Keiskama Hoek, Estcourt, Pietersburg, Johannesburg, Umtata, and Kwa Magwaza, Zululand. Much is also being done for the education of the native and coloured people, and there are hundreds of mission schools throughout the Union. A hostel has been founded at Fort Hare, the government establishment for the higher education of natives.

(iii) *Hostels and Houses of Mercy.*—Leliebloem, Capetown; Irene, Transvaal; and at St. Monica's, Queenstown. There are also the Marion Institute and a home for friendless girls at Capetown, and St. Monica's Maternity Home.

(iv) *Orphanages and Homes for Children.*—For boys: St. John's Hostel, Capetown; St. George's Orphanage, Cleveland, Transvaal. For girls: St. George's Orphanages, Rosebank and Claremont, Cape; House of Bethany, Plumstead, Cape. For young children: St. Michael's Home, Capetown; the Woodville Orphanage, Grahamstown. There are also the St. Francis Home for coloured boys, Capetown; and the Athlone Blind School for coloured and natives at Faure, Cape.

(v) *Communities.*—The Community of the Resurrection, Johannesburg (priests), with a large mission station at Penhalonga, Southern Rhodesia; the Society of St. John the Evangelist, Capetown (priests), with an important mission station at St. Cuthbert's, Tsolo; The Society of the Sacred Mission, Modderpoort, O.F.S. (priests); the Community of St. Mary the Virgin, Irene, Transvaal (sisters); and the Community of the Resurrection, Grahamstown (sisters), with several mission stations throughout the province.

(vi) *Other Activities.*—For sailors, there are homes and chaplains of the seamen's institutes at Capetown, East London, Durban, and Lourenco Marques. There is a strong organization of the Church Lads' Brigade and Church Girls' Brigade among the coloured in the Cape district.

(vii) *Sources of Revenue.*—In the year 1937 the church raised in South Africa itself £205,000 for its own requirements from collections, subscriptions, and donations. In addition to this £33,000 was received from endowments. A further amount of £41,000 was received from overseas, but this was employed almost entirely on missionary work amongst native peoples.

(viii) *Publications.*—Publications include *The Historical Records of the Church of the Province of South Africa, The Legal Development of the Church of the Province, The Cape to the Zambezi* (quarterly), *The Church Weekly Newspaper*, and the *Church Directory and Year Book* containing the names of bishops and clergy, with other useful information; these can be obtained from the English Church Book Room, Church Street, Capetown.

6. **The Methodist Church of South Africa.**—(i) *Historical.*—The Wesleyan Methodist Church commenced work officially in South Africa in the year 1816, when the Rev. Barnabas Shaw arrived to minister to the Wesleyan soldiers in the garrison of occupation and to the native people. In 1820 the Rev. William Shaw arrived as chaplain to the London Party of the British Settlers, and within a few years he commenced work among the native population and made plans for considerable developments. In the course of years the work grew considerably, and attempts were made to minister to all sections of the population not ministered to by the Dutch Reformed Church.

Until 1883 the work in South Africa was under the direct control of the Missionary Society of the Wesleyan Methodist Church in England. In that year the first South African Conference met, and all the missions and churches south of the Vaal River were placed under its jurisdiction; the work in the Transvaal remained under the control of the Missionary Society in England. The South African Conference sustained an affiliated relationship with the parent conference in Great Britain until the year 1927, when, as the result of joint action of the two conferences, it was agreed that the South African church, while remaining in full communion with the parent church, should become independent and autonomous. By a Private Act (No. 17 of 1927) this independent and autonomous existence was ensured and received legislative sanction. Under this Act the Transvaal and Swaziland district, embracing the Transvaal Province, British Bechuanaland, Swaziland, and Portuguese East Africa, came under the jurisdiction of the South African conference as from the 1st of January, 1931. At the same time the Primitive Methodist Missions at Aliwal North in the Cape Province and Johannesburg were taken over by the Wesleyan Methodist Church of South Africa. The conference of

1931 resolved that the name of the church should be altered, and legislative effect was given to this resolution by the passing through Parliament in 1932 of Act No. 12, entitled *The Methodist Church of South Africa (Private) Act.*

(ii) *Organization.*—The area under the jurisdiction of the South African Conference is now divided into seven districts, namely:—1. Cape of Good Hope; 2. Grahamstown; 3. Queenstown; 4. Clarkebury; 5. Kimberley and Bloemfontein; 6. Natal; and 7. Transvaal and Swaziland. These districts are divided into smaller areas known as circuits, of which there are 266. There are also three medical missions with several medical clinics.

The administration of each district rests with an annual synod, composed of all the ministers resident in the area and of lay representatives from all the circuits. The supreme legislative and executive authority is vested in the annual conference, which is composed of representatives elected by the various district synods and official members appointed by the conference itself.

(iii) *Institutions.*—(*a*) *Day Schools.*—Very considerable educational work is being carried on by the church among native, coloured, and Indian people. There are 1,315 schools with 3,191 teachers and 139,192 scholars.

(*b*) *Secondary Schools, European.*—Under Wesleyan auspices three secondary schools for Europeans are in existence, namely, Kingswood College, Grahamstown, and Kearsney College, Stanger, Natal, both for boys, and Epworth High School, Pietermaritzburg, Natal, for girls.

(*c*) *Native Training Institutions.*—There are nine training schools and industrial institutions in connexion with the church. Pupils at these institutions number 4,839.

(*d*) *Orphanages.*—There are three orphanages for European children, namely, the Marsh Memorial Homes at Rondebosch, the Ethelbert Children's Home and Orphanage, Malvern, Natal, and Epworth Children's Home, Johannesburg. There is also an orphanage for coloured children at Heatherdale in the Cape Province.

(*e*) *Theological Colleges.*—A college for the training of ministerial students (European) is established at Mowbray, Cape Province. In connexion with the native college at Fort Hare there is a theological institution for the training of native ministerial students.

(iv) *General Statistics.*—The statistics for the Union of South Africa, Bechuanaland, Basutoland, Swaziland, and Portuguese East Africa, according to the latest available information, are as follows:—

Churches	2,538
Other preaching places	3,907
Ministers	395
Students at theological colleges	25
Evangelists	344
Local preachers	8,760
Church members	179,863
Sunday schools	1,130
Scholars	68,005
Total income from all sources	£553,276
Invested funds	£250,000
Value of church property	£2,000,000

7. Presbyterian Church of South Africa.—The first Presbyterian Church in South Africa was organized in Capetown in 1813 by the Rev. George Thom. In 1820, to meet the views of the Rev. Dr. Philip, who had been called to the pastorate, a Congregational platform was adopted and the church thereafter ceased to be Presbyterian. In 1827, under the Rev. Dr. Adamson, the Church of St. Andrew's, Capetown, the oldest Presbyterian congregation in the Union, was established, and in 1838 a mission for liberated slaves was instrumental in founding the coloured congregation of St. Stephen's in Riebeeck Square. Later in the century Presbyterian congregations were established in various towns in the Cape Colony and Natal and subsequently in the Orange Free State and Transvaal. In 1897 these were all united to form the Presbyterian Church of South Africa. Several congregations in Rhodesia are included in the Church, and the statistics given cover the whole Church in the Union and Rhodesia.

The Presbyterian Church of South Africa is governed by its General Assembly, which is held annually under a Moderator elected by the Assembly year by year. The General Assembly is constituted of representatives of the eight presbyteries—Capetown, Kingwilliamstown, Natal, Orange River, Orange River Native, Port Elizabeth, Transvaal, and Rhodesia.

The church has erected, at a cost of £15,000, and maintains at Queenstown (Cape Province) an orphanage with accommodation for seventy-five children.

The following figures give particulars for the years 1936 and 1937.

PRESBYTERIAN CHURCH—STATISTICS FOR THE UNION AND RHODESIA, 1936 AND 1937.

Description.	1936.	1937.	Description.	1936.	1937.
	No.	No.		£	£
Congregations*	215	206	Value of Church property	463,041	471,799
European members	18,403	18,663	Amount raised for the Church in year	63,738	62,773
European adherents	14,312	14,314	Amount spent on native mission work	8,362	8,622
European children in Sunday schools	7,814	8,137	Amount raised by natives	2,438	2,982
Native members	6,483	6,683	Invested funds†	121,463	122,772
Catechumens	1,198	880			
Mission schools	39	49			
Pupils in mission schools	3,183	4,022			

NOTE.—On the formation of the Bantu Presbyterian Church in 1923 two Presbyteries, Kaffraria and Mankazana, became detached from the Presbyterian Church of South Africa and incorporated in the newly-formed Bantu Church. The figures above relating to mission work indicate what is being done by the Presbyterian Church of South Africa from its own resources.

* Congregations and preaching stations (including mission charges).

† Including capital of beneficiary funds, orphanage, etc.

8. Congregational Churches.—Congregational churches in South Africa have been closely connected for more than a century with the London Missionary Society, and most of the native and coloured churches in the Cape Province were originally started by the missionaries of that Society.

The strict interpretation of congregational principles allows each church to manage its own internal affairs, but the Congregational churches in South Africa have formed a Congregational Union of South Africa, of which all these churches are members. The Union holds an annual Assembly to which all the churches send representatives, and this meeting lays down the principles and general policy to be followed.

With a view to providing local advice, the Union has been divided into five district associations as follows: (1) Rhodesia, the Transvaal, and the Orange Free State; (2) Natal; (3) the Cape Midlands; (4) South-west Cape; and (5) Cape Western.

A training college at Uitenhage for coloured teachers, conducted by the Congregational Union, takes a high place among such institutions in the Cape Province.

The following figures give information for the year ending June, 1938:—

Number of Ministers		81
„ Lay preachers		1,485
„ European members		3,086
„ Coloured members		24,317
„ Native members		7,636
„ European adherents		2,680
„ Coloured adherents		23,330
„ Native adherents		9,185
„ Sunday school scholars		23,820
„ Sunday school teachers		1,315
„ Buildings used in church work		385
Value of property	(approx.)	£250,000
Invested funds	„	£93,000

9. **Baptist Churches of South Africa.**—Baptists have been settled in South Africa since 1820, their first church being opened at Grahamstown. In 1872 the churches combined under the Baptist Union, a voluntary association for the furtherance of their work through mutual conference and assistance, in which each church retained its independence and complete autonomy, though co-operating in corporate action. The churches are represented in an annual Assembly by ministers and lay members, and this Assembly carries out its enterprises through the year by means of its officers and an executive. In 1892 the Missionary Society was formed for work among the Bantu, and it has since become identical with the Union in personnel, being the Union organized for missionary purposes.

The Union includes a number of district associations representing different parts of the country, one of which comprises the German Baptist churches of Kaffraria while another comprises the Afrikaans Baptist churches. In Natal there are also Indian churches, affiliated with the Union, working amongst Telegus and Tamils.

The ministers of the churches in the Union are trained, where possible, at recognized Baptist colleges in Great Britain and the United States of America, and where overseas training is not practicable training courses are provided, supervised by the ministerial education committee, over a period of four years. The European churches are scattered through all the four provinces of the Union of South Africa and in Southern and Northern Rhodesia. The missionary work covers nearly the same ground.

The Baptist Union of South Africa is affiliated with the Baptist World Alliance, a federation of churches comprising about twelve million members and nearly forty million adherents.

General statistics for 1938 are as follows:—

European ministers and probationer ministers	No.	76
European church members	„	7,631
Coloured church members	„	532
Native church members	„	7,568
Indian church members	„	581
Sunday school teachers	„	925
Sunday school scholars	„	10,563
Buildings for church work	„	218
Value of church property	£	178,963
Income of churches	£	35,396

It should be added that there are in addition, under the control of the National Foreign Mission Board of the United States of America, Bantu members numbering over 2,500 who are recognized by the Baptist World Alliance.

10. **Roman Catholic Church.**—The Union contains the following ecclesiastical divisions of the church:—

Delegate Apostolic: Bloemfontein.
Western Vicariate, Cape Province: Capetown.
Eastern Vicariate, Cape Province: Port Elizabeth.
Kimberley Vicariate: Kimberley.
Central Prefecture, Cape Province: Oudtshoorn.
Aliwal Vicariate: Aliwal North, Cape Province.
Mount Currie Prefecture: Kokstad.
Mariannhill Vicariate: Mariannhill, Natal.
Natal Vicariate: Durban.
Vicariate of Eshowe: Inkamana, P.O. Vryheid.
Vicariate of the Transvaal: Johannesburg.
Prefecture-Apostolic of Northern Transvaal: Pietersburg.
Lydenburg Prefecture: Lydenburg, Transvaal.
Vicariate of the Orange River: Pella, Namaqualand.
Vicariate of Basutoland: Roma.
Prefecture of Swaziland: Bremersdorp, Swaziland.
Vicariate of Windhoek: Windhoek, South West Africa.
Kroonstad Vicariate: Kroonstad, Orange Free State.
Great Namaqualand Vicariate: Keetmanshoop, South West Africa.
Umtata Vicariate: Umtata.
Prefecture of Queenstown: Queenstown, Cape Province.

The following figures are given for the year 1938:—

	No.		No.
Bishops*	16	Churches, chapels, and stations†	1,136
Prefects-Apostolic	6	Convents	334
Priests	714	Communities	19
Religious Brothers	653	Colleges and schools	1,286
Nuns	4,112	Other institutions	41

* One on the retired list.
† Includes stations where Mass is said regularly, but not every Sunday.

11. **The Jewish Community.**—(i) *Historical.*—The Jews have been associated with South Africa since its earliest days. Jewish pilots accompanied the Portuguese navigators, and Jews were included among the Dutch East India Company's officials at the Cape. Jewish names constantly crop up in the church and secular records of the Cape in the 17th and 18th centuries. There was also a party of Jews among the 1820 Settlers. The "Jewish Community" as an organized body first came into existence at Capetown in 1841, under the title of "The Society of the Jewish Community of the Cape of Good Hope", its Hebrew name being "Tikvath Israel" (The Hope of Israel). Its leader was Benjamin Norden. As the white population made its way into the whole of the sub-continent, Jewish communities came to be founded in most centres, so that there are to-day Jews in every part of the country. (See *The History of the Jews in South Africa*, by Louis Hermann, London, 1930, and *The South African Jewish Year Book*, 1929.)

(ii) *Congregational.*—In most centres, the Jewish communities are organized for religious purposes into congregations, of which there are about 200 in the Union, most of them having their own synagogues. In the larger centres of the Jewish population, such as Johannesburg, Capetown, Durban, Pretoria, Port Elizabeth, Bloemfontein, and Kimberley, there are Rabbis (holders of the Rabbinical diploma), who exercise authority in matters of religious observance. In the smaller centres, it is usual for a single individual to perform the duties of cantor, teacher of Hebrew and religion, and other functions associated with Judaism.

(iii) *Educational and Cultural Activities.*—A knowledge of Hebrew and of Judaism is normally imparted to the young through supplementary afternoon classes, which are usually attached to the synagogues. In the larger towns there are, in addition, separate Talmud Torah schools for this purpose. The work of these schools is co-ordinated and supervised by the South African Board of Jewish Education, with headquarters at Johannesburg and a special committee at Capetown for the Cape Peninsula. Periodical examinations take place under the direction of qualified inspectors. In the main centres, there are societies or clubs devoted to the fostering of Jewish culture, learning, and social intercourse.

(iv) *Philanthropic Institutions.*—The Jewish community undertakes the care of its own orphans, aged, and poor. In both Johannesburg and Capetown there are orphanages and homes for the Jewish aged; and every considerable centre of Jewish population has its Helping Hand Society, Jewish Board of Guardians, or other benevolent societies, which give financial help to the poor.

(v) *Organizational.*—The representative institution of South African Jewry is the South African Jewish Board of Deputies. A unified body for the Union came into existence in 1912, replacing separate provincial organizations existing prior to that date. The Board is composed of all the important congregations and Jewish institutions in South Africa (its affiliated bodies numbering some 215), and its function is "to watch and take action with regard to all matters affecting the welfare of the Jews in the southern portion of the Continent of Africa". The headquarters of the executive council of the Board are in Johannesburg, and there are provincial committees at Capetown, Durban, Bloemfontein, and Port Elizabeth.

(vi) *Zionism.*—The official representative of the World Zionist Organization (and of its various funds and institutions) in the Union is the South African Zionist Federation, which has branches or correspondents in over 500 places in the Union and adjacent territory. Its main objects are to propagate the principles of Zionism, to elicit the moral and material support of the Jews of South Africa for the upbuilding of the Jewish National Home in Palestine,

to foster a knowledge of the Hebrew language and of Jewish history and culture, and to co-operate with other Jewish organizations in the furtherance of Jewish welfare.

(vii) *Publications.*—There are four weekly newspapers published in English: the *Zionist Record*, *South African Jewish Chronicle*, *South African Jewish Times*, and *Jewish Herald*. There are also three Yiddish papers: *African Jewish Newspaper*, *Jewish Express*, and *South African Jewish Opinion*. Monthly magazines include the *Jewish Guild Magazine*, *South African Menorah*, *Jeshurun*, *Habinyan*, *Jewish Mirror*, and *Hasholom*, all published in English, *Barkai* published in Hebrew, and *Forois* published in Yiddish.

(viii) *Statistics.*—The following table shows the number of persons in the various provinces professing the Hebrew religion as ascertained at the Censuses of 1926 and 1936 respectively:—

JEWS IN THE UNION, CENSUSES OF 1926 AND 1936.*

Province.	1926.			1936.		
	Male.	Female.	Total.	Male.	Female.	Total.
Cape of Good Hope	12,761	11,223	23,984	14,789	13,373	28,162
Natal	1,805	1,472	3,277	2,019	1,744	3,763
Transvaal	20,941	17,861	38,802	28,835	25,067	53,902
Orange Free State	3,310	2,443	5,753	2,667	2,144	4,811
TOTAL	38,817	32,999	71,816	48,310	42,328	90,638

* Corresponding information for the Census of 1931 was not tabulated.

§ 11. Miscellaneous.

1. **Physical Education in South Africa.**—The national scheme of physical education was set afoot in 1937 when the Cabinet decided, in accordance with a general desire which had been evinced in the country, to take some such action as had already been done in most civilized states. The objects aimed at were to raise the general standard of the nation's physique and to impart knowledge of the rules of health, including nutrition.

A sum of £50,000 was voted for the financial year 1938-39 and was allocated as follows:—

(*a*) Expenditure through the Department of Defence, in co-operation with the South African Railways and Harbours Administration £25,000

(*b*) In aid of the work at educational institutions, such as universities, colleges, and primary, secondary, and vocational schools, to be spent through the education departments £15,000

(*c*) Expenditure through local authorities and voluntary organizations £10,000

The first item (£25,000) is being devoted by the departments mentioned to supplying physical training to such groups as the following:—

(i) Permanent Force.
(ii) Special Service and Pioneer Battalions.
(iii) School Cadet Corps.
(iv) Active Citizen Force.
(v) Defence Rifle Associations and Burgher Commandos.
(vi) Voluntary Aid Associations.
(vii) St. John Ambulance Brigade.

The second and third items (total £25,000) are being administered by the Minister of Education, who is advised by and acts through the agency of the National Advisory Council for Physical Education*.

* For personnel see Chapter XXVIII.

Individual educational institutions approach the education departments under which they fall. Technical colleges, vocational schools, and reformatories communicate with the Union Education Department, and primary or high schools with the department of the province in which they lie. £15,000 is divided amongst the five education departments, and each department aids its own institutions by paying out amounts from the sum allocated to it.

Local government authorities and voluntary organizations, such as sports, athletic, or gymnastic clubs, on the other hand, approach the Council direct. When considering applications from these bodies, the Council generally observes the following rules:—

Grants may be either annually recurrent or non-recurrent.

Grants are available to rural as well as urban communities.

Grants are as a rule not made to organizations with fewer than 20 members.

As far as possible all the clubs, schools, and other bodies within a given locality must be allowed to benefit by the grants. For this purpose the Council generally requires representative committees to be formed in the towns and villages where they think of making grants.

Grants are made only if the Council is satisfied that the locality concerned is in need of assistance and has made reasonable efforts to procure such assistance itself.

Property for the purchase of which a grant has been made must be vested in a body approved by the Council.

In order to establish an efficient physical education service the training of teachers and instructors is a matter of great importance. Schemes with which the Council are acquainted are gradually taking shape and include the following:—

(*a*) Some departments send young South Africans overseas to be trained.

(*b*) The provincial education departments train some of their ordinary certificated teachers at normal colleges on a one-year basis, so that they can teach physical education as well as the ordinary school subjects.

(*c*) The University of Stellenbosch trains expert instructors on a four-year basis and others for a shorter period.

2. **Temperance Movement.**—Of the temperance societies operating in the Union of South Africa, the *International Order of Good Templars* is the oldest, its first South African lodge having been opened in 1873. The *Women's Christian Temperance Union* came next, and consists of a South African Union with organized bodies for the four provinces and also for Rhodesia. It has enlarged its scope so as to include young people's branches and also an organization of non-European women. The *White Ribbon*, published monthly, is its official organ. The largest temperance society in South Africa is the *Independent Order of True Templars*, a purely South African body founded for non-Europeans and numbering 15,000 coloured and native adult members and 30,000 juveniles; the *Sons of Temperance* and the *Order of Rechabites* are temperance benefit societies, with world headquarters overseas; the *South African Railways and Harbours Temperance Union* is a sectional society working among railway employees; and the *Band of Hope and Temple Union* seeks to extend activities among the young. In addition, the majority of the churches have special temperance committees.

The *South African Temperance Alliance* co-ordinates the work of the temperance societies, and has special charge of the legislative side of temperance activities. It has provincial organizations in the Transvaal, Natal, and Orange Free State, and its headquarters are at Capetown. The *Tribune* is its monthly organ.

3. **Prevention of Cruelty to Animals.**—The earliest recorded efforts in South Africa towards awakening public sympathy with tortured and ill-used animals were made in the year 1872, when the first society for the Prevention of Cruelty to Animals was founded at Wynberg, Cape. The movement was followed up in 1875 by the passing of an Act dealing with the matter through the Cape of Good Hope Legislature; this Act was later repealed and Act No. 18 of 1888 substituted. In Natal an Act, No. 31, was passed in 1874, and the other territories now forming the Union each introduced similar legislation within the few years following.

After the constitution of the Union the whole of the earlier legislation was consolidated in Act No. 8 of 1914, subsequently amended by Act No. 14 of 1922. Persons guilty of certain offences defined by the Act as amounting to cruelty to animals are liable to imprisonment (with or without the option of a fine not exceeding £25) for a period of not more than three months, with or without hard labour. In 1928 an Act, further amending Act No. 8 of 1914, was passed, providing that in cases where cruelty of a wilful and aggravated nature is proved, the offender is liable to whipping, in addition to other penalties. Animals which have been subject to cruelty may be destroyed or otherwise disposed of as the court may direct. Societies for the prevention of cruelty to animals may be authorized to institute prosecutions under the Act, and officers of such societies may be granted police powers under the Act within particular areas.

Particulars are given hereunder of other Acts which have as their object the protection of animals:—

(i) The *Slaughter of Animals Act*, No. 26 of 1934, came into operation as from the 1st January, 1935. This Act makes provision for the method of slaughter of certain animals and for the licensing of slaughtermen.

(ii) The *Wild Birds Protection Act*, No. 22 of 1934, now in force, will do much to put a stop to the traffic in wild birds, and to their capture and/or sale. It is no longer legal to capture wild birds without a permit, and permits will not easily be obtained.

(iii) The *Performing Animals Protection Act*, No. 24 of 1935, came into operation as from 8th May, 1935. Under the provisions of this Act, any person who intends to exhibit or train for exhibition any animal must obtain a licence to do so, together with a certificate for all animals in respect of which such licence is held. Upon the certificate is specified the form of training and form of exhibition of such animals. Police officers and authorized officers of societies for the prevention of cruelty to animals may enter premises where training and/or exhibition takes place, at any reasonable time, for the purpose of investigating the conditions under which performing animals are trained and kept. Heavy penalties are provided for contraventions of the Act.

Societies are in existence in all the provinces, and nearly all the largest towns have a branch. At the 31st December, 1938, there were 38 societies in the Union.

No grant is made to societies by the Government, although they may claim one half of any fine inflicted (and paid) in cases brought into court by them.

4. **Censorship of Cinematograph Films, Pictures, and Public Entertainments.**—Under the provisions of the *Entertainments (Censorship) Act*, No. 28 of 1931, a Board of Censors was appointed to take over the duties and responsibilities of the boards which previously operated in the four provinces. The functions of the Board are to examine cinematograph films and film advertisements submitted to it for approval, and it has power to approve or reject a cinematograph film unconditionally or to approve of any such film, subject to a condition that it shall be exhibited only to a class of persons specified by the Board or after any specified portion or portions

have been excised therefrom. Section 5 of the Act lays down that the Board shall not approve any film which, in its opinion, depicts any matter that prejudicially affects the safety of the State, or is calculated to disturb peace or good order, or prejudice the general welfare, or be offensive to decency. The Board is also required, upon reference to it by the Minister, to make representations to the Minister regarding the prohibition of the publication of any picture or the giving of any public entertainment, and, in terms of the *Customs Management Act*, No. 9 of 1913, as amended, to advise the Minister of the Interior regarding the prohibition of importation of any printed, engraved, lithographic, and photographic matter which is indecent or obscene or on any ground whatsoever objectionable.

In terms of section 1 of the Act no person shall exhibit in public any cinematograph film or publish a film advertisement, unless such film or advertisement has been approved by the Board. Heavy penalties are provided for contraventions of the Act.

The following statement shows for a series of years the numbers of films and film advertisements censored:—

CINEMATOGRAPH FILMS AND FILM ADVERTISEMENTS CENSORED, 1934 TO 1938.

Heading.	1934.	1935.	1936.	1937.	1938.
FILMS.					
Approved without Excisions—					
For General Exhibition	1,443	1,565	1,414	1,624	1,797
For Exhibition under Conditions	161	160	174	249	309
Approved after Excisions—					
For General Exhibition	41	24	31	47	58
For Exhibition under Conditions	29	41	23	33	23
Rejected	26	27	38	32	43
TOTAL	1,700	1,817	1,680	1,985	2,230
Footage of Films Censored	3,736,664	3,875,288	3,456,270	3,754,283	4,379,800
Fees £	2,595	2,691	2,401	2,635	3,075
FILM ADVERTSIEMENTS.					
Approved	12,578	17,818	14,868	15,780	23,567
Rejected	527	559	181	153	293
TOTAL	13,105	18,377	15,049	15,933	23,860
Fees £	165	185	135	153	257

The recommendations of the Board in regard to publications submitted for examination in terms of the *Customs Management Act*, 1913, for a series of years were as follows:—

	1934.	1935.	1936.	1937.	1938.
Considered objectionable	• 88	130	89	235	1,059
Considered not objectionable	16	32	17	99	637
TOTAL	104	162	106	334	1,696

5. **Public Holidays.**—The following are the statutory public holidays as prescribed in Act No. 3 of 1910:—

New Year's Day.
Good Friday.
Easter Monday.
Ascension Day.
Victoria Day (24th May).
Union Day (31st May).
King's Birthday (first Monday in August).
First Monday in October.
Dingaan's Day (16th December).
Christmas Day.
Boxing Day (26th December).

When any of these days falls on a Sunday, the following Monday is observed as a public holiday. When Boxing Day falls on a Monday, the following Tuesday is regarded as a holiday. Sundays and the above-mentioned days are deemed to be non-business days for bills of exchange and promissory notes.

CHAPTER VI.

LABOUR AND INDUSTRIAL CONDITIONS.

§ 1. Department of Labour.

1. **Formation of the Department of Labour.**—Consequent upon the constitution of the Ministry of Labour in July, 1924, the Department of Labour was established in terms of Government Notice No. 1305 of the 6th August, 1924. By Government Notice No. 568, dated the 26th April, 1935, the designation was amended to the "Department of Labour and Social Welfare", but on 1st October, 1937, a separate Department of Social Welfare was established (vide Government Notice No. 1278 of 20th August, 1937).

The head office of the Department of Labour is in the Union Buildings, Pretoria, while seven district inspectorates have been established with headquarters in Johannesburg, Pretoria, Capetown, Durban, Bloemfontein, Port Elizabeth, and East London. In addition, there are industrial inspectors stationed at Benoni, Kimberley, Krugersdorp, and Pietermaritzburg.

2. **Functions of the Department.**—The primary functions of the Department may be classified as follows:—

(*a*) Employment questions generally (other than native employment) in which are included—
- (i) urban and rural employment exchanges;
- (ii) the recruiting of such members of the Public Service as are not dealt with by the Public Service Commission;
- (iii) the recruiting of labourers for government departments;
- (iv) schemes for the physically handicapped; and
- (v) recruiting for, and placement of, units of the Special Service and Pioneer Battalions;

(*b*) Administration of the following Acts:—
- (i) Factories Act, 1918, as amended.
- (ii) Juveniles Act, 1921.
- (iii) Apprenticeship Act, 1922, as amended.
- (iv) Workmen's Compensation Act, 1934, as amended.
- (v) Industrial Conciliation Act, 1937.
- (vi) Wage Act, 1937.
- (vii) Unemployment Benefit Act, 1937.
- (viii) Workmen's Wages Protection Act, 1914.

(*c*) International Labour Organization matters.

3. **Advisory Council of Labour.**—During 1937, the Advisory Council of Labour, which had last functioned in 1930, was resuscitated by the Minister of Labour. The functions of this Council are of a consultative and advisory character, and all matters falling within the purview of the Department of Labour may be discussed at the instance of the Minister or the Council.

The personnel, whilst drawn from various interests, has been selected by the Minister, not as the representatives of any organization, but on account of the individual's knowledge of and connexion with a particular interest; organizations catering for the more important national interests were, however, invited to submit the names of persons considered suitable for appointment. The Council consists of fifteen members and eleven alternates; the interests represented include agriculture, commerce, industry, and mining, and further members have been appointed on behalf of the interests of women, of the workers generally, and of non-Europeans; in addition there are two Members of Parliament on the Council.

According to the nature of the business to be discussed, meetings of the full Council, or of a group or several groups of interests particularly concerned, are arranged at the discretion of the Minister. At least one meeting of the full Council is convened each year. The proceedings at meetings, and the documents placed before members or alternates, are confidential, but the Council may agree on the terms of any statement which it is decided should be handed to the Press. The inaugural meeting of the reconstituted Council was held in Pretoria on the 29th November, 1937.

§ 2. Labour Conditions and Unemployment.

1. **General Conditions of Labour in Industry and Commerce.**—The expansion of industrial activity in South Africa during the last two decades has naturally been accompanied by a rapid increase in the number of persons engaged in industrial and commercial occupations in urban areas. Problems connected with labour conditions arose at an early stage, and led to the enactment of the laws described in this section of the *Year Book*. The code of industrial legislation is wide enough to deal with most of the difficulties which arise from time to time in regard to labour conditions, and has been successful to a degree which is gratifying to a country with so short an industrial history. In 1922, Parliament passed the *Apprenticeship Act*, which made provision for the training of South Africa's youth in occupations for which it had been necessary in the past to import skilled workmen from overseas. The *Industrial Conciliation Act*, 1924, was followed by the *Wage Act*, 1925, and in 1937 these two measures were replaced by two consolidating Acts bearing the same titles. The regulations made under these laws, together with the provisions of the *Factories Act* of 1918, as amended, cover the great majority of occupations in industry and commerce in urban areas and make provision for the fixing of minimum wages, the protection of the health and welfare of factory workers, and the control of hours of labour and other conditions of employment. The Acts contain safeguards to ensure adequate consultation with the interests affected, and the regulations may be varied from time to time to meet changing conditions.

All questions concerning labour conditions in the Union, particularly in semi-skilled and unskilled occupations, are complicated by the existence of the numerically predominant native and coloured elements of the population. In the Provinces of the Transvaal and Orange Free State, the skilled trades are, by long standing custom, regarded as a European preserve, and although in individual cases members of the native races may have established themselves in occupations requiring a certain degree of skill, the general rule is not affected by these exceptions. In Natal, the Indian has gained a footing in some occupations, while in the Cape Province, Malays and Coloured men (i.e. persons of mixed descent) form a proportion of the journeymen in many trades. The bulk of the unskilled work in most occupations is performed by native or coloured labour.

The conditions of labour and the effect of the Union's industrial laws were surveyed in detail by the Industrial Legislation Commission (1935). A summary of the Commission's report was published in *Year Book* No. 17.

2. **The Civilized Labour Policy.**—The steady influx into the towns from the country districts of large numbers of Europeans of the semi-skilled and unskilled type has led to the development of a sentiment favourable to the employment of European labour in occupational spheres which in past years were regarded as primarily the preserve of the native. This sentiment, which took practical shape under pressure of the acute unemployment following the economic depression of 1920, was further encouraged by the adoption, as a part of public policy, of the principle of the widest possible utilization of civilized labour in the government service.

More recently, the scope for the employment of civilized persons in unskilled and semi-skilled industrial occupations has increased as the result of developments in manufacturing methods. In several instances, industrial councils have already included in their agreements suitable provisions to meet the requirements of civilized workers in occupations not hitherto available to them. Considerable attention has been devoted to this matter in recent years. The experience gained since 1934 has shown very clearly the relationship between wage rates and the employment of civilized labour. In industries not subject to wage regulation, or where no special provision has been made in regard to rates of pay, attempts to increase the number of civilized workers have met with little success. Nor has indirect pressure, exerted through the protective customs tariff under which certain industries have grown up, proved of greater avail. Investigations into the conditions of labour in a number of industries enjoying tariff privileges showed that the proportion of uncivilized labour was high and wages and other conditions of labour poor, in comparison with the standards observed by other industries in South Africa.

3. **Fair Wage Policy.**—The aim of the Government's fair wage policy is to ensure that employees of government contractors are paid fair wages and that satisfactory conditions of employment and hours of labour are observed. Every contract for the supply of government requirements contains what is commonly known as the Fair Wage Clause, the terms of which are as follows:—

> "The contractors shall pay rates of wages and observe hours of labour not less favourable than those commonly recognized by employers and trade societies (or in the absence of such recognized wages and hours, those which in practice prevail amongst good employers) in the trade in the district where the work is carried out. Where there are no such rates of wages and hours recognized or prevailing in the district, those recognized or prevailing in the nearest district in which the general industrial circumstances are similar shall be adopted. Further, the conditions of employment generally accepted in the district in the trade concerned shall be taken into account in considering how far the terms of this clause are being observed."

The Department's divisional inspectors carry out investigations, where necessary, in order to ensure that the fair wage clause is being observed. The Tender and Supplies Board is advised of all cases where contractors or tenderers have been convicted of contravening industrial legislation, and, if the nature of the contravention justifies such action, the guilty party is debarred from tendering for government contracts for a specified period.

In contracts for the erection of government buildings, a more detailed fair wage clause is inserted, and the Public Works Department prescribes the wages to be paid on such works in districts where no minimum wages have been laid down by law. A fair wage clause is also inserted in contracts for the supply of the Railways and Harbours Administration's requirements.

Further, the regulations under the *Customs Tariff and Excise Duties Amendment Act* of 1925, governing the rebate of import duty on articles and materials required for industrial purposes, contain a provision whereby any manufacturer who maintains unsatisfactory labour conditions may be deprived of the right to import such goods free of duty.

In addition, the regulations of the Tender and Supplies Board now provide for approved lists of government tenderers and for the non-inclusion of a firm in an approved list unless, in the case of a South African company or firm, the Board is satisfied, after consultation with the Department of Labour, that satisfactory labour conditions, including the employment of a reasonable proportion of civilized workers, are maintained.

4. **Government Employment Exchanges.**—The Department of Labour conducts employment exchanges at Capetown, Port Elizabeth, East London, Kimberley, Bloemfontein, Johannesburg, Pretoria, Benoni, Krugersdorp, Durban, and Pietermaritzburg, under the supervision of Divisional Inspectors of Labour. These exchanges deal with employment matters affecting adult European males and females, as well as European juveniles of both sexes at the centres mentioned. In rural areas, where the needs of the community were previously served by Post Office and Social Welfare Committee employment exchanges, unemployment work has, since 1st May, 1938, been performed by Magistrates, Native Commissioners, and full-time Special Justices of the Peace. There are 282 rural employment exchanges, known as magisterial employment exchanges, conducted by these officials. Complementary to the employment exchanges referred to above, there is a co-ordinating employment division in the head office of the Department which, in addition to directing the filling of vacancies on government works, co-ordinates the work of district offices, particularly in connexion with the placement of clerical and semi-professional applicants, and the filling of non-prescribed, non-classified, and temporary posts in the general division of the public service. The Department of Labour also conducts employment exchanges for coloured persons at Capetown and Kimberley. In Johannesburg and Durban the needs of coloured

persons are provided for by subsidized employment exchanges conducted by representatives of the coloured communities. It is proposed to replace these subsidized exchanges by departmental employment exchanges in the near future, and also to establish a departmental exchange at Port Elizabeth in accordance with the recommendations of the Commission of Inquiry regarding the Cape Coloured Population of the Union.

In addition to the recruiting of all unskilled labour for government work, e.g., railway, irrigation, government contract works, and normal government works (subsidized and non-subsidized), the Department undertakes recruiting and placement work in connexion with the Special Service and Pioneer Battalions. 7,993 boys from the Special Service Battalion had been placed in employment from its inception in 1933 to the 31st December, 1938, and 1,566 members of the Pioneer Battalion had been placed in employment from 1935, when the battalion was established, to the 31st December, 1938. The placement work in this connexion engaged the attention of two special employment officers stationed at Roberts Heights and Bloemfontein respectively.

The tables given below reflect the employment activities of the Department for the year 1938:—

* Johannesburg and Durban.

employed and their wages are paid out of funds provided by the Department of Labour. The wages for Europeans are the same as those on anti-soil-erosion works, and coloured persons receive 2s. to 2s. 9d. per day.

(ii) *Provincial and Local Authorities Subsidized Works.*—In addition to measures for the relief of unemployment described in this paragraph, subsidies are granted by the Department of Labour to Provincial Administrations and various local authorities to enable them to provide work for persons who would otherwise be unemployed. The conditions of subsidy vary according to circumstances but are on a more liberal basis in the case of persons absorbed in regular employment than in respect of those employed on supplementary works.

With a view to encouraging local authorities to give employment to unemployed semi-fit Europeans, the Department of Labour is prepared to grant subsidies at the rate of 75 per cent. (inclusive of any contribution which may be made by provincial authorities) of the wages paid, based on a minimum wage of 4s. and a maximum wage of 6s. per day. Although the subsidy is based on these wage rates, the employing authorities are not precluded from paying higher wages than 6s. per day; but subsidy is not paid on a wage higher than the ruling rate for Europeans in the area concerned.

(iii) *Statistics.*—The following table shows the average numbers of European and coloured persons employed on subsidized works and non-subsidized government works, including men undergoing training in the Special Service and Pioneer Battalions:—

SUBSIDIZED WORKS AND NON-SUBSIDIZED GOVERNMENT WORKS.—AVERAGE NUMBER OF LABOURERS EMPLOYED, 1934 TO 1938.

Year.	Subsidized Works.		Non-Subsidized Works.	
	European.	Coloured.	European.	Coloured.
1934	14,267	2,254	23,562	1,361*
1935	14,325	1,954	27,560	1,730*

1937	9,823	822	28,696	10,658
1938	9,030	958	29,913	10,612

* Excludes Railways.

(iv) *Special Service and Pioneer Battalions.*—During 1933 a Special Service Battalion was established at Roberts Heights (now Voortrekkerhoogte) for the purpose of combating the deteriorating influences of unemployment and of providing discipline and training for unemployed boys and young men. The cost of the scheme is shared equally by the Departments of Defence and Labour. Recruiting is confined to young men between the ages of 17 and 22 (23 if matriculated) of good character, physically and mentally fit, and in possession of at least a Standard VI certificate. In urban areas the recruiting is undertaken by the Department of Labour, and in rural areas by the police. Final selection is entrusted to a board consisting of representatives of the Departments of Defence and of Labour.

Although the scheme cannot be regarded strictly as a means of providing employment, it has nevertheless proved a most effective method of combating unemployment. Special efforts are made to place in suitable employment members of the battalion who have served the full period of training, and the demand for the services of the products of the battalion (disciplined youth) has exceeded expectations. Members of the battalion receive pay at the following rates per diem: Privates, 1s.; corporals, 1s. 6d.; sergeants, 2s.; and in addition free rations, uniform, medical treatment, quarters, fuel, and light are given. Special attention is paid to physical training, and sports are organized under the direction of a sports officer. The authorized strength is 1,960 men.

In November, 1934, a Pioneer Battalion was established on lines similar to the Special Service Battalion, but for the benefit of young men between the ages of 18 and 30 who are physically and mentally fit, but who are not educationally qualified for the Special Service Battalion. The Pioneer Battalion is stationed at Bloemfontein, and the men enrol for a period of six months, after which they are placed as labourers on government works, particularly with the Railway Administration, and in other employment. The work offered by the Railway Administration is of the manual type, but the labourers are entitled to certain privileges, such as sick and pension benefits, concessions, etc., while their employment is of a permanent nature. The authorized strength of this battalion is 420. The expenditure is shared between the Departments of Defence and Labour and amounts to £22,000 per annum.

The establishment of platoons, attached to the Special Service and Pioneer Battalions, to which applicants handicapped by remediable physical disabilities will be posted for curative treatment, is under consideration. These platoons will serve as "feeders" to the battalions.

(v) *Coloured Training Camp, Kimberley.*—The Department of Labour has concluded negotiations with the Railway Administration, whereby the Department and the Administration became jointly responsible, with effect from 1st October, 1938, for the conduct of the training camp for Coloured youths which the Railway Administration established at Kimberley on 1st March, 1937.

Unmarried coloured youths between the ages of 18 and 30 years, who are medically fit, are eligible for admission to the camp for training. The strength of the camp is 100 units and the period of training is twelve months, but trainees may be discharged to approved employment after having satisfactorily completed six months' service. Trainees are paid 1s. per day and get free food, accommodation, uniforms, light, water, and medical attention. The training consists of physical exercises and vocational instruction. The latter is mainly in respect of railway occupations, but steps will be taken, as experience is gained, to extend vocational instruction to other occupations, if the demand justifies it.

The enrolment of trainees is undertaken by employment exchanges functioning under the Department of Labour.

§ 3. Industrial Conciliation and Arbitration.

1. **Industrial Conciliation Act, 1937.**—This Act came into force on the 15th December, 1937, and the *Industrial Conciliation Act*, No. 11 of 1924, was repealed with effect from that date.

The objects of the new Act are similar in all respects to those of the old Act and provision is made for the registration of industrial councils, employers' organizations, and trade unions, if effected under the 1924 Act, to be recognized as though these bodies had been registered under the new law. The main objects of the law are the prevention and settlement of disputes between employers and employees by conciliation, and in certain cases by arbitration, and the registration and regulation of trade unions, employers' organizations, and private registry offices.

The scope of the 1937 Act is similar to that of the previous statute and embraces every industrial council and public utility undertaking, every industry, trade, and occupation, and every employer and employee engaged in or at any such undertaking, industry, trade, or occupation, excluding agriculture or farming employment, government employment (including the Railway Administration), and work done at charitable or educational institutions, if in the former case no remuneration is paid and in the latter case the work forms a part of the educational training of the person performing it.

The establishment of industrial councils consisting of employers or registered employers' organizations on the one hand, and registered trade unions or groups of registered trade unions on the other hand, is recognized, and these bodies, when registered, may deal with any matter of mutual interest to the parties, and take such steps as may be necessary for the prevention and settlement of disputes within the industry for which they are registered. Agreements arrived at by the parties to these councils may be published by the Minister and made binding upon the employers and employees who are members of the constituent organizations and, if the Minister is satisfied that these employers and employees are sufficiently representative of the industry concerned taken as a whole, the terms of these agreements may on publication be made binding upon all employers and employees in the industry concerned. If it appears that the objects of any such agreement are likely to be defeated by the employment of persons excluded from the definition of employee contained in the Act, i.e. pass-bearing natives, provision is made for the Minister, at the request of the industrial council concerned, to extend to these persons and their employers such of the terms of the council's agreement as he may consider necessary. Agents of industrial councils, whose powers of inspection

were previously restricted to the establishments of parties to the councils, may now exercise powers of inspection in respect of all establishments in the industry concerned, if the Minister approves of their appointment as designated agents.

Where there are no industrial councils and disputes arise, conciliation boards may be set up by the Minister on the application of any of the disputants for the purpose of settling these disputes. Where a dispute relates to employment in connexion with essential services, i.e. the provision of light, power, water, sanitation, fire extinguishing services, or passenger transportation, strikes and lock-outs are prohibited, and the Minister may appoint a conciliation board, although no application may have been made by one of the parties to the dispute, and in any event compulsory arbitration automatically follows the failure of a board to settle a dispute connected with these services; similar provisions apply in the case of the failure of an industrial council having jurisdiction in these matters to settle a dispute.

Where the industrial council or the conciliation board, as the case may be, is unable to agree on the arbitrator, the Minister is vested with power to appoint his own nominee, and, where more than one arbitrator is appointed, an umpire has the power of taking a decision in case the arbitrators are unable to agree. The Minister may appoint an umpire where the parties cannot agree upon the nominee. Awards made by arbitrators or umpires are binding.

In addition to the absolute prohibition in respect of essential services, strikes and lock-outs are prohibited during the currency of any agreement or award which is binding upon the persons concerned, until an industrial council having jurisdiction has reported on the matter, and, if there is no council, until application has been made for the appointment of a conciliation board and such board has reported to the Minister, or the Minister has refused to appoint a board or has not within a fixed period taken his decisi- to appoint a board, and finally if arbitration has been decided upon by t parties pending the making of the arbitrator's award. The Minister h power, in the case of an arbitrator's award, to extend the terms to perso not parties to the dispute, if he considers that the parties are sufficient representative of the undertaking, industry, trade, or occupation concerne Special provision is made for dealing with disputes between private employe and their employees in connexion with essential services, where the employ supplies the service directly or indirectly to a local authority or within t area of a local authority. These provisions are similar to those referred above where the services in question are furnished by the local authori itself.

The Act provides for the appointment of an Industrial Registrar, whom are vested the powers and duties previously exercised by the Registr of Trade Unions and Employers' Organizations under the *Industrial Conciliation Act*, 1924. His duties include the registration of trade unions, employer organizations, and industrial councils. The powers previously conferred upo the Registrar of Trade Unions and Employers' Organizations have been co siderably extended, and the Industrial Registrar now has the right to var the basis upon which registration is accorded to any of the organizatior referred to, so that it coincides from time to time with the interests effectivel catered for by these bodies.

Registration is withheld from applicant trade unions and employer organizations where there already exist in the same area bodies which, i the Registrar's opinion, are sufficiently representative of the interests fo which the applicant desires to cater. The laws governing companies, insuranc companies, and friendly and provident societies do not apply to trade union or employers' organizations, but, if it appears that an organization of em ployees or employers exists for purposes other than those contemplated by th Act, it is permitted to seek registration under any other law for th purpose of achieving those objects. Provision is also made for the registratio of federations of bodies representing employers or employees.

The constitutions of registered trade unions and employers' organization are subject to stricter supervision under the new Act, which lays down that i the Registrar is unable to decide whether any provision in a constitution i or is not in accordance with law, or if he is of the opinion that any provisior is unreasonable in relation to the public or the members of the body con cerned, he shall refuse to approve of such provision. The status of a bod registered under the 1924 Act is not affected by the provisions of the new Act, but the Registrar is empowered to require any organization or unior

registered under the former Act to remove from its constitution any provision which, in his opinion, is inconsistent with the new Act or is contrary to the provisions of any law or is calculated to hinder the attainment of the objects of any law. The Registrar may also conduct enquiries into the affairs of these bodies where it appears that irregularities are taking place.

Another important change brought about by the new Act concerns the registration of associations composed of government employees. Under the old Act a trade union could only be registered in respect of a particular undertaking, industry, trade, or occupation, and several unions consisting of government employees were refused registration on the ground that they could not be said to be organized in respect of a specific undertaking, etc. The new Act, however, provides that an association of the type referred to may, if the other requirements of the Act are satisfied, be registered, notwithstanding the fact that its members or some of them are not employed in any particular undertaking, industry, trade, or occupation. The Act only applies to these associations in so far as registration is concerned, and they cannot for instance participate in the establishment of industrial councils or conciliation boards: they do, however, derive from registration the benefits of corporate status; such unions have the option of applying for registration or not, whereas in the case of all other trade unions application for registration should be made within three months of the commencement of the Act or within three months of their establishment, if this takes place after the commencement of the Act.

The registration and regulation of private registry offices is obligatory, and the keepers of these bureaux are required to maintain books and records in the form laid down in the regulations under the Act.

2. **Enforcement of Wage Regulating Measures.**—The following is a summary of the provisions of the Act in regard to failure to observe the terms of any wage regulating measure, orders of court for the payment of arrear wages, victimization of employees, appointment and powers of inspectors, registration of employers, etc.

(i) *Underpayment of Remuneration.*—Whenever an employer is convicted of underpayment of wages or other remuneration, the court is required to order the convicted person to pay the amount of such underpayment to a specified officer. As much of the amount as the court deems equitable must be paid to the employee concerned, and the balance to the Consolidated Revenue Fund. If the court finds that the employee did not agree to accept less than the minimum to which he was entitled, or agreed in ignorance of his rights, the whole amount must be paid to the employee. When an employer has been convicted of underpayment, the employee concerned is entitled to receive only the amount, if any, which the court orders to be paid to him, and is not entitled to take civil proceedings in respect of any such underpayment. Civil proceedings can only be taken if the employer has not been prosecuted, or has been acquitted on a charge of underpayment.

It is an offence for an employer to require or permit an employee to refund any money paid to the employee under any wage regulating measure, or to sign a receipt for more than he has actually received.

(ii) *Victimization.*—No employer may dismiss an employee, or alter his conditions of employment unfavourably, by reason of the fact that he suspects or believes that the employee—

(*a*) has given information in regard to his employment to the authorities concerned, or

(*b*) has refused to refund remuneration due and paid to him, or to sign for more than he has received, or

(*c*) belongs to a trade union, or takes part outside ordinary working hours (or, with the consent of the employer, within working hours) in the formation or lawful activities of a trade union.

The court which convicts an employer of contravening this section may order that the employee concerned be reinstated or that compensation not exceeding two hundred pounds be paid to him. The maximum penalty is a fine of three hundred pounds or two years' imprisonment with hard labour. Sentence of imprisonment may be imposed together with a fine, or without the option of a fine.

(iii) *Inspectors.*—Inspectors appointed under the Act are empowered to enter any premises without previous notice, to question persons who are

or have been on such premises, and to examine and seize any books or documents relating to any business. An inspector may take with him into any premises an interpreter or a member of the police force. Employers are required to furnish inspectors with the necessary facilities to enable them to carry out their investigations. Any person who makes a false statement to an inspector, or refuses to answer questions put to him by an inspector in the exercise of his functions, or otherwise hinders an inspector, is guilty of an offence.

(iv) *Registration of Employers.*—The Act provides that every employer upon whom a wage regulating measure is binding shall, within three months of the date on which such measure becomes binding, furnish particulars to the inspector in regard to the names of partners, directors, managers, etc. Notification of subsequent changes in such particulars must also be made. Upon receipt of the required statement, the inspector concerned will issue a certificate of registration, and any employer who carries on a business covered by an agreement or award without such certificate is guilty of an offence. No certificate may be issued to any person who has not complied with an order of court in regard to the payment of arrear wages, and provision is made for the cancellation of any certificate in possession of an employer who fails to comply with an order of court.

(v) *Alleged Partnerships.*—Whenever it is alleged that the remuneration of any party to a partnership agreement consists wholly or partly of a share in the takings or profits, and it is proved—

(a) that the agreement is terminable by any party thereto giving less than three months' notice, or

(b) that the amount received by any party was less than the remuneration payable to an employee under the wage regulating measure applicable,

the party concerned is presumed to be an employee, and any other party to the agreement is presumed to be an employer, unless it is proved that the agreement was not made with the object of evading any wage determination, agreement, or award.

(vi) *Demarcation between Trades.*—The Minister is given power to determine whether any employer, employee, class of business or work, or any operation or process, falls within a particular trade or industry. Provision is made for an appeal to provincial divisions of the Supreme Court, and to the Appellate Division.

(vii) *Evidence and Penalties.*—Proof of the publication in the *Gazette* of specified notices is conclusive proof that all the provisions of the Act in respect of matters precedent and incidental to such notices have been complied with. Provision is also made for the acceptance of presumptive evidence of certain facts, unless the contrary is proved. The maximum penalty for an offence for which no penalty is specially fixed is a fine of one hundred pounds, or one year's imprisonment. Imprisonment may be imposed in addition to, or without the option of, a fine. An employer convicted of underpayment a second or subsequent time may be ordered to surrender his certificate of registration. Should he thereafter carry on business in the same trade and employ any persons, he becomes liable to imprisonment for a period of one year without the option of a fine.

3. **Operation of Industrial Conciliation Act.**—The *Industrial Conciliation Act*, which came into operation in April, 1924, was extensively used by industry, and the record of strikes and lock-outs since this Act came into operation has been greatly reduced. In order to enable industry to avail itself of the provisions of the Act, organization on the part of both employers and employees was necessary; the result of the legislation has been to speed up organization on both sides.

The total number of industrial councils registered at the end of 1938 was 50. In three instances councils were set up on a national basis. In all other instances the scope of agreements was limited to provincial or local areas. Until such time as the employers and employees are able to organize on a national basis, the full fruits of this legislation will not be forthcoming, and the question of inter-area competition and varying conditions will present difficulties. As indicated above the *Industrial Conciliation Act*, 1937, which repealed the 1924 Act, contains the same principles, the provisions of the previous Act having been amplified and elaborated with a view to more effective administration.

The following tables give particulars of the number of industrial council and conciliation board agreements and awards. These wage regulating instruments remain in force and are deemed to have been made under the 1937 Act.

(i) INDUSTRIAL COUNCIL AND CONCILIATION BOARD AGREEMENTS AND AWARDS, 1934 TO 1938.

Date.	Number of—			Approximate Number of—	
	Industrial Council Agreements.	Conciliation Board Agreements.	Awards.	Employers.	Employees.
30th June, 1934.....	21	—	3	2,722	42,064
30th June, 1935.....	26	2	5	3,890	51,586
30th September, 1936	36	4	5	4,726	65,732
30th September, 1937	33	2	1	5,123	58,763
30th September, 1938	32	3	4	6,732	64,316

(ii) ARBITRATION AWARDS OPERATIVE AT 30th SEPTEMBER, 1938.

Industry or Occupation.	Area of Jurisdiction.	Date from which Operative.
Borough Council Employees.....	Estcourt borough area.....	11th March, 1937.
Municipal Employees.....	Hercules municipal area.....	24th March, 1937.
Durban Municipal Electricians.....	Durban municipal area.....	5th April, 1938.
Municipal Employees.....	Johannesburg municipal area..	11th July, 1938.

4. **Development of Trade Unionism in South Africa.**—A brief account of the development of the trade union movement in the Union will be found in the ninth and previous issues of this *Year Book*.

With the promulgation of the *Industrial Conciliation Act* of 1924, interest in trade unions, which had waned, was revived, and in many instances these were resuscitated with the assistance of the Department of Labour. Trade unions have not been slow to realize the advantages of the machinery provided by the *Industrial Conciliation Act*, and industrial councils have been established in respect of most of the important industries. While organized labour has through the industrial council system a say as to working conditions in industry, unorganized labour is catered for by the *Wage Act*. At 30th September, 1938, there were 134 trade unions and 99 employers' organizations registered.

In recent years there has been some development in the direction of industrial organization among non-European employees. One of the associations established was the Industrial and Commercial Workers' Union (I.C.U.), which came into being in 1919. The history of this body, which is now defunct, was marked by many internal difficulties, which led to the development of subsidiary and rival associations. A body styled the Federation of Non-European Trade Unions was founded in 1928. A trade union as defined in the Act should, however, be a body consisting of employees, and as pass-bearing natives are excluded from the definition of "employee" given in the Act they cannot form registrable trades unions. The Act does not, however, prohibit organizations of pass-bearing natives from functioning as unregistered bodies. Coloured and Indian organizations have been formed in particular industries, and under the influence of the 1927 agreement between the Union and Indian Governments the Natal Indian Trade Union Congress was established, with the object, *inter alia*, of stimulating trade union organization among the Indian wage-earning population.

5. **Industrial Disputes.**—The following tables contain particulars of industrial disputes for the years 1906 to 1938:—

(i) SUMMARY OF INDUSTRIAL DISPUTES, 1906 TO 1938.

Years.	Number of Strikes beginning each Year.	Number of Workpeople Involved.	Aggregate Duration in Working Days.	Estimated Loss in Wages.
			No.	£
1906–1910	7	6,870	300,846	285,652
1911–1915	24	43,442	266,801	229,050
1916–1920	168	136,771	1,428,176	430,491
1921–1925	46	40,799	1,462,734	1,952,965
1926–1930	47	19,684	23,151	10,014
1931	19	6,284	54,575	19,681
1932	12	4,011	26,034	9,440
1933	10	1,585	16,081	14,563
1934	12	2,379	52,132	37,366
1935	17	2,367	10,564	4,894
1936	20	2,193	5,009	1,936
1937	33	5,906	27,229	9,246
1938	20	3,798	4,070	1,045

NOTE.—In the above table the records up to 1917 are by no means complete, as returns were not then tabulated for all the strikes shown. The latter portion of the table may, however, be accepted as a fairly accurate record.

(ii) INDUSTRIAL DISPUTES, 1938.

* Strike occurred in 1937, but return was received in 1938.
† Wages paid in full.
‡ Time lost made up by working later.

6. **Statistics of Trade Unions and other Associations of Employees.**—The following tables give (i) membership of trade unions and other associations of employees for a series of years, and (ii) the distribution of associations of employees and their membership, according to industrial groups, at 30th September, 1937 and 1938.

It was only when the provisions of the *Statistics Act* were applied, in the year 1919, that it was possible to obtain anything approaching complete statistics of employees' associations. Statistics of trade unions and other associations of employees are now secured annually. In 1932 an attempt was made to ascertain the number of non-European members of trade unions, but the result was not successful, and no figures can be given with any confidence.

At 30th September, 1938, there were 166 employees' unions in existence in the Union, of which 17 dated from pre-Union days; 29 were established between 1925 and 1929; 23 between 1930 and 1934; and 57 between 1935 and 1938.

Of these unions 40 had a membership of below 100; 47 had from 100 to 499; 29 from 500 to 999; 22 from 1,000 to 2,499; 11 from 2,500 to 4,999; and 17 had 5,000 and over.

(i) MEMBERSHIP OF TRADE UNIONS AND OTHER ASSOCIATIONS OF EMPLOYEES, 1900 TO 1938.

Year.	Membership.	Year.	Membership.	Year.	Membership.
	Number.		Number.		Number.
1900	3,836	1924	87,147	1932	106,851
1905	6,343	1925	93,603	1933	106,350
1910	9,178	1926	116,231	1934	126,436
1915	10,538	1927	213,620	1935	150,543
1920	135,140	1928	114,516	1936	189,003
1921	108,242	1929	115,997	1937	223,537
1922	81,861	1930	118,281	1938	253,651
1923	86,865	1931	101,888		

NOTE.—Fluctuations in the total membership are largely due to marked changes in the membership of the non-European unions.

(ii) TRADE UNIONS AND OTHER ASSOCIATIONS OF EMPLOYEES IN VARIOUS CLASSES OF OCCUPATION, NUMBER AND MEMBERSHIP, 30th SEPTEMBER, 1937 AND 1938.

Class of Occupation.	Registered.				Non-Registered.			
	Unions and Associations.		Membership.		Unions and Associations.		Membership.	
	1937.	1938.	1937.	1938.	1937.	1938.	1937.	1938.
Mining	7	7	24,227	25,450	1	1	59	62
Engineering and Metal Working	11	11	15,808	15,773	3	3	358	552
Building	7	7	23,802	25,767	2	—	594	—

Food, Drink, and Tobacco	11	13	2,692	5,169	3	1	1,515	474
Other	17	20	12,409	15,570	3	5	424	985
State Services (excluding Teaching)	14	12	51,648	60,696	5	5	17,924	19,632
Teaching	—	—	—	—	9	9	12,363	12,864
Municipal and Tramway	16	16	13,274	15,008	1	3	268	387
Trading and Clerical	10	11	11,926	15,753	—	2	—	108
Miscellaneous—								
Catering	4	5	2,269	3,076	—	1	—	80
Other	18	22	8,122	8,971	4	3	1,645	2,289
TOTAL	123	133	188,342	216,218	32	33	35,195	37,433

NOTE.—In a number of cases craftsmen and others are members of more than one union. The extent of duplication cannot be given.
Most skilled mechanics in the service of the Railway Administration are members of craft unions and not of railway unions. Such membership is therefore not included in "State Services" above.

7. **Associations of Employers.**—Statistics of associations of employers were taken for the first time in 1919, and are collected annually. The table below gives certain particulars of such associations at 30th September, 1937 and 1938.

At 30th September, 1938, there were 111 employers' organizations, exclusive of Chambers of Commerce, in existence. Of these 29 had a membership of 10 and under; 37 from 11 to 25; 16 from 26 to 50; 8 from 51 to 100; and 21 over 100.

Many employers' associations are federated in national or regional organizations. The most important of these are the district chambers of industries and the S.A. Federated Chamber of Industries; the Federation of Master Printers of South Africa; the National Federation of Building Trade Employers; and the National Association of Hotel Keepers.

CLASSIFICATION OF EMPLOYERS' ORGANIZATIONS (EXCLUDING CHAMBERS OF COMMERCE) ACCORDING TO TRADE, INDUSTRY, OR SERVICE, 30th SEPTEMBER, 1937 AND 1938.

Trade, Industry, or Service.	Registered.				Non-Registered.			
	Associations.		Membership.		Associations.		Membership.	
	1937.	1938.	1937.	1938.	1937.	1938.	1937.	1938.
Mining	2	2	96	97	—	—	—	—
Engineering and Metal Working	15	17	267	2,458*	—	1	—	4

Trading and Clerical	13	12	3,209	1,275*	1	—	17	—
Miscellaneous—								
Catering	8	8	653	796	—	—	—	—
Other	15	14	762	929	3	2	81	175
TOTAL	97	98	6,934	7,642	13	13	248	336

* Difference when compared with previous year mainly due to transfer of S.A. Motor Trade Employers' Association from Trading to Engineering.

At 30th September, 1938, the position as regards Chambers of Commerce was as follows:—

Province.	*Number of Chambers.*	*Number of Member Firms.*
Cape of Good Hope	39	1,685
Natal	7	535
Transvaal	28	1,441
Orange Free State	14	414
TOTAL	88	4,075

These chambers are also associated in a national body, the Association of Chambers of Commerce of South Africa.

§ 4. Juvenile Affairs.

1. **Training and Employment of Juveniles.**—The realization of the necessity for the establishment of a definite system of training and placing juveniles in employment brought into existence a number of voluntary advisory boards, the first of which was established in 1915. Prior to the establishment of the boards little had been done to develop or co-ordinate the work of preparing juveniles for, and placing them in, suitable employment after their school training.

During the year 1918, the boards devoted considerable attention to the apprenticeship problem in the belief that some more definite system of indenture could be adopted in the skilled trades, in order to provide courses of training along definite lines. The interest aroused by the boards in this connexion culminated in the passing of the *Apprenticeship Act* in 1922 (see § 5 below).

2. **Legislation.**—The demands of the advisory boards for increased powers and statutory recognition were met by the passing of the *Juveniles Act* in 1921. This Act makes provision for the establishment of statutory juvenile affairs boards to deal with matters affecting the employment, training, welfare, and supervision of juveniles. A juvenile is defined as "a person who is under the age of 18 years, and who was subject to the laws relating to compulsory education, but shall not include any classes of person exempted by the Minister". Boards are established by the Minister of Labour, who also appoints the members. In making such appointments the Minister shall have regard to the several recommendations of organizations or associations of employers or employees (as the case may be) in the area to be served by the board. The persons representing such organizations or associations shall, as nearly as possible, be equal in number. Among the members of every board shall also be persons having a special knowledge of or experience in educational matters and social conditions.

The Act makes it obligatory for principals of schools situate within a board area to furnish to the board information regarding children who leave school while they are still juveniles. Employers of labour are also required to render returns to boards in respect of juveniles taken into or discharged from their employ.

The Minister may from time to time designate any officer to exercise powers and perform duties in relation to the supervision, welfare, training, employment, and assistance of juveniles, and to co-ordinate the work of the several boards; the Minister may also allocate the powers and duties of a board to any such officer, in any area where no board exists.

Statutory juvenile affairs boards are now operating at Pretoria, the Witwatersrand (3 boards—Central, East, and West), Potchefstroom, Rustenburg, Pietersburg, Brits, Capetown, Port Elizabeth, East London, Kimberley, Grahamstown, Graaff-Reinet, George, Upington, Bloemfontein, Kroonstad, Fauresmith, Durban, Pietermaritzburg, and Ladysmith (Natal). The only non-statutory advisory board still in existence functions at Kingwilliamstown. Non-statutory boards functioning in respect of non-European juveniles have been established at Capetown, Kimberley, Johannesburg, and Durban.

3. **Work of Juvenile Affairs Boards.**—It is a function of the boards to advise parents and children on all matters concerning the employment of juveniles and their careers, welfare, and further education. Employment bureaux are conducted to assist juveniles in finding work. Boards undertake to bring to the notice of the Government, other bodies, and the public generally, the existence of evils, and to suggest remedies, in all matters concerning the training and welfare of juveniles.

In recent years the boards have devoted an increasing measure of attention to questions of vocational guidance and after-care. To promote the vocational guidance activities of boards, the Witwatersrand Central Juvenile Affairs Board issues a monthly journal known as the *Careers Guide*, with a circulation of 11,000 copies. Annual grants-in-aid towards the publication of this journal are made by the Department of Labour and the four provincial education departments. The after-care work of boards involves the following up of juveniles after they have been placed in employment, with a view to ascertaining whether they are satisfactorily placed. They also endeavour to maintain contact with the individual, and in general are available to advise and help the juvenile on critical occasions during the period of adolescence.

The boards also engage in the systematic exploration and encouragement of new fields of employment for boys and girls (e.g. in the commercial distributive industry and in domestic service). They are empowered to collect and maintain such statistics bearing upon the employment of juveniles as are necessary to enable the problems affecting juveniles to be dealt with in the most advantageous manner.

The operations of boards from 1934 to December, 1938, are shown in the following statistics:—

OPERATIONS OF JUVENILE AFFAIRS BOARDS, 1934 TO DECEMBER, 1938.

Period.	Applications for Work.			Placed by Boards.			Found Work or Notified in Employment.			Total Found Employment.	Balance of Registered Juveniles.*	
	Boys.	Girls.	Total.	Boys.	Girls.	Total.	Boys.	Girls.	Total.		Boys.	Girls.

* At end of December.

Further figures concerning juvenile employment are included in the general statistical tables appearing earlier in this chapter. (See § 2, paragraph 4.)

§ 5. Apprenticeship.

1. **Apprenticeship.**—Prior to the passing of the *Apprenticeship Act*, 1922, apprenticeship in the Cape, Natal, and Transvaal Provinces was legalized under *Masters and Servants Acts*, which permitted the indenturing of apprentices under private contracts enforceable by either party. These provisions had, however, become unsuitable to modern industrial conditions, and it was felt that a system, having the force and sanction of law, should be devised, under which youths, to whom good educational opportunities were offered, could learn to become artisans. It was realized that the employment of skilled tradesmen implied the power and afforded the opportunity to train apprentices, and also that the early stage of such employment was highly educative, since it supplied a course which, in industry, was parallel to the secondary cultural course offered by the high schools. The view was held that modern apprenticeship must take its proper place in the educative system of the nation, and that this is the only sure method of training skilled workers. To meet the needs of the Union in these several respects the *Apprenticeship Act* of 1922 was passed.

2. **Apprenticeship Act.**—The provisions of this Act (Act No. 26 of 1922, as amended by Act No. 15 of 1924 and Act No. 22 of 1930) are applicable only to certain industries specified in the *First Schedule* to the Act or added by proclamation. The provisions of the Act cannot be applied in any industry, until the Minister has appointed an apprenticeship committee in respect of that industry in a defined area. Upon designation of any trade in such industry by the Minister on the advice of the committee, it becomes necessary for any employer who wishes to employ a minor in the trade for longer than four months to indenture him under the form of contract of apprenticeship provided in the regulations. The State assumes certain responsibilities relative to the enforcement of the terms of an apprenticeship contract and undertakes the scrutiny and registration of contracts. Payment of premiums is forbidden. Transfer and cancellation of contracts under certain circumstances are provided for.

The *Apprenticeship Act* came into operation on the 1st January, 1923. Regulations under the Act, relating chiefly to the contract of apprenticeship, were published in March, 1923, and have been amended from time to time.

Under an amending Act (No. 15 of 1924) it was constituted an offence for any person to bring pressure to bear on an apprentice to break the conditions of his contract. A clause in the form of contract of apprenticeship rendering it illegal for an apprentice to belong to a trade union was removed, and it was provided that an apprentice should not absent himself from his employment without the sanction of the Inspector of Apprenticeship. A further amending Act reduced the period of probation and made certain changes, mainly of an administrative nature, including a minimum compulsory attendance at technical classes in working hours.

3. **Apprenticeship Committees.**—Apprenticeship committees must consist of not fewer than five members, appointed for a period of three years by employers' and employees' organizations in the industry concerned; the chairman is appointed by the Minister. Recommendations of committees in regard to certain matters have the force of law, if approved by the Minister. The Minister may, in consultation with the committee concerned, prescribe the conditions of apprenticeship in any designated trade, including the period to be served, the qualifications for commencing apprenticeship, and the rates of wages to be paid to apprentices. Similarly, he may fix the number of apprentices who may be employed from time to time in any area.

The following apprenticeship committees are functioning under the Act:—

(i) *National.*

Government Apprenticeship Committee.
National Printing Apprenticeship Committee.
Railways and Harbours Apprenticeship Committee.

(ii) *Provincial and Local.*

Building.—Witwatersrand, Pretoria, Durban, Pietermaritzburg, Cape Division, Port Elizabeth, East London, Queenstown.

Building and Engineering.—Transvaal (Mines), Kimberley.

Building, Engineering, and Furniture.—Bloemfontein.

Carriage Building.—Witwatersrand.

Commercial Distributive Industry.—Bloemfontein.

Dental Mechanicians.—Witwatersrand and Pretoria, Cape Division, Port Elizabeth, Durban, Pietermaritzburg.

Engineering.—Transvaal, Durban, Cape Division, Port Elizabeth, East London, Queenstown, Pietermaritzburg.

Food (Baking and Confectionery).—Witwatersrand, Cape Division.

Food (Butchery).—Witwatersrand.

Furniture.—Cape Division, Durban.

Hairdressing.—Witwatersrand, Cape Division, Durban.

Leather Working and Bootmaking.—Witwatersrand and Pretoria, Cape Division, Port Elizabeth.

Motor Engineering.—Cape Division, Witwatersrand, Pretoria, Durban, Port Elizabeth.

The furniture apprenticeship committees appointed under the Act at East London and Port Elizabeth have ceased to function. The duties of these committees are now vested in the Inspector of Apprenticeship.

4. **Statistics of Operations under Apprenticeship Act.**—The following table gives comparative information regarding apprenticeship contracts registered, terminated, cancelled, and current from 1934 to 1938:—

APPRENTICESHIP ACT—CONTRACTS REGISTERED, TERMINATED, CANCELLED, AND CURRENT, 1934 TO 1938.

* Previously included in Engineering.

5. **Wages of Apprentices and other Conditions of Apprenticeship.**—The wages payable to apprentices may be regulated by the provisions of the *Apprenticeship Act* or by the terms of agreements arrived at under the *Industrial Conciliation Act* or of determinations under the *Wage Act*. Wherever an industry scheduled under the *Apprenticeship Act* is sufficiently well organized to avail itself of the provisions of the Act, it is encouraged to pursue this course, in preference to the insertion of apprenticeship conditions in agreements under the *Industrial Conciliation Act* or determinations under the *Wage Act*, both of which measures were primarily intended for the regulation of the working conditions of labour.

The following tables show at the 31st December, 1938, the weekly rates of wages paid to apprentices and other conditions of apprenticeship in the various industries, as fixed under the provisions of the *Apprenticeship Act*.

DEFINITION OF AREAS.

Area A.—The Cape Province, except Areas B, C, D, E, and F.

Area B.—The municipal areas of Worcester, Oudtshoorn, Mossel Bay, George, Knysna, Malmesbury, and the magisterial district of Tulbagh.

Area C.—The magisterial districts of Paarl, Stellenbosch, Somerset West, Wellington, Uitenhage, and Barberton (Transvaal).

Area D.—The municipal areas of Aliwal North, Burghersdorp, Queenstown, Kingwilliamstown, and Grahamstown.

Area E.—The magisterial districts of Bellville, the Cape (including Durbanville), Wynberg, Simonstown, Port Elizabeth, and East London. The Province of Natal, excluding the magisterial district of Durban. The Province of the Orange Free State, excluding the magisterial districts of Bloemfontein and Kroonstad. The Province of the Transvaal, excluding the magisterial districts of Barberton, Benoni, Brakpan, Boksburg, Germiston, Heidelberg, Johannesburg, Klerksdorp, Krugersdorp, Middelburg, Pietersburg, Potchefstroom, Pretoria, Springs, Standerton, and Ventersdorp.

Area F.—The magisterial districts of Kimberley, Hay, Herbert, and Barkly West (Cape Province). The magisterial districts of Heidelberg, Klerksdorp, Middelburg, Pietersburg, Potchefstroom, Standerton, and Ventersdorp (Transvaal). The magisterial district of Kroonstad (Orange Free State).

Area G.—The magisterial district of Durban (Natal). The magisterial district of Bloemfontein (Orange Free State).

Area H.—The magisterial districts of Krugersdorp, Johannesburg, Germiston, Boksburg, Benoni, Brakpan, Pretoria, and Springs.

(*b*) GOVERNMENT AND RAILWAY APPRENTICESHIP COMMITTEES.

In terms of section 13 (1) of the *Apprenticeship Act*, the Minister is precluded from fixing wages in respect of apprentices employed by the Railways and Harbours Administration and by government departments. In these cases the wages are fixed by the administration and the departments concerned respectively.

§ 6. The Wage Act, 1937, and the Wage Board.

1. **The Wage Act, 1937.**—The *Wage Act*, 1937, came into operation on the 15th December, 1937, and the *Wage Act*, 1925, ceased to be operative on that date. The objects of the new Act are similar to those of the 1925 measure, but its provisions have been amplified with a view to facilitating the operation of the Act. The provision for the appointment of a Wage Board consisting of three members, and for the appointment of divisions of the Board, has been retained. The chairman and members of the Wage Board, or a division, appointed under the 1925 Act and holding office when the new Act came into operation, are deemed to have been appointed under the latter measure. Trade unions and employers' organizations have the right to nominate additional members for specific investigations.

The powers of the Minister in regard to the initiation of Wage Board investigations have been amplified considerably. Under section 5, the Minister may direct that any investigation shall be in respect of any one or more classes of employees in any section of trade. In defining a class of employees, or a section of trade, the Minister may use any method of differentiation he may deem desirable, including differentiation by age, sex, experience, length of employment, or type of work or type or class of premises on which work is performed, but may not differentiate or discriminate on the basis of race or colour. Section 9, which sets out the matters on which the Board may make a recommendation, vests an identically worded discretion in the Board, in regard to the definition of classes of employees.

The necessity for safeguarding civilized standards of living is reflected in section 6, which requires the Wage Board to report, in connexion with every investigation, on the classes of employees to whom it would be equitable to pay remuneration at such rates as will enable them to support themselves in accordance with civilized standards. The points to be taken into consideration in reporting on this matter are the responsibility of the work performed by the employees concerned, the danger to health or life, the conditions under which work is carried on, and generally the nature of the work performed.

The matters on which the Board may make a recommendation are set out at length in section 9, and cover all phases of the relationship between employer and employee. In addition, the Board may make recommendations in regard to the rates at which payment shall be made by a principal or contractor to any person to whom work is given out on contract. Before making any recommendation, the Board is bound, by the provisions of section 8, to consider the ability of employers to carry on their business successfully should its recommendations

be carried into effect. The Board is given wide powers in regard to the collection of information, and section 14 forbids the members and officers of the Board to disclose information relating to any person, firm, or business, save for specified official purposes.

Under section 15, the Minister may publish any recommendation made by the Board, in order to give interested persons an opportunity to lodge objections. The Board may amend its recommendation after consideration of any objections. The Minister is empowered by section 16 to make a determination which, as in the previous Act, must be in accordance with a recommendation by the Board, including any amendments made under section 15, save that the Minister has the right to exclude from the determination any section of a trade, class of employee, or area. The Act contains a number of new provisions designed to facilitate—

(*a*) the cancellation or suspension of a determination, and
(*b*) extension of the area of application of a determination.

Due provision is made for consultation with the Wage Board in regard to the exercise of these powers, and for an opportunity to be given to interested persons to make representations to the Minister.

The provisions of the Act in regard to failure to observe the terms of a determination, orders of court for the payment of arrear wages, victimization of employees, appointment and powers of inspectors, registration of employers, etc., are identical with those contained in the *Industrial Conciliation Act* and described earlier in this chapter.

2. **The Wage Board.**—The first Wage Board was constituted on the 12th February, 1926, the day on which the *Wage Act*, 1925, was brought into operation. Mr. F. A. W. Lucas, K.C., was appointed chairman, and remained in office until the 20th August, 1935. On that date the periods for which the remaining two members had been appointed also expired. The new board was appointed on the 7th February, 1936; the personnel will be found in Chapter XXVIII.

At the end of December, 1938, the following determinations as to wages and hours and conditions of labour, which had been made by the Minister in consequence of investigations instituted by the Wage Board under Act No. 27 of 1925, as amended, and Act No. 44 of 1937, were in operation.

DETERMINATIONS OPERATIVE AT 31st DECEMBER, 1938.

Trade or Section of Trade.	Date Gazetted.	Area of Operation.
Baking and Confectionery	16/3/34	Magisterial districts of Durban, Inanda, Pinetown, and Pietermaritzburg.

Unskilled Employment	21/12/28	Bloemfontein.
Unskilled Work	9/9/38	Municipal area of Capetown.

* Applicable only to persons not covered by an Industrial Council Agreement.

The Department of Labour is responsible for the enforcement of wage determinations under the *Wage Act*, and maintains a staff of inspectors in the principal towns for that purpose.

§ 7. Other Industrial Legislation.

1. **Factories Act.**—The Department of Labour undertakes the administration of the *Factories Act*, No. 28 of 1918, as amended by Act No. 26 of 1931, which contains the following provisions:—

(i) *Administration.*—The appointment of a chief inspector, with inspectors under him for various industrial districts. Power of entry is given and full authority to inspect any factory or part thereof.

(ii) *Registration of Factories.*—All factories have to be registered, and no premises may be used as a factory until a certificate of registration has been obtained from an inspector of factories. Application for registration must be made on the prescribed form. An appeal lies to the Minister of Labour against any decision of an inspector in regard to registration.

(iii) *Employment in Factories.*—A record of employees must be kept. The occupier has also to keep affixed in a conspicuous place certain notices, giving the name and address of the inspector, the working hours of the factory, and an abstract of the Act and regulations.

(iv) *Supervision of Machinery.*—All machinery (except that defined in the *Mines and Works Amendment Act*, No. 22 of 1931, or under the control of the Administration of Railways and Harbours) is subject to the supervision of the Chief Inspector of Factories and his inspectors.

(v) *Regulations.*—The Governor-General may make regulations not inconsistent with the Act.

(vi) *Inquiries by Inspectors.*—In case of death or serious personal injury or other occurrence which makes an inquiry desirable, an inspector may hold an inquiry and summon witnesses to attend. In the case of an accident causing death or serious bodily injury, a copy of the evidence and report must be sent to the Attorney-General or the Solicitor-General. No worker of sixteen years of age or over may work for more than (*a*) 48 hours a week; or (*b*) 8 hours a day; or (*c*) 5 hours continuously. No person under sixteen years of age may work for more than (*a*) 45 hours a week; or (*b*) 8 hours a day; or (*c*) 4½ hours continuously (5 hours on half-holidays). All the foregoing hours are exclusive of meal times. The restrictions do not apply to persons of or over 16 years of age employed in starting motive power in the factory, making preparations for work, or cleaning up, or to unskilled work carried on in the open air. A special exemption may be given by the Minister in the case of a factory where the supply of raw material is intermittent, or subject to seasonal variation, or where raw material is liable to deterioration if untreated, or where continuous processes or the exigencies of the business render special hours necessary during certain times or seasons. Women may not be employed between 6 p.m. and 7 a.m., or boys under sixteen years of age between 6 p.m. and 6 a.m., subject to certain exemptions, which may be granted by the Minister, but which may not authorize work between 9 p.m. and 5 a.m. In exceptional cases, women over 16 years of age may be permitted to work until midnight: provided that they are not employed during any period for a number of hours in excess of the maximum number of hours of work prescribed by the Act or any other law for such females.

Overtime is allowed, but in the case of women and boys under sixteen years of age no overtime may be worked for more than three hours a day on three consecutive days of the week. In the case of women over sixteen years of age, overtime may not be worked on more than sixty days in a year, and in the case of all children under sixteen years of age, on more than twenty days in a year. Overtime in these cases is not allowed on holidays or half-holidays, except by permission of the inspector, and when the employees are willing. An overtime register must be kept in every factory.

No female may work in a factory during the four weeks preceding or the eight weeks following her confinement. Provision exists for the payment by the Government of an allowance not exceeding £1 per week during the twelve weeks above specified, if the female is solely dependent upon the wages she ordinarily earns, and where the father is unable to support the child.

Children under fourteen years of age may not be employed in any factory.

(vii) *Out-Work.*—Where work is given out, a record has to be kept for the guidance of the inspector. No such work may be sub-let, though it may be done by other members of the out-worker's family. The Act provides for a label, which may be attached by the inspector, to be affixed to work given out in connexion with the clothing and textile industries, where the work is performed under satisfactory and sanitary conditions.

(viii) *Noxious and Dangerous Occupations.*—Noxious and dangerous occupations may be so declared by proclamation.

(ix) *Holidays.*—Sundays and statutory public holidays are specified. Other days in the year may be substituted. No women or boys under sixteen years of age may work on Saturday afternoons, except when a half-holiday is provided for on some other day of the working week.

(x) *General Working Conditions.*—Provision is made for proper means of egress in case of fire; for proper sanitation, ventilation, lighting, drinking-water, and such matters.

The following regulations have been framed under the Act:—

Chapter I.—General (Government Notice No. 559/19, *Union Government Gazette*, 2nd May, 1919; amended by Government Notice No. 246/22, *Union Government Gazette*, 10th February, 1922).

Chapter II.—Handling of Hides and Skins and the Sorting of Wool and Mohair (Government Notice No. 2099/20, *Union Government Gazette*, 19th November, 1920).

Chapter III.—Bakehouses and Factories where Foodstuffs are Manufactured, Prepared, or Handled (Government Notice No. 2247/20, *Union Government Gazette*, 17th December, 1920).

Chapter IV.—Regulations dealing with First-Aid in Factories (Government Notice No. 2286/1925, *Union Government Gazette*, 21st December, 1925).

Chapter V.—Regulations dealing with the Use or Storage of Cellulose Solutions in Factories (Government Notice No. 268, *Union Government Gazette*, 14th February, 1930).

Chapter VI.—Regulations dealing with the Supervision and Control of Certain Machinery (Government Notice No. 1247/1931, *Union Government Gazette*, 31st July, 1931).

Full information with regard to the working of the Act is contained in the annual report of the Department of Labour.

Statistics with regard to factories will be found in the chapter on manufacturing industries (Chapter XXIII).

2. **Workmen's Compensation.**—(i) *Workmen's Compensation Act.*—Act No. 59 of 1934, amended in certain respects by Act No. 38 of 1936, consolidates, amends, and extends throughout the Union the law with respect to compensation for disablement caused by accidents to, or industrial diseases contracted by, workmen in the course of their employment, or death resulting from such accidents or diseases. The Act came into operation on the 1st July, 1935, and repeals all previously existing legislation in regard to workmen's compensation.

The following have been scheduled as industrial diseases: cyanide rash, lead poisoning or its sequelae, mercury poisoning or its sequelae, and ankylostomiasis (hookworm) in workmen other than Asiatics or natives.

All claims in respect of injuries caused by accident, resulting in the disablement or death of workmen, must be determined under and in accordance with the Act, and no action in respect of such claim lies at common law.

A summary of the procedure laid down in the Act for the recovery of compensation has been prescribed, and a printed copy thereof must be displayed by every employer in a conspicuous place.

The Act describes what persons are workmen and the dependants of workmen, and sets out the compensation payable, which is based upon the earnings of the workman at the time of the accident. Compensation takes the form of lump-sum payments in certain cases, and monthly pensions in others. Pensions are also provided for the children of workmen who have died as the result of accident, and continue until each child has reached the age of 16 years or dies or marries before that age. In certain cases the continuation of the pension after the age of 16 may be ordered. In all cases where the compensation due to a major exceeds £200, and to a minor £50, the directions of the Workmen's Compensation Commissioner are necessary before payment can be made. This also applies to the payment of pensions in respect of children.

In addition to compensation, employers must also defray, during a period not exceeding one year from the date of accident, the reasonable expenses incurred by workmen in respect of medical, surgical, or hospital treatment, skilled nursing services, and the supply and repair of artificial limbs and apparatus in connexion with injuries, but these must not exceed in all the sum of £100.

Contracts entered into whereby workmen or their representatives relinquish any right to compensation are null and void, but under section 16 provision exists for a workman to agree that the employer shall pay less than the amount payable under the Act—but not less than one-half—if a district surgeon has certified that by reason of old age, serious physical infirmity, or any previous injury, such person is specially liable to meet with an accident or to sustain an injury if employed as a workman. The Act requires all employers, other than the Crown, the State, and any Provincial Administration, to obtain from a licensed insurance company or association a policy of insurance or indemnity for the full extent of their potential liability under the Act to all workmen employed by them; failure to do so is an offence. An employer who proves to the satisfaction of the Minister that he has established a fund for insurance against liability under the Act and has deposited with the Treasury sufficient security to meet all payments which may become due from him may, subject to certain conditions, be exempted from the duty of insuring against liability under the Act.

Compensation in the case of native workmen is on a different scale from that for European, Asiatic, and Coloured workmen, and is in the first place to be assessed by an officer appointed for the purpose. The officer may in addition award the allowance payable in respect of medical, surgical, and hospital treatment, but only to an amount not exceeding £25.

Various regulations have been framed for the better carrying out of the objects and purposes of the Act.

The administration of the *Workmen's Compensation Act* has been assigned to the Minister of Labour, and an officer styled the Workmen's Compensation Commissioner has been appointed and given certain functions and duties which are prescribed in the Act.

(ii) *Statistics.*—The following tables give information regarding accidents which occurred during the period 1st July to 31st December, 1935, and were reported in terms of the *Workmen's Compensation Act.*

Employers are not liable for compensation to natives who are disabled for less than 6 weeks, provided food, quarters, and medical aid are supplied by the employer. Such cases are not reported to the Commissioner and are not included in the statistics.

The figures given refer to all cases reported to the Commissioner by general assurance companies, the Rand Mutual Assurance Co., government departments, the South African Railways and Harbours Administration, and exempted employers.

* Excluding pensions and lump sums paid on account of commuted pensions. [See tables (iv) and (v).]

Table (iv) excludes pension payments and also lump sums paid on account of commuted pensions [see Table (v)]. It also excludes medical cost of cases which occurred on gold mines insured with the Rand Mutual Assurance Co., and on the S.A. Railways & Harbours. During the six months ended 31st December, 1935, 35,498 natives who were disabled in gold mining accidents were treated in hospital at an estimated cost of £62,280. To this must be added the medical cost of European casualties, which is estimated at about £6,300 per month. The annual medical cost on account of injuries to servants of the S.A. Railways and Harbours Administration is estimated at £15,000.

The large amount shown against "Sundries" under the Rand Mutual Assurance Co. consists almost entirely of *ex gratia* periodical payments and not transportation costs as in other cases.

3. **Workmen's Wages Protection.**—The *Workmen's Wages Protection Act* (No. 15 of 1914) was passed "to make better provision for securing the payment of workmen's wages." It provides generally that wages due to a workman shall form a first charge upon money payable to a contractor by his principal, and that assignments and attachments are void as against the claims of workmen.

Other provisions of the Act and particulars of the procedure to be adopted under it are summarized in No. 5 and previous issues of this *Year Book*.

Owing to the protection given to employees by subsequent legislation, such as the *Wage Act* and the *Industrial Conciliation Act*, the number of cases in which workmen make use of the provisions of the *Workmen's Wages Protection Act* is not very great.

§ 8. International Labour Organization.

1. **International Labour Conferences.**—An account of the International Labour Organization established under the Treaty of Versailles will be found in the sixth and previous issues of this *Year Book*. These also contain particulars of the first four general conferences held under the auspices of the International Labour Office each year since 1919, the Union being represented at all except the second. Information as to subsequent conferences will be found in the seventh and later issues of the *Year Book*.

During 1936, in addition to the general annual session of the conference, two special maritime sessions (the twenty-first and the twenty-second) were held. Owing to the paucity of Union-owned shipping and the consequent small number of seamen affected, representation of the Union at these two sessions was not considered necessary, and accordingly no South African delegation attended.

At the twenty-first session, five draft conventions were adopted, namely: No. 53, concerning the minimum requirement of professional capacity for masters and officers on board merchant ships; No. 54, concerning annual holidays with pay for seamen; No. 55, concerning the liability of the shipowner in case of sickness, injury, or death of seamen; No. 56, concerning sickness insurance for seamen; and No. 57, concerning the hours of work on board ship and manning. One further draft convention, No. 58, fixing the minimum age for the admission of children to employment at sea (revised 1936), was adopted at the twenty-second session. The Union Government found itself unable to ratify any of these conventions.

The twenty-third (general) session was held in June, 1937, when four draft conventions were adopted: two of these, which lay down a minimum age for the admission of children to employment—No. 59, covering industrial employment, and No. 60, non-industrial—revise previous conventions dealing with the same matters by raising the minimum age from 14 to 15 years, while the remaining two—No. 61, concerning the reduction of hours of work in the textile industry, and No. 62, concerning safety provisions in the building industry—cover new ground. The question of the ratification of these conventions by the Union Government is under consideration.

The twenty-fourth (general) session was held in June, 1938, and was attended by a South African delegation consisting of eight members, four representing the Union Government and two each the employers and workers respectively. One draft convention (No. 63) concerning statistics of wages and hours of work in the principal mining and manufacturing industries, including building and construction, and in agriculture, was adopted, and has since been ratified by the Union Government, advantage being taken of the provision therein, which enables Governments to supply only certain of the specified statistics. Accordingly in so far as South Africa is concerned, the information to be forwarded annually to the International Labour Office will consist of statistics of the time rates of wages and normal hours of work in mining and manufacturing industries.

2. **Labour Conventions Ratified by South Africa.**—The following conventions framed at the International Labour Conference have been ratified by the Union Government:—

(*a*) Convention (No. 2) concerning unemployment (adopted at the first session of the conference, 1919).

(*b*) Convention (No. 4) concerning the employment of women during the night (adopted at the first session of the conference, 1919). This convention was amended in 1934; the amended version was ratified by the Union, and the ratification of the original was accordingly denounced, with the proviso that the denunciation was to take effect only when the revised convention (No. 41) should have come into force [see (*f*) below.]

(*c*) Convention (No. 19) concerning equality of treatment for national and foreign workers as regards workmen's compensation for accidents (adopted at the seventh session of the conference, 1925).

(*d*) Convention (No. 26) concerning the creation of minimum wage fixing machinery (adopted at the eleventh session of the conference, 1928).

(*e*) Convention (No. 27) concerning the marking of the weight on heavy packages transported by vessels (adopted at the twelfth session of the conference, 1929, and to take effect after ratification by Great Britain, Germany, France, and Italy).

(*f*) Revised convention (No. 41) concerning the employment of women during the night (adopted at the eighteenth session of the conference, 1934).

(*g*) Convention (No. 45) concerning the employment of women on underground work in mines (adopted at the nineteenth session of the conference, 1935).

(*h*) Convention (No. 63) concerning statistics of wages and hours of work in the principal mining and manufacturing industries, including building and construction, and in agriculture (adopted at the twenty-fourth session of the conference, 1938).

It should be pointed out that, though the Union has formally ratified only a small proportion of the conventions, the principles embodied in the majority of these conventions form an integral part of the legislative and administrative system of the Union. Where formal ratification has not been possible, it has frequently been due to the fact that the conventions contain points of detail which are not strictly applicable to the conditions prevailing in the Union of South Africa.

§ 9. Wages and Hours of Labour of European Workers.

1. **Introductory.**—Since the end of the year 1919 the Office of Census and Statistics has undertaken the collection of statistics of wages, hours of labour, trade unionism, and cognate matters in the Union on a regular and comprehensive plan. Prior to that year no systematic or complete record had been maintained. The task of compiling statistics covering a long series of past years was one of magnitude, particularly as the necessary data could not be obtained under statutory authority, but only by enlisting the assistance and co-operation of representative employers of labour and others. With the application of the *Statistics Act*, it became possible to put the annual collection of statistics of wages and other aspects of industrialism on a satisfactory and sure basis. The methods followed in inaugurating the system and in obtaining data and computing results for earlier years were set out in detail in the reports on wages, etc., published in the "Social Statistics" series (S.P. 23, 1921, and S.P. 35, 1922) issued by the Office of Census and Statistics. These publications are now out of print.

From *Official Year Book* No. 11 onwards the method of presentation of wage statistics differs from that used previously. In the earlier issues *averages* were employed in cases where standard minimum wage rates were not available; but, as will be seen from the tables appearing later in this chapter, standard minimum wage rates are now employed wherever possible, these being supplemented in a few instances by average wage rates.

Information is now given in respect of well-defined occupations in the various industries rather than in respect of an industry as a whole. Cognizance is taken only of occupations which fall within the scope of wage determinations or industrial council agreements, or which show a sufficient number of employees to make it possible to obtain a certain amount of stability in compiling wage rate records from year to year. This entailed a careful revision of wage rates as used for index purposes, and recalculations were made as far back as 1926. (See also paragraph 3.)

2. **Scope of Inquiry.**—The following groups of occupations are now utilized in the computation of wage statistics:—

I.—Gold Mining (Witwatersrand).
II.—Diamond Mining (Kimberley).
III.—Engineering and Metal Working.
IV.—Building.
V.—Printing, Bookbinding, etc.
VI.—General Manufacturing.
VII.—Transport and Communication (Railways, Harbours, Tramways, and Posts).
VIII.—Trading.

It will be observed that this list does not include the clerical, domestic, and miscellaneous groups appearing in *Official Year Book* No. 10 and previous issues. For the last two of these groups it has always been found a matter of considerable difficulty to secure adequate information, while the clerical group has been omitted for technical reasons.

Wage rates payable to Europeans (male and female) for full-time work, in a range of specific occupations under the selected groups of industry, are obtained in respect of each of the nine principal industrial centres, and in the case of occupations in manufacturing industry, in respect of certain areas outside those centres. Particulars of wages paid to coloured persons and natives were not called for at the initial investigations, but were ascertained for the first time in the year 1921.

3. **Methods of Collection and Computation.**—A statement on the methods of collection and computation adopted in the wage statistics inquiry was given in the sixth issue of this *Year Book*. In connexion with the basic changes mentioned above, and in order that the sequence of the index numbers should not be broken, two separate calculations were made for the year 1926, one on the old basis and the other on the new. The second calculation has been utilized for making comparisons with years subsequent to 1926, and the relative increases or decreases have been applied to index numbers for 1926 calculated on the old basis.

An examination of employment in industry according to the 1926 Population Census revealed the fact that, except in the case of mining, the proportions of the European population in any particular class of employment in the different towns did not vary materially as between town and town. It was, therefore, decided to re-weight the indexes of wages (mining wages excepted) in the same proportion as is done in the calculation of retail price indexes. This facilitates the calculation of real wages direct from the retail price indexes for the averages of the nine towns. In the case of gold mining, the price indexes of the Witwatersrand have been utilized, and in the case of diamond mining those of Kimberley.

4. **Variations in Nominal and Real Wages.**—The term *nominal wage* is used to signify the actual amount of money which would be received in return for labour for the full number of hours per week, whether full time is actually worked or not. By *real wage* is meant a wage equivalent in purchasing power, i.e. purchasing power according to the price indexes calculated under the *Statistics Act*. It should be noted that in calculating real wages the factor of unemployment has not been taken into account, for the reason that complete statistics of unemployment have not up to the present been obtainable in the Union. Nominal wages are specified in the tables below from 1895, real wages from 1910.

The Government Mining Engineer, from whose statements the wages paid in diamond mining are obtained for the following calculations, states with reference to the figures for 1932: "The lower rates paid for wages on the diamond mines are due to temporary arrangements made to enable men to be retained in employment." In consequence the indexes in Class II for 1932, 1933, and 1934 are not quite comparable with the indexes for other classes in those years, as no allowance is made in the latter for short time worked.

The following tables (i) and (ii) give index numbers of nominal and real wages in eight groups of occupations for certain years up to and including the year 1938.

Index numbers for "All Groups" for a complete series of years from 1910 will be found in a table at the end of § 5 in Chapter VII.

(i) INDEX NUMBERS OF AVERAGE WEEKLY WAGE RATES—EUROPEAN ADULT MALE WORKERS IN EACH OF EIGHT CLASSES OF OCCUPATION (THE BASE IN EACH CASE=UNION AVERAGE FOR EACH CLASS IN 1910=1000).

1938	20 3	17 11	21 3	24 2	21 7	23 6	23 3	24 5*	22 8*

* The 1938 figure for Trading (Class VIII) is not yet available. These rates have, however, been estimated on the basis of the percentage change in 1938, as compared with 1937, in the nominal wage rates of the remaining seven groups as a whole.

5. **Adult Male European Wage Rates.**—The following tables give particulars of wages paid to European adult male workers in certain occupations at the different dates specified. Where possible, standard minimum wages, as laid down by Wage Board determinations or industrial council agreements, have been utilized.

Mining.—The wages shown in the following table were the average rates paid to certain adult male European employees in the mining industry on the third Wednesday of June, 1938. The working hours per week were:—Underground occupations: Witwatersrand Gold Mines, 48½, bank to bank; others, 48.

* Surface hands. † Per mensem.

Building, Printing, etc.—The wage rates throughout the following table are the standard minimum wage rates paid to adult male European employees in certain industries at 30th September, 1938, or approximately at that date. The rates are those agreed on by industrial councils or fixed by the Wage Board.

II. BUILDING, PRINTING, ETC.

Occupation.	Cape Peninsula.	Port Elizabeth.	East London.	Kimberley.	Pietermaritzburg.	Durban.	Pretoria.	Witwatersrand.	Bloemfontein.
	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.
(a) BUILDING—PER HOUR (44 hrs. per week).									
Carpenters, Plumbers, Bricklayers, Masons, Electricians	3 2	3 0	2 11	2 0*	3 4	3 4	3 6	3 6	3 3
Painters, Glaziers, Paperhangers	2 6	2 9	2 7	1 6*	3 0	3 0	3 4	3 4	3 0

* Wage rates in Kimberley are not governed by law; the rates shown are the predominant ones from wage returns.

II. BUILDING, PRINTING, ETC.—*continued.*

Occupation.	Cape Peninsula.	Port Elizabeth.	East London.	Kimberley.	Pietermaritzburg.	Durban.	Pretoria.	Witwatersrand.	Bloemfontein.
	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.
(b) ENGINEERING—PER HOUR (48 hrs. per week).									
Blacksmiths, Boilermakers, Brassfinishers, Fitters, Moulders, Turners, Patternmakers, Electricians	2 9	2 7	2 8	2 9	2 6	2 9	2 9	2 9	2 7

NOTE.—Industrial council agreements were in force in all towns except Kimberley, Pietermaritzburg, and Bloemfontein. For these areas the rates shown are the predominant ones from wage returns.

(c) PRINTING—PER WEEK (40 to 46 hrs.).

Typesetting machine operators	Day..	130 9	130 9	130 9	137 3	130 9	147 3	152 9	152 9	145 0

6. **Comparison between Wages in South Africa and those in Other Countries.**—An attempt is made here to institute a definite comparison between wages paid in South Africa and those paid in the United Kingdom, Canada, Australia, and New Zealand. For this purpose the building trade has been chosen for the following reasons:—(i) The average wages paid in this trade approximate very closely to the general average of all trades in South Africa and apparently are almost equally typical of the average in other countries; and (ii) better and more directly comparable statistics are available for this trade than for others.

The arithmetical average of the wages paid to bricklayers, masons, carpenters and joiners, plumbers, plasterers, and painters in the principal towns has been computed. Labourers have been omitted in all cases, on account of the difficulty of comparing South African native labour with the European labour of other countries. From 1937 the averages have been calculated from information published by the International Labour Office and they refer to the month of October throughout. Details as to how the averages were previously calculated will be found in *Year Book* No. 19.

The information up to 1936 relates to September for the Union, June for Australia, average for the year for Canada, March for New Zealand, and December for the United Kingdom.

The results are as follows:—

(i) WEEKLY WAGE RATES—MALE ADULT EUROPEAN WORKERS IN THE BUILDING INDUSTRY IN SOUTH AFRICA AND OTHER COUNTRIES, 1910, 1914, AND 1933 TO 1938.

Country.	1910 (Average).	1914 (Average).	1933.	1934.	1935.	1936.	1937.	1938.
	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.
South Africa.....	94 6	98 3	123 3	122 1	137 10	140 4	141 1	142 11
Australia.....	64 2	70 5	102 10	102 7	104 0	105 7	111 11	116 9
Canada.....	88 10	97 10	138 4	133 10	137 2	138 4	143 4	150 2
New Zealand.....	63 10	66 8	90 9	90 9	90 5	91 11	101 3	111 11
United Kingdom.....	—	39 5	65 5	65 6	67 4	69 4	71 7	73 6

Comparative figures of price indexes of food, fuel, light, and rent have been calculated for the different countries at the par rate of exchange. The two sets of figures are utilized in combination in the following table of international comparisons, which shows the real value of the wages paid as opposed to the nominal wages detailed in the above table (South Africa in 1910 = 1000). Price index figures for the months mentioned have been used in making the calculations.

(ii) INDEX NUMBERS OF REAL WAGE RATES IN THE BUILDING INDUSTRY IN SOUTH AFRICA AND OTHER COUNTRIES, 1910, 1914, AND 1933 TO 1938.

(South Africa in 1910 = 1000.)

Country.	1910 (Average).	1914 (Average).	1933.	1934.	1935.	1936.	1937.	1938.
South Africa.....	1000	965	1108	1092	1251	1251	1229	1222
Australia.....	976	914	1151	1146	1134	1127	1128	1112
Canada.....	1163	1129	1508	1436	1457	1434	1402	1475
New Zealand.....	1007	933	1027	1009	978	972	972	1045
United Kingdom.....	—	721	888	883	898	886	873	921

It must be emphasized that in the above calculations account has been taken only of the prices of food, fuel, light, and rent. The prices of other commodities and services in the Union have exceeded the increases above indicated, and, in so far as they have been similarly affected in other countries, would, if taken into account, tend to reduce the figures in Table (ii) as far as post-war years are concerned.

7. **Overtime.**—Rates of payment for time worked in excess of ordinary working hours exist in respect of skilled crafts, tramway occupations, and other employment. These rates are in most cases based upon standard rates of wages and usually comprise "time and a quarter", "time and a half," or "double time" applicable to weekday, Sunday, and public holiday overtime with greatly varying incidence. In some cases, for example, "time and a half" is payable for weekday overtime worked, in others for Sunday time, and in yet others for time worked on public holidays. The overtime rate in certain instances increases for work performed after midnight. In certain classes of occupation overtime rates apply after the normal hours have been worked on any one day; in others only after the normal weekly hours have been worked.

8. **Standard Minimum Wage Rates of Female Workers.**—The subjoined table gives some standard minimum rates of wages paid to adult female workers in certain industrial areas at 30th September, 1938, or as near as possible to that date. The rates shown are those that have been laid down by the Wage Board, or have been agreed upon by industrial councils.

STANDARD MINIMUM WAGE RATES OF FEMALE WORKERS AS AT 30th SEPTEMBER, 1938.

9. **Hours of Labour of European Employees.**—The hours of labour worked by Europeans in the various occupations and branches of industry have of recent years tended towards greater uniformity. The International Labour Conference at Washington recommended a 48-hour week; and except in relatively few instances the terms of that recommendation apply to industrial conditions in South Africa. Further particulars on the subject will be found in the sixth issue of this *Year Book*.

10. **Legal Regulation of Wages.**—As has been shown in previous sections in this chapter, various types of machinery exist under Union legislation for the fixing of standard wages and wage-scales, together with other conditions of labour. Under the *Regulation of Wages, Apprentices and Improvers Act*, 1918, local wage boards were established for the purpose. The awards made by these bodies have been largely superseded by the provisions of the *Apprenticeship Act* of 1922, as amended by Act No. 22 of 1930, and the *Wage Act* of 1925, superseded in 1937 by Act No. 36 of 1937, which are described in § 5 and § 6 respectively. Apprenticeship committees govern wage and labour conditions of apprentices in designated trades and specified areas, while the Minister of Labour, acting in accordance with the recommendations of the Wage Board, has powers to regulate wages, etc., in practically every form of

industry and trade (agriculture, public employment, and domestic service being the exceptions). Under the *Industrial Conciliation Act* of 1924, superseded in 1937 by Act No. 44 of 1937, the principle of voluntary regulation of wage and labour conditions by the industries themselves is given full recognition (see §3), the decisions of the various bodies representative of employers and employees being granted the force of law, if they are shown to command a sufficient measure of agreement from the parties concerned. In addition, wages may be regulated under this Act by the findings of appointed conciliation boards and by arbitrators' awards.

§ 10. Wages and Hours of Labour of Non-European Workers.

1. **General.**—It is generally admitted that the prosperity of South African trade and industry depends to a very great extent on an adequate supply of relatively cheap, unskilled non-European labour. This labour is available in the form of (*a*) Cape Coloured, (*b*) Asiatics, (*c*) natives.

The Cape Coloured, chiefly resident in the western and south-western districts of the Cape Province, are mainly engaged in agricultural and domestic pursuits, while in the urban areas many have attained a sufficient degree of skill to secure for themselves standard European wages in such industries as furniture, building, engineering, printing, and tailoring.

The Asiatics, chiefly domiciled in Natal, are employed for the greater part in trade, industry, and domestic service, and a large number work in the cane fields and sugar mills and in coal mines.

The natives distributed throughout the four provinces constitute the chief labour force in agriculture, trade, and industry. A considerable number is engaged in domestic service, while in the railway service unskilled native labour predominates. The Witwatersrand mining industry accounts for a very large number of native labourers, who are absolutely essential for the prosperity of the mines.

The ratio of non-European to European labour varies considerably from one industry to another, but the former element generally predominates. Thus in September, 1938, there were 304,068 natives and other coloured labourers employed on large producing and non-producing gold mines of the Witwatersrand, as against 38,416 European artisans and labourers, giving a ratio of 7·9 to 1. For producing coal mines in the Transvaal and Natal the numbers employed at the same date were 28,951 non-Europeans and 1,737 Europeans, giving a ratio of 16·7 to 1.

2. **Non-European Wages.**—(i) *Farming.*—A certain amount of information is available as regards wages paid to natives in agriculture. The most reliable is that collected by the Division of Economics and Markets of the Department of Agriculture and Forestry in its various farm-economic investigations. In the following table is shown the cost to the farmer of a grown-up native labourer as computed in some of the latest investigations. Costs of native labour in earlier studies were shown in previous issues of the *Official Year Book*. An analysis of native wages in agriculture is also given in fair detail in the report of the Native Economic Commission, published in 1932.

COST OF NATIVE LABOUR PER YEAR.

Type of farming and area.	Year.	Cash.	Rations.	Grazing.	Land.	Total.
		£	£	£	£	£
Peanut farming (N. Transvaal)—	1935–36					
Tenant labourers		11·3	4·5	3·0	·8	19·6
Hired labourers		12·9	4·5	—	—	17·4
Irrigation farming (W. Transvaal)—	1937–38					
Tenant labourers		5·9	4·4	1·9	1·6	13·8
Hired labourers		14·9	4·5	—	—	19·4
Mixed Farming (North-Eastern Orange Free State)—	1937–38					
Tenant labourers		5·0*	5·3	4·8	0·9	16·0
Hired labourers		15·7	4·4	—	—	20·1
Maize Farming (Western Transvaal)—	1937–38					
Tenant labourers		3·9*	4·8	2·0	0·6	11·8
Hired labourers		15·7	4·6	—	—	20·3

* Including taxes paid by employers on behalf of the labourers.

It must be noted that these figures represent the cost of the labour to the farmer, but they do not reflect the actual value of the earnings of the native tenants. The figures for land are arrived at by taking a 5 per cent. interest charge on the land cultivated by the native, irrespective of the value of the crops obtained from this land. Actually the income of the native from the land is in most cases considerably higher, and in the case of the peanut farms, for instance, represents an additional amount of approximately £7 per annum to the native tenant. In addition to the privileges of land and grazing the native also gets a small house in which to live and free use of water and wood.

(ii) *Railways and Harbours.*—The average wage rates paid to unskilled native labourers in the service of the Railways and Harbours Administration during a series of years are given in the following table. All these averages are based on 20,000 to 30,000 employees.

NON-EUROPEAN LABOURERS—SOUTH AFRICAN RAILWAYS AND HARBOURS (PER WEEK).

1912–13.	1913–14.	1921–22.	1929–30.	1934–35.	1935–36.	1936–37.	1937–38.	1938–39.
s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.
11 10	13 1	19 0	17 0	15 5	15 9	16 3	16 7	17 2

(iii) *Mining.*—During September, 1938, the mining industry employed, according to the Government Mining Engineer, 411,695 non-Europeans, chiefly natives. Of these no fewer than 334,920 were engaged on large gold mines in the Transvaal. Coal mining and by-products works accounted for 31,872; diamond mining for 4,740; and alluvial diamond diggings for 9,664.

The natives employed on the Witwatersrand gold mines are housed in compounds and fed at the expense of the mining companies. With the exception of diamond mines in the Transvaal and mines in the Cape, where natives are housed only, it is general for companies to provide their coloured employees with free quarters and food. The average rate of native money wages per shift during September, 1938, was 2s. 2d. on producing mines and 2s. 7·1d. on developing mines. The cost of compound services to the Chamber of Mines per native per shift was approximately 12·1d.; but the value of these services to the native is estimated at 1s. 6d. at least, if he had to purchase them as a private individual.

The hours of work vary from mine to mine and in different occupations, but in no case do these exceed 48 hours per week on gold mines and 52 on coal mines.

The average rate of native money wages in the Transvaal coal mines during September, 1938, was 2s. 0d. per shift.

The average monthly wage for natives engaged in different classes of mining is given in the following table for a series of years.

NATIVE MINING WAGES (PER MONTH, EXCLUDING HOUSING AND FOOD).

Year.	Gold.	Coal.		Diamonds.	
	Witwatersrand.	Transvaal.	Natal.	Cape of Good Hope.	Transvaal.
	s. d.	s. d.	s. d.	s. d.	s. d.
1934	56 7	51 6	46 5	66 8	70 9
1935	57 1	51 7	46 2	69 11	67 0
1936	58 5	51 6	46 4	75 4	66 5
1937	58 4	51 11	48 1	78 0	69 0
1938	58 9	52 8	49 7	80 0	69 1

(iv) *Commerce, Trade, and Industry.*—As already remarked, a very great number of non-Europeans is engaged in trade and industry generally. Many Cape Coloured, as well as Asiatics, are employed in such industries as building, engineering, printing, and furniture at standard European wage rates, but the great majority do unskilled or semi-skilled work. The natives on the other hand are much less skilled and consequently do most of the rough manual labour. Many work in and about shops and warehouses as cleaners, warehousemen, and porters, while a large number are employed as drivers, packers, etc. By far the greatest number, however, are engaged in such industries as building, brickmaking, and engineering as unskilled labourers. Native wages are, therefore, comparatively low; in fact only a very small proportion earn as much as £5 per month.

The table below contains fairly reliable data with regard to the average wages paid to unskilled native labourers employed in various classes of trade, commerce, and industry. The figures have been obtained from wage returns collected by the Office of Census and Statistics and include the estimated value of food and lodging as well as any other benefits.

NATIVE WAGES—INDUSTRY, TRADE, ETC., SEPTEMBER IN EACH YEAR (PER WEEK).

Year.	Cape Peninsula.	Port Elizabeth.	East London.	Kimberley.	Pietermaritzburg.	Durban.	Pretoria.	Witwatersrand.	Bloemfontein.	Natal Sugar Mills.
	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.
1933	22 3	19 9	20 0	18 5	17 4	16 8	15 7	19 0	20 9	11 8
1934	24 4	21 0	19 4	17 9	16 5	16 5	14 11	18 5	20 4	12 10
1935	25 4	23 1	20 3	18 8	17 3	16 10	16 1	18 4	20 4	12 2

1937	26 6	23 6	20 1	17 5	16 0	17 11	17 9	19 7	20 9	11

3. **Standard Wage Rates.**—Schedules of standard minimum rates of wages, determined or agreed on in terms of the *Wage* and *Industrial Conciliation Acts* generally, provide for unskilled workers in addition to the rates fixed for semi-skilled and skilled artisans. In this way native unskilled labourers earn standard rates of wages in several trades and industries. There is, however, only one determination which affects all native unskilled workers in a specified area, namely Determination No. 25; this fixed the minimum wages per day and per week at 3s. 6d. and 20s. respectively, within a radius of 15 miles from the General Post Office, Bloemfontein.

The following examples of wage rates, which have been laid down from time to time for unskilled workers (mainly natives) under industrial legislation, indicate the level of wages paid to such labour in typical industries.

	s. d.	
Footwear Industry	25 0	per week. Throughout the Union.
Biscuit Baking	30 0	" " "
Cleaning, Dyeing, and Laundering	22 6	" Nine Industrial Areas.
Sweetmaking	24 0	" " "
Furniture	30s. in the Cape Peninsula; 24s. in the other large industrial areas.	
Motor Industry (per week)	Cape Peninsula, 27s. 1d.; Durban and Pietermaritzburg, 18s.; Witwatersrand and Pretoria, 20s.	
Building Industry (per hour)	Cape Peninsula, 9d.; East London, 5d.; Port Elizabeth, 7½d.; Durban and Pietermaritzburg, 5d.; Witwatersrand and Pretoria, 5½d.; Bloemfontein, 5½d.	
Building, Brewing, Canvas and Clay, Engineering, Milling and Mineral Waters, Printing, Houses and Shops, Transportation	3 6 per day 20 0 per week	Area within 15 miles radius from General Post Office, Bloemfontein.

§ 11. Miners' Phthisis: A Problem of Labour.

1. **General.**—The history of miners' phthisis legislation, commencing with Act No. 34 of 1911 up to and including the consolidating Act, No. 40 of 1919, has been traced in previous issues of this *Year Book* (Nos. 1 to 6). Recent legislation includes amending Act No. 35 of 1924, consolidating Act No. 35 of 1925, and amending Acts Nos. 38 of 1930, 60 of 1934, 23 of 1936, and 6 of 1938. The 1925 Act consolidates all legislation on the question of miners' phthisis, and makes certain additional provisions for beneficiaries and their dependants. A résumé of Act No. 35 of 1925 was published in *Year Books* Nos. 9 and 10, together with a statement in parallel columns showing the extent of the principal changes between the Act of 1919 and the Act of 1925, and reference is made to the amending Act of 1930 in this and previous issues of the *Year Book*. A statement showing the more important amendments resulting from the passing of Act No. 60 of 1934 appeared in *Official Year Book* No. 17. The administration of the miners' phthisis laws is vested in the Miners' Phthisis Board. All purely medical matters are dealt with by the Miners' Phthisis Medical Bureau, which has an entirely independent organization.

At the 31st March, 1938, applications had been received by the Board from or in respect of 28,696 miners or deceased miners, and at that date 17,576 awards had been made as follows:—

Under Act No. 34 of 1911	57
Under the Prior Law (1.8.12 to 31.7.19)	9,070
Under the 1919 and 1925 Acts	8,449
TOTAL	17,576

At the 31st March, 1938, an aggregate amount of £18,069,267 had been paid as compensation to and in respect of silicosis and tuberculosis sufferers under the *Miners' Phthisis Acts* since the inception of miners' phthisis legislation in 1911, the amount so paid, since the 1919 Act came into operation, being £14,271,350.

The following tables show for the years 1934 to 1938 (i) the allowances received by miners and their dependants and (ii) the allowances received by dependants of deceased miners.

(i) ALLOWANCES RECEIVED BY MINERS AND DEPENDANTS, 1934 TO 1938.

3. **Medical Examinations.**—The following tables give particulars of medical examinations held in respect of applications to benefit under the *Miners' Phthisis Acts* and in respect of miners employed or to be employed underground on the mines.

(i) SUMMARY OF THE WORK OF THE MINERS' PHTHISIS MEDICAL BUREAU (1st AUGUST TO 31st JULY), 1936-37 AND 1937-38.

Nature of Examination or Investigation.	1936–37.		1937–38.		Relevant Section of Act of 1925.
	Number of Examinations made.	Number of Individuals dealt with.	Number of Examinations made.	Number of Individuals dealt with.	
European Miners.					
Initial Examinations	18,931	16,779	18,899	16,762	46
Special Examinations	1,962	1,139	2,160	1,291	44, 46
Periodical Examinations	47,982	26,378	50,862	28,414	44, 45
Benefits Examinations	2,736	2,606	2,481	2,390	22, 23, 26, 29
Claims in respect of Deceased Miners	402	402	395	395	25, 27
Claims for Allowances to Children of Beneficiaries	112	107	118	108	Third Schedule (*d*)
"Rehabilitation" Examinations	15	—	19	—	20 of 1934
"Special Authorization" Examinations	65	42	54	32	25 of 1934
Stall-holders' Examinations	46	29	42	26	51, 52, Act 36 of 1934.
Non-European Miners.					
All Examinations	1,369	876	1,256	835	22, 23, 25, 26, 27, 29, 44, 45, and 46
Native Labourers.					
All Examinations	2,198	2,198	2,347	2,347	35
TOTAL ROUTINE EXAMINATIONS	75,818	50,556	78,633	52,600	—
Supplementary Investigations.					
Post-mortem Examinations—					
(1) Europeans	370	—	357	—	—
(2) Native and other Non-European Labourers	282	—	321	—	—
Admission to Hospital for Observation	120	—	106	—	—
*Special Visits to Sick Miners	29	—	33	—	—
Visits of Inspection to Scheduled Mines	36	—	7	—	—
GRAND TOTAL	76,655	—	79,457	—	—
Daily Average	255	—	264	—	—

* "Visits to Sick Miners" are special visits paid, for the purpose of examination, only to such persons as are entitled to examination and who are unable through illness to present themselves at the Bureau.

(ii) REPORTS OF MEDICAL EXAMINATIONS RECEIVED BY MINERS' PHTHISIS BOARD, YEAR ENDING 31st MARCH, 1938.

Classification.	Without Tuberculosis.	With Tuberculosis.	Total.
Non-beneficiary Miners—			
First Examinations	40	6	46
Second and Further Examinations	77	8	85
Periodical Examinations (first notification)	265	37	302
Medical Board of Appeal	26	1	27
Beneficiary Miners—			
Second and Further Examinations	2,501	200	2,701
Medical Board of Appeal	149	11	160
TOTAL	3,058	263	3,321

4. **Deaths of Beneficiary Miners.**—The following table gives information from 12th May, 1911, regarding the deaths of beneficiary miners noted by the Miners' Phthisis Board, classified in accordance with the results of the last medical examination. Figures for each year prior to 1930-31 are given in the seventeenth and previous issues of this *Year Book*.

NUMBER OF DEATHS OF BENEFICIARY MINERS, CLASSIFIED IN ACCORDANCE WITH THE RESULTS OF THE LAST MEDICAL EXAMINATION—12th MAY, 1911, TO 31st MARCH, 1938.

* No silicosis.
† Silicosis in the ante-primary stage or physically unfit for underground work by reason of the presence of silicosis, though not in either the primary or the secondary stage.
‡ Silicosis in the primary stage with or without tuberculosis.
§ Silicosis in the secondary stage with or without tuberculosis, and tuberculosis with silicosis.
‖ Tuberculosis without silicosis.

5. **Cost of Administration.**—The cost of administration of the Act (i.e. salaries and other expenses of the Board, the Bureau, and the Medical Board of Appeal and their respective staffs) is borne by the Consolidated Revenue Fund. The cost of the administration of the Board was £20,658 for the year ended the 31st March, 1938, being 2·093 per cent. of the total amount paid out by the Board during the same period from the funds and accounts under its control. The cost of administration of the Bureau was £33,460, of the Medical Board of Appeal £5,211, and of the Miners' Phthisis Prevention Committee £1,109 for the same period. The total cost of administration of the Miners' Phthisis Board, the Miners' Phthisis Medical Bureau, the Medical Appeal Board, and the Miners' Phthisis Prevention Committee during the year 1937-38 amounted to £60,438.

6. **Revenue and Expenditure under Miners' Phthisis Acts.**—The subjoined table gives particulars as to revenue and expenditure of the Compensation Fund under the *Miners' Phthisis Acts* from 1st April to 31st March for a period of years.

Under section 9 (1) of the *Miners' Phthisis Act*, 1919, the Insurance Fund (see No. 4 and previous issues of this *Year Book*) was merged in the Compensation Fund.

MINERS' PHTHISIS COMPENSATION FUND—REVENUE AND EXPENDITURE, 1931-32 TO 1937-38.

§ 12. Phthisis Legislation.

1. **Miners' Phthisis Acts.**—(i) *Consolidation Act, No. 35 of 1925.*—Act No. 35 of 1925, which repealed the *Miners' Phthisis Act*, No. 40 of 1919, and the amending Act, No. 35 of 1924, consolidated the whole of the laws relating to miners' phthisis, and is in many respects the expression of many years' observation and experience of silicotic conditions in the gold mining areas along the Witwatersrand.

A résumé of the more salient provisions of Act No. 35 of 1925 was given in *Official Year Book* No. 17 and preceding issues, and a detailed summary appeared in Nos. 9 and 10, to which reference should be made for fuller information on the subject.

(ii) *Further Amendment Act, No. 38 of 1930.*—Act No. 38 of 1930 empowers the Minister, by notice in the *Gazette*, to extend the period (5 years) mentioned in section 39 (3) of Act No. 35 of 1925, i.e., the period during which the Board had power to appropriate moneys from the Compensation Fund for the purposes of the Trades and Industries Fund (the said period was extended to 31st July, 1939). The Act of 1930 also amplifies, with effect from 1st August, 1919, the definition of earnings on which benefits to a native labourer or his dependants for silisosis or tuberculosis are to be calculated.

(iii) *Amendment Act, No. 60 of 1934.*—The Act of 1934 makes further provision regarding the investment of funds, the Medical Bureau and the Board of Appeal, benefits to non-beneficiaries and beneficiaries, payments towards funeral and medical expenses, and the increase of the quarterly appropriation for the purposes of the Trades and Industries Fund.

(iv) *Amendment Act, No. 23 of 1936.*—By the Act of 1936, a further amount not exceeding £75,000 per annum may be appropriated by the Board from the Compensation Fund for the purpose of special *ex gratia* grants from the Special Fund established under the provisions of section 13 of Act No. 60 of 1934.

(v) *Amendment Act, No. 6 of 1938.*—This Act was published in *Government Gazette Extraordinary* of the 18th March, 1938, and came into force on 1st August, 1938. The provisions of this amending Act are as follows:—

ADDITIONAL BENEFITS.

(a) *Miners in the Ante-primary Stage of Silicosis.*—An increase of 5 per cent. of the amount calculated in accordance with the First Schedule to the Act.

(b) *Miners in the Primary Stage of Silicosis or suffering from Tuberculosis without Silicosis.*—An increase of 15 per cent. of the amount calculated in accordance with the First Schedule to the Act.

(c) *Miners in the Secondary Stage of Silicosis or suffering from Tuberculosis with Silicosis.*—The additional monthly allowance prescribed "for a wife", in terms of the Third Schedule to the Act, to be granted to single men and widowers (without children under 16 years of age) if they have a father or mother wholly dependent upon them.

(d) *Dependents of Deceased Miners.*—(i) The additional benefits to which a miner would have been entitled for ante-primary or primary silicosis or tuberculosis without silicosis, had he not died, will accrue to the dependents, unless they are entitled to a monthly allowance award.

(ii) If a miner dies in the primary stage of silicosis, his dependents are entitled to an award of a monthly allowance irrespective of the cause of his death.

(iii) If a miner dies within twelve months from the date he was last employed underground on a scheduled mine and no benefits had been awarded to him but his dependents are entitled to a monthly allowance award, such dependents (*if resident in South Africa from the date of the miner's death*), are entitled to the "fixed sum" award for the ante-primary stage of silicosis (in addition to the monthly allowance). This provision has been made retrospective to cover cases of miners who have died since 31st July, 1934.

(iv) If one or more children of a deceased miner are in receipt of a monthly allowance and his widow is not entitled to such an allowance on the grounds that she married him after the date prescribed by the Act, the Board has discretionary power to make a "Special Grant" to her (in addition to the monthly allowance granted to the child or children of the deceased).

RESIDENTIAL RESTRICTIONS.

A miner who was a beneficiary before 1st August, 1938, is only entitled to the additional benefits mentioned above for ante-primary or primary silicosis or tuberculosis without silicosis, if he has been resident in South Africa from 1st August, 1919, or the date when he was first granted benefits (whichever date is the later).

The dependents of a deceased miner who was a beneficiary or whose dependents were beneficiaries before 1st August, 1938, are only entitled to the additional benefits mentioned above if they have been resident in South Africa from 1st August, 1919, or the date of the miner's death (whichever date is the later).

OTHER PROVISIONS.

(i) *Gratuities.*—Under the Consolidation Act retiring benefits in the form of gratuities based on length of service are provided for officials of the Board, the Medical Bureau, and the Medical Appeal Board, who have had a minimum continuous service of five years.

Under the amending Act, the amount of the gratuity to officials is increased, and provision is also made for the payment of the increased gratuity to full-time members of the Board, the Medical Bureau, and the Medical Board of Appeal, on retirement after at least five years' continuous service.

(ii) *Conversion into monthly allowances of lump sum awards already paid.*—Lump sums for primary silicosis granted before 1st August, 1938, to dependents of deceased miners are to be "converted" into monthly allowances, i.e., payment of the monthly allowance will only commence from a date arrived at by calculating the period over which the amount already paid under the lump sum award, would have been exhausted if it had been paid out as a monthly allowance from the date of the miner's death. The balance of the lump sum will be cancelled when the monthly allowance is granted.

(iii) *Provision against accrual of unpaid benefits to estates.*—If no award had been made by the Board to a deceased person the right to any benefit which he may have had does not accrue to his estate. Specific provisions exist in the Miners' Phthisis Acts enabling the award of benefits to the dependents of a deceased miner to be made.

(iv) *Extension of Special Authorization Provisions.*—A beneficiary miner who has no silicosis and no tuberculosis, and who is the holder of a "Special Authorization" issued by the Bureau, is permitted to resume work in special occupations and localities underground on the scheduled mines. These "Special Authorization" provisions are extended to beneficiary miners who have silicosis in the ante-primary or primary stage.

(v) *Definition of "child under 16 years of age".*—The new definition of "child under 16 years of age" includes persons of any age who are the children of miners and have been declared by the Bureau to be incapacitated for work, and at the same time prescribes the date on which such persons must have been so incapacitated.

(vi) *Continuation of monthly allowances.*—The provisions of the Third Schedule to the Act in regard to the continuation of the monthly allowance of an incapacitated child and dependents (other than the widow or child under sixteen years of age) were unsatisfactory and did not clearly convey the original purpose which, in the case of an incapacitated child, was the continuation of the allowance only for so long as the "child" remained incapacitated and would have been supported by the miner had the latter not died and, in the case of other dependents, was the continuation of the allowance only with due regard to their financial circumstances and the period of the normal expectation of life of the deceased miner. It could have been held that the Board was not empowered to continue an allowance to an incapacitated child or "other" dependent after the miner's death, as a miner could not reasonably be expected to have continued the support of his dependents after that event. The matter has now been adjusted.

2. Miners' Phthisis Board.—The personnel of the board as at present constituted is given in Chapter XXVIII.

3. Miners' Phthisis Prevention Committee.—By Government Notice No. 585, dated the 4th April, 1926, the Minister of Mines and Industries under section 14 (2) of the *Miners' Phthisis Acts Consolidation Act* of 1925 constituted a committee to investigate and report and advise him upon the means of prevention of dust and all matters affecting health conditions in and upon any mine. This committee continued to meet and to conduct investigations throughout the year 1938.

4. Silicosis in Occupations outside Scheduled Mines.—An inter-departmental committee, consisting of representatives of the Department of Mines and the Department of Labour, was appointed in March, 1936, by the Honourable the Minister of Mines for the purpose of carrying out further investigations into

the question of the production of silicosis in occupations outside the scheduled mines, the terms of reference of the committee being to inquire into and report upon—

(1) silicosis-producing occupations outside the scheduled mines;

(2) the extent to which work in such occupations predisposes to or produces silicosis or aggravates or accelerates the progression of the disease;

(3) whether miners' phthisis beneficiary miners should be prohibited, in terms of sub-section (4) of section 70 of Act No. 35 of 1925, from working in any such occupations.

The committee investigated conditions by clinical and radiological examinations of selected employees and by inquiry and inspection at mines and works almost throughout the Union. In the course of the investigation about 700 persons were X-rayed and 112 mines and works visited, these including mines for asbestos, coal, copper, diamonds, gold, iron, manganese, and tin; works producing asbestos products, silica and other bricks, cement, glass, and abrasive soaps; and also quarries, stone crushers, sewer tunnels, the premises of stone and monumental masons, foundries, and engineering works.

The committee submitted two interim reports during 1937 dealing respectively with the conditions in sewer mining and in the Thabazimbi iron mine.

CHAPTER VII.

PRICES AND PRICE INDEXES.

§ 1. Introductory.

1. **General.**—No adequate measures were taken until January, 1919, to ascertain with regularity as a section of routine statistics the facts relating to prices and comparative price data in various parts of the Union. The only material previously available was that reported upon (1) in January, 1914, by the Economic Commission which referred particularly to the lack of means and authority for collecting the necessary data on a sufficiently comprehensive scale; (2) in 1916 by a Special Commission to inquire into increased costs attributable to the war; and (3) by the Cost of Living Commission appointed in 1917 to inquire further into the rise of prices. Summaries of the reports of the commissions were given in previous issues of this *Year Book* (Nos. 1 and 2). From January, 1919, figures have been collected under authority of the *Statistics Act*. These figures include wholesale and retail prices, the former from 1910 and the latter from 1895. Under the same statutory authority a census of rents of habitations was taken half-yearly from 1918 to 1920, and annually since then except in the years 1927, 1929, and 1930. The index numbers of prices at various periods from 1895, as contained in the various tables given in this chapter, have been calculated upon data rendered available as the result of the various investigations referred to. Owing to considerations of space it has been found necessary to omit particulars for certain years from the various tables of index numbers of prices. Tables containing indexes for each year from 1910 were published in *Year Book* No. 17 and previous issues. (See also the table appearing at the end of § 5 of this chapter.)

2. **Statistics of Prices.**—The Economic Commission of 1913 definitely advised the Government to charge itself with the establishment of a section of statistical work covering the principal subjects with which the commission had been dealing, i.e. prices, rents, the cost of living, and wages, as having a vital interest for the workers and industrialists of the Union, and a direct bearing upon the economic problems which faced the country at that period and still more insistently faced it during succeeding years. This commission and the subsequent commissions referred to above, which were appointed in 1916 and 1917, found themselves at a disadvantage owing to the absence of statistical data; and comparisons with other Dominions showed that in this particular respect the Union was most unfortunately placed. It was not, however, possible to give effect to the recommendations of the Economic Commission until the latter part of the year 1918, when a section of the Office of Census and Statistics was constituted for the purpose of maintaining a regular service of statistics of this character.

During the period which has since elapsed much has been done to collate such scattered information as was already in existence, mainly consisting of data obtained by various commissions and in particular by the Cost of Living Commission. From January, 1919, the Office of Census and Statistics took over from the last-named commission the work of preparing and publishing monthly statements as to price movements; and in addition to this work it has done everything possible to make good some, at least, of the deficiencies of the past in this branch of statistics, and to initiate a regular and reasonably adequate statistical service.

It was fortunate, however, that the experience of other countries was available; and the Statistical Council in its consideration of a scheme to cover this important subject had before it the experience of Australia (where a highly specialized system has been created by the Commonwealth Statistician), New Zealand, Canada, and the United States of America. In all these countries the matter had received detailed consideration; many statistical methods had been afforded close and critical examination. Thus the system adopted in South Africa, though modified to suit the peculiar circumstances of a country in which the bulk of the population consists of native and coloured persons, has been very largely borrowed from systems practised elsewhere.

The system was fully explained in a publication (S.P. 13) issued in August, 1919, which was followed by similar reports issued in subsequent years. The last of this series was issued in 1922 (S.P. 35). These publications are now, however, out of print.

§ 2. Wholesale Prices.

The list of commodities in regard to which prices are collected under the *Statistics Act* comprises about 200 articles. The list may be extended from time to time should this prove expedient. Prices have been traced back to 1910. In calculating index numbers of prices for individual commodities the prices in the year 1910 have been taken for the present as the basis for comparison (1000).

The different groups of wholesale index numbers for 1910–1921 were weighted on the average national consumption basis of three years—1917–1919. For the years 1922, 1923, 1924, 1925, and 1926 the consumption basis for the purpose of weighting has been advanced to the average of 1918–1920, 1919–1921, 1920–1922, 1921–1923, and 1922–1924 respectively. For subsequent years, the weighting has been done on the basis of the national consumption for the years 1922 to 1924. Information for arriving at the national consumption has been drawn mainly from the import and export figures and the agricultural and factory censuses.

Price averages are based on quarterly returns furnished by representative firms in Capetown, Port Elizabeth, East London, and Durban, as representing the coast centres, and in Johannesburg as representing the inland centres. The following method of calculating the average price for the Union has been adopted:—

> As regards each town separately, the predominant price or, if there is no predominant price, the actual price nearest to the average of all quotations is utilized; the arithmetical average of the prices for the coast towns is then calculated; finally the Union price is obtained by taking the mean between the Johannesburg price and the average of the prices for the coast towns.

The index numbers for the years since 1919 have been constructed by averaging the index numbers for January, April, July, and October in each year.

The following tables give the index numbers of groups for a series of years.

WHOLESALE PRICES—INDEX NUMBERS OF GROUPS, 1910, TO JANUARY, 1939.

(Base—Index Number for 1910 = 1000 *in the case of each Group.)*

(i) SUMMARY OF GROUP INDEX NUMBERS.

Year.	All Groups.	Food and Groceries.	Food, Groceries, Fuel, and Light.	Other Groups.	South African Goods.	Imported Goods.

TREND OF WHOLESALE PRICES OF COMMODITIES IN SOUTH AFRICA AND THE CORRESPONDENCE BETWEEN THE PRICES OF IMPORTED GOODS AND OF ENGLISH WHOLESALE PRICES.

§ 3. Retail Prices.

1. **System of Collection.**—Until the end of 1931, monthly price quotations were obtained from sixty towns, including seven towns in South West Africa. Since then, however, the collection has been restricted to the nine principal towns of the Union and Windhoek in South West Africa. Statistics are compiled regularly in respect of all these towns. Retail dealers, fully representative of their locality and of good standing, have been selected in each town, and are required to render quotations each month in respect of specified articles. The practice generally followed is to require that the return shall show the retail, over-the-counter, selling price of each article named therein, or of that brand or grade of such article most commonly in demand. The price, in other words, is the actual price predominating in the bulk of the month's sales of each article specified.

The arithmetical average of the quotations in respect of each town is used in constructing the index number. The regulations framed under the *Statistics Act* require the returns to be posted on or before the fifteenth day of the month to which they relate, but no particular day is prescribed for which prices are required. In practice, the bulk of the returns are posted in the second week of the month to which they refer, so that the prices given are presumably those ruling at that time. The indexes are accordingly based on average prices for that period and not on quotations relating to any particular selected day of the month. (For method applied prior to 1926, see No. 7 and previous issues of this *Year Book*.)

2. **Index Numbers of Prices.**—Index numbers of prices are given for the nine principal towns of the Union regarded as a whole in table (i) representing relative prices of commodities in various groups. These figures are used as a basis for the graph included in this section. Index numbers are given in table (ii) showing the relative cost of food in the nine principal towns from 1910; and table (iii) contains monthly food index numbers for the average of the nine towns from 1930. Particulars are given in table (iv) of average prices from 1895 of retail commodities in the nine principal towns of the Union regarded as a whole. These prices have been used for the calculation of the index numbers in table (i). The price for each town has been weighted according to the European population in order to secure the average for all towns.

§ 4. Rents.

1. **Rent Legislation.**—A *Rents Act* was passed by Parliament in 1920, with effect from June of that year until the 30th June, 1921, and was re-enacted annually until 1924, when it was made permanent by Act No. 29. A summary of the original Act, which provided for the constitution of rent boards with power to order the reduction of rents, was given in the sixth and previous issues of the *Year Book*. From the 1st April, 1937, the administration of this Act was entrusted to the Department of Labour and Social Welfare, and to the Department of Social Welfare from 1st October, 1937.

2. **Censuses of Rents.**—The first inquiry of this kind held by the Census and Statistics Office under the *Statistics Act* of 1914 was undertaken during the month of August, 1918, in the nine largest centres in the Union. In addition to returns from occupiers of houses, returns for each year from 1910 to 1918 were obtained from a large number of owners and agents. From this information average rents for each year 1910 to 1918 were computed to correlate by means of ratios to the complete rent census of 1918.

Complete rent censuses were taken concurrently with the population censuses in 1921, 1926, 1931, and 1936, and intermediate censuses in the intervening and subsequent years.

•

The following tables give (i) the index numbers for rents of houses of three to six rooms in the nine principal towns from 1910 to May, 1938, and (ii) the average monthly rent for each class of house in each town according to the May, 1938, Rent Census.

(i) INDEX NUMBERS OF RENTS OF HOUSES OF THREE TO SIX ROOMS IN NINE PRINCIPAL TOWNS, 1910 TO 1938.

(Base—Average for 1910 = 1000.)

§ 5. Price Levels.

1. **General.**—Statistics as to variations in price levels were published monthly by the Cost of Living Commission from December, 1917, to December, 1918; after this date the monthly statements were superseded by statistics of prices compiled by the Census and Statistics Office. Full information regarding the methods of compilation is given in certain reports dealing with wholesale and retail prices and rents, and also in *Year Book* No. 3.

It is necessary to emphasize the point that while the figures published purport to and do in fact measure with a reasonable degree of accuracy *variations* in price levels, they do not indicate either a minimum or a maximum standard of living. Their value is relative and they provide means for comparing costs of commodities at different times on the national consumption basis, and furnish other data which can be applied to questions affecting wages, etc.; but they do not, as often they are wrongly supposed to do, give a direct index of the cost of living of any particular class.

The original method of weighting prices for index calculation purposes was described on Page 22 of the report (S.P. 13) previously alluded to, that is, on the basis of the family budget returns collected in 1913, which represented the only information available at the time. By the latter part of 1920, however, information had been collected which enabled calculations to be made on the basis of post-war national consumption, instead of on the basis of particulars collected from a single class of the community, viz., railway servants.

The national consumption figures are prepared, as far as possible, on a three years' average and represent the consumption of food by Europeans and by coloured persons who have adopted a European dietary. The bulk of the maize, kaffir corn, and rice has been excluded, and the consumption of milk has been estimated by recalculating the budget figure in proportion to the European population, with due allowance for the increased use of fresh milk and decreased use of condensed milk. The weight for rent has been obtained by taking the number of European occupants per house in the urban areas and assuming that the same proportion is true for the whole country.

Index numbers in the case of the years 1895 to 1909 have been calculated on the budget system. Satisfactory information as to prices was obtainable up to the year 1909 for six towns only. The weighted average of these six towns has been calculated on the proportion of these towns to the nine towns in 1910 = 1000. On the assumption that the cost of living in Pretoria, Johannesburg, and Bloemfontein in 1895-1909 was in the same proportion to that of the six towns as in 1910, these figures should give a fair estimate of the average for the Union. Index numbers from 1910 have been calculated on the national consumption basis. Table (*b*) gives the same relatives as are contained in Table (*a*) in a somewhat more popular form, showing the changing value of the sovereign calculated as being worth 20s. in 1910. Table (*c*) contains monthly index numbers for the average of the nine towns from 1930, on the same basis as table (*a*).

More complete figures for the years preceding 1910 will be found in No. 6 and earlier issues of this *Year Book*.

INDEX NUMBERS OF PRICES (RETAIL—FOOD, FUEL, LIGHT, AND RENT), NINE TOWNS, AND PURCHASING POWER OF A SOVEREIGN COMPARED WITH 1910.

December	1288	1242	1187	1220	1186	1181	1190	1251	1245
Average	1300	1268	1211	1180	1197	1185	1189	1211	1253

2. Comparison of Index Numbers of Retail Prices in certain Countries.—The following table gives index numbers of the average retail prices of certain commodities in 1914 and October, 1938, for the United Kingdom, Canada, Australia, and New Zealand, with South Africa as the base (1000). It is of interest to note that in the case of foodstuffs before the war the United Kingdom was roughly one-third cheaper than South Africa, but that now the average prices approximate much more closely. It is more difficult to obtain comparable figures for rents. The following figures have been utilized:—

South Africa.—The weighted average rent of houses of three, four, five, and six rooms in the nine principal towns.

United Kingdom.—Report of the Working Classes Cost of Living Commission (Cd. 8980). Rents paid by skilled artisans and percentage increase shown in the *Ministry of Labour Gazette.*

Canada.—Weighted average rent of six-roomed houses chiefly occupied by workmen in sixty cities.

Australia.—Unweighted average of the rents of four, five, and six rooms in Sydney and Melbourne.

New Zealand.—Unweighted average of the rents of four, five, and six rooms in four principal towns.

It should be noted that in these calculations no allowance has been made for the differences in exchange between the different countries.

INDEX NUMBERS OF PRICES—AVERAGE RETAIL PRICES OF CERTAIN COMMODITIES IN THE UNITED KINGDOM AND THE DOMINIONS.

(South Africa in each case = 1000.)

3. Fluctuations in the Index Numbers of Prices in the United Kingdom and the Union.—The following table gives the index numbers of wholesale and retail prices for the United Kingdom and the Union. It will be seen that there is a general correspondence between the fluctuations of wholesale prices of imported goods in the Union and wholesale prices in the United Kingdom. The United Kingdom Board of Trade has started a new series of wholesale price index numbers with 1930 as the base. In order, therefore, to continue the series in the following table, the Board of Trade index numbers from 1930 onwards have been calculated from this new series.

INDEX NUMBERS OF PRICES IN THE UNITED KINGDOM AND THE UNION.

Year.	(a) Wholesale Prices.						(b) Retail Prices (Food).

* Figures for July each year.

4. **Purchasing Power of a Sovereign in the United Kingdom and the Dominions.**—The following table has been framed for the purpose of indicating the relative purchasing power of money at various periods in Australia, Canada, New Zealand, the United Kingdom, and South Africa. For this purpose the prices applicable to each period and country have been weighted according to the family budget system. The resulting relatives furnish comparisons based in each case upon the average prices in the nine principal towns in the Union in 1910. It should be noted that no allowance has been made for fluctuations in exchange between the different countries.

PURCHASING POWER OF A SOVEREIGN COMPARED IN SOUTH AFRICA, AUSTRALIA, CANADA, NEW ZEALAND, AND THE UNITED KINGDOM, 1910, 1914, AND OCTOBER, 1938. (BASE OF TABLES—UNION OF SOUTH AFRICA, 1910=£1.)

Country.	Food, Fuel, Light, and Rent.			Food.		
	1910.	1914.	1938, Oct.	1910.	1914.	1938, Oct.
PURCHASING POWER OF A SOVEREIGN.						
South Africa	£ 1 0 0	£ 0 18 5	£ 0 16 2	£ 1 0 0	£ 0 17 8	£ 0 17 1
Australia	1 8 9	1 4 6	0 18 0	1 8 6	1 4 3	0 16 9
Canada	1 4 9	1 1 10	0 18 7	1 2 7	1 0 0	0 17 9
New Zealand	1 9 10	1 6 5	0 17 8	1 8 9	1 4 5	0 17 8
United Kingdom	—	1 14 7	1 3 8	—	1 5 8	0 18 0
AMOUNT REQUIRED ON THE AVERAGE TO PURCHASE THAT WHICH IN SOUTH AFRICA (AVERAGE OF NINE PRINCIPAL TOWNS) COULD HAVE BEEN PURCHASED IN 1910 FOR £1.

United Kingdom	—	0 11 7	0 16 11	—	0 15 7	1 2 3

5. **Prices of Wheat, Flour, and Bread in Different Countries.**—The following tables give the wholesale prices of wheat and flour, as well as the retail prices of bread in England, the Dominions, and the United States for a certain number of years. Prices for the intermediate years will be found in previous issues of the *Official Year Book* (Nos. 6 to 11). The prices in all countries were subject to a certain amount of control during the war period. The prices for the United States and Canada are converted at exchange parity. It will be noticed that prices in South Africa are, and consistently have been, considerably in excess of those obtaining even in a largely importing country such as England. Under the provisions of Act No. 10 of 1930 and Act No. 14 of 1931 the importation of wheat, flour, and meal into the Union is restricted.

By Proclamation No. 212, dated 5th October, 1938, the scheme of the Wheat Industry Control Board for the "regulation of the production and marketing of wheat and wheaten products" came into operation. In terms of section 23 of this scheme the Board is empowered to regulate the prices of wheat and wheaten products. During the period 11th November, 1938, to 30th October, 1939, producers of wheat are prohibited from selling wheat of the various classes and grades at prices other than the following (Government Notice No. 1873, dated 11th November, 1938):—

Grade.	*Class A.*	*Class B.*	*Classes D. & E.*
	s. d.	s. d.	s. d.
1	22 0	21 0	18 0
2	21 6	20 6	17 6
3	20 6	19 6	16 6
4	—	17 6	14 6
5	—	13 6	12 0
6	—	11 6	10 0

The above prices are per bag of 203 lb. for wheat delivered free on rail at the producer's railway station and are subject to a commission of 9d. per bag, payable to the Board.

In terms of Government Notice No. 1871, dated 11th November, 1938, the prices of meal and flour were also fixed as follows:—

(*a*) Selling prices to bakers for use in their bakeries only or to wholesalers who confine their business exclusively to supplying retailers, and who take not less than 25 bags of meal or flour of 200 lb. each at a time:—

	Per Bag.
Best baker's flour	37s. 3d.
No. 1 sifted meal	34s. 6d.
No. 1 or best unsifted meal	29s.

(*b*) Selling prices to retailers or to wholesalers who take less than 25 bags of meal or flour of 200 lb. each at a time:—

	Per Bag.
Best baker's flour	38s. 3d.
No. 1 sifted meal	35s. 6d.
No. 1 or best unsifted meal	30s.

The above prices are for meal or flour delivered carriage paid to the retailer's or wholesaler's nearest station.

6. **"Sundries."**—The question of the inclusion of "sundries" (that is, clothing, soft goods, boots, vegetables, and wood, sundry groceries, coloured and native servants' wages, and hardware) as an item in the determination of price levels is one that presents considerable difficulties. Reference should be made to the sixth issue of this *Year Book*, where the question is more fully dealt with.

It is considered that, for the purpose of wage calculations, the use of figures calculated on the basis of food, fuel, light, and rent is much safer. It became evident, however, that in many cases the "sundries" figures were being used in conjunction therewith for wage agreements and calculations. It was therefore decided, in order to meet the demand for percentage figures on these lines, to publish regularly a table containing the combined index numbers for food, fuel, light, rent, and sundries from 1910 onwards. It has been assumed in constructing this table that the prices for "sundries" followed the same course as items of food, fuel, light, and rent from 1910 to 1914. Since then in constructing the price index numbers for food, fuel, light, rent, and sundries, the index number for food, fuel, light, and rent has been combined with that for "sundries" in the proportion of two to one, on the assumption that the amount allowed for expenditure on "sundries" forms approximately one-third of the total household expenditure.

The following table contains the resulting index numbers:—

INDEX NUMBERS OF RETAIL PRICES—FOOD, FUEL, LIGHT, RENT, AND SUNDRIES—IN NINE TOWNS, 1910 TO 1938.

(Weighted Average of Nine Towns in 1910 = 1000.)

Period.	Cape Peninsula.	Port Elizabeth.	East London.	Kimberley.	Pietermaritzburg.	Durban.	Pretoria.	Witwatersrand.	Bloemfontein.	Weighted Average

7. **Comparison of Index Numbers of Wholesale and Retail Prices and o Wages.**—The following table shows the movements of wholesale and retai prices and of wages for each year for which the information is available. I

should be mentioned that information for "sundries" is not available for years before 1914, and it has been assumed for convenience that the movement of the prices of "sundries" was the same during the years 1910 to 1914 as for "food, fuel, light, and rent."

Index numbers of Real Wages, "Standard Basis," are computed by utilizing the retail price index numbers of food, fuel, light, and rent, and those of Real Wages, "Complete Basis," by utilizing the price index numbers for food, fuel, light, rent, and sundries.

INDEX NUMBERS OF WHOLESALE PRICES, FOR ALL GROUPS, SOUTH AFRICAN GOODS, IMPORTED GOODS; RETAIL PRICE INDEX NUMBERS FOR THE AVERAGE OF THE NINE TOWNS, FOR (*a*) FOOD; (*b*) FOOD, FUEL, LIGHT, AND RENT; (*c*) FOOD, FUEL, LIGHT, RENT, AND SUNDRIES; AND INDEX NUMBERS FOR WAGES (*a*) NOMINAL; (*b*) REAL ON STANDARD BASIS; (*c*) REAL ON COMPLETE BASIS.

(Average in 1910 = 1000.)

* Not available.

† Estimated from information for 6 towns only.

‡ The 1938 weekly wage rate for Trading (Class VIII) is not yet available. These index numbers have, however, been estimated on the basis of the percentage change in 1938, as compared with 1937, in the nominal wage rates of the remaining seven groups as a whole.

§ 6. Family Budget Inquiry, 1936.

An inquiry into the expenditure of European families in the nine chief urban centres was carried out by the Office of Census and Statistics with the assistance of supervisors and enumerators appointed by the chief associations of employees in the Union. Families who did not habitually keep account of household expenditure were asked to keep records for the months of March and April, 1936. Families had to include at least one child, those with boarders who were not relations were excluded, and the maximum family income was not to exceed £600 a year.

Of 1,998 completed forms received it was found possible to utilize 1,618. The budgets for all areas combined were averaged in twenty income groups, rising by £25 a year from under £125 a year to £575–£600 a year. For six areas the budgets were averaged in five £100 income groups.

The average monthly family income amounted to £30. 5s. 6d. and the expenditure to £29. 19s. 7d. Of the latter £8. 12s. 8d. or 28·80 per cent. was expended on food, £1. 4s. 6d. or 4·09 per cent. on fuel and light, £6. 7s. 7d. or 21·27 per cent. on rent, £2. 14s. 5d. or 9·08 per cent. on clothing and boots, £1. 0s. 2d. or 3·36 per cent. on transport, and the balance on other commodities and services.

A detailed report with a large number of tables was published (U.G. No. 21, 1937).

§ 7. Revision of the Retail Price Index Numbers.

From information derived from the 1936 Family Budget Inquiry as to the proportional expenditure on different commodities and services, a revision of the Retail Price Index was carried out under the direction of the Statistical Council. Prices were collected for a greatly extended list and calculations on the new basis have been made monthly from January, 1938. The old series was continued for an overlapping period to the end of 1938, when the new series took its place. Special Report No. 127 giving full particulars of the change has been published, and calculations making possible comparisons with past years are given.

The average of the expenditure of nine income groups £225-£450 in the 1936 Family Budget Inquiry was taken as the basis on which to determine the proportion in which the prices of different categories of commodities and services should enter into the composition of the new index numbers.

The food group was increased by the inclusion of prices of fresh fish, pork (leg, shoulder, and chops), poultry (chicken), pork sausages, tinned salmon (pink and middlecut), breakfast oats, biscuits (Marie, cream crackers, and assorted), lard, cooking oil, baking powder, household salt, dried peas, dried beans, tinned fruit (pears and peaches), prunes, raisins (stalkless and sultanas), dried apricots, dried peaches, fresh vegetables and fruit (oranges, tomatoes, cabbage, carrots, beet, green beans, onions, and sweet potatoes).

In the fuel and light group the domestic rates for electric current were utilized. Prices for firewood and matches were added.

The cost of water up to 2,000 gallons per month was added to rent in cases where the tenants pay for water.

The "sundries" group was expanded to include the prices of the following categories, (*a*) cigarettes, (*b*) house—washing and cleaning materials, household replacements except furniture, (*c*) clothing—men's and boys' clothing, women's dress material and other textiles, not house replacements, and boots and shoes, (*d*) transport—bus and tram fares, railway local season tickets, holiday return fares, and petrol, (*e*) amusement and sport—seats at bioscopes, radio listener's licence, (*f*) medical and personal hygiene—medicinal preparations and toilet requisities, dispensing charges, (*g*) life insurance, (*h*) direct taxes, and (*i*) miscellaneous—newspapers, telephone calls, postage, and stationery.

The average of the nine principal urban centres in 1938 was taken as the new base.

Comparison with previous years was made by equating the 1938 index numbers on the old and the new basis. The assumption made was that the level of prices in 1938 was the same whether calculated on the old or the new basis. While this probably gives reasonably accurate comparisons for any particular centre with itself, or with the average of the centres, the index numbers of different centres cannot be compared with each other until 1938. Index numbers for these urban centres for all commodities have not been calculated, as the change of method which has been adopted might render such calculations unreliable. This does not, however, apply to anything like the same extent to index numbers of the average of the nine centres, and these have been recalculated as far back as 1914.

The following tables give the recalculations as far back as 1910 for (*a*) food and (*b*) food, fuel, light, and rent, and as far back as 1914 for (*c*) all groups,

The index numbers for 1938 are the new index numbers for that year.

RETAIL PRICE INDEX NUMBERS FOR THE YEARS 1910 TO 1938 RECALCULATED TO THE 1938 BASE FOR EACH URBAN CENTRE AND FOR THE AVERAGE OF THE NINE PRINCIPAL URBAN CENTRES. THE FIGURES IN DIFFERENT COLUMNS ARE NOT COMPARABLE WITH EACH OTHER.

CHAPTER VIII.

EDUCATION.

§ 1. Higher Education.

1. **History and Development of Higher Education in South Africa.**—The beginnings of a system of higher education in South Africa are to be found in the establishment of the South African College at Capetown in 1829. It was not, however, until the passing of the *University Act* of 1873 by the Cape Parliament and the establishment of the University of the Cape of Good Hope that any notable advance was made.

2. **University of South Africa.**—(i) *General.*—The University of South Africa from the 2nd April, 1918, became the legal successor of the University of the Cape of Good Hope. Its headquarters are at Pretoria, and it embraces the following constituent colleges:—University College of the Orange Free State, Bloemfontein; Huguenot University College, Wellington; Natal University College, Pietermaritzburg and Durban; Rhodes University College, Grahamstown; and the Potchefstroomse Universiteitskollege vir Christelike Hoër Onderwys, Potchefstroom. In the case of each college there is a governing council responsible for general administration, and academic matters and discipline are controlled by the college Senate, consisting entirely or mainly of the professors on the staff, the executive functions being discharged by the Rector, President, Principal, or Master, as the case may be.

The government and the executive authority of the university are vested in a Council consisting of eight members appointed by the Governor-General, four members elected by convocation, and one member appointed by the Council and one by the Senate of each constituent college. Provision is also made for the appointment of a representative of any Government or Administration outside the Union, which contributes to the university such funds as may be prescribed by statute: the Government of Southern Rhodesia is represented on the Council under this provision. Members hold office for six years.

The university Senate consists of the heads of recognized departments of study at the constituent colleges, and, subject to the authority of the Council, controls the curricula, syllabuses of study, and degree and diploma examinations of the university.

OFFICERS OF THE UNIVERSITY OF SOUTH AFRICA.

Chancellor	Field-Marshal H.R.H. the Duke of Connaught and Strathearn, P.C., K.G., K.T., K.P.
Vice-Chancellor	Senator the Right Hon. F. S. Malan, P.C., B.A., LL.D.
Chairman of Senate	Prof. T. F. Dreyer, M.A., Ph.D.
Registrar	Langham Murray, M.A.

The legislation which reorganized the university system created the following joint bodies:—

(a) *The Joint Matriculation Board.*—This Board consists of representatives (28) of the five universities (South Africa, Capetown, Stellenbosch, Witwatersrand, and Pretoria), the Provincial, Union, South West African, and Southern Rhodesian Education Departments, and of the teachers of public and private secondary schools, and is charged with the control and conduct of the Matriculation examination.

(b) *The Joint Committee for Professional Examinations.*—This Committee, which consists of fifteen members, five appointed by the Governor-General and two by each of the five universities, controls and conducts the examinations in law (other than degree examinations), surveying, and the final examination for patent agents. The Registrar of the University of South Africa is *ex officio* secretary to the Joint Matriculation Board and the Joint Committee for Professional Examinations. His address is P.O. Box 392, Pretoria.

(c) *The Vice-Chancellors' Committee.*—This Committee consists of the Vice-Chancellors of the five universities, and is charged with the regulation of matters common to the five universities, the Joint Matriculation Board, and the Joint Committee for Professional Examinations, or any of them. The secretary to the Committee is the Registrar of the University of Capetown.

(ii) *University College of the Orange Free State.*—The college was founded in 1855 by Sir George Grey, but it was not until 1904 that the classes were organized in such a way as to permit of the separate constitution of a university college; this took place in 1907. The erection of the college buildings was completed in 1909, and in 1910 the university college was incorporated by statute. The work undertaken comprises the usual preparation for the examinations of the University of South Africa in literature and science, survey, education, law, commerce, and social science, including preliminary classes for the study of medicine, engineering, agriculture, and theology. The institution was originally named Grey University College.

The college has facilities for research in various departments. The herbarium of the botany department is the regional herbarium for the Orange Free State and Basutoland and for the Union Botanical Survey.

(iii) *Huguenot University College.*—The college dates back to 1874, when, as the Huguenot Seminary, it was founded in Wellington by the late Rev. Andrew Murray, D.D. It was formally incorporated by Act of Parliament in 1907 as a college for women students (with the right of retaining male students for a limited period), and is named in the *University of South Africa Act*, 1916, as one of the constituent colleges of the university. An amendment to the Charter in 1920 inserted the word "University" in the name of the college, and opened its doors to male students from Wellington district. Matriculated students are prepared for the B.A., B.Sc. (Dom. Science), and M.A. degrees of the University of South Africa, for the teachers' diplomas of the University of South Africa, and for the College Domestic Science Teachers' Certificate. Special one-year courses approved by the Cape Education Department are given for teachers who hold the Primary Certificate.

(iv) *Rhodes University College.*—Rhodes University College was established in 1904, when it took over the college department of St. Andrew's College School, which had carried on university work in Grahamstown for some years, and the university students from Kingswood College.

The sum of £50,000 was set apart by the Rhodes Trustees towards the establishment of the college. This was augmented by £10,000 raised locally and also by a bequest of £25,000 from the late Alfred Beit and £5,000 from the de Beers Company.

Further grants from the Rhodes Trust together with government grants and loans have made possible the completion of the permanent physics, chemistry, and psychology laboratories, the arts block, the school of art, and the library and administrative parts of the building scheme. At present the departments of geology, zoology, botany, and geography are housed in old buildings, which have been reconditioned for the purpose. As funds permit permanent buildings for these departments, as well as additional library and lecture room accommodation, will be erected.

The residential nature of the college is one of its outstanding characteristics, 80 per cent. of the students being in residence. The following houses have been built (each holding approximately 60 students): For men: Botha, College, Milner, and Struben Houses, with one central dining hall; for women: Beit, Jameson, Oriel, and Phelps Houses, with one central dining hall.

Courses are given in the usual subjects required for degrees in arts, law, science, commerce, economics, music, and fine arts, as well as for diplomas in education and survey. First-year courses in agriculture, veterinary science, medicine, and engineering, and first and second-year courses in the degree in surveying are offered.

A course of lectures is given in Bantu Studies; and there are facilities for research in the Tanning, Hides, and Skins Department; lectures in Mental Hygiene are given by a Government Psychiatrist. Bursaries and scholarships are available.

The Grahamstown School of Art has been taken over as a department of the college. A donation from the Carnegie Corporation of New York made possible the appointment of an instructor in pottery on the staff of the Art School.

(v) *Natal University College.*—The college was incorporated by Act of the Natal Parliament of 1909, and teaching was started in 1910 at the Maritzburg College and in the Town Hall at Pietermaritzburg, until the college buildings at Scottsville were erected in 1912 on a site of forty acres presented by the municipality for the purpose. Faculties in pure science, arts, fine arts, and law are established here, as well as first-year courses in medicine and agriculture and courses for university diplomas in education. Facilities exist for research in chemistry, physics, botany, zoology, geography, geology, psychology, and history. In 1931 Mr. T. B. Davis of Durban erected a magnificent building on the top of the Berea in Durban on a site of fifty acres provided by the Durban Town Council. This is known as the Howard College in memory of the son of the donor, who was killed in the Great War. The faculty of engineering is housed in this building, while the faculty of commerce has a separate building nearer to the business centre of the town. A lecturer in law is also resident in Durban. There are residences for both men and women in the college grounds at Pietermaritzburg, and a Student's Union building has recently been erected there. The financial and academic control of the two branches at Pietermaritzburg and Durban is vested in a Council and a Senate.

The Natal University College receives liberal support from the State, the Corporation of the City of Durban, and the Corporation of Pietermaritzburg, in the shape of annual grants-in-aid.

(vi) *Potchefstroomse Universiteitskollege vir Christelike Hoër Onderwys.*—The Potchefstroom University College for Christian Higher Education developed out of the literary department of the "Theologiese School van die Gereformeerde Kerk," which was founded on the 29th November, 1869, at Burghersdorp, Cape Province, and was solely supported by the Gereformeerde Kerk. In February, 1905, this school with its literary department was transferred to Potchefstroom. In April, 1919, a government subsidy was granted to the literary department, whereby a complete separation took place between the two departments. The college was placed under the management of its own council under the name of "Potchefstroom University College." In June, 1921, the *Potchefstroom University College (Private) Act* was passed by Parliament, and on the 6th July, 1921, the college was incorporated by proclamation as a constituent college of the University of South Africa. By Private Act passed by Parliament in 1933 the name of the institution was changed to "Die Potchefstroomse Universiteitskollege vir Christelike Hoër Onderwys".

Courses are undertaken for the following degrees and diplomas: B.A., B.Econ., B.Com., B.A. (Social Science), M.A., M.Econ., D.Litt., D.Phil., B.Sc., M.Sc., B.D., M.Div., D.D., M.Ed., and for the Transvaal teachers' examinations in co-operation with the local normal college. Provision is also made for the following: LL.B.; 1st year courses in Agriculture, Medicine, Veterinary Science, and Engineering; training for chemists' examinations, social work, and commercial teaching.

3. **University of Capetown.**—The University of Capetown was created in 1916 by an Act of Parliament, which provided for the incorporation of the South African College as a university on 2nd April, 1918.

The South African College was founded as a private institution in 1829, and was the first college of the kind to be established in South Africa. It was formally incorporated as an institution for male students in 1837 by an Ordinance, which continued until 1878, when an Act was passed making the college an entirely public institution, the shareholders relinquishing their rights. In 1886 women students were admitted. In 1900 it ceased to prepare for matriculation and began to confine itself to university work. In 1902 extensions were made possible by an annual grant from the city funds of Capetown and by the contribution of £40,000 by public subscription. In 1910 the college took over the university classes hitherto carried on at the Diocesan College, Rondebosch; and in 1916 the Capetown Normal College was amalgamated with it. Throughout its existence substantial support was given to the college by the Government.

The foundation of the university was made possible by the munificence of the late Sir Julius Wernher and Mr. Alfred Beit, whose bequests amounting to £500,000 were made available for erecting some of the buildings and providing part of the university endowment.

The main seat of the university is on the Groote Schuur Estate at Rondebosch, where it occupies an area of some 70 morgen; but the former buildings of the South African College in Capetown are used by the faculties of com-

merce and of fine art and architecture, as well as for evening degree classes. The University Little Theatre building was opened in June, 1934. The Wernher and Beit Medical Laboratories are in immediate proximity to the Groote Schuur Hospital, which has over 800 beds and serves as a clinic for the medical school.

The university provides for the residence, as well as the teaching, of students and confers degrees in applied and industrial chemistry, architecture, arts, commerce, education, engineering, fine art, land surveying, law, medicine, music, quantity surveying, science, and social science, and diplomas and certificates in teaching, music, commerce, bacteriology, analytical chemistry, nursing, public health, fine art (including commercial art and ceramics), architecture, quantity surveying, speech training (elocution), social science, and African studies. The degrees and diplomas of the medical school are recognized for purposes of registration throughout the Union and Southern Rhodesia, and the degrees in law are accepted for admission to the bar. Attached to the University are a School of African Studies for the special study of native languages and customs, the South African College of Music, and the Michaelis School of Fine Art.

Provision is made for research work in all departments of the university, and grants-in-aid are obtainable from a special fund established by the Council.

The institution receives liberal support from the State, the Corporation of the City of Capetown, and the Cape Divisional Council.

OFFICERS OF THE UNIVERSITY OF CAPETOWN.

Visitor.....	His Excellency the Governor-General.
Chancellor.....	General the Right Hon. J. C. Smuts, P.C., C.H., K.C., D.Sc.
Principal and Vice-Chancellor.....	Dr. A. W. Falconer, C.B.E., D.S.O., M.D., F.R.C.P.

4. **University of Stellenbosch.**—The Victoria College developed out of the Stellenbosch Gymnasium, which was founded in 1866, and in connexion with which the faculties of literature and philosophy, mathematics and physics—the so-called "Arts Department"—were established in 1874. In 1881 the Arts Department was granted a charter and accorded its status and constitution as the "Stellenbosch College" by a Private Act of Parliament. In 1887 (the year of the 50th anniversary of Queen Victoria's accession) Her Majesty consented to the college's being named "The Victoria College of Stellenbosch". By the *University of Stellenbosch Act*, No. 13 of 1916, the college, on the 2nd April, 1918, was incorporated as the University of Stellenbosch, and in addition to fulfilling its previous functions is entitled to examine its own students and grant degrees.

Provision is made for courses leading to degrees and diplomas in the faculties of arts, science, education, agriculture, theology, law, and commerce, and for the training of teachers for special classes, for physical culture, and for native administration. Since 1934 the Conservatoire of Music at Stellenbosch has been under the Control of the University. Attached to the faculty of arts is a department of Bantu studies, ethnology, and social studies, and under the faculty of science a special department of home economics has been established.

Special mention should be made of the faculty of agriculture, which aims at the promotion of agricultural science and the development of agriculture in the Union. Particular attention is given to the training of future farmers, and provision is made for courses in domestic science and forestry. By Act No. 45 of 1926, the Elsenburg School of Agriculture and the faculty of agriculture of the university were amalgamated to constitute "The Stellenbosch-Elsenburg College of Agriculture of the University of Stellenbosch." In accordance with this Act, the faculty of agriculture shall be for all purposes the faculty of agriculture of the university, and shall have all such rights and privileges and be subject to all such duties as are laid down by the *University of Stellenbosch Act*, No. 13 of 1916. By this amalgamation the faculty of agriculture is brought into more intimate touch with practical farming and matters relating thereto, so that its activities are more extensive than those of the original faculty. A fruit experiment station is attached to the University, and a department of forestry is attached to the faculty of agriculture.

The university possesses well-equipped laboratories, among which the chemical institute (De Beers Building), the science building, and the agriculture building deserve special mention; there are also a botanic garden and three hothouses. The university has two libraries, namely, the Christian Marais Library and the Carnegie Library. The libraries receive a liberal annual grant out of the university funds and now contain about 70,000 volumes.

Research work forms an important part of the activities of this university. In the departments of educational psychology, psychology, sociology, geography, history, agriculture, Bantu languages, ethnography, Afrikaans-Nederlands, geology, biology, law, and economics, special attention is devoted to South African problems. Since 1923, the results of research work have been published regularly in the *Annals of the University of Stellenbosch*. The university Council also awards a special grant for the purpose of carrying on scientific investigational work.

OFFICERS OF THE UNIVERSITY OF STELLENBOSCH.

Chancellor.....	The Rt. Rev. J. D. Kestell, Litt.D.
Vice-Chancellor.....	The Honourable Mr. Justice H. S. van Zijl, B.A., LL.B.
Rector.....	Prof. R. W. Wilcocks, B.A., Ph.D.

5. **University of the Witwatersrand, Johannesburg.**—This institution has developed out of the South African School of Mines, which was transferred from Kimberley to Johannesburg in 1904, taking then the name of Transvaal Technical Institute. Classes in arts and science were commenced in 1906, when the institution was renamed the Transvaal University College. In 1908 a branch institution was established at Pretoria, and the work at Johannesburg and Pretoria was controlled by a common Council until 1910. In that year the Pretoria institution was incorporated as a separate body, retaining the name of Transvaal University College, while the Johannesburg institution received the name of South African School of Mines and Technology and was restricted to departments of mining and technology. Courses in commerce were established in 1913, and in 1916 the institution was made a constituent member of the University of South Africa. In 1917, work was begun in nine new arts and science departments, created in consequence of the generous response of the municipalities and public of the Witwatersrand to the appeal of the Witwatersrand University Committee for financial support. In 1920, the name of the institution was changed to University College, Johannesburg, and in 1921 Parliament passed a Private Act incorporating the college as the University of the Witwatersrand, Johannesburg, with effect from 1st March, 1922.

The university provides courses and grants degrees in the faculties of arts (including social studies, fine arts, music, and education), science, medicine, engineering (including land surveying, mining geology, architecture, and quantity surveying), commerce, law, and dentistry. Courses are offered also for diplomas in architecture, quantity surveying, actuarial mathematics, in social studies, Bantu studies, and a number of other arts subjects, in the economics of local government and public administration, in nursing, massage, medical gymnastics, and electro-therapy, and for post-graduate diplomas in public health, tropical medicine and hygiene, and psychological medicine.

A considerable amount of original research is carried out in all departments by members of the staff and by advanced students. With the assistance of the Union Department of Agriculture and Forestry and of African Explosives and Industries, Ltd., the Frankenwald Estate, a portion of the Beit bequest for the "University of Johannesburg", is being developed as a research station. Important investigations are being undertaken in the minerals research laboratory, which the Department of Mines has established at the university with the professor of metallurgy as Director. Generous donations from Dr. Bernard Price and the Carnegie Corporation of New York have provided for the establishment of the Carnegie-Price chair of Geophysics and of the Bernard Price Institute of Geophysical Research, which commenced its activities in January, 1937, and is housed in a well-equipped Institute building, completed in 1938.

The university departments of public health and forensic medicine are staffed by officers of the Union Departments of Health and the Interior, respectively, the Chief Health Officer being professor of public health, while the professorship of forensic medicine is associated with the post of medico-legal pathologist. The government Commissioner for Mental Hygiene is pro-

fessor of psychiatry. The government Bureau of Archaeology has its offices at the university, in which the Director of the Bureau holds the position of professor of archaeology. The Johannesburg hospitals and the South African Institute for Medical Research are closely associated with the instruction of medical students. In the training of engineering students the university has the co-operation of the Transvaal Chamber of Mines, the South African Institution of Engineers, and other bodies, as well as private firms. The Transvaal Society of Accountants contributes towards the cost of university classes for candidates for the professional examinations in accounting.

In 1938 the enrolment was 2,397 students (1,796 men and 601 women), of whom 1,955 were full-time students and 2,347 were matriculated. The student enrolment was divided between the several faculties as follows: Arts, 530; Science, 176; Medicine, 660; Engineering, 750; Commerce, 204; Law, 34; Dentistry, 43. The number of degrees conferred in 1938 was 342, including 5 doctor's degrees and 48 other post-graduate degrees, and 16 diplomas were granted.

The old university buildings, which date from 1907, are now occupied by the Witwatersrand Technical College. The new buildings at Milner Park, occupied since 1921, were erected at a cost of over £500,000 on a site of 96 acres within 1¼ miles of the centre of the city. The library building was erected in 1933, and the work of completing the central building, including a great hall, is now in progress.

The medical departments are housed separately at the medical school buildings on Hospital Hill, and the department of dentistry is housed in the university dental hospital, near the centre of the city. The university residences for men and women students, the swimming bath, and the playing fields are at Milner Park.

The main library is housed in a separate building, which also contains the celebrated collection of Africana, purchased by the university from the late Dr. J. G. Gubbins. There is a sectional library for each department, including the Leonard Memorial Library of Law Books, and the university also houses and administers the Witwatersrand medical library and the library of the South African Association for the Advancement of Science.

OFFICERS OF THE UNIVERSITY OF THE WITWATERSRAND, JOHANNESBURG.

Chancellor..... Hon. J. H. Hofmeyr, B.A. (Oxon) M.A. (C.G.H.), Hon. D.Sc. (Capetown), M.P.
Vice-Chancellor..... Hon. R. Feetham.
Principal..... H. R. Raikes, A.F.C., M.A.

6. **University of Pretoria (formerly the Transvaal University College).**—In 1908, university classes in arts, science, and law were established at Pretoria by the Transvaal Government, and were placed under the control of the Council of the Transvaal University College at Johannesburg, the constitution of that body being altered so as to give Pretoria equal representation. A separation took place in 1910, the Johannesburg section being re-incorporated as the South African School of Mines and Technology, whilst the Pretoria section retained the name of the Transvaal University College. By Act No. 13 of 1930 the Transvaal University College was incorporated as the University of Pretoria, the higher status being assumed on 10th October, 1930. In 1917 was instituted a faculty of agriculture, financial provision for which (an endowment of £100,000) had been made by the last Parliament of the Transvaal in 1910. The following faculties have since been established: 1918, theology; 1919, commerce and public administration; 1920, veterinary science; 1923, music; 1937, education.

Courses are provided for degrees and diplomas in arts, science, agriculture, veterinary science, law, divinity, education, native education, music, commerce, public administration, native administration, social work, architecture, quantity surveying, and domestic science.

The faculty of veterinary science works in the closest co-operation with the government research laboratories at Onderstepoort, and provides a five-year course leading to the degree of B.V.Sc., a feature being the training in tropical diseases. The faculty of agriculture gives a four-year course leading to the degree of B.Sc. (Agric.), and provides as options an advanced technical training in domestic science and most of the branches of agriculture practised in South Africa.

Important research work has been done in various directions during recent years at this institution, which provides the necessary facilities to students and members of the staff.

OFFICERS OF THE UNIVERSITY OF PRETORIA.

Chancellor..... H. J. van der Bijl, M.A., Ph.D., M.A.I.E.E., M.I.R.E.
Vice-Chancellor and Rector..... C. F. Schmidt, B.A.
Registrar..... Adv. J. C. V. Breytenbach, B.A., LL.B.

7. **Statistics of Universities and University Colleges.**—The tables hereunder give (i) comparative statistics of higher education from the year 1910, and (ii) in respect of each university and college the number of professors, lecturers, assistants, and students, the expenditure for 1937, and the annual value of bursaries granted.

(i) STATISTICS OF HIGHER EDUCATION, 1910 TO 1937.

Year.	Average No. of Students each Year.	State Expenditure.	State Expenditure per Student.	No. of Professors.	No. of Lecturers, etc.	Total Value of Bursaries.
		£	£			£

* Does not include expenditure on the faculty of agriculture.
† Includes the rectors or principals.
‡ Does not include farm and library assistants.
§ Includes a few part-time professors.
‖ Includes students in the faculties of agriculture and veterinary science.
¶ Under this head prizes (amounting to £270) and loans to students are not included. The figures here given will for obvious reasons not agree with the expenditure under the head "Bursaries and Scholarships" given in paragraph 9, table (i) (b), of this section.

8. **Examinations under the University Organization.**—The examining bodies created under the university system in the Union are the Universities of South Africa, Capetown, Stellenbosch, Pretoria, and the Witwatersrand, the Joint Matriculation Board, and the Joint Committee for Professional Examinations. The results of the examinations conducted by these bodies are given in the following tables.

(i) JOINT MATRICULATION BOARD—RESULTS OF EXAMINATIONS, DECEMBER, 1937, AND FEBRUARY, 1938.

* Known as Potchefstroomse Universiteitskollege vir Christelike Hoër Onderwys.

10. **Extension Facilities at University Institutions.**—*The University of Capetown.*—Vacation courses are arranged from time to time in the following subjects: African studies, medicine and surgery (post graduate), and music (teachers). Extension lectures are provided during the sessions. In 1938 three

courses were given on literary and scientific topics. Seminar courses are held periodically for teachers who wish to make a study of present day theories and practice in the field of education.

The University of Stellenbosch.—Besides the ordinary instruction, members of the staff also give public lectures at Stellenbosch and other neighbouring places. It is the aim of the university to be in contact with problems of the day. Besides instruction given to farmers, special attention is paid to practical psychological and educational problems. The Department of Educational Psychology undertakes the observation and treatment of psychological and educational defects of school children, and renders a good deal of assistance to schools in the classification of children. The department of sociology offers advice in connexion with charity and social rehabilitation in Capetown. Prof. Smith is responsible for the compilation of an Afrikaans standard dictionary, at which he has been working since 1925.

The *University of the Witwatersrand, Johannesburg,* conducts part-time classes of post-matriculation standard, leading to degrees in the faculties of arts, commerce, and law, and to diplomas in the faculties of arts, engineering (architecture and quantity surveying), and commerce. A post-graduate vacation course for district surgeons is regularly held, and similar courses for medical and dental practitioners are organized from time to time. Arrangements are being made for vacation refresher courses for teachers. A vacation course in Bantu studies has also been given, and members of the staff participate in vacation courses organized by other bodies. The university arranges frequent public lectures by distinguished visitors and by members of the staff, and most of the lectures organized by student societies are open to the public. The university is associated with the Transvaal Worker's Educational Association in the provision of extension lectures and tutorial classes in the Witwatersrand area.

At the *University of Pretoria*, the extra-mural classes, given out of office hours and in the business centre of the town, provide facilities for civil servants and professional and business men to qualify for degrees in commerce, public administration, arts, and law. In addition, a number of public lectures, dealing mainly with problems of the day, are regularly given in Pretoria and elsewhere by members of the teaching staff and other authorities under the aegis of the university.

Rhodes University College, Grahamstown.—Extension lectures on scientific subjects, history, law, English, music, and fine arts are given from time to time by members of the staff, in Port Elizabeth, Graaff-Reinet, Grahamstown, and other towns in the neighbourhood, and talks are broadcast from the local station of the South African Broadcasting Corporation.

11. **The National Bureau of Educational and Social Research.**—The National Bureau of Education was instituted under the Union Education Department in July, 1929. In 1934 a division of social work under a responsible officer was added and the name of the Bureau was changed to include this aspect; in 1936 a Film Division was established under the Bureau. The Bureau is administered by a Director and comprises at present the following divisions:—

1. The Division of Educational Research and Statistics.
2. The Social Research Division.
3. The Psychological Research and Service Division.
4. The National Library on Education and Social Science.
5. The Film Division.

The chief functions of the Bureau are as follows:—

(*a*) It is a central clearing house for information on education and social work all over the Union. It has in its library developed a considerable collection of official and other publications dealing with education, psychology, and social work, which is probably the largest collection of recent works on these subjects in the country. A free loan system is in operation whereby books may be borrowed by interested organizations and individuals throughout the Union.

(*b*) It acts as a liaison office between the four provinces in all matters pertaining to education and social work in South Africa. It works in close co-operation with the educational committee consisting of the heads of the five Education Departments in the Union. This committee is really a sub-committee of the Inter-Provincial Consultative Committee, for particulars of which see § 5, paragraph 5, Chapter II.

While the Bureau is not a co-ordinating body in the administrative sense, it draws together, either through informal consultation or through conferences, individual persons and State and other organizations engaged in kindred activities. As instances of this may be mentioned the organizing work done by the Bureau in acting as secretariat for the International Conference on Education held in South Africa in 1934 under the auspices of the New Education Fellowship, and for the National Conference on Social Work in connexion with the British Empire Exhibition at Johannesburg in 1936.

It collaborated in a secretarial and technical capacity with the Committee on Juvenile Delinquency and Neglect, the Committee on Poor Relief and Charitable Institutions, the Inter-departmental Committee on Native Education, and the Committee on Medical Training.

(*c*) Not only is the Bureau a sort of liaison office between the various bodies administering education and social work in South Africa, but it also keeps in touch with movements and developments in these fields in other countries, in so far as they are relevant to and may throw light upon South African problems. In this capacity it not only acts as South Africa's representative in connexion with the work of the Committee on Intellectual Co-operation of the League of Nations and the *Bureau International d'Education* at Geneva as well as that of international conferences on educational and social matters overseas, but also systematically keeps local bodies informed of their deliberations and recommendations.

(*d*) The Bureau conducts research work in problems of an educational or a social nature. It also acts as the secretariat to the South African Council for Educational and Social Research, which administers a grant for £2,500 per annum made by the Carnegie Corporation of New York. The results of these investigations are published in special bulletins under the auspices of the Council.

(*e*) The Bureau is also a service bureau. When called upon, it renders service to State departments and social welfare and other organizations. For example, through its Psychological Research Division, the Bureau serves the schools of provincial Education Departments and the trades and industrial schools in such matters as vocational guidance, the psychological classification of pupils, the selection of sub-normals for special education, and the diagnosis of special disabilities, especially of reading, spelling, and arithmetic. Advice is also given concerning the adjustment of problem cases. An important part of this division's work is the standardization of intelligence (individual and group), special abilities, and occupational tests.

(*f*) Through its Film Division the Bureau is responsible for the functions usually performed by what is known as a *Film Institute* in other countries, e.g. in England. These functions in respect of South Africa may be summarized as follows:—

(i) It acts as a clearing house for information on the educational and cultural uses of the cinema.

(ii) It advises educational institutions and government departments on all matters pertaining to audio-visual education, e.g. films and apparatus.

(iii) It links up the film trade and the cultural interests of the country both in the production and in the distribution of films of an educational and cultural nature.

(iv) It certifies films as educational, cultural, or scientific for purposes of customs exemption in terms of the League of Nations Convention on the International Circulation of Educational Films.

(v) It administers the national film library which is responsible for the collection, care, and distribution of 16 mm. educational films. This library has over 1,200 films and is supported by grants from the four Provincial Administrations as well as from Union Government departments, e.g. Education, Health, Agriculture, Labour, and Social Welfare. Schools and

welfare organizations of a public nature are thus enabled to borrow films from the library in regular rotation at a nominal subscription.

12. **Inter-Provincial Co-operation on Educational Matters.**—A sub-committee appointed by the Inter-Provincial Consultative Committee furnishes the means for consultation between the Union Education Department and the four provincial Education Departments on matters pertaining to education. This sub-committee consists of the heads of the five Education Departments who in turn delegate certain specialized aspects of the work to further sub-committees, on which the assistance of officials and technical persons from other departments is called in, e.g., Public Health, Agriculture, Labour, etc.

Several important educational problems have been dealt with in this way. The following are the chief:—(1) The co-ordination of the normal colleges and universities in the training of teachers; (2) the salaries and conditions of service of teachers with a view to facilitating interchange of teachers between the provinces; (3) the co-ordination of (*a*) the agricultural colleges under the Department of Agriculture and Forestry, (*b*) the agricultural schools under the Union Department of Education, (*c*) the primary and secondary schools under the provincial Education Departments, with a view to meeting the urgent educational needs of the agricultural population; (4) vocational guidance in the schools and the organization of juvenile affairs boards in the country districts, with a view to solving the rural unemployment problem in a prophylactic way; (5) the education of physically and mentally deviate children; (6) the co-ordination of medical inspection and follow-up services for school children, with special reference to malaria and bilharziasis; (7) the co-ordination of school broadcasting for the four provincial systems; (8) cinematograph instruction in schools and the institution of a Union Film Institute; (9) uniformity of reporting on educational statistics in the four provincial Education Departments, with a view to the issue of an annual Union Bulletin of Educational Statistics by the National Bureau of Educational and Social Research.

13. **Technical, Vocational, and Special Education.**—As the outcome of an inter-provincial conference held at Durban in November, 1924, vocational education was transferred from provincial to Union control.

The Union Department of Education administers technical colleges under Act No. 30 of 1923; industrial schools under the *Children's Act*, No. 31 of 1937; and trades and housecraft schools under the *Vocational Education and Special Schools Act*, No. 29 of 1928. In 1938 agricultural schools were transferred from the control of the Union Education Department to that of the provincial departments. Special schools for the deaf and blind are also administered under Act No. 29 of 1928. The training of mentally defective children is, however, administered by the Commissioner for Mental Hygiene under the Department of the Interior.

Statistics regarding all the different types of vocational training are given below. Generally speaking, the vocational courses are post-primary, the exception being those at industrial and special schools, where pupils who have not completed the primary school course are also afforded an opportunity of learning a trade or craft while continuing their scholastic training. All pupils in industrial schools are committed under the *Children's Act* on grounds of destitution, neglect, or delinquency, and are on that account at various stages of scholastic advancement when they enter these institutions.

A report on the Technical Colleges of South Africa giving the results of an investigation made by F. H. Spencer, D.Sc., under the auspices of the Carnegie Corporation of New York, was issued in 1937 and is obtainable from the National Bureau of Educational and Social Research, Union Buildings, Pretoria.

Act No. 43 of 1937 makes provision for compulsory attendance at special schools of children who by reason of physical, mental, or behaviour aberration or disability are unable to benefit sufficiently from the instruction given in ordinary schools. With regard to the deaf and the blind, there is no specified age of admission (regulations with regard to special schools are at present under consideration), but blind children are encouraged to enrol at the age of seven years and deaf at four or five years. The schools for the deaf at Worcester and at Capetown have recently acquired with government assistance new buildings for school work, vocational training, and hostel accommodation. At schools for the deaf, the oral method of teaching is followed exclusively,

the principals assuming responsibility for training their staff in the special teaching technique. The course at schools for the deaf is a 12-year one, the last three years being devoted to vocational training. Schools for the blind, which also have a 12-year course, provide school training up to Standard VIII for Europeans and Standard VI for non-Europeans. Vocational training comprises the orthodox crafts for the blind, such as basket, mat, and brush-making, as well as music. Schools for the deaf and the blind are State-aided, the Union Government contributing from two-thirds to the whole of the salaries, as well as 50 per cent. of all other authorized expenditure. In addition, boarding grants are given to necessitous children.

In addition to schools for the deaf and the blind and the school for epileptics at Kuils River administered by the Union Education Department, the provincial Education Departments provide, in a small measure, for other types of deviate children. There is provision in special classes, and in one instance there is a special school (Durban) for about 950 subnormal children. At three centres, viz., Plumstead (Cape), Johannesburg, and Durban, there are facilities for special education and convalescent care for about 120 cripple and cardiopathic children. At two institutions for mental defectives (under Act No. 38 of 1916) the Department of the Interior provides for about 500 mentally defective children of both sexes. Statistical particulars in regard to mentally disordered and defective persons are contained in Chapter IV, § 3.

* In this figure part-time students are reduced to a basis of full-time students in order to obtain comparable unit costs.

† Capital expenditure, such as interest and redemption charges and depreciation, excluded, in order to obtain current tuitional costs on a comparable basis.

‡ Excluding 319 correspondence students.

§ Excluding 9,146 correspondence students. Fees £8,968; expenditure, £11,565.

‖ Includes state bursaries to students for tuition purposes: Cape, £947; East London, £241; Orange Free State, £130; Natal, £531; Pietermaritzburg, £20; Port Elizabeth, £204; Pretoria, £1,392; Witwatersrand, £2,224; Total, £5,689.

¶ In this total a credit balance of £342 is included.

B.—STATE VOCATIONAL SCHOOLS.

(i) ENROLMENT AND COST.

Class of School.	Number of Schools, 1937.	Daily Average Number of Students, 1937.	Total Cost to the State, 1937–38.	Net Cost per Student.*
			£	£
Trades and Commercial Schools	16	1,408	174,669	67·44
Housecraft Schools	13	759		
Agricultural Schools	7	168	35,416	170·32
Industrial Schools (under the *Children's Act*, No. 31 of 1937)	7	1,266	103,005	77·09
TOTAL	43	3,601	313,090	75·84

* These institutions render inter-institutional services which reduce actual cost. They also have an income from cash sales, etc. The net cost allows for these amounts. The net unit cost is based on the daily average of students for the financial year 1937–38, and not on the average for the calendar year. These students are in residence, which together with tuition is provided free in the case of all industrial school students and in the case of nearly all the students in the other institutions.

(ii) NUMBER OF STUDENTS AND TYPES OF VOCATIONAL TRAINING FOLLOWED IN CERTAIN SPECIFIED CLASSES OF STATE SCHOOLS AT THE CLOSE OF THE YEAR 1937.

Class of Training.	Trades Schools.*	Agricultural Schools.†	Housecraft Schools.	Industrial Schools (under *Children's Act.*)	Total.

TOTAL	365	263	628

NOTE.—The State grant to these institutions was £38,795 for the year 1937–38.

14. Examinations.—(i) *Technical, Commercial, and Vocational.*—Under the supervision of the Union Department of Education, a series of national technical and commercial examinations is conducted at regular intervals, with the object of stimulating vocational education in combination with or in continuation of the ordinary school curriculum. The Department is assisted by advisory committees, and is able, by setting a proper standard for the

departmental examinations, to ensure that the training obtained by students and the certificates issued on the results of examinations are of uniform recognition and of definite practical value. The examinations, which were conducted in 333 centres and for which 37,182 candidates (approximately 107,600 subject entries) entered in 1938, are of five general types:—

(1) Teachers' Certificates (embracing courses in the divisions of Art, Commerce, Domestic Science, Technology, and Physical Education).
(2) National Technical Certificates and Advanced Technical Certificates.
(3) Domestic Science Certificates.
(4) Trades School Certificates (in which technical courses are associated with subjects of a more academic and scholastic character).
(5) General Commercial Certificates.

(ii) *On behalf of other Departments.*—Special examinations were conducted on behalf of the South African Railways and Harbours Administration, the Public Service Commission, the Post Office Administration, and the Department of Defence. In 1938, 9,364 candidates were examined on behalf of the South African Railways and Harbours Administration in the official languages, Standard VI, Standard VII, Apprenticeship and Entrance Tests.

Examinations are conducted annually to enable the Public Service Commission to select suitable candidates for appointment as clerks in the Public and Railways Services. These Public Service Examinations are classified as follows:—

(*a*) *Public Service Examination* (*A*), intended for male candidates only between the ages of 16 and 25 years who have passed the Matriculation Examination (with English and Afrikaans or Nederlands as obligatory subjects) or an examination recognized by the Commission as being of equivalent or higher standard.

(*b*) *Public Service Examination* (*B*).—This examination is open to all women who are 16 years of age and over and have passed the Junior Certificate Examination (with English and Afrikaans or Nederlands as obligatory subjects) or its equivalent.

(*c*) *Public Service Examination* (*C*).—This examination is intended for both male and female candidates who wish to be considered for appointment as (i) Probationer Post and Telegraph Assistants, and (ii) in the case of youths, to apprenticeships in the Engineering Division of the Department of Posts and Telegraphs. Candidates are required to be in possession of at least the Junior Certificate including both official languages (i.e. English and Afrikaans or Nederlands) or its recognized equivalent, and must conform to the following age requirements:—

Males: Under 18 and over 15 years.
Females: Under 19 and over 16 years.

(*d*) *Railways and Harbours Clerical Examinations.*—These examinations are intended for candidates who wish to be considered for appointment as clerks in the Administration of the South African Railways and Harbours. Candidates are required to be in possession of the Junior Certificate (Standard VIII) or its recognized equivalent.

Particulars of the number of candidates who sat for recent Public Service and Railways and Harbours Entrance Examinations are as follows:—

Examination.	1937.		1938.	1939.
	March.	December.	November.	February.
Public Service (A)	902	1,720	†	1,194
" " (B)	1,334	1,808	†	1,681
" " (C)—				
Boys	225	654	651	—
Girls	328	621	724	—
	553	1,275	1,375	†
Railways and Harbours	2,117*	1,393	2,111*	†

* Entered. † Not conducted.

(iii) *On behalf of Overseas Examining Bodies.*—The Union Department of Education also conducts examinations in South Africa on behalf of certain overseas examining bodies, such as the University of London (Matriculation and Degree courses), City and Guilds of London Institute, the Royal Sanitary Institute, and the examinations for Army and Navy Cadetship.

15. **Inquiry into Medical Training in South Africa.**—A committee was appointed by the Hon. the Minister of Education in December, 1937, under the chairmanship of Professor M. C. Botha, Secretary for Education, to investigate and report upon medical training in South Africa. The following were the terms of reference:—

(1) Whether the facilities for medical training in South Africa at present available are sufficient and adequate, having regard to the present and prospective future needs of the various sections of the Union's population.
(2) What steps should be taken to remove such weaknesses as may be found to exist at the existing medical schools, and in this connexion whether steps should be taken to fix a quota of students at such schools.
(3) If it is found to be necessary to expand the existing facilities, whether, having regard to the financial and all other relevant considerations, this could most suitably and appropriately be done at existing medical schools or by the establishment of an additional school or schools, and in the latter event what centre or centres would be most suitable for the purpose.

The committee's report was published in May, 1939 (U.G. No. 25, 1939).

§ 2. State and State-aided Education other than Higher Education.

1. **General.**—Under the *South Africa Act*, for a period of five years after the establishment of the Union and thereafter subject to decree of Parliament, control of education other than higher education was granted to the four Provincial Administrations. This arrangement still obtains [except as indicated in § 1 (13) above], and each province has continued to follow its own system and to shape its development according to its own policy. Thus four systems of State or State-aided education exist, which though akin in some respects are entirely dissimilar in others. Further there are numbers of schools independent of State aid or State control, statistics relating to which are given in § 4 of this chapter. The information contained in this section relates entirely to education under State control.

The whole question of "provincial" education has been the subject of investigation by various government commissions. The Provincial Finances Commission, which was appointed in September, 1922, and reported in April, 1923, inquired into the financial aspects of the question, and the Education Administration Commission, appointed in August, 1923, made a survey of the whole field of State and aided education in the Union (other than higher education). In its first report, dated October, 1923, the commission made recommendations defining the limits of compulsory education and assigning the burden of costs in relation to such limits. The final report, published in June, 1924, dealt more particularly with the questions of rural and technical education, and made proposals for the co-ordination of educational effort by the establishment of a central board of education directly under the control of the Government.

A government commission was appointed on the 4th July, 1933, under the chairmanship of Mr. Jacob de Villiers Roos, to examine and report upon the financial relations existing between the Union and the provinces. As the subsidies paid by the Government to the provinces are based upon a rate *per caput* of the average attendance at primary and secondary schools, this question received considerable attention at the hands of the commissioners. The recommendations of the commission are contained in a report (U.G. No. 46, 1934) issued in November, 1934.

As from the 1st April, 1925, all industrial and trades schools, formerly under the administration of the provinces, were taken over by the Union Education Department and classified under higher education.

2. **Educational Administrative System.**—Subject to final control by the Provincial Administration, the central direction of public education in each province is exercised by the provincial Education Department, the permanent

head of which in the Cape of Good Hope is the Superintendent-General, and in Natal, the Transvaal, and the Orange Free State in each case the Director. Each province has an inspection staff adapted to its requirements (see annual reports of the departments).

Further particulars of the educational administrative systems of the various provinces, both central and local, are given in the sixth and previous issues of this *Year Book*.

3. **Financial System.**—The central expenditure on school education is met from grants made by Provincial Councils supplemented from certain other local sources of revenue.

The revenues of the provinces are augmented by annual subsidies paid by the Government. These subsidies are based on the average attendance of European pupils at primary and secondary schools (see Chapter XV).

A feature of the financial provision made in the various provinces for the encouragement of education is the bursary system (see § 3, par. 3 below).

4. **Religious Instruction.**—The practice in each province in all public schools is for school to be opened with prayer and the reading of the Bible. Teaching of Bible history in school, subject to a conscience clause, may be and generally is provided; but no sectarian or doctrinal teaching is allowed, except in the Cape Province under certain conditions laid down in Chapter 23 of Ordinance No. 5 of 1921, which governs the matter.

5. **Secondary School Examinations.**—(i) *General.*—Until 1917 the University of the Cape of Good Hope conducted a Matriculation examination and a Junior Certificate examination. From and after 1918 the control and conduct of the Matriculation examination was vested in the Joint Matriculation Board. In 1922, however, the Transvaal Education Department instituted for the schools under its control a Transvaal Secondary School Certificate examination; in 1924 the Cape Education Department instituted a Cape Senior Certificate examination; and in 1939 the Orange Free State Education Department will conduct its own Senior Certificate Examination. All three of these departmental examinations are recognized by the Board (under certain conditions regarding choice of subjects) as equivalent to the Matriculation examination. Similarly the Junior Certificate examination was transferred to the University of Sout hAfrica, the Education Departments of the Cape, Transvaal, and Orange Free State Provinces, after varying intervals, instituting their own Junior Certificate examinations.

In 1932 a National Senior Certificate examination, which had for some time been conducted by the Union Education Department in connexion with commercial and technical schools, was also recognized by the board as granting exemption from the Matriculation examination. Candidates for the National Senior Certificate examination who were granted exemption from the Matriculation examination numbered 127 in 1937 and 210 in 1938.

(ii) *Cape of Good Hope.*—The Cape Senior Certificate and Junior Certificate examinations are under the control of a departmental examinations committee, which consists of twenty-one members, including nine inspectors, nine representatives of teachers' associations, and two representatives of the Joint Matriculation Board.

The Senior Certificate examination is held at the end of Standard X and the Junior Certificate examination at the end of Standard VIII. Entries for these examinations are accepted from private secondary schools under certain conditions.

Candidates who have passed the Senior Certificate examination are entitled to exemption from matriculation, if they passed in six subjects that satisfy the matriculation options, and if they passed in at least five of the subjects at one and the same examination. In these cases an endorsement signed by the secretary of the Joint Matriculation Board to the effect that the candidate is exempted from the Matriculation examination is added to the certificate. Male candidates who have passed the Senior Certificate examination are eligible for admission to the Public Service examination, if they passed in six subjects, including English and Afrikaans, and passed in at least five of the subjects at one and the same examination.

The following are the results of the examinations held in 1938:—

	No.	%
Cape Senior Certificate.		
Candidates	3,843	—
Passed—		
1st Grade	577	15
2nd Grade	2,516	65
Failed	750	20
Cape Junior Certificate.		
Candidates	8,526	—
Passed—		
1st Grade	1,391	16
2nd Grade	5,700	67
Failed	1,435	17

The admission fee for the Senior Certificate examination is £2. 5s. and for the Junior Certificate examination £1. 10s.

The following is a statement of the revenue derived from fees for the Junior and Senior Certificate examinations during the last five financial years:—

Year.	Junior Certificate.	Senior Certificate.	Total.
	£	£	£
1933–34	6,623	8,750	15,373
1934–35	9,433	7,295	16,728
1935–36	10,152	7,576	17,728
1936–37	11,230	7,628	18,858
1937–38	11,889	8,255	20,144

(iii) *Natal.*—The examinations taken in the secondary schools in this province are the Matriculation and School Leaving Certificate examinations conducted by the Joint Matriculation Board, the Junior Certificate examination of the University of South Africa, and the National and Technical Examinations of the Union Education Department. The results of the two first-named examinations held in December, 1937, and February, 1938, are given in Table (i), § 1 (8), of this chapter.

(iv) *Transvaal.*—The Transvaal Secondary School Certificate examination and the Transvaal Junior Certificate examination are conducted by the provincial Education Department with the assistance of the Transvaal Board of Moderators. The Board consists of fifteen members and includes representatives of the inspectorate, normal colleges, universities, and high and intermediate schools, under the chairmanship of the Director of Education. The papers for the Secondary School Certificate examination are subject to approval by the Joint Matriculation Board.

The underlying principle of the Transvaal examinations is that they shall not be dependent solely on a written examination and the verdict of an external examining authority, but that the school record of a candidate shall form an integral part of the examination. In view of this fact private students are not permitted to sit for these examinations.

The Junior Certificate examination is held at the end of Standard VIII (Form III), and the Secondary School Certificate examination at the end of Standard X (Form V).

The Secondary School Certificate is designed to provide for two types of pupil:—

(*a*) Those who desire it as a record of their school course;
(*b*) those who intend to proceed to a more advanced course of education.

In the case of those under (*a*) the candidate is permitted to select any subject from the curriculum, but in the case of those under (*b*) the candidate must select subjects in accordance with the grouping of subjects as laid down by the Joint Matriculation Board. In the case of the latter, an endorsement signed by the secretary to the Board to the effect that the candidate is exempted from the Matriculation examination for the South African universities is added to the certificate.

The examination fee per candidate for the Secondary School Certificate is £3, with a reduction to £2 in the case of failures re-entering, and for the Junior Certificate the fee is £1.

The following are the results of the examinations held in 1938:—

Transvaal Secondary School Certificate.

	No.	%
Candidates	2,243	—
Passed—		
Class I	229	10·2
Class II	1,264	56·4
Supplementary	247	11·0
Failed	503	22·4

Transvaal Junior Certificate.

Candidates	4,789	—
Passed—		
Class I	612	12·8
Class II	2,528	52·8
Supplementary	690	14·4
Failed	959	20·0

(v) *Orange Free State.*—(*a*) *Junior Certificate Examination.*—The provincial Education Department instituted its own Junior Certificate examination in 1933. Previously this examination was conducted by the University of South Africa. The examination is conducted by an examining board consisting of the Director of Education, two representatives of the Joint Matriculation Board, two representatives of the University College of the Orange Free State, one representative of the Normal College, five inspectors of education, five principals of high schools, and one principal of a junior high school.

The examination is held at the end of Standard VIII; the candidate's school record is taken into account, and an oral test is given in the two official languages.

The admission fee for the Junior Certificate examination is £1. 10s.

The following are the results of the examination held in 1938:—

	No.	%
Candidates	2,032	—
Passed	1,691	83
Failed	341	17

(*b*) *Matriculation Examination.*—This examination is conducted by the Joint Matriculation Board and the results of the examinations held in December, 1937, and February, 1938, are given in Table (1), § 1 (8), of this chapter. In 1939 the Orange Free State Education Department will conduct its own Senior Certificate examination.

6. **Cape of Good Hope.**—(i) *Administrative System.*—The majority of schools for European pupils are controlled by school boards with statutory powers; there are 111 of these. Schools for non-European pupils are mostly controlled by denominational bodies. The general policy of the Cape Education Department aims at the encouragement of local efforts for the extension and improvement of primary and secondary education for all races. The various Acts and Ordinances dealing with education in this province have been co-ordinated in the *Consolidated Education Ordinance*, 1921.

(ii) *Finance.*—Expenditure on teachers' salaries, hire of buildings, purchase of equipment, etc., is defrayed almost entirely from the Provincial Revenue Fund. Education is free, up to the age of 15, in the case of all schools, European and non-European, except in certain high schools and in a few primary schools connected with high schools.

Different scales of fees are in operation at the various secondary and high schools in the Cape Province. When fixing the scale of fees at a school due regard is taken of the locality in which such school is situated and the financial circumstances of the inhabitants.

The following statement shows the minimum and maximum quarterly fees in operation at secondary and high schools throughout the province:—

Description.	Minimum Fees.	Maximum Fees.
	£ s. d.	£ s. d.
Secondary Schools—		
Standard VII.	15 0	1 10 0
„ VIII.	15 0	1 15 0
High Schools (fee-paying from Std. VII)—		
Standard VII.	15 0	1 15 0
„ VIII.	1 0 0	2 0 0
Standards IX and X.	1 2 6	3 3 0
High Schools (fee-paying throughout)—		
Sub. A and B.	10 0	17 6
Standard I.	12 6	1 6 6
„ II.	15 0	1 12 6
„ III.	17 6	2 2 6
„ IV.	1 0 0	2 2 6
„ V.	1 2 6	2 12 6
„ VI.	1 5 0	2 16 6
„ VII.	1 7 6	3 0 0
„ VIII.	1 10 0	3 10 0
Standards IX and X.	2 0 0	4 0 0

The following statement shows the revenue derived from school fees and other sources during the last five financial years:—

EDUCATION RECEIPTS, CAPE OF GOOD HOPE, 1933-34 TO 1937-38.

TOTAL £	281,301	295,826	302,467	311,566	321,064

(iii) *Classification and Curriculum of Schools.*—European schools are classified as training colleges, high schools, secondary schools, primary schools, farm schools, and special schools.

In December, 1938, there were 9 training colleges; 149 high schools and 84 secondary schools providing differentiated courses in secondary education; and 1,704 primary schools, in which instruction is given on the lines of the complete primary course, consisting of two sub-standards and six standards. Farm schools, of which there were 116, provide instruction on the lines of the primary course at centres where it is not possible to secure a regular attendance of at least ten pupils, which is the minimum requirement for primary schools.

The native section included 3 high schools, 14 secondary schools, 3 part-time schools, 19 industrial schools, 14 training schools, and 1,814 denominational primary schools. The coloured section included 4 high schools, 5 secondary schools, 34 public primary schools, 7 farm schools, 19 part-time schools, 2 special schools, 8 training schools, and 832 denominational primary schools. The vast majority of native and coloured schools are managed by the various religious denominations, and are aided by the Government.

(iv) *Attendance.*—Education for European children aged 7 to 16 years inclusive is compulsory throughout the province, unless the child is engaged in a regular occupation and has already passed Standard VI. Provision is made for the transport or boarding of children when necessary.

(v) *Qualifications and Grading of Teachers.*—The chief classes of certificates issued to student-teachers after training and examination are:—

(*a*) European Primary Teachers' Certificate after a two-year course of training, the admission standard being a pass in the Senior Certificate examination or an equivalent examination.

(*b*) European Primary Teachers' Higher Certificate after a one-year course of training in one of the following subjects:—(1) Infant school work, (2) manual training, (3) physical culture, (4) cookery and housewifery, (5) needlework and laundrywork, (6) needlework, (7) music.

These one-year courses are open to students who have qualified for the Primary Teachers' Certificate.

(*c*) Coloured Teachers' Primary Lower Certificate.
(*d*) Coloured Teachers' Primary Higher Certificate.
(*e*) Native Teachers' Primary Lower Certificate.
(*f*) Native Teachers' Primary Higher Certificate.

The course of training for the Native Teachers' Primary Lower Certificate extends over a period of three years, the standard of admission being a pass in Standard VI. The course of training for the Native Teachers' Primary Higher Certificate extends over a period of two years, the standard of admission being a pass in the Junior Certificate examination.

Previously the course of training for the Coloured Teachers' Primary Lower Certificate was a three-year course, the standard of admission being a pass in Standard VI; and the course of training for the Coloured Teachers' Primary Higher Certificate was a two-year course, the standard of admission being the Junior Certificate. Since January, 1936, the course of training for the Coloured Teachers' Primary Lower Certificate has been a two-year course, the standard of admission being a pass in the Junior Certificate Examination. One-year Primary Higher courses of training in special subjects, open to students who have passed the Coloured Teachers' Primary Lower Certificate Examination, were instituted at Coloured Training Schools in 1938.

Teachers in native mission schools are eligible for a good service allowance after five years' reasonably meritorious and continuous teaching service.

(vi) *Salaries of Teachers.*—Particulars of the scales of salaries obtaining with regard to various classes and grades of teachers in European schools are given in the statement below. The minimum and maximum salaries are given in respect of certain classifications containing various grades, but are not given in detail for each intermediate grade.

SCALES OF SALARIES FOR TEACHERS. (Ord. No. 5 of 1921.)

Class of School and Grading of Post.	Number of Grades.	Male.		Female.	
		Minimum.	Maximum.	Minimum.	Maximum.
Principals.		£	£	£	£
Training Colleges	1	750	900	500	600
High Schools	3	600	900	400	600
Secondary Schools	2	450	675	310	450
Primary Schools	6	135*	675	120*	450
Farm Schools	1	80†	110	80†	110
Assistant Teachers.					
Training College Assistant Teachers	1	525	675	350	450
Chief Secondary Assistant Teachers (in High Schools)	4	300	600	235	400
Secondary School Assistant Teachers	6	150	540	135	360
Chief Primary Assistant Teachers (in High Schools)	1	270	450	210	300
Primary School Assistant Teachers	6	135	405	120	270

* Assistant teacher's salary is paid to the principal of a Group E school.
† Plus free board and residence.

(vii) *Training of Teachers.*—European students desiring to be admitted to the two-year course of training for the Primary Teachers' Certificate apply during the third quarter of the preceding year to the principal of the high school at which they are completing their high school course, and from the list of applicants the Department selects those to be admitted. The average fee charged to students for training as teachers is £1. 10s. per quarter.

Coloured students desiring to be admitted to the two-year course of training for the Coloured Primary Teachers' Lower Certificate apply during the third quarter of the preceding year to the principal of the secondary school at which they are taking the Junior Certificate examination, and from the list of applicants the Department selects those to be admitted. The average fee charged to students for training as teachers is £1. 5s. per quarter.

Native students desiring to be admitted to a course of training apply to the principal of the native training school which they wish to attend.

(viii) *Training Colleges.*—Apart from the universities, there are nine European training colleges in which there were in December, 1938, 1,224 students under training as primary and specialist teachers.

The following is a list of training colleges and training schools for teachers in the province.

European.

Capetown Training College.
Graaff-Reinet Training College.
Grahamstown Training College.
Kingwilliamstown Training College.
Oudtshoorn Training College.
Paarl Training College.
Stellenbosch Training College.
Steynsburg Training College.
Wellington Training College.

Non-European.

In the native training schools 2,121 students were under training as teachers in December, 1938, and in the coloured training schools, 671.

(ix) *Special and Part-time Schools.*—The South African Training Ship "General Botha" is a special school. There are also special schools in connexion with the Lady Michaelis Home, Plumstead, and the Princess Alice Home of Recovery, Retreat. Under the Durban Agreement the special, technical, art, and industrial schools, previously under the control of the Cape Education Department, were transferred to the control of the Government as from the 1st April, 1925. European and coloured part-time schools were also transferred to the control of the Government as from 1st January, 1928, but the Provincial Administration again assumed control of coloured part-time schools as from the 1st January, 1932.

7. **Natal.**—(i) *Administrative System.*—Numerous laws and ordinances govern the administration of education in Natal, commencing with Laws Nos. 15 and 16 of 1877, which provided for primary and higher education respectively. The Education Department has power to establish and maintain primary and secondary schools, and also to make grants-in-aid to private primary and secondary schools, which agree to maintain the same standard of education as in the government schools and which are inspected by the Department. The Department may establish schools for native, Indian, and coloured children, and, on request, it may undertake the inspection of private schools which are not grant-aided. There is no system of local administration, but provision is made by law for the establishment of school advisory committees where such are desired, and in some places parent-teacher associations have been formed voluntarily.

(ii) *Finance.*—The entire cost of education is paid out of the central fund, receipts from school fees being paid in to the credit of that fund. Local contributions are not required by the Administration. Except in the case of government native schools, where the fees are from 2s. 6d. to £2 per annum, primary education is entirely free in government schools, and books are supplied free in government and government-aided primary schools. In government secondary schools the fees charged per pupil per annum range from £6. 4s. to £10 according to standard, with a reduction for two or more children in the same family.

The following table shows the revenue derived from school fees and other sources for a series of years:—

EDUCATION REVENUE, NATAL, 1933 TO 1937.

Description.	1933.	1934.	1935.	1936.	1937.

TOTAL £	66,488	65,422	69,375	70,458	72,619

(iii) *Classification and Curriculum of Schools.*—The government schools are divided into primary, intermediate, and secondary schools and, under certain conditions, secondary or intermediate schools may be designated "High Schools." The primary school comprises two infant classes and six standards, the secondary school Standards VII to X (Matriculation), and the intermediate school covers both the primary and the secondary course. As a general rule, no free pupils are admitted to the high schools except those who gain "free places" under the bursary system. Provision exists, however, whereby necessitous children, who have passed Standard VI before reaching the age of 16, may continue to receive free education up to the end of the year in which they become 16. No native, Indian, or coloured children are allowed in schools other than those specially provided for them. Farm schools may hardly be said to be schools in the ordinary sense, but merely groups of children under a tutor or governess. European, coloured, and Indian schools follow the same curricula; a separate curriculum has been devised for native schools. Provision is made in European schools for instruction in the English or the Afrikaans medium.

(iv) *Attendance.*—Education for European children aged seven to fifteen years inclusive (or the completion of Standard VI) is compulsory within a three-mile limit of a school, but pupils may enter voluntarily at 5½ years of age. Fees are charged only in respect of pupils who have passed Standard VI, and in secondary schools which have a Standard VI fees are charged for that standard. There are two preparatory schools for boys where fees are payable, although the work covers only the primary syllabus.

(v) *Qualifications and Grading of Teachers.*—The government training college at Pietermaritzburg supplies on an average about 90 certificated teachers each year, 70 per cent. of whom are women.

Students are trained for Third Class Certificates (two years) and University Education Diplomas: (i) General; (ii) Special; (iii) Technical (all with a degree); and, for a limited time, a non-graduate diploma. From 1936, a new certificate, the "Rural Teacher's Diploma", has been issued and from 1938, the "Natal Teacher's Diploma (Domestic Science)". Training for the Third Class Certificate and the diplomas is effected by co-operation between the Natal University and the training colleges, for the Rural Diploma between the Natal Training College and the Cedara Agricultural College, and for the Domestic Science Diploma at the Natal Training College.

Mainly for the benefit of coloured and Indian students, but open to all races, there have been instituted since 1932 a Third Class (B) Certificate, a Fourth Class Certificate, and a Fifth Class Certificate. The first and third of these can be obtained only by taking a course of training, but the Fourth Class Certificate must be taken as an external course for some time to come; this concession has been allowed mainly for the sake of teachers with experience who prior to entering on their teaching career had no opportunity for training.

Native students may enter training for a Third Class or a Fourth Class Native Teacher's Certificate. These classes are equivalent in standard to the first two classes mentioned in the previous paragraph.

The Second Class Certificate course is an extra-mural course for persons who are actually teaching in Natal. The qualification for admission to the examination is the possession of a Third Class Certificate and Matriculation, plus 5 years' teaching experience, or a degree plus 8 years' teaching experience. The professional part of the examination is conducted by the Natal Education Department.

(vi) *Salaries of Teachers.*—Particulars are given in the statement below as to the scales of salaries obtaining with regard to various classes and grades of teachers in European schools. The minimum and maximum salaries are given in respect of certain classifications containing various grades, but are not given in detail for each intermediate grade.

SCALES OF SALARIES FOR TEACHERS.

Class of Post.	Grade.	Male.		Female.	
		Minimum.	Maximum.	Minimum.	Maximum.

"	B	195	360	165	270
"	A	180	360	150	270

(vii) *Training of Teachers.*—The conditions under which a European teacher is accepted for training are, briefly, that he must have matriculated, be physically fit, and be able to receive the nomination of the head teacher of his school, with specific reference to character, conduct, and temperamental fitness for teaching. The fees for the Third Class Certificate Course are £50 per annum including board and residence at a training college hostel, or £24 exclusive of board and residence.

For the diploma course, the fees per annum payable to the training college are: First year, nil; second year, £3; Third Year Non-Graduate Diploma, £2. 10s.; Third Year Graduate Diploma, nil; Fourth Year Graduate Diploma, £5; all exclusive of board, lodging, and books. Cost of board and residence at the Natal Training College Hostel is £40 per annum, and at the University College Hostel, £60 per annum. In addition, diploma students have to pay to the university the usual fees charged by that institution.

The Provincial Administration may advance loans to a limited number of students up to the full cost of training. The loans are repayable whether the student completes the course or not, and whether he receives an appointment as a teacher or not, but if he receives an appointment he may repay the loan in instalments over a period of five years. He is bound to serve the Department for the same number of years as he received assistance, and failure to do so carries a penalty of £25 for each year of service not performed.

Candidates for the Rural and the Domestic Science Diploma Courses must possess the Third Class Teacher's Certificate, and to encourage a supply of such teachers the Department grants both bursaries and loans, the latter only being repayable.

At the moment the Department does not train teachers for Agricultural Science, but it secures a supply of teachers in this subject by subsidizing their training at approved institutions by means of loans and bursaries.

The Department trains at its own institutions Indians and Coloured persons for the T.3 B and T. 5, the entrance qualification for the former being the Junior Certificate and for the latter Std. VI. The fee is from 7s. 6d. to 15s. per mensem. The entrance qualification for the T. 4 is the T. 5, or a pass in the Mother Tongue, Arithmetic, and two other subjects in the Junior Certificate, plus a year's teaching experience. Candidates are trained externally for this examination at part-time classes, for which no fee is charged.

The training of native teachers is undertaken entirely by Christian missions, but the examinations are conducted by the Department. The entrance qualifications are: for T. 4, Standard VII, and for T. 3 B, the T. 4, plus teaching experience or the Junior Certificate. The fee for any course is £12 per annum including board and lodging, and the Department grants bursaries for these courses.

(viii) *Training Colleges.*—There is one government training college for Europeans, situated at Pietermaritzburg, which, in conjunction with the Natal University College, provides a two years' course to the Third Class Certificate of the province, after admission through the Matriculation or equivalent examination, and courses for the various education diplomas instituted by the University of South Africa. The college contains, in its own grounds, classrooms, laboratories, an art school, music rooms, a domestic science building, and a women's hostel.

There are also five training colleges for natives, one training college and four training classes for Indians, and one training centre for coloured teachers.

The following is a list of training colleges and training schools for teachers in the province:—

European.	*Coloured.*
Natal Training College.	Umbilo Road, Durban.
Indian.	*Native.*
Durban Training Class.*	Adams.
North Coast Training Class.*	Mariannhill.
Pietermaritzburg Training Class.*	Nutall Institute.
Sastri College.	St. Chads.
Stanger Training Class.*	Umpumulo.

* Part-time.

(ix) *Special and Part-time Schools.*—The special schools, viz. the Technical College at Pietermaritzburg and the Natal Technical College at Durban, in common with all similar institutions in the country, are controlled by the Union Education Department.

The Glenwood High School, Durban, formerly the Durban Technical High School, is under the control of the provincial Education Department. In it are provided Junior Certificate and Matriculation courses with a technical or commercial bias. Technical or commercial courses of two, three, or four years' duration are provided at the Vryheid Secondary School, two intermediate schools in Durban, two in Pietermaritzburg, and one at Malvern. Several other intermediate schools are providing commercial subjects for Junior Certificate and Matriculation candidates, and the demand for commercial work is further met at two or three government-aided secondary schools. A special course in agricultural science, with suitable outdoor and laboratory work, is followed at the Vryheid High School, the Estcourt High School, the Eshowe Intermediate School, and the Wartburg and Weenen Government Schools. Its introduction in other rural schools will follow as opportunity occurs.

In 1938 the Weston Farm Training School was transferred from the control of the Union Education Department to that of the Provincial Education Department. Boys who have passed Standard VI are admitted for a two-year course of training in general farming and at the same time cover a Standard VII school course.

Developments in rural and specific agricultural education were introduced in 1936 as the result of the findings of recent Union and provincial commissions. The training of teachers specially qualified to give a rural bias to the education of the country child was commenced. In some 90 schools the elementary principles of agriculture and gardening are taught, and generally the aim in the rural primary school is to equip the child for rural life, without actually attempting definite vocational training.

(x) *Natal Provincial Education Commission.*—On 5th March, 1936, the Administrator appointed a commission to inquire into and report upon:—

(*a*) The system of education, other than higher education, at present existing in the Province of Natal;
(*b*) the financial implications of any alterations proposed;
(*c*) the question of future control and administration of native education in the province;
(*d*) any other matters incidental to such inquiry.

The report of the commission was submitted in January, 1938.

8. **Transvaal.**—(i) *Administrative System.*—Education is administered under the *Education Act*, No. 25 of 1907 (Transvaal), as amended. Provision is made for the establishment and maintenance of schools for European, coloured, and native children. Grants-in-aid are made to private schools, which do not form part of the ordinary school system. The province is divided into 32 school districts, for each of which there is an advisory body called a School Board, consising partly of elected and partly of nominated members.

(ii) *Finance.*—Both primary and secondary school education are free, the cost being met from provincial revenue. Books are supplied free to all pupils up to Standard VIII (Form III).

(iii) *Classification and Curriculum of Schools.*—Primary schools generally include instruction from the grades up to and including Standard VI. In a few instances Standard VI is attached to a high school and is designated "Form I." To a number of primary schools there are secondary departments attached making provision for instruction up to and including Standard VIII (Form III). There are 40 high schools in the province: six of these are for boys only and six for girls. Secondary departments making provision for instruction up to and including Form V are attached to 8 primary schools. On the 1st June, 1937, there were 14,560 pupils in high schools, and 6,348 pupils were receiving secondary education in the secondary departments of primary schools. At many high and primary schools provision is made for instruction in manual training and domestic science.

(iv) *Attendance.*—Education in respect of European children aged seven to sixteen years inclusive (fifteen years on the Witwatersrand), or the completion of Form III (Standard VIII) is compulsory.

(v) *Qualifications and Grading of Teachers.*—Teachers in schools directly maintained by the Government enter into a definite contract with the Government. Assistants in primary schools are paid according to their qualifications, those in high schools according to the posts occupied. Special scales are laid down for principals.

The Teachers' Diploma and the Teachers' Lower Diploma are issued by the Transvaal Education Department, which prescribes the conditions under which they may be issued. Courses for these diplomas are provided at the Normal Colleges. The Higher Education Diploma is issued by the Union Department of Education, which prescribes the conditions under which it may be issued. The university college provides courses, usually directed by a professor of education, for this certificate.

(vi) *Salaries of Teachers.*—Particulars are given in the statement below as to the scales of salaries obtaining with regard to various classes and grades of teachers in European schools as from the 1st January, 1926. The minimum and maximum salaries are given in respect of certain classifications containing various grades, but are not given in detail for each intermediate grade.

‡ Then after five years £600.
§ Then after five years £450.

(vii) *Training of Teachers.*—Candidates for admission to a course of training must—

(*a*) be in possession of the Transvaal Secondary School Certificate or a certificate considered equivalent thereto, showing that the candidate has passed at the examination concerned in both official languages;
(*b*) satisfy an examination by the Medical Inspector of Schools or a Medical Board constituted or approved by the Director of Education;
(*c*) be recommended for admission by persons appointed or approved for that purpose by the Director of Education;
(*d*) enter into an agreement with the Department in which they undertake on completion of the course to serve the Department for a certain period.

Tuition for the professional part of the course is free. Boarding fees, university fees, college fees, etc., amount to approximately £80 per annum.

(viii) *Training Colleges.*—The following is a list of training colleges and training schools for teachers in the province:—

Normal College, Pretoria.
Normal College, Johannesburg.
Normal College, Heidelberg.
Normal College, Potchefstroom.

(ix) *Transvaal Provincial Education Commission.*—On 3rd March, 1937, the Administrator appointed a commission to inquire into the educational system of this province with a view to making such recommendations as may increase its efficiency, bring it into line with the most modern developments in educational practice, and enable it to meet satisfactorily the requirements of all sections of the population. The Commission's report has not yet been issued.

9. **Orange Free State.**—(i) *Administrative System.*—Education is administered under the *Education Laws Consolidation Ordinance*, No. 15 of 1930. The Education Department has powers to establish and maintain various types of public schools and allied institutions, and also to make grants-in-aid to the latter, as well as to private schools which comply with certain conditions. The province is divided into twenty-five school districts, for each of which there is a school board, consisting of elected members, with certain powers of supervision.

(ii) *Finance.*—The total expenditure on education is met from provincial revenue. No local contributions towards expenditure are required. Education up to and including the Matriculation standard was made free in 1920; but certain schools approved by the Provincial Administration are allowed to charge tuition fees, the amount of such fees being placed at the disposal of the respective school committees for expenditure for the benefit of the school, subject to the Administrator's approval.

(iii) *Classification and Curriculum of Schools.*—Primary schools provide for the whole primary school course from the sub-standards to Standard VI inclusive. Junior high schools provide for instruction up to Standard VIII or Junior Certificate, while high schools provide for all continuation work up to Matriculation, School Leaving Certificate, and equivalent examinations. Thus two types of school may be combined in one institution. The public school is regarded as complete when it covers the whole ground from the infant school to university Matriculation.

(iv) *Attendance.*—Education in respect of European children aged six to sixteen years inclusive is compulsory, unless the child is receiving adequate instruction elsewhere, has passed Standard VI, or is fourteen years of age and is lawfully apprenticed to a recognized trade. If a pupil resides more than three miles from school and if the parent is unable to provide transport, the Education Department gives assistance, either for transport or for board.

(v) *Qualifications and Grading of Teachers.*—The minimum requirement for appointment as a teacher in public schools is the possession of the Lower Primary Teachers' Certificate of the Orange Free State or its equivalent. The examination and the grading of teachers in the service of the Department are conducted by a Teachers' Registration Board, of which body the Director of Education is *ex officio* chairman. Professional Teachers' Certificates are of several classes—Lower Primary Teachers' Certificate, Higher Primary Teachers' Certificate, Advanced Primary Teachers' Certificate, Professional Technical Teachers' Certificates, and Secondary Teachers' Certificates, Grades I and II. The minimum requirements for the admission of candidates to these examinations are as follows:—Lower Primary Teachers' Certificate: Matriculation or equivalent certificate and two years' training at the Normal College; Higher Primary Teachers' Certificate: First year B.A. course in certain specified subjects or one year at a recognized School of Agriculture and two years' training at the Normal College; Infant Teachers' Certificate: Lower Primary or Higher Primary Teachers' Certificate and one year's training in Infant School work at the Normal College; Advanced Primary Teachers' Certificate: Higher Primary Teachers' Certificate or equivalent, second year degree course and five years' experience (if the degree course was taken as an internal student, the experience required is reduced to two years).

The Secondary Teachers' Certificate is issued without further examination as follows:—

Grade I.—To teachers in possession of (*a*) the B.A. degree or equivalent academic qualifications plus the M.Ed. of the University of South Africa or equivalent professional qualifications, or (*b*) the M.A. degree of a recognized university, or equivalent academic qualifications plus any recognized professional teachers' certificate of the Orange Free State Province or equivalent professional qualifications.

Grade II.—To teachers in possession of the B.A. degree of a recognized university or equivalent academic qualifications, plus any recognized professional teachers' certificate of the Orange Free State Province or equivalent professional qualifications.

The Professional Technical Teachers' Certificates are issued without further examination to acting teachers with the following qualifications:—

(*a*) *Domestic Science.*—The Matriculation certificate or equivalent academic qualifications, plus any recognized professional technical teachers' certificate in domestic science approved by the Board.

(*b*) *Physical Culture.*—The Matriculation certificate or equivalent academic qualifications, plus any recognized professional technical teachers' certificate in physical culture approved by the Board.

(c) *Art.*—The Matriculation certificate or equivalent academic qualifications, plus any recognized professional technical teachers' certificate in art approved by the Board.

(d) *Music.*—The Matriculation certificate or equivalent academic qualifications, plus any recognized professional technical teachers' certificate in music approved by the Board.

(vi) *Salaries of Teachers.*—Particulars are given in the statement below as to the scales of salaries obtaining with regard to various classes and grades of teachers in European schools. The minimum and maximum salaries are given in respect of certain classifications containing various grades, but are not given in detail for each intermediate grade.

(vii) *Training of Teachers.*—Candidates for admission to the Lower Primary Teachers' Examination must produce evidence to the satisfaction of the Board—

(a) that they are in possession of the Matriculation Certificate or a recognized Secondary School Leaving Certificate, or hold equivalent qualifications;

(b) that they have attended a course of at least two years' duration at an approved institution.

Candidates for admission to the Higher Primary Teachers' Examination must produce evidence to the satisfaction of the Board—

(a) that they have followed a first-year course at a recognized university or university college and presented themselves for examination in the following four subjects, and that they have passed the prescribed university or college tests in at least three of these subjects at one and the same examination: (i) First official language; (ii) second official language; (iii) Biological Science (preferably Biology if approved for degree purposes); (iv) History or Geography or Mathematics or Physics or Chemistry or Geology;

(b) that they have attended a course of at least two years' duration at an approved institution.

Candidates for admission to the examination for the Infant Teachers' Certificate must produce evidence to the satisfaction of the Board—

(a) that they are in possession of the Matriculation Certificate or a recognized Secondary School Leaving Certificate;

(b) that they hold the Lower or Higher Primary Teachers' Certificate;

(c) that they have attended a course of at least twelve months' duration at an approved institution.

In accordance with the provisions of section 3 (*f*) (iii) of Ordinance No. 15 of 1930, the Administrator may, if funds permit, grant Normal College advances to teachers or to persons who hold the Matriculation Certificate or a recognized Secondary School Certificate or equivalent qualifications, and who wish to qualify themselves as teachers. The financial position of the applicant is taken into account in fixing the amount of the advance awarded, but the maximum advance is £60 per annum for study at the Grey University College, or £50 at the Normal College or other approved institution.

(viii) *Training Colleges.*—European teachers are trained at the Normal College, Bloemfontein.

(ix) *Special and Part-time Schools.*—There are several trades and industrial schools, including schools of agriculture and housewifery, and continuation classes are also conducted in Bloemfontein. These schools and classes were taken over by the Union Education Department from 1st April, 1925, and are no longer under provincial control.

§ 3. Statistics of State and State-aided Education other than Higher Education.

1. **General.**—The following tables give in respect of the Union, and of each province separately, summarized figures indicating the development of primary and secondary education and education other than higher education from the earliest date available in each case to 1937. So far as the enrolment figures are concerned, it should be noted that from 1936 onwards these result from a census taken during the first week of June in each year. Figures for previous years relate to the first week in November. The figures should not, therefore, be taken as representing the average enrolment for the last quarter or for the year.

The figures given for expenditure relate only to expenditure from government funds and do not represent the total cost of education, part of which in the Cape, Natal, and Orange Free State Provinces, and for a certain period to a limited extent in the Transvaal Province, has been defrayed from local sources. The figures showing expenditure per scholar are based upon the total of all scholars, European and non-European. Seeing that the cost of European and non-European education differs very considerably and that the proportion of European to non-European children varies in the case of each province, comparison between the provinces cannot be made with any degree of accuracy.

3. **Expenditure on Education of European Scholars.**—Particulars of ordinary government expenditure in the various provinces on education (other than higher education) of European scholars, are given in the following two tables.

(i) GOVERNMENT EXPENDITURE ON ADMINISTRATION, INSPECTION, AND OTHER GENERAL MATTERS, 1937.

NOTE.—This table relates to expenditure on both European and non-European education. The allocation to races is necessarily arbitrary and has not been attempted.

Head of Expenditure.	Cape of Good Hope.	Natal.	Transvaal.	Orange Free State.	Union.
	£	£	£	£	£
Administration	30,276	11,900	20,083	10,136	72,395

* Included under Light, Water, etc.
† £60,876 spent on repairs and maintenance, which cannot be allocated.

(iii) CAPITAL EXPENDITURE BY STATE ON ALL SCHOOL BUILDINGS AND GROUND AND INTEREST AND REDEMPTION PAYMENTS, 1937-38.

Description.	Cape of Good Hope.	Natal.	Transvaal.	Orange Free State.	Union.
	£	£	£	£	£
Capital Value of School Buildings to date	4,927,188	1,382,087*	4,264,606	1,249,261	11,823,142
Expenditure from Loans during year	200,212	53,524	565,692	31,109	850,537
Payments on Loan Interest and Redemption during year	181,122	59,956	143,450	64,641	449,169

(iv) *Bursaries.*—(*a*) *Cape of Good Hope*, 1937-38.—Merit Awards of £10 a year, tenable for two years, are given to the 25 candidates who obtain the highest marks at the Junior and Senior Certificate Examinations.

Bursaries to enable promising and necessitous pupils, whose homes are remote from secondary institutions, to obtain secondary education were also given in 1937-38. Of these, boarding bursaries were awarded to 4,660 pupils, and conveyance bursaries to 441 pupils, at a cost of £55,567 and £1,669 respectively.

(*b*) *Natal*, 1937.—In the Natal Province the number of bursaries granted for educational purposes and to boarders during the year was 2,343, involving an expenditure of £41,656. These bursaries represented merit bursaries and free places, i.e. free books and tuition, and in some cases free board, free or partially-free admission of indigents to hostels, boarding grants to indigents, and free books to indigents.

In addition, grants amounting to £2,696 for transport were paid in respect of 938 pupils, and 530,277 free meals were supplied at a cost of £10,858.

(*c*) *Transvaal*, 1938.—A total sum of £128,100 was made available for bursaries to primary and secondary pupils during 1938.

(*d*) *Orange Free State*, 1937.—The following figures relate to bursaries granted in the Orange Free State: Normal College and secondary bursaries, £13,075; primary boarding and transport bursaries, £5,274.

4. **Statistics of Education of European Scholars in certain Urban Areas.**—The following table gives in summary particulars of schools for European scholars in certain of the more important towns and urban areas in the Union:—

NUMBER OF SCHOOLS, ENROLMENT OF EUROPEAN SCHOLARS AND STUDENTS, AND NUMBER OF TEACHERS IN CERTAIN URBAN AREAS, 1st JUNE, 1937.

Town or Area.	Number of Schools and Colleges.	Enrolment in Primary and Beyond Primary Schools.			Students in Training Colleges and Schools.		Students in Special Schools.		All Scholars and Students.	Teachers.

NOTE.—The special schools are: S.A.T.S. *General Botha* (Simonstown), Lady Michaelis Home (Plumstead), Princess Alice Home of Recovery (Retreat).

5. **Statistics of Education of Non-European Scholars.**—The following tables give such statistics as are available in respect of State and State-aided education of non-European scholars.

In the Orange Free State the £4,000 grant received annually from the Provincial Administration is now amalgamated with the £10,000 Union grant and is disbursed as a grant towards native teachers' salaries, being no longer allocated separately as a capitation grant to the various mission societies.

STATE AND STATE-AIDED SCHOOLS FOR NON-EUROPEAN SCHOLARS.

(i) NUMBER OF STATE AND STATE-AIDED SCHOOLS AND STATE EXPENDITURE ON EDUCATION OF NON-EUROPEAN SCHOLARS, 1920 TO 1937.

Year.	Number of Schools.			Training Schools.	Special Schools.	Expenditure. *	Expenditure per Scholar. *
	Native.	Other Non-European including Asiatic.	Total.				
						£	£ s. d.
1920.....	2,593	498	3,091	29	9	538,200	2 5 2
1925.....	2,646	591	3,237	29	9	726,662	2 12 6
1930.....	3,195	782	3,977	38	23	1,113,956	2 18 3
1933.....	3,148	875	4,023	37	20	1,162,195	2 14 2

§ 4. Statistics of Private Schools.

There is very little government regulation of the activities of private schools in the Union. In the *Cape Province*, private schools with five or more pupils on the roll which do not receive any financial assistance from the Education Department are required to register with the Department, to keep registers of pupils and teachers, and to submit annual returns to the Superintendent-General of Education.

Private schools are inspected free of charge by the Department if the request for inspection is made in writing. It is lawful for an inspector of schools to inspect any private school for the purpose of ascertaining its condition, and should the Superintendent-General of Education not be satisfied with conditions, it is competent for him to refuse to recognize attendance at such school under the provisions relating to compulsory school attendance in the Cape Province. In *Natal*, the Education Department undertakes, upon

request, the inspection of private schools, but gives them no financial assistance of any kind. In the *Transvaal*, the Department has a limited inspectorial power over private schools, which, if attended by ten or more pupils, are required to register and supply returns. In the *Orange Free State* capitation grants may be made to private schools under conditions laid down in the *Education Ordinance*. Inspectors of the Department may visit and inspect any private school which is attended by five or more pupils, and the Administrator, on the advice of the Director of Education, may require any alterations in the conduct of the school to be made within a fixed time, and, if the order is not complied with, he may cause such school to be closed forthwith and the pupils transferred to another school. All private schools must register and supply returns to the Department.

The figures given in the following tables are derived from returns furnished under regulations framed under section 10 of the *Statistics Act*, No. 38 of 1914, by every school or other educational or training institution which was not maintained by the Government, was not in receipt of any government grant, and in which not fewer than five pupils received instruction other than religious instruction during the calendar year. Until 1937 schools were enumerated in December of each year; since 1938 the census has been taken in June.

Appreciable fluctuations occur from year to year in the figures for private schools. This is inevitable considering the transient nature of many of the schools, as well as the fact that private schools continually pass into the category of "government-aided" and then cease to play a part in these statistics. The main reason for fluctuation, however, is the extreme difficulty of achieving complete enumeration. All private schools are not necessarily required to register with the various Departments of Education, and a complete list of schools is therefore unobtainable. The Office of Census and Statistics relies for its information on the lists of registered private schools from the different Education Departments, together with lists furnished by missionaries and grantees who are known to be in control of schools. While the list of European private schools is reasonably complete, that of non-European, especially native, is subject to an unknown margin of error.

§ 5. Scientific Research.*

An article describing the principal scientific research facilities existing in the Union was included in the sixth and previous issues of this *Year Book*. Some reference to the scientific research done at South African universities and colleges will be found in § 1 of this chapter, in the paragraphs devoted to the various institutions.

(i) *National Research Council and Board.*—The Research Grant Board, instituted by the Government in 1918, was merged in April, 1938, into a new organization, consisting of two bodies, the National Research Council and the National Research Board. The Council is purely an advisory body, while the Board's duties are administrative in character and comprise those of the former Research Grant Board.

The functions of the new organization, stated briefly, are to advise the Government generally regarding the encouragement of research in the Union and to administer all government grants in aid of research, as well as other funds placed at its disposal for a similar purpose. A report of the activities of the Research Grant Board from 1918 to 1935 was issued in 1936 (U.G. 13, 1936).

The National Research Council and the Board are attached to the Department of Union Education and report to the Minister of Education.

(*a*) *Research Grants.*—These grants are awarded to members of the staffs of the universities and museums, besides others who have generally a considerable amount of research to their credit. The grants are made to defray such necessary expenses as the purchase of apparatus, material, and literature, travelling expenses, and the cost of publication of the results of research.

(*b*) *University Research Grants and Scholarships.*—An amount of £1,500 has been provided each year from 1934-35 on the estimates of the Department of Education for the award of these grants and scholarships. Their primary object is to encourage the training of research workers in the universities of the Union. In the case of grants, preference is given to applications from post-graduate students and the younger members of university staffs, while the scholarships are available only to post-graduate students, who must undertake to devote their whole time to research during the period of the scholarships. In every case provision must be made for the appointment of a capable supervisor. The grants are for varying amounts, mainly towards the purchase of apparatus or material, or towards travelling expenses, while the scholarships are of the value of £100 for one year and may be renewed on application.

* A comprehensive report on this subject, prepared by a committee of the Research Grant Board was published in the *South African Journal of Industries* (Vol. VII, No. 4, April, 1924).

The grants and scholarships awarded from 1934 are as follows:—

	Grants.	*Scholarships.*
1934	11	10
1935	10	14
1936	6	15
1937	13	10
1938	11	14

(*c*) *Carnegie Corporation of New York.*—The Board, on the invitation of the Carnegie Corporation, assisted in the distribution and administration of funds contributed by the Corporation in support of research in South Africa. The programme was for a period of five years, i.e. from 1928 to 1932 inclusive, and included, in addition to grants for research purposes, travelling allowances for men and women, based on the plan of the Guggenheim Fellowship of the United States of America.

The Board, at the request of the Carnegie Corporation, collaborated with the Dutch Reformed Church in research in connexion with the Poor White problem. The results of this research have been published in English and Afrikaans; the work comprises five volumes, and the cost of publication was borne by the Carnegie Corporation.

The Carnegie Corporation placed a further sum at the disposal of the Research Grant Board for the support of research during the years 1933 to 1937 inclusive. This sum is now practically exhausted.

(*d*) *Mineral Research Scholarships.*—These scholarships, of which two are available annually, are of the value of £240 per annum, and are tenable for one year with the possibility of renewal. They are awarded for the purpose of research in connexion with the winning and utilization of minerals (other than coal) occurring in the Union. The scholars are required to act under the direction of the Director of the Mineral Research Laboratory, University of the Witwatersrand.

(ii) *The South African Institute for Medical Research.*—This Institute was established in Johannesburg in 1912 for the purpose of carrying out (*a*) researches and investigations into the causes and methods of prevention of human diseases, (*b*) routine laboratory examinations of a diagnostic nature for public health authorities, hospitals, the mining industry, and others, and (*c*) the preparation of biological products for the prevention and treatment of diseases, including vaccines, antitoxins, antibacterial sera, and similar products.

The control of the Institute is vested in a board of management representing the Government (3 members), the Witwatersrand Native Labour Association (3 members), and the University of the Witwatersrand (1 member).

In the years which have elapsed since its establishment the Institute has greatly expanded both in building and staff, until now it employs about 100 Europeans and 50 natives.

The Institute is mainly concerned, on the research side, with investigations into medical problems relating to public health and industrial hygiene, with particular reference to South African conditions. Extensive investigations have been made, or are in progess, in connexion with plague, typhus, the typhoid fevers, rabies, the silicosis of gold mining, tuberculosis, pneumonia, meningitis, and other bacterial diseases, and parasitic diseases, while a special department is devoted to the study of tumour formation and growth. Much work has also been done in regard to the nutritional conditions and diets of the native population, and a special study of the blood groups of African natives has been made. Both in the laboratory and in field work extensive studies have been made of the bionomics of the vectors of malaria, and similar studies have been commenced on the flea carriers of plague.

The routine side of the Institute's work includes the performance of routine tests for diagnostic purposes on behalf of the Government, the mining industry, local authorities, hospitals, and medical practitioners, while the serum and vaccine laboratories, in addition to carrying out serological and immunological researches, are responsible for the preparation and issue of large quantities of antitoxins, antibacterial serum, and vaccines for the prevention and treatment of diseases. In this connexion extensive research has been conducted in regard to the snake venoms of Africa and other countries; this has resulted in improved methods for the production of antivenene used for the treatment of snake bite. In regard to the preparation of sera and vaccines, extensive new buildings have been erected and equipped with the most modern plant for the production of these essential biological products.

A branch laboratory for routine diagnostic investigations has been established at Port Elizabeth to serve the eastern districts of the Cape Province.

The Institute works in close association with the medical school of the University of the Witwatersrand, of which the Director of the Institute is honorary professor of bacteriology and pathology, while other officers of the Institute hold senior lectureships in pathology, bacteriology, and parasitology. In addition to the courses in these subjects for the ordinary medical curriculum, special post-graduate courses are held for the diplomas of Public Health, Tropical Medicine and Hygiene, and Psychological Medicine.

The total expenditure on the Institute for the financial year ended on the 31st March, 1938, was £75,892.

The Institute publishes an annual report covering its many activities, and a copy of that report can be obtained by anyone interested on application to the Manager and Secretary, P.O. Box 1038, Johannesburg. The Institute also publishes, from time to time, the results of specific scientific researches in the form of monographs and papers contributed to various medical and scientific journals, copies of which are distributed to similar institutions and to research workers throughout the world.

(iii) *The South African Association of Private Laboratories.*—The members of this association, who are laboratory owners in private medical laboratory or analytical practice in Capetown, Durban, Johannesburg, and Pretoria, work in close co-operation with chemical and medical associations in South Africa. The object of the association is to promote the chemical, medical, and allied sciences, to foster a spirit of mutual help and co-operation amongst its members, and to encourage and facilitate research work in private laboratories.

The officers elected for the year 1938 were:—

Dr. A. Pijper (Pretoria), *President.*
Mr. James Gray (Johannesburg), *Vice-President.*
Dr. J. Pratt-Johnson (Johannesburg), *Hon. Secretary and Treasurer.*

(iv) *The South African Council for Educational and Social Research.*—This Council is constituted under the chairmanship of the Minister of Education. The National Bureau of Educational and Social Research, mentioned in § 1 above, acts as secretariat for the Council.

The objects and functions of the Council are:—

(i) To promote generally, as far as possible in co-operation with existing institutions, the cause of educational and social research and investigation in South Africa;

(ii) to administer the Carnegie Grant of £12,500 (payable in five annual instalments) for the furtherance of the abovementioned object, provided none of this fund be spent upon the salaries of the permanent officers and staff of the Bureau.

This will involve:—

(*a*) Payment of expenses in connexion with the meetings of the Council and the Board;

(*b*) allocation and disbursement of grants to assist in carrying out any research or investigation approved by the Council;

(*c*) the making of an annual grant towards the library of the Bureau so that South Africa may have at least one central library where students may become acquainted with the work done in social and educational fields in other countries, as well as in South Africa;

(*d*) the publication in suitable form of the results of research and investigation approved by the Council;

(iii) to advise the Bureau as to possible lines of research;

(iv) to consider suggestions and recommendations made by an Advisory Board constituted from representatives of various educational and social organizations in the different provinces of South Africa.

An account of the grants made and activities sponsored by the Council has been published in *Research Series No.* 6 of the South African Council for Educational and Social Research under the title: *Educational and Social Research in South Africa.*

§ 6. Libraries.

1. **Library of Parliament.**—The Library of Parliament, which is housed in the Houses of Parliament at Capetown, has existed since July, 1854, and to-day contains some 80,000 books; it is the largest library in the Union maintained purely from State funds. The aim of this institution is to provide information on the political and social sciences required by those governing the country. The institution is open to the Governor-General, senators, members of parliament, and judges, ex-senators, ex-members of parliament, and ex-judges.

A collection of about 25,000 volumes dealing with Africa, called the Mendelssohn library, forms part of the Library of Parliament, and this section is open during office hours to research workers, students, and those interested in African literature. The whole of these collections is fully catalogued according to the Dewey Decimal System of Classification, and students have the assistance of research librarians, together with the help of a subject index.

The Mendelssohn collection originated through the munificence of the late Sidney Mendelssohn, who died in 1917, bequeathing his famous collection of Africana to the Union Parliament. The books brought together by Mr. Mendelssohn number about 12,000 items, and in addition the collection embraces a vast number of historical pictures and maps. A collection of Africana, belonging to Major William Jardine, was subsequently added by purchase, as was also a considerable African library, previously housed in the Library of Parliament. Together with Mr. Mendelssohn's gift, funds were provided for the purpose of keeping the collection up to date.

The Library of Parliament publishes an annual report, periodical lists of additions, and bibliographies of various subjects of contemporary interest, among which are: *Guide to Publications in the Library of Parliament dealing with the Relations between Europeans and Coloured Races* and *Gids tot die Publikasies in en oor Afrikaans in die Parlementsbiblioteek.*

2. **Principal Public Libraries.**—In earlier issues of this *Year Book* (Nos. 1 to 6) historical particulars were given of the four libraries designated by the Copyright Act (No. 9 of 1916) for the receipt of all publications copyrighted in the Union, viz., the South African Public Library, Capetown; the State Library, Pretoria; the Library of the Natal Society, Pietermaritzburg; and the Bloemfontein Public Library.

The *South African Public Library, Capetown,* which is a national institution, was founded in 1818, and is the oldest and largest library in the Union. It contains the Dessinian, Fairbridge, Grey, Hofmeyr, and Wessels Collections, and the Muir Mathematical Library, and is especially rich in literature relating to South Africa and in sets of scientific publications.

The *State Library, Pretoria,* is one of the two national libraries; it is also the central library. It was established in 1887 and possesses one of the most extensive and valuable book collections in South Africa. It includes a very comprehensive collection of works on the early history of and records of travel in South Africa and numerous printed publications issued by the Government of the late South African Republic. In 1932 the Carnegie Corporation of New York voted a capital grant of 125,000 dollars (£25,686 at par) to the State Library, the annual interest on which is devoted to the provision of central library facilities.

The chief objects of the State Library are: To act as the centre of the South African library system; to act as a national lending and reference library, supplying on loan to libraries, and in special cases to individuals, books which cannot be conveniently or economically obtained in any other way; to encourage co-operation between all libraries and to provide the mechanism for exchange of books between libraries; to achieve a united national library system and to provide the services of a travelling organizer to assist library authorities in the solution of their difficulties and in the improvement of their library service; to assist in the establishment of rural library services throughout the entire Union; in terms of the *Patents, Designs, Trade*

Marks and Copyright Act, 1916, to act as a repository for all books, periodicals, newspapers, and other documents published in the Union of South Africa and to furnish information concerning these publications by means of monthly lists of accessions and by other means; to act as a centre of bibliographical information; to act as a municipal library.

The *Library of the Natal Society* originated in a small public library started at Pietermaritzburg in 1846, and was subsequently taken over by the Natal Society, which was founded in 1851 and incorporated in 1874, with the object of promoting the study and cultivation of the various branches of art, science, literature, and philosophy. One of the distinguishing features of the library is the valuable and comprehensive music section. A grant is received from the Provincial Government in support of the children's section, which is now in a flourishing condition. The library supplies books to country subscribers and to library clubs in the schools. There are good reading rooms with overseas and local newspapers and magazines.

The *Bloemfontein Public Library* was established in 1875, and after many vicissitudes it has now developed into a considerable institution. The present building was given by the late Mr. G. A. Fichardt, and the ground by the Municipality; from the latter the library has received a great deal of financial support. The library possesses a good collection of Orange Free State records. The Africana collection has been considerably enlarged and includes the following:—

Hofstede, H. J.: Geschiedenis van den Oranje Vrijstaat, 1876.
Notulen van den Volksraad, Oranje Vrijstaat.
Ordonnanties van den Volksraad, Oranje Vrijstaat.

The Bloemfontein Public Library supplies books to country residents, as well as to 28 smaller libraries in the Orange Free State and the northern Cape Province.

One of the most important steps in the development of the library was the opening in June, 1932, of a children's free library. It has also organized a non-European library service for the Orange Free State, for which a Carnegie grant of 2,500 dollars was made.

It was the first library in South Africa to establish and maintain a Book Club and a Drama Library. Valuable extension work is conducted through the medium of a popular Library Literary Society.

3. Statistics of Public Libraries.—The following tables give statistics of public libraries for a period of years:—

PUBLIC LIBRARIES.

§ 7. Art Galleries and Museums.

1. **Art Galleries.**—(i) *South African National Gallery, Capetown.*—The original Capetown Art Gallery was founded in 1871 under a bequest from Butterworth Bayley, supplemented by the efforts of the South African Fine Arts Association, which resulted in a sum of £3,000 being raised towards the project. The first gallery was situated in New Street, now Queen Victoria Street, but in 1895 this property was sold to the Cape Government, and the art collection was removed to a building adjacent to the South African Museum.

In 1914 a commencement was made with the building of the present gallery, but the outbreak of war interrupted the work, which had not then advanced beyond the foundations. In 1928 building was resumed and the gallery was opened in November, 1930.

The completion of the first part of the building was a result of financial co-operation between the Union Government, the Capetown Municipality, and the trustees of the estate of the late Hyman Liberman, a former mayor of the city. Plans are now ready for extensions involving three new blocks, the building of which was commenced in January, 1938.

Valuable gifts of pictures and sculpture have been made by Mr. A. A. de Pass, Mr. F. K. Wiener, Frank Brangwyn, R.A., Sir Edmund and Lady Davis, Lady Michaelis, The National Art Collection Fund, London, Mr. and Mrs. J. Whitford Griffiths, and others.

(ii) *Statistics.*—Particulars are given hereunder in respect of art galleries:—

2. **Museums.**—(i) The *South African Museum, Capetown*, was established under that name in 1825 with Dr. (later Sir) Andrew Smith as its first curator. In 1855 it was incorporated by Act of Parliament as a government institution, and placed under the care of a board of trustees. The present Director and Keeper is Dr. E. L. Gill and there is a scientific staff of five.

The museum contains collections in all branches of natural history and geology, as well as anthropology and archaeology. In most departments a representative series of specimens is set out for public exhibition, but much larger systematic collections are kept for the use of specialists. Owing to lack of space, there has been up to the present no permanent public exhibit of botanical material, though the museum possesses a large and valuable herbarium; but a named collection of fresh wild flowers renewed every week is shown in the entrance hall.

Much scientific work on the collections is carried out by the staff and by specialists in other South African institutions or abroad. The results are published in the *Annals of the South African Museum*, of which thirty-four volumes are completed or in course of publication.

One whole volume and parts of two others, amounting to 1,153 pages of text, with 39 plates and many other illustrations, were published during 1938. A supplementary publication was an index to Volumes I to XXX of the *Annals*.

Special features of the collections at present exhibited to the public are inscriptions left at Table Bay by early navigators; the life-casts of Bushmen and other native races; cave-paintings, rock-engravings, and prehistoric stone implements; prehistoric remains from Zimbabwe; South African birds, reptiles, and fishes; skeletons of whales from local seas; Karroo fossil reptiles; economic geology of diamonds, platinum, asbestos, etc. Among the more notable of the reference collections are those in South African botany, entomology, arachnology, marine zoology, and fossils.

The exhibition galleries were largely re-arranged a few years ago in consequence of considerable extensions of the building, but as the supply of new show-cases has not yet caught up with the increased space it has so far been impossible to present all the re-arranged sections in finished form. During 1938 a further instalment of cases resulted in the completion of the equipment of the new ethnology gallery and the future insect room. The furnishing of a new outbuilding, which provides much-needed storage and working quarters for the departments of palaeontology and stone-age archaeology, was finished early in 1938, and these new quarters have since been in full use.

Also under the care of the museum trustees, with the help of an advisory committee, is a typical colonial town-house in Strand Street, known as the Koopmans de Wet House and devoted to the exhibition of early Cape-made furniture and domestic appurtenances in use from the Settlement to about the year 1830.

Further particulars descriptive of the principal collections in the museum will be found in the sixth and earlier issues of this *Year Book*.

(ii) The *Albany Museum, Grahamstown*, was founded in the year 1855. At first the collections were housed in various private premises and later in the Town Hall. In 1900 a museum building was erected, the funds for which were provided by the Government. In 1920 a new wing was added and a second wing was completed in 1938.

The museum is under the control of a Director, who is responsible to the board of trustees consisting of twelve members. The Director is Dr. J. Hewitt, who is assisted by three honorary curators: Dr. J. L. B. Smith (fish collections), Prof. E. D. Mountain (rocks and minerals), and Dr. J. V. L. Rennie (fossils). The Botanical Survey officer for the South-eastern Districts acts as Curator of the Herbarium.

The museum is maintained by means of annual grants from the Provincial Administration, supplemented by grants from the Divisional Council, the Grahamstown Municipality, and various colleges, and by public subscriptions.

The collections relate chiefly to the fauna, flora, geology, ethnography, and history of South Africa. The historical collection contains a number of interesting objects relating to the 1820 Settlers, and the pre-history collections include a series of Scandinavian stone implements and also collections of stone implements from many rock-shelters in the Albany district, including material from the well-known sites of Wilton and Howieson's Poort. The bird and mammal rooms contain fairly representative series, and besides there are skin collections stored away—that of birds numbering approximately 10,000 specimens.

Collections of reptiles, amphibians, and fishes are exhibited, and there is a much larger series amongst the study collections. These study collections of lower vertebrates are of considerable importance and include many "type" specimens. There are good collections of insects and of land and marine shells.

The herbarium, which was commenced about the year 1860, is the only public collection of its kind in the eastern Cape Province, and is one of the largest in South Africa. The specimens are contained in 31 cabinets, and the total number is estimated at over 100,000. The herbarium is now the Eastern Districts Regional Herbarium for the Botanical Survey of the Union.

In the arrangement of the exhibited collections the special needs of Grahamstown as an educational centre have been considered. Specimens are often lent to teachers and students for class instruction and study. Recently the sphere of influence has been greatly enlarged by the establishment of a schools service, which provides travelling collections that are sent to the primary schools over a wide area in the eastern Cape Province. The cost of the exhibition cases for this purpose was met from funds donated by the Carnegie Corporation of New York. A fully trained officer has been appointed by the Education Department to manage this service.

In matters of research, interest is mainly concentrated on the eastern Cape Province. The publications of the museum are of two kinds: Guide books for popular instruction and Records which make known the results of the scientific work of the staff. The latter publication is issued to kindred institutions throughout the world on an exchange basis.

(iii) *Port Elizabeth Museum and Snake Park.*—The collection in the museum commenced in a very small way and was housed for many years in a single room. In 1885 the Town Council undertook the control and maintenance of the collection, which was then transferred to the Feather Market building, and in 1888 a grant of £150 per annum was made by the Government. In 1914 Mr. and Mrs. Olorenshaw and Mr. C. R. Olorenshaw presented to the town a spacious residence situated in Bird Street for use as a museum, and the collection was transferred to the new premises.

The museum contains collections of mammals, birds, minerals, and historical specimens. The Marine Hall, built in 1930, contains a collection of specimens of the marine life of Algoa Bay, including two whale skeletons, each measuring 60 feet. The African Hall houses the ethnological collection comprising beadwork, stone implements, bushman paintings, etc. Situated in the museum grounds are the famous Snake Park, where live snakes are displayed by a native attendant, two aviaries, and an aquarium.

(iv) The *Durban Museum* was established by the Durban Town Council in 1887 and is housed in the municipal buildings. The museum contains collections in South African zoology, botany, ethnography, prehistoric archaeology, numismatics, and local history. The exhibits include several important collections, viz.: the Alfred D. Millar collection of more than 3,000 South African butterflies and some 2,500 eggs of South African birds; the J. D. Casey collection of shells of South African molluscs; and the W. S. Churchill collection of more than 3,000 Greek, Roman, and British coins and European commemorative medals; and amongst the collections that are stored for reference and study purposes is the C. N. Barker collection of about 12,000 specimens of South African coleoptera.

The educational value of the museum is promoted by the employment of a guide-lecturer to conduct visitors and classes of school children through the museum and to interpret the exhibits, and also by means of weekly lectures to classes of school children on subjects within the scope of the museum and the curriculum of the schools, illustrated by lantern slides, motion-picture films, and exhibits in the museum.

The results of the scientific activities of the museum staff are published in the *Annals of the Durban Museum*.

The public attendance during the last three years has averaged 115,094 persons per annum.

(v) *Transvaal Museum, Pretoria.*—The Transvaal Museum was established in 1893 and officially opened on 15th May, 1894, by President S. J. Paul Kruger under the name of "Staatsmuseum".

To-day the Transvaal Museum comprises:—

(*a*) the *Old Museum* in Boom Street;
(*b*) the *New Museum* in Paul Kruger Street;
(*c*) the *Paul Kruger Museum* (President Kruger's former residence) in Church Street West.

At the *Old Museum* are exhibited the historical, ethnological, and art collections. The taxidermist's laboratory is also in this building.

The *New Museum* houses the natural history and geological collections, the scientific library, the office of the Director, and the laboratories of the scientific staff. Every branch of natural history is here represented. Three large halls are devoted to the exhibition of mammals, birds, reptiles, fishes, shells, insects, etc., while in a fourth hall is the geological collection, the most extensive in the southern hemisphere. The exhibition collections in the museum have grown to fairly large proportions; the study collections are far larger and, in fact, in most branches they are the largest in South Africa. The method of exhibition of the natural history collections is only a temporary measure; lack of show-cases prevents any proper arrangement and display of the magnificent groups of mammals, which have continually to be replaced as a result of exposure.

The *Paul Kruger Museum* was officially opened as a branch of the Transvaal Museum on the 10th October, 1934. The house has been restored to something of its former state and contains many relics of President S. J. Paul Kruger. Much of the original furniture, however, has still to be procured, and in this respect great difficulty is being experienced. It is hoped that gradually many of these pieces will be returned to their former home, where they will be arranged in their original positions.

The museum is under the control of a Director, Mr. C. J. Swierstra, who is responsible to a board of trustees. The scientific staff consists of six specialists. The results of scientific research on the museum collections are published in the *Annals of the Transvaal Museum*, of which 19 volumes are complete or in the hands of the printer.

(vi) *The National Museum, Bloemfontein.*—The museum was established in 1877. The Government made a grant of £100 per annum, and the material was housed in the Raadsaal, one of the buildings dating from the early days of Bloemfontein. After 1900 the grant was increased to £400 per annum. In 1912 the Government erected a large building for the museum with 12 halls at a cost of £15,000. Thereafter the grant was increased to £1,000, but it was not until 1922, when the grant was further increased to £2,000, that the first scientist was appointed. In 1937 further large halls were added and the floor space was thereby doubled. Other extensions are in course of construction.

To-day the museum is a government museum with a yearly grant of £2,700 from the Government and £150 from the Town Council. It is under the supervision of 6 curators, 4 of whom are appointed by the Government and 2 by the Town Council. The Director of the museum is Dr. Ir. E. C. N. van Hoepen, M.I.

Since the appointment of a scientific staff in 1922 the museum has grown rapidly, not only because of the work of the staff but because of the increasing support of the public. The growth of the museum is reflected in the growth of the more important collections.

The number of exhibits in the most important groups in 1922 as compared with that in September, 1937, is as follows:—

Description.	1922.	1937.	Increase.
Vertebrates	1,886	3,134	1,248
Invertebrates	819	2,988	2,169
Fossil Vertebrates	109	6,439	6,330
Fossil Invertebrates	379	16,139	15,760
Ethnographic Objects	977	4,132	3,155
Stone Implements	286	38,250	37,964
Historic Objects	369	662	293
Minerals and Rocks	1,300	3,494	2,194
TOTAL	6,125	75,238	69,113

In the first 45 years of its existence the museum had assembled 6,125 objects in the above-mentioned sections, and this number had increased by 69,113 to 75,238 in 15 years. The library has grown from 30 books to between 4,000 and 5,000. In 1928 the museum started its own publications, and an exchange system was instituted with learned institutions throughout the world. Twenty-six publications have been issued and an exchange is effected with 358 learned periodicals.

The number of visitors in 1922 was 18,000. This number has increased to about 70,000 yearly.

(vii) *Statistics.*—Particulars are given hereunder for the year 1937 in regard to all museums:—

§ 8. Zoological and Botanical Gardens.

1. **Zoological Gardens.**—(i) The *National Zoological Gardens of South Africa, Pretoria*, arose as an offshoot of the Staatsmuseum der Zuid Afrikaansche Republiek, now the Transvaal Museum. In 1899 Dr. J. W. B. Gunning, Director of the Staatsmuseum, obtained permission to remove a few wild animals, collected by him, from the museum on Market Square to "Rus in Urbe", the present site of the gardens.

The gardens are under the control of a Director (R. Bigalke, M.A., Ph.D., C.M.Z.S.). By Government Notice No. 1398 of the 29th September, 1933, the institution was incorporated under the *State-aided Institutions Act*, 1931, and the committee of management which had hitherto functioned was raised to the status of a board of trustees.

For many years the collection of animals was the most extensive in South Africa, and this is probably still the case.

Towards the end of 1932 the development of an ideal area of approximately 30 acres was commenced as an unemployment relief scheme, and the sections for lions, tigers, and antelopes were completed and occupied towards the end of 1938. These three enclosures are among the largest and most modern of their kind.

Early in 1936 the area of the grounds was increased from about 70 acres to about 100 acres by the cession of approximately 32 acres of the farm Prinshof. This new area extends from the Aapies River to the top of the Daspoort Hills, and is adjacent to the 30-acre extension now in course of development.

(ii) *Zoological Gardens, Johannesburg.*—In 1903 Messrs. Wernher, Beit and Co., of London, and Mr. (later Sir) Max Michaelis, a former partner of that firm, presented to the town about 200 acres of the Braamfontein Forest, then known as the Saxonwold, for the establishment of a public park. The offer was coupled with the wish that the park should be called "Hermann Eckstein Park" to commemorate the name of the late Mr. Hermann Eckstein, a senior partner of the firm. At the time the donation was made, there were in the deceased estate some animals which had been brought together by the late Mr. Hermann Eckstein. These animals were moved to

Hermann Eckstein Park and formed the nucleus of the present zoological collection. The City Council has developed the area, and has acquired over 2,660 animals and birds, with the result that to-day the gardens are one of the principal pleasure resorts of the inhabitants. No charge is made for admittance.

(iii) *Mitchell Park Aviaries and Gardens, Durban.*—These aviaries occupy the site of the former zoological gardens, and the collection of birds is housed in roomy aviaries provided with ample supplies of running water and sheltered by growing trees. The Municipality has erected part of what is intended to be an elaborate scheme of aviaries for a representative collection of South African birds. In addition to the birds, the elephant "Nellie", the gift of the Maharajah of Mysore, is a great source of attraction. Small collections of buck occupy several of the paddocks.

The gardens contain several fine specimens of trees, the chief of these being the *Trichelia Emetica*, the M'kuhla or Thunder tree, a species of immense proportions.

(iv) *Zoological Gardens, Bloemfontein.*—The Bloemfontein Zoological Gardens, situated in the Kings Park, are in reality what the name implies. Cages have been dispensed with in almost all cases, and animals are allowed the freedom of spacious islands, which give natural surroundings as far as is possible within the confines of a zoo. The whole layout of islands, irregular waterways, rustic bridges, lawns, and trees gives a splendid setting for the animals, among which may be found lions, including "Ligers," the progeny of a Bengal tigress and an African lion, leopards, baboons, monkeys, silver foxes, lynx, lemurs, Tasmanian Devils, porcupine, blue and black wildebeest, blesbok, rhebok, waterbuck, lechwe, gemsbok, steenbok, duiker, zebra, water buffalo, eagles, vultures, swans, herons, storks, and numerous other varieties of birds and waterfowl.

(v) *Statistics.*—The following table contains a statement of the number of visitors, receipts, and expenditure of four zoological gardens:—

ZOOLOGICAL GARDENS—NUMBER OF VISITORS, RECEIPTS, EXPENDITURE, 1937.

* No record.
† Includes food.

2. **Botanic Gardens.**—(i) The *National Botanic Gardens of South Africa.*—The National Botanic Gardens were established by unanimous resolution of Parliament in 1913, Kirstenbosch—a part of the Groote Schuur Estate bequeathed by Cecil Rhodes to the people of South Africa—being chosen as their site. Kirstenbosch is situated on the eastern slopes of Table Mountain, and both in natural beauty and in suitability for its purpose it is unsurpassed among the botanic gardens of the world. The area under control is about 550 morgen, extending from about 350 feet altitude to the summit of Table Mountain, 3,570 feet above sea level. The lower portions are being laid out and cultivated, the upper slopes being a nature reserve for the protection of the rich indigenous vegetation.

The purpose of the gardens is the cultivation, preservation, and scientific study of the South African flora. Kirstenbosch also serves an educational purpose in connexion with botanical teaching in the University of Capetown and nature study in the local schools and training institutions. It is popular as a place of pleasure, interest, and recreation for the public, the grounds being open every day of the year without charge for admission.

The chief features of Kirstenbosch are the Lawn and Pond, the Mesembryanthemum Garden, the Terrace, the Composite and Pelargonium Gardens, the Sandstone Kopje, the Fern Dell, the Protea Garden, the Succulent Garden, the Heath Garden, and the Cycad Amphitheatre. Other features of interest are Van Riebeeck's Hedge of Wild Almond, planted in 1660 and recently proclaimed a National Monument; and the old Bath, probably built by Colonel Bird about 1811. In the Economic Grounds is a large collection of plants of economic value.

The Karroo Garden at Whitehill, near Matjesfontein, was established in 1921 by private benefaction and is devoted to the cultivation and study of succulent flora.

The National Botanic Gardens are controlled by a board of trustees acting through a Director, who is one of the two professors of botany in the University of Capetown. The present Director is Professor R. H. Compton, M.A., F.R.S.S.Af. The Curator of Kirstenbosch is Mr. F. W. Thorns, and of Whitehill, Mr. J. Archer.

Kirstenbosch is supported by grants-in-aid from the Union Government, the Cape Provincial Council, the Cape Divisional Council, and the Capetown City Council. The Botanical Society of South Africa, a voluntary organization, now numbering over 1,900 subscribing members, grants the whole of its nett income to Kirstenbosch and Whitehill. Both gardens also derive a small revenue from sales.

(ii) *Municipal Botanic Gardens, Durban.*—These gardens were established in 1849 by an agricultural society, mainly for the purpose of introducing and testing economic plants and crops for the Colony. They are now run on the lines of a public park. The area of the gardens is about 40 acres.

There is a good collection of tropical and sub-tropical trees, both ornamental and economic, representing all parts of the tropics, particularly India and Queensland. A fair number of indigenous plants are cultivated, and this collection receives constant additions. Palms, ferns, orchids, and general conservatory plants are displayed in the Victoria Conservatory, built to commemorate Queen Victoria's Jubilee in 1897. The latest addition is the formal sunken garden, which was constructed in 1934 and has proved a great attraction to visitors. The municipal nurseries are included in the botanic gardens area.

(iii) *General.*—A statement containing particulars of botanic gardens is given hereunder.

BOTANIC GARDENS—NUMBER OF VISITORS, RECEIPTS, AND EXPENDITURE, 1937.

* Including native newspapers.

All publications have also to be registered with the Department of the Interior as required by the *Newspaper and Imprint Act* of 1934.

CHAPTER IX.

ADMINISTRATION OF JUSTICE.

§ 1. Criminal Jurisdiction—Lower Courts.

1. **Magistrates' Courts.**—The *Magistrates' Courts Act* (No. 32 of 1917) as amended by Act No. 39 of 1926 lays down the following limits of punishments which may be imposed by a magistrate's court in any part of the Union:—

Ordinary summary jurisdiction:—
Fine not exceeding £50.
Imprisonment with or without hard labour not exceeding six months, with or without solitary confinement and spare diet.
Whipping, not exceeding fifteen strokes, in certain cases.

Increased jurisdiction by reason of remittal:—
Twice the above limits in case of fine or imprisonment.

The *Magistrates' Courts Act*, 1917, was applied to the mandated territory of South West Africa by Proclamation No. 52 of 1921, issued by the Administrator of that territory under the powers delegated to him under Act No. 41 of 1919 of the Union Parliament.

2. **Courts of Special Justice of the Peace.**—Act No. 2 of 1918 (which has been amended by Act No. 46 of 1935) consolidates the law relating to the appointment and jurisdiction of special justices of the peace.

In the first place jurisdiction is given by section 3 and the First Schedule to the Act over all statutory offences for which the *maximum* penalty does not exceed a £25 fine, or three months' imprisonment, or both. By section 9 *bis* of the Act (as added by Act No. 46 of 1935) the Minister of Justice is given power from time to time, by notice in the *Gazette*, to add any offence to the offences in the First Schedule or to remove any offence from that schedule. Such offences are usually of a petty nature. Also, this section and schedule in effect re-enact, in a briefer form, much of the pre-existing legislation upon the subject. In the Orange Free State alone jurisdiction is given in respect of more than twenty statutes or fractions of statutes, which are at present separately enumerated in the body or the schedule of several Acts extending the jurisdiction of special justices of the peace [First Schedule (1) of Act.]

Secondly. Jurisdiction is given in respect of those common law offences such as petty thefts and assaults, which were originally subjects of trial by a special justice of the peace. This presents no difficulty, as the jurisdiction in this respect is practically the same in all the three provinces which have special justices of the peace [First Schedule (2), (3), (4)].

Thirdly. Jurisdiction is given in certain classes of offence which may be roughly classified as rural, e.g. offences in respect of pounds, preservation of game, etc., upon the assumption that the function of a special justice of the peace is mainly to provide for the comparatively simple wants of the countryside. A complete list of these classes of offence is contained in sub-division (8) of the First Schedule to the Act. Jurisdiction is also given in respect of contraventions of by-laws [First Schedule (6)].

Fourthly. Jurisdiction is given in respect of contraventions of regulations made under the *Native Labour Regulation Act*, No. 15 of 1911, section 23 (1), paragraphs (*i*), (*j*), and (*k*), First Schedule (7).

Finally, in master and servant cases, special justices of the peace are given without restriction the full jurisdiction of a magistrate. This does not increase the punishment which a special justice of the peace may impose, except in the single case of forging a false certificate of character. There are many provisions in the *Masters and Servants Acts** as to matters other than the imposition of fine and imprisonment, e.g. the making of orders for the payment of wages [section 3 (3)].

Besides this increase in master and servant jurisdiction, the plan adopted has resulted in an incidental increase in some other matters. For example,

in the Transvaal special justices of the peace have jurisdiction over all contraventions of Act No. 23 of 1907 (Registration and Control of Dogs), except contraventions of section 7 (3) of that Act, which deals with forgery of dog badges and provides a penalty of two years' imprisonment. The language employed in the Act covers the whole of this statute, including section 7 (3) of that Act. This extension is, however, more apparent than real, since by the proviso to section 3 (1) of the Act a special justice of the peace may not inflict a greater punishment than a fine of £10 or one month's imprisonment. Any risk that a serious offender might escape with an inadequate punishment by being prosecuted before a special justice of the peace for a serious offence is obviated by section 5 of the Act, which empowers the special justice of the peace, if he discovers the offence to be beyond his jurisdiction, or, though within his jurisdiction, of such a nature as not to be suitable for trial by him, to transmit the proceedings to the magistrate to be dealt with according to law, i.e. to be commenced afresh under the *Criminal Procedure and Evidence Act*.

By section 3 (2) of the Act, as amended by section 79, Act No. 46 of 1935, special justices of the peace have been given jurisdiction to sentence to a whipping not exceeding ten cuts male offenders under twenty-one years of age.

The Act gives a special justice of the peace jurisdiction to make an order for costs against an offender or a complainant, in addition to the fine or imprisonment imposed in the case of an offender (see also section 23 of the *Criminal Procedure and Evidence Act*, 1917, as to private prosecutions). The Act also authorizes a special justice of the peace to order an offender to make compensation or restitution.

Section 3 (1) of the Act is so drawn as to prevent any special jurisdiction being exercised under existing laws in the case of special justice of the peace courts.

As regards the appointment of special justices of the peace, and therefore the circumstances which give rise to the constitution of courts of special justice of the peace, the Act (section 1) sets the limit at twenty miles from the seat of magistracy of a district or a sub-district.

Magistrates' courts possess both appellate and review jurisdiction in respect of the criminal proceedings held before courts of special justice of the peace. Under the Act records of all criminal proceedings before a special justice of the peace must be transmitted to the local magistrate for review. He will possess on such review like powers to those possessed by a provincial division of the Supreme Court in the review of a decision of a magistrate's court. The Act also provides for an appeal to the magistrate's court against a conviction or sentence by a special justice of the peace, with a further appeal to the provincial or local division of the Supreme Court having jurisdiction (sections 4 and 7).

§ 2. Criminal Jurisdiction—Superior Courts.

1. **Divisions of the Supreme Court.**—Part VI of the *South Africa Act* (sections 95 to 112) left the superior courts of the Union in precisely the same position as regards criminal jurisdiction as they were in before the establishment of the Union. All that was changed was the nomenclature. A Supreme Court of South Africa was constituted in name, and an Appellate Division thereof was created (section 96); but to that division appeal lies on criminal matters from a judgment of a provincial or a local division, apart from the provisions of Act No. 31 of 1917 (see paragraph 4 below), only after special leave to appeal to it has been given by the division concerned or, if it refuses leave, then by the Appellate Division (sections 103 and 105, as amended by sections 104 and 105 of Act No. 46 of 1935). The three Supreme Courts of the Cape of Good Hope, Natal, and the Transvaal became provincial divisions of the new Supreme Court of South Africa; the High Court of the Orange River Colony became the Provincial Division of the Orange Free State; the Eastern Districts Court of the Cape became the Eastern District Local Division; the High Court of Griqualand became the Griqualand West Local Division; and the Witwatersrand High Court became the Witwatersrand Local Division. Circuit courts in every province also became local divisions of the Union Supreme Court.

By section 3 of Act No. 12 of 1920, as amended by Act No. 46 of 1935, section 108, the Appellate Division has jurisdiction to hear and determine appeals in civil and criminal matters from the High Court of the Mandated Territory of South West Africa, and from any circuit court of that territory, in the same circumstances as such division has jurisdiction to hear and determine appeals and applications for leave to appeal in such matters from a provincial division of the Supreme Court. Where leave is required before appeal can proceed, such leave may be granted by the High Court or a circuit court.

By Act No. 18 of 1931, the Appellate Division is given jurisdiction to hear appeals in criminal matters from the High Court of Rhodesia in the same cases as it has jurisdiction to hear appeals in criminal matters from a provincial division or a local division of the Supreme Court.

2. **Jurisdiction.**—(i) *Provincial and Local Divisions.*—The several supreme courts, high courts, and circuit courts have continued since the establishment of the Union to possess as provincial or local divisions (as the case may be) the same criminal jurisdiction as they previously possessed. In other words, presided over by a judge, and with a jury to determine questions of fact, such a superior court had before the establishment of the Union, and has now, practically unlimited criminal jurisdiction within the area for which it was constituted. This jurisdiction, except in very special cases, comes into operation on presentation to the court of an indictment by the Attorney-General of the province, or in the case of the Eastern District Court, an indictment by the Solicitor-General; and such indictment is presented after the accused has been committed for trial or sentence by a magistrate at the conclusion of an inquiry called a preparatory examination.

The existing jurisdiction of these superior courts has been indirectly confirmed by the Union Parliament in section 4 of the *Criminal Procedure and Evidence Act*, 1917, which lays down that the jurisdiction of the several superior courts in respect of the trial of persons accused of any offence is prescribed in the laws severally relating to the constitution and jurisdiction of those courts. The same Act recognizes two other classes of superior court for the trial of criminal cases, (*a*) the Native High Court of Natal as a permanent court, and (*b*) a special criminal court constituted by the Governor-General *ad hoc* on the request of the Attorney-General for the trial of certain classes of cases where there is ground to believe that the ends of justice may be defeated by trial before a jury.

The statutes conferring criminal jurisdiction on the provincial and local divisions described above are as follows:— *Cape*: The Charter of Justice, sections 30 and 39; Act No. 35 of 1896, section 13, as to the Eastern Districts; Act No. 39 of 1877, section 10, as to the Griqualand Local Division. *Natal*: Act No. 39 of 1896, sections 6, 7, and 8. *Transvaal*: Ordinance No. 10 of 1903, sections 1 and 6. *Orange Free State*: Ordinance No. 4 of 1902, sections 3 and 21.

(ii) *Circuit Courts.*—These courts were established by various pre-Union laws and in the Cape, Transvaal, and Orange Free State are held at such places and on such days as the Governor-General may approve, on the recommendations of the judge-presidents and judges of the provincial divisions of the Supreme Court concerned. One or more magisterial districts may form a circuit district, and the grouping of magisterial districts into circuit districts is subject to alteration from time to time. Descriptions of circuit districts and the places and days for holding of circuit courts are published in the *Government Gazette* from time to time.

The *Cape Province* is divided into two circuits (those for the western and eastern districts). Each is held twice annually, commencing in March and September. The *Transvaal* is divided into two circuits (those for the western and eastern districts). Each is held twice annually. The western circuits usually commence in April and October and the eastern circuits in February and August. Two circuits are held annually for the various districts in the *Orange Free State*. These circuits usually commence in March and September. In *Natal* the law provides for the holding of circuits when necessary at centres prescribed by the Supreme Court. Circuit court is held regularly at Durban, but no circuits have been held elsewhere since 1914.

Full court and single judge circuits for the trial of all classes of cases against natives are held at regular intervals by the *Native High Court* during each year at towns and on days prescribed by rules of court.

(iii) *Special Criminal Courts.*—The Governor-General may, in prescribed circumstances, constitute a special criminal court consisting of at least two and not more than three judges, for the trial of charges of treason, sedition,

or public violence, or for an attempt, conspiracy, or incitement to commit such an offence. The trial is without a jury and is a trial before a superior court. In addition, the Minister of Justice may direct that a person committed for trial for committing any offence under Chapter I of the *Riotous Assemblies and Criminal Law Amendment Act*, No. 27 of 1914, or any offence relating to illicit dealing in or possession of precious metal or precious stones, or the supply of intoxicating liquor to natives or coloured persons, or to insolvency or assignment of estates, or with having committed or attempted to commit any offence towards or in connexion with a European, if the accused is a non-European, shall be tried before a judge without a jury.

3. **Jurisdiction under Act No. 31 of 1917.**—Under the *Criminal Procedure and Evidence Act*, No. 31 of 1917, the superior courts continue the practice of trying indictments presented by the Attorney-General, or (in the Eastern Districts of the Cape) by the Solicitor-General. A superior court also tries an indictment presented—though this is a rare occurrence—by one of that limited class of persons who are empowered to institute private prosecutions after the Attorney-General (or the Solicitor-General) has certified that he declines to prosecute. The indictments are presented after consideration of preparatory examinations and the committal of the accused for trial by a magistrate. Except in the case of the Native High Court and the Special Criminal Court in the circumstances above described—and with one further exception (see below)—the trial is conducted before a jury of nine men, of whom seven at least must be unanimous as to the verdict returned. This limitation on absolute unanimity is a modification of the law in the Cape and the Orange Free State. After a verdict, the court is limited as to the punishment by the provisions of the common law as to the offence, or in case of a statutory offence, by the terms of the statute creating the offence. But the court *must* impose the death sentence on conviction for murder, except where the accused is a woman convicted of the murder of her newly-born child or is a person under sixteen years of age, or where the jury has expressed the opinion that there are extenuating circumstances (or in a case tried without a jury where the court is of opinion that there are extenuating circumstances), and it *may* impose the death sentence on a conviction for treason or for rape. In other cases the court may, subject to the common law or the particular statute concerned, impose fine or imprisonment or whipping or all such punishments, and may also impose those special classes of detention and punishment which are described above in connexion with magistrates' courts. On a third conviction for certain scheduled offences, a superior court may declare the offender to be an habitual criminal, and impose upon him an indeterminate sentence. Under Act No. 31 of 1917 the Attorney-General of a province, or the Solicitor-General of the Cape Eastern Districts, was vested with the right of prosecuting all offences. Under the amending Act, No. 46 of 1935, such right is exercised subject to the control and directions of the Minister of Justice, who may reverse any decision of the Attorney-General or the Solicitor-General, and may himself in general or in any specific matter exercise their authority and functions.

The other exception to trial before a superior court without a jury is contained in section 216 of Act No. 31 of 1917, whereby a judge must on notice and application by the accused try him without a jury, and may summon one or two persons who have experience in the administration of justice or skill in any matter which may have to be considered at the trial to sit with him as assessors. In cases of treason, murder, rape, or sedition, the judge must summon two such assessors. The judge alone decides matters of law, but all matters of fact are decided by a majority, except that the judge's opinion prevails if there is only one assessor and there is a difference of opinion. Where a case is remitted by the Attorney-General (or the Solicitor-General) for trial by a magistrate, and the accused, as he is entitled to do before plea, demands a trial by a superior court, he is tried by a judge without a jury in terms of section 216. (See section 229, as amended by section 41 of Act No. 46 of 1935.)

Under the provisions of Act No. 20 of 1931, women and persons under the age of eighteen years may claim to be tried by a jury consisting of women only. The qualifications for women sitting on a jury are the same as in the case of men, but it is not a duty as in the case of men; it is a right for which application must be made. If nine women jurors are not available the trial proceeds in the ordinary way. There can therefore be no mixed juries consisting of men and women.

4. **Appellate Jurisdiction.**—The decisions of superior courts in the trial of criminal cases are, under section 368 of the *Criminal Procedure and Evidence Act*, 1917, subject to the appellate jurisdiction of the Appellate Division of the Supreme Court constituted under section 96 of the *South Africa Act*. In the case of the Natal Native High Court, this jurisdiction may be on both fact and law, though on points of law the provincial division of Natal exercises an intermediate jurisdiction on questions specially reserved. In the cases of the provincial and local divisions, the jurisdiction of the Appellate Division in criminal cases is limited in practice to decisions on points of law. Such jurisdiction may be exercised (*a*) on application for arrest of judgment on the ground that the indictment discloses no offence; or (*b*) on the consideration of a special entry on the record made on the application of the accused or his counsel, in which an allegation of irregularity or illegality in the preceedings is made, the nature of which is indicated; or (*c*) on questions of law reserved at the trial for the consideration of the Appellate Division by the presiding judge either on his own motion or at the request of the prosecution or of the defence. The Appellate Court may either confirm the judgment of the trial court, or set it aside, or remit the case to the court below for judgment to be given, if it has not already been given, or itself give such judgment as ought to have been given, or impose such sentence (whether more or less severe or of a different nature from that imposed) as ought to have been imposed, or make such other order as justice may require (section 374).

As regards the decisions of magistrates' and other inferior courts in criminal cases, appeals against which are heard and determined, as described below, by the provincial and local divisions, the Appellate Division exercises jurisdiction only when special leave to appeal has been given by such provincial or local division (*South Africa Act*, section 105 as amended by Act No. 46 of 1935). Where such division has refused leave to appeal, the Appellate Division may itself grant such leave.

As above indicated, every decision involving a conviction in a criminal case by a magistrate's court, whether on law or on fact and whether against the conviction or against the sentence passed, is subject to an appeal by the convicted person to the provincial division within the area of jurisdiction covering the magistrate's court, or, if the court sat within the area of jurisdiction of the Griqualand West Local Division, is subject to appeal to that division, or to the Cape of Good Hope Provincial Division, or, if it sat within the area of jurisdiction of the Eastern Districts Local Division, is subject to appeal to that division. The court to which such an appeal lies may affirm, alter, or quash the conviction, or may affirm, reduce, alter or set aside the sentence imposed, or it may set aside or correct the proceedings of the magistrate's court, or generally give such judgment or impose such sentence or may make such order as the magistrate's court ought to have given, imposed, or made in the matter, or remit the case to that court with instructions to deal with any such matter in such manner as the court of appeal may think fit, and generally may make such order as to that court seems calculated to promote the ends of justice [section 100, read with section 95 (2) of Act No. 32 of 1917, as amended by Act No. 46 of 1935].

In addition to the appellate jurisdiction of the provincial and local divisions, Chapter XIV of Act No. 32 of 1917 confers upon them a special jurisdiction to review the proceedings of any magistrate's court whenever a sentence of (*a*) imprisonment or other form of detention exceeding three months is imposed, or (*b*) a fine exceeding £25 is inflicted, or (*c*) whipping is ordered as a punishment except in the case of males under twenty-one years; while, by the amendment to section 95 of Act No. 32 of 1917, the court of appeal is given power to review any criminal case, irrespective of the quantum of sentence, where it is brought to the notice of the court or a judge thereof that the proceedings in the lower court were not in accordance with justice. The records are sent by the magistrate to the registrar of the provincial or the local division concerned and submitted by the latter for consideration of a judge in chambers, who, if satisfied that the proceedings are in accordance with real and substantial justice, gives his certificate to that effect. Otherwise the case is dealt with in open court, which possesses the same powers as it possesses on appeal, and may direct the case to be argued (sections 93 to 95 of Act No. 32 of 1917).

In addition, every provincial division and the Eastern Districts and Griqualand West Local Divisions, under the statute under which they may have been constituted prior to the constitution of the Union, have jurisdiction

to review the proceedings of any inferior court, on the ground that such inferior court has exceeded its jurisdiction or has been guilty of gross irregularity or has admitted illegal or incompetent evidence or rejected legal and competent evidence or has shown malice or corruption.

When a magistrate's court has in any criminal proceedings given a decision in favour of the accused on any matter of law, the Attorney-General, or in the event of a private prosecution the person or body concerned, may require the magistrate to state a case setting forth the question of law and his decision thereon for the consideration of the provincial or local division having jurisdiction, and, if evidence has been heard, his findings of fact in so far as they are material to the question of law. The Attorney-General or private prosecutor may then appeal from that decision. If the appeal succeeds the provincial or local division may either impose sentence or give such order as the magistrate should have given or remit the case to the magistrate with directions. The magistrate then proceeds to deal with the case as he would have dealt with it had his decision on the point of law been in accordance with that of the provincial or local division. If the appeal fails the court may order the appellant to pay the respondent's taxed costs (section 100 *bis* and 100 *ter* of Act No. 32 of 1917 as added by section 95 of Act No. 46 of 1935).

Section 100 *ter* of Act No. 32 of 1917, as added by section 95 of Act No. 46 of 1935, also provides for an appeal by the prosecutor to the Appellate Division from a judgment of a provincial or local division on a point of law decided in favour of the accused.

Under section 388 of Act No. 31 of 1917, as amended by section 73 of Act No. 46 of 1935, the Minister of Justice may submit to the Appellate Division the decision of any superior court on a question of law whenever he has any doubt as to the correctness of such decision.

5. **Advocates, Attorneys, etc.**—The subjoined table gives the number of advocates, attorneys, notaries, and conveyancers admitted into the several divisions of the Supreme Court during 1937 and 1938.

Under Act No. 7 of 1923, women are entitled to practise and to be enrolled as advocates, attorneys, etc., in any province of the Union on the same terms and conditions as apply to men.

ADMISSION OF ADVOCATES, ATTORNEYS, ETC., INTO DIVISIONS OF SUPREME COURT, 1937 AND 1938.

A: Admitted for the first time. E: Enrolled after admission elsewhere.

§ 3. Civil Jurisdiction—Lower Courts.

1. **Magistrates' Courts.**—Up to the 1st January, 1918, the civil jurisdiction of magistrates' courts rested upon and was determined by the provisions of a considerable number of statutes in each of the provinces. On the 1st January, 1918, the new consolidating and amending *Magistrates' Courts Act* (No. 32 of 1917) came into operation, and achieved uniformity in the jurisdiction of these courts throughout the Union.

The Act confers upon a magistrate's court jurisdiction (section 29)—

(*a*) in actions in which is claimed the delivery or transfer of any property movable or immovable not exceeding £200 in value;

(*b*) in actions of ejectment against the occupier of land or premises within the district if the right of occupation does not exceed £200 in clear value to the occupier;

(*c*) in other actions (except those specifically excluded) where the claim or value of the matter in dispute does not exceed £200.

The following classes of actions, however, are specifically excluded from the jurisdiction of the magistrate's court, however little may be the amount at stake, viz., actions for or concerning—

(*a*) divorce and judicial separation;

(*b*) the validity and interpretation of wills and testamentary documents;

(*c*) status of persons in respect of mental capacity;

(*d*) specific performance of acts without alternative of damages, except as to rendering of accounts where the claim does not exceed £200 or delivery or transfer of property not exceeding £200 in value;

(*e*) decree of perpetual silence;

(*f*) provisional sentence (section 44).

Except as to these specially excluded actions, a magistrate's court may acquire jurisdiction by the written consent of both parties, whatever may be the amount or value in dispute (section 43).

Incidental to all this jurisdiction in civil matters a magistrate's court may issue (*a*) orders of personal arrest of persons suspected of intention to abscond; (*b*) orders of attachment of property; (*c*) interdicts prohibiting the removal of furniture which is subject to the landlord's hypothec for rent, and the court may enforce payment thereof not only by execution first against movables and afterwards against immovable property which is not subject to prior charges, but also by civil imprisonment, garnishee (attachment of debts due from third persons), and by order for payment in instalments.

Appeals lie to the provincial division of the Supreme Court from final judgments, or orders having the effect of finality, and from decisions overruling exceptions, the Griqualand West and the Eastern Districts Local Divisions having concurrent jurisdiction with the Cape Provincial Division in respect of decisions of courts within their respective areas of jurisdiction. The parties may, however, agree in writing before the hearing that there shall be no appeal, and the judgment of the magistrate's court shall be final. Formerly appeal lay from a magistrate's court to a circuit court, except in the Transvaal. This is no longer possible under the present Act.

The Magistrates' Courts Act, 1917, has been applied to the mandated territory of South West Africa.

2. **Courts of Special Justice of the Peace.**—Prior to 1918, these courts possessed no civil jurisdiction under the laws of any of the provinces. The *Special Justices of the Peace Act*, No. 2 of 1918, gives them, when sitting more than twenty-five miles from any place where a magistrate's court is held (whether as a periodical court or at the seat of magistracy), jurisdiction to try a civil action in which is claimed a liquidated sum not exceeding £25; but if the sum claimed exceeds £5 the defendant may insist on having the action removed to the magistrate's court. Appeals in civil matters from a court of special justice of the peace lie as in criminal matters to the magistrate's court, with a further appeal to the provincial division of the Supreme Court.

§ 4. Civil Jurisdiction—Superior Courts.

1. **Provincial and Local Divisions.**—The manner in which the several superior courts, viz., the Appellate Division, the provincial divisions, and the local divisions (including circuit courts), came into being at the establishment of the Union, by virtue of Part VI of the *South Africa Act*, is described above (§2). A provincial or a local division (otherwise known as a superior court) has, in addition to any original jurisdiction exercised by the corresponding court of the Colony concerned at the date of the establishment of Union, jurisdiction in all matters in which the Government of the Union or a person suing or being sued on behalf of such Government is a party or in which the

validity of any provincial ordinance comes into question [*South Africa Act*, 1909, section 98 (3)]. Generally it may be said that a provincial division in each province has unlimited jurisdiction throughout the province in respect of all causes or matters arising within that area; while each local division has jurisdiction (slightly restricted in some respects) in regard to causes arising and persons residing within its defined area. For example, the Witwatersrand Local Division, while it has concurrent jurisdiction with the provincial division so long as the cause or matter arises within its defined limits, is expressly excluded from exercising any appellate jurisdiction or from reviewing the proceedings of inferior courts (Proclamation No. 14 of 1902, section 27), and in regard to insolvency and certain other matters its jurisdiction is that of a circuit court only. The Eastern Districts Local Division has certain appellate and review jurisdiction (see §2 above), but in regard to insolvency, registration of title, administration of estates, and certain other matters, its jurisdiction is limited to that of a circuit court only (Act No. 35 of 1896, section 25). The limitations placed upon the Griqualand West Local Division are the same as those placed on the Eastern Districts Local Division (Act No. 39 of 1877, section 10, and Act No. 35 of 1896, section 18).

Special jurisdiction is given to any provincial division in which a parliamentary or a provincial council election is held (but not to a local division) to try election petitions, i.e. petitions complaining of an undue return or undue election of a member, by reason of want of qualification, disqualification, corrupt or illegal practice, irregularity, or any other cause whatever (see Chapter V of Act No. 12 of 1918). In the trial of election petitions by any provincial division under Chapter V of Act No. 12 of 1918, the quorum consists of not fewer than three judges, though one judge may adjudicate on an interlocutory application other than an application for the withdrawal of a petition [section 111 (i)].

In addition, any provincial or local division of the Supreme Court may in its discretion, at the instance of any interested party, inquire into and determine any existing, future, or contingent right or obligation, notwithstanding that such person cannot claim any relief consequential upon such determination.

The provincial divisions sit at Capetown, Pietermaritzburg, Pretoria, and Bloemfontein respectively, the Cape of Good Hope Division consisting of six judges, the Natal Division of four judges, the Transvaal Division of ten judges, and the Orange Free State Division of three judges. The Eastern Districts Local Division consists of four judges; the Griqualand West Local Division of one judge; and one judge of the provincial division may preside over any sitting of the Witwatersrand Local Division.

In all the Cape divisions, the court may sit with one judge only as a divisional court, and under Act No. 10 of 1917 as many divisional courts as there are judges available to preside may sit at the same time for the dispatch of civil business. In the Transvaal Provincial Division (except in vacation time, when one judge constitutes a quorum) the quorum of the court is two, except in motions, applications, and trial cases where the defendant is in default, when one judge sitting in chambers constitutes the court. By Ordinance No. 31 of 1904 (section 1), however, a divisional court of one judge may exercise the civil jurisdiction of the court in any trial action if both parties consent, or if the action is remitted to such divisional court for trial by order of the full court. A like provision exists as regards the Natal Provincial Division [Act No. 39 of 1896 (Natal), section 9], and as regards the Orange Free State Provincial Division by Act No. 21 of 1934. In Natal also, one judge sitting in chambers, or the like, may exercise all the powers of the full court except in arguments on exceptions to pleadings, applications for new trials, objections to accounts in insolvency, and in the administration of estates, rehabilitations in insolvency, and in trials not falling within section 9 of the Act. In those cases the full court is necessary.

In the Orange Free State Provincial Division the quorum in civil proceedings is two, except that one judge may deal with actions for provisional sentence, applications by motion or petition, and actions where the defendant is in default, and any other suit where all the parties agree, or where the case is remitted by the full court for trial by one judge (section 4, Ordinance No. 13 of 1904, as substituted by section 1, Act No. 21 of 1934). In vacation time one judge forms a quorum (section 5, Ordinance No. 13 of 1904).

Further provisions as to jurisdiction, transfers of suits, etc., are as follows:

(*a*) By section 112 of the *South Africa Act*, the judgment or order of any one division of the Supreme Court may be enforced outside the area of jurisdiction of such division, by lodging with the registrar of the provincial division having jurisdiction in the place where it is desired to enforce the judgment, an authenticated copy of the judgment or order. The registrar, on proof that the judgment or order is still unsatisfied, will issue process for the execution thereof, and such process will be executed as if it had been issued originally from that division.

(*b*) Any provincial or local division may, under section 113 of the *South Africa Act*, transfer a civil suit to another division when it is satisfied that it can be more conveniently or fitly heard or determined in that other division, and that this division will proceed with the suit as if it had originally been commenced therein.

(*c*) By section 3 of Act No. 27 of 1912, a civil process for commencing civil proceedings may, subject to compliance with certain forms, be served throughout the Union upon any defendant who resides or is for the time being in the Union, and is subject also to the jurisdiction of the court.

(*d*) When a defendant resides in the Union, it is provided by section 5 of Act No. 27 of 1912 that no attachment of his person or property to found jurisdiction is to be ordered, and if service of a summons can be effected in any other way, no service of a civil summons on a defendant by way of edictal citation is to be authorized.

(*e*) A writ of arrest of the person, issued out of any superior court in connexion with civil proceedings, may be executed throughout the Union by transmitting the writ to the proper officer at the place where the person to be arrested resides or is for the time being.

2. **Appellate Division.**—In addition to the provincial and local divisions, there exists as indicated above, in § 2 (4), the Appellate Division of the Supreme Court. This division was created by section 96 of the *South Africa Act*, and now, since the passing of Act No. 12 of 1920, consists of the Chief Justice of South Africa and four judges of appeal. Its work as a court of criminal appeal is described in § 2 (4). It is, however, chiefly occupied in the final determination of civil causes and matters. It may here be mentioned that it succeeded to the jurisdiction of the old Cape Supreme Court as a court of appeal from the High Court of Southern Rhodesia. Further jurisdiction was conferred upon it by section 3 of Act No. 12 of 1920, to hear and determine appeals from orders or judgments of the newly constituted High Court of South West Africa, and by Act No. 18 of 1931 an appeal lies direct to the Appellate Division from the divisions of the High Court of Southern Rhodesia in cases similar to those in which an appeal lies from a local division of the Supreme Court of the Union. As regards civil appeals from courts of the Union, appeals which before the establishment of the Union lay to the Supreme or High Court of the late Colony go direct to the Appellate Division, except in the case of appeals against interlocutory orders of a single judge, orders on application, motions or petitions, judgments on summonses for provisional sentence, and judgments as to costs only. Those excepted matters are still subject to appeal, first to the provincial division, unless, under section 5 of Act No. 1 of 1911, the parties have agreed to go direct to the Appellate Division and dispense with an intermediate appeal. Where before the establishment of the Union an appeal lay to the Privy Council, the appeal now lies only to the Appellate Division, whose decision is final, unless the Privy Council itself grants special leave to appeal to it from the Appellate Division's decision (sections 104 and 105 of the *South Africa Act*). The Judicial Committee of the Privy Council has intimated that it will, as a general rule, grant such leave in civil cases only when the matter at issue is of some constitutional importance. In practice, however, this rule has not always been strictly adhered to.

While before the establishment of the Union there must have been a certain amount at stake to enable any person to appeal as of right to the Privy Council, the substituted right of appeal to the Appellate Division is not limited by reason of the amount or value in dispute. Appeals to provincial or local divisions on judgments of inferior courts cannot be taken

further to the Appellate Division unless the provincial or the local division concerned grants special leave to appeal. If such leave is refused the Appellate Division may itself grant such leave (section 105 of the *South Africa Act*, as amended by section 105 of Act No. 46 of 1935). A special appellate jurisdiction in the matter of decisions of a provincial division at the trial of an election petition is conferred on the Appellate Division by Act No. 12 of 1918 (section 132), but the leave of the Appellate Division must first be obtained.

The quorum of the Appellate Division is three when the appeal is from a court of a single judge and four when the appeal is from the decision of two or more judges (Act No. 11 of 1927, section 1). In vacation time one judge of the Appellate Division may hear and determine applications for special leave to appeal or for leave to proceed *in forma pauperis*, or for any interlocutory order (Act No. 1 of 1911, section 6).

The process of the Appellate Division runs throughout the Union. As all its judgments have full effect in every province, it naturally follows that they must be executed as if they were original judgments or orders of a provincial division (*South Africa Act*, section 111).

Rules for the conduct of proceedings in the Appellate Division are made by the Chief Justice and judges of the Appellate Division, and they, as judges of the Supreme Court of South Africa, collaborate with the judges of the other divisions in framing rules of court for the conduct of the proceedings in any provincial or local division (*South Africa Act*, sections 107 and 108).

§ 5. Special Native Courts.

1. **Native Tribunals.**—Generally speaking, natives in both civil and criminal matters are subject to the ordinary laws and the ordinary courts of the land. Certain special tribunals have, however, been established for the hearing of purely native cases, with a view to affording the natives a simpler and less expensive method of procedure, also to ensure that cases arising out of native law and customs are heard by officials experienced and well versed in such laws and customs and, in so far as native chiefs' courts are concerned, to accord a measure of recognition to purely native institutions.

2. **Civil Matters.**—In so far as civil matters are concerned the following special native courts have been established:—

(i) *Native Chiefs' and Headmen's Courts.*—A native chief or headman appointed as such under the *Native Administration Act*, No. 38 of 1927, as amended by Act No. 9 of 1929, may be authorized by the Governor-General to hear and determine civil suits arising out of native law and custom between natives resident within his area of jurisdiction. An appeal from the decision of any such court lies to the court of the Native Commissioner.

(ii) *Native Commissioners' Courts.*—Under section 10 of the *Native Administration Act*, No. 38 of 1927, the Governor-General may establish Native Commissioners' courts for the hearing of all civil causes and matters between native and native only, provided that no such court shall have jurisdiction in any matter in which:—

(*a*) the status of a person in respect of mental capacity is sought to be affected;

(*b*) a decree of perpetual silence is sought;

(*c*) namptissement is sought;

(*d*) the validity or interpretation of a will or other testamentary document is in question; or

(*e*) a decree of nullity, divorce, or separation in respect of a marriage (contracted according to christian or civil rites) is sought.

Under this provision Native Commissioners' courts have been established in all districts with appreciable native populations. In Natal and the Orange Free State such courts have now been constituted in every district, while in the Cape Province there are courts at 39 centres and in the Transvaal at 44 centres.

These courts are authorized to decide cases involving questions of customs followed by natives, according to the native law applying to such customs, except in so far as this law shall have been repealed or modified, and provided

that such native law is not opposed to the principles of public policy or natural justice. The custom of *lobolo* or *bogadi* or similar custom is specially declared not to be repugnant to such principles.

(iii) *Native Appeal Courts.*—There are two native appeal courts in existence—one for the Cape and Orange Free State Provinces and one for the Transvaal and Natal. These courts are constituted under section 13 of the *Native Administration Act*, No. 38 of 1927, for the hearing of appeals from Native Commissioners' courts. Each native appeal court consists of a president and two members. The president is a full-time officer appointed by the Governor-General, while the members are appointed by the Minister from time to time as required, and are selected from magistrates, Native Commissioners, and other qualified persons. The decision of a native appeal court is final, except:—

(*a*) where conflicting decisions have been given by a native appeal court within its area of jurisdiction, in which case the Minister may cause a special case to be argued before the Appellate Division of the Supreme Court;

(*b*) where the native appeal court consents to an application for leave to appeal, upon any point stated by the court, to the Appellate Division.

(iv) *Native Divorce Courts.*—Section 10 of the *Native Administration Act*, 1927, *Amendment Act*, No. 9 of 1929, made provision for the establishment of native divorce courts with jurisdiction to hear and determine suits of nullity, divorce, and separation arising out of native marriages contracted according to christian or civil rites. Each such court must consist of the president of a native appeal court, and its area of jurisdiction must coincide with that of a native appeal court. Two native divorce courts have accordingly been established with areas of jurisdiction coinciding with those of the two native appeal courts.

The jurisdiction of the Supreme Court as a forum of the first instance for native divorce cases is not ousted by the native divorce courts, and, moreover, an appeal from the judgment of a native divorce court lies to the provincial or the local division of the Supreme Court having jurisdiction.

3. **Criminal Matters.**—The special courts established for the exercise of jurisdiction in respect of natives are as follows:—

(i) *Native Chiefs' and Headmen's Criminal Courts.*—Such courts are established under section 20 of the *Native Administration Act*, No. 38 of 1927, as amended by section 6 of Act No. 9 of 1929, which empowers the Governor-General to grant to any native chief or headman jurisdiction over members of his own tribe resident or being upon tribal land, or in a tribal location within his area, in respect of offences punishable under native law and custom. His jurisdiction is limited to a maximum penalty of two head of cattle or £5.

An appeal from the decision of any such court in a criminal matter lies to the magistrate of the district concerned.

(ii) *Native Commissioners.*—Section 9 of the *Native Administration Act*, No. 38 of 1927, authorizes the Governor-General to confer criminal jurisdiction upon Native Commissioners in respect of offences, subject to the jurisdiction of a magistrate's court, committed by natives. Appeals from the decisions of Native Commissioners exercising criminal jurisdiction so conferred lie to the Supreme Court.

(iii) *Natal Native High Court.*—The Native High Court of Natal, as at present constituted, exercises criminal jurisdiction only. The court consists of a judge-president and three other judges and tries criminal cases when the accused are natives, but without prejudice to the jurisdiction of magistrates' courts. It exercises jurisdiction in respect of all crimes (including capital offences) committed by natives, save certain particular classes of crimes specified in section 6 of Natal Act No. 49 of 1898 as amended by Natal Act No. 30 of 1910. The jurisdiction of the Supreme Court as a court of first instance is expressly excluded in respect of such crimes committed by natives as are cognisable by the Natal High Court.

§ 6. Source, Development, and Nature of the Law of South Africa.

1. **The Roman-Dutch Law.**—The foundation of the law of South Africa is that system, known as the *Roman-Dutch Law*, which existed in the Provinces of Holland during the time of the Republic of the United Netherlands. This system was derived from Germanic custom and Roman law, and may be said to have consisted of Roman law modified and adapted to the requirements of Holland by well established custom and by statute. The States of Holland in a Resolution of the 25th May, 1735, enacted that the Court of Holland, as also all other tribunals in the Provinces of Holland and West Friesland, must do justice according to the laws and ordinances of the land and also according to the privileges and old-established customs and usages, and, on failure of these, according to the written (i.e. the Roman) law. The Dutch jurist Van der Linden (1756-1835), one of the latest expounders of the Roman-Dutch system before its supersession in Holland in 1809 by the *Code Napoléon*, wrote (*Koopmans-Handboek*, 1.1.4) that to discover what was the law in any particular case, it must first be inquired whether there was any particular law of the land on the matter, or any local ordinance or regulation having the force of law, or any established custom; and that on failure of these, the Roman law, as a model of wisdom and justice, should be called in to supply the *casus omissus*.

2. **Introduction of Roman-Dutch Law by Dutch Pioneers.**—The principles of this system were carried by the early Dutch pioneers into their foreign settlements. In this manner it was, at Van Riebeeck's occupation on behalf of the Dutch East India Company in 1652, introduced into the Cape of Good Hope. Subsequent to the occupation, amendments or additions found requisite to adapt the law of the mother country to the requirements of the settlement were provided first by the laws or rules issued by the Directorate of the East India Company in Holland or by the Company through its Governor-General in Batavia, secondly by the enactments of the local Governor, and thirdly, by *Placaats* of the States-General and the States of Holland. This last-mentioned method, however, was but little resorted to in view of the legislative powers which had been delegated to the Company. How far, if at all, any legislation of the parent country passed since the date of the occupation, and not expressly applied to the settlement, became part of the law of the Cape is an interesting question upon which legal opinion is not unanimous.

3. **Retention of Roman-Dutch Law at Cession of Cape to British.**—At its final cession to the British in 1814 the settlement retained its own laws, the basis of which, as already shown, was the *Roman-Dutch* system. The presumption is that every one of the laws existing at that date is still in force where not expressly repealed by a competent legislature. The *Roman-Dutch Law*, however, with its reverence for immemorial custom and ancient usage, permits of the abrogation of law not only by long continued adverse custom, but even in some circumstances by mere desuetude. But while both the Roman law and Dutch practice recognized that even a statute might be repealed, not only by express legislative enactment, but by the tacit disuse of a whole community, a distinction would probably be drawn by South African courts in this respect between statutes in force before 1806 and those passed at a later date. "I should have great difficulty", said Chief Justice de Villiers in the case of *Seaville* versus *Colley* (9 Cape Supreme Court Reports at page 44), referring to statutes of the latter class, "in holding that disuse for any length of time would be sufficient to abrogate them. They were promulgated at the time when they were enacted and have all been published in authentic form. If such a statute is no longer required, the Legislature, which must be presumed to be acquainted with the body of its own statute laws, is at hand to enact the repeal."

The laws and regulations issued by the Dutch East India Company and the Batavian Government having in general been of ephemeral interest, and the legislative authority of the States-General having been but little invoked on behalf of the settlement, the law as it existed in 1806 is for the most part to be found in the expositions of *Roman-Dutch Law* at that time in existence and considered as authoritative. Amongst these the publications of Grotius, Vinnius, Matthaeus, Groenewegen, Van Leeuwen, U. Huber, Z. Huber, P. Voet, J. Voet, Bynkershoek, Van der Keessel, and Van der Linden have been regarded in South African legal practice as of great authority.

4. **Extension of Roman-Dutch Law.**—*Natal.*—In 1844 the District of Natal became a dependency of the Cape Colony with a Lieutenant-Governor and Executive Council, in whom, however, no legislative authority was vested. Ordinance No. 12 of 1845 of the Cape of Good Hope, in the legislative authority of which the power to make laws for the dependency resided until 1848, enacted that "the system, code, or body of law commonly called the *Roman-Dutch Law* as the same has been and is accepted by the tribunals of the Colony of the Cape of Good Hope shall be and the same is hereby established as the law for the time being of the District of Natal." In 1856 Natal was created a separate Colony with its own Legislative Authority, but the *Roman-Dutch* system has remained the common law. *Transvaal.*—In the Transvaal it was provided in 1859 by an annexure to the *Grondwet* that the law book of Van der Linden should remain, so far as it was not in conflict with the *Grondwet* and other laws or Volksraad resolution, the law book of the State; and that, whenever that book did not treat any matter with sufficient clearness or omitted any subject, then the law book of Simon van Leeuwen and the introduction of Hugo de Groot should be binding. Subsequent to the British annexation it was enacted by section 17 of Proclamation No. 14 of 1902 that the *Roman-Dutch Law*, except so far as modified by legislative enactments, should be the law of the Transvaal Colony. *Orange Free State.*—The Constitution of the Republic of the Orange Free State adopted the *Roman-Dutch Law* as the fundamental law of the State. This, it was later explained, was to be taken to mean the *Roman-Dutch Law* only in so far as it was found in force in the Cape Colony at the time of the appointment of the English judges in the place of the previously existing Council of Justice, and was not to be taken to include any new laws and institutions, local or general, which may have been introduced into Holland and which are not based upon, or are in conflict with, the old *Roman-Dutch Law* as expounded in the text-books of Voet, Van Leeuwen, Grotius, De Papegaai, Merula, Lybrecht, Van der Linden, Van der Keessel, and the authorities cited by them. Ordinance No. 3 of 1902 enacted in section 1 that the *Roman-Dutch Law* shall be the common law of the Colony in so far as it has been introduced into and is applicable to South Africa. *Rhodesia.*—By the Southern Rhodesia Order-in-Council of the 20th October, 1898, the law in force in the Cape Colony on the 10th June, 1891, except in so far as that law had been modified by any Order-in-Council, Proclamation, Regulation, or Ordinance in force at the date of commencement, was declared to be the law of Southern Rhodesia.

5. **Modification of Roman-Dutch Law.**—The adaptability of *Roman-Dutch Law* to the conditions of present day civilization has been well exemplified in South Africa by the history of its development and by its present vigorous vitality. Nevertheless, with the advance of civilization, new situations, not within the contemplation of the law-giver of a century ago, frequently arise, and public opinion in matters affecting human conduct is constantly undergoing change. Alterations or adaptations of law to meet new conditions and the additional requirements of society in the matter of rules of human conduct are in the main provided by the enactments of legislatures and by the adaptation by judges of established principles to new situations and conditions. By these means the *Roman-Dutch Law*, like every other system of law operative in a progressive community, is constantly undergoing development and change.

6. **Legislatures.**—By the *South Africa Act*, 1909, the Legislatures of the Colonies of the Cape of Good Hope, Natal, the Transvaal, and the Orange Free State were abolished, and a Parliament was constituted for the Union, consisting of the King, the Senate, and the House of Assembly. In addition a legislative body was created for each of the four provinces of the Union, styled a *Provincial Council*, with power to pass Ordinances on matters within its jurisdiction. Section 135 of the *South Africa Act* provided for the continuation of all laws existing in the respective provinces of the Union until repealed or amended by Parliament, or, in respect of matters within their jurisdiction, by the Provincial Councils. The work of the Union Parliament has already resulted in the codification on various important subjects of the differing statutory laws of the various provinces.

By the *Status of the Union Act*, No. 69 of 1934, an Act to give effect to the provisions of the Statute of Westminster (22 Geo. V.C. 4), the Parliament of the Union is declared to be the sovereign legislative power in and over the Union, and no Act of the Parliament of the United Kingdom and Ireland is to extend or is to be deemed to extend to the Union, as part of the law of the Union, unless extended thereto by an Act of the Parliament of the Union.

Full power to make laws having extra-territorial operation is conferred upon the Parliament of the Union by the Statute of Westminster, while that Parliament may also repeal or amend any Act of the Parliament of the United Kingdom and any order, rule, or regulation made under authority of such Act, in so far as such Act or order, rule, or regulation made thereunder is part of the law of the Union.

7. **Influence of English Law.**—The law of South Africa has been widely influenced, and its more recent developments to meet the requirements of modern society have been largely moulded, by the law of England. The result of this influence is to be seen both in the statutes of the local legislature and in the body of precedent formed by judicial decisions and frequently but inaccurately known as judge-made law. With the supersession of the Roman-Dutch system in the Netherlands by the adoption of the *Code Napoléon* in 1809, the further development of that system had ceased and colonial legislators and jurists could no longer look to the mother country for guidance in the matter of the expansion and extension of the law necessary to adapt it to the requirements of an advancing community. Consequently when a precedent for some alteration or expansion of the law was required, legislators and jurists, seeing no advantage in resorting to Holland, where an alien system now obtained, had recourse to the law of England for assistance. This process found no inconsiderable encouragement from the fact that many of the earlier judges and practitioners were trained under the English system and not unnaturally resorted with greater freedom to that system than to one which, by reason of its uncodified condition and of its being written in a foreign language, was not easy of ascertainment. The introduction of the English jury system and the general adoption of the English rules of evidence and procedure, the conforming of the usages of commerce to that obtaining in the United Kingdom, the rise of corporations of a character unknown to the earlier jurisprudence, the recognition of the essential justice of the British system of criminology, and the existence of the Privy Council as the ultimate resort of an aggrieved litigant have largely been instrumental in aiding the assimilation into the body of the common law of South Africa of rules and methods of the law of England.

8. **Present Condition of Common Law.**—Nevertheless, apart from statute, the law of South Africa as it exists to-day is essentially the *Roman-Dutch* system. The exposition and development of that system, influenced by English law and local usage, has resulted in a symmetrical and lucid body of law, on the one hand, by virtue of its reverence for local usage, largely freed of those provisions which the general concensus of a more enlightened age has disapproved, and on the other hand showing a singular absence of those subtleties which not uncommonly accrue in the course of their development to systems of more recent origin. The gradual decadence of *Roman-Dutch Law* in other settlements into which it was introduced, which in 1916 led in British Guiana to legislation almost completely displacing it, has found no counterpart in South Africa where, under the impetus given by the creation of one Appeal Court for the whole Union, it may confidently be expected to continue to provide a system pre-eminently suited to the conditions of the country.

§ 7. Department of Justice.

1. **Constitution of Department.**—A Ministry of Justice was created at the establishment of the Union, in substitution for the practice previously in force in each of the Colonies under which the Attorney-General had been a member of the Ministry, and had also assumed ministerial responsibility for the Law Department of the Colony. The system now in force in the Union is that set out in section 139 of the *South Africa Act*, as amended by section 1 of Act No. 39 of 1926, and is as follows:—

> The administration of justice throughout the Union shall be under the control of the Minister of State, in whom shall be vested all powers, authorities, and functions, which shall at the establishment of the Union be vested in the Attorneys-General of the Colonies.

Section 139 of the *South Africa Act* was amended by section 2 of Act No. 14 of 1914, so as to substitute Attorney-General for Minister as *curator ad litem* of lunatics, a portion of which was confirmed by the *Mental Disorders Act* (No. 38 of 1916, section 14), when section 2 of Act No. 14 of 1914 was repealed. By the later Act, the Solicitor-General of the Eastern Districts is, in the area in which he exercises his functions, *curator ad litem* of persons detained as mentally disordered under a magistrate's or a judge's order.

The powers, duties, and functions of the Attorney-General in relation to criminal prosecutions are fully dealt with in Act No. 31 of 1917 as amended by Acts Nos. 39 of 1926 and 46 of 1935. (See particularly Chapter II of the 1917 Act.)

Particulars as to the functions of the Union Department of Justice are given in Chapter II.

The permanent head of the Department is the Secretary for Justice.

2. **Judges and Staff of the Supreme Court.**—The names of the judges and registrars of the several divisions of the Supreme Court of the Union are given in Chapter XXVIII.

3. **Sheriffs.**—(i) *Appointment and Functions.*—In each of the provinces of the Union there is a sheriff, who is an officer of the public service, and whose duties are to execute, either by himself or by deputies appointed by him and duly authorized under his hand and seal, the sentences, decrees, judgments, writs, summonses, rules, orders, warrants, commands, and processes of any division of the Supreme Court within his province. The Charter of Justice of the Colony of the Cape of Good Hope sets out in section 27 that "the sheriff shall by himself or his sufficient deputies, to be by him appointed and duly authorized under his hand and seal, and for whom he shall be responsible during his continuance in such office, execute, and the said sheriff, by himself and his said deputies, are hereby authorized to execute all the sentences, decrees, judgments, writs, summonses, rules, orders, warrants, commands, and processes of the said Supreme Court of the Cape of Good Hope, or of the circuit courts of the said Colony hereafter mentioned, and shall make a return of the same, together with the manner of the execution thereof, to the Supreme Court of the Cape of Good Hope, or to the said circuit courts, as the case may be, and shall receive and detain in prison all such persons as shall be committed to the custody of such sheriff by the Supreme Court of the Cape of Good Hope, or by the said circuit courts or by the Chief Justice, or by any other judge of the said courts."

This provision was closely followed in the other provinces (see in Natal, Act No. 21 of 1905; in the Transvaal, section 4 of Proclamation No. 17 of 1902; and in the Orange Free State, section 3 of Ordinance No. 9 of 1902).

(ii) *Laws Defining Powers and Duties.*—The powers and duties of the sheriff are set out in rules of the various divisions of the Supreme Court and in the Cape Province in Ordinance No. 37 of 1828, in the Transvaal in Proclamation No. 17 of 1902, and in the Orange Free State in Ordinance No. 9 of 1902.

The special powers, duties, and functions of the sheriff in all criminal matters are regulated by Act No. 31 of 1917 as amended by Acts Nos. 39 of 1926 and 46 of 1935.

The sheriff receives the jury list in criminal cases and keeps it. He, or his deputy, in manner provided in section 186 of Act No. 31 of 1917, draws the names of the jurors to be summoned for the criminal sessions.

§ 8. Statistics of Crime.

1. **General.**—The system of collecting statistics of crime, which was inaugurated on 1st January, 1921, involves the completion by the police of a form setting forth the race, sex, age, nationality, birthplace, occupation, offence, and result of trial of every person prosecuted.

In addition to the inclusion of statistics in the Monthly Bulletin of Statistics, the Census and Statistics Office undertakes the compilation of a special report annually, in which statistics of crime are dealt with in greater detail than is possible in the *Official Year Book*. The first report of this series covered the year 1923, with comparative figures for previous years, and this was followed by reports which dealt primarily with statistics for the years 1924 to 1935. The reports for the years 1936 and 1937 were combined in one volume and were for the first time published in full Blue Book form (U.G. No. 33, 1938). The scope of the reports has been expanded to give much additional information. For previous available statistics reference should be made to the annual reports of the Commissioner of Police.

2. **Prosecutions, Convictions, etc.**—The following tables (i) to (v) give information regarding persons prosecuted, convicted, acquitted, etc., during a series of years. Figures for earlier years in the case of these and other tables will be found in previous issues of this *Year Book*.

(i) PERSONS PROSECUTED,* 1934 TO 1938.

Year.	Cape of Good Hope.	Natal.	Transvaal.	Orange Free State.	Union.	Prosecutions per 1,000 of Population.
1934	156,707	103,027	337,184	47,258	644,176	69·7
1935	166,624	111,499	365,694	48,804	692,621	73·5
1936	173,062	117,454	368,072	50,048	708,636	73·7

Motor Vehicle Ordinances*	10,569	1·8	TOTAL CONVICTIONS	588,329	100·0

* Offences other than speeding, reckless driving, and no licence.

4. **Juvenile Crime.**—During 1938 European juveniles, aged 16 years and under, to the number of 2,542, were prosecuted for 93 different offences, and juvenile adults aged 17 to 20 years to the number of 7,516 for 156 different offences. The principal offences involved and the numbers of prosecutions and convictions are given hereunder. The percentages represent the proportions under each offence to the total number of juveniles prosecuted or convicted.

Postponed Sentence	8·54	3·52
Sent to Reformatory or Industrial School	4·10	2·15
Suspended Sentence	1·61	3·70
Imprisoned without Option of Fine	—	0·91*
TOTAL	100·00	100·00

* Including one case with corporal punishment. † Including one case of bail estreated.

5. **Serious Crime.**—(i) *General.*—A large proportion of the persons prosecuted each year are charged with petty offences, chiefly contravention of statutes, common assault, and common theft. For the most part the option of a fine is given in such cases. On the other hand, an appreciable percentage of the total charges before the courts relates to what may be properly designated as serious crime. Offences are classified as serious or otherwise according to the character of the crime itself and not according to the grade of court which deals with it. Statistics of such cases are contained in the tables hereunder.

From time to time the list of offences treated as *serious* for statistical purposes has been revised. For instance, prior to the year 1923, all cases of common theft were statistically included under serious crime, but in that year it was decided that thenceforth common theft cases were to be regarded as serious crime only when the value of the goods stolen was estimated to be £50 or over. In 1930, a thorough revision was made, in collaboration with the police authorities, of the items constituting the list of serious offences, steps being taken at the same time to amplify the code slightly, so as to bring out in greater detail information concerning certain offences.

(ii) *Cases Investigated.*—The percentage of convictions, acquittals, etc., to the total number of persons brought before the courts in 1938 was:—

Heading.	Convicted or Bail Estreated.	Discharged.	Escaped.	Mentally Disordered.	Died.	Case Withdrawn.
	%	%	%	%	%	%
All Offences	88·53	5·76	0·18	0·02	0·01	5·50
Serious Crime	71·02	22·05	0·16	0·17	0·09	6·51

The following tables give particulars of serious crime investigated by the police during a series of years:—

(a) SERIOUS CRIME: RESULTS OF INVESTIGATION, UNION, 1934 TO 1938.

(iii) *Prosecutions and Convictions.*—In 1938 prosecutions for serious offences were instituted against 36,490 persons, representing 4·59 per cent. of the persons brought before the courts. Of these 3,263 were Europeans, 27,640 natives, 514 Asiatics, and 5,073 other non-European persons. The number of Europeans tried for serious offences was equivalent to 2·37 per cent. of all persons of that race brought before the courts. The corresponding percentages in the case of the other races were: Natives, 4·90; Asiatics, 2·84; and other non-European persons, 6·80.

The percentages of convictions in relation to persons prosecuted for serious offences were as follows:—Europeans, 61·63; natives, 71·84; Asiatics 53·50; other coloured 74·41; and for all races 71·03.

The following table shows the convictions for various classes of serious offences during 1938, according to the race and sex of the persons convicted:—

SERIOUS CRIME: CONVICTIONS, UNION, 1938.

Corporal Punishment in addition to Imprisonment (included above)	11	—	1,307	2	1,318	2

(v) *Murder.*—In 1938, 568 persons were prosecuted for murder, the majority being natives. Of the persons prosecuted only 7 Europeans and 137 others were convicted. In 400 instances the charges were withdrawn or the persons prosecuted were discharged.

PERSONS DEALT WITH ON CHARGES OF MURDER, 1934 TO 1938.

Year.	Convicted.			Discharged or Withdrawn.	Died or Escaped.	Mentally Disordered.	Total Number Dealt with.
	European.	Other.	Total.				
1934	3	89	92	354	9	13	468
1935	6	114	120	381	2	23	526
1936	1	119	120	325	5	19	469
1937	3	142	145	469	3	11	628
1938	7	137	144	400	3	21	568

(vi) *Stock Theft.*—In 1938 the convictions for stock theft (excluding poultry and domesticated game) accounted for 16·5 per cent. of the total convictions for serious crime. Theft of small stock (sheep, goats, pigs, poultry, and domesticated game) accounted for 83·9 per cent. of the total convictions for stock theft. Of the persons convicted for stock theft, 2·5 per cent. were Europeans.

STOCK THEFT, 1934 TO 1938.

Year.	Persons Prosecuted.	Persons Convicted.			Convictions for Thefts of:		
		European.	Other.	Total.	Horses, Mules, and Donkeys.	Cattle.	Small Stock.*
1934	12,044	263	8,837	9,100	772	951	7,377
1935	10,996	222	8,091	8,313	606	795	6,912
1936	10,506	207	7,932	8,139	580	843	6,716
1937	8,191	163	6,260	6,423	405	725	5,293
1938	8,489	160	6,343	6,503	369	676	5,458

* Sheep, goats, pigs, poultry, and domesticated game.

(vii) *Liquor Laws.*—The convictions for offences under this head during 1938 amounted to 119,900 or 17·05 per cent. of the total convictions. The various offences under liquor laws were distributed in the following percentage proportions of the total convictions under that head:—

Offence.	European.	Non-European.
Drunkenness	5·16	28·90
Illegal Possession of Native Liquor	0·02	54·80
Illegal Possession of Other Liquor	—	3·29
Europeans Selling to Non-Europeans	0·21	—
Non-Europeans Selling to Non-Europeans	—	0·63
Other Offences (Liquor Laws)	0·73	6·26

The following table gives the number of persons convicted for contraventions of the liquor laws under various headings:—

PERSONS CONVICTED FOR CONTRAVENTIONS OF THE LIQUOR LAWS (EXCLUDING DRUNKENNESS),* 1934 TO 1938.

Year.	Breach of Licence.	Conveying without Permit.	Distilling.	Illegal Possession of Native Liquor.	Illegal Possession of Other Liquor.	Illegal Possession of Yeast.	Illegal Sale of Yeast.	Sales without Licence.
1934..	33	99	69	56,442	5,487	411	17	130
1935..	40	130	39	65,404	5,113	536	118	172
1936..	59	101	77	70,976	3,991	606	149	167
1937..	61	91	51	66,274	3,634	758	213	185

1938..	64	755	251	4,993	1,659	1,155	77,902	0·55	9·86

* See Chapter V.

(viii) *Immorality Laws.*—In 1938 convictions for offences under these laws totalled 533 and represented 0·08 per cent. of the total convictions. The offences committed were as follows:—

Offence.	European.	Non-European.
Indecent Assault—Male on Male	5	230
Keeping a Brothel	4	1
Living on Proceeds of Immorality	—	1
Procuring	—	2
Soliciting	65	137
Other Offences	10	3
Illicit Carnal Intercourse	32	34
Procuring Illicit Carnal Intercourse	—	—
Permitting Premises to be used for Illicit Carnal Intercourse	—	—

6. **Suspended Sentences.**—(i) *Minor Offences.*—If any person is convicted of any offence before an inferior court in respect of which the court is of opinion that it is not necessary or desirable to impose a punishment of a whipping or imprisonment without the option of a fine or a fine exceeding £15, the court may, subject to such conditions as it may impose:—

(*a*) Postpone for a period not exceeding one month the passing of sentence and release the offender under recognizances to appear at the end of that period;

(*b*) pass sentence, but order the operation thereof to be suspended for a period not exceeding one month on conditions;

(*c*) order payment of the fine, but suspend the enforcement thereof if the offender enters into recognizances to pay within one month either in one sum or in instalments.

If the conditions of any order made or recognizances entered into are not fulfilled, the offender may be arrested without warrant and committed to prison to serve any alternative sentence of imprisonment.

(ii) *Serious Offences.*—If any person is convicted of any offence (except murder, rape, robbery, any offence in respect of which a minimum punishment is by law imposed, and any conspiracy, incitement, or attempt to commit any of the above offences) the court may, subject to such conditions as it may impose:—

(*a*) Postpone for a period not exceeding three years the passing of sentence and release the offender on recognizances to appear at the expiration of that period;

(*b*) pass sentence, but order the operation of the whole or any part of the sentence to be suspended for a period not exceeding three years;

(*c*) pass sentence of a fine or, in default of payment, imprisonment, but suspend the issue of a warrant of committal in default of payment for not more than twelve months in order to give the offender an opportunity of paying the fine either in one sum or in instalments.

If at the end of the period for which sentence has been postponed under (*a*) the offender has complied with the conditions, the court may discharge him without passing sentence.

If during the period of suspension the offender has observed the conditions under (*b*), the sentence is not enforced.

If the conditions of suspension or postponement are not fulfilled, the offender may be arrested and made to undergo the sentence which has been or may be imposed; provided that an order further suspending the operation of the sentence may be granted by the court which suspended the operation of the sentence, if the offender proves that he has been unable through circumstances beyond his control to perform any condition of such suspension.

(iii) The number of suspended sentences and suspended sentences revived during the years 1937 and 1938 was as follows:—

Heading.	European.	Native.	Asiatic.	Other Non-European.	Total.
1937.					
Suspended Sentences	2,842	5,334	215	2,149	10,540
Suspended Sentences Revived	41	168	1	102	312
1938.					
Suspended Sentences	2,905	5,661	223	2,177	11,026
Suspended Sentences Revived	46	227	3	89	365

§ 9. Statistics of Civil Judgments.

Civil Judgment and Civil Imprisonment Orders.—The table hereunder contains a summary for the year 1938 of civil judgments for debt for goods sold and of civil imprisonment orders arising out of judgments of this nature: defended cases have been excluded from the former. The data have been furnished by magistrates of a selected number of the more important and representative districts in the four provinces.

The magisterial districts from which the information has been obtained are:—

Cape of Good Hope. Cape, Wynberg, Port Elizabeth, East London, Kimberley, Uitenhage, Albany, Paarl, Kingwilliamstown, Queenstown, Oudtshoorn, Stellenbosch, Cradock, Wellington, Mafeking, Beaufort West, and Graaff-Reinet.

Natal..... Klip River, Vryheid, Durban, and Pietermaritzburg.

Transvaal..... Johannesburg, Pretoria, Germiston, Benoni, Boksburg, Krugersdorp, Potchefstroom, Brakpan, Springs, Pietersburg, Ermelo, and Rustenburg.

Orange Free State..... Bloemfontein, Kroonstad, Bethlehem, Harrismith, Ficksburg, and Vredefort.

It should be noted that the data are confined solely to cases of debt for goods sold, and do not take into account judgments in cases of action for damages and similar causes.

§ 10. Prisons.

1. **Prison System.**—The guiding principles of the penal system are to rescue the child from criminal environment and prevent it from becoming a criminal; to build up and supplement in the criminal the elements necessary to prevent a recurrence of crime; and, if all else fails, by means of the indeterminate sentence to remove the habitual criminal from society and prevent his remaining a menace to it; but even then to allow him an opportunity of self-redemption. It seeks to attain these objects through the instrumentality of government industrial schools for waif and stray children, of reformatories for children who have committed crime, and of various penal institutions for adults, and by classification and division within such institutions. The factors making for reformation operating in the prison are religious and moral influences, schooling, drill and discipline, the training of the hand and the eye, and sound literature. A simple system of marks records the progress or retrogression of the prisoner. The prison visitors' boards, on which the judicial, the medical, and the prison administration are represented in addition to the body of citizens, determine the period when the prisoner may with safety be allowed back into the ranks of society by keeping in constant touch with him personally and by following his conduct reports. They commend him when he improves and exhort him when he lapses. The Social Services of South Africa (see Chapter V) also keeps in touch particularly with the European prisoner, preserves the bond with his family, prepares the way for his return to society, and stands by him in the difficult days after his discharge from prison, when after long restraint he regains his liberty. To make the release not too sudden the prison farm has been introduced, where gradually the prisoner gets back to the conditions of outside life. Among preventive influences there is the suspended sentence, and there is also the probation officer, who stands by the sentenced man and helps him to redeem the promises made by him to the courts. As regards the native the road camp has been created, so that for venial offences against the *Pass Law*, the *Tax Law*, or the *Masters and Servants Law* he goes direct from court to camp and never actually enters a gaol. Gradually the features and methods of penal systems of the past are being abandoned. Single cells are coming more and more into use. The detention of Europeans and natives in the same wards is now forbidden. The guarding of European prisoners by coloured warders has been discontinued. The indiscriminate locking up of witnesses for months in gaol lest they might disappear is no longer resorted to. The practice of restraining mentally disordered persons in prison has been resolutely discountenanced, and under section 14 of the *Prisons and Reformatories Act* they now go to proper hospitals. Similarly the pauper sick are sent to appropriate institutions. Night schools for adults, popular science books in place of unedifying literature, and an occasional lecture on an elevating subject have now found a permanent place in the prison system.

In 1936 an intensified system of classification was introduced with the object of reducing to a minimum any contact between first offenders and recidivists while serving their sentences.

2. **Training and Instruction of Warders.**—In prison life the position of a warder is an important one. On enrolment, probationary warders undergo training at the Central Prison Training Depot at Pretoria, and thereafter they are transferred to the Pretoria Central Prison for further training in practical prison work before being passed out and promoted to the permanent establishment.

Instruction is given in matters of drill and discipline, and there is a thorough grounding in prison practice and regulations. In addition, lectures are given in first aid with a view to warders qualifying for the St. John's Ambulance certificate, and an advocate of the Supreme Court teaches the elementary doctrines of criminal and penal law.

3. **Prison Labour.**—Profitless labour such as oakum picking is now unknown, and its place has been taken by creative arts and trades. At the prisons excellent mats are now made from the discarded sheath leaf of the mealiecob, and replace the coir mats imported from India. Manilla rope or sisal fibre

grown on the prison farms has been turned out by the thousand yards. Buttons are turned by machinery out of discarded bone and the remnants ground into bone-dust fertilizer by the prisoners. Baskets and basket chairs are made from prison-grown osier and rush. Uniforms and boots are made in large quantities, and all brushes and brooms required by government departments are produced by the prisoners, including the carpet broom made from broom corn grown on the prison farms.

4. **Penal Legislation.**—The *Prisons and Reformatories Act*, No. 13 of 1911, incorporated the chief features of the Transvaal laws and especially of Act No. 38 of 1909, which was the first legislation to break ground on modern penological lines. With the *Prisons and Reformatories Act* must be read the *Criminal Procedure and Evidence Act*, No. 31 of 1917, as amended, and the *Children's Act*, No. 31 of 1937. Act No. 46 of 1920 gives government recognition and assistance to certified hostels for the reception of lads who would otherwise be committed to penal institutions. Under Act No. 27 of 1934, the administration of juvenile and juvenile-adult reformatories and hostels was transferred to the Union Department of Education.

Prominent provisions of Act No. 31 of 1917 are that no one may be sentenced to less than four days' imprisonment and that no witness may be detained in goal except on the express application of the Attorney-General. For a trifling offence the accused may deposit the maximum fine with the police, from which, if he is found guilty, his fine is deducted, any balance of this deposit being refunded. In a serious matter the court may, if it finds him guilty, reprimand him or postpone the passing of sentence, suspend the operation of the sentence, obtain the fine out of the offender's wages, allow him to pay by instalments, or permit him to give sureties.

5. **The Indeterminate Sentence: Nature and Working.**—The *Transvaal Criminal Law Amendment Act*, No. 38 of 1909, which came into force on the 1st of October of that year, first empowered superior courts to declare *habitual criminals* all those who might be three times convicted of certain scheduled offences. Such convicted persons were to be detained at hard labour during the Governor's pleasure and were not to be released until the board of visitors, whose creation was also provided for in the Act, should have reported to the Governor: (*a*) that there was a reasonable probability that the habitual criminal would in future abstain from crime and lead a useful and industrious life; or (*b*) that he was no longer capable of engaging in crime; or (*c*) that for any other reason it was desirable to release him. Upon receipt of such a report the Governor was empowered to order the release of the habitual criminal unconditionally or on probation on such conditions as to supervision, or otherwise as might be determined. A person who failed to observe any condition of release could be re-arrested and re-committed to prison and detained there as though he had not been released. If the person released on probation completed the period without breaking any condition of his release he would no longer be deemed to be an habitual criminal; but there was nothing to prevent his being again declared an habitual criminal, if he appeared before a superior court for a further crime.

The provisions of this law were extended to the Union by Act No. 9 of 1911, in force from 28th April, 1911, and by the *Prisons and Reformatories Act*, No. 13 of 1911, in force from 1st October, 1911. The provisions of Act No. 9 of 1911 were re-enacted by section 344 of the *Criminal Procedure and Evidence Act*, No. 31 of 1917.

The scheduled offences, in respect of which a third conviction renders the offender liable to be declared an habitual criminal, include the following:—(i) Rape or any statutory offence of a sexual nature against a girl of or under a prescribed age; (ii) robbery; (iii) assault with intent to commit murder, rape, or robbery, or to do grievous bodily harm, or indecent assault; (iv) arson; (v) fraud; (vi) forgery or uttering; (vii) offences relating to the coinage; (viii) breaking into or entering premises with intent to commit an offence; (ix) theft; (x) receiving stolen property; (xi) extortion or threats by letter or otherwise with intent to extort; (xii) offences described in any law for the suppression of brothels and the punishment of immorality; (xiii) illicit dealing in or possession of precious metals or precious stones; (xiv) illicit liquor supplying to natives or coloured persons; (xv) any conspiracy, incitement, or attempt to commit any of the abovementioned offences.

Each habitual criminal has a personal interview with the prison visitors' board once a year, when he has an opportunity of making any representations he wishes and the board is enabled to question him and observe his demeanour. Each habitual criminal is also seen once a year by the Director of Prisons. On consideration of the various factors, the board may decide whether the time is ripe for recommending that the convict be given a chance to prove whether he can be safely trusted again amongst his fellow men. The board ascertains in what locality the convict is most likely to make good, and on release he is transported to that locality and reports to the local probation officer, who renders such assistance as may be necessary in placing him in steady employment. Before release is actually effected, the convict has been tried for a period in prison under conditions approximating to freedom. It is found that some men break down even under this relaxation and prove their unfitness for final release.

The first indeterminate sentences were passed in 1910 when 2 European males and 27 native and coloured males were declared habitual criminals. In 1920 the record number of such sentences was passed, 20 European males, 153 native males, and 1 native female being declared habitual criminals. The number of indeterminate sentences passed up to the end of 1938 was:—Europeans: males 255, females 3; native and coloured: males 2,858, females 33; Asiatics: males 32; a total of 3,181. No Asiatic female has yet received the indeterminate sentence.

6. **Statistics.**—The subjoined tables give statistics for a period of years in regard to penal establishments, sentenced offenders, juvenile offenders, paupers, mental defectives, and debtors admitted to penal establishments (excluding lock-ups) or held in custody, and an analysis of convictions obtained in 1938. Particulars for earlier years will be found in previous issues of this *Year Book*. The concluding table shows the average number of hard labour units employed daily during the year 1938.

(i) PENAL ESTABLISHMENTS, 1934 TO 1938.

	No.		No.
Employed for Prisons Department...	6,091	Employed for others—	
Employed for Government Departments—		Gratis.....	179
Gratis.....	4,941	For Remuneration.....	2,857
For Remuneration.....	530	* Not employed (ineffective).....	5,854

* Owing to sickness, rain, Sundays, public holidays, etc.

NOTE.—The amount earned by prisons hard labour units during the year 1938 was £57,438.

7. **Administration of Prisons.**—The administration of prisons is placed under the Director of Prisons in the Ministry of Justice. Particulars as to the cost of administration are contained in Chapter XV.

CHAPTER X.

POLICE AND PROTECTION.

§ 1. Development of the Police Organization.

1. **Organization of the Police Force before 1910.**—Earlier issues of this *Year Book* (Nos. 3 to 6) contained an historical account of the development of the South African Police Forces up to the date of the constitution of the Union, and also statistics showing the strength of the various units at that date.

2. **Organization of the Police Force after 1910.**—On the amalgamation of the Police Forces of the Union and the formation of the Permanent Force (South African Mounted Rifles) on 1st April, 1913, the latter force was made responsible for the policing of the Northern Transvaal, the Natal Province (with the exception of the Durban Water Police patrol area), the districts in the Orange Free State on the Basutoland border, the Transkeian native territories with the districts of Kingwilliamstown, Komgha, Aliwal North, Barkly East, and Herschel, and the north-western portion of the Cape Province; the remainder of the Union was administered by the South African Police. When in August, 1914, the South African Mounted Rifles were mobilized for active service, the policing of the areas assigned to that force devolved on the South African Police, by whom it was continued until peace was proclaimed. The fact that during peace time the work performed by both forces is identical led the Government to determine that from the point of view of both economy and efficiency, it would be better to convert the two forces into one Police Force, and accordingly, on 1st April, 1920, the Permanent Force (South African Mounted Rifles) was absorbed and attached to the South African Police. In order that adequate police protection should be afforded to the areas formerly patrolled by the South African Mounted Rifles, as many members of that force as possible were accepted for service in the South African Police.

On the 31st March, 1926, the South African Mounted Riflemen were totally disbanded, and on the 1st April, one head constable, nine first class sergeants, eight second class sergeants, and 120 constables were taken over by the South African Police.

From the 1st April, 1936, the central area of the City of Durban, which up to then had been policed by the Durban Borough Police, was taken over by the South African Police. The whole of the Union is now policed by this force.

In 1934, with the object of securing speedier and more efficient patrolling of the larger urban areas, experiments in the substitution of motor cars and motor cycles for horses were conducted at Capetown and Johannesburg. These proved successful and the cities and larger towns are to-day equipped with motor vehicles, thus ensuring more effective supervision. In many rural areas throughout the Union, motor vehicles have also taken the place of horses for routine patrol and investigation work, with similar success.

In 1936 a wireless installation was erected at Marshall Square, Johannesburg, and this to-day controls the movements and patrol work of all police motor patrols throughout the Reef.

To provide immediate police action in the case of complaints made by residents of outlying suburban areas of Johannesburg, a system of mobile police stations—motor vans fitted as charge offices, with the necessary personnel—was inaugurated and has proved to be of the greatest service from the public point of view, and has in no small measure increased the efficiency of police supervision in the areas so controlled.

These mobile police stations have fixed " time points " known to the public, who may lay complaints or charges there instead of proceeding to one of the permanent police stations for the purpose. During the period the mobile station is stationary at such points, the personnel patrol the surrounding area.

3. **Number of Police in Provinces and Divisions.**—The allocation of police to the various provinces is indicated in the subjoined Table (i), and in Table (ii) is given an analysis of the European section of the South African Police Force on the 31st December, 1938. Table (iii) shows the strength of the South African Police Force on the 31st December for 1911 and in each year from 1922.

(i) SOUTH AFRICAN POLICE—STRENGTH ON 31st DECEMBER, 1937 AND 1938.

1929	6,603	3,941	10,544	1938	7,230	3,437	10,667

4. **Duties of the Police.**—In addition to the duties ordinarily appertainin to a police force, the South African Police are constantly required to under take inquiries on behalf of various government departments, and its member undertake criminal prosecutions (as public prosecutors) in almost all of th rural areas of the Union. They act as messengers of the court, excise officers immigration officers, lock-up keepers, revenue officers, assist in the compila tion of voters' rolls and the registration of births and deaths, serve as la (health) inspectors, inspectors of vehicles, inspectors of licences, post agent pass issuers, health officers, compilers of jury lists, meteorological observer and perform various other duties which are extraneous to police duty prope

The following table shows for a series of five years the cases in which the intervention of the police was called for:—

Description of Circumstances Calling for Police Intervention.	1934.	1935.	1936.	1937.	1938.
	No.	No.	No.	No.	No.
Cases Reported to the Police	769,600	831,073	869,437	932,108	977,769

* At 31st March of following year.
† At 31st December.
‡ Revised figures.

§ 2. Defence System.

1. General.—From the time of the inception of the Defence Force system the Government assumed gradually the duties and responsibilities connected with the defence of the Union, and on 1st December, 1921, the Imperial Military Command in South Africa was abolished and the responsibility for the coast fortress defences of the Cape Peninsula was formally taken over by a Union Commander. The Imperial Government generously endowed the Union with a free gift of all its land and buildings in the Union actually required for defence purposes; the conservation of this endowment is provided for in the *Defence Endowment Property and Accounts Act* (No. 33 of 1922).

The defence system is laid down in the *Defence Act* (No. 13 of 1912, as amended by Act No. 22 of 1922). Under this Act every citizen of European descent is liable between his seventeenth and his sixtieth year (both included) to render in time of war personal service in defence of the country in any part of South Africa within or without the Union. Further, every citizen of sound physique between his seventeenth and his twenty-fifth year (both included) is liable to undergo a course of peace training for a period of four years. All employers are bound by law to afford their employees facilities for this training without in any way prejudicing their employment. A minimum of 50 per cent. of those liable for peace training is required annually, others being required in their twenty-first year to enrol as members of rifle associations for the same period of four consecutive years. As an alternative, citizens may enter for service in the South African Division of the Royal Naval Volunteer Reserve. Every other citizen liable to render war service is also allowed to engage as a member of a rifle association if he elects to do so. The liability of non-Europeans to service may be determined by Parliament.

2. Administration.—A Council of Defence, a headquarters staff, and instructional and administrative staffs for the six military commands have been constituted.

The personnel of the Council of Defence is shown in Chapter XXVIII.

3. Military Commands.—The Union has been divided into six military commands as follows:—

Cape Command.—Headquarters at Capetown.—The Western Province of the Cape of Good Hope, with boundaries including the Magisterial Districts of George, Oudtshoorn, Prince Albert, Beaufort West, Victoria West, Carnarvon, Fraserburg, Calvinia, and Namaqualand.

Eastern Province Command.—Headquarters at East London.—The Eastern Province of the Cape of Good Hope, with boundaries including the Magisterial Districts of Knysna, Uniondale, Willowmore, Aberdeen, Murraysburg, Richmond, Hanover, Colesberg, Venterstad, Albert, Aliwal North, Herschel, Barkly East, Maclear, Qumbu, Libode, and Port St. Johns.

Natal Command.—Headquarters at Durban.—The Province of Natal and those portions of the Northern Transkeian Territories with boundaries including the Magisterial Districts of Mount Fletcher, Mount Frere, Tabankulu, and Lusikisiki.

Orange Free State Command.—Headquarters at Bloemfontein.—The Orange Free State Province and that portion of the Cape Province with boundaries including the Magisterial Districts of Philipstown, De Aar, Britstown, Prieska, Kenhardt, Gordonia, Kuruman, Vryburg, Taung, Barkly West, Kimberley, Herbert, and Hopetown.

Voortrekkerhoogte and Transvaal Command.—Headquarters at Voortrekkerhoogte.—The Transvaal Province (less the area of the Witwatersrand Command) and the Magisterial District of Mafeking in the Cape Province.

Witwatersrand Command.—Headquarters at Johannesburg.—That portion of the Transvaal Province comprising the Magisterial Districts of Krugersdorp, Roodepoort, Johannesburg, Germiston, Boksburg, Brakpan, Benoni, and Springs.

4. The South African Permanent Force.—This Force consists of:—

	Officers.	*Other Ranks.*
1. Staff Corps	24	—
2. Artillery	33	519
3. Air Force	119	1,514
4. Instructional Corps	8	121
5. Infantry—		
Special Service Battalion	14	1,584
Pioneer Battalion	3	243
6. S.A. Naval Service	5	12
7. Ordnance Corps	11	252
8. Service Corps	5	25
9. Medical Corps	13	76
10. Veterinary Corps	—	8
11. Administrative, Pay and Clerical Corps	28	156
12. Permanent Force, Band	1	37
13. Permanent Force, Cadets	—	66
14. Corps of S.A. Military Police	—	40

The Special Service Battalion (Infantry) was created in 1933 for the purpose of assisting unemployed youths between the ages of 17 and 22 years. The minimum standard of education is Standard VI. Members are enlisted for one year, but may be released at any time after nine months' service on obtaining employment in the government service or other approved employment. The battalion is stationed at Voortrekkerhoogte, with a company each at Capetown and Durban.

The Pioneer Battalion (Infantry) was established at Bloemfontein on 1st January, 1935. Unemployed men over the age of 17 may enlist in the battalion for a period of six months. There is no minimum educational standard, and men enlisting in this unit are found employment as labourers in government and other services.

5. The South African Military College.—This college was established in 1912 for the training and instruction of officers and other ranks of the Union Defence Forces.

6. The Coast Garrison Force.—This force consists of the South African Garrison Artillery and Coast Defence Corps. A division of the Garrison Artillery is established at Capetown, and citizens liable for peace training may serve their time in this force. The Coast Defence Corps consists of men specially trained in harbour work, engineering, signalling, and telegraphy.

7. The Citizen Force.—This force consists of persons liable to render personal service in time of war (other than members of the other forces mentioned) and comprises three divisions, viz., the Active Citizen Force, the Citizen Force Reserve, and the National Reserve.

8. Registration of Citizens for training under Defence Act.—All citizens of the Union are required to register themselves under the *Defence Act* during January of the year in which they will reach the age of seventeen. Any person who becomes a citizen between his seventeenth year and his twenty-first year must register himself within ninety days of becoming a citizen Failure to register constitutes an offence punishable by law.

The position in regard to the 1938 registration of citizens is reflected hereunder:—

REGISTRATIONS UNDER DEFENCE ACT, 1938.

Command.	Number Liable for Registration.	Total Number Registered.	Total Voluntary Entries.	Total Non-Voluntary Registrations.
Cape	4,587	3,697	3,441	256
Eastern Province	2,945	2,556	2,516	40
Natal	1,736	1,686	1,643	43
Orange Free State	2,968	2,900	2,855	45
Voortrekkerhoogte and Transvaal	4,489	3,911	3,739	172
Witwatersrand	3,736	3,775	3,547	228
TOTAL	20,461	18,425*	17,641	784

* As time progresses this number will be further augmented owing to citizens registering after due date.

9. The Coast Garrison and Active Citizen Forces.—These forces consist of citizens between the ages of seventeen and twenty-five who are undergoing peace training and citizens who, having completed their compulsory period of training, have been permitted to extend their service.

During the training year 1938-39 the following units were accepted for peace training:—

COAST GARRISON FORCE, ACTIVE CITIZEN FORCE, AND R.N.V.R.—STRENGTH, 30th NOVEMBER, 1938.

10. **South African Naval Service.**—The South African Naval Service mprises a headquarters staff at Simonstown, a hydrographic survey unit, an structional staff, and the South African Division of the Royal Naval Volunteer eserve.

The South African Division of the Royal Naval Volunteer Reserve was nstituted on the 1st July, 1913, and embodies the former Natal Naval Volunteer eserve and Cape Naval Volunteers. It embraces citizens liable for peace aining who elect to perform naval service. The present establishment of ie Division is 69 officers and 911 men, distributed among the R.N.V.R. bases Capetown, Durban, East London, and Port Elizabeth.

The normal period of service for ratings of the Division is four years, as the case of Active Citizen Force and Coast Garrison Artillery units. A oportion of men re-engage for further periods of service and provide the gher ratings of chief petty officers and petty officers in the Division.

The non-continuous training of the Division is carried out at the R.N.V.R. ises and is in the hands of an instructional staff composed of officers, chief etty officers, and petty officers, who are specially lent from the Royal Navy for is purpose. Continuous training is carried out in H.M. ships of the Africa quadron, all officers and men of the Division being under an obligation to erform a period of fourteen days' sea training per annum. There is also a atrol Section comprising masters and mates of trawlers and whalers, who eceive special instruction in minesweeping in H.M. escort vessels.

There are detachments of the Sea Cadet Corps at Capetown, Durban, East London, and Port Elizabeth; these are affiliated to the respective .N.V.R. bases.

The South African Division of the Royal Naval Volunteer Reserve is under he orders of the Naval Commander-in-Chief for discipline, training, and dministration in connexion therewith. For all matters affecting policy, eneral administration, and financial responsibility the Naval Commander-in-Chief acts directly under the Minister for Defence.

Except that the Admiralty provides facilities for training in H.M. ships, he South African Naval Service, including the South African Division of the Royal Naval Volunteer Reserve, is maintained entirely at the expense of the Union Government. A sum of £45,460 was provided for this purpose in the 1938-39 estimates.

11. **South African Air Force.**—The South African Air Force is organized into he following units:—

(i) At Voortrekkerhoogte—

(*a*) The aircraft and artillery depot, which includes aircraft, artillery, and mechanical transport stores, a mechanical transport section, artillery repair and aircraft repair and construction workshops,

and a reserve aeroplane park. The training of Active Citizen Force artisans for the South African Air Force Reserve is also carried out here.

(b) A central flying school.

(ii) At Capetown—

(a) One service flight.

(b) Aircraft and artillery depot for the maintenance of aircraft, artillery, and mechanical transport.

(iii) At Durban—
One service flight.

(iv) At Bloemfontein—
One service flight.

(v) Reserves—

(a) A special reserve of flying officers.

(b) A general reserve of officers.

(c) A reserve of artisans.

12. **Training of Pupil Pilots.**—(i) A new scheme for training pupil pilots for appointment to the Reserve of Pilots, Union Defence Force, came into operation on the 1st April, 1937.

(ii) *Recruiting.*—At present recruiting is restricted to the following areas and towns:—

Cape Peninsula (including Stellenbosch University), East London, Port Elizabeth, Grahamstown, Durban, Bloemfontein, Kimberley, Pretoria, Potchefstroom, and Witwatersrand.

(iii) *Qualifications for appointment.*—A candidate for appointment as a pupil pilot must—

(a) be a British subject—Union National—of pure European descent;

(b) be over 17 and under 32 years of age;

(c) be medically fit for full flying duties;

(d) satisfy a selection board as to his suitability for appointment to the Reserve of Pilots;

(e) be willing to complete a contract of service;

(f) in the case of university students, have at least two more years before graduating (or leaving university).

(iv) *Training.*—Pupil pilots are required to undergo continuous training and non-continuous training as follows:—

	Non-Continuous.		*Continuous.*
	Flying.	*Ground.*	
First Year.....	70 hrs.	74 hrs.	Two periods; 1 of 30 days, 1 of 15 days.
Second Year.....	40 hrs.	30 hrs.	" " " "

Non-continuous training is carried out at government expense at approved civil flying schools at the various recruiting centres mentioned in sub-paragraph (ii), under arrangements made by the Department of Defence. Continuous training is undergone at the South African Air Force Central Flying School, Voortrekkerhoogte, or other Air Force Flying Training Schools.

13. **The Citizen Force Reserve.**—This force is divided into two classes: Class A consists of men who have undergone peace training in the Active Citizen Force and are not over forty-five years of age; Class B consists of members or past members of Defence Rifle Associations who are not over forty-five years of age.

14. **The Coast Garrison Force Reserve.**—The Coast Garrison Force Reserve consists of all members of the Coast Garrison Force who have completed a prescribed period of training and service in that force and who have not passed their forty-fifth year.

15. **The National Reserve.**—This embraces all citizens between the ages of seventeen and sixty years who are not serving in any other portion of the Defence Forces. After the whole of the Active Citizen Force and the Citizen Force Reserve have been mobilized in time of war, the National Reserve may be called out in three classes according to age.

16. **Rifle Associations.**—All citizens who are required to register themselves, but who do not undergo peace training, are required to serve for four years in a rifle association. Every such citizen will be enrolled as a member of a rifle association on the 1st July in his twenty-first year. Any other citizen

liable to render personal service in time of war, not being a member of the Permanent Force, the Coast Garrison Force, or the Active Citizen Force, may become a member of a rifle association on prescribed conditions, as may also boys between the ages of thirteen and seventeen residing in areas where no facilities for cadet training exist. Members may purchase government rifles at approximately half cost price. A free issue of 50 rounds of ammunition is made to all members annually; a further 200 rounds per annum, which must on no account be expended on other than legitimate target practice on a range, may be issued to each member on payment at approximately cost price.

STRENGTH OF DEFENCE RIFLE ASSOCIATIONS AT 31st MARCH, 1938.

Command.	Commandants.	Captains.	Lieutenants.	Voluntary Members.	Cadet Members.	Total.	Commandos.
Cape.....	17	74	217	13,263	114	13,685	17
Eastern Province.....	20	83	229	11,298	22	11,652	20
Natal.....	5	19	56	2,700	19	2,799	5

TOTAL.....	152	661	1,876	108,659	2,242	113,590	152

17. **Cadets.**—In November, 1933, it was decided to reduce the number of cadets proper to 20,000, and financial provision was made for this number. This reduction of strength was to be achieved by limiting cadet training proper to boys of 14 years and over, and retaining only efficient detachments that possessed a minimum of 40 boys of this age.

Boys of 12 and 13 years of age at schools where cadet detachments proper exist may be enrolled as junior cadets. They will receive such training as can be arranged and receive only miniature ammunition on the scale of 200 rounds per cadet per annum. The strength of junior cadets is 6,580.

Detachments not retained as cadet detachments proper have either been disbanded or have transferred as rifle association cadet detachments.

Rifle association cadet detachments will retain the titular and numerical designations allotted to them prior to their transfer. The cadets may receive 200 rounds of miniature ammunition per annum. The retention of status as cadet officers in the case of officers transferring to rifle association cadet detachments will be permitted.

The following statement shows the number of officers and cadets in each of the military commands at 30th June, 1938:—

NUMBER OF OFFICERS AND CADETS, BY COMMANDS, AT 30th JUNE, 1938.

(a) CADETS PROPER.

TOTAL	290	479	18,390	18,869

18. **Small Arms Ammunition Factory.**—A small arms ammunition factory has been established at Pretoria and is manufacturing ·303 cartridges from raw materials produced in South Africa.

§ 3. Africa Naval Station.

The headquarters of the Africa Naval Station are established at Simonstown, where there are extensive dockyards (including a large graving dock) for Admiralty purposes.

The dock and the dockyard are available, on application to the Captain-in-Charge, Simonstown, for the docking and repairs of merchant ships, provided that the facilities desired are not available at the time elsewhere in Union waters, and that men-of-war have priority.

The limits of the Naval Station are from 40° W., 20° 47′ N. to Cape Blanco, thence by the southern shores of Africa to Cape Delgado, along that parallel to 55° E., along that meridian to 30° S., along that parallel to 80° E., along that meridian to the South Pole, along the meridian of 20° W. to the Equator, thence 4° 20′ N., 40° W., and along that meridian to 20° 47′ N.

The names of the ships belonging to the Africa Station are: Cruiser, H.M.S. "Neptune" (displacement 7,000 tons); Escort Vessels, H.M.S. "Milford", H.M.S. "Bridgewater", H.M.S. "Rochester" (with a displacement of 1,000 tons each), and H.M.S. "Auckland (1,200 tons); Oiler R.F.A. "Rapidol". Another cruiser is expected to arrive in October, 1939.

The following is the personnel: Cruiser, 585 officers and men; Escort Vessels, 100 officers and men each (H.M.S. "Auckland 180); H.M. "Dockyard, 590 officers and workmen.

The cost (to the United Kingdom) of maintenance of the ships and of the Simonstown Base is approximately £510,000 per annum.

CHAPTER XI.

NATIVE AFFAIRS.

§ 1. Native Population.

1. **Native Population.**—The number of natives at various census dates was as follows:—

NUMBER OF NATIVES IN UNION AREA AT VARIOUS CENSUSES (EXCLUSIVE OF MIXED AND OTHER COLOURED POPULATION).

Province.	Number of Natives.				Percentage of Total Population.			
	1904.	1911.	1921.	1936.	1904.	1911.	1921.	1936.
Cape of Good Hope	1,424,787	1,519,939	1,640,162	2,045,570	59·12	59·26	58·94	57·95
Natal	904,041	953,398	1,139,804	1,553,629	81·54	79·85	79·74	79·82
Transvaal	937,127	1,219,845	1,495,869	2,444,380	73·79	72·34	71·65	73·15
Orange Free State	225,101	325,824	421,978	553,110	58·12	61·69	67·11	71·64
UNION	3,491,056	4,019,006	4,697,813	6,596,689	67·45	67·28	67·80	68·79

2. **Distribution of Native Population.**—The following table indicates, from the returns of the Population Censuses of 1911, 1921, and 1936, the distribution of the Bantu population. The principal areas in which the natives were congregated and the density per square mile in the case of each group shown are given according to provinces. It will be seen that in the Cape Province the native population is centred in the Transkeian Territories and the Ciskei. In Natal approximately 22 per cent. of the native population is to be found in Zululand, while in the rest of the province the natives are distributed evenly throughout the various districts. In Zululand they are, however, less densely settled than in the remainder of Natal. In the Transvaal the bulk of the native population is centred in the Witwatersrand area and in the northern portion of the province, which forms the greater part of the Bushveld. The Witwatersrand mining area alone contains a quarter of the native population of the Transvaal. In the Orange Free State the natives are principally located in the central and eastern districts, adjoining the Basutoland border.

DISTRIBUTION OF NATIVE POPULATION.

Province and Area.	Native Population.			Per Square Mile.

* Districts reduced in area since 1911.

An attempt was made for the first time at the 1936 Census to obtain particulars of the distribution of natives in various classes of area, as distinct from the geographical distribution shown above, and the results are shown in the following table. Items 15 to 19 cover the "Native Areas", i.e., those portions of the country set aside for, or occupied solely by, natives, where the natives live as peasants under tribal conditions. The number of natives enumerated in these "Native Areas" was 2,962,397, or 45 per cent. of the total native population of the Union, while 2,053,440 (31 per cent.) were on farms owned or occupied by Europeans.

DISTRIBUTION OF NATIVES IN VARIOUS AREAS, 1936.

Class of Area.	Cape of Good Hope.	Natal.	Transvaal.	Orange Free State.	Union.

* Residential areas and townlands.
† Embraces all types of industrial activity, including sugar and wattle estates.

Additional population figures for natives will be found in Chapter XXV, where census figures and estimates of all races of the population are given.

§ 2. Representation.

1. **Representation of Natives Act, 1936.**—This Act, No. 12 of 1936, which was passed at a Joint Sitting of both Houses of Parliament, altered the position in regard to the representation of natives very materially. The position as it existed before the passing of the Act may be ascertained from No. 16 and previous issues of the *Year Book*.

(i) *Cape Province.*—In this province the native population enjoyed the franchise on the same basis as Europeans for many years, and the names of a considerable number of natives appeared on the ordinary lists of voters qualified to vote at elections of members of the House of Assembly. The effect of the *Representation of Natives Act*, 1936, was that the names of these natives were transferred to a special electoral roll called the Cape Native Voters' Roll, on which from time to time will be enrolled the names of natives who may in future obtain qualifications, which prior to the passing of this Act would have entitled the possessor to registration as a voter. Provision exists for the removal from the Cape native voters' roll of the names of those natives who no longer possess the necessary qualifications.

Persons whose names appear on the Cape native voters' roll are entitled to elect three members of the House of Assembly and two members of the Provincial Council, who shall in each case be additional to the number of members provided for in the *South Africa Act*, 1909. For this purpose the Act requires the Governor-General to divide the Cape Province—

(*a*) into three electoral *circles*, each of which will be represented by a member in the House of Assembly, and

(*b*) into two electoral *divisions*, each of which will be represented by a member in the Provincial Council.

These electoral circles and electoral divisions were defined under Proclamation No. 259 of 1936 and are known as the Transkei, Cape Eastern, and Cape Western electoral circles, and as the Cape Eastern and Cape Western electoral divisions, respectively.

Members of the House of Assembly and the Provincial Council elected by the Cape native voters will hold their seats for five years notwithstanding any dissolution of the House or the Council. The qualifications for election by Cape native voters of any person as a member of either the House of Assembly or the Provincial Council are the same as are prescribed under the *South Africa Act* for members of the House of Assembly. Only Europeans may, therefore, be elected. As regards rights, powers, privileges, and immunities, they are to be on the same footing as other members of the House of Assembly or of the Provincial Council, as the case may be.

(ii) *The Union as a whole.*—The provisions detailed in the preceding paragraph may be regarded as a substitute for franchise rights which were taken away from natives in the Cape Province in order to pave the way for a uniform system of representation for natives throughout the Union. The sections providing the system of representation are undoubtedly the main provisions of the Act. This system embraces—

(*a*) the direct representation of natives in the Senate, and

(*b*) the establishment of a Natives Representative Council.

(*a*) *The Senate.*—In terms of the *South Africa Act*, 1909, four senators are appointed by the Governor-General on the ground mainly of their thorough acquaintance, by reason of their official experience or otherwise, with the reasonable wants and wishes of the coloured races. The *Representation of Natives Act* makes provision for the election of four additional senators, each of whom will represent one of the four electoral areas into which the Union is divided, viz.:—

(i) Province of Natal,
(ii) Provinces of Transvaal and Orange Free State,
(iii) the Transkeian Territories, and
(iv) Province of the Cape of Good Hope, excluding the Transkeian Territories.

These senators are elected by electoral colleges each composed of a certain number of voting units, which differ in the various electoral areas owing to differences in local conditions. The voting units of the electoral college for the Transkeian electoral area are the native members of the United

Transkeian Territories General Council. The voting units in other electoral areas include the chiefs of certain tribes, local councils, native advisory boards, and certain other persons or bodies of persons representing the natives of the particular electoral area.

Senators so elected hold their seats for five years. They are required to have the qualifications prescribed by the *South Africa Act* for elected senators, and they enjoy all the usual privileges of senators.

(*b*) *The Natives Representative Council.*—The Act provides that this Council is to consist of six official members, viz., the Secretary for Native Affairs and five Chief Native Commissioners, four nominated native members appointed by the Governor-General, one for each of the electoral areas into which the Union is divided as mentioned in sub-paragraph (*a*) above, and twelve elected native members, three for each electoral area. In the Transkeian Territories all three are to be elected by the electoral college. In the other electoral areas, however, the electoral college, excluding the native advisory boards, is in each case to elect two members and the native advisory boards are to elect one, thus ensuring that the urban native population in each of these electoral areas shall have at least one representative. The non-official members of the Council hold their seats for five years.

The Council meets at such times and places as may be fixed by the Minister of Native Affairs, the Secretary for Native Affairs, or in his absence a person designated by the Minister, to preside. The chairman has a casting vote only, and the other official members have no vote. Any Minister of State or Administrator of a Province and any member of the Native Affairs Commission may attend the meetings of the Council and take part in the proceedings without, however, having the right to vote.

The functions of the Council are to consider and report upon—

(*a*) proposed legislation in so far as it may affect the native population;

(*b*) any matter referred to it by the Minister;

(*c*) any matter specially affecting the interests of natives in general.

It may recommend to Parliament or the Provincial Council, as the case may be, legislation which it considers necessary in the interests of natives, and it will further be required annually to consider and report to the Minister on the draft estimates of revenue and expenditure of the South African Native Trust Fund, which has been established under the provisions of the *Native Trust and Land Act*, No. 18 of 1936. The Council is, therefore, not a legislative but merely an advisory body.

The Minister is empowered to issue a certificate that any Bill or Draft Ordinance contains provisions specially affecting the interests of natives. After the issue of such a certificate, Parliament or the Provincial Council concerned may not proceed with the Bill or Draft Ordinance until it has been submitted to the Council for consideration and report.

Reports of the Council have to be submitted to the Minister and must be laid by him on the tables of both Houses of Parliament, or, if they affect any provincial matter, they must be forwarded by him to the Administrator of the province in question for laying upon the table of the Provincial Council.

Detailed provision also exists in regard to elections, the declaration of persons as non-natives in certain cases, and certain other matters.

The initial elections under the Act were held as follows:—For the election of the three members of the House of Assembly, 8th June, 1937; for the election of the two members of the Cape Provincial Council, 14th June, 1937; for the election of the senators and the members of the Natives Representative Council, 21st June, 1937.

The results of the elections were as follows:—

SENATORS.

Electoral Area.	*Name of Senator.*
Transkeian Territories	Senator the Hon. W. T. Welsh.
Transvaal and Orange Free State	Senator the Hon. J. D. Rheinallt Jones.
Cape Province	Senator the Hon. C. H. Malcomess.
Natal	Senator the Hon. Dr. E. H. Brookes.

MEMBERS OF PARLIAMENT.

Cape Eastern	H. Burman.
Cape Western	J. G. F. Moult.

MEMBERS OF THE NATIVES REPRESENTATIVE COUNCIL.

Electoral Area.	*Name of Member.*
Natal	Dr. John L. Dube.
	W. W. Ndhlovu.
	Arthur Joseph Sililo.
Transvaal and Orange Free State	R. V. Selope Thema.
	R. G. Baloyi.
	Thomas Mapikela.
Cape Province	R. H. Godlo.
	A. M. Jabavu.
	B. B. Xiniwe.
Transkeian Territories	Charles Sakwe.
	Chief Jeremiah Moshesh.
	Elijah Qamata.

In addition the following persons were appointed by the Governor-General, under sub-section (4) of section 20 of the *Representation of Natives Act*, 1936, as nominated members of the Natives Representative Council for the electoral areas specified:—

Electoral Area.	*Name of nominated member.*
Natal	Regent Mshiyeni ka Dinizulu.
Transvaal and Orange Free State	George Makapan.
Cape Province	Chief S. M. Mankuroane.
Transkeian Territories	Chief Victor Poto.

Sessions of the Natives Representative Council were held in Pretoria during the periods 6th to 13th December, 1937, and 21st to 29th November, 1938. The relative reports of proceedings have been published in blue book form (U.G. No. 7 of 1938 and No. 10 of 1939, respectively).

2. **Native Affairs Commission.**—This Commission, established under the *Native Affairs Act*, No. 23 of 1920, still continues to function. It is an advisory body consisting of not fewer than three or more than five members, appointed by the Governor-General and presided over by the Minister of Native Affairs. The members, though in receipt of salaries as commissioners, may sit in either House of Parliament. The functions and duties of the Commission "include the consideration of any matter relating to the general conduct of the administration of native affairs, or to legislation in so far as it may affect the native population (other than matters of departmental administration) and the submission to the Minister of its recommendations on any such matters." Its functions are thus merely advisory, but adequate means are reserved to it of placing its views before Cabinet and Parliament, should its recommendations not be accepted. Regulations in respect of the Commission were published under *Government Notice* No. 2004 of 1920.

In the early stages of its activities, which commenced in April, 1921, the Commission accepted as the first principles of its policy (*a*) that it was primarily and essentially the friend of the native people, and, as such, the needs, aspirations, and progress of the natives should be considered sympathetically by it; (*b*) that it was the adviser of the Government in matters affecting the interests of the natives; (*c*) that it should endeavour to win the confidence of the natives; and (*d*) that it should strive to educate public opinion so as to bring about the most harmonious relations possible between white and black in South Africa. The commissioners have travelled widely throughout the Union for the purposes of the closer study of native problems and of coming into contact personally with native points of view. They have dealt with a number of specific matters of native administration and have investigated certain general questions of native policy, such as native taxation and education, the pass laws, the control of natives in urban areas,

land administration, and the extension of the system of local native councils as contemplated by the *Native Affairs Act*, 1920. They have in addition conducted inquiries into special matters of native interest referred to them by the Government for investigation and report. Fuller information may be found in the first annual statutory report of the Commission for the year 1921 (U.G. No. 15 of 1922) and in later annual reports. The personnel of the Commission as at present constituted is given in Chapter XXVIII.

Since the *Native Trust and Land Act*, No. 18 of 1936, was brought into operation, the investigations in regard to the adjustment and modification of released areas, the acquisition of land by the Trust, and other kindred matters have been carried out by members of the Native Affairs Commission, who have visited and held meetings in a number of districts in the four provinces. They will continue their investigation in the remaining districts as time and opportunity permit.

It may be mentioned that it is provided in sub-section (3) of section 4 of the *Native Trust and Land Act*, 1936, that the affairs of the Trust shall be administered by the Governor-General, with power to delegate any of his powers and functions as Trustee to the Minister of Native Affairs (which has in fact been done) acting in consultation with the Native Affairs Commission.

It is also laid down in the regulations framed under the Act that a meeting of the Commission shall be held at least once a month for the purpose of dealing with matters arising out of the administration of the affairs of the Trust.

3. **Native Conferences.**—The *Native Affairs Act*, 1920, also made provision for the summoning of conferences of persons representative of native opinion. These conferences were never held regularly and, in view of the establishment of a Natives Representative Council by the *Representation of Natives Act*, 1936, they are likely to fall into disuse altogether.

§ 3. Administration.

1. **General.**—In terms of section 147 of the *South Africa Act*, the control and administration of native affairs throughout the Union is vested in the Governor-General-in-Council, who is authorized to exercise all special powers in regard to native administration vested at the time in the governors of the Colonies entering the Union, or exercised by other authorities as superior chiefs. The executive authority rests with a Minister of Native Affairs, who is in control of a Department of State under a permanent Secretary for Native Affairs with an Under-Secretary and staff. The Department is responsible for the administration of all legislation specially affecting the interests of natives and the supervision and control of their general welfare, and is referred to generally by all other departments of State in regard to matters falling within their purview, in which questions regarding native policy, administration, or interest are involved.

Various phases of the administration of the Department are dealt with in the following sections of this chapter.

2. **District Administration.**—For the purposes of District Administration, the Union has been divided into five areas at the head of each of which there is a Chief Native Commissioner. These areas are defined in Government Notice No. 151 of 1936 as follows:—

(*a*) The Transkeian Territories of the Cape Province lying to the east of the Kei River with headquarters at Umtata;

(*b*) The Cape Province, excluding the Transkeian Territories and the districts lying north of the Orange River, with headquarters at Kingwilliamstown.

(*c*) The Province of Natal with headquarters at Pietermaritzburg.

(*d*) The Witwatersrand, including the districts of Vereeniging, Heidelberg, and Witbank, with headquarters in Johannesburg.

(*e*) The Northern Areas, including the Transvaal (excluding the Witwatersrand area), the Orange Free State, and the districts of the Cape Province lying north of the Orange River (i.e. British Bechuanaland and Griqualand West), with headquarters in Pretoria.

(*a*) *The Transkeian Territories.*—The Chief Native Commissioner is also Chief Magistrate for certain purposes. He is assisted by twenty-seven Magistrates and Native Commissioners, all of whom are officers of the Native Affairs Department. This area is almost purely a native area, and each district, with the exception of a few European areas, which are of minor importance, is divided into a number of rural locations, to which headmen are appointed. Administration takes place through these headmen. On the whole the powers of the chiefs have been greatly curtailed, although there are a few who still exercise control over their tribes. The tendency since the passing of the *Native Administration Act*, 1927, has been to add to the powers of recognized Chiefs.

(*b*) *Cape Province.*—Only in the six predominantly native districts of Herschel, Glen Grey, Keiskamahoek, Middeldrift, Victoria East, and Peddie are the Magistrates and Native Commissioners officers of the Department of Native Affairs. In other districts the magistrates are officers of the Department of Justice. The majority of them have, however, been appointed Native Commissioners and, as such, are responsible to the Chief Native Commissioner at Kingwilliamstown. In the districts of East London and Kingwilliamstown, however, Native Affairs Department officials are Native Commissioners, while in Port Elizabeth native administration takes place through an additional Native Commissioner and in Capetown and in the Whittlesea area of the district of Queenstown, through assistant Native Commissioners. In this area there are no recognized chiefs and the administration of locations takes place through headmen.

(*c*) *Natal.*—Magistrates in this province also function as Native Commissioners except in Durban and Pietermaritzburg, where conditions have justified the appointment of separate officials. In the twelve predominantly native districts, Ingwavuma, Ubombo, Nongoma, Hlabisa, Mahlabatini, Mapumulo, Ndwedwe, Msinga, Emtonjaneni, Nkandhla, Nqutu, and Umlazi, the Magistrates and Native Commissioners are officers of the Native Affairs Department. Administration of reserves takes place with the assistance of chiefs and petty chiefs, who retain much larger powers than in the Transkeian Territories and the Cape Province.

(*d*) On the *Witwatersrand* we find a clear division between the functions of Native Affairs and Justice officers and it is only at Vereeniging that the magistrate, a Justice Department official, is also Native Commissioner, and the Native Affairs Department officer is an additional Native Commissioner. Native Commissioners are stationed at Johannesburg, Krugersdorp, Germiston, Benoni, Heidelberg, and Witbank. It may be mentioned that in three cases it was found expedient to group several magisterial districts under one Native Commissioner. Thus the Native Commissioner at Krugersdorp also has charge of the magisterial district of Roodepoort, while Boksburg has been grouped with Germiston, and Brakpan and Springs with Benoni.

The Chief Native Commissioner of the Witwatersrand is also the Director of Native Labour, and as such exercises control through a number of pass officers and inspectors of native labour (*vide* paragraph 3 below).

(*e*) *The Northern Areas.*—In the district of Pretoria the Native Commissioner is an officer of the Department of Native Affairs, but this is the exception to the rule, as in all other Transvaal districts Justice magistrates are *ex officio* Native Commissioners. In all important native districts, however, additional or assistant Native Commissioners, who are officers of the Native Affairs Department, are responsible for the native administration side of the work. As a result of the vastness of many of the magisterial districts, it has also been found necessary to sub-divide them for purposes of native administration. Such sub-districts are controlled by additional or assistant Native Commissioners. As examples of this may be quoted Pretoria with its sub-districts of Hamanskraal and Rayton; Pietersburg with Groot Spelonken and Blaauwberg; Letaba (at Tzaneen) with Duivelskloof and Leydsdorp; Zoutpansberg (at Louis Trichardt) with Sibasa. The Native Affairs Department, therefore, has a larger number of district officers in the Transvaal than appears at first sight. In the Orange Free State the district administration of the Native Affairs Department takes place almost wholly through the medium of Justice Department officials. Only at Thaba 'Nchu and Witzieshoek, where there are native reserves, are there assistant Native Commissioners who are Native Affairs officials.

In the districts of the Cape Province grouped under the Chief Native Commissioner, Northern Areas, the Native Affairs Department has one Magistrate and Native Commissioner, viz., at Taungs, and two assistant Native Commissioners at Mafeking and Vryburg, respectively. In the remaining districts Justice magistrates are directly responsible for native administration.

In those districts where there are native reserves or locations, administration of these takes place with the assistance of chiefs or headmen.

Chiefs in the Transvaal and British Bechuanaland still retain extensive powers.

The number of chiefs and headmen subsidized by the Government in all four provinces is 1,622. In a limited number of cases fairly substantial allowances are paid under agreements entered into at the time of annexation, or in recognition of services rendered. In the large majority of cases, however, the allowances are inconsiderable in amount, and are made as a token of recognition rather than as remuneration for services. A considerable number of chiefs exercise civil jurisdiction under section 12, and criminal jurisdiction under section 20, of the *Native Administration Act*, 1927.

3. **Native Labour Department.**—The Director of Native Labour is charged with executive functions, under the Secretary, in those labour districts proclaimed under the *Native Labour Regulation Act*, 1911 (see § 11 below). The most important of these districts are situated in the Witwatersrand gold and coal mining areas. The Director's staff of inspectors and pass officers stationed at different points in the mining area visit the compounds, deal judicially with petty offences, and generally watch over the welfare and interests of natives employed on the gold mines. The Director administers the other labour districts through the local magistrates. He also advises the Government generally in respect of native labour matters throughout the Union.

4. **Agricultural Administration.**—(*a*) *Organization and Development.*—The Union has been divided into four areas for the purpose of agricultural development. One of these, the Transkeian Territories, is the most advanced, work in that area having been in progress for a number of years. The system evolved there, subject to necessary modification, is being applied to the remaining areas.

(*b*) *Schools of Agriculture.*—Four schools of agriculture have been established, three in the Transkei and one in the Ciskei. In addition agricultural farms have been established for experimental work and for supplying good seed and breeding stock.

(*c*) *System of Work.*—A Director of Agriculture and a Deputy Director have been appointed for the direction and supervision of agricultural work throughout the Union. Assistant Directors have also been appointed for the Ciskei, Natal, and the Northern Areas of the Union. The Transkeian area is under the control of a Director, who, however, is an officer of the United Transkeian Territories General Council. These officers work in collaboration with the Native Commissioners of the various districts in their respective areas.

The schools of agriculture are the centres from which most of the agricultural operations radiate, and selected students from these schools are appointed as agricultural demonstrators or extension officers, and work under the supervision of trained European supervisors. Occasionally short courses are given. The native agricultural demonstrators secure the right from native farmers in their areas to use certain plots measuring, if possible, about two acres. Both seed and fertilizers are supplied free and plots are worked in an up-to-date manner with implements supplied by the South African Native Trust, except in the case of the Transkeian Territories, where implements are supplied by the United Transkeian Territories General Council. The plots are in the midst of native holdings, and the results are thus capable of immediate comparison.

The demonstrators assist in the culling of unsuitable bulls and rams and the introduction of better sires. Improved seed and stock are sold to native agriculturists at a very low figure.

(*d*) *Agricultural Shows and Farmers' Associations.*—Rapid progress has been made in the establishment of farmers' associations and the holding of agricultural shows in the native areas. For the organization of these the assistance of the extension staff is available. The establishment of associations enables free discussion of difficulties in the presence of numbers of interested men to take place, as compared with the system of dealing only with individuals.

(*e*) *Thrift and Co-operative Credit Societies.*—Societies of this type have made rapid progress, and the work commenced in the Transkeian Territories is now spreading to other areas. To provide for the registration and control of these societies in the Transkeian Territories a Central Committee of Native Co-operative Credit Societies has been established under Proclamation No. 191 of the 21st September, 1934.

The proclamation lays down the constitution of the central committee and of the societies, defines the liability of members, and makes provision for the inspection and audit of the books and accounts of societies by the central committee. In addition it lays down by-laws, forms, and a model set of rules.

The central committee, the members of which are natives, consists of not fewer than three and not more than five members, who are elected by delegates of registered co-operative bodies or societies.

(*f*) *Live Stock.*—The Department of Native Affairs has spent a fair sum of money on the purchase of bulls, either on behalf of local councils or direct from its own funds, with the object of introducing the blood of improved breeds of cattle into the native stock. A system of bull camps, to which are drafted females owned by the natives, was inaugurated as far back as 1932 in the Mafeking district. The system has since been extended to other districts.

The following statement shows the number of live stock and poultry owned by the native population and enumerated at the Agricultural Census of 1936-37:—

	By Natives in Reserves.	*By Natives on European Farms.*
Cattle	3,629,944	1,361,329
Sheep	3,661,974	306,642
Goats	2,584,905	858,994
Horses	176,244	169,743
Pigs	313,075	147,493
Mules	2,118	1,414
Donkeys	200,127	124,568
Poultry	3,019,513	1,527,971

(*g*) *Sheep and Wool.*—Natives experience considerable losses of sheep from various causes, but on the whole they receive comparatively good prices for their wool—in some cases as a result of a system of collective marketing which has been introduced in certain centres.

(*h*) *Cane, Maize, and Kaffir-corn.*—Native cane-growers are producing sugar-cane in Natal and Zululand on about 7,000 acres of land. Maize and kaffir-corn are the two staple crops in native areas, and much is being done to improve the production per acre. The average production on demonstration plots is more than double the production from land worked by natives according to their own methods. Good seasons have been experienced during the past few years, and crops of maize and kaffir-corn were generally speaking good throughout the native areas. A certain amount of wheat is being produced in winter by natives under an irrigation scheme laid down by the Department of Native Affairs with the help of the Irrigation Department in the Moiloa Reserve, District of Marico.

(*i*) *Collective Ploughing.*—A system of collective ploughing has been introduced under which implements and draught animals are leased to groups of native farmers in cases where they are not in possession of sufficient implements, or where conditions do not allow of their maintaining sufficient draught oxen, for efficient cultivation.

The agriculturists of a community form themselves into an association and accept liability for:—

(1) Supplying such draught animals, implements, and labour as may be expected from them.

(2) The payment of the *pro rata* share of the rest of the work done by the ploughing unit leased to their association by the South African Native Trust.

The lands are ploughed, harrowed, and planted in blocks under the supervision of the agricultural field staff and the managing committee of the association.

5. **Engineering Development.**—(i) *Organization.*—Excluding the Transkei, the Union has been divided into three areas for the purpose of engineering development, viz., Natal, Ciskei, and Northern Areas, which comprise the remaining native areas of the Union. Each of the three areas has a local engineering

staff, while a Senior Engineer, stationed in Pretoria, has been appointed for the direction and control of services of an engineering nature. Working under the district engineers are overseers and foremen, assistance in regard to field operations being rendered by agricultural officers for the areas concerned.

(ii) *Functions of Engineering Section.*—The work for which the Engineering Section is responsible embraces the following services:—

(*a*) *Water Supplies*, comprising the provision of boreholes and wells together with suitable pumping plant and storage facilities, the design and construction of earth and masonry dams for stock and domestic supplies, the design and construction of irrigation schemes, and the general improvement and maintenance of water supplies.

(*b*) *Roads and Bridges*, comprising work in connexion with the survey, construction, and repair of roads, as well as the provision of the necessary cross drainage works and river crossings and the general improvement of communications in the native areas.

(*c*) *Dipping Services*, including the maintenance and construction of cattle and sheep dipping tanks, as well as the supply and transport of dipping materials. The bulk of this work is in the Province of Natal.

(*d*) *Buildings*, including the construction and maintenance of buildings required for the use of officers of the South African Native Trust. In addition a certain amount of accommodation is provided for officials of the Department of Agriculture engaged in the control of stock diseases.

The following statement reflects the position in regard to the works mentioned above at 30th September, 1938:—

Nature of Service.	No.	Approximate Value.
		£
Boreholes and Wells	529	62,000
Pumping Plants	320	31,000
Stock dams	190	19,000
Irrigation Schemes	12	31,000
Roads and Bridges	—	33,000
Cattle Dipping Tanks	109	27,000
Sheep Dipping Tanks	100	3,000
Buildings	42	20,308

(*e*) *Prevention of Soil Erosion.*—In the native areas, soil erosion due to overstocking presents a major problem. Special funds have been made available by the Government for combating this evil, and a policy of soil reclamation and conservation was initiated in 1934 and is being vigorously pursued in the areas most seriously affected. The more important centres of operation lie in the Ciskei and Natal, but work is also in progress in the Transvaal and Orange Free State. Altogether about 1,300 labourers, as well as mechanical and animal draught, are being employed in fourteen major centres. In addition to the construction of dams and contour banks the fencing in of eroded areas is an important feature of the work. The following statement shows the progress made in this connexion up to 30th September, 1938:—

Contour Banks	Miles.	3,742
Soil Erosion Dams	No.	1,563
Area covered by works	Morgen.	46,747
Fences erected	Miles.	494
Area fenced	Morgen.	49,511
Total cost of works	£	149,000

§ 4. Native Administration Act, 1927.

Provisions of far-reaching effect are contained in the *Native Administration Act*, No. 38 of 1927. The main purpose of this enactment is to consolidate the systems of native administration throughout the Union and generally to facilitate this administration.

With this end in view the Governor-General is now, except in the Cape Province, Supreme Chief of all natives, the powers assumed to have been possessed by hereditary chiefs being thus centralized in him. Provision is made for tribal organization and control, with definite powers to remove individuals and even tribes in the public interest from place to place within the Union.

One of the most revolutionary changes is that contained in the recognition of native law and custom in special courts. Native Commissioners, Additional Native Commissioners, and Assistant Native Commissioners have been appointed for these courts since the 1st January, 1929, with almost unlimited jurisdiction to hear civil cases and matters between native and native. Notwithstanding the provisions of any other law, it is in the discretion of these courts, in all suits or proceedings between natives involving the question of customs followed by natives, to decide such questions according to the native law applying to such customs, except in so far as it shall have been repealed or modified, provided that such native law shall not be opposed to the principles of public policy or natural justice, and it is specially enacted that it shall not be lawful for any court to declare that the custom of *lobolo* or *bogadi* or other similar custom is repugnant to such principles. Certain native chiefs may be authorized to hear and determine civil claims subject to appeal to the Native Commissioner. Chiefs in British Bechuanaland have been allowed to maintain their criminal jurisdiction, and this may also be granted to other chiefs in other areas in respect of offences punishable under native law and custom.

From the date of the establishment of the Native Appeal Court, the Native Territories Appeal Court was abolished, and the Natal Native High Court ceased to exercise jurisdiction in any civil matter. Criminal jurisdiction conferred upon magistrates by the *Magistrates' Court Act*, 1917, and the *Criminal Procedure and Evidence Act*, 1917, has, in terms of the 1927 Act, been conferred on certain Native Commissioners.

An amendment to the Act makes provision for the establishment of native divorce courts under the presidency of the Presidents of the Native Appeal Courts.

A further chapter deals with marriages and succession. In this provision is made for the regulation of marriages by Christian rites between parties who had previously been living in a customary union, and also for the exclusion of the ordinary consequence of marriage in community of property according to Common Law, except under certain circumstances; succession under certain rules is also provided for.

Another outstanding feature of the Acts is the provision for government by proclamation. The Governor-General is empowered to alter any existing law or make new laws for areas included in the Schedule to the *Natives Land Act*, 1913, or such areas as may be designated by both Houses of Parliament as native areas for this purpose. All the provisions contained in the laws in force in the provinces dealing with the issue of *Letters of Exemption* have been repealed, and the Governor-General has been empowered not only to grant these privileges but to cancel them, whether they may have been granted under the provisions of the existing legislation or under the powers of prior Acts. Letters issued under the latter are regarded as having been issued under the provisions of Act No. 38 of 1927. Finally, apart from the preceding provisions, the Governor-General may make regulations for the prevention of misconduct and disorders, the regulation of the mode of living of natives, and the control of certain villages and townships.

Section 37 of the Act provides for the fixing by Governor-General's proclamation of the date of coming into operation, either in whole or in part. By Government Notice No. 201, *Government Gazette* dated the 5th August, 1927, the Act, with the exception of Chapter V, which has reference to marriage and succession, became law as from the 1st September following. Chapter V was eventually brought into force as from the 1st January, 1929, under the provisions of Proclamation No. 296, *Government Gazette Extraordinary* dated the 21st December, 1928.

§ 5. Local Government.

1. **Glen Grey District Council.**—(i) *Constitution.*—This council was established under the provisions of the *Glen Grey Act* (Cape of Good Hope), No. 25 of 1894. It is composed of the magistrate of Lady Frere as chairman and twelve members, six nominated by the Governor-General and six elected by the location boards established under the Act. The assistant magistrate is the secretary and treasurer.

(ii) *Functions.*—The revenue of the Council is derived from Local Tax paid by the natives in terms of Act No. 41 of 1925 and quitrents on arable allotments. Estimates of revenue and expenditure are submitted annually for

approval by the Governor-General. The revenue received by the Council is expended solely in the interests of the natives of the district in the following directions:—

(a) Road construction and maintenance including the building of bridges.
(b) Dipping of cattle.
(c) Encouragement of better methods of agriculture.
(d) Irrigation schemes.
(e) Public health.

The Council possesses a farm 1,432 morgen in extent, where the natives are taught practical methods of agriculture. One hundred and fifty plots each of 5 acres are worked by native farmers under the supervision and direction of the Council's farm manager. The plots change hands every 12 months and thus many natives are taught correct methods of agriculture.

2. **United Transkeian Territories General Council.**—(i) *History.*—The establishment of native councils in the Transkeian Territories, under a formal constitution, dates from the beginning of 1895, when District Councils were created in the districts of Butterworth, Idutywa, Nqamakwe, and Tsomo, the four being united in what was called the *Transkei General Council*, the meetings of which were held at Butterworth. In 1899 the district of Kentani entered the system. In 1903 it was extended to the seven districts of Tembuland and East Griqualand, and the name was changed to *Transkeian Territories General Council*. This Council met yearly in Umtata. By 1924, with the exception of Mount Currie, all districts within the Transkeian Territories, excluding Pondoland, had accepted the council system and fell under the jurisdiction of the Transkeian Territories General Council. Mount Currie is more or less a European district having only one small location. In 1911, the council system in a somewhat modified form was extended to the districts of Libode, Ngqeleni, and Port St. Johns, collectively known as Western Pondoland, the body thus formed being known as the *Pondoland General Council*. In 1927 the districts of eastern Pondoland, namely Bizana, Flagstaff, Lusikisiki, and Tabankulu, accepted the system and were included under the jurisdiction of the Pondoland General Council.

Under the provisions of Proclamation No. 279 of 1930, dated the 18th November, 1930, the Transkeian Territories General Council and the Pondoland General Council were amalgamated, with effect from the 1st January, 1931, into a General Council styled the United Transkeian Territories General Council, and the combined organization now functions for all districts in the Transkeian Territories with the exception of Mount Currie, twenty-six districts falling within its area of jurisdiction. Proclamation No. 279 of 1930 laid down that the seat of the United Transkeian Territories General Council should be at Umtata, and that its meetings should be convened at that place from time to time by the Chief Magistrate of the Transkeian Territories upon dates to be fixed by him; it vested in the amalgamated body all powers previously enjoyed by the constituent councils in their respective areas of jurisdiction and provided for the transfer of all property, assets, and liabilities of the old councils to the new body; it prescribed that all officers and employees of the Transkeian Territories General Council and the Pondoland General Council should become officers and employees of the United Transkeian Territories General Council, and that as such they should retain all their existing and accruing rights.

(ii) *Constitution.*—A revision of the constitution was undertaken in 1932 and was in due course given the force of law under Proclamation No. 191 of the 24th October of that year.

Provision was made therein for the constitution of an executive committee, consisting of the Chief Magistrate, three magistrates appointed from time to time by the Chief Magistrate, and four native members of the General Council, elected triennially by the Council for appointment by the Governor-General. The executive committee is responsible for the administration and control of the following Council affairs:—

Establishments.—Appointment, discipline, and dismissal of pensionable officers.
Education.—Scholarships.
Agriculture.—Establishment of new agricultural institutions; new agricultural institution buildings; acquisition and disposal of farms; establishment, acquisition, and disposal of plantations.
Public Works.—Consideration of tenders for any service, the lowest tender for which is over £100.
General.—The institution of legal proceedings.

The United Transkeian Territories General Council consists of three native members from each Council district, nominated and appointed in a prescribed manner, together with the four chiefs of Eastern Pondoland, Western Pondoland, Tembuland, and Gcalekaland. The magistrates of the Council districts are entitled to attend and to take part in the deliberations of all meetings of the General Council. The chief Magistrate is the chairman and chief executive officer of the Council. After each session of the General Council, the magistrates of the Council districts meet under the chairmanship of the Chief Magistrate in order, *inter alia*, to consider the resolutions adopted and to express their views thereon for the information of the Government. The native members of the executive committee are entitled to attend, and, subject to the approval of the Chief Magistrate, to take part in the deliberations at this meeting, which is known as the Magisterial Conference.

(iii) *Functions of the General Council.*—The councils (district and general) are constituted as advisories to the administration, associating the natives with the control of local funds, giving them a voice in the disposal of affairs intimately affecting their own interests, training them to constitutional methods of expressing their wishes in regard to general and local policy, and also keeping the Government and its officers in touch with native feeling.

The functions of the General Council in session are defined in its constitution to include—

(a) the initiation and consideration of any matter relating to the economic, industrial, or social condition of the native population of the Union or any part thereof in so far as it affects the natives within the area of the jurisdiction of the Council;
(b) the consideration of any proposed legislation or existing law which specially affects the native population of the Union in so far as it affects the natives within the area of jurisdiction of the Council;
(c) the consideration of any specific matter submitted to it by the Governor-General or by the Minister;
(d) the passing of resolutions on any such matter.

Debates in the General Council cover a wide range of subjects, including the revision of laws particularly affecting the native population, such as those in connexion with native marriage and inheritance, education, diseases amongst stock, control of commonages and forests, etc. Questions come before the General Council directly by motions introduced by magistrates or members, and also on submission from district councils and on reference by the Government. Procedure in the council is more or less parliamentary in form. The resolutions of the councils (district or general) having been taken on the subjects placed before them, the responsibility for action thereon rests upon the magistrates, the treasurer, the Chief Magistrate, the Minister, or the Governor-General, according to the importance of the matters involved.

(iv) *Functions and Constitution of District Councils.*—In local administration the various district councils stand to the General Council in the relation of individual parts of a single body. They are executive organs of the General Council, which distributes amongst them such duties as road maintenance and dipping operations, but remains financially responsible for their actions. They have no separate income or expenditure, but there is one common treasury into which all revenues flow, and which is chargeable with the cost of the different services authorized. This arrangement has the twofold merit of allowing for local variations and ensuring, under better control, the accumulation of funds which enable projects beyond the means of any single district organization to be undertaken.

Each district council in the Transkeian Territories, with the exception of Lusikisiki, Libode, Umtata, and Willowvale, consists of the magistrate of the district, who is chairman, and six members, and is constituted in the following way:—

Two members of each council are nominated and appointed by the Governor-General. For the appointment of the other four, each district is divided into four electoral areas known as sections, and the local taxpayers and native quitrent payers in each section elect three representatives. Thereafter these representatives nominate, in the territories other than Pondoland, four of their number, and in the territory of Pondoland, two of their number, to be recommended to the Governor-General for appointment as district councillors. The chiefs of Eastern and Western Pondoland nominate two local representatives for appointment by the Governor-General as members of each district council within their respective areas. The four chiefs of Eastern Pondoland, Western Pondoland, Tembuland, and Gcalekaland are *ex officio* members of the

Lusikisiki, Libode, Umtata, and Willowvale district councils, respectively. Each district council meets in the ordinary course six times a year, but special meetings may at any time be summoned by the magistrate of the district.

(v) *Financial System.*—Under the *Natives Taxation and Development Act*, No. 41 of 1925, as amended by Acts Nos. 28 of 1926, 37 of 1931, 25 of 1932, and 49 of 1935, the United Transkeian Territories General Council receives the native quitrents collected in all council districts and, in addition, the local tax of 10s. payable in respect of every hut or dwelling in a native location, according to the number of wives, not exceeding four, for whom the taxpayer is responsible. Quitrent payers are exempted from the payment of local tax.

In general, the district councils are responsible for the initiation of expenditure proposals, which are collated and laid before the General Council in the form of annual estimates of expenditure. After revision by the treasurer the votes of the Council are taken thereon, and the proposals are then submitted for the approval of the Governor-General. The annual expenditure controlled by the General Council (including the cost of dipping operations) is approximately £260,000. The total expenditure from the inception of the council to the 30th June, 1938, excluding government grants, amounted to £1,185,800. The Council does not levy rates upon or receive taxes from Europeans, who nevertheless share incidentally in many of the benefits accruing to ratepayers from Council expenditure.

(vi) *Scope of operations.*—The more important operations undertaken by the Council may be summarized as follows:—

(*a*) The maintenance of about 4,400 miles of roads and the construction of new roads at a total charge of about £60,000 a year.
(*b*) The construction and maintenance of bridges and causeways. At the 30th June, 1938, 123 bridges and 26 causeways had been built.
(*c*) The repair and construction of cattle and sheep dipping tanks, of which the Council owns 655 and 856 respectively.
(*d*) The dipping of large stock belonging to natives.
(*e*) Anti-soil-erosion works which have been undertaken on a large scale and towards which the Native Affairs Department grants a sum of £5,000 per annum.
(*f*) The development of water supplies. The South African Native Trust granted £5,000 to the Council for expenditure on this service during 1937-38, and a similar sum during 1938-39.
(*g*) The establishment of four types of scholarships designed to assist native students in deserving cases (1) to attain the Junior Certificate standard of education; (2) to proceed from the Junior Certificate stage to Matriculation and post-Matriculation study; (3) to train as visiting (Jeanes) teachers; and (4) to complete medical studies overseas.
(*h*) Grants to State-aided and mission hospitals.
(*i*) Grants to industrial schools.
(*j*) The provision and upkeep of plantations for the primary purpose of supplying natives' requirements in the way of fuel and hut-building material.
(*k*) £ for £ grants towards the fencing of groups of arable allotments, and, funds permitting, the assumption of the natives' liability for the half-cost of dividing fences erected under the compulsory provisions of the *Fencing Act*, No. 17 of 1912.
(*l*) The improvement of native live stock through the elimination of scrub and supernumerary sires and the supply of well-bred sires at approximately 50 per cent. of the cost of purchase, as well as the conducting of grazing control experiments. The South African Native Trust granted a sum of £20,000 during the financial year 1937-38 for expenditure on live stock improvement in the Transkeian Territories.
(*m*) Agricultural development, in connexion with which service the Council maintains a demonstration staff of 139 native agricultural demonstrators, 7 agricultural supervisors, and 1 assistant supervisor in the field; has established and supports by grants, one central and 17 district agricultural shows; has organized vegetable, wheat and maize-growing competitions; conducts at periodical intervals demonstration caravan tours to the outlying parts of the Territories and has established its own experimental farms and agricultural schools for the teaching of agriculture, the encouragement of pastoral industries, and the improvement of stock-breeding.

(*n*) The establishment of an experimental orchard in charge of an experienced horticulturist for the purpose of encouraging natives to grow fruit for both economic and health reasons.

(vii) *Roads and Bridges.*—There are several rural road authorities within the territory, e.g. the National Road Board, the Provincial Advisory Roads Board, the General Council, the Mount Currie and Matatiele Divisional Councils, and the Umzimkulu Road Board. The three last-named bodies, constituted in 1931, are responsible for the maintenance of certain defined roads within their respective areas; the National Road Board and the Advisory Roads Board maintain the National Roads and main trunk roads respectively; municipal and village bodies keep roads within their areas; and the remainder are left to the General Council, which confines itself chiefly to roads in native locations, but occasionally repairs a thoroughfare through a European or a native farming settlement; it receives no grants towards construction or maintenance of roads or bridges.

(viii) *Public Health.*—In addition to paying a *pro rata* share of the cost of treating its ratepayer population in the State-aided and mission hospitals of the Transkeian Territories, the Council makes a small annual grant to the South African (Native and Coloured) Health Society and contributes towards the cost of treatment of native tubercular patients from its area at the Nelspoort Sanatorium.

(ix) *Large Stock Dipping Operations.*—Cattle dipping operations in the *United Transkeian Territories General Council* districts are paid for from funds supplied by the natives in payment of stock rates. The magistrate and the district council of each district, with the exception of Idutywa, are responsible for carrying out the dipping operations. Subject to control by the Chief Magistrate and in co-operation with the Veterinary Department, they take the necessary steps for suppressing East Coast Fever and other diseases. The Engineer's Department of the General Council arranges for and supervises the construction and repair of cattle tanks in native areas. The annual cost of the dipping of large stock in the Transkeian Territories is in the neighbourhood of £50,000.

3. **Local Councils under Act No. 23 of 1920.**—The *Native Affairs Act*, 1920 (as amended by Act No. 15 of 1927), provides for the establishment of local councils in native areas which have been set aside or may hereafter be set aside as such by Parliament. The councils are in principle designed to have real local self-government, and, while independent of official or European control in their deliberations, they have as chairmen government officials with advisory duties, conversant with the necessities and obligations of local government. The Native Affairs Commission, which was empowered to recommend the constitution of such councils, proceeded from the standpoint that these bodies should be established wherever possible.

The extent of each council's area is defined by a proclamation which also indicates the number of its members, not exceeding nine, who serve for a period of two years. The members are natives, of whom a certain number are nominated by the Governor-General and the remainder elected by representatives of the local tax and native quitrent payers. The Native Commissioner of the district is usually designated by the Minister of Native Affairs to preside at the meetings of and generally to act in an advisory capacity to the local council.

The following local councils have been established under the Act:—

Cape of Good Hope...	Tamacha (Kingwilliamstown) (1927), Middeldrift (1927), Keiskamahoek (1928), Victoria East (1927), Peddie (1927), Mafeking (1927), Herschel (1930), East London (1932), and Hewu (Queenstown) (1937).
Natal.....	Msinga District (1928).
Transvaal.....	Zebediela's Location (1927), Sekukuni's Location (1928), Bakoberg Masibi's Location (1929), Moiloa Reserve (1929), and Pietersburg District (1934).

Local Councils derive their funds mainly from the local tax and native quitrent collected in their respective areas, payment of which is made to them in terms of section 11 of the *Natives Taxation and Development Act*, 1925.

Where the natives of any area are not sufficiently advanced for local self-government, provision exists for the establishment of a local council with restricted powers. The Governor-General may direct that all decisions of the Council in the exercise of any of its powers shall be subject to the approval of the Minister of Native Affairs.

Regulations relating to the administration of local councils were published under Government Notice No. 50 of 1930.

4. **The Ciskeian General Council.**—(i) *Constitution.*—The Ciskeian General Council was established under Proclamation No. 34 of 1934, with effect from 1st April, 1934. It was constituted as a result of two conferences of representatives of district and local councils held at the end of 1932 and during 1933 at Kingwilliamstown. A basis of federation was drafted, was accepted by all councils, and finally received the sanction of the Governor-General on the 21st February, 1934.

The Council consists of the Chief Native Commissioner as chairman and chief executive officer, the chairmen of the nine district and local councils, and two members nominated by each of these councils to serve for a period of two years.

In their capacity as chairmen of the district or local councils, Native Commissioners, or Assistant Native Commissioners as the case may be, attend meetings and participate in the deliberations of the General Council, but are not permitted to vote on its resolutions, which at the conclusion of each meeting are required to be transmitted to the Minister of Native Affairs for consideration.

(ii) *Functions of the Ciskeian General Council.*—Generally speaking the council system in the Ciskei approximates closely in its objects and functions to that of the Transkei. There are, however, certain constitutional variations, the most important of which is that the Ciskeian General Council is created on a federal as opposed to the union basis of its Transkeian sister, thereby preserving to district and local councils a measure of independence and opportunity for individual development limited only by the specific functions committed to the General Council under Proclamation No. 34 of 1934. The functions so committed embrace—

(*a*) the encouragement of the planting and cultivation of trees, the establishment and control of plantations, and improvement in methods of agriculture;

(*b*) assistance generally in the advancement of scholastic, agricultural, and industrial education by the provision of scholarships;

(*c*) grants in respect of hospital treatment, medical training, and the provision of sanitation and medical services to natives.

The General Council is also entrusted with—

(1) the initiation and consideration of any matter relating to the economic, industrial, or social condition of the native population of the Union or any part thereof in so far as it affects the natives within the area of jurisdiction of the General Council;

(2) the consideration of any proposed legislation or existing law which specially affects the native population of the Union in so far as it affects the natives within the area of jurisdiction of the General Council;

(3) the consideration of any specific matter submitted to it by the Governor-General or by the Minister;

(4) generally any other powers and functions which may be regarded as proper to General Council administration and which may be committed to it by direction of the Governor-General after consultation with the district and local councils.

Provision exists for the delegation by the General Council of any portion of the powers and functions enumerated under items (*a*), (*b*), and (*c*) above to any district or local council.

(iii) *Functions of Local Councils.*—These institutions have separate control, within the area for which they are established, of matters relating to—

(*a*) the construction and maintenance of roads, drains, dams, and furrows, and the prevention of erosion;

(*b*) the provision of improved water supplies;

(*c*) the suppression of diseases of stock by the construction and maintenance of dipping tanks and in any other manner whatsoever;

(*d*) the destruction of noxious weeds, and, generally, any functions regarded as proper to local administration committed to local councils by direction of the Governor-General. These include, for example, contributions towards the fencing of blocks of land and the destruction of rodents. Any of the foregoing functions may be delegated to the General Council with the concurrence of at least two-thirds of the district and local councils.

(iv) *Financial System.*—The sources of revenue of district and local councils are similar to those of Transkeian institutions, but while the Transkeian district collections of local tax and quitrent accrue to the Central Council, those of Ciskeian districts are, in terms of section 11 of the *Natives Taxation and Development Act*, 1925, as amended, paid direct to the subordinate council, and can be appropriated to its use only after the council's estimates of expenditure have received approval by the Governor-General. Expenditure of General Council revenue is similarly controlled.

The funds of the General Council are derived mainly from a contribution of from 10 to 15 per cent. of each constituent council's revenue for the preceding year. The percentage payable is determined annually by the General Council and has, from the inception of the latter, remained at 12½ per cent.

5. **Finances of Native Councils.**—The following table reflects the revenue and expenditure of the various councils during the years 1934 to 1938:—

REVENUE AND EXPENDITURE OF NATIVE COUNCILS, 1934 TO 1938.

Council.	1934.		1935.		1936.

‡ Established May, 1937.

6. **Orange Free State Native Reserves.**—There are three areas in the Orange Free State reserved for the exclusive occupation of natives: the Witzieshoek, Thaba 'Nchu, and Selika Native Reserves.

The Witzieshoek Reserve is a mountainous area approximately 50,000 morgen in extent on the edge of the Drakensberg escarpment in the Harrismith district. Its total population, according to the 1936 Census, is 7,733. The reserve was originally set aside for the late Mosuto Chief Paulus Mopeli and his people in recognition of their services to the Orange Free State Republic during the Basuto wars. In 1873 some 6,000 morgen of the reserve were set aside for the Batlokoa Tribe under Chief Koos Mota. The population of the reserve consists of the descendants of these two tribes, now under the control of Chief Charles Mopeli and the Regentess Eva Mota respectively.

The general administration of the reserve is controlled by the Native Affairs Department through its Assistant Native Commissioner (known locally as the "Commandant"), who lives in the reserve.

Since 1934 a considerable amount of work has been done to combat soil erosion and to assist in the more direct development of the reserve. This has been co-ordinated with the problem of storing water, and 14 dams have been built. Afforestation has also been undertaken.

Missionary work in the reserve is mostly in the hands of the Dutch Reformed Church, which has recently, with the assistance of the South African Native Trust and other interested bodies, built a hospital to meet the medical needs of the natives.

The Thaba 'Nchu and Seliba Reserves are situated in the Thaba 'Nchu district. The former is 6,631 morgen in extent with a population in 1936 of 3,783, and the latter 17,659 morgen with a population of 3,587. A portion of the latter reserve, called Carolusrus, has been marked off for the use of certain coloured persons who were established there. It is approximately 900 morgen in extent and is occupied by 206 coloured persons.

In addition to the reserves further land, approximately 43,000 morgen in extent, has been acquired by the South African Native Trust for the settlement of natives.

Three local boards have been established under the provisions of Ordinance No. 6 of 1907 (O.F.S.): one at Thaba 'Nchu with seven members, six of whom are elected by the natives of the reserve; one for the Seliba Reserve, the seven members of which are elected by the natives; and one with three coloured members at the Carolusrus Reserve. The boards have been showing increasing attention, within the limits of their funds, to the medical needs of the natives. Clinics under the charge of trained native nurses have been established and are doing good work.

A large educational institution in the Thaba 'Nchu Reserve attended by about 600 native children and providing for primary and high school education has been established by the Methodist Church.

Under the provisions of the *Natives Taxation Amendment Act*, No. 37 of 1931, the various native reserve boards in the Orange Free State receive the proceeds of the local tax collected from natives within their respective areas of jurisdiction.

The following is a statement of the revenue and expenditure of native reserve boards in the Orange Free State:—

NATIVE RESERVE BOARDS, ORANGE FREE STATE: REVENUE AND EXPENDITURE, 1935-36 TO 1937-38.

Reserve.	1935-36.		1936-37.		1937-38.	
	Revenue.	Expenditure.	Revenue.	Expenditure.	Revenue.	Expenditure.
	£	£	£	£	£	£
Witzieshoek	570	596	656	751	668	1,046
Thaba 'Nchu	1,245	600	1,062	736	399	330
Seliba	417	276	633	235	291	277
Carolusrus	29	10	45	25	15	14

7. **Mission Stations and Communal Reserves.**—Under Act No. 29 of 1909 (Cape), certain mission stations, where land was held in trust by the missionary body for the native and coloured occupants, were brought under a system in which a definite grant of land was made to the missionary body for the purposes of its work, and the remainder of the station was demarcated and reserved for the registered occupiers. For the control and regulation of the native or coloured community thus established a board of management is provided for by the Act. The board consists of six members elected by the registered occupiers and three appointed by the Governor-General and is presided over by the magistrate of the district; it is endowed with certain of the duties and functions of a village management board, mainly the control of roads, fences, sanitation, water supply, and use of the commonage, and it has power to make regulations in regard to those matters, subject to the approval of the Governor-General. The board may levy a rate of not less than 10s. per year on each registered occupier for the purpose of defraying the cost of administration.

Eight mission stations have now been proclaimed under the Act: Shiloh, in the district of Queenstown; Mamre, in the district of Malmesbury; Goshen, in the district of Cathcart; Enon, in the district of Uitenhage; Zoar, in the district of Ladismith; Pniel, in the district of Paarl; Genadendal, in the district of Caledon; and Ebenezer Kolonie, in the district of Van Rhynsdorp. The system has also, as provided in Part II of the Act, been extended to the four communal reserves: Leliefontein, Concordia, Steinkopf, and Komaggas in Namaqualand.

8. **Tribal Trust Funds (Transvaal).**—In the Transvaal, what are known as *Tribal Trust Funds* have been established in various districts under the control of the local officers of the Native Affairs Department. Originally these funds were instituted for the purpose of extinguishing tribal debts and reorganizing the finances of the tribes concerned. Owing to dilatoriness in meeting their obligations in respect of land purchases, etc., imprudence, and mismanagement of tribal moneys, certain tribes had become yearly more and more involved until, with the consent of chiefs and people, their affairs were investigated and taken in hand by the officers of the Native Affairs Department. As a result of the assistance and protection afforded, the tribal finances were in the course of a few years placed upon a solvent and satisfactory basis.

These trust funds comprise the proceeds of self-imposed levies voluntarily subscribed by the natives. The levy usually takes the form of an annual rate payable by each taxpayer, the amount of which is fixed by the chief and the members of the tribe. It is collected at the office of the Native Commissioner or the Additional or Assistant Native Commissioner, and is paid into the government banking account; accounts are paid by warrant voucher, and the books are audited by government audit inspectors.

The system of maintaining Tribal Trust Funds derived from voluntary levies was initiated in the Pietersburg district, and was attended with marked success. As a result, a number of such funds has been established, and in some cases they are utilized as media not only for discharging tribal obligations, but for providing services of benefit and utility to the communities concerned, e.g. fencing, tree planting, the construction and maintenance of dipping tanks, the sinking of boreholes, erection of windmills, etc.

Section 15 of the *Natives Taxation and Development Act*, No. 41 of 1925, provides definite legal sanction for the imposition of these levies, if desired by any native tribe or community, not only in the Transvaal but throughout the Union.

§ 6. Land Administration.

1. **The Natives Land Act.**—The *Natives Land Act*, No. 27 of 1913, took effect from the 19th June, 1913, and was avowedly a temporary measure with the object of maintaining the *status quo* as regards the ownership and occupation of land in the Union relatively by natives and by persons other than natives—so far as that could be done without imposing undue hardship "until Parliament should make other provision." Provision was made for the appointment in the interim of a commission for the purpose of inquiring into and recommending to Parliament what areas should be set apart, within which (*a*) natives and (*b*) persons other than natives should not be permitted to acquire or hire land or interest in land.

To fulfil its purpose, the Act laid down that, except with the approval of the Governor-General, a native might not acquire from a person other than a native, nor a person other than a native from a native, any land or interest in land in any area outside the native areas described in the schedule to the Act; and that without such approval no person other than a native might acquire any land or interest therein in a scheduled native area.

In 1936 was enacted legislation complementary to the *Natives Land Act*, 1913, in the shape of the *Native Trust and Land Act*, No. 18 of 1936, which by Proclamation No. 219 of 1936 was brought into operation on the 31st August of that year.

The cardinal features of the Act are:—

(*a*) The establishment under section 4 of a corporate body, known as the South African Native Trust, with the Governor-General as Trustee, to be administered for the settlement, support, benefit, and material and moral welfare of the natives of the Union. A necessary corollary to the establishment of the Trust has been the inauguration, under the provisions of section 8 of the Act, of a fund, known as the South African Native Trust Fund, to be utilized for the acquisition and development of land for native settlement, for the advancement of the agricultural, pastoral, and industrial interests of the natives and generally to promote the objects and purposes of the Trust. The pre-existing trusts such as the Natal Native Trust and the Zululand Native Trust have been merged in the South African Native Trust.

(*b*) The prescription under section 2 of the Act of certain areas, termed "released areas", defined in the First Schedule to the Act, within which the purchasing power of the Trust and of the natives themselves is to be focused, and which are thus destined ultimately to become native areas.

In this connexion it should be mentioned that the Act, under section 6, vested in the South African Native Trust all the established Crown and Trust native locations and reserves and unalienated Crown land in the released areas, and in section 10, in recognition of the fact that more land would be required for native occupation, specially empowered the Trust from time to time to acquire additional land for native settlement until the land so acquired, together with that vested in the Trust by virtue of its having previously been Crown land in released areas, should reach a maximum of seven and a quarter million morgen, apportioned between the various provinces as follows:—

	Morgen.
Cape of Good Hope	1,616,000
Natal	526,000
Transvaal	5,028,000
Orange Free State	80,000
TOTAL	7,250,000

Further the Act purports, in so far as purchase by natives themselves is concerned, to free the released areas from the restrictions imposed by paragraph (*a*) of sub-section (1) of section 1 of the 1913 Act, so that natives may acquire land in those areas without special approval. At the same time it is important to note that even in the released areas natives are not able to acquire isolated patches of land, i.e. land wholly surrounded by properties owned by non-natives, except with the approval of the Governor-General and subject to such conditions as he may impose.

For the purpose of computing the extent of land acquired by the Trust from time to time, that is with reference to the seven and a quarter million morgen mentioned above, land purchased by natives is deemed to have been purchased by the Trust.

(*c*) The fact that it brings the Cape Province into line with the other provinces as regards the acquisition of land by natives.

Here it may be mentioned that the Supreme Court had ruled that the restrictions imposed by section 1 of the 1913 Act did not apply in the Cape Province by reason of the saving clause contained in sub-section (2) of section 8 of that Act. That saving clause was, however, repealed by the *Native Trust and Land Act*, with the result that the provisions of section 1 of the 1913 Act, as modified by the new Act, now apply throughout the Union.

(*d*) The provisions contained in Chapter IV regarding the occupation by natives of land belonging to non-natives.

Chapter IV will apply only to areas to which it is specially extended by proclamation. Before applying the provisions of this chapter to any district, the Government will satisfy itself that the general body of the local rural European opinion is in favour thereof, and that adequate accommodation will be available for the natives likely to be displaced by reason of the application of the provisions of the chapter. Up to the present it has been applied to one area only, viz., the European portion of the district of Lydenburg, Transvaal, with effect from 15th April, 1938 (Proclamation No. 264 of 1937, as amended by Proclamation No. 43 of 1938).

The Trust has since its establishment concentrated upon the purchase of the additional land which it is empowered under the Act to acquire. Up to the 31st December, 1938, 958,717 morgen of land had actually been purchased by and transferred to the Trust. In addition, the purchase of a large number of farms, which have been inspected and valued with a view to acquisition by the Trust, has been approved and transfer is awaited. The purchase of further land is being pushed forward as expeditiously as possible, and it is anticipated that large areas of land will be acquired by the Trust during the course of the next few years.

The Trust, in embarking upon its vast scheme of native land purchase, realizes the necessity for adopting measures to remedy unsatisfactory conditions now existing in native reserves. To this end, shortly after the Act was passed, arrangements were made for a detailed survey of each location by a committee in each province, known as the Locations Reclamation Committee, consisting of the Native Commissioner of the district concerned, an agricultural expert, and a qualified engineer. The Committee is required to carry out investigations *in loco* and to report upon and make recommendations as to the following matters—

(*a*) the definition of residential areas in the locations;

(*b*) the definition of arable areas therein;

(*c*) the demarcation of deferred and rotational grazing areas;

(*d*) the acquisition of additional land to relieve overcrowding in the locations, to provide for necessary expansion, and to allow of settlement being effected upon a proper basis;

(*e*) anti-soil-erosion measures;

(*f*) provision of additional water supplies, such as boreholes, wells, reservoirs, etc., indicating where such can most economically and advantageously be provided, having due regard to the requirements of the location residents for water for domestic purposes and for stock;

(*g*) afforestation and the preservation of timber;

(*h*) irrigation schemes;

(*i*) the imposition of any necessary limitation in respect of stock.

The Location Reclamation surveys are being steadily proceeded with in all the provinces.

Much of the land purchased by the Trust will, in pursuance of the locations reclamation scheme, be assigned for the use and occupation of specific tribes in order to provide necessary extensions to the tribal locations. Other purchased land will be utilized to provide accommodation for tribes and communities which have not previously had locations. In addition, the Trust is under a statutory obligation to provide land for the accommodation of surplus natives who may be evicted from urban areas as a result of the operation of the *Native Laws Amendment Act*, 1937, which was brought into operation on the 1st January, 1938, or who may be evicted from privately-owned farms as a consequence of the squatting restrictions contained in Chapter IV of the *Native Trust and Land Act*, 1936.

In every case the settlement of natives on Trust land is being effected under close supervision, as far as possible on a tribal basis, and the natives are required to pay rental to the Trust, assessed by the Minister on an equitable basis.

SOUTH AFRICAN NATIVE TRUST.

REVENUE AND EXPENDITURE, 1st SEPTEMBER, 1936, TO 31st MARCH, 1938.

Heading.	1-9-36 to 31-3-37.	Financial Year 1937-38.
(a) REVENUE.		
Grants from Union Government—	£	£
For Purchase of Land and Assistance to Natives	228,252	1,003,089
For Native Education	185,000	813,000
Subsidy for Coloured Children, O.F.S.	3,150	4,298
Welfare Grant	2,250	4,750
TOTAL	418,652	1,825,137
Surrenders by Provincial Administrations	6,217	25,536
Collections under Act No. 41 of 1925—		
General Tax	268,027	816,647
Local Tax	105,312	224,907
Quitrent	29,984	68,951
TOTAL	403,353	1,110,505
Fort Cox Agricultural School	1,575	2,473
Sales	617	—
Experimental Farms	—	1,417
Rents	10,689	45,089
Grazing Fees, etc., Farms Purchased	447	3,229
Stock Fees	113	—
Forest Revenue	1,112	2,227
Mining and Prospecting Revenue	2,135	5,112
Dipping Revenue	346	1,116
Quitrent Payable under Act No. 18 of 1936	319	765
Interest on Investments and Loans	9,050	17,562
Miscellaneous Revenue	1,856	2,413
Putill Trust—Interest	85	90
Orange Free State Imperial Grant-in-Aid—		
Interest	1,001	1,517

O.F.S. Imperial Grant-in-Aid—Grants-in-Aid for Education of O.F.S. pupils	—	616
TOTAL £	912,660	2,496,863

2. **Individual Tenure.**—(i) *Cape Province.*—(*a*) *Ciskeian Districts.*—Allotments are held by natives under individual tenure in surveyed locations in certain districts of the Ciskei, viz., East London, Kingwilliamstown, Victoria East, Fort Beaufort, Peddie, Stutterheim, Queenstown, Herschel, and Glen Grey. These allotments may be classified broadly as follows:—

(1) Those granted in pursuance of the earlier surveys, i.e. prior to the passing of Cape Act No. 40 of 1879.

(2) Those granted under the provisions of Cape Act No. 40 of 1879.

(3) Those held under the Glen Grey system of tenure, as embodied in the *Glen Grey Act*, No. 25 of 1894.

In the early days, the necessity for inculcating amongst the natives, by a gradual process, European methods and ideas in respect of the ownership and occupation of land does not seem to have been sufficiently realized, with the result that individual tenure of land, which was entirely foreign to native ideas, was introduced before the people were ripe for it, or understood its implications, and in a form unsuitable for natives in their then stage of development, allotments being granted on the same basis and more or less subject to the same conditions as applied in the case of Europeans. These conditions naturally militated against the success of the earlier native location surveys.

A better appreciation of conditions existed when Cape Act No. 40 of 1879 was passed "to provide for the disposal of lands forming native locations". This Act contemplated the division of each location into a sufficient number of arable and residential allotments to enable grants to be made to the location residents, and the reservation of the remaining extent as commonage for the use of the registered holders. The Act provided that the grants should be made, subject to conditions to be approved by both Houses of Parliament, and from time to time, as fresh grants were made, advantage was taken of this provision to insert in the title deeds conditions which experience had shown to be desirable and necessary.

The greatest defect in the systems of individual tenure applied in native locations prior to the passing of the *Glen Grey Act* in 1894 lay in the fact that no provision was made for a simple and inexpensive method of transfer, so that small holdings, on the average not more than five morgen in extent, could be transferred only by means of a formal deed in the ordinary course, a procedure involving in many instances the payment of legal fees amounting to more than the actual value of the land. Further, the natives themselves, when transferring their land, failed to appreciate the necessity of doing more than hand over the actual title deed to the new owner. The result was that, in the great majority of cases, transfer of land not held under the Glen Grey system was never registered, though in many cases the allotments frequently changed hands. The confusion arising out of this state of affairs was such, that it became necessary to create by legislation special machinery to deal with the position. To this end, provision was made in section 8 of the *Native Administration Act*, No. 38 of 1927, (1) for the appointment of commissioners to investigate and determine the rights of occupation and ownership in all such cases, and (2) on payment of a fee of £1 sterling, for the transfer of the holdings concerned direct to the respective owners, as determined by the commissioners. Commissioners have been appointed for the various districts concerned, and are pursuing their investigations, which will of necessity be somewhat prolonged.

In addition Proclamation No. 117 of 1931, which was promulgated on the 27th March, 1931, introduced uniformity as regards the conditions of title, and provided a simple and inexpensive method of transfer by endorsement upon the title deed upon payment of a fee of 2s. 6d.

Provision is contained in section 6 of the *Native Administration Act*, No. 38 of 1927, for the establishment by Governor-General's proclamation of special deeds registries for the registration of deeds relating to immovable property owned by natives in scheduled native areas. Steps have been taken under this provision to establish a native deeds registry in the office of the Chief Native Commissioner, Kingwilliamstown (Proclamation No. 119 of 1931). This registry deals with all allotments held by natives under individual tenure in the various Ciskeian locations.

The provisions of section 6 of the aforesaid Act have been applied, by sub-section (2) of section 21 of the *Native Trust and Land Act*, 1936, to all land the title to which has been derived by any native from the South African Native Trust.

Under Proclamation No. 128 of 1937, it is provided that immovable property owned by the Trust and situate within an area which has been proclaimed under section 6 of Act No. 38 of 1927 shall, for the purposes of that section, be deemed to be owned by natives.

(*b*) *Transkeian Districts.*—The Glen Grey system of individual tenure was extended to the district of Butterworth in the Transkeian Territories by Proclamation No. 227 of 1898, and later to the districts of Nqamakwe, Tsomo, Idutywa, Umtata, and Engcobo. A somewhat modified, but essentially similar, system was applied to the district of Xalanga by Proclamation No. 241 of 1911.

The cardinal features of the system have already been indicated, but it should be mentioned, in so far as the Transkeian Territories are concerned, that by taking advantage of the edictal system of legislation operative there, it has been practicable to introduce modifications and improved methods from time to time with a readiness which would not otherwise have been possible. A deeds registry for native titles under the individual tenure system, as applied in the Transkeian Territories, was established in the office of the Chief Magistrate at Umtata by Proclamation No. 196 of 1920, and has functioned most satisfactorily.

(ii) *Natal.*—During 1918, the first definite step was taken towards introducing individual tenure of land into the native areas in Natal. A beginning was made in the mission reserves, and the survey of the Amanzimtoti and Ifafa Reserves has since been completed.

(iii) *Transvaal and Orange Free State.*—No system of individual tenure has been introduced in the Transvaal and Orange Free State native locations and reserves, and the land is still occupied by the people under the communal or tribal system.

(iv) *General.*—Questions have been raised as to the success of the various systems of individual tenure. The survey of the locations has been an expensive process: the natives are not able to comprehend the value of exact measurement, and the surveys have not in all instances been carried out in a way to meet the conservative habits of those for whom the allotments were intended. The Survey Commission, which reported in 1921, recommended that some simpler form of survey should be employed where native allotments were in question, and with this object Mr. M. C. Vos was appointed to go into the question and submit a scheme. His report (U.G. No. 42 of 1922) is a valuable synopsis of the history of individual tenure in its application to native land, and contains suggestions for a simpler system of defining the boundaries of native allotments and for the registration of native titles.

3. **Occupation of Land for Church, School, and Trading Purposes.**—The grant or occupation of sites for church, school, mission, or trading purposes on land owned by the South African Native Trust is controlled by the trustee of that trust (i.e. the Minister of Native Affairs). No grant, however, of any extent of land greater than two morgen can be made without the consent of Parliament as signified by resolution of both Houses [sub-section (4) of section 18 of Act No. 18 of 1936].

The residence upon, or the carrying on by any person other than a native of any profession, business, trade, or calling upon, any land in a scheduled native area or released area of which the Trust or a native is the registered owner, or which is held by any religious denomination or society, is prohibited except with the approval of the trustee, in whom is also vested the discretion to grant or refuse the issue of licences to carry on any profession, business, trade or calling on such land [sub-sections (1) and (3) of section 24 of Act No. 18 of 1936].

4. **Prospecting in Native Areas.**—The control of the issue of permission to prospect or mine on land in respect of which the South African Native Trust or a native is the owner of the mineral rights is vested in the Minister of Native Affairs under section 23 of the *Native Trust and Land Act*, 1936, paragraph (*a*) of sub-section (1) of which provides that:—

> No person shall prospect for minerals on such land without the written permission of the Minister: Provided that this provision shall not apply in respect of land situate in the Province of the Transvaal which at the commencement of this Act is a proclaimed public digging for precious or base metals or is land declared open to public prospecting for precious and base metals for so long as it remains so proclaimed or open. For such permission such fee as may be prescribed by regulation shall be paid to the Trust; and the Trust shall, in the case of land of which the Trust is the owner, pay the fee to the fund, and, in the case of land of which any other person is the registered owner, pay the fee to that person.

The method of dealing with applications for permission to prospect for precious and base minerals, the fees payable for and conditions attaching to permits to prospect for such minerals and permits to win corundum, and other kindred matters are laid down in the regulations (sections 64 to 69) under the *Native Trust and Land Act*, 1936, published under Government Notice No. 494, dated the 2nd April, 1937.

§ 7. Education and Religious Influences.

1. **Education.**—(i) *General.*—The education provided for natives may be graded as primary (normally an 8-year elementary course), post-primary (including secondary education, industrial education, and the training of primary school teachers), and higher, i.e., college or university, education as provided by the South African Native College.

All State and State-aided native education, with the exception of that represented by the South African Native College, is controlled by the Provincial Administrations in terms of § 85 of the *South Africa Act*. Native education, other than State and State-aided education, is under the control of missionary societies. In consequence of this arrangement, the supervision of the education of the natives has been made distinct from the administration of all other native matters. The Native Affairs Commission, in its annual report for 1921, strongly recommended that native education should be controlled and administered by the Government, in view of existing provincial anomalies and the inadequate financial provision made. It may be noted, as a fact which has some bearing on the point, that there has appeared a growing inclination amongst a certain section of the native population, particularly in the Transkeian Territories, to secularize native education and to obtain a larger direct share in its management. Statistics of native education will be found in Chapter VIII, which also contains particulars for the various provinces of the organization of native education, which forms an integral portion of the general education systems in force in the provinces. The details given in the following paragraphs are an extension of these observations, and show more particularly what is being done by the several provinces in providing for the education of the natives.

Section 3 of Act No. 46 of 1925 provides for grants of the following fixed amounts to the various provinces for the purposes of native education: Cape Province, £240,000; Natal, £49,000; Transvaal. £46,000; Orange Free State, £5,000. This fixed annual contribution of £340,000 is made from the public revenue, not direct to the provinces, but to the South African Native Trust Fund. From this fund grants are made to the provinces for the maintenance, extension, and improvement of education facilities among natives, and for the adjustment of the salaries of native teachers, subject to such conditions as may be fixed by the Governor-General after consultation between the Minister of Native Affairs and the Administrator concerned.

(ii) *Cape of Good Hope.*—In June, 1919, the Administrator of the Cape of Good Hope appointed a commission to investigate the whole question of native education in the province. Its report, a most valuable one, was issued in 1920 (C.P. 4—'20). Some of the commission's recommendations have been carried out, notably the appointment of a chief inspector of native education and the preparation of a draft curriculum especially designed for native schools.

An Advisory Board for Native Education, consisting of representatives of the missions, the teachers, and the native people, was created in 1929.

The rapid development of native education in this province is illustrated by an increase in enrolment during 1937 of over 10,000 pupils as compared with the average enrolment in 1936.

(iii) *Natal.*—In Natal native education has always been organized as a distinct branch of the Education Department, with separate personnel in the inspectorate and in headquarters office staff. It has a team of native supervisors, who assist the inspectors, and also organizing instructors in domestic economy, needlework, woodwork, and native crafts. The Native Education Advisory Board, which consists of representatives of the leading missionary denominations, the native people, the Native Teachers' Union, and the Native Affairs Department, performs a most useful function in advising upon and helping to direct educational policy.

Local school committees elected by the parents exist at all government native schools, and at many of the aided schools.

The social side of education is advanced by means of the Pathfinder Wayfarer Movements, by agricultural shows and craft exhibitions, by thrift societies.

The distinguishing features of native schools, as apart from schools for other races, are (*a*) an emphasis upon the study of the Zulu language, (*b*) a bias towards the study and practice of agriculture, promoted by means of nature study and the cultivation of school gardens, (*c*) an attack on superstition by means of practical hygiene, and later on by the study of physiology, and (*d*) the improvement of manual skill by means of indigenous arts and crafts.

There are five institutions at which teachers are trained and twelve at which work of a secondary level is done, while three schools for girls and three for boys give instruction in various industrial subjects.

(iv) *Transvaal.*—In the Transvaal the machinery necessary to cope with the number of native pupils receiving education, now approaching 100,000, has been expanded. There are now 8 inspectors including the Chief Inspector and 15 native supervisors. There is a Native Education Advisory Board, the members of which include representatives of various religious denominations, the Native Affairs Department, and the Provincial Education Department. A committee is being appointed to investigate the problems of native education on the Witwatersrand.

There are 8 training institutions for teachers and 4 secondary schools. Teachers are selected by the school authorities, but their appointment must be approved by the Education Department. Owing to lack of funds many schools are inadequately staffed. School buildings are provided by the mission authorities, the native communities, and in some cases by municipalities. Grants in aid of rent are paid by the Department in respect of new buildings which are used exclusively for school purposes. The teaching of Afrikaans has been introduced in all schools, and steps are being taken to improve the output of school books in the vernacular.

(v) *Orange Free State.*—The number of State-aided schools providing education for natives in this province in 1938 was 365 with an average enrolment of 41,593. These schools were established and are controlled by various religious denominations. There were 1,070 teachers, 672 males and 398 females, of whom 438 (40·93 per cent.) were fully trained, 218 (20·37 per cent.) partly trained, and 414 (38·69 per cent.) untrained.

In addition there are approximately 80 native schools, with an enrolment of about 4,000 pupils, which receive no grant-in-aid. About 60 of these have qualified for State-aid, but owing to lack of funds grants have not yet been awarded.

There are three institutions at which teachers are trained and five providing high school courses.

Information regarding assistance to native education from the Orange Free State Imperial Grant is given in paragraph 3 following.

2. **Higher Education.**—(i) *General.*—There are numerous institutions which endeavour to provide for the needs of the native people in regard to post-primary education. The leading institutions are:—

Cape of Good Hope.
- Lovedale (Victoria East).
- Blythswood (Nqamakwe).
- Healdtown (Fort Beaufort).
- St. Matthew's (Keiskamahoek).
- Shawbury (Qumbu).
- St. John's College (Umtata).
- Tiger Kloof (Vryburg).
- Emfundisweni (Flagstaff).
- Clarkebury (Engcobo).
- All Saints (Engcobo).
- Mariazell (Matatiele).
- Mvenyane (Matatiele).
- Emgwali (Stutterheim).
- Kimberley – Gore-Browne Training School and Lyndhurst Road Secondary School.

Natal.
- Adams Training Institution.
- Edendale.
- Mariannhill.
- Ohlange.
- Indaleni.
- St. Chads.
- Umphumulo.
- Inanda.
- St. Hilda's.
- St. Augustine's.
- Inkamana.
- Edwaleni.
- Bulwer.

Transvaal.
- Kilnerton (Pretoria).
- Diocesan College (Pietersburg).
- Botsabelo (Middelburg).
- Lemana Training College (Elim).

Orange Free State.
- Stofberg Gedenkskool.
- Modderpoort.
- Moroka Missionary Institution.
- Bantu High School (Bloemfontein).
- Bantu United School (Kroonstad).

(ii) *The South African Native College.*—While native students are not barred from following courses at the European university institutions, very few actually do study there. The only *ad hoc* native institution doing work of a university standard is the South African Native College at Fort Hare. This institution was opened in 1916 as the result of the co-operation of the Union Government, the native councils of the Transkeian Territories and Basutoland, and the important mission societies. It started with an enrolment of 20 students. In 1937 it had 130 students, and its current expenditure was £12,875. Its chief source of income is the government grant. The growth of the institution during the last five years is indicated in the table in this section. A recent important extension of its activities is the institution of a three years' course of training for native medical aids. The course is preceded by a year of scientific training and followed by one of practical work in a large public health or hospital area. Candidates are carefully selected and will, on completion of the course, be employed as medical aids in native areas. This course was made possible by the generous grant of £75,000 by the Transvaal Chamber of Mines. The enrolment dropped in 1937 to 130 as a result of the abolition of some of the pre-matriculation classes. By 1938, except for special courses for the training of native ministers, all the work undertaken at the college was of post-matriculation standard. The rapid growth in recent years in the number of secondary schools for non-Europeans in the Union and adjacent territories encourages the expectation that the enrolment of the college will soon rise substantially. Out of the 130 students at the college 79 students did work of a university (i.e. post-matriculation) standard. Eight students studied theology, 38 education, 4 commerce, 15 medical aid, and 23 studied for matriculation.

The students sit for the examinations of the University of South Africa, an external examining body. In 1937, 7 obtained the B.A. degree, 2 the B.Sc. Degree, and 4 the Diploma in Education.

SOUTH AFRICAN NATIVE COLLEGE (FORT HARE): GOVERNMENT GRANT AND ENDOWMENT, 1933 TO 1937.*

Heading.	1933.	1934.	1935.	1936.	1937.
Government grant.....£	4,565	6,483	6,500	7,035	8,000
Total number of students.....	128	147	153	165	130
Matriculated students.....	43	60	65	81	79

* For further information in regard to finance see Table (*d*) in § 1, para. 9 (ii), Chapter VIII.

3. **Orange Free State Imperial Grant.**—Out of a grant of £2,000,000 made by the Imperial Government as war compensation in the Orange Free State, a sum of £171,000 was allocated to natives and of this £27,400 remained unexpended when all claims had been met. This fund, which at 31st March, 1938, stood at £36,049, is now being used for educational extension. Loans are made from the capital fund for the erection of school buildings, mostly in urban areas, and the interest charged on these loans provides the funds for bursaries to students at approved institutions. Up to 31st March, 1938, loans ranging from £150 to £5,000 had been made to twenty-two bodies for the provision of school buildings. The total amount of loans outstanding at this date was £22,931.

Originally grants of £15 per annum were made to approved institutions in respect of each native student from the Orange Free State attending it and receiving education in standards above Standard IV or in industrial training. In consequence of the exhaustion of accrued interest on the fund, grants had to be reduced to £12 per student, and the number of these had to be strictly limited. The regulations under which these grants were made have now been superseded by a comprehensive set of regulations, which came into force on the 1st January, 1934, and provide for the grant of bursaries varying from £5 to £25 per annum to students training as teachers, attending high schools, taking agricultural, industrial, or commercial courses, training as nurses, or taking the Matriculation course, or a post-Matriculation course culminating in a degree at the South African Native College. Various conditions governing these bursaries are laid down, one being that no bursary will be given to a student attending an institution outside the Orange Free State, unless no institution within that province can provide the course which he desires to follow.

The amounts awarded in bursaries for a series of years were as follows:—

BURSARY AWARDS MADE FROM THE ORANGE FREE STATE IMPERIAL GRANT-IN-AID, 1933-34 TO 1937-38.

1933-34.	1934-35.	1935-36.	1936-37.	1937-38.
£ 784	£ 483	£ 625	£ 624	£ 616

4. Inter-departmental Committee on Native Education, 1935.—In July, 1935, the Minister of Education, after consultation with the Provincial Administrations, appointed an inter-departmental committee to inquire into the various aspects of native education.

The Committee's report was published in March, 1936 (U.G. No. 29, 1936), and a summary of the main findings and recommendations contained in the report was published in *Official Year Book* No. 18.

5. Native Separatist Churches.—There are already several hundred native separatist churches, and the number continues to increase. The policy followed in dealing with applications for the recognition of these organizations for government privileges, such as the appointment of marriage officers, railway concessions, and the occupation of Crown land for church and school purposes, is that laid down by the first report of the Select Committee on Native Affairs, 1925. The recommendations of that committee were as follows:—

> "With regard to applications by churches or religious bodies for sites or other privileges depending upon Government recognition, that as a general rule permission shall only be granted to churches long established and enjoying universal public recognition, and in all other cases before any application is considered by the Native Affairs Department a report shall be submitted by the Native Affairs Commission in regard to the applicant body as to the demand for its existence, its stability, its capacity both financially and educationally and its general fitness for work amongst natives."

Up to the present only eight purely native churches have been accorded recognition, viz., the Ethiopian Church of South Africa, the Presbyterian Church of South Africa, the Bantu Presbyterian Church of South Africa, the African Methodist Episcopal Church, the Lutheran Bapedi Church, the Lutheran Bapedi Church of South Africa, the African Congregational Church, and the Independent Presbyterian Church. Apart from the question of special facilities, the attitude of the Government towards these organizations is one of non-interference so long as law and order are observed.

The most fruitful cause leading to the increased establishment of such churches is to be found in jealousies and differences, which frequently lead to open quarrels amongst natives over the question of supremacy in the church. Repeated schisms occur, each side claiming to have expelled the other from the church for insubordination, and both coming separately to the Government with a request for State recognition of their church. In 1921 a commission was appointed to inquire into the origin and activities of these bodies. The report of the commission was published in 1925 (U.G. No. 39—'25).

§ 8. The Dipping of Stock.

In 1930 there were, in the native areas of the Union, approximately 5,500,000 head of large and 10,000,000 head of small stock. It will readily be appreciated that, in a country such as South Africa, which has been subject to the ravages of animal diseases, particularly East Coast Fever in cattle and scab in sheep, it is a matter of national importance to ensure the regular and efficient dipping of these vast herds of native-owned stock, as this alone can keep disease in check. The Native Affairs Department, working in co-operation with the Department of Agriculture and Forestry, has, therefore, assumed responsibility for the construction and maintenance of dipping tanks and the adequate supervision of dipping operations in native areas.

Prior to the establishment of the Native Development Account, under the provisions of Act No. 41 of 1925, the requisite funds for dipping had been raised in the different native areas in a variety of ways, viz., by voluntary levies, by the imposition of specific rates under the provisions of the *Dipping Tanks Advances Act*, No. 20 of 1911, by stock rates, by imposing a definite charge in respect of each beast dipped, etc.

The position now is that as regards scheduled native areas, other than such as fall under the jurisdiction of a council or a reserve board, the cost of the erection and maintenance of dipping tanks and the expenditure incurred in dipping operations, including the wages of European supervisors, native assistant supervisors, and native foremen, are met from the South African Native Trust funds. In scheduled native areas falling under a council or a reserve board, expenditure is ordinarily met from the revenue of the council or the board concerned. This revenue is derived almost exclusively from the proceeds of the local tax and native quitrent paid over to such body in terms of Act No. 41 of 1925 from the local fund of the Development Account. The only exception to this rule is in respect of the districts falling under the jurisdiction of the United Transkeian Territories General Council. Dipping operations are carried out in the districts under the aegis of the Council, but the cost, except as regards the dipping of small stock, is not met from the revenue of the Council, but from the proceeds of a special rate levied for the purpose in each district on either a stock or a poll basis.

§ 9. Control of Natives.

1. **Natives in Urban Areas.**—Control of the conditions of native residence in European towns and villages is governed by the *Natives (Urban Areas) Act*, No. 21 of 1923. It is a comprehensive enactment providing, in terms of the title—

> for improved conditions of residence for natives in or near urban areas and the better administration of native affairs in such areas; for the registration and better control of contracts of service with natives in certain areas and the regulation of the ingress of natives into and their residence in such areas; for the exemption of coloured persons from the operation of pass laws; for the restriction and regulation of the possession and use of kaffir beer and other intoxicating liquor by natives in certain areas and for other incidental purposes.

This enactment was amended by Act No. 25 of 1930 in certain details as a result of experience gained in the working of the original Act. During 1937 in furtherance of its native policy the Government placed on the statute book the *Native Laws Amendment Act*, No. 46 of 1937, which brought about important changes in the original Act.

Generally these Acts define and describe the powers and the duties of urban local authorities in respect of the native population within their areas, requiring such authorities to set aside land for the accommodation of the natives who are legitimately within their boundaries, and prohibiting the acquisition by natives of any interest in any land situated within any urban area or rural township except with the approval of the Governor-General.

Subject to certain exemptions these Acts contain provisions for the compulsory residence in native locations, villages, or hostels, of all natives residing within an urban area. This is in accordance with the policy of segregation of natives adopted by the Government. To enable local authorities to carry out their obligations in this direction, these bodies are empowered to expropriate land and to borrow money for the purposes of establishing locations, native villages, and hostels, of erecting the necessary buildings, and/or lending money to natives individually to enable them to build their own houses in established locations.

It is of interest to note that provision has been made by the Government for the lending of money at economic and sub-economic interest rates to local authorities to assist them in financing their schemes for improved housing conditions in locations.

The Acts further make provision for the prohibition of entry into an urban area of natives not employed therein and for the removal therefrom, at the cost of the Government, and for settlement in areas acquired by the South African Native Trust, of natives who are surplus to the labour requirements of such an area as ascertained by means of a biennial census, and also of natives unlawfully within any such area, as well as idle and dissolute natives.

In order further to limit and control the influx of natives into urban areas, foreign natives, i.e. natives not domiciled within the Union of South Africa, South West Africa Mandated Territory, Basutoland, Bechuanaland Protectorate, or Swaziland, may not enter or be employed in an urban area except under certain circumstances.

According to the Acts all revenue accruing to local authorities from locations, native villages, hostels, and beer halls, as well as other specified revenue derived from natives generally, is required to be maintained in a special account, from which expenditure on services rendered to or in respect of any area of land set apart as a location, native village, or hostel, or for the welfare or benefit of the native residents within urban areas, is met. No such expenditure may, however, take place until after the estimates thereof have received the approval of the Minister.

Provision is made for the appointment of departmental inspecting officers to advise and report on the administration of the Acts and for the licensing of the municipal employees who are placed in charge of urban native administration. As a link between such administration and the natives themselves provision is made for the establishment of native advisory boards representing locations. These boards have received increased status by being created voting units in terms of the *Representation of Natives Act*, No. 12 of 1936. The various established boards have, outside the provisions of the Act, organized an annual congress of delegates, at which matters affecting urban native administration are discussed from the native point of view.

The introduction by any person of intoxicating liquor into a location, native village, or hostel is prohibited, but, whereas the original enactment permitted the brewing of kaffir beer for domestic consumption by natives in urban locations only when specially allowed, the *Native Laws Amendment Act* has provided that brewing of kaffir beer for domestic consumption in locations shall prevail where the urban local authority has not the exclusive right to brew and supply, or has not licensed individual natives to brew and supply, kaffir beer. Prior to the coming into operation of the last-named Act, eleven local authorities in Natal exercised the exclusive right to brew and supply kaffir beer in their areas, while brewing for domestic consumption was permitted in 111 local areas. Since the passing of the Act nineteen additional local authorities have been granted the exclusive right to brew and supply kaffir beer, and in all other urban areas domestic brewing is permitted in locations established therein.

The right to trade in a location or native village is reserved in certain circumstances to natives, but the local authority itself may under certain conditions engage in trade. Trading is carried on by natives in a number of urban locations.

Location regulations have been promulgated under section 23 of the Act in respect of numerous urban areas, and make due provision for the control of locations and the establishment of native advisory boards. The system of registration and control provided for in section 12 of the Act has been applied to the principal urban, mining, and industrial areas in the Transvaal, and is administered by the Government in continuance of the pre-existing practice in that province. The system has been extended to other urban areas outside the Transvaal, where, however, the regulations are administered by the local authorities.

A number of municipalities have shown increasing interest in the health, education, and recreation of the natives within their areas by providing hospitals, clinics, schools, playing fields, and communal halls.

2. **Pass Laws.**—The laws relating to travelling passes in the Transvaal and Orange Free State were consolidated under Proclamation No. 150 of 1934. This proclamation defines the provinces mentioned, excluding scheduled native areas, as pass areas and provides for the carrying of passes by natives entering, leaving, or travelling within such areas. Section 14 further makes adequate provision for the exemption of certain classes of natives, including amongst others those who are certified by Native Commissioners to be of good character and repute. Up to the end of 1938, 8,229 exemptions had been issued.

In Natal natives do not require passes to travel within the province, but Law No. 48 of 1884 requires every native entering or leaving the province to be in possession of a pass.

In the Cape Province natives enjoy entire freedom of movement except in British Bechuanaland and the Transkeian Territories, where natives entering or leaving are required to be in possession of passes.

3. **Native Service Contract Act, No. 24 of 1932.**—The intention of this Act, as expressed in its preamble, was to amend the Transvaal and Natal Laws relating to masters and servants, to amplify the *Natives Land Act*, 1913, to impose a tax on certain owners of land, and to provide for other matters incidental thereto. The Act was brought into operation on the 10th March, 1933, by Proclamation No. 54 of 1933. It has, however, no application to the Cape Province and affects the Orange Free State only in so far as the operation of the *Natives Land Act*, 1913, is concerned.

The essential provisions affecting the Transvaal and Natal are:—

(*a*) The prohibition of the employment of any male native domiciled in the Union or of the issue of a pass to any such native to proceed to a place other than his home, unless he can produce a document of identification, and the further provision prohibiting his employment for any period, should it appear from his document of identification that he is domiciled in the Transvaal or Natal on land outside a native location, unless he can produce a labour tenant contract between himself and the owner of such land or a statement signed by such owner that he is not obliged to render the owner service during such period;

(*b*) the prohibition of the employment of any such native male under the age of eighteen without the consent of the owner of the land whereon the guardian of such native resides and of the employment of any native male or female under that age without his or her guardian's consent;

(*c*) the authority granted to the guardian of any native, male or female, between ten and eighteen years of age on his or her behalf to enter into a labour tenant or other service contract with the owner of the land on which such guardian is domiciled.

These provisions are designed to ensure that natives observe their service obligations as labour tenants, to counteract the tendency of native juveniles to flout the authority of their parents, and to prevent the uncontrolled settlement of natives on European farms.

The Act further contains a number of incidental provisions subsidiary to the main principles.

4. **Exemption Laws.**—Provision for granting Letters of Exemption from certain laws affecting natives is included in section 31 of the *Native Administration Act*, No. 38 of 1927. Regulations under this section make provision for the exemption of natives from any or all of the following laws:—

(*a*) Any curfew or night pass proclamation promulgated under section 19 of the *Natives (Urban Areas) Act*, 1923, *Amendment Act*, No. 25 of 1930.

(*b*) Sub-section (1) of section 12 of the *Natives (Urban Areas) Act*, No. 21 of 1923.

(*c*) The pass laws promulgated under—

(i) Proclamation No. 150 of 1934 (Transvaal and Orange Free State).

(ii) Natal Laws Nos. 48 of 1884 and 52 of 1887.

(*d*) In Natal, subject to certain provisos, the Natal Code of Native Law.

At the end of 1938, 84 exemptions had been issued under these regulations.

§ 10. Taxation.

1. **Direct Taxes on Natives.**—Natives are subject to direct taxation under the provisions of the *Natives Taxation and Development Act*, No. 41 of 1925, and amending Acts Nos. 28 of 1926 and 37 of 1931. Every male native, who has reached the age of 18 years, pays a personal tax, known as the General Tax, of £1 per annum; and in addition, the occupier of every hut or dwelling in a native location pays a Local Tax of 10s. per hut per annum. The maximum amount payable as Local Tax by any native is £2, and the tax is not payable in respect of land held on quitrent tenure. Provision is made for the exemption of indigent natives not able to earn, of natives whose permanent residence is outside the Union, of natives attending approved educational institutions, and of natives aged 65 years and over.

The proceeds of the local tax and quitrent payable within their areas are paid to the various native local councils established throughout the Union. Two-fifths of the general tax accrues to the Union Revenue Account, while the remaining three-fifths and local tax collected in areas in which there is no

local council accrue to the South African Native Trust Fund. The revenue of this Fund derived from the three-fifths of the General Tax is used for the promotion of scholastic education among natives by subsidy to the Provincial Councils, for agricultural education directly by the Department, and for works of a national character.

The following tables show the amount paid in taxation by natives.

(i) GENERAL TAX.

Financial Year.	Cape of Good Hope.	Natal.	Transvaal.	Orange Free State.	Total.
	£	£	£	£	£
1933–34	192,292	242,078	565,845	69,363	1,069,578
1934–35	224,340	271,179	642,647	94,205	1,232,371
1935–36	225,116	272,242	681,362	96,375	1,275,095
1936–37	317,499	288,062	574,070	103,047	1,282,678
1937–38	230,169	292,050	795,370	94,866	1,412,455

NOTE.—The above figures include the amounts paid to the Native Development Account up to the 31st August, 1936, in terms of Act No. 41 of 1925.

(ii) LOCAL TAX.

(v) PASS FEES.†

Financial Year.	Cape of Good Hope.	Natal.	Transvaal.	Orange Free State.	Total.	Assigned to Transvaal Province.
	£	£	£	£	£	£
1933–34	994	10,192	460,571	1,306	473,063	421,202
1934–35	962	10,618	510,984	1,411	523,975	482,449
1935–36	599	12,462	572,222	1,379	586,662	537,015
1936–37	578	11,921	629,712	1,535	643,746	591,203
1937–38	472	12,020	652,222	1,416	666,130	604,007

† Only a negligible amount of the revenue from Pass Fees is paid by natives. The great bulk is paid by employers of labour in respect of the registration of contracts under the *Natives (Urban Areas) Act.*

2. **Quitrents and Squatting Fees.**—The following is a summary of the other principal sources of native revenue in the various provinces (as distinct from rents, rates and fees, etc., paid by natives to properly constituted bodies and trusts).

(i) *Cape Province* (apart from Transkeian Territories).—Quitrents are imposed either in surveyed locations under the *Glen Grey Act*, No. 25 of 1894, or in locations falling under the purview of Proclamation No. 117 of 1931.

(ii) *Transkeian Territories.*—On surveyed Crown land locations a quitrent is substituted for the Local Tax. Private location fees are imposed in lieu of the Local Tax in respect of natives residing on private property in the Matatiele and Mount Currie districts.

(iii) *Natal.*—Natives living on Crown lands in Natal proper pay a squatters' rent of £2 per annum, but in Zululand, where no squatters' rent is payable, the Crown land residents are liable for Local Tax under Act No. 41 of 1925.

(iv) *Transvaal.*—Natives squatting on Crown lands as distinct from locations have to pay a rent of £1. 10s. per annum, plus a grazing fee for stock in excess of a limited number.

3. **Departmental Committee of Inquiry into Methods of Collection of Native Tax.**—A departmental committee of inquiry into the methods of collection of native tax was appointed by the Minister of Finance in September, 1937; the committee consisted of: Mr. A. F. Corbett, Commissioner for Inland Revenue; Mr. A. L. Barrett, Chief Native Commissioner, Ciskeian Territories; Mr. R. R. Campbell, Magistrate, Department of Justice; Mr. A. M. Slade, Chief Surveyor, Inland Revenue Department; Capt. G. Kruger, South African Police.

Its terms of reference were:—

(1) To invite from all interested persons evidence upon the existing methods of collecting native tax.

(2) To receive from any person desirous of offering it any suggestion for the modification or alteration of the existing methods or for the introduction of new methods which will ensure the most efficient collection with the infliction of the least possible hardship on the native taxpayer.

(3) To receive from any person desirous of offering it any suggestion for enabling natives convicted of non-payment of tax to earn money wherewith to meet their liabilities, such as the institution of a system of work camps or other methods of attaining the object.

(4) To analyse all evidence and suggestions and to report thereon to the Honourable the Minister of Finance.

The Report of this Committee was laid on the Table of the House on the 7th February, 1939, and effect is being given to the recommendations contained in the Report.

§ 11. Native Labour.

1. **The Native Labour Regulation Act.**—The recruitment of native labour throughout the Union is governed by Act No. 15 of 1911. The executive duties under the Act are carried out by an officer styled the Director of Native Labour, with headquarters in Johannesburg. This officer is vested with the duty of issuing licences to labour agents and employers desiring to recruit natives, and to compound managers. He has extensive powers, including the assessment of compensation, the cancellation of contracts under certain circumstances, the control of conditions under which natives are employed, housed, and fed, more particularly in labour districts proclaimed under the Act, and the repatriation of natives becoming unfitted for work on account of accidents or sickness. The labour districts in the Transvaal are Randfontein, Krugersdorp, Roodepoort, Johannesburg, Germiston, Boksburg, Benoni, Springs,

Witbank, Breyten, Heidelberg, Vereeniging, Christiana, Lichtenburg, Kaalplaats, Klerksdorp, and Ventersdorp. In the Orange Free State, labour districts are situated in the districts of Boshof, Viljoensdrift-Coalbrook, and Fauresmith, while the Cape Province has four labour districts, viz., Barkly West, Herbert, Hopetown, and Zwemkuil. There are two labour districts in Natal, viz., Vryheid and Dundee, the former including, in addition to collieries in the Vryheid magisterial district, certain portions of Ngotshe, Utrecht, and Paulpietersburg districts, while the latter includes also certain farms on which coal mining is proceeding in the magisterial districts of Newcastle and Ladysmith.

The following table gives the number of recruiting licences issued under the Act for a period of years.

ISSUE OF RECRUITING LICENCES, 1934 TO 1938.

Year.	Cape of Good Hope.	Natal.	Transvaal.	Orange Free State.	Total.
1934.....	372	47	39	7	465
1935.....	416	54	50	9	529
1936.....	443	58	54	8	563
1937.....	470	71	69	7	617
1938.....	610	75	79	6	770

The fees payable annually for licences are as follows:—

(a)	For a district labour agent's licence.....	£ 6
*(b)	" provincial labour agent's licence.....	25
*(c)	" Union labour agent's licence.....	50
(d)	" compound manager's licence.....	1
(e)	" conductor's licence.....	1
(f)	" employer's recruiting licence.....	1

If a licence be issued after the 30th June in any year, only half the above fees are payable, while endorsements for additional districts beyond the first are obtainable on payment of a fee of £1 in respect of each endorsement.

The extent to which labour agents may exercise their calling is governed by regulation, as it has been found necessary to safeguard districts that possess only sufficient native population to meet their own requirements. While labour agents are precluded from recruiting in certain areas, there is no obstacle placed in the way of natives voluntarily leaving such areas either to take, at their own expense, the journey to centres of employment, or to proceed to the nearest labour agent in an open area, to offer themselves as recruits. While the mining industry was at one time almost the only well-paid source of employment for natives, other industries and undertakings are making increased use of native labour, and, by improving conditions of employment, are becoming formidable competitors in the labour market. The time has arrived when the extent to which employers will be able to obtain native labour will depend on how their conditions of employment and observance of contractual obligations compare with those of their rivals.

2. **Union-Mozambique Convention.**—The entry into the Union of native labourers from the Portuguese Colony of Mozambique is governed by the convention between the Union Government and the Government of the Portuguese Republic entered into at Pretoria on the 11th September, 1928, the terms of which were revised by both Governments on the 17th November, 1934, and again on the 8th June, 1936. The convention, in its revised form, provides that the number of Portuguese natives to be recruited for employment on the mines shall not exceed ninety thousand, the mines being allowed, if they so desire, to employ a minimum of sixty-five thousand. These numbers may, however, be altered by arrangement between the two Governments in order to solve any difficulties which may arise in Mozambique or the Union in regard to native labour. Such an arrangement has been arrived at and the number is to be reduced to 80,000 by June, 1939. The duration of contracts of service in

* No provincial or Union labour agents' licences have as yet been issued.

respect of Portuguese natives is limited to a period of twelve months (313 shifts worked), subject to a renewal at the option of the labourer for a further period of six months (156 shifts worked). The maximum period of service is thus restricted to eighteen months. The convention further provides that, after the first nine months' service and during any period or periods of re-engagement, an amount representing approximately one-half of the wages earned shall be deferred and paid to the natives in Mozambique on their return home.

3. **Tropical Native Labour.**—In 1935 the Transvaal Chamber of Mines was given authority to introduce 3,000 natives from Nyasaland with a view to ascertaining the suitability, both as regards health and service, of such natives for work on the mines in the Transvaal. The number was increased to 5,000 in 1936, to 10,000 in July, 1937, and in November, 1937, authority to recruit tropicals to an unlimited number was given.

4. **Natives Employed in Labour Districts and Kimberley.**—The subjoined tables give an analysis of the natives employed in proclaimed labour districts, classified according to the territory from which the labour has been obtained.

NATIVES EMPLOYED IN LABOUR DISTRICTS, 1934 TO 1938.

Year.	Union.				Mozambique.	Basutoland.	Bechuanaland Protectorate.	Swaziland.	Other Territories.	Grand Total.

5. **Remittance Agency.**—New regulations relative to the Native Remittance Agency, Johannesburg, were published under Government Notice No. 1729, dated the 21st October, 1938, and came into operation on the 1st November, 1938. Natives may now make remittances free of charge through any Native Commissioner (in the case of Johannesburg District, through the Pass Officer). Since 1913 the following amounts have passed through the books of this agency:—

REMITTANCE AGENCY ACCOUNT, 1913 TO 1938.

Year.	Remittances.	Deposits.	Year.	Remittances.	Deposits.

1924	15,031	11,181	1937	9,216	—
1925	13,804	16,609	1938	6,907	—

Many natives, however, still continue to remit large sums of money through the agency of friends returning home, employers, and recruiting organizations. Certain of the latter, with the consent of the Government, recruit on contracts, under which a portion of the wages stipulated for is paid on the return of the natives to their homes. The deposit work of the agency was taken over by the Post Office during the year 1929.

6. **Compensation.**— In 1934 the *Workmen's Compensation Act*, No. 59 of 1934, was passed and it came into operation on the 1st July, 1935. This Act repealed section 22 of Act No. 15 of 1911. The Director of Native Labour has been appointed as "the officer" for all proclaimed labour districts, and as such is charged with the duty of assessing and recovering from employers the amounts payable under the Act for accidents to native workmen in labour districts, and of distributing such amounts to beneficiaries. He is also charged with the assessment and distribution of compensation payable under the *Miners' Phthisis Act*, No. 35 of 1925.

The number of accidents to natives reported under the *Workmen's Compensation Act* and the number of natives compensated and the amount of compensation paid under the *Miners' Phthisis Act* from 1936 are given hereunder:—

Workmen's Compensation Act.

8. **Sources of Native Labour.**—The industries of the Union are very largely dependent on native labour, which is drawn from the native population resident—

(*a*) in rural locations and reserves within the borders of the Union;

(*b*) on European-owned farms;

(*c*) in urban areas;

(*d*) in extra-Union territories.

The mines derive their labour supply mainly from the sources mentioned in (*a*) and (*d*). The information and statistics furnished in paragraphs 2 to 4 above are of interest in this connexion. Other employers of natives in urban areas, both in industry and in domestic service, may be said to rely to some extent on all these sources. Section 5 *quater* of the *Natives (Urban Areas) Act*, 1923, as amended, however, now prohibits the employment of foreign natives in urban areas.

In the agricultural industry the supply is derived from the sources mentioned under (*a*), (*b*), and (*c*). The conditions under which natives are employed on farms are set out in paragraph 10. Here it may be stated that the vast majority of the natives employed on farms reside on those farms. It is only where this source fails that labour is derived from other sources, mostly through the medium of labour agents. This happens commonly in the case of industrialized forms of agriculture, such as sugar-cane growing in Natal, the wattle industry in Natal and the Transvaal, and other forms of industrialized agriculture in the Eastern Transvaal. Native labourers are not obtained from adjoining territories in terms of a recognized convention or arrangement between the Union and those territories, as is the case in the mining industry. On the contrary, reliance is placed on the number of natives, from Portuguese East Africa, Nyasaland, and Northern and Southern Rhodesia, who enter the Union clandestinely in search of employment. The regulations prescribing the conditions of labour agents' and employers' licences regulate the recruiting of these natives after their entry into the Union. In Natal the fact that Portuguese natives are malaria tolerant is recognized and it is provided by Government Notice No. 217 of 1937, as amended, that they may only be recruited for employment in what are termed "restricted areas" (*vide* Government Notice No. 1311 of 1935) where malaria is endemic. In the Transvaal in terms of Government Notice No. 217 of 1937 quoted above, foreign natives, other than those from Portuguese territory, may be recruited for employment exclusively as farm labourers in the districts of Zoutpansberg, Pietersburg, Pilgrims Rest, Middelburg, Potgietersrust, Carolina, Bethal, Ermelo, Lydenburg, Barberton, Belfast, Letaba, Nelspruit, Waterberg, and certain farms in the district of Pretoria. As these natives enter the Union without passports, they are granted temporary permits, for which a fee of 5s. is payable, permitting them to remain in the Union for a period of six months. These permits are, however, renewable.

In addition to those mentioned above numbers of natives come from the neighbouring High Commission territories under permit. These are dealt with on the same footing as Union natives.

9. **General Conditions of Native Labour.**—Certain particulars regarding the general conditions of native labour and employment are given in Chapter VI. The subject has not yet been adequately investigated, apart from its bearing on the mining industry, but certain determinations of the Wage Board under the *Wage Act* of 1925 gave legal sanction to rates of pay, which had hitherto been a matter of arrangement between employer and employee. It is clear that the position of the native in the industrial development and organization of the country is one of increasing importance and must continue to receive the closest attention. The industrializing of natives brings in its train a number of problems which, unless adequately ventilated and discussed, must lead to industrial and political unrest. Recent years have been remarkably free from anything in the way of native strikes, but there is, nevertheless, evidence of an increasing insistence amongst native workers upon improved conditions, particularly in regard to wages.

The question of conditions of labour of natives engaged the attention of the Native Economic Commission appointed under Government Notice No. 1074, dated the 13th June, 1930. The commission made an exhaustive study of the facts, and published its report (U.G. No. 22, 1932) in May, 1932. A résumé of the report appears in the appendix of *Year Book* No. 13.

10. **Conditions of Employment of Natives on Farms.**—After the total prohibition under the *Natives Land Act*, 1913, of the residence of natives on farms as squatters on rent-paying terms or as share farmers, the labour tenant system remained popular in large areas of the Union as the system retained for the natives a close connexion with the soil and the right to keep cattle, to which they are greatly attached. It was also popular with farmers as land was plentiful and it permitted them to pay for their labour in kind. Under this system a native is allowed to reside on a farm with his family, to cultivate a certain area of land, and to graze a specified number of cattle on condition that he and/or such members of his family as are stated in the agreement should render service to the farmer for a specified period. The system varies from area to area and in fact from district to district, particularly as regards the period of service to be rendered per annum. The most usual periods of service are three months in the Transvaal and six months in Natal. But this is not the maximum period, which may extend to twelve months, while what is known as the "two days a week system" is also encountered in some districts. Further information in regard to the system is obtainable from Part II of the report of the Native Economic Commission, 1930-1932 (U.G. 22—1932.

The system, while admirably suited to the early days when land was plentiful and markets scarce, has given rise to many complaints by both natives and farmers of late years as it no longer satisfies modern conditions. By a gradual process the system has, therefore, disappeared entirely in some areas and been modified considerably in others. In the Cape Province it is now almost unknown and in the Orange Free State it exists only in a few districts. In the Transvaal and Natal, it retains, mostly in a modified form, a firmer footing. Contracts nowadays usually stipulate for the payment of a wage and for the supply of food to the tenant during the service period. The payment of a cash wage was unknown in earlier days. Natives who are unable to earn sufficient cash on the farms for their needs are allowed to proceed to urban and industrial areas to work during their free period. This has given rise to many complaints amongst farmers that these natives do not return for their service period, and an endeavour has been made to counteract the trouble by legislation (*vide* paragraph 95, sub-paragraph 3, of the *Native Service Contract Act*, 1932). Chapter IV of the *Native Trust and Land Act*, 1936, also deals with the position. In many districts in Natal it is now usual to offer to tenants who desire to work during their free period full market wages for employment on farms.

In areas where the labour tenant system is now defunct, cash wages are paid, but these are generally low, averaging from 10s. to 20s. per month. Rations consisting mostly of mealie meal or mealies, with irregular additions of meat and milk, are as a rule supplied to those members of the family of the labourer who actually work. The family resides on the farm in a dwelling, which is usually constructed in the native way by the labourer himself. Where climatic conditions make gardening possible, the family is allowed to cultivate a small vegetable garden, and almost invariably a limited number of stock (mainly milch cows) is allowed to graze on the farm free of charge. Unlike the labour tenant, these natives render continuous service throughout the year. Natives resident on farms are, on the whole, poor, but are not in a worse position than those urbanized natives who work as unskilled labourers for wages which are depressed as a result of competition from native temporary workers from rural areas. Although the wages of natives resident on farms are considerably lower than the wages paid in towns, the privileges which they enjoy in the way of free housing, fuel, water, milk, etc., for all of which the urban resident has to pay, must be taken into account in making any comparison. There are, further, many good employers who take an interest in their servants and provide conditions which enable the thrifty to increase their possessions.

The conditions of those labourers who are not permanently resident on farms and who, as explained in an earlier paragraph, are mostly employed on sugar and other estates where industrialized forms of agriculture are practised, are vastly different from those described above. As on the mines, wages are calculated on a "per shift basis" and range from £1. 10s. to £2. 10s. per month.

On the larger estates labourers are usually housed in compounds, and free rations are almost invariably given. These natives only remain on the estates for the periods of their contracts (mostly six months) and thereafter return to their homes.

11. **Shortage of Native Labour.**—Owing to phenomenal mining and industrial development during recent years, an acute shortage of native labour was experienced early in 1937, and as for some years past a tendency had developed for natives to drift to towns, where the work is as a rule lighter, conditions are more attractive, and wages higher, this shortage was felt more particularly by the farming community. The Minister of Native Affairs therefore decided to appoint a committee consisting of Major J. F. Herbst (Chairman), Major H. S. Cooke, O.B.E., Mr. W. Elliot, Mr. J. P. Jooste, M.P., Lieut.-Col. J. S. Lendrum, and Mr. J. H. Viljoen, M.P., to inquire into and report upon:—

(1) The shortage of native labour in the farming industry in the Transvaal, Orange Free State, and Natal Provinces.

(2) What steps should be taken to improve the amount of native labour offering itself for employment in the industry; and, in particular, in how far it is possible and advisable to use the existing government machinery or specially created machinery for the purpose.

(3) The economic condition of native farm labourers, the rate of wages or other remuneration paid to them, and generally the treatment they receive on the farms.

(4) Generally any question or proposal that may commend itself to the Committee as promoting the more effective supply of native labour on farms and the equitable distribution of available supplies between the farming and other industries.

The investigations of the Committee were subsequently extended to include the Cape Province. The Committee has completed its deliberations and submitted its report to the Government.

§ 12. Miscellaneous.

Ethnography of South African Natives.—An ethnographic review dealing with the physical,* cultural,† and linguistic‡ aspects of the South African natives appears in *Year Books* Nos. 7 and 8.

The results of the Government Ethnologist's activities are being made available in a series of ethnological publications. Volume I of the series, entitled "Transvaal Ndebele Texts," appeared in 1930; Volume II, entitled "Kinship Terminology of the South African Bantu," in 1931; Volume III, entitled "Contributions towards Venda History, Religion and Tribal Ritual," in 1932; Volume IV, entitled "Marriage Customs in Southern Natal," in 1933; Volume V, entitled "A Preliminary Survey of the Bantu tribes of South Africa", in 1935; Volume VI, entitled "Tshivenda-English Dictionary", in 1937; and Volume VII, entitled "History of Matiwane and the amaNgwane Tribe", in 1938. These are obtainable from the Government Printer, Pretoria.

* By Prof. R. A. Dart, Witwatersrand University.

CHAPTER XII.

HARBOURS, LIGHTHOUSES, AND SHIPPING.

§ 1. Harbours.

1. **General.**—Harbours and lighthouses are owned and managed by the Government. They are associated under the *South Africa Act* with the railways for the purposes of control and administration, and financially are upon the same footing as the railways, under the provisions of the constitution dealing with the Railways and Harbours Fund. The administration is required to be upon business principles, due regard being had to agricultural and industrial development.

2. **Harbour Advisory Boards.**—Harbour Advisory Boards are constituted at the harbours of Walvis Bay, Table Bay, Mossel Bay, Port Elizabeth, East London, and Durban. Each advisory board consists of seven members. One member is nominated by the Municipal Council of the town at which the harbour is situate, three by the Chamber of Commerce of such town, and the remaining three members are nominated by the Governor-General. In the nomination of the last-mentioned three members, one is selected to represent shipping interests and one to represent persons paying harbour dues and charges.

The General Manager of Railways and Harbours furnishes the boards with such information and affords them such reasonable facilities as may be necessary for the determination of any matter under consideration, or for the due and proper fulfilment of their duties and functions. It is the duty of the boards to advise the Administration upon any matter affecting the interest or welfare of the respective harbours; the construction, maintenance, and upkeep of harbour works; the landing, shipping, and transhipping of cargo; the charges upon goods and upon shipping; and the regulations affecting importers, shippers, and the trade of the port generally. The boards also furnish the Administration with their opinion upon any subject or question referred to them for advice.

3. **Harbours: Financial Statements.**—Particulars are given in the following tables of (i) the principal sources of harbour revenue, (ii) the principal heads of expenditure, and (iii) the accumulated capital expenditure and the annual financial position as a result of operating the harbours from 1934. Figures for earlier years will be found in previous issues of this *Year Book*.

(i) HARBOURS—REVENUE, 1934 TO 1938.

Year ending 31st March.	Dues on Ships.	Dues on Goods and Live Stock.	Tugs and Lighters.	Cranage Service.	Other Revenue.	Total.
	£	£	£	£	£	£

1938	325,970	350,003	48,331	724,304	101,376	825,680

(iii) HARBOURS—CAPITAL EXPENDITURE, GROSS REVENUE AND EXPENDITURE (INCLUDING INTEREST PAYMENTS), AND PROFIT AND LOSS, 1934 TO 1938.

Year ending 31st March.	Capital Expenditure to Date.	Revenue.			Expenditure.				Profit or Loss (-).
		Harbours.	Miscellaneous.	Total.	Maintenance and Working, including Depreciation.	Interest.	Miscellaneous.	Total.	
	£	£	£	£	£	£	£	£	£
1934.	17,141,106	1,285,507	29,108	1,314,615	646,862	622,639	455	1,269,956	44,659
1935.	16,750,151*	1,560,718	26,748	1,587,461	703,290	588,211	586	1,292,087	295,374
1936.	17,187,744	1,776,887	23,873	1,800,760	728,863	559,275	776	1,288,914	511,846
1937.	17,699,639	1,959,450	14,231	1,973,681	753,242	558,486	64	1,311,792	661,889
1938.	18,366,817	2,073,167	15,694	2,088,861	825,680	565,818	253	1,391,751	697,110

* £656,350 "dead" assets written off plus £23,294, representing the proportion debitable to Port Alfred and Port Shepstone in respect of discount and expenses in connexion with Loan Capital (Harbours).

4. **Government-Owned Steamers.**—Originally three steamers were handed over by the Imperial Government free of cost. These vessels were later disposed of and replaced by three steamers built to the Administration's order.

The following table gives the revenue and expenditure in connexion with Government-owned steamers from the year 1934:—

STEAMSHIPS—REVENUE AND EXPENDITURE, 1934 TO 1938.

Year ending 31st March.	Revenue.			Expenditure.			Surplus or Deficit (-).
	Freight.	Miscellaneous.	Total.	Working Expenditure.	Miscellaneous.	Total.	
	£	£	£	£	£	£	£
1934.....	101,349	900	102,249	88,040	10,598	98,638	3,611
1935.....	95,905	4,364	100,269	87,915	10,598	98,513	1,755
1936.....	101,067	372	101,439	88,249	13,028	101,277	162
1937.....	101,851	848	102,699	96,157	13,028	109,185	- 6,486
1938.....	115,400	2,095	118,395	94,507	20,028	114,535	3,860

5. **Harbours: Staff Employed.**—The subjoined table gives the number of staff employed at the harbours at 31st March, 1938, classified according to race and distinguishing salaried, daily paid, and casual employees:—

HARBOURS—STAFF, 31st MARCH, 1938.

Classification.	Regular.				Casual.				Total.
	European.	Native.	Indian.	Other Coloured.	European.	Native.	Indian.	Other Coloured.	
Salaried.....	332	—	—	—	—	—	—	—	332
Daily paid.....	1,158	420	20	262	188	518	—	14	2,580
Railworkers.....	83	—	—	—	68	—	—	—	151
Total.....	1,573	420	20	262	256	518	—	14	3,063

6. **Pensions to Ex-Harbour Employees.**—The subjoined table gives particulars of pensions payable to ex-harbour servants as at 30th September during the period 1934 to 1938:—

PENSIONS PAYABLE TO EX-HARBOUR SERVANTS AS AT 30th SEPTEMBER, 1934 TO 1938.

Year.	Chargeable to Harbour Revenue (Pension Vote).				Chargeable to Pension Funds.	Total.
	Superannuation (Age Limit).	Invalid (Ill-health).	Compensation (Added Years).	Extra-Statutory.		
	£	£	£	£	£	£
1934.....	515	128	7,640	947	14,355	23,585
1935.....	515	128	6,870	808	15,541	23,862
1936.....	515	128	5,781	808	16,577	23,789
1937.....	515	128	3,732	658	19,771	24,804
1938.....	515	128	2,521	658	19,811	23,633

Note.—Particulars of pensions payable to ex-lighthouse officials are shown under "Lighthouses" below, and to ex-railway officials in Chapter XIII.

7. **Safety of Shipping.**—Under the powers conferred by section 4 of the *Railways and Harbours Regulation, Control and Management Act*, 1916, the port captain of any port may adopt such measures as he may think necessary for the prevention of ships from leaving any harbour overloaded or improperly loaded, or insufficiently manned or without duly qualified officers or engineers, or with a number of passengers on board in excess of the number that can be carried with reasonable safety, or improperly found or otherwise unseaworthy, and in any such case the port captain may, by written order, detain such ship until the defect complained of by him has been remedied to his satisfaction. The seasonal dates for loadline purposes, affecting Union ports are: Winter, 16th April to 15th October; Summer, 16th October to 15th April.

8. **Berthing Facilities.**—The following particulars give details of harbour works at the ports, together with information as to berthing facilities, depth of water, and other matters. The South West Africa ports are dealt with in Chapter XXVII. The most recent harbour plans may be seen in the Annual Report of the General Manager of Railways and Harbours.

No. 5 Quay.....	310	24 ft.	24 ft.	—	—
Coaling Jetty.....	210	24 ft.	24 ft.	—	—
NEW BASIN (196 Acres).					
Berth A (Knuckle Berth).....	900	38 ft.	38 ft.	6	4 tons.
Berth B, South Side, South Pier...	800	37 ft.	36 ft.	6	4 tons.
Berth C, South Side, South Pier...	700	36 ft.	34 ft.	5	4 tons.
Berth D, South Side, South Pier...	607	32 ft.	28 ft.	1	15 tons.
				1	3 tons.
				3	4 tons.

Total length of existing quayage, 15,259 lineal feet.
Total length of quay shed frontage, 6,554 lineal feet.

Storage of Coal.—Sites for 54,000 tons. Two 4-ton cranes provided at Amsterdam coal yard.

Shed and Storage Accommodation.
Floor space for cargo in sheds..... 796,013 square feet.
Cubic capacity of sheds..... 9,151,178 cubic feet.

Pre-cooling facilities.—Pre-cooling Stores of a capacity of 4,750 shipping tons are available at Berth C, South Pier, New Basin, and pre-cooled commodities can be shipped either direct from these stores to ship at Berth C, or at adjoining Berth D via underground tunnel. Fruit may also be loaded at Nos. 3 and 4 berths, South Arm. Accommodation for the cool storage of 1,500 shipping tons is available at berth D.

Oil-fuel Tanks.—Fourteen tanks, with a total capacity of 52,267 tons. The tanks, which are all privately owned, are equipped with pumping plant and service pipe lines to quays.

Bulk Refined Oil Storage.—Fourteen tanks of aggregate capacity of 11,398,572 gallons of petrol and eleven tanks of aggregate capacity of 6,169,689 gallons of paraffin, all privately owned.

Grain Elevator.—One terminal grain elevator of 30,000 tons storage capacity, with loading conveyors to No. 4 jetty. Intake capacity of elevator, 1,000 tons per hour; shipping capacity, 1,000 tons per hour.

Entrance Depth to Harbour.—At L.W.O.S.T., 38 feet.
Anchorage in roadstead for vessels of any draught.

(a) Table Bay Harbour—(*continued*).

Lighters (used for coaling purposes).—Six lighters of aggregate capacity of about 1,910 tons.

Tugs.—The port is equipped with four powerful tugs and two small craft. The four large tugs are fitted with modern salvage and fire appliances and are equipped with wireless.

Repairing Facilities.

Graving dock.—Length on keel blocks..... 500 ft.
Width at coping..... 90 ft.
Width at entrance top..... 68 ft.
Maximum width at bottom (keel block height) 56½ ft.
Depth on sill, H.W.O.S.T..... 26 ft.
The dock can be emptied in three hours.

Floating dock (off-shore).
Overall length..... 137 ft. 6 in.
Overall width..... 37 ft. 6 in.
Height of keel blocks..... 3 ft. 8 in.
Depth on sill, H.W.O.S.T..... 17 ft. 3 in.
Lifting capacity..... 450 tons.

The dock is designed to submerge to a depth of 15 feet below H.W.O.N.T. to top of keel blocks, and can take vessels up to 23 feet 2 inches in beam.

Slips.—Patent slip for craft up to 750 tons, with accommodation for two vessels at a time. Draught forward end of slip, 10 feet; aft end, 18 feet. Length of slipway, 183 feet 10 inches. Also two boat slips for yachts and small craft.

Floating Crane.—Lifts 60 tons at 80 feet radius.

Recent Developements.—The Government recently agreed to a comprehensive long-range scheme, estimated to cost approximately £6,000,000, of harbour development at Capetown. Briefly the proposal involves the construction of a new random block mole from Woodstock beach in the direction of the South Arm return knuckle, and necessitates the demolition of the recently constructed mole. The enlarged basin thus made available will enable extensive deep-water berths and other facilities to be provided.

An initial expenditure of £3,130,916 on the following major works, representing a substantial portion of the long-range scheme, has been sanctioned:—

(*a*) Construction of three new deep-water berths (E, F, and G) complete with shed and crane equipment;
(*b*) construction of new random block mole;
(*c*) removal of existing mole;
(*d*) construction of temporary pile embankment;
(*e*) reclamation of land, including filling behind new berths.

The undermentioned portion of the work has been let to an overseas engineering firm at a contract price of £1,125,262:—

(i) The carrying out of the total reclamation and dredging programme;
(ii) the removal of rock;
(iii) the construction of the temporary embankment;
(iv) the construction of a retaining wall;
(v) the removal of the existing random block mole; and
(vi) the construction of the new eastern mole in steel sheet piling.

The contractors have commenced operations, and good progress is being made with their portion of the work, while the construction of the three new berths, which is being carried out departmentally, is well advanced.

An agreement has been reached between the Administration and the Capetown City Council in regard to the land to be reclaimed on the sea front between Table Bay Docks and Woodstock Beach. The area thus made available will be utilized to establish a new railway goods depot and marshalling yard, and will enable a new passenger station to be built nearer the sea front. The municipality will also be able to give effect to a replanning of the city area in the vicinity of the existing railway station which they are desirous of carrying out.

(b) MOSSEL BAY HARBOUR.

PARTICULARS.

Dom Pedro Wharf	860	13 to 24	2	3 tons....	Hydraulic.
			1	2 tons....	Hydraulic.
			1	1 ton.....	Hand.

Shed and Storage Accommodation (exclusive of warehouses let to the public):—
Floor space..... 402,250 square feet.
Cubic capacity (approximately)..... 4,525,300 cubic feet.

Breakwater.—Total length from end of Dom Pedro Jetty, 4,850 feet at base.

Fruit Export Facilities.—A pre-cooling store of a capacity of 4,500 shipping tons is available at No. 2 Quay.

Lighters.—Five lighters, aggregate capacity 810 tons.

Tugs.—The port is equipped with two powerful tugs fitted with salvage pumps, fire appliances, and wireless.

Recent Developments.—An important scheme for transforming Port Elizabeth from an open roadstead port worked exclusively by the lighterage system to a completely sheltered harbour has recently been completed. The scheme involved the construction of—

(*a*) A breakwater 4,850 feet in length extending from the end of Dom Pedro Jetty in an easterly and then a northerly direction;
(*b*) an arm extending eastward of the North jetty for a distance of 3,570 feet, this arm to have a quay on the south or enclosed side, named the Charl Malan (or No. 1) Quay;
(*c*) a new arm 1,000 feet south of and parallel to Charl Malan Quay, with a quay on the north side 1,700 feet in length equipped with modern pre-cooling facilities;
(*d*) the dredging of the area embraced by the Charl Malan and No. 2 Quays, together with the entrance thereto, to a minimum depth of 36 feet L.W.O.S.T.

The construction of the breakwater and the new arms has formed an enclosed harbour with a water area of 314 acres and the scheme allows for the construction of additional berths within the enclosed area if required in the future.

A scheme for the provision of bulk oil and petrol facilities at an estimated cost of £45,537 was sanctioned in October, 1937, and a commencement was made with the work shortly thereafter. In general, the facilities will consist of an area of approximately 8·2 acres to be reclaimed at the south side of the Dom Pedro jetty, on which storage tanks, etc., are to be erected by the interests concerned.

(d) EAST LONDON (BUFFALO) HARBOUR.

† Working radius 47 feet.

Shed and Storage Accommodation.
Shed floor space (East Bank)..... 144,241 sq. ft.
(West Bank)..... 108,000 sq. ft.
TOTAL..... 252,241 sq. ft.

(d) East London Harbour—(*continued*).

Shed capacity (East Bank)	2,134,503 cubic ft.
(West Bank)	1,836,000 cubic ft.
TOTAL	3,970,503 cubic ft.

Ten acres of open storage ground for rough goods.

Fruit Export Facilities.—A pre-cooling store for the export of citrus and deciduous fruit is available at the quay in the "C. W. Malan" Basin (No. 6 Wharf). The capacity of the cooling chamber is 332,466 cubic feet.

Bulk Oil Storage.—Ten petrol tanks of aggregate capacity of 8,678,925 gallons, seven paraffin tanks of aggregate capacity of 2,944,410 gallons, and three fuel-oil tanks of an aggregate capacity of 1,056,000 gallons, all privately owned.

Working Depth at Harbour Entrance at L.W.O.S.T.—35 feet.

Tugs.—The port is equipped with three powerful tugs and two small craft. The large tugs are fitted with salvage appliances, and two are fitted with wireless telegraph and telephone and direction finder.

Lighterage.—Seven lighters, 930 tons aggregate capacity.

Repairing Facilities.

Slipway.—Length of cradle, 200 feet.
Capacity, 1,000 tons dead-weight.

Recent Developments.—A turning basin or swinging area capable of being made use of by the largest ocean-going vessels at present visiting South African waters has recently been constructed in the harbour near the entrance. In the western wing of the new basin a wharf 454 feet in length has been specially constructed to accommodate ocean-going oil tankers, whilst a concrete quay 1,000 feet in length, with 35 feet of water alongside at L.W.O.S.T., has been completed in the eastern wing of the basin. This quay, which is used for the accommodation of mail boats, is now being extended to 1,500 feet.

To afford protection to the larger mail boats now plying to and from South Africa: the south breakwater has recently been extended by 600 feet and a further extension of 400 feet is under construction, while the channel from the harbour entrance to the turning basin is being deepened to 35 feet L.W.O.S.T.

* Working radius 62½ feet.

Shed and Storage Accommodation.

Floor-space for cargo in sheds	781,008 sq. ft.
Cubic capacity of sheds	10,367,812 cubic ft.
Cubic capacity of outside storage accommodation	7,216,139 cubic ft.

Working Depth at Harbour Entrance.—At L.W.O.S.T., average 37½ feet, outer channel; 35 feet inner channel.

Lighters and Punts.—Five lighters and two punts of an aggregate capacity of about 1,030 tons.

Tugs.—The port is equipped with five powerful tugs fitted with modern salvage and fire appliances; four of them are fitted with wireless. There is also one pilot boat fitted with wireless.

Coaling Appliances.—Belt conveyor and bucket transporter coaling appliances are installed at the Bluff. These appliances are electrically driven and capable of coaling at the rate of 1,000 tons per hour. Capacity of dumpers, 100 tons and 80 tons respectively. Capacity of storage bins, 10,000 tons. Concrete bins of 60,000 tons capacity, for ground coal storage, are also available. The mechanical plant is capable of loading bins at the rate of 400 tons per hour and off-loading at 300 tons per hour.

Grain Elevator.—One terminal elevator of 42,000 tons storage capacity, with shipping gallery. Intake capacity of elevator, 1,000 tons per hour; shipping capacity, 1,000 tons per hour.

Oil Facilities.—The oil storage sites are located at Island View, where a timber wharf 1,000 feet in length exists, with a depth alongside of 30 to 35 feet. Petrol and paraffin in bulk are discharged into tanks direct from this wharf through the medium of pipe lines. The petrol storage comprises 21 tanks, with a total capacity of 18,215,000 gallons, and the paraffin storage, 10 tanks of 4,833,000 gallons capacity. There are also seven oil-fuel tanks of a total capacity of 5,893,000 gallons and two crude oil tanks with a total capacity of 2,500,000 gallons erected at the oil sites. All tanks are privately owned.

Fruit Export Facilities.—A pre-cooling store for the export of citrus and deciduous fruit is available at the Point wharf. The capacity of the cooling chambers is 1,800 tons.

(e) Durban Harbour—(*continued*).

Manganese Ore Loading Facilities.—Electrical conveyor plant, at Congella, privately owned. Shipping capacity, 500 tons per hour.

Repairing Facilities.

Graving Dock.—Length, 1,150 feet; width at entrance, 110 feet; at coping, 138½ feet; divided into two compartments—outer, 678 feet 10 inches and inner, 450 feet; depth on sill H.W.O.S.T., 41 feet; L.W.O.S.T., 35 feet. Cranage equipment: one 25-ton with 90 feet radius; one 10-ton and two 5-ton.

Floating Dock.—Lifting capacity, 4,000 tons; overall length, 350 feet; overall width, 88 ft.; height of keel blocks, 4 feet; depth of water over keel blocks, 17½ feet.

Floating Crane.—Lifting capacity 25 tons.

Recent Developments.—An expenditure of £620,000 was recently authorized for the provision of additional deepwater berthage, but, owing to the appreciable expansion of the import and export trade of Durban harbour during the last few years, it became necessary to give further consideration to the question of providing additional berthage facilities at that port, and it was eventually decided to proceed with the construction of a new projecting or T wharf. This jetty, when completed will have a berthage of 2,150 feet made up as follows:—

South side	2,150 feet.
North side	2,034 feet.
End of T jetty	858 feet.

The cost of the revised scheme, including the cost of equipping the jetty with cranes, sheds, rail tracks, etc., is estimated at £1,921,592.

A comprehensive investigation by a committee of departmental officers and representatives of the various local interests into the question of the future development of Durban harbour has recently been concluded, and the report submitted in this connexion is now under consideration.

Among other works lately embarked upon at Durban harbour is the construction, at a cost of £60,017, of a new marine airport and the provision of a new floating dock, the expenditure for which will amount to £214,884.

(f) MINOR HARBOURS.

Particulars of the facilities at the minor Union harbours are set out in the following statement:—

Nature of Facility.	Name of Harbour.				
	Port Nolloth.	Simonstown (Naval station).	Knysna.	Port St. John.	Kalk Bay.
Accommodation	Open roadstead	Bay: depth 40–60 ft.	River harbour (14 ft. L.W.O.S.T. on inner bar)	River harbour.	Enclosed harbour
Quayage	Jetty	—	400-ft. wharf	172 ft.	—
Depth alongside	12 ft.	—	—	—	—
Cranes	Two 5-tons	One 50-ton, one 20-ton, two 5-ton.	—	One 5-ton	—
			—	—	—
			—	—	—
Repairing facilities	Slip, 500 tons	Graving dock 756 ft. × 95 ft.	—	—	Boat slipway.

§ 2. Lighthouses.

1. **Lighthouses.**—The following list gives particulars in regard to the lighthouses, fog signals, whistle buoys, life-saving appliances, etc., under the control of the Union Government:—

(a) LIGHTHOUSES, HARBOUR LIGHTS, ETC., ON THE SOUTH AFRICAN COAST.

Station.	Class of Light or Fog Signal.	Candle Power.	Range of Light.	Remarks.
SOUTH WEST AFRICA.			Miles.	
Swakopmund	5th Order Dioptric.	21,000	16	Revolving white, two flashes every 10 secs.
Walvis Bay, Pelican Point	6th Order Dioptric.	1,500	12	Automatic harbour light, white flash every 4 secs.
" "	Fog Signal, 8½-inch Diaphone	—	—	Blast every 40 secs.
Walvis Bay, Outer Entrance	Wigham Light Buoy	—	—	White flash every 10 secs.
Walvis Bay, Spit Buoy	Light and Bell Buoy	—	3	Automatic white, flash every 6 secs.
Diaz Point	3rd Order Dioptric.	120,000	18	Revolving white, flash every 4 secs.
"	Subsidiary Light	—	—	Fixed, with white and red sectors. White from 200° to 230° red thence to 240°.
"	Fog Signal, 2-inch Diaphone	—	—	One blast every 20 secs.
Luderitz—				
Shark Island	6th Order Dioptric.	500	5	Automatic, flash 2½ secs., eclipse 7½ secs., with coloured sectors. Green from 39° through east to 136°, white thence to 161°, red to 180°.
"	Light and Bell Buoy	500	3	Automatic white, flash every 3 secs.

(a) LIGHTHOUSES, HARBOUR LIGHTS, ETC., ON THE SOUTH AFRICAN COAST—(*continued*).

Port Elizabeth (Staging at end of North Arm Mole)	6th Order Dioptric.	150	1	Automatic green, flash every second.
Bird Island.....	1st Order Dioptric.	180,000	16	Revolving white, flash 3 secs., eclipse 4 secs.; flash 3 secs., eclipse 20 secs.; and wireless telephone.
Great Fish point.....	1st Order Dioptric.	600,000	23	Revolving white, flash every 10 secs.
Hood Point.....	1st Order Dioptric.	375,000	19	Revolving white, four flashes every 40 secs., and signal station.
East London (Beach) Anchorage	6th Order Dioptric.	500	4	Automatic red, flash every 3 secs.
East London Western Breakwater (Temporary)	6th Order Dioptric.	200	3	Automatic white, flash 2 secs., eclipse 8 secs.
East London Eastern Breakwater	4th Order Dioptric.	2,000	3	Automatic green, 3 flashes every 9 secs.
East London Leading Light	5th Order Dioptric.	2,000	4	Automatic red, flash 3 secs., eclipse 2 secs.
Bashee.....	3rd Order Dioptric.	225,000	18	Revolving double and single white, flash 0·2 sec., eclipse 2·7 secs. Revolving double and single white, flash 0·2 sec., eclipse 8·35 secs. Revolving double and single white, flash 0·2 sec., eclipse 8·35 secs.
Cape Hermes.....	5th Order Dioptric.	5,000	19	Automatic white, flash every 3 secs., and signal station.
South Sand Bluff....	5th Order Dioptric.	5,000	20	Three flashes every 20 secs., automatic.
NATAL.				
Port Shepstone.....	5th Order Dioptric.	27,000	14	Revolving white, flash every 10 secs., and signal station.
Green Point.....	2nd Order Dioptric.	240,000	23	Revolving white, two flashes every 15 secs.
,, ...	Subsidiary Light...	—	—	Fixed red over Aliwal Shoals, 268° to 298°.
The Bluff (Durban)..	3rd Order Dioptric.	3,000,000	23	Revolving white, three flashes every 20 secs.
Port Natal Leading Lights	4th Order Dioptric.	2,000	4	Near light, red flash every sec., automatic.
,, ,,	5th Order Dioptric.	2,000	4	Distant light, white flash 4 secs., eclipse 1 sec., automatic.
Port Natal (Anchorage)	5th Order Dioptric.	2,000	5	Complex group: automatic red flash 0·3 sec., eclipse 2·7 secs.; automatic red flash 0·3 sec., eclipse 2·7 secs.; automatic red flash 3·0 secs., eclipse 6·0 secs.
Port Natal—				
South Breakwater Light	Electric.....	200	3	Fixed white light.
North Pier Light.	Electric.....	200	2	Automatic occulting green light, flash 3 secs., eclipse 1 sec.
Durnford Point.....	4th Order Dioptric.	6,000	15	Automatic white, flash every 5 secs.
Cape St. Lucia.....	4th Order Dioptric.	6,000	15	Automatic white, two flashes every 10 secs.

(b) LIGHTHOUSES, HARBOUR LIGHTS, ETC., UNDER CONSTRUCTION.

Dassen Island	Electrification of light to increase candle power.
Robben Island	Electrification of light to increase candle power.
Great Fish Point	Electrification of light to increase candle power from 600,000 to 20,000,000.
Robben Island	Installation of radio beacon.
Walvis Bay (Swakopmund)	Installation of radio beacon.
Cape L'Agulhas	Installation of radio beacon.
Cape Receife	Installation of radio beacon.
North Head, Saldanha Bay	Installation of automatic light for coasters, etc.
East London	Nautophone fog signal on breakwater.

2. **Lighthouses: Finance.**—The following table gives details of the capital cost, revenue, and expenditure on lighthouses, beacons, bells, etc., from 1934. It must, however, be observed that the capital cost is part and parcel of the Harbours capital expenditure shown in the table in § 1 (3) above, and profit or loss is introduced into the miscellaneous revenue and expenditure items of the same statement.

CAPITAL COST, REVENUE, AND EXPENDITURE—LIGHTHOUSES, BEACONS, BELLS, ETC., 1934 TO 1938.

Year ending 31st March.	Capital Cost.	Revenue (Light Dues).	Expenditure.					Profit or Loss (—).
			Maintenance.	Salaries, Transport, and Stores.	Depreciation and Miscellaneous Expenses.	Interest.	Total.	
	£	£	£	£	£	£	£	£
1934	278,140	46,548	4,202	28,855	6,623	4,703	44,383	2,165
1935	286,193	55,396	2,304	30,153	6,379	4,577	43,413	11,983
1936	301,614	70,204	2,689	29,453	6,598	4,582	43,322	26,882
1937	303,516	60,511	4,068	30,703	7,475	2,739	44,985	15,526

3. **Pensions to Ex-Lighthouse Employees.**—The following table gives particulars of pensions payable to ex-lighthouse servants as at 30th September each year from 1934 to 1938:—

PENSIONS PAYABLE TO EX-LIGHTHOUSE SERVANTS AS AT 30th SEPTEMBER, 1934 TO 1938.

Year.	Chargeable to Lighthouse Revenue (Pension Vote).				Chargeable to Pension Fund.	Total.
	Superannuation (Age Limit).	Invalid (Ill health).	Compensation (Added Years).	Extra-Statutory.		
	£	£	£	£	£	£
1934	—	147	273	—	1,971	2,391
1935	—	147	164	—	2,080	2,391
1936	—	147	30	—	2,317	2,494
1937	—	147	30	—	2,709	2,886
1938	—	—	30	—	2,877	2,907

Note.—Particulars of pensions payable to ex-harbour officials are shown under "Harbours" above, and to ex-railway officials in Chapter XIII.

§ 3. Shipping.

1. **Vessels Entered at Union Harbours.**—The following Table (i) and (ii) give particulars as to the number and tonnage of vessels entered at harbours from 1934. These figures represent the gross number of vessels entered and cleared, each visit by the same vessel being counted as a separate entry. Table (iii) gives the number and tonnage of vessels under the heading of nationality entered during the same period.

(i) NUMBER AND TONNAGE OF VESSELS ENTERED AT HARBOURS, 1934 TO 1938.

5. **Distances from Union to certain Overseas Ports.**—The following table gives the approximate distances by sea from the principal Union ports to important overseas ports. It must be noted, however, that the distances shewn do not necessarily reflect the actual direct distance between two points but are the nautical mileages of the routes followed by steamship lines offering the most direct and expeditious outlet.

DISTANCES IN NAUTICAL MILES FROM UNION PORTS TO CERTAIN OVERSEAS PORTS.

FROM—				TO—
Capetown.	Port Elizabeth.	East London.	Durban.	
5,978	6,416	6,547	6,800	Southampton.
6,889	7,309	7,447	7,709	Hamburg.
6,180	6,606	6,737	6,972	Rotterdam.
6,060	6,498	6,629	6,924	Marseilles.
5,978	6,399	6,430	6,783	Genoa.
6,786	7,215	7,346	7,593	New York.
7,338	7,776	7,907	8,160	Montreal.
3,267	3,667	3,737	4,057	Rio de Janeiro.
4,480	4,852	4,987	5,244	Buenos Aires.
5,569	5,131	5,000	4,747	Bombay.
9,732	9,294	9,163	8,910	Kobe.
4,708	4,421	4,290	4,037	Fremantle.
5,603	5,548	5,417	5,164	Adelaide.
5,814	5,759	5,628	5,375	Melbourne.
6,504	6,851	6,720	6,467	Sydney.
7,737	8,084	7,953	7,700	Wellington.

6. **Legislation.**—The Navigation Laws at present in force are the *Local Merchant Seaman's Act*, No. 13 of 1855 (Cape), Law No. 10 of 1883 (Natal), and the *Merchant Shipping (Certificates of Competency) Act*, No. 45 of 1925. The principles of the Imperial *Merchant Shipping Act*, 1894, are also followed with the exception of certain parts thereof which are not applicable to the Union.

The *Merchant Shipping (Certificates of Competency) Act* provides for the granting of certificates of competency or service to persons employed as masters, mates, and engineers, and in certain other capacities on certain vessels; for the suspension and cancellation of such certificates; and for other matters incidental thereto.

7. **Shipping Casualties.**—All matters relating to casualties to vessels along the Cape coast fall under the control of the Department of Customs and Excise. In terms of section 17 of the *Local Merchant Seaman's Act*, 1855 (Cape), a magistrate and two master mariners, preferably in active employment, are appointed by the Governor-General as president and assessors, respectively, to constitute courts of inquiry for the purpose of investigating the circumstances attending casualties to vessels.

If, upon any investigation made by the above courts, any master or mate is found guilty of misconduct, negligence, or any serious offence, his certificate may be suspended or cancelled by the Governor-General.

A similar procedure is followed in regard to casualties to vessels along the Natal coast, except that all such casualties are under the control of the Department of Justice and courts of inquiry are held under Natal Law No. 10 of 1883.

Statements showing particulars of vessels wrecked, foundered, stranded, or otherwise damaged or disabled are published in the Annual Statements of Trade and Shipping for the Union of South Africa and South West Africa.

8. **Distressed Seamen.**—Particulars are given in the following statement in regard to the number of distressed South African seamen repatriated to South Africa and the amounts expended in this connexion for a series of years.

DISTRESSED SEAMEN REPATRIATED TO SOUTH AFRICA, 1934 TO 1938.

Year.	No.	Cost.
		£
1934	22	179
1935	22	115
1936	10	38
1937	10	45
1938	20	78

9. **South African Shipping Board.**—The South African Shipping Board was established on the 1st June, 1929, under the provisions of Act No. 20 of 1929. The Board consists of nine members, of whom six only have voting powers. Of the six members with voting powers three are nominated by the Governor-General, and may not be members of the Public Service or of the Railways and Harbours Administration. Of the remaining three, one is nominated by the Association of Chambers of Commerce, one by the Federated Chamber of Industries, and one by the South African Agricultural Union. The three members not possessing voting powers are persons in the employ of the Government or the Railways and Harbours Administration.

Members are appointed for such periods and upon such conditions as the Governor-General may determine. The present members of the Board are shown in Chapter XXVIII.

The functions and duties of the Board are:—

To investigate and report to the Minister upon any matters relating to ocean transport to, from, or between Union ports, including more particularly any question—

(a) as to whether the rate of freight charged by any shipowner on any particular commodity exported from the Union is prejudicial to Union exporters as compared with their overseas competitors;

(b) as to whether the rate of freight charged by any shipowner on any particular commodity imported is unreasonably high having regard to the rate of freight for that particular commodity operating on other ocean routes;

(c) as to failure on the part of a shipowner to give reasonable notice of changes in freight classifications or rates;

(d) as to the levying by any shipowner of differential freight or other charges as between one shipper and another in respect of the ocean conveyance of goods to, from, or between Union ports;

(e) as to differential or unfair treatment by any shipowner of any shipper in respect of the allocation of space accommodation or any other matter.

Under the provisions of Act No. 29 of 1933, the cost of administration of the Board is a charge to be defrayed from the Railways and Harbours Fund.

CHAPTER XIII.

RAILWAYS, AIRWAYS, ROADS, AND ROAD TRANSPORT.

§ 1. Railway Development.

1. **General.**—In the first three issues of the *Year Book*, an account was given of the more important stages of railway development.

2. **Comparison with other Dominions.**—The following table gives comparative figures regarding mileage of open line, mileage of line per 1,000 square miles of territory, and mileage of open line per 1,000 of estimated population for Australia, Canada, New Zealand, and the Union at the latest date for which particulars are available:—

Heading.	Australia. (30th June, 1937.)	Canada. (31st Dec., 1936.)	New Zealand. (31st March, 1937.)	Union of South Africa.* (31st March, 1938.)
Mileage of open line	27,955	42,916	3,323	13,620
Mileage of line per 1,000 square miles	9·40	12·38	32·26	17·4
Mileage of line per 1,000 of estimated population:—				
European	4·10	3·89	2·11	6·48
All Races	—	—	—	1·32

* Including South West Africa.

3. **Railway Construction.**—(i) *General.*—Particulars of railway construction undertaken prior to 1937 will be found in *Year Book* No. 19 and earlier issues.

In 1937 the construction of the following three new lines on the Witwatersrand was authorized:—

Midway-Bank	22 miles.
Crown-Langlaagte	approximately 3 miles.
Germiston-Jupiter (double line)	approximately 3 miles.

These lines, the first-mentioned of which was opened for traffic in December, 1938, are in the nature of relief lines and are necessitated by the extraordinary growth of traffic in the Witwatersrand mining area.

(ii) *Main Line Improvements, etc.*—The Government has recently adopted a policy of improving the main lines of railway by means of reduction of grades and elimination or easing of curves. Opportunity is also taken of replacing, where necessary, existing level crossings by overhead bridges or subways. Another object of the scheme is to provide employment.

The first large work to come under this scheme was the improvement of the Natal main line between Uithoek and Volksrust with the object of eliminating the reversing stations at Inkwelo and Boscobello and at the same time improving grading and curvature. All the improvements on the Glencoe-Volksrust section have been carried out, and work on the Uithoek-Glencoe section is nearing completion.

In connexion with this work, model villages, including accommodation for schooling and recreation, were established at Ingogo and Mount Prospect, where accommodation for approximately 450 men and their families was provided. The model villages were established with a view to making the men's position more permanent and ensuring their regular employment, and generally to enable them to bring up their families under more favourable conditions. These villages have since been transferred to the Cape Eastern system.

A comprehensive scheme for the straightening and relocating of the Cape Eastern main line between East London and Springfontein at a cost exceeding £1,500,000 was recently authorized. The work is likely to extend over a considerable length of time and, by virtue of its magnitude, it offers scope for a continuance of the system of model villages, so successfully applied in connexion with the Northern Natal main line improvements. The model villages have, therefore, been transferred from Natal to Toise River and Dohne, respectively, and work has commenced on the first of the deviations.

The following are brief particulars of other important works recently approved by the Government:—

Witwatersrand: Electrification of Reef suburban area, provision of additional running tracks, reduction of curvature, elimination of level crossings, lowering of tracks through populous areas, and provision of new goods depot and marshalling yard at Prospect Township.

Germiston-Pretoria: Doubling and electrification of line, elimination of level crossings, reduction of curvature, and improved location of the line at several points; this work has since been completed.

Pretoria: Provision of a new goods depot at Potgieter Street, and the remodelling of the Pretoria West yard; provision of a new loco depot and marshalling yard at Capital Park; elimination of level crossings in the Pretoria area; modernization of the mechanical workshops at Pretoria, etc.

(iii) A Commission styled the Railway Line Revision Commission with Mr. A. Kuit, Chief Railway Commissioner, as chairman was recently appointed to investigate and report on all railway lines in the Union which (*a*) terminate in dead-ends; (*b*) should be straightened and linked up with adjacent main lines; or (*c*) are inefficient on account of gauge; which could be economically converted into relief lines for the convenience of the Department or the public; and which would at the same time contribute to the general development of the country.

4. **Electrification of Railways.**—Act No. 30 of 1922 provides for the electrification of any line of railway, in respect of which moneys have been appropriated by Parliament, and for the erection of the necessary power stations and equipment. Provision is also made for the use, subject to existing rights, of the water in public streams for the purpose of working electric generating stations.

In terms of Act No. 42 of 1922, provision has been made for power for electric traction purposes to be generated and supplied by the Electricity Supply Commission. The Electricity Supply Commission furnishes the Railway Administration with power for railway requirements and deals generally with the co-ordination of the production of electrical energy for commercial and municipal purposes.

The following are details of the railway lines in South Africa which have been electrified:—

(i) *Natal-Orange Free State Area.*—In 1922 the Government decided to electrify the section from Glencoe Junction to Pietermaritzburg on the Natal main line, together with the short Howick branch line, a total distance of 174 route miles. The scheme was completed and brought into operation in April, 1926. In February, 1932, electrification was extended from Pietermaritzburg to Cato Ridge, a distance of 28 miles, and a further extension of the electrified system from Danskraal (on the Natal main line) to Harrismith in the Orange Free State, a distance of 59 miles, was completed and brought into commercial operation in February, 1935.

In August, 1934, the electrification of two further sections of the Natal main line was authorized, namely from Cato Ridge to Durban and from Glencoe to Volksrust, involving route mileages of 45 and 77, respectively. The Cato Ridge-Durban section was completed in December, 1936, and the Glencoe-Volksrust section in October, 1937. The whole of the Natal main line—between Durban and Volksrust—a distance of 323 route miles, is now operated by electric traction and constitutes the longest stretch of electrified line in the British Empire.

In July, 1938, a commencement was made with the electrification of the 23 mile Rossburg-Hillcrest section, and on completion of this work the electrified track in Natal and the Orange Free State will total 413 route miles, which is equal to 698 miles of single track.

The power station at Colenso (which generates the power for the Natal railway electrification scheme), together with the twelve sub-stations and the high tension cross-country transmission lines as far as Pietermaritzburg, erected for the original electrification scheme, was handed over to the Electricity Supply Commission in December, 1926.

An 88,000-volt transmission line is carried on extensions to the track structures between Danskraal and Harrismith to feed the two sub-stations situated at Colworth and Van Reenen. A special feature of this construction was the use, for the first time for railway electric traction, of mercury arc rectifiers (mutators) equipped for regenerative working. The results obtained were most satisfactory, and this type of mutator sub-station was provided in connexion with subsequent electrification schemes. The method of carrying the 88,000-volt transmission line on the track structures as adopted on the Danskraal-Harrismith route was employed on all subsequent electrification works.

The catenary suspension system (single contact wire) is adopted for the overhead equipment of the permanent way. The track structures are steel latticed masts erected on concrete foundations, and, in the case of the recent extensions, the masts have been fabricated principally from old rails.

(ii) *Capetown Suburban Electrification.*—Railway electrification in the Cape Peninsula commenced in 1927-28 with the conversion of the 22-mile Capetown-Simonstown line, followed by the electrification of the sections Salt River to Bellville (10 miles), Maitland to Dieprivier (10 miles), and Pinelands to Langa (3 miles). The total electrified route mileage is 45.

The power for the electrified services is supplied from the Electricity Supply Commission's power station near Salt River Junction through seven rotary converter traction sub-stations owned and operated by the Electricity Supply Commission.

To cope with the accelerated and augmented train service resulting from electric operation, the manual system of signalling previously in vogue at Capetown has been replaced by an all-electric installation, and automatic and semi-automatic colour-light signalling has been introduced between Capetown and Wynberg and between Salt River and Bellville.

(iii) *Witwatersrand Area.*—As part of a comprehensive scheme for the improvement of rail transport facilities in the Witwatersrand area, authority was given for the electrification of 132 miles of track comprising: Randfontein-Springs, Germiston-Pretoria-Pretoria West, Apex-Welgedacht via Geduld, Langlaagte-Canada-Pimville, Canada-Booysens-Village Main, Germiston-Alberton, and Germiston-Wattles.

Twelve sub-stations of the mercury-arc rectifier type without regeneration have been provided. The system of supply is 3,000 volts D.C., the power being supplied from the joint systems of the Victoria Falls and Transvaal Power Company, Ltd., and the Electricity Supply Commission. The sub-stations are owned by the Commission, but were constructed and are being operated by the railways on behalf of the Commission.

On 15th March, 1937, steam haulage was replaced by electric traction on the Germiston-Alberton and Germiston-Wattles sections; then followed the various sections on the East Rand. At 31st January, 1938, electric working was extended to Randfontein, thus completing the conversion of the Main Reef line. Both the Germiston-Pretoria and Pretoria-Pretoria West sections were electrified during December, 1938, and the only section still to be converted is that from Canada to Booysens and Village Main, which, it is expected, will be completed during 1939.

When all the work referred to has been completed, South Africa will possess an electrified route mileage of 590 or single track equivalent totalling 1,217 miles.

§ 2. Construction and Open Mileage of Railways.

1. **Mileage of Government Railways.**—The following table gives the mileage of new railway lines in each province opened in each year, and the total mileage of government lines at the end of each of five financial years. Particulars for the period 1897 to 1934-35 will be found in *Year Book* No. 17 and for later years in succeeding *Year Books*.

MILEAGE OF NEW RAILWAY LINE IN EACH PROVINCE OPENED IN EACH YEAR AND TOTAL MILEAGE OF GOVERNMENT LINE OPEN AT 31st MARCH, 1934 TO 1938.

Year ending 31st March.	Cape of Good Hope.		Natal.		Transvaal.		Orange Free State.		Union.		South West Africa.

* Private lines include Natal–Zululand Railway (Verulam–Tugela, 50 miles), leased to the Government.

§ 3. Administration of Government Railways.

1. **Administration of Union Government Railways.**—The railways (and harbours—see Chapter XII) are, with few exceptions, the property of the Government, and since the constitution of the Union have been administered under the provisions of the *South Africa Act*, 1909.* This provides *inter alia* that:—

> subject to the authority of the Governor-General-in-Council the control and management of the railways, ports and harbours of the Union shall be exercised through a Board consisting of not more than three Commissioners, who shall be appointed by the Governor-General-in-Council, and a Minister of State, who shall be chairman. Each Commissioner shall hold office for a period of five years, but may be reappointed.

A further Act to interpret the provisions of the above-mentioned law relating to the Railway Board and to define the functions of that board was passed in the year 1916.

The pertinent provisions of this later Act are as follows:—

> The management and working of the Railways and Harbours shall, subject to the control of the Minister, be carried out by the General Manager, who shall be governed by such regulations as the Minister may from time to time frame after consultation with the Board.

The executive head of the Department is the General Manager of Railways and Harbours, with headquarters at Johannesburg. In him is vested the entire management and control, as set out in the foregoing extract from the Act of 1916.

The General Manager is assisted by two Assistant General Managers (one commercial, the other technical) at headquarters; in addition to which there are nine System Managers (each in charge of a system), a Chief Civil Engineer, a Chief Mechanical Engineer, a Chief Traffic Manager, and a Chief Accountant, each of whom is responsible to the General Manager.

The headquarters of the eight systems in the Union are situated at Capetown, Bloemfontein, Johannesburg, Durban, Port Elizabeth, East London, Pretoria, and Kimberley respectively.

In terms of Act No. 20 of 1922, the railways and harbours in the territory of South West Africa became an integral part of the railways and harbours of the Union, and are controlled by a System Manager stationed at Windhoek.

Under each system manager there is a system engineer, as well as superintendents in charge of the technical, operating, and commercial work, by whom the staff operating the railways is immediately controlled.

2. **Principles of Railway Administration.**—The principles upon which the Railways and Harbours of the Union are administered are clearly defined in the following extract from the *South Africa Act*:—

> The railways, ports and harbours of the Union shall be administered on business principles, due regard being had to agricultural and industrial development within the Union, and promotion, by means of cheap transport, of the settlement of an agricultural and industrial population in the inland portions of all provinces of the Union;

and the following further extract as to the financing of the railways indicates the principle on which the rates leviable for the conveyance of traffic are based:—

> So far as may be the total earnings shall not be more than are sufficient to meet the necessary outlays for working, maintenance, betterment, depreciation and the payment of interest due on capital, not being capital contributed out of railway or harbour revenue.

3. **The Union and Rhodesia Railway Agreement.**—In January, 1937, an agreement was entered into between the Mashonoland Railway Company, Ltd., the Rhodesia Railways, Ltd., the Government of Southern Rhodesia, and the Government of the Union of South Africa in regard to certain railway matters. Summarized the treaty provides:—

(a) That the two Rhodesian railway companies admit the right of the Union Government to purchase the section of line between Vryburg and Palapye, and that the Union Government will not exercise such right for a period of 33½ years from the date of the signing of the agreement;

(b) that the Rhodesian signatories will not take any action which may directly or indirectly divert import traffic from Union ports to Beira;

(c) that the section of line between Vryburg and Ramathlabama is to be treated, for railway tariff purposes, as though such line formed part of the South African Railways.

*For particulars of the administration of the South African railway system prior to 1910 reference should be made to the sixth and earlier issues of this *Year Book*.

4. **Railways and Harbours Fund.**—In the *South Africa Act* provision is made for the establishment of a Railways and Harbours Fund, into which all revenues raised or received from the administration of the railways and harbours are paid, and from which are withdrawn all moneys necessary to meet such expenditure of the Railways and Harbours Department as has received the approval of Parliament. Withdrawals from the fund may be made for unforeseen expenditure to the extent of £500,000 or such additional sum as is represented by the excess of the actual revenue over the estimated revenue. Such expenditure, however, must be reported as soon as Parliament meets. All profits earned remain to the credit of the fund and are not paid to the Treasury, as was the practice prior to the constitution of the Union. Expenditure on Capital Account is made from moneys received from the Treasury out of Loan Funds. Unexpended balances are returned to the Treasury. The Administration has no liability in respect of the cost of raising, or discount expenses in connexion with the flotation of, loans. Such expenses are wholly defrayed by the Treasury, jointly with expenses for meeting the requirements for public works and other purposes served by loans.

5. **Capital Expenditure.**—The Select Committee on Public Accounts in its fourth report of 1912 recommended that the sum of £86,252,960 should be regarded as the amount of the capital charge as at the date of Union, upon which interest should be paid by the Railways and Harbours Administration. This amount includes a sum of £13,138,263 derived from pre-Union railway profits re-invested in the railways, upon which an annual interest charge amounting to £459,839 at the rate of 3½ per cent. has had to be paid to the Consolidated Revenue Fund, although no equivalent liability has had to be met by the Treasury. The justice of this exaction against railway earnings has been questioned by the Railways and Harbours Administration on several occasions, and in 1933-34 the Government specially appropriated the amount of interest due on these thirteen millions out of General Revenue, thus relieving the Railways and Harbours of the charge for that year. This concession was followed up at the next session of Parliament by the adoption of a provision, introduced into the *Finance Act* of 1934 (section 2), for determining the amount of capital invested in the Railways and Harbours as at the 31st May, 1910, and defining the true rate of interest to be paid by the Administration in respect of post-Union capital loans, and on Treasury Bills outstanding at the end of each financial year.

The total Railways and Harbours capital investment at the 31st May, 1910, is deemed to have been £73,247,750, and the interest charges payable on this sum are, in future, to be calculated at the rate of £3. 8s. 8d. per cent. per annum.

6. **Staff.**—The following table gives details as to the staff employed in the government railways at the 31st March, 1934, and succeeding years:—

GOVERNMENT RAILWAYS—STAFF EMPLOYED AT 31st MARCH, 1934 TO 1938.

At 31st March.	Regular Staff.				Casual Staff.		Grand Total.
	European.			Non-European.	European.	Non-European.	
	Salaried.	Other.	Total.				
1934.....	8,315	38,021	46,336	18,767	2,506	9,506	77,115
1935.....	8,816	40,040	48,856	19,923	3,255	13,055	85,089
1936.....	9,349	42,734	52,083	20,772	4,140	20,698	97,693
1937.....	10,023	44,694	54,717	21,528	5,014	26,884	108,143
1938.....	10,704	47,853	58,557	23,236	5,702	30,409	117,904

7. **Railways and Harbours Service Commission.**—A permanent Commission, somewhat on the lines of the Public Service Commission (Chapter II), has been established under the chairmanship of Mr. Graham Cross, with Mr. C. G. C. Rocher and Mr. H. Cheadle as members, for the purpose of dealing with recommendations for appointments and promotions in the Railways and Harbours service.

8. **Principal Officers of the Railway Administration.**—A list of the principal officers of the Railways and Harbours Administration will be found in Chapter XXVIII.

9. **Expenditure on Salaries, Wages, and Pensions.**—The following tables show (i) the expenditure of the Railways Administration on salaries and wages from 1933-34, compared with the average during 1910-11 to 1913-14, under various headings, and (ii) the amounts paid in pensions each year from 1931:—

(i) SOUTH AFRICAN RAILWAYS—TOTAL AMOUNT EXPENDED ON SALARIES AND WAGES AND CHARGED TO WORKING EXPENSES, 1933-34 TO 1937-38, WITH AVERAGE FOR THE YEARS 1910-11 TO 1913-14.

1938.....	1,436	519	126,872	758	852,069	981,654

Note.—Details for earlier years will be found in previous issues of the *Year Book* and particulars of pensions payable to ex-harbour and ex-lighthouse officials are shown in Chapter XII.

10. **South African Railways and Harbours Publicity and Travel Department.**—The Publicity and Travel Department of the South African Railways and Harbours is controlled by a Publicity and Travel Manager and two assistant managers, with headquarters at Johannesburg, branches at Capetown, Durban, and Pretoria, and sub-offices at Port Elizabeth, East London, Bloemfontein, Kimberley, Windhoek, and Lourenco Marques, at which places tourist bureaux are established. The Department is also represented in Great Britain by the Director, South African Government Travel Bureau, attached to the staff of the High Commissioner for the Union of South Africa, South Africa House, Trafalgar Square, London, and is in close touch with tourist and travel agencies all over the world. A Tourist Development Corporation has recently been established by Act of Parliament, No. 15 of 1938, the primary object of which shall be, by means of advertisement and the dissemination of information about Southern Africa, i.e. south of the equator, to encourage persons who reside elsewhere to visit Southern Africa and to tour therein.

The purely commercial activities of the Department include—

(*a*) the control of all bookstalls and automatic machines at stations on the Administration's lines throughout the Union;

(*b*) the control of poster display and of public advertisements of every description on the Administration's property and in various publications, such as the Transvaal Telephone Directory, the railway time tables, Hotel and Boarding House Guide for the Union of South Africa, the *South African Railways and Harbours Magazine* (a monthly journal produced by the Publicity and Travel Department and dealing with transportation and travel topics), and *South African Travel News*.

Under what may be styled technical activities, the functions of the Department are more diverse and include—

(*a*) a large photographic section, where photographs, enlargements, lantern slides, and other pictorial media are prepared for propaganda purposes. Arrangements are also made by the Publicity and Travel Department for the production of cinema films representing scenic and other South African subjects for use as travel propaganda. These are exhibited throughout the world;

(*b*) a designing section, which is responsible for the Departmental displays at exhibitions and shows, and for the production of posters, window displays, brochure cover designs, show cards, advertisement layouts, and for such other designing work as may be needed for advertising purposes;

(*c*) a press-cutting section;

(*d*) a section responsible for placing the numerous advertisements of the Administration in the local and overseas press;

(*e*) a journalistic section.

The work of the last-named varies in character, and embraces the production of periodicals and press articles treating of tourist interests, and the compilation of brochures, both for the Administration and for public bodies, designed to attract tourists and holiday-makers to specific resorts or areas. The Department's most important function is that of being the Government's official organization for disseminating propaganda overseas relative to South Africa, such propaganda having for its object the attraction to South Africa of tourists and others who may be interested in the country.

The function of the tourist bureaux is to provide for passengers' care-free travel, embracing inclusive bookings to cover rail, road, air, and steamer reservations, meals and bedding on trains, hotel or boarding-house accommodation, collection and delivery of luggage, and sightseeing excursions where desired.

11. **Railway Housing Commission.**—During August, 1937, the Minister of Railways and Harbours appointed a Housing Commission—

to investigate, report upon and make recommendations in connexion with the housing of railway and harbour servants.

The Commission consisted of—

Mr. C. M. Hoffe, Chief Accountant (Chairman);
Mr. W. Bührmann, Economist, Department of Agriculture (Nominated Member);
Mr. R. S. Williams and Mr. D. K. Geddes (elected members representing staff associations).

The Commission submitted five interim reports, together with a final report dealing with housing policy generally.

12. **Railway House-Ownership Scheme.**—The house-ownership scheme, which was recommended by the Railway Housing Commission and accepted by the Administration, enables railway servants to acquire their own homes under very favourable terms. Briefly the scheme provides for the advancing of loans at 3½ per cent. interest in connexion with the purchase of houses by railwaymen. No deposit will be called for, as the whole amount required for the acquisition or erection of a house may be advanced. The capital sum is to be redeemed by payments spread over periods ranging from ten to thirty years.

§ 4. Locomotives and Rolling Stock.

1. **Rolling Stock in Service.**—The following table gives the number of locomotives and coaching and wagon stock in service at 31st March, 1934 to 1938.

LOCOMOTIVES AND ROLLING STOCK IN SERVICE AT 31st MARCH, 1934 TO 1938.

31st March.	Locomotives.			Coaching Stock.		Wagon Stock.		
	Steam.		Electric.	3' 6"	2'	3' 6"		2'

1938	2,089,912	5,519,386	12,545,711	9,819,807	29,974,816

(c) TON MILE STATISTICS, 1934 TO 1938.

Particulars (Revenue-Earning Traffic).	1934.*	1935.*	1936.*	1937.*	1938*.
	Ton Miles.	Ton Miles.	Ton Miles.	Ton Miles.	Ton Miles.
Goods and Minerals (other than Coal)	2,391,050,266	3,058,906,178	3,442,830,870	3,565,893,078	4,937,745,625
Coal	1,603,087,471	1,837,570,185	2,051,101,165	2,100,888,126	2,283,829,496
TOTAL TON MILES.	3,994,137,737	4,896,476,363	5,493,932,035	5,666,781,204	7,221,575,121

* Year ending 31st March.
† Amended figures.

3. **Speed of Trains.**—The speed of main line trains varies according to loads, grades, and other local conditions. Between Capetown and Johannesburg, and between Durban and Johannesburg, the times for express journeys work out as follows:—

SPEED OF EXPRESS TRAINS.

Section.	Miles.	Time in Hours.	Miles per Hour (Average).
Capetown-Johannesburg	956	27¼	35·1
Johannesburg-Capetown	956	25¾	37·1
Durban-Johannesburg	494	17¾	27·8
Johannesburg-Durban	494	17¾	27·8

These averages include all stops at stations and depots en route; the actual running speed on short sections, where the conditions are favourable, is frequently 40 to 45 miles an hour with ordinary main line trains, and 50 to 55 miles with express trains. Fast non-stop electric trains are run between Capetown and Muizenberg at a speed of 38½ miles per hour throughout the journey of 15¼ miles, and between Pretoria and Germiston at a speed of 39 miles per hour throughout the journey of 34 miles.

4. **De Luxe Express Trains.**—Express trains run twice a week between Johannesburg and Capetown and vice versa, connecting once weekly with the incoming and outgoing mail steamers.

These trains consist of first class "de luxe" articulated saloon units, a twin dining-car being placed in the middle with a lounge car adjoining. The whole train is finished externally in rich blue and cream enamel.

The articulated saloon units comprise two coach bodies and underframes, each 45 feet long, mounted on three four-wheeled bogies, the central bogie being placed at the junction of the two coaches. This arrangement ensures smoother running, eliminates vibration over the bogies, and adds generally to the comfort of travelling. The articulated saloons are more commodious than the ordinary type and have hot and cold water laid on in each compartment and coupé, and also in the shower bath with which each unit is provided. Each saloon has an attendant, who, in addition to supplying beds and keeping the saloons clean, is available for personal services. An electric bell is provided in each compartment and coupé to enable passengers to summon the attendant. The latter, in turn, is able, by means of a telephone installed in his quarters, to communicate passengers' catering requirements to the dining-car. A conductor accompanies each train throughout the journey. Passengers travelling by these trains are required to pay ordinary first class fares, plus a surcharge of 20 per cent. on the ordinary single fare.

The Administration has on order twelve new first class "de luxe" saloons for use on these trains. The coaches will be of steel construction, fully air-conditioned, and will embody the very latest improvements in coaching stock construction and equipment.

5. **Length of Journeys.**—Particulars in regard to the length of journeys between some of the principal railway centres are contained in the subjoined table:—

LENGTH OF JOURNEYS BETWEEN PRINCIPAL CENTRES IN MILEAGE AND TIME.

Points between.		Mileage.	Hours.

	Windhoek	1,379	64¾

The longest continuous journey which can be performed over the Union railways is from Bitterfontein in the Cape Province to Goliel in Southern Swaziland, the distance being 1,760 miles.

The railway to the north has now been extended to Port Francqui, which is about 1,141 miles beyond the Belgian Congo border at Sakania, and a continuous journey can be made from Capetown to Port Francqui, a distance of about 3,292 miles.

§ 6. Casualties.

The subjoined table gives the total number of persons killed or injured on the railways during the past five years, specifying whether Europeans or others:—

PERSONS KILLED OR INJURED IN ACCIDENTS, 1934 TO 1938.

§ 7. Passenger Fares and Goods and Live Stock Rates.

1. **Tariff Policy.**—The tariff policy of the South African Railways is governed by section 127 of the *South Africa Act*, which provides as follows:—

> The railways shall be administered on business principles, due regard being had to agricultural and industrial development within the Union, and promotion, by means of cheap transport, of the settlement of an agricultural and industrial population in the inland portions of all provinces of the Union. So far as may be, the total earnings shall not be more than are sufficient to meet the necessary outlays for working, maintenance, betterment, depreciation, and the payment of interest due on capital, not being capital contributed out of railway or harbour revenue.

Prior to the establishment of the Union, the government railways of the four provinces were administered separately, those of the Cape of Good Hope and Natal being known as the *Cape Government Railways* and the *Natal Government Railways* respectively, and those of the Transvaal and the Orange Free State, subsequent to the Anglo-Boer War, as the *Central South African Railways*.

2. **Supplementary Wharfage Dues.**—Under the powers conferred by Act No. 22 of 1916 and Act No. 20 of 1922, the Railways and Harbours Administration, by notification in the *Gazette* (Government Notice No. 1150, dated the 27th June, 1930), imposed supplementary wharfage dues of 1s. per 100 lb. on goods imported into the harbours of the Union or of South West Africa, the additional charges to be imposed upon persons using wagons or other vehicles for the transportation of their goods along routes which, in the opinion of the Administration, are regarded as competing with railway transport.

The Railways and Harbours Administration requires any person upon whom it may call to enter into a written contract with the Administration to have all his goods conveyed by rail between competitive points, and thus secure for himself the advantages of the rebate of the supplementary wharfage dues. The consignor of imported goods, who has entered into this contract and who is required to transport them at the request of a consignee along a competitive route, is required to render a return to the Administration within ten days, giving certain particulars concerning the consignment, in order that the amount rebated in the first instance to the consignor may be recovered from the consignee.

3. **Passenger Fares.**—Three classes of accommodation are provided for passenger traffic, viz., first, second, and third. In addition, special native fares lower than third class fares apply for distances over 150 miles to natives travelling by recognized native trains.

The fares in operation are (*a*) ordinary, (*b*) excursion, (*c*) special suburban and inter-urban, and (*d*) season, applicable as follows:—

(*a*) The ordinary mileage scale of fares applies to the total mileage travelled in respect of any single or return journey or extensive tour including side journeys, forming a continuous all-rail journey or tour. The cost in pence per mile for various total distances travelled is:—

Total mileage travelled.	1st *Class.*	2nd *Class.*	3rd *Class.*
	d.	d.	d.
100	2·34	1·56	1·17
1,000	2·06	1·38	1·04
2,000	1·59	1·06	0·89
3,000 and over	1·34	0·90	0·75

The special native fares range from 0·8 penny per mile at 225 miles to 0·6 penny per mile at 1,050 miles and are available for travel by goods trains and recognized native trains, with a reduction for native youths under 18 years of age recruited for agricultural or industrial purposes to 0·6 penny per mile at 225 miles and 0·33 penny per mile at 600 miles and over.

(*b*) The excursion fare scale for return journeys applies: (i) to the periods of general excursion booking, approximately 36 days at midsummer, 11 days at Easter, and 22 days at midwinter; (ii) under certain conditions to first and second class seasonal seaside excursions applicable to recognized seaside resorts during their respective seasons, and affords excursion facilities to one or other of the resorts during most months of the year; (iii) to week-end and evening excursions; (iv) to other occasions on which ordinary excursion fares are quoted; and (v) to concessionary fares based on the excursion fare scale. The cost of travel at the excursion fare scale for various total mileages travelled outward and homeward is in pence per mile:—

Total mileage travelled.	1st *Class.*	2nd *Class.*	3rd *Class.*
	d.	d.	d.
100	1·38	0·93	0·69
1,000	1·30	0·86	0·62
2,000	1·21	0·81	0·61
3,000	1·01	0·67	0·54

(*c*) Special suburban and inter-urban fares on a considerably lower basis than the ordinary fares apply in the vicinity of the large towns, and between such towns and adjoining urban centres.

(*d*) Short distance and long distance season ticket scales are in operation, the latter being based upon the total route mileage of the lines over which the ticket is available, and the charge for 2,000 route miles, for example, is £113 first class and £90 second class per annum.

The following figures illustrate the short distance monthly season ticket scale. Weekly, half-monthly, quarterly, half-yearly, and yearly tickets are issued at charges more or less proportionate to the monthly rate:—

Monthly Season Rate.	1st *Class.*	2nd *Class.*
Miles.	£ s. d.	£ s. d.
5	0 16 9	0 14 0
10	1 6 6	1 2 0
20	1 16 6	1 10 6
40	2 10 0	2 1 9

4. **Parcels Rates.**—Parcels and excess luggage are conveyed by passenger train and are charged for according to weight and distance. The following are a few examples of rates:—

RAILWAY PARCELS AND EXCESS LUGGAGE RATES.

Miles.	½ lb.	2 lb.	5 lb.	30 lb.	50 lb.	100 lb.
	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.
50	0 4	0 4	0 9	1 5	2 1	2 9
100	0 4	0 9	1 0	2 1	2 9	4 2
200	0 4	1 0	1 5	3 9	5 2	7 11
300	0 4	1 4	1 9	5 2	7 7	11 4
500	0 4	1 4	2 5	7 11	11 4	17 3
1,000	0 11	1 10	3 9	12 0	17 11	26 6

Certain produce, such as bread, butter, meat, fruit, fish, eggs, etc., is conveyed at half parcels rates.

5. **Live Stock Rates.**—Large animals are cattle, horses, donkeys, camels, mules, and ostriches.

Small animals are calves and foals under three months old, ewes, goats, pigs, and sheep, and also ostrich chicks under four months old.

A minimum charge as for four head of large animals or twenty-one head of small animals per truck is levied, while a maximum charge, based upon floor space of the truck used, operates.

RAILWAY LIVE STOCK RATES.

A=Rate per head (large animals).
B=Rate per 7 head (small animals).
C=Charge per mile for 8 large animals loaded in a short truck.
D=Charge per mile for 49 small animals loaded in a short truck.

Miles.	A.	B.	C.	D.
	s. d.	s. d.	d.	d.
100	5 9	5 9	5·52	4·83
250	11 3	11 3	4·32	3·78
500	18 7	20 7	3·57	3·46
750	24 10	28 5	3·18	3·18
1,000	27 11	31 11	2·68	2·68
1,500	34 2	47 11	2·19	2·68

6. **Railway Rates for Tourists' Motor Cars.**—The following special return rates apply for conveyance of motor cars by rail when accompanying passengers holding *two or more* first or second class return adults' tickets:—

When the forward journey does not exceed 500 miles £3 10 0
When the forward journey does not exceed 750 miles 4 4 0
When the forward journey exceeds 750 miles 5 0 0

7. **Goods Rates.**—The rates charged for the conveyance of goods are divided broadly into four classes, viz., (*a*) Mileage, (*b*) Distribution, (*c*) Port, (*d*) Export and Coal Rates.

(*a*) *Mileage Rates.*—The following table shows mileage rates per ton of 2,000 lb., and rates per ton per mile at certain distances for the various classes of traffic enumerated:—

RAILWAY RATES PER TON AND PER TON PER MILE FOR GIVEN DISTANCES.

Tariff No.	Examples of Commodities included in Tariff referred to.	50 Miles.	100 Miles.	250 Miles.	500 Miles.	750 Miles.	1,000 Miles.

* Special.
† Per ton per mile.
‡ Maximum rate on S.A. maize and maize meal, 20s. per 2,000 lb.; S.A. wheat, wheaten meal, and wheaten flour, 22s. 6d. per 2,000 lb.; S.A. kaffir-corn and rye, in bulk, 27s. 6d. per 2,000 lb.

(*b*) *Distribution Rates.*—Certain important inland towns are known as "distribution centres," from which goods may be forwarded at special

"distribution" rates, thus stimulating the development of commerce in the inland towns. The broad underlying basis of the distribution rates is as follows: Schedule rate§ to ultimate destination from the port governing the distribution centre, via the distribution centre, *less* the rate§ from the same port to the distribution centre, plus cartage where applicable.

(*c*) *Port Rates.*—Special rates apply from the ports to inland towns. The following are the rates from the principal ports to Johannesburg:—

RAILWAY RATES PER TON AND PER TON PER MILE FROM CERTAIN PORTS TO JOHANNESBURG.

(*a*) Rates per ton of 2,000 lb., exclusive of cartage.
(*b*) Rates per ton per mile.

Tariff No.	Port and Mileage.							
	Table Bay (Capetown), 951 miles.		Algoa Bay (Port Elizabeth), 713 miles.		Buffalo Harbour (East London), 666 miles.		Point (Durban), 486 miles.

* Temporary rate.

(2) *Bunker and Export Coal.*

Special rates are in force for export and bunker coal from all collieries to the ports. The following are a few examples of the rates charged, in pence per ton of 2,000 lb.:—

RAILWAY RATES IN PENCE PER 2,000 LB. FOR BUNKER COAL.

From.	Bunker.		
	To Table Bay (Capetown).	To Point, Natal (Durban).	To Lourenco Marques.
	d.	d.	d.
Witbank.....	171	—	90
Hattingspruit.....	173	88·5	—
Hlobane.....	174	91·0	—

Subject to such conditions and on production of such proof as may be prescribed from time to time by the Administration, a rebate is granted in respect of coal shipped as cargo overseas beyond South or South West Africa.

§ Excluding cartage.

(2) *Bunker and export coal*—(continued).

This rebate is also allowed on coal utilized in bunkering ships carrying export cargo coal equal to 5,000 tons, or three-quarters of the ship's cargo carrying capacity (whichever is less), from Port Natal and Lourenço Marques to places overseas beyond South or South West Africa. The rebates are:—

Point ... ... 2s. 3d. per ton of 2,000 lb.
Lourenço Marques ... ... 2s. 3d. ,, ,,

§ 8. Railway Finance.

1. **Earnings.**—The subjoined tables give particulars of earnings of the South African Railways under various headings for a series of years. A graph is included, showing *inter alia* the variations of net revenue in relation to capital cost.

Figures for the period 1910-11 to 1934-35 were published in *Year Book* No. 17 and for later years in succeeding *Year Books*.

(i) EARNINGS CLASSIFIED UNDER MAIN HEADS, 1934 TO 1938.

Year ending 31st March.	Coaching.		Goods.	Coal.	Live Stock.	Miscellaneous.	Total.

1938.....	13,263	41,532,616	29,974,816	25,896,923	1,953	149·65	207·35

* Includes 50 miles leased from the Natal-Zululand Railway Company.
† Exclusive of live stock tonnage.

(vi) CAPITAL COST OF GOVERNMENT RAILWAYS AND PER CENT. OF NET REVENUE TO CAPITAL COST, 1910-11 TO 1937-38.

Year ending 31st March.

2. **Working Expenditure.**—Particulars as to the working and recurrent expenditure of the South African Railways are given under various headings in the subjoined tables for the financial years stated in each case:—

(i) TOTAL WORKING EXPENDITURE, 1933-34 TO 1937-38.

Expenditure.	1933-34.	1934-35.	1935-36.	1936-37.	1937-38.
	£	£	£	£	£
Maintenance of Way and Works	2,330,076	2,492,607	2,610,194	2,808,219	3,108,830

1937-38	—	1,534,868	+ 320,769

(v) *Subsidiary Services.*—The following table gives for a series of years the results of the working of the subsidiary services, e.g. catering, publicity, bedding, grain elevators, and road motor transport, conducted by the South African Railways. These services represent activities of some magnitude in themselves, and as only the final figures of profit and loss are carried into the financial statement in 3(i) above, under the heading of miscellaneous revenue and expenditure, this large volume of work tends to be lost sight of entirely.

SUBSIDIARY SERVICES, 1933-34 TO 1937-38.

* The adjustments, which in some instances produce a minus amount, are the differences produced when the value of stocks in hand at the end of the financial year is greater or less than the value of the stocks at the beginning of the same year.

REVENUE AND EXPENDITURE OF GOVERNMENT RAILWAYS, YEARS 1910-11 TO 1937-38.

4. **Cost of Construction.**—The subjoined table gives particulars as to the cost of construction of new lines completed since the establishment of Union. The details relating to the lines opened prior to 1931 are available in No. 17 and previous *Year Books*.

The cost per open mile at 31st March, 1938, of lines of 3 ft. 6 in. gauge averaged £9,619 and of 2 ft. gauge £3,254. These amounts include expenditure on new works on open lines.

COST OF NEW LINES COMPLETED FROM THE ESTABLISHMENT OF UNION TO THE 31st MARCH, 1938.

§ 9. Aviation and Air Transportation.

1. **Civil Aviation.**—(i) *Aviation Control.*—The *Aviation Act*, No. 16 of 1923, which was passed to enable effect to be given to the International Air Navigation Convention and to make provision for the control, regulation, and encouragement of flying within the Union, came into force on the 1st July, 1924. The Act provides for the adoption of the convention, and empowers (*a*) the issue of proclamations to give effect to the convention; (*b*) the ratification of and giving effect to amendments; and (*c*) the application within the Union of any of the provisions of the convention. Section 3 provides for the making of regulations, which cover, *inter alia*, the licensing and certificating of personnel, machines, and aerodromes, the registration of aircraft, the safety and security of persons and property, the holding of accident inquiries, etc.

Section 4 provides for the appointment of a Civil Air Board to advise the Minister, and the Act gives powers of control, after issue of special proclamation, to provide for a state of war or great national emergency.

Provision is made (*a*) for the establishment and maintenance, out of any moneys appropriated by Parliament for the purpose, of aerodromes and road approaches thereto; (*b*) for the acquisition of land for this purpose; and (*c*) for land being expropriated for aerodromes, as though the acquisition were a defence purpose in terms of section 87 of the *Defence Act* (No. 13 of 1912). Aerodromes used for public purposes must be approved or licensed.

Actions for *trespass or nuisance* against aircraft for flying over private property are barred, provided reasonable height and the rules of flight are observed, but it is laid down that damages may be recoverable for *loss or damage* caused by the aircraft or by articles falling from the aircraft. The Act provides for the investigation of accidents to aircraft, and empowers the detention of aircraft for breach of law or regulations.

The provisions of the Act are made applicable to all aircraft except those used for military, naval, or government purposes, but they may be applied to government aircraft or aerodromes by proclamation.

In September, 1931, the administration of civil aviation was transferred from the Department of Posts and Telegraphs to the Department of Defence.

(ii) *Air Navigation Regulations.*—The *Air Navigation Regulations and Amendments*, 1935, were promulgated on the 4th October, 1935. Copies of this publication are obtainable from the Secretary for Defence, Defence Headquarters, Pretoria.

(iii) *Wireless.*—Thirteen D/F Wireless Stations for the use of civil aircraft are now in operation in the Union at Durban, East London, Port Elizabeth, Kimberley, Vryheid, Maclear, Piquetberg, Bethlehem, Beaufort West, Pietersburg, Wingfield (Capetown), Germiston, and Mossel Bay.

In connexion with the contemplated air route from the Rand Airport to Mossamedes in conjunction with the west coast service, further stations will be erected in the near future at Palapye and Maun in the Bechuanaland Protectorate and at Windhoek and Outjo in the South West African Mandated Territory. D/F stations are also contemplated at Nelspruit in connexion with the service to Portuguese East Africa (Lourenço Marques), and at Bloemfontein in connexion with the extension of the arterial services.

The new stations are planned to work in the shortwave band with direct cathode ray indication of bearings observed on aircraft.

(iv) *Flying Clubs and Schools.*—At the end of 1938 the following flying clubs and schools were in operation in the Union:—Johannesburg Light Plane Club; Rand Flying Club, Germiston, Klerksdorp, Potchefstroom, Benoni; Witwatersrand Technical College, Johannesburg, Randfontein, Vereeniging, Witbank, Bethal, and Standerton; African Air Transport (Pty.), Limited, Kimberley and Capetown; Natal Aviation (Pty.), Ltd., Durban; Haller Aviation (Pty.), Ltd., East London, Port Elizabeth, and Grahamstown; Bethlehem Flying Club; Bloemfontein Light Plane Club, Free State Aviation, Kroonstad, Harrismith, Senekal, and Theunissen; Pretoria Flying School; Union Aviation Co. (Pty.), Ltd.; Air Taxi Co. (Pty.), Ltd.; African Flying Services (Pty.), Ltd.; and Aero Services (Pty.), Ltd.

During 1938 these clubs and schools flew a total of 41,204 hours, carried 27,831 passengers, and trained 357 pupils for their "A" Pilots' licences, besides numerous pupil pilots for the Air Force Reserve.

(v) *Charter and Private Flying.*—During 1938, 6,515 hours were flown and 4,505 passengers carried on charter flights and in private aircraft.

(vi) *Pupil Pilots Training Scheme.*—A new scheme for the training of pupil pilots came into operation on the 1st April, 1937, under which the Government proposes to train, over a period of approximately six years, 1,000 pilots for the South African Air Force Reserve of Pilots. Courses of training are in accordance with a prescribed syllabus, which includes 110 hours' training in actual flying and 104 hours' ground instruction. This training is carried out by pupil pilots at approved flying clubs and schools in their spare time whilst following their civil occupations. In addition, pupil pilots are required to undergo continuous training at the Central Flying School, Voortrekkerhoogte, viz., one period of 30 days and one period of 15 days in both the 1st and the 2nd year of training.

Forty-six pupil pilots were enrolled under this scheme on 1st April, 1937, and in addition approximately 90 pupil pilots who had enrolled under former schemes were absorbed under the new scheme. It has been arranged to enrol 50 pupils in each subsequent quarter.

Under the scheme a grant of £30 is paid to approved flying clubs and schools in respect of Union nationals of either sex who have qualified for an "A" Pilot's licence and have completed 25 hours' dual and solo flying on club or school aircraft. This grant is shared with the pilot concerned.

(vii) *Aviation Licences and Certificates.*—The number of civil aviation licences and certificates issued in the Union up to the 31st December, 1938, and the number current at that date were as follows:—

Licences and Certificates.	*Issued.*	*Current.*
	No.	No.
"A" Pilots.....	932	476
"B" Pilots.....	223	140
Ground Engineers.....	219	135
Aerodromes.....	110	76
Aircraft.....	378	255

(viii) *Civil Aircraft Registered.*—The following table shows the number of civil aircraft registered in the Union since 1929:—

Year.	Registered.	Cancelled.	Current.	Year.	Registered.	Cancelled.	Current.
	No.	No.	No.		No.	No.	No.
1929	22	8	33	1934	16	6	72
1930	15	8	40	1935	21	3	90
1931	24	12	52	1936	53	11	132
1932	15	10	57	1937	94	17	209
1933	17	12	62	1938	75	25	259

2. **South African Airways (S.A.R. and H.).**—In terms of Act No. 21 of 1931, powers were granted to the South African Railways and Harbours Administration to operate its own departmental aircraft for the transport of passengers and goods, and on the 1st February, 1934, the Administration took the first step to implement the provisions of the Act, and assumed control, under the title of South African Airways (South African Railways and Harbours), of the services hitherto operated by Union Airways between Durban and Capetown and Durban and Johannesburg.

In pursuance of the policy of having all scheduled air services State-owned, the Administration took over the South West African Airways from the 1st February, 1935.

On 1st April, 1936, South African Airways took over the whole of the services south of Germiston, which were previously operated by Imperial Airways, and in June, 1937, coincident with the introduction by Imperial Airways of its flying boat service terminating at Durban, South African Airways took over the route from Germiston to Lusaka jointly with Rhodesia and Nyasaland Airways. This service was extended to Kisumu during July of the same year.

Since then the Administration has been actively developing its air services, the route mileage of which now aggregates 7,206, and there has been a remarkable growth of passenger and mail traffic on all sections of the scheduled routes in South Africa, as will be seen from the subjoined statement:—

NUMBER OF PASSENGERS AND AMOUNT OF FREIGHT AND MAILS CONVEYED, AND MILEAGE FLOWN, 1934 TO 1938.

Class of Traffic.	1934.	1935.	1936.	1937.	1938.
S.A. Airways (S.A.R. & H.) (Union).					
Passengers carried.....No.	1,973	8,121	15,256*	18,498*	34,162*
Freight and Mails carried.....lb.	93,031	369,773	851,717*	1,589,451*	3,005,639*
Mileage flown.....Miles	240,306	374,712	577,980*	1,110,076*	1,862,193*
S.A. Airways (S.A.R. & H.) (South West Africa)					
Passengers carried.....No.	135	426	—	—	—
Freight and Mails carried.....lb.	6,017	4,840	—	—	—

* Includes South West Africa services.

Including additional aircraft on order the Administration's fleet of aircraft is as follows:—

JU.86 Junkers (10-seater)	18
JU.52 Junkers (14/16-seater)	11
JU.90 Junkers (40-seater)	2
F.13 Junkers	2
Miles Magister (Training)	1
TOTAL	34

Lorenz blind landing equipment has been installed and satisfactorily tested at the Wingfield Aerodrome, Capetown, and the installation of similar equipment at Durban and Port Elizabeth is nearing completion. All new aircraft are being equipped for the operation of this system.

Particulars of the services operated by the South African Airways are subjoined:—

Section.	*Services per week in each direction.*
Rand–Durban	10
Durban–Capetown	6
Rand–Capetown	6
Rand–Port Elizabeth	3
Rand–Windhoek	2
Rand–Bulawayo	3, with an extension between Bulawayo and Kisumu once per week.

In conjunction with local authorities the Administration has given special attention to the provision of emergency landing grounds at regular intervals throughout the Union and South West Africa, and under normal circumstances the aircraft performing services over the regular routes are always within approximately 10 to 15 minutes flying distance from a landing ground.

3. **Air Mails.**—(i) *England-South Africa.*—A regular twice weekly air service carrying mails between Southampton and Durban is operated by Imperial Airways, Limited. "C" class flying-boats are used. The route followed is via France, Italy, Greece, Egypt, Sudan, and Uganda, then along the coast via Mombasa, Dar-es-Salaam, Beira, and Lourenço Marques. The journey occupies approximately 4½ days inwards and 5½ days outwards.

(ii) *South Africa-Australia and Far East.*—In conjunction with the South Africa-England air service, which connects at Alexandria in Egypt with the eastbound services of Imperial Airways, Limited, and associated companies, a regular twice weekly service by air between South Africa and Australia and the Far East is in operation. The route is via Palestine, Iraq, the Persian Gulf, India, Burma, Malaya, Java, and Darwin. "Feeder" air services operate between Karachi and Ceylon and between Bangkok and Hong Kong. The journey occupies six days to India, nine to Malaya, and eleven to Australia.

(iii) *Empire Air Mail Scheme.*—The first stage of the Empire Air Mail Scheme, having for its object the conveyance of all first class mail matter (letters and postcards) within the Empire by air without surcharge, was inaugurated by the flying-boat which left England on the 29th June, 1937, and arrived at Durban on the 5th July, 1937. In the reverse direction the first flying-boat to convey all first class mail matter posted in the Union and addressed to the United Kingdom left Durban on the 4th July, 1937. A further step towards the fulfilment of this object was made when the Empire Air Mail Scheme was extended, amongst other countries, to India, Malaya, Canada, and Newfoundland. The first mails from the Union for these countries under the "all letters by air" service left Durban by flying-boat on the 20th February, 1938. The first "all-up" mail arrived in the Union from India on the 8th and from Malaya on the 11th March, 1938.

(iv) *Air Mail Statistics.*—(a) *Within the Union.*—The weights of mail matter conveyed by air within the Union, including mails conveyed by Union Air Services to and from the flying boats and to and from South West Africa, for a series of years were as follows:—

AIR MAIL MATTER CONVEYED IN UNION AND SOUTH WEST AFRICA, 1934 TO 1938.

Direction.	1934.*	1935.*	1936.*	1937.*	1938.*
	lb.	lb.	lb.	lb.	lb.

Europe (excluding United Kingdom)	5,231	8,312	14,218	20,811	52,203
†Belgian Congo	—	—	—	—	526
†Portuguese East Africa	—	—	—	—	3,270
†Nyasaland	—	—	—	—	6,516

* Year ending 31st March.
† Service commenced 1st July, 1937.

(*v*) *Postage Rates.*—For air mail postage rates see Chapter XIV.

§ 10. Southern Africa Transport Conference.

On the initiative of the Union Government, a Transport Conference, at which the territories of Southern Africa were represented, was held in Johannesburg from the 7th to the 14th September, 1936. Distinguished and representative delegations attended from Angola, Basutoland, Bechuanaland Protectorate, Belgian Congo, Kenya, Madagascar, Mozambique, Northern Rhodesia, Nyasaland, Southern Rhodesia, Swaziland, Tanganyika, Uganda, and Zanzibar, in addition to Union delegates from the appropriate Departments of State.

While the Conference was originally conceived to serve as a venue for the exchange of views upon railway matters of common interest, its scope was subsequently enlarged to embrace all forms of transport.

At its initial plenary session the Conference resolved to appoint—

(i) a committee on surface transport; and
(ii) a committee on airways.

These committees considered various subjects concerning their respective groups and submitted recommendations in regard thereto.

An important recommendation of the Conference was to the effect that a permanent secretariat be established for the purpose of maintaining an interchange of views between the territories represented at the Conference. This recommendation was accepted and a permanent secretariat has been established in the office of the Minister of Railways and Harbours, Union Buildings, Pretoria.

The record of proceedings of the Conference was printed and is obtainable from the South African Railways Publicity Department, Johannesburg.

§ 11. Road Motor Services, Motor Vehicles, and Tramways.

1. **South African Railways and Harbours—Road Motor Services.**—The South African Railways and Harbours Administration has a large number of road motor services in operation, the total route mileage over which these services were in operation at 31st March, 1938, being as follows:—

Province.	*Route Miles.*
Cape of Good Hope (including Bechuanaland)	6,850
Natal	1,287
Transvaal (including Swaziland)	3,421
Orange Free State	1,049
South West Africa	805
TOTAL	13,412

The route mileages of the road motor services at the end of each financial year since 1934 are given below:—

Year.	1934.	1935.	1936.	1937.	1938.
Route mileage	10,535	10,971	11,292	11,940	13,412

The road motor services, which are mainly operated for the development of rural areas and which act as feeders to the railway, deal with the conveyance of all classes of traffic, particularly agricultural products, merchandise, and general farming and household requirements.

The majority of vehicles at present in use are pneumatic-tyred vehicles with a net carrying capacity of 5 to 10 tons. Improved types of vehicles are being introduced and the utility of the services is being extended. Trailers of 2 to 7-ton nett carrying capacity are utilized in certain districts where road conditions permit, and the haulage of as much as 15 to 20 tons per trip is possible, which facilitates the transport of large quantities of seasonal traffic such as wheat, maize, wool, etc. Altogether 545 motor vehicles and 301 trailers were in operation on the 31st March, 1938.

The operating results for the financial years ending 31st March from 1934 were as follows:—

	1934.	1935.	1936.	1937.	1938.
Vehicle mileage	5,049,918	5,245,956	6,141,763	7,484,221	8,653,534
Passengers conveyed.....No.	2,036,354	2,155,243	2,605,803	3,823,170	4,862,205
Goods conveyed.....Tonnage	318,109	395,546	421,810	474,376	597,554
Cream conveyed.....Galls.	810,486	1,008,080	1,377,815	1,503,229	1,391,063
Earnings.....£	452,166	483,761	496,781	571,685	612,867
Expenditure.....£	419,070	424,604	429,916	526,314	586,741

The experience of the Administration is that these services are extremely valuable in encouraging development of country districts, where farmers are often handicapped through being situated long distances from the railway. The services have been particularly useful in the development of dairy, poultry, and fruit farming, where regular and expeditious transportation is so necessary.

Repairs to road motor vehicles are executed in the Administration's repair shops, situate at Capetown, Kimberley, Port Elizabeth, East London, Durban, and Johannesburg, while at Langlaagte a large centralized workshop has recently been opened permitting the greater concentration of heavy motor repairs. The Langlaagte shop is also equipped with machinery capable of manufacturing any description of bus body for road motor vehicles.

2. **Tramways and Motor Bus Services.**—(i) *Tramways.*—All public tramways used for the conveyance of passengers now employ electric traction. The tramways of Capetown, Kimberley, and Port Elizabeth are owned by companies; but elsewhere they are owned and controlled by the municipalities. The following are the existing tramways in operation:—

Cape of Good Hope: Capetown and Suburbs, Kimberley, and Port Elizabeth.
Natal: Durban.
Transvaal: Pretoria and Johannesburg.
Orange Free State: Bloemfontein.

The following table shows the length of route in the case of each tramway system and other particulars as to equipment, revenue, expenditure, and other matters.

TRAMWAY SYSTEMS, 1937-38.

3. **Motor Vehicles Licensed.**—Statistics of motor vehicles licensed are not collected under the *Statistics Act*, but are derived solely from details contained in duplicate motor tax receipt forms as supplied to the Census and Statistics Office by licensing officers throughout the Union.

(a) *General Statistics.*—The following tables give the numbers of motor vehicles licensed in the Union over a period of years, as well as detailed statistics for the year 1938 regarding the number and description of motor vehicles licensed in each province.

Detailed information is not taken out in respect of horse-power, country of origin, and purpose for which vehicles are used. In this respect the 1930 figures, which appeared in *Official Year Book* No. 13, are the latest available.

(b) *New Motor Vehicles.*—(i) *Number Licensed.*—From the beginning of the year 1928 details of new motor vehicles became available. Summarized figures in this regard for the year 1938, with 1937 totals, are shown in the table hereunder. For monthly totals reference should be made to *Special Reports* Nos. 117 and 131, which contain motor vehicle statistics for these years.

* Excluding motor cycles. Separate figures not available.

4. **Revenue Derived from Motor Industry.**—Steps have been taken to collect figures showing the revenue derived by the Provincial Administrations and by Transvaal local authorities from taxation imposed under the Motor Vehicle Ordinances in the various provinces, the revenue derived by the Union Government from customs duties levied on items in connexion with the motor industry, and the value of imports of motor cars, etc. The three following tables contain summaries of these details. Lubricating oil is not included in Table (i), as only a relatively small portion of the imports thereof is utilized for the purposes of the motor industry.

So far as railway rates are concerned, no data are available.

(i) NET REVENUE DERIVED FROM IMPORT DUTIES IMPOSED BY GOVERNMENT UPON ITEMS RELATING TO THE MOTOR INDUSTRY, 1933 TO 1937.

Tubes, motor cycle	1,603	484	211	64	100

In addition to the above, certain revenue accrued to the Railway Administration under the *Motor Carrier Transportation Act*, No. 30 of 1930, as amended by Act No. 31 of 1932. This revenue is derived from fees in respect of Motor Carrier Certificates, Vehicle Identification Cards, and Security Certificates. The collections have been as follows:—

Year.	£
1933-34	17,715
1934-35	22,635
1935-36	22,683
1936-37	26,365
1937-38	29,129

5. **Garage Licences and Petrol Pumps.**—Since 1927-28 and 1929 respectively statistics have been secured in regard to garage licences and petrol pumps. Act No. 32 of 1925 makes provision for the payment of a licence of £3 per annum by all motor garages. Petrol pumps include kerbside, wall, and portable pumps.

The relative figures are given in the table hereunder. Though the two sets of figures are not related, they are shown in one table for the sake of convenience.

GARAGE LICENCES, 1936-37 AND 1937-38, AND PETROL PUMPS, 31st JANUARY, 1938 AND 1939.

8. **Motor Carrier Transportation.**—In the 1930 session of Parliament the *Motor Carrier Transportation Act* (No. 39 of 1930) was passed "to provide for the control of certain forms of motor carrier transportation and matters incidental thereto," and during the 1932 session the Act was amended in several important respects.

Whereas the original Act defined motor carrier transportation as "the conveyance of persons and/or goods for reward (by means of certain types of vehicles)", the amending Act extended the scope of the definition to include, in addition to conveyance for reward, the conveyance also of persons or goods in the course of any industry, trade, or business of whatever nature. In terms of section 1, however, certain classes of conveyance are not regarded as motor carrier transportation within the meaning of the Act, e.g. the conveyance of farm products by their producer and of farming requisites by a farmer by means of vehicles belonging to such producer or farmer, the operations of ordinary taxis (not running regularly between points served by other reasonable facilities), the conveyance (other than the conveyance of persons or goods for reward) by a local authority in its own vehicles within the area of its jurisdiction, the conveyance of patients in an ambulance, the towing of breakdowns, the conveyance of hotel or boarding-house guests between a station or a wharf and such hotel or boarding-house, and the conveyance of school children to and from school. Certain areas and public roads have been proclaimed as transportation areas and transportation routes

respectively. The definition of these areas and routes is contained in Proclamation No. 210, 1930 (as amended by Proclamations No. 342, 1931, No. 134, 1933, No. 158, 1933, No. 1, 1936).

A Central Road Transportation Board* has been appointed consisting of a chairman and two members, and a local transportation board has been appointed for each of the proclaimed transportation areas, whose headquarters are at Bloemfontein, Capetown, Durban, East London, Johannesburg, Kimberley, Pietermaritzburg, Port Elizabeth, Pretoria, and more recently Windhoek in South West Africa.

Any person who carries on motor carrier transportation, as defined, within a proclaimed transportation area, or over a proclaimed transportation route, requires the sanction of the Central Board or of a local board, as the case may be, failing which an offence is committed.

Motor carrier transportation, as appears from the definition, falls under two main heads:—

(i) The conveyance of persons or goods for reward, and
(ii) the conveyance of persons or goods in the course of any industry, trade, or business.

Normally a carrier who conveys goods or persons for reward requires a motor carrier certificate, but the Act makes provision for the granting of exemption in respect of the conveyance under this head in certain instances, e.g. the conveyance of goods within the area of jurisdiction of a town council, town board, etc., with a population of not more than 20,000 persons; the conveyance of farm products from the place of production to the nearest town or station, or goods from the nearest town or station to a farm, if no other reasonable facilities for their conveyance exist; the conveyance of scholars and sports teams; and the conveyance of picnic or other parties, organized by religious associations or for charitable purposes.

Motor carrier transportation under the second head embraces the conveyance by merchants, manufacturers, industrialists, etc., of their own goods. In respect of such conveyance the Board or a local board is compelled to grant exemption (*a*) within certain exempted areas defined by regulation, and (*b*) for the conveyance of goods by their owner between his place of business and the nearest railway station. The normal exempted area is the magisterial district in which an applicant has his place of business, but in certain cases two or more magisterial districts comprise one exempted area, while in a few instances one or more magisterial wards have been excluded from the normal area of exemption. For certain classes of transportation, however, wider areas have been defined, e.g. the conveyance of bona fide commercial travellers' samples, the conveyance of newspapers, the conveyance of building plant and scaffolding, etc.

The procedure to be followed by applicants for motor carrier certificates or exemptions is outlined in the *Motor Carrier Transportation Regulations*, 1932, published in Government Notice No. 1028, dated the 10th August, 1932.

The north-western districts of the Cape Province (i.e. Gordonia, Kenhardt, Carnarvon, Williston, Calvinia, and Namaqualand) were not affected as there were no proclaimed transportation areas or routes in that part of the Cape Province; during the year 1936 the Board found it expedient to recommend to the Government the proclamation of certain routes in Zululand and from Port Nolloth eastwards. Simultaneously the whole system of proclaimed routes throughout the rest of the Union was reconsidered, and a revised Proclamation, No. 1 of 1936, amending and extending routes previously proclaimed and creating additional routes, was duly promulgated with operative effect as from the 1st August, 1936.

The following tables show (*a*) the seating capacity and/or carrying capacity of vehicles employed, and (*b*) the number of passengers conveyed and weight of goods carried in terms of motor carrier certificates issued under

* For personnel see Chapter XXVIII.

Road Motor Transportation Acts during the years 1933 to 1937. The tonnage of goods carried excludes goods carried within the municipal areas, but passenger-carrying vehicles include all those licensed by the Transportation Board under the Act.

9. **Motor Vehicle Legislation.**—Information in regard to the provisions of provincial motor vehicle legislation was given in *Year Book* No. 17 and previous issues. The provincial Motor Vehicle Ordinances and amending Ordinances are as follows:—

PROVINCIAL MOTOR VEHICLE ORDINANCES AND AMENDING ORDINANCES.

	Cape of Good Hope.	*Natal.*	*Transvaal.*	*Orange Free State.*
Main Ordinance.	No. 15 of 1938. No. 19 of 1929 (Omnibus Traffic Control).	No. 10 of 1937.	No. 17 of 1931.	No. 18 of 1931.
Amending Ordinance....	No. 4 of 1938 (Omnibus Traffic Control).	No. 4 of 1938.	No. 19 of 1933. No. 16 of 1938.	No. 3 of 1933. No. 12 of 1933. No. 12 of 1934. No. 14 of 1935. No. 8 of 1937. No. 8 of 1938.

§ 12. Road Vehicle Accident Statistics.

Statistics in regard to road vehicle accidents have been collected by the Office of Census and Statistics since March, 1934. Under the system which was in force from March, 1934, to December, 1937, the officer-in-charge of each police station in the Union furnished his District Commandant with particulars of all accidents reported at his station during the month. Each commandant, of whom there were about 45 in the Union, then summarized the returns for his district and forwarded a copy of the summary to the Census Office, where a summary for the whole Union was compiled.

On 1st January, 1938, a new system of collecting statistics was introduced, whereby detailed reports on all accidents which occur in the Union are submitted to the Census and Statistics Office. The information obtained from these reports is regularly published in the *Monthly Bulletin of Statistics*. A comprehensive report on accidents which occurred during 1938 has also been published; this is obtainable from the Government Printer, Pretoria.

During the year 1938, 43,868 accidents were reported, involving 75,434 vehicles, of which 60,480 were motor vehicles, 10,868 pedal cycles, 95 railway trains, 2,343 animal-drawn vehicles, and 1,648 other vehicles; in addition, collisions occurred with 5,614 pedestrians, 2,032 animals, and 3,213 fixed objects, and there were 1,443 cases of skidding or capsizing. Casualties included: 1,074 persons killed, of whom 396 were Europeans; 3,372 persons seriously injured; and 13,082 persons slightly injured. Of the 1,074 persons killed 448 were drivers of vehicles, including 287 pedal cyclists, 291 were passengers of vehicles, and 335 were pedestrians.

* April to December.

§ 13. Roads and Bridges.

1. **Provincial.**—(i) *Cape of Good Hope.*—In this province the roads are divided into main, divisional, and public roads. Main roads are those established by the *Roads Ordinance, No.* 21 of 1927, as amended by Ordinance No. 32 of 1937; divisional roads are established by proclamation under the provisions of the *Divisional Councils and Roads Ordinance,* No. 13 of 1917; public roads are those, not being main or divisional roads, over which a right-of-way exists in favour of the public. The Administrator is empowered by proclamation to close divisional and public roads, and to divert main, divisional, and public roads. It is the duty of divisional councils to determine the width of roads within the area under their control. Where it is necessary to redetermine the width of roads, the approval of the Administrator is required. The Provincial Roads Engineer and District Roads Engineers are charged with the duty of inspecting roads, bridges, pontoons, and ferries.

Ordinance No. 21 of 1927, as amended, provides for the payment to divisional councils by the Provincial Administration of a subsidy in respect of main roads (and bridges on the line of such roads) and a grant in respect of divisional roads. Provision is also made for the payment of subsidy to municipalities in respect of main roads. Both divisional and municipal councils are empowered to raise loans for road and bridge construction. In the case of roads connecting two divisions, the councils of both divisions may agree to contribute to the construction and maintenance of such roads.

Ordinance No. 31 of 1935 provides for the establishment of a Provincial Road Fund, from which loans may be granted to divisional councils, free of interest, for the purpose of constructing roads or acquiring road-making plant and machinery.

National road construction in the Cape Province is financed by the National Road Board, but the Provincial Administration is responsible for the actual construction and maintenance of the roads.

With the introduction of Ordinance No. 1 of 1935 an Advisory Road Board has been constituted which advises the Cape Provincial Administration in allocating an amount of £50,000 provided annually for a period of five

years from loan funds, plus revenue expenditure voted each year, for the construction and maintenance of the main roads in the Transkeian Territories.

(ii) *Natal.*—The maintenance of Government roads is under the control of a Provincial Road Engineer, and the system is purely departmental. Since the establishment of Union, some 1,100 miles of government roads have been constructed, the total mileage at the end of the year 1937-38 being 6,600. The average annual expenditure on main roads since the constitution of the Union, including new construction and salaries, approximates £200,000. The total number of bridges erected on main roads in the Province is 613.

There were approximately 35 Europeans employed on road construction whose wages were met from provincial funds, and 20 coloured persons were employed in similar services, for whom the Province received a subsidy from the Government.

In Natal 583 miles of roads will eventually become national routes. The construction of these roads will be carried out by the Natal Provincial Roads Department on behalf of the National Road Board.

The expenditure on national routes (mechanical plant, roads, and bridges) for the period under review amounted to £241,557.

The mileage of bituminous roads completed was 16·4, of gravel roads 26·1, and of earth roads 38·5. The number of bridges erected was 13.

(iii) *Transvaal.*—The roads in the Transvaal are governed by the *Roads Ordinance*, No. 9 of 1933 (Transvaal), as amended by the *Roads Amendment Ordinances* Nos. 8 of 1937 and No. 17 of 1938.

During the financial year 1937-38 an amount of £349,210 was expended on the construction, betterment, and maintenance of district and main country roads. This sum includes an amount of £8,860 which was expended on the repair of roads serving schools, as a result of the Administration's School Centralization Schemes.

There are approximately 21,000 miles of district and main country roads in the Transvaal, and in consequence of the Administration's policy of light construction work instead of patchwork maintenance, which has been followed in the past, the improvement in these roads has become very marked. Some 1,600 miles of light construction work was carried out during 1937-38, and in addition numerous small bridges and culverts were built.

In accordance with the policy of the Mines Department to assist mining companies in outlying areas that Department allocated £21,330 to the Provincial Administration for the repair of selected roads in many areas serving the mines. The work consisted mainly of minor repairs and improvements.

The Administration has also carried out work for the Native Affairs Department in respect of roads serving native areas. An amount of £4,350 was made available for this purpose during the year under review.

A Roads Fund is provided for under Chapter 6 of the *Roads Ordinance*, No. 9 of 1933, which re-enacts the provisions of Ordinance No. 19 of 1927, under which a portion of the taxation on motor vehicles is earmarked for work solely on provincial roads; this has allowed of increased road construction work and maintenance. Work was commenced during the latter part of 1927, and at the end of the financial year 1937-38 some 2,750 miles of main inter-town roads had been constructed. This total of 2,750 miles, including 165 miles of tarmac surfacing, has cost the Provincial Road Fund approximately £1,882,000. The cash balance at the disposal of the Roads Fund for the purpose of constructing and maintaining Provincial Roads amounted at 31st March, 1938, to £647,344.

During the financial year 1937-38, the National Road Board made available an amount of £508,660 for the construction and maintenance of National Roads in the Transvaal. In consequence considerable improvement in the construction and tarmac surfacing of the declared sections of National Roads was effected. This has also allowed of more provincial funds being made available for provincial and district roads.

Chapter 4 of the *Roads Ordinance*, No. 9 of 1933, as amended by the *Roads Amendment Ordinance*, No. 17 of 1938, makes provision for the extension of provincial roads into municipal areas as far as the boundary of surveyed erven. It is the policy of the Administration to proclaim these sections provincial roads so as to bring them under the provisions of the Roads Fund.

The *Main Reef Road Ordinance*, No. 17 of 1928, defines and makes provision for the reconstruction and maintenance of the Main Reef Road which is vested in the local authorities through whose areas it passes, but the cost of reconstruction and maintenance is shared between those authorities and the Provincial Administration. The construction of the Main Reef Road has been completed.

Control of roads is vested in the Administrator-in-Executive-Committee. The control is exercised through a Provincial Roads Engineer, assisted by an Assistant Provincial Roads Engineer and technical officers. The field assistants and road inspectors are stationed in magisterial areas in respect of which there are roads boards appointed by the Administrator in terms of sections 11 to 20 of the *Roads Ordinance*, No. 9 of 1933, as amended by the *Roads Amendment Ordinance*, No. 8 of 1937, to assist and advise the Administration on road matters generally falling within their areas. A close connexion with local requirements is thus maintained.

The approximate mileage of roads within the Province (exclusive of those within municipal areas) is as follows:—

Main Reef Road	50 miles.
Main Roads (including Provincial and National Roads) ...	6,000 miles.
District and Country Roads	21,500 miles.

(iv) *Orange Free State.*—In this province the roads are divided into three classes: Proclaimed main roads with a width of 80 Cape feet (in the case, however, of main roads proclaimed as national roads under the *National Roads Act*, No. 42 of 1935, the width is 100 Cape feet); proclaimed district roads with a width of 80 Cape feet; and farm roads with a width of 50 Cape feet. The farm roads are not proclaimed, nor is any complete registration or record kept of them; they become public roads through undisturbed and uninterrupted use by the public for a period of fifteen years. Further modifications of this general principle are embodied in the *Roads Ordinance*, No. 6 of 1932.

No public road, whether proclaimed or not, may be closed or deviated without formal application to and the consent of the Provincial Administration. The construction and the maintenance of roads in the province are done departmentally under the supervision of the Provincial Roads Engineer, who reports to the Provincial Secretary. Only the proclaimed main roads are regularly maintained.

A wheel tax was introduced in 1917, and in 1930 the tax was increased. There are fifty-nine district road boards in the province.

There are approximately 5,000 miles of main roads and approximately 6,500 miles of district roads. The provincial roads of the province are well bridged and drained, and it is possible to travel over the greater portion of the province without danger from flooded rivers or spruits. The estimated expenditure on roads and bridges for the year 1938-39 is £381,000. In addition the sum of £435,000 has been made available from the National Road Fund under the *National Roads Act*, 1935, in connexion with the construction of national roads in the province. Some 5,500 miles of road are now being maintained under the patrol system.

The following is a list of Ordinances under which the control of roads is provided for in the Orange Free State:—

Ordinance No. 14 of 1931.	Ordinance No. 4 of 1936.
Ordinance No. 6 of 1932.	Ordinance No. 9 of 1936.

* Municipalities and village councils only.

† Public works generally. A separation as between roads and bridges and other works cannot be made.

3. National Roads.—(i) *National Roads Act*, 1935.—By this Act was created a National Road Fund and a National Road Board entrusted with the administration of the fund. The National Road Fund derives its funds from—

(a) an allocation of the customs tax on petrol at the rate of 3d. per gallon;

(b) such other moneys as may be appropriated by Parliament; and

(c) interest on the invested cash balances of the fund.

As an initial contribution to the fund an amount of £500,000 was allocated by Parliament out of the surplus revenue of 1934-35.

The National Road Board consists of a chairman and five members appointed by the Minister, four members being appointed from nominations made by each of the four provinces. The Board with the approval of the Minister has appointed a technical and administrative staff to assist in carrying out its duties.

The Board itself is not empowered to construct, reconstruct, repair, or maintain roads: these duties are carried out by the provincial authorities to whom funds are voted for work on declared roads, and the work is required to be in accordance with pre-determined plans and completed to the satisfaction of the Board.

Among the functions of the Board are—

(a) to submit to the Minister for his approval a five-year scheme of works to be undertaken on declared roads at the expense of the fund;

(b) to recommend to the Governor-General for declaration in the *Gazette* any road which, in the national interest, it considers should be declared a national or a provincial road, or a special road which in the Board's opinion would serve substantially to develop some part of the Union or would otherwise serve the public interest;

(c) to supervise and co-ordinate the works carried out at the expense of the fund;

(d) on its own initiative or at the request of the Minister to investigate any question appertaining to roads in the Union;

(e) generally to promote the improvement of road services in the Union.

(ii) *Five-Year Scheme.*—On the 22nd February, 1936, the Board submitted a five-year scheme of works framed by it in pursuance of the provisions of section 15 (1) (*f*) of the *National Roads Act*, 1935 (see Report, U.G. No. 20 of 1936). This scheme has received the approval of the Minister of the Interior.

The scheme provides for the construction, reconstruction or repair, and maintenance, at the sole cost and charge of the National Road Fund, of approximately 5,396 miles of roads recommended for declaration as national roads under section 4 (*a*) of the Act. No provision is made in the scheme for either provincial or special roads to be declared under section 4 (*b*) and (*c*) of the Act.

The following is an outline of the routes recommended and the estimated mileages:—

ROUTES RECOMMENDED.

No. of Route.	Outline Description.	Cape of Good Hope.	Natal.	Transvaal.	Orange Free State.	Total Mileage of Route.
		Miles.	Miles.	Miles.	Miles.	
1	Belt Bridge-George	363	—	398	352	1,113
2	Capetown-Durban	999	126	—	—	1,125
3	Durban-Johannesburg	—	258	148	—	406
4	Pretoria-Komatipoort	—	—	275	—	275
5	Winburg-Ladysmith	—	37	—	165	202
6	Reddersburg-East London	247	—	—	99	346
7	Middelburg-Port Elizabeth	224	—	—	—	224
8	Kimberley-Bloemfontein	4	—	—	111	115
9	Capetown-Colesberg	506	—	—	—	506
10	Mount Ayliff-Pietermaritzburg	79	69	—	—	148
11	Capetown-Van Rhynsdorp	195	—	—	—	195
12	Doorn River-Cango Caves	48	—	—	—	48
13	Johannesburg-Kimberley-Nelspoort	346	—	254	—	600
14	Durban-Eshowe	—	93	—	—	93
	TOTAL	3,011	583	1,075	727	5,396

The standards of construction will provide as far as possible for safe, rapid, economical, and all-weather transport. The minimum legal servitude width for national roads will be 100 Cape feet in the case of the Transvaal, Orange Free State, and Cape Provinces, and 100 English feet in Natal, except on sections where the Board considers it impracticable.

Special attention is being given to such matters as the bridging of river crossings; the elimination of, protective measures at, and improvement to railway crossings; the erection of warning signs and direction and identification posts; the provision of road patrol depots; the planting of trees along roads where considered advisable; and systematic and efficient maintenance.

Provision was originally made in the five-year scheme for the construction of approximately 20 to 25 per cent. of the 5,396 miles of roads to bituminous standards. The Board has now decided that all national roads shall be bituminized.

It is estimated that the amount required for the completion of the scheme will be approximately £20,000,000. This amount includes interest and redemption on Provincial and Divisional Council loans raised prior to the 1st April, 1935, which under the Act form a first charge against the National Road Fund.

(iii) *Progress.*—The following is a summarized statement of approximate progress on national roads up to 31st December, 1938:—

Heading.	Cape of Good Hope.	Natal.	Transvaal.	Orange Free State.	Total.
Surveys—					
Total mileage completed	1,120	180	540	280	2,120
Bridge Construction—					
Number of bridges completed and bridges on which work was proceeding	50	18	32	20	120
Road Construction other than Bituminous Surfacing—					
Mileage completed	610	116	374	195	1,295
Construction of Bituminous Surfacing—					
Mileage completed	90	70	205	45	410

The Board has submitted the *Advertising and Ribbon Development Restriction Draft Bill* for the consideration of the Provincial Administrations and the Government.

CHAPTER XIV.

POSTS, TELEGRAPHS, AND TELEPHONES.

§ 1. Posts.

1. **Origin and Development of Postal Service in South Africa.**—An article entitled "An Outline of the Development of the Postal, Telegraph, and Telephone Services of South Africa" was published in *Year Book* No. 18.

The foundation of the South African Postal Union was laid in 1883 by means of separate Conventions entered into between the several South African Governments. The first South African Postal Union Convention came into force in 1898. This secured uniformity of practice and rates of postage between the Cape, Natal, Transvaal, and the Orange Free State. The Portuguese Province of Mozambique became a party to the Postal Union at a later date.

2. **Postal Service.**—The postal laws and ordinances of the four provinces of the Union, dating from 1882 in the case of the Cape of Good Hope and Natal, from 1898 in the case of the Transvaal, and from 1903 in the case of the Orange Free State, continued to have effect until the 1st September, 1911, when the "Act to consolidate and amend the laws in force in the Union relating to the Post Office, and to impose certain charges to discourage shipping combinations" (Act No. 10, 1911) was brought into operation. The Act provides that the administration and control of the Department shall, under the Minister of Posts and Telegraphs, be vested in the Postmaster-General, who has the supervision and control of all persons in the service of the Department and of all post offices and post and telegraph services. He is authorized to establish, maintain, and abolish mail services, post offices, and savings bank offices; to make and alter postal and telegraph arrangements with other postal and telegraph administrations; and to make regulations for the conduct and guidance of officers and for the conduct of any business entrusted to him, or as to the manner of exercising the powers and duties assigned to him by the Act. He may prescribe the fees, rates, or charges for the conveyance of postal articles and for the transmission, conveyance, or delivery of telegrams, and for any other service rendered by the Department. The headquarters of the Department are at Pretoria. Mails are conveyed by every description of transport: by the aboriginal runner, the post-cart, the motor car, the travelling (railway) post office, and the aeroplane. There are in all 1,598 posts exclusive of those conveyed by rail.

3. **Postal Facilities.**—The following statement shows the number of offices open, posting receptacles in use, and private bags in use for a series of years, and also the number of inhabitants and the number of square miles to each post office:—

POSTAL FACILITIES, 1934 TO 1938.

Year ending 31st March.	Number of Post Offices Open.	Number of Posting Receptacles in Use (excluding those at Post Offices).	Number of Private Bags in Use.	Number of Inhabitants * (all Races) to each Post Office.	Number of Square Miles to each Post Office.
1934	3,178	1,497	4,744	2,908	149
1935	3,212	1,584	4,908	2,935	147
1936	3,241	1,657	5,108	2,967	146
1937	3,304	1,760	5,421	2,965	143
1938	3,317	1,852	5,736	3,009	142

* Estimated mean population 30th June.

There are 56,391 private boxes installed at 587 post offices in the Union, the numbers in the various provinces being:—

PRIVATE BOXES IN POST OFFICES AT 31st MARCH, 1938.

Province.	Total Number of Post Boxes.	Number of Post Boxes Let.	Number of Post Offices Concerned.
Cape of Good Hope	16,850	11,082	218
Natal	7,933	4,595	104
Transvaal	24,030	18,140	168
Orange Free State	7,578	4,341	97

Private boxes are available for rental purposes at most of the large post offices, and the fees vary, according to size and according to whether an office is in an urban or a rural area, from 15s. to £3. 5s. per annum.

4. **Mail Matter Dealt With.**—The following tables show for a series of years mail matter dealt with:—

8. **Rates of Postage.**—(i) *General.*—The following are the principal post office charges:—

RATES OF POSTAGE FROM UNION OF SOUTH AFRICA.

Country.	Letters.	Postcards.	Newspapers.	Printed and Commercial Papers.	Sample Packets.
A. Union of South Africa, Basutoland, Bechuanaland Protectorate, Swaziland, and South West Africa.	1d. per ½ oz. air conveyance; 1d. per oz. surface conveyance.	1d. each for air conveyance; ½d. each for surface conveyance.	½d. per 4 oz. per copy. Limit of weight for each packet 1 lb.	½d. per 2 oz.	½d. per 2 oz. with a minimum of 1d. for packets addressed to places outside the Union.
B. Southern Rhodesia, Northern Rhodesia, Mozambique, Kenya, Uganda, and Tanganyika, Nyassaland, Angola, and Belgian Congo.	1½d. per ½ oz.*	1½d. each.*	½d. per 4 oz. per copy. Limit of weight for each packet 1 lb.	½d. per 2 oz.	½d. per 2 oz. with a minimum of 1d.
C. Aden, Australia, Bahrein, Banks Islands, Brunei, Burma, Canada, Ceylon, Cook Islands, Dubai, Eire (Irish Free State), Egypt, Fanning Island, Fiji Islands, Gilbert and Ellice Islands, Great Britain, Hong Kong, India (British and French), Labuan, Malay States (Federated and Unfederated), Mauritius, Muscat, Nauru, Newfoundland, New Guinea (Mandated Territory), New Hebrides, New Zealand, Norfolk Island, North Borneo, Northern Ireland, Palestine, Papua, Persian Gulf Ports (Bahrein, Dubai, and Muscat only), Samoa (Territory under British Administration), Sarawak, Seychelles, Solomon Islands, Straits Settlements, Sudan (Anglo-Egyptian), Tibet, Tonga, Transjordan, and Zanzibar.	1½d. per ½ oz.*	1½d. each.*	½d. per 2 oz.	½d. per 2 oz.†	½d. per 2 oz. with a minimum of 1d.
D. For remainder of British Commonwealth.	1d. per oz.	1d. each.	½d. per 2 oz.	½d. per 2 oz.†	½d. per 2 oz. with a minimum of 1d.
E. For Foreign Countries.	3d. the first oz. and 1½d. for each additional oz.	1½d. each.	½d. per 2 oz.	½d. per 2 oz.†	½d. per 2 oz. with a minimum of 1d.

* Conveyed by air mail only. † With a minimum of 3d. in the case of commercial papers.

Cash on Delivery Fees.

For trade charges up to and including £1	1s.
For every additional £1 or part thereof	3d.

Parcels (Surface Mail).

Agricultural parcels addressed to any place within the Union and Basutoland...	Up to 1¼ lb.	3d.
	Over 1¼ lb., but not exceeding 3 lb...	6d.
	Over 3 lb., but not exceeding 6 lb....	8d.
	Over 6 lb., but not exceeding 9 lb....	10d.
	Over 9 lb., but not exceeding 11 lb...	1s.
Agricultural parcels addressed to the Bechuanaland Protectorate (except Kasane and Ghanzi).....	Up to 3 lb.....	1s.
	Over 3 lb. but not exceeding 7 lb.	1s. 6d.
	Over 7 lb. but not exceeding 11 lb.	2s.
Ordinary parcels.—For places within the Union and for Mozambique and South West Africa.....	Not exceeding 4 oz.....	2d.
	Not exceeding 8 oz.....	4d.
	Not exceeding 1 lb.....	6d.
	For every additional 1 lb. or portion thereof.....	6d.
For Bechuanaland Protectorate.....	1s. per lb. (Kasane 1s. 3d. per lb.).	
For Rhodesia (Southern).....	1s. 1d. per lb.	
For Rhodesia (Northern).....	1s. 3d. per lb.	
For United Kingdom.....	9d. per lb.	
For British possessions and foreign countries	Special rates have been fixed on an average traffic basis.	

(ii) *Air Mail Letter Rates.*—On and from the 1st July, 1937, new postage rates were introduced as a result of the decision to transmit by air mail all letters and postcards addressed to countries participating in the Empire Air Mail Scheme, as well as to the Belgian Congo, Angola, and Mozambique.

As from 1st October, 1937, alternative air mail and surface mail rates were introduced for letters addressed to destinations within the Union and South West Africa only. The standard rate is 1d. per half-ounce and letters must be stamped according to this rate, unless they are clearly marked "By surface conveyance", when the rate is 1d. per ounce. Surface transport is also used where speedier delivery can be effected by this means. The ½d. postcard is still available within the Union, South West Africa, and the Protectorates, but is only eligible for conveyance by surface mail.

Letters addressed to the overseas countries mentioned under B and C in the schedule above travel by air mail and are rated at 1½d. per half-ounce (postcards 1½d. each). There are no alternative surface mail postage rates for these countries.

Higher rates, as specified below, apply to letters conveyed by air to the countries not mentioned under A, B, and C above. The weight basis is half an ounce. Postcards may be forwarded by air mail at half the minimum rates for air mail letters, except where the rate for this class of mail matter is specifically mentioned. The ocean mail rates are given in paragraph (i) above and these are the only instances in which there are alternative air mail and ocean mail rates.

AIR MAIL—RATES OF POSTAGE.

Country of Destination.	Letters per ½-oz.	Post Cards.
	s. d.	s. d.
Europe.....	1 0	0 6
Asia—		
Russia (in Asia).....	1 0	0 6
All other countries.....	1 6	0 9
Africa—		
Gold Coast, Nigeria, Gambia, Sierra Leone via Lagos.....	0 6	0 3
Other Countries—		
East Coast.....	0 9	0 4½
North and West Coast.....	1 3	0 7½
America—

Argentine, Bolivia, Brazil, Chili, Paraguay, Uruguay.....	4 0	2 0
All other countries.....	1 6	0 9

The foregoing rates include air transmission by all international and internal services available.

(iii) *Air Mail Parcel Rates*:—

Within the Union and South West Africa: 9d. per ½ lb.

Air mail parcels are not accepted for destinations other than the above.

9. **Money Orders.**—Money Order Conventions are in force between the Union of South Africa and the Commonwealth of Australia, Dominion of Canada, Ceylon, Holland, Hong Kong, India, Netherlands East Indies, France (including Algeria), Germany, Irish Free State, Italy, Kenya Colony, Malaya, Mauritius, Mozambique, New Zealand, Nyasaland Protectorate, Northern and Southern Rhodesia, St. Helena, Tanganyika Territory, United States of America, and Zanzibar. There is also direct money order exchange with the United Kingdom.

There are 973 money order offices in the Union. The maximum amount of a single money order is £40.

(i) MONEY ORDERS AND COMMISSION, 1934 TO 1938.

(iv) *Rates of Commission on Money Orders.*—The rates of commission charged on money orders issued in the Union of South Africa are as follows:—

For payment in the Union of South Africa, South West Africa, and Bechuanaland Protectorate ...	6d. per unit of £4 or part thereof.
For payment in Northern Rhodesia and Mozambique	9d. per unit of £4 or part thereof.
For payment in Southern Rhodesia	9d. per unit of £4 or part thereof plus 2d. exchange per £1 or part thereof.
For payment elsewhere	1s. per unit of £4 or part thereof.

(v) *Foreign Telegraph Money Orders.*—A service exists between the Union of South Africa on the one hand, and the United Kingdom, Germany, Irish Free State, Mauritius, Nyasaland, Kenya, Uganda, and Tanganyika Territory on the other, by which remittances may be telegraphed to or from money order offices in those countries. The maximum amount of an overseas or foreign telegraph money order is £40 and the charges in the Union are:—

(*a*) The money order commission at overseas rates, viz. 1s. for every £4 or part thereof, and

(*b*) The cost of the telegram of advice at full or deferred rates for telegrams addressed to the country of destination.

10. **Postal Orders.**—Union and British postal orders are issued and paid throughout the Union.

Union postal orders are payable in the Union, the Bechuanaland, Basutoland, and Swaziland Protectorates, South West Africa, Northern and Southern Rhodesia, Nyasaland, Kenya, Uganda, and Tanganyika Territory, and Portuguese East Africa.

British postal orders carrying a higher poundage charge are used for remittances to Great Britain and a number of overseas countries which accept and pay them.

15s., 17s. 6d., 20s.	6d.

11. **Postal Drafts.**—A system of postal drafts is in force, by means of which a member of the public can draw upon another at any point in the Union and South West Africa where there is a money order office, for any sum up to £10 A *demand* is made by the postmaster, on a date specified by the drawer, upon the person from whom the money is to be collected. If paid, the postmaster issues a receipt and remits the amount collected to the drawer by money order. The Department's fee is 1s. for one demand and 1s. 9d. for two. The presentation of a postal draft has the same force and effect as a legal demand, and in any suit or action the production of a dishonoured draft, with the postmaster's report thereon, is taken as evidence of the facts stated in that report, unless the contrary be proved.

POSTAL DRAFTS ISSUED AND COLLECTED, 1934 TO 1938.

12. **Ocean Mail Service.**—The present contract for the conveyance of mails between South Africa and the United Kingdom, which is held by the Union-Castle Mail Steamship Company, has been in existence since 1st January, 1937, and provides that the duration of the voyage shall not exceed 14 days in each direction. The subsidy paid is £225,000 per annum, of which £27,000 is paid in consideration of the mail ships commencing and terminating their voyage at Durban instead of Capetown.

Postal communication is maintained between South Africa and South America by means of private ships as opportunity offers, and with India, the Far East, and Australia by means of either the Empire Air Mail Scheme or private ships.

13. **Air Mail Service.**—Particulars in connexion with postal matter conveyed by air will be found in Chapter XIII.

§ 2. Telegraphs and Wireless Communication.

1. **Development of Service.**—Particulars of the development of the telegraph services were given in an article entitled "An Outline of the Development of the Postal, Telegraph, and Telephone Services in South Africa" published in *Year Book* No. 18.

2. **Statistics of Working.**—The following table gives particulars regarding the mileage of wire, number of offices, and number of telegrams dealt with during a series of years:—

WORKING OF TELEGRAPHS, 1934 TO 1938.

Year ending 31st March.	Mileage of Wire.	Number of Offices.	Forwarded Telegrams dealt with.		Cash Revenue.	Total Capital Expenditure to End of Year.
			Number.*	Value.		
			1,000	£	£	£1,000

1937	21,074	3,185	6,978	545,642	605,714	1,656
1938	21,289	3,273	7,065	555,304	626,350	1,763

* All classes, including radio-telegrams and overseas telegrams, but excluding railway service messages handed in at telegraph offices worked by the Railway Administration.

3. **Rates for Transmission of Telegrams.**—The following are the present rates for transmission of telegrams:—

For the Union of South Africa, South West Africa, Basutoland, and Swaziland	1s. for the first 12 words or portion thereof and 1d. for every additional word.
For Southern Rhodesia, British Bechuanaland, and the districts of Lourenco Marques and Inhambane (P.E.A.)	2s. for the first 12 words or portion thereof and 2d. for every additional word.
For transmission from aeronautical wireless stations to Imperial Airways and South African Airways aircraft whilst in flight	11d. per word.
For transmission from Slangkop Radio, Jacobs Radio, East London Radio, Algoa Bay Radio, and Walvis Bay Radio by wireless telegraphy to ships at sea	11d. per word.*

*This charge is reduced to 6d. a word for radio-telegrams exchanged with vessels of the Union-Castle Line, the German African Lines, the City and Hall Lines, the Canadian-South African Lines, the Holland-Africa Line, the Indian African Line, the India-Natal Line, the Natal Line, the K.P.M. Line, the Swedish South Africa Line, Norwegian, Africa and Australia Line, and Lloyd Triestino Line (Duilio and Guilio Cesare only), while on the coast between Capetown and Durban.

4. **Wireless Telegraphy.**—(i) *Coast Stations for Ship to Shore Working.*—Departmental wireless coast stations have been established at Slangkop (near Capetown), Algoa Bay (Port Elizabeth), Jacobs (near Durban), and Walvis Bay. These stations are equipped with up-to-date apparatus and are able normally to communicate with ships up to a distance of 2,000 miles. To ships fitted with short-wave installations communication is possible over much greater distances. A coast station of small power is also established at East London.

Provision is made for the principal ports from which succour can be sent to be notified of distress calls from ships at sea, and a continuous watch, which is maintained at all wireless stations, ensures an immediate response to such calls.

A news service and a wireless time signal are broadcast daily from Slangkop Radio for the information of ships at sea. The news service is also broadcast daily from Walvis Bay Radio. In addition, a wireless station, known as Table Bay Radio, is established at the Docks, Capetown, in connexion with the safe navigation of vessels into port during times of fog or haze. Similar wireless stations are established at Durban and Algoa Bay Harbours for communication with the harbour tugs.

(ii) *Wireless Stations for Aeronautical Working.*—To aid air navigation, departmental wireless stations have been established at Bethlehem, Beaufort West, Durban, East London, Germiston, Kimberley, Maclear, Maitland, Mossel Bay, Pietersburg, Piquetberg, Port Elizabeth, and Vryheid. Provision is made for the exchange direct between aerodrome stations and aircraft in flight of messages comprising meteorological and other data to ensure safety of aircraft and regularity of air traffic.

(iii) *Overseas Wireless Telegraphy.*—Wireless telegraphic communication is established between the Union of South Africa and Great Britain by means of the Beam system of transmission. As from the 1st October, 1930, the Eastern Telegraph Company's cables and the Beam wireless system have been worked jointly by a single South African operating company known as Overseas Communications of South Africa, Limited. The provision of a direct land line between Johannesburg and the Company's Office in Capetown affords, in effect, direct telegraphic communication between Johannesburg and London.

1938	11,978	27,567	39,545	196,812	394,766	591,578	13,226

5. **Wireless Broadcasting.**—In view of the development of wireless telephony, regulations dealing with the subject of broadcasting, and also with the question of wireless experimenting, were published in August, 1923. Under these the Postmaster-General was empowered to grant licences, under certain conditions, for the establishment of a broadcasting wireless telephony service, as well as for the installation of receiving-sets by listeners, who were required to enter into a contract with broadcasters licensed in particular areas. Receiving-set licences were charged for at the rate of 5s. per annum, and in addition prescribed charges were payable to the broadcaster. The regulations also made provision for the control and licensing of amateur wireless experimenting.

The opening on the 1st July, 1924, of a broadcasting station at Johannesburg, and the subsequent establishment of similar stations at Capetown and Durban, stimulated the public interest in wireless telephony, as is shown

by the marked increase in the number of wireless licences issued. Stations have also been established at Bloemfontein, Pietermaritzburg, Pretoria, and Grahamstown.

In 1926 a *Radio Act*, No. 20 (subsequently amended by Act No. 23 of 1928 and Act No. 22 of 1936), was passed by the Legislature. This Act, which repealed the previous regulations, makes provision for the control of radio activities within the Union, and places the exclusive privilege of transmitting and receiving radio-telegrams under the control of the Postmaster-General, who is empowered to issue licences under prescribed conditions to persons operating wireless stations, to experimenters, broadcasters, and listeners.

Fees are payable annually in advance, and are as follows:—

Description.	Within 100 miles of nearest main broadcasting centre.	Beyond 100 miles but not exceeding 250 miles.	Beyond 250 miles.
(*a*) TARIFF I.			
	£ s. d.	£ s. d.	£ s. d.
All classes of radio receiving apparatus, except loud-speaker extensions specified in Tariff II.	1 15 0	1 5 0	1 0 0
(*b*) TARIFF II.			
Each loud-speaker extension from a master radio receiving apparatus installed in a block of flats, hotel, or any other communal or collective establishment	0 17 6	0 17 6	0 17 6

In special circumstances such fees are payable as the Board of Governors of the South African Broadcasting Corporation may prescribe.

(*c*) Listener's licences may be issued free of charge to:—

(i) Educational institutions approved by the Board, provided that the receiving sets are used solely for educational purposes and are installed in class-rooms for this purpose.

(ii) Public hospitals.

(iii) Charitable institutions recognized and approved by the board of governors as such.

(*d*) Listener's licences may be issued to the following persons on payment of a fee of 2s. 6d.:—

(i) Blind persons whose applications for such licences are supported by recommendations from societies for the care of the blind recognized by the board of governors.

(ii) Indigent invalids whose circumstances are deemed by the board of governors to be such as to warrant the granting of a 2s. 6d. licence;

The granting of any licences under (*c*) and (*d*) is in the entire discretion of the board of governors.

The number of listener's licences current at the 31st March in each of the last nine years is shown in the following table:—

1930	19,138	1935	108,428
1931	28,343	1936	139,494
1932	42,719	1937	166,344
1933	53,670	1938	189,321
1934	73,704		

6. **South African Broadcasting Corporation.**—The *Broadcasting Act*, No. 22 of 1936, which provides for the establishment of the South African Broadcasting Corporation, came into force on 1st August, 1936. The Act provides for the appointment of nine governors and of local councils at Johannesburg, Pretoria, Capetown, Grahamstown, Durban, Pietermaritzburg, and other centres

as required, to advise the board on matters connected with the broadcasting service. The Corporation is empowered to make regulations for fixing the amount of listener's licence fees, but any regulations dealing with fees must be approved by the Minister before they become effective. Section 14 of the Act provides that the Corporation shall frame and carry out its broadcasting programme with due regard to the interests of both English and Afrikaans culture.

One of the major developments in broadcasting since the establishment of the Corporation is the introduction towards the end of 1937 of two additional independent programmes which are predominantly Afrikaans. These programmes were originally broadcast only from Roberts Heights and Klipheuvel short-wave transmitters, which the Corporation hires from the Postmaster-General and Overseas Communications of South Africa, Ltd., respectively, but are now also relayed by medium-wave transmitters in Johannesburg, Pretoria, Bloemfontein, and Capetown.

The earlier transmissions from the Roberts Heights and Klipheuvel transmitters, and also those from the experimental long-wave transmitter in Johannesburg, undertaken during 1937-38, formed part of an experiment which was undertaken on the advice of the Corporation's own experts and the foremost overseas authorities in order to obtain data as to the suitability of different wavelengths in the Union before formulating a comprehensive coverage scheme.

Another interesting development which has been achieved is the erection near Johannesburg of a receiving station, similar to the British Broadcasting Corporation's station at Tatsfield. This station will enable the Corporation to receive and to relay suitable overseas programme material.

The Corporation now broadcasts five entirely independent programmes and one semi-independent programme (that from the Grahamstown transmitter) for approximately twelve hours daily and had twelve transmitters in operation at the end of 1938. This number will be increased to sixteen during 1939.

A comprehensive survey of the Corporation's activities from 1st August, 1936, to 31st December, 1937, is contained in the Annual Report issued in April, 1938. Details of later developments will appear in future annual reports, which will be published in April each year.

Particulars of wave lengths and power of broadcasting stations are:—

Station.	Metres.	Kilocycles.	Power in Kilowatts.
Bloemfontein	371·01	808·6	2·0
*Bloemfontein	483·87	620·0	(?)
Capetown	500	600·0	10·0
*Capetown	340·91	880·0	2·0
Capetown (Klipheuvel)—			
Daylight Transmission	31·23	9,606·0	5·0

Pietermaritzburg	430·00	697·7	10·0
Pretoria	315·0	952·38	2·0
*Pretoria	449·1	668·0	(?)

* Will be put in operation during 1939.

7. **Cable and Beam Services.**—The cables connecting South Africa with Great Britain, Australia, South America, India, and the Far East are owned by the Eastern Telegraph Company, but they are operated by the Overseas Communications of South Africa, Limited, working in conjunction with the Beam wireless system between the Union of South Africa and Great Britain. There are five principal cable routes:—

(1) To the United Kingdom via St. Helena and St. Vincent.

(2) To Australia and the Far East via Cocos.
(3) To the United Kingdom via the West Coast stations serving the Gold Coast, etc.
(4) To the United Kingdom and India via East Coast stations.
(5) To South America via Ascension and St. Vincent.

OVERSEAS TELEGRAMS DEALT WITH ON BEHALF OF THE OVERSEAS COMMUNICATIONS OF SOUTH AFRICA, LTD., 1934 TO 1938.

Year ending 31st March.	Number of Messages.			Value of Terminal Charges accruing to the Union Government from Overseas Telegrams.
	Outwards.	Inwards.	Total.	
				£
1934	355,257	317,995	673,252	35,219
1935	388,914	311,862	700,776	37,586
1936	385,472	358,702	744,174	38,885
1937	451,348	409,589	860,937	42,315
1938	423,995	419,735	843,730	41,257

Communication with overseas countries is maintained through Overseas Communications of South Africa, Ltd., and, unless routed by the sender, traffic circulates via either the cable system or the beam wireless at the discretion of the company. The charges for both routes are identical. Beam wireless communication was established in 1927, when it was operated by an independent company, but as from 1st October, 1930, the beam wireless and the cable system have been worked under the control of the above-mentioned Company. From 1st April, 1931, all traffic has circulated via Capetown.

8. **Overseas Telegram Tariffs.**—The lowest charges per word for ordinary private telegrams addressed to the countries mentioned below are as follows:—

Europe—	
Bulgaria, France, Italy, Portugal, Switzerland, and Jugoslavia	1s. 4d.
Czechoslovakia, Germany, Holland, Hungary, Roumania, Turkey	1s. 5d.
Denmark, Iceland, Lithuania, Norway, Poland, Sweden	1s. 6d.
Estonia	1s. 8d.
Finland, Latvia	1s. 7d.
Great Britain and Northern Ireland, Eire, Belgium, Greece, Spain, Gibraltar	1s. 3d.
Soviet Socialist Republics	1s. 9d.
Other Countries—	
Argentina, Chile, Peru	3s. 9d.
Australia	1s. 3d.
Brazil	2s. 10d. and 3s. 7d.
British West Africa	1s. 3d.
British West Indies	1s. 3d.
Burma	1s. 3d.
Canada	1s. 3d.
Canary Islands	1s. 5d.
Ceylon	1s. 3d.
China	3s. 10d. to 4s.
Dutch East Indies	2s. 5d.
Hong Kong	1s. 3d.
India	1s. 3d.
Japan, Manchuria, Taiwan	4s.
Kenya and Uganda	1s. 3d.
Madeira	1s. 8d. and 1s. 9d.
Mauritius, St. Helena	1s. 1d.
New Zealand, Tanganyika	1s. 3d.
United States of America (according to State)	2s. to 2s. 7d.

Half-rate, i.e. deferred, telegrams in plain language are accepted for most destinations. These messages may be delayed in transmission in favour of higher-rated traffic. An *urgent* class of telegram, charged at double rates, is accepted for most countries. Telegrams expressed in code language are subject to special conditions as to word construction; they are charged at approximately six-tenths of the ordinary tariff and are admitted for all destinations. Letter telegrams, which are transmitted as traffic conditions permit, are accepted for a number of countries at approximately one-third of the ordinary tariffs.

§ 3. Telephones and Beam Telephone Service.

1. **First Exchange and Development of Service.**—In 1882 the first telephone exchange in South Africa was opened at Port Elizabeth, followed in 1884 by the opening of a similar exchange at Capetown. In quick succession exchanges were established at all the principal towns throughout the Cape Colony, Natal, Transvaal, and Orange Free State. At the 31st March, 1938, there were 1,509 exchanges in existence in the Union. The largest exchange system is situated at Johannesburg, where 39,115 subscribers' lines and 720 public call offices were in use at 31st March, 1938. Automatic exchanges have been established throughout the areas served by the exchange systems at Johannesburg, Durban, Port Elizabeth, East London, Pietermaritzburg, Kingwilliamstown, and in the Cape Peninsula, with the exception of Bellville and Parow, where the work of conversion from manual to automatic working is in hand. In addition, automatic exchanges have been established on the Reef at Germiston and Springs, and arrangements have been made gradually to convert the remaining Reef exchanges to automatic working.

Long distance communication by telephone has been effected by the introduction of repeaters at various points, and conversation can be carried on between all the larger centres of the Union. The further extension of long-distance telephone communication is receiving attention.

In addition to the extension of long-distance communication within the borders of the Union, communication has also been established between the Union and Lourenco Marques, Southern and Northern Rhodesia, and South West Africa. A service is also in operation between the Union and Kenya by means of radio telephony.

Particulars of the development of the telephone service were given in an article entitled "An Outline of the Development of the Postal, Telegraph, and Telephone Services of South Africa", published in *Year Book* No. 18.

2. **Farm Telephone Lines.**—In order to assist in the development of agriculture and of rural areas, close attention has been given for some time past to the expansion of the farm line system. Specially advantageous conditions, including reduced rates, have been applied to this class of business, and its growth continues to be marked. The 4,520 miles of farm line serving 2,221 farmers in 1924 had grown by March, 1938, to 45,631 miles, giving service to 18,009 farmers.

3. **Telephone Tariff Rates.**—(i) *Flat Rate Exchanges.*—The annual rental covers unlimited service to the exchange to which the subscriber is connected. The following tariffs are applicable:—

Description.	Business Premises.	Private Residences.	Two-party Lines to Private Residences only.
	£ s. d.	£ s. d.	£ s. d.
At exchanges consisting of not more than fifty subscribers	7 0 0	5 0 0	4 10 0
At exchanges consisting of more than fifty subscribers	10 0 0	7 0 0	5 0 0

For lines extending beyond the radius of one mile from the exchange the excess mileage is charged for at the rate of £1. 10s. per annum per quarter mile or portion thereof.

(ii) *Message Rate Exchanges—*

Kingwilliamstown and Kroonstad:

	£	s.	d.
Annual rental for an exchange line to premises not more than two miles distant from the exchange	2	10	0
Excess mileage per quarter mile or portion thereof per annum	1	10	0
For each local call	0	0	1½

Bloemfontein, East London, Kimberley, Pietermaritzburg, and Port Elizabeth:

	£	s.	d.
Annual rental for an exchange line to premises not more than two miles distant from the exchange	3	0	0
Excess mileage per quarter mile or portion thereof per annum	1	10	0
For each local call	0	0	1½

(iii) *Grouped Message Rate Exchange Systems* comprise the following:—

(1) *Witwatersrand Exchange System embracing*:

Zone A. Krugersdorp, Randfontein.
Zone B. Florida, Roodepoort.
Zone C. Auckland Park, Bedford View, City, Hillbrow, Jeppes, Johannesburg, Kensington, Linden, Mayfair, Newlands, Orange Grove, Parkview, Rosebank, Turffontein, Yeoville.
Zone D. Alberton, Boksburg, Edenvale, Germiston.
Zone E. Benoni, Brakpan, Brentwood Park, Petit, Putfontein, Springs.
Zone F. Rivonia, Sandown.

(2) *Pretoria Exchange System embracing*:

Zone A. Hatfield, Pretoria, Pretoria North.
Zone B. Irene.
Zone C. Silverton.
Zone D. Wierda Bridge.

(3) *Capetown Exchange System embracing:*

Zone A. Capetown, Rondebosch, Sea Point, Woodstock, Wynberg.
Zone B. Bellville, Parow.
Zone C. Hout Bay, Muizenberg, Noordhoek.
Zone D. Simonstown, Kommetje.

(4) *Durban Suburban Exchange System embracing*:

Zone A. Overport, Durban North, Rossburgh, Fynnlands, Westville.
Zone B. Isipingo.
Zone C. Hillcrest, Kloof, Malvern, Pinetown.

The annual rental charges applicable in these grouped exchange systems are as follows:—

	£	s.	d.
Exchange Lines:			
To premises not more than two miles distant radially from the exchange	3	12	0
Excess mileage per quarter mile or portion thereof ...	1	10	0
Call Fees:			
For each local call to an exchange situated within the same zone as the exchange to which the calling subscriber is connected	0	0	1½
To exchanges in adjacent zones	0	0	3
To exchanges in the third zone, the subscriber's zone counting as the first	0	0	4½
To exchanges more than three zones distant within the same exchange system	0	0	6

(iv) *Farm Telephone Line Services—*

		Rental.
(a)	For lines connected to the nearest exchange and where the number of subscribers is not less than ten	£7 per party per annum.
(b)	For lines connected to the nearest exchange and where the number of subscribers is less than ten	A total annual rental equivalent to 15s per annum per quarter mile of line or portion thereof, with a minimum of £7 per party per annum and a total maximum of £70 per annum exclusive of the charges for auxiliary services.

Where, for good and sufficient reasons acceptable to the Postmaster-General, a farm telephone line is connected to other than the nearest exchange, even though ten parties are connected, a total annual rental equivalent to 15s. per quarter mile of line or portion thereof is charged according to distance, subject to a minimum of £7 per annum per party.

The annual rental for farm telephone lines covers unlimited service to the exchange to which the subscriber is connected.

(v) *Call Offices and Trunk Services.*—(A) *Call Offices.*—The charges for call office calls are as follows, with a minimum of 3d. for three minutes:—

(*a*) For calls to subscribers or other call offices connected to the same exchange, 3d. for three minutes or portion thereof;

(*b*) for calls within the grouped exchange system—

(i) to exchanges within the same or adjacent zones: 3d. for three minutes or portion thereof;

(ii) to exchanges more than two zones distant: 6d. for three minutes or portion thereof;

(*c*) for calls to any other exchange more than 15 miles distant, measured radially, the rates for trunk calls apply.

The Postmaster-General has the right to terminate any call after expiration of six minutes.

(B) *Trunk Line Calls.*—The charges for trunk line calls are as follows:—

For Distance up to and including.	Between 8 a.m. and 6 p.m.		Between 6 p.m. and 9 p.m., 6 a.m. and 8 a.m.		Between 9 p.m. and 6 a.m.	
Miles—	s.	d.	s.	d.	s.	d.

1,070	15 3	10 3	6 6
1,095	15 6	10 6	7 0

Unit Period.—The unit period is three minutes from the time that the caller is informed that the connexion required is established, provided that when the charge for a three-minute call is not less than 5s. (3s. 6d. and 2s. 6d. at night) extra time is charged for *pro rata* per minute.

4. **Statistics of Working.**—The following tables give particulars of the operation of the telephone services for a series of years:—

(i) TELEPHONE SERVICES, 1934 TO 1938.

Year ending 31st March.	Exchanges.	Public Call Offices.	Instruments in Use.	Calls.	Instruments per 100 of European Population.
				1,000.	
1934	1,406	6,004	117,451	183,400	6·13
1935	1,435	6,177	130,469	206,302	6·64
1936	1,449	6,422	142,431	228,140	7·02
1937	1,463	6,705	157,188	241,626	7·09
1938	1,509	7,099	175,711	261,269	8·47

(ii) FINANCIAL PARTICULARS OF TELEPHONE SERVICES, 1934 TO 1938.

Year ending 31st March.	Cash Revenue.	Value of Government Traffic.*	Total Capital Expenditure to end of Year.
	£	£	£1,000
1934	1,655,724	348	9,114
1935	1,892,748	284	9,692
1936	2,079,125	291	10,377
1937	2,282,557	33	11,167
1938	2,507,123	98†	12,189

* Union Government traffic paid for from 1st April, 1924. These amounts represent the value of free Imperial Government services, which ceased during 1936–37.
† Represents the unpaid value of services rendered in connexion with the distribution of meteorological reports.

5. **Overseas Beam Telephone Service.**—On the 1st February, 1932, the telephone systems of Great Britain and the Union of South Africa were linked together by means of the Beam radio system of the Overseas Communications of South Africa, Ltd. Wireless transmission takes place from the British Post Office station at Rugby and from the Overseas Communications Company's station at Klipheuvel, and the receiving stations are at Baldock (England) and Milnerton (South Africa) respectively. Telephone subscribers in England and South Africa are connected to the wireless stations by ordinary land line circuits.

At the commencement wireless telephony was restricted in South Africa to Capetown, Port Elizabeth, and a number of country exchanges as far north as De Aar, whilst overseas the range of communication did not extend beyond England, Scotland, Wales, Northern Ireland, and the Isle of Man. At 31st December, 1938, however, the facility was available at all the larger centres and also at many country towns in the Union. By the same date the range of communication for the South African service had been extended overseas to most European countries and to various other parts of the world.

The Union system also serves as the connecting link whereby overseas telephone service is available at a number of points in Rhodesia and also at Windhoek in South West Africa.

The following are the charges for a three-minute conversation between those points in South Africa to which the facility is available and the countries listed:—

Country.	Charge for 3-minute Call, Monday to Friday up to 4 p.m.	Charge for 3-minute Call, Saturday and after 4 p.m. Monday to Friday.	Report Charge.
	£ s. d.	£ s. d.	£ s. d.
Europe—

India	5 12 6	5 12 6	0 16 0
Argentina and Brazil	6 12 0	6 12 0	0 16 0

Calls are divided into two categories: "ordinary" calls and "person-to-person" calls. An ordinary call is booked to a telephone number and is regarded as effective and charged for as soon as any person at the caller's telephone is introduced to any person at the callee's telephone; but if such call cannot be put through for atmospheric or other reasons no charge is raised. When booking a call, however, a subscriber may nominate the person to whom he desires to speak and may also give his own name. Such person-to-person calls are regarded as effective only when the two persons concerned are placed in touch with each other. The charge for a personal call is the same as that for an ordinary call, except that when contact cannot be established with the desired person, or with an acceptable substitute, the "report charge" indicated above is levied in place of the normal charge.

For the purpose of charging, North America is divided into a number of Canadian and American zones. The charge from South Africa to the first American or Canadian zone is £6. 12s. On North American calls to points beyond the first zone an additional charge of 9s. is made for each zone beyond the first; but the report charge of 14s. remains constant, irrespective of the zone to which the call is made.

In the case of the Dutch East Indies and Argentina there are two zones, the charges being: Dutch East Indies—1st zone, £5. 14s.; 2nd zone, £6. 3s. Argentina—1st zone, £6. 12s.; 2nd zone, £6. 18s.. The report charges of 13s. (Dutch East Indies) and 16s. (Argentina) remain constant for both zones of these two countries.

§ 4. Savings Bank and Union Loan Certificates.

1. **Conduct of Savings Bank.**—Savings banks are administered by the Department at Capetown (for the Cape Province) and Pretoria (for the Transvaal, Orange Free State, Natal, certain East Griqualand and Northern and North-Western Cape offices and Basutoland, Swaziland, and Bechuanaland offices). Deposits of any amount (provided the first deposit is not less than one shilling) are received, subject to a limit of £1,000 in any one year ending 31st March. Interest at the rate of 2½ per cent. per annum is paid, and deposits are received at all money order offices. Any depositor may, in addition, invest in Savings Bank Certificates of £100 each up to £1,000. Interest on certificates at the rate of 3 per cent. per annum is credited to the depositor's account half-yearly. Particulars of Post Office savings bank transactions will be found in Chapter XVI.

2. **Union Loan Certificates.**—Under the provisions of Act No. 29 of 1933, section 10, the control, management, issue, and repayment of Union Loan Certificates issued on or after the 1st June, 1932, are vested in the Postmaster-General in place of the Treasury as heretofore. Particulars of these certificates and statistical data relating to them are contained in Chapter XVI of this issue of the *Year Book*.

§ 5. African Postal and Telecommunication Union.

This Union was formed in 1936 with the object of securing by co-ordination the improvement of postal, telegraph, and telephone services in the southern half of the African continent. The Administrations comprised within the Union are: Angola, Basutoland, Bechuanaland Protectorate, Belgian Congo, Kenya, Uganda, Tanganyika Territory, Portuguese East Africa (Colony of Mozambique), Northern Rhodesia, Nyasaland, Southern Rhodesia, South West Africa, Swaziland, and the Union of South Africa.

African inter-territorial telegrams are circulated over communication channels utilized by the African Telecommunication Union as part of the African inter-territorial system.

CHAPTER XV.

STATE FINANCE.

A. GENERAL FINANCIAL SYSTEM OF THE UNION GOVERNMENT.

1. **Statutory Provisions.**—The financial provisions of the constitution are to be found in sections 117 to 133 of the *South Africa Act*. In terms of section 117, all revenues from whatever source arising vest in the Governor-General-in-Council. The section creates a Railways and Harbours Fund, into which are paid all revenues from the administration of the railways, ports, and harbours, while further provision is made as follows: "There shall also be formed a Consolidated Revenue Fund, into which shall be paid all other revenues raised or received by the Governor-General-in-Council, and such fund shall be appropriated by Parliament for the purposes of the Union in the manner prescribed by this Act and subject to the charges imposed thereby." Further provisions relating to the financial system of the Union are those contained in the *Exchequer and Audit Act* of 1911, as amended by Act No. 31 of 1916, Act No. 37 of 1922, and Act No. 27 of 1927, and the *Public Debt Commissioners Act*, 1911, as amended by sections 6 and 7 of Act No. 38 of 1921 and Act No. 50 of 1926. The raising of loans is governed by the *General Loans Consolidation and Amendment Act*, No. 22 of 1917, as amended by Act No. 20 of 1919 and Act No. 21 of 1928.

2. **Consolidated Revenue Fund.**—Under the present financial arrangements, which conform to the provisions of the *South Africa Act*, as more particularly defined in the *Exchequer and Audit Act*, 1911, all revenues, except those of the Railways and Harbours Administration, are carried to the Consolidated Revenue Fund. All Post Office revenue is therefore ultimately accounted for in this fund. The fund comprises the Revenue Account and the Loan Account, the former being credited with all moneys received from revenue proper, the latter with moneys derived from the raising of loans, from repayment of loans, or from the alienation of fixed property and such other moneys as Parliament may direct to be paid to that account. The charges upon the Revenue and Loan Accounts are provided for by annual Appropriation Acts, and, subject to section 26 of the *Exchequer and Audit Act*, it is only under the authority of such Acts that a withdrawal from the Consolidated Revenue Fund may take place. The section referred to provides that withdrawals to meet unforeseen and necessary expenditure, not provided for in an Appropriation Act, or expenditure in excess of an amount so provided, may be made under special warrant of the Governor-General, up to an amount not exceeding on the whole £500,000.

3. **Railways and Harbours Fund.**—The revenues of the Railways and Harbours Administration are carried to a fund styled the Railways and Harbours Fund, and are appropriated for purposes of the Administration by annual Appropriation Acts. A similar provision to that described above exists for meeting unforeseen or excess charges on the fund within certain limits. The Railways and Harbours Fund embraces a capital account and a revenue account, and the funds to meet capital expenditure are in the main provided by the Treasury from the proceeds of loans raised, by way of loan to the Administration at rates of interest corresponding to those paid by the Treasury. (See Chapter XIII.)

4. **Public Debt Commissioners.**—All trust moneys, e.g. Sinking Fund, Pension Fund, Guardians' Fund, and Post Office Savings Bank moneys, coming into the hands of the Government or the Railways and Harbours Administration, and funds held by Provincial Administrations, are handed over for investment and management to the Public Debt Commissioners. The Public Debt Commissioners consist of the Minister of Finance as chairman, *ex officio*, a member of the Railway Board (in 1939, Mr. A. Kuit), and one other member (in 1939 Mr. J. G. Hubball). The powers and functions of the commissioners are governed by the *Public Debt Commissioners Act*, 1911, as amended by sections 6 and 7 of Act No. 38 of 1921 and the *Public Debt Commissioners (Amendment) Act*, No. 50 of 1926. The principal Act had provided that the surplus of revenue over ordinary expenditure in each year should be paid to the commissioners and applied by them to redemption of debt. This was, however, modified in 1926 as explained in the next paragraph.

5. General Sinking Fund.—A very important and (for the maintenance of South Africa's credit in the money market) very salutary new departure was made by Act No. 50 of 1926. The provision mentioned in paragraph 4 above in regard to surplus revenue was withdrawn, and provision was made for the creation of a *General Sinking Fund*. Into this fund is to be paid from the Consolidated Revenue Account the sum of £650,000 per annum for forty years from the commencement of the financial year 1927-28. The object of this measure is to extinguish the non-productive debt of the Union, including the cost of public works and buildings, computed in 1926 to be approximately £55,000,000. The annual accumulation of £650,000 at 4½ per cent. interest will redeem 69½ millions of debt in forty years, which is ample for the existing debt.

As regards future unproductive debt, the proceeds of certain mining leases, appropriated annually to loan funds, are estimated to be more than sufficient to cover the outlay on ordinary capital expenditure. Assuming, therefore, that during the said period of forty years unproductive capital expenditure is not increased through extraordinary causes (e.g. war or an abnormal series of deficits on revenue account), the General Sinking Fund will do very much more than extinguish the unproductive debt.

Under section 3 (1) (*b*) of the Act provision is made for the continuance of the payment of interest by the Consolidated Revenue Account during the full period of forty years on any General Sinking Fund moneys utilized for the cancellation of stock due to be redeemed in a shorter period; similar provision is made under (*c*) in the case of a loan repaid from a special sinking fund.

Section 3 (1) (*c*) reads as follows:—

> "There shall be paid to the commissioners from the Revenue Account for the credit of the General Sinking Fund in each financial year after the repayment of any loan for which a sinking fund was established and thereafter for the remainder of the said period of forty years a sum equal to four and one-half per centum of the amount arrived at by adding the contributions made to the sinking fund of that loan from the General Sinking Fund to the interest on such contributions at four and one-half per centum compounded annually and accumulated to the close of the financial year during which the loan was repaid."

6. Audit.—The audit of all the accounts of the Union Government, including those of the Railways and Harbours Administration, is conducted by the Controller and Auditor-General, who reports annually thereon to Parliament. The appointment, powers, and duties of this officer are prescribed in the *Exchequer and Audit Act* of 1911 and the amending Acts Nos. 31 of 1916, 57 of 1922, and 27 of 1927.

7. Financial Relations between the Union Government and the Provinces.—The powers of the provinces are in the main defined in section 85 of the *South Africa Act* and the *Financial Relations Act* of 1913. The latter Act has been extended and modified from time to time by Acts No. 9 of 1917, No. 6 of 1920, No. 5 of 1921, No. 5 of 1922, No. 21 of 1924, No. 39 of 1927, and No. 50 of 1935, but in the 1925 Session of Parliament an Act (No. 46) was passed, which introduced several radical changes in the provincial position, to which detailed reference is made later. The most important duties of the provinces are the control and administration of education, other than higher education (i.e. up to university matriculation standard) and technical education, hospitals and poor relief, roads and bridges, townships, horse and other racing, betting, and game and fish preservation. From the date of the constitution of the Union until April, 1913, when the *Financial Relations Act* came into operation, the whole of the funds required by the provinces were provided by grants from the Union Exchequer. The Act of 1913 was based on the Majority Report of the Financial Relations Commission, which was composed of a representative of each province, with the Right Honourable Sir G. H. Murray, G.C.B., as Chairman.

In September, 1922, a commission was appointed to inquire into and report upon the finances of the several provinces, and as a result of the report of this commission a further commission was appointed in August, 1923, to investigate the matter of the State's liability for the cost of education and certain other matters in connexion with the education of European children.

Beyond funding the deficits as recommended by the 1922 commission, and making certain minor changes, no action was taken by the Government in regard to any of the commission's recommendations. A new Government came into office in June, 1924, and shortly afterwards a conference of provincial representatives was called by the Minister of Finance at Durban to discuss the vexed question of financial relations.

The results achieved at the conference were embodied in legislation—Act No. 46 of 1925, as amended by Act No. 31 of 1926.

Briefly the changes in financial relations, which have been effected since 1st April, 1925, are as follows:—

(1) The annual subsidy to the provinces is based on the number of European pupils in average attendance at primary and secondary schools, the grants per head up to 30th November, 1931, being: Cape of Good Hope and Natal, £14; Transvaal, £16. 7s. 6d.; Orange Free State, £15. 8s.; though for the first 30,000 pupils in each province the grant is £16. 7s. 6d. per head. From the 1st December, 1931, these amounts have been equalized between the coastal and inland provinces and now stand at £14 for each pupil in excess of 30,000 in all provinces. A subsidy is also given for non-European pupils.

There are other grants in respect of the various other educational activities of the provinces, e.g. training of teachers, native education, etc.

A special additional subsidy of £75,000 each was given to Natal and the Orange Free State. This was increased to £125,000 and £275,000 respectively under the 1935 Act.

In terms of section 14 of Act No. 35 of 1936, the aggregate of the grants payable to any province under sub-sections (1), (2), (3), and (4) of section 2 of Act No. 46 of 1925, in respect of any one of the first three financial years following upon the financial year which ended on the 31st March, 1936, shall not be less than the aggregate of such grants which became payable in respect of the last mentioned financial year.

(2) The general power of the provinces to impose direct taxation, derived under section 85 of the *South Africa Act*, gave rise to a large number of test cases in the courts on the validity of taxing ordinances and has been withdrawn; the sources from which alone they may raise revenue and legislate in regard thereto are set out in the following schedule:—

- (*a*) Hospital fees and fees received in respect of such education as is within the jurisdiction of a Provincial Council.
- (*b*) Licences required for dogs outside urban areas; licences to take, catch, or kill game, fish, or other animals; licences to sell game; licences to pick or sell wild flowers.
- (*c*) Licences to own or drive any motor vehicle or other vehicle propelled by mechanical power.
- (*d*) Wheel tax or tax on vehicles, including motor and other mechanical vehicles.
- (*e*) Amusements or entertainment tax.
- (*f*) Auction dues.
- (*g*) Licensing of totalizators and the imposition on the licencees of a duty in respect of the takings thereof; and licences, taxes, and fees in connexion with the control, regulation, and restriction of horse and other racing, betting, and wagering, and the dissemination of information as to betting and wagering.
- (*h*) Taxes on persons other than companies and on the incomes of persons other than companies subject to certain limits.
- (*i*) A tax on companies other than mutual life insurance companies.
- (*k*) Tax on the ownership of immovable property.
- (*l*) Licences in respect of the importation for sale within the province of goods from beyond the borders of the Union.
- (*m*) Receipts of a miscellaneous nature connected with matters entrusted to a province.

(3) The power to fix the licence fees in respect of trades, professions, and occupations has been taken over by the Union Government (Act No. 32 of 1925). The proceeds derived from this source are, however, transferred to the provinces, together with the proceeds of transfer duty, liquor licences, and native pass fees. Under section 4 of Act No. 17 of 1938, the Provincial Governments may authorize the carrying on of certain specified professions or callings without the payment of licence duties, and will be reimbursed by the Union Government for the loss of such revenue.

(4) The power of the Natal municipalities to impose certain trading licences has been taken away, and the grant in lieu to Natal provided under the 1913 Act has been abolished, as the revenue from licences will accrue to the province in the ordinary way under the arrangement set out in paragraph (3).

(5) In 1933, another Provincial Finance Commission was appointed, with Mr. J. de V. Roos (formerly Controller and Auditor-General of the Union) as chairman. This commission reported towards the end of 1934 (U.G. No. 46—1934) and, as a result of the consideration of the report, Act No. 50 of 1935 was passed and a consultative committee, consisting of the Administrators and the Executive Committees of the four provinces, was established. This committee is presided over by the Minister of the Interior, and meets when necessary to discuss matters common to the four provinces.

Under the 1935 Act the outstanding capital and interest charges upon loans granted to the provinces prior to 1st April, 1935, to meet deficits on their revenue accounts were assumed by the Union Government from that date; this excludes interest which had accrued and was due on the 31st March, 1935.

In view of the increased annual subsidy to Natal (from £75,000 to £125,000), authority was granted to the Provincial Council of Natal to pay to the Municipality of Pietermaritzburg any amount it deemed fit to compensate that city for loss of prosperity through having ceased to be a seat of government.

(6) The passing of the *National Roads Act*, 1935 (Act No. 42 of 1935), gave considerable relief to the provincial taxpayer through the assumption of the National Road Board of the responsibility for the payment of interest and redemption charges on loans raised by the provinces prior to 1st April, 1935, for the construction of roads and bridges. Divisional councils in the Cape Province also received similar relief.

B. PUBLIC REVENUE AND EXPENDITURE OF THE UNION.

§ 1. General Summary.

1. Revenue and Expenditure of States Prior to 1910.—The following table gives particulars regarding the revenue and expenditure of the States now forming the Union from 1881 to 1910. Railway revenue and expenditure have been excluded from the figures, which have been adjusted to uniform fiscal periods (1st April to 31st March). Details for individual years will be found in the sixth and previous issues of this *Year Book*:—

REVENUE AND EXPENDITURE (EXCLUDING RAILWAY REVENUE AND EXPENDITURE) OF STATES NOW FORMING THE UNION, 1881 TO 1910 (ADJUSTED TO UNIFORM FISCAL PERIODS).

* To 31st May, 1910.

† Average for years 1895–96 to 1898–99. ‡ Average for years 1902–03 to 1904–05.

2. Revenue and Expenditure from 1910.—The following table shows the total ordinary revenue and expenditure of the Union and of the provinces. The revenue of the provinces excludes subsidies from the Union Government, and such subsidies are also excluded from the ordinary expenditure of the Union Government. To maintain comparability the following adjustments

to the audited statements have been made: (i) The revenue of the Union from 1910-11 to 1916-17 excludes receipts from *Bewaarplaatsen* transferred to the Loan Account, and the expenditure of the Union excludes subsidies to the Provincial Councils, and, in the year 1912-13, a contribution of £100,000 to the Miners' Phthisis Compensation Fund, which was a debit against the *Bewaarplaatsen* receipts; (ii) Interest paid by the Railways and Harbours on Loan Capital, which was formerly credited to the Consolidated Revenue Fund, has been credited direct to the Public Debt Commissioners since 1923-24, and has been deducted from both revenue and expenditure and shown separately. Owing to this change the figures are undoubtedly a better guide to the public expenditure of the country.

It should be noted that *primage duty*, which was specially imposed during 1931-32 and 1932-33 for the payment of export subsidies, is included in the revenue tables shown hereunder. Similarly that portion of the export subsidies paid out of primage duty during those two years is included in the expenditure tables. In the Controller and Auditor-General's Report these two items do not figure in the ordinary revenue and expenditure of the Union.

From 1935-36 the heading "Provincial Expenditure" includes expenditure by the Provinces on behalf of the National Road Board.

For certain revenues credited direct to Loan Account see paragraph 11, Section D, of this chapter.

UNION—REVENUE AND EXPENDITURE (INCLUDING PROVINCIAL), 1911-12 TO 1937-38.

Year.	Revenue.			Expenditure.			Interest on Railway Capital (From Railways and Harbours).

* Excluding an amount of £250,000 diverted from the surplus of revenue over expenditure towards reducing the deficiency existing in the Transvaal Administrative and Clerical Pension Fund.

‡ Including primage duty collected for the payment or part-payment of export subsidies.

3. Distribution of Ordinary Revenue under Main Groups.—In classifying the revenue of the Union Government and of the Provincial Administrations in four principal groups, viz. (1) Taxation, (2) Services, (3) Public Estate, and (4) Miscellaneous, the general principles employed in the Union Government estimates of revenue and in the annual reports of the Controller and Auditor-General have been adhered to. The revenue of the Union Government under the various groups consists chiefly of the following:—

(1) *Taxation.*—Customs, excise, diamond export duty, licences, income tax, excess profits duty, surtax on interest, death duties, native taxes, native pass and compound fees, stamp duties, and primage duty. (The last mentioned was collected during the years 1931-32 and 1932-33 only.)

(2) *Services.*—Posts and telegraph receipts, fees of office and court, and approximately half of the departmental receipts.

(3) *Public Estate.*—Mining revenue not credited to income tax, State mining, quitrent, forest revenue, rents of government property, recoveries of advances, and about two-fifths of the departmental receipts.

(4) *Miscellaneous.*—Interest and fines and forfeitures, no matter to which revenue vote these are credited, and the remaining portion of departmental receipts.

The provincial revenue has been allocated on the same principles. Taxation consists chiefly of licences, transfer duty, etc., and services comprise education receipts, hospital fees, etc.

The portion of excess profits duty credited to Loan Account in 1917-18 and 1918-19 is taxation, and has for the purpose of these tables been added to the ordinary revenue for those years with a suitable footnote.

Further tables showing taxation, and taxation per head of the European population, of the Union Government and each Provincial Administration are published below.

In addition to the revenue derived from taxation, shown in the following tables as collected by the Union Government and Provincial Administrations, there are other amounts raised by other taxing bodies, or levied by the Government and credited direct to special accounts. The chief of these are: (i) Taxation receipts of the Cape divisional councils, (ii) native taxation credited direct to the S.A. Native Trust, (iii) levies on commodities for the purpose of subsidizing exports, such as the butter levy, and (iv) as from 1st April, 1935, 3d. per gallon of the import duty on petrol, transferred to the National Road Fund.

Municipalities and other local bodies also levy taxation in the form of rates and taxes, and where differentiation is made in the unit charges for services, such as electric current based on the valuation of immovable property, some part of the revenue from these services might properly be regarded as taxation. Local authorities also receive a portion of taxes on motor cars, etc., which is not included in the provincial returns.

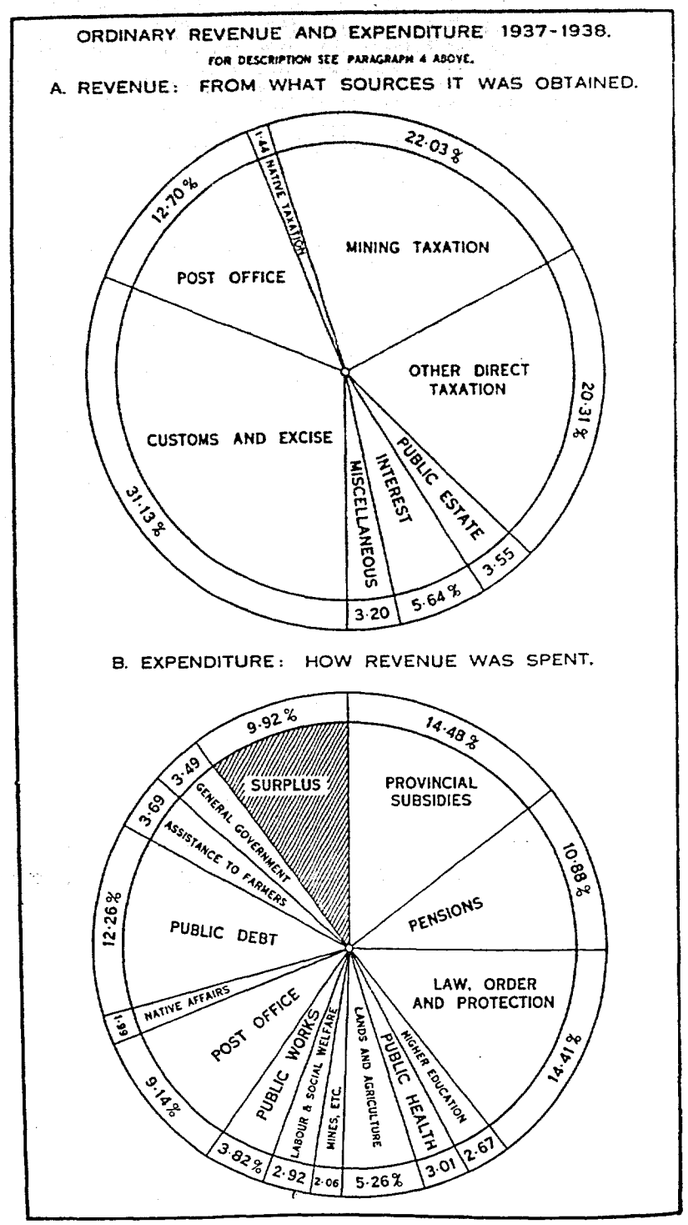
UNION AND PROVINCIAL REVENUE AND EXPENDITURE AND EXPENDITURE PER HEAD OF EUROPEAN POPULATION, 1911-12 TO 1937-38.



4. **Graphic Representation of Ordinary Revenue and Expenditure, 1937-38.**—The following table shows (*a*) the ordinary revenue and expenditure of the Union (excluding that of the Provinces) for 1937-38 classified under a number of principal heads, and (*b*) the relative percentage which each head bears to the total revenue and expenditure. These percentages have been used in the construction of the circular graphs which follow. It should be noted that the revenue derived from mining taxation includes the income tax collected from the mining industry, but excludes Government ownership revenue, licences, and mynpacht dues, which have been credited to Public Estate, and also the export duty on diamonds.

In comparing the classification of expenditure, as arranged in the graph and the table following, with the table shown in § 3 (2) below, it should be observed that the term General Government in the former includes Miscellaneous, and that Mines, etc., includes Mines and Commerce and Industries. Public Works includes Government Printing Works and the item Native Affairs includes the grant of £340,000 to the S.A. Native Trust.

REVENUE AND EXPENDITURE (EXCLUDING PROVINCIAL), 1937-38, CLASSIFIED UNDER SPECIFIED HEADS, AND THE PERCENTAGE WHICH EACH HEAD BEARS TO THE TOTAL AMOUNT.

§ 2. Revenue of the Union.

1. **Ordinary Revenue of the Union.**—The total ordinary revenue of the Union for a series of years, with quinquennial comparisons from 1911-12, is given according to financial years (1st April to 31st March) in the subjoined table, together with the revenue per head of the total population and per head of the European population only. The ordinary revenue is taken to exclude railway and harbour revenue and (from 1st April, 1913) collections of revenue on behalf of Provincial Administrations. Receipts from *bewaarplaatsen*, a source of revenue resulting from certain government ownership rights in respect of gold mines in the Transvaal, have been transferred to Loan Account for these years, with the exception of 1921-22, when the revenue under this head was credited to Revenue Account. The unaudited collections for 1938-39 and the estimates of revenue for the year 1939-40 are given in paragraph 14 hereunder. In the appropriation for the financial year 1933-34 the sum of £1,900,000 gold mining lease revenue was diverted from Loan Account to Revenue Account; but, as the financial year ended with a substantial surplus, this amount was returned to the Loan Account during 1934-35. To maintain comparability, the figures have been amended, and the £1,900,000 has been transferred to Loan Account for 1933-34.

ORDINARY REVENUE OF THE UNION AND REVENUE PER HEAD OF THE POPULATION, 1911-12, 1916-17, 1921-22, 1926-27, AND 1929-30 TO 1937-38.

Period.	Customs and Excise.	Posts, Telegraphs, and Telephones.	Inland Revenue.	Total Revenue.	Per Head of Population.	Per Head of European Population.
