* Including primage duty collected for the payment or part-payment of export subsidies.

2. **Sources of Revenue.**—The ordinary revenue of the Union is derived from (*a*) receipts from customs and excise; (*b*) collections by the Inland Revenue Department under various heads, including income tax payments, taxation of mines, stamp, transfer, and other duties, and native taxes; and (*c*) revenue earned by the postal, telegraph, and telephone services of the Union. The revenue receipts under the main heads are given below for six financial years (1st April to 31st March).

HEADS OF REVENUE OF THE UNION, 1932-33 TO 1937-38.

Description of Revenue.	1932-33.	1933-34.	1934-35.	1935-36.	1936-37.	1937-38.

† Refund of previous year's over-collections.
‡ Amended figure.

5. **Income Tax Act.**—The collection of income tax is governed by the *Income Tax Act*, No. 40 of 1925, as amended by Acts Nos. 36 of 1926, 23 of 1927, 18 of 1928, 29 of 1929, 31 of 1930, 30 of 1931, 28 of 1932, 31 of 1933, 44 of 1934, 28 of 1935, 34 of 1936, 51 of 1937, and 20 of 1938. The Act of 1925 consolidated and amended the previous Act of 1917 as amended by the subsequent Acts of 1919, 1920, and 1921. The principal change introduced was the repeal of the dividend tax, the yield of taxation being maintained by a corresponding increase in the rates of normal tax chargeable upon companies.

The taxes imposed for the years 1930 to 1938 were:—

A. Normal Tax. B. Supertax. C. *Surtax on Fixed Interest. D. †Gold Mines Excess Profits Duty. E. §Gold Profits Surtax.

Returns under the Act (as now amended) are required as follows:—

A. In respect of normal tax from—
- (*a*) every married person, or representative of such person, whose income for the year of assessment exceeded £400;
- (*b*) every unmarried person, or representative of such person, whose income for the year of assessment exceeded £400;
- (*c*) the public officer of every company, the income of which for the year of assessment exceeded £400;
- (*d*) every person to whom a form of return is issued, irrespective of the income of that person for the year of assessment in question.

* This additional tax was in operation in 1932 and 1933 only.
† Introduced in 1933 by Act No. 33 of 1933, and repealed by Act No. 34 of 1936 with effect from 1st January, 1936.
§ Introduced by Act No. 51 of 1935 and repealed by Act No. 34 of 1936 with effect from 1st January, 1936.

The general provisions of the principal Act (as amended from time to time) apply each year to the determination of the taxable amount upon which the normal and the super tax are to be levied and the collection of the amount payable in respect of that taxable amount, but the actual rates to be levied are fixed each year by Parliament in respect of the year of assessment ending on the 30th June of that year. Provision is further made that the rates so fixed shall be applicable to any *interim* assessment made in respect of the following year of assessment, subject to adjustment when the next annual determination of rates is made.

(i) *Rates.*—The rates for the year of assessment ended 30th June, 1938, were:—

A. NORMAL TAX.†—In respect of each taxable amount (as defined below)—
- (*a*) in the case of gold mining companies, for each pound of taxable amount, *three shillings*;
- (*b*) in the case of diamond mining companies, for each pound of taxable amount, *three shillings*;
- (*c*) in the case of all other companies, for each pound of taxable amount, *two shillings and sixpence*;
- (*d*) in the case of persons other than companies, for each pound of taxable amount, *one shilling* and as many *two-thousandths of a penny* as there are pounds in that amount, subject to a maximum rate of *two shillings* in every such pound;
- (*e*) in the case of persons or companies who derive any portion of their income from mining for gold, in respect of each pound of the taxable amount so derived a percentage determined in accordance with the following formula:—

$$y = 40 - \frac{500}{x}$$

in which y represents such percentage and x the ratio, expressed as a percentage, which the taxable income derived from mining for gold bears to the total income derived therefrom.

N.B.—For the purposes of this paragraph income derived from mining for gold shall include any income derived from silver, osmiridium, or other minerals which may be won in the course of the mining for gold, and any income which, in the opinion of the Commissioner, results directly from mining for gold.

Provision is made in cases where production of gold was commenced after the 31st December, 1935, for the redemption of capital expenditure incurred prior to the date of commencement of production over the period of the life of the mine or ten years whichever is the shorter.

B. SUPERTAX.—In respect of each amount subject to supertax (as defined below):—

For each pound of such amount, *one shilling* and as many *five-hundredths of one penny* as there are pounds in that amount, subject to a maximum rate of *five shillings* in every such pound.

(ii) *Taxable Amounts.*—The *Income Tax Act* of 1925 (as amended from year to year) defines the taxable amount and amount subject to supertax in respect of each tax as follows:—

A. NORMAL TAX.—The taxable amount of any income is the amount remaining after deducting from the taxable income such of the abatements set out below as are applicable. (NOTE.—A taxable income is the amount remaining after deducting from gross income, that is, all receipts other than those of a capital nature, all exempted amounts, and all admissible deductions other than abatements.) Act No. 29 of 1929 provides for deduction from the taxable income of any person engaged in farming pursuits of the amount expended by such person during the year of assessment in respect of dipping tanks, dams, water-furrows, boreholes, pumping plants, fences, the eradication of noxious weeds, prevention of soil erosion, erection of buildings for farming purposes, and the establishment of orchards and vineyards. Under the provisions of section 2 of Act No. 29 of 1929 allowance may be made in respect of the value of any machinery, implements, utensils, and articles used by a taxpayer for the purposes of his trade, which have been scrapped during the year of assessment.

† In respect of (*c*) and (*d*), Normal Tax for the tax year ending 30th June, 1934, was subject to a rebate of 20 per cent., for the tax years 1935, 1936, and 1937 to a rebate of 30 per cent., and for the tax year 1938 to a rebate of 20%.

Abatements—

I. In the case of any person other than a company—

(1) (*a*) a sum of—

(i) £400 in the case of every person to whom paragraph (2) (*a*) below is applicable;

(ii) £400 in the case of every person to whom paragraph (2) (*b*) below is applicable,

as the case may be;

(*b*) any sum not exceeding £50 paid by the taxpayer during the period in respect of which a return is made as premiums upon policies under which he, his wife, or his minor children is or are insured against death, accident, or sickness;

(*c*) any fees or subscription, not exceeding £10 in the aggregate, paid by the taxpayer to any benefit or friendly society during any period in respect of which a return is made;

(*d*) a sum of £100 for each unmarried child of the taxpayer under the age of twenty-one years;*

(*e*) a sum of £30 for each dependant of the taxpayer.

"Dependant" means—

(i) any person incapacitated by old age, infirmity, or any other reason satisfactory to the Commissioner from maintaining himself; and

(ii) any child (other than the child or step-child of such taxpayer) to whose maintenance during the year of assessment the taxpayer has contributed, whether in cash or otherwise, to an amount of not less than £30.

(2) The total of the allowances applicable to any person is subject to reduction as follows:—

(*a*) In the case of every person who—

(i) during any portion of the period in respect of which the assessment is made was married; or

(ii) during the whole of the period in respect of which such assessment is made, was divorced, but maintained a child* during any portion of that period,

the reduction shall be by one pound for every completed ten pounds by which the taxable income of such person exceeds six hundred pounds:

Provided that any person who was a widower or widow during the whole of the period in respect of which the assessment was made shall be assessed as though he had been married throughout that period, and any person who has been separated under a judicial order or written agreement throughout that period shall be assessed as though he had been divorced throughout that period.

(*b*) In the case of all persons to whom paragraph (*a*) of this sub-section does not apply, the reduction shall be by one pound for every completed pound by which the taxable income of any such persons exceeds four hundred pounds.

II. In the case of companies the abatement is £400, subject to reduction as provided in paragraph (2) (*b*) above.

III. In the case of persons or companies who derive income from mining for gold which income is subject to tax in accordance with the formula provided in paragraph A (*c*) under "Rates" above, the abatement is £20,000 reduced by £1 for every completed £4 by which the taxable income so derived exceeds £20,000.

IV. In any case in which the period assessed is less than one year, the total of the allowances applicable other than insurance premiums and fees or subscriptions to benefit or friendly societies *actually paid* during the period assessed is proportionately reduced.

Exemptions.—Section 10 (as amended) of the *Income Tax Act* of 1925 provides for certain exemptions, e.g. revenues of the Government of the Union and Provincial Administrations and other local authorities of the Union, revenues of foreign States, revenues of the Imperial Government and of the Governments of the British Dominions, Colonies, and Possessions (other than revenues derived by the last-named Governments from any trade carried on within the Union); receipts of building and friendly societies, mutual savings bank or loan associations, pension, superannuation, or provident funds of a permanent nature, and of trade unions; receipts of bodies or associations which are in the opinion of the Commissioner amateur sporting bodies or associations; receipts of ecclesiastical, charitable, and educational institutions of a public character; receipts of mutual life assurance societies and of companies and associations dealing only with their own members; war pensions and miners' phthisis awards; interest on tax-free loans, on building society contributory shares, on deposits in the Post Office Savings Bank, and on Union Loan Certificates; interest on government and municipal loans, including stock issued by the Electricity Supply Commission, when received by persons non-resident in the Union; salaries and emoluments payable to the Governor-General and his personal staff and to persons holding office in the Union as officials of British and foreign Governments (provided that such persons are stationed in the Union for that purpose and are not ordinarily resident in the Union); dividends received from companies chargeable with or exempt from the normal tax and profits of mining exempted from taxation under the *Gold Law* of the Transvaal.

* "Child" includes step-child and child adopted under the *Children's Act*, No. 31 of 1937.

B. SUPERTAX.—The amount subject to supertax is the amount remaining of the income subject to supertax after allowing an abatement of £2,500, diminished by one pound for every pound by which the income subject to supertax exceeds £2,500. The abatement thus ceases to exist when the income subject to supertax reaches £5,000.

The income subject to supertax is an aggregate of—

(*a*) the taxable income of the taxpayer as determined for the same year of assessment for normal tax purposes;

(*b*) any dividends derived from sources within the Union which were excluded in determining that taxable income;

(*c*) any bonus shares or debentures or other securities awarded to the taxpayer during the year of assessment as the capitalization of the profits of any company in which he was a shareholder;

(*d*) liquidation dividends in so far as they represent a share of profits, whether such profits are earned before or after the commencement of winding up;

(*e*) any amount allocated to the taxpayer by the Commissioner, representing his share of the undistributed profit of a private company as defined in section 32 of the Act.

Deductions.—From the aggregate so determined may be deducted expenditure, other than capital expenditure, incurred in the production of the dividends or bonus shares included in the aggregate, and any loss assessed for normal tax purposes.

"Private Companies", as defined in section 27 of the Act, are now subject to supertax.

(iii) *Summary of Assessments—All Income Tax.*—The subjoined table gives the number and value of assessments of income tax under the various Acts named.

Note.—The term *Tax Year* used in certain of the following tables has for its meaning the twelve months commencing the 1st July and ending the 30th June of the following year. The *Financial Year* commences on the 1st April and ends on the 31st March following.

6. **Estate and Succession Duties.**—Act No. 29 of 1922, as amended, makes provision for a duty to be levied in respect of the estate of every person dying on or after 1st July, 1922. The duty is chargeable only in respect of estates the dutiable value of which exceeds £15,000, and is leviable at a progressive scale rising from ½ per cent. and reaching the maximum of 17 per cent. at £75,000.

The Act further provides for the levy, in the case of any person becoming entitled to property, of a succession duty as follows:—

Degree of Relationship of Successor to Predecessor.	Rate of Duty upon Dutiable Amount of Succession.
	Per cent.
Where the successor is the direct descendant or ascendant of the predecessor	2
Where the successor is the brother or sister of the predecessor	4
Where the successor is the descendant of the brother or sister of the predecessor	6
Where the successor is otherwise related to the predecessor or is a stranger in blood or is an institution	10

Succession duty is chargeable only in respect of successions exceeding £100 in value. Successions between £101 and £200 in value are subject to a diminishing abatement which disappears when the value of the succession exceeds £200.

The following are exempt from succession duty:—

(*a*) Any succession accruing from any predecessor to his surviving spouse;

(*b*) any succession accruing to any public institution within the Union of a charitable, educational, or ecclesiastical nature, or required to be devoted wholly to charitable, educational, or ecclesiastical purposes of a public nature within the Union or accruing to a public institution within the Union, which has for its purpose the advancement of science or art;

(*c*) any succession accruing to any provincial administration or municipality or other local authority.

The following table shows the amount collected in death duties during five financial years.

DEATH DUTIES COLLECTED, 1933-34 TO 1937-38.

7. **Native Taxes.**—Under the provisions of the *Natives Taxation and Development Act*, No. 41 of 1925, which consolidated the various pre-Union and Union laws relating to the taxation of natives in the different provinces, a general tax of one pound (£1) sterling is levied upon every male adult native under the age of 65 who is domiciled in the Union, or who has resided in the Union for a period of twelve months, and, in addition, a local tax of 10s. per hut, subject to a maximum of £2, is imposed upon the occupier of every hut or dwelling in a native location in the Union, unless the occupier is the owner of an allotment of land held under quitrent title in the location in which the hut or dwelling is situated. The Act had effect as from the 1st January, 1926.

Originally, one-fifth of the general tax, together with any local tax or native quitrent collected in respect of any area not falling within the jurisdiction of certain named councils or boards, was paid into a special account called the "Native Development Account". In terms of section 5 of the *Native Trust and Land Act*, No. 18 of 1936, the Native Development Account was merged in the South African Native Trust with effect from the 31st August, 1936. The amounts paid in are applied to the maintenance, extension, and improvement of educational facilities amongst the natives, and for the further development and advancement of their welfare. As from 1st April, 1935, the share allocated for this purpose was increased from one-fifth to seven-twentieths; as from 1st April, 1936, to two-fifths; and as from 1st April, 1937, to three-fifths.

The subjoined table shows the collections, exclusive of the share which accrued to the S.A. Native Trust, during five financial years.

NATIVE TAX COLLECTIONS, FINANCIAL YEARS 1933-34 TO 1937-38.

1933-34 £	155,624	193,666	452,876	55,864	858,030

8. **Land Revenue.**—All quitrent charges, except in respect of certain special levies in the Cape Province, were abolished throughout the Union by Act No. 54 of 1934 (as amended by Act No. 49 of 1935 and Act No. 33 of 1937), with effect from 31st December, 1934. A short reference to the conditions under which quitrent was collected was contained in *Official Year Book* No. 15 and earlier issues.

The statement hereunder shows the amount of quitrent and farm taxes collected over a series of years.

QUITRENT AND FARM TAXES COLLECTED, 1913 TO 1938.

Year Ending 31st March.	Cape of Good Hope.	Natal.	Transvaal.	Orange Free State.	Total.

Recoveries of Advances	26	34
Miscellaneous	440	340
TOTAL*	43,993	44,110

* Excludes amounts collected and credited to National Road Fund and S.A. Native Trust account.

§ 3. Expenditure of the Union.

1. Ordinary Expenditure of the Union.—The subjoined table gives the total expenditure of the Union Government charged against the Consolidated Revenue Fund [excluding, however, subsidies to Provincial Administrations, Grant to the S.A. Native Trust, and interest on Railway capital (see C. § 2 (2) and (3), and B. 1 (2)], during certain financial years (1st April to 31st March) from 1911-12. Expenditure is also shown (*a*) per head of the total population, and (*b*) per head of the European population only.

It should be noted that the portion of the export subsidies paid out of primage duty during 1931-32 and 1932-33 is included in the expenditure tables shown hereunder, although the Controller and Auditor-General's Report excludes the relevant amounts from the ordinary expenditure of the Union.

The estimates of expenditure for the years 1938-39 and 1939-40 are given in § 3, 2, hereunder.

ORDINARY EXPENDITURE OF THE UNION GOVERNMENT, AND EXPENDITURE PER HEAD OF THE POPULATION, FINANCIAL YEARS 1911-12 TO 1937-38.

Period.	Public Debt.	Posts, Telegraphs, and Telephones. *	General Government.	Total Ordinary Expenditure.	Per Head of Population.	Per Head of European Population.

TOTAL	8,780	602,150

* Net annual value.

4. **State Assistance to Farmers.**—(i) *Functions of State Advances Recoveries Office.*—The State Advances Recoveries Office was established with effect from the 1st April, 1935, in terms of section 1 (i) of the *State Advances Recoveries Act*, No. 37 of 1935, for the purpose of centralizing, as far as possible, the collection and administration of all loans granted for the purpose of assisting farmers. As a commencement the loans previously administered by the Land and Agricultural Bank and granted in terms of the *Drought Distress Relief Act*, No. 16 of 1924, the *Farmers' Special Relief Act*, No. 4 of 1931, and the *Drought and Flood Distress Relief Act*, No. 25 of 1927, were transferred to this office, together with loans granted to small tenant farmers.

The rights and powers conferred upon the Managing Director and the General Manager of the Land and Agricultural Bank under prior legislation were transferred to the Secretary of the State Advances Recoveries Office by Act No. 37 of 1935.

During the year 1935-36 the administration of certain loans was taken over from the Department of Agriculture and Forestry, such as advances for seed wheat, 1920, 1923, 1924, 1925, and 1926, tenant farmers' scheme, 1931-32, and advances for the issue of maize, 1933. The foregoing were all from loan funds.

The office also took over the collection of the following advances from revenue funds:—

(*a*) From the Department of Agriculture and Forestry: Advances in connexion with fencing, flood distress relief, issue of seed wheat, 1927, branding irons, and conveyance of stock from drought-stricken areas; and

(*b*) from the Departments of Labour and Social Welfare: Advances in connexion with the relief of distress, rehabilitation, and housing loans.

The rest of the loans to be transferred from these departments were taken over at the 1st April, 1937, and the loans of certain Agricultural Credit Societies and Livestock Societies were taken over from the Land and Agricultural Bank during the year 1936-37.

(ii) *Farmers' Assistance Act*, 1935.—Owing to the severe drought and depression during the previous few years, it was found necessary during the 1935 Session of Parliament to make further provision for assisting the farming community. As a result the *Farmers' Assistance Act*, No. 48 of 1935, was passed, which makes provision for loans for rehabilitating farmers and sets up machinery for arranging compromises with their creditors, while section 5 of the *State Advances Recoveries Act*, No. 37 of 1935, provides for the granting of loans to purchase stock.

In terms of section 2 of the *Farmers' Assistance Act*, No. 48 of 1935, a board, known as the Farmers' Assistance Board and consisting of three persons, was appointed by the Minister, together with a consultative member for each province. This Board is responsible for the consideration of applications under the Act and the granting of assistance in terms of its provisions.

Local committees were established in the various districts throughout the Union for the purpose of investigating local applications and furnishing the Board with their recommendations thereon.

Section 9 of the Act provides that for the purpose of carrying out the provisions of the Act the Board may perform any one or more of the following Acts:—

(*a*) On such terms as it may deem fit, lend money to an applicant on mortgage of the whole or any part of his immovable property;

(*b*) acquire the whole or any part of the movable or immovable property belonging to an applicant or to his insolvent or assigned estate, or to the estate of the deceased spouse, child, or parent of an applicant;

(*c*) upon such terms as it may deem fit, let or sell any property so acquired to the applicant in question or to his spouse, child, or parent, or to any other person;

(*d*) acquire any live stock or other farming requisites and let or sell them, on such terms as it may deem fit, to the applicant or to any person to whom the Board has let or sold any property in terms of paragraph (*c*).

The principal object of this legislation is to assist farmers—

(a) whose liabilities exceed the reasonable value of their assets, when efforts are made to arrange a compromise with creditors, or,

(b) who, by reason of the extent of their liabilities, or owing to the lack of stock or the means of properly working their land, are unable to continue farming operations with a reasonable prospect of success.

The Act came into force on the 1st June, 1935, and some time was naturally required to bring the necessary machinery into full operation. Thousands of applications for assistance were received from farmers who found themselves in financial difficulties, or who required additional stock to enable them to continue farming.

All purely re-stocking applications were closed as at 31st March, 1936, but applications for rehabilitation advances were continued, money being granted for stock where necessary, in addition to assistance for the payment of debts.

The following disbursements were made from loan and revenue funds during the financial years 1935-36 to 1937-38 in connexion with loans granted to farmers:—

(iii) *Loans Outstanding.*—The sum outstanding against farmers in respect of loans granted by the Land and Agricultural Bank of South Africa and other government departments, the administration of which was transferred to the State Advances Recoveries Office, in terms of Act No. 37 of 1935, as well as in respect of loans granted by the Farmers' Assistance Board, increased from £8,664,095 at 31st March, 1937, to £10,800,009 at 31st March, 1938.

Capital repayments by farmers increased from £376,413 during 1936-37 to £469,374 during 1937-38.

For advances made by the Land and Agricultural Bank on behalf of the Government under section 20 of Act No. 29 of 1933, see Chapter XVI. § 3.

(iv) *Administration Costs.*—The cost of administering the loans taken over and the loans granted by the Farmers' Assistance Board, and the cost of the Board and local committees, totalled £77,900 in 1936-37 and £84,785 in 1937-38.

5. **Special Assistance to Farmers.**—The subjoined table gives a summary of special assistance given by the Government to farmers from 1934-35.

a Excluding salary of Governor-General (£10,000).
b Excluding allowances paid to Senators and Members of the House of Assembly.
c Includes £42,534 for industrial disturbances.
d The major portion of this expenditure was met from Loan Account.
e Included in the amount paid to the staff of the High Commissioner.
f Includes Museums, Astronomy, and Meteorology, but excludes Vocational Schools.
g The amount paid out in respect of the Head Office administration included in "Higher Education and Science."
h Includes salaries paid in respect of reconnaissance surveys, boring, and maintenance of government irrigation works.
i Includes cost of Population, Agricultural, and Industrial Census enumerations.
j Includes salaries paid to customs investigation officers, from 1930-31, and to State Advances Recoveries Office (formerly Farmers' Special Relief Board) from 1931-32.
k Includes expenditure on the Head Office administration of the Prisons Department, for the years 1932-33, 1935-36, 1936-37.
l For these years the expenditure on Head Office administration is included in that of the Department of Justice.
m Includes expenses of Export Subsidy Account from 1931-32.
n Up to 1936-1937, included salaries of Births, Marriages and Deaths Registries. From 1937-38 this item is included under Interior.

7. **Estimates of Revenue and Expenditure.**—The following table shows the estimates of ordinary revenue and expenditure for 1938-39 and 1939-40.

The details of expenditure for 1938-39 given in paragraph 2 above do not include the additional appropriations, which amounted to £488,344. The chief items comprised: Additional Grants to Provincial Administrations, £73,202; Agriculture, £237,300; and Public Works, £50,902. For 1939-40 the details do not include the Supplementary Estimates (U.G. No. 23-1939), the chief of which are: Police, £110,000; Special Grant to Provinces, £160,000; Defence, £378,750; Social Welfare, £27,000; Agriculture, £41,386; and Assistance to Farmers, £856,500 (including special contribution towards reduction of transport costs, £800,000).

* Including supplementary estimates.

C. REVENUE AND EXPENDITURE OF PROVINCES.

§ 1. Financial System of Provinces.

There is a provincial revenue fund in every province, into which all revenues raised or received by the province are paid. Appropriations are effected by Ordinance of the Provincial Council. It is only under the authority of such an Appropriation Ordinance that any withdrawal from the fund may take place. The provincial accounts are audited in each case by an auditor appointed and paid by the Union Government.

With the approval of the Treasury, a Provincial Administration may borrow during any financial year such sum as may be required to meet a deficit in the provincial revenue fund.

§ 2. Ordinary Revenue of Provinces.

1. **Sources of Revenue.**—From the date of Union (31st May, 1910) until the 31st March, 1913, after which date the *Financial Relations Act*, No. 10 of 1913, became operative, the provincial expenditure was met from subsidies issued by the Union Government [see Section A (7) of this chapter]. From the 1st April, 1913, until the 31st March, 1925, the Union Government contributed an annual subsidy amounting, broadly speaking, to one-half of the ordinary expenditure for the year, though the grant was curtailed from 1921. In the case of Natal and the Orange Free State a special annual grant was provided for by section 5 (i) (*b*) of the Act above mentioned, under which each of these two provinces received £100,000 in addition from the Union Treasury. Certain other sources of revenue within each province were made available from the 1st April, 1913, particulars of which are contained in the tables relating to revenue collections (par. 3 hereunder).

Under the *Provincial Subsidies and Taxation Powers (Amendment) Act* of 1925, which became effective on the 1st April, 1925, the sources of provincial revenue were restricted to (i) a subsidy from the Union Government based on the number of pupils and students in average attendance at educational institutions within the province; (ii) certain revenues collected by the Union Government and transferred to the provinces, e.g. transfer duty, native pass fees, liquor licences, and trading, professional, and occupational licences; (iii) a specified list of taxes or fees [see Section A (7) of this chapter], in regard to which the province has full legislative powers.

In the Transvaal a special source of revenue exists in the pass fees paid by natives. In the Cape, Natal, Transvaal, and Orange Free State Provinces there are taxes on totalizators. The Cape, Natal, and Orange Free State Provinces, and the Transvaal since the 1st December, 1931, have obtained revenue from an entertainment tax. In the Transvaal and Orange Free State Provinces some revenue is derived from auction dues. In the Cape Province a considerable revenue is obtained from the property tax. With these exceptions the revenue collected may be grouped under the main heads of (*a*) transfer duty, (*b*) liquor licences, (*c*) general licences, including trading and vocational licences, motor licences, and various other licences, including those for dogs, game, and fisheries, (*d*) personal and provincial income taxes, and (*e*) miscellaneous departmental receipts, of which school and educational fees make up a considerable part, and hospital fees some further part.

The following statement contains information regarding taxes payable in each province. Particulars of trading and other licences in operation in the different provinces will be found in Chapter XXIV of this *Year Book*.

PARTICULARS OF PROVINCIAL TAXATION.

Designation of Tax.	Particulars.
Auction Dues.....	*Transvaal.*—1 per cent. on amount of each sale of fixed property or lease, and agricultural and pastoral produce (including meat), and 2½ per cent. on amount of each sale of all other produce (*Ordinance No. 9 of 1923*). *Orange Free State.*—1 per cent. on amount of each sale of immovable property and 2 per cent. on amount of each sale of movable property or live stock (*Ordinance No. 9 of 1934*). Sales by the market master of any local authority of ordinary farming produce, including wild animals and the skins and hides of wild animals, but excluding live stock and wool, are exempt. Sales of wool by a licensed auctioneer who has an established wool auction market are exempt, subject to compliance with certain prescribed conditions (*Ordinance No. 9 of 1934*).
Betting and Racing Taxes (*a*) *Bookmakers*.....	*Cape of Good Hope.*— (i) Annual registration fee (licence)..... £5 0 0 (ii) For the right to bet at Tattersalls :— In Capetown and Port Elizabeth..... 50 0 0 Elsewhere..... 25 0 0 (iii) For every race meeting at which the bookmaker carries on his occupation :— Gold Ring— If he has paid the fee for the right to bet at Tattersalls, for each race meeting :— In the Cape Division..... 2 2 0 Elsewhere..... 1 1 0 If he has not paid the fee for the right to bet at Tattersalls, for each race meeting :— In the Cape Division..... 5 5 0 Elsewhere..... 3 3 0 Silver Ring— For each race meeting in the Cape Division and elsewhere..... 1 1 0 (iv) On his winnings arising from bets made on any race course on races which are run on the same day on that race course..... 5 per cent. On the gross amount staked with him in respect of bets which he has made at Tattersalls and which he has won 5 per cent. On the gross amount staked with him in respect of bets which he has made on a race course on races run elsewhere than on such race course, and which he has won 5 per cent. (*Ordinance No. 8 of 1921* as amended by *Ordinance No. 6 of 1937*). *Natal.**—Annual licence. Gold Ring, £50 per annum; Silver Ring, £15 per annum. *Transvaal.*—5 per cent. of gross losings, to be paid by bookmakers, in certain cases 2½ per cent. (*Ordinance No. 26 of 1925*). *Orange Free State.*—(i) Bookmaker's licence, £10 per annum; (ii) Tax on bookmaker's bettings: (*a*) £2. 2s. 0d. per diem in respect of every race meeting he attends; (*b*) 5 per cent. on his winnings on any race run in the Union; (*c*) 10 per cent. on his winnings on any race run outside the Union; (iii) Tax on public betting: 5 per cent. on winnings from bookmakers (*Ordinance No. 4 of 1931*).
(*b*) *Bettors*.....	*Cape of Good Hope.*—5 per cent. upon any amount payable to him by a bookmaker at Tattersalls; 5 per cent. upon amount payable to him by a bookmaker on a racecourse, in respect of any bet made on races run elsewhere than on such racecourse (*Ordinance No. 23 of 1932*, as amended by *Ordinance No. 15 of 1934*). *Natal.*—½ per cent. on all bets made on a racecourse, and 6¼ per cent. when made in a betting club room, the bookmaker or bettor paying on his winnings (*Ordinance No. 17 of 1922*, as amended by *Ordinance No. 6 of 1923*).

* A reduction is made in respect of licences issued after the 30th June in any year.

PARTICULARS OF PROVINCIAL TAXATION—(*continued*).

Designation of Tax.	Particulars.
Betting and Racing Taxes—(continued).	
(c) *Betting Room*.....	*Natal.**—Annual licence from £25 to £100 per annum according to area.
	Orange Free State.—Annual licence £25 in respect of a specified room established in Bloemfontein by Orange Free State Tattersalls Club and in respect of a specified room in any other town in which the said club may establish a branch (*Ordinance No. 4 of 1931*).
(d) *Racecourse*.....	*Natal.**—Annual licence from £5 to £50 per annum according to area.
	Transvaal.—Licence for any period of twelve calendar months payable only in respect of dog or whippet racecourse, £15 (*Ordinance No. 3 of 1926*, as amended by *Ordinance No. 15 of 1933*).
(e) *Totalizators*.....	*Cape of Good Hope.*—4¼ per cent. of amount of commission (exclusive of the first £200 of gross takings in respect of totalizators other than at Kenilworth and Milnerton) received by licence-holder; commission of latter must not exceed 12½ per cent. of gross takings (*Ordinance No. 28 of 1931*, as amended by *Ordinance No. 23 of 1932*, *Ordinance No. 15 of 1934*, and *Ordinance No. 16 of 1935*).
	Natal.—6¼ per cent. of total amount paid in, 3 per cent. when total is less than £1,000 and 4 per cent. when total is less than £2,500 (*Ordinance No. 12 of 1918*, as amended by *Ordinance No. 7 of 1921*), 5 per cent. when total is less than £7,000 (*Ordinance No. 12 of 1918*, as amended by *Ordinance No. 7 of 1921* and *Ordinance No. 15 of 1927*).
	Transvaal.—(i) Horseracing—4½ per cent. of gross takings; 2 per cent. of net takings which are undistributed after a dividend has been declared; 2 per cent. on dividends unpaid three months after they are declared (*Ordinance No. 9 of 1927*); (ii) Dog (other than whippet) racing—at the same rates payable in respect of horseracing, but only in respect of those race meetings at which the gross takings of the totalizators exceed £350 (*Ordinance No. 3 of 1926*, as amended by *Ordinance No. 15 of 1933*); (iii) Whippet racing—at the same rates payable in respect of dog (other than whippet) racing, provided that in respect of any race meeting at which the gross takings exceed £350 the first £350 of the gross takings are exempt. The holder of a totalizator licence is, however, subject to a minimum totalizator tax of £15 (*Ordinance No. 3 of 1926*, as amended by *Ordinance No. 15 of 1933* and *Ordinance No. 8 of 1934*).
(f) *Admission to Racecourses*	*Transvaal.*—20 per cent. of all payments for admission to a racecourse (*Ordinance No. 18 of 1917*).
Companies Tax.....	(See under Personal, Income, and Company Taxes below.)
Dog Tax.....	*Natal.*—10s. per annum for each dog over six months (*Dog Tax Law No. 27, 1875*, as amended by *Ordinances Nos. 6, 1921; 22, 1926; and 5, 1927*). Dog tax collectable in areas under the jurisdiction of boroughs or townships accrues to the borough or township revenue funds—*vide* section 3, Law No. 27 of 1875, section 10, Law No. 39 of 1884, and section 2, *Ordinance No. 11 of 1926*.
	Orange Free State.—Annual tax of 10s. for each dog of the age of six months or over, provided that in respect of any dog which is acquired, or which attains the age of six months, after the 30th September in any year the tax shall be 5s. Registered members of recognized vermin hunt clubs may be granted exemption in respect of *one dog only*, for which a fee of 1s. is payable. Exemption is also granted for a period of one month in respect of dogs brought into the province for purposes of exhibition (*Ordinance No. 8 of 1932* as amended by *Ordinance No. 5 of 1935*).
	Transvaal.—Kaffir hunting dog, or greyhound or dog of a similar kind, over the age of six months, £5 per annum; greyhound or dog of a similar kind kept solely for racing purposes, 10s. per annum; any other kind of dog, 10s. per annum; a breeder of dogs which are registered with the South African Kennel Union, £5 per annum for more than ten dogs. The tax is not payable within the area of any municipality or health committee in which by-laws or regulations governing the licensing of dogs are in force (*Ordinance No. 18 of 1933*).
Entertainment Tax.....	*Cape of Good Hope.*—Where payment, excluding the amount of tax, does not exceed 6d., 2d.; exceeds 6d. but does not exceed 1s. 6d., 3d.; exceeds 1s. 6d. for every 6d. or portion of 6d. an additional 1d. (*Ordinance No. 23 of 1930*, as amended by *Ordinance No. 30 of 1932*).
	Natal.—Tax for every payment not exceeding 6d., 1d.; 1s., 2d.; 1s. 6d., 3d.; 2s., 4d.; 2s. 6d., 5d.; 3s., 6d.; 4s., 9d.; 5s., 1s. Exceeding 5s. tax is 6d. for every succeeding 2s. 6d. or part thereof; bioscope tea rooms and the like, where no charge for admission: 5 per cent. on gross takings (*Ordinance No. 11 of 1917*, amended by *No. 9 of 1920*, *No. 12 of 1921*, and *No. 15 of 1929*). Provision is made for exemption in the case of entertainments promoted in aid of certain objects.

* A reduction is made in respect of licences issued after the 30th June in any year.

PARTICULARS OF PROVINCIAL TAXATION—(*continued*).

Designation of Tax.	Particulars.
Entertainment Tax—(continued).	*Transvaal.*—Tax for every payment exceeding 1s., but not exceeding 2s., 3d.; 3s., 4d.; 4s., 5d.; 5s., 6d.; 7s. 6d., 9d.; 10s., 1s. 3d.; 12s. 6d., 1s. 6d.; exceeding 12s. 6d., 2s. 6d. for first 12s. 6d. and 2s. for every succeeding 10s. or part thereof. Provision is made for exemption from tax in the case of entertainments promoted for certain objects (*Ordinance No. 19 of 1931* as amended by *Ordinance No. 6 of 1936*).
	Orange Free State.—Tax for every payment for admission not exceeding 6d., 1d.; 1s., 2d.; 1s. 6d., 3d.; 2s., 4d.; 3s., 6d.; 5s., 1s.; 7s. 6d., 1s. 6d.; 12s. 6d., 2s. Exceeding 12s. 6d., tax is 2s. 6d. for first 12s. 6d. and 2s. for every succeeding 10s. or part thereof. In certain circumstances the tax may take the form of a lump sum, based on gross takings; the amount of the tax to be 15 per cent. of the gross takings (*Ordinance No. 9 of 1927*). In the case of a restaurant where no admission is charged and where instrumental music is given or a vocalist or concert or entertainment party is engaged, tax of 10s. per day; £2. 0s. 0d. per week; £4. 0s. 0d. per month; £10. 0s. 0d. per quarter; £15 0s. 0d. per six months; or £25 0s. 0d. per year, is levied. Cinematograph, bioscope, or like exhibition given in a restaurant; a tax of 1d. per person for every person admitted is levied. Provision is made for exemption from tax in the case of entertainments promoted for certain objects (*Ordinance No. 9 of 1927*, as amended by *Ordinance No. 7 of 1931* and *Ordinance No. 5 of 1933*).
Licences—Importers....	*Cape of Good Hope.*—In respect of goods imported for sale within the Cape Province from beyond the borders of the Union, for every completed £100 of the value of such goods £1. An importer whose importations during any calendar year do not exceed £500 is exempt. (*Ordinance No. 19 of 1930* as amended by *Ordinance No. 3 of 1937.*)
Motor Tax.....	*Cape of Good Hope.*—Drivers' Licences :— Learner: Motor vehicle other than motor cycle (2 months), 10s.; motor cycle (2 months), 5s. Competency Certificate: Motor vehicle other than motor cycle, 10s.; motor cycle, 5s. Final: Motor vehicle other than motor cycle (perpetual), £2; motor cycle (perpetual), £1. Occasional driver's licences valid for 3 months for bona fide visitors to the Cape Province, 10s. Competency certificate (visitors), 5s. *Annual Licence Fees for Motor Vehicles :—*

* In respect of so-called traction engines fitted with pneumatic tyres and used solely for hauling a trailer carrying the produce of the farm on which the owner of the said traction engine is *bona fide* farming, or supplies for use on the said farm, the licence fee payable in respect of such traction engine shall be £7. 10s. In lieu of the fees set out in the column under the heading " Goods Vehicles and Omnibuses, Pneumatic tyred ".

The annual licence fee is subject to a reduction of $^1/_{12}$th in respect of every completed calendar month of the year which has elapsed up to the time ownership of the vehicle is acquired.

Annual General Licences for Motor Vehicles—Motor Dealers, Manufacturers, or Repairers.

In respect of all motor vehicles owned and kept at each business premises, whether principal business premises or branch business premises

Motor vehicle other than motor cycle: Annual fee of £10 for first vehicle, and £3 for each additional vehicle.

Motor Cycle: Annual fee for every motor cycle with or without side-car, £3.

If such general licence is taken out for one-half of the year, beginning the 1st January or the 1st July, the fee is ⅔ths of the annual fee.

PARTICULARS OF PROVINCIAL TAXATION—(*continued*).

Designation of Tax.	Particulars.	£	s.	d.
Motor Tax—(contd.)...	*Natal*.—Drivers' Licences:—			
	Provisional Licence (1 Month): Motor cycle, 2s.; other motor vehicle, 5s.			
	Competency Certificate: Motor cycle, or motor cycle with side-car, 2s.; other motor vehicle, 10s.			
	Final (valid for 5 years from issue): Motor cycle, 5s.; motor cycle with side-car, 5s.; motor car, 10s.; other motor vehicle, 10s.			
	Renewal of a driver's licence (valid for 5 years from issue), 2s. 6d.			
	Fees Payable for Annual Registration of Motor Vehicles:—

	Lorries or other self-propelled vehicles designed for conveyance of goods: similar rates, plus 50 per cent. Trailers: not exceeding 1,000 lb. in weight, £1; 1,001–3,000 lb., £5; 3,001–5,000 lb., £20; and over 5,000 lb., £30.		
	Where a motor vehicle is acquired after the 1st January in any year, the licence fees, but not the registration fees, are reduced by one-twelfth for every completed month between the 1st January and the date of acquisition.		
	General Motor Trade Licences:—		
	(*a*) Annual licence of £10 authorizing the use of one set of plates, issued to manufacturers or repairers of, or dealers in, all motor vehicles except motor cycles, for purpose of demonstration and sale. £10 for each additional set of plates required. Licences may be taken out for one quarter of year beginning on 1st January, 1st April, 1st July, or 1st October: a fee of £3 is payable per quarter.		
	(*b*) Annual licence for motor cycles only, £3 for each set of plates (*Ordinance No.* 18 *of* 1931, as amended by *Ordinance No.* 12 *of* 1933 and *Ordinance No.* 12 *of* 1934).		
Personal, Income, and Company Taxes	*Cape of Good Hope.*—(*a*) *Personal Tax*: Due by every person 21 years of age or over resident in the Cape Province: (i) if married, 10s. on an income of £250 per annum and an additional 2s. 6d. on every completed £10 of income in excess of £250, subject to a maximum of £3; (ii) if unmarried, £1 on an income of £150, and 2s. 6d. on every completed £10 of income in excess of £150, subject to a maximum of £5.		
	(*b*) *Income Tax* (*Normal*): Due by every Union income tax payer resident within the Cape Province, on each completed shilling of the amount of normal income tax payable to the Union Government, (i) if married, 15 per cent., (ii) if unmarried, 22½ per cent.		
	(*c*) *Income Tax* (*Super*): Due by every Union income tax payer resident within the Cape Province on each completed shilling of the amount of super-tax payable to the Union Government, (i) if married, 20 per cent., (ii) if unmarried, 30 per cent.		

PARTICULARS OF PROVINCIAL TAXATION—(*continued*).

Designation of Tax.	Particulars.
Personal, Income, and Company Taxes (continued)	***Cape of Good Hope*—(continued).** **(*d*) *Companies Tax:* Due by every company carrying on a business in the Cape Province, 4½d. on each £1 of "taxable income" derived from sources within the Cape Province (excluding mining operations).** ***Exemptions:* (1) Married females who are not separated from their husbands under judicial order or written agreement, provided that any married woman who is liable for Union Income Tax by virtue of rendering separate income tax returns is liable for Provincial Income Tax; (2) indigents; (3) natives upon whom a Provincial Council may not by reason of section 3 (2) of Act No. 5 of 1921 impose direct taxation; (4) married persons with incomes less than £250; (5) unmarried persons with incomes less than £150; (6) officials of outside Governments who are not liable to Union income tax (*Ordinance No. 31 of* 1932 as amended by *Ordinances Nos.* 12 of 1933, 31 of 1934, 21 of 1935, and 24 of 1938).** ***Natal*.—(*a*) *Personal Tax:* (i) Persons with incomes of less than £450, £1; (ii) persons with incomes of £450 or over, £2; (iii) persons in certain defined circumstances, with incomes of less than £250, 10s.** **(*b*) *Income Tax:* Rate 10 per cent. of the normal or super-tax assessed under the Union *Income Tax Act*.** **(*c*) *Company Tax:* Three pence for each £1 of taxable income determined by the Commissioner for Inland Revenue as having been derived from sources within the Province.** ***Exemptions:* Females not liable for income tax; indigent males; male adults attending educational institutions as whole-time students and not liable for income tax; lepers or mentally deficient persons not liable for income tax; any person in receipt of a war pension, whose taxable income did not exceed £250; any person of 60 years or over during any part of the year of assessment who is not liable for Union income tax; persons or the income of persons who have become liable to a tax upon persons or the income of persons under the law of another province; mutual life insurance companies, building societies, friendly societies and companies which do not carry on business for gain; income derived from mining operations; natives (*Ordinance No. 17 of* 1928, as amended by *Ordinance No. 17 of* 1931 and *Ordinance No. 10 of* 1935).** ***Transvaal*.—*Ordinance No. 10 of* 1928, as amended by *Ordinance No. 20 of* 1930 and *Ordinance No. 14 of* 1933.—The incidence of taxation is as follows:—** **(*a*) *Personal Tax:* Tax on persons resident in the province of the age of 21 and over:—** **Married, £1. 10s. 0d.** **Unmarried and under the age of 25, £1. 10s. 0d. Unmarried and of the age of 25 or over:—(i) If his income was under £100, £1. 10s. 0d.; (ii) if his income was £100 or over, £2. 5s. 0d.** **(*b*) *Income Tax:* Tax on the income of persons resident in the province:—** **Married: 15 per cent. calculated on each completed shilling of the amount of Union normal and/or supertax assessed in respect of the previous year.** **Unmarried: 22½ per cent. calculated on each completed shilling of the amount of Union normal and/or supertax assessed in respect of previous year. A widow, widower, divorced person, or a person who is separated by judicial order or written agreement is deemed to be unmarried, provided that any such person who supports a minor child, and an unmarried person who supports an adopted child or who is the sole support of a parent, shall be deemed to be married.** ***Exemptions:* All females, except those who are income tax payers; unmarried males with an income of less than £50; married males with an income of less than £100; indigents; students who attended an educational institution during three months immediately preceding due date of tax and not liable for income tax; lepers and mentally deficient persons not liable for income tax; male adults who have attained the age of sixty and over not liable for income tax; natives.** **(*c*) *Companies Tax* (*Ordinance No. 12 of* 1933): Subject to a minimum payment annually of £5 the rates of tax payable by companies shall be:—In respect of companies other than financial companies, for each pound of taxable income, sixpence; in respect of financial companies, for each pound of dividend distributed, one shilling.** ***Exemptions*:—Any portion of a taxable income or any portion of a dividend distributed which is derived from mining operations or rights in or to mines or minerals; any taxable income that is derived from a source outside the province; any company which does not carry on business for the purpose of profit or gain which is to be divided amongst or credited to the shareholders or members thereof; any portion of a dividend distributed by a financial company out of dividends which have already been taxed as a dividend

PARTICULARS OF PROVINCIAL TAXATION—(*continued*).

Designation of Tax.	Particulars.
Personal, Income, and Company Taxes—(continued)	*Transvaal*—(continued). distributed under this Ordinance; any dividend distributed on the winding up of a company; any mutual life assurance company; any portion of the taxable income of a non-mutual life insurance company which is distributed amongst its policy holders; any company, which on the due date of the tax is in a dormant state, is in receipt of no income, and conducts no active operations for the benefit of its shareholders. *Orange Free State*.—(*a*) *Personal Tax:* On married and unmarried adults: minimum tax, £1, plus 2s. in the case of married adults, and 3s. in the case of unmarried adults, for every completed £10 by which the taxable incomes of such adults exceed £100. (*b*) *Income Tax:* Married adults: 20 per cent; unmarried, 30 per cent. on each completed shilling of amount paid or payable for Union income tax. A widower, a widow, or a divorced person is deemed to be unmarried, provided that any such person who supports a minor child or children and an unmarried person who is the sole support of a parent shall be deemed to be married. (*c*) *Company Tax:* Minimum of £5 on each company having an office or place of business within the province, to which no taxable income accrued from sources within the province, or whose taxable income from sources within the province does not exceed £200. For every other company 6d. on each £1 taxable income derived from sources within the province. *Exemptions:* (1) Income derived directly from mining operations; (2) co-operative societies registered as such under Act No. 28 of 1922; (3) companies not carrying on business for profit or gain to be divided among members or shareholders; (4) mutual life insurance companies; (5) portions of taxable income of non-mutual life insurance companies credited to or distributed among policy holders; (6) unmarried females with income less than £100; (7) married females except those liable for income tax; provided that any woman who marries during the tax year and who is liable for income tax for a period of less than one year, and any married woman who is liable for income tax by virtue only of section 46 of Act No. 40 of 1925, shall be exempt from personal tax; (8) indigents; (9) students with incomes less than £100; (10) natives as defined by section 19 of Act No. 41 of 1925; (11) coloured persons liable to poll tax, *vide* O.R.C. *Ordinance No. 2 of* 1904; (12) lepers, lunatics, and persons mentally deficient unless Union income tax payers; (13) building societies registered under the *Building Societies Act* 1934; (14) adults 60 years of age or over whose taxable income is less than £100; (15) officials of other Governments who are not liable to income tax (*Ordinances No. 4 of* 1928 as amended by *Ordinances Nos. 4 of* 1937 and 13 *of* 1938).
Native Pass Fees	*Transvaal*.—2s. per head per month payable by employer in certain defined proclaimed labour areas in respect of every male native registered to him under a service contract (*Act No. 21 of* 1923).
Transfer Duty	*Cape of Good Hope*.—2 per cent. (*Act No. 5 of* 1884, as amended by *Act No. 11 of* 1913). *Natal*.—2 per cent. (*Law No. 5 of* 1860, as amended by *Law No. 20 of* 1865, *Law No. 19 of* 1883, *Law No. 19 of* 1884, *Law No. 5 of* 1890, *Law No. 6 of* 1891, *Act No. 7 of* 1903, *Act No. 23 of* 1907, *Act No. 31 of* 1908, *Act No. 11 of* 1909, *Act No. 12 of* 1909, *Act No. 11 of* 1913). *Transvaal*.—2 per cent. Leases liable for 1½ per cent. (*Proclamation No. 8 of* 1902 as amended by *Ordinance No. 14 of* 1905 and *Acts No. 28 of* 1919 and *No. 10 of* 1913). *Orange Free State*.—2 per cent. on sale of immovable property (*Ordinance No. 12 of* 1906 as amended by *Act No. 30 of* 1908 and *Act No. 11 of* 1913). In all provinces duty is payable within six months of date of contract, thereafter interest at rate of 12 per cent. per annum on amount of duty becomes payable.
Wheel Tax	*Natal*.—On every vehicle other than a traction engine, motor lorry, motor omnibus, motor car, or motor cycle, 2s. 6d. per wheel; excludes vehicles running on rails; also bicycles and rickshas, or other vehicles which are propelled or drawn by human power (*Ordinance No. 13 of* 1918, as amended by *Ordinance* No. 7 of 1919, and section 3 of *Ordinance No. 8 of* 1921). Provision is made for exemption of certain vehicles. *Orange Free State*.—Any vehicle other than a motor vehicle or trailer, 5s. per wheel; any bicycle, 2s. 6d. per wheel. A tax at one-half these rates is payable in respect of a vehicle or bicycle acquired between the 30th September and the 31st December in any year. Vehicles used solely and bicycles used principally for the conveyance of children to and from school are exempt (*Ordinance No. 17 of* 1931, as amended by *Ordinances Nos. 8 of* 1933, 11 *of* 1934, and 6 *of* 1935).

2. Total Revenue of Provinces.—The subjoined tables give (i) the total amount of the Union Government subsidy, and (ii) the total revenue collected in the case of each province (1st April to 31st March each year).

(i) SUBSIDIES OF UNION GOVERNMENT TO PROVINCES—FINANCIAL YEARS 1911-12 TO 1937-38.

§ 3. Ordinary Expenditure of Provinces.

1. **Classification of Provincial Expenditure.**—The tables contained in this section give particulars of ordinary expenditure for certain years from 1911-12 in each province and in all provinces under the main heads. The provinces classify their ordinary expenditure as follows:—(*a*) Administration, (*b*) Education, (*c*) Hospitals and Charitable Institutions, (*d*) Roads, Bridges, and Local Works, (*e*) Miscellaneous Services, and (*f*) Interest and Redemption Charges. An analysis along these lines has been made of the figures for the last five years, and details thereof will be found below. Sub-head (*d*) includes expenditure on behalf of the National Road Board from 1935-36.

Expenditure prior to the 1st April, 1913, was covered by grants of the Union Government, and from that date has been met in each case from the provincial revenues derived from the sources described in the preceding section of this chapter.

Chapter II gives particulars as to the functions of Provincial Administrations and the various services for which the Administrations are responsible.

2. **Total Expenditure and Expenditure per Head.**—The tables given below contain particulars as to the total ordinary expenditure in each province from 1911-12 and the expenditure per head of the mean total population and the mean European population:—

ORDINARY EXPENDITURE OF THE PROVINCES, AND EXPENDITURE PER HEAD OF THE POPULATION, 1911-12 TO 1937-38.

4. **General Administration.**—Particulars are given below for certain financial years (1st April to 31st March) of ordinary expenditure on the general administration of the four provinces. These figures do not include the administration expenses relative to Education and Roads, Bridges, and Local Works. Expenditure relating to these is shown under the respective headings below.

PROVINCIAL GENERAL ADMINISTRATION EXPENSES, 1933-34 TO 1937-38.

Province.	1933-34.	1934-35.	1935-36.	1936-37.	1937-38.

TOTAL.....£	23,962	20,325	39,421	32,131	42,619

5. **Expenditure of Provinces on Education.**—In accordance with the provisions of section 85 (iii) of the *South Africa Act*, for a term of five years (1910-15) and thereafter until otherwise determined by Parliament, education, other than higher education (for which the Union Government is responsible), was placed under the control of the Provincial Administrations. This arrangement still obtains except that as from the 1st April, 1925, all industrial and trades schools were taken over by the Union Education Department and classified under Higher Education [see Chapter VIII, § 2 (1)]. Expenditure on education forms by far the largest item of expenditure in the provinces. The subjoined table gives for all provinces the ordinary expenditure on education for certain financial years (1st April to 31st March) and the distribution of expenditure under main headings in each province for the same period. Further details in respect of expenditure on education are given in Chapter VIII.

PROVINCIAL ORDINARY EXPENDITURE—EDUCATION (OTHER THAN HIGHER EDUCATION), 1933-34 TO 1937-38.

7. **Expenditure on Roads, Bridges, and Local Works.**—Particulars are given in the tables below for certain financial years (1st April to 31st March) for all provinces and for each province separately, as to ordinary expenditure by Provincial Administrations on roads, bridges, and local works. Payments from the National Road Fund through the various provinces are also shown from 1935-36. In the case of the Province of the Cape of Good Hope the moneys received from the National Road Fund on account of interest and redemption due on divisional council loans have been transferred to the Provincial Roads Fund account. Further details as to roads and bridges are given in Chapter XIII.

PROVINCIAL ORDINARY EXPENDITURE—ROADS, BRIDGES, AND LOCAL WORKS, 1933-34 TO 1937-38.

† Includes £315,519 refund of 1932-33 salary reductions and £528,268 revenue surplus transferred to Capital Account.

9. **Interest and Redemption.**—Particulars are given hereunder in respect of each province as to the interest and redemption charges paid by the Provincial Administrations for a certain number of years. The reduction from 1936-37 against the heading Roads, Bridges, and Local Works is mainly due to the fact that certain liabilities have been taken over by the National Road Board.

* Estimates.

D. PUBLIC DEBT AND EXPENDITURE FROM LOANS.

1. **Public Debt of the Union.***—The table below gives particulars (i) of the total amount of the gross public debt of the Union, the amount of the sinking fund, and the net public debt at the close of each financial year (31st March) 1911 to 1939, and (ii) the amount of gross and net debt respectively per head of the mean total population and per head of the mean European population. Comparisons under this head with other Dominions are difficult to effect, because of the numerical preponderance of the coloured races in the Union. If it were possible to determine the relative economic position of the individual of the coloured races and the individual of European race, it might be in reason to institute comparisons. The figures for the Union have, however, been given for both the mean total population and the mean European population. The true means of comparison with other countries lies in figures some way between those given, probably in each case in an amount per head approximately half of that given in respect of the European population. Nevertheless, it is of interest to note the following amounts, representing for various countries the gross public indebtedness per head of the population:—

			£	s.	d.
New South Wales	at 30th June,	1937	130	3	5
Victoria	,,	,,	95	3	0
Queensland	,,	,,	125	18	1
South Australia	,,	,,	181	5	8
Western Australia	,,	,,	203	7	6
Tasmania	,,	,,	108	16	6
Commonwealth of Australia (i.e. The State Debts added to the Commonwealth Debt less Debts counted twice)	,,	,,	184	18	10
New Zealand (per head of European population)	at 31st March,	1937	182	4	3
Canada	,,	1938	62	15	2
Union of South Africa (per head of European population)	,,	1937	125	5	9
	,,	1938	126	15	2

The system in the Union, under which the responsibility for the whole of the public debt is vested in the Union Government, distinguishes it from that in Australia, where each State has separate responsibility, and where the Commonwealth debt forms only a small proportion of the whole. In any comparison with Canada also differences of provincial government, differences in regard to railways and other undertakings, have to be examined, without which comparison is likely entirely to mislead. Speaking generally, apart from differences in the elements of the population, the conditions in Australia and New Zealand most nearly approximate to those in the Union.

* A statement showing the position of the public debt at the establishment of the Union, when it amounted to £116,036,978 (see paragraph 2 below), will be found in the sixth and previous issues of this *Year Book*.

8. **Dates of Maturity of Funded Debt.**—The following table shows the dates of maturity of the funded debt of the Union as it stood on the 31st March, 1937. The remoter date of maturity has been taken for loans in trust at 3 per cent. and under, and the earlier date for loans above 3 per cent. (except where otherwise stated).

FUNDED DEBT OF THE UNION, 31st MARCH, 1937—DATES OF MATURITY.

9. **Colonial Stock Act.**—The *Colonial Stock Acts*, 1877 to 1900, passed by the Imperial Government gave the privilege of Trustee Stocks to such stocks of the Colonies as were registered in the United Kingdom in accordance with the provisions of those Acts. The *Trustee Investment in Union Government Securities Act*, No. 6 of 1913, made provision for the payment of money due to holders of such stocks. In view of the *Statute of Westminster*, 1931, the Imperial Government undertook to modify the Treasury conditions with regard to those stocks, provided the Union Government gave a suitable undertaking to safeguard the interests of stockholders. This undertaking is embodied in the *Colonial Stock Act* 1900 *Declaration Act*, No. 49 of 1934.

10. **Expenditure from Loans.**—In the subjoined table particulars are given for six years of the expenditure from loans under the main heads.

Expenditure under the heads of Public Works and Buildings, Lands, and Local Works and School Loans includes capital expenditure incurred by the Provincial Administrations.

EXPENDITURE FROM LOANS, 1932-33 TO 1937-38.

* Includes Farmers' Special Relief in terms of the 1931 Act and advances in terms of section 20, Act No. 29 of 1933.

The total appropriation for loan expenditure in 1938-39 was £25,553,324, and the issues required for expenditure were £22,885,000.

11. **Loan Receipts.**—The following table gives, for six financial years, the loan recoveries and other loan credits under the main heads. Certain revenue, chiefly derived from public estate, is not included in ordinary revenue but is credited direct to the Loan Account under Other Loan Credits. The table does not include Capital receipts (temporary or funded loans raised) nor surrenders of previous years' unexpended balances.

LOAN RECEIPTS, 1932-33 TO 1937-38.

* From 1936–37 represents recoveries by State Advances Recoveries Office.
† From 1936–37 included in Farmers' Special Relief.

The revised estimate for 1938-39 for Loan Receipts was £5,400,000, and Exchequer Receipts amounted to £5,461,420. In addition, an amount of £3,927,036 being portion of the surplus on revenue account for 1937-38 was transferred and credited to loan account during 1938-39.

12. Loan Expenditure and Recoveries.—The following table shows, allocated to the various services, (*a*) the net expenditure from loan at 31st March, 1938, (*b*) the net expenditure from loan at Union, (*c*) the net expenditure from loan since Union, i.e. from 31st May, 1910, to 31st March, 1938, (*d*) recoveries on loan account since Union, and (*e*) the gross expenditure from loan account during the same period.

The net expenditure at 31st May, 1910, in the case of Lands, Agriculture, and Irrigation was £4,225,396. An estimate of the amount spent by each department has been made and accepted by the departments concerned to represent as close approximations as can be made in the circumstances.

The net expenditure now shown as at the date of Union differs from the total net expenditure given in No. 7 and earlier issues of the *Year Book*, chiefly owing to the fact that the cost of the raising and conversion of loans is excluded.

A reconciliation statement as between the net expenditure from loan and the public debt is given at the foot of the table.

LOAN EXPENDITURE AND RECOVERIES AT 31st MARCH, 1938.

Service.	Net Expenditure. At 31st March, 1938.	Net Expenditure. At 31st May, 1910.	Net Expenditure. 31st May, 1910, to 31st March, 1938.	Recoveries, 31st May, 1910, to 31st March, 1938.	Gross Expenditure 31st May, 1910, to 31st March, 1938.

13. System of Capital Expenditure in Provinces.—Prior to the passing of the *Financial Relations Act*, No. 10 of 1913 (as amended), capital expenditure in connexion with services controlled by the Provincial Administrations was covered by the general expenditure of the Union Government. In terms of section 6 (3) of the Act of 1913, however, specific issues from loans are provided for the provinces in respect of capital or non-recurrent expenditure, defined as expenditure (whether directly or by loan to local bodies) upon the erection, construction, acquisition, extension, or improvement of any building, bridge, pont, or upon any work or undertaking of a permanent nature in relation to a matter entrusted to the province, but not expenditure upon the construction of a road, unless authorized by the Treasury in special cases; provided that—

(*a*) if the expenditure upon any such building or extension thereof does not exceed £500, or

(*b*) if the expenditure upon any bridge, pont, or other such work or undertaking does not exceed £500, such expenditure is deemed to be normal or recurrent expenditure, except by provision of the Executive Committee of a province on the annual estimates of expenditure, with the approval of the Treasury, or

(*c*) if the expenditure appears clearly to be of a capital or non-recurrent nature, the Treasury may in its discretion authorise such expenditure to be regarded as capital or non-recurrent expenditure, notwithstanding that the amount of such expenditure is less than £500 (section 1 of Act No. 21 of 1924).

In 1925, the objects for which loans could be made from capital expenditure were extended so as to include the purchase of provincial stores and requisites.

The amount, which may from time to time be required by any province for the purpose of meeting any capital or non-recurrent expenditure, is advanced to that province upon loan as required, in such amounts as Parliament authorizes by annual appropriation. Any such advance has to be repaid by the province to the Treasury by equal half-yearly instalments, so calculated that the whole advance and the interest thereon will be repaid within a period of not less than fifteen years and not exceeding forty years, but the Treasury may prescribe a shorter period for the repayment of any such advance as is made for the construction of any road. Advances made prior to the 1st July, 1921, bear interest at the rate of 5 per cent. per annum, but under the provisions of section 1 (1) of Act No. 42 of 1917 the Minister of Finance fixed the rate of interest on advances made on or after the 1st July, 1921, at 6 per cent. per annum. On and from the 1st January, 1923, the rate of interest was fixed at 5 per cent. per annum, and was again reduced to 4 per cent. per annum as from the 1st January, 1933, and to 3½ per cent. per annum as from 1st April, 1934. On the 31st December, 1936, an overall rate of interest at 4¼ per cent. per annum was fixed with effect from 1st July, 1936, on the balances outstanding at 1st July, 1936, of loans for capital expenditure made to Provincial Administrations prior to

1st July, 1935, under section 9 (1) of Act No. 10 of 1913. The rates of interest now applicable to loans to the provinces are, therefore, 4¼ per cent. per annum on the balances of loans made prior to 1st July, 1935, and 3½ per cent. per annum on loans made subsequently. The instalments and interest aforesaid are treated in the *Appropriation Ordinance* and in the accounts of the province as part of its normal or recurrent expenditure.

The amounts received by a province for capital expenditure are paid into the capital account of the Provincial Revenue Fund.

14. **Details of Capital Expenditure in Provinces.**—Table (i) below gives the total capital expenditure in each province for a period of years (1st April to 31st March) and the total capital expenditure for the whole of that period. Table (ii) gives in respect of each province the capital expenditure for a number of years under the main heads of expenditure. The whole of this expenditure is covered in the table contained in paragraph 12 of this section.

15. Provincial Loan Indebtedness.—The table hereunder is a summary of the provincial loan accounts for the year ending 31st March, 1938. The figures have been sub-divided to show the indebtedness of each province as regards (a) capital expenditure, and (b) loans to meet revenue deficits. These figures do not include amounts raised for the purpose of granting housing loans to local authorities.

CHAPTER XVI.

CURRENCY, BANKING, AND GENERAL FINANCE.

§ 1. Coinage.

1. **The Transvaal Mint.**—A State Mint was established by the South African Republic in 1890 and continued to function until November, 1902. During its existence the Mint struck coins to the value of £2,722,027. 8s. 4d.

2. **The Pretoria Branch of the Royal Mint.**—(i) *General.*—The establishment of a branch of the Royal Mint at Pretoria was provided for by Act No. 45 of 1919. A Royal Proclamation, dated 14th December, 1922, determined the Pretoria Mint to be a branch of the Royal Mint, London, for the purpose of the manufacture of the British sovereign and half-sovereign. Governor-General's Proclamation No. 37 of 1923 (the *Pretoria Mint Proclamation*, 1922) gave effect to the Order-in-Council as from 1st January, 1923, from which date the Mint began to function.

In 1937 the Union Defence Department made preparations for the manufacture of ·303 ammunition in South Africa and placed orders for the necessary plant, etc., with the successful tenderers, Imperial Chemical Industries, Ltd. The Mint, Pretoria, was entrusted with the carrying out of this work in view of the fact that it already possessed many of the necessary facilities and had a skilled staff suitable for this type of work. During 1938 the scheme was inaugurated after the necessary buildings and plant had been erected and the additional staff obtained. Accounts and statistics for this section are not included in the figures given below.

Further particulars regarding the establishment and functions of the Mint, which have been omitted from this issue owing to considerations of space, will be found in *Year Book* No. 17 and previous issues.

The following are the names of the principal officers of the Pretoria Branch:—

Deputy Master.....	J. T. Becklake, A.M.I.E.E.
Assayer.....	C. R. Robson, B.Sc., A.I.C.
Chief Clerk and Accountant....	R. E. Hill.
Senior Technical Officer.....	J. Wilson, M.B.E.

(ii) *Coinage.*—The designs of the Union silver and bronze coins are as follows:—

Obverse for all denominations—Uncrowned effigy of His Majesty the King with the inscription GEORGIUS VI REX IMPERATOR.

Reverses—

Two-and-a-half shillings..	A shield containing the arms of the four provinces of the Union, surmounted by a Crown, the denomination expressed as 2½ *Shillings*.
Florin.....	Shield as for above coin, no Crown. Denomination expressed as 2 *Shillings*.
Shilling.....	Figure of Hope with an anchor, a star above. Denomination expressed as *Shilling*.
Sixpence.....	Protea surrounded by six bundles of four rods each, the rods being symbolical of the four united provinces. Denomination expressed as "6d."
Threepence.....	As for 6d. but with three bundles of four rods each and "3d."
Penny.....	A Dutch East India merchantman in full sail, *Penny* or ½ *Penny*.
Halfpenny.....	
Farthing.....	Two heraldic sparrows. ¼ *Penny*.

"South Africa" and "Suid-Afrika" with date on all denominations.

The silver coin is composed of 800 parts of pure silver to 200 parts of copper; whilst the bronze coin is made of a mixture of copper, tin, and zinc.

Union silver and bronze token coin passes as legal tender in South West Africa, Basutoland, British Bechuanaland, and Swaziland.

(iii) *Statistics.*—The coining and other activities of the Mint, excluding the ammunition manufacturing section, are illustrated in the following tables:—

‡‡ Includes Voortrekker Medals: 75 Gold, 3,112 silver, and 46,160 bronze.

§ 2. Currency and Banking.*

1. **South African Reserve Bank.—The South African Reserve Bank was established at Pretoria under the *Currency and Banking Act*, No. 31 of 1920. The original Act was amended by Acts No. 22 of 1923, No. 26 of 1930, section 7 of the *Financial Adjustments Act*, No. 25 of 1932, and by the *Currency and Exchanges Act*, No. 9 of 1933.**

The Bank management consists of a board of eleven directors, of whom six are elected by stockholders, three must be or have been actively engaged in commerce or finance, one in agriculture, and two in other industrial pursuits, three are government representatives, while the Government also appoints the Governor and the Deputy-Governor of the bank. No person may be nominated as a director, if he is a director, officer, or employee of another bank or a Member of Parliament or of a Provincial Council. All the directors must be British subjects and must reside in the Union. The capital of the Bank is £1,000,000. No stockholder other than a subscribing bank or the Treasury may hold more than £10,000 of the capital stock. If any bank parts with its stock in excess of £10,000 it may not re-acquire it.

The capital of the Bank may be increased with Treasury approval, and the price of stock for that purpose may be fixed by the board with the approval of the Treasury.

The reserve fund has reached the maximum of £1,000,000 provided for in the Act. Declared net profits in excess of a 10 per cent. dividend to shareholders are paid over to the Government.

The classes of business the Bank may or may not engage in were set forth in *Official Year Book* No. 17 and in previous issues.

The Bank has the sole right to issue bank notes in the Union for a period of twenty-five years, from the 17th December, 1920. These notes are legal tender even when tendered by the Bank itself. The denominations of notes are prescribed by the Treasury, and the notes are no longer redeemable in gold. The note issue is secured to an amount of not less than 30 per cent. in gold, of which not more than one half may be held outside the Union, and by a first charge on all the assets of the Bank. Further provision is made for the suspension of reserve requirements for certain limited periods.

The Bank must hold in gold or specie a reserve of at least 30 per cent. of its deposits and bills payable in addition to the gold reserve required for bank notes (not more than one-fifth of this reserve may be silver specie).

Every bank transacting business in the Union is required to hold reserve balances in the Reserve Bank, equal to at least 10 per cent. of its demand liabilities in the Union, other than notes, and 3 per cent. of its time liabilities to the public in the Union.

The use of the word "bank" is prohibited in a business name, unless it was a lawful designation on the 1st of May, 1930, or the Treasury has given written permission for its use.

The Reserve Bank is authorized to make investments to prevent undue fluctuations in the exchange value of Union currency in relation to the currency of the United Kingdom. Any loss suffered by the Bank as a result of depreciation in any gold or bills or securities so acquired, caused by variations in rates of exchange, will be charged against revenue, and any profits will accrue to revenue.

The Governor-General is given power to make regulations in regard to any matter directly or indirectly relating to currency, banking, or exchanges. He may suspend in whole or in part the *Currency and Exchanges Act* or any other Act of Parliament or any other law relating to or affecting or having any bearing upon currency, banking, or exchange.

The principal Act came into operation on 17th December, 1920, and the Bank opened on 30th June, 1921. In December of the same year it notified the Treasury that it was in a position to issue notes. A proclamation (No. 14 of 1922) was issued declaring that on 30th June, 1922, all other banks should cease to issue or re-issue bank notes. The Treasury subsequently prescribed the following denominations of notes to be issued: 10s., £1, £5, £20, and £100. As, however, there was found to be a shortage of £1 notes

* In issues of the *Official Year Book* prior to No. 9 will be found information relating to the passing of the *Currency and Banking Act*, 1920, the Gold Standard Inquiry Commission 1924-25, and the issue and withdrawal of the Gold Certificates.

the Reserve Bank, at the request of the other banks, actually began issuing notes in April. By the end of July the change over was practically accomplished. Under the Act the commercial banks transferred the liability for their outstanding notes, amounting to £443,084, to the Reserve Bank on the 30th June, 1924.

Until the issue of its notes the business of the Reserve Bank was chiefly confined to granting advances to the Government and acting as a clearing-house for other banks. Since then it has been engaged in building up a re-discount business, and as its activities include the marketing of the gold production, it is able to control the South Africa-London exchange. In 1927 the accounts of the Union Government were transferred to the Bank.

Act No. 26 of 1930, which came into force on the 30th May of that year, incorporated the chief recommendations of the Gold Standard Inquiry Commission of 1924-25.

Act No. 9 of 1933, some of the provisions of which came into force as from 28th December, 1932, and some as from 20th January, 1933, was passed to meet the problems arising from South Africa's leaving the gold standard and pegging the exchange to sterling. An article entitled "Currency, Banking, and Exchange in the Union, 1931 to 1933, and Cognate Matters" appeared in the Appendix to *Official Year Book* No. 14.

In returns for 1938 "Other Assets" include an amount of £9,652,000, which represents the "Gold Premium Account." The difference between the price the Reserve Bank pays for gold and its statutory value, viz. 77s. 10½d. per standard ounce, is debited to this account. If any such gold is realized, the premium is credited to the account (*vide* Report of the thirteenth ordinary general meeting of the S.A. Reserve Bank, 1933). The potential profit as on 31st March, 1938, was £1,465,807. Gold shown in the first column of assets below is valued at the standard price.

In the latter part of 1938 the Bank instituted facilities for earmarking gold on behalf of foreign buyers. On the 31st December, 1938, the amount of gold so held was valued at £20,715,000.

Section 3 of Act No. 49 of 1935 guarantees the Bank against any loss in discounting bills under the wool purchase scheme with Germany entered into on 31st December, 1934.

Branches of the Bank have been opened in Johannesburg, Capetown, Durban, Port Elizabeth, East London, and Bloemfontein.

SOUTH AFRICAN RESERVE BANK—LIABILITIES AND ASSETS, 1932 TO 1939.

NOTE.—In the table hereunder the figures in the column headed "Capital and Reserve" include the amount appropriated to the reserve after the close of the financial year. The figures in the column headed "Undivided Profits" represent chiefly the final dividend due to shareholders and the share of the profits accruing to the Government.

* Includes British Government Treasury Bills.

2. **Banking in South Africa.**—A brief account of the history of banking in the Union will be found in the sixth and previous issues of this *Year Book*.

Tables giving the liabilities and assets of all banks operating in South Africa since 1891, with the exception of the Banque Française de l'Afrique du Sud, which operated in the Transvaal for a few years, but the returns of which have not been fully traced, will be found in the ninth and previous issues of the *Official Year Book*.

3. **Commercial Banks.**—There are eight banks trading in the Union. Of these the Standard Bank of South Africa, Limited, and Barclays Bank (Dominion, Colonial and Overseas) have their head offices in London, the Netherlands Bank of South Africa in Amsterdam, Holland, the Stellenbosch District Bank, Limited, in Stellenbosch, in the Cape Province, the Colonial Banking and Trust Company, Limited, in Johannesburg, the Union Bank of South Africa, Limited, in Johannesburg, and the United Dominions Corporation (S.A.), Limited, in Capetown. The Public Liberal Bank and the South African Commercial Bank went into voluntary liquidation, the former during September, 1938, and the latter during November, 1938.

Subject to the amending clauses of the *Currency and Banking Act*, 1920, the amending Acts, No. 22 of 1922 and No. 26 of 1930, and the *Currency and Exchanges Act*, No. 9 of 1933, which repealed the *Finance Emergency Regulations Act*, No. 48 of 1931, the following laws exist to control banking:—

Transvaal Law No. 2 of 1893.
Orange Free State Ordinance No. 20 of 1902.
Cape Colony Act No. 6 of 1891.
Union Act No. 7 of 1917.

Under the *Banks Act* of 1917 all banks are required to render to the Union Treasury detailed returns of their assets and liabilities within and without the Union as at the 31st March, 30th June, 30th September, and 31st December in each year. In terms of section 31 of the *Currency and Banking Act*, 1920, as amended by Act No. 22 of 1923, all banks are required to make a monthly return showing, for the Union, their liabilities to the public, their cash reserves, the total amount of their advances and discounts and the value of South African Reserve Bank notes held by them.

Under section 2 of Act No. 49 of 1935 the Government is authorized to give the necessary guarantees against loss to the banks participating in the Government's wool and mohair credit scheme to meet the need of short-term credit facilities by farmers.

4. **Branch Banking.**—The following table gives the numbers of branches, sub-branches, and agencies of the various banks in the Union in the years 1914, 1937, and 1938.

BRANCH BANKS, SUB-BRANCHES, AND AGENCIES, 1914, 1937, AND 1938.

Bank.	1914.	31st December, 1937.				31st December, 1938.

* The Colonial Banking and Trust Company had 55 agencies at 31st December, 1937, and 47 at 31st December, 1938. As it is not a cheque-paying bank, these figures have been omitted from the above table.
† Voluntary Liquidation, November, 1938.
‡ Voluntary Liquidation, September, 1938.
§ Registered March, 1937.

In 1914 there was one bank or agency per 2,782 European persons, while in 1937 and 1938 there was one bank or agency per 2,979 and 2,973 European persons respectively.

5. **Banking Statistics.**—The subjoined statements (i) and (iii) give particulars for a number of years as to the total liabilities and assets of all commercial banks in the Union, and (ii) and (iv) for the year 1938 as to the total liabilities and assets of each bank. The form of presentation is based upon that prescribed by the *Banks Act* of 1917, which differs in certain respects from the form adopted for previous years.

Separate tables showing the liabilities and assets in the Union from 1913 to 1926 were published in *Official Year Book* No. 9. Figures for later years have been published in subsequent issues.

(i) COMMERCIAL BANKS—TOTAL LIABILITIES (AT 31st DECEMBER), 1914 AND 1935 TO 1938, AND LIABILITIES IN THE UNION, 1938.

6. Deposits, Advances and Discounts, and Cash Reserves of the Commercial Banks.—The monthly return of deposits, advances, discounts, and cash reserves in the Union, to which reference is made in paragraph 3 above, is published in the *Monthly Bulletin of Statistics* for the month following the date to which the information refers. The figures are not in complete agreement with the quarterly statements, but the difference is inconsiderable. This important return gives a useful picture of seasonal and other trends of the chief banking factors. Details by month since 1931 are shown in the following table.

7. Bank Debits to Individual Accounts.—From the beginning of 1928 the banks have supplied the Census Office with the monthly bank debits to individual accounts within the Union, for the seven clearing-house centres and for the four provinces separately. The current figures are published in the *Monthly Bulletin of Statistics*. The following tables contain information of these debits, (i) in each of the provinces and certain of the larger towns for the years 1934 to 1938, and (ii) during each month for a series of years.

8. Clearing-House Returns.—On account of the fact that banking in South Africa is almost entirely confined to a few large corporations, and that transactions between different branches of the same bank are not put through a clearing house, the clearing-house returns in the Union, though not without considerable interest, must be interpreted with caution. Clearings take place in every town in which two banks have branches, and the returns of the seven chief towns are given below. Since the South African Reserve Bank commenced business, clearing-house settlements throughout the country have been effected by drawing on balances with the Reserve Bank. The South African Reserve Bank is in effect the clearing-house of all the clearing-houses.

CLEARING-HOUSE RETURNS, 1934 TO 1938.

9. Average Exchange Rates.—The average exchange rates, *South Africa on London*, for each year since 1931 are published below. The calculations have been confined solely to the Telegraph Transfer, Sight, and Ninety Days' Sight Buying and Selling Rates. The seventh column, headed "Mean Value of £100 Sterling," has been calculated by taking the mean point between the buying and the selling T.T. rate, and represents the average price of sterling in terms of South African money. The eighth column, headed "Average Discount Rate per Annum," is calculated from the difference between the ninety days' sight and the T.T. buying rate. The percentages given represent the average annual discount rates charged by the banks on money advanced on exporters' bills, and eliminate charges for exchange accommodation. Prior to 1st July, 1937, bills forwarded by air mail at the request of customers, on which a small concession in the normal rates was made, were not taken into account in the calculations, and the period allowed for sight was taken as twenty days. From 1st July, 1937, however, with the introduction of the air mail service, whereby all first class postal matter is carried by air, the rates of exchange were amended and the period allowed for sight is now taken as seven days.

AVERAGE ANNUAL EXCHANGE RATES, SOUTH AFRICA ON LONDON, AND PRICE OF £100 IN LONDON IN TERMS OF SOUTH AFRICAN MONEY, 1931 TO 1938.

* Omitting September, 1931, to April, 1933. For intermediate rates see table in *Year Book* No. 14. † Not quoted.

In view of the departure of Great Britain from the gold standard on the 21st September, 1931, the figures in the foregoing table have not been calculated for the period September, 1931, to April, 1933.

10. **Bank Rate of Discount.**—The South African Reserve Bank, under section 12 (3) of the *Currency and Banking Act*, is obliged to "fix and publish from time to time the rates at which it will discount the various classes of bills." The first announcement made on the 29th December, 1922, fixed the following rates:—

6 per cent. for first class commercial bills of not more than ninety days' currency.
6½ per cent. for first class agricultural bills with a maturity exceeding ninety days but not exceeding six months.

On the 21st November, 1924, the above rates were changed to 5½ per cent. and 6 per cent.; on the 10th September, 1927, to 6 per cent. and 6½ per cent.; on the 9th January, 1928, to 5½ per cent. and 6 per cent.; on the 17th August, 1929, to 6 per cent. and 6½ per cent.; on the 29th September, 1930, to 5½ per cent. and 6 per cent.; on the 13th March, 1931, to 5 per cent. and 5½ per cent.; on the 13th November, 1931, to 6 per cent. and 6½ per cent.; on the 7th October, 1932, to 5 per cent. and 5½ per cent.; on the 20th February, 1933, to 4 per cent. and 4½ per cent.; and on the 15th May, 1933, to 3½ per cent. and 4 per cent. respectively. By an amendment of section 13 of the principal Act, the currency for first class commercial bills was extended to one hundred and twenty days.

The minimum advance rate previously quoted by the other banks may perhaps be regarded as corresponding to the above rate for the period before the Reserve Bank quoted a rate. The rates for a period of ten years were:—2nd February, 1913, 6 per cent.; September, 1915, 6½ per cent. (coastal, 6 per cent.); 1st March, 1920, 7 per cent.; 16th August, 1920, 7½ per cent.; 1st May, 1922, 7 per cent.

The commercial banks deal in the same class of business as the Reserve Bank at the same rates. On first class secured overdrafts and unsecured overdrafts of undoubted clients their rate was 6½ per cent., increased to 7½ per cent. on 17th August, 1929, decreased to 6½ per cent. on 1st October, 1930, increased to 7½ per cent. on 20th November, 1931, and reduced to 6½ per cent. on 10th October, 1932, to 6¼ per cent. on 15th February, 1933, to 6 per cent. on 20th March, 1933, and to 5½ per cent. on 30th April, 1934.

11. **Fixed Deposit Rates.**—The following table shows the fixed deposit rates in force in South African commercial banks since 18th December, 1922. The rates in force from the 23rd June, 1913, to that date will be found in earlier issues of this *Year Book* (Nos. 9 to 12).

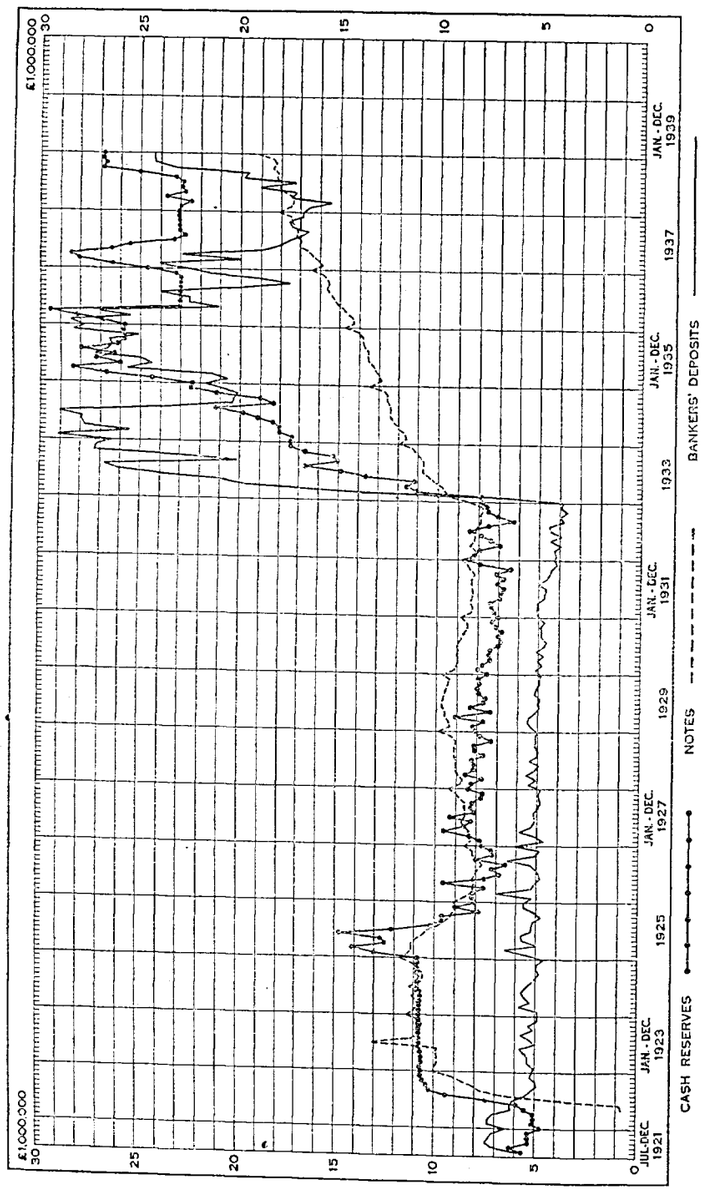
* From the 24th April, 1934, the twelve months' rate of 2 per cent. per annum on deposits was limited to £10,000 by any one depositor; for amounts in excess of £10,000 the rate is 1 per cent. per annum.

† On deposits up to £10,000 by any one depositor.

‡ On deposits up to £5,000 by any one depositor, thereafter 1 per cent.

From 1st August, 1927, the banks accepted deposits of £10,000 and over, subject to 31 days' notice of withdrawal at the rate of 2½ per cent. per annum, reduced to 2 per cent. when notice of withdrawal is given. On the 2nd April, 1929, the amount of £10,000 was reduced to £5,000, subject to the same rates of interest. On the 26th August, 1929, the rate of interest was changed from 2½ per cent. to 2¾ per cent., reduced to 2½ per cent. on giving notice of withdrawal. On the 1st January, 1930, one rate only, viz., 2¾ per cent., was introduced, and the period of notice was reduced from 31 days to 14 days, such notice not to be given within seventeen days of deposit. This rate was changed to 2½ per cent. on 1st October, 1930; to 2 per cent. on 26th January, 1931; to 1½ per cent. on 1st April, 1931; to 2½ per cent. on 29th October, 1931; to 2¾ per cent. on 20th November, 1931; to 3 per cent. on 20th January, 1932; to 2½ per cent. on 10th October, 1932; to 2 per cent. on 28th November, 1932; to 1 per cent. on 20th January, 1933; and it was finally suspended on 25th January, 1933.

12. **Bank Amalgamations.**—Details of the merging of the National Bank of South Africa in Barclays Bank (Dominion, Colonial and Overseas) and the amalgamation between the Netherlands Bank of South Africa and the Transvaal Commercial Bank were given in *Official Year Book* No. 8.



13. **People's Banks.**—There are four banks in the Union, which may be classified under the general designation of "People's Banks", viz., (*a*) Ons Eerste Volksbank (Pretoria), (*b*) Die Volkskas (Koöperatief) Beperk (Pretoria), (*c*) Die Afrikaanse Verbond-, Spaar- en Voorskotkas, Beperk (Bloemfontein), and (*d*) The South African Savings and Credit Bank Ltd. (Bloemfontein). They are run on a quasi-philanthropic basis, their main object being to assist on a commercial basis persons who would ordinarily have recourse to the money-lender. In *Official Year Book* No. 17 and previous issues, details were given as to their history and functions, but owing to limitations of space these particulars have now been omitted. The following table gives a summary of their operations during the last five years and particulars for each bank separately for the latest period available. The financial year for (*a*) Ons Eerste Volksbank and (*b*) Die Volkskas ends on 30th June, for (*c*) Die A. Verbond-, Spaar- en Voorskotkas on 30th September, and for (*d*) The S.A. Savings and Credit Bank on the 31st August.

15. **Other Savings Banks.**—The following tables give particulars for a period of years of savings banks operating in the Union. The information is collected under the *Statistics Act*. The figures are inclusive of the four people's banks mentioned above, but are exclusive of savings bank departments of the commercial banks and building societies, details of which are respectively shown in the tables in paragraph 5 above and § 4 hereunder. Statistics of the Post Office Savings Bank are given in the preceding paragraph.

SAVINGS BANKS, 1933-34 TO 1937-38.

(i) NUMBER OF BANKS AND ACCOUNTS.

16. **Union Loan Certificates.**—Act No. 20 of 1919 authorized the raising of money by means of Union Loan Certificates. These certificates offer a suitable investment for small sums in a government security, bearing a high rate of interest, if left to mature, free of Union income tax and super tax. Certificates of nominal values of £1, £10, and £25, and forms of application for certificates of larger amounts are obtainable at any money order office in the Union and South West Africa. No individual is entitled to hold more than £1,000 (face value). Limited liability or other registered companies, partnerships, or public bodies are not permitted to hold certificates, but friendly, charitable, and provident societies, clubs, and funds, approved of by the Postmaster-General, may invest and, provided they can produce a certificate from the Commissioner for Inland Revenue certifying that their funds are wholly exempt from income tax, there is no limit to their investments. As from the 1st February, 1935, a new series of certificates has been issued; the purchase price of a single certificate has been increased from 16s. to 16s. 3d. and at the end of six years the value is 20s. The purchase price, together with any accrued interest, is repayable at short notice any time prior to the date of maturity, on application to the Accountant, Union Loan Certificate Section, G.P.O., Pretoria (in the case of certificates issued at Transvaal or Natal offices) or Capetown (in the case of certificates issued at Cape of Good Hope and Orange Free State offices). The annual compound interest rate for the six years is 3.54 per cent. For particulars of earlier series of certificates see *Official Year Book* No. 15 and earlier issues.

The total number of individual holders of single and multiple certificates is estimated at between 80,000 and 90,000.

The following table shows the number of units and the value of Union Loan Certificates issued and repaid during certain years from 1920. For the intervening years see *Year Book* No. 19 and previous issues.

NUMBER AND VALUE OF UNION LOAN CERTIFICATES ISSUED AND REPAID, 1920 TO 1939.

At 31st March.	Number.			Amounts.*			Interest Paid.
	Issued.	Repaid.	Balance.	Issued.	Repaid.	Balance.	
	Units.	Units.	Units.	£	£	£	£
1920.....	2,132,593	60,278	2,072,315	1,652,760	46,716	1,606,044	—
1925.....	7,867,597	2,601,865	5,265,732	6,139,263	2,022,478	4,116,785	190,107
1930.....	12,204,695	6,554,740	5,649,955	9,608,941	5,129,814	4,479,127	952,623
1935.....	19,404,031	11,427,782	7,976,249	15,370,463	8,987,426	6,383,037	2,357,803
1936.....	20,508,083	12,197,664	8,310,419	16,267,505	9,604,110	6,663,395	2,544,314

1939.....	22,853,413	14,607,030	8,246,383	18,173,085	11,539,273	6,633,812	3,140,129

* Calculated at Issue Value of Certificates, i.e. 15s. 6d. per unit up to the 8th April, 1923, 16s. per unit to 31st January, 1935, and thereafter 16s. 3d. per unit.

17. **Savings Clubs.**—The object of the Union Loan Certificate issue is to encourage thrift among the people, and in order to foster that ideal the National Thrift Committee, with headquarters at the General Post Office, Capetown, was appointed by the Government. The functions of the committee include the establishment of local committees in appropriate centres, the adoption of schemes for promoting thrift, and control of the club movement. Special facilities for the accumulation of small sums for investment in Union Loan Certificates are provided by means of the savings clubs. These clubs may be formed among groups of people in the same office, business house, factory, school, society, etc., provided not fewer than five members are enrolled, the necessary books being supplied free of charge. Each club appoints its own treasurer, who accepts deposits of small amounts from members, and immediately invests the collective savings in Union Loan Certificates. These certificates are subsequently distributed among members. The club scheme was commenced at Capetown in March, 1920, and clubs are now established in almost all the principal towns. On the 31st March, 1938, there were 1,322 clubs on the register, of which 1,263 were school clubs. The certificates purchased by all savings clubs amounted to 96,661 units, school clubs being responsible for 82,565.

§ 3. Land and Agricultural Bank of South Africa.

1. **Establishment.**—The Land and Agricultural Bank of South Africa was established on the 1st October, 1912, by Act No. 18 of 1912. Prior to that date land banks (referred to as "provincial banks") existed in the Transvaal under the name of the *Transvaal Land and Agricultural Bank* (Act No. 26 of 1907), in the Orange Free State as the *Land and Agricultural Loan Fund of the Orange Free State* (Act No. 33 of 1909), and in Natal under the name of the *Land and Agricultural Loan Fund of Natal* (Act No. 27 of 1907). In the Cape of Good Hope the *Agricultural Credit Bank Act*, No. 25 of 1907, was passed, but remained inoperative. On the 1st October, 1912, the three provincial banks ceased to exist, and their assets and liabilities were transferred to and vested in the Land and Agricultural Bank of South Africa, referred to for convenience as the Union Land Bank.

The Union Land Bank took over the assets and liabilities of the three provincial banks at an amount "mutually agreed between the Minister of Finance and the central board of the bank." Under that agreement the value of the assets and liabilities of the Transvaal and Natal banks were taken at the figure shown in the balance-sheets as at the 30th September, 1912, but in the case of the Orange Free State bank the balance-sheet figures were reduced by £3,560, the assets *Advances against Promissory Notes* (£105,960) and the liability *Reserve Funds* (£4,816) being reduced by the amount mentioned.

2. **Capital.**—The Union Land Bank commenced business on the 1st October, 1912, with a capital of £2,735,000. Its capital is not fixed and consists of the amount mentioned, together with—

(*a*) such further moneys as Parliament may from time to time by appropriation authorize the Minister of Finance to pay to the bank;

(*b*) any moneys paid to the Bank under any law, or under any regulation under any law, as part of its capital; and

(*c*) such further amounts as the Bank was authorized to raise, under section 3 of Act No. 36 of 1921 as amended or added to by Act No. 40 of 1922 and Act No. 24 of 1938, for the purpose of financing individual farmers or co-operative organizations by means of—

(i) discounting with other banks bills of co-operative organizations;

(ii) overdrafts with other banks;

(iii) issuing Land Bank bills; and

(iv) receiving moneys on deposit withdrawable at not less than one month's notice.

Further moneys authorized by Parliament are contained in the following statement:—

Year.	Amount.	Year.	Amount.
	£		£
1912-13	200,000	1926-27	950,000
1913-14	825,000	1927-28	658,000
1914-15	400,000	1928-29	500,000
1917-18	225,000	1929-30	700,000
1918-19	400,000	1930-31	1,900,000
1919-20	300,000	1931-32	1,145,000
1920-21	250,000	1932-33	500,000
1921-22	500,000	1933-34	—
1922-23	500,000	1934-35	—
1923-24	830,000	1935-36	1,000,000
1924-25	700,000	1936-37	500,000
1925-26	850,000	1937-38	1,000,000
		1938-39	750,000
		TOTAL £	15,583,000

At the 31st December, 1938, the Bank's capital was as follows:—

	Amount.
Capital Fund	£17,314,006
Reserve Fund	£1,174,306

3. **Cost of Capital.**—The Act provides that the Bank shall pay interest at the rate of 3¾ per cent. per annum on its capital, but this rate may be increased or reduced by resolution of Parliament, and it is further provided that the Bank shall not pay a higher rate than is recovered on any advances made by any of the provincial banks. By resolution Parliament, in 1914, increased the rate to 4 per cent. per annum on amounts paid to the Bank after the 1st April, 1914. Later on it was again increased in terms of section 20 of Act No. 18 of 1912, and the Bank was required to pay a rate which was based on the cost of the money to the Government. As a result of representations made by the board during 1935 the Government was able to reduce the rate of interest payable by the Bank on its capital as from 1st April, 1935. Part of the Bank's capital thereafter bore a rate of 4 per cent. and the balance 3½ per cent. As a result of further representations made by the board in this connexion, the Government agreed during the same year, to reduce the overall rate of interest charged on the Bank's capital to 3½ per cent. as from the 1st April, 1936, and the Bank now pays a rate of 3½ per cent. on its capital.

4. **Management and Control.**—(i) *The Central Board.*—The bank is a body corporate, and its operations and policy are controlled by a central board consisting of a chairman and six ordinary members, each of whom is nominated by the Governor-General. The central board meets in Pretoria, where the Bank's head office is situated. The General Manager is the chief executive officer of the Bank, and in the absence of the chairman of the Central Board, he acts as chairman.

(ii) *Local Boards.*—In addition to the central board, there are local boards consisting of three members each, who are also nominated by the Governor-General, and the chairman of each local board is designated by the Governor-General. These local boards are purely advisory, and have been established (1) at Capetown for the Cape Western area, (2) at Cradock for the Cape Eastern area, (3) at Bloemfontein for the Orange Free State area, (4) at Pietermaritzburg for the Natal area, and (5) at Vryburg for the Cape North-Western area.

(iii) *Land Bank Areas and Branch Offices.*—As from the 1st April, 1939, three new branches of the Bank have been established and the six existing Land Bank areas have been subdivided into nine new Land Bank areas, as follows:—

(A) CAPE PROVINCE.

(1) The *Cape Western Area*, with branch office at Capetown to serve the districts of:—

Bellville.	Ladismith.	Simonstown.
Bredasdorp.	Malmesbury.	Somerset West.
Caledon.	Montagu.	Swellendam.
Calitzdorp.	Mossel Bay.	Stellenbosch.
Capetown.	Namaqualand.	Tulbagh.
Ceres.	Oudtshoorn.	Van Rhynsdorp.
Clanwilliam.	Paarl.	Wellington.
George.	Piquetberg.	Worcester.
Hopefield.	Riversdale.	Wynberg.
Knysna.	Robertson.	

including the various sub-districts.

(2) The *Cape Eastern Area*, with branch office at Cradock to serve the districts of:—

Albany.	Humansdorp.	Somerset East.
Aberdeen.	Indwe.	Stockenström.
Adelaide.	Jansenville.	Stutterheim.
Alexandria.	Keiskamahoek.	Transkei, comprising:
Albert.	Kingwilliamstown.	Butterworth.
Aliwal North.	Komgha.	Idutywa.
Bathurst.	Lady Grey.	Kentani.
Barkly East.	Maraisburg.	Nqamakwe.
Bedford.	Maclear.	Tsomo.
Cathcart.	Middelburg.	Willowvale.
Colesberg.	Molteno.	Tarkastad.
Cradock.	Middeldrift.	Tembuland, comprising:
East Griqualand, comprising:	Pearston.	Elliotdale.
Matatiele.	Peddie.	Engcobo.
Mt. Ayliff.	Port Elizabeth.	Mqanduli.
Mt. Currie.	Pondoland, comprising:	St. Marks.
Mt. Fletcher.	Bizana.	Umtata.
Mt. Frere.	Flagstaff.	Xalanga.
Qumbu.	Libode.	Uitenhage.
Tsolo.	Lusikisiki.	Uniondale.

(iv) *Agents of the Bank.*—Every magistrate, field-cornet, and police officer, and the Postmaster-General and any officer under him, are by law appointed agents of the Bank when required by the central board to assist in any matter.

(v) *Staff.*—The Bank is not a Department of State, and its officers are not members of the public service, although they may be seconded members of the public service.

At the 31st December, 1938, the Bank's staff consisted of 371 officers, of whom 4 were seconded from the public service. Whilst the seconded officers and officers taken over from the provincial banks contribute to the various pension funds of the public service, the Bank established, on the 1st May, 1916, a Superannuation Fund for its own officers, to which it contributes on the £ for £ basis.

The contributions are levied on the basis of the officer's age at date of entry into the service of the Bank and vary from 5 per cent. to 8 per cent. on his total salary.

5. **Operations of the Bank.**—(i) *Objects and Powers.*—The main objects of the bank are to make advances—

(a) to farmers against the security of first mortgage on land. The advance cannot exceed 60 per cent. of the value placed by the central board on the land;

(b) to agricultural co-operative societies and companies and to guarantee the fulfilment of contracts undertaken by co-operative societies and companies individually or by some organization acting

for a group of them. In a "society" members are jointly and severally liable for its debts; in a "company" members' liability is limited to the nominal value of shares subscribed for by them and to any contingent liability attaching to those shares. In addition thereto, in respect of cash credit advances made available to companies, the members thereof are liable to the Bank to the extent of an amount equal to any amounts which they may receive from the company in the form of advances, goods supplied, or services rendered by the company out of such Cash Credit Account;

(c) to regulatory boards established under the *Marketing Act* (No. 26 of 1937) for any purpose for which such regulatory boards may borrow money in terms of that Act;

(d) to farmers to erect boundary and internal fences, to construct dipping-tanks, to construct silos and other contrivances for the making or storage of ensilage, to provide a supply of water, by boring or otherwise, to erect windmills or other mechanical contrivances for pumping water;

(e) to settlers who hold land from the Crown under lease, subject to the repayment of these loans being guaranteed by the Minister of Lands;

(f) to farmers, in the form of cash credit accounts, for the purpose of defraying any costs which in the opinion of the Board are incidental to the production, cultivation, gathering, or marketing of any crops growing or to be grown on any land cultivated by such farmer. These advances are secured by means of a lien or pledge over the crops, and in addition a statutory restraint is placed against transfer of the land upon which such crops are grown until the advance has been repaid. For the time being these advances are only being made to sugar-cane farmers.

(ii) *Co-operation Amongst Farmers.*—The establishment and registration of co-operative societies is under the control of the Registrar of Co-operative Societies, but the Bank is nevertheless interested in the welfare of these organizations in that many of them are financed by it.

The total number of co-operative societies in operation at the end of the year 1938 was 235, and the membership totalled some 105,000.

The purposes for which these societies have been established are varied, and they operate throughout the Union.

The amount owing to the Bank by co-operative societies as at 31st December, 1938, was £2,112,704.

(iii) *Financial Results.*—The loans made by the Bank to farmers and agricultural co-operative societies prior to 1921 carried interest at 5 per cent. per annum, with the exception of dipping-tank and fencing loans, for which the rate was 4 per cent. per annum. From 1921, however, the interest charged was raised to 6 per cent. on ordinary advances and 5 per cent. on dipping-tank, fencing, silo, and water supply loans. Interest on mortgage loans was reduced to 5½ per cent. from the 1st August, 1930. During the operation of the *Farm Mortgage Interest Act*, No. 34 of 1933, the rate of interest charged to mortgage debtors falling under that Act was 5 per cent. per annum. As from 1st April, 1935, a permanent reduction to 5 per cent. on all long date advances prior to 1st April, 1933, was made, and on all such advances after 1st April, 1933, the rate of interest was fixed at 4½ per cent.; but as a result of the reduction of the rate of interest payable on the Bank's capital as from the 1st April, 1936, the Bank was able to pass on the reduction to all its long-date debtors as from the first due date after the 1st April, 1936. The rate of interest fixed for all long-date advances is now 4½ per cent.

From 1st April, 1935, the interest charged to agricultural co-operative organizations has been regulated by the cost of raising the money. The rate of interest charged under cash credit advances granted to sugar-cane farmers is also regulated by the cost of raising the money.

The following table shows the net profits of the Bank from 1912:—

LAND AND AGRICULTURAL BANK—NET PROFITS, 1912 TO 1938.

Year.	*Net Profit.*	*Year.*	*Net Profit.*
	£		£
1/10/12 to 1926	709,316	1933	29,436
1927	64,567	1934	14,721
1928	70,268	1935	12,995
1929	75,573	1936	19,249
1930	69,293	1937	20,320
1931	27,149	1938	69,448
1932	36,794		
		TOTAL £	1,219,129

The Bank's object is not to make large profits, and section 43 of Act No. 18 of 1912, as amended by section 9 of Act No. 40 of 1922, provides that as soon as the reserve fund and the capital of the bank total such amount as is, in the board's opinion, adequate to enable the Bank fully to carry out its objects, an amount determined by the board will be paid to the Minister of Finance out of the profits and the reserve fund of the Bank, but, to meet this payment, the amount of the reserve fund may not be reduced below £350,000.

(iv) *Liabilities and Assets.*—The following table shows the amount of the liabilities and assets of the Bank in each year from 1934:—

LAND AND AGRICULTURAL BANK—LIABILITIES AND ASSETS ON THE 31st DECEMBER, 1934 TO 1938.

Year.	Liabilities.					Assets.

§ 4. Building Societies.

1. **Historical.**—Apart from pre-Union legislation in Natal, there was, until ct No. 62 of 1934 was passed, no general Act in the Union for the control f building societies. A Bill was drafted as far back as 1922, but its enactent was not proceeded with. Further Bills were drafted between 1932 and 934 and were referred to Select Committees. In 1932 an emergency Act No. 6 of that year) was passed, which permitted every building society or vings bank society approved of by the Minister of Finance to borrow oney for any of the purposes of its business, notwithstanding any previous strictions imposed in this respect. This Act has been repealed by Act No. 2 of 1934 as far as building societies are concerned.

Act No. 62 of 1934, as amended by Act No. 19 of 1935 and Act No. 56 1937, which came into operation on the 2nd August, 1937, makes provision r the appointment of a Registrar of Building Societies, and requires that l building societies, whether permanent or terminating, shall be registered cording to law. The head office of any building society so registered must situated in the Union, and under certain circumstances a deposit, which all be invested in approved securities, the income of which is due to the ciety, must be made with the Treasury as security for the payment of the bility of the society in respect of shares and deposits. The investment of nds is strictly confined to certain forms of security, and the advance which ay be made on mortgage on immovable property is limited to a given perntage of the determined value of the property, or of the sum of the value of e property hypothecated and of any collateral security offered. The paid-up are capital of a registered society may not at any time amount to less than e-third of the total sum received by the society on deposit and loan, and a serve fund of at least ten per cent. of the society's liabilities to depositors and e paid-up share capital of the society must be established and maintained act. The total amount owing to a society on the mortgage bonds registed in its favour may not at any time be less than the total amount reved by the society on deposit and loan and not yet repaid by it. A society ist also hold as security for the prompt repayment of deposits not less

than one-fourth of the total value received by the society on deposit and not yet repaid. This amount may be held in cash, or on deposit with a bank approved by the Registrar and withdrawals on demand or at notice, or in specified securities.

Provision is made for the holding of annual general meetings, audit, and inspection, which may be undertaken by the Registrar at the request of a given number of the members. Half-yearly returns are required to be lodged with the Registrar, and an annual licence of £20 is required to be paid to the Inland Revenue by every registered building society.

The above is only a very brief summary of some of the principal provisions of the enactment, which should be consulted should further information on the subject be desired.

A short account of the early history of the building society movement in South Africa was given in *Official Year Book* No. 12.

2. **General and Statistical.**—Until the end of 1935 statistics of building societies in the Union were collected annually under the *Statistics Act* by the Office of Census and Statistics, the first collection taking place in respect of the year 1919-20. For the purpose of these statistics the term "Building Society" included all associations or organizations having for their object the purchasing, acquisition, or building of houses for members of such associations or for other persons. The tables hereunder give particulars of such societies. As from the beginning of 1936, however, the collection of data in regard to building societies rests with the Registrar of Building Societies, who administers the *Building Societies Act*.

The figures for the years from 1935-36 have been furnished by the Registrar. The particulars for 1935-36 are not reconcilable with those for 1934-35, the reason being that the latter do not agree with the statements furnished by the societies to the Registrar in regard to their position at the beginning of the year 1935-36. These discrepancies are fully dealt with in the report of the Registrar.

It should be explained here that the considerable decrease in the amount owing to investing members in Natal societies for 1935-36 [Table (*b*)] is due to the fact that investors' deposits have, to a very large extent, been converted into shares in terms of the Act [see increase in shares, Table (*a*) (iii)].

At 31st December, 1937, there were 72 building societies operating in the Union, of which 44 belonged to the permanent and 28 to the terminable class.

‡ Amended figure.
§ Including loans granted but not paid out and property in possession; the amounts for 1936-37 were £3,072,339 and £525,875 respectively.

§ 5. Insurance.

1. Union Insurance Act.—The question of the consolidation of the laws of the several provinces relating to insurance had been under consideration practically from the year of the establishment of the Union, and a consolidating Bill was printed in 1917; it was not until the year 1923, however, that an *Insurance Act* for the Union (No. 37 of 1923) was passed by the Legislature. This Act places insurance matters in the Union on a common basis, and repealed the relative old colonial laws wholly or in part. Its provisions had been previously discussed with insurance companies and others concerned.

The Act applies to all persons or bodies of persons (other than local authorities, friendly societies, burial societies, and trade unions) carrying on insurance business in the Union. Provision is made for the registration of insurance companies and for the lodging of security, which may in certain circumstances be increased or decreased, with the Treasury. Every company registered must have a chief office and a principal officer in the Union, and is required to render to the Treasury annually a duly certified revenue account, profit and loss account, and balance-sheet. The classes of insurance subject to the provisions of the Act are accident, bond, investment, burglary, employers' liability, fire, industrial, life, live stock, marine, motor, and plate glass insurance. An actuarial investigation into the financial position of life insurance companies at intervals is provided for. Minors of eighteen years of age and over may insure their lives. Persons insured may, without consent of the insurance companies involved, engage in military or naval service in defence of the Union. Certain protection is given against life insurance policies being taken in execution by creditors of the insured. The contingency of life insurance companies amalgamating or life insurance business being transferred from one company to another is provided for. Companies having their head offices in the Union may be wound up under certain conditions, in the event of their being proved insolvent. Certain requirements must be complied with by persons initiating insurance business in the Union or dealing with insurance in various other ways, and there are penalties for infringements of the Act.

The accounts, abstracts, and statements deposited with the Treasury, or a summary thereof in such form as the Treasury may determine, must be presented to Parliament and published. In the absence of a consolidating *Insurance Act*, annual statistics of insurance, covering the Union as a whole, were from the year 1917 collected and published under the *Statistics Act* (see paragraph 2). Moreover, certain particulars relating to Cape life assurance companies and returnable under the *Life Assurance Act* of 1891 of the Cape of Good Hope were regularly compiled and published (see *Official Year Book* No. 8). The Union *Insurance Act* repealed the Cape Act referred to, and statistics of insurance more complete and in greater detail than it was practicable to procure under the *Statistics Act* have been compiled, as from 1924, from the returns submitted by companies under the *Insurance Act*. Detailed information with regard to individual companies from 1924 onwards will be found in the annual returns issued by the Treasury.

2. Statistics of Insurance.—In the following tables are given for a period of years particulars obtained under the Union *Insurance Act* regarding insurance companies operating in the Union. Particulars of information obtained under the *Statistics Act* from 1917 to 1923, and under the Union *Insurance Act* from 1924 to 1932, will be found in previous issues of the *Official Year Book*. The figures relate to every class of insurance transaction.

(i) INSURANCE COMPANIES OPERATING IN UNION, 1933 TO 1937.

NUMBER AND HEADQUARTERS OF INSURANCE COMPANIES.

At 31st December.	Headquarters in—				Total.
	Union.	United Kingdom.	British Dominions.	Other Countries.	
1933.....	16	56	11	7	90
1934.....	16	58	11	7	92

1936.....	17	58	11	7	93
1937.....	20	58	11	7	96

NOTE.—Particulars of the Mutual Life Insurance Company of New York are excluded from all the insurance tables, because its business in the Union has been taken over by the African Life Assurance Society, Ltd. Certain policies, however, have not been transferred to the latter society and still appear on the books of the original company. Of such policies 172, amounting to £70,325, were in force on the 31st December, 1937, on which date the company had assets in the Union amounting to £4,716.

§ 6. Registration of Companies.

Registration of Companies.—The data given in early issues of the *Official Year Book* have been abandoned in favour of the information made available since Act No. 46 of 1926 came into force. The earlier figures, owing to the fact that continuous additions had been made without corresponding deduction of defunct companies, or of reduced capital, had become greatly inflated and were, therefore, in a measure misleading.

Act No. 46 of 1926 consolidated and amended the various company laws in force in the four provinces, and came into operation on the 1st January, 1927. The figures given in items 1 to 3 in the following table show only the registration and nominal capital of the companies incorporated and registered after that date. The figures under items 4 to 10, however, include companies registered prior to and after the 1st January, 1927.

An act entitled the *Companies Amendment Act*, 1939, amending Act No. 46 of 1926, was passed during the 1939 session of Parliament and will come into operation on the 1st January, 1940.

REGISTRATION OF COMPANIES, 1935 TO 1938.

Heading.	1935.	1936.	1937.	1938.
1. Companies Registered at 31st December—*				
Local.....No.	7,517	9,029	10,604	12,117
Nominal Capital.....£	99,915,918	126,691,692	151,837,800	177,[illegible]
Foreign.....No.	218	230	236	246
2. New Companies Registered during year—				
Local.....No.	1,200	1,512	1,575	1,515
Nominal Capital.....£	13,676,525	26,775,774	25,146,108	[illegible]
Foreign.....No.	21	12	6	10
3. Situation of Registered Offices of Local Companies registered during year—				
Cape of Good Hope.....No.	228	238	263	279
Natal.....No.	110	123	122	203
Transvaal.....No.	836	1,131	1,170	997
Orange Free State.....No.	17	20	20	28
4. Increases of Capital—				
Number.....	241	277	289	306
Amount.....£	7,666,153	12,564,032	12,414,882	10,346,795
5. Reductions of Capital—				
Number.....	22	24	23	19
Amount.....£	1,344,328	1,601,880	857,808	1,107,439
6. Liquidations (Voluntary)—				
Number.....	171	179	215	218
Total Capital.....£	3,882,789	4,800,974	4,603,447	2,728,554
7. Liquidations (Compulsory)—				
Number.....	38	27	27‡	46
Total Capital.....£	1,084,397	93,239	274,076‡	873,273
8. Defunct Companies removed from Register†.....No.	338	271	374	363
9 Fees of Office.....£	12,849	15,037	16,079	16,203
10. Share Capital Duty paid to Receivers of Revenue in respect of New Registrations and Increases in Capital.....£	53,171	98,363	93,921	40,075

* Totals of progressive annual registrations under Act No. 46 of 1926.
† Includes registrations effected prior to the promulgation of Act No. 46 of 1926.
‡ Amended figure.

§ 7. Insolvencies and Administration of Estates.

1. **Insolvencies.**—Particulars are given in the subjoined tables in regard to insolvencies and assignments. The *Insolvency Act*, No. 24 of 1936, which came into operation on the 1st July, 1936, provides for the administration of insolvent and assigned estates.

(i) INSOLVENCIES, 1934 TO 1938.

Heading.	Number of Insolvencies.				Insolvents' Statements of Assets.*	Insolvents' Statements of Liabilities.*
	Voluntary Surrenders.	Compulsory Sequestrations.	Assignments.	Total.		
(a) UNION.						
					£	£
1934.....	246	252	170	668	1,141,354	1,460,210
1935.....	270	218	170	658	1,404,882	1,959,940
1936.....	379	232	99	710	951,427	1,432,621
1937.....	288	265	—	553	738,881	1,010,150
1938.....	394	407	16	817	1,094,019	1,428,027
(b) PROVINCES, 1938.						
					£	£
Cape of Good Hope	123	80	5	208	305,573	415,821

1938.	703	106	8	817	3·54	22	475	28	61	130	101

* Includes the following numbers of natives :—

Year.....	1934.	1935.	1936.	1937.	1938.
No.....	4	3	6	—	5

2. **Deceased Estates.**—The administration of the estates of deceased persons is regulated by Act No. 24 of 1913 and vested in the Masters of the Supreme Courts at Capetown, Pretoria, Pietermaritzburg, and Bloemfontein, having jurisdiction within the several provinces, and the Assistant Master at Kimberley, who is subordinate to the Master of the Cape of Good Hope and has jurisdiction in the Griqualand West Local Division of the Supreme Court. Provision is made in the Act, *inter alia*, for the registration of wills, the preparation and submission of inventories by surviving spouses and others in the case of persons dying, the issue of letters of administration to executors testamentary or dative, and letters of confirmation to tutors and curators, and the due liquidation and distribution of deceased estates, estates of minors, mental patients, prodigals, and absentees under the supervision of the Master concerned. A Guardians' Fund, consisting of all moneys vested by law in the Masters, is established for each province; these funds are held in trust by the Public Debt Commissioners (see Chapter XV).

The following table gives particulars of work done in the Masters' Offices under the *Administration of Estates Act*:—

ADMINISTRATION OF ESTATES, 1934 TO 1938.

Heading.	Estates Registered.	Wills.	Security Bonds.	Liquidation Accounts.	Executors, Curators, and Tutors Appointed.	Guardians' Fund.*
	No.	No.	No.	No.	No.	£
1934	10,131	7,185	3,202	8,298	8,175	3,625,698
1935	11,559	8,075	3,611	9,160	9,024	3,761,648
1936	11,448	7,744	4,058	9,913	9,405	3,919,253
1937	12,269	8,385	4,012	11,184	10,174	4,041,329
1938	12,283	8,360	4,409	11,263	10,256	4,147,564

MASTERS' OFFICES, 1938.

	No.	No.	No.	No.	No.	£
Capetown	4,835	3,241	1,601	4,847	4,199	1,974,626
Kimberley	384	261	149	371	217	
Pietermaritzburg	1,677	1,129	694	1,767	1,450	145,708
Pretoria	4,366	2,978	1,511	3,168	3,702	1,377,214
Bloemfontein	1,021	751	454	1,110	863	454,358
TOTAL	12,283	8,360	4,409	11,263	10,256	4,147,564

* Funds invested with Public Debt Commissioners as at 31st March each year.

3. **Death Duties.**—All assessments of estate and succession duty are now made by the Masters under the provisions of Act No. 29 of 1922, as amended by Act No. 31 of 1925 and by section 10 of Act No. 34 of 1930.

4. **Trust Moneys.**—The provisions of the *Trust Moneys Protection* Act, No. 34 of 1934, impose upon the Masters the duty of registering all trust deeds where the subjects of the trusts consist wholly or in part of "Settled Moneys".

§ 8. Co-operative Societies and Companies.

In Chapter XIX, § 12, certain information is given in regard to the co-operative movement, and to the legislation by which it is governed. The following tables augment that information by furnishing statistical data on the subject, showing (i) the position of the movement annually over a series of years in relation to the number of associations in existence and their membership; (ii) the classes of agricultural companies and societies formed, their membership, and turnover in the business year 1937-38; and (iii) the liabilities and assets of co-operative associations at the end of the same period.

(i) NUMBER AND MEMBERSHIP OF REGISTERED CO-OPERATIVE COMPANIES AND SOCIETIES, 1934 TO 1938.

Year.	Agricultural (*a*) Companies and and (*b*) Societies.				Consumers' Trading Societies.		Total Societies and Companies.

TOTAL £	807,758	8,263,783	9,071,541

NOTE:—(a) The figures reflected are subject to revision after receipt of the audited statements of certain associations.
(b) The assets and liabilities of dairy cattle and live stock societies are not included in this table.

CHAPTER XVII.

LAND SURVEY, TENURE, AND OCCUPATION.

§ 1. Land Survey.

1. **General.**—The system of land registration in the Union requires that every deed granting or conveying landed property should have attached to it a diagram of the property being disposed of, or that a reference must be made back to a previous deed with such a diagram appended. The area of the land, its dimensions, locality, description of its boundaries and other distinguishing features must be clearly set forth in the diagram referred to in the deed of conveyance, of which it forms a component part. The need for accuracy in the survey upon which the diagram is based is obvious, and to ensure this no diagram is accepted for registration with a deed of grant or transfer, unless it is signed by a surveyor duly admitted to practise as such and is further approved of by the Surveyor-General of the province in which the land in question is situate.

Before a diagram is approved by the Surveyor-General, the numerical data are first checked to see that they are consistent; these are then compared with similar data on the diagrams of adjoining holdings to ensure that the property being granted or transferred does not overlap or in any way encroach upon land already alienated. Provision now exists for a thorough examination of the field book, calculations, and working plan of each survey, so that every possible precaution may be taken to determine the accuracy of the diagram attached to the deed. The older surveys naturally did not possess this guarantee of accuracy, but as opportunities arose for checking them, it was realized that some action had to be taken to bring the titles of properties with faulty diagrams into harmony with the boundaries of the land as beaconed or occupied. Laws were promulgated, first in the Cape Colony and later in the Transvaal and the Orange River Colony, under which an owner, finding that the original survey of his property had been incorrectly made, could have a resurvey, and obtain an amended title in accordance with the existing boundaries of his land. In Natal, though there was no actual legislation on the subject, the procedure for obtaining a rectification of an erroneous title was very similar to that followed in the other colonies (now provinces). Recent legislation has made it compulsory for the owner of any property represented by a diagram which is grossly defective to obtain an amended diagram thereof based upon a correct survey, before the land can be transferred. No sub-division which comprises any boundary whose data differ beyond certain prescribed limits from the data on the original diagram of the property can be transferred, until all owners concerned have consented to those boundaries which have been adopted in the new survey and which are not already unimpeachable. Year by year erroneous diagrams and titles are being replaced by others containing correct particulars, and it may safely be asserted that, except in sparsely populated districts where land is of comparatively small value, very few titles now exist which do not properly describe the land and correctly define its boundaries.

2. **Legislation.**—A *Land Survey Act* for the Union was passed in 1927 and came into force on the 1st January, 1929. This Act consolidates all previous laws, regulations, and tariffs of the four provinces, and together with the regulations framed under it governs and controls the following matters:—

The functions and duties of Surveyors-General.
Trigonometrical survey and the appointment of a Director thereof.
The constitution and establishment of a Survey Board and of a Survey Regulations Board.
The recognition and duties of land surveyors.
Survey procedure.
The establishment of beacons and boundaries as unimpeachable.
The settlement of boundary disputes.
Tariff for surveys.

The Act provides for the appointment of a Director-General of Surveys in lieu of the Survey Board, if found expedient, but at present the Survey Board is in existence and is responsible for the policy and principles which the several Surveyors-General have to follow in administering the Act and the Regulations.

Any person who, at the commencement of the Act, was recognized and had the right to practise as a land surveyor in any province of the Union, is now entitled to practise as such in any part of the Union.

The qualifications for recognition as land surveyor under the Act are—

(*a*) attainment of the age of 21 years;

(*b*) the passing of such examination as may be prescribed from time to time by the Joint Committee for Professional Examinations constituted under sub-section (1) of section 23 of the *University of South Africa Act*, 1916 (Act No. 12 of 1916), or any amendment thereof, or by any other examining body lawfully empowered to prescribe any such examinations as such joint committee or such other examining body may declare to be equivalent to such prescribed examinations;

(*c*) after the passing of the examinations mentioned in paragraph (*b*), such training in practical survey work as may be prescribed from time to time by regulation under paragraph (*m*) of sub-section (1) of section 9;

(*d*) the carrying out, to the satisfaction of the Survey Board, of such trial survey as the Survey Board may prescribe;

(*e*) the passing to the satisfaction of the Survey Board, of an examination in the laws in force in the Union relating to the survey, registration, and transfer of land; and

(*f*) the making of a declaration to perform faithfully the duties of a land surveyor in conformity with all existing laws and regulations.

3. **Qualifying Examinations.**—The examination prescribed by the Joint Committee for Professional Examinations is conducted in two parts, which may be taken at the same session or separately; Part 1 may be passed in two separate examinations. A candidate for the examination must have passed the Matriculation examination or an equivalent examination approved by the Committee. The full regulations governing the examination and the syllabuses of the subjects of the examination are published in the *Law and Survey Handbook*. Communications relating to the examination should be addressed to the Secretary, Joint Committee for Professional Examinations, P.O. Box 392, Pretoria.

In 1929 the University of Capetown and the University of the Witwatersrand established a B.Sc. degree in land surveying, which is recognized as equivalent to the abovementioned prescribed examination. The curriculum for the degree extends over four years. First and second-year courses are also conducted at Rhodes University College, Grahamstown, and Natal University College, Durban. Candidates who complete these courses are entitled to complete the remaining courses for the degree at either the University of Capetown or the University of the Witwatersrand.

4. **Government Control of Survey.**—In each province is established a Surveyor-General, who controls the survey of all government land and employs duly admitted surveyors for this work at the tariff fixed by regulation under the Act. After land is once alienated from the Crown, the Surveyor-General's only concern with its subsequent sub-division is the examination of the survey records and diagrams necessary for effecting transfer of the parts. As stated above the diagram must bear his certificate of approval before it will be accepted for registration in a deeds office.

The sub-division of private property may be performed only by admitted surveyors, and the cost is now regulated by the tariff embodied in the survey regulations.

During the years 1937 and 1938 respectively, 20,003 and 22,089 sets of diagrams were examined in the several provinces, details of which are as follows:—

	1937.	1938.
Cape of Good Hope	8,645	9,402
Natal	3,603	4,024
Transvaal	6,683	7,572
Orange Free State	1,072	1,091

5. **The Trigonometrical Survey.**—The Trigonometrical Survey under the provisions of the *Land Survey Act*, 1927, conducts all classes of land survey work other than surveys for land registration; it is also charged with the preparation of maps other than geological maps. Its main functions are to provide for—

(*a*) the establishment of permanently marked trigonometrical stations by triangulation at intervals varying from eight to three miles apart, and of reference marks by precise traverse in urban areas, to serve as an adequate control for all kinds of land survey and mapping operations;

(*b*) a network of bench marks by precise levelling along the main routes of communication, referred to tide gauge determinations of mean sea level at the several ports of the Union, for the purpose of co-ordinating engineering and irrigation surveys and the height determinations of the triangulation survey throughout the country;

(*c*) the air survey of the Union for supplying vertical air photographs for use in topographical, geological, irrigation, forest, soil, road reconnaissance, and native areas reclamation surveys;

(*d*) the topographical mapping of the Union on a scale of 1/50,000;

(*e*) the preparation of topographical, cadastral, and general maps;

(*f*) a continuous record of the magnitude and direction of the earth's magnetic force by means of photographic recording instruments at the magnetic observatory, and periodic observations to be taken at certain permanent field stations established throughout the country, for the purpose of determining the secular variation of the magnetic elements.

With the exception of triangulation surveys, which are mainly carried out on contract by land surveyors in private practice, the above operations are carried out by a staff of professional and technical officers. The field costs of the operations (*a*), (*b*), (*c*), and (*d*) are financed from loan funds.

The primary and secondary orders of triangulation (average density of points, 25 and 8 miles respectively) are now established over the greater part of the Union, and the tertiary triangulation (4 to 3 miles density) is well advanced. Some 1,350 miles of levelling has been completed between Table Bay and Delagoa Bay via Pretoria. This work, which has been in abeyance for several years, is now being recommenced along the main road from Durban to Pretoria and from Pretoria to Beit Bridge.

The air photography of 80,000 square miles of country was completed by January, 1939. The scale of the contact prints is between 1/15,000 and 1/20,000. Enlargements are supplied as required.

The organization of the topographical survey was commenced in 1937. The scheme provides for the establishment of five field parties each comprising 15 officers; four parties have so far been formed to operate in the Transvaal, Natal, and Western and Eastern Cape. Two of these parties are now nearly fully trained. Line maps to the scale of the air photographs are produced by the field parties and copies are made available for immediate purposes pending the preparation of the topographical maps.

Co-ordinates and heights of trigonometrical stations and bench mark data are supplied free of charge by the Trigonometrical Survey Office, Mowbray, Cape Province. Contact prints or enlargements are supplied at cost price by the Trigonometrical Survey Office, Pretoria. Maps and the *Magnetic Year Book* are obtainable from the Government Printer, Pretoria. An account of the history of the Trigonometrical Survey and a description of its organization will be found on page 679, *Official Year Book* No. 19. Details of the progress of the operations and work of the Office can be obtained from the Annual Reports of the Director.

6. **Scale of Fees.**—The following are the more important items in a scale of fees chargeable in the offices of the Surveyors-General as from the 1st April, 1922:—

SCALE OF FEES CHARGED IN THE OFFICES OF THE SURVEYORS-GENERAL.

	£	s.	d.
Examination Fee—			
The examination of a diagram of any piece of land, excluding diagrams of Crown land:—			
For any number of sides up to six inclusive.....	0	10	0
For each additional side over six.....	0	1	0

§ 2. Land Settlement.

1. **Legislation.**—The allotment of Crown land to intending settlers for agricultural or pastoral purposes takes place mainly under the provisions of the *Land Settlement Act*, No. 12 of 1912, as amended by the *Land Settlement Act Amendment Act*, No. 23 of 1917, the *Land Settlement Acts Further Amendment Act*, No. 28 of 1920, the *Land Settlement Acts Further Amendment Act*, No. 21 of 1922, the *Land Settlement Laws Further Amendment Act*, No. 26 of 1925, the *Land Settlement (Amendment) Act*, No. 6 of 1928, the *Land Settlement (Amendment) Act*, No. 1 of 1931, the *Land Settlement Relief Act*, No. 25 of 1931, the *Land Settlement (Amendment) Act*, No. 57 of 1934, the *Land Settlement (Amendment) Act*, No. 47 of 1935, and the *Land Settlement Amendment Act*, No. 45 of 1937.

2. **General.**—In terms of these Acts, the Minister of Lands is empowered, on a recommendation from the Land Board within whose jurisdiction the land is situate, to allot Crown lands and to purchase, from funds appropriated by Parliament for the purpose, privately-owned land for sub-division into suitable holdings for agricultural and pastoral purposes. The Minister may make advances to the allottees of holdings for the purpose of acquiring stock, equipment, and other things necessary for the development of their holdings, and he may cause permanent improvements to be effected on holdings and the cost thereof to be added to the purchase price of the land. There are six land boards: the Central Land Board which meets in Pretoria, and whose function it is to advise the Minister in all the above matters, and five local land boards, who submit recommendations on various matters to the Central Land Board for consideration. The Western and Transvaal local boards meet at Pretoria, the Cape local land board at Capetown, the Natal local land board at Pietermaritzburg, and the Orange Free State local land board at Bloemfontein. The respective local boards usually meet at least once a month, and intending applicants may arrange to interview the boards through the respective secretaries.

Inspectors of lands are stationed in those districts in which land settlement is proceeding rapidly and, in addition, resident superintendents are maintained on the principal closer settlements. The settlers on closer settlements may form committees of management for the purpose of controlling or safeguarding the use and distribution of water, the pasturing of stock on, or the cultivation of, communal areas, and generally of controlling any matters incidental to the development and improvement of the respective settlements.

Subject to what is stated hereunder with regard to the contributory purchase system of settlement, all rights on Crown lands to minerals, metals, mineral oils, and precious stones are reserved to the Crown, subject, however, to the provisions of the *Reserved Minerals Development Act*, 1926, and the *Precious Stones Act*, 1927, but there is no reservation of rights to minerals, metals, mineral oils, and precious stones to the Crown on the issue of Crown grants in cases where such rights are included in the purchase of the land for the settlers. The rights of heirs in deceased estates and of legal representatives in cases of lunacy, as well as of trustees in insolvencies, are also defined in the Acts.

3. **Purchase and Tenure of Crown Lands.**—The tenure of holdings on Crown lands is a lease for five years, carrying an option of purchase at a price fixed, on the recommendation of the Land Board, when the lease is entered into. No rent is payable during the first two years; two per cent. per annum, calculated on the purchase price, is payable during the third year; and 3½ per cent. per annum, calculated on the purchase price, is payable during the fourth and fifth years. The lease may, at the discretion of the Minister, be extended for a further period of five years, in which event rent at the rate of 3½ per cent. per annum, calculated on the purchase price, is payable. If the option of purchase is exercised during or at the expiration of the lease period, the lessee is required to pay, yearly in advance, interest calculated at the rate of 3½ per cent. per annum on the purchase price. The purchase price must be paid in full not later than 65 years reckoned from the date on which the lessee exercised his option to purchase, but the lessee may, at any time, pay instalments of not less than £25 on account of the purchase price. The lessee is entitled to obtain a Crown grant at the expiration of ten years from the date of the commencement of the lease, provided he has paid the purchase price in full and has complied in all respects with the conditions of his lease. In special circumstances a Crown grant may be issued before the expiration of the ten-year period. There are certain semi-arid areas throughout the Union where reduced rates of rent and interest apply. In these areas also, there is no rent payable for the first two years, but thereafter the rental is calculated at the rate of 1 per cent. on the purchase price, and, on exercise of the option of purchase, the lessee pays interest yearly also at the rate of 1 per cent. on the purchase price, the latter being payable within 65 years as set out above.

If there are no improvements on a holding at the date of the allotment thereof, or if the improvements are of a value less than £100 or less than twenty per cent. of the unimproved value of the land, whichever amount may be the greater, the lessee must within 10 years of the commencement of the lease effect improvements which, together with the existing improvements (if any), will bring the total value of the improvements to £100 or twenty per cent. of the unimproved value of the land, as the case may be. Special conditions, e.g., with regard to tree planting, etc., are inserted in the lease by the Land Board where these are considered advisable. Residence on the holding is required, though the Minister may, on the recommendation of the Land Board, grant exemption from the residential condition either wholly or for a specified period. Permanent exemption is given only in most exceptional circumstances. In the case of holdings allotted under the contributory purchase system hereinafter referred to, the lessee is required to occupy his holding for eleven months in the year, and in other cases the period of occupation is stated in the *Gazette Notice* inviting applications for particular holdings.

The Minister may also, on the recommendation of the Land Board, offer holdings for allotment, subject to the condition that the successful applicants for such holdings shall pay on allotment, and as a condition thereof, an amount to be determined by the Minister not exceeding one-fifth of the purchase price fixed for each holding. In such cases the allottees shall be deemed to have exercised, as from the date of allotment, the right to purchase the land, and the lessee pays interest yearly in advance at the rate of 3½ per cent., the purchase price being payable within 65 years in the manner indicated above.

On the recommendation of the Land Board, the Minister may, provided not less than five years have expired from the date of the commencement of the lease, issue a Crown grant to a lessee, if the valuation of the holding, with the improvements of a permanent and substantial nature thereon, exceeds by one-fourth the total indebtedness of the lessee to the Government in respect of the purchase price of the holding and of any advances that may have been made. Simultaneously with the issue of the Crown grant, the lessee is required to pass a mortgage bond in favour of the Government, specially hypothecating to the Government the land granted, for the balance of the indebtedness due. Restrictions are inserted in the Crown grant, when issued, preventing the owner, for a specified period of years, from hypothecating, subdividing, or transferring the land without the consent of the Government. Such restriction operates for ten years from the date on which the option to purchase the holding was exercised, but does not apply to cases where a lease has been issued subsequent to 1st July, 1934.

4. **Allotment of Crown Lands to Applicants.**—The method of allotment of Crown land holdings is by selection of applicants by the Land Board. All holdings available for disposal are advertised widely, and applications are invited during a stated period of six weeks. At the expiration of that period the Land Board concerned makes its recommendation to the Central Land Board, which in turn advises the Minister as to the applicants to whom, in its opinion, the holdings should be allotted. Holdings may be allotted to any person, male or female, over the age of 18 years.

The allotment of Crown land for agricultural or pastoral purposes also takes place under other laws passed prior to Union, but allotments thereunder are of infrequent occurrence, and it is only under special circumstances that use is made of the provisions of these laws. In the Province of Natal prior to the passing of the *Land Settlement Act* of 1912, allotments were mostly made under proclamations, and this practice was followed for many years even after 1912, especially in respect of the allotment of land in Zululand considered suitable for sugar-cane cultivation. The principal pre-Union statutes under which Crown lands are still allotted are:—Act No. 15 of 1887 (Cape) and Ordinance No. 57 of 1903 (as amended) (Transvaal).

In Natal allotments are made under Proclamation No. 121 of 1924 as amended by Proclamation No. 123 of 1928. Various other land settlement laws were passed after Union, but all these were in connexion with settlement operations prior to Union.

5. **Advances to Settlers.**—The limit of the advances that may be made to a settler for the purchase of stock and equipment is £500. Settlers are not entitled to receive advances; these may be granted only on the recommendation of the Land Board. Every application is dealt with on its merits by the Land Board. Prospective settlers, therefore, must not assume that they will receive advances. The terms of repayment vary according to the purpose for which the advance is granted. Loans carry interest at 3½ per cent. per annum. Advances may be granted for five years subject to the power of the Minister to extend the period of repayment for a further five years.

In addition to the advances referred to in the preceding paragraph, the Minister may, on the recommendation of the Land Board, cause boring operations to be carried out or improvements of a substantial and permanent nature to be erected or constructed on a holding, including boundary fencing and dipping tanks. On completion of such operations or improvements the cost thereof is added to the purchase price of the holding, and the rent or the interest on the purchase price, as the case may be, payable by the lessee in respect of the holding, is increased accordingly.

6. **Purchase and Tenure of Privately-owned Land.**—The Minister may, on the recommendation of the Central Land Board, assist settlers to acquire privately-owned agricultural land for their personal occupation, provided that the amount of the purchase price to be contributed by the Government does not normally exceed £1,500, and provided that the settlers are prepared to contribute not less than one-tenth of the purchase price. Only under exceptional circumstances is the contribution of £1,500 exceeded, and in no case will it exceed £2,250. The contribution of one-tenth of the purchase price by the applicant is a minimum contribution, and, in cases where the

Land Board considers that a larger contribution by the applicant is justified, the applicant may be required to make such larger contribution as may be determined by the Minister on the advice of the board.

The tenure given to the settler is a sixty-five years' lease with an option to purchase, which is deemed to have been exercised from the date of commencement of the lease.

(i) Under the *Land Settlement (Amendment) Act*, No. 57 of 1934, which came into force on the 2nd July, 1934, leases were issued on the following conditions:—

No payment is made by the settler during the first and second years, but in respect of those years interest at the rate of 4 per cent. on the total cost of the holding to the Government is added to the purchase price. The purchase price payable by the settler is made up of—

(*a*) the price paid by the Minister, less the amount contributed by the settler;
(*b*) the costs of transfer of the holding to the Government;
(*c*) interest for a period of two years at the rate of 4 per cent. per annum calculated on the total of items (*a*) and (*b*).

This purchase price, together with interest thereon at the rate of 4 per cent. per annum, is payable in thirty equal annual instalments as from the beginning of the eleventh year from the date of the commencement of the lease, which is the date on which the land is transferred to the Government. From the beginning of the third year of the lease till the end of the tenth year of the lease, that is for a period of eight years, interest at the rate of 4 per cent. per annum on the purchase price is payable.

(ii) Under the *Land Settlement (Amendment) Act*, No. 47 of 1935, which came into force on the 17th May, 1935, the rate of interest payable on the purchase price was reduced to 3½ per cent. per annum.

(iii) Under the *Land Settlement Amendment Act*, No. 45 of 1937, the following amendments were made:—

(*a*) The period of lease is extended from 40 to 65 years.
(*b*) The purchase price, together with interest thereon at 3½ per cent. per annum [*vide* (i) above] is payable in sixty-three equal annual instalments from the beginning of the third year of the lease.
(*c*) These amendments apply—
(1) to all leases entered into subsequent to the date of commencement of this Act, which is the 26th May, 1937;
(2) to leases issued prior to the date of commencement where the lessee submits an intimation in writing to the Minister that he desires the amendments to be made applicable to his lease and the tenure of the lease permits of this being done.

7. **The Unbeneficial Occupation of Farms.**—The *Unbeneficial Occupation of Farms Act* (No. 29 of 1937) aims at remedying a social evil which, broadly speaking, has arisen through the uneconomic sub-division of land used for farming purposes. Land originally large enough in extent to afford the owner or occupier a reasonable subsistence has in many cases been divided among heirs from generation to generation, until many of the sub-divisions are to-day too small as economic units. In other cases again there has not been actual sub-division, but the original farm has become so overpopulated by the persons having an interest in it, or has been burdened with encumbrances to such an extent, that the occupiers or owners cannot subsist on it.

The Act empowers the Minister of Lands to appropriate land not beneficially occupied for farming purposes, subject to the obligation to pay compensation.

Before steps are taken to appropriate any land, the Central Land Board is required to investigate alleged cases of unbeneficial occupation and report to the Minister, who, if satisfied that the land falls within the terms of the Act, may give notice of at least three months to all the owners of, and persons having an interest in, the land that he intends to appropriate such land or any interest which constitutes a burdensome encumbrance thereon. The said notice must specify the amount of compensation offered, and the interested

persons are required to notify the Minister whether they accept the offer. If they do not accept the offer the Water Court for the district must fix the amount of compensation.

In case of dispute or doubt as to who is entitled to the compensation money, the amount thereof is to be paid to the Master of the Supreme Court to be held in trust for the eventual beneficiaries. Provision is also made in the Act for the protection of bondholders, and the Minister is absolved from further liability upon payment of compensation.

The appropriation procedure having been complied with, the appropriated land is registered in favour of the Government, and is then disposed of in terms of the laws relating to land settlement. In allotting such land, the Minister may give preference to applicants who owned or carried on farming operations on the land immediately prior to its appropriation.

8. **Financial.**—At the 31st March, 1938, there were 11,999 debtors on the books of the Department of Lands. The capital sum due to the Government for land sold, for advances made to settlers, etc., in respect of the several provinces, was:—

	£
Cape of Good Hope	1,401,113
Natal	868,961
Transvaal	3,146,616
Orange Free State	1,148,177
Total £	6,564,867

Of the total amount, £90,659 was actually due, but unpaid, at the 31st March, 1938. The balance (£6,474,208) is repayable mainly in yearly and half-yearly instalments over long periods.

The collections during the financial year 1937-38 were: Capital, £287,174; interest, £191,409; rent, £37,336; miscellaneous revenue, £54,422; a total of £570,341. The amounts due, but unpaid, at the 31st March, 1938, were: Capital, £90,659; interest, £252,237; rents, £34,896; miscellaneous revenue, £5,618; a total of £383,410.

9. **General Statistics.**—The following table summarizes the allotment of agricultural holdings made during the financial year ended 31st March, 1938, and during the period 31st May, 1910, to 31st March, 1938, under the several statutes governing the disposal of land for settlement purposes.

Further information as to the working of the Land Settlement Acts and the Acts in force in the provinces prior to Union will be found in No. 12 and previous issues of this *Year Book*.

§ 3. Registration of Deeds.

1. **Deeds Registries Act, 1937.**—The *Deeds Registries Act*, No. 47 of 1937, passed to consolidate and amend the laws in force relating to the registration of deeds, came into operation on the 1st September, 1937. It repealed the existing *Deeds Registries Act*, No. 13 of 1918, but provided that all matters pending in a particular registry immediately prior to the commencement of the new Act should be carried to completion as if the Act had not been passed.

Numerous changes have been introduced into the Act and, while an exhaustive recapitulation of the innovations is impracticable, a brief summary of the more important changes may be of interest.

For the first time in the history of the deeds registries provision has been made for the appointment of a Chief Registrar for the Union. Section 8 provides that the Chief Registrar shall be the chairman and executive officer of the Deeds Registries Regulations Board and shall exercise supervision over all deeds registries in order to ensure uniformity of practice and procedure.

The Deeds Registries Regulations Board, established under section 9 of the Act of 1937, consists of the Registrars of Deeds at Capetown, Pretoria, Bloemfontein, Pietermaritzburg, and Kingwilliamstown, the Rand Townships Registrar, the Government Attorney, one member of the Surveys Regulations Board, and six conveyancers, two of whom shall be appointed by the Minister and shall be recognized country practitioners.

The functions of the Regulations Board are set out in section 10 and include the power to prescribe the form of registers (which may be looseleaf registers) to be kept by a registrar, the manner in which records shall be bound, and the manner and form in which the identity of persons shall be established.

Section 14 provides that transfers of land and cessions of real rights shall follow the sequence of the successive transactions in pursuance of which they are made. There are three exceptions to this provision, which is designed to frustrate attempts at "skipping of transfers".

The Act gives special attention to the position of women in connexion with matters of registration (section 17). It lays down the particulars to be furnished and the methods to be adopted when property has been acquired by a woman married in community of property, or when it is sought to deal with property registered in the name of a married woman.

Where it is sought to transfer land which is an asset in a joint estate, section 21 requires that, except in three instances detailed in the section, the survivor shall be joined in his personal capacity with the executor of the estate of the deceased spouse.

It frequently happens that land is donated or bequeathed to the children already born and the children to be born of a particular person or of a specific marriage. Section 25 lays down the manner in which and the person to whom, as trustee, such land shall be transferred. It also defines the procedure to be followed when the identity of all such children has been established.

Section 26 deals with partition of land and the requirements for passing deeds of partition transfer in accordance with the agreement of partition. This is similar to the provisions of section 8 of the Act of 1918, except that it is no longer possible to obtain a *certificate* of partition title in lieu of a deed of partition transfer.

A person who holds two or more pieces of land by one deed may, under the authority of section 36, obtain a certificate of registered title for one or more of such pieces of land. A similar provision existed in Act No. 25 of 1909 (Transvaal), but this was not re-enacted in Act No. 13 of 1918.

An entirely new provision is found in section 42, which enables an owner of two or more contiguous pieces of land held on different conditions of tenure to obtain, with the consent of the Minister, a certificate of uniform title.

Section 50 deals with the execution of bonds, and permits the registration of bonds to secure existing debts or future debts or both. Section 52 provides that: No cession of any bond intended to secure future debts shall be registered unless the amount already due in respect thereof is disclosed in the cession. On registration of such cession the bond shall be deemed to be a bond securing an existing debt of the amount so disclosed and shall be endorsed accordingly.

The insertion in a bond, attested by a registrar, of the clause known as the General Clause is prohibited by section 53, except in cases provided in any other law.

The period within which a notarial bond may be registered is fixed at two months from the date of execution [section 61 (1)]. Under Act No. 13 of 1918 the period allowed was one month. Sections 61 and 62 deal with the drawing and registration of notarial bonds.

By section 64 a person who has transferred land subject to the reservation in his favour of any real right (other than a right to minerals) may obtain a certificate of registration of that real right.

Important provisions have been made in section 71 relative to the issue of certificates of reservation of rights to minerals, particularly in regard to land on which a township or settlement is established. Any person who transfers land subject to reservation in his favour of rights to minerals, or on whose land a township or settlement is established subject to such reservation, must take out the certificate of rights simultaneously with the passing of transfer or opening of the register of the township or settlement.

By section 87 (1), as in the case of notarial bonds, the period allowed for registration of an antenuptial contract drawn in the Union has been extended to two months from the date of its execution. The period for registration of antenuptial contracts drawn outside the Union has been limited to six months, whereas previously such contracts could be registered at any time.

Section 50 (1) of Act No. 13 of 1918 provided that a special power of attorney to pass a mortgage bond could not be acted upon after the expiration of three months from the date of signature, and that a general power of attorney could not be acted upon for mortgage purposes unless registered within three months from the date of signature. This provision has not been re-enacted in Act No. 47 of 1937.

The enactment of the *Deeds Registries Act*, 1937, marks a further milestone in the progress of the system of land registration, and there can be little doubt as to the advantages to be derived from a more efficient registration system and consequently greater security of title throughout the deeds registries in the Union.

2. **Scale of Fees.**—The regulations framed in accordance with the provisions of the *Deeds Registries Act*, 1937, were published in *Government Notice* No. 1265 of 1938. The following is the schedule of fees of office and the tariff of fees and charges of conveyancers, notaries public, and legal practitioners, in connexion with the preparation, passing, and registration of deeds:—

A.—SCHEDULE OF FEES OF OFFICE.

Item.		£	s.	d.
1	For the registration of a deed of grant from the Crown, excluding grants of land to which the provisions of Act No. 25 of 1894 (Cape) apply	0	15	0
2	For the registration of any deed of transfer	0	15	0
3	For the registration of a deed of partition transfer under the provisions of section 26 of the Act	0	15	0
4	For the registration of a certificate of registered title of land under the provisions of the Act	0	15	0
5	For the registration of a certificate of consolidated or amended title under the provisions of section 40 of the Act	0	15	0
6	For the registration of a certificate of amended title under the provisions of section 41 of the Act	0	15	0
7	For the registration of a certificate of uniform title under the provisions of section 42 of the Act	0	15	0
8	For the registration of a certificate of registered real rights under the provisions of section 64 of the Act	0	15	0
9	For the registration of a certificate of township or settlement title under the provisions of section 46 of the Act	0	15	0
10	For the registration of a certificate of registered title of a share in minerals under the provisions of section 74 of the Act	0	15	0
11	For the registration of a mortgage bond	0	15	0
12	For the registration of a suretyship contained in a mortgage bond	0	15	0
13	(1) For the registration of a notarial bond	0	10	0
	(2) For the registration of a suretyship contained in such bond	0	10	0
14	For the substitution of a bond :—			
	(*a*) Where a new title is issued	0	10	0
	(*b*) Where the existing title is endorsed	0	5	0

Item.		£	s.	d.
15	For the registration of cancellation, cession or cancellation of cession of a bond or of the release of any property or person from a bond or of a part payment on a bond	0	5	0
16	For the registration of a waiver of preference of one bond in favour of another bond or of any registrable real right in favour of a bond if such waiver be contained in the bond	0	5	0
17	For the registration of an agreement varying the terms of a bond	0	5	0
18	For the registration of a notarial deed creating a servitude or other real right or by which such servitude or right is ceded, modified or cancelled	0	10	0
19	For the registration of a servitude contained in a transfer over one piece of land in favour of another for each transfer	0	5	0
20	For the registration of an antenuptial contract or in Natal of a postnuptial contract	0	10	0
21	For the registration of a notarial cession, lease or sub-lease of rights to minerals or of a notarial cession or cancellation of such lease or sub-lease	0	10	0
22	For the registration of a mynpacht brief	0	5	0
23	For the registration of any registrable real right created in a transfer or grant	0	10	0
24	For the registration of a notarial lease or sub-lease or cession or cancellation thereof	0	10	0
25	For the registration of a notarial prospecting contract or of a notarial cession or cancellation thereof	0	10	0
26	For the registration of a power of attorney including eventual cancellation thereof	0	5	0
27	For making any endorsement required under this Act or any other law for each deed	0	2	6
28	For each application under the provisions of section 33 of the Act	2	0	0
29	For each objection lodged under the said section	0	5	0
30	For the registration of a certificate of rights to minerals under the provisions of the Act	0	15	0
31	For noting the termination of registered real rights, for each title	0	2	6
32	For the registration of any notarial deed not otherwise provided for	0	10	0
33	For the registration of a change of name of a person or partnership under section 93 of the Act or of any company or society	0	5	0
34	For a report to the court made by a registrar in terms of section 97 of the Act	1	0	0
35	For the registration of an amendment of an error in the name or description of any person or property under section 4 (1) (*b*) of the Act for each deed	0	5	0
36	For the cancellation of the registration of any prospecting contract under section 85 of the Act or of a lease of land or rights to minerals, servitude or prospecting contract, under section 90 (1) of the Act	0	5	0
37	For a certificate by a Registrar of any fact (in addition to the fee prescribed in respect of the information contained in such certificate)	0	2	6
38	For a certified copy of a deed, power or other document or of the entries on a folio of a register containing not more than 400 words, prepared in a Deeds Registry provided that certificates of authentication or attestation of a power shall be treated as part thereof	0	5	0
	For every additional 100 words or part thereof	0	1	0
	For any such copy if prepared by the applicant therefor, one-half of the above fees.			
39	For every entry note or other act made or performed in a Deeds Registry, not being any of the matters or things elsewhere provided for in this schedule or in the regulations	0	2	6
	Provided no fee shall be payable for the cancellation of any power of attorney.			
40	For each bill of costs taxed :			
	For each £1 or fraction thereof on the amount of the bill submitted for taxation	0	0	6
41	(*a*) For a search of an index to any register :—			
	For each name searched whether of person or property	0	2	0
	(*b*) For an inspection of any one deed, document or diagram or of a register (for each folio, and continuation thereof inspected)	0	2	0
	(*c*) For a search through a title (where no other method available) for each piece of land	0	2	0
	(*d*) For any continuous search for information :—			
	For the first hour of such search	1	0	0
	For each additional hour	0	10	0

Item.		£ s. d.
	Should any of the searches mentioned in this item be made by the applicant or his duly authorized agent one-half of the fees shall be charged: Provided that in the discretion of the Registrar such half fees may also be charged in cases where access to strong-rooms by members of the public is prohibited and application is made in person or by a duly authorized agent.	
	(*c*) For any search not specially provided for, a fee to be fixed by the Registrar provided the minimum fee shall be.....	0 2 0
42	For each search made by a Registrar in the Province of the Cape of Good Hope in connexion with the issue of a certified copy of a lost or destroyed title-deed:—	
	For every hour or fraction of an hour.....	0 2 0
	But not to exceed £1 in the whole.	
43	The fee referred to in regulation 63 shall be.....	0 2 6
44	For the registration of an advance made under the provisions of the dipping tanks or fencing Acts or any other Act which does not provide for an exemption from payment of fees.....	0 5 0
45	For the cancellation, part-payment, release or substitution of such advance	0 5 0
46	For opening a register for a township or settlement.....	1 0 0
47	(*a*) For the cancellation of debentures registered under Act No. 43 of 1895 (Cape):—	
	For every 10 or fraction of 10 up to 100.....	0 2 6
	For every 10 or fraction of 10 after 100.....	0 0 6
	(*b*) For the registration of a release of property from a debenture or an endorsement made thereon in connexion with the registration of a servitude or issue of a certificate of title or any other consent given in connexion with the land thereby secured:—	
	For every 10 or fraction of 10 up to 100.....	0 5 0
	For every 10 or fraction of 10 after 100.....	0 1 0
48	Upon written application being made by any divisional or municipal council or other local authority to search the registers or records of any Deeds Registry, the Registrar, upon being satisfied that the information is required to enable such council or local authority to carry out its statutory powers or duties, may allow such search to be made upon payment of one-eighth of the prescribed fee or fees, unless provision be made in any law allowing such searches to be made on behalf of such council or local authority without charge or at a higher or lower charge: Provided that where any information is supplied to a local authority on application the charge shall be one shilling per entry.	
49	When particulars of all bonds are taken regularly from any register for publication in a newspaper or periodical, there shall be paid, if the Registrar is satisfied that the publication in such newspaper or periodical serves a public purpose, a fee in respect of each bond of threepence if taken direct from the bond. If from the current register the same fees as for copies of deeds provided such information be extracted at the same time.	

EXEMPTIONS.

Item.

1 Any person engaged in research work of an historical character or of general public interest may be permitted, subject to such conditions as the Registrar may stipulate, to search the records and registers free of the payment of any fee: Provided that when an applicant is a student of a university incorporated by an Act of the Union he shall produce a certificate from the principal thereof, any other person a certificate from the Minister describing in the case of each certificate the purposes for which the search is made.

2 (*a*) No fee shall be chargeable if the same would in the meaning of Act No. 30 of 1911 or any amendment thereof, be legally payable and borne by the Government of the Union of South Africa or any Department thereof, or by the Imperial Government.

(*b*) No fee shall be chargeable in respect of any transfer or cession of immovable property to the Government or any Department thereof if such transfer or cession be in pursuance of a donation to or expropriation by the State of such property.

(*c*) No fee shall be levied by a Registrar in respect of the performance of any Act prescribed by section 3 (*w*) and 59 of the Act.

B.—TARIFF OF THE FEES AND CHARGES

of conveyancers and notaries public in connexion with the preparation, passing and registration of deeds or other documents registered or filed or intended for registration or filing in a deeds registry and the fees and charges of any other legal practitioners in connexion with the preliminary work required for the purpose of any such deed or other document and as to taxation of any such fees or charges, framed in terms of sub-section (1) (*c*) of section ten of the *Deed Registries Act*, 1937.

(*c*) Certificate of registered title under section 38	3	3	0
(*d*) Certificate of township or settlement title under section 46	3	3	0
(*e*) Certificate of rights to minerals under sections 71, 72, 73 and 74	3	3	0
(*f*) Certificate of consolidated title under section 40	4	4	0
(*g*) Certificate of amended title under section 41	4	4	0
(*h*) Certificate of uniform title under section 42	4	4	0
Partition transfer under section 26 :—			
(*j*) Of an erf	3	3	0
(*k*) Of other land	4	4	0
3. If more than one piece of land is included in the same transfer or certificate, an additional fee :—			
(*a*) In the case of erven or agricultural holdings for each additional property	0	5	3
(*b*) In the case of other land, for each additional property	0	10	6
4. Framing for first insertion and inserting in a partition transfer referred to in item 2 (*k*) of this tariff, conditions or servitudes, an additional fee, per folio or part thereof, of additional matter of	0	10	6
5. If a transfer or certificate is to be lodged in triplicate, an additional fee of	0	10	6
6. Attendance on behalf of transferor or transferee superintending conveyance from or to him when deed prepared and lodged by another conveyancer :—			
(*a*) When the value of the land does not exceed £500	1	1	0
(*b*) When the value of the land exceeds £500 but does not exceed £3,000	2	2	0
(*c*) When the value of the land exceeds £3,000	3	3	0
7. Framing acceptance of servitude by a third party in terms of section 76 (1) (*c*)	1	1	0

SECTION III.—MORTGAGE BONDS.

(The amount of preference for costs shall not be taken into account in calculating the fees.)

	£	s.	d.
1. Drawing each bond, including one copy for Registry and attendances on lodgment and execution, when the amount of the bond is :—			
£200 and under	2	2	0
Over £200 and up to £500	3	3	0
Over £500 and up to £1,000	4	4	0
Over £1,000 and up to £10,000, an additional fee, for every £1,000 or part, of	1	1	0
Over £10,000 and up to £50,000, an additional fee, for every £2,000 or part, of	1	1	0
Over £50,000 and up to £100,000, an additional fee, for every £5,000 or part, of	1	1	0
Thereafter an additional fee, for every £10,000 or part, of	1	1	0
2. Any act of suretyship where immovable property is hypothecated, or waiver when included in a bond, an additional fee for such suretyship or waiver of	1	1	0
3. Attendance on behalf of mortgagor or mortgagee superintending bond when same is prepared and lodged by another conveyancer :—			
(*a*) When the amount of the bond does not exceed £500	1	1	0
(*b*) When the amount of the bond exceeds £500 but does not exceed £3,000	2	2	0
(*c*) When the amount of the bond exceeds £3,000	3	3	0
4. If a bond is to be lodged in triplicate an additional fee of	0	10	6

SECTION IV.—NOTARIAL BONDS.

(The amount of preference for costs shall not be taken into account in calculating the fees.)

	£	s.	d.
1. Drawing bond including minute, signed original for record and another signed original, grosse or notarially certified copy, and attendances on execution and attestation, when the amount of the bond is :—			
£500 and under	5	5	0
Over £500 and up to £1,000	6	6	0
Over £1,000 and up to £10,000, an additional fee, for every £1,000 or part, of	1	1	0
Over £10,000 and up to £50,000, an additional fee, for every £2,000 or part, of	1	1	0
Over £50,000 and up to £100,000, an additional fee for every £5,000 or part, of	1	1	0
Over £100,000, an additional fee, for every £10,000 or part, of	1	1	0
2. Any Act of suretyship included in a notarial bond, an additional fee for such suretyship of	1	1	0
3. Attendance registering such bond at a Deeds Registry	1	1	0
If bond received from another centre is rejected for amendment or other valid reason necessitating searches, investigations, attendances or correspondence, or if such services are necessarily rendered prior to lodgment, additional fees as prescribed under "Miscellaneous" and "Work not Specified", with a minimum of	0	10	6
4. For each additional original, grosse or certified copy (not being a carbon copy) for registration in each additional Registry, per folio or part thereof	0	5	3
5. Attendance registering bond in a Registry after previous registration in another Registry (section 62)	1	1	0

SECTION V.—AUXILIARY OR SURETY BONDS.

(The amount of preference for costs shall not be taken into account in calculating the fees.)

	£	s.	d.
1. Drawing mortgage bond to be passed as additional security for another bond or a surety bond, including one copy for Registry and attendances on lodgment and execution	3	3	0
2. If such bond is to be lodged in triplicate an additional fee of	0	10	6
3. Drawing auxiliary or surety notarial bond, including minute, signed original for record and another signed original, grosse or notarially certified copy, and attendances on execution and attestation	4	4	0
4. Attendance registering auxiliary or collateral notarial bond	1	1	0
If bond received from another centre is rejected for amendment or other valid reason necessitating searches, investigations, attendances or correspondence or if such services are necessarily rendered prior to lodgment, additional fees as prescribed under "Miscellaneous" and "Work not Specified", with a minimum of	0	10	6
5. For each additional original, grosse or certified copy (not being a carbon copy) for registration in each additional Registry, per folio or part thereof	0	5	3
6. Attendance registering bond in a Registry after previous registration in another Registry (section 62)	1	1	0

SECTION VI.—MARRIAGE CONTRACTS.

	£	s.	d.
1. Drawing contract, including minute, signed original for record and another signed original, grosse or notarially certified copy, attendances on execution and attestation, when no settlement is made or trust or testamentary disposition is embodied	3	3	0
2. If contract contains a settlement, trust or testamentary disposition, an additional fee for minute and all copies of, per folio or part thereof, of additional matter to give effect thereto	0	10	6
3. Framing and issuing notarially certified copy of a contract executed outside the Union for registration in a Deeds Registry within the Union, or of any contract for filing in a Deeds Registry, per folio or part thereof	0	5	3
With a minimum of	0	10	6
4. Attendance registering contract under 1, 2 and 3 above	1	1	0

SECTION VII.—OTHER NOTARIAL DEEDS.

	£	s.	d.
1. Framing any notarial waiver of preference by mortgagee, usufructuary or other holder of limited interest, or other notarial consent required under the Act or regulations, including minute, signed original for record and another signed original, grosse or notarially certified copy	3	3	0

	£	s.	d.
2. Framing any notarial lease, servitude, prospecting contract, donation or other notarial deed (other than those provided for above and in 3), including minute, signed original (when necessary) grosse or notarially certified copy for record, and another signed original, grosse or notarially certified copy, according to the length and complexity thereof, with a minimum of	4	4	0
3. Framing any notarial lease or cession of rights to minerals including minute and two signed originals, grosses or notarially certified copies thereof, when the purchase price or value is:—			
£1,000 or under	4	4	0
Over £1,000 and up to £10,000, an additional fee, for every £1,000 or part, of	1	1	0
Over £10,000 and up to £50,000, an additional fee, for every £2,000 or part, of	1	1	0
Over £50,000 and up to £100,000, an additional fee, for every £5,000 or part, of	1	1	0
Thereafter an additional fee, for every £10,000 or part, of	1	1	0
4. Framing notarial cession of any notarial deed mentioned in 2, including minute and two signed originals grosses or notarially certified copies, per folio 10s. 6d., with a minimum of	2	2	0
5. Preparing and issuing each further signed original, grosse or notarially certified copy, of any of 1, 2, 3 or 4, in original type, per folio	0	5	3
Each additional carbon copy duly attested	0	10	6
NOTE.—Original type allowed for first and every fourth copy.			
6. Attendance registering any deed under 1, 2 3 or 4 above	1	1	0
If deed received from another centre is rejected for amendment or other valid reason necessitating searches, investigations, attendances or correspondence, or if such services are necessarily rendered prior to lodgment, additional fees as prescribed under "Miscellaneous" and "Work not Specified", with a minimum of	0	10	6

SECTION VIII.—CESSION, REDUCTION, RELEASE, CANCELLATION, ETC., OF BONDS.

1. Drawing cession, consent to cancellation of cession, or consent to cancellation of bond, reduction of capital or releases of person or property, and attending on signature thereof	0	10	6
2. Attendance registering each of the above mentioned	1	1	0
If documents received from another centre are rejected for amendment or other valid reason necessitating searches, investigations, attendances or correspondence, or if such services are necessarily rendered prior to lodgement, additional fees as prescribed under "Miscellaneous" and "Work not Specified", with a minimum of	0	10	6

SECTION IX.—UNDERHAND WAIVERS, CONSENTS OF MORTGAGEES, USUFRUCTUARIES, LESSEES, ETC.

1. Framing waiver of preference in regard to the ranking of a bond	0	10	6
2. Framing consent of mortgagee, usufructuary, lessee or holder of other limited interest, required by the Act or regulations not otherwise provided for in this tariff (not notarial)	1	1	0
3. Framing consents under section 57, including attendances on mortgagee and new debtor	2	2	0
4. Framing agreement or consent to variation of terms of bond, including attendances on mortgagor and mortgagee	1	1	0
5. Attendance registering each of the documents mentioned in 1, 2, 3 or 4 above, if registered	1	1	0
If documents received from another centre are rejected for amendment or other valid reason necessitating searches, investigations, attendances or correspondence, or if such services are necessarily rendered prior to lodgment additional fees as prescribed under "Miscellaneous" and "Work not Specified", with a minimum of	0	10	6

SECTION X.—MISCELLANEOUS.

1. Drafting form of resolution	0	10	6
2. Issuing or arranging issue of each guarantee and attending to payment thereof	1	1	0
3. Attending on receipt of each guarantee and payment thereof	0	10	6
4. In cases where transactions are dependent upon other deeds by other practitioners, a fee for forwarding documents to registration centre and instructing fully	0	10	6
5. Attendances on other conveyancers arranging preparation or lodging of interdependent deeds, from	0	10	6
to	1	11	6
6. Attendances at office of Master or other proper office and obtaining copies of documents required to complete deed or conveyance or registration (exclusive of searches)	0	10	6
7. Attendances at office of Master, or other proper office and obtaining certificate under Death Duties Act	0	10	6
8. Attendances at office of the Master, applying for and obtaining certificate or consent required from him under Act No. 24 of 1913 for registration purposes in a Deeds Registry (including inspection of will, etc.)	1	1	0
9. Attendances at public or local authority offices (e.g., for clearance certificates, etc., or in connexion with bonds), for any number of attendances at each office	0	10	6
10. Attendances and searching in Deeds, Master's or other offices in connexion with servitudes or other particulars or information necessarily required for the preparation, lodgment or registration of deeds, per half hour or part	0	10	6
11. Attendances searching for tacit hypothecations in connexion with a bond to be passed in respect of each debtor	1	11	6
12. Attendance at Deeds Registry lodging titles and arranging for endorsement under Act No. 24 of 1913 or under section 45 of the Act	1	1	0
13. Obtaining and lodging bond (or having same lodged) for endorsement *re* certificate of registered title taken out	1	1	0
14. Drawing any application required under the Act or by a Registrar	0	10	6
15. Attendances on inspecting, checking, arranging and lodging for endorsement of amendment of title under section 44	1	1	0

27. Preparing and issuing grosse or notarially certified copy of any notarial deed or other document, not provided for above:—			
In original type, per folio	0	5	3
Each carbon copy duly attested	0	10	6
Note to Section VII, 5, applies.			
28. Framing notice to apply for issue of certified copy of a deed, and attendances on publication thereof	1	1	0
29. Attendances in obtaining certified copy of any deed from Deeds Registry and filing of necessary documents	1	1	0

SECTION XI.—DIAGRAMS AND GENERAL PLANS.

1. Attendance on instructions *re* sub-division and to submit papers to surveyor for framing of sub-divisional or other diagrams for any purpose required under the Act or regulations and instructing surveyor accordingly, per half hour	0	10	6
2. Attendance submitting diagrams to Surveyor-General for approval	0	10	6
When two or more diagrams so submitted are to be deducted from the same original and are submitted simultaneously, the fee for each diagram after the first is	0	5	3

	£	s.	d.
3. Attendance submitting diagrams to Surveyor-General for approval when a diagram is required in connexion with a deed to be passed at a Deeds Registry elsewhere, for the first set	1	1	0
Thereafter per set lodged simultaneously	0	5	3
4. Attendance on municipal or other local authority to obtain approval, in terms of any law, of sub-divisional diagrams	1	1	0
5. Attendance in obtaining certified copy of any diagram including application	1	1	0

SECTION XII.—WORK NOT SPECIFIED.

1. All fees or charges specified in the above tariff shall, save as is otherwise provided, cover the specific respective services set opposite each respective item only. Fees or charges for all other attendances, correspondence or services may be allowed at the discretion of the Registrar, and if so allowed the following scale shall apply:—

Any attendance	0	5	3
Any letter per folio or part thereof	0	5	3
Drawing of any document per folio or part thereof	0	10	6
Copies of documents, per folio or part thereof	0	5	3
2. Attendances on taxation, including drawing of bill and notice of taxation, on the amount of fees allowed on taxation	5 per cent.		

SECTION XIII.—APPORTIONMENT OF FEES UNDER SECTION 10 (4) OF THE ACT.

(*a*) Item applicable to the Province of the Cape of Good Hope [exclusive of the area referred to in paragraph (*b*) of the Second Schedule to the Act] and to the Province of the Transvaal [including the area referred to in paragraph (*h*) of the aforesaid Schedule].

Where in this tariff provision is made for one fee for drawing, lodging, executing or registering any deed of transfer, certificate of registered or other title to land, minerals or other real rights, or mortgage bond, and such deed is drawn by one conveyancer and is lodged and executed or registered by another conveyancer, one-fourth of the fee prescribed therefor shall be the separate fee of the former and three-fourths thereof shall be the separate fee of the latter; provided that if such deed is rejected—

1. on the ground that same requires amendment, the latter conveyancer shall be entitled to charge an additional fee, for attendances, searches, or correspondence thereby occasioned,

of from	0	10	6
to	1	1	0

2. on other grounds necessitating investigations, drawing or copying of documents, attendances or correspondence, the latter conveyancer shall be entitled to charge such additional fees as prescribed under "Miscellaneous" or "Work not Specified" or other relative section of this tariff, in respect of any such services rendered by him in complying with the Registrar's requirements or at the request of the first-mentioned conveyancer.

The aforegoing apportionment of any fees prescribed for the drawing and execution of notarial deeds or bonds shall also apply if any such deed or bond is drawn by one notary and is executed before another and such apportionment shall be the separate fees of the respective notaries.

(*b*) Item applicable to the Province of the Orange Free State and to the area referred to in paragraph (*b*) of the Second Schedule of the Act.

Where in this tariff provision is made for one fee for drawing, lodging, and executing any deed, and such deed is drawn by one conveyancer and lodged and executed by another conveyancer, one-third of the fee prescribed therefor shall be the separate fee of the latter and the remaining two-thirds the separate fee of the former.

(*c*) Item applicable to the Province of Natal.

Where in this tariff provision is made for one fee for drawing, lodging, and executing any deed, and such deed is drawn by one conveyancer and lodged and executed by another conveyancer, one guinea of the fee prescribed shall be the separate fee of the latter and the remainder the separate fee of the former.

Small Holdings Ordinance, No. 4 of 1934.
Local Government Consolidation Ordinance, No. 15 of 1935.

4. **Deeds Registries.**—There are seven deeds registry offices, each of which is in charge of an officer styled the Registrar of Deeds. In addition there is the Rand Townships Registration Office, Johannesburg, under the control of the Rand Townships Registrar, whose functions are similar to those entrusted to registrars of deeds. The areas served by the several deeds registries are as follows:—

Capetown	The Province of the Cape of Good Hope, exclusive of the area served by the deeds registries at Kingwilliamstown, Kimberley, and Vryburg.
Kingwilliamstown	The territory known as British Kaffraria, defined by Proclamation of the High Commissioner dated 23rd December, 1847, comprising the divisions of Kingwilliamstown, Komgha, Stutterheim, and portions of the divisions of Cathcart and Victoria East.
Kimberley	The divisions of Kimberley, Barkly West, Hay, and Herbert, together with that portion of the division of Prieska which is situate to the north of the Orange River.
Vryburg	The divisions of Vryburg, Mafeking, Gordonia, Kuruman, and Taung.
Pietermaritzburg	The Province of Natal.
*Pretoria	The Province of the Transvaal.

* The Registrar for the Transvaal has also since 1904 been Registrar of Deeds for Swaziland.

Bloemfontein	The Province of the Orange Free State.
Johannesburg (Rand Townships Registration Office)	The Mining District of Johannesburg as defined by Proclamation No. 14 of 1923.

Information concerning the institution of the various deeds registries and particulars of earlier legislative enactments providing for the registration of deeds, bonds, etc., are given in *Year Book* No. 18 and previous issues.

The functions of the registrars of deeds in the several provinces are laid down in section 3 of Act No. 47 of 1937 and include *inter alia* the following:—

(i) To examine deeds or other documents submitted to them for execution or registration and, if permitted by law and no other valid objection exists, attest or execute and/or register the same, in particular:—
- (*a*) Grants and leases of land lawfully issued by the Government.
- (*b*) Deeds of transfer or hypothecations of land and certificates of title to land.
- (*c*) Cessions of bonds (including cessions made as security), cancellations, part payments, and releases by the legal holders, and variations of the terms of bonds.
- (*d*) Antenuptial contracts, notarial prospecting contracts, general or special notarial bonds, notarial deeds of donation and other notarial deeds registrable by law.
- (*e*) Notarial cessions, leases, subleases, cessions and cancellations of leases and subleases of rights to minerals, and certificates of registration and reservations of such rights, and the issue of mynpachtbrieven.
- (*f*) Any servitude, whether personal or praedial, and other real rights in land.
- (*g*) General plans of erven and sub-divisions of land, notarial leases, subleases of land and cessions and cancellations thereof.

(ii) Generally to exercise all such powers and discharge all such duties as by law may or are to be discharged by them or as are necessary to give effect to the provisions of Act No. 47 of 1937.

It is essential for the purposes of registration that transfer deeds, certificates of title, and mortgage bonds shall have been drawn or prepared by persons duly authorized by law so to do, and be executed in the presence of, or attested by, as the case may be, the registrar concerned. Other deeds, if registrable by law, are generally registered only if executed in the presence of a notary public and attested by him.

5. **Statistics.**—Table (i) hereunder gives a summary of the more important transactions registered at the various deeds registries during 1938. The transactions for each registry separately for a series of years are given in the following tables:—

(i) SUMMARY OF TRANSACTIONS, 1938.

6. **Mortgage Bond Statistics.**—Beginning with the year 1935, a new system was inaugurated whereby the various Registrars of Deeds supply the Census Office with details of mortgage bonds passed, increased, cancelled, or part-paid, and the following tables give the results for 1938. Notarial and collateral bonds are not included in these statistics, nor are cessions, securities, waivers of preference, or transfer of liability. In regard to Land Bank transactions the details were obtained from the Land Bank direct and have been treated as being entirely rural; they include bonds passed under section 20 of Act No. 29 of 1933. The figures for bonds cancelled and part-paid do not include amounts written off in terms of sections 47 and 48 of Act No. 13 of 1918.

§ 4. Valuation of Property.—Cape of Good Hope.

Second and Third General Valuations.—The third general valuation of the province has been commenced; and it has been completed and is in force in respect of certain divisions and the areas of certain local authorities.

The subjoined table gives the result of the second complete general valuation (except where such has been superseded by the third general valuation, in which cases the figures of the latter are shown) of immovable property in the Cape of Good Hope Province (inclusive of the Transkeian Territories), undertaken in terms of Ordinance No. 7 of 1914 and *interim* general valuations framed under Ordinances No. 5 of 1922 and No. 5 of 1926, and shows, by divisions, the number of properties, the site value, the value of buildings and of exempted improvements, the total valuation, and the rateable value in each case. The figures are corrected up to 31st December, 1937. A *division* is defined by the Ordinance as being a rural or divisional council area, including any municipality or village management board area therein, and where there is no rural or divisional council area, a magisterial district or such magisterial districts as may be combined for the purpose of the Ordinance by the Administrator. *Site values* are determined, according to a prescribed procedure, by the ordinary price which a buyer would be willing to give and a seller to accept if the land to be valued were brought at the time of valuation to voluntary sale. The basis of the valuation of *buildings* is the estimated cost of erection at the time of valuation, allowance being made for structural and other depreciation. By *exempted improvements* are meant those "which increase the value of the land for agricultural purposes, and include structural works, dipping and storage tanks, kraals, fences, irrigation works, dams, boreholes, stables, etc., but not residential buildings".

The following table gives information concerning the valuation of immovable property in the Cape Province, taken under the provisions of Ordinance No. 5 of 1926:—

VALUATION OF IMMOVABLE PROPERTY, CAPE OF GOOD HOPE PROVINCE (INCLUDING TRANSKEIAN TERRITORIES).—CORRECTED UP TO 31st DECEMBER, 1937.

CHAPTER XVIII.
IRRIGATION AND WATER CONSERVATION.

§ 1. Irrigation.

1. **Legislation.**—A reference to legislation concerning water conservation and irrigation in the four provinces prior to the constitution of the Union will be found in *Year Book* No. 18 and previous issues. The Union *Irrigation and Conservation of Waters Act* was passed in 1912. This Act provides first for a national law regulating the use of water in public streams. Further, it provides special judicial machinery for dealing with the definition of water-rights along public streams, the settlement of disputes, the granting of servitudes and permits, and other matters. It also contains a variety of provisions designed to promote the development of irrigation. In principle the Act is an effort to realize the following main objects:—

(*a*) Preservation, to the fullest extent possible, of all vested rights so far as they are of practical value to riparian owners.

(*b*) Provision for a rational and practical method of effecting an equitable distribution of water flowing in defined channels of a permanent character.

(*c*) Provision of equitable and practical means for the conservation and use of that portion of the flow in South African streams which cannot be immediately and beneficially used and may run to waste.

(*d*) Provision of machinery for bringing these objects into effect.

The subject-matter of the Act is as follows and gives an indication of the scope of the law:—

Chapter I. General control, including provision for hydrographic surveys, preparation of schemes, engineering services, water-boring.
II. Use of public and private water.
III. Use of subterranean water.
IV. Constitution of *Water Courts* and their jurisdiction, powers, and authorities.
V. Constitution of *River Districts* and *Boards*.
VI. Constitution of *Irrigation Districts* and *Boards*.
VII. Expropriation of land and acquisition of servitudes.
VIII. Irrigation loans to private persons and to *Irrigation Boards*.
IX. General and miscellaneous matters relating to right of entry upon land for irrigation purposes, service of notices and documents, exemption of irrigated lands from rates, offences and penalties, etc.

Seven sections of regulations have been framed under the law dealing with various matters in detail.

Under Act No. 33 of 1926, as amended by Act No. 57 of 1934, provision was made for an Irrigation Commission, which was established under Government Notice No. 1363, dated 4th August, 1926. This Commission is solely advisory. In 1934 Parliament passed the *Irrigation Amendment Act*, No. 46 of 1934, which in many respects materially amended the principal Act.

A detailed history of the growth of Water Law up to 1933 is contained in a work on *Water Law: Its Development in the Union of South Africa*, by A. D. Lewis, Director of Irrigation.

2. **Administration.**—(i) *Irrigation Department.*—The administration of the *Irrigation Act* is vested in an Irrigation Department under a Director of Irrigation with a staff of engineers and administrative officers. The principal activities of the Department may be summarized as follows:—

(*a*) A special branch of the Department is engaged in the systematic collection and compilation of data relating to the water resources of the Union. The chief features of this research are the collection of data in connexion with the flow of surface water and a study of the conditions affecting this flow.

Information is also collected concerning the duration and magnitude of floods, the minimum flows in the perennial rivers, the silt carried in suspension in rivers, the water disposal at the larger storage reservoirs, the gauging of dolomitic springs, the evaporation from free water surfaces, the transition losses in rivers and canals, etc.

For some results see Hydrographic Survey Papers Nos. 1 to 5, obtainable from the Government Printer, Pretoria.

(*b*) Closely allied to the Hydrographic Survey as regards the character of its investigations is the meteorological service, particulars of which will be found in Chapter I of this *Year Book*.

(*c*) Systematic reconnaissance surveys, together with hydrographic statistics, indicate where and how irrigation development can take place, and the carrying out of these surveys is a function of the Department hardly less in importance than the collection of hydrographic data. Arising out of these reconnaissance surveys irrigation projects are elaborated; these are either laid before the riparian owners interested, with the object of inducing them to form an irrigation district under the Act for the purpose of undertaking the scheme as a co-operative work financed under an irrigation loan, or the project is taken up, if circumstances are favourable, as a government work and may be constructed by departmental agency.

The Irrigation Department between 1934 and 1937 also prepared a Topographic Map of the Union to a scale of 1:500,000. This was published in ten sheets and is obtainable from the Government Printer, Pretoria, at 3s. per sheet. At the same time a magnetic survey was made. The results have been published in a pamphlet entitled "Magnetic Declination in South Africa (1936)": a map entitled "Magnetic Declination Map for the approximate epoch 1936" is included and the cost is 2s. 6d. The Topographic Map is now available to a scale of 1:1,500,000 or 23·6 miles per inch, and comprises two sheets which together form a map 5′ by 3′ 9″ overall. It is obtainable from the Government Printer at 6s. post free. An edition for aviation purposes may also be obtained from the Government Printer, Pretoria, at the same price.

(*d*) Government irrigation works are maintained and to a large extent administered by the Irrigation Department.

(*e*) An elaborate system exists under which *bona fide* farmers, irrigation boards, and river boards may obtain professional assistance from the Department. Such services are charged for at prescribed fees.

(*f*) An important section of the Department is the water-boring branch, the work of which falls into the following main sections:—

(1) Boring on behalf of farmers on a scale of charges under the most recent government policy of subsidy approximating to 50 per cent. of the actual cost to the Department; in December, 1936, a supplementary scheme was introduced enabling subsidies to be granted for boreholes drilled by private boring contractors (Government Notice No. 1817 of 1936);

(2) boring for water on vacant and waterless Crown lands to make such lands fit for settlement; and

(3) boring for water at school sites, hospitals, gaols, and other similar public institutions.

(*g*) The Department acts as the adviser of Provincial Administrations on all matters relating to water supply, drainage, sewerage, or irrigation within the areas controlled by municipalities and public bodies; and it advises and more or less controls irrigation and river boards.

(*h*) Irrigation loans are issued to farmers who are owners of land and also to irrigation boards under the provisions of the *Irrigation Act*, No. 8 of 1912, as amended by Act No. 26 of 1916. Section 4 of the *Finance Act*, No. 49 of 1935, makes provision for subsidies under irrigation loans not exceeding 25 per cent. of the cost of the works with a maximum of £125 in the case of persons other than irrigation boards. These subsidies may be granted by the Minister on certain conditions in respect of irrigation works constructed by means of irrigation loans and with the approval of the Department. Section 8 of the *Finance Act*, No. 35 of 1936, enables loans, including advances for boreholes, not exceeding £250 to be noted against title in lieu of the provision of sureties.

(*i*) The Meteorological Office also falls under the control of the Director of Irrigation.

(ii) *Water Courts.*—The water court is an institution which was in existence in the Cape Province for many years, and a similar court was created under the Transvaal *Irrigation Act*, No. 27 of 1908. In the Union Act the water court occupies a stronger and more important position than under the Cape of Good Hope or the Transvaal law. A water court is constituted by an itinerant water court judge as president and two assessors, one of them a competent hydraulic engineer attached to the Irrigation Department, and the other a person selected from a number nominated by the Governor-General for each proclaimed water court district. The *Water Court Judge Act*, No. 2 of 1924, makes provision for an additional judge of the Cape of Good Hope Provincial Division of the Supreme Court, and lays down the performance by such judge, or by certain other persons, of the functions of a water court judge. The Union has been divided into twenty-two water court districts for that purpose.

3. **Government Expenditure on Irrigation.**—Particulars are given hereunder as to expenditure on the Department of Irrigation for a series of years:—

(i) IRRIGATION—GOVERNMENT EXPENDITURE, 1933-34 TO 1937-38.

4. **Irrigation Districts.**—At 31st March, 1938, 131 irrigation districts controlled by irrigation boards had been constituted. This figure excludes irrigation districts established at one time or another and subsequently disestablished.

Irrigation districts and boards are formed in terms of Chapter VI of the *Irrigation and Conservation of Waters Act*, No. 8 of 1912, for the purpose of carrying out and controlling co-operative irrigation schemes. Any three riparian owners may petition the Minister to form an irrigation district, and if, on inquiry, it is found that the owners of not less than two-thirds of the total irrigable area under the projected scheme are in favour, the district may be constituted by the Governor-General-in-Council by Proclamation. All the irrigable area in the district then becomes liable to rating by the board, and the rates are a preferent charge on the land, ranking prior to all other mortgages. An irrigation board may obtain irrigation loans from the Government or from other sources on the security of its rates.

Much of the irrigation development has been done through the medium of irrigation boards, especially in the Cape Province, but latterly activity has been greater in government schemes. Of the 131 irrigation boards extant

as at 31st March, 1938, 80 were in the Cape Province, 43 in the Transvaal, 4 in Natal, and 4 in the Orange Free State, and all works except that at Egmont, Wepener, had been completed. Eighty-nine irrigation boards have received loans from the Government totalling approximately £5,000,000. This figure does not include the amount of such subsidies as may have been contributed by the Government towards the construction of later schemes, nor the amount of £31,700 spent on irrigation works for districts that have subsequently been deproclaimed. The total area scheduled by these 89 boards is approximately 120,000 morgen. There are 21 irrigation districts with schemes constructed without loans, the total rateable area being some 11,000 morgen. The remaining 21 irrigation districts have not yet embarked upon construction.

In addition to the expenditure on these co-operative irrigation schemes, the sum of £9,501,891 was spent from capital funds up to the 31st March, 1938, on government works. The more important of these works, which irrigate some 120,000 morgen are:—Hartebeestpoort, Olifants River, Buchuberg, Pongola, Marico Bosveld, Rust-der-Winter, Loskop, Vaal River Development, Upington Islands, and Riet River.

5. **Important Irrigation Schemes.**—(i) *General.*—Generally it can be said that, compared with other large irrigating countries, the conditions are not very favourable in South Africa. Even more favoured countries, such as America, Italy, and Spain, have found it necessary to subsidize irrigation works, and in the Union not only will a subsidy be necessary for future works, but some of the capital expenditure of the completed works will have to be written down. In regard to the expansion of irrigation schemes in the future, the Director of Irrigation dealt with the subject in a fairly comprehensive manner in the appendix to his annual report for the financial year 1928-29. Since 1916 great progress has been made with irrigation based upon conservation schemes, and the following table embodies some of the more important of these. Some further particulars of certain of these works will be found in the succeeding paragraphs.

STORAGE WORKS CONSTRUCTED, UNDER CONSTRUCTION, OR AUTHORIZED.

Name of Scheme and District.	Original Storage Capacity, million cubic feet (liable to reduction by silt).	Actual or Estimated Cost of Scheme.
CAPE OF GOOD HOPE.		£
Bellair: Ladismith and Swellendam	425	45,300
Blyde River: Pearston	81	34,235
Bregde River Conservation	1,600	83,713
Buchuberg Dam: Prieska	1,306	663,293
Calitzdorp: Oudtshoorn	205	168,054
Grass Ridge (Great Fish River): Cradock	2,757	171,000
Kamanassie: Calitzdorp and Oudtshoorn	1,355	726,000
Lake Mentz (Sundays River): Uitenhage and Jansenville	4,122	564,200
Leeuw Gamka: Prince Albert	355	83,660
Oliphants River: Van Rhynsdorp	231	766,433
Olifants River: Clanwilliam	2,611	249,798
Oukloof: Prince Albert	83	93,206
Prins River: Ladismith	135	22,110
Stoltz River: Beaufort West	56	31,700
Tarka (Great Fish River) (Lake Arthur); Cradock	2,500	613,801
Van Rhyneveld's Pass: Graaff-Reinet	2,800	410,000
NATAL.		
Pongola: Piet Retief	Diversion Weir	192,044
TRANSVAAL.		
Bon-Accord: Pretoria	415	115,000
Bospoort: Rustenburg	125	34,265
Buffelspoort: Rustenburg	174	78,789
Hartebeestpoort: Pretoria and Rustenburg	5,369	1,300,959
Klein Marico: Zeerust	139	45,716
Klerksdorp: Klerksdorp	188	28,700
Klipdrift: Potchefstroom	443	97,434
*Loskop: Middelburg	6,400	1,500,000
Olifants Nek (Hex River): Rustenburg	574	110,000
Marico Bosveld: Zeerust	2,587	274,590
Rust-der-Winter: Pretoria	980	142,611
Schweizer Reneke: Schweizer Reneke	152	51,931
†Lindleyspoort: Rustenburg	428	200,000

* Under construction. † Authorized.

STORAGE WORKS CONSTRUCTED, UNDER CONSTRUCTION, OR AUTHORIZED—(*continued*).

Name of Scheme and District.	Original Storage Capacity, million cubic feet (liable to reduction by silt).	Actual or Estimated Cost of Scheme.
ORANGE FREE STATE.		£
*Egmont: Wepener	453	65,000
Kaffir River: Bloemfontein	1,350	90,000
*Kalkfontein Dam (Riet River): Fauresmith	12,980	700,000
Kopjes: Vredefort	313	109,637
CAPE OF GOOD HOPE, TRANSVAAL, AND ORANGE FREE STATE.		
*Vaal River Development Scheme, under two separate organizations:—		
(*a*) Vaalbank Dam: Heilbron and Vereeniging	38,000	1,400,000
(*b*) Vaal Hartz Irrigation Scheme: Christiana and Barkly West	Diversion Weir	2,600,000

* Under construction.

(ii) *Hartebeestpoort* (*Crocodile River*).—The dam is situated in a poort in the Magaliesberg Mountains, about 25 miles west of Pretoria on the Rustenburg road. The works were commenced in August, 1916, and consist of a concrete dam of constant-angle arch type, 460 feet long, 161 feet high above the river bed, and 193 feet above lowest foundation level. The area of the reservoir at full supply is 6½ square miles. The capacity of the dam is 123,255 acre feet, and the land irrigable totals 38,098 acres.

(iii) *Lake Mentz* (*Sundays River*).†—The dam is situated 42 miles below Jansenville. The works were commenced in July, 1918, and consist of a concrete gravity section dam, 1,260 feet long, 94 feet high above the river bed, and 114 feet above lowest foundation level. The area of the reservoir at full supply is 7½ square miles. The initial capacity of the dam, which is now reduced by silting, was 94,000 acre feet. The area of the land rated by the Sundays River Irrigation Board is 23,445 acres.

(iv) *Kamanassie* (*Kamanassie River*).—The site of the dam is about 12 miles from Oudtshoorn. The works were commenced in June, 1919, and consist of a concrete gravity section dam, 1,265 feet long, 115 feet high above the river bed, and 145 feet above lowest foundation level. The area of the reservoir at full supply is 1¼ square miles. The capacity of the dam is 31,110 acre feet, though this can be raised. The area of the land rated by the Kamanassie Irrigation Board is 26,814 acres.

(v) *Tarka* (*Tarka River, Tributary of the Great Fish River*).†—The dam, also known as Lake Arthur, is situated on the farm Tekenfontein, 18 miles south of Cradock. The works were commenced during 1921, and consist of a concrete gravity section dam, 1,640 feet long, 107 feet high above the river bed, and 124 feet above assumed lowest foundation level. The area of the reservoir at full supply is 3¼ square miles. The initial capacity of the dam was 58,000 acre feet, but this has been reduced by silting, and work was completed in 1937 on raising the crest level 6 feet by means of balanced gates. These alterations have temporarily augmented the storage capacity by 13,800 acre feet. The area of the land rated by the Great Fish River Board is 25,500 acres.

(vi) *Grass Ridge* (*Great Brak River*).†—The dam is situated on the Great Brak River, 9 miles above Fish River Station. The works were commenced during 1921, and consist of an earthen dam with a concrete core wall. It is 1,530 feet long, 80 feet high above the river bed, and 96 feet above assumed lowest foundation level. The area of the reservoir at full supply is 5 square miles. The initial capacity of the dam was 63,272 acre feet, but it has been reduced by silting. The land served by the Tarka and Grassridge dams is rated by the Great Fish River Conservation Board and is 44,763 acres.

(vii) *Van Rhyneveld's Pass* (*Sundays River*).†—The dam is situated immediately above Graaff-Reinet. The works were commenced in July, 1920, and consist of a concrete dam, 1,160 feet long, 106 feet high above the river bed, and 141 feet above lowest foundation level. The area of the reservoir

† The silting of these four reservoirs is described in Communication No. 5 to the Second Congress on Large Dams held at Washington, U.S.A., in 1936.

at full supply is 4 square miles. The initial capacity of the dam was 64,000 acre feet; this has been reduced by silting. The area of the land rated by the irrigation board totals 20,000 acres.

(viii) *Tygerpoort (Kaffir River).*—The dam is situated about 22 miles south of Bloemfontein. The works were commenced during the first quarter of 1922, and consist of an earthern dam with reinforced concrete core-wall. It is 395 feet long, 65 feet high above the river bed, and 95 feet above lowest foundation level. The area of the reservoir at full supply level is 1 square miles. The capacity of the dam is 30,000 acre feet. The area of the land rated by the irrigation board totals 2,700 acres.

(ix) *Olifants Nek (Hex River).*—The dam is situated in a poort in the Magaliesberg Mountains, about 9 miles south of Rustenburg, Transvaal. The works were commenced in October, 1926, and consist of a concrete dam of the constant-radius arch type, 440 feet long and 80 feet high above the river bed. The area of the reservoir at full supply is about one square mile. The capacity of the dam is 13,119 acre feet; this can be increased. The irrigable area is 4,290 acres.

(x) *Brandvlei Conservation Dam (Breede River).*—This dam, also known as "Lake Marais," is situated about 6 miles south of Worcester; and consists of an earthern embankment 3,252 feet long, with a maximum height of 28·5 feet. It has no core-wall, but is provided with a puddled-clay apron, of a maximum width of 110 feet, on the upstream side. The area of water surface is 6 square miles and the capacity is 38,062 acre feet. The irrigable area rated by the Breede River Conservation Board is 19,033 acres. The works were commenced in March, 1920, and completed in July, 1922. The dam is filled by a supply channel, 2 miles long, from the Holsloot River; and additional replenishment is occasionally obtained, by means of regulating gates, from high floods in the Breede River, which flows along the downstream side of the embankment. The supply being thus controlled, no spillway is provided. The storage capacity of this dam is being increased. The Worcester-Villiersdorp main road passes over the crest of the dam.

(xi) *Vaal-Hartz Irrigation Scheme.*—During the parliamentary session of 1934, an Act known as the *Vaal River Development Scheme Act*, No. 23 of 1934, was passed by the Legislature. The major purpose of this Act is to provide for the construction by the Government of irrigation works on the Vaal River. A schedule appended to the Act describes the works to be constructed under its authority in the following terms:—

(*a*) An upper storage dam on the Vaal River situated approximately fourteen miles below the confluence of the Vaal and Wilge Rivers. The wall of this dam will be constructed of concrete, and will be situated on or near the farms Witpoort on the south bank and Vaal-bank on the north bank of the Vaal River. The dam will have an initial impounding capacity of not less than 700,000 acre feet, and will, when full, submerge an area of land not less than 50 square miles in extent. This will be the largest dam in the Union. It has been built so as to allow for enlargement at small cost.

(*b*) A diversion weir on the Vaal River, situated approximately three miles above the railway bridge at Warrenton. The weir will be situated on or near the farms Schoolplaats on the south bank and H. 20 on the north bank of the Vaal River. The weir will have a height of about 30 feet. It will serve to control and divert water into the canals described below.

(*c*) A main canal, with branch canals, will convey water diverted by the weir described in paragraph (*b*) to such land as is to be irrigated.

(*d*) Weirs and diversion canals at suitable places in or near the Vaal River for the purpose of generating power.

(*e*) All other appurtenances necessary for the proper development of the scheme, for the control and disposal of surface drainage, for the measurement and control of water released from the works or from any portion thereof, and generally for carrying out the scheme.

The scheme, when completed, is estimated to cost somewhere in the vicinity of £4,000,000; and the upper storage dam on the Vaal River when filled will throw back the impounded water a distance of over 70 miles and form a lake with a surface area of 60 square miles.

The Rand Water Board has acquired certain rights to a portion of the stored water on payment of £520,000.

(xii) *Loskop Irrigation Scheme.*—This scheme, consisting of a large storage dam and canal system, is situated in the Middelburg and Pretoria districts on the Olifants River. The dam is about 36 miles north of the town of Middelburg and is of the concrete gravity overspill type, the leading particulars being: Crest length, 1,420 feet; 120 feet high above river-bed level. The quantity of concrete will be about 222,000 cubic yards, and the quantity of water stored will be 150,000 acre feet. Canals will be taken along both banks of the river, and the irrigable area to be served is approximately 38,000 acres. Construction work on the dam started in July, 1934.

(xiii) *Riet River Scheme.*—This scheme, comprising the Kalkfontein Dam and a main canal 80 miles long, is situated on the Riet River in the Fauresmith district, Orange Free State. The construction of the dam, which is of the rockfill type, was started in July, 1935. The main particulars are: Crest length, 1,040 feet; height above river bed, 113 feet; quantity of rockfill, 270,000 cubic yards; quantity of concrete in slab and toe wall, 11,000 cubic yards. Two hundred and ninety-eight thousand acre feet of water will be stored in this reservoir, which as regards capacity will be the second largest in the Union. The irrigable area to be served is approximately 23,000 acres.

6. **Underground Water.***—Water is a mineral; and the investigation of a country's underground water resources is an integral part of the duties of a State geological survey, a duty that is as important as the investigation of any other mineral occurrences. *Pari passu* with the correlation of the known supplies with the geological structure and the rock formations of an area is the location of sites at which further supplies may be obtained by boring or by well-sinking.

For some years the Geological Survey of the Union endeavoured to perform this part of its duties as a sort of "side line"; but it became more and more evident that the calls made upon it for advice on water problems could only be met by the appointment of a special and adequate staff, and during the last two years or so this staff has been gradually built up and formed into a special section.

The most insistent demand made upon this section is one for advice on the location of borehole sites. The selection of proper sites is dependent on a knowledge of the nature of the rocks which will be encountered by drilling, of their water-bearing capabilities, and of the detailed structure of the area in which they are situated. It is also dependent on a knowledge of the results obtained in previous borings. Consequently, systematic surveys of fairly extended areas are almost essential preliminaries to the actual location of boring sites within those areas; and such surveys are now in active progress, particularly in those parts of the Union that are less favoured in the matter of surface water.

Although such investigations are essentially geological, it has been found that, under certain circumstances (and particularly those where the rocky face of the land is masked by a covering of sand or eluvial material), observations made by certain geophysical means prove to be of considerable assistance in enabling one to "see" beneath such a mask. Measurements of magnetic anomalies and of the variations in electric resistivity within an area are capable of geological interpretation; and measurements of these types are now a general adjunct to the field geologist engaged in water investigations. Experience has shown that the percentage of successful sites has, in some areas, risen to almost one hundred when the geologist has taken into consideration the geophysical phenomena before selecting his sites.

* See also Geological Survey Memoir No. 34: "The Water-bearing properties of the more important Geological Formations in the Union of South Africa" by H. F. Frommurze, D.Sc.

The Geological Survey undertakes selection of boring sites for government departments, municipalities, and farmers, preference being given in that order. In every case an endeavour is made to preface the selection of sites by a regional survey; when the exigencies of the case do not permit of such a survey, the chances of success are obviously diminished. In view of the costs involved in drilling, it is highly desirable that every precaution should be taken in the choice of sites.

7. **Water-boring.**—The Irrigation Department undertakes water-boring operations, and the following table gives particulars of these operations since the year 1933-34.

IRRIGATION DEPARTMENT—WATER-BORING, 1933-34 TO 1937-38.

Financial Year.	Number of Drills in Commission.	Number of Applications Received.	Number of Boreholes Completed.	Total Footage Drilled.	Estimated Yield of Water in 1,000 gallons per diem.
1933-34	83	973	1,102	188,133	17,250
1934-35	95	976	1,072	199,875	15,911
1935-36	101	984	1,204	228,552	18,884
1936-37	102	1,194	1,158	214,360	16,675
1937-38	102	1,908	1,234	234,824	19,758

§ 2. Conservation of Water.

1. **Waterworks and Water Storage in Municipal Areas.**—The following table gives particulars of the cost of installation, storage capacity, and consumption of the municipal waterworks of the principal municipalities for the year 1937-38. Information concerning the development of the waterworks, the sources of supply, etc., of the larger municipalities was given in *Year Book* No. 18 and previous issues.

URBAN WATERWORKS, 1937-38.

Town.	Cost of Installation.	Maximum Storage Capacity (in Thousands of Gallons).	Maximum Working Capacity per diem (in Thousands of Gallons).	Consumption for Domestic Purposes.	
				Annual (in Thousands of Gallons).	Average Daily (in Thousands of Gallons).
Capetown	5,125,629	6,634,000	20,000	3,813,508	10,448

* Rand Water Board supplies Benoni, Boksburg, Brakpan, Germiston, Johannesburg, Krugersdorp, Roodepoort–Maraisburg, Springs, and Witwatersrand Mines (see paragraph 2 below).
† Consumption for all purposes except mines. ‡ Particulars not available.

2. **Rand Water Board.**—(i) *Constitution and Organization.*—The Rand Water Board was constituted, under Ordinance No. 32 of 1903 (Transvaal), to supply water in bulk to the municipalities, and in bulk and in retail to the gold-producing mines, situated within the Board's "limits of supply", which include the magisterial districts of Johannesburg, Boksburg, Germiston, Krugersdorp, Roodepoort, Benoni, Springs, and Brakpan, and portion of the Heidelberg district. The Board was subsequently empowered by Act No. 22 of 1909 to supply water in bulk and in retail to the South African Railway Administration within the "limits of supply".

Further statutory powers were conferred upon the Board by Ordinances Nos. 48 of 1904, 30 of 1905, 21 of 1906, and Act No. 22 of 1909 (Transvaal); also by Union Acts Nos. 18 of 1914, 10 of 1920, 10 of 1921, 18 of 1923, 5 of 1931, 8 of 1932, 21 of 1933, 38 of 1934, 9 of 1935, 4 of 1937, and 12 of 1938.

The Board consists of 30 members, including the chairman, who is appointed by the Government. Fourteen members represent the Transvaal Chamber of Mines, five the Johannesburg Municipality, the remaining ten being the the representatives, respectively, of the Railway Administration, the municipalities of Benoni, Brakpan, Boksburg, Germiston, Krugersdorp, Randfontein, Roodepoort-Maraisburg, Springs, and Nigel.

(ii) *Water Supply.*—Under the Ordinance of 1904 the whole of the undertakings of the Johannesburg Waterworks Company and the Vierfontein Syndicate and the waterworks of the Braamfontein Company were transferred to and vested in the Board on the 31st March, 1905. On that date the Board undertook the supply of water to the mines and municipalities situated within "the limits of supply".

The water supply available to the Board at the date of the acquisition of the above-mentioned undertakings was about 2½ million gallons a day, a quantity which was barely sufficient to supply the then domestic and health requirements of Johannesburg and a few of the mines on the Central Rand. The Board was obliged, therefore, to undertake the development of additional sources of supply and the extension of its distribution system, which now serves the area extending from Venterspost and Randfontein on the west to Springs and the Nigel district on the east of Johannesburg.

The sources of supply comprise wells and boreholes in the Klip River Valley capable of yielding 10 million gallons a day, and impounding reservoirs on the Vaal River.

In the case of the Vaal River Scheme, the right has been conferred on the Board, under Acts Nos. 18 of 1914, 38 of 1934, and 4 of 1937, to take a supply of up to 150 million gallons a day from that source. Of this quantity the Board has so far disposed of the rights in respect of supplies totalling 22 million gallons a day for power and industrial purposes at and in the vicinity of Vereeniging. In June, 1935, and December, 1936, the Board authorized the carrying out of extension schemes designed to increase the supply to be drawn from the Vaal River for the use of the Board's consumers on the Rand from 20 to 48 million gallons a day. A further scheme to increase the supply from 48 million gallons per day to 68 million gallons per day was adopted by the Board in January, 1938. The extension schemes above mentioned were undertaken by the Board in view of the increasing demand for water, owing to the municipal, mining, and industrial expansion taking place on the Rand.

(iii) *Statistics.*—Summarized particulars of the Board's water supply undertaking were given in *Official Year Book* No. 6. The following tables contain statistics of water supplied by the Rand Water Board and of its financial position:—

(*a*) WATER SUPPLIED TO CONSUMERS DURING THE YEAR ENDED 31st MARCH, 1938.

(IN MILLION GALLONS.)

Consumer.	Total Consumption.	Average Daily Supply.
Municipalities	6,232	17,073
Gold Mining Industry	6,253	17,132
South African Railways	907	2,485
Other Consumers	449	1,232
TOTAL	13,841	37,922

(b) FINANCIAL POSITION.

(a) LOAN ACCOUNT AS AT 31ST MARCH, 1938.

	£
Total	8,221,950
Redeemed	4,353,635
Balance Outstanding	£3,868,315

(b) REVENUE, ETC.

For the year ending 31st March, 1938, the revenue of the Board amounted to £649,428 and the expenditure to £649,428. At the date mentioned the Reserve Fund stood at £121,927, the Betterment Fund at £65,315, and the Stock Redemption Fund at £758,629.

CHAPTER XIX.

AGRICULTURAL AND PASTORAL PRODUCTION.

§ 1. General.

1. **Statistics of Production.**—(*a*) *Introduction.*—A brief history of the development of agriculture in South Africa will be found in the sixth and earlier issues of this *Year Book*. More detailed statistics about this industry will be found in the annual Report on the Agricultural and Pastoral Production of the Union of South Africa. Seventeen of these annual reports have already been published, the last containing data for the year 1936-37.* For the three years 1930-31 to 1932-33 the Government, as a measure of economy, suspended the annual enumeration of agricultural production, consequently no annual reports for these years are available.

The work of enumeration is performed by the police organization, and information is furnished under the *Statistics Act*, which provides penalties for non-compliance, for failing to answer questions put by authorized officers, for refusing to permit authorized officers to enter upon any land, etc., for hindering or obstructing authorized officers, for giving wrong information, and, on the part of officers employed in collecting and handling the information, for divulging any facts relating to the affairs of an individual farmer.

(*b*) *Period covered by the Census.*—The first agricultural census was taken for the period July, 1917, to June, 1918. The second covered the ten months from July, 1918, to April, 1919. The next three dealt with the twelve months ending on 30th April of each year. The sixth census covered the period of sixteen months from May, 1922, to August, 1923, and later censuses were taken for the year ending the 31st August. Coincident with the World Agricultural Census of 1930, a complete census of agricultural production in the Union was also taken. Another complete census of agricultural and pastoral production was taken in 1937.

(*c*) *Scope of Returns.*—From 1917-18 to 1921-22 particulars were collected for European-occupied farms only, and for the years 1917-18 and 1920-21 for native locations, reserves, mission stations, etc., as well.

From 1922-23 onwards the information collected has been subdivided into the following groups:—

(*a*) Europeans on European-occupied farms.
(*b*) Natives on farms occupied by Europeans.
(*c*) Natives in reserves and locations, on mission stations, on Crown lands solely occupied by natives, and on private farms owned or rented by natives.

It should be specially noted that the term "European" as used above, and elsewhere in this section, includes Asiatics and other coloured persons (but not natives) unless otherwise stated.

The area covered by the various censuses include:—

(*a*) All occupied farms and agricultural holdings in rural areas, irrespective of size.
(*b*) All occupied urban farms and urban agricultural holdings of one morgen (1 morgen=2·1165 acres) or more in extent, the products of which are intended for sale.
(*c*) Rural native reserves and locations, Crown lands solely occupied by natives, and private farms owned or rented by natives.

In regard to the live stock, crops, etc., of natives, attention is directed to the following points:—

(*a*) In the case of agricultural crops the production only has been obtained. Consequently, in any tables reflecting the area sown or reaped, the information given refers only to Europeans, Asiatics, and other coloured persons (excluding natives).

* The Eighteenth Report, covering data in respect of the year 1937-38 is in course of preparation.

(*b*) Particulars, other than those shewn in tables (ii) and (v) below, have not been collected, as experience over a number of years has shewn that the cost involved in an annual collection of data on a more extended scale is out of proportion to the value of the results obtained, more especially as the items omitted are of minor importance when compared with the figures for Europeans.

(*c*) For natives residing on farms occupied by Europeans, i.e. native squatters, the information was furnished by the agriculturists on whose farms such squatters resided.

(*d*) For natives in native reserves and locations, on Crown lands solely occupied by them, and on private farms owned or rented by them, the figures have been arrived at mainly by means of carefully prepared estimates.

Information as to the total number of live stock in all urban areas, as well as that enumerated at the Agricultural Census, was obtained for Europeans at each quinquennial population census and in regard to non-Europeans at the Population Censuses of 1911, 1921, and 1936. The urban figures, however, excluding those included in the agricultural censuses, are relatively unimportant, and the following tables showing the results of the agricultural censuses only give a sufficiently accurate picture of the state of the agricultural industry of South Africa. The term "occupied farm", whenever it appears, includes urban agricultural holdings of one morgen or more in extent, the products of which are intended for sale.

(i) NUMBER OF PRINCIPAL CLASSES OF LIVE STOCK OWNED BY EUROPEANS ON OCCUPIED FARMS AT 31st AUGUST—1923 TO 1938.

2. **Department of Agriculture and Forestry.**—(*a*) *Organization.*—At the head of the Department is the Minister, who is responsible to Parliament for the policy and acts of the Department, and the next in authority is the Secretary, who is the permanent head of the Department and the accounting officer and is responsible to the Minister for the work of the Department. The Secretary is assisted by two Under-Secretaries.

The activities of the Department are maintained by a number of divisions and offices, presided over by scientific and technical officers. The Secretary, the Under-Secretaries, and the chiefs of the various divisions and offices are stationed at Pretoria, with the exception of the Viticulturist and the Superintendent of the Guano Islands, who are stationed at Elsenburg and Capetown respectively.

The divisions are as follows:—

(1) Veterinary Services.
(2) Plant Industry.
(3) Chemical Services.
(4) Economics and Markets (including Co-operation Sub-Division).
(5) Agricultural Education and Extension (including the Losperfontein Training Farm).
(6) Forestry.
(7) Dairying.

Information concerning the functions and activities of the various divisions was published in *Official Year Book* No. 17 and previous issues. This information has had to be omitted from this issue owing to considerations of space. For further information on this subject reference should also be made to the publication *Farming in South Africa*, in which the Annual Report of the Department of Agriculture and Forestry is published.

The Stellenbosch-Elsenburg College of Agriculture of the University of Stellenbosch is under the control of the Minister of Agriculture and Forestry.

(*b*) *Revenue and Expenditure.*—The following is a statement of the revenue and expenditure of the Department (Agriculture only) for the financial years April to March, 1936-37 and 1937-38:—

DEPARTMENT OF AGRICULTURE—REVENUE AND EXPENDITURE, 1936-37 AND 1937-38.

Classification.	1936-37.		1937-38.

* Including Soil Survey.

(*c*) *Publications.*—The following is a list of publications issued by the Department of Agriculture and Forestry:—

(1) *Farming in South Africa*, issued monthly in English and Afrikaans separately. Obtainable from the Government Printer, Pretoria, at 5s. within the South African Postal Union, otherwise 7s. 6d. per annum, prepaid.
(2) Popular bulletins on all manner of agricultural subjects. A list of available bulletins is obtainable gratis from the Editor, Department of Agriculture and Forestry, Pretoria.
(3) Science bulletins, the *Onderstepoort Journal* (quarterly), *Bothalia* (a publication describing the systematic side of botany and work done in the National Herbarium), Botanical and Entomological Memoirs.

and annual reports on Low Temperature Research obtainable from the divisions concerned, viz. Veterinary Services, Plant Industry, Chemical Services, and also from the Stellenbosch-Elsenburg College of Agriculture of the University of Stellenbosch.

(4) Weekly press service, issued only to the newspapers of the Union for further distribution.

(5) Urgent press matter either to news agencies for telegraphic dispatch to newspapers, or directly to newspapers for immediate publication.

(6) *Handbook for Farmers in South Africa*, a revised and enlarged edition (1937) of the book first published in 1929. Obtainable from the Government Printer, Pretoria, at 5s. per copy in the Union, otherwise 7s. 6d., prepaid.

(7) *Radio Service.*—With a view to preserving closer contact with the farming community, the departmental radio service has been further extended in that the weekly agricultural talks have been converted into a daily service, broadcast from the Johannesburg B transmitter at 8 p.m. Market reports supplied by the Division of Economics and Markets are broadcast daily in the morning, afternoon, and evening.

3. **Prevention of Soil Erosion.**—The Government has determined upon measures on national lines to combat soil erosion, which in the Union has become a national evil, and has decided to place at the disposal of landowners special facilities for the construction or undertaking of works for its prevention.

Three methods of dealing with the problem are proposed:—(i) By payment of a bonus to private landowners who undertake anti-erosion works at their own expense, (ii) by payment of a subsidy to private landowners who construct anti-erosion works with the assistance of a loan, and (iii) by the employment of unemployed Europeans on anti-erosion works. Combined with (iii), a loan not exceeding £50 for a period of 5 years without interest may be granted for the purpose of enabling the landowner to purchase the required implements and material and to provide the necessary housing accommodation, if required.

In the case of (i) a bonus of 33⅓ per cent. of the finally assessed valuation of the works is paid, with a maximum of £166. 13s. 4d., and in the case of (ii) a subsidy of 25 per cent. of the finally assessed valuation of the works, with a maximum of £87. 10s. 0d. In (iii) seven-eighths of the wages is paid by the State, the remaining one-eighth being charged to the landowner, but payment is spread over a period of 50 years and bears no interest. No instalment is collected within the first 5 years.

The following amounts were expended from the inception of the schemes up to the 31st December, 1938:—

	£
1. Bonuses paid under (i) above up to 31st March, 1938	124,946
Bonuses paid under (i) above from 1st April, 1938, to 31st December, 1938	53,279
2. Loans paid out under (ii) above up to 31st March, 1938	109,040
Loans paid out under (ii) above from 1st April, 1938, to 31st December, 1938	12,525
Subsidy paid on loans for completed works up to 31st March, 1938	27,260
Subsidy paid on loans for completed works from 1st April, 1938, to 31st December, 1938	3,523
3. Loans paid out for purchase of implements under (iii) above up to 31st March, 1938	15,433
Loans paid out for purchase of implements under (iii) above from 1st April, 1938, to 31st December, 1938	1,112

Up to the 31st December, 1938, the Department had approved of 24,783 small dams under the above schemes, of which 10,362 were completed and passed by the Department at that date.

4. **Eradication of Weeds.**—Although the responsibility for the control of noxious weeds was transferred from the Provincial Administrations to the Government in 1935, it was not until 1937 that enabling legislation in the form of Act No. 42 of 1937 was passed by Parliament. Since then steps have been taken by the Department of Agriculture to call into being the necessary

organization for the enforcement of the Act and to acquaint the public, the farming community in particular, with their responsibilities and duties under the Act.

In terms of Proclamation No. 161 of 1938 the following plants have been proclaimed as weeds and their eradication is compulsory throughout the Union, viz.:—

Botanical Name.	*Common Name.*
1. All plants of species of *Xanthium*	Burweed, Cocklebur, etc.
2. *Solanum auriculatum* Ait	Bugtree.
3. *Cuscuta campestris* Yuncker	Lucerne Dodder.
4. *Hakea sericea* Schrad	Silky Hakea or Needlebush.
Hakea gibbosa S.M. (Cav.)	Hairy Needle Bush.
Hakea suaveolens R. Br	Sweet Hakea.
5. *Cannabis sativa* L	Dagga.
6. *Circium lanceolatum* Hill	Spear or Bull Thistle.
7. *Opuntia imbricata* (Haw.) D.C	Imbricate Cactus.

In addition to the plants enumerated above all species of the Opuntia (prickly pear), excluding the species known as Burbank's Spineless Cactus, have been proclaimed as weeds throughout the Union, with the exception of some 26 districts in the Eastern Cape Province, where infestations have assumed such immense proportions that eradication by ordinary mechanical or chemical means has become impossible. In these districts eradication is being effected under the supervision of the Department by biological means, i.e. by using *Cactoblastis* and associated insects. Eradication in these districts is therefore not compulsory, as it is in the case of the remainder of the Union.

In the European areas the Department of Agriculture administers the *Weeds Act*. In the native areas, however, the control of weeds continues to be a function of the Native Affairs Department.

(i) *Biological control of Prickly Pear.*—The breeding and liberation of *Cactoblastis cactorum* for the control of prickly pear commenced in 1933 at Graaff-Reinet. Since then two additional stations have been established, one at Uitenhage and one at Fort Beaufort. Although the experiments are still in their early stages the results have been sufficient to justify bringing all three stations into full production, and arrangements are under way to double the production facilities at these centres. At the few centres where the colonies have been in action for three years or more the insect population is making its presence visibly felt in the destruction of the prickly pear. Thus far some 470 colonies varying from 100,000 to 250,000 eggs each have been distributed over 17 magisterial districts affected, and in the older colonies the collapse of the prickly pear appears to be imminent.

In addition another insect, *Dactylopius coccus* (the Cochineal of commerce), has shown very useful tendencies in the reduction of prickly pear vigour in fruiting and this insect is being actually distributed as an auxiliary to *Cactoblastis*.

(ii) *Jointed Cactus.*—Although this plant is also a noxious weed, it was dealt with under a separate Act, namely Act No. 52 of 1934, and the Government undertook to clear the infested land in the first place, after which the owners would be compelled under the Act to keep their farms free from the pest.

In accordance with this policy, large numbers of Europeans were employed to carry out eradication by mechanical methods. The work was commenced towards the end of 1934 and was continued until 31st July, 1938. During the period 1934 to 31st March, 1938, a sum of approximately £172,000 was spent in carrying out the campaign against the pest. This sum does not, however, include the salaries and subsistence and transport allowances of the permanent staff; similarly the amounts paid by the Government to Divisional Councils in connexion with the loans which they had previously made for jointed cactus control are not included.

Meanwhile, the discovery was made that the cochineal insect (*Dactylopius confusus*) attacks and destroys jointed cactus. In view of the success achieved in the field with this insect and the fact that control by this means is less costly and more effective than the mechanical method of eradication, the latter method was discontinued as from 1st August, 1938. Steps are being taken to distribute the cochineal insect as rapidly as possible over all infested areas.

In certain native areas where the infestation of jointed cactus was particularly severe the cochineal insect has become well established, and the progress made can be regarded as highly satisfactory. The same applies to densely-infested farms in European areas. It appears, however, that on farms where the infestation is slight and scattered, the cochineal insect takes a longer time to establish itself and to yield outstanding results.

(iii) *Gifblaar.*—For some years a scheme for assisting farmers in the control of gifblaar has been in operation, but very little advantage is being taken of it. Under the first part of the scheme poisons (calcium chloride and copper sulphate) are issued gratis and the services of a foreman-instructor supplied free of charge in all cases where the infestation can be treated with poisons in a practical and economical manner. The second part of the scheme provides for the payment of a bonus of 33⅓ per cent. of the cost of the fencing material for the fencing-in of heavily-infested gifblaar patches, subject to a maximum of £20 per farm and £40 per applicant. This applies in cases where the Department is satisfied that eradication is neither practicable nor economical.

(iv) *General.*—The weeds dealt with in the foregoing paragraphs by no means constitute a complete list of plants which are harmful or noxious to the farming industry. The problem is one of much larger compass and is closely related to the question of veld management and land utilization.

Apart from these proclaimed weeds, all of which are exogenous plants, mention must also be made of a number of indigenous plant species which are practically useless in so far as the stock industry is concerned, and which, in many cases, hamper farming to a considerable extent, or even make it impossible. These useless species may be divided broadly into two classes, viz., poisonous plants and inedible plants. The first class includes hundreds of species, but the following are of the greatest importance: Senecio, which causes dun-siekte in horses and Molteno disease in cattle and is also responsible for material losses among small stock; vermeerbossie, which is the cause of considerable stock mortality in Griqualand West, and also to a smaller extent in other parts of the country; slangkop; and the gousiektebossie. The second class includes plants such as Rhenosterbush, Harpuisbos, blue bush, pakaan, acacia, etc.

The incidence of these poisonous and inedible plants is mainly due to the absence of proper veld management. As soon as the veld is over-grazed, these plants make their appearance, and once they have become established it is extremely difficult to eradicate them unless the veld is allowed to rest. It has been proved that the application of a system of proper grazing and resting of the veld will greatly reduce the spread and, consequently, the harmful effects of these plant species. It would therefore be useless to attempt to eradicate the plants without introducing a system of grazing calculated to avoid overstocking and to encourage the growth of nutritious species of vegetation. The Department is therefore not disposed in the circumstances to proclaim as weeds, in terms of the Act, indigenous plants which are poisonous or useless. It prefers to approach the question by means of propaganda among farmers in order to make them conscious of the fact that it is a problem which can be solved by individual farmers themselves through the application of judicious grazing systems and proper veld management. In the meantime the Department is carrying out investigations with a view to ascertaining the most economical method of grazing.

5. **Eradication of Citrus Diseases.**—(i) *Scaly bark or psorosis* of citrus trees is a serious infectious disease, possibly caused by a virus, which develops slowly in mature trees over five years old, eventually rendering them unprofitable and causing premature death. The disease was first recognized in South Africa in 1919; experiments proved that trees once affected could not be cured by any method of treatment and in the interests of the citrus industry a policy of eradication was decided upon. In terms of the *Psorosis Act*, No. 42 of 1927, scaly bark is a notifiable disease, and every tree found infected must be destroyed in the manner prescribed by regulation made under the Act.

As a result of these measures the percentage of trees contracting this disease is very small compared with the number of trees affected in countries where no eradication of trees showing psorosis is practised.

During 1938, an inspection was made of citrus trees in the Brits, Pretoria, Rustenburg, and Marico districts of the Transvaal, and in certain districts in the north-west Cape. Of the 312,100 trees inspected in the Transvaal, 248 were found to be infected, and of 210,723 examined in the north-western Cape 216

showed symptoms of scaly bark. A total of 522,823 trees was thus inspected and 461, i.e., nearly 0·09 per cent., were found to be infected with scaly bark and destroyed. In 1937, 517,607 trees were inspected and 1,087 or approximately 0·22 per cent. found to be infected.

(ii) *Citrus Canker.*—The bacterial disease known as *citrus canker* is regarded as one of the most destructive diseases affecting citrus trees. It spreads rapidly, affecting fruit and all other parts of the tree, and causes failure of buds in nurseries. The disease caused considerable havoc in the United States in 1915, and in 1916 assumed epiphytotic form in certain districts of the Transvaal. It was ascertained that the disease was limited in its distribution, and in 1917 it was decided that it was in the best interests of the citrus industry to place quarantine restrictions on the areas in which citrus canker was known to occur and to institute a campaign for the eradication of all infected trees (Act No. 10 of 1919).

During the years 1918 to 1927, a total of 3,199,666 trees was inspected: the trees in all nurseries in the quarantined area were eradicated, and a total of 44,735 trees, representing both infected trees and blocks of trees in which canker had occurred, was destroyed. The compensation paid to owners for the destruction of these trees amounted to £77,935, and the cost of administration for ten years to £56,193. No infected trees have been found since 1927, and it may now be considered that the disease has been completely eradicated. The planting restrictions imposed in the Rustenburg, Brits, Waterberg, and Pretoria districts of the Transvaal have therefore been abolished (Proclamation No. 93 of 1938).

6. **Construction of Silos and Sheds.**—With the object of encouraging livestock farmers who are able to produce on their farms sufficient hay or other fodder for the purpose of making ensilage for feeding to their stock, a bonus of 25 per cent. is paid on the final valuation of silos and sheds which have been erected with the approval and to the satisfaction of the Department. The bonus does not exceed £50 per farm and, in cases where approved works are erected on more than one farm belonging to the same applicant, the bonus does not exceed £100. From the inception of the scheme in 1936 to 31st December, 1938, an amount of £11,395 was paid in bonuses on silos, sheds, and ensilage cutters.

7. **Locust Administration.**—The law providing for the destruction of locusts is administered by the Secretariat. The *Agricultural Pests Act* (Act No. 11 of 1911 as amended by Act No. 12 of 1922 and Act No. 15 of 1934) makes it compulsory for occupiers of land to report the appearance of flying locusts or hoppers and the laying of eggs, and to destroy hoppers which are found on their land. In the event of any person failing to destroy hoppers, the Government carries out the work at his expense. Government assistance is granted in cases in which occupiers, in spite of doing their utmost with the resources at their disposal, are unable to overcome the hoppers before they reach the winged stage. The Government provides free of charge a prepared poison bait, which consists of maize meal or maize bran and arsenite of soda powder. The maize meal bait contains 2 per cent. arsenite of soda and the maize bran bait 3 per cent. It is not possible to legislate effectively for the destruction of flying locusts, but every assistance is given and every effort made to encourage farmers to undertake the destruction of flying swarms, especially when crops are threatened. In the past, the Government has under special circumstances, when for instance grain producing areas are invaded, undertaken the destruction of ovi-positing swarms of flyers of the brown locust by means of poison bait. With a view to ensuring the adoption of a uniform policy throughout South Africa and consequent better control of the pest, arrangements have been made with South West Africa for the Union Locust Law to be applied in that territory, and for the operations against the locusts therein to be controlled by the Union Administration. An arrangement is also in existence with the Bechuanaland Protectorate whereby the Union Administration assists with the destruction of hoppers in the territory, especially in those areas bordering on the Union.

During 1938 both the brown and the red locust were present in the Union. Hopper outbreaks of the red locust occurred in several localities in Zululand, Natal, Pondoland, and the Transvaal. Outbreaks also occurred in the eastern section of the Bechuanaland Protectorate. The results obtained with poison bait were excellent, and no hoppers reached the flying stage.

With regard to the brown locust, only minor hopper outbreaks of the swarm phase occurred early in the year. The solitary phase population had increased to such an extent that an extensive campaign had to be waged

against incipient hopper outbreaks, and later also against flying swarms which threatened the wheat-producing areas of the Eastern Cape Province. Towards the end of the year an extensive campaign against hoppers in the swarm phase had to be conducted. Poison bait was used throughout with good results.

During 1939 extensive hopper outbreaks of the red locust are expected in the Transvaal and the eastern section of the Bechuanaland Protectorate; in Natal and Zululand only minor hopper outbreaks are expected. With regard to the brown locust, outbreaks of the swarming phase and incipient hopper outbreaks are also expected.

8. **Agricultural Boards.**—(i) *Agricultural Advisory Board.*—An Agricultural Advisory Board was appointed by the Minister of Agriculture in February, 1920, to advise him on matters relating to agriculture. The members of the Board are called together from time to time by the Minister of Agriculture and Forestry for the purpose of consultation, and to afford them an opportunity of submitting their views on matters relating to agriculture and any proposed legislation in connexion therewith. The secretary of the Board is G. T. Welsford, P.O. Box 377, Bloemfontein.

(ii) *The Perishable Products Export Control Board.**—The Perishable Products Export Control Board was constituted in terms of the provisions of the *Perishable Products Export Control Act*, No. 53 of 1926, for the purpose of controlling the export of perishable products from the Union, more particularly by regulating shipments and the necessary shipping space. The Board also exercises important functions in connexion with pre-cooling and cold stores in which perishables falling under its control are pre-cooled and stored prior to shipment. The perishable commodities, the export of which is at present controlled by the Board, are citrus and deciduous fruits, pineapples, eggs, butter, cheese, and meat. The Act under which the Board is constituted is administered by the Minister of Railways and Harbours.

The Board consists of eight members, appointed by the Governor-General. Three members, one of whom the Governor-General designates as chairman, called ordinary members, are appointed on the advice of the Minister of Railways and Harbours and are in receipt of special remuneration. The other five members, called representative members, are appointed on the advice of organized producers and the Minister of Agriculture and Forestry to represent definite perishable products exported from the Union. The Board has its headquarters at Capetown, but is represented at Durban, East London, and Port Elizabeth by special officers known as Supervisors of Perishable Exports.

Apart from the salaries of the chairman and the ordinary members of the Board, which are paid out of Railway and Harbour Funds, the expenditure of the Board is met from funds obtained from levies made in terms of the provisions of the *Agricultural Products Grading Act*, No. 16 of 1922, the *Agricultural Industries Advancement Act*, No. 16 of 1925, and, in cases where no levies are being paid in terms of the provisions of either of these Acts, the Act constituting the Board.

(iii) (*a*) *The National Marketing Council.**—In the *Marketing Act*, No. 26 of 1937, as amended, which provides for the orderly regulation of the production and the marketing of agricultural products by regulatory boards, on which the various interests are represented, and for the grading and standardization of agricultural products, provision is also made for the establishment of the National Marketing Council, which may be regarded as the principal body to advise the Minister on marketing schemes and on marketing policy in general. The Council is also required to advise in connexion with such decisions made by the several regulatory boards as are subject to the approval of the Minister, and in general it exercises supervision over the operation of marketing schemes promulgated under the Act.

The National Marketing Council consists of a chairman, a deputy chairman, and three other members, all of whom must be appointed by the Governor-General. An additional member may be appointed if necessary. The chairman and the deputy chairman must be officers of the Department of Agriculture and Forestry and hold office during the pleasure of the Governor-General. The other members are appointed for a period of four years, but may be reappointed.

The chairman and the deputy chairman may be paid such allowances, in addition to their salaries as officers in the public service, as the Governor-General may determine. The other members receive such salaries or other

* For personnel, see Chapter XXVIII.

remuneration (out of moneys appropriated by Parliament for the purpose) as the Governor-General may determine. All members except the chairman must be full-time members.

At council meetings attended by both the chairman and the deputy chairman, the latter has no vote, but at meetings unattended by the chairman the deputy chairman has all the powers of the chairman. At least two of the other members must be present to form a quorum. In the event of an equality of votes the chairman has a casting vote in addition to his deliberative vote.

The functions of the National Marketing Council are:—

(i) To examine and to report to the Minister upon any marketing scheme for the establishment of regulatory boards, referred to it by the Minister;
(ii) upon the direction of the Minister to prepare a marketing scheme;
(iii) to examine schemes in operation and to report to the Minister thereon;
(iv) to assist in the organization of regulatory boards;
(v) to supervise the auditing of the books of account of the regulatory boards;
(vi) to transmit to the Minister, with its report and recommendations thereon, the decisions of regulatory boards dealing with restrictions of production and sale and with price fixing;
(vii) upon the direction of the Minister to inquire into the marketing of any product in general or on any market;
(viii) to advise the Minister on the prohibition or regulation of the importation or the exportation of any product into or out of the Union;
(ix) to advise the Minister in regard to any matter within his purview under the *Marketing Act* on which he may ask for advice, and to perform such other duties as the Minister may from time to time assign to it.

The National Marketing Council has the following powers:—

(i) It may take evidence under oath for the purposes of any inquiry falling within its functions and duties, may subpoena witnesses, and may examine books, records, or documents which any witness has been required to produce. Penalties are provided for in the case of any member or officer of the Council who discloses information acquired by the Council in the exercise of its powers of hearing evidence on oath.

(ii) It may require any regulatory board to furnish such information as may be deemed necessary.

Since its inception, the Council has submitted the following reports:—

No.	*Date.*	*Subject.*
1	27/5/1938	The Proposed Mealies and Mealie Products Marketing Scheme.
2	30/5/1938	The Proposed South African Dried Fruit Scheme.
3	5/9/1938	Proposed Amendment to Mealies and Mealie Products Marketing Scheme.
4	28/ 9/1938	The Proposed Wheat Control Scheme.
5	12/10/1938	Review of Mealie Position with Special Reference to Exports, the Creation of a State Reserve of Mealies and the Purchase and Sale of Mealies and Mealie Products by the Mealie Industry Control Board.
6	8/11/1938	Prohibition of Sale of Wheat and Wheaten Products by Producers and Fixation of Prices of Wheat and Wheaten Products for the 1938-9 Season.
7	15/11/1938	Further Export of Mealies during the 1938-9 Season and the Grant of Government Assistance to the Mealie Industry Control Board for the Payment of Export Compensation.
8	9/ 2/1939	Control of the Importation of Currants.
9	27/ 2/1939	The Proposed Tobacco Control Scheme.
10	15/ 3/1939	The Proposed Dairy Products Marketing Scheme.

(*b*) *Producers' and Consumers' Advisory Committees.*—The *Marketing Act* also provides for the establishment of a Producers' Advisory Committee and a Consumers' Advisory Committee, each consisting of eight members appointed by the Minister to represent, respectively, the interests of producers and the consumers of products. Six of the eight members of the Producers' Advisory Committee must be nominated by the South African Agricultural Union, and two of the eight members of the Consumers' Advisory Committee have to be nominated by the United Municipal Executive of South Africa. These two

committees are advisory and consultative bodies, electing their own chairman, which the Minister may consult on any matter affecting the interests of producers or consumers, as the case may be, or which the Marketing Council may so consult in connexion with any scheme, while they may themselves make representations to the Minister or the Council on any matter or any marketing scheme in so far as it affects the interests of producers or consumers.

(iv) *Regulatory Boards under Jurisdiction of National Marketing Council.*—(a) *Dairy Industry Control Board.**—The Dairy Industry Control Board is a statutory body established under Act No. 35 of 1930, as amended by Acts Nos. 7 of 1932, 51 of 1934, and 60 of 1935. The main powers conferred on and the functions performed by the Board are as follows:—

(1) The imposition of a levy not exceeding 1d. per lb. on all creamery butter, farm dairy butter, butter substitutes, and cheese (other than cheese made by any person for consumption by his household) manufactured in the Union and on all butter, butter substitutes, and cheese imported into the Union;
(2) the payment of a bounty not exceeding 6d. per lb. according to grade on all butter and cheese exported under direction of the Board;
(3) the adjustment of supply of dairy products (butter and cheese) to market demand by determining from time to time the quantities of butter or cheese which must be exported from the Union during any period and the allotment of a *pro rata* share thereof to each individual creamery or cheese factory owner respectively for export during that period;
(4) the utilization of levy funds—
  (a) to stabilize prices of dairy produce in the Union;
  (b) to reduce the cost of producing, manufacturing, or marketing dairy produce;
  (c) to encourage the greater consumption of dairy produce;
  (d) generally to assist the development of the dairy industry;
(5) the payment of a subsidy, under certain conditions approved of by the Minister, according to grades of butter or cheese sold in the Union for any purposes or to any class of consumer approved of by the Minister;
(6) to receive, administer, and expend any moneys placed at its disposal in accordance with the conditions on which such moneys were made available;
(7) to advise the Minister in regard to the renewal of the registration of any creamery, cheese factory, creamery depot, condensed milk factory, or butter substitutes factory, and the registration of any new creamery, cheese factory, creamery depot, condensed milk factory, or butter substitutes factory.

The amount of levy imposed by the Board is 1d. per lb. on all creamery butter manufactured and on all farm dairy butter sold and butter imported into the Union. The levy on cheese is 1d. per lb. on all cheese manufactured in cheese factories, on all cheese imported, and on all cheese not manufactured in registered cheese factories which is sold.

For the year ended 30th September, 1938, the bounty on butter was 4¼d., 3¼d., and 2¼d. per lb., on first, second, and third grade butter, respectively, exported. The bounty on cheese was 4¼d., 4d., and 3¼d. per lb. on first, second, and third grade cheese respectively, exported.

(b) *Tobacco Industry Control Board.**—This Board, established on the 21st June, 1935, under the *Tobacco Control Amendment Act*, No. 17 of 1935, was reconstituted as from the 1st April, 1939, in accordance with the provisions of the Tobacco Control Scheme (Proclamation No. 51 of 1939 issued in terms of the *Marketing Act*, No. 26 of 1937), for the regulation of the production and marketing of tobacco. The powers of the Board include the following:—

(i) With the approval of the Minister to impose a levy, not exceeding one penny per pound, on tobacco;
(ii) with the approval of the Minister, to prohibit any producer of tobacco from selling any tobacco produced by him in the Union, elsewhere than in the Transkeian Territories, through any channel other than such agency as the Board may determine, and for that purpose to appoint, in respect of such areas and on such conditions as it may deem fit, agents who shall be authorized to conduct such agencies for the sale of tobacco on behalf of producers;

* For personnel, see Chapter XXVIII.

(iii) with the approval of the Minister from time to time to prohibit—
  (a) any producer from selling tobacco which he has produced, or
  (b) any person from selling tobacco produced by any person, or any grade, class, or quantity thereof (whether in its original form or wholly or partly processed),
  at a price other than a price fixed by the Board or at a price below a price fixed by the Board for any particular class, grade, or quantity of tobacco;
(iv) with the approval of the Minister to borrow money and to utilize its funds for the purpose of attaining the objects of the scheme;
(v) to prohibit any person from selling any tobacco which he has exported, except through such agency or agencies, whether within or outside the Union, as the Board may designate for the purpose; and
(vi) to pay out of its funds to any person who exports tobacco from the Union a bounty or premium which may vary according to the class, grade, standard, or quality of the tobacco exported, and from which may be excluded tobacco below a specified quality.

The levy imposed on tobacco as from 3rd April, 1939, is as follows:—
Class (a) Turkish tobacco, one-tenth penny per pound weight.
Class (b) Flue-cured tobacco, one-fifth penny per pound weight.
Class (c) All other tobacco not included under (a) or (b), one-fifth penny per pound weight.

(c) *Mealie Industry Control Board.**—The Mealie Control Scheme, to be administered by the Mealie Industry Control Board, established under the *Mealie Control Amendment Act*, No. 59 of 1935, was published under Proclamation No. 131 on the 17th June, 1938.

Among others, the powers granted to the Board under the above-mentioned scheme, include the following:—

(i) To impose a levy on all mealies and mealie products purchased or otherwise acquired by a mealie trader from a producer of mealies;
(ii) to prohibit any person from exporting mealies or mealie products except under the authority of a permit issued by the Board;
(iii) to pay such compensation as the Board may determine to any person in respect of any mealies or mealie products exported by such person on the authority of a permit issued by the Board;
(iv) to utilize its funds to improve the marketing of mealies and generally for any object which in its opinion is likely to encourage the internal consumption of mealies and mealie products, and to assist the development and betterment of the mealie industry;
(v) to publish information in regard to the production and marketing of mealies and mealie products and generally to disseminate information concerning the mealie industry;
(vi) to enter into contracts for carrying out any work in connexion with the handling, storage, grading and disposal of mealies and mealie products;
(vii) to purchase and sell mealies and mealie products;
(viii) to act as agent for the receipt and sale of mealies and mealie products;
(ix) to require every person concerned in the production, thrashing, shelling, marketing, or processing of mealies and mealie products to furnish the Board with such information relating to such mealies or mealie products as may be available to such person and as the Board may specify.

A levy of ¾d. per bag is imposed on all mealies ground, crushed, gristed, or otherwise processed in terms of section 21 of the *Mealie Control Amendment Act*, No. 59 of 1935, exemption being granted in terms of section 22 of this Act, in respect of mealies ground for own consumption by a producer.

In terms of section 6 of the Mealie Control Scheme, a levy of 1s. per bag was imposed on all mealies or mealie products purchased or otherwise acquired from a producer. On the 7th September, 1938, it was found necessary to amend the scheme by providing for a levy of 1s. 6d. per bag.

The funds derived from this levy are utilized for the purpose of elevating the price of mealies to the producer above world values. This is done by means of a refund to persons exporting mealies or mealie products, under the authority of a permit issued by the Board, of the amount of the levy paid by them on the mealies purchased from a producer and the amount which

* For personnel, see Chapter XXVIII.

they were required to pay the producer over and above export parity. On the 22nd June, 1938, this refund was fixed at 2s. 3d. per bag, on the 7th September, 1938, it was increased to 3s. 3d. per bag, and on the 27th January, 1939, it was reduced to 2s. 6d. per bag.

The export of mealies and mealie products was prohibited except under a permit issued by the Board, so that no mealies or mealie products were exported during the 1938-39 season without the authority of the Board. Under the powers granted to it, the Board during this season purchased mealies direct from producers at a price of 8s. 6d. per bag. A portion of the mealies purchased was resold for manufacturing purposes and the feeding of stock intended for export, and the balance was sold for export.

(*d*) *Wheat Industry Control Board.**—The Wheat Industry Control Board established in terms of the *Wheat Industry Control Act*, 1935, was reconstituted in terms of the *Marketing Act*, 1937, and given wide powers in terms of the aforementioned Act. Full details of the Wheat Control Scheme may be obtained from Proclamation No. 212 of 1938, published in a *Gazette Extraordinary*, No. 2574 of the 5th October, 1938. The most important powers given to the Board are:—

(i) To buy and sell wheat and wheaten products and, with the approval of the Minister, to prohibit any producer of wheat from selling wheat to any person other than the Board. By virtue of these powers the Board has by Government Notice No. 1874 of the 11th November, 1938, prohibited any producer from selling wheat or wheaten products to any person other than the Board. The Board has appointed agents throughout the Union to purchase wheat on its behalf;

(ii) to fix, with the approval of the Minister, the prices at which wheat and wheaten products such as flour, meal, bran, and bread may be sold. The Board has by Government Notice No. 1873 of the 11th November, 1938, fixed the prices at which producers of wheat shall sell wheat to it. These prices remain in force until the 31st October, 1939. The Board has also fixed the prices at which it is prepared to sell the wheat it has so purchased. The Board has also fixed by Government Notices Nos. 1871 and 1872 of the 11th November, 1938, the selling prices for flour, meal, bran, pollard, and bread;

(iii) to advise the Minister in connexion with the grading, packing, and labelling of wheat and wheaten products such as flour, meal, bran, pollard, and bread. On advice of the Board, regulations in connexion with the grading of wheat were made and were published in Government Notice No. 1746 of the 21st October, 1938. Grades for wheaten products are under consideration;

(iv) to place a levy not exceeding one shilling per 200 lb. on all wheat ground, crushed, gristed, or otherwise processed. Since the 5th October, 1938, the levy is one shilling per bag on all wheat ground, crushed, gristed, or otherwise processed. The Board obtains its funds from the proceeds of this levy and from trading profits and commissions.

(*e*) *Dried Fruit Board.**—This Board was established on the 1st December, 1938, under the *Marketing Act*, No. 26 of 1937, for the purpose of administering the scheme for the regulation of the production and sale of dried fruit. Full details of the South African Dried Fruit Scheme may be obtained from Proclamation No. 229, dated the 21st October, 1938. The powers of the Board include the following:—

(i) With the approval of the Minister to impose a levy, not exceeding sixpence per 100 lb., on any kind of dried fruit;

(ii) with the approval of the Minister to borrow money to be used for the purpose of attaining the objects of the scheme and to use any money derived from any levy imposed for any object which in its opinion will be to the advantage of persons interested in dried fruit;

(iii) to establish an information service in order to advise producers of dried fruit from time to time about marketing conditions;

(iv) to act as agent for the receipt and sale of dried fruit;

(v) to conduct a pool for the sale of any kind of dried fruit;

* For personnel, see Chapter XXVIII.

(vi) to require any person, if he exports dried fruit, to forward to a specified market so much of the quantity thereof which he exports as the Board may determine;

(vii) with the approval of the Minister to impose a special levy in connexion with the sale of dried vine fruits or other kinds of dried fruits;

(viii) to establish an equalization fund and to pay into any such fund a portion of any moneys at the Board's disposal or the proceeds of any special levy imposed and to compensate from any such fund any person for loss sustained by him as a result of forwarding dried fruit to a specified overseas market pursuant to an order of the Board;

(ix) to require every person concerned in the production, marketing, or processing of dried fruit to furnish the Board with such information relating to dried fruit as may be available to such person and as the Board may specify;

(x) to assist, by grant or loan or otherwise, any undertaking for preserving, processing, storing, or conditioning dried fruit and any research work relating to the improvement, production, processing, and marketing of dried fruit;

(xi) to advise the Minister as to—

(*a*) the conditions regarding grades, standards of quality, method of packing, and the marking of dried fruit or any receptacle or cover containing it, subject to which dried fruit may be sold or imported for sale;

(*b*) the prohibition, control, or regulation of the importation or export of dried fruit; and

(*c*) all matters relating to the marketing or processing of dried fruit.

(v) *Live Stock and Meat Industries Control Board.**—During the 1934 session of Parliament, the *Live Stock and Meat Industries Act*, No. 48 of 1934, was passed, designed, *inter alia*, to establish a Live Stock and Meat Industries Control Board and to provide for the imposition of a levy on slaughtered stock.

Briefly summarized the Act provides for:—

(*a*) The creation of a representative control board with powers of controlling the internal markets, with a view to ensuring a more orderly marketing of live stock locally, and generally advising the Minister on all matters relating to the industry;

(*b*) the imposition of a levy on all cattle, sheep, and goats slaughtered at abattoirs or slaughter-poles, the meat of which is intended for sale, the levy moneys to be used for the encouragement of meat exports through the payment of bounties, and for the general improvement of the industry;

(*c*) the improvement of cattle through the establishment of cattle improvement areas, in which only approved bulls may be kept;

(*d*) the erection, inspection, and registration of cold storages;

(*e*) the regulation of the meat trade and the prescription of the qualifications to be possessed and the securities to be provided by butchers.

The Act came into force in August, 1934, and several important provisions have already been brought into operation, namely, the institution of the Board, the imposition of the levy, the promulgation of regulations for the registration of cold storages, the proclamation of a large number of districts as cattle improvement areas, and the control of the supplies of live stock to the markets of the Witwatersrand, Pretoria, and the Cape Peninsula.

The following levy on slaughtered stock has been in operation since August, 1934 (Government Notice No. 1129 of 1934):—

(*a*) Cattle, six months and over, 2s. per head;

(*b*) cattle, under six months, 6d. per head;

(*c*) sheep and goats, 3d. per head;

* For personnel see Chapter XXVIII.

As from 31st January, 1937, the following Government subsidy is being paid on chilled beef:—

1½d. per lb. for Grade A.
1 d. per lb. for Grade B.
½d. per lb. for Grade C.

As from 1st December, 1937, the following subsidies are being paid:—

(a) On frozen beef—Second Quality Grade X—½d. per lb. dressed weight.

(b) On frozen mutton and lamb:—

Mutton: Grade A—½d. per lb.
,, B—½d. per lb.
Lamb: Grade A—1½d. per lb.
,, B—1d. per lb.

In addition, the following export bounty is payable by the Board:—

Chilled Beef: 1½d. per lb. on First Quality, Grade A.
1½d. per lb. on First Quality, Grade B.
1 d. per lb. on First Quality, Grade C.
Frozen Beef: ½d. per lb. on X-quality Frozen Beef.
1½d. per lb. on Boneless Frozen Beef.
¾d. per lb. F.A.Q. Frozen Beef Exported in Quarters.
Frozen Mutton: Grade A—1½d. per lb.
Grade B—1½d. per lb.
Frozen Lamb: Grade A—1½d. per lb.
Grade B—1½d. per lb.
Grade C—1d. per lb.

(vi) *Wool Council.**—The Wool Council was established early in 1930 as a result of the resolutions passed by a special congress of wool farmers convened by the South African Agricultural Union on the 18th September, 1929, and the first meeting was held on the 2nd April, 1930.

A levy of one shilling per bale on all wool exported was imposed as from the 1st January, 1930, in accordance with a resolution passed by this congress. This fund is administered by the Minister of Agriculture and Forestry, who is advised in the expenditure thereof by the Wool Council. The other functions of the Council are as follows:—

(a) The extension of investigational work as far as wool is concerned;
(b) the better organization of wool farmers;
(c) the making of propaganda for the increased consumption of wool both in South Africa and overseas;
(d) the carrying out of such further duties as may appear necessary for the advancement of the wool industry.

The Wool Council is constituted as follows:—An officer of the Department as chairman; two members representing the non-organized wool farmers, appointed by the Minister of Agriculture and Forestry in consultation with the Agricultural Advisory Board; the chairman of the National Woolgrowers' Association of South Africa, *ex officio*; two members representing the Cape Province and one member representing each of the provinces, Orange Free State, Transvaal, and Natal. The representatives of the provinces are nominated by the various provincial Agricultural Unions in consultation with the provincial Woolgrowers' Associations, and such nominees are appointed by the Minister.

The Wool Marketing Committee was established in September, 1934, in accordance with a resolution passed by the last congress of the National Woolgrowers' Association in 1934. This committee, as reconstituted in 1938, now consists of the chairman and the eight members of the Wool Council, and two members of the executive committee of the National Woolgrowers' Association, representing the producers; and six members of the South African Wool and Mohair Brokers' Association and four members of the Council of South African Wool and Mohair Buyers, representing the wool trade. The function of this committee is to advise the Minister of Agriculture and Forestry in regard to all questions affecting the marketing of wool.

The Wool Council in consultation with Australia and New Zealand at a conference held in Melbourne in January, 1937, decided to establish an International Wool Research and Publicity Secretariat in London, consisting of three members appointed to represent the three contributing countries.

* For personnel, see Chapter XXVIII.

The functions of the International Secretariat are:—

(1) To undertake investigations into circumstances and conditions relative to phases of the wool industry throughout the world, in order to formulate a programme of campaign for the promotion of wool utilization.
(2) To investigate advertising and general publicity media, and to be responsible for the effective completion of any approved scheme.
(3) To conduct economic researches and to provide facilities for industrial and commercial liaison for the promotion of the trade in wool and pure wool and wool mixture goods.
(4) To secure assistance necessary to carry out its work effectively.

(vii) *Hides and Skins Advisory Board.**—This Board came into existence in April, 1930, for the purpose of advising the Minister in all matters pertaining to hides and skins, especially in regard to the following:—

(a) The promulgation and administration of export regulations;
(b) the application of the hide and skin levy fund;
(c) marketing;
(d) methods for improvement and scientific research.

A levy of 2½d. per bale of dry hides or skins and ¾d. per wet hide exported is payable. In each case an additional fee of ½d. is made for inspection.

(viii) *Egg Levy Advisory Board.**—An Egg Levy Advisory Board was established as from April, 1933, to supersede the Egg Levy Advisory Committee, which had functioned for a number of years under the auspices of the South African Poultry Association. The main functions of the Board are to advise the Minister on matters pertaining to the application of the egg levy fund and the marketing side of the poultry industry.

Portion of the levy of 9d. per case imposed on export eggs under Government Notice No. 1390 of 1922, promulgated under Act No. 35 of 1917, is utilized in connexion with the carrying out of the functions of the Board.

(ix) *Veterinary Board.**—A Veterinary Board has been established in terms of the *Veterinary Act*, No. 16 of 1933, mainly for the purpose of:—

(a) Dealing with the registration of veterinarians;
(b) ensuring that registered veterinarians conform to the best traditions of the veterinary profession in respect of the question of professional conduct;
(c) eliminating the practising of veterinary science by persons who are technically or otherwise not qualified to do such work, and hence ensuring that the veterinary services rendered to the stock owner are of the required standard.

So far certificates of registration have been issued to about 175 veterinarians in the Union.

9. **Levies and Export Bounties—Agricultural Products.**—The imposition of levies on certain agricultural products, for the purpose of promoting by a variety of methods the interests of the producers concerned, has been practised for several years. Corresponding with the extension of the control board system, levies have also been imposed on other products and, by virtue of legislation enacted since 1934, the levy system has been extended to embrace slaughter stock (Act No. 48 of 1934), tobacco (Act No. 17 of 1935), wheat (Act No. 58 of 1935), and maize (Act No. 59 of 1935).

Levies are at present in existence in respect of the following products:—

(a) *Statutory Levies.*—Butter and cheese, slaughter stock (cattle, sheep, and goats), maize, wheat, and tobacco.
(b) *Non-Statutory Levies.*—Wool, hides and skins, eggs, citrus fruit, deciduous fruit, and cotton.

Of the above-mentioned levies, those in the case of butter and cheese, slaughter stock, and tobacco are partially intended for the payment of an export bounty on these products by their respective control boards. Levies payable in respect of the other products mentioned are utilized for purposes other than the payment of an export bounty.

The following figures indicate the amounts collected by way of levy and the amounts disbursed as export bounties in regard to the products on which an export bounty is paid.

* For personnel, see Chapter XXVIII.

AMOUNT OF LEVY COLLECTED AND AMOUNT DISBURSED AS BOUNTY ON BUTTER, CHEESE, MEAT, AND TOBACCO, 1932-33 TO 1937-38.

* Wool levy not yet in existence.
† Wool levy temporarily suspended as from 1st February, 1932, and re-introduced with effect from 1st August, 1936.
‡ Hides and skins levy in existence only since 1930-31.
§ Period 16th July, 1935, to 31st March, 1936.
‖ With regard to maize and wheat (*a*) levy funds in respect of wheat are utilized for the compensation of storage losses in terms of Act No. 58 of 1935, (*b*) the levy on maize is collected in terms of Act No. 59 of 1935.
¶ Calendar year 1936.
**Period 1st August, 1936, to 31st March, 1937.

10. **Regulations Controlling the Import and Export of Stock, Plants, Fruits, Bees, etc.**—Information in regard to the more important regulations governing the import and export of various agricultural and pastoral products is given hereunder.

(i) *Stock.*—(*a*) The eradication and control of infectious stock diseases are effected under the provisions of the *Diseases of Stock Act*, No. 14 of 1911, and the regulations framed thereunder. In order to ensure against the introduction of infectious stock diseases from countries or territories outside the Union, precautionary restrictive measures are enforced in connexion with the importation into the Union of—

(i) various classes of stock; and
(ii) animal and vegetable products.

The introduction of stock and animal and vegetable products from certain countries is prohibited, and in other cases importation is permitted only subject to such precautionary measures as may be necessary to eliminate the risk of introducing infection into the Union.

It should be noted that, for the purpose of the *Diseases of Stock Act* and regulations, "stock" includes not only domestic animals, but also poultry and all other birds, and most species of wild animals.

Intending importers may obtain particulars of the veterinary requirements in respect of the commodity to be imported from the Director of Veterinary Services, Union Buildings, Pretoria.

(*b*) Sera, vaccines, and similar substances intended for the treatment of stock diseases may not be imported into the Union without written permission. Applications for permission to introduce any such substances must be addressed to the Secretary for Agriculture and Forestry, Union Buildings, Pretoria.

(*c*) Export of stock and products to countries outside the Union is subject to the import restrictions of the country of destination, and the Division of Veterinary Services conducts the necessary tests on such stock and provides the certificates required by the various importing countries.

(*d*) Inspection of meat intended for export overseas is controlled by the Division of Veterinary Services. The slaughter stock is subjected to both ante-mortem and post-mortem inspection to ensure that the animals are free from disease and that the meat is fit for human consumption.

(ii) *Plant Import Regulations.*—The introduction of plants from overseas, and also from African territories other than Southern Rhodesia, Basutoland, Bechuanaland, and Swaziland, is allowed only under special permission, given at the discretion of the Agricultural Department. Any person who desires to import plants should, before placing his order, apply to the Division of Plant Industry, Pretoria, for a permit for their introduction, as many plants are not admissible and overseas nurserymen often refuse to consign plants to South Africa, unless they know that a permit has been or will be issued. The importation of peach stones, lucerne, tea, elm, and tomato seed, acorns and chestnuts from overseas and African territories, other than Southern and Northern Rhodesia, Nyasaland, the Belgian Congo, Basutoland, Bechuanaland Protectorate, and Swaziland, is either prohibited or more or less drastically restricted. A permit is required to import maize and barley from overseas and other countries, except Southern and Northern Rhodesia, Nyasaland, Basutoland, Bechuanaland, and Swaziland. Cotton seed from overseas and all African territories, except Basutoland, Bechuanaland Protectorate, and Swaziland, is not admitted except under permit. No permit is required for the importation of other seeds, bulbs, and tubers. The importation of dried citrus peel, unmanufactured cork, raw cotton, second-hand bags, broom corn, and brooms, brushes, and other articles made wholly or partly from *sorghum* is subject to restrictions. The restrictions on unmanufactured cotton also apply to importations from Southern Rhodesia.

Plants on which any insect or disease is found are liable to be excluded. Woody plants are fumigated as a matter of routine. For more effective treatment, vacuum fumigation establishments are now provided at Capetown and Durban. Certain plants have to be grown in quarantine for a year or more before being passed, and others are specially disinfected in copper sulphate solution. Some of the restricted seeds and plant products are also fumigated or disinfected before release. These various precautions are designed to minimize the risk of introducing new pests and diseases. Fees are charged for fumigations and disinfections.

(iii) *Fruit and Potato Import Regulations.*—Certain varieties of fruit are admitted without the formality of a special permit, but are subject to inspection and to treatment, or even to exclusion, should they be found to be diseased or infested with insects considered pestiferous. The introduction of peaches, plums, cherries, and other stone fruits and of fresh citrus fruits of all varieties is prohibited. The importation is also prohibited of apples, pears, quinces, and loquats from Japan, Korea, Manchuria, and East Siberia.

Prospective importers of potatoes are advised to obtain from the Division of Plant Industry particulars of documents required from the country of origin, as consignments are not admitted until prescribed certificates are produced.

The regulations concerning overseas fruit and potatoes apply also to the produce of African territories other than Southern Rhodesia, Northern Rhodesia, Nyasaland, Belgian Congo, Basutoland, Bechuanaland Protectorate, and Swaziland, except that citrus fruit is admitted without restriction from the Mandated Territory of South West Africa, and under certain conditions from the greater portion of the territory administered by the Companhia de Moçambique.

(iv) *Bee Import Regulations.*—The right to introduce bees and used apiary appliances is strictly reserved to the Government. The introduction of honey, jam, syrup, or malt mixed with honey, and of fly-string, fly-tape, flypapers, and other preparations containing honey for attracting flies, is prohibited.

Medicines containing more than 25 per cent. of honey by weight are also excluded.

The introduction of foundation comb and of beeswax is allowed only under special permit. The Government has wide powers, not at present exercised, in respect of the keeping of bees and of measures for the eradication or suppression of bee diseases.

(v) *Nursery Regulations.*—On the assumption that plants from nurseries are the most serious potential disseminators of certain classes of insect pests and plant diseases, the registration of plant nurseries is required, and such places are quarantined, should the conditions appear to warrant this drastic action. The name and address of the seller must be legibly and durably affixed to any plant sold or to its container. Every nurseryman who sells fruit trees is required to have a cyanide fumigation chamber fulfilling specified requirements, and the fumigation of every fruit tree therein, before it is allowed to leave the nursery, is obligatory. The provisions as regards registration and other nursery requirements do not apply to premises whereon bulbs, tubers, seedling transplants of vegetables, garden flowers, and field crops, sweet potato cuttings, pineapple crowns and suckers, carnation plants, chrysanthemum plants, ferns, and spineless cactus and strawberry plants are grown for sale, nor to fruit, vegetables, cut flowers, and other parts of plants evidently not intended for planting, nor to sugar-cane in the sugar-producing area of Natal and Zululand, nor to vine nurseries within, and confining their business to, the main viticultural area of the Cape Province, but any person who grows other kinds of perennial plants for sale is required to effect registration.

(vi) *Plant Removal Regulations.*—The requirements in connexion with nursery stock are supplemented by requirements in respect of plants that are sent by rail or post by persons who are not nurserymen. The inclusion of any plant in a parcel must be divulged on the label or consignment note, and railway and postal officials are under instructions to see that consignments of plants, with the exception of those mentioned in (v) as exempt from the nursery restrictions, go to a plant inspector at the sender's expense for examination. The inspector may return diseased plants to the sender. Fruit trees are fumigated, whether apparently free of pests or not; a fumigation fee of 2s. 6d. or more is charged. The removal or dispatch of plants infested with certain prescribed insect pests and plant diseases is an offence.

The removal of vines into the Graaff-Reinet district, and also into a large area comprising the main viticultural districts in the south-west of the Cape Province, is strictly prohibited. The removal of mango trees into Swaziland without the express permission of the Swaziland Government is also prohibited. Owing to the danger of spreading *Pernicious* (San José) *Scale*, the special permission of the Department is required for the removal of most kinds of plants from the Transvaal, Orange Free State, or Natal to the Cape Province, from the municipal areas of Cradock, Kokstad, and Maclear, from the area comprised within a radius of twelve miles from the post office, Villiersdorp, and from the area comprised within a radius of five miles from the railway station Naauwpoort, Cape Province.

(vii) *Regulations Governing the Export of Fruit.*—Regulations pertaining to the export of fresh and dried fruits are published as often as is considered necessary, which in practice, in the case of fresh fruit, has proved to be every year before the export season commences.

Shipping arrangements in respect of fresh fruit exports are made by the Perishable Products Export Control Board, Parliament Street (P.O. Box 1891), Capetown, and all would-be exporters must be registered with this Board as exporters, before they can export fruit. Registration entails also the rendering to this Board from time to time of estimated quantities to be exported by the person concerned. This is to enable the Board to provide adequate shipping space for the fruit offering for export. Details of regulations pertaining to export of fruit can be obtained from the Board.

No fruit showing visible spray stains may be exported, nor is the export allowed of either fresh or dried fruit which is found to contain more than one-hundredth of a grain per pound of arsenious oxide. This regulation affects mainly the export of pears and apples and is a requirement which all fruit exporting countries have to comply with in regard to fruit exported to the United Kingdom.

Except under exceptional circumstances, all fresh fruit for export must be pre-cooled before shipment.

The regulations lay down what information must appear on the outside of the boxes and how the boxes shall be marked (*e.g.*, the number of fruits or the weight of fruit in the box, grade, variety, shipping mark, etc.), and specify the sizes of the containers.

Grades in respect of deciduous, citrus, and dried fruits are defined in the regulations, these grades being determined primarily on quality, freedom from external blemish, and to some extent on size.

For grapes, oranges, and grapefruit, there are maturity standards, or virtually palatability standards, expressed in terms of the proportion of sugar (total soluble solids) to acid. For example, the minimum maturity standard for certain grapes is 16: 1, which means that for every one part of tartaric acid in the juice, there must be at least 16 parts of sugar. The test entails the determination of the sugar content of the juice by means of a hydrometer and of the acid by titration. Apart from having to comply with the requirements of the regulations in respect of appearance, citrus fruits must contain a certain minimum percentage of juice.

11. **Grading of Agricultural Products.**—The successful marketing of South African agricultural produce overseas is dependent upon a proper system of government supervision and grading. To ensure a satisfactory standard of quality, the principle of government inspection and grading has been embodied in various legislative measures, more especially in the *Agricultural Produce Export Act*, No. 35 of 1917, and has gradually been extended to cover all the principal Exports, such as fruit, grain, tobacco, cotton, wine, dairy produce, meat, eggs, wool hides, and skins, and is being applied to all new articles as soon as their commercial importance justifies the step.

12. **Agricultural Organization.**—The South African Agricultural Union is the main body of organized farmers representing all the interests of the agricultural industry in South Africa. The Secretary of this Union is Mr. G. T. Welsford, P.O. Box 377, Bloemfontein. The organization is constituted by four provincial organizations and also has affiliated to it the South African Women's Agricultural Union, which represents all the provincial Women's Agricultural Unions in South Africa.

The addresses of the respective secretaries of these provincial organizations and the South African Women's Agricultural Union are as follows:—

South African Women's Agricultural Union	Mrs. M. Stofberg, Stettyn, Worcester, C.P.
Cape Province Agricultural Association..	P.O. Box 37, Middelburg, C.P.
Natal Agricultural Union.....	P.O. Box 225, Pietermaritzburg.
Orange Free State Agricultural Union....	P.O. Box 377, Bloemfontein.
Transvaal Agricultural Union.....	P.O. Box 937, Pretoria.

Most of the farmers' associations and agricultural societies in each of the four provinces are in turn affiliated to one or other of the four provincial organizations. These organizations have as members a great many farmers representing the most influential and progressive sections of the agricultural community. An important function of the agricultural societies is the promotion of the various agricultural shows, of which those organized by the following societies at the places mentioned are the most popular: Western Province Agricultural Society (held at Rosebank about the end of February); Port Elizabeth Agricultural Society (held at Port Elizabeth in March); Central Agricultural Society (held at Bloemfontein in March); Witwatersrand Agricultural Society (held at Johannesburg at Easter); Royal Agricultural Society (held at Pietermaritzburg at the end of June); and Durban and Coast Agricultural Society (held at Durban about the beginning of July).

Each provincial organization has a standing committee, which meets at least four times a year. Each of these organizations holds an annual general conference attended by delegates from the various affiliated bodies. From each of the provincial organizations ten delegates are elected at the annual general conference to represent it in the South African Agricultural Union, which meets annually for the purpose of deliberating on matters affecting agriculture generally throughout the Union. A president and an executive committee are elected for the ensuing year at the annual congress. The organization described has resulted in the creation of a system properly co-ordinated in such a manner that every interest of the agricultural industry is served thereby.

Matters of local or parochial concern are dealt with by a network of organized bodies of farmers throughout the country. For purposes of wider but still provincial interest representatives are sent by these bodies to an annual congress, from which again a delegation is chosen for the final deliberative council, at which general principles are considered. At all these congresses government officers, for the most part experts on the subjects coming under discussion, are in attendance for the purpose of furnishing information on the work of the Government and advice generally on technical and other matters. The funds for carrying on the activities of these organizations are provided by subscriptions, supplemented by grants from the Government and the Provincial Councils of the Cape Province and the Transvaal.

The following is a representative list of bodies serving particular phases of the agricultural industry:—

(i) South-African Stud-book Association, with which is affiliated:—
(a) The Friesland Cattle Breeders' Association.
(b) The Shorthorn Society of South Africa.
(c) The Afrikander Cattle Breeders' Society.
(d) The Devon Cattle Breeders' Society of South Africa.
(e) The South Devon Breeders' Society of South Africa.
(f) The Ayrshire Cattle Breeders' Society of South Africa.
(g) The Aberdeen-Angus Cattle Breeders' Society of South Africa.
(h) The Hereford Breeders' Society of South Africa.
(i) The Sussex Cattle Breeders' Society of South Africa.
(j) Brown Swiss Cattle Association.
(k) Red Poll Cattle Breeders' Society.
(l) Jersey Cattle Breeders' Society of South Africa.
(m) The South African Guernsey Cattle Breeders' Society.
(n) Persian (Blackhead) Sheep Breeders' Society of South Africa.
(o) Angora Goat Breeders' Society of South Africa.
(p) The Pig Breeders' Society of South Africa.
(q) The Pig Development Association of South Africa.
(ii) Stud-book of Thoroughbred Horses of South Africa.
(iii) The Nurserymen's and Seedmen's Association of South Africa.
(iv) The Western Province Beekeepers' Association.
The South African Association of Beekeepers.
(v) The Co-operative Wine Farmers' Association of South Africa, Ltd.
(vi) The South African Sugar Association.
(vii) The South African Maize Breeders', Growers', and Judges' Association.
The South African Grain Traders' Association.
(viii) The South African Poultry Association.
(ix) Sacca, Ltd.
East Griqualand Co-operative Cheese Federation.
(x) The Fruit Growers' Co-operative Exchange of South Africa, Ltd.
(xi) The South African Co-operative Cotton Growers, Ltd.
(xii) The Central Co-operative Cotton Exchange Ltd.
(xiii) Federated Farmers' Co-operative Association of South Africa, Ltd.
(xiv) National Woolgrowers' Association.
(xv) S.A. Co-operative Deciduous Fruit Exchange, Ltd.
(xvi) S.A. Co-operative Citrus Exchange, Ltd.
(xvii) S.A. Dried Fruit Co., Ltd.
(xviii) Die Sentrale Ko-operatiewe Tabak Maatskappy van S.A., Beperk.
(xix) S.A. Sentrale Ko-operatiewe Graan Maatskappy, Beperk.
(xx) S.A. Groundnut Growers' Association.

In connexion with the above list, it is to be noted that in recent years the distinctive tendency in the sphere of agricultural organization has been the growth of co-operative effort, in the shape of farmers' associations and exchanges for the marketing of agricultural and pastoral products.

13. **International Institute of Agriculture, Rome.**—The International Institute of Agriculture at Rome was created under an International Convention on the 7th June, 1905, and is supported by practically all civilized states. The Institute co-ordinates statistics of production and consumption of the various states, and summarizes their literature and reports on their activities in so far as they affect farming.

It therefore disseminates important information regarding international trade, indicates the progress made, and the means by which it is attained. The information afforded to the Union Government, more especially in regard to the world's crops, is of value as affecting markets for and prices of the Union's produce.

The Union Government is a member of the Institute under Group 4 of the adhering states, which entitles it to two votes on the General Assembly and entails an annual subscription of 8,000 gold francs. In addition, the Union Government pays an annual subscription of 2,163 lira for special publications issued by the Institute, which are required in addition to those to which the Union Government is entitled as a member of the Institute.

14. **Legislation.**—A summary of agricultural legislation up to 1931 will be found on Page 246 of *Official Year Book* No. 13. Later legislation passed will be found in Chapter II of the subsequent volumes.

§ 2. Live Stock and Pastoral Production.

1. **Horses, Mules, and Asses.**—(i) *History of Horse-breeding.*—At the time of the discovery of the Cape (1486) the natural group of Equidae were represented by two types of Zebra and the Quagga only. These types were not used in the development of the horse stock of the country. The first importations of horses of Arabian and Persian breeding were made from Java (1652). From time to time importations were made from Persia (1689), South America (1778), North America (1782), and England (1782), but the greatest progress in the early history was made during the governorship of Lord Charles Somerset, and many good and high-priced stallions were imported by private owners during the period 1820-1830. Horse-breeding was retarded by horse-sickness in 1719, and during the second visitation of the dreaded disease in 1763 losses exceeded 2,500 horses during the course of a few months. The prosperous trade of supplying remounts to the Indian army commenced in 1769, and by 1810 as many as 5,482 horses and 198 mules had been supplied. About the middle of the 19th century, horse-breeding declined, owing largely to deterioration of the stock as a result of the use of inferior stallions. The trade with India passed to Australia, and other factors, such as the development of more lucrative farm enterprises (merino sheep, Angora goats, ostriches) and the adoption of mechanized power, contributed towards a lack of interest in horse-breeding. Apart from the breeding of race horses, few changes in horse-breeding have taken place during the past three decades. However, the market for good horses has always been remunerative. The thoroughbred is used for the breeding of horses for riding, remount, and limited carriage purposes, while the Percheron is the most popular breed for heavy draught and for the improvement of common draught-horse stock.

(ii) *Natural Suitability of the Country for Horse-breeding.*—The two main factors which influence the degree of success that may be expected are: the occurrence of horse-sickness and the nutritive value of the natural pasture. Horse-sickness occurs in varying degrees of severity in most of the summer-rainfall areas. The immunization of equines against horse-sickness has, however, reduced losses from this disease considerably. With very few exceptions, the natural pastures of all the provinces are low in mineral and protein value; these deficiencies retard growth, development, and maturity, and in many instances result in reduced stature and lack of quality of bone. The coastal regions of Natal and immediately south of Natal, the low and middle veld areas of Transvaal, and the extreme barren parts of Bechuanaland are unsuitable for horse-breeding. In general, it may be said that horses do well wherever conditions are best suited for sheep. The following are considered the best districts for horse-breeding: Colesberg, Middelburg (Cape), Wodehouse (vicinity Dordrecht), Robertson, and Malmesbury (vicinity Darling).

(iii) *Mules.*—Early importations of donkeys into South Africa were made from the Cape Verde Islands; in all probability these animals were of Spanish origin and Andalusian stock. Early in the 18th century certain districts of the Western Province, especially the district of Malmesbury, attracted attention as grain-farming areas and progress was rapid. The use of mules in these districts spread and mule-breeding became an important enterprise. Subsequently, mule-breeding spread to other areas, even beyond the borders of the Cape, and large numbers of mules were bred where suitable mares were available. More recently the interest in mule-breeding has waned, although good mules are always in demand and realize good prices. The South African mule, although frequently somewhat light, is a most useful draught animal, very hardy, willing, and capable of much work to an advanced age. Mules can be reared successfully where horses do well. In 1937 the Department of Agriculture and Forestry imported forty-one donkey mares and three jacks from the United States of America to augment the existing stud. The object of the importation is the breeding of a good class of jack for sale to farmers. Particular attention must be paid to the selection of good-framed large mares for mule breeding, while the mares and their foals should receive adequate feed during periods when the natural veld does not supply sufficient feed for normal growth and soundness of bone.

(iv) *Statistics.*—The following table gives particulars of horses, mules, and asses in the Union. In 1930 and 1937 the Agricultural Censuses did not cover the towns. The numbers in the towns in 1926 and 1936 have been added to the 1930 and 1937 figures respectively for convenience of comparison.

NUMBER OF HORSES, MULES, AND ASSES, 1904 TO 1937.

Year.	Cape of Good Hope.	Natal.	Transvaal.	Orange Free State.	Union.

* A detailed classification of the number of horses in the Union in 1921, according to age, will be found in the sixth and previous issues of this *Year Book*.

2. **Cattle.**—(i) *History of Cattle-Breeding.*—The first colonists who landed at Table Bay found large herds of cattle in the possession of the nomadic native tribes. The resources of the country in respect of the supply of fresh meat induced the Dutch East India Company to provision its ships trading with India and the East with supplies of this kind from the Cape of Good Hope. At a later stage, during the days of the pioneer colonists, cattle had to be relied upon, in the absence of railway communication, for the transport services required for the development of the country. As a consequence cattle were bred which possessed great hardiness, rustling qualities and constitution, and the capacity to stand long treks, and which could be relied upon for draught purposes. In the course of time there was created a distinct breed, which came to be known as the *Afrikander*. Remarkable progress has been made within the last decade in improving the early maturing beef and fattening qualities of this breed.

The introduction of European breeds took place during comparatively recent times. Towards the end of the eighteenth century small importations of *Friesland* cattle—or at least cattle from Holland—found their way into different parts of the country, more especially into areas in the vicinity of the Cape Peninsula. The first importations of British breeds of cattle took place towards the middle of the nineteenth century, and consisted mainly of *Shorthorns* and *Devons*. These were followed by other well known breeds, so that towards the end of the century cattle farming enjoyed a fairly well established position in the pastoral industries of the country.

Rinderpest in 1896, however, took heavy toll of the herds throughout the whole of southern Africa, a disastrous set-back, which was further accentuated by the Anglo-Boer War of 1899-1902. Thus the permanent progress of the cattle industry of to-day had its beginning after the close of that war, when the Union's pastoral industries had to be built up from their very foundations. The progress of the work was greatly accelerated by the formation of the South African Stud-Book Association in 1905 and of the different breed societies affiliated thereto. These movements have served to promote the breeding of pure-bred stock and have protected and fostered the interest of breeders.

Of late years, the prevention and the control of diseases in cattle have been seriously taken in hand, and other progressive schemes, such as the establishment of agricultural divisions and schools, legislative measures, trade relations, and improved farming methods, have combined to bring the pastoral industries to a more stable and financially sound condition.

In 1936, the Union possessed no fewer than eleven million head of cattle, and pastoral products have now increased beyond the power of absorption of the limited local market. Considerable difficulty has been found in placing these surplus products on overseas markets, but consistent headway is now being made in regard to the improvement of the quality of pastoral products. Legislation has recently been introduced with a view to stabilizing and consolidating the cattle industry and other branches of farming associated with it.

Under the ocean mail contract of 1912 pedigree cattle are conveyed to South Africa free of freight. The number of cattle introduced up to the 31st December, 1923, as the result of this provision was 3,367.

The number of pedigree cattle imported since the beginning of 1924 has been as follows:—

Year.	Under Provisions of Mail Contract.	Total Importations.	Year.	Under Provisions of Mail Contract.	Total Importations.
1924	—	18	1932	70	80
1925	91	166	1933	38	53
1926	—	21	1934	55	119
1927	—	69	1935	115	126
1928	2	166	1936	165	236
1929	65	295	1937	57	175
1930	77	131	1938	47	54
1931	88	110			

(ii) *Number of Cattle.*—The figures given in the table hereunder represent the number of cattle as returned at the general Censuses of 1904 and 1911, and at certain censuses of pastoral production beginning with 1918. For those years when the censuses did not include the towns, the numbers enumerated in the towns at the previous census have been added for convenience of comparison.

NUMBER OF CATTLE, 1904 TO 1938.

Year.	Cape of Good Hope.	Natal.	Transvaal.	Orange Free State.	Union.
1904 (General Census)	1,954,390	666,903	515,956	363,204	3,500,453
1911 "	2,715,330	456,087	1,339,298	1,286,234	5,796,949
1918 (Census of Agriculture)	2,410,934	977,252	1,888,443	1,575,295	6,851,924

1938 " "	3,711,266	2,510,440	3,339,184	2,017,637	11,578,527

* A detailed classification of the cattle enumerated at the 1921 Census, according to age, will be found in the sixth and previous issues of this *Year Book*.

† Information with regard to breeds of cattle in 1922 will be found in *Year Books* Nos. 6 and 7.

‡ Figures amended to include numbers enumerated in the towns in 1936, instead of those enumerated in 1926.

(iii) *Age and Sex of Cattle.*—The following table shows for the years 1921, 1926, 1930, and 1937 the European-owned cattle classified according to age and sex.

CATTLE (EUROPEAN-OWNED ONLY)—NUMBER AND CLASSIFICATION AS TO AGE AND SEX.

Year.	Cattle under 1 year.	Bulls and Oxen 1 year and under 2 years.	Heifers 1 year and under 2 years.	Cattle 2 years and over.			Total Cattle.
				Bulls.	Cows and Heifers.	Oxen.	
	No.	No.	No.	No.	No.	No.	No.
*1921	1,001,268	904,206		113,099	2,263,778	1,916,332	6,198,683
1926	908,588	746,614		85,538	1,959,377	1,845,520	5,545,637
1930	798,834	718,204		76,448	1,824,856	1,753,968	5,172,310
1937	1,034,205	473,366	627,205	75,211	2,169,927	1,816,846	6,196,760

* Includes cattle owned by natives residing on European-occupied farms, but excludes 2,728 cattle on rail.

3. **The Beef Industry.**—The rapid increase in the cattle herds, largely a result of better methods of control and prevention of live stock diseases since the beginning of the present century, has resulted during the past decade in a surplus of beef production.

In order to maintain the price level of slaughter stock on the local market, the Government in 1932 instituted a Meat Trade Control Board with power to regulate the internal marketing of live stock. The Board, by the regulation of the Johannesburg market, was undoubtedly instrumental in maintaining the price level of slaughter stock in the country. It was dissolved under the provisions of the *Live Stock and Meat Industries Act*, 1934, and its functions were transferred to the Live Stock and Meat Industries Control Board established under that Act.

In view of the unimproved condition of Union cattle, and especially beef cattle, the export trade in beef has, up to the present, been confined almost entirely to frozen beef, and fairly large quantities have in the past been exported yearly, chiefly under contract, to the Italian and Belgian Governments for military requirements.

The export trade in chilled beef, which is confined almost exclusively to the United Kingdom, and which promises a remunerative outlet for an improved beef animal, was commenced in 1932. Since the latter part of 1934 fairly regular weekly shipments have been exported. With the exception of the Cape Eastern Meat Export Association, which serves the Cape eastern area and which operates through East London, the organization of this trade in the northern Provinces was until 1938 entirely in the hands of the Department of Agricultural and Forestry, which is also responsible for the grading of all meat exported to the United Kingdom. During 1938 two more producers' exporting organizations were formed; the one, serving Natal and East Griqualand, operates through Durban, and the other, serving the north-western Cape and the western Transvaal, operates through Kimberley. Exports through Johannesburg are still organized by the Department of Agriculture and Forestry.

The *Live Stock and Meat Industries Act*, No. 48 of 1934, marks a very important stage in the development of the live stock industry, and more particularly of the beef industry. Cattle-breeders have already availed themselves of the machinery for the improvement of cattle provided by the Act, and up to the end of 1938 upwards of 128 districts had been proclaimed under the Act. Further details of the Act are given in para. 9 (v) of § 1 of this chapter.

The following tables show (*a*) the exports of beef since 1933; (*b*) the number of animals slaughtered in abattoirs during the years 1933 to 1937; and (*c*) index numbers of animals slaughtered at the principal abattoirs. There have been no imports of beef since 1931.

(a) BEEF—EXPORTS (OVERSEAS TRADE), 1933 TO 1938.

Year.	Exports (South African Produce).		
	Weight.	Declared Value.	
		Total.	Per 100 lb.
	lb.	£	£ s. d.
1933	21,883,756	261,307	1 3 11
1934	6,162,942*	55,454*	0 18 0
1935	14,369,470	170,743	1 3 0
1936	22,549,603	290,574	1 5 9
1937	16,907,274	233,564	1 7 8
1938	3,474,242	55,480	1 11 11

* Including beef of Rhodesian cattle slaughtered in the Union—4,630,446 lb., value £33,158.

(b) NUMBER OF ANIMALS SLAUGHTERED IN ALL ABATTOIRS, 1933 TO 1937.

Year.	Sheep, Lambs, and Goats.	Cattle.	Calves.	Pigs.	Total.
1933	3,208,695	489,839	41,700	218,087	3,958,321
1934	2,502,156	543,991	43,622	194,409	3,284,178
1935	2,464533	573,780	45,890	220,775	3,304,978
1936	2,892,641	611,727	50,981	272,315	3,827,664
1937	3,309,472	635,177	56,113	275,300	4,276,062

Quarterly returns from 39 of the principal abattoirs have been collected from the third quarter of 1932, and index numbers based on the returns in 1929-30 have been constructed for them. For the quarterly index numbers from the third quarter of 1932 to the last quarter of 1937, see *Official Year Books* Nos. 17 to 19.

(c) INDEX NUMBERS OF ANIMALS SLAUGHTERED IN ABATTOIRS, ANNUALLY 1929-30 TO 1937, QUARTERLY FROM 1938.

Year.	Sheep, Goats, and Lambs.	Cattle.	Calves.	Pigs.
1929-30	1000	1000	1000	1000
1933	1214	842	985	1113
1934	947	935	1030	992
1935	932	986	1084	1126
1936	1094	1051	1204	1389

2nd Quarter	1298	1116	1398	1470
3rd Quarter	1280	1135	1531	1421
4th Quarter	1390	1092	1527	1532
1939—1st Quarter	1351	1056	1344	1366
2nd Quarter	1356	1130	1550	1525

4. **The Meat Research Laboratory, Onderstepoort.**—Within recent years it has come to be generally accepted that the Union is primarily a pastoral country and that agricultural practices should follow the lines of producing crops, first and foremost for the proper feeding of live stock.

In order to develop the meat side of the animal industry the Government has for many years conducted breeding and feeding tests on cattle, sheep, and pigs, and much progress has been made. Up to the present, however, the criteria by which farm animals have been judged as potential meat-producing animals, and by which the quality of their meat has been judged in terms of the consumers' requirements, have all been empirical. If further progress is to be made in the production of beef, mutton, lamb, bacon, and pork, the present criteria will have to be reviewed in terms of scientific facts. The research necessary to obtain the basal knowledge required to find out what constitutes good meat, how it can be produced in an hygienic manner, and how it can best be preserved for export and prepared for consumption, is to be undertaken in the Meat Research Laboratory at Onderstepoort. Although situated at Onderstepoort, the Laboratory is to serve the whole of the Department of Agriculture and not only the Division of Veterinary Services.

The Meat Research building, which was completed early in 1939, is divided into three sections.

(*a*) *The Abattoir Section.*—This section will deal with the relation between the live animal, its carcass, and the cuts of that carcass, both with regard to quantity and quality of the meat. Abattoir methods, i.e. pre-slaughter management (methods of stunning, bleeding, dressing, flaying, handling), general abattoir hygiene, pre-mortem and post-mortem inspection, system of grading, etc., will be systematically investigated, with the object of improving present day technique.

(*b*) *The Cold Storage Section.*—This section has been equipped with a most up-to-date refrigeration plant and a large number of cold storage chambers for experimental purposes. All the known methods of refrigeration can be employed with wide ranges of temperature, humidity, air circulation, etc. Facilities for gas storage are also available. In this section, the problems of meat preservation, not only for purposes of export, but also for local market requirements, will be investigated.

(*c*) *The Laboratory Section.*—This section provides facilities for the chemical, physical, and biological analysis of meat and also for the preparation of meat for consumption. It is in this section that the real detailed basic research will be conducted, on the results of which it is hoped to formulate scientifically accurate and commercially appliable methods of judging the quality of meat, thus making it possible to bring into function a dependable system of grading all kinds of meat and meat products.

Although the principal function of the laboratory staff will be basal research, its members will endeavour to remain in as close touch as possible with commercial abattoirs, cold storage plants, and the meat trade in general, and will, when time allows, investigate problems with which the trade is confronted.

5. **Dairying.**—(i) *General.*—Experience has shown that a considerable portion of the Union is well adapted to dairy farming. The climate is mild, and, in those districts in which the rainfall is good, cattle thrive well on the natural veld for from six to eight months of the year.

The principal crops grown for the feeding of dairy cattle are maize, lucerne, oats, teff grass, millet, mangolds, rye, and cow-peas, all of which do well in most of the areas devoted to dairy farming. Considerable quantities of maize are grown for silage and maize hay, and the use and value of all the above-mentioned fodders are being increasingly realized.

Most dairy breeds do well in South Africa. *Frieslands, Ayrshires, Jerseys, Dairy Shorthorns, South Devons, Brown Swiss, Red Polls,* and *Guernseys* are to be found in considerable numbers and there are many pure-bred herds of these breeds.

The office of the Division of Dairying in Pretoria is a constant source of free information on all questions pertaining to dairying. Officers of the Dairy Division are stationed in each of the four provinces, and it is their duty to travel among the farmers and give advice and instruction in approved methods of production, and in all matters pertaining to dairying and dairy farming, as well as to administer the provisions of the *Dairy Industry Act* and to grade all butter and cheese for export overseas. In regard to milk-recording, provision is made for granting official certificates of performance in respect of registered cows and statements of records of production in respect of non-registered animals.

At the present time there are three main legal measures under which the dairy industry is directed. The first is the *Dairy Industry Act* (No. 16, 1918), as amended by the *Dairy Industry Act*, 1918, *Amendment Act*, 1926 (No. 14, 1926), which controls the internal economy of the industry. It provides "for the registration of dairy premises and the owners and occupiers thereof, for the marking of dairy produce and registration of marks thereon, and generally for the regulation of the dairy industry."

The second is the *Agricultural Produce Export Act* (No. 35, 1917), in which provision is made for regulations governing the export of dairy produce. These regulations provide for the compulsory grading of butter and cheese for export. The maximum content of water allowed in export butter is 16 per cent. No preservative is permitted except common salt, and that must not be in excess of 4 per cent. No other extraneous matter is allowed.

The third is the *Dairy Industry Control Act* (No. 35, 1930), which makes further provision for the regulation and control of the dairy industry, and under the provisions of which a Dairy Industry Control Board functions. This Act also provides for the imposition of a levy on certain dairy produce and for the grading and branding, according to grade, of Cheddar cheese.

In addition to its prescribed functions the Dairy Industry Control Board administers the State-Aided Milk and Butter Scheme, under which milk or cheese is made available to all children in primary schools and to necessitous children in secondary schools. Under this scheme butter is also made available at reduced prices to certain classes of low-wage earners.

The *Co-operative Societies Act* (No. 28, 1922) also claims mention in connexion with South African dairying, for the industry is one which has proved itself peculiarly adaptable to co-operative organization in South Africa as in all parts of the world. (See "Agricultural Co-operation," § 12 below.)

(ii) *Butter and Cheese.*—In 1938, there were in the Union 58 creameries and 14 cream depots, 115 cheese factories including 6 process cheese factories, 5 condensed milk factories, 1 dried milk factory, 1 margarine factory, and 1 butter substitutes factory (specially registered for the renovating or reworking of butter). Both the Cheddar and Gouda types of cheese are successfully made. Other varieties such as blue-veined and process or loaf types of cheese are also now being made in fair quantity and with considerable success.

Regulations governing the export of butter and cheese have been brought into operation, and neither of these products may leave the Union before being officially graded according to quality, or (in the case of farm butter) unless marked "Ungraded farm butter" or "Cooking butter" (butter below third grade).

Cattle.—In the year 1911 there were shown to be 1,900,230 Union. The following table shows the number of European- ıd heifers of two years old and over for the censuses at which ın was called for.

	Number.
1918	1,924,925
1921	2,263,778
1926	2,046,094
1930	1,911,573
1936	2,150,471
1937	2,169,927

ics of milk production are available, but it may be said that years great improvement has been brought about both as re- and quality. Many more herds of first-rate milking capacity en built up, while large numbers of pure-bred cattle have been being imported; their progeny is spreading and is having a nce for good upon the ordinary cattle of the country. The pure-bred cattle, the creation of cattle improvement areas, the inferior bulls, and the purchase of improved sires under the attle Improvement Scheme are factors which have undoubtedly sponsible for the increased output of dairy products.

Records.—A revised Dairy Cattle Improvement and General ng Scheme, designed to encourage further the keeping of milk the culling of unprofitable cows, came into operation in Sep- Under this scheme it is possible for breeders and farmers to ilk production officially recorded and tested for butter-fat at a rate, provided they agree to have every cow in their herd ng every lactation and to have their herd averages published mental journal, *Farming in South Africa.*

mum fee for testing pure-bred cows is 10s. per month for a nd including five cows. A herd of twenty cows may be tested er month, and 3d. is charged for each additional animal above Grade or non-registered herds are tested at a charge of 5s. to twenty cows and 1d. per animal above that number. The is, however, 30s., which entitles the farmer to have twenty or er of cows tested for a period of six months. At the 31st December, ere 249 registered and 427 grade herds, representing a total of different breeds, under official test.

f pure-bred herds are required to weigh and record the quantity ch milking, but, in the case of grade herds, farmers are allowed milk on one day each week. The keeping of milk records is ıe increase. Full particulars of the scheme are obtainable from endent of Dairying, Department of Agriculture and Forestry,

stics.—The following tables will serve to illustrate the position ry and the advance which has taken place since 1910-11:—

R—PRODUCTION, IMPORTATION, AND CONSUMPTION, 1910-11 TO 1937-38.

(vi) *State-Aided Milk and Butter Scheme.*—(a) *General.*—The State-Aided Milk and Butter Scheme was inaugurated in August, 1935. The scheme is financed by the Government, the South African Railways and Harbours Administration, and the Dairy Industry Control Board. Its main object is to divert to inland consumption as much as possible of the surplus dairy produce which is normally exported overseas. An endeavour is in the first instance made to utilize for distribution to children all available supplies of surplus milk which would otherwise be converted into cheese and butter.

The scheme embraces (a) the free supply of milk or cheese to children only and (b) the supply of butter at considerably reduced prices to necessitous families and charitable institutions, provided funds are available for that purpose. The cost of cheese and butter supplied under the scheme is normally based on "Export Parity", i.e., the prices which would have been realized on the London market, if the cheese and butter had been exported. During certain periods, however, local wholesale prices may be allowed.

The following statement of expenditure reflects the development of the State-Aided Milk and Butter Scheme since its inception:—

EXPENDITURE—STATE-AIDED MILK AND BUTTER SCHEME.

Heading.	1935–36.*	1936–37†.	1937–38.†	1938–39.†
	£	£	£	£

Butter	4,589	17,596	117,966	188,821
Sundries	225	726	207	200
TOTAL £	37,586	151,828	255,272	341,079

* 1st August to 31st March.
† 1st April to 31st March.

(b) *Distribution of Milk or Cheese.*—A ration not exceeding one half pint of milk per day in respect of each child (or one ounce of cheese at centres where milk is not normally available) may be distributed to necessitous school and pre-school children.

School children may be supplied with milk or cheese on schooldays only. The distribution must take place at schools under the supervision of teachers. Pre-school children may receive milk on every day of the week throughout the year, provided they are assembled at approved depots or centres to consume the milk, which must be distributed under the supervision of child welfare societies, local health authorities, or other approved organizations. Milk may also be distributed to indigent school and pre-school children during school holidays, provided they are assembled at approved centres or camps.

It is expected that parents will make every endeavour to contribute any amount not exceeding 2s. per quarter in respect of each child receiving milk or cheese. No child is, however, deprived of its right to participate in the scheme merely because its parents are unable or unwilling to contribute. All moneys collected are deposited by school principals at the nearest office of the Receiver of Revenue.

In the case of town schools or centres for pre-school children, the milk must be supplied in accordance with the conditions laid down by the local health authorities, who are consulted and have to approve of the sources from which the milk is obtained and the manner in which it is distributed to the children. It is also desired that the milk be pasteurized, unless the local health authorities approve of the distribution of unpasteurized milk. Principals of rural or farm schools must satisfy themselves that the milk is obtained from satisfactory sources, but may arrange for the sources of supply to be examined by district surgeons.

Tenders are periodically invited for the distribution of milk to children, and thereafter contracts are concluded for any period not exceeding twelve months. In order not to stimulate the production of more milk, a price schedule for surplus milk ranging from 8d. to 1s. 2d. per gallon delivered at schools has been adopted. The price paid for milk varies from place to place according to the quantity supplied, the distance over which the milk has to be transported, the climatic conditions affecting production, and the cost of pasteurization and bottling. Accounts for milk distributed to children are paid in full after the close of each month, out of the funds provided for the scheme.

The number of children and the quantity of milk supplied vary from month to month in accordance with the number of schooldays and holidays, and with seasonal variations in the production of milk. Details of the quantities and cost of milk distributed monthly appear below:—

DISTRIBUTION OF MILK, 1937-1938 AND 1938-1939.

* Includes sundry expenditure: 1937–38, £397.

Schools authorized to obtain cheese in lieu of milk (i.e. at centres where milk is not normally available) are allowed to order their requirements over certain fixed periods, usually one to two weeks, direct from registered cheese factories. Government graded first grade Cheddar cheese only must be supplied to schools. Experiments are, however, being carried out with the supply of process Cheddar produced in five pound loaves, which, it is anticipated, may overcome difficulties encountered in regard to packing, transport, cutting up, storage, and deterioration.

Seasonal variations in the production of cheese are offset by storage and do not seriously affect the supply to schools, which is largely determined by the number of schooldays in each month or by holidays. A number of schools periodically cease to distribute cheese, particularly during warmer weather or when supplies of milk or other foods such as summer fruits are more plentiful. Details of the quantities and cost of cheese distributed monthly appear below:—

DISTRIBUTION OF CHEESE, 1936-37, 1937-38, AND 1938-39.

TOTAL	1,228,824	£82,157*	1,189,013	£61,667*	—	—	1,186,570	£70,201

* Includes sundry expenditure: 1936-37, £39; 1937-38, £355.

(c) *Distribution of Butter.*—Butter under the scheme at 6d., 5d., and 4d. per lb. respectively for first, second and third grade may be supplied to:—

1. Charitable institutions which purchase no butter at all or less than one half pound per week in respect of each inmate.
2. Families consisting of at least two members, whose joint income does not exceed 6s. per day.
3. Families consisting of three or more members whose joint income does not exceed 8s. per day.
4. All fixed and casual European staff of the South African and Harbour Administration, provided they are graded as railworkers and have dependents.

The maximum weekly ration of butter allowed to beneficiaries under the scheme is restricted to:—

1. One half pound per week in respect of each inmate of a charitable institution.
2. One pound per week in respect of families consisting of two to three persons.
3. Two pounds per week in respect of families consisting of four and more persons.
4. Three pounds per week in exceptional instances only in respect of very large European families.

The responsibility in regard to the supply of butter to charitable institutions is vested in the committee or body responsible for their management. The distribution of butter to necessitous families is undertaken by (*a*) municipalities or local health departments, (*b*) specially formed butter distribution committees or (*c*) existing organizations or bodies.

The butter is ordered once every week from the nearest registered creamery and must be distributed on a fixed day and time each week from centrally situated depots. Second or third grade butter must, if available, be accepted by beneficiaries, but, when the lower grades are not available, first grade butter may be purchased at the higher price.

The circumstances of all families applying for butter under the scheme are investigated, and approved applicants are furnished with official butter permits which must be presented at the nearest distribution depot on the appointed day and at the appointed time each week before any butter is obtained.

After the close of each month creameries are paid, out of the funds provided, a subsidy on all butter supplied under the scheme. The subsidy is equivalent to the difference between the full cost of the butter and the price of 6d., 5d., and 4d. per lb. respectively at which the various grades of butter have been distributed.

The quantity of butter distributed varies with the number of weeks in each month and tends to drop in January when many institutions are closed for the summer holidays. Details of the quantities and cost of butter distributed under the scheme monthly appear below:—

6. **Sheep and Wool.**—(i) *Sheep-Breeding.*—The original Cape sheep were of a leggy hair-bearing type with fat tails and fat rumps. To improve the breed, importations of sheep from good flocks of various overseas countries commenced as early as 1654 and continued at intervals up to fairly recent years. The importations in 1812, however, marked the real beginning of the permanent establishment of the merino in South Africa. In 1804 there were but half a million sheep in the Cape Colony; by 1811 the number had increased to 1·3 million. In 1810 the Colony exported 29·7 thousand pounds of wool to Great Britain, whereas in 1833 the quantity had increased to 93·3 thousand pounds.

As further settlement of the hinterland extended so was the area of sheep and wool production increased. Owing to the difficulty of eradicating tick-borne diseases, certain areas of the Union are not considered to be entirely suitable for the rearing of wool-bearing sheep. The 1937-38 agricultural census reflects the following number of sheep:—

Woolled sheep	32,795,580
Non-woolled sheep	6,205,991

For the calendar year 1938, the export of grease wool amounted to 237,258,989 lb. and of scoured wool to 7,155,825 lb., the total value being £8,983,740.

The breeding of purely mutton types of sheep as distinct from the fat-tailed non-woolled types is at present very limited; efforts to improve the latter types by the importation of and crossing with rams of improved mutton breeds are being encouraged by the Department working in conjunction with the Livestock and Meat Industries Control Board. In 1936 and 1937 some improved mutton type rams, purchased from funds made available by the Meat Control Board, were imported, and in 1938 a further 480 rams were imported under similar circumstances.

(ii) *Breeds of Sheep.*—The table which follows gives particulars of the number of European-owned sheep and lambs, classified according to breeds, as returned at the censuses of 1926, 1930, and 1937.

† Not enumerated.

(iii) *Number of Sheep in the Union.*—The following tables show the number of sheep (woolled and others) in the country for certain years from 1904. For those years when the censuses did not include the towns, the numbers enumerated in the towns at the previous census have been added for convenience of comparison.

NUMBER OF SHEEP, 1904 TO 1938.

Year.	Cape of Good Hope.	Natal.	Transvaal.	Orange Free State.	Union.
			(a) WOOLLED SHEEP.*		
1904	8,465,308	504,798	413,638	2,436,891	11,820,635

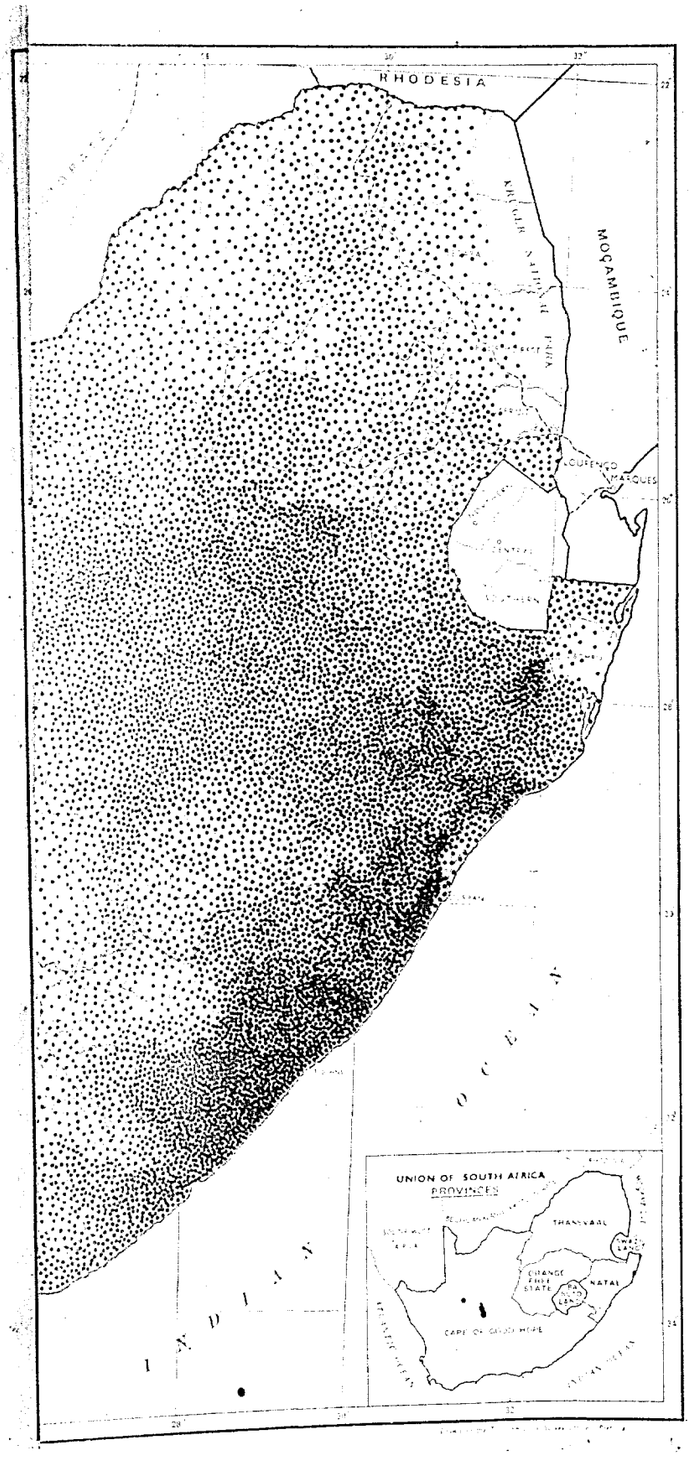
1926	2,927,569	248,049	327,108	129,685	3,642,501
1930	3,626,807	293,533	351,989	226,721	4,499,140
1932†	4,788,000	331,000	678,000	467,000	6,264,000
1934	3,592,748	260,289	615,647	338,184	4,806,868
1935	4,236,752	321,510	639,808	482,634	5,680,704
1936‡	4,774,457	270,336	733,413	661,470	6,439,676
1937	4,249,895	239,324	430,523	329,718	5,249,460
1938	4,556,876	260,869	798,065	640,910	6,256,720



* In the classification of sheep there are marked differences at each census. This is owing to the farmer's confusing his woolled with his non-woolled sheep.

† Estimate by the Department of Agriculture and Forestry as at 30th June.

‡ Amended figures. Numbers enumerated for the towns in 1936 added instead of those enumerated in 1926.

(iv) *World Sheep Population.*—The following table is based on data published by the Imperial Economic Committee.

Of the total number of about 736 million sheep in the world over 39 per cent. are in the Southern Hemisphere; 65 per cent. of these are in Australia, New Zealand, and the Union of South Africa. About 47 per cent. of the sheep population of these three countries are merino sheep.

NUMBER OF SHEEP IN VARIOUS COUNTRIES, 1937.*

* Where 1937 figures are not procurable, the latest available figures have been interpolated.

(v) *Wool.*—(a) *Union Production.*—Almost the whole of the wool clip is shipped overseas, and the export returns therefore reflect practically the total production of the country. Details will be found in Chapter XXIV.

The following table gives the production of wool as returned at the agricultural censuses for certain census years up to 1937-38.

PRODUCTION OF WOOL—CERTAIN AGRICULTURAL CENSUSES, 1920-21 TO 1937-38.

Year.	Cape of Good Hope.	Natal.	Transvaal.	Orange Free State.	Union.
	lb.	lb.	lb.	lb.	lb.
1920–21	66,833,137	5,909,932	15,812,392	47,373,558	135,929,019
1925–26	91,256,894	7,191,117	17,759,762	51,713,737	167,921,510
1929–30	133,163,303	11,919,837	27,823,893	76,535,029	249,442,062

1936–37	133,779,495	9,037,849	20,374,330	55,909,309	219,099,983
1937–38	129,822,803	8,188,107	19,315,110	50,577,416	207,903,436

NOTE.—The discrepancy between the production and the export figures (Chapter XXIV), plus the local consumption, is a phenomenon common also to Australia and America. The difference is apparently accounted for by wool pulled from slaughtered sheep and sheep which have died from disease, and also by wool shorn by speculators, figures in respect of which are not reflected in the production returns.

(b) *World Production.*—The table hereunder gives the estimated world production in each year for the years 1932-33 to 1937-38 classified under the headings Merino, Cross-bred, and Carpet Wool. The table is based for the most part on data compiled by the Imperial Economic Committee (World Production and Trade, 1937-38).

From the point of view of South Africa, which produces little but merino wool, the production figures for carpet wools, and also those for crossbreds below about 48's quality, are unimportant. The main merino wool-producing countries are Australia, South Africa, and the United States of America. These three countries contribute approximately 90 per cent. of the total world merino wool production. Australia alone produces about 57 per cent. of the total world merino wool production.

ESTIMATED WORLD WOOL PRODUCTION, 1932-33 TO 1937-38.

(vi) *The South African Wool Market.*—The majority of sheep-farmers forward their wool direct to wool-brokers at the coast, who sell on a commission basis. At all ports, the all-auction system of selling wool is now in vogue.

In 1938, the Government concluded the fifth payment Agreement with the German Reich for the 1938-39 season, according to which Germany undertook to buy wool in the Union to a maximum value of £3,700,000 during the period September, 1938, to August, 1939, the value of purchases made in Germany by Union importers during the same period to be off-set against such purchases of wool.

The quantity of wool exported in millions of pounds (grease equivalent) and the average export value per pound of grease wool in successive seasons since 1920-21 is shown below:—

WOOL EXPORTED AND THE AVERAGE EXPORT VALUE PER LB., 1920-21 TO 1937-38.

Season.	Quantity Exported.	Value per Pound.	Season.	Quantity Exported.	Value per Pound.

1938	3,433,965	1,100,951	981,547	40,562	5,557,025

* Figures amended to include the numbers enumerated in the towns in 1936 instead of those enumerated in 1926.

(ii) *The Angora Goat.*—In 1838 twelve rams and one ewe were imported, but the rams were said to have been rendered impotent before they left Angora, and only one male born en route proved perfect. A second importation was made in 1856, followed by others in 1857, 1860, 1868, 1870, 1871, 1880, and 1897. So much intelligent care was bestowed on the breeding of Angoras that in 1891 there were approximately 3,000,000 in the country, and some of the specimens were regarded as superior to any goats produced in Turkey.

During the post-war decade the high prices realized for wool, as compared with mohair, served to hasten the displacement of Angoras by woolled sheep, while in 1929-30 a slump in the demand for mohair set in and the commodity actually became unsaleable at times. The continued depression and drought resulted in a decrease in the number of Angora goats in the country to a record low level in 1936. During the 1935-36 season there was a recovery in demand for mohair, prices appreciated sharply, and all old stocks were cleared. Since then prices have remained steady, and the industry is in a comparatively flourishing state again.

(iii) *Production of Mohair.*—As in the case of wool, practically all mohair is shipped overseas, and the export returns may be taken as substantially indicating the production of this article. Details will be found in Chapter XXIV.

The following table shows the production of mohair as returned at the agricultural census of 1917-18 and at certain annual censuses from 1920-21 to 1929-30, when the agricultural census was suspended. Annual censuses of agricultural production were resumed as from the year 1934.

PRODUCTION OF MOHAIR—CERTAIN AGRICULTURAL CENSUSES, 1917-18 TO 1937-38.

Year.	Cape of Good Hope.	Natal.	Transvaal.	Orange Free State.	Union.
	lb.	lb.	lb.	lb.	lb.
1917-18	9,614,100	136,900	211,500	422,600	10,385,100
1920-21	7,905,206	93,004	117,556	332,784	8,448,550
1925-26	7,602,001	52,015	43,620	181,907	7,879,633
1929-30	6,803,193	49,907	29,431	136,551	7,019,082

1935-36	3,368,662	20,730	6,567	87,561	3,483,520
1936-37	3,117,161	16,957	4,947	86,011	3,225,076
1937-38	3,140,177	18,024	2,815	72,702	3,233,718

(iv) *Trade in and Marketing of Mohair.*—The Cape Province produces nearly all the mohair marketed in the Union. Unlike wool, however, mohair is not offered and sold by public auction, but is disposed of entirely by private treaty. Over 90 per cent. of the mohair produced is marketed through Port Elizabeth.

The quantity of mohair exported and the average export value per pound of mohair in successive years since 1925 is shown below:—

EXPORT OF MOHAIR AND VALUE PER POUND,* 1925 TO 1938.

Year.	Quantity Exported.	Value per Pound.*	Year.	Quantity Exported.	Value per Pound.*
	1,000 lb.	d.		1,000 lb.	d
1925	11,560	17·4	1932	6,435	3·6
1926	11,141	16·0	1933	15,743	5·0
1927	10,681	18·2	1934	6,478	6·6
1928	7,704	22·6	1935	10,637	8·2
1929	10,038	15·4	1936	6,342	16·5
1930	6,874	10·3	1937	4,561	25·1
1931	5,500	7·5	1938	5,111	16·6

* This represents the value at the ports and is therefore expressed in South African currency at the date of sale.

(v) *The South African Goat.*—South African goats are bred principally in the dry Karroo districts to the north and north-west of the Cape Province, in the various native areas, and in the bush country where sheep do not thrive. These goats are hardy animals, grow to a considerable size, and multiply rapidly: hence they are the most profitable stock which can be raised in districts where there is a demand for goats for slaughter purposes.

(vi) *Export of Goat Skins.*—Practically all the goat skins available for sale are exported overseas. The number and weight of Angora goat and other goat skins exported from 1934 to 1938 are shown in the following table:—

EXPORT OF GOAT SKINS, 1934 TO 1938.

Pig and Bacon Industry.—(i) *Number of Pigs.*—Particulars are given hereunder as to the number of pigs. The agricultural censuses taken in 1930 and in subsequent years did not include the towns. Pigs in native locations in 1934 to 1936, and those owned by natives on European farms in 1935 and 1936, were not enumerated. Estimates based on the previous census for these areas and classes have been added where necessary for convenience of comparison.

NUMBER OF PIGS, 1904 TO 1938.

Year.	Cape of Good Hope.	Natal.	Transvaal.	Orange Free State.	Union.
1904	385,945	75,887	155,843	61,409	679,084
1911	505,730	110,332	302,882	162,656	1,081,600
1921	448,166	120,989	249,063	96,551	914,769
1926	405,538	124,401	268,251	132,639	930,829
1930	442,189	110,600	296,297	113,683	962,769
1934	405,884	94,534	259,312	90,313	850,043
1935	422,372	108,655	298,468	135,511	965,006
1936*	460,395	116,525	328,838	171,048	1,076,806
1937	453,209	120,189	316,642	146,720	1,036,760
1938	434,452	110,455	289,297	113,722	947,926

* Amended figures. Numbers enumerated in towns in 1936 added instead of those enumerated in 1926.

(ii) *Present Position of the Industry.*—Owing to systematic breeding and feeding and improvement in management generally, the standard of bacon pig produced has been appreciably raised during recent years. The facilities provided under the present ocean mail contract for the free conveyance of pedigree stock have been the means of increasing the importation of pigs. With a view to putting the pig industry on a sound basis, the Government is now contemplating placing the industry under the provisions of the *Live Stock and Meat Industries Act* of 1934 and the *Marketing Act*, No. 26 of 1937.

The following tables give particulars as to the production, imports, and exports of bacon, ham, and lard:—

(a) BACON, HAM, AND LARD—PRODUCTION, 1917-18 TO 1937-38.

* Amended figure.

Of the imported breeds, *Large Blacks* are still produced in the largest numbers, followed by *Large Whites*, *Berkshires*, *Middle Whites*, and *Tamworths*. With a view to improving the quality of bacon produced, experiments in breeding and feeding have been carried out by the Department of Agriculture and Forestry, and up to the present the following breeds and crosses have proved the most satisfactory for the production of lean sizeable bacon, provided careful attention is paid to proper feeding, viz.:—

(*a*) Large White Boar crossed with Large Black Sows.
(*b*) Tamworth Boar crossed with Large Black Sows.
(*c*) Large White.
(*d*) Tamworth.

The registration of all pedigree pigs is performed by the Pig Breeders' Society of South Africa. Advice and literature are given gratis on application to the Secretary, P.O. Box 703, Capetown.

9. **Ostrich Farming.**—Ostrich farming is no longer an important industry in the Union. With a change in women's fashions the demand for good feathers has almost disappeared.

The following table shows the number of ostriches at the dates specified. The ostriches in urban areas as enumerated at the 1921 and 1926 censuses have been included in the figures for 1924 and 1930, respectively, owing to the fact that the censuses for these years did not include the towns. Ostriches were not enumerated for towns and villages proper at the 1936 urban live stock census, and owing to the rapid decline of the ostrich feather industry no allowance was made for the number of ostriches in these areas in 1937, as the number would be negligible.

NUMBER OF OSTRICHES, 1904 TO 1937.*

Year.	Cape of Good Hope.	Natal.	Transvaal.	Orange Free State.	Union.

1937 (31st August)‡.....	39,082	66	665	452	40,265

* Ostriches were not enumerated at the Censuses of 1927 to 1929, 1934 to 1936, and 1938.
† A table classifying the various types of ostriches in the Union at the 30th April, 1921, is given in the sixth issue of this *Year Book*.
‡ Europeans only.

A table showing the quantity and value of ostrich feathers exported from the Union will be found in Chapter XXIV.

10. **Poultry.**—During the past three decades poultry keeping has developed enormously in South Africa, and, with the establishment and existence of co-operative egg circles in three provinces of the Union, the marketing of poultry produce has been facilitated. Now that eggs and dressed table poultry are included under the National Mark Scheme, it is anticipated that local marketing will also improve for producers.

The plentiful season in South Africa coincides with the period of scarcity in Europe. Eggs exported during that season therefore find a fair market overseas. The first export took place in 1914, when 1,927 cases, each containing 30 dozen eggs, were exported to London. In 1938, 89,981 cases were exported. In 1922 a levy of 9d. per case was placed upon all eggs exported from the Union, the proceeds being devoted to the development of the industry.

A breeders' register of birds of proved standard requirements and egg production has been in existence since 1928, and this has gone far to imbue farmers with confidence in so far as the purchasing of stock birds is concerned.

The table poultry section of the industry is also growing in importance and the supply of quality birds does not yet meet the demand. Export regulations providing for the inspection of liquid eggs and table poultry are now also being enforced.

Two well-organized egg-laying tests are run by the Department of Agriculture and Forestry, accommodation for 1,100 birds being available. Another egg-laying test is run by the Eastern Province Agricultural Society at Port Elizabeth. Short and special courses are arranged for prospective poultry farmers at the five colleges of agriculture.

In addition to research work on poultry diseases done by the Division of Veterinary Services at Onderstepoort, the Division of Agricultural Education and Extension has started a poultry research station at the Agricultural College, Potchefstroom.

A voluntary scheme for testing breeding stock for bacillary white diarrhoea has been inaugurated by the Division of Veterinary Services and is meeting with ready response from breeders.

The following table gives particulars of the poultry owned by Europeans, as ascertained at the censuses of 1930 and 1937. The 1926 and 1936 figures for towns and villages were used for 1930 and 1937 respectively for purposes of comparison. The total number of native-owned poultry in 1937 was 4,757,749.

NUMBER OF POULTRY, 31st AUGUST, 1930 AND 1937 (EUROPEANS ONLY).

11. **Bees.**—The Government has two officials on its professional staff, whose special duty it is to give advice on matters concerning bee-keeping, and instruction in apiculture is also given at the government agricultural colleges. With the object of minimizing the risk of introducing disease, the Union, in common with Rhodesia and Portuguese East Africa, prohibits the importation of honey, and reserves to the Government exclusively the right to import bees. The importation of beeswax and foundation comb is allowed only under special permit, and is conditional on the subjection of the wax to prolonged heating. Until the latter part of 1917 South Africa was supposed to be free of infectious bee brood diseases. European foul brood and sac brood have, however, since become recognized in all four provinces, but under systematic management they do not cause serious losses. In general these diseases escape the observation of the owners of the infected colonies. American foul brood and Acarine disease (the so-called Isle of Wight Disease), two very serious diseases in other countries, have never been found in South Africa.

In 1930 and 1936 the Department of Agriculture and Forestry imported from the United States of America a docile Italian strain of bees for local queen-rearing. Queens from this strain are sold to beekeepers in South Africa. In 1939 another shipment of Italian queen bees arrived from the United States of America.

The following table gives particulars as to the number of beehives and the production of honey for certain years. Except for 1911, however, the figures do not represent the total number and production. In 1918 and 1921 particulars were not enumerated for natives in locations, reserves, etc. The figures for 1926, 1930, and 1937 exclude particulars as to natives on European-occupied farms, as well as natives in reserves, locations, etc., while in 1930 and 1937 particulars as to towns and villages were also not enumerated. For 1930, however, the figures for towns and villages as enumerated in 1926 were used again.

§ 3. Cereals.

1. **Winter Cereals.**—The growing of one or more of the winter cereal crops —wheat, oats, barley and rye—constitutes a part of the farming practice in most districts. In some districts oats, barley, and rye are grown simply as winter feed for stock; in others the production of grain forms the main line of farming. In the south-west Cape, the winter-rainfall area, practically all these small grains are grown during the rainy season; in the summer-rainfall area they are grown either under irrigation or under dry-land farming systems during the winter and spring, when little or no rain falls. The winter-rainfall area is more suited to the production of winter cereals, but nevertheless large quantities of these crops are produced in the summer-rainfall area, particularly in the Orange Free State.

Rust occasionally does considerable damage to both wheat and oat crops, but much improvement is being effected through the breeding of resistant strains.

The following table shows the average area of land reaped by Europeans for the different winter cereals each year:—

WINTER CEREALS—AVERAGE AREA REAPED—1933-34 TO 1937-38.

Crop.	Morgen.*	Per Cent. of Total Winter Cereal Area.
Wheat....	821,778	71·6
Oats....	237,419	20·7
Rye....	54,460	4·7
Barley....	34,925	3·0
TOTAL....	1,148,582	100·0

* 1 morgen = 2·1165 acres.

2. **Wheat.**—The most important wheat-growing districts are situated in the south-west Cape. In Malmesbury, Piquetberg, and Caledon districts practically all the available land is devoted to the cultivation of cereals. In the north-eastern Cape and in the eastern Orange Free State wheat fits into the farming system as a winter dry-land crop; in these areas the cost of production is generally lower than in the south-west Cape, but the crop is less certain. A considerable quantity of wheat is produced under irrigation in the Transvaal and in certain part of the Cape Province outside the south-west Cape; a limited quantity of wheat is also grown under irrigation in the Orange Free State. Over the greater part of the Union sowing commences in April and continues until June and harvesting takes place from October to December.

The main varieties grown are as follows:—

South-west Cape.—Pilgrim, Sterling, Vondeling, Spring Early, Farratoon, Beltista, Kenya Governor.

Rest of Cape.—Red Egyptian, Wolkoring, Oubaard, Mains Patent, and a miscellaneous assortment of others.

Orange Free State.— Red Egyptian, Rooi Llama, Bontaar, Scheepers, and a miscellaneous assortment of others.

Transvaal.—Lalkasarwali, Rooi Kleinkoring, Baard Indië, Kruger, Red Egyptian.

During the last few years, wheat-growing has developed considerably, owing to favourable weather conditions and abnormal economic conditions, including the policy of wheat protection. The increase in production has been due partly to the cultivation of new land, and partly to the replacement of other grains by wheat.

A special analysis, based on the 1934-35 Agricultural Census, was made of all the returns showing wheat produced by Europeans and revealed that out of 31,212 returns there were 15,057 with under 40 bags each, 6,902 with from 50 to 99 bags each, 6,589 with from 100 to 499 bags each, 1,660 with from 500 to 999 bags each, and 1,004 each with 1,000 bags and over. For further details of this analysis see *Year Book* No. 18, page 756. A similar analysis based on the 1937-38 Agricultural Census is given below.

The confused f.a.q. (fair average quality) marketing system of past years has now been replaced by a sound, clearly-defined grading system. The grades are simple and in large measure reflect the millers' requirements. The introduction of this grading system has been the direct result of large scale co-operative marketing.

The price of wheat in South Africa is determined chiefly by the size of the crop and the stabilizing measures of the Wheat Control Board. The price is thus to a certain extent artificial, and is little influenced by the price at which wheat can be imported. The importation is carefully regulated by means of special permits, and the entry of only limited quantities of high quality wheat for blending purposes is allowed.

The following tables show (i) the area reaped for wheat by Europeans in the different provinces in 1936-37 and 1937-38; and (ii) the number of returns showing wheat produced during 1937-38, classified according to the number of bags obtained. The reason for combining some of the classification headings in table (ii) below is that for certain individual categories there are fewer than four returns, and four returns is the minimum for which the Census Office may publish information.

3. **Oats.**—The bulk of the oat crop is grown for grain, but in certain districts of the Cape large quantities of oat hay are grown for feeding to mules and horses. The value of oats as a winter grazing crop is becoming more generally recognized, and increasing areas are being sown to oats for this purpose. A small proportion of the oat grain crop is used annually for the manufacture of breakfast foods, but the bulk is used in various forms as stock feed.

The main varieties sown are Algerian, Jongensklip, and Langgewens for grain and hay, and Sunrise and Bassonhawer for grazing. A special analysis, based on the 1935-36 Agricultural Census, was made of all returns showing oats produced by Europeans, and revealed that out of the 19,600 returns there were 7,522 with areas sown of under 5 morgen each, 3,661 with from 5 to under 10 morgen each, 3,397 with from 10 to under 20 morgen each, 1,620 with from 20 to under 30 morgen each, and 3,400 with 30 morgen and over per return. For further details of this analysis see *Year Book* No. 19, page 749.

The following tables show (i) the area reaped for oats by Europeans in the four provinces in 1936-1937 and 1937-38, and (ii) the production of oats from 1903-04 to 1937-38. From 1929-30 the figures relate to the European production only, that is, the production by natives on European-occupied farms and in locations, reserves, etc., was not enumerated. Natives on European-occupied farms produced 1,261,950 lb. during 1925-26, while natives in locations, reserves, etc., produced 2,152,650 lb. and 1,095,000 lb. during 1920-21 and 1925-26, respectively.

Details of the exports of oats will be found in Chapter XXIV.

4. **Rye.**—Rye is the least important crop of the winter cereals. A fair percentage of the area sown is grazed off by stock, and it is used as a grazing crop more commonly in the north-west Cape Province and eastern Orange Free State than in the south-west Cape Province.

Rye for grain is grown chiefly on the poorer soils of the south-west Cape Province and on the more sandy regions in the north-western corner of the winter-rainfall area. The yield obtained from rye is lower than that from the other cereals.

Early Cape Rye is almost the only variety grown for grain, but in the north-eastern Cape it has been supplanted for grazing purposes by Stooling Rye.

The following tables show (i) the area reaped for rye by Europeans in 1936-37 and 1937-38, and (ii) the production of rye from 1903-04 to 1937-38.

5. Barley.—Although barley cannot be classed as one of the major crops of the Union such as maize and wheat, it is nevertheless a very important crop in many parts of the country. In some districts barley is grown purely as a grain crop, in others considerable quantities of green barley are produced for soiling purposes. In certain areas barley is grown for grazing purposes and it may also be used as a green manure. In a few dry districts in the Cape, namely Worcester, Robertson, Ladismith, and Van Rhynsdorp (Klawer), and in the Transvaal districts of Lydenburg and Zoutpansberg, high quality barley is produced under irrigation for malting purposes.

The main varieties grown are Cape Six Row for grain (both malting and feed grain) and for grazing, and Cape Early barley and barley wheat (bearded and beardless) for green feed purposes.

The following tables show (i) the area of land reaped for barley by Europeans in 1936-37 and 1937-38, and (ii) the production for certain years:—

6. The Sorghums.—*Kaffir-corn* is the term most generally applied in the Union to these crops, but *sorghums* is the more correct, including as it does the *grain sorghums* (kaffir-corns), the *forage* or *sweet sorghums*, and *broom-corn*.

(i) *Kaffir-Corns.*—The term *kaffir-corn* as applied in the Union includes the true *kaffir-corns*, the *milos*, *durras*, *kaoliang*, *feterita*, *hegari*, and several others. The kaffir-corns are indigenous to Africa, and comprise a large range of red, white, and pink varieties, as well as the varieties obtained by selection from these in other countries.

The red and white kaffir-corns have long been used by the natives in South Africa as a food and also in the preparation of an alcoholic drink. In a prepared form, and as a cattle and poultry feed, their use is being extended both in South Africa and in Europe. As forage and grain crops for areas where maize cannot be profitably grown, they should be more widely cultivated than they are at present. Yields of kaffir-corn are equal to or somewhat inferior to those of maize, but in adapted areas kaffir-corn will outyield maize.

(ii) *Forage or Sweet Sorghums.*—The sweet sorghums, like the grain sorghums, are extremely well adapted to semi-arid conditions, being drought-resistant and able to resume growth and yield well after long, hot, dry spells. The natives, especially in Natal and Zululand, grow many types, mainly for human consumption.

(iii) *Broomcorn.*—This is a type of sorghum with a pithy stalk and a long, loose-branched head. Broomcorn, of which there are two main types, the standard or tall and the dwarf, is also drought-resistant. It is grown for the heads, which are harvested while green and sold after curing for broom and brush-making purposes.

The following tables show (*a*) the area under kaffir-corn reaped by Europeans in 1936-37 and 1937-38, and (*b*) the production of kaffir-corn from 1903-04 to 1937-38:—

7.—**Maize.**—Maize is one of the agricultural mainstays of the country. Considerable quantities of maize are exported overseas annually, and the high quality of maize produced in the Union is well known to maize-importing countries. The development of maize growing is shown by the fact that the total production, which in 1904 amounted to 361,169 tons, was over 2,400,000 tons in 1934. In 1937 it was 2,812,800 tons.

A special analysis, based on the 1934-35 Agricultural Census, was made of all the returns showing maize produced by Europeans, and revealed that out of 55,963 returns there were 30,039 with under 100 bags each, 17,442 with from 100 to 499 bags each, 4,949 with from 500 to 999 bags each, and 3,533 each with 1,000 bags and over. For further details of this analysis see *Year Book* No. 18, page 762. A similar analysis was made for the period 1937-38 and a table giving details will be found below.

The principal maize-growing area in the Transvaal extends from Ermelo in the east to Lichtenburg in the west, southwards to the Vaal River, and north of a line drawn between Middelburg and Rustenburg. Outside this region small maize areas have been developed in the Waterberg and the Zoutpansberg. The Orange Free State, where the heaviest crop per square mile is grown, is, with the exception of the south-western portion, particularly suitable to maize production. The most fruitful maize fields of Natal are situated in the midlands, at an elevation of from 2,000 to 3,000 feet. Yields of fifteen bags per acre are often obtained in this area. Much of the Cape Province is unsuited to the growing of maize. In the Transkei and adjoining districts, however, the conditions are favourable, and considerable development has taken place. The central portion of the High Veld, comprising the districts of Heidelberg, Bethal, Standerton, Frankfort, and Heilbron, is at present the most productive area in the Union. The acreage under maize here is very extensive, and good crops are grown, which produce from ten to fifteen bags per acre. The maize zone in South Africa may be said to possess two distinct and valuable advantages over the famous "corn" belt of the United States. The growing season is longer by from four to seven weeks, and this adds considerably to the length of the planting season. Again, the drier atmospheric conditions in the Union produce a grain with a lower moisture-content; and this grain, thereby less liable to injury during transit, is more suitable for export, as well as for manufacturing purposes. The rainfall is generally sufficient if the soil is well cultivated, and the soil itself is of good quality throughout and excellent in parts. Labour is fairly plentiful and cheap. A well-appointed system of grain inspection and testing at shipping points has been established, and every endeavour is made to maintain a regular and cheap overseas service for the export trade of the country.

South African maize is marketed overseas on a "Government Certificate Final" basis, and these certificates are accepted by the overseas corn trade associations. All South African maize and maize products are graded at the ports or at inland centres by government graders. For maize there are eight grades, but the bulk of the grain exported falls into the grades No. 2 white flat and No. 6 round yellow.

The *Mealie Control Act*, 1931, which provided for the compulsory export of the export quota percentage, has been superseded by the Mealie Control Scheme established in terms of the *Marketing Act*, 1937. Export of the surplus is left to voluntary and private initiative. The export is, however, financed by the Mealie Industry Control Board from a levy imposed on the purchase of mealies from the producers. These moneys are used by the Board to increase the producers' prices above export parity, the export machinery being

used for this purpose. The Board rebates the levy to exporters and also refunds to them the additional expenditure which they were required to incur as a result of the Board's price policy.

The following tables give particulars regarding the production, importation, consumption, and export of maize and maize products:—

8. **Grain Elevators.**—Reports on the investigations leading to the establishment of the grain elevator system are contained in Blue Books U.G. No. 38, 1918 (Elevator Committee's Report) and U.G. No. 3, 1920 (Consulting Engineer's Report).

The system was inaugurated in August, 1924, and was placed under the control of the Railways and Harbours Administration. Country elevators are established at the principal dispatching stations in the grain belts and large terminal elevators at the ports. The following is a list showing the location and capacity in tons of 2,000 lb. of the elevators:—

GRAIN ELEVATOR SYSTEM.

Station.	Storage Capacity.	Station.	Storage Capacity.	Station.	Storage Capacity.
Port Terminal Elevators.	Tons.		Tons.		Tons.
Durban	42,000	Kinross	4,000	Potchefstroom	2,600
Capetown	30,000	Senekal	4,000	Leslie	2,600
		Rendezvous	4,000	Plenaars River	2,200
Country Elevators.		Lindley Road	4,000	Hennenman	1,800
		Balfour	3,000	Kaallaagte	1,800
Frankfort	5,800	Clocolan	3,000	Koster	1,800
Heilbron	5,800	Ventersdorp	3,000	Leeuwdoornstad	1,800
Klerksdorp	5,800	Vermaas	3,000	Maquassi	1,800
Heltz	5,800	Vrede	3,000	Val	1,800
Bethal	4,800	Coligny	2,600	Westminster	1,800
Bethlehem	4,800	Ficksburg	2,600	Davel	1,800
Kroonstad	4,800	Middelburg (T.)	2,600	Standerton	1,800
Bothaville	4,000	Makokskraal	2,600	Settlers	1,750
		Moorreesburg	2,600		

This system affords an aggregate storage accommodation of 72,000 tons at the port elevators and 110,950 tons at the country elevators, or a grand total storage capacity of 182,950 tons.

The functions of the elevator system are confined to grading, weighing, cleaning, storing, and handling the grain. The elevator authorities do not buy or sell grain. When the farmer deposits his grain in the elevator, he receives in exchange a negotiable elevator receipt, which is issued in terms of the *Agricultural Warehouse Act*, 1930 (Act No. 42 of 1930), and on which are inscribed the weight, description, and grade of the grain. The elevator authorities insure the grain against all losses of whatsoever description whilst in the elevator system, and undertake to deliver, on presentation of the elevator

receipt, the exact weight and grade inscribed thereon. A deduction of 1 per cent. to cover wastage and loss of weight is made at the time the grain is placed in the elevator system. The elevator receipts are recognized by the banks as first-class security, on which they advance loans. Buying and selling of grain under the elevator system is done entirely through the medium of the elevator receipts.

The total capital expenditure on the grain elevator system to 31st March, 1938, amounted to £2,559,267, of which £1,069,330 had been spent on the construction of the country elevators and the balance, £1,489,937 on the port elevators at Durban and Capetown.

9. **Grain Grading Regulations.**—The regulations governing the grading of grain and grain products for export and for elevator purposes are contained in Government Proclamation No. 103 of 1932. A tabular statement showing the classification of the grading in respect of both maize and kaffir-corn was published in *Official Year Book* No. 14.

10. **Elevator Operations and Maize Yield.**—The tonnage of maize dealt with through the elevators and details of export and local consumption deliveries since the inception of the system are as follows:—

ELEVATOR OPERATIONS, 1924-25 TO 1937-38.

Elevator Season (Year ending 30th June).	Exported.	Local Consumption.	Total Deliveries.
	Tons.	Tons.	Tons.
1924-25 (Crop Year 1923-24)	45,040	30,439	75,479

1931-32 (,, 1930-31)	220,996	155,976	376,972
1932-33 (,, 1931-32)	311,826	170,574	482,400
1933-34 (,, 1932-33)	—	128,000	128,000
1934-35 (,, 1933-34)	501,090	25,376	526,466
1935-36 (,, 1934-35)	249,835	126,841	376,676
1936-37 (,, 1935-36)	34,932	108,446	143,378
1937-38 (,, 1936-37)	753,867	94,443	848,310
AVERAGE, 1924-38	275,871	96,015	371,886

The production of maize for 1936-37 (1937-38 elevator season) amounted to 28,178,439 bags, the highest on record, and represents an increase of nearly four million bags compared with the previous record attained in 1924-25 (elevator season 1925-26). The increased production in 1936-37 resulted in a record tonnage turnover of 848,310 tons in the elevator for the 1937-38 elevator season, as compared with the previous record of 571,178 tons for the 1930-31 season. The 753,867 tons exported is also a record for elevator working, as it exceeds the previous highest export tonnage in the 1934-35 season by over 252,700 tons.

Special facilities were provided during the 1930-31 season for the handling and storage of wheat in the elevators under a grading system, and for the year ended 31st October, 1931, the quantity of wheat deposited in the elevators amounted to approximately 175,000 bags. During the 1931-32 season the elevators were more extensively used for wheat, the total quantity deposited up to the 31st October, 1932, amounting to nearly 871,500 bags. The increased tonnage handled is attributed to the increased production of wheat, together with the concessions made in the elevator storage tariffs and the improved facilities provided. During the 1932-33, 1933-34, 1934-35, 1935-36, 1936-37, and 1937-38 seasons the total quantities deposited amounted to 254,480 bags, 173,020 bags, 261,560 bags, 777,260 bags, 162,240 bags, and 47,470 bags, respectively.

The working of the grain elevators since their inception in 1924-25 up to and including the financial year ended the 31st March, 1938, resulted in a net loss to the Administration of £426,856.

The financial results of each year's operations are as follows:—

	Loss.	*Profit.*
	£	£
1924–25	75,755	—

* Not enumerated for natives on European farms, in reserves, locations, etc.
† Not enumerated.

2. **Lucerne** (*Medicago Sativa*).—Lucerne is a perennial legume and has the advantage over annual leguminous hay crops of producing satisfactory yields for a number of years. Under satisfactory soil and climatic conditions the yield of lucerne is superior to that obtained from most other hay crops, and a good stand of lucerne may last fully 20 years or more. The principal varieties in the Union are Cape Provence, Chinese, and Hunters River.

Lucerne is grown practically throughout the Union, but as a crop of any importance it is found mostly in the arid and semi-arid areas where irrigation is practised. On practically every farm in the Karroo is to be found a field of lucerne, the size of which depends upon the irrigable land available.

On a commercial scale lucerne is grown principally on the several large irrigation schemes, viz. at Oudtshoorn, and along the Orange River, Fish River, and Sundays River.

A fair demand for lucerne in the form of meal for poultry feeding has arisen in European countries, and mills for the production of this meal have been erected in various parts of the country. Lucerne seed, lucerne hay, and lucerne meal must conform to standard government grades before export is permitted.

The following table gives particulars of the area under lucerne in 1936-37 and 1937-38:—

AREA UNDER LUCERNE, 1936-37 AND 1937-38.

Province.	1936–37.		1937–38.	
	Area in Morgen.	Percentage of Total Area.	Area in Morgen.	Percentage of Total Area.
		%		%

Natal	1,383	1·3	1,541	1·3
Transvaal	5,029	4·9	6,009	5·2
Orange Free State	8,975	8·8	10,043	8·7
TOTAL	102,392	100·0	115,863	100·0

1 Morgen = 2·1165 Acres.

3. **Teff** [*Eragrostis tef* (Zucc.) Trotter].—Teff is one of the staple cereal food crops of Abyssinia (of which it probably is a native) and was first introduced into Natal fifty years ago. As a hay crop the grass is most extensively grown, particularly in the Transvaal.

It is a quick-growing summer annual which under favourable conditions grows up to 4 feet. It is not grown to any extent in areas of low rainfall, being more drought-evading than drought-resistant. Neither is it grown under high rainfall conditions, where it is subject to lodging. The areas to which it is well adapted are the Transvaal Highveld, the north-eastern Orange Free State, the north-eastern Cape Province, and the Natal uplands.

Owing to fineness of stem and leaf it is easily cured: it is very palatable, and is readily eaten by stock, but its feeding value is not very high. If sown early it may be cut two or three times, but if sown late only one cutting and an aftermath are obtained. Returns of 4-8 tons per morgen are not uncommon, but the average yield is well below this figure.

The Pretoria University has been responsible for the introduction of seed samples from Abyssinia in recent years, and superior strains are being bred from these.

4. **Agricultural Grasses.**—Experiments are being carried out by the Department of Agriculture and Forestry to determine the most suitable grasses for hay, pasture, ensilage, etc., under the various soil and climatic conditions of the Union. Marked improvements in productivity and range of adaptability have been achieved by breeding, and many grasses can be definitely recommended for certain purposes under certain conditions.

The grasses tested may be divided into two classes:—

(i) *Winter Grasses.*—These grasses make their best growth during the winter months and are calculated to supply under irrigation, or in moist or winter-rainfall areas, succulent green feed for stock during the dry months of the year. The most useful are Canary grass (*Phalaris tuberosa*), Brome grasses (*Bromus* spp.), Cocksfoot (*Dactylis glomerata*), Rye grasses (*Lolium* spp.), New Zealand Tall Fescue (*Festuca elatior*), and Wheat grasses

(*Agropyron* spp.), which have been introduced from Europe, America, Australia, or New Zealand. They are for the most part grasses that have been under cultivation in other countries for many years and that can be reproduced from seed, which is easily obtainable. There are also a few promising indigenous grasses such as *Ehrharta calycina* and *Agrostis lachnantha*.

(ii) *Summer Grasses.*—These are grasses which remain dormant during the dry winter months and in this group South African indigenous grasses are unexcelled. In the drier areas, the best results have been obtained with the following: Finger grasses (*Digitaria* spp.), mostly stoloniferous perennials, which retain a high feeding value even in their dry winter condition; Droëland grass (*Cenchrus ciliaris*), a good dry land hay and pasture grass; various species of Panicum including Buffels grass, or Guinea grass (*P. maximum*), and Makarikari grass, both of which are useful for hay or grazing, the latter being particularly drought resistant. For moister areas or areas with fairly good rainfall the following are recommended: Kikuyu (*Pennisetum clandestinum*), a deep-rooted creeping grass that under favourable conditions forms a dense mat of succulent nutritious foliage; Napier fodder and Umfufu (*Pennisetum purpureum*), tall reed-like grasses with broad leaves, useful as wind-breaks or for ensilage, which give a very high yield per acre; Limpopo grass and Antelope grass (*Echinochloa pyramidalis*), reed-like grasses, less tall and coarse than Napier fodder, and good for hay and ensilage. Rhodes grass (*Chloris gayana*) and *Paspalum dilatatum* (a naturalized grass in moist localities throughout the Union) are useful for hay and pasture. There are also some promising species of *Setaria*, *Brachiaria*, *Urochloa*, etc., which are at present under investigation.

5. **Drought-hardy Plants.**—*Spineless Cactus, American Aloe, and Salt Bush.*—The best means of reducing stock losses during periods of drought is to conserve fodder during the times of plenty for use during the lean years. In some areas so little water is available for growing cultivated crops that the drought problem is a most difficult one. Fortunately there are certain drought-hardy plants that will thrive even during the most protracted droughts. Such drought-hardy plants are the cactus group, the American aloe, and the varieties of salt bush. Not only do these plants withstand drought, but they will thrive on most soils, while the salt bush flourishes on land too "brak" for ordinary crops. These plants remain green and succulent in the winter and in long protracted droughts, with the result that they can be made to furnish a very essential part of the animal's diet. They are also palatable and easily established.

The leaves of the spineless cactus and suckers from the aloe are planted out in rows in the early spring. In three or four years the spineless cactus will yield annually a crop of leaves of some 30 to 60 tons per acre, and in six or seven years the aloe will provide about the same returns. The salt bush (Old Man variety) should be planted in seed-beds in August and later, and about March transplanted into the permanent plantation. A plantation of this kind will furnish excellent grazing for all classes of stock for three or four seasons.

6. **The Millets.**—The millets or manna are relatively quick-maturing summer annuals that thrive in hot areas. They are very drought-hardy and can be grown successfully on rather unproductive soils. There are several types of millets, the chief being the *Foxtail*; others are the *Japanese Barnyard* and the *Pearl* millets. These crops are used largely for the production of hay, where a quick-maturing summer catch-crop is required. The hay is inferior in quality to teff and is not to be recommended for horses as a sole diet, as millet hay causes disorders known as millet fever. The *Pearl* millet is rather a coarse late-maturing variety that is used for the production of grain (chiefly for poultry feed and for beer making by the natives) as well as for hay.

7. **Silage.**—In many parts of South Africa conditions are such that stock for a great part of the year cannot obtain the desired amount of natural green feed, so that the farmer has to provide for it by some other means. This may be done by the growing of fodder crops and feeding them off to stock green from the land, or the preservation of suitable crops in a succulent form by protecting them from the air. The product obtained by this latter process is known as ensilage, or more commonly silage.

Although the majority of commonly cultivated plants have given satisfactory results in experimental trials, practice has shown that maize is the silage-crop *par excellence*; and the value of the silage is increased if the maize is mixed with a leguminous crop in the proportion of two of the former to one of the latter. In the latter case it is to be recommended that the maize be drilled and the other crop sown among the young maize plants. Velvet beans or cow peas serve this purpose well. The two crops should, however, not be sown together if general conditions, e.g. rainfall and soil fertility, are not such that big yields may be expected.

Great strides have been made in recent years in the utilization of lucerne and grass, as well as other legumes, for silage purposes. It has further become the practice to add molasses to leguminous crops at the time they are put into the silo with the object of augmenting the lactic and acetic acid content of the silage.

Lucerne silage produced under the new molasses method may be regarded as almost equal to green lucerne and has the advantage that it does not cause hoven. Molasses has been used successfully in making silage with all legumes and other green feeds, such as green winter cereals, young grass, and all other protein-rich crops.

§ 5. General Agricultural Crops (Non-Cereals).

1. **Miscellaneous.**—The following tables give particulars as to the cultivation and production of general agricultural crops. A special analysis based on the 1935-36 Agricultural Census was made of all returns showing potatoes produced by Europeans, and revealed that out of the 17,384 returns there were 11,250 with under 40 bags each, 2,716 with from 40 to under 100 bags each, 2,621 with from 100 to under 500 bags each, and 797 each with 500 bags and over. For further details of this analysis see *Year Book* No. 19, page 761.

† Not enumerated.

2. **Potatoes.**—The potato ranks as one of the leading crops of the Union. It is grown in most parts of the country, though production on a large scale is confined to more or less definite areas where the necessary climatic, soil, and marketing conditions obtain. In the Transvaal, the area of greatest production is found on the High Veld, which is situated in the region around Bethal, Middelburg, and Heidelberg. In the Low Veld to the north and east, the crop also finds favour under irrigation. In the Orange Free State, it is chiefly grown in the area extending from Thaba 'Nchu and Ladybrand to Harrismith, while potatoes are largely grown under irrigation in the neighbourhood of Petrusburg. The popularity of the crop in Natal increases from the coast northward, the best potato area extending into the eastern Transvaal. The Cape Province area of maximum production extends from the districts surrounding Capetown to beyond Cathcart, and is confined to the coastal belt. The areas where the crop is grown without irrigation are characterized by comparatively cool climate, rather light soil, and average annual rainfall ranging from about 25 in. to about 30 in., the major portion of which falls during the summer.

In 1924 the first Seed Potato Growers' Association was formed at Westminster in the Thaba 'Nchu district of the Orange Free State. Since then other associations have been formed at Underberg and Elandskop in Natal and at Knysna in the Cape Province. The Department of Agriculture and Forestry supplies government experts to inspect the growing crops and later the harvested tubers. The potatoes which attain the desired standard of excellence are sold as "certified seed" under the trade mark of the association, a certificate of guarantee being also furnished. *Up to date* is the variety grown by these associations.

3. **Beans.**—Beans grow well in most parts of the Union, but have not so far been grown in sufficient quantity for export. Experiments are being carried out to ascertain the varieties suitable for growth in the various parts. At present, beans of the dwarf varieties are largely raised for local consumption; these consist of the *Sugar*, *Haricot*, and *Butter* types. *Speckled* beans are largely grown for native trade, the *Haricot* type being more in demand for European consumption. The gold mines also furnish a large market for dried beans.

Soya beans are largely grown for their value as cattle-food in the form of ensilage or hay; they are also valuable for soil renovation and are used for this purpose. Suitably balanced with other ingredients, such as maize products, ground soya beans are exceelent feeding for dairy cows. The cake, which is a by-product in the production of soya bean oil, is also a very valuable concentrate. Good varieties for hay and ensilage are *Mammoth*, *American White*, and *Southern*. The principal commercial value of the bean is for oil extraction, and for this purpose the yellow seeded varieties such as *Mammoth* and *Chinese White* are among the most suitable.

In so far as human consumption of soya beans is concerned, some two years ago a satisfactory method was devised of treating the beans so as to render them palatable, and a meal is being produced which should prove to be of the greatest value in supplying a food rich in fats and proteins.

The lack of well adapted varieties, and the fact that on ripening most of the soya beans grown shattered their seeds badly, did much to limit production in South Africa in the past. Breeding work by the Division of Plant Industry has, however, resulted in the production of a variety which does not shatter and appears to be well suited to local conditions.

Other beans useful as soil renovators are *Mung*, *Velvet*, and *Dolichos*. The *Cowpea*, known in some parts of the Union as the *Kaffir Bean*, is very useful for stock-feeding and soil improvement; it is much used as a legume in the rotation of crops. The cowpea is unquestionably the most widely grown annual legume in the Union. It is fairly drought resistant and wherever grown is found to be well inoculated. This makes it a desirable crop to be grown in rotation with maize. Disadvantages of the crop are (i) the fact that it is of procumbent growth habit and is, therefore, difficult to harvest for hay, and (ii) its susceptibility to leaf spot diseases, which makes it an uncertain crop under very wet conditions. Investigation is at present being undertaken by the Division of Plant Industry with the object of breeding upright growing strains which will be resistant to the prevalent leaf diseases.

4. **Peanuts.**—The peanut, also known as the groundnut or monkey nut, is a sub-tropical to tropical legume. Production of peanuts is largely confined to the Springbok Flats area in the Potgietersrust and Waterberg districts. Other fairly important districts in the production of this crop are Pietersburg, Letaba, Zoutpansberg, and Pretoria. The natives have grown peanuts for many years, but it is only since 1914 or thereabout that its value as a nutritious hay crop and concentrate has been recognized by farmers. It is proving to be a valuable crop for the drier, warmer areas of the Transvaal, fitting very well into farming systems in these areas. The nuts are used in the preparation of products for human consumption and also as a source of high quality oil. The cake left over after the expressing of the oil forms a palatable high protein concentrate for cattle.

At the present time edible oils of high quality are manufactured in the Union. Peanuts, produced locally and imported, form the bulk of the raw materials for the factories. In general, the peanuts grown in the Union are of high quality and a great proportion of the local crop is utilized in the confectionery and edible nut trade. Government grades exist for peanuts for export.

5. **Chicory.**—Chicory is best adapted to deep well-drained soils that are not too sandy. It is cultivated as a summer crop in the Transvaal and as a winter or a summer crop in Alexandria in the Cape Province (where sowings are made in March or September and where excellent chicory is produced). The variety usually planted is the *Long Magdenburg*. This crop is at present marketed under a control scheme similar to that which has been brought into force through the control boards for wheat, maize, and other products.

§ 6. Vineyards and Fruit Cultivation.

1. **Viticulture.**—(i) *Introduction of Viticulture into South Africa.*—The vine was introduced into South Africa as early as 1655, three years after the landing of Van Riebeeck, and later the Governor, Van der Stel, encouraged

and helped viticulture as much as possible, importing vines from France, Germany, and Portugal. The French Huguenots, who came mostly from wine districts, adapted themselves naturally to the cultivation of the vine, and viticulture became one of the most important branches of agriculture in South Africa, especially in the Paarl and Stellenbosch districts, where the Huguenots mostly settled, and where viticulture still predominates over other agricultural pursuits. To-day vines are largely cultivated in the following districts named in order of production: Worcester, Paarl, Robertson, Stellenbosch, Montagu, Malmesbury, Tulbagh, Ceres, Cape, and Caledon. In many other districts vines are grown, but on a smaller scale. Sultanas are grown extensively along the lower Orange River under irrigation.

Early in the year 1886, Phylloxera was discovered in the Cape and Stellenbosch districts. The Government of the Cape of Good Hope made every effort to eradicate the disease, but without success. In 1892 resistant American stocks were imported, and about 90 per cent. of the vines of the Union are now grafted on such stocks.

The table hereunder gives particulars as to the extent of vineyards and the number of vines:—

VINEYARDS,* 1918 TO 1937.

* The natives have not as yet adopted this branch of farming.

(ii) *Government Aid for the Industry.*—About 1885 the Cape Government bought the farm *Groot Constantia* in the Cape Peninsula, for the purpose of carrying out experiments in viticulture and of educating farmers in improved methods of wine-making. One of the many resultant benefits was the raising of the standard of the country's light and sweet wines.

In 1910 the Government bought the small farm *Belle Vue* in the Paarl district as an experiment station for conducting tests in regard to the best grapes for both market and wine-making purposes. This station is of considerable assistance to viticulturists, as from it vines of many varieties are distributed over the Union, after their suitability as table or wine grapes has been studied.

The Stellenbosch-Elsenburg Agricultural College of the University of Stellenbosch to-day gives all the facilities required by viticulturists: it gives full courses as well as short courses in all viticultural and wine-making matters. The need for the Constantia Wine Farm has, therefore, disappeared.

In 1905 the Cape Government inaugurated a scheme of co-operative wineries by furnishing financial assistance in the shape of loans. Under this scheme nine co-operative wineries were established, where large quantities of wine of uniform quality could be made. At first these wineries failed to realize anticipations and several were closed down. The four existing co-operative wineries, viz., Helderberg (Stellenbosch), Drakenstein (Paarl), Bovlei (Wellington), and Drostdy (Tulbagh), are doing very well, and it is acknowledged that it would be beneficial to the industry if more co-operative wineries were established.

(iii) *Co-operative Association.*—Towards the end of 1917, owing to the depression in the wine market, the Ko-operatieve Wijnbouwers Vereniging van Zuid-Afrika, Beperkt, was formed. Over 95 per cent. of the wine farmers joined this association, and a board of directors, appointed by the members, now fixes yearly the prices for wine. Certain undertakings were entered into between the farmers and the merchants as to the disposal of the wines produced, but difficulties arose with regard to certain ambiguous clauses in the constitution, and this led to a subsequent reorganization of the association on a sound basis, so as to fall in line with Act No. 28 of 1922. The wine merchants thereupon resigned as members of the association.

In 1924 the *Wine and Spirits Control Act* (No. 5 of 1924) was passed, which gave the association absolute control over all wines declared by the producer as distilling wine, whether belonging to a member or a non-member. Every wine grower in the Cape Province renders to the association, on a certain date each year, a return of all wines, spirits, and brandy produced by him, and states what quantity he has for disposal for consumption as wine, and what quantity he has for sale as distilling wine. The price the farmer gets for distilling wine is fixed each year by the board of directors.

For every leaguer of wine sold by a member for distilling purposes, the association deducts ten shillings, and for every amount so deducted the member receives a share in the association. Furthermore, the merchant-distillers are required to pay to the association about twice as much for distilling wine as members receive.

The intention is to create a fund to be used by the association when necessary to deal with any surplus wine which may be on the market. The association buys these wines at the minimum price, and, after turning them into spirits, disposes of them outside the Union.

(iv) *Naming of Wines, Brandies, and Champagne.*—As a result of representations made by the French Government in 1935, the Union Government decided to prohibit, as from dates specified in Proclamation No. 895 of 1935, the use of certain French names in respect of wines, brandies, and champagne produced and sold within the Union. The full list of names appearing on the prohibited list is given in a schedule to the Proclamation.

(v) *Wine Commission.*—On the 23rd of July, 1935, the Governor-General appointed a commission under the chairmanship of Mr. H. W. Drew, with Messrs. A. Appleyard, P. P. du Toit, M.P., G. F. Malherbe, and S. F. Waterson, M.P., as members, to inquire into, and report on and make recommendations concerning, the viticultural industry. The terms of reference were:—

(1) The development of viticulture in the Union and the factors which influenced its expansion;

(2) the conditions at present prevailing in the viticultural industry with special reference to the disposal of the various products of the vine;

(3) the working and effects of the *Wine and Spirits Control Act*, 1924 (Act No. 5 of 1924), as amended by Act No. 17 of 1928;

(4) the advisability and practicability of the extension of the principle of statutory control to any or all of the products of the vine, more particularly quality wines, raisins, and sultanas, and, if considered advisable and practicable, what form such control shall take;

(5) any other matter pertaining to the products of the vine which the Commission may deem desirable to investigate.

The Commission's report was published in June, 1937 (U.G. No. 25, 1937), and certain of the recommendations are now under consideration.

(vi) *Branches of the Industry.*—Vines are grown in the Union to produce fresh fruit, wine, brandy, unfermented grape juice, raisins, and currants. For these purposes the undermentioned varieties of grapes are principally grown:—

Export and Table Grapes.—White and Red Hanepoot, Rosaki, Henab Turki, Prune de Cazouls, Barlinka, Barbarossa, Gros Colman, Alphonse Lavalle, Molinera Gorda, Ohanez, and some other less important varieties.

Wine-making.—Steen, Riesling Green Grape, White French, Hanepoot, Hermitage, Cabernet Sauvignon, Muscadel Red and White; these are grown on a large scale. Shiraz, Mataro, Merlot, Malbec, Kanaändruif, Clairette Blanche, and others are grown to a lesser extent.

Brandy.—All wine varieties, Folle Blanche, Colombard, St. Emilion.

Raisins and Currants.—Hanepoot, Sultana, Cape, and Zante Currants.

(vii) *Table Grapes.*—Large quantities of table grapes have of late years been exported, and this branch of the industry has developed into a flourishing trade.

(viii) *Wine, Brandy, and Vinegar.*—The Dutch introduced vines chiefly for the purpose of brandy-making, and wine-making was taken up on the arrival of the Huguenots in 1688. The natural conditions in South Africa led to the production of a heavy type of wine, as well as of sweet wines. German and Austrian experts engaged by the Cape Government advocated the making of light wines, but it is only during the last twenty years that this branch of the industry has progressed, and some excellent light wines are now produced.

In 1926 the Ko-operatieve Wijnbouwers Vereniging started exporting wines and it is to-day the biggest exporter. In order to safeguard the industry and ensure that the quality exported would be of a high standard, the Government brought a regulation into force in 1924, which stipulated that no wine should be exported unless a certificate is issued by the Government Viticulturist certifying that the wine is true to type, is sound, and in every other way conforms to the export regulations.

Table (*a*) below shows the quantity of wine, apart from distilling wine, made on farms during a series of years according to the returns of the Ko-operatieve Wijnbouwers Vereniging van Zuid-Afrika, Beperkt. Table (*b*) shows the quantity and value of wine exported and imported from the year 1910.

The brandy industry of South Africa is as old as the wine industry. Formerly only two kinds of brandy were recognized, viz., dop and wine brandy. Dop brandy was so known from the Dutch word *dop* (husk), which signified that the brandy was obtained from the distillation together of *doppe* and wine, or piquette. The distillation of husks and piquette mixed is now practically prohibited; a discriminating excise duty of 22s. 6d. per proof gallon is imposed. The brandy produced from the distillation of husks and wine mixed has taken the name of grape brandy, which is somewhat of a misnomer. On this brandy an excise duty of 17s. 6d. per proof gallon is levied, which means that it is practically out of the market, as the excise duty on pure wine brandy is considerably lower, i.e. 12s. 6d. per proof gallon.

It is laid down by Act No. 5 of 1924 that all brandies put on to the market for consumption from 1st June, 1928, must be a blend containing at least 25 per cent. three year old matured pot still brandy, which has been distilled and matured according to government regulations. The wine distilled must also be approved of. Perhaps in no other country is the distillation of husks so suppressed as in South Africa, and the Union adulteration laws with regard to both brandy and wine are stringent.

Table (*c*) hereunder gives particulars of the production, importation, exportation, and consumption of brandy in the Union from the year 1910:—

(*c*) BRANDY—PRODUCTION, IMPORTATION, EXPORTS, AND CONSUMPTION, 1910 TO 1938.

Year.	Production.*		Total Production.	Imports (less Re-exports).	Exports.	Various Uses.*	Consumption.

1938	3,641,467	133,315	3,774,782	20,831			

* As given in Excise Reports.

(ix) *Raisins and Currants.*—Both loose and stalk raisins are produced in the Union. The sultana produced is an excellent article, and has completely supplanted the imported commodity. The quantity and value of raisins, currants, and sultanas, the product of South Africa, exported overseas since 1934 are as follows:—

	lb.	£
1934	7,041,837	93,750
1935	9,308,141	123,247
1936	9,733,285	134,642
1937	13,552,805	205,865
1938	17,312,904	255,342

Exports to the Rhodesias and South West Africa are excluded from the foregoing figures. In 1938 exports to Southern Rhodesia amounted to 149,711 lb. with a declared value of £3,427.

In order to discourage the use of raisin grapes for wine-making purposes and thus diminish the wine surplus, the Co-operative Winegrowers' Association grants a subsidy of 1½d. per lb. on raisins or sultanas exported.

The real *Zante Currant* grape was not imported until 1916, but it is now being grown fairly extensively, especially in the south-western districts of the Cape Province. The Cape currant is a kind of dwarf Muscadel and possesses a pleasing flavour, but it is not cultivated on a large scale.

The subjoined table gives particulars of the quantities of raisins and currants produced on farms during a series of years:—

RAISINS AND CURRANTS PRODUCED ON FARMS, 1910-11 TO 1936-37.

* Denotes fruit sold (farms only).

2. **Fruit Cultivation.**—(i) *Fruit Growing.*—The fruit-growing industry dates back to the early days of the occupation of the Cape. Nevertheless, there was no great advance in the industry until the closing years of the nineteenth century, by which time, as the result of the gradual development of fruit growing, particularly in the western districts of the Cape Province, production of large quantities of deciduous fruits, such as grapes, peaches, apricots, plums, and pears, in excess of domestic requirements, had been reached. There thus came into existence an export trade, at first on a small scale—in 1900, some years after its initiation, shipments to the extent of no more than 309 tons were made—but increasing as the industry developed and the trade became better organized, until by the year 1910 the shipments had reached a total of 2,705 tons. Since that time the export of fruit has consistently increased until the total quantity exported is now over 200,000 tons per annum. The consumption of fruit in the Union is also very great. The principal fruits exported are peaches, pears, plums, apricots, nectarines, apples, oranges, naartjes (tangerines), grapefruit, pineapples, melons, grapes, mangoes, litchis, lemons, granadillas, avocadoes, pomegranates, persimmons, quinces, and tomatoes.

VARIETIES OF FRUIT GROWN ON A COMMERCIAL SCALE.

Apples.	Grapefruit.	Melons.	Pineapples.
Apricots.	Granadillas.	Nectarines.	Pomegranates.
Avocadoes.	Guavas.	Naartjes (Tangerines).	Plums.
Bananas.	Lemons.	Olives.	Prunes.
Cape Gooseberries.	Limes.	Oranges.	Quinces.
Cherries.	Litchis.	Papaws.	Raspberries.
Custard Apples.	Loganberries.	Peaches.	Strawberries.
Figs.	Loquats.	Pears.	Tomatoes.
Grapes.	Mangoes.	Persimmons.	

A special census was taken in 1925 of deciduous and citrus fruit trees and vines, the fruit of which was grown particularly for purposes of export. In *Official Year Books* Nos. 8, 9, and 10 data are given as to ages of the trees, and in Nos. 11 and 12 a résumé is given of the total numbers of such trees in each province.

The following table gives the area in the various provinces of orchards, vineyards, etc., the produce of which is intended for sale.

AREA OF ORCHARDS, VINEYARDS, ETC.—CENSUS, 1936-37.

(ii) *Fruit Export.*—The fruit export industry is governed by regulations under the *Fruit Export Act* of 1914, the *Fruit Export Control Act* of 1925, and the *Fruit Export Further Control Act* of 1929, the object of which is to maintain a high standard of quality in all fruit exported. Revised regulations governing the export of fruit are published yearly as Government Notices. In order to organize fruit growers and to stabilize the fruit markets, particularly those overseas, the Fruit Growers' Co-operative Exchange of S.A., Ltd., was formed in 1926. This is the parent body of the S.A. Co-op. Deciduous Exchange, Ltd., with headquarters in Capetown, and the S.A. Co-op. Citrus Exchange, Ltd., with headquarters in Pretoria.

(a) *All Fruits.*—(i) *Exports.*—The following table gives the declared value of fresh fruit of various kinds exported during a series of years:—

VALUE OF VARIOUS CLASSES OF FRESH FRUIT EXPORTED, 1932 TO 1938.

* Including exports to Northern and Southern Rhodesia and ships' stores.

(b) *Deciduous and Sub-tropical Fruits.*—Exports in the 1935-36 season constituted a record. Quantities of the different kinds of fruits exported since 1933-34 are given below. As the size of the boxes used depends upon the kind of fruit and the method of packing, the quantities are given in shipping tons of 40 cubic feet measurement.

QUANTITY OF FRUIT EXPORTED EACH SEASON,* 1933-34 TO 1937-38.

* Including du Roi.

(*d*) *Pre-cooling Chambers, Capetown, Port Elizabeth, East London, and Durban Harbours.*—Pre-cooling chambers with a storage capacity of 6,000 shipping tons are available at the A and B Berths, New Basin, and Nos. 3 and 4 Berths, South Arm, Table Bay Harbour, Capetown. These chambers with their equipment are regarded as the most up-to-date of their kind, and the facilities provided enable fruit cargoes to be handled with extraordinary rapidity. Similar chambers at Port Elizabeth, East London, and Durban Harbours are capable of accommodating 4,500, 1,500, and 2,000 shipping tons respectively.

(iii) *Dried Fruits.*—Dried fruits, especially raisins, sultanas, currants, prunes, pears, apricots, and peaches, are produced for home consumption throughout a large portion of the Union, and as an article of commerce are produced mainly in the south-western and in the eastern districts of the Cape Province. Dried apples are produced in the eastern portion of the Orange Free State. The north-west of the Cape Province is now also developing, especially in the districts of Gordonia and Kenhardt, where sultanas are produced on land irrigated from the Orange River. Enormous strides have been made in recent years in the production of high quality dried fruits for export, and the South African product now compares favourably with that of any part of the world.

The following table shows (*a*) the quantities of the more important kinds of dried fruit produced on farms during certain years 1910-11 to 1936-37; (*b*) the quantities of the different kinds of dried fruit exported during the years 1934 to 1938; and (*c*) the quantity and value of dried fruit (excluding currants, raisins, almonds, walnuts, and dates) produced, imported, and exported during the years 1920-21 to 1936-37:—

‡ Farm production assessed at same value per lb. as factory production.
§ Amended figure.

(iv) *Nuts.*—The walnut and the almond are the only nuts planted on a commercial scale in the Union; the quantity sold on farms during 1935-36 and 1936-37 of both varieties amounted to 456,600 lb. and 249,801 lb., respectively. The supply of both is, however, quite unequal to the demand, and there is need and scope for heavy planting of walnut and almond trees, to the cultivation of which various districts are eminently suited. Considerable attention is being given to the cultivation of tung nuts; pecan nuts are also being grown extensively. Imports of almonds, walnuts, and other edible nuts in 1938 were as follows:—Almonds, 660,157 lb., valued at £47,044; walnuts, 304,855 lb., valued at £11,901; and other edible nuts, 2,212,706 lb., valued at £40,951; representing a total value of £99,896.

(v) *Canned Fruits.*—Canneries have been established principally at towns on or near the coast, partly on account of the better supply of suitable labour, and partly on account of the more economical working possible in those localities. The article produced is uniformly good and has much improved within the past few years. The chief centres of the industry are Durban, Port Elizabeth, Capetown, Paarl, Worcester, and Wellington.

The following table gives particulars of the quantity and value of canned and bottled fruit produced, imported, and consumed during the years 1916-17 to 1936-37.

CANNED AND BOTTLED FRUIT.—PRODUCTION, IMPORTATION, AND CONSUMPTION, 1916-17 TO 1936-37.

§ 7. Sugar-cane.

1. **Sugar Industry.**—(i) *Historical.*—The first sugar mill was erected at Compensation, Victoria County, Natal, in 1849. By 1860 sugar-cane cultivation had made considerable progress in Alexandra, Durban, and Victoria Counties, and a number of small mills were in operation. A fair proportion of these mills were steam driven, but in a number of cases ox gear and water power were still used. The largest mill had not more than 40 horse-power.

For a number of years the progress of the industry was retarded by various factors, such as fluctuating prices, competition from Mauritius, disease among the "soft" varieties of cane, lack of suitable transport facilities, and a restricted market.

The development of the gold mining industry in the Transvaal caused some expansion of the market for Natal sugar between 1880 and 1889, and the joining up of the Natal and Transvaal railways further improved the position. The outbreak of the Anglo-Boer War led to a greater local demand, with resultant higher prices and increased cultivation.

For some years after 1904 the industry suffered severely from the dumping of German beet sugar, and the acreage of cane reaped showed a steady decline. During this period, however, owing to favourable climatic conditions, there was an increase in the average output of sugar per acre, and the effects of German competition were thus to some extent mitigated.

In 1905 the first sugar lands were taken up in Zululand. The first harvest of cane was reaped there in 1908, when about 2,000 acres were cut. During 1924 areas in Zululand north of Somkele were, as an experiment, allotted partly for cotton and partly for sugar; the results have so far been negligible.

With the completion of a customs convention between all the South African States in 1903, Natal obtained a position of preference against Mauritius and overseas sugar, and importations from these sources fell off as the Natal output increasingly met the South African demand.

From 1910 to the outbreak of the Great War, Natal encountered increasing competition from Mozambique in the Transvaal market. Under the terms of the Convention of 1909, sugar imported from that territory was not liable to customs duty. When the commercial clauses of the convention were denounced in 1923, sugar imported from Mozambique became liable for customs duty on entering the Union. Under the Convention of 1928 liability for customs duty remained.

The expansion of output since 1910 has been due in some measure to the steady development of Zululand; but Natal proper contributed largely, by bringing under cane land which was under other crops (such as tea) and land

hitherto undeveloped. In 1917-18 Natal had 128,460 acres under cane, while Zululand had 55,184 acres. In 1923 Natal's acreage had risen to 141,400 and Zululand's to 70,000. The year 1927, however, marked an epoch in Natal's sugar history, because increased fiscal protection, added to fiscal preference in the British market, granted in 1919, stimulated progress in a remarkable way. In 1923 the acreage reaped in Zululand was 26,400 and in Natal 60,000. In 1932 the figures were 52,000 for Zululand and 88,000 for Natal, a 97 per cent. increase in the former case and a 46 per cent. increase in the latter. The quantity of cane crushed during the 1938-39 season totalled 4,658,962 tons compared with 4,489,022 tons in 1937-38.

(ii) *Geographical Distribution of Cane.*—The geographical distribution of cane growing in the three areas of the sugar belt, ordinarily known as "South Coast" (S.W. of Durban), "North Coast" (N.E. of Durban to Tugela River), and "Zululand" (N.E. of Tugela River), in recent years is given below, the season 1926-27 (the season immediately preceding the application of the Fahey Agreement) being given for comparison with post-Fahey-Agreement seasons.

Area.	1926-27.	1935-36.	1936-37.	1937-38.	1938-39.
Total cane crushed (tons of 2,000 lb.)	2,147,323	3,865,687	4,181,973	4,489,022	4,658,962
South Coast.....per cent.	33·04	20·7	19·74	21·9	19·4
North Coast..... "	41·06	54·3	52·73	48·2	51·2
Zululand..... "	25·90	25·0	27·53	29·9	29·4

(iii) *Varieties of Cane Cultivated.*—Prior to the introduction of the Uba variety, a number of different varieties of cane were cultivated. Owing to the ravages of disease and drought and the poor ratooning qualities of the older varieties, that is, the lack of ability to make vigorous growth from old root stocks after a crop has been cut, endeavours were made to obtain more suitable varieties from other countries. Among the varieties thus introduced was Uba, which soon displaced all others almost entirely, because of its general hardiness, resistance to drought and many plant diseases, and excellent ratooning powers. With Uba the usual practice is to grow four crops from the one planting, comprising one so-called "plant cane" crop and three ratoon crops after successive cuttings. Objections to Uba from the manufacturing view-point arise (1) from its high fibre content, which makes the cane relatively difficult to mill and promotes undue loss of sugar in the only partially exhausted fibre, and (2) from the special nature of certain colloid or waxy impurities apt to occur in the expressed juice, which leads to difficulties in filtering and boiling the juice.

In the field, it is found that the leaves (trash) adhere firmly to the stem of Uba cane, making it difficult to harvest cleanly and rapidly, and promoting the practice of burning the standing cane before harvesting, to which there are weighty agronomic objections. Uba also is somewhat low in sucrose (sugar) content compared with modern improved varieties.

Measures initiated in 1926 for the eradication of all canes other than Uba resulted in the sugar-cane growing area being cleaned of all varieties susceptible to Mosaic disease, except for small quantities retained for scientific purposes in selected and defined quarantine areas. The object was to eliminate Mosaic disease by the eradication of all cane susceptible to the disease, Uba being for all practical purposes immune. The way would then be clear for the introduction of new Mosaic-free stocks of varieties of cane superior to Uba in sucrose content and in field and milling qualities.

From January, 1927, until December, 1930, the growing of any cane other than Uba was prohibited except in quarantine, with special written permit. Owing to the existence, previously unsuspected, of a perennial weed, *Setaria sulcata*, which is capable of transmitting Mosaic disease infection to sugar-cane, this policy failed in its main object, viz., the elimination of Mosaic disease by the eradication of suitable host plants, and the disease, fortunately in a relatively mild form, is still endemic. Nevertheless the ultimate results of the temporary prohibition of the growing of all varieties except Uba were for several reasons very beneficial. The destruction of many diseased canes which were foci of infection was enforced, several undesirable varieties were eliminated, and the way was cleared for a new beginning with varieties of proved value for South African conditions, introduced and tested under scientific control.

From December, 1930, onwards, the varieties P.O.J. 2725, P.O.J. 2878, C.H. 64/21, P.O.J. 2714, P.O.J. 2727, Co. 290, Co. 281, and Co. 301 have been successively released for general commercial planting. These varieties were amongst a large number that had been accumulated from all parts of the world at the experiment station of the South African Sugar Association, Mount Edgecombe, Natal, for study and trial, and represent a selection of canes considered most promising for South African conditions. The P.O.J. canes originated at the experiment station of the Javan Sugar Industry (Proefstation Oost Java); of these canes No. 2878 had proved singularly successful in that country (the " Wonder " cane of Java). C.H. 64/21 is claimed to be a cross between Uba and D. 74 produced at the Government Experiment Station near Havana, Cuba; while the three Co. varieties were bred at the Imperial Government Cane Breeding Station at Coimbatore in Southern India. Although Uba is not affected by Mosaic disease, it has become increasingly infected within recent years by a somewhat similar plant virus disease known as Streak Disease, which causes a stunting of growth of the cane. Most of the newly released varieties are more or less highly resistant to Streak Disease as well as to Mosaic. The work of selection of new imported varieties for local adaptation and use is being actively continued. As in most extra-tropical countries, the crossing of cane varieties has not been successful for climatic reasons, but of late years cross-fertilized flowers (tassels) of certain varieties have been introduced from Florida, U.S.A., India, and Mauritius and have been successfully germinated. Upwards of 5,000 new seedlings have been originated locally in this way. These new seedlings will have to undergo years of trial, and the chances are very great against combining in any given one the qualities necessary for the exacting requirements of a modern sugar-cane variety, even where the most promising parents have been successfully crossed. Nevertheless, the ultimate prospects of getting in this way new canes particularly well suited to local conditions are better than those of getting them from the alternative method of introducing established varieties of promise for South African conditions, which have however been evolved to suit other conditions.

Of the introduced varieties mentioned above, P.O.J. 2725, Co. 281, Co. 290, and Co. 301 appear to have become permanently established on a considerable scale, and are rapidly replacing Uba.

The experiment station of the South African Sugar Association was established at Mount Edgecombe, Natal, in 1927, for investigation into problems of the growing of cane and the manufacturing of sugar. It is one of the very few examples in this country of a research station supported by the industry it serves and not by the Government. There are chemical and botanical laboratories, a green-house, administrative offices, and 90 acres of land for field experiments at Mount Edgecombe, and a quarantine greenhouse for the reception and preliminary growth and observation of imported sugar-canes at the Natal Herbarium Botanic Gardens, Durban. The staff of the experiment station includes thirteen scientific and technical officers. Many field experiments are carried out on private estates also, in co-operation with the owners or occupiers.

(iv) *Yield of Cane.*—The average yield of sugar-cane per acre over the years 1926 to 1937 inclusive was 20·70 tons of 2,000 lb., most of the fields being cut every second season. In the 1937-38 season the average yield was 23·75 tons per acre for all varieties, the Uba cane yielding 20·38 tons and all other varieties 28·91 tons. The ratio of cane to sugar for that season was 8·80, which indicates a yield of 2·32 tons of sugar per acre.

A few years ago the yield of cane per acre was 3 or 4 tons greater from the Zululand settlements than from the rest of Natal where the land had in the main been longer under cultivation. This difference disappeared for various reasons, but is again becoming evident, this time apparently owing to the greater adaptability of the new varieties of cane to Zululand conditions and their consequent more rapid adoption there.

(v) *By-products.*—During the past year, considerable investigations have been made into the possibilities of developing the principal by-products of cane, viz., bagasse and molasses. For some time, motor spirit, in which alcohol from molasses and petrol are combined in equal parts, has been produced, and also rectified and methylated spirits, commercial and anaesthetic ether, and other products (glycerine, etc.). Recent research has been undertaken with the object of ascertaining the commercial possibilities of these by-products on a much larger scale and of stimulating greater interest in their potentialities.

(vi) *Sugar Mills.*—The industry is well provided with mills, and in Natal proper the owners of these (with one or two exceptions) for the most part crush a proportion of cane grown by themselves. In Zululand the mills are situated in the centre of a large area of farms owned by cane farmers; from these they obtain nearly all the cane they crush.

During 1936 in anticipation of the expiry of the Fahey Conference Agreement referred to in No. 17 and previous *Year Books*, planters, millers, and others concerned in the sugar industry negotiated an Agreement among themselves which is to run for five years from 1st May, 1936, and has been given force of law by the *Sugar Act*, No. 28 of 1936. This Agreement contained three outstanding features. First of all it recognized the necessity for restriction of output, to escape the lowering of average returns arising from increasing export to a market which had been falling for several years; secondly it gave effect to the demand of cane growers that the basis on which cane prices were calculated under the expiring 1926 Agreement should be raised; and thirdly it opened the way for railage economies by making provision for, as far as practicable, crushing cane at the mill nearest to its place of growth.

Restriction of sugar output necessitates parallel action in regard to cane. Provision is therefore made for determining the cane quota of every planter, with the important reservation that no restriction applies to growers producing less than 3,500 tons of cane. This principle of encouraging the smaller growers has been extended to prices for cane. All cane sent to a mill is paid for according to a standard formula, which shows an advance on the 1926 Agreement formula. In addition a fund has been established out of which growers receive an increase on the formula price, the amount of the increase varying with the producer's output, running from 1s. 7d. a ton to a planter reaping 1,000 tons to nil to a planter reaping 15,000 tons. This fund comprises about £51,000 contributed by miller-cum-planter factory units and about £85,500 from a levy on all millers of 1½d. per ton on European planters' cane crushed and of 3d. per ton on millers' cane crushed.

The mills usually work between the months of May and December, when the sugar-content of the cane is at its optimum. In 1938-39, there were 22 mills in operation, 17 in Natal proper and 5 in Zululand.

(vii) *Sugar Refineries.*—Two refineries attached to two of the mills deal with the " cargo " sugars produced by the mills. During 1926-27 important additions were completed to the one bone-char process refinery, which now takes raw sugar from ten mills and is equipped to produce 120,000 tons of refined sugar. A refinery using the suchar process started in 1927 at Illovo, and produces about 20,000 tons. One mill produces 55,000 tons of refined sugar by the double carbonatation process. Several mills continue to produce mill white sugar. Two factories in favourable seasons produce over 55,000 tons of sugar each.

(viii) *Labour.*—At one time the labour employed in the sugar industry was mostly Indian, but during recent years the proportion of Indians has rapidly decreased. At present the great majority of the labourers employed both on the estates and in the mills are natives. It has been found impossible to obtain an adequate regular supply locally, and arrangements have therefore been made for recruiting in native areas outside Natal. Europeans are employed on the large estates as managers, chemists, engineers, and overseers. In recent years there has been a growing tendency to employ Europeans for work hitherto done by Indians and natives, the limiting factor to greater extension being the necessity for selecting for Europeans classes of work in which there is no very close association with coloured labourers. According to the 1936-37 Industrial Census, there were 1,085 Europeans, 4,391 natives, 3,239 Asiatics, and 61 other coloured persons employed in sugar mills and refineries.

Including owners managing their own farms, the number of Europeans directly employed in the industry is estimated at 2,500. The native labour employed varies considerably, being reckoned at between 50,000 and 60,000 labourers at the height of the harvesting season.

(ix) *Price of Sugar.*—The following statement gives the average price (excluding £1 excise duty and allowing for manufacturers' and other rebates) of first grade refined Natal sugar per ton (2,000 lb.) at Durban from the 1910-11 to the 1938-39 season:—

Year.	Price.	Year.	Price.	Year.	Price.
	£ s. d.		£ s. d.		£ s. d.
1910-11.....	17 4 3	1920-21....	46 11 6	1930-31....	19 10 5
1911-12.....	18 1 6	1921-22....	29 3 5	1931-32....	18 0 11

1919-20.....	26 6 4·8	1929-30....	20 2 7		

* Amended figure.

By the *Sugar Prices Act*, 1926, the maximum retail price of refined sugar at South African ports for consumption in the Union was fixed at 3¾d. per lb., and of mill white sugars at 3½d. per lb. These prices were reduced to 3½d. and 3¼d. respectively under the provisions of section 11 of Act No. 25 of 1932.

The 1926 Act was repealed by the *Sugar Act*, No. 28 of 1936, which *inter alia* kept the maximum prices for first refined and mill white sugars unchanged, and which in addition places an obligation on all millers to make and sell a new type of sugar called 2 Grade. For this grade the producer's price is limited to £14. 10s. per ton free on rail at Durban, while the maximum retail price is 2½d. per lb. anywhere in the Union within five miles of a railway.

The customs duty imposed on sugar imported into the Union amounts to 12s. 6d. per 100 lb., plus a suspended duty applied by Proclamation in 1926 and proclaimed as operative in May, 1930.

(x) *Return to Producers.*—Under the Fahey Agreement, all producers at the date of signature of that document agreed to export a quota of sugar surplus to South African consumption according to the proportion their output bore to the total output. By the same agreement provision was made for supplying manufacturers of jams, jellies, canned fruit, sweets, condensed milk, etc., with sugar at prices based on the fiscal duty in force. These obligations have been continued under the *Sugar Act*, No. 28 of 1936. The following table gives the return to the producer after allowance has been made for export, manufacturers' prices, and similar industrial obligations. The price given is for sugar of 96 degrees polarisation (i.e., sugar for refining) and is that on which millers are paid for their sugar and planters for their cane:—

Season.	*Average return per short ton of whole crop of 96 degrees Pol. Sugar.*	Season.	*Average return per short ton of whole crop of 96 degrees Pol. Sugar.*
	£ s. d.		£ s. d.

§ 8. Tea, Coffee, Cotton, and Tobacco.

1. **Tea.**—Tea was first grown at the Durban Botanical Gardens in the year 1851, and for a long period the industry was conducted on experimental lines, but without success. In 1878 some two thousand plants were procured from Assam by Mr. J. L. Hulett (the late Sir Liege Hulett) and planted out on his estate at Kearsney in Natal. The first crop (of 30 lb.) was raised in 1880, and in 1883 tea produced on the estate was valued at 2s. 9d. per lb. in London.

Owing to the low price of tea in recent years the progress of this industry has been seriously hampered.

The following table gives particulars of the area of tea plantations, the produce in green leaf and in manufactured tea, the importation, and the consumption of tea:—

TEA.—PRODUCTION, IMPORTATION, AND CONSUMPTION, 1910-11 TO 1937-38.

Year (Season).	Area Cultivated.	Yield (Green Leaf).	Manufactured Tea.	Production (less Exports).	Imports (less Re-exports).	Retained or Available for Consumption.

2. **Coffee.**—The attempt made in recent years to introduce coffee growing into certain selected areas believed to be suitable for producing this crop has not proved a success.

3. **Cotton.**—South Africa produces only a very small quantity of cotton. Early attempts to produce fibre were unsuccessful owing to imperfect knowledge and faulty organization. Periodic droughts, to which large areas of the country are subject, and low prices have further increased the difficulty of establishing the industry on a permanent basis.

The lands available for development, where soil and climate are favourable, comprise, generally speaking, the whole of the Middle and Low Veld. These areas include large stretches of country in the western Transvaal, north of the Magaliesberg Range, in the northern and eastern Transvaal, Swaziland, Zululand, northern and eastern Natal, and numerous river valleys in Natal. Cotton is also successfully grown under irrigation along the Orange River. The Bollworm is at present the greatest pest the South African cotton-grower has to contend with. Until this pest is overcome it is unlikely that cotton will ever become an important crop in the Union.

The following figures of the annual production of cotton lint are interesting:—

COTTON LINT PRODUCED, 1910-11 TO 1937-38.

Year.	Annual Production in Pounds.
1910-11	13,623
1915-16	227,562
1920-21	1,169,298
1925-26	8,152,559
1929-30	6,485,205
1933-34	975,987
1934-35	1,186,658
1935-36	792,806
1936-37	1,359,060
1937-38	452,790

The following table gives figures showing the production of cotton:—

* Native locations, reserves, etc., not enumerated.
† Grader's figures, which do not distinguish native production—supplied by the Department of Agriculture and Forestry. Statistics of area under cultivation not available from 1932-33 to 1935-36, and for 1937-38.
‡ Agricultural Census.

4. **Tobacco.**—Tobacco-growing in the Union of South Africa is an old-established industry. Until about three decades ago, the majority of tobacco growers in South Africa utilized all their own leaf for the manufacture of roll tobacco on the farms by simply subjecting it to a process of fermentation. This so-called "Boer" tobacco was used for smoking, chewing, and for making

snuff. The class of tobacco produced, however, has undergone very great changes in the last twenty years, and an endeavour has been made to meet the new requirements. As the aroma, character, and quality of tobacco leaf are almost entirely dependent on the soil and climatic conditions under which it is produced, striking variations occur in the types of leaf from the different localities. The principal tobacco-growing localities are the Magaliesberg areas (Rustenburg, Marico, Pretoria, Waterberg, and Krugersdorp), the Potgietersrust area, the Vaal River area (Vredefort and Potchefstroom), the Piet Retief and Barberton areas, the Kat River, Gamtoos River, and Oudtshoorn areas, and the Turkish tobacco area, the Western Province of the Cape. In the Turkish tobacco area the crop is grown under natural precipitation, which falls in winter, with scarcely any rainfall in summer. In the other areas the tobacco crops are raised under conditions depending on summer rains, supplemented by irrigation when necessary. Some are grown almost entirely under irrigation.

The crop is one which South African farmers have long cultivated. Most of the growers are small farmers with a limited amount of suitable land. The tobacco-growing areas are situated in the healthiest parts of the country and, as a tobacco grower can, under normal circumstances, make a living on a comparatively small plot of ground, the main tobacco-growing areas are relatively thickly populated. Because of a number of irrigation schemes, the industry has great potentialities.

Tobacco-growing is an intensive form of agriculture requiring much experience and skill. It is a specialist crop, and, as with all crops the produce of which is in the nature of a luxury, quality is everything, the demand and the price paid for it depending to a large extent on fashion and taste.

The production and the consumption of cigarettes have increased tremendously in the past decade, creating a growing demand for light-coloured leaf. At the moment, the Union is not producing the quantity of flue-cured leaf required by local manufacturers, the deficiency being met from Rhodesian sources; but during the past eight years much attention has been paid to flue-curing and remarkable progress has been made. In the 1930-31 season there were about 50 flue barns in the country, with a production of 80,000 lb. of flue-cured tobacco, while during the 1936-37 season there were more than 800 flue barns with a production of over 2,500,000 lb. If the production of this type of tobacco continues to expand at the same rate as it has during recent years, the requirements of Union manufacturers will be met in the near future. When this stage has been reached, flue-cured leaf will be exported with better prospects of profitable disposal than is the case with dark tobacco. As a result of the lack of research facilities and the persistence of many farmers in crude and unscientific methods and in growing unsuitable types, the market is flooded with inferior tobacco. To overcome these drawbacks, the Government has established an up-to-date research station at Kroondal in the Rustenburg District.

Excellent pipe tobaccos and cigarettes are manufactured in the Union, and it is considered that a greatly increased demand for South African tobaccos could be created in Great Britain, if they were manufactured there and carefully blended to suit the local taste. A preference of approximately 25 per cent. on Empire-grown tobacco imported into the United Kingdom is having a marked effect, as it stimulates interest in the growing of tobacco in the Dominions and in the huge market provided by Great Britain.

The following table gives particulars as to tobacco grown in the Union:—

TOBACCO GROWN, 1910-11 TO 1937-38.

2. **Classification of Farms and Holdings Occupied by Europeans, according to Size.**—The following table gives the total number of farms and holdings occupied by Europeans in each province in 1937 and 1938, classified according to size.

Urban holdings of one morgen or more in extent, the products of which are intended for sale, are included. Under the title "Undivided Farms" are included cases where returns were received from more than one occupier of the same farm, the total area of which is known, but not the proportion occupied by each individual occupier.

CLASSIFICATION OF EUROPEAN-OCCUPIED FARMS AND HOLDINGS, ACCORDING TO SIZE, INCLUDING URBAN HOLDINGS OF 1 MORGEN AND OVER, THE PRODUCTS OF WHICH ARE INTENDED FOR SALE, 1937 AND 1938.

§ 10. Fertilizers and other Products.

1. **General.**—The sale of fertilizers is governed by the *Fertilizers, Farm Foods, Seeds, and Pest Remedies Act* (No. 21 of 1917). The Act serves to protect purchasers of the articles referred to from having worthless kinds imposed upon them, and thus also safeguards the interests of the honest vendor. "Fertilizer" is defined as "any substance containing, or purporting to contain as chemical constituents thereof, nitrogen, phosphoric oxide, potash, or lime, in a form or combination available as plant food and sold or intended for sale for the purpose of fertilizing the soil or supplying nutriment to plants; but does not include farm yard or stable manure, kraal manure and kraal manure ash, town refuse or night soil. All such fertilizers shall be considered to derive their entire value from the nitrogen, phosphoric oxide, potash or lime, as the case may be, which they contain in such a form or combination as aforesaid."

The Act provides that no person shall supply any fertilizer which is not of the nature, composition, or quality as described when sold to the purchaser, and that every person who sells any fertilizer shall give or send to the purchaser at the time of delivery an invoice stating the quantity sold, the name, brand, and number under which the fertilizer is registered, and also the chemical constituents thereof, which have been registered as prescribed by regulation in respect of such fertilizer. That statement in the invoice shall be deemed to be a guarantee that the article is as described therein.

Fertilizers and Farm Foods Regulations were published under Government Notice No. 1116 of the 1st July, 1927.

The phosphatic fertilizers used in the Union are chiefly superphosphates, basic slag, rock phosphates, and bone preparations. In recent years the manufacture of superphosphate and bone preparations has been undertaken to a considerable extent. Phosphatic deposits occur in various parts of the country, at Weenen, Saldanha Bay, Mamre, Matjesfontein, Kuruman, Murchison Range, Bandolierskop, Palabora, and Bethlehem. Lime deposits are found extensively in the Union; some of them, when ground, are suitable for fertilizer purposes (e.g. agricultural lime). The principal varieties of nitrogenous fertilizer in use are sulphate of ammonia, nitrate of soda, nitro-chalk, blood-meal, meat-meal, and different forms of guano. For the most part the organic nitrogenous fertilizers are produced locally, the municipal abattoirs at Capetown, Pretoria, Johannesburg, East London, Port Elizabeth, Bloemfontein, Germiston, Brakpan, Durban, Benoni, Krugersdorp, and Randfontein being responsible for the preparation of considerable quantities of blood-meal and meat-meal, while guano (bird, whale, fish, and bat) is extensively worked up and used. Potassic fertilizers are imported mainly in the form of sulphate and muriate. Burnt kraal manure ("karroo ash") is also used on account of the potash it contains.

2. **Guano.**—This fertilizer, which is obtained from the group of Government Guano Islands situated along the west and south coasts of South Africa, is sold in a pulverized form, and is used principally in the cultivation of cereals and vegetables, but is also now being extensively employed in the treatment of young orchards and vineyards, as well as in the growing of maize and sugar-cane. Its principal chemical constituents are nitrogen, potash, phosphoric oxide, and lime, and, as the composition of the deposits obtained from the different islands varies materially in certain essentials, all collections are systematically mixed so as to obtain an approximately uniform grade of article.

The average analysis of guano sold during the year 1938 was:—

Nitrogen	10·4 per cent.
Phosphoric Oxide, total	11·6 ,,
Phosphoric Oxide, soluble in Citric Acid	11·0 ,,
Potash	2·0 ,,

Guano is usually sold by the Government at £7 per ton, but during the period of depression in 1933 the price was reduced to £6 per ton, and it is still being supplied to farmers at the reduced price. There is a very large and increasing local demand for guano, and, as the supply is limited, no exportation to places beyond the limits of the Union is permitted.

Further particulars of the government guano deposits will be found in the sixth and previous issues of this *Year Book*.

The following tables give (i) the imports from overseas of various types of fertilizer during a series of years, (ii) the factory production of fertilizers, as shown in recent industrial censuses, and (iii) the quantity of guano produced:—

1935	2,334	4,846	7,180
1936	2,816	3,619	6,435
1937	2,400	3,816	6,216

The value of the guano produced in the years 1936 and 1937 was £38,608 and £37,294 respectively.

The products mentioned in the succeeding paragraphs are by-products of the Government Guano Islands.

3. **Penguin Eggs.**—The collection of penguin eggs is at present restricted to certain portions of Dassen Island from which an average of 500,000 eggs annually has hitherto been obtained. After a lapse of three years, during which no eggs were collected because of the reduced number of penguins, collecting was resumed on a restricted scale in 1936, when 178,000 eggs were collected and disposed of. No collection of penguin eggs was undertaken in 1937 owing to the prevalence of unfavourable conditions when the birds should have been laying.

4. **Seal Skins.**—The number of seal skins and the quantity of seal oil secured annually vary considerably according to circumstances. The sealing industry is mainly in the hands of the Government, and private enterprise is permitted only on certain specified islands and rocks on the South African coast reserved for that purpose. Owing to the depressed state of the fur market, no sealing was undertaken during 1934 and 1935. Sealing was, however, re-commenced in 1936, when 2,689 pelts were taken and disposed of at favourable prices. During 1937, 14,453 pelts were taken. The improved market conditions in 1936 were not, however, maintained in 1937, with the result that only half the season's catch was disposed of and the prices obtained were very poor.

§ 11. Export Subsidies.

The payment of export subsidies under the *Export Subsidies Act*, 1931, was discontinued during 1937 (Government Notice No. 378, dated 12th March, 1937).

The Act was in force for six years and at the end of December, 1938, the total expenditure in respect of export subsidies was £11,018,134. The following are the amounts expended in respect of some of the principal commodities:—

	£
Wool	5,347,741
Citrus	1,074,048
Maize and Maize Products	824,713
Deciduous Fruit	901,205
Hides and Skins	534,258
Minerals and Ores	627,433
Wattle Bark and Extract	455,558

While the payment of subsidy on meat in terms of Act No. 49 of 1931 has been cancelled, a subsidy in accordance with Government Notice No. 855 of 1937 is being paid on chilled and frozen beef and frozen lamb and mutton. [See paragraph 9 (*v*), § 1 of this chapter.]

§ 12. Agricultural Co-operation.

Co-operative organization and enterprise are regulated by the *Co-operative Societies Act*, No. 28 of 1922, as amended by Acts Nos. 38 of 1925, 2 of 1930, 23 of 1933, and 33 of 1934.

The principal Act repeals all previous laws in regard to co-operation and provides for the formation, registration, and management of associations of farmers and others wishing to dispose jointly of agricultural produce,

and/or to acquire collectively farming requisites and other necessities. Associations may be formed on the basis of the limited or the unlimited liability of the members. The system of organization is briefly as follows:—

Individual persons, numbering not fewer than seven in the case of agricultural co-operative societies and not fewer than twenty-five in the case of co-operative trading associations, may form a "local" organization to perform local service for the members. Two or more locals may form a "central" company, which specializes in the sale of a particular kind of product and which acquires and supplies requirements in bulk. Two or more centrals may again form a "federal" body, whose function it is to co-ordinate the activities of the centrals, particularly in regard to export of products and import of requirements.

The Act further stipulates that no person may carry on operations as a co-operative association, use the word "Co-operative" in conjunction with the term "Agricultural" or "Trading Society" while carrying on operations, and hold out in any manner whatsoever that an association is a co-operative society or company, unless it is registered under the Act. Provision is further made for the management of co-operative associations by boards of directors, elected by the members, and for the winding up, voluntary or compulsory, of societies and companies.

The Act is administered by a Registrar, who is required to keep a register of all associations registered under its provisions, who deals with all matters pertaining to formation, registration, and liquidation, and to whom co-operative societies and companies must transmit annually lists of directors, financial statements, and other returns connected with the business of each organization. On payment of such fees as are prescribed by the Minister, any person may inspect these returns and statements at the office of the Registrar, or may obtain extracts or copies of such returns and statements and any other documents relating to co-operative associations kept by the Registrar.

In addition to this medium of control, the activities of co-operative associations registered under the Act are periodically inspected and supervised. This work is carried out by a staff of inspectors appointed for that purpose, under the control and supervision of the Registrar, who also advises co-operative societies and companies regarding business methods and policy, system of accounting, etc.

REGISTERED CO-OPERATIVE SOCIETIES AND COMPANIES IN ACTIVE OPERATION AT 30th JUNE, 1937 AND 1938.

Description.	1937.		1938.

§ 13. Agricultural Colleges, Experiment Farms, etc.

1. **Description of Establishments.**—Agricultural colleges and experiment farms are established at several points in the Union. All the institutions are in close proximity to stations on main lines of railway and are fairly central as regards the areas they serve. The farms on which the colleges are situated are large, well stocked, well equipped, and representative of the agricultural conditions of their respective areas, and they enable the breeding of pedigree live stock and the cultivation of land to be undertaken on a suitable scale for the instruction of students and the improvement of the stock of the country. The laboratory and classroom accommodation and equipment provide suitable facilities for a sound training in the science of agriculture.

The institutions have on their staffs separate lecturers in agronomy, animal husbandry, sheep and wool, agricultural engineering, chemistry, botany, entomology, dairying, poultry husbandry, and horticulture, and (at Elsenburg) viticulture and winemaking; and there are also experimentalists and itinerant instructors. Lectures in veterinary science are given by officers of the Division of Veterinary Services. In addition to their educational duties, the staff perform extension, experiment, and research work, and it is contemplated that in due course three more or less self-contained branches will be developed at each institution for college work, experiment and research work, and extension work.

A brief description of these colleges and farms and the purposes which they serve is given hereunder.

(i) *Stellenbosch-Elsenburg College of Agriculture of the University of Stellenbosch, Stellenbosch, C.P.*—This institution was established in 1898 as the Elsenburg School of Agriculture and is the oldest of its kind in the Union. The area of the farm and experiment station is approximately 1,300 morgen, of which 450 morgen are under cultivation. About 62 morgen are devoted to vineyards and orchards. The special features of this institution are horticulture, viticulture and wine-making, cereal and tobacco (Turkish) growing, and dairying. The area of operation includes the coastal region from Namaqualand to Knysna, and extends inland as far as Calvinia, Sutherland, Laingsburg, and Ladismith.

On 1st October, 1926, the agricultural faculty of the University of Stellenbosch and the Elsenburg School of Agriculture were amalgamated, the new institution being called the Stellenbosch-Elsenburg College of Agriculture of the University of Stellenbosch, with the head office at Stellenbosch.

The functions of the college are:—

(*a*) To carry out scientific instruction and research in agriculture of a university character;
(*b*) to conduct courses of instruction in agriculture for students other than university students;
(*c*) to carry out extension, experimental, and investigational work in agriculture in the winter-rainfall area of the Cape Province.

The college comprises the agricultural building and the university farm (Welgevallen) at Stellenbosch, the experimental stations at Elsenburg and Mariendal, the cereal experiment station, Langgewens, in the Malmesbury district, the Fruit Research Station at Groot Drakenstein, district Paarl, the experimental plot for cereals on the farm Jongensklip, district Caledon, and the experimental plot on the Olifants River Settlement.

(ii) *Grootfontein (Middelburg, Cape).*—This station was established on a farm, about 12,000 morgen in extent, acquired from the Imperial military authorities. The station was started, and the school was opened for the reception of students in 1911. The special feature of this institution is merino sheep. Agriculture under Karroo conditions, notably the growing of lucerne, is an important phase of activity.

Research is being carried on into the question of the utilization of certain crops for grazing purposes, and experiments are being conducted in certain aspects of irrigation. Other projects include the management of Karroo veld, anti-soil-erosion work, and research in locusts and blowfly, grazing, and pasture management. Experiments with sheep and wool are a very important activity of the college. Fat lamb production on irrigated crops is receiving attention, and studies in sex physiology of several breeds and crosses of sheep have been in progress for many years. Important investigations into the influence of environmental factors upon wool production are undertaken.

(iii) *Cedara (Natal).*—The Cedara station was established in 1902, and the college was opened in 1906. The farm is approximately 1,000 morgen in extent. Artificial pastures, cattle and farm dairying, maize, and forestry (including wattle-growing) form the special features at this experiment station, and the area of its operation covers the whole of the Natal Province and East Griqualand. An egg-laying competition is held at this college.

The institution has achieved a considerable reputation throughout the country through research work connected with pasturage and investigations made into the best methods of ensilage of the plentiful growth of grasses which can be cut in summer and utilized in winter, when there is a shortage of succulent pasturage.

Valuable research work on the control of the fruit fly and citrus pests and methods of combating the wattle bagworm is being carried out.

(iv) *Potchefstroom (Transvaal).*—This station was established in 1902, and the college was opened in 1909.

The homestead farm comprises 853 morgen. In addition there are two grazing farms, Noyjons (927 morgen), situated 5 miles from the main institution, and Brakspruit (616 morgen), 7 miles distant. Hence the total area available is 2,396 morgen, of which 400 morgen are under cultivation, including 100 morgen under irrigation.

Matters relating to agriculture under high veld conditions, the cultivation of crops under irrigation and otherwise, stock breeding, and the growing of maize and other cereals are special features of this establishment, and its area of operation covers the whole of the Transvaal Province.

Research work is being undertaken in connexion with maize, sorghums, grasses, and summer legumes. A measure of success has been achieved in the development of important new varieties of maize, cow peas, and soya beans. Inquiries into the effect of veld burning and into pasture management, conducted over a period of years, have been completed. Important data gathered from experiments with fertilizers are being collected.

A considerable amount of experimental work with cattle and sheep is being undertaken and an extensive programme of work with pigs is contemplated. The cattle experiments involve:—

Studies in connexion with the feeding of supplements in the form of compressed meals or cake to young steers on veld during the winter months; the fattening of steers (on rations compiled largely from farm-grown feeds); the influence of stabling as opposed to non-stabling upon milk production; sheep cross-breeding for mutton production; the inheritance of body folds and wrinkles in merino sheep.

A special programme of poultry experimental work is being initiated; the main phase of the work will deal with nutritional problems.

(v) *Glen (Orange Free State).*—The station was established in 1912 as a farm to serve the Orange Free State, and the college was opened for students in 1919. The farm, situated on the Modder River, measures 1,900 morgen and adjoins the Glen railway station. In 1927 an adjoining farm, Middelpunt, 638 morgen in extent, was purchased to serve as additional grazing for the herds and flocks of the college. The institution serves the whole of the Orange Free State and the districts of Herbert, Barkly West, Taung, Hay, Kuruman, Vryburg, and Mafeking in the Cape Province as a centre for agricultural education and extension work amongst farmers. Agricultural matters relating to sheep-farming, dairy-farming, crop production on dry lands, as well as under irrigation, are special features of this establishment. The central egg-laying competition is also held at this institution.

Experiments in pasture management are in progress, and attention is being given to the cultivation of field crops, particularly maize and potatoes, and to systems of crop rotation. Recently irrigation experiments have been commenced.

2. **The Faculty of Agriculture, University of Pretoria.**—The faculty gives scientific instruction and carries out research in the principal problems of South African agriculture, especially of the summer rainfall area. It embraces the following departments:—

Agricultural Chemistry.	Poultry.
,, Botany.	Agronomy.
,, Economics.	Horticulture.
,, Engineering.	Veterinary Science.
Entomology.	Domestic Science.
Animal Husbandry (including sheep and wool).	Dairying.

The faculty does not stand under the direct control of the Department of Agriculture and Forestry, as is the case with the institutions mentioned in the preceding paragraph, but receives financial support from the Department.

3. **Courses at Agricultural Colleges.**—The courses of instruction consist of:—

(i) A two-year diploma course at all the agricultural colleges. The first year's instruction of the two-year course is based on practical farming operations, supplemented by lectures to teach the underlying principles, while the second-year course is an advanced course, which continues that of the previous year and consists of lectures and practical work. The fees have recently been reduced from £60 to £36 per annum inclusive of board and lodging. Several bursaries are available for students who are unable to meet the full cost of the course.

(ii) Special courses in various agricultural subjects are held annually during prescribed periods, the most important being the following:—

Grootfontein..... (*a*) Eight-months sheep and wool course—£28 inclusive.
(*b*) Three-months course in sheep and wool for students holding a university degree in agriculture—£12 inclusive.

Cedara..... (*a*) Six-months small-holder's course with special attention to dairy cattle, dairying, pigs, and poultry—£22. 10s. 0d. inclusive.
(*b*) Teachers' course especially arranged to meet the requirements of teachers of the Natal Education Department—£28 inclusive.

Glen..... (*a*) One-year certificate course for future rural teachers (forming part of the three-year professional training for the Higher Primary Teacher's Certificate of the Orange Free State)—£36 inclusive. Bursaries are available for this course.
(*b*) Eight-months course in commercial dairying, for buttermakers and cheesemakers—£28 inclusive.
(*c*) Three-months course in sheep and wool classing—£12 inclusive.

(iii) Short courses of five days' duration are, especially during the vacation periods, conducted at all the above-mentioned colleges. They comprise special subject courses and general courses in most branches of agriculture, and are designed to meet the needs in particular of farmers, their wives, sons, and daughters, and of rural school teachers, who are unable to devote more than a few days or weeks to acquiring some knowledge of the subjects taught. The lectures and demonstrations are specially prepared, so that those attending them may secure the greatest benefit in the short time at their disposal. Women are afforded the opportunity of attending the courses in poultry, dairying, horticulture, and apiculture, in addition to the courses in domestic science specially provided for them.

The ordinary courses give a sound practical as well as a technical training to young farmers, but do not offer a full training for the agricultural expert or the agricultural scientist. This work is conducted by the Faculty of Agriculture of the University of Pretoria and by the Stellenbosch-Elsenburg College of Agriculture of the University of Stellenbosch. The special courses provide for those who have already had some experience in the branches of farming concerned. For full particulars application should be made to the principals of the colleges.

4. **Laboratory Work.**—In addition to field trials, many investigations are being undertaken in the laboratories of the colleges. These include a wide range of chemical work, in connexion with soils, fertilizers, feeding stuffs, dips, and tanning materials, and entomological and botanical work on insect pests, plant diseases, etc. The chemists also perform a certain amount of routine analytical work in connexion with the administration of certain Acts of Parliament. For *bona fide* farmers, analyses of waters, soils, fertilizers, dips, feeding stuffs, etc., are undertaken at the college laboratories at special rates; while plant identifications, seed testing, and various other services are performed gratis.

5. **Scholarships.**—Since the constitution of the Union, scholarships have been awarded to students for special study overseas in agriculture, veterinary science, and the various agricultural sciences, for the purpose of training promising South Africans to fill posts in the Department of Agriculture and Forestry. These scholarships are granted only for work which cannot be taken up with advantage in the Union. Upon the completion of their courses the

recipients of the scholarships undertake, if required, to enter the service of the Union of South Africa for a period of at least three years (depending upon the duration of the scholarship) at the scale of salary in force for the particular post to which the appointment is made.

Bursaries.—Bursaries of £50 per annum each for periods not exceeding two years are awarded to candidates who have completed at least their second year in a university course for an agricultural degree for the study of the various agricultural sciences at South African universities. Similar bursaries are also available for the study of veterinary science and are tenable for periods not exceeding four years. The first-year course for the B.V.Sc. degree may be taken at any university in South Africa, but the remaining four years of the course must be taken at Onderstepoort. Assistance bursaries are also awarded to deserving students, as well as to those students in need of financial assistance who are attending the various agricultural colleges.

Scholarships and bursaries from O.F.S. funds (Act No. 34 of 1909) are available to children of inhabitants of the Orange Free State who are in need of financial assistance for:—

(*a*) Study overseas in Agriculture or Home Economics.
(*b*) A one-year course at the College of Agriculture, Glen, O.F.S., for matriculated students who wish to take the Normal College course in Bloemfontein.
(*c*) The diploma course at any of the four Colleges of Agriculture (at Glen, O.F.S., Potchefstroom, Transvaal, Middelburg, C.P., and Cedara, Natal).
(*d*) A degree course in Agriculture at the Pretoria and Stellenbosch Universities.

6. **Sales of Stock.**—Sales of surplus stock bred on the farms are held annually at each of the colleges. Sales of surplus stock from the Potchefstroom College of Agriculture are held at the Johannesburg Agricultural Show at Easter and at the Maize and Fat Stock Show in September. The surplus stock of the Glen College of Agriculture is sold by auction in Bloemfontein in the months of May, September, and November of each year. Poultry and pigs are sold out of hand at all times.

7. **Expenditure and Revenue.**—The following table gives particulars of the expenditure and revenue in connexion with agricultural education for the financial years 1933-34 to 1937-38:—

AGRICULTURAL EDUCATION, EXPENDITURE AND REVENUE, 1933-34 TO 1937-38.

CHAPTER XX.

FORESTS.

§ 1. Character and Extent of Forests.

1. **General.**—The Union is a comparatively poorly timbered country, and, although fairly considerable areas of forest or scrub are known to have disappeared before axe and fire within the last century or two, there appears to be no reason to believe that it has ever been, as a whole, a heavily timbered country during the present geological period. There seems to be no ground for supposing that even scrub forests were found to any great extent on the High Veld or Karoid veld of the interior, while the same remark applies to a large part of the mountain slopes and the country between the mountains and the sea.

Roughly speaking the forests of this country may be classed as *dense timber forests* and *scrub and savannah forests.*

2. **Timber Forests.**—These are found, mainly on the seaward and southern slopes of the mountain ranges within usually less than 100 miles of the coast, at widely scattered intervals from the Cape Peninsnsula to the Zoutpansberg Range. Even on the mountain ranges they seldom occupy any extensive area continuously, but are almost always found in isolated patches of from a few acres to a few thousand acres each, in the kloofs or ravines.

(i) *Cape Province, Midlands.*—The largest of the more or less continuous areas of forest are found within a strip of country some 110 miles long and ten miles broad, between the Outeniqua Mountains and the sea, extending from George through Knysna to the Humansdorp division. It has been estimated that roughly 90,000 acres of this country are occupied by forests. These have been heavily exploited during the last century or more, and the virgin timber in them is approaching exhaustion. The principal species composing these forests and the main uses of their woods are as follows:—

Podocarpus latifolius....	Real Yellowwood.....	Flooring boards and other building timbers; railway sleepers; joinery and furniture; naves for wagons, etc.
Podocarpus falcatus.....	Common Yellowwood..	
Curtisia faginea.....	Assegai.....	Wagon-wood.
Ocotea bullata.....	Black Stinkwood or Laurel.	Furniture.
Olea laurifolia.....	Ironwood.....	Wagon-wood.
Apodytes dimidiata.....	White Pear.....	Wagon-wood.
Gonioma kamassi.....	Kamassi.....	Exported to Europe for the manufacture of shuttles for weaving, etc.

(ii) *Cape Province, Western.*—From George westwards to the Cape Peninsula scarcely anything remains of the forests which were once found on the mountains, and which were exploited from the earliest days of European settlement in South Africa. Their destruction by fire followed, and small patches remain only in the more inaccessible kloofs. In the Cedarberg, a distinct type of forest occurs, namely, that of the Clanwilliam Cedar (*Widdringtonia Juniperoides*). This species does not form dense forest; the trees grow singly or in small groups scattered on rocky slopes and crags. The wood is a durable light softwood, and the larger trees in the more accessible parts have been exploited. The area has been made a forest reserve and all possible means are adopted to protect it from fire and to assist regeneration of the cedars.

(iii) *Cape Province, Eastern.*—The timber forests occur chiefly on the coastal mountain ranges, but nowhere except on the Pirie Mountain do they cover continuous areas of any great extent. These forests have been exploited and but few of them still contain virgin timber. In composition they are generally similar to those of Knysna, the most notable difference being the almost complete absence of Stinkwood (*Ocotea bullata*), while they contain much Sneezewood (*Ptaeroxylon utile*), a durable timber of great value.

Kamassi is absent east of Port Elizabeth, but Cape Box (*Buxus Macowani*), which yields a valuable wood not much inferior to the European box, is found in fair abundance in the Alexandria and East London districts, forming, with Sneezewood and some other species, a type of low but dense forest in the neighbourhood of the coast.

(iv) *Transkeian Territories.*—The timber forests here are, in general, similar in distribution and composition to those of the eastern Cape Province, but somewhat more extensive areas are found at intervals along the coast. The species constituting the latter are very varied, and include, in addition to the species of the eastern Cape Province, many others of more northern range, such as Natal Mahogany (*Trichilia emetica*), Umzimbeet (*Millettia caffra*), Umgesisa (*Cussonia umbellifera*), and Flatcrown (*Albizzia fastigiata*). Considerable quantities of Cape Box (*Buxus Macowani*) of comparatively large size also exist in these forests.

The more accessible of the Transkeian forests have been heavily worked in the past, but some of them, including most of the coast forests and a few forests consisting almost exclusively of Yellowwood (*Podocarpus Henkelii*) in the northern part of the Territories, have been too inaccessible to allow of profitable utilization.

(v) *Natal.*—The forests of Natal are now of small extent, the greater proportion of those which once existed having passed out of government ownership or been included in native locations, and much of the area once occupied by them has been deforested. Generally speaking, they may be grouped as mountain and coast forests like the Transkeian, and are of more or less similar composition. A special feature of some of the coast forests is the large proportion of Waterberry (*Syzygium cordatum*). Some of the Crown forests have been heavily worked but a few containing virgin timber, largely Yellowwood, still exist in the southern districts of Natal.

(vi) *Transvaal.*—The timber forests occur at widely scattered intervals on the mountain ranges along the eastern edge of the Highveld plateau and are individually of small extent, with the exception of some on the easterly slopes of the Woodbush Mountains and the Zoutpansberg Range. With few exceptions these forests have been heavily worked in the past and little merchantable timber now remains in them.

In general the composition of these forests approximates to that of the timber forests of Natal, except that the Yellowwood is not so abundant, while other species not found elsewhere (of which *Syzygium Gerrardi* is the most important) are encountered.

3. **Scrub and Savannah Forests.**—These cover extensive areas known variously as *Thornveld, Bushveld* or *Middleveld*, in addition to the *Lowveld* of Natal and the Transvaal. Numerous species enter into their composition, but various kinds of Acacias predominate, and of these the common Mimosa, *Acacia karo*, is the most widespread. Many of the species yield timbers of good quality, e.g. the Wild Olive (*Olea verrucosa*), the Karree-boom (*Rhus lancea* and *viminalis*), the Camelthorn (*Acacia giraffae*), Knoppiesdoring (*Acacia pallens*), Apiesdoring (*Acacia Galpinii*), Matumi (*Adina Galpinii*), and Kiaat (*Pterocarpus angolensis*). These trees sometimes reach a moderately large size, sufficient for sawing into timber, but over much of the more accessible areas where they occur the mature timber has already disappeared. Generally speaking, the trees are of small size and slow growth, and their often scattered distribution and the open nature of the forests do not render these forests suitable for economic forest management. The trees form, however, an asset of much value for fuel, fencing posts, and other local uses, as well as for shelter and protection for the soil. The land on which they are situated has mostly passed into private ownership or is situated within native reserves. Unfortunately, the value of scrub forests is often not realized by the owners and the destruction of the forests has proceeded apace and is still continuing. In the category of scrub forests should be included the bushy growth found along much of the coast. A good deal of this has been set apart as government forest reserves for the prevention of the formation of sand-dunes.

4. **Extent of Plantations and Indigenous Forests.**—The area of all plantations and indigenous forests in the Union (including government and municipal plantations and forests), as returned at the Agricultural Census of 1937, with comparable totals for plantations (1930) and indigenous forests (1926), is shown in the following table, which gives the area under different species in the plantations in each province.

AREA OF PLANTATIONS AND INDIGENOUS FORESTS.

1 Morgen = 2·11654 acres. * Not available. † As at 31st August, 1926.

5. **Regeneration and Growth of the Timber Forests.**—In many of the forests natural regeneration is deficient, but in others, particularly those in the Knysna region, young trees are found in abundance.

In the past, before the Forest Department took control, the forests generally were exploited with no regard to sylvicultural considerations. Woodcutters, having a free choice, naturally selected the best trees for sawing up into the products in demand by the European population; natives again required enormous quantities of poles and laths for building their huts and kraals. The consequence is that the forests in general are to-day in an abnormal condition, i.e., the older age classes, instead of consisting of sound individuals, are represented by inferior or useless trees only, while, in native areas especially, younger trees of different age classes on which the perpetuation of the forests depends are wanting.

It is the aim of the Forest Department, by restricting further cutting and by paying attention to the regeneration naturally or artificially established, to remedy the condition of the forests as quickly as possible. The component species are slow growing, and it will therefore take a very long time before the economic value of the forests can be fully restored.

6. **Reserved Indigenous Trees.**—A list of indigenous trees reserved under the terms of section 12 of the *Forest Act*, No. 16 of 1913, is contained in *Government Gazette* No. 2194 of the 11th May, 1934 (Government Notice No. 594).

§ 2. Forestry Development.

1. **Relation of the State to Forestry.**—Until 1876 no central or technical control was exercised over the Crown forests of the Cape Colony, but in that year a Department of Forests and Plantations was constituted, and in 1881 a Superintendent of Woods and Forests was appointed. In 1891 this post was abolished, and the four conservancies into which the Colony had been divided were thereafter administered independently by four conservators, who were responsible to the Secretary for Agriculture. In 1905 a Chief Conservator of Forests was appointed, who was responsible to the Minister. In the Transvaal and the Orange Free State the Crown Colony Governments, about the year 1903, established forest departments as divisions of the respective agricultural departments. In Natal no settled policy was followed, but the post of Conservator of Forests was twice made and abolished, the administration of the forests being in the hands of the Director of Agriculture from 1908 onwards. When the Union was established in 1910 the four forest departments were immediately combined under one Chief Conservator of Forests, later named the Director of Forestry. In October, 1934, the Forest Department was abolished and combined with the Department of Agriculture under the title of the Department of Agriculture and Forestry, and a Division of Forestry was established under the Director of Forestry.

In 1913 the *Forest Act*, No. 16 of 1913, was passed. This Act, supplemented by a short Act, No. 14 of 1917, consolidates and amends the forest laws previously in force in the various provinces of the Union, and relates to forest tenure, forest reservation, demarcation, and the regulation and protection of forests. With certain modifications it follows the principles laid down by the Cape of Good Hope *Forest Acts*, No. 28 of 1888 and No. 20 of 1902. In terms of the Act forest reserves consist of both demarcated and undemarcated reserves. The penalties imposed in respect of offences within the demarcated forests are, as a rule, more severe than those levied in the case of offences in undemarcated forests. The Act confers upon the Government the power of expropriation of land for certain forestal purposes and provides that no servitudes can now be acquired by prescription over the forest estate. Certain portions of the Act deal specifically with the protection of private forests, but other provisions of the Act may be applied to private forests for their better protection at the request of the owners. A number of Proclamations and Government Notices have been issued dealing with a variety of matters affecting the protection, management, and exploitation of forests.

Proclamation No. 266 of 1936, amended by Proclamation No. 278 of 1936, has made the grading of all wattle bark for export compulsory as from the 1st of January, 1937. Condition No. 1 states that "No person shall export wattle bark unless it has been examined, graded and branded as herein prescribed". For this purpose a technical Forest Officer was appointed as wattle grader and stationed at Durban. It should be noted that dealings in the bark of "Silver Wattle" trees, because it is a product inferior to that of the "Black" or "Green" Wattle, are allowed only under stringent conditions, the infringement of which is subject to severe penalties.

2. **The Forest Estate.**—The area of Crown lands reserved for forestal purposes and controlled by the Division as at 31st March, 1938, was:—

	Acres.
Demarcated Forest Reserves	2,901,498
Undemarcated Forest Reserves	421,597
TOTAL ... ...Acres	3,323,095

This area consists of*:—

	Acres.
Indigenous High Forest	425,000
Afforested	339,000
Land suitable and available for afforestation	350,000
Scrub forest and land held for protective purposes	2,209,000

* Approximately.

3. **Functions and Work of the Division of Forestry.**—These are set out shortly as follows:—

(a) *The protection and conservation of indigenous timber forests and their utilization in such a manner as not to impair, but rather to increase their future productivity.* Funds voted for this purpose are mainly spent on protection from fire and on regeneration. The destruction by natives of young growth for hut-wattles has been almost entirely stopped, as a result of the establishment of plantations of exotic species to supply this product. The cash revenue derived from the indigenous forests during the financial year 1937-38 was £16,964. The indigenous forests are not capable of yielding more than a very small fraction of the Union's requirements of timber, and moreover they produce mostly hardwoods, whereas 80 or 90 per cent. of the requirements is for softwoods.

(b) *The creation of new resources by afforestation, to provide as far as possible for the country's timber requirements.* The extent of the plantations so far established by the State for the above purpose is about 339,000 acres, and afforestation is proceeding at the rate of about 15,000 acres per year. The species principally planted are conifers producing the class of softwood required, e.g. *Pinus insignis, P. patula, P. pinaster, P. caribala,* and *P. taeda.*

Though afforestation on a large scale started less than 15 years ago, large quantities of timber are already becoming available for the manufacture of paper pulp, fruit and industrial boxes, and for building timber, etc.

Cash revenue derived from the plantations during the financial year 1937-38 amounted to £142,339, which includes revenue derived from the sale of transplants, tree seeds, and sawn and planed timber from departmental mills to the public. The revenue should increase rapidly as the timber becoming available in ever increasing quantities finds its way on to the market.

(c) *The protection of important catchment areas for the sake of water supplies.* Of the three million acres of ground controlled by the Division of Forestry about two million acres are held mainly for the protection of water supplies. Extensive areas on mountain ranges holding the sources of important rivers are protected as far as possible against fire and grazing, especially in the Cape Province, but also in Natal and the Transvaal. Control is gradually being extended to other areas of importance in this connexion, Crown land being reserved for the purpose where necessary, and in some cases privately-owned mountain ground constituting catchment areas of importance being acquired by purchase.

(d) *The prevention and reclamation of drift sands.* Along the coast from the Cape to Zululand are forest reserves, which are held for the prevention and reclamation of drift sands. The scrub forests and other vegetation on the littoral dunes, the denudation of which would result in extensive movement of sand, are strictly protected. In the past very large areas of moving sand on the Cape Flats and near Port Elizabeth were reclaimed by the spreading of town refuse and have since been afforested. Elsewhere the method adopted successfully was the planting of marram grass and other vegetation assisted, where necessary, by mechanical barriers. Reclamation of open sands on government land under the latter system is still proceeding steadily.

Along the Western and South Western coastal belt large areas of moving sand are to be found on privately-owned farms. The owners may obtain State aid in the work of reclamation under schemes corresponding in principle to those devised for anti-erosion works on private property.

(e) *The establishment and maintenance of nature reserves.* Within the forest areas special nature reserves have been established, the object

of which is to maintain in their natural state for all time special features of the flora or of the landscape in the interests of scientists and nature lovers of the present and the future. At present the aggregate area covered by these nature reserves amounts to 12,320 acres, and new ones are gradually being established.

(f) *The encouragement of tree planting by private enterprise.* The Division of Forestry puts expert advice on tree planting and on the management of plantations at the disposal of farmers and others free of charge. Lectures are given at universities, agricultural colleges, farmers' meetings, etc. Transplants are obtainable from government nurseries at low rates; during 1937-38 almost four million plants were issued to the public.

Apart from trees planted on farms for purposes of shelter and to provide rough material for local requirements, there are, especially in the Transvaal and Natal, large areas of plantations owned by individuals, companies, and corporate bodies. These plantations consist mainly of Eucalypts grown for mine poles and Black Wattle grown primarily for tan bark but also for mine timber. The area under Black Wattle alone is estimated to be well over 250,000 morgen, of which about 70 per cent. is in Natal, where the wattle bark industry is centred.

4. **Organization of the Division of Forestry.**—(i) *Administration.*—The Division is controlled by the Director of Forestry assisted by the Deputy Director. The Union is divided into six Forest Conservancies each in charge of a Conservator of Forests. Each conservancy consists of a number of Forestal Districts controlled by District Forest Officers, each of whom has under him a number of foresters in charge of forest patrols.

The conservancies and forestal districts are as follows:—

Cape Province.

1. *Western Conservancy* (headquarters Capetown): *Forestal districts*: Capetown; Kluitjes Kraal (P.O. Wolseley); Elgin; Bredasdorp; Jonkershoek.
2. *Midland Conservancy* (headquarters Knysna): *Forestal Districts*: George; Saasveld (P.O. George); Knysna; Concordia (P.O. Knysna); Storms River.
3. *Eastern Conservancy* (headquarters Kingwilliamstown): *Forestal Districts*: Port Elizabeth; Kingwilliamstown; Stutterheim; Keiskamahoek.
4. *Transkeian Conservancy* (headquarters Umtata): *Forestal Districts*: Butterworth; Umtata; Kokstad.

Transvaal.

5. *Transvaal Conservancy* (headquarters Pretoria): *Forestal Districts*: Louis Trichardt; Tzaneen; Pretoria; Graskop; Sabie; Nelspruit; Barberton.

Natal and Orange Free State.

6. *Natal and Orange Free State Conservancy* (headquarters Pietermaritzburg): *Forestal Districts*: Eshowe; Pietermaritzburg; Bloemfontein.

(ii) *Research.*—The Division has its research sections, e.g., the Sylvicultural Research section dealing with all problems connected with the growing and management of timber crops and with forests influences and the Forest Products Research section (centred in the Forest Products Institute at Pretoria West) dealing with properties and uses of locally grown exotic and indigenous timbers, their resistance to decay and insects, sawing and seasoning methods, preservative treatments, etc.

(iii) *Technical Control.*—At headquarters officers are allotted to the management of the forest estate, utilization of the forest crops (sawmilling, etc.), statistics, forest education, and extension services.

(iv) *Recruitment of Officers.*—Officers of the higher professional division are recruited from men who hold a degree of forestry of a recognized university. This degree is obtainable in South Africa at the Stellenbosch University after a four years' course in forestry.

Men desirous of entering the government service as foresters are trained at the Saasveld Forest School near George. The course extends over a period of two years.

5. **Revenue and Expenditure of Forest Department.**—The subjoined tables give particulars of expenditure and revenue of the Forestry Division in the financial years 1936-37 and 1937-38, distinguishing operations of Railway plantations from ordinary forestry operations:—

FORESTRY EXPENDITURE AND REVENUE—1936-37 AND 1937-38.

1937	419,056	45,941	60,073	1,831,358	237,652	531,475
1938	295,882	51,941	40,680	1,313,620	208,557	327,203

In addition, manufactured wood to the value of £1,673,605 and other unmanufactured wood to the value of £10,615 was imported in 1937, making a total value of £3,922,103.

The export of South African unmanufactured and partly manufactured woods during 1938 was valued at £13,286.

2. Yield from South African Forests, etc.—The yield from the government forest reserves and plantations during the financial years 1933-1934 to 1937-38 was as follows:—

GOVERNMENT FOREST RESERVES AND PLANTATIONS—YIELD OF TIMBER, 1933-34 TO 1937-38.

Of wood produced from private plantations a large quantity is cut from wattle plantations in the process of harvesting the bark. Though a good deal is wasted owing to inaccessibility, much of it finds its way on to the market as fuel and mining poles: about 90 per cent., if not more, of the props used in the gold and other mines comes from privately-owned wattle and eucalypt plantations.

Indigenous forests on private property yield fuel, fence poles, etc., for local needs, and to a small extent logs for saw timber.

A large proportion of the indigenous timber yielded by the native forests is used for wagon-woods, furniture, panelling, etc., for which purposes the South African woods are particularly suitable. Smaller quantities are used for parquet flooring, tool handles, etc. Certain of the plantation-grown eucalypts have also proved satisfactory for these purposes.

Export of timber is confined to small quantities of the two South African Boxwoods, viz., Cape Box (*Buxus Macowani*) and Kamassi (*Goniama Kamassi*). These timbers find their way on to the European markets for use as rollers, shuttles, etc., in the textile industry.

The following tables give the production from (*a*) plantations, and (*b*) indigenous forests in the Union as returned at the Agricultural Census in respect of the year ending 31st August, 1937. The production from plantations and indigenous forests in native reserves, locations, etc., are not available.

3. **Forest Industries.**—(i) *Wattle Bark.*—This important industry was developed mainly in Natal, where the greater portion of the total area of 250,000 morgen of wattle plantations is situated. Up to 1936 there was no organized system of marketing or effective control of the quality of the bark exported. In that year low prices, together with complaints as to the poor quality of the bark finding its way on to overseas markets, caused grave concern as to the future of the wattle industry. A departmental committee under the chairmanship of the Director of Forestry was appointed to consider measures for remedying the conditions which threatened the stability of the industry. The report of the committee stressed the necessity for standardizing the product and recommended the registration of exporters, the registration of a distinctive brand under which each exporter would be allowed to ship bark, and the grading of bark for export to official standards. The measures recommended were put into force at the beginning of 1937 and have already had a steadying effect on the marketing conditions affecting the South African product.

The Division of Forestry controls the grading of bark, and forest officers are detailed for research and demonstration to promote proper cultural methods in wattle plantations.

The exports of (*a*) wattle bark and (*b*) bark extract during a series of years were as follows:—

(ii) *Sawmilling.*—Up to a few years ago the sawmill industry was confined to a few small plants dealing with comparatively insignificant quantities of timber from the indigenous forests. Now that millions of cubic feet of softwoods are annually becoming available from plantations, private enterprise is beginning to realize the possibilities in this direction. In the several provinces there are already a number of private mills which are turning out fruit and industrial boxes and, to a less extent, building material. In a few years the plantations will yield logs from which building timbers can be manufactured in ever increasing quantities. State sawmills have been established at Elandshoek near Nelspruit and at George to serve as models for layout and to demonstrate methods of seasoning and manufacture for the guidance of private enterprise. It is estimated that during the next five years about eight and a half million cubic feet of softwoods will become available each year from the plantations. Part of this amount will be absorbed by existing sawmills, but arrangements have still to be made for the disposal of the remaining and larger portion of the yield. Failing satisfactory contracts with private enterprise, the State will be forced to expand its activities in the sawmilling business in order to utilize the available supplies.

(iii) *Paper and Paper Pulp.*—The manufacture of pulp and Kraft paper in South Africa started on a small scale with the establishment of a concern in the Transvaal about sixteen years ago. This plant obtains its supplies of pulp partly from overseas and partly from local supplies of old newspapers, etc. From time to time the use of local materials such as papyrus, Tamboekie grass, sugar-cane waste, and Baobab trees, was considered for the manufacture of paper, but for one reason or another no developments took place. The erection of the pulp and paper plant near Johannesburg, of which mention was made in the previous *Year Book*, is now complete and production will commence in the near future. This concern will use wheat straw for conversion into pulp, but may also use considerable quantities of wood.

Pinus patula, grown extensively in the Transvaal in government and other plantations, has proved suitable for pulping for the manufacture of Kraft paper and similar products. The Government has undertaken to supply 750,000 cubic feet per year of this timber for a projected pulp plant in the eastern Transvaal. A similar undertaking near George, Cape Province, is also under consideration, but here the raw material for pulping will consist mainly of *Pinus pinaster*, of which the Government has undertaken to supply at least a million cubic feet a year.

Developments are pending in regard to both projects, which will use wood from government plantations. There are available in the plantations large quantities of wood (distinct from saw timber) which can be used for pulping in small sizes not economically utilizable as saw timber.

CHAPTER XXI.

FISHERIES.

§ 1. Sea Fisheries.

1. **History and Development of the Industry.**—The fishing industry is one which has to a large extent been neglected, and the earliest settlers in this country found little encouragement in promoting its development. Van Riebeeck, the first Governor, issued instructions that they were not to "waste their time in fishing," but nevertheless, some of the freed slaves, principally Malays, who to this day constitute the chief fishing population in the Cape, engaged in a certain amount of fishing. Long after the time of van Riebeeck, obstacles were placed in the way of the development of the fishing industry, and only 150 years ago colonists were forbidden to establish fishing stations at any distance from Capetown, as this necessitated protection from headquarters. The non-European fishermen plied their trade with the aid of small open boats in much the same manner as is at present practised at the Cape.

Within the last thirty or forty years, owing to the increased European population and the consequent demand for fish, attention has been directed to the possibilities of developing the fisheries. Modern methods of fishing, such as long line fishing and trawling, were attempted by private enterprise, but did not prove successful. The use of the long line was rendered difficult owing to the quantities of dog-fish which infest the South African seas. Trawling was tried in Table Bay and elsewhere. At Port Elizabeth it was taken up by the steam tugs in their spare time, and an area in Algoa Bay, of somewhat limited extent, was regularly visited and afforded a small supply of soles. In the year 1895 the attention of the Government of the Cape Colony was drawn to the undeveloped state of the fisheries and the need for action in the matter. An officer (the late Dr. J. D. F. Gilchrist) was appointed for the purpose of obtaining definite and reliable information as to the resources of the South African seas, and to advise as to what steps should be taken to place the industry on a more satisfactory basis, with regard to both its development and its conservation. A steam trawler, the *Pieter Faure*, specially designed for experimental work, was built, and systematic investigation commenced. Details of the work are embodied in reports of the Government Biological and Marine Investigations in South Africa, published by the Government of the Cape of Good Hope. As a result of these investigations, the fisheries of the Agulhas Bank were discovered, and it was established that trawling was practicable.

In Natal, as early as the year 1867, the fisheries were made the subject of legislation, a law being promulgated in that year to regulate the capture of fish within the bay or the harbour of Port Natal. In 1881, the Government of Natal appointed a commission to inquire into the subject of the pollution of streams in the coast districts of that Colony. This commission put forward valuable recommendations affecting the interests of the Natal fisheries. At a later date the *Fisheries Law* (No. 21 of 1884) was passed, with jurisdiction extending to all waters of the Colony of Natal in which fish were found.

In 1901 certain investigations on Natal Fisheries were conducted under the direction of the late Dr. Gilchrist during a limited period of the year and over a limited area. After much good work had been carried out in both Natal and Cape seas, the survey was discontinued for a number of years.

From 1907, when the *Coastal Fisheries Act* (No. 31 of 1906) became operative, the Natal Fisheries Department became fully organized, and in 1938 it consisted of: (*a*) the Natal Fisheries Board of seven board members, appointed for a period of 3 years, together with the Principal Fisheries Officer as secretary; (*b*) the officials of the Department; and (*c*) an Inland Fisheries Board of nine members, an Inland Fisheries Officer, River Conservancies, and Honorary Fisheries Inspectors (inland waters). The province has been divided

up into river conservancies, whose members control their particular areas and make recommendations to the Inland Fisheries Board on any matters of concern to their conservancy. The fisheries inspectors number 180, and are appointed for a period of 12 months. Their duties consist of the inspection of licences and the prevention of illegal methods of fishing, and they look to the general welfare of the waters in their areas. In addition there are 79 honorary fisheries inspectors dealing with coastal areas, who are also appointed for a period of 12 months.

By the Act of Union (1910) all matters relating to the "protection of fish" were delegated to the Provinces, and all regulations relating to fisheries matters are framed under either the *Natal Fisheries Ordinance*, No. 11 of 1916, or the *Cape Fisheries Ordinance*, No. 30 of 1920. Recently, however, it was decided to hand over all matters relating to marine fisheries to the Union Government, and as soon as the necessary legislation has been introduced, the control of sea fisheries will be vested in the Division of Fisheries of the Department of Commerce and Industries.

From 1920, extensive survey operations round the South African coast were carried out in the whaler *Pickle*, and valuable fishing grounds were found. The survey now embraces the whole Union coast line and also that of South West Africa. The discovery of fishing grounds near Dassen Island has proved of great value to the Cape trawlers, while other areas near the Orange River mouth, although at present unexploited, are a valuable asset. Detailed results of the investigations from 1920 to 1936 are embodied in Fisheries and Marine Biological Survey Reports, 1 to 13. The Fisheries Survey is now a division of the Department of Commerce and Industries.

During 1929, it was decided to replace the *Pickle* by a larger, more up-to-date, and specially constructed survey vessel, as it was obvious that she had outlived her usefulness as a research ship. The new vessel was launched in October, 1930, and named *Africana*. She arrived in Capetown on the 26th December, 1930, and was immediately taken over by the Department and placed in commission. The *Africana* is a vessel of 313 tons gross register, 136 feet in length overall, 25 feet beam and 13 ft. 6 in. depth, and is thus considerably larger than either of her predecessors, the *Pieter Faure* or the *Pickle*. In all essentials this vessel is a steel steam trawler, with various modifications to suit the type of work she is intended to do. She embodies all the most modern equipment necessary for marine survey work, and for her size she is one of the finest survey vessels afloat. A feature of her construction is the laboratory accommodation, which makes it possible to carry out most of the research work on board with as little delay as possible.

Research in connexion with savings-gear for commercial trawlers, whereby the capture of small and immature fish is reduced to a minimum, has been completed in so far as the sole grounds on the Agulhas Bank are concerned. This has resulted in the introduction of a new type of trawl net with a savings-panel through which immature fish may escape. A detailed report has been issued dealing with this investigation (see J. M. Marchand, "Savings-trawl Investigations in Relation to the Conservation and Regulation of the Agulhas Bank Sole-Fisheries". Investigational Report No. 1. 1934. Fisheries and Marine Biological Survey Division). The investigation has been extended to the stockfish grounds off the west coast, and a report on this work entitled, "Savings-trawl Investigations in South African Waters during 1935" (Investigational Report No. 8) has been published.

Experiments are now being conducted with a view to tracing the movements of various migratory fish. Numbers of the principal species of commercial fishes are tagged and records kept of their liberation, so that on the return of the tags after recapture of tagged specimens the migration may be recorded. In this manner it is hoped to obtain important details of the movements of the fishes, which would be of great value to the fishing industry and of considerable commercial importance.

2. **Cape Fishing Pursuits.**—The development of Cape fisheries has not been along the lines customary in such enterprises. Owing to the lack of harbours in which large boats can find shelter, and to some extent to the apathy and conservatism of the non-European fishermen, there has been no transition stage from the utilization of small open rowing boats to that of large modern steam vessels, and there are no large-decked sailing boats which find shelter in small fishing harbours. The construction of small fishing harbours is the next desideratum in the progress of the fishing industry, to allow of the use of the decked sailing boats so characteristic of the fishing industry of Europe. Initial

steps have already been taken in this direction, and the accomplishment of the desired object would probably mean the rise of a new and enterprising race of fishermen, and probably the improvement of certain branches of fishing at present neglected. The fishing industry and its possible development cannot, however, be on exactly the same lines as in Europe, the fish themselves being in some degree different in kind and habit; but there is enough similarity to justify the conclusions, already partly proved, that there is a great opening for improved methods in the catching, curing, and distribution of fish on modern lines.

3. **Fish Varieties.**—The following brief review of the varieties, principally of Cape fish, gives a conception of the industry and its possibilities. The scientific names of the fishes are given in view of the fact that there is no standardization of local names, the same species being frequently designated by names which have only a local significance. A list giving the names of the principal food fishes occurring in Cape and Natal waters appeared in *Official Year Book* No. 17 and previous issues.

(*a*) Snoek (*Thyrsites atun*).—The Snoek (the Barracouda of Australia) was about twenty years ago one of the most abundant of Cape fish. At that time it was caught in enormous numbers during the fishing season and exported to Mauritius. It is a fish peculiar to the southern hemisphere, occurring in the waters round Chile, Tristan da Cunha, the south-west of the Cape, and the south-west of Australia. "Snoeking" is still one of the most important branches of the Cape fishing industry and is conducted principally along the west coast as far as Walvis Bay during the months from December to June, when this species of fish is abundant.

(*b*) Silver Fish or Kaapenaar (*Dentex argyrozona*); Hottentot or Hangberger (*Spondyliosoma blochii*); Pangas or Dik-bekkie (*Sparus laniarius*); Red Stumpnose (*Sparus gibbiceps*), etc.— These fish are more or less stationary in their habits, and are the staple fish of the fishing industry. They are caught by hand lines, and are usually fairly abundant, though of late years the fishermen complain of scarcity. This they attribute to the destruction of the fry and eggs by the trawl. This question and the kindred one of the destruction of immature fish was investigated by the Cape Government by means of the survey steamer and a small marine laboratory, and as a result it was proved that the allegations were without foundation. It has been demonstrated on a small scale that some of these fish are well adapted to the process of smoking, and that they could undoubtedly compete satisfactorily with the great quantities of imported smoked fish with which the South African market is supplied.

(*c*) Geelbek or Cape Salmon (*Atractoscion aequidens*); Kabeljou, Cob, or Salmon Bass (*Johnius hololepidotus*); and Stockfish (*Merlucius capensis*).—These are among the most important of the large migratory fish. The Geelbek (often known as the Cape Salmon) is a large handsome fish with a superficial resemblance to the salmon, but with no real affinity to the Salmonidae. It is often caught in the trawl, and is also frequently taken in large quantities by hook and line. The Kabeljou is said to be identical with the Maigre, while the stockfish is the same as the Hake of European seas. They are caught both by line fishing and by trawl, by the first-named sometimes in great quantities. With these larger migratory fish is included the brilliantly coloured Seventy-four (*Dentex undulosus*), more abundant in the warmer waters of the east coast, where it is known as the Silverfish, the Silverfish of the west coast being known as the Carpenter (a corruption of Kaapenaar). With modern methods of fishing and with larger boats, which would enable the line fishermen to proceed further out to sea, these large and valuable fish could doubtless be procured in greater quantities. A fair amount of smoked stockfish is appearing on the market and has proved as good an article as the imported smoked haddock.

(*d*) Smaller Migratory Fish.—Among the smaller migratory fish are the Mackerel or Makreel (*Scomber colias*), the Harder or Springer (*Mugil cephalus*), the Herring (various genera), and the Anchovy (*Engraulis capensis*). The Mackerel is very little different from the European species and occurs abundantly at certain seasons. It is not, however, looked upon with favour by the fishing community,

and is even regarded as poisonous, as indeed it may have proved when preserved by some of the rough-and-ready methods once in vogue. An enterprising American some years ago visited the Cape with a schooner and brought nets for the express purpose of procuring a fish which is appreciated at its true value in America. Great quantities were procured, but the native fishermen made such strong representations as to the damage caused, especially to the spawn of fish, that in the absence of better information the Legislature was induced to pass a law forbidding the use of these nets. None of the smaller migratory fish, such as the Herring, the Sardine, and the Anchovy, are put on the South African market, which is flooded with tinned sardines, smoked herring and haddock, and other European fish.

(*e*) Flat Fish.—The investigations of the Government have shown that a sole (*Austroglossus pectoralis*) equal to the European sole occurs in great abundance on the Agulhas Bank. This type of fish is now more abundant in South African waters than in those round Britain, and its export in ice to Europe has become a feasible enterprise. The West Coast Sole (*A. microlepis*) is also a species of considerable commercial value.

(*f*) Oysters.—The Rock Oyster was formerly very abundant; a fair supply is yet obtained from some places, and good prices are secured. The supply has, however, become very limited; but there is every prospect that with artificial propagation and adequate care a valuable industry may be established. The English Oyster might be cultivated in some of the more sheltered bays, such as Saldanha Bay, Knysna, and Zwartkops. Experiments have actually been made in this direction, but, although the oyster thrives well, no sustained and systematic oyster culture has been attempted.

4. **Crawfish Industry.**—This industry had its beginning over a score of years ago and, after passing through many vicissitudes and technical difficulties in canning, has now become a factor of considerable importance to the west coast of the Cape Province and also in South West Africa. In recent years an extension of the industry in the form of the exportation of frozen crawfish tails has been started in Capetown. In the short time that has elapsed since its inception, this section of the industry has grown relatively quickly.

The imposition of a quota by the French Government, which resulted in the decline of the French market, proved a serious blow both to the canned crawfish industry and also to the exportation of frozen crawfish tails, France having been the principal market for export. Extensive markets are, however, opening up in other parts of the world: Australia, for instance, is becoming a valuable customer for both crawfish and other fish. In regard to the export of crawfish for consumption in France, it is necessary, owing to the quantitative restrictions imposed by that country, to obtain a permit, under the provisions of section 2 of the *Crawfish Export Control Act*, No. 50 of 1934, from the Director of Fisheries, Capetown.

Research work dealing with the canning processes of the Cape crawfish or Kreef was completed during 1935, and Investigational Report No. 5 entitled "Studies in the Canning of Cape Crawfish" was published.

At present, the position of the industry is by no means bright owing to a cycle of bad seasons. There is no reason to assume, however, that the grounds are being "fished out," expert opinion being to the effect that the prevailing scarcity is due to periods of bad weather and to the migration of the fish to grounds more distant from the fishing bases. Certain measures to prevent extermination or complete migration from the areas which can be profitably exploited are essential, and it is hoped that the research work at present being carried on will eventually yield data, as a result of which such measures can be taken.

Not a great deal is known at present of the habits, life history, etc., of the crawfish, though much valuable research work was done in the past by the late Dr. Gilchrist and the late Mr. Cripps (Provincial Fisheries Officer). In 1924, the Department of Mines and Industries became interested through its Fisheries Survey Committee, and Lieut. F. H. Sibson, R.N.V.R., was appointed to continue the researches. During 1936 an Investigational Report (No. 6) was published on "The Reproduction, Embryology and Metamorphosis of the Cape Crawfish" by C. von Bonde. This report fills in many of the gaps in the previously existing knowledge of the breeding habits of the crawfish.

Hitherto the industry has been carried on almost exclusively in the waters of the Cape Province and South West Africa, but discoveries made by the Fisheries Survey vessel *Pickle*, in deep waters (250 fathoms) off the Natal coast, go to show that valuable fishing grounds may be found here also, though at present the great depth of the water prevents successful exploitation, except by means of trawling.

An intensive survey of the various crawfish grounds in the vicinity of the Cape Peninsula and Saldanha Bay has been carried out since June, 1930, by means of the specially constructed motor-cutter *Jasus*. Primarily the survey was concentrated on the various sanctuaries, with a view to ascertaining the condition of the fish at various seasons. Concurrently the survey was extended so as to permit of investigations being carried out in new areas. Thus far the results have been very gratifying. A new crawfish patrol and survey cutter, the *Impala*, was launched on the 15th March, 1938, and placed in commission early in April. The *Impala* has conducted an extensive survey of the crawfish grounds from Cape Point to Lamberts Bay, and her sphere of operations, which combines patrol and survey work, is being gradually extended so as to embrace the whole of the west coast crawfish grounds.

Transplantation of live crawfish into depleted areas is now being carried out by the research ship *Africana*, and areas on the west coast are being restocked.

A comprehensive review of the crawfish industry has been published in Fishery Bulletin No. 1 entitled "The Natural History and Utilization of the Cape Crawfish, Kreef or Spring Lobster, *Jasus* (*Palinurus*) *Lalandii*," by C. von Bonde and J. M. Marchand. This bulletin deals fully with the canning factories, methods of fishing, fishing grounds, and the life history of the crawfish.

5. **Statistics.**—Certain statistical information regarding crawfish canning and other fish preserving is given in the following tables:—

(i) FACTORIES, EMPLOYEES, SALARIES AND WAGES, AND VALUE OF ARTICLES MANUFACTURED, 1932-33 TO 1936-37.

6. **Fishing Harbours.**—As the result of an extensive survey of the coast from Durban to Port Nolloth by a committee appointed for the purpose in 1925, considerable improvements have been effected in recent years in fishing harbours.

The present position in the provision of better harbour facilities for fishermen is reflected in the following schedule:—

Place.	Construction.	Remarks.
Strand	Jetty	Completed November, 1933.
Velddrift	Automatic Light	Completed during 1936.
Gansbaai	Landing Stage and Mole	Completed November, 1935.
Arniston	Landing Stage	Completed May, 1936.
Hout Bay	Breakwater	Completed October, 1937.
Vermaaklikheid	Cutting of Channel	Completed July, 1937.
Still Bay (Riversdale)	Ramp and Winch	Completed September, 1935.
Hermanus (Still Bay)	Breakwater, Quay, and Approach Road	Work commenced and will be completed March, 1941.
Kleinmond	Slipway	To be completed, July, 1939.
*Hout Bay	(1) Approach Road	—
	(2) Jetty	—
Port Alfred	Breakwater and Jetty	To be completed, 1939.
Gordon's Bay	Breakwaters, Jetty, and Slipway	One breakwater and jetty already completed. Second breakwater commenced.
†Kalk Bay	Alterations and Improvements	New mole nearly completed.
Lambert's Bay	Harbour	To be completed March, 1939.
Hawston	Slipway	Completed August, 1938.
‡Mossel Bay	Alterations and Improvements	—

* Work being undertaken by Divisional Council. Government bears two-thirds of cost.
† Work being undertaken by Railways Administration.
‡ In the case of Kalk Bay, Government bears one-third of cost, and in the case of Mossel Bay, one half of cost.

All fishing harbour construction work was taken over from the Public Works Department by the South African Railways and Harbours Administration as from the 1st April, 1939. The Department of Commerce and Industries will remain responsible for all administrative matters as heretofore.

7. **Whaling.**—Of recent years great improvements in the method of capturing whales and in their subsequent treatment have been effected, and various species, formerly of little value, now comprise a basis of important industries in various parts of the world. The chief species of whales found off the South African coast include the following:—

Humpback Whale	*Megaptera nodosa.*
Fin Whale	*Balaenoptera physalus.*
Blue Whale	*Balaenoptera musculus.*
Sei Whale	*Balaenoptera borealis.*
Sperm Whale	*Physeter macrocephalus.*
Southern Smooth Whale	*Balaena australis.*

Up to 1930 the whaling industry in South Africa was a large one, but, owing to world over-production of whale-oil in 1931, operations were greatly curtailed and the annual amount exported since then shows violent fluctuations. Exports of whale oil of South African origin averaged £106,989 per annum for the period 1910-1914 and £394,566 per annum for the years 1926 to 1930, but decreased to £47,712 per annum for the period 1931-1935. Statistics for the years 1934 to 1938 are given hereunder.

In view of the need for some form of control or restriction having for its object the protection of the industry, an effort is being made to give effect to certain recommendations embodied in a report on the whaling industry in South Africa. The Division of Fisheries is in touch with the British Government, with a view to co-operation in carrying out parallel observations on whales on the South African coasts, in order to obtain further information regarding whale migration.

As a result of the International Convention for the Regulation of Whaling, it was agreed internationally that during the 1937-38 season whales could be caught only in waters south of 40° south during the period 8th December, 1937, to the 7th March, 1938. Inspectors were carried on all factory ships operating in the Antarctic.

WHALE PRODUCTS—EXPORTS, 1934 TO 1938.*

Description.	1934.	1935.	1936.	1937.	1938.

* South African produce only.

8. **Shark-Fishing Industry.**—The various attempts at establishing a shark-fishing industry have not met with success for various reasons, and the Fisheries Division has issued an investigational report, entitled "Shark Fishing as an Industry", to act as a guide in any future development in this very important branch of the fishing industry.

§ 2. Inland Fisheries.

1. **River and Enclosed Water Fisheries.**—The rivers of the Cape Province are remarkable for the poverty of their indigenous fish fauna. The *Kurper*, or native carp, is a small fish; the *Witvis*, a kind of barbel, is of little value from a sporting or an economic point of view; and the same can be said of the *Moggel* or mud-fish. Troup, carp, and other fish have been successfully introduced from overseas, and trout are now established in many rivers in the Cape, Natal, and Transvaal Provinces, and in Rhodesia. When introduced into a dam or river carp increase with remarkable rapidity, and unfortunately proved a success to the detriment of trout. Not only do they feed on trout ova and fry, but also on grass and other vegetation, whose roots they are said to devour, thus denuding the rivers and dams of their vegetation and at the same time contaminating the water. For these reasons no carp have been distributed from the government hatcheries at Jonkershoek since 1924, and the Administration is now considering the advisability of framing regulations prohibiting the future introduction of carp into inland waters. During the last ten years other species of fish, notably largemouth and smallmouth black bass, have been imported in an effort to obtain a fish suitable for South African dams and enclosed waters to take the place of carp. The steps taken in this direction are described in paragraph 3 below.

Nearly all the rivers in Natal abound in indigenous scale fish (barbus), which may be taken on the fly or with ground bait. Eels, barbel, and bream are also to be caught, while tiger fish in some of the rivers and pans of Northern Zululand afford the angler excellent sport.

Two species of trout are established in the Cape, Natal, and Transvaal Provinces, "rainbow" and "brown", but the former is considered more suitable for South African rivers. From a hatching and a sporting point of view it is also regarded as a superior fish; better results are obtained from its ova when stocking a stream, and it puts up a good fight when hooked.

2. **Trout Acclimatization in South Africa.**—(i) *Cape of Good Hope.*—Early attempts at trout acclimatization, which had been undertaken between 1875 and 1884 by purely private venture, did not prove a success, but in 1890 the Cape Government interested itself in the matter and provided funds for a further attempt. In 1892 and again in 1893 consignments of ova were received and placed in the Eerste River and tributaries, and later some 20,000 fry were liberated in the Breede, Berg, Eerste, and Lourens Rivers, but owing to lack

of proper rearing ponds the distribution of these fry had to be made earlier than was advisable. Profiting by these experiences the Government secured a site for a fully equipped hatchery on the farm "Jonkershoek", on the upper reaches of the Eerste River, and a number of trout, including 500 two-year olds, were placed in the Eerste and other rivers. The first "stripping" of South African trout took place in 1895, and in 1897 rainbow trout were successfully introduced, the first "stripping" of which took place in 1899. The Jonkershoek hatchery has been considerably extended and improved, and ova and fry are being widely distributed, not only throughout the Cape of Good Hope, but also to other provinces and to Rhodesia.

In 1894 an annual subsidy was obtained from the Government to establish a hatchery in the Pirie Forest, which distributes both rainbow and brown trout. Difficulties similar to those encountered in the western Cape Province were met with, but success was finally achieved, and a number of streams in the Transkei and eastern Cape Province have been stocked from that source. The Frontier Acclimatization Society, Kingwilliamstown, which administers the hatchery, receives an annual grant of £350 from the Cape Provincial Administration.

The western area of the province usually gets its rain from April to September, and the best fishing months are October, November, and December. In the eastern area the best fishing months are March, April, October, and November. The first two months are particularly good. Heavy thunderstorms and torrential rains usually occur during December, January, and February, making fishing difficult owing to high floods and the discoloration of the water.

The following licences are required to fish for trout or other non-indigenous fish in the Cape Province:—

(*a*) Trout and other non-indigenous fish:—
Male adults: 10s. per month. £1 per fishing season.
Women and juveniles: 5s. per fishing season.

(*b*) Black bass and perch only: 2s. 6d. per fishing season.

The Ordinances dealing with fisheries in the Cape Province are Ordinance No. 30 of 1920 (main Ordinance), as amended by Ordinances Nos. 6 of 1925, 3 of 1930, 11 of 1932, 4 of 1936, and 7 of 1937.

Various regulations have also been promulgated and these provide *inter alia* that the close season for trout-fishing throughout the Cape Province, including the Transkeian Territories, shall be from the 16th May to the 31st August in each year, both days inclusive.

(ii) *Natal.*—The first attempt to introduce trout into the Natal rivers was made in 1875, and in 1882 and 1883 further consignments of brown trout ova were received, but in none of these cases was success attained. In 1889 the Natal Government was induced to sanction a grant of £500 for the purpose of establishing a hatchery and importing ova. In 1890 a consignment of ova was imported and between that year and 1893 several thousands of fry reared at the Boschfontein hatchery, near Balgowan, were placed in various Natal streams. In 1899 it was found that trout were thriving in certain of the streams which had been stocked, and a hatchery on a considerably extended scale was established at Tetworth.

The Natal Administration has continued to take an active interest in trout acclimatization and has assisted riparian owners and angling associations to stock streams with fry. The work is still actively carried on and attempts are continually being made to stock new rivers, both by placing fry hatched *in situ* in them, and by transporting one and two-year old trout from other rivers where they are well established. To illustrate this aspect of the work it may be stated that 120 trout of this age were caught in the Bushman's River and transported a distance of 180 miles to the Pivaan River near Utrecht, between 7 a.m. and 4.30 p.m., with the loss of only one-third of their number. Transportation of adult fish is also resorted to where there is a danger of the stock being depleted.

Thirty-three rivers of the province are stocked with trout, fifteen being stocked with brown trout, nine with rainbow, and nine with both species. There are in all 800 miles of water stocked with brown or rainbow trout, besides several rivers in course of being stocked. During the course of the 1938-39 open season the Tugela, which flows through the Natal National Park, and the Little Tugela River were opened for public fishing for the first time. These rivers have been stocked with trout for a number of years.

The Administration imported thirty thousand brown trout ova from Australia. This consignment arrived during July, 1938, and the hatching was an unqualified success. The fry were liberated throughout suitable rivers in the northern districts of the province.

Licences are required for trout-fishing in Natal. These may be obtained from the Provincial Secretary, Pietermaritzburg, the Principal Fisheries Officer, Durban, various Receivers of Revenue, and specially appointed officers at certain fishing resorts. The cost of a licence for the whole season is £1, and of a seven-day licence, 7s. 6d. A special licence available for the whole season is issued to women and juveniles at a cost of 5s. In addition daily or weekly charges are made by certain angling associations. The fishing season extends from September to April in respect of brown trout, but opens and closes fifteen days later in respect of rainbow. It has been discovered that brown trout (*salmo fario*) can hold their own with the indigenous scale fish in a river, whereas the rainbow trout (*salmo iridens*) do not succeed in doing so.

(iii) *Transvaal.*— Attempts have been made to introduce trout into various districts of this province, but success has so far been attained in Machadodorp, Haenertsburg, Lydenburg, White River, and Pilgrims Rest areas only.

The stocking of the Elands River at Machadodorp was first effected about 1910, and between 1918 and the present time some 60,000 fry have been placed in the stream and its tributaries. In the Haenertsburg area there are two trout streams, the Broederstroom and Helpmakaar Rivers. The former is stocked with rainbow trout and the latter with brown trout. In the Lydenburg district trout were first introduced between the years 1915 and 1917, and in 1922 a supply of ova was secured from Jonkershoek. These were introduced into three streams in the neighbourhood of Lydenburg and proved highly successful. Since that date several suitable streams have been stocked. There are about 200 miles of water stocked with trout in the neighbourhood of Lydenburg.

Licences, which cost 10s. for a season, must be obtained to fish for trout in Transvaal streams. The fishing season in the Transvaal extends from October to April, inclusive, with the exception of all waters in Ward Woodbush, where the season is from October to March. Regulations framed under the *Fish Preservation Ordinance*, 1921 (Transvaal), as amended, were promulgated in the Transvaal *Provincial Gazette* of the 30th May, 1933.

(iv) *Orange Free State.*—Up to the present little success has attended the efforts to introduce trout into the streams of this province. Attempts have been made to stock the Wilge River in the Harrismith district, but so far without result. Rainbow trout have been placed in the reservoir of the Bethlehem Municipality.

(v) *Basutoland.*—Between 1909 and 1915 attempts were made to introduce trout, both brown and rainbow, into Basutoland streams, but without success. The first consignment was placed in the Little Caledon River in 1909 at Boqate, near Maseru, and on subsequent occasions ova were hatched and fry liberated in this river, and also in the Silver Spruit and the Quthing, Sejabatho, Tsoelike, and Mokhotlong Rivers. None of these experiments proved successful, but in March, 1935, 7 live brown trout of from 6″ to 8″ were introduced into the Lekhalabaletse River, a tributary of the Mokhotlong River. In October and November, 1935, 3 of these fish were seen in the Lekhalabaletse River, which incidentally runs westward. If the fish become established the theory that trout thrive only in rivers running in an easterly direction will be disproved.

(vi) *Swaziland.*—Swaziland rivers are well stocked with the usual indigenous fish found in the Transvaal rivers, including silver fish, barbel, bream, and, in the bush veld, tiger fish. For many years experiments were carried out with a view to establishing brown and rainbow trout in the mountain streams of Swaziland. A hatchery was established, but, though over forty thousand fry were liberated in the Swaziland rivers and in some of those in the Eastern Transvaal, they did not thrive. Trout up to three pounds in weight were taken at various times, but none are now to be found in Swaziland waters. It is believed that the water was not cold enough at the spawning time.

3. **Black Bass in South Africa.**—The largemouth black bass (*Micropterus salmoides*) has been distributed over a much wider range in South Africa than the trout, as it is a "pondfish" suited to life in the larger farm dams, reservoirs, and sluggish waters in general. The black bass is one of the "game" or sporting fishes of North America and it is also an excellent table

fish. The success of the largemouth black bass has aroused keen interest in South Africa, and attention is now being turned to the possibilities of introducing other members of the same family of perch-like fishes (the Centrarchidae), particularly the smallmouth black bass (*Micropterus dolomieu*), the spotted bass (*Micropterus pseudaplites*), and the bluegill sunfish (*Helioperca macrochira*).

The presence of largemouth bass in South Africa dates from February, 1928, when 45 fingerlings (bred in Holland in 1927) were imported by the Rand Piscatorial Association and taken to the Jonkershoek Hatchery, near Stellenbosch, C.P. These bass matured and bred at Jonkershoek in October, 1929, and the distribution of their fry to other waters was commenced in June, 1930. A second consignment of largemouth bass was imported by the Rand Piscatorial Association during December, 1928, and these were taken to the Pirie Hatchery, near Kingwilliamstown, C.P., but did not breed until 1932. In some of the waters stocked with the first South African bred fry from Jonkershoek (notably Paarde Vlei lake, Somerset West; and Brandvlei irrigation lake, Worcester) very large numbers of young bass resulted from the first "wild breeding" during October-November, 1931; some of them attained a length of twelve inches at nine months old, and some weighed 3 lb. before their second winter in 1933. Bass fry from the Cape hatcheries were sent to all the provinces of the Union, and to Rhodesia, South West Africa, and Swaziland. The secondary distribution of wild-bred bass was commenced in the Cape in 1932. In 1933, the Natal Inland Fisheries Department commenced a very extensive programme of distribution of bass bred in dams in that province, and similar work was done in the Transvaal. From 1935, largemouth bass bred in Swaziland have been distributed, and have been sent from there into Zululand, Eastern Transvaal, Basutoland, and even to Nyasaland. The progeny of the small nucleus stocks at the Cape have been scattered far and wide over Southern Africa.*

The introduction of the other species is being undertaken by the Cape Piscatorial Society, Capetown, and the Natal Inland Fisheries Department, Pietermaritzburg, acting in co-operation through the Union Division of Fisheries and the Union Legation at Washington, D.C., U.S.A.

Mr. A. M. Powell, Superintendent of Hatcheries of the State of Maryland Conservation Department, Baltimore, U.S.A., made all the technical arrangements for the shipments. The American-South African Line, Inc., New York, gave free assistance in this work as an act of courtesy to the Union.

As a preliminary attempt to send 50 young smallmouth bass in ordinary metal shipping cans had failed in February, 1937, Mr. Powell designed large shipping tanks made of cypress wood and a special equipment of electrical aerating pumps. Fifty-five smallmouth bass (about 3 inches long), which had been bred in Maryland during May, 1937, were sent from New York on 20th September, 1937. These bass were not fed at all on the voyage and the temperature of the water in their tanks rose as high as 83 degrees Fahrenheit in the tropics; but 29 of them survived to reach Capetown on 22nd October. They were taken to the Jonkershoek Hatchery of the Cape Provincial Administration near Stellenbosch. Four weaklings died during the first few weeks and there was some subsequent reduction of the stock, but by the end of May, 1938, the remainder had attained a length between 7½ and 10 inches. Smallmouth bass in Maryland, U.S.A., are not expected to breed until they are three years old, but the effects of transportation from the northern to the southern hemisphere was to promote exceptional precocity in the imported fish and they commenced to spawn at the end of September, 1938, before they were 17 months old.

This early success has permitted the distribution of South African bred smallmouth bass to begin long before it was expected. The first lot of smallmouth bass fry to leave the hatchery were planted in the Muizenberg Reservoir on 3rd December, 1938; and 300 fingerlings were released in the Berg River at Groot Drakenstein a few weeks later. Further distributions in the Cape Province were planned to take place after the hot weather. Over 200 smallmouth bass fingerlings were sent from Capetown to Durban in four consignments by means of the South African Airways service during December, 1938, and January, 1939; and the fish all arrived in excellent condition and were taken inland by road to various breeding dams. In January, 1939, a can of 25 smallmouth bass was sent by air from Capetown

* Fuller details will be found in Investigational Report No. 7, 1936, Division of Fisheries, Department of Commerce and Industries: "Black Bass in the Cape Province", by A. Cecil Harrison. Government Printer, Pretoria. (Price 2s. 6d.)

to Johannesburg and from there it was taken by road for 250 miles to Mbabane in Swaziland. All the bass arrived there in good condition after what is probably a record day of travel for live fish in South Africa.

The next step in the programme of fish acclimatization by the co-operating bodies was the introduction of the bluegill sunfish. It is thought that the bluegill will fill the present need in South Africa for a minor sporting and table fish for placing in farm dams and other waters which are not extensive enough to support a stock of largemouth bass.

The first attempt with the transportation of bluegills was made in June, 1938, but an unfortunate hitch in the stevedoring arrangements at New York docks caused heavy mortality amongst the fish before the voyage was actually begun, and only 4 bluegills arrived at Capetown. One of these died shortly afterwards at Jonkershoek, and it was found to be an egg-bound female, a circumstance which showed the hazards of bringing out these prolific fish from American summer to the Cape winter climate. The three survivors appear to be males.

In October, 1938, a second attempt to import bluegills was more successful: 120 small fish were sent and 72 arrived alive at Capetown. Thirty-six were taken to the Jonkershoek Hatchery, and, after some of the shipping tanks had been cleaned out, the remaining 36 were placed therein in fresh water and given a supply of live food for the voyage to Durban: 27 reached Durban alive and were taken inland to Howick. Thirty-two of the bluegills taken to Jonkershoek survived the quarantine period. They were about 2¼ inches long when turned out into a breeding pond on December 30th, 1938, and in three weeks time they had grown to about 4 inches long. Bluegills grow to be about 12 inches long and a pound in weight, but will commence to breed when quite small. Proof of this was soon obtained at the Jonkershoek Hatchery: on January 24th, 1939, one of the four-inch males was found to be guarding a nest of eggs, which hatched within a few days. Bluegill fingerlings should, therefore, be available for distribution during 1939.

Another species of fish, the introduction of which from America is under consideration, is the spotted bass (also known as the Kentucky or southern smallmouth bass). This fish is required for stocking the brown-stained coastal streams of the southern Cape and turbid streams in other regions, and generally for running water which is too warm for the northern smallmouth bass and too rapid for the largemouth bass. It is hoped to import a shipment of these fish, most probably in October, 1939, as that period of the year has proved to be the most suitable for such transportations.

In the *Cape Province* largemouth black bass are very plentiful in the lower reaches of the Berg, Breede (Worcester, Robertson, and Swellendam), and Olifants Rivers (Clanwilliam), and are also to be caught in various lakes, vleis, and irrigation reservoirs. Bass fishing has become a public amenity under provincial regulations at a licence fee of 2s. 6d. per season, which extends from 1st January to 31st August. Largemouth bass breed freely in enclosed waters, and the dry summers which usually prevail in the western part of the Cape Province produce conditions in the sluggish parts of the rivers very favourable for breeding. There is still some doubt as to whether extensive natural reproduction of largemouth bass is possible in the rivers of the eastern area of the province, which are subject to heavy floods in summer, but largemouth bass are so prolific in farm dams that certain angling associations are planning to transfer large numbers of fingerlings from such dams to the rivers, to compensate for this climatic difficulty.

Freshwater fisheries circulars, published by the Cape Piscatorial Society, 73, St. George's Street, Capetown, include the following gratis publications of general interest: No. 28, October, 1937, "The Importation of American Smallmouth Black Bass"; No. 30, March, 1938, "Fish of the Rivers of the Langeberge"; No. 31, June, 1938, "Fish of the Olifants River, Clanwilliam"; No. 32, November, 1938, "Progress Report on the Acclimatization of Smallmouth Bass and Bluegills".

In *Natal* the Provincial Administration was responsible for the introduction of largemouth black bass, and has given every encouragement financially and otherwise in the distributions that have taken place. In April 1931, fifty stock fish were obtained from the Cape provincial hatchery at Jonkershoek and placed in dams at Nottingham Road and Karkloof; during subsequent years they spawned prolifically. Since 1932, 297 distributions,

numbering 11,875 young bass, have been made in Natal and Zululand. These have done remarkably well in the dams in which they have been placed, mostly with a view to removing the young fish each year and stocking the rivers in the vicinity.

A start has been made with stocking the numerous large fresh water lakes in Zululand with black bass; during the year 1937, forty adult bass were released in Lake Umsingazi, a stretch of water covering some 6,000 acres, near Richards Bay, and easily accessible. Bass have also been planted in the Nyamiti Pan and Lake Sibayi, the largest fresh water lake in Zululand. Since then further distributions of largemouth bass have been made in these lakes and pans and also in other fresh water areas in Zululand, including Lake Bangazi, which is within 20 miles of St. Lucia. Evidence exists to show that these waters are ideally suited to this species: a catch in one lake indicated that the fish had increased 1 lb. 8 oz. in weight during the short period of twelve months.

These fish are game fighters, and permits to fish for them are issued by the Provincial Secretary and certain magistrates in the province. The fee for a seasonal licence is 2s. 6d. The largest caught to date weighed 5 lb. 9 oz., but greater weights can be expected in favourable environments with a plentiful food supply.

The Administration was also jointly responsible for the successful importation of the smallmouth black bass (*Micropterus dolomieu*) from America. The smallmouths will be used to stock cool, swift-flowing rivers in the province which are unsuitable for trout and largemouth bass. The original consignment of smallmouth bass was placed in the hatchery at Jonkershoek, Cape Province. These first spawned during 1938. Further consignments of fry numbering nearly 200 have since been obtained from the Jonkershoek hatcheries.

Although largemouth black bass were originally imported into South Africa by a Transvaal angling club (the Rand Piscatorial Association, Johannesburg), the distribution in the *Transvaal* has been slow. There is no provincial hatchery in the Transvaal, and the absence of this and of organized control of fishing in this province has retarded progress. Black bass have been liberated in Florida Lake on the West Rand, the Hartebeestpoort Dam, the Elands River, the Hennops River, and the Klip River, and have also been distributed in various privately-owned and municipal waters, but the results have not been altogether satisfactory. It has been ascertained that of the fry hatched out in open waters only about one-third reach maturity, as the parent fish feed on them, and experience has shown that, if black bass is to become well established, waters should be stocked at least two or three times a year.

It is intended to introduce bass into the Vaal and Loskop dams, and 300 to 400 fish, hatched out in two dams in Johannesburg, are being retained for this purpose.

In the *Orange Free State* several farmers have introduced black bass into dams on their farms, but it is still too early to state what the result has been. The Provincial Administration has also recently acquired a number of black bass fingerlings with the ultimate aim of stocking dams and rivers with this breed of fish.

Largemouth black bass were introduced into *Swaziland* in 1933 and have done very well. From 1935 distributions of black bass have been made in Swaziland waters and various neighbouring territories. During 1938, 2,137 largemouth bass, of which 1,000 were yearling fish, were distributed as follows: Various waters in Swaziland, 144; Transvaal, 1,073; Southern Rhodesia, 810; Bechuanaland Protectorate, 110. In January, 1939, smallmouth bass which had been imported from the United States of America were brought in and liberated in two hatcheries at Mbabane, viz., 12 from Natal and 25 from the Cape.

The *Basutoland Administration* imported a number of largemouth black bass from Swaziland early in 1937. These were liberated in artificial dams at Maseru, Mafeteng, Leribe, and Butha Buthe. The fish have spawned well and 150 have been moved from the original dam at Maseru to stock new dams.

CHAPTER XXII.

MINES.

§ 1. Department of Mines.

1. **Organization.**—The organization of the Mines Department has been built up from that of the Department of Mines of the Transvaal Republic, which was taken over by the Colonial Government at the conclusion of the South African War. When the Union was constituted the various Mines Administrations of the other Colonies were absorbed so as to form one Mines Administration for the Union under the Minister of Mines. In the republican days and during the régime of the Crown Colony Government, the head office of the Mines Administration was in Johannesburg under the Commissioner of Mines, but on the advent of responsible government in the Transvaal it was found convenient to move the head office to Pretoria so as to be in close touch with the Minister. The Department issues annually a report by the Government Mining Engineer containing a wide range of statistical data concerning mining. A monthly publication of interim statistics is also circulated.

The organization of the Department may be summarized as follows:—

Head Office, Pretoria—

General administration of mining laws of the Union.

District Offices—

(Mining commissioners, Johannesburg, Heidelberg, Barberton, Pilgrims Rest, Pietersburg, Lichtenburg, Klerksdorp, Pretoria, Bloemfontein, Barkly West, Pietermaritzburg.)

Issue of all prospecting licences and mining titles under the *Mining Acts* of the four provinces of the Union, including those dealing with diamonds, and carrying out local administration of those laws under the head office.

(Registrar of Mining Titles, Johannesburg.)

The central registration of all Transvaal and Orange Free State Mining Titles and Witwatersrand Township stands.

Engineering Branch, Johannesburg—

(Government Mining Engineer, Government Mine Surveyor, Inspectors of Mines and Machinery.)

Advisory to the Government on technical mining matters; the safety of life and limb and the safeguarding of health in the working of all mines; licensing of all boilers and inspection of prime moving machinery in mines and works (*Mines and Works Act*, 1911); issue of certificates of competency to persons employed in mining; valuation of mines and the surveillance of mines in which the Government receives a direct share of the profit.

Geological Survey, Pretoria—

(Director of Geological Survey, Geologists, Geophysicists, Mineralogists, and Drawing Staff.)

Geological survey of the Union; investigation of mineral resources including detailed coal survey; investigation of underground water resources; study of the value of geophysical methods of prospecting; identification of minerals and rocks for the public; research on minerals; maintenance of geological museum; preparation and publication of geological maps with explanations, memoirs, and bulletins.

2. **Mineral Laws.**—The following Mining Laws are administered by the Department of Mines:—

UNION LEGISLATION.

Mines, Works and Machinery Act, 1911 (No. 12 of 1911), as amended.
Precious Stones Act, 1927 (No. 44 of 1927), as amended.
Reserved Minerals Development Act, 1926 (No. 55 of 1926), as amended.

CAPE OF GOOD HOPE.

Precious Minerals Act (No. 31 of 1898), as amended by the Mineral Law Amendment Act (No. 16 of 1907).

NATAL.

Natal Mines Act, 1899 (No. 43 of 1899).

TRANSVAAL.

Precious and Base Metals Act, 1908 (No. 35 of 1908 of the Transvaal), as amended.
Transvaal Mining Leases and Mineral Law Amendment Act, 1918 (No. 30 of 1918).

ORANGE FREE STATE.

Orange Free State Mining Metals Act, 1936 (No. 13 of 1936), applying with certain exceptions the Transvaal Gold Law (Act No. 35 of 1908), as amended, and the Transvaal Mining Leases and Mineral Law Amendment Act, 1918 (No. 30 of 1918).

3. Mines Department: Examinations.—The issue of certificates of competency is governed by Part IV, Chapter XXVII, of the regulations issued under the *Mines and Works Act*, No. 12 of 1911, as amended. Examinations are conducted for the following certificates of competency:—

Examination.	Governed by—	Examination fee.
		£ s. d.
Mine Managers	Regulations Nos. 296 to 299	5 0 0
Mine Overseers	Regulations Nos. 300 to 302	3 0 0
Mine Surveyors	Regulation No. 303	3 0 0
Assayers	Regulation No. 304	3 0 0
Mechanical and Electrical Engineers	Regulation No. 305	3 0 0
Winding Engine Drivers	Regulations Nos. 306 to 308	2 0 0
Locomotive Engine Drivers	Regulations Nos. 309 to 312	2 0 0
Stationary Engine Drivers	Regulations Nos. 313 to 316	2 0 0
Boiler Attendants	Regulations Nos. 317 to 319	2 0 0
Blasting Certificates	Regulations Nos. 320 to 325	10 0 (Permanent)
		1 0 (Provisional)

For examination purposes, commissions of examiners or other issuing authorities are appointed from time to time, and certificates are granted or withheld in accordance with the decision of such commissions or other issuing authorities. Appeal may be made to the Government Mining Engineer against any decision of any commission of examiners.

For mines of the Witwatersrand area and scheduled mines, the blasting certificate of the Commission of Examiners, Johannesburg, is required. For fiery mines the certificate of the Commission at Dundee or Witbank is necessary, but provisional certificates may be issued by an Inspector of Mines authorized by the Government Mining Engineer to issue such certificates.

For all mines other than scheduled mines and fiery mines, a blasting certificate issued by an Inspector of Mines, or such Commission of Examiners as the Government Mining Engineer may appoint, is valid. Provisional blasting certificates for these mines may also be issued by an Inspector of Mines or by the certificated mine manager of the mine on which the person is working.

A lampman's certificate may be obtained from the Inspector of Mines of the district concerned; the fee is 5s. (see Regulation No. 326).

The following statement shows the number of candidates examined and the number passed for the years 1931 to 1938 inclusive.

MINES DEPARTMENT: RESULTS OF EXAMINATIONS, 1931 TO 1938.

Examination.		1931.	1932.	1933.	1934.	1935.	1936.	1937.	1938.

4. History and Development of the Geological Survey.—The first official geologist appointed within the area now forming the Union of South Africa was Andrew Wyley who, in 1854, was appointed by the Government of the Cape from the Geological Survey of Ireland. Some years previous to this, Sir Roderick Murchison had suggested to the British Government the formation of a Geological Survey of the Cape Colony and had urged the ability of Andrew Geddes Bain, the "father of South African geology", then a road engineer in the Government Service, to occupy the post of Government Geologist.

Mr. Wyley seems to have been employed for about four years in all; particulars of his work appeared only in reports, laid before Parliament, which dealt with the Maitland mines near Port Elizabeth, a gold discovery at Smithfield, the Stormberg coalfield, the copper fields of Namaqualand, and a more general account of the geology of the Colony, entitled *Notes of a Journey in Two Directions Across the Colony.*

In 1874 the Government of Griqualand West appointed Mr. G. W. Stow to undertake geological investigations for a period of six months, as a result of which some valuable maps and sections were produced. The Volksraad of the Orange Free State employed the same geologist in 1877 and 1878, and during this period he reported favourably on certain coal seams which to-day fall within the Verceniging coalfield.

In 1871 and 1872 Mr. E. J. Dunn made a journey through Namaqualand for the Cape Government with the object of prospecting for gold, and in 1872 he went on another gold prospecting expedition, this time towards Port Elizabeth and to the Stormberg coalfields. His reports were published by the Government. A further report on work done on the Stormberg fields in 1876-77 was published in 1878. Reports on work accomplished by Mr. Dunn were also published by the Government in 1883 and 1886. In 1886 Mr. Dunn drew the attention of the Cape Government to the necessity for a systematic geological survey of the country: but ten years passed before his suggestion was acted upon. During this time several reports on mineral occurrences were written for the Cape Government by various geologists, but no permanent survey was in being.

The first step towards systematic geological survey in Africa south of the Equator was taken at the Cape, where a Geological Commission was constituted, which was instructed "to organize, control and direct the work of Geological Exploration and Survey", and which appointed in 1896 a part-time Director and two field geologists. The Commission concentrated its efforts on the scientific elucidation of the geology of the Cape Colony, without allowing itself to be drawn away into economic questions, and its scientific staff, never more than three in

number, maintained a steady output of maps and geological descriptions of a very high standard. In 1912 the geological staff of two was amalgamated with the staff of the Transvaal Geological Survey to form the Geological Survey of the Union.

In the Transvaal, Dr. G. A. F. Molengraaff was appointed State Geologist of the Republic in 1897 and continued as such until the outbreak of war in 1899. He issued two valuable annual reports. After peace had been declared, systematic geological work was recommenced by the newly formed Geological Survey of the Transvaal, which consisted, at first of a Director and two geologists, but was subsequently augmented by the appointment of additional geologists. Annual reports and maps (with explanations) and some memoirs were issued up to the time of the formation of the Union Geological Survey.

The Natal Government appointed Mr. W. Anderson as Government Geologist from the beginning of 1899, and single-handed he carried on a geological survey of Natal and Zululand until the end of 1905. The results of his work were published in three reports, which are illustrated by maps and contain descriptions of a considerable number of fossils collected by him.

At the amalgamation of the Transvaal and Cape geological surveys in 1912, the professional and technical staff consisted of a Director, an Assistant Director, four geologists, a curator, two draughtsmen, and a laboratory assistant, and the approximate annual cost of the survey was £10,000. For some 20 years the numbers employed in the survey remained more or less constant. During recent years, however, the policy of the Government with regard to mineral development has resulted in a very noticeable expansion both in the sphere of activities of the Geological Survey and in the numbers of its personnel. At present, there is allotted to the Survey a professional and technical staff of 51, and the estimated expenditure for the financial year 1939-40 will be approximately £42,600.

The results of the work of the Survey are made known to the public in the form of memoirs, special publications, bulletins, and geological sheet maps accompanied by explanations. For mapping purposes, the Union has been divided into 255 sheets, most of them covering one degree in longitude by half a degree in latitude, while South West Africa (which for geological survey purposes is under the control of the Union survey) is divided into 160 such sheets. Of the Union sheets, 89 have been surveyed in varying degrees of detail, and the maps of about 50 have been published in one form or another. In South West Africa 16 sheets only have been so far surveyed. Attention has been largely devoted to those areas which are the more likely to prove of mineral economic value.

During the last few years, aerial photography and various methods of geophysical investigation have been used as accessories to ordinary geological methods of survey, and there has been a great expansion in the use of such methods in the search for underground water reserves.

§ 2. The Transvaal Chamber of Mines and its Subsidiary Organizations and Associated Institutions.

1. **General.**—In September of the year 1886, the Witwatersrand Gold Fields were proclaimed as public diggings. Shortly after, a Diggers' Committee was formed under the old *Gold Law*. In 1887 the Chamber of Mines was formed with the following objects:—

"To collect, arrange and from time to time publish information connected with the mining industries of the Transvaal, and particularly of the Witwatersrand Gold Fields, and to watch over and promote those industries generally; to arrange for scientific and technical papers to be read before members; and to confer with the Diggers' Committee on matters of interest."

The survival of anything more definitely corresponding to a Memorandum or Articles of Association cannot be traced, but even as early as April, 1888, the Secretary had to deal with the most persistent of the many popular delusions in connexion with the Chamber. The public then, as in many cases now, were convinced that the personnel of the Chamber, from the President of the day down to the junior clerk, knew all about share prices, if, indeed, they were not responsible for them. A letter from the Secretary of that day to a foreign correspondent runs as follows:—

"They (i.e., the Chamber) do not act as brokers, nor do they advise investors, but are a public body, composed of the leading men on the gold fields and formed for the purpose of watching over and protecting the mining interests of the Witwatersrand. It would be beyond the bounds for which our Chamber was formed to express an opinion upon the value of any property or to recommend any special investments. There are engineers here of repute, also share brokers and general agencies to whom you can refer in such matters and who make these inquiries a matter of business."

To-day, the public in South Africa and in Europe are better informed as to the administration of the industry, and as to the functions of its various organizations, but even so there are still people who think that share market movements take place in accordance with decisions of the Chamber's committee.

Even as at the present day, public opinion was not always correctly informed as to the relation between the Mining Houses and the Chamber, or as to the responsibility of the industry through the Chamber or otherwise for events in Johannesburg. A consideration of all records now available would lead the reader to doubt whether in the past the critics of the industry made sufficient allowance for the numerical strength of the "camp followers", or appreciated their error in identifying the latter with established bodies in the industry. One of the earliest presidents of the Chamber pointed out that producers who were members of the Chamber contributed 96 per cent. of the total output. At that time there were hundreds of so-called gold mining companies in existence, most of which were on the official list of the Johannesburg Stock Exchange. Very few of these companies were members of the Chamber or had any official connexion with genuine enterprise. In most cases no work had been done on their properties, and it is doubtful whether the output suffered much by that fact.

To-day the Chamber is, in effect, a body which, through the medium of a staff headed by specialists, handles the centralized activities of the mines and deals with the problems which are common to the industry as a whole. These problems include labour matters (European and coloured); technical questions (such as those connected with Mining Regulations); parliamentary and legal matters (including legislation); health conditions on the mines (including dust-allaying and ventilation); the scrutiny of patent applications; taxation, accounting questions, and the collection of statistics.

As a convenient method of carrying out its objects, and as a further side to its activities, the Chamber acts as Secretary to certain subsidiaries, viz.:—

The Witwatersrand Native Labour Association, Limited.
The Native Recruiting Corporation, Limited.
The Rand Refinery, Limited.
By-Products, Limited.
The Chamber of Mines Steel Products, Limited.
The Chamber of Mines Building Company, Limited.

The secretarial work of the above-mentioned subsidiary companies is performed by the Chamber's Staff. The Chamber is also in close association with the Rand Mutual Assurance Co., Ltd., the Government Miners' Training Schools, the Transvaal Miners' Phthisis Sanatorium, and the South African Institute for Medical Research. Boards of directors and executive committees of all these organizations are composed of or include representatives of the same bodies of Group officials as those which supply the membership of the Chamber's principal committees. Thus the officials of mining houses and companies composing the industry are able to maintain close personal touch with matters which it would be inconvenient or impossible to handle in any other way.

The principal committee of the Chamber is the Gold Producers' Committee, consisting of the local heads of the more important mining houses associated with the Chamber. Colliery affairs are dealt with by the Collieries Committee, whilst the Executive Committee deals with certain questions of common interest and with matters of membership. Questions of importance in connexion with the work of all the subsidiary organizations referred to above are governed wholly in most cases, and partly in the others, by decisions of the Gold Producers' Committee. The Chamber thus voices the decisions of the Groups; in some cases the Chamber implements these decisions; but it must be understood that the constituent Groups govern the Chamber, and not *vice versa*.

In addition to the committees mentioned in the last paragraph, there are numerous committees and sub-committees appointed by the Gold Producers' Committee to investigate and report on particular subjects. A president and two vice-presidents of the Chamber are chosen each year at the annual meeting of members. The normal period of office is one year, although at times presidents have been re-elected. In the course of its history, the Chamber has had twenty-six separate presidents, including Sir Lionel Phillips, Sir Evelyn Wallers, Sir Percy Fitzpatrick, Sir George Farrar, and Messrs. Georges Rouliot, Hermann Eckstein, and John Martin. A study of the list of former presidents shows that the majority of men who have played leading parts in building up the industry have held the post of president of the Chamber for at least one year. The chief officials of the Chamber are the Legal Adviser, Technical Adviser, Native Labour Adviser, and two Joint Secretaries. The chief official of the Witwatersrand Native Labour Association, Ltd., and the Native Recruiting Corporation, Ltd., is the General Manager of those companies.

2. **Native Labour.**—The native labour complement required by the gold mines varies from time to time; at the end of 1938 the total requirements were estimated at 358,000, of which 309,000 were supplied at that date. The Witwatersrand Native Labour Association and the Native Recruiting Corporation, with head offices in Johannesburg, are the two organizations concerned with the supply of native labour to the industry. The demand for native labour has continued to expand and the native labour supply is now derived from four main areas: (*a*) the native territories of the Union, (*b*) the three British Protectorates, (*c*) the southern districts of the Province of Mozambique, and (*d*) certain territories north of latitude 22° S. The employment of natives from the areas north of latitude 22° S. has made encouraging progress and the statistics in regard to health and mortality are satisfactory. The cost of obtaining native labour is 1·403d. per native per shift worked.

From the central depot in Johannesburg the natives are sent to the various mines. There they live in open compounds, where strict cleanliness and decency are insisted on. They are amply fed, and well cared for when sick. Religious instruction is supported and in some cases night schools are maintained. The playing of games in the open air is encouraged, and cinema entertainments are regularly given.

The daily ration laid down by Government regulation is as follows:—24 oz. of maize meal, 6 oz. of bread, 3 oz. of beans or peas, 2 oz. of peanuts or ½ oz. of fat, 5 oz. of vegetables, ½ oz. of coffee or cocoa with sugar, and in addition 3¾ lb. of meat per week and sufficient salt.

Each mine has a well-equipped native hospital, and about 50 medical officers are employed on the Rand who devote all their time to native labourers on the mines. In addition, nine doctors are maintained at the Witwatersrand Native Labour Association central depot in Johannesburg. Sick and injured natives are sent back to their homes under special supervision. Deaths amongst mine natives from disease have dropped from 31.96 per 1,000 in 1909 to 5·02 per 1,000 in 1938.

Whilst the average earnings of native labourers employed in Witwatersrand gold mines is 2s. 2d. per shift, it is possible for a native to earn several times as much in the more specialized branches of mining on which natives are employed. In addition to their wages, native labourers are supplied with free quarters and food, medical attention, etc., estimated to cost the mining companies 1s. per shift and to be worth 1s. 6d. to 2s. 0d. to the individual if he were paid entirely in cash and maintained himself. There are facilities for transmitting money home to relatives and friends, and, under a deferred payment scheme, many natives get the bulk of their wages on arrival back at their homes.

3. **Subsidiary Organizations.**—(i) *The Witwatersrand Native Labour Association, Ltd.* (the *W.N.L.A.*), recruits labour in Portuguese East Africa, south of latitude 22 degrees South, and in certain areas north of that latitude. It employs 139 Europeans and over 970 natives for this task. It has stations, systematically placed throughout the territory, to which natives come seeking work. From these they are sent by easy stages to main camps, and eventually, by way of a central depot in Johannesburg, to the various mines. The natives undergo no fewer than three medical examinations en route. Recruitment is entirely voluntary. The Portuguese natives have worked in the mines since the inception of the industry, so that mining has become a tradition. The native goes to the mines in order to get the wherewithal to pay his lobolo or marriage portion, to pay taxes, and to buy the many things that contact with the white man has taught him to use. These natives contract to remain for twelve months, after which they may renew their contract for an additional six months. 70,000 Portuguese natives were obtained during 1938.

(ii) *The Native Recruiting Corporation, Ltd.* (*the N.R.C.*).—This Corporation obtains its natives from the Union and the British native territories of Bechuanaland south of latitude 22 degrees South, Swaziland, and Basutoland. It employs 140 officials, 599 natives, and 350 white recruiting agents for the work. The last mentioned are usually traders, who are licensed and supervised by the Government and the Corporation. During 1938 the mines obtained 216,000 natives from these areas, about one-half offering themselves for work without the assistance of recruiting agents. The average period of service is about twelve months.

(iii) *The Rand Refinery, Limited.*—One of the most important subsidiaries of the Chamber, especially in its bearing on broad financial questions rather than in its intrinsic magnitude, is the Rand Refinery. Prior to 1922, the unrefined bullion produced on the mines was shipped to Europe for treatment. Since the foundation of the refinery, the whole output of the Witwatersrand (with insignificant exceptions) has been refined at the refinery at Driehoek, Germiston. The refinery also handles an important amount of gold and silver from producers outside the Transvaal. It deals at present with approximately 12,000,000 ounces of gold per annum, which represents about one-third of the gold production of the world. Further information regarding the operations of the Rand Refinery is given in paragraph 19, § 4, of this chapter.

(iv) *By-Products, Limited.*—This company was registered on the 8th November, 1909, under the title of "Witwatersrand Co-operative Smelting Works, Ltd." One of the principal reasons for its creation was that it was regarded as a means for helping to suppress illicit gold trading. Its principal object is to engage in the smelting and other treatment of by-products obtained in South African mining.

The by-products, whilst mainly supplied by the gold mines of the Witwatersrand, are to some extent obtained from the outside districts and from Rhodesia. The plant includes various items which are not ordinarily maintained by individual mines; and the centralization of facilities for treating material which, for the most part, is obtained on individual mines in small quantities, naturally leads to considerable economy. Bullion produced at the works is forwarded to the Rand Refinery, Ltd., for refining and realization. The Company has also undertaken research work on the platinoid metals, as some of the material handled at the works contains not inconsiderable quantities of these.

(v) *The Chamber of Mines Steel Products, Ltd.*—This company was registered on the 20th November, 1936, for the purpose of taking over the whole of the plant, buildings, and undertakings of the Shoes and Dies Branch of the Witwatersrand Smelting Works, Ltd. The manufacture of battery shoes and dies was originally commenced in 1916, owing to the difficulty of importing them at that time. This war-time departure has since proved highly successful under normal conditions, and the manufacture of steel balls for tube milling has also been undertaken. During the year ended 31st December, 1938, the output amounted to 10,516 tons of shoes and dies, valued at £110,418, and 23,005 tons of steel balls, valued at £340,385.

(vi) *The Chamber of Mines Building Company, Ltd.*—This Company owns and manages the buildings in which the Chamber and its subsidiaries have their offices.

4. **Associated Institutions.**—(i) *The Government Miners' Training Schools (the G.M.T.S.).*—The idea of establishing a training school for miners originated in about 1905, when it became apparent that many young men of South African birth were showing a desire to follow the occupation of mining. The Transvaal Government of that day appointed a representative committee to inquire into and report on the advisability of establishing a State mining school. This committee reported in favour of such a course, and, after various preliminaries had been settled, the Union Government established in 1911 something in the nature of an experimental school at the Wolhuter Mine. This school fulfilled a useful purpose, and it was decided to widen the scope of the scheme, under a somewhat different organization.

In 1916, the Chamber of Mines agreed to co-operate with the Government in the matter and the G.M.T.S. was reorganized, the managerial control of the school being placed in the hands of an executive committee appointed by a board of directors, consisting of Government and Chamber representatives, with a Government nominee as chairman.

Just prior to its reorganization, the school employed two European instructors and 26 apprentices, and was quartered entirely at the Wolhuter Mine. In December, 1938, the Government Miners' Training Schools employed an instructing staff of 137 Europeans, who supervise the training of 1,383 apprentices in every branch of underground mining work on twelve mines. There are nine hostels, where 718 apprentices are housed and fed. There are three day schools which cater only for young men who live with their parents or friends, and in addition all sections of the schools provide employment for a certain number of these "living-out" apprentices.

The cost of conducting the schools is largely borne by payments by the mines for work done under the supervision of the instructors belonging to the schools in the course of training the apprentices. The deficit is met in the proportion of three-quarters by the industry itself and one-quarter by the Government. The capital cost of the school buildings is borne by the industry and the Government in the proportions of one-third and two-thirds respectively.

Before admission to the schools, lads are required to pass the examination for physical fitness conducted by the Miners' Phthisis Medical Bureau. The apprentices are paid rates based on a sliding scale sufficiently liberal to enable them to supply their ordinary needs, and to live in moderate comfort throughout the whole period of their indenture. From the beginning of 1917 to 31st December, 1938, the number of apprentices who had completed their full course and had become qualified miners was 4,478. Although the primary object of the schools is to train lads to become practical miners, many ex-apprentices have reached official positions on the mines.

In 1936 the Government and the Chamber of Mines agreed to establish a scholarship which would enable a selected apprentice each year to take the four-year course at the University of the Witwatersrand for the Degree of Bachelor of Science in Engineering in the branch of Mining and Metallurgy, Group II. In addition to this scholarship, the Chamber of Mines has agreed to assist two other selected ex-apprentices each year to take the same course.

(ii) *The Transvaal Miners' Phthisis Sanatorium.*—The Transvaal Miners' Phthisis Sanatorium was founded in 1916, and was originally intended for the reception and treatment of miners suffering from the disease known as Miners' Phthisis. The institution—to the costs of which the Government and the Gold Mines are joint contributors—is known as "Springkell Sanatorium" and is situated a few miles from Johannesburg.

Originally the majority of miners, especially the older men, who suffered from the disease were immigrants, and many of them were homeless when unable to care for themselves. As the proportion of this type became smaller, and the proportion of South African born miners larger, the demand for accommodation from miners tended to diminish. Moreover, the incidence of the disease itself has also diminished. For some seventeen years past, therefore, a number of non-miner patients suffering from tuberculosis have been admitted at the discretion of the administration of the sanatorium. As from 1st April, 1934, the institution became part of the National Tuberculosis Scheme, and provision was made for women patients. The fees for non-miner patients are, in most cases, paid or partly paid by various public authorities, the rate charged comparing favourably with the maintenance cost of patients in the larger public institutions.

At 31st December, 1938, there were 101 patients resident at Springkell, made up as follows:—

Miners	41
Non-miners—Men	42
Women...	18
	101

(iii) *South African Institute for Medical Research.**—Prior to the year 1912 the provision for carrying out laboratory investigation in connexion with the health problems and health services of the mining industry was very limited. Johannesburg was then but twenty-five years old, and, while the mining industry was well established, neither it nor the population of Johannesburg had reached that position of stability and permanence that they have since attained. Nevertheless, the special circumstances which then presented themselves to the gold mining industry, in relation to the health of the large native and, to a less extent, the European labour organization of the industry, brought the whole question of medical services prominently before the minds of the leaders of the industry. The severe mortality, more particularly from lobar pneumonia and meningitis, amongst tropical native labourers, many of whom were then employed on the mines, was causing grave concern and led to investigations being set afoot under the control and advice of such eminent investigators as General Gorgas, of Panama Canal fame, and Sir Almroth Wright, of London.

Thus it was that attention became focused on the need for laboratory research, with the result that the Witwatersrand Native Labour Association, a branch of the mining industry, approached the Government with an offer to build and equip an institute for Medical Research at a cost of approximately £46,000, subject to the Government's contributing equally with the Association towards the cost of maintenance. This offer was accepted by the Government and the original buildings were completed in August, 1914, on a site of approximately six acres adjacent to the Johannesburg Hospital and the Medical School of the Witwatersrand University. The Institute was built from the design of Mr. (now Sir) Herbert Baker, F.R.I.B.A.

During the 25 years of its existence the work of the Institute has grown remarkably both in volume and variety. Additional buildings have been erected from time to time, until their total cost now amounts to over £130,000. The staff shows a commensurate increase, and equipment is liberally provided for the many activities involved. To-day the mining industry, through the Witwatersrand Native Labour Association, contributes £7,500 annually towards the maintenance of the Institute.

The work of the Institute comprises a number of different aspects of medical science and is carried out in the following departments: Bacteriological, Pathological, Serological, Parasitological, Biochemical, Entomological, Industrial Hygiene, and Medico Legal.

For a more detailed account of the activities of the Institute reference should be made to the paragraph in regard to the Institute contained in Chapter VIII of this volume.

(iv) *The Rand Mutual Assurance Company, Limited (Accident Prevention and Safety First).*—The liability of the gold mines in respect of workmen's compensation is provided for by means of a mutual insurance company.

All the Witwatersrand gold mining companies, members of the Transvaal Chambers of Mines, are members of the Rand Mutual Assurance Company, Limited, and its membership also includes a number of other mining companies in the Transvaal.

The Company is run on mutual lines and not for the making of profits. Members are charged premiums for Europeans at a flat rate based on the wages paid to employees, while premiums for natives are at a fixed rate per head. The amount of the premium is fixed to produce a margin of revenue over expenditure, and the surplus, after placing an amount to reserve, is periodically returned to members as a bonus based on premiums paid by members during the Company's financial year. Administration expenses are low and amount to less than 7 per cent. of the premiums charged to members.

The mining industry does not confine itself to compensating injured workmen, but also takes an active interest in the prevention of accidents and the minimizing of the results of injuries. With these objects in view, the industry undertakes the following activities through the Rand Mutual Assurance Company, Limited:—

* See also § 5 (ii) of Chapter VIII.

(*a*) A "*Safety First*" campaign against accidents under the aegis of The Prevention of Accidents Committee, which is financed by the industry to the extent of about £8,000 per annum. This Committee is composed of Government officials, including the Government Mining Engineer, directors of the industry, mining engineers, mine managers, medical men, and other technical experts.

The gradual improvement in the accident death rate per thousand per annum of all Europeans and natives employed on the Witwatersrand Gold Mines, since the Committee commenced its activities in 1913, will be noted from the following comparative figures of the first five years from 1913 and the five years to 1938:—

Year.	Accident Death Rate per 1,000 per annum.	Year.	Accident Death Rate per 1,000 per annum.
1913	3·81	1934	2·11
1914	3·22	1935	2·02
1915	3·17	1936	2·05
1916	3·16	1937	2·12
1917	2·64	1938	1·86

The death rate of 1·86 per thousand for the year 1938 is the lowest in the history of the Rand.

(*b*) *The encouragement of instruction in first aid and rescue work on the mines.*—The organization in co-operation with the South African Red Cross Society of classes and ambulance competitions for both European and native mine employees; assistance is given by the Prevention of Accidents Committee and for some years new records have been made in the numbers of those attending classes and taking part in competitions. In 1936 a new elementary practical first aid course was started, and up to 31st December, 1938, nearly 8,000 white mine employees had successfully passed their examinations, this being in addition to those who passed the Society's ordinary examinations for the full mining first aid course. No fewer than 26,158 natives passed a first aid examination in 1938, the total number of certificates issued to mine natives being well over 117,000 since this training was officially initiated by the South African Red Cross Society in 1922.

(*c*) *The provision of medical specialists, consultants, and special hospital and expert treatment for injured workmen.*—Claims are handled centrally by the Company's officials on behalf of its members. They are carefully and sympathetically considered and reported upon by the company's Medical Department which deals with claimants from the point of view of giving them fair and reasonable compensation. *Ex gratia* payments are often made where the workman or his dependants are not legally entitled to recover compensation.

5. **Chamber of Mines Hospital.**—It was decided in 1935 to build and equip a Chamber of Mines Hospital, particularly for the specialized treatment of serious accident cases. A site of eight acres has been acquired at Cottesloe on the town side of Auckland Park, Johannesburg, and the contract for the erection of the building was signed at the beginning of 1937. The estimated cost for building and equipment is in the neighbourhood of £250,000.

The hospital was opened on the 10th July, 1939.

6. **Witwatersrand Gold Mines Employees Provident Fund.**—The Witwatersrand Gold Mines Employees Provident Fund came into operation on the 1st January, 1934. Since its inception and up to the end of 1938 the benefits awarded have amounted to over £1,299,705. At the present time these benefits are in the form of gratuities payable on reaching the age of 60 in the case of underground men, or 63 in the case of surface men, or otherwise on certified incapacity or on death. As from 1st January, 1944, benefits will be payable in the form of pensions.

The fund was established with an initial contribution from the Gold Mining Industry of £605,925, and in addition receives a contribution from the mines of £14. 8s. 0d. per European employee per annum. During the year 1936 this amount was specially increased to £19. 4s. 0d. The total amount contributed to the fund from its inception up to the 31st December, 1938, was £3,192,419 (this includes the initial amount of £605,925). Mine employees are not required to contribute to the fund.

At 31st December, 1938, investments to the amount of £2,387,115 were held by the fund in loans to the Electricity Supply Commission, the Rand Water Board, and South African municipalities, in Union Loan Certificates, and on Fixed Deposit.

During the year 1936 the consulting actuaries completed their valuation of the fund as at 31st December, 1935. The position disclosed was so satisfactory that it was found possible to improve the benefits (*a*) by increasing the proportion of past service to be taken into account as pensionable service from 55 to 60 per cent., and (*b*) by providing for varying proportions of the past service prior to breaks in past service being taken into account in determining pensionable service.

7. **Witwatersrand Gold Mines Employees Savings Fund.**—In April, 1938, the mines decided to establish this Fund under the aegis of the Witwatersrand Gold Mines Employees Provident Fund. Payments are made by the mines at the rate of 5s. per European employee per week, and the amount to the credit of each employee may be withdrawn from time to time under stipulated conditions.

8. **Holiday Allowance to Mine Employees.**—In 1934 it was decided to introduce a system of cash grants to mine employees on the occasion of their annual leave, in order to enable them to make the best use of such leave. The arrangement formed part of an agreement with the trade unions, resulting from a request from the latter to share in the increased prosperity of the gold mining industry, and was partly in consideration of the fact that the South African Railways Administration found it impossible to extend the excursion fare system to the whole year, whilst on the other hand leave to mine employees cannot always be granted in particular months. The allowance has been increased since its original introduction, and now stands at £4. 3s. 4d. per holiday week, with a maximum of £15. Junior employees receive a reduced rate allowance.

9. **Medical Benefit Allowance.**—The mining companies arranged from 1st October, 1936, to relieve their employees of the cost of medical benefits by paying to each employee an amount at the rate of £7. 10s. per annum, which is equal to 12s. 6d. per month of service per European employee. A reduced allowance was granted to juniors. The medical benefits continue to be arranged by the Mine Medical Benefit Societies.

§ 3. Mineral Production.

1. **Value of Mineral Production.**—The table hereunder gives the total value of certain minerals produced from the earliest dates of existing records. The value of gold is calculated at the standard rate of £4·24773 per fine ounce, except where the gold premium is stated to be included.

The gold premium during the period 24th July, 1919, to the end of 1924 was valued at £32,740,264; at £668,798 in December, 1932; at £21,903,301 in 1933; at £27,795,410 in 1934; at £30,767,825 in 1935; at £31,342,025 in 1936; at £32,711,300 in 1937; and at £35,011,312 in 1938. Copper and tin are valued on the estimated pure metal contained in shipments according to the average current prices in London.

VALUE OF PRODUCTION OF MINERALS UP TO 31st DECEMBER, 1937 AND 1938.

Classification.	Cape of Good Hope.	Natal.	Transvaal.	Orange Free State.	Union.

3. Wages Earned in Mining.—The salaries and wages earned by European and other employees of mining and allied concerns during 1938 amounted to £33,635,110, distributed as shown in table (i) hereunder. Wages earned in salt works and miscellaneous factories are not included in table (i). Earnings on alluvial diamond diggings cannot be ascertained with any degree of accuracy and are therefore excluded. Table (ii) shows in comparative form the earnings from 1911, and in table (iii) the amounts paid out in salaries and wages for a period of years are analysed according to provinces and the race of the employees. In table (iv) are given particulars for a series of years of the aggregate and average earnings and payments to European employees on the Witwatersrand gold mines. These figures are calculated from the average number of persons actually in service, and thus represent the average earnings of a person assumed to have been employed the whole year, which is not generally the case; consequently the actual average annual earnings of each individual who finds employment on the mines must necessarily be less.

11. **Index of Stock Exchange Prices of Gold Mining Shares.**—In *Official Year Book* No. 17 and previous issues a description will be found of the origin of the index numbers of the values of the shares of 30 gold mining companies quoted on the Johannesburg Stock Exchange, as well as weekly index numbers for the period December, 1932, to June, 1933.

The prices of the shares of the following gold mining companies are included in the index:—Brakpan, City Deep, Consolidated Main Reef, Crown Mines, Daggafontein, Durban Deep, East Geduld, East Rand Proprietary Mines, Geduld, Geldenhuis Deep, Government Gold Mining Areas, Langlaagte Estates, Luipaards Vlei, Modder B, Modder Deep, Modder East, New Kleinfontein, New Modderfontein, New State Areas, Nourse Mines, Randfontein, Robinson Deep (B), Rose Deep, Simmer and Jack, Springs, Van Ryn Deep, West Rand Consolidated, West Springs, Witwatersrand, and Witwatersrand Deep. Owing to the liquidation of the Modder Deep, this company had to be excluded from the index of gold mining shares as from December, 1936.

The following table gives (*a*) the index numbers calculated on specific dates from January, 1923, to July, 1932, and (*b*) the monthly index numbers from January, 1933.

JOHANNESBURG STOCK EXCHANGE.—INDEX OF THE QUOTED VALUES OF THE SHARES OF 30 GOLD MINING COMPANIES.*

January, 1931=1000.

(*a*) Based on quotations taken on 1st January and 1st July, respectively, for years 1923 to 1932.

§ 4. Gold.

1. **Historical.**—Though there is unmistakable evidence that gold was mined by the ancients to a considerable extent in the northern portion of South Africa, there is little to show that there were early workings in any portion of the Union of South Africa. On going back to ancient history, we find that southern Africa in former days was intimately connected with mining, and all through the old records mention is made of gold exports that did so much to enrich the eastern and north-eastern coast trade. The golden stories told by the old chroniclers were no doubt exaggerated, but they stimulated pioneering enterprise and caused numerous expeditions to be formed for penetrating the coast lands and getting into the rich gold-bearing interior of Monomatapa, Sofala, and other old African provinces. In former days the Portuguese were responsible for most of the exploration of the gold-bearing areas. Only the northern and eastern territories were exploited, and no gold had ever been obtained from the Witwatersrand goldfield. Vague reports were, however, current regarding the existence of gold in the Transvaal for very many years before output was reported. The following are some of the cardinal dates in connexion with gold mining in South Africa:—

1868. Carl Mauch mentioned the existence of gold near the Olifants River.
1870. Gold found in the Murchison Range.
1873. Gold found in the Lydenburg district at Pilgrims Rest and extensive alluvial gold washing continued for many years thereafter.
1882. De Kaap goldfields started.
1884. The brothers Struben commenced quartz mining on the farm *Weltevreden* on the Witwatersrand and started a five-stamp battery.
1885. The Sheba Mine discovered and Barberton founded.
1885. The first gold from the banket or conglomerate beds of the Witwatersrand panned.
1886. Johannesburg founded.
1887. The first stamp mill started working banket.
1887. Coal discovered at Boksburg.
1887. Formation of Chamber of Mines.
1890. First cyanide test works and start of the Robinson cyanide works.
1891. Chlorination works at the Robinson Mine.
1892. Extensive deep level companies formed.
1892. Opening of railway to Johannesburg via Orange Free State.
1893. Rand Victoria borehole—Reef found, depth 2,343 feet.
1895. Bezuidenhoutville borehole—Reef, 3,127 feet.
1905. Introduction of tube mills.
1911. Six-hundred-stamp mill erected at Randfontein.
1912. Successful operations on the Far East Rand attracted general attention.
1922. All-sliming process introduced.
1923. Amalgamating tables largely replaced by blanketing on the Witwatersrand.
1923. Osmiridium first won in considerable quantity on the Witwatersrand.
1932. South Africa leaves gold standard (December).
1932. Magnetometric surveying in prospecting introduced.
1935. Robinson Deep air cooling plant completed and in operation.
1936. Successful boring operations indicate large extension of milling operations on West Rand.
1936. World's deepest workings, shaft 15B, Crown Mines, 8,611 feet in December, 1936.
1937. The deepest single lift hoisting shaft in South Africa, 6,321 feet, the South Deep Shaft of the Simmer and Jack Mines, Ltd., came into operation in November, 1937.
1938. The world's deepest cored borehole put down by New Central Witwatersrand Areas, Ltd., on Gerhardminnebron was stopped at a final depth of 10,718 feet in January, 1938.

2. **Methods of Aerial Survey and Geophysical Prospecting as Applied by the Geological Survey.**—One of the chief objects of a geological survey in any country is the preparation of a series of geological maps showing areal distribution of the various rock formations and rock groups that build the surface of the country. From a geological map emerge deductions concerning

the sub-surface structure, deductions which can be strengthened or altered by an examination of the results of drilling, shaft-sinking, and other mining operations when such results are available.

The scale of such maps varies. When an area is likely to contain little or nothing of mineral economic value, the scale is small and no really detailed geological work is attempted, unless conditions are such that detailed work for pure scientific knowledge is permissible. When, however, an area is known, or is thought, to contain minerals of economic importance, mapping is done on a larger scale and greater attention is paid to details of geological structure and rock differences.

Whatever the scale on which geological mapping is done, it is essential for purposes of accuracy that reliable geographic maps of an area be available for the use of the geologist in the field, maps on which as many surface features as possible should be set down with accuracy, including relief. Without such, the field geologist has first to be his own topographer, and much of his time is wasted in doing work that is not rightly his.

The Union of South Africa is badly supplied with such maps. Over many parts of it there is a network of secondary triangulation beacons which enable the position of a point to be fixed with regard to them; and each province has its own set of divisional maps or degree sheets showing the boundaries of farms, whose corner beacons are sometimes tied on to the secondary triangulation. But these maps take no account of relief or it is only roughly indicated with no pretence to accuracy; and the almost complete absence of reliable contour maps has, until quite recently, been a serious handicap to the geologist.

Air Survey.—Photographs of the earth's surface taken from the air enable larger portions of that surface to be viewed as a whole than is possible to an observer on the ground. Moreover, taken under certain conditions, it is possible to obtain from them a perspective view of the surface relief and to compile reasonably accurate topographic maps. On these maps linear features such as stream courses, roads, and often hills and valleys produced in rock formations, are revealed in every detail, being drawn direct from the photographs.

In order to test the possibilities of utilizing air survey methods, the Geological Survey of the Union employed the Aircraft Operating Company of Africa in 1934 to photograph a small area of hilly country around Barberton. Previous to flying, a number of control points were marked on the ground by white crosses, the co-ordinates of these points on the conform system being known. A list of all known heights in the area was supplied to the contractors. The company was asked to supply the Survey with (1) a set of vertical photographic prints on a scale of approximately 1:10,000 completely covering the area, the prints to have at least 60 per cent. fore-and-aft overlap and a lateral overlap, in order that they may be examined under the stereoscope; (2) a topographic map of the area photographed, on an agreed scale, with all the features shown that were visible on the photographs—such as roads, rivers, railroads, fences, houses, etc.—in their true positions and form lines at approximately 100 ft. intervals.

Examination of the photographic prints by stereoscopic methods showed that physiographic relief was markedly visible and that it was possible to delineate certain geological features, such as outcrops, faults, direction of dip, joints, etc., with ease on a mere inspection of the photograph. It was obvious that, with a set of such photographs in the field, the geologist would be spared much of the trouble of plane-table survey, that his geological observations could be made directly on the photographs, that by a reasonable study of the prints the field-worker could very materially accelerate his rate of progress, that the transference of the geology from the photographs to a map was possible in an office, and that frequently he is enabled to delineate horizons or structures of economic importance with an accuracy not possible or only attained at the cost of much time, labour, and expense by other methods of survey; moreover, the aerial photographs afford him a true perspective of rock distribution and extent so often obscured or not apparent at first to the investigator dependent upon ground work only.

The result of this trial was so satisfactory that, during the next two years, much larger areas were photographed for the Survey by the same company, and topographic maps of the areas have been compiled. A total area of 5,503 square miles (in northern Natal, the eastern Transvaal, and the Murchison Range) has now been covered in this way and further areas will be photographed.

Hitherto, for assistance in the compilation of topographic maps, a close system of control points has been marked on the ground preparatory to flying, the marks then being visible on the photographs. Since, however, in nearly every case these points have been marked on high points in dissected country they lie above the mean level of the area under examination. Recent discussion has shown that this tends to lead to errors in mapping, and that the system of pre-flying marking is wasteful and unnecessary. In future, control points will be chosen after the photographs are prepared and ground parties from the Trigonometrical and Topographic Survey will fix such points for mapping purposes.

The areas hitherto chosen are confined to those of economic value and are all highly dissected or are so bush-covered that long-range visibility on the ground is difficult. In such types of country, the geologist working with plane-table frequently finds it impossible to locate his position relative to triangulation beacons. With air photographs, however, the position of a rock outcrop can be located readily and, in many cases, the continuation of the rock in both directions from the outcrop can be traced on the photograph without its being necessary to follow it foot by foot on the ground. After some practice, the air photographs can be used as indicators helping the geologist in his search for details of structure, and with reasonable care have proved themselves to be time-savers of great value. A notable example of this is the comparative rapidity with which the highly-dissected area carrying the important gold-bearing "reefs" of Lydenburg-Sabie has been mapped in great detail.

The Vryheid-Utrecht coalfield in northern Natal has also been treated in this manner, as well as the gold-bearing region of the Murchison Range. In both cases the value of air photographs to the geologist have been very apparent, and their use has resulted in a great saving of time and labour.

Inter-departmental arrangements are now in force under which the provision of air photographs for Geological Survey work becomes the duty of the Trigonometric and Topographic Survey office.

Geophysical Surveying.—The extensive use of magnetometric survey in the search for the extension of the beds of the Witwatersrand system in the area between Randfontein and Klerksdorp focused public attention on geophysical surveying in general as an aid to geological prospecting. The Department of Mines, through the Geological Survey, instituted in consequence a series of investigations into the application of various methods to geological problems under South African conditions. Four such methods are being tested, and certain results have been achieved.

A. *Magnetic Method.*—This method entails the measurement of local changes in the earth's magnetic field. The instrument generally used is a vertical force variometer, which measures the vertical component of the magnetic intensity. When the value of the vertical component at a station differs from the average value for the region surrounding the station, the difference is termed the magnetic anomaly at that station. Such anomalies may be due to rock masses which possess either permanent magnetism or induced magnetism due to the earth's field. The method is thus mainly used for locating masses of so-called magnetic material.

The Geological Survey has employed Vertical and Horizontal Force Variometers, which are magnetic field balances of the Lloyd-Schmidt type. With these traverses have been made across outcrops of the Lower Witwatersrand beds, in order to plot magnetic anomalies against the geological section and so institute a relationship between the nature and the value of the anomalies with the exact position of the horizons which cause them.

Where a mineral ore gives rise to variation of the magnetic intensity, the method can be used to locate bodies of such ore; and it has been so used by the Survey in investigating the nickel ores and chromite seams in the Rustenburg district and elsewhere.

The location of dykes of igneous rock under cover is also greatly assisted by magnetometric investigations; this method has been utilized as an aid in the selection of borehole sites in connexion with water supply problems, and has proved of very considerable assistance to the geologist.

B. *Gravimetric Method.*—The Eötvös torsion balance measures the rate of change in the value of the acceleration due to gravity at different points on the earth's surface. The lack of homogeneity of the earth's crust gives rise to gravity anomalies, and the local departure of equipotential surfaces from their normal or theoretical position and direction can be detected by the torsion balance.

The gravimetric method is used more particularly in elucidating concealed structural features such as faults, anticlines, and synclines. Investigations carried out by the Geological Survey have shown that the density differences in the Witwatersrand area are sufficient to enable the concealed structure of the Witwatersrand system to be mapped and, under favourable conditions, the thickness of the overlying cover of younger rocks to be calculated.

Where density differences are large enough, as in the case of sulphide-bearing pipes cutting the pyroxenites and other basic rocks of the Bushveld Complex, the presence of smaller geological structures may be located and their boundaries delineated by means of the torsion balance.

In practice, the actual field readings have to be compensated for various effects due to the shape and rotation of the earth, to the nature of the terrain and topography of the area in which observations are being made, and to special local causes. These necessitate an accurate topographic survey of the area; and since the complete observations at any one station may take several hours, a gravimetric survey is both lengthy and expensive. It is worthy of note, however, that the gravimetric is the only geophysical method for which there is a complete and exact theory.

As a substitute for the Eötvös balance when more rapid and less detailed surveys are to be made, instruments known as gravimeters have been devised and are in use.

C. *Seismic Method.*—More recently the Geological Survey has begun investigations in the Johannesburg-Pretoria area into the applicability of the seismic methods to estimating the thickness of various strata. The instrument in use is a Jones' Microid Seismograph with Zeiss Tuning-fork time marker and recorder.

The method consists in essence in measuring the time which elapses between an artificial explosion and the arrival of various types of waves at a recording station at a known distance. At an interface between two layers of rock with different velocities (i.e. velocities at which a longitudinal wave travels through the rocks) waves may be either reflected or refracted. Experiments so far have been directed towards the estimation of these velocities in different types of rock; and the determination of the velocities has shown that both the refraction and the reflection method may be used in the Witwatersrand and contiguous areas for the detection of large-scale covered geological features, and may be of great importance in calculating the thickness of the younger covering overlying the Witwatersrand beds.

D. *Electric Resistivity Method.*—The ordinary rocks and minerals that form the earth's crust offer very varying specific resistivities to the passage of an electric current. The ratio between the conductivity of a consolidated rock and that of an overlying alluvial deposit may be of the order of several thousands, while that between the conductivities of a metallic ore and of the country rock enclosing it may run into millions. A wet rock is a much better conductor than its dry equivalent and therefore, theoretically, it should be possible by measuring comparative resistance to obtain a knowledge of changes in the crust, to locate water-bearing layers, and to determine structures favourable for the accumulation of water.

Investigations into the value of the method for the location of underground water in various South African geological formations are now being made by the Geological Survey. The type of instrument in use is one based on the principles of the four-electrode method, and hitherto the main task of the Survey has been to compare the results obtained by field work on various formations with the known positions of water supplies within these formations. The results seem to justify the hope that it will be possible to indicate, with more accuracy than has been obtained by other means, sites for water-boring and to investigate the depths of sub-soil and of decomposed rock on the sites of suggested dam walls.

Detailed mathematical analysis of the principles involved still awaits completion; but, even now, the method is a scientific one, far removed from the stage of "trial and error".

3. **Witwatersrand Gold Mining.**—The Witwatersrand goldfield is located on an elevated plateau, nearly 6,000 feet above the sea. The Witwatersrand (or Ridge of White Waters) projects somewhat above the plateau, and the outcrop of the conglomerate reefs can thus in a measure be said to be the dividing watershed between the Atlantic and the Indian Ocean, the tributaries of the Vaal River draining into the Atlantic, and those of the Limpopo or the Crocodile River into the Indian Ocean.

The conglomerate beds of the Witwatersrand are composed of quartz pebbles bound together by a siliceous cement containing iron pyrites. The name "banket," which has been given to the conglomerate from its general resemblance to an almond sweetmeat with this Dutch name, refers specially to the ore taken from the oxidized zone, which in the early history of the fields was called "free milling" and was found to extend to only a limited depth. The bankets occur in a series of quartzites and shales, which are known as the Witwatersrand beds, and which constitute a formation succeeding in age the archaic schists of Barberton.

The gold contained in the conglomerate is not often visible to the naked eye, occurring almost invariably in the matrix, its existence in the pebbles having been recognized only in rare instances. There are several series of these conglomerate beds in planes more or less parallel to each other. The most common designation of them, starting from the lowest geological horizon, is as follows:—Main Reef series, Bird Reef, Kimberley series, Elsburg and Black Reefs. Gold is found as a constituent in all the banket beds included in the foregoing list, but thus far only the Main Reef series has justified extensive exploitation and even here only within certain limits.

Owing to departure from the gold standard in December, 1932, and the consequent rise in the price of gold, some of the banket beds other than the Main Reef series came within the range of profitable exploitation, and, in addition, large blocks of low grade ore, previously abandoned on the Main Reef series as unpayable, were brought into ore reserves and mined at a profit.

Improved mechanical methods and labour organization have gradually brought all the chief gold mines to a similar basis as regards both mining and metallurgy, and a very satisfactory extraction is obtained throughout the whole banket series of reefs. The success in working these large bodies of comparatively low grade ore may be assigned to the following causes:—(*a*) The adaptability of the cyanide process to the Witwatersrand ores; (*b*) the uniformity and character of the gold-bearing deposit; (*c*) cheap unskilled labour; (*d*) the proximity of coal deposits; (*e*) absence of heavy pumping charges; and (*f*) good water supply.

Actual mining on the main gold-bearing area is greatly assisted by a very strong roof, which supports all excavations made within reason, and which requires a minimum of timbering and other supports in the shallower workings. This excellent roof or hanging-wall has its limits, however, and the enormous amount of ore extracted is now having effect, causing falls, earth tremors, and subsidences, and necessitating extensive sandfilling and other precautions to save existing workings and communication ways.

4. **Recent Mining Developments.**—(i) *The Central Rand.*—One of the chief features of deep level mining is the increase in the rock temperature at depth, and a few mines have installed air-cooling plant with the object of compensating for this increase by supplying cool air to the deepest workings. The maximum depth attained up to the end of 1938 was over 8,600 feet below the surface.

Several shafts are being sunk which will be equipped to wind in a single stage from greater depths than was previously considered practicable. One has been completed and is winding from a depth of 6,321 feet in one lift.

(ii) *The East Rand Basin.*—To the east and south of the producing mines in this area fourteen companies are engaged in shaft sinking and development operations. Several new boreholes have been put down and it appears that part at least of the area lies at a shallower depth than was anticipated.

(iii) *Areas to the east of the East Rand Basin.*—A number of boreholes have been put down in an attempt to prove the existence of the Main Reef Series in the Bethal-Ermelo district.

(iv) *Extension of the West Rand.*—During the years 1898-1905 various companies had put down a series of boreholes to the south of Randfontein with the object of locating the extension of the Main Reef Series. After passing through a thickness of approximately 2,000 feet of dolomite, the drills encountered conformable beds and intersected what appeared to be a payable reef horizon. A company started shaft sinking, but the difficulties of coping with an abnormal influx of water from the dolomite were then insurmountable and operations were abandoned.

The area lay dormant for nearly 20 years until at the end of 1932 the New Consolidated Goldfields Company, as a result of geophysical and geological investigations over a large area, formed a company to take over the prospecting of this new field. Numerous boreholes were put down, and the results obtained up to the present have been considered favourable enough to warrant the flotation of the Venterspost, Libanon, Blyvooruitzicht and

Driefontein West Mines, on which two vertical shafts have been completed and four are being sunk. The large quantity of water contained in the dolomite, which the pioneers in this field were unable to cope with, has added very greatly to both the cost and the difficulties of shaft sinking, but the application of the cementation process has shown that these difficulties are no longer insurmountable.

(v) *The Klerksdorp Area.*—For many years prospectors had been puzzled by the complex nature of geological features in the Klerksdorp area, the greater portion of which is covered by dolomite and Ventersdorp lavas.

After the successful application of the magnetometric method in the determination of the magnetic horizons of the Lower Witwatersrand System in the area to the west of Randfontein, it was felt that similar methods, in conjunction with the discriminate use of boreholes, could profitably be employed in the Klerksdorp district, and a company was accordingly formed with this object in view.

During the first three years of working many disappointments were experienced by this company, but in 1936 it was rewarded by the discovery of a payable ore body which was proved to exist over a very large area. This company is now sinking two vertical shafts to exploit the discovery.

(vi) *The Ventersdorp District and the Free State.*—Owing to the successful prospecting operations in the West Rand-Klerksdorp district, great interest has been displayed in the possibilities of finding extensions of the payable reefs discovered, in the Ventersdorp district to the north, and in the Orange Free State to the south, and a number of boreholes are being sunk in these areas.

5. **Gold Production.**—(i) *Union.*—The following table shows the progressive gold production of the Union, which in 1938 contributed approximately 38·09 per cent. of the world's gold output excluding that of U.S.S.R. for which no estimate is available:—

QUANTITY OF GOLD PRODUCED IN THE UNION, 1884 TO 1938.

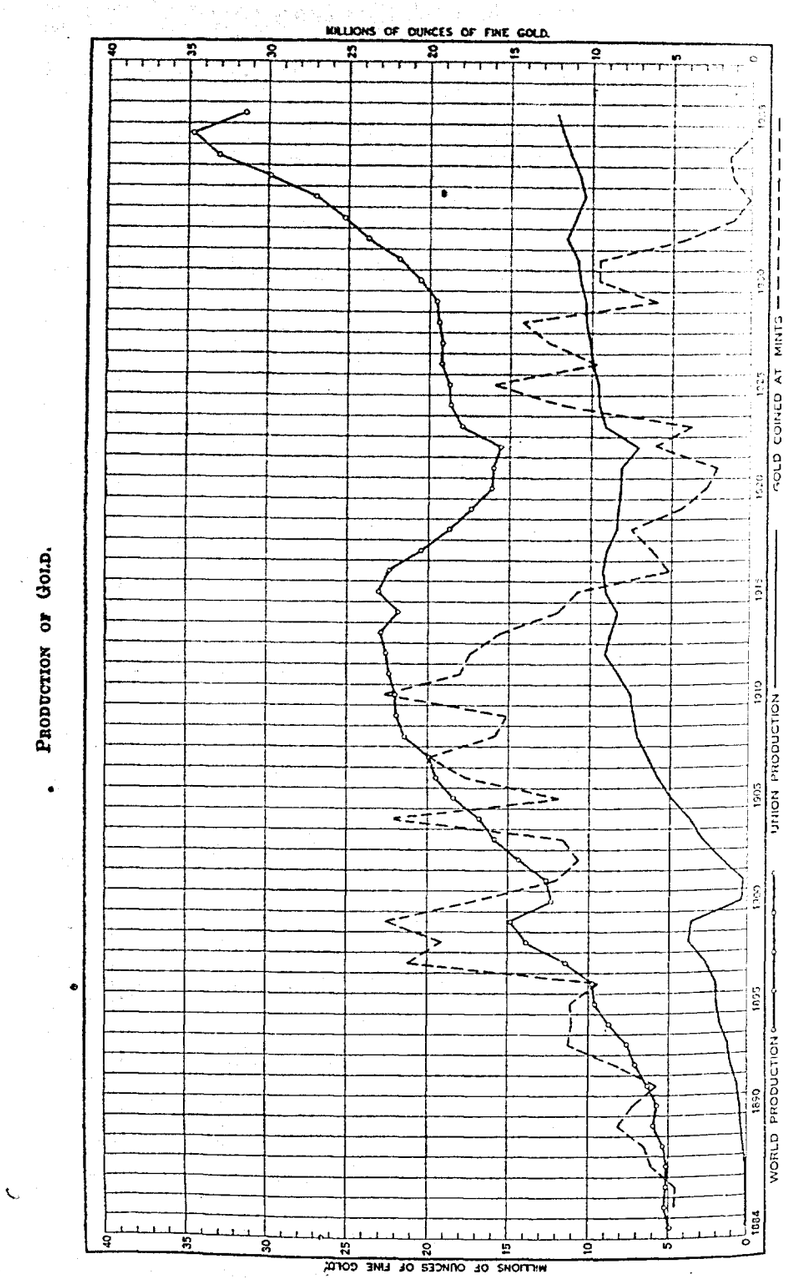
* And prior to 1884.



In the early days of modern mining, accurate statistics were seldom available, but the total value of gold produced in the Union of South Africa from 1868, when gold was first discovered, to the end of 1938, amounted approximately to £1,657,660,554, including the premium accruing in the years 1919 to 1924, and from December, 1932 to 1938. Over 95 per cent. of the gold was won on the Witwatersrand.

(ii) *World Production.*—Particulars of the world production of gold from 1493 are given in the following table:—

WORLD PRODUCTION OF GOLD, 1493 TO 1938.§

6. **Methods of Mining.**—The gold-bearing beds of the Witwatersrand are locally known as reefs, which strike east and west and dip south. They are beds of conglomerate occurring in a pre-Silurian sedimentary formation. At the outcrop the dip is usually steep, but the ore bodies flatten out at depth. In the early days the outcrop was developed by sinking shafts on the lowest reef. At distances apart of about 100 feet, stations were cut and development drives driven in the reef east and west, while crosscuts to the south exposed the other reefs which were similarly developed. The areas between levels were cut up into suitable blocks by winzes and raises, which when holed became faces from which to start stoping.

When it was realized that the dip at depth became flatter and that values were more or less maintained, "deep level" shafts were sunk. These were usually compound shafts, that is to say shafts sunk vertically from the surface through the reef and turned into incline shafts under the reef. Such shafts were designed to intersect the reef at about 1,000 feet below surface. The necessity for a reduction in the speed of winding at the bend and the excessive wear of the winding ropes led to the adoption of a new procedure. The next stage of development comprised the sinking of vertical shafts from the surface with sub-incline or sub-vertical shafts sunk from convenient points near the bottom of the main vertical.

The earlier main vertical shafts were sunk to a depth of about 3,000 feet. In later shafts the depth was increased until it reached about 4,500 feet which for a time was the maximum. Recently, by reason of advances in the design and control of winding engines and other factors, still deeper shafts have been sunk, and there are now several vertical shafts in course of being sunk to a projected depth of between 6,000 and 6,500 feet. One has recently been completed with a depth of 6,321 feet.

The mode of development and stoping from the deep shafts remains in principle very similar to that obtaining in the old outcrop mines, except that the distance between levels has been considerably increased. All development and stoping on the Rand is done with the aid of compressed air driven rock drills. Some of the mines obtain their air power from central compressor stations run by a power company; others obtain such power from their own plant.

Several methods or combinations of methods are used for the support of the underground workings; these methods comprise pillars, timber, pigsties or cogs, mat packs, chocks, steel, stone walls, concrete masonry, reef packs, waste packs, and sand filling. Vertical shafts are protected by pillars of reef from damage which might arise from the subsidence of surrounding ground, but sub-incline shafts are now invariably sunk a considerable distance below the reef and the reef is stoped out over them at the earliest opportunity.

Almost all of the manual work is performed by natives under the supervision of white men. The proportion of natives to whites employed by the mines is about 8 to 1.

Transport of the broken ore from the stopes to the ore-bins at shaft stations is in most cases carried out by means of haulages of various descriptions which are fed by systems of hand-tramming. On the haulages, trucks varying in size from 1 ton capacity on endless rope to 20 tons on electric locomotive haulages are used. The ore is raised to the surface in skips drawn by engines in large part propelled by electric power, which is gradually replacing steam power for this purpose. Three mines have their own power stations, and for the rest electric power is developed by 6 main stations of a power company; 3 on the Rand, 1 each at Vereeniging and Klip, some 40 miles distant from Johannesburg, and 1 at Witbank, some 80 miles east of Johannesburg. Considerable quantities of water are encountered in the mines, more particularly in the Far East and in the new Far West. The cementation process has been generally adopted for the sealing of water-bearing fissures, the quantity of water entering the mines being thereby reduced. Even after this, however, the quantity of water pumped by each mine is enormous and has necessitated the installation of high capacity pumps. These are usually of the centrifugal type and in all cases are driven by electric power.

For the outcrop mines in the early days natural ventilation was ample, but the increased depths at which mining is now carried on has necessitated the installation of large capacity ventilating fans and even the sinking of special ventilation shafts. Water is used in abundance for drilling and for wetting broken rock prior to moving it, and after blasting for mixing with air in the form of water blasts, all with a view to mitigating the dust evil. Special drinking water is always supplied underground and great care

is taken regarding sanitation. Shaft stations, haulages, and travelling ways are electrically lit. White employees and many natives use acetylene gas lamps; candles are used by other natives. The use of electric hand lamps has recently been introduced experimentally.

European and native underground employees are lowered and raised in cages or skips, the carrying capacity of which varies from 10 to 120 per trip. In the large mines workmen are transported between shaft stations and their working places in trains drawn by electric locomotives. The underground working hours are limited to 48½ hours from bank to bank per week.

Mining operations are controlled by a number of stringent regulations devised to protect the health and maintain the safety of workers. Frequent amendments to the code are made as a result of the experimental and research work of a committee appointed to investigate the possible prevention of the contamination of mine air by mine dust, the inhalation of which results in miners' phthisis, and, as a result of the investigation of accidents, to ensure safer mining practice.

European and native miners are well catered for in the way of change houses, shower baths, etc.; large recreation halls, comfortable quarters, amenities for recreation, such as bowling greens, tennis courts, football fields, and golf courses, are provided on nearly all the mines, and all at moderate monthly subscriptions or rents.

Accidents of a serious nature involving death or incapacitation for fourteen days have to be reported to the Government Mines Department, when inspectors hold searching inquiries into the occurrence. These inspectors also hold inquiries into complaints lodged with them on any matter pertaining to the safe running of the mines, and are entrusted with limited punitive powers in the case of infringement of mining regulations, provided that no death has resulted from such infringement.

Although in the early days improvements in mining methods appear to have been slow, great advances have been made since that time, and to-day the Witwatersrand gold mining industry admittedly leads all mining fields in its organization and methods. Special attention is paid to the safety of its workmen, and a generous scheme of compensation in respect of accidents is in operation.

7. Metallurgy of Gold Production.—The rock broken during mining operations in the Witwatersrand mines is not all gold-bearing, since some of the rock encasing the banket is almost always broken too. It is, therefore, necessary to "sort" or pick out some of the "waste" or non-gold-bearing rock. Although sorting is done to a certain extent underground at some mines, the major portion is done when the rock has been hoisted to the surface. To-day 11 per cent. of rock hoisted is sorted, as against 14·7 per cent. some years ago. On reaching the surface the broken rock is either transported to a central crushing and sorting station or crushed and sorted at the shaft head; the former is the more common method. Various methods of transport for the ore from the shafts to the reduction works have been adopted. At the older mines the endless rope haulage or trains of small trucks drawn by steam or electric locomotives was adopted, and is still in use; but on the larger or more modern mines 35-40 ton side discharge "hoppers" drawn by steam locomotives on a wide gauge railway are in general use.

At the crushing and sorting plant the rock is broken in crushers, washed, and sorted. The sorting is done by natives, the clean-washed broken rock passing before them on a moving surface, either a conveyor belt or a revolving table. The waste rock picked out goes to the dump and the gold-bearing rock, usually after further crushing, is then ready for treatment.

In plant incorporating stamps, the ore hoisted from the mine is tipped on to a "grizzley" and thereby separated into plus and minus 1¾-inch material. The oversize is washed and deposited on to slow-moving conveyor belts, the washings passing into the tube-milling circuit. The coarse clean rock passes along the belts, and waste rock is hand picked therefrom by natives and sent to the dump. Reef pebbles, about 6 inches in size, suitable for tube-milling are then removed and conveyed to the tube-mills, the remaining rock passing on to jaw or gyratory crushers set to about a 2-inch opening. The crushed rock therefrom joins the grizzley fines and is conveyed to the stamp mill.

In the stamp mill the ore is crushed wet to pass through screening, which varies from 3 to 155 holes to the square inch, the coarser screening being used in the more modern stamp mills. Stamps vary in weight from 1,200 to 2,000 lb. and the tonnage crushed per stamp, depending on the weight of the stamp and the screen aperture, varies from 7 to 40 tons per 24 hours. With only one or two exceptions, plate amalgamation or corduroy concentration has been entirely abandoned in stamp mills. The pulp leaving the stamp mill passes on to the tube-milling section.

Most reduction plants erected since 1918 have omitted stamps from their flow-sheets, depending solely on crushers and tube-mills for the reduction of the ore. This necessitated a finer reduction in the crusher station, which is achieved by adopting a closed circuit and making all the ore pass through a vibrating screen with square aperture not exceeding one inch in diameter before it leaves the station. This product passes direct to the tube-mills, wherein it is ground by the ore pebbles previously referred to, the tube-mills being about half full of pebbles. In recent years a mixture of 3-inch steel balls and ore pebbles has found favour as a grinding medium.

For many years the size of tube-mills on the Rand was standardized at 5 feet 6 inches in diameter by 22 feet long, but a more popular size is now 6 feet 6 inches by 20 feet. Several operating are 8 feet in diameter by 16 feet long. All tube mills are fitted with renewable liners.

In the case of stamp mill pulp, which consists of a ratio of water to solids of about six to one, it is necessary to reduce the water content of the pulp to about 30 per cent. to permit good grinding in the tube mills. This is achieved with cone classifiers or mechanical rake classifiers of the Dorr type.

Prior to 1918, the pulp leaving the tube mills passed over amalgamated copper plates whereon about 55 per cent. of the total gold in the ore was deposited. This gold amalgam was removed periodically from the plates, cleaned, and retorted. However, the possibilities of loss by theft, the increasing cases of mercurial poisoning of the workmen, and the lock-up of the gold on the plates led to the substitution of corduroy in place of plate amalgamation. The corduroy is placed on stationary tables about five feet wide and twelve feet long, and the pyritic concentrate obtained by washing the corduroy every four hours is dressed on a reciprocating table of the Wilfley type. Only the enriched product therefrom is amalgamated, the resulting amalgam being cleaned, pressed, and retorted. The retorted gold is melted and cast into bars, which are sent to the Rand Refinery. The dressing table tailing and the amalgamation residue are usually returned to the tube-milling circuit. About 50 per cent. of the total gold content of the ore plus about 5,000 ounces of osmiridium annually are recovered on the Rand from corduroy concentrates.

The out-flow from the tube-mills, having passed over the corduroy tables, is then elevated by pump to classifiers, which separate the insufficiently ground material (containing a relatively high percentage of gold and pyrites, which is returned to the tube mills) from the remainder, which flows on to the cyanide treatment section. Milling is sometimes conducted in a cyanide circuit but more usually in a water circuit.

The majority of the plants on the Rand still retain separate treatment for sand and slime, although all the latest plants grind the ore sufficiently fine to permit of treating the whole of it as slime.

Where sand treatment is incorporated, the final pulp is classified into sand and slime with cones or mechanical classifiers. The sand constitutes about 45 per cent. of the total ore and is collected in tanks of 40 to 55 feet in diameter, fitted with filter mats and capable of holding 400 to 850 tons of sand. The excess water is drained from the sand and, although in a few cases the cyanide treatment is carried out in these tanks, it is more usual to transfer the sand therefrom by conveyor belts to other similar sized tanks in which the treatment is given. Cyanide solution containing a maximum strength of ·08 per cent. NaCN is pumped on to the top of the sand charge and this solution, in percolating downwards through the sand, dissolves about 90 per cent. of the gold contained therein. The gold-bearing solution passes through the filter mat and is sent to the precipitation section. The sand is given a wash with barren solution of low cyanide strength prior to being discharged to the residue dump. About 1·7 tons of solution per ton of sand are used, and the total treatment occupies about five days.

The slime is settled in collectors of 40 to 70 feet in diameter, the clear water or solution overflowing these collectors being returned to the milling section. The settled slime, containing about 40 per cent. moisture, is sluiced out of the collectors with cyanide solution into agitators, wherein the slime is kept in suspension by means of air or centrifugal pumps for four to twelve hours, during which time about 95 per cent. of the gold in the slime is dissolved. The cyanide strength of the solution in these agitators is about ·015 per cent. NaCN and contains about ·01 per cent. CaO. The ratio of solution to solids is about 1·25 to 1.

Having dissolved the gold in the slime, the next step is to separate the gold-bearing solution from the treated slime, and this is done almost exclusively by vacuum filtration, although some of the older plants still retain the decantation method of subjecting the slime to a series of washes with barren solution and subsequent settlements. Vacuum filtration is achieved with the intermittent Butters filter or continuous rotary filters in which, by means of vacuum, the solution is drawn through a canvas cloth leaving a cake of slime thereon which, after washing with barren solution, is discharged to the slimes dam. The solution from the filters is clarified by passing through a bed of sand and is then sent to the precipitation section. In the most modern plants a continuous system of collection, treatment, and washing of the slime is carried out with Dorr thickeners, Dorr or Brown agitators, and rotary filters.

In the precipitation section, oxygen is removed from the solution by subjecting it to a vacuum before the solution is brought into contact with zinc, which precipitates the gold, leaving a barren cyanide solution for reuse. The zinc is in the form of extremely thin ribbons closely packed in extractor boxes, through which the solution percolates, or in the form of zinc dust which is added to the solution before it is sucked through canvas leaves on which the gold slime is deposited. Whichever method is used the gold slime is periodically removed, treated with sulphuric acid to remove the excess of zinc, filter pressed, and smelted. The residual zinc sulphate solution is used for underground timber preservation.

Two methods of smelting are in common use on the Rand, namely, lead smelting and crucible smelting. In the former, the gold slime is mixed with litharge, carbon, and other suitable fluxes and charged into a reverberatory furnace, from which, after about twelve hours, lead bullion containing approximately 8 per cent. gold and slag are withdrawn. The lead bullion is then treated in a cupel furnace, in which the lead and base metals are oxidized and removed, leaving the gold, which is remelted and cast into bars for dispatch to the Rand Refinery. In the crucible process, the gold slime is calcined, fluxed with borax, sand, and manganese dioxide, and smelted in clay-lined pots in a reverberatory furnace. The resulting gold buttons are collected, melted in plumbago pots, and cast into bars, which are sent to the refinery.

8. **The Barberton Goldfield.**—The Barberton goldfield lies in a strip of rugged country in the eastern Transvaal, drained by the De Kaap and Komati rivers. The characteristic ridges to be found in this field have a north-east and south-west trend and are made up of highly contorted and generally steeply inclined beds of ancient schists, shales, quartzites, and carbonate rocks of the Swaziland system. All these beds have been subjected to powerful pressure and earth movements by neighbouring granite massifs. In this disturbed area there is a vast number of fissures and magmatic intrusions in association with which gold has been located. In some of these fissures and crush-zones gold has been found in conjunction with such minerals as arsenopyrite, stibnite, etc., and there are also instances of fairly well-defined quartz reefs. Some of these occurrences have been followed to considerable depths and over comparatively large areas, but in many instances the gold has been patchy and, whilst rich at the surface, has rapidly decreased at depth, with the result that many of the discoveries have come to an early end.

Gold was first located in this area in 1882, and three years later the phenomenally rich occurrences in the Sheba valley were discovered. By 1886 these discoveries had attracted over 5,000 prospectors, as well as large sums of money from investors. During the years 1895 and 1896, the production of gold totalled 103,511 and 105,778 ounces respectively, and the Sheba mine during the years between 1886 and 1918 produced over £4,000,000 worth of gold. Although in the early stages mining was carried on successfully in this district, later, chiefly owing to the nature of the deposits and increased cost of production as depth became greater, there was a rapid decline. Subsequently, operations were carried on only in a small way by a few owners, but in 1929 one of the Rand mining groups began operations on a larger scale and has since extended its holdings.

A considerable increase in mining activity has taken place in this district as a result of the Union's departure from the gold standard and the later rise in the price of gold. Many dormant properties have been acquired and equipped by small companies and syndicates. New ore bodies have been discovered as a result of more systematic prospecting, and there is every indication that several of these properties will be in a position to continue production for a number of years. The gold production from this area amounted to 65,845 ounces in 1938.

An account of these fields will be found in Geological Survey Memoir No. 9—"The Geology of the Barberton Gold Mining District"—A. L. Hall.

9. **Pietersburg-Murchison Range and Letaba Goldfields.**—(*a*) *The Pietersburg Goldfield* consists of two small areas of country situated respectively 30 miles east and 10 miles south-east of the town of Pietersburg in the north-eastern Transvaal. The former occurrence is associated mainly with veins in the old granite, and these deposits have been worked from time to time on a small scale. The small villages of Woodbush and Haenertsburg form the centre of this area. Mining in the latter and more important area commenced in 1870 with the discovery and working of the Eersteling mine, from which large nuggets have been recovered at different times. The Eersteling mine works mainly on auriferous quartz veins, but rich, sometimes ill-defined, zones in the ancient schists of the Swaziland system have been located on many neighbouring properties. All the enterprises, however, where any considerable capital was employed were failures, and most of the production from this area has been contributed by small individual workers. The main difficulty has been the inconsistency of the pay chutes. Since 1933-34 several small mines have recommenced operations; new lodes have been discovered, and many alluvial diggers are to be found in this area. These fields are healthy at all times of the year. A revised geological description of them appears in Geological Survey Bulletin No. 12, published in 1939.

(*b*) *Murchison*-Letaba Goldfield.*—In low-lying country, 90 miles east of Pietersburg, are situated the Murchison and Letaba goldfields, which received attention shortly after the discovery of the Pietersburg area. In spite of the expenditure of large sums of money, the results obtained so far have been disappointing, chiefly owing to the erratic nature of the deposits, coupled with the metallurgical difficulties encountered in treating the ores. The Murchison Range forms a conspicuous row of hills, which follow a long narrow zone of schistose rocks enclosed on the north, south, and east by granite. In this zone are two parallel, well-defined mineralized belts about 3 miles apart. The reefs strike approximately east and west and have been traced for upwards of 30 miles. The gold in the northern belt is associated with stibnite, and both belts of reef, for the most part, dip steeply and vary in width and value in very short distances. The gold has been found either in lenticular veins, usually composed of coarsely crystalline quartz, in mineralized zones, in chlorite talc and quartz schists, or in black or burnt reefs. A detailed description of the Murchison belt, with geological map, has been published by the Geological Survey as Memoir No. 36.

The renewed interest accorded this field during 1933-34, not only by the small workers, but by larger mining houses, has been sustained, and, as a successful method for treating antimonial gold ore is stated to have been discovered, much is expected from the field. Mining activities have also extended northwards as far as the Limpopo river, where several finds have already been recorded. All these fields are now near railway lines, and the output from this area for 1938 amounted to 28,212 fine ounces of gold.

10. **Lydenburg and Pilgrims Rest.†**—This field lies in the eastern Transvaal, approximately 40 miles north of Barberton, and occupies an area of some

* "The Geology of the Murchison Range"—Geological Survey Memoir No. 6—A. L. Hall.
† "The Geology of Pilgrims Rest Gold Mining District"—Geological Survey Memoir No. 5—A. L. Hall.

400 square miles of country lying west of and on the Drakensberg escarpment. It is a mountainous region of great scenic beauty. In 1870, concurrently with the discovery of gold in the Pietersburg area, alluvial gold was located in this area. It is recorded that in 1875 there were no fewer than 1,500 white miners recovering alluvial gold. The sedimentary rocks of the Transvaal system outcrop here, and a number of interbedded and fairly consistent flat reefs have been located and worked with success. These reefs generally follow definite horizons and vary in width from a few inches to 3 feet and over. Many leaders separate from these reefs, and in addition fissures and blows of considerable extent have been exposed containing notable quantities of gold, together with copper and other ores. The mineralization of these reefs and fissures is most probably attributable to the igneous activity which produced the Bushveld igneous complex. For many years the greater part of this area was held by the larger mining companies, but latterly with the increase in the price of gold many additional small concerns have commenced operations, and a certain amount of alluvial gold digging is again taking place.

Two important electric power schemes operate in the district, one controlled by a private company and the other by a semi-state organization, the Electricity Supply Commission. There is an abundant supply of water, and railways have been constructed to the fields.

11. **Alluvial Gold.**—At the present date it cannot be said that there are any important alluvial gold diggings in South Africa, although a few diggers can still be found prospecting the alluvial deposits in the Pietersburg, Barberton, and Pilgrims Rest districts, for in 1938 the output of alluvial gold was only 866 fine ounces from all Transvaal districts. In 1873, and for some years following, a considerable quantity of so-called alluvial gold was won in Pilgrims Rest and Barberton districts, until the deposits were worked out and the diggers turned their attention to the gold-bearing reefs and beds. At the Duivelskantoor the sandstones of the Black Reef series contain alluvial deposits of small extent, and numerous nuggets of gold have been found in this locality. In 1898 a fifty-two ounce nugget was found on the main coach road near the Duivelskantoor, and this nugget was shown at the Paris Exhibition in 1900. The gold from these fields has apparently been derived from the dolomites and other formerly overlying rocks, which have now disappeared through erosion.

Alluvial gold recovered in the Transvaal from the date of the British occupation up to the 31st December, 1938, amounted to 52,966 ounces of fine gold. In the Cape Province from 1910 to 31st December, 1938, 296 ounces of fine gold were obtained, and in Natal, from 1910 to 31st December, 1938, 534 ounces. The total alluvial production of the Union to the end of 1938 was 53,796 ounces of fine gold.

12. **Estimates of Gold Production.**—Although estimates of future gold production were given in No. 17 and previous editions of the *Official Year Book*, the rise in the price of gold and the uncertainty as to the maintenance of this increased price, coupled with the results obtained in prospecting outside the limits of the producing Witwatersrand, all tend to stultify any previous estimates and make it impossible at the present time to hazard a guess at the limits of future production.

13. **Capital in Gold Mining Industry.**—*Witwatersrand Gold Mines.*—Taking the actual indebtedness of Witwatersrand gold mines, which includes issued capital, debentures, premiums, loans, and advances, amounting at 31st December, 1938, to £78,662,848 according to the statistics of the Government Mining Engineer, and comparing this with dividends paid, amounting to £15,573,904, a return of 19·8 per cent. is obtained for the year 1938. Similar figures for 1937 are— total indebtedness £71,380,305, and dividends £15,310,024, giving a return of 21·4 per cent. Any amounts appropriated from profits for working capital are not included in the "total indebtedness" figures quoted, as such amounts are not strictly funds received, for which the industry is responsible to make some return, but may be deemed to be included in "costs." If for the two years mentioned the amount of dividends is compared with the issued capital only, then the returns show 27·1 per cent. and 28·1 per cent. respectively. These figures are further analysed in the following table:—

WITWATERSRAND GOLD MINES—DIVIDEND-PAYING, NON-DIVIDEND PAYING, DEVELOPING, AND NOT WORKING, SHOWING CAPITAL ISSUES AND DIVIDENDS PAID, 1929 TO 1938.

Year.	Producing—Dividend Paying.				Producing—Non-Dividend Paying.		Developing.		Not Working.

14. **Costs and Yield of Gold Mining (Witwatersrand).**—The following table showing the number of tons milled, the yield per ton, the working costs, working profits, and dividends paid per ton milled and per fine ounce recovered from

the Witwatersrand gold mines, has been prepared from the annual reports of the Transvaal Chamber of Mines, and refers to the returns of member companies of the Chamber. Gold held in reserve, expenditure charged to capital account, interest on and redemption of debentures, and profits tax have not been taken into account in arriving at the working profits. For various reasons the working profit shown is not in all cases the exact difference between the yield as shown and the working costs as shown, but in the yearly averages given below the difference is very slight. The value of the gold premium has been included in the figures from 1919 to 1924, for a portion of the gold produced in December, 1932, and from 1933 onwards.

COSTS AND YIELD OF GOLD MINING—WITWATERSRAND, 1910 TO 1938.

15. **Disposal of Gold from Mines.**—In June, 1926, the Transvaal Chamber of Mines entered into an agreement with the South African Reserve Bank, under which the bank undertook to purchase at a fixed price for delivery from the Rand Refinery, Ltd., Germiston, all fine gold bullion that was offered to it by the producers. This agreement lapsed in December, 1932, when the Union of South Africa left the gold standard. Thereafter a provisional agreement was made by which the South African Reserve Bank marketed the gold on behalf of the producers until a final agreement was signed on 10th May, 1933. Under that agreement the South African Reserve Bank pays 100s. per fine ounce as a first instalment to the gold producers. The gold is then shipped to London and when it is sold, which must be within 28 days of the date of purchase, the net amount realized over and above 100s. per fine ounce is paid over to the gold producers.

At the fourteenth ordinary general meeting of stock holders of the South African Reserve Bank, held on the 4th July, 1934, the Governor intimated that the above procedure had been modified to the extent that the Reserve Bank had arranged to buy gold outright from the producers on delivery, instead of keeping them waiting for full payment pending the final result of the gold sales.

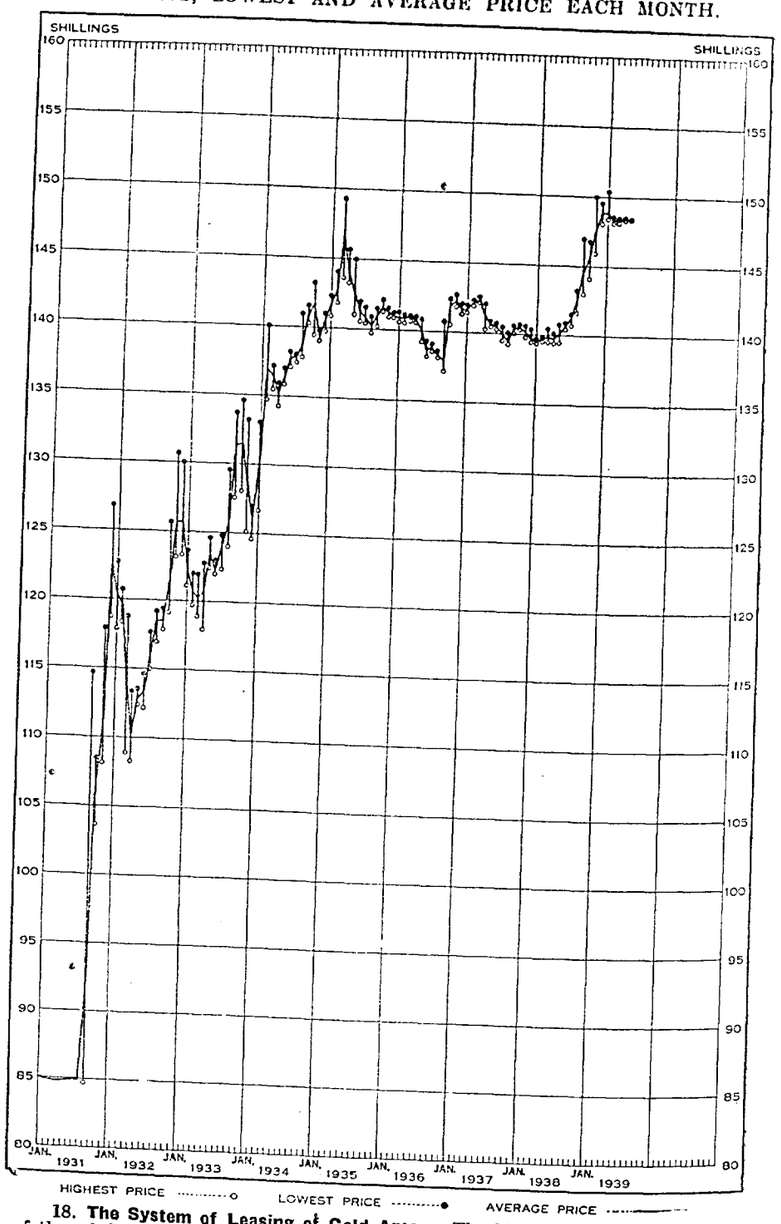
An account of the disposal of South African gold and the variation in price from the outbreak of the Great War to the return to the gold standard in 1925 will be found in previous issues of the *Official Year Book* (Nos. 5 to 8).

The exports of gold bullion and gold coin will be found in Chapter XXIV.

16. **Internal and External Payment of Mine Dividends, etc.**—One of the more important "invisible" items in the balance of payments of the Union of South Africa is the amount of mine dividends which is paid outside the Union. With the cordial co-operation of the secretaries of the group companies in Johannesburg and of the secretaries of other mining companies, the information is available from the second half of 1933. The results show where these amounts were actually paid. No doubt a portion of the dividends and interest paid in the Union is paid to the banking accounts of persons resident abroad, chiefly for the purpose of re-investment in the Union. A more considerable portion is paid to financial houses, which again pay a portion of their dividends abroad. As, however, those houses derive a portion of their profits from sources in the Union other than mine dividends and interest and also from sources outside the Union, their dividends cannot by any means be wholly ascribed to mine dividends. Moreover, it is possible that a portion of the amounts paid outside the Union was paid to their credit.

The following table gives the payments for gold, coal, and other mines for the years ended 31st December, 1937 and 1938:—

INTERNAL AND EXTERNAL PAYMENT OF DIVIDENDS DECLARED AND OF DEBENTURE AND LOAN INTEREST PAID BY MINING COMPANIES, 1937 AND 1938.



Heading.	1937.				1938.			
	Gold Mines.	Coal Mines.	Other Mines.	All Mines.	Gold Mines.	Coal Mines.	Other Mines.	All Mines.

PRICE OF GOLD IN LONDON.
HIGHEST, LOWEST AND AVERAGE PRICE EACH MONTH.

18. The System of Leasing of Gold Areas.—The history of the development of the mining lease system established under the Transvaal Act, No. 35 of 1908, was recorded in the sixth issue of this *Year Book*.

By Act No. 30 of 1918 the Mining Leases Board was made a statutory body. Under section 46 of the 1908 Act, the powers of the Governor-General in regard to the leasing of mineral ground had been restricted to areas large enough, in the opinion of the Government Mining Engineer, to make one workable mining proposition; but, in sections 2 and 3 of Act No. 30 of 1918, these powers were widened to permit of the granting of leases of the undermining rights of land insufficient in extent to constitute workable propositions. These smaller areas are not advertised for tender, but are applied for by adjoining mining companies, which are in the best position to work them. All such applications are submitted to the Mining Leases Board for report and recommendation.

Important features of the Act are:—

(*a*) That every recommendation of the Board on any application for a lease, after action has been taken by the Governor-General, shall be laid on the tables of both Houses of Parliament;

(*b*) that no departure shall be made from the Board's recommendations as to the acceptance or refusal of a tender, or as to the terms to be embodied in a lease, without further reference to the Board, and that, if the Board reports against the proposal to amend its recommendation, the amended lease shall not be valid or binding, unless it has been approved by resolutions of both Houses of Parliament.

In order that the Government should have full knowledge of the operations of the companies working gold mines on the areas leased, an official called the Inspector of Mining Leases, with knowledge of mining technique and finance, was appointed to investigate the affairs of these companies. His duties comprise the inspection of underground and surface operations at the mines, and of the books, accounts, and documents of the lease companies. His quarterly and annual reports are available for public inspection at his office.

Up to 31st December, 1938, thirty-four large gold mines had operated on areas leased on a basis of participation in profits. One of these, namely, that leased to the Craigie Mines, Limited, was exhausted without making a profit in which the Government shared, and another, the Witpoort Gold Areas, Ltd., has been absorbed by Brakpan Mines, Ltd. These have therefore been omitted from the following table:—

GOLD AREAS LEASED ON THE BASIS OF PARTICIPATION IN PROFITS.

* Company released from payment upon its absorption by the East Rand Proprietary Mines, Ltd.
† Commuted into a cash payment in lieu of profits won subsequent to 1st January, 1925. Company now defunct.
‡ Government's share of profits to 30th June, 1938.

The share of the profits payable to the Government of the companies working these leased areas was, in the cases of the Cinderella Consolidated Gold Mines and the Meyer and Charlton Gold Mining Company, 4·02 per cent. and 10·8668 per cent. respectively; in the case of the Langlaagte Estate and Gold Mining Company, New Kleinfontein Company, and Simmer and Jack Mines, it is 1·415 per cent., 4 per cent., and 5 per cent. respectively; but in all other cases it varies with the ratio that the profit bears to recovery, and is calculated upon a sliding scale, so devised that the company receives a fixed proportion of any reduction in costs it may make and another fixed proportion of any increase in recovery it may effect, subject, in some of the leases, to minimum percentages.

The general form of the sliding scale is: $y=a-\frac{b}{x}$, where y is the percentage of profits payable to the Government, x is the ratio of profit to recovery expressed as a percentage, and a and b are constants agreed to in the lease.

The following table shows the scale in each case and illustrates its results:—

LEASE COMPANIES—GOVERNMENT SHARE OF PROFITS.

Company	Scale.	Percentage of Profits payable to Government when the ratios of profit to recovery expressed as percentages are as follows.					
		10	20	30	40	50	60

(*k*) Subject to a minimum of 3·50 per cent.

(*l*) Subject to a minimum of 6·25 per cent.

(*m*) $y = 9·73 - \frac{147·69}{x}$ where x is less than 45; $y = 17·37 - \frac{491·58}{x}$ where x is greater than 45.

(*n*) Subject to a minimum of 3·82 per cent.

(*o*) $y = 7·1415 + ·160875\,x$ when x does not exceed 33⅓%; $y = 18.125 - \frac{187·5}{x}$ when x exceeds 33⅓%.

Under the Acts of 1908 and 1918, two hundred and thirty-seven leases have been entered into, granting mining rights over a total extent of 113,919 claims. Fifty-seven of these are share-of-profit leases, of which 55 have been granted to the thirty-four companies previously enumerated. The revenue from this type of lease is included in the table showing Government share of profits—the total being £51,185,657. One hundred and fifty have been sold for cash, the most noteworthy sale being that of 519 claims to Crown Mines, Limited, for the sum of £200,000; the total amount received on account of cash sales up to the 31st March, 1939, was £447,630. Thirty have been sold for annuities over a term of years or for payments on a royalty basis and the amount received on this account up to the 31st March, 1939, was £1,955,297.

In the case of certain areas known as "bewaarplaatsen", the freeholder is entitled to a portion of the payments made to the State by the lessees, and the amount paid to freehold owners on this account up to 31st March, 1939, was £1,781,253. "Bewaarplaatsen" were defined under the Gold Law (Republican) of 1898 as areas reserved from prospecting and digging and were roughly classified as localities used for public purposes or urban habitations, sites on or near mines used for surface working, and water rights. The owners of these areas possessed only surface rights. Under section 52 of Act No. 35 of 1908 the right to mine was vested in the Crown and some of these sites were leased to mining companies for the extraction of the underlying gold.

The revenue up to the 31st March, 1939, can be summarized as follows:—

From leases, on a basis of participation in profits.....	£51,185,657
From leases, sold for cash.....	447,630
From leases, sold on an annuity or royalty basis...	1,955,297
	£53,588,584
Less amount paid to freeholders.....	1,781,253
	£51,807,331

19. **Rand Refinery, Limited.**—This is a private company, the shareholding being confined to gold mining companies, members of the Transvaal Chamber of Mines. The works are situated at Germiston, and the principal operations consist of refining the gold bullion produced by the gold mines on the Witwatersrand and elsewhere. The refinery was completed in December, 1921, and a note on its organization and activities will be found in the sixth and seventh issues of the *Year Book*.

The following is a summary of its operations since its inception on the 22nd December, 1921, to the 30th September, 1938.

§ 5. Base Metals.

From the statistical data given in § 3 of this chapter, it will be noted that a large variety of base minerals has been produced, and a perusal of subsequent sections will serve to demonstrate the widespread character of the deposits from which these have been obtained. With a view to fostering the further development of the base mineral industry, there have been established by the Government:—

(*a*) An inter-departmental committee for the development of the mineral industry.*
(*b*) A mineral development section of the Government Mining Engineer's branch of the Department of Mines.
(*c*) A Minerals Research Laboratory.*
(*d*) The Fuel Research Institute.†

A survey of the Union's resources of base minerals, investigation of overseas markets for them, and the possibility of their application to domestic use call for the closest co-operation between the two Departments of State concerned.

The inter-departmental committee, therefore, comprises both administrative and technical officers of the Departments of Mines and of Commerce and Industries and acts in an advisory capacity to the departments concerned.

The mineral development section with its technical staff under an officer-in-charge stationed in Johannesburg, acting directly under the Government Mining Engineer, works in close co-operation with the Geological Survey, the inspectors of mines, and mining commissioners of the various districts, in the collection of information as to resources and the possibilities of economic working, and also deals with all inquiries in respect of supply of, demand for, and marketing of base minerals received both locally and from overseas. In order to maintain closer contact with the requirements of overseas markets, a technical officer, known as the Overseas Representative, Mines Department, is now permanently stationed in London.

The Minerals Research Laboratory has been established in connexion with the University of the Witwatersrand under the direction of the head of the metallurgical department of that institution, and is controlled by an advisory committee comprising government technical and administrative officers and representatives of the university. It handles all problems submitted to it in connexion with treatment of ores and the preparation of products for marketing and their application to use in local and overseas industries.

The Fuel Research Institute was constituted a corporate body by Act of Parliament. The objects of the Institute are (*a*) to grade coals, (*b*) to investigate the fuel resources, (*c*) to undertake research on solid, liquid, and gaseous fuels, and (*d*) to investigate any matter referred to it by the Government.

The handbook, the *Mineral Resources of the Union of South Africa*, which was published in 1936 but is now out of print, is to be reprinted shortly. It will be published by the Government Printer, Pretoria.

* See § 13 of this chapter.
† See para. 15, § 11, of this chapter.

§ 6. Copper.

1. **General.**—Copper occurs in the Union in the Transvaal, Cape, and Natal Provinces, but the only deposits that have proved to be of much economic importance are those of Namaqualand and the Zoutpansberg district of the Transvaal. At Areachap, to the west of Upington, a cupriferous pyritic lode has been opened up in the Kheis quartz schists, and quartz veins carrying copper are also present in various parts of Hay, Gordonia, and Prieska, in the same and younger formations. In the Mount Ayliff district of East Griqualand, copper pyrites and pyrrhotite have also been found, in association with nickel and a certain amount of platinum, along the base of highly differentiated sheets of gabbroidal rock, instrusive into Karroo sediments, the most important of which is that forming the Insizwa mountain.

In the Transvaal the Rustenburg Platinum Mines, Limited, produces a copper-nickel matte, and small quantities of copper-bearing concentrates are recovered from the gold-copper deposits of the eastern Transvaal, but the Messina (Transvaal) Development Company, which operates in the Zoutpansberg district, is responsible for the bulk of the output.

2. **Discovery of Copper and Development of Mining.**—It is known that copper, tin, and iron deposits were worked long before European settlement took place; but very little knowledge of the history of any ancient industry in these metals is available.

Copper was known to exist in Namaqualand as far back as 1685, when the Dutch Governor, Simon van der Stel, headed an expedition to verify the reports that reached him to that effect, but it was not until 1852 that operations were commenced on the occurrences near Springbokfontein. In 1863 the Cape Copper Company commenced operations and in 1887 a second company, the Namaqualand Copper Co., was registered in South Africa. In the subsequent exploitation of this area at least a dozen mines contributed to the copper output of Namaqualand, but the more important were those at O'okiep and Nababeep, which belonged to the Cape Copper Company, and Tweefontein, owned by the Namaqualand Copper Co. Each company owned smaller workings as well.

The great decline in the price of copper which commenced in 1918 led to the virtual cessation of operations in 1919. Production recommenced in 1922 and continued on a reduced scale until 1931, when operations ceased. The S.A. Copper Company took over all the properties in 1931, but in 1937 was absorbed by the O'okiep Copper Company. The last-mentioned concern is at present reconditioning and equipping some of the mines with a view to large production.

From the first year for which records are available up to the end of 1938, copper to the value of £21,079,047 was produced in Namaqualand.

The Messina Company in the Zoutpansberg district, Transvaal, has continued as a consistent producer for a number of years. The copper deposits occur in a well-defined belt, known for over twenty miles, which traverses the older gneissoid granite in a north-east/south-west direction. This belt, which coincides with a well-defined crush zone in the gneiss, ranges in width from 500 to 1,000 feet.

The mine workings have now reached a depth of 2,300 feet in places. It would appear that the lodes become progressively poorer as they are followed downward.

3. **Production of Copper.**—The following table gives particulars of the value of copper sold in and/or shipped from the Union since 1857:—

COPPER ORE SOLD AND/OR SHIPPED, 1857 TO 1938.

4. **Ore Deposits and Methods of Mining and Treatment.**—Particulars of ore deposits and methods of mining and treatment were given in *Year Book* No. 4 and previous issues, but have not been repeated owing to exigencies of space.

§ 7. Tin.

1. **Discovery and Mining of Tin.**—There is evidence to show that tin was worked in the past, and that some of the tin mines of to-day are on areas that were mined fairly extensively by ancient people. The ancient tin workings of the Transvaal and surrounding country are, so far as has been ascertained, confined to deposits and tin-bearing lodes in the granites, quartzites, and felsites.

Cassiterite was discovered both in the Cape Province and in Swaziland in the final decade of the last century, but it was not till 1902 that serious attention was turned to its exploitation. Later, in 1904, cassiterite was also found in the Bushveld area of the Transvaal, and has since been developed in several mines.

(i) *Cape Province.*—Tin ore has been found to occur in the granite of the Bottelary-Stellenbosch mountain-mass and the rocks of the Malmesbury series near the contact with this granite, and on the slopes of Devil's Peak, Capetown, near the contact between the granite and Malmesbury beds. Four main types of deposit have been distinguished:—

(1) Veins and associated impregnations in the granite.
(2) Stringer lodes in the rocks of the Malmesbury series.
(3) Saddle veins in the rocks of the Malmesbury series.
(4) Alluvial deposits derived from the disintegration of the primary occurrences.

Most of the tin output has come from deposits of type (4) on the farm Langverwacht near Kuil's River, where one company is operating on a small scale. A detailed account of the occurrences has been given by A. V. Krige (Trans. Geol. Soc. S. Afr., XXIV, 1921, pp. 53-70).

The total tin shipped from the Cape Province up to 31st December, 1938, was valued at £70,335.

(ii) *Eastern Transvaal and Swaziland.*—Two tin-bearing areas are known in north-western Swaziland, viz., the alluvial deposits of Mbabane and the surrounding country, and pegmatites round Forbes Reef. The pegmatites have not been found workable, though cassiterite crystals are not uncommon in them.

The heavy rainfall and the strong denudation to which this area is subjected form ideal conditions for natural concentrations. The alluvial deposits extend on both sides of the Swaziland border, i.e. also in the eastern Transvaal, but the producing portion of the deposits is confined to Swaziland.

These detrital deposits occur as "flats" along the course of the Mbabane and other rivers, and to a less extent on the hill slopes. There is a soft overburden of about ten feet which generally carries very little tin. Underlying this is a tin-bearing gravel two to three feet thick, which rests on the granite floor of the valley. The cassiterite occurs chiefly as loose crystals, but quite frequently also in boulders of pegmatite. Associated accessory minerals besides those forming the granite, are ilmenite, monazite, euxenite, aeschynite, corundum, and tourmaline. The cassiterite is evidently derived from pegmatite and quartz veins in the older granite.

Forbes Reef is situated about twelve miles north of Mbabane, on the eastern side of the Ingwenya range, which is formed of quartzites and schists of the Swaziland system intruded by older granite. In this area tin occurs in veins in the schist. Usually the veins follow fissures which are parallel to the strike of the schists. Along these fissures the schist is tin-bearing over a width of about three inches. At Sanders Creek a vein of decomposed pegmatite yielded considerable amounts of cassiterite.

(iii) *Transvaal Bushveld.*—Cassiterite was first discovered in 1904 in the central or Bushveld area of the Transvaal. This area is geologically notable as consisting of an immense lopolith of red granite, intrusive between the Pretoria series and the Waterberg formation. With its subsidiary felsites and contact zones of metamorphic alteration it covers an area some 250 miles from east to west, by 100 miles from north to south. Cassiterite is found both in the granite and in the felsites and sedimentary rocks in direct contact with it. In the felsites the mineral occurs irregularly along joints and bedding planes, and so far the workings in this rock have never been attended with success.

In the sedimentary rocks, the Rooiberg and Leeuwpoort mines have been worked successfully in fissure veins, traversing a mass of quartzites and shales of undoubted sedimentary origin, which are enveloped in the granite. At Rooiberg these veins are vertical, and do not carry more than 1 per cent. to 1·5 per cent. tin, but their value consists of lateral enrichments, which pass off into the bedding planes of the country rock and give pockets and bonanzas of phenomenal richness. At Leeuwpoort the veins are not highly inclined, and are richer in themselves than at Rooiberg, but on the other hand notable enrichments in the country rock appear to be few. Besides pyrites, specularite, and a small amount of arsenopyrite, no other metallic minerals are of obvious occurrence in these deposits.

A more detailed description of the deposit is contained in the handbook *Mineral Resources of the Union of South Africa* referred to under § 5 of this chapter.

In 1917 the Zaaiplaats Tin Mining Company began smelting tin for consumption in the Union. This was a war measure and was successful during the war, but was discontinued in 1921, when normal conditions returned. Smelting was also started at Leeuwpoort and was continued during the period of the war, but, owing to the impure nature of the ore, work was discontinued soon after peace was declared. During 1938, six companies were producing tin concentrates in the Transvaal.

2. **Production of Tin.**—The following table gives particulars of the value of tin sold in and/or shipped from the Union from 1912:—

TIN SOLD AND/OR SHIPPED, 1912 TO 1938.

Year.	Quantity.	Value.	Year.	Quantity.	Value.
	Tons (2,000 lb.).	£		Tons (2,000 lb.).	£
1912	2,932·208	367,699	1933	1,240·939	135,557
1915	3,441·353	331,420	1934	975·282	135,773
1920	2,463·219	435,680	1935	996·817	130,892
1925	1,938·566	304,552	1936	1,064·576	114,516
1930	1,276·825	118,200	1937	954·622	118,226
1932	963·231	63,228	1938	1,156,270	98,108

iron per annum. The joint company commenced to produce pig-iron from South African ore in June, 1926, but ceased production on the establishment of the Pretoria works.

In 1933 the company's blast furnace was occupied for a short time on the production of ferro-manganese, when 3,000 tons of a highly satisfactory alloy were produced. In 1938 the plant was reconditioned for the regular production of this alloy.

(3) *The Dunswart Iron and Steel Works, Limited.*
(4) *The Witwatersrand Co-operative Smelting Works, Limited.*
(5) *Geo. Stott and Company, Limited.*

The three last-named concerns are established on the Witwatersrand and produce iron and steel from scrap.

5. **Manganese.***—In 1925, manganese was discovered at Postmasburg, 168 miles west of Kimberley. The deposits are on a large scale, as compared with well-established sources of supply being exploited in other parts of the world. There are two principal varieties of ore, the one massive or non-crystalline and the other crystalline, the former agreeing in composition and properties with psilomelane, and the latter principally with braunite.

The ore occurs in conjunction with large deposits of ferruginous manganese, manganiferous iron, and haematite ores, but can be readily sorted out in practice. It possesses superior physical qualities, which prevent any crumbling or production of fines during mining operations, thus ensuring very little loss during transit and reducing loss from flue dust to a minimum. The ore is also eminently suitable for storage, as it has no apparent tendency to disintegrate.

Judging from the extensive outcrops of manganese ore and the evidence afforded by the prospecting and development done by the various companies to date, the available tonnage of the ore is enormous and must run into many millions of tons. The economical exploitation of these fields has been rendered possible by the construction of a railway, which was extended from Koopmansfontein, near Kimberley, to Postmasburg in 1930, and for a further 20 miles during 1936 to the farm Lohathla.

Specifications of the grades available for export are as follows:—

1st Grade minimum	50 per cent. Mn.,	5— 9 per cent. Fe.
Medium " "	46 per cent. Mn.,	11—14 per cent. Fe.
3rd Grade "	43 per cent. Mn.,	13—17 per cent. Fe.
4th Grade "	38 per cent. Mn.,	13—24 per cent. Fe.
5th Grade "	29 per cent. Mn.,	20—32 per cent. Fe.

The silica content of these ores averages 2-4 per cent. and the phosphorus content from 0·025 to 0·045 per cent.

The dolomite of the Transvaal system contains small amounts of manganese. As a result of chemical weathering of the rock, the manganese has at many places been concentrated at the surface in residual deposits of pyrolusite and psilomelane. Such deposits have been worked at a number of localities in the Krugersdorp district, and some of them have yielded ore of great purity. All the known deposits are of limited extent.

The following table gives particulars of the production, sales, and shipments of manganese ore from 1911:—

MANGANESE ORE PRODUCED, SOLD, AND SHIPPED, 1911 TO 1938.

Year.	Actual Production.	Sales and Shipments.	
		Quantity.	Value.
	Tons (2,000 lb.).	Tons (2,000 lb.).	£
1911	†	130	179
1920	67	67	277
1925	519	501	817
1930	162,394	58,572	91,858
1934	72,199	72,812	83,851
1935	105,216	99,001	127,969
1936	284,667	236,861	259,461

† Not available.

6. **Nickel.***—The occurrence of nickel has been noted in many parts of the Transvaal Bushveld Complex, in the Barberton area, in the Cape Province, and also in Natal, but the only two deposits, which appear at the present time to have prospects of economic importance, are those at Insizwa in the Cape Province and at Vlakfontein No. 902 in the Rustenburg district of the Transvaal.

At Insizwa, where a considerable amount of prospecting has been done, the ore occurs as pyrrhotite mixed with chalcopyrite and pentlandite, and is apparently formed by a magmatic concentration in the base of large highly differentiated gabbroidal sheets.

On Vlakfontein No. 902 in the Rustenburg district a considerable amount of prospecting and development work has also been done, and it is claimed that over 150,000 tons of ore, averaging over 3 per cent. nickel and 1 per cent. copper, have been proved. The ore occurs in irregular pipe-like bodies, which cut vertically across the pseudo-stratification characteristic of the basic and ultra-basic rocks which form the lower zone of the Bushveld Igneous Complex. As in the case of Insizwa, the ore is composed chiefly of pyrrhotite, chalcopyrite, and pentlandite. In the centre of the pipes the ore generally consists of massive sulphides, but grades into disseminated sulphide ore on the periphery.

The company responsible for the initial opening up of the occurrences in the Rustenburg district restarted development of the deposits on an increased scale, and commenced erection of plant for the production of a copper-nickel matte. During 1936 development work was discontinued.

The Barberton occurrence is of interest, ore carrying up to 25 per cent. nickel being located in a sedimentary bed. Little development has, however, taken place, and nothing can as yet be said as to its permanence. The ore appears to occur in the form of an entirely new mineral—a magnetic iron-nickel oxide. Sulphur is absent, and the mineral reduces easily and runs down into a metallic button, carrying about 54 per cent. nickel.

7. **Platinum, etc.**†—The occurrence of platinum and the allied group of metals has been noted in some of the igneous rocks of the country, and in the black sands derived from the concentration of the Rand conglomerates in the process of extracting the gold. In the last few years a considerable quantity of osmiridium has come into the market from this latter source. The quantity is likely to increase as the processes by which osmiridium is recovered are adopted on a greater scale.

The quantity of osmiridum recovered and the value realized in the years 1934 to 1938 were as follows:—

Year.	Oz.	£
1934	5,845·344	27,072
1935	5,277·673	24,460
1936	5,370·649	28,445
1937	5,666·750	37,254
1938	5,883·650	36,523

In 1923, platinum was discovered in a brecciated quartz lode near Naboomspruit in the Transvaal; the values, however, were very erratic, and at present this reef is not being worked.

At the end of 1924, platinum-bearing rocks were located in the Bushveld Igneous Complex in the Lydenburg district of the Transvaal. The most important of these is a sheet of gabbroidal rock, known as the Merensky Reef, which contains from 2 to 5 pennyweights of platinum metals to the ton, and which occupies a definite horizon in the lower pseudo-stratified zone of the Bushveld Igneous Complex. In the Lydenburg district this reef strikes roughly north-south and has been traced over a distance of nearly 60 miles. It dips at about 12 degrees to the west and is fairly uniform in its values and widths.

In the same area, small kopjes or hillocks are found composed of an igneous rock known as hortonolite dunite; they represent the outcrops of pipe-like occurrences of that rock, and three of them have been found to carry platinum in payable quantity. One of these has, however, been worked out

* C. M. Schwellnus, Geol. Series Bulletin No. 5, "The Nickel-Copper Occurrence in the Bushveld Igneous Complex West of the Pilansberg."
† Wagner, P. A., Memoir No. 24, Geological Survey of the Mines of S. Africa, "Preliminary Report on the Platinum Deposits in S.E. part of the Rustenburg Dist., Transvaal."

at a depth in the neighbourhood of 700 feet; workings on the other two have not reached so great a depth. None of these dunites is being worked at present.

In the middle of 1925, platinum-bearing rocks were located near the town of Potgietersrust in the Transvaal; here several reefs have been proved. The reefs in this area, while of greater width and higher value than the Merensky Reef at Lydenburg, are not so consistent.

The rocks of the Bushveld Complex in the Rustenburg area of the Transvaal are an important source of platinum. Here the norite reef has been found to extend continuously from 30 miles east of Rustenburg, passing that town and continuing on north to the Crocodile river, a distance of roughly 100 miles. The reef is very consistent, and averages 5 pennyweights of platinum over a width of 4 feet.

Three mines on the Merensky Reef reached the producing stage, one in the Potgietersrust and two in the Rustenburg area, but owing to the serious drop in the price of platinum all operations for the recovery of this metal ceased early in 1932. The Rustenburg Platinum Mines, Ltd., recommenced active operations during 1933, and has been a consistent producer since that date.

Crude metallics and a matte containing approximately 35 per cent. of platinum metals and gold are produced and shipped to London for refining and sale.

The production and the sales during the years 1934 to 1938 were as follows:—

PLATINUM: PRODUCTION, 1934 TO 1938.

Particulars.	Quantity.	Assay.	Estimated Contents, Platinum Metals.
1938.			Oz.
Crude Platinum	69,054·000 oz.	26.44 per cent.	18,256·000
Concentrates	952·487 tons.	36·88 oz. per ton	35,124·000
Total: 1938	—	—	53,380·000
1937	—	—	39,624·942
1936	—	—	32,915·451
1935	—	—	31,271·569
1934	—	—	37,741·681

PLATINUM: SALES, 1934 TO 1938.

Particulars.	Fine Oz.	Value.
Platinum Metals—		£
1934	22,889·265	139,516
1935	31,337·783	179,697
1936	29,044·706	176,292
1937	30,125·000	237,663
1938	38,862·000	223,776

8. **Silver.**—The winning of silver has been chiefly confined to that contained in the gold bullion, of which it forms about 10 per cent. by weight.

9. **Radio-Active Minerals.**—So far, pitchblende has been found only in the Gordonia district of the Cape Province.

§ 9. Diamonds.

1. **History.**—Early in 1867 a shiny stone picked up by the children of Daniel Jacobs, a Dutch farmer, on the Orange River near Hopetown, excited the curiosity of a neighbour, from whose hands it passed into those of a trader named John O'Reilly. O'Reilly took it to Grahamstown, where it was identified as a diamond by Dr. W. G. Atherstone. Later on this stone, which weighed 21¼ carats, was sold to the Governor of the Cape for £500. At the instance of Dr. Atherstone and others, further searches were made along the Orange and Vaal Rivers, but with indifferent success, until the finding of an 82½ carat gem—the Star of South Africa—two years later. This diamond was purchased from a Griqua herd boy by Schalk van Niekerk (the same man who carried the first diamond found to O'Reilly) for 500 sheep, 10 oxen, and a horse. It was eventually sold for £25,000 and gave an impetus to the first mineral "rush" in South Africa, at least since the time of the ancients.

The camps established during the next few years along the Orange and Vaal Rivers were the scenes of bustle and excitement such as are always associated with new finds of precious minerals.

The search for diamonds was first made along river channels and dry water courses, but in 1870 and the following year diamonds were found on the surface of volcanic pipes, which later on became the sites of productive mines. The first pipes discovered were Du Toitspan, Bultfontein, and Jagersfontein. The De Beers and Kimberley diamond pipes were discovered in the following year, Koffiefontein in 1875, and Wesselton in 1890. The Premier, near Pretoria, was discovered some time before 1902. A group of small but rich mines in the Bosch of district, the Roberts Victor, Blaauwbosch, and New Eland, were proclaimed in 1906, 1910, and 1912 respectively.

The upper portions of the pipes were at first worked by individual diggers, each of whom was entitled to peg a claim 30 by 30 feet. The pipe areas were accordingly pegged off in chequer board fashion, and adjacent portions worked by a multitude of owners independently, and at varying rates. This continued until the difficulties of mining brought about the amalgamation of the different interests into De Beers Consolidated Mines in 1888. Thus started the systematic mining of the great volcanic pipes, from which developed an industry, which with its selling organizations, etc., has kept diamond production on an even keel for almost fifty years.

Searching for alluvial diamonds has nevertheless continued through all this time, and with it has remained the element of romance with which the industry was inaugurated. In 1908 a Cape coloured boy who had worked in the Kimberley mines picked up diamonds in the Namib desert, east of Luderitzbucht, South West Africa, and this led to the discovery of the unique wind-sorted deposits that occur in that country, in which the richest layers occur on the top rather than at the base of the deposits.

In the Union practically all the alluvial digging up to the year 1912 was done in the Vaal River basin and along that section of it which lies between the mouth of the Harts River and Bloemhof in the Transvaal. From 1906 to 1912 the production from this source ranged from £400,000 to £500,000 per annum. From 1911 onward stones were being found in increasing numbers farther north than Bloemhof on the plains of the western Transvaal, and in the 15 years 1911 to 1926 £20,000,000 worth of the gems came from there.

In 1926, after many years of comparatively small alluvial production, enormous deposits of diamonds were discovered in the northern parts of the Lichtenburg and Ventersdorp districts of the western Transvaal. These localities, which are close to the mining community of the Rand, were the scenes of tremendous excitement in the years 1926 and 1927. In the earlier part of 1927 the diggings supported a population of 50,000 Europeans and 90,000 natives, and they produced diamonds worth £4,958,737 during that year. In 1928 £2,574,328 worth was produced, but the output has fallen continuously since then. Many of the claims in these diggings were pegged under a system of organized rushes in which literally thousands of citizens engaged in gigantic foot races, under control of the police. The starting line was some miles distant and the finish was the area of the supposed diamondiferous ground, choice of claims going to those who got there first. Twenty-five thousand people are said to have engaged in one such rush.

The latest episode was staged in 1927 on the coast of Namaqualand, where, after the finding of stones scattered over a long strip of coastline by a number of people, a geologist, by scientific prospecting, in which a fossil oyster shell was used as a marker, discovered an ancient beach line which contained an exceedingly rich deposit of diamonds. These were, moreover, of an average quality that is perhaps finer than any hitherto found in South Africa.

2. **Production of Diamonds.**—(i) *Union.*—The table below gives the annual output and value of diamonds in each province from the earliest date for which records are available.

According to official records, the value of the diamond output during this period was £327,771,889. The production of diamonds since the date of discovery, 1870, may, however, be taken to have amounted to considerably more.

* 1894–1901.

The decrease in the production of diamonds from the year 1931 onwards is mainly attributable to the curtailment and subsequent stoppage of operations on the mines controlled by the De Beers Corporation. In July, 1931, the Dutoitspan mine at Kimberley was closed down, and short time employment was resorted to at the Bultfontein, Wesselton, and Premier Mines, while the operations at Jagersfontein were confined to a limited mining programme. In March, 1932, operations ceased at all the De Beers mines including Premier Mine.

Diamond working on a limited scale was resumed at Kimberley in February, 1935, and in 1936 the Dutoitspan mine at Kimberley and the mine at Jagersfontein, Orange Free State, were re-opened. In 1937, work was restarted at Koffiefontein, Orange Free State, and, as a result of the increase of activity, production figures for 1937 showed a substantial improvement on the figures for the preceding year. In 1938 there was a further increase in the caratage produced.

(ii) *World.*—The followings table shows the world production of diamonds for a series of years up to 1937 and indicates the proportion which is contributed by the Union. No later information is available.

* Exports.
† These figures, with the exception of those for South Africa and South West Africa were obtained from *The Mineral Industry of the British Empire and Foreign Countries.*
‡ Includes accumulated stocks exported during 1934.

3. **Diamondiferous Deposits.**—Diamonds are found in Southern Africa in volcanic pipes and fissures considered to be of upper Cretaceous age, and in coastal as well as inland gravel and boulder beds of different ages. Most of the latter are of post-Cretaceous age, and there is little doubt that the diamonds in them have been derived, by weathering and erosion, from kimberlite pipes and fissures. Diamonds have, however, been found in other sedimentary beds, e.g. the Witwatersrand conglomerates, which are of much greater age than that phase of volcanicity. This indicates that there must have been some other very much older and as yet undiscovered primary source of the diamond.

The diamondiferous deposits in the Union of South Africa can therefore be classified as follows:—

(i) Ancient conglomerates (e.g. Witwatersrand).
(ii) Volcanic "kimberlite" pipes and fissures.
(iii) "Alluvial"* or more recent gravels and boulder-beds.

In the succeeding pages each of these types of deposits and the manner of their exploitation is described separately. The various economic factors which govern the diamond industry are also briefly discussed.

(i) *Witwatersrand Conglomerates.*—Diamonds occur in the conglomerates from which gold is being produced on the Rand and are won along with osmiridium on the corduroy tables. They are present in very minute quantities compared to gold. From most mines no stones have been produced and in other places only one or two have been found. Most of the diamonds have come from Modder B Mine, where 194 carats were produced in one year. The diamonds are generally green, but one pink stone has been found. The largest stone recorded weighed six carats. The distribution of diamonds over the Reef area appears to be related to that of osmiridium, another minute constituent of the reef. Green diamonds up to eight carats in weight were also found in Witwatersrand conglomerate on the Klerksdorp commonage in the early nineties.

(ii) *Volcanic Pipes.*—The volcanic pipes, which have been drilled nearly vertically through the rocks of the earth's crust, are filled with foreign inclusions lying in a matrix of an ultrabasic rock called kimberlite. Out of about 150 pipes of kimberlite so far discovered, 25 have been mined and the bulk of the production comes from seven only. In the payable mines the proportion of diamonds existing in the pipes varies from about 1: 700,000 to 1: 4,000,000.

(*a*) *Distribution.*—Kimberlite pipes occur in groups over an area embracing 30 degrees of latitude from Sutherland in the Cape Province to Mwanza in Tanganyika Territory 2° 30′ south of the Equator and from longitude E. 16° 30′ to E. 33° 30′. The more important groups are those of Kimberley, Pretoria, Jagersfontein, Koffiefontein, and Postmasburg. The producing pipes lie in a fairly well defined belt from Jagersfontein in the Orange Free State to the Premier Mine in the Transvaal, a distance of 350 miles.

(*b*) *Size and Shape.*—Pipes vary in surface area from the Premier Mine near Pretoria, the greatest diameter of which is over half a mile, to those that are less than 100 feet across. They are commonly ovoid in plan, although many irregular pipes occur. In vertical section they are for the most part steep-sided funnels that are vertical or nearly so. The Kimberley pipe has been worked to a depth of 3,520 feet. The outcrop areas of pipes are not characterized by distinctive topographic features. Their surfaces are usually on a level with the surrounding country, but they may be marked by a slight depression or a protuberance.

The enormous variation in surface measurements is shown in the following table, which gives the area in claims of 30 by 30 Cape feet of some of the principal mines.

AREA IN CLAIMS OF PRINCIPAL DIAMOND MINES.

Mine.	Claims.	Mine.	Claims.
Premier	3,570	Jagersfontein	1,128
Dutoitspan	1,441	Bultfontein	1,067
Koffiefontein	1,428	Crown Diamonds	271
Wesselton	1,162	West End	147

* The use of the term "Alluvial" though not strictly correct is retained for convenience on account of its widespread usage in South Africa as a general descriptive term to distinguish this type of deposit from the diamond pipes or kimberlite deposits.
The diamondiferous gravels and boulder beds in many cases have little or no relation to the existing river systems in South Africa and they vary in age from Eocene to late Quaternary.

(*c*) *Geological Features.*—Many pipes are compounded of one or more plugs of kimberlite occurring within the same orifice. Each of these may vary slightly in petrological character and the type of diamonds it contains. Underground exploration and mining have proved that these minor pipes may commence at varying depths from the surface. Within the orifice that constitutes the Kimberley mine the westernmost of three pipes passes at about 2,000 feet into a 3 to 7-foot dyke, the easternmost loses its identity below 845 feet, and the central one persists to the bottom of the mine.

Most of the pipes are connected with narrow dykes of kimberlite which are of an earlier age. This indicates that they are situated on pre-existent lines of fissuring, and the supposition is strengthened by the manner in which neighbouring pipes are in many places aligned in plan.

Throughout the wide area over which they occur the kimberlite pipes present the same features and are practically identical petrographically. They are believed to have been extruded from a common magma during the same geological period.

The pipes pierce rocks of all ages up to and including the lower members of the Karroo system. They include fragments of Stormberg lavas of lower Jurassic age. A plug of melilite basalt which pierces sediments of Neocomian (Lower Cretaceous) age has by intermediate occurrences been correlated with the kimberlite pipes. They are moreover older than certain Pliocene gravels and are thought to be of Upper Cretaceous age.

(*d*) *Pipe Filling.*—The pipe filling consists in part of non-volcanic material, but the bulk of it is kimberlite.

The non-volcanic material is composed of material derived from the formations traversed by the pipe, and also of deep-seated ultra-basic rocks called cognate xenoliths, which are not anywhere exposed on the earth's surface. Some of the material is clearly derived from above its present position from strata that were pierced by the pipe, but have since been removed by denudation. In the Wesselton mine near Kimberley, for instance, there are boulders of fossiliferous Beaufort sandstone that must originally have lain 3,000 feet above the Dwyka shales that form the walls of the pipe close to the present surface. Inclusions of this type vary from small pebbles to masses weighing millions of tons. The harder of these boulders are beautifully rounded and polished, while the softer tend to be angular. The deep-seated ultrabasic inclusions—cognate xenoliths—are formed of all possible combinations of the minerals, olivine, enstatite, diopside, garnet, ilmenite, and phlogopite, and they form ultrabasic rock varieties known as eclogite, lherzolite, hartzburgite, and wehrlite. The eclogite nodules composed of garnet and diopside have in rare cases been found to carry diamonds.

Kimberlite and the material derived from it constitute the pipe rock proper. In opening up a pipe it is usual to meet in descending order with:—

1. "Yellow Ground", representing completely hydrated and oxidized kimberlite, kimberlite tuff, and kimberlite breccia. This extends from the surface to a depth of from 35 to 140 feet.

2. "Blue Ground", the same rocks in a less altered and unoxidized state, below the limits of the oxidized zone.

3. "Hardebank", which is the designation applied to relatively well preserved kimberlite that does not disintegrate on exposure to the weather.

"Yellow ground" is best likened to a dry mud or clay of yellow or yellowish-brown colour.

"Blue ground" varies considerably in appearance. As a rule it consists of a serpentinous matrix of slate blue, bluish green or bluish black colour, soft and rather greasy to the touch, through which are scattered, with all manner of foreign inclusions, innumerable serpentine pseudomorphs after olivine, glistening plates of phlogopite, and occasional grains of ilmenite, pyrope, enstatite, and chrome diopside. Thin sections prove that some blue ground is merely decomposed kimberlite, other varieties represent altered kimberlite tuff and breccia, and yet others altered injection breccia resulting from the injection of kimberlite into masses of fragmentary material formed by the explosions that drilled the pipes. The inclusions in such injection breccias and those in kimberlite are invariably found to have suffered thermal metamorphism resulting in the development of minerals such as augite, diopside, biotite, and garnet.

(*e*) *Diamonds.*—Diamonds when present in the pipe matter are found in well-formed crystals, broken crystals, and cleavage fragments, a considerable proportion of the latter being invariably present. The better class of diamond is accompanied by "bort" and impure stones classed as "rubbish". The larger diamonds are usually octahedral in form, the smaller dodecahedral. Cubes are very uncommon. Diamonds with rounded edges are most common, owing to growth in the octahedral, and solution in the direction of the dodecahedral and cube faces. Bort is impure or imperfectly crystallized diamond matter. If often occurs in globular or spherical masses with rough surfaces.

Diamonds vary in size from minute stones to the Cullinan diamond of 3,025 carats, which is equal to 1·37 lb. avoirdupois. The average size varies from mine to mine. In the more important mines the proportion of diamonds over 1 carat in weight varies from 29 per cent. to 65 per cent. of the total output (1 carat equals 200 milligrammes).

The colour of the stone varies greatly. White stones tinged with yellow, known as "Capes" and "Silver Capes", are perhaps the most common, the valuable blue whites much less so. All colours are occasionally found. The Premier Mine yields stones of many colours. Cutting proves that the colouring matter is for the most part on the outside.

In hardness South African diamonds are slightly inferior to alluvial stones from Brazil and India.

The diamond content of the blue ground of even the richest pipes is exceedingly small, and that of the payable mines ranges from about 5 to 30 carats to the hundred loads,* which is equivalent to from 1/4,000,000 to 1/700,000. There is in general a diminution of diamond content with depth.

Every pipe and every dyke of diamond-bearing kimberlite yields stones characterized by their own peculiarities of crystallization, colour, lustre, surface markings, etc. It has been established, moreover, that in those pipes where there is evidence of the presence of a number of distinct columns of blue ground formed by successive eruptions, each column yields diamonds that are more or less distinguishable from the others. Certain kimberlite dykes also carry diamonds, but in the majority of instances the pipes are richer than adjacent kimberlite dykes of antecedent age. Kimberlite dykes that are of later age than the pipes carry no diamonds.

(*f*) *Origin of the Kimberlite Pipes and the Diamonds.*—The pipes are the products of successive eruptions. It has been shown that the blue ground found in different portions of any particular pipe may show marked differences in appearance, properties, and diamond content, and the diamonds found in the different varieties of pipe rock may likewise vary considerably in character. It has been proved, moreover, that these differences persist in depth, and appear to be due to variations in the nature of the kimberlite from which the blue ground has been derived.

As regards the origin of the diamond it is clear that every eruption of kimberlite gave rise to stones of distinctive character, and this is the best proof that in any particular occurrence the bulk of the diamonds present are normal constituents of kimberlite, and must have crystallized from the magma of that rock probably under intratelluric conditions at great depths.

(*g*) *Methods of Mining.*—Mining is begun on all the pipes by open-cast work. The rock is broken in benches, the faces ranging from 40 to 100 feet in height. Blasting proceeds on a large scale, deep chambered holes being usually employed and from five to six tons of ground are broken per pound of dynamite employed. Manual labour is employed for drilling and loading, except that light drills are employed for breaking big lumps resulting from the blasting.

For the removal of the pay ground to the surface the two methods employed are (1) hauling the ground in tubs running on fixed wires over the edge of the crater, (2) mechanical truck haulage carried down an incline either wholly within the mine itself, or cut wholly or partly through the country rock outside.

The depths to which open-casting can proceed depend primarily on the nature of the pipe walls. The depths attained by open-casting in the Kimberley group of pipes were from 400 to 500 feet and at Jagersfontein 780 feet. Because of the size of the pipe exploited and the strength of the walls, the open-cast at the Premier Mine is expected to attain an even greater depth.

* Load is equal to 16 cubic feet of broken rock, which weighs approximately 1,600 lb.

As depths increase the rock is sent through chutes to drives below the open-cast, and then to vertical shafts sunk some distance away from the pipe. This is finally superseded by wholly underground methods.

The underground system of mining involves the sinking of two vertical shafts into the country rock at a distance of about 1,000 feet from the pipe. One of these is used for hoisting, the other for ventilation and as an emergency shaft. From one of the vertical shafts main rock haulages are driven to the pipe at vertical intervals of about 600 feet. On the level of these haulages the pipe is developed by means of a rectangular system of main cross drives connected to the haulage. The ground between the main levels is developed by "prospect shafts", one of which is usually in the pipe and the other in the country rock adjacent to it. From these shafts working levels are developed 40 to 60 feet apart in the blue ground by a rectangular system of drives which eventually cuts the ground on each working level into pillars about 20 by 20 feet. Ore passes connect with the main level below.

The method of mining is one of caving and retreating, the general direction of the latter being toward the section of the mine nearest to the main haulage shaft. Starting from the back and then, or at a later stage, from one or both of the sides of the pipe, the object is to leave behind gradually all of the ground on the level either broken or collapsed within a moderately short period, having in the meantime recovered and removed as much as possible of the broken rock. Mining at the same time proceeds in such a way that the ground remaining in situ takes the form of a series of great steps descending toward the back and the sides of the mine away from the direction of retreat. A tunnel about 10 to 12 feet wide is first driven along the rim of the pipe, more or less at right angles to the main haulage. From this a raise is put up, and by overhead stoping a series of oblique slices are taken from the hanging so that a longitudinal section of the "chamber" or stope assumes the shape of a right-angled triangle, the base of which is the floor of the tunnel and the hanging the hypotenuse. The stope is kept filled with broken ground up to a convenient working distance from the hanging wall which is also the working face. Stoping proceeds upward until the apex of the triangle cuts the level above, and then side-ways in the direction of the lower part of the stope. When this has proceeded to a sufficient distance, a similar stope is started on the level below and a parallel stope on the same level as the first, pillars being left between each pair. The average width of a chamber is about 12 feet, but this depends upon the ground. Where the latter is really good, a width of from 14 to 15 feet is not uncommon; but where it is bad the demands of safety may require it to be brought down to much less than 12, or even abandoned altogether. As the distance between the centres of pillars is fixed, the widening or narrowing of a chamber involves a corresponding change in the size of the pillar separating the chamber being mined from the worked out chamber behind. Much importance attaches to this so-called "back pillar", which, in view of the considerable pressure to which it is subjected, must be carried up with as much straightness and regularity as possible. In practice, it is not often brought below five feet in width, but this depends on the nature of the ground and the height to which the chambers are carried. In order to secure final subsidence in these pillars within the time required, the plan is sometimes adopted of having the chambers on one level taken up under the pillars of the level above. As the width of a chamber is altered to meet requirements, so also may the slope or incline be varied according to circumstances.

The offset tunnels cut in the preliminary blocking of the ground, at centres of from 20 to 22½ feet, serve for loading out the chambers, two out of every three being reserved for this purpose. These are lipped or angled off as far as possible within the chamber to permit of the easy passage of the ground into them. Every third tunnel is reserved for entrance to a so-called "poleway", which is simply a rounded recess carried up in the side of the chamber as stoping proceeds, and separated from it by a closed brattice, usually of medium sized round timber, to keep in position the broken ground within. These poleways serve for escape in case of necessity, and at the same time promote ventilation within the chamber.

For the rest, the breaking and the handling of ground proceed on the lines of progressive and up-to-date mining generally. It is of interest, however, to mention as an example of the scale on which work is conducted, that 86,572 loads, equivalent to 69,257 short tons, have been hoisted at Jagersfontein in a working week of five-and-a-half days.

(*h*) *Methods of Treatment and Recovery.*—From the crude expedients of earlier days, there was gradually evolved a process of extraction which was universally adopted and adhered to for many years. This method started by taking advantage of the natural pulverization that takes place in diamondiferous ground on exposure to the weather, and proceeded thereafter by successive stages of wet concentration to the final segregation of the precious stones. The stages of reduction were as follows:—

(i) Weathering of the ground by spreading out on prepared floors.
(ii) Concentration in rotary pans, by which reduction to about one per cent. of the original bulk was effected.
(iii) Treatment of the resulting concentrate, after sizing, by jigs, which effected a further reduction to about one-twelfth of the material received from the pans.
(iv) Hand sorting of the jig concentrate.

Something must be said of the final recovery of the diamond by taking advantage of the special affinity which it and certain other gems manifest for grease, in consequence of certain differences between their surface tension and that of the worthless material. This discovery was made by Mr. Fred Kirsten, of the De Beers Company, a good many years ago, but the process to which it led has only gradually come to be universally adopted. It consists essentially of a shaking table inclined at a suitable angle, and covered with a smooth layer of thick grease, over which sized concentrated material can be carried sufficiently freely by water. In practice the Frue Vanner has been found satisfactory when arrangement has been made for keeping the belt covered with a skin of grease, and for scraping off the material, including the diamonds, retained on it. Care has to be taken that the mixture of grease, mainly a crude petroleum, is suitable, and other adjustments must be attended to, but generally the results are absolutely satisfactory, at least as regards blue ground. This method does not give as efficient results in the treatment of yellow ground. The diamonds are easily freed from the adhering grease by melting and treatment with a hot solution of caustic soda.

After recovery on the sorting tables, the diamonds are finally cleaned by being given a bath in hydrofluoric acid, and are then handed over for final sorting, valuation, and shipment. In the course of final sorting a large parcel of stones may be separated, as in the case of the diamonds from the Premier mine, into as many as 1,000 different classes, according to size, colour, purity, shape, and so forth. Diamonds from the De Beers mines would on the other hand be divided into about 400 classes only. This work, it need scarcely be said, calls for highly expert training.

(*i*) *Costs.*—The cost of mining and treatment varies according to the methods employed and the depths from which the ground is hauled. At De Beers Consolidated Mines, Ltd., and New Jagersfontein Mining and Exploration Company, Ltd., where mining is carried on by underground methods at considerable depths, the costs per load washed in 1928 were 4s. 11d. and 3s. 6d. respectively. In the same year the cost at the Premier mine which is worked open-cast and at a shallow depth was 2s. 6d. per load.

(*j*) *Labour.*—The excellent management of labour on these mines has contributed greatly to the low cost of production. White employees are well paid and treated with much consideration, with the result that the mining population has become more settled and contented than is generally the case in large mining areas. For the periods of their contracts, which are of limited duration, natives and coloured persons who work on the mines are confined to compounds. This system has been attended by the most satisfactory results. From the point of view of the employer it ensures against theft and keeps the labour supply at the highest standard of physical efficiency. The native on the other hand is well fed and cared for and is able to return home at the end of his engagement with his earnings practically untouched.

(iii) *Alluvial Deposits.*—(*a*) *Distribution.*—The principal detrital deposits are those in the valleys of the Orange, Vaal, and Hartz Rivers between Prieska and Potchefstroom, the deposits on the high plains of the western Transvaal in the districts of Lichtenburg and Ventersdorp, and those on the coast of Namaqualand from the mouth of the Orange River southward. Deposits of lesser importance are, or have been, worked east of Kuruman, at Zwartruggens, near Pretoria, and in the Limpopo valley. In South Africa outside of the Union there are also very important deposits along the coast

of South West Africa, between the Orange River and Conception Bay and within 12 miles of the coast, and others in Southern Rhodesia, Angola, and Tanganyika.

(*b*) *Deposits of the Vaal River Basin.*—Wagner has divided these deposits into:—

(i) High-level gravels occurring on the plains in the basins of the Vaal and its tributary the Harts River. They lie up to 400 feet above the river channels and as far as 20 miles from them. Examples of these are the gravels between Bloemhof and Schweizer Reneke in the Transvaal.

(ii) Terraces bordering the present river channels of more recent origin than the high-level gravels.

(iii) Ancient gravel-filled channels, some close to, others at considerable distances from, the present river beds. The Droogeveld channel south of the junction of the Vaal and Harts Rivers is an example of this.

(iv) Gravels in the present bed of the Vaal River.

Gravel terraces bordering the Vaal River and 70 feet above it at Waldeck's Plant carry vertebrate fossils of lower Pleistocene age. The high-level gravels of Lichtenburg and Ventersdorp may belong to the Pliocene.

(*c*) *Lichtenburg and Ventersdorp Fields.*—Alluvial gravels carrying diamonds have a very wide distribution in the northern parts of these two districts within a belt fully 90 miles long by 12 miles wide. Many of the smaller deposits have already been worked out, but most of the larger ones are far from being exhausted. The diamonds are found in irregular patches of gravel or in well-defined "runs", which may exceed 150 yards in width and may extend, though not continuously, for miles. The patches are clearly remnants of such "runs". The gravels consist of boulders and pebbles of chert embedded in a brown clayey matrix. Angular chert fragments are mixed with well rounded boulders. Quartzite, quartz, agate, and chalcedony are much in evidence. Grains of ilmenite, garnet, and other minerals associated with diamonds in kimberlite are rarely found.

The gravels rest on an ancient dolomite surface occupying gentle depressions, channels, or irregular hollows, and in certain places huge sink-holes in the dolomite locally termed "potholes", which in a few instances exceed 100 feet in depth. The floor is very uneven and in places highly irregular. The gravels are rudely stratified, but the original bedding has been much disturbed, tilting due to subsidence having commonly taken place.

The diamonds of the more important Lichtenburg area average about one-half carat and are much inferior to those from the Vaal River diggings. Their average value has ranged between 34s. and 43s. per carat generally as against from 70s. to 120s. for the latter. The average value of the Ventersdorp stones is appreciably higher than the value of those from the Lichtenburg fields.

Harger, Beetz, and Du Toit conclude that the "runs" and patches mark the positions of ancient streams flowing in Ventersdorp from the north towards the Vaal River, and in Lichtenburg from the north-east into the Molopo River and then westwards into the Kalahari. The preservation of these ancient river deposits has been due essentially to solution of the underlying dolomite whereby they were protected from erosion.

(*d*) *South West Africa.*—Alluvial diamonds occur along the coast of South West Africa from the mouth of the Orange River northwards to Conception Bay, a distance of over 300 miles, and back from the coast to a distance of about twelve miles. There are four principal areas, Kolmanskuppe east of Luderitz, Pomona, Bogenfels, and Oranjemund to the south. The first three are situated in country characterized by north-south troughs bounded by bare rocky ridges with their floors filled with deposits of gravel and sand.

The diamonds occur for the most part in the upper layer of loose detritus, along the floors of such troughs and in other depressions. This layer is usually only a few inches thick, but may be up to 25 feet thick. It is composed of 20 to 80 per cent. of yellow sand and 20 to 40 per cent. of coarse material from 1 to 10 millimetres in diameter. The diamonds are concentrated with the coarse material which is composed of milky quartz, white feldspar, yellow chalcedony, banded agate, red jasper, red garnet, epidote, magnetite, and specular iron.

The immediate concentration of the diamonds is brought about by the action of a wind that blows strongly from the south for many months of the year and takes the fine material out of the upper layers. Previous to this recent concentration some of the diamonds had been deposited as gravels in old river beds of Tertiary age. Their ultimate source is thought to be pipes of kimberlite. Such pipes occur inland in this region, but up to the present no diamonds have been found in them.

At Oranjemund diamondiferous raised marine beaches are developed like those across the Orange River standing at from 12 to about 60 feet above sea-level, and from them has been recovered the largest diamond yet discovered along the coast, one of 246 carats.

(*e*) *Namaqualand.*—Alluvial diamonds occur along the coast of Namaqualand from the mouth of the Orange River south-west to Zout River, a distance of over 200 miles. The diamonds are found in marine gravels occupying wave-cut terraces lying at elevations of from 20 to 210 feet above sea-level. The greatest distance from the present shore line at which they have been found is three miles. The deposits are for the most part buried by sand, surface limestone, and later gravels.

The most important deposit so far found is situated three-quarters of a mile south of the Orange River and one and a half miles from the coast at a spot known as Alexander Bay. This to-day constitutes the State Alluvial Diggings. A strip of gravel from 8 to 40 feet wide occupies a storm beach from 110 to 135 feet above sea-level. This has been proved to be very rich in diamonds of exquisite quality. There is an almost complete absence of inferior stones and bort. The first parcel excavated from this locality fetched an average price of over £12 per carat.

Rich terraces have also been worked at Klein See at the mouth of the Buffels River, while productive alluvial gravels occur along that river through a distance of 25 miles.

The origin of these diamonds along the Atlantic coast has not been unquestionably established. Some of them must have been brought down from the interior by the Orange River and its tributaries and redistributed by waves and currents, though local sources can also be suggested and possibly submarine pipes off the coast.

(*f*) *Exploitation.*—The shallower deposits are worked by stripping the overburden and excavating the gravel. Open-cast methods are used also in working some of the larger potholes in the Lichtenburg fields. On certain of the deep gravel deposits in the Vaal River area, however, the ground is strong enough to admit of underground work. In such cases shafts up to 100 feet deep are sunk to the payable gravels. Where the diamonds lie along the bottom of an old watercourse they can be excavated by driving along the bottom of the depression. More extensive areas of payable ground are mined by the pillar and stall method.

Deposits in the bed of the Vaal River have been worked by constructing dams or breakwaters above or around the "pools", pumping them dry, and excavating the gravel in the ordinary way. Although such operations involve a great deal of risk, some of them have yielded handsome profits.

After excavation the gravel is generally sorted, very fine stuff and coarse material being discarded. The intermediate product is then washed in hand-operated rotary pans of the same type as those used on the mines. The concentrate is drawn off at intervals and further concentration is effected by hand jigging in small circular sieves with one-eighth inch openings, before being sorted on canvas covered tables. Certain syndicates, however, work their claims with large and elaborate plants.

At Lichtenburg and other fields far from flowing streams, water has to be hauled to the diggings, and its cost is a very serious item of expenditure. White diggers usually employ one or more native helpers.

The figures for 1938 show that 3,183 Europeans and 8,995 non-Europeans were engaged in alluvial operations. The diamonds found amounted to 259,146 metric carats valued at £973,335.

4. **Economic Factors.**—In 1933 negotiations were carried on between the producers of the Union and South West Africa, The Diamond Corporation, Limited, and the Union Government. The outcome of these negotiations was the formation of the Diamond Producers' Association, the members of which are:—

The Government of the Union of South Africa.
The Administrator of South West Africa, and
The Consolidated Diamond Mines of South West Africa, Limited.
De Beers Consolidated Mines, Limited.
Premier (Tvl.) Diamond Mining Company, Limited.
New Jagersfontein Mining and Exploration Co., Ltd.
Cape Coast Exploration, Limited.
The Koffiefontein Mines, Limited.

The volume of trade available is apportioned amongst the members on a basis of quotas. The Diamond Producers' Association has entered into an agreement for the sale of its diamonds with a new company styled The Diamond Trading Company, Limited. As the result of these arrangements the two basic principles on which the prosperity of the diamond trade depends, namely, the control of production and sales through one channel, are ensured.

South Africa is no longer in the happy position it occupied some years ago of having practically a world monopoly of the supply of diamonds. Production in other parts of the world, notably Angola, Belgian Congo, and Gold Coast, has increased, until it has well exceeded that of the Union. Flooding of the market from those sources has, however, been prevented by means of working agreements with the producers in Angola and the Congo.

The closing during the past few years of all mines has meant that the entire output has been furnished by the alluvial fields. The progressive reduction of the output, the sales of accumulated stocks, and the increased demand for diamonds have, however, rendered possible a resumption of mining.

5. **Government Control.**—Except in the case of those on a few farms, precious stones are the property of the State. In the case of a mine, save for various existing concerns, the Government retains the right to one-half if existing on private land and seven-tenths if existing on Crown reserves. The State owns a six-tenths interest in the Premier Mine.

For a monthly payment of 5s. a digger may peg and work a claim 45 feet long by 45 feet broad on a proclaimed diggings. Because of the ease with which diamonds can be stolen, stringent laws are in existence, which make the buying and selling of uncut stones unlawful except to properly licensed persons. All diamonds purchased on the diggings are liable to examination by Government experts, who are able to distinguish the stones from the various deposits, and such examinations form a check on the sale of stolen diamonds as products of alluvial claims. Formerly the discovery of a payable alluvial deposit invariably led to the proclamation of the ground as a public diggings after the owner's and the discoverer's rights had been secured. The over-production of the Lichtenburg fields gave rise in 1927 to legislation which enabled the Government to permit or prohibit the prospecting and working of diamonds on private as well as on Crown lands, and to control the disposal of the diamonds won. In Namaqualand the Government retains full possession of all diamonds on Crown reserves, except in the case of the several discovery rights that have been granted. Outside these discovery claims the fields are being operated as a State diggings. An export tax of ten per cent. on uncut diamonds has been in force since 1919. There is a further tax of 15 per cent. on profits.

6. **Prices.**—During the years 1911 to 1913 the average prices of mine stones produced in the Union were 32s. 1d., 36s. 5d., and 40s. 1d. respectively per metric carat of 200 milligrams. In 1920 the average price for mine stones had risen to 99s. 9d. At the end of that year, however, a complete collapse occurred in the diamond trade. This was due to over-production, as well as to a world-wide financial depression, which caused many of those adversely affected by it to sell their diamond jewellery, and severely curtailed the buying of new diamonds. There has been some improvement in the price since that time.

The prices of alluvial stones, although on the average much higher than those of the mine stones of equal weight, fluctuate on the market in sympathy with the rise and fall of the latter. Price, however, is also dependent upon the quality and size of the diamonds produced. Thus the drop in the average price of alluvial stones during the years 1926 and 1927 is directly due to the large quantity of stones of small size and relatively poor quality sold from the Lichtenburg fields during that period.

AVERAGE PRICE OF DIAMONDS, PER METRIC CARAT, 1934 TO 1938.

YEAR.	CAPE OF GOOD HOPE.	TRANSVAAL.	ORANGE FREE STATE.	UNION.
	s. d.	s. d.	s. d.	s. d.
1934	48 9	31 10	17 9	39 6
1935	28 10	16 0	112 8	24 6
1936	62 3	43 0	26 3	58 5
1937	87 8	43 2	45 3	78 10
1938	58 6	39 0	25 11	50 6

The following table shows the varying prices of stones over a period of years commencing with 1912.

AVERAGE PRICE OBTAINED FOR DIAMONDS, 1912 TO 1938.

Year.	Average Price per Metric Carat obtained for—		
	Mine Stones.	Alluvial Stones.	All Stones.
	s. d.	s. d.	s. d.
1912	36 5	104 11	39 1
1915	45 9	78 3	51 6
1920	99 9	213 3	113 11
1925	57 4	159 5	66 8
1930	61 5	65 1	62 8
1934	31 10	55 6	39 6
1935	18 3	62 9	24 6
1936	55 3	97 7	58 5
1937	80 10	71 10	78 10
1938	47 3	56 10	50 6

7. **Diamond Cutting.**—By far the greater part of the diamonds produced in South Africa is shipped to London and eventually cut and polished in Amsterdam and Antwerp.

Cutting operations have been carried on in South Africa for a considerable time, but originally began on a very small scale. Thus in 1909 there were two small factories in Johannesburg. The industry was slow to expand, notwithstanding the fact that in 1917 a 5 per cent. export duty was imposed, that in 1919 this duty was raised to 10 per cent., and that an Act was passed for the control of cutting factories and for the purpose of ensuring a reasonable supply of rough diamonds for the cutters.

The South African cutter has an advantage over the European cutter of about 11¼ per cent. in price.

In the year 1926 valuable discoveries of alluvial diamonds were made in the Lichtenburg district of the Transvaal; in 1927 the production from this source was at its peak and in consequence prices fell. Thus not only did existing cutters increase their output, but new cutters started business, and at the end of 1927 there were eight cutting establishments, which during the latter half of 1927 cut 1,515 carats in the rough, valued at £9,000, and employed among them an average of 36 skilled workmen and 23 apprentices.

Early in 1928 the Government entered into an agreement with some Belgians to establish a large factory in South Africa and train considerable numbers of South African apprentices. This fact, and the fact that the Government made available to cutters at the end of 1928 diamonds acquired from the State Alluvial Diggings, encouraged far more cutters to come out from Europe and set up in business, and also brought about an increase in the output of factories already established.

During the year 1929 there were 25 factories working; these factories produced £1,451,002 worth of polished diamonds. The following table contains particulars of the Union's diamond cutting industry from 1929.

DIAMOND CUTTING INDUSTRY AT 31st DECEMBER, 1929 TO 1938.

Year.	Establishments.	Licensed Cutters.	Registered Employees.	Apprentices.	Other European Employees.	Native Employees.	Diamonds Polished.	
							Weight.	Value.
	No.	No.	No.	No.	No.	No.	Carats.	£
1929...	25	33	357	350	34	34	45,740·42	1,451,002
1930...	26	31	281	362	35	35	54,506·86	1,414,631
1931...	32	43	215	347	16	23	50,320·75	956,937
1932...	28	37	211	237	16	24	47,616·72	752,573

1938...	18	38	158	1	4	17	42,482·10	914,995

§ 10. Gem Stones other than Diamonds.

1. **Garnets.**—Garnets of good quality and several varieties of spinel occur in the Zoutpansberg district of the Transvaal, but so far these have not been exploited on any large scale.

2. **Beryl.**—Beryls, including the emerald variety, occur in pegmatites and mica schists in the Leydsdorp area of the Letaba district in the Transvaal. A great deal of prospecting has taken place and some half-dozen small producing mines were actually brought into being during 1928 and 1929. The restricted demand for stones under depressed world conditions resulted in the closing down of all but one of these mines, and prospecting in the mica schists has ceased. The following table gives particulars of sales and shipments of beryl crystals for a series of years:—

BERYL (EMERALD) CRYSTALS, SALES AND SHIPMENTS, 1929 TO 1938.

Year.	Quantity.	Value.	Year.	Quantity.	Value.
	Carats.	£		Carats.	£
1929.....	49,887	16,206	1934.....	*	10,698
1930.....	36,431	11,100	1935.....	*	10,756
1931.....	46,178	8,360	1936.....	*	6,082
1932.....	8,085	2,932	1937.....	*	10,838
1933.....	14,764	4,220	1938.....	*	8,601

* Not available.

3. **Verdite.**—A variety of serpentine, which has obtained the local name of verdite, has been worked in the Barberton district of the Transvaal. This is an extremely beautiful stone of a green colour, suitable for all manner of small ornaments, clock-cases, etc., but too soft for architectural purposes.

4. **Crocidolite.**—In South Africa, this term has been commonly applied to the "chatoyant" hard variety of the mineral used in jewellery and for ornamental purposes and known as "tiger's eye" and "cat's eye". The distribution of the valuable species is comparatively limited, little being found away from the farm Naauwpoort in the Hay district of the Cape Province. Enough is available there, however, to supply the world's requirements for an indefinite time.

5. **Jade.***—The so-called South African "jade" is found in the Transvaal, between Pretoria and Rustenburg. It possesses all the qualities of a semi-precious stone, and has been found well suited for the manufacture of articles of stone jewellery. The commonest colour is green, not much different from that of true jade, but pink and other lighter shades are also found. In 1924, 1,347 lb. valued at £323 were sold and in 1929, 190 lb. valued at £38. The known deposits of this mineral are limited in extent, and there has been no production since 1929.

§ 11. Coal.

1. **General.**—The discovery of coal in South Africa had very far-reaching effects upon the trade and prosperity of the country. There are no old records as to the extraction of this mineral, but it is probable that both natives and colonists won a little from the outcrop seams some years before any of the coal beds were put to commercial use. In 1878 Dunn and North reported upon the existence of workable coal in the Stormberg beds of Cape Colony, and at Indwe, Molteno, and other localities seams of second-rate coal have been mined for many years.

In the Transvaal coal was first opened up near Boksburg in 1887, and the finding of this mineral in close proximity to the Witwatersrand gold fields was of the greatest importance, as the high plateau in which the gold-bearing beds were discovered was practically destitute of timber, and there was no railway communication to the coast or to other coal fields. Following upon the discovery at Boksburg, large seams of good coal were opened up in the Witbank district, and, with good railway communication to Johannesburg, the Witbank collieries now supply the bulk of the coal used by the mines and other industries.

Natal, speaking generally, produces the best coal in the Union, and does a large shipping trade. The seams, however, are smaller and deeper than those of the Transvaal; gas and dust exist in some pits, and working costs are higher than in the other provinces. It is probable that the large bodies of anthracitic coal which exist in Natal will also be worked in the future, and that some of the poorer seams now discarded will be utilized for the extraction of by-products.

South Africa has made its name through the production of gold and diamonds, but it is mainly due to the existence of cheap coal that the large output of gold and diamonds has been made possible.

2. **Production of Coal.**—The following statement shows the quantity and value of coal produced from 1934. Figures showing the annual output of coal from the earliest date for which records are available appeared in No. 17 and earlier issues of the *Year Book*.

OUTPUT OF COAL, VALUE, AND VALUE PER TON, 1934 TO 1938.

Year.	Quantity.					Value.	Average Value per ton.

3. **Geology and Occurrences.**—Most of the South African coalfields are now well-known geologically, and the more important have been well prospected by boreholes and other means. They have been described in detail in the three volumes of Memoir No. 19 of the Geological Survey, by W. Wybergh, which contain many maps, sections, and analyses, together with detailed estimates of the coal reserves available in each field, and a summarized extract of these estimates appears below. The coal of all the more important fields occurs in the series of grits, sandstones, and shales forming the "Middle

* From a paper by Dr. A. L. Hall ublished in the Transactions of the Geological Society of South Africa, Volume XXVII, 1924.

Ecca" beds of the Karroo Series in the south-eastern Transvaal; the only exceptions known are the Waterberg coalfields, where the coal seams probably belong to the Upper Ecca, the Somkele field in Zululand, probably of Beaufort age, and the Stormberg field of the Cape Province, where the coal occurs in the Stormberg Series.

The principal coalfields are as follows:—

(a) *Transvaal.*—(i) *Witbank.*—A well prospected and developed field. In general, a good steam coal, largely used for bunkering and export trade, as well as for general industrial and household purposes. Calorific value as mined 12·5 to 13, volatiles about 24·5 per cent. Not usually a coking coal.

(ii) *Springs-Heidelberg.*—Includes several isolated areas, the greater part of which is little known. A steam coal with 21 per cent. to 22 per cent. volatiles, and calorific value ranging from about 9 to 11·25. Of the "Undetermined" coal probably about one-third has a calorific value of over 11. None of the coal from this area is coking coal.

(iii) *Eastern Witbank.*—A well prospected but undeveloped field, continuous with the Witbank field proper. The coal is in general similar to that of Witbank, but of somewhat higher average calorific value. Much of the "Proved" and "Estimated" coal is, however, believed to be a coking coal.

(iv) *Bethal.*—Large quantities of coal are known to exist, of which some 480,000,000 tons, from one seam, are believed to have a calorific value of 11 to 12, the remainder being from 10·5 to 11. The field has been very little prospected, and the coal-bearing area may be considerably larger than here estimated.

(v) *Ermelo-Middelburg-Belfast.*—Well prospected in the neighbourhood of existing collieries, but includes a considerable area about which little is known. The Ermelo coal, as mined, has a general calorific value of a little over 12, with 28 per cent. to 29 per cent. volatiles. Not used for export, but largely used for household and railway purposes. The lower grades, not at present mined, are lower in volatiles. The Middelburg-Belfast area includes several detached areas, and except in one or two places has been little prospected. The coal appears to be of similar quality to that of Witbank, but of lower grade, the calorific value being from 11·5 to 12.

(vi) *Piet Retief-Wakkerstroom.*—The coal seams are undeveloped, but outcrop continuously for 100 miles. The classification of any portion of the coal as "proved" in the technical sense is thus open to question, though there can be no doubt whatever of the existence of the quantities thus classified. The further estimate of the total quantity is very speculative. The available analyses, very few in number, all indicate a high grade coal with calorific value from 12 upwards and volatiles ranging from 21 per cent. to 37 per cent.

(vii) *Springbok Flats.*—Practically nothing is known of the quality of this coal, and the estimate of the quantity is very speculative. Outcrops are not exposed, but seams have been penetrated by boreholes in several widely separated localities.

(viii) *Waterberg.*—Very little is known about this field, and the estimate is very speculative. Coal seams do not outcrop, but have been encountered in a number of boreholes in widely separated localities. In some cases the total thickness of coal is very great. The few analyses indicate calorific values of from 11 to 13, with volatiles ranging from 18 per cent. to 30 per cent. Some seams appear to contain good coking coal.

(ix) *Zoutpansberg.*—This field is almost entirely unknown, and the coal-bearing area and the thickness of coal are very uncertain.

(x) *Syferfontein No.* 32.—Coal of low grade. Calorific value below 10.

(xi) *Komatipoort.*—Hardly prospected and coal-bearing area unknown. Owing to the prevalence of dolerite intrusions, the prospects of development are unfavourable.

(xii) *Springfield.*—The coal seams vary from 17 to 70 feet in thickness and average 20 feet of workable coal of calorific value 10 to 11, ash 18 per cent., and volatiles 28 per cent. 60,000,000 tons of extractable coal have been proved in this area, and plant has been installed to produce up to 1½ million tons per annum.

The coal is being cleaned in a "Chance" sand flotation washer and is being used mainly for the generation of electricity.

It is a non-coking coal, burns with a long clear flame, and is suited for boiler and domestic requirements.

(b) *Natal.*—(xiii) *Klip River.*—Well prospected and fully developed. Large areas are affected by dolerite intrusions. Yields a good steam coal of consistent value, usually suitable for coking and largely used for export and bunker trade. Calorific values are usually from 13 to 14. Volatiles, where not affected by igneous intrusions, run from 20 per cent. to 30 per cent., but where so affected shew every graduation down to 30 per cent.

(xiv) *Vryheid.*—Well prospected and developed. The distinction between bituminous and anthracitic coal is more sharply marked than in the Klip River field. In other respects the coal is similar to that of the Klip River field and is used for the same purposes. There is a narrow but high grade seam with calorific value of over 14, which yields a first class coke.

(xv) *Utrecht.*—Well prospected in the neighbourhood of the collieries, where the coal is similar to that of the Vryheid field. Large areas, which almost certainly contain coal of similar quality, are as yet entirely unworked and little prospected.

(c) *Orange Free State.*—The data on which the estimates are based are meagre, except in proximity to working collieries, but the few boreholes scattered over a large area have uniformly revealed large seams of coal. Little is known of the grade, but it is probably low. In the working collieries the calorific value ranges from 9 to 11, and the volatiles from 24 per cent. to 27 per cent. The coal is a non-coking steam coal.

(d) *Cape Province.*—Although in the Stormberg area coal is found in considerable quantities and was formerly worked on a fairly large scale, it is so thin and of such poor quality, besides being much broken by igneous intrusions, that it is not worth including in the estimate.

The following table contains data relative to the coal resources of the Union and shows the quantities of coal, the existence of which is "proved", and the proportions at given calorific values.

COAL RESOURCES OF THE UNION OF SOUTH AFRICA.*

* Geological Survey Memoir No. 19 (W. J. Wybergh), Vols. I, II, and III.

The basis of the estimate in the foregoing table is as follows:—

No seam is included which has a thickness of less than 3 feet of clean coal, except to a very limited extent in Natal. There are, however, many such seams in most of the coal fields, which in the aggregate contain large amounts of coal.

"Proved" coal, except in the case of the Piet Retief-Wakkerstroom field, is taken to mean coal which has been sufficiently prospected to warrant immediate opening up where the quality and economic conditions permit.

"Estimated" coal is taken to mean coal, the existence of which is fairly certain, but which requires further investigation to warrant the expenditure of capital.

"Undetermined" coal is that about which little is known in detail, but of the probable existence and extent of which there is good and sufficient geological evidence to warrant prospecting.

These estimates do not take volatile matter into consideration. The calorific value of the "estimated" and "undetermined" coal is uncertain or unknown. Large quantities of low grade coal, probably of calorific value less than 10, have been entirely omitted from the estimate.

The analyses contained in the following table may be taken as representative of Transvaal and Natal coals as supplied for export and bunkering.

4. **Methods of Mining.**—The methods of mining followed in the Natal, Transvaal, and Orange Free State coal mines were briefly described in previous issues of this *Year Book* (Nos. 1 to 4).

5. **Coke, By-Products, Tar, etc., produced by Mines.**—(i) *Coke.*—Up to the beginning of 1914 the manufacture of coke was confined to the Province of Natal, which supplied all the coke used in South Africa and also exported a considerable quantity.

In 1938 the output of coke by mines was 179,630 tons, valued at £201,582.

Natal coke is of excellent quality especially for foundry work, being very dense and hard. Analyses of a typical Natal coke taken over a period of two years gave the following results: Fixed carbon, from 88·60 per cent. to 89·40 per cent.; ash, from 10·4 per cent. to 9·80 per cent.; sulphur, from 0·60 per cent. to 0·50 per cent.; calorific power, 13·12 per cent.

(ii) *By-Products.*—The Dundee Coal Company is producing the following by-products at its Waschbank Factory, Natal: tar, ammonia liquid, light creosote oil, naphtha salts, solvent naphtha, and benzol.

(iii) *Tar.*—During 1938, 267,121 gallons were sold for £5,242, Natal disposing of the whole amount.

The S.A. Iron and Steel Industrial Corporation at Pretoria also produces large quantities of coke, tar, and other by-products. (See also § 3, Chapter XXIII.)

6. **Employment and Accidents in Coal Mining.**—The number of persons employed in coal mining during the year 1938 is shown below. The table also shows the number of persons killed and injured, and the proportion killed per thousand employed.

COAL MINES—EMPLOYEES AND ACCIDENTS, 1938.

Province.	Persons Employed in Coal Mining.		Accidents.		Death-Rate from Accidents per 1,000 Employed.
	European.	Other.	Persons Killed.	Persons Injured.	
Cape of Good Hope.....	4	49	—	—	—
Natal.....	596	12,593	31	668	2·35
Transvaal.....	1,199	16,709	34	391	1·99
Orange Free State.....	132	2,396	4	35	1·58
UNION.....	1,931	31,747	69	1,094	2·05

7. **Conditions of Labour in Collieries.**—In the collieries, the European miner is in the position of a supervisor, having usually from 50 to 100 natives employed under him. He does little manual work beyond conducting blasting operations and examining the places before the natives enter and start work. Natives (the aboriginal Bantu inhabitants of South Africa) do all the manual work, such as hewing the coal, filling it into trucks, and tramming. In Natal, Indians are employed, as well as natives, and are efficient in supervising stationary engines, running coal cutters, setting timber, and pipe and track laying.

The hours worked are, as a rule, forty-eight hours a week, and where this is exceeded overtime is paid.

8. **Wages (Coal Mines).**—During 1938 European miners' wages (including allowances but excluding overtime) averaged 22s. 6d. per shift in the Transvaal and 23s. 0d. in Natal. The average wages per month for natives in the Transvaal and Natal were 52s. 8d. and 49s. 7d. respectively, with quarters, rations, and medical attendance supplied. Indians, as a rule, draw slightly higher wages than natives, as they remain longer on the mines, and their increased efficiency entitles them to superior remuneration. The following statement shows the wages earned in the collieries in 1938:—

COAL MINES—WAGES PAID, 1938.

Union, 1937.....£	11,488,354	999,823	10,488,531	1,222,981	445,286	1,047,100

* Includes companies also producing coal by-products.
† Includes a considerable amount representing value of estate property and also of one colliery in the Transvaal.
‡ Includes one colliery in the Orange Free State.

10. **International Comparison of Production.**—Compared with the enormous coal production of such countries as the United States of America, the United Kingdom, and Germany, the coal output of the Union is small. The following table gives the production in tons of 2,000 lb. of some of the chief coal-producing countries of the world, during a series of years:—

OUTPUT OF COAL* IN VARIOUS COUNTRIES, 1913 TO 1938.

* These figures include lignite converted into terms of coal at the ratio of 9:2 for Germany and 3:1 for other countries. The data have been compiled from the League of Nations *Monthly Bulletin of Statistics*, except those relating to Australia, which were taken from the Australian *Official Year Book*.
† Not available. ‡ Amended figure. § Since March, 1935, includes Saar production.

11. **Union Coal Trade and Coal Consumption.**—As South Africa is far from any of the important coal fields of the world, its coal deposits are of the utmost value to it. Aided by an ample supply of cheap coal or electric power generated by means of coal, new industries are rapidly developing throughout the country. For many years to come South Africa should be able to supply coal at a cheap rate; for, while wages are likely to increase in older countries, the native of South Africa will probably remain content to work for far less than a European. This fact, taken together with the favourable geographical situation of the Union, will enable the country to compete on advantageous terms with the other coal-producing countries of the world.

The following table shows the quantity in tons of 2,000 lb. of coal imported into, exported from, and consumed in the Union during certain years:—

COAL—IMPORTS, EXPORTS, AND CONSUMPTION, 1911 TO 1938.

Year.	Consumption of Coal.			Coal Imported.	Coal Exported.	Coal Bunkered.†
	Total.	Railway.*	Mines.			
	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
1911.....	6,139,481	1,463,226	2,608,043	68,035	82,586	1,440,912

* Steam coal only. † Shipped in vessels cleared overseas only. ‡ Not available.

12. **Price of Coal.**—The price of coal varies considerably in the different provinces. The reason for this difference in prices is largely due to the situation of the collieries. Thus the Cape Province coal, though inferior in quality, fetches the highest price, because coal from other provinces has to be transported by rail to the Cape Province. The following table gives data from the year 1912, as to the average price of coal at the pit's mouth.

AVERAGE PRICES OF COAL (PIT'S MOUTH), 1912 TO 1938 (PER TON OF 2,000 LB.).

Period.	Cape of Good Hope.	Natal.	Transvaal.	Orange Free State.
	s. d.	s. d.	s. d.	s. d.
1912	11 0·55	5 6·99	4 4·78	5 4·57
1915	11 4·22	6 9·50	4 4·82	5 2·14
1920	15 5·22	12 3·40	6 1·12	5 11·43
1925	14 4·98	7 5·13	5 0·67	5 6·33
1930	13 9·34	5 10·45	4 11·74	5 6·50
1934	12 1·86	5 3·01	4 8·27	4 5·20
1935	12 5·44	5 4·10	4 8·47	4 4·85
1936	12 4·98	5 8·79	4 8·32	4 5·03
1937	12 5·92	6 0·03	4 8·37	4 7·01
1938	11 4·37	6 9·32	4 11·31	4 9·32

13. **International Comparison of Prices.**—Apart from the price of Cape coal, the price of coal in the Union compares very favourably with the prices in other parts of the world.

The average pit's mouth prices of coal per short ton (2,000 lb.) in various countries are as follows:—

	Year.	s.	d.
United Kingdom	1937	15	2
South Africa	1938	5	4
Australia (New South Wales)	1937	10	10
Canada	1937	12	8
New Zealand	1937	17	10

The following table gives a comparison of the retail prices of coal in the Union and various other countries:—

INTERNATIONAL COMPARISON OF THE RETAIL PRICE OF COAL, 1929 TO 1938.

Year.	South Africa.	Canada.		Australia.	New Zealand.	United Kingdom.
		Anthracite.	Bituminous.			
	Per 100 lb.	Per 100 lb.	Per 100 lb.	Per 100 lb.	Per 100 lb.	Per 100 lb.

1938	1 6·67	2 11·47	1 11·14	2 7·68	2 11·33	2 0·47

14. **Fuel Research Institute and Coal Act.**—The *Coal Act*, No. 27 of 1922, which came into effect on the 1st September, 1922, followed the lines of the Coal Commission's report. Its main provisions were summarized in *Official Year Book* No. 12 and were not repeated, as the Act was repealed on the 24th January, 1931, in terms of the provisions of section 21 of the *Fuel Research Institute and Coal Act*, No. 36 of 1930, which was brought into operation on the 6th September, 1930. Act No. 36 of 1930 was amended, and extended powers were granted to the Fuel Research Institute by Act No. 2 of 1933.

15. **Fuel Research Institute.**—The *Fuel Research Institute and Coal Act* constituted a Fuel Research Institute and a Fuel Research Board, the objects of the Institute, as defined by section 2 (1) of the Act, being—

(*a*) to study and investigate the fuel resources of the Union;
(*b*) to undertake scientific and technical research on all matters relating to fuels in general and to fuel by-products;
(*c*) to grade coals for export or bunkering;
(*d*) to investigate any other matter which the Minister, after consultation with the board appointed under section 3, may refer to it;
(*e*) subject to the approval of the Minister to establish such laboratories, testing stations, or sub-stations, as it may deem necessary; and
(*f*) to publish, from time to time, in such form as it may deem suitable, particulars of the grades of coal available in South Africa, and any other such information concerning the objects referred to in this section as it may deem suitable.

Under further provisions of the Act, the Institute has taken over the rights and assets and assumed the liabilities of the Coal Grading Committees created by Act No. 27 of 1922 and, as required by sub-paragraph (*c*) above, is carrying out the grading of coal, there having been no interregnum in the discharge of this function.

Grades and standards for coal have been adopted by the Institute as follows:—

TRANSVAAL.
First Grade..... Minimum calorific value, 12·8 lb./lb. units.
Second Grade..... Minimum calorific value, 12·3 lb./lb. units.
Third Grade..... Below the minimum calorific value of the second grade.

NATAL.
First Grade..... Minimum calorific value, 13·1 lb./lb. units.
Second Grade..... Below the minimum calorific value of the first grade.

The Institute is situated on the east side of Pretoria in the grounds of the Boys' High School (English medium) and in close proximity to the university.

§ 12. Non-Metallic Minerals other than Coal.

1. **General.**—Until recent years little interest has been shown in the occurrences of any other minerals but diamonds and gold; this applies more particularly to the non-metallic minerals. Prior to the Great War asbestos, common salt, and lime were practically the only non-metallic minerals which had received much attention.

The position had, however, improved considerably in the years immediately preceding the world depression, and, had not this set back then taken place, further attention would undoubtedly have been paid to the country's resources of non-metallic minerals, and production of these for both domestic and overseas consumption would have shown a material increase. With the recent improvement in world conditions and expansion of local industries, there are again indications of increased interest in this class of minerals.

The present position in regard to these has been summarized in the following paragraphs.

2. **Asbestos.***—Five classes of asbestos occur within the Union. They are:—Chrysotile, crocidolite, amosite, tremolite, and asbestic, but only the first three have been exploited to any considerable extent.

Asbestos mining began in 1893, when the Cape Asbestos Company produced nearly 100 tons of crocidolite. Chrysotile was first produced in 1906 and amosite in 1912.

It is of interest to note that the Union of South Africa is the only country in which the fibrous or asbestiform varieties of the two amphibole minerals, crocidolite and amosite, occur in a form and manner suitable for commercial exploitation.

* Geological Survey Memoir No. 12 (Revised), "Asbestos in the Union of South Africa." Hall, 1930.

(i) *Chrysotile.*—Chrysotile occurs in the rocks of the Jamestown basic igneous complex in the Barberton and Carolina districts of the eastern Transvaal and in Swaziland, and in various other places in the Transvaal and Natal where rocks of this character occur. Chrysotile also occurs in the serpentinized dolomites of the Dolomite series near Carolina.

The asbestos-carrying serpentine belt in the De Kaap valley, in the neighbourhood of Barberton, has a length of some 3 miles and a maximum width of 2 miles. On this belt are situated the New Amianthus and the Munnik-Myburgh mines. The fibre from this area is of excellent quality, and its character is well maintained to the lowest depths reached, some 600-700 feet vertically below surface. Work at the New Amianthus mine has been suspended, and the operations of the company owning it have been transferred to the Havelock mine in Swaziland.

The occurrences in the dolomite in the Carolina district extend over a distance of some 20 miles. The veins are lens-like and are not continuous over any distance, and payable bodies are limited.

(ii) *Crocidolite.*—Crocidolite occurs in Griqualand West over a distance of 250 miles from a point 30 miles from Prieska on the Orange river northward through Griquatown and Kuruman to the Bechuanaland border. The colour is blue varying in shade, and good commercial fibre works up easily, the fibres of the best grades being flexible and having a silky feel. Its tensile strength is greater than that of chrysotile, and it is acid and sea-water-resisting, but fuses at a lower temperature. In this district the crocidolite occurs in cross-fibre veins of lenticular shape in the thin bedded ironstones of the Griquatown series, comparable to the Pretoria series of the Transvaal. Veins vary in width up to 3 inches, but probably 70 to 90 per cent. of the asbestos in the rock is under ½ inch in length. Individual deposits in this area are small, and workings producing in excess of 20 tons of fibre per month are rare. Continuity of the asbestos zones is more evident in the southern part of this area, but the class and the length of fibre are on the whole better towards the north.

In the Pietersburg district lens-like veins of similar character to those in Griqualand West occur in the banded ironstone at the base of the Pretoria series. The quality of the mineral is not on the whole, however, as good as that of the Prieska-Kuruman area.

(iii) *Amosite.*—Amosite type of asbestos occurs at intervals over a distance of 60 miles between Chuniespoort, south of Pietersburg, northern Transvaal, and the Steelpoort river north of Lydenburg, eastern Transvaal. The fibre occurs as cross-fibre veins in banded ironstones of the Pretoria series, or within bands of ironstone included in the underlying dolomite. Its occurrence is confined to the lower 200 feet of the Pretoria series. The most important disclosures have been at the Penge mine, where there are three series of seams. The average length of the fibre is from 8 to 9 inches, but in some instances fibre up to 12 inches has been mined.

(iv) *Tremolite and Asbestic.*—Occurrences of tremolite are found in Zululand, and asbestic, a matted deposit of fibres, in the Zoutpansberg district of the Transvaal. The latter is being exploited for local consumption only.

(v) *Mining and Recovery.*—The rugged nature of the country in the Lydenburg-Pietersburg area lends itself to adit mining to a large extent, but in Griqualand West, where deposits are of limited extent, mining is done by the local natives, either on their own account or under white supervision. Open mining and underground mining on the filling system are practised.

When mechanical means are not available, veins of fibre are separated from the adhering rock by hand cobbing. The asbestos is fiberized with hammers and classified by being passed through screens of the trommel type. Where there is a mill, coarse crushing by jaw crushers or rollers is followed by sorting of the long fibre. The finer material is again crushed and passed to disintegrators or fiberizers. Shaking screens, cyclone collectors, and grading machines clean and classify the fiberized product, after which it is bagged and shipped to market.

In the eastern Transvaal, Swaziland, and Natal, there are extensive areas of serpentinized basic rocks similar to those of the New Amianthus zone. There is, therefore, the possibility of the location of further deposits of chrysotile asbestos of commercial value, and increased production is possible, should the demand warrant it. The Griqualand West crocidolite deposits are, however, capable of sustaining a fairly constant tonnage for many years to come. Recently increased interest has been taken by manufacturers of asbestos products in Transvaal crocidolite.

Owing to the limited development outside the Penge area, the extent of the amosite deposits is at present difficult to judge. The prevailing world economic conditions had the effect of decreasing very considerably the activity shown in connexion with the production of this mineral during the years 1927 to 1929. A steady production is, however, now being maintained.

The following statements give particulars regarding the sales and shipments of asbestos during the years 1933 to 1938:—

(*a*) ASBESTOS SALES AND SHIPMENTS, 1933 TO 1938.
(TON—2,000 LB.)

3. **Corundum.***—The existence of corundum in the Pietersburg, Zoutpansberg, and Letaba districts had been known for some years, but the mineral was not regarded as being of commercial importance till the demand for abrasives created by the European war brought it into prominence. Since 1914 there has been a continuous but fluctuating production from this area.

The corundum occurs in original or primary deposits—so-called "reef" corundum—and in secondary or detrital deposits derived from the former by weathering and sub-aerial denudation—"eluvial" corundum.

The final product is clean crystal corundum of excellent abrasive quality, most of which is marketed in 3 grades. These are:—

A1 = + ¼ inch.
A2 = -½ + ¼ inch.
B3 = -¼ + ⅛ inch.

There is a similar occurrence of corundum in the gneiss near Steinkopf, in Namaqualand, but attempts to exploit this have not been attended by success.

The demand for this mineral slackened considerably during the period of the general world depression in the consuming industries, and also in consequence of the increased use of artificial abrasives, but of late years there has been a distinct revival in demand, more particularly from the United States of America. In 1926 the tonnage of corundum sold reached 5,996·40 tons, valued at £44,871, but in 1932 the tonnage was only 362, valued at £2,621. The amount and free-on-rail value of corundum exported within recent years was as follows:—

Year.	Tons (2,000 lb.)	Value.
		£
1934	3,202	23,844
1935	4,775	36,552
1936	4,851	38,240
1937	2,466	18,716
1938	1,540	12,454

* W. Kupferburger, Department of Mines, Geol. Series Bulletin No. 6, "Corundum in the Union of South Africa."

4. **Flint.**—Flint in the nodular form does not occur in South Africa, but as chert it makes very well-defined bands up to two feet and more in thickness in the dolomites. It has been worked for liners for tube-mills, but the introduction of steel and composite liners has checked the growth of this industry.

5. **Fluorspar.**—Fluorspar is of widespread occurrence in the Transvaal. It occurs as a common accessory or gangue mineral in many of the tin deposits of the central Transvaal associated with later acidic phases of the great period of igneous activity which led to the formation of the Bushveld complex. Further evidence that the granitic magma of the Bushveld, as well as that of the somewhat later alkaline intrusions north and north-east of Pretoria and at the Pilansberg, is rich in fluorite is afforded by the presence of fluorspar in veins and breccias associated in places with quartz, barytes, and specularite in these rocks in many localities.

In the western Transvaal south of Zeerust, fluorspar occurs alone or associated with lead and zinc ores in veins and larger bodies formed by the replacement of the dolomite, and it is more than probable that the mineralization of this area has a general relationship with some phase of the Bushveld igneous activity.

Minor occurrences are also known in Zululand and Namaqualand.

Exploitation of deposits in the western Transvaal commenced in 1918 but, in view of the fact that the bulk of the production had to be exported, it was not possible to mine and produce profitably anything except the high grade material.

The biggest output took place during the years 1923 and 1924 when 12,093 tons and 11,235 tons respectively were produced and exported. Since then there has been a gradual decline. At the present time the bulk of the production is absorbed by the local steel works. During 1938, 1,879 tons were sold locally and 3,328 tons were exported.

6. **Graphite.***—Impure graphite is of fairly common occurrence, both in the older sedimentary rocks and in the gneissic rocks of the Transvaal and Cape Provinces, and has been worked for some years. One small mine in the Zoutpansberg district turns out about six tons per month. It is worked up by the owners into material for furnace linings and forge facings. The mineral occurs in a lens in gneiss and, so far as it has been opened, is mostly a fairly pure carbon. Certain veins in it give a very pure flake graphite, but not in large quantities. The output is, however, limited to the requirements of home consumption.

7. **Gypsum.**—The cement factories use a considerable amount of gypsum, which occurs as irregular crystalline segregations in the subsoil and as pan deposits in arid localities. Most of the present output comes from the vicinity of Windsorton Road in Griqualand West and from Van Rhynsdorp, C.P.

8. **Kieselguhr.**—Kieselguhr occurs in the Amsterdam district of the eastern Transvaal, near Pietersburg in the northern Transvaal, near Krugersdorp, and in Griqualand West and Gordonia. It occurs as a deposit in the beds of certain small fresh-water marshes, and its occurrence may be very much wider, for it is not a material which attracts attention by either its appearance or its mode of occurrence. It has so far been worked to a small extent only, mainly for use in boiler-lining materials.

9. **Kaolin and Clays.**—Kaolin occurs as a decomposition product of the granite over very large areas, but has not yet been worked, except on a very small scale in the Transvaal, Natal and on the Cape Flats, where, however, its occurrence is not directly associated with granite.

10. **Fireclays.**—Fireclays are associated with all the coal measures of the country, and many are of excellent quality. These do not usually occur directly underlying coal, but are often separated from it by a hundred feet or more.

* See *Journal of Industries*, February, 1918.

Fire-bricks, crucibles, and other refractory products are manufactured at Boksburg, Vereeniging, and Olifantsfontein in the Transvaal.

11. **Pottery Clay.**—Most of the coal measure clays are suitable for pottery work. A deposit of these is worked at Olifantsfontein, between Pretoria and Johannesburg, and very excellent articles of decorative potteryware are produced; but difficulty is experienced in producing white chinaware.

12. **Common Clay.**—Good common clay for brickmaking is plentiful throughout the Union, and near the large urban centres beds of shale have been found giving a uniform and satisfactory clay for pipes, tiles, etc., which are now being produced in the Union on a large scale.

13. **Lignite.**—A form of lignite occurs in the Knysna district of the Cape Province, and impure peat is fairly common in the marshes on the edge of the Transvaal and Basutoland escarpment.

Inferior coal is common in all the Karroo formations. In the Karroo horizon in the Beaufort West and Laingsburg districts of the Cape Province, veins up to five feet in width, both vertical and inclined, occur, filled with a coal-like substance, which appears to be an inspissated and carbonized bitumen, much in the same way as veins filled with manjak occur in the petroleum districts of other countries. This substance is not at present used, but it is of great scientific interest.

14. **Lime.***—Three forms of limestone are at present known and worked:—

(a) *Magnesian Limestone.*—This is the common dolomite which covers vast areas in the Transvaal and Cape Provinces. It contains up to 40 per cent. carbonate of magnesia. It is largely burnt in ordinary kilns, and yields the common blue building lime of those provinces.

(b) *White Lime.*—This is a pure white lime used for chemical purposes and for the cyanide works of the Rand. It is usually obtained from stalagmitic deposits and cave fillings in the dolomite. At Potgietersrust a small area in the dolomite has been found, where the beds are free from magnesia, but the deposits are unsatisfactory in size and continuity.

At Taung, in Bechuanaland, an extensive deposit of pure white limestone, said to contain not less than 7,000,000 tons, has been opened up and connected with the railway. This has proved a most satisfactory development, for hitherto there has been no adequate and suitable supply of pure limestone for metallurgical purposes available in the Union.

(c) *Desert Limestone.*—Vast areas in all the provinces are covered by a desert limestone of considerable thickness. This, however, generally contains up to 20 per cent. silica and other impurities. It is largely worked near Pretoria and Mafeking, and in the Orange Free State, for cement making. For other purposes it does not generally yield a good lime.

Particulars of the output of lime in the Union will be found in Chapter XXIII (Manufacturing Industries).

15. **Magnesite.**†—Magnesite in workable quantities occurs in several places in the Transvaal, notably at Kaapmuiden, and the deposits are close to the railway. It occurs as a "stock-work" of veins in serpentine. An attempt to work it on a large scale in 1906 failed, but in 1926 the output reached an average of 170 tons per month, which, however, had declined in 1932 to 114 tons per month. In 1933, the average monthly production was 142 tons; in 1936, 156 tons; in 1937, 161 tons; and in 1938, 240 tons. Magnesite is used for carbonic acid making in Johannesburg, the residue being turned into cupels. The deposits, though not continuous, are extensive and very favourably situated.

16. **Marble.**—Up to a few years ago, the existence of pure marble in the Union was unknown.

* See Geological Survey Memoir No. 11, "Limestone Resources of the Union."
† See *Journal of Industries*, March, 1918.

Of recent years attention has been called to the existence of a very considerable deposit of marble at, and in the neighbourhood of, the farm Marble Hall, in the north-eastern corner of the Pretoria district. This marble is of great variety, and much of it is of excellent quality. It is fully reported on in the *Journal of Industries* for July, 1919. A branch railway was constructed to this deposit in 1935, and marble for building purposes and for use as limestone for metallurgical purposes is being quarried.

Marble deposits also occur north of Brits in the Transvaal, and about 5 miles east of Belfast in the Transvaal a pale-green serpentinized marble is being opened up, which is stated to be hard and of fine grain.

In the Cape Province marble occurs in the coast districts of Namaqualand and Van Rhynsdorp, and a black marble at Cango. None of these deposits has, however, been opened up. The railway has recently been extended to the vicinity of the Van Rhynsdorp deposits, and these will probably be exploited.

Good quality "travertine" and "onyx" marble has been located near Port St. Johns, Cape Province, and is now being worked. Cutting and polishing works have been established in Durban in connexion with this deposit.

17. **Mica.***—Excellent mica occurs in the Transvaal along the Olifants river, in the eastern portion of the Letaba district near Mica station on the Selati railway line. The mica here occurs in large books up to 100 lb. and more in weight, in pegmatite lenses in the gneiss. The lenses occur in a belt of country over two miles in width and fifty miles long.

Much of the mica is a soft green variety, which is popular with American consumers, who describe it as being particularly suitable for grinding into a silvery lustrous powder used in many industries. The production of sheet mica is comparatively small, and most of it is used locally in the electrical industry. Small quantities of waste mica are exported.

Mica has also been worked on a small scale at Steinkopf, in Namaqualand. Large reserves of vermiculite (hydrothermally altered phlogopite) occur in serpentine at Palaboroa, in the eastern Transvaal, and have been proved by shafts and pitting. The material can be easily worked; and the occurrence would appear to be the largest single source of vermiculite known.

18. **Mineral Oil.**†—Mineral oil occurs in vesicles associated with the intrusive rocks of the Karroo formation. This is probably a distillation product from the carbonaceous beds below. The indications of the existence of flowing mineral oil in commercial quantities in the Union are not considered favourable.

19. **Oil Shales.**—Beds of oil shale up to 4 feet in thickness, associated with the coal measures, occur in the Transvaal, Natal, and Cape Provinces. Experiments with these shales show that they yield a distillate up to 36 gallons to the ton from representative samples.

In 1922, a committee was appointed to investigate the question of liquid fuels in South Africa. This committee issued an interim report in March, 1925, which was published in the *Journal of Industries* in May of that year. The final portion of the report was published in the *Journal of Industries* in November, 1925. A résumé of these reports appears in *Official Year Book* No. 8.

During 1934 a company was formed, under the aegis of two well-known mining houses, to mine torbanite in the Ermelo district, with the object of treating these oil shales locally. The crude oil produced by the retorting of oil shale at Ermelo is subsequently refined to motor spirit at Boksburg.

20. **Nitrates.**—Nitrates have been reported from all the more arid districts of the Union, but on investigation the deposits have never proved more important than cave fillings, where the mineral has been formed from the excreta of animals. An attempt was made to exploit nitrate deposits of this description in the Prieska district, but it did not meet with success.

Geological Survey Memoir No. 14 gives a scientific description of the above deposits.

* See *Journal of Industries*, April, 1918; also Geological Survey Memoir No. 3.
† See *Report on Petroleum Prospects of the Union*, by E. H. Cunningham Craig. October, 1914.

21. **Phosphates.***—Attention was first directed to local sources of phosphate during the period of the World War, when the importation of phosphatic fertilizers was uncertain and irregular. The first deposits to be investigated were those in the neighbourhood of Saldanha Bay, Cape Province. These were found to be of considerable extent, and the quantities available may be estimated in hundreds of thousands of tons; but the major portion of the phosphate was found to be in combination with iron and alumina and not with lime. Many attempts have been made to devise a process by which the insoluble iron and aluminium phosphates could be converted into soluble forms suitable for use as fertilizers, but none of the processes has as yet been found to be of practical application. The deposits nevertheless remain an important potential source of phosphate in the Union. A full report on the occurrence by Dr. A. L. du Toit is published by the Geological Survey in Memoir No. 10, 1917.

At Lulukop in the Pietersburg district of the Transvaal, there is a deposit of pyroxenite containing about 8 per cent. of apatite. The deposit has been proved over an area of approximately 4 square miles. A milling and flotation plant has been erected, and a finely ground apatite was produced with a guaranteed phosphoric oxide content of 36 per cent. Owing to the inability of the producing company to compete profitably with other locally manufactured and imported phosphates, however, work was suspended in 1934. This deposit is at present the biggest and most favourable source of phosphate known within the Union.

At Bandolierkop there are apatite-bearing pegmatite veins, which were worked on a small scale by the same company, but which were abandoned in favour of those near Lulukop.

22. **Pigments (Mineral Paints).**—Iron oxides and ochres of all descriptions occur in the older rocks of the Union.

Red oxide is found and has been profitably worked at numerous places near Utrecht, Dundee, and Helpmakaar, Natal, in the Ecca series some two hundred feet below the coal seams along the oxidized outcrop of an ironstone seam. The product is found to be very suitable for roof paints.

The exploitation of what are apparently extensive deposits of ochre in the Riversdale district, Cape Province, was commenced a few years ago. The material, which is of good quality with a very high staining power, has found a ready and increasing market in the United Kingdom, Europe, America, and Australia. Mainly as the result of this, sales of these materials, which in 1930 amounted to only 532 tons, valued at £1,004, have shown a progressive increase during subsequent years.

In 1931, 1,267 tons, valued at £2,358, were disposed of; in 1932, 2,113 tons, valued at £6,563; in 1933, 4,203 tons, valued at £15,445; in 1934, 5,997 tons, valued at £16,396; in 1935, 4,979 tons, valued at £16,950; in 1936, 6,848 tons, valued at £24,806; in 1937, 6,462 tons, valued at £22,909; and in 1938, 6,542 tons, valued at £22,513.

23. **Salt.**—No deposits of rock salt are known to occur, but in the Cape, the Orange Free State, and the Transvaal Provinces a very large quantity of rough salt is made from the liquor of salt pans. These pans are shallow depressions, often several square miles in extent, in the surface of the more arid districts. They are without outlet and retain the inflow of water received in the rainy season, with the result that in many cases an excellent supply of brine remains available close to the surface. Such occurrences are worked now in practically every case where the brine is found to be of suitable quality and reasonable transport facilities are available. The great bulk of the salt is obtained entirely by solar evaporation in shallow dams, though in the case of one or two producers, artificial heat has been adopted for final precipitation of the concentrated liquor. The coarse salt obtained by solar evaporation is subject to contamination from dust, and has to be graded in course of recovery according to its apparent quality. A portion of the purest grade is subsequently ground fine for household and dairy purposes and put on the market in suitable form. The quality of this approximates to that of the European article. The Union is now almost self-supporting in this important commodity, but new calls are likely to arise, and there will doubtless be considerable further expansion in the salt industry.

* See *Journal of Industries*, January, 1918.

In order further to encourage prospecting and the development of mineral resources in outside districts, Parliament during the financial year 1936-37 voted a sum of £40,000 for the purpose of extending the assistance to small mines, and a scheme was evolved providing for direct financial assistance by way of loans for development, sampling, mineral transport, etc. As a result of the experience gained it was decided to extend the scope of the scheme to include direct financial assistance for the purchase of plant and machinery, and the provision for assistance to small mines was accordingly increased. From the inception of the small mines assistance scheme up to the 31st December, 1938, 270 applications for assistance were dealt with.

Other longstanding methods of assisting prospectors and small miners are (*a*) the identification of minerals by the Geological Survey free of charge, and (*b*) analyses of samples by the chemical laboratories of the Division of Chemistry at Capetown and Johannesburg at a nominal fee.

A Minerals Research Laboratory has been established by the Mines Department in co-operation with the University of the Witwatersrand at that university. It is hoped that this laboratory will be of great assistance to the mining industry in the Union as a whole. The policy adopted by the controlling committee has been to undertake the investigation of all mineral problems which normally do not fall within the scope of private metallurgists, and which are considered by the committee to be of national importance. Details of the work undertaken from time to time and the equipment purchased will be found in the annual report of the Director of the laboratory, which is published as an annexure to the Government Mining Engineer's Annual Report. Separate Mines Department Bulletins are also published on various investigations carried out by the laboratory, and papers which are printed in pamphlet form are presented by the staff to the various scientific societies and are available at the laboratory.

Overshadowed as the base mineral industry is in this country by the gold mining industry, it is the policy of the Government to assist and encourage the production of industrial minerals to the greatest possible extent and, apart from what has been said above, which applies to all mineral development, the Government has appointed an Inter-departmental Mineral Development Committee, consisting of representatives of the Department of Mines and the Department of Commerce and Industries. The Committee reports to the Government from time to time on any problems which may come to its notice, or which may be referred to it, regarding industrial minerals, and makes recommendations thereon.

A large increase in the staff of the Geological Survey Division of the Department of Mines has made it possible to undertake a systematic economic survey of the base minerals of the Union, and this work is now proceeding. A Mines Department representative is attached to the High Commissioner's office in London, whose special duty it is to study the technical requirements of overseas mineral markets, and generally to promote contact between consumers overseas and producers of industrial minerals in the Union. An information circular giving particulars of production, local sales, and exports, and the names of producers of industrial minerals in the Union and in the mandated territory of South West Africa, is published quarterly by the Mines Department.

§ 14. Bibliography of Mineral Resources.

The following classified list contains the titles of the principal publications issued during 1937 and 1938 dealing with the economic minerals of South Africa. For further publications reference should be made to earlier issues of this *Year Book*.

(i) Gold.

DANLOUX-DUMESNIL, M.—Les Mines d'Or du Transvaal depuis la Dévaluation Sud-Africaine. Rev. Industr. min., 15 May-1 June, 1937, pp. 1-23.

GUEST, HERMAN.—Klerksdorp's Fifty Years of Mining. Publ. Klerksdorp Mine Manager's Association, 1938.

MENDELSSOHN, E.—Gold Deposits of the Central Murchison Range, Transvaal Trans. geol. Soc. S. Afr., Vol. XLI, 1938, pp. 249-272.

PELLETIER, R. A.—Contributions to the Geology of the Far West Rand. (With special reference to the West Witwatersrand Areas.) Trans. geol. Soc. S. Afr., Vol. XL, 1937, pp. 127-162.

CHAPTER XXIII.

MANUFACTURING INDUSTRIES.

§ 1. Industrial Censuses.

1. **Industrial Censuses, 1891-1911.**—Although certain manufacturing industries have long been established in South Africa, the first statistical data in this connexion for the Colonies now comprised within the Union were obtained for the Cape Colony at the Population Census of 1891, and for all four Colonies at the Population Census of 1904. These returns were rendered by manufacturing establishments having an annual production amounting in value to £100 or more. Returns were similarly called for and tabulated at the first Union Census of 1911. The summarized results of these inquiries are given in paragraph 4 below.

2. **Annual Industrial Censuses under the Statistics Act.**—A census of manufacturing industries was undertaken under the *Statistics Act* in 1917, and formed the first special inquiry of the kind in the Union. The first census covered the calendar year 1915, or the business year ended not later than the 30th June, 1916. The large majority of returns were rendered for at least a part, many of them for a full half, of the year 1916, and the census may be taken therefore to have covered substantially the Union business year 1915-16. All manufacturing establishments within the Union employing four or more hands, or utilizing any form of mechanical motive power, were included within the scope of the inquiry. For the census covering the year 1916-17 and subsequent inquiries, the scope was extended to cover establishments employing three or more hands, or utilizing any form of mechanical power or boilers for steam-heating purposes.

The results of the various censuses are issued in the form of annual reports, nineteen of which have been published.

Owing, however, to the suspension of the industrial census between the years 1930 and 1933, there was a break of approximately three-and-a-half years between the fifteenth and sixteenth reports. It should be noted that the returns under the latter and under subsequent censuses relate to the business years ending on any date during the second year quoted in the tables.

3. **Classification of Manufacturing Industries.**—Manufacturing industries have been tabulated in accordance with the following classification, which has been based as nearly as possible upon that adopted by, and in force in, the various States in Australia. In the classification adopted in the first census (for 1915-16), Tanning was included in Class I, Boots and Shoes in Class VI, and Harness and Saddlery in Class VIII. These were subsequently grouped together under a new Class XV—Leather and Leatherware. Since 1924-25 Electrical Engineering has been transferred from Class XIV to Class IV, and since 1928-29, Blacksmithing from Class IV to Class VIII, being included in the item "Coach and Wagon Works".

CLASSIFICATION OF MANUFACTURING INDUSTRIES.

CLASS I—RAW MATERIAL.

Boiling down, Tallow Refining and Bone Milling.	Cotton Ginning.
Fellmongering and Wool-scouring.	Wattle Bark, Grinding and Compressing (not Wattle Extract).
Chaff-cutting and Corn-crushing.	Other Industries.

CLASS II—STONE, CLAY, ETC.

Asbestos Working (not Mining).	Marble, Stone, Slate Dressing.
Bricks, Tiles, Earthenware, and Pottery.	Cement Factories, Modelling in Cement and Plaster.
Glass.	Other Industries.
Lime Works.	

CLASS III—WOOD.

Baskets and Wickerwork.	Saw Mills.
Brushes and Brooms.	Cooperages.
Carpentry and Joinery.	Shopfitting.
Packing Case and Box Works.	Other Industries.

CLASS IV—METALS, ENGINEERING, ETC.

Brass and Copper, Cutlery.	Steel Ceiling Works.
Engineering, Foundries (including Mine, Railway, and Tramway Workshops), and Steel Works.	Electrical Engineering.
Galvanized Iron Works and Plumbing.	Iron and Steel Furniture.
Wire Working (including Gate and Fence Making).	Other Industries.

CLASS V—FOOD, DRINK, ETC.

Bacon and Ham Curing.
Polony and Sausage Making.
Butter and Cheese and Condensed Milk Making.
Fish Preserving.
Meat Preserving.
Ice and Refrigerating.
Bread and Biscuit Making.
Confectionery and Sweet Making.
Flour and Grain Mills.
Fruit Preserving and Jam Making.
Coffee Roasting and Grinding, Tea, Pickle, Sauce, and Spice Making.
Sugar Mills and Refineries.
Salt Pans, Salt Works.
Aerated Water Factories.
Breweries and Malt Works.
Distilleries.
Tobacco, Cigar, and Cigarette Factories.
Other Industries.

CLASS VI—CLOTHING, TEXTILES, ETC.

Tailoring and Clothing Factories (including Dressmaking, Millinery, Hats and Caps, Waterproof Clothing, etc.).
Dyeing and Cleaning.
Bags and Sacks, Mats and Matting, Rope, Cordage, and Twine.
Tarpaulins, Tents, and Sails.
Textile Factories.
Other Industries.

CLASS VII—BOOKS, PRINTING, ETC.

Printing, Book Binding, and Stationery.
Photo Engraving and Lithographing.
Paper Bags and Cardboard Boxes.
Other Industries.

CLASS VIII—VEHICLES, ETC.

Coach and Wagon Building and Blacksmithing.
Cycle and Motor Repairing.
Spokes, Wheels, Yokes, Tyres, and other Industries.

CLASS IX—SHIP BUILDING, ETC.

Ship and Boat Building and Repairing.

CLASS X—FURNITURE, ETC.

Furniture, Cabinetmaking, and Upholstery.
Mattress Factories.
Picture Frames.
Other Industries.

CLASS XI—CHEMICALS, ETC.

Chemicals, Drugs, Perfumery, Disinfectants, Insecticides, Sheep and Cattle Dips.
Explosives and Matches.
Fertilizers.
Oil and Grease.
Paints and Varnishes.
Blacking, Polishes, Blanco, Whiting, etc.
Soap and Candles.
Tanning Extract.
Other Industries.

CLASS XII—SURGICAL INSTRUMENTS, ETC.

Opticians.
Surgical, Dental, etc., Instruments and Appliances.

CLASS XIII—JEWELLERY, ETC.

Gold and Silver Smiths.
Diamond Cutting.
Other Industries (including Electro-Plating).

CLASS XIV—HEAT, LIGHT, AND POWER.

Electric Light and Power Stations.
Gas, Coke, and Tar Works.
Other Industries.

CLASS XV—LEATHER AND LEATHERWARE.

Tanneries.
Boots, Shoes, and Leggings (manufacturing).
Boot and Shoe Repairing.
Harness and Saddlery, Portmanteaux and Bags.

CLASS XVI—BUILDING AND CONTRACTING.

Building and Contracting (including new railway, road, waterworks and irrigation works construction from 1919-1920).

CLASS XVII—OTHER INDUSTRIES.

Whaling and Miscellaneous.

4. **Statistics of Manufacturing Production from 1904.**—The main results of the inquiries undertaken in 1917 and subsequent years, covering, with the exception of the years 1930-31 and 1931-32, when no census was conducted, the years 1915-16 to 1935-36, are given in the table hereunder in conjunction with those obtained in 1904 and 1911. Comparison with these two years (1904 and 1911), however, cannot be pressed too closely. It seems probable that in the Censuses of 1904 and 1911 the returns included, in some cases at least, figures relating to merchanting, as well as manufacturing. On the other hand mine and railway workshops appear to have been omitted. Clearly, too, the enumeration of distinct works and the methods of valuing land, buildings, and improvements, seem to have differed considerably in 1904 and 1911, and again in the regular annual censuses begun in 1917. Beyond the statement hereunder of the total figures under various main headings for the Union in 1904 and 1911, no further comparisons between these figures have therefore been attempted. The censuses under the *Statistics Act* taken for the first time in 1917 have the advantage of being specialized inquiries taken on a basis which will admit of close comparisons being made from that date.

In the following tables the more important particulars are given for a number of years. The first set (*a*) includes the data relating to government and local government undertakings and railway workshops, the second set (*b*) excludes these.

The first column under "Engines and Motors" shows the total horse-power of all prime movers and the second omits the horse-power of the prime movers of electricity generating concerns, but includes the horse-power of motors driven by purchased power.

In terms of a resolution passed at the Second Conference of British Commonwealth Statisticians (Ottawa, 1935) a calculation of "Net Output" has been made. This is the same as "Value added by Process of Manufacture" less cost of fuel, light, and power, and amounts paid to other establishments in the clothing and tailoring industry for work given out. Owing to limitations of space, information regarding fuel has been omitted, but details with regard to private industries for the last five industrial censuses will be found under paragraph 6, § 2.

MANUFACTURING PRODUCTION—GENERAL SUMMARY—1904, 1911, AND 1915-16 TO 1936-37.

Year.	No. of Establishments.	No. of Employees.		Salaries and Wages Paid to—		Engines and Motors.		Materials Used.	Value of Gross Output.	Value Added by Process of Manufacture.	Net Output.
		European.	Other.	Europeans.	Others.	Prime Movers.	Net Total.				
				£1,000	£1,000	H.P.	H.P.	£1,000	£1,000	£1,000	£1,000

§ 2. Factory Production.

1. **Number of Factories.**—Particulars are given hereunder as to the number of privately-owned factories for the last five Industrial Censuses, arranged according to classes of industry. The classes of industry with which factories are connected are set out in § 1 (3) above. Factories have been separately enumerated, even when under the same management as other establishments, if concerned with a clearly distinct class of work. In many cases, however, factories have been engaged upon various, often dissimilar, operations, for which it has been found impossible to render separate returns. In such cases the establishment has been enumerated in the subjoined return as a single factory, classified according to the character of the principal industry with which it was concerned.

PRIVATELY-OWNED FACTORIES, 1932-33 TO 1936-37.

CLASS OF INDUSTRY.	1932-33.	1933-34.	1934-35.	1935-36.	1936-37.
I. Raw Material	87	87	86	84	82
II. Stone, Clay, etc.	356	406	444	501	547
III. Wood	251	284	304	343	362
IV. Metals, Engineering, etc.	753	857	938	1,041	1,116
V. Food, Drink, etc.	1,902	1,985	2,038	2,120	2,147
VI. Clothing, Textiles, etc.	785	910	992	1,058	1,060
VII. Books, Printing, etc.	404	442	458	472	467
VIII. Vehicles, etc.	1,345	1,479	1,541	1,623	1,714
IX. Ship Building, etc.	8	7	7	8	8
X. Furniture, etc.	217	270	316	357	369
XI. Chemicals, etc.	157	177	185	194	199
XII. Surgical Instruments, etc.	25	26	26	29	30
XIII. Jewellery, etc.	63	69	67	66	71
XIV. Heat, Light, and Power	92	102	110	118	127
XV. Leather and Leatherware	200	233	247	270	273
XVI. Building and Contracting	620	778	859	932	962
XVII. Other Industries	56	68	71	73	75
TOTAL	7,321	8,180	8,689	9,289	9,609

2. **Capital of Factories.**—The returns asked for in respect of factories in the first two industrial censuses included particulars as to capital, made up of (*a*) the value of land and buildings, (*b*) the value of machinery and plant, and (*c*) other capital (outstandings, stocks, cash in hand and in bank, and all movable assets).

The particulars required in respect of land, buildings, machinery, and plant were accepted as reasonably accurate; but in many cases it was found that establishments encountered difficulty in arriving at the true figure as regards total capital, particularly where a manufacturing and a trading business were combined under one amount of capital, or where the capital covered some other class of industry carried on in the same or even in a separate locality. For this reason it was decided to discontinue returns as to capital, and instead to confine the returns to the value of land and buildings, machinery, and plant.

3. **Land and Buildings.**—The value of land and buildings owned by the occupiers and used as factories is arrived at by giving the government valuation, where such exists, or the municipal or other recognized valuation, or failing such, the price at which the owner is prepared to sell. In the majority of cases a recognized valuation exists and is given, the number falling under the last alternative being inconsiderable. The following table gives the value as returned in respect of each class of industry for the last five Industrial Censuses.

VALUE OF LAND AND BUILDINGS USED BY PRIVATELY-OWNED FACTORIES, 1932-33 TO 1936-37.

Class of Industry.	1932-33.	1933-34.	1934-35.	1935-36.	1936-37.
	£	£	£	£	£

4. Machinery and Plant in Privately-owned Factories.—The following table gives particulars as to the value of machinery and plant used in privately-owned factories, according to the main classification of industries for the last five Industrial Censuses.

VALUE OF MACHINERY AND PLANT USED IN PRIVATELY-OWNED FACTORIES, 1932-33 TO 1936-37.

Class of Industry.	1932-33.	1933-34.	1934-35.	1935-36.	1936-37.
	£	£	£	£	£
I. Raw Material	209,514	195,363	168,593	152,698	147,052
II. Stone, Clay, etc.	1,359,223	1,499,632	1,529,490	2,103,417	2,541,078
III. Wood	272,566	292,676	321,864	366,595	416,843
IV. Metals, Engineering, etc.	2,747,554	4,403,565	5,173,762	5,521,763	6,019,589
V. Food, Drink, etc.	6,495,080	6,304,780	6,383,949	6,636,838	6,929,063
VI. Clothing, Textiles, etc.	728,444	898,042	1,074,343	1,243,737	1,305,526
VII. Books, Printing, etc.	1,564,929	1,583,218	1,656,804	1,920,962	1,955,209
VIII. Vehicles, etc.	396,783	424,169	447,785	507,028	583,525
IX. Ship Building, etc.	3,017	2,765	4,461	2,142	3,345
X. Furniture, etc.	142,635	156,426	177,287	233,809	282,443
XI. Chemicals, etc.	1,740,251	1,740,024	2,198,026	2,751,595	2,296,961
XII. Surgical Instruments, etc.	9,150	10,945	10,265	11,047	11,245
XIII. Jewellery, etc.	29,674	29,066	28,393	25,922	28,514
XIV. Heat, Light, and Power	11,653,888	12,689,275	13,574,335	16,513,917	17,709,692
XV. Leather and Leatherware	546,259	573,742	627,676	682,262	719,256
XVI. Building and Contracting	178,651	198,331	245,497	315,983	383,735
XVII. Other Industries	138,205	159,071	355,210	374,186	547,048
TOTAL £	28,215,823	31,161,090	33,977,740	39,363,901	41,881,044

5. Motive Power in Privately-owned Factories.—Particulars are given hereunder as to the class of motive power used in privately-owned factories for the last five Industrial Censuses. Table (ii) shows the total prime movers and the net total in each class of industry for the same period. The net total represents the total horse-power, less electricity undertakings and motors operated by power generated by the establishment. See also § 1, paragraph 4.

(i) CLASS OF MOTIVE POWER USED IN PRIVATELY-OWNED FACTORIES, 1932-33 TO 1936-37.

Class of Motive Power.	1932-33.	1933-34.	1934-35.	1935-36.	1936-37.
Steam Turbines H.P.	941,759	1,092,891	1,159,989	1,287,785	1,398,304
Steam Reciprocating Engines H.P.	*	*	*	100,736	91,170
Gas Engines H.P.	†	†	†	7,252	8,999
Diesel and Heavy Oil Engines H.P.	27,979	32,937	35,910	22,217	29,225
Petrol, Paraffin and other Light Oil Engines H.P.	†	†	†	9,592	11,175
Electric Motors—					
(*a*) Operated by Power Generated by Establishment H.P.	33,273	38,996	42,331	52,977	54,166
(*b*) Operated by Purchased Power H.P.	169,241	224,384	268,299	306,747	356,763
Water Turbines H.P.	6,669	6,602	6,602	6,817	7,072
Air Compressors ‡ No.	369	410	483	585	625
Water Wheels ‡ No.	121	123	131	122	109
Wind Mills ‡ No.	116	121	133	130	131
Total Prime Movers H.P.	976,407	1,132,430	1,202,501	1,434,399	1,545,945
Net Total H.P.	260,988	322,607	370,228	414,368	458,482

* Included in Steam Turbines.

† Included in Diesel and Heavy Oil Engines.

‡ Number of establishments. Information with regard to H.P. not available.

† Revised figure.

9. Value of Materials Used in Privately-owned Factories.—Particulars are given hereunder as to the value of materials used by privately-owned factories in each class of industry for the last five Industrial Censuses and as to the value of materials, the product of South Africa, included in the value stated in table (i).

(i) VALUE OF MATERIALS USED IN PRIVATELY-OWNED FACTORIES, 1932-33 TO 1936-37.

Class of Industry.	1932–33.	1933–34.	1934–35.	1935–36.	1936–37.
	£	£	£	£	£

10. Gross Value of Production of Privately-owned Factories.—The table given hereunder shows the gross value of production in each class of industry. It must be noted that this return in certain respects represents duplicated values. For example, in the value of the product of boot and shoe, harness and saddlery, and portmanteau and bag factories is included again the value of leather produced by tanneries. The average output per employee and per European employee is also given.

GROSS VALUE OF PRODUCTION OF PRIVATELY-OWNED FACTORIES, 1932-33 TO 1936-37.

Class of Industry.	1932–33.	1933–34.	1934–35.	1935–36.	1936–37.

* Amended figure.

11. Net Output.—Resolution 23 of the second Conference of British Commonwealth Statisticians held at Ottawa in 1935 reads as follows: "The term 'Net Output' or 'Net Value of Production' should be used to denote the value added in each industry to the cost of the objects used in production, including all materials, whether transformed or not in the industrial processes, and fuel and purchased power consumed, whether used for heating, lighting, or other purposes, but excluding any amount paid to other firms for work given out to be done by them."

Details for the last five years, calculated in accordance with this definition, are given in the following table:—

NET OUTPUT OF PRIVATELY-OWNED FACTORIES, 1932-33 TO 1936-37.

Class of Industry.	1932-33.	1933-34.	1934-35.	1935-36.	1936-37.

* Amended figure.

12. **Index Numbers of Prices and Volume of Output.**—The calculation of these indexes has been revised and a new base year 1934-35 substituted for 1920-21. Quantities and values for an increasing number of articles manufactured have become available necessitating this change. Column 1 gives the census years. Column 2 gives the percentage of the value of manufactured articles for which quantities and values are available. From this information an index of average prices was obtained for each year which is shown in Column 3. The next three columns show the value of all articles manufactured, the value of work done, and the sum of these two, the gross output. The seventh column is obtained by dividing the index of prices into the value of all articles manufactured and expressing the results as an index series with the year 1934-35 as 1000. This measures the output of manufactured articles with changes due to variations of prices eliminated. The eighth and ninth columns measure the changes in the value of articles manufactured and the gross value of output without the elimination of changes due to prices, with the year 1934-35 as 1000. The calculations of volume can only be regarded as approximately correct and are made on the assumption that prices on the whole moved in step with the prices of those commodities for which average prices are available.

INDEX NUMBERS OF PRICES OF PRODUCTS AND VOLUME OF OUPUT, 1916-17 TO 1936-37 (BASED ON THE PARTICULARS OF ALL INDUSTRIAL ESTABLISHMENTS).

Year.	Items for which Quantities and Values are obtainable.		Total Output of all Industry (including Municipal and Government but excluding Non-Generating Electricity Stations).

* Amended figure.

13. **International Comparison of Factory Returns.**—Some interest and value attach to the comparison represented in the following table as to certain values and other particulars in regard to factory production in the Union, Canada, New Zealand, and the Commonwealth of Australia. The basis of returns undoubtedly differs in the various Dominions, economic conditions vary greatly, and the elements of the population are dissimilar, so that the comparisons must not in all respects be taken to be exact. Nevertheless, they afford some indication of the relative importance of manufacturing industries in the countries mentioned.

§ Rated horse-power.

14. **Monthly Index Numbers of Employment.**—In consultation and co-operation with various manufacturers' associations the Office of Census and Statistics in July, 1922, initiated the compilation of a monthly index of employment in secondary industry. This index is published in the *Monthly Bulletin of Statistics*. The data are obtained from returns of persons employed rendered monthly by a number of selected establishments in the four principal industrial centres, viz., the Cape Peninsula and adjoining areas, Port Elizabeth, Durban and adjoining areas, the Witwatersrand (including Pretoria), and since 1925, East London; and the figures show, by comparison with the results of a base year, the relative condition of employment and activity in each of the principal classes of industry in the different centres concerned. In 1925 a new series of index numbers was commenced with July, 1925, as base, and a further revision was effected during 1935, with base July, 1935=1000.

Information relating to employment is also obtained monthly with regard to mining from the Government Mining Engineer and with regard to railways and harbours from the General Manager. In addition, returns having reference to employment on trams and motor buses is obtained from certain urban centres. This information has been combined to form a general index of employment with the base, July, 1925=1000.

The employment figures obtained for mining and transportation are complete, but those for secondary industry, as mentioned above, are obtained only from a selected number of establishments and, therefore, make no allowance for the expansion of industry due to the opening up of new industrial establishments. The results of the annual industrial censuses up to 1936-37 reveal that there has been a greater increase in employment than the monthly indexes shewed and it has, therefore, been necessary to revise the General Indexes of employment.

The following table gives the revised figures from 1926, under various headings, all calculated to the base 1925=1000.

GENERAL INDEX OF EMPLOYMENT.

§ 3. Iron and Steel Industry.

1. **Development.**—Although the question of the exploitation of the Union's iron ore deposits had since 1860 been under consideration at different times and by different interests, nothing practical was accomplished till 1901, when the first quantity of pig-iron was produced by Mr. C. L. Green from a primitive blast furnace near Pietermaritzburg. The enterprise did not meet with great success and after some years the plant was dismantled.

In 1908 serious attention was focused upon the potentialities of the iron and steel industry by Sir Robert (then Mr. R. N.) Kotze in a report issued by him as Government Mining Engineer to the Transvaal Government. It was not until Union, however, that further progress was made. The Government then called for tenders for scrap iron accumulated by the Railways, making it a condition that the successful tenderer should erect the necessary plant for converting the scrap into steel and that later experimental work should be conducted on the production of steel from local ores. This led to the coming into existence, in 1912, of the Union Steel Corporation, which actually commenced production the following year at its Vereeniging works.

In the meantime production had also started at Dunswart, and in 1911 the Dunswart Iron and Steel Works, with a capital of £25,000, was formed. Soon afterwards the Witwatersrand Co-operative Smelting Works erected a Shoe and Die branch at Driehoek. This undertaking has enjoyed considerable success, and to-day supplies the total requirements of the gold mines for shoes and dies.

In 1917 the Union Steel Corporation floated the Transvaal Blast Furnace Company, which erected an experimental blast furnace at Vereeniging. During the same year yet another company, the Pretoria Iron Mines, Ltd., came into being. This undertaking, operating only intermittently, produced in all 4,000 tons up to April, 1921. The outcome of the work thus done was the formation at Pretoria, at the end of 1919, of the South African Iron and Steel Corporation, Ltd., with a capital of £1,500,000.

The Newcastle Iron and Steel Corporation, which was floated in 1920, sold its assets to the Union Steel Corporation in November, 1924. Production at Newcastle commenced in June, 1926, but operations ceased in 1933. In 1937 the plant was acquired by the African Metals Corporation, and production re-commenced in April, 1938.

In an endeavour to stimulate the industry, the Government passed the *Iron and Steel Encouragement Act* in 1922, introducing the bounty system in respect of pig-iron and steel produced in the Union from ores mined in the Union. These bounties were to be paid only if the plant, in the opinion of the Minister, was capable of producing at least 50,000 tons of pig-iron or steel per annum. Advances could be made to the producer before the stage of production had been reached, provided that the advances did not exceed in any one year the amount of bounties, which would be obtained, if the stage of production had been reached. Only one Company, the Union Steel Corporation (S.A.), Ltd., qualified under the Act, and £49,217 was paid to its Newcastle works in 1928. The Act has since lapsed.

In 1928 the Government once more took active measures and passed the *Iron and Steel Industry Act*, No. 11 of 1928, under which the South African Iron and Steel Industrial Corporation was constituted on the 5th June, 1928. The blowing in of the Corporation's first furnace on the 9th March, 1934, marked the commencement of a new era in the history of the industry.

2. **South African Iron and Steel Industrial Corporation, Ltd.**—In 1927 a Bill was introduced in Parliament, to promote the development of the iron and allied industries within the Union and, for that purpose, to constitute the South African Iron and Steel Industrial Corporation, Limited. This Bill was passed and became law in 1928 (*Iron and Steel Industry Act*, No. 11 of 1928). Subsequently in *Government Gazette* No. 1718 of the 20th July, 1928, regulations were published, framed under section (1) (*a*) of the Act, defining the remuneration and the manner and other conditions of appointment of the members of the board of the Corporation, and the appointment and personnel of the government directors on the board was gazetted on the 10th August following (*Gazette* No. 1722).

The South African Iron and Steel Industrial Corporation, Ltd., is a public company and its capital is as follows:—

Share Capital:—	
500,000 Ordinary A Shares of £1 each	£500,000
5,500,000 Ordinary B Shares of £1 each	£5,500,000
Total share capital (issued and fully paid)	£6,000,000
Debentures:—	
Five per cent. Debentures	£1,500,000

The ordinary A Shares were subscribed by the Governor-General from funds appropriated by Parliament for the purpose. These shares are not transferable, except by Act of Parliament, and entitle the Governor-General, as holder, to a number of votes which shall always exceed by one the total number of votes of all the other shareholders in the aggregate.

Act No. 40 of 1931, which amended Act No. 11 of 1928, enabled the Government to take up any B Shares (or any preference shares issued in lieu thereof) which had been offered to the public for three months and had not been subscribed.

The debentures, which are guaranteed as to both principal and interest by the Governor-General, are redeemable from 1946 to 1971. The greater part of them is held by the Public Debt Commissioners. Section 9 of Act No. 11 of 1928 places the following limitation on dividends payable: 6 per cent. per annum on the A Shares and 12½ per cent. per annum on the B Shares. The Corporation may not be wound up without the authority of an Act of Parliament.

The following were the nominees on the Board of Directors of the Corporation as at 31st December, 1938.

Directors appointed by Governor-General.	*Directors appointed by B shareholders.*
Dr. H. J. van der Bijl (*Chairman*).	A. M. Mostert.
General B. G. L. Enslin.	G. H. Whitehouse.
R. Dyason.	J. Dommisse.
P. V. Gawith.	

The works have been erected on the Pretoria Town Lands some five miles west of the centre of the city and comprise the following:—

Coke Oven Battery (57 Ovens) and By-Product Plant; two Blast Furnaces, 500/600 tons per diem each; one 500-ton Inactive Mixer; three Basic Open Hearth Steel Furnaces, two of 120 tons and one of 250 tons hearth capacity; Heavy and Light Rolling Mills; and Sheetworks with an annual capacity of 50,000 tons.

There are, in addition, the requisite workshops, stores, calcining plant, laboratories, test house, offices, etc., necessary to furnish a complete works. Iron ore is mined, as a branch of the Corporation's activities, at Thabazimbi in the district of Rustenburg, and also on the Pretoria Town Lands adjacent to the works. Dolomite is also quarried close to the works, and a limestone deposit is worked at Taungs, Cape Province.

The Thabazimbi ore averages 66 per cent. of metallic iron and requires to be mixed with the silicious iron ore from the Pretoria Town Lands in order to produce the requisite flux in the blast furnace. Washed coal is drawn from the Navigation Pit of the South African Coal Estates (Witbank), Ltd. Experience has proved that satisfactory coke can be made from the Transvaal coal alone. Practically all the remaining raw materials required in the works, as well as much of the refractory material for furnaces, etc., are available from South African sources.

The ingot capacity of the Corporation's works as at present constituted is approximately 325,000 tons per annum. Iron and steel products, many of which are used in the development of main and secondary industries in the Union, are turned out by the Corporation's rolling mills. These products comprise such finished articles as rails of heavy and light sections, joists, channels and angles for structural work, light plates, black sheets, galvanized plain and corrugated sheets, reinforcing steel and tube billets; as well as semi-finished products such as blooms, billets and slabs, pig iron of various grades, etc.

In addition to iron and steel products large quantities of valuable by-products are extracted in the course of manufacture and coking, viz.: Ammonia, motor spirit (benzole), benzine, toluene, xylene, naphthas, naphthalene, creosote, furnace oil, black paints, dehydrated tar, road tars, pitch, and road-making materials.

Associated with the South African Iron and Steel Industrial Corporation, Ltd., is the Union Steel Corporation (of South Africa), Ltd. This Corporation was originally formed in 1912 to undertake a contract for a period of sixteen years for the purchase and conversion into steel of accumulations of scrap,

wrought iron, and steel lying at the various depots of the South African Railways and Harbours Administration, and also of subsequent accumulations at certain depots. For many years steel was produced by the Corporation at Vereeniging, Transvaal, solely from scrap, and a satisfactory technique and product were established. Towards the end of 1924 the Corporation purchased the assets of the Newcastle Iron and Steel, Ltd., and the blast furnace thus acquired at Newcastle, Natal, was blown in in June, 1926. From then onwards a proportion of pig-iron has been regularly used in the steel furnaces at Vereeniging. The Newcastle blast furnace was idle from November, 1933, until April, 1938, and during that period supplies of pig-iron for Vereeniging were drawn from Pretoria. The Newcastle plant was taken over by the African Metals Corporation, Limited, in August, 1937, and the blast furnace re-commenced production in April, 1938.

The ingot capacity of the open hearth plant is approximately 60,000 tons per annum.

The capital of the Union Steel Corporation is as follows:—

*125,000 A Cumulative Participating Preference Shares of £1 each.....	£125,000
125,000 B Cumulative Participating Preference Shares of £1 each.....	125,000
2,400,000 Ordinary Shares of 5s. each.....	600,000
Total Capital (authorized, issued, and fully paid).....	£850,000

* These shares are held by the South African Iron and Steel Industrial Corporation, Ltd.

§ 4. Electricity Supply and Electricity Undertakings.

1. **Electricity Supply Commission.**†—(i) *General.*—In 1921 the Government took steps to ensure that the electricity supply industry should be directed along lines indicated by experience in the more highly developed countries, and appointed a committee to investigate the subject. The outcome of this investigation was the enactment of the *Electricity Act*, No. 42 of 1922.

The Act provides *inter alia* for the establishment of the Electricity Supply Commission, the members of which are appointed by the Government. The Commission is not a government department, but is a corporate body required to operate like a private concern, free from parliamentary control and influence. It is, however, subject, like most private electricity undertakings, to the jurisdiction of the Electricity Control Board, a body appointed under the Act as the controlling authority of electricity production and supply within the Union, to which all applications must be made for licences for the establishment of electricity undertakings. The Commission, however, differs from private enterprise, primarily in that it is required to operate as far as practicable on the basis of neither profit nor loss, and it received financial assistance from the Government only during the first seven years of its existence. This assistance was given, not in the form of grants, but by advances from the Treasury, subsequently consolidated into loans, the Commission being obliged to pay interest and to repay the principal in specified periods of time, exactly as if the loans had been raised by public subscription, the security for the loans being the revenues and assets of the Commission. The Commission has since raised all its capital in South Africa, including the amounts necessary to repay the government advances, by the issue of Local Registered Stock.

(ii) *Functions.*—The Commission was appointed under the provisions of the Act on the 1st March, 1923, and is now composed of the following members:—

Dr. H. J. van der Bijl (*Chairman*).
A. M. Jacobs.
W. P. M. Henderson.
R. B. Waterson.

Broadly, its functions are—

(*a*) to establish, acquire, maintain, and work undertakings for an efficient supply of electricity;
(*b*) to investigate new or additional facilities for the supply of electricity and the co-ordination of existing undertakings so as to stimulate the provision of a cheap and abundant supply of electricity; and
(*c*) to advise the Administrators of the several provinces upon new municipal electricity schemes and extensions of existing schemes, and to give its opinion as to the best course to be pursued,

† Supplied by the Electricity Supply Commission.

and particularly as to whether the Commission itself could not furnish a supply to the advantage of the local authority. The Commission's functions in this respect are purely advisory.

(iii) *Undertakings.*—Since its inception the Electricity Supply Commission has established seven undertakings, namely, Natal Central, Witbank, Capetown, Durban, Klip, Sabie, and Rand Extension, the latter comprising a distributing network serving the Witwatersrand and adjoining areas. The six power stations serving the other undertakings have a total installed generating station capacity of 636,230 kw., while machinery of 146,000 kw. capacity is in course of construction or on order. The Commission's undertakings commenced supplying electricity in 1923, and in 1926 approximately 160 million units were sold; in 1938 the quantity sold had risen to 2,986 million units. In March, 1939, the construction of the Vaal Station was commenced; the initial installation will comprise three generating sets, each 33,000 kw., and one house set.

(*a*) *Natal Central Undertaking.*—The power station is located at Colenso with installed capacity of 60,000 kw.; there are duplicate 88,000-volt transmission lines from Glencoe to Pietermaritzburg and single circuit 88,000-volt lines from Pietermaritzburg to Booth substation (Durban), Glencoe to Volksrust, and Daimana to Bethlehem, making 546 route miles in all. Electricity is supplied as direct current to the Railway Administration from 27 substations. Bulk supply is given to the towns of Bethlehem, Dundee, Estcourt, Glencoe, Harrismith, Ladysmith, Mooi River, Newcastle, and Pietermaritzburg; the Commission also reticulates 1,408 smaller industrial, domestic, and lighting consumers.

(*b*) *Witbank Undertaking.*—This undertaking comprises a power station (installed capacity, 101,000 kw.) at Witbank and transmission and distribution systems in the Witbank district for the supply of electricity to industrial concerns, collieries, and domestic and other consumers; it also supplies power to the Victoria Falls and Transvaal Power Company, Limited, on the Witwatersrand, by means of a 132,000-volt overhead line between Witbank and Brakpan, owned and operated by that Company.

(*c*) *Capetown Undertaking.*—This undertaking comprises a power station (installed capacity, 90,300 kw.) at Salt River (which is inter-connected with the Capetown Corporation's power station), a transmission system, and substations in the Cape Peninsula for the supply of electricity to the Railway Administration for traction and other purposes, as well as transmission and distribution systems in the Cape rural areas extending through the Bellville, Paarl, Stellenbosch, Somerset West, and Malmesbury districts, for the supply of electricity to municipalities and industrial, domestic, and other consumers.

(*d*) *Durban Undertaking.*—This undertaking comprises a power station (installed capacity, 98,000 kw.) at Congella, supplying electricity in bulk to the Durban Corporation. Supply is also given along the Natal South Coast to Clansthal, Kelso Junction, Park Rynie, Pennington, Renishaw, Scottburgh, Sezela, Umkomaas, Umzinto, Port Shepstone, and Margate, which are reticulated by the Commission.

(*e*) *Sabie Undertaking.*—This undertaking comprises a hydro-electric power station (installed capacity, 1,350 kw.) and transmission and distribution lines, and supplies electricity to gold mining companies in the Sabie district.

(*f*) *Klip Generating Station.*—The Klip Generating Station, started up in March, 1936, has 8 units, each 33,000 kw., working, whilst there are 4 similar sets under construction or on order, giving a total station capacity of 421,000 kw. when the four 7,000-kw. house sets are included; all the power generated is sold to the Victoria Falls and Transvaal Power Co. Ltd., which operates the station on behalf of the Commission.

(*g*) *Rand Extension Undertaking.*—The Electricity Control Board granted a licence in 1934 to supply electricity in an area surrounding that already held by the Victoria Falls and Transvaal Power Co. Ltd.; this licence was subsequently ceded by the Commission to the Victoria Falls and Transvaal Power Co. Ltd.

Tariffs for the supply of electricity from any of the Commission's undertakings may be had on application to the Commission at its head office, Escom House, Rissik Street, Johannesburg, or at its local offices in Capetown, Durban, and Witbank.

(iv) *Finance.*—The Commission's total capital expenditure to 31st December, 1938, was £17,148,484, made up as follows:—

Undertaking.	*Capital Expenditure.* £
Natal Central	4,084,463
Witbank	2,479,782
Capetown	2,449,491
Durban	1,453,334
Sabie	96,145
Klip	5,611,448
Rand Extension	582,697
Escom House	391,122
TOTAL	£17,148,484

The Commission's loan capital at 31st December, 1938, was £16,250,000, made up as follows:—

Loan No. 1.—Government of the Union of South Africa	£3,000,000
Loan No. 2.—Government of the Union of South Africa	5,000,000
	£8,000,000
Less repaid during 1933 and 1934	£8,000,000
Local Registered Stocks.	
Loan No. 3 4¾ per cent. 1953–63	£500,000
Loan No. 4 4½ per cent. 1953	£2,500,000
Loan No. 5 3¾ per cent. 1954–64	£6,750,000
Loan No. 6 3½ per cent. 1959–64	£2,500,000
Loan No. 7 3¼ per cent. 1956–66	£2,000,000
Loan No. 8 3½ per cent. 1957–67	£2,000,000
	£16,250,000

(v) *Statistics.*—The figures of primary interest in connexion with the Commission's undertakings for the year 1938 are:—

Total capital expenditure at 31st December, 1938	£	17,148,484
Total revenue	£	2,232,022
Total production costs (including capital charges, reserve fund contributions, etc.)	£	2,218,696
Total station capacity	kilowatts	636,230
Total electricity sales	units	2,985,502,089
Average cost per unit sold	d.	0·178
Total coal consumption	tons	2,630,740
Number of consumers		7,254
Total area of supply (approximately)	sq. miles	20,000

The total revenue for the year 1938 is made up as follows:—

Heading.	Receipts.	Percentage of Total Receipts.	Average Price per Unit Sold.
	£	%	d.
Sales for—			
Traction (Converted to Direct Current)	638,734	29·26	0·486
Bulk	1,246,641	57·11	0·118
Industrial and Mining	221,028	10·12	0·429
Domestic and Lighting	76,578	3·51	1·754
TOTAL	2,182,981	100·00	0·176
Other Revenue	49,041	—	—
GRAND TOTAL	2,232,022	—	—

The total production costs for the year 1938 are made up as follows:—

Heading.	Expenditure.	Percentage of Total Expenditure.	Cost per Unit Sold.
	£	%	d.
Generation	881,347	39·72	0·071
Electricity Purchased	93,402	4·21	0·007
Distribution	58,674	2·65	0·005
General Expenses	146,196	6·59	0·012
Interest and Redemption	862,610	38·88	0·069
Reserve Fund	176,467	7·95	0·014
TOTAL	2,218,696	100·00	0·178

2. **Electricity Control Board.**—The *Electricity Act* of 1922 also provides for the appointment of a board, called the Electricity Control Board, which is the licensing and controlling authority for all electricity undertakings (including the Commission's) other than municipal, except in certain circumstances, in the Union of South Africa. The Board was first appointed under the Act on 28th August, 1922. Regulations under the Act were published on 8th December, 1922. (For the personnel of the Board, see Chapter XXVIII.)

3. **Power Supply on the Witwatersrand and in the Southern Transvaal—The Victoria Falls and Transvaal Power Company, Limited.**†—This Company in conjunction with a subsidiary company, the Rand Mines Power Supply Company, Limited, formed and controlled by it, supplies the requirements of electrical energy for the whole of the Witwatersrand gold mining industry, excepting only three mines, the Randfontein Estates G.M. Company, the East Rand Proprietary Mines, and the New Kleinfontein Company, which have for many years operated separate generating stations to supply their own requirements of electricity; and during recent years power from this Company's system has been placed at the disposal of developing and producing mines in the Potchefstroom and Klerksdorp districts. The vast bulk of the Company's output is consumed by the gold mining industry, but the Reef municipalities from Randfontein to Springs (with the exception of Johannesburg) and the municipalities of Nigel, Heidelberg, Vereeniging, Potchefstroom, and Klerksdorp, draw bulk supplies of electricity from the Company's system for distribution to consumers within their own municipal boundaries. The Company furnishes the Johannesburg Municipality with a stand-by supply to augment when necessary the supply available from the city power station. In Germiston, by agreement with the Municipality, the Company undertakes the service of street lighting and the reticulation of supply to individual consumers. Apart from the mines and municipalities numerous industrial enterprises of all kinds—steel furnaces and rolling mills, structural steel works, wire works, pipe works, milling companies, and many others in the Witwatersrand and Vereeniging districts—purchase their electric power direct from The Victoria Falls and Transvaal Power Company. By arrangement with the Electricity Supply Commission, the supply of electricity required by the South African Railways and Harbours Administration for the Railway Electrification Scheme on the Reef is furnished by the Company from convenient points on its network.

The Company was established in 1906 and commenced operations in that year. Later it applied for and was granted a licence under the provisions of the *Power Act*, 1910, (Transvaal), and when the *Electricity Act* of 1922 became law certain amendments to the original licence were effected to bring it into conformity with that Act. From time to time as the Company's field of operations has expanded, amendments to the licence have been made to permit of extensions to the Company's generating stations, transmission system, and area of supply.

When The Victoria Falls and Transvaal Power Company, Limited, was first established, a proposal to tap by means of hydro-electric generation the natural source of energy available at the Victoria Falls on the Zambezi for use on the Rand was given consideration. As, however, agreements in existence at that time for the supply of power to the mining groups stipulated—whether power was transmitted from the Falls or not—that steam-driven stations should also be established to ensure security of supply, it was decided that it would be uneconomic, even if technically practicable, to develop and transmit power from the Zambezi to the Rand. Thus the electricity which is supplied from the Witwatersrand system is drawn from steam generating stations situated at Brakpan, Simmer Pan, Rosherville, Vereeniging, Witbank, and Klip. The stations at Brakpan and Simmer Pan (near Germiston) are owned by the Company, while those at Rosherville and Vereeniging are owned by the Rand Mines Power Supply Company, Limited. The Witbank generating station and the new Klip station are owned by the Electricity Supply Commission, but were built by the Company for and on behalf of the Commission, and are operated by the Company as integral parts of its interconnected system, the Company taking approximately 90 per cent. of the output from the Witbank station and the whole output from the Klip station.

Since the bulk of the Company's output is consumed by the gold mining industry, an unprecedented growth of the Company's business resulted from the expansion of the mining industry brought about by the rise in the price of gold which has taken place since December, 1932. The extent of this

† Data supplied by The Victoria Falls and Transvaal Power Company, Limited.

growth may be judged from the increase in the Company's total sales of electricity and compressed air from 1,502 million units in 1932 to 3,017 million units for the year 1938.

To meet this phenomenal increase in the demand for power, not only on the Witwatersrand but also in the new mining areas to the south-west, east, and south-east of the Witwatersrand, the Company has carried out very large extensions to the power supply system operated by it. In 1934, in accordance with an agreement arrived at between the Company and the Electricity Supply Commission (established by the Government under the *Electricity Act* of 1922), the Commission applied to the Electricity Control Board for, and was granted, a licence to supply electricity within an extensive area surrounding the area of supply of the Company and a permit for the establishment of the new Klip Generating Station. This licence which is known as the "Rand Extension Licence" was, with the consent of the Control Board, ceded by the Commission to the Victoria Falls and Transvaal Power Company. Including the area of the Rand Extension Licence, the area in which the Power Company is authorized to supply electricity is now approximately 12,000 square miles in extent and in addition to the Witwatersrand comprises the magisterial districts of Potchefstroom, Krugersdorp, Vereeniging, and Heidelberg, and portions of the Witbank, Pretoria, Ventersdorp, and Klerksdorp districts, as well as a large area in the northern Orange Free State south of the Vaal River between Standerton and Klerksdorp; and the agreement between the Commission and the Company, under which the latter took cession of the Rand Extension Licence, enables consumers operating in the area of supply of that licence, although in many cases far removed from the Witwatersrand, to obtain supplies of electricity from the Company at the favourable tariffs applicable in the highly industrialized and densely populated Witwatersrand area.

Under the agreement with the Electricity Supply Commission, the new Klip Station, which is situated at Redan about 5 miles north of Vereeniging, is being constructed and is operated by the Company. The station has been designed for an ultimate capacity of 424,000 kilowatts and when completed will be the largest generating station in the Southern Hemisphere. The present programme provides for the installation of twelve 33,000-kilowatt turbo-generators and four 7,000-kilowatt house sets, with twenty-two boilers each with an evaporative capacity of 180,000 lb. per hour; eight of the large generating units and three house sets are already in commercial service, making the installed capacity of Klip Station 285,000 kilowatts at the end of 1938. Under normal loading conditions the steam required for the operation of each of the large generators necessitates burning 30 tons of coal per hour, and the ultimate coal consumption at this station alone will reach about 2,250,000 tons of coal per annum.

But even with Klip Station at its completed capacity of 424,000 kilowatts, the Company's forecast of power requirements indicates that still further generating plant will be necessary. Plans for the construction of another new station have been under consideration for some time, and in 1938 a further agreement was made with the Electricity Supply Commission for the erection of a station to be known as Vaal Station on the farm Bankfontein approximately 4 miles south of Vereeniging. Like the Klip Station, this new station will also be owned by the Electricity Supply Commission but will be erected by the Company and operated by it as an integral part of its system. The initial capacity of Vaal Station will it is expected be 108,000 kilowatts, but the station is being designed so as to be readily capable of extension.

The installed electric generating plant capacity at the end of 1938 of the stations operated by the Company was as follows:—

	Kilowatts.
Brakpan	48,000
Simmer Pan	40,000
Rosherville	60,500
Vereeniging	139,100
Witbank (Electricity Supply Commission)	100,000
Klip (Electricity Supply Commission)	285,000
TOTAL KILOWATTS	672,600*

* Equivalent to approximately 902,000 horse-power.

A unique feature of the Company's operations is the supply of compressed air in bulk to mines situated within the central area of the Witwatersrand. This centralized system of air distribution, on which the maximum demand is close upon 112,000 horse-power, is the largest and most important scheme of its kind in the world and has proved most successful in its operation. The Company is not obliged under its licence to supply compressed air, but it has contracted to supply certain mines of the Rand Mines Group, and, subject to certain conditions which ensure priority of supply to those mines, supply is also given to a few other mines and to several relatively small industrial consumers situated within economic reach of the air pipe system, that is to say, within an area about 16 miles in length along the Central Rand.

The compressed air supplied by the Company is drawn from steam turbine-driven compressor plant installed at Rosherville generating station, from the Robinson electrically driven compressor station on the property of the Crown Mines, and from the Canada Dam electrically driven compressor station which The Victoria Falls and Transvaal Power Company, Limited, has erected in recent years near Canada Junction. The Company also supplies compressed air to the Brakpan Mines, Limited, from steam compressors installed at Brakpan power station. The installed capacity of the air compressing plant feeding the Company's air system is as follows:—

	Horse-power.
Rosherville Compressor Station	76,000
Robinson Compressor Station	20,000
Canada Compressor Station	32,000
Brakpan Compressor Station	10,500
TOTAL HORSE-POWER	138,500

The Company's total sales of electricity and compressed air during the last five years have been:—

	Million Units.
1934	1,753
1935	1,979
1936	2,332
1937	2,676
1938	3,017

The charges for power made by the Company are in accordance with standard tariffs which have been evolved to give a sliding scale of prices, varying according to the size and constancy of the consumer's load; and in addition the standard agreements provide for the participation by consumers in the profits of the Company through the medium of an annual rebate.

The output taken by the gold mining industry represented well over 90 per cent. of the Company's total sales for 1938. The net cost of electrical energy to the mining groups for that year was just under three-tenths of a penny per unit and for compressed air slightly less than a penny per thousand cubic feet of free air delivered at an average gauge pressure of about 105 lb. per square inch, prices which compare very favourably with those ruling in any part of the world for similar types of supply.

In general The Victoria Falls and Transvaal Power Company's system consists of a main distribution system extending between Heidelberg in the east and Randfontein in the west, with Witbank interconnected to the East Rand through two 132,000-volt transmission lines. The Vereeniging station and Klip station are interconnected and are linked with the main distribution system through thirteen 88,000-volt transmission lines radiating to the Company's generating and distribution stations situated at suitable points on the west, central, and east Rand. In addition to this main system the Company has recently completed the construction of an 88,000-volt transmission line running from the Vereeniging station through the Potchefstroom and Klerksdorp districts to a point 16 miles beyond Klerksdorp. Although this line was built at a time when the demand in the area was largely conjectural, mining activity has increased to such an extent that a second 88,000-volt transmission line has had to be constructed.

Each of the gold mines is supplied from the distribution system by one or more feeders connected to a transformer station situated on the mine property, and the majority of the larger mines are supplied from several

transformer stations situated at points most convenient for their operations. The large majority of the Witwatersrand Gold Mines are thus fed from more than one source; in some cases a single mine transformer station is supplied from as many as six independent feeders so that, in the event of a fault rendering one or more feeders unserviceable, supply is maintained from the remainder, a layout which has proved extremely efficient under the severe lightning conditions obtaining on the Witwatersrand during the summer months in every year.

The Head Office of The Victoria Falls and Transvaal Power Company, Limited, is at 2, London Wall Buildings, London, E.C.2, and the Johannesburg offices (where full particulars as to terms of supply may be obtained) are at 501/525 Consolidated Building, Fox Street, Johannesburg.

4. **Electricity Supply—Municipalities and other Local Authorities.**—The subjoined tables give particulars in respect of electric light and power stations operated by municipalities and other local authorities, as to (i) the revenue, expenditure, and number of employees, and (ii) plant, units of power sold or used, working expenses, and number of consumers. The figures have been extracted from the returns received in connexion with the Industrial Census, 1937. This census covers the financial years which ended on any date in the calendar year 1937.

ELECTRICITY SUPPLY—MUNICIPALITIES AND OTHER LOCAL AUTHORITIES.

(i) REVENUE, EXPENDITURE, AND NUMBER OF EMPLOYEES, 1936-37.

Note.—The expenditure given below includes the cost of units purchased by those concerns which do not generate, but which purchase, electricity. In the case of Capetown, Durban, Johannesburg, Klerksdorp, and Potchefstroom, the municipalities both generate and purchase.

Town.	Date of Establishment.	Revenue.	Expenditure.	Number of Employees.

* Electric current purchased from another source; not generated by local authority.

† Electric current is both generated and purchased. The figure for the units represents the total number generated and includes the units lost in generation and transmission and used in the station.

5. **Statistics of Electricity Generating and Distributing Plants.**—The following tables containing varied information concerning the production and distribution of electric power, the capacity of the installations, employment, finance, etc., have been compiled from data collected for 1932-33 to 1936-37 through the medium of the industrial census. The figures relate to the financial years ended on any date in each of the calendar years 1933 to 1937.

ALL UNDERTAKINGS GENERATING AND/OR DISTRIBUTING ELECTRICITY.

(i) CLASSIFICATION OF UNDERTAKINGS, 1936-37, WITH COMPARATIVE FIGURES FROM 1932-33.

Province and Year.	No. of Undertakings.		Units Generated.	Units Generated and Used.	Units Generated and Sold.

* This column includes the value of all units sold in bulk, as well as the revenue derived from the re-sale of such portion of these units as was acquired by the purchasing concern with the object of re-selling to consumers. In other words the value of such re-sold units is duplicated. For this reason the totals appearing in the last column of tables (vii) (*a*) and (*b*) are furnished in order to enable the calculation to be made of the net increase of revenue over expenditure in respect of all electricity undertakings.

ALL UNDERTAKINGS GENERATING AND/OR DISTRIBUTING ELECTRICITY—(*continued*).

§ 5. Energy Balance Sheet.

At the request of the World Power Conference, Energy Balance Sheets for the Union were calculated for the years 1932 and 1933 on the principles proposed by Dr. Ernst Haidegger of Budapest. The production and net imports and exports of the different primary fuels were calculated and converted into calorific values. From these consumption figures were arrived at. Information was obtained from the Departments of Mines, Forests, and Customs, and valuable assistance and advice were given by the Institute of Fuel Research.

The production of electric energy by hydro-electric plants was converted into calories on the assumption of a 15 per cent. efficiency.

The electric energy generated was converted into terms of primary fuel used plus the number of calories assumed for the hydro-electric plant. This total divided by the total consumption gave the electrification factor. The number of total population was divided into the total consumption and into the total electric energy generated to obtain the energy consumption and the electric energy consumption per head of population.

1933	2,946·6 =	18·01	27·45	7·8	353

§ 6. Department of Commerce and Industries.

1. **Organization of Department.**—Upon the constitution of the first Ministry of the Union, a portfolio of Commerce and Industries was created, which provided for the control of customs and excise and of industrial and commercial matters. On a rearrangement of portfolios, the Department of Commerce and Industries was abolished, ministerial control of customs and excise being vested in the Department of Finance. Matters connected with commerce and industry were then dealt with by a branch of the Customs Department, designated the *Commercial Section*. Simultaneously with these changes, the portfolio of Mines, which already administered the machinery regulations and dealt with matters in connexion with the manufacture of explosives, was extended to include industries, with special reference to labour organization as a result of the rise of labour problems connected with the mining and allied industries, the title of the department being altered to Mines and Industries. This arrangement as regards the *Commercial Section* of the Customs Department and the industrial

side of the Mines Department continued until the middle of 1916, when, owing to the growing importance of questions affecting industrial production, further alteration was found to be necessary, and the work of the commercial section of the Customs Department was transferred to the Department of Mines and Industries, thus concentrating in the one department the work previously carried out by the two branches.

In July, 1924, upon the constitution of a Ministry of Labour, the Department of Labour took over from the Department of Mines and Industries the existing Labour Division, and with it the control of relief work and the administration of the *Industrial Conciliation Act*, the *Apprenticeship Act*, the *Juveniles Act*, and the *Regulation of Wages Act*.

In May, 1925, the control of the Trade Commissioner service, which up to that date had been exercised by several Departments of State, was definitely vested in the Department of Mines and Industries, and the service then formed a section of the Division of Industries.

On the 1st December, 1925, the Industries Division of the Department of Mines and Industries ceased to exist, and the Board of Trade and Industries, acting subject to the direction of the Minister of Mines and Industries, assumed control of the functions formerly exercised by the Industries Division. From this date, also, the Board of Trade and Industries was authorized to act as the co-ordinating medium between the public and the trade commissioners for the Union in matters relating to overseas trade. This service is now controlled by the Department of Commerce and Industries.

On the 1st May, 1933, a Department of Commerce and Industries was established in charge of the then Minister of Labour, in his capacity as Minister of Commerce and Industries. The functions of the Department comprise the encouragement and development of South African manufacturing industries and matters relating to the industrial utilization of the Union's natural resources and raw materials. It controls funds voted for grants-in-aid, the advertising and exhibition of Union products overseas, and the marketing overseas of the products of the Union's base metal industry.

The Department has in its charge the administration or executive work, or both, connected with the activities of the trade representatives overseas, the Assize Division, the Fisheries and Marine Biological Survey, and the Office of the Chief Inspector of Explosives.

The Department also controls the administration of the Acts, and all matters arising therefrom, under which the following boards and other bodies are established: the Assize Board, the South African Iron and Steel Industrial Corporation, Ltd., the Electricity Control Board, the Electricity Supply Commission, the Board of Trade and Industries, the Fuel Research Board.

The Acts administered by the Department are the following:—

The Adulterated Leather Act, No. 32 of 1923.

The Board of Trade and Industries Acts, Nos. 28 of 1923 and 33 of 1924.

The Electricity Act, No. 42 of 1922, as amended by Act No. 34 of 1924, Act No. 27 of 1927, and Act No. 21 of 1928.

The Explosives Act, No. 8 of 1911.

The Fuel Research Institute and Coal Act, No. 36 of 1930, as amended by Act No. 2 of 1933.

The Iron and Steel Industry Encouragement Act, No. 41 of 1922, as amended by Act No. 43 of 1926.

The Iron and Steel Industry Act, No. 11 of 1928, as amended by Act No. 40 of 1931, Act No. 61 of 1934, and Act No. 30 of 1935.

The Sugar Act, No. 28 of 1936.

The Unlawful Determination of Prices Act, No. 24 of 1931, as amended by Act No. 14 of 1937.

The Weights and Measures Act, No. 32 of 1922, as amended by Act No. 13 of 1933.

The Trade Coupons Act, No. 18 of 1935.

The Crawfish Export Control Act, No. 50 of 1934, as amended by Act No. 41 of 1935.

2. **Board of Trade and Industries.**—In October, 1916, an Industries Advisory Board, designed to advise the Minister in regard to the industrial development of the Union, was appointed, and early in 1917 a scientific and technical committee to deal with scientific methods of research and management was created. In October, 1918, these bodies were amalgamated under the title of the Advisory Board of Industries and Science. This board, having completed the work for which it and its predecessors were constituted, was dissolved in January, 1923.

The first Board of Trade and Industries was established on the 6th July, 1921. In 1923 the Board was placed on a statutory basis by Act No. 28 of 1923. The first Board was replaced on the 1st October, 1924, by a Board established under Act No. 33 of 1924.

The Board consists of a chairman and not more than three other members, who hold office for a period not exceeding three years, and who may be re-appointed from time to time for a further period not exceeding three years. The section of the Act dealing with the appointment or re-appointment of members provides for their retirement by rotation. The chairman and members receive such salaries or remuneration (out of moneys appropriated by Parliament for the purpose) as the Governor-General may determine.

Subject to the direction of the Minister, the functions and duties of the Board, as defined by Act No. 33 of 1924, shall be to inquire into and advise the Government on all matters concerning the economic development of the natural resources of the Union and its industries and trade and in particular on—

(*a*) the payment of bounties or other forms of State aid for industries;

(*b*) fiscal policy in so far as it bears on commerce and industries;

(*c*) the recasting and revision of the customs tariff;

(*d*) the removal of anomalies from time to time in the customs and excise tariffs;

(*e*) complaints or recommendations on the working of the customs and excise tariffs;

(*f*) combinations, trusts, monopolies, and restraints of trade tending to affect the general interest injuriously, especially by restricting production or maintaining or raising prices; and the prevention thereof;

(*g*) the dumping of imported goods whereby Union industries are likely to be unfavourably affected;

(*h*) the supply of raw materials, labour, and technical knowledge for industry, and the encouragement of the investment of capital in industry;

(*i*) transport and markets for the requisites and products of industries;

(*j*) the relation between factory, wholesale, and retail prices;

(*k*) commercial legislation;

(*l*) such other matters as the Minister may refer to it for report.

The Board shall report to the Minister on the matters referred to it and on such matters as may be referred to it by statute, and, in doing so, it is the duty of the Board to report as fully as possible on all aspects of any matters referred to it, in so far as they may affect revenue, trade, and commercial and economic conditions, with special reference to the probable effect of any action recommended on the consumer and those employed in the industry.

The Board may take evidence under oath for the purpose of any inquiry falling within its functions and duties, may subpoena witnesses, and may examine books, records, or documents which any witness has been required to produce. Penalties are provided for failure to obey a subpoena or for giving false evidence. Penalties are also provided in the case of any member or officer of the Board, who discloses information acquired by the Board in the exercise of its powers of hearing evidence on oath.

The recommendations and reports made by the Board upon any matter under the Act must be submitted to Parliament.

The first Board submitted forty-two reports to the Government on various matters connected with the trade and industry of the country, and the total number presented to March, 1939, was 244. A list of reports, Nos. 1 to 102, appeared in *Official Year Book* No. 11, 103 to 113 in No. 12, 114 to 127 in No. 13, 128 to 153 in No. 14, 154 to 165 in No. 15, 166 to 188 in No. 16, 189 to 206 in No. 17, 207 to 223 in No. 18, and 224 to 228 in No. 19. A list is given below of those since issued. Of these documents some have been published as White Papers by the Government Printer, Pretoria.

229. Control of the Export of Scrap Metal.
230. Dumping of Electric Welding Electrodes.
231. Dumping of Hauling and Hoisting Chains.
232. Dumping of Coal-burning Stoves.
233. Operation of the Sugar Exchanges.
234. Dumping of Iron and Steel Products from the United States of America.
235. Rebate of Duty on Cashew Nuts for Experimental Purposes.
236. Customs Tariff Amendments, 1938.
237. Rebate of Customs Duty on Mafurra Oil Fatty Acid and Boxboards for Packing Citrus Fruits for Export.
238. Freight Dumping of Iron and Steel Products.
239. Admission under Rebate of Customs Duty of Cokes for the Copper Smelting Industry in South West Africa.
240. Ordinary Dumping of Rubber Pneumatic Tyres and Inner Tubes imported from the United States of America and Canada.
241. Importation of Soya Beans under Rebate for Milling Purposes.
242. Admission under Rebate of Customs Duty of Materials required by the Boot and Shoe-making Industry.
243. Ordinary Dumping of Rubber Pneumatic Tyres and Inner Tubes imported from the United Kingdom and Sales Dumping of Tyres and Tubes imported from the United States of America, Canada, and the United Kingdom.
244. Admission under Rebate of Customs Duties of Glacial Acetic Acid, Powdered Pectin, Second-hand Casks, Steel Wheels and Caps, Nozzles and Studs for Industrial Purposes.

3. **Publications.**—The *Journal of Industries*, which served as a medium for the dissemination of industrial and allied information, ceased publication with the December, 1925, issue. A list of reports published in that journal will be found in the eighth issue of this *Year Book*. The place of the journal was taken by the *Commercial and Industrial Gazette*, which was issued monthly by the Board of Trade and Industries from May, 1926, till March, 1931, when publication ceased. A list of the special reports published in the *Gazette* was given in *Official Year Book* No. 12. The only additional report published since then has been No. 22, *Salt and Saltpans of the Union*, by Dr. Vernon Bosman (*Gazette* No. 57, January, 1931).

In April, 1936, the Department of Commerce and Industries published a handbook entitled *Industrial Development in South Africa and Facilities for the Establishment of Factories* and edited by Dr. Vernon Bosman. The publication deals with secondary industries and their development over the last 25 years, and is a valuable guide to the establishment of industries in the Union of South Africa. This handbook is obtainable from the Government Printer at a cost of 1s.

In July, 1938, the first issue of the *Journal of the Department of Commerce and Industries* was published. This is a monthly publication and deals with foreign and domestic trade, the formation of trade contracts, and commercial and industrial enterprise in the Union of South Africa.

4. **Rural Industries Commission.**—In accordance with the undertaking given in the House of Assembly during the 1937 parliamentary session by the Minister of Commerce and Industries, the Government decided to appoint a commission to investigate the possibility of establishing industries in the rural areas of the Union.

The commission was appointed on the 13th August, 1937, with the following terms of reference:—

> "To make a survey of the industrial possibilities of the rural areas in the Union, and to secure information in regard to facilities essential to the establishment of industries in those areas, namely: raw materials, land, water, power, transport, labour, etc., the information so secured to be made available for the guidance of private enterprise."

CHAPTER XXIV.

COMMERCE.

§ 1. Customs Conventions and Trade Agreements.

1. **Conventions and Agreements in Force.**—The following is a list of Customs Conventions, Commercial Agreements, and Trade Treaties at present in force between the Union and various countries. Detailed information regarding the more important agreements was published in *Official Year Book* No. 17 and previous issues.

(i) *Contiguous Territories.*

(*a*) Union-Mozambique Convention providing for customs matters, commerce, native labour, and railway traffic between the two territories.

(*b*) Union-Northern Rhodesia Customs Agreement.

(*c*) Union-Southern Rhodesia Trade Agreement.

(*d*) Customs Agreement between the Union and the Territories of Basutoland, Swaziland, and the Bechuanaland Protectorate.

(ii) *Other Countries.*

(*a*) Preferential Trade Agreements between the Union and the United Kingdom, the Dominion of Canada, the Irish Free State, and New Zealand.

(*b*) Agreements for the reciprocal exchange of most-favoured-foreign-nation treatment with the United Kingdom and the British Colonial Empire, Canada, Irish Free State, and Australia.

(*c*) In consequence of the accession to treaties entered into between the United Kingdom and the following countries, most-favoured-nation treatment is accorded on a reciprocal basis to the Argentine, Colombia, Costa Rica, Denmark, Egypt, Italy, Liberia, Morocco, Norway, Sweden, Switzerland, and Venezuela.

(*d*) Treaty of Commerce and Navigation with the German Reich.

(*e*) Temporary Commercial Agreements providing, generally, for the mutual extension of most-favoured-nation treatment in matters of customs and trade, or stipulating, in some instances, specified customs concessions, have been concluded between the Union and India, Burma, the Belgian and Luxemburg Economic Union, Czechoslovakia, France, Italy, and the Netherlands. The Agreement with the Kingdom of the Netherlands also establishes a régime of most-favoured-nation treatment in respect of shipping.

2. **Imperial Conference, Ottawa.**—At the Imperial Conference, held at Ottawa during July and August, 1932, where the Union was officially represented by the Hon. N. C. Havenga, Minister of Finance, the Hon. A. P. J. Fourie, Minister of Mines and Industries, and the Hon. P. G. W. Grobler, Minister of Lands, trade treaties were negotiated between the Union and (i) the Dominion of Canada, (ii) the United Kingdom of Great Britain and Northern Ireland, and (iii) the Irish Free State. These treaties, together with the various schedules, were subsequently ratified by the Union Parliament and embodied in Act No. 8 of 1933. A brief résumé of the Articles contained in these agreements was published in *Official Year Book* No. 17.

§ 2. Union Customs Management and Tariff.

1. **Customs Management.**—In terms of section 130 of the *South Africa Act*, 1909, there is free trade throughout the Union. The application of customs control, therefore, affects only the trade of the Union with other countries, carried on in the main with countries overseas.

The management of the customs of the Union is provided for by Act No. 9 of 1913 (*Customs Management Act*), which became operative on the 1st August, 1913, in substitution for numerous laws previously in force in the various provinces. The control and management of the collection of duties is vested in a Commissioner of Customs. Every person employed on any duty relating to customs by order or with the concurrence of the Governor-General, or of the Commissioner of Customs, is an officer of customs. Provision is made for the boarding and searching of ships, the sealing of goods, the taking of samples, and the appointment of ports and landing places—free warehousing ports, or ports for limited purposes.

All duties collected are paid into the Union Treasury and are levied on weights and measures established by law in the Union, or on an *ad valorem* basis. When notice is given in the House of Assembly by any Minister of State of a resolution to affirm the expediency of increasing any customs dues, the officer of customs is empowered to demand a bond from importers to cover the payment of any such increase which may thereafter be imposed; but such bond may extend over a single session of Parliament only.

(i) *Prohibitions of Importations.*—The importation into the Union of the goods enumerated in the following list is prohibited:—

(*a*) Goods which, being foreign manufacture, bear the name, mark, or brand of manufacturers resident in the United Kingdom or any British possession, or which, whether of foreign manufacture or not, bear marks contravening the provisions of any law in force in the Union relating to merchandise marks.
(*b*) Coins, base or counterfeit.
(*c*) Goods which are indecent or obscene or on any ground whatsoever objectionable; in the event of any question arising as to whether any goods are indecent or obscene or objectionable, the decision of the Minister of the Interior shall be final: Provided that in respect of printed, engraved, lithographic, and photographic matter the decision shall be given after consultation with the Board of Censors appointed in terms of sub-section (1) of section 2 of the *Entertainments (Censorship) Act*, 1931 (Act No. 28 of 1931).
(*d*) Prison-made and penitentiary-made goods.
(*e*) Printed books, music, and newspapers which are unauthorized prints of any works which are copyright in the United Kingdom or the Union or any British possession.
(*f*) All animals, articles, matter, or things, the importation of which is from time to time prohibited by or under the authority of any law.
(*g*) Carbide of calcium which, when treated with water, yields less than 250 litres of gas from one kilogram, the gas being measured at 15° C. under a pressure of 760 millimetres of mercury.
(*h*) Second-hand boots and shoes.

NOTE.—Amongst the articles under paragraph (*f*) the importation of which is prohibited are adulterated leather, adulterated foods, wines and spirits and vinegar not complying with standards to which similar Union products must conform, honey, used beehives and accessories or appliances, eucalyptus, acacia, or coniferous plants, fresh stone fruits, and peach stones.

Restrictions are imposed upon the importation of habit-forming drugs, yeast, dangerous weapons, second-hand clothing, birds of the parrot family, lovebirds and budgerigars, donkeys from Southern Rhodesia and certain animal and vegetable products from Southern Rhodesia and Bechuanaland Protectorate, butter, cheese, wheaten flour, wheaten meal, and wheat. The importation of certain plants and seeds, such as barley, maize, tea, elm seeds, acorns, chestnuts, lucerne, tomato and cotton seed, and peach stones, liable to introduce pests into the Union, bees and their larvae or eggs, beeswax, and foundation comb, is prohibited except on permit from the Department of Agriculture and Forestry. In addition to forfeiture of such any person importing prohibited goods is liable to the imposition of a penalty.

(ii) *Obligations of Importers.*—No importation of goods into the Union may be made without due entry and the payment of customs dues. Every person carrying on business in the Union is required to keep within the Union reasonable and proper books or accounts of his transactions in one of the official languages of the Union, and within two years after the date of any importation may be required to produce bills of lading, invoices, and other documents relating to the goods. The particulars to be contained in invoices are prescribed by regulation. Any person offering goods for sale, or removing them, or having such goods entered in his books, may be required to produce proof as to the person from whom the goods were obtained, and, if he is the importer, as to the place where the import dues were paid.

(iii) *Entry Inwards.*—The master of every ship is required to report in person, or by his authorized agent, within twenty-four hours after the arrival of his ship in a Union port. Due entry of goods must be made before landing. Importers must effect entry within fourteen days of a ship's arrival. In default, the goods may be conveyed to the King's Warehouse, and, if not cleared within three months, may be sold.

Station masters on the railways are required to report the arrival of goods from without the Union by train. Similarly, persons arriving overland with goods are required to report.

Penalties are imposed for undervaluation of goods.

Provision is made for bonded warehouses under licence of the Commissioner of Customs. Heavy penalties are imposed in respect of unlawful warehousing and smuggling.

(iv) *Exportation of Goods.*—The exportation or caariage coastwise of arms, ammunition, military and naval stores, or goods being capable of conversion into such stores, may be prohibited. Entry outwards has to be made in respect of every ship bound from the Union, delivery being made to the officer of customs of a content of goods loaded in such ship, with other particulars. Exporters are required to deliver a bill of entry, and export duty (if any) must be paid.

Special provisions are made in respect of coasting trade between Union ports.

(v) *Ports of Entry.*—Under the *Customs Management Act* the following places have been proclaimed ports of entry for the Union to or through which goods may be imported, or through which alone they may be exported:—

Cape Province.—Capetown, Port Elizabeth, East London, Mossel Bay, Port Nolloth, Knysna, Simonstown, St. John's River, Kimberley, and Mafeking.

Natal.—Durban, Pietermaritzburg, Ingwavuma, Maputa (Manguzi), Muzi, and Sikova Drift.

Transvaal.—Johannesburg, Pretoria, Germiston, Boksburg, Lebombo, Komatipoort, and Alfred Beit Bridge.

Orange Free State.—Bloemfontein.

South West Africa.—Walvis Bay and Luderitz.

In addition to the above the following ports have been proclaimed ports of export only:—St. Helena Bay, Hout Bay, Struys Bay, Hondeklip Bay, Saldanha Bay, Lambert's Bay, Port Beaufort, and Kalk Bay.

Aerodromes have been prescribed for customs purposes at Capetown, Durban, Kimberley, Johannesburg (Rand Airport, Germiston), Pietersburg, Komatipoort, Walvis Bay, and Windhoek.

(vi) *Free Warehousing Ports.*—The following places have been proclaimed free warehousing ports for the purpose of warehousing and securing goods:—Capetown, Port Elizabeth, East London, Mossel Bay, Simonstown, Kimberley, Durban, Pietermaritzburg, Johannesburg, Pretoria, Germiston, Boksburg, Komatipoort, Bloemfontein, Walvis Bay, and Luderitz.

(vii) *Declaration of Value.*—(*a*) *Imports.*—For goods subject to an *ad valorem* duty, the value of such goods shall ordinarily be taken as—

(i) the market price at which at the time of exportation such or similar goods are offered for sale, for consumption in the country from which the goods are exported, to all purchasers in the usual wholesale quantities in the ordinary course of trade in the principal

markets of such country, including the cost of packages ordinarily used in those markets, carriage to the port of shipment, and all other expenses incidental to placing the goods on board ship ready for exportation to the Union, but not including excise duties payable in that country; or

(ii) the f.o.b. price of the goods to the importer, including agents' or buying commission in excess of 5 per cent., whichever is the greater.

(b) *Exports.*—The value of South African goods exported is their current value in the open market at the port of shipment, including the cost of packing and packages. For re-exports from open stocks, the f.o.b. price is given, and in the case of exports from bond, the value recorded is that at which the goods were originally warehoused.

(viii) *Customs Investigation Officers.*—Since the beginning of 1923 Customs Investigation Officers for the Union of South Africa have been established in New York for the purpose of examining the invoices and shipping documents of American and Canadian exports to the Union, inquiring into the domestic value of similar goods in America, and investigating into the country of origin of Canadian goods shipped *via* the United States.

Similar officers have been stationed in London since the beginning of 1926, for the purpose of investigating the values of goods shipped from the United Kingdom and the Continent of Europe.

(ix) *Duties on Spirits.*—An amendment of Act No. 9 of 1913 was effected by Act No. 27 of 1919, the main provision of which was to make retrospective any increase of duty resolved upon under the *Excise Act* (1913) and under the *Customs Acts* as regards spirits (beverages) in stock on the date of any notice of proposed increase issued under the law.

2. **Statistics of External Trade.**—Prior to July, 1905, each Colony or Territory in the Customs Union had its own statistical department which recorded particulars of its import, export, and inter-colonial trade. In addition, each maintained what was generally known as a Customs Union Office, where records were compiled of the trade between the parties to the Union. From such records was ascertained the amount of customs duty due to each party in the Customs Union. In 1904, the Governments of the countries in the Customs Union decided that it was desirable that statistics relating to the import, export, and inter-colonial trade should be kept on a uniform basis and by an office created for the purpose.

Since the coming into operation of the *South Africa Act* the compilation of trade statistics has been continued under the Union Government.

It should be noted that for statistical purposes the Protectorates of Basutoland, Swaziland, and Bechuanaland are regarded as integral parts of the Union of South Africa, and no separate information is available for their trade, whether direct to or in transit through the Union, other than the estimates given in Part II of this *Year Book*. Payments in respect of customs collections are, however, made by the Union Government to these protectorates by agreement, on the basis contained in paragraph 12 of the Schedule to the *South Africa Act*.

3. **Preference.**—(a) *Union of South Africa.*—The first record of preferential rates of duty is to be found in the records of the Cape Colony. From 1821 to 1830 the duty was approximately 3 per cent. *ad valorem* on British goods, and 10 per cent. on foreign goods and those imported from the East.

Again, in 1840, by an Order-in-Council, dated the 10th August, differential rated duties were imposed on certain articles, and these early differential tariff rates were continued, subject to variations, until 1855, when they were abolished by the *Customs Tariff Act* of that year. From that time until 1903 customs duties were levied equally on all goods and articles imported, irrespective of the country of origin or manufacture. In that year, under the Customs Union Convention concluded between the Cape Colony, Natal, the Orange River Colony, the Transvaal, and Southern Rhodesia, it was agreed as follows:—

> A rebate of customs duties shall be granted on any goods and articles the growth, produce or manufacture of the United Kingdom imported therefrom into the Union for consumption therein, and that a rebate should also be granted on goods and articles the growth, produce, or manufacture of any British Colony, Protectorate, or Possession granting equivalent reciprocal privileges to the Colonies and Territories in the Customs Union.

Rebates of duty were continued in subsequent Conventions,* and have been continued since the constitution of the Union in favour of the United Kingdom and those British Dominions which have afforded reciprocal treatment, viz., Canada and New Zealand.

The *Customs Tariff and Excise Duties Amendment Act*, No. 36 of 1925, made provision for preference as a fundamental factor in the general tariff policy of the country. In addition to extending preference to a list of scheduled goods produced and manufactured in the United Kingdom, it provides for the extension of equivalent reciprocal privileges between the Union and any† British Dominion, colony or possession, and for tariff agreements to be entered into with foreign nations on the principle of the most-favoured-foreign-nation treatment, in consideration of the extension by the contracting State of equivalent reciprocal tariff privileges in respect of goods imported into its territory from the Union. These agreements with foreign countries are, however, subject to the limitation that they may not apply to such goods or articles, named in the schedules to the Act, in respect of which preference has been granted to the United Kingdom.*

As an outcome of the Imperial Conference held at Ottawa in 1932, the preferences extended to the United Kingdom and Dominions under the provisions of Act No. 36 of 1925 have been abandoned in favour of specific trade agreements; such agreements have been entered into between the Union and (i) Canada, (ii) Great Britain and Northern Ireland, and (iii) the Irish Free State. The schedules of preference as arranged between those units of the Empire are embodied in Act No. 8 of 1933 and are published in the lists of tariffs appearing below. Although no specific agreement has as yet been concluded between the Union and New Zealand, nevertheless certain articles, the product of that Dominion, are accorded a preferential rebate on importation into the Union.

The schedules to the Act have since been considerably modified by the introduction of a "three line tariff", making provision for minimum, intermediate, and maximum rates of duty, the application of which is determined by specific agreement with various foreign countries.

(b) *United Kingdom.*—The principle of Imperial preference was adopted by the British Parliament in 1919, and preference was given on the duties in force in the United Kingdom to the following articles, the produce of countries within the British Empire. The present values of the rebates are as follows:—

One-third of the duty on clocks and watches, motor cars and accessories, musical instruments and accessories, cinematograph films, and hops.

One-fourth (approx.) of duty on tobacco, cigars, cigarettes, and snuff.

One-sixth of duty on chicory, cocoa, coffee (other than raw coffee), silk, and artificial silk.

Two-thirds of duty on raw coffee.

One-third of duty on tea.

One-half of duty on wines. On South African wines exceeding 25° but not exceeding 27°, three-quarters of the duty is rebated.

Brandy, rum, gin, naphtha, methylic alcohol, and unsweetened potable spirits are rebated 2s. 6d. per proof gallon.

Sweetened spirits, 2s. 9d. per proof gallon.

Perfumed spirits, 4s. per proof gallon.

Sugar, glucose, chutney, preserved and crystallized fruits, jams and jellies, condensed milk (sweetened), the rebate varies from 2s. to 5s. 10d. per cwt.

Saccharine and like substances, 30s. per lb.

The whole duty is rebated on dried fruits, optical glass, elements and instruments, certain synthetic organic chemicals, scientific glassware and instruments, and various other key industry goods.

---

* These have since been abandoned in favour of specific agreements.

† On the 1st July, 1926, the Commonwealth Government withdrew the preferential tariff on goods produced or manufactured in the Union, and from that date the preference on Australian goods named in Part III of the Second Schedule to Act No. 36 of 1925 ceased to operate.

Until the passing of the *Import Duties Act* (United Kingdom) of 1932 the articles liable to duty on importation were relatively few. The *Import Duties Act* introduced a general tariff of 10 per cent. on most manufactured and semi-manufactured goods and this duty, in many cases, has since been raised by additional duties to amounts varying up to a maximum of 100 per cent. *ad valorem*. Imported goods liable to duty under this Act which are the product or manufacture of Empire countries are exempted from duty.

As the result of the Imperial Economic Conference held at Ottawa during August, 1932, the Government of the United Kingdom imposed duties on certain commodities imported from all sources other than Empire countries. The list included the following of interest to South African exporters, viz.: Maize (flat white), butter, cheese, eggs, and fresh and preserved fruits. One or two of these duties were subsequently modified under the Anglo-American Trade Agreement of November, 1938, but the whole of the duties is still rebated on the products of Empire countries.

4. **Protection.**—*Normal Tariff.*—Act No. 36 of 1925, which amends and supersedes the customs tariff formerly in force, was designed largely for the purpose of encouraging industrial development within the Union. A distinctive feature of this tariff and a fundamental departure from any previous one was its division into *maximum* and *minimum* rates of duty. Normally the *maximum* rates were imposed. Under Act No. 44 of 1935 a further division into a three-line tariff has been made, i.e., a *minimum*, an *intermediate*, and a *maximum* rate. Briefly the *minimum* tariff is applicable to designated goods imported into the Union from the United Kingdom or any British Dominion, colony, or possession with which the Union has concluded an agreement for equivalent reciprocal privileges and incorporates the existing preferences under Ottawa agreements.

The *intermediate* rate incorporates the then existing maximum duties, and constitutes the effective protective tariff for Union industries, primary and secondary. It will form the basis for negotiating treaties to secure tariff concessions from other countries in exchange for the application of these rates to certain of their products, or to obtain reciprocal most-favoured-nation treatment.

The *maximum* rate is the tariff rate applicable to all goods to which the minimum or the intermediate rate has not been applied. Ordinarily it should have been made effective immediately, but the Government was faced with the position that in such an event taxation through the customs would be greatly increased until treaties or agreements brought the intermediate rates into operation. This was clearly impossible, and provision is, therefore, made in Act No. 44 of 1935 for bringing into operation from time to time the maximum duties on those articles: intermediate rates will thereafter apply only when they are imported from countries with which agreements have been concluded involving those articles.

Provision is made that in the event of its being reported to the Minister through the appropriate official channel that any protected industry is—

(*a*) charging unduly high prices for any product; or
(*b*) acting in a manner which tends to such restraint of trade or the establishment of such a monopoly as is injurious to the public interests; or
(*c*) maintaining unsatisfactory labour conditions;

the Governor-General may, by proclamation, after due notice has been given to the industry, declare that the minimum duty shall be levied and collected in respect of the article concerned.

Suspended Duties.—In addition to the minimum, intermediate, and maximum rates provided for in the tariff, provision is made for the imposition of suspended duties upon certain imported manufactured goods when occasion arises. These duties may be brought into force by proclamation as from date of publication in the *Gazette* on any article specified, whenever the prevailing imposts are found to provide an inadequate protection to the industries which they are designed to assist.

The following are the goods in respect of which suspended duties have been brought into operation:—

Sugar other than candy and icing sugar, loaf and cube sugar and golden and maple syrup, jaggery, molasses, saccharum, glucose, and treacle	from 26/7/30.
Liquid disinfectants and disinfectant powders (in bulk), the active ingredients of which are derivates of coal tar	from 22/8/30.

Common bottles of glass of the beer and mineral water types	from 22/8/30.
Bentwood chairs	from 22/8/30.
Milk, full cream, sweetened, condensed	from 22/8/30.
Medicine bottles, i.e., medicinal or dispensing flats, panelled flats, and poison flats in sizes from two fluid ounces up to and including sixteen fluid ounces	from 8/7/32.
Milk, full cream, unsweetened, condensed	from 12/8/32.
Deodorized or hydrogenated refined vegetable fats	from 28/7/33.
Vegetable oils of certain types	from 29/5/35.
Mustard and Rape seed oil	from 24/7/36.
Mules	from 15/7/37.

Dumping Duties.—The principle of a special dumping or countervailing duty was first introduced into the customs legislation of the Union by Act No. 26 of 1914 (section 8), and became recognized as a fundamental factor in the economic development of the Union by its inclusion in the *Customs and Excise Amendment Act*, No. 23 of 1923 (section 12). Act No. 36 of 1925 (section 15), as amended, provides that dumping duties shall be imposed whenever, after investigation and report by the Board of Trade and Industries, the Minister is satisfied—

(i) that goods, which are of a class or kind produced or manufactured in the Union—
  (*a*) have been or are being or are likely to be exported to the Union at an export price which is less than the domestic value thereof, plus the extra cost of packing and packages for export, carriage to the port of shipment, and all other expenses incidental to placing the goods on board ship ready for exportation to the Union; or
  (*b*) are being sold or offered for sale at a port of entry or other place in the Union, in the usual and ordinary course of trade, for an amount which is less than the domestic value thereof, plus the extra cost of packing and packages for export, inland carriage, sea freight, insurance, and all charges to that port or place, including landing, transportation, and delivery charges, and any duty (other than a dumping duty) payable under this Act or any amendment thereof; or
(ii) that a bounty has been or will be granted in respect of such goods in the country in which they were produced or manufactured or from which they were exported, by way of a bonus, rebate, subsidy, or otherwise, whether granted by a Government or other authority or person.

The dumping duties which may be imposed in terms of section 15 of the Act are—

(*a*) "ordinary" dumping duty, which shall be the difference between the export price and the domestic value plus the extra cost of packing and packages for export, carriage to the port of shipment, and all other expenses incidental to placing the goods on board ship ready for exportation to the Union; Provided that such difference is greater than five per centum of the export price: Provided, further, that in respect of any particular class or kind of goods the ordinary dumping duty may be limited to a percentage of the value for duty purposes, or alternatively to a specific rate per unit of quantity, volume, or weight, such percentage or alternative specific rate to be determined by the Governor-General and notified by him by proclamation in the *Gazette*.
(*b*) "sales" dumping duty, which shall be the difference between the selling price in the Union and the domestic value plus the expenses and charges set forth in paragraph (*d*) of section 15 (1) of the Act;
(*c*) "bounty" dumping duty, which shall be the amount of the bounty referred to in paragraph (*c*) of section 15 (1) of the Act.

"Exchange" dumping duty is leviable under the provisions of the above-mentioned section 15, as follows:—

(*a*) Whenever after investigation and report by the Board of Trade and Industries the Minister is satisfied that the exchange value of the currency of the country of origin or export of goods imported

into the Union is depreciated in relation to Union currency, and is of opinion that by reason of such depreciation goods of a class or kind manufactured or produced in the Union are being imported into the Union at prices which are detrimental to an industry in the Union, and is further of opinion that it would be in the public interests to impose, in respect of such goods, a dumping duty, the Minister shall from time to time determine the rate at which the currency of such country shall be computed in terms of Union currency for the purposes of assessing the dumping duty and he shall thereupon notify in the *Gazette* the rate so determined and the class or kind of goods to which such duty shall apply.

(*b*) If after the issue of such notification any person imports from such country into the Union any goods of a class or kind so notified, there shall be charged, levied, collected, and paid on such goods on their importation into the Union, in addition to the duties otherwise prescribed, an exchange dumping duty equal to the difference between the cost free on board at the port of shipment of such goods to the importer in Union currency and such cost, expressed in the currency of the country of origin or export of such goods, computed in terms of Union currency at the rate determined by the Minister: Provided that the Minister may in his discretion in respect of any particular class or kind of goods limit such dumping duty to a percentage of the aforesaid difference or alternatively to a specific rate per unit of quantity, volume or weight, such percentage or alternative specific rate to be determined by the Minister and notified by him in the *Gazette*.

(*c*) In the case of goods exported to the Union on consignment account, or for which nominal prices are charged or for which no charge is made, the cost free on board at the port of shipment shall be taken to be the price free on board at which similar goods are ordinarily sold for export, or, if there be no such price, then the value of such goods as determined for purposes of duty in terms of section fourteen.

"Freight" dumping duty is leviable under the provisions of section 15, as follows:—

Whenever after investigation and report by the Board of Trade and Industries the Minister is satisfied—

(*a*) that goods which are of a class or kind produced or manufactured in the Union have been or are being or are likely to be exported to the Union from a particular country or port of shipment at a rate of freight or at freight charges less than the rate of freight certified by the South African Shipping Board as being the normal freight rate chargeable on that class or kind of goods from that country or port;

(*b*) that such reduction is exceptional in character;

(*c*) that detriment to an industry within the Union may result from such reduction; and

(*d*) that it would be in the public interest to impose a freight dumping duty in respect of such goods,

the Minister may from time to time determine the minimum rate of freight which shall be applicable to goods of that class or kind shipped from that country or port to any of the several ports of discharge in the Union or to any of the several ports in Africa at which goods are discharged for removal overland to the Union; and shall thereupon notify the same in the *Gazette*: Provided that the minimum rate so determined and notified shall in no case exceed the normal freight rate as certified in terms of paragraph (*a*).

If after the issue of such notification any person imports into the Union any goods of a class or kind to which in terms thereof any such minimum rate is applicable, there shall, if such goods have been shipped from any such country or port to any such port of discharge at a rate of freight or freight charges less than the minimum rate so determined and notified in respect of goods of that class or kind shipped from that country or port to that port of discharge, be charged, levied, collected and paid on such goods on their importation into the Union, in addition to the duties otherwise prescribed, a freight dumping duty equal to the difference between the rate of freight or freight charges actually paid and the minimum rate of freight so determined and notified.

Special Duties on Iron and Steel Products.—Section 9 of Act No. 25 of 1936 provides that—

(*a*) Whenever, after report by the Board of Trade and Industries, the Minister is satisfied that iron and steel products of any particular class or kind manufactured in the Union have been or are being or are likely to be exported to the Union at a price that would cause detriment to the iron and steel industry in the Union, and is further of opinion that it would be in the public interest to levy in respect of such goods a special duty, the Minister may from time to time determine, in respect of that particular class or kind of iron and steel products, a price on board ship at any of the several ports of discharge in the Union, or at any of the several ports in Africa at which goods are discharged for removal overland to the Union, below which price that class or kind of goods shall not be imported into the Union through that port; and shall thereupon notify the same in the *Gazette*: Provided that the price so determined and notified shall be an amount which, in the opinion of the Minister, based upon a report made by the Board of Trades and Industries, does not exceed the fair average price on the world's markets, plus normal insurance and freight charges to the port of discharge.

(*b*) If, after the issue of such notification, any person imports into the Union any goods of a class or kind, to which in terms thereof such price is applicable, at a c.i.f. price which is less than the price so determined and notified, in respect of the port of discharge of such goods, there shall be charged, levied, collected and paid on such goods on importation into the Union, in addition to any other duties payable thereon, a special duty, equal to the difference between the said c.i.f. price and the price so determined and notified.

(*c*) If, after the issue of such notification, any goods of a class or kind to which on terms thereof such price is applicable are sold or offered for sale by the importer or any other person at any price in the Union in the ordinary course of trade for an amount which is less than the price so determined and notified plus landing, transportation and delivery charges and the duties payable under the principal Act and this Act, there shall be charged, levied, collected and paid on such goods in respect of their sale a special sales duty which shall be equal to the difference between the selling price and the price so determined and notified plus the charges and duty mentioned in this sub-section, and which shall be payable by the person so selling such goods or offering such goods for sale; Provided that the Minister may, if he is satisfied that the goods have deteriorated in quantity or value after importation, reduce, in respect of such goods, the price so determined and notified, and the special sales duty upon such goods shall thereupon be charged, levied, collected, and paid accordingly.

(*d*) For the purpose of this section "c.i.f. price" shall mean the price paid or to be paid by the importer for the goods on board ship at the port of discharge including insurance and freight charges, or the export price as defined in section 19 of the principal Act together with insurance and freight charges paid or to be paid for conveyance of the goods to the port of discharge.

(*e*) No special duty or special sales duty shall be payable under this section in respect of goods which were shipped to the Union on or before the 22nd of May, 1936, or which the Commissioner of Customs is satisfied were purchased or ordered before that date for shipment to the Union in order that they may be used in the fulfilment of contracts entered into before the 22nd day of May, 1936, for the erection of buildings or constructional works.

(*f*) The Minister shall, in the course of each ordinary session of Parliament, lay upon the Tables of both Houses of Parliament a report showing the prices charged by producers in the Union for the classes and kinds of iron and steel products in respect of which

a price has been determined and notified in terms of this section, and the prices charged for those classes and kinds of goods by producers in the principal countries from which such goods are exported to the Union.

(The prices determined in terms of (*a*) are stated in Government Notice No. 327 of 1937, as amended by Government Notices Nos. 459 and 540 of 1937.)

The following dumping duties imposed and operative in terms of Chapter 11 of Act No. 36 of 1925, as amended, were effective and in force on the 31st December, 1938:—

Exchange dumping duties were imposed under Government Notice No. 1119 of 1932, as amended by Government Notices Nos. 370 of 1933 and 422 and 1141 of 1934, and supplemented by Government Notices Nos. 986 and 1164 of 1933 and Nos. 185 and 977 of 1935, on specified articles imported into the Union from the United Kingdom and Northern Ireland, Irish Free State, Australia, New Zealand, Canada, the Argentine, Norway, Sweden, Denmark, the Province of Mozambique, and Uruguay; and similar duties were imposed under Government Notices Nos. 229 of 1932 as amended by Government Notices No. 1200 of 1932, No. 370 of 1933, and No. 1457 of 1934, and supplemented by Government Notices Nos. 185, 586, and 977 of 1935, and 43 of 1936, on certain articles imported from India and Japan.

Free List.—The goods described in Class XV of the tariff are admitted into the Union under rebate of customs duty to the extent specified in the respective items of the said class, subject to such conditions and regulations as the Minister may prescribe, and provided that the goods are imported for use only in the manufacturing industry mentioned in each instance. Rebate of customs duty will not be allowed in terms of sub-section (1) except in respect of goods imported for use in a factory—

(*a*) which is situated in an area approved by the Minister;

(*b*) which has been registered under the *Factories Act*, No. 28 of 1918, or any amendment thereof; and

(*c*) in which the number of operatives employed exceeds a number to be specified by the Minister in respect of the particular industry carried on in that factory.

5. **Customs Tariff.**—Owing to the magnitude and complexity of the new three-line tariff introduced under the provisions of Act No. 44 of 1935, it is not possible to include the tariff in the form in which it appeared in *Official Year Book* No. 15 and previous issues.

Section 12 (1) of Act No. 36 of 1925, as amended, empowers the Governor-General to proclaim rebates or refunds of duty, subject to compliance with the regulations set out in the relative proclamation, on a variety of goods including goods imported into the Union and exported therefrom to specified countries; imported materials used in the manufacture of goods exported to certain countries; travellers' samples; tourists' personal effects; settlers' household effects; goods for experimental purposes; any article which is a raw material or essential requisite of any industry and in respect of which the Board of Trade and Industries recommends such rebate; and goods of Union origin or manufacture which have been exported from the Union and returned or brought back.

Two publications are issued annually, (i) The Customs Tariff Booklet containing the detailed tariff, together with any regulations which may have been issued in respect of any item, and (ii) The Customs Act Booklet, which contains the enabling Act, No. 36 of 1925, together with particulars of any special or dumping duties leviable in addition to the ordinary duties provided for in the tariff, and details of all rebates and relative regulations which have been proclaimed. These booklets are obtainable from the Government Printer, Pretoria.

§ 3. Imports and Exports.

1. **South African Overseas Trade, 1826 to 1909.**—The earliest statistics relating to the overseas trade of South Africa are those of the Cape of Good Hope, which date from 1826. From the year 1862 records of imports and exports through Durban are available, and from 1905 the figures relative to the trade with the Transvaal through Delagoa Bay become accessible, although the railway line from Lourenco Marques and the Transvaal was opened in 1894. Prior to this date, the whole of the trade of the States now constituting the Union was carried through Cape and Natal ports, but after the opening of the Delagoa Bay-Transvaal railway line an increasing volume of trade was carried along that route.

Summarized particulars of the South African overseas trade from 1826 to 1909 will be found in the sixth and previous issues of this *Year Book*.

2. **Imports and Exports from 1906.**—The value of imports and exports from 1906 to 1909 in respect of the territories constituting the Union, and in respect of the Union from 1910, is given in the subjoined tables (i) and (ii), together with the balance of trade for the period from 1906. Table (iv) shows the value of imports and exports from 1906, with the value per head of the mean population, and per head of the mean European population, and the proportion per cent. of exports to imports.

From 1926 gold and silver from Rhodesia, Tanganyika, and Mozambique refined in the Union are included in both imports and exports at the value of the bullion content. Previous to that date they were omitted from the statistics.

Gold Premium.—The following method has been employed in calculating the gold premium for 1933 and 1934: the monthly exports and imports of gold bullion and specie have been valued at the prices of gold announced by the Chamber of Mines each month, plus an allowance for the difference between the average price of gold declared for the year's output and that ultimately

received for the output by the gold mines. As from 1935 the gold premium is based on the price of gold ruling at the date of importation or exportation. Table (iii) gives the value of the gold premium from 1934. These figures have been included in the values of gold bullion and gold specie wherever these appear in this chapter.

Gold Earmarked.—During the latter half of 1938 the South African Reserve Bank published a notification to the effect that it was now also holding gold, specially earmarked, for the account of other banks and customers. The quantity so held on the 31st December, 1938, was 2,821,207 fine ounces, valued at £20,714,902, and for purposes of comparability these figures have been included in the export statistics wherever applicable.

(i) VALUE OF IMPORTS OF MERCHANDISE, GOVERNMENT STORES, AND SPECIE, AND RE-EXPORTS FROM 1906.

Year.	Imports.				Imported Goods Re-exported.
	Merchandise.	Government Stores.	Specie.	Total.	
	£	£	£	£	£
Pre-Union Average 1906-09	26,150,386	1,301,050	1,008,226	28,459,662	1,109,673
Union— Average:

3. **Imports.**—Statistics of imports from countries overseas and from the neighbouring territories are compiled by the Department of Customs and Excise, and the analysis which appeared in *Official Year Book* No. 19 and previous issues was compiled in the Census Office according to a classification which was adopted about twenty years ago. The Union of South Africa is a party to the 1928 International Convention on Economic Statistics, and during 1938 adopted the International List of Trade Commodities as prepared by the Committee of Statistical Experts. Statistics on this basis, commencing with the year 1937, have been compiled and published by the Department of Customs and Excise, and the table following gives particulars of imports in an abridged form. Comparable statistics for 1935 and 1936 are also given.

	GRAND TOTAL	75,345,270	86,304,084	103,383,626	95,886,917

* Includes gold premium on gold specie.

4. **Exports.**—The following tables give particulars as to the value of various classes of articles, the quantity and value of various articles in detail, and the total value of articles the produce of the Union exported each year from 1910. Want of space necessitates the elimination from Tables (iii) to (vi) of the averages for the years 1915-19 and 1920-24, but these may be obtained from earlier issues of the *Year Book* (Nos. 7 to 16).

In view of the fact that a considerable portion of the gold output was being exported in the form of gold coin, the figures for gold specie have been included since 1925 to enable a more satisfactory comparison to be made with the figures for previous years. Silver and copper specie are, however, excluded. The value of the gold premium is included in the figures where applicable, and from 1938 the value of gold earmarked has also been added (see paragraph 2 above).

For the years 1910 to 1934 the value of removals to Southern and Northern Rhodesia and South West Africa was shown in a separate column, but as from 1935 these figures have been included under the various classes.

In the following tables 1 ton=2,000 lb.

(i) VALUE OF EXPORTS FROM 1910 (INCLUDING SHIPS' STORES).

Year.	Living Animals.	Agricultural and Pastoral Produce.	Products of Mines.*	Other Articles.	Exports to Rhodesias and South West Africa.	Total South African Products.*	Imports Re-exported.	Grand Total.*

* Includes gold earmarked.

6. **Foreign Trade.**—The tables below give particulars as to the value of the trade carried on by the Union with certain British and other countries since 1910. Imports are credited, where possible, to the country in which the goods have been manufactured, grown, or produced. Where the particulars of origin are not available, the goods are credited to the country from whence shipped. Exports are credited to the countries of final destination as far as can be ascertained up to the time of shipment. A considerable proportion of the goods declared to be for export to the United Kingdom is distributed from that country over Europe, but as the ultimate country of destination is unknown when the consignment leaves South Africa, the export figures are credited to the United Kingdom; to a less degree this also applies to exports consigned to Antwerp and Rotterdam. In the case of goods consigned on an optional bill of lading the country of delivery is subsequently ascertained. From the restoration of more or less normal relations after the war up to 1922, the direction of trade, as far as imports were concerned, tended to revert to pre-war conditions except in the case of Rhodesia and Kenya Colony, with which countries there was considerable trade expansion. Among the new European States the most notable increases in imports occurred in the imports from Czechoslovakia, chiefly cyanide of sodium, beads, glassware, shoes, and textiles, and from Finland, chiefly wood and paper. The outstanding feature of exports was the increase in the trade with the Continent of Europe, where France, Belgium, Germany, Holland, and Italy are the Union's chief foreign customers. These countries take considerable quantities of wool, hides and skins, maize, and bark. Belgium and Holland import diamonds. Some of the Union's gold export, though sold in London, went to the United States, and the same country was one of the best customers for diamonds.

Outside of Europe and Africa the greatest increases in imports have been from the United States, Canada, Japan, and the Netherlands Indies. Exports to those countries have increased considerably though on nothing like the same scale.

† Includes gold earmarked, 2,821,207 fine ounces.

§ 4. General Features of the External Trade.

1. **Vessels Entered at Union Ports, 1937 and 1938.**—The tonnage of vessels entered at Union ports in 1938 was 4 per cent. more than in 1937. The cargo landed showed a decrease of 5 per cent. compared with that of 1937. The percentage of British tonnage decreased from 63·85 per cent. in 1937 to 62·23 per cent. of the whole in 1938.

NUMBER AND TONNAGE OF OVERSEAS VESSELS ENTERED AT UNION HARBOURS AND TONNAGE OF CARGO LANDED AND SHIPPED, 1937 AND 1938.

1938	732	4,099	11	63	3,417	545

3. **Principal Exports since 1914.**—The succeeding tables give comparisons in respect of some of the principal articles of South African produce, showing in each case the quantity exported, the recorded value, the value assessed at the 1909 price, the value assessed at the previous year's price, showing gain or loss, together with an index number calculated upon the average price for the years 1909 to 1913 (=1000). The figures for the years 1929 to 1934 exclude removals to Rhodesia and South West Africa and ships' stores. From 1935, the figures represent total exports of South African produce.

PRINCIPAL EXPORTS OF SOUTH AFRICAN PRODUCE, 1914 AND 1929 TO 1938—QUANTITY, VALUE ON DIFFERENT BASES, AND INDEX NUMBERS.

Year.	Quantity.	Actual Value Recorded.	Assessed Value at 1909 Price.	Assessed Value at Previous Year's Price.	Gain or Loss (−) Compared with 1909 Price.	Gain or Loss (−) Compared with Previous Year's Price.	Export Unit Value.	Index Number of Export Unit Value. (1909–13 =1000.)

4. Variation of Export Values.—The following tables show the variation in the value of exports, divided into four categories: (i) living animals, (ii) produce of the land, (iii) produce of the mines (excluding gold), and (iv) other articles. Table (v) is a summary of the preceding four. Table (vi) is similarly a summary of the first four tables, with the addition of gold.

The second column in the tables shows the recorded values of exports, the third the values at the average 1909–13 prices. The last two columns show the index numbers (1) of the volume of exports, and (2) of the export values. About 98 per cent. of the exports are shown by quantities as well as values in the annual statements of the Customs Department. In the case of the remaining 2 per cent., where values only are recorded, changes of value have been applied proportional to the other articles in their appropriate class.

Particulars for earlier years were published in previous issues of the *Official Year Book*. A statement covering the period 1909 to 1929 appeared in No. 12.

VARIATIONS IN VOLUME AND VALUE OF EXPORTS (S.A. PRODUCE) FROM 1929.

(Including Ships' Stores but excluding Removals to Rhodesia and South West Africa.)

Year.	Recorded Value.	Value at 1909–13 Average.	Effect of Change of Price.		Index No. of Volume of Export (Average 1909–13 = 1000).	Index No. of Export Values (Average 1909–13 = 1000).

† Includes gold earmarked.

5. **Variation of Import Values.**—The following tables show the variation of the values of imports divided into three categories: (i) Food and Drink, (ii) Raw Materials, and (iii) Manufactured Articles. Table (iv) is a summary of the preceding three. As far as possible a method of calculation was pursued similar to that followed in the case of exports. As, however, only one-third of the imported articles have quantities as well as values recorded, investigation of other sources of information was necessary. Details of the exports from the United Kingdom to South Africa in the former's trade returns, which are more detailed as to quantities, were extracted and collated with the variations of wholesale prices. Assistance was given by the British Board of Trade. The final results, tabulated below, though not purporting to be absolutely correct, may be taken as substantially accurate. Owing to a considerable accumulation of additional information of a quantitative nature, calculations since 1926 have first been made with 1925 as a base, and then readjusted to the index numbers of that year in order to preserve the continuity of the tables. Confirmation of the limits between which the margin of error might lie is afforded by a comparison of the weight of overseas cargo landed at Union ports and the index of volume arrived at from the above calculation. The results are indicated hereunder. In the former case the year 1913 (the first for which details are available) is taken as the base equal to 1111, the index of volume for that year.

	Overseas Cargo Landed.	Index of Volume of Imports.		Overseas Cargo Landed.	Index of Volume of Imports.
1913	1111	1111	1926	1291	1245
1914	906	927	1927	1386	1306
1915	740	791	1928	1494	1436
1916	782	880	1929	1655	1575
1917	628	663	1930	1438	1309
1918	520	690	1931	1177	1227
1919	555	570	1932	931	989
1920	964	895	1933	1119	1270
1921	612	618	1934	1506	1693
1922	682	712	1935	1736	1867
1923	923	851	1936	2088	2109
1924	1101	1041	1937	2358	2362*
1925	1165	1120	1938	2241	2194

* Amended figure.

Owing to the immense variety of merchandise and also to the fact that information of the weight of cargo landed at Lourenco Marques is not available, no complete comparison can be made between the two sets of figures. The fact, however, that the figures show a remarkable degree of correspondence confirms the general accuracy of the calculations given below.

Particulars for earlier years were published in previous issues of the *Official Year Book*. A statement covering the period 1909 to 1929 appeared in No. 12

VARIATIONS IN VOLUME AND VALUE OF IMPORTS (INCLUDING IMPORTS OF GOVERNMENT STORES, BUT EXCLUDING IMPORTS FROM RHODESIA AND SOUTH WEST AFRICA).

1938	1,258,139	1,172,304	502,625	12,513	120,345	1,305,162

9. **Actual Cost of Imports.**—Owing to the method of declaring the value of imports [see § 2, 1 (vii)], some items have to be declared at values exceeding the price actually paid for them. On the other hand the cost of freight and insurance, and buying commissions not exceeding 5 per cent., are omitted. From 1933 importers have been required to state separately the total amount of the cost, insurance, freight, commission, and other charges paid on board ship at the port of entry into the Union. From 1922 to 1933 the cost of freight and insurance only was obtained and details will be found in *Official Year Book* No. 17 and previous issues.

The following table shows the difference between the two sets of figures for the years 1935 to 1938. The excess of the c.i.f. and c. values over the declared values of merchandise and government stores imported from overseas, less imports by post as shown at the bottom of the table, is the amount that should be added to the declared value of imports to obtain the actual cost of imports. Calculations for earlier years will be found in previous issues of the *Year Book*.

	1935.	1936.	1937.	1938.
Declared value of—	£	£	£	£
Merchandise and Government Stores Imported from Overseas	74,284,445	85,296,612	102,353,407	94,805,835
Less Goods Received through the Post	1,815,990	1,975,152	2,103,104	2,071,276
(*a*) Balance at Declared Values	72,468,455	83,321,460	100,245,303	92,734,559
(*b*) Calculated c.i.f. and c. Values	77,626,171	89,156,000	107,876,000	100,358,000
EXCESS OF (*b*) OVER (*a*).....£	5,157,716	5,834,540	7,630,697	7,623,441

§ 5. Trade Commissioner Service.

1. **Trade Commissioner Representation.**—(i) *London.*—Until within a short time of the constitution of the Union the Cape was the only South African Government to have its own special trade representative in the United Kingdom. Just before the formation of the Union, however, the Natal Government appointed an officer under the title of Commercial Agent, and both the Transvaal and Orange River Colony had attached to the offices of their Agents-General in London officers specially charged with the supervision of trade and commercial matters. On the establishment of Union in 1910, these offices were merged in one and placed under the control of an officer styled the Trade Commissioner for the Union of South Africa, who with his staff forms an integral portion of the High Commissioner's Office in London, and is concerned with the marketing of products of the Union of South Africa in the British Isles.

(ii) *Continent of Europe.*—At the beginning of 1922 the first official Commercial Office of the Union of South Africa on the Continent was created, with headquarters at Rotterdam. The headquarters were removed to Milan in 1925.

In 1929 the Union Government appointed Envoys Extraordinary and Ministers Plenipotentiary as its representatives abroad. The Office of the Commissioner for Commerce on the Continent of Europe was then abolished, and in its stead two Commercial Counsellors were appointed in Europe, one for the northern European States with headquarters at the South African Legation, Berlin, the other for the southern and eastern European States with headquarters at the South African Legation, Rome. During 1938 the posts of Commercial Counsellor, Berlin, and Commercial Attachés at Paris and the Hague, were abolished and replaced by posts of Commercial Secretary. A Union Consulate is maintained at Hamburg under the control of the South African Legation at Berlin. The staffs of the Union's legations at Lisbon, Brussels, and Stockholm handle commercial matters affecting their particular areas.

Honorary trade commissioners have been appointed at Gothenburg, Sweden; Oslo, Norway; Genoa, Italy; and Rotterdam, Holland.

(iii) *Canada.*—An Accredited Representative for the Union, with offices in Ottawa, was appointed during 1938. The duties of the Accredited Representative include amongst others the development of the Union's export trade to Canada. There is also an honorary Trade Commissioner stationed at Vancouver.

(iv) *America.*—The Union's trade interests are represented by a Consul at New York, appointed during 1938, and a Commercial Attaché assigned to the South African Legation at Washington, D.C. An honorary Trade Commissioner is stationed at San Francisco, California.

(v) *East Africa, Mozambique, Batavia, and China.*—The Commissioner for the Union in East African Territories, whose headquarters are at Nairobi, also acts as its Commercial Representative. A Union Consulate is maintained at Lourenco Marques, and in the Far East a Trade Commissioner's office exists, with headquarters at Batavia, and sub-offices at Singapore and Calcutta.

An honorary trade commissioner is stationed at Shanghai, China.

The two Assistant Trade Commissionerships for East and West African Territories, created in October, 1934, have been abolished. To replace these the post of Commercial Attaché for East African Territories, with headquarters at Nairobi, and the post of Trade Commissioner for North and West African Territories, with headquarters at Tangier, were created with effect from 1st January and 1st February, 1938, respectively.

2. **Activities.**—The functions of the Union's trade representatives are to explore the marketing possibilities of South African products abroad, the development and extension of the Union's export trade, the establishment of new markets, and the collection of information relating to commercial conditions overseas. These activities are co-ordinated by the Department of Commerce and Industries at Pretoria, which undertakes the dissemination of the data collected and forwarded to the Union for the information of producers and exporters.

Trade propaganda takes the form of exhibitions and displays, organized and conducted by the trade commissioners, participation in industrial and commercial fairs, and general trade advertising. The resulting trade inquiries are passed to the Union for the attention of exporters. Through the medium first of the trade commissioners abroad, and secondly of the Department of Commerce and Industries, producers in the Union can, accordingly, be brought into touch with prospective buyers overseas.

Shipments of perishable products from the Union are examined at the Southampton docks by the staff of the Trade Commissioner, and reports as to condition and quality are forwarded to the Union. The disposal of consignments is followed up and market reports are prepared, whilst auction sales of Union products are attended and reported upon. Where goods fall short of market requirements, directions are indicated in which improvement in packing, quality, or grading are desirable.

Ruling prices of the Union's products are reported by cable, and any important information regarding future marketing possibilities is immediately conveyed to the Union. Changes in foreign customs tariffs which affect the export trade of the Union are immediately notified.

The trade representatives attend conferences held in their respective areas in order to protect the interests of South African trade. The Trade Commissioner, London, has a seat on several important bodies affecting commerce, which have been created by mutual agreement at previous Imperial Conferences.

3. **H.M. Trade Commissioner Service in South Africa.**—The post of His Majesty's Trade Commissioner was created in 1908, as a result of the Imperial Conference of 1907. An officer was appointed for each of the four larger Dominions by the Board of Trade, to co-operate with their Commercial Intelligence Branch, which was afterwards re-organized as the Department of Overseas Trade, in fostering British trade, and to undertake work similar to the commercial side of the activities of the British Consular Service in foreign countries. The scheme was in the nature of an experiment, and the organization proportionately small. The four trade commissioners were respectively instructed to open offices at Capetown, Melbourne, Montreal, and Wellington. In 1918 steps were taken to carry out an important scheme of development as recommended by the Dominions Royal Commission, and it was decided to appoint trade commissioners in Calcutta and Bombay, the West Indies (Port of Spain, Trinidad), the East Indies (Singapore), as well as additional trade commissioners in the Dominions. Since then further posts have been created in the Irish Free State (Dublin), East Africa (Nairobi), and Rhodesia (Salisbury).

The service has two offices in the Union, at Capetown and Johannesburg. The Trade Commissioner at Johannesburg is specially concerned with the trade of the Transvaal, and matters relating to the other provinces and South West Africa are attended to by the Trade Commissioner at Capetown. A Senior Trade Commissioner with jurisdiction over the two offices is also stationed in Capetown. Imperial trade correspondents, who co-operate with the trade commissioners, have been appointed in Durban, Port Elizabeth, and Windhoek, and in Maseru.

The primary object of the trade commissioner is to direct importers in South Africa, whether of finished manufactures, machinery for local production, or raw materials, to United Kingdom sources of supply, and generally to work for the promotion of trade within the Empire. This obviously entails a close study of local requirements and of foreign competition in this market, as well as a knowledge of the capabilities of British producers and manufacturers overseas. It is also clear that there is almost unlimited scope for work in this field. The work is complementary and parallel to that of the Union Trade Commissioner in London, with whom the Department of Overseas Trade in London and the trade commissioners in South Africa are in constant touch.

His Majesty's Senior Trade Commissioner in South Africa is Mr. W. Peters, C.M.G., stationed at Capetown, the Trade Commissioner at Johannesburg is Mr. J. W. Brigden, and the Trade Commissioner at Capetown is Mr. C. Kemp.

4. **Canadian Trade Commissioner in South Africa.**—The Canadian trade commissioner service was established by Order-in-Council on the 21st November, 1891, and the first officer was appointed in 1894. Since then the service has extended, and at present there are thirty-four Canadian trade commissioner offices in various parts of the world, including two in South Africa. The present officers in South Africa are Mr. J. C. Macgillivray, Trade Commissioner, and Mr. H. W. Brighton, Assistant Trade Commissioner, Capetown; Mr. J. H. English, Trade Commissioner, and Mr. J. C. Britton, Assistant Trade Commissioner, Johannesburg. In addition, arrangements were made by the Canadian Government with the British Government in 1912, whereby a large number of British consuls were placed at the disposal of Canadians who may wish to consult them on trade matters.

The purpose of the Canadian trade commissioner service is to promote the sale of Canadian products abroad, and to provide Canadian manufacturers and exporters with information regarding trade conditions in countries where Canadian goods are likely to find a market. Within the British Empire, they also have instructions regarding co-operation with other Canadian government departments in such matters as distressed nationals, immigration, and similar subjects of general Canadian interest. Within the Empire, they are likewise instructed to assist exports to Canada.

The Canadian Government has subsidized monthly steamship services to South African ports from the ports of Montreal and St. John in eastern Canada and Vancouver in western Canada.

5. **American Commercial Attaché in South Africa.**—The trade promotion activities of the American Government are concentrated in the Bureau of Foreign and Domestic Commerce, which is a part of the United States Department of Commerce, established as a separate department in 1912. This bureau now has eleven industrial, eleven economic, and eight administrative divisions, with a staff of about 300 in Washington, D.C. In addition, there are twenty-five district offices located in the principal commercial centres in the United States, and fifty-five co-operative offices, which are maintained by local chambers of commerce. In the foreign field, the Department of Commerce maintains thirty-four offices, including the Johannesburg office, which was opened in 1920. The Johannesburg staff consists of the Commercial Attaché, Mr. Clayton Lane, and the Assistant Trade Commissioner, Mr. Frederick J. Cunningham. In addition to these resources, the Department has the active co-operation of about 1,000 American diplomatic and consular officers, located in every part of the world.

The chief function of the Bureau of Foreign and Domestic Commerce is to render assistance to American commerce in its broadest sense: in addition to replies to business inquiries, information on general commercial conditions, as well as on various trades and industries, is made available to the business public through many channels, especially through the publications of the Bureau, the most important of which is a weekly publication, *Commerce Reports*. Accurate, up-to-date reports, which can be of practical value to American manufacturers and exporters, are received in Washington by cable and mail, and are promptly disseminated.

6. **French Commercial Attaché in South Africa.**—Since the establishment in 1919 of the "Services français d'Expansion Commerciale", a special division of the French Department of Commerce (Ministère du Commerce), there has been a considerable development of the official efforts for the promotion of overseas trade.

Commercial attachés have been appointed in foreign countries. They number now more than sixty. One of their chief functions is to find reliable French firms which can be put in touch with importers desirous of securing French products. In order to be well acquainted with the changes in production which may take place, the commercial attachés go periodically to France, where they get in touch with the various producers or manufacturers through their syndicates or chambers of commerce. They also report to the Ministry of Commerce on economic and commercial conditions in the countries where they are stationed. This information is collected by a special division of the Ministry of Commerce, the "Service de Renseignements pour le Commerce Extérieur", and is communicated when required to the interested parties through the medium of an official publication, the *Moniteur Officiel du Commerce et de l'Industrie*.

A French Commercial Attaché has been stationed in the Union since 1925, and his functions are to foster and extend the trade relations between the two countries and to endeavour to open up commercial relations between the Union and the French colonies. The Johannesburg staff consists of one Commercial Attaché, Monsieur Yves Lederlin, and one Secretary-General, Monsieur René Miot. The head office is at 24, Geneva House, Johannesburg, where inquiries as to French trade and industries, or as to securing French agencies or purchasing French products, should be addressed.

7. **Trade Commissioner for the Netherlands Indies.**—In March, 1934, the Government of the Netherlands Indies appointed a Trade Commissioner for the Union of South Africa, in the person of Mr. F. Heckman, who established his office at Durban.

The purpose of this appointment was to promote trade relations between the two countries. The establishment of a direct shipping line in 1931 by the Royal Packet Navigation Company [K.P.M. (Pty.), Ltd.] to trade between the Union of South Africa and the Netherlands Indies has been of material assistance in achieving this object.

§ 6. Excise Duties.

Excise Duties Imposed.—Particulars of excise legislation, both before and since the establishment of the Union, will be found in previous issues of the *Official Year Book* (Nos. 1 to 3). Details as to revenue collections of excise are given in Chapter XV.

(i) *Spirits and Beer.*—The following table shows the duties and the rebates allowed under Act No. 35 of 1921.

TARIFF OF EXCISE DUTY ON SPIRITS AND BEERS MANUFACTURED IN THE UNION (ACT No. 35 OF 1921).

ARTICLE.

Spirits.	Rate of Duty.
	£ s. d.
Wine brandy, viz., spirits distilled from wine or must produced solely by the alcoholic fermentation of the juice of fresh grapes, per imperial proof gallon	0 12 6
Grape brandy, viz., the distillate resulting from the distillation solely of grape juice together with the husks, per imperial proof gallon	0 17 6
Dop brandy and spirits distilled from materials other than the produce of the vine, per imperial proof gallon	1 2 6
Mixtures of wine with wine brandy or grape brandy, when the alcoholic strength of such mixture exceeds forty and a half per centum of proof spirits; and mixtures of wine with spirits other than wine brandy or grape brandy, per imperial proof gallon	1 2 6
Beer brewed from worts of the specific gravity of not less than one thousand and twenty degrees, and not more than one thousand and thirty-nine degrees, per 36 imperial gallons	0 15 0
Beer brewed from worts of the specific gravity below one thousand and twenty degrees and above one thousand and thirty-nine degrees, per 36 standard gallons.... (With a proportionate increase or decrease for any difference in gravity.)	1 10 0
Lager beer produced from worts of the specific gravity of less than one thousand and forty degrees shall be charged at the higher rate of duty.	

TARIFF OF EXCISE DUTY ON SPIRITS AND BEERS MANUFACTURED IN THE UNION (ACT No. 35 OF 1921)—(*continued*).

Rebates of Excise Duties on Spirits.	Extent of Rebates.
(*a*) Spirits of a strength of 50 per cent. overproof and upwards, when methylated in the manner prescribed by regulation	The whole duty.
(*b*) Plain spirits used in the manufacture of medicinal preparations, flavouring essences, and perfumed spirits; subject to the approval of, and to conditions imposed by, the Commissioner of Excise	The whole duty less 7s. 6d. per imperial proof gallon.
(*c*) Plain spirits used for industrial purposes, and rendered unpotable to the satisfaction of the Commissioner of Excise	The whole duty.
(*d*) Plain spirits used by scientific or teaching institutions for burning, preserving, or experimental purposes, plain spirits used in, and essential for, the working of X-ray and similar apparatus, and plain spirits used in Government or public hospitals, under such safeguards as the Commissioner of Excise may impose	The whole duty.
(*e*) Wine brandy and grape brandy, used in the fortification or preservation of pure wine, subject to compliance with the provisions of any Act relating to excise duties, or any regulations issued thereunder	The whole duty.
(*f*) Rectified spirit used in the manufacture of ether, or other substance, by a process which causes the ethyl alcohol to undergo chemical change, and provided that not more than 2 per cent. by volume of ethyl alcohol remains in the resulting ether or other product	The whole duty.
(*g*) Spirits exported for consumption outside the limits of the Union	The whole duty.
(*h*) Spirits lost through evaporation, leakage, or other unavoidable cause, when such loss is proved to the satisfaction of the Commissioner of Excise	The whole duty.
(*i*) Spirits distilled in Natal from the products or by-products of the sugar-cane, when duty paid for consumption in Natal	5s. per imperial proof gallon.
(*j*) Plain spirits used in the manufacture of vinegar and acetic acid; subject to the approval of, and to conditions imposed by, the Commissioner of Excise	The whole duty, less 2s. per imperial proof gallon.
(*k*) Brandy distilled in a pot still, under excise supervision, wholly from pure wine or must the produce of fresh grapes, approved of by the Government Brandy Board, at a strength not exceeding 30 per cent. overproof, matured by storage in an approved warehouse in approved wood for a period of three years and certified by the said board to be pure wine brandy	3s. per imperial proof gallon.

NOTE.—The regulations under which rebates of excise duties on spirits manufactured in the Union are made were published in *Government Gazette* No. 2153 of the 15th December, 1933—Government Notice No. 1697, and Government Notice No. 2114 published in *Government Gazette* No. 2594 of 30th December, 1938.

(ii) *Cigarette Excise Surtax.—The Cigarette Excise and Surtax Act*, 1911, repealed the Cape Act of 1909, and re-enacted the tax throughout the Union. Instead, however, of the tax being collected by means of stamps affixed to each container at the time of their retail sale, the tax is now collected from the manufacturer by means of stamps affixed to the container before cigarettes leave the factory, or from an importer at the time of first importation or delivery from a bonded warehouse. Manufacturers overseas are allowed to purchase the necessary stamps and affix them to the containers of cigarettes at the time of manufacture. The schedule of the Act imposing these duties, as amended by Act No. 35 of 1922, reads as follows:—

(*a*) On all cigarettes manufactured in the Union, whether made from tobacco grown or produced therein, or from tobacco imported therein, or from a mixture of Union grown and imported tobaccos, an excise duty for every one-half ounce net weight or fraction thereof ½d.
(*b*) On all cigarettes imported into the Union and delivered for consumption therein, a surtax (in addition to the duty payable under the customs laws) for every one-half ounce net weight or fraction thereof ½d.

(iii) *Tobacco.*—Act No. 36 of 1925 repealed the duties imposed under Act No. 27 of 1924 and imposed the excise duties given in (*a*) and (*b*) below on tobacco manufactured in the Union, with similar customs duties on tobacco manufactured in a territory, the Government of which has entered into a customs agreement with the Government of the Union, on importation into the Union. Act No. 28 of 1933 imposed in addition the excise and surtax duties set out in (*c*).

(*a*) Ready for use in the making of cigarettes, per pound weight 6d.
(*b*) In the form of cigarettes, per pound weight 6d.
(*c*) On all cigarette tobacco manufactured in the Union whether made from tobacco grown or produced therein or from tobacco imported therein, or from a mixture of Union-grown and imported tobaccos, an excise duty for every two ounces net weight or fraction thereof 1½d.
A surtax of equivalent amount in addition to the duty payable under the customs laws is imposed on all cigarette tobacco imported into the Union.

(iv) *Sugar.*—The *Customs Amendment and Excise Duties Extension Act*, No. 22 of 1915, imposed a duty on Union sugar of 1s. per 100 lb. Act No. 37 of 1916 reimposed the duty until the 30th June, 1917; Act No. 36 of 1917 until 30th June, 1918; Act No. 20 of 1918 until 30th June, 1919; Act No. 32 of 1919 until 30th June, 1920; and the duty was made permanent by Act No. 44 of 1920.

(v) *Matches.*—The *Matches Duty Act*, No. 13 of 1914, imposed a duty on Union-made matches, and the duty was increased by Act No. 23 of 1923 to 1s. per gross of boxes containing not more than 100 matches, 2s. per gross of boxes containing not more than 200 matches, and so on in proportion for any increase in size of boxes.

(vi) *Playing Cards.*—Act No. 44 of 1920 imposed a duty at the rate of 3d. per pack (not exceeding fifty-three cards) on Union made playing-cards.

(vii) *Acetic and Pyroligneous Acids, etc.*—The *Excise and Customs Tariff Amendment Act*, No. 37 of 1913, imposed a duty on Union-made acetic and pyroligneous acids, extracts and essences of vinegar, as follows:—

If of a strength not exceeding the strength of proof, per gallon or fraction of a gallon.....	1s.
And in addition for each degree of strength in excess of the strength of proof, per degree.....	4d.

Proof held to be equal to 6 per cent. of absolute acid.

Under Act No. 44 of 1920, a rebate or refund of the excise duty is allowable in respect of acetic and pyroligneous acids manufactured in the Union, when used in the manufacture of chemical and other substances, not being articles intended for use as food, beverages, or condiments.

§ 7. Patents, Designs, Trade Marks, and Copyright.

1. **General.**—Act No. 9 of 1916, which was brought into force on the 1st January, 1917, repealed all previous legislation embraced in no fewer than thirty-two Acts and Proclamations of the various provinces, and made consolidated and comprehensive provision in respect of patents, designs, trade marks, and copyright in the Union. The administration of the Act is vested in the Minister of Justice, and the office concerned with each of the four subjects of the Act is expressly fixed at Pretoria, under a Registrar. Seals of office are provided for. Impressions of such seals are to be admitted in evidence and judicially noted. The Registrar may in any proceedings before him—

(*a*) receive evidence on affidavit or *viva voce* upon oath;
(*b*) summon witnesses and issue commissions *de bene esse*;
(*c*) order discovery or inspection and require the production of documents;
(*d*) award costs against any party to proceedings before him.

The registers kept under the Act are open to public inspection on payment of the prescribed fee. Penalties are provided for offences against the Act, including the making of false entries and of false statements. Officers of the Patent Office are forbidden to traffic in patents. Special penalty is enforceable in the case of the unauthorized use of the Royal Arms or the Arms of the Union upon any article.

Copies of the *Patent Act* and Regulations framed thereunder may be obtained from the Government Printer, Pretoria.

2. **Patents.**—The following persons, whether British subjects or not, may make application for a patent:—

(*a*) The inventor, either alone or jointly with one or more other persons; or
(*b*) the inventor jointly with the assignee of a part interest in the invention; or
(*c*) the assignee of the inventor, either alone or jointly with one or more other persons.

An application for a patent must be made in a prescribed form, and must contain a declaration as to the facts relied upon to support the application. A provisional or complete specification in quadruplicate must be supplied.

The Registrar may accept or refuse the application or may return the specification or drawing for amendment; but in the case of refusal, the applicant is permitted to appeal to the law officer. If the application and the specification have been accepted, the Registrar gives written notice of that fact to the applicant, and in the case of a complete specification transmits copies of the specifications to the Attorneys-General at Capetown, Pietermaritzburg, and Bloemfontein respectively. The acceptance, if of a complete specification, must be advertised not later than one month from the date

of such acceptance. Within two months after the last advertisement, or such further time as the Registrar may allow, any person may give notice to oppose such patent on any of the following grounds, but no other:—

(*a*) That the applicant has obtained the invention from the person giving such notice (hereinafter referred to as the objector), or from a person of whom the objector is the legal representative or assignee;
(*b*) that the invention has been fraudulently obtained to the prejudice of another's rights;
(*c*) that the complete specification describes or claims an invention other than that described in the provisional specification, and that such other invention forms the subject of an application, made by the objector in the interval between the leaving of the provisional specification and the leaving of the complete specification;
(*d*) that the invention is not novel, or is not capable of being patented in terms of the definition of invention in section *six* of the Act;
(*e*) that the person represented as being the inventor is not such;
(*f*) that the invention or the application of the same is contrary to law, public order, or good morals;
(*g*) that the complete specification does not sufficiently disclose or explain the invention or the manner in which it is to be performed.

Opposed applications are heard and determined by a judge. If there is no opposition, or if an opposed application is determined in favour of the patent, a patent is granted on payment of the prescribed fee, and the patent is sealed. The term limit of a patent is fourteen years from its date, subject to extensions, which must be applied for under prescribed procedure. The effect of a patent is to grant to the patentee, subject to the Act and the conditions of the patent, full power, sole privilege, and authority, by himself, his agents, and licensee during the term of the patent, to make, use, exercise, and vend the invention within the Union, so that he shall have the sole profit and advantage thereof.

Provision is also made for patents of addition, the restoration of lapsed patents, the revocation of patents, and the issue of a single patent for cognate inventions. Certain provisions are made as to procedure in respect of actions for infringements of patents. A patent may be acquired by the Government by agreement with the patentee or by arbitration. The inventor of any improvement in instruments or munitions of war may assign the patent to the Government.

Any person resident in the Union on passing the prescribed examination, and on paying to the Registrar a fee of £5, may be registered as a patent agent. Attorneys are entitled to practise as patent agents without passing an examination.

Fees.—The following fees are payable in respect of a patent:—

On filing application for patent	£1
On filing complete specification	£3
On sealing patent	£1

Renewal Fees.

1. Before the expiration of the third year from the date of the patent	£4
2. Before the expiration of the seventh year from the date of the patent	£6
3. Before the expiration of the tenth year from the date of the patent	£10

NOTE.—Any or all of the payments for renewals may be made in one sum.

3. **Designs.**—The Registrar may, on the application (made in the prescribed form and manner) of any person claiming to be the proprietor of any new or original design not previously used in the Union, and not described in any printed publication, nor registered or patented in the Union or in any other country, register the design under the Act. A certificate of registration is then given. The effect of registration is to give the proprietor copyright for a period of five years. Extension of the period may be authorized on application and payment of the prescribed fee.

4. **Trade Marks.**—A registrable trade mark must contain or consist of at least one of the following essential particulars:—

(*a*) The name of a company, individual, or firm represented in a special or particular manner; or

(*b*) the signature of the applicant for registration or of some predecessor in his business; or

(*c*) an invented word or invented words; or

(*d*) a distinctive word or words not reasonably required for use in the trade; or

(*e*) any other distinctive mark.

The Registrar may refuse to register a trade mark which contains—

(*a*) a representation of the King or any member of the Royal Family, or of the Royal Crown; or

(*b*) the word "Royal" or any word, letter, or device indicating Royal or Government patronage; or

(*c*) a representation of the Royal Arms, or of a national flag of the United Kingdom, or of the national arms of the United Kingdom, or of the Arms or Seal of the Union; or

(*d*) a representation of any living person without his written consent.

Any person claiming to be the proprietor of a trade mark may apply for its registration in accordance with prescribed procedure, and the Registrar's refusal to register may be appealed against. Opposition to registration may be noted. The registration of a trade mark is for fourteen years, but may be renewed from time to time upon payment of the prescribed fee. A trade mark may be removed from the register if the conditions as to use and renewal are not complied with.

5. **Copyright.**—The British *Copyright Act*, 1911, has been given effect in the Union, subject to certain slight modifications. The result is that copyright subsists in every original dramatic, musical, or artistic work if, in the case of a published work, the work was first published within any part of the British Dominions; and if, in the case of an unpublished work, the author was at the date of making of the work a British subject or resident within the British Dominions. The Union is a member of the Copyright Union and has acceded to the Rome Convention (see Proclamation No. 32 of 1936). The effect of this proclamation is to extend copyright protection within the Union to works published in or made by any of the subjects of any of the countries of the Copyright Union. Reciprocal arrangements as to protection of copyright also exist between the Union and the United States of America (Proclamation No. 118 of 1924), the Irish Free State (Proclamation No. 185 of 1930), and the Federated Malay States (Proclamation No. 39 of 1933). Provision is made for the registration of copyrights, but registration is optional, since copyright subsists apart from registration. Registration is, however, notice to the world of the existence of copyright.

Under section 150 of the *Copyright Act*, No. 9 of 1916, it is compulsory for the publisher of every book first published in the Union, whether printed therein or not, to send free of charge, within one month after such book has been delivered out of press, one of the best copies of such book produced, to each of the following libraries: British Museum, London; South African Public Library, Capetown; Library of the Natal Society, Pietermaritzburg; State Library, Pretoria; and the Bloemfontein Public Library. In the case of a work published in serial form or in parts, a copy of each part or number has to be sent.

Any publisher who fails to comply with this provision is liable, on conviction, to a fine not exceeding £5 and the value of the book. A certificate given under the hand of a librarian of a benefiting library, to the effect that a copy of a book has not been delivered, shall be deemed to be sufficient evidence.

The expression "book" includes every part or division of a book, pamphlet, sheet of letterpress, sheet of music, map, plan, or chart separately published. Subsequent editions of a book are included if they contain any alterations.

Copyright in works prepared or published by or under the direction or control of any government department is vested in the Government Printer, in terms of section 18 of the British *Copyright Act*, 1911, and extracts therefrom for publication may be made only by permission, for which application should be made to the Government Printer, Pretoria (Government Notice No. 2, dated the 22nd December, 1930, *Government Gazette* of the 2nd January, 1931).

6. **Applications for and Registrations of Patents, etc.**—The subjoined tables give for a period of years particulars as to the number of applications and registrations in respect of patents, trade marks, and copyright in the Union, together with details of the countries of origin of patents and trade marks and the classes of copyright works registered.

* Amended figure.

§ 8. Trading and other Licences.

1. **Description and Scale of Licences.**—Act No. 32 of 1925 (as amended), which has had effect as from the 1st January, 1926, has two schedules appended containing a list of specified trades, professions, and occupations for which licences have to be taken out before the trade, profession (see below), or occupation may be carried on. The *First Schedule* provides for the following

licences, which have full force and effect throughout the Union wheresoever they may be issued, except in the case of those which, in terms of the schedule, are required for or restricted to specific premises or areas.

(i) Agent of Foreign Firm.
(ii) Banker or Banking Institution.
(iii) Commercial Traveller.
(iv) For the Sale of Fireworks.
(v) Newspaper Publishers.

The duties collected in respect of these licences accrue to the Consolidated Revenue Fund.

The *Second Schedule* contains a list of licences, shown by an asterisk in the list below, which have force and effect only within the province in which they are issued, save in those cases in which other provision is specially made, either in the schedule itself or elsewhere in the Act. The duties collected in regard to these licences accrue to the Provincial Revenue Fund of the province in which liability for such licence duties arises. The Ordinances of the various provinces provide, in addition, for a number of licences, the duties on which are assigned to provincial revenue.

Professional licences.—In terms of section *four* of Act No. 17 of 1938, Provincial Councils may by resolution authorize the carrying on in their respective provinces of the professions or callings specified in Part II of the second schedule to the *Licences Consolidation Act*, 1925, without the taking out of the licences, and without payment of the licence duties prescribed.

With a few exceptions, licences fall due to be renewed on the first day of January each year, but in most cases if the liability to take out a licence commences only after the thirtieth day of June, the amount payable in respect of the licence is one-half the scheduled amount.

Licences are issued by Receivers of Revenue except where otherwise stated in the list following, and every licence must be taken out in the district where the trade, profession (see above), or occupation is carried on.

The following lists show the licences required to be taken out in the different provinces and the scale of duties payable:—

A.—LICENCES IN FORCE IN ALL PROVINCES.

	£	s.	d.
*†Advertising agent or advertising contractor	5	0	0
*‡Aerated or mineral water manufacturer	10	0	0

‡ Third Schedule, Act No. 30 of 1928, as amended by Act No. 41 of 1934.

2. **Licences Issued.**—(*a*) *All Licences.*—Particulars are given in the tables below as to the number of licences issued and the amount paid for licences in each province for a period of years, distinguishing between licences reserved to the Union Government and licences assigned and transferred to the provinces. In making use of information contained in the tables, it should be observed that while a large proportion of the licences are imposed under the provisions of Act No. 32 of 1925, which made uniform the collection of certain licences throughout all the provinces, others are particular to certain Provincial Administrations only, these having been enacted under the provisions of the Ordinances of those provinces, or continued under the powers of pre-Union legislation. A few licences mentioned above, e.g., explosives, hulks, etc., are issued and accounted for by the Departments directly concerned.

§ 9. Stamp Duties and Fees.

The following is the tariff of stamp duties and fees prescribed by the *Stamp Duties and Fees Act*, 1911, as amended by Acts Nos. 31 of 1913, 43 of 1919, 31 of 1921, 42 of 1931, 64 of 1934, 49 of 1935, 35 of 1936, and 50 of 1937.

	£	s.	d.
Tariff of Stamp Duties:			
Affidavit or Solemn or Attested Declaration—In respect of every deponent or declarant except that an affidavit or declaration made on behalf of a company or partnership, or by persons holding jointly the office of administrator, executor, curator, tutor or trustee, and deposing or declaring only as such, shall be deemed to be made by one deponent or declarant	0	1	0
Exemption:			
Any affidavit or declaration required to be made in connexion with any payment to, or refund from, the public revenue, or any payment in respect of pension by the Imperial or any Colonial Government.			
Antenuptial or Postnuptial Contract....	1	0	0
Agreement or Contract in respect of which no other stamp duty is specifically provided—If the matter thereof be of the value of £10 or upwards.....	0	1	0
Exemptions:			
(*a*) Contracts or agreements relating to the sale, supply, or delivery of goods, wares, or merchandise (including live stock and agricultural produce);			
(*b*) Contracts or agreements for the hire of any domestic servant, labourer, or seaman.			
Arbitration or Award:			
Every deed of submission and every award:			
If the amount or value in dispute do not exceed £50.....	0	2	6
If it exceed £50.....	0	5	0
Authentication Certificate given by any Minister or public officer in his official capacity or under his official seal testifying to the identity of any person or the authenticity of any signature on a document for use outside the Union: Provided that where more than one signature or seal is required to complete the authentication, one payment of duty shall be sufficient.....	0	10	0
Bill of Exchange or Promissory Note:			
(1) Payable on demand.....	0	0	1
(2) Payable otherwise than on demand:			
(i) When the amount or value does not exceed £10.....	0	0	1
(ii) When the amount or value exceeds £10, but does not exceed £50.....	0	0	6
(iii) When the amount or value exceeds £50—for every £50 or part thereof.....	0	0	6
Exemptions:			
(*a*) Draft or order by any banker on another banker not available for payment or credit to any third person and used solely for settling or clearing accounts between such bankers.			
(*b*) Coupon or warrant for interest or dividend attached to or issued with any marketable security.			
(*c*) Bill or draft by or upon the Union Treasury or any public account.			
Bill of Lading for the carriage or transport of any goods by sea, for every such bill or copy or duplicate thereof.	0	0	6

	£	s.	d.
Bond: (1) Any mortgage bond hypothecating immovable property or interest in such property and any general or special bond passed before a notary public: Provided that in the case of any such bond which is executed by way of suretyship only and is collateral to a duly stamped bond for the same debt or obligation executed by the principal debtor or obligor, the duty chargeable shall be one shilling for each £100 or part thereof of the debt secured or to be secured:—			
(*a*) Where the total amount of the debt secured or to be secured does not exceed £500—for every £100 or part thereof.....	0	1	0
(*b*) Where the total amount of the debt secured, or to be secured, exceeds £500, but does not exceed £1,000—for every £100 or part thereof	0	1	6
(*c*) Where the total amount of the debt secured or to be secured exceeds £1,000, but does not exceed £2,000—for every £100 or part thereof.....	0	2	6
(*d*) Where the total amount of the debt secured or to be secured exceeds £2,000—for every £100 or part thereof.....	0	5	0
(2) Any bond mentioned in (1) which is auxiliary or collateral to or substituted for a previously made and duly stamped bond executed by the same person and for the same debt or obligation—a duty at the rates mentioned in (1) but not exceeding....	0	10	0
(3) Cession of any such bond as mentioned in (1) or of any bond substituted therefor:—			
(*a*) Where the amount remaining due does not exceed £1,000—for every £100 or part thereof....	0	1	0
(*b*) Where the amount remaining due exceeds £1,000—for every £100 or part thereof.....	0	2	6
(4) Cession of any auxiliary or collateral bond as aforesaid.....	The like duty as is chargeable on the bond.		
In determining, for the purposes of this item, the amount of any debt secured or to be secured or remaining due under any bond, any sum separately secured by such bond to cover any costs incurred in connexion with such debt shall be excluded from that amount.			
Exemptions.			
(*a*) Bond given solely in security for any payment due to the public revenue.			
(*b*) Bond given by any public official in respect of the discharge of his official duties.			
Broker's Note:			
Where the consideration exceeds £5 and does not exceed £25.....	0	0	1
Where the consideration exceeds £25, but does not exceed £50.....	0	0	6
Where the consideration exceeds £50, but does not exceed £100.....	0	1	0
Where the consideration exceeds £100 for every £100 or part thereof....	0	1	0

	£	s.	d.
Exemptions:			
(*a*) Note of sale or purchase on behalf of another broker or agent within the Union who is acting in the same transaction for a principal.			
(*b*) Note in respect of the sale or purchase of any stock issued by the Government of the Union.			
Certificate by any person (other than a Notary) in a public or official capacity of any act or thing having been done or performed or of any document or copy of any document	0	1	0
Exemption:			
Certificates in respect of which any fee or duty be otherwise chargeable by law or regulation.			
Certificate by any public officer of the Union or of any province within the Union in his official capacity as such:			
(*a*) certifying to the performance of any official act or to anything having been done or performed; or			
(*b*) certifying to the correctness of any document or copy of a document	0	1	0
Provided that there shall be exempt from the payment of this fee any certificate in respect of which any fee or duty is otherwise chargeable under any law or regulation.			
Charter Party:			
(1) Of any vessel or ship not exceeding 500 tons burthen.....	0	15	0
(2) Of any vessel or ship exceeding 500 tons burthen but not exceeding 1,000 tons.....	1	10	0
(3) Of any vessel or ship exceeding 1,000 tons burthen.....	2	10	0
Company Capital Duty:			
Five shillings per cent. on a statement of the amount of nominal capital or increase of nominal capital for registration thereof.			
Customs Documents:			
On each original bill or document of entry or document in lieu thereof..	0	0	6
Exemptions:			
(*a*) Any bill or document of entry coastwise from any port in the Union to any other port in the Union.			
(*b*) Any bill or document of entry relating to any goods imported by post.			
Duplicate original of any instrument, the original whereof is chargeable with stamp duty under any law in force within the Union: the like duty to that chargeable upon the original, but not to exceed.....	0	1	0
Exemptions:			
Any duplicate original in respect of which a substantive stamp duty is otherwise chargeable. Any duplicate original which is required to be filed of record in any public office of the Union.			
Lease or Agreement of Lease or any instrument intended or operating as a lease or agreement to let (including a sub-lease) provided the lease, agreement, or instrument is not chargeable with Transfer Duty:—			
(1) (*a*) If the lease, agreement, or instrument be by the month or for any definite period of less than one year; or			
(*b*) If the lease, agreement, or instrument be for an indefinite period but terminable by one month's notice or less than one month's notice:—			
If the rent does not exceed the rate of £2. 10s. per month.....	0	0	6
If the rent exceeds the rate of £2. 10s. per month but does not exceed the rate of £5 per month	0	1	0
If the rent exceeds the rate of £5 per month but does not exceed the rate of £10 per month.....	0	2	6
If the rent exceeds the rate of £10 per month but does not exceed the rate of £15 per month.....	0	5	0
If the rent exceeds the rate of £15 per month but does not exceed the rate of £20 per month.....	0	10	0
If the rent exceeds the rate of £20 per month but does not exceed the rate of £25 per month.....	0	15	0
If the rent exceeds the rate of £25 per month.....	1	0	0
(2) If the lease, agreement, or instrument be for a definite period of one year or longer, duty shall be payable according to the following scale on a sum equal to the aggregate amount of rent payable during the period of the lease, agreement, or instrument, *plus* the amount of any other consideration whatsoever due or payable in respect of or by virtue thereof:—			
If the lease, agreement, or instrument be for any period not exceeding five years—for every £100 or part thereof.....	0	5	0
If the lease, agreement, or instrument be for any period exceeding five years but not exceeding ten years—for every £100 or part thereof.....	0	7	6
If the lease, agreement, or instrument be for any period exceeding ten years but not exceeding twenty years—for every £100 or part thereof.....	0	10	0
If the lease, agreement, or instrument be for any period exceeding twenty years—for every £100 or part thereof.....	0	15	0
Provided that if in any case it be shown to the satisfaction of the Commissioner that the aggregate amount of rent or other consideration on which duty is payable exceeds the full selling value of the property leased, duty shall be payable only on the amount of such full selling value.			
(3) Any lease, agreement, or instrument for an indefinite period not within any of the foregoing classes shall for the purposes of duty be deemed to be for three years; but after the expiration of any period of three years, the lease, agreement, or instrument shall, if indefinitely continued or renewed, be stamped again for another period of three years.			
(4) Lease, agreement, or instrument aforesaid—			
Cession or Assignment.....	0	5	0
Any Cession or Assignment by a lessee or holder provided such cession be not liable for Transfer Duty.			
Marketable Security—including any scrip, certificate, warrant, or any other like instrument representing any share, stock, or debenture, or any right of option to acquire any such share, stock, or debenture of any company or other corporate body (excepting a local authority or a building society):—			
(1) In respect of the original issue within the Union of any such shares, stocks, or debentures—			
(*a*) if transferable only by registration: for every £10 or part thereof of nominal value.....	0	0	6
(*b*) if made out to bearer or in any manner so as to be transferable by delivery only, for every £10 or part thereof of nominal value	0	2	0
Exemptions:			
(i) Where the scrip, certificate, warrant, or like instrument is issued solely in substitution for any instrument			

	£ s. d.
or instruments of the same nature of like or equivalent value, withdrawn, cancelled, or lost, which were owned by the person to whom the issue in substitution is made: Provided that this exemption shall only be allowable if the new instrument is endorsed by a director, secretary, or responsible officer as being *bona fide* a substitution without change of ownership.	
(ii) Any share or other instrument or document issued in connexion with the capital of any co-operative society or company with limited liability registered under Act No. 23 of 1922.	
(2) In respect of the registration of the transfer of any such marketable security: for every £100 or part thereof of the amount or value of the consideration given, or where no consideration is given, of the value of the marketable security transferred	0 1 0
Notarial Act or Instrument: Any notarial act or instrument in respect of which no other stamp duty is specially provided, and any notarial grosse duplicate, original, or copy of any instrument	0 2 0
Partnership: Agreement of Partnership	1 0 0
Policies of Insurance: (1) Policy of life insurance, including funeral policy:— If the sum assured does not exceed £50	0 0 1
If the sum assured exceeds £50—for every £100 or part thereof	0 1 0
(2) Policy of insurance or renewal thereof in respect of any motor vehicle, including incidental insurance against accidents to persons, damage done to or suffered by such vehicle or injuries suffered by third parties and any other risk ordinarily covered by such policies: In respect of each vehicle the subject of such policy or renewal	0 2 6
(3) Policy of insurance against accident to a person or in respect of injury, incapacity, sickness, or the like, other than insurance included in a policy chargeable under paragraph (2)—every policy	0 1 0
Every renewal thereof	0 1 0
(4) Policy of insurance under which a sum is payable to cover any compensation or damage due under a law relating to workmen's compensation or employer's liability or the common law, in respect of the death, or illness of, or injury to an employee, or any third party insurance, other than insurance included in a policy chargeable under paragraph (2)—every policy	0 1 0
Every renewal thereof	0 1 0
(5) Policy of insurance or renewal thereof of any other kind, including marine insurance, fidelity insurance, plate glass insurance, insurance against burglary, fire, or any other risk, loss or damage or any combined or other insurance, other than insurance ordinarily included in a policy chargeable under paragraph (1), (2), (3), or (4)—for every £100 or part thereof of the sum assured. Subject to minimum duty of 6d. and a maximum duty of £5.	0 0 1
(6) Any policy or renewal thereof where the sum assured is not a specific sum	0 1 0
(7) Cession of any policy of insurance or of any interest under a policy of insurance	0 2 0
Provided that the duty on any cession shall not exceed the duty to which the policy which is ceded or under which an interest is ceded would be liable under the foregoing provisions.	
(8) In respect of any tickets, coupons, notices, bills, or other documents purporting to be or to entitle to an insurance in the event of death, injury, sickness, or the like.	A duty of two and a half per cent. on the amount of all receipts from the sale or issue of valuable consideration on any such document.
	£ s. d.
(9) Any interim policy of insurance, the currency of which does not exceed four calendar months	0 1 0
Provided that the duty on any such interim policy shall not exceed that payable upon a final policy covering a like risk.	
Where a policy or renewal of a policy to which paragraph (2), (3), (4), (5), or (6) applies is for a period of less than a year, a *pro rata* duty only shall be payable, for example, for a half-yearly policy or renewal—one-half of the duty. Subject to a minimum duty of 3d.	
Exemptions:	
(*a*) Interim cover note, when issued in respect of a policy of insurance to be issued within the Union.	
(*b*) Policy solely for the purpose of effecting reinsurance by one insurance company or association in another insurance company or association to cover general risks.	
Power of Attorney or any instrument of like kind:—	
(1) Proxy to vote at any specified meeting or adjournment thereof	0 0 1
(2) Any special power, or substitution under any power of attorney whatsoever (in respect of each grantor)	0 1 0
(3) To act generally for the grantor (in respect of each grantor)	0 5 0
(4) Of any kind not comprised in the foregoing (in respect of each grantor)	0 1 0
Except that a power granted by or on behalf of a company or partnership or by persons holding jointly the offices of administrator, executor, curator, tutor, or trustee, and granting the power in any such capacity only shall be deemed to be given by one grantor.	
Receipt: (1) If given for or upon the payment of money amounting to £1 or more	0 0 1
(2) If given for or in respect of any fixed deposit made with any bank, company, or association whether corporate or unincorporate—for every £100 (or part thereof) and for every period of twelve months (or part thereof) for which the deposit is made	0 0 6
Exemptions:	
(*a*) Receipt or acknowledgment by any Government official for any payment or deposit received by him in his official capacity.	
(*b*) Receipt or acknowledgment on Postal Orders or Money Orders or Post Office Savings Bank forms.	

	£ s. d.
(*c*) Receipt passing between any legally established benefit society, provident society, building society, or savings bank society, and any member thereof, or receipt in respect of the payment or repayment of money deposited with or borrowed from any legally established building society.	
(*d*) Acknowledgment or slip relating to money deposit (other than on fixed deposit) with a bank to the credit or account of any person.	
(*e*) Acknowledgment by a bank or a notary of the receipt of any bill or note for the purpose of being presented for acceptance or payment.	
(*f*) Receipt received in the Union, but executed outside the Union and relating to the payment made outside the Union.	
(*g*) Receipt given by a prisoner or discharged prisoner to the prison authorities in respect of money paid to him or on his behalf during imprisonment or on discharge from prison.	
(*h*) Receipt for pay and allowances given by any member of the Union Defence Forces in time of war, and receipts for pay or allowances given by any member of those forces other than the South African Permanent Force, in time of peace.	
(*i*) Receipt in respect of money deposited in or withdrawn from an account in any bank if that account is, in the opinion of the Commissioner, a savings bank account.	
Security or Suretyship: Any document of security or pledge or any act of suretyship, indemnity, or guarantee not otherwise chargeable with duty:—	
(1) For any sum not exceeding £10	0 0 1
For any sum exceeding £10, but not exceeding £50	0 0 6
For any sum exceeding £50, but not exceeding £100	0 1 0
For any sum exceeding £100—for every £100 or part thereof	0 1 0
(2) Where no amount is stated	0 2 6
(3) Not comprised in the foregoing	0 2 6
Exemptions:	
(1) When given solely in relation to any payment due to the public revenue.	
(2) A cession by a co-operative company to the Land and Agricultural Bank of South Africa as security for a loan of the company's right and title to—	
(*a*) the amount of subscribed but unpaid capital, and to the amount of any contingent liability attaching to its shares; and	
(*b*) the amount of any debts owing to the company (section 3 of Act No. 40 of 1922).	
Survey of a Ship or Vessel: Certificate thereof	0 2 6
Transfer Deed: Relating to immovable property—for every £10 or part thereof of the consideration or value	0 0 6
Exemptions: (1) Partition transfers except in respect of consideration paid by one of the parties thereto to another such party.	
(2) Transfers whereby no change of beneficial interest in the property transferred is effected.	
Warehouse Receipts issued under provisions of Act No. 42 of 1930: (1) Any warehouse receipt	0 0 1
(2) Any endorsement of any warehouse receipt or rail-surety-note by way of security:—	
(*a*) Where the debt to be secured—does not exceed £10	0 0 1
exceeds £10 but does not exceed £50	0 0 6
exceeds £50 but does not exceed £100	0 1 0
exceeds £100—for every £100 or part thereof	0 1 0
(*b*) Where the amount of the debt to be secured is not stated, or is contingent upon the happening of some further event, or is otherwise not ascertainable at the date of the endorsement	0 2 6
General Exemptions in respect of all Instruments: (1) No stamp duty and no fee payable by means of stamps in any court or public office shall be chargeable in respect of:—	
(*a*) Any instrument, or the registration, lodgment, issue, or use thereof, if the duty or fee thereon would be legally payable and borne by the Government of the Union or any department thereof or by the Imperial Government.	
(*b*) Any instrument used, or for use, in or in connexion with criminal proceedings, or charge laid of a criminal offence, or in connexion with bail.	
(2) Any instrument specially exempted from stamp duty under any law shall not be chargeable with duty by reason of the provisions of this Act.	

§ 10. Weights and Measures.

1. **Legislation.**—An historical review of the weights and measures systems of the four provinces of the Union, up to the passing of the Union Act which consolidated the existing legislation, was given in the fourth issue of this *Year Book*. The *Weights and Measures Act*, No. 32 of 1922, which came into operation on the 1st April, 1923, established standard weights and measures throughout the Union, and embodied the principle of optional use of the metric system, subject to provisions contained in the Act. This Act was amended in certain respects by Act No. 13 of 1933, and the current Regulations under the Act are the *Weights and Measures Regulations*, 1933. The Act and Regulations, bound together in pamphlet form, are obtainable from the Government Printer or any Assize Office.

2. **Administration.**—Subject to the control of the Minister of Commerce and Industries, the Act and Regulations are administered by the Superintendent of Assize and assizers.

An Assize Board* is constituted under section *ten* of the Act; its fuctions are to examine, or cause to be examined, applicants for the post of assizer and to make recommendations to the Minister regarding any types or patterns of weighing and measuring instruments, weights, and measures in use or intended to be used in trade.

For administrative purposes the Union has been divided into seven districts, each of which is under the charge of a District Assizer. District offices are situated at Pretoria, Johannesburg, Durban, Capetown, Port Elizabeth, East London, and Bloemfontein, whilst a sub-office was established at Pietermaritzburg during 1938.

3. **Standard Measures.**—The standards prescribed are set forth in the First Schedule to the Act and are as follows:—

STANDARD MEASURES OF WEIGHT, LENGTH, AND CAPACITY.

Weight.

1 pound=0·4535924 kilogram 1 kilogram=2·2046225 pound (avoir).

Length.

1 yard=0·9143992 metre 1 metre=1·0936143 yard.

Capacity.

1 gallon=4·545963 litres 1 litre=0·219975 gallon.

Assizable Weights and Measures.

Weights and Measures submitted for assizing must conform to the denominations specified in the Second Schedule to the Act: the original Schedule was replaced by the one promulgated under Proclamation No. 252 of 1933. The various units of each denomination are given hereunder, but the full range can be ascertained by reference to the Schedule:—

I. WEIGHTS.

1. *Avoirdupois Weight.*
   Cental=100 pounds.
   Pound (lb.).
   Ounce (oz.)=437·5 grains=28·3495 grams.
   Dram (dr.).
2. *Troy Weight (for Precious Metals).*
   Ounce troy (oz. tr.)=480 grains=31·1035 grams.
   Pennyweight (dwt.)=24 grains (grs.).
3. *Carat Weight (for Precious Stones).*
   Carat (cm_4)=200 milligrams=3·08647 grains.
4. *Apothecaries' Weight.*
   Ounce (oz. apoth.)=480 grains.
   Drachm=3 scruples.
   Scruple.
   Grain.
5. *Metric Weights.*
   Kilogram.
   Gram.
   Decigram (0·1 gram).
   Centigram (0·1 decigram).
   Milligram (0·1 centigram).

II. CAPACITY.

1. *Liquid Measure.*
   Gallon (gal.).
   Quart (qt.)=¼ gallon.
   Pint (pt.)=½ quart.
   Gill=¼ pint.
2. *Apothecaries' Measure.*
   Quart.
   Pint.
   Fluid ounce (fl. oz.)
   Fluid drachm (fl. dr.).
   Minim (min.)
3. *Metric Measure (Liquid).*
   Dekalitre (10 litres).
   Litre (1·0).
   Decilitre (0·1 litre).
   Centilitre (0·01 litre).
   Millilitre (0·001 litre).

* For personnel see Chapter XXVIII.

III. LENGTH.

Customary multiples and parts of the yard, the foot, the inch, and the metre.

New Standards may be approved by Proclamation.

Denominations which are Permitted for Expressing Trade Contracts.

Whilst weights and measures can only be assized provided their denominations conform to those laid down in the Second Schedule, for the purpose of expressing trade contracts not only these prescribed denominations, but also multiples thereof, are permitted; in addition, the following are lawful for this purpose:—

Weight.

The ton of 2,000 pounds.
The Metric Tonne of 1,000 kilograms.

Length.

The Cape foot=0·3148581 metre.
The Cape rood.

Area.

The square yard, square foot, square inch, and the square metre.
The morgen, the acre, and the hectare.

The morgen	=	600 sq. roods.
	=	86,400 sq. Cape feet.
The acre	=	4,840 sq. yards.
	=	43,560 sq. feet.
The hectare	=	10,000 sq. metres.

Cape measures of length and area may not be used except for measuring land, and then only so far as the survey laws of any portion of the Union admit of such use.

Cubic Content.

The Standard measures of cubic content are those obtained by cubing the standard measures of length.

4. **Weights prescribed for a "Standard Bag" of Agricultural Products.**—Regulation 9 (2) Part II of the *Weights and Measures Regulations*, 1933, prescribes the following net weights for a "standard bag" of the commodities mentioned:—

	Lb.
Cockle, ground-nuts (shelled), kaffir-corn, mealies, boermeal, ryemeal, rye, samp, and wheat	200
Mealie rice or maize grit	190
Maize flour, kaffir-corn malt, mealies (seconds), crushed mealies, and mealiemeal	180
Barley malt	168
Rice	160
Barley, buckwheat, hominy chop, germ meal, oats, pollard, and potatoes	150
Sweet potatoes and onions	120
Wheaten bran, crushed oats, and sunflower seed	100
Mealie bran	80
Ground-nuts (unshelled)	75

5. **Goods to be sold by prescribed Weights.**—In addition to the requirement of the Act that any goods sold by weight must be sold by "net" weight, certain packed commodities specified in the Regulations under the Act are,

furthermore, required to be sold in accordance with prescribed scales of quantities; amongst these may be mentioned tea, coffee, sugar, flour, butter, jam, salt, rice, breakfast foods, vermicelli, etc. The net weight of the contents is required to be marked on each package.

6. **Approval of Instruments intended for Trade Use.**—Section *twenty-three* of the *Weights and Measures Act* requires the submission for examination and test of all new types of weighing and measuring instruments, weights, and measures intended for trade use, in order to determine whether or not they are likely to facilitate fraud. The fees for such examination are prescribed in Regulation 9 Part III of the *Weights and Measures Regulations*, 1933.

7. **Prescribed Fees for Assizing.**—The current fees tariff issued under section *twenty-six* of the Act was promulgated by Proclamation No. 137 of 1935 and published in *Government Gazette* No. 2289 of the 19th July that year.

CHAPTER XXV.

POPULATION AND MIGRATION.

§ 1. Population.

1. **General.**—The census taken in 1904 in each of the four Colonies which were incorporated in the Union was the first simultaneous census taken in South Africa. The Union Census is taken under Act No. 2 of 1910, as amended by Act No. 5 of 1935. The principal Act specifies the particulars which may be collected, and empowers the Governor-General to make regulations. The forms for the collection of the data are prescribed under the regulations. The *Census Amendment Act* of 1935 made provision for a quinquennial enumeration up to 1941 and thereafter a decennial enumeration, but the *Electoral Quota Act*, No. 21 of 1937, substitutes the year 1951 for 1941 as the date up to which quinquennial censuses shall be taken.

Table (i) hereunder gives the dates of the various censuses which have been taken in the States of South Africa now comprised in the Union; but, while comparisons are possible in respect of the numbers of the population of separate provinces for varying dates prior to 1904, full comparison is only possible in respect of the whole area of the Union for the years 1904, 1911, 1921, and 1936—1911 being the year in which the first Union census was taken—and for the years 1918, 1926, and 1931 in respect of the European population only. The summaries of the population returns for the 1904 and subsequent censuses are given hereunder in tables (ii), (iii), and (iv); while the mean estimated population for the years 1930 to 1939 is shown in tables (v) and (vi). The returns of the 1918 Census given in the tables do not include persons absent from the Union on active service or for other purposes connected with the Great War. A special absentee census in respect of males was taken under the *Electoral Census Further Provision Act* of 1918, simultaneously with the main census of the European population, and 28,312 persons were enumerated; particulars of these will be found in *Official Year Book* No. 4.

At the Census of 1926, the territory of Walvis Bay was enumerated by the authorities of South West Africa, and the figures were included in the population of South West Africa. Walvis Bay, however, is an integral portion of the Union, although administered from Windhoek, under the provisions of Union Act No. 24 of 1922, by the Administrator of South West Africa. With the exception of several detailed tables where, owing to the data not being available, the exclusion of Walvis Bay is mentioned in a footnote, the 1926 Census figures have been corrected by the inclusion of the 662 persons (males 475, females 187) in Walvis Bay within the population of the Union (Cape Province).

A census of all races of the population was due to be taken on 5th May, 1931, but owing to financial stringency the enumeration was restricted to Europeans. The tabulation of the returns was limited to the particulars necessary under the *South Africa Act*, i.e., a count of the number of males and females in each province and district classified according to age.

Detailed information as to the censuses of 1921, 1926, and 1931 will be found in the published Population Census Reports.

A census of all races of the population was taken on 5th May, 1936, and the figures for magisterial districts are given in the District Statistical Summary at the beginning of this volume. A preliminary report showing the geographical distribution of the population was published on 31st December, 1936. It is intended to publish the 1936 Census Report in 12 volumes, and these will be issued from time to time as the detailed statistics become available. Volume I, containing particulars of the distribution of all races of the population was published in September, 1938 (U.G. No. 21—1938); Volume II giving the ages of the European, Asiatic, and Coloured population was published in November, 1938 (U.G. No. 28—1938); Volume III containing information concerning the marital condition of the European, Asiatic, and Coloured population was published in March, 1939 (U.G. 39—1938); Volume IV containing particulars of languages of the European, Asiatic, and Coloured population was published in April, 1939 (U.G. 44—1938). It was decided to publish particulars of the ages and marital condition of the Bantu population in advance of the complete volume dealing with non-Europeans, and a report which is a section of Volume IX was published in April, 1939 (U.G. 50—1938).

The population is divided for census purposes into four racial groups as follows:—

(1) Europeans—persons of pure European descent.
(2) Natives—pure blooded aboriginals of the Bantu race.
(3) Asiatics—Natives of Asia and their descendants; mainly Indians.
(4) Coloured—this group consists chiefly of Cape Coloured, but includes also Cape Malays, Bushmen, Hottentots, and all persons of mixed race.

The last three groups, when combined, form the group referred to as the "Non-European" group.

* Includes population of Walvis Bay.

Estimates of Population.—The estimates of population in the following tables have been framed on the assumption that the rate of increase between any two censuses is uniform, but for Europeans adjustments are made annually according to the net increase due to births, deaths, and migration.

(v) ESTIMATED* MEAN POPULATION, UNION, 1930 TO 1939.

Year.	Total Population.	European.			Non-European.

* As at 30th June.

Increase in the Population.—The average annual rate of increase in the population as shown in the following table was lower for the period 1911 to 1921 than between 1904 and 1911, and notably so in the case of the mixed races and the Asiatics. The former suffered severely in the influenza epidemic of 1918, and in the case of the latter the decline in the average annual increase was due to the considerable emigration of Indians, of whom approximately 29,000 were repatriated between 1911 and 1921. In Natal the number of Indian males decreased by 86 during the ten years, while the number of females showed an increase of 8,391, giving a total increase of 8,305 in the Indian population of that province, which is equivalent to an annual rate of 0.62 per cent.

During the period 1921 to 1936 there were no serious abnormal influences to retard the growth of the population, and there was, therefore, a more or less steady rate of increase.

(vii) INCREASE IN THE POPULATION, 1904 TO 1936.

Race.	Census 1904.	Census 1911.		Census 1921.		Census 1936.

2. **Population in Regional Divisions.**—These divisions are non-administrative, but each comprises a group of magisterial districts. The boundaries, although somewhat arbitrarily drawn, follow closely the different climatic conditions found in the Union due to altitude, varying rainfall, etc.

The Union is divided into seven divisions as follows:—

I. *South-Western Coastal.*—Extending from Malmesbury district to Alexandria district inclusive.

II. *South-Eastern Coastal.*—Mainly the coastal districts of Transkei, Natal, and Zululand from Bathurst district to the border of Portuguese East Africa.

III. *Karroo-Cape Central.*—Bounded on the south by Division I, on the east by Division V, and on the north by Divisions IV and VII. Clanwilliam and Piquetberg are the only districts in this division on the Atlantic coast.

IV. *Highveld.*—This embraces the greater portion of the inland plateau land and includes the whole of the Orange Free State, the inland districts of Natal, that portion of Transvaal lying approximately south of the 25° of south latitude, the districts of the Cape Province adjacent to the western boundary of the Transvaal and to the western and south-western boundary of the Orange Free State.

V. *Cape Thornveld.*—Comprising the Transkei hinterland and adjacent districts.

VI. *Transvaal Bushveld.*—This comprises the districts lying approximately north of the 25° of south latitude.

VII. *North-Western Cape.*—Bounded on the south-east by Divisions III and IV, on the west by the Atlantic Ocean, and on the north by South West Africa and Bechuanaland Protectorate.

POPULATION IN SEVEN NON-ADMINISTRATIVE REGIONAL DIVISIONS, CENSUSES, 1921 AND 1936.

* Includes an estimate of 191,984 natives and 24,465 coloured outside Police Zone.
† Includes 9,561 natives absent at labour centres outside Swaziland.
‡ Only natives in employment (254,297) enumerated—remainder estimated.

4. Proportions of the Races in the Population.—Between 1865 and 1891 the population of the Cape Colony was affected by the annexation of areas thickly populated by natives. Between 1891 and 1904, in spite of the annexation of Pondoland and Bechuanaland with 10,300 Europeans and 276,522 of the non-European races, the proportion of European population to non-European increased slightly. In the Orange Free State the proportion of European to non-European population is highest, in Natal lowest, but in the former the figure has declined from census to census, while in the latter it has risen. The Transvaal and Cape Provinces occupy intermediate positions.

The following table gives the racial composition of the population in the census years 1904 to 1936:—

RACIAL COMPOSITION OF THE POPULATION AT SUCCESSIVE CENSUSES SHOWING THE PROPORTIONS OF EACH RACE TO THE TOTAL POPULATION.

Year.	European.		Native (Bantu).		Asiatic.		Coloured.		Total Non-European.		Total all Races.
	No.	%	No.	%	No.	%	No.	%	No.	%	No.
1904..	1,116,806	21·6	3,491,056	67·4	122,734	2·4	445,228	8·6	4,059,018	78·4	5,175,824
1911..	1,276,242	21·4	4,019,006	67·3	152,203	2·5	525,943	8·8	4,697,152	78·6	5,973,394

5. Population of Each Province.—(i) *Cape of Good Hope.*—Between 1921 and 1931 the male European population of the Cape Province increased by 48,000, and the female European population by 50,000. Between 1931 and 1936 the male increase was 18,000 and the female 24,000. These figures reflect not only a natural tendency, but also the fact that there has been a steady flow of male migration from the Cape Province to other parts of the Union, chiefly to the Transvaal.

(*a*) CAPE OF GOOD HOPE—POPULATION AT EACH CENSUS.

(ii) *Natal.*—Between the years 1891 and 1904 the European population of Natal Province, excluding Zululand (annexed in 1897) and the districts of Vryheid, Utrecht, and part of Wakkerstroom, transferred from the Transvaal in 1903, increased from 46,788 to 87,776, i.e. by 87.60 per cent. The 1891 figures include mixed races not specified separately. The number of these was small, and its inclusion would not affect materially the rate of increase. During the period 1904 to 1911 the European population was practically stationary, there having been a decrease of 4,263 males (of which number 1,300 are accounted for by the reduction of military garrisons) and an increase of 5,268 females. Between 1921 and 1931 the European population increased by 40,000, of whom 48 per cent. were males. Between 1931 and 1936 the increase in Europeans was 5,000 males and 8,000 females.

(iii) *Transvaal.*—In 1890 the European population of the Transvaal Province as now constituted was 113,713. In 1904 the number had risen to 297,277 and in 1911 it stood at 420,562. The figures for 1904 and 1911 include respectively about 8,200 and 5,000 men of the military garrison. The normal population for the years 1904 and 1911 was therefore 289,000 and 416,000, respectively.

(iv) *Orange Free State.*—The first census of the Orange Free State Province was taken in 1880, when the European population was returned as 61,022. According to the next census in 1890 the population had increased to 77,716, an increase of 16,694, or 27·36 per cent. in ten years. Making allowance for troops stationed in the province in 1904 and 1911, the population for those two years was 135,000 and 171,000 respectively.

§ 2. Analysis of Population.

1. **Area.**—The total area of the Union is approximately 472,550* square miles, divided between the provinces as is shown in the table which follows. This figure is subject to correction from time to time as re-surveys of portions of the country are undertaken.

PROVINCIAL DISTRIBUTION—AREA AND POPULATION.

Province.	Area in Square Miles.	Percentage of Total Area of Union.	Percentage of Total Population.		
			Census 1911.	Census 1921.	Census 1936.
Cape of Good Hope.....	277,169*	58·65	42·04	40·16	36·81
Natal.....	35,284	7·47	19·99	20·63	20·30
Transvaal.....	110,450	23·37	28·23	30·13	34·84
Orange Free State.....	49,647	10·51	8·84	9·08	8·05

* Includes Walvis Bay (430 sq. miles).

2. **Density of Population.**—In 1936 Natal had the largest number of persons to the square mile, there being one individual to 12 acres. In the other provinces the density of population was in the Cape Province one to 50 acres, in the Transvaal one to 21 acres, and in the Orange Free State

one to 41 acres. The density of population from the first census in 1865 is given in the following table:—

DENSITY OF POPULATION, 1936 AND PREVIOUS CENSUS YEARS.

* Census of Europeans only.

3. **Density of Rural Population.**—The usual practice is to compute the density of population for provinces and districts irrespective of the number and extent of the towns and villages situated therein, which in effect gives a false comparison between differently constituted areas. In a young country like the Union the true density should be judged on the basis of the distribution of the rural community living in the rural or farming areas. This has been computed for the Census of 1936, and the urban population, numbering 3,009,531 persons and occupying 5,710 square miles of municipal lands, has been eliminated from the total. The results are given in comparative form in the subjoined table, which distinguishes Europeans from non-Europeans.

POPULATION AND DENSITY IN RURAL AREAS—CENSUS, 1936.

Province.	European.		Non-European.		All Races.	
	Population.	Density per Sq. Mile.	Population.	Density per Sq. Mile.	Population.	Density per Sq. Mile.

4. Densely and Sparsely Populated Districts.—The subjoined table gives the ten most thickly populated and the ten most sparsely populated districts according to the returns of the Census of 1936. It must be understood that the majority of the densely populated districts contain one or more large towns, while others consist largely of mining areas. The majority of the sparsely populated districts are situated in the north-western Cape Province.

DENSELY AND SPARSELY POPULATED DISTRICTS, 1936.

* Number of persons to the square mile. † Europeans only. ‡ All races.

6. Distribution of Races in Urban* and Rural Areas.—The table hereunder shows the distribution of races between urban and rural areas according to the returns at the Censuses of 1904 to 1936, the races being distinguished as European and non-European.

The bulk of the non-European population resides in the rural areas of the Union, which term embraces all native reserves in the Union proper and in the Native Territories. The proportion of the non-European population enumerated in urban areas at the Censuses of 1904, 1911, 1921, and 1936 was as shown in the table below. At the Census of 1911 there was a slightly greater proportion in urban areas than at the Census of 1921, but in 1936, owing to mining and industrial activity, the number of non-Europeans in the urban areas was nearly double the number in 1921. The natural habitat of the Bantu is the veld or rural region, and the rate of increase is there entirely natural. The increase in urban areas, however, depends largely on requirements for labour purposes.

* An urban area is defined as an area included within any city, borough, municipality, or village management, health committee, township, or other local board constituted under any law, and possessing some form of urban local authority

TOTAL	100·00	100·00	100·00	31·38	68·62	100

8. Population Returns for Principal Towns.—The following table gives the European population of all towns (including suburbs adjacent to a municipal boundary) having a European population of 2,000 or more at the Census of 1936.

The last four columns show the relative order of the towns, according to their European population, at the Censuses of 1911, 1921, 1931, and 1936. In 1911 there were 35 towns with a European population of over 2,000; in 1921, 55; in 1931, 64; and in 1936, 68.

PRINCIPAL TOWNS (INCLUDING SUBURBS) CLASSIFIED ACCORDING TO THE NUMBER OF EUROPEAN INHABITANTS, CENSUS, 1936.

* Including suburbs adjacent to municipal boundary.
† Below 2,000.
‡ Not then constituted an urban area or not separately enumerated.

9. **Population of the Witwatersrand.**—The rapid development of the gold mining industry following the Union's departure from the gold standard at the end of 1932 has resulted in a large increase in the population of the Witwatersrand. This area, consisting of the following towns and their suburbs, viz.

Randfontein, Krugersdorp, Roodepoort, Johannesburg, Germiston, Boksburg, Benoni, Brakpan, Springs, and Nigel, now contains one-fifth of the European population, and more than one-tenth of the total population of the Union. The 1936 Census figures for each town are shown in the table to paragraph 8, and the figures for the Witwatersrand since 1911 are given below:—

POPULATION OF WITWATERSRAND.

Race.	1911.	1921.	1926.	1931.	1936.
European	179,999	231,111	255,260	304,258	402,223
Non-European	285,865	303,115	—	—	614,967
All Races	465,864	534,226	—	—	1,017,190

10. **Population of each District.**—The number of Europeans and non-Europeans in each district, as returned at the Census of 1936, and the area in square miles of each district will be found in the District Statistical Summary at the beginning of this volume.

11. **Ages of the People.**—The following table gives details in quinquennial age groups regarding all races of the population as enumerated at the Census of 1936.

(i) NUMBER AND PERCENTAGE OF EUROPEANS, QUINQUENNIAL AGE GROUPS, AND NATIVES, CENSUS, 1936.

14. **Official Languages.**—Information has been collected since 1918 in regard to the number of Europeans able to use either or both of the official languages, viz., English and Afrikaans. The steady growth of bilingualism is shown in the following table: omitting children under school age, nearly two-thirds of the European population can now speak both English and Afrikaans.

OFFICIAL LANGUAGES SPOKEN BY EUROPEANS (7 YEARS OF AGE AND OVER), 1918 TO 1936.

Official Languages Spoken.	Number.				Per cent.			
	1918.	1921.	1926.	1936.	1918.	1921.	1926.	1936.

15. **Home Language.**—For the first time particulars are available of the language spoken in the homes of the people. In the urban areas 53 per cent. of the European population speak English in their homes against 41 per cent. speaking Afrikaans. On the other hand in the rural areas 84 per cent. speak Afrikaans and only 14 per cent. English. The following table shows the details for each province:—

16. **Nationality.**—Nearly 98 per cent. of the Europeans enumerated at the 1936 census were South African nationals—96 per cent. by birth or domicile, and 2 per cent. by naturalization. (For a definition of Union nationality see §8 of this chapter.)

Residents of other British territories temporarily in the Union at the date of the census, and also British subjects whose period of residence was not sufficient to qualify them for union nationality, numbered 11,777 (0.6 per cent.).

All foreign subjects, of whom the most numerous were Germans, Lithuanians, Netherlanders, Russians, and Poles, totalled 31,849 (1.6 per cent.). Sixty per cent. of the total number of foreign subjects were enumerated in the Transvaal.

Particulars for each province are shown in the following table:—

NATIONALITY—EUROPEANS, 1936.

17. **Birthplaces.**—Persons born in the Union now comprise seven-eighths of the European population, compared with three-quarters in 1904, while the extra-Union-born population has declined from one-quarter to one-eighth. As the number of persons born outside the Union has remained more or less stationary at a quarter of a million, the increase in the population has been entirely due to the natural increase. 60 per cent. of the extra-Union-born came from the United Kingdom, 10 per cent. from other British territories, and 30 per cent. from foreign countries.

The principal birthplaces as revealed at the 1936 Census are shown in Table (i), and the change since 1904 in the ratio of Union-born to those born outside the Union, in Table (ii).

§ 3. Asiatic Population.

1. Asiatic Population.—The number of Asiatics in the Union is given in the following table. The decrease in the number of Asiatics in the Orange Free State since 1921 is due principally to a change in classification. Syrians were classified as Asiatics in 1921, but have since been included with Europeans.

ASIATIC POPULATION—CENSUSES, 1904 TO 1936.

Year.	Cape of Good Hope.		Natal.		Transvaal.		Orange Free State.		Union.		
	Male.	Female.	Male.	Female.	Male.	Felhale.	Male.	Female.	Male.	Female.	Total.
1904...	9,316	926	63,497	37,421	9,799	1,522	197	56	82,809	39,925	122,734
1911...	6,581	1,083	80,477	52,943	8,990	2,022	87	20	96,135	56,068	152,203
1921...	5,724	1,972	80,314	61,335	11,056	4,935	242	153	97,336	68,395	165,731
1936...	6,677	3,831	97,073	86,588	15,379	10,114	22	7	119,151	100,540	219,691

2. Asiatics in the Union.—Previous issues of this *Year Book* (Nos. 1 to 6) contained particulars of the Asiatic population in each province. Considerations of space have necessitated the omission of these paragraphs. The question is dealt with in some detail in the Report on the Census of 1921.

Under the *Immigrants Regulation Act*, 1913 (which is applicable to all classes and races), Asiatics, with the exception of wives and children of domiciled relatives, are prohibited from entering the Union, not *eo nomine*, but under a certificate of the Minister issued in terms of section 4 (1) (*a*). The provisions of the Act also restrict the movement of Asiatics to the province in which they are resident.

The *Class Areas Bill*, which was introduced by the Government during the 1924 parliamentary session, aimed at making provision for the reservation in towns of residential and trading areas for persons, other than natives, having racial characteristics in common, and was designed primarily to give the Government powers to enforce a measure of segregation of Asiatics in particular urban centres. The Bill met with a hostile reception from the Asiatic community. Owing to the dissolution of the House of Assembly in May, 1924, the Bill did not pass beyond the preliminary stages.

The Minister of the Interior, in the parliamentary session of 1926, introduced a recast *Class Areas Bill*, which was referred to a Select Committee. A deputation from the Government of India, which visited the Union to study the conditions under which Indians were living, gave evidence before the Select Committee. As a result of the Committee's report, it was decided to postpone consideration of the Bill, and to discuss the whole question at a conference with the Government of India during the recess.

The Asiatic question in the Union has an Imperial context, to which brief reference may here be made. The Imperial Conference of 1917 accepted the principle of reciprocity of treatment between India and the British Dominions in the matter of immigration. The Conference of 1918 elaborated the principle, and laid down that Indians already permanently domiciled in the other British countries should be allowed on certain conditions to bring in their wives and minor children. At the Imperial Conference held in 1921 the position of Indians in the British Empire was further discussed, and a Resolution was passed which, while approving the Resolution of the 1918 Conference on the subject, expressed the opinion that in the interests of the solidarity of the British Commonwealth it was desirable that the rights of British Indians to citizenship should be recognized. This Resolution was not accepted by the South African representatives, and the Indian delegates expressed the hope that by negotiation between the Governments of India and the Union the objections of the latter could be overcome. The question was again raised at the Conference of 1923, when the Indian representatives made certain proposals, with a view to giving effect to the policy laid down in 1921. In the case of the Union, the suggestion was that the Union Government should agree to the sending to South Africa by the Government of India of an agent, who would protect Indian nationals there and act as an intermediary between them and the Union authorities. In rejecting the proposal, General Smuts on behalf of the Union stated that he could hold out no hope of any further extension of the political rights of Indians in South Africa. He defined the issue in the Union to be a question of economic competition, and not of race or colour, and declared that the white community in South Africa felt that the whole question of the continuance of western civilization in that country was involved in this issue.

Fuller information in regard to the Asiatic problem in the Union was published in previous issues of the *Year Book* (Nos. 1 to 4).

3. Asiatic Inquiry Commission.—A summary of the reports (dated May, 1920, and March, 1921, respectively) of the Asiatic Inquiry Commission appointed in February, 1920, was given in the fourth and fifth issues of this *Year Book*. The commission inquired primarily into the legal position arising from and affecting the acquisition of land by Asiatics for trading purposes and their trading activities generally.

4. Indian Delegations, 1926 and 1927.—Capetown Conference and Agreement.—Consequent upon a proposal to introduce into the House of Assembly the *Areas Reservation and Immigration and Registration (Further Provision) Bill*, a deputation from India arrived in the Union to study at first hand certain aspects of the Indian population problems. This deputation was followed by a return visit to India of a parliamentary deputation from the Union Government. As a result of the investigations of these deputations, the Governments of India and the Union arranged for a meeting in the Union of a further delegation from India to explore every possible avenue, in order to arrive at a satisfactory solution of the Indian problem.

The Indian delegation assembled in conference with the parliamentary deputation in Capetown on the 17th December, 1926. At the session, which lasted until the 11th January, 1927, the contentious differences were discussed and recommendations were agreed to which were afterwards approved of by the respective Governments. Particulars of the agreement arrived at were published in *Year Book* No. 19.

One result of the conference was the appointment by the Government of India, at the request of the Union Government, of an Agent-General for the Government of India in the Union in order to secure continuous and effective co-operation between the two Governments. The names and the periods of office of the successive Agents-General for the Government of India in the Union are as follows:—

The Hon. Srinavasa Sastri, 1927-1929.
Sir Venkata Reddi, 1929-1932.
Kunwar Sir Maharaj Singh, 1932-1935.
Syed Sir Raza Ali, C.B.E., 1935-1938.
Sir Benegal Rama Rau, C.I.E., I.C.S., 1938 (present incumbent).

In accordance with the Capetown agreement, delegates of the Government of the Union of South Africa and of the Government of India met at Capetown from 12th January to 4th February, 1932, to consider the working of the agreement and to exchange views as to any modifications that experience might suggest.

In response to a suggestion made at the meeting that the possibilities of a colonization scheme for the settlement of Indians in other countries be explored, a committee was appointed by the Minister of the Interior with the following terms of reference:—

> "To undertake a preliminary investigation in South Africa in connexion with the proposals set forth in paragraph 3 of the Agreement arrived at by the 1932 Round Table Conference, for the exploration of the possibilities of a colonization scheme for settling Indians, both from India and from South Africa, in other countries; and to report as to the country or countries in which further investigation as to the successful operation of such a scheme might advantageously be made, having regard to the political, climatic, and economic conditions in such country or countries, and to the extent to which Indians in the Union would participate therein."

The committee reported on the 26th February, 1934 (U.G. No. 23-1934) and recommended that British North Borneo, British New Guinea, and British Guiana were countries which might be further investigated advantageously in regard to the possibilities of the operation of a successful colonization scheme.

5. Asiatic Land Laws Commission.—This commission was appointed in February, 1938, with the Hon. J. M. Murray as chairman, and Messrs. H. Britten, N. Smit, and B. Bloemsma as members.

The commission was appointed to inquire into and report whether and, if so, to what extent the letter and spirit of any law restricting or prohibiting the ownership, use, or occupation by Asiatics of land is being evaded, and to make recommendations in regard thereto. The report of the commission was published in March, 1939 (U.G. No. 16—1939).

§ 4. Immigration and Emigration.

1. Immigration.—As one of the newer countries of the world, South Africa, since the days of the earliest settlements, has received a more or less steady influx of immigrants, the volume of which was abnormally increased or decreased at certain periods by important events such as the discovery of diamonds and gold, and the period and aftermath of the South African War of 1899-1902 and of the World War (1914-1918). The records of the numbers in earlier years are not complete, and it was not until the year 1903, when the first *Immigration Act* was brought into operation in the Cape Colony, that accurate records began to be kept. The value of these figures as an index to the accession of population is discounted by the absence of corresponding figures for Natal and also of records of the departures from South Africa.

It was not until the passing of the *Immigrants Regulation Act*, 1913, that legislation and statistics of arrivals from abroad became uniform in the two coastal provinces. This Act, however, gave no authority for recording or in any way dealing with departures from the country.

In the year immediately following the South African war a very large accession of population was recorded; but for several years following there was a reaction due to a severe commercial depression, and there was undoubtedly a considerable loss of European population. A change in the direction of flow again occurred in the year 1910, when the country once more received an accession of population from overseas. The period of the World War was marked by a considerable diminution in the flow of immigration. There was a revival after the cessation of hostilities in 1918, and in the two or three succeeding years there was a fairly large influx of immigrants. The movement was, however, checked as a result of the economic depression, which commenced towards the beginning of 1921.

From 1924 onwards, immigrants from countries situated in eastern, central, and southern Europe arrived in increasing numbers each year. This is attributable to the restrictions placed upon immigration by the United States of America and other immigrant countries, and led to the introduction of the *Immigration Quota Act*, No. 8 of 1930, which came into force on the 1st May, 1930. The years 1930 and 1931 showed a very appreciable diminution in the number of immigrants when compared with previous years; this was due to the effects of the *Quota Act* and the world economic depression. In January, 1937, the *Aliens Act* was passed, and the *Quota Act* was repealed (see § 6 of this chapter).

2. Statistics of Migration.—(i) *Prior to* 1918.—Although the Union has extensive land borders of many thousands of miles on the north, it was not until the latter part of 1914 that figures were recorded in respect of the movement of population other than that by sea, and then only *via* Mafeking to and from Rhodesia by railway. The following year this was extended to the railway border station of Komatipoort on the Union-Portuguese East Africa border.

(ii) *Returns under the Statistics Act* (1918 to 1923).—From the 1st January, 1918, statutory powers were given to the Director of Census to collect information in regard to all persons entering or leaving the Union *via* the sea and land borders. The method of collecting the statistical data was to enumerate all travellers by means of a special statistical form. In the case of seaports the immigration officers were responsible for the enumeration, while travellers *via* the land borders were enumerated either by railway officers or by the police stationed at or near drifts and other places of entry or exit. During the first four months of the year 1918, every person crossing the border by rail was enumerated, but, owing to the heavy traffic and consequent delay and inconvenience, it was decided by the Statistical Council that as from the 1st May only those persons who were travelling with single journey tickets should be enumerated. The figures for the year 1918 were somewhat affected by this change of procedure.

The regulations framed under the Act exclude the enumeration of aboriginal natives of the Bantu race. Therefore, the statistics account only for Europeans, Asiatics, and coloured persons of mixed race.

(iii) *Revised Scheme of Collection*, 1924.—From the 1st January, 1924, the method of collection was revised, and additional particulars became available. The most important feature of the revised method is the isolation and the separate tabulation in the statistics of the large number of persons "in transit" *via* the Union. The peculiar geographical situation and the development of the ports and railways of the Union have placed the country in a favourable

position in this respect, and there is a considerable amount of traffic *via* Union ports and railways of persons passing to and from Rhodesia, the Belgian Congo, South West Africa, and the Portuguese Province of Mozambique. At coastal ports there is also a certain amount of transhipment for East African ports, India, Australia, etc. Particulars of persons on holiday or business visits to the Union are also tabulated. All statistical particulars in respect of persons arriving by sea are extracted from the Passengers' Declaration Form (D.I. 10) required in terms of the *Immigration Act*, 1913, to be completed in respect of all passengers landing in the Union from overseas. This form is also required in respect of all entrants into the Union *via* the Portuguese port of Lourenco Marques.

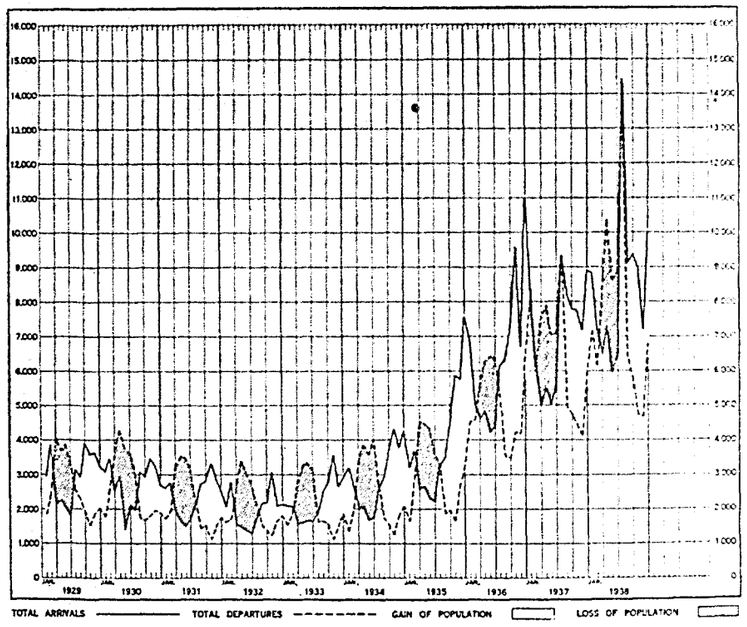
The opening of the Beit Bridge over the Limpopo River created another land border "port" for purposes of migration statistics, and statistics have been collected at this point since the 1st January, 1930. The appointment of immigration officers at this port in November, 1935, has made possible the collection of information concerning all non-Union residents crossing the border. Subsequently the enumeration was extended to cover all travellers.

In October, 1935, immigration officers were stationed at Mafeking for the enumeration of the large number of railway travellers crossing the border at this point.

From the beginning of 1937, persons travelling between the Union and Portuguese East Africa via Stegi, near the Swaziland border, have been enumerated.

(iv) *Air Traffic.*—The development of air services also necessitated a further amendment to the regulations dealing with migration statistics, and on the 20th January, 1930, Government Notice No. 129 was issued, with effect from the 1st November, 1929, requiring every person arriving or departing by air to furnish the particulars required for statistical purposes. The customs officers at the declared customs aerodromes in the Union act as prescribed officers for the purpose of collecting statistics of all persons leaving by air, whilst the particulars of persons arriving are collected by the immigration officers as provided in Regulation 28 (2) of the *Air Navigation Regulations*.

(v) *Publication of Statistics.*—Detailed statistics of immigration and emigration are published annually by the Office of Census and Statistics under the title *Statistics of Migration* (obtainable from the Government Printer, Pretoria, price 2s. 6d.).



Monthly summaries are published in the *Monthly Bulletin of Statistics*.

(vi) *Statistics.*—The following table gives a summary of the statistics of migration for the last five years. The figures for earlier years will be found in previous editions of this *Year Book*.

ARRIVALS AND DEPARTURES OF EUROPEANS, JANUARY, 1929, TO DECEMBER, 1938 (GROSS FIGURES, EXCLUDING "IN TRANSIT" PASSENGERS).

Note.—Prior to 1935 partial enumeration only was made at the Union-Bechuanaland and Union-Rhodesian borders.

The following tables record the arrivals and departures of persons by sea, by land, and by air, classified according to their stated intentions on entry or departure. The figures for migrants *via* the land borders show the number of persons actually enumerated, and the abnormal increase since 1935 is due chiefly to the improved system of enumeration mentioned above. Before the appointment of immigration officers at Mafeking and Beit Bridge towards the end of 1935, comparatively few of the temporary travellers between the Union and Rhodesia were enumerated. Except at Nakop, on the South West Africa border, where the system of enumerating only persons travelling on single journey railway tickets is still in force, the statistics of migration *via* the land borders may now be taken as reasonably complete.

Figures for migrants by air are available from November, 1929, but the number of air travellers was very small until January, 1932, when Imperial Airways inaugurated regular air services between Europe and South Africa. In June, 1937, Imperial Airways introduced its flying boat service terminating at Durban, and South African Airways took over the route from Germiston to Lusaka *via* Bulawayo. Most of the arrivals and departures by air are from and to Rhodesia by South African Airways.

The column headed "In transit through Union" shows the number of persons enumerated, who pass through the Union to and from countries or territories beyond its borders. These figures are excluded from the detailed tables for the Union.

NOTE.—The totals include persons whose age or marital condition was unspecified.

The following table shows the number of Europeans of South African birth who left the Union permanently during the year 1938. A high proportion of the number was under 21 years of age, and 75 per cent. of minors were children under 16 years of age. Many of these, no doubt, were children of parents one or both of whom were not born in South Africa.

AGE AND MARITAL CONDITION OF SOUTH AFRICAN BORN EUROPEAN RESIDENTS DEPARTING PERMANENTLY, 1938.

TOTAL	4,016	779	16,804	18,985

The following table shows the number of Europeans who stated that they were "in transit" through the Union. There is a considerable traffic over the South African railways of persons passing through the Union to and from Rhodesia. The extension of railways into the Congo, and the mineral development of that region, also increased the "in transit" traffic, but the opening of the Benguela Railway, which connects Central Africa with Lobito Bay on the west coast, diverted the greater portion of this traffic away from the Union. It must be understood that the figures for some of the land border ports do not represent the full traffic, for the reasons given in paragraph 2 of this section.

NUMBER OF EUROPEAN PASSENGERS "IN TRANSIT", 1938.

Country to and from which proceeding.	Arrivals.		Departures.

TOTAL	4,611	4,219	4,436	4,003

MONTHLY NATURAL AND MIGRATION INCREASE OF THE EUROPEAN POPULATION, JANUARY, 1928, TO DECEMBER, 1938.

EXPLANATION OF GRAPH.—The space between vertical lines represents three calendar months, and between horizontal lines 1,000 persons. The graphical lines below the zero line indicate decreases of population. The migration increase is the difference between gross arrivals and departures (excluding "in transit" traffic), and the natural increase the excess of births over deaths.

1. Migration of Non-Europeans.—As mentioned in paragraph 2 above, Natives (Bantu) are excluded from the statistics of migration; as the number of Coloured persons crossing the borders of the Union is small, the great majority of non-European travellers enumerated are Asiatics.

In general, the arrangements for the enumeration of travellers given in paragraph 2 apply equally to Europeans and non-Europeans. At Komatipoort, however, only Asiatics entering the Union are enumerated by the immigration officers, particulars of Transvaal Asiatics departing being obtained from the Principal Immigration Officer, Pretoria, by whom the necessary permits are issued.

The following tables show the movement of non-Europeans:—

In 1937 the number of non-European immigrants exceeded that of emigrants by 709 (male immigrants outnumbered emigrants by 109, while female immigrants outnumbered emigrants by 600). In 1938, the number of non-European immigrants also showed a surplus over emigrants, the excess recorded being 454. During the fifteen years 1924 to 1938, the number of non-European emigrants exceeded that of immigrants by 11,878.

5. **Assistance to and Regulation of Immigration.**—(i) *General.*—Except in so far as provided in the *Aliens Act*, 1937 (*vide* § 6 of this chapter) no obstacle is, as a rule, placed in the way of the entry of European immigrants, provided that they are of good health and character, and are able themselves or through their friends or employers to show that they have means of support. Experience has shown the necessity for these requirements, as the circumstances of the country do not render it always easy for a new arrival to make his way, unless on the one hand he is a thoroughly competent tradesman, or on the other hand has work definitely assigned to him or friends who are able to introduce him to employment and in the meantime to assure him of support. It is particularly difficult for an immigrant, who is without a trade or who has indifferent trade qualifications or is not specially qualified in some other capacity, to procure employment. It is therefore essential that persons of such a type should be able to show on arrival that they have means of support until they may be able to secure work.

(ii) *Prohibited Immigrants.*—By the *Immigrants Regulation Act*, No. 22 of 1913, as amended, the Immigration Department of the Union is empowered to regulate the entry of immigrants, and certain classes of persons denominated prohibited immigrants may be excluded or even extruded from the country; or their residence may be circumscribed as to time and in other respects. See also § 6 below (*Aliens Act*, 1937). Amongst such classes are persons who have been convicted of serious crime; persons of ill-fame; persons who are insane, diseased, including those who suffer from tuberculosis, or are otherwise physically afflicted. Persons likely to become a public charge, and in some cases illiterate persons, are also regarded as prohibited immigrants: and by section 4 (1) (*a*) of the Act the Minister of the Interior is empowered to deem as prohibited immigrants persons, or classes of persons, whose presence for economic or certain other reasons is considered undesirable. For the operation of this clause as affecting Asiatic immigration reference may be made to § 3, 2, of this chapter.

Very full powers of restriction, arrest, and detention are given to immigration officers, who are stationed not only at the ports, but at a number of places within the territory or at the borders of the Union. Any person so arrested or restricted has, however, the opportunity of appearing before one of the *Appeal Boards*, of which three have been constituted, viz.: at Pretoria, Durban, and Capetown.

The Commissioner for Immigration and Asiatic Affairs with headquarters at Pretoria is the chief executive officer controlling immigration. He also acts as Principal Immigration Officer for the Province of the Transvaal. The Principal Immigration Officers for the Provinces of the Cape and Natal have headquarters at Capetown and Durban respectively. The Orange Free State Province comes under the jurisdiction of the Principal Immigration Officer, Durban.

(iii) *Immigration Laws.*—Control over the entry of undesirable immigrants was exercised in Natal from the year 1897; in the Transvaal and Orange Free State from the year 1902, when the *Peace Preservation Ordinance* was passed [following the period of the War (1899-1902), during which military rule had given the necessary powers]; and in the Cape Colony from the year 1903, when the *Immigration Act*, No. 47 of 1902, came into operation. The pre-Union laws governing immigration were repealed by the *Immigrants Regulation Act*, No. 22 of 1913. This Act has been amended by the *Immigration and Indian Relief (Further Provision) Act*, No. 37 of 1927, the *Immigration (Amendment) Act*, No. 15 of 1931, the *Immigration (Amendment) Act*, No. 19 of 1933, and the *Immigration (Amendment) Act*, No. 27 of 1937.

(iv) *Restrictive Effects of the Law.*—The table given below shows the number of persons seeking admission whose entry was prohibited or whose movements were restricted:—

(v) *Land Border Immigration.*—Immigration officers are stationed at the points of entry by rail into the Union from Mozambique (at Komatipoort) and from Rhodesia (at Mafeking and Beit Bridge). The authorities of the latter colony also render certain valuable assistance in checking illicit immigration. Under the *Immigrants Regulation Act* of 1913, passengers entering the Union at the land borders are examined in the same way as at the ports (see paragraph 2 *supra*). An additional immigration officer is stationed at the causeway across the Crocodile River at Komatipoort to deal with road transport.

6. **Re-admission.**—Under the *Immigrants Regulation Act* provision is made for the issue by an immigration officer of a *certificate of identity*, at the option of any person proving lawful residence in the Union, who, intending to leave the Union, desires some assurance as to his title to return to the Union without coming under the restrictive operation of the Act. The fee charged is 2s. 6d. Photographs and means of identification are required. The duration of such certificates is limited to three years, but may be extended, on the authority of the Minister, for a period not exceeding ten years in all. Holders of these documents, who do not return to the Union

within the currency of the certificates, may be required to undergo the tests imposed by law, and may ordinarily be taken to have abandoned any domicile they had previously acquired in the Union. Certificates are issued only to persons who are within the Union, and the possession of a certificate does not exempt the holder from carrying a passport as provided under section 24 of the Act.

7. **Passports demanded on Entry.**—Section 24 of the *Immigrants Regulation Act* includes provision that every person of the age of 16 years and over seeking to enter the Union must be in possession of a valid passport or other document of identity of a class recognized by the Minister, duly *visé* where necessary. This provision of the Act makes it necessary for all persons arriving in the Union to be in possession of passports or other recognized documents of identity; therefore persons from the Union visiting Rhodesia, Portuguese East Africa, and other neighbouring territories, with the intention of returning to the Union, are enjoined to take out a tourist passport issued by the Department of the Interior, for which a fee of 15s. is charged. These passports are valid for any number of temporary visits to those territories in a period of one year from the date of issue. Such passports, however, may be issued only to Union nationals. (See § 7.)

§ 5. Immigration under Quota.

During the period 1st May, 1930, to the 31st January, 1937, immigration from certain countries scheduled under the *Quota Act* was unrestricted, but from all non-scheduled countries immigration was regulated by quota. This Act was repealed by the *Aliens Act*, 1937, and the *Immigration Amendment Act*, 1937.

§ 6. Immigration under the Aliens Act of 1937.

The *Aliens Act*, No. 1 of 1937, came into force on the 1st February, 1937. Under its terms no alien may enter the Union unless he is in possession of a permit to enter for either permanent or temporary residence. By "alien" is meant a person who is not a natural-born British subject or a Union national. British subjects by naturalization are, therefore, aliens for the purposes of the Act, unless they are also Union nationals. The Act relates to admission to South West Africa, as well as to the Union.

In regard to permanent residence, a form of application must be completed in duplicate, to which must be attached eight recent photographs (four full-face and four in profile) of the applicant, together with medical and police reports, and documentary evidence of good character, employment during the past five years, and financial circumstances. The completed application with its supporting documents is to be sent to a Representative of the Union in the country in which the applicant resides, or where there is no such representative, to a British Consul, for transmission to the Department of the Interior, Pretoria. Applications must be sent through those channels and not direct to the Secretary for the Interior, except in cases where the applicant is temporarily resident in the Union.

An Immigrants Selection Board appointed for the purpose will examine each application and authorize or refuse the issue of a permit for permanent residence. The Act lays down that the Board shall not authorize the issue of a permit unless the applicant is of good character, likely to become readily assimilated with the European inhabitants within a reasonable time of his entry, is not likely to be harmful to the welfare of the Union, and does not or is not likely to pursue an occupation which, in the Board's opinion, is already overcrowded. The Board may also authorize the issue of permits to the wife and any minor children or the aged or destitute parents or grandparents of an alien permanently and lawfully resident.

The permit will be issued by the Department of the Interior and, together with an identification card also to be issued and one copy of the form of application, is to be handed to an immigration officer on the arrival of the entrant at an authorized port of entry. The authorized ports are Capetown, Durban, Port Elizabeth, East London, the Rand Air Port (Germiston), Komatipoort, Beit Bridge, Mafeking, Luderitz, and Walvis Bay. The last two are in South West Africa. On landing each entrant must pay a fee of £1 in Union currency.

An alien who desires to be admitted for such temporary purposes as a business, a health, or a touring visit, may be admitted on temporary permit for such period as he desires, but must furnish full reasons for the visit, produce such credentials as he possesses to support his request, hold a valid passport or other recognized travel document, the validity of which will not expire during the period of temporary residence, and, if necessary, provide a recent photograph. A temporary permit is issued gratis but the immigration officer may in his discretion demand a deposit up to £100 as security for compliance with the terms of the permit. To genuine visitors and tourists the deposit will not as a rule exceed £5.

The Minister has discretion to waive the requirements of the Act in regard to distinguished aliens desiring to visit the Union, provided they do not enter for permanent residence. The issue of permits for both permanent and temporary residence will not exempt the holders from complying with the provisions of the principal immigration law, the *Immigrants Regulation Act* of 1913, as amended from time to time.

The Act does not apply to an alien who is lawfully domiciled in the Union or who prior to the 1st February, 1937, lawfully entered for permanent residence, to diplomatic or consular officers and their households and staffs, or to the holder of a permit issued under the *Immigration Quota Act*, 1930 (now repealed), provided he entered while that permit was still valid.

Provision is made for the imposition of penalties in cases where (*a*) false information is given, (*b*) the permit holder engages within three years in any employment other than that stated in his application, or (*c*) any person endeavours to induce any member of the Immigrants Selection Board or any official whose duty involves dealing with applications to effect, or vote for, or recommend the issue of permits.

§ 7. Passports.

1. **Passports.**—Passports are issued to persons in the Union who are Union nationals and natural-born British subjects, to their wives (and widows), to persons who became British subjects by annexation, and to persons who have been naturalized in the United Kingdom or in the Union, or who hold an Imperial certificate of naturalization issued by any of the Dominions. Application is made on a prescribed form to the Department of the Interior, and photographs and evidence of identity and status are essential. Passports are issued in either English or Afrikaans or in both those languages at the request of the applicant. The initial availability of passports is five years, and they may thereafter be renewed for any period from one to five years, but in no case may the validity of a passport be extended beyond ten years from the original date of issue. The fee for a passport is £1, plus 1s. application fee, and a fee of 2s. is charged for each year for which a passport is renewed. Every person travelling abroad must be in possession of a passport.

Union passports, with a few exceptions, are valid for travel throughout the British Empire; consequently the holder of a Union passport may travel from one part of the British Empire to another without a fresh endorsement at the commencement of each journey, provided the validity of the passport has not expired.

2. **Tourist Passports.**—Union nationals who desire to travel to the neighbouring territories of Portuguese East Africa, the Rhodesias, Bechuanaland Protectorate, Basutoland, Swaziland, Nyasaland, Kenya, Uganda, Tanganyika, Zanzibar, and Mauritius, may obtain a tourist passport at a fee of 5s. in lieu of a proper passport. The passport is valid for one year, but may be renewed up to a period of 5 years in all.

§ 8. Union Nationality.

1. **Legislation.**—The *Union Nationality and Flags Act*, No. 40 of 1927, came into force on the 31st May, 1928. Chapter I defines who are nationals of the Union, and Chapter 2 provides for the flags of the Union.

2. **Union Nationality.**—Chapter 1 of the Act provides that the following persons shall be Union nationals:—

(*a*) A person born in any part of South Africa included in the Union, who is not an alien or a prohibited immigrant ("alien" means a person who is not a British subject);

(*b*) a British subject whose entry has not been prohibited under any immigration law in force in any part of South Africa now included in the Union, and who has been continuously domiciled in the Union for two years after entry, so long as he retains such domicile;

(*c*) a person domiciled in the Union, who is not a prohibited immigrant, who became a naturalized British subject under the laws in force in any part of South Africa now included in the Union, and who has been continuously domiciled in the Union for at least three years after entry, so long as he retains that domicile and does not become an alien;

(*d*) a person born outside any part of South Africa included in the Union, whose father was a Union national at the time of such person's birth, or would have been a Union national if the Act had at the time of such person's birth been in force, and was not in the service of an enemy state, provided such person is not a prohibited immigrant.

Other provisions relating to the status of married women, widows, and divorced women, and children, are mentioned hereunder.

The wife of a Union national is deemed to be a Union national, and conversely, if a person is not a Union national, his wife is not. Where a man ceases, during the continuance of his marriage, to be a Union national, his wife may make a declaration before a magistrate, a justice of the peace, or other person appointed by the Minister of the Interior, that she desires to retain Union nationality, if, under the provisions of the *British Nationality in the Union and Naturalization and Status of Aliens Act*, No. 18 of 1926, she has, in similar circumstances, made a declaration to retain British nationality.

A woman who was a Union national, and who ceases to be such on marriage, does not revert to Union nationality merely by the death of her husband, or by the dissolution of the marriage, and similarly a woman who becomes a Union national by marriage retains that status when she becomes a widow, or when the marriage is dissolved.

Children under the age of 21 of persons who cease to be Union nationals for any reason also cease to be Union nationals, but such children may, within one year after reaching the age of 21, declare that they desire to resume their status as Union nationals.

Where a widow who was a Union national marries a person who is not a Union national, the children by her former husband still retain their Union nationality.

Any person who, by reason of his having been born in any part of South Africa included in the Union, is a Union national, but who at his birth or during his minority became, under the law of the United Kingdom or of any possession of the British Empire, or of any self-governing dominion, a national also of that kingdom, possession, or dominion, and is still such a national, and any person who though born outside that part of South Africa constituting the Union is a Union national, may, if of full age and not a mentally disordered or defective person and not domiciled in the Union, make a declaration renouncing his status as a Union national. If, however, such person subsequently establishes a domicile in the Union, he resumes Union nationality under (*b*) above.

Declarations of renunciation must be made in a prescribed form before a magistrate, a justice of the peace, or other person authorized by the Minister of the Interior.

Act No. 14 of 1932 (the *Nationalization and Amnesty Act*) provides that nationals of the former Transvaal and Orange Free State Republics who, after the date those republics ceased to exist, did not become nationals of any other state, are deemed to have become British subjects, if they became resident in the Union after that date and before the commencement (31st May, 1928) of the *Union Nationality and Flags Act*, No. 40 of 1927, or are deemed to be Union nationals, if they became resident in the Union after the 31st May, 1928, but before the commencement of Act No. 14 of 1932 (19th May, 1932), or became Union nationals by becoming resident in the Union after the 19th May, 1932.

The Act was brought into force to provide British and Union nationality for those persons who, being burghers, may not have become British subjects by annexation, through absence from the territories in question at the time of annexation and for some years subsequently. Any doubts as to the acquisition of Union status in respect of those persons is now settled.

The amnesty clause has nothing to do with nationality.

§ 9. Naturalization of Aliens.

1. **Recent Legislation.**—*The British Nationality in the Union and Naturalization and Status of Aliens Act*, 1926, was promulgated on the 1st July, 1926, the Union of South Africa thereby falling into line with the other Dominions in adopting Part II of the *British Nationality and Status of Aliens Act*, 1914 (4 and 5 Geo. 5. Ch. 17) and 1918 (8 and 9 Geo. 5. Ch. 38). Aliens naturalized under this Act acquire British nationality throughout the Empire, except in those Dominions which have not adopted Part II.

2. **Qualifications Demanded of Aliens for Naturalization.**—(i) To be eligible for naturalization an alien must satisfy the following conditions:—

(*a*) He must have attained the age of twenty-one years.

(*b*) He must have resided in the Union or some other part of the British Empire for not less than five years during the eight years immediately preceding the date of his application. This period of five years must include actual residence in the Union for one year immediately preceding the date of application, with the remaining four either in the Union or some other part of the British Empire; or he must have been in the service of the Crown, e.g. in the Army, Navy, or Civil Service, for a period of five years during the eight years immediately preceding the date of application for naturalization.

(*c*) He must be of good character and repute.

(*d*) He must be able to read and write either of the official languages of the Union to the satisfaction of the Minister.

(*e*) He must intend, if naturalized, to continue to reside in the Union or in some other part of the British Empire, or to serve under the Crown.

(ii) Procedure to be followed:—

(*a*) An alien desiring to be naturalized must apply on a prescribed form. This form and the other forms necessary may be obtained free of charge on application to the Secretary for the Interior, Pretoria.

(*b*) The first step is for the applicant to publish in the *Government Gazette* in both official languages, and in one English and one Dutch or Afrikaans newspaper circulating in the magisterial district in which he resides, a notice of his intention to apply to the Minister for naturalization. Applicants must themselves arrange for advertising in the two newspapers and the notice in every case must be in the wording prescribed. Forms of notice for publication in the *Government Gazette* and newspapers may be obtained from the Department of the Interior, Pretoria.

The notices of intention in the *Gazette* and the newspapers must appear one clear month before the application for naturalization is made to the Minister.

The expenses of publication in the *Gazette* and the newspapers must be borne by the applicant.

(*c*) The next step is to obtain a certificate from a magistrate or a justice of the peace (but not from a commissioner of oaths) to the effect that the magistrate or justice of the peace has satisfied himself, from personal knowledge or inquiries made, that the applicant is of good character and repute and possesses the qualifications for naturalization. The justice of the peace must not be the agent or the attorney of the applicant.

(*d*) The applicant must then complete the application form in his own handwriting, and declare on oath the accuracy of the statements made thereon. The person before whom the oath is declared must not be the agent or the attorney of the applicant. The application form, properly completed, must then be sent to the Secretary

for the Interior together with the certificate of repute as above, and copies of the two newspapers and the *Gazette* advertisement in which the notice of intention appears.

(e) If the application is approved the applicant will be notified and furnished with a form of oath of allegiance to complete, which, on completion, must be returned to the Secretary for the Interior. If the oath of allegiance is not made within three months of the date of notification by the Secretary for the Interior, the whole application becomes null and void.

(f) On receipt of the oath of allegiance a certificate will be issued and forwarded to the magistrate of the district for delivery to the applicant. At the same time notice to the applicant will be sent asking him to call on the magistrate to receive the certificate.

(iii) *Expenses.*—The fees payable are as follows:—

	£	s.	d.
(a) Cost of publication in the *Gazette* ... ... (The amount must be remitted in cash to the Government Printer, Pretoria, with the notice of intention properly completed in both the official languages.)	0	13	0
(b) Revenue stamps on the form of application	0	1	0
(c) Fee for registration of application	1	0	0
(d) Fee for the issue of the certificate	5	0	0
TOTAL	£6	14	0

The cost of advertising in the two newspapers is additional to the above. Advertising must be arranged by the applicant himself.

(iv) A person naturalized under a prior law in the Union or any territory now included in the Union, or who became naturalized by virtue of a certificate issued under those laws to his father or mother, may apply for a certificate under the Act of 1926.

(a) *Procedure.*—A form of application may be obtained from the Department of the Interior. No advertisement is necessary either in the *Government Gazette* or in a newspaper.

(b) *Expenses*—

	£	s.	d.
Revenue stamps on the form of application	0	1	0
Fee for registration of application	1	0	0
Fee for issue of the certificate	0	10	0
TOTAL	£1	11	0

(v) Persons may be naturalized in the discretion of the Minister,

(1) in respect of whose nationality as British subjects a doubt exists;

(2) who, not having been British subjects or burghers of the late South African or the Orange Free State Republic, served with the British or Republican forces in the war of 1899-1902, and who after the 31st May, 1902, remained aliens under the existing laws, provided that they were domiciled in the Union for five years immediately prior to the 1st July, 1926.

(a) *Procedure.*—Application in the first place must be made to the Department of the Interior.

(b) *Expenses.*—There are none, except the statutory fee required on any sworn declaration that may be demanded.

3. Effect of Naturalization.—(a) A person naturalized under this Act becomes, unless the law provides otherwise (*vide* section 6 of the Act), entitled to all the rights, powers, and privileges, and subject to all the obligations of a natural-born British subject, throughout the British Empire, its Dominions and Dependencies, except in those Dominions which have not adopted Part II of the *British Nationality and Status of Aliens Act*, 1914-22.

(b) The wife of a person naturalized under this Act acquires the same status as a naturalized British subject as her husband.

(c) The minor children, who are aliens, of a person naturalized under this Act become naturalized, only if their names are specifically included in the parent's naturalization certificate. Such children must ordinarily be resident in the Union with their parent at the time of application. Children who are not minors cannot be included in a parent's certificate. If they desire to be naturalized, they must make application on their own behalf.

(d) Persons naturalized under laws in force in the Union prior to the passing of Act No. 18 of 1926, who do not apply for a certificate under the last mentioned Act, retain their existing rights and privileges.

4. **Naturalization Certificates Issued.**—The table given below enumerates the certificates of naturalization issued for a series of years:—

CERTIFICATES OF NATURALIZATION ISSUED, 1930 TO 1938.

Previous Nationality.	1930.	1931.	1932.	1933.	1934.	1935.	1936.	1937.	1938.

§ 10. Change of Name.

The *Aliens Act*, No. 1 of 1937, contains a clause (section 9) which provides that if any person changes the name he bore or was known by or assumed before the 1st January, 1937, he shall be guilty of an offence, unless he has been authorized to change his name by the Governor-General, and such authority has been published in the *Gazette*. Persons excluded are women assuming husbands' names on marriage; married or divorced women or widows resuming names they bore at any prior time; a woman who lives or lived with a man as his putative wife and assumes his surname, or after having assumed that name, resumes a surname she bore at any prior time; adopted children taking the surnames of the persons adopting them; illegitimate children assuming the surnames of fathers after the marriage of the parents; and persons assuming a surname attaching to an inherited title, or one conferred by the King.

A person intending to apply for a change of surname is required to publish a notice of his intention once in each of four consecutive weeks in the *Gazette* and in each of two daily newspapers circulating in his district and designated for the purpose by the magistrate of that district. The notice must state in full his present christian names and surname, those by which he is or was at any time known, those he desires to assume, his business and residential address, and his reasons in full for desiring to change his name, and must invite any person who objects to the change to lodge such objection with the local magistrate.

The Governor-General must be satisfied from a statement submitted by the applicant, and from reports furnished by the Commissioner of Police and the local magistrate that the applicant is of good character, and that there are good and sufficient reasons for the assumption of another surname.

A conviction or an acquittal of a person guilty of an offence under this section shall not bar a further charge and conviction if he again assumes or describes himself under the same assumed name or any other surname.

The fee for an application is £6.

CHAPTER XXVI.

VITAL STATISTICS.

§ 1. Registration of Births and Deaths.

1. System of Registration.—Until the year 1924 a different series of laws elating to the registration of births and deaths was in force in each of the rovinces, making the co-ordination of registration difficult and greatly istricting the value of the vital statistics of the Union. In 1923 the *Births, eaths, and Marriages Registration Act* (No. 17), consolidating and amending ie laws in force in the various provinces, was passed and brought into operaon as from 1st January, 1924.

The main features of the Act are as follows:—

Provision is made for the appointment of a Registrar for each of the four rovinces and for a Registrar-General for the whole Union. District registrars e appointed for each magisterial district, and, where they are not specially ppointed, magistrates will *ex officio* be registrars for their respective districts.

A distinction is drawn between urban and rural areas. The former are efined as including areas under the jurisdiction of municipal councils, borough uncils, town councils, village councils, town boards, local boards, village anagement boards, and health committees, but may include other areas at e discretion of the Minister.

Registration is compulsory for all races of the population in urban areas. rural areas natives may register voluntarily; but for all other races regisation is compulsory. The Governor-General, however, may make special gulations applicable to natives and may by proclamation apply to aboriginal atives Chapter IV of the Act, which relates to registration in areas other than ban. The term *native* is defined as meaning a person both of whose parents long or belonged to an aboriginal race or tribe of Africa, including any rson of mixed race living as a member of any native community, tribe, kraal, location. Until such time as the Act is applied to Indian immigrants in atal, Law No. 25 of 1891 (Natal), which provides for birth, marriage, and ath registration of immigrant Indians in that province, remains in force.

In urban areas the time limit for reporting a birth is 7 days, and a death hours. Information concerning a birth or a death must be given by a alified informant, who must appear personally before the district registrar assistant district registrar of the district in which the event occurred. In ral areas the prescribed period in which to register a birth or a death is days.

All deaths in urban areas must be certified as to the cause by a qualified gistered medical practitioner. Without such certificate the district registrar assistant district registrar cannot authorize burial; he must report the cts to the magistrate, who will institute inquiries into the cause of death d, if necessary, hold an inquest.

A medical certificate is not ordinarily required in the event of a death in rural area; whenever a medical practitioner has attended a person during e last illness, he is required to furnish a certificate as to the cause of death, as to his inability to sign such a certificate.

Deaths occurring on shipboard in Union ports or waters or in transit to nion ports must be registered at the first Union port of call; but only births children whose parents reside or intend to reside in the Union are required be registered.

The Act empowers the Governor-General to promulgate regulations—

(1) for the management of registrars' offices or district registration offices;
(2) prescribing the duties or powers of registrars and district registrars;
(3) prescribing the nature and extent of information respecting births, deaths, and marriages;
(4) prescribing the necessary forms, certificates, and registers to be used;
(5) prescribing the fees payable for searches, for certificates issued, and for acts performed under the provisions of the Act.

On 1st July, 1928, the Secretary for the Interior was appointed Registrar-General for the Union. At the same time a Registrar for the four provinces was appointed with headquarters at Pretoria, and the records of births, marriages, and deaths of the Cape Province, heretofore conserved in Capetown, were thereafter transferred to the archives at Pretoria.

Full particulars of the systems of registration formerly in force in the various provinces of the Union were given in the fourth and previous issues of this *Year Book*.

The registration of births and deaths of Europeans may, for all practical purposes, be said to be complete throughout the Union. The provision in Act No. 17 of 1923 for voluntary registration of native births and deaths in rural areas has resulted in fewer registrations than formerly.

Section 133 (1) of the *Public Health Act*, No. 36 of 1919, provides that the Minister of Public Health may, when so requested by a local authority, make regulations requiring the father of any child, if he is residing with the mother when the child is born, or, in his absence, the person attending on the mother at the time of or within six hours after the birth, to report the birth forthwith to the local authority, with such details as may be prescribed by the regulations.

The *Births, Marriages and Deaths Registration Amendment Act*, No. 7 of 1934, provides for the alteration by a competent person of the name (not the surname) under which registration of a birth was originally made, and for the insertion of the name in cases where it was not entered at the time of registration. The re-registration of illegitimate births when the parents have subsequently married is also provided for in the Act.

2. **Publication of Statistics.**—Detailed statistics of births, deaths, and marriages are published annually by the Office of Census and Statistics under the title of *Report on the Vital Statistics of the Union of South Africa*. The report contains approximately 100 tables, with comparisons for previous years. It is obtainable from the Government Printer, Pretoria (price 4s. per copy).

3. **Periods of Tabulation.**—It has been the practice in the Union, in common with all other countries, to tabulate vital statistics for the *calendar year*. The records for past years in the Office of Census and Statistics all relate to the period 1st January to 31st December, and they have been built up for a series of years, thus making a useful comparative history of the vital events of the population. The tables given in this chapter are tabulated on this basis and thus afford a ready comparison with the vital statistics tabulated and published by other Dominions and countries. The Department of Health, however, adopted for the purposes of health reports a Union *health year*, which runs from 1st July in one year to the 30th June in the following year. This necessitates the tabulation of vital registrations half-yearly in order to obtain figures for the local health year, as well as for universal comparison. In addition to these two tabulation periods, the Office of Census and Statistics also collects and tabulates monthly preliminary figures for certain large towns, and quarterly figures for the Union and the provinces.

The estimates of population for the years 1932 to 1935 were revised when the final results of the 1936 Census became available. The birth, death, and marriage rates for those years have, therefore, been revised.

The following table shows the number of European births and deaths registered and the vital rates during the *health* years from 1933-34, and also the estimated European population at the 31st December of each year:—

VITAL REGISTRATIONS AND RATES PER 1,000, UNION HEALTH YEARS, 1933-34 TO 1937-38.

EUROPEAN POPULATION.

Health Year.	Estimated Population 31st Dec.	Births.		Deaths.		Infantile Mortality.	
		No.	Rate.	No.	Rate.	No.	Rate.

*Preliminary figures.

§ 2. Births.

1. **Births Registered.**—The total number of births registered from 1911 of Europeans and non-Europeans is shown in the following tables. Detailed figures prior to the year 1931 will be found in No. 16 and previous issues of the *Year Book*. The *Births and Deaths Registration Law* in the Orange Free State prior to 1924 applied to Europeans only.

The significance of the figures relating to non-European births is purely administrative, owing to the incompleteness of the registration of births of natives.

* Preliminary figures.

3. Birth Rate and Proportion of the Sexes.—Table (i) shows the birth rate per 1,000 of the estimated mean population for Europeans and mixed and other coloured persons. From the year 1910, when the European birth rate was 32·52, there has been a gradual decline in the rate with slight fluctuations.

Table (ii) gives the proportion of each sex of European births registered. These figures, when compared with those for other Dominions and various European countries, show a slightly greater excess of male over female births.

Table (iii), which shows the crude birth rates of various countries, has been compiled from the latest available information. In No. 13 and earlier issues of this book, the rates for specified years were given, but owing to the difficulty in collating the information it was not possible to publish rates for all countries for the same year. The method of averaging for the last three years available was, therefore, adopted as giving a better comparison. It also obviates to some extent the fluctuations due to abnormal conditions such as epidemics, famines, extraordinary climatic changes, etc., in the different parts of the world represented in the table.

(i) BIRTH RATES, 1933 TO 1937.

* Europeans only.

Birth Rates in the Principal Towns.—The registration of non-European vital events in the towns, though probably complete in so far as the actual number of events is concerned, is an entirely misleading index of the birth and death rates of the non-European community of the towns. Possible exceptions are the municipalities of Capetown, Port Elizabeth, and Kimberley, which have a large mixed non-European population of a stationary type, who live in the towns in a similar manner to Europeans. In the other towns this section of the population is a constantly changing one. There is frequently a predominance of one sex, and those persons in the community who are employed as domestic servants are generally unmarried, or if married are separated from their families. In Johannesburg and the other Witwatersrand towns there are large numbers of male natives of the population living in mine compounds. The non-European population of Pretoria is principally Bantu, and the ratio of males to females is 2 to 1. Of the female population less than one-third are married women. Moreover, it is customary for native women to leave the towns and return to their kraals for confinement. The number of births registered is, therefore, small in proportion to the population upon which vital rates would be computed. These factors would also influence the infantile mortality and general death rates. The following table shows the number of births and the birth rates of Europeans in the principal urban areas, and also the number of non-European births registered. The latter, however, must be taken as merely a record of registrations and should not be used for the purpose of calculating rates.

4. Births in Regional Divisions.—The following table shows the number of births and the birth rates for Europeans and the number of births for mixed and other coloured persons in seven regional divisions. These divisions are non-administrative, but have been arranged as far as possible to accord with the variations in altitude and rainfall, and the different climatic conditions prevailing generally. Each division comprises a number of magisterial districts. A fuller description of the areas is given in Chapter XXV.

The *coastal* regions, which contain rather more than a quarter of the total European population, consistently show a lower birth rate than the general rate for the whole Union. The *highveld* region, in which more than half the Europeans reside, has a birth rate very similar to that of the whole Union. The *Transvaal bushveld* shows a high birth rate and a low infantile mortality rate.

BIRTHS IN REGIONAL DIVISIONS, 1933 TO 1937.

Year.	Union.	Regional Divisions.						
		South-Western Coastal.	South-Eastern Coastal.	Karroo—Cape Central.	High-veld.	Cape Thorn-veld.	Transvaal Bush-veld.	Cape North-West.

5. Natural Increase.—The number of births in excess of deaths, which showed a steady decline from 1911 to 1917 and from 1925 to 1928, moved in an upward direction during 1929 and 1930, but the figure fluctuated from the year 1931 onwards. The years 1918 and 1919 were highly abnormal and cannot be considered for comparative purposes in this connexion.

Although the males born are more numerous than the females, the actual increase in the population from the excess of births over deaths is in favour of the females, as the number of male deaths greatly exceeds that of female deaths. The masculinity of the population is, therefore, steadily declining. Table (ii) shows the comparative masculinity of the European population and of births and deaths for a period of years. Reference to the subjoined table (i) shows that for the provinces the natural increase of males is less than that of females.

The total excess of births over deaths of Europeans from the date of the constitution of the Union to the 31st December, 1937, was approximately 759,917.

(i) NATURAL INCREASE—EUROPEAN POPULATION, 1911 TO 1937.

* Number of males to each 100 females.
† Ratio of death rate of males to death rate of females.

6. Births in Urban and Rural Areas.—The distribution of births in the urban centres and rural districts is shown for a series of years in the following statement. Previous to the year 1924 births were tabulated according to the area of registration, with the result that the urban rates were increased by the inclusion of births to rural residents who had come into towns for accouchement. Under the laws in force prior to January, 1924, it was not possible to adjust the registrations according to the area of residence of the parents, but with the introduction of consolidating legislation in that year a system of transfers was instituted, and the following table shows the urban and rural births correctly allocated.

BIRTHS IN URBAN AND RURAL AREAS—EUROPEANS, 1933 TO 1937.

Year.	Urban Areas.				Rural Areas.				Total Persons.	General Birth Rate per 1,000.
	Male.	Female.	Persons.	Birth Rate per 1,000.	Male.	Female.	Persons.	Birth Rate per 1,000.		
1933.....	13,016	12,352	25,368	21·35	9,978	9,173	19,151	27·21	44,519	23·53

1935.....	14,357	13,694	28,051	22·17	10,050	9,616	19,666	28·14	47,717	24·29
1936.....	15,156	14,475	29,631	22·58	9,834	9,105	18,939	27·29	48,630	24·21
1937.....	16,228	15,417	31,645	23·46	9,849	9,384	19,233	27·69	50,878	24·90

7. Plural Births.—The number of plural births recorded during the years 1933 to 1937 is given in the following table:—

PLURAL BIRTHS—EUROPEANS, 1933 TO 1937.

Year.	Twins—Number of Events.				Triplets—Number of Events.			
	Total.	Both Born Alive.	One Stillborn.	Both Stillborn.	Total.	All Born Alive.	One Stillborn.	All Stillborn.
1933.....	512	474	24	14	7	7	—	—
1934.....	486	456	21	9	5	4	1	—
1935.....	552	512	26	14	4	3	1	—
1936.....	523	466	44	13	7	7	—	—
1937.....	540	484	40	16	5	4	—	1

8. Illegitimate Births Registered.—The number of European illegitimate births registered during a series of years is shown in the following table. The Cape Province has consistently returned a higher percentage of illegitimate births than has any other province.

The percentages for the Union compare favourably with the rates as published by other Dominions and foreign countries. Of twenty countries for which recent particulars are available, a ratio of illegitimate to total births lower than that of the Union occurs only in Southern Rhodesia and Holland.

ILLEGITIMATE BIRTHS REGISTERED—EUROPEANS, 1933 TO 1937.

Year.	Number.					Per Cent. of Total Births.				
	Cape of Good Hope.	Natal.	Transvaal.	O.F.S.	Union.	Cape of Good Hope.	Natal.	Transvaal.	O.F.S.	Union.
1933.....	623	66	426	78	1,193	3·47	1·92	2·31	1·66	2·63
1934.....	585	75	416	82	1,158	3·32	2·27	2·15	1·78	2·55
1935.....	598	88	498	65	1,249	3·28	2·56	2·36	1·32	2·62
1936.....	591	72	399	58	1,120	3·25	2·00	1·80	1·21	2·30
1937.....	597	86	453	63	1,199	3·24	2·28	1·90	1·29	2·36

The usual method of stating the number of illegitimate births as a proportion of the total births is not entirely satisfactory. The subjoined table shows the illegitimate births in 1936 in relation to the total unmarried European female population of child-bearing age. There is, however, no method of arriving at a correct estimate of this group of the population for any period except that of the census. The figures below are based upon the census figures of 1936, and the rates for the censuses of 1921 and 1926 are inserted for comparison. The table also shows the legitimate birth rate in relation to the married European female population between the ages of 15 and 45 years. No tabulation of marital condition was undertaken at the Census of 1931.

ILLEGITIMATE AND LEGITIMATE BIRTHS PER 1,000 OF THE UNMARRIED AND MARRIED FEMALE POPULATION BETWEEN THE AGES OF 15 AND 45 YEARS—EUROPEANS, CENSUS, 1936.

§ 3. Deaths.

1. **Deaths Registered.**—The total number of deaths registered during the period 1st January, 1911, to 31st December, 1938, of Europeans and non-Europeans is shown in the subjoined tables. As is the case in regard to the number of births registered, the fluctuations in the figures for the Natal Province in respect of non-European deaths are caused by the inclusion of registrations of deaths of Indians in 1912, and native registrations also in 1913 and later years, neither of which events was previously recorded. The *Births and Deaths Registration Law* of the Orange Free State did not apply to natives and coloured persons.

In all the tables in this section the European figures for the Natal Province prior to the year 1914 include persons of "coloured" or mixed race, the number of coloured persons, however, being small.

† Preliminary figures.

3. Crude Death Rate.—The simplest measure of mortality is obtained by computing the number of deaths per 1,000 of the population. This is known as the "crude" death rate, and furnishes a useful index to the healthiness or otherwise of the climate of the country and the condition of life of the community.

The records since the establishment of the Union show a fairly constant death rate for Europeans, and the fluctuation in the figures is small, being less than 1 per 1,000 from year to year. Since the year 1921, the rate has been consistently below 10 per 1,000 except for the years 1928, 1935, and 1937. The death rate for the whole population in the Orange Free State and the infantile mortality rate in Natal have been consistently lower than in the rest of the Union.

4. Specific Death Rates.—The term Specific Death Rate used in the following table designates the rate of mortality per 1,000 of the population at specified ages. For intercensal periods estimates of population in age groups are based on proportional ratios between two censuses, and, for post-censal periods, estimates are adjusted according to the records of births, deaths, and migration. The rates have been calculated from the year 1912 and have been published in previous editions of this *Year Book*. The following table shows the rates for Europeans for five years from 1933:—

5. Specific Death Rates according to Marital Condition.—The following table, based upon the 1936 Census, shows the death rates per 1,000 persons, according to marital condition in certain age groups.

The table shows that from the age of twenty the death rates of married men were considerably lower than those of single men. On the other hand, the specific death rates of married and single females fluctuate from age to age. The rates of widowed and divorced persons are of interest, but are liable to considerable fluctuation, owing to the small numbers upon which the calculations are made.

The general death rates (all ages) according to marital condition depend largely on the age distribution of each group. Thus the rates for single persons are low, as this group contains the majority of young persons, while the widowed and divorced group, which contains a large proportion of old persons, has much higher death rates.

Owing to difficulties in estimating population in groups according to marital condition for intercensal years, computations showing the effect of marital condition on specific death rates cannot be made for periods other than a census year. The average mortality under each marital condition for three years—one year preceding and one year following a census year—will probably give a better index of the effect of marital condition on death rates, and will tend to eliminate any excess mortality in one group that may be due to some abnormal condition. The figures in the table have been calculated on this basis for the years 1935 to 1937.

DEATHS PER 1,000 IN SPECIFIC AGE GROUPS ACCORDING TO MARITAL CONDITION, EUROPEANS, AVERAGE, 1935 TO 1937.

* Europeans only.

7. Standardized Death Rate.—The usual and simplest method of calculating the death rate of a country is to express the number of deaths as a proportion of each thousand of the estimated mean population, i.e. the *crude* death rate. Any error that may occur in the computation is most likely to arise through an over or an under-estimate of the population; but in a country like the Union, where a census is taken quinquennially, the population may be estimated for intercensal years with a fair degree of accuracy. An error may also occur if the system of registration of deaths is imperfect. Errors due to these two causes, however, will probably be negligible. Notwithstanding the criticism that has been levelled at crude death rates, they are reliable and useful rates for most practical purposes. *Standardized* rates have a special and limited application.

A full explanation with examples of the different methods employed is published in the Reports on the Vital Statistics of the Union for 1933 and subsequent years.

The *standardized* death rates given in the following table are calculated on the *standard million* of England and Wales. For purposes of comparison the *crude* death rate has also been inserted.

CRUDE AND STANDARDIZED DEATH RATES PER 1,000—EUROPEANS, 1913 TO 1937.

Year.	Crude.	Standardized.*	Year.	Crude.	Standardized.*

* Standard population of England and Wales of undistinguished sex, Census 1901.

8. Standardized Death Rates for Towns and Sub-Divisions of the Union.—The standardized death rates given in this book are calculated on the *standard million* of the population of England and Wales, 1901, and thus afford a direct comparison with the death rates of that country and with other countries using the same standard. An international standard, while useful for comparing the rates of one country with another, is unsuitable when adjusted or standardized rates are required for local areas within a country. For this reason the population of the Union as enumerated at the Census has been chosen as the standard for computing standardized rates for the provinces, the largest towns, urban and rural areas, and the regional divisions into which the Union has been divided for the purposes of vital statistics. These rates enable the relative salubrity of each town or area to be compared on the same basis, each with the other or with the Union as a whole. In other words, the crude death rate of (say) Johannesburg is standardized for differences in age and sex constitution for comparison with the rate for (say) Capetown with a similar age and sex distribution of its population, any difference in the two standardized rates being thus due to causes other than a preponderance of one sex or of a particular age group.

The method followed is known as the *indirect* or *factorial* method of standardization and is identical with that used by the Registrar-General of England and Wales for many years. Briefly, the method of computation is as follows: The mean annual death rates at certain age groups for the whole Union are applied to the population at the corresponding age groups, as enumerated at the census of the town or area, for which the standardizing factor is required. The results give the number of deaths that would be expected in a year, if the rate of mortality of each age group were the same as that of the Union as a whole. From the sum of the products and the total population of the area or town in question is computed the *index death rate*. This index death rate indicates the degree to which the population of that particular area is favourably or unfavourably constituted. In the same manner an index death rate is computed for the Union, and the relation of this rate to the index death rate of any other area or town gives the required standardizing factor.

The following table gives the standardized death rates for each of the provinces during a period of years, on the basis of the Union population, distinguished for age and sex distribution. Figures for earlier years will be found in previous issues of this *Year Book*.

STANDARDIZED DEATH RATES*—EUROPEANS, 1933 TO 1937.

* Standardized for age and sex distribution to the standard population of the Union.

9. Deaths in Urban and Rural Areas.—The number of deaths of Europeans occurring in urban centres and rural districts during a period of years is shown in the table hereunder. The number of deaths registered in urban areas is largely in excess of the number registered in rural areas. This is mainly owing to the fact that the urban population represents 66 per cent. of the total population, and also that the deaths of many rural inhabitants occur in the larger towns, especially in hospitals and nursing institutions.

Prior to 1924 it was not possible to adjust the registrations according to area of residence. Under the consolidating legislation, Act No. 17 of 1923, a system of transfers was made possible, and from the 1st January, 1924, death statistics have been tabulated by area of residence. The columns giving the urban and rural death rates show that the urban rate is consistently higher than the rural rate, which may be attributed in part to the more hazardous occupations followed by the urban industrial population.

The results of the Censuses of 1931 and 1936 reveal the fact that the age and sex distribution of the population of urban areas is more favourable to a low crude death rate than that of the rural areas. Allowance for this divergence in population is, therefore, made by computing standardizing factors based on the age and sex distribution of the standard population of the Union, and applying these to the crude rates. [Para. 8 above.]

* Standardized for age and sex distribution to the standard population of the Union.

Deaths in Large Urban Centres.—Since the beginning of the year 1921, monthly returns of births and deaths have been collected from the nine largest municipalities and the Witwatersrand towns. Statistics for each of the towns comprising the Witwatersrand urban areas from 1936 will be found in the Reports on the Vital Statistics of the Union. The yearly registrations and death rates from 1933 are given in the table hereunder.

Rates are not shown for the non-European population for several reasons, the chief of which are the migratory nature of the population, the unequal sex proportions, and the peculiar age distribution due to the absence of young children and old persons. The last-named cause is peculiar to the inland towns, whose non-European population is principally Bantu and not, as in the case of the Cape coastal towns, coloured persons of mixed blood who permanently reside in the towns. The particular effects of these population peculiarities are more fully explained in the section on births.

10. **Deaths in Regional Divisions.**—In this chapter, the majority of the figures are tabulated according to the four main administrative areas (provinces) of the Union. The reason for this is that each province until 1923 had its own *Births and Deaths Registration Law*, and tabulation has naturally followed according to the vital events registered under the respective laws. The boundaries of the provinces follow generally the principal inland rivers or mountain ranges. For the purposes of vital and population statistics the Union has now been sub-divided into seven regional divisions, arranged as nearly as possible according to climatic conditions. A description of these divisions will be found in Chapter XXV. The following table shows the crude death rates for the past five years in each of the divisions. The age and sex distributions of the several populations differ from each other, and from the distribution of the total Union population. To eliminate differences due to these two causes the rates for the period 1932 to 1935 have been standardized to the Union standard population as at the Census of 1931, and those for 1936 to the Union standard population as determined at the 1936 Census. For ease of comparison the crude rates for the European population of the Union have been inserted.

DEATH RATES PER 1,000 IN REGIONAL DIVISIONS—EUROPEANS, 1933 TO 1937.

Year.	Union.	Regional Divisions.

11. **Mortality of Each Sex.**—There are two methods of calculating the ratio of deaths of one sex to those of the other or of male to female deaths. One is to calculate the actual number of male deaths to each 100 of the actual female deaths registered. The result gives a *crude ratio*, because it does not take into account the sex constitution of the population or, in other words, the relative numbers of each sex exposed. The second method is to calculate the ratio of the death rate of males to the death rate of females. This calculation eliminates the unequal distribution of the sexes in the population and thus reduces the comparison of the mortality of each sex to a *standard*. The results are given in the following tables under the heading *Crude* and *Standardized Ratios*, or, as the ratios are calculated on the basis of males to females, *Relative Male Mortality*. The latter method shows at a glance at which ages the number of deaths of males exceeds that of females or *vice versa*. Tables (i) (*a*) and (ii) (*a*) record the actual number of deaths of males to each 100 deaths of females according to the number of registrations of deaths effected. Tables (i) (*b*) and (ii) (*b*) show the relative male mortality for each 100 female deaths on a basis of an equal number of each sex exposed to risk.

If we take the standardized figures as a truer index of sex mortality, it will be seen that with few exceptions the number of deaths of males regularly exceeds that of females, the average excess for the years 1933 to 1937 being 28 per cent. for all ages.

In table (i) (*b*) below, the excess in the mortality of males manifested itself at all ages throughout the period except at ages 30 to 34 in 1934, 5 to 9 in 1936, and 10 to 14 in 1937.

In table (ii) the masculinity of the deaths in each province is shown for the period 1933 to 1937. The first portion of the table gives the crude ratios based on the number of deaths of each sex. As explained above this calculation takes no cognizance of the fact that in the majority of age groups there were more males than females exposed to risk of death. Had the distribution of the sexes been constantly equal, the resulting standardized mortality of males to that of each 100 females would have been as shown in the second portion of the table under the heading *Relative Male Mortality*.

were caused by respiratory diseases, and 26 per cent. were from diarrhoea and enteritis. During the period under review the number of deaths from the last-named causes each month increased from October each year, reaching its peak during December, and falling away again during the month of March. The large numbers for the five months, October to February, which are the warmest months of the year, are therefore responsible for the high death rate from infantile diarrhoea.

INFANTILE MORTALITY, EUROPEANS—CAUSES OF DEATH, 1933 TO 1937.

Cause.	Year.				
	1933.	1934.	1935.	1936.	1937.

16. **Infantile Mortality in Regional Divisions.**—The following table gives a comparison with the Union of the infantile mortality rate in seven *regional* or *climatic divisions*.

The fluctuations in the rates recorded in the Cape Thornveld, Transvaal Bushveld, and Cape North-West may be due to some extent to the small population of these areas, and therefore to the small numbers upon which the rates are calculated. A very small increase or decrease in the number of either births or infant deaths causes a marked variation in the mortality rate.

INFANTILE MORTALITY IN REGIONAL DIVISIONS—EUROPEANS, 1933 TO 1937.

Year.	Union.	Regional Divisions.						
		South-Western Coastal.	South-Eastern Coastal.	Karroo—Cape Central.	High-veld.	Cape Thorn-veld.	Transvaal Bush-veld.	Cape North-West.

17. **Infantile Deaths in Principal Urban Centres.**—Table (i) hereunder shows for the years 1933 to 1937 the infantile mortality in the principal urban areas. Unfortunately, the mode of living, age, and sex distribution of the non-European population of the towns are such as to preclude the computation of reliable infantile mortality rates for this section of the population. The nature of these peculiarities of population and their effect on vital statistics are more fully explained in a previous paragraph dealing with the non-European birth rates in these areas.

(i) INFANTILE MORTALITY IN THE PRINCIPAL TOWNS*, 1933 TO 1937.

* Statistics for the towns of the Witwatersrand from 1936 will be found in the report on Vital Statistics.

Infantile Mortality in Various Cities.—The following table is compiled from various sources and shows the infantile mortality rate in various large cities throughout the world for the latest available date.

(ii) INFANTILE DEATH RATES FOR CERTAIN CITIES AVERAGED OVER THREE SUCCESSIVE YEARS.

City.	Period.	Average Annual Rate.	Position.	City.	Period.	Average Annual Rate.	Position.
Alexandria	1934-36	206	38	London	1935-37	64	18
Amsterdam	1934-36	31	2	Melbourne	1935-37	41	9
Antwerp	1934-36	61	15	Madrid	1933-35	97	29
Auckland	1934-36	37	6	Montreal	1934-36	86	25
Belfast (N. Ireland)	1934-36	98	30	New York	1934-36	48	11
Berlin	1934-36	62	16	Oslo	1934-36	25	1
Birmingham	1935-37	63	17	Paris	1934-36	70	21
Bombay	1934-36	247	39	Perth (W.A.)	1934-36	39	8
Brisbane	1933-37	70	21	Prague	1934-36	88	26
Brussels	1934-36	78	23	Quebec	1934-36	109	33
Budapest	1934-36	112	34	Riga	1934-36	63	17
Buenos Aires	1934-36	57	14	Rio de Janeiro	1934-36	173	36
Cairo	1934-36	197	37	Rome	1934-36	74	22
Chicago	1934-36	42	10	San Francisco	1934-36	36	5
Christchurch (N.Z.)	1934-36	38	7	Stockholm	1934-36	35	4
Copenhagen	1934-36	50	12	Sydney (N.S.W.)	1935-37	39	8
Dublin	1934-36	96	28	Tokio	1934-36	94	27
Edinburgh	1934-36	67	19	Venice	1933-35	80	24
Glasgow	1934-36	102	31	Vienna	1934-36	69	20
Hamburg	1934-36	55	13	Warsaw	1935-37	107	32
Leningrad	1930	141	35	Washington	1934-36	70	21
Liverpool	1935-37	80	24	Wellington (N.Z.)	1934-36	32	3

18. **Certified and Uncertified Deaths.**—There has been a steady increase in the proportion of deaths certified by medical practitioners. In the year 1911 the percentage of certified deaths was 75·95. In 1914 nearly four-fifths of the total number of deaths registered were certified, and in 1937 the proportion of certified deaths was over 93 per cent.

The lowest percentage of uncertified events is in Natal, where, excluding Zululand, the density of the population is greater than in the other provinces. In the Cape Province the position is not satisfactory, 11·41 per cent. of the total deaths recorded in 1937 being uncertified. This is, however, a great improvement over 1911, when 34 per cent. of deaths were uncertified. When an inquest or magisterial inquiry has been held into the cause of death, the event is recorded as a certified registration.

The following tables give (i) the number of inquests held on Europeans, and (ii) the percentages of certified and uncertified deaths of Europeans during the years 1933 to 1937:—

(i) NUMBER OF INQUESTS, EUROPEANS, 1933 TO 1937.

Year.	Cape of Good Hope.	Natal.	Transvaal.	Orange Free State.	Union.
1933	478	138	605	120	1,341
1934	489	127	626	117	1,359
1935	474	174	709	106	1,463
1936	528	159	718	109	1,514
1937	479	155	727	121	1,482

(ii) PERCENTAGES OF CERTIFIED AND UNCERTIFIED DEATHS—EUROPEANS, 1933 TO 1937.

PROPORTION PER 100 DEATHS.

Year.	Certified by Medical Practitioner.	Inquests and Inquiry Cases.	Uncertified Deaths.
1933	83·86	7·59	8·55
1934	84·58	7·33	8·09
1935	85·46	7·09	7·45
1936	85·00	7·88	7·12
1937	85·98	7·19	6·83

19. **Ages at Death.**—Considerations of space necessitate the omission from the *Year Book* of tables showing ages at death, but the subject is dealt with fully in the annual reports dealing with vital statistics. (See also § 5 below.)

20. **Classified Causes of Death.**—The Government of the Union is a party to the agreement executed in Paris on the 3rd July, 1909, by the International Commission which revised the *International Classification of the Causes of Sickness and Death*. From the 1st January, 1912, the second revision of the *International Nomenclature* was adopted for the tabulation of vital and morbidity statistics, so that from that date the vital statistics of the Union are comparable with those of other countries using the same classification.

The International Commission for the third revision of the nomenclature met in Paris in October, 1920; but, owing to unexpected occurrences, the issue of its report was considerably delayed. The change from the second to the third revision was therefore not effected until the 1st January, 1922. With a view to securing uniformity as regards the cause of death when preparing death certificates, all medical practitioners have been supplied with a pocket reference to the International List of Causes of Death and requested to aid the Statistical Department in the improvement of vital statistics by employing always the exact terms printed in the booklet, whenever these are applicable. The fourth revision (1929) of the International List was brought into use in 1932.

In 1925 a qualified medical practitioner was appointed as part-time Medical Assessor of Vital Statistics to assist the Census Office staff in the classification of causes of death. All death forms are examined by the Assessor, and, where the particulars do not enable the cause of death to be accurately classified, additional information is requested of the medical practitioner who issued the death certificate, or, in the case of inquests, of the magistrate who held the inquest.

On an average about 850 deaths are queried each year, and of these 95 per cent. can subsequently be allocated to a definite cause of death for statistical purposes.

The table hereunder shows the number of deaths registered for the years 1934 to 1937 classified in accordance with the *International Abridged List* and supplemented by the addition of certain causes of special interest to the Union, such as miners' phthisis, silicosis, and plague.

§ 4. Marriages.

1. **Marriages in the Cape of Good Hope.**—(i) *Persons who may not Marry.*—Persons who may not marry in the Cape of Good Hope are males under eighteen and females under sixteen years of age, except with the permission in writing of the Minister of the Interior; minors, i.e. persons under twenty-one years of age (not being widowers or widows), except with the consent of parents or guardians or of a judge; persons of unsound mind; impotent persons and blood relations in the direct line and collaterals within the third degree; persons previously married, while such marriages subsist. Widowers or widows with minor children may marry only on the production of a certificate from the Master of the Supreme Court that the inheritance of minors has been secured, or that the estate of the deceased spouse is valued at less than £100. A guardian may not marry his ward until his accounts as guardian have been closed and audited.

(ii) *Persons authorized to Solemnize Marriages.*—Magistrates and detached assistant magistrates are authorized to solemnize marriages, as are also persons (officers of the Public Service, ministers of religion, or persons holding responsible positions in any religious denomination or community) who may be specially designated as marriage officers by the Minister of the Interior and persons who were authorized to solemnize marriages in the Cape of Good Hope Province prior to the passing of Act No. 43 of 1916.

(iii) *Preliminaries to Marriage.*—In the case of marriages by magistrates or detached assistant magistrates, written notice must be posted in a conspicuous place in or near the courthouse for a period of twenty-one days and read out in court thrice in the district or sub-district in which each of the parties has resided for not less than fourteen days prior to such publication of notice. In the case of marriages by ministers of the Christian religion, banns must be published on three Sundays before the congregation to which each of the parties belongs. All other marriage officers must publish notices of marriage by affixing a copy of each notice for a period of not less than twenty-one days in a conspicuous place accessible to the public. When the parties reside in different places, whether within the province or elsewhere, banns or notices must be published in both places in accordance with the law of the country in which the places are situated.* A special licence is obtainable at the office of any magistrate or detached assistant magistrate at a cost of £5. Where a special licence has been obtained, publication of banns is not necessary.

(iv) *The Marriage Ceremony.*—Marriages may be solemnized by magistrates and detached assistant magistrates in the court-room or office between the hours of 9 a.m. and 12 noon, or in a private house at any convenient hour of the day; and by other marriage officers between the hours of 8 a.m. and 4 p.m.† There are no specified hours within which marriages by special licence must be performed.

(v) *Registration.*—After the ceremony the parties, at least two witnesses, and the officiating marriage officer are required to sign certain documents.

(vi) *Certificates, Searches, and Fees.*—Magistrates and detached assistant magistrates may not charge a fee for solemnizing marriages. Other marriage officers (except ministers of churches established in the province prior to the 7th September, 1838, who are entitled to the fees customarily paid to them at that date) may charge a fee of 4s. for solemnizing a marriage. The fees payable for searches and issue of certificates are prescribed by regulation framed under Act No. 17 of 1923 (*vide* paragraph 5 hereunder).

2. **Marriages in Natal.**—(i) *General.*—Ordinance No. 17 of 1846 provides for the solemnization of marriages after the publication of banns by ministers of the Christian religion. The Government may appoint marriage officers to perform marriage ceremonies. Before minors are married the consent of their legal guardians must be obtained, and, if that is not procurable, then the consent of the chief civil judge must be obtained. In terms of Act No. 8 of 1935 no boy under the age of 18 years and no girl under the age of 16 years is capable of contracting a valid marriage except with the permission in writing of the Minister of the Interior. After the marriage ceremony an entry of the marriage must be made in the register kept by the minister or marriage officer, such entry being signed by the parties in the presence of two witnesses and the minister or marriage officer.

* See Proclamation No. 209 of 1914 concerning mode of publication of banns.
† Amended by section 10 of Act No. 7 of 1934 (*vide* paragraph 5 hereunder).

Under Law No. 7 of 1889 magistrates of every district are authorized to issue licences to marry in place of the publication of banns. The foregoing requirements apply to white persons, to natives exempt from the operation of native law, and to Christian Indians.

(ii) *Indian Immigrants.*—All marriages of Indian immigrants must be registered with the Protector of Indian Immigrants under Natal Law No. 25 of 1891; and in the case of Christian Indians an additional copy of the marriage register is forwarded to the Registrar for registration. (See also paragraph 5 hereunder.)

(iii) *Natives.*—Under Natal Law No. 28 of 1865 natives exempted from the operation of native law who have once married are never allowed to marry according to native law. Law No. 46 of 1887 provides that natives not exempt from the operation of native law may be married by Christian rites, but ministers may not solemnize these marriages without the necessary licence from the magistrate. The children of natives thus married may not marry according to native law. Under Act No. 43 of 1916 a minister who solemnizes marriages of natives by Christian rites must be appointed a marriage officer by the Minister of the Interior.

3. **Marriages in the Transvaal.**—(i) *General.*—Act No. 13 of 1909 of the Transvaal, amending Law No. 3 of 1871, provides that marriages between white persons may be either by banns or by licence and may be solemnized by the magistrates of the various districts and all ministers of religion who have been appointed marriage officers by the Minister of the Interior. Banns must be published in public in the ordinary manner on three successive Sundays during divine service in a church or other building habitually used for public worship in the parish in which each of the parties or both of them reside, or by being posted up for a period covering three successive Sundays in a conspicuous place, to which the public have access, at the magistrate's office of the district in which each of the parties to the intended marriage resides, or in which both of them reside. The fee for a licence, which is valid for three months from the date of issue, is £5.

(ii) *Marriages of Coloured Persons.*—Law No. 3 of 1897 regulates the marriages of coloured persons. The term *coloured person* includes any person who is manifestly coloured, and whose marriage on that account may not be solemnized under the law for white persons. Before a marriage of coloured persons may be solemnized, the parties must appear before a civil marriage officer and submit a certificate from their parents or guardian, from their captain or chief or the minister of their church, or from any reputable citizen, preferably a person occupying an official position, to the effect that there is no impediment to the marriage according to law. Marriages of coloured persons contracted prior to the promulgation of Law No. 3 of 1897 are not legal, but may be legalized by registration under Ordinance No. 29 of 1903, provided that such marriages were solemnized by ministers of religion authorized to solemnize marriages under Law No. 3 of 1871.

(iii) *Prohibited Marriages.*—Sections 8 and 16 of Law No. 3 of 1871, as amended by Act No. 13 of 1909, provide that: If any person acknowledges himself or herself to be a minor, or if from any other information there are good grounds for considering him or her to be such, and he or she cannot produce the consent of father or guardian, or in case a widower or a widow wishes to remarry and minor heirs are left for whose father's or mother's portion of the inheritance proper security (bewys) shall not have been given according to law, according to certificate from the Orphan Master (now the Master of the Supreme Court) or other official authorized by law thereto, or if it shall be known, or if, by inquiry in the manner provided by Article 5, or in any other lawful manner, it might have been learned, that the persons who seek to be joined together in matrimony are related to one another within one of the prohibited degrees of blood relationship, or that they have come from beyond the borders of the Transvaal for the express purpose of being married there, because they would not have been able to effect a valid marriage in the place where they are domiciled, or the publication of banns shall not have taken place, or a special licence shall not have been granted as provided by law, it shall not be lawful to solemnize a marriage of such person.

If a minor cannot obtain the consent of parents or guardian to enter into a marriage owing to insurmountable difficulties, it shall be lawful for the magistrate of the district, in which the minor resides, to grant or refuse

consent after due inquiry into the case. In terms of Act No. 8 of 1935, no boy under the age of 18 years and no girl under the age of 16 years is capable of contracting a valid marriage except with the permission in writing of the Minister of the Interior.

4. **Marriages in the Orange Free State.**—The Law relating to the contracting of marriages in the Province of the Orange Free State is No. 26 of 1899, which came into operation on the 14th July of that year. This Law makes provision for marriages to be entered into either after publication of banns or by special marriage licence.

In the case of a marriage by banns, it is required by section 3 that the banns shall be publicly proclaimed on three consecutive Sundays during the holding of public divine service in some church building or other recognized institution for public divine worship within the parish wherein one or both of the parties reside; should the parties reside in different parishes, the banns must be published in each such parish. Section 7, however, allows of the publication of banns, under special circumstances, by means of a notice affixed to the outside door of the court-room of a magistrate's office during a period of three weeks.

The procedure to be followed by applicants for a special marriage licence is set forth in sections 9, 10, and 11 of the Law, and in accordance therewith the parties are required to appear together before a magistrate and there make and subscribe to affidavits containing answers to questions which it is necessary for him to put to them in order to satisfy himself that there are no legal impediments to the issue of the special marriage licence applied for. Thereafter the application must be forwarded to the Administrator of the province, by whom the licence is issued.

Section 13 prescribes the qualifications required in parties to marriages, and mentions the disqualifications on account of which marriages are prohibited. It is provided, *inter alia*, that minors must have attained the age* of eighteen years in the case of males and fifteen years in the case of females, and that they must produce evidence of the consent of their parents or guardians in respect of their contemplated marriage. Where a parent's consent is unobtainable, the magistrate may grant consent under the provisions of section 19. In the case of a widower three months, and in the case of a widow 180 days, must have elapsed since the death of the deceased spouse, before a further marriage may be contracted by him or her. The law relating to the prohibited degrees of consanguinity is Ordinance No. 31 of 1903.

Marriages may be solemnized, as provided by section 17, on any day of the week, including Sunday, but the ceremony must take place between the hours of eight in the morning and four in the afternoon† in some church or other public building devoted to divine service, public office, or private house with open doors and in the presence of at least two legally qualified witnesses.

5. **Union Legislation.**—Act No. 20 of 1913 authorizes the solemnization of marriages after the publication of banns in different places, whether one or both such places be in another province, or in a country, colony, or territory outside the Union.

Under section 56 of Act No. 24 of 1913 the remarriage of the surviving spouse before the portions of minor children are secured is prohibited, except with the consent of the Master of the Supreme Court.

Act No. 22 of 1914 provides that Indian marriages according to the tenets of an Indian religion may be legalized by registration, provided that a joint application is made to any magistrate or marriage officer, and that each of the parties is desirous that the marriage should be regarded as a valid and binding one in law. Such unions become by the fact of registration valid and binding marriages from the date when they were contracted, and all incidents follow therefrom, which follow from any other union recognized in law as a valid and binding marriage.

Act No. 43 of 1916 makes provision for the appointment of marriage officers to solemnize marriages under the laws in force in the several provinces of the Union.

* Under Act No. 8 of 1935 the minimum ages are 18 and 16 years respectively.
† Under Act No. 7 of 1934 marriages may be performed at any hour, *vide* paragraph 5.

In terms of the *Births, Marriages, and Deaths Registration Act* of 1923 the duplicate original register must be transmitted to the custody of the Registrar of the province in which the marriage was solemnized within seven days of the marriage, and the original register must be retained in the custody of the marriage officer who solemnized such marriage.

The following fees and charges prescribed by regulations framed under Act No. 17 of 1923 are payable in respect of searches and of the issue of certificates:—

	£	s.	d.
For a special licence	5	0	0
For a certificate of marriage	0	2	6
For a copy of any documentary proof	0	1	0
For each search made, per calendar year or part thereof	0	1	0

Marriage with a deceased wife's sister is legal in the Union, and Act No. 17 of 1921 permits the marriage of a widow with her deceased husband's brother.

Notwithstanding the provisions of any law requiring the solemnization of a marriage within certain prescribed hours, Act No. 7 of 1934 provides that a marriage officer may, but shall not be obliged to, solemnize a marriage at any other time, and such marriage shall be as valid as if solemnized within the prescribed hours.

Legislation was enacted under the provisions of the *Marriage Law Amendment Act*, No. 8 of 1935, prohibiting the marriage of boys under 18 and girls under 16, except with the permission in writing of the Minister of the Interior.

6. **Marriages Registered.**—The tables for European marriages in this section apply only to events where both the groom and the bride were of European descent. If one only of the contracting parties was of such descent, the marriages have been tabulated as *mixed* and are excluded from all the following tables relating to marriages of European persons.

MARRIAGES REGISTERED, 1911 TO 1937.

† Including mixed marriages, for the details of which see the table in the following paragraph.

7. **Mixed Marriages.**—The term *mixed marriage* is used to denote a marriage contracted by parties, one of whom is of European and the other of aboriginal or other coloured descent. The following table gives the number of

such marriages solemnized in the Cape and Natal Provinces during a period of years:—

MIXED MARRIAGES—CAPE OF GOOD HOPE AND NATAL,* 1933 TO 1937.

Description.	1933.		1934.		1935.		1936.		1937.	
	Cape of Good Hope.	Natal.	Cape of Good Hope.	Natal.	Cape of Good Hope.	Natal.	Cape of Good Hope.	Natal.	Cape of Good Hope.	Natal.
European males to non-European females	50	16	48	8	55	20	46	5	66	11
Non-European males to European females	13	4	14	2	14	2	19	3	21	2
TOTAL	63	20	62	10	69	22	65	8	87	13

*In the Orange Free State one European male was married to a coloured female in 1937.

8. **Marriage Rate.**—The following table shows the number of marriages of Europeans contracted per 1,000 of the estimated mean European population. The records of marriage rates date back to the year 1911 for the whole Union, and for years prior to 1933 were published in previous issues of this *Year Book*. The rate of 11·31 for the year 1937 is the highest recorded. The lowest rate recorded was 7·41 in 1923.

MARRIAGE RATES OF EUROPEANS, 1933 TO 1937.

Year.	Cape of Good Hope.	Natal.	Transvaal.	Orange Free State.	Union.
1933	8·17	8·21	9·90	7·96	8·83

Other	1·25	1·51	1·30	1·39	1·54
TOTAL	63·88	66·45	66·50	66·88	66·44
By Magistrates	36·12	33·55	33·50	33·12	33·56
GRAND TOTAL	100·00	100·00	100·00	100·00	100·00

In 1912, civil marriages represented 21·97 per cent. of the total marriages solemnized; in 1937 the proportion was 33·55 per cent. This high percentage for the Union is mainly due to the large proportion of civil marriages in the Transvaal, where 43·52 per cent. of the total marriages in the year 1937 were performed by magistrates; while only 22·8 per cent. of the total marriages in the Cape Province were civil marriages. The proportion of civil marriages to the total marriages registered in New Zealand during the year 1937 was 16·87 per cent.; and in the Commonwealth of Australia 8·21 per cent. in 1936.

10. **Marriages by Banns or Licence.**—The subjoined table gives particulars from 1933 of the number of persons who were married after the publication of banns or by licence.

NUMBER OF EUROPEANS MARRIED BY BANNS AND BY LICENCE, 1933 TO 1937.

12. **Ages and Marital Condition of Persons Married.**—Table (i) hereunder gives particulars as to the ages and marital condition of Europeans married in 1937; Table (ii) gives the same particulars with respect to non-Europeans; Table (iii) shows the relative ages of Europeans married in 1937; Table (iv) gives the numbers and percentages at each age period of European bridegrooms and brides married during a period of years. In the thirteenth issue of this *Year Book* comment was made upon the fact that the age at which men most commonly marry had changed from the group 25-29 years to the lower group 20-24 years during the period 1927 to 1930 inclusive. This feature in the marriage statistics was the result of a change in the age constitution of the male population, which showed a deviation from normal in the two age groups, the numbers in group 25-29 years being below normal, and in group 20-24 above normal. The shortage in the former group is explained by the fact that during the Anglo-Boer War there was a considerable falling off in the number of births, with a consequent deficiency in the number who would normally have reached the group in 1927 and subsequent years. The increase in group 20-24 years was the result of immigration following immediately after the Anglo-Boer War, together with the resumption by the pre-war population of normal life at the close of hostilities, which led to a great increase in the birth rate in subsequent years. The survivors of those persons born in that period reached the age of 23 or under in 1927, thus abnormally increasing the population in that group. It will be observed, however, that whereas the 20-24 age-group showed a decrease between 1929 and 1930, the 25-29 age-group showed a considerable rise, and in 1931 again became the age-group at which men most commonly marry.

The age groups 20-24 has remained undisturbed as the period at which women commonly marry. In 1937 over 41 per cent. of the females married were from 20 to 24 years of age. The optimum age of marriage of grooms in 1937 was 25 and of brides 21. The majority of marriages of men aged 45 years and over, and of women aged 40 years and over, were second marriages. In 1937 the proportions were 81 and 76 per cent. respectively.

13. **Marriages of Minors.**—The number of marriages of minors during a series of years and the proportion per cent. of that number to the total number of marriages are given below. In comparison with figures for the United Kingdom and various British Dominions, the percentage of bridegrooms under twenty-one years is in most cases lower in the Union, but, on the other hand, the percentage of brides who marry under that age is higher. In England and Wales the percentages in 1937 were: Grooms 3·20, brides 14·83; in Scotland, 1936: Grooms 4·4, brides 17·1; in New Zealand, 1937: Grooms 2·76, brides 17·47; and in the Commonwealth of Australia, 1937: Grooms 4·37, brides 20·1.

MARRIAGES OF MINORS—EUROPEANS, 1933 TO 1937.

Year.	Bridegrooms.		Brides.		Percentage of Minors.	
	Adults.	Minors.	Adults.	Minors.	Bridegrooms.	Brides.
1933.....	16,175	534	11,760	4,949	3·20	29·62
1934.....	19,314	576	14,259	5,631	2·90	28·31
1935.....	20,007	592	14,814	5,785	2·87	28·08
1936.....	21,671	623	15,937	6,357	2·79	28·51
1937.....	22,457	664	16,506	6,615	2·87	28·61

14. **Marriage Contracts.**—Marriages in the Union are contracted either in community of property or by ante-nuptial contract. Briefly, in the former case the property of the contracting parties becomes the property in the joint estate; in the latter, a legal contract is drawn up and registered, under the terms of which each maintains individual control of his or her personal property brought into the marriage.

The number of marriages contracted by Europeans during the years 1933 to 1937 classified according to type of contract was as follows:—

Year.	Number.		Per cent.	
	In Community.	Ante-Nuptial.	In Community.	Ante-Nuptial.
1933.....	12,119	4,590	72·5	27·5

1936.....	15,778	6,516	70·8	29·2
1937.....	16,178	6,943	70·0	30·0

§ 5. South African Life Tables.

1. **General.**—Two South African life tables have been calculated and published by the Office of Census and Statistics. The first table was based on the European mortality for the years 1920-22, and was published in the *Final Report* of the 1921 Population Census; the second, derived from similar data for the years 1925-27, is published in S.P. 57-'30, and also appears in the *Final Report* of the 1926 Population Census. An account of all other life tables that have been published will be found in S.P. 57. Full details of the method employed in constructing the tables will be found in the reports. In addition monetary tables on single lives at 4, 4½, and 5 per cent. were calculated for South African Life Table No. 2.

2. **Comparative Rates of Mortality and Expectation of Life.**—The following table gives comparative figures from the two tables for rates of mortality and expectation of life for both sexes at quinquennial ages.

SOUTH AFRICAN LIFE TABLES—COMPARATIVE RATES OF MORTALITY AND EXPECTATION OF LIFE.

13. **Marriages of Minors.**—The number of marriages of minors during a series of years and the proportion per cent. of that number to the total number of marriages are given below. In comparison with figures for the United Kingdom and various British Dominions, the percentage of bridegrooms under twenty-one years is in most cases lower in the Union, but, on the other hand, the percentage of brides who marry under that age is higher. In England and Wales the percentages in 1937 were: Grooms 3·20, brides 14·83; in Scotland, 1936: Grooms 4·4, brides 17·1; in New Zealand, 1937: Grooms 2·76, brides 17·47; and in the Commonwealth of Australia, 1937: Grooms 4·37, brides 20·1.

MARRIAGES OF MINORS—EUROPEANS, 1933 TO 1937.

Year.	Bridegrooms.		Brides.		Percentage of Minors.	
	Adults.	Minors.	Adults.	Minors.	Bridegrooms.	Brides.
1933.....	16,175	534	11,760	4,949	3·20	29·62
1934.....	19,314	576	14,259	5,631	2·90	28·31
1935.....	20,007	592	14,814	5,785	2·87	28·08
1936.....	21,671	623	15,937	6,357	2·79	28·51
1937.....	22,457	664	16,506	6,615	2·87	28·61

14. **Marriage Contracts.**—Marriages in the Union are contracted either in community of property or by ante-nuptial contract. Briefly, in the former case the property of the contracting parties becomes the property in the joint estate; in the latter, a legal contract is drawn up and registered, under the terms of which each maintains individual control of his or her personal property brought into the marriage.

The number of marriages contracted by Europeans during the years 1933 to 1937 classified according to type of contract was as follows:—

Year.	Number.		Per cent.	
	In Community.	Ante-Nuptial.	In Community.	Ante-Nuptial.
1933.....	12,119	4,590	72·5	27·5
1934.....	14,275	5,615	71·8	28·2
1935.....	14,716	5,883	71·4	28·6
1936.....	15,778	6,516	70·8	29·2
1937.....	16,178	6,943	70·0	30·0

§ 5. South African Life Tables.

1. **General.**—Two South African life tables have been calculated and published by the Office of Census and Statistics. The first table was based on the European mortality for the years 1920-22, and was published in the *Final Report* of the 1921 Population Census; the second, derived from similar data for the years 1925-27, is published in S.P. 57-'30, and also appears in the *Final Report* of the 1926 Population Census. An account of all other life tables that have been published will be found in S.P. 57. Full details of the method employed in constructing the tables will be found in the reports. In addition monetary tables on single lives at 4, 4½, and 5 per cent. were calculated for South African Life Table No. 2.

2. **Comparative Rates of Mortality and Expectation of Life.**—The following table gives comparative figures from the two tables for rates of mortality and expectation of life for both sexes at quinquennial ages.

SOUTH AFRICAN LIFE TABLES—COMPARATIVE RATES OF MORTALITY AND EXPECTATION OF LIFE.

Age.	Rate of Mortality ($1{,}000q_x$) at each age.				Expectation of Life ($\mathring{e}_x$) at each age.			
	Male Lives.		Female Lives.		Male Lives.		Female Lives.	
	1920–22.	1925–27.	1920–22.	1925–27.	1920–22.	1925–27.	1920–22.	1925–27.
0	87·84	74·44	73·88	62·76	55·61	57·78	59·18	61·48
5	2·94	2·92	3·04	2·37	58·34	59·51	61·38	62·76
10	2·00	1·79	1·64	1·48	54·02	55·17	57·00	58·33
15	2·45	2·06	2·19	1·91	49·56	50·65	52·50	53·78
20	3·94	3·44	3·34	2·60	45·26	46·27	48·15	49·34
25	4·42	3·82	4·06	3·25	41·18	42·09	44·00	45·01
30	4·98	4·16	5·06	3·98	37·08	37·87	39·93	40·77
35	6·50	6·07	5·42	4·75	33·05	33·73	35·93	36·00
40	8·17	7·16	6·20	5·43	29·16	29·78	31·89	32·47
45	11·09	9·55	7·57	6·30	25·41	25·89	27·90	28·34
50	13·45	12·27	9·45	8·03	21·8	22·17	22·97	24·28
55	18·06	17·35	13·17	12·79	18·3	18·60	20·16	20·41
60	25·96	24·71	18·66	17·25	15·14	15·31	16·56	16·76
65	35·79	34·82	29·65	28·92	12·18	12·39	13·24	13·36
70	56·33	51·69	45·64	42·97	9·53	9·54	10·35	10·42
75	80·61	83·10	67·23	71·89	7·39	7·22	7·83	7·86
80	119·90	119·12	119·99	103·09	5·56	5·42	5·78	5·85
85	173·31	185·53	150·79	172·33	4·17	3·92	4·50	4·13
90	235·02	251·46	238·34	237·95	3·11	2·98	3·17	3·11

It will be seen that the improvement in the South African tables is very largely due to the marked decrease in the mortality rates of young children, which has been a conspicuous feature in recent years.

3. **Comparison with other Countries.**—The following table gives a comparison between the rates of mortality and expectation of life at decennial ages of New Zealand, Australia, England and Wales, and South Africa.

COMPARISON OF SOUTH AFRICAN LIFE TABLE No. 2, WITH THOSE OF OTHER COUNTRIES AT DECENNIAL AGES.

Age.	Male.				Female.

0	57·78	62·76	59·15	55·62	61·48	65·43	63·31	59·58
5	59·51	62·17	60·43	58·81	62·76	64·05	63·64	61·67
10	55·17	57·73	56·01	54·64	58·33	59·50	59·20	57·53
20	46·27	48·66	46·99	45·78	49·34	50·36	50·03	48·73
30	37·87	39·98	38·44	37·40	40·77	41·76	41·48	40·26
40	29·78	31·56	30·05	29·19	32·47	33·23	33·14	31·86
50	22·17	23·51	22·20	21·36	24·28	24·91	24·90	23·69
60	15·31	16·03	15·08	14·36	16·76	17·29	17·17	16·22
70	9·54	9·91	9·26	8·75	10·42	10·57	10·41	9·95
80	5·42	5·33	5·00	4·93	5·85	5·78	5·61	5·56
90	2·98	2·31	2·60	2·82	3·11	2·52	2·91	3·13

It will be found in comparing the South African Life Table with those of other countries that it lies between that of Australia and that of England and Wales. At birth the expectation of life is about two years less than that of Australia and two years more than that of England and Wales. The table follows this intermediate course until about 60, when the expectation of life in South Africa is slightly more favourable than in Australia, and continues so for the older ages. New Zealand, which has probably the best expectation in the world, has an expectation at birth of about five years in the case of males and four years in the case of females greater than that for South Africa.

CHAPTER XXVII.

THE TERRITORY OF SOUTH WEST AFRICA.

§ 1. Introductory.

Prior to the twelfth century, the territory was inhabited by wandering bodies of Bushmen, who had, it is believed, been preceded by the negroid race known as the Haukoins or Berg Damaras. About the twelfth century the Hottentots gradually overspread the coastal regions. The Ovambos followed at a later date. About the beginning of the eighteenth century the Hereros arrived. This tribe enslaved the Berg Damaras and gradually forced the Hottentots southwards, until Oasib, the Chief of the Hottentots, sought assistance from Jonker Afrikaner, who lived on the Orange River. The latter, whose followers were armed with rifles, was able to reduce the Hereros to a state of bondage and in that state they remained until Jonker's death in 1860. Kamaherero, the Chief of the Hereros, then succeeded in combining the central tribes of Hereros and defeated the Hottentots under Jan Jonker Afrikaner, old Jonker's son. Eventually he not only freed his tribe from bondage, but imposed his will on the Hottentots living in the southern portion of Namaqualand.

The first recorded visit of a European to the territory is that of Bartholomew Diaz, who landed at Angra Pequena (now Luderitz) in 1486 and erected a monument. The first white man to cross the Orange River into the territory is said to have been Jacobus Coetzee, while on a hunting expedition in 1760. He reported that the Hereros possessed great herds of cattle. In 1792 W. van Reenen and Piet Brandt reached the Herero border. Their report also refers to the wealth in cattle of the Hereros.

In 1876, as a result of continued unrest among the native tribes, a Special Commissioner was dispatched to the territory by the Government of the then Cape Colony to obtain information in regard to the country and to ascertain whether the chiefs were desirous of coming under the Government of that Colony. The Commissioner received an offer of submission from Kamaherero and the Herero chiefs. Namaqua chiefs also requested the Cape Government to place amongst them Resident Commissioners to assist them in the management of their territory. Nothing was done as a result of this mission, however, and the state of unrest continued until 1883. In that year, the Luderitz Company of Bremen acquired 150 miles of territory from the Chief of South Namaqualand. German traders settled at places along the coast and German factories were established at Angra Pequena.

Correspondence took place in the years 1883 to 1885 between the Governments of Germany, Great Britain, and Cape Colony, and ultimately the territory was annexed by Germany from Cape Frio to the Orange River, with the exclusion of the Walvis Bay settlement (which had been annexed by the British Government in 1878) and the islands along the coast. A Charter was granted to the Deutsche Kolonial Gesellschaft, which was founded in 1885 and continued to exercise the Charter until 1892, when its responsibilities were taken over by the German Imperial Government. Landed property was similarly taken over in 1908, but the Gesellschaft retained its mining rights. In that year diamonds were discovered on the coast.

Railway construction commenced in 1897 with the narrow gauge line connecting Windhoek, the capital of the territory, with Swakopmund. Subsequent constructions include 3ft. 6in. gauge lines from the Union border at Nakop to Walvis Bay with branch lines from Seeheim to Luderitz and from Windhoek to Gobabis. Narrow gauge (2 ft.) lines run from Usakos to Tsumeb, with branches from Otavi to Grootfontein and from Otjiwarongo to Outjo. The total rail mileage at the end of March, 1938, was 1,462.

The best means of entering the territory is by sea at Walvis Bay or by rail from the Cape Province or by air from Johannesburg. The railway journey from Capetown to Windhoek, the seat of the Administration, the Legislature, and the High Court, is 1,383 miles and from Johannesburg 1,336 miles.

Shortly after the Great War broke out, Luderitz and Swakopmund were occupied by the Union Defence Forces and later, in April, 1915, a general converging movement from these points, as well as from the Union border, commenced. On the 9th July the German army surrendered, and the administration of the country was taken over by the Union of South Africa, which established a military régime.

In terms of Article 22 of the Treaty of Versailles those Colonies and Territories which, as a consequence of the Great War, ceased to be under the sovereignty of the States which formerly governed them, and which were inhabited by peoples not yet able to stand by themselves under the strenuous conditions of the modern world, were placed under the tutelage of advanced nations, who could best undertake the responsibility attached to the well-being and development of such peoples, the tutelage to be exercised by such advanced nations as Mandatories on behalf of the League of Nations. Certain territories, owing to the sparseness of their population or their geographical contiguity to the territory of the Mandatory, were to be administered under the laws of the Mandatory as integral portions of its territory, subject to certain safeguards in the interests of the indigenous population. In pursuance of these terms of the Treaty, the Government of the Union of South Africa was entrusted with the Mandate in respect of the territory formerly known as German South West Africa. On 12th September, 1919, the Union House of Assembly formally accepted this mandate and the Governor-General was given power to make appointments, establish offices, and issue proclamations and regulations; to repeal, alter, amend, or modify any laws in force within the territory; to make new laws applicable to the territory; to delegate his authority in respect of these actions to such officers in the territory as he may designate to act under his instructions.

Martial law rule continued until 1st January, 1921, when the powers vested in the Governor-General, referred to above, were delegated to the Administrator of the territory. By Proclamation No. 1 of 1921, dated the 13th January, 1921, the Administrator proclaimed the establishment of an Advisory Council. This Council consisted of nine members representative of farming, commercial, mining, wage-earning, and native interests. The duties and functions of the Council were to advise the Administrator generally in regard to matters affecting the territory, more especially those relating to the raising of revenue, the appropriation of moneys for public services, and the allocation of expenditure, and matters of general policy in relation to legislation and administration.

By Union Act No. 42 of 1925, which came into operation on the 5th August, 1925, provision was made for the constitution of an Executive Committee, an Advisory Council, and a Legislative Assembly for the territory.

§ 2. Physical Characteristics.

1. **Area and Boundaries.**—The territory of South West Africa embraces an area of 317,725 square miles (82,290,860 hectares). It lies between latitudes 17° 23′ south and 28° 57′ south, the Atlantic Ocean, and longitude 21° east; so that, from practically the centre of the Rehoboth district northwards, it falls within the tropics, and from there southwards within the South Temperate Zone. Walvis Bay, which is 374 square miles (96,867 hectares) in extent, is administered by the Administration of South West Africa, but the area remains nevertheless an integral part of the Province of the Cape of Good Hope.

The boundaries of the territory are—

North.....Angola, which for a considerable distance is separated from South West Africa by the Kunene and Okavango Rivers.

North East...Northern Rhodesia.

East.....The Protectorate of British Bechuanaland and the Province of the Cape of Good Hope of the Union of South Africa.

South.....The Orange River, which is also the boundary of the Province of the Cape of Good Hope of the Union of South Africa.

West... .....The Atlantic Ocean.

2. **Physical Features.**—(i) *Formation.*—South West Africa is practically one large plateau, which forms a portion of the main South African plateau. It has a mean average height of approximately 3,600 feet above sea level, and slopes gradually, especially on the eastern portion of the territory, from 2,500 feet in the south to 4,800 feet in the north, while it is interspersed with small mountain ranges, of which the Moltkeblick rises up as high as 8,146 feet above sea level. The Brandberg, which is near the coast and is the highest of these, has an elevation of 8,550 feet. The plateau or interior upland is separated from the sea by a practically rainless desert commonly called the Namib, which rises rapidly, but evenly, from the sea to the plateau, has an average width of 100 kilometres (62 miles), and attains its greatest width towards the south, and its narrowest towards the north, the annual rainfall there being less than one inch. A good deal of the plateau in the south may be classed as semi-desert, as the average annual rainfall is less than 10 inches, but in the north there is a marked improvement, the average rainfall in parts being over 20 inches.

The edge of the South African Plateau is well defined in the north and south of South West Africa by broken ranges of mountains like the Kaokofeld and Aus-Kubub Mountains (Huib Hochebene), but in the centre there is no defined escarpment. The plateau attains its greatest average elevation around Windhoek, which lies between the Khomas Hochlands and the Auas Mountains. From there, isolated eminences and ranges superimposed on the main plateau extend in a northerly direction to the Kaokofeld Mountains. To the south, the Highlands are succeeded at some little distance by the plateau and the table-topped mountains of Great Namaqualand; eastward and north-east of these elevated tracts, the upland assumes a very level character, composed mostly of sand dune formation merging eventually everywhere into the sandveld of the Kalahari.

(ii) *Mountains.*—The most mountainous section is the Windhoek district, in which are—

(1) The Khomas Hochland, a very rugged lofty tableland, with a mean altitude of 6,000 feet, rising up in places to 6,700 feet above sea level;

(2) Rugged ranges north-east of Windhoek, of which the principal are the Onjati Mountains (6,457 feet); and

(3) To the south and south-east, the Auas Mountains, having a mean average elevation of approximately 6,700 feet, and attaining their greatest altitude in the Moltkeblick Peak (8,146 feet). In this section, the Kuiseb, the Fish, the Elephant, the Nosop, and the Swakop rivers have their source, and this may practically be termed the watershed of South West Africa.

With the exception of the Kaokofeld Mountains, which form the edge of the plateau, the rest of the mountains are broken ranges and isolated eminences rising out of the Great Plateau. Among these are the Omatako (7,510 feet), Erongo (7,277 feet), Chuos (4,446 feet), Naukluft (6,477 feet), Weissrand (3,800 feet), Zaris (5,922 feet), Schwarzrand (5,889 feet), Tiras (6,126 feet), Huib Hochebene (Aus-Kubub) (5,490 feet), Klein Karras (4,885 feet), and Gross Karras (5,907 feet).

(iii) *Rivers.*—With the exception of the boundary rivers, the Kunene, Okavango, Orange, Zambezi, and Chobe (Linyanti) Rivers, and the Kwando (or Mashi) in the Caprivi Zipfel, there are no perennial streams. There are, however, dry sandy river beds, which flow after heavy rains, but except in very wet seasons, few of these flow for any considerable distance; such are the Swakop, the Kuiseb, and the Omaruru. These river beds have the appearance of having been blocked up by loose sand, under which the water percolates and eventually reaches the sea. By sinking shallow wells in them plentiful supplies of fresh water are obtained; a good illustration of this is at Rooibank, near the mouth of the Kuiseb, and at Goanikontes, near the mouth of the Swakop.

The principal of these sandy rivers are: The White Nosop and the Elephant, both of which flow east and south-east; the Fish, which flows south; and the Kuiseb, the Swakop, the Omaruru, and the Ugab, which flow west.

(iv) *Ocean Currents.*—The coast is swept by the cold Benguella current, which originates in the Antarctic Ocean and flows along the western coast of South Africa as far as the mouth of the Congo. There can be no doubt that the arid character of the Namib is due primarily to the influence of this current.

(v) *Pans.*—Characteristic of the northern and eastern section of the territory are the peculiar shallow depressions without any outlet, commonly known as *pans*, which range in diameter up to a couple of miles. They may be classified according to the water contained in them as freshwater pans, brack pans, and salt pans. The surface of the salt pans, such as those at Aminuis and west of the Etosha Pan, becomes covered during the dry season with a dazzling white crust composed chiefly of common salt. The Etosha Pan can hardly be classified amongst these occurrences, as it covers an area of approximately 1,404 square miles (363,600 hectares). In the winter it is dry, but during the summer months or wet season it is covered by a shallow sheet of water, which varies according to the rainfall and the amount of water flowing into it by way of the Ekuma and Omulonga Omurambas from the north and the Ovambo Omuramba from the east.

3. **Vegetation.**—(i) *Namib.*—Along the sea coast there is no vegetation whatsoever; from about twenty-five miles inland the landscape is characterized by such plants as the milk bush (*Euphorbia*) and cacti; towards the east, in years of abundant rainfall, it is fairly well grassed. In the river beds which traverse it, trees of rich verdure are found, such as various acacias, the principal of which are the Kameeldoring (*Acacia giraffae*) and the Ana (*Acacia albida*).

(ii) *South.*—In the extreme south for a considerable distance semi-desert conditions prevail, consisting of an arid, stony plateau and plains supporting edible shrubs and a sparse growth of grass; in heavy rainy seasons, however, nutritious grasses and flowers spring up everywhere. The river courses, as in the Namib, are clothed with trees. The most widely distributed plants are the milk bush and the Ganna bush (*Salsola aphylla*), the three thorn bush (*Rhigozum trichotomum*), and the Noonie bush (*Boscia foetida*), the trees being the Kameeldoring (*Acacia giraffae*) and the Koker-boom (*Aloe dichotoma*).

(iii) *Centre.*—From the southern portion northwards the veld assumes the characteristics of the Karroo until Rehoboth is reached, when it changes into a park-like grass country studded with large thorn trees, being especially well timbered along the water courses. From the mountainous portion of the Windhoek district northwards towards Omaruru, the country is covered with level bush with an undergrowth of very nutritious grass, the valleys and water courses being well timbered, mostly with acacia trees, especially the Kameeldoring (*Acacia giraffae*).

(iv) *North.*—Towards the north the bush becomes denser; the country becomes fairly well timbered all over, and is traversed in its most northern section by belts of open Mopane forests; towards the Okavango it is covered by fertile tropical vegetation.

(v) *East.*—In the southern portion of the eastern section the vegetation is karroo bush intermixed with grass, the valleys being covered with thorn bush. This changes towards the centre, where trees become more numerous. The dunes themselves are covered with thorn bush, large acacia trees, and good grass. From Rehoboth northwards the whole is well timbered and merges into thick tropical vegetation.

4. **Rainfall and Climate.**—A rainfall of about an inch along the coastal belt and up to 6 inches in the south, 12 inches in the centre, and 22 inches in the north can be regarded as normal. The territory is, however, subject to periods of drought, and at varying intervals as much as three or more times the normal rainfall may be precipitated.

The climate is hot and dry and on the whole healthy. Malaria is met with in the northern districts during the autumn, and after a good rainy season it becomes more prevalent and may even assume serious proportions.

§ 3. Administration.

1. **Central Administration.**—(i) *Mandate.*—The administration of the country is vested in the Government of the Union of South Africa, under the following Mandate:—

THE MANDATE FOR SOUTH WEST AFRICA.

The Council of the League of Nations,

WHEREAS by Article 119 of the Treaty of Peace with Germany, signed at Versailles on 28th June, 1919, Germany renounced in favour of the Principal Allied and Associated Powers all her rights over her oversea possessions, including therein German South West Africa; and

WHEREAS the Principal Allied and Associated Powers agreed that, in accordance with Article 22, Part I (Covenant of the League of Nations) of the said Treaty, a Mandate should be conferred upon his Britannic Majesty to be exercised on his behalf by the Government of the Union of South Africa to administer the territory aforementioned and have proposed that the Mandate should be formulated in the following terms; and

WHEREAS His Britannic Majesty, for and on behalf of the Government of the Union of South Africa, has agreed to accept the Mandate in respect of the said territory and has undertaken to exercise it on behalf of the League of Nations in accordance with the following provisions; and

WHEREAS, by the aforementioned Article 22, paragraph 8, it is provided that the degree of authority, control, or administration to be exercised by the Mandatory, not having been previously agreed upon by the members of the League, shall be explicitly defined by the Council of the League of Nations,

Confirming the said Mandate, defines its terms as follows:—

Article 1.

The territory over which a Mandate is conferred upon His Britannic Majesty for and on behalf of the Government of the Union of South Africa (hereinafter called the Mandatory) comprises the territory which formerly constituted the German Protectorate of South West Africa.

Article 2.

The Mandatory shall have full power of administration and legislation over the territory subject to the present Mandate as an integral portion of the Union of South Africa, and may apply the laws of the Union of South Africa to the territory, subject to such local modifications as circumstances may require.

The Mandatory shall promote to the utmost the material and moral well-being and the social progress of the inhabitants of the territory, subject to the present Mandate.

Article 3.

The Mandatory shall see that the slave trade is prohibited, and that no forced labour is permitted except for essential public works and services, and then only for adequate remuneration.

The Mandatory shall also see that the traffic in arms and ammunition is controlled in accordance with principles analogous to those laid down in the Convention relating to the control of the arms traffic, signed on 10th September, 1919, or in any convention amending the same.

The supply of intoxicating spirits and beverages to the natives shall be prohibited.

Article 4.

The military training of the natives, otherwise than for purposes of internal police and the local defence of the territory, shall be prohibited. Furthermore, no military or naval bases shall be established or fortifications erected in the territory.

Article 5.

Subject to the provisions of any local law for the maintenance of public order and public morals the Mandatory shall ensure in the territory freedom of conscience and the free exercise of all forms of worship and shall allow all missionaries, nationals of any state, member of the League of Nations, to enter into, travel, and reside in the territory for the purpose of prosecuting their calling.

Article 6.

The Mandatory shall make to the Council of the League of Nations an annual report to the satisfaction of the Council, containing full information with regard to the territory, and indicating the measures taken to carry out the obligations assumed under Articles 2, 3, 4 and 5.

Article 7.

The consent of the Council of the League of Nations is required for any modifications of the terms of the present Mandate.

The Mandatory agrees that, if any dispute whatever should arise between the Mandatory and another Member of the League of Nations relating to the interpretation of the application of the provisions of the Mandate, such dispute, if it cannot be settled by negotiation, shall be submitted to the Permanent Court of International Justice, provided for by Article 14 of the Covenant of the League of Nations.

The present Declaration shall be deposited in the archives of the League of Nations. Certified copies shall be forwarded by the Secretary-General of the League of Nations to all Powers Signatories of the Treaty of Peace with Germany.

Made at Geneva, the 17th day of December, 1920.

(ii) *Principal Officers.*—The following is a list of the principal officers of the Administration in South West Africa. Judicial and police officers are shown in § 8 below:—

Administrator	Dr. the Hon. D. G. Conradie, B.A., LL.D.
Secretary for South West Africa	D. D. Forsyth.
Assistant Secretary for South West Africa	J. Neser.
System Manager, South African Railways and Harbours	G. H. Dawson.
Accountant	R. W. Patterson.
Medical Officer to the Administration	Dr. B. Vivier, B.A., M.B., Ch.B., B.A.O., D.P.H.
Surveyor-General	A. C. Parry.
Director of Posts and Telegraphs	W. W. Williams.
Director of Works	D. Holtzhausen, B.A., B.Sc.
Director of Education	W. Orban, M.A.
Registrar of Deeds	H. W. S. Birch, B.A.
Senior Veterinary Surgeon	J. W. Williams, B.V.Sc.
Manager of the Land and Agricultural Bank of South West Africa	J. G. von Backström.

2. **District Administration.**—The territory, exclusive of Ovamboland, is divided into seventeen magisterial districts, wherein the various magistrates exercise certain administrative as well as judicial functions. They are charged with the functions of receivers of revenue, and, except in the districts of Windhoek and Luderitz, with the control of district native affairs.

3. **Local Government.**—Town and district councils were established in 1909 by a decree of the German Imperial Chancellor. The district councils lapsed on the occupation of the country by the Union Forces, but the town councils were allowed to continue in office until the end of 1918, when their powers were taken away and exercised by the magistrates. In July, 1920, a Proclamation re-establishing municipal councils was issued, under which the councillors were nominated by the Administrator for a period of one year, and certain powers of intervention were reserved. In every case half the number of councillors appointed were Germans. In other respects the Proclamation followed Union lines, and a rating system was established in lieu of the municipal income tax, which formed the chief feature of municipal finance under the German régime. A *Municipal Amendment Proclamation* was promulgated in 1922, providing for the election of half of the members of municipal councils. In January, 1925, a Proclamation (No. 2 of 1925) was issued, under which it is competent for the Administrator to establish a village management board in any village not being a municipality, and in any other area of residence of any community. Such board, of which the magistrate of the district is *ex officio* chairman and treasurer, shall consist of not fewer than two and not more than four members, appointed by the Administrator during pleasure from amongst the residents in the area for which it has been constituted, and shall possess certain powers of local government defined by the Proclamation. In December, 1935, the *Municipal Ordinance*, 1935, consolidating the *Municipal Proclamation*, 1920, and its amendments, was passed.

Hospital boards have been established at five centres—Windhoek, Luderitz, Grootfontein, Keetmanshoop, and Walvis Bay—at all of which hospitals have been opened. Assistance is given to these boards on lines similar to those laid down in the Cape *Hospital Ordinance* of 1912, under the *Hospitals and Charitable Institutions Ordinance*, No. 16 of 1930, which provides for the election of hospital boards.

There are also private hospitals or nursing homes at Swakopmund, Gobabis, Warmbad, Omaruru, and Otjiwarongo for Europeans, and government native hospitals at Windhoek, Keetmanshoop, and Omaruru. (See also § 6, para. 6.)

4. **Capital.**—Windhoek, with a population of 4,812 Europeans and 5,839 natives is the capital town and occupies a central position in the territory. It has an elevation of 5,600 ft. and is finely situated within an amphitheatre of hills. The town has undergone considerable municipal development since 1920 and enjoys all modern municipal services, such as water-borne sewerage system, electric light and power services, municipal abattoirs, cold storage works, etc. The amenities of the town have likewise been improved, and there are large public gardens, parks, swimming baths, general sports grounds, show grounds, etc. The water supply was formerly derived from hot water springs, which were sufficient to meet the requirements of the town, but in 1932 a large dam holding approximately eight hundred million cubic feet of water, which is used exclusively for domestic purposes, was completed at Avis by the municipality.

There are three hospitals, two for Europeans and one for natives, as well as three maternity homes. There are large schools with hostels attached for both the old and the new population, and the English Church also maintains a school. In the suburb, Klein Windhoek, there are large vineyards and market gardens, which provide the town with fruit and vegetables.

Windhoek is 253 miles distant by rail from Walvis Bay, 539 from Luderitz, 1,383 from Capetown, and 1,336 from Johannesburg.

§ 4. Constitutional Development.

1. **Constitution.**—Under Union Act No. 49 of 1919 the exercise of the Mandate was vested in the Governor-General who, by Proclamation (Union) No. 1 of 1921, delegated his powers to the Administrator appointed by the Union Government.

It was decided later to confer a limited measure of self-government upon the inhabitants of South West Africa, and the constitution granted is embodied in Union Act No. 42 of 1925. This provides for the creation of an Executive Committee, an Advisory Council, and a Legislative Assembly. The Act came into operation on 5th August, 1925, and by Proclamation No. 57, dated the 19th March, 1926, the Governor-General of the Union declared that the Executive Committee, the Advisory Council, and the Legislative Assembly should be constituted. The first elections for the members of the Legislative Assembly took place on the 25th May following, the second on the 3rd July, 1929, and the third on the 31st October, 1934.

2. **Executive Committee.**—This body consists of five members, one of whom shall be the Administrator (who shall be chairman). The remaining four persons shall be chosen by the Assembly from among its own members or otherwise at its first meeting after any general election. The election of members shall, whenever such an election is contested, be according to the principle of proportional representation, each voter having one transferable vote. All members other than the Administrator hold office for the duration of the Assembly and until their successors are chosen. The Administrator in Executive Committee carries on the administration of those matters in respect of which it is competent for the Assembly to make Ordinances.

All matters are determined by a majority of votes of the members present, and in case of equality the Administrator has a casting vote. Three members of the Committee (of whom the Administrator or the person appointed by the Governor-General to act as Administrator or to be the Deputy-Administrator shall be one) constitute a quorum at any meeting of the Committee. The remuneration of members of the Committee, other than the Administrator, is determined by the Governor-General.

The present members of the Executive Committee are: Mr. D. W. F. E. Ballot, Lt.-Col. J. L. Hamman, D.S.O., Dr. H. B. K. Hirsekorn, and Cdt. C. H. B. Oberholzer.

3. **Advisory Council.**—This body consists of eight members, viz., the Administrator (who shall be chairman), the other members of the Executive Committee, and three members appointed by the Administrator, subject to the approval of the Governor-General. One member so appointed by the Administrator must be an official selected mainly on the ground of his thorough acquaintance, by reason of his official experience or otherwise, with the reasonable wants and wishes of the non-European races in the territory.

The Council meets at such times and places as may from time to time be determined by the Administrator, and four members form a quorum.

The duties and functions of the Council are to advise the Administrator in regard to—

(*a*) those matters in respect of which the Assembly is not competent to make Ordinances, including matters of general policy and administration apart from routine matters of administration;

(*b*) his assent to an Ordinance passed by the Assembly or its reservation for the signification of the pleasure of the Governor-General; and

(*c*) any other matter upon which its advice may be requested by the Administrator.

Members of the Council hold their seats thereon for the duration of the Assembly and continue to hold their seats until the constitution of a new Council after a general election of the Assembly. Every member of the Council, except the Administrator, receives such remuneration as the Governor-General may prescribe.

The members of the Advisory Council are Mr. D. W. F. E. Ballot, Lt.-Col. J. L. Hamman, D.S.O., Dr. H. B. K. Hirsekorn, Cdt. C. H. B. Oberholzer, Mr. H. Hörlein, Mr. E. F. Oettle, and Cdt. L. J. F. von Maltitz, M.C. The last three mentioned are the members appointed by the Administrator.

4. **Legislative Assembly.**—The Assembly consists of eighteen members, twelve of whom are elected by the voters of the territory and six appointed by the Administrator, subject to the approval of the Governor-General. The duration of the Assembly shall be five years from the date of its first meeting after each general election. Any person who is for the time being enrolled

as a voter, and who is not subject to the disqualifications prescribed by the Act, is eligible for election or for appointment as a nominated member. Any person shall be disqualified who—

(*a*) has at any time been convicted of a crime or offence for which he has been sentenced to death or to imprisonment without the option of a fine, unless he has received a grant of amnesty or a free pardon or unless the imprisonment has expired at least five years before the date of nomination or election;

(*b*) is an unrehabilitated insolvent;

(*c*) has been declared by a competent court to be of unsound mind;

(*d*) holds any office of profit under the Administration of the Territory or of the Government of the Union;

(*e*) ceases for any other reason to be qualified to be enrolled as a voter.

There shall be a session of the Assembly at Windhoek at least once in every financial year, the interval between the last sitting in one session and the first sitting in the next session being not more than twelve months.

Every member of the Assembly must take an oath or affirmation of allegiance. The Assembly must choose a chairman, who will have no deliberative vote, but only a casting vote in the event of equality of votes on any question to be determined by the Assembly. The Administrator or any member of the Executive Committee who is not a member of the Assembly has the right to take part in the proceedings of the Assembly, but may not vote. The presence of nine members of the Assembly is necessary to constitute a sitting thereof.

The official languages are English and Dutch*, but any member may address the Assembly in the German language.

The remuneration of members of the Assembly is fixed by the Governor-General.

The first sitting of the first session of the Legislative Assembly took place at Windhoek on the 15th of June, 1926. The names of the persons who are at present members of the third Assembly, together with the names of the electoral divisions which each represents, are given hereunder:—

Gibeon	Comdt. J. C. Jooste.
Gobabis	L. C. F. Taljaard.
Grootfontein	W. B. Volkmann.
Keetmanshoop	M. E. Oliff.
Luderitz	Dr. H. B. K. Hirsekorn.
Okahandja	L. J. B. van Aardt.
Otjiwarongo	Comdt. L. J. F. von Maltitz, M.C.
Stampriet	H. P. van der Westhuizen.
Swakopmund	J. D. Lardner Burke.
Warmbad	Comdt. C. H. B. Oberholzer.
Windhoek Central	N. C. Fraser.
Windhoek District	Lt.-Col. J. L. Hamman, D.S.O.

The life of the second Assembly, which was due to expire on the 18th July, 1932, was extended by Governor-General's Proclamation, No. 107 of 1932, for a further period of one year. An extension for a period of another year was proclaimed under a similar proclamation, No. 144 of 1933.

At the 31st December, 1938, the following persons held appointments as nominated members of the Legislative Assembly:—

D. W. F. E. Ballot.	H. Hörlein.
Comdt. J. C. Balt.	J. C. T. Meinert.
C. P. Bond.	T. F. L. Woker.

5. **Reservations of Legislative Powers.**—The Assembly has power to legislate by Ordinance upon all matters except those which have been expressly reserved. The reservations are contained in sections 26, 27, and 28 of the Act, and read as follows:—

Section 26.—Except with the consent of the Governor-General previously obtained on any particular occasion and communicated to the Assembly by message from the Administrator, it shall not be competent for the Assembly to make an ordinance in relation to any subject falling within the following classes of matters, i.e. to say—

* Including Afrikaans—*vide* Union Act No. 8 of 1925.

(*a*) native affairs or any matters specially affecting natives, including the imposition of taxation upon the persons, land, habitations, or earnings of natives. Whenever any Ordinance of the Assembly imposes taxation upon persons, lands, habitations, or incomes or earnings generally, natives and their lands, habitations, and earnings shall be exempt from its provisions;

(*b*) mines, minerals, mineral oils, and precious stones, or the moneys derivable therefrom or payable to the Administration in respect of licences for prospecting or winning the same or as share of the produce thereof or any taxation in connexion therewith;

(*c*) the acquisition, construction, management, regulation, control, and working of railways and harbours in the territory; and the organization, discipline, and conditions of employment of and the payment of pensions, retiring allowances, and financial benefits to persons in the employment of the Railways and Harbours Administration;

(*d*) the organization of and discipline and conditions of employment of persons in the public service who are serving in the territory, and the payment of pensions, retiring allowances, and financial benefits to such persons;

(*e*) the constitution and jurisdiction of courts of justice, whether superior or inferior, and the practice or procedure to be observed therein;

(*f*) the administration, management, and working of the postal, telegraph, and telephone services;

(*g*) the establishment or control of any military organization in the territory;

(*h*) the movements or operations of any unit of the South African Defence Forces within the territory;

(*i*) the entry of immigrants into the territory or of other persons;

(*j*) tariffs of customs and excise duties and the control and management of customs and excise;

(*k*) currency and banking and the control of banking institutions.

Section 27.—(i) Except with the consent of the Governor-General previously obtained on any particular occasion, and communicated to the Assembly by message from the Administrator, the Assembly shall not, until the expiration of a period of at least three years from the date of the first sitting of the first session of the Assembly, be competent to make Ordinances in relation to any of the following subject-matters:—

(*a*) The establishment or control of any police force in the territory.

(*b*) Civil aviation.

(*c*) Primary or secondary education in schools supported or aided from the revenues of the territory.

(*d*) The establishment, management, or control of any land or agricultural bank in the territory.

(*e*) The allotment, sale, lease, or disposal of government lands in the territory.

(ii) At any time after the expiry of the said period of three years, if power has not been so conferred by the Governor-General upon the Assembly to make Ordinances in relation to any particular subject-matter specified in sub-section (1), then the Governor-General may, on a recommendation made by the Assembly and embodied in a resolution for which it is certified by the chairman thereof that not less than two-thirds of the members thereof voted, declare by proclamation in the *Gazette* and in the *Official Gazette* of the territory, the full competency of the Assembly to make Ordinances in respect of that subject-matter.

(iii) Save as is specially provided in this section, the provisions thereof shall remain in operation after the said period of three years.

Section 28.—It shall not be lawful for the Assembly—

(*a*) to originate or pass any Ordinance, Vote, or Resolution which has the effect of appropriating any part of the Territory Revenue Fund formed as hereinafter provided; or

(*b*) to originate or pass any Ordinance, Vote, or Resolution imposing any tax, duty, due, or charge or burden on the people,

unless such Ordinance, Vote, or Resolution is introduced or moved by the Administrator in person or has first been recommended to the Assembly by written message of the Administrator during the session in which it is proposed.

Every Ordinance passed by the Assembly must be presented to the Administrator for his assent.

The Administrator may then—

(*a*) refer the Ordinance back to the Assembly, with such amendments as he may suggest for its consideration;

(*b*) assent to the Ordinance;

(*c*) reserve the Ordinance for the signification of the Governor-General.

In the last-mentioned event the Administrator must transmit the Ordinance, together with such explanatory observations as may be necessary, to the Governor-General, who may declare within six months after receipt thereof by him that he allows or disallows the Ordinance, or that he reserves it for further consideration. An Ordinance so reserved shall have no force or effect, unless and until the Governor-General, within a further period of six months from the date of his reservation, declares that he does not exercise his power of disallowance.

Copies of all Ordinances assented to and a return indicating the Ordinances which have been reserved for further consideration by the Governor-General or disallowed and the reasons for reservation or disallowance must be laid upon the Tables of both Houses of Parliament.

Unless a particular date is fixed, every Ordinance shall come into operation as from the date of its first publication in the *Gazette*.

Although not competent to make Ordinances in respect of the matters reserved by sections 26 and 27 of the Act, the Assembly may, by resolution, recommend to the Governor-General or to the Administrator the issue of a proclamation enacting a law or the amending or repealing of any law relating to such matters.

As regards finance, the Act provides for the formation of a fund known as the Territory Revenue Fund, which may be drawn upon only under the authority of an Appropriation Ordinance passed by the Assembly and in pursuance of a warrant under the hand of the Administrator directed to an officer serving under the Administration of the territory; provided that until such appropriation has been made and for a period not exceeding two months after the end of a financial year, the Administrator may withdraw from the Fund moneys to meet expenditure on services, in respect of which there has been an appropriation up to the end of that financial year.

The Administrator may, by special warrant under his hand, authorize the issue of moneys from the Territory Revenue Fund—

(*a*) to defray unforeseen expenditure of a special character, which is not provided for in an Appropriation Ordinance or in an Appropriation Proclamation issued under section *thirty-eight* of the Act, as amended by Act No. 38 of 1931, and which cannot without serious injury to the public interest be postponed until adequate provision can be made therefor by the Assembly; or

(*b*) to meet an excess on any head of expenditure in an Appropriation Ordinance or Appropriation Proclamation.

The total sum which the Administrator may authorize shall not at any time exceed £25,000, and the relative expenditure shall be submitted to the Assembly for appropriation not later than its next ensuing session.

The annual estimates of expenditure for the territory shall be prepared by the Administrator in consultation with the Advisory Council, and thereafter submitted to the Assembly.

If the Assembly rejects or fails to pass—

(*a*) an Ordinance appropriating in any financial year moneys from the Territory Revenue Fund sufficient, in the opinion of the Administrator, to pay during that year the salaries and allowances of the Administrator, of the Judge of the High Court, and of officers

serving under the Administration, and to carry on the public administration of the territory, and any other services which the Administrator certifies to be necessary in the interests of the territory or to meet any liabilities which have been incurred in or in respect of the territory or of any railway or harbour works therein; or

(*b*) an Ordinance imposing any tax to raise in any year revenue which the Administrator certifies to be, with other revenues, necessary for the purposes described in paragraph (*a*);

or, though passing the Ordinance, passes it with amendments to which the Administrator personally is unable to agree, regard being had by him to the purposes aforesaid, the Administrator may transmit a full report in relation to the whole matter to the Governor-General, and the Governor-General may, after consideration of that report and of any further report or recommendation on the matter, passed and transmitted by the Assembly by message, make a law, by proclamation under the powers reserved to the Governor-General under this Act, providing for such appropriation or such tax (as the case may be) as may, in the opinion of the Governor-General, be sufficient for the purposes mentioned in paragraph (*a*) or paragraph (*b*) of this section (as the case may be).

Section 44 of the Act contains the following important reservation:—

(i) Nothing in this Act contained shall be construed as in any manner abolishing, diminishing, or derogating from those full powers of administration and legislation over the territory as an integral portion of the Union which are conferred by the mandate hereinbefore recited and have been confirmed by the *Treaty of Peace and South West Africa Mandate Act*, 1919 (Act No. 49 of 1919), or as modifying any provision of that Act. Those full powers of administration and legislation are hereby expressly reserved to the Governor-General and may be exercised or delegated by him in accordance with that Act to the intent that by proclamation new laws may be made for the territory, existing proclamations may be repealed, amended, or modified, or any Ordinance made by the Assembly and in force under this Act may be repealed, amended, or modified. Every such proclamation of the Governor-General or of the Administrator shall, before it has the force of law in the territory, be published in the *Official Gazette* thereof.

(ii) A Proclamation of the Administrator or an Ordinance made by the Assembly shall, though promulgated, have effect in and for the territory so long and as far only as it is not repugnant to or inconsistent with a Proclamation of the Governor-General, or an Act of the Union Parliament, applicable to the territory.

6. **Franchise.***—(i) Every European person who—

(*a*) has been resident in the territory for twelve months immediately prior to the date fixed for the commencement of any provisional list of voters; and

(*b*) is twenty-one years of age or upwards at that date; and

(*c*) is a British subject,

as well as every person who, under section 2 of Act No. 30 of 1924, became a British subject naturalized under Act No. 4 of 1910, shall be entitled to be registered as a voter, unless in either case he is disentitled for any reason mentioned in paragraph 2 of the Schedule to the Act. But no person shall be entitled to be registered on more than one list or, if registered on more than one list, to vote in more than one electoral division.

(ii) No person shall be entitled to be so registered if he has been—

(*a*) convicted at any time of murder unless he has obtained a free pardon therefor;

(*b*) convicted at any time of any offence and sentenced to imprisonment without the option of a fine, which imprisonment has not expired at least three years before the date of the commencement of registration, unless he has obtained a free pardon for that offence.

For the purposes of the Act the port and settlement of Walvis Bay is deemed to form part of the territory, but the territory known as Caprivi Zipfel is excluded.

* Under the provisions of the *South West Africa Constitution Amendment Proclamation* (No. 103 of 1939) the franchise has been extended to European women.

Section 45 of the Act provides as follows:—

After the expiration of a period of three years* from the date of the first sitting of the first session of the Assembly, the Governor-General may, on a recommendation made by the Assembly and embodied in a resolution for which it is certified by the chairman thereof that not less than two-thirds of the members thereof voted, repeal or alter any provision of this Act, except sections *twenty-six* and *forty-four* and this section; provided that the Governor-General shall not act upon such a recommendation, unless the proposals contained therein have lain upon the Tables of both Houses of Parliament for a period of one month and during that period neither House has expressed its disapproval of the proposals.

7. **Ordinances.**—The following list shows the number and short title of the Ordinances passed by the Legislative Assembly of the territory in 1938:—

ORDINANCES PASSED BY THE LEGISLATIVE ASSEMBLY, SOUTH WEST AFRICA, 1938.

No.	Short Title.
1	Brewers and Distillers Licences Duty Amendment Ordinance.
2	Additional Appropriation (1937–'38) Ordinance.
3	Unauthorised Expenditure (1936–'37) Ordinance.
4	Appropriation (1938–'39) Ordinance.
5	Licensing of Totalisators Ordinance.
6	Village Management Boards Amendment Ordinance.
7	Trespass of Animals Amendment Ordinance.
8	Adoption of Children Amendment Ordinance.
9	Agricultural Pests Amendment Ordinance.
10	Hospitals and Charitable Institutions Amendment Ordinance.
11	Karakul Sheep-farming Industry Protection Amendment Ordinance.
12	Apprenticeship Ordinance.

§ 5. Population.

1. **General.**—Table (*a*) gives the final results of the Censuses† taken in the territory on 3rd May, 1921, on 4th May, 1926 (Europeans only), and on 5th May, 1936. The population of Walvis Bay is excluded from the census figures given below. At the Census of 1936 the population of Walvis Bay numbered 2,035 persons, of whom 523 were Europeans and 1,512 non-Europeans.

Table (*b*) shows the estimated mean European population for each year from 1935.

(*a*) POPULATION CENSUSES, 1921, 1926, AND 1936.

Race.	Male.	Female.	Persons.
Census, 1936—

Native	92,627	84,835	177,462
TOTAL	119,263	108,476	227,739

* Proclamation No. 103 of 1939 extended the franchise to European females on the same conditions as are applicable to males.

† The Population Census designed to take place in 1931 was abandoned for reasons of economy.

‡ Includes 24,465 coloured persons and 191,984 natives (estimated) outside the police zone.

(*b*) ESTIMATED MEAN POPULATION—EUROPEAN, 1935 TO 1939.

Year.	Male.	Female.	Persons.
1935	17,700	14,100	31,800
1936	16,600	14,100	30,700
1937	16,600	14,100	30,700
1938	16,700	14,200	30,900
1939	17,200	14,700	31,900

2. **Population of Towns.**—According to the Censuses of 1921, 1926, and 1936, the population of the principal towns was as follows:—

Town.	1936.		1926.	1921.	
	European.	Other.	European.	European.	Other.
Windhoek	4,812	5,839	3,809	3,469	4,399
Luderitz	846	1,714	1,234	1,003	1,014
Keetmanshoop	1,043	1,673	1,159	1,026	1,659
Swakopmund	1,149	828	1,125	1,078	694

3. **Births, Deaths, and Marriages.**—The registration of births and deaths became compulsory with the adoption in the territory of Union Act No. 17 of 1923, with effect from 1st January, 1924. A Proclamation was issued during 1920, under which the celebration of marriages was brought into line with Union procedure.

A short reference to the native customs which are observed by the aborigines in regard to marriages, births, and deaths was published in *Year Books* Nos. 3 to 9.

4. **Immigration and Emigration.**—The following series of tables gives a summary of the statistics of migration into and from South West Africa. Table (i) summarizes the arrivals and departures according to race from 1934. Tables (ii) and (iii) record the reasons for arrival and departure via seaports from the year 1934. This information is not available in respect of persons entering or leaving the country via the land borders. Table (iv) gives the numbers of persons travelling into or from South West Africa by rail on single journey tickets only.

5. **Angola Boers.**—The term "Angola Boers" is used in reference to a considerable number of one-time Transvaal Republican nationals who at intervals, commencing in 1874, turned their backs on the Transvaal, crossed the Kalahari desert and settled in Angola, where until a few years ago they hunted and tilled the soil apparently undisturbed. However, for various reasons they expressed a wish to return to South Africa, and a deputation from them met the Administrator of South West Africa and the Minister of Lands of the Union, and in 1928 arrangements were made for their conveyance from Angola to South West Africa, the Union Government providing an amount of £500,000 towards defraying the cost of transport and settlement.

Altogether about 350 families, comprising close on 1,900 individuals, emigrated out of Angola into South West Africa, and 53 families remained behind. Practically all the immigrants have been accommodated in four different settlements in the districts of Gibeon, Gobabis, Otjiwarongo, and Grootfontein. The settlement at Gobabis contains the largest number of members, followed by Otjiwarongo, Gibeon, and Grootfontein. More than 200 farms have been allotted to the immigrants, where approximately 310 families have made their homes. In order to meet their needs in cattle, buildings, and agricultural and dairy material, the Administration of South West Africa is accommodating them with advances. After a test of nine years it has been proved that the majority of the farms in the Osire Block, District Otjiwarongo, allotted to the Angola farmers, are not suitable for stock farming. On the recommendation of the Land Board, a block of 33 farms situated north of the Kamanjab area in the district of Outjo has been surveyed, and in due course some 33 settlers will be transferred to the Outjo district, where, under healthy veld and climatic conditions, it is hoped they will be able to farm successfully.

Like other settlers, the Angola farmers have had a hard struggle against adverse climatic conditions and stock diseases. The severe drought of 1933 was undoubtedly a test of their farming abilities. In general they have made good progress and proved to be hardworking. A small percentage have fully paid their stock advances and have applied to exercise option of purchase in respect of their holdings. By the end of 1937, loans made out of the Land Settlement Fund had been repaid in many cases, with the result that funds have been made available for additional grants to deserving settlers for improvements.

As a result of good rains during 1934-35 and normal rainfall since then, cattle diseases (Gallamsiekte in particular) have diminished considerably, and consequently the increase of stock has been very promising. Sheep farmers settled in the Gibeon district and the southern portion of Gobabis district have made good progress with Karakul sheep.

Up to the end of 1935, 8 per cent. of the settlers had proved to be unsuccessful as stock farmers. The majority of these trekked to the Union (Rustenburg, Transvaal, and Vryheid, Natal), where they received assistance from their relations living there. Those who remained are working on road construction, riding transport, or doing smithy work.

Educationally the settlements are on a sound basis. There are now 11 permanent schools with hostel accommodation for from 40 to 80 scholars. The total number of pupils attending these schools at the close of the year 1938 was 626. A small percentage attend the Windhoek High School.

During 1934, the Angola settlers with a few exceptions became naturalized British subjects.

6. **Naturalization.**—The *Naturalization of Aliens Act*, No. 4 of 1910, was repealed by the *British Nationality in the Union and Naturalization and Status of Aliens Act*, No. 18 of 1926. The latter Act is also in force in South West Africa, the expression "the Union" being defined by the Act to include South West Africa. In the same way, the Union *Nationality and Flags Act*, No. 40 of 1927, is in force in South West Africa. The *South West Africa Naturalization of Aliens Act*, No. 30 of 1924, passed by the Union Parliament, made the *Naturalization of Aliens Act*, No. 4 of 1910, effective in the territory, which for the purposes of the Act was considered to form part of the Union. Act No. 30 of 1924 provided that every adult European, who, being a subject of any of the late enemy powers, was on the 1st January, 1924, or at any time thereafter before the commencement of the Act (15th September, 1924) domiciled in the territory, should, at the expiration of six months after the latter date, be deemed to have become a naturalized British subject, unless within that period he signed a declaration that he was not desirous of being naturalized. The final lists of persons naturalized in this way show that, out of a total of 3,489 persons who were eligible, 3,261 accepted British nationality. The *South West Africa Naturalization of Aliens Act*, No. 27 of 1928, provided for the naturalization of children of persons naturalized under Act No. 30 of 1924. The final lists show that 2,472 persons were naturalized under the aforementioned Act.

§ 6. Public Health and Hospitals.

1. **Medical Services.**—The health and medical services are performed by the Medical Officer to the Administration, who is stationed at Windhoek, by one whole-time district surgeon, stationed in Ovamboland, and by fourteen part-time district surgeons, whose appointments are made on the same basis as in the Union of South Africa. There are also seventeen registered medical practitioners, the majority of whom are in private practice, the others being attached to mines.

There are eight municipalities: Windhoek, Swakopmund, Okahandja, Karibib, Walvis Bay, Omaruru, Keetmanshoop, and Luderitz; nine village management boards: Gibeon, Mariental, Aus, Warmbad, Usakos, Otjiwarongo, Outjo, Grootfontein, and Gobabis. For the remaining districts the magistrate is the rural local authority.

2. **Water Supply and Sanitation.**—The population is almost entirely dependent on underground water for its water supply, which is generally obtained from springs or from wells and boreholes. The Avis Dam at Windhoek was completed towards the end of 1932, and for 3 years it supplied the town with water. Towards the close of 1937, however, this supply became exhausted, and although good rains fell there was not a sufficient fall in the catchment area to replenish the supply. The municipal authorities, therefore, were compelled to fall back on water from boreholes. At Luderitz there are no adequate supplies of fresh water, and the water used is distilled sea water. Except in the case of Windhoek the water available is rather hard.

The municipality of Windhoek has a water-borne sewerage system; a large portion of the town has already been linked up, but some time will have to elapse before the entire town is served in this manner. In the remainder of the territory, owing to the inadequacy of the water supply and the sparseness of the population, conservative methods of nightsoil removal are in use.

3. **General Health Conditions.**—The climate, generally speaking, is healthy. Malaria is met with in the territory north of Windhoek, in the Gobabis district, and along the banks of the Nosop. It is usually of a mild type, but serious outbreaks may occur after exceptionally wet seasons, when isolated cases of blackwater fever may be met with. Sporadic cases of Malta fever are met with amongst the European population, and there has been an increase in the number of cases of this disease during the last two years. Long residence in the interior is liable to lead to functional disturbances of the nervous and circulatory systems, which, however, can be obviated by periodical visits to the bracing climate of the coast. Acute rheumatism is rarely met with, and acute respiratory diseases are not very prevalent. Affections of the eye are rife amongst the natives in the north; Europeans are not as a rule affected, but the intense glare has a deleterious effect on the eyesight. Ear, nose, and throat infections are fairly common owing to the irritating effect of mica dust combined with the dryness of the air.

A comprehensive survey of the principal diseases found in the territory appeared in *Year Books* Nos. 6, 7, and 8; to these must now be added plague and typhus fever. The relative importance of many of the other diseases does not warrant their inclusion in this issue. The following are the more important:—

(i) *Anthrax* is met with, especially amongst the natives in Ovamboland, owing to the practice of eating the meat of animals that have died from this disease. Occasionally a European is found suffering from the disease.

(ii) *Diphtheria.*—Only sporadic cases are met with.

(iii) *Enteric Fever.*—According to Missionary Irle, "Die Herero," typhoid fever was unknown prior to the year 1898. During the Herero war the disease became widely disseminated throughout the country and was accompanied by a considerable mortality. Subsequently annual epidemic outbreaks occurred in the urban areas, generally towards the end of the rainy season. For some years there were no serious outbreaks, but, following on the phenomenal rains which fell at the commencement of 1934, severe outbreaks of enteric fever occurred at Keetmanshoop, Swakopmund, and Windhoek. Since then, except for a few sporadic cases, the territory has been singularly free from typhoid and paratyphoid fevers.

(iv) *Epidemic Cerebro-spinal Meningitis.*—Only a few sporadic cases of this disease occurred during 1936.

(v) *Leprosy.*—The existence of leprosy among natives in South West Africa was first discovered in 1918, and recent investigations in Ovamboland have revealed quite a number of cases. The disease, however, appears to have been imported from Angola, as it is amongst natives from that territory that most of the cases occur. The greatest incidence is met with amongst the natives in the Okavango region and the eastern portion of the Caprivi Zipfel. Except in the areas mentioned it is foreign to the territory.

(vi) *Malaria* has a seasonal occurrence over the greater portion of South West Africa. During recent years, owing to a number of exceptionally dry seasons, the incidence of this disease has been low, but in 1934, after the heavy rains at the commencement of the year, malaria assumed epidemic proportions in some districts, particularly the Gobabis district, and it was prevalent throughout the length and breadth of the territory with the exception of Luderitz district. The incidence of malaria has been normal since 1935.

(vii) *Malta Fever.*—This disease is apparently on the increase. It cannot as yet be assigned to any particular part, but appears to be mostly met with in the south, both Europeans and natives being victims. The view has been expressed that the Karakul industry may have something to do with its increase.

(viii) *Plague.*—The disease occurred for the first time in the history of the country at the commencement of 1932. Human cases have as yet been almost entirely confined to Ovamboland, and the disease has for the most part manifested itself as bubonic plague. It was introduced by veld rodents, amongst which the disease is now enzootic. Thus epizootics will probably occur from time to time with resultant danger to the human population.

There was a decline in the incidence of the disease in 1934; only 37 cases came to notice, and no deaths were reported. During 1935 there were 207 cases with 29 deaths in Ovamboland; in 1936, 56 cases with 3 deaths; in 1937, 51 cases with two deaths; and in 1938, 59 cases with 7 deaths.

(ix) *Scarlet Fever.*—No cases were reported during 1936. In the previous five years only sporadic cases occurred, whereas in 1930 Windhoek experienced an epidemic lasting several months. An outbreak assuming epidemic proportions occurred in Omaruru in 1937, while several cases were reported from Windhoek and Swakopmund. In 1938 only sporadic cases were reported, mainly from the midlands.

(x) *Smallpox.*—It is stated that smallpox was unknown to the Herero until the year 1864, when it was introduced into Hereroland by the Nama (Hottentots). There is no record of any other epidemic outbreak in the country prior to the German occupation. In 1897 and 1898 an epidemic, with a considerable mortality amongst the Hereros and Damaras, was prevalent in the north-western portion of Damaraland and in the Kaokofeld. This epidemic may quite possibly have been chicken-pox, as the native has this disease in a very bad form. Amaas or Kaffir-pox is stated to have been endemic amongst the Hottentots in the south, but since 1915 only two sporadic cases have come under observation. It can safely be stated that the disease is seldom met with in the territory except in the extreme north, on the borders of Angola and in the Caprivi Zipfel, which borders on Northern

Rhodesia, where the disease is endemic. In view of the incidence of smallpox in the Union all European school children, as well as children of pre-school age, were vaccinated during 1938.

(xi) *Tuberculosis.*—Up to the beginning of this century this disease was unknown to the natives of South West Africa, with the exception of the Hottentot, but a rapid and widespread dissemination took place during and subsequent to the Herero war. The highest incidence of this disease is met with amongst the Hottentots living in the south of the territory. All the local tribes, especially the Ovambo and Bushmen, are susceptible to pulmonary affections when removed from their natural environment, and a proportion of those who contract pneumonia subsequently succumb to pulmonary tuberculosis. The disease once implanted on virgin soil runs a very rapid and acute course in the majority of cases. As a result of improved conditions there has been a distinct improvement in regard to the spread of tuberculosis amongst the Hottentots in the south, malnutrition being no longer of common occurrence. The disease is not prevalent amongst the European population.

(xii) *Typhus Fever.*—A sharp outbreak of this disease occurred for the first time in the history of this territory in July, 1934. It was confined almost entirely to Keetmanshoop and district, and was fortunately short lived. A small outbreak occurred in the Warmbad district during 1935, and an outbreak occurred in the Windhoek location in 1936. There was again a small outbreak in 1937. The cases were, however, of a mild nature and there were no fatalities. During 1938 no cases occurred.

4. Registration of Medical Practitioners, Dentists, and Chemists and Druggists.—The *Medical, Dental and Pharmacy Act*, No. 13 of 1928 (Union), has been extended to South West Africa, and all registrations of medical practitioners, dentists, and chemists and druggists are effected by the Medical Council and the Pharmacy Board.

5. Mentally Disordered and Defective Persons.—There are no institutions for the reception of mentally disordered or defective persons, but Union Act No. 38 of 1916 makes provision for the removal of mental patients, as soon as they are certified, to institutions in the Union. Native patients who are not a danger to themselves or to others are handed over to the care and control of their relatives or temporarily cared for in one or other of the native hospitals. The number of patients removed to institutions in the Union during the last five years is as follows:—

	1934.	1935.	1936.	1937.	1938.
European.....	2	8	4	4	6
Native.....	—	—	3	1	5

6. **Hospitals.**—(i) *State-aided Hospitals.*—(a) *Areas and Boards.*—In July, 1930, the *Hospitals and Charitable Institutions Ordinance*, No. 16 of 1930, came into force, Proclamation No. 5 of 1922 and Amendments being repealed. Regulations which are not inconsistent with or repugnant to the Ordinance are, however, retained.

Hospital areas already constituted remain such for the purposes of this Ordinance. The Administrator may by notice in the *Gazette* either constitute any one or more magisterial districts, or any portion or portions of any one or more of such magisterial districts (including any municipality therein), an area under this Ordinance, or from time to time include in any area any land adjoining such area, or sub-divide any area into two or more areas. In every such area a board consisting of six members shall be appointed. One member is appointed by the council of the municipality in the area (if there is more than one municipality the member is to be elected jointly by the councils of the municipalities), two by the contributors (a contributor being a person who subscribes, collects, or raises by any means not less than £1 during the preceding financial year or who has subscribed not less than £20 in one donation at any time), one by the honorary visiting medical staff, and two by the Adminstrator. If any persons or body entitled to elect members fails to appoint a member, the Administrator shall appoint such member. Should there be no municipality or honorary visiting medical officers in an area, the Administrator shall appoint such members.

(b) *Government Subsidy.*—If during any financial year the Administrator is satisfied that a board has not sufficient funds to carry out the administration of this Ordinance during the year, he may, by way of subsidy, pay to the board out of the Territory Revenue Fund an amount not exceeding three-fifths of the total amount which the board has been authorized to

expend on maintenance for the year: Provided that, where an institution or institutions under the control of the board have endowments for maintenance purposes, the income of such endowments for that year shall be first deducted from the total authorized expenditure of the board on maintenance for the year and the balance remaining met on the above basis.

(c) *Deficits.*—If in any year there is a deficit, the Administrator shall, if he is satisfied that the board has reasonably endeavoured to collect voluntary contributions from the public and to recover fees from patients, and that, having regard to the circumstances of the area and the class of patients most furnished with relief by the board, a reasonable amount has been received by the board from such sources of revenue, order the payment of such deficit, in whole or in part as he may deem desirable, out of the Territory Revenue Fund and out of the funds of the municipality or municipalities, if any, in such area. The Administrator shall not order more than three-fifths of the deficit to be paid out of the Territory Revenue Fund, or more than two-fifths out of the funds of such municipality or municipalities. If there is no such municipality or municipalities, the whole of the deficit, or such part thereof as the Administrator may deem advisable, shall be paid out of the Territory Revenue Fund: Provided that, where there is more than one municipality in such area, the amount which each municipality is ordered to pay shall be in proportion to the value of its rateable property. The pound for pound scheme formerly in vogue has been abolished.

State-aided hospitals are established at Windhoek, Grootfontein, Luderitz, Keetmanshoop, and Walvis Bay. No new hospital areas have been constituted since the coming into force of the 1930 Ordinance.

While the hospital boards are required to furnish relief to all sections of the community, both European and native, accommodation for natives is provided only at Luderitz and Walvis Bay, as the requirements of the natives in other hospital districts are met by the existing government native hospitals.

(ii) *Mission and Other Hospitals.*—Hospitals with accommodation for both Europeans and natives are maintained by the Roman Catholic Mission at Swakopmund and at Gobabis, and for Europeans only at Windhoek. This mission also maintains a nursing home at Otjiwarongo and a maternity home at Warmbad.

There are also three institutions established under the auspices of a German Red Cross Society (Frauenverein vom Roten Kreuz für Deutsche über See), viz.: Elizabethhaus (maternity), Windhoek; Prinzessin Rupprecht Heim, Swakopmund; Krankenhaus, Omaruru; a private clinic at Windhoek; and a private nursing home at Omaruru. Hospitals for the treatment of their European and native employees are provided by the various mining concerns at Tsumeb and Abenab, in the Grootfontein district, and at Kolmanskop and Orange River Mouth, in the Luderitz district.

(iii) *Medical Care of Natives.*—Three state-owned native hospitals are directly controlled and maintained by the Administration, namely, at Windhoek, Keetmanshoop, and Omaruru. The number of beds in the various native hospitals is as follows:—Windhoek, 75; Keetmanshoop, 20; and Omaruru, 8. In Windhoek additional accommodation in the form of two wards to take 20 beds each is nearing completion. The trained staff of the Windhoek native hospital consists of a superintendent, two European orderlies, and four fully-qualified native nurses. With the exception of a small revenue from patients' fees, the whole cost of maintenance of these institutions is borne by the Administration. There is also a dispensary maintained in the native location at Windhoek, which is in charge of two trained nurses, and there are four venereal compounds, viz., at Grootfontein, Otjiwarongo, Karibib, and Mariental.

In Ovamboland there is a whole time district surgeon, who renders free services and makes periodical visits to the various tribes and to the Finnish, Anglican, and Roman Catholic Missions. His headquarters are at Ondongua. The Finnish Mission has hospitals at Onandjokue, Engela, and Eenana in Ovamboland, which can accommodate respectively 80, 50, and 10 in-patients. The hospitals at the first two places are in charge of qualified medical practitioners. The Anglican Mission has a hospital of 22 beds at St. Mary's, Ukuanyama area, Ovamboland. There are numerous mission stations throughout Ovamboland, the Okavango, and the Caprivi Zipfel, which are either subsidized or receive drugs free of charge.

Apart from the facilities for the treatment offered by the State-owned native hospitals, the terms of appointment of district surgeons provide for free medical attendance on indigent natives and, in districts in which there

are no such institutions, patients of this description requiring hospital treatment are either admitted into the local hospital, if any, or transferred elsewhere at the expense of the State. The South African Railways and the mining industry provide free medical treatment for their native employees. Arsenical and mercurial preparations and iodide of potassium for the treatment of syphilis and quinine for the treatment of malaria are supplied free of charge to district surgeons for the treatment of patients dealt with by them in their official capacity.

(iv) *Statistics.*—The following tables summarize certain available statistics in regard to hospitals and nursing homes in South West Africa.

§ 7. Education.

1. **General.**—Education in South West Africa is controlled according to the provisions of the *Education Proclamation*, 1926, which superseded the *Education Proclamation* of 1921 and came into force on 1st October, 1926. It provides for the compulsory attendance up to Standard VI (8th school year) of all European children who have completed their seventh but not their sixteenth year.

As a result of negotiations with the German population in 1921, thirteen out of eighteen private schools were transferred to the Administration on the 1st January, 1922. The general principle of the Concordat is that the transferred schools are financed by the Administration, and adopt the Union

curriculum and system, retaining German as medium of instruction to the end of the elementary course. All scholars above Standard I receive a daily lesson in a Union official language, as chosen by the parents. The *Education Proclamation*, 1926, makes provision for children whose home language is German to use German as the chief medium of instruction in all standards above Standard VI.

On the 1st January, 1930, the Volks- und Realschule at Swakopmund came under the control of the Administration and was organized as a high school with German as the medium of instruction. Students are able to take both the Matriculation examination, which admits to the South African and English universities, and the Abiturienten Examination, which admits to the German universities. On 1st October, 1931, the private German school at Tsumeb also came under the control of the Administration.

2. **Administration.**—All financial and technical matters are controlled by the Administration of the country. Local committees are appointed to represent the parents; their functions are mainly advisory.

3. **Government Schools.**—Provision is made for both primary and secondary education, and the code is that of the Cape Province. Primary education is free, but fees are charged for secondary instruction. Pupils pay for books and stationery. There are boarding hostels maintained by the Administration.

GOVERNMENT SCHOOLS, 1934 TO 1938.

TOTAL.....1934	169	4,600	1,112

* Including subsidized hostels.

4. **Coloured and Native Education.**—The education of the coloured people and the natives is under the supervision of the various missions. The Administration pays the salaries of the teachers and supplies furniture and equipment free of charge, but the missions have to supply the buildings and pay 50 per cent. of the cost of books.

There are thirteen coloured schools in the country with an enrolment of 965 pupils. The Administration has one at Windhoek, the Anglican Church of Damaraland has one at Luderitz, the Rhenish Mission has six, the Roman Catholic Mission one, and the Wesleyan Church two in the Rehoboth area. The Rhenish Mission also has one at Aroab, and the Wesleyan Church one at Mariental. The education of the natives is mainly in the hands of the Finnish Mission in Ovamboland, and of the Rhenish and Roman Catholic Missions in Damaraland and Namaland. The Anglican Church and the Roman Catholic Mission have also begun to do educational work in Ovamboland. The Education Department has registered seventy-seven mission schools for natives, all of which have qualified for government aid. In addition, there are two training schools for native teachers; the one at Okahandja is conducted by the Rhenish Mission, and the other at Doebra is conducted by the Roman Catholic Mission. The total number of scholars in all the native mission schools is 4,225.

5. **Cost and Statistics of Education.**—In 1937-38 the total expenditure on education amounted to £142,859. Of this amount £126,464 was spent on the education (including hostel expenses) of European pupils, and £16,395 on that of native and coloured pupils. The following tables contain data relative to education over a series of years:—

(i) NUMBER OF SCHOOLS AND SCHOLARS. EXPENDITURE ON EDUCATION, AND AVERAGE EXPENDITURE PER SCHOLAR, 1933-34 TO 1937-38.

§ 8. Administration of Justice.

1. **Legal System.**—Article 2 of the Mandate, under which the territory is administered by the Government of the Union of South Africa, gave to the Mandatory full power of administration and legislation over the territory as an integral portion of the Union, and authorized the Mandatory to apply the laws of the Union to the territory, subject to such local modifications as circumstances might require. By the *Administration of Justice Proclamation*, 1919, the Roman-Dutch law as existing and applied in the Province of the Cape of Good Hope on the 1st January, 1920, was introduced as the common law of the territory, and all existing laws in conflict therewith were to the extent of such conflict repealed, except proclamations issued during the military occupation and in force on the said date, which continued to remain in force. Rights already accrued and liabilities already incurred were preserved. The effect of this proclamation was considered by the High Court in the cases of *Tittel* v. *The Master* (12th July, 1921) and *Collisons (S.W.), Ltd.*, v. *Kruger and others* (2nd July, 1923), which laid down that Roman-Dutch Law had been introduced into South West Africa, together with all the modifications which it had undergone in the Cape Province by desuetude, custom, judicial decision, and statute, whether abrogating or enacting. It was accordingly held, in the former case that the statutory law of the Cape Province relating to the execution of wills, so far as that particular will was concerned, was the law of the territory, and in the latter case that the Cape law of prescription as contained in Act No. 6 of 1861 was also part of the law of the territory. Much of the statute law of the Union has been specifically extended to the territory by Act of the Union Parliament, by proclamation or ordinance, subject to amendments required by local circumstances. Amongst such statutes may be mentioned those relating to interpretation of laws, solemnization of marriages, insolvency, arbitration, administration of estates, mental disorders, deeds registration, companies, bills of exchange, stamp duties, prisons, public health, immigration, land settlement, pounds, liquor licensing, inquests, concealment of birth, protection of girls and mentally defective women, children's protection, prevention of cruelty to animals, stock theft, diseases of stock, agricultural pests, vagrancy, masters and servants, workmen's compensation, police offences, preservation of game, railways and harbours, and usury. Certain portions of the German law (for example, that portion relating to mining) have been kept alive by express provisions in proclamations issued by the Administrator. A few Acts of Parliament of the Union apply directly to the territory; for instance, Acts Nos. 20 and 24 of 1922, 16 and 27 of 1923, 30 of 1924, 42 of 1925, 13, 18, and 22 of 1926, 22 and 40 of 1927, 27 of 1928, and 1 of 1937.

The law in force in South West Africa includes, therefore, (i) Roman-Dutch Law, with the modifications it has undergone in the Cape Province as explained above; (ii) certain Union Acts of Parliament which apply directly to the territory; (iii) proclamations issued by the Governor-General or the Administrator, some of which specifically introduce Union statutes; (iv) Ordinances by the Legislative Assembly; (v) those portions of the German law which have been expressly preserved; and (vi) those fragments of the German law which have survived by reason of the fact that they do not conflict with any of the laws already mentioned.

2. **Superior Courts.**—On the 1st January, 1920, military courts were abolished and civil courts established. A superior court, entitled the High Court of South West Africa, was created, consisting of a single judge. It has its seat at Windhoek, but may be held at other places appointed by the judge. In civil cases the judge sits alone, but in criminal cases the court is composed of the judge, who is president, and two other members, who must be either advocates or magistrates. There is no jury. Questions of law are decided by the judge, except questions of law governing the punishment, which are decided by a majority of the members of the court. Questions of fact are determined by a majority of the members, which also fixes the sentence to be passed.

An officer, styled the Attorney-General, has been appointed, who, in regard to the prosecution of crimes and offences, possesses the powers of an attorney-general in a province of the Union under section 139 of the *South Africa Act*, as originally passed, and before amendment in terms of section 1 of Act No. 39 of 1926. There are also a Registrar, Master, and Sheriff of the High Court and a Registrar of Deeds.

By Proclamation No. 38 of 1920, circuit courts were established, with a similar constitution to that of the High Court. The territory is divided from time to time into two or more circuit districts, in each of which a circuit court is held at least twice a year.

An appeal from the High Court or from a circuit court, whether in the exercise of civil or criminal jurisdiction, lies to the Appellate Division of the Supreme Court of South Africa under the same circumstances and subject to the same conditions as an appeal lies from a Provincial Division of the Supreme Court of South Africa. In cases of an appeal from orders or judgments of the High Court or a circuit court upon application by way of motion or petition, or on summons for provisional sentence, or judgments as to costs only, or on civil appeals from a magistrate's court, special leave to appeal must first be obtained from the Appellate Division.

The law of procedure and evidence in the High Court and in circuit courts in civil cases is that of the Cape Provincial Division of the Supreme Court of South Africa, and in criminal cases that prescribed by the Union *Criminal Procedure and Evidence Act*, 1917, which has been extended and applied to the territory with certain amendments. In 1935 a substantive provision was passed (Proclamation No. 30 of 1935), embodying substantially all the provisions of Act No. 31 of 1917, with the necessary modifications.

Rules for the conduct of proceedings in the High Court and circuit courts are framed by the judge of the High Court, subject to the approval of the Administrator.

3. **Inferior Courts.**—Magistrates' courts were also established on the 1st January, 1920, and have the same jurisdiction and observe the same procedure as the magistrates' courts in the Union. An appeal lies to the High Court of South West Africa from a judgment of a magistrate's court in the same circumstances and on like terms and conditions as an appeal may be had to a Provincial Division of the Supreme Court of South Africa from a magistrate's court in the Union. All sentences imposed by a magistrate's court of whipping or of fines exceeding £25 or of imprisonment exceeding three months are reviewed by the High Court. The country is divided into eighteen magisterial districts, and courts are held at the following places:—Aroab, Bethanie, Mariental, Gobabis, Grootfontein, Karibib, Keetmanshoop, Luderitz, Maltahöhe, Okahandja, Omaruru, Ondongua, Otjiwarongo, Outjo, Rehoboth, Swakopmund, Warmbad, and Windhoek. At present there are no magistrates at Aroab and Bethanie. The magistrate of Keetmanshoop is also magistrate of these districts. There is also no magistrate at Maltahöhe; the magistrate of Gibeon (at Mariental) is magistrate of this district. There is furthermore no magistrate at Ondongua. A special magistrate is appointed *ad hoc* whenever necessary. Periodical courts are also held by magistrates at other places at regular intervals. Any magistrate's court may be held at any place or places, within the local limits within which it has jurisdiction, appointed by the magistrate. There is no Rules Board as in the Union, but by Proclamation No. 31 of 1935 the judge of the High Court has been empowered to frame new rules and repeal and amend existing rules of magistrates' courts, subject to the approval of the Administrator.

Special justices of the peace have been appointed under Proclamation No. 25 of 1921 at Hochfeld and Walvis Bay, and also certain seats of magistracy. Special justices of the peace have jurisdiction in criminal cases to impose a sentence of fine not exceeding £10 and imprisonment not exceeding one month but, except in the case of juvenile offenders, they may not impose a sentence of whipping. All sentences imposed by special justices of the peace are reviewed by the magistrates of the respective districts. Special justices of the peace have no jurisdiction in civil cases.

4. **General.**—The power to remit sentences is vested in the Administrator, except as regards death sentences, in which case the prerogative of mercy may be exercised by the Governor-General-in-Council of the Union. The languages which may be used in the Courts are English and Dutch,* but German may be used in addressing the High Court. In criminal cases interpreters are provided in all languages free of charge.

By Act No. 24 of 1922 of the Union Parliament provision was made for the reciprocal service and enforcement in the Union and the territory of civil and criminal summonses, orders, warrants, and other processes of magistrates' courts and superior courts. Provision was also made for the removal of proceedings, whether criminal or civil, from a superior court in the Union to the High Court of South West Africa, and *vice versa*. The same Act provided that for all judicial purposes the port and settlement of Walvis Bay should be regarded as a part of the territory of South West Africa. That port and settlement has been included in the magisterial district of Swakopmund.

By Act No. 13 of 1926 of the Union Parliament, provision was made for the arrest and surrender of fugitive offenders from British colonies and protectorates in Africa south of the equator, in which the Governor-General by Proclamation declares that there exists a law providing reciprocally for the arrest and surrender of fugitive offenders from South West Africa. The same Act provided for the application to South West Africa of the Imperial *Extradition Acts*, 1870 to 1906, as regards the extradition of fugitive criminals between South West Africa and any foreign State, between the Government of which and His Majesty an extradition treaty has been entered into, if the treaty provides for its extension to South West Africa. By Proclamation No. 26 of 1920, provision was made to enforce the attendance before the courts of certain adjoining territories of persons resident or being within South West Africa and required as witnesses in civil or criminal proceedings.

5. **Principal Judicial and Police Officers.**—The following is a list of the principal judicial and police officers in the territory:—

Judge of the High Court of South West Africa	O. H. Hoexter, B.A., LL.B.
Registrar of the High Court, Taxing Officer, Sheriff, and Master of the High Court	J. M. M. Commaille.
Attorney-General	R. E. G. Rosenow, B.A., LL.B.
Professional Assistant to Attorney-General	J. P. de M. Niehaus, B.A., LL.M.
Commandant, South West Africa Police	Lt.-Col. C. A. B. van Coller, M.B.E.

6. **Admission of Legal Practitioners.**—Provision has been made for the admission of advocates, attorneys, notaries public, and conveyancers. The High Court may admit to practise as an advocate any person entitled to practise or to be admitted to practise as an advocate in any division of the Supreme Court of South Africa. The admission of attorneys is governed by the provisions of the *Law Society Proclamation*, 1921 (Proclamation No. 32 of 1921) as amended by Proclamation No. 4 of 1936.

The amending Proclamation embodies all the principal provisions of Act No. 23 of 1934, with necessary modifications. Union practitioners with three years' experience may be admitted to practise, subject to certain conditions. No person may be admitted to practise both as an advocate and as an attorney. Certain practitioners of the former courts of German South West Africa may also be admitted to practise as advocates or as attorneys. Any person admitted to practise as an advocate or an attorney by the High Court may also appear in any proceedings before a magistrate's court. The High Court exercises jurisdiction in respect of advocates, attorneys, notaries public, and

* And Afrikaans.

conveyancers similar to that exercised by the Cape Provincial Division of the Supreme Court in respect of practitioners in the Cape Province. By Proclamation No. 32 of 1921, the Law Society of South West Africa was established.

7. **Prisons.**—Gaols and lock-ups are administered in accordance with the Union *Prisons Act* (No. 13 of 1911) and regulations framed thereunder; there are at present seven gaols under the prison branch of the Administration and twenty-one lock-ups and twenty police cells controlled by the police under the supervision of the various magistrates. The gaols are classed as follows:—

1st Class—Windhoek.
4th Class—Luderitz, Keetmanshoop, Grootfontein, Omaruru, Gobabis, and Swakopmund.

The daily average of prisoners in the whole of the territory for 1938 was 326·68; only a small percentage were Europeans. Of this number 247·98 were at the Windhoek gaol, where all long-sentence prisoners are concentrated and the usual prison industries carried out. Female prisoners serving long sentences are, however, detained at Swakopmund, owing to lack of suitable accommodation at Windhoek. The local natives dislike sentences of imprisonment, and if possible pay a fine in preference.

The number of convictions for breach of gaol regulations is very low, and the convictions are only for minor offences such as being in possession of unauthorized articles, i.e. tobacco, matches, etc.

8. **Crime Statistics.**—The following tables show for a series of years the number of persons of each race and sex convicted (i) by the High Court and circuit courts and (ii) by inferior courts.

(i) CONVICTIONS—HIGH COURT AND CIRCUIT COURTS—1934 TO 1938.

1937	8,826	8,979	1,339	61	5,869	981	8,250
1938	10,187	10,314	1,287	87	6,503	992	8,869

§ 9. Native Administration.

1. **Native Population.**—A census was taken in 1936, when the native population, which was partly enumerated and partly estimated, was returned as 69,740 in the Police Zone, and 191,984 outside the Police Zone, including those living in Ovamboland, the Kaokofeld, the Okavango, and the Caprivi Zipfel. The total number of natives is 261,724. These figures exclude all persons classified as "Coloured" for Census purposes, for particulars of which see § 5 of this chapter.

2. **Native Labour.**—The increased activity in mining operations generally has created a great demand for mine labourers, and, as the wages offered are higher and the conditions of employment more attractive than those which the farmer is able to provide, this activity has resulted in a marked shortage of labour available for pastoral and agricultural pursuits.

The labour supply for the diamond mines is drawn from Ovamboland, whilst the labour for the tin, copper, vanadium, and gold mines inland is drawn from recruits obtained within the police zone, and from the Okavango area in the northern portion of this territory. In the past the recruitment of natives in Ovamboland and the Okavango was carried out by the Administration through the native affairs officers stationed in those territories. Recruiting organizations have now been formed to carry on this work.

The chief employers of labour in the territory are the Railway Department, the Chamber of Mines at Luderitz, the Otavi Copper Mining Company in Tsumeb, the South West Company, and the various tin mining companies in the districts of Omaruru and Karibib. They employ principally unskilled labourers, derived to some extent from local sources, but for the most part from Ovamboland and the Okavango area.

In Ovamboland, the Okavango, Windhoek, and Luderitz, officers have been specially appointed for the purpose of native administration, whilst in the country districts the control is vested in the magistrates.

3. **Native Law.**—In areas which have been opened up for the settlement of Europeans, the main provisions of the law affecting natives, apart from those dealing with masters and servants, which is practically the law as it exists in the Cape Province, are embodied in the following enactments:—

(*a*) The *Native Administration Proclamation*, 1922, which supersedes many of the old German laws and constitutes the principal pass law, regulating as it does the movements of natives within the territory and of those desirous of leaving or entering it. This proclamation also provides for the exemption of natives under certain conditions from the carrying of passes, and contains provisions for the establishment of reserves and the control of natives therein and on farms. The pass laws are not applicable in purely native areas such as Ovamboland. The *Native Labour Proclamation*, 1917, applies more particularly to the control and welfare of natives working within mining areas.

(*b*) The *Vagrancy Proclamation*, which provides for the suppression of idleness and trespass. Natives are allowed to select their own masters, and strict instructions have been issued against forcing natives to take service with particular masters against their will. When a native is dilatory in finding employment, an employer may be indicated, and if he refuses to engage himself, he may be prosecuted under the *Vagrancy Act*. Before sentencing natives under the Vagrancy Laws, magistrates are required to give the offender an opportunity of taking employment in preference to undergoing imprisonment. Certificates of exemption from labour may be granted to natives having visible means of support, such as possession of stock. Persons unfitted for labour by reason of old age or physical infirmity are *ipso facto* exempted persons.

(*c*) The *Municipal Proclamation*, which empowers municipalities, *inter alia*, to make regulations, subject to Government sanction, for the control and management of native locations within their respective areas.

(*d*) The *Natives' Stock Brands Proclamation*, which provides for the branding and registration of their large stock and frees natives from the liability of having to purchase branding irons. Under this Proclamation these irons are supplied by the Administration and are in the custody of prescribed officials under whose supervision the stock is branded.

(*e*) The *Native Reserve Trust Fund Proclamation*, which provides for revenue collected in reserves being spent entirely in the interests of the natives resident in the reserves concerned.

(*f*) The *Urban Areas Proclamation*, which adopts the main provisions of the Union *Natives (Urban Areas) Act* of 1923, and omits only those which are not applicable to the conditions obtaining in the territory. This proclamation has been applied to the towns of Windhoek, Swakopmund, Tsumeb, Otjiwarongo, Luderitz, Mariental, Usakos, Keetmanshoop, Omaruru, Karibib, Okahandja, Grootfontein, and the port of Walvis Bay.

(*g*) The *Native Reserves Fencing Proclamation*, which provides that the Fencing Law be applied to natives in respect of areas proclaimed as native reserves.

(*h*) The "*Wheel Tax*" (*Application to Natives*) *Proclamation*, which provides that natives shall pay wheel tax at the same rate as Europeans.

(*i*) The *Prohibition of Credit to Natives Proclamation*, 1927, which prohibits the granting of credit to natives.

(*j*) The *Dog Tax* (*Applicable to Natives*) *Proclamation*, 1928, which provides that every native who resides in a reserve and is registered as the owner of stock running in that reserve may apply for the exemption from payment of tax in respect of one dog.

(*k*) The *Native Administration Proclamation*, 1928, which provides for the appointment of a Chief Native Commissioner, Native Commissioners, and Assistant Native Commissioners, establishes courts for the hearing of native cases, and deals with tribal organization and the control of natives generally.

(*l*) The *Ovamboland Affairs Proclamation*, 1929, which provides for the establishment of trust funds for the tribes in Ovamboland.

(*m*) The *Caprivi Zipfel Affairs Proclamation*, 1930, which provides for the establishment of trust funds for the tribes in the Caprivi Zipfel.

(*n*) The *Native Labour Regulation Amendment Proclamation*, 1931, which makes provision for the return of native labourers to the places where they were recruited.

(*o*) The *Control of Sites Proclamation*, 1932, which regulates the granting of sites in native areas for church, school, or mission purposes.

(*p*) The *Witchcraft Suppression Proclamation*, 1933, which provides for the suppression of the imputation or practice of pretended witchcraft.

(*q*) The *Immorality Proclamation*, 1934, which prohibits illicit carnal intercourse between Europeans and natives and other acts in relation thereto.

(*r*) The *Extra-territorial and Northern Natives Control Proclamation*, 1935, which provides for the control of natives recruited beyond the boundaries of the territory, or beyond the limits of the police zone, for labour within the said zone, and for the control of such natives as aforesaid who have voluntarily entered the said zone.

(*s*) The *Support of Dependants* (*Natives*) *Proclamation*, 1936, under which provision exists for compelling relatives to support indigent natives for whose maintenance they are liable.

4. Expenditure on Natives.—The following statement shows for a series of years the direct expenditure on natives:—

EXPENDITURE ON NATIVES, 1933-34 TO 1937-38.

Year.	Education.	Native Affairs.	Public Health.	Total.
	£	£	£	£
1933-34	12,134	14,359	9,852	36,345
1934-35	13,395	18,835	11,788	44,018
1935-36	15,440	28,163	11,847	55,450
1936-37	16,120	22,390	12,720	51,230
1937-38	16,395	33,459	14,335	64,189

5. Liquor Prohibition.—In order to secure the advancement of the native and to prevent as far as possible his lapsing into crime, it is forbidden to place in the care of, or to give, sell, or deliver to, any coloured person any intoxicating liquor, except for medicinal purposes on the production of a prescription from a qualified medical practitioner. It is further unlawful for a master to give his servant "tots" of liquor; it is also unlawful to brew kaffir beer without permission.

6. Native Reserves.—With a view to the reconstruction, as far as practicable, of tribal organization and the provision of areas in which the natives may live under healthy and natural conditions with their stock, reserves have been established in various districts. These are generally controlled by the hereditary chief, if any, or an elected or appointed headman, who is responsible to the magistrate of the district for the preservation of law and order in and about the reserve. In some instances, European welfare officers have been appointed for the purpose of closer supervision of the reserves. This system of native administration may be said to serve a double purpose, in that it ensures a settled, contented population, and creates a potential labour-recruiting field for the future. All the areas selected for native reserves have existing water

supplies, but, as these are not conveniently distributed and are in some cases insufficient, dam-building operations upon a considerable scale are being undertaken. It is the policy of the Administration to provide adequate supplies in all reserves.

Purely native areas such as Ovamboland and those secured by old treaties have not been disturbed, whilst various additional reserves have been provided.

The following native reserves have been proclaimed:—

NATIVE RESERVES IN SOUTH WEST AFRICA.

District.	Name.	Extent.	By Whom Occupied.
(*a*) LAND OCCUPIED BY NATIVES UNDER GERMAN TREATIES.			
		Hectares.†	
Keetmanshoop	Berseba Hottentot Territory.	575,000*	Berseba Hottentots.
Warmbad	Bondels Reserve	174,505	Bondelzwarts.
Omaruru	Okombahe	172,780	Bergdamaras.
Outjo	Zessfontein	31,416	Topnaar and Swartbooi Hottentots.
Outjo	Franzfontein	36,188	Swartbooi Hottentots.
Bethanie	Soromas	16,830	Bethanie Hottentots.
(*b*) RESERVES ESTABLISHED BY THE SOUTH WEST AFRICA ADMINISTRATION.			
		Hectares.†	
Maltahöhe	Neuhof	20,500	Various Tribes.
Keetmanshoop	Tses	254,587	Hottentots, Hereros, and Damaras.
Okahandja	Ovitoto	61,193	Hereros.
Grootfontein	Otjituo	372,024	Chiefly Hereros.
Gobabis	Aminuis	554,800	Bechuanas and Hottentots.
Gobabis	Epukiro	1,027,000	Chiefly Hereros.
Otjiwarongo	Waterberg East	343,000	Hereros and Damaras.
Gibeon	Gibeon Reserve	39,192	Witbooi Hottentots.
Omaruru	Otjihorongo	330,000*	Hereros.
Karibib	Otjimbingwe	91,021	Hottentots, Damaras, and Hereros.
Windhoek	Aukeigas	13,837	Damaras.
Grootfontein	Okavango Native Territory	3,200,000*	Kuangari, Bunja, Sambio, Diriko, and Mbukushu.
Outjo (Kaokoveld)	Kasupi	114,500*	Ovatjimba, Ovahimba.
Outjo (Kaokoveld)	Oorlog	99,100*	Hereros, Oorlams, Ovatjimba, and Ovahimba.
Outjo (Kaokoveld)	Karuapa	165,600*	Ovatjimba and Ovahimba.
Ovamboland	Ovamboland	4,200,000*	Ondonga, Ukuanyama, Ukuambi, Ongandjera, Ombalantu, Ukualuki, and Okolonkathi (mixed).
Outjo	Franzfontein (ext.)	21,000*	Swartbooi Hottentots.
	TOTAL	11,914,073	

* Approximate.
† A hectare = 2·4711 acres (approx.) = 1·1675 morgen (approx.).

NOTE.—
(*a*) Areas approximately 4,255,800 hectares in extent are reserved for the future extension of native reserves.
(*b*) In the eastern Caprivi Zipfel three tribes are provided for and Trust Funds are established.
(*c*) The Rehoboth Gebiet (in extent 1,356,200 hectares) in the Rehoboth District is reserved for the Rehoboth Coloured community.

In 1938 the estimated population in the Proclaimed Reserves was as follows:—

Reserve.	Men.	Women.	Children.	Total.
Soromas	63	102	100	265
Gibeon	104	162	153	419
Aminuis	980	960	943	2,883
Epukiro	756	1,072	937	2,765
Otjituo	744	781	408	1,933
Otjimbingwe	331	546	545	1,422
Berseba	689	624	717	2,030
Tses	417	421	311	1,149
Neuhof	10	9	15	34
Ovitoto	489	743	436	1,668
Okombahe	381	471	416	1,268
Otjihorongo	678	854	524	2,056
Waterberg East	1,389	1,524	1,482	4,395
Franzfontein	67	93	137	297
Bondels	80	161	195	436
Aukeigas	147	299	240	686
Zessfontein	218	199	252	669
Hochanas (temporary)	34	67	95	196
TOTAL	7,577	9,088	7,906	24,571

§ 10. Land and Irrigation.

1. **Land Settlement.**—The following statement furnishes information relative to the ownership of land in the territory (exclusive of Ovamboland and the Caprivi Zipfel):—

LAND OWNERSHIP IN SOUTH WEST AFRICA, 1938.

Description.	Area.
	Hectares.
Area of Territory—	
(*a*) Outside Police Zone	30,101,000
(*b*) Inside Police Zone: Namib land	7,164,860
Other lands	45,025,000
	82,290,860
Non-European (Natives and Coloured) Lands—	
(*a*) Proclaimed Native Reserves (inside and outside Police Zone)	11,914,073
(*b*) Areas reserved for extension of Native Reserves (inside and outside Police Zone)	4,255,800
(*c*) Rehoboth Gebiet	1,356,200
	17,526,073
European Farm Lands—	
(*a*) Farms in Private Ownership	14,708,692
(*b*) Farms leased to settlers; 1,735 farms	8,828,187
(*c*) Land held by Companies	2,077,331
	25,614,210
Urban Areas	437,100
Game Reserves (inside and outside Police Zone)	9,593,600
Area of unalienated Crown Lands—	
(*a*) Inside Police Zone	11,578,226
(*b*) Outside Police Zone	9,500,000
	21,078,226

1 square mile = 258·994 hectares.

A land tax is leviable on all landed property, rural and urban, and yields about £12,000 per annum. The land tax is collected from owners of land in the territory in accordance with the following Ordinances:—

(i) Taxation of Landed Property Consolidation and Amendment Ordinance, 1935 (Ordinance No. 5 of 1935).
(ii) Taxation of Landed Property Amendment Proclamation, 1935 (Proclamation No. 9 of 1935).
(iii) Taxation of Landed Property Further Amendment Ordinance, 1935 (Ordinance No. 22 of 1935).

Crown lands in the territory are disposed of under Proclamation (Union) No. 310 of 1927. Under this proclamation land is from time to time advertised as available for settlement purposes by notice in the official *Gazette* and in newspapers circulating in the territory and in the Union. The farms are advertised for eight weeks; after the expiry of this period all applications are considered by the Land Board.

Remission of rent for the first five years of the lease period of a settler's operations may be granted, where a settler has effected improvements of a permanent nature to the value of 10 per cent. of the prairie value of the holding allotted to him. Crown land values range from 1s. to 5s. per hectare (2½ acres) according to quality and locality.

It is advisable that intending settlers should be possessed of capital of from £1,000 to £2,000. Inquiries should be addressed to the Senior Officer, Lands Branch, Windhoek, S.W.A.

2. **Water Supplies.**—The chief methods of obtaining water supplies in the territory are—

(*a*) by tapping the underground water by means of boreholes and wells;
(*b*) by the construction of surface dams and weirs;
(*c*) by the construction of underground weirs or *grundschwelle* across sandy river beds.

The first method is extensively employed by stock farmers owing to the prevalence of underground supplies, but, where the topography of the ground is favourable, conservation of water is accomplished by means of dams. Strong artesian supplies occur in regions along the Oup and Nosop Rivers. The water occurs in layers of sandstone between shale strata of the Karroo formation. The depths of the artesian boreholes vary from 250 to 730 feet, and the yield from 20,000 to 1,000,000 gallons per 24 hours. These boreholes are under control, and water can be shut off when not required. With the exceptions mentioned below, the rivers of the territory are all intermittent. It is, however, only during the rainy season, which is in summer, that these intermittent rivers flow at all; in the winter the river beds are dry. The following rivers are perennial:—

The *Orange River*, which forms the southern boundary of the territory and discharges into the Atlantic Ocean.

The *Kunene River*, which forms part of the northern boundary and discharges into the Atlantic Ocean.

The *Okavango River*, on the north-east, which discharges into the Okavango marshes in Bechuanaland.

The *Kwando* or *Mashi River*, which crosses the Caprivi Zipfel and discharges into the Zambezi River.

The *Zambezi River*, which forms the boundary between the Caprivi Zipfel and Northern Rhodesia and discharges into the Indian Ocean.

Subterranean water in South West Africa is generally found at considerably greater depths than in the Union, and the supplies are fairly reliable and constant throughout the dry season. Government boring operations have been much curtailed, but numbers of private boring contractors now drill for farmers.

The following table gives the total footage drilled by government machines in recent years and the yields obtained.

WATER-BORING OPERATIONS, 1934 TO 1938.

Year.	Boreholes Completed.	Boreholes in Progress at End of Year.	Aggregate Depth.	Yield per Diem.
			Feet.	Gallons.
1934	5	2	1,402	84,280
1935	10	1	3,098	482,660
1936	4	2	1,448	115,600
1937	6	1	1,972	49,680
1938	9	3	2,255	108,600

3. **Rainfall.**—The rainfall of the various districts in the territory does not, owing to its uncertainty, form a reliable water supply. Generally speaking, the rainfall increases from south to north and from west to east. The maximum amount of rain falls accordingly in the north-eastern area, and the minimum rainfall is found in the south-west. The heaviest precipitation takes place during the summer months from December to March over the northern area. In the south, on the other hand, winter rains have been experienced. The rainfall statistics for the various districts are given hereunder:—

(i) RAINFALL STATISTICS, 1933-34 TO 1937-38 (in Inches).

Locality.	1933–34.	1934–35.	1935–36.	1936–37.	1937–38.

Bethanie	4·21	Swakopmund	0·71	Grootfontein	22·44
Gibeon	6·30	Okahandja	13·78	Tsumeb	21·22

§ 11. Agriculture, Live Stock, and Fisheries.

1. **General Conditions.**—Owing to the generally low rainfall prevailing in the territory, it is not possible to carry out agriculture on any considerable scale. However, in the Grootfontein district, which is situated in the northern portion of the territory, where the rainfall approximates 24 inches, crops of maize, potatoes, beans, etc., can be produced in some years, although the distribution of the rainfall tends to be erratic and cannot always be relied on. As a rule the maize crop, even though not brought to maturity, can be developed sufficiently for the production of silage, a matter of considerable importance to such farmers as are engaged in the dairy industry, for which this district is on the whole suitable. There is a good supply of artesian water along the Oup River, and here a certain amount of wheat is grown, while further east on the Nosop River this crop is also produced under a system of floodwater irrigation.

The agricultural statistics for the years 1934 to 1938 are as follows:—

Item.	1934.	1935.	1936.	1937.	1938.
Area cultivated.....hectares*	22,230	19,699	21,297	15,837	27,636
Wheat.....lb.	1,083,400	1,306,200	1,730,600	1,628,200	950,000
Maize.....lb.	9,369,600	6,461,600	13,171,400	10,577,000	15,205,000
Kaffir-corn.....lb.	406,400	375,600	249,600	228,780	94,000
Potatoes.....lb.	312,150	851,000	472,320	761,280	440,700
Beans.....lb.	59,800	92,000	6,220	—	—
Tobacco.....lb.	67,625	46,000	96,630	351,980	151,200

* A hectare = 2·4711 acres (approx.) = 1·1675 morgen (approx.).

2. **Pastoral Conditions.**—With the exception of the areas previously mentioned, practically the whole of the territory is farmed under pastoral conditions. Normally the territory, in addition to meeting its own requirements as regards beef and mutton, exports considerable numbers of large and small stock on the hoof to the Union for slaughter purposes. In the south farming is confined mainly to sheep and goats, while in the middle and north dairy ranching is carried on as well. The sheep industry is confined almost entirely to Karakul breeding. The cattle maintained are of the dual purpose type, the idea being the production of a medium amount of milk, which provides ready cash, and the production of a useful carcass of beef.

Neudam is the chief experimental farm, but during 1936 there was a further extension of the Administration's activities in connexion with the breeding of pure-bred Karakul sheep. Portion of the pure-bred flock was transferred from Neudam experimental farm to Omatjenne, near Otjiwarongo, so that there is now a breeding station in the north. In addition to Karakul sheep, three herds of pure-bred cattle are maintained at Neudam, viz., Red Poll, Shorthorn, and Aberdeen Angus. Auction sales of pure-bred Karakul rams are held twice during the year at Windhoek, at Omatjenne, and at Keetmanshoop, and one sale of pure-bred bulls is held at Windhoek.

The Karakul industry makes continued progress and farmers had a good year in 1938, the prices obtained for pelts being very satisfactory. Pure-bred animals fetched high prices, e.g. at the sales of the Administration's stock, 165 rams were sold at an average price of £19. 12s. 10d. and 93 culled ewes at an average price of £8. 9s. To show what strides the Karakul industry has made during a period of twelve years, it may be stated that in 1926 approximately 10,000 pelts were exported while in 1938 more than 1,290,000 were exported.

3. **Stock Disease.**—The territory remains comparatively free from serious stock diseases. It has remained free from foot and mouth disease since the end of 1934. Anthrax and black-quarter in cattle do occur, but outbreaks are promptly dealt with by means of prophylactic inoculation coupled with quarantine measures, and thus cause no heavy losses. During 1938 gallamsiekte was not at all severe; but horse-sickness was fairly prevalent in some areas, where the mortality amongst uninoculated animals was high. Anaplasmosis seems to be spreading, but preventive inoculation is being practised to a considerable extent. Amongst small stock the prevalent complaints are scab, verminosis, and, to a less extent, vegetable poisoning.

4. **Live Stock Census and Export of Live Stock.**—The following tables give the number of animals returned at livestock censuses and the export of live stock during a series of years.

(i) NUMBER OF ANIMALS RETURNED AT LIVE STOCK CENSUSES, 1934 TO 1938.

Live Stock.	1934.	1935.	1936.	1937.	1938.
	No.	No.	No.	No.	No.
Cattle	622,426	665,919	706,708	806,669	908,071
Horses	17,985	20,919	23,521	25,447	28,164
Mules	1,160	1,251	943	1,050	1,627
Donkeys	70,221	77,066	83,346	88,051	99,301
Pigs	5,856	8,117	11,791	11,541	9,690
Woolled Sheep	126,635	123,271	123,334	111,824	94,373
Karakuls (pure-bred)	26,497	33,067	22,422	25,074	26,465
Karakuls (grade)	774,127	1,092,839	1,448,900	1,880,932	2,119,924
Other Sheep	709,629	814,375	812,602	797,190	769,323
Angora Goats	11,865	20,450	14,300	17,216	19,676
Other Goats	700,754	895,316	812,602	1,212,788	1,400,646
Blackhead Persian Sheep	92,317	86,786	58,696	82,771	64,172

(ii) ESTIMATED NUMBER OF NATIVE-OWNED LIVE STOCK, 1934 TO 1938.

Area.	Large Stock.					Small Stock.

5. **Fisheries.**—The only fishing on a commercial basis is carried on at Walvis ay by snoek cutters from Capetown. Figures showing the quantity and alue of snoek exported from Walvis Bay during the fishing seasons from)33-34 are given below. A small private concern is operating at Sandfish arbour with seine nets (trek nets) and supplies fresh and smoked fish to land consumers and to the Walvis Bay community. Crawfish canning has een established at Luderitz and three factories are in operation.

SNOEK EXPORTED FROM WALVIS BAY, 1933-34 TO 1937-38.

Season.	Quantity.	Value.
	No.	£
33–34	252,600	7,578
34–35	593,565	17,806

	Long Tons.	£
1935	489	1,422
1936	543	2,960
1937	223	1,196
1938	1,118	8,944

§ 12. Mines.

1. **Copper.**—In the Journal of Francis Galton, written in 1851, the first mention is made of the occurrence of copper ores—at Tsumeb—in what is now the Mandated Territory of South West Africa, but the only company which has ever produced copper on a considerable scale is the Otavi Minen und Eisenbahn Gesellschaft, which owns and works the Tsumeb Mine in the Grootfontein district. At present the Tsumeb Mine is the only mine producing copper ore and copper matte in the territory.

The deposits consist of lenses of ore in grey Otavi dolomite, the shapes of the bodies varying considerably from level to level. The ore at Tsumeb is a massive coarsely crystalline aggregate, composed in variable proportions of argentiferous galena and chalcocite, with zincblende, pyrite, enargite, stibioluzonite, and chalcopyrite. The chalcocite is of secondary origin. Less important deposits of copper-lead and copper ore of the same nature occur at other places in the Otavi mountain area.

Up to 1918 the Khan mine on the Khan River, a tributary of the Swakop River, exploited an inclined vein of coarse copperbearing pegmatite in gneiss. Copper deposits of the same nature are known at a number of places within the territory; but the future of copper mining at all these places depends very largely on the price of the metal and the stability of the copper market. At present there is no production from any of these old mines.

The ores and by-products from the Tsumeb smelter hoisted and exported during the years 1927 to 1938 are shown below.

PRODUCTION AND EXPORT OF COPPER-LEAD ORE, COPPER-LEAD MATTE, PIG-LEAD, AND CADMIUM, 1927 TO 1938.

* Exported from stocks on hand. † Estimated value. ‡ Unrecorded.

2. **Diamonds.**—The discovery of diamonds in the neighbouring states during the latter part of the last and the early years of the present century, followed by a wave of prosperity, drew attention to the possibilities of finding diamonds in South West Africa.

Numerous occurrences (42 pipes and fissures) of blue-ground in the Gibeon and surrounding districts were tested during the period 1903-1910. Although in all other respects the blue-ground was found to be almost identical, mineralogically and petrographically, with that in the Kimberley pipes, no diamonds were found.

Alluvial diamonds occur along the coast of South West Africa from the mouth of the Orange River northwards to Conception Bay, a distance of over 300 miles. There are four principal areas, Kolmanskuppe east of Luderitz, and Pomona, Bogenfels, and Oranjemund to the south. The first three are situated in country characterized by north-south troughs bounded by bare rocky ridges with their floors filled with deposits of gravel and sand.

The diamonds occur for the most part in the upper layers of loose detritus, along the floors of the troughs and in other depressions. This layer, usually only a few inches thick, may in places be up to 25 feet thick, and is composed of from 20 to 80 per cent. of yellow sand and 20 to 40 per cent. of coarse material from 1 to 10 mm. in diameter. The diamonds are concentrated in the coarse material, which is composed of milky quartz, white feldspar, yellow chalcedony, banded agate, red jasper, red garnet, epidote, magnetite, and specular iron.

The immediate concentration of the diamonds is brought about by the action of a wind which blows strongly from the south for many months of the year and takes the fine material out of the upper layers. Previous to this recent concentration, some of the diamonds had been deposited as gravels in old river beds of Tertiary age. Their ultimate source is thought to be pipes of kimberlite. As has been already stated, such pipes occur inland, but up to the present no diamonds have been found in them.

As a result of the discoveries of diamonds in the marine terraces of Alexander Bay, prospecting was actively undertaken at Oranjemund, north of the Orange River mouth, where similar diamondiferous raised terraces standing from 12 to 60 feet above sea level were found and developed like those across the Orange River at the State Diggings in the Union of South Africa. From them has been recovered the largest diamond yet discovered along the coast, one of 246 carats.

The yearly output and value of diamonds from South West Africa have varied considerably with the demands of the market.

The following table gives particulars of the production of diamonds in the years 1934 to 1938.

PRODUCTION AND VALUE OF DIAMONDS, 1934 TO 1938.

Year.	Diamonds Produced (Carats).	Number of Diamonds per Carat.	Diamonds Sold (Carats).	Price Realized per Carat.	Total Value Sold.
				s.	£
1934	4,126	0·7	257,813	34·84	449,167
1935	128,463	0·93	126,306	85·09	537,408
1936	184,916	1·25	184,426	90·30	915,695
1937	196,802	1·25	184,863	119·05	1,100,492
1938	154,856	1·32	37,258	152·20	283,754

3. **Tin.**—Tin ore (cassiterite) was first discovered in South West Africa in 1908. The mineral is found within a large area stretching south and south-west of the Erongo Mountains between Otjimbojo and Spitzkop, in another area lying to the east and west of Okambahe, north of the Erongo, and in a third area south, east, and west of the Brandberg.

The most important primary source of the ore is an enormous number of pneumatolytically altered pegmatites either situated within the parent granite or intruded within the adjoining schists. Cassiterite also occurs as a mineral deposited from aqueous solution and not associated with pegmatites. Erosion of these primary sources has given rise, at certain points, to the concentration of alluvial and eluvial ore. Production of both shed tin and ore takes place from the primary sources.

As a general rule the cassiterite within the pegmatites is patchy; many of the occurrences are low grade and unpayable under the primitive methods of mining in vogue, but others have for years been sources of profit to a number of small concerns. It is hoped that when the nature of the occurrences is fully understood by those engaged in production, the fields will be the scene of a permanent tin industry.

The annual export of tin concentrates from the year 1929 is given hereunder:—

EXPORT OF TIN CONCENTRATES, 1929 TO 1938.

Year.	Quantity.	Value.	Year.	Quantity.	Value.
	Tons.	£		Tons.	£
1929	227·6	32,000	1934	203·2	32,400
1930	172·6	20,200	1935	239·2	37,842
1931	106·4	8,500	1936	233·0	30,173
1932	111·8	10,000	1937	214·6	32,496
1933	203·5	28,800	1938	250·0	30,006*

* Estimated value.

4. **Marble.**—Between Swakopmund and Karibib extensive occurrences of marble are known. White and coloured marble of excellent quality was quarried at Karibib for several years, but no production is taking place at the present time. White greenish onyx-marble is recorded from the Otavi valley; and the marble series of the Damara system probably contains enormous quantities of architectural and decorative stone.

5. **Gold.**—During the past few years much interest has been displayed in the occurrence of auriferous veins in the Rehoboth district; but the optimism with which the fields were prospected has proved to be only partially justified.

Mineralized quartz veins, veinlets, stringers, and lenses are of common occurrence in the schists and mixed rocks of the Fundamental Complex in this district. The gold values in these have proved to be very patchy and on the whole low, except in the zone of secondary enrichment near the surface. In most cases, too, the quartz masses have proved too narrow and too impersistent to repay mining on any large scale; and the area seems to be one in which profits can only be made by working certain of the richer reefs on a small scale. At present the Rehoboth goldfield is neglected, the output having dropped to roughly 300 ounces for the year 1938.

Gold is also being produced from auriferous reefs at Ondondu Otjiwapa in the Omaruru district, and from alluvial deposits at the same place.

Attempts have been made from time to time to extract gold from alluvium in the various stream beds; but no extensive or rich patches have as yet rewarded the prospector, except in the early days of the Ondondu Otjiwapa field in the Omaruru district, where some 6,091 ounces of alluvial gold were recovered from a limited area during the years 1924 to 1933.

In the following table the gold recovered from the beginning of 1924, when alluvial gold was first discovered at Ondondu Otjiwapa, to the end of 1938 is shown:—

Year.	Ondondu-Otjiwapa (Omaruru).	Rehoboth.	Total.	Value.
	Unrefined Gold Oz.			£
1924	147·17*	—	147·17	†

1936	2,203·18	2,230·83	4,434·01	28,210
1937	1,977·20	1,082·25	3,059·45	19,510
1938	1,649·46	309·68	1,959·14	12,633

* Chiefly alluvial gold.
† Unrecorded.

6. **Iron.**—Extensive iron deposits are found in various parts of the country. A deposit of iron ore at Kalkfeld, in the Otjiwarongo district, is mined by the Otavi Minen und Eisenbahn Gesellschaft. The ore is used by them in their smelter at Tsumeb for fluxing their lead-copper ores. The output for 1938 was 23,861 metric tons.

High grade iron ores, low in phosphorus, are known to occur near the valley of the Schaf River, in the south of the Windhoek district. Here, intercalated in the marble series of the Damara system, are numerous bands of iron ore varying in thickness from a few metres to 45 metres. Two analyses showed 55 per cent. and 60.8 per cent. Fe. respectively.

Itabirite has been recorded from the hinterland of Walvis Bay. Large deposits of haematite are interbedded with rocks of the Nama system in the Kaokoveld, and iron ore has also been recorded from Garub Mountain, near the Luderitzbucht railway line.

7. **Vanadium.**—Ores of this metal have been opened up at Abenab and other places in the concession areas of the South West Africa Co., Ltd., and the Otavi Minen und Eisenbahn Gesellschaft in the Grootfontein district. With the exception of the Abenab, Bobos, Baltika, and Nageib deposits, none of them proved to be extensive.

During 1938 the South West Africa Co., Ltd., and the Otavi Minen und Eisenbahn Gesellschaft exported vanadium concentrates averaging 19 to 20 per cent. of V_2O_5, to the value of £171,369.

The export of vanadium concentrates during the years 1929 to 1938 were as follows:—

EXPORT OF VANADIUM CONCENTRATES, 1929 TO 1938.

Year.	Quantity.	Value.	Year.	Quantity.	Value.
	Tons.	£		Tons.	£
1929	5,287	222,000	1934	1,645	51,575
1930	3,817	150,700	1935	3,288	128,232
1931	3,938	130,700	1936	5,263	213,151
1932	1,378	52,200	1937	5,096	197,867
1933	1,170	44,312	1938	4,522	171,369*

* Estimated value.

8. **Salt.**—The chief reserves of salt within the territory lie along the coastal strip from Swakopmund northwards to Cape Cross. The mineral occurs both as stratified rock-salt interbedded with youthful deposits, and as rock-salt and brine associated with coastal pans. The rock-salt is high grade and can easily be excavated. The Panther-Beacon pan and the Cape Cross pan are two of the most important. The former is close to Swakopmund and is a source of high-grade brine, which will give a salt of excellent quality. The latter, which is some 80 miles from the railway, contains enormous quantities of salt and high-grade brine. The reserves of rock-salt alone run into millions of tons giving 90 per cent. NaCl. when dry, and the high-grade brine is unlimited.

The salt produced is at present sold locally to stock-farmers, fishermen, and others, but a company has recently been formed with the object of erecting refineries and, if possible, establishing an export trade.

The following table shows the quantities of salt produced and sold in the territory since 1935:—

PRODUCTION OF SALT, 1935 TO 1938.

Classification.	1935.		1936.		1937.		1938.	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.
	S. Tons.	£	S. Tons.	£	S. Tons.	£	S. Tons.	£
Rock Salt	5,535	6,645	592	1,350	738	2,020	706	1,957
Coarse Salt			3,501	4,545	3,758	6,505	4,871	8,024
Fine Salt			121	264	37	230	13	85
TOTAL	5,535	6,645	4,214	6,159	4,533	8,755	5,590	10,066

9. **Semi-Precious Stones.**—South West Africa possesses valuable deposits of semi-precious stones including beryl (aquamarine and heliodore), beautiful green and red tourmalines, crystal clear topazes, and transparent purplish red almandine garnets, all of which cut and polish with pleasing effect, as well as deposits of rose-quartz associated with beryl-bearing pegmatites.

Owing to the large stocks of unsold semi-precious stones previously exported and held by cutters in Germany, production for the time being has been curtailed.

The production in 1937 was:—Aquamarines: 4,970 grammes, value £160; tourmalines: 37,795 grammes, value £321; and topaz: 4,000 grammes, value £67.

Sales effected in Germany since 1935 from stocks on hand are given below:—

SALE OF SEMI-PRECIOUS STONES (FROM STOCKS HELD OVERSEAS), 1935 TO 1938.

Class.	1935.		1936.		1937.		1938.

10. **Other Metals and Minerals.**—Besides the ores already mentioned, a variety of other minerals has been located throughout the territory, some of which are mined and exported in small quantities. In the majority of cases, however, the discovery is merely reported and nothing further is done to prove the value. Some of the minerals under this heading and their location are as follows:—

Asbestos (Tremolite).—In the Pforte mountains, Swakopmund district, and at Alberta and Nuams in the Rehoboth district.

Asbestos (Chrysotile).—Near Km. 15 on the Swakopmund-Windhoek railway line, and at Kuchanas and Kochena in Karras Mountains, Keetmanshoop district, where bodies of pyroxenitic serpentine occur.

The fibre is short and the proved tonnage small. The large area of old rocks in this portion of the Great Karras range of mountains is imperfectly known geologically, and further exploration might well result in the discovery of workable deposits of chrysotile.

Beryl.—Pegmatites in the southern and eastern portions of the Warmbad district, in the hinterland of Swakopmund, at Rössing, Arandis, Leewater, Goas, and Pforte, and several places between the Omaruru and Kuiseb Rivers, have been found to contain beryl similar to that occurring in the pegmatite area of Namaqualand in the Union of South Africa. Although a few tons of the mineral have been exposed, no large quantity has yet been proved to exist.

Corundum.—Corundum has been recorded from pegmatites in parts of the Warmbad district, a few miles north of the Orange River and also from the Khomas Mountains.

Fluorspar.—On the farm Garub No. 83 in the Keetmanshoop district, 60 miles from Kalkfontein railway station, and on the adjoining farm Stinkdorn No. 28 in the Warmbad district, fluorspar of exceptional purity has been prospected and, to a certain extent, mined. The Garub deposit is in the form of a funnel-shaped body in medium-grained porphyritic granite. An attempt was made during 1938 to exploit the spar, but owing to the distance from and bad roads to the nearest station and the distance from the nearest port, the attempt proved unsuccessful and the mine was again closed down at the end of the year.

An extensive deposit of massive low-grade fluorspar on the farm Marburg No. 1 in the Otjiwarongo district has been partially opened up by adits. The spar averages from 85 to 90 per cent. CaF_2. Owing to its situation and the grade of ore it is not being worked.

Garnet.—At Husab, about 38 miles from Swakopmund on the Swakop River, brown garnet occurs as lenses in a well-defined band of marble. The lenses have been traced over a strike of 3 miles, and attain a width in places of 50 to 60 metres. Well over a million tons of the mineral seem to be present.

Enormous tonnages of float and massive garnet (both grossularite and andradite) occur north of Spitzkop and at Arandis in the Swakopmund district.

Graphite.—This mineral occurs as a constituent of many of the limestones of the Marble series.

During the last few years a certain amount of development has taken place sporadically on a deposit at Aukam No. 104 in the Bethanie district, about 30 miles south of Kuibis station on the Luderitzbucht-Keetmanshoop railway line. Graphite occurs here in lenses and pockets in the granite of the Basement complex. The best flake graphite is found as veins and stringers in less pure amorphous material, and it can only be separated by hand sorting. There is a considerable tonnage available. If a market could be found for this material, the discovery of yet further bodies in this comparatively unknown area might result.

Iceland spar.—Deposits of Iceland spar of optical quality have been known to occur in the vicinity of Mariental, in the Gibeon district, for the last decade, and for some years there have been spasmodic attempts at the exploitation of what appears to be a very promising field if properly treated. The spar occurs in nests, varying in size from a few inches to 15 feet across, in the amygdaloidal basalts of the Stormberg series, which outcrops over a considerable area in the Gibeon and Rehoboth districts. The deposits are scattered and only systematic search can reveal the total quantity of the mineral that is available.

To bring this mineral under proper control, a special grant to mine Iceland spar throughout South West Africa was issued during 1937, with the result that the mining, handling, and packing operations are now carried out under expert supervision, and an important industry is slowly being established.

During 1938 high grade optical spar to the value of £230 was exported to America, and 1 ton of pure calcite, containing 99·8 per cent. $CaCO_3$, was shipped to Germany and realized £120.

Lead.—Veins containing argentiferous galena were worked between 1912 and 1930 in the country near Aiais, which lies in the western part of the Warmbad district a few miles east of the Fish River, and attempts were made to work similar veins on Ysterbank, some 20 miles to the north.

The silver-lead ores occur in veins, which at Aiais are closely associated with a set of basic dykes. The veins are narrow, almost vertical, and for the most part short; the largest do not extend for more than a few hundred yards.

Carbonate lodes with galena and apatite occur to the east of Bokkiesbank Ost and Blydeverwacht. Lead is also a constituent of the copper ores of Otavi, from where the whole of the output of pig-lead is at present obtained (see paragraph 1 of this section).

Lithium.—Deposits of lithia mica, lepidolite, occur over a large stretch of country surrounding the Erongo mountains, but the most important deposits are confined to a few farms south-east of Karibib. There are two main types of occurrences:—Syngenetic deposits in which the mica is found in nests and books associated with blows of quartz in pegmatites, and epigenetic deposits in which the ore is in the form of massive aggregates of scales and crystals mixed with some quartz, to which the name lepidolite greissen was given.

In the best of these deposits, a grade of ore of well over 4 per cent. LiO_2 can be maintained by hand picking. Within a restricted area to the south-east of Karibib, an estimated reserve of over 60,000 tons is stated to be present, of which 50,000 tons are of high grade ore.

Fairly extensive beds of amblygonite, averaging 7·5 per cent. of lithium oxide, have recently been discovered, associated with the lepidolite deposits, in the Karibib district. During 1938 some 315 tons, which realized £3,060, were shipped to various countries overseas from the deposits at present being worked at Johann Albrechts Höhe and Okongava, near Albrechts Siding, on the main railway line to Swakopmund.

Mica.—Apart from those of lepidolite no workable deposits of mica have hitherto been discovered in the territory, although the pegmatites of the Erongo and the Swakopmund hinterland carry the mineral as a constant constituent.

Rutile.—A deposit of pure rutile has been opened up on the farms Erongo Ost No. 82 and Kakona Ost No. 81 in the Omaruru district. The rutile occurs in an extensive body of pegmatite cutting through an aplitic granite outcrop.

The concentrate, which is recovered in a very primitive fashion by native women, contains over 98 per cent. of TiO_2. Some 53 long tons of rutile have been recovered from this deposit since September, 1936, and realized £1,198.

Tantalite.—Tantalite-columbite occurs sporadically in the altered pegmatites throughout nearly the whole of the Erongo tin fields. It has also been recorded from Donkerhoek in the Karibib district, Brandberg in the Omaruru district, and various other parts.

Tungsten.—Like tantalite, wolframite occurs in association with cassiterite in altered pegmatites of the Erongo tin fields. A promising deposit has recently been developed at Kranzberg, south of Omaruru.

At Nakais, in the Warmbad district, development work was done on wolframite in pegmatite veins cutting granite, but little of the mineral was actually produced. It has also been recorded from various other parts of the territory.

Other Minerals.—Occurrences of various other minerals, such as cobalt, corundum, molybdenite, nickel, scheelite, uranium, and zinc, have been reported from time to time, but so far the occurrences are merely of academic interest.

Exports.—Such of the above-mentioned minerals as have been produced and exported from the territory are shown in the following table:—

MINERALS EXPORTED, 1935 TO 1938.

Description.	1935.		1936.		1937.		1938.

* Estimated value. † lb.

11. **Mineral Laws of the Territory.***—The mining law in force in the territory is the German Imperial *Mining Ordinance* of the 8th August, 1905, as amended by Proclamation No. 24 of 1919 and various subsequent proclamations up to Proclamation No. 17 of 1936. The *Mining Ordinance* brought into force in 1905 was largely designed to encourage prospecting; but of late years many defects have become apparent, and amendments of considerable importance were introduced during 1934.

The Ordinance applies to the following:—

Gold, silver, and platinum, both in their native state and as ores;
Precious stones (diamonds, rubies, emeralds, and sapphires);
All metals not mentioned above, in their native state and as ores;
Mica, semi-precious stones, asbestos, fluorspar, and Iceland or optical spar;
Coal, salts, and valuable earths, for example:
- (*a*) Coal, brown coal, and graphite;
- (*b*) Bituminous substances in solid, liquid, or gaseous state, especially petroleum and asphalt;
- (*c*) Rock salt, including other salts found in deposits of this nature, and the brine springs;
- (*d*) Earths which can be made use of on account of their sulphur contents and for the production of alum, sulphates, and saltpetre;
- (*e*) Phosphates (organic and inorganic) and guano.

(i) *Prospecting Claims.*—Prospecting is permitted over practically the whole country where the Ordinance is in force, with the exception of the following places: public roads, public places, railways, burial places, and on all properties where, in the opinion of the Mines Department, it is not in the public interest to allow prospecting. The Mines Department also decides the distances from springs and other sources of water, within which prospecting is not allowed. No prospecting is permitted under buildings and within 50 metres of these, nor in gardens and enclosed yards, unless both owner and user of the property give their sanction. The size of a precious mineral prospecting claim is 100×200 metres, and of a base metal claim 300×600 metres, the claims being rectangular in shape.

No person may prospect in any district unless he is in possession of a prospecting licence issued by the mining authority or the magistrate of such district. Before a prospecting licence is issued the applicant must deposit a minimum amount of £10 in cash or in the form of a bank guarantee as security for the restoration of the surface (fencing or filling in of shafts, etc.) and for any damage suffered by the landowner through such prospecting or mining operations. The charge for the licence is 2s. 6d. for each month or part of a month for any one magisterial district, or 5s. per month or part of a month for the whole territory. When a claim has been pegged, notice must be given as soon as possible to the Mines Department, the maximum time allowed between the pegging and the notification being four weeks. At the same time, prospecting fees, fixed at 5s. per month for each precious mineral and 2s. 6d. for each base mineral claim, must be paid for six months in advance; similar payments continue to be paid in advance for corresponding periods, as long as the claims are held.

The owner of a prospecting claim may be called upon at any time by the mining authority to carry out prospecting and development work appropriate to the nature of the deposit.

(ii) *Mining Claims.*—Mining is permitted only in mining areas. The mining authority may, however, in his discretion, issue permits to allow any minerals recovered during prospecting to be sold or exported. Every prospecting claim may be converted into a mining area upon application, after being properly surveyed and beaconed off, but must, in any case, be so converted two years after a claim has been pegged. The mining claim must have the shape of a rectangle, and must fall within the boundaries of the prospecting claim, the length not exceeding five times the width of the claim. After certain formalities have been gone through (such as due publication, etc.), the conversion of a prospecting claim into a mining area takes place. Mining must be commenced within two years of the granting of the title.

The Administrator may also confer special titles for the sole right to prospect for or mine certain minerals in specified areas on such conditions as he may decide, should it be in the public interest to do so.

(iii) *Taxes.*—The taxes on a mining claim consist of licence moneys and a royalty. The licence money for a precious metal claim is forty shillings per hectare per annum, and for a base metal claim 2s. 6d. per hectare per

* Information regarding the mineral laws of the territory or production and sales of minerals may be obtained from the Mines Department, Windhoek.

annum, with a minimum of forty shillings per annum. The mining tax or royalty is from 1 to 10 per cent. of the gross proceeds according to the mineral.

The diamond tax is regulated by the *Diamond Taxation Proclamation*, 1931, under which an export duty of 10 per cent. and a diamond profit tax amounting to 60 per cent. of the value of the diamonds, less 70 per cent. of the working expenses, is levied.

(iv) *Compensation.*—When mining on private land, the mine owner may be compelled to purchase the ground in case it is deteriorating in value owing to the mining operations. In any case he has to make good any damage caused. The landowner receives one-quarter of the royalty mentioned above.

§ 13. Manufacturing Industries.

The last available particulars with regard to manufacturing establishments in South West Africa were for the year 1925-26. These were published in *Year Books* Nos. 4 to 13, and reference should be made to them for data on the subject.

§ 14. Commerce.

1. **Imports and Exports.**—The following tables give, under the principal headings, the value of (i) imports into, and (ii) exports from, the territory of South West Africa during the five years 1934 to 1938. The figures include the value of merchandise passing between the Union and the territory.

IMPORTS AND EXPORTS, 1934 TO 1938.

(i) IMPORTS.

Item.	1934.	1935.	1936.	1937.	1938.

* Valued at price ruling on day of export. † Amended figure.

The following table gives particulars regarding the trade between South West Africa and the Union for specific years:—

VALUE OF MERCHANDISE AND GOVERNMENT STORES IMPORTED FROM AND EXPORTED TO THE UNION, 1910 TO 1938.

YEAR.	IMPORTS INTO SOUTH WEST AFRICA FROM UNION.			EXPORTS FROM SOUTH WEST AFRICA TO UNION (excluding diamonds).
	South African Produce.	Imported Goods Re-exported.	Total.	
	£	£	£	£
1910	118,626	93,386	212,012	4,855
1915	190,606	244,877	435,483	12,158
1920	645,084	1,144,280	1,789,364	428,946
1925	538,883	696,969	1,235,852	396,996
1930	690,084	402,093	1,092,177	376,523
1934	564,207	395,104	959,311	554,774
1935	610,154	477,579	1,087,733	815,221
1936	748,344	569,573	1,317,917	662,067
1937	970,105	687,931	1,658,036	662,984
1938	985,182	681,962	1,667,144	760,609

The value of diamonds exported from South West Africa has fluctuated considerably, as will be seen from the table given earlier in this section.

Another export of note is live stock. Until the latter part of 1918 the border was closed, and the export of cattle to the Union was prohibited. This enabled the flocks and herds to recover from losses sustained during the war. For details of the exports of live stock, see § 11 above.

The extent of the export trade in copper ore is indicated by the particulars given in § 12 above.

2. **Customs and Excise.**—Under the provisions of Act No. 36 of 1925 (Union of South Africa), the mandated territory of South West Africa is regarded for purposes of the collection of customs and excise duties as part of the Union, and all customs and excise laws of the Union are applicable to the territory. The duties collected are paid into the Consolidated Revenue Fund of the Union, and out of this fund is to be paid annually towards the cost of the administration of the territory a sum, which shall approximate to the customs and excise duties paid on goods consumed in the territory, after deducting therefrom a sum equivalent to the duties on goods removed from the territory for consumption in the Union.

3. **Registration of Companies.**—Particulars regarding the registration of companies are given for a series of years in the following table.

REGISTRATION OF COMPANIES, 1934 TO 1938.

Heading.	1934.	1935.	1936.	1937.	1938.
Companies Registered at 31st December—

1938	2	5	—	1	—	—	8

§ 15. Harbours and Shipping.

1. **Luderitz.**—This port is situated 485 miles by sea to the north of Capetown. There is a well sheltered harbour, with good anchorage, and the port possesses the usual facilities for dealing with traffic. It owes its prosperity as a seaport to the discovery of diamonds in 1908 in the adjacent Kolmanskop and Pomona districts. The trade of the port suffered considerably owing to the temporary closing down of the local diamond fields, but these are operating again. A reinforced concrete jetty, 493 feet long, has been constructed, and a slipway for lifting tugs, lighters, and small craft has been provided.

2. **Walvis Bay.**—This port is situated in the small enclave of British territory retained when Germany annexed South West Africa, and is 735 miles distant by sea from Capetown and 21 miles south of Swakopmund. Walvis Bay was never developed, and served only as a detached magistracy and police post for the protection of British interests.

The port has a natural and well-sheltered harbour, and during the Great War its advantages over the port of Swakopmund for the handling of troops and stores brought it into prominence as the northern base of operations. Swakopmund has since been closed as a port, and the whole of the landing and shipping work has been transferred to Walvis Bay, which is regularly visited by German and Union-Castle mail steamers. British and Canadian cargo boats occasionally call to disembark general cargo and Italian ships call regularly.

Considerable development has taken place here, and warehouses, engine sheds, dwelling-houses, etc., have been erected; a new slipway has been constructed, and improved and extended goods and station yards have been provided. A cold storage and refrigerating plant has been erected, capable of handling 150 cattle and 200 to 300 sheep per day. A concrete wharf, 1,500 feet long, has been constructed with a suitable approach channel, 29 feet deep, thus enabling vessels to come alongside for discharge and to take on board passengers and cargo. The wharf is equipped with electric cranes. A sea-going tug, the "Sir Charles Elliot", and a smaller tug, the "J. W. Herbert", are attached to the port.

A whaling station was erected at Walvis Bay in 1916 and was used as a factory until 1930, when, owing to the migration of the whales, whaling operations ceased. The station is now being maintained by the Interessentskapet, Walvis Bay, a concern of Norwegian Whaling Companies, as a repair depot. For seven months in each year employment is found for 75 Europeans and 130 natives in repairing the whale catchers after their expedition to the Antarctic. Thirty to forty ships are overhauled each year.

The Rooibank water scheme has been completed, and provides a sufficient supply of water for the requirements of the port and the new township which has been laid out. A wireless station is established near the port.

Four petrol companies have established depots at the port, and petrol is distributed in tins and metal containers. One company has erected five bulk storage tanks and, in addition, manufactures tins and cases at its depot.

3. **Shipping.**—The following table shows the number and tonnage of vessels entered at South West Africa harbours from 1934.

NUMBER AND TONNAGE OF VESSELS ENTERED AT SOUTH WEST AFRICA HARBOURS, 1934 TO 1938.

Year.	Steam.*				Sailing, Coastwise and Overseas.		Total.	
	Coastwise.†		Overseas.					
	No.	Tonnage.	No.	Tonnage.	No.	Tonnage.	No.	Tonnage.

1938...	287	628,190	98	346,519	—	—	385	974,709

* Includes motor vessels.

† Includes shipping from Union ports.

4. **Cargo.**—Particulars are given in the following table of cargo handled at South West Africa harbours from the year 1934.

CARGO DEALT WITH AT SOUTH WEST AFRICA HARBOURS, 1934 TO 1938.

Year	Walvis Bay.		Luderitz.		Total.	
	Cargo Landed.	Cargo Shipped.	Cargo Landed.	Cargo Shipped.	Cargo Landed.	Cargo Shipped.
	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
1934	30,983	10,170	6,920	4,491	37,903	14,661
1935	32,868	22,227	10,894	6,049	43,762	28,276
1936	44,802	24,209	16,589	8,503	61,391	32,712
1937	62,006	49,952	18,941	9,318	80,947	59,270
1938	67,682	78,505	14,354	10,049	82,036	88,554

§ 16. Railways, Roads, and Transport.

1. **German Railway System.**—Immediately prior to the outbreak of hostilities in 1914, the railway system in the territory then known as German South West Africa comprised the following:—

	Miles.	Chains.
State Railways—		
(*a*) 3 ft. 6 in. Gauge	770	19
(*b*) 2 ft. Gauge	566	12
TOTAL	1,336	31
Private Lines—		
2 ft. Gauge	98	—
GRAND TOTAL	1,434	31

These railways were constructed at varying intervals between 1903 and 1915.

2. **Railway Extension.**—With a view to expediting the advance of the Union forces during the Great War and securing direct lines of communication, the work of connecting the Union railway system with the German terminus at

Kalkfontein (South) was rapidly pushed forward, and the whole of the line from Prieska to Kalkfontein—a distance of 315½ miles—was completed between September, 1914, and June, 1915. During this time there was a delay of about four months owing to floods, which prevented the construction of the Orange River bridge.

A short line was also run from Walvis Bay to Swakopmund—21 miles 2 chains—and the Otavi Company's line from Swakopmund was converted from 2′ gauge to 3′ 6″ to Karibib by the Railway Engineers Corps, thus ensuring a standard gauge from Walvis Bay throughout the territory to the Union. The remainder of the 2′ gauge German State Railway from Rössing to Karibib was uplifted by the Union railway authorities shortly after the cessation of hostilities.

3. Organization under Union Railway Management.—In terms of Act No. 20 of 1922 the railways in South West Africa were incorporated in the Union system from the 1st April, 1922, and are under the administration of a System Manager with headquarters at Windhoek. In addition, the control of the System Manager extends over the Union sections, Walvis Bay to Swakopmund (border) and De Aar (exclusive) to Nakop (border). The total mileage of the South West Africa railway system is shown hereunder:—

	Miles.	Chains.
Union Lines—		
3 ft. 6 in. Gauge:		
Walvis Bay to Swakop River (Border)	22	43

Otjiwarongo to Outjo	45	37
TOTAL	1,470	67
GRAND TOTAL	1,891	63

* Includes 6 miles 73 chains of tri-rail (Usakos-Kranzberg).

No actual development of the railways in regard to construction of feeder lines, etc., could be undertaken until the destiny of the country was finally decided. Moreover, until the known mineral resources of the territory are properly exploited and developed, no definite steps can be taken in this direction. A branch line, extending from a point near Windhoek Station to Ondekaremba, was however completed towards the end of 1924, and an extension from Ondekaremba to Witvley in December, 1929. A further extension from Witvley to Gobabis was later sanctioned and completed on the 5th November, 1930.

The Railway Administration operates the following road motor services in the territory:—

Windhoek—Koanus—Dorbabis	74 miles.
Omitara to Okavarumendu	100 ,,
Omitara to Hodgsonspost	105 ,,
Mariental to Gumuchab	109 ,,
Mariental to Eirup	54 ,,
Mariental to Maltahöhe	81 ,,
Mariental to Beenbreck	124 ,,
Mariental to Osterode	54 ,,
Keetmanshoop to Aroab	108 ,,
Keetmanshoop to Koes	98 ,,
Tsumeb to Oshikango	222 ,,
Aus to Maltahöhe	176 ,,

4. Railway Traffic: Passengers, Goods, and Live Stock carried.—The following table gives particulars of the number of passengers, the tonnage of goods, and the number of live stock carried during the last five years:—

RAILWAY TRAFFIC, 1934 TO 1938.

Year ending 31st March.	Passengers.	Tonnage of Goods.			Live Stock carried.	
		Forwarded.	Received.	Total.	Large.	Small.
	No.	Tons.	Tons.	Tons.	No.	No.
1934	35,183	55,301	81,028	136,329	33,033	138,946

Windhoek	842	419	60	1
TOTAL	3,353	1,597	205	1

7. Roads.—The *Roads and Outspans Ordinance*, No. 7 of 1937, marked a complete change in the road policy of the territory. Briefly stated, this Ordinance has abolished all local roads boards, and placed the construction, maintenance, and control of all public roads under the authority of the Administrator.

It has created a Roads Fund to be utilized for the construction, maintenance, control, and repair of roads and outspans. The revenue derived from wheel tax, motor licence duty, and any tax on the sale of petrol is paid into the fund. The Ordinance also provides that the Legislative Assembly may further appropriate to the Roads Fund from the Territory Revenue Fund such moneys as may, from time to time, be required.

A Central Roads Board has been appointed consisting of three persons with the Director of Works as chairman of the Board. This officer is also in charge of road construction and maintenance. The Board's function is to advise the Administrator on all matters relating to the carrying out of the provisions of the Ordinance.

Over 20,000 miles of public roads have been proclaimed in the territory.

The construction and maintenance programme for the financial year 1939-40 will entail an expenditure of £60,000. This sum includes the provision for the construction of low-level bridges, causeways, culverts, motor grids, and sign posts.

The *Motor Carrier Transportation Act* (Union), No. 39 of 1930, and the amending legislation, Act No. 31 of 1932, have been extended to the mandated territory of South West Africa, with effect from the 1st August, 1933. Under Union Proclamation No. 134 of 1933, a transportation area was established, with the headquarters of its local board at Windhoek, and, under the control of the Central Road Transportation Board, Pretoria, a transportation route was defined.

§ 17. Posts, Telegraphs, and Telephones.

1. **Organization and Finance.**—The number of post and telegraph offices open at 31st December, 1938, was 102; private bag services numbered 628. There were 31 money order and savings bank offices.

Post, telegraph, and telephone facilities are identical with those prevailing within the Union, as are also the postage, telegraph, and cable rates.

Inland parcel post charges are 6d. per lb.; and domestic parcel post charges 9d. for 3 lb., 1s. 6d. for 7 lb., and 2s. for 11 lb.

The financial progress of the Department may be deduced from the statement of expenditure and revenue set forth hereunder:—

POSTS, TELEGRAPHS, AND TELEPHONES—REVENUE AND EXPENDITURE, 1934 TO 1938.

Year ending 31st March.	Expenditure.	Total Revenue.	Customs Collections on Parcels and Sale of Revenue Stamps.
	£	£	£
1934	50,670	64,996	19,893
1935	54,464	63,201	22,425
1936	54,123	72,668	25,183
1937	52,010	78,577	29,603
1938	59,084	89,297	35,472

2. **Postal Traffic.**—The traffic under the various classes of postal business may be gauged from the subjoined table:—

POSTAL STATISTICS, 1934 TO 1938.

Year ending 31st March.	Articles Posted.	Articles Received.
	No.	No.
1934	3,400,852	4,402,788
1935	4,230,980	5,087,650
1936	3,838,664	5,829,356
1937	4,390,308	5,077,256
1938	4,589,710	5,948,528

3. **Savings Banks.**—South West Africa Proclamation No. 15 of 1931 made provision for Post Office savings bank business, with transfers at par between South West Africa and the Union of South Africa, the United Kingdom, Southern Rhodesia, India, and the Province of Mozambique.

The interest on savings bank deposits is 2½ per cent. per annum. The maximum sum which a depositor may bank is £1,000 in any one year with no aggregate limit. From the 1st November, 1918, facilities were introduced, whereby the territory and the Union arranged to accept deposits and withdrawals on behalf of each Administration, and to encash circular warrants.

Savings bank certificates of face value of £50 each are issued and bear interest at 3 per cent. per annum. The maximum sum which may be held in certificates is £2,000.

(i) SAVINGS BANK ACCOUNTS, 1934 TO 1938.

Year ending 31st March.	Opened.	Closed.	Remaining Open at End of Year.	Deposits.	Withdrawals during Year.	Amount due to Depositors.
				£	£	£
1934	1,127	458	7,086	173,734	103,378	197,853
1935	1,970	451	8,605	172,845	143,953	226,745
1936	1,099	725	8,979	214,960	172,161	269,544
1937	1,904	564	10,319	278,696	212,477	335,763
1938	1,733	642	11,410	341,082	318,261	358,584

(ii) SAVINGS BANK CERTIFICATES, 1934 TO 1938.

Year ending 31st March.	Issued.		Repaid.		Due to Holders.	
	No.	Value.	No.	Value.	No.	Value.
		£		£		£
1934	535	26,750	112	5,600	770	38,500
1935	267	13,350	235	11,750	802	40,100
1936	728	36,400	231	11,550	1,299	64,950
1937	680	34,000	289	14,450	1,690	84,500
1938	780	39,000	496	24,800	1,974	98,700

4. **Money and Postal Orders.**—Money order facilities were introduced on the 1st January, 1917, and extended to all countries embraced in the Universal Postal Union.

The rates of commission are:—

For South West Africa, 6d. per unit of £4. Maximum for one order £40.

For Union of South Africa, 6d. per unit of £4. Maximum for one order £40.

For Rhodesia and Province of Mozambique, 9d. per unit of £4.

For payment elsewhere, 1s. per unit of £4.

The following tables give the issues and payments of money orders and postal orders for five years:—

(i) MONEY ORDER ISSUES AND PAYMENTS, 1934 TO 1938.

Year ending 31st March.	Issues.		Payments.	
	Number.	Amount.	Number.	Amount.
		£		£
1934	37,560	142,066	16,223	94,998
1935	38,145	143,878	18,121	99,375
1936	39,646	164,607	21,051	129,699
1937	41,213	178,752	21,450	137,716
1938	43,793	193,686	23,750	146,572

(ii) POSTAL ORDER SALES AND PAYMENTS, 1934 TO 1938.

Year ending 31st March.	Issues.		Payments.	
	Number.	Amount.	Number.	Amount.
		£		£
1934	76,927	31,076	32,062	13,180
1935	79,678	34,368	33,821	15,225
1936	89,564	40,521	41,185	18,176
1937	105,077	46,515	46,133	20,625
1938	114,088	50,898	56,578	25,497

5. **Telegraphs.**—The mileage of telegraph lines and routes is as follows:—

Telegraph	380	miles wire.
Telegraph-telephone	6,375	„ „
Rural telegraphs and telephones	585	„ „
Farm telephone lines	2,278	„ „
Telegraph, superimposed	2,850	„ circuit.
Total length of telegraph and telephone wire	9,618	„

The telegraph and the cable traffic are shown hereunder:—

(i) TELEGRAPH TRAFFIC, 1934 TO 1938.

Year ending 31st March.	Total Forward.	Transmitted.	Received.	Total Dealt With.
1934	110,170	215,303	90,042	415,515
1935	114,587	227,260	95,558	437,405
1936	120,984	249,490	99,583	470,057
1937	136,648	274,832	114,248	525,728
1938	154,745	311,506	129,492	595,743

(ii) TELEGRAPH AND CABLE TRAFFIC, 1934 TO 1938.

Year ending 31st March.	Telegraph.				Cable.	
	Paid Value.	Railway Traffic.	Government Traffic.	Total.	Number of Messages.	Paid Value.
	£	£	£	£		£
1934	8,314	3	718	9,035	4,327	2,620
1935	7,948	2	622	8,572	4,875	2,975
1936	8,131	4	556	8,691	5,599	3,232
1937	8,705	6	547	9,258	6,575	3,581
1938	9,803	9	677	10,489	7,320	4,457

6. **Telephones.**—There are 41 exchanges and 37 call offices in existence. Long-distance telephone communication is available between all points in the territory. Inter-territorial communication exists between certain exchanges and call offices and all larger centres in the Union, the Rhodesias, Lourenço Marques, and the British Isles. Trunk calls to or from Union Post Office trunking centres are charged at Union trunk tariff.

The following are the rates for telephone connexions:—

RATES FOR TELEPHONE CONNEXIONS.

(*a*) URBAN.

Type of Connexion.	Class of Exchange.		
	1. (Radius 2 Miles).	2. (Radius 1 Mile).	3. (Radius ½ Mile).
	£ s. d.	£ s. d.	£ s. d.
Business	10 0 0	7 10 0	6 0 0
Residence	6 0 0	5 0 0	4 0 0

The Windhoek automatic exchange has a 2-mile radius; business and residential connexions cost £2. 10s. per annum, plus 1d. per originating call, or alternatively 2s. 6d. per month plus 1½d. per originating call, if so desired by the subscriber.

Extras.—

Extra mileage from exchanges, £1 per 440 yards or £4 per mile.

Telephone extensions, £4 per annum (indoor); outdoor, £4 per annum, plus £1 per 440 yards.

Table telephones, 5s. extra.

(*b*) FARM TELEPHONES.

Approximately £4 per mile.

(*c*) PRIVATE WIRES.

On existing routes, £2 per mile of circuit.

On new pole routes, 10 per cent. on cost of construction.

(*d*) TRUNK CALLS.

For first 25 miles, 6d., and for each 25 miles thereafter, 3d. These charges are assessed on radial distances from exchanges.

TELEPHONES, 1929-30 TO 1938.

Year.	Exchange Connexions.	Extensions.	Year.	Exchange Connexions.	Extensions.
1929-30	1,214	313	1934	1,323	155
1930-31	1,363	162	1935	1,401	170
1931	1,260	141	1936	1,473	179
1932	1,194	112	1937	1,750	150
1933	1,220	87	1938	1,762*	236

* Includes 138 farm line stations.

7. **Wireless Telegraphs.**—The Walvis Bay Radio Station maintains two-way communication with shipping on the west coast route between South Africa and Europe. The station is equipped with the latest continuous wave transmission and receiving gear for long and short wave transmission and reception. A Ship Letter Telegram Service was introduced in August, 1934.

The following figures show the radio traffic from 1934:—

	Messages.	*Words.*	*Value.*
1934	9,099	126,624	£2,508
1935	10,659	170,431	£2,846
1936	11,038	174,906	£2,880
1937	11,421	180,129	£3,339
1938	11,607	185,032	£3,394

§ 18. Finance.

1. **Public Revenue.**—Formerly the principal source of revenue in the territory was that derived from the tax on the diamond mines at Luderitz. Until 1929-30 the assessment of this tax was completed in the terms of the German law, which provided broadly that the Government received 66 per cent. of the gross proceeds realized by the sale of diamonds, less 70 per cent. of the working costs. For the present tax see § 12, 11 (iii). Now the largest item of revenue is that collected under the head of customs and excise.

Particulars are given hereunder of revenue received during a series of years:—

REVENUE, 1933-34 TO 1937-38.

Description.	1933-34.	1934-35.	1935-36.	1936-37.	1937-38.

† Includes loan repaid by Land Bank £140,000 in 1936-37 and £65,000 in 1937-38.

2. **Public Expenditure.**—The main item of expenditure to 31st March, 1920, was that on the garrison, which included the police force, and amounted to £2,421,617 from August, 1915, to March, 1920. All other heads of administrative expenditure for the same period together amounted to £618,197, making a combined total of £3,039,814. The total expenditure to 31st March, 1938, was £19,970,691.

Particulars are given hereunder as to expenditure during a series of years:—

EXPENDITURE, 1933-34 TO 1937-38.

Swakopmund Protection Scheme	—	—	—	—	1,269
Repayment to Union Government of Land Bank Loan redeemed	—	—	—	140,000	—
TOTAL £	54,592	65,256	74,704	187,806	56,958

4. **Financial Organization.**—The territory under the German Government had not reached the independent stage of British self-governing colonies. The Landesrath was merely an advisory body, and all fiscal edicts were issued by the Governor. The estimates of revenue and expenditure prepared in the territory required the sanction of the Imperial Reichstag. The supervision of the Imperial Government was held to be justified on the grounds that Imperial grants were made annually to the Protectorate, although these grants merely approximated the cost of the military establishment. The Imperial Government guaranteed the loans issued for the purpose of building railways. The control of all revenue and expenditure, including that of the railways, but excluding post and telegraph revenue, was exercised by the *Finanz Referent* under the Governor. The Post and Telegraph Department

was a branch of the Imperial Department, and quite distinct from the Protectorate Administration. Certain revenues were assigned by the Governor to municipal and district councils. These included dog tax, liquor, bar, hotel, and trade licences. The local authorities were also empowered to raise funds for local purposes by means of an income tax.

After the British occupation, changes were made to bring the administration into line with the administration of the Union, but no fundamental changes were made in the taxation laws. The Administration was financed by grants from the Union War Loan Vote to March, 1920. Since that date the Administration has been financed from revenue raised in the territory and from loans raised from the Union Government. The railways were taken over and financed by the Railways and Harbours Department of the Union; but the German tariff of charges was retained. Union Act No. 20 of 1922 enacts that the government railways and harbours in the territory, as they existed on the 10th January, 1920, should become from that date vested in the Railway Administration of the Union as part of the Union system. The loss arising from the working of the railways from 1st August, 1915, to 31st March, 1922, was made chargeable to the Union Railways and Harbours Capital Account, while future receipts and expenditure were to be charged to the Union Railways and Harbours Fund. The territory was thus relieved of the burden of financing the railways and maintaining the high rates levied under the German laws. Considerable reductions have been made in the through passenger fares to the Union and in goods traffic rates.

The district councils were abolished, but municipal councils were continued. The municipal income tax was withdrawn, and the councils are now empowered to levy property rates, taxes on vehicles, and charges for municipal services. The German system of assigned revenues was carried on, but after 1929 modifications were made, with the result that except for dog tax proceeds, which have always been paid over, the municipal councils now only receive the trading licences revenues allotted to them by the *Licences Consolidation Ordinance* of 1935. The levy of rates and the expenditure incurred by the councils are subject to the approval of the Administrator.

Generally, the revenues payable under the German laws have been collected and utilized in part payment of the cost of administration. The customs revenues have been collected and retained in the Union; but from the 1st April, 1919, these have been credited to the territory. The Union Treasury was authorized to exercise financial control in the territory.

The provisions of the *Exchequer and Audit Act*, 1911, of the Union of South Africa were applied to South West Africa as from the 1st April, 1921. The financial regulations framed under the Act were also applied as far as they could be made applicable, and financial regulations to meet local requirements were also issued.

An Ordinance to regulate the receipt, custody, and issue of public moneys and to provide for the audit of accounts thereof was passed by the Legislative Assembly for the territory at its first session and brought into operation in September, 1926.

5. **Banking Facilities.**—Immediately after the occupation of the territory by the Union forces in 1915 the National Bank (later merged in Barclays Bank) and the Standard Bank of South Africa both established branches in the territory. These institutions have branches in all the larger towns. The German banks continued to carry on their business, but these have all since been liquidated.

§ 19. The Land and Agricultural Bank of South West Africa.

1. **Establishment.**—The Land and Agricultural Bank of South West Africa is a body corporate; it was established on 1st April, 1922, under proclamation by the Administration of South West Africa, and was administered and managed under the provisions of the *Land Bank Act* of the Union of South Africa (Act No. 18 of 1912) as amended and applied to South West Africa by Proclamation No. 10 of 1922 and subsequent amendments thereof.

Provision was made in the proclamation for the bank to take over all assets and liabilities of the branch of the Land and Agricultural Bank of South Africa at Windhoek, in respect of its operations in South West Africa,

and, further, to take over from the liquidator of the late Landwirtschaftsbank such unrealized assets as remained at the close of the liquidation. Moneys recovered in respect of these assets were decreed to form part of the funds loaned by the Administration to the Land and Agricultural Bank of South West Africa. This provision was modified by Proclamation No. 1 of 1927. The bank was empowered to carry out and complete the contract included in the bonds and other securities thus taken over.

On the 26th October, 1935, all the laws relating to the Land and Agricultural Bank of South West Africa were repealed, and a consolidated Proclamation (Proclamation No. 22 of 1935) was promulgated.

2. **Capital.**—The funds of the Land and Agricultural Bank of South West Africa consist of—

(i) such moneys as are appropriated by the Administration from time to time from the public funds of South West Africa;

(ii) such moneys as are recovered in respect of the unrealized assets of the late Landwirtschaftsbank;

(iii) such moneys as are recovered from time to time in respect of amortization of loans granted by the Bank, on capital funds not in excess of £1,000,000.

The Land and Agricultural Bank of South West Africa started its operations with a capital fund of £350,000. Since then the capital has been increased by annual grants provided out of public funds by the Administration. During 1935 the Administration transferred to the Bank approximately £600,000, which it previously held free of interest, provided the board undertook to maintain its rate of interest charged to debtors at 4 per cent. for those people who were debtors of the Bank on the 31st December, 1931, and 5 per cent. on all advances made after this date and subject to the condition that if the Bank, at any time, went into liquidation or lost its identity the Administration would be free to raise a claim for the repayment of this capital sum. During the years 1936 and 1937 the Bank repaid £205,000 to the Administration and a further £85,000 during 1938. At 31st December, 1938, its capital account stood at the following figures:—

Capital and other Funds.		£
Moneys received from Administration, 1921 to 1938 inclusive		932,694
Less Amount transferred to Contingent Liability Capital		527,000
TOTAL	£	405,694
Less Amount repaid during 1936	£140,000	
Less Amount repaid during 1937	65,000	
Less Amount repaid during 1938	85,000	
		290,000
		115,694
Moneys collected in respect of Landwirtshaftsbank assets during 1938		8,064
Contingent Liability Capital		620,347
Redeemable Capital		183,543
Reserves (on which no interest is paid)		208,575
TOTAL	£	1,136,223

In accordance with section 3 (i) of Proclamation No. 13 of 1930 and Proclamation No. 22 of 1935, as soon as the capital of the Land Bank, provided out of funds received from the Administration of South West Africa or voted by Parliament, has reached the sum of £1,000,000, the Land Bank is obliged to redeem, by annual instalments extending over a period of forty years, any amount it receives in excess of this £1,000,000.

On moneys provided by the Administration as loan funds, the Bank pays interest at such rates as the Administration may from time to time direct. At present the undermentioned rates of interest are paid:—

£115,694 and £21,913 at 5·019 per cent., £161,629 at 4·9464 per cent.

Out of the funds of the Bank are paid—

(i) the various kinds of advances granted by the Bank;

(ii) the fees and allowances of members of the board of management;

(iii) the salaries and allowances of the staff and of persons employed by the Bank;

(iv) all other expenditure incurred by the Bank.

The rate at which money is advanced to farmers is at present 5 per cent. on all types of advances.

3. **Administration.**—The operations of the bank are controlled at present by a board of management consisting of four members, who are nominated by the Administrator. The Managing Director holds office at the pleasure of the Administrator. The remaining members were originally appointed for a period of three years; but their period of office was extended for another two years by the Administrator. The Managing Director is the chief executive officer of the Bank; he attends all board meetings and has a vote. The head office of the bank is at Windhoek.

Inclusive of the manager, the staff now consists of seven officials, all of whom are on the permanent staff. Officials of the Bank are not members of the public service, unless they are officers seconded from that service. The staff contributes to the Bank's own pension scheme, to which the Bank itself contributes on the £1 for £1 principle.

During the year 1938, the cost of administration in proportion to the Bank's capital funds was 0·6506 per cent.

Every magistrate, civil servant, and police officer, and the Director of Posts and Telegraphs and any officer under him, must, when required by the board of management of the Bank, report on any case submitted to him and, in general, must be prepared to act as agent for the Bank at all times.

4. **Activities.**—The following kinds of advances are granted by the Land Bank:—

(i) Advances on first mortgage of farm land. No individual farmer may obtain more than £3,000 from the Land Bank, and no advance against the security of farms may exceed 60 per cent. of the agricultural or pastoral value of the land determined by the board of management.

(ii) Advances to settlers on Crown land held under lease or agreement to purchase. The Administration guarantees repayment of such loans.

(iii) Advances to duly registered co-operative agricultural societies or companies.

(iv) Advances to registered owners of farms, for constructing dipping tanks and silos, for erecting fencing on boundary lines, for developing additional water supplies (not exceeding £500), for acquiring breeding stock (not exceeding £250), for the construction of water conservation schemes.

(v) Advances to registered owners are also granted for the construction of dams for periods to be determined by the board

5. **Co-operation.**—There are at present nine co-operative agricultural societies registered for the acquisition of breeding stock, whose capital indebtedness to the bank amounts to £16,422, and 6 co-operative relief organizations, whose aggregate debt is £4,116.

6. **General.**—Like the Land Bank of the Union of South Africa, the institution does not aim at making large profits; it is striving to amass substantial reserves which will enable it effectively to carry out its objects and to extend its usefulness and ultimately to become independent of State aid.

In July, 1932, a proclamation was promulgated granting further relief to debtors of the Bank. The rate of interest on all existing loans was reduced to 4 per cent., and all arrears as at the 31st December, 1931, were capitalized. In addition, debtors were granted exemption from the payment of instalments for a period of 12 months, expiring on 1st July, 1933.

PROFITS AND PROPORTION OF INTEREST EARNINGS TO CAPITAL.

Year.	*Net Profits.* £	*Interest Earnings per cent. of Capital.*	*Year.*	*Net Profits.* £	*Interest Earnings per cent. of Capital.*
1922–23	1,930	6·38	1931	13,074	6·03
1924	2,468	6·17	1932	13,896	4·54
1925	2,994	5·95	1933	13,536	4·05
1926	4,192	5·69	1934	14,505	4·29
1927	6,666	5·57	1935	*	—
1928	10,419	6·92	1936	17,317	4·41
1929	13,306	6·23	1937–38	17,383	4·20
1930	12,665	6·15	1938–39	24,876	4·50

* Owing to an adjustment of the accounts affecting interest accruing to and payable by the Bank, for which purpose the net profit for the year 1935 was utilized, the result is an apparent loss of £1,359 on the year's working. Had the previous method of showing the accounts been followed the profit and loss account for the year would have reflected a net profit of approximately £15,000.

7. **Landwirtschaftsbank.**—The following figures represent the value of the unrealized assets of the late Landwirtschaftsbank when taken over from the liquidator, and at the 31st December, 1938:—

	At 1st *April*, 1922.	*At* 31st *Dec.*, 1938.
	£	£
Mortgage Bonds	152,363	24,793
Past Due Interest	10,747	920
Bills Receivable	11,256	—
Sundry other Bonds	4,921	—
Properties bought in and overdue interest thereon	—	8,343
	£179,287	34,056
Less Credit Balance	38	253
TOTAL	£179,249	33,803

8. **Statistics of Operations.**—The following statement shows the number of applications for advances of all kinds received and granted, and the amounts thereof, from 1934 to 1938, inclusive:—

APPLICATIONS FOR ALL KINDS OF ADVANCES, 1934 TO 1938.

Year.	Applications Received.		Applications Granted.		Paid Out.
	Number.	Amount.	Number.	Amount.	Amount.
		£1,000.		£1,000.	£1,000.
1934	30	31	23	22	14
1935	83	83	61	62	38
1936	113	102	89	88	49
1937	180	160	137	111	80
1938	234	183	157	116	67

The following table indicates the liabilities and assets of the Land and Agricultural Bank of South West Africa for the years 1934 to 1938 inclusive.

LIABILITIES, 1934 TO 1938.

Year.	Capital.	Reserve.	Landwirtschaftsbank Contra.	Other Liabilities.	Total.
	£1,000.	£1,000.	£1,000.	£1,000.	£1,000.
1934	1,207	103	62	93	1,465
1935	1,210	110	56	39	1,415
1936	1,076	124	48	37	1,285
1937*	1,009	137	40	47	1,233
1938*	927	209	34	129	1,299

ASSETS, 1934 TO 1938.

Year.	Advances.	Landwirtschaftsbank Securities.	Book Debts.	Other Assets, including Cash on Hand.	Total.
	£1,000.	£1,000.	£1,000.	£1,000.	£1,000.
1934	1,301	62	88	14	1,465
1935	1,264	56	57	38	1,415
1936	1,157	48	18	62	1,285
1937*	1,066	40	13	114	1,233
1938*	1,060	34	14	191	1,299

* As the end of the Bank's financial year has been altered from 31st December to 31st March these figures are approximate.

The total extent of land pledged to the Bank at the 31st December, 1938, as security for ordinary mortgage loans was 5,822,555 hectares. The value that the bank was prepared to advance was £982,039.

The following are the purposes for which ordinary mortgage loans were granted:—

	£
(i) To effect improvements	55,973
(ii) To purchase live stock	36,013
(iii) To redeem old and onerous bonds (largely for improvements in previous years)	624,270
(iv) To discharge debts	119,187
(v) To purchase land	113,912
(vi) To pay Lands Branch purchase price and advances to ex-settlers	32,684
TOTAL £	982,039

The total amount of investments controlled by the Land and Agricultural Bank of South West Africa, as at 31st December, 1938, was:—

	£
(i) Investments (with past due interest) of the Land and Agricultural Bank of South West Africa	1,073,484
(ii) Investments (with past due interest) of the late Landwirtschaftsbank	33,803
TOTAL £	1,107,287

§ 20. Retail Prices and Rents.

1. **Retail Prices.**—The collection of retail price data is undertaken by the Union Census and Statistics Office. Quotations for food were obtained monthly from retail merchants in the principal towns of the territory from 1920 to 1931. Since the beginning of 1932 these quotations have been obtained from Windhoek only.

A departmental committee on local and other allowances made investigations into the cost of living in South West Africa in February and March, 1931, and decided to accept the prices collected by the Census Office for food and rent, to substitute wood for coal in the fuel and light group, and to add 10 per cent. to the Union figure for "sundries". An investigation into the quantity of wood consumed in Windhoek disclosed the fact that the average consumption was approximately seven bags a month per family.

Price index numbers for food in the principal towns and in Windhoek separately have been calculated quarterly from 1920 and monthly for the latter from December, 1930. Price index numbers based on the recommendations of the departmental committee referred to above have been calculated for Windhoek monthly from December, 1930, for food, fuel, light, and rent, and for food, fuel, light, rent, and sundries.

In the absence of pre-war price data for the territory, the weighted average for the nine principal towns in the Union has been taken as the base for each index, and, subject to the above explanations, the index numbers in the following table are directly comparable with those of the Union.

PRICE INDEX NUMBERS FOR FOOD, 1920 TO 1938, AND FOR FOOD, FUEL, LIGHT, AND RENT, AND FOOD, FUEL, LIGHT, RENT, AND SUNDRIES, FROM 1931 TO 1938.

Basis: Weighted Average for nine principal towns in the Union, 1910=1000.

Year.	Food.		Food, Fuel, Light, and Rent.	Food, Fuel, Light, Rent and Sundries.
	Principal Towns (S.W.A.).	Windhoek.	Windhoek.	Windhoek.
1920	2027	1989	—	—
1922	1437	1453	—	—
1925	1412	1435	—	—
1930	1423	1452	—	—
1931	1335	1369	1560	1590
1932	—	1199	1434	1481
1933	—	1165	1139	1270
1934	—	1202	1117	1261
1935	—	1149	1101	1253
1936	—	1165	1132	1274
1937	—	1206	1165	1314
1938—				
1st Quarter	—	1183	1175	1341
2nd Quarter	—	1237	1207	1362
3rd Quarter	—	1207	1216	1369
4th Quarter	—	1191	1220	1372
Year	—	1205	1205	1361

2. **Rents.**—Although particulars of rent were collected at the Census of 1926 and again in December, 1930, the number of non-privileged rented houses in any of the towns in South West Africa except Windhoek was too small for the purpose of computation.

The following table gives the average rentals of non-privileged houses in Windhoek containing three, four, five, and six rooms, respectively, as resulting from the May, 1926, December, 1930, March and November, 1933, October, 1934 and 1935, May, 1936, 1937 and 1938, Rent Censuses; and also the index numbers for the weighted average rents, compared with the weighted average rent of the nine towns in the Union in 1910.

AVERAGE RENTALS OF NON-PRIVILEGED HOUSES, WINDHOEK, MAY, 1926, TO MAY, 1938.

Year.	Three Rooms.	Four Rooms.	Five Rooms.	Six Rooms.	Index. [Weighted Average for Union-Nine Towns in 1910=1000.]
	£ s. d.	£ s. d.	£ s. d.	£ s. d.

CHAPTER XXVIII.

PERSONS AND EVENTS.

§ 1. Executive and Parliamentary Representation.

1. The following lists contain the names of the various persons concerned in the government of the country. The figures in parenthesis following the names of members of the Judicature and public officials appertain to the date of appointment to the post. For information on the subject of the Constitutional Development, Parliamentary Institutions, and Public Administration, reference should be made to Chapter II.

2. **The Governor-General.**—The following have been successively Governors-General of the Union:—

Name.	Date of Royal Commission.	Date of Assumption of Office.
Right Hon. Viscount Gladstone, P.C., G.C.B., G.C.M.G., G.B.E.	30th March, 1910.....	31st May, 1910.
Right Hon. Earl Buxton, P.C., G.C.M.G	14th May, 1914.....	8th September, 1914.
H.R.H. Prince Arthur of Connaught, K.G., K.T., G.C.M.G., G.C.V.O., C.B., A.D.C.	5th August, 1920.....	20th November, 1920.
Major-General the Right Hon. the Earl of Athlone, G.C.B., G.C.M.G., G.C.V.O., D.S.O.	21st November, 1923.	21st January, 1924.
Lt.-Col. the Rt. Hon. the Earl of Clarendon, P.C., G.C.M.G.	3rd December, 1930..	26th January, 1931.
Right Hon. Sir Patrick Duncan, P.C., G.C.M.G., K.C., LL.D.	22nd March, 1937....	5th April, 1937.

The personal staff of His Excellency the Rt. Hon. Sir Patrick Duncan is as follows:—

Secretary: G. W. Klerck.
Administrative Secretary: J. H. Davis.
Comptroller: Major H. C. Juta.
Aides-de-Camp: Captain F. G. T. Radloff; Captain R. A. St. G. Martin; Lieutenant G. R. G. Watkins, R.N.

3. **The Executive Council.**—The Governor-General, together with the Ministers named in the following list, constitute the Executive Council:—

General the Right Hon. J. C. Smuts, P.C., C.H., K.C., D.T.D.: Prime Minister and Minister of External Affairs and of Defence.
Colonel the Hon. Deneys Reitz: Minister of Native Affairs.
Hon. J. H. Hofmeyr, M.A., D.Sc.: Minister of Finance and of Education.
Hon. R. Stuttaford: Minister of Commerce and Industries.
Col. the Hon. W. R. Collins, D.T.D., D.S.O.: Minister of Agriculture and Forestry.
Hon. H. G. Lawrence, K.C.: Minister of Interior and of Public Health.
Hon. F. C. Sturrock, M.I.Mech.E.: Minister of Railways and Harbours.
Hon. C. F. Clarkson: Minister of Posts and Telegraphs and of Public Works.
Hon. W. B. Madeley: Minister of Labour and of Social Welfare.
Col. the Hon. C. F. Stallard, K.C., D.S.O., M.C.: Minister of Mines.
Senator the Hon. A. M. Conroy: Minister of Lands.
Dr. the Hon. C. F. Steyn, K.C.: Minister of Justice.
Maj. the Hon. P. V. G. van der Byl, M.C., M.A.: Minister without Portfolio.

4. **Members of the Senate.**—The following is a list of the members of the Senate:—

NOMINATED SENATORS.

Senator Col. the Hon. F. B. Adler.
Senator the Hon. T. Boydell.
Senator the Hon. W. A. Hofmeyr.
†Senator Rev. the Hon. C. J. van R. Smit.
†Senator the Hon. A. T. Spies.
†Senator the Hon. A. P. J. Fourie.
†Senator the Hon. P. W. le Roux van Niekerk.
Senator the Hon. J. C. van Rooy.

† Selected on the ground mainly of his thorough acquaintance, by reason of his official experience or otherwise, with the reasonable wants and wishes of the coloured races.

ELECTED SENATORS.

CAPE OF GOOD HOPE.	NATAL.
Senator the Hon. A. M. Conroy.*	Senator Col. the Hon. J. H. Blaney.
Senator the Right Hon. F. S. Malan.	Senator the Hon. S. S. Brisker.
Senator the Hon. J. P. Malan.	Senator the Hon. J. Dyson.
Senator the Hon. C. P. Mathewson.	Senator the Hon. A. J. McGibbon.
Senator the Hon. P. A. Myburgh.	Senator the Hon. W. J. O'Brien.
Senator the Hon. O. A. Oosthuisen.	Senator the Hon. P. J. Wessels.
Senator the Hon. D. Retief.	Senator the Hon. C. Whytock.
Senator the Hon. G. F. Zondagh.	One vacancy.
TRANSVAAL.	**ORANGE FREE STATE.**
Senator the Hon. S. F. Alberts.	Senator the Hon. W. J. C. Brebner.
Senator the Hon. G. Hartog.	Senator the Hon. B. Cilliers.
Senator the Hon. P. G. W. Grobler.	Senator the Hon. C. F. H. Meintjes.
Senator the Hon. R. A. Kerr.	Senator the Hon. H. Potgieter.
Senator the Hon. B. D. Pienaar.	Senator the Hon. C. A. van Niekerk (*President*).

§ 6. Diplomatic, Consular, and Commercial Representatives.

1.—REPRESENTATION OF THE UNION GOVERNMENT ABROAD.

(i) *The High Commissioner in London and Principal Subsidiary Officers.*—The Office of High Commissioner for the Union of South Africa in the United Kingdom was created by Act No. 3 of 1911. The successive occupants of the post were:—

Sir Richard Solomon, K.C.B., K.C.M.G., K.C.V.O. (1911-14).
Rt. Hon. W. P. Schreiner, P.C., C.M.G., K.C. (1914-19).
Sir Reginald Blankenberg (Acting) (1919-21).
Sir Edgar Harris Walton, K.C.M.G. (1921-25).
Mr. J. S. Smit (1925-29).
Mr. E. H. Louw (1929).
Mr. C. T. te Water (1929-1939).

The present incumbent is Mr. S. F. Waterson, who was appointed in September, 1939.

The principal sub-officers attached to the High Commissioner's office are: The Secretary; the Trade Commissioner; the Advisory Engineer; and the Publicity Agent.

OFFICE OF HIGH COMMISSIONER IN LONDON—CHIEF OFFICERS.

Secretary	F. J. du Toit, B.A.
Trade Commissioner	A. P. van der Post, B.A., B.Sc. (24.8.39).
Director, Publicity and Travel Bureau	P. G. B. Reyneke (1.7.37).
Advisory Engineer	T. C. Swallow (21.11.32).

The offices of the High Commissioner are at South Africa House, Trafalgar Square, London, W.C. 2.

(ii) *Publicity and Travel Branch.*—This branch was established by the South African Railways and Harbours Administration, through its Publicity and Travel Department, for the purpose of advertising the travel, residential, and other attractions and potentialities of South Africa. For this purpose it compiles, issues, and maintains comprehensive supplies of publicity literature, photographs, films, and lantern slides, and arranges for the insertion of articles, pictorial matter, and advertisements in the overseas press. The extensive use of sound films plays a notable part in the publicity propaganda programme, and a thoroughly modern cinema theatre is a feature of South Africa House in London. The office is in a position to furnish information on most matters concerning South Africa, to quote railway rates and fares, and to prepare itineraries for intending travellers; it will also quote inclusive costs for tours, embodying steamship, airways, hotel, motor transport, collection and delivery of luggage, and other incidental services.

(iii) *Diplomatic, Consular, and Commercial Representatives.*—The following is a complete list of Union diplomatic, consular, and commercial representatives abroad:—

§ 7. Public Bodies.

The membership of certain of the more important public bodies is given hereunder:—

DEPARTMENT OF FINANCE.

Farmers' Assistance Board.

Chairman ..... A. C. Wilmot.
Members ..... W. J. M. Visser; J. C. van Wyk Steytler; J. G. Hubball.

Brandy Classification Board.

Chairman ..... J. Muller.
Members ..... M. L. Louw; P. P. du Toit.

DEPARTMENT OF NATIVE AFFAIRS.

Native Affairs Commission.

Members ..... G. H. Nicholls, M.P.; J. M. Young; E. A. Conroy, M.P.; A. O. B. Payn, M.P.; J. F. T. Naudé, M.P.

DEPARTMENT OF DEFENCE.

Council of Defence.

President ..... Minister of Defence.
Members ..... Brig.-Gen. J. J. Collyer, C.B., C.M.G., D.S.O.
E. A. Conroy, M.P.
Col. G. M. J. Molyneux, D.S.O., V.D.
Lt.-Col. K. Rood, M.P.
Secretary ..... Secretary for Defence.

Civil Air Board.

Chairman ..... Major D. Cloete, M.C., A.F.C.
Members ..... Major J. G. Davis, V.D.; Col. J. Holthouse, O.B.E.; Dr. E. L. Mackenzie, M.C., M.B., Ch.B., F.R.C.S.E.; A. H. V. Kent; D. T. Guild.
Secretary ..... Capt. P. L. Lindup.

DEPARTMENT OF LANDS.

Central Land Board.

Chairman ..... L. M. Wentzel.
Members ..... F. P. S. le Roux; T. A. Warner; N. B. Mentz; P. L. Erasmus; D. O. van Velden; M. J. Grobler.

National Parks Board of Trustees.

Chairman ..... Hon. N. J. de Wet.
Vice-Chairman ..... J. F. Ludorf.
Members ..... D. F. Gilfillan; Dr. G. S. Preller; Hon. O. Pirow, K.C.; W. A. Campbell; Hon. J. H. Conradie; Brig.-Gen. F. R. G. Hoare; W. H. Rood; R. A. Hockly.

DEPARTMENT OF COMMERCE AND INDUSTRIES.

Assize Board.

Chairman ..... J. L. Meyer, Superintendent of Assize.
Members ..... Prof. John Orr, O.B.E., M.I.M.E., A.M.I.E.E., A.Am.S.C.E., N.Am.S.M.E.; W. A. Martin; S. M. Herbert.
Secretary ..... D. R. Munro.

Board of Trade and Industries.

Chairman ..... F. J. Fahey.
Members ..... A. J. Stals, B.A., M.D., LL.D.; A. T. Brennan; A. J. Norval, D.Com.

Electricity Control Board.

Chairman ..... J. S. v. d. Lingen, B.A., Ph.D., M.D.P.G., F.P.S., F.Inst.P., F.R.S. (S.A.).
Members ..... C. Mullins, M.I.Min.E., A.M.I.E.E. (S.A.); S. C. A. Cosser; J. L. Hill, M.I.E.E. (S.A.); A. A. Roberts, B.A., LL.B. (Cantab.).

Electricity Supply Commission.

Chairman ..... Dr. H. J. van der Bijl.
Members ..... A. M. Jacobs; W. P. M. Henderson; R. B. Waterston.

DEPARTMENT OF AGRICULTURE AND FORESTRY.

Perishable Products Export Control Board.

Chairman	J. C. le Roux.
Members	R. Dyason; H. A. Pare; W. Lawson Brown (representing the citrus industry); H. Curtis (representing the egg and poultry industry); A. C. V. Baines (representing the dairy industry); A. C. Buller (representing the deciduous fruit industry); E. S. Pugh (representing the meat industry).

National Marketing Council.

Chairman	Dr. P. R. Viljoen.
Deputy Chairman	Dr. C. H. Neveling.
Members	P. C. de Villiers; C. H. Olivier; Prof. H. D. Leppan.

Producers' Advisory Committee.

Chairman	Major E. W. Hunt.
Members	G. F. H. Bekker, M.P.; S. J. Burger; W. Elliot; A. Op't Hof; G. V. Thomas; D. P. van der Merwe; H. A. Wium.
Secretary	Dr. F. J. van Biljon.

Consumers' Advisory Committee.

Chairman	Maldwyn Edmund.
Members	W. Freestone; T. Gillooly; Mrs. M. Jenkins; H. H. Kemp; H. J. Laite; A. A. Moore; Mrs. E. O'Connor.
Secretary	Dr. F. J. van Biljon.

REGULATORY BOARDS UNDER JURISDICTION OF NATIONAL MARKETING COUNCIL.

Dairy Industry Control Board.

Chairman	E. G. Hardy, Superintendent of Dairying.
Members	B. H. Ryder (Transvaal), P. F. Hugo (Cape Province), M. van der Merwe (Orange Free State), and A. V. Allan (Natal) (representing creamery producers in their respective provinces); J. D. T. Prinsloo (Orange Free State) and L. D. Gilson, M.P. (Cape Province) (representing milk producers); C. Harper (Cape Province), B. S. Wood (Orange Free State), T. Russel (Natal), and N. Spoel (Transvaal) (representing butter manufacturers in their respective provinces); C. W. Whysall and A. C. V. Baines, M.P. (representing farm dairy butter makers); S. Michelsen, Senior (representing distributors); Senator P. A. Myburgh (representing cheese manufacturers); R. S. Jacobs (South West Africa), R. England (Bechuanaland Protectorate) (representing adjoining territories).

Tobacco Industry Control Board.

Chairman	Dr. J. F. W. Grosskopf, Chief of Division of Economics an Markets.
Members	N. J. J. Combrinck, S. P. le Roux, M.P., R. F. Camphor, F. W. Neethling, W. Harlow, N. Prak, P. W. du Preez, and E. H. Nellmapius (representing tobacco growers who are members of co-operative organizations); E. J. Kay (representing tobacco growers who are not members of any co-operative organization); M. E. Risien (representing large scale manufacturers); L. te Groen (representing small scale manufacturers); J. Domisse (representing trade).

DEPARTMENT OF AGRICULTURE AND FORESTRY—(*continued*).

Mealie Industry Control Board.

Chairman	P. F. Hugo.
Members	H. Evans, H. P. Hancke, B. J. J. de Wet, and C. P. van Rensburg (representing producers of mealies who are members of co-operative organizations); Maj. R. D. Doyle, W. Elliot, and J. J. C. South African Shipping Board.

Chairman	Vacant.
Members	Major C. C. Frye, O.B.E.; Major E. W. Hunt. D.S.O., M.C., J.P.; G. A. Fichardt; P. V. Gawith; F. K. Dixon; F. J. Fahey; J. D. Heddon; A. F. Hayes.

Tourist Development Corporation Board of Control.

Chairman	D. M. Robbertze.
Members	C. P. Newton; A. McC. Campbell; Dr. A. J. Norval; H. J. Crocker; H. O. B. Grant.

§ 8. Provincial Administration.

1. **Administrators of the Provinces.**—The *South Africa Act* provides that in each of the four provinces there shall be a chief executive officer appointed by the Governor-General-in-Council, and styled the Administrator of the province. All executive acts relating to provincial affairs are done in the name of this officer. In the appointment of an Administrator preference is, as far as possible, given to a person resident in the province. Administrators are appointed for five years, and their salaries are provided by Parliament. The present Administrators of the several provinces are:—

ADMINISTRATORS.

Cape of Good Hope	Capt. the Hon. F. A. JOUBERT.
Natal	Hon. H. GORDON WATSON, I.S.O.
Transvaal	Gen. the Hon. J. J. PIENAAR.
Orange Free State	Hon. J. F. JANSE VAN RENSBURG.

2.—**Executive Committees of the Provinces.**—Each Provincial Council elects at its first meeting, from among its members, or otherwise, four persons to form with the Administrator an Executive Committee for the province, the Administrator acting as chairman. A member of a Provincial Executive Committee, who is not also a member of the Provincial Council, is entitled to take part in the proceedings of the council, but has not the right to vote. The function of Executive Committees is to carry on the administration of provincial affairs on behalf of the Provincial Council. Executive Committees have the power, subject to certain considerations, to appoint officers to the provincial services. The Provincial Executives at the 31st May, 1939, were composed as under.

EXECUTIVE COMMITTEES OF THE PROVINCES.

Cape of Good Hope.		*Natal.*

1918 Census of European population (5th May). Constitution of Universities of South Africa, Capetown, and Stellenbosch. General Smuts and the Hon. H. Burton attend Imperial Conference in England. Signature of Armistice with Germany (11th November). Epidemic of influenza (with pneumonia); estimated mortality, 11,726 whites, 127,745 coloured.

1919 Native disturbances at Bloemfontein, Johannesburg, and Pretoria. Ministry of Health created in the Union. The Union granted the mandate for the government of the South West Africa Protectorate. Conclusion of Peace with Germany (Treaty of Versailles, 28th June), Generals Botha and Smuts signatories on behalf of the Union. Death of General Botha. General the Right Hon. J. C. Smuts appointed Prime Minister. Treaty of Peace and South West Africa Mandate passed in Special Session of Parliament.

1920 Signing of Final Peace Treaty. Native strike on the Rand. General Parliamentary Election. 10th March; reconstitution of Ministry under General Smuts. Flight from Cairo to Cape successfully accomplished by Colonel (now Sir) Pierre van Ryneveld and Major (now Sir) Quinton Brand. Gift by Mr. Davis, of Durban, of £20,000 for training ship to train boys for mercantile marine. The *Grahamstown Journal*, founded 1831, pioneer journal of South Africa, ceased publication. First conference of Empire Statisticans in London. Lord Buxton, Governor-General of the Union, retires. H.R.H. Prince Arthur of Connaught appointed Governor-General.

1921 Amalgamation of South African and Unionist Parties and General Election (February); Cabinet formed by General Smuts. Board of Trade and Industries established. Second complete census of the Union (3rd May). Imperial Conference held in London; General Smuts, Colonel Mentz, and Sir Thomas Smartt, South African representatives. South African Reserve Bank brought into operation (30th June). Defence of South Africa completely taken over by the Union Government; Capetown Castle handed over to the South African nation and Imperial command withdrawn. Diamond mines completely closed down in Kimberley; economic depression accentuated. Union Trade Commissioner appointed on the continent of Europe.

1922 Prolonged industrial struggle in the Transvaal—strike on coal mines, in steel industry, and at the Victoria Falls Power works on the Witwatersrand, followed by acts of violence in different parts of the Reef area; declaration of general strike followed by widespread revolutionary movement in the mining districts; martial law proclaimed (10th March) and Government forces mobilized. Commencement made with erection of grain elevators in the Union and electrification of Glencoe-Maritzburg railway. University of the Witwatersrand established (1st March). Mozambique Convention denounced by Union Government (1st April). Rebellion of Bondelzwart Hottentots in South West Africa. Inauguration of the Witwatersrand University (4th October). Referendum taken in Rhodesia on question of entry into the Union (27th October); Union Government's terms rejected (8,774 votes against, 5,989 for).

1923 Incorporation of Southern Rhodesia as part of His Majesty's Dominions (12th September); establishment of responsible government (1st October). British Empire Conference sessions commenced in London (1st October); South Africa represented by General the Right Hon. J. C. Smuts, Senator the Hon. N. J. de Wet, and the Hon. H. Burton. Reported discoveries of platinum in Waterberg District, Transvaal. Termination of office of Prince Arthur of Connaught; appointment of the Earl of Athlone as Governor-General of the Union.

1924 One-day flight by military aeroplane from Capetown to Pretoria. Assumption of office by the Governor-General, the Earl of Athlone (21st January). General Election (17th June). Formation of Ministry by General the Hon. J. B. M. Hertzog. New portfolio of Labour created (August). Customs agreement between Union and Rhodesia negotiated.

1925 Prince of Wales visits South Africa. Union reverts to gold standard. Afrikaans constituted an official language. Reserve Bank opens branches at Johannesburg, Capetown, Durban, Port Elizabeth, and East London. President Kruger's centenary. Appellate Court decides native women exempt from Transvaal Native Pass Ordinance, No. 43 of 1902. Appointment of Trade Commissioner in United States of America.

1926 Alan (now Sir Alan) Cobham completes round flight by aeroplane England to Cape via Egypt. Joint sitting both Houses of Parliament to consider Colour Bar Bill. Royal Air Force with three aeroplanes fly from Egypt to Cape and return to England. "Carnarvon Castle", first motor-driven regular mail liner trading with South Africa, arrives. Government delegation proceeds to India. General Hertzog, Prime Minister, attends Imperial Conference. Census of European Population (4th May).

1927 Beam radio-telegraphic communication opened with Great Britain. "Groot Constantia", destroyed by fire in 1925, restored. "Moth" aeroplane piloted by Lieut. R. Bently, flown from England to Johannesburg in 26 days. Carnegie Corporation of New York donates £100,000 in aid of scientific research and other projects in South and East Africa. Diamond discoveries in Little Namaqualand. Eleventh Congress of the Federation of Chambers of Commerce of the British Empire meets in Capetown.

1928 Diamond cutting industry established at Kimberley. Suburban railways in Cape Peninsula operated by electricity. German Reichstag ratifies Trade Treaty with South Africa. Angola Boers repatriated to South West Africa. Union-Mozambique Trade and Customs Convention signed.

1929 Opening of Alfred Beit Road and Rail Bridge over Limpopo connecting Union with Southern Rhodesia. Inauguration of air mail service. Native riots in Durban. Visit of British Association for the Advancement of Science to the Union. The Four Gospels and Psalms published in Afrikaans. General Election (12th June). Union Ministers Plenipotentiary appointed to Holland, Italy, and the United States of America.

1930 Amended Customs Agreement arrived at between the Union and Southern and Northern Rhodesia. Enfranchisement of European women. General Hertzog attends Imperial Conference. Formation Diamond Corporation, Ltd., capital £2,500,000 increased to £5,000,000. Importation of wheat prohibited except under permit. Quota Act, restricting immigration from certain countries, passed.

1931 Pretoria proclaimed a city. Great Britain abandons gold standard (September). October output of gold from Union mines passes £4,000,000 mark. Statute of Westminster passed by Imperial Parliament. Durban to Capetown air mail crashed at Sir Lowry Pass; three deaths. Fire at Witwatersrand University, valuable library collections destroyed. Census of European Population (5th May).

1932 Air mail between Union and Great Britain inaugurated (January). Wireless telephone communication established with Great Britain (February). Diamond mining industry temporarily closed down owing to depression. Solo flight in "Puss Moth" between England and Capetown accomplished in 4¾ days. Imperial Conference, Ottawa (August), Union representatives the Hons. N. C. Havenga, A. P. J. Fourie, and P. G. W. Grobler. Explosion of 260 tons of dynamite on rail at Leeuwdoornsstad, five persons killed, many injured. Union suspends gold payments (December), boom in gold mining shares begins.

1933 Circulation of British silver withdrawn. Record non-stop flight, R.A.F. machine, Cranwell, England, to Walvis Bay, 5,340 miles in 57½ hours. Political Coalition of South African and Nationalist Parties formed under General Hertzog as Prime Minister. Sixth Parliament dissolved (April): Seventh Parliament met (May). United States and Canada abandon gold standard (April). World Economic Conference, London (June), Union representatives—Hons. J. C. Smuts, N. C. Havenga, and O. Pirow. South Africa House, London, opened by H.M. the King. Drought broken, floods in Orange Free State and South West Africa. Afrikaans Bible issued. Coke oven fired at S.A. Iron and Steel Works, Pretoria (December).

1934 South African (Union) Navy ceased to function. Union Airways acquired by Union Government. Jonker diamond, weighing 726 carats, found on Elandsfontein alluvial diggings and sold for £70,000. Official visit to Union of H.R.H. Prince George. Port Elizabeth harbour officially opened. S.A. Iron and Steel Works, Pretoria:—Blast furnaces blown in March; Official Opening by the Governor-General, the Earl of Clarendon (11.8.34). Prime Minister launches M.V. "Bloemfontein" at Amsterdam by wireless from Pretoria. General Smuts installed as Rector of St. Andrews University, Scotland.

1935 Prime Minister and Minister of Mines attend King's Silver Jubilee in London. The Union of South Africa celebrates its twenty-fifth anniversary. World Press Conference held in Union. Public Service Entrance Examinations instituted. Record price of gold 149s. 4d. on London market (6.3.35). King George V Silver Jubilee Fund for combating tuberculosis inaugurated. Meeting of Empire Forestry Conference in Union. Pan African Postal Conference held at Pretoria.

1936 Death of King George V (20/1/36). Accession of King Edward VIII. Abdication of King Edward VIII (10/12/36). Accession of King George VI. Passing of *Representation of Natives Act* at a joint sitting of both Houses of Parliament. Third complete Census of Union (5th May). Fire at Medical School, Capetown University, damage estimated at £60,000. South African Broadcasting Corporation established (1st August). Record for voyage England to Capetown held by R.M.S. Scot since 1893 broken by R.M.M.V. Stirling Castle (13 days, 6 hours, 30 mins.). Parliamentary delegation visited India (September). Union inland postal rates extended to Angola, Belgian Congo, Nyasaland, Kenya, Uganda, and Tanganyika Territory (1/7/36).

1937 Sir Patrick Duncan Governor-General (5/4/37). Transvaal Chamber of Mines adopted principle of "closed shop" (8/4/37). Coronation of King George VI (12/5/37). Imperial Conference, London, attended by Prime Minister and Minister of Finance (May-June). Imperial Airways Flying Boat Service inaugurated (June). Introduction of conveyance by air mail of all first class mail matter within the Union, S.W.A., the Protectorates, and other countries in the African Postal Union, and certain overseas countries. Postage rates amended—Union, S.W.A., and Protectorates: 1d.; other participating countries, 1½d. per half ounce. Previous letter rate of 1d. per ounce abolished (1/7/37). Inauguration of Empire Air Mail Scheme (1/7/37). Southern Africa Transport Conference (7-14/9/37). Surface mail rate, 1d. per ounce, for letters addressed to destinations within the Union and South West Africa only, introduced (1/10/37).

1938 Empire Air Mail Scheme extended to include India, Malaya, Canada and Newfoundland (20/2/38). Seventh Parliament dissolved (11/4/38). General Election (18/5/38). Eighth Parliament met (22/7/38). Inauguration South African Press Association providing general news service within Union (1/7/38). Electrification of railway on Witwatersrand-Randfontein to Springs- and from Germiston to Pretoria. Limpopo air crash, four members Royal Air Force Boxing Team and two South African Air Force Officers killed (6/6/38). Voortrekker Centenary celebrations: Trek wagons left Capetown (8/8/38); Laying of foundation stone Voortrekker Memorial, Pretoria (16/12/38).

1939 Record solo flight, England-Cape-England, accomplished by A. Henshaw in 4 days 10 hours 16 minutes (5-9/2/39). State visit of President Carmona of Portugal (August). Inauguration of Union-Loanda Air Service (21/8/39). Institution for the Union of the King's Medal for Bravery (25/8/39). Outbreak of War between Germany and Poland (1/9/39). Declaration of war against Germany by Great Britain and France (3/9/39). State of war with Germany proclaimed by Union of South Africa (6/9/39). Resignation of General the Honourable J. B. M. Hertzog; General the Right Honourable J. C. Smuts appointed Prime Minister (6/9/39). Life of Third Senate extended from 5/9/39 to 5/3/40.

§ 10. Obituary.

1935 Brigadier-General J. J. Byron, C.M.G., D.S.O. Hon. Tielman Roos, ex-Minister of Justice and ex-Judge of the Court of Appeal. George Arthur Hyde Villiers, Captain the Lord Hyde. Senator the Hon. G. G. Munnik (Transvaal). H. Mackenzie, formerly General Manager, Standard Bank. Sir George Cory, historian, author of "The Rise of South Africa". H. A. Oliver, C.M.G., ex-Member of Cape and Union Parliaments (1908-1924), "Siege Mayor" of Kimberley. Senator the Hon. A. H. M. Lamprecht (Orange Free State). Hon. F. G. Gardiner, Judge President of the Cape Provincial Division of the Supreme Court. Hon. H. F. Blaine, Supreme Court (Orange Free State). Dr. Samuel Evans, Chairman and Managing Director of Crown Mines, Limited, Public Debt Commissioner. J. A. E. Euvrard, Chairman of the Central Road Transportation Board. J. S. de Villiers, Chairman of the Provincial Council of the Orange Free State. Reenen J. van Reenen, Chairman of the Irrigation Commission. C. F. Kayser, M.P. (Port Elizabeth North). Dr. J. G. Gubbins, founder of the Gubbins Library of Africana. J. B. ("Pen") Wessels, M.P. (Frankfort), Member of Native Affairs Commission. Mr. Justice Britter, Native High Court, Natal. Col. A. Herschell, O.B.E., M.C., V.D., Member of the South African Railways and Harbours Service Commission. Rt. Hon. H. Burton, P.C., K.C., ex-Minister of Railways. Sir John Dove-Wilson, former Judge President, Natal. Sir George Albu, financier and pioneer of the Rand Goldfields. T. Ainsworth Dickson, C.M.G., M.C., Resident Commissioner, Swaziland.

1936 Count Labia, Minister Plenipotentiary for Italy. Monsignor Kolbe, O.M.I. J. E. A. Volschenk, artist. Sir Thomas Keir Murray, one-time Minister of Lands and Works and Colonial Secretary.

Natal. R. H. Struben, O.B.E., M.P. (Albany). Dr. E. P. Baumann, M.P. (Rosettenville). Sir Lionel Phillips, pioneer of diamond and gold mining. Brigadier-General Sir C. P. Crewe, K.C.M.G., C.B., V.D., ex-M.P. (East London), ex-Minister, Cape of Good Hope. Sir Arnold Theiler, veterinary scientist and founder of Onderstepoort Laboratory. Rt. Hon. Sir J. W. Wessels, Chief Justice of the Union. Sir Thomas Cullinan, D.S.O., discoverer of Premier Mine (23/8/36). Sir James T. Molteno, K.C., Speaker of last Cape House of Assembly and of first Union Parliament (16/9/36). Senator the Hon. F. Ginsberg (23/9/36). Hon. C. T. M. Wilcocks, Administrator of the Orange Free State (14/11/36). S. D. de Wet, M.P. (Heidelberg, Transvaal) (21/12/36).

1937 Duncan M. Eadie, General Secretary, South African Sugar Association and Member, Union Statistical Council (24/4/37). Thos. Orr, C.M.G., former Minister of Finance (11/5/37). H. J. Hofmeyr, Vice-Chancellor, Witwatersrand University (2/6/37). Senator the Hon. T. C. Stoffberg (12/6/37). Sir Johannes van Boeschoten (14/7/37). Senator the Hon W. Lategan (28/7/37). Hon E. R. Grobler, formerly Administrator of the Orange Free State Province and President of Orange River Colony Legislative Council (1/9/37). Prof. J. E. Duerden, formerly of Rhodes University College and Director of Wool Research in the Union. Sir Herbert C. Sloley, K.C.M.G., ex-Resident Commissioner of Basutoland—1900 to 1916 (22/9/37). H. B. Papenfus, K.C., Member National Parks Board of Trustees (23/9/37). J. J. Scholtz, M.P. (Mossel Bay) (—/10/37). C. Maggs, industrialist and financier (17/10/37). J. H. H. de Waal, M.P. (Piquetberg), former Speaker of the House of Assembly (30/10/37).

1938 Dr. A. W. Roberts, former Senator and Member of Native Affairs Commission (27/1/38). Hon. D. de Waal, former Judge-President, Transvaal (19/2/38). Hon. J. Schofield, former Senator (3/3/38). John Jack, founder of Germiston and Simmer and Jack Mine; introduced cyanide process and percussive pneumatic stope drill (jack-hammer) to the Rand (9/3/38). Senator the Hon. D. J. J. Malan (2/6/38). Col. H. Mentz, former Minister of Defence (3/6/38). Most Rev. F. R. Phelps, D.D., former Archbishop of Capetown (27/6/38). Hon. Melius de Villiers, formerly Chief Justice, Orange Free State—1888 to 1899 (6/7/38). D. Hugo, member of Railway Board (8/7/38). Mr. Justice I. Curlewis (16/7/38). Hon. S. P. Bekker, Administrator of the Transvaal (29/7/38). H. W. Sampson, O.B.E., former Minister of Posts and Telegraphs and of Public Works. H.R.H. Prince Arthur of Connaught, former Governor-General of the Union of South Africa—1920-1923 (12/9/38). Sir H. Graumann, K.B.E., pioneer of Rand Goldfields, former mayor of Johannesburg and member of Union Parliament—1915 to 1924 (19/9/39). C. P. Robinson, member of Natal House of Assembly, 1906-1909, and of Union Parliament, 1910-1938 (8/10/38). Rt. Hon. Lord Stanley, Secretary of State for the Dominions (16/10/38). Prof. A. Moorrees, Chancellor of Stellenbosch University (17/11/38). Rev. James Gray, first Presbyterian minister on Rand, founder of St. George's Presbyterian Church, Johannesburg, 1887 (18/11/38). Mr. Justice T. B. Horwood, Natal Native High Court (19/11/38). Hon. A. S. Naude, Senator (30/11/38). A. E. Campbell, M.P. (Pretoria Central) (26/12/38). Rev. Dr. A. Dreyer, Archivist, Dutch Reformed Church. F. W. Beyers, ex-Minister of Mines and ex-Judge of Appeal. Rev. P. G. J. Meiring, Editor of "Die Kerkbode".

1939 A. J. Swanepoel, M.P. (Lichtenburg) (4.2.39). P. P. du Toit, M.P. (Paarl) (26.2.39). R. Gwelo Goodman, Artist (11.3.39). Sir Matthew Nathan, former Governor of Natal (19.4.39). T. S. McEwen, one of first Commissioners of S.A. Railways and Harbours (8.8.39). Sir Willem van Hulsteyn, formerly member of Transvaal Legislative Assembly and of Union Parliament (14.8.39). Sir Spencer Lister, Director of S.A. Institute for Medical Research, originator of the pneumonia vaccine (6.9.39).

The obituary of prominent South Africans from the date of Union up to and including the year 1924 appeared in *Year Book* No. 7, and for the years 1925 to 1934 in *Year Book* No. 19.

PART II.

HIS MAJESTY'S HIGH COMMISSION

FOR THE TERRITORIES OF

BASUTOLAND,

BECHUANALAND PROTECTORATE,

AND

SWAZILAND.

INTRODUCTORY.

HIS MAJESTY'S HIGH COMMISSION FOR THE TERRITORIES OF BASUTOLAND, BECHUANALAND PROTECTORATE, AND SWAZILAND.

1. **The Office of High Commissioner.**—The Office of High Commissioner originated in the Commission of 1846, which appointed the Governor of Cape Colony "High Commissioner for the settling and adjustment of the affairs of the territories in Southern Africa adjacent or contiguous to the eastern and north-eastern frontier of the said Colony". The title of the post, after some modification, subsequently became "High Commissioner for South Africa". The High Commissioner was until 1899 charged with the conduct of British relations with the South African Republic (Transvaal) and the Orange Free State, as well as with native States and tribes outside the Colonies of the Cape and Natal, and also with Swaziland, which was administered by the Government of the South African Republic, under the Convention of 1894. He administers Basutoland, the Bechuanaland Protectorate, and Swaziland.

Prior to the 1st October, 1923, Southern Rhodesia was administered by the British South Africa Company, and the High Commissioner exercised certain powers of control under the Southern Rhodesia Order-in-Council, 1898. Upon the establishment of responsible Government the Order-in-Council of 1898 lapsed, but under the Southern Rhodesia Constitution Letters Patent certain of the High Commissioner's previous powers and functions in regard to native administration were reserved to him. In 1937 the High Commissioner's powers in regard to Southern Rhodesia were terminated by the Southern Rhodesia Constitution (Amendment) Letters Patent.

On the 1st April, 1924, Northern Rhodesia, which had previously been administered by the British South Africa Company, and over which the High Commissioner had exercised certain powers of control under the Northern Rhodesia Order-in-Council of 1911, came under the direct administration of the Crown. The new Government was constituted under the Northern Rhodesia Order-in-Council, 1924, which revoked the Order-in-Council of 1911, and provision for the establishment of a Legislative Council was made by the Northern Rhodesia (Legislative Council) Order-in-Council, 1924. Mr. H. J. Stanley, C.M.G. (now Sir H. J. Stanley, G.C.M.G.), assumed office as the first Governor and Commander-in-Chief on the 1st April, 1924.

The office of High Commissioner, which was formerly held by the Governor of Cape Colony, was, by a Commission dated the 6th October, 1900, vested in Lord Milner, and by a similar commission dated the 15th March, 1905, in Lord Selborne.

During the years 1910 to 1930 the office was vested, by separate commission, in the successive Governors-General of the Union of South Africa. This arrangement ceased upon the termination of the period of office of Major-General the Earl of Athlone, K.G., when Sir Herbert J. Stanley, G.C.M.G., was appointed to be High Commissioner for South Africa, and the office was separated entirely from that of the Governor-General.

The title of High Commissioner for South Africa was changed upon the appointment of Sir William H. Clark, G.C.M.G., K.C.S.I. (January, 1935), to His Majesty's High Commissioner for Basutoland, the Bechuanaland Protectorate, and Swaziland.

2. **Principal Officers.**—The following list gives the names of the High Commissioner and the principal officers on his staff:—

*High Commissioner.**—Sir William H. Clark, G.C.M.G., K.C.S.I.
Judge of the High Courts.—Sir Walter Huggard, K.C.
Attorney-General.—E. R. Roper, D.S.O., K.C.
Administrative Secretary.—H. E. Priestman, C.M.G.
Assistant Administrative Secretary.—H. L. Smith, O.B.E.
Auditor.—R. E. Goodman, C.B.E.

* It has been announced that Sir William Clark is to be succeeded by Sir Edward Harding, G.C.M.G., K.C.B.

INTRODUCTORY.

HIS MAJESTY'S HIGH COMMISSION FOR THE TERRITORIES OF BASUTOLAND, BECHUANALAND PROTECTORATE, AND SWAZILAND.

1. **The Office of High Commissioner.**—The Office of High Commissioner originated in the Commission of 1806, which appointed the Governor of Cape Colony "High Commissioner for the settling and adjustment of the affairs of the territories in Southern Africa adjacent or contiguous to the eastern and north-eastern frontier of the said Colony". The title of the post, after some modification, subsequently became "High Commissioner for South Africa". The High Commissioner was until 1899 charged with the conduct of British relations with the South African Republic (Transvaal) and the Orange Free State, as well as with native States and tribes outside the Colonies of the Cape and Natal, and also with Swaziland, which was administered by the Government of the South African Republic, under the Convention of 1894. He administers Basutoland, the Bechuanaland Protectorate, and Swaziland.

Prior to the 1st October, 1923, Southern Rhodesia was administered by the British South Africa Company, and the High Commissioner exercised certain powers of control under the Southern Rhodesia Order-in-Council, 1898. Upon the establishment of responsible Government the Order-in-Council of 1898 lapsed, but under the Southern Rhodesia Constitution Letters Patent certain of the High Commissioner's previous powers and functions in regard to native administration were reserved to him. In 1937 the High Commissioner's powers in regard to Southern Rhodesia were terminated by the Southern Rhodesia Constitution (Amendment) Letters Patent.

On the 1st April, 1924, Northern Rhodesia, which had previously been administered by the British South Africa Company, and over which the High Commissioner had exercised certain powers of control under the Northern Rhodesia Order-in-Council of 1911, came under the direct administration of the Crown. The new Government was constituted under the Northern Rhodesia Order-in-Council, 1924, which revoked the Order-in-Council of 1911, and provision for the establishment of a Legislative Council was made by the Northern Rhodesia (Legislative Council) Order-in-Council, 1924. Mr. H. J. Stanley, C.M.G. (now Sir H. J. Stanley, G.C.M.G.), assumed office as the first Governor and Commander-in-Chief on the 1st April, 1924.

The office of High Commissioner, which was formerly held by the Governor of Cape Colony, was, by a Commission dated the 6th October, 1900, vested in Lord Milner, and by a similar commission dated the 15th March, 1905, in Lord Selborne.

During the years 1910 to 1930 the office was vested, by separate commission, in the successive Governors-General of the Union of South Africa. This arrangement ceased upon the termination of the period of office of Major-General the Earl of Athlone, K.G., when Sir Herbert J. Stanley, G.C.M.G., was appointed to be High Commissioner for South Africa, and the office was separated entirely from that of the Governor-General.

The title of High Commissioner for South Africa was changed upon the appointment of Sir William H. Clark, G.C.M.G., K.C.S.I. (January, 1935), to His Majesty's High Commissioner for Basutoland, the Bechuanaland Protectorate, and Swaziland.

2. **Principal Officers.**—The following list gives the names of the High Commissioner and the principal officers on his staff:—

*High Commissioner.**—Sir William H. Clark, G.C.M.G., K.C.S.I.
Judge of the High Courts.—Sir Walter Huggard, K.C.
Attorney-General.—E. R. Roper, D.S.O., K.C.
Administrative Secretary.—H. E. Priestman, C.M.G.
Assistant Administrative Secretary.—H. L. Smith, O.B.E.
Auditor.—R. E. Goodman, C.B.E.

* It has been announced that Sir William Clark is to be succeeded by Sir Edward Harding, G.C.M.G., K.C.B.

3. Standing Joint Advisory Conference.—By arrangement between His Majesty's Government in the United Kingdom and His Majesty's Government in the Union of South Africa, a Standing Joint Advisory Conference was constituted in 1938, consisting of the Resident Commissioners of Basutoland, the Bechuanaland Protectorate, and Swaziland, and the Union Secretaries for Native Affairs, Agriculture and Forestry, and Finance, whose function it is to study openings for co-operation between the Union Government and the Administrations of the three High Commission Territories in matters affecting the development of the High Commission Territories, and to consider any matters of joint concern to the Union and the High Commission Territories, such as prevention and control of animal diseases, marketing of produce, prevention of bubonic plague, etc.

BASUTOLAND.

CHAPTER I.

BASUTOLAND.

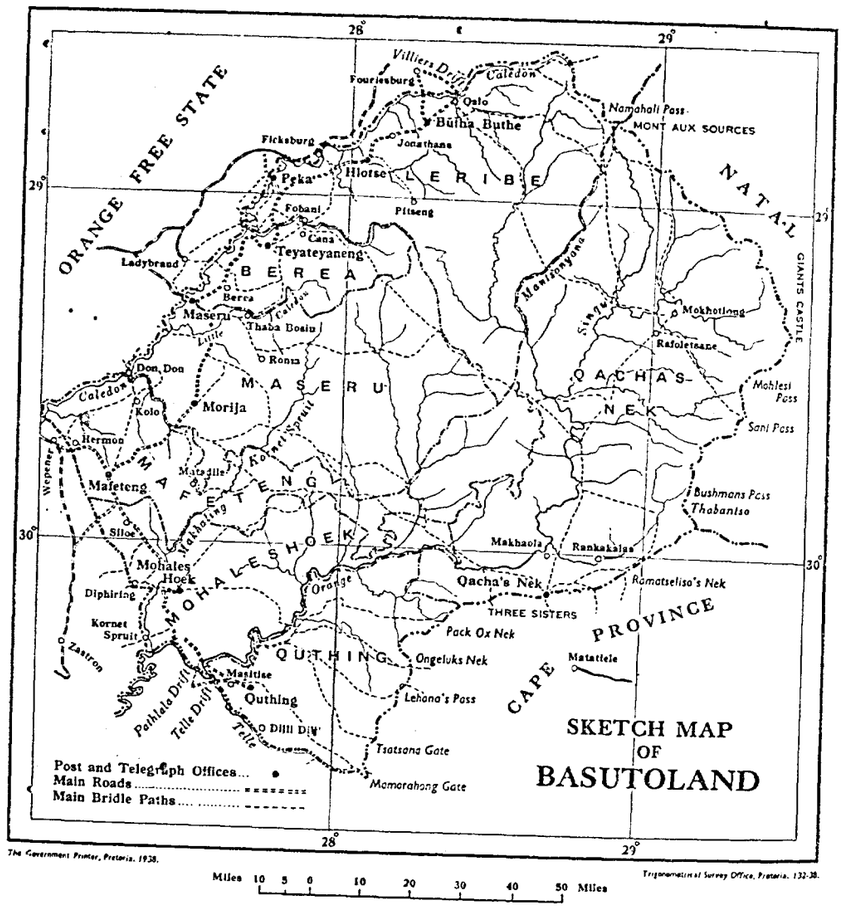
§ 1. History.

1. **Origin.**—The Basuto of Basutoland appear to have been composed of the remnants of several tribes which were broken up in the wars waged by the Matabele and the Zulus. Between 1815 and 1830 these tribes, realizing the paramount necessity of co-operation for self-defence, were gradually united under Moshesh, a chief of great ability. The Great Trek of 1835-37 brought the emigrant Boer farmers into contact with the Basuto and led to continual friction on boundary questions, aggravated by cattle raids and counter raids. In 1852 Sir George Cathcart in an attempt to restore order advanced with British troops towards Thaba Bosiu, Moshesh's headquarters, demanding a fine for compensation for Basuto raids; part of the fine was paid, but the advance continued until it was checked at the Battle of Berea, after which Moshesh diplomatically entreated for peace, promising to exercise more control over his people, and hostilities ceased. A few years later, in 1856, disputes arose between Moshesh and the Orange Free State respecting boundary questions, and hostilities resulted which lasted from 1856 to 1858, with indecisive results, and were concluded by the *Treaty of Aliwal*, 1858. Collisions nevertheless frequently recurred.

In 1865 the war broke out afresh, and Moshesh again claimed the protection of the Governor, Sir Philip Wodehouse. He declined to interpose actively, but dispatched a British Commissioner to Thaba Bosiu, to settle the difficulties. This measure met with little success, and in the end the Boers were successful, and Moshesh sued for peace. At the Treaty of Thaba Bosiu, April 1866, he recognized the permanent cession of a portion of his district and acknowledged himself a subject of the Orange Free State.

The peace was of short duration, the war was renewed, and the Basuto, pressed by the Boers, were on the brink of total defeat, when they again appealed to be taken under the authority of the Queen. In January, 1868, Sir Philip Wodehouse received authority for the recognition of Moshesh and his tribe as British subjects, and for the incorporation of their territory. This was carried into effect by a proclamation dated 12th March, 1868, and the event is now commemorated by observing this date as a public holiday, known as *Moshoeshoe's Day*.

2. **Annexation to the Cape Colony.**—The country remained in a very unsettled condition until it was annexed to the Cape Colony by an Act of the Cape Legislature, No. 12 of 1871. The Act expressly declared that Basutoland was not to be subject to the general law of the Colony, and gave the Governor power to legislate for it by proclamation, and to extend to it by proclamation any Cape Act not otherwise in force therein.



In 1884 the territory was disannexed from the Cape Colony and the Government was carried on under the direct control of the Imperial Government, *vide* Order-in-Council of 2nd February, 1884, which was proclaimed and brought into force by Proclamation 75A of 18th March, 1884.

§ 2. Description.

1. **Physical Features.**—The territory of Basutoland lies between latitude 28° 35′ and 30° 40′ S. and between longitude 27° and 29° 30′ E. It is bounded on the west and north by the Orange Free State, on the east by Natal and East Griqualand, and on the south by the Cape Province.

Geographically, the territory may be divided into two regions running roughly from south-west to north-east, the eastern region comprising about two-thirds of the total area. The western region, a continuation of the Free State plateau, with an average altitude of some 5,000 feet, merges into the eastern area, which comprises the mountains known as the Maluti, an offshoot of the Drakensberg Range. The latter forms the eastern boundary, and includes peaks rising to 11,000 feet and dropping sharply down to Natal.

BASUTOLAND.

The Government Printer, Pretoria, 1938.
Trigonometrical Survey Office, Pretoria, 132-38.

The area of the territory is 11,716 square miles, and it is entirely a native reserve.

2. **Meteorology.**—The climate is dry and bracing, with extremes of heat and cold, both seasonal and diurnal. High altitude, electric tension in the air, and long periods of strong sunshine without clouds or rain necessitate for European residents periodic changes to the coast level, where the air is more humid. The temperature varies from a maximum of 93° F. to a minimum of 11° F. The rainfall is capricious; the average is approximately 30 inches, but it fluctuates much above and below that figure. The total annual rainfall in 1938 recorded at the different stations varied from 23 inches to 36 inches.

3. **Bibliography.**—The following is a list of annual reports and other publications relating to Basutoland:—

An Ecological Survey of the Mountain Area of Basutoland (1938).
Annual Report on the Social and Economic Progress of the People of Basutoland.
Annual Sanitary and Medical Report.
Annual Report on Education.
Report on the Financial and Economic Position of Basutoland.
"The Basutos" by Sir Godfrey Lagden, K.C.M.G., 2 vols.—Hutchinson.
"History of the Basuto" by D. F. Ellenberger and J. C. Macgregor.
"The Basuto of Basutoland" by E. A. T. Dutton.—Jonathan Cape.

§ 3. Administration.

1. **Central and District Administration.**—The territory is now governed by a Resident Commissioner under the direction of the High Commissioner for Basutoland, the Bechuanaland Protectorate, and Swaziland, the latter possessing the legislative authority, which is exercised by proclamation.

The chiefs adjudicate on cases between natives, who have a right of appeal to the district commissioners' courts, where all cases between natives and Europeans are brought.

For fiscal and other purposes the country is divided into seven districts and two sub-districts. Each of these is sub-divided into wards, presided over by hereditary chiefs allied to the Moshesh family.

2. **Basutoland Council.**—There is an annual session of the Basutoland Council, which consists of a hundred members, all natives, ninety-five being nominated by the chiefs and five by the Government. The council is consultative and advisory and deals chiefly with the domestic affairs of the nation. It has no executive powers.

3. **Principal Officers.**—The following list gives particulars of the principal officers on the establishment:—

Resident Commissioner: E. C. Richards, C.M.G.
Deputy Resident Commissioner and Government Secretary: D. W. How.
First Assistant Secretary: T. B. Kennan, M.C.
Financial Secretary: L. G. Luscombe, O.B.E.
Commissioner of Police and Prisons: Major R. W. Booth, O.B.E.
Principal Medical Officer: H. W. Dyke, C.B.E.
Superintendent, Leper Asylum: Sir Walter Johnston, C.M.G.
Director of Agriculture: R. W. Thornton, C.B.E.
Principal Veterinary Officer: G. T. Henderson.
Director of Public Works: J. K. Gerrand.
Director of Education: O. B. Bull.
Master, High Court: W. G. S. Driver.
Registrar, High Court: G. B. Gray.

4. **Capital.**—The capital town is Maseru, which is the headquarters of the Government. It is situated on the Caledon River 86 miles by rail east of Bloemfontein. The population in 1936 was 329 Europeans, 3,300 natives, and 83 other cofoured persons.

§ 4. Population.

Censuses of the population of Basutoland were taken in 1904, 1911, 1921, and 1936, simultaneously with censuses taken in other parts of South Africa. No census was, however, taken in 1918, 1926, or 1931. The following tables give particulars of the population at the censuses mentioned:—

(i) POPULATION, 1904, 1911, 1921, AND 1936.

Year.	European.	Native and Coloured.				Grand Total.
		Bantu.	Asiatic.	Coloured.	Total.

§ 5. Vital Statistics and Migration.

1. **Births, Deaths, and Marriages.**—The registration of births is not compulsory. Registers are kept in district offices, but are only made use of by Europeans. The registration of deaths is also not compulsory, and no statistics can be given under these two heads.

All Christian and civil marriages are registered in the office of the Government Secretary, Maseru. The following figures represent the number of marriages so registered during the years specified:—

MARRIAGES REGISTERED.

Year	1934.	1935.	1936.	1937.	1938.
Number	776	1,052	1,040	1,345	1,289

Most of the marriages amongst the natives are contracted according to native custom, the usual dowry of cattle being paid.

2. **Migration.**—The *Immigration and Prevention of Trespass Proclamation*, No. 1 of 1933, provides for the exclusion or removal from Basutoland of persons who, in the Resident Commissioner's opinion, are likely to be prejudicial to peace, order, or good government, or to the interests of the natives, or who have no visible means of support, or who have been convicted of certain crimes.

The *Aliens Proclamation*, No. 47 of 1937, provides machinery, similar to that set up by the Union *Aliens Act*, for the admission of foreigners to Basutoland. For permanent residence, prescribed official forms made out in duplicate, with medical and other certificates, must be sent to the Government Secretary either direct or through a British Consul. Such applications are then scrutinized by the Immigration Selection Board, and, if approved, permits and identification cards are issued to the applicant. Temporary permits to enter Basutoland may be obtained by non-British subjects from immigration officers in the territory, who may demand a deposit of up to £100. The duties of immigration officers are performed by the Superintendent or Assistant Superintendent of Police in each of the "ports of entry".

The fee for a permit for permanent residence is £1. For a temporary permit 5s. is charged.

Every native entering or leaving the territory must be in possession of an official pass. A statement of the number of passes issued during 1938 is given in § 8.

§ 6. Public Health and Sanitation.

1. **Medical Service.**—(i) *General.*—The Basutoland Medical Service, which supervises the public health and sanitation of the territory, is organized on a departmental basis. Administration is in the hands of the Principal Medical Officer, who is responsible for all expenditure under the Medical Vote. The leper asylum is a separate department with a special Vote, but is subordinate to the Principal Medical Officer. There is a government medical officer for each district.

The following table gives particulars of the revenue and expenditure in connexion with the Medical Service:—

MEDICAL SERVICE: REVENUE AND EXPENDITURE, 1933-34 TO 1937-38.

Description.	1933-34.	1934-35.	1935-36.	1936-37.	1937-38.
	£	£	£	£	£
Revenue	2,539	2,292	2,840	3,502	5,215
Expenditure	25,712	26,605	29,311	29,614	30,078

(ii) *Hospitals.*—In addition to public health and sanitation, the Medical Department administers the government hospitals and dispensaries, and provides free medical attendance, excepting specialized treatment, for all government officials and their families.

Beginning in 1885 with one medical officer and a so-called native hospital, which was little more than a couple of rooms, without nurses or proper furniture and appliances, the system has gradually developed, until now there are eight government hospitals, five equipped on modern lines, staffed by one or more trained nurses and a partially trained native staff, and three cottage hospitals staffed by trained and partially trained native nurses. The Maseru hospital is ranked as a Class I hospital by the Cape Medical Council. Each hospital has an out-patient department and a dispensary, at which all Basutoland natives are treated at a fee of 1s. for each attendance. Native in-patients and patients suffering from venereal diseases pay nothing. A few beds are reserved for Europeans. Officials and their wives, when admitted to hospital, pay maintenance fees, which are based on a sliding scale; other European patients pay 15s. per diem.

All fees collected are paid into revenue and the cost of administration is borne by the Government.

The following table furnishes information for a series of years in regard to hospitals, staff, and patients.

HOSPITALS: INSTITUTIONS, STAFF, AND PATIENTS, 1934 TO 1938.

* All non-resident.
† Trained and partially trained.
‡ Including 3 medical mission hospitals.

2. **Leper Settlement.**—The leper settlement, which was started in 1914 and occupies 1,700 acres at Botsabelo, near Maseru, comes under the direction of the Principal Medical Officer. The cost of maintenance is met by the Government, and no charge is made to the lepers.

The tables which follow give particulars of the staff employed, the number of patients, and the expenditure on the leper settlement for a series of years.

LEPER SETTLEMENT.

	£	£	£	£	£
Expenditure	19,071	19,138	18,200	17,933	17,484

3. **Medical and Dental Registration.**—Proclamation No. 17 of the 29th April, 1921, provides for the registration of medical practitioners, dentists, and chemists in Basutoland. No person may be registered to practise in the territory unless he possesses diplomas and certificates similar to those required as a qualification for registration in the Transvaal.

Applications for registration must be made in writing to the Principal Medical Officer. The Resident Commissioner, without assigning any reasons, may withhold his approval, in which case the applicant may appeal to the High Commissioner. The fee for registration is £5. The Resident Commissioner, on the advice of the Principal Medical Officer, may recommend to the High Commissioner the removal of names from the register.

Amending Proclamation No. 28 of 1934 allows permission to be granted, after examination by a medical officer, to missionaries to prescribe simple drugs and afford medical and surgical aid at a fee not to exceed 1s.

4. **Control of Public Health and Sanitation.**—Proclamation No. 18 of the 29th April, 1921, contains regulations for preventing the introduction into the territory, and the spreading therein, of contagious and infectious diseases. It also provides for the enforcement of regulations to control sanitation and water supplies and the sale of goods and for other public health measures.

§ 7. Education.

1. **Native Education.**—Education is mainly in the hands of the Paris Evangelical, Roman Catholic, and English Church Missions, each of which receives a grant-in-aid from the Government. The mission schools are scattered over the country fairly equally in proportion to the density of the population, and there are very few children who are not within reach of a school.

The educational system is designed mainly to meet the interests of the vast majority of children who have only a short school life of three or four years. Tuition in the lower classes is, therefore, almost entirely in the vernacular, so that a child becomes literate in his own language and is not taken out of his own environment. The country unfortunately is not well suited to the teaching of indigenous arts and crafts, owing to the lack of available material, but wherever possible sewing and housecraft are encouraged among the girls and gardening and other manual work among the boys.

No fees are charged in elementary or intermediate schools, nor is attendance compulsory; home duties and pastoral or agricultural work interfere with the regularity of school attendance, but on the whole Basuto children show wonderful keenness in being present as regularly as possible. A written examination for Standard VI is open to pupils from all parts of the territory, and twelve bursaries are awarded at this stage each year, which, with six awarded at the Junior Certificate stage, enable children of exceptional ability to continue their education at one of the institutions or at the new Basutoland High School which was opened in 1939. University education is provided at the South African Native College at Fort Hare, Cape Province, to which Basutoland contributes £300 per annum, besides providing two annual bursaries for promising Basuto students. Thus it is possible for even the poorest child to proceed from his village school to the University.

Although the missions are chiefly concerned with mission and school work, there is no doubt that indirectly they effect a great deal towards promoting public welfare. Each central mission station is a centre of civilization with its various branches radiating from it, so that there are very few parts of the territory which do not feel their influence. At certain missions sports meetings are held and arouse much enthusiasm. In the camps, the older inhabitants have formed sports clubs. The Pathfinder-scout and Wayfarer-guide movements are developing in an encouraging fashion and cannot fail to exert a profound and beneficial influence on the life of the people.

2. **European Education.**—There are six small schools which provide elementary education for the children in the camps: for further education children are sent to schools in the Union. The Government provides one annual bursary of £25 (for two years) for children under 13 years of age, and through the generosity of Messrs. Frasers, Ltd., a similar bursary of £50 per annum has also been provided.

3. **Education Statistics.**—The following tables contain statistics relative to education for a series of years:—

EDUCATION STATISTICS, 1933-34 TO 1937-38.

† Includes from 1934-35 3 teacher training institutions for males, 3 infant-teacher training institutions for females, 2 technical schools for males, and 3 industrial schools for females.

§ 8. Labour and Wages.

The following are the statistics for the years 1934 to 1938 of passes issued to Basutoland natives to proceed to the Union for purposes of labour or visiting:—

PASSES ISSUED TO NATIVES, 1934 TO 1938.

Year.	Labour.				Visiting.	Grand Total.
	Mines.	Agriculture.	Miscellaneous Labour.	Total Labour.		
1934.....	23,370	6,712	8,360	38,442	38,097	76,539
1935.....	30,057	5,584	9,797	45,438	38,988	84,426
1936.....	36,038	6,964	13,878	56,880	53,061	109,941
1937.....	33,130	3,782	14,811	51,723	43,597	95,320
1938.....	50,233	3,872	13,859	67,964	44,215	112,179

All visiting permits are given to natives for a period of from three days up to one month for the purpose of visiting relatives in the Union, or of proceeding to border towns to make purchases, etc. The vast majority of labourers who leave the territory do not stay in the Union for more than six to nine months. There is very little scope for labour in the territory. Wages for road-making and general unskilled labour range from 9d. to 1s. 6d. per diem. The conditions governing the cost of living approximate to those existing in the contiguous portions of the Orange Free State and the Cape Province.

§ 9. Administration of Justice.

1. **Courts of Law.**—The Basutoland courts of law consist of:—

(*a*) The High Court, which constitutes the Supreme Court of Basutoland, and from which an appeal lies to the Privy Council. A Judge is assigned to the High Court and not more than two administrative officers and one or more native assessors may be appointed to assist the court, but the decision of the court is vested exclusively in the judge.

(*b*) Subordinate Courts, namely—

(i) Courts of a District Commissioner or any Assistant District Commissioner in charge of a district or sub-district, called Subordinate Courts of the First Class.

(ii) Courts of an Assistant District Commissioner, called Subordinate Courts of the Second Class.

(iii) Courts of a Cadet, called Subordinate Courts of the Third Class.

Subordinate Courts of the First Class have civil jurisdiction where neither party is a European and in all other actions where the claim or value of the matter in dispute does not exceed five hundred pounds.

Subordinate Courts of the Second Class have civil jurisdiction in all actions where neither party is a European and in all other actions where the claim or value of the matter in dispute does not exceed two hundred and fifty pounds.

Subordinate Courts of the Third Class have no civil jurisdiction.

Subordinate Courts of the First, Second and Third Classes have criminal jurisdiction over all offences except treason, murder, sedition, offences relating to coinage or currency, and rape, except that Subordinate Courts of the First Class have jurisdiction to try any case of rape which has been remitted for trial by the Attorney-General.

(*c*) Native Courts, established by warrants under the hand of the Resident Commissioner, have certain limited jurisdiction as set out in the warrants and subject to restrictions imposed by law. There is a right of appeal to a native court of appeal, and thence to a subordinate court. All holders of subordinate courts have certain rights of their own motion of revision of the proceedings of all native courts.

The laws in force are the same as were in force in the Cape of Good Hope up to March 18th, 1884, except where repealed or altered by Proclamation of the High Commissioner, who is also empowered to make by proclamation such laws as may be necessary for the peace, order, and good government of the territory. The Law of Criminal Procedure and Evidence was revised and consolidated by Proclamation No. 59 of 1938.

2. **Police and Prisons.**—The Police and Prisons Service is under the control of the Commissioner of Police and Prisons.

Police.—The Police establishment consists of 13 European officers and 290 native non-commissioned officers and privates.

Prisons.—There are 9 gaols in the territory and a prisons staff of 67 officials, all but 2 of whom are Basuto.

3. **Crime Statistics.**—The following table shows the number of convictions for various crimes and offences during the last five years:—

NUMBER OF CONVICTIONS FOR VARIOUS CRIMES, 1934 TO 1938.

E. = European. O. = Other.

§ 10. Land and Agriculture.

1. **Land Settlement.**—There is no individual ownership or tenure of land in the territory. Land is held under the communal system, and is apportioned to the people by the chiefs. There are no farmers in the country other than natives, the European population consisting mainly of government officials, missionaries, traders, and labour agents.

2. **Agriculture.**—Maize is the staple food of the Basuto, and it is estimated that one-half of the total acreage in cultivation is planted under this cereal. The figures for 1938 are: acreage, 375,000; yield, 873,750 bags. The harvest was a good one.

The next most important cereal, both from the point of view of the acreage sown and the yield obtained, is wheat. In 1938, 264,375 acres were planted and 257,812 bags harvested. It is estimated that in a normal year about two-thirds of the wheat in the Territory is grown in the mountains. Basutoland wheat possesses excellent milling and baking qualities due to its high glutin content and it is in demand in the Union for blending purposes. Although wheat is taking an ever greater place in the diet of the Basuto, a large proportion of the annual yield is exported to the Union of South Africa. In 1938 152,776 bags were thus disposed of.

The estimated acreage sown with kaffir-corn in 1938 was 93,750 and the yield 197,812 bags.

The following tables give a list of imports and exports of the three principal crops during the past five years:—

IMPORT AND EXPORT OF MAIZE AND MAIZE MEAL, KAFFIR-CORN, AND WHEAT AND WHEAT MEAL, 1934 TO 1938.

Year.	Maize and Maize Meal.		Kaffir-corn.		Wheat and Wheat Meal.

1938	33,017	18,988	2,272	1,820	8,087	12,852
(*b*) EXPORTS.						
1934	1,675	1,048	73	54	89,545	88,919
1935	8,105	2,574	184	109	181,090	152,315
1936	395	284	656	589	90,250	65,796
1937	4,858	1,864	2,518	1,215	171,441	132,386
1938	26,196	11,514	52,770	35,614	152,776	155,807

Other crops of importance are barley, oats, peas, and beans, and there has been a noticeable increase in their production for local consumption during recent years. Since the famine in 1933-34 there has also been a considerable increase in the production of such vegetables as potatoes, cabbages, pumpkins, and carrots. The addition of these to the diet of the people is most beneficial.

Anti-soil-erosion work on a small scale was started in 1935, and was pushed forward steadily, though still on a small scale, during the first nine months of 1936. The work is now being rapidly extended as a result of a loan of £160,233 received for this purpose from the Colonial Development Fund.

The following table shows the progress that had been made up to the end of 1938.

ANTI-SOIL-EROSION WORKS.

Measure.	Previous to 1938.	During 1938.	Total to end of 1938.
Area reclaimed.....Acres.	8,316	19,240	27,556
Length of contour banks constructed.....Yards.	858,831	2,078,746	2,937,577*
Dams constructed.....No.	29	20	49
Trees planted.....No.	43,296	128,662	171,958
Area fenced.....Acres.	268	386	654

* Does not include the many thousands of yards of partially completed work cut by plant but still to be finished by manual labour.

The pasture in the areas treated shows a wonderful improvement.

The testing of a great variety of grasses, particularly stoloniferous varieties, for use in anti-soil erosion work is being done at the Maseru Experimental Station, which has been in existence since 1935.

Of recent years the Agricultural Department has pressed forward a scheme to induce the natives to construct gardens and to plant trees in the vicinity of their villages. The object of this is two-fold: first to provide vegetables, fruit, and firewood for local use, and secondly as a further preventive measure against soil erosion.

3. **Animal Husbandry.**—(i) *Sheep and Goats.*—Natural advantages permit the production in Basutoland of wool of the first class. Great importance is, therefore, attached to the production of good wool and the breeding of a better class merino sheep. The Administration has realized that for the attainment of these objectives both the health and the quality of the sheep must be closely studied. The eradication of sheep scab has thrown open the doors to progress in this direction, and in 1936 two further steps were taken, viz. the elimination of undesirable rams and legislation for compulsory dosing to combat internal parasites.

The emasculation of all bastard and Persian rams was, under an instruction issued by the Paramount Chief, largely carried out by the people and Basutoland has now been almost cleared of the type of ram which was doing great harm to the production of true merino wool. To replace these rams 1,748 good merino rams have been imported, and further numbers will be brought in from time to time. These rams are sold to the natives at cost price.

Compulsory dosing to combat internal parasites commenced in April, 1936. All sheep and goats are dosed once a month, and the cost is paid by the farmers. The co-operation accorded by native sheep farmers to the veterinary staff in carrying out this difficult task is an outstanding instance, amongst many, of the support given to difficult undertakings by the Paramount Chief and his people. It is gratifying that an improvement in the condition of the sheep is apparent. Free voluntary dipping for redwater is being introduced.

Owing to the lack of stability of the mohair market, the production of mohair is not encouraged.

(ii) *Cattle.*—The condition of cattle, in the past rather poor owing to overstocking, has improved, mainly owing to the toll taken by the 1933 drought, the survival of the fittest, and more favourable seasons. A cattle census taken in 1938 revealed a population of 434,990 units. The Basuto trek-ox is much sought after by Union farmers, but, owing to the internal demand for oxen for draught and pack purposes, the natives are reluctant to part with their animals.

In addition to the regulations prohibiting the entry of undesirable bulls, the following steps are being taken to improve the cattle in the territory:—

(1) A campaign for the emasculation of "scrub" bulls;

(2) the introduction from the Union of pure-bred Afrikander, Sussex, and Devon bulls;

(3) the establishment of "bull camps" in selected areas.

As a result of a considerable decrease in the incidence of anthrax in the territory, it is now considered sufficient to confine compulsory inoculation to actually infected areas only: cattle in such areas are inoculated twice a year. In addition, all cattle leaving the territory are inoculated immediately prior to removal.

(iii) *Horses.*—The famous Basuto pony has, owing to various causes, lost to a great extent many of the good features this breed at one time possessed. An attempt to rehabilitate horse stock is being made by means of the introduction of stallions of thoroughbred or Arab extraction. These stallions are distributed over the country and placed under the care of approved native horse masters. The scheme is very popular with the natives and promises to produce good results.

(iv) *Number of Live Stock at Censuses.*—The following table gives the number of live stock at certain periods:—

NUMBER OF LIVE STOCK AT CENSUSES, 1911 TO 1938.

Year.	Cattle.	Horses.	Mules.	Donkeys.	Sheep.	Goats.
1911*	437,411	87,997	1,415		1,368,999	988,668
1921*	580,666	153,733	6,584		1,859,712	895,358
1935	352,331	75,356	1,129	15,100	1,285,596	432,220
1936	414,572	84,650	1,275	22,361	1,264,344	410,620
1937	418,921	85,017	1,068	22,766	1,695,325	
1938	434,990	87,788	1,076	25,314	1,470,361	489,574

* Approximations only.

(v) *Exports.*—Exports by traders during the years 1934 to 1938 were as follows:—

EXPORTS OF CATTLE, WOOL, MOHAIR, AND HIDES AND SKINS, 1934 TO 1938.

Year.	Cattle.		Wool.		Mohair.		Hides and Skins.	
	No.	Value.	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.
		£	lb.	£	lb.	£	lb.	£
1934...	17,173	53,574	5,093,858	118,744	702,018	12,602	533,281	6,605
1935...	3,189	14,943	6,410,589	131,198	830,245	22,513	154,349	1,921
1936...	6,613	34,305	5,986,871	154,329	817,849	42,124	155,897	2,526
1937...	4,954	25,885	4,662,779	142,899	782,221	57,615	195,306	4,533
1938...	3,243	21,358	6,461,852	125,241	870,651	41,584	124,761	2,451

4. **Forests.**—There are no forests, and there is very little indigenous wood.

§ 11. Commerce and Industries.

1. **Trade.**—There are 199 licensed trading stations in the territory, which purchase produce from the natives and do a fairly large trade in blankets, clothing, prints, foodstuffs, etc. Under Proclamation No. 76 of 1936, restricted trading licences may be granted to natives, who pay a lower licence fee, and are prohibited from trading in wool, mohair, and live stock.

2. **Imports and Exports.**—The following table shows the imports and exports for a series of years. The returns of imports and exports are compiled from statistics furnished by the traders themselves. The former give the invoice cost of merchandise at the coast or wherever purchased.

VALUE OF IMPORTS AND EXPORTS, 1934 TO 1938.

Description.	1934.	1935.	1936.	1937.	1938.
	£	£	£	£	£
Imports—					
Total value	629,317	621,426	712,125	760,736	805,126
Government imports (included in above)	62,550	33,095	38,236	45,000	56,000
Exports—					
Total value	284,522	331,145	302,193	368,629	401,512

3. **Mining and Industrial Activities.**—There are no mines in the territory and no industrial activity has yet taken place.

§ 12. Railways, Roads, and Posts.

1. **Railways and Roads.**—There are no railways in Basutoland, with the exception of one mile of the South African Railways, which enters Basutoland at Maseru from the Orange Free State.

A good main road runs from Butha Buthe in northern Basutoland to Quthing in the south. It connects all the government stations with the exception of Qacha's Nek and Mokhotlong. Qacha's Nek is situated on the Drakensberg on the south-eastern border and is accessible to wheel traffic from East Griqualand only. No wheel traffic can reach Mokhotlong, which is two days' journey by pack transport from Himeville in Natal. All the government stations in the western part of the territory lie near the border and are connected by road with the nearest Union town or railway station.

The principal district stations after Maseru, which is twelve miles from the Orange Free State border town of Ladybrand, are: Leribe, about twelve miles from Ficksburg; Mafeteng, about sixteen miles from Wepener; and Mohale's Hoek, about thirty miles from Zastron.

Excepting the Orange River, at which there is a pont, all rivers of any size on the main road are bridged. The bridge over the Phuthiatsana or Little Caledon River, nine miles from Maseru, deserves notice as it is entirely of stone and has one 80-ft. and two 40-ft. arches. The Caledon River, which forms the western and north-western borders, is bridged at Caledon's Poort, near Butha Buthe, Ficksburg near Leribe, Peka, and Maseru, the last-named being a combined railway and road bridge. Bridges have been constructed over the Telle River, which forms the boundary between the Quthing and Herschel districts, and over the Makhaleng River, thus connecting Mohale's Hoek with Zastron.

2. **Posts, Telegraphs, and Telephones.**—There are 11 money order offices, and 36 postal agencies. The postal service is administered by the Postmaster-General of the Union, and deposits and withdrawals may be made with the Union Post Office Savings Bank at these offices. All the district offices, with the exception of Qacha's Nek, are connected from north to south by telephone, which is used very extensively by the general public. Through telephone line connexions between Maseru and Ladybrand, Leribe and Ficksburg, Mafeteng and Wepener, and Quthing and Lady Grey, are in operation. During the year 1938 a new issue of Basutoland postage and revenue stamps came into use.

The following table furnishes particulars of postal transactions for a series of years:—

POSTAL STATISTICS, 1933-34 TO 1937-38.

§ 13. Finance.

1. **Revenue.**—The territory is financially self-supporting, the principal sources of revenue being the native tax, customs, income tax, and wool export duty. The following table shows the revenue collected under the different heads during a series of years.

PUBLIC REVENUE, 1933-34 TO 1937-38.

Description.	1933-34.	1934-35.	1935-36.	1936-37.	1937-38.

3. **Native Tax.**—Hut tax was imposed when the country was first taken over by the British Government. It was, however, changed by the Basutoland *Native Tax Proclamation*, 1911 (since amended), to a personal tax payable by every adult male native domiciled in Basutoland. The present rate is twenty-five shillings per annum, and, in addition, if such native has more than one wife according to native custom, a further sum of twenty-five shillings for every such additional wife. No native, however, is liable to pay, in respect of himself and his wives, more than £3. 15s. in any one year. Further, an education levy of 3s. per annum is made on every adult male native. This levy is credited to a Native Education Fund, but for purposes of convenience it is collected with the tax.

The District Commissioners are in charge of the collection of the tax in their districts, a duty they carry out through the chiefs and headmen, who are nominally responsible to them for the collection in their respective wards. Paid native collectors operate in each district under the supervision of the district commissioners and in conjunction with the chiefs to whose wards they are appointed.

An office has been established in Johannesburg for the purpose of collecting tax from the Basuto, Bechuana, and Swazi employed on the gold mines. During the financial year 1937-38, £61,856 was collected by this office, which also deals with the domestic affairs of the Basuto, Bechuana, and Swazi labourers on the Rand.

4. **Licences.**—The following scale of licence fees operates in Basutoland:—

I.—*Trading Licences.*

	£	s.	d.	
(1) General trader	25	0	0	per annum
(2) Restricted native trader on a government reserve	5	0	0	,,
(3) Restricted native trader not on a government reserve	2	10	0	,,
(4) Commercial traveller—retail	15	0	0	,,
(5) Commercial traveller—wholesale	25	0	0	,,
(6) Agent of firm outside Basutoland purchasing produce for use or consumption outside Basutoland	15	0	0	,,
(7) Miller—Grinding capacity not exceeding 20 bags per day	3	0	0	,,
(8) Miller—Grinding capacity exceeding 20 bags day	10	0	0	,,
(9) Taxi	2	0	0	,,
(10) Baker	5	0	0	,,
(11) Butcher	5	0	0	,,
(12) Fruiterer	5	0	0	,,
(13) Refreshment rooms excluding native eating-houses conducted by natives	5	0	0	,,
(14) Motor garage	10	0	0	,,
(15) Commission agent	10	0	0	,,
(16) Insurance agent	10	0	0	,,
(17) Debt collector	10	0	0	,,
(18) Hawker not using vehicle or pack animals	1	0	0	per month
(19) Hawker using vehicles or pack animals per vehicle or 8 pack animals	2	0	0	,,
(20) Dealer in live stock	2	0	0	,,
(21) Apothecary	5	0	0	per annum
(22) Native sub-agent engaged under a licensed insurance agent	1	0	0	,,

Where any of the licences Nos. (1) to (17), (21), and (22) above is taken out after the 30th June in any year, the fee payable is one-half of that specified above.

For the transfer of a general trader's licence, ½ per cent. on the whole purchase consideration, subject to certain abatements, is charged. For the transfer of a commercial traveller's licence £1 is charged.

II.—*Motor Vehicle Licences.*

	Annual Licence Fee. £ s. d.
(*a*) For every motor cycle without side-car	15 0
(*b*) For every side-car or similar attachment	7 6
For every motor car—	
(*c*) not exceeding 1,500 lb. in weight	2 5 0
(*d*) weighing over 1,500 lb. and not exceeding 2,500 lb.	3 0 0
(*e*) weighing over 2,500 lb. and not exceeding 4,000 lb.	4 10 0
(*f*) weighing over 4,000 lb. and not exceeding 6,000 lb.	7 10 0
(*g*) weighing over 6,000 lb.	15 0 0
(*h*) for every motor car trailer or similar attachment	2 0 0

Note.—The above motor registration fees are reduced by one-half if paid after the 30th June in any year.

	s. d.
Transfer of motor car licence	5 0
Transfer of motor cycle licence	2 6
Motor car driver's licence	10 0
Motor cycle driver's licence	5 0

III.—*Other Licences.*

	Per Annum.
Labour agent	£15
Auctioneer	10

IV.—*Stamp Duties.*

Courts of Law.—The tariff of fees applicable to the Court of the Resident Commissioner and the Courts of the District Commissioners is laid down in Proclamation No. 24 of 1935.

Rates of estate and of succession duty are laid down in Proclamation No. 20 of 1935. The tariff of fees of the estates of deceased persons is laid down in Proclamation No. 19 of 1935.

The following fees are also payable:—

	£ s. d.
For registration of a marriage	2 6
For copy of marriage certificate	2 6
Passport	15 0
Renewal of passport, for every year renewed	2 0
For registration of patent—	
Filing application for registration of patent	10 0
Registration of patent	1 0 0
Renewal fees—	
Before the expiration of the third year of patent	2 0 0
Before the expiration of the seventh year of patent	3 0 0
Before the expiration of the tenth year of patent	5 0 0
(*Note.*—Any or all of the payments for renewals may be made in one sum.)	
On registration of any assignment, amendment, extension, or licence	10 0

5. **Currency.**—Under the provisions of Proclamations Nos. 53 of 1932 and 2 of 1933, notes of the South African Reserve Bank and silver and copper coin of the Union circulate, and are accepted as legal tender in Basutoland in the same manner as in the Union. Silver coin of H.M. Royal Mint in England was withdrawn from circulation within the territory as from the 16th January, 1933.

6. **Banking.**—There is a branch of the Standard Bank at Maseru.

BECHUANALAND PROTECTORATE.

CHAPTER II.

BECHUANALAND PROTECTORATE.

§ 1. History.

1. **Proclamation of British Protectorate.**—During the year 1885 Sir Charles Warren, who was in command of an expedition dispatched from England to pacify Southern Bechuanaland, where for some time previously hostilities had been proceeding between the Bechuana and the Boers from the South African Republic, visited the principal chiefs in Northern Bechuanaland (known as the *Bechuanaland Protectorate*), namely, Khama, Gaseitsiwe, and Sebele, and as a result a British Protectorate was proclaimed over their territories. No further steps were taken until the year 1891, when, by an Order-in-Council dated 9th May, the limits of the Bechuanaland Protectorate were more clearly defined, and the High Commissioner for South Africa was authorized to appoint such officers as might appear to him to be necessary to provide for the administration of justice, the raising of revenue, and generally for the peace, order, and good government of all persons within the limits of the Order. Sir Sidney Shippard, the Administrator of Bechuanaland, was appointed Resident Commissioner. An Assistant Commissioner was also appointed for the Southern Protectorate and another for the Northern Protectorate, the laws in force in the Colony of the Cape of Good Hope on the 10th day of June, 1891, being declared in force in the territory, *mutatis mutandis* and so far as not inapplicable. Subsequent legislation has been effected by Proclamation of the High Commissioner.

2. **Relations with the British South Africa Company.**—For fiscal and other purposes the Protectorate was treated as a portion of the Crown Colony of British Bechuanaland until the 15th of November, 1895, when the latter was annexed to the Cape Colony. In the autumn of that year arrangements were made for the transfer of the administration of the Bechuanaland Protectorate, with the exception of certain reserves for native chiefs, to the *British South Africa Company*. In 1896 the administration of the two areas above referred to was retransferred to the Imperial Government, by whom the Protectorate, in its entirety, is still governed under the name of the Bechuanaland Protectorate. It includes the Tati District, which is a portion of old Matabeleland, conceded in 1887 by Lobengula to Mr. S. H. Edwards.

3. **Proclamation of Crown Lands.**—In 1895 the Chiefs Khama, Sebele, and Bathoen visited England, and each of them abandoned all rights and jurisdiction in and over certain portion of his former territory. The lands thus abandoned by them were, by Order-in-Council dated the 16th day of May, 1904, declared Crown Lands, and all rights of His Majesty in or in relation thereto were vested in the High Commissioner for South Africa, who was empowered to make grants or leases of such lands on such terms and conditions as he might think fit, subject to any directions received from one of His Majesty's Principal Secretaries of State. Title to these lands was subsequently granted to the *British South Africa Company, Limited*, subject to certain reservations, and these lands are now known as the Tuli, Gaberones, and Lobatsi Blocks of farms.

By virtue of the Order-in-Council dated the 10th January, 1910, all other land situate within the limits of the Bechuanaland Protectorate, elsewhere than in the Tati district, was, and still is, vested in His Majesty's High Commissioner for South Africa, subject to all the provisions of the Order-in-Council of the 16th May, 1904, and to the following exceptions:—

(1) Such land as is either—

(*a*) included in any native reserve duly set apart by proclamation; or

(*b*) the subject of any grant duly made by or on behalf of His Majesty; and

(2) the forty-one farms known as "the Barolong Farms," held by members of the Barolong tribe by virtue of certificates of occupation issued by the Chief Montsioa on the 28th day of March, 1895.

4. **Later Developments.**—During the period 1896-97 the existing railway line connecting the Union of South Africa with Rhodesia was constructed by the Bechuanaland Railway Company, authorized thereto by High Commissioner's Proclamations.

In 1898 a limited number of farms were allotted at and in the neighbourhood of Ghanzi, in what was then the Ngamiland district of the territory, to settlers, some of whom had trekked thereto as prospectors in 1894.

In 1899 the boundaries of the Bamangwato, Batawana, Bakgatla, and Bangwaketse native tribes were established and defined by proclamation, and in 1909 the boundaries of the Bamalete native reserve were similarly fixed.

In 1911 the *Tati Concessions, Limited*, and its successors and assigns were confirmed by Proclamation No. 2 of 1911 in the full, free, and undisturbed possession as owners of all the land within the Tati district, subject to all the terms and conditions of the said proclamation, certain lands being assigned as a reserve for the occupation of natives. This reserve is under the control of the Government, and the natives residing within it hold and occupy the land included therein, subject to such rules and regulations as are from time to time proclaimed by the High Commissioner; and, subject to certain conditions safeguarding the interests of the natives, the company (now the *Tati Company, Limited*) retains the mining rights (including precious stones) over this native reserve.

In 1920 a European Advisory Council and a Native Advisory Council were established to advise the Resident Commissioner in matters affecting the Europeans and the natives respectively.

In 1933 an area of land, in extent 20,213 morgen 3 square roods, was set aside as a native reserve for the Batlokwa tribe. This land originally formed portion of the Gaberones Block.

§ 2. Boundaries, Area, and Physical Characteristics.

1. **Boundaries.**—The territory of the Bechuanaland Protectorate is bounded on the south and east by the Union of South Africa, on the north-east by Southern Rhodesia, on the north by the Zambezi and Chobe (Linyanti) Rivers, and on the west by the territory of South West Africa.

It has not been surveyed as a whole, but its area is estimated at 275,000 square miles. Its mean altitude is about 3,300 feet.

2. **Meteorology and Physical Features.**—The winter climate (May to August) is delightful. The heat during the other months is great, but there are occasional short, sudden and therefore treacherous changes from extreme heat to cold. Malarial fever is prevalent, being particularly severe in the neighbourhood of water-courses and other low-lying places, where, during and immediately after the season of the heavy rains (December to end of April), the dense bush, thick undergrowth, and rank vegetation afford excellent shelter to mosquitoes. The rainfall varies considerably over the territory from year to year; in an average year for most areas it lies between 18 and 25 inches, though heavier falls have been recorded.

The eastern portion of the territory has some fine hill scenery in comparatively close proximity to the Transvaal border. The remainder of the Protectorate, which at first sight appears to be perfectly flat, is in reality undulating, rich in grasses, shrubs, and trees, with occasional outcrops of limestone, but mostly of a sandy and waterless character. Old and well-defined river-courses indicate, however, that at one time the country was well watered, as indeed is still the case north and north-east of Lake Ngami.

§ 3. Protection of Game.

1. **Game Reserves.**—Two game reserves have been established in the territory. The Kalahari Game Reserve extends over the whole area of the Protectorate lying west and north of the Molopo River up to the 24th parallel of Latitude S, and continues northwards along the border of South West Africa

to Latitude S 22° 30′, this strip being bounded on the east by the 21st meridian of Longitude west. The Chobe Game Reserve occupies that part of the Protectorate lying north of Latitude S 19° 45′ and east of Longitude 23·8 east. In addition, a bird sanctuary has been proclaimed within a radius of four miles from Mogobane Dam in the Bamalete Reserve. Shooting is strictly prohibited in all these areas, and offenders are severely dealt with by the Courts.

2. **Species of Game.**—The following species of game are found in the territory:—

Royal Game.

Elephant	Eland
Giraffe	Rhino

Large Game.

Hippotamus	Setutunga	Springbok
Quagga	Hartebeest	Ostrich
Koodoo	Waterbuck	Crowned Crane or Mahem
Bushbuck	Oribi	Wattled Crane or Belkraan
Impala	Tsessebe	Giant Bustard or Compou
Rietbok	Zebra	Gemsbok
Puku	Wildebeest	Ground Hornbill
Buffalo	Nyala	
Sable Antelope	Ludwig's Bustard or Paauw	
Lechwi	Secretary Bird	
Stanley Bustard or Paauw		

Small Game.

Rhebok	Vaal Korhaan	Klipspringer
Bush Korhaan	Duiker	Dikkop
Steenbok	Guinea Fowl	Hare
Pheasant	Wild Goose	Partridge
Wild Duck	Grouse	Snipe
Plover	Black Korhaan	

3. **Hunting of Game.**—The hunting of Royal game without a special licence issued by the authority of the Resident Commissioner is prohibited, and persons found guilty of hunting Royal game are liable to a fine not exceeding £150 or to imprisonment up to 12 months.

Applications for shooting licences should be made to the District Commissioner of the area in which it is proposed to hunt. Before hunting in a native reserve it is necessary to obtain the Chief's permission in addition to the usual licences. Licences to shoot large game are usually endorsed with the number of head allowed; the number allowed depends mainly on the period of the licence. Permits for the introduction of all arms, ammunition, and intoxicating liquor must be obtained from the District Commissioner of the district for which licences have been issued.

Licences to shoot large game are issued at the following rates per person:—

Period.	*Residents.* £	*Non-Residents.* £
14 days	4	6
1 month	8	12
2 months	12	18
3 months	16	24
Exceeding 3 months	25	30

In addition, a gun licence (£2) must be taken out. This further entitles the holder to shoot small game, which consists of all game mentioned under the heading Small Game in paragraph 2 above and not included in the schedules of Royal and large game.

No licences are issued to shoot game in areas south of Latitude 24. The shooting of large game without licences is allowed in a tsetse fly area of some 80 miles by 20 miles round Maun.

The period commencing the 1st September and ending on the last day of February in the succeeding year is the close season for game.

The export of game trophies, game hides, and biltong is at present governed by the laws of the Union of South Africa.

§ 4. Administration.

The form of government is very similar to that which obtains in Basutoland. The territory is administered by a Resident Commissioner under the direction of the High Commissioner for Basutoland, the Bechuanaland Protectorate, and Swaziland, the latter possessing the legislative authority, which is exercised by proclamation. There is also an Assistant Resident Commissioner.

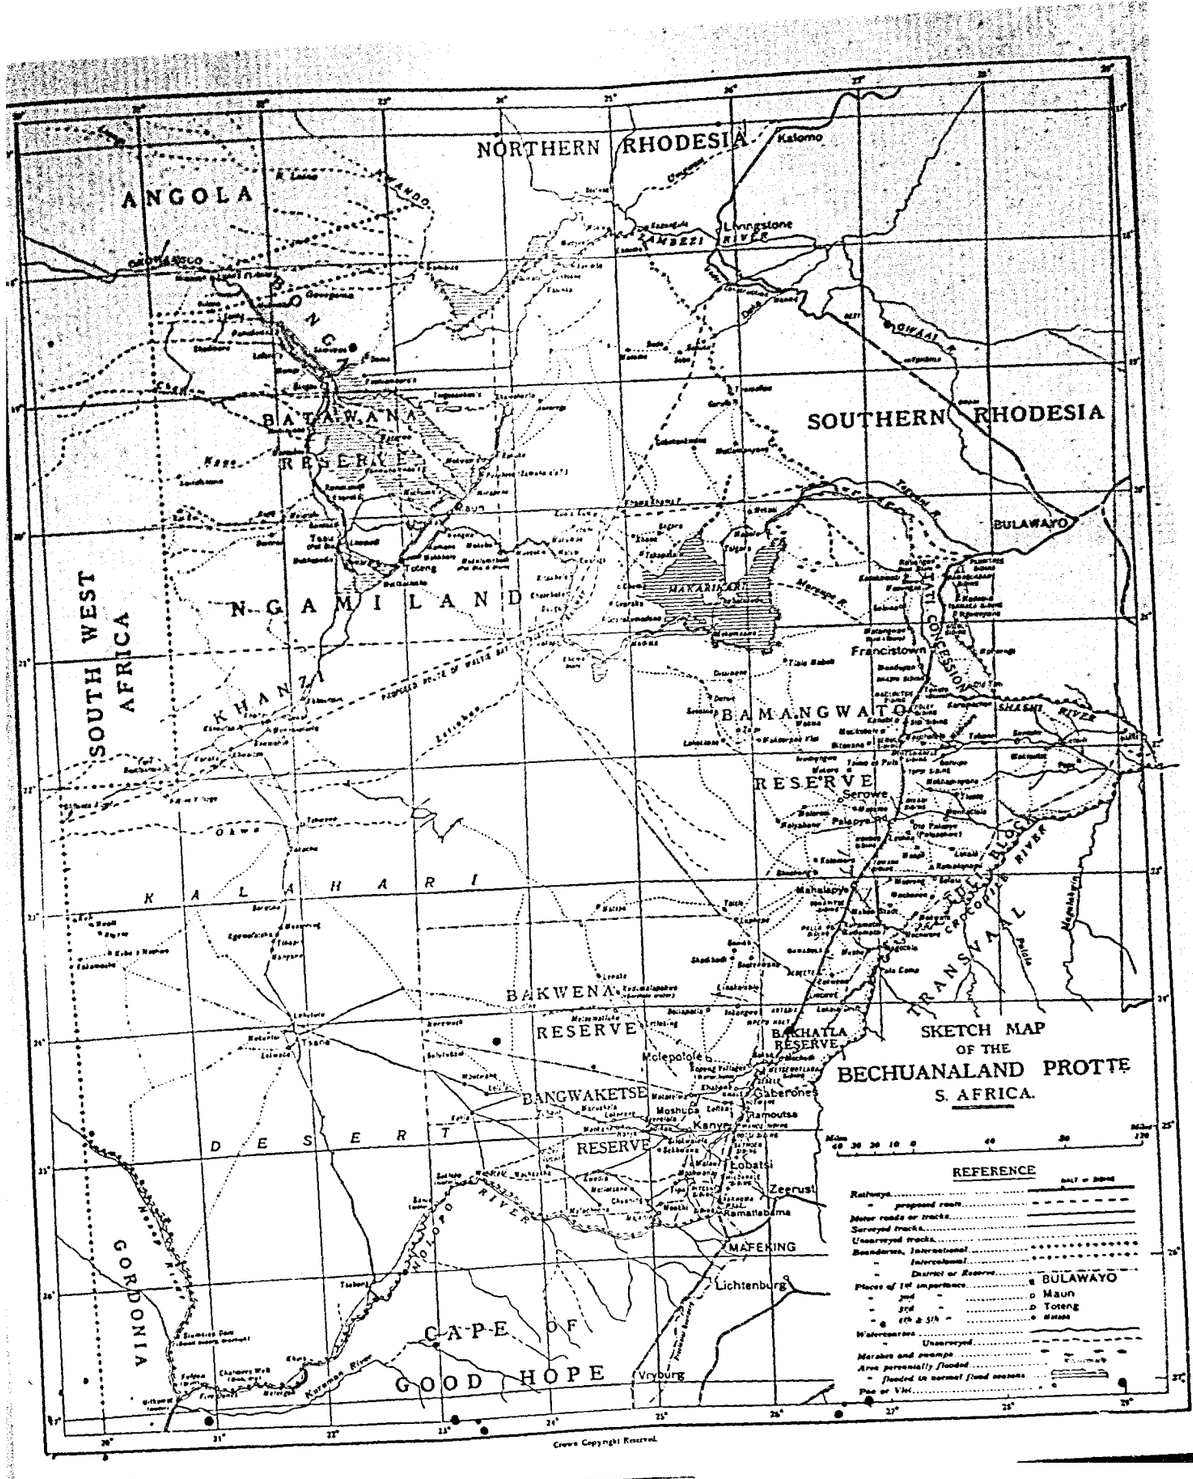
The territory is, for administrative purposes, divided into eleven districts, each with a district commissioner, who is assisted in the maintenance of law and order by a force of police.

The headquarters of the Administration, which is attached to the Colonial Service and is eventually responsible to the Dominions Office, are at Mafeking, in the Cape Province.

PRINCIPAL OFFICERS OF THE ADMINISTRATION.

Resident Commissioner and Commandant of Police	C. N. Arden Clarke.
Assistant Resident Commissioner	A. D. Forsyth Thompson.
Government Secretary and Director of Customs	
Financial Secretary, Master of the Resident Commissioner's Court, Chief Mining Commissioner	W. H. Russell.
First Assistant Secretary and Registrar	G. E. Nettelton, O.B.E.
Director of Education	H. J. R. Dumbrell, O.B.E., B.A.
Deputy Commandant of Police	Major R. K. F. Hurndall.
Principal Medical Officer	J. W. Stirling, M.B., Ch.B.
Chief Veterinary Officer	J. H. N. Hobday, B.Sc., M.R.C.V.S.
Chief Agricultural Officer	R. England, M.B.E.
Director of Public Works	W. G. Brind, O.B.E.

§ 5. Population.



The following tables give particulars regarding the population of the Protectorate according to the censuses taken in 1911, 1921, and 1936. No European population censuses corresponding to those taken in the Union in 1918, 1926, and 1931 were taken in the Protectorate.

§ 6. Vital Statistics and Migration.

1. **Registration of Births, Deaths, and Marriages.**—The registration of births is voluntary and is governed by Act No. 20 of 1880 of the Colony of the Cape of Good Hope, which is applicable to the Bechuanaland Protectorate. Only details of non-natives are registered.

The solemnization of marriages is governed by Proclamation No. 1 of 1917, as amended by Proclamations Nos. 14 of 1917 and 72 of 1922. Most natives secure their brides by the payment of "bogadi" cattle to the parents of the bride.

2. **Migration Regulations (Europeans).**—Under the provisions of Proclamation No. 8 of 1929 the Resident Commissioner may, by written notice or by written or telegraphic authority to the district commissioner of any district, prohibit any person from entering or remaining in such district, if, in his opinion, the presence of such person therein is likely to be prejudicial to the peace and good government of the Protectorate, or to the interests of the natives living therein. These provisions do not apply to any native ordinarily resident in the Protectorate, nor to any person living therein in the exercise of any rights held by him under any law. The penalties for contravening the provisions of the proclamation are a fine not exceeding £10 or imprisonment with or without hard labour for a period not exceeding one month. Proclamation No. 34 of 1932, as amended, regulates the entry of immigrants, other than native immigrants, and prohibits the entry of undesirables into the Bechuanaland Protectorate.

§ 7. Public Health.

1. **Public Health Laws.**—The provisions of the *Public Health Acts* of the Colony of the Cape of Good Hope passed previously to 10th June, 1891, are, *mutatis mutandis*, in force within the territory, and new regulations are introduced by proclamation. The provisions of Part I of the *Police Offences Act*, No. 27 of 1882, have been applied by proclamation to the areas of Gaberones, Francistown, Lobatsi, and Palapye.

By Proclamation No. 12 of 1924, as amended by Proclamation No. 51 of 1934, the Resident Commissioner is empowered, subject to the approval of the High Commissioner, to make regulations for the purpose of preventing the introduction into or dissemination within the territory of any infectious or contagious disease, and to make local public health regulations. Special provision for the preservation of health and the regulation of sanitation in matters connected with prospecting and mining is promulgated under Proclamation No. 54 of 1934.

No one may practise within the territory as a medical practitioner, dentist, chemist, nurse, or midwife without being registered in accordance with the provisions of Proclamation No. 62 of 1934, as amended by Proclamation No. 7 of 1937. Any person desiring to be registered shall make application in writing to the Principal Medical Officer, shall provide such proof as may be required that he possesses the qualifications prescribed by the proclamation, and shall make a sworn declaration in support thereof. The approval of the Resident Commissioner is required before registration takes place.

The Principal Medical Officer may, if satisfied that the interests of the public necessitate medical, dental, or pharmaceutical services additional to those supplied, approve that other persons may practise in these capacities, by permission of the Resident Commissioner.

2. **Hospitals and Medical Service.**—The Principal Medical Officer is stationed at Mafeking. There are Government Medical Officers at Lobatsi, Gaberones, Serowe, Mahalapye, and Francistown, and in charge of two travelling dispensaries. The Railway Section through the Protectorate is attended by the Principal Medical Officer and the Medical Officers at Lobatsi, Gaberones, and Francistown, in addition to their other duties. Subsidized missionary doctors are stationed at Kanye, Mochudi, Maun, Sofala, and Khale.

There are government hospitals at Lobatsi, Serowe, and Francistown, mission hospitals at Kanye, Mochudi, Molepolole, Maun, and Sofala. The al, Mafeking, deals with cases among the staff at headquarters. government travelling dispensary units, each comprising two ing in the Kalahari and north of Francistown respectively.

In the Tati district regular visits are made by ministers of the Wesleyan Church and the Church of the Province of South Africa, who also have congregations in the southern portion of the territory on the Barolong farms and in the Bakwena Reserve, respectively.

Dr. Livingstone, the famous missionary and explorer, spent several years working at a mission station at Kolobeng in the Bakwena Reserve; the site of the mission station has now been proclaimed a historic monument.

At Molepolole there is the Livingstone Memorial Hospital, which was built some time ago by the Free Church of Scotland Mission.

The leading missions assist considerably with school work, and in most instances the secretaries of the Tribal School Committees are missionaries who do voluntary work in that capacity.

§ 9. Labour and Wages.

1. **Labour in the Protectorate.**—The European population of the Protectorate being small, and there being no industries of any magnitude in the territory, apart from the Tati gold mines, the demand for native labour within its borders is consequently restricted and confined chiefly to work in farming operations within the comparatively small areas open to white settlers in the Francistown and Ghanzi districts and in the Tuli, Gaberones, and Lobatsi blocks of farms.

2. **Labour Recruiting.**—The Protectorate offers a large field of operations for recruiters of native labour for work on the mines and elsewhere outside the territory, but the general financial depression which prevailed during 1932, and the resultant closing of many mines, greatly reduced the volume of recruiting. No person may act as a labour agent within the Protectorate, unless he is the holder of a current, non-transferable licence for that purpose, issued to him by the Resident Commissioner or by some officer duly authorized by the Resident Commissioner to issue such licences.

Any person applying for a labour agent's licence is required to deposit £100 or to find security to the like amount to the satisfaction of the Resident Commissioner or other authorized officer, and must also fix a *domicilium citandi et executandi* within the territory, where all civil process in respect of any breach of contract or recovery of wages may be served. Every application for such licence must be accompanied by a statement in writing, signed by the proposed employer, giving his name and address, the nature of the proposed employment, the rate of wages at which the native labourers are to be engaged, and any further particulars as to the proposed terms of service which the officer issuing the licence may demand. No concession or contract, by which any native chief or headman purports to bind himself or his people to provide labourers, is valid.

The native tribes of the territory are well behaved as a whole, ready to act on the advice of the Resident Commissioner and of his officers, and the Administration is therefore in the happy position of being free from labour problems which affect other countries.

The following table furnishes information for the years 1933 to 1938 of the number of passes issued to Bechuanaland natives to proceed to the Union of South Africa for purposes of labour or visiting:—

PASSES ISSUED TO BECHUANALAND NATIVES TO PROCEED TO THE UNION FOR PURPOSES OF LABOUR OR VISITING, 1933 TO 1938.

YEAR.	LABOUR.				Visiting.	Grand Total.
	Mines.	Agri-culture.	Mis-cellaneous.	Total.		
1933	4,716	730	2,367	7,813	5,809	13,622
1934		Comp	lete figures	not availab	le.	
1935	6,198	98	1,890	8,186	2,729	10,915
1936	6,639	30	690	7,359	2,186	9,545
1937	9,401	2	1,224	10,627	1,982	12,609
1938	11,183	—	1,242	12,425	2,196	14,621

3. **Wages and Cost of Living.**—The conditions as to wages and the increase caused by the war in the cost of foodstuffs and other necessaries of life are, to all intents and purposes, similar to those at present existing in the Union of South Africa.

4. **Sale of Intoxicating Liquor.**—No intoxicating liquor may be introduced into the territory without the permission in writing of the Resident Commissioner, a district commissioner, or a commissioned officer of police. The sale or gift of liquor to any native is strictly prohibited. The word "native" is understood to mean "any aboriginal native belonging to any native tribe, including half-castes and all persons of mixed race living as members of any native community, tribe, kraal, or location."

Apart from the licence issued to the Rhodesia Railways, Limited, for the sale of refreshments on passenger trains running through the Bechuanaland Protectorate, there are only seven licences for the sale of liquor in the territory. These are granted in respect of premises along the railway line at places where accommodation is necessarily provided for travellers, and there is also one at Maun in Ngamiland.

§ 10. Administration of Justice.

1. **High Court.**—Proclamation No. 50 of 1938 abolished the Special Court which had functioned since 1912 and established a High Court (presided over by a judge), which posesses and exercises, in respect of civil and criminal proceedings arising in the territory, all the jurisdiction, power, and authorities vested in the Supreme Court of South Africa.

The High Court is the Court of Review and Appeal within the territory. The right of appeal to the Privy Council, provided for in section *three* of Proclamation No. 2 of 1896, lies against any final judgment, decree, sentence, or order of the High Court.

There must be at least two sessions of the High Court a year, and the judge may direct that any trial may be held and any appeal heard with the aid of not more than two administrative officers, who are to be appointed for that purpose by the Resident Commissioner. The Court may also call to its assistance one or more native assessors, who shall be chosen by the Resident Commissioner from Chiefs, sub-Chiefs, headmen, or other natives suitably qualified to aid the court. The opinion of each officer and native assessor so associated with the court shall be given and shall be considered by the court, but the decision is vested exclusively in the judge.

The jurisdiction of the High Court is exercisable, so far, as regards procedure, practice, and evidence in criminal cases, in the manner provided by the *Bechuanaland Protectorate Criminal Procedure and Evidence Proclamation*, 1938 (No. 52 of 1938).

The court may at any time make rules of court for regulating the proceedings of the High Court and subordinate courts.

At any time when the High Court is not in session the Assistant Resident Commissioner has power and authority to exercise the civil and criminal jurisdiction of the Court in all countries and applications (including applications for arrests and interdicts of persons and things), in all actions for provisional sentence, and in all other causes in which either the plaintiff or the defendant is in default or in which consent to judgment is filed by the defendant.

By section *two* of Proclamation No. 2 of 1896 the Resident Commissioner has all the powers of the Supreme Court of South Africa in civil matters but no original jurisdiction.

2. **Subordinate Courts.**—Proclamation No. 51 of 1938 establishes three classes of subordinate courts with jurisdiction in the districts within which such courts are situated. The jurisdiction of these courts is limited in civil and criminal matters by the terms of that Proclamation, and in every case an appeal lies to the High Court.

Under High Commissioner's Notice No. 151 of 1925 (published in the *Official Gazette* of the 9th October, 1925), a Rule of the Court of the Resident Commissioner provided scales of fees and charges to be taken and made by attorneys of the courts of the Bechuanaland Protectorate in civil cases, where the cause of action exceeds £50, and in applications for compulsory sequestration and voluntary surrender of estates as insolvent.

The following table shows the number of convictions for criminal offences during the last five years. For the years 1934 to 1936 and for 1938 the statistics for Superior Courts include cases where sentences beyond the limit of an Assistant District Commissioner's jurisdiction were passed by district commissioners. The 1937 figures reflect only cases coming before the Special Court.

CONVICTIONS FOR CRIMINAL OFFENCES, 1934 TO 1938.

Description.	1934.	1935.	1936.	1937.	1938.
(i) INFERIOR COURTS.					
Offences against the Person	100	117	141	204	159
Offences against Property	258	200	321	272	259
Tax and Pass Laws, etc.	251	679	523	493	611
Other Offences	795	758	599	565	812
TOTAL	1,404	1,754	1,584	1,534	1,841
(ii) SUPERIOR COURTS.					
Homicides	9	12	12	2	5
Other Offences against the Person	19	6	17	5	12
Offences against Property	96	15	28	1	66
Other Offences	16	10	77	—	21
TOTAL	140	43	134	8	104

These figures do not include cases tried by native tribunals in accordance with Proclamation No. 75 of 1934.

3. **Witnesses' Expenses.**—Tariffs of allowances payable to witnesses in any criminal proceedings in the Bechuanaland Protectorate are framed under the provisions of Proclamation No. 13 of 1898 as amended and No. 7 of 1914, and are published under High Commissioner's Notices No. 34 of 1906 and No. 15 of 1914. The former contains the reciprocal tariff approved as regards neighbouring colonies, and the latter contains the tariff for witnesses residing within the Bechuanaland Protectorate. Witnesses from neighbouring colonies are paid allowances at the rate of from 10s. to £2. 10s. per diem, and allowances ranging from 2s. to £1 per diem, according to the status of the person, are paid to those residing within the territory.

4. **Prisons.**—There is a prison at Francistown and another at Gaberones. At other centres there are lock-ups. The prison regulations framed under and by virtue of Proclamation No. 10 of 1939 were published under Government Notice No. 45 of 1939.

§ 11. Defence and Police Organization.

1. **General.**—There are no military forces in the Protectorate. For the maintenance of law and order, however, there is a force of police known as the Bechuanaland Protectorate Police. The force is under the direct control of the Resident Commissioner, who is also Commandant. The Deputy Commandant is the executive officer in command, with headquarters at Mafeking.

Proclamation No. 41 of 1927 provided for the establishment and maintenance of the Bechuanaland Protectorate Police Force. This proclamation repealed Proclamation No. 22 of 1896, which applied the provisions of Part 2 of the *Cape Mounted Riflemen Act* (Cape of Good Hope), No. 9 of 1878, to which the force was formerly subject as regards discipline. High Commissioner's Notice No. 99 of 1927, as amended by Notice No. 129 of 1928, published under the aforesaid proclamation, contained the disciplinary regulations to which the members of the force are subject. On December 17th, 1937, the new *Bechuanaland Protectorate Police Proclamation* and Regulations came into force under Proclamation No. 69 of 1937 and High Commissioner's Notice No. 212 of 1937. Proclamations Nos. 41 of 1927, 39 of 1935, and 8 of 1936 were

repealed except in so far as those members of the police force are concerned who, at the commencement of this proclamation, were serving in the force, and who have not exercised their power of election to serve under the new proclamation and regulations.

The European personnel comprises 7 officers, 4 warrant officers, and 41 other ranks. There are 232 native non-commissioned officers and men.

A training depot is maintained at Gaberones, where there is also a Criminal and Finger-print Bureau. The force is distributed in small detachments at various places in the Protectorate.

2. **Arms and Ammunition.**—No arms or ammunition may be brought into the territory or delivered to anyone within its boundaries, without the permission in writing of the Resident Commissioner or of an assistant commissioner or a district commissioner duly authorized by the Resident Commissioner to grant such permission.

§ 12. Land Tenure and Water Supply.

1. **Land Tenure.**—The amount of transfer duty payable in the territory is two pounds per centum.

No policy has yet been disclosed as regards the Crown lands defined by the Order-in-Council of the 10th January, 1910, and no occupation or ownership, or claims of right to occupation or ownership, by any person of European birth or descent in respect of any land within the limits of the territory, and no concession or grant of any right, title, or privilege to deal with or authorize the occupation or ownership of any such land, may be recognized as valid or legal, unless or until approved in such mode as has been or may hereafter be appointed by the High Commissioner.

Outside the native reserves no tribal claims to land in the Protectorate may be acknowledged by His Majesty's Government, unless such claims are based upon an occupation commencing at a date prior to the Proclamation of the High Commissioner constituting such land a protectorate or incorporating such land in the Protectorate, or unless such land has been subsequently occupied with the express consent of the High Commissioner.

No concession by any native chief, whether or not accompanied or supported by any power of attorney or instrument or document of procuration, and no power of attorney or instrument or document of procuration granted by any such chief coupled with an interest in favour of some other person, whether such interest be apparent or not in the face of such power, instrument, or document, can be recognized by any court of law unless and until sanctioned and approved by His Majesty's Secretary of State.

The native reserves are held under tribal tenure and are inalienable. No person of European birth or descent may carry on business of any description therein, without having first obtained the consent of the chief and his councillors.

2. **Water Supply.**—Apart from the rivers Marico, Limpopo, Zambezi, and Chobe, and apart from the Okavango marshes and their outlets, there are practically no surface waters in the territory, except in the rainy season. In the dry season, when the rain-pools disappear, water can, however, usually be obtained at no great depth by sinking in the sandy beds of the larger rivers. Water-boring and well-sinking operations, in comparatively close proximity to the eastern border of the territory, have given good results.

A four year grant made from the Colonial Development Fund has enabled considerable progress to be made in the development of water supplies. Under this grant 86 boreholes have been completed since the beginning of the scheme, of which 58 have been successful. Native well-sinking parties have been busy deepening existing wells and increasing storage capacities.

A dam to conserve 360,000,000 gallons of water has been completed in the Bangwaketse Reserve. Seven dams have been constructed in the Bakgatla Reserve, and three in the Batlokwa Reserve. Work has started on a dam near Kanye, in the Bangwaketse Reserve. When completed this dam will hold 243,000,000 gallons of water.

§ 13. Agriculture and Pastoral Production.

1. **Agriculture.**—Although maize, kaffir-corn, beans, pumpkins, and melons are reaped in large quantities by the natives when the season is favourable, the rainfall is insufficient, or too uneven and uncertain in its distribution, to render agriculture anything but a hazardous pursuit. Tobacco for private consumption only is grown in small quantities in the northern part of the territory.

2. **Witwatersrand Agricultural Show.**—In 1931, 1932, and 1935 very successful and attractive displays indicating the potentialities of the Bechuanaland Protectorate, including karosses, cheese, etc., were exhibited at the Witwatersrand Agricultural Show. The exhibits by reason of the variety and merit of the individual items, together with their arrangement and general *ensemble*, constituted in each case one of the outstanding features of the show, and in 1931 and 1932 won a special prize, the "Connock" Perpetual Challenge Trophy, for the best low veld district exhibit, as well as a 1st prize of £100, and in 1935, the gold medal.

3. **Live Stock.**—On 30th November, 1938, the cattle population of the territory was 649,424, and the small stock population 438,683.

4. **Export of Cattle.**—Owing to the cattle surplus in the Union, the export of Protectorate cattle to the open markets of the Union was stopped in February, 1923, when the quarantine camp was closed. In addition and for a similar reason, restrictions as to weight and condition were imposed on Protectorate slaughter cattle on 1st March, 1924. All exported animals, except those intended for overseas, had to scale a minimum of 800 lb. live weight, and the carcass to dress 50 per cent. of the estimated live weight.

In January, 1926, this live weight standard was increased to 1,050 lb. for oxen (bulls and bull stags being absolutely excluded), but was fixed at 790 lb. for cows, dead meat to conform to these standards. With the outbreak of foot and mouth disease in Rhodesia in the early part of 1931, all cattle markets in the Union were closed to the Bechuanaland Protectorate north of Palapye Road.

A veterinary inspection fee of 2s. 6d. was imposed in 1938 on all cattle leaving the territory. Since 1st December, 1930, Bechuanaland Protectorate cattle have been allowed to be reconsigned from the quarantine section of the Johannesburg abattoir to the surrounding Reef abattoirs. (See also § 15.)

The exports of cattle, sheep and goats, pigs, wool, and hides and skins for a period of five years were as follows:—

EXPORT OF CATTLE, SHEEP AND GOATS, PIGS, WOOL, AND HIDES AND SKINS, 1934 TO 1938.

Year.	Cattle.		Sheep and Goats.		Pigs.		Wool.		Hides and Skins.
	No.	Value.	No.	Value.	No.	Value.	Quantity.	Value.	Value.
		£		£		£	lb.	£	£
1934.....	1,600	450	4,711	2,626	31	69	587	250	20,370*
1935.....	12,466	62,330	19,638	14,729	1,433	1,748	1,608	39	17,043*
1936.....	13,134	105,072	10,967	9,452	472	944	664	9	23,777*
1937.....	5,098	45,000	945	900	798	1,250	—	—	20,000*†
1938.....	21,570	172,730	15,515	9,678	1,941	3,882	443	7	18,313*

* Includes skins of wild animals and karosses.
† Approximately.

5. **Licensed Sale of Stock.**—Persons, other than those licensed as general traders or butchers within the territory, who desire to purchase, or acquire by exchange or barter, live stock within the Protectorate, for export therefrom, are required to obtain a licence to do so. Applicants for such licences deposit £100, or find security to that amount to the satisfaction of the Resident Commissioner or other authorized officer, and are required also to fix a *domicilium citandi et executandi* within the territory. Such deposit or security may be taken in execution in whole or in part for the purpose of satisfying judgments of any competent court within the Bechuanaland Protectorate, whereby the person who made such deposit or found such security is required to pay any sum, whether by way of damages, costs, or otherwise, to any person domiciled within the Protectorate. An applicant is further required to have been duly registered as the proprietor of a brand within the Protectorate. Purchase for export licences cost £5 per quarter, but the High Commissioner may order that they shall be issued for any calendar year or portion thereof without payment of any fee therefor. They are not transferable, and are issued subject to such conditions as to the local limits within which cattle may be purchased or acquired as the Resident Commissioner may impose, and the issue or renewal thereof may be refused without any reason being given.

The term "live stock" includes any horse, mare, gelding, colt, filly, mule, or ass; any bull, cow, ox, heifer, or calf; and any sheep, goat, or pig.

6. **Restrictions on Imports.**—As a precautionary measure against the introduction of contagious animal diseases—especially East Coast fever, the spread of which to the territory the Administration has so far succeeded in preventing—no cattle, sheep, pigs, goats, horses, mules, and donkeys, and no hay, horns, and skins, and no vehicle (except railway vehicles and motor cars) or wagon-gear, cart-gear, or harness may be introduced into the Bechuanaland Protectorate without the written permission of the Resident Commissioner or other duly authorized officer; and no horned cattle may be removed from one district to another within the territory without the permission in writing of the Chief Veterinary Officer, or, within a district, without permission in writing from the district commissioner or some other official authorized by the Resident Commissioner. The Resident Commissioner has power to order, in case of emergency, that all movement of cattle from any place to any other place within the territory be forthwith stopped.

7. **Equines.**—Horses and mules are very liable to contract the disease of horse-sickness in the territory. Consequently there are comparatively speaking few of these animals in the Protectorate.

8. **Forest Resources.**—Certain northern districts of the territory are well wooded, and smaller timber is plentiful in the south, whence a large quantity of dead wood for fuel is exported to the diamond diggings in the Transvaal. Timber suitable for mining props is also sent out of the country.

9. **Co-operative Societies.**—The formation, registration, and management of co-operative agricultural societies within the territory are governed by Proclamation No. 2 of 1910.

10. **Bush Fires.**—Useful legislation was passed in 1927 (Proclamation No. 27) enabling the Administration and settlers in any declared area of the Francistown district to co-operate in combating bush and grass fires.

§ 14. Mines.

1. **Gold and Silver.**—The only portion of the territory in which gold mining has so far been carried on is the Tati district. This has been done on a small scale for years.

The output of gold and silver for the last five years has been as follows:—

PRODUCTION OF GOLD AND SILVER, 1934 TO 1938.

Year.	Gold.		Silver.	
	Quantity.	Value.	Quantity.	Value.
	Fine oz.	£	Fine oz.	£
1934.....	9,485	65,578	978	90
1935.....	11,419	73,324	1,758	176
1936.....	16,723	117,061	1,350	79
1937.....	17,577	122,184	1,499	89
1938.....	19,111	133,139	1,127	122

2. **Mining Proclamation, 1932.**—*The Mines and Minerals Proclamation* (No. 33 of 1932), promulgated on the 12th August, 1932, for the first time introduced legislation providing for prospecting and mining within the territory, with the exception of the land known as the Tati district, which is specially excluded.

Under the proclamation land is divided into:—

(*a*) Crown land and land not held under mineral concession.

(*b*) Land held under mineral concession, i.e., land situate in a native reserve granted by the chief and the tribe with the approval of the Secretary of State for the purpose of prospecting and mining.

(*c*) Private land.

On Crown land, in respect of which the proclamation has been applied, prospecting is allowed either—

(*a*) Under an exclusive right conferred by means of a Crown grant.

(*b*) Under prospecting permit, provided the land has been declared open to prospecting.

On private land or land held under mineral concession, to which the proclamation has been applied, public prospecting may take place only with the consent of the owner as defined by the proclamation, or of the holder of the mineral concession, as the case may be. Before an owner of private land or the holder of a mineral concession may himself prospect, he is required to obtain a prospecting permit. On native reserves, to which the proclamation has been applied, prospecting may be carried out:—

(*a*) Under mineral concession obtained from the chief and the tribe, provided the consent of the Secretary of State has been obtained.

(*b*) Under a Crown grant issued with the consent of the owner, as defined in the proclamation.

(*c*) In the case of public or general prospecting on native reserves under the authority of a prospecting permit, provided the land has first been declared open to such prospecting.

The holder of a prospecting permit may peg a maximum of 500 claims, but no restriction as to the number of claims which may be pegged is imposed on the holder of a mineral concession in respect of the area he holds under such concession, or on the owner of private land in respect of the land owned. The extent of a claim is fixed at 400 by 150 feet, or 60,000 square feet, and the rate of licence payable thereon varies according to the period for which the claim is held.

In the regulations published by the High Commissioner under the provisions of the Proclamation, "Mining Title" is defined as:—

(*a*) Claims for which a certificate of registration has been issued by the Registrar of Deeds.

(*b*) Mineral concession (whether granted previously or subsequently to the proclamation).

(*c*) Crown grants duly registered as required by the proclamation.

A special chapter of the proclamation is devoted to prospecting and mining for diamonds. Prospecting for or winning diamonds may not take place on any private land, unless it has first been declared open for such purpose, and prospecting for or winning diamonds on Crown land or native reserves may take place only under the authority of a Crown grant.

For purposes of administration, provision is made for dividing the territory into mining districts, each district being under the control of a mining commissioner, with authority to issue prospecting permits and claim licences, and generally to supervise and administer his district in accordance with the provisions of the Proclamation.

The Crown lands comprising the districts of Ghanzi, Kgalagadi, and Chobe, excluding that portion of the game area defined by High Commissioner's Notice No. 139 of 1933 and falling within the Chobe district, were made available for public prospecting for minerals, except diamonds, as from the 5th January, 1934.

§ 15. Trade.

Imports consist chiefly of cotton blankets, articles of clothing, ploughs, iron and tin ware, and groceries. Exports consist mainly of horned cattle, small stock, hides, skins, dairy products, and wood, and, in seasons of abundant harvest, maize and kaffir-corn.

The total value of imports and exports during the years 1934 to 1938 was as follows:—

VALUE OF IMPORTS AND EXPORTS, 1934 TO 1938.

Heading.	1934.	1935.	1936.	1937.	1938.
	£	£	£	£	£
Imports—Total Value	178,674	310,562	363,270	341,536	361,316
Exports—Total Value	139,138	260,204	347,858	243,187	375,719

The Bechuanaland Protectorate is a native territory, the inhabitants of which are engaged mainly in cattle rearing. The distribution among the various tribes of improved bulls bred in camps situated in the reserves, and the restriction of cattle exportations to the Union to a certain weight of animal, contribute in different ways to the improvement of native stock. For veterinary reasons, the export of cattle to the Union is further restricted to consignments intended for approved abattoirs, and (without restriction as to weight) for export overseas, while to South West Africa and Southern Rhodesia it is absolutely prohibited. Export through Northern Rhodesia to the Belgian Congo has not been resumed since 1932, and the indications are that this market has been lost.

The sheep, goats, and pigs exported to the Union of South Africa and to the Rhodesias up to the end of 1932 commanded a fair market, but veterinary restrictions on account of foot and mouth disease caused practically a "close down" of the territory until the latter end of 1934, when certain concessions of export were again granted. Since April, 1935, when cattle export to Johannesburg was resumed, together with other cattle export to Durban for slaughter and export overseas and the export of frozen beef from the Lobatsi abattoir, the cattle export trade has resumed fairly normal conditions.

The export of hides and skins was permitted only under strict government supervision of disinfecting and storage. The same conditions applied to furs, wild animal skins, karosses, curios, etc., with the exception that these could be exported for disposal in the Union after having been in sealed containers and under government supervision for three months. In September, 1935, normal conditions were resumed. (See also § 13, para. 4, of this chapter.)

The trade in dairy products by the European settlers is promising. The exports during the last five years have been as follows:—

EXPORTS OF DAIRY PRODUCTS, 1934 TO 1938.

Year.	Butter.		Butter-fat and Cream.		Cheese.	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.
	lb.	£	lb.	£	lb.	£
1934	423,127	31,786	*	*	11,204	628
1935	139,497	9,750	1,175	411	2,985	110
1936	214,135	11,457	9,315†	3,493	1,815	99
1937	354,120	19,859	—	—	1,080	54
1938	390,534	26,630	75	4	—	—

* Owing to foot and mouth disease position, no butter-fat or cream was exported.
† Gallons.

The opening of the Lobatsi Creamery by the Bechuanaland Cold Storage Company, Ltd., has been of much assistance to the Protectorate's dairy industry. This butter factory is rapidly going ahead and is an asset to both the operating company and the Protectorate. A second creamery was erected at Francistown during 1932 and serves the needs of the northern part of the territory.

The following table shows the quantity and value of maize, maize meal, and kaffir-corn imported and exported for a series of years:—

IMPORT AND EXPORT OF MAIZE, MAIZE MEAL, AND KAFFIR-CORN, 1934 TO 1938.

Year.	Maize.		Maize Meal.		Kaffir-corn.	
	Quantity. Bags (200 lb).	Value. £	Quantity. Bags (180 lb).	Value. £	Quantity. Bags (200 lb).	Value. £
(a) Import.						
1934	2,369	1,528	15,563	9,311	1,641	1,237
1935	2,592	1,267	30,472	14,330	3,436	1,673
1936	7,785	5,927	24,565	15,627	5,059	2,966
1937	2,089	1,389	23,922	14,645	7,002	3,507
1938	7,918	4,589	34,958	22,122	20,554	13,979

1935	4,070	1,682	6,710	3,641	18,145	8,004
1936	3,289	1,547	10	10	32,672	21,853
1937	356	118	—	—	25,825	11,391
1938	500	125	174	126	3,530	1,981

The manufacture of what are known as "native curios" is an industry that in South Africa might be said to be peculiar to the Bechuanaland Protectorate. Animals, birds, etc., of the country are carved by the natives in a soft wood (the Monyelemycle tree) and decorated by burning with a hot iron. These are much sought after by travellers passing through the territory, the natives swarming around the trains at any stopping place for the purpose of selling them. This native trade, so attractive to railway passengers and lucrative to the natives, is allowed to continue, subject, however, to the good behaviour of the sellers on the railway lines.

For customs purposes the territory is dealt with, by agreement, as a part of the Union of South Africa, the Treasury of the Union paying out quarterly to the Bechuanaland Protectorate a sum bearing to the total customs revenue of the Union in each year the same proportion as the average amount of the customs revenue of the territory for the three completed financial years last preceding the taking effect of the *South Africa Act*, 1909, bore to the average amount of the whole customs revenue for all the colonies and territories included in the Union received during the same period. That proportion is 0·27622 per cent. of the total customs revenue of the Union. The territory collects its own customs duties on spirits and beer manufactured in the Union of South Africa, or in any British protectorate or possession in South Africa, the Government of which has entered into a customs agreement with the Union. An agreement on the same lines has been entered into with the Government of Southern Rhodesia.

§ 16. Railways and Roads.

1. **Railway Construction.**—On 3rd August, 1894, an agreement was entered into between the High Commissioner for South Africa as Governor of British Bechuanaland, the British South Africa Company, and the Bechuanaland Railway Company (now Rhodesia Railways, Ltd.), for the construction and working of a railway by the railway company, from Vryburg in British Bechuanaland to Palapye in the Bechuanaland Protectorate. This agreement was later supplemented by an amending agreement between the same parties. These two documents form the schedule to Proclamation No. 227 of British Bechuanaland.

The railway line from Vryburg to Ramathlabama—upon the southern boundary of the Bechuanaland Protectorate—having been constructed under the provisions of the abovementioned proclamation, the Bechuanaland Railway Company was authorized and empowered by a proclamation dated the 23rd November, 1896, to construct, equip, maintain, and work, subject to the provisions thereof and to the terms of the two agreements alluded to, a line of railway from the southern boundary of the territory to a point at or near Palapye, and, for that purpose, to enter upon and take possession of land of a uniform width throughout of one hundred yards, and such land in addition as might be required for all junctions, sidings, and stations, and for all other works and approaches.

The extension of this line by the Bechuanaland Railway Company to the northern boundary of the Bechuanaland Protectorate was authorized by a subsequent proclamation; and in view of the Matabele and Mashona rebellion in 1896, and the fact that in that year all ox traffic from the Cape to the north was dislocated by rinderpest, the construction was pushed on with great rapidity by the contractors, the line reaching Bulawayo on the 19th October, 1897.

2. **Railway through Tati District.**—In 1910, as the result of negotiations extending over some years, the Tati Concessions, Limited (now the Tati Company, Limited), and the Bechuanaland Railway Company (now Rhodesia Railways, Limited) entered into an agreement (see Schedule 3 to the Bechuanaland Protectorate Proclamation No. 2 of 1911), whereby the former conveyed to the latter, in addition to certain land at Francistown and subject to certain conditions, a strip of land—along the line of railway they constructed—of a uniform width of one hundred yards throughout the Tati district (now merged into the Francistown district).

3. **Length of Railway.**—The length of the railway line running through the Bechuanaland Protectorate is 394 miles, including about 70 miles through the Francistown district. The line enters the Protectorate at Ramathlabama Spruit, sixteen miles north of Mafeking and 886 miles north of Capetown, and leaves it at mileage 1,289 (about half-way between Ramaquabane Siding and Plumtree).

The Rhodesia Railways, Limited, has constructed several dams in connexion with the working of the line, viz.:—

	Capacity in Gallons.
Lobatsi	15,000,000
Metsimasuane (Notwani Siding)	45,000,000
Palapye	15,000,000
Tsessebe (Inchwe River)	12,000,000

There is no other line of railway in the Bechuanaland Protectorate.

4. **Railway Commission.**—By Proclamation No. 8 of 1927, a commission was set up to ensure that the inhabitants of the Bechuanaland Protectorate, as well as those of Southern and Northern Rhodesia, should in future enjoy the lowest possible railway rates which can be secured without impairing the economic position of the railway companies whose lines traverse those territories or disregarding reasonable obligations to the shareholders. Each of the three territories is represented on the commission.

5. **Walvis Bay Railway Survey.**—A conference of representatives of Southern Rhodesia, South West Africa, and the Bechuanaland Protectorate was held in Pretoria during September, 1930, and decided on the general route of the survey from Dett to Gobabis, with provision for the survey of a branch route from Plumtree if funds permitted. It was agreed that the three Administrations should contribute equally to the cost of the survey. In the case of the Bechuanaland Protectorate a grant of £2,000 for this purpose was obtained from the Colonial Development Fund. The survey along the line of route selected was completed in June, 1931. An economic survey of the main route was afterwards undertaken in 1931 by an agriculturist, and a geologist kindly lent by the Government of Southern Rhodesia. The reports of the surveyor in charge, the agriculturist, and the geologist were circulated to the three Administrations in October, and in general are favourable to the main project.

6. **Roads.**—The roads from railway stations and sidings to the principal villages serve for motor transport, but about fifty miles west of the railway line the tracks are very sandy and generally unsuitable for motor traffic except on a few routes, which motor lorries and the more high-powered cars are able to negotiate. The Administration, however, has set about improving the motor tracks and remedying, as far as possible, the existing primitive conditions. An all-through north to south motor road is in being, and causeways have been built over certain of the river drifts. Useful motor tracks now exist, which connect Ngamiland with the railway at Livingstone and Palapye Road, Ghanzi with Gobabis, South West Africa, and Lehututu with Lobatsi. Motor lorry transport is found to be a paying proposition on these routes.

Work was commenced during 1936 in an endeavour to make the main roads passable all the year round. With this object in view a programme of low level bridge construction was embarked upon. Bridges have been built over the Taungs River at Ramoutsa, the Metsimasuane River at Notwani, the Tshwaneng Spruit near Khale, the Metsimaclaba River near Pilane, the Metsimaclaba River on the Molepolole Road, the Mahalapye River, the Tati River, the Shashi River, the Macloutsi River near Foley, and the Bathoen Spruit 10 miles north of Lobatsi, and one has been built near Gaberones. The bridge building programme has now been completed.

A grant has been received from the Colonial Development Fund to cover a five-year programme for reconstructing the main south to north road through the territory. The class of roads to be provided under the scheme are earth roads fully drained, with gravelled construction only in places where soil conditions will not suit wet weather conditions. Up to March, 1939, 125 miles of road had been reconstructed. This figure includes work on the Serowe-Maun road.

§ 17. Posts, Telegraphs, and Telephones.

1. **Postal System.**—The administration and control of the postal department in the Protectorate is, subject to the authority of the Resident Commissioner, vested in the Postmaster-General of the Union of South Africa, and, by Proclamation No. 28 of 1916, Act No. 10 of 1911 (*The Post Office Administration and Shipping Combinations Discouragement Act*, 1911) of the Union of South Africa, was with certain exceptions, *mutatis mutandis*, applied to the Protectorate.

2. **Telegraphs and Telephones.**—The telegraph and telephone lines erected in the Protectorate, connecting the Union of South Africa with Rhodesia, are owned and worked by the Southern Rhodesia Government. They run parallel to the railway line. The only telegraph and telephone branches are from Palapye Road to Serowe, a distance of approximately 35 miles, and from Palapye Road to Macloutsie and Fort Tuli. Certain farm telephone lines are being installed in the Tati district. There is a telephone line from Pilane Siding to Mochudi Village, a distance of approximately 9 miles, and Lobatsi has recently been connected by telephone with the telephone system of the Union. Many of the surrounding farms have been connected, as well as business places and private houses in and near Lobatsi. The Mochudi-Pilane and Lobatsi telephone lines are controlled by the Postmaster-General of the Union, at Pretoria. During the year 1935, a telephone line between Gaberones Station and Gaberones village was completed.

The rate for telegrams exchanged between the Bechuanaland Proteetorate and other parts of South Africa is 2d. per word; to Northern Rhodesia it is 3d. per word. Within the territory the rate is one shilling for the first twelve words and a penny for every additional word.

The *Electric Telegraph Acts* of the Cape of Good Hope, Nos. 20 of 1861, 5 of 1862, 4 of 1877, and 41 of 1882, are still in force in the Bechuanaland Protectorate, *mutatis mutandis*. Sections 80 to 92 of Act No. 10 of 1911, which refer to telegraphs and telephones, expressly excluded when that Act was put into force, were applied by Proclamation No. 23 of 1928.

3. **Wireless.**—No person may establish or use any apparatus or installation for the transmission or reception of messages or other communications by means of electrical energy without the aid of wires, without having previously obtained a licence for these purposes, *vide* Proclamation No. 10 of 1927, as amended.

In 1936 two Government wireless stations were erected in the Protectorate, one being at Mafeking and the other at Maun. The Mafeking station operates on a wave-length of 50·84 metres, and a frequency of 5,900 kilocycles, with an output of 200 watts. The Maun station operates on approximately the same wavelength and frequency, but has an output of only 40 watts. During 1937 additional wireless stations were erected at Ghanzi, Tsabon, and Gaberones.

In 1938, two private wireless stations were erected in the Protectorate for the Witwatersrand Native Labour Association, one being at Francistown, and the other at Kazungula. Both these stations are of 40-watt output.

Telegrams are relayed by wireless, and at present no additional charge is made for this service.

4. **Statistics.**—The following table gives particulars of postal transactions for a series of years:—

POSTAL STATISTICS, 1933-34 TO 1937-38.

5. **Agricultural Parcel Post Service.**—This service was inaugurated between the Bechuanaland Protectorate (with the exception of Maun, Kasane, and Ghanzi) and the Union of South Africa in 1925, and with Southern Rhodesia in 1927, at rates very similar to those obtaining in both the latter countries.

§ 18. Finance.

1. **Revenue and Expenditure.**—There is no public debt in the Bechuanaland Protectorate. The excess of expenditure over revenue is met by Imperial grants-in-aid.

The revenue receipts under the various heads are given below for six financial years.

REVENUE, 1932-33 TO 1937-38.

Description.	1932-33.	1933-34.	1934-35.	1935-36.	1936-37.	1937-38.

TOTAL.....£	142,830	187,264	183,707	210,113	209,721	210,797

2. **Native Tax.**—The Native Tax, the amount of which is determined each year, was £1 for 1937-38 and 1938-39, but was raised to £1. 2s. for 1939-40, the tax year runs from 1st April to 31st March.

Tax is payable by every male native, who on the 1st July in any year is of the apparent age of eighteen. If the native has more than one wife, £1 is payable in respect of each additional wife, provided always that a native shall not be liable to pay more than £3 in any one year in respect of himself and his wives. There is also in operation in each reserve a tribal levy payable annually for the benefit of the Tribal Treasuries. A new Native Treasury scheme, conferring greater responsibilities on the Tribal Treasuries, came into operation in 1938. The Resident Commissioner may appoint any chief as collector of tax within any area. An amount equal to ten per cent. of the value of tax collected in respect of the current year, five per cent. in respect of arrear tax paid in before the 31st October, and five per cent. of all tax paid thereafter, whether in respect of current or arrear tax, may be paid to such chiefs in consideration of the services rendered in the collection of the tax. Outside the native reserves the tax is collected by officers appointed for that purpose by the Resident Commissioner.

3. **Stamp and Licence Duties and Fees.**—By Proclamation No. 14 of 1897, dated 30th September, 1897, as amended by Proclamation No. 23 of 1914, the undermentioned Acts of the Cape Colony, with regard to stamp and licence duties, were specially declared in force in the Protectorate, with certain modifications, in so far as they were at that date in force within the said Colony, and in so far as they were not inconsistent with or repugnant to any laws in force in the territory, namely:—

Act No. 3 of 1864.	Act No. 20 of 1884.
Act No. 13 of 1870.	Act No. 13 of 1886.
Act No. 15 of 1877.	Act No. 38 of 1887.

The following tariffs of fees have been applied to the Protectorate by proclamation:—

In the office of the Master of the Resident Commissioner's Court, see Fourth Schedule to Proclamation No. 33 of 1934 as amended by Proclamation No. 36 of 1934.

In the court of the Resident Commissioner and in courts of District Commissioners, see High Commissioner's Notice No. 105 of 1934.

The following fees are also payable:—

	£	s.	d.
For registration of a brand		10	0
For registration of a co-operative society	1	0	0
For registration of a marriage		2	6
For copy of a marriage certificate		2	6

	£	s.	d.
For registration of a patent—			
On filing application for registration of patent		10	0
On registration of patent	1	0	0
Renewal fees—			
Before the expiration of three years, reckoned from the date of registration of patent in the Bechuanaland Protectorate	2	0	0
Before the expiration of seven years, similarly reckoned	3	0	0
Before the expiration of ten years, similarly reckoned	5	0	0
(*Note.*—Any or all of the payments for renewals may be made in one sum.)			
On registration of any assignment, amendment, extension, or licence		10	0
On enlargement of time for payment of renewal fees—			
Not exceeding one month	1	0	0
Not exceeding two months	2	0	0
Not exceeding three months	3	0	0
For registration of a trade mark—			
On filing application for registration of trade mark		10	0
On registration of trade mark	1	0	0
Renewal fees—			
As and when and as often as renewal of registration is necessary in the Union of South Africa	1	0	0
On registration of any assignment, amendment, addition, or alteration		10	0
For a passport		15	0
For renewal of a passport, for each year renewed		2	0
For endorsement of a passport (except for British Empire journeys)		2	0
For visa of a passport		varies.	

The following is the scale of licences in operation in the Protectorate. These licences are issued for calendar years, unless otherwise stated.

BECHUANALAND PROTECTORATE LICENCES.

(i) TRADING LICENCES.

Description of Licence.	Whole Year. £ s. d.	Half-Year. £ s. d.	Remarks.
Agent of a foreign firm	10 0 0	5 0 0	—
Assurance company, society, or association (fire, accident, or life)	—	—	£5 first year, 3d. per £1 of premium received in the territory for second and subsequent years; minimum, £5; maximum, £30.
Auctioneer	10 0 0	5 0 0	—
Baker	5 0 0	2 10 0	—
Bank	—	—	For every £100 of its paid-up capital, ¼d.
Broker	5 0 0	2 10 0	—
Butcher	5 0 0	2 10 0	—
Cigarettes (manufactured or for sale)	1 0 0	—	1st April in one year to 31st March in the next.
Commercial traveller	5 0 0	—	—
Dealer (non-importer)	3 0 0	—	—
Dealer (importer)	10 0 0	5 0 0	—
Dealer in aerated waters, cigars, and tobacco	1 10 0	0 15 0	—
Dealer in unwrought precious metal	25 0 0	—	£8 per quarter.
Dealer in diamonds	30 0 0	—	—
Dealer in explosives (dynamite, gelatine, detonators, and fuse)	2 0 0	—	—
Game (to sell or export for sale)	2 0 0	1 0 0	—
Gunpowder	5 0 0	2 10 0	—
Hawker	—	—	£5 for three months or less, for each vehicle.
Importer	12 0 0	—	—
Insurance agent	5 0 0	—	—
Labour agent	25 0 0	12 10 0	See § 9 above.

(i) TRADING LICENCES—(*continued*).

Description of Licence.	Whole Year.	Half-Year.	Remarks.
	£ s. d.	£ s. d.	
Joint stock company	—	—	1s. on every £100 of the subscribed capital.
Manufacturer	10 0 0	5 0 0	—
Ostrich feather buyer	5 0 0	2 10 0	—
Pawnbroker	10 0 0	5 0 0	—
Railway administration or company (refreshment cars)	60 0 0	—	—
Restaurant, refreshment room, and tea-room keeper	5 0 0	2 10 0	—
Trader (from fixed stand)	Minimum, 15 0 0 Maximum, 50 0 0	Minimum, 7 10 0 Maximum, 25 0 0	On aggregate amount of sales during preceding year. As to trading in native reserves, see first paragraph of § 12.
Stock Buyer—			
Including purchase for export	25 0 0	12 10 0	See § 13.
Excluding purchase for export	20 0 0	10 0 0	—
Wine and spirits :—			
Wholesale	30 0 0	15 0 0	—
Retail	35 0 0	17 10 0	—
Midnight privilege	5 0 0	2 10 0	—
Temporary	—	—	10s. per diem.

(ii) MOTOR VEHICLE LICENCES.

	£ s. d.
For a motor cycle without side-car	15 0
For a motor cycle with side-car	1 2 6
For a motor vehicle other than a motor cycle—	
weighing 1,500 lb. or under	2 5 0
weighing over 1,500 lb. and not exceeding 2,500 lb.	3 0 0
weighing over 2,500 lb. and not exceeding 4,000 lb.	4 10 0
weighing over 4,000 lb. and not exceeding 6,000 lb.	7 10 0
weighing over 6,000 lb. and not exceeding 8,000 lb.	15 0 0
weighing over 8,000 lb. and not exceeding 9,000 lb.	22 10 0
weighing over 9,000 lb.	27 10 0

N.B.—The above motor vehicle taxes are reduced by one-quarter if paid between 1st April and 30th June, by one-half if paid between 1st July and 30th September, and by three-quarters if paid between 1st October and 31st December.

	£ s. d.
Transfer of motor car licence	10 0
Transfer of motor cycle licence	2 6
Transfer of licence, where car has been destroyed, to new motor car	10 0
Duplicate of registration certificate or of motor vehicle licence	2 6
Driver's licence—	
Motor car	1 0 0
Motor cycle	10 0
Temporary learner's licence (available for 1 month)—	
Motor car	5 0
Motor cycle	2 6
Fee payable to examiner for competency certificate, deducted from licence fees—	
Motor car	5 0
Motor cycle	2 6

NOTE.—The owner of any motor vehicle, who holds an unexpired licence or licences entitling him to drive such vehicle within any province of the Union, the Mandated Territory of South West Africa, or any part of Southern or Northern Rhodesia, Basutoland, or Swaziland, may drive such vehicle (otherwise than for hire) in the Bechuanaland Protectorate for a continuous period not exceeding three months, if on public business for 6 months, in any calendar year without registering the same or obtaining a motor vehicle or a driver's licence in the Bechuanaland Protectorate, but he must submit such licence or licences to the first district commissioner of the Bechuanaland Protectorate on his route for endorsement.

(iii) OTHER LICENCES.

	£ s. d.
Certificate of Admission to Practice—	
As an advocate	20 0 0
As an attorney	20 0 0
As a notary public	12 10 0
As a conveyancer	12 10 0
As a medical practitioner	5 0 0
As an apothecary, chemist, and druggist	2 10 0
As a dentist	2 10 0
As a nurse or midwife	1 0 0
Game (to carry or use a gun)—	
Residents	1 0 0
Non-residents	2 0 0
Marriage, special	5 0 0

Radio Licences:	£ s. d.	
1. For a licence to deal with radio telegrams	5 0 0	per annum
2. For a radio experimenter's licence	1 0 0	,,
3. For a broadcasting licence	5 0 0	,,
4. For a listener's licence the charges vary in accordance with the distance from the broadcasting station and the class of listening-in licence, e.g.:		
Private residence and boarding establishment	£1 to £3. 5s.	per annum
Cafés and restaurants	£2. 15s. to £4. 5s.	per annum
Hotels and licensed clubs	£3. 15s. to £5. 5s.	per annum
Public entertainments	£3. 15s. per annum to £5. 5s.	per mensem

4. **Currency.**—Under the provisions of Proclamations Nos. 54 of 1932 and 3 of 1933, notes of the South African Reserve Bank and silver and copper coin of the Union circulate and are accepted as legal tender in the Bechuanaland Protectorate in the same manner as in the Union. Silver coin of H.M. Royal Mint in England was withdrawn from circulation within the territory as from the 16th January, 1933.

5. **Banking.**—There is no bank in the territory.

SWAZILAND.

CHAPTER III.

SWAZILAND.

§ 1. History.*

The Swazis are akin to the Zulu and other tribes of the south-eastern littoral. Up to about 100 years ago they occupied the country just north of the Pongolo River, but a hostile chief in their vicinity forced them farther **north, and,** under their Chief Sobhuza, they then occupied the territory now **known as** Swaziland. This chief, who died in 1839, was succeeded by Mswazi **II. The further** order of succession has been: Ludonga, Mbandini, and **Bhunu,** whose son, Sobhuza II., was installed as Paramount Chief in 1921, **after a** long minority, during which his grandmother, Labotsibeni, acted as **regent.**

The many concessions granted by Mbandini necessitated some form of **European** control, notwithstanding the fact that the independence of the Swazis **had been** guaranteed in the Conventions of 1881 and 1884, entered into between **the Government** of Her late Majesty, Queen Victoria, and the Government **of the** late South African Republic. In 1890, soon after the death of Mbandini, a provisional government was established representative of the Swazis, **the** British, and the South African Republican Governments. In 1894, under **convention** between the two European Governments, the South African Republic was given powers of protection and administration, without incorporation, and Swaziland continued to be governed under this form of control **until** the outbreak of the Boer War in 1899.

In 1902, after the conclusion of hostilities in the Transvaal, a Special Commissioner took charge, and under an Order-in-Council in 1903 the Governor of the Transvaal administered the territory, through the Special Commissioner, until the year 1907, when under an Order-in-Council (1906) the High Commissioner assumed control and established the present form of administration. Previously to this, steps had been taken for the settlement of the concessions question by the definition of the boundaries of the land concessions and their partition between the concessionaires and the natives. The boundaries of the mineral concessions were also defined, and all monopoly concessions were expropriated. Title to property is therefore now clear.

In 1912, a special court was established with an advocate of the provincial division of the Transvaal as president. The other members of the court consist of the Resident Commissioner, the Deputy Resident Commissioner, and the assistant commissioners of the various districts. The court holds sessions twice a year. All cases are dealt with by three members sitting without a jury. The court has jurisdiction in civil and criminal cases.

An elected advisory council, representative of the Europeans, was established in 1921 to advise the Administration on purely European affairs.

§ 2. Boundaries, Area, and Physical Characteristics.

1. **Boundaries and Area.**—Swaziland is bounded on the north, west, and south by the Transvaal Province, and on the east by Portuguese territory and Zululand. The area of Swaziland is 6,704·6 square miles.

2. **Physical Characteristics, Climate, etc.**—The territory is divided geographically into three longitudinal regions of roughly equal breadth, running from north to south, and known locally as the high, middle, and low or bush veld. The mountainous region on the west rises to an altitude of over 4,000 feet. The middle veld is about 2,000 feet lower, while the low veld, bounded on the east by the Lebombo Mountains, has an average height of not more than 1,000 feet.

The mountainous region, or high veld, is free from malaria, which is present in the low veld, and in a slight degree in the middle veld during some of the summer months. The first two regions are remarkably well watered. Innumerable small streams unite with the large rivers which traverse the country from west to east. Except for these the low veld is not very well watered. The climate is ideal except for a few months in

* A full history will be found in previous issues of this *Year Book* (Nos. 3 to 6).

summer, when the heat is somewhat excessive in parts. The high veld portion, however, seldom experiences any excessive heat, a spell of hot weather being almost invariably followed by cooling mists.

3. **Meteorology.**—Both the rainfall and the temperature vary considerably with the altitude of the stations. The average rainfall to the end of 1938 at two stations was:—

Mbabane (3,800 feet)	53·24	inches over 36 years.
Bremersdorp (2,175 feet)	34·41	" " 35 "

The following return shows the temperature recorded at Mbabane:—

RECORDED TEMPERATURE, MBABANE.

Year.	Mbabane.		
	Mean Max.	Mean Min.	Mean Temp.
1934	73·1	51·2	62·2
1935	72·4	49·8	61·1
1936	71·5	51·4	61·4
1937	71·8	51·8	61·8
1938	71·4	52·2	61·8

4. **Bibliography.**—The following reports relating to Swaziland are issued annually:—

Report on the Social and Economic Progress of the People of Swaziland.
Report on Education.
Medical and Sanitary Report.

§ 3. Administration.

1. **Central Administration.**—By an Order-in-Council, dated the 1st December, 1906, Swaziland was placed directly under the control of the High Commissioner for South Africa, and a Proclamation was issued in March, 1907, providing for the appointment of a Resident Commissioner, a Government Secretary, and assistant commissioners, and the establishment of a police force. In 1921 the establishment of an advisory council to advise the Administration in purely European matters was approved. A council of nine members was elected, five for the southern portion of Swaziland, and four for the northern portion. Subsequent elections took place in 1923, 1926, 1928, 1932, 1935, and 1938.

The headquarters of the Administration are at Mbabane, a small village, picturesquely situated on the hills overlooking the middle veld, at an altitude of 4,000 feet. It is reached by good roads from Ermelo, Breyten, and Carolina in the Transvaal, the last-named town being distant about ninety miles. The journey by mail-car from Breyten takes about five hours. Mbabane can also be reached from the Portuguese railhead at Goba by road through Bremersdorp, the former capital, and the journey by motor car, over a fair road, usually takes between eight and nine hours. The Railways and Harbours Administration of the Union of South Africa now runs a road motor service on the main routes in the territory, and the Portuguese East Africa Railways run a similar service from Goba to Stegi.

2. **Principal Officers of Administration.**—

Resident Commissioner: C. L. Bruton, O.B.E., B.A. (Oxon.).
Deputy Resident Commissioner: H. B. A. McCarter, O.B.E.
Government and Financial Secretary: J. R. Armstrong, O.B.E.
Assistant Government Secretary and Inspector of Mining Beacons: L. J. Puttick.
Master and Registrar of the High Court, Sheriff, Registrar of Births, Marriages, Deaths and Companies, W. W. Usher.
Principal Medical Officer: D. Drew, B.A. (Trinity, Dublin), M.B., B.Ch., B.A.O. (Dublin).
Principal Veterinary and Agricultural Officer: W. A. Elder, O.B.E., F.R.C.V.S.
Director of Public Works: J. H. Gardner, O.B.E., B.Sc., A.M.I.C.E.
Superintendent of Education: E. M. D. Glynn, M.A.
Chief of Police: Major E. D. Fenn.

3. **Local Administration.**—A proclamation was issued in 1912, constituting the township of Mbabane and empowering the High Commissioner to make general regulations for the government of townships. There is a town advisory committee, but the streets are kept in repair by the Government and no rates are charged. The sanitary organization of Mbabane is under government supervision, and householders pay a nominal amount per month for this service; the town is provided with electric light and an ample supply of water.

§ 4. Population and Vital Statistics.

1. **Population.**—The following table gives the population of Swaziland in 1911, 1921, and 1936. No censuses corresponding to the European population censuses in the Union of 1918, 1926, and 1931 were taken in Swaziland.

POPULATION, 1911, 1921, AND 1936.

Race.	1911.			1921.			1936.		
	Male.	Female.	Total.	Male.	Female.	Total.	Male.	Female.	Total.
European	623	460	1,083	1,239	966	2,205	1,476	1,264	2,740
Native (Bantu)	44,098	54,635	98,733	52,761	57,534	110,295	74,130*	79,140*	153,270*
Asiatic	84	59	143	7	—	7	4	—	4
Other Coloured				254	190	444	375	326	701
TOTAL	44,805	55,154	99,959	54,261	58,690	112,951	75,985	80,730	156,715

* Includes 9,561 Bantu (9,451 males and 110 females) absent at labour centres outside Swaziland.

A small percentage of the natives in southern Swaziland consists of Zulus. There are five European villages in Swaziland—Mbabane, with a European population of 220, Bremersdorp with a European population of 230, and villages which have been established in the southern district, at Hlatikulu and Goedgegun, and in the central district at Stegi. Other European centres are the government stations at Mankaiana and Pigg's Peak.

2. **Vital Statistics.**—(i) *Registration of Births, Deaths, and Marriages.*—The registration of births and deaths is provided for under Proclamation No. 22 of 1927, and the solemnization of European and native marriages is regulated by Law (Transvaal) No. 3 of 1871 and Law (Transvaal) No. 3 of 1897, which are in force in Swaziland by virtue of the *Swaziland Administration Proclamations* of 1904 and 1907. The registration of native births, deaths, and marriages (other than marriages under European law) is not yet enforced.

(ii) *Births, Deaths, and Marriages Registered.*—The total number of births, deaths, and marriages registered during a period of years is shown in the following table:—

BIRTHS, DEATHS, AND MARRIAGES REGISTERED, 1934 TO 1938.

Year.	Europeans.		Marriages.	
	Births.	Deaths.	European.	Non-European.
1934	78	20	26	176
1935	55	19	18	174
1936	55	26	21	217
1937	42	25	19	193
1938	54	21	17	216

3. **Health.**—Swaziland varies in altitude from about 4,000 feet on its western border to about 400 feet near the eastern border, and consequently all kinds of climate are represented, from that of the Transvaal high veld to almost tropical low veld. While the former is one of the healthiest portions of South Africa, in the low veld on the eastern side there is a good deal of malaria in the hot season, and some dysentery. Both, however, are easily avoided by taking the precautions ordinarily considered necessary in any sub-tropical country, and quite a number of white men lead healthy lives in the very middle of the low veld. The natives, on the whole, are of good physique and suffer little from epidemic diseases. The medical service consists of four government doctors, with three hospital assistants and three mission doctors.

Statistics of government hospitals for the years 1934 to 1938 are as follows:—

HOSPITALS, 1934 TO 1938.

* Amended figure.

§ 5. Educational Organization and Social Condition.

1. **Education.**—(i) *Native Education.*—Education is mainly in the hands of the different mission societies, which in 1938 had 278 schools under their supervision. Of these schools 104 were in receipt of government assistance and 174 were entirely supported and controlled by the missions. The aided schools are visited by native supervisors, of whom there were four on the staff of the Education Department during 1938. In almost all these schools the teaching does not proceed further than the second or third standard. In a few schools the teaching extends as far as the sixth standard.

In addition there are three government schools for natives, which are under the supervision of a European principal. These schools are under the control of a school board, through which the principal is directly responsible to the Resident Commissioner in all matters concerning the general administration of the schools. The National schools are financed out of the Swazi National Fund, which was created with the concurrence of the Swazi chiefs for purposes of direct benefit to the natives. Each native taxpayer is required by law to pay 2s. per annum to the fund, the expenditure from which is under the control of the Government. The closest association exists between these schools and the Paramount Chief and Mnukwazi the Chieftainess, in the immediate neighbourhood of whose kraals the schools are situated. At the largest of the three schools facilities exist for industrial and agricultural training, as well as for the ordinary academic course up to the Junior Certificate examination.

As yet schools have no great hold on the communities they serve, and the attendance of children is generally both irregular and difficult to secure. It is, however, reassuring to note a growing interest in education.

(ii) *European Education.*—Education for European children is compulsory up to Standard V or the age of 15 years. Primary education is free and is provided by nine schools, eight government and one government-aided. These schools are situated in the towns and more thickly populated rural areas of the country. A full secondary education is provided at St. Mark's School, Mbabane, and the government school at Goedgegun takes children as far as the Junior Certificate examination. An agricultural section has been developed at Goedgegun, where there are excellent opportunities for this type of work. Boarding bursaries at the rate of 4s. per child per week are paid by the Government for all white pupils whose parents are in poor circumstances, and who reside three miles or more from school.

The following tables give the available statistical information regarding schools for Europeans and natives for the years 1934 to 1938:—

EDUCATION, 1934 TO 1938.

† Two with secondary departments.

2. **Churches and Missionary Activities.**—There are twenty-three religious bodies carrying on work in Swaziland, as follows:—

Church of England.
Wesleyan Methodist.
Dutch Reformed Church.
S.A. Reformed Church.
Gereformeerde Kerk.
South African General Mission.
Roman Catholic.
Church of the Nazarene.
International Holiness Union.
Pilgrim's Holiness.
Berlin Lutheran.
Lebombo Pentecostal.
Evangelic Lutheran.
African Methodist Episcopalian.
Independent Methodist.
Full Gospel Mission of Norway.
Christian Catholic Apostolic Church of Zion.
Scandinavian Alliance Mission.
Swedish Mission.
Norway's Free Evangelical Mission to the Heathen.
Seventh Day Adventist.
African Congregational.
Apostolic Faith.

As far as possible, the native missions avoid encroaching on each other's spheres of work. Religious instruction is given by the different bodies at about 416 different centres, where the average attendance during 1937 was 36,270. The Church of England and the Roman Catholic Church also have churches at Mbabane and Bremersdorp.

3. **Labour.**—There is a fair local demand for native agricultural and mine labourers, and about 750 natives are employed by the tin mining companies working in Swaziland. In 1938 the Havelock Asbestos Mine employed 1,555 natives. The country has not, however, advanced sufficiently to absorb all the native labour available, and consequently the Swazis go out freely to work on the Transvaal mines, where the demand for their labour increases every year. There are about 7,000 Swazis in constant employment on the mines in the Transvaal. The recruiting of labour is under the control of the Native Recruiting Corporation, which has agents in the various districts. Many of the natives, however, go out to seek work of their own accord.

The following are the statistics for the years 1934 to 1938 of passes issued to Swaziland natives to proceed to the Union for the purposes of labour or visiting:—

PASSES ISSUED TO NATIVES, 1934 TO 1938.

Year.	Recruited for Witwatersrand Mines.	Seeking work.	Visiting.	Total.
1934	6,907	6,752		13,659
1935	8,459	4,504	3,582	16,545
1936	9,984	5,769	4,266	20,019
1937	6,840	3,325	3,244	13,409
1938	8,030	2,515	3,401	13,946

§ 6. Administration of Justice.

1. **Superior Courts.**—By the *Swaziland Administration Proclamation*, 1907, a Court of Resident Commissioner with all the powers of a superior court was established. The laws of the Transvaal then in force in Swaziland were re-enacted, *mutatis mutandis*, and the Roman-Dutch Common Law was declared to be in force. In 1912 this Proclamation was amended, and a Special Court was substituted for the Resident Commissioner's Court, with an advocate of the provincial division of the Transvaal as president. The other members of this court consist of the Resident Commissioner, the Deputy Resident Commissioner, and the assistant commissioners of the various districts. The court holds sessions at least twice a year and all cases which come before it are dealt with by three members, sitting without a jury. It has jurisdiction in all civil and criminal cases arising, or which shall have arisen, in Swaziland, including the right of reviewing the proceedings of and hearing appeals from any inferior court of justice in Swaziland. When the court is not in session—

(*a*) the president of the special court has power to review the criminal proceedings of the courts of assistant commissioner when the sentence exceeds three months' imprisonment, or a fine of £25, or any sentence of whipping, and to hear appeals in all civil and criminal cases against any judgment, sentence, or final order of the courts of assistant commissioner;

(*b*) the Resident Commissioner or the Deputy Resident Commissioner, as a member of the Special Court, is competent to exercise the civil jurisdiction of the Special Court in all motions and applications and in all actions for provisional sentence, and in all cases in which all parties apply to have the case tried before the Resident Commissioner. In any case, other than a review of criminal proceedings, there is a right of appeal to the full court.

Death sentences may be carried out only upon the special warrant of the High Commissioner. There is a right of appeal to the Privy Council against any final judgment of the Special Court, where the matter in dispute is of the value of £500 or upwards.

2. **Lower Courts.**—Under the *Swaziland Administration Proclamation*, 1907, the High Commissioner appointed courts of assistant commissioners with jurisdiction in all civil proceedings in which neither party is a white person, and in criminal proceedings in which the accused is not a white person. These courts have no jurisdiction to try, summarily any persons charged with treason, murder, attempt to murder, culpable homicide, rape, attempt to commit rape, or sedition; and in these cases and in other serious cases, preparatory

examinations are taken under the *Criminal Procedure Code*, 1903, of the Transvaal, which is in force in Swaziland. The jurisdiction of courts of assistant commissioners as regards white persons, in both civil and criminal matters, is the same as was conferred on courts of magistrates in the Transvaal at that time.

3. **Native Courts.**—Under the above-mentioned Proclamation, the Paramount Chief and other native chiefs of Swaziland are authorized to continue to exercise jurisdiction according to native law and custom in all civil disputes in which natives only are concerned. An appeal lies from the decision of any such chief to the Resident Commissioner, whose decision is final.

4. **Police.**—A police force, known as the Swaziland Police, has been established under the command of a Chief of Police. In 1938 the strength of the force was:—European: 1 officer, 24 non-commissioned officers and men; Native: 109 non-commissioned officers and men.

5. **Prisons.**—The Swaziland Prisons Department in 1938 consisted of 3 European gaolers, 37 native warders, and 1 native wardress.

6. **Crime Statistics.**—The following tables show the number of convictions for criminal offences during a series of years:—

CONVICTIONS FOR CRIMINAL OFFENCES, 1934 TO 1938.

Description.	1934.	1935.	1936.	1937.	1938.

Other Offences	5	1	—	1*	—
TOTAL	34	15	18	22*	29

* Amended figure.

§ 7. Organization for Defence or War.

In addition to the police force constituted as stated previously, in each of the four districts of Swaziland there is a rifle club, every member of which holds a government rifle and ammunition. An undertaking is signed by the members: "in case of emergency to respond in person . . . to any call in defence of life or property in Swaziland, or the preservation of order therein, when called upon by the Resident Commissioner or his lawful deputy." There are about 350 members belonging to these rifle clubs, and most of them could be mobilized as a mounted force.

§ 8. Land Settlement.

For information relating to the grant of land, mineral, grazing, and other concessions reference should be made to *Official Year Book* No. 6. The present owners of land derive their titles from the original concessions granted by the Swazi kings, and provision exists whereby these titles, if granted in respect of periods of ninety-nine years or over, may be converted into freehold grants. As a result of the conversion into freehold of long term concessions and the expiry of short term concessions, Swaziland title is gradually being reduced to freehold tenure, though the holders of Perpetual Land Concessions show no tendency to avail themselves of the provisions for conversion. The original titles were inquired into by the Chief Court of Swaziland in 1890, and most of the concessions were confirmed. These concessions were duly registered in the books of the Swazi nation by their agent and adviser,

the late Mr. T. Shepstone, C.M.G., and registration has been continued in the Swaziland Deeds Office, which is under the charge of the Registrar of Deeds for the Transvaal at Pretoria.

The boundaries of concessions were determined, in terms of the *Swaziland Administration Proclamation* of 1904, by the Swaziland Concessions Commission, which also determined how far any concession is registrable as a servitude or lease against another concession. Land survey and tenure and occupation and registration of land are based on the same principles as those in the Transvaal. The Surveyor-General of the Transvaal acts in a similar capacity for Swaziland. The relative statutes governing Swaziland title and survey are, however, not Union statutes, but the *Transvaal Deeds Office Proclamation* of 1902, as amended, the Z.A.R. *Survey Law* of 1891, as amended, and various Proclamations issued by the High Commissioner for South Africa.

The following tables give particulars of deeds registrations in Swaziland during a period of years:—

(i) SWAZILAND DEEDS REGISTRY, PRETORIA.—DEEDS REGISTERED, 1934 TO 1938.

* Including cancellations of Cessions of Bonds.

NOTE.—By Proclamation No. 38 of 1931 the laws relating to stamp duty and fees in Swaziland were amended with effect from 1st October, 1932.

§ 9. Agriculture, Game, and Fish.

1. **Live Stock and Pastoral Production.**—(i) *Horses and Mules.*—Owing to the prevalence of horse-sickness, Swaziland is not a horse or mule breeding country, but both classes of animal are used extensively.

(ii) *Asses.*—A small number of asses is bred in the territory.

(iii) *Cattle.*—The export of cattle from Swaziland into the Union is prohibited, except in respect of cattle for slaughter purposes.

NUMBER OF CATTLE, HORSES, MULES, ASSES, AND PIGS, CENSUS, 1930, AND ESTIMATES, 1933 TO 1938.

Year.	Cattle.	Horses.	Asses.	Mules.	Pigs.
1930 (Census)	332,296	2,751	10,473	472	9,328
1933 (estimated)	309,754	2,399	13,543	522	6,153
1934 (estimated)	420,000	2,404	13,134	679	6,677
1935 (estimated)	406,227	2,205	14,150	550	6,843
1936 (estimated)	398,384	2,300	14,300	600	6,900
1937 (estimated)	402,970	2,400	15,000	540	6,900
1938 (estimated)	407,460	1,419	14,074	212	7,000

(iv) *Sheep and Goats.*—Approximately 250,000 sheep come into Swaziland from the Union annually for the purpose of winter grazing. The general farming of woolled sheep the year round has not been generally tried, but a few flocks kept on the hills have done well. The goats of Swaziland are of the common South African goat breed. There are no Angora goats in the country.

The estimated numbers of native-owned sheep and goats are as follows:—

1930 (Census).....	171,029	1936 (estimated).....	145,000
1933 (estimated).....	149,710	1937 (estimated).....	145,500
1934 (estimated).....	138,600	1938 (estimated).....	140,000
1935 (estimated).....	143,000		

(v) *Dairy Produce.*—A creamery was opened at Bremersdorp in October, 1937, and 26,673 lb. of butter were manufactured up to the 31st December, 1937. In 1938, the quantity of butter fat was 224,565 lb. (Europeans 100,935 lb. and Natives 123,630 lb.) valued at £11,763.

2. **Agricultural Production.**—(i) *Cultivation of Cereals.*—The summer rains begin in September and continue until March or April. The principal crop raised in the country is maize, which is grown in all parts. The chief varieties grown are: Hickory King, Iowa Silver Mine, Potchefstroom Pearl, Natal Horsetooth, Sahara, and Boesman.

Kaffir-corn is extensively grown by the natives, and wheat, oats, rye, and barley are grown to a limited extent by European farmers with facilities for irrigation.

(ii) *Fruit Cultivation.*—All classes of fruit grow well. Citrus fruits, apples, pears, peaches, apricots, plums, and strawberries grow in the high parts, citrus and all sub-tropical and tropical fruits in the middle and low parts. The government horticulturist of the Transvaal has reported very favourably on the prospects of fruit-growing, and he was especially impressed with the suitability of the climate and soil for citrus fruits and mangoes. All fruit at present produced is consumed in the territory, with the exception of small quantities of citrus which are exported overseas. Pending the construction of a railway, production will be limited for want of a market.

A few orchards of Tung trees have been planted and the prospects are very encouraging.

(iii) *Cotton.*—The cotton industry is progressing favourably. Experiments with many varieties have been carried out, and jassid-resistant cotton bred by the Empire Cotton Corporation at Barberton gives the best results.

Swaziland is believed to be essentially a cotton-producing country of the future. The rainfall, averaging from 30 to 40 inches, the absence of frosts, excepting along some of the streams, the abundance of sunshine, and the fertility of the soil supply the requisites for successful cotton production. The production of cotton in Swaziland in 1938 was practically nil.

(iv) *Tobacco.*—For the production of bright or yellow leaf, the soil, on the whole, is not suitable, though there are restricted areas which are suitable for the production of this type of leaf. The dark or heavy types of leaf are believed to be best suited to the soil conditions. In the Lebombo flats and on the Lebombo there are considerable areas which will produce good bright tobacco. A co-operative tobacco company has been formed in the Hlatikulu district, and co-operation has been declared compulsory.

The amount of tobacco produced in Swaziland during a series of years is as follows:—

PRODUCTION OF TOBACCO, 1929 TO 1938.

Year.	Quantity.	Year.	Quantity.
	lb.		lb.
1929.....	1,068,400	1934.....	374,952
1930.....	580,000	1935.....	261,794
1931.....	312,180	1936.....	187,776
1932.....	341,055	1937.....	264,000
1933.....	377,906	1938.....	322,020

(v) *Other crops.*—The growing of sugar-cane, coffee, and tea is in the experimental stage only.

3. **Forest Resources.**—The whole of the low veld is heavily bushed, and isolated forests or "bushes" exist in kloofs in the Drakensberg Range. There are no indigenous timbers in sufficient quantities to repay exploitation commercially, except for rough purposes, such as timbering mines. Gums and wattles thrive well in the mountainous parts of the west.

4. **Diseases of Animals.**—The diseases most prevalent are tick-borne diseases, i.e. East Coast fever, ordinary redwater, anaplasmosis, and heartwater. Owing to the dipping facilities in the country, none of these diseases constitutes a deterrent to ranching. There were at the end of 1938, 251 cattle dipping tanks in the territory, of which 145 are Government-owned and 106 privately owned.

(i) *East Coast Fever.*—The outbreaks of and deaths from this disease over a series of years are shown in the following table:—

OUTBREAKS OF AND DEATHS AS A RESULT OF EAST COAST FEVER, 1929 TO 1938.

Year.	Outbreaks.	Deaths.	Year.	Outbreaks.	Deaths.
1929.....	2	72	1934.....	4	174
1930.....	1	1	1935.....	14	489
1931.....	—	—	1936.....	1	383
1932.....	—	—	1937.....	4	283
1933.....	1	3	1938.....	—	73

(ii) *Ordinary Redwater, Anaplasmosis, and Heartwater.*—These diseases are also controlled by the regular dipping insisted upon.

(iii) *Blackquarter.*—This disease is on the decrease. General preventive inoculation is being introduced, and where it has already been carried out the results are excellent.

(iv) *Horse-sickness.*—The virulency of this disease depends upon the rainy season and the altitude. All horses and mules are now being immunized with vaccine prepared at the Onderstepoort Laboratory, Pretoria, Transvaal.

(v) *Anthrax.*—Outbreaks of this disease have become frequent in recent years, and all infected herds are regularly vaccinated.

5. **Game.**—The following antelope are represented in Swaziland, viz.:—

Kudu.	Reedbuck.	Red duiker.
Inyala.	Bushbuck.	Blue duiker or piti.
Roan antelope.	Mountain reedbuck.	Klipspringer.
Blue wildebeest.	Vaal rhebuck.	Steenbuck.
Waterbuck.	Oribi.	Sharpe's steenbuck.
Impala.	Duiker.	Rooi rhebuck.

From time to time a few elephant, rhinoceros, hippo, and zebra come into Swaziland from adjoining territories. Game birds are well represented and comprise a large number of species of *Francolin*, partridges and pheasants, and guinea-fowl.

6. **Fish.**—There are several varieties of freshwater fish in the rivers of Swaziland, and tiger fish are found in the Usutu, Black Mbuluzi, and Komati Rivers. In 1932 black bass were liberated in rivers near Mbabane, and are showing good results.

§ 10. Mining and Industrial Activities.

1. **General.**—Mining in Swaziland is carried out under the authority of concessions granted by the late Swazi king Mbandini. These concessions are subject to the payment of certain royalties and a profits tax.

There is a small amount of mining for alluvial tin in the vicinity of Mbabane, where it is found in payable quantities. The Crown owns several mineral areas, and a considerable portion is open for prospecting and mining. Gold mining was carried on for some years at the Pigg's Peak and other mines, and considerable quantities of gold have been recovered from the Forbes Reef and Pigg's Peak Mines on the west. Large deposits of coal exist in the low veld; but beyond prospecting operations nothing has been done to exploit these. In the north-western part of the territories a very valuable deposit of asbestos was discovered and the right was acquired by the New Amianthus Mines, Ltd. Development operations took place in 1938 and production is expected to commence in April, 1939.

2. **Mineral Production.**—The following table shows the output of tin and gold during the last five years:—

MINERAL PRODUCTION, 1934 TO 1938.

Year.	Cassiterite Tin.		Fine Gold.	
	Quantity.	Value.	Quantity.	Value.
	Long Tons.	£	Oz.	£
1934	162	37,356	379	2,608
1935	182	39,628	314	2,132
1936	183	36,351	276	1,938
1937	154	37,158	2,410	16,873
1938	174	33,129	1,246	9,035

§ 11. Trade.

1. **Regulation of Customs.**—By an agreement with the Government of the Union of South Africa, dated 29th June, 1910, Swaziland is dealt with for customs purposes as part of the Union. Payments due to Swaziland are assessed upon the basis of the average of the collections for the three years ended 31st March, 1910, calculated in relation to the total customs collections of the states now forming the Union during the same period. No statistics of imports and exports are now kept. The imports consist principally of maize, flour, groceries, wearing apparel, hardware, spirits, tobacco, and kaffir truck, while the principal export is cassiterite tin.

The revenue received by Swaziland from this source during the last five years is shown hereunder:—

	£
1933-34 (31st March, 1934)	16,175
1934-35 (31st March, 1935)	18,656
1935-36 (31st March, 1936)	19,822
1936-37 (31st March, 1937)	20,167
1937-38 (31st March, 1938)	20,598

2. **Trade and Cost of Living.**—There has been little variation in imports, owing to the small European population and to the elementary requirements of the natives. The volume of trade is small.

The cost of living and prices generally are high, largely owing to the cost of transport of goods from distant railheads. The following were the average prices of foodstuffs and live stock obtaining throughout the year 1938:—

	£	s.	d.		£	s.	d.
Flour.....per bag 196 lb.	1	9	0	Beef.....per lb.	0	0	6
Maize.....per bag 200 lb.	0	15	0	Mutton.....per lb.	0	0	9
Kaffir-corn.....per bag 200 lb.	1	0	0	Cheese.....per lb.	0	1	9
Potatoes.....per bag 150 lb.	1	0	0	Eggs.....per doz.	0	1	6
Butter.....per lb.	0	1	9	Cattle.....per 100 lb. dead-weight	1	0	0
Milk.....per quart	0	0	7	Horses.....per head	12	10	0
Rice.....per lb.	0	0	4	Sheep.....per head	0	17	6
Sugar.....per lb.	0	0	4	Goats.....per head	0	10	0
Bread.....per lb.	0	0	4				

§ 12. Roads and Principal Routes of Communication.

There are no railways in the territory, and the lack of them has hindered the development of the country. Since January, 1928, the Railways and Harbours Administration of the Union of South Africa have established the following road motor services in Swaziland: Breyten via Mbabane to Bremersdorp, 117 miles, daily; Bremersdorp to Stegi, 43 miles, tri-weekly; Bremersdorp to Gollel, 112 miles, bi-weekly; Piet Retief via Dwaleni to Hlatikulu, 57 miles, four days a week; Dwaleni to Hluti, 31 miles, bi-weekly. The Portuguese East African Administration runs a daily motor service from Goba railhead to Stegi.

The main roads in the territory are kept in as good repair as possible, but a good deal remains to be done in improving and extending means of communication generally.

There are good roads to Mbabane from Ermelo, Breyten, and Carolina, and there is a good road from Mbabane to Delagoa Bay. It is possible to motor through Swaziland from the Transvaal to Delagoa Bay, and, with the improvements now taking place to the through road, both in the Transvaal and in Swaziland, this route will no doubt be largely made use of in the winter months. The main port of entry for the southern portion of Swaziland is from Piet Retief, whence roads extend to Mankaiana, Hlatikulu, and elsewhere in the southern districts. There is also a port of entry at Gollel, the terminus of the railway from Durban.

§ 13. Posts, Telegraphs, Telephones, and Savings Bank.

1. **General.**—By Proclamation No. 5 of 1907, the High Commissioner was empowered from time to time to enter into agreements with the Government of the Transvaal, for the carrying out by the said Government of postal and telegraph services and for the carrying on of a post office savings bank. These services are now, by agreement, under the control of the Postmaster-General of the Union, but are paid for from Swaziland funds.

2. **Post Offices.**—At the end of the financial year (31st March, 1938) there were the following:—

Post, Telegraph, and Telephone Agencies	2
Postal Order Agencies	1
Postal Order, Telegraph, and Telephone Agencies	7
Telephone Offices only	3
Money Order, Savings Bank, Post, Telegraph, and Telephone Offices	6
Telegraph and Telephone Offices only	5

3. **Mail Services.**—The following is a list of the mail services in operation at 31st March, 1938:—

Route.		Times Weekly.	Conveyance.	Time (Hours).	Cost per Annum.
					£
Bremersdorp	Stegi	3	Motor	3½	129
Piet Retief	Hlatikulu	4	"	4	75
Hlatikulu	Mooihoek	2	Foot	4	24
Hluti	Dwaleni	2	Motor	4	93
Mankaiana	Piet Retief	2	"	4	143
Bremersdorp	Breyten via Mbabane	6	"	8½	202
Mbabane	Forbes Reef-Pigg's Peak	6	Donkeys	—	144
Malkerns	Mahlanya	2	Foot	3	12
Goedgegun	Dwaleni	4	Motor	¼	18
Hlatikulu	Kubuta	2	Foot	6	18
Mankalana	Mahlanya	2	"	8	36

4. **Statistics.**—The following table gives particulars of postal transactions for a series of years:—

POSTAL STATISTICS, 1933-34 TO 1937-38.

(iii) PUBLIC DEBT.

Swaziland Consolidated Loan ... ... Interest 4 per cent. per annum; repayable in nineteen years from 1st April, 1924; Proclamation No. 6 of 1924.	£35,000
Swazi National Trust Fund ... ... Interest 4 per cent. per annum; Proclamation No. 9 of 1906.	£20,000

2. **Native Tax.**—A tax of £1. 15s. per annum is paid by each adult male native who is unmarried or who has one wife. Natives with more than one wife pay £1. 10s. per annum in respect of each wife, with a maximum of £4. 10s. Out of each unit of tax, i.e., £1. 10s. or £1. 15s. as the case may be, the sum of 2s. is credited to the Swazi National Fund, and is spent on objects of direct benefit to the natives.

3. **Currency.**—Under the provisions of Proclamations Nos. 55 of 1932 and 4 of 1933, notes of the South African Reserve Bank and silver and copper coin of the Union circulate and are accepted as legal tender in Swaziland in the same manner as in the Union.

4. **Banking Facilities.**—Barclay's Bank (D.C. & O.) has branches at Mbabane and Bremersdorp; the Standard Bank, at Bremersdorp. The banknote issues, etc., are carried out under Union laws.

5. **Stamp and Licence Duties and Fees.**—(i) *Stamp Duties and Fees.*—The following stamp duties and fees apply in the territory:—

Administration of Estates—Deceased Persons.	Transvaal Law No. 15 of 1899 as applied to Swaziland.
Administration of Estates—Deceased Persons.	Transvaal Proclamation No. 28 of 1902, Schedule E of Proclamation as applied to Swaziland.
Administration of Estates—Insolvent Persons	Transvaal Ordinance No. 5 of 1905, Schedule to Ordinance as applied to Swaziland.
Affidavit or solemn or attested Declaration	Swaziland Proclamation No. 38 of 1931, 2nd Schedule.
Agreement of Contract	Swaziland Proclamation No. 38 of 1931, 2nd Schedule.
Antenuptial or Postnuptial Contract	Swaziland Proclamation No. 38 of 1931, 2nd Schedule.
Arbitration of Award	Swaziland Proclamation No. 38 of 1931, 2nd Schedule.
Authentication Certificate	Swaziland Proclamation No. 38 of 1931, 2nd Schedule.
Bicycles, registration of	Swaziland Proclamation No. 35 of 1937.
Bill of Exchange or Promissory Note	Swaziland Proclamation No. 38 of 1931, 2nd Schedule.
Bond	Swaziland Proclamation No. 38 of 1931, 2nd Schedule.
Brands Great Stock, registration of	Swaziland Proclamation No. 64 of 1937.
Broker's Note	Swaziland Proclamation No. 38 of 1931, 2nd Schedule.
Certificate	Swaziland Proclamation No. 38 of 1931, 2nd Schedule.
Company Capital Duty	Swaziland Proclamation No. 38 of 1931, 2nd Schedule.
Coronation Stamps	Swaziland Proclamation No. 68 of 1937.
Customs Documents	Swaziland Proclamation No. 38 of 1931, 2nd Schedule.
Deeds Office	Transvaal Government Notice No. 80 of 1902, Schedule.
Duplicate Original of any Instrument	Swaziland Proclamation No. 38 of 1931, 2nd Schedule.
Duplicate Motor Certificate	Swaziland Proclamation No. 26 of 1916, Sec. 2 (4).
Land and Agricultural Loan Fund	Swaziland Proclamation P. 34/1929 (amended by 13/1930, 7/1931, 1/1937).
Lease or Agreement of Lease	Swaziland Proclamation No. 38 of 1931, 2nd Schedule.
Marketable Security	Swaziland Proclamation No. 38 of 1931, 2nd Schedule.
Notarial Act or Instrument	Swaziland Proclamation No. 38 of 1931, 2nd Schedule.
Partnership	Swaziland Proclamation No. 38 of 1931, 2nd Schedule.
Patent Office	Transvaal Proclamation No. 22 of 1902 Schedule H as applied to Swaziland.
Patent Office—Additional fees	Transvaal Government Notice No. 179 of 1902 as applied to Swaziland.
Patent Office—Registration of Trade Marks	Transvaal Government Notice No. 180 of 1902, 1st Schedule as applied to Swaziland.
Petty Debts—Recovery of	Transvaal Law No. 10 of 1897 as applied to Swaziland.
Postal Rates	High Commissioner's Notices Nos. 122, 171 of 1937, 28 and 122 of 1938.
Power of Attorney or any Instrument of like kind	Swaziland Proclamation No. 38 of 1931, 2nd Schedule.
Receipt	Swaziland Proclamation No. 38 of 1931, 2nd Schedule.
Registrar of Mining Rights	Transvaal Government Notice No. 55 of 1903, Schedule A.
Sheriff's Office	Transvaal Proclamation No. 17 of 1902, Schedule as in force in Swaziland.
Surveyor-General's Office	Swaziland Proclamation No. 18 of 1910 as amended by No. 43 of 1922.
Security or Suretyship	Swaziland Proclamation No. 38 of 1931, 2nd Schedule.
Tariff Higher Court	Art. 10, Transvaal Law No. 14 of 1895.
Tariff Lower Court	Art. 13, Transvaal Law No. 12 of 1899.
Telephone Charges	High Commissioner's Notice No. 129 of 1937.
Transfer Deed	Swaziland Proclamation No. 38 of 1931, 2nd Schedule

(ii) *Licence Duties and Fees.*—The General Licensing Proclamation is No. 53 of 1931 as amended by Proclamation No. 62 of 1932, Proclamation No. 13 of 1934, and Proclamation No. 1 of 1936, and in addition there are the following Proclamations and High Commissioner's Notices dealing with:—

Arms and Ammunition	Proclamation No. 21 of 1908 as amended by Proclamation No. 37 of 1910 and Proclamation No. 12 of 1912.
Game Licences	Swaziland Government Notice No. 4 of 1906 as amended by High Commissioner's Notices Nos. 24 of 1910 and 34 of 1934.
Labour Agents and Runners	Proclamation No. 19 of 1912 as amended by Proclamation No. 30 of 1917, Proclamation No. 22 of 1922, Proclamation No. 9 of 1928, and Proclamation No. 12 of 1930.
Liquor Licences	Proclamation No. 42 of 1936, as amended by Proclamation No. 6 of 1937.
Motor Cycles and Motor Cars	Proclamation No. 26 of 1916 as amended by Proclamation No. 33 of 1926, Proclamation No. 14 of 1930, Proclamation No. 50 of 1931.
Prospecting Licences	Section 17 of Proclamation No. 25 of 1911.
Public Ferries	High Commissioner's Notice No. 121 of 1931 as amended by High Commissioner's Notices No. 81 of 1936 and No. 153 of 1938.
Radio Licences	High Commissioner's Notice No. 16 of 1927 as amended by High Commissioner's Notice No. 60 of 1935.
Wildebeest Permits	Proclamation No. 17 of 1929.

The schedule below gives the amounts of the licences.

SCHEDULE.

	ANNUAL. £	s.	d.

Restaurant, Refreshment, or Tearoom-keeper	5	0	0	
Runners	1	0	0	
Temporary or Special Licence				15s. 0d. per day.

APPENDIX.

CHAPTER II, § 3, 4.

Ministries of the Union.—On the 6th September, 1939, General the Hon. J. B. M. Hertzog resigned the Premiership and His Excellency the Governor-General called upon General the Rt. Hon. J. C. Smuts to form a Ministry. The personnel of the second Smuts Ministry is as follows:—

SECOND SMUTS MINISTRY.

Department.	*Minister.*
Prime Minister and Minister of External Affairs and of Defence	Gen. the Rt. Hon. J. C. Smuts, P.C., C.H., K.C., D.T.D.
Native Affairs	Col. the Hon. Deneys Reitz.
Finance and Education	Hon. J. H. Hofmeyr, M.A., D.Sc.
Commerce and Industries	Hon. R. Stuttaford.
Agriculture and Forestry	Col.-Cmdt. the Hon. W. R. Collins, D.T.D., D.S.O.
Interior and Public Health	Hon. H. G. Lawrence, K.C.
Railways and Harbours	Hon. F. C. Sturrock, M.I.Mech.E.
Posts and Telegraphs, and Public Works	Hon. C. F. Clarkson.
Labour and Social Welfare	Hon. W. B. Madeley.
Mines	Col. the Hon. C. F. Stallard, K.C., D.S.O., M.C.
Lands	Senator the Hon. A. M. Conroy.
Justice	Dr. the Hon. C. F. Steyn, K.C.
Without Portfolio	Maj. the Hon. P. V. G. van der Byl, M.C., M.A.

CHAPTER II, § 10, 5.

Parliamentary By-elections.—The following are the results of recent by-elections for Parliamentary representation.

Electoral Division.	Date of Election.	No. of Voters on Register.	No. of Candidates.	No. of Votes cast.*	Percentage of Votes Cast to Voters on Register.	Successful Candidate.	
						Votes Cast for.	Percentage of Votes Cast.
Cape—							
Mowbray	10/10/39	—	1	—	—	Unopposed.	
Natal—							
Pietermaritzburg District	12/9/39	5,802	2	3,077	53·03	2,893	94·02

* Including spoilt papers and rejected votes.

CHAPTER II, § 10, 11.

Provincial Council By-elections.—The following are the results of recent by-elections for Provincial Council representation.

Electoral Division.	Date of Election.	No. of Voters on Register.	No. of Candidates.	No. of Votes cast.*	Percentage of Votes Cast to Voters on Register.	Successful Candidate.	
						Votes Cast for.	Percentage of Votes Cast.
Cape—

Transvaal—							
Lichtenburg	21/6/39	3,502	2	2,702	77·73	1,462	52·36

* Including spoilt papers and rejected votes.

CHAPTER VI, § 7, 2.

Workmen's Compensation Act Statistics, 1936.—The following tables give information regarding accidents which occurred during the period 1st January to 31st December, 1936, and were reported in terms of the *Workmen's Compensation Act*.

Employers are not liable for compensation to natives who are disabled for less than 6 weeks, provided food, quarters, and medical aid are supplied by the employer. Such cases are not reported to the Commissioner and are not included in the statistics.

The figures given refer to all cases reported to the Commissioner by general assurance companies, the Rand Mutual Assurance Co., government departments, the South African Railways and Harbours Administration, and exempted employers.

(i) PERSONS INJURED, ACCORDING TO AREA, RACE, SEX AND DEGREE OF INJURY, 1936.

* Excluding pensions and lump sums paid on account of commuted pensions. [See tables (iv) and (v).]

Table (iv) excludes pension payments and also lump sums paid on account of commuted pensions [see Table (v)]. It also excludes medical cost of cases which occurred on gold mines insured with the Rand Mutual Assurance Co., and on the S.A. Railways & Harbours. It has been estimated that the gross cost of medical aid to the S.A. Railways and Harbours Administration during 1936 was £27,000 and to the Rand Mutual Assurance Co., £58,724 on account of Europeans, and £19,575 on account of natives. An amount of £743 should be added to medical cost under licensed assurance companies; this represents retaining fees paid by certain mechanical engineering firms to doctors for attending to minor injuries to a large number of workmen.

The large amount shown against "Sundries" under the Rand Mutual Assurance Co. consists almost entirely of *ex gratia* periodical payments and not transportation costs as in other cases.
