The height of the trade union movement in the sub-continent was reached in 1928-29 when the communists became influential. Communist leaders had captured almost every important union in the sub-continent except the textile union in Ahmedabad and they had succeeded in securing a membership of over 50,000 textile workers in Bombay City for their Bombay Girni Kamgar Union. The membership figures of the various other unions which they controlled also showed remarkable increases.

The Split.—The communists made a successful attempt in 1929 either to capture or to break the All-India Trade Union Congress. They affiliated the Bombay Girni Kamgar Union with a membership of 54,000 and the G.I.P. Railway Workers' Union with a membership of 41,000 to that body during the year and with the assistance of the voting strength which these two unions together with some of their other unions gave them, they captured both the Congress and its Executive Committee at The Tenth Session of the Congress which was held in Nagpur in that year.

Resolutions were adopted favouring the affiliation of the Congress to international communist organisations and for the boycott of the Royal Commission on Indian Labour, the International Labour Conference and the Round Table Conferences on Indian Reforms.

Moderate trade unionists under the leadership of Mr. N. M. Joshi thereupon seceded from the Congress and formed a new organisation called the Indian Trades Union Federation. The All-India Railwaymen's Federation which was till then affiliated to the Trade Union Congress left that body in 1929 and remained outside till 1935.

At the eleventh session of the All-India Trade Union Congress held at Calcutta in July 1931, a further split occurred in its ranks and the extreme left wing under the leadership of Messrs. S. V. Deshpande and B. T. Randive broke away to form the All-India Red Trade Union Congress. By this time, however, trade unionism in the sub-continent was at a thoroughly low ebb and none of the three national organisations could by any manner or means make a claim to speak on behalf of Indian labour; but, as the Congress had already decided to boycott the International Labour Conference, the Government of India accepted the Indian Trades Union Federation as the body competent to recommend delegates to the International Labour Conference.

With a view to bringing about unity in the ranks of Indian labour, a committee called the Trade Union Unity Committee was appointed at a representative conference held in Bombay on the 10th May 1931 under the auspices of the All-India Railwaymen's Federation. This Committee found that there existed and distinct sections of labour were in existence in the sub-continent—(1) the communist group; (2) the liberal group; and (3) the rest—and that the gulf which divided the communists from the other sections was unbridgeable. The Committee, therefore, recommended a platform of unity for the remaining sections of labour. It was proposed to organise and unite all unions which accepted this 'platform of unity' under a new federation to be called the National Federation of Labour. At a joint meeting between the General Council of the Indian Trades Union Federation and the Provisional Committee of the National Federation of Labour held at Calcutta in April 1933, the two federations were amalgamated on the basis of the platform of unity as finally evolved by the Trade Union Unity Committee but subject to certain modifications and the new amalgamation was named the National Trades Union Federation.

Unity Attempts.—In 1935, the two sections of the All-India Trade Union Congress composed their differences and it was agreed that the parent body should be recognised as the central organisation of the working classes in the sub-continent. In the month of February of the same year an agreement was reached between the representatives of the All-India Trade Union Congress and the National Trades Union Federation by virtue of which a Joint Committee of the two organisations was to be formed with a view to exploring the possibilities of common action with the assistance of the affiliated unions of both. Another direction in which an effort towards common action on agreed matters was made was the agreement entered into between the National Federation

of Labour and the All-India Congress Socialist Party for joint action on specific political and economic issues.

At the end of the year 1937, the National Trades Union Federation had a membership of 83,000 with 62 affiliated unions and the All-India Trade Union Congress had a membership of 46,000 with 98 affiliated unions. It is interesting, however, to note that the labour unions of Ahmedabad which draw their inspiration from Mahatma Gandhi have throughout remained aloof from both these bodies.

At a special joint session of the All-India Trade Union Congress and the National Trades Union Federation held at Nagpur on the 17th April 1938, it was decided to combine these two bodies into one central organisation. The principal terms of the agreement approved by the executives of both these bodies were that the basis of representation on the joint General Council of the new combined Trade Union Congress be fifty-fifty—44 members from each group—and that the Trade Union Congress accept the constitution of the National Trades Union Federation *in toto*. The General Council was to act for the combined body with the one limitation that questions relating to general strikes and affiliation with international bodies should be decided by a three-fourth's majority. If this scheme worked well, the task of unification should be pushed further and the two bodies merged into one. The Provisional Affiliation entered into at Nagpur in April 1938 was formally ratified at the Eighteenth Session of the All-India Trade Union Congress held at Bombay on the 28th and 29th September 1940.

Attitude to War.—This very same session, however, was responsible for yet another split in the Congress. The Session adopted a resolution of neutrality in connexion with the war effort but certain elements headed by Dr. Aftab Ali, President of the Seamen's Union at Calcutta desired to support the war effort. The Trade Union Congress while adhering to the principle of neutrality, however, gave a free hand to such of their affiliated members as desired to support the War Effort. This attitude of lukewarmness did not satisfy Mr. Aftab Ali and he disaffiliated his Union from the Congress.

Another section, headed by Mr. M. N. Roy and known as the Royists with Mr. Jamnadas M. Mehta, formed a new central organisation known as the Indian Federation of Labour with its head office at Delhi. Mr. Jamnadas M. Mehta was appointed its President and Mr. M. N. Roy its General Secretary. Two hundred trade unions in the sub-continent with a total membership of over a quarter of a million have affiliated themselves to the new Federation which was carrying on a country-wide campaign and propaganda for all-out support by Indian labour for the war effort.

The All-India Trade Union Congress, at the moment is made up of three distinct groups: (1) the Communists; (2) the Nationalists (including the Indian National Congress and the Congress Socialist Party); and (3) the pure Trade Unionists.

There are, however, two important groups outside the Trade Union Congress. One is the Royists. The other is the Hindustan Mazdoor Seva Sangh which is the permanent offsprings of the Labour Sub-committee set up by the Gandhi Seva Sangh in 1937 to organise labour on the principles set up by Mahatma Gandhi—principles which have been followed by the Textile Labour Association, Ahmedabad, since its inception in 1921. The original Sub-Committee established a training school in Ahmedabad to educate interested persons in trade union work. After completing a course of training in this school, the trainees are sent out to different centres to organise and conduct *bona fide* trade unions. The Sangh acts as an Advisory Body and is not a federation of unions. In politics, its policy is the same as that of the Indian National Congress but it does not organise or conduct trade unions of workers on political lines.

According to an enquiry recently made by the Government of India, it has been found that the most representative workers' organization in India is the All-India Trade Union Congress.

The latest development in the field of trade unions in India has been the establishment of what is known as the Indian National Trade Union Congress. This institution has the active support of Congress Governments in the country. The Ahmedabad Textile Labour Association has joined this organisation which generally follows the ideology of the Congress.

STATISTICS OF TRADE UNIONS

One of the Annual Reports which the Government of India stopped publishing during the War was that relating to the administration of the Indian Trade Unions Act. These reports used to contain statistics regarding number of registered unions and their membership.

No Province except Bombay has maintained any records for both registered and unregistered unions. The Labour Office of the Government of Bombay has collected full and complete information regarding all trade unions in the Province of Bombay since the year 1922. The following Table shows the progress of the trade union movement in that Province during the last few years:

Year	Average number of Unions during the year	Average Membership during the year
1922	18	41,030
1923	91	191,937
1929	170	159,026
1930	177	191,942
1941	174	184,517
1942	183	183,364
1943	214	221,029
1944	261	266,042
1945	295	321,582
1946	352	340,540

All-India Figures.—Although the Government of India have not so far revived the publication of an Annual Report on Trade

Unions, their Labour Bureau publishes figures for Registered Trade Unions in the *Indian Labour Gazette*. The following tabular statements show the latest available position in regard to Registered Trade Unions:—

Province	No. of Registered Trade Unions	No. of Unions making returns	Membership of Unions making returns.
Ajmer-Merwara	3	3	946
Assam	9	9	2,486
Bengal (E. and W.)	330	134	289,255
Bihar	49	31	73,428
Bombay	93	79	172,679
C.P. & Berar	53	27	13,748
Delhi	40	19	30,504
Madras	154	141	88,270
N.-W.F.P.	4	2	328
Orissa	4	4	1,494
Punjab (E. and W.)	22	21	8,308
Sind	39	39	12,431
U.P.	34	34	36,734
Trade Unions whose objects were not confined to one Province	31	30	161,777
Total	865	573	889,388

The following table shows the number and membership of the Registered Trade Unions from which returns were received, classified according to industries:—

Branches of Industry	1944-45	
	No.	Membership.
1. Railways (including workshops and other transport excluding Tramways)	82	304,486
2. Tramways	4	10,390
3. Textiles	113	210,712
4. Printing Presses	24	13,560
5. Municipal	23	11,928
6. Seamen	9	79,501
7. Docks and Port Trusts	24	37,098
8. Engineering	53	35,513
9. Miscellaneous	241	186,200
Total	573	889,388

Conventions Ratified.—India and Pakistan have ratified only 15 out of the 67 Conventions ratified by the I. L. O. but have in addition incorporated into the national legislative

measures the essential features of many other Conventions. The following is the list of Conventions ratified:—

- Hours of Work (Industry), 1919.
- Night Work (Women), 1919.
- Night Work (Young Persons), 1919.
- Right of Association (Agriculture), 1921.
- Weekly Rest (Industry), 1921.
- Minimum Age, 1921.
- Medical examination of Young Persons (Sea), 1921.
- Workmen's Compensation (Occupational Diseases), 1925.
- Equality of Treatment, 1925.
- Inspection of Emigrants, 1926.
- Seamen's Articles of Agreement, 1926.
- Marking of Weight, 1929.
- Night Work (Women) Revised, 1934.
- Underground Work (Women), 1935.
- Protection Against Accidents (Dockers) Convention, 1929, Revised in 1932.

LABOUR ADMINISTRATION

The work of the Ministry of Labour of the Government of India has increased considerably. As a matter of fact, recently this Ministry has been split into two different Ministries, one styled the Ministry of Labour and the other Ministry of Works, Mines and Power.

Apart from dealing with labour legislation and labour conditions and attempting and bringing about uniformity of standards in the different Provinces, this Ministry has recently undertaken very great additional responsibilities for the placement of civil and military demobilized personnel. It administers and controls all matters in connection with the work of the National Services Tribunal, the Technical Training Scheme, the Bevin Scheme and the system of Employment Exchanges. It has continued active co-operation with organized employers and labour organizations through the Tripartite Labour Conference and Standing Labour Committee.

Prior to the year 1920 there was little co-ordination between the Centre and the Provinces in matters connected with Labour. The participation by India in the First Session of the International Labour Conference held at Washington in 1919 and the increasing interest taken by the Indian public in questions connected with labour made it necessary, however, both for the Government of India and the Governments of the more industrialised Provinces not only to consider the question of the representation of labour in the Central and provincial legislatures but also to allocate to special departments or offices the administration of labour questions.

The Government of India established a Labour Bureau in the year 1920 which instituted inquiries into certain phases of factory work and published some reports in a series known as "Bulletins of Indian Industries and Labour."

The Bureau was however abolished in March 1923 on the recommendation of the Indian Retrenchment Committee. Since the War and the creation of the Tripartite Labour Conference the Ministry of Labour of the Government of India has considerably expanded its staff and it now deals with a much wider range of subjects than it did before the War.

Labour Bureau.—To meet the ever growing needs of Government, industry and labour for accurate and reliable information relating to labour conditions, labour legislation, etc., the Central Government established on 1st October 1946, a Labour Bureau with the following functions:—

- The collection of statistics relating to labour, etc.
- To maintain the cost of Living Index Numbers compiled under the Government of India's Scheme for the preparation of Cost of Living Index Numbers on uniform lines.
- To keep up-to-date the factual data relating to working conditions collected by the Labour Investigation Committee.
- To conduct research into specific problems with a view to furnishing data required for the formulation of policy.

(e) To edit the *Indian Labour Gazette*, and,

(f) To edit a Labour Code of various Legislative enactments and the statutory rules made thereunder and a Year Book giving authoritative description of labour affairs in the country.

The Bureau has now been in existence, for nearly two years. It has so far issued the following two publications:—

- A symposium containing articles contributed by Sir Wilfrid Garrett, Chief Adviser of Factories, to the *Indian Labour Gazette*.
- A Report on an Enquiry into the Family Budgets of Workers in the Tea Plantations of Assam, Bengal and South India.

At the time of writing the *Indian Labour Year Book* is in the press.

One of the extensions of the activities of this Ministry has been in the field of the collection of necessary data for compiling cost of living index numbers for selected centres in India on uniform lines. Accordingly, an Officer styled Director, Cost of Living Index Scheme, was appointed in the year 1942 and he has now collected some 27,000 family budgets in about 28 selected centres in India and Pakistan. The data have now been tabulated and within a short time it may be possible to have for the first time, scientifically compiled cost of living index numbers for principal centres in the two Dominions.

The Central Government, in the Ministry of Labour, have also now appointed a Chief Labour Commissioner. This officer is in charge of industrial relations and conciliation, labour welfare operation of labour laws, and maintenance of information regarding wage rates and conditions of work. There are a number of deputies working under him known as Regional Commissioners. Among the functions of the

Office of the Chief Commissioner of Labour, is to look after the welfare of the employees employed in concerns belonging to the Central Government, including mines. The Chief Commissioner of Labour and his deputies also intervene in disputes arising between Government and employees in the various mines and factories.

The Provinces—Consequent on the introduction of Provincial Autonomy with effect from 1st April, 1937, Sind was separated from the Presidency of Bombay and made into a separate Province. The new Government of Sind modelled its administration of all labour questions on Bombay and created a Labour Office with a special Commissioner of Labour. Since the year 1937, the Governments of the United Provinces, Assam, the Central Provinces and Berar and Bihar have also created special appointments of Commissioners of Labour; but, whereas the appointments in the United Provinces was a full-time one, those in the Central Provinces and Berar, Bihar and Assam have been coupled with other posts. In the old undivided Punjab, administrative matters connected with Labour were in the hands of the Director of Industries. Labour conditions in Orissa and in the North-West Frontier Province are not such as to justify the creation of special appointments of Labour Commissioners.

Bengal (E. and W.)—The personnel of the Governments connected with labour matters consists of the:

Labour Commissioner and Registrar of Trade Unions; Deputy Labour Commissioner and Chief Inspector, Shops and Establishments; Commissioner for Workmen's Compensation and Authority under the Payment of Wages Act; Assistant Labour Commissioners; Labour Officers and the Chief Inspector of Factories.

During the last two years, the office of the Commissioner of Labour, has carried out a number of statistical and socio-economic enquiries into labour conditions such as family budget enquiries, wage censuses, etc. This work was undertaken either in connection with the Government of India's scheme for the preparation of cost of living index numbers on uniform lines or on behalf of the Labour Investigation Committee.

Bombay—The real pioneer work in the field of labour information and statistics in the sub-continent during the last twenty-five years has been done by the Bombay Labour Office. The principal work of the Labour Office during the year was in connection with the editing of the Labour Gazette and conciliation in Trade Disputes. The administration of the Bombay Industrial Disputes Act, 1938, has resulted in a heavy strain on the Labour Organization of the Government, the chief personnel of which consists of Commissioner of Labour, who is also Chief Conciliator, Bombay Industrial Disputes Act, and Registrar of Trade Unions; Assistant Commissioners of Labour; Labour Officer, Bombay and Officer-in-Charge, Labour Welfare Department; District and Assistant Labour Officers; Commissioner for Workmen's Compensation; Chief Inspector of Factories and the Labour Welfare Officer, Bombay. The Commissioner co-ordinates the work of the three

Labour Directorates, viz., Directorate of Labour Information, of Labour Administration, and of Labour Welfare respectively.

Madras—The Commissioner of Labour in Madras is also the Chief Inspector of Factories but for the administration of the Factories Act he is assisted by a Deputy Chief Inspector of Factories at headquarters, in charge of the Madras Factories Circle. Three additional Factories Circles, each in charge of an Asst Inspector of Factories were sanctioned in 1945-46.

The Labour Commissioner in Madras has no special statistical office to deal with labour statistics, and no reports have been published of any special inquiries into questions connected with industrial labour in the Province. The conduct of the Quinquennial Census into Agricultural Wages has, however, been placed in his hands and, with a view to the proper administration of the Payment of Wages Act a beginning has been made for a more accurate collection of industrial wages statistics, information regarding which is included in the Annual Reports on the Administration of the Factories Act.

In view of the large increase of work resulting from war conditions, the Government of Madras sanctioned the creation of a post of Assistant Commissioner of Labour in September, 1943. In February 1944, this Officer was appointed as Additional Commissioner for Workmen's Compensation. An additional post of a Labour Conciliation Officer for the Madras, Ramnad and Tinnevely Districts with headquarters at Madras was created in 1945.

The personnel of the Madras Government connected with Labour matters consists of the Commissioner of Labour; Commissioner for Workmen's Compensation; Registrar of Trade Unions; Chief Inspector of Factories and the Authority under the Payment of Wages Act; Deputy Chief Inspector of Factories; Asst Commissioner of Labour and Additional Commissioner for Workmen's Compensation and the Labour Conciliation Officers.

C. P. and Berar—Prior to January, 1944 when the Government of the Central Provinces and Berar created the post of a Commissioner of Labour, matters in connexion with the administration of questions connected with Labour were dealt with by the Director of Industries. The new Labour Office in Nagpur has been modelled on lines similar to that in Bombay and it is to be responsible for the collection of statistics relating to the cost of living, industrial disputes and trade unions. The Commissioner of Labour is assisted by a Labour Officer and Assistant Labour Officers. The Commissioner and the Labour Officer have been appointed Conciliators under the Trade Disputes Act, 1929.

U. P.—Following the recommendations of the Cawnpore Labour Inquiry Committee, the Government of the United Provinces sanctioned the post of a whole-time Labour Commissioner in March 1940. This Officer, like the Commissioner of Labour in Bombay, was to hold all the statutory appointments connected with Labour and he was provided with a permanent staff with effect from 1st April 1941.

The main functions of the Labour Department are: (a) Prevention and settlement of industrial disputes. (b) Disposal of individual complaints received from workmen or their organisations. (c) Labour Intelligence. (d) Collection, compilation and publication of accurate statistics of labour conditions and welfare. (e) Organisation, superintendence, direction and control of Labour Welfare Work. (f) Registration of Trade Unions. (g) Labour Regulation. (h) Administration of Labour Acts. (i) Supervision and control of the Office of the Chief Inspector of Factories and Boilers, U.P., and (j) Miscellaneous work connected with Labour, viz., (a) Emigration and (b) Preparation of Electoral Rolls, etc.

An inquiry into Rents and Density of Population in Workers' Dwellings in Cawnpore begun about the middle of 1943 has now been completed. Other inquiries into the conditions in the Brassware Industry at Moradabad and the Scissors Industry at Meerut have also been completed. Yet another enquiry which is also now completed is one into Family Budget at Cawnpore under the Govt. of India's centrally controlled cost of living index scheme.

The personnel of the United Provinces Government dealing with Labour matters consists of the Labour Commissioner, Commissioner for Workmen's Compensation, Registrar of Trade Unions, and Chairman, Sugar Commission, United Provinces and Bihar; Labour Officers and the Chief Inspector of Factories.

Bihar—In pursuance of the recommendations of the Bihar Labour Inquiry Committee, a Department of Labour on the lines of the Bombay Labour Office was brought into existence in Bihar with effect from 1st July, 1942. This was established on a permanent basis with effect from the 15th March, 1944. The Factory and the Boiler Inspection Departments have been placed under the Commissioner of Labour since September, 1944. The Commissioner of Labour has been appointed ex-officio Inspector under the Factories Act, the Payment of Wages Act and the Employment of Children Act. The Commissioner and his two Assistants have also been appointed Conciliators under the Trade Disputes Act, 1929. The Employment Bureau which was created in 1935 and was attached since then to the Director of Industries was transferred permanently to the Office of the Commissioner of Labour with effect from 1st January, 1945. The Commissioner of Labour is a Commissioner for Workmen's Compensation only in contested cases. Other cases are taken up by District Magistrates who are ex-officio Commissioners for the purposes of the Workmen's Compensation Act.

The newly formed Labour Department has been engaged in the settlement of industrial disputes and in the examination of the recommendations contained in the Report of the Bihar Labour Inquiry Committee. The personnel of the Government of Bihar dealing with Labour matters is as follows: Commissioner of Labour and Employment Conciliation Officer, Registrar of Trade Unions and Chairman, National Service Labour Tribunal; Assistant Commissioners of Labour; and the Chief Inspector of Factories.

Sind—In July 1940, the Government of Sind constituted an Advisory Board of Labour consisting of persons interested in Labour matters for promoting better relations between employers and employees and to advise Government on Labour matters in general. The Honourable Minister holding the Labour Portfolio is the Chairman and the Commissioner of Labour is the Secretary. This Board was reconstituted in 1944 on the basis of equal representation for employers and Labour. It now has 23 members. The functions of the Board are to examine labour problems and to conduct surveys on all questions connected with Labour, to devise schemes for the development of better relations between employers and employees and to offer expert opinion and advice to Government on all important matters concerning Labour.

The Commissioner of Labour in Sind has been appointed as an Arbitrator in a number of industrial disputes. The Government of Sind has now constituted a panel of two Adjudicators for settlement of trade disputes. The Personnel of the Government of Sind dealing with Labour matters is as follows: Commissioner of Labour, Registrar of Trade Unions, Chief Inspector of Shops, and Conciliator, Trade Disputes Act; Assistant Commissioner of Labour and the Chief Inspector of Factories and Boilers.

Punjab (E. and W.)—The Punjab was the only major Province which had not appointed a Commissioner of Labour. The administration of labour matters prior to the partition of the country in the Province was in the hands of the Director of Industries, who was also the Registrar of Trade Unions. The personnel of the administrative staff of the government old undivided dealing with matters connected with Labour was as follows: Director of Industries and Registrar of Trade Unions; Chief Inspector of Factories; Labour Officer; and the Chief Inspector of Shops and Commercial Establishments, Punjab.

In Eastern Punjab no suitable organisation has yet been set up at the time of writing owing to the uncertain conditions resulting from mass evacuations.

In Assam the main question connected with Labour is that concerning the recruitment of Labour for tea plantations from other provinces. As inter-provincial migration is a central subject, the Provincial Government are not very actively interested in the special consideration of other Labour questions. Notwithstanding this however, the Government of Assam have obtained the approval of the Government of India and the vote of the Legislature for appointing the Controller of Emigrant Labour as part-time Labour Commissioner, with a whole-time Assistant.

The only important event of interest that has occurred in the field of Labour in Assam recently is the creation of the Workmen's Compensation Deposit Scheme. Labour conditions in Orissa and the North-West Frontier Province are not such as to justify the appointment of Labour Commissioners. In Orissa, the Director of Development is the Labour Commissioner; and the Revenue Commissioner is the Registrar of Trade Unions. In the North-West Frontier

Province, the Secretary to Government in the Legislative Department is entrusted with the work of industrial and labour disputes. In **Ajmer-Merwara**, the Labour Officer is now designated Registrar of Trade Unions. He deals with all matters pertaining to Labour.

States—The rapid industrialisation witnessed in the sub-continent especially since the advent of the Second World War in 1939 has not been confined to the Dominions alone but has also extended to the States. After the end of the First World War, there was a slight tendency for industry in British India to migrate to the States owing to the absence of labour laws and restrictive conditions of work but most of the progressive States such as Hyderabad, Baroda, Mysore, Gwalior, Indore, Travancore, Cochin, etc., have endeavoured during recent years, to bring their labour legislation into line with the Labour Laws in the Dominions with the result that industrial workers in these States are now assured of conditions very similar to those obtaining in India and Pakistan. The participation by some States in the Conferences of Labour Ministers and their representation in the Tripartite Labour Conference and in the Standing Labour Committee created in 1942 have given an added impetus to planned industrialisation and the levelling up of conditions of work in the States with those obtaining in the Dominions.

* **Mysore**—Prior to 1941, Mysore had a Factories Act, a Mines Act, a Workmen's Compensation Act and a Maternity Benefit Act. Labour problems in Mysore have, however, been brought into considerable prominence as a result of rapid industrialisation in the last few years. In addition to 28 new plants, 25 large industrial concerns of which 17 were State-aided and eight State-owned were established in the State during the decade ending 1941. The total number of large industrial undertakings stood at 330 by the end of 1943 and these gave employment to an average of nearly 86,000 workers. An amendment made to the Mysore Factories Act in 1942 extends the scope of the Act to all factories employing ten or more persons instead of 20 as before thus bringing almost all factories in the State within its purview. The Mysore State has now fallen in line with the Indian Factories Act by reducing the hours of work to 48 per week. The Mysore Workmen's Compensation Act was considerably liberalised and the operation of the Mysore Maternity Benefit Act was extended to women employed in mines in the same year. The Code of Civil Procedure was also amended in such a way as to ensure the exemption of the wages of workers from attachment.

The most advanced piece of labour legislation in States today is the Mysore Labour (Emergency) Act enacted in 1941 and placed permanently on the Statute Book in January 1942.

This Act creates machinery for the peaceful and speedy settlement of industrial disputes and seeks generally to promote the welfare of labour. Among its many provisions are those relating to the setting up of a Department of Labour with a Commissioner and three Assistant Commissioners of Labour and a Court of Industrial Arbitration: the framing by the Commis-

sioner of Labour, of Standing Orders for workmen; and the conferring of the rights of association on all labour employed in the State. The Court of Industrial Arbitration, consisting of a Judge of the High Court as its Chairman and two independent members decides industrial disputes referred to it by Government or by agreement between the parties and decides appeals from the Orders of the Commissioner of Labour regarding Standing Orders.

The creation of rival unions of workers is avoided by prescribing a single Association each for industrial undertakings employing not less than 100 persons and by conferring Statutory recognition on each Association immediately it is registered.

A Labour Welfare Board consisting of representatives of employers, unions of workers and local bodies entrusted in labour welfare with the Commissioner of Labour in Mysore as Chairman was constituted in December 1942 with a wide range of functions covering all matters relating to labour welfare, labour legislation, collection of statistics and dissemination of labour intelligence.

The personnel dealing with matters connected with labour is as follows:—Commissioner of Labour and Chief Inspector of Factories; Assistant Commissioners of Labour; Chief Conciliator and Registrar of Associations and the Chairman, Court of Arbitration.

Hyderabad—On the 1st April 1944, there were 668 industrial concerns subject to the Hyderabad Factories Act employing 53,295 operatives of whom 37,627 were men, 12,255 were women and 1,413 were children. In addition to the Factories Act which embodies provisions for the health and safety of labourers, there is a Mines Act, a Boiler and Machinery Act, the Hyderabad Labour Compensation Act, and a Maternity Benefit Act. Recent legislation includes a Payment of Wages Regulation, an Employment of Children Regulations, a Trade Disputes Order for the appointment of an Industrial Court and Conciliation Boards and a Trade Unions Act. Debt Conciliation, Land Mortgage and Money-Lenders Regulations have been framed for the protection of agriculturists and agricultural labour. Hours of work in the majority of the factories do not exceed 54 or 60 per week and in Government concerns are limited to 7 to 8 per day. Strikes and lockouts have been made illegal unless 21 days' notice has been given.

A Departmental Employment Bureau has been created for solving the problem of unemployment. A Statistics Act, much wider in scope than the Industrial Statistics Act of India has also been enacted. The Department of Statistics has instituted quinquennial inquiries into wages and conditions of employment of agricultural and industrial labourers since the year 1920 and the first printed Report on the Labour Census was published in 1935. The second Report on Labour Wages Census (Rural and Urban) 1940 has also been published. A scheme for Inquiries into Family Budgets and the compilation of Cost of Living Indexes in several industrial centres of the Dominions, Hyderabad City (including Secunderabad), Warangal, Nizamabad, Nanded, Aurangabad

and Gulbarga is in process of completion. A collection of Statistics Act was adopted early in the year 1945. This is the most advanced piece of legislation of its kind yet adopted in the sub-continent and is much wider in scope than the Industrial Statistics Act, 1942. The personnel dealing with matters connected with Labour is as follows: Minister in charge of Labour; Secretary for Labour; Commissioner of Labour; Labour Officer and the Labour Welfare Inspectors.

Baroda—The total number of registered factories in the Baroda State on the 31st July, 1944 was 170 of which 80 were perennial and 90 seasonal. The total number of persons employed in all factories employing more than 20 persons was 41,771. Baroda was one of the first states in India to enact a Mines Act. The Baroda Mines Act, 1908 contains provisions in regard to health and safety of workmen employed in the Mines. As far as other Labour Laws are concerned the Government has adopted, with certain changes to suit local conditions, the Indian Factories Act, 1934; the Workmen's Compensation Act, 1923; the Trade Disputes Act, 1929; the Trade Unions Act, 1926; the Payment of Wages Act, 1936; and the Bombay Maternity Benefit Act, 1929. Under the Baroda Factories Act, the maximum permissible weekly hours of work are 48 for perennial factories and 54 for seasonal factories. The Workmen's Compensation Act and the Rules framed thereunder have been adopted in toto. In the Baroda Maternity Benefits Act, the benefit is to be at the rate of six annas a day as against 8 annas a day as in the Bombay Act. Sections 6(3) and 18A (relating to the appointment of Conciliators) have been omitted from the application of the Trade Disputes Act, 1929.

The Baroda Trade Unions Act has important variations from the India Act on which it has been modelled: (1) No Associations or Unions of Government Servants, whatever be their objects, are permitted; (2) the forming, by Unions, of political funds is not recognised; (3) the proportion of persons connected with an industry which is covered by a Union to outsiders on its executive has been fixed at 60% and 33% per cent. respectively; and (4) Section 30 of the British Indian Act has been omitted. Under the Baroda Payment of Wages Act, all wages have to be paid before the expiry of the tenth day following the period for which they fall due. In the application of Rule 81A of the Defence of India Rules, the period of notice required for the declaration of a strike or a lock-out is six weeks.

A Labour Officer whose main duty was to endeavour to bring about settlements in labour disputes was appointed in the year 1938. In addition to conciliation work he is entrusted, as Special Registrar of Co-operative Societies for Workers, with the work of organising Co-operative Societies and other welfare Schemes with the help of employers. In the year 1943, the Government of Baroda State instituted an inquiry into the general financial condition of

the cotton mills in the State and the conditions of labour employed in them with special reference to recruitment, wages, hours of work, labour welfare and efficiency.

With a view to seeing that the increased earnings accruing to industrial workers in the State as a result of war conditions might not be frittered away in drink, etc., the Baroda Government decided to start Co-operative Thrift Societies for the workers. The Government have guaranteed the security of all deposits made in such Societies. By the end of February, 1945, twenty such Societies with a membership of 24,301 workers had been established in the State. The total amount of savings as at the same date amounted to Rs. 20,19,962.

The personnel of the Government of Baroda dealing with administrative matters connected with Labour is as follows: Director of Labour and Registrar of Trade Unions; Labour Officer, Inspector of Factories under the Payment of Wages Act and Special Registrar of Co-operative Societies for Labour and the Inspector of Factories.

Indore—In October 1943, Indore was the fifth largest centre of the cotton textile industry in the sub-continent with seven mills having 213,440 spindles and 0,301 looms. The total number of factories on the register on 1st October 1944 was 485 of which 322 were perennial and 163 seasonal. These provided employment for 30,297 workers in all of whom 26,377 were employed in cotton mills.

Labour legislation in Indore is almost parallel to that in India and includes Factories, Workmen's Compensation, Trade Unions' and Maternity Benefit Acts. The Indore Trade Disputes Act provides for the appointment of Courts of Inquiry and Boards of Conciliation to deal with disputes and also for a Labour Officer to secure the maintenance of harmonious relations between the workers and their employers. Standardisation of wages has been secured in cotton textile mills and labour has been decasualised by the introduction of the *Baoli* Control System on the lines adopted by the Millowners' Association, Bombay. Safety Committees to prevent accidents in factories have also been established.

Cochin—Unlike Mysore, Baroda and Indore, the large industrial population of Cochin State is organised on a cottage basis. The number of concerns on the Factory Register at the end of the last official year (18th August 1944) was 108 employing 12,806 persons. Today Cochin State has all the labour laws which have been enacted in Indore with a Dock Labourers' Act in addition. Recent additions include an Employment of Children Act and the Employee's Liability Act. The administration of labour matters is generally in the hands of the Commissioner of Labour. The Factories Act and the Workmen's Compensation Act are, however, under the immediate administrative control of the Chief Engineer, Public Works Department and the District Magistrate of the State respectively.

States in India and Pakistan

THE Narendra Mandalor Chamber of Princes came into existence, with the earnest co-operation of a number of leading Princes themselves, as one of the results of the Report on Indian constitutional reform presented to Parliament by Montagu, Secretary of State for India and Lord Chelmsford, Viceroy and Governor-General of India in 1919. The proposal was that the Chamber should exist as a permanent consultative body, with the Viceroy as President and the members composing the Chamber consisting mainly of the Princes and Chiefs having salutes or whose membership might otherwise be considered desirable by the Viceroy. Certain smaller Chiefs were grouped and were given the privilege of nominating a member to represent them from year to year. The Chamber a recommendatory body, performed its functions under a constitution approved by the Secretary of State and dealt with questions submitted to it concerning the Princes and their rights and privileges generally and their position in imperial affairs.

The Chamber was formally inaugurated by the Duke of Connaught on 8th February 1921.

As the constitution of the Chamber provided for each State-Member exercising one vote on any question coming before the Chamber, power in the Chamber gradually fell into the hands of a majority representing the smaller States because these States were naturally the readiest to exercise their membership privileges. This development caused serious dissatisfaction among the Greater States and out of that sprang a movement for the re-organization of the Chamber.

The differences between the Greater States and the Lesser States were much sharpened by the different view-points which they held in regard to Federation. His late Highness of Patiala early in 1936 resigned the Chancellorship on this account. Thereafter His late Highness of Bikaner resigned from the Standing Committee of the Chamber. Only one Ruling Prince with a salute as big as 17 guns was left an active participant in the Chamber's affairs. His Highness of Patiala was succeeded in the Chancellorship by His Highness of Dholpur, who automatically proceeded to the appointment from that of pro-Chancellor. His Excellency the Viceroy, in consultation with the Princes, convened a meeting in February 1937.

This meeting was preceded by intensive deliberations in the Informal Conferences of Princes. Their Highnesses at discussions which they held in Bombay in October 1936 appointed a Constitution Committee, under the Chairmanship of His late Highness the Maharaja of Patiala and including the Chancellor, to examine the Government of India Act of 1935 from the point of view of the States' entry into Federation. This Committee produced its report in the first week of February 1937, and in the course of it said that upon careful consideration of the Act they had "come to the conclusion that the safeguards have been substantially met" and that certain further recommendations now newly

made by themselves would, if adopted, completely fulfil them. These recommendations, the Committee said, had been drafted in consideration of the fact that the Act had already been passed. They comprised, therefore, four proposed changes in the Draft States' Instrument of Accession.

This report was taken into consideration by the general body of Princes at an informal Conference which adopted the report of the Constitution Committee. This decision was endorsed at a formal meeting of the Chamber of Princes in February 1937 by the re-election of His late Highness of Patiala to the Chancellorship by an overwhelming majority, and by the election of a pro-Chancellor and Standing Committee in sympathy with the same decision.

His Highness the Jam Sahab of Nawanagar succeeded His late Highness of Patiala in the Chancellorship and held the office for a number of years until the election in 1944 of His Highness the Nawab of Bhopal.

Internal Reform.—The pace of administrative and constitutional reform in the States rapidly increased in the years before the war owing to the introduction of provincial autonomy in British India, the apparent approach of Federation, and pressure—sometimes direct—from the Indian National Congress.

A new factor in the accession of the States to the proposed federation arose early in 1938. The Congress demanded as one of the conditions precedent to its active co-operation with the federal scheme of 1935 the introduction in the States of self-governing institutions and an undertaking by the States rulers that in choosing their representatives to the federal legislature they would adopt an elective element. Neither the British Government nor their representatives in India could countenance these demands which were contrary to the provisions of the Act. Nevertheless the tide of democracy could not be stemmed.

Numerous States announced their Rulers' intention to liberalise their constitutional machinery and to improve their administration. Many actually introduced reforms. A few Rulers declared that responsible government was the goal of policy and took steps towards it.

An extraordinary development took place early in 1939 when Mahatma Gandhi decided on a fast to death to compel the Thakore Sahab of Rajkot to implement his promise concerning the membership of a reforms committee. The Viceroy intervened and Mahatma Gandhi agreed to the adjudication of the Chief Justice of the Federal Court, which went in his favour. But subsequently further difficulties over the constitution of the committee arose owing to the Mahatma's promise to the minorities and the Mahatma eventually recanted and declared that his fast had been coercive in character. He therefore left the committee to be constituted by the State. Later Mahatma Gandhi announced a "new technique" for agitation by States' subjects, in which he counselled moderation in their demands and called off all civil disobedience movements in the states.

His advice and direction was followed in almost every State where previously the air had been thick with strife. In some cases the response was quick, while in others the local leaders were inclined to be resentful of this sudden brake on their activities. Eventually, however, quiet was restored on the "States front," although stray "incidents" continued to engage the attention of the local public and of Mahatma Gandhi himself.

1943 Meeting.—The annual meeting of the Princes' Chamber was held in October 1943. It was addressed by Lord Linlithgow for the last time, for he left India almost immediately after. The address was listened to by the largest number of Princes that had ever attended any session since the inauguration of the Chamber. The Crown Representative upheld the federal ideal as the best for Indian unity and for the constitutional future of India and declared that "that unity is wholly consistent with the survival and orderly development of Indian States." He emphasised that the Crown's obligations to protect carried with them equally binding responsibilities to ensure, if need be, that what was protected continued to be worthy of protection.

1944 Crisis.—In the middle of September two deputations of the Princes waited on His Excellency the Crown Representative. One of them discussed questions affecting smaller States such as interstate general services, while the other took up with His Excellency the industrial policy of the Government of India as affecting the States, post-war reconstructions, treaty rights and relationship with the Crown. What happened at this interview is not clear except from the rapid events which culminated in a crisis in December 1944. On December 4, 1944, for the first time in the 23-year-long history of the Chamber of Princes, the Standing Committee of the Chamber resigned *en bloc*; and the session of the Chamber, scheduled to meet on the following day, was obliged to be postponed *sine die*.

On this crisis of first rate importance there is, curiously enough, no authoritative information. For an understanding of the subject, one has to rely on press reports published at the time. These varied in detail but were agreed on the main causes of the crisis. According to these press reports, the unprecedented step of the resignation of the entire Standing Committee of the Chamber and the appointment of a "Committee of action" (including the Chancellor and the Pro-Chancellor, the Nawab of Bhopal and the Jam Sahab of Nawanagar) was the climax of a series of events since September 15-16, 1944 when a deputation of Princes, led by the Nawab of Bhopal, waited on H. E. the Crown Representative.

About a month later the Chancellor addressed a communication to the Political Adviser to the Viceroy. The latter replied on December 2, which was the immediate cause of the Princes' decision. The decision was taken after several hours of protracted discussion extending over two days, and in the later stages the opinion of rulers outside the Standing Committee and of a few eminent administrators with State experience was consulted.

Besides the Nawab of Bhopal, Chancellor of the Chamber, and the Pro-Chancellor, the Jam Sahab of Nawanagar, the members of the Standing Committee who resigned include the Rulers of Indore, Dewas (Senior), Doongarpur, Patiala, Jaipur, Bikaner, Bilaspur and Rampur.

Princes' Demands.—Newspaper reports claim that the Princes' deputation to the Viceroy in the middle of September raised eight points, namely: First, the boards set up to control the working of the joint services of States should consist of full-powered States and should not include minority representatives of States.

Secondly, joint advisers appointed for groups of States which find it financially and otherwise desirable to have them should not deal with Political Officers over the head of the State administrations.

Thirdly, the working of various schemes relating to the States should be reviewed periodically.

Fourthly, the Standing Committee should be given the opportunity to prepare schemes to secure minimum standards of administration in the States.

Fifthly, Princes should be allowed to draw up an alternative plan for co-operative grouping.

Sixthly, joint High Courts should not be set up. The Raja of Bilaspur, in particular, is reported to have opposed these courts as an invasion of the rights of States.

Seventhly, the Instrument of Attachment should be revised in consultation with representatives of the attaching and attached States and no further attachments should be made.

Eighthly, arbitration machinery should be set up to ensure that treaty rights are not overridden.

The Viceroy's reply expressed disagreement with points one, two, five, six and eight and the first part of seven, and promised consideration of three and four. As regards the second part of seven, the reply pointed out that the scheme of attachment was limited to Western India and Gujerat States and the Government had no intention of extending it to other States.

The reply promised protection against undue newspaper attacks from British India against States and drew attention to the fact that as States' administrations improved occasions for harsh or unjust criticisms would become less and less.

On the question of post-war reconstruction and industrial planning, the Crown Representative was against allowing any unit or units to follow any policy of development that was likely to upset the All-India scheme.

In the summer of 1945, it was reported that the deadlock had almost been resolved. The resignations made in December 1944 were withdrawn late in the summer of 1945 and the Princely Order turned its attention to measures towards the political, social and economic uplift of the States against the background of current developments in the country.

THE WAVELL PLAN

The Princes' meeting in Bombay in the summer of 1945 coincided with the conference of leaders convened by the Viceroy. The Nawab of Bhopal, addressing the Constitutional Advisory Committee of Princes and Ministers, welcomed the Wavell Plan, expressed the desire that an agreed settlement should be reached, and gave the assurance that the Princes would co-operate most cordially with an interim national Government for British India on matters of all-India concern.

His Highness felt confident that they could come to reasonable and honourable terms with the Government of a free India, and said: "India is our motherland. We have a great heritage of tradition, culture and administrative experience. We yield to none in patriotism.... We must associate our people as closely as possible with the administration of our States. This is, in fact, being done in many States...."

The Standing Committee met again at the end of September, 1945, and considered a number of questions of interest to the States.

Referring to the contention that low taxation standards in the Indian States attracted capital from British India, Sir Manubhai Mehta made it clear that the States had no intention to invite British Indian industrialists to establish industries in State territories at the expense of the industrial development of British India. The States asked for a voice in the formulation of the economic and industrial policy of the whole country. Sir Manubhai also complained that the Central Government had obstructed the natural growth of industries in Indian States.

Sir Manubhai declared that the States were prepared to collaborate in order to see that India achieved full political progress. What they opposed was unilateral changes in their treaty rights. He said that there should be no change in the monarchical form of government. The rulers might accept representative or responsible government.

Princely circles were busy in January 1946 on the eve of the annual session of the Chamber. Both at the meeting of the Standing Committee and at a general conference of about two hundred rulers and ministers, they discussed the position of the States in general against the background of impending constitutional developments in India, the attachment scheme, all-India industrial and aviation policies, co-operative grouping of States and joint services.

LARGER UNITS

Meeting after an interval of nearly two years, the annual session of the Chamber of Princes heard the Viceroy, Lord Wavell, give an assurance on one of the main points of difference which led to the crisis of 1941, namely, treaty rights and relationship with the Crown.

"I can assure you," said the Viceroy, "that there is no intention on our part to initiate any change in this relationship or these rights without your consent."

"I am confident that you will have no intention or desire to stand in the way of the growth of India to its full stature or to hinder the political, economic or social progress and advancement of your subjects."

Speaking of States whose finance was inadequate, Lord Wavell suggested that it was incumbent upon them so to modify their constitutional position as to ensure the welfare of their subjects for the future. In order that these States might have political stability, adequate financial resources and effective association of the people with the administration, he strongly urged that they should arrange to join a large unit or combine with other small States to form a political entity of a sufficient size.

The Viceroy also touched on the importance of gradually approximating taxation policies and systems in Indian States with those of British India.

IMPORTANT DECLARATION

An important declaration on constitutional developments in Indian States, guaranteeing certain fundamental rights to the States people, was made by the Chancellor, the Nawab of Bhopal. On behalf of the States he pledged himself to make "our fullest contribution to any attempt to settle India's constitutional problems on a just and reasonable basis." The declaration of rights was an earnest of this desire. A resolution urging States to adopt immediate measures to implement the policy outlined in the declaration was adopted by the Chamber.

As an earnest of the spirit of collaboration to enable the States to play their full part in the India of the future, the Chancellor made the following declaration:

"The Chamber of Princes in consultation with the Committee of Ministers have given anxious consideration to the question of the development of constitutional reforms in Indian States.

"The Chancellor of the Chamber of Princes is authorised to make the following declaration on behalf of and with the full authority of the Chamber of Princes:

"The object is to set up forthwith constitutions in the States in which the sovereign powers of the Rulers are exercised through regular constitutional channels without in any way affecting or impairing the continuance of the reigning dynasty in, and the integrity of, each State.

"There shall be popular institutions with elected majorities to ensure close and effective association of the people with the governance of the States.

"It is understood that in framing the detailed constitution of individual States on the above lines, regard shall be had to the special circumstances in each State.

Rights of Subjects.—"Most States have already adopted statutory provisions guaranteeing the rule of law and the security and protection of persons and property within their territories. In order to lay down and declare the position in this matter in precise and clear terms, the

following essential rights should be guaranteed in States where this has not already been done with powers vested in the courts of the States to redress any infringement of these rights:—

"(1) No person should be deprived of his liberty, nor should his dwelling or property be entered, sequestered or confiscated save in accordance with law.

"(2) Such right may be suspended as may be prescribed in case of war, rebellion or serious internal disorder.

"(3) Every person should enjoy the right of free expression of opinion, the right of free association and combination and the right to assemble peacefully without arms and without military formation for purposes not opposed to law or morality.

"(4) Every person should enjoy freedom of conscience and the right of freely to profess and practice his religion, subject to public order and morality.

"(5) All persons should be equal before the law, irrespective of religion, caste or creed.

"(6) No disability should attach to any person merely by reason of his religion, caste or creed, in regard to public employment, office of power or honour, or in the exercise of any trade or calling.

"(7) There should be no *begar* (forced labour).

Administration.—It is reaffirmed that the administration shall be based on the following essential principles which would be strictly enforced where they do not obtain at present:

"1. The administration of justice must vest in an impartial and competent judiciary independent of the executive, and there must be suitable provision for the impartial adjudication of disputes between individuals and the State.

"2. The Rulers in their own States should clearly demarcate administrative budgets from civil lists and fix the latter at a reasonable percentage of the ordinary revenue.

"3. The incidence of taxation must be fair and equitable and a definite and substantial portion of the revenue must be allocated for the benefit of the people, particularly in the nation building departments.

"It is strongly recommended that the essential measures recommended in this declaration should, where they are not in force, be adopted without delay.

"This declaration, made spontaneously and earnestly, is inspired by faith in the peoples of Indian States and in the future destiny of the States. It represents the will of the Rulers to implement these decisions without reservation or delay. May it lead to increasing freedom from want and fear, and freedom of the mind and its expression! May it grow on the sure foundation of mutual love, tolerance, service and responsibility!"

Collaboration Promised.—Replying to the Crown Representative's opening address, the Nawab of Bhopal on behalf of the Princes, said: "We are grateful to Your Excellency for the

reassurance that there is no intention to initiate any change in our relationship with the Crown or the rights guaranteed by our treaties and engagements without our consent. We have already declared that we have no intention of withholding our consent to any adjustments which may be required under the future constitutional arrangements in India and which we consider reasonable in the wider interests of India.

Referring to the attachment scheme the Chancellor said: "We take it as understood that the arrangements envisaged under this suggestion are intended to proceed on the basis of mutual consent and do not exclude suitable schemes of joint services between some bigger and some smaller States where these may be evolved by mutual agreement. We are convinced that it is possible to ensure the objective in view without impairing the continuance of the ruling dynasty, or the integrity and autonomy of the State concerned."

GUARANTEES

The political outlook underwent a transformation with the announcement in the middle of March, 1946, that a British Cabinet Delegation would visit India and finally settle the constitutional problem of the country.

At a meeting of Rulers and Ministers of the Indian States, early in April 1946, it was generally agreed that any constitution would be subject to ratification by the States in order to be binding on them, that adherence to the monarchical form of Government and continuance of the reigning dynasty in each state would not be open to question and that the existing treaties and *sansads* would not be altered ultimately without the consent of the States concerned. It was also agreed that the following points should be placed before the Cabinet Delegation:

Enforcement of constitutional safeguards, which the States may secure, should be such as can be enforced through the Federal Court;

Every State shall continue to retain its sovereignty, except to the extent to which its powers are delegated by it to the future Indian Union;

The territorial integrity of each State shall not be interfered with and the existing boundaries of each State shall not be altered without its free consent and approval;

The reigning dynasty of each State shall continue;

The existing form of Government in each State shall not be interfered with by the Union or any unit of the Union;

States which cannot individually afford to provide the basic efficiency of administration required in modern times should freely enter into suitable arrangements founded on consent with large States or combine in groups of small States.

Shortly after, the Indian States Constitutional Advisory Committee decided that the Princely Order should remain outside the proposed Interim Government, but the idea that an *ad hoc* committee should be established, to serve as a liaison body between the Interim Central Executive and the Indian States, found strong support.

MISSION'S PROPOSALS

In a memorandum on States Treaties and Paramountcy, presented to the Chancellor of the Chamber of Princes, the Cabinet Mission said among other things:

"Prior to the recent statement of the British Prime Minister in the House of Commons an assurance was given to the Princes that there was no intention on the part of the Crown to initiate any change in their relationship with the Crown or the rights guaranteed by their treaties and engagements without their consent. It was at the same time stated that the Princes' consent to any changes which might emerge as a result of negotiations would not unreasonably be withheld...

"During the interim period, which must elapse before the coming into operation of a new Constitutional structure under which British India will be independent or fully self-governing, paramountcy will remain in operation. But the British Government could not and will not in any circumstances transfer paramountcy to an Indian Government.

"In the meanwhile, the Indian States are in a position to play an important part in the formulation of the new Constitutional structure for India... In order to facilitate this they will doubtless strengthen their position by doing everything possible to ensure that their administrations conform to the highest standard. Where adequate standards cannot be achieved within the existing resources of the State they will no doubt arrange in suitable cases to form or join administrative units large enough to enable them to be fitted into the constitutional structure. It will also strengthen the position of States during this formative period if the various Governments which have not already done so take active steps to place themselves in close and constant touch with public opinion in their State by means of representative institutions.

"During the Interim period it will be necessary for the States to conduct negotiations with British India in regard to the future regulation of matters of common concern, especially in the economic and financial field. Such negotiations, which will be necessary whether the States desire to participate in the new Indian Constitutional structure or not, will occupy a considerable period of time, and since some of these negotiations may well be incomplete when the new structure comes into being, it will, in order to avoid administrative difficulties, be necessary to arrive at an understanding between the States and those likely to control the succession Government or Governments that for a period of time the then existing arrangements as to these matters of common concern should continue until the new agreements are completed. In this matter, the British Government and the Crown Representative will lend such assistance as they can, should it be so desired.

"When a new fully self-governing or independent Government or Governments come into being in British India, H. M. G.'s influence with these Governments will not be such as to enable them to carry out the obligations of

paramountcy. Moreover, they cannot contemplate that British troops would be retained in India for this purpose. Thus, as a logical sequence and in view of the desires expressed to them on behalf of the Indian States, His Majesty's Government will cease to exercise the powers of paramountcy. This means that the rights of the States which flow from their relationship to the Crown will no longer exist and that all the rights surrendered by the States to the paramount power will return to the States. Political arrangements between the States on the one side and the British Crown and British India on the other will thus be brought to an end. The void will have to be filled either by the States entering into a federal relationship with the successor Government or Governments in British India, or failing this, entering into particular political arrangements with it or them."

Princes' Reaction.—Shortly after the Standing Committee of the Chamber and Ministers of other States met to consider the Cabinet Mission's proposals in the light of the memorandum quoted above. In June 1946 the Chancellor wrote to the Viceroy:—

"... The Standing Committee are of the view that the plan provides the necessary machinery for the attainment by India of independence as well as a fair basis for further negotiations. They welcome the declaration of the Cabinet Mission in regard to paramountcy, but consider certain adjustments necessary for the interim period which have already been indicated by them...

"The Standing Committee have decided, in response to Your Excellency's invitation, to set up a Negotiating Committee whose personnel is given in the enclosed list. The Committee did their utmost to keep the number small as desired by Your Excellency, but they felt that it would not be possible for them to reduce that number... The result of the negotiations are proposed to be considered by the Standing Committee of Princes, the Committee of Ministers and the Constitutional Advisory Committee whose recommendations will be placed before a general conference of Rulers and representatives of States...

"In the meantime, as desired by Your Excellency, questions relating to the exercise of paramountcy in the interim period are proposed to be pursued with Sir Conrad and any outstanding points will be submitted to Your Excellency."

To this the Viceroy replied at the end of June:—

"The Cabinet Mission and I welcome the attitude which the Princes have adopted towards the plan which we have proposed for the solution of India's constitutional problem, and we particularly appreciate the action of the Standing Committee in endorsing the suggestions we made in regard to the manner in which States could best fit themselves to make their due contribution to India's new constitutional structure.

"I understand from Sir Conrad Corfield that he is already engaged in active discussions with the authorities of the Central Government about the machinery for giving effect to the Princes' proposal for a Consultative Committee to deal with matters of common concern to British India and the States.

PEOPLES' REPRESENTATIVES

The Indian States had to fit in into the radical transformation which the Indian political scene was to undergo. The trend towards democratisation of Princely rule was determined partly by the realisation among the rulers themselves to end the mediaval autocracy, partly by the influence of external nationalist urges, especially the representatives of the States' people.

In July 1946 a demand that States' representatives on the proposed Constituent Assembly must be elected representatives of the States' people was made by the Standing Committee of All-India States People's Conference which met in Bombay. The resolution declared that the people of the States would not recognise any decision taken without their approval and consent. Pandit Jawaharlal Nehru presided over the meeting.

The meeting appointed a committee of five persons with powers to add two more members to prepare material and draft proposals on behalf of the States' people for the then coming constitutional changes in the country as a whole and internal changes in the States.

Five more resolutions were adopted relating to Kashmir, Bikaner, Kalat States, the food situation in Mysore and the organisation of labour in States. The committee reiterated that the ban on Pandit Nehru's entry into Kashmir was unwarranted, that it could not be tolerated and that there would be no peace until Sheikh Abdullah was released.

On the eve of Independence Day, Mr. K. T. Bhashyam, a prominent Congressman and former President of the Mysore Congress and a member of the Expert Committee appointed by the All-India States People's Conference in Bombay to draft a constitution for Indian States with a view to aligning them with the provinces in a free Indian Union, issued for publication his draft constitution for the States. Under Mr. Bhashyam's scheme, India's 584 States were to be classified under three heads, namely, those that could remain as they were, those that had to be grouped together to constitute administrative units and those that could not or would not join a group and had to be abolished as States.

In September it was announced that the States' Negotiating Committee, which was to negotiate on behalf of the Indian States, matters relating to States' representation on the Constituent Assembly, was to consist of nine members. They were: the Nawab of Bhopal, Chancellor of the Chamber of Princes; the Maharaja of Patiala, Pro-Chancellor; the Jam Sahab of Nawanganar; the Maharaja of Dungarpur; Sir Mirza Ismail, President of the Nizam's Executive Council; Sir Ramaswami Mudaliar, Dewan of Mysore; Sir C. P. Ramaswami Aiyar, Dewan of Travancore; Sir Sultan Ahmed, Constitutional Advisor to the Chancellor; and Sardar K. M. Panikkar, Prime Minister of Bikaner.

A little later Pandit Jawaharlal Nehru, in a statement to the press, declared that he felt that he should not continue to function as President of the All-India States People's

Conference under the prevailing circumstances though he proposed to remain a member of the Standing Committee. In his place Sheikh Mahomed Abdulla, the Vice-Chancellor, was chosen to function as President.

OBJECTIVES RESOLUTION

The deep concern of the Indian Princes for the future was evidenced by the important and many meetings held by them in December to consult jointly on the negotiations which were to be conducted with the Constituent Assembly. The meeting of the Standing Committee of the Princes was first held in Delhi under the chairmanship of the Chancellor, H. H. the Nawab of Bhopal. This was followed by a meeting of the Grouping Committee of the Chamber of Princes at which the various schemes for a regional confederation of the grouping of the States were discussed.

The States Constitutional Advisory Committee reviewed the up-to-date constitutional position in the country, *vis-a-vis*, the States and discussed the broad outlines of the policy to be followed by the Negotiations Committee set up by the Princes. Three members of the States Negotiating Committee then present in Delhi regretted to note that the resolution had been moved at the preliminary session of the Constituent Assembly raising many fundamental constitutional issues which, in their opinion, could not and should not be considered or decided by the Constituent Assembly in the absence of States' representatives and before the Negotiations contemplated under the Cabinet Mission's plan. (The Constituent Assembly's resolution, *inter alia*, proposed to set up an independent sovereign republic comprising not only British India but also the territories that then formed the States).

The All-India States People's Conference at the close of December, after a critical reference to the activities of the Political Department of the Government of India, demanded in a resolution for a "complete change" both in its personnel and its relations with the Government of India and States. The Chief Officer of the Department, it was urged, should be Indians acceptable to the people of the States and further the Department's activities should be carried on in close consultation with the Government of India.

Later, in a report, the Experts Committee of the Conference laid down ten principles which, in its view, was to frame the basis of responsible Government in the States and suggested the grouping of the States into regional units.

At the deliberations of the leading Princes and Ministers in New Delhi at the end of January 1947 grave fears were expressed about the future of the States. Engendered by Pandit Nehru's resolution on the objectives of the Constituent Assembly, the terms of the motion constituting the Committee to confer with the States and the speeches of leaders and of the legal opinion of British Indian statesmen were discussed. The plea that all aspects of the position of the States in the future union and not merely the method of representation of the States in the Constituent Assembly should be the subject of

negotiation was the main point of the resolution drafted by the States' Constitutional Advisory Committee and adopted by the Committee of Ministers.

It was later adopted by the Standing Committee of the Princes' Chamber and later endorsed by a conference of about 60 rulers. Besides authorising the Negotiations Committee to settle the terms of the States participation in the Constituent Assembly and to determine their ultimate position in the All-India Union subject to ratification by the States, the resolution offered co-operation in framing an agreed constitution according to the Cabinet Mission's plan. It also laid down certain fundamental propositions which were to serve as the basis for the States acceptance of the Mission's scheme. The majority party in the Constituent Assembly did not see eye to eye with the Princes in many of the conditions stipulated in the resolution. But then the Princes, it was argued, had been "provoked" by some of the sentiments expressed in the Constituent Assembly.

AGREEMENT REACHED

The Princely attitude was summed up in the words of the Nawab of Bhopal, "You are asked to quit or exist on sufferance only; it will be unworthy on our part to succumb to these threats."

On February 9, 1947, a momentous agreement was reached between the Negotiating Committee of the Constituent Assembly and the Princes' Chamber as a result of which the States' co-operation in constitution-making was practically assured. The proposals as to how the States ought to be represented in the Constituent Assembly and the distribution among the States of their quota of seats was to be drawn up by the Secretariats of the Constituent Assembly and the Princes Chamber and submitted to another joint meeting of the two committees to be held early next month.

The following month a joint statement was issued by H.H. the Nawab of Bhopal, Chancellor of the Chamber of Princes, and Pandit Jawaharlal Nehru, which said:

"The States' Negotiating Committee set up by the Chamber of Princes and the corresponding committee of the Constituent Assembly held joint meetings yesterday and today. In the course of the discussions, reference was made to the Cabinet Delegation's statement of May 16, the resolutions of the Constituent Assembly and the resolution passed by the Conference of Rulers. The discussions were friendly and satisfactory.

"On the basis of a general understanding arrived at, it was decided to take up the question of the representation of the States in the Constituent Assembly. The Secretariats of the Assembly and the Chamber of Princes were accordingly asked together to draw up detailed proposals for the allocation of the 93 seats allotted to the States and to place them for consideration before the next joint meeting of the two committees which will consider the proposed allocation as well as the method of selection of the States' representatives."

A joint meeting of the Standing Committee of Princes and the Constitutional Advisory Committee ratified a day later the action taken by the States' Negotiating Committee,

As a logical sequel to this agreement and surviving a second shock, the negotiations between the committees of the Constituent Assembly and the Princes' Chamber emerged satisfactorily. In an agreement reached on the method of representation of the States and the method of distribution of the 93 States' seats in the Constituent Assembly, a sub-committee representative of both sides was to supervise the implementation of the agreement. As a result of the agreement the States' people would have at least a 50 per cent. share in the States' quota.

Split Averted.—At a meeting of the Committee of Ministers of the Chamber of Princes held in Bombay at the end of March, it was suggested to hold a round table conference of representatives of the major political parties in India and of the States to find out the greatest measure of accord which could be secured as regards defence, communications and foreign affairs when the final transfer of power to one or more successor governments was to be effected.

A threatened split in the ranks of the Princely Order on what constituted the appropriate moment for the States' representatives to enter the Constituent Assembly was averted by a last minute compromise reached after midnight parleys early in April to resolve group differences on the eve of a general conference of rulers in Bombay which was to follow immediately. The compromise formula prepared by His Highness the Maharaja of Gwalior permitted freedom to the member States of the Chamber to enter the Assembly at any stage they might deem proper after the Assembly would ratify the agreement between the Negotiating Committees of the Chamber of Princes and of the Assembly.

At the annual session of the All-India States People's Conference held at Gwalior in mid-April, Dr. Pattabhi Sitaramayya, who presided, declared that the Princes had no place in the Constituent Assembly any more than Governors of provinces, which might thereafter be called States composing the Indian Union. The conference decided to accept the agreement arrived at between the Negotiating Committees of the Princes and the Constituent Assembly regarding the method of selecting States representatives to the Constituent Assembly. Also resolutions on constitutional reforms in the States, instructions to Praja Mandals and on grouping of States were passed at this session.

The Joint Committee of the Negotiating Committee of the Constituent Assembly and the Chamber of Princes finalised the draft allocation of seats among the States on April 24. Sixty out of the 93 seats earmarked for the States were to be shared by 20 bigger States entitled to send representatives to the Assembly independently. The remaining 33 seats were distributed among the smaller States which would form groups as described to elect the allotted number of representatives.

At the end of April, Pandit Nehru moved resolutions in the Constituent Assembly "recording" the report of the committee appointed to negotiate with the States' Negotiating Committee and welcomed the representatives of the States who had already been chosen, expressing the hope that other States which

had not chosen their representatives so far would take immediate steps to that end in accordance with the agreed procedure.

DISSOLUTION RECOMMENDED

After H.M. Government's plan of June 3 of 1947, storm clouds were gathering over the Princes' Chamber. The schism between the two schools of thought among the Princes widened as to their place in the future political set-up of India. The crisis was precipitated by the resignation of the Nawab of Bhopal of the Chancellorship of the Chamber. The first impact of the plan found the Chamber of Princes disintegrating. The Standing Committee of the Princes, under the Chairmanship of the Maharaja of Patiala (who, as pro-Chancellor, was acting as Chancellor) passed a resolution recommending to the Crown representative to wind up the Chamber of Princes.

The reaction of the Standing Committee of the All-India States People's Conference to H.M. Government's statement was contained in a resolution declaring that "on the lapse of Paramountcy sovereignty resided in the peoples of the States and the Princes could only be constitutional rulers embodying the people's sovereignty... any ruler declaring his State independent will thereby express his hostility not only to the Indian Union but to his own people. Such an act will have to be resisted." Later a directive to the people of the States to be vigilant and be prepared for contingencies as certain States were increasing their forces was contained in a resolution adopted by the Standing Committee.

INSTRUMENT OF ACCESSION

According to the Draft Instrument of Accession circulated among the rulers at the end of July, the States which would be acceding to the Indian Dominion would not be committing themselves in any way to acceptance of any future constitution of India or fettering their discretion to enter into agreement with the Government of India under any such future constitution. Further, the terms of the Instrument of Accession should not be varied by an amendment of the Indian Independence Act of 1947 unless such amendment was accepted by the ruler concerned by a supplementary Instrument of Accession.

The schedule attached to the Instrument of Accession covered matters with respect to which the Dominion Legislature might make laws in the acceding States. They included defence, foreign affairs and communications as main subjects and other ancillary subjects.

This was soon followed by a Princes' Conference with the Viceroy at which the latter strongly advised the Indian States to join one or the other Dominion by August 15.

A REVOLUTION

"The bloodless revolution" since independence in one-third of what was once the undivided India—the territory of the Indian States—was one of the most sweeping and radical in the history of this country.

Addressing a press conference in New Delhi at the end of January 1948, Sardar Vallabhbhai Patel made a 3,000-word statement detailing the various stages of this "revolution." The statement showed how the Indian States, by a twin process of democratisation and integration, had undergone such drastic changes as to change the whole map of India.

Sardar Patel made the following statement on the consolidation of States:—

"As you are all aware, on the lapse of Paramountcy, every Indian State became a separate independent entity, and our first task of consolidating about 550 Indian States was on the basis of accession to the Indian Dominion on three subjects. Barring Hyderabad and Junagadh, all the States which are contiguous to India acceded to the Indian Dominion. Subsequently, Kashmir also came in.

"With the birth of independence in India, the urge for enjoyment of similar freedom naturally inspired the people of the States, where the process of democratisation of administration had not made anything like the same progress as was made in the adjoining provinces. The result was agitation on the part of the people and occasional clashes between the Rulers and the ruled. Some Rulers, who were quick to read the writing on the wall, gave responsible Government to their people, Cochin being the most illustrious example.

"But in Travancore, there was a short struggle, but there too the Ruler soon recognised the aspirations of his people and agreed to introduce a constitution in which all power would be transferred to the people and he would function as a constitutional ruler.

"Similarly, in Mysore there was a struggle for a short time in which the popular will triumphed eventually, and we know that there has been a complete transfer of power from the Ruler to the people.

"While these big States were temporarily able to deal with popular movements, the smaller States were not able even to maintain law and order with their limited resources and with the people in opposition to the administration. This was particularly evident in the Eastern States, in one of which States, namely, Nilgiri, the situation had so deteriorated as to result in the Ruler leaving the State."

MERGER

"In another State, in the same area, the Ruler could not return to the capital and had to approach the Ministry of States to advise the local 'praja mandal' to keep quiet as the Ministry was about to take up the question of consolidation of States.

"These States had formed a superficial union which could not last as it was not based on linguistic, cultural and economic affinities. The law and order situation in some of the States was so bad as to cause apprehension to the adjoining administrations of Orissa and the Central Provinces.

"You know the sequence of events thereafter. I went there in the middle of December, met the Orissa Rulers at Cuttack and the Chhatisgarh Rulers at Nagpur, and it was decided that the best interests of the people as also of the Rulers lay in administrative integration of the States with the adjoining provinces.

"The merger of Eastern States electrified the whole atmosphere. The people of the States found that there was a remedy for their difficulties arising out of their limited resources and narrow outlook.

"The eight Deccan States which formed the United Deccan State by merging their sovereignties into the new State, a step which was then considered to be revolutionary, felt that even in the new State their life would be cramped and that they would not have the same amenities and benefits as the people of the adjoining province of Bombay would have with all the resources of Bombay.

"The people who had assembled to frame a democratic constitution for their new State changed their minds and asked for the merger of their States into Bombay.

"The rulers who have always been known for their progressive outlook, appreciated the weight and soundness of this view and agreed to abide by the decision of the people. The Constituent Assembly of the new State met on January 26, and passed a resolution by an overwhelming majority in favour of merger into Bombay Province. The merger will thus be given effect to within a few days. *[The merger took place on March 8, 1948].*

"There are some other States in the Deccan which had not joined the Union, but in these States also the movement for merger had become so strong that the Rulers could not maintain law and order pending the merger of the States into the province of Bombay. These states are Akalkot and Jath.

"The ruler of Jamkhandi was one of the earliest to read the sign of the times and had approached this Ministry more than two months ago for unqualified merger of the State into Bombay. There was thus no trouble in his State, and the people have welcomed the decision and the action of the Ruler.

"Thus all the States in the Deccan, except Kolhapur, will shortly take their place in the Province of Bombay to the mutual advantage of both, and to the particular advantage of the people of these States."

KATHIAWAR

"Next came the problem of Kathiawar. Kathiawar is a veritable jigsaw puzzle of different jurisdictions. The States in Kathiawar comprise 13 salute States, 107 limited jurisdictional States and 329 non-jurisdictional estates and talukas, making up 449 units altogether. The area involved is more than 22,000 square miles with a population of between 3½ to four million.

"The administration of the States is complicated by the fact that many of them have scattered islands of territory all over the place. The Salute States of Nawanagar, Gondal and Junagadh, for instance, have respectively 9, 18

and 24 separate areas of territory. Added together, these 449 units divide the map of Kathiawar into about 860 different areas."

Sardar Patel then briefly described the main features of the new set-up.

He said: "The new State of Kathiawar is known as the United State of Kathiawar. There is a Presidium of Rulers consisting of five members, each of whom shall be the Ruler of a covenanting State. The Rulers of Nawanagar and Bhavnagar, the two most important States in the region, are members of the Presidium in their own right. One member is elected from amongst themselves by the Rulers of covenanting non-salute States. The other two members are elected by the members of the Council of Rulers, consisting of the Rulers of the Salute States other than Nawanagar and Bhavnagar.

"The Council of Rulers elect one member of the Presidium to be the President or the Rajpramukh and another to be the Vice-President of the Presidium. The first elections have already taken place, and H. H. the Jam Saheb of Nawanagar, who played a notable part in bringing these negotiations to a successful conclusion, has been elected as the Rajpramukh with H. H. the Maharaja of Bhavnagar as the Vice-President. The term of office of the Rajpramukh and the Vice-President is five years.

"There will be a Council of Ministers to aid and advise the Rajpramukh.

"This covenant, as you will have noticed, applies only to the Salute States and non-Salute States. There are, in addition, a number of talukas and thanas which are administered by the Government of India through its Regional Commissioner in Kathiawar."

Saurashtra State.—On February 16, 1948, the United State of Kathiawar was inaugurated at Jamnagar in the presence of a distinguished gathering which included Sardar Vallabhbhai Patel, Deputy Prime Minister and Minister for States, and Sardar Baldev Singh, Defence Minister, Government of India.

About 440 States of Kathiawar—of which 13 were Salute States and 113 with jurisdictional powers—with a population of 4,000,000, an aggregate area of 35,000 square miles and a revenue of 6½ crores were united and were to have responsible Government. Under the Covenant executed by the rulers of Kathiawar, complete transfer of power to the Union was provided for. The Rulers would become completely constitutional heads and in the majority of cases would surrender their sovereignty, jurisdiction and territory for the sake of a unified administration in the entire region. Another important provision was to set up a Constituent Assembly to frame a constitution for the United State of Kathiawar.

At the inauguration of the new State the Jamsaheb of Nawanagar said: "Five Rajput Rulers have taken the oath; you know our traditions; you know our history; you can depend upon our oaths. As Rajpramukh, I shall accept in the sphere which is reserved for me to work as the constitutional head of the State."

The Jam Saheb of Nawanagar was the first Rajpramukh and the Maharaja of Bhavnagar the Upajpramukh. Mr. U. N. Dhebar was elected the Chief Minister of the State.

Two months later, Mr. V. P. Menon, Secretary to the States Ministry, at yet another conference at New Delhi was able to outline more clearly what the 562 Indian States and thousands of semi-jurisdictional thanas, estates and talukas that lay across the map of India like an un-assembled jigsaw puzzle would look like in a few months, when the process of union and integration of States with the Dominion of India was consummated.

The 562 States, he declared, would be reduced to 25 sizeable political units.

Detailing the then five-month-old process of the unification of India, Mr. Menon stated that 289 jurisdictional, non-jurisdictional and semi-jurisdictional talukas, thanas and estates would merge with Bombay on June 5, 1948. This would add an area of about 27,000 square miles and an annual revenue of Rs. 2½ crores to the exchequer of the Province. A total of 869 full-fledged and other units covering an area of 200,000 square miles having a revenue of more than Rs. 30 crores would be involved in the unions and mergers which had been or likely to be consummated in the near future.

SUMMING-UP

Here is a short note each on the various mergers. For the latest position see the table at the end of the article.

Central India States (or Malwa State).—A special session of the Regional Council of the Central India States' People's Conference held at Gandhidham, Ujjain, early in March, passed a resolution urging the formation of a State comprising all the States of Central India. The Maharaja of Gwalior gave his consent to the formation of a single union comprising all the States of Central India. The new State, expected to be born in the near future at the time of writing was to comprise 22 Central Indian States including Indore, Gwalior, Dewas (Sr.), Dewas (Jr.) and Dhar and was expected to have a population of about 7,000,000 and a revenue of about Rs. 8 crores.

This Union named Madhya Bharat has now been formally inaugurated and is the largest of the States Unions.

Chhatisgarh States.—In January 1948 all the 14 Chhatisgarh States in the Central Provinces became an integral part of the Provinces with the taking over of the administration of these territories by the officials of the C. P. Government.

The C. P. Government instructed its officers in the newly created four districts of Chhatisgarh Division to see that the people felt they were all equal before law and that justice would be administered without fear or favour. The Government also impressed on their officers to do nothing which would needlessly offend the dignity or compromise the status of a Ruler whose ancient rights, immunities and privileges and civil list were guaranteed by the Government of India and the Provincial Government. Consequently on the merger of Chhatisgarh States, the

limits of the Nagpur, Jubbulpore and Chhatisgarh Divisions were altered as follows with effect from January 1, 1948:—Nagpur: Nagpur, Wardha, Chanda, Chhindwara, Betul and Bhandara districts; Jubbulpore: Jubbulpore, Saugor, Mandla, Hoshangabad, Nimar and Balaghat; Chhatisgarh: Raipur, Bilaspur and Durg.

Deccan States.—Early in February 1948, the newly formed United Deccan State which brought together eight Indian States in the Deccan covering an area of about 8,000 square miles as one administrative unit, with its Rajamandal (Council of Rulers) and its constitution-making body created under the agreement were all dissolved to facilitate the merger of each of the member States with the Bombay Province. A little later, on February 19, Rulers of 15 Deccan States affixed their signatures in Bombay on separate similar agreements integrating their administrations with that of Bombay Province.

The signatories to the agreement were the Rulers of Akalkot, Aundh, Bhor, Jamkhandi, Jhat, Kurundwad Jr., Kurundwad Sr., Mudhol, Miraj Jr., Miraj Sr., Phaltan, Ramdurg, Sangli, Savnur and Vadi.

By the agreement the Rulers ceded to the Dominion Government full and exclusive authority, jurisdiction and powers for and in relation to the governance of the States and agreed to transfer their administrations to the Dominion Government on March 1, 1948.

The Government of Bombay, however, took over on March 8 the administration of 16 Deccan States, the additional one being Sawantvadi with a total area of more than 8,000 square miles and a total population of over a million and a half.

Gujarat States.—The Rulers of 18 Gujarat States comprising an area of 27,000 square miles with a population of 2,600,000 and a revenue of Rs. 1½ crores agreed on March 20, 1948, to integrate their administration with that of Bombay Province and on the same terms as was done by the Deccan States. The merger agreement of the Gujarat States, which was to become effective on June 5, 1948, when the States would be handed over to the Government of India, had already been signed by the rulers of Bansda, Baria, Cambay, Dharampur, Jawhar, Lunawada, Rajpipla, Sant, Idar and Vijayanagar. The agreement was also signed on behalf of the rulers of Balasinor and Chhota Udepur, who are minors, by the ruler of Lunawada. A few days later Sachin, Radhanpur, Danta, Palanpur, Jambhugoda and Sirohi also signed the agreement.

Himachal Pradesh.—A new province in the Indian Dominion, Himachal Pradesh came into being on April 16, 1948.

It has an area of about 11,000 square miles and a population of nearly 1,000,000. Its revenue is about one crore of rupees.

The rulers of 21 hill states of Simla comprise the new province.

Mr. N. C. Mehta, Secretary, Ministry of Information and Broadcasting, Government of India, was appointed Chief Commissioner of the Himachal Pradesh Province.

Mangrol and Manavadar States.—The States of Mangrol, Manavadar, Sardargarh and Babriawad decided to accede to the Indian Dominion according to the results of the referendum held in the States in the middle of February 1948.

Matsya State.—In the Durbar-e-am (Chamber of the People's Representatives) in the historic Bharatpur Fort was inaugurated on March 17, 1948, the State of Matsya comprising Alwar, Bharatpur, Dholpur and Karauli.

Mr. N. V. Gadgil, Minister for Works, Mines and Power, Government of India, inaugurated the Union of Matsya and administered the oath of office to the Rajpramukh, the Maharaja of Dholpur, and the Upapramukh, the Maharaja of Alwar. The Chief Minister of the Union was to be Mr. Shoba Ram of Alwar.

The four States of the Matsya Union comprise between them 7,536 square miles of territory with a population of close upon 2,000,000 and a revenue of about a crore of rupees. They are contiguous States, constituting roughly a semi-circle abutting on Muttra and Agra District of the United Provinces with Jaipur forming the other half of the circle. They form part of the former Rajputana Residency.

Rajasthan State.—A free union of States—the Union of Rajasthan—was inaugurated on March 25, 1948, by Mr. N. V. Gadgil on behalf of the States Minister, Government of India, Sardar Vallabhbhai Patel.

After the accession of Udaipur to the Union a month later, the enlarged Union brought under one administrative unit all the portion of Rajputana which lies to the east of Aravali Hills; the only Rajput States that remained separate entities were Bikaner, Jaipur, Jodhpur and the State of Jaisalmer, all four lying to the west of the Aravali Range.

The Union State of Rajasthan constituted the second biggest Union in India comprising 30,000 square miles with a population of about 4½ millions and enjoying an aggregate revenue of a little more than 3 crores.

Udaipur singly provided as much again in area, population and revenue as the nine States which once constituted the Rajasthan Union. Naturally, it was given a leading position in the expanded Rajasthan and its ruler was constituted Rajpramukh for life, the original Rajpramukh, the Maharaja of Kotah, having readily agreed to step down in favour of the premier Rajput Prince and becoming Upapramukh along with the rulers of Bundi and Dungarpur. The Chief Minister of the Union was Mr. Gokul Lal Aswa.

Palanpur, Danta and Sirohi, three small states to the west of Udaipur, though included in the Rajasthan Agency are claimed to be part of Gujarat.

The ten States which formed the Rajasthan Union are Kotah, Bundi, Dungarpur, Jhalwar, Banswara, Partabgarh, Tonk, Kishangarh, Shahapura and Udaipur.

Vindhya Pradesh State.—The Union of Vindhya Pradesh, comprising the 35 States of Bhundelkhand and Baghelkhand, came into being on April 4, 1948. Mr. N. V. Gadgil inaugurated the Union.

The integration of the administration of these two Agencies with the Government of India resulted in the addition of an area of nearly 25,000 square miles with a population of 3,500,000 to the Dominion, while the total revenue of the States is estimated at a little less than 2½ crores.

The Maharaja of Rewa was made the Rajpramukh of the new Union and the Maharaja of Panna the Upapramukh. Mr. K. P. Saksena became Prime Minister of the new State.

At the time of writing the formation of yet another Union to be called the Phulkian State in East Punjab, consisting of Nabha, Kapurthala, Jhind, Faridkot, Malerkotla, and Patiala is under discussion.

All the States within the Pakistan orbit have acceded to Pakistan: Dir, Swat, Chitral, Khairpur, Bahawalpur, Kalat, Kharan, Las Bela and Makran.

KASHMIR

In contrast with the "peaceful revolution" that most of the Indian States have undergone since independence, three States two of them major ones,—Kashmir, Hyderabad and Junagadh—offered India one of the thorniest problems to be solved.

The problem of Kashmir was exhaustively dealt with in a White Paper giving "factual information, backed by relevant documents," which was laid on the table in the Indian Parliament early in March 1948.

Divided into four parts with an introduction giving a brief description of the territories involved, the White Paper gave the Indian point of view of the whole dispute which ended in a reference by India to the U.N.O.

The first part of the White Paper dealt with events leading to the accession of Jammu and Kashmir State to India; the second dealt with the invasion of the State by raiders from Pakistan; the third, with the evidence for Pakistan's complicity in the invasion; and the fourth with India's objectives.

The following are in brief, the statements contained in the White Paper:

The State of Jammu and Kashmir announced its intention of negotiating a Standstill Agreement with both India and Pakistan. In fact, however, the State signed a Standstill Agreement only with Pakistan and entered into no agreement with the Government of India prior to its accession on October 26, 1947.

Nevertheless, in an effort to coerce the State into acceding to Pakistan, the Pakistan authorities cut off supplies of food, petrol and other essential commodities to Kashmir and hindered the free transit of travellers between Kashmir and Pakistan.

Economic pressure was thus applied simultaneously with military pressure in the form of border raids.

On October 24, the Government of India received the first request for military aid from the Government of Jammu and Kashmir State. At that time, the Government of India had no agreement, military or political, with the State.

On October 25, the Government of India directed the preparation of plans for sending troops to Kashmir by air and road. Indian troops were sent to Kashmir by air on October 27 following the signing of the Instrument of Accession on the previous night.

The accession was legally made by the Maharaja of Kashmir and this step was taken on the advice of Sheikh Abdullah, the leader of the All Jammu and Kashmir National Conference, the political party commanding the widest popular support in the State.

Part two of the White Paper deals with the invasion.

Part third of the White Paper (dealing with the alleged complicity of Pakistan in the invasion of Kashmir) details evidence based on moral and material aid, on assistance, both active and passive, given to the raiders in Pakistan.

The White Paper points out that, as has been stated by the Prime Minister of India on numerous occasions, the task of Indian troops is to clear the raiders from and restore peace to Kashmir, as this is necessary to the holding of a plebiscite or referendum by the people of the State to decide finally as to which Dominion they would accede.

After protracted debates in the United Nations a Mandatory Commission was set up to settle the Kashmir question. The terms of reference, however, have proved unacceptable both to India and Pakistan.

HYDERABAD

Internal difficulties in Hyderabad State since independence in the form of disturbances and popular agitation have demanded a solution no less than the major one of accession to the Indian Union.

With a view to solving both these questions, a Standstill Agreement between Hyderabad Government and the Dominion of India was executed in Hyderabad and Delhi at the end of November 1947.

The Agreement, while making it clear that the Nizam's sovereign rights were to remain unimpaired, laid down that the Union Government was to undertake to co-operate with the Nizam's Government in preventing and discouraging all subversive activity and propaganda. All Dominion troops were to be withdrawn from Hyderabad territory before the end of February 1948.

Hyderabad had a right under the Agreement to appoint agents-general in all countries including the U.S.A. and the Dominions. Simultaneously it was announced from Hyderabad that Mir Laik Ali, a leading industrialist of the State, had been appointed Prime Minister of Hyderabad by the Nizam.

When the settlement with Delhi was reached, Swami Ramananda Tirth, President of the Hyderabad State Congress, was released from jail where he had been put by the State authorities on August 15, 1947, when a non-co-operation movement was launched to support his demand for responsible government. Mir Laik Ali the new Prime Minister, invited Congress participation in the Interim Government formed ostensibly for the standstill period.

That Government was, however, to be committed to no particular line of action, except to search for a new form of constitution. The composition of the Interim Executive Council itself was proposed on the basis of a President, a Vice-President and four officials appointed by His Exalted Highness, four Muslim representatives of the Ittehad-ul-Muslimeen and four non-Muslims. Apart from this insistence on non-official communal parity, the Prime Minister refused to be committed to responsible government, a constituent assembly, accession to India, even a plebiscite on the last issue.

Mir Laik Ali's own appointment and that of his official colleagues, it was then felt in India were made by the ruler in deference to the clamour of extremist Muslims.

A week after the Standstill Agreement was signed, there was an attempt on the life of His Exalted Highness the Nizam. Strong condemnation was expressed by all the parties to the State of this attack, including the State Congress.

Soon breaches of peace in the State began to assume alarming proportions. Terrorism became rampant and the pronouncements and deeds of Razakars, the armed volunteers of Ittehad-ul-Muslimeen under the leadership of Kazim Razvi, did not help to ease a difficult situation.

At the end of April a substantial number of political detainees were released together with an announcement of His Exalted Highness the Nizam in a special "firman" liberalising the administration in Hyderabad. The "firman" urged representatives of the people to associate themselves in a greater measure with the work of framing a new constitution for the State and invited the political parties outside the Interim Cabinet to come in and assume the responsibilities of Government. The Nizam expressed confidence that the various classes of the people in the State would adopt every possible means to preserve peace and tranquillity and remove such tendencies in the public life of the State as were likely to affect its prestige and position.

Hopes, however, of a new and more helpful phase in the relations with the Indian Union were dashed to the ground, as the "firman" and the Prime Minister's statement which followed were both considered to contain too much caution and vagueness.

JUNAGADH

Though less localised than the problem of Kashmir, Junagadh sprang into almost equal prominence by being referred to the United Nations Security Council.

The sequence of events in Junagadh were as follows:—

After the Dewan of Junagadh had announced accession to Pakistan, demonstrations occurred and the Nawab finding his position getting difficult left for Karachi. His departure only served to make the situation still worse when the Dewan also followed the ruler to Karachi.

Whether there was an economic blockade or not the administration soon collapsed. The Dewan then sent one of his ministers to the leaders of the "Provisional Government" to negotiate a settlement. When the negotiations concluded the Dewan requested the Indian Government to assume responsibility for administering Junagadh to save it from chaos. Indian forces then entered Junagadh territory and restored order.

Early in January 1948, the "Provisional Government" was dissolved, since according to Mr. Samaldas Gandhi the purpose for which it was brought into existence had been fulfilled. The functions of the "Provisional Government" were taken over by the Junagadh Praja Mandal.

At the end of February, in a referendum held in the State, the number of votes in favour of accession to India was 190,779 while those in favour of Pakistan were 91.

Pakistan's case with regard to Junagadh and Manavadar was that both the States had lawfully acceded to Pakistan and that subsequently, without any justification, India had sent troops to those States, unlawfully occupied them and taken over their administration.

Regarding Mongrol, Sardargarh and Bantwa, Pakistan contended that being federating States, attached to Junagadh, they could not independently accede to India or Pakistan and that, therefore, their accession to India was invalid.

HERE IS A DIAGRAMMATIC REPRESENTATION OF THE CHANGES WHICH HAVE TAKEN PLACE AS GIVEN IN THE WHITE PAPER ON INDIAN STATES:

Date of Merger or integration.	Name of States.	Number of States.	Province with which merged.	Area in sq. miles.	Population. (in Lacs).	Revenue (in Lacs).
1	2	3	4	5	6	7
January 1st, 1948.	Athgarh, Athmalik, Bamra, Barama, Baudh, Bonal, Daspalla, Dhenkanal, Gangpur, Hindol, Kalahandi, Keonjhar, Khandpara, Narsingpur, Nayagarh, Nilgiri, Pal Lahara, Patna, Rairakhol, Ranpur, Sonapur, Talchar, Tigiria.	23	Orissa	23,637	40.46	98.74
January 1st, 1948.	Bastar, Changbhakar, Chhuikhadan, Jashpur, Kankor, Kawardha, Khairagarh, Korea, Nandgaon, Raigarh, Sakti, Sarangarh, Surguja, Udaipur.	14	C.P. & Berar	31,598	28.20	88.06
February 1st, 1948.	Makrai	1	C.P. & Berar	151	.14	.25
February 22nd, 1948.	Banganapalle	1	Madras	259	.45	3.25

INDIVIDUAL STATES

We shall now proceed to deal with some of the individual States as they stood on December 31, 1947.

AKALKOT, a Mahratha State in the Deccan, is bounded on the north by Hyderabad, on the east by Kurundwad (Jr.) and Hyderabad, on the south by Bijapur and Hyderabad and on the west by Sholapur Dt. The climate is comparatively cool and agreeable with an average rain-fall of 25 inches. The capital is Akalkot.

The Ruling House is Mahratha belonging to the Bhonsle family. The rulers trace their origin to Ranoji Patel of Parad in the Nizam's Dominions, who was taken by the Chhatrapati Shahu Maharaj (grandson of the great Shivaji) of Satara into his family and had the family surname Bhonsle of the Rajas of Satara conferred upon him.

RAJA SHRIMANT VIJAYASINHA FATESINHA BHONSLE, RAJASAHIB OF AKALKOT, was born on December 13, 1915. He was educated at the Bishop's High School, Poona, the Rajkumar College, Rajkot where he passed with distinction in English and science, and finally the Deccan College, Poona. He also took a course in Administrative Train-

ing in Bangalore. The Rajasahib ascended the *gadi* on April 3, 1923, and was invested with full ruling powers on February 27, 1936. He married Princess Kamala Devi of Gwalior on February 23, 1934, but she died at Akalkot a little less than a month later. The Rajasahib married again in April 1942 Shrimant Maharajkumari Nirmala Devi, grand-daughter of His late Highness Sayajirao Gaekwar of Baroda. The Heir-apparent is Shrimant Prince Jayasinh Rao Bhonsle, the younger brother of the Ruler.

The Rajasahib's recreations are shooting, riding, tennis, cricket, motoring and racing.

The area of Akalkot is 498 sq. miles and the population 1,03,903. The average annual revenue is Rs. 6,85,145.

The soil is mostly black and mixed. The chief crops are jawar, bajra, wheat, tur gram and mung, and the money crops ground-nuts, chillies, cotton, linseed, sesamum, etc., which afford scope for industrial development.

INDUSTRIES

Akalkot has a match factory, an oil mill, a soap factory, a hosiery works and cotton ginning and power looms. A distillery and a chemical works are also working satisfactorily. A factor that is partly responsible for the development of industries in the State is the Akalkot Waterworks constructed at a cost of Rs. 12 lakhs and the Power House.

There is State control over the necessities of life such as food and clothing. The Government has invested Rs. 4 to 5 lakhs in the procurement of food-grains which are distributed to the people through organised agencies at very reasonable rates. Sugar, cloth and yarn for the hand-loom industries in the State are similarly distributed. The whole system of control is working very satisfactorily.

ADMINISTRATION

The old Assembly has been dissolved and it is proposed to appoint a popular minister to carry on the administration of the State. Another way in which the administration is readjusting itself to modern conditions is to conclude a temporary co-operative arrangement with the Kolhapur Darbar in the matter of the High Court, Police, and Secretariat correspondence with the Ministry of States.

As for local self-government an elected municipality with an elected president has just started functioning and in 7 of the villages panchayats are working satisfactorily.

Dewan: A. N. PRADHAN, B.A.

A MARNAGAR (THANADEV-LI) STATE is a premier Wala Kathi State in Central Kathiawar within Western India and Gujerat States region. The Ruler belongs to the illustrious Jaitani Kathi clan. Rule of primogeniture governs succession in the State.

DARBARSHREE AMRAWALA SAHEB, the present Ruler of AMARNAGAR STATE, was born on November 28, 1895. He ascended the *gadi* on October 23, 1922. He was educated at Rajkumar College, Rajkot.

The Heir-Apparent Samatwala was born on January 10, 1943. Grandson of the Ruler and son of the deceased prince Yuvraj Shri Ramwala, he is studying at home. Cadet, K. S. Harsurwala, born on October 6, 1931, is also receiving education at Rajkumar College, Rajkot.

The area of the State is 117.32 sq. miles, its population 20,000 and its average annual revenue Rs. 3,50,000. The State has acceded to the Dominion of India.

There is a purely popular municipality in Amarnagar having its

own elected President and members. Every village has a Grama Panchayat over which is the Sar Panch Committee of elected members.

EDUCATION

His Highness has evinced a keen interest in the education of his subjects. Primary and secondary education is free and compulsory. Poor and needy students from the State are offered scholarships within and without the State. Special encouragement is given to sons of cultivators. Free medical aid has also been provided.

Facilities to industrialists have brought about the establishment of the Amresh Oil Mill by Rajya Mitra Sheth Shree Nanjibhai Kalidas Mehta, and of a jaggery process factory by Sheth Abdul Karim of Dhoraji to facilitate the work of sugarcane cultivation and other similar industries.

The State is spending about Rs. 40,000 to Rs. 50,000 per annum on relief by distributing foodstuffs at concession rates to petty servants as well as average middle class people, and free to deformed and poor people. Religious tolerance is a unique feature of the State. All communities are treated alike and they live like brothers.

The cessation of hostilities has brought the problem of post-war planning to the forefront. New buildings such as Secretariat, Power House, Middle School and Girls' School are being constructed. Town planning in Amarnagar and Luni is a feature of the post-war reconstruction scheme.

ADMINISTRATION

The administration is assisted by an Executive Council consisting of the Dewan and four members. *Dewan and Vice-President in Council:* KUSUMRAJ J. DEWANI, B.A., LL.B.; *Huzur Secretary:* MANOHAR K. PANDIT, B.A., LL.B.; *First Member:* TRIBHUVAN R. CHOKSHI; *Treasury Officer and Second Member:* VISHNULAL H. BUCH; *District & Sessions Judge and Third Member:* AMRATLAL K. CHAUDHARI, ADVOCATE; *Popular Member (Fourth Member):* RAJYA RATNA SHETH JIVRAJ LAXMICHAND; *Huzur Court Judge:* DOLATRAJ N. BUCH; *Municipal President:* RAJYA RATNA SHETH JAGJIWAN KALYANJI; *Chief Medical Officer:* DR. LAXMIDAS R. MEHTA, M.B.B.S.; *Nyayadhisht and First Class Magistrate:* BHASKARRAJ P. VAISENAV, B.A., LL.B.

BAHAWALPUR is the principal Muslim State in Pakistan.

The Ruling family is descended from the Abbaside Khalifas of Baghdad. Legends strengthened by existing records show that they established themselves as progressive pioneers in their newly acquired territory, making a special feature of agricultural development by the construction of canals from the Indus river.

ALAHAZRAT JALALAT-UL-MALIK HIS HIGHNESS AMEER AL-HAJ SIR SADIQ MUHAMMAD KHAN V ABBASI, G.C.S.I. (1941), G.C.I.E. (1931), K.C.S.I. (1929), K.C.V.O. (1922), Hon. LL.D. (Punjab and Aligarh Muslim Universities), the present Ameer of Bahawalpur, was born in 1904, the only son of His late Highness Nawab Al-Haj Muhammad Bahawal Khan V. Abbasi Bahadur. He succeeded to the *gadi* in 1907 and assumed full ruling powers in 1924.

The Ameer was educated at Aitchison Chiefs College, Lahore. He married the daughter of Sahibzada Faiz Muhammad Khan Abbasi in 1921. He was A.D.C. to H.R.H. the Prince of Wales during his

Indian tour, 1921-22. He is the Colonel-in-Chief of Bahawalpur State Forces and an Hon. Maj.-General in H.M.'s Forces. He was also a member of the Standing Committee of the Chamber of Princes from 1933 to 1947. His Highness has travelled widely in the Middle East, Europe and the United Kingdom. He performed Haj in 1935. He visited various fronts during the last World War and is the recipient of, besides British Commemorative and other War Medals, the Grand Cordon of the Order of Al-Rafidain (Iraq) 1941. He is keenly interested in shooting, tennis, polo, motoring and philately.

The area of the State is about 20,000 sq. miles, its population 2 millions and its revenue Rs. 4,23,00,000. The State has acceded to the Dominion of Pakistan.

The Ruler is entitled to a salute of 17 guns.

The Heir-Apparent MAJOR SAHIBZADA MUHAMMAD ABBAS KHAN ABBASI, WALIAHAD BAHADUR, was born on March 22, 1924.

ADMINISTRATIVE PROGRESS

His Highness has been taking keen interest in the improvement of State Forces and his personal example as a good soldier has gone a long way in raising the standard of efficiency of the Army.

The State is predominantly agricultural. The participation of the State in the Sutlej Valley (Irrigation) Project is an example of His Highness' foresight and his solicitude for his people. The State has three major Head Works on rivers Sutlej and Chenab from which canals take off and provide perennial irrigation for 2.8 million acres. The capital expenditure on this Project up-to-date comes to over 200 lakhs. The completion of this colossal irrigation Project has opened a new era of increasing prosperity for the State. Arrangements have been made for the establishment of a large Cotton Textile Mill, a Hydrogenated Vegetable Oil (Vanaspatti) Plant, a Soap Factory, and a big Flour Mill. The schemes have also been completed for the establishment of a large modern tannery and leather works, a woollen spinning and weaving mill and chemical works. The primary and secondary education up to middle standard is free. A number of young men are being selected for training abroad for free higher training at State expense. The State has a first grade degree College and one intermediate College besides numerous High Schools. The Jamia Abbasi is a magnificent Institution run on the lines of Al-Azhar University at Cairo. His Highness takes a keen interest in the administration and maintains constant and close touch with his people.

BANGANAPALLE, the only Muslim State in the Madras Presidency, is situated in the Kurnool Dt. The climate is dry and healthy and the physical features are of the common Deccan type.

The State is entitled to a hereditary salute of 9 guns. The capital is Banganapalle.

The Nawabs of Banganapalle belong to two historical Muslim families and trace their descent on the one side from a Grand Vazeer of Aurangzeb and the other from Saiyid Mahomed Khan Razvi the great Minister of Shah Abbas II of Persia. In 1769, a descendant named Saiyid Hussain Ali Khan came into possession of the jagir of Banganapalle from the Sultan of Bijapur. It is from Saiyid Hussain Ali Khan that the present Nawabs of Banganapalle trace their descent.

HIS HIGHNESS NAWAB MIR FAZLE ALI KHAN BAHADUR, the present ruler, was born on November 9, 1901. He was educated at the St. George Grammar School, Hyderabad; Newton Institute,

Madras; and the Mayo College, Ajmer. He succeeded to the throne on the death of his father on January 22, 1922. In 1924 he married the only daughter of his paternal uncle. After the death of his first wife the Nawab married again in 1930 Raisunnisa Begum Sahib, the present Begum Saheba, who belongs to the family of Nawab Salar Jung Bahadur of Hyderabad. The Nawab has one son and one daughter by the first wife, and two daughters by the second. The Heir-Apparent, Nawab Mir Gulam Ali Khan Bahadur, was born on October 12, 1925.

His Highness has travelled widely in India and has made pilgrimages to the holy places of Iran, Iraq and Arabia. He is a keen sportsman and is very good at polo, tennis, cricket and billiards.

The area of Banganapalle is 275 sq. miles and the population 44,631. Of the people 32,508 are Hindus, 10,571 Muslims, and 1,552 other castes. The annual revenue of the State is Rs. 3,75,545.

PRODUCE AND MINERALS

The main occupation of the people is agriculture, the principal crops being millets and pulses. Cash crops like cotton and groundnuts are also grown. The State is rich in mineral resources such as diamond and calcite. There are also extensive slab deposits.

For its communications the State chiefly depends on its roads which connect every village with every other village. The railway is also easily accessible as the nearest railroad Panyam on the Bezvada-Guntakal section of the M. & S. M. Railway is only 17 miles from Banganapalle.

Medical education is free and so is education up to the lower secondary stage.

The State has an ambitious post-war programme which will include projects for the improvement of communications and the opening of irrigation works.

ADMINISTRATION

On July 1, 1947, the Nawab announced his intention of establishing a constitutional government in the State. Meanwhile as an earnest of his intention he has set up a State council to conduct the administration.

Dewan-President of the State Council: KHAN SAHIB SYED IMAM SAHIB BAHADUR, B.A.; **Chief Judge:** VAIDYANATHA AIYER, M.A., B.L.; **Revenue Member:** KHAJA NAZEER HUSSAIN SAHIB; **General Member:** SRI MEDAM SUBBIAH GARU; **Civil & Sessions Judge:** MOHAMMED KHALID SAHIB, B.A., B.L.; **Revenue Officer:** MIRZA HYDER BAIG SAHIB; **State Surgeon:** KHAN SAHIB DR. SYED ZAINULABIDDIN SAHIB; **P.W.D. Officer:** A. SUBBA RAO GARU; **Munsiff-Magistrate:** MAHMOOD BIN MOHAMMAD, M.A., B.L.; **Chief Police Officer:** SYED HUSSAIN SAHIB; **Public Prosecutor:** R. VENKATARAO, B.A., B.L.; **Education Officer:** LATIF NAIK SAHIB, B.A., L.T.

BANSWARA: Banswara is an independent State situated in the southern part of Rajputana. During British rule this was one of the first class treaty States enjoying full Sovereign Powers and a dynastic salute of 15 guns. The area of the State is 1,946 sq. miles with a population of 2,99,913. The State is rich in minerals and upto now has been surveyed and settled three times for purposes of land revenue administration.

The present ruler, **RAYAN RAI MAHIMAHENDRA MAHARAJADHIRAJ MAHARAWALJI SAHIB SHREE CHANDRAVEER SINGHJI SAHIB BAHADUR**, NARESH RAJYA BANSWARA, was born on Kartik Shukla Paksha 14, Samvat 1966 Vikrami, corresponding to 26th November 1909 A.D.

He succeeded his late father His Highness the Maharawal Sahib on the 27th July, 1944; the Raj Tilak was celebrated on 7th August, 1944, and the Rajyabhishek

(Coronation) on the 20th November, 1945. Descended from the senior branch of the premier clan of Ahara Sisodiya Rajputs now ruling over Mewar, His Highness is 22nd in descent from Maharawal Jagmal Singhji, who founded Banswara in Samvat 1583 Vikrami corresponding to 1527 A.D. His Highness was educated at the Mayo College, Ajmer, and received his administrative training at Bikaner under the personal supervision of His late Highness the Maharaja Shri Sir Ganga Singhji Sahib Bahadur of Bikaner. The State has a Legislative Assembly consisting of members with a non-official majority. The Municipal Board of Banswara town has a majority of non-official elected members.

Both primary and secondary education is free in the State and provision for technical education is also made in the High School.

There is a decent hospital and a number of dispensaries in the rural areas.

The State is well served with telephonic communications. There are many relics of archaeological interest.

The capital is almost in the centre of the State and is 65 miles from Dohad railway station, 53 miles from Ratlam railway station (Standard gauge), 44 miles from Naml railway station and 60 miles from Mandor railway station (Metre gauge). There is a metal-road linking the capital with Dohad railway station. The State has various motor bus services (working on monopoly system).

The administration of the State is conducted by His Highness who is assisted by a Prime Minister and a Cabinet of Ministers. The State has also an Executive Council consisting of His Highness as the President, the Prime Minister as the Vice-President and other Ministers as members.

BARIA STATE is situated in the heart of the Panchmahals District between 22°-30' and 23°-0' north latitude and 73°-41' and 74°-11' east longitude. The Rulers of Baria are Chauhan Rajputs being the descendants of Palunsinh who conquered Champaner and its dependencies in or about Samwat 1300 (A. D. 1244).

LT.-COL. HIS HIGHNESS MAHARAO SHREE RANJITSINHJI, K.C.S.I., the present Ruler was born on July 10, 1886; was educated at Rajkumar College, Rajkot, Imperial Cadet Corps, Dehra Dun and in England; married Shrimant Tak-takunverba Saheb, daughter of H. H. Maharaja Saheb of Rajpipla in 1905, and Shrimant Dilher Kunverba Saheb, niece of H. H. the Maharaja Saheb of Rajpipla in 1918; succeeded to the *gadi* on February 29, 1908 and was installed as Ruler May 7, 1908. The Heir-Apparent Maharaj Kumar Shree Jaydeep-sinhji, grandson of the present Maharaja and the eldest son of the late Shree Subhagsinhji was born on June 24, 1929.

His Highness served during the Great War of 1914-1918 when he was made a captain on January 1, 1918. He also served during the Afghan War of 1919. In 1930 he was promoted Major and in 1937 Lt.-Col. He had become K.C.S.I. in 1922. In 1933 he visited England and in 1937 he went again to attend the King's coronation in April that year. The Maharaja is entitled to a salute of 11 guns.

The State has an area of 845 square miles, and a population of 2,020,55. The gross revenue of the State based on the average figures for the last five years is Rs. 20,23,322.

The staple crop of Baria is maize, the land being irrigated by wells. The forests are rich in teakwood and other sorts of jungle produce. The State has a large trade in timber and its industry is chiefly centred round saw mills and oil crushing plants of which there are many. There is a State Banking Department for the promotion of commerce and industry. Transport and communications are good. The State is equipped with a narrow gauge railway line which runs from Piplo to Devgad Baria. There are also excellent metalled roads.

Both primary and secondary education is free for all State subjects. And the State is well served by a net-work of medical relief centres.

ADMINISTRATION

Dewan: DEWAN BAHADUR MOTILAL L. PAREKH, M.A., LL.B.; Chief Commandant, Baria State Forces: MAJOR MAHARAJ KUMAR HEERASINGHI; Judge, Huzur Court: DEWAN BAHADUR C. N. BARODA, one of the major States in India, lies partly in Gujerat and partly in Kathiawar. The Royal House which is Maratha belongs to the Gaekwad family. The capital of the State is Baroda. The State has acceded to the Indian Dominion.

MAJOR GENERAL HIS HIGHNESS FARZAND -I- KHAS -I- DOWLAT -I- ENGLISHIA, MAHARAJA SIR PRATAP-SINHA GAEKWAD, SENA KHAS KHEL SHAMSHER BAHADUR, G.C.I.E., LL.D., THE MAHARAJA OF BARODA, was born on June 29, 1908. He was educated at the Baroda College and the Deccan College, Poona. He married Her Highness Maharani Shanta Devi in 1929, and Her Highness Maharani Sita Devi in 1943. He ascended the *gadi* on February 7, 1939. The Heir-Apparent is Shrimant Fatesinha Gaekwad who is 18 years old.

Among the Maharaja's recreations are polo, tennis, cricket and hunting.

The area of the State is 8,176 sq. miles and the population 28,55,010. The revenue for 1945-46 was

Rs. 450.74 lakhs and the expenditure Rs. 379.29 lakhs.

Agriculture and pasture support 64.6 per cent of the people. The principal food crops are rice, wheat, gram, maize, and garden produce, and the principal cash crops are castor, rapeseed, poppy, cotton, san-hemp, tobacco and sugar-cane. The land tenure is ryotwari. There are about 386 industrial and commercial concerns, 4 agricultural banks and 1,509 co-operative societies. The State also contains sandstone which is quarried at Songir.

For the post-war period a tentative plan of reconstruction involving an expenditure of 15 crores has been formulated.

The State is well served by a net-work of railways. Besides the B.B. & C.I., Rajputana-Malwa, Tapti Valley Railways, which pass through the State, the railway owned by the State is 795 miles in length. The total mileage of metalled and fair-weather roads is 694 and 1,633 respectively.

There are 2,609 educational institutions of different kinds in addition to 6 colleges. Primary education is free and compulsory. The State also maintains a system of rural and travelling libraries.

ADMINISTRATION

With a view to falling in line with democratic trends visible in every Indian State, responsible Government has been introduced into the state. Dr. Jivraj Mehta has been appointed Prime Minister. The constitution of the state is to be framed by a Constituent Assembly elected on the basis of adult franchise and the Government have ordered preparations to be made for elections to the Constituent Assembly. The personnel of the new Ministry has not been announced at the time of writing.

BARWANI STATE is situated in Central India. The Ranās are Sisodia Rajputs of the Ūdaipur family who separated from the parent stock about the 14th century. They were not tributaries to any of the Malwa Chiefs.

HIS HIGHNESS MAHARANA SHRI DEVI SINGHJI, the present Maharana Sahib of Barwani, was born on July 19, 1922. He ascended the *gadi* on April 21, 1930.

His Highness was educated at Daly College, Indore, where he passed the Diploma Examination in 1939, and Indore Christian College. While a student in the Christian College, he joined the Officers' Training Corps at Indore and received military training for six months. He received judicial

and administrative training for four months and training in agriculture at the Institute of Plant Industry, Indore. He plays tennis and squash.

The Maharana was invested with full ruling powers on October 18, 1942. He married Shri Dilhar-kunverba Sahiba, niece of H.H. Maharao Sahib of Cutch, in May 1943. The Heir-Apparent Maharajkumar Anirudh Singhji was born on May 21, 1944.

The area of the State is 1,178 sq. miles, its population 1,76,666 according to 1941 census and its revenue for 1946-47 Rs. 18,00,000. The Ruler is entitled to a salute of 11 guns. The State has acceded to the Dominion of India.

ADMINISTRATION

The administration of the State is carried on by His Highness the Maharana Sahib with the assistance of a State Cabinet consisting of three elected popular Ministers.

President: HIS HIGHNESS THE MAHARANA SAHEB BAHADUR, Ruler of Barwani State.

Chief Minister: SHRI KASHINATH JOSHI, B.A., LL.B.; *Revenue Minister:* RAI SAHIB DAYASHANKER TIWARI; *Judicial Minister:* SHRI B. T. SAKRIKAR.

BENARES: THE STATE of Benares under its Hindu Rulers existed from time immemorial and finds mention in Hindu and Buddhist literature. In the 12th century it was conquered by Shahab-uddin Ghori and formed a separate Province of Mohammedan Empire. During the reign of Akbar the great, it also formed a separate Province. Subsequently Hindu Raj was again established in Benares along with the decline of Moghal Empire. In the 18th century Raja Mansa Ram obtained Sanad of Raj from Emperor Mohammad Shah of Delhi in favour of his son Raja Balwant Singh who founded the present Benares State comprising the Four Circars of Benares, Jaunpur, Gazipur and Chunar. During the next thirty years attempts were made by Saftar Jung and after him by Shuja-ud-daulah of Oudh to destroy the independence of the Raja but the latter withstood them successfully, and strengthened his position. In 1794 management of the Four Circars was taken over by the Company's Government under an agreement by which surplus revenue was granted to the Raja. In 1911, the British Government restored full ruling powers to the Maharaja, to be exercised in respect of a part of the original territory known as Maharaja's 'Family Domains' even in regard to the administration of which, his powers had been limited by the Company's Government.

The State at present, consists of the three districts of Bhadohi, Chakia and Ramnagar.

The area of the State is 875 sq. miles and its population according to the latest census returns is 4,51,428. The revenue of the State in the year 1944-45 was Rs. 34,51,451.

Adopted by His late Highness Maharaja Sir Aditya Narain Singh Bahadur as his son and successor on June 24th, 1934 (H. H.

MAHARAJA VIBHUTI NARAIN SINGH BAHADUR was born on 5th November, 1927, and succeeded to the *Gadi* on April 5th 1939, following the sudden demise of His late Highness. During His Highness's minority the State was administered by a Council of Administration under the Presidentship of C. R. Peters and later that of Khan Bahadur Syed Ali Zamin, M.B.E., the present Dewan of Benares State.

For his higher education, His Highness remained at the Mayo College, Ajmer for six years whence he was called to take up the full ruling powers of the State on July 11, 1947.

On taking the reins of Government the first thing the Maharaja did was to announce Responsible Government to his people and promptly to implement it by placing the administration in the hands of elected members responsible to popularly elected Praja Mandal. A Reforms Committee comprised of elected members with Pt. Hirdal Nath Kunzru, as its Chairman, has been set up for drafting and recommending a constitution for full responsible government.

The Judiciary comprises a Chief Court and a Judicial Committee consisting of retired Judges of the Allahabad High Court and an ex-advocate General of the U.P. This Judicial Committee advises His Highness in appeals and revisions filed before him.

Education is free even in the High Schools, of which there are three, one in each district, and in addition to these there are three aided High Schools and a number of vernacular Primary and Secondary Institutions, besides a few Sanskrit Pathshalās.

There is provision for efficient medical aid including the activities of the Red Cross Society in the sphere of maternity and child welfare. The new hospital at Ramnagar when fully equipped, would be one of the best hospitals in the area.

Agriculture is the main occupation of the people of the State. There is an agricultural and Rural Development Department running on modern lines. There is an extensive Canal system owned and managed by the State in the district of Chakia which has helped the U.P. Govt., considerably, during the recent food crisis.

There are two important industries in the State namely glass and carpets. The former is produced in the Glass Factory at Ramnagar and the latter at Bhadohi, of which the quality and design are deservedly famous and in large demand in world markets.

The State is well served by communications through road and rail. The E. I. Railway and the O. T. Railway run through State territory and the stations of Benares Cantonment, Moghal Sarai and Jeenathpur are within easy distance of Ramnagar. There are a number of metalled roads and a good motor bus and lorries service, whilst the Delhi-Calcutta Grand Trunk Road runs within a mile or two of the main State Road from Ramnagar and so through the district of Bhadohi.

BHADARWA STATE belongs to the Rewa Kantha Gujerat States Group and is included among the groups of States entitled to send a representative member to the Chamber of Princes. The Chiefs of the State are Waghela Rajputs.

H. H. SHRIMANT MAHERBAN (Namdar) THAKORE SAHEB SHREE NATVERSINHIJI RANAJITSINHIJI, the present Ruler, was born on November 29, 1903. He was educated at the Rajkumar College, Rajkot and was married to Shree Jijiraj-kuverbasaheb of Rajpur (Kathiawar) in 1930. The heir to the throne Maharaj Kumar Shree Samarvijaysinhji, was born on October 21, 1942.

H. H. succeeded to the *gadi* on the death of his father on April 26, 1935 and was invested with full powers on October 7, 1935.

Excluding several Wantas in Baroda, the area of the State is 27 sq. miles and the population 13,520. The revenue is Rs. 2,40,000.

EDUCATION

Medical relief and education are free. The State has made good progress in education, and has provided schools for every village having a population of more than 250. The capital town is provided with electricity and pipe-water.

ADMINISTRATION

The outlook of the administration is progressive. Survey settlement has been introduced, permanent tenancy rights having been granted in 1918. The Deccan Agriculturists' Relief Act, the Child Marriage Restraint Act, and such other acts of a reformist nature are all in force in the State.

The State enjoys full civil powers, and in criminal matters it enjoys powers up to 7 years R. I. and a fine up to Rs. 10,000. The Judiciary and Executive are separate. The State police force is well organized. Village panchayats were introduced in every district on the occasion of the birth of the Yuveraj Saheb. The Municipality in the town has a majority of elected members.

Karbhari: S. G. BHAT, B.A., LL.B., Advocate (A.S.).

Nyayadhisht and Magistrate: Post Vacant.

Medical Officer: Dr. LABH-SHANKER H. ACHARYA, L.C.P.S. (Bom.), M.B.B.S. (Madras).

Address: Bhadarwa (Rewa Kantha).

BHAVNAGAR is a first class State in Kathiawar. It lies at the head and west side of the Gulf of Cambay. The Rulers are Gohel Rajputs and claim descent from the three sons of Sejakji believed to have settled in the country about 1260.

HIS HIGHNESS THE MAHARAJA COL. SIR SHRI KRISHNAKUMAR-SINHIJI, K.C.S.I., the present Ruler of Bhavnagar, was born on May 19, 1912. He succeeded to the *gadi* in July 1919. The State was under a Council of Administration during his minority. He was invested with full ruling powers in April 1931.

His Highness was educated at Rajkumar College, Rajkot and Harrow, England. He returned to India in 1928. In 1931, he married Vijyaba Saheba, third daughter of H.H. the Maharaja Shri Bhojrajji of Gondal. The Heir-Apparent Yuvraj Maharajkumar Shri Virbhadrasinghji was born in 1932.

The area of the State is 2,961 sq. miles, its population 6,18,429 (1941 census) and its average annual revenue including railway Rs. 1,36,69,571. The State has acceded to the Dominion of India.

Bhavnagar is an important port on the Gulf of Cambay. It has long been described as the chief mart and channel of import and export trade of Kathiawar, Ahmedabad and

Marwar. It has a good and safe harbour being approached by a creek and offers all modern facilities. It has its own workshop and a dry dock.

The chief means of communication are railways. The Bhavnagar port is linked with the hinterland by the Bhavnagar State Railway which runs to a total length of 307 miles.

Industrially the State is well-developed. The main industries are 3 cotton mills, 5 weaving mills, 1 rubber factory, 4 chemical works, 1 bone crushing factory, 1 silk mill, 1 match factory, 1 cement tiles factory and 1 sugar factory. Besides, there is a large shipping company, the Bharat Lines Ltd. and also the salt industry. A large dairy industry unit has been set up at Khodiyar. Foundation stone for pottery and glass works at Sihor, was recently laid. Moreover there are several small-scale industrial concerns employing manual labour, which produce sugar-candy, copper and brass utensils, chemicals, soap, wooden furniture, cotton thread, gold thread, battery cells, trunks and buckets, and wooden and ivory toys.

The chief agricultural products are grain, cotton, groundnuts, sugar-cane, etc. Measures for the extension of irrigation and improvement of agriculture have received the special attention of His Highness. A fund of Rs. 24 lacs was raised for helping needy farmers. A school of agriculture and an experimental farm were opened and agricultural demonstrations and propaganda were started. The State has launched various schemes of water supply and irrigation. Irrigation tanks at Ambla, Valavad, Ramdhani, Sihor, etc., increase the supply of subsoil water and have been a real boon to agriculturists. The Darbar have also sanctioned a scheme for building a reservoir on the river Rangholi. Village panchayats have been introduced.

ADMINISTRATION

The executive head of the administration is the Dewan, who is directly responsible to the Ruler. The Dewan is assisted by four Naib-Dewans who have been assigned different portfolios. There is a Dharasabha or Legislative Assembly consisting of 55 members. The Dewan is the President of the Darasabha. The Judiciary is independent of the Executive. His Highness has a fixed privy purse.

Principal Officers: ANANTRAI PRABHASANKAR PATTANI, M.A. (Cantab.), *Mukhya Dewan*; MAGANLAL H. GHANDI, M.A. LL.B., *Bar-at-Law, Naib Dewan (Judicial)*; RAVISHANKER S. BHATT, M.A. (London), *Naib Dewan (Railways & Finance)*; HARIFRASAD H. TRIVEDI, B.A., LL.B., *1/c Naib Dewan (Revenue)*; GAJANAN U. BHATT, B.A., S.T.C., M. Ed. (Leeds), *Naib Dewan (Education)*; MINOCHAUER R. UNWALA, B.A., LL.B., *Junior Judicial Member, Hazur Court*; BALAKRISHNA V. TRIVEDI, B.A. *Bar-at-Law, Chief Judge.*

BHOPAL STATE in Central India lies between north lat. $22^{\circ}23'$ and $24^{\circ}4'$ and east long. $76^{\circ}28'$ and $78^{\circ}52'$. It is bounded on the north by the States of Gwalior, Basoda, Kurwai and Tonk, on the south by the Narbada River, on the west by the States of Indore, Gwalior and Narsingarh, and on the east by the Saugor Dt. of the Central Provinces. Most of the State is situated on the Malwa Plateau to the north of the Vindhya. The climate is, generally speaking, temperate throughout the State and the average rainfall varies

from 30 to 50 inches. The State contains many remains of great archaeological interest including the famous Sanchi Topes, which date from the second Century B.C. and which were later restored under the direction of Sir John Marshall. Adjoining the Topes is the Sanchi station on the G.I.P. main line to Delhi.

Bhopal is the principal Muslim State in Central India and ranks only next to Hyderabad in importance among the Muslim States of India. The ruling family was

founded by Dost Muhammad, Khan an Afghan of the Mirazi Khel clan who came to Delhi in 1708 during the first year of Bahadur Shah's reign in search of employment.

COL. AIR-VICE-MARSHAL HIS HIGHNESS THE NAWAB SIKANDAR SAULAT IFTIKHARUL MULK MUHAMMAD HAMIDULLAH KHAN, BAHADUR, G.C.S.I., G.C.I.E., C.V.O., B.A., LL.D., the present Ruler of Bhopal, was born on September 9, 1894. He married in 1905, the daughter of Shahzada Humayun, a great grandson of Shah Shuja a Shahzada Khel who was exiled from Afghanistan and became domiciled in India. The Nawab and the Begum have three daughters.

The Nawab was educated at Bhopal and the M.A.O. College, Aligarh. Taking the Bachelor of Arts Degree in 1915, he put in a further year's special study in law. After returning to Bhopal he underwent a thorough practical training in almost every branch of the State administration including the Chief Secretaryship of the Government of Bhopal. Finally on May 17, 1926 he ascended the *gadi* on the voluntary abdication of his mother.

His Highness was throughout a leading member of the Chamber of Princes of which he was Chancellor in 1931-32, and again in 1944 when he remained Chancellor almost till the lapse of paramountcy. As Chancellor of the Chamber of Princes he also took an active part in the deliberations of the Round Table Conference held in London in 1931-32.

His Highness is an all-round sportsman but he is best known in India as one of the country's finest polo-players.

The Ruler of Bhopal is entitled to a salute of 21 guns within, and 19

guns outside his territories. The State has acceded to the Dominion of India.

HEIR-APPARENT

The heir-apparent, Col. Suraiya Jah Nawab Gohar-e-Taj Princess Abida Sultan Begum, was born on August 28, 1913. In 1933 she married Nawab Sarwar Ali Khan, and has one son. The Princess was educated privately and is a fine product of both Western and Eastern culture. She is a scholar in Arabic and Persian and an accomplished pianist and violinist. She is also an all-round sports-woman. She is, for instance, a hard rider, a dead shot, a fine polo player, an expert skater, a good pilot and a proficient swimmer. She has been very active in the public life of the State, taking a special interest in social and religious questions. She leads a simple life and always tries to identify herself with the humblest citizen in a hundred different ways.

For some years now the Princess has been taking an active part in the administration of the State. She is at present in charge of the Private Estate of His Highness as Chief Secretary in the Department of Sarfe-khas. During the war years when the Nawab was pre-occupied with urgent war work she took over and acted as President of the State cabinet and discharged her onerous responsibilities with great skill and dignity. In recognition of all her services to the State she was awarded the Akhtar Hamidia Gold Medal on the occasion of the fifty-second birth-day of His Highness the Nawab in

February 1946. The Princess holds the honorary rank of Colonel in the Bhopal State Military Forces and is officially styled 'Col. Suraiya Jah Nawab Gohar-e-Taj Begum.'

The area of the State of Bhopal is 7,000 sq. miles, its population about 8,00,000.

PRODUCE AND INDUSTRY

More than two-thirds of the State is arable and the soil is generally very fertile. The principal agricultural products are wheat and other cereals and the main cash crops are tobacco and sugarcane. The State forests are very extensive and valuable. The land system which is in force in the State is ryotwari by which the cultivator holds the land direct from the Government. There is absolute permanency of tenure so long as the assessment is regularly paid.

With a view to acquainting the people with improved methods of agriculture, the State Agricultural Department is propagating necessary advices and instructions so as to enable the agriculturists to produce good crops in plenty. The State is always on the look-out to help agriculturists.

Industrially, too, the State is well-off. Among the more important manufacturing concerns in the State are: The Bhopal Textile Mills, the Straw-Board Factory, the Sehore Sugar Factory, the Nerbudda Refrigerated Products Co., the Central India Chemicals Ltd., the Hamidia Match Factory, a tent factory, an oil mill and several ginning and

pressing factories. Bhopal is also rich in deposits such as iron, bauxite, mica and other valuable minerals.

COMMUNICATIONS

Bhopal is on the G. I. P. Railway main line between Bombay and Delhi. The chief means of communication within the State itself are the roads, of which a great many are new.

Both in education and public health excellent facilities are provided by the state authorities. There are travelling dispensaries in the country-side and a new hospital staffed and equipped on modern lines in Bhopal City.

ADMINISTRATION

In January 1946 His Highness announced a series of reforms providing for 1. extended franchise, 2. elected majority in the legislature, 3. consultative committees to advise Government Departments, and 4. Public Services Commission to select candidates for Government posts. In April 1947 three non-official ministers representing the bulk of public opinion were appointed members of the Executive Council which consists of five members, thus giving the popular representatives a majority in that body.

On the 29th of April 1948, the Nawab announced the inauguration of responsible Government in the State with the formation of an Interim Government with Raja Sir Oudh Narain Bisariya as Prime Minister. The interim Government consisting of a Prime Minister and eight other ministers, seven of whom are non-officials, would function under the present constitution until the new constitution has been promulgated and elections to the new legislature have taken place.

Alimartabad, Motamidus Sultan, Raja Sir Oudh Narain Bisariya,

Prime Minister, Law and Order and Legislature; Pandit Chaturnarain Malaviya (Bhopal Praja Mandal), *Deputy Prime Minister, Commerce, Industries, Supplies and Labour*; Colonel Nawabzada Radhid-uz-Zafar Khan, *Education and Local Self-Government*; K. F. Haider, *Finance*; Mahmud Hussain (Bhopal Praja Mandal), *Revenue*; Mr. Zanoor, *Public Health, Medical and Jails*; Kamta Prasad, (Bhopal Praja Mandal), *Agriculture, Forest and Fisheries*; Rai Lala Mulkraj (Bhopal Political Conference), *Public Works, Irrigation and Communications*; Seth Pratapmal (Bhopal Political Conference), *Rural Development*.

Specially notable has been the success which has attended the efforts of the Ruler, Governments and people of the State to maintain peace and communal harmony. At a time when the greater part of the country seemed to have been infected by the virus of communal bitterness, Bhopal kept aloft the torch of communal amity and goodwill. To assist the State Govt. in this all important task, H. H. has appointed a Peace Liaison Committee for Bhopal city the majority of whose members are non-officials representing all shades of public opinion in the State.

A scheme to maintain the internal security of the State and to preserve a volunteer reserve police, has been designed by the State Government. An aerodrome in the State was expanded in order to serve as an important centre in aerial communications.

The specially notable feature of the administration of the State has been the success of the State's effort to tide over the scarcity of foodstuffs. The State has exported large supplies of grains to deficit areas, hard hit by scarcity. It also maintained civilian supplies all over the State at cheap rates.

BHOR STATE lies in the Western Ghats between north lat. 18° and $18^{\circ}45'$ and west long. 75° and $74^{\circ}12'$. The capital town is Bhore, 32 miles from Poona and 26 miles from Lonand on the M. & S. M. Railway. The State contains forts of historical interest like Torna and Rajgad, and a number of caves which come down from the Buddhist period. The State is entitled to a dynastic salute of 9 guns.

HIS HIGHNESS RAJA SHRIMANT SIR RAGHUNATHRAO SHANKARRAO PANDIT PANT SACHIV, K.C.I.E., MADAR-UL-MAHAM, of Bhore was born on September 20, 1878. He studied at two famous institutions, the Poona High School and the Deccan College where he also took a course in law. He ascended the *gadi* on July 17, 1922. His first wife S. S. Gangutai Saheb, whom he married in 1893, died in 1907 fourteen years later. He married a second time in 1908 but lost his second wife S. S. Laxmibai Saheb too in 1931. The Heir-Apparent, Shrimant Sadashivrao alias Bhau-saheb, son by His Highness' first wife, was born on September, 27, 1904.

His Highness has travelled widely and has visited England and the Continent of Europe.

The area of the State is 910 sq. miles, and the population according to the 1941 census 1,55,961. The average annual revenue of the State is about Rs. 9,05,000.

INDUSTRY

Rice is the principal crop, though bajri and jawar are also grown in some parts. There are five industrial concerns in the State, the Bhore Trading Co., the Bhore Industries, Ltd., Shri Laxmi Textile Mills, Ltd., Raja Raghunathrao Mills, Ltd., Parek Paper Mills, Ltd. which are all doing very well under the fostering care of the Administration. A project for starting a sugar factory is under consideration. Under post-war planning the State has a scheme for the construction of certain irrigation works, a second scheme for the extension of communications, and a third one for the development of its forest resources.

Primary education has been free since 1922, and scholarships are provided for higher education. There is a State High School at Bhore, the Rajah Raghunathrao High School and a private English school at Pali. Liberal grants are awarded to all private schools. The State also maintains a public library.

ADMINISTRATION

The State enjoys full internal powers. On August 18, 1947, on the occasion of the silver jubilee of his accession to the *gadi*, the Raja introduced responsible government into the State. The State budget is votable. And practically all the departments are in charge of four ministers selected from the Legislature. The State has its own High Court.

BIKANER the northernmost State in Rajputana lies between north lat. $27^{\circ}12'$ and $30^{\circ}12'$ and east long. $72^{\circ}12'$ and $75^{\circ}41'$. It is bounded on the north and west by Bahawalpur State, on the south-west by Jaisalmer State, on the south by Jodhpur State, on the south-east by Jaipur State, on the east by Loharu State and Hissar Dt., and on the north-east by Ferozepur Dt. In point of area it is the sixth largest State, and the second largest in Rajputana. The northern portion of the State consists of level loam land while the remainder is, for the most part, sandy and undulating. The average annual rainfall is about 12 inches. The water level over most of the State is from 150 feet to 300 feet deep.

The reigning family of Bikaner belongs to the Rathor clan of Rajputs who have always been a race of distinguished warriors. The State was founded in 1465 A.D. by Rao Bikaji, son of Rao Jodhaji, ruler of Marwar, and after him both the State and the capital city are named.

Bikaner, which is the third biggest city in Rajputana has a population of 1,27,226 according to the 1941 census. It is a fine city with a network of roads and buildings and other works of public utility and amenities of modern type. Among the finer buildings which are worthy of note are the Lallgarh Palace, the residence of His Highness the Maharaja; the Museum; the Legislative Assembly Hall; the public offices and Law Courts; the

Victoria Memorial Club, built in memory of Queen Victoria; the Dungar Memorial College apart from the old palaces and the Fort, and a Public Park with the Kirti Stamba, a 60 feet high memorial to the martial glory of Bikaner.

HON. LT.-GENERAL HIS HIGHNESS MAHARAJADHIRAJA RAJ RAJESHWAR NARENDRA SHIROMANI MAHARAJA SHRI SADUL SINGHI BAHADUR, G.C.S.I., G.C.I.E., C.V.O., was born on September 7, 1902. He ascended the throne and was also invested with the full powers on February 2, 1943. His Highness attended the Coronation Durbar in 1911 when he was appointed a page to King George V. During the Prince of Wales' tour of India in 1921-22 he was attached to his personal staff. He also was Chief Minister of the State from 1920-25.

The Maharaja of Bikaner has travelled widely. He accompanied his father to Europe when the latter attended the Peace Conference after the First World War

and the meetings of the Assembly of the League of Nations in 1924 at Geneva. His Highness was equally active during the Second World War. For instance, he toured the Middle East Theatre of War in November 1943, and then the Assam Burma Front in November 1944 to inspect the Bikaner Bijey Battery there.

His Highness played a most notable part in bringing about constitutional unity between the Indian States and the Indian Dominion. It was also to a great extent through His Highness' efforts that satisfactory assurances in respect of the place of the States in the Indian Union were secured.

The Maharaja of Bikaner has married the sister of H. H. the Maharaja Sri Gulab Singhji Bahadur of Rewa, and has two sons: Maharaj Kumar Sri Karni Singhji Bahadur, the Heir-Apparent, and Maharaj Kumar Sri Amar Singhji Bahadur, and a daughter who is married to the Maharaj Kumar Sri Bhagwat Singhji Bahadur, Heir-Apparent to the throne of Udaipur. On January 13, 1946 a son was born to the Heir-Apparent of Bikaner.

The area of the State of Bikaner is 23,317 sq. miles and the population 12,92,938 according to the 1941 census, an increase of 38.1 per cent over the figure of 9,36,218 recorded in 1931. 70 per cent of the population is Hindu, 14 per cent Muslim, 6 per cent Sikh and 3 per cent Jain.

The estimated total revenue for 1947-48 is Rs. 3,19,22,891 out of 15

which the ordinary revenue is Rs. 2,80,07,646 and capital and extraordinary Rs. 39,15,245.

PRODUCE & INDUSTRY

The State is mainly agricultural although the trading classes have got very big business concerns in all parts of the Dominion as well as abroad. The principal crops in the order of importance are bajri, gram, wheat, barley and jowar. Sarson, cotton, sugar-cane and pulses are also grown in the north and east, and tobacco in the east and south. Cattle, sheep and camels are an important part of the wealth of the agricultural population. Though the sheep and camel are famous, attempts are being made to improve the breed still further.

The chief manufactures are glassware, sugar (by vacuum pan process), distillery, plastic product, biscuit, cardboard, oil, soap, rugs, woollen fabrics, carpets, pottery, lacquer-ware, and others. The Bikaner woollen shawls and carpets are famous all over the world.

Among the mineral and other deposits are coal (lignite) at Palana, salt at Lunkaransar, red sandstone near Dulmera, copper near Bidasar, gypsum at Jamsar, Selenite at Lunkaransar, Fuller's earth (Multani Mitti) at Palana and Madh, glass-sand and bauxite at Madh, calcite near Dhirera, barites in Magra District, and limestone in many localities. Saltpetre occurs as a surface efflorescence in soil in some northern parts of the State. The sandstone is of

excellent quality and finds a ready market. The coal is eminently suitable as gas coal and the gypsum deposits are believed to be the best in India. The quantity of selenite available at Lunkaransar is estimated at half a million tons. The glass works at Bikaner is utilizing glass-sand found at Madh which has proved to be of very good quality.

The chief exports are wool, woollen carpets and rugs, rape-seed, sugar-candy, saltpetre, and fuller's earth; while the chief imports are cereals, piece-goods, cotton, sugar, opium, tobacco and metals.

The Bikaner State Railway is the principal means of transport and is 883.5 miles long. It has cost more than 4½ crores to build including a capital outlay of over Rs. 20 lakhs on a railway workshop.

IRRIGATION

Till 1927 there was practically no irrigation in the State, the crops depending wholly on scanty and precarious rainfall. Now there is a big irrigation works, the Gang Canal, already functioning, and another and much bigger the Bhakra Dam under consideration. The Gang Canal which was opened by Viscount Halifax (then Lord Irwin) in 1927 irrigates an area of about 7,27,000 acres of land in the north-west. The main canal from Ferozepur Headworks in East Punjab to Shivpur in the Bikaner State is 84.7 miles long and it is believed to be the longest concrete-lined canal in the world. The cost of constructing the Canal including

the Dam was over 3 crores and 60 lakhs. The State is also participating in the Bhakra Dam Project which it is expected will irrigate approximately another 12 lakhs of acres in the northern parts. The State's share of the cost is estimated at about Rs. 8 crores.

EDUCATION

The nation building activities in the State are equally well looked after. Primary education is compulsory and free for everyone while secondary education is free for the Bikaneris. Liberal scholarships are awarded to State subjects for higher studies in technical subjects in India and abroad.

Bikaner State is well provided with educational institutions. There are 307 primary schools (15 exclusively for Harijans and 15 for adults), 57 middle and lower middle schools, 18 high schools, 4 intermediate colleges including one for girls and one first grade college providing courses in Arts, Science and Law. Among the special types of schools are one public school which uses the latest technique in teaching, a Montessori school for children of both sexes, and a school for the education of girls under strict purdah arrangements.

MEDICAL SERVICE

The medical service too is organized on modern and up-to-date pattern. There are as many as 46 hospitals and dispensaries in the State, and in the capital itself there are two large and well-equipped hospitals one for men, and the other for women and children. In these hospitals

there are arrangements for the most up-to-date treatment in X-ray, deep-ray therapy, radium, penicillin, etc., every department being in charge of a highly skilled specialist. These two hospitals have become centres of medical aid not only for people in Bikaner but also for people from Rajputana, and sometimes even for people in the outlying parts of the Dominion. Besides these two general hospitals there are a Maternity and child welfare Centre and a special hospital for tuberculosis. The State intends starting an ayurvedic college too in the capital in a short time. A fund of Rs. 40 lakhs has also been earmarked by His Highness the Maharaja to finance an intensive programme of rural uplift including water-supply and drainage in the Capital and rural areas. One lakh of rupees is set apart every year for providing drinking water, and constructing tanks and wells. Other measures to improve the condition of the people include the abolition of import duty on articles of personal use, the remission of several customary levies and in general a reduction of taxes and cesses. Finally, there are 80 co-operative credit societies to help the cultivator.

ADMINISTRATION

From the political point of view Bikaner has been equally progressive. Not less than 10 per

cent of the revenue of the State is spent for nation-building purposes. Bikaner has a separate and well-defined civil list and privy purse with strict demarcation between the personal expenditure of the Ruler and State expenditure. Bikaner was the first State to separate the Judiciary from the Executive, to raise the Chief Court to the status of High Court and to establish a Legislative Assembly with powers of interpellation, discussion of budgets, voting grants, moving adjournment motions, etc. (1913).

His Highness the Maharaja was pleased to promulgate recently the Government of Bikaner Act, 1947, which in two years will lead to the establishment of responsible Government under the aegis of the Ruler, with suitable provision for entrusting vast powers to popular ministers even during the interim period. The Act will bring into existence a legislature of two Houses on a wide and popular franchise and the entire range of administration will be entrusted to a Council responsible to the Legislature with a few reservations relating to His Highness' Household, the Devasthan Department, the Army, and His Highness' relations with Chiefs and Nobles and other Jagirdars. As for local self-government there are 175 Panchayats, a number of District Boards and Municipalities with elected Presidents.

BILKHA is a Rajput State. The Rulers belong to the illustrious Vala Katni Rajput clan and claim descent from the Oghad Virani branch of the Jetpur House.

DARBAR SHREE RAVATEVALA SAHEB, the present Ruling Chief of Bilkha, was born on January 19, 1906. He succeeded to the *gadi* on January 19, 1928.

The Ruler was educated at the Rajkumar College, Rajkot. He married Bai Shree Devkunverba Saheba in February 1928. The Ranisaheba is religious-minded and does not observe *pardah*. The Ruler has four sons, Prince Jaswant Singhji who is the Heir-Apparent, K. S. Kishorsinghji, K. S. Ranjitsinhji and K. S. Harishchandra-sinhji. He has three daughters. The eldest daughter Rajkumari Shree Nandkunverba, was born on December 28, 1929. She is brilliant in her studies and is the first Rajkumari in the community to appear

for the matriculation examination of the Bombay University in 1945. The second daughter Kumari Bhanukunverba, was born on October 7, 1935.

The area of the State is 167 sq. miles. It has a population of 45,000. The annual revenue is Rs. 5,87,000. The State has acceded to the Dominion of India.

The Chief Saheb is a great lover of sports and shikar. He takes special interest in cricket, tennis, billiards, golf and volley ball. He won the Kathiawar Gymkhana Tennis Challenge Cup, the Billiards Cup and the Gibson Volley Ball Challenge Shield in 1940. He is a good marksman. He is an expert rider and owns some of the best Kathi horses. He visited England on the occasion of the coronation of His Imperial Majesty King George VI in 1937 and toured the Continent.

The jurisdiction of the Ruler extends over 29 villages. Of these Bilkha, Kunkavav, Medarda and Chital are towns of some commercial importance and afford scope for development of commerce and industry.

REVENUE

In matters of revenue, the system of Bhagbatai prevails in the State. But the Chief Saheb has granted proprietary rights to the Khaduts on their holdings.

COMMUNICATIONS

The important means of communication are railways and roads. Bilkha town is served by

the Junagadh State Railway and is a station on the Junagadh-Visavadar section, while Kunkavav and Chital are stations on the Jetalsar-Dhasa section of the Gondal Railway. There is a regular motor service between Medarda and Dushala, and Medarda and Junagadh.

The State has made some progress in the sphere of irrigation. It has recently built a tank named 'Ravatsagar' which irrigates about 1,000 acres of land.

The cessation of hostilities has brought the problem of post-war reconstruction to the forefront and the Ruler has evinced a keen interest in this direction.

ADMINISTRATION

The Chief Saheb is deeply solicitous of the advancement of his State in every respect and it has been his earnest ambition to raise the standard of living of his subjects in all possible ways. With this object he made strenuous efforts to consolidate his *Giras* which were lying scattered under the exchange system and secured complete sovereignty over the towns of Bilkha, Medardar and Chital, which were *Majmu* till 1935. Bilkha, the capital of the State, is equipped with electricity and possesses good roads. It has a middle school, a taluka school and girls' school. The Ruler has decided to raise the middle school to a full fledged high school as early as possible. The State has provided medical facilities as well. There is a hospital in Bilkha for medical aid to the people. Construction of a decent hospital with sufficient beds and all modern equipments, and the development of commerce and industry in Bilkha are engaging the attention

PRINCIPAL OFFICERS

Dewan : CHHOTALAL P. BHATT, B.A., LL.B.

CHANDRA DIP SINGH*, B.A., L.T.; *Secretary, State Council*: RAJ RAJESHWAR NATH JAIN; *Conservator of Forests*: RANBIR SINGH PAWAR, B.A., LL.B. (Acting).

CAMBAY STATE is bounded on the east by the Baroda State, on the north and west by Ahmedabad, and on the south by the Gulf of Cambay. The Ruler is a mogulul of Shia faith of the Najam-e-Sani family of Persia.

Cambay, the capital of the State, stands at the head of the Gulf of Cambay. Lal Bagh, where the forces of the Moghul Emperor Akbar stayed when he visited Cambay and Kothi and where the East India Company established a factory in 1613, and the Dil Kush are historically important buildings.

HIS HIGHNESS NAJAIN-UD-DAULAH MUMTAZ-UL-MULK MOMIN KHAN BAHADUR DILAVERJUNG NAWAB MIRZA HUSSAIN YAWAR KHAN BAHADUR, the Nawab of Cambay, was born on May 16, 1911. He succeeded to the *gadi* on January 21, 1915, and was invested with full powers on December 30, 1930. His Highness was educated at Rajkumar College, Rajkot till 1928, and afterwards spent a year

in Europe accompanied by his tutor and companion. The Heir-Apparent JANAB WALIAHAD BAHADUR NAWABZADA MIRZA MUHAMAD JAFAR ALI KHAN was born on October 15, 1936. The Ruler is entitled to a salute of 11 guns.

The area of the state is 392 sq. miles, its population 96,501 (1941 census) and its revenue on the average of the last five years' normal income, Rs. 18,87,124. The State has acceded to the Indian Dominion.

The State has a textile mill, three match factories, one starch factory and one glue factory. Besides, dressing of Cornelian and Agate and some precious stones is done.

All services in the State are pensionable. Survey and settlement have been extended to every village in the State. Free primary education and free medical aid are provided. Liberal endowments are given for the relief of agricultural indebtedness. Each village has a panchayat. The High Court is independent of the Executive.

ADMINISTRATION

The administration is carried on by the Interim Council with the Dewan as the President and four others as members, three of whom are popular ministers.

Dewan and President: SARDAR SAHEB SARDAR RANBIR SINGH, B.A.; *Minister for Central Excises*: SAGOONLAL C. DESAI, B.A., LL.B.; *Minister for Revenue*: MADHAVLAL B. SHAH; *Minister for Law*: CHIMANLAL D. BHAGAT, B.A., LL.B. *Minister for Public Health*: HUSAINBHAI F. ALI.

CHAMBA STATE is one of the oldest principalities in India and was founded by Meruta in A.D. 550. It is bounded on the west and north by Kashmir, on the east and south by the districts of Kangra and Gurdaspur and is shut in on almost every side excepting southwest by lofty hill ranges. The whole country is mountainous and is a favourite resort of sportsmen. It possesses a remarkable series of copper plate inscriptions from which its chronicles have been compiled. Chamba town is the capital of the State and the Ruler is a Rajput of the Surajbansi Race.

MAJOR HIS HIGHNESS RAJA LAKSHMAN SINGH, the present Ruler of Chamba State, was born on December 8, 1924. He succeeded to the *gadi* on December 7, 1935, and was invested with full ruling powers on May 4, 1945. His Highness was educated at Aitchison College, Lahore.

The area of the State is 3,127 sq. miles, its population 1,68,938 and its revenue Rs. 16,00,000.

The Ruler is entitled to a salute of 11 guns. The State has acceded to the Dominion of India.

PRODUCE

Crops are rice, maize and millets. There are some valuable forests in the State. The possibilities of developing fruit growing for export, cultivation of profitable crops, etc., and mining are being investigated. A couple of Sindhi bulls and heifers have been imported into the State and bull-calves from that breed are distributed amongst villagers for improving the local cattle breed. A department of Industries has been started to explore the possibilities of development in sheep-breeding, bee-keeping, manufacture of textiles, wood work, etc.

Education is free in the State except in higher classes. There is a high school in Chamba town. The State has about 60 primary and lower middle schools.

Medical aid also is free throughout the State. The Chief Medical Officer is in charge of the Public Health and Medical Relief. The Municipality is looking after the sanitation and conservancy in the town. The State has its own Veterinary dispensary.

Co-operative movement has been started since 1943, and thrift and credit societies have been opened. A Central Co-operative Bank has also been started.

The Chief means of communication in the State are roads. The principal road to Chamba town is from Pathankot, the terminus of the Amritsar-Pathankot branch of the North Western Railway. The Darbar have drawn up a five-year road development plan. The wheeled traffic road from Banikhat to Chamba, which forms the chief item of this plan, is almost complete. A lorry service is in operation. Construction and improvement of other essential roads in the interior are also contemplated.

ADMINISTRATION

With a view to associating the people more closely with the administration, the following committees have been constituted namely, Legal Codification Committee, composed of non-officials to advise the administration on the exact form which new State Laws should take, a Municipal Committee in the town, a Constitutional Reforms Advisory Committee to advise the Darbar in drafting the constitution for the State and a Non-Official Advisory Committee to advise the Director of Civil Supplies and the Textile Commissioner. Panchayats have been established in all the Parganas of the State. The judiciary is independent of the Executive. The administration is carried on by His Highness with the assistance of a Council consisting of *Devan*: R. S. Lubhaya, B.A., LL.B., and two members—*Home Member*: THAKUR INDAR SINGH; *General Member*: LALA PRAKASH CHAND, B.A., LL.B.

CHARKHARI STATE in Central India, is bounded on the north by the Districts of Banda and Hamirpur, on the south by the States of Chhatarpur and Ajaigarh, on the east by the District of Banda and the States of Ajaigarh and Panna, and on the west by Dhasan River. The State has acceded to the Dominion of India.

HIS HIGHNESS MAHARAJA-DHIRAJ SIRAHDARUL MULK MAHARAJA JAYENDRA SINGH JU DEO BAHADUR, the present Ruler of Charkhari, and the second son of Shri Raja Mahipal Singh Ju Deo, C.S.I., Ruler of Sarila State, was born on May 24, 1929. The Maharaja was educated at Mayo College, Ajmer and Daly College, Indore. He was installed on the *gadi* on September 7, 1942. His Highness assumed the reins of Government at a grand Darbar held on August 28, 1947. The Ruler is entitled to a salute of 11 guns. His Highness is a keen sportsman.

Judiciary is independent of the Executive. The laws in force

in the Indian Dominion are applied in the State. Every big village has a panchayat court to dispose of petty civil and criminal cases.

The State has well organised Revenue, Police, Customs, Excise, Forest and P. W. D. Departments under separate heads. The Ruler takes particular care in the development of education. Dispensaries giving free medicine to suffering humanity have been opened in every Tehsil. There is a Veterinary Hospital at the Headquarters. The State has a power house in Charkhari proper to provide the city with lights. There is a metalled road connecting the Headquarters with the Rly. station at Mahoba on the Jhansi Manikpur section of the G. I. P. Rly.

An experimental agricultural farm demonstrates to the cultivators improved methods of agriculture. Cash Taqavi for seeds, bullocks and wells is liberally distributed every year and grazing facilities have also been extended. Other measures for the uplift of tenants are under the consideration of the Maharaja.

The beggar problem has been completely solved in the State.

ADMINISTRATION

With a view to associating the people of the State with the administration and pending the establishment of a Constituent Assembly for which elections are going to be held shortly, His Highness, immediately after taking over the Government, announced the appointment of an interim government consisting of three members, a Chief Minister, a Public Minister and a Jagir Minister to assist him in the administration of the State.

CHHOTA UDEPUR STATE is situated in the north-east corner of Gujerat, and belongs to the Gujerat States Group. It is bounded on the north by the State of Devgarh, Baria and the Thakurate of Kathiwar, on the east by the State of Ali Rajpur, on the south by the River Narbada and some of the Sankheda Mewas estates, and on the west by the rest of the Sankheda Mewas, the Baroda State and the Narukot territory.

H. H. MAHARAWAL SHRI VIRENDRASINHJI, the present Ruler, was born on October 24, 1937. He ascended the *gadi* on October 16, 1946 while still a minor after the death of his father in Lisbon. The Ruler is now in the care of a tutor who is also the guardian.

The area of the State is 890.34 sq. miles, and the population according to the census of 1941 is 162,292. The income of the State for the year 1945-1946 was Rs. 23,55,000 and the expenditure Rs. 23,24,866.

PRODUCE & INDUSTRY

Besides food grains the chief agricultural products of the State are cotton and groundnut. The arable parts are well watered by a number of rivers and rivulets, though the State encourages the digging of wells in private holdings. The methods of cultivation are very primitive especially among the aboriginal tribes, but lately there has been a great deal of improvement owing to the activities of the Agricultural Department.

There are 5 cotton mills, 3 pressing factories, 4 oil mills and one glass works in the State, the Natwarsinhji Glass Works Ltd. There are also lead, copper and manganese mines which are being

worked by companies to whom the mines have been leased.

COMMUNICATIONS

There is a railway owned by the State besides the Champaner Shivarajpur Pani Mines Railway which serves the mining areas. There are about 50 miles of metalled roads, running across rivers on causeways, and connected with feeder cart tracts from the outlying villages. There are the usual post and telegraph offices besides telegraph offices at railway stations. There is an automatic telephone system at work in the State capital, while the Taluka Headquarters too have telephone connections.

Education is free in the State. There are a number of educational institutions including an Anglo-Urdu School. The State devotes special attention to the education of girls for which purpose it maintains six schools at Chhota Udepur, Kavant, Jehpur, Jabugam, Tejgadh and Chulamali.

Post-war planning is very much in the minds of the State authorities. They are planning on an ambitious scale to include agriculture, forestry, cottage industries and primary education. It is proposed to construct a new hospital in the capital with the most up-to-date equipment. The authorities are also planning to improve the transport system. It is proposed to erect a new bridge across the Orsang River to connect the Bombay-Baroda Road with the Bombay-Agra Road. And the construction of another 50 miles of metalled roads is well under way.

ADMINISTRATION

The Ruler being a minor, the State is administered by a Board of Regency through an Executive Council consisting of three members, one of whom is a non-official.

CHHUIKHADAN, one of the smaller States in the Eastern States Union consists of three separate blocks surrounded by the States of Khairagarh and Nandgaon, and the Zamindaris of the Drug district. The capital Chhuikhadan (meaning quarry of white clay) is situated 31 miles both from Rajnandgaon and Dongargarh, two stations on the Bengal Nagpur Railway.

The founder of the State was Mahant Rupkishore Das, who entered the service of the Nagpur Durbar and was rewarded by the grant of Chhuikhadan as *jagir*. Rup Das being a *vaishnava* the State descended from *Guru* to *Chela* but later the system of descent was changed to one of father to son through marriage. The State lapsed to the British Government in 1853. In 1865 the status of Feudatory Chief was conferred on the then ruler Mahant Luxman Das, and an adoption *sanad* granted. In 1937 another *sanad* was granted defining the ruler's status and powers.

The present ruler, MAHANT RITU PARNA KISHORE DAS was born on

July 3, 1922, and was educated at the Rajkumar College, Raipur. He was invested with full ruling powers on April 2, 1944. The Mahant has two younger brothers Kumar Thalendra Kishore Das and Kumar Radha Sarveshwar Kishore Das.

The area of Chhuikhadan is 153 sq. miles and the population according to the 1941 census 32,715. The total revenue of the State in 1945-46 was Rs. 1,52,324 and the total expenditure Rs. 1,07,732. The inhabitants of the State are mostly Lodhis, Telis, Gonds and Chamars.

AGRICULTURE, FOREST

The State is mainly agricultural, the principal crops being rice, wheat, gram, linseed and kodo. The State also possesses about 17 sq. miles of forest, the principal yield from which consists of timber, fire-wood, bamboos and some other minor produce. The export trade of the State consists chiefly of grains and betel leaves, while imports include sugar, gur, cloth, yarn, salt and kerosene.

The State has a well-equipped hospital at the capital. There are 20 schools for boys and girls with 1,521 names on the rolls. Primary education is free, and the State spends as much as Rs. 11,500 (figures for 1945-46) on education as a whole.

The State has been keen on associating the people with the administration. Chhuikhadan town, for instance, has a municipality with an elected majority.

The State has prepared an elaborate scheme of post-war reconstruction which includes among others the building of a new dispensary, 2 new schools, several bunds and wells and 10 model villages.

CHITRAL STATE occupies a unique strategic position on the extreme north of the Dominion of Pakistan.

The Chitral dynasty traces its descent to Amir Timur, the famous Tamerlane, through his grandson Sultan Hussain, the Emperor of Herat. Mirza Ayub, the grandson of Sultan Hussain came to Chitral as an exile and married the daughter of the then Ruler of Chitral, who styled himself the descendant of Alexander the Great. The issue of the marriage was the founder of the present dynasty.

LT.-COL. HIS HIGHNESS HAJI MOHAMMAD MUZAFFAR-UL-MULK, the present Ruler of Chitral State, was born on

October 6, 1901. He was educated at the Islamia College, Peshawar. His Highness succeeded to the *gadi* on July 29, 1943, when his elder brother died without a male issue.

The area of the State including the districts of Yasin, Ghizer and Ishkoman, is about 8,000 sq. miles. The Ruler is entitled to a salute of 11 guns.

The State has acceded to the Dominion of Pakistan.

RESOURCES

The Ruler has placed the mineral resources of his State at the disposal of the Pakistan Government and has also offered 5,000 Deodar trees in the State forests free of cost for building purposes to the Pakistan Government.

He has contributed Rs. 30,000 to the Quaid-i-Azam's Relief Fund.

The State maintains its own State Forces known as Body Guard with more than 5,000 trained men.

The valleys of which the State consists are extremely fertile and perennially cultivated.

COCHIN is a maritime State lying in the south-west corner of India. It is bounded on the north by Malabar, on the east by Coimbatore Dt., on the south by the Travancore State, and on the west by the Arabian Sea.

H. H. SRI RAMA VARMA, THE MAHARAJA OF COCHIN, was born in August 1876. He succeeded to the *gadi* in July 1948 on the death of his brother, the late Maharaja.

The area of the State is 1,480 sq. miles and the population 14,22,875 according to the 1941 census. The income for the financial year 1945-1946 was Rs. 3,74,68,700 and the expenditure Rs. 3,72,94,700. Budget estimates for the current year are receipts Rs. 4,19,00,000 and expenditure Rs. 4,17,00,000.

Nearly a third of the State is covered with dense forests in which teak, ebony, rose-wood and other valuable trees abound. The forests of the State are among its greatest assets. Rice forms the staple of cultivation. Cocoanuts are largely

raised in the sandy tracts and their products are among the chief exports of the State.

The State is equally well advanced in industry. There are 110 factories. These include 20 rice mills, 11 oil mills, 35 tile factories, 2 saw mills, 3 coir factories, one spinning and weaving mill, one spinning mill, one plywood factory, 2 engineering works, etc. Cottage industries include manufacture of furniture, coir goods, bell-metal wares, screw-pine and bamboo mats, agricultural implements, leather goods, handloom products, etc. Cochin has a magnificent harbour and is expected to develop into one of the major ports of India.

In point of education Cochin occupies a front rank among Indian States and Provinces. Primary education is free. There are 719 educational institutions including 9 first grade colleges and a Training College, with a total strength of 2,29,800 (1,29,391 boys and 1,00,409 girls). Apart from libraries attached to schools in urban areas there are 217 rural libraries. The State also maintains 57 medical institutions, (allopathic) and 91 ayurvedic institutions.

ADMINISTRATION

The Government is carried on by the Maharaja through a Council of Ministers responsible to the Legislature elected on a wide franchise. Virtually full responsible government has been granted to the people. Legislation rests with the legislature but without prejudice to the right of the Maharaja to make laws. At the head of the judicial administration of the State is the High Court.

Local administration is carried on by 6 municipalities and 87 panchayats in the villages.

Prime Minister : RAO BAHADUR T. K. NAYAR; *Ministers* : PARAMBI LONAPPAN, B.A., B.L.; K. BALAKRISHNA MENON, B.A., LL.B.

COOCH BEHAR STATE in West Bengal is bounded by the Districts of Jalpaiguri, Goalpara and Rangpur. The area of the State is 1,318.35 square miles, its population 6,39,898 and its revenue about rupees one crore. The State has acceded to the Dominion of India.

HON. LT.-COLONEL HIS HIGHNESS MAHARAJA SIR JAGADDIPENDRA NARAYAN BHUP BAHADUR, K.C.I.E., the present Ruler of Cooch Behar, was born on December 15, 1915. He succeeded to the *gadi* on December 20, 1922, and was invested with full ruling powers on April 6, 1936. The Ruler is entitled to a salute of 13 guns. His Highness was educated at Harrow and Trinity Hall, Cambridge.

Her Highness the Maharani Sahiba, daughter of His late Highness the Maharaja Sayajirao Gaekwar of

Baroda, is the mother of the Maharaja. His Highness has a brother, Maharajkumar Indrajitendra Narayan and two sisters Maharajkumaris Gayatri Devi (H.H. Maharani Sahiba of Jaipur) and Menaka Devi (H.H. Maharani Sahiba of Dewas Jr.).

ADMINISTRATION

The administration is assisted by a Legislative Council which is fully representative of the different interests in the State. In view of the general constitutional development in India, His Highness has increased the number of non-official members to provide for a non-official majority.

President, State Council: HIS HIGHNESS THE MAHARAJA BHUP BAHADUR; *Chief Minister:* RAI BAHADUR HIMMAT SINGH K. MAHESWARI; *Household Minister:* MAJOR RAJKUMAR RAJENDRA SINGH, Bar-at-Law; *Public Health and Education Minister* (representing the non-official group of the Legislative Council to which he is responsible): S. C. ROY SINGH SARKER, B.L.; *Finance Minister:* MAULVI ANSARUDDIN AHMAD, B.A.; *Revenue Minister:* M. W. BAZLEY RAHAMAN SARKER, B.L.

JUDICIARY

Chief Justice: RAI SUBODH CHANDRA DUTT BAHADUR, B.L., District and Sessions Judge, Bengal (Retd.); *Puisne Judge:* SRIJUT T. P. MUKHERJEE, M.A., B.L.

DASPALLA STATE is situated in the Eastern States Union. It was founded in the year 1495 A.D. by Sal Bhanj. The Ruling house is descended from the Bhanj family of the Salar dynasty. The emblem of the State is peacock and the sun. The present Ruler is the seventeenth descendant of the dynasty.

RAJA BAHADUR KISHORE CHANDRA DEO BHANJ, the present Ruler of Daspalla State, was born on April 16, 1908. He succeeded to the *gadi* on December 11, 1913 as the Minor Chief. He was invested with full ruling powers on March 3, 1930.

The Raja Bahadur was educated at the Rajkumar College, Raipur, and passed the Diploma examination creditably in 1927. He was attached to the Raipur district for two years as an Honorary Assistant Commissioner and Magistrate for practical training and had the final year of training in the State itself.

He married the only sister of the Ruler of Bamra State on February

6, 1931. The Heir-Apparent Jubraj Purna Chandra Deo Bhanj was born in 1932. The title of 'Raja Bahadur' was conferred on the Ruler in 1941.

The area of the State is 568 sq. miles. The State has acceded to the Dominion of India. The people of the State speak Oriya.

Daspalla is an agricultural territory. The staple food crop is rice which is grown extensively in the State with some subsidiary crops such as pulses, etc. Nearly two-thirds of the area is covered with dense forests which abound in sal, bamboos and other valuable trees.

REFORMS

Various improvements have been effected in different departments of the State since the assumption of administration by the present Ruler. The headquarters have been connected with the Railway station Khurda Road on B. N. Rly. by an all weather road with permanent bridges. Several charitable dispensaries have been opened in the interior. There is a telephone system connecting important places. The town has been provided with electricity.

There has been good progress in education. Free and compulsory primary education has been introduced. Various rights and concessions have been granted to the State subjects.

The Raja Bahadur is anxious to remain in constant touch with his subjects rich and poor with a view to hearing their grievances personally and granting redress. He places the prosperity of his people above everything else.

DATIA STATE is one of the states forming the Bundelkhand group. The Rulers are Bundela Rajputs of the Orchha House. The territory was granted by the Chief of Orchha to his son Bhagwan Rao in 1626. This was extended by conquest, and by grants from the Delhi Emperors. The capital of the State is Datia.

LT.-COLONEL HIS HIGHNESS MAHARAJA LOKENDRA SIR GOVINDSINGH JU DEO BAHADUR, G.C.I.E., K.C.S.I., the present Ruler of Datia State, was born in 1886. He ascended the *gadi* on August 5, 1907.

His Highness is a Patron of St. John Ambulance Association, Vice-Patron of National Horse Breeding and Show Society, Vice-President of Red Cross Society and All India Baby Week Society, and Vice-Patron, Girl Guide Association, Indian Empire. He is a member of the

Cricket Club of India, besides being a member of several societies, associations and clubs.

HOSPITALS & SCHOOLS

The Maharaja contributed several lakhs to the war effort during the 1st world war. He presented a statue of Lord Reading to the Imperial Capital, Delhi. Several beautiful buildings of public utility, like the Lord Hardinge Hospital, Maharani Mohan Kunwar Female Hospital, Maharajkumari Rup-kunwar Dispensary, Lord Reading High School, Lady Willingdon Girls' School and Town Hall, have been constructed in his own capital town.

His Highness celebrated his Silver Jubilee in 1933. He has shot big game in South-East Africa and also in India.

The area of the State is 912 square miles. Its population is 1,74,072 and it has a revenue of about Rs. 20,00,000. The state has acceded to the Dominion of India.

ADMINISTRATION

The administration of the State is conducted with the assistance of an Executive Council of which His Highness the Maharaja Sahib is the President. Besides the President, the Council consists of the Dewan, Home Member, Army Member, Judicial Member and General Member. A new constitution for the State is under preparation.

Dewan: RAO KRISHNAPAL SINGH.

DEWAS SENIOR STATE, excluding the isolated pargana of Bagod, lies entirely on the Malwa plateau in Central India. Its territories, which are intermixed with the possessions of other Central India States especially with those of Scindia and Holkar, are situated roughly between N latitude 22° and 24° and E longitude 75° and 77°.

HIS HIGHNESS MAHARAJA KRISHNAJI RAO PUAR, SENASAPTA-SAHASRI, the present Ruler, was born on May 12, 1932. He succeeded to the *gadi* on March 23, 1947. His Highness is being educated at K. E. G. V. High School, Dewas Senior, and appeared for the high school examination of the Ajmer Board in March 1948.

The area of the State is 449.50 sq. miles, its population 87,479 and its revenue about Rs. 15 lacs. The Ruler is entitled to a salute of 15 guns. The State has acceded to the Dominion of India.

INDUSTRIES

The Shri Vikram Sugar Mills Ltd., Alote, which forms the major industry in the State, is under construction. There are also ginning factories and flour mills, a starch factory, and Electric Power houses. Hosiery industry is conducted on a small scale. The State is predominantly agricultural and about 80 per cent of the population is employed in agriculture.

ADMINISTRATION

The Ruler is a minor and the State is at present under minority administration. Her Highness Maharani Pramila Raje Chhatrapati of Kolhapur, the mother of His Highness, is the Regent of the State. Her Highness carries on the administration with the aid and advice of an Executive Council. Responsible Government has been introduced in the State under the Dewas State Senior Branch Constitution Act of 1947. There is a Lok Pratinidhi Sabha functioning with an elected majority. The Sabha has nominated three of its members to the Executive Council and they command a majority in the Council.

Executive Council:—Dewan and President: RAO BAHADUR RAJ-MANTRAPRAVIN SARDAR K. P. NAIDU; *Home Minister:* RAJ-MANTRA PRAVIN MAJOR SARDAR SHANKARRAO A. PAWAR, GAMBHIR RAO, Jahagirdar of Khatamba and Amarpura; *Education and Health Minister:* V. K. BIDWAI, B.A., LL.B.; *Trade and Commerce Minister:* BHIMSINGH RAGHUNATH-SINGH CHOUDHURY, B.A., LL.B.; *Local Self-Government Minister:* MAJOR SARDAR THAKORE GIRIRAJ-SINGH, Isthampuradar of Jawasia.

DEWAS STATE (Jr.) is situated in Central India. The founders of the Senior and Junior Branches of the Dewas State were two brothers of the Puar (Parmar) Rajput tribe who came to Malwa about 1730 A.D.

HIS HIGHNESS MAHARAJA SHRI-MANT YASWANTRAO BHAUSAHEB PAWAR, the present Ruler of Dewas State (Jr.), was born in March 1905. He succeeded to the *gadi* on December 2, 1943.

He attended Law terms at the Inner Temple, London and underwent a course of military training at Indore. He received administrative training in Revenue and Settlement Departments at Gwalior and acquired practical experience in matters of administration during the regime of his late father. In 1938, when, his father went to Europe, His Highness conducted the administration. Many beneficent reforms were introduced at his instance, notable among them being concerned with Harijan uplift. He is a keen sportsman and a good shikari. He has visited Europe several times.

The area of the State is 422.53 sq. miles. It has a revenue

of Rs. 20 lakhs. The Ruler is entitled to a salute of 15 guns. The State has acceded to the Dominion of India.

Industrially the State has made progress. The soap factory, biscuit factory, cotton spinning mills, flour and sugar mills, engineering works, a power house and the handloom industry of Sarangpur are all worthy of mention.

ADMINISTRATION

In pursuance of the long established traditions of the State to associate its people with the administration, a further step towards self-government was taken on the recommendation of a non-official committee appointed for the purpose and the Government of Dewas Junior Act was promulgated during the year under which a Lok Sabha, consisting of 38 members, of whom 31 are elected and 3 officials and 4 non-officials nominated, has been inaugurated.

His Highness is assisted by an Executive Council, whose duty and powers are defined by the Executive Government Act, 1937. There is a Public Service Recruitment Board for State services. Members in charge of the departments are advised by non-official advisory committees. The Debt Conciliation Board has given great relief to the cultivators.

STATE COUNCIL

Dewan and President (Political, Law and Police): MUNTAZIM-I-KHAS BAHADUR M. B. REGE, B.A., LL.B.; *Vice-President and Member for Revenue, Commerce and Industries:* SARDAR T. S. PAWAR, B.A., LL.B.; *Member for Food:* SARDAR G. S. GANDHYE, B.A., LL.B.; *Bar-at-Law; Member for Finance:* R. V. RAIRIKAR, B.A.; *Member for Education, Health and Labour:* R. B. DUBE, M.A., J.D.; *Member for P. W. D. and Local Self Government:* BIRDICHANDJI SHRIMAL.

DHAR STATE in the Malwa group in Central India, takes its name from the old city of Dhar, long famous as the capital of the Parmar Rajputs, who ruled over Malwa from the 9th to the 13th century. The present Rulers of Dhar, Puar Marathas, claim descent from the Parmar Rajputs. In the middle of 18th century the Ruler of Dhar, Anand Rao, was one of the leading chiefs of Central India.

The famous and ancient hill-fort of Mandu, the capital of several ancient and mediæval kingdoms, with its beautiful mausoleums, tombs, palaces, high hills and deep valleys, is situated at a distance 24 miles from the city of Dhar.

HON. LIEUT.-COLONEL HIS HIGHNESS MAHARAJA ANAND RAO PUAR SAHEB BAHADUR,

the present Ruler of Dhar State was born on November 24, 1920. He succeeded to the *gadi* by adoption on August 1, 1926,

His Highness was educated in Daly College, Indore. He visited England twice in 1937 and 1938. He was invested with full ruling powers on March 16, 1940.

The area of the State is 1800.24 sq. miles. It has a population of 253,258 according to the 1941 census. The average revenue is Rs. 30,00,000. The Ruler is entitled to a salute of 15 guns. The State has acceded to the Dominion of India.

ADMINISTRATION

The administration of the State is carried on by His Highness the Maharaja Sahib Bahadur assisted by a State Council consisting of the Dewan and two members.

STATE COUNCIL

Dewan and President of the Council: DEWAN BAHADUR N. R. CHANDORKAR.

Judicial Member: N. S. BAPAT, B.A., L.T., LL.B.

Revenue Member: RAO SAHIB N. V. JOHSI, B.A.

Assistant to the Dewan in the Finance Branch: R. M. PURANIK, M.A., LL.B.

Huzur and Council Secretary: R. M. PURANIK, M.A., LL.B.

DHARAMPUR STATE is situated in Gujerat. The Ruler who is a Sisodia Rajput belongs to the solar race. The capital of the state is Dharampur.

HIS HIGHNESS MAHARANA SHRI VIJAYADEVI, RANA SAHEB of Dharampur, was born in 1884. He was educated at the Rajkumar College, Rajkot. He married a daughter of the Maharaja of Rajpipla in 1905 and after her death he married again in 1907 a daughter of K. S. Samantsinhji of Palitana. The Maharaja lost his second wife too in January 1939. The heir to the throne is Maharaj Kumar Shri Narhar Devji who is a graduate of Bombay and Cambridge. The Maharana ascended the *gadi* in 1921, and twenty-five years later in 1946 his subjects celebrated the silver jubilee of his reign with great pomp and eclat.

His Highness' recreations are shooting, music and travelling. His Highness has travelled widely in Europe, America and the Far East and has given the benefit of

the travels to his people in the shape of many reforms calculated to promote their social, educational and material welfare.

The area of Dharampur is 704 sq. miles and the population 123,336. The revenue of the State is about Rs. 18 lakhs.

PRODUCE AND INDUSTRY

The State is agricultural, the principal crops being paddy, nagli, tur and cereals. Sugar-cane can also be grown. The State possesses rich forests abounding in 70 varieties of timber but the most important kinds of wood that reach the market are teak, rosewood, tanach, seven, haladvan, etc. As for industry there are rice mills, one oil mill, 2 flour mills, and a saw mill. A sugar factory may shortly be opened. And as there are bamboos in abundance the question of starting a paper or pulp factory is also under consideration.

The State is very liberal in its attitude to the khatedars and the cultivators. Ryotwari is in force. The lands are classified and suitably assessed. The State supplies the cultivator with seeds and manure at concession rates. There are many co-operative societies in the State.

Primary and secondary education are free throughout the State. In all there are 40 primary schools, one high school, one Urdu school, one Taluka school and one Music school. There are hospitals for both the sexes with the most up-to-date equipment. All medical treatment is free throughout the state. And among the amenities are a museum and a public library.

ADMINISTRATION

Administration is carried on through a State Council under the guidance and supervision of the Ruler. Local self-government functions through a Municipal Council with an elected majority for the town, and a number of panchayats of which every important village has one.

President: RAO SAHEB D. C. MEHTA, B.A., LL.B. (Rtd. Dy. Political Agent).
Law Member: B. T. SHAH, B.A., LL.B.

Revenue Member: N. D. PARIKH, M.A., LL.B., B.Com., F.R.E.S.

Secretary, State Council: SHANTILAL L. SHAH B.A., LL.B.

Huzur Personal Assistant: BHOGILAL J. MODY.

DHOLPUR is the easternmost State in Rajputana. The ruling family of Dholpur are Jats of the Bamraolia clan, the latter name being derived from Bamraoli near Agra where an ancestor of the family held lands about 1195. The capital of the State is Dholpur.

LT.-COL. HIS HIGHNESS RAIS-UD-DAULA SIPAH DAR-UL-MULK SARAMAD RAJ HAI HIND MAHARAJADHIRAJ SIR SAWAI MAHARAJ RANA SIR UDAI BHAN SINGHJI LOKENDRA BAHADUR DELER JUNG JAI DEO, MAHARAJA RANA of Dholpur, was born on February 12, 1893. He was educated at the Mayo College, Ajmer where he won several prizes and then for a brief period in the Imperial Cadet Corps after which he made an educational tour of Western Europe.

The Maharaja has married the sister of the present Rais of Badrukhan a very old House of the Phulkian States. The Maharaja succeeded to the *gadi* in March 1913. He is entitled to a permanent salute of 15 guns and a personal salute of 17 guns.

The area of Dholpur is 1,221 sq. miles and the population 286,901.

The revenue of the State is about Rs. 19,74,000.

PRODUCE

Dholpur is a grain producing country, not remarkable for any special manufacture. The principal crops are bajra, moth, jowar, cotton, wheat, gram and barley. The hills in the Western parts of the State supply inexhaustible quarries of fine grained and easily worked red sandstone. The chief exports besides sand-stone are cotton, ghee, and in good years wheat, gram, bajra, til and mustard seed and the principal imports include salt, cloth, sugar, rice and tobacco.

The Poona-Agra Road as well as the G.I.P. Railway run through the State. There are three railway stations, one at Dholpur and the other two at Mania and Gher respectively.

The present Ruler takes a deep interest in the welfare of his subjects. The number of schools in the State is 34 including one high school teaching up to the Matric standard. There are three well-equipped charitable hospitals and also a separate hospital for orthodox people where indigenous treatment is given. To help the agriculturist with loans the State has established a number of banks. Many artificial lakes have also been constructed to supply the cultivator with water for irrigation. The town of Dholpur has been electrified and the Ruler who is very keen on public works has put up many buildings such as the Town Hall, Clock Tower, Orphanage, and so on.

ADMINISTRATION

The State is administered by a Council of which the Maharaja is the President.

Financial and Political Secretary: PANDIT KALADHAR TEWARI.

Political and Judicial Secretary: S. RANBIR SINGH, B.A., LL.B.

Revenue Secretary: BABO MADHO NARAIN, B.A.

Personal Secretary: RAI SAHEB M. DIN DAYAL, B.A.

DHRANGADHRA STATE is situated in the north of the Peninsula of Kathiawar between North Lat. $23^{\circ}13'$ and $22^{\circ}33'$ and East Long. 71° and $71^{\circ}48'$. The capital Dhrangadhra is 75 miles west of Ahmedabad.

HIS HIGHNESS JHALADHIP MAHARAJADHIRAJ MAHARAJA SHRI MAYURDHAWAJ SANJIT, the present Ruler was born on March 3, 1923. He was educated first at Dhrangadhra and then at the Heath Mount School and Haileybury College, England. In 1940 he returned to India to join the St. Joseph Academy at Dehra Dun where he passed the School Certificate Examination in the first grade with distinction. He married Maharaj Kumari Shri Brijraj Kumari, a daughter of His late Highness the Maharaja Saheb of Jodhpur on March 3, 1943. The Heir-Apparent Namdar Yuvaraj Maharaj Kumar Saheb Shri Shatruijit Deo was born on March 22, 1944. His Highness succeeded to the throne on February 4, 1942, and assumed the reins of government on October 8, 1943.

The area of the State is 1,167 sq. miles, and the population 94,417. The revenue of the State is Rs. 35,00,000.

Cotton, jawar, bajri and wheat are the main agricultural products. The crops are irrigated by water drawn from wells of which there are as many as 4,162. The State helps the cultivator with loans for sinking wells. It has also built a number of dams at Sitapur, Ratawa, Baisagadh and Kumarkhan Vanta.

INDUSTRIES

The State has been very active in industry too. Salt and magnesium chloride are produced in the State. The State has also established a company, called the Dhrangadhra Chemical Works, Ltd. for the large-scale manufacture of soda ash, caustic soda, and soda bicarb. There is also another company, Mayurdhawaj Magnesia Works, Ltd., for manufacturing magnesia. An article for which Dhrangadhra is justly noted is the fine building stone which occurs at different places in the State.

The State owns the 57 miles of the railway between Wadhwan and Halvad, and another 18 miles between Dhrangadhra and Kuda. There is bus service between Dhrangadhra and Halvad via Kondh.

Primary education is compulsory in the State; so is physical education for boys. There are 64 educational institutions including a school for the blind and a co-educational primary school. Adult education is not overlooked. Free medical help is liberally provided.

A major item in the post-war reconstruction programme is the building of a dam at Bhambhan at a cost of Rs. 30,00,000 which will bring about 75,000 acres of land under cultivation.

Administrative changes were introduced in less than a year after the Maharaja ascended the *gadi*. Administration is conducted by a State Council appointed by His Highness. The members are: *President*: HIS HIGHNESS THE MAHARAJA; *Deewan and Vice-President*: G. R. Raddi, M.A., (London); *Education and General Member*: W. G. SUBHEDAR, B.Sc., LL.B.; *Revenue and Supplies Member*: M. V. ARVIND, B.A., LL.B.

GONDAL STATE in Kathiawar lies between North Lat. $21^{\circ}42'$ and $22^{\circ}8'$ and East Long. $70^{\circ}3'$ and $71^{\circ}7'$. The Chief of Gondal is a Rajput of the Jadeja stock with the title of Maharaja Thakore Saheb. He is entitled to a hereditary salute of 11 guns.

HIS HIGHNESS SHRI BHOJRAJJI MAHARAJA THAKORE SAHEB of Gondal was born on January 8, 1883. He was educated at Eton and Balliol College, Oxford.

His Highness ascended the *gadi* on March 9, 1944, when he announced donations worth Rs. 60,00,000 for various works of public utility. This amount has since been increased to Rs. 1,00,00,000 (one crore).

His Highness married Rajkunverba, a daughter of Rana Shri Banesinhji of Vana on January 25, 1905. Maharani Shri Rajkunverba, Her Highness of Gondal, was born on November 7, 1890,

and was educated privately. The Rani Saheba is well versed in Gujarati, Canarese and English, and takes a keen interest in the education of girls, especially Rajput girls. She has very advanced views on social questions. She has, for instance, discarded the purdah, and moves about freely among her subjects.

The Maharaja and the Maharani Saheba have two sons and five daughters. The Heir-Apparent to the throne of Gondal, Yuvaraj Shri Vikramsinhji was born on October 13, 1914. He was educated at Bangalore. He married Nayankunverba Saheba, sister of the Raja Diraj of Achrol in 1937. Among his recreations are cricket and tennis in both of which he has achieved a certain degree of proficiency. The Yuvaraj has two sons and two daughters.

The area of the State of Gondal is 1,024 sq. miles and the population 244,514. The revenue is about Rs. 60,00,000.

DEVELOPMENT

The founder of the State was Kumboji I who had a modest estate of 20 villages. Kumboji II, fourth of the line, widened the territory to its present size by conquest. But the man who was chiefly responsible for bringing the State to its pre-eminent position in Kathiawar was Maharaja Bhagvatsinhji who worked with unflagging industry throughout his life for the welfare of his subjects. He reformed the administration,

developed the resources of the State and in general exerted himself so powerfully on behalf of the people that today though the State income has increased ten-fold, the expenditure has increased only three times. Gondal is noteworthy in at least two respects. It is free from rates, taxes, customs, octroi and export duties. It has been a pioneer in the development of railways in Kathiawar.

Maharani Shri Rajkunverba Saheba

The Royal Family of Gondal has great faith in education. It is the only State among the States of Western India where female education is compulsory. The Maharani Saheba, for instance, has played a special part in the opening of a very big residential school for Rajput women in Gondal called the Rajkunverba Rajput Kanya Vidyalaya, and has also given the Maharaja Saheb every assistance in his endeavours in the

wider sphere of general education. Expenditure on education has always been on a lavish scale in Gondal. The State has what may be called a complete system of education from elementary schools right up to University training of the most up-to-date type. Care has always been taken to provide these schools with well-qualified staff of both sexes, and the education authorities have insisted that nothing but the latest methods in instruction should be used in all the schools in their care. These schools of a general type are supplemented by Arts Schools and workshops for technical instruction where boys are trained as engineers, mechanics, carpenters, joiners, smiths, painters, surveyors and levellers. But if any one institution must be mentioned of which the State may be specially proud, it is the Grasia College at Gondal which can indeed rank as one of the greatest educational achievements in the whole of Kathiawar.

PRODUCE & INDUSTRY

Gondal has also been remarkable for the vigour with which public works have been put through regardless of cost. Fifty lakhs of rupees have been spent in providing irrigation facilities alone. A great number of wells have been bored, tanks and canals constructed, thus bringing into cultivation enormous new acres of waste land. There is an agricultural association in the State which has done much to foster improved methods of husbandry such as crop-raising, cattle-breeding and the planting of fruit trees.

Yuvraj Shri Vikramsinhji

Expenditure of the nation-building sort has been no less lavish in other directions, as in road-making, for instance, or the construction of telegraph and telephone communications. The main roads, often lined by long avenues of trees, are indeed a model of their kind.

The aged and the sick, too, have shared in this liberality. The Gondal Hospital, for instance, is a model of comfort and convenience with a well-equipped operating room and medical, surgical and lying-in-wards. There is also an asylum where the infirm and the disabled are well provided for, and also encouraged to learn useful crafts.

ADMINISTRATION

The Royal Family is equally alert and enlightened in other directions too. The Yuvraj, for instance, has long been associated with his father in the administra-

tion of the State and has spent most of his time in attending to State affairs. Two questions in which he is specially interested are agriculture and town planning. This keen interest on the part of the Royal Family is inevitably reflected in the outlook of the whole administration which is both efficient and up-to-date. In the sphere of justice and social order, for instance, they have the same legal system as in the Dominion of India, making due allowance for local conditions. In addition, there are special regulations provided for the purpose of meeting local requirements such as irrigation rules, plague regulations, revenue code, abkari rules, and so on.

Acting Dewan : P. B. JOSHI, B.A.

Nyaya Mantri : RAO SAHEB T. P. SAMPAT, B.A., LL.B.

Manager & Engineer-in-Chief, Gondal Railway : M. R. PANDYA, B.Sc. (London), A.M.I.E.

GWALIOR is the premier Mahratta State in Central India. It is divided into two parts, *viz.*, Gwalior Prant and Malwa Prant, which are composed of 11 Districts or 37 Tehsils and 12 Tappas. The extreme points of the Gwalior territory lie between North Lat. 22° 10' and 26° 52'; East Long. 74° 38' and 79° 8'. It is bounded on the north, north-east and north-west by the Chambal River, which separates it from Agra and Etawah districts of the United Provinces and by the States of Dholpur, Karauli and Jaipur in the Rajputana Agency; on the east by the Indian districts of Jalaun and Jhansi in the United Provinces, and Saugor in the Central Provinces; on the south by the States of Bhopal, Khilchipur, Raigarh and Sironj Pargana of Tonk; and on the west by the States of Jhalawar, Tonk and Kotah in the Rajputana group. The State is rich in historic associations with much scenic beauty, picturesque cities and virgin forests for the sportsman, with an abundance of big and small game. The name of the State Gwalior, is derived from Gwalior Fort, situated on a hill anciently known as Gopadri or Gopajini, the Shepherd Hill. The House of Scindia traces its descent to a family of which one branch held the hereditary post of patel in a village near Satara. The Gwalior House was founded

by Ranoji Scindia who held the military rank of Chatrapathi Shahu Maharaj. The capital of the State is Gwalior. The languages spoken in the State are Malwi, Mundali, Marathi, Hindi, Urdu, Bundelkhandi and Marwari.

LIEUT. GENERAL HIS HIGHNESS MAHARAJA, MUKHTAR-UL-MULK, AZIM-UL-IQTIDAR, RAFI-USH-SHAN, WALA SHIKOH, MOHATASHAM-I-DAURAN UMDAT-UL-UMRA, MAHARAJADHIRAJ HISAM-US-SALTANAT, SIR JIWAJI RAO SCINDIA, ALIJAH BAHADUR, G.C.S.I. (1946), G.C.I.E. (1941), MALIK-I-MUAZZAM-I-RAFI-UD-DARJA-I-INGLISTAN, the present Maharaja of Gwalior, was born on June 26, 1916, son of His late Highness Maharaja Sir Madhav Rao Scindia and Her late Highness the Maharani Gajraraja Scindia. He ascended the *gadi* on September

27, 1925 and assumed full ruling powers on November 2, 1936.

His Highness was educated privately under the guardianship of his mother, passed matriculation examination in second division and attended Victoria College, Gwalior. He received settlement and revenue training at Lyallpur (Punjab), administrative training in Bombay and Bangalore and military training at Poona. He was appointed 'Associate Knight' of the Venerable Order of St. John of Jerusalem in June 1947. In November 1937, he was elected Vice-President of the East India Association, London. He is interested in motoring, big game shooting, riding, tennis, polo and reading.

The area of the State is 26,367 sq. miles, its population 4,006,159 and its estimated gross revenue for 1946-47, Rs. 385.35 lakhs. The Ruler is entitled to a salute of 21 guns. The State has acceded to the Dominion of India.

His Highness the Maharaja Scindia has, in consonance with the wishes of the people of Gwalior, agreed to join the Gwalior-Indore-Malwa Union, which is the biggest of States Unions in the country. The Union has an area of 46,273 sq. miles, a population of 72 lakhs and revenue of about 8 crores. According to the covenant signed by 20 States of Central India, His Highness the Maharaja Scindia of Gwalior has been appointed the Rajpramukh of the Union for life and His Highness Maharaja Yeshwant Rao of Indore the Senior Upraj-Pramukh for life. Recently at a special session, the Gwalior Legislature has elected its quota of 40 members from Gwalior for inclusion in the Interim Legislature of the Madhya Bharat Union. The Union was inaugurated by Pandit Nehru, Prime Minister of India at Gwalior on May 15, 1948.

STATE FORCES

The State Army consisting of Cavalry, Infantry, and Artillery Units, is well organised and is considered to be the best among the Indian State Forces. The State maintains its own postal system and a light railway known as the Scindia State Railway.

EDUCATION

Educationally, the State is much advanced. There are three Degree Colleges—two at Gwalior, the capital, including one for women, and one at Ujjain; two Intermediate Colleges, and High Schools in practically all the districts. There are a few technical schools imparting education in arts and crafts, a public school on the Gwalior Fort which is run on the English public school lines, and a Montessori School for small children. An up-to-date Medical College, the Gajra Medical College, the only one in Central India and affiliated to the Agra University, commenced functioning from August 1946. Its foundation stone was laid by H. E. Lord Wavell in November 1945.

POLITICAL REFORMS

In June 1939 important political reforms were announced, which were supplemented by His Highness' proclamation of September 1941. The strength of the Praja Sabha was raised to 90, of whom 55 are elected representatives, thus increasing the non-official element in the Lower House. The Praja Sabha (Lower House) and the Raj Sabha (Upper House) have power of discussing the constitution and the budget. Inaugurating the first session of these Sabhas in April 1946, His Highness stressed the necessity of raising the standard of living by increasing *per capita* income, bringing about an all round social,

moral and cultural development, extending medical help, nursing, midwifery, health and sanitation to the very doors of the people, wiping out mass illiteracy and fighting chronic malnutrition and insanitation on a wide front. The Maharaja decided that Gwalior should join the Constituent Assembly of India to which four representatives—one nominated and three elected—were sent with a view to lending its full support towards the peace, stability and prosperity of the Indian Union.

As a result of His Highness' proclamation of January 20, 1948, a responsible Interim Government, with nine popular Ministers collectively commanding the confidence of the Legislature, consisting entirely of elected representatives, and two Ministers nominated by His Highness, was set up on 24th January, 1948. Except for External Affairs, Defence, Privy Purse, Palace Civil List which are entrusted to the two nominated Ministers, all other subjects have been placed in charge of popular Ministers. The constitution and composition of the existing Legislature would be revised forthwith so that there is only one chamber called the Praja Sabha consisting of all the elected members of the present Legislature, the Ministers and such members not exceeding fifteen as may be co-opted by the elected members of the existing two Sabhas to represent unrepresented minorities and interests. The new legislative body will continue during the interim period before the coming into operation of a new constitutional structure. The powers of the existing Legislature will be exercisable by the reconstituted Praja Sabha and will be enlarged without delay in so far as it may be necessary or expedient to give effect to this Proclamation and subsequent proclamation and proclamations in

this respect to carry out the Ruler's intentions. The reconstituted Legislature will elect out of its members a President and a Dy. President. A new constitution making body known as the Vidhan Sabha will be brought into being forthwith consisting of 20 members elected by the reconstituted Legislature by the method of proportional representation with single transferable vote and a President elected by the members constituting the body. Excepting the Ruler's Privy Purse and the Palace Civil List, the scope, functions and powers of the committee will have no limitation and its recommendations save in so far as they relate to External Affairs and Defence will be accepted and implemented by the Ruler.

Since the assumption of ruling powers by the present Maharaja, commendable activity has been witnessed in all branches of administration. The construction of the Harsi Reservoir costing about Rs. 1½ crores, the grant of one crore of rupees for rural reconstruction, the establishment of a Degree College for Women and an up-to-date Medical College as also a scheme for construction of a Female Hospital and the creation of a new department of Public Health, are some of the important beneficent measures undertaken during the period. The network of roads has been utilised by motor bus services run by the Gwalior Central India Transport Co., and those places which were unconnected are now being joined with important highways. There is an up-to-date Aerodrome at Maharajpur, 4 miles from the capital.

POST-WAR RECONSTRUCTION

The State is devoting special attention to its post-war schemes of agricultural improvements, betterment of livestock, development of forestry, expansion of

medical relief to villages and diffusion of education in rural areas; besides, such activities as the survey of minerals, metallurgy and industrial resources, construction of roads and buildings, restoration of ex-service personnel to civil life, multiplication of banking facilities, public health, education, etc., have also received due attention. The blue print prepared by the State under the expert advice of Dr. Radhakamal Mukerjee, reputed Indian economist, consists of 128 schemes grouped in 'Special Priority', 'Particular Area' and 'Whole State' schemes to show at a glance the order they claim for their execution. Post-war reconstruction and development claims a handsome provision in the State budget.

For the resettlement of ex-servicemen, employment exchanges are functioning at Gwalior and Ujjain and a Committee has been appointed by the Durbar for the implementation of other schemes in this connection.

The Pilot projects will inaugurate reconstruction of agriculture by concentrating the activities of all the departments in particular groups of 10 to 15 villages in one district of northern division and another in the southern division. The Government have since sanctioned these projects which are being implemented under the aegis of the Revenue Department. Negotiations are also afoot for participation in the Kotah Hydro-Electric Project, which will make about 26,000 kw of electric

energy available to the State. The Post-war Reconstruction Department publish weekly price index numbers which have proved helpful both for agricultural as well as industrial purposes.

ADMINISTRATION

In matters of administration, His Highness is assisted by a Cabinet of Ministers.

Personal Staff: Private Secretary: Lt.-Col. EKNATHRAO PATIL. B.Sc.; *Military Secretary:* Col. S. K. SURVE; *Controller of Household:* Maj. S. V. INDULKAR.

CABINET

LILADHAR JOSHI: *Chief Minister, General Administration, Jagirs Department, Planning, Publicity, Public Relations;* Col. SARDAR MADHAV RAO PHALKE: *Army Minister;* Lt.-Col. H. DERABAD, the premier State in the sub-continent better known as the Dominions of His Exalted Highness the Nizam, is between 15° 10' and 20° 40' N. and 74° 40' and 81° 35' E. It forms a polygonal tract occupying almost the whole of the centre of the Deccan plateau. It is bounded on the north by Berar and the Central Provinces, on the north-west by the Khandesh District of the Bombay Presidency, on the west by the Ahmednagar, Sholapur, Bijapur and Dharwar Districts of Bombay; and on the east by the Wardha and Godavari rivers, and the Kistna District of Madras. The royal dynasty was founded by Asaf Jah, a distinguished General of Aurangzeb of Turkoman descent.

NAWAB MIR OSMAN ALI KHAN
BAHADUR NIZAM-UD-DAULA, NIZAM

AM-UL-MULK, ASAF JAH, the Nizam of Hyderabad and Berar, was born on April 6, 1886. He ascended the gadi on August 29, 1911.

The Nizam was educated privately. He married Dulhan Pasha, the daughter of Nawab Jehangir Jung, a nobleman representing a collateral branch of the Nizam's family, in 1906. Nawab Mir Himayat Ali Khan, Azam Jah Bahadur, Prince of Berar, is the heir to the throne.

The State abounds in objects and places of historical and archaeological importance, the most noteworthy being the towns of Aurangabad and Osmanabad and the caves of Ellora and Ajanta. The forts of Golconda, Gulbarga, Warangal, Raichur, Mudgal, Parenda, and Naldurg are also very famous, not to mention the innumerable temples, mosques and shrines, which lie scattered about the State.

The capital of the State is Hyderabad. It has a population of 728,400 (1941 census). It is the fourth largest city in the sub-continent of India. The city is beautifully situated on the banks of the River Musi with attractive public buildings, broad cement roads, adequate electricity and water-supply, and an efficient bus service run by the State Railway. Among the more interesting sights for visitors to Hyderabad are the Char Minar, and Mecca Masjid.

the fort and tombs of Golconda, the large artificial reservoir—the Osman Sagar and the Himayat Sagar—and the Osmania University.

HEIR-APPARENT

HIS HIGHNESS GENERAL WALASHAN NAWAB MIR HIMAYAT ALI KHAN, AZAM JAH BAHADUR, LL.D. (Osmania and Aligarh Muslim Univ.), Prince of Berar and Heir-Apparent to the Nizam of Hyderabad and Berar, was born on February 22, 1907.

He received his early education under eminent Indian and European scholars. Military training was supervised by the late Major-General Nawab Sir Afsar-ul-Mulk Bahadur. He is a fine shot and a keen all-round sportsman, and excels in polo, tent-pegging, pigsticking and hunting. He has received a thorough training in administrative work, both executive and judicial.

His Highness married Durr-e-Shahvar, the only daughter of H.M.

the Califa Abdul Majida II. Her Highness received the title of Durdana Begum from H.E.H. the Nizam after marriage. She had her education under the care of her father who was himself a great scholar. And besides being well-versed in various languages she is a keen student, an able speaker and an excellent painter. Their Highnesses the Prince and Princess of Berar have travelled extensively in Europe.

His Highness was appointed Commander-in-Chief of the Hyderabad State Forces in 1934 and has associated himself whole-heartedly with measures designed to enhance the efficiency of the Army. He has done much to reorganise the Regular Forces, Irregular Forces, Paigah Troops with a view to keeping the former abreast of modern lines in arms and equipment and to ensure that their training is maintained at the high level demanded by present-day military standards.

STAFF

Nawab Samad Yar Jung Bahadur, *Controller*; Dr. Haider Husain, *Staff Surgeon*; Syed Bashiruddin Ahmed, *Military Secretary*; Major Hamidullah and Maj. Mahmood Ali Beg, *A. D. Cs.*

The area of the State is 1,00,465 sq. miles (Berar 17,767 sq. miles), its population 19,636,157 (Berar 3,441,838) and its estimated revenue for 1947-48 Rs. 2678.10 lakhs. The Ruler is entitled to a salute of 21 guns. The State has entered into a Standstill Agreement with the Government of the Indian Dominion lasting for a period of one year.

PRODUCE AND INDUSTRY

The Government has always evinced a keen interest in the industrial development of the State and any new venture finds a ready response from them. The State has vast natural resources. It is known for instance to be the largest producer in the world of oil-seeds. Cotton also is a staple produce. There are other agricultural resources. All possible commercial and agricultural industries are being developed. The State Bank in Hyderabad has an authorised capital of Rs. 1,50,00,000. Co-operative Credit Societies have also been created which have already proved of great benefit to the agriculturists.

One of the first acts of the Nizam was to have a dam built across the river Musi, on which Hyderabad is situated, so as to mitigate the violence of any floods. At the same time a reservoir of water was created by the construction of the dam, capable of serving as a source of supply for the large population of the city. Thus a generous and healthy supply of drinking water was assured to the population. The first reservoir has been named 'Osman Sagar' after His Exalted Highness and the second on the Isi River is called 'Himayat Sagar' after the Heir-Apparent.

COMMUNICATIONS

The chief means of communication are railways and roads, of which there is a regular network in the State. The railway is owned by the State which also maintains its own paper currency, coinage and postal system. Hyderabad also possesses an army of its own.

EDUCATION

The education of the people has not escaped the vigilant attention of His Exalted Highness' Government. The most notable experiment on a grand scale, which will make the rule of the present Nizam memorable in history, is the institution at Hyderabad of the Osmania University. The new university represents the first attempt of its kind to impart higher instruction through the students' own vernacular. A special feature is the Translation Bureau attached to it, the object of which is permanently to enrich the Urdu language by translating into it numerous standard European works on mathematics, science, history, philosophy and political economy.

Special facilities have been created for educating those classes who have been denied education by custom or prejudice. The education of women too, almost unknown for a long time, has considerably advanced under the regime of the present Nizam.

The University has six Arts Colleges including one for women, and Colleges of Engineering, Medicine, Law and Teaching. It has also an Honours College, a College for Jagirdars and one for physical education. There are also a village industries training centre, a central technical college and an observatory.

The prosperity of his subjects has always been the main concern of the Nizam. He is deeply solicitous of the welfare of the depressed classes and through the unremitting labour of His Government many new schemes for promoting their welfare have been enunciated. The Legislative Assembly recently voted a grant of one crore of rupees to be utilised by the Government for the uplift of the depressed classes. The Nizam has kept up the tradition of the House of Asaf Jah in observing impartiality in matters pertaining to the religion of the different communities of the Dominion.

ADMINISTRATIVE REFORMS

Constitutional reforms of a far-reaching nature were announced in 1946. Under the scheme a new legislative assembly with an elected majority came into being in February 1947. The assembly consists of 132 members of whom 76 are elected. The basis of representation in the Assembly is functional and the members are elected by the method of joint electorates.

The powers and functions of the Assembly have been considerably increased and the franchise qualifications have been extended. In his Instrument of Instructions, the Nizam has enjoined on the Government the duty of importing into the working of the Constitution a spirit of accommodation and responsiveness to the wishes of the Legislature. By a recent Firman the Nizam has set up a new committee consisting of official representatives and non-official elected representatives drawn from the Legislative Assembly to go into the question of further enlarging the powers of the Assembly.

INTERIM CABINET

Prime Minister: Mir Laik Ali. *Deputy Prime Minister:* Pingale Venkatrama Reddy. *Ministers, Finance and Foreign Affairs:* Nawab Moin Nawaz Jung; *Land Revenue:* Nawab Fazal Nawaz Jung; *Law and Justice:* Raj Mohan Lal; *Police and Customs:* Abdul Hameed Khan; *Railways and Communications:* Abdur Rahim; *Planning and Development:* Ikramullah; *Public Works:* Mohammad Abdur Raoof; *Education:* B. S. Venkat Rao; *Local Government and Labour:* Yamin Zuberi; *Medicine and Public Health:* Malkarjan Appa.

ICHALKARANJI is a feudatory Jahagir under Kolhapur State. The Jahagir consists of two talukas, Ichalkaranji having 8 villages and Ajra having 70 villages. Ichalkaranji the headquarters of the Ichalkaranji taluka, is also the principal town of the Jahagir and is 18 miles to the east of Kolhapur and 5½ miles away from Hatkanangale Rly. station situated on the Miraj-Kolhapur branch of the M. S. M. Rly.

SHRIMANT VITHAYAKRAO NARAYANRAO GHORPADE, PANT SACHIV, the present Ruler of Ichalkaranji, was born in 1896. He succeeded to the *gadi* on August 19, 1947 as the nearest heir to the late Jahagirdar Shrimant Narayanrao Babasaheb Ghorpade.

He was educated at the Ichalkaranji and Jamkhandi High Schools and at Fergusson College, Poona. He took his law degree in 1928. He married Shri Sow Satya Bhamabai, daughter of S. J. Kunte of Sangli, retired Police Prosecutor, Poona and Nasik, in 1924, and has two daughters, Shrimant Kumari Pramilitai studying in the matric class & Shrimant Kumari Durgadevi.

The area of the Jahagir is 241 sq. miles, its population 83,000 (1941 census) and the annual revenue about Rs. 5½ lakhs. The Jahagir has acceded to the Dominion of India, through Kolhapur Darbar.

The principal agricultural products are jowar, tur, gram, cotton, tobacco, sugarcane, etc., in Ichalkaranji Taluka and paddy, nagli, sawa, sesamum, jack fruit and cashew nuts in the Ajra taluka. Sugarcane is grown on water lifted from wells by old contrivances called 'mots' drawn by bullocks. It is also grown to some extent on river water lifted by oil engines from the Panchganga river flowing through the Ichalkaranji taluka.

At present lands are irrigated by well water lifted by old contrivances and in some cases by river water lifted by oil engines. An irrigation plant for utilising the Panchganga river water on a large scale is however under construction. It is a part of the power reconstruction programme of the Kolhapur Darbar and when complete would go a long way in increasing the agricultural yield of the whole territory to be brought under the scheme. The chief exports are tobacco, gur, sugarcane, groundnut, cotton and paddy.

There are fine roads in the Ichalkaranji taluka. Every village has been brought within easy communication with the headquarters. A 20-mile long metalled road in the Ajra taluka has brought the majority of villages in that taluka within easy reach of its principal town. There is a railway station in Arag village in Ichalkaranji taluka, on the Miraj-Pandharpur. B. L. Rly. A good motor road runs from Ichalkaranji to Ajra via Kolhapur and Nipani.

Ichalkaranji town is well-known for its sarees and is popularly known as the Manchester of Maharashtra. It has about a hundred saree factories employing nearly six thousand workers. The town has all the modern facilities of good water-supply, electricity, etc. It has a full fledged high school and four banks. Ichalkaranji is also a textile centre having three ginning factories and one pressing factory. Ajra taluka is rich in forests, producing sandalwood, myrabolan, teakwood, etc. It has also good rainfall.

ADMINISTRATION

The administration is conducted by the Jahagirdar with the help of his Karbhari who is also his Chief Revenue Officer and District Magistrate. The Jahagirdar has delegated his judicial powers to an independent Judicial Officer. The Jahagir maintains its own police.

IDAR STATE, popularly known as Nani Marwar, is in Southern Rajputana. It is bounded on the north by the States of Sirohi and Mewar, on the east by Mewar and Dungarpur, and on the south and west by Ahmedabad and territory belonging to the Maharaja of Baroda. It is situated in North Gujarat and is in Political relations with the Western India and Gujarat States Region. The Capital of the State is Himatnagar.

The State enjoys plenary powers and a salute of 15 guns.

The present dynasty of the Rathor clan was founded in Idar by the two brothers Anandsinghji and Raisinghji who came with a few followers from Jodhpur and made an easy conquest and settled at Idar in 1729. Since then the territory of Idar has continued under the sway of the Rathors, though from time to time certain strips of the country were snatched away by the Peshwas.

HIS HIGHNESS MAHARAJADHIRAJ MAHARAJA SHREE HIMATSinghji SAHEB BAHADUR, the present Ruler of Idar, was born on September 2,

1899. He was educated at Mayo College, Ajmer where he had a brilliant academic career. He was at the College in all for five and a half years and won every single class prize from the fifth form to the diploma, five for English and eleven for various other subjects. His record on the playing fields was equally distinguished. He represented the Mayo College against the Aitchison College in tent-pegging and tennis. He captained one or the other of the junior football or cricket teams. He was one of the best polo-players at the College all through. And as a crowning achievement he won the first prize for riding every year without a break.

On leaving College, the Maharaja plunged into the administration of the State working under the close personal supervision of his father the late Highness. The Maharaja went on a tour of India in 1929-30 from which he acquired further practical experience of politics and administration, so that when he ascended the *gadi* on July 11, 1931, he was fully equipped to take over the Government of the State and discharge his duties as Prince and Ruler.

Among the Maharaja's hobbies are hunting, pigsticking, horse-racing, music, painting and photography.

The Maharaja has married Shree Jawahar Kunwar Sahiba, the eldest daughter of the Raja of Khandela in the Jaipur State. The marriage took place in 1908.

HEIR-APPARENT

The Maharaja and the Maharani have two sons. Maharajkumar Shree Daljit Singhji and Amar Singhji. The Maharajkumar Shree Daljit Singhji, the Heir-Apparent, was born on July 10, 1917 and was educated like his father at Mayo College, Ajmer. On leaving College, he was given

a training in the various branches of administration in Nawanagar State. He then accompanied the Jam Saheb to England on the occasion of the Silver Jubilee of the reign of King George V. He returned to India in 1935 after a short tour of the Continent. In 1936, he married a sister of the Jam Saheb.

The Maharajkumar has always taken a keen interest in flying and at the first All-India air rally held at Karachi in 1938 he won the Wakefield Trophy for acrobatics and the Speedoline Trophy for instrument flying. During the Second World War he acted as Honorary Pilot Instructor for sometime at Bombay and Madras. At present he is holding the position of Dewan of the State. His hobbies are flying, shooting, cine-photography and swimming. He is also keenly interested in classical music.

The area of Idar State is 1669 sq. miles and the population 307,798 according to the census of 1941. The revenue of the State including alienated lands is in the neighbourhood of Rs. 60,00,000. The

the remainder consist of Rajputs, Brahmins, Baniyas, Kunbis, Bhils, etc.

AGRICULTURE, FORESTS

The soil is generally fertile and agriculture is the chief source of livelihood for about 80 per cent of the population. In some places the soil is of a light sandy nature, in others it is rich and black. The principal crops are grains, oilseeds and sugar-cane.

The jungle in some parts specially at the bottom of the hills is very thick. The forests are full of herbs, spices, roots, flosses, barks, resins, gums, and much excellent wood. Other forest produce include material for paper pulp (Boswellia, serrata woods), Urenalaba, a fibrous product suitable for rope and sack cloth, and catechu for calico printing.

The water resources of the State are excellent. The five big rivers, namely Sabarmati, Hathmati, Harnav, Meshwa and Vatrak which flow through the State have nearly every Taluka under command for purposes of irrigation. For the last two years the attention of the authorities has been largely concentrated on the development of the water resources with a view to bringing every bit of arable land under cultivation. For this purpose some of the old irrigation tanks are being renovated, a project which when completed is expected to bring an area of 5,000 acres of land under irrigation. The State is also planning ahead and has under consideration three different projects: 1. a storage reservoir and hydro-electric power production on the Sabarmati near Dharoi in conjunction with Bombay and Baroda; 2. a storage reservoir across the Hathmati near Demai; and 3. a storage reservoir across the Vatrak near Magodi. It is estimated that these three projects will together bring an area of one lakh of acres

RURAL UPLIFT

There are other ways too in which the State is trying to promote agriculture. The State has created a Department of Agriculture for giving advice to the agriculturists on modern methods of cultivation. The Department maintains a demonstration farm and distributes improved varieties of seeds. The whole of this activity has been worthwhile as it has produced tangible results in three different directions. The Department has discovered the kind of sugar-cane which suits the soil most so that sugar-cane cultivation has considerably increased. Second, it has found an improved method of gur-making and third, the cotton crop has also improved so that the cotton fetches a much higher price than before.

To help the cultivator maintain his cattle two veterinary surgeons have been appointed in the State whose duty is to give the cultivator advice about proper care and to treat the cattle when they are ill.

The other ways in which the State is helping the agriculturist is by giving him liberal grants to sink new wells and repair old ones. Interest-free loans are also frequently advanced. On this account alone the State is annually spending as much as Rs. 82,000. A unique feature of the village uplift programme is the employment of so-called village guides to tour the countryside and promote the general sanitation and educate the people in habits of health and hygiene.

INDUSTRY

Passing next to mining and industry, we find that the State abounds in valuable minerals such as asbestos, manganese, kaolin, talc magnesite, pipe-clay, silica, mica, feldspar, Selenite-lime-stone, sandstone, granite. The State also possesses extensive quarries of building material.

There are a number of industries in the State. There are, for instance, a Match Factory at Himatnagar, the Glass and Ceramic Industries at Himatnagar, the Sabar Valley Kaolin

and Starch Industries Ltd. at Arsodia, the Eklera China Clay Works at Eklera, three ginning and pressing factories at Himatnagar, Jadar and Bayad, and Oil Mills at Himatnagar and Bayad. The Arsodia China Clay Factory is one of the biggest and most up-to-date concerns of its kind in the whole sub-continent. At Idar wooden lacquered toys are being manufactured by the Kharadies. In some other parts of the State weaving is done on fly shuttles by Vankars. A new distillery plant has just been erected at Idar.

There is also great scope in the State for textiles, pottery, sugar and tanning industries as cotton, China-clay, sugar-cane and hides and skins are available in plenty.

EDUCATION, MEDICAL

Both primary and secondary education are entirely free for dependents of State subjects. There are 158 schools including two High Schools and Middle Schools. Almost every big village is provided with a middle school teaching up to Standard III. In some cases separate schools are provided for girls. There are about 12,000 students in all on the rolls and the amount of money spent every year on scholarships alone is as high as Rs. 21,000. The total amount of money budgeted for education during the current year is Rs. 2,94,195.

Like education, medical relief is given free. There is a well-equipped hospital with a separate maternity ward at Himatnagar, a hospital and maternity home at Idar, and a number of dispensaries scattered throughout the State. There are in all 25 medical institutions including one homeopathic and 2 ayurvedic dispensaries. The total number of patients treated during the current year (1946-47) was 2,75,728 and the total expenditure incurred was Rs. 1,27,446-4-3.

The people are fully associated with the administration in the sphere of local self-government. There are 3 municipal committees, 5 budgeted and 12 non-budgeted sanitation committees and 170 gram-panchayats in the State. These bodies look chiefly after the sanitation of the towns and villages under their charge. All members of the municipal committees except the Presidents are elected, and in the case of the gram-panchayats of the Khalsa villages all members are elected including the Presidents. The State helps the local bodies generously with annual grants amounting to about Rs. 43,000.

INDORE is the premier State in Central India. The State limits extend to 21° 22' and 26° 60' North Latitude and 74° 22' and 78° 51' East Longitude. It is bounded on the north by the Udaipur and Kotah States of Rajputana, on the north-east by Jhalawar, on the east by the States of Gwalior, Dewas, Dhar, Bhopal and Nimar in the Central Provinces, on the south by the Khandesh District of the Bombay Presidency, and on the west by the States of Gwalior and Barwani. The House of Holkar was founded by Malhar Rao Holkar, born in 1693.

MAJ. GENERAL HIS HIGHNESS MAHARAJADHIRAJ RAJ RAJESHWAR SAWAI SHREE YESHWANT RAO HOLKAR BAHADUR, G.C.I.E., LL.D., the present Maharaja of Indore, was born on September 6, 1908. He succeeded to the *gadi* on February 26, 1926 and was invested with full ruling powers on May 9, 1930.

His Highness was educated in England from 1920-23 and again at Christ Church, Oxford from 1926-29. He married a daughter of the Junior Chief of Kagal in 1924. A daughter Princess Usha-devi was born on October 20, 1933. Her Highness Maharani Sanyogita Bai died in July 1937. The Maharaja married again on July 6, 1943. A prince was born on May 18, 1944.

The Maharaja was a delegate to the R.T.C. in 1931. He is interested in tennis, cricket and Shikar.

The area of the State is 9,934.18 sq. miles, its population 15,13,966 and its revenue Rs. 2,68,55,900. The Ruler is entitled to a salute of 21 guns within and 19 guns outside the State. The State has acceded to the Dominion of India.

His Highness attaches great importance to the development of Panchayats. He has ordered that every village in the State should have a village Panchayat. Accordingly 517 panchayats have already been formed and are working. The City Municipal Council in Indore enjoys full autonomy in respect of passing their budget, appointment of their officers and initiation of new taxation.

INDUSTRY AND COMMERCE

Indore occupies a foremost place among the Indian States on account of its enormous development in industry and commerce. The industrial development of the State was initiated as early as 1886 when the first cotton mill was started in Indore as a State-owned

and State-managed concern. The State has been following a steady industrial policy resulting in the establishment of a flourishing textile industry with 7 mills and 1,15,000 spindles and 6,300 looms employing nearly 30,000 workers. The paid-up capital in the Industry is Rs. 1.5 crores with block valued at nearly Rs. 4 crores. The production of cloth has been going up rapidly and is now about 150 lakhs of pounds.

Next in importance after the cotton industry is the Engineering industry of the State. Two re-rolling mills produce a variety of articles such as oil expellers, oil engine parts, sugar-cane crushers etc. The sugar mill at Mahidpur, with a crushing capacity of 350 tons per day was erected entirely in the war period. A large Vanaspati manufacturing concern capable of producing 25 to 40 tons a day is under erection in Indore. Besides these, there are six oil mills, one ice factory, one thymol factory and one glass factory. In all there are 174 large industrial running concerns (49 perennial and 125 seasonal). Since the year 1944 permission has been granted to sixty-four industrial concerns such as a large scientific apparatus manufacturing company, four ice factories and one thymol factory. The taxation on industries has been very low being 15 per cent on net profits above Rs. 50,000 and after deduction of depreciation. By way of encouragement to the industrial enterprise, the State grants concessions including acquisition of land on easy terms, supply of water from river free of cost and

exemption from payment of customs duty. Under sanctioned rules, the Stores Purchase Committee of the State can purchase products manufactured within the State even if they are priced 10 per cent higher than similar products from outside.

Neither have Cottage Industries been overlooked. Almost 150 years ago the famous Devi Shree Ahilya-bai took the trouble of attracting expert weavers from other parts of India and made them settle down in Maheshwar, then the capital of the State. The Maheshwar saries command wide market all over India. Among other cottage industries the most important ones are the Hosiery industry at Indore, blanket weaving factory at Manasa, cloth printing industry of Gotampura.

The State has made remarkable progress in its trade as well. There has been no tax on profits from business. This, coupled with the central position of Indore with a network of roads connecting distant parts of Central India, has led to the growth of a big market in a variety of articles including hardware, medicines, paper, spices, etc. The stock exchange at Indore and the bullion market are also well known as Sarafa.

MEDICAL SERVICE

With a view to carrying medical relief to all parts of the State, the policy of opening 16 dispensaries every year for a period of five years was sanctioned and accordingly 64 dispensaries have already been established. The idea is to

leave no place with a population of 1,000 or more without a dispensary. The central hospital of the State containing 300 beds and equipped with the latest instruments and apparatus is proposed to be rebuilt with 750 beds at a cost of nearly Rs. 50 lakhs. This will provide clinical training for the students of the Medical College to be started in Indore based on the existing medical school. Liberal contributions have been made to the college by the Holkar Government. The foundation stone for a large T. B. clinic and a large maternity and child welfare home was laid by Her Highness in 1944. This building as also a sanatorium is under construction. Construction of maternity wards have also been sanctioned in every place with a population of 5,000 or more.

EDUCATION

The State has 575 schools and 3 colleges providing education for 53,925 boys and girls. An agricultural school has been added to the Institute of Plant Industry, hitherto purely a research institution. The Holkar College provides education upto the M.Sc. stage and also degree course in Commerce. An Arts School and a School of Music, Sanskrit Mahavidyalaya and many other such institutions are also maintained by the Education Department.

His Highness is known for his advanced views on social matters. The Harijan Entry proclamation of 1938 was hailed as a charter of rights. The Harijan Uplift

Committee, has been functioning for a long time and has done good work for the uplift of the community. As an earnest of his concern for these poor people, His Highness the Maharaja gave out of his privy purse a sum of nearly Rs. 2 lakhs, out of which as many as 284 Sanitary tenements have been constructed for the municipal sweepers. Among the notable social enactments by His Highness the Maharaja may be mentioned the Indore Marriage Registration and Marriage Restraint Act, which had been strictly enforced, the Indore Nukta Act and the Marriage Expenses Controlling Act which prevents wasteful expenditure on marriages and funeral ceremonies; the Act for prevention of marriage between old men and young girls, Divorce Act and Civil Marriage Act, etc.

LABOUR

The welfare of industrial labour has also engaged the attention of His Highness and his Government. Indore, with the exception of Ahmedabad, is the only centre in India where complete standardisation of wages of almost all the textile workers has been effected and is working. Adjudication authority recently appointed is engaged in the wide revision of the Standardisation scheme in order to bring it up-to-date in the light of the existing circumstances. On the initiative of the Government of Indore, mill-owners have been persuaded to set apart a sum of Rs. 3.5 lakhs for the construction of tenements for textile labour. It is hoped that about 2,500

houses will go up in the near future. The Government will acquire the necessary land and develop it and provide the necessary services at its own cost. The effect of this sympathetic labour policy has been the comparative immunity from disturbances that has been enjoyed by Indore unlike several other centres in India.

POST-WAR RECONSTRUCTION

Indore has its own post-war plans like the Chambal Hydro-Electric Scheme designed to cost Rs. 6 crores and the development of Indore Electric Supply into a big Thermal Station at a cost of Rs. 121 lakhs. A broad gauge railway scheme from Bhusawal to Tarana *via* Indore and Dewas is being surveyed. Besides, there are a number of schemes on which the Industries Department is actively engaged. Similar schemes of a far-reaching nature have also been prepared by various policy committees and are under active consideration. These include the introduction of free compulsory primary education, construction of several more hospitals and the road programme involving a capital expenditure of Rs. 4 crores. The Indore City Water Supply Scheme has been completed at a cost of nearly Rs. 70 lakhs and the Underground Drainage Scheme estimated to cost nearly Rs. 60 lakhs is being worked up.

ADMINISTRATION

Association of the people with the Government has long been a

guiding principle in the State administration. A small legislative committee created in 1920 was expanded into a legislative council in 1936. Under the new scheme of reforms, the Council was expanded and given a two third majority of non-officials from the year 1944. Special representation was provided for Muslims women, Harijans and others. The council consists of 53 members of whom 37 are elected and the rest nominated, 8 being officials and the rest non-officials. The Council enjoys powers of interpellation in all matters concerning administration and of passing resolutions on the budget, barring a few reservation like treaties, the personal affairs of the Rulers, Army, etc.

Recently His Highness has announced reforms of a far-reaching character. An interim cabinet has been set up pending the introduction of a permanent constitution after full consideration of the recommendations of the Constitution Making Committee which was set up by the Indore Legislative Council. The Interim Cabinet consists of 8 Ministers nominated by the Prajamandal. The Ministry will be responsible to the local legislature except for certain reserved subjects.

INTERIM CABINET

Prime Minister : V. S. Khode
Ministers : Vajjanath Mahodaya
Mishrilal Gangwal, K. A. Chitale
Manoharsingh Mehta; V. S. Sarwate
V. V. Dravid, Nandlal Joshi.

JAMBUGHODA STATE is in the Gujarat States Group. It is bounded on the north by the Devghad Baria State and Panchmahals, on the west by the Panchmahals District and Chhota Udepur State territories, on the east by the Chhota Udaipur State.

The State enjoys full dynastic jurisdictional powers, and has individually acceded to the Dominion of India. The State is a member of the organisation of the full powered States of Gujarat and has entered into a Standstill Agreement with the Government of India.

MAHERBAN SHRIMANT RANA SAHEB SHRI RANJITSINHJI GAMBHIRSINHJI, C.I.E., the present Ruler of the State, was born on January 4, 1892, and was installed on the *gadi* on February 2, 1918. The Ruler was educated at the Rajkumar College, Rajkot. The ruling family of Jambughoda belongs to the hereditary clan of Parmar

Rajputs and are direct descendants of the Mahakumars of the famous King Vikramaditya of Malwa.

The Rana Sahab had the honour of presenting the case of 104 small States of Gujarat before the Indian States Enquiry Committee (Financial) at Bombay in February 1932. A new constitution for the State based on responsible government is now under preparation.

On August 12, 1922 was born an Heir-Apparent Maharajkumar Shri Digvijaysinhji, who took his B.A. degree from Bombay. The Maharajkumar was educated in his very early days in Hartshorne Anglo-Vernacular school at Jambughoda and at the Boys' High School, Panchgani. He passed his Senior Cambridge examination in 1939. He eventually joined the college at Baroda and took his B.A. degree in 1944 with History and Economics as special subjects. He married the eldest daughter of the Heir-Apparent of Datia and by this union he has one son and one daughter.

The Maharajkumar is a keen Shikari and has bagged 28 panthers and 2 tigers. He is receiving judicial and administrative training in his own State. He is a member of the Imperial Delhi Gymkhana Club. On the occasion of the Silver Jubilee of His Majesty the late King George the Fifth, he was awarded the Silver Jubilee Medal and the Coronation Medal.

The State covers an area of 143 square miles and has a population of 14,380. The average annual income of the State is about

Rs. 5,50,000. The State has acceded to the Dominion of India.

PRODUCE

The main occupation of the population is agriculture. All food crops and commercial crops such as long staple cotton, sugarcane, groundnuts, oilseeds, etc. are being grown. Owing to the propaganda of the State Agricultural Department people are now taking to improved methods of agriculture. In the post-war development plans, mechanisation of agriculture is contemplated. The State has been planning devices to improve the lot of the agriculturists and educate them in the use of modern implements.

IRRIGATION

In the absence of big rivers in the State, the agriculturists have to depend on well water for irrigating their crops. During the last three years several katcha and pacca wells have been sunk for irrigation purposes.

COMMERCE AND INDUSTRY

For the development of Commerce and Industry, a public limited company, The Jambughoda Industries Ltd. has been formed. This concern runs a saw mill, a soap and phenile making department and a rice and flour mill.

MINERALS

There are appreciable mineral resources in the State, and two big mineral companies from Bombay have shown great interest in Manganeese, Galena, Tin and Copper.

COMMUNICATIONS

The State maintains its roads in good condition and these are linked with the Provincial High Roads. In the interior of the State there are feeder roads which connect most of the villages of the State with the main metal roads in the State.

POST-WAR PLANS

This plan is predominantly a peasant's plan. Sixty per cent of the total expenditure is designed to benefit the farmers. The projects include land development, irrigation, livestock improvement, prevention of soil erosion and the building of bunds. Introduction of collective farms is also contemplated.

The plan also envisages development of communications, expansion and improvement of educational and medical facilities. Development of the industrial side of the State is also being planned. This involves establishment of cottage industries as well as large-scale industries. Development of mining and measures to implement the plan will be undertaken as soon as conditions permit.

The Rana Saheb has effected several improvements in education, medical relief, agriculture, communications, etc. A thorough overhauling of the administrative machinery of the State, and the separation of the Judiciary and executive, as well as the construction of buildings for hospitals, schools, library, irrigation wells, tanks, telephone lines, guest houses, etc., are among the achievements of a very progressive ruler.

JAMMU AND KASHMIR STATE: The territory known generally as the Jammu and Kashmir State, lies between 32° and 37° N. and 73° and 80° E. It is an almost entirely mountainous region with a strip of level land along the W. and E. Punjab border, and its mountains valleys and lakes comprise some of the grandest scenery in the world.

The area of the State is 84,471 square miles. The total population is 4,021,616, and the average annual revenue about Rs. 500 lakhs.

HISTORY.—In 1586 Kashmir was annexed to the Moghul Empire by Akbar. In the reign of Sikandar, who was a contemporary of Tamerlane, a large number of Hindus was converted to Islam. Jehangir did much to beautify the Valley, but after Aurangzeb there was a period of disorder and decay, and by the middle of the eighteenth century the Suba or Governor of Kashmir had become practically independent of Delhi. Thereafter the country remained under Afghan rule until 1819 when it was conquered by Maharaja Ranjit Singh and passed to Sikhs.

The early history of the State as at present constituted is that of Maharaja Shri Gulab Singhji, a scion of the old Ruling Family of Jammu, who rose to eminence in the service of Maharaja Ranjit Singh of Lahore and was, in recognition of his distinguished services made Raja of Jammu in 1820. He held aloof from the war between the British and the Sikhs, only appearing as mediator after the battle of Sobraon (1846), when the British made over to him the valley of Kashmir and certain other areas in return for his services in re-establishing peace.

The present Maharaja is Shri Maharaja Hari Singhji Bahadur.

INDUSTRY

The population is predominantly agricultural and pastoral. The principal food crops are rice, maize and wheat. Oilseed is also an important crop. Barley, cotton, saffron, tobacco, beans, walnuts, almonds and hops are also grown. Pears and apples, the principal fruits of the Valley, are exported in large quantities. The State forests are extensive and valuable. The principal species of timber trees are deodar, blue pine and fir.

A survey of the mineral resources of the State revealed that the most noteworthy of the minerals expected to be found were bauxite, coal, Fuller's earth, kaoline, slate, zinc, copper and talc. Gold is found in Baltistan and Gilgit, sapphires in Paddar, aquamarines in Skardu and lead in Uri. The silk flature in Srinagar is the largest of its kind in the world. Woollen cloth, shawls, carpets, papier maché and wood carving of the State are world famous.

Recently attention has been directed towards the development of tourist traffic. Tourist Bureaux have been opened at a number of places including Rawalpindi and Suchetgarh, to give the necessary information regarding the State to the intending visitors.

Great efforts have been and are being made towards the improvement of roads for wheeled traffic in the State. The Jhelum Valley road (196 miles) which links the Kashmir Valley with West Punjab and the North-Western Frontier Province is considered to be one of the finest motorable mountain roads in the world.

The Banihal Cart Road, about 200 miles long, joins Kashmir with the North-Western Railway system at Jammu-Tawi and is also a fine motorable road.

Roads for pack animals lead from Srinagar, the summer capital of Kashmir, to the frontier districts of Gilgit and Ladakh. Internal village communications have also been much improved.

The Jammu-Suchetgarh Railway, a section of the Wizarabad-Sialkot branch line of the North-Western Railway system, is the only Railway in the State. The mountainous nature of the country has so far prevented the extension of the line into the heart of the State. The State is also connected with the telephone system of the two Dominions.

According to the last census of the State, there were over 238,000 literate persons in the State including over 35,000 females. The number of educational institutions is 2,078. There are four Colleges and one aided Oriental College. In Municipal areas education for boys was made compulsory in 1929. More schools including basic schools are being introduced every year.

ADMINISTRATION

The story of how after the transfer of power Kashmir became the scene of fighting between frontier raiders and Indian Troops has been related elsewhere (See introduction to this Section). Though the question has been before the U.N. a long time now no solution wholly acceptable to both sides has yet been found.

Meanwhile the administration has been drastically revised. A popular interim Government has been established with Sheik Mohammed Abdullah as Prime Minister. As for the future as soon as normal conditions are restored a national assembly will be convened in the State on the basis of adult suffrage which will frame a democratic constitution for the State. The Prime Minister and other Ministers function as a Cabinet and act on the principle of joint responsibility. Two members of the Government are Mirza Mohammad Afzal Beg, Revenue Minister and Gulam Mohammad Sadiq, Development Minister.

JANJIRA STATE is situated to the south of the Kolaba Dist. of the Bombay Presidency. The State pays no tribute and owns a dependency on the south coast of Kathiawar known as Jafarabad Territory, which also unlike other Kathiawar States pays no tribute. The State receives from Junagadh an annual 'khandani' payment on Una Mahal of 360 Mosambigiri Ryals equivalent to Rs. 500. The capital of the State is Murad, which is on the mainland, the name of Janjira being retained by the island fort opposite.

H.H. SIDI MUHAMMAD KHAN, THE NAWAB SAHEB of Janjira was born on March 7, 1914. He was educated at the Rajkumar College, Rajkot, the Deccan College, Poona, and was trained in administration in the Mysore State. The Nawab was married to Nawabzadi Rabia Sultan Jehan Begum Saheba, the daughter of H.H. the Nawab of Jaora on November 14, 1933. He has four daughters.

The Nawab ascended the *gadi* on May 2, 1922 on the death of his father, and was invested with full

powers on November 9, 1933. During his minority the State was administered by his mother H.H. Kulsum Begum Saheba as Regent with the aid of the Dewan.

H.H. is entitled to a dynastic salute of 11 guns and to a permanent salute of 13 guns within his own territories.

H.H. is a Sunni Muslim and has a *sanad* guaranteeing succession according to the Mohammedan law

The area of the State is 379 sq. miles and its population 117,324. The average income of the State is Rs. 15,00,000 including that derived from the dependency of Jafarabad. The principal sources of income are land revenue, forest, abkari and customs. The ports of Janjira proper have the rights of Dominion Customs ports.

The Nawab pays special attention to the education of his subjects. He has established several Marathi, Urdu and English schools at great expense to the State. There are State dispensaries at important places where medicine is given free.

ADMINISTRATION

The State enjoys plenary civil powers. It also has plenary criminal powers except over Dominion subjects.

Dewan: NAWABZADA MOHD SADIQ, B.A., Bar-at-Law; Chief Judge, High Court: I. S. HAJI, B.A., B.Sc. (Econ.), Bar-at-Law, F.R.E.S.; Judges, High Court: HARIVADAN DHIRAJLAL THAKORE, B.A., LL.B., Advocate (O.S.), AKBAR A. PEER-BHOY, Bar-at-Law; Sar Nyayadhish: RAM-KRISHNA BABAJI DALVI; Sadar Tahasildar: SIDI JAFAR SIDI MAHMUD SHEKHANI, B.A., LL.B.; Chief Medical Officer: Dr. A. J. F. ALMEIDA, M.D. (Hons.) Berlin, L.R.C.P. (Edin.), L.R.F.P. & S. (Glas.), D.T.M. (Liv.), L.M. (Dublin); Director of Public Instruction: M. A. KOKATE, M.A., B.T.; Superintendent of Police: Lt. SYED SHAHBAKATI, B.A.; Asst. Collector of Customs & Salt: D. M. HANWARI, B.A.; Huzur Secretary to H.H. the Nawab Saheb: J. T. CHITNIS, B.A., LL.B.; Ag. Chief Engineer: KAZI HASAN KAZI MOHAMMAD MIHASLAI, B.E.; Chief Customs Officer: SIDI EBRAHIM SIDI ABDUL RAHMAN KHANZADA; Mamlatdar, Jafarabad: SIDI YAKUB SIDI MAHOMED KHANZADA; Chief Forest Officer: M. USMAN KHAN.

JAORA is the only Treaty State in Malwa, in Central India. There are 2 towns and about 350 villages in the State. The state has acceded to the Indian Union and has joined the Malwa States Group known as "Madhya Bharat". The capital is Jaora. It contains several imposing buildings including a fine secretariat and court house, post and telegraph offices, Mahatma Gandhi High School and other educational institutions, the Central Jail, two hospitals, an Ayurvedic Pharmacy, one sugar mill, one cotton press with nine ginning factories and a number of other structures of public and private character. The other town is Tal, some 18 miles from Jaora. It is the headquarters of the Tal Tehsil.

The prevailing form of speech is Malwi and Rangri. The official language used in the State was Urdu and is now changed to Hindi.

The Chiefs of Jaora claim descent from Abdul Majid Khan, an Afghan of the Tajik Khel tribe from Suwat. The first Chief established himself in the State in 1808.

The state is entitled to a salute of 13 guns.

THE LATE CHIEF LT.-COL. HIS HIGHNESS FAKHRUD DAULAH NAWAB SIR MUHAMMAD IFTIKHAR ALI KHAN SAHIB BAHADUR, SAULAT-E-JANG, G.B.E., K.C.I.E., died on the 18th December 1947 and the question of succession to the *gadi* of the State, which is in dispute, is under the consideration of the Government of India.

The area of the State is 602 sq. miles and the population 116,953. The revenue is about Rs. 15,00,000.

The soil of the State is among the richest in Malwa, being mainly of the best black variety. The principal food crops are jawar, maize and wheat, and the principal money crops poppy and cotton. Irrigation is carried on by means of wells.

As for industry there is one sugar mill with a crushing capacity of 700,000 tons per day, an oil mill, nine ginning and pressing factories and one State pencil factory.

The Rajputana-Malwa Railway on which Jaora is a station runs through the State.

To promote the general well-being of the people in the State an ambitious ten-year programme involving a total expenditure of Rs. 50,10,206 has been drawn up.

ADMINISTRATION

On the 15th January 1948, the Government of India, Ministry of States, appointed Sir Harilal N. Gosalia, Kt., M.A., LL.B., as Administrator of the State with full powers of the late Ruler. The Administrator is assisted by the following Secretaries:—

PANDIT AMAR NATH KATJU, B.Sc., LL.B., Secretary, *Rifah-i-Am and Deputy Chief Minister*.

SAHIBZADA NASRAT MOHAMMAD KHAN, M.A., LL.B.: Secretary, Law & Justice.

MOULVI ABDUL GHANI, B.A., P.E.S. (Retd.): Secretary, P.W.D.

SAHIBZADA MIR NASIRUDDIN AHMAD: Household Secretary.

JASDAN, the premier Kathi State, is situated in Kathiawar. The Rulers are Saketiya Suryavanshi Kshatriyas, being the descendants of Katha, the younger son of the Suryavanshi Maharaj Karan Shruta of Ayodhya. The capital of the State is Jasdan. The State has acceded to the Indian Union.

HIS HIGHNESS DARBAR SHREE ALA KHACHAR, the present Ruler of Jasdan was born on November 4th 1905. He was educated at the Rajkumar College, Rajkot. He succeeded to the *gadi* on June 11, 1919 and was invested with full powers on December 1, 1924. The Heir-Apparent is Yuvaraj Shree Shivraj Kumar, born on October 9, 1930.

The area of the State is 296 sq. miles, and the population 37,672 according to the census of 1941. The gross revenue is about Rs. 10 lakhs.

The principal occupation is agriculture, the chief food crops being jowar, bajri, wheat, gram and pulses, and the chief cash crops cotton, and sugar-cane.

There are about 12 plantations of fruit trees such as mangoes, musumbis, bananas and chikoos. For irrigation water is drawn from 4 artificial lakes.

As for industry there is an oil mill and a match factory at Jasdan, and a ginning and pressing factory at Vinchhia.

Railway communication is by the Botad-Jasdan. Railway which runs from Botad Junction to Jasdan, a distance of 32.87 miles. The State owns half-share in Botad Jasdan Railway. Motor buses from Jasdan go to Vinchhia, Kamalpur, Rajkot and Chital. There is postal service too.

All education is free throughout the State and primary education has been made compulsory in certain villages as an experimental measure. Every village with a population of 500 people has a school. Like education all medical aid given at the State hospital and dispensaries is also free.

All cultivators enjoy heritable tenancy rights and there is also an Agricultural Co-operative Bank to help the cultivators with loans.

ADMINISTRATION

Local government functions through village panchayats as elsewhere. Every village has a panchayat and the panchayats themselves enjoy wide civil and criminal powers.

For the State as a whole there is a Darbar Sabha composed of elected members. The Sabha has powers to pass legislation, discuss the budget, and generally guide and help the Durbar in administration.

Dewan: RAJKUMAR SHREE AMRA KHACHAR; *Huzur Court Judge*: PRABHULAL D. SHUKLA, B.A., LL.B.; *First Member of the Council*: JHAVERILAL TRAMBAKAL VYAS, B.A., LL.B.; *Revenue Secretary*: DADA VADHER GIDA; *General Secretary*: PUNJBIHAI DHADHAL.

JATH is an ancient Mahratha State in the Deccan. It is bounded on the north by Sholapur Dist., on the east by Bijapur Dist., on the south by Belgaum Dist. and on the west by Sangli State.

The Ruling Family, which is of high Mahratha class, claims its descent from Satvajirao Chavan, a Patil of Daflapur on whom Ali Adil-Shah, King of Bijapur conferred the Deshmukhi Watan of the Jahagirs of Jath and Karajagi Paraganas in the year 1680. The capital of the State is Jath.

LT.-COMMANDER RAJA SHRIMANT VIJAYASINHRao RAMRAO, R.I.N. RAJA of Jath State, was born on July 21, 1909. He was educated for some time at the Deccan College but was suddenly called back owing to the serious illness of his father. The Raja ascended the *gadi* and was invested with full powers on January 12, 1929. On March 27, 1929, he married Shrimant Lilawati Raje, the eldest daughter of the late Rajasaheb of Akalkot, thus uniting two illustrious Houses,

namely, the Dafles of Jath and the Raje Bhosles of Akalkot.

The Raja Saheb attended the Round Table Conference in 1932 at the invitation of the Secretary of State for India. He is an all-round sportsman and a good cricketer and takes a keen interest in scouting.

The area of Jath State is 981 sq. miles and the population 107,036. The revenue of the State is Rs. 4,25,000. The Raja exercises full civil and criminal jurisdiction over the State.

ADMINISTRATION

Politically, the whole drift has been towards responsible government. The Legislative Assembly has recently been remodelled and now consists of 18 members out of whom 15 are elected and 3 nominated non-officials to represent the Harijans, the Muslims and the women in the State, respectively. The Speaker and the Deputy Speaker are also elected by the Assembly.

The Shrimant Raja Saheb has appointed three ministers from among the elected members of the Assembly who will form a cabinet with the Dewan as the President. To these ministers all subjects have been transferred except defence, external affairs, and saranjams and inams which the Raja Saheb has reserved for himself.

Dewan and President of the Council of Ministers: D. N. PRADHAN, B.A., LL.B.

Chief Minister, Law and Order: Y. M. SAVANT.

Education, Judiciary, Civil Supplies: D. G. DUGANI.

Revenue, Finance: B. SHAIKH.

JAWHAR STATE lies among the Sahyadri Mountains to the north of Thana District and is one of the oldest States in the Bombay Presidency. Most of the State is an elevated territory 1,000 to 1,500 feet above the Konkan plain, healthy and cool and has beautiful scenery on every side. It is 38 miles from Dahanu Road on the B.B. & C.I. Rly. Jawhar City, which is the capital of the State, is only 90 miles from Bombay and has an excellent climate in summer. It is fast developing into an ideal hill station.

The Rulers of the State are the descendants of the illustrious family of Jayaba Mukne, who is said to be the founder of the *gadi*. Nemshaha, the son of Jayaba Mukne, the second Ruler of the State, received in 1343 A.D. the title of Shaha from Mahommed Taghlakh,

the Emperor of Delhi and was recognised as the Ruler of a tract of land which now goes to form nearly the whole of the Thana and a part of Nasik Districts and which in those olden days yielded a revenue of nine lakhs of rupees. So important was this event, that the 5th of June 1343, the day on which this title was received in Jawhar, was made the beginning of a new era and is still used as the beginning of the official year of the State.

FT. LT. HIS HIGHNESS MAHARAJA SHRIMANT YESWANTRAO PATANGSHAH VIKRAMSHAH, the present Ruler of Jawhar, was born on December 11, 1917. He was educated at the Rajkumar College, Rajkot, and Blundell's Old Public School in England. While in England he received some administrative training and on return to India he received further practical administrative training under the Collector of Nasik. On January 16, 1938 he ascended the *gadi* and was invested with full ruling powers. In May 1938, he married Shrimant Priyamwada Raje, sister of the Rajasaheb of Jath. The Heir-Apparent Shrimant Yuvaraj Maharaj Digvijaysinhrao was born on January 5, 1940.

The Maharaja's chief recreations are shooting, riding, tennis and motoring. He is entitled to a permanent salute of 9 guns.

The area of the State is 308 sq. miles and the population 65,126 according to 1941 census. The average annual revenue is about Rs. 15,00,000.

PRODUCE

The State is chiefly agricultural, the main foodgrains and pulses produced being paddy, ragi, varai, tur, urd and khurasani. The State also possesses forests consisting of good quality teak. Among other jungle produce are charcoal, gum, honey, hirda, behada and other medicinal herbs, roots and fruit.

In the field of industry too the State is making good progress. The manufacture of bobbins, starch, foreign liquors, chemicals, paper, textiles, dyeing and printing has either started or is well under way.

COMMUNICATION

As for communications, the nearest railway station is Dahanu on the B.B. & C.I. Rly., which is only 38 miles away and between which and Jawhar there is a regular bus service. There is also an excellent Road between Jawhar and Bombay and another between Jawhar and Nasik. Between Jawhar and Nasik also there is a regular bus service.

EDUCATION

In the field of education the State has made good progress considering the Adivasi area. Primary education is provided free to all throughout the State. There is a middle school at Jawhar and

it is being developed into a high school. A fine Central Library and a Book Club have recently been opened and a museum with high educational value is under construction.

Free medical relief is available in the State. There are three stationary and two touring dispensaries providing relief to the suffering. A hospital and a maternity home costing more than two lakhs are nearing completion.

POST-WAR PLANS

Jawhar Durbar has drawn up an ambitious post-war programme the main items of which are building a high school, opening a cinema, starting new industries, building a railway station, a creek port at Pale near Dahanu, and a railway line from Pale to Talawali. Other projects include the construction of schools, roads, wells, irrigation works and dairy farming, and the nationalisation of bus service.

CONSTITUTIONAL PROGRESS

Jawhar Durbar have been moving well in advance of the times in introducing constitutional reforms in the State, under which franchise on a very wide basis is given even to Adivasis. In implementation of his promise to reach his cherished goal of becoming a Constitutional Ruler in the minimum of time, the Maharaja has already introduced full responsible Government in the State.

Ministers : S. H. TENDULKAR; K. G. KARKARE, B.A.; V. T. PATIL.

JHALAWAR STATE is situated in the south east of Rajputana surrounded by the States of Kotah, Indore, Gwalior, Sitamau, Dewas and Tonk. There are also two small detached areas of the State—one on the north-east, and another on the north-west bordering Indore, Udaipur and Gwalior territories.

The capital of the State is Brijnagar, the nearest Railway Station being Shrichhatrapur at a distance of 18 miles. Other important towns in the State are Jhalrapatan, Gangdhar, Dag, Bhawani Mandi and Rajendrapur Mandi. The latter two are Railway Stations on the B.B. & C.I Railway main line.

H. H. MAHARAJ RANA SHRI HARISCHANDRA BAHADUR, the present Ruler, was born on 7th of September, 1921. He was educated at the Rajkumar College, Rajkot, Aldenham School, Elstree (England) and St. Joseph's Academy, Dehra Dun. He has also taken the I.C.S. Probationers' Training Course at Dehra Dun and the Indian Police Training Course at Moradabad. His Highness

was married to Rajkumari Ila Devi, daughter of the Raja Saheb of Jubbal on 9th May, 1940. The Heir-apparent Yuvaraj Shri Indrajit was born on 12th June, 1944. A second son—Maharaj Kumar Mahijeet was born on 1st May, 1947.

The area of the State is 812 sq. miles and population approximately 150,000. The revenue is about twenty lakhs.

CROPS & INDUSTRIES

Principal crops are jawar, maize, cotton, gram and wheat. Wells constitute the chief source of irrigation. The State has constructed several tanks and has also introduced lift irrigation from the larger rivers. Principal industries are pottery works, oil mills, and ginning and pressing factories. Good quality of sandstone is quarried from hills for building purposes. There are great possibilities of starting copper and cement works, as also cotton and sugar mills. The starting was delayed due to war conditions, and possibilities are once again being explored. There is an Intermediate Arts College, at Brijnagar. All education in the State is entirely free. The B.B. & C.I. Railway main line has three Railway Stations in the State limits. The Jhalawar Motor Transport Services connect all the districts in the State with one another.

SOCIAL SERVICES

There are three hospitals, two general hospitals with up-to-date equipment including X-ray plant and a Laboratory, and a hospital for ladies known as Shri Hira Kunwarba Hospital. There are dispensaries in all the Districts of the State.

To cultivate a sense of civic responsibility, Home Guards have been organised in the principal towns. There are six fully elected Municipal bodies in important towns receiving grants from the State and Panchayats are being established in the villages. To encourage agriculture and industries, fairs and exhibitions are being held each year at different places in the State.

ADMINISTRATION

His Highness the Maharaj Rana Bahadur has granted full Responsible Government to his people. The Cabinet consists of the President and two other Ministers all the three being elected. **HARISCHANDRA, H. H.**, THE MAHARAJ RANA OF JHALAWAR, *President*; **KANHAIYA LAL MITTAL, B. Sc. LL.B.**, *Home & Foreign Minister*; **MANGILAL BHAYYA**, *Development Minister*.

The Judiciary is entirely independent of the Executive. *Judge, High Court*: **RAI BAHADUR RANGILAL**, *Ex-Puikne Judge*, Lahore and *Ex-Chief Justice*, India

JODHPUR STATE, also called Marwar, is the largest (in area) of the Rajputana States. It is bounded on the north by Bikaner and Shekawati, on the east by Jaipur and Kishangarh on the south by Sirohi and Palanpur, and on the west by the Rann of Cutch and the Thar and Parkar District of Sindh. The Maharaja of Jodhpur is the head of the Rathor Clan of Rajputs, and belongs to the solar race of which Rama, the deified king of Ayodhya, is the most illustrious representative. The Royal Houses of Bikaner, Kishangarh, Idar, Ratlam, Sailana, Sitamau and Jhabua are all offshoots of the Family.

The Rathors are first mentioned in the edicts of Asoka in the third century B.C. During the tenth and eleventh centuries the various branches of the clan gradually established ascendancy over different parts of India. Then towards the middle of the 13th century that branch of the clan which had settled in Kanouj moved into the desert tracts of Rajputana and founded the city of Jodhpur. The Rathors have been noted for their valour—the motto on the coat-of-arms says, "Ran Banka Rathor," i. e., 'Rathor Invincible'—and one of the kings of Jodhpur was regarded as the most powerful ruler of his time.

The city of Jodhpur contains many handsome buildings, including ten old palaces and eleven fine temples. The fort is one of the finest in Rajputana standing in great magnificence on an isolated rock overlooking the town. Today Jodhpur is an up-to-date airport.

It is situated on the main air routes of India and almost all the transcontinental air services pass through this port. The State is entitled to a salute of 17 guns outside and 19 guns inside the territory.

HIS HIGHNESS RAJ-RAJESHWAR MAHARAJADHIRAJ MAHARAJA SRI HANWANT SINGHJI SAHEB BAHADUR, the Ruler of Jodhpur, is the 38th Ruler from Rao Sihaji Rathor (1243-1273 A.D.) the founder of the present ruling dynasty. He was born on June 16, 1923 and was educated at the Mayo College, Ajmer and subsequently the Government College, Ajmer. He married Princess Sri Krishna Kunwarba Sahasra, sister of His Highness the Maharaja of Dhrangadhra. He has two daughters, the first born in January 1944 and the second in May 1945. After leaving college the Maharaja underwent training in State administration and worked as one of His late Highness' Council

of Ministers, holding such important portfolios as those of Education, Public Works, Customs, and the Ijlas-i-Khas. His Highness ascended the *gadi* on June 9, 1947. Among his recreations are tennis, shooting, fishing, flying, motoring, photography and mechanics.

The area of Jodhpur is 36,120 sq. miles and the population according to the 1941 census 2,555,904. The revenue of the State is Rs. 2,91,65,000.

The greater part of the country is an arid desert. But even in those areas which are fairly fertile the rainfall is scanty and capricious. There are no perennial rivers and the supply of sub-soil water is limited. The only important river is the Luni.

PRODUCE

The principal crops are pulses, millets, bajri, jowar, etc., though wheat and barley are also produced in the more fertile tracts. Large quantities of melons are seen especially near wells. And among the cash crops are cotton, opium, tobacco and sugarcane. Industry is less important than agriculture in Jodhpur. There is a Salt Lake at Sambhar and the marble quarries of Makrana are justly famous. The State is well served by railways. The Jodhpur Railway (a first class railway) extends from Hyderabad (Sind) to Luni Junction, and from Marwar Junction to Kuchaman Road, with branch lines radiating in all directions. The B. B. & C. I. also runs across a portion of the south-eastern border.

Lately the State has witnessed a period of all-round progress and development. The various Departments have been reorganized and put on sound systematic lines. The land revenue system has been revised and the benefit of the Provident Fund placed within the reach of all State ser-

vants. Primary education has been greatly stressed and extended. Jodhpur is one of the most literate States of Rajputana. It offers lavish scholarships for vocational training and helps the growth of private institutions by affording handsome aids. There are a number of efficient primary and high schools including a first grade college and four high schools with boarding houses. As for public health there is a State hospital which is the best of its kind in India.

ADMINISTRATION

The Administration of the State is carried on with the aid of the State Council. There is also a Consultative Committee representing the Sardars to help in the administration. Recently, however, great strides have been made in the direction of responsible government. Communal electorates have been abolished, village panchayats with wide powers have been established, the town municipalities have been granted a majority of elected members. A new legislative assembly with an elected majority and power to legislate, interpellate, discuss grants, etc., is to commence functioning shortly.

State Council President and Prime Minister: MAJOR-GEN. MAHARAJA DHIRAJ SRI SIR AJIT SINGHI SAHIB; *Home Minister:* MAJOR MAHARAJ SIR HIMMAT SINGHI SAHIB; *Revenue Minister:* DEWAN BAHADUR TH. MADHO SINGHI OF SANKHWAS; *Judicial Minister:* LALA HARISH CHANDRAJI MATHUR, B.A.; *Minister for Public Health:* THAKUR BHERUN SINGHI BHATI OF KHEJARLA; *Minister for Local Bodies (Local Self-Govt.):* RAI BAHADUR JASWANTRAJI MEHTA, B.A., LL.B.; *Political Secretary & Ex-Officio Council Secretary:* SAMRATHRAJ MATHUR, B.A.

JUNAGADH STATE lying in the South-West of Kathiawar Peninsula with a population of 670,719 has assumed a fresh role in the political landscape of what was Kathiawar in 1947 and is Saurashtra in 1948. The area of the State including Mangrol is 3,337 sq. miles.

POLITICAL DEVELOPMENTS

The closing months of 1947 witnessed the breakdown of the machinery of law and order in the State, large scale migration of people across the borders of the territory, the Nawab's desertion of his State and disintegration of his ministry culminating in the Dewan's before his flight to Karachi, requesting the Indian Union represented by the Regional Commissioner for the Western India and Gujarat States at Rajkot to come and administer the State and protect its people from chaos and disorder. Accordingly the Regional Commissioner, under orders of the Ministry of States, took over the administration of the State on 9th November, 1947, when peace and order were restored and the migrated population returned to their hearths and homes. The State was placed in charge of Administrator S. W. Shiveshwarkar, M.B.E., I.C.S., assisted by Rao Saheb Tarachand L. Shah, M.B.E., Joint Administrator.

ADMINISTRATIVE REFORMS

The system of governance of the State has since been undergoing steady progress. The first to receive attention was the soothing of the strained relations of sister communities, which was accomplished without much effort with the co-operation of their leaders. Reforms in various Departments were simultaneously taken in hand. Education received priority in that 161 new primary schools were

decided to be opened from April 1948. Text books have been revised. Communal institutions have been changed into schools of common fellowship, Harijan students have been secured the rights and privileges enjoyed by students of any other community.

The Medical Department is also having its share of reforms. District dispensaries are being provided with nurses and mid-wives and additional dispensaries are being planned.

Rail-cum-Road transport has been organised with a fleet of passenger buses plying between various centres in districts. Asphalting of trunk roads and reconstruction of district roads is being planned.

REFERENDUM

In order to determine the unfettered choice of the people whether they wished the State to accede to the Dominion of Pakistan or the Dominion of India, a referendum was taken, after wide notification, on February, 20, 1948, on the specific issue. The referendum was conducted by the Judicial Commissioner for the Western India and Gujarat States Region C. B. Nagarkar, I.C.S., assisted by a Referendum Officer B. D. Pandit. Out of the total registered voters numbering 2,01,457 throughout the Junagadh State, 1,90,870 exercised their votes at 411 polling booths. 1,90,779 of these voted in favour of accession to the Dominion of India against 91 in favour of the Dominion of Pakistan. The counting of votes was done in the presence of committees of leading citizens of the State, both Hindu and Muslims.

KANKER is a member of the Eastern States Union. It is bounded on the north by Raipur and Drug Dists., on the east by Raipur, on the south by Bastar State, and on the west by Drug Dist., Kanker State has a pleasant, temperate climate. It is the only one of the States in the Eastern States Union which does not pay tribute. The capital of the State is Kanker.

The Ruling Family is Rajput belonging to the Somvashi clan. The State was founded by Bir Kanhar Deo who ruled at Sihawa near Dhamtari in Raipur Dist. about 800 years ago. Some remains of the fort which he built at Dhamtari can still be seen. The family lost the Sihawa Pargana when it was given away as dowry to a Chief of Bastar who is married into the Kanker Royal Family. For some time the Rulers of Kanker were in subsidiary alliance with the Haihayvanshi dynasty of Chhattisgarh and were thus able to hold the Dhamtary tract within their territory. Later when the Mahrattas appeared they could keep their possessions only on condition that they provided a military contingent 500 strong whenever needed. But in 1809 the State fell on evil days when the then Chief was deprived of his possessions. But the misfortune lasted only about ten years for in 1818 the State was restored to the Ruler by the British Resident administering the Nagpur territories on payment of an annual tribute of Rs. 500. This tribute too was eventually remitted in 1823 since when the State has been exempt

from payment of tribute of any kind whatever. 1903 marks yet another step forward for in that year the hereditary title of Maharajadhiraj was conferred on the Rulers of Kanker. In 1911 the Rulers were granted a personal salute of 9 guns.

HIS HIGHNESS, MAHARAJADHIRAJ BHANUPRATAP DEO, the present Ruler, was born on September 17, 1922. He was educated at the Rajkumar College, and the Mayo College, Ajmer, from where he was graduated. He also took a course in administrative training at the I.C.S. training camp at Dehra Dun in 1943.

His Highness is an adopted son of his predecessor, Maharajadhiraj Lal Komal Deo, and ascended the *gadi* on December 12, 1927, on the latter's death. Seventeen years later in 1944, he was formally invested with full ruling powers. To mark the occasion, the State remitted a large part of the land

revenue which was due to it. The Maharajadhiraj has one son and one daughter.

The area of Kanker State is 1,430 sq. miles and a population of about 150,000 according to the census of 1941. More than half the population consists of Gonds and the remainder are mostly Halbas with a few non-aboriginal castes. The annual income based on the average of the past three years is about Rs. 7,00,000.

The capital town Kanker is situated on the Raipur-Vizianagaram Road, 86 miles from Raipur and 38 miles from Damtari and is connected with both these towns by regular bus service. The population of Kanker town is about 6,000.

AGRICULTURE

The State is predominantly agricultural and the staple food of the people is rice. The Agricultural Department is very active and under its guidance the methods of cultivation are gradually improving through the use of better seeds and implements. The staff does active propaganda throughout the year and explains to the cultivators how to combat insect pests and prepare artificial manure. To increase production the State also supplies the cultivator with improved varieties of seeds. The State has started a dairy with Sahiwal cows, the ultimate object of which is to produce breeding bulls and supply them to the people to improve the breed of the cattle.

FOREST PRODUCE

The State contains 400 sq. miles of forest, from which comes the

major portion of its revenue. The chief jungle produce are timber, bamboos, harra, lae, tendu leaves and gum. 1/12 of the harra which is produced in the whole of India comes from Kanker and the quality of the product is also extremely high. With a view to further development a regular working plan has been prepared and about 230 sq. miles of the forest have already been surveyed and demarcated.

His Highness made himself exceedingly popular in all parts of the State soon after his accession to power by the introduction of a series of reforms, which included the grant of forest concessions, establishment of village panchayats, development of communications, introduction of constitutional reforms, opening of State temples for Harijans, and the inauguration of many beneficial measures for the welfare and uplift of the masses. His Highness has also acceded to the Indian Union and has signed a Standstill Agreement.

EDUCATION

Being himself a highly educated and enlightened ruler the Maharajadhiraj pays particular attention to the spread of education. Primary education is entirely free while in the high school local students are charged only a nominal fee. There are 34 primary schools in the State including one for girls and according to the new five year plan 5 new schools are to be opened every year. There is already one full-fledged high school located in a magnificent building which is affiliated to the C.P. Education Board. This High School is also remarkable in that it

provides co-education, a novel institution in this part of the country. Further, a new Anglo-Vernacular Middle School has been started at Bhanupratappur, the headquarters of the Tehsil of the same name.

Medical facilities for the rural people have not escaped His Highness' attention either. There is already a fully equipped hospital at Kanker in charge of a competent State surgeon besides five branch dispensaries in the interior, every one of which is in charge of a well-qualified medical man. There is also a Veterinary Department with two veterinary dispensaries, one at Kanker and the other at Bhanupratappur under the supervision of trained doctors. Prompt measures are always taken to prevent outbreaks of epidemics among the cattle.

In a social sense too the State is very much alive. There is some social activity or other all the year round. Kanker has a fully equipped club, Komel Deo Club, named after the late Ruler which provides facilities for indoor and outdoor games. The Club has also a well-equipped library and reading-room.

DEVELOPMENT SCHEMES

A five-year post-war development scheme has been prepared to meet some of the crying needs of the present day. This scheme aims at the development of communications, expansion of education, improvement of agriculture including cattle-breeding, the opening of grain banks, the construction of irrigation projects, the improvement of pisciculture, the extension

of medical and veterinary departments, the reorganization of the police and forest services and the expansion of the power house.

ADMINISTRATION

Coming to the question of political organization we find that the Maharajadhiraj was one of the first among the Rulers of the Eastern States Union to introduce responsible government in response to popular demand. The administration is carried on by a State Council of four members including the Maharajadhiraj who is the President and the Dewan who is the Vice-President. The other two members who are chosen by the State Assembly and are responsible to it are designated Revenue and General Member respectively. It is worthy of note that though the ministers chosen by the Assembly wanted only the portfolio of civil supply they were entrusted with other important portfolios like Revenue, Excise, Education, Agriculture and Municipality in addition so that they might effect far-reaching improvements in their respective spheres for the welfare of the people. This generous offer satisfied the Assembly which agreed to work the new Constitution for at least three years.

The Legislative Assembly itself consists of 25 members of whom the majority are elected. His Highness is the President of the Assembly while the Deputy President is a non-official.

Dewan : T. MAHAPATRO, B.A., B.L.

Revenue Member : R. K. LAL.

General Member : C. S. LAHREE.

KAPURTHALA STATE lies in the Province of East Punjab between the rivers Sutlej and Beas. The Maharaja traces his family history back some 900 odd years, when the foundations of his State were laid by Rana Kapur, a member of the Rajput ruling dynasty of Jaisalmer. The Maharaja has a unique position among the Sikh ruling princes of India as both the head of an important State and the premier Taluqdar of Oudh.

MAJOR-GENERAL HIS HIGHNESS MAHARAJA JAGATJIT SINGH BAHADUR, G.C.S.I. (1911), G.C.I.E. (1918), G.B.E. (1927), the present Ruler of Kapurthala, was born on November 23, 1872, son of His late Highness Raja-i-Rajgan Kharak Singh of Kapurthala. His Highness was carefully brought up and received a liberal education. He has five sons and one daughter. The eldest son and Heir-Apparent Shri Tikka Raja Paramjit Singh, was born on May 19, 1902.

The area of the State is 661 sq. miles. It has a population of 3,78,380 and a revenue of about Rs. 70,00,000 including Oudh Estates. The State has acceded

to the Indian Union.

His Highness owns landed property in the United Provinces of an approximate area of 700 sq. miles with a population of over 4,50,000, Rai Bahadur Diwan Sunder Dass, M.B.E., being the Manager.

Architecture is one of His Highness' great hobbies. He has always evinced a keen interest in the educational matters of the State. Agriculture has received special attention.

DECORATIONS

His Highness was created a G.B.E. on the occasion of his Golden Jubilee. He was an Honorary Colonel of the 3/11th Sikhs (45th Rattays Sikhs); was promoted to Major-General in June 1948. He received the Grand Cross of the Legion d'Honneur from the French Government in 1924; also awarded Grand Cordon of the Order of the Nile, Grand Cordon of the Order of Morocco, Grand Cordon of the Order of Tunis, Grand Cross of the Order of Chili, Grand Cross of the Order of the Sun of Peru, Grand Cross of the Order of Cuba, Grand Cross of the Order of Iran; thrice represented Indian Princes and India on the League of Nations in 1926, 1927 and 1929. His Highness celebrated the Golden Jubilee of his reign in 1927, Diamond Jubilee in 1937 and 70th year of his reign in 1947. His Highness had the honour of attending the Silver Jubilee of His late Majesty in 1935, and the Coronation of Their Majesties King George VI and Queen Elizabeth in London in 1937. Appointed Member, India Defence Council in 1941.

STATE COUNCIL

SHRI TIKKA RAJA PARAMJIT SINGH, *President*; MAHARAJKUMAR KARAMJIT SINGH, *Vice-President*. *Members*: MAJOR MAHARAJKUMAR AJIT SINGH; DIWAN BAHADUR DR. LAKHPAT RAI SIKUND, M.A., Ph.D., Bar-at-Law, *Chief Minister*.

KOLHAPUR, the premier State in the Southern Maratha Country, lies between N. Lat. 15°50' and 17°10' and E. Long. 73°43' and 74°44'. It is bounded on the east by the Patwardhan States (now merged in Bombay Province) and part of Belgaum District of Bombay Province; on the west by Ratnagiri District; on the north by Satara District; and on the south by Sawantwadi State (also merged) and Belgaum District. It represents the only surviving portion of the Maratha Empire founded by Shivaji the Great. It enjoys the right to send its own representative to the Indian Constituent Assembly.

HIS HIGHNESS MAJOR SHRI SIR SHAHAJI CHHATRAPATI MAHARAJASAHEB, B.A., G.C.S.I., the present Ruler of Kolhapur, was born on April 4, 1910. He ascended the *gadi* by adoption on March 31, 1947. He was A.D.C. to H.M. the King, and Ruler of Dewas (Sr.) State before adoption. He served with distinction in the fighting in World War II.

The area of the State is 3,230 square miles. It has a population of about 1,092,046 according to the 1941 census, of whom about 5,54,937 are males and 5,37,109 are females. The Ruler is entitled to a dynastic salute of 19 guns. The State has acceded to the Dominion of India.

COMMERCE AND INDUSTRIES

Industrially the State is sufficiently advanced. There are the Shahu Spinning and Weaving Mill, the Kolhapur Sugar Mills, the Kolhapur State Rly., the Match Factory, a Tobacco Factory and the Radhanagri Hydro-Electric Works (in progress), an Electric Power House and numerous other private industrial concerns existing in the State. Kolhapur City, Jaysingpur and Gadhinglaj are also important commercial and trading centres handling export and import on a large scale of grains, gur, tobacco, ground-nuts, oilseeds, hides, etc.

The principal crops are rice, nagali, warry, and other millets, sugar-cane and ground-nut, jowar, bajri, chillies, tobacco and cotton. The west zone is remarkable for its dense forest and games of all kinds.

The State has minerals particularly bauxite, the deposits of which are some of the richest, finest and most extensive in the whole world. They are capable of profitable exploitation in view of the facility for generating hydro-electric power in the many rivers in the vicinity.

CONSTITUTIONAL REFORMS

Constitutional reforms of a far reaching nature were announced at the time of the formal 'Rajyabhishek' of the present Maharaja, which was held on June 1, 1947. Subject to certain reservations the Executive Council was expanded to include a majority of elected members of the Legislature to whom they were made responsible. On Dasara Day dated 24th October 1947, His Highness announced further reforms and finally on November 19, 1947 an Interim Government was formed of eight Ministers (including the Prime Minister nominated by His Highness), four Ministers belonging to the Praja Parishad and two representing the Kolhapur Legislative Assembly and one of the Scheduled Castes. Responsible Government, subject to some specified reservations agreed to by the Praja Parishad was thereby inaugurated. Elections for a Constituent Assembly to determine the State's future constitution is to be held very shortly. The Prime Minister is in charge of the Reserved subjects only, i.e., Political relations, Foreign Affairs, Army, the Privy Purse of the Ruler and his household and certain specified safeguards as to aliensations including Jaghirs. The Ministry functions on the basis of joint responsibility.

At the time of writing, following discussions between the Maharaja and the Secretary to the Indian States Ministry, on the disturbances which occurred in Kolhapur after Mahatma Gandhi's assassination, His Highness has agreed to a request from the Government of India to dissolve the present Ministry to facilitate an impartial and independent inquiry and to appoint an Administrator who would be in charge of the transferred subjects while the reserved ones would be administered by the Prime Minister as before. Capt. V. Nanjappa, I.C.S., the Collector of Nasik took over the charge as Administrator, with effect from 22nd March, 1948.

KOTAH STATE is situated in South East Rajputana bounded on the north by Tonk, Jaipur State and the District of Mathura, on the east by Gwalior State, on the west by Bundi, Udaipur and Indore, and on the south by Rajghar and Khilchipur.

COL. HIS HIGHNESS MAHARAJA-DHIRAJ MAHI MAHENDRA MAHARAO RAJA SHRI BHIM SINGHJI SAHIB BAHADUR MAHARAO OF KOTAH, the present Ruler was born in 1909 and ascended the *gadi* in 1940. He was educated at Mayo College, Ajmer, and married a daughter of His late Highness Maharaja Ganga Singhji Sahib Bahadur of Bikaner in 1930.

The Heir-Apparent Maharaj Kumar Brijraj Singhji Sahib was born on 21st February 1934.

The ruling family belongs to the Hara sect of Chauhan Rajputs and is an offshoot of the Bundi family. Kotah State came into existence about 1625 during the reign of Madho Singhji, second son of Rao Ratan of Bundi.

Area of the State is 5,684 sq. miles with a population of 777,398; Revenue (from 1941-42 to 1945-46)

Rs. 63,89,255 (last five years' average); salute 17 guns.

Agriculture is the chief occupation in the State, and there are two big mandis from where grain and oilseeds are exported. The proposed Chambal Hydro-electric Project is expected to irrigate a vast area of land and run numerous industries.

The State is famous for the manufacture of fine muslin known as "Doria cloth"

EDUCATION

There is a First Grade College affiliated to the Rajputana University, five High Schools, including one Girls' High School at Kotah and 215 other schools out of which one is a Teachers' Training School and 25 Vernacular Schools for girls. Consequent on the passing of the Kotah State Compulsory Education Act 1946, compulsory education has been introduced in the city of Kotah with effect from the 11th August, 1947.

The State maintains 36 dispensaries including one hospital for women in Kotah proper, and subsidizes a number of practitioners in indigenous medicines. The number of Co-operative Societies as on 31-8-47 is 586.

The Nagda-Mutta section of the B. & C. I. Rly. and a portion of the Bina Baran Railway run through the State, a length of 32 miles the latter being owned by the State. The capital, Kotah, lies on the B. & C. I. Railway. Other trading centres are Baran and Ramganj Mandi.

There is a regular hierarchy of judicial courts from the High Court down to the Village Panchayats, established to provide cheap and prompt justice in petty cases of prescribed nature. The High Court was established in 1939. Justice is administered according to laws codified by the State Government and the spirit of the Law in force in India.

The Kotah State is represented on the Indian Constituent Assembly by Lt.-Col. 'Kr. Dalel Singhji, M.A., and has acceded to the Indian Union.

ADMINISTRATION

Administration is carried on by His Highness with the assistance of a State Council of five ministers constituted as follows:

President: H. H. THE MAHARAJA SAHIB BAHADUR; Vice-President & Prime Minister: S. N. MEHTA, I.C.S.; Home Minister: RAJ CHANDRA SENJI OF KUNADI; Development Minister: N. L. IYA, B.A., B.E., M.I.E. (India); Revenue & Civil Supplies Minister: THAKUR MAHENDRA SINGHJI RANA-WAT; Minister-in-waiting Lt.-Col. KR. DALEL SINGHJI.

KUTCH STATE is bounded on the north and north-west by Sind, on the east by the Palanpur Agency, on the south by Kathiawar and on the south-west by the Indian Ocean. Whichever way one looks at the State, either from its isolated position, or its distinctive dialect or the strong feeling of loyalty which the people have for the Ruler, Kutch has more of the elements of a separate unit than any other State in Western India. The capital of the State is Bhuj, founded in 1549.

The earliest historical record of the State is found in Greek writings. Its modern history, however, dates from its conquest by the Sind tribe of Samma Rajputs in the thirteenth century. This tribe later came to be known as Jadeja, that is to say, the children of Jada the reputed founder of the tribe. Thus the Maharao of Kutch

has always been recognised as the head of the Jadeja clan of Rajputs.

After their initial victories the Jadejas gradually spread themselves into the various parts of the Peninsula till at last early in the 16th century Maharao Shri Khengarji I became the first ruler of the whole of Kutch with the designation Maharao.

THE RULER

MAHARAJA DHIRAJ MIRZA MAHARAO SHRI MADANSINHJI SAVAI BAHADUR, Maharao of Kutch, the present Ruler, was born on October 12, 1909 and was educated privately. He married Maharaj Kunvari Shri Rajendra Kunver Ba of Kishangarh and has three sons and two daughters.

His Highness personally takes active interest in the administration and has often represented the State in discussions with the Government of India on major problems affecting Kutch. He has travelled widely in Europe and Africa and is keenly interested in Indian philosophy. Among his recreations are riding, pigsticking and shikar. He is a tennis player of note.

The Maharao has 2 brothers and 3 sisters. His younger brother Maharaj Kumar Shri Fatehsingji was born in 1920 and the youngest Maharaj Kumar Shri Himmatsinhji was born in 1928.

Maharaj Kumar Shree Prithvirajji, the eldest son of His Highness, is the Heir-Apparent and is at present receiving education at the Mayo College, Ajmer.

The Maharaja is entitled to a permanent salute of 17 guns and a local salute of 19 guns.

The area of the State of Kutch is 17,225 sq. miles including the two Ranns which have an area of about 9,000 sq. miles. The population of the State is, according to the census of 1941, 500,800. The average annual revenue is about Rs. 70,00,000 (Krs. 2,10,00,000).

PRODUCE

There is a fair proportion of good arable land in Kutch and wheat, barley and cotton are cultivated. Irrigation has been well developed and there are today 18 dams irrigating an area of 6,375 acres.

The State is rich in gypsum, clays and limestone and has fairly large deposits of iron and lignite.

As for occupations other than agriculture and mining, there are the beautiful embroidery and silver-work, for which Kutch is chiefly noted. Silk and cotton textiles are also of some importance. The main industrial establishments in Kutch are the United Salt Works, the Anjar Spinning and Weaving Mill, the Kutch Oil and Allied Industries, the Kutch Match Works, and the Meraw Metal Works.

COMMUNICATIONS

There are 72 miles of railway in the State and 270 miles of road. But goods are mostly carried by

sea in country craft, the chief import and export centres being Mandvi and Tuna. The State has a modern port in Kandla which is a natural harbour. The port has a reinforced concrete pier along which large ocean going ships can lie, and the water at the approaches is both smooth and deep.

Both primary and secondary education are free in the State. There are altogether 625 schools with 27,300 names on the rolls. Medical relief is just as extensive with 6 Government hospitals and 14 Government dispensaries, dispensing medicine and advice.

ADMINISTRATION

Passing next to political organisation we find that the authorities are anxious to keep in harmony with the spirit of the times. Local self-government is already functioning in the major towns of the State, where there are municipal bodies with elected majorities and elected non-official Presidents. As for the rural areas a Gram Panchayat Act has just received the Ruler's assent and has become law. Under the Act there will be a Gram Panchayat in every village with a population of 500 and over. Like the Municipalities the Panchayats will have elected majorities and elected Presidents.

In keeping with the political trend all over the country, His Highness has declared his intention to grant full Responsible Government to his people as early as possible.

LAKHTAR STATE in East Kathiawar lies between North Lat. 22°49' and 23° and East Long. 71°46' and 72°3'. It consists of two distinct portions, Than and Lakhtar together with some outlying villages in Ahmedabad Dist. The Ruler is descended from the Dhrangadhra House. The capital of the State is Lakhtar.

THAKORE SAHEB SHRI INDRA-SINGHJI SAHEB of Lakhtar, was born on April 15, 1907. He was educated at the Rajkumar College, Rajkot. He married in 1926 Bai Shri Vijayakunverba Saheba, daughter of the late Raolji Shri Taktasinhji Sahab of Mansa. He ascended the *gadi* on July 2, 1940 on the death of his father. The Heir-Apparent Yuvraj Sahab Shri Balbhadrasinghji Sahab was born on November 19, 1929. He is now studying at a leading college in Bombay. The Thakore Sahab has also two daughters.

The Thakore Sahab is a ruler of very progressive views and takes a keen interest in the administration of the State. There is no capital punishment in Lakhtar.

The area of the State is 247.4 sq. miles and the population is over 30,000. The annual income of the State is about five lakhs.

The main occupation of the people is agriculture. Cotton is also grown, besides the usual food grains.

In Lakhtar there are three ginning factories, one pressing factory and one oil mill, while Thangadh, the other town, is famous for its fine pottery works. Lakhtar's chief link with the rest of India is the B. B. & C. I. Railway, the capital itself being a station on the Railway's metre-gauge section.

Like all progressive states Lakhtar devotes special attention to education. The State has one high school affiliated to the Bombay University, 2 middle schools, 9 vernacular schools for boys, and 2 for girls. To encourage higher education, the State has established a permanent fund, and 15 scholarships are awarded for further study in Arts, Agriculture, Medicine and other technical subjects every year.

ADMINISTRATION

The State has a representative constitution the purpose of which is to associate the people more closely with the administration. The judiciary is independent of the executive.

Dewan : R. P. Shukla, High Court Pleader; *Revenue Karbhari* : M. S. Raval; *Popular Ministers* : T. C. Trivedi; L. V. Rana; *President, Legislative Assembly* : J. D. Shah, Advocate; *Chief Medical Officer* : D. M. Shah, M.B.B.S.; *Educational Officer* : B. D. Vyas, B.A.; *Assistant Medical Officer* : C. D. Rana; *Accounts Officer* : K. N. Mehta; *Thangadh Mahalkari* : G. M. Vyas; *Supdt. of Police* : M. M. Rana (Retired Agency Police Officer); *Hazur Shrestedar* : P. G. Shah, Advocate; *State Survey Officer* : P. H. Pathak; *Rayasat Adhikari* : L. K. Gohel.

Huzur Court Judge : C. G. Sanghavi, Advocate, W.I.S. Agency; *Sar Nyayadhish (District & Sessions Judge)* : U. K. Mehta, B.A., LL.B.; *Lakhtar Nyayadhish (Civil Judge & First Class Magistrate)* : M. H. Shah, B.A., LL.B.; *Thangadh Nyayadhish (Civil Judge & First Class Magistrate)* : J. M. Bhatt, B.A., LL.B.; *Huzur Court Registrar* : M. K. Shah, B.A., LL.B.; *Thangadh Medical Officer* : J. P. Mehta, L.C.P. & S. (Bom.).

LATHI STATE is situated in Kathiawar between north latitude 21°14' and 21°45' and east longitude 71°23' and 71°32'. The Rulers are Gohel Rajputs and are the descendants of Sejakji, the common ancestor of Bhavnagar, Palitana and Lathi. The capital of the State is Lathi.

THAKORE SAHEB SHRI PRAHLAD-SINHJI OF LATHI, the present Ruler was born on March 31, 1912. He was educated at the Rajkumar College, Rajkot. He ascended the *gadi* on October 14, 1918 and after a course of training in administration in the Wankaner State was invested with full ruling powers on February 19, 1931. He has married Surya Kunverba Saheba, a daughter of the late Thakore Sahab of Kotda-Sangani. The Heir-Apparent K. S. Bhupendrasinhji was born on November 27, 1935.

The area of the State is 48 sq. miles and the population 10,812. The annual revenue is Rs. 4,67,000.

Lathi is agricultural, the chief crops being jawar, bajri, groundnut, wheat, gram, pulses, chillies and sugar-cane.

The most important industries are hand-loom weaving, cotton ginning and the production of edible oil. The chief exports are grain, seeds and oil, hand-woven cloth, pottery, gur, hides and skins and the chief imports mili cloth, sugar and luxury goods.

As for communications, the Gondal State Railway passes through Lathi town, and there are motor services which connect Lathi with Amreli, Rajkot, Damnagar and other places.

Among post-war plans are included the construction of a new hospital, high school, waterworks, drainage, roads and houses. A cinema which was part of the post-war programme is already functioning.

Primary education is free.

ADMINISTRATION

The administration is carried on by Councillors selected from a panel submitted to the Thakore Sahab by the non-official members of the Praja Pratinidhi Sabha. The Sabha which was formed on the Maharaja's own initiative is a body with a non-official majority. There is also another Sabha in the State called the Khedut Sabha which deals with problems affecting the social and economic uplift of the cultivators. This Sabha has been functioning since 1937.

High Court Judge : BHUPATRAI M. BUCH, B.A., LL.B.

Political Councillor : BAVALAL UTTAMRAM UPADHYAY.

Revenue and Finance Councillor : PRABHUDAS VASHRAM SHAH.

Public Works and Municipal Councillor : ISUFALLY TYABALLY VORA.

Medical Officer : DR. P. K. DAVE.

Sar Nyayadhish : M. A. MEHTA, B.A., LL.B.

Acting Educational Officer : ISHWARLAL G. VASAVDA, B.A.

Superintendent of Police : BHANJJI BHURAJI SOLANKI.

LUNAWADA STATE is situated in the Gujarat States group. The Rulers belong to the illustrious clan of Solanki Rajputs, descended from Sidhraj Jaysinh Deo of Anhilwad Patan, once the Emperor of Gujarat, Cutch and Kathiawar. Lunawada is the capital of the State.

CAPT. HIS HIGHNESS MAHARANA SHRI VIRBHADRASINGHI, the present Maharana Saheb of Lunawada State, was born in 1910. He ascended the *gadi* in 1930.

His Highness was educated at Mayo College, Ajmer. He underwent military training at Dehra Dun and joined the Welsh Regiment for acquiring practical training in modern warfare. He personally proceeded to the Italian Front in 1944-45 to take active part.

He is the recipient of 1939-45 Star, Italian Star, Indian Service Medal and War Medal.

The Maharana married Maharani Saheba Shri Munherkunverba, daughter of Capt. H. H. Maharana Raj Saheb Shri Sir Amarsinhji, K.C.S.I., K.C.I.E., of Wankaner State, in 1931.

His Highness is held in high esteem among the Rajputs of the Rewakantha and Panchmahals and has been endeavouring to help the social uplift and educational activities of the Rajputs of the neighbouring areas. He is the Chairman of the Gujarat States organisation and is President of the Regency Board of the two Gujarat States of Chhota-Udaipur and Balasinor.

The area of the State is 388 sq. miles, its population 1,05,318 and its revenue Rs. 14,00,000. The Ruler is entitled to a dynastic salute of 9 guns. The State has acceded to the Dominion of India.

INDUSTRY

Industrially the State is well-off. There are at present a match factory, leather factory, rice, oil and pulse mills and a saw mill. Possibilities are being explored for the establishment of a sugar factory and textile mill in the State. Post-war development schemes are being undertaken and the town of Lunawada will

shortly have the benefit of cement roads and an additional hospital with the latest equipment. The State is rich in forests and is considered a paradise for shikaris.

Primary and secondary education and medical aid are given free throughout the State.

Lunawada, the capital of the State, is also a railway station, 25 miles from Godhra on the Bombay-Delhi route of the B. B. & C. I. Rly. The State abounds in very beautiful and attractive natural scenery. Lunawada and other important places are connected by good roads, and a pucca metalled road runs between Lunawada and Godhra

The Maharana Saheb has three sons. Maharajkumar Shri Bhupendrasinhji, the eldest son and Heir-Apparent, was born on October 14, 1934. Rajkumar Shri

Dhirendrasinhji and Rajkumar Shri Pushpendrasinhji were born on December 25, 1935 and January 31, 1937, respectively. All the three sons are studying in the Mayo College, Ajmer.

ADMINISTRATION

The administration of the State is conducted by the Maharana Saheb with the assistance of a State Council of which His Highness is the President. *Dewan and Foreign and Political Member:* A. P. SHAH, B.A. (Hons.), Advocate; *Wazir and Home Member:* MAHARAJ PRAVIN-SINGHI; *Popular Member:* L. K. PATEL; *Naib Dewan and 4th Member:* MAHARAJ VIRVIKRAM-SINGHI; *Chief Secretary:* N. K. KANABAR.

High Court Judge: N. N. PATWARI, B.A., LL.B., Solicitor; *District and Sessions Judge:* V. A. MEHTA, B.A., LL.B.; *District Magistrate:* H. P. RATHOD, B.A., LL.B.; *Nyayadhish and F. C. Magistrate:* G. H. ANANDJIWALA, B.A., LL.B.; *Private Secretary:* M. V. PAWAR, B.Sc.; *Ag. State Engineer:* T. P. PANCHAL; *Police Superintendent:* S. M. PANDYA; *Chief Medical Officer:* DR. N. D. SHAH, M.B., B.S.; *Revenue Officer:* A. R. DAVE, B.A.; *Customs Officer:* B. H. CHAUHAN; *Forest Officer:* S. L. DAVE; *Head Master, S. K. High School:* R. G. MODI, M.A.

MANAVADAR STATE, in Kathiawar, comprises an area of 107 sq. miles with a population of 32,000. The revenue is Rs. 11,90,000 (average of last five years).

KHAN SAHEB GHULAM MOYNUDDIN KHAN Nawab of Manavadar State, is a descendant of the illustrious Uzanai Pathan (Babi) family who, since the reign of Humayun, have always been prominent in the annals of Gujarat.

He was born on Dec. 22, 1912, and was educated at

Rajkumar College, Rajkot. The Nawab succeeded to the *gadi* in 1918 and was invested with full ruling powers on Nov. 21, 1931.

He married Sahebzadi Qudsia Siddiq Begum Saheba, sister of the present Shaikh Saheb of Mangrol, in October 1933.

Nawabzada Mohamed Aslam Khan Saheb, Heir-Apparent, was born on the 15th of March, 1935. The three other princes are N. Z. Mohamed Fatehuddin Khan, N. Z. Mohamed Anees Khan, N. Z. Mohamed Idrees Khan.

The administration of the State during the minority of the Khan Saheb from 1918 to 1931 was in the hands of Fatima Siddiq Begum Saheba, the late mother of the Khan Saheb, who was awarded the "Kaiser-i-Hind" Gold Medal by the Government for her administrative genius which was amply demonstrated during her Regency.

MAYURBHANJ STATE lies between North Latitude 21° 17' and 22° 34', East Longitude 85° 40' and 87° 10' and is bounded on the north by the Seraikela State and the Singhbhum and Midnapur Districts, on the south by the States of Keonjhar and Nilgiri and the Districts of Balasore, on the east by the Midnapur and Balasore Districts, and on the west by the Singhbhum District and the Keonjhar State. Ancient Mayurbhanj extended over the territories of Kolhan and Seraikela States and parts of the Balasore and Midnapur districts prior to British conquest of Orissa in 1803. It has sometimes been described as the Switzerland of the East Indian Peninsula. The State is rich in antiquities. The recent discovery of certain archaeological remains testifies to its ancient civilization and culture.

Maharaja Sir Pratapchandra Bhanj Deo

The ruling family is the head of the Bhanja Vansi Kshatriyas of Orissa and claims to belong to the solar line. The emblem of the State is a peacock. The capital of the State is Baripada, a progressive town which provides modern amenities.

FL./LT. HIS HIGHNESS MAHARAJA SIR PRATAP CHANDRA BHANJ DEO, G.C.I.E., Maharaja of Mayurbhanj, was born on February 18, 1901. He was educated at the Mayo College, Ajmer and the Muir Central College, Allahabad. He was married on November 25, 1925, to a daughter of Mahraj Kumar Sardar Singhji of Shahpura, Rajputana. He has two sons and one daughter. The name of the Heir-Apparent is Tikait Pradeep Chandra Bhanj Deo. The Maharaja succeeded to the *gadi* on April 23, 1928, after the death of his elder brother and was formally installed on June 16, 1928.

The area of the State is 4,243 sq. miles. The population is 9,90,977 and the revenue Rs. 46,87,000.

PRODUCE

Mayurbhanj is mainly agricultural, the principal products being rice, maize and millet. The chief cash crop is oil-seeds. There are three major irrigation works, at present and new projects are being undertaken yearly to provide more facilities. To help the cultivator the State has opened an Agricultural Department, established granaries and has passed several legislative measures besides making annual liberal grants and loans.

FORESTS

The famous Similipal hills attaining a height of nearly 4,000 feet contain varieties of fauna and flora. Different species of timber are found in these hills. There is an extensive Sabai plantation in the State. Medicinal plants, barks, flowers, fruits and seeds are exported in large quantities. Experiments are being made with growing of exotic species, namely teak, pine, paper mulberry, eucalyptus, sandalwood, cinchona, tea, coffee and Sylhet oranges; and they have proved successful in most cases.

MINERALS

The State is also rich in mineral resources. The mining of iron-

ore undertaken by Tatas is one of the chief industries of the State. A geological survey has revealed the existence of large deposits of vanadium-bearing magnetite, glass-sand and kaolin. All these resources have enabled the State to embark on a programme of large-scale industrialization. For instance, factories for the production of vanadium, glass, textiles, potteries, plastics, chemicals and pharmaceuticals have been set up. The State does not overlook the interests of its cottage industry either. It has opened an industrial school and the products of the Mayurbhanj Tussar Textiles and Cottage Industries have received wide appreciation both in India and abroad.

In its southern part the State is connected with India by the Mayurbhanj Railway which runs from Talbandh, *via* Baripada to Rupsa on the Calcutta-Madras line of the B. N. Railway; and in the northern part it is connected to India by the B. N. Railway running from Badampahar to Tatanagar. The State is also well served by a number of good roads.

EDUCATION

The State is very active in the nation-building departments of the administration. Primary education is free and adult education forms an important item in rural reconstruction. There are four high schools, a large number of primary and middle English schools as well as girls' schools, Muktabs, Sanskrit Tols, special schools and night schools. For the spread of education the State spends about three lakhs of rupees annually.

MEDICAL SERVICE

Throughout the State there are dispensaries including itinerant ones and hospitals and leprosy clinics to cater for the patients. There is an up-to-date hospital at the capital with arrangements

for X-Ray, clinical, chemical and microscopic examinations. A fully equipped Zenana hospital is also attached to it. There is also a maternity and child welfare centre in the hospital compound. There is an Ayurvedic Dispensary in charge of a Kaviraj who looks after patients. The number of patients thus treated yearly is over three lakhs.

ADMINISTRATION

Mayurbhanj has been developing for many decades on progressive lines and has evolved an individuality of its own which has stood the test of time and of which it can justly be proud. In its constitutional aspects as well, it has developed a form which is suited to its own conditions and serves its special needs.

The State has acceded to the Indian Union and is represented by Sri Lalmohan Pati.

A Constituent Assembly has been elected, consisting of 51 members with the object of framing a wholly popular form of Government under the aegis of the Ruler but without any reservation for him. The Assembly elected Hon'ble Sri Sarat Chandra Das, President of the Mayurbhanj Prajamandal as the Prime Minister. He formed an Interim Ministry for the State on December 10, 1947. As an interim arrangement pending the framing of the constitution, the Constituent Assembly is functioning as the State Legislature. The executive administration is being carried on by the Council of Ministers responsible to the legislature.

The State has four sub-divisions where regular law courts have been established. Appeals from the subordinate courts are accepted in the High Court at the capital consisting of three judges who are independent of the executive. There is perfect amity amongst different classes and no communal trouble has ever occurred in the State.

MOHAMMADGARH STATE in Central India, lies on the Malwa Plateau to the north-east of Bhopal. Bhonrasa State was conquered by Diler Khan who became Amirul Umera and Nawab. He constructed the Kurwai fort and made it his capital. On his death, the State was divided between his two sons. The younger son Nawab Ahsan-Ullah Khan got the portion with the old capital Bhonrasa. Both the sons became weak and began to lose their territories to the Mahrattas. Nawab Ahsan-Ullah Khan lost almost all his State including the capital Bhonrasa.

Nawab Mohammad Sabir Quli Khan Bahadur Safdar Jang Diler Jang.

Later on his eldest son Nawab Mohammad Khan conquered a small place and constructed a fort, which was named by his father as Mohammadgarh. Nawab Mohammad Khan made Mohammadgarh his capital. In 1912 the administration of the State was made over to Nawab Siddiq Quli Khan. Today Mohammadgarh pays no tribute to any State and has direct

political relations with the Government of India through the Regional Commissioner for Central India.

The present ruler of Mohammadgarh, NAWAB MOHAMMAD SABIR QULI KHAN BAHADUR SAFDAR JANG DILER JANG is the eighth ruler of the dynasty, and was born at Bhopal on January 28, 1929. His father is Nawab Siddiq Quli Khan Bahadur who abdicated in his favour on August 2, 1947. His mother Nawab Asadi Begum belongs to the family of Nawab Baqi Mohammad Khan of Bhopal.

The young Nawab was educated at the Daly College, Indore, where he had a distinguished academic career. He passed the Senior Cambridge Examination in the first division in 1947. On August 2, 1947, he was invested with full ruling powers at the age of 18.

The area of the State is about 30 sq. miles and the population about 3,000. The average annual income is about Rs. 60,000.

AGRICULTURE

The State is mainly agricultural, the soil being very fertile. Wheat is the chief crop while among the subsidiary crops are gram, rice, jowar and sugar-cane. Water for cultivation comes from wells and from reservoirs formed by building *palas* across streams. One drawback, however, which the State is trying hard to remedy, is the backward nature of the individual cultivator.

The Ruler is progressive-minded and the State has ambitious plans for post-war reconstruction, which will include the construction of a good school, a hospital and an all-weather road through the State for which last the Administration is looking to the Central Government for help and encouragement.

MUDHOL STATE in the Deccan is situated between the Belgaum and Bijapur Districts of the Bombay Province. Mudhol is an ancient State dating back to 1397. The Ruling family claims descent from the Sesodia Maharanas of Udaipur. The capital of the State is Mudhol.

HIS HIGHNESS SHRIMANT RAJA BHAIRAV SINGH, the present Ruler of Mudhol, was born on October 15, 1929. He was educated at Westgate-on-Sea, England, the Shri Shivaji Preparatory Military School, Poona, and the Doon School, Dehra Dun. He succeeded to the *gadi* on November 9, 1937 and was invested with full ruling powers on July 10, 1947.

His Highness is an all-round sportsman and a good shikari.

The area of the State is 367 sq. miles and the population 72,447. The revenue of the State is about 5 lakhs.

The greater portion of the soil in the State is black and the staple crops are cotton, jawar, bajra, wheat and groundnut.

INDUSTRY

Industry is represented by ginning and pressing factories, slate works and oil expellers. A cement and sugar factory is also under contemplation. Handloom industry is carried on on a large scale at Mahalingpur town and a few other villages. There are over 3000 handlooms working in the State, and the saris which they produce are in great demand in the neighbouring districts and the Mysore State.

Mudhol town is connected to the Chikodi Road railway station on the M. & S. M. Railway by a metalled road. There is regular bus service between Mudhol town and Chikodi Road.

Primary education is free and only very small fees are charged for secondary education. Many scholarships are also granted to poor and deserving students. The State maintains a well-equipped hospital and maternity ward at Mudhol and two dispensaries elsewhere.

POST-WAR PLANS

As for post-war planning the Government of India have been approached for the construction of the Raybag-Bagalkot Railway and the project is under active consideration. Negotiations are also in progress about the establishment of a sugar and cement factory in the State. Finally, though the State itself has no independent irrigation projects in hand it is so situated that it stands to benefit by the Daddi Dam Scheme of the Government of Bombay if it materializes.

The Maharaja has declared his intention of establishing responsible government in the State under the ægis of the Ruler. Pending the establishment of a new Constitution, the administration is carried on by the Maharaja himself with the aid of an Executive Council consisting of the Dewan, who is the President of the Council, and two popular ministers.

MYSORE STATE is surrounded on all sides by the Madras Presidency except on the north and the north-west where it is bounded by the districts of Dharwar and North Canara respectively and towards the south-west by Coorg. The capital of the State is Mysore, which is also the residence of the Maharaja.

HIS HIGHNESS SIR SRI JAYA CHAMARAJENDRA WADIYAR BAHADUR, G.C.B. (1946), G.C.S.I. (1945), LL.D. (1942), the present Ruler of Mysore, was born on July 18, 1919. He succeeded to the *gadi* in August 1940 and was invested with full ruling powers on September 8, 1940. His Highness was educated at the Maharaja's College, Mysore and passed his B.A. from the Mysore University in 1938. He has travelled extensively in the Far East and Europe, and is an expert musician, a keen rider. He plays tennis and racquets and is fond of big game shooting.

The area of the State is 29,474.82 square miles, population: 73,29,140 and annual revenue Rs. 10,16,46,000. Mysore has acceded to the Dominion of India and has sent its own repre-

sentatives to the Indian Constituent Assembly.

The chief agricultural products are rice, ragi, sugar-cane, coffee, coconut, areca, cotton and mulberry.

Industries manufacturing iron and steel, cement, paper, sugar, cotton and silk, soaps, chemicals and fertilisers, sandalwood oil, etc., thrive in the State. The only aircraft factory in India is situated in Bangalore. Mysore is the principal gold producing centre in India.

Communications by road as well as by railway have been maintained throughout the State. There are 6,273 miles of road of which 5,051 miles are metalled. The State railway comprises of 609 miles of metre gauge line and 102 miles narrow gauge line. There is also a tram line running for 36 miles. Mysore is also rapidly developing into an important air port.

The State is devoting special attention to post-war planning for which many schemes have been formulated. So far Government have sanctioned 80 schemes relating to agriculture, veterinary and animal husbandry, electrical, railways and medical and public health. Government have ordered the working of details for the establishment of a rayon factory in the State.

ADMINISTRATION

The Maharaja has, by a proclamation, announced the establishment of responsible Government in the State. An Interim Popular Ministry has been formed with the Dewan, and 9 Ministers responsible to the legislature, with a Chief Minister. The Ministers now function as a cabinet with the Dewan and act on the basis of joint responsibility on all matters. The Interim Ministry has initiated the setting up of a constituent assembly composed of 76 elected members of whom 5 are Muslims and 9 depressed classes, to frame the new constitution. The new constitution was to have come into effect on July 1, 1948.

COUNCIL OF MINISTERS.—Dewan: DIWAN BAHADUR SIR A. RAMASWAMI MUDALIAR, K.C.S.I.; Chief Minister: K. CHENGALARAYA REDDY, B.A., B.L.; Ministers, Finance and Industries: H. C. DASAPPA, B.A., LL.B.; Law and Labour: K. T. BHASHYAM IYENGAR, B.A., B.L.; Public Works and Agriculture: H. SIDDIAH, B.A., LL.B.; Home: T. MARIAPPA, B.A., LL.B.; Local Self-Government: R. CENNINIGARAMIAH; Public Health and Excise: MAHMOOD SHERIFF, B.A., LL.B.; Education: D. H. CHANDRASEKHARAIYA, B.A., LL.B.; City Municipalities and Murai: RAJASEVASAKTA P. SUBBARAMA SETHY; Private Secretary to His Highness: AMATYASIROMANI SIR T. THUMBOO CHETTY; Chief Justice: RAJADHARMAPRAVINA DEWAN BAHADUR P. VENKATARAMANA RAO, B.A., B.L.

NARSINGARH STATE in Malwa lies between north latitude $23^{\circ}35'$ and $24^{\circ}0'$ and east longitude $76^{\circ}20'$ and $77^{\circ}10'$. It is bounded on the north by Indore, Kilchipur and Rajgarh States, on the east by Maksudangarh and Bhopal, on the west by Dewas and Gwalior, and on the south by Bhopal and Gwalior. The Ruler belongs to the Parmar clan of Rajputs. Besides Narsingarh which is the capital there are three towns *viz.*, Pachore, Khujner, and Chhapihera.

His Highness Rajah Shri Vikram Singhji Sahib Bahadur, K.C.I.E., the present Ruler, was born on September 21, 1909. He was educated at the Daly College, Indore, and the Mayo College, Ajmer. He also spent a year in Bangalore where he received his administrative training under the Mysore Government. In July 1928 he paid a visit to England, Scotland and France. In June 1929 he married a daughter of the late Ruler of Cutch. He ascended the *gadi* on April 23, 1924 and was invested with full powers on October 7, 1929. He again

The Maharaja is entitled to a salute of 11 guns.

His Highness has adopted as heir Maharajkumar Shri Bhanuprakash Singhji Sahib Bahadur, the eldest son of his youngest uncle, Maharaj Shri Prabhunath Singhji Sahib Dharmalankar. The Heir-Apparent who is in his nineteenth year is studying at the Daly College, Indore.

The area of the State is 734 sq. miles and the population 1,25,178 according to the 1941 census. The revenue is Rs. 10,77,000.

PRODUCE & INDUSTRY

The soil of the State consists mostly of the fertile black variety common to Malwa; and the main occupation of the people is agriculture. The principal food crops are jawar, wheat, maize and gram in that order of importance, and the principal cash crop is cotton. The State is the sole proprietor of the land, villages being leased out to farmers who are responsible for the assessed revenue of their holdings.

To develop the industrial resources of the State, a technical and economic adviser has been appointed. A Bank called the Hind States Bank has also been started under the patronage of the Maharaja Sahib Bahadur.

Narsingarh is well served by a net-work of motor roads. The nearest rail-heads are Bhopal 52 miles and Sehore 44 miles. Narsingarh is also only 21 miles from Biora on the Bombay-Agra Road.

Among the post-war projects are the opening of a cinema, the installation of a telephone system in the capital and the establishment of cottage industries like pottery,

Primary education, is free and liberal scholarships are granted to deserving students for higher education. The State maintains a good number of primary schools, four middle schools, a boys' high school and a girls' school.

Medical aid is free. There are well-equipped allopathic hospitals of all kinds in the State. The ayurvedic and unani systems are also encouraged in equal measure by the grant of suitable allowances to private practitioners.

Heir-Apparent

The State has been active in the sphere of social and economic reform. It has, for instance, abolished child marriage, the nukta ceremony and beegars. It has constructed culverts, irrigation tanks, etc. Takkavi loans are lavishly granted to cultivators each year, and a general remission of arrears of land revenue amounting to about Rs 10,83,000 has also been declared.

ADMINISTRATION

The Maharaja is assisted by a State Council in which there will be two elected members. There is

an independent High Court with C. B. Sanghi, M.A., LL.B., as Chief Justice, who also acts as Adviser-in-Chief to the Maharaja. Local Self-Government has also begun to function and the municipalities have a majority of elected members. The present constitution, however, is being revised by a Committee of six members who are to frame a new constitution.

President, Executive Council: His Highness Maharaja Shri Vikram Singhji Sahib Bahadur, K.C.I.E., Ruler of Narsingarh State; *Dewan & Vice-President:* Maharaj Shri Prabhunath Singhji Sahib, Dharmalankar, Dharmkesri; *Judicial Member:* Rai Sahib Munshi Brahma Dina, B.A., LL.B.; *General Member:* Ambika Prasad Kaushik, B.A.; *Revenue Officer:* Pandit Kundan Lalji; *Private Secretary to His Highness the Maharaja Sahib Bahadur:* Khan Sahib Mulla Abdul Quadir, N.K.D., B.A., LL.B.; *Comptroller of the Household to H.H. the Maharaja Sahib Bahadur:* Kunwar Khuman Singhji Sahib; *Personal Assistant to the Dewan & Vice-President, State Council:* Nagendra Mohan Vyas, M.A., LL.B.; *Council Secretary & Superintendent, Durbar Office:* Pandit Vaikuntha Nandan Vyas, B.A., L.S.G.D.; *Accountant General:* Pandit Jagannath Prasad Vyas, B.Com., Visharad. *Foodgrain Commissioner:* Pandit Ishwari Prasad Dube; *Director of Education:* Murlidhar Vijaivargiya, M.A., L.T.; *Chief Justice and Adviser-in-Chief to His Highness the Maharaja Sahib Bahadur:* C. Tiwari, B.A., LL.B.; *Munsif & Magistrate, 1st Class at Khujner:* G. K. Sharma, B.A., LL.B.

NAWANAGAR STATE is situated on the southern shores of the Gulf of Cutch in Kathiawar. Nawanagar comes first in order of preference among the Kathiawar States. Nawanagar has acceded to the Indian Union. The capital of the State is Jamnagar. The Royal family belongs to the Jadeja clan of Rajputs.

Lt. Gen. His HIGHNESS MAHARAJA JAM SHRI DIGVIJAYSINHJI SAHIB, G.C.S.I., G.C.I.E., K.C.S.I., the present Jam Sahib, was born on September 1, 1895. He was educated at the Rajkumar College, the Malvern College, and the University College, London. On April 2, 1933, he ascended the *gadi*, and in 1935 he married Gulabkunverba, a daughter of the Royal house of Sirohi. His Highness was elected Chancellor of the Chamber of Princes in 1939 which office he held till 1944. In the years 1942-1943 he was in England as one of the Indian members of the War Cabinet. Since then he has been pro-Chancellor. The Heir-Apparent Yuvraj Maharaj Kumar Shri

Shatrushalyasinhji was born on February 20, 1939.

The area of the State is 3,791 sq. miles and the population 5,04,006 according to the 1941 census. The revenue is about Rs. 98 lakhs.

The State is mainly agricultural, the chief crops being bajri, jawar, wheat, gram. Among the cash crops are ground-nut, garlic, castor seeds and cotton. The State has the largest irrigation works on the west coast of India near Jodiya. Another big project under consideration aims at harnessing the waters of the Saso river.

INDUSTRIES

The State has the following industries: spinning and weaving mills, paint manufactures, wire products, salt works, tin factories, cement works, tiles and potteries, plastic button manufacture, match works, soap factories and a mineral development syndicate. The State is also trying to revive the once famous gold-thread industry. There are oyster rocks forming pearl fisheries on the northern coast. The State has great potentialities for a fishing industry. The State has an extended sea-coast and the harbours of Jodiya Bedi and Salaya, one of which Bedi is certain to develop into a major port with the loss of Karachi. Jamnagar which has a fine aerodrome is on the Bombay-Karachi line of the Air Services of India. The State owns a railway and there is a regular bus service on fine metalled roads between important centres and the capital. Besides the Trunk Telephone service at Jamnagar there is an inland telephone system.

Primary and Secondary education is free. There are 275 primary schools, 37 middle schools, and 4 high schools. Scholarships are provided for higher education.

There are 4 hospitals in the capital and dispensaries in all important towns and villages. Free ambulance service is provided for urgent cases. With the opening of an Ayurvedic college, Jamnagar has become a great centre of ayurvedic studies.

ADMINISTRATION

The administration is carried on under the guidance of His Highness by the Dewan M. D. Solanki assisted by the secretaries.

Military Secretary and Home Member: COL. MAHARAJ SHRI PRATAPSIHJI; *Judicial Secretary:* I. C. MUNSIF, B.A., LL.B.; *Revenue Secretary:* KUMAR SHRI SURESHJI, B.A. (Cantab.), M.Sc. (California); *Political Secretary:* DWARKADAS L. SARAYA, B.A.; LL.B.; *Chief Medical Officer:* DR. P. M. MEHTA, M.D., M.S., F.C.P.; *Honour Personal Assistant:* LT.-COL. GEOFFREY CLARKE, M.B.E.; *Manager & Engineer-in-Chief:* J. D. Rly.; F. J. DE SOUZA.

PALANPUR is bounded on the north by the States of Marwar and Sirohi, on the east by Sirohi Danta and the Mahi Kantha Group, on the south by the Baroda State, and on the west by the Banas Kantha Group. The capital of the State is Palanpur situated on the B.B. & C.I. Railway. Palanpur is also the junction for the Palanpur State Railway. Palanpur is a very old settlement of which mention is made as early as the 8th century.

The Ruling Family is Yusufzai Lohani Pathan, His Highness being the 29th Ruler of his House. The State is entitled to a salute of 13 guns.

LT.-COL. H. H. ZUBD-TUL-MULK DEWAN MAHAKHAN NAWAB SHRI TALEY MUHAMMAD KHAN BAHADUR, G.C.I.E., K.C.V.O., A.D.C., NAWAB of Palanpur, was born on July 7, 1883. He was educated privately. He was married on January 20, 1906, to the daughter of

Malek Shri Rustomkhanji of Dasada, and his son and Heir-Apparent Nawabzada Iqbal Muhammad Khan was born on June 8, 1917. His Highness ascended the *gadi* on September 28, 1918. He was granted an honorary commission as captain in the Army in 1916, awarded a K.C.S.I. on June 5, 1920, awarded a K.C.V.O. on March 17, 1922, promoted Major in 1930, and made G.C.I.E. on January 1, 1932. He was promoted to the rank of Lt.-Col. in 1936. His Highness was a member of the Indian Delegation to the 9th Assembly of the League of Nations at Geneva in September 1928.

The area of the State is 1,774.64 sq. miles, and the population is 3,15,855. The revenue of the State is Rs. 33,69,842.

There is a considerable trade in cloth, grain, sugar and rice in the State.

Revenue Minister: MUSHIR-UL-MAHAM Y. Y. SYED, B.A., LL.B.

Puisne Judge: BHASKER RAO V. MEHTA, M.A., LL.B.

PATIALA is the premier State in East Punjab and is the largest of the three Phulkian States. The State is divided into three main portions, of which the most extensive is situated in the plains south of Sutlej river. The State is rich in antiquities. The majority of the population belongs to the Sikh religion. The Sikhs are very much attached to the Rulers of Patiala for guidance and the advancement of all their interests. In Sikh history, the voice of Patiala reveals itself to be prominent.

HON. LIEUT.-GENERAL HIS HIGHNESS FARZAND-I-KHAS DAULAT-I-INGLISHIA MANSUR-UL-ZAMAN AMIR UL-UMRA MAHARAJADHIRAJ RAJ RAJESHWAR SHRI MAHARAJA-I-RAJGAN SHRI SIR YADAVENDRA SINGH, G.B.E., G.C.I.E., LL.D., YADU VANSHAVATANS BHATTI KUL BHUSHAN, the present Ruler, was born on January 7, 1913. He succeeded to the *gadi* on March 23, 1938.

He received his early education from private tutors and then joined the Aitchison College, Lahore. In addition he received

police training at the Police Training College, Phillaur, in the Punjab.

A son and heir to His Highness was born on March 11, 1942.

Patiala State covers an area of 5,932 square miles and its population according to the census of 1941 is 1,936,259. The annual income of the State is about Rs. 2,70,00,000. His Highness is entitled to a salute of 19 guns. The State has acceded to the Dominion of India.

PRODUCE

Patiala is predominantly an agricultural State. And Government has been most active in developing its agricultural resources. The Agricultural Department created as early as 1919 has been doing useful work in popularising methods of intensive and extensive cultivation and introducing improved varieties of seeds. Also cultivators are encouraged to use better implements such as tractors and to construct tube-wells. The Rural Uplift Department was created in 1939 with a view to raising the standard of living of the villagers and broadening their outlook on life. It aims at educating the people in civic responsibilities and improving the sanitary conditions of the villages.

INDUSTRY

The mineral resources of the State, though yet largely unexploited, are believed to be not inconsiderable. In addition to this the State has valuable forests. A number of factories have been started. The cement works at Surajpur and

the Biscuit Factory at Rajpura are among the biggest factories of their kind in India, and are being run on up-to-date lines. As regards transport 139 miles of broad-gauge railway line have been constructed by the State at its own expense.

EDUCATION

There are three colleges, including one for girls, and ten high schools. All these are being run by the State. Primary and female education is free throughout the State.

POST-WAR PLANS

A number of schemes for ameliorating the lot of the demobilised soldier and ensuring for him decent living conditions have been sanctioned. A certain percentage of vacant posts have been reserved for ex-servicemen. His Highness has also prepared elaborate post-war development and reconstruction plans which aim at substantial economic, social and educational uplift of the people. Several industrial projects will be started at an early date and care has been taken to see that the common man is really benefited by them.

ADMINISTRATION

His Highness has introduced several measures of radical and momentous reforms in spite of the strains and stresses of World War II. Separation of the Executive from the Judiciary, re-organising the Judicial Department, and the constitution of the Judicial Committee of the Ijlas-i-Khas to hear appeals against the verdicts of the High Court are among his foremost achievements. The abolition of unpopular escheat laws, the creation of the Industries Department, the addition of a Maternity Ward to the Lady Dufferin Hospital at a cost of Rs. 75,000, the opening of the Bahadurgarh Fruit Farm, increase in the salaries of gazetted

officers, ministerial staff, inferior servants and the personnel of the Patiala State Forces and introduction of an elective system in the Municipalities and small town committees, are other achievements of his rule. A T.B. Hospital accommodating 70 beds and 15 cottages is under contemplation. Also a Civil Service Commission has been constituted for the recruitment to civil services on a competitive basis.

In fulfilment of his pledge to grant full responsible government to his people, His Highness has announced constitutional reforms of a far-reaching character. These however, now stand relegated in view of the recently formed Union of the East Punjab States which include Patiala, Nabha, Jind, Faridkot, Kapurthala, Malerkotla, Kalsia and Nalagarh. His Highness the Maharaja of Patiala has been selected as Rajpramukh for life. The new Union was inaugurated on 15th July. A scheme for responsible government for all the integrated Punjab States is now under active consideration.

His Highness as Chancellor of the Chamber of Princes played a vital role in shaping the destiny of the country. He exhorted his fellow Princes to join the Constituent Assembly. The Maharaja takes a special interest in the well-being of his community. With a view to promoting its solidarity, he established the Panthic Durbar which aims at unifying the different elements in the Panth.

The State gave the lead in setting up camps for the refugees coming over from Western Pakistan. More than 2,00,000 refugees have so far been permanently settled on land and in business and 3,18,000 acres of land have been allotted to them. The majority of the Sikh refugees from the West Punjab have settled in Patiala State.

PORBANDAR STATE lies in the west of the Peninsula of Kathiawar between 21°58' and 21°14' north latitude and 69°28' and 70°28' east longitude. The capital city of Porbandar is situated on the coast of the Arabian sea on the direct route between Bombay and Karachi. The State forms a triangular strip of territory along the shore of the Arabian sea. The Ruling family belongs to the Rajput clan of the Jethwas claiming descent from Shri Hanuman the devoted friend and ally of the great King Shri Ramchandra of the Ramayana age.

HON. LT.-COL. HIS HIGHNESS MAHARANA SHRI SIR NATWAR-SINHJI BAHADUR, K.C.S.I., the present Maharana Saheb of Porbandar, was born on June 30, 1901. He succeeded to the *gadi* in 1908.

His Highness was educated at Rajkumar College, Rajkot. He came first at the All-India Chiefs' Diploma Examination in 1918. He married Princess Rupaliba, M.B.E. (dec'd. 1943), the daughter of the late Ruler Sir Daulatsinhji Bahadur of Limbdi, in 1920.

He skippered the first All-India Cricket Team to England in 1932.

The area of the State is 642.25 sq. miles, and its population 1,46,648 according to the 1941 census. The average revenue amounts to Rs. 40,00,000 the main sources being customs and land revenues. The Ruler is entitled to a salute of 13 guns. The State has acceded to the Dominion of India.

The State is rich in quarries, the most important being the limestone quarries at Adityana situated at the foot of the Satpuri Hills and yielding peerless building stone known as the Porbandar stone.

The main irrigation in the State is through tanks and wells. As a result of an extensive programme the State is today dotted by tanks of various capacities and equipped with a large number of field wells.

AGRICULTURE

The State soil is fairly fertile. A large portion of the State consists of saline soil and a considerable portion of mineral land. Drainage of the Barda Hills and inundation of the rivers in flood are also factors which govern agricultural prospects. The soil along the sea-coast is suitable for cocoanut plantation. The principal crops are gram, cotton and pulses. The Hope Reclamation Works named after H.E. the Marquess of Linlithgow are also meant to contribute to the development of agricultural resources of the State.

INDUSTRIES

The principal industries of Porbandar are situated in the northern part of the city. These are Jagdish Industries Ltd., manufacturing vegetable products and the Swastik Industries Ltd., manufacturing hosiery products. Besides, there is a cement factory, also a textile mill, match factory and oil mills.

The administration of the State is always being conducted in accordance with the laws of the State, many of which are adopted from British Indian Enactments. It had always been the policy of His Highness to keep the people associated in all important matters affecting the interests of the State.

The Legislature known as the Raj Sabha (Legislative Assembly) is composed of 30 to 32 members of whom 24 are elected, and only 6 are the Ruler's nominees. The Executive consists of the Chief Minister and the two Ministers, one being designated as Revenue and Finance Minister and the other as Home Minister. The appointment of Chief Minister rests with the Ruler. The two ministers are also appointed by His Highness, the selection being made from a panel of four nominees in the confidence of the Legislature. The two Ministers are responsible to the legislature. The civil service and the Foreign and Political Depts. are reserved to the Chief Minister. The Legislature is competent to pass for the Ruler's assent, enactments in respect of all matters falling under the portfolios of the two Ministers, make interpellations, move resolutions, and regulate financial administration. 14 Raj Mantris and Raj Shubhechhaks constitute two orders of advisers on matters relating to civic and rural questions of public welfare. The village Panchayat Act made applicable to all the unalienated villages, ensures simple, speedy and inexpensive justice.

HEIR-APPARENT

Maharajkumar Shree Udaybhan was born on October 6, 1910. He was adopted by His Highness the Maharana Saheb on June 12, 1941, from Jethwa Shree Shivsinghji of Shrinagar. He received second-

ary education at the Garasia College, Gondal. After passing Matriculation Examination of the Bombay University in 1926, he joined the Agricultural College, Poona, and took the B.A. degree in 1932. Before adoption he underwent training in the Bombay Port Trust and Customs Department, and was also Preventive Officer till adoption. He is keen at tennis and billiards.

The Yuvraj married Rajkumari Shri Premkunverba, sister of Thakore Saheb Shri Chhatrasal-sinhji of Limbdi on July 3, 1941. He takes special interest in the administrative activities of the State with which he has been closely associated by the Maharana. His solicitude for the welfare of the people and peaceful progress of the State has made him very popular. He keeps himself fully informed of local conditions as well as larger questions concerning the State.

Dewan : M. S. Jayakar, M.A., C.I.E.

RADHANPUR STATE is situated in the north of Gujarat and has 174 villages. Its western boundary passes over portions of the Rann of Cutch, while on the east it borders Kankrej and Patan district of the Baroda State. On the south it is bounded by Vanod, Dasada and Jhinjhuwada, and on the north by Wao and Tharad States. There are three rivers, viz., Banas, Saraswati and Rupen. Area: 1,150 square miles; Population: 67,923; Revenue: Rs. 15 lakhs.

H. H. NAWAB SAHEB MURTAZAKHAN JORAWARKHAN BABI BAHADUR is a descendant of the illustrious Babi Family who since the reign of Humayun have always been prominent in the annals of Gujarat. He is the 10th Nawab occupant of the *gadi* since the foundation of the Babi House by Babi Jafarkhan. Born: 10th Oct., 1899. Recognition

announced by Govt. on 1st Jan. 1937. Investiture Durbar with full powers was held on 7th April 1937. Educated: Rajkumar College, Rajkot, and received administrative training under His late Highness. Married the daughter of H. H. the Nawab Saheb of Palanpur in 1925, by whom he has one daughter. In 1929 H. H. married the daughter of His late Highness Nawab Sir Jalaludinkhan of Radhanpur. Hereditary and permanent salute: 11 guns.

The principal agricultural products are cotton, wheat, bajri, juwar, mung, rapeseed and castor-seed. The State is noted for its fine breed of cattle known as Wadhia or Kanrej.

INDUSTRY

There are 8 cotton ginning and one cotton pressing factories. There is also a Match Factory, an Oil Mill and a number of snuff grinding mills.

The Radhanpur State has under contemplation a scheme of irrigation designed by Dr. S. K. Gurtu, Irrigation Expert, and N. B. Baxter, Retired, Chief Engineer, Bombay Presidency, whereby all the surplus water of Banas and Saraswati rivers will be conveyed in various directions through distributaries.

A regular motor service is running between the capital town of Radhanpur and Harij, a Railway Station on G. B. S. Railway, which is at a distance of about 23 miles from Radhanpur. There are postal, telegraph and telephone communications. *Dewan*: Gajanan U. Bhatt, B.A., M. Ed. (Leeds).

RAJKOT STATE is the geographical centre of Kathiawar and has a temperate and healthy climate suited for both Indians and Europeans. The rulers of Rajkot are Jadeja Rajputs and direct descendants of the rulers of Cutch and Jamnagar who trace back their lineage to the mar dynasty of Shri Krishna. The area formerly known as civil station was retroceded to the Rajkot State on July 20, 1947. It is named Pradyumna Nagar after the present Ruler. The State is entitled to a dynastic salute of 11 guns. The capital is Rajkot.

HIS HIGHNESS THAKORE SAHEB PRADYUMNASINHJI OF RAJKOT was born on February 24, 1913. He was educated at Panchini, the Rajkumar College, Rajkot, where he won a gold medal for good conduct, and at Highgate. He was married on May 30, 1932. Heir-Apparent, K. S. Manharajji, who is now studying at the Rajkumar College, was born on November 18, 1935. His Highness ceded the *gadi* on June 12, 1940, and was invested with full powers on August 17, 1940.

The area of the State is 285 sq. miles, and the population 1,49,000. The revenue is about Rs. 30,00,000.

The usual food grains with cash crops like cotton and sugar-cane are the principal agricultural products. About 3,000 acres are under tank irrigation, and 8,784 acres under well irrigation. The Thorala Dam project which is under consideration will irrigate another 15,000 acres when it is complete.

INDUSTRY

Lately Rajkot has made great progress in industry and commerce. There is a cotton textile mill, a gunning pressing factory, a leather factory, 3 big oil mills, a hosiery works, a metal factory for brass and copper utensils, a number of flour mills, and many other small industrial concerns. Besides the Rajkot State Bank, ten banks established in the District have their branches in the State. The State is well served by railways. The capital is situated at the junction of three railways: the Gondal Railway, the Jamnagar-Dwarka Railway and the Morvi Railway. Four trunk roads coming from four different directions converge here. In education too, Rajkot is in the forefront. There is the Dharmendrasinhji Arts and Science College, the Rajkumar College, the Hunter Training College for men and the Barton Training College for women, besides three high schools and a separate girls' school.

ADMINISTRATION

The administration is carried on by the Executive Council consisting of His Highness the Thakore Saheb as President, the *Dewan* Saheb as Vice-President and two other councillors.

Dewan and Vice-President, State Council: RAJMITRA R. S. MANE PATIL, C.I.E., B.A., LL.B., F.R.S.S., F.R.E.S. (London); *Chief Judge, High Court*: S. C. SHROFF, Bar-at-Law; *First Member, State Council*: KHAN BAHADUR K. R. GREEN; *Second Member, State Council*: POPATLAL P. ANANDA, B.A., LL.B.; *Revenue Officer*: HARILAL BRIMJI B.A.; *Sar Nyayadhisht*: G. K. DWIVEDI, Advocate; *Police Commissioner*: K. D. PANTHAKI; *Huzur Personal Assistant*: S. Y. DURVE, B.A.; *Managing Engineer, Rajkot State Electric Supply Company*: RAI BAHADUR A. C. DAS, M.A.I.E.E.; *Chief Medical Officer*: DR. A. P. MEHTA; *Principal, Dharmendrasinhji College*: DR. R. K. YAGNIK, M.A., Ph.D. (London); *Chief Engineer*: T. D. SANGHAVI, B.E. (Civil); *Secretary, State Council and Officer-in-Charge, Pradyumna Nagar*: D. B. PATEL, M.A.; *Treasury Officer*: V. M. RAJADA; *Educational Officer*: C. A. BUCH, M.A., B.Sc.; *Diwani Nyayadhisht*: V. S. UPADHYAYA, B.A., LL.B.; *First Class Magistrate*: P. L. CHOKSHI, Advocate; *Customs and Excise Officer*: RAO SAHEB H. R. BUCH, B.A., LL.B.; *Riyasat Superintendent*: R. S. JADEJA.

RAJPIPLA is the premier State in the Gujarat States. It is bounded on the north by the Narbudda with the exception of a tract in the north-east part of the State, on the north-east by the territories of the Baroda and Chhota Udepur States and some of the Sankheda Estates, on the south by the Baroda State and Surat District, on the east by the West Khandesh District, and on the west by the Baroda State and the Broach District. The Rulers are Gohel Rajputs, descended from the family which ruled at Perim in the thirteenth century.

LT.-COL. HIS HIGHNESS MAHARAJA SHRI SIR VIJAYSINHI, G.B.E., K.C.S.I., the present Ruler of Rajpipla, was born on January 30, 1890. He was educated at the Rajkumar College, Rajkot, and Imperial Cadet Corps, Dehra Dun.

The Maharaja has travelled extensively in Europe and America. He is an Honorary Lt.-Col. in the XVI Light Infantry. He is interested in polo, racing and sporting. He won the Derby in 1934 with 'Windsor Lad.'

The area of the State is 1,617.5 sq. miles, its population according to 1941 census 2,49,032 and its total revenue Rs. 65,73,024, the chief sources being land revenue, excise and forests. The Ruler is entitled to a permanent hereditary salute of 13 guns. The State has acceded to the Dominion of India. The State Forces comprise one full infantry company and one full garrison company.

AGRICULTURE

Agriculturally the State is well-off. The soil is fertile and produces foodgrains, cotton, oilseeds, tobacco, etc. The principal crop is cotton which is wholly of the 1027 A.L.F. Long Staple variety. Sowing of inferior cotton is prohibited by law. Rajpipla cotton has established a good reputation in Bombay and other markets and is sought after by the trade.

The State possesses Cornelian and Agate mines. The famous Cup of Ptolemy is reputed to have come from the mines at Limbodra in the Rajpipla State.

IRRIGATION

Narbada, the biggest river in Gujarat, runs through this State. A dam site for forming the biggest lake on the Narbada is situated a little higher up at Mokhadi in this State. Investigation is at present being made by a Special Officer appointed by the Central Government for preparing the Tapti-Narbada Multi-purpose Project. When this scheme materialises, about $\frac{1}{2}$ the area of this State will be under irrigation.

Communications have been developed to a fairly high degree in the State. There are railway communications within the State connecting with the main B.B. & C.I. Rly. at Ankleshwar, having its terminus

at Rajpipla. There are two railway lines from Jhagadia one running upto Netrang and 19 miles long, and the other leading to the river Narbada thus opening up river traffic to the Bay of Cambay and Kathiawar. Rajpipla has an aerodrome for civil aviation purposes.

ADMINISTRATIVE REFORMS

Since the assumption of ruling powers by the present Maharaja many important reforms have been introduced into the State. The State employees have been given revised scales of pay with adequate dearness allowance to compensate for the high cost of living with benefit of leave, pension, etc. Survey settlement was introduced into the State as early as 1889-90 and has been extended to every village.

A post-war reconstruction committee has been formed for the moral and material advancement of the people of the State. As a result of the committee's deliberations in the field of education, several reforms have been introduced, namely, free and compulsory primary education (including physical) throughout the State by stages, opening of primary schools in all the villages numbering about 175, opening a college for the training of primary teachers in the State, provision for the award of liberal grants for the establishment of libraries and reading rooms in villages, maintenance of boarding houses for students of the Rajput and Bhil communities and a hostel attached to the high school for the convenience of village students, liberal grants-in-aid to private educational institutions in the State for their maintenance, provision of modern equipment in the high school such as audio visual and visual apparatus, etc., maintenance of a Sanskrit pathshala for imparting religious and cultural education, liberal grants of scholarship, for secondary and

higher education, and the appointment of a council to advise the State in all matters relating to education. Primary education has been always free throughout the State.

Liberal endowments have been provided for the benefit of widows and destitutes. Annually Tagavadi advances are liberally granted to agriculturists for seed, bullocks and general agricultural purposes. Free grazing of cattle, free supply of firewood and other minor forest produce for *lonahide* consumption are generously allowed in forest areas. Encouragement is given to trade and industry such as sugar, cement, etc. The 1027 A.L.F. variety of cotton has been introduced throughout the State, and pressing and ginning factories have been developed. Railways have been extended, motor bus passenger services have been started for public convenience. District and Taluka Local Boards have been established. The State Forces have been organised. A legislative council has been established and a scheme has been evolved for the grant of responsible government to the people by stages. The Debt Conciliation Act and the Debt Conciliation Court give adequate relief to agricultural debtors. There is a High Court of Judicature, which is completely independent of the Executive. Taluka Advisory Boards consisting of non-official members have been established.

POST-WAR PLANS

The most important post-war plans are (1) evolution of a scheme for the provision of wells for drinking and domestic purposes in each village, (2) remodelling existing tanks in villages for the purpose of irrigation as far as possible, (3) provision of suitable roads for public convenience and (4) the development of village industries including the establishment of a model agricultural farm.

ADMINISTRATION

The State subjects enjoy complete freedom and security. His Highness is accessible to all and is always ready to give a patient hearing to any of his subjects.

Interim Executive Council: President: YUVA-RAJA SHREE RAJENDRASINH; State Nominee: KHAN BAHADUR PHEROZE D. KOTHAVALA, B.A., LL.B.; Popular Ministers: SURAJRAM D. PUROHIT, B.A., LL.B., HIRALAL M. GANDHI, B.A., LL.B., and DESATBHAI BAVABHAI; High Court Judge: SIR HORMAZDIAR P. DASTUR, Kt., Bar-at-Law.

HEIR-APPARENT

YUVRAJ SHRI RAJENDRA SINHI was born on March 30, 1912. He was educated at Mayo College, Ajmer, and Royal Military Academy, Woolwich. He has been the Army Minister since 1943. The Maharaja's younger sons are Maharajkumar Pramodsinhi, born in 1917 and Maharajkumar Indrajitsinhji born in 1925.

RAMPUR STATE is situated in the north of the Rohilkhand Division in the United Provinces of Agra and Oudh and is bounded on the north by the Naini Tal district, on the east by the Bareilly district, on the south by the Budaun district and on the west by the Moradabad district. The area of the State is 892.54 square miles. The State is mainly agricultural, rice, wheat, maize, cotton and sugarcane being the chief crops. Population of the State according to the census of 1941 was 4,77,042. Revenue in 1946-47 was Rs.78,72,380. The State is entitled to a permanent Salute of 15 guns.

The present Ruler MAJ. GEN. HIS HIGHNESS ALIJAH FARZAND-I-DILPIZIR-I-DAULAT-I-INGLISHIA, MUKHLIS-UD-DAULA, NASIR-UL-MULK, AMIR-UL-UMARA, NAWAB SIR SYED RAZA ALI KHAN BAHADUR, MUSTAID-I-JUNG, G.C.I.E., K.C.S.I., D. LITT., LL.D. was born on 17th November 1906. Educated at Rajkumar College, Rajkot. Married the daughter of the late SAHIBZADA SIR ABDUS-SAMAD KHAN, Kt., C.I.E., in 1921, and has 3 sons and 6

daughters. His Highness ascended the *gadi* on June 20, 1930.

His Highness is the Pro-Chancellor of the Aligarh Muslim University, Hon. Colonel in the 9/11th Jat Regiment, Hon. Colonel, Hodson's Horse, President of the Board of Trustees, Shia College, Lucknow, and a member of the East India Association and Marlborough Club, London.

Colonel Nawabzada Syed Murtaza Ali Khan Bahadur, M.B.E., the Heir-Apparent, was born on 22nd November 1923. Educated at Wellington College, London, passed Senior Cambridge from the Doon School, Dehra Dun in 1942. Was A.D.C. to His Excellency General Sir Claude Auchinleck, Commander-in-Chief from July 1943 till April 1946.

During the reign of the present Ruler, the State has made great progress in Commerce and Industries, and the City of Rampur has now become one of the biggest industrial towns of the United Provinces. There are two Sugar Mills, a Textile and an Oil Mill, a Match Factory, Wood Turnery, Fabrics Factory, Ice Factory, a Distillery and Chemical Manufacturing Company, Cottage Industries and Rampur Tannery and Leather Man facturing Factory.

Besides the two big rivers Ramganga and Kosi and other small rivers flowing from the Naini Tal district into the State, there is a big system of canals of 133 miles in the State which irrigates more than 30,000 bigas of land. There are also tube wells constructed in the areas not served by the canals.

A railway line passes through the State connecting Rampur with Moradabad and Bareilly on the old O. & R. section of the East Indian Railway. There are four Post Offices in Rampur city and a branch post office in each of the Tehsils and also in some of the important villages.

Primary and Secondary education is given free. Liberal Scholarships are granted for secondary and higher education. The State maintains well-equipped hospitals both in the city and at the Tehsil Headquarters.

ADMINISTRATION

The State Council is responsible to His Highness and at present consists of:—
President: COL. SYED B. H. ZAIDI, C.I.E., BAR-AT LAW, *Chief Minister;* *Vice-President:* RAI BAHADUR MAN MOHAN, M.A., *Political Minister;* *Members:* COL. NAWABZADA SYED JAFAR ALI KHAN BAHADUR; RAGHUNAND KISHORE, *Law Member;* DR. IHSAN MOHAMMAD KHAN M. A., Ph. D., *Finance Minister;* *Secretary:* SAHIBZADA MOHAMMAD YUSUF KHAN BAHADUR, B.A. (Cantab.).

RATLAM STATE is the premier Rajput State in the Malwa group in Central India. The Ruler of Ratlam is the recognised head of the Rajputs of Malwa.

HIS HIGHNESS MAHARAJA SHREE LOKENDRA SINGHJI SAHEB BAHADUR, the present Maharaja of Ratlam, was born on November 19, 1927. He was educated at the Mayo College, Ajmer, Daly College, Indore, Col. Brown's School, Dehra Dun, and St. Columbia School, Delhi. He has also completed his practical training in administrative work on January 19, 1947. His Highness married a daughter of Lt.-General Sir Shankar Shumshere Jung Bahadur Rana, K.B.E. of Nepal. He succeeded to the *gadi* in February 1947 and was invested with full ruling powers on August 4, 1947.

The Young Maharaja accompanied his late father to

England to attend the coronation and had the privilege of being invited to all functions at Buckingham Palace. He was specially presented to their Majesties the King and Queen at Windsor Castle and Buckingham Palace. He is an all round sportsman.

The area of the State is 693 sq. miles, its population 1,26,117 and its average revenue Rs. 15,00,000. The Ruler is entitled to a salute of 15 guns within and 13 guns outside his State. The State has acceded to the Dominion of India.

ADMINISTRATION

With a view to associating the people with the administration of the State, His Highness formed a committee to propose constitutional reforms suitable for introduction in the State. The committee has submitted its report and the proposed reforms are being implemented. Two popular Ministers have been appointed. The administration is assisted by a State Council of five Ministers of whom one is the President and the Chief Minister.

STATE COUNCIL

President and Chief Minister: DEWAN BAHADUR Pt. BRIJ CHAND SHARMA, M.A., LL.B.; *Ministers:* RAO BAHADUR KESARI SINGHJI PANCHOLI, B.A., LL.B., *Deputy Chief Minister;* THAKUR MAHENDRA SINGHJI of Sarwan, *Minister-in-Waiting;* DR. DEVISINGHI, *Minister for Education and Health;* LAHAR SINGHJI BHATI, *Minister for Local Self-Government;* THAKUR PARBAT SINGH, *Secretary, Council.*

REWA is the largest State in Central India. The State is bounded on the north by the Banda, Allahabad and Mirzapur Districts of the U.P., on the east by the Mirzapur District of U.P. and Surguja District of C.P., on the south by the Central Provinces and on the west by the States of Maihar, Nagod, Sohawal and Kothii. The State has a number of waterfalls of which, Chachai and Keoti, are famous for their height and grandeur. Area of State is 13,000 sq. miles. Population 1,820,445 (1941 census). Revenue Rs. 65,00,000. Salute 17 guns.

HIS HIGHNESS BANDHIVESH MAHARAJADHIRAJA MARTAND SINGH JU DEO BAHADUR, Maharaja of Rewa, was born in 1923 and ascended the *gadi* on 7th February 1946; was invested with ruling powers, 1st April 1946. He was educated at Daly College, Indore and Mayo College, and received training in 1942, at I.C.S. Probationer's Course, Dehra Dun, and Administrative training in Mysore State for over a year.

His Highness married on 23rd Aug. 1943 the daughter of His late Highness Maharao Shree Vija Raj Singh Ji Sewai Bahadur of Kutch.

The Maharaja is a keen sportsman and has shot 42 tigers. He bagged his first tiger at the age of 13 in 1936. He is a member of the General Council of Daly College and of the Managing Committee of King Edward Medical School, Indore.

The general administration of His Highness' Government is conducted by a State Council of which His Highness himself is the President. The State Council consists of four Ministers, a Deputy Prime Minister and a Prime Minister who is also the Vice-President. The judicial administration is independent of the executive and accordingly a High Court consisting of the Chief Justice and two Puisne judges, has been constituted.

The State is very rich in minerals and there are extensive coal producing areas in the Southern and Eastern portions. Large deposits of corundum noted for their fine quality are also found all over the country. The other minerals found in the State are iron ores, copper, lead, yellow ochre, lime stone, felspar, fire clay, bauxite and sillimanite. There are extensive forests in the State which produce excellent timber.

The State has a Shellac Factory to convert lac found in the state into shellac. Bagai grass and bamboos are also found in great abundance and a Paper Factory is being established in the State.

The soil is fertile and bears excellent crops, rice, maize, Kodau, Bajra, etc., being grown in the autumn and wheat in the spring. Irrigation is mainly by wells and bands.

■ Satna (30 miles) is the Railway Station for Rewa and is situated on the Allahabad-Itarsi Section of the Great Indian Peninsula Railway which passes through the State for a distance of about 18 miles. The B. N. R. branch line from Katni to Bilaspur and the C. I. C. Rly. pass right through the Southern District for about 140 miles. There are about 1,800 miles of roads in the State out of which 500 miles are metalled and the remaining are fair weather roads.

SACHIN STATE lies, roughly speaking, within the limits of Surat Dt. of the Bombay Presidency. The villages constituting the State are widely scattered, some of them being surrounded by Dominion territory, and others by portions of the Baroda State.

The Nawab of Sachin is by descent an Arab or Abyssinian. Originally the Nawabs of Sachin were the Rulers of Janjira. But in the time of the founder of the House, Nawab Sidi Abdul Karim Mahommed Yakut Khan, there was a rebellion and the Nawab's younger brother was put on the throne of Janjira. Eventually, the East India Company and the Mahrattas offered mediation and Nawab Abdul Karim Khan founded the State of Sachin. Thus Sachin is the senior of the only two Abyssinian States in India, the other being Janjira.

The permanent capital of the State is Sachin and the summer capital Dumas. Dumas is a delightful sea resort, ten miles by motor road from Surat. It is the only summer resort of its

kind on the west coast offering trunk telephone facilities and other modern conveniences. Among the amusements in Dumas are sea-bathing, tennis, cricket, motoring and so on.

His Highness Mubariz-ud-Daulah, Muzzafar-ul-Mulk, Nusrta-E-Jung, Nawab Bahadur Sidi Mahomed Haider Mahomed Yakut Khan, Nawab of Sachin, the present Ruler, was born on September 11, 1909. He was educated at home and later at the Rajkumar College, Rajkot. He succeeded to the *gadi* and was invested with full ruling powers on November 20, 1930. On July 23, 1937, he married Her Highness Alimama Sultan Nur Mahal Nawab Yaqut Zamani Begum and on May 10, 1938, Her Highness Manzar Sultan Mumtaz Mahal Nawab Massarrat Zamani Begum.

AGRICULTURE

The soil in the State varies from black to light. The usual cereals are known as well as cotton and sugar-cane. Irrigation is carried on from tanks and wells. There are no forests in the State. Cotton yarn and coarse cloth are manufactured. A breakwater at Dumas and a causeway at Bhimpur, by keeping back seawater have contributed towards the reclamation of a considerable area of uncultivable salt land.

The chief link with the Dominion is the B.B. & C.I. Railway on which Sachin is a station.

His Highness has introduced full responsible government in the State and the Interim Ministry will be elected very shortly.

SAILANA STATE is situated in Central India. The Ruler is a descendant of the Rathor Rajput clan of the Jodhpur House and is the twelfth Ruler of Sailana. The Head Office of the Kshatriya Mahasabha remained at Sailana for ten years.

HIS HIGHNESS RAJA SAHIB SIR DILEEP SINGHJI BAHADUR, K.C.I.E., the present Ruler of Sailana, was born on March 18, 1891. He was educated at Mayo College, Ajmer. He married a daughter of His Highness the Maharawatji Sahib of Partabgarh in 1909, and after her demise, a daughter of Rawatji Sahib of Meja (Mewar). The Heir-Apparent Maharajakumar Digvijayasinghji Sahib, M.A., was born on October 15, 1918.

The Maharaja ascended the *gadi* on July 14, 1919. The Rajputs of the surrounding non-Rajput States consider His Highness as their head and the Rajputs of India consider His Highness as one of the foremost leaders and a distinguished member of the community. His Highness is the

patron of the Mahasabha and has presided over its annual sessions six times. He is President of the Kurukshetra Restoration Society, Thaneshwan, and Council of Bharat Dharma Mahamandal. He is also a member of the General Council of the Mayo College, Ajmer and Daly College, Indore.

The area of the State is 297 sq. miles, its population 40,228 and its annual revenue Rs. 6,00,000. The Ruler is entitled to a salute of 11 guns. The State has joined the Rajasthan States.

EDUCATION

The local vernacular school has been raised to a high school, and a new school building and a boarding house have been constructed. Education and medical aid are free throughout the State. A new hospital has been built with facilities for indoor patients and an up-to-date maternity ward.

The constitution of the local municipality is democratic. An agriculture farm at the capital and an industrial free Mandi at Dileepnagar where a cardboard mill and an oil mill are running, have been established by the Raja Sahib. A large oil mill and an iron and steel works have been set up at Bangrod, a broad-gauge station of the B.B. & C.I. Railway.

The establishment of another Mandi at this place has recently been sanctioned. The Judiciary is independent of the Executive, and a High Court has been established.

ADMINISTRATION

The administration is assisted by a Council of State of which SHREEMAN YUVRAJ SAHIB DIGVIJAYSINGHJI, M.A., is the President. *Chief Minister:* THAKUR LOKPALSINGH, M.A., LL.B.

SANDUR, The Maharaja of Sandur is Shrimant Maharaj Yeshwantrao Hindurao Ghorpade, Mamlakatmadar, Senapathi.

The Maharaja and Maharanisahab of Sandur are deeply interested in administration and widely travelled. They visited England and the Continent in 1935, as students of peoples and governments, and Australia in 1939 as guests of the Commonwealth to acquire first-hand knowledge of the working of the federal form of government there. During the past 20 years the Maharaja has instituted progressive reforms in the State, and has associated the people in their own government gradually, culminating in the recent grant of responsible government to the people.

HISTORICAL SKETCH

The Ruler of Sandur has a great and glorious tradition to uphold. The House of 'Ghorpade', of which he is a true son, was founded in the Deccan, centuries ago by Karnasinh, a Sisodia Rajput whose ancestors had died fighting Alaudin Khilji at Chitor. The enterprising Karnasinh scaled the walls of the otherwise impregnable hill fort of Khelna (Vishalgad today) by means of a rope tied to a monitor lizard, called "Ghorpad" in Marathi and so acquired the title 'Ghorpade' for himself and his descendants. The line of Shivaji the Great was founded by the younger brother of Karnasinh, but the claim of the Ghorpade family to a place in history is independent of this relationship to the founder of the Mahratta Empire.

"The vast region of Southern Maharashtra and Karnatak was long under the sway of the various Ghorpade families and ruled by them" (Sardesai). The names of Bhyriji, Santaji and Maloji have inspired both terror and pride over this broad tract. Under Bhyriji's grandson, Murar Rao, the celebrated Chief of Gooty, the Ghorpades attained the height of their power. Murar Rao's empire

Born: 1908. Ascended the *gadi* in 1928 and assumed full ruling powers in 1930.

Married: In 1929 the eldest daughter of Umadat-Ul-Mulk, Raj Rajendra Lieut.-Col. Malojirao Narsingrao Shitole Deshmukh Rustumjung Bahadur of Gwalior.

Sons: Heir-Apparent—Yuvraj Murar Rao Raje Ghorpade, born 7-12-1931; Rajkumar Shrimant Ranjit Sinh Raje Ghorpade, born 16-2-1933; Rajkumar Shrimant Vijaya Sinh Raje Ghorpade, born 18-10-1937; and Rajkumar Shrimant Shiva Rao Raje Ghorpade, born 13-9-1940. Daughters: Rajkumari Shrimant Nirmala Raje Ghorpade, born 8-2-1934 and Rajkumari Shrimant Vijaya Devi Raje Ghorpade, born 5-2-1947.

The Maharaja is the President of the All-India Mahratta Educational Conference and has been its President for the past three terms.

extended as far east as Madras and Pondicherry and he levied a tribute of Rs. 7 lakhs from Mysore and Hyderabad. It was this same Chief of Gooty whose help Clive solicited during the siege of Arcot, and who routed Chanda Saheb, turning the scales and history itself in favour of the British. In 1818, during the time of Shiva Rao, the State first came into political relations with the British and its unfettered internal sovereignty was recognised.

GENERAL

Sandur has acceded to the Indian Dominion by executing the standard form of Instrument of Accession.

It is a State located a few miles south of the River Thungabhadra, and is contiguous to the State of Mysore along its south-eastern border.

"Sandur territory is one of the richest iron yielding centres of the whole world."—Bruce Foote of the Geological Survey of India. Manganese ores, red oxide of the highest grade for the manufacture of pigment, and sandalwood of high oil-content are other features of the State.

The population, about 16,000 as per the census of 1941, has increased during the last few years due to the increased industrial activities of the State, and the lack of famine here, which have lead to immigration. The population may now be taken to be in the neighbourhood of 20,000. The rainfall averages 34.37" over the past 10 years. The average revenue for the past three years is in the neighbourhood of 7 lakhs.

ADMINISTRATIVE REFORMS

Many administrative reforms now spoken of as 'modern' were anticipated years ago in Sandur

State and have had the benefit of trial and improvement over many years.

Sandur was the first Indian State to do away with untouchability, by the Maharaja's Proclamation of 1932. This is a reform of considerable magnitude as a quarter of the population are members of the Scheduled Castes. Equal rights of worship at all temples and equal rights to all public amenities are guaranteed to the people by Statute in Sandur. Visiting Sandur in 1933, Mahatma Gandhi said that Sandur was "an oasis in a desert" and "a model State". Complete communal harmony among the subjects is a noteworthy feature of the State.

LEGISLATURE

The legislature consists of 2 houses, the Prajamandal consisting of the elected representatives of the people and the Darbar consisting of eligible hereditary members and representatives of various interests. Both houses have equal powers of legislation and vote on the budget, and are the only sources of permanent legislation, the Maharaja having limited his own legislative powers to temporary emergency laws by the Sandur State Constitution Act of 1946, the last permanent proclamation issued by him.

THE MANTRI MANDAL (STATE CABINET)

There is no Dewan in Sandur State, and the policy now enunciated of government by executive council was initiated here as long ago as 1934.

The State Cabinet is presided over by the Maharaja and in his absence by the Prathinidhi who is a member of the Royal Family nominated by him. A Minister

nominated by the Maharaja from among the members of the State Legislature, an elected Mantra Sachiv (Popular Minister), and an Additional Member nominated by the Sandur State Congress constitute the Mantri Mandal.

JUDICIARY

Sandur is perhaps the pioneer among the States of her size to constitute an independent Chief Court presided over by a Nyayadish of unimpeachable integrity. By arrangement with the Government of Madras, the Maharaja appoints the District and Sessions Judge of the adjoining Madras District of Bellary as the Nyayadish of the Sandur Chief Court.

The judiciary is separated from the executive.

A Debt Conciliation Board was constituted in 1936 to relieve agricultural indebtedness.

EDUCATION

The central educational institution, Shri Chatrapathi Shivaji Vidyamandir, sends up students for the matriculation examinations of the universities outside the State. Special stress is laid on pre-military avocations, extra-curricular activities and the study of Dharma Sashtira at the Vidyamandir. There are State-run or State-aided primary schools in every important village of the State.

MINERAL RESOURCES

The main mineral resources of Sandur State consist of iron and manganese ores. The highest grade of iron ore, described by some geologists as of the very best quality in the world, occurs in the State and competent authorities have estimated the quantity available at 100 million tons.

Manganese ore of medium grade analysing about 40 per cent as well as manganese ore of high grade occur in the State and are now being mined and exploited by a British firm, the General Sandur Mining Company, who have been exporting the ore to Continental metallurgical industries at the average rate of 100 thousand tons yearly.

The manufacture of ferro-manganese in the State is the foremost of Sandur's prospective industries. The recent scheme of the General Sandur Mining Company's experts for the electrical treatment of low grade manganese-ore to produce Spiegel-eisen as one of the products, has been examined by the Government of India authorities, whose Mineral Adviser has described the scheme as "a path finder" to other metallurgical industries in India. The Government of India Ministry of Industry have approved the location of a ferro-manganese unit in the State.

The setting up of an iron and steel industry here to utilise the vast deposits of high grade iron-ore occurring here is also being examined.

Red Oxide of the highest grade for the manufacture of pigment occurs in the State, as also vast deposits of Jasper.

FOREST PRODUCE

Sandur Sandalwood has been proved to have an oil-content of 5.77 per cent, by distillation tests. Sandalwood of all types is sold by the State Forest Department. Sandur State has been one of the largest individual suppliers of fodder hay to the Indian Army during the war years and the Forest Department has specialised in the supply of high grade fodder hay.

SANT STATE, in Gujerat is bounded on the north by the States of Banswara and Dungarpur, on the east by the Jalod Taluka, on the west by the Lunawada State and on the south, by the States of Baria, Sanjeli and Godhra Taluka. Since April 22, 1943 the Kadana State has formed part of the Sant State. The Ruling family belongs to the Mahiravat Clan of Parmar Rajputs which is descended from the illustrious family of Vikramaditya and Raja Bhoj of Ujjain. The Parmars originally came from Dhar. They first settled at Jhalod and finally about the thirteenth century at Sant. The founder of the State was Rana Sant who with his uncle Limdev established himself at Sant.

The capital of the State is Satrampur which is 32 miles away from Santroad station on the B.B. & C.I. Ry. The Sant State has acceded to the Dominion of India.

HIS HIGHNESS MAHARANA SHRI PRAVINSINHJI, THE RULER OF SANT STATE was born on December 1, 1907. He was at first privately educated and later at the Rajkumar

College, Rajkot, the Princes' School, Baroda, and finally the Baroda College. All through he had a distinguished academic career. He did equally well on the playing-field where he won medals, cups and other prizes. He is a particularly good tennis and football player. Later he donated a silver trophy for a cricket tournament open to all suburban schools in Bombay.

His Highness married Maharaj-kumari Shri Rajkunverba (Hansakumari), the eldest daughter of His Highness the Maharao Saheb of Kutch on May 15, 1928 at Bhuj. He ascended the *gadi* on December 25, 1946. The Maharana and the Maharani have travelled widely in England and the Continent. They first went to England in 1935 to attend the Silver Jubilee celebrations. They went again in 1937 to attend the Coronation of Their Majesties King George VI and Queen Elizabeth. This second time when they visited England they toured the whole Continent before returning to India in 1938.

The area of the State is 527½ sq. miles, the population is 1,14,047, and the revenue Rs. 12,55,535.

PRODUCE & INDUSTRY

The staple crop is maize, and other agricultural products are oilseeds, ghee and hides. The forests yield teak and bamboo. The industries are of the hand-made sort, cottage industries which

include handloom weaving, basket making and mat making. The State has been running its own handloom factory at Santrampur since 1942. As for the future there is great scope for the development of industries like glass-making and those based on forest produce.

The State takes good care of its subjects. Primary and secondary education are free, there is free medical relief, there is regular land, survey, there is a famine relief fund for granting loans free of interest for certain specific purposes such as the purchase of agricultural stock, the digging of wells, the erection of bunds to prevent soil erosion, or other measures taken to effect permanent improvements in the holding.

COMMUNICATIONS

The nearest railway stations are Sant Road on the B.B. & C.I. Railway and Lunawada on the Gujerat Railway which are 32 and 18 miles respectively from Santrampur. There is a post and telegraph office with two branches at Kadana and Malvan. The towns of Sant and Rampur are electrified, and a great many roads are metalled.

ADMINISTRATION

The present Ruler of Sant who enjoys full powers and exercises plenary jurisdiction affords an admirable example of what modern training can do for an Indian

Prince. Long before his investiture with full ruling powers His Highness took a hand in the administration of the State so as to equip himself fully for the task when the time came for him to take over responsibility for the government of the State. His Highness possesses rare distinction and a rarer sense of duty and serves his State in a spirit of whole-hearted devotion working hard and incessantly to promote the social and economic welfare of his subjects. The subjects for their part have shown in equal measure their sense of appreciation of His Highness' great qualities as man or Ruler for he is held in very high regard by his subjects, and commands great loyalty. His Highness takes great interest in social reforms also.

The State is administered with the assistance of an Executive Council consisting of three official and two non-official members.

Dewan: N. J. DIVECHA, B.A., LL.B. Senior-officials, *Naib Dewan*: RUTANSINH K. PARMAR, B.A., LL.B., *Nyayadhish & F. C. M.*: V. N. MANIAR, B.A., LL.B.; *High Court Judge*: J. M. ANTIA, B.A., LL.B., *Advocate*; *District & Sessions Judge*: MANILAL H. MEHTA, B.A., LL.B.; *Chief Medical Officer*: DR. M. K. KANE, M.B.B.S.; *State Engineer, P.W.D.*: M. K. GUPTA, B.Sc., B.E.; *Forest Officer*: HINGORANI, R.F.O.; *Superintendent of Police*: R. N. DESAI.

SAWANTWADI STATE, one of the ancient Maratha States in Western India is a compact territory unbroken by the lands of other States. Bounded on the north by the Malvan subdivision of the Ratnagiri District and separated by the Sahyadri Hills, on the north-east by Kolhapur territory, on the east and south-east by the District of Belgaum, and on the south by the Dicholi and Pedna sub-divisions of Goa, the general aspect of the country is strikingly picturesque.

HIS HIGHNESS RAJA BAHADUR SHRIMANT SHIVRAM SAWANT BHONSLE, the present Raja of Sawantwadi, was born in 1927. He succeeded to the *gadi* in 1937, and was invested with full ruling powers on May 12, 1947.

His Highness was educated at the Doon School, Dehra Dun and Wadia College, Poona. He had a long and strenuous course of military training. He successfully held responsible posts in the Military. He has also acquired sufficient knowledge of ad-

ministrative matters, by undergoing training with the Commissioner, Southern Division, Bombay. He is a keen sportsman, an excellent musician, an artist, a true soldier and an administrator.

The area of the State is about 930 sq. miles, its population 2,52,170 (1941 census) and its gross revenue Rs. 10,34,597 the principal source being land revenue, forest and abkari. The State has acceded to the Dominion of India.

The State is rich in teak, especially near the Sahyadri Hills. The principal fruits are mangoes, plantains, citrons, limes and jack-fruit. Coconuts and cashew nuts are in plenty. The staple agricultural produce in the State is rice. The quantity produced in the State is not sufficient and a good deal has to be imported.

Iron-ore of a fairly good quality is found in the neighbourhood of Ramghat in Shayadri range. The Akeri stone, a slate coloured talcschist, is extremely hard compact and heavy and is unrivalled for building purposes. Mica mining is taken in hand. A soap factory has been started at Math. Bidi making is developing on a large scale. The sodium factory at Math is progressing well. There are hundreds of handlooms in the State.

The principal industries in the State consist of gold and silver embroidery work on both leather and cloth, fans, baskets, and boxes of kaskas, brass ornamented with gold thread and beetle wings, lacquered toys, playing cards and elegant drawing room ornaments from the horns of buffaloes and bisons.

ADMINISTRATION

Dewan: RAO BAHADUR P. G. DESHMUK, B.A.; *Sar Nyayadhish and Sessions Judge:* K. M. WAZKAR, B.A., LL.B.; *Naib Dewan, District Magistrate and Huzur Secretary:* RAO SAHEB G. S. BAKRE, M.A.; *Chief Medical Officer:* DR. V. N. ASHTAPUTRE, M.S.; *State Engineer:* C. B. DEWASTHALI, B.E.; *Chief Police Officer:* D. H. KHAN; *Malaria Medical Officer and Private Secretary to His Highness:* RAO SAHEB DR. C. H. KARNIK, L.C.P.S.

SIRMUR: This State lies among the Siwaliks Ranges between 77° 5' and 77° 55' East and 30° 20' and 31° 5' North. It is 1,141 sq. miles in area with a population of 156,054 (1941 Census). Nahan is the capital of the State.

The ruling dynasty is the younger branch of the ruling House of Jaisalmer and the present Ruler is HON. LT.-COL. H.H. MAHARAJA SIR RAJENDRA PRAKASH BAHADUR, K.C.I.E., who is the 48th direct male lineal descendant from the original founder of the Dynasty, Maharaja Subhans Prakash in 1095 A.D. He was born on January 10, 1913 and ascended the *gadi* on November 22, 1933.

He was educated privately and he married the sister of Raja Shrimant Mahendra Singh Ju Deo of Nagod, C.I., in April, 1936 and the daughter of Sir Shri Bahadur Singh Ji Man Singh Ji, K.C.S.I., K.C.I.E., Thakore Saheb of Palitana State in December, 1941.

The State has an Annual Revenue of Rs. 50,00,000 and a Salute of 11 guns.

18

The State consists of both hills and plains with altitude varying from 1,090 ft. to 11,966 ft.

The chief products are wheat, maize, rice, sugar-cane, poppy, ginger, potatoes, turmeric and chillies, etc. It is rich in Sal, Deodar and Pine forests.

It has an iron foundry which was established in 1867 A.D. and produces sugar-cane crushers which are the best available in the market. The State owns large tea estates at Kowlagarh and Choharpur in Dehra-Dun District.

The mineral resources of the State are being prospected. There are huge deposits of Gypsum, Lime and Iron Pyrites. A scheme for the construction of dams on the rivers Tons and Giri, which are tributaries of the Jumna, to generate hydro-electric power and provide irrigation facilities is under the active consideration of the Durbar. A Sirmur Land Produce Syndicate Limited has been formed.

The State maintains a Corps of Sappers and Miners which rendered valuable services to the Crown during the Second Afghan War and during the First Great War when it was captured with General Townshend's force at Kut-ul-Amara. It also served with His Majesty's Forces during Great War II.

ADMINISTRATION

The administration is carried on by His Highness with the help of a Council of Ministers. Judiciary is separate from the Executive. The highest Judicial authority is the Raj Niyaya Sabha which hears appeals from the High Court.

The legislature is comprised of 30 members of whom 23 are elected on adult suffrage.

State Council President: HIS HIGHNESS THE MAHARAJA SAHIB BAHADUR; *Primo Minister and Vice-President:* COL. KANWAR SHIV RAJ SINGH; *Finance Minister:* RAI SAHIB R. G. ABBI; *Minister for Local Self-Government:* JAI GOPAL SHARMA; *Secretary to Government of Sirmur:* PT. KRISHAN LAL SHARMA, B.A.; *Raj Niyaya Sabha Members:* RAI BAHADUR MUKUND LAL PURI, M.A., Bar-at-Law and GAURI PRASAD SAXENA, B.A., P.C.S. (Retd.); *High Court Chief Justice:* RAI BAHADUR BHAGAT JAGAN NATH.

SURGUJA STATE lies in the Central Provinces. It is bounded on the north by Mirzapur Dt. and the State of Rewa, on the east by the Palamau and Ranchi Dts., on the south by Jashpur State, Udaipur State and Bilaspur Dt., and on the west by Korea State. It is the largest of the five Chhota-Nagpur States. The Ruling Family is descended from the Arkshel Rajahs of Palamau. The capital of the State is Ambikapur.

MAHARAJA RAMANUJ SARAN SINGH DEO, C.B.E., was born on November 4, 1895. After the death of his first wife in 1921 he married a daughter of General Bhupatindra Bikram Shah, of Nepal in 1922. By his first wife the Maharaja has two sons, the elder of whom, Maharajkumar Ambikeshwar Saran Singh Deo was born on December 14, 1910, and a daughter. By his second marriage he has one son who was adopted under the name Chandra Chur Prasad Singh Deo by the Ruler of Udaipur before his death, and a daughter. The Maharaja has travelled extensively in Europe and East Africa. He is a keen sportsman and a good shot having bagged over a thousand tigers.

The area of the State is 6,055 sq. miles and the population 551,307. The revenue for 1944-45 was Rs. 16,31,034.

PRODUCE AND INDUSTRY

Practically the entire population is dependent on agriculture, the principal crops being rice, wheat, barley, oats and maize. Grams, pulses and oil-seeds are also grown. A great deal has been done to improve agricultural methods. For instance, loans are granted to cultivators. Certain kinds of land (Dand) have been made free of rent. Over 2,000 tanks have been built for irrigation purposes. A large number of demonstration farms and one cattle breeding farm have also been opened so that today the cultivators are trying to grow new crops like sugar-cane, groundnut, and a number of English vegetables.

The mineral resources are abundant and valuable. Among others the State contains the biggest coal-field in the country. But the coal-fields remain unexploited. Other mineral resources are mica, iron, limestone, bauxite and lead. Industrial development is held up because of lack of transport facilities. There are three rail heads in the State, Garhwa Road on the E.I.R., Kharsia on the B. N. R. and Chirimiri on the projected Central India Coal-fields Railway. But they are all far off from the capital.

The Maharaja is an enlightened ruler; he has built many schools, dispensaries and dharmasalas.

ADMINISTRATION

The administration is carried on by the Maharaja assisted by a State Council.

Chief Minister: AMBIKESHWAR SARAN SINGH DEO; **Development Minister:** MAHARAJKUMAR CHANDIKESHWAR SARAN SINGH DEO, B.A.; **Finance Minister:** SATYA NARAYAN SINGH, B.A., B.L.

TONK STATE, lies partly in Rajputana and partly in Central India. There are six districts in all in the State and some of them are separated from one another by distances varying from 20 to 250 miles. All the districts contain hills and are well wooded. The various districts resemble each other to this extent, that all are, speaking generally, favoured with good soil and water. The annual rainfall in the Rajputana districts of the State averages between 25 and 30 inches, and in the rest of the territory from 30 to 50 inches. The climate of Tonk is on the whole dry and healthy though malarial fevers prevail during and after the rains.

The ruling family of Tonk is Afghan of the Sallarai tribe of Buner. The capital town of the State is Tonk. The State has acceded to the Indian Union.

HIS HIGHNESS MUMTAZUDDOWLA WAZIRUL MULK NAWAB MUHAMMAD FARUQ ALI KHAN SAHIB BAHADUR SOWLAT-I-JUNG NAWAB OF TONK, was born on August 8, 1885. The Nawab was educated

privately in Persian and Urdu. He ascended the *gadi* on May 31, 1947. The Nawab has a thorough knowledge of Judicial and Revenue law and administration. His Highness is entitled to a salute of 17 guns.

The area of the State is 2,553 sq. miles. The population is about 358,000 and the revenue about Rs. 39,00,000.

The State is agricultural. The staple food crops are jawar, wheat, gram, maize, til. The only money crop grown is cotton. The State depends on artificial irrigation only to a small extent. Irrigation is almost entirely from wells, the water being lifted by means of the charas, buckets made of leather. There are forests but most of them consist of scrub jungle and grass reserves. Teak trees of inferior kind are found in some districts. Among the farm animals are cattle, goats and sheep. The cattle are of an inferior type. But goats and sheep of the ordinary breed are reared in considerable numbers.

Good cotton cloth is woven throughout the State, the best kinds being produced in Tonk itself. Felt rugs and saddle cloths are also made and guitars and pen-cases carved in wood and inlaid with ivory. There is also a cotton press and a ginning factory. The State is not rich in mineral deposits. There are sandstone quarries in a district which yields slabs excellent for building purposes.

The chief exports are cereals, cotton, hides and cotton cloth and the chief imports are salt, sugar, rice, cotton cloth piece-goods, tobacco and iron.

Two railways, Rajputana-Malwa and Bina-Baran, run through parts of the State. There is a fine metalled road which connects Tonk with Jaipur. The rest of the roads are merely fair-weather communications.

ADMINISTRATION

The administration is carried on by His Highness with the help of a State Council consisting of the Prime Minister, the Home Minister and the Revenue Minister. An Advisory Committee has been constituted to formulate proposals for a closer association of the people with the administration. Two popular ministers are soon to be appointed.

President: HIS HIGHNESS THE NAWAB SAHEB BAHADUR; **Vice-President, Prime Minister and Finance Minister:** YAMINUL MULK KHAN BAHADUR RAHMAN BAKHSH KADRI, M.B.E., U.P.C.S., MUSHIR JUNG BAHADUR; **Home Minister:** SHARFUL OMORA RAFIQUK MULK SAHIBZADA MOHAMMAD TOFIK KHAN SAHIB, BAHADUR RAFIQ JUNG; **Revenue Minister:** KHAN SAHIB MUZAFFERUL MULK MUZAFFAR MOHAMMAD KHAN SAHIB BAHADUR, B.A., MODDABBIR JUNG; **Secretary:** S. SHAMSUDDIN AHMAD, B.A.

TRAVANCORE, the third biggest State in India after Hyderabad and Mysore, occupies the south-west portion of the Indian Peninsula, the southern tip reaching down to Cape Comorin. Travancore is bounded on the north by the State of Cochin and the Coimbatore Dt., on the east by the Dts. of Ramnad and Tinnevely, and on the south and the west by the Indian Ocean and the Arabian Sea respectively. Travancore is one of the most picturesque parts of South India containing an extensive hill region, numerous rivers, and a succession of backwaters and forests. In point of literacy the State is in the forefront.

Travancore has acceded to the Indian Union. The capital of the State is Trivandrum.

The Ruler belongs to a Kshatriya Family which traces its descent from the ancient Chera Kings of South India. Raja Marthanda

Varma, the first Ruler who achieved the unification of what is now Travancore is said to have dedicated his country to Shri Padmanabhaswami and ever since, the Rulers of Travancore, Rajas or Ranis, have ruled the country as the Dasas or Sevinis of the deity.

HON. MAJOR-GENERAL HIS HIGHNESS SRI PADMANABHA DASA VANCHI PALA SIR BALA RAMA VARMA KULASEKARA KIRITAPATI MANNY SULTAN MAHARAJA RAJA RAMARAJA BAHADUR SHAMSHER JANG, G.C.S.I., G.C.I.E., D.Litt., MAHARAJA OF TRAVANCORE was born on November 7, 1912. He ascended the *masnad* on September 1, 1924 when he was 12, and was invested with full ruling powers on November 6, 1931 when he attained majority. The Maharaja was educated privately by an accomplished European tutor. After completing his education the Maharaja travelled extensively in India, Europe, Ceylon and the Dutch East Indies. He holds the honorary degree of D. Litt. of the Annamalai and Andhra Universities.

His Highness is the Colonel-in-Chief of the Travancore State Forces, Honorary Colonel of the 12th Malabar Battalion, Honorary Colonel of the 16th Light Cavalry Regiment of the Indian Army, and Honorary Major-General of the British Army. He is entitled to a local salute of 21 guns and an outside salute of 19 guns.

The Royal Family follows the ancient *marumakkattayam* law or the law of inheritance through

the female line. Her Highness Maharani Setu Parvati Bai, the mother of the Maharaja was born on November 6, 1896. She was adopted into the Royal Family at the age of 4 along with her elder sister. In April 1907 she was married to Ravi Varma, a grand nephew of Ravi Varma Koilampuran, the famous Indian artist. Her Highness has two sons and a daughter. Her second son, who is the Heir-Apparent, called Elaya Raja, was born on March 22, 1922.

HER HIGHNESS THE MAHARANI the Maharaja holds the honorary degree of D. Litt. of the Universities Andhra, Annamalai and Benares and like the Maharaja too she has

travelled widely in India, Europe, Ceylon and the Dutch East Indies.

The area of the State of Travancore is 7,661.75 sq. miles and the total population 6,070,018 according to the 1941 census. The revenue of the State is Rs. 975.63 lakhs. Hinduism is the predominant religion and its followers constitute nearly two-thirds of the entire population, while Christians of various denominations including the ancient Syrian Christians represent more than one-fourth. Women generally enjoy a freedom unique in India and their complete equality with men as well as their general education have led to their active participation in public affairs.

Except for a certain warm humidity the climate is temperate. The rainfall is generally heavy averaging about 89 inches per year. The staple food of the people is rice, fish and tapioca.

AGRICULTURE

Agriculture is the main occupation of the people though industry is assuming an increasingly important place in the economy of the State. In the plains we find rice, tapioca, yams, beans and gram. On the lesser uplands near the Ghats are pepper, rubber, ginger and turmeric. On the higher elevations there are extensive tea and cardamom plantations. And on the broad coast-belt and the shores of the backwaters, there are dense coconut plantations, while such trees as areca, jack, mango, tamarind and cashew are grown around the homesteads.

The State reserved forests cover an extent slightly less than a third of the area and are well timbered with teak, black-wood, ebony, jack and anjili. And among the forest animals are the elephant, the leopard, the bison, the bear and the sambur and a variety of small game.

INDUSTRY

Government plays a big part in industrial life. The more important State enterprises are: a ceramic factory at Kundara which manufactures porcelain ware, electrical goods, crockery, fancy articles and sanitary equipment like drainage pipes; Travancore Sugars and Chemicals which manufactures besides sugar 260 varieties of pharmaceutical products such as liniments, liquid extracts, liquors, pulses, spirits, syrups and specialties including caffein aspirin and lysol; a rubber factory at Trivandrum which manufactures cycle tyres and tubes, motor car tyres, surgical tubes, hoses, gharry tyres, etc.; the Aluminium Smelting Factory and Glass Factory at Alwaye and the Plywood Factory at Punalur. All these factories are driven by cheap power obtained from the Pallivasal Hydro-electric Works. Refined salt is also being produced on a commercial scale and the State is now able to export salt after meeting all its requirements.

Enterprises for the starting of which arrangements have been made are: a cane sugar factory, a rayon factory, a cement factory, a few spinning mills, a fishing

industry, the processing of ilmenite, manufacture of titanium pigments. The Fertilizers and Chemicals industry with a capital of five crores to produce 50,000 tons of ammonium sulphate per year and other chemicals like caustic soda, sulphuric acid, potassium chlorate, ammonium sulphate, acetic acid and calcium carbide have started production.

COMMUNICATIONS

The whole State is covered by a net-work of roads and canals with a well-regulated system of road and water transport. Trivandrum is a terminus on the South Indian Railway, and there is regular air service between Trivandrum and Madras via Cochin and Bangalore. The whole of the road transport system is under State control and a steam navigation company has also been started for the development of coastal traffic.

EDUCATION

The literacy figures are the highest in India—47.05 per cent for the whole State, 58.1 for males and 36 for females, and the literacy figures for those above 5 years are 55 for the whole State, 67.9 for males and 42.1 for females. There are four First Grade colleges, and three Second Grade colleges. There is also a Law College, a Teachers' Training College, a Sanskrit College and a College for Ayurveda.

Distributed throughout the State there are more than 3,500 educational institutions, teaching more than 700,000 pupils. By a proclamation of 1936 a University, exclusively designed to promote technological study and original research and to promote Kerala art and culture, has been established. A scheme of universal and compulsory primary education on the basis of a ten-year plan is also being worked out. About one-fifth of the total revenue of the State is spent on education every year.

Among legislation of the nation-building or social service sort are: a Debt Relief Act, an Act establishing a Credit Bank, a Proclamation throwing open all temples to untouchables, and another Proclamation abolishing the death penalty for certain offences.

The Maharaja has been very generous with his money. His benefactions include large sums for earthquake relief, fight against tuberculosis, for a home for the destitute and the infirm, for a school for the deaf, the dumb and the blind, for feeding the poor and providing food and clothing to poor school-going children. The Maharaja also grants large annual donations to several philanthropic and scientific bodies. He has founded an art gallery in the capital

besides the one which he maintains in his palace.

ADMINISTRATION

Though the Ruler is legally the source of all authority yet for more than a century the Maharajas have acted as constitutional monarchs without failing to maintain effective personal contact with the administration. The Legislature which was reconstituted in 1932 is a bicameral body with an Upper House, Sri Chitra State Council, and a Lower House, the Sri Mulam Assembly. Both the Houses are thoroughly representative of all classes, communities and interests with a decisive non-official and elected majority. The Legislature enjoys wide powers, budgetary, legislative and powers of interpellation in relation to all matters except those pertaining to the Ruling Family.

On September 4, 1947 the Maharaja issued a Proclamation expressing his intention to establish responsible government in the State. A representative body consisting of persons elected on the basis of adult franchise will be constituted for framing the future constitution of the State.

Officiating Dewan : RAJYASEVA-
PRAVINA P. G. NARAYANAN
UNNITHAN, B.A., B.L.

UDAIPUR STATE, also called Mewar, is situated in the south-east of Rajputana. It is bounded on the north by Ajmer-Merwara and Shahpura, on the west by Jodhpur and Sirohi, on the south by Dungarpur, Banswara and Partapgarh, and on the east by the districts of Nimach and Tonk and the States of Bundi and Kotah.

Udaipur is the premier State of Rajputana and also the most ancient. Indeed for centuries the history of Mewar was the history of Rajputana while during one critical period it was almost the history of India. No State made a more courageous or prolonged resistance to the Muslims than Mewar and the old capital, Chitor, itself was sacked no less than three times as a consequence. The Rulers of Udaipur take special pride in the fact that no daughter of Mewar was ever given in marriage to a Muslim conqueror. The Ruling family belongs to the Sesodia clan of Rajputs and the Hindus look upon the Ruler of Mewar as the legitimate heir to the throne of Rama. By reason of its romance and beauty, its snow-white palaces,

flower-gardens, wooded islands, and the lovely lake-side capital, Udaipur has had more appeal to poets, painters, and travellers than any other single place in India.

The State is entitled to a permanent salute of 19 guns and a local salute of 21 guns. The capital is Udaipur. The state has acceded to the Dominion of India.

HIS HIGHNESS MAHARAJADHIRAJ MAHARANA SHRI SIR BHOPAL SINHIJI BAHADUR, THE RULER, was born on February 22, 1884. He married the sister of the Thakur of Anwa in March 1910. A year after his first wife died the Maharaja married the daughter of Thakur Kesari Singh of Achrol in Jaipur State. The Maharaja's third marriage took place on January 17, 1928, with the daughter of the Thakur of Khudala in the Marwar State. His Highness ascended the *gadi* on the death of his father on May 24, 1930. Maharajkumar Bhagwat Singh, son of Maharaj Partap Singh who was born on June 20, 1921 has been adopted as Heir-Apparent.

The area of the State is 12,041 sq. miles and the population 1,926,698. The revenue is Rs. 1,82,00,000.

The State is self-sufficient in regard to food. On the whole the soil is rich. The chief means of irrigation are wells and tanks.

INDUSTRY

The State has two textile mills, one sugar mill, two oil mills and one match factory. The State is also rich in mineral deposits such as mica, soapstone, beryl, asbestos, manganese, calcites and emeralds. The State has its own railway, the Mewar State Railway, the total mileage being 145.74. There are also 360 miles of metalled road. As for post-war planning, schemes for the development of hydro-electric power, irrigation works, and of the construction of 150 miles of fair weather road, are all under consideration.

Primary and secondary education are free. Besides seven high schools there is a college teaching up to the M.A. classes. The medical service is of a high quality. There are allopathic and ayurvedic dispensaries scattered throughout the State. In the capital there is a large, well-equipped hospital and a college. Udaipur was among the first states to separate the judiciary from the executive. The State has an independent High Court.

ADMINISTRATION

Prime Minister: DR. SIR S. V. RAMA-MURTY, K.C.I.E., C.I.E., M.A. (Cantab), I.C.S. D. LITT.; **Army & Revenue Minister:** COL. RAO MANOHAR SINGH, M.B.E. OF BEDLA; **Finance Minister:** DR. MOHAN SINHA MERTA, Ph.D., M.A., LL.B., Bar-at-Law; **Home Minister:** MAJOR. RAJADHIRAJ HARI SINGH OF ACHROL; **Public Health & Education Minister:** KR. RACHUBIR SINGH, B.A.; **Supply Minister:** MOHAN LAL SUKHADIA; **Local Self-Government Minister:** HIRALAL KOTHARI, B.A., LL.B.

VADIA STATE is situated in Western Kathiawar. The Rulers of Vadia belong to the Virani branch of Kathis, who have given their name to the whole region. Kathis once dominated the province; hence the name Kathiawar. The capital Vadia has a suburb, Suragpara, named after the present Ruler, which is regarded as one of the 'beauty spots' of Kathiawar.

DARBAR SHREEJ SURAGWALA SAHEB, the present Ruler of Vadia, was born on March 15, 1904 and was educated by a private tutor. He married A. S. Kunverbai Saheba in 1922 and has two sons and three daughters. The Heir-Apparent Kumar Shri Krishna-kumar Saheb was born on April 23, 1931 and is now studying at a public school in Rajkot. The Darbar Saheb ascended the *gadi* on May 7, 1930 on the death of his father. He is the maker of modern Vadia.

The area of the State is 100 sq. miles and the population 25,000. The revenue is Rs. 3,00,000.

Vadia is agricultural. It produces all the food grains which

it needs. It also grows cash crops like sugarcane, cotton and ground-nut. Most of the water comes from wells though sometimes electric power is also used for irrigation purposes. There is a considerable amount of industrial activity in the State. There is one oil mill, one ginning factory, one match factory, one Mumra and Pauwa factory and some rice and pulse hullers.

The railway station is Vadia Deoli on the Gondal Railway, which is connected with all the big towns of Kathiawar. From the station to the town proper there is a telephone line.

Education and medical relief are free. In the capital there is an electric power house.

Legislation in the State is of a progressive nature. Among the Acts which are in force in the State are a Child Marriage Restriction Act, a Farmers' Relief Act, and a Prohibition Act. There is also a State Bank. The Municipality was handed over to the people in 1937. Its President is also elected. Since 1945 local Dhara Sabha, Gram-Panchayats and District Panchayats have been in operation. The Vice-President of the Dhara Sabha is elected.

ADMINISTRATION

Deewan: TRAMBAKLAL V. VYAS, M.A., LL.B.; **Companion to Heir-Apparent:** DURGASHANKER J. PANCHOLY, B.Sc., S.T.C.; **Nyayadhisht:** MAGANLAL N. BHUPTANY, Advocate; **Chief Medical Officer:** DR. K. J. PANCHOLY, L.C.P.S.; **Private Secretary:** RAMBHAI D. PATGIR; **Hazur Secretary:** HATHIBHAI R. VANK; **Educational Officer:** HIMATLAL J. PANCHOLY, B.A., S.T.C.D.; **Treasury Officer:** PANACHAND B. SANGANI; **Superintendent of Police:** BHURABHAI RUPISING.

VALA STATE situated about 22 miles north-west of Bhavnagar in Kathiawar, lies between north lat. $21^{\circ}51'$ and $22^{\circ}1'$ and east long. $71^{\circ}50'$ and $72^{\circ}3'$. The Rulers are Rajputs of the Gohel clan. The capital Valabhipur stands on the site of the ancient Valabhi, the seat of the Valabhi dynasty. Copper plates, coins, rings, etc., are frequently dug up in its vicinity.

THAKORE SAHEB SHRI GAMBHIR SINHJI VAKHATSINHJI GOHEL of Vala was born on April 25, 1889. He was educated at Harrow and Clare College, Cambridge. He also took a regular course in military training at the Imperial Cadet Corps at Dehra Dun. The Thakore Saheb married the youngest daughter of the late Thakore Shree Verisalji of Roha Kutch on March 9, 1912. The Heir-Apparent Yuvraj Shri Pravinchandrasinhji was born on October 15, 1925. The Thakore Saheb ascended the *gadi* on June 5, 1943. His chief recreation is riding. Secretary to the Thakore Saheb: Rajkumar Jaswantsinhji of Vala.

AGRICULTURE

The area of the State is 211.9 sq. miles (including zilla villages). The population is 16,197 and the revenue Rs. 6,44,000.

Agriculture is the main occupation. The principal export is wheat. About 1,000 bighas of land are irrigated by water stored in the Gordon Bundh. There is one ginning factory in the State. Salt is also manufactured in small quantities at present and also collected from natural deposits.

Primary and secondary education are free throughout the State.

ADMINISTRATION

The administration is conducted by the Thakore Saheb with the help of a Dewan. The departments of education and municipality have been handed over to the Praja Pratinidhi Sabha.

PRINCIPAL OFFICERS:—Dewan: KESHAVLAL K. OZA, B.A. (Hons.), LL.B.; *Sar Nyayadhisht:* CHHOTALAL P. TRIVEDI, B.A., LL.B.; *Chief Medical Officer:* DR. VALABHDAS M. BHAYANI, M.B.B.S.; *Nyayadhisht & 1st Class Magistrate:* GIRJASHANKAR K. VYAS, B.A., LL.B.; *Superintendent of Police:* DALSUKHRAM K. BHATT; *Revenue Assistant:* NATVERSINHJI AJITSINHJI JADEJA; *Superintendent, Huzur Office:* BHAGWANTRAI B. HATHI; *Executive Officer, Praja Pratinidhi Sabha:* CHANDULAL K. MEHTA; *State Surveyor:* SAKHARAM K. VIDWANS; *State Overseer:* GOKULDAS B. BHARADIA; *Treasury Officer:* MANISHANKER V. RAJYAGOR; *Bardashi Officer:* JIWANLAL F. MEHTA.

WADHWAN STATE is situated in the north-east part of Kathiawar. Bounded on the north by Dhrangadhra State, on the south by the Chuda and Limbdi States and Dhandhuka Taluka, on the east by the Limbdi State, and on the west by the Muli and Sayla States, the State lies between latitudes 22° and 23° and longitudes 71° and 72° . It was founded in about 1630 by Rajoji, son of Prathirajji, the eldest son of Raja Chandarsinhji of Halvad. The Ruler belongs to the Jhala clan of Rajputs.

HIS HIGHNESS MAHARANA THAKORE SAHEB SHRI SURENDRASINHJI JORAWARSINHJI JHALA, the present Ruler of Wadhwan, was born on January 4, 1922. He succeeded to the *gadi* on July 7, 1934, and was invested with all ruling powers on June 8, 1942. His Highness was educated at Iayo College, Ajmer and Blundells school, Tiverton (Devonshire), England. He married Ba Shri ayakumariba, youngest daughter of His Highness Maharaja Saheb hri Bhojrajji Saheb of Gondal on February 18, 1942. He has two

brothers Kumar Shri Virendrasinhji and Kumar Shri Vikramsinhji.

The Heir-Apparent Tika Raja Shri Birendra Deo Bahadur was born on March 30, 1943.

The area of the State exclusive of the villages in the Indian Dominion is 242.6 sq. miles, its population 69,911, and its revenue about Rs. 7½ lacs. The Ruler is entitled to a permanent salute of 9 guns.

Industrially the State is well-off. There is one spinning and weaving mill in Surendranagar. There are also 9 ginning factories and 4 presses. Wadhwan City and Surendranagar are the important centres of commerce and industry, where the branches of five banking companies are situated. Washing soap, and brass, copper and silver wares are manufactured on an extensive scale.

The B. B. & C. I. Railway, and the Morvi and Bhavnagar State Railways pass through the State territories. Wadhwan Junction is an important railway station where all the above three railways meet. Two regular tramway services, one between Jorawarnagar and Sayla and the other between Wadhwan City and Surendranagar pass through the State. A bus service between Wadhwan City and Jorawarnagar is run by the Jorawarnagar Municipality. Almost all the important villages are interwoven by regular bus services. The State contains about fifteen miles of roads, namely the Wadhwan-Rajkot Trunk Road, Wadhwan-Dhrangadhra Road and Wadhwan-Limbdi Road, as also two good roads connecting Wadhwan City and Surendranagar. The State does not possess any irrigation facilities.

ADMINISTRATION

The administration of the State is assisted by a State Council of which His Highness is the President. *Dewan and First Member:* RAO SAHEB J. L. BAROT; *Naib Dewan and Second Member:* LAXMICHAND N. GOSALIA, B.A.; *Third Member:* KUMAR SHRI KARANSINHJI J. JHALA.

PRINCIPAL OFFICERS: *High Court Judge:* P. L. CHUDGAR, Bar-at-Law; *Officer-in-Charge, Surendranagar:* MOHANLAL JIWANLAL, Bar-at-Law; *Sar Nyayadhisht:* BHOLANATH J. THAKER, B.A., LL.B.; *Supdt. of Police:* RAO BAHADUR HARISHANKER J. RAWAL; *Director of Education:* VISHWANATH S. ABHYANKER, M.A., B.Sc. (U. S. A.); *Ag. Chief Medical Officer:* DR. REWASHANKER A. SHUKLA, L.C.P. & S.; *Rajkharch Officer:* GOPALJI B. GOHEL; *Chief Revenue Officer:* GOVINDSINHJI R. JHALA; *Nyayadhisht:* SHANTILAL M. VORA, B.A., LL.B.; *First Class Magistrate & Civil Sub-Judge, Surendranagar:* DHIRAJLAL B. NARICHANNA, Advocate; *Treasury Officer:* PATHUBHA K. CHUDASAMA; *State Engineer:* RUBSINHJI B. JHALA; *Secretary, State Council:* D. M. JOSHI; *Palace Medical Officer:* DR. REWASHANKER A. SHUKLA, L.C.P. & S.; *Khangi Kamdar:* DEVISING G. JADEJA.

Indian Representatives Abroad

Ambassador in China, Nanking, His Excellency Sardar K. M. Panikkar.

Ambassador in U.S.S.R., Moscow, Her Excellency Shreemati Vijayalakshmi Pandit.

Ambassador in Iran, Tehran, His Excellency Mr. Ali Zaheer, Bar-at-Law.

Ambassador in Nepal, Kathmandu, His Excellency Sardar Surjit Singh Majithia.

Agent of the Government of India in Malaya, Kuala Lumpur, T. G. Nataraja Pillai.

Liaison Officer to the Government of India in Pakistan, Peshawar, K. L. Khana.

Envoy in Czechoslovakia, N. Raghavan, Bar-at-law.

Envoy in Br. East Africa, Appa Sahab Pant.

Indian Embassy in Pakistan

After the division of the Indian sub-continent and the establishment of Pakistan, the Government of India nominated on August 11 Mr. Sri Prakasa a well known Congress leader from the United Provinces, as their High Commissioner in the new Dominion. Soon afterwards, Sardar Sampuran Singh was appointed as Deputy High Commissioner at Lahore. Mr. V. Viswanathan, I.C.S., one of Indian civilians with a long diplomatic experience was sent to the Pakistan capital as the Deputy High Commissioner to organise the Indian High Commissioner's office. At about the same time, Mr. K. L. Punjabi, I.C.S., was named as the Deputy High Commissioner at Peshawar but subsequently, he was transferred to Lahore his place being taken by Major B. K. Kapur as Liaison Officer at Peshawar.

The offices at Lahore and Peshawar were mainly engaged in tackling problems arising out of the mass exchange of population between East and West Punjab and N.-W. Frontier Province. The actual work of evacuation was carried out in that region by the Military

Evacuation Organisation. These two offices were also concerned with the difficult problem of settling claims of evacuees' abandoned property in the two Dominions. Even after evacuation of Government personnel and refugees, the problem of abducted women remained to be solved and both India and Pakistan have shown exemplary co-operation in handling this and other allied Inter-Dominion problems. In the Frontier Province, there are still some small Hindu pockets which are being cleared.

IN KARACHI

The High Commissioner's office in Karachi is intended to be India's Embassy in Pakistan and from the very beginning concerned itself with work of a purely diplomatic nature. Owing to acute housing scarcity in the Pakistan capital, both the High Commissioner and his deputy were forced to carry on their work in their rooms in a private hotel, but subsequently, they moved to Damodar Mahal, a palatial building, situated in the new Bunder Road extension of Karachi.

The first problem that this office had to tackle was the evacuation of 15,000 Central Government personnel scattered in Sind, Baluchistan, North-West Frontier and Bahawalpur. A transfer bureau was set up and evacuation of all personnel was completed on November 1, 1947. Although there was no rioting on the Punjab scale in these areas there were widespread outbreaks of violence in Quetta, Bahawalpur and Hyderabad (Sind) which led to a large exodus of Hindus and Sikhs from Sind beginning with August 15, 1947. The migration slackened about the beginning of December, but unfortunately, the disorders at Hyderabad (Sind) on December 17 and much more widespread disturbances in the Pakistan capital itself on January 6, 1948, led to a second wave of migration. With no military organisation to assist them, the energies of the officers of the Indian Embassy were taxed to the full as a lakh of Hindus and Sikhs had to be moved from Sind to India every month by train and sea and even by air. This large-scale evacuation raised questions relating to evacuees' property and allied problems. No custodian of evacuee property was appointed in Sind, but economic rehabilitation officers in Sind and Baluchistan carried out the functions of custodians of evacuee property. Although no accurate estimate of non-Muslim evacuee property in Western Pakistan could be had at present, it must be remembered that as the entire trade

and commerce were in their hands in this part of the sub-continent, their economic stake must be very considerable.

One of the redeeming features of the Indo Pakistan relations since partition is the way both Governments had co-operated in solving their mutual difficulties in regard to food. India's Food Councillor, Major-General A. C. Arnold was mainly responsible for this, had vacated his office of Regional Food Controller in Karachi in March 1947.

The following are among the more important members of the Indian High Commissioner's staff in Pakistan:

IN KARACHI

Deputy High Commissioner:—S. K. Kripalani.

Additional High Commissioner:—N. R. Malkani.

Food Councillor:—Vacant.

Secretary to the High Commissioner:—Deshpande.

Attaches:—B. K. Massand; A. K. Roy; A. B. Bhadkamkar.

AT LAHORE

Deputy High Commissioner:—Sardar Sampuran Singh.

Officer on Special Duty:—K. L. Punjabi.

AT PESHAWAR

India's Liaison Officer:—K. L. Khana.

Pakistan Representatives Abroad

Quaide-Azam's Personal Representative in Afghanistan, Kabul, M. H. Quzilbash.

Charge d'Affaires, in Egypt, Alexandria, J. A. Rahim.

Charge d'Affaires, in Iran, Tehran, Mohammad Hassan.

Ambassador in the U.S.A., Washington, D.C., His Excellency Mirza Abul Hasan Ispahani.

Charge d'Affaires, in Burma, Rangoon, Ibne Hasan.

High Commissioner in the U.K., London, Habib I. Rahimtoola.

High Commissioner in India, New Delhi, Zahid Husain, C.I.E.

Trade Commissioner in Australia, Sydney, A. D. Azhar.

Trade Commissioner Service

UNITED KINGDOM

The United Kingdom Trade Commissioners are the representatives in India, Burma and Ceylon of the Board of Trade. The two departments of the Board which are mainly concerned with external economic relations are the Commercial Relations and Treaties Department, which is responsible for general external commercial policy, and the Export Promotion Department, which acts as the executive instrument for fostering export trade. Both departments are under the same ministerial direction—the Secretary for Overseas Trade—who is responsible to the President of the Board of Trade under whose guidance he is concerned with the whole field of external trade.

In foreign countries the counterpart of the work performed by Trade Commissioners is undertaken by Foreign Service Officers in Commercial Diplomatic and Consular posts. The Board of Trade is associated with the Foreign Office in the staffing of commercial posts in foreign countries. But the trade policy of the United Kingdom is a matter for the President of the Board of Trade acting, as do all other Ministers, in consultation and agreement with those of his colleagues whose interests are also concerned.

Function of United Kingdom Trade Commissioners. The primary duty of the United Kingdom Trade Commissioners consists in the giving of assistance to governments, organisations, firms and individuals who wish to establish contact with sources of supply in the United Kingdom. The Trade Commissioner, in addition, himself collects information in regard to trade opportunities which may arise within his territory. He reports to the Board of Trade on all matters affecting the trade, industry and commerce of the area entrusted to him. He is responsible for maintaining close personal relations with ministers and officials of governments in his area, with chambers of commerce, trade associations and the principal importers and manufacturers. He aims at visiting the principal commercial centres, reporting upon foreign competition, on financial and trade conditions, and new legislation affecting trade. He is also expected to maintain a regular flow of commercial information of all kinds to the Board of Trade, to maintain active correspondence with firms in the United Kingdom who wish to extend their trade, and to give all possible assistance to representatives of United Kingdom firms who may visit this territory.

The United Kingdom Trade Commissioners in India endeavour to maintain contact with United Kingdom representatives and agents in India. The offices are equipped with a wide range of directories and reference books of all kinds, including libraries of catalogues of the leading United Kingdom manufacturers. Firms desiring information with regard to specific manufacturers are invited either to call personally

or to communicate their requirements in writing. It is hoped that local importers and buyers will not hesitate to make more extensive use of the information available in these offices, and to bring to the attention of the United Kingdom Trade Commissioners any cases where difficulties may have arisen over the harmonious development of trade between the United Kingdom and India.

On account of the partition of India, there is now a separate United Kingdom Trade Commissioner's organisation in Pakistan, with its headquarters at Karachi. There is also a United Kingdom Trade Commissioner in Burma, where an office has recently been opened at Rangoon.

Staff:

Delhi—Rowland Owen, United Kingdom Senior Trade Commissioner in India.

L. Harrison, United Kingdom Trade Commissioner at Delhi.

E. A. Midgeley, M.B.E., United Kingdom Trade Commissioner.

J. N. McKelvie, United Kingdom Trade Commissioner.

Address:—Eastern House, Man Singh Road, New Delhi.

Telephone No. 40011/5.

Telegrams:—TRADCOM.

Calcutta—A. W. Burton, M.B.E., United Kingdom Principal Trade Commissioner at Calcutta.

K. E. Mackenzie, United Kingdom Trade Commissioner at Calcutta.

D. A. Bryan, United Kingdom Trade Commissioner.

Address: P. O. Box 683-4, Chittaranjan Avenue, Calcutta.

Telephone No. 6455.

Telegrams: TRADCOM.

Bombay—John Stoodley, United Kingdom Trade Commissioner at Bombay.

Address: P. O. Box 815, Menkwa Building, 10, Outram Road, Fort, Bombay.

Telephone No. 6455.

Telegrams: TRADCOM.

Karachi—W. Godfrey, United Kingdom Senior Trade Commissioner in Pakistan.

A. H. Kemp, United Kingdom Trade Commissioner at Karachi.

Address: Chamber of Commerce Building, Wood Street, Karachi.

Telephone No. 2886/8.

Telegrams: TRADCOM.

CANADA

The Canadian Department of Trade and Commerce comprises, as one of its principal divisions, the Foreign Trade Service, formerly called as the Commercial Intelligence Service. This service had its beginnings prior to the establishment of the Department in 1892 and since undergone considerable expansion. Before the war it included a headquarters staff of Ottawa and thirty-four Trade Commissioners posted abroad, seventeen of these being in British India and an equal number in foreign countries. Several of these were closed during the war but are being progressively reopened and the beginning of 1948 the service comprised offices in the United Kingdom, the Dominions, Newfoundland, Eire, the West Indian Colonies, the United States, Cuba, Egypt, the principal countries of Central and South America, the Netherlands, Norway, Sweden, Portugal, France, Belgium, Italy, and Greece. The Service still continues to expand both in respect to offices and trained personnel in order to assist in the expansion of Canada's extensive wartime trade to a normal commercial basis.

In those countries where Canada has established diplomatic representation the Trade Commissioner's office has been incorporated into the Canadian embassy or legation.

The office of the Canadian Trade Commissioner in India, Burma and Ceylon was established in Calcutta in 1922 and was transferred to Bombay on April 1st, 1940. In the summer of 1947, the office of the High Commissioner for Canada was established at New Delhi where a Commercial Section is also located. Since September 1947, a Trade Commissioner office was established in Karachi to look after the requirements of the new Dominion of Pakistan. The services of Canadian Trade Commissioner offices are at the disposal of Canadian firms interested in the export of their goods to the Indian, Pakistan, Burma and Ceylon markets and to Canadian manufacturers and others who may be interested in the purchase of local products. These offices are also in regular touch with import houses in these countries and are prepared to co-operate as well with exporters interested in the Canadian market.

Office of the High Commissioner for Canada:
4, Aurangzeb Road, New Delhi.
Commercial Secretary: Richard Grew, P. O. Box 114, Telephone 40191, Cable Address: "CANADIAN", New Delhi.

Trade Commissioner Service

Acting Canadian Government Trade Commissioner: C. R. Galloway, Gresham Assurance House, Mint Road, Bombay, P. O. Box 886, Telephone 20672, Cable Address: "CANADIAN", Bombay.

Acting Canadian Government Trade Commissioner: G. A. Browne, P. O. Box 531, Karachi, Cable Address: "CANADIAN", Karachi.

AUSTRALIA

The Australian Government Trade Commissioner is located in Bombay and Calcutta and covers the territory of India and Burma.

The Trade Commissioners deal with enquiries received from India, Burma and place Indian Merchants and Firms in touch with manufacturers in Australia. They maintain a flow of trade information to the Department of Commerce, Australia, for dissemination to Australian exporters and information on specific openings for trade, including Government contracts and tenders for which Australian products might be suitable. They watch the demand for specific goods and gives information concerning competition to be met in their supply. An important function is to provide details of credit conditions and terms of payment. Market surveys on specific commodities are prepared and sent for the information of trade interests in Australia.

Information and literature is available on all aspects of trade with Australia.

Senior Australian Government Trade Commissioner in India and Burma: H. R. Gollan, D.S.O., M.C.—Address: Menkwa Building, Outram Road, P. O. Box 217, Bombay.

Australian Government Trade Commissioner: S. D. Shubart.—Address: Menkwa Building, Outram Road, P. O. Box 217, Bombay.

Australian Government Trade Commissioner: E. A. Benson.—Address: 2, Fairlie Place, P. O. Box 303, Calcutta.

NEW ZEALAND

Trade Commissioner in India: R. J. Inglis.—Address: 16, Churchgate Street, Bombay.

DENMARK

Office: Indian Mercantile Chambers, Nicol Road, Ballard Estate, Bombay.

Trade Commissioner: Harry Toyberg-Frandzen.

Asst. Trade Commissioner: P. Manford-Hansen.

Scientific Surveys

THE Botanical Survey Department of the Government of India was under the control of a Director. The Superintendent of the Royal Botanic Garden, Calcutta was *ex-officio* Director. The Director having retired since December 3, 1939, the Department is awaiting some reorganisation. The duties of the Director are distributed amongst (i) Dr. K. P. Biswas, M.A., D.Sc. (Edin.), F.R.S.E., Superintendent, Royal Botanic Garden, Calcutta and (ii) K. Sreenivasan, M.A., Curator, Industrial Section, Indian Museum. There is a staff at headquarters of one officer for systematic work and at the Indian Museum a Curator who is engaged in the development and maintenance of the Industrial Section.

A Trading Scheme for systematic and taxonomic work has been inaugurated by the Government of India with a view to developing the Botanical Survey of India in near future.

The existence of the Botanical Survey, like that of the Geological Survey, has both a cultural and an economic justification. On general grounds it is obvious that a progressive Government should acquaint itself with the vegetable resources of the area it administers, and although apart from the cinchona operations, the activities of the survey cannot be said to have much immediate economic applicability—consisting as they do of investigations and researches into the systematic taxonomy, distribution of plants, ecology and economic botany of plant life—the work accomplished in pure and applied botany at the Royal Botanic Garden during the last century and a half has exercised a profound and far-reaching influence upon the development of Agricultural Science and Forestry in India. The irreplaceable dried plant materials obtained by botanical explorations and preserved for more than one hundred and fifty-six years at the Herbarium of the Royal Botanic Garden, Calcutta, and several thousands of indigenous and exotic trees, shrubs and herbs cultivated in the open, prove to be most useful in dealing with such questions of considerable State importance as naturalisation of useful plants, introduction of new vegetable products into the country, the adaptation of raw produce to the requirements of manufacturing industry, land utilisation, preservation of rural areas, provision of national parks, drainage, sanitation and public health.

Geological Survey.—The Geological Survey of India is one of the oldest Geological Surveys in the World. The present department, now under the Government of India, Department of Works, Mines and Power, was founded in 1851. Its primary function is the preparation of a geological map of India, the basis on which all geological work, including an appraisal of the mineral deposits of the country, must rest.

Up to the beginning of the present century, most of the geological maps prepared were on the small scale of 1" = 4 miles, many of the surveys being rather in the nature of geological reconnaissances with the object of obtaining a broad view of the geology of the country as a whole. During the last 40-50 years, mapping

has, wherever possible, been on a standard scale of 1" = 1 mile, and in certain areas of special economic importance on larger scales.

The importance of geological work in connection with India's industrial development is now widely realised and, to meet enhanced demands, the gazetted cadre of the Department is being increased as rapidly as possible. The present sanctioned strength is the Director, 1 States Liaison Officer, 10 Superintending Geologists (including 2 Deputy Directors), 30 Geologists, 1 Petroleum Geologist, 50 Assistant Geologists, 2 Geophysicists, 1 Chemist, 9 Assistant Chemists, 1 Mining Engineer, 1 Deputy Mining Engineer, 1 Drilling Engineer, 1 Driller and 1 Registrar. This staff is divided into (i) Headquarters Division, and (ii) Field Staff. The Headquarters Division, with its office in Calcutta, includes 2 Deputy Directors (one in charge of General Administration, Publications, and Records and the other in charge of Mineral Development and Technical Administration), 1 Petrologist and 1 Curator with assistants who identify rocks and minerals submitted for examination by the public and superintend the Museum collections, 1 Palaeontologist with assistants who are responsible for the identification of fossils and supervision of the fossil collections, and a chemical staff working in the Headquarters Laboratory. The office sections include, in addition to the general administrative sections, a Library section, a Publication section and Drawing office, including map and process sections. Geological maps are prepared in the Drawing office and smaller maps are also printed there. The departmental Library is well-equipped with books and publications on geological and allied subjects. These may be consulted by the general public and in certain circumstances may be issued on loan.

The Field Staff, who spend about half of the year on geological fieldwork in any part of Indian Dominion and the remaining 6 months at headquarters, are deputed to work either in the Field Circles or in the Specialist Sections, the former consisting at present of 5 Circles, viz., (1) Western Circle for Bombay and Rajputana; (2) Northern Circle for East Punjab, U. P. and Bihar; (3) Central Circle for C. P. & Orissa; (4) Eastern Circle for West Bengal and Assam and (5) Southern Circle for Madras and the latter of 6 Specialist Sections, viz., (1) Mineral Development Section; (2) Engineering Geology and Ground Water Section; (3) Geophysical Section; (4) Drilling Section; (5) Mining Section and (6) Rare Mineral Section. The Field Circles each embrace one to several provinces, while the activities of the 6 Specialist Sections cover the whole of the Indian Dominion. Each Field Circle is under the supervision of a superintending Geologist. The individual Mapping Circles embrace one to several provinces while the activities of the two specialised circles cover the whole of India. The object of the Field Circles is to continue the detailed geological mapping of Indian Dominion. Officers in these Circles carry out preliminary investigations on such mineral occurrences as are found during the course of mapping, and also undertake the simpler types of

engineering geology and water-supply investigations. They also supply the geological guidance necessary in any geophysical work which may be carried out in their areas. Officers of the Mineral Development Circle are men who have specialised in the study of certain minerals, such as coal, mica, manganese, clays, gypsum, etc. Their work is of an all-India character, and they operate and give advice to provinces wherever their specialised knowledge is advantageous. Similarly, the work of the Engineering Geology Circle is of an all-India character, the members being highly specialised in the geological investigation of dam-sites, water-supply or any geological problems related to engineering.

With the present small staff, this section can take on only a limited number of investigations but it is hoped that it will be expanded to the required cadre as quickly as possible. It works in close co-operation with the Public Works Dept. of the various Provincial Governments. A small geographical staff has been appointed and is being equipped. The Geophysical Section is at present working mainly on water-supply and engineering geology problems, and on the location of small mineral deposits. The Drilling, Mining and the Rare Minerals Sections have just begun to function—additional staff is still being recruited. For work in connection with the testing of minerals deposits, exploring dam-sites and underground water resources, drilling equipment is being purchased.

Every year, before the programme of the field surveys is decided upon, the Provincial Governments are asked to give details of geological investigations, mineral surveys or engineering enquiries which they desire to have carried out. Such definite programmes of fieldwork may also cover the States, joining the Indian Union and may be carried out free of charge. If, however, any special problem has to be dealt with which does not come under the regular programme of the Department (e.g., a mineral survey of a particular area, an enquiry connected with a particular engineering project, or short-term investigations involving specialised geological knowledge), a charge may be made for the services of the officers deputed for such work.

Recently a Mineral Information Bureau has been organised within the Geological Survey of India with the object of assisting the mineral industry in the country by disseminating in non-technical language the available information on Indian minerals and advising the public on the development and utilisation of mineral resources. The Bureau published a quarterly journal called "Indian Miners" in which information is couched in a simple form readable by the general public.

The results of the investigations and researches of the Department are published in—

- (i) *Records of the Geological Survey of India*, which include the Annual Reports, Annual Mineral Review, and short papers. On volume of 4 parts is published annually. Every 5 years, a Quinquennial Review of the Mineral Production of India, is published as a separate volume of the *Records*.

- (ii) *Memoirs of the Geological Survey of India*; in general each volume deals in detail with a particular area and a particular mineral.

- (iii) *Palaontologia Indica*, which deals entirely with palaontological matters.

As a part of the *Records*, a series of Bulletins on particular minerals have been published in recent years. These Bulletins are intended to summarise the geological information available in India on commercial minerals. As each edition goes out of print, these Bulletins are revised and reprinted.

Thus to cater for the Mineral Industry, the Geological Survey of India publishes:

- (a) An Annual Review of Mineral Production, the contents of which are mainly production statistics relating to the previous year.
- (b) A Quinquennial Review of the Mineral Production of India, giving a review of the trend of the industry during the past 5 years.
- (c) Bulletins, each giving a summary of geological knowledge on a particular mineral.
- (d) A Semi-popular quarterly journal known as the "Indian Minerals" which contains articles on minerals and mining in India, mineral statistics and abstracts of world mineral news, etc.

During the War, the publication of the *Records* (except Bulletins) and *Memoirs* was suspended, but this has now been resumed.

The advice of the Geological Survey of India is taken by the Central Government and others on all questions of mineral policy. To encourage and assist the teaching of geology in classes and colleges, the Department presents collections of minerals, rocks and fossils and gives lectures to students and at times to the public with a view to popularising the study of geology.

The geological functions of the Mineral Utilisation Branch of the Department, which was established as a War measure, have been taken over by the Mineral Development Circle.

The Strategic Branch, which was formed during the War with a view to providing geological information and advice for the Allied Forces, has been dissolved.

Survey of India.—The first authoritative map of India was published by D'Arville in 1752, when the exploration of the then unknown India was still largely in French hands. It had been compiled from routes of solitary travellers and rough chart of the coast.

The Survey of India may be said to have been founded in 1767—ten years after the battle of Plassey—when Lord Clive formally appointed Major James Rennell, the first Surveyor General of Bengal, at that time the most important of the East India Company's possessions, though there were earlier settlements in Madras and Bombay.

Rennell's maps were originally military reconnaissances and latterly chained surveys based on astronomically fixed points, and do not

pretend to the accuracy of modern maps of India based on the rigid system of triangulation commenced at Madras in 1802 and since extended over and beyond India. Even now, however, the relative accuracy of these old maps makes them valuable in legal disputes, as for instance in proving that the holding of a Bengal landowner was a river area at the time of the Permanent Settlement of 1793, so that he is debarred from its benefits.

From these beginnings, this department has gradually become primarily responsible for all topographical surveys, explorations and the maintenance of geographical maps of the greater part of Southern Asia, and also for geodetic work.

Geodesy means the investigation of the size, shape and structure of the earth, and the geodetic work of the department consists of primary (or geodetic) triangulation, latitude, longitude and gravity determinations. From these the exact "figure" of the earth is obtained, whereby points fixed by triangulation can be accurately located on its curved surface. This system of fixed points holds together all topographical and revenue surveys, and the existence of such a system from the early days of the department has avoided the embarrassments caused in other countries where isolated topographical surveys have been started without a rigid framework, with the inevitable result that they could not be fitted together.

A geodetic framework is, therefore, essential in any large survey, but there are a number of other activities, all of them ultimately utilitarian which can be suitably combined with its execution, and the following are some of those which are carried out in India:

Precise levelling for the determination of heights;

Tidal predictions and publication of Tide Tables for thirty-nine ports between Suez and Singapore.

The Magnetic survey; Observation of the direction and force of Gravity;

Astronomical observations to determine latitude, longitude and time;

Seismographic and meteorological observations at Dehra Dun.

Indian geodesy has disclosed widespread anomalies of gravitational attraction in the earth's crust, which have recently led to a reconsideration of the whole theory of isostasy.

Topographical Surveys.—In the past this department used to carry out the large scale revenue surveys for most of India, and was still conducting this work for Central and Eastern India in 1905.

Though revenue survey is primarily a record of individual property boundaries and is unconcerned with the surface features, ground levels and exact geographical position essential to a topographical survey, it was on the whole found economical to carry out both surveys together.

By 1905, however, all the Provinces had taken over the revenue surveys, for which they had always paid, and the Survey of India was enabled to concentrate its energies on a complete new series of modern topographical maps in

several colours on the 1-inch to 1-mile scale as recommended by a commission which sat at the time to consider the existing maps of India.

This new series had been rendered necessary by the natural demand for more detailed information to be shown on maps, especially as regards the portrayal of hill features by contours and proper classification of communications.

While some of the unsurveyed places are in remote tracts like the Naga hills of Assam and the high Himalayas, most are accessible. Large areas in North Bihar, South Bombay, Gujarat and Western Rajputana have yet to be mapped on modern lines.

The activities of the Survey of India have gone beyond the borders of India in the past. Nepal, for instance, was surveyed and mapped at the request of the local authorities in 1927.

Surveys and records of international, state and provincial boundaries have always formed an important item of topographical work.

Air Surveys.—The use of air survey has been progressively developed in this department and is now widely used both in support of the topographical survey programme and for special requirements of Irrigation Geology, Town-planning and other development works.

Air survey is, in certain types of terrain and for certain purposes, more speedy and more economical than ground survey and can be carried out by the department at almost any normally required standard of accuracy.

Paid for work.—In normal times the department is prepared to undertake or aid local surveys, on payment by those concerned, such as:

Forest and cantonment surveys;

Riverain, irrigation, railway and city surveys;

Surveys of tea gardens and mining areas, with such control levelling as is necessary for those operations;

Administrative assistance is also given, and executive officers lent, in aid of the revenue surveys of various Provinces and States.

Maps.—In addition to topographical maps on scales of 1 inch, $\frac{1}{2}$ inch and $\frac{1}{4}$ inch to one mile and geographical maps on scale of 16 miles to one inch and smaller scales, the Department produces and holds for sale the following special maps:—

General maps of India, Provincial Maps, City and Town Guide Maps, Cantonment Plans, Manoeuvre Maps and miscellaneous maps.

All departmental maps published are shown in the 'Survey of India Map Catalogue' which can be obtained for Re. 1 post free from the Director of Map Publication, Dehra Dun.

Administration is in the hands of the Surveyor General under the Ministry of Agriculture, Government of India.

The Headquarters office is at Delhi under the Deputy Surveyor General.

There are map printing offices at Dehra Dun and Calcutta, the resources of which may be made use of by Government Departments and the public for printing special maps, illustrators for reports, patents, diagrams, etc.

During the war, the Department was almost entirely devoted to work in direct support of the war effort and many of the civil activities outlined above were interrupted or suspended. These activities have now been resumed and intensified particularly in relation to development projects.

Zoological Survey of India.—The Zoological Survey of India was founded in 1916 on the basis of the Zoological and Anthropological Section of the Indian Museum which itself is a descendant of the Royal Asiatic Society of Bengal. The extensive Zoological collections are for and maintained by the Zoological Survey of India partly belong to the Asiatic Society, mostly to the Trustees of the Indian Museum and partly to the Central Government. Besides the collections, which are rich in types and unique specimens of Indian fauna, the greatest asset of the Survey is its extensive zoological library, probably the second best in Asia. Under certain rules and regulations, the books are sent out to *bona fide* research students thereby encouraging Zoological research even in the remotest corners of India.

By conducting surveys of molluscs in connection with the spread of Bilharzia after the First World War both on the eastern and western frontiers of India and the surveys of rats in connection with the spread of Typhus in the Manipur Valley during the Second World War, the Zoological Survey of India justified the confidence reposed in it by the authorities. In recent years, it has supplied staff for the development and research in fisheries and for the Plant Protection Bureau of the Central Government. Certain sections of the Fisheries Research, and Plant Protection Bureau are now located in the Zoological Survey of India. Even from a purely utilitarian aspect the potentialities and aspects of the Survey are very much under-exploited.

The objects for which the Zoological Survey of India was founded, are (i) to undertake faunistic studies so as to acquire all possible information on the geographical distribution of Indian animals, (ii) to maintain and add to the

National Zoological collections started nearly a century and a half ago by the Asiatic Society of Bengal, (iii) to maintain and develop the public exhibits in the Zoological galleries of the Indian Museum at Calcutta, (iv) to identify specimens as required by investigators in any part of the country and (v) to advise the Government on zoological matters.

The Zoological Survey of India publishes *Records and Memoirs of the Indian Museum* which are journals of Indian Zoology and recently the publication of the *Fauna of British India* has also been transferred to the Survey. The Reports of the Zoological Survey of India published triennially are illustrated and informative.

The Anthropological Section of the Survey was budded off in December 1945 and formed the nucleus of the Anthropological Survey of India. With it the publication of "Anthropological Bulletins" was also transferred to that Department.

Since its establishment, the Survey had to weather many heavy storms, such as the Inchcape Retrenchment Committee proposals of 1923, the 1931 Retrenchment Committee proposals which crippled it completely, the shifting of the Survey from Calcutta to Benares in April, May 1942, the Varuna Flood of September 1943, and the depletion of its staff to meet the needs of Fisheries Development and Research. The report of Lt.-Col. R. B. Seymour Sewell, formerly Director, Zoological Survey of India, submitting proposals for the reconstruction and expansion of the Survey, issued in November 1946, is still under the consideration of the Govt. of India. As Zoological Departments are not well developed in most of the Indian Universities and as nature history studies are not much in vogue in this country, for the recruitment of staff, a Scheme for Training in Systematic Zoology has been in operation in the Zoological Survey of India since February 1946.

The Zoological galleries, which suffered heavy damage due to occupation of the Indian Museum by Army Authorities, are being reconstructed and restored. Some of them have been thrown open to the public since October 1947.

Forests

EVEN in the earliest days of the British occupation the destruction of the forests in many parts of the Indian sub-continent indicated the necessity for a strong forest policy, but, whether or not our early administrators realised the importance of the forests to the economic and physical welfare of the whole country, the fact remains that little or nothing was done to check uncontrolled destruction with its inevitable results in erosion and sterilisation of the fertility of the land.

The years between 1850 and 1857 witnessed the first beginnings of forest conservancy in Southern India. It was a Memorandum of the Government of India issued in 1855, arising as it chanced out of the annexation of the Province of Pegu in Burma which first laid down the outline of a permanent policy for forest conservancy in India. Exploration, demarcation and settlement, followed by efforts to introduce protection and some form of organised management, were long and laborious tasks, which are even yet not completed. Nevertheless, large tracts of forest were saved from ruin and were gradually brought under increasingly efficient management. It was in 1862 that the Governor-General in Council submitted to the Secretary of State detailed proposals for the administration of forests as a public estate for the welfare of the country as a whole. With the appointment of Brandis (later Sir Dietrich Brandis) as the first Inspector-General of Forests in 1863 commenced the scientific management of India's forest estate. Whatever may have been the opinions held in the past in some quarters regarding restrictions imposed by forest policy, there can now no longer be any doubt regarding the very substantial benefits which have accrued to the country through the formation of an extensive forest estate and that in her forests India now possesses a property of great value.

TYPES OF FOREST

More than one tenth of the total area of the Indian sub-continent is under the control of the Forest Departments. These areas are classified as reserved, protected or unclassified State forests. In the reserved forests rights of user in favour of individuals and the public are carefully recorded and limited at settlement while the boundaries are defined and demarcated; in the protected forests the record of rights is not so complete, the accrual of rights after settlement not being prohibited, and the boundaries are not always demarcated; while in the unclassified forests no systematic management is attempted, and as a rule the control amounts to nothing more than the collection of revenue until the areas are taken up for cultivation or are converted into reserved or protected forests. The total forest area of India and Pakistan under the control of the old Forest Department on 31st March, 1941, was 98,253 square miles or 11.4 of the total area. This was classed as follows: Reserved 72,930; Protected 6,772; Unclassed State 18,550.

Throughout this vast forest area, scattered over the length and breadth of the sub-continent, from the Himalayan snows to Cape Comorin,

and from the arid Juniper tracts of Baluchistan to the Eastern limits of the Assam hills, there is an infinite variety in the types of forest vegetation, depending on climate, topography, soil and other local factors. Vegetationally, the greater part of the sub-continent, including the Indo-Gangetic Plain, must be considered as in the tropics, but wherever there are mountains, such as the Nilgiris in the south, and the Himalayas and Assam-Burma hills in the north, subtropical, temperate and, in the north, alpine zones must be distinguished, each supporting its own forest types.

Next to the major altitudinal effects, rainfall is the most important factor in the determination of the nature of the forests, and within each of the main zones, tropical, subtropical, temperate and alpine, there can be distinguished wet, moist and dry forest types. In addition, various edaphic and seral types occur, dependent on local conditions, such as littoral (beach), tidal, fresh-water swamp, and rivrain forests.

The following is a brief description of the main forest types:—

I.—TROPICAL FORESTS

1. Tropical Wet Evergreen Forests.—These are dense forests, with a large number of tree species all mixed together, but according to their heights forming several canopies or layers. The upper canopy trees, among which *Dipterocarps* are usually characteristic, are often 150 to 200 feet high, and they very often have clear stems of 100 feet before the first branch is reached. These forests are found in the areas with the heaviest rainfall. In the southern or Peninsular region, they occur along the Western Ghats from a little south of Bombay to Tinnevely, i.e., in the western parts of Bombay, Madras, Coorg, Mysore, Cochin and Travancore. In the northern or Indo-Gangetic region, the type is to be found in the wetter parts of the Bengal area (the submontane and Chittagong areas), extending into the damper parts of the coastal strip of Orissa, and intermingled with the next two types over almost the whole of Assam. The type also occurs extensively in the Andamans.

2. Tropical Semi-Evergreen Forests.—These form an intermediate type between the wet and the moist types. They are fairly widely distributed in the Northern region, occurring all over Upper Assam and in North and South of East and West Bengal (Buxa, Jalpaiguri, Kurseong, Kalimpong, Chittagong), and in Orissa (Puri, Angul and some of the adjoining States). In the South, however, the type is not extensive, owing to the steep rainfall gradient in the Western Ghats, and it is limited to narrow strips just north of Bombay, near Goa, South Cochin and part of Coorg. Forming a dense forest of several canopies, there are again numerous evergreen species, but mixed with them are many deciduous species, such as the *Terminalias*, and the general height is somewhat less than in the wet evergreen forests.

3. Tropical Moist Deciduous Forests.—In these forests the trees are leafless for part of the year, and although the canopy is complete, the forests are not so dense, nor are the trees so tall as in the preceding types. The height of the dominant trees varies from 100 to 150 feet. In the southern region, *Teak* is the chief tree, mixed with *Terminalias* and many other species. The type is widely distributed all over the centre and south of India, in the Central Provinces, Bombay, Madras, Mysore, Coorg, Cochin and Travancore. In the North, *Sal* (*Shorea robusta*) is the dominant species, and the type extends extensively through East and West Bengal, Assam, Bihar, Orissa, and the United Provinces up to the eastern border of East Punjab.

4. Tropical Dry Deciduous Forests.—This type is found throughout the Peninsula, in Bombay, Central Provinces, Hyderabad, Mysore and Madras, and in the Indo-Gangetic Plain, from Orissa, through Bihar and the United Provinces to East Punjab, wherever the annual rainfall is from about 30 to 50 inches. In the South, the most important tree is again *Teak*, but there are many associates, which often become the dominant species. In the North, the forest is typically mixed, with *Sal* occurring only locally.

5. Tropical Thorn Forests.—The dry tract throughout the Peninsula to the lee of the Western Ghats, from the extreme south to Indore and Bhopal, with a rainfall of only 20 to 35 inches per year, is characterised by a low open forest of thorny trees, of which various species of *Acacia* are especially common. The corresponding area in the North has an even lower rainfall, 10 to 30 inches per year. It extends throughout the western side of Upper India (except for areas of actual desert), from the North-West Frontier Province, through East and West Punjab and Rajputana, to Sind and Baluchistan, with eastern extensions into the drier parts of the United Provinces, especially on unfavourable soils. *Acacias* are again characteristic, although less prominent than in the south and the related tree *Prosopis spicigera* is also generally distributed.

6. Tropical Dry Evergreen Forests.—A special type is met on the Carnatic coast, where the rainfall is 30 to 50 inches per year, largely from the retreating (north-east) monsoon in October and November. Here there is a low forest 30 to 40 feet high, consisting of small thick leaved evergreen trees, such as *Mimusops hexandra* and *Memeylon edule*.

II.—SOUTHERN SUBTROPICAL AND TEMPERATE FORESTS

These are represented only by wet types on the higher hills, such as the Nilgiris and Palni hills, where the rainfall is relatively high. The subtropical zone, from about 3,000 feet to 6,500 feet, has a dense evergreen forest of medium height (80 feet) in which *Eugenia* is a characteristic genus, with *Lauraceae* and other families also well represented. Above this, in the temperate zone, rolling grassy downs are characteristic, as round Ootacamund, with patches of forest, known as *sholas*, occupying the sheltered folds in the hills. These forests, probably the relics of former much more extensive forests which have been reduced

by burning, felling and grazing, are typically a relatively low but fairly dense evergreen type, 50 to 60 feet high, with a great variety of trees, among which *Ternstroemia*, *Eugenia* and *Melastoma* are typical general.

III.—NORTHERN SUBTROPICAL FORESTS

1. Subtropical Wet Hill Forests.—This type occurs on the lower slopes of the Eastern Himalayas and in the Assam-Burma hills, from a little under 3,000 feet to 6,000 feet. The forests are mostly of good height (up to 150 feet) and density, characterised by many species of evergreen *Oaks* and *Chestnuts*, with many other temperate trees, such as *Alder* and *Birch*, which are deciduous for short periods. *Pines* are typically absent, or are confined to drier sandy soils or well drained ridges, while *Dipterocarps* sometimes extend upwards from the tropical wet evergreen forests.

2. Subtropical Moist Hill Forests.—These extend to the whole length of the Western and Central Himalayas, from the North-West Frontier Province to Bhutan, mostly between 3,000 and 6,000 feet, but descending in places to 2,000 feet, and ascending on southerly aspects to 7,500 feet.

The principal tree is the *Chir* or *Chil* pine (*Pinus longifolia*), which forms almost pure forests over extensive areas. *Oaks*, *Rhododendrons* and other trees mix with or replace the *Chir* at the higher levels and in damper situations.

The type extends eastwards into the Khasi, Naga, Manipur hills, but instead of the *Chir* the dominant tree is the *Khasi pine* (*Pinus khasya*).

3. Subtropical Dry Evergreen Forests.—These are open low scrub forests of evergreen trees and thorny shrubs, in which the chief species is the *Olea* (*Olea cuspudata*). They occur from about 1,500 feet to 5,000 feet in the Himalayan foothills, the Salt Range and the Kala Chitta hills in the Punjab area, Kashmir and Hazara, extending westwards into Baluchistan and other countries. The forests have mostly been considerably impoverished by grazing, lopping and felling and with protection the general density becomes much better.

IV.—NORTHERN TEMPERATE FORESTS

1. Wet Temperate Forests.—These are found in the Eastern Himalayas from Nepal eastwards, extending through West and East Bengal into the higher hills of Assam from about 6,000 feet to 9,500 feet. They are typically fairly dense evergreen forests, in which several species of *Oaks* and *Chestnuts* predominate, but many other species are also present, including typically deciduous trees such as *Maple*, *Elm* and *Prunus*.

2. Moist Temperate Forests.—Along the whole length of the Himalayas from the North-West Frontier Province, through Kashmir, West and East Punjab, United Provinces, Nepal and the Darjeeling district to Sikkim and Bhutan, at altitudes from 5,000 to 11,000 feet, and with a rainfall from 40 to 100 inches per year, are to be found extensive coniferous forests similar to the temperate forests of Europe and North America. The chief trees

are Spruce, Silver Fir, Cedar (Deodar), Blue Pine (*Pinus excelsa*), and *Tsuga*. Cypress and Yew also occur to a less extent. Often these trees are mixed together, but pure crops of one or the other are generally more frequent, depending on the altitude, aspect and other conditions. Evergreen Oaks are also often present, particularly on southern aspects, while in the damper situations are often many broad leaved trees, also typical of European forests, such as Maples, Hornbeam, Horse Chestnut, Birch, Elm, etc.

3. Dry Temperate Forests.—In the inner ranges of the Himalayas, where the south-west monsoon is feeble, and the rainfall is usually less than 40 inches a year, and that is mostly in the form of winter snow, is to be found extending from 5,000 to 10,000 feet a drier and more open type of temperate forest. It consists chiefly of the conifers Cedar (*Deodar*), *Pinus gerardiana* and *Juniper* (*J. macrocarpa*), with some Silver Fir and Blue Pine at higher elevations. Broad leaved trees, such as Maple, Ash and the Holm Oak, occur scattered or in pure patches, while the *Olive* spreads up from the dry subtropical zone. The type occurs in Hazara, Kashmir, Chamba, Inner Garhwal and Sikkim. Among the herbs and shrubs present are many medicinal plants, such as *Artemisia* and *Ephedra*.

V.—ALPINE FORESTS

The uppermost forests of the Himalayas, from about 9,500 to 12,000 feet, consist of a dense growth of small trees and large shrubs, chiefly Birch, *Rhododendron* and dwarf *Juniper* with patches of coniferous overwood of high level Silver Fir and Blue Pine.

This gives place to an alpine scrub above, consisting of dwarf *Rhododendrons*, *Junipers* and other shrubs, interspersed with patches of grassland, which form excellent grazing areas in summer, when they are covered with a great variety of beautiful alpine flowers.

VI.—SPECIAL FOREST TYPES

Among various special edaphic and seral forest types, the following may be mentioned:—

1. Beach Forests.—All round the coast, wherever a fair width of sandy beach occurs, there is a fringe of forest in which *Casuarina*, originally introduced from Australia, is now often the most characteristic species. Elsewhere, small evergreen and deciduous trees form a low but fairly dense fringe along the shore.

2. Tidal Forests.—In the Sunderbans of the Ganges-Brahmaputra delta, and along the mouths of other large rivers, such as the Mahanadi, Godavari and Indus, are to be found *Mangrove* (*Rhizophora*, *Brougniera*, etc.) and *Sundri* (*Heritiera*) forests, typical of salt water swamps. Many of the trees have stilt roots for support, and "knees" or pneumatophores projecting upwards from the swamps to provide aeration for the roots.

3. Fresh-water Swamp Forests.—These are not very extensive, but are to be found above the salt water limit in the deltas of the large rivers, and also in depressions, often old river beds, in parts of Assam, West and East Bengal, the United Provinces and Madras. They are subject to prolonged annual flooding and have

various species according to the locality. The delta type in Bengal supports the best of the *Sundri* forests, often over 100 feet high.

4. Riverain Forests.—Along all the large rivers on the banks of new alluvium are to be found stretches of moisture-loving trees, such as *Lagerstræmia flos-regina*, *Terminalia myriocarpa* and *Salix tetrasperma*. On recently deposited gravels and sand, extensive stretches of which occur along many river courses both in the North and the South, are often to be found forests in various stages of succession, depending on how new or old is the deposit, on the rainfall and other local factors. Perhaps the most characteristic are the *Khair* (*Acacia catechu*), *Sissoo* (*Dalbergia sissoo*) and *Tamarix* forests found throughout North from Assam to West Punjab. These forests are usually characterised by heavy grass, and with protection they slowly change to a more miscellaneous type of forest by the gradual colonising of other species.

VII.—THE BAMBOOS

No account of the forests of the sub-continent would be complete without a reference to the Bamboos, of which there are very many species occurring in the tropical, subtropical and temperate zones. Tall bamboos, such as *Bambusa arundinacea* and *Dendrocalamus hamiltonii*, often form a very dense undergrowth in the tropical semi-evergreen and moist deciduous forests, while *Dendrocalamus strictus* is locally abundant and economically important in the drier parts of the tropical moist deciduous forests and in some of the tropical dry deciduous forests. One of the important results of forest research is the utilisation of bamboos for the making of paper, but there are still extensive areas of forests with a dense undergrowth of bamboos, which are not at present economically exploitable and which often greatly hinder other forest operations.

FOREST POLICY

The general policy of the Government in relation to forests was definitely laid down in 1894 by the classification of the areas under the control of the Department into four broad classes, namely:—

(a) Forests the preservation of which is essential on climatic or physical grounds. These are usually situated in hilly country where the retention of forest growth is of vital importance on account of its influence on the storage of the rainfall and on the prevention of erosion and sudden floods.

(b) Forests which afford a supply of valuable timbers for commercial purposes, such, for example, as the teak forests of the centre and the south, the sal forests of the north, the centre and the north-east and the deodar and pine forests of the North-Western Himalayas.

(c) Minor Forests, containing somewhat inferior kinds of timber and managed for the production of wood, fodder, grazing and other produce for local consumption; these forests are of great importance in agricultural districts.

(d) Pasture lands.—These are not "forests" in the generally understood sense of the term but grazing grounds managed by the Forest Department merely as a matter of convenience.

These four classes of forest are not always sharply divided from each other, and one and the same tract may to a certain extent be managed with more than one object.

Administration.—The forest business of the Governments of India and Pakistan is carried out in their Departments of Agriculture. The Inspector-General of Forests is the technical adviser to the Government in forest matters. Under the Constitution of 1919 Forests were made a transferred subject in Bombay where they had long been administered by the Provincial Governments, and in 1924 the Reforms Inquiry Committee presided over by the late Sir Alexander Muddiman, Home Member of the then Government of India, recommended that they be transferred in other provinces too unless any local Government on examination of the position could make out a convincing case against the transfer in its own province. After the Constitution of 1935 Forests were included in the schedule of Provincial subjects throughout India.

Territorial Charges.—The various Provinces are divided into one or more Forest Circles, each in charge of a Conservator of Forests; usually Provinces containing three or more circles also have a Chief Conservator who is the head of the Department for his Province. Circles are divided into a number of Forest Divisions. In charge of members of the Imperial or Provincial Forest Service. Each Division contains a number of Ranges in charge of junior members of the Provincial Service or of Forest Rangers or Deputy Rangers; heavy Divisions are also sometimes divided into Sub-divisions. The Ranges are further sub-divided into a number of rounds and beats. These are protective as well as administrative sub-divisions held by Foresters and Forest Guards.

Non-Territorial Charges.—Apart from territorial charges there are various important posts of a non-territorial nature connected with Forest Research and Education, Silviculture, Utilisation and the preparation of Forest Working Plans.

The Forest Service.—The Forest Service comprises four branches:—

(1) The Indian Forest Service.—The I.F.S. in common with other Secretary of State Services is, on account of the constitutional changes, in the process of liquidation. Recruitment to this service ceased in 1932.

(2) The Indian Forest Engineering Service.—This service was created in 1919 but since 1922 no further recruitment has been made. Some of the Forest Engineers have been transferred to the Indian Forest Service or the Indian Service of Engineers and some have resigned or have retired.

(3) The Provincial Forest Service.—Till 1923, officers for the lower gazetted Forest Service were recruited for direct appointment as Extra Assistant Conservators of Forests, and were known as Provincial Forest Service Officers. They were trained at the Imperial Forest College, Dehra Dun. After the training of Indian officers for appointment to the Indian Forest Service was started at Dehra Dun. In 1926, the training of the Provincial Forest Service officers was stopped in 1928.

With the advent of Provincial autonomy in 1936 and the consequent cessation of all further recruitment to the Indian Forest Service, Provincial Governments are now building up new Provincial Forest Services of their own to take the place of the Indian Forest Services. As a result the old Provincial Forest Services will disappear in due course.

(4) The Subordinate Forest Service.—These consist of Forest Rangers, Deputy Rangers, Foresters and Forest Guards.

The training of Forest Rangers for India is concentrated at the Indian Forest Ranger College, Dehra Dun; but in addition to sending candidates to this college, Madras has its own Forest College for training Forest Rangers at Coimbatore.

The training of subordinates below the rank of Rangers is carried out in various local forest schools and training classes.

FOREST EDUCATION

Forest education in India first started with the founding in 1878 of a Forest School at Dehra Dun, for the training of forest rangers. But with the establishment of the new Indian Forest College, probationers are now being trained directly for the Superior Forests Services of the various Provinces and States of India also.

The original Forest School, established in 1878, came directly under the Government of India in 1884, when it became known as the Imperial Forest College, and trained Rangers at first for all the provinces. In 1912 the Madras Forest College was opened at Coimbatore, serving Madras, Bombay, the Central Provinces, Bihar and Orissa, and the South and Central Indian States, the Imperial Forest College at Dehra Dun serving the rest of India. The Madras Forest College was closed on 1st July 1939, but was re-opened for Madras candidates only in 1945. Apart from this Ranger students from all parts of India are being trained at Dehra Dun. The College at Dehra Dun has now been renamed the *Indian Forest Ranger College*, to distinguish it from the new *Indian Forest College* for the training of officers for the Superior Forest Services, opened in 1938.

Research.—The Forest School founded at Dehra Dun in 1878 became also a recognised centre of forest research in 1906.

In 1914 the first Forest Research Institute was opened on the Chandbagh Estate, Dehra Dun. Within a very few years the war demand for forest produce emphasised the scope and need for extensive research far beyond that for which accommodation had been provided. Plans were therefore made for a new Forest Research Institute on the Kaulaghar (New Forest) estate a few miles out of Dehra Dun; and it was opened on the 7th November, 1929.

The Forest Research Institute is under the administrative control of the President. There are five main branches of forest research, namely Silviculture, Forest Botany, Utilisation, Entomology and Chemistry and Minor Forest Products. Silviculture, which deals with all the production side of forestry, is under the direction of the Silviculturist. Much of the actual research work is, however, decentralised and done by local

provincial silviculturists in the provinces, but the Central Silviculturist co-ordinates their work, does all the statistical computing and acts as an information bureau on silvicultural matters for the whole of India.

Forest Products.—Forest produce is divided into two main heads—(1) Major produce, that is timber and firewood, and (2) Minor produce, comprising all other products such as bamboos, leaves, fruits, fibres, grass, gums, resins, barks, animal and mineral products, etc. The average annual outturn of timber and fuel from all sources averages about 306 million cubic feet. This was undertaken a few years ago at the initiation and development of certain large exploitation schemes, especially in Madras, which had indifferent success. It was hoped in Madras, by utilising modern American methods, to extract and utilise very large quantities of valuable timbers, but the final result proved that this extensive exploitation was justified neither by the stand of timber in the forests nor by the possibilities of satisfying markets. The Provincial Government after this experience adopted a more cautious policy.

In the Andamans notable developments have taken place. In the past, extraction of timber was done by elephant dragging with the result that only a fringe of the forests could be touched. Attempts were made in employing American methods of mechanical logging, for which machinery was bought and an American expert employed to take charge of the work. The costs of extraction, however, by these means proved too high. Recently the problem has been solved by means of light tramways, the trains of trucks being drawn by elephants which have been superannuated from ordinary work, and it has been found possible in this way to work large, hitherto inaccessible areas of forest very cheaply. Elsewhere in the sub-continent a great part of the trade in timber lies in the hands of contractors who are, on the whole, regarded trustworthy if sufficient control over their operations is exercised.

Forest Industries.—The important role which the forests of a country play in its general commercial welfare and in providing employment for its population is not always fully recognised. If accurate estimates were available for India or Pakistan they would no doubt show that apart from the jungle population which is directly dependent on the forests and the large numbers of wood-cutters, sawyers, carters, carriers, raftsmen and others working

in and near them, employment on an enormous scale is provided to persons engaged in working up the raw products. Among these latter may be mentioned carpenters, wheelwrights, coopers, boat-builders, tanners, rope-makers, lac-manufacturers, basket-makers, and many other classes of skilled labourers. The census shows over a million people and their dependents so employed in the two Dominions and nearly a further half million in the States, but these are probably below the actuals, as much forest labour is not wholetime labour, devoting seven or eight months in the year to forest work and the rest to agriculture. With the opening up of the forests, the extension of systematic working, the wider use of known product, and the possible discovery of new products, a steady and extensive development of industries dependent on the forests of India and Pakistan may be confidently anticipated in the future.

Financial Results.—The growth of forest revenue, expenditure and surplus during the past 70 years in India and Pakistan has been steady. Gross revenue, before the late world-wide depression caused a temporary disorganisation of all trades, steadily increased until it amounted to some Rs. 290 lakhs a year for both the Dominions, surplus revenue amounting to upwards of 26 per cent. of gross revenue. Most of the Provinces ordinarily show a steady increase of surplus. Figures of revenue, expenditure and surplus for the three years ending 1940-41 are as follows:—

Year.	Revenue.	Expenditure.	Surplus.
1940-41	37,105,052.	23,763,614.	133,41,438.
1939-40	30,202,818.	22,744,245.	74,58,573.
1938-39	30,097,367.	23,130,435.	69,66,932.

Agencies.—The general practice of the Forest Departments in the Government of India and Pakistan and the various Provinces is to conduct their own sales direct with timber dealers or large consumers though there are notable exceptions. Indian timber marketing in England (especially Andaman timbers) is now done under the direction of a Timber Adviser who is attached to the Office of the High Commissioner for India. Sales of Indian timbers and especially timbers from the Andamans are steadily increasing.

Bibliography.—A large number of bulletins and other publications has been issued by the Forest Research Institute, and of these a list can be obtained from the President, Forest Research Institute and College, New Forest, Dehra Dun, U.P.

Hydro-Electric Development

CHEAP motive power is one of the secrets of successful industrial development and the favourable initial conditions caused by the war, the enthusiasm for industrial development which has seized nearly all classes of educated Indians, and the special attention which the circumstances of the war have compelled Government to direct towards the scientific utilisation of Indian natural resources all point to a rapid growth of industrial enterprise in all parts of the sub-continent within the next few years. Indeed, the process, for which sound foundations had been laid before the war, is now rapidly under way. The sub-continent is severely handicapped compared with other lands as regards the generation of power by the consumption of fuel, coal or oil. These commodities are all difficult to obtain, and costly in the sub-continent except in a few favoured areas. Coal supplies for example are chiefly centred in Bengal and Chota Nagpur and the cost of transport is heavy. Water power and its transmission by electricity offer, on the other hand, good possibilities, both as regards the quantity available and the cheapness at which the power can be supplied, in certain parts of the sub-continent.

Water power schemes, pure and simple, are generally difficult because the power needs to be continuous, while the rainfall is only during a small portion of the year. Perennial rivers with sufficient water throughout the year are practically non-existent in the sub-continent. Water, therefore, must be stored for use during the dry season. Favourable sites for this exist in many parts in the mountainous and hilly regions where the heaviest rainfalls occur and the progress already made in utilising such opportunities by the electrical transmission of power affords encouragement for the future. Further, hydro-electric schemes can sometimes be associated with important irrigation projects, the water being used for both electricity generation and irrigation.

The Industrial Commission emphasized the necessity for a Hydrographic Survey of the sub-continent. On this recommendation the Government of India in 1918 appointed the late Mr. G. T. Barlow, C.I.E., then Chief Engineer, Irrigation Branch, United Provinces, to undertake the work, associating with him Mr. J. W. Meares, M.I.C.E., Electrical Adviser to the Government of India. Mr. Barlow died before completing the work; but Mr. Meares issued a preliminary Report in September, 1919, and a triennial Report in 1921, indicating that a minimum continuous water power of nearly 6 million kilowatts with a maximum of 13 million kilowatts could be developed in India. This excluded practically all the great rivers, which were then uninvestigated.

The Government of India has since formed a Central Technical Power Board for developing hydro-electric resources and for carrying out a systematic hydro-electric survey. The present stage of progress and some of the plans under consideration for development of hydro-electric power in the post-war period in some of the major provinces and states are indicated in the following paragraphs.

BOMBAY HYDRO-ELECTRIC WORKS

The greatest Hydro-Electric undertakings in the sub-continent are the three schemes developed and brought into operation by Tata Sons, Ltd., and continued under their management until 1920, when they were transferred to the management of the Tata Hydro-Electric Agencies, Ltd., in which Messrs. Tata Sons retained a substantial interest. These undertakings are:—

- The Tata Hydro-Electric Power Supply Company, Ltd. Supply started in 1915.
- The Andhra Valley Power Supply Company, Ltd. Supply started in 1922.
- The Tata Power Company, Ltd. Supply started in 1927.

The population of Bombay including suburbs at the 1941 census was 1,489,883 with a total population of approximately 4,000,000 in all the areas served by these companies. Its cotton mills and other factories consumed about 150,000 H.P., which until these Hydro-Electric Schemes came into operation, was entirely produced by thermal stations using fuel coming from great distances.

The favourable position of the Western Ghats which rise to a height of more than 2,000 feet above sea-level within a few miles of Bombay City, with their heavy rainfalls was taken full advantage of for providing Bombay City and vicinity with an adequate and economical power supply.

Khopoli.—The hydraulic works of the Tata Hydro-Electric Power Supply Company are situated near Lonavla at the top of the Bhor Ghats. The monsoon rainfall is stored in three lakes, namely Lonavla, Walwan and Shiravta, from which it is conveyed in open masonry canals to the Forebay at Khandala and thence through steel pipes to the Power House at Khopoli at the foot of the Ghats, where the head at turbine nozzles is 1,725 feet or approximately 750 lbs. per sq. inch. The normal capacity of the Power Station at Khopoli is 48,000 k.W. This scheme was formally opened by the Governor of Bombay on the 8th of February 1915.

Investigations in 1917-18 led to the discovery of a site on the Andhra River just to the North of the Tata Hydro-Electric Supply Company's lakes, where additional power could be developed. These investigations resulted in the formation of the Andhra Valley Power Supply Co. and the construction of the schemes, the principal features of which consist of a reservoir formed by a dam about 190 feet high, across the Andhra River and a tunnel 8,700 feet long driven through solid trap rock to the scarp of the Ghats, from which the water is taken in steel pipes 4,600 feet long to the turbines in the generating station at Bhivpuri. The head of water at turbine nozzles is 1,740 feet or approximately 750 lbs. per sq. inch. The electrical

energy is transmitted to Bombay over a transmission line 56 miles long for augmenting the supply from Khopoli. The present installed capacity at this station is 48,000 kW.

INTEGRATED SYSTEM

The Tata Power Company's scheme on the Nila-Mula River to the South-East of Bombay was investigated and developed along lines similar to the Andhra Valley scheme and has a normal installed capacity of 100,000 kW. The power is transmitted to Bombay over a transmission line 76 miles long and is used to augment the supply of the two earlier companies to mills, factories and railways.

The Tata Hydro-Electric System, comprising the Tata Hydro-Electric Power Supply Company, the Andhra Valley Power Supply Company and the Tata Power Company, is operated as an integrated electric power system serving an area in the Province of Bombay of more than 1,000 square miles. It is the largest power system in the sub-continent having a fixed capital expenditure in excess of Rs. 16 crores and an annual output representing more than one-third of the total electricity production.

Electric service is rendered to the textile mills and other industries of Bombay and the sub-urban areas, to the railways for electric traction, to local authorities and, in bulk for retail distribution, to the electrical undertakings supplying Bombay City and suburban districts, Poona and ten other localities within the area.

During the year 1946-47, the system generated 1,075,000,000 units of hydro-electric energy. The combined generating capacity of the three hydro-electric stations is approximately 230,000 kW. The system operated a total of 776 circuit-miles of high voltage electric lines and underground cables, including 458 circuit-miles of transmission lines of 100,000 volt capacity.

The rate for energy delivered to the Mills, Factories and Railways has, for several years, shown a steady decrease and now averages 0.32 of an anna per unit, the downward trend of which will continue as industries develop and individual consumptions increase. This power supply greatly enhances the natural advantages Bombay has as a great manufacturing, trading and shipping centre.

For the development of industries and agriculture in the northern portion of Bombay Presidency, the Bombay Government has embarked on the provision of an electrical grid scheme somewhat on the lines of the British Grid. Besides taking power from the Tata's Hydro-Electric System and from some of the selected Steam Station, it is also proposed to construct initially two new hydro-electric stations at Bhandargera and Bhatgar for supplying power to this grid.

DEVELOPMENT IN PROVINCE

In the Province of Bombay, there are at present 68 licensees in operation. In the case of three of these, the licensees have hydro-electric stations, their installed plant capacity being 2,31,000 kW. These three licensees serve by bulk supply Bombay City, the Bombay Subur-

ban District, Poona and about six other townships. Almost all the remaining 65 licensees generate their own electric energy. Of these, one has an installed capacity of 45,000 kW another 3,624 kW, the remaining have relatively small power houses. Most of the licensees operate in urban areas.

The objects with which the Government of Bombay have set up the Electric Grid Department are: (1) to rationalise the generation of electricity by generating it at a few selected stations having natural advantages, (2) to make available progressively large amounts of electricity at low rates, and (3) to bring the energy within reach of a progressively increasing number of the urban and rural population.

The objects are to be achieved by the establishment of an Electric Grid System in regions which lend themselves to such development economically under quasi-state control. New power stations—both hydro-electric and thermal—will be established. These and the existing efficient generating stations of licensees, wherever practicable, will be inter-connected by the Grid lines. Inefficient generating stations will be closed down and the licensees concerned supplied bulk power. Wherever possible, rural areas within the Grid regions will be supplied electricity from the system.

New Bill.—It is also intended to establish small Diesel Stations in isolated townships, which have some cottage industries and which cannot, within reasonable time, be served from the Grid.

To promote rapid development of the use of electricity by agriculturists and cottage and small scale industrialists specially in rural areas, it is proposed to assist them financially in acquiring electrical machinery and equipment on hire purchase terms.

Largely, at the initiative of the Government of Bombay, the Government of India introduced in the Central Legislature a Bill entitled "Electricity (Supply) Bill, 1946" during the Budget Session of 1946. When this measure is passed, Bombay Government proposes to set up the Bombay Electricity Board, which will be, under the provisions of the above enactment, charged with the work of rationalisation and development of Electric Supply in the Province.

Meanwhile, a Special Grid Department has been organised under the Electrical Commissioner with the Government of Bombay. The development programme under execution at present consists of: (1) North Gujarat Grid Scheme, (2) South Gujarat Grid Scheme, (3) Rural electrification and small town schemes based on small Diesel Stations.

NORTH GUJARAT GRID SCHEME

This scheme contemplates taking power in bulk from the power station of the Ahmedabad Electricity Company at Sabarmati and distributing it to centres of load in North Gujarat Area. The works comprise construction of about 70 miles of 66/110 kV line, 14 miles of 33,000 and 50, miles of 11,000 volt transmission lines and about 480 miles of distribution lines.

Construction of a new power station by the Ahmedabad Electricity Company, initially consisting of two 15,000 kw steam turbo sets, negotiated by Government with the Company in the year 1944-45, is nearing completion. Arrangements have been made with the Company to order two more 15,000 kw sets to be installed in the new station as early as possible to meet the anticipated demand three or four years hence.

The order for construction of the 66/110 kV line from Ahmedabad to Baroda was placed with Messrs. British Insulated Callender's Cables Ltd. and they are pushing on with this work. The order for 33 and 11 kV line materials has been placed with the same Company. The required power transformers and sub-station control gear have been ordered out.

The original programme of completion of works has had to be drastically revised in the light of the delivery dates for sub-station control gear and other equipment, now reported by manufacturers in the U.K. According to present indications, it would appear that distribution of electricity in this region can be commenced in the second half of 1949.

SOUTH GUJARAT GRID SCHEME

This scheme comprises installation of a steam power station initially comprising two turbo alternator sets of 7,500 kw each near Surat for supply of power in areas from Surat to Bulsar, and construction of an E.H.T. transmission line over a distance of about 40 miles from Surat to Bulsar.

The sites provisionally selected for this purpose are being investigated in regard to their suitability. Tentative designs for power house buildings, boiler house and other civil engineering works have been prepared. Work in connection with preparation of designs of transmission lines and sub-stations is in hand.

Orders for two turbo sets of 7,500 kw each and boiler house equipment have already been placed. Order for switchgear and other equipment has also been placed.

Owing to recent coal crisis in the U.K., manufacturers are unable to deliver machinery and equipment within the periods previously indicated. The programme of work originally prepared has, therefore, had to be drastically revised. According to present indications, it would appear that supply from the steam station can be commenced in 1950.

BAR ODA

The Baroda State Government has agreed to co-operate with the Government of Bombay by taking supply in bulk at Kalol, Baroda, Navsari and Billimora for distribution within the State territory. Negotiations are in progress with the B.B. & C.I. Railway for the use of a common power system on a co-operative basis by the Railway for meeting its power requirements for traction between Ahmedabad and Bombay and by the Bombay Government for supplying electric service to urban and rural population residing within economic distance of the various sub-stations en route. If a mutually satisfactory agreement is reached, it will be necessary further

to develop the power stations at Ahmedabad and Surat and the transmission system. The co-operation between Bombay Government, Baroda Government, the B.B. & C.I. Railway and the Ahmedabad Electricity Company is expected to be of appreciable benefit to all the parties and will tend to reduce the cost of electric service in the area covered.

Negotiations are also in progress with the G.I.P. Railway for the use of a common power system in the Nasik and Khandesh areas.

RURAL SCHEMES

The schemes so far sanctioned by Government consist of: (1) Electrification of the towns of Ratnagiri, Malvan, Vengurla, Chiplun, Islampur and Peth, (2) Electrification of certain villages in the Satara taluka based upon power being taken from the existing power house of the Satara Electricity Co., (3) Electrification of certain villages in the Bulsar taluka, based on bulk electricity being taken from the existing power house of the Bulsar Electricity Co. Later on, when power becomes available from the Government's own station in Surat, power will be supplied from that Station, (4) Extension of such schemes to other talukas is being examined.

Neither of these can at present supply any large industrial load, but when item (3) is linked up with the new Surat Steam Station, there will be scope for supplying power for industrial use.

In addition to those mentioned above, small Diesel stations may be established during the next five years in about 19 townships containing about 2,000 dwelling houses or more and having village industries, the production of which can be appreciably increased by the use of electric power. A list of the towns provisionally selected is given hereunder:

Sr. No.	Division	District	Town
1	Northern	Ahmedabad	Dholka
2	"	"	Dhanduka
3	Central	East Khandesh	Erandol
4	"	"	Parola
5	"	"	Dharangaon
6	"	"	Shendurni
7	"	West Khandesh	Shahade
8	"	Sholapur	Akluj
9	Southern	Bijapur	Chikodi
10	"	"	Gokak
11	"	"	Hukeri
12	"	"	Konnur
13	"	"	Sankeshwar
14	"	"	Ballhongal
15	"	Bijapur	Guledgad
16	"	"	Ilkal
17	"	"	Sulebhavi
18	"	"	Hungund
19	"	Dharwar	Gajendragad

Jog Power

In consideration of the consent given by the Government of Bombay to the Government of Mysore for the electric development of the waterfall at Jog under certain conditions, the latter has agreed to supply the Bombay Government, electric power upto 5,000 E.H.P. (3,730 kw) at Jog on reasonable terms to be mutually agreed upon. It has also been ascertained that power upto 10,000 E.H.P. would be available if there

is sufficient demand within a reasonable economic distance from the Jog power house. The proposal for the utilisation of this power has been investigated and the report is under the consideration of Government. A special Officer appointed by the Government of Bombay to study the industrial possibilities within an economic distance of the Jog power house has started investigation.

HYDRO-ELECTRIC PROJECTS

Salient features of the hydro projects which are likely to be undertaken within the next ten years are given hereunder:

Koyana Project.—This scheme when fully developed is capable of meeting a demand of the order of 250,000 kw. continuous after reserving part of the storage for irrigation. When finally developed, this would be one of the larger power stations in the sub-continent. Initially, about 48,000 kw. could be developed economically for supply to the Districts of Poona, Satara, Sholapur, Bijapur and Ratnagiri as required. Electro-chemical industries and other similar loads could be established near the power station site with advantage and the plant progressively increased.

In December 1946, Government sanctioned detailed investigations and survey work to enable separation of estimates and designs of works connected with the project. This work was started early in 1947 and is progressing steadily and satisfactorily. A committee has been appointed by the Government to examine the question of utilising part of the storage for irrigation purposes in Bijapur District by high lift pumps located in a suitable position on the banks of the Krishna River. The Chairman of the committee in a preliminary note has estimated that when the lift irrigation scheme is fully worked out, the power requirements would be of the order of about 90,000 kw.

The possibilities of utilising the tailrace waters of the proposed Koyana hydro-electric power station will also be investigated.

Kalinadi Project.—Preliminary survey work connected with the scheme was sanctioned by the Government of Bombay in January, 1947. The work has been entrusted to Messrs. Associated Consulting Engineers (India), Bombay. The preliminary report indicates that 350,000 kw. continuous is available in the Kalinadi Basin, distributed in five power stations. The final report is awaited. The Districts of Dharwar, Karwar, Belgum and Bijapur appear to be within economic reach of this source of power.

Bhatgar Hydro-Electric Project.—A demand of about 10,000 kw. can be met from this source, provided the power station is linked up either with Koyana when and if developed or Tata system at Poona. Consideration of this scheme will be taken up after 2 seasons' work has been put in on the proposed new irrigation dam at Vir, which will provide a balancing and supplementary reservoir.

Bhandardara-Randha Electric Scheme.—A demand of 16,800 kw. can be met from this source. In addition to this, a further 7,500 kw. can be obtained during the monsoon. This power can be firm up by the establishment of a steam station of the installed capacity of

15,000 kw. in this area. The scheme was sanctioned by the Government of Bombay in 1945 but its execution had to be postponed as under the present conditions, development of this source of power cannot be undertaken economically. The question of its execution will be reviewed in due course.

Narbada-Tapti.—Governments of Bombay and India have also under consideration the possibility of developing Narbada and Tapti River Basins on multi-purpose basis. When these materialise an appreciable block of Electric Power will be available from these sources.

MYSORE HYDRO-ELECTRIC WORKS

The first Hydro-Electric Scheme of any magnitude undertaken in the sub-continent or indeed in the East, was that on the Cauvery River in Mysore State, which with its generating station, transmission line and distributing system was inaugurated in 1902.

The Cauvery River rises in the district of Coorg in the Western Ghats and flows across Mysore State. The principal object of this scheme was the supply of power to the mining companies on the Kolar Gold Fields about 92 miles from Sivasamudram, the site of the generating station. This transmission line was for a number of years the longest line in Asia. Since 1902 the supply of electrical energy from Sivasamudram has been provided for Bangalore and Mysore Cities and 226 other towns and villages in the State.

The initial undertaking has constantly been expanded and its total normal capacity now stands at 42,000 kw. This great increase has been made possible by the construction of the Krishnarajasagar reservoir, near Mysore City, which has a capacity of 44,000 million cubic feet of storage above the minimum draw off level.

The number of the consumers of all classes continues to increase rapidly every year with greatly increased power demands. The Government of Mysore have encouraged the use of electrical energy and have made a survey of hydro power resources of the State and prepared plans for the construction of a number of generating stations at the most economic sites in future.

Demands for large additional blocks of power made it necessary for Government in continuing its policies for the industrial development of the State, to sanction the construction of a power station at the Shimsha Falls for the production of 17,200 kw. and the construction of a power station at the Jog Falls for the production at the first instance of about 48,000 kw. The power station at Shimsha Falls was completed in June 1940, thus bringing the total installed capacity of Sivasamudram and Shimsha Stations to about 59,200 kw.

At the Jog Falls on the Sharavathi River the construction of a power house and installation of machinery have made good progress and the first two units were expected to be in service generating 24,000 kw. at 50 cycles by the middle of February 1948. The State Government have also sanctioned the extension of the Jog Falls

scheme for an ultimate installed capacity of 120,000 kw. All the machinery required for the extension have been ordered.

The Government have also approved the adoption of the standard frequency of 50 cycles throughout the State except in the Kolar Gold Fields area and also the construction of transmission lines for transmitting 50-cycle supply generated at Jog to the various parts of the State.

The number of lighting and power consumers of all classes in the cities of Bangalore and Mysore and other towns and villages in the State has increased to more than 70,000.

The transmission system consists of over 900 route-miles of 78,000 and 37,500 volt lines with a total of 1,350 miles of circuits. The transmission system is extended to supply hydro-electric power to the four corners of State. With the construction of the new transmission lines and on the generation of power at Jog, over 600 miles of 110 kv. transmission lines will be in service.

The use of electricity for improving the transport facilities in the State forms an important item under the "Post-War Development Schemes" and it is expected that in the next five years, introduction of electric trolley buses in Bangalore and electrification of railways between Mysore and Bangalore will be an accomplished fact.

TRAVANCORE STATE

The first electrical undertaking to operate in the State was the Hydro-Electric Station established in the High Ranges by the Kanan Devan Hills Produce Co., Ltd., in 1905 which was intended to meet the power requirements of the Company for lighting and factory drive. It was towards the close of 1927 that Government initiated a programme of electrical development in the State. A start in this direction was made by the establishment of a thermal station at Trivandrum, the capital of the State, in March 1929. The rapid expansion of the Trivandrum Electric Supply served as an incentive to private enterprise to come into the field. A thermal station was started at Kottayam in 1932 for the supply of power to that town, under a license. Another private agency took up the supply of power at Nagercoil in 1934.

A scheme for the supply of power to Quilon was inaugurated by the Government towards the middle of 1934.

A license for the supply of power to the Taluks of Shencottah and Pathanapuram was granted to a private Agency in 1940 and the supply was inaugurated in 1941.

Expansion.—In view of the very large demand for electric supply being extended to several areas, the Government decided to initiate a large hydro-electric system to meet the growing demand for power. As a first step towards this objective, the Pallivasal Hydro-Electric Scheme was sanctioned by the Government in 1931 and the work was taken up immediately afterwards. The first stage of development was completed by the beginning of 1940 and the supply was commenced in March 1940.

The scheme utilises the water of the Mudra River diverted at Munnar through a tunnel 9 ft. by 8 in. and 10,200 ft. in length. Two parallel steel penstock lines each 7,800 ft. in length take the water to the generating station. The generating plant consists of three 5,000 kva. Alternators generating a 11,000 volts directly coupled to Pelton wheel operating at 1,980 ft. head. Two of the machines are in normal service while the third serves as a stand-by. The normal generating capacity of the station is 9,000 kw, but during peak hours, the third unit is also commissioned to take up loads upto 1,500 kw, thereby raising the effective capacity of the station to 10,500 kw. The capacity of the station has now been increased by the installation of a fourth generating set. Power is stepped up to 68,000 volts for transmission to the plains. The transmission system as now brought under use consists of 420 circuit miles of 66 kv. lines on lattice steel towers, 42 circuit miles of 66 kv. lines on teak wood and concrete poles, taking power to 5 major 66 kv. sub-stations and 26 miles of 33 kv. lines, 350 miles of 11 kv. single circuit lines and 10.5 miles of double circuit lines connecting all the important centres in North and Central Travancore.

The availability of hydro-electric power in most of the important commercial and agricultural centres coupled with the impetus given to industrial and agricultural operations consequent on the situation created by the Second World War, has resulted in a steadily growing demand for power. The connected load is over 25,000 kw. with a maximum peak load of 13,300 kw. The total generation during 1946 was 75.42 million units. About 72.5 per cent of the power generated is used for industrial purposes and the rest for agricultural and domestic needs. Electrolitic production of aluminium, tea factories, fertilisers and chemicals, ceramics, textiles, paper, plywood, oil mills, saw mills, tile factories, mineral factories, engineering workshops, etc., constitute the main industrial load.

Three More Sets.—L. T. distribution is standardised at 400/230 volts. Ascu treated teakwood poles supplied by the State Forest Department and wooden cross-arms, have been standardised for all 11 kv. lines and a major part of the network.

The demand for power has been so pressing that action for augmenting the power supply was taken as early as 1941. Although the necessary orders for the plant were placed in 1941, the demands of the late War, which had necessarily to be given the highest priority, necessitated the execution of the orders being held in abeyance till 1944. The work of the installation of 3 more generating sets each of 7,500 kw. capacity in the Pallivasal Station is now in progress. One of these units, the fourth set, has been taken into service. Two more pipe lines to supply water to these three generating sets are also being laid. The erection of the third pipe line, 30-in. dia., is already completed and that of the fourth is in progress. The additional power generated is used mainly for aluminium production and for the manufacture of Ammonium Sulphate.

Dams.—To ensure a perennial supply of water for power development at Pallivasal and Sengulam, the construction of dams for storage of monsoon rain water has been taken up. One of these reservoirs, with a capacity of 270 million cubic feet, is located at Sethuparvathyapuram, about 16 miles east of Munnar in the high ranges. The other dam at Madupatty, about seven miles from Munnar has been designed to impound 2,000 million cubic feet of water. It is now under construction.

Owing to the delay in augmenting the generating capacity of the Pallivasal Station, it was found necessary to resort to other arrangements for making available additional power to meet the demands arising out of commitments already made. As a result of the negotiations with the Government of Madras, it has been possible to get a block of 3,000 kw. of power from the Papanasam System. A 66 kv. single-circuit line connecting Kundara to Shencottah has been constructed and the supply from Papanasam has been inaugurated from the beginning of September 1946.

The demand for power as foreseen now is so heavy that it has become an urgent necessity to explore the possibilities for further hydro-electric developments. Two more schemes are already under investigation. The first of these, the Sengulam Scheme is proposed to be located 4½ miles lower down the present generating station. With the tail water of the main station, it is expected that the station could generate about 48,000 kw.

The other station is proposed to be located further lower down the same river. The tail water of the second station together with the discharge of two other tributaries of the Mudrapuzha River will supply the water for this scheme and the output of this station is estimated to be 40,000 kw. With the construction of suitable reservoirs for the collection of water, it is expected that the generating capacity of this station can be further augmented.

Growing Demand.—Power development from the Pampa River in Central Travancore is also under investigation. Preliminary forecasts show that it will be possible to develop about 100,000 hp. from this Scheme.

The situation created by the Second World War has given a strong impetus to industries in general and on the wake of it, a growing demand for power. During war-time, one of the major industrial concerns supplied with power from the Government System was the Indian Aluminium Co. Power was also being supplied to several industries engaged in war work. Special mention may be made in this connection regarding the role of electricity in food production activities both during and after the war as with the scarcity of fuel oil and oil engines, it has been necessary to resort to electric drive for de-watering operations in rice fields in the back-water areas and also for lift irrigation. Several thousands of acres of land both in Central and North Travancore have been put under cultivation with the aid of electric drive and as experience has shown that this is both economical and convenient, it is proposed to adopt this as a permanent arrangement.

MADRAS

Hydro-electric development in Madras until 1927 was confined to a few tiny plants in tea estates and to the small installation at Katori in the Nilgiris for making cordite. In recent years there has been significant progress and Madras now ranks next to Bombay in its hydro-electric power output. Three hydro-electric stations are now in operation. Besides extensions to the existing plants, two more stations are under construction.

The water power sites in the province are mostly in the Western Ghats especially in the region of the Nilgiris and the Palnis. Sites in the Eastern Ghats are few and some of them are on border streams. A close estimate of the available power has not yet been made. The continuous power output from the sites which are definitely known to be worth development is over 220,000 kw. It is likely that further survey and investigation would locate more sites. While it is unsafe at this stage to give an estimate of the maximum water power available in the province it may be assumed to be around 500,000 kw. continuous. This does not, however, include power that can be developed from future large irrigation dams like those projected at Polavaram on the Godavari.

Electric Power Grid.—To develop the available power resources in an orderly and rational way and make it available over the whole province cheaply and in abundance, an 'Electric Power Grid' for the province was conceived by the Madras Government over 15 years ago. It is a scheme of inter-connected power houses, both hydro and thermal, feeding a network of transmission and distribution lines serving towns and villages. Part of it is already in existence and the rest is to be built in appropriate stages corresponding to the industrial and social advance of the country.

The Grid in the south where it is well formed consists at present of three hydro-electric power stations, viz., those at Pykara, Mettur and Papanasam. A fair part of 12 districts from Chittoor to Tinnevely and Chingleput to Malabar is covered. 45 Municipal towns and 910 villages receive supply. The installed generating capacity of the three stations totals 104,000 kw. The Grid owned by the Government Electricity Department has over 3,000 miles of high tension lines operating at voltages from 11,000 to 110,000 and 1,850 miles of low tension distribution lines. There are 24 extra high tension sub-stations of 110 and 66 kv. and sixteen of 33 and 22 kv. sub-stations with transforming capacity totalling 150,150 kva. and 770 distribution transformer stations with an aggregate capacity of 39,500 kva. The total load connected to the Grid is 185,200 kw. Among the important industries which are served are textile mills, cement factories, electro-chemical works, Steel-rolling mills and tea factories.

Rural Electrification.—Rural electrification on a fairly extensive scale has also been carried out with a connected load of over 32,800 kw. There are over 4,900 electric pumps for irrigation and 825 rural factories for ginning cotton, hulling rice, pressing oil seeds, shelling nuts, crushing cane and milling flour.

There are over 101,700 consumers of all classes: 79,800 served through the distributing licensees and 21,900 served by Government direct. The total power generated from the hydro-stations in 1946-47 was 298 million units representing 78% of the total generation in the Province. The capital investment so far made is nearly Rs. 7.76 crores and the revenue in 1945-46 was Rs. 112 lakhs.

In the central and northern regions of the province the grid is yet to take shape. At present there are number of thermal stations each serving the local area but not inter-connected. When the big hydro-electric stations on the Machkund River in the Vizagapatam District and other extensions in progress are completed, the Grid will practically cover the whole province.

Pykara Scheme.—The scheme utilises the waters of the Pykara river which drains from the Nilgiri plateau having a catchment area of nearly 38 square miles and a fall of about 3,100 ft. The flow though perennial is very irregular and often drops to values around 20 cusecs during the dry season. The topography however embraces a number of feasible storage sites which could be developed according to the growth of power demand. The estimated potential capacity of the full development is around 40,000 kW continuous.

The first stage of development was commenced at the end of 1929 and was completed at the end of 1932. This stage utilised the regulated flow of the river with small storages of 58 million cubic feet in the forebay and 28 million cubic feet in the Glenmorgan Reservoir. The rapid growth of load necessitated the early construction of the Dam at Mukurti to store 1400 m.c. ft. with open spillways. The work was commenced in January 1935 and completed in June 1938. By installing automatic gates over the spillways the storage capacity has been raised to 1,800 m.c. ft. in April 1946. The final stage now sanctioned will provide a further increase of 2,000 m.c. ft. storage by the construction of a second dam across Pykara river.

Civil Works.—Water from the intake of the river is led by a flume to the forebay from whence it is led through a single 78" diameter steel pipe 1,000 ft. long to a surge tank at the head of the penstocks. In the first stage two pipes each in 3 sections of diameter 27" 24" 21" with a total length of about 9,300 ft. were laid. In the second stage a third penstock of 42" 39" 37½" diameter was added.

The initially installed plant comprises three 7,810 kva., 3 phase, 600 r.p.m. alternators coupled to 10,900 hp. pelton wheels. Power is generated at 11,000 volts 50 cycles and stepped up to 110,000 volts by means of three 7,810 kva., 3 phase, 11 kv. 66-110 kv. transformers.

In 1939 two 12,500 kva., generating units and two 12,500 kva., transformers were added. The Pykara-Coimbatore transmission line was changed from 66 kv. to 110 kv. operation to suit the increased load demand. In 1947 two 5,000 kva., 11/66 kv. transformers were added to feed the 66 kv. lines to the West Coast.

Transmission and Distribution.—Power is transmitted to Coimbatore, which is the main receiving station and also the chief load centre by means of a 50 mile double circuit 110 kv. line. The line is extended therefrom at 66 kv. to Tiruppur, Erode, Udumalpet, Sembatti and Madurai. At Erode and Madurai it is established with the Mettur and Papanasam Systems respectively. Power is now supplied from Pykara to Calicut and Cannanore through 66kv. lines.

This system has 1,278 miles of transmission lines of voltage ranging from 11,000 to 110,000 in service. There are 5 extra high tension sub-stations with transforming capacity of 70,750 kva., and 426 distribution transformer stations with an aggregate capacity of 22,465 kva.

Mettur Scheme.—The engineering features of the Mettur Hydro-Electric Scheme provide an interesting contrast to the Pykara Hydro-Electric Scheme. The Mettur Dam, one of the largest structures of its kind in the world is 176 ft. high and can impound a total of 93,500 m.c. ft. of water. This storage is primarily for irrigation purposes but part of the water let down for irrigation is utilised to the best advantage for the generation of hydro-electric power.

During construction of the dam 4 cast iron pipes 8'-6" in diameter had been built into the structure and equipped with the necessary valves, gates, screens and other fittings. Each pipe is designed to discharge a maximum of 1,250 cusecs for power purposes.

Work on the initial installation with 3 units of 10,000 kw. each was commenced in the latter part of 1935 and the station started operation in June 1937.

The operating head varies from 160 ft. at full reservoir level to a minimum of 60 ft. The average head is 135 ft.

Power House.—The Power house is situated immediately below the Mettur Dam. The units are 12,500 kva., 250 r.p.m. generators coupled to overhung type twin horizontal Francis turbines one on each side. The turbines operate under a variable head from 60 to 160 ft. developing a maximum of 16,000 hp. each. Power is generated at 11,000 volts, 50 cycles, 3 phase and stepped up to 66,000 volts (110,000 volts later) for transmission to various load centres.

The fourth generating unit recently added was commissioned into service in October 1946.

Power is transmitted to Singaperet in the north and Erode in the south by means of two 66,110 kv. trunk lines (a total mileage of 100 miles) taking off from the Power Station. At Erode the Mettur System is linked with Pykara network. 66 kv. lines have been extended in the north to Vellore, Tiruvannamalai and Villupuram and in the south to Trichinopoly, Tanjore and Negapatam. To ensure proper voltage regulation two 2,500 kva. synchronous condensers are installed at Trichinopoly.

Considerable lengths of 11,22 and 33 kv. lines have been constructed for extending power to various places. 1,390 miles of high tension lines

of all voltages are now in service. There are 24 E.H.T. sub-stations with an aggregate transformer capacity of 52,400 kva. The number of distribution transformer stations are 259 and have a total capacity of 12,838 kva.

The Mettur Station is being linked with Madras thermal station by a 110 kv. line between Singarapet and Madras. This inter-connection will enable diversion of the surplus seasonal power at Mettur to Madras thereby saving coal. During dry months Madras will assist Mettur to enable larger, firm demand being met in the Mettur System than is possible at present.

Papanasam Scheme.—This is the third hydro-electric scheme to be undertaken by the Madras Government. The first stage of the scheme was started in 1938 and the station commenced operation in July 1944.

The Tambiraparani river drops about 300 ft. over the picturesque Papanasam falls at the foot of the Western Ghats in Tinnevely District. The power development consists in regulating the river flow and harnessing the energy that was wasted over the falls. The catchment is benefited by both South-West and North-East monsoons, the latter generally preponderating.

Six miles above the falls a reservoir of 5,500 m.c.ft. is formed by constructing a masonry dam 170 ft. above river bed and 800 ft. long. About 1 mile above the falls the water is diverted from the river course by a weir 1,350 ft. long and 35 ft. high giving a pondage of 23 m.c.ft. for daily regulation. Water is conducted by two 9 ft. low pressure steel pipes from the diversion weir to the surge tank at the edge of the cliff and from thence through four 66" penstock pipes 520 ft. long down the hill slope to the power house which is located near the Agastya temple at the foot of the Papanasam Falls. (One low pressure pipe and 2 penstocks only were installed in the first stage). The gross head developed is 330 ft.

Power House.—The generating plant consists of three vertical alternators of capacity 7,250 kva., 600 r.p.m. coupled each to a Francis reaction turbine of 9,850 B.P.H. The generation is at 11 kv., 3 phase, 50 cycle and power is stepped up to 66 kv. by means of three 7,250 kva., 1,166 kv. transformers.

To utilize fully the water that will be available in good rainfall years the fourth generator along with the second low pressure pipe line and penstock pipe are being installed now. They form the second stage of development at this site.

The transmission system extends to Tuticorin, Kollipatti and Madura, and is linked with the Pykara Hydro-Electric System at Madura. For purposes of voltage regulation two 2,500 kva., synchronous condensers are installed at Madura.

The system has 330 miles of high tension transmission lines, 8 H.T. sub-stations with transformer capacities totalling 24,750 kva., and 83 distribution transformer stations with an aggregate capacity of 4,142 kva.

Bulk power to the extent of 3,000 kw. is being delivered to the Travancore Government at the State borders near Shencottah.

Five-year Programme.—During the war years no progress could be made and there was practical stoppage of all new schemes and extensions. The only work done was to complete with great difficulty the few schemes already started. The Madras Government have sanctioned a five-year programme of construction of the following new schemes and extensions.

1. Machkund Hydro-Electric Scheme including extensions to the Vizagapatam and Bezwada Thermal auxiliary plants.
2. Nellore Thermal Scheme.
3. Madras Thermal Extension Scheme and inter-connection with Mettur Hydro.
4. Ceded Districts Scheme.
5. Moyal Scheme.
6. Pykara Hydro-Electric Scheme Extensions.
7. Madura Thermal Scheme.

Machkund Scheme.—This Scheme is for harnessing the Machkund river in the Vizagapatam District on the borders of Madras and Orissa, at the Duduma Falls where a gross head of 840 ft. is available. 100,000 kw. of power could be developed at this site, and the scheme is proposed to be worked out in stages.

The initial stage will comprise a diversion dam across the Machkund river, a flume channel, a 3,000 ft. long low pressure tunnel and three penstock pipes leading to the power house. The power station will have 3 generating sets each of 17,250 kw. In the later stage a dam is to be constructed at Jalaput and in the ultimate stage there would be 6 penstocks with generating units of capacity totalling 100,000 kw.

The civil works and power house have to be constructed in co-operation with the Orissa Government, and Madras has undertaken to execute the project works. The work on the scheme has been commenced and the initial stage is expected to be completed by 1951.

A 300 mile 110 kv. transmission line will carry the Madras share of power to Vizagapatam, Rajahmundry and Bezwada. This scheme will be adequate to supply the power needs of the Vizagapatam, Godavari, Kistna and Guntur districts. Pending its completion, additional generating plant totalling 9,000 kw. has been ordered for the Bezwada and Vizagapatam thermal stations to meet the interim demand of the region.

Nellore Scheme.—For the Nellore area a thermal station is planned at Nellore with two 2,500 kw. transportable power sets initially. The sets have been received and the plant will be working next year. The network of this area will be eventually linked with the Southern Grid.

Madras Thermal Extensions.—Supply for the Madras city area is now inadequate, on account of the load exceeding the capacity of the power house. The Madras city power undertaking of the Madras Electric Supply Corporation was acquired by the Government in August 47 and steps have already been taken to modernise the plant and increase its capacity. A new 150,000 kw. Turbo-alternator set has been ordered as also the associated boilers and they would be in service in 1949-50. To meet the

growing demand in the meanwhile, two 2,500 kw. transportable power units are being installed as a temporary measure to supplement supply. These units will be in service by February 1948.

A 110 kv., 124 mile-line inter-connecting the Madras Thermal Station with the Mettur Hydro Station is being constructed for mutual exchange of power. It will be completed by the middle of 1948.

Ceded Districts Scheme.—The Ceded Districts are proposed to be supplied with power purchased from the Mysore Jog Hydro-Electric Scheme. Supply will start early in 1949. When the Tungabhadra hydro power station is built—around 1952—it will take over the area and supply from Mysore will be stopped.

Moyal Scheme.—The Moyal Scheme for developing power from the tail water of the Pykara power station with a head of about 1,280 ft. available at the Moyal Slope, 9 miles lower down, is now under construction.

The main features of the scheme are: 1. A channel about 7,600 ft. long to divert the tail water from the Pykara power station to the adjacent Avarihalla valley. 2. A regulating reservoir of 28 m.c. ft. at Maravakudi 4 miles lower down. 3. A flume channel about 24,000 ft. long from the reservoir to the forebay and headworks at Guruvu-Gowda Hundi. The forebay is to have a storage of 6 m.c. ft. 4. A 7 ft. diameter low pressure pipe from forebay to the surge tank at the head of the penstocks and 3 penstocks 2,880 ft. long in two sections of 45' and 42' to the power station. 5. A power station with three 12,000 kw. 428 r.p.m. alternators coupled to 18,000 h.p. two nozzle vertical type impulse wheels.

Power is to be generated at 11 kv., 3 phase, 50 cycle, stepped up to 110 kv. and transmitted to Pykara and Erode through 110 kv. double circuit transmission lines. This will be the 4th hydro-electric station of the Grid in the Southern part of the province and will meet the increasing demands of the Pykara and Mettur Systems for a few years.

Pykara Extensions.—The final stage of the Pykara project consisting of a second dam across the Pykara river to provide a storage of 2,000 m.c. ft. a new penstock, and two generating sets of 13,500 kw. each at Pykara station has been sanctioned. This will not only meet the power deficiencies of Mettur and Papanasam stations during periods of unfavourable water conditions but will also meet the demands arising out of the large scale industrial and agricultural developments in the southern districts in the near future.

Madura Thermal Scheme.—To supplement the output in the Hydro-Grid during water scarcity, a thermal auxiliary station at Madura with an initial capacity of 4,000 kw. is to be built shortly. The plant is under erection.

To handle the additional power that will be generated, additional transmission lines for reinforcing the Grid have also been sanctioned.

These schemes which are all now under construction cover a major part of the province and will result in doubling the existing generating capacity. They are scheduled to be completed before 1952 and will cost Rs. 15 crores.

KASHMIR

A scheme of much importance from its size, but more interesting because of the developments that may be expected from it than for the part which its current supply already plays in the life of the countryside, is one installed forty years ago by the Kashmir Durbar, utilising the river Jhelum, near Buniyar about fourteen miles from Baramulla.

The headworks of the Jhelum power installation is situated six and a half miles from the power house, at Mohora and the main connection between the two is a timber flume. These works and the forebay at the delivery end of the flume have a capacity for carrying water sufficient for the ultimate generation of 20,000 electrical horse-power. Four pipes 792 feet long lead from the forebay to the power house and from forebay to water wheels there is an effective head of 399 feet. There are four horizontal water-wheels, each coupled on the same shaft to a 1,000 kva., 3-phase, 2,300 volt, 25 cycle generator running at 500 r.p.m. The power house is of sufficient capacity to allow of 15,000 kw. generating plant being installed within it. Two transmission lines run side by side as far as Baramulla, 21 miles from Mohora at which point one terminates. The other continues to Srinagar, further 34 miles. The installation at Baramulla was originally utilised for three floating dredgers and two floating derricks, for dredging the river and draining the swampy countryside and rendering it suitable for cultivation.

The lighting of Baramulla has been taken in hand with satisfactory results and the power load is building up. At Srinagar, the line terminates at the State silk factory, where current is supplied not only for driving machinery and for lighting, but also for heating. The whole of Srinagar city is now electrically lighted and there are a number of power loads.

New Sources.—Besides the Jhelum power installation, there are two other schemes, the Muzaffarabad hydro-electric installation utilising a tributary of the river Kishan Ganga and the Jammu hydro-electric installation. The Muzaffarabad power house has one 130 B.H.P. pelton wheel directly coupled to a 110 kva., 3,300 volt, 50 cycle alternator. This serves Muzaffarabad town and Dodel on J. V. Road. The Jammu power house employs five generating sets. Of these, one 265 kw. set is driven by a Diesel oil engine and the remaining four, generating among themselves 1,225.5 kw., are driven by water turbines.

In addition to the above schemes, new sources of power capable of feeding large-scale manufacture are being explored in view of the beginning of large-scale industries in Jammu and Kashmir State, being explored. The State has already provided funds from capital expenditure not charged to revenue for the improvement of the State's electrical system. The necessity for augmenting the power supply in the Jammu area being many, a steam turbine driven generating plant of 1,500 kw. capacity is being installed for being located at Miran Sahib and connected with Jammu by a 6,600 volt line. This will enable necessary supply of power being made available for Jammu, Jammu Cantonment and Miran Sahib industrialisation. The cost of the scheme is estimated at Rs. 8,41,200.

A hydro-electric scheme with an ultimate capacity for generating 9,000 kw. by harnessing the Sind River near Ganderbal is also under survey and a smaller scheme for supply of power at Pahalgam is now in progress, while other smaller schemes for Anantnag and Udhampur are under investigation. The utilisation of the Chenab River for developing a hydro-electric scheme on a large scale is also under consideration.

UNITED PROVINCES

The Ganges Canal Hydro-Electric Grid supplies power at attractive rates for domestic, industrial and agricultural purposes to 14 districts in the west of the Province and to Shahdara in Delhi Province. Seven of the ten falls available for electrification have been developed and stand-by steam power stations at Chandausi and Harduaganj with installed capacity of 19,000 kw. have been constructed. The Grid thus have no less than 38,000 kw. of installed capacity. A new hydro-electric station at Mohammadpur with an installed capacity of 9,300 kw. is under construction which is likely to go into commission during the winter of 1948. At Harduaganj steam station additional power plant is under erection which will raise the installed capacity of the station from 10,000 kw. to 20,000 kw. This is also likely to be completed by the winter of 1948. Besides supplying some 93 towns with current for light and fans and minor industries, the Grid provides energy for irrigation pumping from tube wells and open wells.

The Ganges Valley State Tube-Well Scheme comprises about 2,000 tube-wells, covering the districts of Moradabad, Bijnor, Budaun, Muzaffarnagar, Saharanpur, Meerut, Bulandshahr, Aligarh and Etah, introducing irrigation on the volumetric system over approximately one million acres hitherto without any source of irrigation. This supply of cheap power from some 2,300 sub-stations is already having an important bearing on the economic disposal of crops and the development of minor industries in the urban centres and rural areas.

Investigations into the electrical and financial possibilities of a number of hydro-electric power generating stations have been completed and the work has already commenced on the Sarda Canal Hydro-Electric Scheme with an installed capacity of 42,500 kw. This station will be ultimately linked up with the large steam station at Cawnpore and the Ganges Canal Hydro-Electric Grid.

PUNJAB HYDRO-ELECTRIC PROJECT

Situated on a spur of the Dauladhar Range at elevations ranging between 6,000 and 4,000 feet above sea-level, and connected by means of a tunnel over 15,000 ft. long, are the works of what is known as the Uhl River Hydro-Electric or Mandi Scheme which is now operated by the E. Punjab P.W.D. Electricity Branch with its Headquarters formerly at Lahore.

This project owes its origin to the need which began to be felt in the old undivided Punjab during the War of 1914-18 for making energy available for industrial and agricultural purposes at rates cheaper than were then prevailing.

The site was discovered in the year 1922. A detailed project was prepared by 1923. Work on the construction of the first stage of this scheme was started in 1928. The total capital outlay on the scheme to the end of the year 1944-45 has been Rs. 730.6 lacs.

Due to the extensive nature of the construction works, it was found necessary to build two small temporary hydro-electric power stations one at Dhelu near Shanan and the other at Thujl near the headworks at Brot which were linked together and the combined installed capacity was 1,440 kw.

Water is withdrawn from the Uhl and the Lamba Dug Rivers at Brot and conveyed by a 9.25 ft. internal diameter concrete lined circular pressure tunnel which is one of the longest tunnels in the sub-continent and is the first steel mantle tunnel to be built in Asia. The tunnel is about 3 miles long and is designed for a normal full discharge of 600 cusecs (but it can carry up to 800 cusecs if required). The tunnel needs steel penstocks which run down the slope to the Shanan Power Station near Jogindarnagar (Mandi State) so as to utilise 1,300 ft. of the total fall thus converting the snow fed waters of the Uhl and its tributary into electrical energy.

Transmission System.—The initial installed capacity of Shanan Power Station is 48,000 kw. The plant consists of four 17,000 B.H.P. Pelton wheels, running at 428.5 r.p.m. each driven by a single jet of water and connected to a 12,000 kw. 11,000 volt, 3 phase, 50 cycle alternator.

From the Shanan Power Station energy generated at 11,000 volts is stepped up to 132,000 volts which is the highest voltage adopted for this purpose in the sub-continent. The transmission system comprises a double circuit 132 kv. trunk transmission line supported on steel towers 80 ft. high normally set 1,000 ft. apart but with spans extending even up to 3,380 ft. in the hills. This line supplies sub-stations at Kangra, Pathankhot, Dhariwal, Amritsar and Lahore.

A single circuit 132 kv. line also runs from Amritsar to Jullundur and is continued at 33 kv. to serve Goraya and Ludhiana sub-stations. A 66 kv. single circuit line starts from Lahore and supplies sub-stations at Kasur and Ferozepur while a similar line from Lahore serves sub-stations at Shahdara, Sheikhupura, Chuharkana, Mohlan, Jaranwala and Lyallpur.

From these various sub-stations 11,000 volt lines radiate to supply between them about sixty towns and villages. In addition to serving 31,000 consumers directly from its own mains, the Branch also furnishes bulk supplies to the N.W.R. for its own Workshops and to the P.W.D. Central Workshops, to two licensees (the Amritsar Municipality and the Jullundur Electric Supply Co.) and also to the Kapurthala State at two points. The connected load at the end of March, 1945 was 59,289 kv. the total number of units generated being 125,530,190 and the revenue assessed 80.38 lacs for the year 1944-45.

POST-WAR SCHEMES

During the last World War, though the construction of any major new schemes could not be undertaken, the question of post-war power development in the Punjab area was seriously engaging the attention of the old undivided Punjab Government. As an outcome of detailed investigations a Five Year Post-War Development Plan was approved.

All these schemes, in addition to providing power for thousands of irrigation tube-wells throughout the area, will provide much needed additional power for industrial and economic development.

The possibility of introducing tube well irrigation in certain parts of the Punjab area adds to the interest of post-war hydro-electric projects. This would enable thousands of acres of hitherto uncommanded land to be brought under cultivation, thereby increasing food supply and also lower the water table very considerably and tend appreciably to eradicate the menace of water-logging in many parts.

Rasul Hydrel Scheme.—This is a special priority scheme and provides for the development of 22,000 kw. of electric power at Rasul headworks from water to be dropped from the Upper Jhelum Canal to the Lower Jhelum Canal with an available average head of 84.75 ft.

The Scheme is estimated to cost Rs. 818.53 lakhs and provides for the construction of a hydro-electric station at Rasul with two 11,000 kw. Kaplan generating sets. It also provides for a double circuit 132 kv. line from Shalamar (Lahore) to Rasul via Gujranwala, Gujrat and Jhelum and single circuit 132 kv. line on double circuit towers from Jhelum to Rawalpindi via Gujarkhan. It also provides for: (i) a double circuit 66 kv. line from Gujranwala to Lyallpur via Hafizabad, Sukheke, Sangla Hill and Chak Jhumra, (ii) a double circuit 66 kv. line from Rasul to Malakwal, (iii) and 66 kv. and 33 kv. single circuit lines between Lyallpur and Chinot, Malakwal and Sargodha via Bhulwal, Rasul and Chakori, Malakwal and Bhabra, Hafizabad and Chinawan, Bhulwal and Bhabra and Gujranwala and Sialkot via Daska.

This scheme is primarily meant for providing tube-well irrigation in some of the districts in the western and central parts and the available power is proposed to be utilised in the following manner: (i) Operation of 1800 tube-wells to be installed on the channels of the Northern Canals of the Irrigation Branch, (ii) Supply of electrical energy for industrial power and lighting in twenty-eight towns in the districts of Shahpur, Jhelum, Gujrat, Sialkot, Gujranwala, Sheikhupura, Lyallpur and Jhang, (iii) Supply of power to the Uhl River Grid to the extent of 5,000 kw. during the low water period in the Jogindarnagar catchment area.

The construction of this scheme has already started and it is scheduled to be ready for operation by the middle of 1949.

NANGAL SCHEME

The old Punjab Government had accorded administrative approval to what is known as the Nangal Power Project.

This project provides for a diversion weir from the Sutlej at Nangal in the North-East near Bhakra and a canal 37 miles long and of 10,000 cusecs capacity from Nangal to Rupar. At Rupar, one branch will lead to the Sirhind Canal while another branch will form the main line upper of the future Bhakra Canal. From a study of the discharge tables of the Sutlej river for the last 35 years it appears that 3,000 cusecs would be a safe minimum supply on which to count and the initial stage of the project is based on the utilisation of this minimum discharge.

After the Bhakra Dam is completed the canal, in addition to the free flow of the river, will take the releases from the Bhakra reservoir. The fair minimum discharge available will then be 6,000 cusecs and the firm power available will be doubled.

Situated on the canal will be 4 power houses with heads of 81.53.5, 53.5 and 51 ft. at minimum flow period, yielding a total of 66,400 kw. of primary power at 72% load factor. When the Bhakra Dam is completed and more water becomes available it is anticipated that, with the installation of a fifth power house at or below Rupar, it will be possible to develop approx. 1,32,000 kw. of primary power at 72 per cent. load factor.

The Plan.—The project provides for: (1) A double circuit 132 kv. trunk line—on 220 kv. towers—from Nangal to Ambala and single circuit onward up to Delhi via Panipat. The towers between Ambala and Delhi will be designed for 220 kv. and stringing of a second circuit in future, if necessary, (ii) A double circuit 132 kv. line—on 220 kv. towers—between Nangal and Jullundur, (iii) A single circuit 132 kv. line, on double circuit towers, between Jullundur, Ferozepur, Fazilka and Pakpattan, (iv) 66 kv. and 33 kv. branch lines connecting the 132 kv. trunk line grid sub-stations with Karnal, Abdul-lahpur, Patiala, Nabha, Bilaspur, Naraingarh (Sirmoor State), Khanna, Jagraon, Moga, Kot-Kapura, Bhatinda, Muktsar and Abohar towns, (v) 11 kv. lines and local distribution network for supplying the irrigation tube-wells and towns covered by the Scheme.

The Nangal Power Project has been rendered urgently necessary to provide power for the construction of the Bhakra Dam; to provide power for the industrial and economic development of the area; and to provide for tube-well pumping to increase the irrigation supplies on the Sutlej Valley, Sirhind and Western Juma Canal Systems as early as possible.

The subsidiary advantages of the Project are that: (i) It will obviate material interference with Rupar Head Works and the Sirhind Canal. Apart from the political difficulties thus escaped, there will be a saving of Rs. 165 lakhs, (ii) It will provide a balancing reservoir for the Bhakra Dam releases and, by stabilising diurnal variations, will enable the full development of Bhakra power.

The initial stage of the scheme, i.e., the development of 66,400 kw. of primary power, is estimated to cost Rs. 1,774 lakhs and expected to be completed by the middle of 1951. The

final stage, which is estimated to cost an additional sum of Rs. 191 lakhs, will not be taken in hand until after Bhakra power is available and the power position of the whole region has been thoroughly re-examined.

MANGLA HYDRO-ELECTRIC SCHEME

This project provides for the generation of 10,000 kw. of hydro-electric power at Mangla near the Irrigation Branch Head Works on the Upper Jhelum Canal from a head of 30 ft. and minimum flow of approx. 5,000 cusecs in the head reach of the canal. It also provides for the linking of this power station by a double circuit 132 kv. line with the 132 kv. Grid sub-station at Jhelum which would be constructed under the Rasul Hydel Scheme.

Addition of a pipe line and two 12,000 kw. pelton wheel generating sets at Jogindarnagar is an extension of the existing hydro-electric works of the Uhl River Scheme at Jogindarnagar and is meant for developing additional power which, in cold weather periods during shortage of water at the headworks at Brot, will be supplied by means of the Mangla Hydro-Electric Scheme but, when there is a shut down of that generating plant during summer, it will be supplied by these additional sets at Jogindarnagar power station which has an ample supply of water in summer to run five machines.

These two schemes are therefore primarily meant to supplement each other during the low water periods at the respective power stations, thus ensuring a constant supply of additional power all throughout the year. The schemes are estimated to cost Rs. 99.52 lakhs and scheduled to be completed in 1951.

THE BHAKRA PROJECT

This is the major post-war hydro-electric project in East Punjab and has been considered in many shapes and forms since it was first submitted about 30 years ago. The project involved protracted negotiations with various States through which the irrigation canals will run, ascertaining as to which of them would like to participate in the scheme and under what terms.

It was only very recently that these protracted negotiations reached a more or less final stage and serious attention could be given to detailed designs of the dam, canals, power station, etc. The work of designing the Dam has finally been entrusted to a firm of American Consulting Engineers headed by Mr. Savage, who is generally considered the best living authority on high dams and has been responsible for the design of such marvels of modern engineering as the Boulder Dam and Grand Coulee Dam in the U.S.A.

The scheme involves the construction of a 480 ft. high dam across the Sutlej at Bhakra in East Punjab and the creation of a reservoir for canal irrigation and development of hydro-electric power.

The Bhakra storage is estimated to have a live storage of approx. 3.4 million acre feet capable of discharging during the 270 days,

when natural river supplies are non-existent, a mean discharge of about 6,300 cusecs. It will irrigate the dry famine stricken tracts of Hisar, Rohtak and the adjacent States where no canal irrigation is available at present. It will also generate about 1,88,000 kw. of electric power at 0.72 load factor (which is the average load factor of the Punjab Grid), with an installed capacity of 3,20,000 kw., i.e., four machines of 80,000 kw. capacity. The generating station will be linked up with the transmission system of the Punjab Grid with extensions in the West Punjab up to Multan.

The construction of so stupendous a scheme is naturally a slow job, if full measures of safety and a reasonable economy are to be provided. The preliminary work has already been started but the scheme is not expected to be completed before 1950.

NIZAMSAGAR PROJECT

The Hyderabad State has decided to proceed with the Nizamsagar Hydro-Electric Project as an immediate post-war measure for bringing hydro-electric power to Hyderabad city. The scheme is intended to utilise the water stored in the Nizamsagar dam and it is expected that electric power varying from about 1,500 kw. as the minimum to about 11,500 kw. as maximum could be generated. It is proposed to install two 4,000 kw. hydro-electric generating sets and to construct 80 miles of 66 kv. transmission lines for supply to Hyderabad city. In this connection a sum of Rs. 85.20 lakhs has been provided in the budget for 1947-48.

There is another scheme known as the Godavari Valley Authority, which is modelled on T.V.A. It is a combined hydro-electric power-cum-irrigation project under which it is proposed to generate 55,000 kw. continuous and to bring under cultivation an additional acreage of 1.25 millions. The scheme also contemplates the creation of a model industrial town with a number of important industries located in its vicinity. A sum of Rs. 291.95 lakhs has been provided in the 1947-48 budget for this scheme.

Tungbhadra Project.—An agreement has recently been reached on the apportionment of the waters of the Tungbhadra river between the Governments of Madras, Mysore and Hyderabad. For the share of the waters, it will be possible for Hyderabad State to utilise three drops in the irrigation canal for generation of hydro-electric power, giving an initial output of about 15–25,000 kw. For this project a sum of Rs. 98.50 lakhs has been provided in the 1947-48 budget.

There are a number of hydro-electric power sites on the Manjeera, Kaddam and Purna tributaries of the Godavari and on river Dindi, a branch of Kistna river as well as on the upper and lower reaches of the Kistna. The actual power potentialities of these sites need detailed investigation.

These irrigation cum-hydro-electric schemes are making a fairly good progress so far as is permissible under existing limitations.

KOLHAPUR STATE

The Kolhapur State has embarked on the generation of electric power from the water stored in the Radhanagari dam which has been raised to the height of 50 feet. It will be further raised to 75 ft. for which construction is now in progress. The power house will be situated at the foot of the dam and the installation will comprise four 1,200 kw. Kaplan sets operating on 65/116 feet head. The power will be transmitted by means of 32 miles of 33 kv. lines to Kolhapur city for augmenting the water supply to the city, supply of energy to industrial concerns and take over the load from the existing oil engine station. The Radhanagari station will be supplemented by another Thermal 1,300 kw. station at Kolhapur. Both the stations will run in parallel. The scheme is also intended to provide an assured water supply for existing irrigation and new areas that will be put under cultivation by the installation of about 175 electric pump sets in the area served by the transmission lines and irrigating an area of 9,000 acres under sugar cane cultivation.

N.-W. F. P.

The possibility of generating electricity at Malakand was first recognised some 25 years ago. The waters of the Swat River to the north of Malakand are utilised for fertilising the north-eastern part of the Peshawar valley by driving a tunnel known as Benton tunnel under the Malakand pass and constructing a canal. It is recognised that by extending it by another half a mile upto a point above the upper Swat canal, advantage could be taken of a natural fall of some 250 feet for the production of electricity.

This scheme was sanctioned in 1934 and a new tunnel known as Burkit tunnel, 12 feet in diameter was constructed. From the tail of the Benton tunnel, water is discharged over a regulating weir into the new power tunnel from which it emerges through an open channel with silt extractor into the forebay. At the remote end of the forebay, a spillway syphon is provided to allow evacuation of excess water automatically in the event of sudden changes of load. From the forebay the water flows through penstock pipes 515 feet long with external diameter varying from 61 inches at the top to 55 inches at the bottom into the power house situated below at Malakand.

The available discharge is 800 cusecs with a total head of 250 feet. The generating plant consists of three reaction turbine sets each generating 3,200 kw. at 11 kv., 3 phase 50 cycles. The pressure is stepped up by transformers to 66 kv. and power transmitted by a 30-mile double circuit line to Mardan and thence by 74 miles of single circuit ring main to Peshawar Cantonment, one line passing through Charsadda and the other through Risalpur and Nowshera. 140 miles of 11 kv. branch lines are also provided for serving important towns and rural areas in the Province. The scheme came into operation in 1938.

The hydraulic works and the power house have been designed for the installation of three more generating sets at a future date. Two additional sets each of 5,000 kw. are on order and will be installed early in 1948.

An extension of the 66 kv. transmission system to Wah and Haripur is now in progress and a further extension to Kohat is proposed.

A 33 kv. transmission system is also proposed for Swabi and Saidu Sharif, the Capital of Swat State.

Irrigation

THE chief characteristics of the rainfall in the sub-continent are its unequal distribution over the country, its irregular distribution throughout the seasons and its liability to failure or serious deficiency. The normal annual rainfall varies from 460 inches at Cherrapunji in the Assam hills to less than three inches in Upper Sind.

The second important characteristic of the rainfall is its unequal distribution throughout the seasons. Except in the south-east of the Peninsula, where the heaviest precipitation is received from October to December, by far the greater portion of the rain falls during the south-west monsoon, between June and October. During the winter months the rainfall is comparatively small, the normal amount varying from half an inch to two inches, while the hot weather, from March to May or June, is practically rainless. Consequently it happens that in one season of the year the greater part of the country is deluged with rain and is the scene of the most wonderful and rapid growth of vegetation; in another period the same tract becomes a dreary, sun-burnt waste.

From the agricultural point of view however, the most unsatisfactory feature of the rainfall is its liability to failure or serious deficiency. The average annual rainfall over the whole country is about 45 inches and there is but little variation from this average from year to year, the greatest recorded being only about seven inches. But if separate tracts are considered, extraordinary variations are found. At many stations annual rainfalls of less than half the average are not uncommon, while at some less than a quarter of the normal amount has been recorded in a year of extreme drought.

Classing a year in which the deficiency is 25 per cent. as a dry year and one in which it is 40 per cent. as a year of severe drought the examination of past statistics shows that, over the precarious area, one year in five may be expected to be a dry year and one in ten a year of severe drought. It is largely in order to remove the menace of these years that the great irrigation systems in parts of the country have been constructed. In the arid tracts where the annual rainfall is less than 15", no cultivation is normally possible without irrigation.

THREE CLASSES

The Government irrigation works may be divided into three main classes, those provided with artificial storage, those dependent throughout the year on the natural supplies of the rivers and those receiving their supplies from the sub-unit. In actual fact, practically every irrigation work depends upon storage of one kind or other but, in many cases this is provided by nature without man's assistance. It is only in the north and in Madras, where the cold weather rains are even heavier than those of the south-west monsoon that the principal non-storage systems are found.

The expedient of storing water in the monsoon for utilisation during the subsequent dry weather has been practised from time immemorial. In their simplest form, such storage works consist of an earthen embankment or masonry wall constructed across a valley or depression, behind which the water collects, and those under Government control range from small tanks irrigating only a few acres each to huge reservoirs which are capable of storing over 20,000 million cubic feet of water.

Irrigation from wells has been practised from times immemorial. In recent years, however, Government has installed in some places in U.P. and Behar electrically driven tube wells for the supply of irrigation water to cultivators.

All irrigation works are divided into three classes—productive and unproductive, with the third class embracing areas irrigated by non-capital works. The main criterion to be satisfied before a work could be classed as productive is that it should, within ten years of the completion of construction, produce sufficient revenue to cover its working expenses and the interest charges on its capital cost. Most of the larger irrigation systems belong to the productive class. In recent years, the criterion mentioned above has been the subject of much criticism as it ignored the indirect benefits from irrigation projects.

Unproductive works are constructed primarily with a view to the protection of precarious tracts and to guard against the necessity for periodical expenditure on the relief of the population in times of famine. They are financed from the current revenues, generally from the annual grant for famine relief and insurance, and are not directly remunerative, the construction of each such work being separately justified by a comparison of the value of each acre protected (based upon such factors as the probable cost of famine relief, the population of the tract, the area already protected and the minimum area which must be protected in order to tide over a period of severe drought) with the cost of such protection.

Nearly one-eighth of the whole area irrigated from Government works is effected by minor works for which no capital account is kept.

GROWTH OF IRRIGATION

There has, during the last sixty years, been a steady growth in the area irrigated by Government irrigation works. From 10½ million acres in 1878-79 the area annually irrigated in the Provinces of India and Pakistan rose to 19½ million acres at the beginning of the century and to 35 million acres in 1944-45.

The main increase has been in the class of productive works, which irrigated 4½ million acres in 1878-79 and rose to 20,756,209 acres in 1926-27. During the year 1944-45 the areas irrigated by productive and unproductive works amounted to 26.05 and 5.0 million acres respectively.

The area irrigated in 1944-45 was largest in the Punjab (E. and W.) where 14.05 million acres were irrigated during the year, excluding the area irrigated through channels which lie in the States. The Madras Presidency came next, with an area of 6.51 million acres, followed by the United Provinces with an area of 5.37 million acres.

The total capital outlay, direct and indirect on irrigation and navigation works, including works under construction, amounted at the end of the year 1944-45 to Rs. 15,597 lakhs. The gross revenue for the year was Rs. 2,094 lakhs and the working expenses 726 lakhs; the net return on the capital being, therefore, 8.77 per cent.

The return on capital invested in productive irrigation works was highest in the Punjab where the yield was 18.48 per cent. The return was 17.60 per cent. in Bombay, 15.93 per cent. in N.-W.F.P., 9.95 per cent. in Sind and 8.63 per cent. in the United Provinces.

Charges for Water.—The charges for water are levied in different ways in the various Provinces. In some, notably in Sind, the ordinary land revenue assessment includes also the charge for water, 9/10ths of this assessment being regarded as due to the canals. In others, as in parts of Madras and Bombay, different

rates of land revenue are assessed according to whether the land is irrigated or not, and the assessment upon irrigated land includes also the charge for water. These methods may, however be regarded as exceptional. Over the greater part of the sub-continent water is paid for separately: the area actually irrigated is measured, and a rate is charged per acre according to the crop grown. Lower rates are often levied in cases where irrigation is by "lift", that is to say where the land is too high for the water to flow on to it by gravity and consequently the cultivator has to lift it on to his field.

Various other methods of assessment have been tried, such as by renting outlets for an annual sum, or by charging according to the volume of the water used, but these have never been successful. The cultivator fully understands the principle of "No crops, no charge" which is now followed as far as possible in canal administration, but has no confidence in a system under which his liability for water rate is independent of the area and quality of his crop.

The rates charged vary considerably with the crop grown, and are different in each Province and often upon the several canals in a single Province. Water rates on some important crops as assessed in some Provinces are as given under:

NAME OF PROVINCE	NAME OF CROP					
	Sugar-cane	Rice	Cotton	Wheat	Maize	Pulses and Millets
	Rs. a. p.	Rs. a. p.	Rs. a. p.	Rs. a. p.	Rs. a. p.	Rs. a. p.
N.-W.F.P. ..	7 2 0 to 10 8 0	4 0 0 to 8 0 0	3 4 0 to 5 12 9	3 4 0 to 4 12 0	3 0 0 to 4 10 0	2 2 0 to 4 10 0
Punjab (E. and W.)	7 0 0 to 11 1 6	5 4 0 to 6 8 10	4 8 0 to 6 4 0	3 8 0 to 5 0 0	3 12 0 to 4 4 0	2 12 0 to 3 8 5
United Provinces ..	5 0 0 to 12 0 0	4 0 0 to 7 8 0	2 8 0 to 5 8 0	3 0 0 to 5 0 0	3 0 0 to 5 0 0	2 4 0 to 3 4 0
Madras ..	7 8 0 to 17 8 0	6 4 0 to 10 0 0	3 2 0 to 10 0 0		3 2 0 to 10 0 0	3 2 0 to 10 0 0

Practically speaking, Government guarantees sufficient water for the crop and gives it as available. If the crop fails to mature, or if its yield is much below normal, either the whole or part of the irrigation assessment is remitted.

A somewhat different system, the long lease system, is in force in parts of Bengal (E. and W.) and the Central Provinces, under which the cultivators pay a small rate for a term of years whether they take water or not. In these Provinces where the normal rainfall is fairly high, it is always a question whether irrigation will be necessary at all, and if the cultivators have to pay the full rate, they are apt to hold off until water becomes

absolutely essential, and the sudden and universal demand then usually exceeds the supply. By paying a reduced rate every year for a term of years they become entitled to water when required; consequently there is no temptation to wait till the last possible moment, and the demand is much more evenly distributed throughout the season.

Taken as a whole, irrigation is offered on extremely easy terms, and the water rates represent only a very small proportion of the extra profit which the cultivator secures from the water he receives.

CENTRAL BODIES

For the Dominion of India as a whole there are two central statutory bodies: the Central Board of Irrigation with a Research Committee and a Bureau of Information, and a Central Waterways, Irrigation and Navigation Commission which as the name indicates has a wider purview. The Board of Irrigation consists of the Chief Engineers of Irrigation, Hydro-electric and Waterways of the Provinces, of the States of Hyderabad, Mysore, Travancore and Cochin and of representatives from Burma and Ceylon. The Board meets every year when papers of a technical nature are read and discussed. These papers are then published along with technical literature on specific questions in a monthly abstract and a quarterly journal which the Board brings out for the purpose. Of late the Board has broken new ground and has begun to issue little pamphlets for the layman explaining the works which are being undertaken by the Dominion engineers from time to time.

For purposes of research and experiment in irrigation and hydro-dynamics the Central Board has a station at Khadakvasla near Poona called the Indian Waterways Experiment Station. There is now a proposal to extend the range of activities of this station rename it as the Central Waterways, Irrigation and Navigation Research Station, and shift it to Delhi.

Besides the Government of India, seven Provinces, namely West Punjab East Punjab, United Provinces, Sind, West Bengal, and Madras, and two States namely Hyderabad and Mysore also maintain research stations.

The Bureau of Information of the Board maintains a library where literature on irrigation, hydro-electric engineering, river control and allied subjects, is collected from all parts of the world and indexed in detail for the supply of information to the Irrigation Departments of the Provinces and the States.

The Central Waterways, Irrigation and Navigation Commission was set up in 1945 and consists of a chairman and two full time and such part time members as are from time to time found necessary. Being a fact-finding, planning, and co-ordinating body for India as a whole it has much wider functions than the Central Board of Irrigation. The Central Commission prepares projects, initiates schemes for the training of Indian engineers in specialized fields such as waterways, navigation, irrigation, and finally advises the Government of India on disputes between Provinces or on the question of priority as between various projects of flood control, irrigation, navigation and so on. The Commission, of course, maintains a full time technical and administrative staff to carry on its functions.

IRRIGATION STATISTICS

The area irrigated by Government works in each Province is given in the table below:—

Province	Average area irrigated in triennium 1936-39 Acres	Area irrigated in 1944-45 Acres
Madras	7,396,100	6,509,399
Bombay	466,200	639,386
Bengal (East and West)	171,800	245,442
United Provinces	4,769,200	5,371,922
Punjab (East and West)	12,195,800	14,045,199
Bihar	679,500	744,943
C.P. (including Berar)	319,100	727,536
N.-W.F.P.	466,500	534,735
Orissa	366,400	708,179
Sind	4,692,900	4,256,587
Minor Administrations	*	46,416
Baluchistan	104,700	26,949
Total	31,628,200	34,946,698

* Not available.

KINDS OF WORKS

Here are a few figures for productive, unproductive and non-capital works for India and Pakistan:—

Province	Productive Works Area Irrigated 1944-45	Unproductive Works Area Irrigated 1944-45	Non-capital Works Area Irrigated 1941-42
Madras	3,043,199	263,225	3,207,400
Bombay	11,954	437,176	207,500
Bengal (East and West)	3,826,689	1,531,981	31,800
United Provinces	14,110,148	726,882	5,500
Punjab (East and West)	666,449	126,247	29,600
Bihar	220,592	676,476	44,900
C.P. (excluding Berar)	309,143	353,869	
N.-W.F.P.	4,050,745	324,993	20,600
Orissa	124,123	22,330	
Sind	26,053,899	5,003,920	3,547,300
Rajputana			
Baluchistan			
Total			

Taking productive works as a whole the capital invested in them was at the end of 1944-45 Rs. 10,169 lakhs. The net revenue for the year was Rs. 1,297 lakhs giving a return 12.76 per cent as compared with 9 per cent in 1918-19 and 9½ per cent in 1919-20 and 7.68 per cent in 1937-38. In considering these figures it must be remembered that the capital invested includes the expenditure upon several works which have only lately come into operation and others which were under construction, which classes at present contribute little or nothing towards revenue. Moreover only the receipts from water rates and a share of the enhanced land revenue due to the introduction of irrigation are credited to the canals, so that the returns include nothing on account of the large additions to the general revenues of the country which follows in the wake of their construction.

Here are figures for costs and revenue:—

Province	Net area sown in 1943-44 Acres	Area irrigated by Government irrigation works Acres	Percentage of area irrigated to total area sown	Capital cost of Government irrigation and Navigation works to end of 1943-44 (lakh rupees)	Estimated value of crops raised on areas receiving state irrigation (lakh rupees)
Madras	31,890,989	6,461,450	20.26	2052.2	5214.02
Bombay	28,625,161	626,759	2.19	1079.4	*
Sind	5,700,383	4,511,110	79.14	2648.8	*
Bengal (East and West)	28,060,000	244,217	0.87	532.0	*
United Provinces	37,210,028	5,344,683	14.36	3076.9	7807.39
Punjab (East and West)	28,533,453	13,888,010	48.67	4259.5	11683.69
Bihar	17,658,400	780,104	4.42	356.1	*
C.P. and Berar	24,988,891	722,239	2.90	652.9	*
Orissa	6,296,451	828,277	13.15	328.0	*
N.-W.F.P.	2,300,551	528,359	22.97	316.6	*
Assam	6,928,175	*	*	*	*
Baluchistan	*	25,156	*	146.5	*
Minor Administrations	804,852	55,408	6.88	29.6	*
Total	218,997,334	34,015,772	15.53	15478.4	

* Figures not available.

Among irrigation works should be mentioned the Ganga Tube-Wells Scheme in certain parts of western U.P. which enables the ground water reservoirs lying to a depth varying from 15' to 45' to be utilized for irrigating a vast area: canals of the normal type would be useless because of limitation of river water. The total number of State tube-wells running at the end of the year 1943-44 was 1649 and the total area irrigated was 665,046 acres. The total capital outlay on the whole scheme up to the end of 1943-44 was 1.89 crores and on the hydro electric grid which is in operation throughout the area is 3.73 crores.

NEW WORKS

Planned development of natural regions such as river valleys is very much in the air. After the success of the T.V.A. in America such planned development has become part of the world's general thinking. So naturally, a great many Provinces in India were ready with plans at the end of the War for a fuller and a more efficient use of India's water resources. Some of the plans as in the Punjab for instance are irrigation projects pure and simple. Others have more purpose than one in view such as the production of electric power or the opening out of inland waterways for navigation and so on. But none of the projects so far formulated in India or Pakistan have either the sweep or the ambition of Roosevelt's enterprise in the Tennessee Valley in the early days of the New Deal, an enterprise in which engineers, architects, biologists, teachers, doctors and social workers worked together to recreate the whole life of a backward area.

Of all the projects for post-war development in India and Pakistan four are outstanding by reason of their size and ambition. They are the Damodar Project for southern Bihar and West Bengal; the Kosi Project for northern Bihar and Nepal; the Mahanadi Project for Orissa, C.P.; and last the Narmada-Tapti Project for C.P. and Bombay. (There is, of course, the Assam Project for the construction of 11 dams across the Brahmaputra but as the whole project is in a very nebulous condition it is not worth noticing here. Besides it has been planned on such an ambitious scale that it is estimated to cost over 50 crores while the budget of the Province is of the same dimensions as that of the City of Calcutta.)

The core of the plan in every case is a series of dams across the main course of the river for storing water, generating electric power, preventing periodical flooding, conserving the fertility of the soil and providing facilities for navigation. In the case of the Mahanadi Project, a further idea appears, the idea of rural uplift, of bringing a newer and a richer life into a backward area by providing the cultivator with model schools, houses and recreation centres.

Some of the areas selected for development in the country cut right across Provincial boundaries and inter-Provincial bodies have had to be set up, or quasi-autonomous organization on the lines of the T.V.A. had to be created by the Government of India as in the case of the Damodar Valley to prepare estimates and supervise construction.

It must be mentioned, however, that though the preliminary surveys and investigations are complete nowhere has work actually begun except once again on the Mahanadi Project where the Orissa Government have bought machinery and equipment worth about Rs. 25 lakhs to start with. When all the projects (big and small) are complete, which will be about 15 years India and Pakistan will have added 26 million acres to the existing cultivated area, 5 million kw. of electrical energy to the existing half a million kw. and produced extra food stuffs worth about 10 crores of rupees.

We shall now proceed to give a few facts about the more important irrigation projects undertaken by or under consideration of the various Provincial Governments.

THE BIG FIVE

Damodar Valley Project: On the Damodar River in south Bihar; 8 dams and 1 barrage; multi-purpose; irrigation, electric power, navigation, prevent soil erosion, afforestation, improve drainage, control malaria; location of barrage at Durgapore 15 miles from Ranigunge from which two canals will take off, one on each side; capacity of reservoir 4.7 mln. acre ft.; will cultivate 700,000 acres of land; will generate 65,000 primary and 65,000 secondary kw. and another 150,000 from thermal generating plant linked up with it; cost 55 crores; plan worked out by Central Technical Power Board.

When the project is complete the *kharif* crop will increase to 400,000 tons of paddy and the *rabi*, now non-existent, will earn a gross income of 5 crores for the cultivator. The power generated will be used to develop the mineral resources of the area, and the resulting pools will make navigation possible from the head of the works at Ondal where the marshalling yard for Ranigunj coal is situated right down to the Hooghly 30 miles above Calcutta. The Provincial Governments of Bihar and West Bengal have authorized the Central Government to set up a Damodar Valley Authority on the lines of the T.V.A.

Kosi Project: On the River Kosi in Nepal and north Bihar; 2 barrages: first barrage near Baraha Kshetra in Nepal; second near Nepal-Bihar border; multi-purpose; first dam 750 ft. high, capacity of reservoir 11 mln. acre ft. of water, will irrigate 1 mln. acres of land in Nepal, generate 1.8 mln. kw.; second dam: the highest in the world, will irrigate 2 mln. acres in Bihar; cost 85 to 95 crores; will take 10 to 15 years to build.

Survey work has just started, and when the project is complete navigation will be possible from the Kosi reservoir to the Ganga, which means that Nepal will be opened up and ships can pass from Calcutta right up to Nepal within a short distance of Khatmandu.

Mahanadi Project: On the River Mahanadi in Orissa; three dams as three separate units, Hirakud Dam, Tikarapara Dam, Naraj Dam, each with its own canal system and hydro-electric power installation, could be integrated later for development of valley as a whole; multi-purpose; together will cultivate 21 mln. acres of land; Hirakud Dam to be constructed first, 9 mls. west of Sambalpur, 3½ mls. long, 125 ft. high, with 17 miles of low dykes on either side; capacity of 5.3 mln. acre ft.; will irrigate 800,000 acres of land in Sambalpur Dt.; will generate 350,000 k.w.; will cost 16 crores; 3 to 5 years to complete; work to start end of 1947; model villages, sanitary housing and anti-malarial measures, electric and water supply, schools, community centres, roads, cottage industries, dairy farms, fish culture; for dispossessed peasants land will be given instead of compensation in money.

Navigation will be possible from Hirakud right down to the sea 300 mls. away. The resulting electric power will be utilized to exploit manganese, iron, coal and bauxite deposits. A cement factory will also be set up.

Narmada-Tapti Project: On the Rivers Narmada and Tapti in C.P. and Bombay; still in the survey stage; 8 sites in C.P. selected; will cultivate 1 mln. acres in C.P. and 110,000 in the Surat and Broach Dts. of Bombay; will generate 1 mln. k.w. of electric power; will cost 200 crores; will take 15 years to complete; will be a source of great industrial wealth.

Ramapadasagar Project: On the River Godavari at Polavaram in the Presidency of Madras; one of the biggest; 150 ft. high, 200 ft. below foundation, 1½ mls. long; capacity of 2 mln. acre ft.; multi-purpose; will irrigate 2.3 mln. acres above delta; and produce 1 mln. tons of extra rice; will generate 100,000 kw. of electric power; will cost 80 crores; work will start at end of 1948 and take 20 years to complete.

SMALLER PROJECTS

Tungabhadra Dam: Work at Mallapuram in Bellari Dt. was started in 1945. This is a joint Madras-Hyderabad Project and work is being carried on in co-operation with the Nizam's Government. The dam will be 2,200 ft. long and 180 ft. high with a storage capacity of 2.6 mln. acre ft. When complete it will bring under cultivation an area of 300,000 acres of land and generate a considerable amount of electric power.

Besides Tungabhadra and Ramapadasagar the Government of Madras have plans for 130 smaller irrigation projects during 1947-48 in the Grow More Food Campaign which will bring under cultivation an area of 98,000 acres at a cost of Rs. 1,65,38,000. The Government of Madras have also under consideration a further four year programme of 170 irrigation schemes at a cost of 3 crores of rupees. This is exclusive of the Bhavani Project in Coimbatore Dt. and the Pennar Project at Gandikota in Cuddapa Dt.

Along with Madras we could group the plans for irrigation of the States of Mysore and Hyderabad. The most ambitious project of the Mysore Government is the Bhadra Reservoir near Lakhaballi in Kadur Dt. which is expected to make the State self-sufficient in food. The Bhadra Dam will be 320 ft. long, 185 ft. high with a storage capacity of 6125 mln. cubic ft. It will irrigate an area of 180,000 acres. The cost of the dam will be 888.45 lakhs.

Besides the Tungabhadra and Godavari, Hyderabad has several projects in hand of which the biggest is the Devnagar Project which will irrigate an area of 100,000 acres and generate 80,000 kw. of electric power. The cost of the project will be about 3½ crores. Preliminary surveys are being carried out.

Bombay: The Government of Bombay have five irrigation projects for Gujarat alone under consideration, estimates for which have

been submitted. The Government, in fact, have a five-year programme for the Province as a whole which will cost them 9½ crores. In some of these projects the interests of States are involved and negotiations are in progress, for instance, with Baroda and Kolhapur. The five projects for Gujarat are Mahi (1½ crores), Watrak (75 lakhs), Meshwa (25 lakhs), Patas Dungri (20 lakhs) and Wardala (20 lakhs). Seven more projects are under contemplation which will cost 5 crores in all and which when complete will irrigate an area of 300,000 acres. When the larger Narmada-Tapti Project is also complete, it is calculated that 16 lakhs of acres in Gujarat out of the 30 which are now under cultivation will be irrigated by artificial means.

Belgaum Dt. will have the Daddi Dam on the Ghataprabha River to irrigate an area of 450,000 acres; Bijapur and Satara Dts. will have dams on the Rivers Koyana and Krishna to irrigate an area of 250,000 acres; and finally Nasik Dt. will have the Gangapur Dam on the river Godavari 8 miles north-west of Nasik. This last dam will cost 2 crores and will provide enough water to irrigate an area of 61,000 acres. Work will commence in a short time and the dam will take four years to complete.

Bengal: Before the partition the Government of Bengal had a triple project one on the river Tista, a second on the Ganga and a third on the Brahmaputra. The Tista Project still in the investigation stage contemplates building two dams, one at Gatikhola above Jaipaluri and the second a short distance below the first. The Project had a number of purposes in view such as better drainage, improved sanitation, soil conservation, fish culture, cheap navigation and so on. It was expected to generate 300,000 kw. of electric power and bring under cultivation an area of 1.5 mln. for *rabi*. The *kharif* crop alone was estimated to yield one million tons of paddy. It was also hoped that when the project was complete it would provide cheap transport for the forest wealth of the Darjeeling, Kalimpong and Sikkim hills. After the partition the fate of this triple project to develop large areas in northern, central and eastern parts of what was Bengal is probably in the balance.

But work on the other project called the Mor Reservoir Project has already started. This project contemplates the construction of a dam—on the river Moorakshy at Messenjone and a barrage near Suri in Birbhum Dt. The reservoir will have a capacity of 1 mln. acre ft. and irrigate an area of 600,000 acres of land. The scheme is estimated to cost over seven crores.

U.P.: A project in which the Governments of U.P., Bihar and the State of Rewa are interested is the Pipri Dam on the river Rihand, a tributary of the Son, in Mirzapur Dt. The scheme which is under preparation is a multi-purpose one which will not only provide water for irrigation but help in navigation and provide facilities for the exploitation of the mineral wealth of the area. The dam will be 600 ft. high and will form a lake 180 square miles

with a storage capacity of 9 mln. acre ft. of water. The dam will command an area of 600,000 acres for irrigation and produce electric power of 150,000 kw. The whole project will take six years to complete and will cost 16 crores of rupees. When it is complete a ship will be able to pass from Calcutta right into the heart of the Rewa State, a distance of 600 miles.

A second project which the U.P. Government have under contemplation is the Nayar Dam across the river Nayar near Marora in Garhwal Dt. The dam will be 600 ft. high and will have a storage capacity of 1.4 mln. acre ft. When complete it will generate primary power to the extent of 30,000 kw. and secondary power amounting to 70,000 kw. The estimated cost of the dam is 865 lakhs. A third project which is under contemplation of the U.P. Government is a dam across the Ramaganga river.

Punjab (E. and W.). The Punjab has been the classic home of irrigation projects of the modern type. The capital expenditure of the Punjab (East and West) on the major canals alone has been in the neighbourhood of 40 crores and the annual gross revenue has been about 6 crores. With the formal opening of the Thal Canal in January 1917 it may be said that the Punjab at any rate has reached a point when the water resources of its rivers have been utilized almost to the full. Development from now on must be along the difficult and expensive path of storage and pumping of sub-soil water by means of tube wells.

The Thal barrage which is situated at Daudkhel 3 miles from Kalabagh on the Indus in West Punjab will irrigate an area of 350,000 acres in

the Dts. of Mianwali and Shahpur and produce 750,000 tons of food grain. With the opening of the Thal project the last available block of waste land in West Punjab has been brought into cultivation. The canals have been lined with concrete and the whole project has cost 2 crores of rupees.

For the water-logged parts of the Jhelum canal area 1,860 tube-wells are going to be constructed. The power for the operation of these wells will come from hydro-electric stations to be installed at Rasul by getting water drop from the upper to the lower Jhelum canal.

A scheme which is under investigation by the East Punjab Government is the Bhakra multipurpose project. The dam will be 480 ft. high with a storage capacity of 3.5 mln. acre ft. and will command an area of about 4.5 mln. acres and generate 160,000 kw. of electric power. The project is estimated to cost 42 crores of rupees. The Government of Patiala State which can be linked up with East Punjab has also an irrigation project in view called the Dochi Project estimated to cost 5 crores.

In Sind which like the Punjab is well served by irrigation works two more dams are expected to be built one in Upper Sind and the other in Lower Sind. The Upper Sind barrage will be located at Gudu 80 miles above Sukkur. The total cultivable area commanded will be 2,323,600 acres while the estimated cost is about 12 crores. The Lower Sind barrage will be located at Hajipur. The total cultivable area commanded will be approximately 2,569,400 acres, while the estimated cost will be 12 crores.

Agriculture

THE agriculture of the sub-continent with its wide range of physical and climatological conditions, varies considerably in character and scope. There is scarcely any cultivated crop of the temperate, sub-temperate or tropical zone which cannot be grown in some part of this vast region from the warm humid coastlands to the perennially temperate altitudes of its mountain ranges.

The total area of cultivable land in the sub-continent is about 354 million acres, which is exclusive of a forest area of approximately 68 million acres. The total gross cropped area sown annually is roughly 245 million acres. Of this vast area, 198 million acres are under cereal and pulse crops of all kinds which supply food and fodder for a human population of 400 million and an animal population of 380 million head of cattle, sheep and goats.

In the sub-continent's agriculture, the dominant climatological factor is the monsoon and, in most parts of the country, the total annual rainfall is precipitated between the months of June and October. The winter and early summer months are generally dry and high temperatures prevail in the months of March to June, prior to the break of the monsoon rains. Thus the agricultural season is naturally divided into two main sub-divisions the Kharif season of the monsoon and the Rabi season of the cold weather. Each of these seasons has its own distinctive crops. The greater part of the Indo-Gangetic plain and the northern tracts of the Peninsula are served by the main monsoon which falls between June and October. During these months the average rainfall for the whole of the sub-continent is about 47 inches, varying from 15 (or less) to 50 inches in the main cultivated tracts. Rainfall in the cold weather season between December and March is generally not more than 2 to 4 inches. The bulk of the rainfall in the south of India, including most of the Madras Province and a large part of the territories of the States of Hyderabad and Mysore, is received from the north-east monsoon and falls during the period October to February.

SOILS

Four main soil groups can be recognised in the sub-continent, viz., (1) the red soil derived from rocks of the Archaean system which characterizes Madras, Mysore and the south-east of Bombay and extend through the east of Hyderabad and the Central Provinces to Orissa, Chota Nagpur and the south of Bengal, (2) the black cotton or *regur* soils which overlie the Deccan tract and cover the greater part of Bombay, Berar and the western parts of the Central Provinces and Hyderabad with extensions into Central India and Bundelkand; the Madras *regur* soils though less typical are also important, (3) the great alluvial plains, agriculturally the most important tract in the sub-continent as well as the most extensive mainly the Indo-Gangetic plain embracing Sind, Northern Rajputana, most of the Punjab area, the plains of the United Provinces, most of Bihar and the Bengal area and half of Assam, and (4)

the laterite soils which form a belt round the Peninsula and extend through East Bengal into Assam and Burma.

The increasing demands on the land from a constantly rising population have called forth greater attention to the question of more effective land utilisation. A considerable amount of scientific work is thus being done on all these groups to a greater or lesser extent throughout the sub-continent, both as regards their classification and their crop-producing power. Soil studies have been given a new orientation and have received fresh stimulus due to the concept of the "soil-profile" or entire vertical cut of the soil being taken as the unit of study instead of the superficial layer supporting vegetation.

Survey.—A notable instance of such work is the recent classification of the black cotton soils of the Bombay Canals and the investigations regarding their suitability for sugar cane crop. The importance of soil survey and soil-mapping by Genetic Methods is being gradually recognised in different parts of the country. In the Bombay Province such survey and mapping has been in progress in several sugar factory estates of the Bombay-Deccan since 1910 on a contract basis. By the end of March 1948, about 540,000 acres will have been surveyed and mapped showing soil types and other fertility factors will be completed, on the basis of which varietal, manurial and irrigation technique for maximising sugar production on economic limits will be worked out. A scheme for land utilisation survey for crop-planning of the Province as a part of Soil Conservation Research has been proposed for the maximum exploitation of the country's resources for making the Province self-supporting in respect of food, fodder and clothing.

At the Indian Agricultural Institute, Delhi, the collection of data on soil survey available in the various Provinces and States has now been completed after three years of work and will be shortly published. The important question of soil conservation and development is receiving greater attention and considerable work on both the aspects has been taken in hand, particularly in the Punjab area and in Bombay. The erosion survey carried over 34,000 acres in the scarcity areas of the Bombay Province has revealed that nearly 70 per cent. of the land has already been eroded.

Desert Soils.—In addition to the four main groups of Indian soils mentioned above, the desert soils of the sub-continent occupy a large tract in eastern Sind extending over the whole length of that Province, along the edge of the Indus alluvium, Rajputana and the south Punjab area of which the Thar—Rajputana desert—alone occupies an area of 40,000 square miles. Alkali soils also form an important group of Indian soils which are known as *reh* or *usar* in the United Provinces, *kalar* in Sind, *rakkar* and *thur* in the Punjab and *chopan* or *kari* in Bombay Province. Such soils are characterized by a high degree of impermeability and "stickiness" together with high alkalinity and frequent

presence of large excess of free salts. They are usually poor in nitrogen and humus and unsuitable for crop growing without previous reclamation. A considerable amount of working of the reclamation of these soils has already been done in the Punjab area, Sind and Bombay which shows the possibility of bringing these unproductive lands back to cultivation. Forest soils occupy a large part of the sub-continent. Investigations on the nature of soil profiles of the Chaulatja Hill in U.P. and of the Kulu Forest in the Punjab area indicate that these soils belong to the Brown-Earth Podsol groups.

AGRICULTURAL EQUIPMENT

In the sub-continent farming is carried on with the minimum of capital and there is practically no outlay on buildings, fencing and agricultural machinery. The cultivators are for the most part illiterate and agricultural indebtedness is high and rates of interest on loans are heavy. During the past twenty years, much progress has been made by the co-operative credit movement in many provinces. In recent years, it was found necessary to supplement co-operative credit by the development of non-credit activities through multi-purpose societies and by organisation of purchase and sale societies, better farming societies, etc. Such societies have proved of great value to the cultivators and in combination with measures for debt redemption, etc., will contribute largely to improvement in the economic condition of the agriculturists. (See article on 'The Co-operative Movement'.)

Livestock.—Practically all cultivation in the sub-continent is done by bullocks and the efficiency and capacity of these in different districts varies considerably. The best types in common use are capable of handling what would be considered as light single-horse implements in Europe. Bullock power is also used for raising water from wells for field irrigation, for driving the chaff-cutter and the sugar-cane crusher and for treading out the grain in the threshing yard. In general, the Indian cultivator cares well for his draught bullocks which, in most cases, constitute the most important part of his moveable property.

Implements.—In general, cultivating implements are few and simple and remarkably well suited for the tillage operations for which they have been evolved. The ploughs are usually of wood, tipped with an iron or steel point, and stir rather than invert the soil. Iron ploughs are also extensively used in some districts. A heavy wooden beam is commonly employed to serve the combined purposes of roller, clod-crusher and soil-compactor. In the black cotton soil areas, the *bakhar*, a simple type of broad-bladed harrow, is in general use. In many Provinces, seed drills or seed tubes are utilised for drilling the crops in rows to facilitate inter-cultivation. In less advanced tracts, the seed is merely broadcast and ploughed into the soil. Practically no harvesting machinery is in use, the crops being cut or gathered by hand and threshed—in the case of grain crops—under the feet of bullocks. Cereal crops are winnowed by the agency of the wind although cheap mechanical winnowing machines, designed by agricultural engineers, are receiving attention from the more advanced cultivators.

With reference to the introduction of improved agricultural implements, this work is now being largely done by private business and agencies which are extending rapidly in the rural areas. Work on mechanical cultivation is still largely in an experimental stage though tractor ploughing has proved very effective in the eradication of deep-rooted weeds in the United Provinces, Bombay and certain States. One notable development of recent years in connection with agricultural implements is the large extent to which improved types are now being manufactured and sold by village craftsmen.

Land Development.—Considerable attention is paid in many areas of the country notably in Bombay and the Punjab area to land development measures designed to check erosion from torrential and excessive rainfall and to the preservation of soil and moisture, which are essential for the successful growing of crops. In Bombay a Land Development Section of the Agricultural Department was formed in the year 1943-44 and this has now been expanded into a separate Land Improvement Department on a permanent footing under a strong and expert staff. This Department is undertaking large scale projects of Land Improvements which include bunding or terracing of the cultivated lands and trenching and afforestation of uncultivable lands lying in the upper catchments or water-sheds—all on contour alignments. This provides labour for the scarcity or famine areas and will help to protect them from famine or scarcity in the future. The total acreage so far improved and protected in the Province is over six (6) lakhs of acres.

This Department has also a Dry Farming Section which attends to the biological part of soil conservation work and also the maintenance of the bunds or terraces. Dry Farming methods are introduced in all such areas which are improved by bunding. Experience gained during the last three years has demonstrated to the cultivators that terracing and dry farming give considerably increased yields both of grain and fodder. These beneficial effects tend to increase with time.

The original Bombay Land Improvement Schemes Act has now been considerably amended in the light of experience gained and is applied to several water-sheds.

CULTIVATION AND TILLAGE

The improvement of the ordinary cultivation and tillage methods in common use in the sub-continent offers a vast field for increasing the yields of field crops and, consequently, the profits of the agriculturists. In many parts cultivation is good but, particularly in the non-irrigated tracts and in areas liable to failure of rainfall, there is much room for improvement. The research work done on dry farming methods conducted under the auspices of the Indian Council of Agricultural Research points to the great benefits accruing from thorough cultivation including occasional ploughing and manuring, repeated harrowings and inter-culturings, wider spacing and lower seed rates.

The main object of tillage methods for *rabi*, i.e., for cold weather crops, is the conservation of soil moisture and the preparation of a good

seed-bed to ensure germination of seeds. To achieve these objects, repeated harrowings are given which produce good surface mulch over a moist sub-soil. The practice of drilling the crops with wider spacings permits inter-cultivation of the crops by bullock-implements and the use of low seed rates reduces the competition for moisture. For *kharif*, i.e., monsoon crops, the preliminary cultivation of the fields is less intensive. Dry farming researches so far done in the sub-continent deal mostly with cereal crops which are mostly erosion-permitting; and erosion-resisting crops like legumes have not been tried. Recently, these legumes, such as, groundnut, Matki (*Phaseolus aconitifolius*) and Hulga (*Dolichos biflorus*), have been found to be very successful in controlling erosion and run-off and in increasing crop yields when grown in strips on contours below the erosion-permitting crops. This technique, known as contour strip cropping, has now been taken up for detailed study in the Bombay Province.

Two economic factors which tend to keep down the standard of cultivation in many Provinces are the fragmentation and sub-division of holdings, resulting from Indian laws of inheritance, and certain systems of land tenure whereby the cultivator, as a tenant, has no interest in permanent improvement of his holding. In addition, the agriculturists rarely live on their lands but congregate in villages for mutual protection. Efforts are now being made in many Provinces to eliminate these factors, which contribute to a low standard of cultivation.

IRRIGATION

The chief characteristics of Indian rainfall are its unequal distribution throughout the country, seasonal irregularity of precipitation and liability to failure or partial deficiency in many tracts. The average annual rainfall for the whole country is about 45 inches and there is little variation from this average from year to year. But, within individual tracts, remarkably wide variations in total annual rainfall are found. At many recording stations, annual rainfall of less than half the average precipitation are not uncommon, and in cases of extreme drought, less than one quarter of average rainfall has been recorded in precarious tracts. Such tracts include practically the whole of the Punjab area and North-West Frontier Province, the United Provinces except the submontane regions, Sind, a large portion of Bihar, most of Madras and the Bombay Province, omitting the coastal belts, and portions of the Central Provinces. The canal system of the sub-continent is by far the largest in the world. Of the total cultivated area of 245 million acres, about 57 million acres are irrigated annually from one source or another. Of this huge area, 30 million acres are irrigated by canals, 14 million acres by wells and 13 million acres from tanks and other sources. Protective irrigation works have made agriculture stable instead of precarious in many districts. (For details see article on Irrigation).

About one-quarter of the total irrigation of the country is got from lifting water from wells ranging in depth from a few feet to over fifty feet. Their numbers have greatly increased in recent years largely through Government advances for their construction. The recurring cost of this form of irrigation has, however,

greatly increased owing to the high price of draught cattle and the increasing cost of their maintenance.

All agricultural departments are now giving increased attention to the better utilisation of underground water-supplies, existing wells being improved by boring and tube wells of large capacity installed and equipped with pumping machinery. In scarcity areas the large scale bunding operations undertaken by the Bombay Department of Agriculture will lead to the increase in the water-supply of wells. Efficient types of water lifts are rapidly replacing the old-fashioned *mholas*.

Tank irrigation is common in Central and Southern India. Large quantities of rain water are stored in lakes (or tanks) during the rainy seasons and distributed during the drier seasons of the year. Often the indirect effect of the tank in maintaining the sub-soil water level is as important as the direct irrigation.

Construction of temporary Bandharas across streams and small rivers after heavy monsoon period is over is also common in parts of Bombay and Madras Provinces for irrigation during the drier *rabi* period. The Government of Bombay has recently opened a separate Department for increasing such minor irrigation works throughout the Province.

Manures and Manuring.—The great bulk of Indian soils are deficient in organic matter. In other agricultural countries of the world, this want is usually met by the return of farmyard manure to the land or by the use of composts made from crop residues and similar waste organic materials. In India and Pakistan, however, cattle dung is largely utilised for village fuel but the practice of composting is now being rapidly developed in many areas. The cultivation of green manure crops is making headway, especially in the irrigated tracts, and many Provincial Governments allow concessions to encourage their extension. The use of certain oil-cakes, especially groundnut and castor cake, is on the increase and this method of manuring is now common with many irrigated crops. With regard to artificial fertilisers, nitrogenous organic manures, e.g., ammonium sulphate and nitrate of soda, are being extended in use through the efforts of departmental and private agencies and the question of the manufacture of such manures is now receiving close attention of the Government of India and Provincial and State administrations. A factory for the manufacture of ammonium sulphate in India has been established at Sindri in Bihar.

RICE

Rice is the most extensively grown crop in the sub-continent, and on an average, occupies about 28% of the total cultivated area. It preponderates in the wetter parts of the country viz., East and West Bengal, Bihar and Orissa, and Madras. The area fluctuates slightly around 72 million acres and the yield is about 27 million tons. In 1941-42, total area under rice including Indian States was 73 million acres with a total yield of approximately 25 million tons. The crop requires for its proper maturing a moist climate with well assured rainfall. The cultivated varieties are numerous differing greatly in quality and in suitability for various conditions of soil and climate.

Rice is either broadcast, drilled or transplanted. Broadcast rice is grown generally on high lands of the paddy areas where moisture is less, and the crop is sown in the beginning of the monsoon with the help of the rain-water. Sprouted seed is also sown broadcast in standing water after the onset of the monsoons, particularly in the salt-land paddy areas.

For transplanted rice the seedlings are raised in the nursery generally located in a high lying portion of the field and the nursery is rubbed or burnt over with cowdung or brush wood and grass. The seedlings get ready for transplanting within 4-5 weeks after sowing. The soil is generally prepared after the arrival of the monsoon and is worked into a puddle before the seedlings are transplanted. The seedlings are planted either singly or in small bunches containing from 4 to 6 plants each and are simply pushed into the mud at distances of 6 to 9 inches apart. The rice-fields are kept more or less under water until the crop shows signs of ripening. The area under improved varieties of rice distributed by the agricultural departments is now over 4 million acres. As a result of various schemes for the intensification of research on rice in all the principal rice-growing provinces financed by the Indian Council of Agricultural Research improved varieties to suit different areas have been evolved and are being distributed now.

The sub-continent consumes more rice than it produces, the balance in the past having been provided almost entirely by Burma. Imports in 1941-42 were 986,000 tons, mainly from Burma, Siam and French Indo-China.

WHEAT

Wheat is grown widely throughout Northern India as a winter crop, the United Provinces and East and West Punjab supplying about two-thirds of the total area, and nearly three-quarters of the total output in the sub-continent. This crop occupies, on an average, about 10 per cent. of the total cultivated area in the country. The majority of the varieties grown belong to the species *Triticum vulgare*. Bombay mostly grows durum wheats in which a number of improved strains are evolved and are spreading rapidly. A new improved wheat, called Niphad-4, having the blood to durum, unigare and dicoccum wheat species has been recently evolved with exceedingly good baking quality. Indian wheats are generally white, red and amber coloured and are mostly classed as soft from a commercial point of view. Most of the Indian wheats are soft weak wheats but there are some well-known Macaroni wheats amongst them. The largest wheat acreage of recent years was that of 1933-34, namely, 36 million acres but the yield did not come up to the record harvest of 1939-40 which exceeded 104 million tons. Recent crops have averaged about 9 million tons per annum which is only slightly, if anything, above internal requirements. With the development of irrigation from the Lloyd Barrage Canal in Sind and in the newer Punjab Canal Colonies a further increase in wheat production is certain. The crops are generally grown after a summer fallow and except in irrigated tracts, depends largely on the conservation of the soil moisture from the previous monsoon. On irrigated land 2 to 4 waterings are generally given. The crop is

generally harvested in February to April and the threshing and winnowing go on up till the end of May. The total area under improved varieties of wheat is now over 8 million acres. The Indian Council of Agricultural Research has appointed two Standing Committees to advise on problems connected with rice and wheat. The rust epidemic causes great damage to the wheat crop and a comprehensive scheme to check this menace is being financed by the Government of India.

MILLETS

These constitute one of the most important groups of crops in the country, supplying food for the poorer classes and fodder for the cattle. The varieties vary greatly in quality, height and suitability to various climatic and soil conditions. Perhaps the two best known varieties are Jowar (*Sorghum vulgare*) the great millet, and Bajra the Bulrush millet (*Pennisetum typhoides*) which, between them, occupy about 60 million acres annually.

In 1941-42, the total area under jowar and bajra in the sub-continent was 36 million acres excluding the States. Generally speaking the jowars require better land than the bajras and the distribution of the two crops follows the quality of the soil. Both the crops are generally sown in the beginning of the monsoon and so they require to be thoroughly weeded. It is often grown mixed with the several pulses especially Arhar (*Cajanus cajan*—pigeon pea) and other crops, and is commonly rotated with cotton. The subsidiary crops are harvested as they ripen either before the millet is harvested or afterwards. In some provinces like Bombay rahi juar is also an important crop.

Pulses.—Pulses are commonly grown throughout the sub-continent in great variety and form the backbone of agriculture, since even the present moderate degree of soil fertility could not be maintained without leguminous rotations. They are a primary necessity in the food of a vegetarian population. The yields on the whole are fairly good, mixed cropping is common. The principal pulses are Arhar (*Cajanus cajan*), gram (*Cicer arietinum*), various species of *Phaseolus* and *Pisum*. The Indian Council of Agricultural Research is financing co-ordinated schemes with the object of evolving high-yielding disease-free and draught-resistant strains of millet and pulses. These schemes are in operation in various provinces and States.

COTTON

Cotton is one of the most important commercial crops in the sub-continent. The average area under cotton in the quinquennium ending 1938-39 was 24.6 million acres and the average yield 5.5 million bales of 400 lbs. each. During the five-year period ending 1944-45 the average annual acreage and yield decreased to about 20.4 million acres and 5.2 million bales respectively. In 1945-46 the estimated area and yield were 14.8 million acres and 3.4 million bales respectively. The ascertained area under improved varieties of cotton in 1945-46 was about 8.6 million acres. The consumption of Indian cotton in mills in India amounted to 3,871,000 bales in 1945-46. The principal export is of short staple cotton below 7/8" in

staple but there is also in normal years an export of medium and long staple Indian cotton, of staple length 7/8" to 1-1/16", such as Punjab-American.

There is no Indian cotton belt; Bombay Province, the Punjab area, the Central Provinces and Berar, Madras Province, Sind and United Provinces and the States of Hyderabad and Baroda, all have important cotton tracts producing distinct types. Sowing and harvesting seasons are equally diverse, the former extending from May to December in different parts of the country and the latter from October to May and June.

Yields very greatly; in the best irrigated tracts the normal yield is about 200 lbs. of ginned cotton per acre, and yields much above this have been recorded, whilst in the poorest unirrigated tracts 60 lbs. per acre is a good crop. Of recent years, as the result of the work of the Agricultural Departments and the Indian Central Cotton Committee, the quality and yield of staple cottons have improved and also the yield and cleanliness of the produce from the short staple tracts.

The Cotton Transport Act, the Cotton Ginning and Pressing Factories Act, the Bombay Cotton Markets Act (now the Bombay Agricultural Produce Markets Act), the Central Provinces Cotton Markets Act, the Madras (Commercial Crops) Markets Act and the Punjab Agricultural Produce Markets Act have all been passed at the instance of the Committee and are doing much to check adulteration and promote better marketing. In certain provinces, legislation has been enacted, or is under consideration, with the aim of preventing the growing of very inferior varieties and of stopping certain malpractices which affect the quality and reputation of Indian cotton. Agricultural Departments have continued their campaign of cotton improvement apart from improvements in methods of cultivation.

SUGARCANE AND SUGAR

The Indian sub-continent which was, only a decade before, a large importer of sugar is now one of the most important sugarcane growing and sugar producing countries in the world. The area under sugarcane cultivation in 1946-47 was estimated to be 4,108,000 acres as against 4,004,000 acres in 1945-46 and 3,435,000 acres in 1932-33. The crop is mostly grown in the United Provinces, Bihar and Bombay Presidency; more than half the area being in the United Provinces. The seedling canes of high quality, mainly the production of Imperial Sugarcane Breeding Station, Coimbatore have now replaced the indigenous hard, thin canes. The total areas under improved varieties of cane in 1945-46 and 1944-45 were estimated to be 3,377,255 acres and 3,603,562 acres representing approximately 81.35 and 83.71 per cent. respectively of the total area.

With a view to improving and developing sugarcane in India the Indian Central Sugarcane Committee has sanctioned a sum of Rs. 53.75 lakhs under the five year development scheme submitted by the Government of Assam, Bihar, Bombay, the Central Provinces, Madras, Orissa and the United Provinces. An advance of Rs. 1,50,000 has also been promised to East Punjab. A high power sub-committee

has also been formed to help and guide the Indian Central Sugarcane Committee in all matters of vital importance to the sugar industry and to ensure that research schemes are efficiently and expeditiously implemented.

OILSEEDS

The crops classified under the heading are chiefly groundnuts, linseed, sesamum and the cruciferous oilseeds (rape, mustard, etc.). Although oilseeds are subject to great fluctuation in price and the crops themselves are more or less precarious by nature, they cover an immense area. The Indian Council of Agricultural Research has been financing the co-ordination schemes on breeding, control of pests and diseases and storage in different Provinces and States. High-yielding strains have been evolved under these schemes and these are being popularized among the cultivators. Control measures for various diseases and pests embracing all oil seeds are recommended under the co-ordinated schemes. The work relating to oil seeds has now been taken over by the newly created Indian Central Oilseeds Committee.

The sub-continent has the largest area under groundnuts in the world. Madras ranks first, claiming more than 60 per cent. of the acreage and production, and is followed by Bombay and Hyderabad. The area under this crop in 1941-42 was 7 million acres. In that year the yield was approximately 3 million tons.

Linseed requires a deep and moist soil and is grown chiefly in the Central Provinces, Bihar and United Provinces. The crop is grown for seed and not for fibre and therefore, has developed a shorter and branching habit of growth. The yield varies from 400 to 500 lbs. per acre. It is grown chiefly for export. Since the outbreak of the Second World War, the area under this crop has fallen considerably owing to the stoppage of exports. The area under linseed was 3,348,000 acres with a yield of 361,000 tons in 1941-42.

Sesamum (Gingelly) is grown all over the sub-continent. In some places it is grown as a monsoon crop and in others as a winter crop. In 1941-42, it occupied an area of 4,145,000 acres with a yield of 414,000 tons.

The Cruciferous Oilseeds form an important group of crops in the north of the sub-continent where they grow freely and attain a fair state of development. The area under rape and mustard, including an estimated figure for the area grown mixed with other crop is about 54 to 7 million acres annually. Production in 1941-42 was 1,034,000 tons from an acreage of 6,204,000 acres. A large portion of the crop is crushed locally for domestic consumption.

JUTE

Jute is one of the most important cash crops. The fibre is obtained from two species of annual plants called *Corchorus capularis* and *Corchorus Olitorius*.

Jute is grown in the alluvial soils of East Bengal (Pakistan), West Bengal, Bihar, Assam and Orissa, East Bengal contributing about 96 per cent. of the total acreage. In 1947-48 the acreage in India (West Bengal, Bihar, Assam

and Orissa) was 0.65 million acres and in Pakistan (East Bengal) 2 million acres, the output being 17 lakhs and 68 lakhs bales (one bale = 400 lb.) respectively for India and Pakistan. It is a rainy season of *kharif* crop and is sown broadcast during February to May on well prepared seedbeds. Two to three inches of rainfall during sowing and alternate periods of sunshine and moderate rainfall (about one or two inches every week) thereafter, seems ideal for a good growth of the crop. It responds well to weeding and thinning processes which are usually given 2 or 3 times during the growing season.

The plants often grow to a height of 12 feet or more. Four to five months after sowing when they are in flower the plants are cut close to the ground. Cut plants are tied up into bundles and steeped under water for retting. In 12 to 25 days, the retting is complete; the fibre is then carefully separated out from the stalks, washed and dried. It is then ready for various commercial uses. The output of dry fibre of jute generally varies from 12 to 25 mds. with an average of 15 md. per acre, depending upon soil fertility and other factors.

Quality in jute is judged by its strength, fineness, colour, lustre, length and uniformity. The types of goods ordinarily manufactured from jute fibre in India are hessians, sackings, canvas and tarpaulins; certain 'specialties' for example, rugs and carpets, linoleum hessians, jute blankets, etc., are also made on a small scale. Since the commencement of the Second World War, however, jute has been put to many new lines of manufacture in India, e.g., sand bags, union fabrics (jute-cotton), tents, hood-cloth, netting, cords, etc.

India and Pakistan together practically hold a monopoly of production of raw jute. Attempts have been made and are still being made in different parts of the world to grow jute but not with any degree of success.

Compulsory restriction of jute acreage in the Bengal area came into force in 1941. Total areas under the crop in India and Pakistan together during the years 1944, 1945 and 1946 were 2,103,955, 2,421,670 and 1,889,010 respectively, and the corresponding yields were 6,203,205, 7,991,070 and 5,550,465 bales respectively. The average area and the yield of the crop for a period of ten years ending in 1940 was 2,914,000 acres and 8,454,000 bales respectively.

The annual world consumption of jute during the period from 1933-1934 to 1944-1945 varied from 77 to 126 lakhs of bales of 400 lbs. each, the average being about 98 lakhs of bales. The jute trade of 1946-47 was restricted mainly on account of the short crop of that year.

TOBACCO

Tobacco is grown here and there all over the country chiefly, however, in the Bengal area, Bihar, Bombay, and Madras. Of the two varieties cultivated *Nicotiana Tabacum* is by far the more common. Maximum crops are obtained on deep and moist alluvium soils and a high standard of cultivation including liberal manuring is necessary. The seed is germinated in seed beds and the young plants are transplanted when a few inches high, great care being taken to

shield them from the sun till they are well established. The crop is very carefully weeded and hoed. It is topped after attaining a height of say, 2 ft., and all suckers are removed. The crop ripens from February onwards and is cut just before the leaves become brittle. The greater part of the tobacco grown in the sub-continent is intended for *Hookah* smoking and is coarse and heavy in flavour. Lighter kinds are also produced for cigar and cigarette manufacture. Of recent years there have been important developments in the production, in commercial quantities of better quality cigarette tobacco both in Madras and in Bihar. The area under tobacco in the sub-continent in 1944-45 was 10,89,000 acres as against 981,000 acres in 1943-44. The total yield of dried leaf was 412,000 tons in 1944-45 as against 363,000 tons in the preceding year. Bombay is known for the production of a good quality of bidi tobacco.

LIVE-STOCK CENSUS

The report on the 5th quinquennial Census of live-stock in the sub-continent, taken in January 1940, shows that these were then excluding United Provinces, Bihar and Orissa, 110 million heads of bovine cattle, made up roughly of about 87 million heads of oxen and 22 million heads of buffaloes.

For draught purposes mainly cattle are used everywhere though male buffaloes are important as draught animals in the rice tracts and damper parts of the country. For dairy purposes, the buffalo is important, the milk yield being high and the percentage of butter fat considerably above that in cow's milk. The best known breeds are the Murrah buffaloes of the Punjab area, the Jafferabadi buffaloes of Kathiawar, and the Surti and Pandharpuri buffaloes of the Bombay Province. The cattle and buffalo population in the sub-continent is abnormally high amounting to over 60 per cent. of the human population. The spread of cultivation has diminished the grazing grounds, insufficient fodder crops are raised and many of the cattle are small, ill-fed and inefficient. Nevertheless the best Indian breeds have many merits. Of the draught types, the best known breeds are the Hissar (Punjab), Hansi (Punjab), Bhaganari (Baluchistan), Nellore (Madras), Amrit Mahal (Mysore), Kankrej (Gujarat), Kangayam (Madras), Kherigarh (U.P.), Malvi (C.I.), Khillar (Deccan), Nimar (East Khandesh), and Dangli (Konkan). The Dangli and Nimur breeds of the Bombay Province have the potentialities to be developed into dual purpose breeds. The Government of Bombay have established a Dangli Cattle Breeding Farm at Igatpuri (district Nasik) for improving the breed in that direction. Amongst the best milking breeds are: the Sahiwal (Punjab), the Gir (Kathiawar), and Scindi (Sind). Of the dual-purpose (i.e. draught and milk combined) the best known breeds are Hissar (Punjab), the Hariana (Punjab and U.P.), the Tharparkar (Sind), the Kankrej (Gujarat), and the Gir (Kathiawar).

On the Government cattle-breeding farms pedigree herds are being built up and from these selected bulls are issued, preferences being given to special breeding areas, to villages which undertake to exclude 'scrub' bulls and where serious efforts to maintain a good strain of cow are made. Once established

such breeding areas rapidly produce a supply of superior bulls for general distribution and in this way the valuable bulls from Government herds are used to advantage. The premium bull system is also working well in some tracts.

IMPROVING QUALITY

The sub-continent possesses some very fine breeds of cattle, each breed being peculiarly suited to the area to which it is indigenous. To mention some, there is the heavy fast Kankrej breed in Gujarat, admirably suited to the sandy deep rutted roads found in this part. Then we have the Dangli or Kala Kheri born and bred in the hilly, heavy rainfall area of the Western Ghats. Rain and water logged conditions do not affect this breed; indeed, the more the rain, the better it thrives. On the plateau of the Central Deccan, we have the Khillar, a light fast draught animal which thrives on very meagre pastures and is essentially suited to the hard stony in country which it is reared.

A good deal has been done for the improvement of cattle. The various Provinces have farms on which pedigree bulls are bred and reared. These are placed out in suitable villages on a premium system. In the Province of Bombay, Herd Registers are maintained for 8 of the breeds of the Province, shows are held annually so that progress is noticed in those areas in which such work has been undertaken. In addition, the Bombay Live-stock Improvement Act of 1933, known as the "Castration Act" which is intended to prevent promiscuous breeding by undesirable male stock in the villages has now been applied to 213 villages in the Province.

It has been estimated that the number of sheep in the sub-continent is in the neighbourhood of 44 crores and that the total quantity of wool produced is 84 crores pounds annually. The production of wool per sheep varies greatly in different parts of the sub-continent. In the North-West Frontier Province, Baluchistan, Sind, the Punjab (E. and W.), United Provinces, Rajputana and Western India States, the annual production per sheep is estimated at between 3.1 lbs. and 4 lbs., while in the rest of the Provinces it does not exceed 1 lb. The average for the whole of the sub-continent is in neighbourhood of 1.9 lb. per sheep per year. This would indicate the vast scope for increasing wool production.

The improvement of finer qualities of wool has been engaging the attention of the Indian Council of Agricultural Research since 1933, and a systematic breeding of the five principal Indian breeds of sheep was undertaken in the Punjab area (Hissar), Madras (Hosur) and Bombay (Poona), and promising results achieved.

The breeding programme of the research stations is based on the evaluation of wool quality by the following standard methods of estimation of the different attributes by the wool fibre. The pedigreed stock bred at these stations is being spread in the rural areas under the Post-War Reconstruction programme undertaken by the different provinces.

DAIRYING

India and Pakistan are still far behind other countries in the matter of dairy industry, although many of the Provincial Governments have now been taking keen interest in its development. The main difficulty is the low milk productivity of the Indian dairy animal, which has to be improved by systematic and scientific methods of breeding, feeding and management. Factors such as the climatic conditions and the vastness of the country have, no doubt, been obstacles but, unless the individual dairy animal is improved and arrangements made to dispose of the milk economically, it would not be possible to put the dairy industry on sound footing.

Most of the provinces have now appointed special Dairy Development Officers for dealing with the problems effectively and, in the Province of Bombay, Government have been considering plans to improve dairying on co-operative lines as well as through private enterprise. For this the Province has been divided into zones such as: (i) the city areas, that is the areas within 30 to 40 miles radius of each town where milk will be produced on co-operative lines and supplied to cities, (ii) concentrated cattle breeding and milk producing areas where there are natural facilities for raising the dairy stock economically and where milk produced can be converted into products through co-operative creameries, and (iii) the remaining areas where demands of milk would be met by producing milk locally.

If this is done it would be possible to breed more and better dairy animals in the villages and to supply milk to towns more efficiently and at cheaper rates.

The different Agricultural Colleges have been imparting instruction in Dairy Husbandry. They have been in many instances carrying out research in Dairy Science, although much of this work is being done at the Indian Dairy Research Institute at Bangalore. This Institute, in addition to research work, also trains students for Indian Dairy Diploma Course and a post-graduate course in Animal Husbandry and Dairying.

There is not a big market in the sub-continent for western dairy products; such as cream, butter, cheese, etc., although their demand is constantly growing. In the absence of more milk, however, and the small units of dairy farming, the Indian peasant manufactures small lots of 'Desi' butter, Dehi, Ghee, etc., purely as a cottage industry.

ANIMAL HUSBANDRY

Details of the steps taken and progress made in the control of disease and improvement of stock are given in a biennial review of animal husbandry in India.

The control of contagious diseases of live-stock is carried out by the Civil Veterinary Departments in the Provinces and major States. The staffs of these departments are, for the most part, recruited from among the graduates of the Veterinary Colleges of which there are seven, viz., one each at Lahore, Patna, Calcutta, Bombay, Mather (U.P.), Hyderabad (Deccan), and Madras. One more

college is proposed to be opened at Jabulpore. Many of the colleges have now been affiliated to Universities and impart training up to the graduate standard, as against licentiate training which they have imparted up till now. The chief research centre is the Indian Veterinary Research Institute at Mukteswar in the United Provinces and its branch at Izatnagar, near Bareilly. This institute is maintained by the Government of India and has recently been considerably expanded, the latest additions being a poultry research station and a nutrition institute and genetics section. A certain amount of research is also conducted at the Provincial Colleges.

In addition to research, the Imperial Veterinary Research Institute also manufactures large quantities of sera and vaccines for the use of the Provincial Departments in their fight against disease and until recently was the only manufacturing centre for these products. Serum institutes have, however, been opened in recent years at Madras and Bangalore, mainly for the manufacture of biological products for the use of the Madras and Mysore Civil Veterinary Departments respectively. Many Provinces are now opening their own vaccine and serum centres.

The chief diseases that the Civil Veterinary Departments have to deal with are glanders and surra in equines, and rinderpest, foot and mouth disease, hemorrhagic septicæmia, black quarter and anthrax in ruminants while tuberculosis, Johne's disease and contagious abortion are assuming greater importance than in the past. Glanders and surra are both scheduled diseases under the Glanders and Fray Act. Glanders is incurable but surra can now be successfully treated with Naganol. This disease

(surra) also affects camels, cattle and dogs and in recent years its importance as a bovine disease has been more widely recognised.

Treatment of Diseases—Of the diseases of ruminants mentioned, all, with the exception of foot and mouth disease, can now be controlled either by the inoculation of protective sera or by vaccination.

The successful manufacture of anthrax "spore" vaccine at Mukteswar is another advance of great importance in the fight against live-stock disease.

Indian poultry are also subject to several contagious diseases. The dreaded "Ranikhet" disease is fairly wide-spread and its ravages have seriously interfered with the poultry industry. A chick-passaged vaccine has now been developed at the Indian Veterinary Research Institute and trials conducted in the field have been very encouraging. Fowl pox and fowl cholera vaccines are available for the protection of poultry against those diseases.

The sub-continent is protected from foreign infection by the application of the Live-stock Importation Act at all ports at which the landing of animals is permitted.

In addition to their duties in connection with disease control, the Civil Veterinary Departments also conduct the treatment of animals in hospitals and dispensaries. The institutions are for the most part maintained by Local Boards with financial assistance from Government, the professional staff usually being provided by Government. In most Provinces, the Veterinary Dispensaries are now being taken over by Government.

AREA CULTIVATED AND UNCULTIVATED IN 1942-43 IN EACH PROVINCE

The Statistics given in the following pages are the latest available.

Provinces	Area according to survey	Deduct States	NET AREA	
			According to survey	According to village papers

Improvement of Agricultural Marketing

MARKETING SCHEME

IN view of the importance of agricultural marketing as an aid to the general economic recovery of the country, the Government of India decided to give effect to the recommendations made by the Royal Commission on Agriculture and generally endorsed by the Central Banking Enquiry Committee regarding marketing surveys. After consultation with Provincial Governments, it was decided that the first step should be the appointment of a highly qualified and experienced marketing expert with practical knowledge of agricultural marketing in other countries.

Directorate—In accordance with this decision, the office of the Agricultural Marketing Adviser to the Government of India (recently redesignated as Directorate of Marketing and Inspection) was constituted with effect from 1st January, 1935, at Delhi, with Mr. A. M. Levingstone as the first Agricultural Marketing Adviser. After more than six years of useful activities in India, he reverted in 1941 to the Ministry of Agriculture of His Majesty's Government in the United Kingdom. The present incumbent of the post is Dr. T. G. Shirname, B.Ag., Ph.D. (Wales), F.S.S.F.R. Econs. (Lond).

The name of the office has recently been changed into "Directorate of Marketing and Inspection" and it has now taken over all the functions of the Directorate of Inspection of the Ministry of Food.

The Agricultural Marketing Adviser to the Government of India is assisted by a Deputy and this post is at present held by Dr. B. C. Sen, D.Sc. The technical staff consists of an Agricultural Marketing Adviser, a Deputy Agricultural Marketing Adviser, a Director of Inspection, 3 Senior Marketing Officers, 3 Marketing Officers, 2 Assistant Directors of Inspection, 1 Supervising Officer (Grading Stations) and 15 Assistant Marketing Officers. In addition, the Agricultural Marketing Adviser is assisted, in the quality control inspection work for internal and for export trade under the Agricultural Produce (Grading and Marking) Act, 1937, by 2 Chief Inspectors and 20 Inspectors, apart from the large subordinate personnel engaged on quality control work.

With the help of suitable subsidies from the Indian Council of Agricultural Research, the Provincial Governments established similar organisations in their respective areas and have, in some cases, further added to their staffs to meet the growing demand for developmental work of a practical nature. Certain leading Indian States have also co-operated by appointing full-time officers in their States and over 200 States have nominated officers to deal with marketing questions. In Provinces and States which have no Senior Marketing Officers the Director of Agriculture supervises the work of the marketing section. The Central Marketing Staff are responsible for the survey work in a large number of States which do not have staffs of their own. They also have to advise and assist the local marketing staffs in carrying out their work.

"The Marketing Scheme was originally sanctioned for a period of five years and the organisation was given the twofold task of (i) carrying out marketing surveys and publishing reports describing in detail the present system of marketing of agricultural and animal husbandry products with recommendations regarding the lines of future improvement and (ii) drawing up suitable grade specifications after examining chemical, physical and other commercial characteristics of market samples of such commodities and testing their working under practical conditions.

All-India marketing survey reports, in respect of wheat, linseed, eggs, tobacco, grapes, coffee, potatoes, milk (second edition), groundnuts, rice, hides, sugar, citrus fruits markets and fairs, co-operative marketing, lac, skins, coconuts, gram, bananas, cashewnuts, barley, sheep and goats, fish, cattle, wool and hair, castor seed have been published while the reports on ghee and other milk products, rape seed, mustard and toria, stone and small fruits and the supplement to the wheat report which brings the data and information given in the report published in 1938 up-to-date are in the press. The report on some other commodities like maize and millets, sann hemp, sesamum and niger seed, meat, poultry, mangoes, pulses, fibres and chillies are in preparation.

Reports—A Handbook on the Quality of Indian Wool which is intended to serve as a guide to wool trade and persons interested in wool and a Preliminary Guide to Indian Fish, Fisheries and Methods of Fishing and Curing, have also been published.

During the year 1943, at the instance of the Government of India, rapid marketing surveys were also conducted in respect of (i) certain English vegetables (peas, beans, cabbage, cauliflower, tomatoes and carrots) and certain important pulses; (ii) bones and bonemeals; and (iii) India's requirements of agricultural implements and machinery and the relevant reports were submitted to Government. In 1944, the Directorate similarly carried out a rapid survey of milk production and distribution in Delhi Province in connection with a scheme for the supply of milk to Government servants in Delhi and New Delhi and submitted the report to Government. In 1945 a rapid survey on Cardamoms was carried out and the report thereon is at present in the press. A similar survey was carried out on Arecanuts in 1945-46 and the report is in the press.

Hitherto, the All-India marketing survey reports have dealt with the problem as it related to the entire undivided India. In fact, the earlier reports had included Burma as well. With the partition of the country all these reports have to be revised and brought up-to-date for the Dominion of India. To begin with it is proposed to revise forthwith the reports on rice, groundnuts and milk.

Surveys—Surveys are in progress in Provinces and States on several commodities such as

cotton and safflower seed; turmeric, pepper and ginger; animal fats and by-products, dried fruits and nuts, melons and water-melons, fruit and vegetable products, root vegetables, bulb and cole crops and honey and bees wax. The relevant marketing survey reports on the above commodities will be issued as soon as the investigation work is complete.

Arrangements have also been made to issue abridged editions of marketing survey reports in Hindustani for the use of the general public. The translation of abridged reports on milk, co-operative marketing and potatoes has been completed.

Storage and Transport—A report on cold storage and transport of perishable produce in Delhi Province was published in 1937. With a view to studying the commercial possibilities of cold storage transport of perishable products like fruits, etc., certain refrigerated transport trials were conducted during 1940-41 on two N.W.R. cold storage wagons. All-India survey work on cold storage was also carried out in part during that period. In view, however, of the recent transport difficulties and the consequent shortage of wagons, the experiment and survey on cold storage has had to be postponed for the present. A separate Directorate of Storage and Plant Protection has now been set up by the Ministry of Agriculture to take up immediately on more intensive scale work on ordinary and cold storage construction and refrigerated transport.

GRADING AND MARKING

In discussing steps which might be taken to improve the general level of quality, the Royal Commission thought that organised trade associations in India could give great assistance in applying effective pressure to secure improved quality from the producers. This view was fully borne out by the preliminary marketing surveys and two general lines of action were decided upon: first, the physical grading and packing of commodities such as fruits, eggs, etc., on the basis of statutory standards and, secondly, the standardisation of contract terms for staples such as cereals and oilseeds. The former involved legislation and the Agricultural Produce (Grading and Marking) Act, 1937, was passed in February 1937, for defining standards of quality and methods of marking in respect of prescribed grade designations applied to schedule products.

As a result of consultation with provincial governments and representative trade and manufacturing interests, further commodities were added to the schedule to the Act, which now includes fruits, vegetables, eggs, dairy produce, tobacco, coffee, hides and skins, fruit products, *atta*, oilseeds, vegetable oils (including hydrogenated oils and vegetable fats), cotton, rice, lac, wheat, sann hemp, sugar-cane, gur (jaggery), myrobalans and *bura*. The grading and marking rules in respect of most of these commodities have been duly prepared and notified. Tentative grade specifications and rules for several varieties of rice and fruits have also been drawn. Several States have adopted similar legislation and are applying the AGMARK to the commodities graded in their areas.

The development of trading on the basis of

the standard methods of grading is definitely "catching on". In the early stages experimental grading stations are operated on the basis of provisional standards; subsequently the process of grading and marking is done commercially on a voluntary basis by packers holding a Certificate of Authorisation issued by the Agricultural Marketing Adviser. The authorised packer may be the primary producer or co-operative society or an association of primary producers, village collectors and processors or the individual larger packer or manufacturer holding a key position in the process of distribution.

Standardized Grading—"By the close of the year 1946, the standardised grading and marking of the many commodities referred to above was being carried out commercially by as many as 513 packers. During 1946 alone, more than Rupees 12 crores worth of produce were sold under the Agmark as compared with about Rupees 7 crores in the previous year as per details below:—

Commodity	Value of quantity graded.	
	1945	1946
Ghee	4,76,37,001	5,65,85,078
Butter	40,62,768	40,46,780
Edible Oils ..	48,85,916	77,71,575
Hides	9,42,292	10,09,050
Eggs	17,41,335	7,96,113
Tobacco	33,08,801	4,08,95,966
Sugar-cane gur ..	49,011	66,988
<i>Bura</i>	—	—
Cotton	40,55,041	40,19,246
Sann Hemp ..	46,92,000	51,25,200
Fruits	2,14,765	2,18,506
Fruit Products ..	1,38,895	—
Total ..	7,31,28,271	12,03,34,802

It will incidentally be seen from the above statement that in the case of a majority of commodities the grading scheme has held its own satisfactorily in spite of the abnormal conditions like scarcity, transport, movement and control restrictions. Certain commodities like rice, *atta* and *bura* could not be graded during 1946. Fruit products are now not graded under the Agmark, as their quality has been standardised under the Fruit Product Control Order, 1946. The value of eggs graded declined. The number of ghee grading stations increased considerably in the United Provinces from 1944 onwards as a result of a decision of the Provincial Government to ban all exports of ghee out of the province except for a limited quantity of Agmark graded ghee for civilian consumption in deficit areas like Bengal and Bombay.

At present, the grading of ghee is most popular in the United provinces and Bihar among the Provinces and in the Kathiawar States like Porbandar, Junagadh, Nawanagar, Gwalior and Patiala. Recently, the Government of Madras who had so far banned the grading of ghee under the Agmark in the province have relaxed the ban and it is hoped that ere long the grading of this commodity would be extended to this Province.

Compulsory Grading—Sometime in 1944, the

United Province Government also fixed higher prices for Agmark graded mustard oil as against the ungraded oil. The grading output of this commodity, therefore, recorded a certain amount of increase but as such a premium for the graded commodity was not reflected in the price structure allowed to mustard oil at Calcutta with imports of the bulk of the oil from the United Provinces were directed, the increase in the graded output has not been quite sustained.

The Egg Grading and Marking Rules were further amended reducing the number of grades from six to four in order to facilitate rapid marketing. That the advantages of grading marketable produce are being appreciated all over the country has been recently exemplified by the introduction of a scheme of compulsory grading of eggs by the Mysore city municipality within its jurisdiction. An interesting experiment for marking the date of grading on the shell of graded eggs was initiated at Delhi and was attended with a fair amount of success. It has however been recognised that such a measure could be practised with advantage only at the stage where the graded eggs are sold out to the consumers. It has accordingly been decided only to persuade egg graders who import eggs for grading to adopt the principle as far as possible.

Fruit, Vegetables—Staples like rice and *atta* are not graded at present on account of their being subjected to rationing and controlled distribution. Towards the close of 1943 an experiment was initiated in Madras Province to grade rice according to *ad hoc* war quality specifications and to link up such grading with the activities of the local Civil Supplies Department. The scheme expanded considerably but had to be closed down towards the close of 1944 due to low arrivals in the market of good quality rice. The Department also decided recently to abandon the *atta* grading scheme as it was not considered to be of direct benefit to the producers. The view has generally been adopted that as far as possible the grading of commodities, the quality of which could not be verified by definite chemical tests, should not be allowed to expand on any considerable scale. An exception has, however, been made in regard to commodities like fruits and vegetables, sugar cane gur and *bura*, when graded by producers' organisations only. The task of assisting the formation of such organisations is also being pursued vigorously.

Special mention should be made here of the scheme for the grading and marking of sann hemp introduced towards the close of 1942. The scheme was drawn up as a result of complaints received from the Hemp Controller in the United Kingdom regarding the low quality of exports of hemp from India. The scheme follows the general lines of all other grading schemes under the Agmark in that grading is done by authorised packers holding certificates of authorisation issued by the Agricultural Marketing Adviser to the Government of India. The Government of India have, by a notification under the Sea Customs Act, prohibited the export of sann hemp not graded under the Agricultural Produce (Grading and Marking) Act, 1937. In order to ensure that grading is

done correctly and in accordance with the Act and the Rules, a special inspectorate staff consisting of one Chief Inspector and 8 Inspectors (including 3 Asstt. Marketing Officers temporarily diverted to work as Inspectors) has been appointed at stations at Shipur (Benares), Calcutta, Vizianagram and Bombay. The major portion of the cost of this staff is recovered from the trade by means of a charge of twelve annas per bale. The Vice-President of the London Hemp Association visited India towards the close of 1944 and discussed the scheme with the Agricultural Marketing Adviser and the Inspectorate staff.

As a result of these discussions and the decisions arrived at the various Conferences held with the trade, certain modifications have been made in the Sann Hemp Grading and Marking Rules, 1942 so as to bring about improvement in the quality of the exported hemp and to establish a proper and acceptable correlation between the grades represented by private trade marks and the corresponding grades under the Agmark of Sann Hemp exported out of India. The Department generally takes the advice of importers abroad and the exporters in the country before making any such modification in the scheme.

Tobacco Grading—In the beginning of 1944 a conference of tobacco interests convened at Guntur decided that the quality of exports of all types of tobacco from India should be controlled and that no tobacco should be exported on consignment account unless it conformed to Agmark specifications. Accordingly, early in 1945, the Central Government banned under S.19 of the Sea Customs Act, the export of flue-cured Virginia, sun-cured Virginia, sun-cured Natu and Mothari tobaccos to a foreign country other than the U.K., unless it was graded under the Tobacco Grading and Marking Rules, and certified as such by the Inspectors appointed for the purpose. They also sanctioned the posts of one Chief Inspector and 8 Inspectors to be stationed at Guntur and other centres for purposes of quality control.

Later, at a conference of the trade presided over by the Supply Member of the Government of India and attended by a representative of the Tobacco Leaf Section of the London Chamber of Commerce, it was decided to extend the scheme of restricted exports to the U.K. also, and accordingly the Government of India issued a notification withdrawing the exception allowed in the case of exports to the U.K. from the operation of their former Notification banning the export of ungraded tobacco. The result is that the four varieties of tobacco mentioned above cannot be exported to a foreign country unless they are graded according to Agmark specifications. The ban on the exports of tobacco unless graded under Agmark has further been extended to another three varieties, viz., Sun-cured Jati, Sun-cured Jutti and Sun-cured Jati Bishpath.

The Indian Central Tobacco Committee, who were placed in charge of all developmental and marketing schemes concerning tobacco, accordingly sanctioned an additional staff of 11 Senior Inspectors and 10 Inspectors for exercising quality control. The entire tobacco grading scheme is now being financed by the Committee from the funds placed at their disposal by the Government of India.

The Chief Inspector and all Inspectors, except two, are stationed at Guntur, which is an important virginia tobacco centre, and certain other places situated close to it. Two Inspectors are stationed at Cocanada and Trichinopoly the former exercising control over the exports from that port and the latter on the exports from the Southern Districts of the Madras Province.

In order to further tighten up control, two posts of Vigilance Inspectors have been created. The scheme has been in operation for more than two years and has brought about a definite improvement in the quality of exports which is evidenced by the general appreciation by foreign buyers in the United Kingdom and other countries. It is hoped that this scheme will not only lead to the expansion of India's external trade in tobacco, but also enhance the reputation of the country for delivering goods in the international markets exactly in accordance with standards of grades.

Early in 1944 a conference of fruit products manufacturers convened by the Central Agricultural Marketing Department decided in favour of legislative action for standardisation of minimum quality of fruit products manufactured in India and for the enforcement of higher standards of hygiene and sanitation in the factories. The decision was duly considered by the Government of India and towards the end of 1945 they promulgated the Fruit Products Control Order, 1945. According to the order no manufacturer could produce on or after 1st July, 1946 any kind of fruit or vegetable products in India without holding a licence granted on fulfilment of certain conditions with regard to hygiene, sanitation, quality, specifications, etc.

In order to ensure adequate control of quality and proper grading, several persons in the provinces and States were authorised by the Agricultural Marketing Adviser to inspect graded produce and grading centres. The co-operation of agricultural, veterinary and allied departments in all provinces was sought for in this connection and several of their officers were provided with the necessary authority to inspect grading stations and graded produce. Arrangements have also been made for controlling the quality of graded produce by systematically analysing samples collected by the inspecting staff both from the packers' premises as well as from the markets. Nearly 10,000 samples of ghee and quite a large number of edible oil samples were analysed at the Central Control Laboratory, Cawnpore, during the calendar year 1946. Samples of graded butter and gur are also periodically analysed there by two assistant chemists appointed for the purpose.

In the earlier stages, the analysis of atta samples was done by the Cerealist, Agricultural College, Lyaipur and to a limited extent by the Agricultural Chemist to the Government of the Central Provinces. In 1943 an Atta Analyst was appointed to assist the Cerealist at Lyaipur in this work. A Rice Analyst was also added to the headquarter staff and the entire analytical work on rice samples was made over to him. Since, however, these two commodities are now rationed and are not graded, no work in this connection is being done. For the purpose of

keeping a vigilant watch on the quality of Agmark eggs put in Delhi market, an Egg Grading Demonstrator was appointed as a result of which the quality standards further improved. But on account of scarcity of eggs and the imposition of controls by the local administration, grading of eggs could not be continued in Delhi and this useful activity had to be withheld. The work would be, however, resumed as soon as trade becomes free of controls.

The exercise of quality control by examination of samples at these laboratories naturally involves a certain amount of unavoidable expenditure. This is partly offset by the sale of AGMARK labels to authorised packers. It was, however, observed that the Agricultural Produce (Grading and Marking) Act, 1937, under which such recoveries were being made, did not permit the levy of any further charges than what the labels, etc., were costing to the Department. In order, therefore, that a portion, if not the whole, of the inspection cost could be recovered from the packers who were the chief beneficiaries from the grading scheme, the Act was amended in about the middle of 1943 so as to permit recoveries on labels for this purpose as well as for arranging any special publicity with regard to particular commodities. In the early stages, before the grading of a particular commodity has passed the experimental stage and proved its merit, it has not always been found possible to get the packers to agree to contribute in this way. Steps are being taken, however, to make quality control as far as possible self-supporting, particularly with regard to commodities mainly produced for export, e.g., sann hemp, or commodities like ghee, the grading of which has now become definitely established. With the same view the Edible Oils Grading and Marking Rules were recently amended so as to provide for an enhanced rate of charges on Agmark labels and to provide for the application of these labels to bigger containers like drums and railway tank wagons.

Ensuring Purity—Expansion in the grading of ghee and the increasing general demand for graded ghee has also committed the Department to ensure that proper arrangements are instituted or existing ones stiffened in order to provide for an adequate check on the quality of the graded products. Certain new measures have accordingly been instituted. Firstly, vigorous tests have been introduced for examining the purity of ghee and ensuring its freedom from adulteration. To detect unmistakably the commonest adulterant—vegetable fat—the Central Control Laboratory, Kanpur, where samples of ghee are analysed, has been equipped with Phytosteryl Acetate test apparatus and arrangements are under way to install this apparatus at the laboratories of the authorised packers. The policy of appointing Government Chemists at the laboratories of authorised packers so as to ensure freedom from possible influences, initiated in 1945 has been working satisfactorily in the United Provinces and Bihar. The scheme is likely to be extended to the Central Provinces and Madras shortly. At a conference of ghee packers held on the 21st April, 1945 these measures were generally agreed to and the conference further agreed to a proportionate increase in the charges

levied on the graded ghee so as to make the scheme self-supporting.

As a further measure of improving the existing quality control arrangements, it was also decided to divide the areas in which the ghee grading centres are located into zones, each zone being placed under the charge of an Inspector. For this purpose four posts of Inspectors have been sanctioned. The Inspectors exercise vigilant control on the quality of ghee in their respective areas by visiting the grading stations frequently and by collecting check samples of graded ghee from the premises of the packers and from the market, for examination. As a result of the various quality control measures the reputation of the purity of Agmark ghee is on the increase.

Owing to the fact that the Kathiawar States contributed a large proportion to the ghee graded in the country it was found necessary to establish a Subsidiary Control Laboratory in Kathiawar for doing the immediate work connected with the analysis of samples. The increasing popularity of Agmark products has brought to light ingenious efforts on the part of unscrupulous persons at illegally imitating and counterfeiting the Agmark labels and manipulating and adulterating the contents of graded products. This in its turn, has demonstrated the need for strengthening the quality control measures still further. In order to safeguard against the misuse of Agmark, proposals are under consideration for the enhancement of penalties provided for the violation of rules made under the Agricultural Produce (Grading and Marking) Act, 1937.

Standard Contract Terms—The Standard Contracts terms for wheat and linseed, were finally agreed to by the Grain and Oilseeds Conference, 1938, and similar terms for groundnuts were settled at an informal Conference held at Bombay in January 1939. A fairly satisfactory measure of agreement has been obtained regarding the adoption of the terms and while certain trading associations have started trading on this basis, unanimous support was not forthcoming, owing partly to the existence of an excessive number of small "futures" trading associations scattered all over the country and partly to the opposition of one or two important trading institutions and certain influential exporting and importing interests.

With a view to bringing about uniformity in the different contract terms for wheat and linseed (including the Standard Contract) adopted by the trade, an informal Conference of the representatives of 3 important trade associations of Bombay was convened in February 1941. Besides suggesting certain changes in the tolerances and limits of rejection for damaged, slightly damaged and shrivelled grains, the Conference made 2 important recommendations, viz., that (1) 25 tons should be adopted as an alternative to 500 maunds as the minimum unit of transaction, and (2) that the Cwt. should be adopted as an alternative to the maund as the unit of quotation. In the case of linseed, the Conference further suggested that the cleaning charge under "Refraction" should be lowered. These latter suggestions were circulated to the trade interests concerned and they have been accepted.

In the case of wheat, it has been decided to amend the Standard Contract for wheat as finally agreed to in 1938 and thereby implement the abovementioned recommendations.

The Standard Groundnut Contract was examined at the Bombay Conference, 1941, and several minor changes were suggested. These were afterwards circulated to the trade interests concerned. As regards Hand Picked Selected Groundnuts (kernels and nuts in shell), the Contract terms agreed to at a Conference held in 1940, were further revised and accepted by 2 leading trade associations of Bombay. Three leading exporters of groundnuts in Madras adopted the Standard Groundnut Contract from the beginning of 1942 and they have reported that the Contract terms have been readily accepted both by the sellers and purchasing agents and that they worked very well during the period of adoption. The question of enforcing the standard contract terms for groundnuts by legislation was examined at a conference of groundnut interests convened at Bombay in August 1944 under the joint auspices of the Central Agricultural Marketing Department and the Imperial Council of Agricultural Research. The conference agreed upon the various terms except in regard to drage and methods for estimating it, and recommended that the point be examined by the Oilseeds Committee of the Indian Council of Agricultural Research and till then the drage clause may be omitted. It was also felt that the trade should adopt the standard contract terms voluntarily, compulsion being introduced only if the trade fail to do so. The question of framing legislation to make the adoption of standard contract terms compulsory has been referred to Provincial Governments and is under their consideration at present. The question of introducing legislation for regulating produce exchanges is also under consideration.

Standard Containers—For most commodities the containers used in the sub-continent are very variable in size. Owing to their fragile nature, the contents are subject to appreciable damage which also varies in extent. To overcome these difficulties, trials on a commercial scale were carried out in Madras, Travancore, old undivided Bengal, old undivided Punjab, the North-West Frontier Province, Assam, Rampur State, United Provinces, etc., with boxes of standard patterns for use in transit of eggs and fruits. Careful records were kept of the results for comparing the standard and the ordinary containers.

In the Travancore experiment conducted during 1939 and 1940 covering about 300,000 eggs, the loss by damaged and broken eggs in the standard boxes was only 0.62 per cent. as compared with damage and loss through pilferage of 1.77 per cent. in the ordinary baskets. As a result of the experiments, almost the entire exports of eggs from the State to other markets like Madras were packed in the improved containers in 1941. This was facilitated by the grant of suitable concessions in freight rates by the railway companies. In the Bengal trials the total wastage in the standard boxes was 0.5 per cent. as compared with 2.5 per cent. in the case of baskets. The experiments conducted by the Rampur State revealed that in 3 out of 4 containers of eggs consigned to Nainital in

August 1941, the contents were absolutely undamaged, while in the case of the fourth, the damage was only about 1 per cent. Such reductions in the physical loss of produce are of small magnitude, but even a saving of 1 per cent. on this score alone would represent an economy of something like Rs. 5½ lakhs in the cost of distribution of the eggs put on the market. These experiments, however, received a set-back during 1942 owing to transport difficulties created by the War.

Legislation Regulating Markets—The draft model bill for the regulation of markets circulated by the Agricultural Marketing Adviser in the year 1938 formed the basis for necessary legislation in Provinces and States. Agricultural Produce Markets Acts are now in force in the Punjab area, North-West Frontier Provinces, Sind, Madras, Bombay, Central Provinces, Mysore, Baroda, Gwalior and Hyderabad and the question is under consideration in other Provinces and States where no legislation already exists.

The Regulated Markets are, however, mostly in respect of particular commodities which are of local importance. For instance, in Amraoti, in the C.P. the number of regulated markets for cotton is significant. It rose from 36 in 1942 to 39 in 1945, and the number of other agricultural markets from 5 in 1942 to 7 in 1945. In Madras, the Madras Commercial Crops Markets Act, 1933 is in operation, and is applicable to cotton markets in Tirupur, Adoni and Nandyal, to groundnuts at Cuddalore, and to tobacco markets in Guntur district and Bezvada taluk. The most rapid expansion in the organisation of regulated markets has been in Bombay during the past few years. In Sind and old undivided Punjab, the regulated markets are in respect of cereals and pulses. Among the States, Hyderabad and Gwalior occupy premier places, the former having at present 28 regulated markets and the latter 36. It is, however, observed that due to abnormal conditions legislation relating to regulate markets is not making the desirable progress. It is, however, gratifying to note that the necessity for organising regulated markets has recently been stressed by the Central Food Advisory Council and attention of the Provinces and States has been drawn to the draft bill proposed by the Central Agricultural Marketing Department in 1938 in this connection.

A bill for the introduction of Regulated Markets in the Centrally Administered Areas is also at present under the consideration of the Government of India.

The attempts at regulating the markets were fittingly strengthened and supplemented by the passage on the 28th March 1939, by the Central Government of the Standards of Weight Act, 1939. The Act came into force with effect from the 1st July 1942 and the Standards of Weights Rules, 1942 have also been prepared. The Rules will be enforced as soon as sets of standard weights are ready for distribution to the Provincial and State Governments.

Broadcasting Market Quotations—The dissemination of reliable up-to-date and accurate market intelligence is an essential function of the marketing department. The solution of the

problems of food administration and price control would have been facilitated if a properly co-ordinated All-India Market News Service had been in existence from the beginning. Unfortunately, due mainly to lack of funds, the Central Agricultural Marketing Department had to rest content with a skeleton service of limited value. Similarly, except in the United Provinces, where a fairly comprehensive market intelligence service is being run under a special marketing staff, the arrangements in this behalf in the various Provinces and States are totally inadequate.

The Central Agricultural Marketing Department at present arranges for the broadcast of (1) the daily market rates of a number of commodities at Hapur market, (2) a weekly market report dealing with the fluctuations in prices of commodities like wheat, rice, oilseeds, pulses and several graded articles at various centres in India. During the year 1943, at the instance of the Food Department arrangements were made to broadcast daily the market rates for coarse grains at a number of selected centres all over India; but this broadcast was discontinued after a short time. The Department is also issuing a monthly review of prices and stocks relating to various commodities. Consequently on the establishment of the Directorate of Economics and Statistics under the Ministry of Agriculture this work has been transferred to that Directorate.

Publicity for Agmark—The necessity for publicity for any scheme of agricultural improvement should be obvious. Efforts are accordingly being made to keep the public informed of the activities of the Department through the media of newspapers, exhibitions of special posters at railway stations and other suitable public places, and by putting up demonstration stalls at the various agricultural and industrial exhibitions in the Provinces and States. In these exhibitions, public demonstrations are given of the technique of grading by exhibiting illustrative maps, diagrams and charts relating to the production, supplies and prices and by sale of the actual graded commodities. A brief pamphlet on the "Story of Agmark" has also been prepared for distribution to the public. In the recent period, publicity of the above sort has however been modest as it was not considered desirable to increase the demand for Agmark products when it might not be possible to meet it due to scarcity conditions. At the same time it was found necessary to arrange for special publicity if any section of the trade in a particular commodity wanted it and was prepared to contribute towards the cost. The Agricultural Produce (Grading and Marking) Act, 1937, has therefore been suitably amended to recover such cost. In this connection the Directorate's reorganised control, arrangements for graded ghee in the United Provinces were extensively advertised in the more important newspapers in the United Provinces, the Bengal area and Delhi Province. A proposal for the preparation of an Agmark Ghee film is also under consideration.

The question of setting up departmental AGMARK stalls was examined recently and it was considered necessary that their establishment

and efficient running would be best facilitated only if the Agricultural Produce (Grading and Marking) Act, 1937, was suitably amended. Proposals for the same have accordingly been submitted to the Government of India recently.

Development of Export Markets—The Royal Commission on Agriculture and more recently the Indian Government Trade Commissioners abroad have pointed out repeatedly that the main obstacle in the way of attempts at pushing Indian agricultural products abroad was lack of standardisation in the quality and have stressed the need for an organised attempt to improve the quality of exported goods. The Directorate of Marketing and Inspection has from the beginning paid close attention to this problem. A scheme for the grading and marking of seedlac exported out of India was initiated in 1941 and during the period from July 1941 to January 1942, 2 consignments of graded seedlac weighing about 2,194 maunds were sent to the United States of America. Though the report on the first consignment was favourable, the experiment had to be abandoned due to the abnormal conditions consequent on the War.

Complaints about uncertainties of quality of lac have been increasing and there has been since recently a tendency on the part of foreign users to go in for substitutes. Proposals for regulating the quality of exports on the basis of standard Agmark grades are therefore under consideration. A reference has already been made to the scheme for Agmark grading and marking of sann hemp and tobacco before export. Both these schemes have been working satisfactorily and assisted in building up reputation of the country for delivering goods in foreign markets according to standards. Markets for tobacco could be extended to many countries and similar results are soon expected for sann hemp as well.

Goat Hair, Wool—In the recent past, contact was made with the Australian importers of goat skins and information was obtained with regard to their requirements of quality in Indian goat skins. Similar enquiries were also addressed to the Trade Commissioners at New York and London. Samples of goat hair collected from different parts of the country were sent to the Indian Government Trade Commissioner in Australia for being shown to buyers in that country. It was found that while the Australian merchants were generally satisfied with Indian goat hair, they would require it in a specially dressed form if they were to take Indian goat hair on any large scale for commercial use. A specimen of this dressed hair as used in Australia was obtained and shown to the trade interests in India in order to find out whether such dressing could be done as a matter of course before exporting hair from India. The trade in India felt that such dressing was not possible in the absence of the necessary mechanical means and technical knowledge. With great difficulty some more information was secured on the point and a consignment of samples of dressed hair was sent to Australia for evaluation. The samples were greatly appreciated by the trade in that country. As a result of this, tentative grade specifications for goat hair have been drawn up. These have been generally approved by importers in foreign countries

and the question of finalising them now consultation with the trade in India is under consideration.

Recently ten bales of cleaned and wash wool were collected by the Directorate from Ajmer and Jodhpur and sent to the Indian Government Trade Commissioner, New York for purposes of evaluation by the Incorporated Carpet Manufacturers' Association, New York. The quality of this wool sent was highly appreciated by the Association. In view of this success a scheme for the grading of wool under the Agmark with a view to developing foreign markets and bringing about improvement in the local quality and for the appointment of the necessary Inspectorate staff is under consideration. In order to ascertain the views of the trade in this matter a Conference of the important wool traders in the country was convened in January 1946, and as recommended by the Conference an *ad hoc* wool committee was constituted by the Government of India in order to examine this question.

Edible Nuts—Some time in 1942 the Directorate collected certain samples of edible nuts such as groundnuts in shell, cashewnuts, almonds and apricot stones, and sent them to the Indian Government Trade Commissioner in Canada in order to find out whether there would be any possibility of their utilisation in Canada for the preparation of chocolates, etc. The nuts were shown to the importers and were approved. A consignment of similar samples of wool, seedlac, shellac, cashewnuts, peanuts, almonds and walnuts has been sent to the Indian Trade Commissioner in Canada with a view to exploring possibilities of development of trade in those commodities. Further developments are awaited. Samples of different commodities were also sent to the Imperial Institute, London, for exhibition purposes. A few samples of Indian wool were also sent to the Indian Government Trade Commissioner in Australia and New Zealand in May, 1947 for exhibition at the Sydney Show. The samples were considered as 'wonderful collection of Indian wool varieties' and were retained by Sydney Technical College as a permanent collection.

As a result of complaints received from the Indian High Commissioner in London regarding the quality of Indian curry powder and ginger exported to United Kingdom a scheme for its compulsory grading is under consideration. Representative samples have been collected and are being analysed for the determination of quality factors. Similar scheme for the compulsory grading of castor oil is also under examination and the drawing up of grade specifications on the basis of the results of analysis of samples is in progress.

In order to safeguard the reputation in foreign markets of all kinds of agricultural produce exported out of the country, a comprehensive Bill styled the Agricultural Produce Exports (Quality Control) Bill to provide for legislation for the compulsory grading of all such produce has been proposed by the Directorate of Marketing and Inspection and is at present under the consideration of the Government of India.

Apart from the activities detailed above, the

Central Marketing Staff has to deal with numerous enquiries of a general nature. The marketing staffs in several provinces are also closely connected with price control activities and are required to supply useful information regarding the availability of several agricultural commodities in India for the use of the Defence Services. The Central Marketing Staff are frequently called upon to supply information regarding stocks, production, prices, etc., of various commodities to the Supply and Food Departments of the Government of India. The Department also offered material assistance to the Defence Services by arranging supplies of various foodstuffs to the military. For instance, several thousand maunds of Agmark ghee and butter were purchased by the Supply Department for the Defence Services during the last few years. Graded eggs in large numbers were supplied to the Army, Internment camps, hospitals, etc.

The above is only a brief sketch of the activities of the marketing staff. The detailed

accounts, given in the published annual reports of the Agricultural Marketing Adviser, show that the scheme has recorded steady progress in spite of several difficulties such as lack of adequate funds and personnel and reluctance and hesitation on the part of the trade to follow new methods.

Early in 1945 the Government of India set up a Marketing Sub-Committee of the Policy Committee No. 5 on Agriculture, Forestry and Fisheries to examine the entire question of the improvement of agricultural marketing in India, the maintenance of standards of purity and quality, the establishment of warehouses and the organisation and functions of the Central and Provincial Marketing Departments. The Sub-Committee have submitted their Report to the Government of India which is at present under their consideration. The future policy with regard to agricultural marketing will largely depend on the decisions taken by the Government of India on the various recommendations contained therein.

List of the Central Marketing Officers and the Senior Marketing Officers in the Provinces and States :—

A.—Central Marketing Staff

Agricultural Marketing Adviser to the Government of India.—T. G. Shirname, B.A., Ph.D. (Wales), F.S.S., F.R.Econs. S. (Lond.).

Deputy Agricultural Marketing Adviser to the Government of India.—Dr. B. C. Sen, D.Sc.

Senior Superintendent.—P. S. Visvanathan, B.Sc. (Ag.).

Senior Marketing Officers.—K. H. Advani, M.Sc. (Agri.); H. S. Bawa, M.R.C.V.S.

Marketing Officers.—Triyugi Prasad, M.A., LL.B.; K. N. Vasvani.

Supervising Officer, Grading Stations.—K. P. Jain, B.Sc., A.H.B.T.I.

Assistant Marketing Officers.—S. C. Chakravarty, B. Ag.; V. P. Anantanarayanan, M.Sc.; Parduman Singh, B.Sc. (Agri.); R. N. Chaturvedi, B.Sc. (Agri.); B. D. Joshi, B.Sc. (Agri.); M. B. Nayyar, M.Sc.; Syed Ali Imam Naqvi, B.Sc. (Agri.); H. G. Mathur, M.Sc. (Agri.); R. V. S. Rao, B.Sc. (Agri.); R. S. Bhatnagar, B.Sc. (Agri.); V. P. Kachwaha, M.A., LL.B.; M. R. Sharma, M.A.; R. T. Mirchandani, B.A.; T. T. Mulvani; P. M. Idnani, B.Sc. (Agri.).

Inspectorate Staff (Quality Control) Ghee.—L. K. Shukla, B.Sc., A.H.B.T.I., Inspector, Ahmedabad; V. Chandramouly, B.Sc., Inspector, Patna; B. S. Dane, B.Sc., A.H.B.T.I., Inspector, New Delhi.

Inspectorate Staff under Sann Hemp Scheme.—Pratap Singh, B.Sc. (Agri.), Chief Inspector; R. N. Murty, Inspector, Calcutta; O. N. Garg, B.A., Inspector, Vizianagaram; P. L. Mukherjee, M.Sc., Inspector, Shilpur.

Inspectorate Staff under the Tobacco Grading Scheme.—P. L. Tandon, B.Sc. (Wales), F.R.Econs. S. (Lond.), Chief Inspector; P. R. Parthasarathy, L.Ag., Senior Inspector; M. Hanumantha Rao, B.A., Vigilance Inspector; E. Parthan, Vigilance Inspector.

B.—Provincial Marketing Officers

Madras.—S. N. Venkataramana Ayyar, B.A. B.Sc. (Agri.).

Bombay.—V. D. Karkhanis, B.A. (Hons.), G.D.C.A., Chief Marketing Officer; R. K. Apte, Marketing Research Officer.

West Bengal.—N. C. Ray, M.Sc., Dip. (Agri.) (Edin.).

United Provinces.—Shri Ram Singh (Food-grains).

East Punjab.—Pritam Singh Diol.

Bihar.—A. K. Sarkar (Asstt. Marketing Officer-in-Charge).

Orissa.—D. Chottray.

Central Provinces.—R. N. Gadre.

C.—Minor Administrations

Ajmer-Merwara.—Officer-in-Charge, Marketing Office.

Coorg.—P. M. Changappa, Dip. (Econ). C. H. D. (Mech.).

Delhi.—Asstt. Registrar, Co-operative Societies, Delhi.

D.—States Marketing Officers

Hyderabad.—Rai Mohindra Bahadur.

Mysore.—M. D. Venkata Urs, B.A.

Patiala.—S. B. S. Harchand Singh, L.Ag.

Bhopal.—Jamil Mohd. Khan, B.Sc., LL.B.

Baroda.—Dr. M. J. Patel

Gwalior.—N. R. Jatar

Kashmir.—Economic Assistant, (name not available)

Jodhpur.—R. S. Kishen Puri, B.A., LL.B.

Bikaner.—The Marketing Officer. (name not available)

Indian Council of Agricultural Research

IN Chapter III of their Report, the Royal Commission on Agriculture in India held that agricultural research in the sub-continent was still in its infancy; that however efficient the organisation which was built up for demonstration and propaganda it could not achieve a full measure of success unless it was based on research; that lack of co-ordination in agricultural research had prejudicially affected progress; that there was a wide field open for the co-operation of the Central Government and of Provincial Governments in regard to agricultural research; and that it was the duty of the Government of India in the discharge of the ultimate responsibility for the welfare of the vast agricultural population of the country, to advance research in every way possible without encroaching upon the functions of Provincial Governments in that sphere.

The Royal Commission, after discussing the possible methods by which closer contact might be established between scientific investigators working in the Institutions under the Central Government and Investigators employed under the Provincial Governments, recommended the establishment of an Imperial Council of Agricultural Research to which the Imperial Agricultural Research Institutions and the Provincial Agricultural Research Institutions would stand in exactly the same relation.

In the late Department of Education, Health and Lands Resolution No. 826-Agr., dated 23rd May, 1929, the Government of India decided that the Imperial Council of Agricultural Research should be registered under the Registration of Societies Act, XXI of 1860, and the Council was accordingly registered as a Society under the provisions of that Act. The name of the Council has since been changed to "Indian Council of Agricultural Research" and its work is now limited to the Dominion of India.

The Royal Commission on Agriculture envisaged that the primary function of the Council should be to promote, guide and co-ordinate agricultural, including veterinary research in the sub-continent and to link it with agricultural research in other parts of the Empire and in foreign countries. It should make arrangements for the training of research workers, should act as a clearing house of information in regard not only to research but also to agricultural and veterinary matters generally and should take over the publication work which was being carried out by the Imperial Agricultural Department. In the light of the experience gained during the years the Council has been in existence, it has recently been decided that the Council's functions should be enlarged to include work connected with the application of the results of research to field practice and the Council's function is now to undertake, aid, promote and co-ordinate agricultural and animal husbandry education, research and its application in practice, development and marketing in India by all means calculated to increase

scientific knowledge of the subjects and to secure its adoption in everyday practice.

The Commission recommended that the Council should be entrusted with the administration of a non-lapsing fund of Rs. 50 lakhs to which additions should be made from time to time as financial conditions permitted. The Government of India decided that an initial lump grant supplemented by a fixed minimum grant annually should be made to the Council. They decided that the initial grant should be Rs. 25 lakhs of which Rs. 15 lakhs would be provided in the budget for 1929-30 and from the next financial year onward the annual recurring grant would be fixed at Rs. 7.25 lakhs per annum of which Rs. 5 lakhs would be devoted to the furtherance of the scientific objects of the Council and the remaining Rs. 2.25 lakhs to the cost of its staff and Secretariat. In 1940 the Agricultural Produce Cess Act was passed under which a cess of 1 per cent *ad valorem* on certain commodities was levied for the purpose of providing funds for carrying out the general research programme of the Council. The proceeds of the cess were expected to yield in a normal year about Rs. 14 lakhs.

Constitution.—As regards the constitution of the Council, the Government of India decided that the Council should be divided into two parts, a Governing Body which would have the management of all the affairs and funds of the Council subject to certain limitations and an Advisory Board the functions of which would be to examine all proposals in connection with the scientific objects of the Council which might be submitted to the Governing Body.

The Governing Body of the Council consists of the Member of the Governor-General's Council in charge of the portfolio of Agriculture who is the ex-officio Chairman, the Vice-Chairman, I.C.A.R., the Ministers of Agriculture in the Provinces, one representative from the Council of State, two representatives from the Legislative Assembly, one representative of European business community and one representative of the Indian business community, two representatives of the Advisory Board, the Secretary to the Government of India in the Department of Agriculture and such other persons including nominees of States as may be appointed from time to time by His Excellency the Governor-General.

The Advisory Board consists of the Vice-Chairman of the Society (ex-officio Chairman) the Agricultural and Animal Husbandry Commissioners, the Directors of the I.A.R.I., the I.V.R.I. and the Indian Institute of Science, Bangalore, the Directors of Agriculture and members of the Society representing the Provincial Veterinary Departments of the Provinces, a representative of minor administrations, a representative of the Forest Research Institute, a representative of the Co-operative Department, a representative of the Indian Research Fund Association, four

representatives of Indian Universities, a representative of the Indian Tea Association and the United Planters' Association of Southern India, representatives of the All-India Commodity Committees, persons nominated as members on the ground of scientific knowledge or other special qualifications and such other persons including nominees of States as may be appointed from time to time by His Excellency the Governor-General.

Personnel.—At present the following States are affiliated to the Council, viz.—

Hyderabad, Mysore, Travancore, Bhopal, Cochin, Kashmir, Baroda, Gwalior, Bikaner, Patiala and Jaipur.

Officers of the Council :—

Chairman.—The Honourable Jai Ramdas Daulat-
rao, B.A., LL.B.

Vice-Chairman.—Sardar Bahadur Sir Datar Singh.

Secretary.—Rai Bahadur S. C. Sarkar, B.A.

Agricultural Commissioner.—Rai Bahadur R. L. Sethi, I.A.S.

Animal Husbandry Commissioner.—Rai Bahadur P. N. Nanda, M.R.C.V.S.

Assistant Agricultural Commissioner.—I. B. Chatterji, M.Sc. (Agri.), L.A.G.

Assistant Animal Husbandry Commissioner.—H. K. Lal, B.Sc., M.R.C.V.S.

Statistical Adviser.—Dr. P. V. Sukhatme, D.Sc., Ph.D.

Statistician (Agriculture).—V. D. Thawani, M.A.

Statistician (Animal Husbandry).—A. R. Roy, M.A.

Statistician (Training).—R. D. Narain, M.Sc.

Agricultural Marketing Adviser.—Dr. T. G. Shirname, Ph.D.

Assistant Secretary.—H. C. Thapar, B.A. (Hons.)
Registrar, Central Herd Book.—K. P. B. Kartha, B.Sc.

Editor, Council's Journals.—Dr. U. N. Chatterji, B.Sc. (Hons.), M.Sc., D.Ph., D.Sc., F.N.A.

Chief Superintendent.—B. S. Dasarathji, B.Sc. (Hons.).

Indian Institute of Sugar Technology, Kanpur

The Indian Sugar Committee of 1920 recommended *inter alia* the establishment of a Central Research Institute as necessary for the proper development of the Sugar Industry.

The recommendation of the Sugar Committee was accepted and the Imperial Institute of Sugar Technology was started at Kanpur by the Government of India on 1st October, 1936, to carry out research in the different branches of Sugar Technology and to help the Indian Sugar Industry in various ways by rendering technical assistance to Sugar Factories, by training students in all branches of Sugar Technology, by providing short term courses to technical men already engaged in the Industry, etc. On the 1st March, 1945, the control of the Institute passed to the Indian Central Sugarcane Committee, formed by resolution of the Governor General in Council and registered under the Registration of Societies Act XXI of 1860. The Committee is constituted by members from every section of the Industry, viz., cane growers, sugar manufacturers, sugar merchants and Sugar Technologists.

The Institute is financed by grants from the Sugar Excise Fund.

The work of the Institute has been organized under two broad heads, (a) office work including general administration and (b) research and teaching. The former includes the technical, the statistical and general sections; the latter consists of three main sections—Sugar Technology, Sugar Engineering and Sugar Chemistry, the last comprising of Sugar Chemistry, Organic Chemistry, Physical Chemistry and Bio-Chemistry.

The laboratories are well equipped with instruments required for research on sugar and allied products. Attached to the Institute are the Experimental Sugar Factory, workshop, Sugar Engineering and Chemical Engineering laboratories, Sugar Research and Testing Station, Bilari, Bureau of Sugar standards and the research scheme for the manufacture of sugar candy in India.

The functions of the Research and Testing Station at Bilari are (i) testing of existing plants and processes in use in the open pan industry, (ii) undertaking research work for introducing improvements in the plants and processes, (iii) giving demonstration of new machines and improved processes. In this connection it may be mentioned that the Indian Central Sugarcane Committee have since 1945 constituted a gur and khandsari sub-committee for advising on the lines of work to be carried out at the Research Station.

Technical Assistance.—Apart from the technical work under the Sugar Production Rules (1935) technical assistance and advice on various aspects of the sugar industry are given by the Institute to sugar factories, private parties and provincial Governments within the Indian Dominion and the States acceding to it. The Institute endeavours to meet all technical requirements of factories so far as its staff and equipment permit. The more important types of work which the Institute undertakes for rendering technical assistance to sugar factories are (a) advice to promoters of

new factories, (b) advice relating to extensions and alterations of existing factories, (c) advice relating to improvements in working of plant, (d) advice relating to improvements in manufacturing process, (e) technical control of manufacturing operations (f) advice regarding working expenses and cost of production, (g) investigations into special problems and (h) analytical work.

The sugar Trade Information Service under the control of the Director is run to meet the requirements of the sugar trade and industry in India.

The scope of the work of the Institute was brought to the notice of all persons interested in the sugar industry through a booklet entitled "Functions and Activities". In order to establish and maintain contact with the sugar factories and enable them to be in touch with research work carried out at the Institute and developments elsewhere, arrangements have been made for issuing brief summaries on matters of technical interest under the title of "Sugar Notes". Description and results of various experimental and research work carried out in the Institute are being published annually in the publication entitled "Scientific Reports of the Indian Institute of Sugar Technology".

The Institute trains a limited number of men every year and gives them a thorough and up-

to-date training in their respective subjects. For most courses, a period of factory training is an essential condition for the grant of diploma or certificate. There are six regular courses of training for students desiring to qualify for technical posts in sugar factories, viz., Fellowship and Associateship courses in Sugar Technology and in Sugar Engineering and the Sugar Engineering Certificate Course, the Sugar Boilers Certificate Course. Beside, facilities are provided for men already engaged in the industry to have the necessary technical training during the off-season provided they have the requisite educational qualifications. The off-season courses are (a) Chemical Control, (b) Bacteriology, (c) Pan Boiling, (d) Fuel and Boiler Control, (e) Statistical Methods (for research students), (f) Statistics (for sugar students), (g) Milling Plant operation and control.

In order to afford adequate facilities to the Sugar Factories in India for selecting properly qualified staff and at the same time to reduce unemployment amongst the educated technical workers in the sugar industry, the Institute maintains an Employment Bureau which collects authentic information about the qualifications and experience of those seeking employment in the Sugar industry and makes it available free of charge to factories on receipt of enquiries.

AREA CULTIVATED AND UNCULTIVATED IN 1941-42 IN EACH PROVINCE.

The Statistics given in the following pages are the latest available.

Provinces.	Area according to survey.	Deduct Indian States.	NET AREA;	
			According to survey.	According to Village Papers.

Food

TO give the population an adequate and balanced diet, the Indian Union needs to increase her food production by 10 million tons a year, according to the Food Grain Policy Committee, which, under the chairmanship of Sir Purshottamdas Thakurdas, was appointed towards the end of 1947 to investigate the country's requirements and make recommendations for policy during the next five years. The Committee pointed out that on the basis of a cereal ration of 16 and 12 ounces per person per day for rural and urban population respectively, the country required 44.4 million tons of grain a year. Total production is 39.9 million tons, leaving a shortage of 4.5 million tons which does not, however, allow for an adequate and balanced diet.

The Committee's analysis of the situation shows that the food supply of the Indian Union has not been considerably affected by the partition of the country. Though the Pakistan provinces of Sind and the West Punjab are major food grain producers, their surpluses have to be offset against the deficits in the N.W.F.P. and East Bengal.

FOOD COMMITTEE REPORT

While criticising the shortcomings of the "Grow More Food" campaigns initiated during the last war, the Food Grain Policy Committee's recommendations for stepping up cereal production by 10 million tons in the next five years relied on much the same methods—more irrigation, more cultivation of waste lands, more manure, better seed and the formation of a Central Land Reclamation Organisation with a capital of Rs. 50 crores subscribed by the Central Government.

Direction of food production would be in the hands of a Central Board of Agricultural Planning on which provinces and states would be represented. Agriculture was to remain a provincial subject, though the responsibility for feeding the country rested with the Centre.

These plans were put forward at a moment when it seemed as though the food crisis, through which India had been passing since 1942, was easing. In December 1947, the Government of India accepted the Food Grain Policy Committee's preliminary recommendation that there should be gradual decontrol of cereals and limitation of imports. To this end, governments of provinces and states were advised to reduce their commitments under controlled distribution and rationing. They were left free to devise their own means of procurement and to fix their own prices. In order to encourage production and procurement the Central Government promised to pay a bonus of eight annas a maund to every provincial government for grain procured inside its territory and an additional eight annas for every maund exported. This bonus was intended to cover any losses incurred in distribution and expenditure on production. These steps were taken in the belief that decontrol would make it possible for hoarded grain to come to market. During the first six months of the revised policy it seemed likely

that the experiment would be a success. Certainly there was none of the chaos which the critics had expected. For example, the complete decontrol of sugar saw a doubling of its price, but no scarcity.

Rural rationing ceased over large areas, but at the middle of 1948 there was no sign that the 12-ounce ration in the larger towns of the deficit areas could be abolished or even increased. Much, however, depended on the results of the 1948 monsoon and on the continued flow of imports.

India's food thus continued to be administered more or less on the lines laid down in 1943 by the Food Grains Policy Committee which, after critically examining each area's production, imports and exports, evolved a Basic Plan of procurement and distribution, supplemented by imports of one million tons of grain a year, plus a buffer stock of half a million tons. This annual import target was not reached till after war ended.

A CRITICAL YEAR

During 1944 and 1945 the extension of rationing, first pioneered in Bombay in 1943, accompanied by good crops, prevented the development of serious crisis. However, hopes that rice imports would be resumed very soon after the Far Eastern War ended failed to materialise and a poor crop in India made 1946 a critical year and both rationing and crop levies were extended in many parts of the country. Early in the year the standard cereal ration was reduced to 12 ounces a day and by February scarcity areas had been announced in the Bombay Deccan and other southern areas. India sent a Food Mission to London and Washington in an attempt to secure better imports than the totally inadequate allotments made by the Combined Food Board. Main shipments of food were wheat from Australia and mostly coarser grains, from the Americas. A ray of hope came when rice began to arrive from Burma and Indonesia.

DR. PRASAD'S PLAN

Towards the end of the year Dr. Rajendra Prasad, the then Minister for Food and Agriculture, said in a review of the situation that a further cut in cereal rations might be necessary to tide over the country till the *khari* harvest. Grave difficulty had been experienced in obtaining supplies from overseas and there had been a serious shortfall in the arrival of promised shipments. His review was not altogether well received, owing to an impression that Central Government officials had not exerted the maximum amount of pressure to obtain overseas supplies, and that provinces with surpluses were holding unnecessarily large reserves. Owing to high prices of imported food, the Central Government spent Rs. 15.5 crores on subsidising the sale of imported food during 1946.

The year 1947 opened with prospects of severe shortages of both wheat and rice owing to the failure of the *khari* and *rabi* crops in 1946. To some extent this gloom was offset by the allocation of 410,000 tons of rice to India by the

International Emergency Food Council, the bulk to come from Burma. Dr. Prasad put forward a five year plan for better agriculture, intended to wipe off India's annual deficit of 1.6 million tons of cereals which was expected to increase to 7 millions by 1951. His aim was to raise average production from 10 maunds an acre to 11½ maunds. Approximately 159 million people were subject to cereal rationing at the beginning of the year.

In May, it was announced that India had demanded 4 million tons of cereals from overseas. It was estimated that the Central India wheat crop had suffered a million tons damage due to rust, and that there had been a total deficit of

2 million tons on the *khari* crops and the same amount on the *rabi* crops. This state of affairs necessitated reductions in the proportions of wheat and rice available in rations in many areas.

Though a period of acute shortage was officially expected in the latter half of the year, before the *khari* crop came in, it also became apparent that there were considerable supplies of grain available wherever an open market enabled it to reach consumers. In view of this, the United Provinces Government lifted rationing from 15 towns in July. Eventually the increasing pressure of un-official supplies caused the Central Government to introduce their decontrol policy.

Famine

Food production in the sub-continent has through the ages periodically failed to meet the needs of the people. The sub-continent's history has consequently been punctuated by disastrous famines, the worst of which have killed millions of people and left wide tracts of country desolate. Famines may be said to arise when large groups of people fail to produce enough food for their own needs and lack the means of obtaining it from other sources. Such conditions may be precipitated either by successive failures of the monsoons, on which four-fifths of the sub-continent's agriculture depends even today; by natural disasters such as floods or earthquakes or by human agencies such as war and grain market speculation.

References to famine are found early in the sub-continent's history. Little is known of these early disasters; details are based on tradition and until late in the eighteenth century such visitations were regarded as natural calamities which man was powerless to prevent. The first definite outbreak known to historians was in 650 A.D. when famine raged throughout the country. There was another series of famine in 941, 1022, and 1033, when whole provinces were depopulated and men were driven to cannibalism, according to tradition. The years 1148-1159 saw almost continuous famine. In 1344 famine was rampant in Upper India. The Emperor Muhammad Tughlak was unable to obtain necessities for his own household and ordered the evacuation of Delhi's population to Deogiri (modern Daulatabad) in the Deccan. From 1396-1407 the Durga Devi famine devastated the Deccan and so reduced the population that land went out of cultivation for years. The years 1595-98 saw famine in the north.

The Gujarat famine, one of the first about which precise details have survived, broke out in 1630. Towns and districts were stripped of inhabitants. In 1631 a Dutch merchant reported that only 11 of the 260 families at Swally had survived.

In 1769-70 ten million people (one-third of the population) are estimated to have perished in a famine in the Bengal area. In 1783 came the Chalisa famine in the north, followed by the Dojlara, or Skull, Famine in the Deccan in 1790-92. The Dojlara is reputed to have been the severest famine ever known in the sub-continent. It extended over Bombay, Hyderabad and the northern districts of Madras where relief works were opened, the first of their kind in the country.

That is only a brief list. Between 1660 and 1750 there were 14 major famines about which little is known.

The causes of these famines were those already stated. Practically the whole of the food production was dependent on the vagaries of the monsoon. Internal wars were common and often coupled with them were widespread pillage, trade dislocation and general devastation. The fast communications of the nineteenth and twentieth centuries were not available for relief to be brought from outside the famine area. Between 1838 and 1899 there were eight major disasters. The famines of 1833 and 1861 were in the U.P. In 1838, 800,000 people are estimated to have perished. In 1861 relief was provided in time.

SOUTH INDIAN FAMINE

Orissa was the scene of the next famine, in 1865-67. It affected 180,000 square miles and 47,500,000 people. The Bengal Government was slow in appreciating the need for action, but later food was poured into the area in prodigious quantities. Thirty-five million units were relieved (a unit is one person supported for one day) at a cost of Rs. 95 lakhs. The mortality was very heavy, and it is estimated that a million people or one-third of the population died in Orissa alone. This was followed by the Madras famine of 1866, and the famine in Western India of 1868-70. The latter famine introduced the sub-continent to the great migration from Marwar which was such a distinguishing feature of the famine of 1899-1900; it is estimated that out of a total population of a million and a half in Marwar, one million migrated. There was famine in Behar in 1873-74, then came the great South Indian Famine of 1876-78. This affected Madras, Mysore, Hyderabad and Bombay for two years and in the second year extended to parts of the Central and United Provinces and to a small tract in the Punjab. The total area affected was 257,000 square miles and the population 58,500,000. Warned by the excessive expenditure in Behar and actuated by the desire to secure economy, the Government relief programme was not successful. The excess mortality in this famine is said to have been 5,250,000 in British territory alone. Throughout British India 700,000,000 units were relieved at a cost of Rs. 8½ crores. Charitable contributions from Great Britain and the Colonies aggregated Rs. 84 lakhs.

THE FAMINE CODES

The experiences of this famine showed the necessity of placing relief on an organised basis. The first great Famine Commission which sat under the presidency of Sir Richard Strachey, elaborated the Famine Codes, which, amended to meet later experience, form the basis of the famine relief system today. They recommended (1) that employment should be given on the relief works to the able-bodied at a wage sufficient for support, on the condition of performing a suitable task; and (2) that gratuitous relief should be given in their villages or in poor houses to those who are unable to work. They recommended that the food supply should be left to private agency, except where that was unequal to the demands upon it. They advised that the land-owning classes should be assisted by loans, and by general suspensions of revenue in proportion to the crop failure.

Provincial codes were drawn up, and were tested by the famine of 1896-97. In that disaster 307,000 square miles were affected, with a population of 69,500,000. The numbers relieved exceeded 4,000,000 at the time of greatest distress. The cost of famine relief was Rs. 7½ crores. Revenue was remitted to the extent of Rs. 1½ crores, and loans given aggregating Rs. 1½ crores. The charitable relief fund amounted to about Rs. 1½ crores; of which Rs. 1½ crores were subscribed in the United Kingdom. The actual famine mortality in British India was estimated at 750,000. The experiences of this famine were examined by a Commission under Sir James Lyall, which reported that the success attained in saving life and the relief of distress was greater than had ever been recorded in famines, comparable with it in severity, and that the expense was moderate. But before the Local Governments had been given time to digest the proposals of this Commission, or the people to recover from the shock, the great famine of 1899-1900 began.

THE FAMINE OF 1899-1900

This famine affected 475,000 square miles with a population of 69,500,000. In the Central Provinces, Berar, Bombay, Ajmer, and the Hissar district of the Punjab famine was acute; it was intense in Rajputana, Baroda, Central India, Hyderabad and Kathiawar and was marked by several distinctive features. The rainfall over the whole of India was in extreme defect, being eleven inches below the mean. In several localities there was practically no rain. There was in consequence a great fodder famine, with a terrible mortality amongst the cattle. The water-supply was deficient; and brought a crop of difficulties in its train. Then districts like Gujarat, where famine had been unknown for so many years that the locality was thought to be immune, were affected. The people clung to their villages, in the hope of saving their cattle, and came within the scope of the relief works when it was too late to save life.

A very large area in the Indian States was affected, and the Marwaris swept from their impoverished land right through Central India like a horde of locusts, leaving desolation in their train. For these reasons relief had

to be given on an unprecedented scale. At the end of July, 4,500,000 persons were supported by the State, Rs. 10 crores were spent on relief, and the total cost was estimated at Rs. 15 crores. The famine was also marked by a widespread acceptance by Indian States of the duty hitherto shouldered by the Government of India alone—the supreme responsibility of saving human life. Aided by loans to the extent of Rs. 3½ crores, the Indian States did a great deal to bring their administration into line with that in British India. Although actual deaths from starvation were insignificant, the extensive outbreaks of cholera, and the devastating epidemic of malaria which followed the advent of the rains induced a famine mortality of approximately a million.

1943 BENGAL FAMINE

Localised famine conditions have recurred fairly frequently since 1901, but until 1943 it seemed that the procedure laid down by the Famine Codes was capable of dealing with all eventualities. Unfortunately, conditions in which the difficulty of obtaining relief supplies would be so great that the Codes' provisions could not be filled, were not envisaged. This state of affairs, however, arose in Bengal early in 1943. The province is estimated to be 83 per cent. self-sufficient for food and before 1942 imported most of the balance of its needs from Burma. The cutting off of this supply was followed by a series of natural disasters, including the Midnapore hurricane which late in 1942 devastated a wide area and is estimated to have destroyed 1,500,000 tons of rice. During the monsoon of 1943, when famine was already present in Bengal, floods in the Damodar river held up relief supplies from the U.P. and Punjab at a critical period. Public nervousness over the fall of Burma, the denial policy, by which boats and the larger stocks of rice were removed from East Bengal to prevent their use by the Japanese, and the general shortage of food in most consuming centres in the country were all contributory causes of the famine. When shortages became apparent in Bengal their effect was intensified by speculation on a most outrageous scale. A few areas such as Midnapore, were short of food from natural causes. Most of the other famine-stricken districts suffered because rice prices were far beyond the reach of the people, because speculators had drained the area of stocks, or because the available grain was hoarded by its owners.

According to the Famine Codes, assistance should have been provided from outside. In 1943 the problem was two-fold. Very large supplies were not readily available elsewhere owing to the general dislocation of Indian grain markets; the movement of supplies into Bengal was difficult owing to the congested state of the railways. A fairly steady stream of grain did, however, reach Calcutta from July onwards, but the Bengal Government did not evolve a satisfactory plan of distribution. Many famine areas in the province were virtually without relief until the army assisted the civil authority to organise food distribution and medical relief in November, 1943. This relief, coupled with a record rice crop, which became available in January-February, 1944, overcame the immediate crisis.

Famine conditions were accompanied by epidemics of cholera, malaria, smallpox and dysentery which probably caused as many deaths as starvation itself.

ENQUIRY COMMISSION

The Famine Inquiry Commission, headed by Sir John Woodhead, was appointed in 1944 and published a separate report on Bengal. The Commission estimated that 1,500,000 people died in Bengal as a result of the famine and its accompanying epidemics. They considered 6,000,000 people, or one-tenth of the population of the province, were affected—practically all of them belonging to the poorer classes in the rural areas. Though the basic cause of the famine was the failure of the 1942 winter rice crop, the Commission considered that

high prices were at least as important as crop failures in causing starvation. Their report clearly exposed the failure of both the Bengal Government and the Government of India to take timely measures to keep the province's food situation under control. Not only was control of the procurement and distribution of food defective, but even medical relief, which could otherwise have mitigated the epidemics, was inadequate.

During 1943 famine broke out in the Bijapur district of Bombay and in the Ceded Districts of Madras. There were also acute food shortages in Orissa, in Travancore and Cochin and the Madras district of Malabar. In none of these areas did conditions approach the severity of the Bengal famine, mainly owing to the energy of the local authorities in organising relief and in controlling supplies and prices of food.

Fisheries

THE fisheries of the sub-continent, potentially rich, as yet yield a mere fraction of what they could were they exploited in a fashion comparable with those of Europe, North America or Japan. The fishing industry, particularly the marine section, has certainly expanded considerably within the last 50 years concurrently with improvement in the methods of transport and increase in demand for fish, cured as well as fresh, from the growing population of the great cities within reach of the seaboard.

The caste system, however, exerts a blighting influence on progress. Fishing and fish trade are universally relegated to low caste men who shirk from their want of education, the isolation caused by their work and caste and their extreme conservatism, are among the most ignorant,

suspicious and prejudiced of the population extremely averse to changing the methods of their forefathers and almost universally without the financial resources necessary for the adoption of new methods, even when convinced of their value. Higher caste capitalists have hitherto fought shy of associating with the low caste fishermen, and except in large operations on new lines, the capitalists cannot be counted upon to assist in the development of Indian fisheries. As in Japan, it appears that the general conditions of the industry are such that the initiative must necessarily be taken by Government in the uplift and education of the fishing community and in the introduction and testing of new and improved apparatus and methods.

Baroda

THE fishery resources of the Baroda State to-day, while mainly relating to true fish, both marine and freshwater, include the crustaceans and molluscs; among the latter are the conches and the oysters, one species of oyster being valued for the cheap pearls yielded. To tap these resources a Department of Fisheries, started in September 1937, is being organised by Dr. S. T. Moses, the Director, whose services have been lent by the Government of Madras. Apart from fishery and biological surveys conducted, the main achievements so far are the successful departmental working of the Windowpane Oyster Pearl Fishery for two seasons and the subsequent revival of the lease, along with that of the conch fishery; the demonstration of the utilisation of these 'Piacuna' pearls, previously used only in medicine, for making jewellery; preparation of oystergrit for poultry from the shells of the edible oyster; conservancy of manure from (1) fish offal, (2) prawn and other crustacean offal and (3) marsh plants (sampire and seablite); preparation of prawn meal dust and the manufacture and sale of Shark Liver Oil with vitamin contents of 2,000 international units per gramme of A and 200 of D.

Gradual attempts to introduce freshwater fish culture as a subsidiary occupation for the ryot are being made and studies of larvicidal and cyclospicidal fish, both local and imported, have been started. In Baroda City a Fish Market was erected and the Aquarium in the Public Park was revived. Alterations and additions to the aquarium as to include Laboratory facilities have been included in the post-war scheme starting this year. Schemes now functioning are—'Prawn Farm' in the Dadhar River, the curing, pickling and smoking of fish in the Kodinar area, and the biological studies of our marine fauna and flora and experiments in their industrial uses and in emulsification, deodorisation, etc., of Shark Liver Oil and by-products.

As the famous fishing grounds off Kodinar, which supply almost all pomfrets for Bombay

are exploited mainly by outside fishermen who merely camp in the State during the season, a colonisation scheme has just been begun under which the fishermen are induced to settle permanently at Kotdah by grant of concessions (residential huts, curing yards, salt and even lands for cultivation) ashore and (use of motor launch and loan of nets, etc.) afloat. The first batch of fishermen arrived from Beyt in March 1944. A co-operative society was recently started for the benefit of the Kodinar Uacharas who are now for the first time for many years working the Pomfret and Hilsa Fisheries on their own.

Schemes held up by the War include the Velan Backwater Fishfarm for mullets, salmon and edible oysters, the Muldwarka Fish Hatchery for Hilsa and a five-year plan of fishery development in Port Okha, which included the erection of a Biological Station; an Aquarium; a fish liver oil factory and cold storage station; a fishmeal factory; a cannery and the starting of power fishing. Recently a company the Western India Fisheries Ltd. has been floated with a capital of 5 lakhs, 20 per cent of which will be contributed by the State Government with the intention of launching large scale fishery operations under departmental guidance installing cold storage stations, cannery, smokehouse, manure and meal factories etc., putting up huts for fishermen, supplying their vocational requirements such as boats, nets and tackle including modern equipment down to power vessels for quick transport and deep sea fishing. This company when it starts working will take over power fishing in its entirety and the preservation of fish and industrial experiments in part. The departmental activities under the post-war scheme costing 4½ lakhs will thus, besides industrial activities at other centres comprise, 1. training of men both in India and abroad, 2. biological and technological research in aquaria, farms and laboratories and 3. fish, prawn, oyster etc. culture including measures aiming at fish conservation and reduction of depletion.

Bengal (East and West)

THE value of the fisheries of this extensive deltaic region lies primarily in the enormous area occupied by inland waters—rivers, creeks, jeehis, odd swamps,—to say nothing of paddy-fields and tanks. These swarm with fish and, as the Hindu population are free to a large extent from the aversion to fish-diet which is widely prevalent among certain castes in the South, the demand for fish is enormous. Rice and fish are indeed the principal mainstay of the population and no less than 80 per cent. of the people consume fish as a regular item of diet. It is calculated that 1.8 per cent. of the population is engaged in fishing and its connected trades, a percentage that rises to 2.6 in the Presidency, Rajshahi and Dacca Divisions. 490,865 persons in Bengal subsist by fishing and 272,579 are maintained by the sale of fish.

As a freshwater fisherman, the Bengali is most ingenious, his traps and other devices exceedingly clever and effective—in many cases, too effective—so eager is he for immediate profit however meagre this may be. The greatest inland fishery is that of the hilsa (*Hilsa ilisha*) which annually migrates from the sea and estuaries in innumerable multitudes to seek spawning grounds in the Ganga and the other great rivers. Other valued and abundant river and tank fishes are the rohu (*Labeo rohita*), the Katla (*Catla catla*) and mrigal (*Cirrhina mrigala*). Prawns and shrimps abound everywhere. Of important fishes taken in the lower reaches of the rivers and in the great network of creeks and bhetki (*Lates calcarifer*) and the mullets are the most esteemed. Apart from these estuarine fishes the most valuable sea-fishes are the Mango-fish or Thread-fish or Indian Salmon (*Polymemus*) fish or pomfrets. The sea-fisheries are as yet little exploited. Taking everything into consideration it can safely be stated that the fishery wealth of Bengal is enormous and is far in excess of any other Province.

History.—Following the inquiry begun in 1909 by Sir K. G. Gupta, an investigation of the steam trawl potentialities at the head of the Bay of Bengal was undertaken, the trawler Golden Crown being employed for the purpose. The results showed that there are extensive areas suitable for trawling and capable of yielding large quantities of high class fish. Much attention was devoted during these trawl cruises to the acquisition of increased knowledge of the marine fauna, the results being published in the Records and Memoirs of the Indian Museum. But as the intention of Government was only to explore the fishery resources of the Bay of Bengal and not to embark upon any commercial undertaking themselves the Golden Crown was ultimately sold after a successful trawling for more than 18 months. It was conclusively proved by facts and figures that trawling in the Bay was a commercial possibility even at that time, and Government sincerely hoped that private trade would soon take up the venture.

Originally one Fisheries Department served the needs of the two Provinces of Bengal and Bihar and Orissa. Separation was effected in 1920 after which fisheries in Bengal were admi-

nistered by the Director of Agriculture. The Bengal Fishery Department was abolished under retrenchment in 1923.

During the 14 years after the closure of the Fisheries Department, the price of fish in Calcutta soared consequent on the rapidly increasing demand and the unhealthy monopoly exercised by a small group of vested interests. The economic condition of the fishermen gradually became worse due to exploitation by capitalists and the fisheries in general were getting depleted due to various causes. As distress increased the public began to clamour for the re-establishment of the Fisheries Department to protect the fisheries interests and to organise and develop the fishing industry on modern lines. The Bengal Government therefore appointed a Fisheries Expert to survey the existing condition of the fishing industry in the Province and to suggest schemes of development with a view to augmenting the fish supply, to examine ways and means of bringing about a reduction in the means of bringing about a reduction in the ruling prices of fish, to stimulate commercial enterprise in speedier transport and better marketing and to establish cold storage plants and factories for the utilization of by-products. The services of Dr. M. Ramswami Naidu of the Madras Fisheries Department were requisitioned by the Bengal Government. He surveyed the industry and submitted a report to the Government as a result of which a Department of Fisheries was started in May 1942 with Rai Bahadur Dr. S. L. Hora of the Zoological Survey of India as its Director, to organise the fish trade under the War emergency conditions, to conserve the existing supplies and to conduct investigations on tank fisheries with a view to increasing the food supply in the Province.

With ever-increasing demand for fish in Calcutta and the concurrent rise in prices, the prospects of remunerative steam-trawling are now much brighter. As a matter of fact one big limited concern has already commenced trawling in the Bay of Bengal with Calcutta as headquarters; and it is expected that several other companies will soon follow suit.

Freshwater mussels are used extensively at Dacca in the manufacture of cheap pearl buttons and in many cases pearls are also found in the mussels which the pearl dealers gather and sell in the various parts of the Indian sub-continent. The Dacca bangle factories constitute an important local industry of very ancient standing; their material is almost entirely obtained from South India and Ceylon chank fisheries already referred to.

Potentialities.—Bengal's fisheries are a veritable gold mine; the Bay of Bengal has been described on good authority as the second best fishing ground in the world (the best fishing ground in the world being the Barent Sea). In the past, however, they have remained largely neglected, insufficiently explored, or wastefully exploited. The Government has started a Technological Laboratory at Jaunpur near the Coastal sea-coast for demonstration among ignorant fishermen of modern processes of drying fish and also for proper utilisation of shark-liver oil (a

rich source of Vitamin A) which is now being wasted by the local fishermen as fuel. The laboratory would also be used as a temporary marine base for the introduction of mechanised shark fishing and other improved methods for both off-shore and fore-shore fishing. There would appear to be good prospects for a few floating canneries, with equipment for the manufacture of fish by-products, working at the head of the Bay of Bengal and in the estuaries, as enormous catches of prime fish are made in those parts during the season which lasts from September-October to March-April. Fresh water and estuarine fisheries are vast and very important and only require to be developed scientifically.

The importance of the fresh water fisheries of Bengal is evident from the fact that their production is more than fifty per cent of the total fresh water production of the Indian sub-continent and in money value it is almost 60 per cent of the grand total. The Government have recently sanctioned a large-scale experimental scheme whereby the extensive and properly embanked paddy-fields in the Sundarban Abads will be used for the culture of carps and salt water fisheries of the nature of English mulletries will be improved for the culture of bhekti, mullets, prawns, etc.

One of the most important reasons why many of the tanks in the rural areas are not stocked with fish is the non-availability of fry. Even when fry are available they are not always of the suitable type, and the result seldom comes up to expectation. The owners of the tanks who take to pisciculture, therefore, give up their venture in despair after a year or two. To supply this want, the Government are working a plan

for supplying departmental fry at 50 per cent of the cost of production to those tank-owners who undertook to stock their tanks in accordance with the advice of the technical officers of the Fisheries Directorate. Under this scheme Nursery Units are being set up in 14 districts and fry are being distributed therefrom. This roused a good deal of enthusiasm among tank-owners in the rural areas and many of the tanks which had been lying derelict for a long time past, have come to be stocked with fry. Reports so far received from the departmental officers indicate that the fish liberated in the tanks are growing well.

It is intended to stimulate production by the free distribution of fry of suitable species and to advance loans for the improvement of derelict fisheries.

Owing to shortage of meat, there is a heavy demand for fish from the civil population of Calcutta and other urban areas. Unfortunately the supplies are limited on account of refrigeration and transport difficulties, but schemes are under preparation whereby efforts will be made to augment supplies to an appreciable extent.

In recent years, as a result of fishery investigations carried out by the staff of the Zoological Survey of India and by the Zoology Department of the University of Calcutta, much progress has been made regarding the bionomics and life-histories of several species of commercial importance. Particular mention should here be made of the discoveries regarding the breeding grounds of Hilsa and the extensive trade in the young of this valuable species. As a result of these studies, it may now be possible to take protective measures for the conservation of the Hilsa fishery.

Bombay

WHEREAS Bengal's fisheries are at present confined principally to inland waters, those of Bombay are concerned, save in Sind, almost entirely with the exploitation of the wealth of the sea. Bombay is favoured with a coast line abounding in excellent harbours for fishing craft, a fair-weather season lasting for some seven months, and a fishing population more alive to their opportunities and more daring than those of the sister Presidencies. Bombay sea-fisheries are of very great importance financially as well as economically and, there is ample scope for most useful work in improving curing methods, in introducing canning and in the development of minor fishery industries, particularly those connected with the utilization of by-products.

The more important sea-fish in Bombay are pomfrets, srole and sea-perches, among which are included the valuable Jew-fishes (*Sciaenidae* spp.) often attaining a very large size and notable as the chief source of "fish-maws" or "sounds," largely exported for eventual manufacture into isinglass.

FISHING BOATS

The finest of the Bombay fishing boats are from the coast between Basseln and Surat. These boats are beautifully constructed, attain a considerable size, and are capable of keeping in the sea

for weeks together. In the season the men fish principally off the Kutch and Kathiawar coasts and in the mouth of the Gulf of Cambay. Their main method of fishing is by means of huge anchored stow nets, which are left down for several hours and hauled at the turn of the tide. The chief catches are bombil (Bombay duck), pomfrets and Jew-fishes. The first named are dried in the sun after strung through the mouth upon lines stretched between upright posts.

South of Bombay the fishermen of Ratnagiri and Rajapur make use of another and lighter class of fishing boat specially designed for use in drift-net fishing. Fine hauls of *Bombil seer* (a large form of mackerel) and allied fishes are often made during the season from September to January. Later sharks and rays predominate. For the latter specially large and powerful nets are employed. For part of the fair season, when fishing is not usually remunerative, many of the larger Bombay fishing boats are employed as small coasters, a fact which shows how big their size is.

FRESH WATER FISHERIES

With a view to developing fresh water fisheries of the Province a survey of different sheets of water and their fish fauna was undertaken which revealed that although there were

extensive irrigation reservoirs and tanks for commercial fish culture, there was hardly any indigenous fish suitable for the purpose.

Experiments on growing both indigenous and exotic varieties of fish in natural tanks and a study of their rate of growth, feeding and breeding habits, have revealed that selected varieties of carps occurring in the rivers of Northern India fatten satisfactorily under local conditions and are most suitable for stocking ponds, lakes, etc. The experiments have shown that a suitable tank of about four acres in area can grow about 2,000 lb. of fish and that the financial returns are most encouraging.

The main difficulty, however, in undertaking stocking operations on a large scale is that fry and fingerlings of suitable carps have to be imported from such distant places as Patna, Calcutta, etc. and consequently there is great uncertainty about the supplies. The future of the fresh water fisheries in this Province, therefore, depends on whether a reliable source of supply can be established at hand. In order to obviate the difficulty of importing fry and fingerlings from outside the Province, perennial sheets of water are being annually stocked. These waters include the Ulhas River, Visapur Reservoir, Tata Lakes and Powal Lake.

It is expected that the fish introduced in these waters will grow and breed so that the resulting fingerlings will be utilised for stocking other ponds. The work, however, will have to be continued for a number of years before any tangible results can be obtained.

SORLEY'S REPORT

A special department exists in Bombay for the development of the fisheries of the Province and their organisation on progressive lines. The department is in charge of the Director of Fisheries and has been specially constituted with effect as from the financial year beginning April 1, 1945. Till then the administration of fisheries was the responsibility of the Director of Industries who administered the subject of 'Fisheries' from 1918 and had for a time two officers in the department engaged upon fishery investigation and development.

No survey of the fishing industry can be complete without a reference to the so-called Sorley's Report (published in 1933) which is a store-house of information and also the starting-point of all subsequent measures for the improvement of the industry. Among its more important recommendations were 1. the establishment of a marine aquarium, 2. the opening of a bureau of fisheries information, 3. the encouragement of marine biological research and 4. the employment of motor launches for the transport of fish to consuming centres.

The experiment in mechanical transport was first conducted at Danda in co-operation with the head of the local fishing community. A launch obtained on loan from the R.I.N. was used with suitable modifications. The experiment was such a great success, the fishermen were so highly impressed with the speed with which fish could be transported that today there are no less than 30 vessels engaged in the carrying trade. The launches operate between Bombay

and the fishing fields both in the north and south of it, and the total quantity of fish brought into the city during 1946-47 was 3,086,500 lb.

DEEP-SEA FISHING

Something even more important, however, is a scheme financed on a 50 50 basis by the Governments of India and Bombay for deep sea fishing. For this purpose a vessel *Tapase* has been put into operation, manned entirely by the members of the fishing community. The Government of India are also independently operating a steam trawler in which improved fishing methods such as trawl nets, purse-seine nets and Danish seine nets are being tried out along the Bombay coast.

Certain private concerns are also conducting experiments, of whom two may be mentioned. Messrs. India Fisheries Ltd. with a capital of over Rs. 20,00,000 will operate a purse-seine fishing vessel bought in America and manned by an American Master Fisherman and a crew of four. And second, Messrs. Western Fisheries Company who are using a 71 footer motor fishing vessel purchased from the Navy for trawler experiments conducted with the help of three Italian experts. Yet another private trawler 'Tongkol' which arrived in Bombay from Karachi in July made five voyages during the monsoon and landed about 23 tons of fish.

The Fisheries Department have designs for vessels with a much wider cruising range than was possible before. In accordance with the wishes of the fishermen these vessels will be deckless but will have arrangements for the installation of engines and the storage of fish. Two of such 45 vessels which are now ready have been offered to the fishermen's co-operative societies on a subsidy-cum-loan basis. If the vessels prove popular it is proposed to build 30 more at a cost of Rs. 8,00,000 in the next five years and make them available to as many fishing centres as possible.

It is clear that any experiment with the trawlers will be worthless if they have to be operated by technicians who do not belong to the fishing community. So part of the whole scheme is to train youths of the fishing community to run and maintain motor launches so that the whole trade can be confined to the community itself. Schools have been started for this purpose and an apprentice gets as much as Rs. 30 a month as stipend.

REFRIGERATING FACILITIES

Larger supplies of fish made available by the launches have induced the flow of private capital into channels intimately bound up with the fishing trade. Several ice factories and cold storage plants have since been set up at Malwan on the Ratnagiri coast and Chendla on the Karwar coast. In Bombay, a quick-freezing plant employing the Z-process has been installed by a Russian technician at the Kermani market at Delisle Road and an ice factory and a cold storage plant have also been set up on the east side of Crawford Market (Bombay). A feature of the plant mentioned last is that it has a number of small chambers which are hired out at

small fees either to one individual or to several collectively. This plant also provides for the quick-freezing of fish.

Several ice factories have been set up with the help given by the Department in releasing machinery, building material, etc. This has obviated the need for obtaining ice from remote centres in the City. The existence of two ice factories and one cold storage plant at the Sassoon Dock is a welcome facility to the fishermen who are now able to store catches at any hour of the day or night when retail vendors are not on the spot.

As there is still a great need for the extension of refrigerating facilities the Government have imported machinery from the U.S.A. for two ten ton and one eighteen ton ice-making plant in addition to cold storage and quick-freezing equipment.

FISH CURING

The control of the fish curing yards was transferred to the Department of Industries on July 1, 1936, prior to which they were administered by the Salt Department of the Government of India. There are 34 such yards in Bombay, 20 in the Ratnagiri District and 14 in the Kanara District. At these yards duty-free salt is stored in salt kothars from where it is issued to fish curers to cure fish.

Since the transfer of the yards the Fisheries Department has been devoting special attention to effecting improvements in the methods of curing. Cement concrete platforms were constructed at the Karwar yard for curing fish. The fishermen have realised the advantages resulting from such platforms, with the result that the fishermen at other yards have approached the Department for similar platforms at their own yards. As a result of this, cement concrete platforms have been provided at Harwada in the Kanara District, and Mirkarwada, Ratnagiri and Malwan in the Ratnagiri District.

To demonstrate improved methods of curing fish, the Department also constructed model fish curing sheds with cement concrete floors and Mangalore tiled roofs which will replace the present thatched sheds and sandy floors. This step will ensure the curing of fish in accordance with sanitary principles and increase the food value of the cured fish.

Smoking of fish is another method of preserving fish which has recently been introduced.

CO-OPERATIVE SOCIETIES

The value of co-operative societies cannot be gainsaid. And as a result of vigorous propaganda several co-operative societies of fishermen have come into existence at Binga, Ankola, Nandangad and Kodibag in the Kanara District, Bagmundla, Venguria, Jaitapur, Vijaydurga and Shiroda in the Ratnagiri District, Satpati, Murbe, Kharekuran, Shirgaon and Uttan in the Thana District, Danda in Bombay Suburban and Lower Colaba in Bombay City. These Societies will receive Government help for the acquisition of motor launches, trucks, ice plant and also financial help in the form of loan or subsidy.

Allied to co-operation are the fishery schools, of which four have been established at Ratnagiri, Karwar, Ankola and Satpat. The growing attendance at these schools is proof that they meet a long-felt need. Steps have also been taken to establish six more schools—at Kolak and Umarsadi in Surat, Jaitapur, Mithbho and Deobag in Ratnagiri and Majah in Kanara.

Five other items which need to be mentioned are the fisheries information bureau, the marine aquarium, the fish farm, the marine biological station and technological laboratory at Sassoon Dock and the exploitation of the by-products of the fishing industry. The last item will be dealt with at some length, while the others will be dealt with briefly.

A fisheries information bureau has been set up. The function of this bureau is to collate and supply information connected with the local and other fisheries. The information collected by the bureau is useful to the fishing industry, as it furnishes information not available to them before.

The establishment of marine aquarium has been made possible by a munificent donation of Rs. 2 lacs by Mr. and Mrs. Vicaji D.B. Taraporwala. The Government has accepted the donation and allotted a commanding plot of land for it along the Marine Drive. The scheme has been admitted as a post-war reconstruction measure and it is hoped that the aquarium will be ready in April 1949. A feature of the aquarium will be that the exhibits will include both fresh water and marine forms found along the coast of the Province. In addition, the aquarium will have facilities for marine biological research and investigations.

A scheme for setting up of a fish farm to remedy the lack of precise scientific data regarding the breeding habits of various indigenous and exotic food fishes, their rate of growth, food requirements, etc., has been sanctioned by the Government. The farm which will be established at Khopoli on the Tata tail race is expected to come into existence early next year. A scheme to establish two marine biological stations at Ratnagiri and Karwar respectively has also been sanctioned. This is a part of a five-year plan of post-war development programme involving a capital expenditure of Rs. 2,30,000 and an average annual expenditure of Rs. 73,500.

FISH OILS

A Fisheries Technological Laboratory has been established at Sassoon Docks for conducting research on problems relating to ancillary industries like shark-liver oil, gelatin, glue, fish meal, etc. To ensure quick and clean extraction of oil a sharpie's super centrifuge, a fish liver boiler, and a steam boiler have been imported. A deodorizer will also be installed to eliminate the disagreeable fishy odour of the oil. One piece of work which the Laboratory does is to test samples of shark-liver oil from the public for their vitamin A content, the number of samples so tested average over 300 a year.

The Second World War led to an investigation of the possibilities of the manufacture of oil from shark-livers to replace the dearth of supplies occasioned by the stoppage of imports of Cod-Liver Oil from Norway.

A simple process of oil extraction, not involving the use of any complicated machinery, was devised and demonstrated by the Department to the local fishermen and to the fishermen of Ratnagiri, Jaitapur, Malwan and Shiroda. The demonstrations were largely attended and the fishermen were greatly impressed by the fact that a new occupation and fresh source of income had been opened out to them. As a result of the demonstrations the fishermen earnestly took up the work of oil extraction and have regularly been sending to the Fisheries Department oil extracted by them. This is refined by the Department and later sold to chemists in Bombay.

During 1946-47 the output of neat shark-liver oil delivered to the Department was 3,000 gallons with an average vitamin A potency of 15,000 International Units per gramme. The oil when processed was capable of yielding 400,000 lb. of Oleum vitaminum of B.P. standard. Besides this there is the oil disposed of by the fishermen directly which will not be less than 1,500 gallons. This is how the year's (1946-47) supplies were disposed of: 1. 1,967 gallons of neat oil with an average vitamin 'A' potency of 20,000 International Units per gramme and valued at Rs. 46,612 was supplied to the Haffkine Institute, 2. of the 2,246 gallons of shark-liver oil (B.P. standard) half was supplied to civil surgeons of Government

hospitals in and outside the Bombay Province 3. 4,860 ten oz. bottles of shark-liver oil, Bombay Brand were sold to the public, 4. The Department has also put on the market shark-liver oil in a concentrated form under the name of 'Elasmin'. A small quantity of neat shark-liver oil was supplied to the medical profession for dressing wounds and to industrial concerns for curing leather and tempering steel.

The technique of the manufacture of shark-liver oil is capable of great improvement, especially in the matter of extraction, refinement and processing of the product. The value of training in the West for this purpose cannot be gainsaid, for the shark-liver oil industry is likely to play an even larger part than hitherto in the country's fishing industry. For this purpose the Government got one of the Superintendents trained at the British Cod Liver Oil Producers in Hull. The training acquired by the Superintendent is proving very helpful.

The superiority of Bombay's shark-liver oil over other varieties is unquestioned. Oils from *Carcharias melanopterus* and *Pristis perotteti*, for instance, yielded a vitamin A potency of 140,000 and 40,000 international units per gramme respectively. This is many times more potent than cod-liver oil which, according to the British Pharmacopoeia standard, is between 500 and 1,500 international units per gramme.

Cochin State

THE maritime State of Cochin, South India, has three types of fisheries, namely, marine, estuarine and freshwater. Its 35 mile coastline includes 19,700 acres of backwater abounding in different varieties of fish, brought in through the natural openings in Cochin and Cranganore. Thanks to the heavy monsoon months bearing down rich feed from the mountain and forest tracts of the interior, the State has her best sea-fishing during the rainy half of the year.

Marine and Estuarine Fishing.—The State has over 800 sea-going boats which bring in on an average 24 lakhs maunds of fish every year, consisting of Sardine and Mackerel (through gillnets), miscellaneous varieties like butter fish, ribbon fish, sole fish, silver bellies and horse mackerel (caught by boat-seine) and sharks, rays, seer and other bigger varieties (by hauling).

The bulk of the monsoon catch is needed to meet the demand within the State itself, while a fraction is salt-cured and exported to the markets of Travancore and other parts of the sub-continent. The annual export trade in cured fish amounts to about Rs. 5 lakhs per year.

Prawn Fishing.—The sea, the extensive lagoons and the paddy lands on the coast produce various types of prawn during different parts of the year. All the varieties are nourishing and tasty. Before the war Burma in general and Rangoon in particular used to provide the best market for hard-dried prawn pulp from the State, the annual export amounting to Rs. 15 lakhs. The Department of Fisheries has now resources for preserving prawns in air-tight tins which keep the product well preserved for periods ranging from 8 months to one year.

In the post-war era it is quite likely that the State's rich crop of prawns may form raw materials for building up a canning industry within the State.

Preservation.—Salt curing is the most widespread and perhaps the only preservation process which is dependent on the sun. Artificial drying or dehydration is generally resorted to during the monsoon. Smoking of fish is also encouraged as there is a demand for this. The Department has devised a plan for using smoke and heat from a common oven for smoking and dehydrating separate lots of fish in different chambers.

Fish Oil Industry.—Shark-liver oil and Ray-liver oil are now being produced by the Department. The hammer-heads and saw fishes are famous for the healing qualities of their oil, particularly in ophthalmic and pulmonary troubles. Shark-liver oil which has a very high percentage of Vitamin A has an exceedingly good market in the State. The cruder form of this oil is used for caulking boats and polishing leather. The stearin is made into insecticidal soaps and lotions.

Shell Fish Industry.—This industry is confined to the collection of little heaps of shells washed ashore. Shells are calcined in kilns to produce lime as a cottage industry. Near Wellington Island in the State, oysters are available, their meat being used as a specific in wasting diseases and also as a delicacy. The Fishery Department is now exploring the possibilities of making face powder out of oyster shells.

Fish Farming.—Estuarine fish farming is another contribution made by the Department in the development of the fishing industry. A

splendid ground for the culture of mugilis and milk fish has been discovered by transforming the unused land for paddy or coconut into a sort of nursery. Separate areas for fishes such as the Bekhti, the Indian salmon and Jew Fish which appeal to the sporting angler and the eater alike, are also marked and planned for systematic operations.

Deep Sea Fishing.—The State is working on a scheme for the operation of the boat-seine of Malabar with the basal platforms of net for mackerel; and of drift nets and hook and line

for bigger fishes like seer, chornimus, rays and sharks.

The socio-economic activities of the Department are directed towards the liquidation of illiteracy amongst fishermen, by establishing five fishery schools manned by teachers from the fisher community trained in fisheries technique. Canals and roads for facilitating transport of fish are also being opened by the Department. Co-operative Societies have also been established and are being under the auspices of the Department.

Hyderabad (Deccan)

THE Hyderabad Fisheries Department was established in 1941. Since then investigations and preliminary surveys of many tanks and reservoirs have been carried out and about 100 varieties of fishes have been collected.

The chief sources of fish are the perennial rivers Godavari, Kistna and Manjira, but their tributaries are not so useful as most of them dry up during the summer. There are also many big reservoirs and more than 35,000 big tanks besides thousands of small ones, in which fishing is done.

Murrel is the most common and popular fish and it is obtained in large numbers during the hot season. But there is always a scarcity during the other parts of the year.

Breeding and culture of fishes is the most important part of the work, which is done by the Fisheries Department. Fish-farms where besides indigenous fishes, other fishes like Gourami, Etropus and Mullet are kept for breeding, are being established in certain parts of the State. Hosainsagar fish-farm, for instance, is already functioning; and three others in Nizamabad, Medak and Atraf-e-Balda are under way. In the near future, fishfarms will be opened in other Districts too. The stocking of tanks has also started and a large number of them have already been stocked with fingerlings of fishes to increase production.

Madras

THE Madras Coast line of 1,750 miles is margined by a shallow-water area within the 100 fathom line of 40,000 square miles; outside of the mere fringe inshore, this vast expanse of fishable water lies idle and unproductive. The surf-swept East Coast is singularly deficient in harbours whereon fishing fleets can be based, and so from Ganjam to Negapatam, the unsinkable catamaran, composed of logs tied side by side is the only possible easy-going fishing-craft. Its limitations circumscribe the fishing power of its owners and consequently these men are poor and the produce of their best efforts meagre compared with what it would be if better and larger boats were available and possible.

The West Coast is more favoured and contributes to more than three-fourths of the total landings of sea fish in the Province. From September till April weather con

Besides breeding and culture the Department is concerned with improving the technique of fishing. Deep-water netting, for instance, has been introduced in one of the reservoirs as an experimental measure and if successful it will be extended to other reservoirs in the near future. An item in the post-war programme is the preservation of fish through refrigeration.

Incidentally the Fisheries Department is helping the Health Department to fight malaria with larvicidal fishes as at Trimalapur in the Nizamabad District.

The Fisheries Department is active not only on the production side but also on the marketing side. It supplies the Hyderabad city market with fish in conjunction with the Hyderabad Co-operative Central Trading Society, Ltd. The needs of the District, however, are not overlooked for it is only the fish which are in excess of the needs of the District that are being sent to the City. The money for the purchase of the fish is provided by the Department but part of the idea is to encourage the growth of co-operative enterprise. The ultimate object is to entrust the whole work of supply as well as of sale to the Co-operative Society. With this end in view Societies are being formed in the Districts, and tanks instead of being given to individuals are now being leased out to these Societies on nominal payments.

good enough to permit even dugout canoes to fish daily. No difficulty is found in beaching canoes and boats throughout this season.

The fishing population is a large one. In the census taken by the Department of Fisheries in 1930-31, the fisher-population on the West Coast totalled 135,294.

Kinds of Fish.—During 1946-47 46,76,701 maunds of fish were landed on the West Coast, which important varieties were as follows:—Mackerel 26,29,645 maunds valued at Rs. 1,17,12,485.

Silver-bellies 2,87,935 maunds valued at Rs. 12,16,471.

Soles 2,30,281 maunds valued at Rs. 5,48,57. Prawns 1,69,594 maunds valued at Rs. 6,42,66. Gogglers 1,16,123 maunds valued at Rs. 3,45,09. Catfishes 77,729 maunds valued at Rs. 6,02,86.

Ribbon-fish 47,402 maunds valued at Rs. 2,14,903. Sharks 44,614 maunds valued at Rs. 3,52,683. White sardines 33,488 maunds valued at Rs. 97,252.

On the East Coast Sardines, White-bait, Ribbon fish, Jew fish, Prawns, Catfish, Pomfret and Seer form the bulk of the fishery.

Fishing on both coasts is mainly by seine nets, drift nets and wall nets and also by hooks and lines. The most common craft used are the dug out canoe on the West Coast and the Catamaran and masula boat on the East Coast. Fishing outside the 5 fathom line is little in evidence save by Bombay boats (Ratnagiri) which are engaged in drift netting for bonito, seer and other medium-sized fishes. These strangers are enterprising fishers and bring large catches into Malpe and Mangalore and other convenient centres: the material is largely cured for export.

The Department.—As Government attention has been given in Madras over a longer period to the improvement of fisheries, and a larger staff concentrated upon the problems involved than elsewhere, this Presidency has now the proud position of knowing that her fisheries and collateral industries are better organised and more progressive than those in other provinces. It was in 1907 that a fisheries bureau was created. Later it developed into a separate Department of Government. It now forms part of the Department of Industries and Commerce.

The activities of the Department are so varied that it is difficult even to enumerate them in the space available, much less to give details. So far its most notable success has been the reform of manufacturing processes in the fish-oil trade, and the opening of an oyster farm conducted under hygienic conditions.

Madras practically led the way in developing the shark-liver oil industry in the country. Oil from a South Indian shark-liver is ascertained to be about thirty-five times richer in Vitamin A than an average sample of medicinal cod-liver oil. When cod-liver oil could not be imported in any quantity during the war, an opportunity was provided for developing an indigenous industry for the production of fish liver oil rich in Vitamin A, and also for manufacturing malt extracts and emulsions and various preparations of this kind. The manufacture of shark-liver oil is undertaken at the fish curing yards and oil extraction centres and in 1946-47, 8,399 gallons of crude oil were manufactured and sent to the Government Oil Factory, Calicut, for purification and blending. The amount of refined oil manufactured was 11,343 gallons and the amount sold was 9,400 gallons in 1946-47. The product, both in the blended and standardised bulk form and in the vitamin concentrated form of 'Adamin' has stood its test very well and is acting a useful post-war stabilisation.

Fish Curing.—Fish curing is practised extensively everywhere on the Madras coasts: its present success is due primarily to Dr. Francis Day who, after an investigation during

1869-71 of the fisheries of the whole of the sub-continent, pressed for the grant to fishermen of duty-free salt for curing purposes within fenced enclosures. His salt suggestions were accepted by the Madras Government, and from 1882 a gradually increasing number of yards or bounded enclosures were opened at which powdered salt is issued as and when necessary to the curers. At present there are 112 fish curing yards scattered along the coast. During the year 1946-47, 24,72,305 maunds of fresh fish were brought to these yards for curing and 3,84,664 maunds of salt were issued for the purpose.

Besides salt curing, the department started, in 1944, the smoking of fish, mainly for supplying the Army. During the year 1944-45, 124,320 lbs. of smoked mackerel, pomfret and seer were supplied to the Army and 5,382 lbs. to the civilian population, from the seven centres of production. The supply to the Army has since been stopped and at present smoking of fish is done on a small scale at the Fisheries Technological Station, Calicut, where researches on the efficient and economic methods of preserving and transporting fish are being carried out.

Two fish factories for processing prawns are subsidised by the Indian Council of Agricultural Research; they manufacture semi-dried prawns from inland lakes.

Pearl Fisheries.—Off the coasts of Tinnevely and Ramnad Districts of the Presidency lie the valuable pearl oyster beds which, owing to a complex of causes yield at long intervals, an irregular supply of the oysters. With a view to elucidating and controlling the fluctuations to the best advantage, the life history of the oyster with correlation to oceanographic factors is studied by the Marine Biological Section of the Department. The rearing of pearl oysters in captivity, started in 1933 at the Krusadal Biological Station, Pambur has been very successful and a highly promising technique of pearl production by artificial inducement is being developed here. During 1946-47 the stock of Oysters at Krusadal were replenished with 1,000 Oysters from the Tuticorin banks.

Allied to the Pearl fisheries are the Chank fisheries of the maritime districts, both being crown monopolies. Besides the precious sacred chanks, the ablation chanks and Poofa conches, lakhs of chank shells feeding the flourishing chank ornament industry in the north come mostly from the seas of this Province. A total of 569,663 chanks were fished during the year 1945-46. Experiments in marking chanks started in 1931 to study the rate of growth and migration of the chank in its natural haunt is continuing and up to 30th June 1946, 5,374 chanks have been marked and liberated.

The Marine Aquarium.—Perhaps a word is necessary about the Marine Aquarium at Madras. Ever since its opening, being the first institution of its kind in Asia, it has been immensely popular with the public. On account of war emergency, the Marine Aquarium was closed on 8th March 1942. The immediate opening of a larger Aquarium on more up to date lines is now under consideration.

Deep Sea Fishing.—It is now agreed that Indian fishing requires improvements so as to cover more of ground as well as of catch. The survey of deep sea fisheries by the trawler "Lady Goschen," though brief, disclosed the existence of important off-shore fisheries unsuspected before. The wealth of fish off Negapatnam reported by the trawler was of sufficient importance to attract the notice of Japanese fishermen thousands of miles away. Even then it was realised that if Madras was to benefit by the survey, the allied duty of enabling the local fishermen to exploit the off-shore fishing grounds by suitable craft and tackle must be shouldered by the Department.

In 1944, the Department initiated deep sea fishing operations in different centres in the Presidency, mainly to augment the output of sharks to feed the growing shark-liver oil industry and also to demonstrate off-shore fishing. The operations resulted in a catch of about 9,000 maunds of fish in 1946-47. Meanwhile in December 1945, a new fishing method had been attempted, viz., schooner fishing. The Pearl Fishery Inspection Vessel, "Lady Nicholson" was engaged in off-shore fishing with handlines and longlines and took four local fishing boats on tow. The catches made during the 4 months of the trial were 29,549 lbs. of fish. Further experiments are under way. The Department has acquired 8 motor fishing vessels from the Navy and they are now operating at Vizagapatnam, Cocanada, Madras, Adihampatnam, Pamban, Tuticorin, Calicut and Mangalore.

A special craft and tackle section has been opened to devise, demonstrate and popularise improved fishing methods for different types of water, including inland waters.

The Inland Fisheries.—The fisheries of the numerous, extensive backwaters along the coastal belt of the Peninsula, the various rivers and the innumerable irrigation tanks, wells, canals, artificial reservoirs, natural lakes and domestic ponds distributed all over the land are of considerable magnitude, though in several cases the non-perennial nature of the water causes their fisheries to be ignored except during the summer drought when the streams shrink to pools and the tanks to puddles and the owners or the lessees of the fishing rights turn out to catch fish. The major waters are, however, provincialised, and their fisheries systematically developed and exploited directly or through a lease system. With a view to conserving fish seed, great congregations of breeder carps and their young below the Mettur Dam on the Cauvery and her tributaries, of spawning Hilsa below the anicuts in the Godavari, the Kistna, the Cauvery and the Coleeroon rivers and of immature mullets in the coastal backwaters, are protected by legislation against their indiscriminate capture. Destructive methods of fishing such as poisoning, dynamiting, etc., are also penalised.

The chief freshwater fishes of economic importance are the ubiquitous Murrel (*Ophicephalus striatus*, *O. muridus*, etc.) notable for its ability to live for a considerable period

out of water, the various carps (*Catla catla*, *Cirrhina cirrhosa*, *C. reba*, *Labeo calbasu*, *L. fimbriatus*, *L. kontius*, *Barbus dubius*, *B. carnaticus* and the well known favourite of sportsmen in India, the Mahseers), the catfishes (*Wallagonia attu*, *Mystus seengala*, *M. aor*, *M. punctatus*, *Pangasius pangasius*, *Clarias magur*, *Saccobranchius fossilis*, *Silonia silindia* the eel (*Anguilla*) the spiny eels (*Mastacembelus* spp.), *Notopterus notopterus*, the climbing perch (*Anabas scandens*) and the Hilsa (*Hilsa ilisha*). To these have been added a number of valuable exotic fish which have been successfully acclimatised to the waters of the Province. Thus the giant Gourami, acclaimed as the best freshwater table fish in the world has been introduced from Java and successfully reared and bred in the Departmental farms from where it has been distributed to Bombay, E. and W. Bengal, the E. and W. Punjab and other places. In the Nilgiris the English Carp, the Tench and the Rainbow Trout have been acclimatised and thrive well. The Government working in conjunction with the Nilgiri Game Association maintain a hatchery at Avalanche where quantities of trout fry are hatched and reared for replenishment of the streams of the plateau. The Mirror Carp which was introduced from Newara Eliya, Ceylon, in 1939, is thriving well in the Nilgiris and is now extensively used for stocking other upland waters of the Presidency. From Madras it has now been distributed to Bangalore, Bombay and the Kumaon Hills in the United Provinces. Semi-exotic forms like the Rohu (*Labeo rohita*) and the Mrigal (*Cirrhina mrigala*) have been recently introduced from the delta of the Ganga. The attempts of the Department to introduce Catla, the quick growing carp, into the Cauvery river were successful and this fish which was unknown to the South of the Kistna is now established in the Cauvery System.

Methodical attempts to augment the stock by local fingerling collection and distribution, acclimatisation of salt water forms like the mullets (*Mugil spp.*), the Pearlspot (*Etroplus suratensis*), the milkfish (*Chanos chanos*), the cock-up (*Lates*), etc., and hatchery operations for Hilsa, carps and the Trout have all been very successful in the building up of the Inland Fisheries of the Province.

Research.—In addition to the existing departmental fish farms, a fresh scheme of District Rural Fishery Demonstration has been put in operation in all the districts for a systematic survey and utilisation of every piece of cultivable water for aquaculture and, through Demonstration Fish Farms to educate the ryots and make them interested in fish farming as well as to maintain and distribute fish seed.

For the biological control of "water-borne" diseases like malaria, filariasis and guinea worm, small mosquito-cidal and cyclopsicidal fishes are collected, reared and distributed in thousands to municipalities and other local authorities at a nominal price for introduction into mosquito-haunted sheets of water; these anti-malarial operations have proved successful in places where the local authorities have given proper attention to the directions issued.

Marine Biological Research with special reference to applied fisheries Science is being carried at the three Research Stations, one on the West Coast at West Hill and the other two on the East Coast at Tuticorin and Krusadal. Krusadal is a small coral islet situated near the island of Rameswaram and has been popularly called the "Biologists Paradise". Every year biology students from various institutions in India frequent this station for field studies. Investigations on the occurrence, migrations, feeding and spawning habits and development of the various food fishes as also the physico-chemical factors which influence their life are being carried out in all the three stations. Research on the life history of the Pearl Oyster and Chank is an important item of work at Krusadal and Tuticorin. Experiments are also being conducted at the Krusadal biological station in the culture of pearls under controlled conditions.

An estuarine research station has been set up at Ennore, near Madras to study important fishes like Mullet, Bektli and Threadfin which generally frequent the estuaries.

The Inland fisheries of Madras had also long been without a regular research section. After an experimental stage in Rural Pisciculture a regular Freshwater Biological Research Station, the first and only one of its kind in India, has been opened in Madras since 1942, with a subsidy from the Indian Council of Agricultural Research. The work of the station is directed towards investigating the bionomics, feeding and breeding habits and biometry of the important food fishes of the Province and the varied aspects of Ecology and Hydrology with a view to determining and promote the optimum conditions of maximum fish production. Two special wings, one Hydrological and the other Phytological have been added to the Research station for special attention to physico-chemico and floral studies towards the increase of aquatic productivity and the solution of pollution problems. The foundation stone of the new Hydrobiological Laboratories proposed for the Station was laid by Dr. Rajendra Prasad on May 13, 1947.

Welfare Work.—A remarkable feature in the work of the Madras Fisheries Department is the energy which it devotes to the improvement of the condition of the fisherfolk. On Sir Frederick Nicholson's initiative, the Department has always recognised the duty of spreading among them education and the habits of thrift, temperance and co-operation. The work has been specially successful on the West Coast. The number of fishermen's co-operative societies in 1944-45 on the West Coast was 59.

The Committee on Fisheries recommended that all co-operative work among fishermen both on the West and East Coasts in the Presidency should be done by the Fisheries Department and that, on the analogy of the system in vogue in the Labour Department, staff

of Inspectors of Co-operative Societies should work under the Fisheries Department, the Co-operative Department supplying trained Inspectors and auditing the books of the societies. The Government partially accepted the recommendations and sanctioned the deputation of a Registrar of Co-operative Societies and Inspectors for exclusive work among fishermen under the department.

To promote the education of fisherfolk, the department runs a number of schools for fish children where free education and midday meals are given. There are at present 60 Fisher schools with a strength of over 10,000 pupils. A unique feature of this movement is a Fisher's Technical High School, which is perhaps the only one of its kind in India.

While these service institutions of the department have been catering to the needs mainly of the marine fishermen, the diffused distribution of the inland fishermen has been one of the difficulties in the way of equally rapid progress in their rehabilitation work. Preparatory statistics of inland fisherfolk are however, being collected.

The educational work of the Department is becoming one of its most important branches. Training men in the technology of curing, manufacture, etc., in co-operative propaganda and in general fisheries Science. In the past Fisheries Officers of most Provinces and State have received training in the Madras Fisheries. Till very recently the Fisheries Training Institution in Madras, under the subsidy of the Government of India, trained batches of graduates and post-graduates in an half-yearly course of general fishery work, while a Popular Short Term Course trains interested persons in the art of fish farming, to enable them to run private farms on efficient lines. Arrangements are made for the training of skilled workers at the Marine Fisheries Technological Institute Tuticorin while Fisheries Technology has been included in the subjects taught in the Polytechnic recently opened at Cocanada. The Fisheries Station at Ennore supplies zoological specimens for the use of college classes and museums and is contributing materially to the advancement of the study of Zoology throughout India.

A Fisheries Information Bureau has recently been set up by the Department to disseminate information on all fishery matters, to answer enquiries and for popularising scientific methods of fish farming, production, exploitation and utilization. Besides, the Bureau maintains a Central Fisheries Museum and a well equipped Library. A Fishery Marketing Unit has been opened recently with a view to effecting a speedy survey of the existing marketing conditions of fish and fishery products, to draw up a working plan for the rational utilisation and equitable distribution of the produce assuring a fair return to the producer and to arrange necessary transport facilities, by road, rail and water.

Mysore State

THE Fisheries Section in Mysore is an adjunct to the Department of Veterinary and Animal Husbandry Services and was started in 1940. A survey of the fisheries of the State was first of all undertaken with a view to studying the existing condition of the fisheries, i.e., the extent of fishing done at present, and the scope for the improvement of the fishing industry.

Fisheries development work, namely the adoption of conservation measures, the establishment of fish-sanctuaries and the stocking of tanks and river with good species of food fishes has been organised in three suitable areas of the State. They are Shimoga, Krishnarajasagar and Kolar Fishery Divisions. Results achieved have been sufficiently striking to justify expansion of the scope of the work to the whole State.

Two Fish Farms have been established one at Markonahalli and the other at Markandeya

where fishery investigations are being carried out. Three varieties, viz., Catla, Pearlsplit and Gowrami were first introduced into the nursery ponds of these farms and after sufficient rearing disseminated into selected fisheries of the State. The varieties have well acclimatised themselves and have bred in the reservoirs and spread themselves over certain areas. These results are highly satisfactory and justify large scale stocking operations.

Mysore State is also noted for its game fishing resources. The famous large carp "Masheer" is the main game variety. Measures are being devised to conserve and develop game fisheries in the State.

The Fisheries Department today has two objects in view: one is to effect proper conservation on scientific lines, so as to increase production of food fishes and the other is to ameliorate the economic condition of the fishermen of the State.

Orissa

THE fishery wealth of Orissa is enormous. The East Coast line, the Chilka lake and large areas of inland waters yield all the 3 types of fish, i.e. (i) marine, (ii) estuarine, (iii) inland.

(i) *Marine*.—Due to lack of communication facilities, the fishing is scattered along the sea coast, the most important fishing centres being Chandbali, Chandipur, Talpada, Puri, Arvilpali, Gopalpur, Markandi and Sonapur. Fish is consumed locally, the surplus being simply sun-dried or salted. Whitebait, sardine, mackerel, seer, hilsa and pomfrets, are the principal varieties. 12 fish curing yards in Orissa which used to provide duty free salt to fishermen are to be converted since the abolition of duty on salt to centres for demonstration of better fish curing methods.

Catamarans are used throughout the year, the sea being too rough for larger boats. Podows, i.e., country boats, are used in winter for the shore-seine net. Fishing gear employed are hooks and lines, drift nets, drag nets and seines of crude types. These are made locally. Middlemen control the fishery although there are some co-operative societies.

Lack of harbour and cold storage facilities and capital to introduce better fishing methods make improvement of marine fisheries a very difficult problem. The standard of living of the sea-fisherman is extremely low and calls for improvement. In some fishing centres the fishermen live on fish alone for days together. Improvement of the financial position of the co-operative societies, legislation limiting the middle men's activities, establishment of fishery schools are some of the measures which Government has to take.

(ii) *Estuarine*.—The Chilka lake forms a compact fishing area and yields extremely tasty fish and prawns. The lake is leased out by Zamindars to merchants who have built up an organised fishing industry. The export averages 50,000 mds. per annum and consists of mullets, bhakti, pomfrets, mackerel, Indian salmon, etc. The fish is packed in ice and exported mainly to Calcutta. Other estuarine fishing centres are Kirtanlakhati, Kujang, Chowmuhan and

Sonapur. Lately, due to intensive fishing, there has been a scarcity of adult-sized fish in the Chilka lake. Problems of controlling the mesh of nets after studying the life history of important fishes are under consideration of the I.C.A.R. and the Government. Prohibition of indiscriminate fishing, killing of immature fish, observance of close season, etc., are post-war problems to be tackled. An estuarine biological station is being established at Balugam and the trade has to a great extent been diverted to Co-operative Societies bringing in considerable profit to the fishermen.

(iii) *Inland*.—The rivers and tanks form a great potential source of fishing though Hilsa in Orissa is not as tasteful as that in the Ganges. Rohee, catla and mirgala are the economic species. These breed only in rivers and in large bunds which resemble rivers, during rains as in the Sambalpur District. Collection of fry is carried on every year in Balasore, Cuttack and Sambalpur. An organised fry trade exists in Lakhanath in the Balasore District. Government fry distribution supplies 20 centres and the supply which used to average 2,00,000 fingerlings annually has been raised to 15,00,000.

The fisheries are owned mostly by private individuals. Government fisheries are controlled by the Revenue Department. Although people realise that pisciculture is profitable, the multiple owners of water areas prevent active development. The activities of the Fishery Department have been confined to propaganda which, without executive authority, have not led to appreciable results. The prohibition of killing of fry in canals, paddy fields, etc., by legislation and of letting of sewage into inland waters, the construction of dams with fish ladders and the placing of Government fisheries under the control of the Fisheries Department are under contemplation. The post-war inland fisheries development scheme now in operation envisages rapid cleaning and stocking of tanks by forming co-operative fish farms. 10 such farms are now in operation on the results of which would depend the large scale adoption of establishment of collective fish farms.

Punjab (East and West)

THIS is the first full year of the work of the reorganized Fisheries Section of the Agricultural Department. On the staff are a Warden of Fisheries, four Deputy Wardens, 29 Assistant Wardens, Fisheries and 125 Fisheries Watchers. There is also a Fisheries Research Officer with a small staff to conduct Research on Fisheries.

The section has been provided with a Government lorry, a driver and a cleaner to facilitate transport of fry from the fry farms to the fish farms and the young fish from the fish farms to the streams and rivers.

The activities of the Fisheries Department have been directed to:—1. Conservation, comprising conservation by (i) Legislation, (ii) Providing fish ladders at the Canal Headworks, (iii) Creating fish sanctuaries (iv) Eradication of fish enemies. 2. Culture and propagation, comprising (i) Culture of exotic species e.g. Trout etc. (ii) Culture of indigenous species e.g. Carp etc. 3. Marketing and exploitation, comprising (i) Survey of rivers (ii) Improvement of socio-economic condition of fishermen (iii) Marketing of fish. 4. Miscellaneous, comprising (i) Propaganda and (ii) Anti-Malarial Activities.

CONSERVATION

The number of fishing licences issued during the year was 11,620 as compared with 10,724 of the last year. The increase is due to expansion of watch and ward staff and activities of the newly appointed staff of Assistant Wardens.

The number of netting licences and their fishing licence fee in the Kulu valley remained restricted as it was in 1944-45.

The receipts from Fisheries in 1945-46 amounted to Rs. 1,98,234 as compared with Rs. 1,81,394 in 1944-45.

The total number of fishing offences reported during 1945 was 436 as compared with 331 in 1944.

The catches of fishermen were satisfactory in all the districts. Some of the Fish Ladders were not working satisfactorily. (The working of the Fish Ladders was discussed with the Executive Engineers concerned who made suggestions for their proper functioning.)

No violation of rules in the sanctuaries has been reported and the fish are progressing satisfactorily except in Machiali Stream and Bheral in the Palampur Tehsil of Kangra district which have been silted up. The restriction on fishing near the bridges as a war measure was removed under Punjab Government Notification No. 3643-Agr., dated 20-11-45.

CULTURE AND PROPAGATION

There are at present 12 natural rearing ponds in Kulu Valley. The growth of fry in these ponds is extraordinarily rapid. Some of them are grown 3 times more than those kept at the hatchery.

The stripping of Brown Trout commenced towards the end of 1945. 71 female fish were stripped yielding 1,24,000 ova. After fertilisation 85,230 became eyed and 60,000 of them were planted in the different rivers and streams in Kulu Valley, and 25,230 were allowed to hatch at the farms. Out of this number 21,000 hatched successfully and were also planted in various streams keeping about 1,000 at the farms.

82 angling licences were issued in Kulu waters during the year under report as against 137 of last year. The decrease is due to the fact that very few anglers visited the valley on account of heavy floods which occurred during July and August 1944 and caused deterioration of trout fishing.

Trout in the Paber and Baspa rivers in Basahar State are flourishing. Due to the remoteness of the streams only one angler came to fish in the Baspa River during 1945-46 and he caught 10 fishes varying from 14" to 20" in size.

The carp does not usually spawn in confined waters but having refused to spawn in the Chhenawan fish farm tanks for a number of years, they have begun to spawn there during the last three years at the time of heavy rains and floods. Eggs were laid this year on the flooded banks of the tanks and not in the field. These eggs were collected and put in other ponds for hatching in the Khori tank. The carp also spawned and the fry attaining a size of 6-8 inches within four months and were then successfully transferred for stocking other ponds. Spawning also took place at various other places and the eggs were collected for stocking different ponds. 73 spawning grounds have so far been located in the various districts in the Province.

Fry Farms.—The number of fry farms so far established is 73. Most of these fry farms are the pools left in the spawning grounds where fry collect after the flood subsides. In addition, controlled, fry farms have also been established in some districts. 3,800 fry were supplied, free of cost to the Manager, Khassa Distillery at Anritsar, who has a large tank and also to the B.C.G.A. Farms tank at Khanawal. Transport, however, was charged.

Village ponds are also now being stocked with fish. The total number of such village ponds, which have been leased by Government for fish propagation, is 78, and all have been stocked with fish.

The total number of fish farms so far established in the fish consuming districts is 30. Most of these fish farms are large permanent tanks and are mostly rain-fed, while a dozen or so are Canal-fed, and two of them near Batala are kept filled with water by means of a tube-wall. The Shernsher Khan Tank at Batala is fully stocked with fish and licences are issued for fishing purposes. 199 licences were issued this year for fishing in this tank, and the Anglers caught 1,195 fish.

The number of tanks stocked during the year was 46 and the number of carp fry planted in them was 52,526. The transport of fry from the fish farms to the fish farms was done in oxygen carriers over long distances in the Government lorry. Sales of fish from such tanks have commenced.

Salvage of fry in the drying pools after floods is an important function of the section. If such fry is not salvaged after floods they perish. 1,17,874 such carp fry were salvaged during 1945-46 and put into other tanks and shallow streams.

MARKETING AND EXPLOITATION

The Fisheries staff has completed survey of all the rivers and streams in their jurisdiction.

At present there are about 6 credit and co-operative societies in Gurdaspur and Hoshiarpur districts but only a very small percentage of fishermen have joined. In the remaining districts there are no such societies. Efforts are being made to open credit and supply societies throughout the licence issuing districts. Some difficulty has been felt by fishermen in obtaining the necessary amount of yarn to make nets or to mend their old ones. The department has been able to get the yarn for the fishermen.

By starting fish farms and stocking of village tanks, etc., it has become possible to establish new markets for the sale of fish. Such fish

markets now exist at Campbellpur, Jhelum, Pind Dadan Khan, Sialkot, Amritsar, Wazirabad, Lahore, Ferozepur, Mianwali, Jullundur, Multan and Sargodha. Efforts are being made to have at least one fish market at the Headquarters of each district. The President and Executive Officers of the Municipal Committees have been requested to undertake the construction of fish markets at suitable places in their jurisdiction.

Although it is difficult to collect exact information regarding the total quantity of fish brought into the markets as fishermen do not give accurate information for fear that their licence fee may be raised, yet whatever information has been collected shows that not less than 46,573 maunds of fish became available for consumption during the year.

Vigorous propaganda is being done by the Fisheries Staff in the villages in connection with the propagation of fish and contact has been made with landlords who have been impressed with the utility of fish culture. The interest of the people to start fish culture has greatly increased and many are looking forward for the supply of fry which will be made available after August, 1946 when the fish have spawned.

The value of Colisa as larvicidal fish is well known. It is being reared at the Government Farm, Chhennawan. 20,000 Colisa were supplied during 1945-46 to the Public Health Department for stocking in ponds situated in localities where malaria fever prevails.

Sind

TAKING into consideration the limited sea-board and the number of fishing villages, Sind has a rich sea fishery.

The fishing grounds are located not only around Karachi, but as far away to the south east as Kutch and towards north as Sonmiani and even Pasni, Ormara, Gwadar up to the Persian Gulf. Vigorous drift net fishing is carried on in the sea-board specially up to 20 fathoms contour line even as far as 120 miles due south of Karachi and an equal distance in the north towards the Persian Gulf for important economic fish like Ghol, Surnial, Sole, Rawas, Chokli, Kargoon, Pitho, Hiro, Sang, Sangro, Glssur, Kanderi, Kar, Llaro, etc., etc.

Extensive fish curing operations were carried on with the duty free coloured salt manufactured in Sind till the day on which the duty on salt was abolished.

A scheme for starting Government fish curing yards has been approved. To begin with 5 yards at Cape Monz, Karachi, Ibrahim Hydri, Sonneri and Mull on the sea coast and one at Buback for fresh water fish in Munchur, Lake have been sanctioned, where curing will be done under Government supervision with clean white duty free salt in cemented tanks under hygienic conditions. Plans are ready for 18-19 yards all along the coast. But owing to financial difficulties and limitations in the P.W.D.'s building capacity only 2 yards are proposed to be constructed this year.

The best market for Sind's dry fish is Colombo, where in the year 1943-44, 95,000 cwt. of dry fish and cured prawns were sold. Fresh fish packed in ice is also exported to up-country places like Simla, Lahore, Peshawar, Rawalpindi, Quetta. In the year 1944-45 about 30,000 mds. of fish were exported to these places.

New Schemes : In August 1944 the Sind Government appointed Dr. M. Ramaswami Naidu of the Madras Fisheries Department as Fisheries Expert with a view to making a survey of the fisheries of this province, both marine and inland, and to examine the possibilities of developing them. In the meantime the following schemes for the development of the fishing industry were prepared by him and submitted to Government.

1. Edible oyster culture and establishment of an oyster park.
2. Development of prawn fishery and manufacture of semi-dried prawns.
3. The establishment of smoke houses for smoking Hilsa and other fishes.
4. The establishment of five Government fish curing yards in the Sind coast for production of good quality cured fish.
5. Establishing the fishing industry and improving the socio-economic conditions of the fisher-folk.
6. The establishment of Hilsa Hatchery and a freshwater fishery research station.

Fisheries

7. The establishment of a Marine Aquarium in Karachi.

8. Deep sea fishing experiments with modern type of power crafts and tackle and introduction of fish carrier launches for expeditious transport of fish.

9. Establishment of demonstration plants for the manufacture of fish manure and fish meal by the utilisation of fish waste and non-economical fish.

10. Establishment of a Marine Biological and Technological station at Karachi.

11. Establishment of an up-to-date wholesale fish market with cold storage and ice packing facilities close to the new fish harbour at Karachi proposed by the Port Trust.

12. State control of the production of shark-liver oil and its other products.

Of the above schemes the first four, the eighth and the twelfth have already been sanctioned by the Government of Sind and are being put into execution.

Of those which are sanctioned one edible oyster park has already been started at Ibrahim Hydri where experiments for the collection of oysters spats and to increase the output of oysters are being conducted.

22 maunds of "semi-dried" prawns were also manufactured. But owing to the unexpected tidal wave disaster which occurred at the height of the prawn fishery season practically two or three fishing settlements along a 40 mile coast were completely destroyed, 113 fisher folk were drowned, and the prawn fishery was adversely affected. Last year the manufacture of semi-dried prawns was carried on a larger scale. Its continuance this year is also sanctioned.

A smoke house for smoking "Palla" (Hilsa) fish has just been completed at Sukkur near the Lloyd Barrage and experiments in smoking Palla fish will be started soon. A few hundreds of "Hilsa" (Indian Shad) were also smoked and sold.

Two motor fishing launches, one 75 footer with 160 H.P. Diesel engine and another 95 footer with 260 H.P. Diesel marine engine, both fitted with a power winch, have just been purchased by the Sind Government from the naval base at Cochin and will be utilized as fish "carriers" to fetch fish caught in distant places in the sea up to the Persian Gulf in the west and Kutch in the South-East, and also probably for deep sea fishing. One of the M.F.V.'s, a 90-footer has been brought to Karachi and is being equipped for fishing with trawl net, and provision for a cork-insulated fish-hold is also made.

A Master Fisherman to demonstrate the modern methods of fishing from rover vessels recruited for the purpose has also arrived here and will soon be starting deep-sea fishing with this vessel.

Besides the above trawler, another steel built 75 foot trawler "Ala" with gear, refrigeration plant, insulated fish-hold, echo sounding machine and wireless, allotted to the Pakistan Dominion has just arrived from Lowestoft (U.K.)

with a European skipper and engineer. This trawler is also proposed to be handed over to the Sind Department of Fisheries for deep-sea fishing experiments; she will be put into commission in one or two weeks.

A Fishermen's Co-operative Purchase and Sale Society has been started at Karachi and is working very well. The Society has exported a first consignment of 1286 cwt. of cured fish to Colombo. The old, undivided Government of India gave this Fishermen's Co-operative Society a special Licence Quota of 18,000 cwt. for the export of dry fish abroad.

Arrangements are being made to instal a cold store for fish at Karachi.

Other schemes for the conservancy and development of freshwater fisheries of the province are under preparation.

Steps have also been taken to improve road communications for expeditious transport of fresh fish from fishing centres to consuming centres.

The important fishing villages in Sind are :—

		Fishing population.
Khudda.	(in Karachi)	3,000
Kaliri.	"	2,500
Diaba Island.	"	2,500
Phit Island.	"	1,600
Ibrahim Hydri.		4,000
Rerhi.		2,000

Besides, there are other less important fishing villages in the deltaic areas of the Sind Coast.

Prawn Fishery.—Seasonal fishery, which commences from the month of November and ends by end of March, is also a very important fishery of this province. On an average 40,000 mds. of cured prawns are exported every year to Colombo and other places.

The important fishing areas for prawn fishery are :—

Kurangi creek
Phiti creek
Kudi creek
Patianni creek
Dhabo creek
Chaan creek

Of the above, Phiti, Patianni and Dhabo creeks are the most prolific among the prawn fishing areas.

The prawns caught in Sind waters belong to a big marine group "Peneidae" which are normally inhabitants of sea but migrate into estuaries of lower salinity in quest of their food which is predominantly diatomaceous in character.

The prawns comprise the following three kinds. The names are naturally in the local language.

1. "Jhalro"	the biggest	5'-9"
2. "Kaliri"	the medium	4'-6"
3. "Kidi"	the small	2'-4"

A good number of sharks (Saw fish, Hammer Head, and several other ordinary sharks) are captured specially during the months of August, September and October and again February and March. One variety, the "Basking" shark

(*Rhynodon typicus*) which grows as large as 60 feet, is occasionally fished with harpoons. Its liver yields a large quantity of oil.

There are at present two private shark-liver oil factories and they are manufacturing a fairly good refined oil, fit for therapeutic purposes which is being marketed both as concentrated (2,000 i.u.s.) and standardised oil (1,600 i.u.s.).

There are two distinct oyster-fisheries in Sind, both present in the creeks which constitute the mouth of the Indus and its network, specially between Karachi and Ketibunder. These are (1) edible oyster and (2) the window-pane oyster which yields pearls. An auction held in the year 1944-45 yielded Rs. 800.

The most popular fish from the Indus is the Pulla or Palloh (the well-known Indian Shad). This is under the control of the Revenue Department who lease out different stretches of the Indus. The Dumbra and other freshwater carps and prawns are other items in the Indus fisheries.

The Hub River which forms the boundary between Sind and Baluchistan, contains the well-known sporting fish—Mahseer (*Barbus*).

Aphanius dispar (*Cyprinodon dispar*-Day) a well-known mosquito larvivorous fish is present in freshwater pools around Karachi and is used to a certain extent to combat malaria.

Travancore

THE Department of Fisheries an independent department is now under the direct control of Government.

The coast line of Travancore is 172 miles long and is margined by a shallow water area, within the 100 fathom line, of nearly 3,900 square miles. Out of this vast expanse of fishable waters, only a distance of 5-7 miles is exploited at present and the value of the industry to the State at present is estimated at Rs. 1,20,00,000 per year. The surf swept coast is singularly deficient in harbours and during the monsoon months the fury of the breakers is a source of great hindrance to fishing. From Cape Comorin to Trivandrum the unsinkable catamarans composed of logs tied side by side is the only possible easy going fishing craft. From Quilon to the northern most boundary of the State, small country made canoes are used and from October to June, when weather conditions are favourable seine nets are extensively employed.

The esteemed table fish of the coast consists of pomfrets, seer fish, several species of horse-mackerel, tunny, Jew fish, whiting, mackerel and thread fins. In economic importance, however, shoal fish and fish of inferior quality such as butter-fish, sardines, white bait and ribbon-fish take precedence. Butter-fish, sardines and prawns are abundant in the northern half of the coast, while cat-fish, white bait and ribbon-fish are predominant in the southern half. This conspicuous difference in the distribution of shoal fish has been found to be mainly due to the differences in the nature of the sea bottom. During favourable seasons, butter-fish, white bait, ribbon-fish and cat-fish are so greatly in excess of the local food requirements that large quantities are salted and dried both for inland consumption and for export. Travancore exports annually about Rs. 53,00,000 worth of salted fish, the greater part of which is sold in the adjoining Tamil districts and Ceylon.

As the important shoal fish are seasonal in their appearance certain months are more favourable for fishing than others. During these favourable seasons large catches are landed daily along the coast and the only method of conservation of the large unsaleable surplus is salting and drying. But realizing that salted fish is devoid of some of the essential properties of fresh fish, the Government opened a refrigerating plant in the metropolises for the preservations and storage of fresh fish.

The Department also succeeded in devising a cheap and efficient method of packing frozen fish for transport over distances within 72 hours by rail. Although, by this means, it was found possible to send frozen fish to all important inland towns in South India, the method did not prove a commercial proposition owing to its high cost and the competition of iced fish from Malabar; consequently it had to be abandoned for the duration of the war. Now there are proposals to work the Cold Storage Plant.

Fish Curing.—The prevalent methods of fish curing being imperfect and very often unhygienic, the salted and dried fish produced in India are usually inferior in quality, which accounts for the low prices they fetch and the limited demand for them. In order to stimulate demand by improving the quality, the Department of Fisheries has prepared a scheme of hygienic methods of curing and experiments on dehydration of fish are in progress.

Shark Liver Oil.—The Department started the manufacture of shark-liver oil in 1939, and the oil is offered in the market under the trade name 'Sharliverol'. The oil is roughly standardized to ensure Vitamin 'A' potency of 8,000-8,000 international units and is sold in the pure form after eliminating traces of free acids and sterine. Since maintenance of a high standard of quality is the guiding principle of the Department, only oil extracted by special methods is used in the manufacture of shark liver oil in order to maintain a high standard of quality and no attempt is made to blend it with cheap vegetable oils. During the last twelve months, about 14,500 lbs. of oil was produced, the greater part of which was exported to British India and Ceylon. Though some degree of success has been achieved in the manufacture of Shark Liver oil, the need for further improvement has not been overlooked. Researches on oil technology and determination of the specific properties of the oil obtained from various species of sharks are in progress in collaboration with the Department of Industrial Chemistry, with a view to improve methods of manufacture and suitable standardization.

The demand for other marine oils has also been steadily increasing. Sardine oil as was very scarce during the past year but it was more or less supplemented by turtle oil and the oil extracted from *Ballista*, popularly known as leather jackets.

Other marine products also came into prominence. The war situation stimulated investigation of the commercial possibilities of some of the common sea weeds found along the coast of Travancore. The extraction of iodine from *Sargossum* and of Agar from *Gracillaria* was attempted by the Department of Industrial Chemistry which undertakes a survey of the distribution of sea weeds, as a result of which the manufacture of Agar Agar has been started on a commercial scale.

Lake Fisheries.—The lake fisheries constitute an important section of the industry. A chain of interconnected lakes extends from the borders of Cochin to Trivandrum. The largest of them is about 30 miles long and ten miles across, at its broadest part. Their greatest advantage is their proximity to the sea and their temporary or permanent communication with the sea, which bring them under tidal influence. Certain varieties of fish and prawns migrate into these lakes periodically either in search of some special type of food or suitable spawning grounds. The most important of these migratory forms is prawn, the annual catch of which is estimated at Rs. 25,00,000, out of which about Rs. 15,00,000 worth of dried prawn pulp was being exported to Burma and Singapore. But after the fall of Burma, the prawn industry was confronted with an unprecedented slump which threatened the economic welfare of a large section of the fishing population who depended mainly on prawn fishing; but the crisis was averted to some extent by discovery of new markets in British India and Ceylon through Departmental propaganda. Experiments were also conducted for improving methods of preservation and for the preparation of new products out of prawn. As a result of these endeavours, a new product called powdered prawn, suitable for making prawn cutlets, chutnies, pastes and curries has been produced and will soon be placed on the market. A better method of preservation which will prolong the keeping qualities from two

months, which is the normal period now, to eight months is also being demonstrated to the public.

Shell Fish Industry.—The shell fish industry of the lakes is now confined mainly to the collection of lime shells from certain regions of two of the major lakes. These supply all the lime required for building purposes in the State and recently a scheme has been drawn up for exploiting these extensive resources for the manufacture of cement.

Large beds of edible oysters are also found in three of the lakes. At present these are not very popular as an article of food but investigations are under progress for culturing them on the same principles as those followed in Europe and for finding out markets for liver oysters outside the State.

While in the rest of India inland fisheries are very unfavourable situated as many of the rivers and tanks dry up in summer, in Travancore fresh water fisheries are a source of perennial fish supply. There are about 120 varieties of fresh water fish, some of which grow to very large size.

Research Activities.—A combined Aquarium and Marine Biological Laboratory was recently completed under the auspices of the University of Travancore. The Aquarium which is one of the largest in Asia is open to the public and the Laboratory, in addition to training students for post-graduate research degrees will also function as a bureau of fisheries.

The Marine Biological station of the Department has so far completed seven pieces of research relating to marine and backwater fisheries, the most noteworthy of which are the "Food habits of the Shoal fishes of the coast," "A survey of the prawn fisheries" and "The causes of spoilage in dried prawns." The department also read three papers at the last session of the Science Congress and contributed a few short notes to the *Current Science*. At present there are five Research Students working in the Marine Biological Laboratory.

United Provinces

FISHERIES investigations in the United Provinces date back to the sixties when Dr. Day, as Inspector General of Fisheries made a survey of the inland fisheries of India. His report on the freshwater fisheries of India (1876) includes replies to his questionnaire to District and Taluq officers in the United Provinces which contain valuable information, most of which still holds good. One of the results of Day's investigation was the enactment of the Government of India Fisheries Act of 1897.

The possibilities of developing fisheries in the U.P. however was for the first time considered by the Government of the U.P. in 1920 in connection with a reference from the Punjab Government about the regulation of fishing in the Jumna. The Government decided to institute an investigation into the possibility of establishing a Fisheries Industry in the U.P.

An inquiry was conducted by Mr. Edye whose report was published in 1923. Despite the general impression that Mr. Edye dealt mainly with sporting fish and not with fish as food for the general public, his investigations

were comprehensive and his recommendations sound. Due to this general misunderstanding resulting from Edye's own imperfect summary of his recommendations in the report and his unrealised hope that extensive imports of sea fish were about to commence which might render the development of inland fisheries unnecessary, no serious attention was paid to his report. The only concrete action taken by Government appears to be with reference to the conservation of the sporting fish Mahseer and Trout in hill streams and the general recommendation to the Municipal and District Boards and to the Co-operative Department to develop local fisheries.

In 1943 as part of the programme for post-war reconstruction and more immediately to provide against the prevailing shortage of food caused by the War, the development of fisheries received consideration. It was, however, felt that exploitation of the fisheries to increase the supply of fish to towns and the Army was the immediate need and should take precedence of fisheries survey, and fisheries research. The Government therefore decided to take immediate

steps to provide a regular, abundant and cheap supply of reasonably good quality fish in the market in Lucknow and in the other important cities. Energetic action was taken by the Government through the Co-operative Department, War Supply staff :—

To improve the existing sources of supply by encouraging market contractors to increase supplies and where this was not possible by directly recruiting fishermen supplying them with boats and nets and intensively fishing rivers, tanks and Jhils, to seek and develop new sources of supply hitherto unexploited.

To improve transport by the provision of ice and refrigeration vans, and

To improve the marketing of fish by direct sale to the public and the Army at equitable rates far below the ruling market prices.

Post-War.—The scheme which was put through at Lucknow, Allahabad, Benares and Naini Tal was extended to other large consuming centres in 18 out of 48 districts. The Government however decided to wind up the marketing scheme by 31st Oct. 1947.

In March 1944 the need for a technical expert was felt and a Fisheries Development Officer was appointed in the Department of Animal Husbandry to help immediately in the proper expansion of the supply scheme which had been launched and ultimately to plan a Scientific Department of Fisheries for the United Provinces.

A comprehensive five years' plan of post-war development was drawn up by the Fisheries Department Officer and has been approved by the Government.

In response to the general demand to grow more food a scheme for stocking as many suitable tanks as possible in the 6 districts (Benares, Mirzapur, Jaunpur, Allahabad, Band and Jhansi) was sanctioned jointly by the Government of India and the U.P. Government early in 1945 and some tanks have so far been cleared of predaceous fish and stocked with the fry of quick-growing carp. The scheme has since been extended to 18 districts.

Rivers being the primary source of supply of food fish it was realized that side by side with intensive culture and exploitation the conservation and control of river fisheries should receive attention. A staff of 6 wardens, 1 assistant wardens and 21 watchers has been sanctioned and has been partially recruited to patrol the rivers. A fisheries research laboratory at Lucknow has been established for continuous study of conditions obtaining in the rivers and tanks and to initiate suitable measures of fish conservation and culture which will keep pace with intensive exploitation. A suitable site at the Tanda Fal (Mirzapur) has been selected for a research fish farm. As waters above 3000 ft. are devoid of food fish the well-known mirror carp of Europe which has done remarkably well in Ceylon and on the Nilgiris has been brought to the Kumaon Division for stocking rivers.

Public Health

THE history of the public health administration in the sub-continent may be traced back to the appointment of the Royal Commission in 1859, which recommended measures for the amelioration of the health of the army and the civil population. In accordance with its suggestions "Commissions of Public Health" were established in the provinces of Madras, Bombay and Bengal in 1864. This led to the appointment of Sanitary Commissioners. In 1888 the Government of India issued a resolution "drawing the attention of local bodies and village unions to their duties in the matter of sanitation."

The success achieved by such efforts was negligible except in the larger cities. Owing to the vast number of the sick the main emphasis was laid on curative medicine; preventive medicine did not receive proper attention. The outbreak of plague in 1896 had a great effect on the people and the Government, awakening them to the need of overhauling the public health machinery in the country.

The report of the Plague Commission in 1904 was a landmark in the history of public health administration. It recommended the strengthening of public health services and the establishment of laboratories for research and the preparation of vaccines and sera, but the total effect of the measures adopted in pursuance thereof was small. Attention was directed mainly to urban centres while about 90 per cent of the population lived in villages.

Under the Government of India Act, 1919 the health administration was transferred to Provincial Governments making it a subject directly under Ministers responsible to the Legislatures. This position continues under the Government of India Act, 1935 and the Provincial Governments are unfettered in the development of health and sanitation in areas under their jurisdiction. The effect of this transfer are summarised by the Health Survey and Development Committee in its report as follows :—

"Ministers were anxious to promote the growth of Education, medical relief and preventive health measures as far as funds permitted. Indeed, there has been, since the Reforms, far greater public health activity in the provinces than ever before."

VITAL STATISTICS

The sub-continent's population growth is characterised by high levels of fertility and mortality. Interconnected with this feature is the high infantile mortality. Thus, her birth rate, death rate and infantile mortality rate are much higher than those of Western Countries.

Birth rates.—The five yearly averages for the pre-war period 1937-41 was 33.2 and for the war years 1941-45 was 28.0. This noticeable fall in the birth rate was shared by almost all the individual provinces. The birth rate of 28.9 in 1946 suggests an improvement, increases in the rate of an order of 2 per mille or more having been recorded in Ajmer-Merwara, Assam, Sind and pre-partition Bengal.

Death rates.—The five yearly averages of 22.3 in 1937-41 and of 22.5 in 1941-45 show that disparity in the death rates was not so marked as in the case of birth rates, the only instance of an increase of over 2.0 per mille being Bengal which went through the great famine of 1943. It seems therefore reasonable to hold that, in spite of the stress and strain which war conditions brought to bear on community life, the rise in mortality over the sub-continent as a whole was not appreciable. The death rate in 1946 was 18.4. Although the high cost of living and difficulties in respect of Food continued in 1946, it is gratifying to note that the recorded death rates show an appreciable fall in every province in comparison with the five year period, the decrease being 4.1 per mille in the sub-continent as a whole and over 5 per mille in the provinces of pre-partition Punjab, Delhi, Central Provinces, Coorg and Ajmer-Merwara.

Infantile mortality rates.—The five yearly averages for 1937-41 was 160.4 and for 1941-45 was 100.8. Here again, the war years did not produce a rise in the sub-continent as a whole, while some of the individual provinces recorded varying reductions in the infantile mortality rate in comparison with the five year period before the war. The infantile mortality rate of 135.8 in 1946 shows an appreciable fall in comparison with the five yearly averages. This decrease is shared by almost all the provinces and, in some cases the fall has been appreciable.

Normal Conditions.—The rise in birth rate during 1946 even though it was slight, and the simultaneous decline in death and infant mortality rates would seem to justify a guarded optimistic view that an improvement of the public health was recorded during the year. From 1941 to 1944 the vital statistics presented the dual characteristic of a rapidly declining birth rate and an increasing death rate which would generally be interpreted as indicative of adverse health conditions in the country. The corresponding rates for 1946 show an appreciable advance in the birth rate in many provinces and an equally noticeable fall in the general and infantile mortality rates and it may well be that the year 1946 marks the stage of a return to more normal health conditions.

EPIDEMICS

During the year under review the incidence of epidemic diseases was mild throughout the country. There were epidemic outbreaks in Bombay, Madras, U.P., and Bihar and to a minor extent in the Central Provinces, but they did not take on the explosive and extensive nature of the previous two years. Perhaps, the prophylactic inoculation campaigns introduced in anticipation of the seasonal rises by the various provinces after their experience of the last two years may account for keeping the epidemic under check through the building up of an immune population.

Except in the cases of cholera, smallpox and plague morbidity statistics for the general population are as a rule not collected in the sub-continent. Whatever information in this direction

can be gathered is restricted to the Hospital and Dispensary statistics. Mortality statistics relating to the general population, however, are collected in several details, e.g. by age, sex and community. Deaths by different causes are also recorded but there is not much uniformity in the details adopted by the various provinces, as for instance deaths from tuberculosis or malaria are not recorded separately for rural areas by a number of provinces. These statistics of deaths by causes besides suffering from all the shortcomings common to the Indian vital statistics are collected under the further difficulty of lack of facilities for proper diagnosis.

Statistics of cholera, smallpox and plague are collected throughout the sub-continent and as their symptoms are understood by the general public we have comparatively reliable figures for these diseases. However, all these three diseases usually do not account for more than 5 per cent of the total mortality in any province. Owing to the general unreliability of the classification of causes of death, the Public Health Commissioner with the Government of India presents the Indian mortality statistics other than those relating to cholera, smallpox and plague under the broad groupings of fevers, dysentery and diarrhoea, respiratory diseases and "all other causes." Of these the most important group is that of fevers under which is shown 50 per cent to 75 per cent of the total mortality in most of the provinces. This group includes a variety of heterogeneous diseases and a large number of unclassified conditions which for want of proper facilities for diagnosis are catalogued by the persons, usually illiterate, actually reporting the death. Owing to the unsatisfactory manner of collection of vital statistics, the health administrator is handicapped by the lack of precise knowledge of the extent and nature of his problems.

LEPROSY

Leprosy has been prevalent in the sub-continent for many centuries, being recognised and described by ancient Hindu Physicians. The *Susharata Samhita* written 2,500 years ago describes the different forms of leprosy, and its treatment with chaulmoogra oil, the mainstay in its present-day treatment.

The 1931 census report recorded 150,000 persons suffering from leprosy. Investigations carried out by expert leprosy workers indicate that at a conservative estimate the number of cases is about 1 million (10 lakhs). About three-fourth of these cases are of the mild type and are not infective. The disease is found throughout the sub-continent, but is most prevalent in parts of Assam, pre-partition Bengal, Bihar, Orissa, Central Provinces, Madras, Hyderabad and Travancore.

Leprosy relief work has been going on for a long time. Apart from the Central and Provincial Governments, and some local organisations, the Mission to Lepers and the Indian Council of the British Empire Leprosy Relief Association have played an important role in this field.

Founded by Wellesley Bailey, the first asylum was built at Chamba, Punjab, in 1875. The Mission now runs about 30 leper homes with about 10,000 inmates. It has done very noble work and has given a lead

in various ways. The Provincial Governments assist the Mission by making grants on a *per capita* basis.

Leprosy Relief Association.—The introduction of new methods of treatment of leprosy led to the foundation in the year 1924 of the British Empire Leprosy Relief Association in London followed by the foundation of the Indian Council of the Association in 1925; later, provincial branches were formed in most of the provinces of India. At the inauguration of the Indian Council, Lord Reading, the then Viceroy and Governor-General of India, issued an appeal on behalf of the Association, and collected a sum of over Rs. 20 lakhs, which forms the Capital Fund of the Indian Council.

The work of the Association has greatly stimulated interest in leprosy in the sub-continent, resulting in knowledge of the disease, of its prevalence, clinical forms, prognosis, spread and the factors influencing its spread. The medical profession as a whole is now taking a keen interest in the leprosy problem. H.E. the Governor-General of India is the President of the Indian Council and the Director-General of Health Services, the Chairman of the Governing body; K. Sanjiva Row, C.I.E., and Sardar Bahadur Bhaiwant Singh Puri, O.B.E., the Honorary Treasurer and Secretary respectively. Dr. Dharmendra, an officer of the Medical Research Department, Government of India, is at present the Research Worker of the Association.

The research work of the Association is carried out at, or directed from, the School of Tropical Medicine, Calcutta, and is done in collaboration with the Endowment Fund of the School and the Indian Research Fund Association. The main activities of the Association are:—

(i) *Research.*—This includes clinical, histological, bacteriological, therapeutic, epidemiological and immunological studies. Recent studies of the only immunological test the "lepromin test" or the "Mitsuda Reaction" by Dr. Dharmendra at the School of Tropical Medicine, Calcutta, have resulted in a great improvement in the test, and have thrown considerable light on the mechanism of the reaction.

(ii) *Post-graduate Training in Leprosy.*—Special post-graduate training classes for training doctors in the diagnosis and treatment of leprosy are arranged annually at the School and over 1,000 doctors from the sub-continent, and not a few from abroad, have attended these special courses. In addition, lecture-demonstrations in leprosy are given to the L.T.M. and D.T.M. classes at the School.

(iii) *Leprosy Surveys.*—In the early years, Survey Party carried out rough sample surveys in different parts of the sub-continent in order to get an idea of the incidence and distribution of the disease. More recently, intensive surveys of small selected areas have been carried out in different parts of the country in order to collect information about the factors that favour the spread of the disease and in order to study the possibility of evolving suitable methods of isolation of infective cases for the control of the disease.

(iv) *Publication and Propaganda.*—"Leprosy in India," a quarterly journal published by the Association, is a record of the study of leprosy and of anti-leprosy work in the sub-continent and other places. Recently a new propaganda book entitled "Popular Lecture on Leprosy" by Dr. Dharmendra has been published, which gives the main facts about leprosy in simple and non-technical language.

The Treatment of Leprosy.—The mainstay in the treatment of leprosy has been injections of chaulmoogra (hydnocarpus) oil or its preparations. Recently encouraging results have been reported by the use of certain sulphone drugs such as "Promin" and "Diasone." It is yet too early to assess the value of this group of drugs in the treatment of leprosy. The treatment with chaulmoogra oil is of value in individual cases. It cannot be expected to control the spread of leprosy with treatment alone.

Control of Leprosy.—Leprosy can be controlled by raising the general economic and social conditions of the population and, by preventing contact of infective patients with healthy people, specially children. The only sure method of preventing contact with infective cases is the isolation of these cases in leprosy hospitals, sanatoria, or colonies, etc. Great difficulty is experienced in providing institutional accommodation for all the infective cases in the country. The total accommodation in all the institutions at present is for about 15,000 patients whereas a rough estimate of infective cases places the figure at 2½ lakhs. So some other methods of isolation are urgently needed to supplement the institutional isolation.

The two alternatives are the isolation of the patient in his home, and the isolation of all the patients of a village or a group of villages in huts made in the outskirts of the village. Home isolation is practicable only in families with sufficient financial resources. Village isolation appears to be specially suited to the sub-continent, with its big leprosy problem and limited resources. It is desirable that methods of village isolation should be developed in suitable areas and then widely applied.

Under Dr. Cochrane, now Director of the Leprosy Campaign of Madras Province, rural preventive units have been established since 1939, the object of which was to deal with the problem of leprosy in rural areas. Each unit consists of an administrative block, including treatment centres and staff quarters, and a segregation area where patients sleep at night and where evening meals are provided. All infective cases of leprosy in villages served by the preventive unit are required to sleep in the segregation area, thus preventing contact with their families during night. In the villages where such control methods have been adopted, there has been a marked decrease in the gross incidence of leprosy over the period 1939 to 1945, whereas in villages where such control had not been established, the incidence of leprosy had increased, in one case to more than twice the 1939 figures. The decrease was particularly marked amongst infective cases and children.

With the advances in knowledge of infectiousness of leprosy there has been some change in

the existing restrictions on patients suffering from leprosy, and the leprosy Section of the Madras Public Health Act (1939) has been considerably modified, the amended act of 1944 allowing considerable liberty to patients suffering from leprosy while at the same time ensuring adequate protection for the public.

MALARIA

Malaria is by far the most important disease in India and Pakistan, both from the point of view of sickness and of mortality. It has been estimated that in both the Dominions at least 100 million persons suffer from this disease annually, and that out of 8 million deaths from all causes every year, it is responsible for at least 2 million deaths due to its direct and indirect effects. In addition, 25 to 75 million cases, primarily debilitated under attacks of malaria are finally reported under other diseases. The loss in man-hours of these millions employed in all types of labour in industry and agriculture runs into colossal figures resulting in much avoidable wastage of potential wealth.

Malaria is primarily a disease of the rural areas, as the mosquito that transmits it, breeds in fresh water collections more often associated with rural rather than urban conditions. Ninety per cent of the population living under rural conditions following agricultural pursuits, are exposed to the risk of suffering from this disease. While malaria has been successfully controlled in some urban and industrial areas like the coal-fields, railway colonies and tea estates, where the population lives in compact colonies and is subject to some degree of discipline, in rural areas, with a sparse and scattered population, the *per capita* cost of its control has so far been considerably high. Experiments carried out in recent years in Delhi and Bombay provinces have shown that this cost can be materially reduced, and which has been made possible by the new powerful weapons like, DDT and Gammexane as insecticides, and new synthetic anti-malarial drugs, such as Paludrine, and Chloroquine. The advantage of the new insecticides over the pyrethrum sprays lies in the former's prolonged residual toxic action.

The special importance of malaria lies in the fact that it hampers the full exploitation of natural resources and in fact, the development of large tracts of land is held up owing chiefly to the prevalence of this disease. To implement the policies of Grow More Food and rehabilitation of the displaced populations, it is essential that these tracts be reclaimed and to achieve this end, properly planned and adequately staffed anti-malaria organisations must be created.

PLAGUE

Plague in the sub-continent first appeared in Bombay in 1896 and within a short time the disease spread widely throughout the country. Its incidence reached the maximum in 1904 with a total mortality of 9,64,677 in the sub-continent. Since then there has been a gradual decline and now the incidence of the disease has been reduced very considerably. In 1940, the total deaths recorded in the sub-continent were 19,799 which

figure came down to 11,984 in 1941 and 10,577 in 1942. In 1943 the figure went up to 13,578 and since then there has been a steady rise in the recorded mortality with 21,525, 29,751 and 32,977 deaths respectively in 1944, 1945 and 1946. During the years 1940-46 the provinces mainly affected were the United Provinces, Bihar, the Central Provinces, Bombay and Madras. Of these, the United Provinces recorded the highest number of deaths and had epidemic outbreaks in 1940, 1944, 1945 and 1946 with 11,725, 15,454, 14,024 and 18,199 deaths respectively. The incidence in Bihar and the Central Provinces was not of any special significance except for the sudden epidemic outbreak in Bihar in 1946 with 8,689 deaths as compared with 1,523 deaths in 1945. Bombay had epidemics in 1940 and 1941 and again in 1944, in the last quarter, the total deaths in these years being 5,573, 5,311 and 2,514 respectively. The disease prevailed in severe form in several districts in 1945 resulting in 11,779 deaths. In 1946 the mortality came down to 3,405 which was slightly above the normal incidence. Madras had a severe epidemic in 1941 with 4,985 deaths. The incidence in 1945 was about the normal level with 1,644 deaths, while in 1946 a slightly higher incidence was recorded with 2,254 deaths. There are certain endemic centres situated in the cool and moderately damp areas running from the Himalayas in the north through Central and Eastern India to the Deccan and the province of Madras.

However, the history of plague through the centuries serves as a warning against a complacent view of the reduced prevalence of the disease in the country. It is known that the disease can smoulder in its endemic homes for long periods and that on certain occasions, it acquires an increased striking power and spreads far and wide in epidemic waves into distant lands, to retreat again after a while to those areas where it permanently resides. While, therefore, it is gratifying that plague as a public health problem has been of decreasing importance within the past decade, the fact that endemic foci exist makes it imperative that no slackening of effort for its complete eradication should be permitted.

BLINDNESS

In olden days the blind were generally regarded as incapable of participating in the ordinary activities of life, and were left to depend upon begging for their existence.

Extent of Blindness.—An estimate of the sub-continent's blind population places it at 2 millions, of whom 50% are totally blind and the remaining blind to the extent of requiring welfare services. The chief causes are inflammatory diseases of the eye, smallpox, venereal diseases, nutritional deficiencies, glaucoma and cataract.

Treatment of Eye Diseases.—The treatment of eye diseases has, and is, being carried out in the eye wards of Government Hospitals, and Hospitals under the control of Local Authorities in the Provinces and local centres, mission hospitals, a few travelling eye dispensaries, camp eye hospitals and eye fairs, and in small local dispensaries to the limit of their resources.

Existing Schools and Societies for the Blind.—These mostly owe their existence to philanthropic and missionary organisations.

There are 21 schools for the blind only, 5 for deaf mutes as well as blind, 1 is in combination with a poor asylum, and 2 are departments of missionary establishments. The majority of them receive a small measure of Government and/or Municipal aid. They have a total enrolment of 1,139 blind people.

Special Officer Appointed.—In January, 1943 the Government of India appointed Lt.-Col. Sir Clutha Mackenzie as a Special Officer "to investigate the extent of blindness in India and its cause, and to carry out a survey of the existing societies for the education of blind children and of the means of employing trained blind men and women in sheltered industries, and to prepare a scheme for the creation of a national organisation for the blind of India."

Special Joint Committee.—Later in the year a Special Joint Committee on Blindness was appointed, which comprised of 2 sub-committees, the Education Sub-Committee, and the Medical Sub-Committee, for purposes of discussing the technical details of their respective fields. The report and evidence collected by Sir Clutha Mackenzie formed the basis of its deliberations. Their report and recommendations have now been published by the Government of India, under the title "Report on Blindness in India, 1944" and measures are being taken to implement the recommendations.

Recommendations.—The chief recommendation is that an Indian Council on Blindness should be created at the Centre, representative of the Government, of the philanthropic public and of the blind themselves. There should be two committees, one to deal with Prevention and Treatment, and other with Welfare of the Blind. The Secretary to the first Committee would be the Adviser in Ophthalmology, and of the second, the Adviser in Blind Welfare. An officer designated as Assistant Educational Adviser (Blindness) has already been appointed in the Ministry of Education, Government of India.

It is contemplated that similar committees will be set up by Provincial Governments and by the larger Indian States.

Tasks which lie ahead.—(1) The elimination as far as possible of the causes of blindness. (2) The extension of the facilities for treatment of eye diseases, both in quantity and in quality. (3) The rehabilitation of the blind, by providing facilities for education, employment, care and recreation. (St. Dunstan's Institute at Dehra Dun under the able direction of Sir Clutha Mackenzie, an officer blinded in the war of 1914-18 is an outstanding example of what can be done.)

YELLOW FEVER

All aircraft from the west are required to land at Bombay, (Santa Cruz) where an elaborate organisation has been set up by the Government of India to deal with them.

TUBERCULOSIS

The first co-ordinated effort in Tuberculosis control on an All-India basis, was the inauguration of the King George Thanksgiving (Anti-Tuberculosis) Fund to commemorate the recovery of His late Majesty King George V from a serious illness in 1929. This fund was utilised to stimulate activities in the preventive and

curative aspects of this disease, and in the specialised training of doctors and Health visitors.

In 1937, Lady Linlithgow, the then Viceress, issued an appeal for the King Emperor's Fund for Tuberculosis. This marked the next step forward, and resulted in the formation in 1939 of the Tuberculosis Association of India.

Of the sum of over Rs. 85 lakhs collected as a result of Lady Linlithgow's appeal, 95 per cent was returned to the various Provinces and States that had contributed, to enable them to proceed with their own Anti-Tuberculosis plans, in co-operation with, and with the advice of the Central Association at New Delhi, the President of which is Lady Mountbatten. This Central Association issues its recommendations for the policy to be carried out in the Anti-Tuberculosis campaign in the sub-continent. Through its Technical Adviser, expert advice on all aspects of Tuberculosis work is available to all the branches of the Association in the Provinces and Indian States, and to any official and non-official bodies engaged in such work. It is hoped thereby to facilitate standardization and to prevent waste of effort and money.

Through this Central Committee, in addition to Technical advice, the other aspects of the war against Tuberculosis are brought into prominence. These include publicity and propaganda, the training of Tuberculosis workers, the convening of Conference, and the liaison with the work of 34 affiliated associations in the sub-continent and similar associations abroad.

In 1945 there were 124 Tuberculosis clinics and 70 Hospitals and Sanatoria with 4,384 beds in the total number of such Institutes. That this is only the beginning of the task which lies before the Dominions can be realised when it is stated that the estimated annual deaths from this disease are 5,00,000 and that there are 24 million open cases (i.e. in an infective stage) in the country.

New Organization.—The third stage of the campaign will come with the adoption of the recommendations of the Health Survey & Development Committee in the post-war period. This report recommends a comprehensive and integrated tuberculosis organisation, which should include:—

- (1) a domiciliary service to organise a home isolation and treatment scheme,
- (2) improvement of housing conditions which entails working hand in hand with local authorities,
- (3) increasing the number of tuberculosis clinics,
- (4) the development of hospital accommodation to meet the requirements of the sub-continent on the five year plan of one 200-bedded tuberculosis hospital for each unit of 10 million population. This will be followed by development on a larger scale,
- (5) the establishment of after-care colonies,
- (6) the provision of institutions for the care of patients who have passed beyond the curable stages,

(7) the establishment of travelling tuberculosis units for the needs of the remote rural areas,

(8) instituting post-graduate training centres in tuberculosis for doctors.

As a preliminary to implementing the recommendations of the Bhoré Committee, the Government of India appointed an Adviser in Tuberculosis in the Directorate-General of Health Services in July, 1946. This officer toured the provinces and some of the States of the Indian Union and Pakistan, surveyed the existing arrangements for tuberculosis control in the country and submitted his report and suggestions to the Government.

The Delhi University instituted a Diploma Course in Tuberculosis disease with the approval and financial assistance of the Government of India. The first course commenced in March, 1947.

There is every reason to hope that the Anti Tuberculosis Campaign will be pursued vigorously by the Government of India and Pakistan in spite of the troubles that beset them and the financial difficulties caused thereby.

CENTRAL ADVISORY BOARD OF HEALTH

In April, 1937, the Government of India acting under Section 135 of the Government of India Act constituted a Central Advisory Board of Health. The aim of the Board is to ensure co-operation between the Centre and the provinces and between province and province in matters related to health which are of common concern. In addition the Board is designed so as to be representative of the States. Work is done through standing or *ad hoc* committees which permits the Board to act as a central information bureau. It advises on all matters referred to by the Central or Provincial Governments and makes suggestions to the Central Government on any matter affecting public health to which it considers Government's attention should be drawn.

The Public Health Commissioner with the Government of India was Secretary to the Board.

The first meeting was held in 1937 when *ad hoc* committees were appointed to report on:

- (1) the maternity and child welfare work in the sub-continent including the training of maternity and child welfare workers and the organisation of schemes in urban and rural areas,
- (2) to examine the question of food adulteration with reference to legislative measures now in force in different provinces and such additions and amendments to these as may be considered advisable.

The Maternity and Child Welfare Committee met in Simla in October, 1938 and its report was widely circulated. The Food Adulteration Committee produced two reports one on the technical aspect dealing with standards for purity in regard to different foods and the standardisation of the technique to be employed in food analysis, while the other dealt with the

legislative aspect of the problem including an examination of the various Acts and Regulations with suggestions for their improvement.

The second meeting of the Central Advisory Board of Health was held in Madras in 1939 and recommended the appointment of a sub-committee to examine the possibility of introducing a system of compulsory inoculation of pilgrims against cholera. It also appointed an *ad hoc* committee to prepare a report on leprosy and its control in the sub-continent. The first of these committees met and reported in June, 1939 and the second in October, 1941.

The third meeting of the Board was held in Poona in July, 1940. The meeting recommended the appointment of a special committee to report on the questions of teaching of hygiene in schools and of the Medical inspection of school children. This special committee met in December, 1941 and reported.

The fourth and the fifth meetings of the Board were held in January, 1942 and October, 1943. An important outcome of the fifth meeting of the Board was the appointment of a joint committee of the Central Advisory Boards of Education and Health to examine the problem of blindness in the sub-continent. A report on this subject was published in 1944 which deals with the two main aspects of blindness, *viz.*, its prevention and cure and the education, employment and general welfare of the blind.

As a result of the recommendations of the Health Survey and Development Committee, the Medical and Public Health Departments were amalgamated on the 15th August, 1947 and consequently the post of the Public Health Commissioner with the Government of India merged with that of the Director-General of Health Services. That Committee has further recommended the establishment of a Central Board of Health which, if and when established, will take the place of the existing Central Advisory Board of Health.

BHORE COMMITTEE'S PLAN

A Health Survey and Development Committee was appointed by the Government of India in October, 1943 under the chairmanship of Sir Joseph Bhore, K.C.S.I., K.C.I.E., C.B.E., to make a survey of existing health conditions in the sub-continent and to formulate plans for future health development. The Committee was quite representative in its composition and consisted of 9 officials and 16 non-officials. The Committee had, further, the advantage of discussing its problems with certain distinguished workers in the field of health from the United Kingdom, the United States of America, the U.S.S.R. and Australia, who came to India for this purpose on the invitation of the Government of India.

The Committee's Recommendations.—In putting forward its recommendations the Committee kept in view certain objectives. They are:—

- (1) the scheme, when fully developed, should provide each individual in the country with adequate medical care, curative and preventive, irrespective of his ability to pay for such services;
- (2) the medical aid made available to the rural is much less than that provided in urban areas.

- (3) the active co-operation of the people should be secured in the development of the health programme.

Taking these objectives into consideration the Committee has drawn up a long-term programme which will provide the country with a modern health service based on the newer and expanding conceptions of modern health practice.

The district health organisation will have as its smallest unit of administration a primary unit which will normally serve a population of 10,000 to 20,000. About 15 to 20 such primary units will together constitute a secondary unit and a varying number of the latter (3 to 5) will form the district health unit, the designation suggested by the Committee for the district health organisation. At each of the headquarters of the district, secondary and primary health units will be established a Health Centre from which will radiate the different forms of health activity into the territory covered by each type of unit. The provision made for medical relief and preventive health work at each of these Health Centres will increase in scope and efficiency from the primary unit to the district health unit.

The District Health Centre will possess general and special hospitals with a total bed strength of about 2,500 and all the consultant and laboratory services required for the diagnosis and treatment of disease on up-to-date lines. The Secondary Health Centre will have a hospital with 650 beds and the primary unit headquarters a 75-bed hospital. A system of ambulances and telephone connections between these three types of hospitals will help to promote the fullest utilisation of the higher types of service available at the larger institutions by the people living in the remoter parts of the district.

Healthy Environment.—These hospitals will also take an active part in the preventive health campaign. They will be linked with the field health organisations in respect of such services as those for tuberculosis, for mothers and children or for venereal diseases in order to ensure that the remedial and preventive health work carried out in the homes of the people receive the full benefit of the treatment and diagnostic facilities available at the hospitals.

The Committee has stressed that preventive and curative health work should be dovetailed into each other in order to produce maximum results. It has, therefore, suggested extensive changes in the existing training programme for doctors and has laid emphasis on equipping him for preventive health work. It has also made elaborate proposals for a considerable expansion of training facilities for the different types of other health personnel required for meeting the sub-continent's needs.

The Committee has made it plain that no health development plan can produce adequate results unless sufficient measures are taken for the provision of a healthy environment for community life, such as safe water supply, hygienic houses, a satisfactory system of conservancy and proper supervision over the production, distribution and sale of food intended for public consumption. Specific recommendations have been put forward in respect of these.

In order to secure the active support of the people the establishment of a Health Committee

in every village has been recommended. Such Committees are intended to stimulate local effort for the improvement of environmental sanitation, control of infectious disease and the steady development of a programme of health education.

Government of India have accepted in principle all the recommendations of the Bhore Committee, and have started their implementation with regard to the following items:—

1. **Scholarship Scheme.**—A medical scholarship scheme was initiated in 1945. Under this scheme a limited number of medical and dental graduates and nutrition workers are selected annually for post-graduate training abroad at Government expense in medical and allied subjects, dentistry and nutrition.

2. **All-India Medical Institute Advisory Committee.**—A Committee met in January 1947 with Sir A. L. Mudallar, Vice-Chancellor, University of Madras, as Chairman to advise on the establishment of an All-India Medical Institute,

which will be a multi-purpose medical training centre. The report of the Committee is awaited.

3. **Provincial Governments' 5 year plans.**—The Provincial Governments' 5 year medical and public health development schemes are being examined in the light of the recommendations of the Bhore Committee and approved for the grant of the Central Government contribution in respect of the approved schemes. The Provincial Governments submit periodical progress reports regarding the execution of these development schemes.

4. **Committee on Indigenous system of Medicine.**—A Committee under the chairmanship of Sir R. N. Chopra, met in January, 1947 to enquire and report on the ways to improve the facilities for research and training on indigenous systems of medicine. The Committee is also entrusted with task of considering the means of effecting a synthesis of indigenous and scientific medicines. The report is awaited.

The Maternity and Child Welfare Movement

Among the most pressing problems of health is that presented by the appalling maternal and infant mortality. The figures for maternal mortality are not accurately known, but some 1,50,000 mothers lose their lives each year as a result of pregnancy and child birth. The number of mothers who suffer from ill health and are disabled temporarily or permanently as a result of the normal physiological function of child bearing is at least 20 times the annual maternal deaths. Every year more than 2½ million Indian children die before the age of 5 years, while many others survive only to grow weak and feeble from unhygienic surroundings during infancy and childhood.

The maternity and child welfare movement which aims to promote maternal and child health and to reduce deaths, owes much to the All-India Maternity and Child Welfare League initiated by Lady Chelmsford in 1918 and also since 1920 to the Indian Red Cross Society. The amalgamation of these two bodies in 1931 forming the Maternity and Child Welfare Bureau, Indian Red Cross Society, has undoubtedly increased and developed the work.

The Maternity and Child Welfare Bureau, Indian Red Cross Society, is the only body voluntary or official at present working on a continental basis. The Bureau is managed by a technical committee representing the medical and public health services, the nursing profession and voluntary organisations and individuals working in fields allied to maternity and child welfare. The Director of the Maternity and Child Welfare Bureau, Indian Red Cross Society, an officer of the Women's Medical Service, acts as Secretary. The Bureau administers the Victoria Memorial Scholarships fund for the training of dais, the Lady Chelmsford League fund for maternity and child welfare and the funds of the Lady Reaping Health School.

The income from the funds is expended on (1) the maintenance of a central Bureau of information on all aspects of maternal and child health throughout the sub-continent, (2) on training schemes for workers in the maternity and child welfare field, doctors, health visitors, midwives, nursery school teachers and nursery

nurses, (3) on propaganda, literature and publicity and (4) on grants-in-aid of experimental schemes.

The care needed by the wives and children of soldiers in the Indian Army is being increasingly realised, and nowhere more than the units themselves. The result has been in the last few years, the opening of much work in this direction. Much of it is purely medical work, which, in the absence of family hospitals for the Indian soldiers, is a necessity. But genuine child welfare activities are also present in some centres.

Army Child Welfare was formerly an activity of the Maternity and Child Welfare Bureau under the Lady Birdwood Fund, but to all rapid expansion of welfare activities for the Indian Troops, a special committee, "The Indian Fighting Forces Maternity Child Welfare" took over the management of Indian Army Centres in the year 1942. The Secretary of the Indian Red Cross Society and the Director of the Bureau are members of this Committee. A remarkable feature of the whole movement is the keenness of the men themselves to aid it, realising as they do the benefits to their own women and children. There are very few cantonments where some work of this kind is not going on.

In all the provinces and most of the States, Welfare activities for the care of mother and child now exist, the activities differ in the nature of the work undertaken, and the amount of organisation displayed. The Health Survey and Development Committee appointed by the Government of India in 1942 has studied the existing Maternal and Child Health services and have made their recommendations for its future developments. The Committee has emphasised the need for organising the services and an integral part of the medical and public health services of the province and state and much emphasis has been laid on the preparation of workers. Much excellent work is still being done by voluntary organisations such as Branches of the Indian Red Cross Society in Assam, Bengal, Madras, N.W. F.P., Orissa, Punjab, Central Provinces, United

Provinces, and Sind. In Bihar the work is undertaken by the Bihar Maternity and Child Welfare Trust and in Bombay two influential bodies the Bombay Mofussil Maternity, Child Welfare and Health Council; and the Bombay Presidency Infant Child Welfare Society have recently amalgamated their resources under the title "Bombay Mothers and Children's Welfare Society" for the better Co-ordination and development of the work. The pace of the transition from voluntary to official direction has been accelerated in recent years and medical women are now employed in the offices of the Directors of Public Health in Madras, Bombay, Orissa, Assam, Delhi and the East Punjab; and in several of the larger states. A similar post has been established in the Central Provinces and one will shortly come into being in the United Provinces. These developments are noteworthy since the work is best co-ordinated and most energetically carried on where such appointments have been made. The Government of India have recently sanctioned a post for a medical woman in the office of the Director-General, Health Services.

WELFARE WORK IN INDUSTRY

The industrial concerns of recent years have realised the importance of providing special facilities for the employees and an increasing number of industries are now maintaining comprehensive welfare schemes for women and children. The Government of India have instructed authorities in the coal mines to establish creches and provide such minimum requirements regarding building staff and equipment as are detailed in their circular.

So far the schemes have devoted their attention to educating women in the elements of mothercraft and attempting to preserve infant lives and improve child health. In a land of so many languages and difficulties progress will necessarily be slow and the Dominions have yet to decide whether they will work intensively to try to rear a few well-developed children, as far as adolescence or extensively attempt to bring a large number of infants through the first critical

Insanity and Mental Hospitals

In the sub-continent facilities for the care and treatment of persons suffering from mental disorders are very inadequate. To serve a population of over four hundred million, there are only 20 institutions with an accommodation for about 15,000 patients. While accurate figures are lacking regarding the actual number of mental patients in the two Dominions, even at a conservative estimate of two per thousand of the population, as against 3.5 in England, and 5 in America, the figures run into over two millions. This does not take into account the mental defectives, who are not less than two millions and the psycho-neurotics, who are about twice this number, needing intensive treatment.

The Bhoré Committee, to which reference has been made has recommended amongst other measures, the starting of new and well-equipped mental hospitals, and these are likely to be given effect to by the Provincial Governments concerned, in the near future.

At present, the institutions at Ranchi, Madras, Poona, and Bangalore can be regarded as Mental

months, only to have them perish at a later stage from the many ills to which children are heirs.

In Western lands the Child Welfare Movement has no more marked characteristic than its inability to stop expanding. Its ramifications know no bounds. Its inevitable corollaries are endless, and like the banyan tree it will no doubt in the sub-continent also develop innumerable fresh roots such as medical supervisions, dental clinics, better housing, open air playgrounds, etc. But these are not yet. Its preliminary task is to educate the mothers of India and Pakistan to the enormity of allowing two million babies to perish every year and to convince them of the equally important fact that a high death rate always spells a high damage rate of sickly, under-developed, incompetent citizens.

VICTORIA MEMORIAL SCHOLARSHIPS

The Victoria Memorial Scholarships Fund was founded in 1903 by Lady Curzon, with the object of securing better standards of midwifery practice by the dais of the sub-continent. A sum of about Rs. 6½ lakhs was secured by public subscription in 1903 and a further sum of Rs. 1,39,000 was added to the Fund in 1935 from Their Majesties' Silver Jubilee Fund.

The Fund is now administered by the Maternity and Child Welfare Bureau, Indian Red Cross Society and the income is expended as grants-in-aid of training schemes for dais and midwives maintained by voluntary organisations, generally branches of the Indian Red Cross Societies in the Provinces and States of the sub-continent. The Director of Maternity and Child Welfare, I.R.C. Society, an officer of the Women's Medical Service, is Secretary to the Fund.

In spite of continuous efforts in the training of dais since the beginning of the present century, no appreciable improvement has yet been made in the midwifery services in the rural areas. It is, therefore, necessary to extend the training to rural areas taking care that only the required number are trained and allowed to work under supervision until such time as they can be replaced by properly trained midwives.

Hospitals. The others function chiefly as places for detention and custodial care of patients.

The Mental Hospital, Bangalore (Mysore State) is the most modern hospital in the sub-continent, modern in building, outlook, and treatment. Built in 1938 and gradually added to, it consists of a series of pavilions, constructed of granite and has cost over ten lakhs. It has accommodation for 400 early cases of mental disorder.

All the modern methods of treatment are undertaken, including electric shock, insulin and cardiozal treatment, psycho-analysis, with or without sodium penthal, and relevant brain surgery, Pre-frontal leucotomy, lobectomy, and in epileptics ventricular puncture and exploration of the brain. While in the other hospitals, several methods of treatment are available, the Mental Hospital, Bangalore, is probably the only institution in the sub-continent where the medical, surgical and psychological treatment of patients is so well integrated.

Posts and Telegraphs

THE control of the Posts and Telegraphs of India or Pakistan is vested in an officer designated Director-General of Posts and Telegraphs whose office is attached to the Ministry of Communications of the Government of India and of Pakistan respectively. The following is a summary of the position in regard to India. But it applies *mutatis mutandis* to Pakistan as well. For financial and budget matters there is a Joint Secretary, Ministry of Finance (Communications). The superior staff of the Direction, in addition to the Director-General himself, consists on the postal side of one Senior Deputy Director-General, one Deputy Director-General, Postal Services, two Assistant Directors-General, Establishments, one Assistant Director-General, Postal Services, one Assistant Director-General, Planning, and eleven Assistant Dy. Directors-General.

For postal purposes, India is divided into eight circles, namely, West Bengal, Bihar and Orissa, Bombay, Central, Madras, East Punjab, United Provinces and Assam. Each of the first seven is in charge of a Postmaster-General and the Assam Circle is controlled by a Director, Posts and Telegraphs. The Central Circle comprises roughly the Central Provinces and the Central India and Rajputana Agencies.

The Heads of Circles are responsible to the Director-General for the whole of the postal arrangements in their respective circles, including those connected with the conveyance of mails by railways, inland steamers, and air services. All the Postmasters-General are provided with Deputy and Assistant Postmasters-General while in the Assam Circle the Director is assisted by Assistant Directors. The eight Postal Circles are divided into Divisions, each in charge of a Superintendent of Post Offices or Railway Mail Service as the case may be and each Superintendent is assisted by a certain number of officials styled Inspectors.

Generally there is a head post office at the headquarters of each revenue district and other post offices in the same district are usually subordinate to the head office for purposes of accounts. The Presidency Postmasters of the Calcutta, Bombay and Madras General Post Offices, the Chief Postmaster of the Delhi General

Post Office and Postmasters of the larger of the other head post offices are directly under the Postmasters-General. The Presidency Postmasters have one or more Inspecting Postmasters subordinate to them. When the duties of the Postmaster of a head office become so onerous that he is unable to perform them fully himself, a Deputy Postmaster is appointed to relieve him of some of them, and if still further relief is required, one or more Assistant Postmasters are employed.

The more important of the offices subordinate to the head office are designated sub-offices and are usually established only in towns of some importance. Sub-offices transact all classes of postal business with the public, submit accounts to the head offices to which they are subordinate incorporating therein the accounts of their branch offices, and frequently have direct dealings with Government local treasuries. The officer in charge of such an office works it either single-handed or with the assistance of one or more clerks according to the amount of business.

Branch offices are small offices with limited functions ordinarily intended for villages, and are placed in charge either of departmental officers on small pay or of extraneous agents, such as school-masters, shop-keepers, land-holders or cultivators who perform their postal duties in return for a small remuneration.

The audit and accounts work of the Post Office is entrusted to the Accountant-General, Posts and Telegraphs, who is an officer of the Indian Audit Department and is not subordinate to the Director-General. The Accountant-General is assisted by Deputy Accountant-General, all of whom, with the necessary staff of clerks, perform at separate headquarters the actual audit and accounts work of a certain number of postal circles.

In accordance with an arrangement which has been in force since 1883, a large number of sub-post offices and a few head offices perform telegraph work in addition to their postal work and are known as combined offices. The policy is to increase telegraph facilities everywhere and especially in towns by opening a number of cheap telegraph branches of sub-post offices.

Inland Tariff

Inland Tariff is applicable to Aden, Nepal, Ceylon and Portuguese India except as indicated below and is as follows:—

	When the postage is prepaid	When the postage is wholly unpaid	When the postage is insufficiently prepaid
Letters			
Anna Pies			
Not exceeding one tola	1 6		
And every additional tola	1 0		
Book and pattern packets.			
For the first five tolas or fraction thereof	0 9		
For every additional two and a half tolas, or fraction thereof, in excess of five tolas	0 3		
		Double the prepaid rate (chargeable on delivery)	Double the deficiency (chargeable on delivery)

Postcards

Single	6 pies
Reply	1 anna

(The postage on cards of private manufacture must be prepaid in full. Reply postcards cannot be sent to Nepal.)

Parcels (prepayment compulsory)

Parcels not exceeding 12½ seers (1,000 tolas) in weight:—

Not exceeding 40 tolas	Rs. a. 0 6
For every additional 40 tolas or part of that weight	0 6

Registration is compulsory in the case of parcels weighing over 440 tolas.

All parcels to Aden should be registered. There is no parcel service to Nepal. These rates are not applicable to parcels for Ceylon and Portuguese India.

Registration fee

For each letter, postcard, book or pattern packet, or parcel to be registered 0 3	Rs. a.
---	--------

Ordinary Money Order fees

For every sum of Rs.10 or fraction thereof 0 2

In the case of money orders for Ceylon and Portuguese India, the rates prescribed for foreign rupee money orders are applicable. There is no money order service to Nepal.

Telegraphic Money Order fees.—The same as the fees for ordinary money orders plus a telegraph charge calculated at the rates for inland (the cost of the telegraphic advice to Aden and Ceylon in respect of those countries) telegrams for the actual number of words used "in the telegram advising the remittance, according as the telegram is to be sent as an "Express" or as an "Ordinary" message. In addition to the above a supplementary fee of two annas is levied on each telegraphic money order.

There is no telegraphic money order service to Nepal or Portuguese India. In the case of Ceylon the telegraph charge is calculated at the rates shown below:—

Express.—Rs. 2-8-0 for the first 12 words and 3 annas for each additional word.

Ordinary.—Re. 1-4-0 for the first 12 words and 2 annas for each additional word.

Value-payable fees.—These are calculated on the amount specified for remittance to the sender and are the same as the fees for ordinary money orders.

Insurance fees

Where the value insured does not exceed Rs. 100	Rs. a. 0 4
Where the value insured exceeds Rs. 100 but does not exceed Rs. 200	0 5½
Where the value insured exceeds Rs. 200 but does not exceed Rs. 300	0 8

For every additional Rs. 100 or fraction Rs. a. thereof over Rs. 300 and upto Rs. 1,000 0 2

For every additional Rs. 100 or fraction thereof over Rs. 1,000 0 1

As regards Aden, Ceylon and Portuguese India see Foreign Tariff.

Acknowledgment fee.—For each registered article 1 anna.

Foreign Tariff

FOREIGN TARIFF is not applicable to Aden, to Ceylon, to Nepal or to Portuguese India except as indicated below and is as follows:—

Letters.—To Aden, Ceylon, Nepal and Portuguese India—Indian inland rates. To Burma—2 annas for the first tola and 1 anna for every additional tola or part thereof.

To all other countries. 3½ annas for the first ounce and 2 annas for each additional ounce or part of that weight.

Postcards, Single 2 annas.

Reply 4 annas.

Postcards to Burma: Single 1 anna and reply 2 annas.

Printed Papers.—½ anna for every 2 ounces or part of that weight.

Business Papers.—For a packet not exceeding 10 ounces in weight 3½ annas.

For every additional 2 ounces or part of that weight ½ anna.

Samples.—1½ annas for first 4 ounces and ½ anna per 2 ounces thereafter.

Printed Papers, Business Papers and Samples.—To Burma, 9 pies for the first five tolas and 6 pies for every additional 5 tolas or part of that weight.

Parcels

Parcel postage varies for different countries as shown in the Foreign Post Directory included in the Post and Telegraph Guide. Information relating to the rates of postage on parcels for Great Britain and Northern Ireland is given below:—

(i) Parcels not exceeding 22 lbs. in weight and addressed to Great Britain and Northern Ireland are forwarded as mails to the British Post Office, the rates of postage applicable to such parcels being as follows:—

	Via Gibralt.	Rs. a. p.
For parcel		
Not over 3 lbs.		1 11 0
Over 3 lbs. but not over 7 lbs.		3 5 0
" 7 " " " 11 "		5 2 0
" 11 " " " 22 "		8 5 0

Registration is compulsory. Registration fee is as, 3.

These parcels are delivered by the post office and the postage paid carries them to destination.

Limits of weight

Letters.—4 lbs. 6 oz.

Printed Papers and Business Papers.—To Great Britain and Northern Ireland, and Ireland, British Australasian Colonies, Togo (British), the Union of South Africa, Rhodesia and the Bechuanaland Protectorate—5 lbs.

To Aden or Ceylon—No limit.

To all other destinations—4 lbs. 6 oz.

Samples.—To Great Britain and Northern Ireland, and Ireland, Togo (British), the Union of South Africa, Rhodesia, and Bechuanaland Protectorate—5 lbs.

To Aden or Ceylon—200 tolas.

To all other destinations—1 lb. 2 oz.

Parcels.—11 lbs., 20 lbs. or 22 lbs.

Limits of Size

Letters.—35 inches in length, breadth and thickness taken together and 23½ inches in any one direction. If in form of roll, 39 inches in length plus twice the diameter and 31 inches in any one direction.

Printed Papers and Business Papers.—To Aden and Ceylon—2 feet in length by 1 foot in width or depth. If in form of roll, dimensions are 30 inches in length and 4 inches in diameter.

To all other destinations—35 inches in length, breadth and thickness taken together and 23½ inches in any one direction. If in form of roll, 39 inches in length plus twice the diameter and 31 inches in any one direction.

Note.—Printed papers sent open, i.e., without a cover or wrapper in the form of cards, whether folded or not should not measure less than 4 inches in length and 2½ inches in width.

Samples.—To Great Britain and Northern Ireland, and Ireland, Togo (British), the Union of South Africa, Rhodesia and the Bechuanaland Protectorate—2 feet in length by 1 foot in width or depth. If in form of roll, dimensions in all cases are 39 inches in length plus twice the diameter and 31 inches in any one direction.

To all other destinations—35 inches in length, breadth and thickness taken together and 23½ inches in any one direction. If in form of roll, dimensions in all cases are 39 inches in length plus twice the diameter and 31 inches in any one direction.

To Aden or Ceylon—2 ft. in length by one foot in width and depth.

Money Orders

To countries on which money orders have to be drawn in rupee currency, the rates of commission are as follows:—

	Rs. a.
On any sum not exceeding Rs. 10	0 3
On any sum exceeding Rs. 10 but not exceeding Rs. 25	0 6
On any sum exceeding Rs. 25	0 6
On any complete sum of Rs. 25 and 6 annas for the remainder, provided that, if the remainder does not exceed Rs. 10, the charge for it shall be only 3 annas.	

To countries on which money orders have to be drawn in sterling, the rates are as follows:—

	Rs. a.
On any sum not exceeding £1	0 4
" " exceeding £1 but not exceeding £2	0 7
" " " £2 " " £3	0 10
" " " £3 " " £4	0 13
" " " £4 " " £5	1 0
" " " £5 " " £6	1 0

for each complete sum of £5 and 1 rupee for the remainder, provided that if the remainder does not exceed £1, the charge for it shall be 4 annas; if it does not exceed £2, the charge shall be 7 annas; if it does not exceed £3, the charge shall be 10 annas; and if it does not exceed £4, the charge shall be 13 annas.

Registration fee

For each letter, postcard and packet of printed or business papers and samples .. 3 annas.

Insurance fees (for registered letters and parcels only).

For insurance of letters and parcels to Aden and Ceylon and of letters to Portuguese India.—Insurance fees mentioned under "Inland Tariff."

For insurance of letters and parcels to Burma, British Somaliland, Mauritius, Seychelles, and parcels to Portuguese India.

Where the value insured does not exceed Rs. 200 5½

For every additional Rs. 200 or fraction thereof 5½

Note.—Insurance service to Burma and British Somaliland has been temporarily suspended.

For insurance of letters and parcels to Great Britain and Northern Ireland and to British Possessions and foreign countries (other than those mentioned above) to which insurance is available.

Where the value insured does not exceed £14 5½

For every additional £14 or fraction thereof 5½

Acknowledgment fee.—3 annas for each registered article, 1 anna in the case of registered article addressed to Aden, Ceylon or Portuguese India.

Air Mails

Letters, postcards and packets can be sent by air in the inland post as well as to certain foreign countries on payment of special Air Mail fees. Such letters can be registered. Insured articles cannot be sent by Air Mail except to Burma and Ceylon. The inland Air fees are as follows:—

(i) For a postcard, 6 pies plus ordinary postage.

(ii) For a letter and packet, 1 anna for each tola or part thereof plus ordinary postage.

For Air fees to foreign countries, see the Post and Telegraph Guide.

Air Letter Service.—A new light weight "Air Letter" service for use by civilians has been introduced from the 1st December 1944, which is available for writing to most of the

Empire countries and H.M.'s Forces overseas. It has been extended to U.S.A. from 1st June 1947. The postage rate is 6 annas per air letter except for U.S.A., Canada and Newfoundland for which the rate is 8 annas.

A special air letter form is available from post offices at a cost of 6 annas per form. Similar forms of private manufacture, bearing an indication that they have been approved by the Head of a Circle, can also be used, but they should be prepaid with the prescribed charge.

Air letters cannot be registered or insured, nor are any enclosures permitted. No other facility, such as express, delivery, is available.

AMOUNT OF BUSINESS

At the close of 1945-46, there were 1,28,211 permanent and 34,318 temporary Post and Telegraph officials, 25,916 post offices and 1,62,232 miles of mail lines. During the year,

1,978 million articles, including 67.5 million registered articles were posted; stamps worth Rs. 15.2 crores were sold for postal purposes; about 66.1 millions of money orders of the total value of Rs. 198.1 crores were issued; 1,631 thousand Indian Postal orders to the value of Rs. 100 lakhs were sold; a sum of Rs. 27.08 crores was collected for tradesmen and other 2 on V.P. articles, about 3.5 million insured articles valued at 148 crores of rupees were handled. Customs duty aggregating over 159 lakhs was realised on parcels and letters from abroad; pensions amounting to about 256 lakhs were paid to Indian Military pensioners and over 6,000 lbs. of quinine and 8,688,600 tablets of substitutes for quinine (e.g. Mepacrine) were sold to the public. On 31st March 1946, there were 3,507,000 Savings Bank Accounts with a total balance of Rs. 115 crores and 92,685 Postal Life Insurance Policies with an aggregate assurance of Rs. 18.9 crores.

TELEGRAPHS

Up to 1912 the telegraph system in the sub-continent was administered as a separate department by an officer designated Director-General of Telegraphs who worked in subordination to the Government of India in the Department of Commerce and Industry. In that year it was decided to vest the control of Posts and Telegraphs in a single officer as an experimental measure with a view to the eventual amalgamation of the two Departments.

In pursuance of this policy an experimental amalgamation of the two services was introduced in the Burma and Central Circles on the 1st July 1912. The fundamental principles of this scheme which followed closely the system in force in the United Kingdom and several other European countries were that the traffic and engineering work of the Telegraph Department should be separated, the former branch of work in each Circle being transferred to the Postmaster-General assisted by a Deputy Postmaster-General and a suitable number of attached officers and the engineering branch being controlled by a Director of Telegraphs Subordinate to this officer there were several Divisional Superintendents who were assisted by a number of attached officers.

Amalgamation.—In 1914 the complete amalgamation of the two Departments was sanctioned by the Secretary of State and introduced on 1st April. The superior staff of the Direction, in addition to the Director-General himself, now consists of the engineering (including wireless) side of a Chief Engineer, Post and Telegraphs, with one Deputy Director-General Telegraph Staff and Establishments, two Deputy Chief Engineers and two Asstt. Chief Engineers. For Engineering Construction work, there is one Addl. Chief Engineer with three Directors of Telegraphs, and some Divisional Engineers, Telegraphs. For traffic work there is a Deputy Director-General with one Controller of Telegraph Traffic and one Assistant Deputy Director-General. To assist in Telephone work there is one Deputy Director-General (Telephones) and two Assistant Deputy Directors-General, Telephones, and in Wireless

matters there is one Assistant Dy. Director-General (Wireless). There are also one Assistant Deputy Director-General (Maintenance) and two Asstt. Divisional Engineers, Telegraphs under the Deputy Chief Engineer (Maintenance).

In the Circles the scheme which has been introduced follows closely on the lines of the experimental one referred to above. For telegraph engineering purposes the sub-continent was formerly divided up into five Circles, each in charge of a Director. These five Circles were divided into eighteen Divisions each in charge of a Divisional Engineer. In 1922 Sind and Baluchistan Circle was formed with its headquarters at Karachi. This Circle is now under the charge of a Director of Posts and Telegraphs in the Pakistan P. & T. Deptt. On the 31st March 1924 there were 7 Circles and 20 Divisions. With a view to complete fusion of the three branches of work, the engineering work of the Bombay and Central Circles was brought under the control of the respective Postmaster-General in 1925 and this unification was gradually extended to other Circles. The fusion was completed in March 1930. In 1946 the Bengal and Assam Circle was divided into two Circles, namely Bengal Circle and Assam Circle, in charge of a Postmaster-General, and a Director, with headquarters at Calcutta and Shillong respectively. The telegraph traffic and the engineering branches in the Circle are controlled by the Postmaster-General, Calcutta and the Director of Posts and Telegraphs, Shillong the former officer now having under his control the West Bengal P. & T. Circle, which lies within the Indian Dominion. There is also one Deputy Director of Telegraph Traffic each at Calcutta, Bombay and Madras to look after the speedy disposal of traffic. There are now 18 Engineering Divisions. With effect from 1-7-1939, the Superior Telegraph Engineering and Wireless Branches have been amalgamated into a Single Service, viz.,—Telegraph Engineering Service—Class I.

There has been much expansion on the Telephones side of the Department consequent on the acquisition of the telephone systems at Bombay, Calcutta, Madras, Karachi and Ahmedabad by Government. Separate Telephone Dis-

tricts which are quite independent of the respective Postmasters-General were created at Bombay, Calcutta and Madras with effect from 1st April 1943. The Ahmedabad Telephone system has been placed under the administrative charge of the Bombay District. The Chief Officers of the Bombay and Calcutta Districts are designated General Managers, Telephones. Recently a new Telephone District has also been formed at Delhi where there has been considerable telephone expansion during the war.

The audit and accounts work of the Telegraph Department is, like that of the Post Office, entrusted to the Accountant-General, Posts and Telegraphs, assisted by a staff of Deputy and Assistant Accountants-General.

INLAND TARIFF

Telegrams sent to or received from places in India or Burma or Ceylon are classed as Inland telegrams. The tariff for Inland telegrams is as follows:—

	For delivery in India	
	Private and State	Express, Ordinary.
	Rs. a.	Rs. a.
Minimum charge ..	1 10	0 13
Each additional word over 8 ..	0 2	0 1

	For delivery in Burma	
	Private and State	Express, Ordinary.
	Rs. a.	Rs. a.
Minimum charge ..	2 12	1 6
Each additional word over 8 ..	0 4	0 2

	For delivery in Lhasa (Tibet).	
	Private and State.	Private and State.
	Ex-press.	Ordinary.
	Rs. a.	Rs. a.
Minimum charge ..	2 0	1 0
Each additional word over 12 ..	0 2	0 1

The address is charged for.

	Additional charges	
	Minimum for reply-paid telegram ..	Minimum charge for an ordinary telegram except in the case of Burma, for which the minimum amount pre-payable is Rs. 2-12-0 for Express and Rs. 1-6-0 for Ordinary.
Notification of delivery ..		Minimum charge for an ordinary telegram.
Multiple Address telegrams, copying fee for each 100 words or less in each copy beyond the first ..		4 annas.

Collation One half of the charge for an ordinary telegram of same length.

	Rs.	
	If both the offices of origin and destination are closed ..	2
	If only one of the offices is closed ..	1
For acceptance of an Express telegram during the hours when an office is closed.	If the telegram has to pass through any closed intermediate office, additional fee in respect of each such office.	

Boat hire Amount actually necessary.

	For delivery in India.		For delivery in Ceylon.	
	Ex-press.	Ordinary.	Ex-press.	Ordinary.
	Rs. a.	Rs. a.	Rs. a.	Rs. a.
Minimum charge ..	1 8	0 12	1 8	
Each additional 5 words over 40 in respect of India, each additional four words over 32 in respect of Ceylon ..	0 2	0 1	0 2	
The address is free.				

Greetings Telegrams.

Inland Greetings telegram service has been suspended as a temporary measure.

Inland De Luxe Telegrams.

Senders of Greetings telegrams to or from offices in India may use their own phraseology in such telegrams on payment of 2 annas in addition to the charge appropriate to the class of message (Express or Ordinary).

These telegrams will be delivered in specially printed artistic forms and envelopes.

This DE LUXE service is not applicable to telegrams for Burma.

The sender of a DE LUXE telegram should write before the address the special instruction — L.X.—which will not be charged for.

FOREIGN TARIFF

The charges for foreign telegrams vary with the countries to which they are addressed. The rates per word for telegrams to countries in Europe, America, etc., are as follows:—

Cables are not now accepted to the following countries:—
Japan, Karafuto, Corea, Manchuria, Kwangtung leased territory, Formosa, Marian or Ladrones Islands, Marshall, Palaos and Caroline Islands,

Chefoo in China. Wake Island, and portions of New Guinea.

	Ordy.	Defd.	D.L.T.

Urgent Telegrams—

Rate double of ordinary rate.

Daily Letter Telegrams—

One-third ordinary rate with a minimum charge for 25 words.

Code telegrams (except for the U.S.A. and countries within the British Empire) are accepted at 3/5th of the ordinary rate. Code telegrams for countries within the British Empire and for the U.S.A. are accepted at 2/3rds of the ordinary rate (*vide clause 425, P. & T. Guide*).

Telegrams are accepted at all Government Telegraph Offices.

Usual rules apply regarding Registration of abbreviated addresses, Reply Paid, etc.

Full lists published in Post and Telegraph Guide.

Radio Telegrams.—

For radio-telegrams addressed to ships at sea from offices in India and transmitted via the coast stations at Bombay, Calcutta, Karachi or Madras the charge is thirteen annas per word (ordinary) or eight annas per word (code) in nearly all cases.

The following are the charges (excluding supplementary charges) for radio-telegrams from offices in India transmitted to ships at sea

through the coast stations mentioned in the preceding paragraph:—

	Total charge per word	Ordinary.	Code.
	Rs. a.	Rs. a.	
(1) All Government or Private Radio-telegrams, excepting those mentioned in (2) and (3) below ..	0	13	0 8
(2) Radio-telegrams to His Britannic Majesty's Ships of War or Ships of the Royal Indian Navy ..	0	8	0 5
(3) Radio-telegrams to Spanish or Swedish ships ..	0	12	0 7½

The sender of a radio-telegram may prepay a reply. He must insert before the address, the instruction "R.P." followed by mention in Rupees and annas of the amount prepaid, e.g., R.P. 7-8. This expression counts as one word.

Daily Letter-Telegrams

Daily Letter-Telegrams in plain language, which are dealt with telegraphically throughout are accepted for non-Empire countries and Australasia on any day of the week, and are ordinarily delivered to the addressee on the morning of the second day following the day of booking. They are subject to the conditions prescribed for Deferred Foreign telegrams with certain exceptions as stated below.

The charge for a Daily Letter-Telegram is ordinarily one-third of the charge for a full rate telegram of the same length and by the same route subject to a minimum charge equal to the charge for 25 words at such reduced rate including the indication DLT.

The late fee system does not apply to Daily Letter-Telegrams and such telegrams are not accepted during the closed hours of an office.

On Indian lines Daily Letter-Telegrams are transmitted after Deferred Foreign telegrams.

The only special services admitted in Daily Letter-Telegrams are Reply paid, Poste Restante, Telegraph restante, Multiple addresses, de Luxe and telegraph redirection under orders of the addressee.

The class prefix for Daily Letter-Telegrams will be DLT.

Night Letter-Telegrams

Night Letter-Telegrams (NLT) are accepted for all Empire countries, except Australasia, with which the Daily Letter-Telegram Service (DLT) remains in force, at the same rates and under the same conditions as prescribed for Daily Letter-Telegrams, except as follows:—

(i) They will be delivered on the morning of the day following the day of booking.

(ii) The special instruction and the class prefix for Night Letter-Telegrams will be NLT.

Empire Social Telegrams

Empire Social Telegrams (GLT) conveying solely greetings, family news or non-commercial personal affairs can be availed of throughout the year at special reduced rates, for all Empire countries except Sudan.

Empire Social Telegrams (GLT) for the purpose of transmission and delivery to a territory or place to which NLT service is available is deferred until the morning of the day following the day of acceptance; where there is no NLT service but a DLT service is available, an Empire Social Telegram is deferred and delivered on the second day following the day of acceptance or as soon as possible thereafter. Minimum charge for an Empire Social Telegram is Rs. 3-6-0 for the first 12 words (excluding the Special Instruction-GLT which will not be charged) and 4½ annas for every additional word.

The only Special Services admitted in Empire Social Telegrams are "Reply Paid" and "De Luxe."

De Luxe Telegrams

Telegrams relating to happy events or greetings may be sent to certain foreign countries for delivery on an artistic form in an envelope of the same character. A supplementary charge of four annas per telegram in addition to the charge at the appropriate rate according to the class (i.e., Urgent, Ordinary, Code, Deferred, DLT., etc.), is charged for such telegrams.

Greeting Telegrams (Foreign).

Telegrams conveying Christmas and New Year wishes are accepted for most non-empire countries from the 14th of December to the 6th Jan. inclusive at special reduced rates, subject to a minimum charge for 10 words per telegram. To all Empire countries except Sudan, such greetings may be conveyed by means of Empire Social Telegrams.

Growth of Telegraphs.

At the end of 1897-98 there were 50,305 miles of line and 185,088 miles of wire and cable. Compared to this, there were 116,700 miles of

line including cable and 1,192,800 miles of wire including conductors on the 31st March 1946. The numbers of departmental telegraph offices were 257 and 80 respectively, while the number of telegraph offices worked by the Post Office rose from 1,634 to 4,010.

The increase in the number of paid telegrams dealt with is shown by the following figures:—

	1897-98.	1945-46.
Inland ..		
Private ..	4,107,270	21,312,248
State ..	860,382	5,512,383
Press ..	35,910	787,091
Foreign ..		
Private ..	735,679	8,227,719
State ..	9,896	241,707
Press ..	5,278	94,297
	5,754,415	31,175,445

The outturn of the workshops during 1945-46 represented a total value of Rs. 1,89,78,000.

Wireless.

The number of messages handled during the year 1945-46 by departmental wireless stations in India was nearly 287,000. This shows a decrease of about 55,000 over the previous year.

Telephones.

With effect from 1-4-43 the Licensed Telephone Systems at Calcutta, Bombay and Madras and with effect from 1-9-43, the Licensed Telephone Systems at Ahmedabad and Karachi were acquired by Government. On the 31st March 1946, there were about 2,700 exchanges and 126,130 Telephones operated by the department and licensed system. About 4.5 million trunk telephone calls were handled during the year 1945-46.

Posts and Telegraphs.

The capital outlay of the Indian Posts and Telegraphs Department during and to the end of the year 1945-46 was Rs. 2,17,81,000 and Rs. 24,25,16,000 respectively. The receipts for the year ended 31st March 1946 amounted to Rs. 33,47,30,400 and charge (including interest on capital outlay) to Rs. 22,16,53,800, the result being a net gain of Rs. 11,30,76,600.

Broadcasting

For several years limited broadcasting services were maintained by radio clubs in Calcutta, Bombay and Madras. Although the transmitting sets employed by them were of very low power, the broadcasts were popular. The clubs were assisted financially by a government contribution based upon the revenue from licence fees, but this did not nearly suffice to cover the cost of the transmissions, and great credit is due to the members of those clubs for the sporting manner in which they provided additional funds and undertook the entire responsibility for the programmes.

After negotiations extending over several years, an Indian Broadcasting Company was granted a licence to establish broadcasting services upon lines similar to those of the British Broadcasting Corporation, and transmitting stations were erected at Bombay and Calcutta, the service from the former being inaugurated by the Viceroy in July 1927 and the latter by the Governor of Bengal a month later. These stations had each an aerial input of one and a half kilowatts, the same as that of the 2LO stations in London, of which they were practically duplicates. The programmes were so arranged that both Indian and European music were broadcast daily and the news bulletins and market and weather reports were read in two languages.

Owing to financial difficulties the Indian Broadcasting Company went into liquidation with effect from March 1, 1930. Since then the Government of India have been controlling broadcasting in this country. Government for this purpose formed an Indian State Broadcasting Service, now called All-India Radio, and instituted a Central Broadcasting Advisory Committee.

In 1934, Government felt justified in embarking on a policy of development and, as a first step, a sum of Rs. 2,50,000 was granted for a 20-kW mediumwave station to be established at Delhi. This station was actually opened on January 1, 1936.

In the year 1936 a special fund of Rs. 40,00,000 was created for the development of Broadcasting in India. At that time there was, in addition to the mediumwave centres at Bombay, Calcutta and Delhi, a 0.25 kW mediumwave centre at Peshawar which was being operated by the N.-W. F. P. Government.

Orders for extensive new equipment for implementing the scheme of expansion were placed in January 1937. It included 10 transmitters which were put into operation as follows:—

Lahore 5-kW mediumwave: December 16, 1937; Delhi 10-kW shortwave: December 16, 1937; Bombay 10-kW shortwave: February 4, 1938; Lucknow 5-kW mediumwave: April 2, 1938; Delhi 5-kW shortwave: June 1, 1937; Madras 10-kW shortwave: June 16, 1938; Madras 0.2-kW

mediumwave: June 16, 1938; Calcutta 10-kW shortwave: August 16, 1938; Trichinopoly 5-kW mediumwave: May 16, 1939; Dacca 5-kW mediumwave: December 16, 1939.

Peshawar, which was taken over from the N.-W. F. P. Government on April 1, 1937, was converted into a 10-kW mediumwave centre on July 16, 1942.

In the year 1942, India became an important operational base for the Far Eastern theatre of World War II. Consequently the British Government requested All-India Radio to install at Delhi five shortwave transmitters including one 100-kW transmitter as an urgent war measure. These projects were undertaken and completed according to schedule.

A 100-kW transmitter capable of providing a broadcasting service to countries outside India which was opened on May 1, 1944 constituted another technical development of great importance in AIR's history.

After the partition of India, the regional stations at Peshawar, Lahore and Dacca were handed over to the Pakistan Broadcasting Service.

All-India Radio.—All-India Radio is an "attached" office of the Department of Information and Broadcasting, of the Government of India. Its head is the Director-General, All-India Radio, whose office is located in Broadcasting House, Parliament Street, New Delhi. Other officers at headquarters: Chief Engineer, three Deputy Directors-General (Administration, Home and External programmes), Director of Administration, Deputy Chief Engineer, Public Relations Officer, Assistant Director of Administration, Assistant Solicitor, Director of Programmes, and three Officers on Special Duty (Programmes, Administration and Engineering).

Regional Stations.—The regional stations are situated at Delhi, Lucknow, Patna, Calcutta, Cuttack, Madras, Trichinopoly and Bombay. Each regional centre consists of studios and office buildings, transmitter installations and receiving centre installations. The technical facilities at the studios provide for simultaneous programme transmissions, channels for rehearsals and tests, listening rooms, recording facilities, etc. The studios at Delhi, Bombay, Madras and Calcutta are air-conditioned. All the centres are equipped with mediumwave transmitters which furnish a first-grade service for listeners located within 50 to 100 miles radius. At Delhi, Bombay, Madras and Calcutta, shortwave transmitters have also been provided for serving the whole of the zone in which the station is situated. The receiving centre at each station is the link between the Central News Organisation at Delhi and the station itself, and is used for relaying news bulletins and important broadcasts from Delhi.

The stations transmit for about seven to eleven hours a day. This is generally split up into three daily transmissions, morning, afternoon and evening. Programmes are planned by Station Directors with the assistance of their Programme Executives and Programme Assistants. Details are worked out well in advance of their schedule dates and are published in the fortnightly journals of All-India Radio. Programmes are broadcast in 13 Indian languages and in English. The general programme consists of Indian music, talks, plays, lecture programmes and programmes for women and children. Rural programmes are broadcast from all stations with the exception of Calcutta which broadcasts a special programme for industrial areas. Educational broadcasts are radiated from Bombay, Calcutta, Madras, Trichinopoly and Delhi.

Broadcasting House.—Probably the largest centre of broadcasting activity in the East was completed in 1943. Architecturally, Delhi's newest and one of its most striking

sites, it represents from the point of view of equipment, the latest in radio engineering. With its soft-shaded studios, each with an individual acoustic pattern to suit every variety of sound reproduction, its control room—a compact of up-to-the-second scientific efficiency—its dramatic control panels and its luxury-liner corridors between studios, it constitutes a landmark in every sense of the word in the history of Indian broadcasting.

Central News Organisation.—This is situated at Delhi and provides (a) news bulletins for Home programmes (in English and seven Indian languages) and (b) external programmes. All the news bulletins are prepared in the Central News Organisation and broadcast from the transmitters at Delhi set apart for news. Each station relays the bulletins suitable for its listening areas. A few minutes are set apart at each station for local news. This period accommodates news of purely local interest.

CENTRAL NEWS SERVICES

Language	Relayed by	Number of bulletins.	Total duration of news (in hours)
English	All stations of AIR ..	1,460	304
Hindustani	Delhi, Bombay, Lucknow, Jullundur, Amritsar and Patna	1,460	242
Tamil	Madras and Trichinopoly ..	1,095	183
Telugu	Madras	1,095	183
Bengali	Calcutta	1,095	183
Marathi	Bombay	1,095	183
Gujerati	Bombay	1,095	183
Kannada	Bombay	92	23
*Special East Punjab ..	Jullundur and Amritsar ..	242	20
TOTAL		8,720	1,504

Bulletins in Oriya, Assamese and Malayalam are being included in 1948.

* At present in simple Hindustani. These bulletins are shortly to be turned into Punjabi.

External Services.—The external broadcasts from the Central News Organisation consists of daily services in Mid-Eastern and Far-Eastern languages, programmes for Indians Overseas and programmes for the forces. All these are radiated from Delhi but they are distinct from the programmes of the Delhi (regional) station. Altogether fifty-nine news bulletins a day in twenty-one languages—fourteen foreign and seven Indian—are broadcast from Central News Organisation at fixed times of the day. The languages used in External Services include Burmese, Thai, Kuoyu, Amoy, Cantonese, Japanese, French, Arabic, Persian, Afghan, Persian, English, Hindustani, Tamil, Gujarati, Tonkinese, Cochín-Chinese and Italian.

EXTERNAL SERVICES

Language 1	Areas covered 2	Total duration (Hours) 3	No. of bulletins (News) 4	Total duration News (Hrs.) 5	Music (Hrs.) 6

18. Kashmiri	Kashmir, Jammu	273	365	61	183.5
19. Dogri	N.-W.F.P. Tribal areas	92	365	61	31
TOTAL		5957.5	9125	1554	2841

*Composite programmes consisting of News, Commentaries, Music, etc., relayed from the BBC.

Research and Maintenance Departments.—These two departments of the Engineering Division are located at Delhi. The Research Department deals with all technical problems, concerning reception and transmission and is also responsible for the continuous study of ionospheric data and forecasting transmission conditions, so that the most suitable wavelengths can be chosen in advance for long-distance services. The Maintenance Department handles problems which arise in the upkeep and day-to-day operation of the engineering equipment used by All-India Radio.

Radio Journals.—A.I.R. publishes programme journals in English (Indian Listener), Urdu (Awaz) and Hindi (Sarang) from Delhi; Bengali (Betar Jagat) from Calcutta and Tamil (Vanoli) from Trichinopoly. The following figures give the circulation of the journals:—

	Indian Listener	Awaz	Sarang	Betar Jagat	Vanoli	Total
1930-31	2,750	..	..	1,520	..	4,270
1931-32	2,750	..	..	2,000	..	4,750
1932-33	3,800	..	..	1,700	..	5,500
1933-34	4,500	..	..	1,700	..	6,200
1934-35	8,000	..	..	1,750	..	9,750
1935-36	13,500	500	..	1,900	..	15,900
1936-37	16,500	2,190	..	2,400	..	21,090
1937-38	18,500	5,500	..	2,800	500	27,300
1938-39	21,250	6,000	2,500	3,100	1,250	33,100
1939-40	18,500	8,250	5,000	3,900	3,230	38,880
1940-41	20,000	13,250	7,500	4,350	6,250	51,350
1941-42	24,000	14,750	8,500	5,500	8,800	61,550
1942-43	23,500	14,500	7,250	6,650	9,150	61,050
1943-44	22,750	15,000	7,250	7,000	10,150	62,150
1944-45	23,800	17,250	8,250	6,900	11,150	66,750
1945-46	22,500	17,500	8,250	6,825	12,100	67,175
1946-47	28,900	24,000	11,000	8,693	17,498	90,089

Monitoring Office.—In order that all news bulletins may be prepared with a knowledge of what is being broadcast by other important stations of the world a Monitoring Office has been established at Simla.

Public Relations.—For establishing and maintaining contact between All-India Radio and its listeners there is a Public Relations Officer at headquarters and a Liaison Officer and a Listener Research Officer at each Station.

Advisory Committees, established at the broadcasting centres in consultation with the Provincial Governments, keep the Director-General, All-India Radio, in touch with local public opinion in the matter of programme construction and advise him on such matters. For advising the Director-General All-India Radio, on the choice of a generally acceptable vocabulary for Hindustani, a Hindi-Urdu Standing Advisory Committee was formed in 1946. The first meeting of the Committee was held in May and June 1946.

Post-War Plan.—In November 1944 a Basic Plan for the development of broadcasting in India was drawn up and submitted to the Government of India as a post-war scheme. This was revised in September 1945 to include a scheme for External Broadcast and for the re-organisation of the Central Directorate and other units located at Delhi.

The objects of the scheme, as outlined in the basic plan, are:

- (i) To provide two different broadcast services—an urban service in large cities and towns and over thickly populated areas of urban character, and a rural service for the whole of India on two different sets of transmitters.
- (ii) (a) Under urban service to provide urban programmes in 19 major languages.
- (b) Under rural service to provide rural programmes in 125 different rural languages and dialects spoken in the rural areas.
- (iii) To provide an alternative urban service (zonal programme) over certain areas where the density of urban population is high.

This post-war broadcasting scheme, in general, seeks to provide, among other things, each of the villages with a community receiving radio set and over 130 transmitting stations broadcasting instructional and entertainment programmes.

As the first stage in the scheme for the Development of Broadcasting in this country, the Government of India have formulated an eight-year plan which has been taken up for immediate implementation. This plan has been approved by the Development Board and by the Standing Finance Committee of the Legislature. It covers the following:

- (i) Establishment of new broadcasting centres at Cuttack, Nagpur, Shillong, Gauhati, Ahmedabad, Bezwada, Calicut and Dharwar.
- (ii) Installation of high-power medium-wave transmitters at Delhi, Bombay, Madras, Calcutta and Allahabad.

(iii) Construction of studio buildings at Madras and Calcutta.

(iv) Provision of additional studio facilities at the existing broadcasting centres.

In their choice of new centres, the Government of India have been guided by the following factors:

- (i) Demands of the linguistic areas hitherto unprovided with a service and the importance of the language from the literary point of view and from the size of population speaking the language.
- (ii) Demands of the various provinces.
- (iii) Density of urban population within the service area of the broadcasting centre and its potentialities in bringing in increased revenue.
- (iv) Importance as an educational and cultural centre, and availability of programme talent at the centre or within easy reach thereof.
- (v) Density of rural population and distribution of villages and hamlets within the service area, which will determine the centre's usefulness as a rural centre.

All the services now to be provided will be on the medium wave.

The total estimates capital cost of the entire scheme will be Rs. 3, 64,70,000. Works costing Rs. 3,01,70,000 would be completed within the first five years.

Because of the various factors involved in the opening of new stations, such as, acquisition of sites, construction of new buildings, etc., a certain amount of delay is inevitable. In order to provide an interim service until the complete plans for each centre are carried out, the Government of India have undertaken the construction of "pilot" stations at the new centres mentioned above. These pilot stations are to form the nucleus of the future services and, in addition to the meeting of the immediate needs of the areas concerned, they would help to cultivate the potential talent at the centre and also make the people more radio-minded. Such a pilot station has already been opened at Cuttack and two more are under construction at Shillong-Gauhati and Nagpur.

Licences.—Broadcast receiver licences are issued at all head and sub-post offices at a fee of ten rupees per year, and cover the use of receiving sets throughout India. Licences for fixed stations for transmitting and experimental purposes are much sought after, and despite a careful scrutiny of the applications, a considerable number have been issued. The number of traders in wireless apparatus who are required to take out special Import licences has increased considerably during recent years.

Broadcast Receiver Licences are issued to Municipalities or other public bodies for the reproduction of broadcast programmes in public places by the Postmaster-General of the Province. A licence issued for this purpose covers the use of one wireless receiver and any number of loudspeakers at one place only but does not cover any external wiring erected outside the premises of the licensee.

A commercial Broadcast Receiver Licence is, however, necessary in the case of clubs, institutions, messes, etc., for reproducing broadcast programmes at subscriptions, dances, concerts, bazaars, etc., to which the public are admitted. This licence is also issued by the Postmaster-General at a fee of Rs. 25 and is valid for one year.

While the number of wireless receiver Licensees in India has increased, the total for British India numbering 252,899 on July 1, 1947, is negligible, when one considers the vast population, about 388,097,955, or when one compares it with the progress in Europe, America or Japan where it has become an indispensable dynamic social institution.

Taking the figures of wireless licences, there was an increase of 11,000 between January 1933, and July 1935. The number in April 1937 was 43,351, in April 1938, 53,810, in April 1939, 78,698, in April 1940, 100,388, in April 1941, 128,087, in April 1942, 156,793, in April 1943, 168,236, in April 1944, 181,848, and 205,130 in April 1946. At the end of March 1946 there were 47,492 licence holders in the Punjab and North-West Frontier Province. Postal Circle which had the largest number in old undivided India, the Bombay Postal Circle coming next with 45,144.

The growth of Broadcast receiver licences at the end of March of each year beginning with 1933 is given below which will indicate the interest evinced in radio :

Pakistan Service

ON the creation of the Dominion of Pakistan, three regional broadcasting stations were handed over to the P.B.S. These were: One 5-kW medium-wave station at Lahore, one 10-kW medium-wave station at Peshawar, and one 5-kW medium-wave station at Dacca. These stations have a comparatively small range and are primarily intended to meet local needs.

NEW TRANSMITTERS.—It is proposed to install five more transmitters in the near future. Of the two 50-kW short-wave transmitters to be installed at Karachi, one will be used for internal broadcasts and a centralised news service, and the other for external broadcasts. These two transmitters will cover not only the whole of Eastern and Western Pakistan, but also certain countries in the Middle East and Europe.

Two more 10-kW medium-wave transmitters are also earmarked for Sind. Of these, one will be installed at Karachi. It will meet only the local needs of the town. As Karachi is bounded by sea on one side and desert on the other, this transmitter will not be able to serve the whole of Sind. It is, therefore, possible that the other medium-wave transmitter may be installed at Hyderabad.

One 7.5-kW short-wave transmitter to be installed at Dacca, in addition to the existing 5-kW medium-wave transmitter, will not only serve the whole of the East Bengal, but also connect East Bengal with Western Pakistan and will be heard in Western Pakistan.

It is not proposed to set up a radio station at Chittagong in the near future as the short-wave transmitter to be installed at Dacca will be heard throughout East Bengal and will be able to cater for the needs of Chittagong also.

RURAL EDUCATION.—No scheme for the establishment of a large number of transmitting radio centres for rural propaganda and education has so far been prepared, mainly because of financial reasons. The expenditure involved would be very large and the Provincial Governments who are generally responsible for installing radio sets in rural areas, may not be able to find the necessary funds for the purpose for some time to come.

There are also practical difficulties in implementing a scheme of this kind on account of the generally undeveloped state of the rural areas and lack of means of communication. In the vast majority of towns and villages, there is no electricity and in most cases one will have to depend on battery-operated radio sets. These sets cannot be installed without making elaborate arrangements for their maintenance and servicing. There are no workshop facilities for re-charging batteries in most of the mofussil districts.

The new installations will bring about an appreciable expansion in the activities of Radio Pakistan. The existing radio stations at Lahore and Peshawar are already broadcasting rural programmes. No rural programmes are being broadcast from the Dacca Station as the Provincial Government of undivided Bengal did not provide Dacca and its vicinity with radio sets.

British Broadcasting Corporation

THE British Broadcasting Corporation maintains a small office in New Delhi, to act as a liaison point between its broadcasting headquarters in London and the broadcasting organisations of India, Pakistan and Ceylon, as well as to maintain contact with listeners in these countries to the B.B.C.'s Overseas Programmes.

Its function is purely one of liaison. No transmitting of programmes takes place outside London.

The office in New Delhi was first established in 1942 with the then primary object of conducting listener research for the B.B.C.'s Overseas Programmes broadcast from London, in both English and in five Eastern languages.

Early in 1943, the scope of the office was slightly expanded with the appointment of a senior B.B.C. Representative from London, to handle all matters of co-operation, interchange of ideas and material and public relations, between the B.B.C. and its sister broadcasting organisations in India.

Pakistan and Ceylon have since been added to the scope of its contacts, but the general shape of the office remains the same, with, as its two main strands of work, Listener Research and Public Relations.

With Listener Research, the office helps to form a liaison between listeners to the B.B.C. Programmes in these countries and the broadcasting planners and artists working in London. It aims to ensure that the B.B.C.'s Eastern Service—which is broadcast especially for the three Dominions and which can be heard daily between 7 p.m. and 9 p.m.—satisfies the needs of its audience; keeps up-to-date with changing opinions and requirements. It aims to keep listeners in touch with news and trends of thought in the Western countries; and by reporting back to London the views of listeners, helps to introduce new features and programmes which meet with the interests and needs of the listeners in these communities.

It aims too to maintain a similar contact between the planning departments in London and the listeners in these countries to the B.B.C.'s General Overseas Service broadcast in English over the twenty-four hours daily; and which is directed specially to India, Pakistan and Ceylon every day from 6-30 a.m. to 10-30 p.m.

In carrying out this work, the B.B.C. Listener Research Officer has toured most areas in the three Dominions enquiring at first hand into the reception of the programmes and assessing from suggestions, appreciations and frank criticisms, how far they are fulfilling the listeners' needs.

EXCHANGE OF IDEAS

One method of promoting cordial relations is by a constant interchange of ideas, scripts and through reciprocal arrangements for the rebroadcasting of news, cultural items and great public occasions. So, through such co-operation, the B.B.C. was enabled to rebroadcast the ceremonies of August 14 and 15 and similarly, there were rebroadcasts in the Dominions on such occasions as the Royal Wedding in November, 1947.

Such rebroadcasts often require careful planning in terms of timings and technical facilities and the work of the B.B.C. Office in New Delhi helps to meet these arrangements.

Also, by means of recordings made by the B.B.C. Transcription Service, of programmes broadcast in London on any of the Home or Overseas Services, the B.B.C. can offer broadcasting concerns all over the world, records of outstanding items such as concerts of Western Music, or talks given by authorities on matters of general cultural and educational interest. Being in recorded form, other broadcasting concerns can use them in their programmes at times best suited to the habits of their audiences.

So a link can be formed between the East and the West especially in the spheres of thought and culture.

Similarly through the co-operation of such broadcasting organisations as All India Radio the B.B.C. Office can also send recordings of the Indian Scene back to London for broadcast to the English people and so foster and maintain an exchange of ideas between the Dominions and Great Britain.

The B.B.C. also maintains a News Correspondent in New Delhi whose work is to report to London for inclusion in B.B.C. News Bulletins, news items from the three Dominions. The present holder of this post is H. R. Stimson. The present B.B.C. Representative is B. W. Cave-Browne-Cave.

The address of the B.B.C. Office is: Post Box 109, New Delhi.

Civil Aviation

THE development of internal air services in the sub-continent was first essayed by Lord (then Sir George) Lloyd during his Governorship of Bombay (1918-23). The first air service was organised by the then undivided Government of India between Karachi and Bombay and was operated by the Royal Air Force. It was a purely Government venture and was established as a temporary and experimental measure during the fair-weather season of 1920, with the object of testing the extent to which air mail service was likely to be used by the public. It was closed down as soon as sufficient data as to running expenses had been collected and its continuance as a purely commercial concern was not advocated.

The general attitude of the Government or some time after this was that as no air services in the world had yet been run without a Government subsidy and as India had no money available for such a purpose, a general development of air services must await more prosperous times. The pressure of external conditions in favour of Indian aviation enterprise gradually increased. The inauguration of French and Dutch air services across the sub-continent, as well as the institution of a regular weekly service between England and Karachi, and the general increase of civil aviation in all parts of the world and of visits of flyers of different nations to the sub-continent, stimulated both Government and public opinion. India had become a party to the International Commission for Air Navigation and under this she was under an obligation to provide ground facilities for aircraft from other countries.

The problem of internal air services was freshly taken up by the Government of India in the Department of Industries and Labour when Sir Bhupendranath Mitra was member of Government holding that portfolio.

Non-official members of the Assembly, under the leadership of Dr. Moonje, then an elected member, for some time strongly pressed Government to institute a practical system for the training of young Indians in civil aviation.

With the intervention of the war, flying had to be confined to war work but this enabled India to skip over two generations of gradual progress since numerous aerodromes originally built for defence purposes are now in use as civil aerodromes. The network of radio and meteorological facilities established during war served as a nucleus in building up the post-war facilities on a much expanded scale. As a result of this on the 1st January 1946 it became possible to commence the operation of daily air services on many trunk air routes in the sub-continent, not operated before the war, with aircraft obtained from the disposals stocks and suitably converted to meet the requirements of scheduled air services.

HISTORY OF AIR SERVICES

To take up the thread from where we left Sir Bhupendranath Mitra was in due course obliged to reconsider the question of assisted internal air services in the sub-continent. An

arrangement was made by which the Imperial Airways' Services between Croton and Karachi was, on 30th December, 1929, extended to New Delhi, mails from and for Europe being carried to and from each week. This conveyance of mails between New Delhi and Karachi was performed under a special arrangement, the chief point of which was that the service was conducted by the Government of India and that Imperial Airways chartered to them machines for the purpose. This meant, in effect, that the Western service of Imperial Airways continued to Delhi, but technically the service from Karachi eastwards belonged not to them but to the Government of India. Passengers as well as mails were carried.

On the expiration of the period for which the contract on these lines was arranged, the Government of India decided not to renew their charter with Imperial Airways and adopted the alternative course of contracting with the Delhi Flying Club to carry the weekly Karachi-Delhi air mail. Passengers were also carried by this service. This, like the earlier special arrangement with Imperial Airways, was obviously a transitional plan. It came into operation early in 1932. Sir Bhupendranath Mitra was succeeded by Sir Joseph Bore and the latter entered with enthusiasm into the problem. Its solution was largely assisted by a great deal of spade work carried out by Col. Sheldermine before he resigned his appointment as D.C.A. in order to take up the corresponding post in England. A scheme was worked out under the direction of Sir Joseph Bore for the institution of a weekly air service between Karachi and Calcutta in connection with the weekly arrivals and departures of air mails conveyed by Imperial Airways Ltd. from and to England.

The acute financial stringency following on the world depression, necessitated the abandonment of the Government Karachi-Calcutta service in 1931.

TRANS-CONTINENTAL AIRWAYS

Efforts to attain the desired result were revived successfully in 1933. Arrangements were made with the British Government and Imperial Airways Ltd. for the extension of the London-Karachi air service across the sub-continent from Karachi to Singapore, as a link in the England-Australia air service. A private company called the Indian Trans-Continental Airways Limited was formed with a majority of Indian Directors, in which Imperial Airways Ltd. held 51 per cent of the shares, Indian National Airways Ltd. 25 per cent and the Government of India 24 per cent. This company then operated jointly with Imperial Airways a weekly service from Karachi to Singapore, where it connected with Qantas Empire Airways' weekly service from Singapore to Australia.

Indian National Airways Ltd. was established largely through the efforts of Mr. R. E. Grant D'Arvan, C.B.E. to participate as a shareholder in Indian Trans-Continental Airways and to develop feeder and other internal air services in the north of the sub-continent. They opened a bi-weekly service between Calcutta and Rangoon and a

★Flying your goods to any air-port in India—or abroad—is the new way to earn profits. Here's what we offer:

1. All kinds of goods handled expertly and safely.
2. Special charter facilities for carrying bulk consignments.
3. Rebates given on regular shipments (ask for details).
4. Free pick up of goods from door-step.
5. Insurance undertaken.

YOU PAY ONLY STANDARD AIR-FREIGHT RATES

Points of Good Design

M. K. CEILING SWITCHES

(For A.C. Circuits Only)

Introducing a new range of Ceiling Switches of small dimensions and remarkable efficiency

- (1) Simplified robust design embodying silver contacts.
- (2) Short break with high currency breaking capacity.
- (3) Smooth action from any angle.
- (4) Moulded base and cover in "non-track" material.
- (5) Conforms to B.S.C. 816.
- (6) Wide range of Types.

Surface type only 2" diameter.

Semi-recessed type for B.S. boxes.

One-way, Single Pole and Double Pole.

Two-way, Single Pole.

Rating 5 amps, 250 volts. A.C.

Finish Brown, with white cord pull, and 4 feet black cord.

M. K. ELECTRIC LTD.

EDMONTON, LONDON, N.18, ENGLAND.

daily service between Dacca and Calcutta with prospects of extension to Assam. Under a ten-year contract with the Government of India, they also instituted a weekly service from Lahore to Karachi, to link with the Imperial Airways London-Karachi services. The Rangoon and Dacca services from Calcutta were abandoned in 1935 owing to lack of public support.

Before all these developments, however, the first move had taken place in the west of the sub-continent through the enterprise of Tata Sons Ltd. Under a 10-year contract with the Government of India, a feeder service was started in 1932 between Karachi, Bombay and Madras, connecting at Karachi with the London-Karachi service. From the beginning of 1935, Imperial Airways London-Karachi service, and with it the Trans-India service to Calcutta, and the feeder services, Karachi-Lahore and Karachi-Bombay-Madras, were operated twice weekly. The second Trans-India service was extended to Australia in 1936.

EMPIRE AIR MAIL SCHEME

The initiative in this development was taken by the British Government. In September 1936 an agreement was reached with the Government of India and the Government of India simultaneously negotiated with the Government of Ceylon for the extension of the Karachi-Madras service to Colombo. The new services were inaugurated on the 28th February 1938, with four services a week each way from London to Calcutta. The frequency of the two feeder air mail services in India, viz., Karachi-Madras-Colombo and Karachi-Lahore was simultaneously increased to four, each service maintaining connection with the easterly and westerly flights of the main trunk service. The frequency was increased to five when the services in the Australian section were augmented at the end of July 1938 and all first class mails to Empire participating countries were conveyed by air. On the Empire system of air services, Imperial Airways and its associated companies, including Indian Trans-Continental Airways Ltd. flew a total distance of approximately 7,000,000 miles in 1938 as against 4,300,000 in 1937 and the total load carried rose from 6,315,400 to 12,392,000 ton-miles. In the early months of 1939, 550 tons of mail consisting of 50,000,000 letters were carried, each letter travelling on an average of 4,750 miles.

The Empire Air Mail scheme was suspended in September 1939 on the outbreak of the war with Germany, but a restricted service was maintained until June 1940 when, on Italy's entry into the war, air mails to the United Kingdom were totally suspended. In December 1940 the possibilities of introducing a direct air link between Britain and Durban were investigated and a "short circuiting" route was inspected by Major J. R. McCrindle, Deputy Director General of the British Overseas Airways. Air Service to England was renewed in August 1945. The Empire Air Mail scheme was finally abandoned with effect from the 1st April 1947.

India-England Airgraph Service—This new service was inaugurated on February 2, 1942. The airgraphs were photographed on a

miniature film measuring about half an inch square. The films were sent throughout by air, and a photograph facsimile, measuring about five inches by four inches, of the original letter, was made from the film and delivered to the addressee. The rate of postage originally fixed at fourteen annas was reduced to eight annas on March 2. The airgraph service was discontinued in July 1945.

INTERNAL AIR SERVICE

In 1937 Messrs. Tata Sons Ltd. established a service between Bombay and Delhi, calling at Indore, Bhopal and Gwalior. This service operated twice weekly during the fair season.

Air Services of India Ltd., Bombay, inaugurated in November, 1937 an air service from Bombay to Bhavnagar, Rajkot, Jamnagar and Porbandar in the Kathiawar States. The service was terminated in 1940. The twice weekly Bombay-Poona-Kolhapur line was also terminated due to war in 1940.

During the period of the war and up to the end of 1945 Tata Airlines, Bombay, and Indian National Airways, New Delhi, the only active operating companies in India at that time, were operating a number of trunk and feeder air services with lend-lease aircraft loaned to them under the wartime contracts with the Government of India who controlled the entire load capacity on the said air services and met the cost of operations from defence estimates. Civilian traffic was carried only when space was available after meeting the military demands.

Concurrently work had been proceeding during the war years and Sir Frederick Tymms was placed as Officer on Special Duty for producing a Post-War Plan for the development of Civil Aviation in India. Soon after the termination of the war, on the 1st January, 1946, the lend-lease aircraft loaned to the two companies were withdrawn and replaced by surplus Dakota type aircraft purchased from the United States Army and Navy Liquidation Commission. With these aircraft the two companies commenced commercial operations under agreements with the Government of India. Under these agreements Government guaranteed the companies a fixed percentage of the capacity revenue on their services. In return control was exercised over a portion of the load capacity required for Government priority traffic. The following services were operated under the terms of this contract:—

TATA AIRLINES

Karachi-Ahmedabad-Hyderabad (Dn.)-Madras-Colombo daily.

Bombay-Ahmedabad-Delhi daily.

Bombay-Nagpur-Calcutta (from 1st April 1946, twice a week).

INDIAN NATIONAL AIRWAYS

Delhi-Cawnpore-Allahabad-Calcutta daily.

Delhi-Jodhpur-Karachi daily.

Delhi-Lahore-Rawalpindi-Peshawar three times a week.

Apart from these services, operated under the guarantee arrangements, the following new services were also commenced:

AIR SERVICES OF INDIA LTD.

Bombay-Jamnagar-Bhuj (from 25th June 1946, three times a week).

Bombay-Bhopal-Nagpur-Lucknow (from 28th June 1946, once a week).

INDIAN NATIONAL AIRWAYS

Delhi-Rampur-Lucknow (from 7th February 1946 daily).

DECCAN AIRWAYS LTD.

Delhi-Gwalior-Bhopal Nagpur-Hyderabad-Madras (from 1st July 1946, three times a week).

Hyderabad-Bangalore (from 1st July 1946, twice a week).

In pursuance of the provision made in Rule 135 of the Indian Aircraft Rules 1937, an Air Transport Licensing Board was constituted in July 1946, since under rule 134 of the said Rules no scheduled air services could be operated after the 1st September 1946 except under a licence granted by the Board. Up to the 31st December, 1946, the Air Transport Licensing Board had granted provisional licences for the operation of the following air services:—

15. Bombay-Nagpur-Calcutta	Mistri Airways Ltd.

A total of 97 applications from 20 air transport companies for operating air services on 78 routes, covering the whole of what was British India and many states, was received by the Air Transport Licensing Board during the year 1946.

The grant of provisional licences by the Board was continued during 1947 and following further provisional licences were granted. In addition various changes in the frequencies and routes of scheduled air services were authorised.

TRAFFIC STATISTICS

Some interesting statistics of the traffic carried by Indian air services, scheduled and non-scheduled, during 1946 and 1947 are given below:—

Particulars	1946.	1947.
(A) SCHEDULED SERVICES		
Miles flown	4,520,046	9,361,673
Number of passengers carried	105,251	260,209
Mall carried in lbs.	1,026,403	1,404,050
Freight carried in lbs.	1,318,153	6,140,172
Capacity Ton-Miles operated	8,536,457	18,598,778
Load Factor	74.8%	79.4%
Regularity (percentage of the number of services operated to number of services scheduled) ..	96.8%	97.3%
(B) NON-SCHEDULED FLIGHTS		
Miles flown	509,495	3,804,737

NATIONALISATION

A Civil Aviation Conference was held on the 1st February, 1947, under the Chairmanship of the then Hon'ble Minister for Communications, Sardar Abdur Rab Nishtar. The object of this conference was to obtain the views of the various parties concerned on the subject of nationalisation of air services; a subject which had previously been debated in the Legislative Assembly. No final decision was, however, made. Again in 1948 this question was referred to the Standing Advisory Committee for Communications by the present Hon'ble Minister for Communications, Mr. Rafi Ahmed Kidwai. The Advisory Committee reported that a beginning should be made by Government undertaking the operation of one route themselves as an experimental measure in order to gain operating experience and obtain further data.

A committee was consequently appointed by the Hon'ble Minister for Communications to go into this question and the recommendations of the committee have been made to Government.

Non-Scheduled Air Services—A sudden demand was made upon the operating Companies for providing aircraft for the evacuation of refugees from Western Pakistan to India during the disturbed period following Partition and for the transport of personnel and material to Kashmir to deal with the situation arising from tribal attacks on the State. The operating Companies fully co-operated in providing machines and crews for these operations. The number of persons evacuated by air from Western Pakistan exceeded 50,000. For the purpose of air evacuation, a fleet of 20 aircraft was also specially chartered from B.O.A.C.

EXTERNAL AIR SERVICES

The question of India starting her own external air services to other countries had been occupying the attention of the Government of India ever since the end of the war, but the first concrete step was taken only about the end of 1947, when the Government approved a scheme for the establishment of an Indian air service between India and the United Kingdom. A new company was formed for this purpose under the name of Air-India International Ltd. The Government of India hold 49 per cent. of the share capital with an option to increase this to 61 per cent. at any time. On the Board of Directors of this company, Government have their own nominee as a "Special Director" who has certain over-riding powers. During an initial period of five years any losses incurred by this company will be made good by Government but any payment so made shall have to be repaid out of subsequent profits made by the company. The India-United Kingdom service, equipped with the most modern type of Lockheed Constellation 40-seater aircraft, commenced operation on June 8, 1948 on the route Bombay-Cairo-Geneva-London when the 'Malabar Princess' took off from the Santa Cruz airport with 35 passengers, and 164 bags containing about 1,700 lb. of letter mail.

As a result of bilateral air transport agreements negotiated with various countries, foreign air services passing through India have largely increased in number. At the present time services to and across India are operated by Pan-American Airways, Trans-World Air Lines, British Overseas Airways Corporation, Air France, K.L.M., Qantas Empire Airways and China National Aviation Corporation.

AERODROMES

In 1939 there were only 12 civil aerodromes in India with aerodrome staff and other necessary facilities. During the war, the Defence Department took over the control of all civil aerodromes and the services of all Air Traffic Control Officers were loaned to the Air Forces. The Air Forces continued to exercise control over these aerodromes till 1945 when, due to improvement in the war situation, gradual transfer of the aerodromes to civil aviation commenced. During the war, the development of aerodromes was rapid with the result that at the end of the war India had several hundreds of aerodromes, many with 2,000 yard paved runways.

Under the post-war plan of the Government of India, framed before the partition, it was proposed to develop 4 International, 10 Major, 32 Intermediate and 57 Minor aerodromes in India. Because of the partition in August 1947, these plans had to be modified and under the revised scheme it was proposed to have 3 International, 7 Major, 13 Intermediate and 22 Minor aerodromes in the Indian Dominion. At present all these aerodromes except 14, mostly Minor, are already staffed and equipped to deal with aircraft operations. Additionally, there are 20 aerodromes in the various Indian States which

Since partition, Bombay Airport (Santa Cruz) has become the first port of entry from the West for the Indian Dominion and is provided with customs, immigration and health facilities. Extensive development works are in progress at Bombay Airport to cope with the anticipated increase in air traffic. To meet the demands of the increasing International air traffic through the Calcutta (Dum Dum) Airport, India's gateway to the East, considerable expansion of the airport is planned.

Night Lighting Equipment—Twenty-four aerodromes are at present equipped for night-flying operations. The night flying equipment in use at some of the stations at present is of the emergency type consisting of paraffin flares, lanterns and glim lamps. Portable electric flare paths are provided at two stations and it is proposed to acquire more of these sets to be installed at other stations. Schemes are in hand to provide permanent electric runway lighting, taxiway lighting, and approach lighting, etc., at the Major and International airports.

Operations—At the close of war, the Civil Aviation Department took over by stages operational control of a number of aerodromes including those originally belonging to it before the war. The technique of Air Traffic Control during the war was developed to a very high standard to ensure safety of aircraft operations. Air Traffic Control was brought under three heads namely, Area Control, Approach Control and Airfield or Local Control. Of these, with a view to minimising the staff, Approach and Local Controls have, for the present, been combined together. Area Control Centres have been established at Delhi, Calcutta, Bombay and Madras.

NAVIGATIONAL AIDS

Thirty-seven Aeronautical Communications Stations—25 of which are operated by the Director-General of Civil Aviation and 12 by Airline Operating Companies on an agency basis—have been established by the Government of India.

On an average, there are at present seven Navigational Aids and seven Air/Ground Communication Channels available at the International airports in conformity with the pattern laid down by International Civil Aviation Organisation. Provision has been made, in the future plan, for further augmentation of navigational aids by installation of up-to-date methods of Instrument Landing System, Ground Control Approach System, Air/Ground Control Radar at all International airports. Long-range navigational aids have also been planned for Bombay, Calcutta and Madras to give coverage to an aircraft flying over the sea. At the other airfields, almost all the navigational aids and aircraft communication channels recommended by the International Civil Aviation Organisation have been provided. In addition, facilities exist for point to point communication on both radio telegraphy and telephony between the adjacent airfields and also between the International airfields. These point to point links will be further expanded to improve communication between the stations in India as well as between the International airports in India.

been planned to provide aerodrome service in the nature of Inter-communicating Tele-Talk System, Public Address System and Speech Recording Apparatus at Control Towers for recording the telephonic communication with aircraft.

There are three important ancillary units within the Communication organisation of the Civil Aviation Department. These Units are known as Radio Construction Unit, Radio Stores Depot, and Radio Development Unit. The new installations and major repairs are carried out by the Construction Unit. Radio Stores Depot is the central stores responsible for distribution of all equipment to the stations. Radio Development Unit, which came into existence in January, 1948, is engaged in carrying out research and development work on problems pertaining to the Aeronautical Communication Service.

AIR TRAINING

Facilities exist in the aeronautical communication service for the training of operating and technical personnel at the Civil Aviation Training Centre at Saharanpur. During the year 1947, this Centre had trained nearly 350 trainees. This Training Centre is probably the best-equipped establishment of its kind in South-East Asia. Various instructional courses are provided at this Centre for personnel ranging from the new recruits to those with limited previous experience.

It is also proposed to start Flying and Air Traffic Controllers Schools at Allahabad and an Engineering School at Barrackpore for the training of Commercial Pilots, Aerodrome Officers, Control Operators and Ground Engineers, in the near future. The output in the first three years of operation of these schools is estimated to be 280 Commercial Pilots, 300 Aerodrome Officers, 300 Control Operators and 300 Ground Engineers.

During the year 1947, a handbook entitled 'AERADIO' giving details of radio facilities and many other useful information was compiled. The first edition of this handbook was published in July, 1947.

In order to facilitate exchange of ideas and co-ordinate the requirements of Airline Operating Companies with regard to Navigational Aids and Communication facilities in Civil Aviation, a body known as Communication Consultative Committee was formed at the end of 1946. The Civil Aviation Department and Airline Operating Companies are represented in this Committee. The meetings of this Committee are held every year and have already proved its usefulness in co-ordinating the requirements of Navigational Aids and Communication facilities in the country.

Details are also being finalised for the establishment of an Indian Aeronautical Society for the advancement of Aeronautical Science and Engineering. It is hoped that this Society will be formed by the end of this year.

Flying Clubs—Flying Clubs provide facilities for ordinary citizens to learn to fly at concessional rates. To a limited extent they also give flying training for commercial aviation. There are, at present, 7 subsidised Flying Clubs

in India with Headquarters at Delhi, Bombay, Madras, Barrackpore, Patna, Bhubaneswar and Lucknow, and three non-subsidised Flying Clubs, viz.—the State-assisted Flying Clubs at Jodhpur, Trivandrum and Hyderabad. It is proposed to open and subsidise three more Flying Clubs, namely the Northern India Flying Club at Jullundur, the C.P. and Berar Flying Club at Nagpur and a Club at Gauhati in Assam during 1948-49. During 1947-48, the Clubs carried out 18,112 hours flying. During 1948-49, it is proposed to revise Gliding activities by subsidising the Indian Gliding Association Ltd., Poona.

Aeronautical Maps—The preparations of a series of aeronautical maps on the scale of 1/1,000,000 has been undertaken by the Survey of India. Hitherto, there have been two series of general maps in this scale, namely the "Carte Internationale" Series and the "India and Adjacent Countries" Series. In order to facilitate the work of keeping the maps up-to-date, it was decided to concentrate on "Carte Internationale" Series only. The Government have also undertaken to print aeronautical maps covering Indian territory conforming to the I.C.A.O. recommendations. The 4th Session of Map Division Meeting of I.C.A.O. was held at Brussels in March 1948 in which India participated. The recommendations made therein are awaiting approval of the I.C.A.O. Council.

India is a member of the International Civil Aviation Organisation and has been elected to its Council. Mr. K. M. Raha was the first Representative of India on the Council of I.C.A.O. followed by Mr. B. M. Gupta and Mr. D. Chakravarti. India took part in all the Assembly meetings and was represented in important Committee and Division meetings. India has invited the Organisation to hold the I.C.A.O. South-East Asia Regional Air Navigation Meeting in New Delhi during November/December 1948.

India has also entered into bilateral air transport agreements with U.S.A., Netherlands, France and Sweden. Agreements with Pakistan and Switzerland have been finalised and await signature by the respective Governments. Negotiations are in progress for the conclusion of a bilateral air transport agreement with U.K.

MANUFACTURE

There were no aircraft manufacturing activities in India before the last World War and engineering activities were limited to the overhaul and repair of aircraft and engines by various Companies such as Tata Airlines, Bombay, now Air-India Limited, Indian National Airways Ltd., Delhi, Air Services of India Ltd., Bombay, Indian Air Survey and Transport Co. Ltd., Calcutta and De Havilland Aircraft Company, Karachi.

An Aircraft Factory for the manufacture of aircraft was a strategic necessity after the outbreak of War. The Hindustan Aircraft Company was started in the Year 1940 as a commercial venture, by Mr. Walchand Hirachand in association with the Government of Mysore, initially for the assembly and ultimately for the manufacture of aircraft. In the year 1941 the Government of India decided that they should

themselves take a more active part in the Company's affairs and equal shares were held by the Government of India and Government of Mysore and Messrs. Walchand Hirachand. The scheduled manufacturing programme could not progress very much, as the material was not reaching the factory due to shipping difficulties. A limited number of aircraft were constructed from the material and components imported between the period 1940-43, and the Director General of Civil Aviation was responsible for the inspection of this project on behalf of the Government of India.

With the Allied Air Forces in India making increasing demand for service and overhaul work, it became necessary for the Government of India to secure the control of the Aircraft Factory. Subsequently the Government of India bought over Walchand's interest. Later on the Factory was handed over to the U.S.A.A.F. under a managing agent's agreement for the duration of the War. At the end of 1943 the management reverted to the Government of India and Mysore State. During the War this Factory carried out repair, overhaul, maintenance and servicing of American Air Force aircraft and engines. At one time it employed about 13,000 people. On the conclusion of the war with Japan in 1945, the Factory was reorganised by the Government of India under the Department of Industries and Supply for the conversion and overhaul of Army Dakotas for the use of Civil Airlines. It is now engaged on the conversion and overhaul work both for Civil Aviation and the Air Forces. It has also a programme of assembling and manufacturing of Trainer aircraft for the Air Forces. It is the policy of the Government of India to develop this Factory into a manufacturing concern.

A Limited liability Company called Portsmouth Aviation Company, Nawanagar is in the course of being established at Sika in Nawanagar State. It is a sister Company of Portsmouth Aviation Limited, England. The principal product of the Company will be the assembly and manufacture of an all-metal twin-engined 5 Seater aircraft called the "Aero-Car", which will be suitable for feeder line communication, executive travel or air-ambulance work. The Aero-Car aeroplane will be first assembled in India from parts fabricated in U.K. and later on manufactured in India in stages. The Company is going to set-up an Aero-Engine overhaul Shop backed up by a Machine Shop. To begin with the key technical personnel will be obtained from U.K. It is expected that the Company will be completely Indianised in a few years.

The following other Aero-material and parts are now being manufactured by the under-mentioned Companies in India. They are approved for this purpose by the Director General of Civil Aviation in India. The inspection of the manufacture is carried out in accordance with standard aeronautical practice in U.K. and U.S.A.

Aero-Aluminium Sheets—The Aluminium Production Company of India Ltd., P. B. 361, 5 Council House Street, Calcutta is approved for the manufacturing, storing and distribution of Aircraft Aluminium Sheets to British Standard Specifications 2L4, 2L16, and 2L17.

Aero-Tyres and Tubes—The Dunlop Rubber Company (Ltd.), Sahagunj, Hoogly District, is approved for the manufacture, repairing and remoulding of aircraft tyres and tubes.

The Firestone Tyre and Rubber Company of India Ltd., Hay-Bunder Road, Sewree, P.O. Box No. 197, Bombay, is approved for the manufacture of Aircraft Tyres and Tubes.

Aircraft Solders—The Eyre-Smelting Co., Ltd., Hide Road, Kidderpore, P.O. Box No. 10602, Calcutta, is approved for the manufacture, storing and distribution of Aircraft Solders.

Wooden Airscrews—The Forest Research Institute, Dehra Dun, is approved for the manufacture and repair of Wooden Airscrews.

Aircraft Gaskets—Messrs. Hardecastle, Waud & Co., Ltd., Alice Buildings, Hornby Road, Bombay, is approved for the manufacturing of Gaskets.

Plywood—Plywood-Products, Sitapore, is approved for the manufacture of aircraft Plywood to Aeronautical Specification D.T.D. 427.

Aeroplane Cotton Fabric—To specification D.T.D. 407 will be undertaken by Messrs. Buckingham & Carnatic Co., Ltd., and Binny & Co., Madras Ltd. as soon as the new machinery which has been received by them has been installed.

RESEARCH

Research and development work in Aeronautics is still in its infancy in India. The pressing need for it has not been felt so far since aircraft operations in this country in the past have been of limited scope and the aircraft industry remained in an undeveloped state. The position has changed today and aircraft design and manufacturing activities have been started in Hindustan Aircraft Limited and elsewhere; and as a consequence the necessity has arisen for initiating research on advanced problems of aircraft design, for developing materials of indigenous origin and for the introduction of advanced aeronautical engineering training in Universities and technical institutions. Recent advances in civil air transport design and practice have also brought in their wake complicated problems relating to air-worthiness and safety in operations. In view of these developments, the necessity for a separate research and development branch in the Civil Aviation Department was anticipated even during the war. A small Research and Development Organisation was created in April, 1946. The work of this organisation so far has been mainly concerned with engineering problems relating to modification and repair of aircraft, operational problems concerning aircraft performance at various aerodromes, development and use of Indian materials for aircraft construction, advice on advanced aeronautical education and training, the encouragement of fundamental research in aeronautics and the formation of an aeronautical society for the advancement and diffusion of knowledge of aeronautical science.

A post-graduate course in aeronautical engineering was introduced in the Indian Institute of Science, Bangalore, in December, 1942 and since then the Institute has been the only

advanced training centre for aeronautical engineers in India. The Department of Aeronautics of the Institute is equipped with a wind tunnel and apparatus for structural research. The Institute will be the centre of fundamental aeronautical research in this country. Wind tunnel research at the Institute is being supported by an annual grant from the Department of Civil Aviation.

It is proposed to establish a research laboratory under the aegis of the Civil Aviation Department where practical problems of particular interest to Civil Aviation will be investigated. One such experimental problem is the collection of data on flight loads by means of V.G. Recorders installed in transport aircraft. There are many other problems of tropical operations such as temperature accountability in aircraft performance, power plant protection, the development of special safety devices, the evaluation of the effects of turbulence, etc., which could advantageously be investigated in

the research laboratory with a view to ensuring greater safety in operations. The research laboratory will also be engaged in certain aspects of civil aircraft design development work and will eventually have to undertake the examination of "prototype" aircraft for purposes of type certification.

Considerable progress in original aircraft design work is being made at Hindustan Aircraft Limited, Bangalore and advances in this field will require the services of a research and development establishment organised on the lines of the Royal Aircraft Establishment in England and the N.A.C.A. Laboratories in America. The proposed research laboratory of the Civil Aviation Department is intended to serve as the nucleus around which future aeronautical research and development activities may grow in such manner as to be of maximum benefit to the aircraft industry for evolving original aircraft designs and for developing and perfecting the methods of fabrication.

IT was only after the railways had proved to be a definite asset to the nation in England that their construction in the sub-continent was contemplated. And then to test their applicability to Eastern conditions three experimental lines were sanctioned in 1845. These were from Calcutta to Raniganj (120 miles), the East Indian Railway; Bombay to Kalyan (32 miles), Great Indian Peninsula Railway; and Madras to Arkonam (39 miles), Madras Railway.

Indian Railway building on a serious scale dates from Lord Dalhousie's great minute of 1853; wherein, after dwelling upon the great social, political and commercial advantages of connecting the chief cities by rail, he suggested a great scheme of trunk lines linking the Presidencies with each other and the inland regions with the principal ports. This reasoning commended itself to the Directors of the East India Company, and it was powerfully reinforced when, during the 1857 flare-up the barriers imposed on free communication were severely felt by the authorities as there was no private capital in the sub-continent readily available for railway construction, English Companies, the interest on whose capital was guaranteed by the State, were formed for the purpose.

By the end of 1859 contracts had been entered into with eight companies for the construction of 5,000 miles of line, involving a guaranteed capital of £52 millions. These companies were 1) the East Indian; (2) the Great Indian Peninsula; (3) the Madras; (4) the Bombay, Baroda and Central India; (5) the Eastern Bengal; (6) the Indian Branch, later the Oudh and Rohilkund State Railway and now part of the East Indian Railway; (7) the Sind, Punjab and Delhi, now merged in the North-Western Railway; and (8) the Great Southern of India, now the South Indian Railway. The scheme laid the foundations of the whole railway system of the sub-continent as it exists today.

EARLY DISAPPOINTMENTS

The main principle in the formation of these companies was a Government guarantee or their capital, for this was the only condition in which investors would come forward. This guarantee was a five per cent. return coupled with a free grant of all the land required; in return the companies were required to share the surplus profits with the Government, after the guaranteed interest had been met; the interest charges were calculated at 22½ to the rupee; the Railways were to be sold to Government on fixed terms at the close of twenty-five years and the Government were to exercise close control over expenditure and working. The early results were disappointing. Whilst the Railways greatly increased the efficiency of the civil administration, the mobility of the troops, the trade of the country, and the movement of the population, they failed to make profits sufficient to meet the guaranteed interest. Some critics attribute this to the necessarily high standard of construction adopted, and to the engineers' ignorance of local conditions, the result was that by 1869 a deficit on the Railway budget was Rs. 18,641 khs. Seeking for some more economical

Railways

method of construction, the Government secured sanction to the building of lines by direct State Agency, and funds were allotted for the purpose, the metre-gauge being adopted for cheapness.

Funds soon lapsed and the money available had to be diverted to converting the Sind and Punjab lines from metre to broad-gauge for strategic reasons. Government had therefore again to resort to the system of guarantee, and the Indian Midland (1882-85), since absorbed by the Great Indian Peninsula; the Bengal-Nagpur (1883-87); the Southern Maharatta (1882); and the Assam-Bengal (1891) were constructed under guarantees, but on easier terms than the first companies. Their total length was over 4,000 miles.

FAMINE AND FRONTIERS

In 1879, embarrassed by famine and by the fall of the exchange value of the rupee, Government again endeavoured to enlist unaided private enterprise. Four companies were promoted:—the Nilgiri, the Delhi-Umballa-Kalka, the Bengal Central, and the Bengal and North-Western. The first became bankrupt, the second and third received guarantees, and the Tirth Railway had to be leased to the fourth.

A step of even greater importance was taken when the States were invited to undertake construction in their own territories, and the Nizam's Government guaranteed the interest on 330 miles of line in the State of Hyderabad. This was the first of the large system of Indian State Railways. In the first period up to 1870, 4,235 miles were opened, of which all save 45 were on the broad-gauge; during the next ten years there were opened 4,239, making the total 8,474 (on the broad-gauge 6,562, the metre 1,865, and narrow 67).

Then ensued a period of financial ease. It was broken by the fall in exchange and the costly lines built on the frontier. The Penjdeh incident, which brought Great Britain and Russia to the verge of war, necessitated the connection of our outposts at Quetta and Chaman with the main trunk lines. The sections through the desolate Haral and Bolan Passes were enormously costly; it is said that they might have been ballasted with rupees; the long tunnel under the Khojak Pass added largely to this necessary, but unprofitable, outlay.

REBATE TERMS ESTABLISHED

This induced the fourth period—the system of rebates. Instead of a gold subsidy, companies were offered a rebate on the gross earnings of the traffic interchanged with the main line, so that the dividend might rise to four per cent. but the rebate was limited to 20 per cent. of the gross earnings. Under these conditions, there were promoted the Ahmedabad-Prantel, the South Behar, and the Southern Punjab, although only in the case of the first were the terms strictly adhered to.

The Barsi Light Railway, on the two feet six inches gauge, entered the field without any guarantee, and with rolling stock designed to illustrate the carrying power of this gauge. The rebate terms being found unattractive in view of the competition

of 4 per cent. trustee stocks they were revised in 1896 to provide for an absolute guarantee of 3 per cent. with a share of surplus profits; or rebate up to the full extent of the main line's net earnings in supplement of their own net earnings, the total being limited to 3½ per cent. on the capital outlay. Under these terms, a considerable number of feeder line companies was promoted, though in none were the conditions arbitrarily exacted. As these terms did not at first attain their purpose, they were further revised, and in lieu was substituted an increase in the rate of guarantee from 3 to 3½ per cent. and of rebate from 3½ to 5 per cent. with equal division of surplus profits over 5 per cent. in both cases. At last, the requirements of the market were met, and there was for a time a mild boom in feeder railway construction and the stock of all the sound companies promoted stood at a substantial premium.

Conditions changed after the war and the Acworth Committee so far from approving of this system, considered that the aim of the Government should be to reduce by amalgamation the number of existing companies and that it should only be in cases where the State cannot or will not provide adequate funds that private enterprise in this direction should be encouraged.

The existing Branch Line Companies have ceased for some time to raise additional capital for capital requirements. They have either obtained overdrafts from various Banks for this purpose at heavy rates of interest or issued debentures at special rates of interest (usually about 7 per cent.) or in several cases asked for money to be advanced to them by the Railway Board. So far, therefore, from reducing the amount that the Government of India have to raise in the open market, they were increasing the amount. For the above reasons, the Government of India have abolished this system and are now prepared themselves to find the capital required for the construction of extensions or branches to existing main line systems. They have also announced their readiness to consider the question of constructing branch or feeder lines which were not expected to be remunerative from the point of view of railway earnings upon a guarantee against loss from a Local Government or local authority which might desire to have such lines constructed for purely local reasons or on account of administrative advantages likely to accrue in particular areas.

This proposal was put forward as affording a suitable method of reconciling the interests of the Central and the Local Governments and of providing for local bodies and for Local Governments a method of securing the construction of railways which may be required for purely local reasons and which, while not likely to prove remunerative on purely railway earnings, are likely to give such benefits to Local Governments and local bodies as will more than repay the amounts paid under the guarantee. Some such arrangements have already been made with Local Governments in Madras, the Punjab area, Assam and Bombay.

RAILWAYS BEGIN TO PAY

Meantime a much more important change was in progress. The gradual economic

development of the sub-continent vastly increased the traffic, both passenger and goods. The development of irrigation in the Punjab area and Sind transformed the North-Western Railway. Owing to the burden of maintaining the unprofitable Frontier lines this was the Cinderella of the Railways in the sub-continent—it had become the chief target of the critics who protested against the unwisdom of constructing railways from borrowed capital. But with the completion of the Chenab and Jhelum Canals, the North-Western became one of the great grain lines of the world, choked with traffic at certain seasons of the year and making a large profit for the State. In 1900 the railways for the first time showed a small gain to the State. In succeeding years the net receipts grew rapidly. In the four years ended 1907-08 they averaged close upon £2 millions a year.

In the following year there was a relapse. Bad harvests in India, accompanied by the monetary panic caused by the American financial crisis, led to a great falling off in receipts just when working expenses were rising, owing to the general increase in prices. Instead of a profit, there was a deficit of £1,240,000 in the railway accounts for 1908-09. But in the following year again there was a reversion to a profit, and the net railway earnings continued to increase steadily till they reached a figure of over £10 millions in 1918-19. This era of profits ended with the close of the year 1920-21 and in 1921-22 there was a loss of over £6 millions.

These changes in the fortunes of the railways affected the Budget of the Central Government rather seriously and in 1924-25 the Railway finances were separated from the General Budget. The terms of the separation are referred to in a later paragraph while the profits of the railway in the years from 1924-25 onwards are given below:

Year.	Contribution to General Revenues.	Transferred to Railway Reserve Fund.†	Total Gain or Loss.*
	Rs.	Rs.	Rs.
1925-26	5,49,00,000	3,79,00,000	9,28,00,000
1926-27	6,01,00,000	1,49,00,000	7,50,00,000
1927-28	6,28,00,000	4,57,00,000	10,85,00,000
1928-29	5,23,00,000	2,58,00,000	7,81,00,000
1929-30	6,12,00,000	2,08,00,000	4,04,00,000
1930-31	5,74,00,000	10,93,00,000	5,19,00,000
1931-32	—	4,95,00,000	9,20,00,000
1932-33	—	—	10,23,00,000
1933-34	—	—	7,96,00,000
1934-35	—	—	5,06,00,000
1935-36	—	—	4,00,00,000
1936-37	—	—	1,21,00,000
1937-38	2,76,00,000	—	2,76,00,000
1938-39	1,37,00,000	—	1,37,00,000
1939-40	4,33,00,000	—	4,33,00,000
1940-41	12,16,00,000	6,30,00,000	18,46,00,000
1941-42	20,17,00,000	—	28,08,00,000
1942-43	20,13,00,000	8,86,00,000	45,07,00,000
1943-44	37,64,00,000	13,20,00,000	50,84,00,000
1944-45	32,00,00,000	17,88,47,209	49,88,47,209
1945-46	32,00,00,000	6,20,03,676	38,20,03,676

† Figures preceded by a — indicate a withdrawal from the Railway Reserve Fund.

* Figures preceded by a — indicate a loss.

1933-34 is the first year to show some signs of recovery since the depression. The earnings of the State-owned lines increased from Rs. 84 crores in 1932-33 to Rs. 86 crores in 1933-34 and to Rs. 95.48 crores in 1936-37; but the net result of the year's working showed a gain of Rs. 121 lakhs.

CONTRACTS REVISED

One factor which helped to improve the financial position was the revision of the original contracts under which the guaranteed lines were constructed. The five per cent. dividend guaranteed at 22d. per rupee, and the half-yearly settlements made these companies a drain on the State at a time when their stock was at a high premium. The first contract to fall in was the East Indian, the great line connecting Calcutta with Delhi and U.P. and Bihar. When the contract lapsed, the Government exercised their right of purchasing the line, paying the purchase-money in the form of terminable annuities, derived from revenue, carrying with them a sinking fund for the redemption of capital. The railway thus became a State line; but it was released to the Company which actually worked it.

Under these new conditions the East Indian Railway Company brought to the State in the ten years ended 1909 after meeting all charges, including the payments on account of the terminable annuity by means of which the purchase of the line was made, and interest of all capital outlay subsequent to the date on purchase, a clear profit of nearly ten millions. No other railway shows results quite equal to the East Indian, because, in addition to serving a rich country by an easy line, it possesses its own collieries and enjoys cheap coal.

But with allowance for these factors, all the other guaranteed companies which have been acquired under similar conditions as their contracts expired, have proportionately swelled the revenue and assets of the State. It is difficult to estimate the amount which must be added to the capital debt of the sub-continent's railways in order to counter-balance the loss during the period when the revenue did not meet the interest charges. According to one estimate it should be £50 millions. But even if that figure be taken, Government have a magnificent asset in their railway property.

IMPROVING OPEN LINES

These changes induced a corresponding change in railway policy. Up to 1900 a great work had been the provision of trunk lines. But with the completion of the Nagda-Muttra line, providing an alternative broad-gauge route from Bombay to Delhi through Eastern Rajputana, the trunk system was virtually complete.

There does not exist any through rail connection between India and Burma, although several routes have been surveyed: the mountainous character of the region to be traversed,

and the easy means of communication with Burma by sea, rob this scheme of any living importance. Further survey work was undertaken between 1914 and 1920, the three routes which were surveyed being the coast route, the Manipur route, and the Hukong valley route.

These works are, however, subordinate to the necessity for bringing the open lines up to their traffic requirements and providing them with feeders. The sudden increase in the trade of the sub-continent found the main lines totally unprepared. Costly works were necessary to double lines, improve the equipment, provide new and better yards and terminal facilities and to increase the rolling stock. Consequently the demands on the open lines altogether overshadowed the provision of new lines. Even then the railway budget was found totally inadequate for the purpose, and a small Committee sat in London, under the Chairmanship of Lord Inchcape, to consider ways and means. This Committee found that the amount which could be remuneratively spent on railway construction was limited only by the capacity of the money market. They fixed the annual allotment at £12,000,000 a year. Even this reduced sum could not always be provided.

GOVERNMENT CONTROL

As the original contracts carried a definite Government guarantee of interest, it was necessary for Government to exercise strong supervision and control over the expenditure during construction, and over management and expenditure after the lines were open for traffic. For these purposes a staff of Consulting Engineers was formed, and a whole system of checks and counter-checks established, leading up to the Railway Branch of the Public Works Department of the Government of India. As traffic developed, the Railways outgrew this dry nursing, and when the original contracts expired, and the interests of Government and the Companies synchronised, it became not only vexatious but unnecessary.

Accordingly in 1901-02 Thomas Robertson was deputed by the Secretary of State to examine the whole question of the organization and working of the Indian Railways, and he recommended that the existing system should be replaced by a Railway Board, consisting of a Chairman and two members with a Secretary. The Board was formally constituted in March 1905. The Board was made subordinate to the Government of India in which it was represented by the Department of Commerce and Industry. It prepared the railway programme of expenditure and considered the greater questions of policy and economy affecting all the lines. Its administrative duties included the construction of new lines by State Agency; the carrying out of new works on open lines; the improvement of railway management with regard both to economy and public convenience, the arrangements for through traffic, the settlement of disputes between lines, the control and

promotion of the staff on State lines, and the general supervision over the working and expenditure of the Company's lines.

Certain minor changes have taken place from time to time since the constitution of the Railway Board. In 1908, to meet the complaint that the Board was subjected to excessive control by the Department of Commerce and Industry, the powers of the Chairman were increased and he was given the status of a Secretary to Government with the right of independent access to the Viceroy; he usually sat in the Imperial Legislative Council as the representative of the Railway interest. In 1912 in consequence of complaints of the excessive interference of the Board with the Companies, an informal mission was undertaken by Lord Incheape to reconcile differences. Various changes were introduced during the years 1912-1920 such as the modification of the rule that the President and members of the Railway Board should all be men of large experience in the working of railways due to the importance of financial and commercial considerations in connection with the control of railway policy. This decision was, however, revised in 1920 and an additional appointment of Financial Adviser to the Railway Board created instead. The question of the most suitable organization was further fully examined by the Acworth Committee in 1921 and a revised organization which is described later was introduced on 1st April 1924.

Some Difficulties.—Some of the difficulties involved in the constitution of a controlling authority for the railways may be realized from a study of the "Notes on the Relation of the Government to Railways in India" which was being printed as appendix 'B' to Volume I of the Annual Report by the Railway Board on Indian Railways upto the Report for the year 1938-39. These notes bring out the great diversity of conditions prevailing which involve the Railway Department in the exercise of the functions of—

- (a) the directly controlling authority of the State-worked systems aggregating 21,356 miles on the 31st March 1943,
- (b) the representative of the predominant owning partner in systems aggregating 10,169 miles,
- (c) the guarantor of many of the smaller companies and
- (d) the statutory authority over all railways in the Dominion.

Moreover in all questions relating to railways or extra municipal tramways in which Provincial Governments are concerned, the Railway Department is called upon to watch the interests of the Central Government and is frequently asked to advise the Local Governments.

Its duties do not end there. The future development of railways depends largely on the Government of India and the Railway Department is therefore called upon to plan out schemes of development, to investigate and survey new lines and to arrange for financing their construction.

The evolution of a satisfactory authority for the administration of these varied functions has proved extremely difficult and the question was one of those referred to the Railway Committee (1920-21) presided over by Sir William Acworth who recommended the early appointment of a Chief Commissioner of Railways whose first duty should be to prepare a definite scheme for the reorganization of the Railway Department and Mr. C. D. M. Hindley, formerly Agent of the East Indian Railway and Chairman of the Calcutta Port Trust, was appointed Chief Commissioner on November 1st, 1922.

THE RAILWAY BOARD

The principal constitutional change involved in this appointment is that the Chief Commissioner who takes the place of the President of the Railway Board is solely responsible—under the Government of India—for arriving at decisions on technical matters and for advising the Government of India on matters of railway policy and is not, as was the President, subject to be out-voted and overruled by his colleagues on the Board. The detailed reorganization of the Railway Board in accordance with the Chief Commissioner's proposals required careful consideration but one of the most important of his recommendations namely the appointment of a Financial Commissioner was considered of particular urgency and the Secretary of State's sanction was therefore obtained to the appointment with effect from 1st April 1923.

The Railway Board as then reconstituted consisted of the Chief Commissioner, the Financial Commissioner and two members. The proposal of the Acworth Committee that the Indian Railways should be sub-divided into 3 territorial divisions with a Commissioner in charge of each was not accepted and the work of the Members of the Board was divided on the basis of subjects.

The reorganization carried out in 1924 had for one of its principal objects the relief to the Chief Commissioner and the Members from all but important work so as to enable them to devote their attention to larger questions of railway policy and to enable them to keep in touch with Local Governments, railway administrations and public bodies by touring to a greater extent than they had been able to do in the past.

This object was effected by the following new posts which in some cases supplemented the existing ones and in other cases replaced them. Directors of Civil Engineering, Mechanical Engineering, Traffic, Establishment and Finance and 11 Deputy Directors and 2 Assistant Directors are working under them.

SUBSIDIARY BODIES

The necessity of some central organisation to co-ordinate the publicity carried out on forms of railway publicity which can be best organised by one central body led to the inauguration of the Central Publicity Bureau under a Chief Publicity Officer in 1927. The Bureau was a great success and the organisation was made permanent from January 1st, 1929.

In the slump of the 4th decade of the present century however, it was found difficult to maintain this. Moreover when the war of 1939 came on, it had its own effects. The Central Publicity Bureau was ultimately shifted to Calcutta on 1st July, 1940 and amalgamated with the Publicity Offices of the East Indian and Eastern Bengal now the B. & A. Railways.

The growing importance of Labour questions necessitated the organisation of a new branch in the Railway Board's office and to the appointment in 1929 of a third member whose main duties are connected with the satisfactory solution of labour problems and the improvements of the conditions of service of the staff generally and of the lower paid employees in particular.

During the depression which began with the thirties it was decided to hold in abeyance many superior posts including those of Member Traffic; Member, Engineering; Director, Civil Engineering and Director, Mechanical Engineering. Some of these posts have since been revived and on the recommendations of the Indian Railway Enquiry Committee—presided over by Sir Ralph Wedgwood—the Central Accounts organisation of railways was taken over by the Railway Board. The present superior staff in the railway Board, therefore, consists of the Chief Commissioner, the Financial Commissioner, 3 Members, 10 Directors, a Secretary and 33 deputies and assistants.

Under the Railway Board's policy of progressive standardisation, a Central Standardisation Office was established in 1930 under a Chief Controller of Standardisation to provide the means whereby such standardisation would be progressively effected in accordance with changing conditions and as the result of practical experience. The technical Officer under the Railway Board was transferred to this office as a Deputy Controller. This office was made permanent in 1935.

ACCOUNTS

The question of transferring the supervision of railway accounts of State Railways from the Finance Department to the Railway Board was under consideration for some time and in accordance with a resolution adopted, by the Legislative Assembly in September 1925, a start was made with the transfer of the supervision of railway accounts on the East Indian Railway. At the same time a separate Audit Staff was appointed reporting directly to the Auditor-General. As it was found that the separation of Audit from Accounts led to greater efficiency, a similar organisation was introduced on other State-managed railways during 1929. The supervision of Accounts Officers was placed under a Controller of Railway Accounts reporting to the Financial Commissioner of Railways and that of Audit Officers under a Director of Railway Audit reporting to the Auditor-General. These two duties were previously combined under the Accountant-General, Railways, reporting to the Auditor-General. The Chief Accounts Officers

on railways are now under the General Managers and the Controller of Railway Accounts has been made a Director under the Railway Board.

There are two important systems of administration organisation on the Railways—the Divisional system and the Departmental system. In the divisional system the railway is divided into divisions, each under a Divisional Superintendent, who in turn has officers of all departments like Civil Engineering, Transportation, Commercial, Accounts, Stores, the running and operation portion of Mechanical Engineering and on some railways even the Medical, working under him in his division. In the departmental system the railway is divided into smaller portions called districts by each department (and districts of the various departments need not be co-terminus) and each of these districts is under a District Officer reporting direct to the head of his department in the Headquarters Office.

Railway Conference.—A Clearing Accounts Office, with a Statutory Audit Office attached thereto, was opened in December 1926 to take over work relating to the check and apportionment of traffic interchanged between State-managed Railways. The work of the different railways was gradually transferred to this office, the North Western Railway being taken over first on the 1st January 1927, the East Indian Railway following on the 1st April, the Eastern Bengal Railway on the 1st January 1928, and the Great Indian Peninsula and B. B. & C. I. Railways later.

During 1927-28 demonstrations explaining the Clearing Accounts Office procedure were given to the representatives of the Press as well as to the representatives of the various railways who visited the office to study the new procedure.

In order to facilitate the adjustment of domestic questions, the Railway Conference was instituted in 1876. This Conference was consolidated into a permanent body in 1903 under the title of the Indian Railway Conference Association. It is under the direct control of the railways, it elects a President from amongst the members, and has done much useful work.

THE GAUGES

The standard gauge is five feet six inches. When construction was started the broad-gauge school was strong, and it was thought advisable to have a broad-gauge in order to resist the influence of cyclones. But in 1870, when the State system was adopted it was decided to find a more economical gauge, for the open lines had cost £17,000 a mile. After much deliberation, the metre-gauge of 3 feet 3½ inches was adopted, because at that time the idea of adopting the metric system for India was in the air. The original intention was to make the metre-gauge lines provisional; they were to be converted into broad-gauge as soon as the traffic justified it; consequently they were built very light. But the traffic expanded with surprising rapidity, and it was

found cheaper to improve the carrying power of the metre-gauge lines than to convert them to the broad-gauge. So, except in the Indus Valley, where the strategic situation demanded an unbroken gauge, the metre-gauge lines were improved and they became a permanent feature in the railway system.

Now there is a great metre-gauge system north of the Ganges connecting Assam with the Rajputana lines and Kathiawar and another system in Southern India serving large tracts of the Bombay and Madras Presidencies and the States of Hyderabad, Mysore and Travancore. These two systems are not yet connected, but the necessary link from Khandwa by way of the Nizam's Hyderabad-Godavari railway, cannot be long delayed.

Certain feeder and hill railways have been constructed on the 2'-6" and 2'-0" gauges and since the opening of the Barsi Light Railway which showed the possible capacity of the 2'-6" gauge, there has been a tendency to construct feeder lines on this rather than on the metre-gauge.

RAILWAY MANAGEMENT

The relative advantages and disadvantages of State and Company management of the railways owned by Government which comprise the great bulk of the railway mileage in the sub-continent have been the subject of discussion in official circles and the public press for many years. Here the question is complicated by the fact that the more important companies have not in recent years been the owners of the railways which they manage and the headquarters of their Boards are in London.

The subject was one, perhaps the most important, of the terms of reference of the Acworth Railway Committee. That Committee was unfortunately unable to make a unanimous recommendation on this point, their members being equally divided in favour of State management and Company management. They were, however, unanimous in recommending that the present system of management by Boards of Directors in London should not be extended beyond the terms of the existing contracts and this recommendation has met with general public acceptance. During the year 1922-23, the question was again referred to certain Local Governments and public bodies and opinions collected and discussed.

The subject has also been discussed on many occasions in the Central Legislature. The old undivided Government of India, however, followed a uniform policy of increasing the scope of direct State-management. The East Indian Railway was taken over for State-management on 1st January, 1925, and from then on the policy continued, the latest additions to State-management being the Bengal and North Western and Rohilkund and Kumaon Railway which were taken over on the 1st January 1943. From the same date the two were amalgamated and the combined system named as the Oudh and Tirhut Railway.

At the end of 1929-30 the Nizam's Guaranteed State Railways system which was the property of the Company, was acquired and its management taken over by His Exalted Highness the Nizam's Government and is now known as His Exalted Highness the Nizam's State Railway.

SEPARATE FINANCES

The question of the separation of the railway from the general finances was under consideration for some time and as a result of the recommendations of the Acworth Committee in 1921, the question was further examined by the Railway Finance Committee and the Legislative Assembly but it was decided to postpone a definite decision for the present.

The question was examined afresh in connection with the recommendation of the Retrenchment Committee in 1923, that the railways should be so worked as to yield an average return of at least 5½ per cent. on the capital at charge and it was decided that a suitable time had arrived when this separation could be carried out. A resolution was accordingly introduced in the Assembly on the 3rd March 1924, recommending to the Governor-General in Council:—that in order to relieve the general budget from the violent fluctuations caused by the incorporation therein of the railway estimates and to enable the railway to carry out a continuous railway policy based on the necessity of making a definite return over a period of years to the State on the Capital expended on railways:—

(1) The railway finances shall be separated from the general finances of the country and the general revenues shall receive a definite annual contribution from railways which shall be the first charge on railway earnings.

(2) The contribution shall be a sum equal to five-sixths of 1 per cent. on the capital at charge of the railways (excluding capital contributed by Companies and Indian States and Capital expenditure on strategic Railways) at the end of the penultimate financial year plus one-fifth of any surplus profits remaining after payment of this fixed return, subject to the condition that if any year railway revenues are insufficient to provide the percentage of five-sixths of 1 per cent. on the capital at charges surplus profits in the next or subsequent years, will not be deemed to have accrued for purposes of division until such deficiency has been made good. From the contribution so fixed will be deducted the loss in working, and the interest on capital expenditure on strategic lines.

Reserves.—(3) Any surplus profits that exist after payment of these charges shall be available for the Railway administration to be utilised in—

(a) forming reserves for,

(i) equalising dividends, that is to say, of securing the payment of the percentage contribution to the general revenues in lean years,

(ii) depreciation,

(iii) writing down and writing off capital,

(b) the improvement of services rendered to the public,

(c) the reduction of rates.

(4) The railway administration shall be entitled, subject to such conditions as may be described by the Government of India, to borrow temporarily from capital or from the reserves for the purpose of meeting expenditure for which there is no provision or insufficient provision in the revenue budget subject to the obligation to make repayment of borrowings out of the revenue budgets of subsequent years.

(5) In accordance with present practice the figures of gross receipts and expenditure of railways will be included in the Budget Statement. The proposed expenditure will, as at present, be placed before the Legislative Assembly in the form of a demand for grants and on a separate day or days among the days allotted for the discussion of the demands for grants the Member in charge of the Railways will make a general statement on railway accounts and working. Any reductions in the demand for grants for railways resulting from the votes of the Legislative Assembly will not ensure to general revenues, i.e., will not have the effect of increasing the fixed contribution for the year.

(6) The Railway Department will place the estimate of railway expenditure before the Standing Finance Committee for Railways on some date prior to the date for the discussion of the demand for grants for railways.

STANDING FINANCE COMMITTEE

This resolution was examined by the Committee appointed by the Legislative Assembly on 3rd March 1924 to examine the proposals for the separation of railway from general finances. The final resolution agreed to by the Assembly on September 20th, 1924, and accepted by Government differed from the original resolution in that the yearly contribution had been placed at 1 per cent. instead of 5/6th per cent. on the capital at charge and if the surplus remaining after this payment to General Revenues should exceed 3 crores, only 1/3rd of the excess over 3 crores were to be transferred to the Railway Reserve and the remaining 2/3rd was to accrue to General Revenues.

At the same time a Standing Finance Committee for Railways was to be constituted to examine the estimate of railways expenditure and the demand for grants, the programme revenue expenditure being shown under a depreciation fund. This committee was to consist of one nominated official member of the Legislative Assembly as Chairman and 11 members elected by the Legislative Assembly from that body. This would be in addition to the Central Advisory Council which will include the Members of the Standing Finance Committee and certain other official and non-official members from the Legislative Assembly and Council of State.

These arrangements were to be subject to periodic revision but to be provisionally tried for at least 3 years. They would, however, only hold good as long as the E. I. Railway and the

G. I. P. Railway and existing State Managed Railways remain under State-management and if any contract for the transfer of any of the above to Company management was concluded against the advice of the Assembly, the Assembly would be at liberty to terminate the arrangements in this resolution.

The Assembly in an addendum recommended that the railway services and the Railway Board should be rapidly Indianised and that the stores for the State Managed Railways should be purchased through the organisation of the Indian Stores Department.

Reorganisation Problems.—The principles allocation of surplus laid down in the above resolution has since been amended by a subsequent resolution passed by the Legislative Assembly on 2nd March 1943 which provided, *inter alia* that from 1st April 1943 so much of the convention as provides for the contribution and allocation of surplus to general revenues ceases to be in force and until a new Convention is adopted by the Assembly, the allocation of the surplus on commercial lines between the railway reserve and general revenues shall be decided each year on consideration of the needs of the railways and general revenues, the loss, if any, on strategic lines being recovered from general revenues.

The growing complexity of railway administration and the evolution of new methods of controlling traffic have given a stimulus to the efforts of various railways to revise their organisations. The general direction in which this reorganisation is being considered is that of consolidation into one department of the operating or transportation work of the railways, including the provision of power. This system is invariably in existence on those railways which have adopted the Divisional organisation. It is also being adopted by some railways where the general organisation is still on the Departmental basis.

THE POPE COMMITTEE

When the railway finances were in a bad way, a Committee under the Chairmanship of Mr. F. A. Pope, General Executive Assistant to the President of the L. M. S. Railway, was formed to investigate and inaugurate a detailed analysis of every important achievement of railway operation. The Committee started work during 1932-33 and among other things, perfected a system of detailed investigation into individual items of railway working which came to be known as 'Job Analysis.'

Mr. Pope returned to India in 1933-34 and prepared a second report based upon the progress of the work and on further possibilities of economy.

The most important recommendations of the second report related to:—

1. Intensive use of locomotives.
2. Intensive use of coaching stock.
3. Intensive use of machinery and plant.

4. Disposal of Uneconomical wagons.
5. Combining resources between railways.
6. Handling and transport of smalls traffic and of traffic to be transhipped at break of gauge stations.
7. Ticketless travel.
8. Methods of increasing earnings.

As a result of the 1st report of the Pope Committee, special 'Job Analysis' Organisations were set up on most of the important Railways. Their main purpose was to investigate in detail by special methods individual aspects of railway working and suggest means whereby economies may be achieved or the efficiency of operation increased.

Now that the methods of working on the railways by stages have been overhauled these organisations have been abolished.

RAILWAY ENQUIRY COMMITTEE, 1937

As a result of the recommendation of the Public Accounts Committee, the Railway Enquiry Committee was appointed in October 1936. This Committee was under the Chairmanship of Sir Ralph L. Wedgewood, C.B., C.M.B., Chief General Manager of the London North Eastern Railway. Its terms of reference were:

To examine the position of State-owned railways and to suggest such measures as may, otherwise than at the expense of the general budget,

- (i) secure an improvement in net earnings, due regard being paid to the question of establishing such effective co-ordination between road and rail transport as will safeguard public investment in railways, while providing adequate services by both means of transport; and
- (ii) at a reasonably early date, place railway finances on a sound and remunerative basis.

The report was submitted in June 1937 and duly considered by the Railway Board. Early action was taken to implement such of the recommendations as could be accepted without further examination. Where special investigation was considered necessary this was arranged for R. E. C.

RAILWAY ENQUIRY COMMITTEE, 1947

As a result of the recommendations of the Railway Standing Finance Committee, the Government of India appointed the Railway Enquiry Committee, 1947 which assembled on 24th of April, and consisted of:—

Chairman: Hon'ble Mr. K. C. Neogy, then M.L.A. Central and Members: Khan Mohammed Yamin Khan, then M.L.A. Central; Prof. Humayun Kabir, Labour Leader; Col. N. D. Balantine, American Rail-Road Consultant; Sir George Cuffe, Ex-General Manager; J. N. Nanda, Ex-General Manager; K. R. Rama Iyer, Additional Financial Commissioner and Secretary: M. N. Chakravarti, Railway Traffic Officer.

The following were the terms of reference:—
(1) Suggesting ways and means of securing improvement in net earnings by: (a) economies in all branches of railway administration, and (b) by any other means. (2) Ascertaining the extent of staff surplus to requirements and suggesting practical methods of absorbing them in railway service.

Within a few months of the assembly of the Committee, the sub-continent entered a period of unprecedented political and communal unrest and the climax was reached when Partition was decided upon. As conditions were not at all favourable for arriving at firm and useful conclusions, in regard to staff surpluses and measures for economy and securing improvement in net earnings, it was decided to disperse the Committee temporarily by the middle of October, 1947. It was also decided that when conditions became more favourable the Government would reassemble the Committee to enable them to complete their report.

K. C. Neogy, the Chairman, had to leave the Committee on his appointment as the Minister, Relief and Rehabilitation of Refugees. The new Chairman is Pandit Hridayanath Kunzru.

RATES ADVISORY COMMITTEE

The Railway Rates Advisory Committee continued during the year 1947-48 with Khwaja Sir Mohamed Noor as its President.

The functions of the Committee are to investigate and make recommendations on:—

- (1) Complaints of "undue preference"—Section 42(A) of the Indian Railways Act;
- (2) Complaints that rates are unreasonable in themselves;
- (3) Complaints or disputes in respect of terminals—Section 46 of the Indian Railways Act;
- (4) Complaints in respect of conditions as to packing of articles specially liable to damage in transit or liable to cause damage to other merchandise;
- (5) Complaints in respect of conditions as to packing attached to a rate; and
- (6) Complaints that railways do not fulfil their obligations to provide reasonable facilities under Section 42(3) of the Indian Railways Act.

The closest possible contact between the Railways and the business community was maintained by means of the Central and Local Advisory Committees, which were first introduced in 1923, meetings with Chambers of Commerce, Trade Associations and personal contact by railway officers with business firms.

The inauguration of the electrified main line section of the G. I. P. Railway from Kalyan to Poona took place on the 5th November 1929, and constituted the first entirely main line of track to be electrified in the sub-continent. This scheme involved the elimination of the Bore Ghat Reversing Station.

Class I Railways.

All Railways

Open Mileage.—The total route mileage on 31st March 1946, was made up of—

Broad-gauge	20,686.60 miles.
Metre-gauge	16,004.23 "
Narrow-gauge	3,827.08 "

Under the classification adopted for statistical purposes, this mileage is divided between the three classes of railways as follows:—

Class I	36,899.48 miles.
Class II	2,557.08 "
Class III	1,061.35 "

During the year 1945-46 no new constructions were undertaken though some new surveys were sanctioned.

Statement showing calculations of contributions to General Revenues accruing to Railway Reserve Fund during the year 1945-46.

	Commercial.	Strategic.	Total.
(i) Receipts (1945-46)—Gross traffic receipts	2,23,41.79	2,31.97	2,25,73.76

	1933-34	71 " "
	1934-35	69.9 " "
India	1935-36	69.5 " "
	1936-37	65.2 " "
	1937-38	65.3 " "
	1938-39	66.8 " "
	1939-40	65.6 " "
	1940-41	58.0 " "
	1941-42	56.4 " "
	1942-43	51.6 " "
	1943-44	57.9 " "
	1944-45	65.1 " "
	1945-46	70.7 " "

The output of Railway-owned collieries during 1945-46 was 3,683,521 tons. This represents an increase of 21.7 per cent over the output of 1944-45.

During the year 1945-46, the output of Railway Collieries represents 37 per cent. of the total coal consumed on locomotives on Indian Railways.

STAFF

The total number of employees on Indian Railways at the end of the year 1945-46 was 990,869 as compared with 701,307 at the end of 1938-39. The following table shows the number of employees by Communities on 31st March 1936, 1937, 1938, 1939, 1940, 1941, 1942, 1943, 1944, 1945 and 1946—

* Revised figures: Due to changes made by the Railway administration in the figures published last year.

INDIANISATION

Superior services, following the recommendation of the Lee Commission that recruitment in the sub-continent be advanced as soon as practicable up to 75 per cent of the total number of vacancies in the Superior Services of the Railways, the various Railway Companies managing State and other railway lines followed the Government lead. As far as concerns State-managed Railways, the direct recruitment

during the year included no European while 18 Indians were appointed.

Accidents.—The following table shows the number of passengers, railway servants and other persons killed and injured in accidents on the Railways, excluding casualties in railway workshops, during the year 1945-46 as compared with the previous year:—

Cause.	Killed.		Injured.	
	1944-45.	1945-46.	1944-45.	1945-46.
A.—Passengers.				
In accidents to trains, rolling-stock, permanent way, etc.	40	89	234	253
In accidents caused by movements of railway vehicles exclusive of accidents to trains	664	716	2,346	2,309
In accidents on railway premises not connected with the movement of railway vehicles	2	..	56	4

AMENITIES

Railway administrations in peace time are constantly endeavouring to make railway travel, especially in the lower classes, more attractive and the amenities afforded necessarily cover a large and varied ground. Improved booking facilities by setting up additional booking offices and out-agencies, provision of clean and adequate accommodation in trains, avoidance of overcrowding, arrangements for the vending of wholesome refreshments at reasonable rates in railway premises and trains, amenities to the public waiting at stations in the shape of waiting rooms and covered platforms and measures for ensuring the security of women passengers are some of

the main directions in which progress continues to be made from year to year. But both by the size and scale of arrangements required and its primary necessity to the passenger, the most important of all is the adequate supply of wholesome drinking water to the travelling public, particularly in the hot season, for which, in addition to the existing permanent arrangements, a hot weather (special) establishment is drafted every year.

With the termination of war, the conditions have not shown much change and consequently the restoration of pre-war facilities to the public is necessarily a slow process.

The Chief Railways

Assam-Bengal

The Assam-Bengal Railway, which is constructed on the metre-gauge, starts from Chittagong and runs through Surma Valley across the North Cachar Hills into Assam. It was worked under a limited guarantee by a company.

The Eastern Bengal Railway was promoted under the original form of guarantee and was constructed on the broad-gauge. The first portion of the line running to Calcutta over the Ganges was opened in 1862. In 1874 sanction was granted for the construction on the metre-gauge of the Northern Bengal State Railway, which ran from the north bank of the Ganges to the foot of the Himalayas on the way to Darjeeling. These two portions of the line were amalgamated in 1884 into one State Railway.

The Assam-Bengal Railway has come under State-management and has been amalgamated with the E. B. Ry. with effect from 1st January 1942 and the combined system is named as Bengal-Assam Railway.

The Dibru-Sadiya Railway was purchased by the Government and amalgamated with the Assam-Bengal Railway from 1st April 1945.

1945-46

Mileage open	3,554.81
Capital at charge	Rs. 87,34,35,000
Net earnings	Rs. 4,73,11,000
Earnings per cent. . . .	5.42%

Bengal-Nagpur

The Bengal-Nagpur Railway was commenced as a metre-gauge from Nagpur to Chhatishgarh in the Central Provinces in 1887. A company was formed under a guarantee which took over the line, converted it to the broad-gauge and extended it to Howrah, Cuttack and Kaini. In 1901 a part of the East Coast State Railway from Cuttack to Vizagapatnam was transferred to it and in the same year sanction was given for an extension to the coal-fields and for a connection with the Branch of the East Indian Railway at Hariharpur.

The State took over the line from October 1, 1944.

1945-46

Mileage open	3,388.14
Capital at charge	Rs. 81,91,26,000
Net earnings	Rs. 1,69,67,000
Earnings per cent. . . .	2.07%

Bombay, Baroda and Central India

The Bombay, Baroda and Central India Railway is one of the original guaranteed railways. It was commenced from Surat via Baroda to Ahmedabad, but was subsequently extended to Bombay. The original contract was terminable in 1880, but the period was extended to 1905 and then renewed under revised conditions. In 1885 the Rajputana-Malwa metre-gauge system of State railways was leased to the Company and has since been incorporated in it. On the opening of the Nagda-Muttra, giving broad-gauge connection through Eastern Rajputana with Delhi

the working was entrusted to this Company. On the acquisition of the Company in April 1907 the purchase price was fixed at £11,685,581.

The State has taken over the management with effect from January 1st, 1942.

1945-46

Mileage open	3,404.23
Capital at charge	Rs. 77,45,65,000
Net earnings	Rs. 7,10,04,000
Earnings per cent. . . .	9.17%

East Indian

The East Indian Railway is one of the three railways sanctioned for construction as experimental lines under the old form of guarantee. The first section from Howrah to Pandua was opened in 1854 and at the time of the Mutiny ran as far as Kaniganj. It gives the only direct access to the port of Calcutta from Northern India and is consequently fed by all the large railway systems connected with it. In 1880 the Government purchased the line, paying the shareholder by annuities, but leased it again to the company to work under a contract which was terminable in 1919.

The contract was not terminated until January 1st, 1925, when the State took over the management. From July 1st, 1925, the Oudh & Rohilkhand Railway was amalgamated with it.

1945-46

Mileage open	4,063.55
Capital at charge	Rs. 1,56,88,000
Net earnings	Rs. 12,47,34,000
Earnings per cent. . . .	7.95%

Great Indian Peninsula

The Great Indian Peninsula Railway is the earliest line undertaken in India. It was promoted by a Company under a guarantee of 5 per cent, and the first section from Bombay to Thana was open for traffic in 1853. Sanction was given for the extension of this line via Poona to Raichur, where it connects with the Madras Railway, and to Jubbalpore where it meets the East Indian Railway. The feature of the line is the passage of the Western Ghats, these sections being 15½ miles on the Bhor Ghat and 9½ miles on the Thul Ghat which rise 1,131 and 972 feet. In 1900, the contract with the Government terminated and under an arrangement with the Indian Midland Railway that line was amalgamated and leased to a Company to work.

The contract was terminated on June 30th, 1925, when the State took over the management.

1945-46

Mileage open	3,531.26
Capital at charge	Rs. 1,18,50,99,000
Net earnings	Rs. 11,34,39,000
Earnings per cent. . . .	9.57%

Madras and Southern Mahratta

The Madras Railway was the third of the original railways constructed as experimental lines under the old form of guarantee. It was projected to run in a north-westerly direction in connection with the Great Indian Peninsula

Railway and in a south-westerly direction to Calicut. On the expiry of the contract in 1907 the line was amalgamated with the Southern Mahratta Railway Company, a system on the metre-gauge built to meet the famine conditions in the Southern Mahratta Country and re-leased to a large Company called the Madras and Southern Mahratta Railway Company.

The contract was terminated and it was decided to bring the railway under State-management on the 1st April 1944.

1945-46		
Mileage open	2,940.31	
Capital at charge ..	Rs. 56,17,31,000	
Net earnings	Rs. 8,82,26,000	
Earnings per cent. ..	15.71%	

North-Western

The North-Western Railway began its existence as the Sind-Punjab-Delhi Railway, which was promoted by a Company under the original form of guarantee and extended to Delhi, Multan and Lahore and from Karachi to Kotli. The interval between Kotli and Multan was unbridged and the railway traffic was exchanged by a ferry service. In 1871-72 sanction was given for the connection of this by the Indus Valley State Railways and at the same time the Punjab Northern State Railway from Lahore towards Peshawar was begun. In 1886 the Sind-Punjab-Delhi Railway was acquired by the State and amalgamated with these two railways under the name of the North-Western Railway. It is the longest railway in India under one administration.

1945-46		
Mileage open	6,881.27	
Capital at charge ..	Rs. 1,53,04,70,000	
Net earnings	Rs. 9,02,32,000	
Earnings per cent. ..	5.90%	

Oudh-Tirhut

The Bengal and North-Western Railway was constructed on the metre-gauge system by a company without any Government assistance other than free land and was opened to traffic in 1885. The system was begun in 1874 as the Tirhut State Railway. In 1890 this line was leased by Government to the Bengal and North-Western Railway. Since then extensive additions have been made in both sections. It is connected with the Rajputana metre-gauge system at Cawnpore and with the Bengal and Assam Railway at Katihar and the East Indian Railway at Benares and Mokameh Ghat.

The Rohilkund and Kumaon Railway was constructed on the metre-gauge and opened for traffic in 1884. Later on extensions were added between 1906 and 1916.

The Bengal and North Western and the Rohilkund and Kumaon Railway have come under State-management from 1st January 1943. From the same date the two were amalgamated and the combined system is named as Oudh-Tirhut Railway.

1945-46		
Mileage open	2,679.67	
Capital at charge ..	Rs. 30,54,75,000	
Net earnings	Rs. 5,07,13,000	
Earnings per cent. ..	16.60%	

South Indian

The South Indian Railway was one of the original guaranteed railways. It was begun by the Great Southern India Railway Company as a broad-gauge line; but was converted after the seventies to the metre-gauge. This line has been extended and now serves the whole of the Southern India, south of the south-west line of the Madras Railway. Between Tuticorin and Ceylon a ferry service was formerly maintained, but a new and more direct route to Ceylon via Rameshwaram was opened at the beginning of 1914. As the original contract ended in 1907, a new contract was entered upon with the Company on the 1st of January 1908.

The contract was terminated on 1st April 1944, when the State took over the management.

1945-46		
Mileage open	2,349.25

THE STATES

The principal Indian State Railways are the following:—

Bikaner State

The line is owned by the Bikaner Government. It was worked by the Jodhpur-Bikaner Railway Administration upto 31-10-1924, when it was taken over by the Bikaner Government.

Total mileage open	883.05
--------------------------	--------

Jodhpur

The railway, which was worked by the Jodhpur-Bikaner Railway Administration upto 31-10-1924, is now worked by the Jodhpur Durbar. At present the Railway consists of 318.74 miles of Indian section and 806.95 miles of Durbar lines.

Total mileage open	1,125.69
--------------------------	----------

Mysore State

These lines are the property of the Mysore Government. Of the 9 lines 5 sections were worked by the Madras & Southern Mahratta Railway. Of these 3 lines were taken over by the Mysore Government from 1-10-1919 and the other two from 1-1-1938. It consists of 609.47 miles of metre-gauge and 128.80 miles of narrow-gauge lines.

Total mileage open	738.27
--------------------------	--------

H. E. II. The Nizam's State

The Railway was constructed by a company under a guarantee from the Hyderabad State, which took over the management from 1-4-1930. It consists of 57.82 miles of Indian sections and 1,302.16 miles of Hyderabad State lines.

Total mileage open	1,359.98
--------------------------	----------

India and Ceylon

The possibility of connecting India and Ceylon by a railway across the bank of sand extending the whole way from Rameswaram to Mannar has been reported on from time to time, and since 1895 various schemes have been suggested.

The South Indian Railway having been extended to Dhanushkodi, the southernmost point of Rameswaram Island, and the Ceylon Government Railway to Talaimannar, on Mannar Island, two points distant from each other about 20 miles across a narrow and shallow strait, the possibility of connecting these two terminal stations by a railway constructed on a solid embankment raised on the sand bank known as "Adam's Bridge," to supersede the ferry steamer service which has been established between these two points, is one of the schemes that has been investigated.

In 1913, a detailed survey was made by the South Indian Railway Company, and the project contemplates the construction of a causeway from Dhanushkodi Point on the Indian side to Talaimannar Point on the Ceylon side, a length of 20.05 miles of which 7.19 will be upon the dry land of the various lands, and 12.86 will be in water. The sections on dry land will consist of low banks of sand pitched with coral and present no difficulty. The section through the sea will be carried on a causeway which it is proposed to construct in the following way. A double row of reinforced concrete piles, pitched at 10 feet centres and having their inner faces 14 feet apart, will first be driven into the sand. These piles will then be braced together longitudinally with light concrete arches and chains and transversely with concrete ties, struts and chains. Behind the piles slabs of reinforced concrete will be slipped into position, the bottom slabs being sunk well into the sand of the sea bottom. Lastly, the space enclosed by the slabs will be filled in with sand.

The top of the concrete work will be carried to six feet above high water level, and the rails will be laid at that level. The sinking of the piles and slabs will be done by means of water jets. This causeway, it is expected, will cause the suspended sand brought up by the currents, to settle on either side bringing about rapid accretion and eventually making one big island of Rameswaram island and Mannar island.

Indo-Burma Connection

The raids of the Emden in the Bay of Bengal in 1914 and the temporary interruption of communications between the sub-continent and Burma, stimulated the demand for a direct railway connection between India and Burma. The old undivided Indian Government accepted the position and appointed Mr. Richards, M. Inst. C.E., to be the engineer-in-charge of the surveys to determine the best route for a railway from the sub-continent to Burma.

The coast route appears to be the best one but at present would not be remunerative. This would start from Chittagong, which is the terminus and headquarters of the Assam-Bengal Railway and a seaport for the produce of Assam. The route runs southwards through the Chittagong district, a land of fertile rice fields intersected by big rivers and tidal creeks and it crosses the Indo-Burma frontier, 94 miles from the town of Chittagong. For about 160 miles further it chiefly runs through the fertile rice lands of Arrakan and crosses all the big tidal rivers of the Akyab delta. These include the Kaladan river which drains 4,700 miles of country and even at a distance of about 30 miles from its mouth is more than half a mile wide. About 260 miles from Chittagong the railway would run into the region of mangrove swamps which fringe the seacoast north and south of the harbour of Kaungkphu stretching out into the mangrove swamps like ribs from the backbone. Innumerable spurs of the Arrakan Yoma have to be crossed.

Yoma is a mountain ridge which extends from Cape Negrais northwards until it loses itself in a mass of tangled hills east of Akyab and Chittagong. At its southern end the height of the ridge is insignificant but it has peaks as high as 4,000 feet before it reaches the altitude of Sandway and further north it rises much higher. It is a formidable obstacle to railway communication between the sub-continent and Burma.

This route is estimated to cost about £7,000,000 and would have to be supplemented by branch lines to Akyab where there is at present a considerable rice traffic and the cost of this would have to be added to the £7,000,000 already referred to.

The other routes examined have been the Hukong Valley route and the Manipur route which were surveyed by the late R. A. Way many years ago. The Manipur route was estimated to cost about £5,000,000 as it has to cross three main ranges of hills with summit levels of 2,650, 3,600 and 8,900 feet. Altogether there would be about four miles of tunnelling through the three main ridges and through other hills and more than 100 miles of expensive undulating railway with grades as steep as 1 in 50 and 11,000 feet of aggregate rise and fall.

The Hukong Valley route is only about 284 miles long and it presents fewer engineering difficulties than either the Coast or the Manipur route. One hundred and fifty miles of this route lie in open country capable of cultivation though at present it is only very thinly populated. Only one range of hills has to be crossed and this can be negotiated with a summit tunnel 5,000 feet long at a height of 2,500 feet. There are less than fifty miles of very heavy work and only about 4,500 ft. aggregate of rise and fall. The Hukong Valley route although cheaper than the Manipur route is not a practical financial proposition.

Main results of working of all the sub-continent's Railways treated as one system.

After Partition

As a result of the decision to partition the sub-continent two important Railways had had to be divided between Pakistan and India. This was done in conformity with the boundaries defined by the Radcliffe Boundary Commission. The Railways affected were the N. W. Railway and the combined B. A. Railway. Roughly, the position is that those portions of the N. W. Railway which traverse the districts Jullundur, Ambala, Ludhiana and all Eastern Punjab districts, certain portions of Amritsar and Ferozepore districts of the undivided Punjab and of the Delhi Province have been formed into what is called the Eastern Punjab Railway and is administered by the Chief Administrative Officer, E. P. Railway, who functions as the General Manager for that Railway.

Similarly a certain portion of the Eastern Bengal Railway (broad-gauge) and a considerable portion of the old A. B. Railway (metre-gauge), both of which formed parts of the amalgamated Bengal Assam Railway have been allotted to Pakistan.

So far as India is concerned the residual portions of these two railways have been merged partly with the O. T. and E. I. Railway systems of India and the portion of the metre-gauge which traverses the north of the Brahmaputra Valley and lies in India is now renamed the Assam Railway, and is administered by the Chief Administrative Officer, Assam Railway, who functions as the General Manager for that Railway.

1948-49 BUDGET

The table below shows the principal figures of the budget estimates for 1948-49:—

	(In lakhs of rupees)
Gross Traffic Receipts	19,000
Working Expenses	1,47.15
Ordinary Working Expenses	1,47.15
Appropriation to Depreciation Reserve	11.18
Fund	1.45
Payments to Worked Lines	1.45
Total Working Expenses	1,59.78
A.—Net Traffic Receipts	30.22

Miscellaneous Transactions

Receipts	3.16
Expenditure	1.00
B.—Net Miscellaneous Receipts	2.16
Net Railway Revenue (A + B)	32.38
Interest Charges	22.53
Net Surplus	9.85

Some Particulars

No Increase in Fares.—There would be no increases in fares and freights. The question arises: what is to be done with the net surplus of Rs. 985 million for the year 1948-49? First of all, there is the question of the contribution payable by the Railways to General Revenues. That question of contribution payable to general revenue is at present determined by a Resolution which the Legislature passed in 1943, which practically lays down that the contribution to General Revenues is to be fixed with reference to the requirements of the Railways and of General Revenues in each particular year. A Committee has been appointed consisting of three Members of the Standing Finance Committee under a Chairman. Pending the receipts of the finding of this Committee, Government do not propose to make any allocations out of the surplus.

[This Committee has since reported and according to its recommendations, Rs. 45 million has been allocated to General Revenues.]

Workshop Position.—In regard to workshop, that is to say, locomotive position, chiefly, of the total number of locomotives that India possesses today, about a third are over-age locomotives which have done their normal period of service and which, if locomotives were available in the world market, would be replaced almost immediately.

There are two elements of importance in connection with the workshops. First of all, there is the question of the availability of spare parts. There is secondly the question of labour and the amount of output that one can expect from labour. As regards spare parts there has been a perceptible improvement in the delivery of orders from the United Kingdom. Secondly, it has been possible to utilise increasingly the spare capacity for manufacturing these small parts in Indian Ordnance factories. The position will be illustrated by the fact that in 1948 the orders that have been placed in India for spare parts show an improvement of nearly 37 per cent over the orders placed in India in 1947.

Labour.—As regards the question of labour, on practically all principal Railways there is an improvement in the number of man-days worked in the workshops. But the quantum of work which is being done during the normal prescribed period is considerably below what one might reasonably expect. There are two ways of meeting that problem. First of all, one has to provide administrative devices which would automatically secure that each labourer renders his full quota of work. There is, secondly, the co-operation to be secured from labour organisations themselves.

Taking the question of the improvement in respect of the availability of spare parts and the improvement in respect of attendance in the workshops, the result of these two factors is necessarily reflected in the turn-round figure. Turn-round, is the period which a wagon takes to perform a journey and return to take up fresh traffic. When an estimate was made last time (Nov. 1947) it was found that the period of turn-round of a broad gauge wagon was 48 days. The latest figure is 45.9. On metre-

gauge lines, the old average was 51. The latest figure is 60.7. The reason for the deterioration is the disturbances at Ajmer, where the biggest metre-gauge workshop is situated. If Ajmer is left out, then the average figure for the turn-round of metre-gauge wagons comes to 45, as against the old figure of 51.

Wagon Movement.—Another factor which has been becoming increasingly important in recent months is the undue detentions of wagons at destinations by customers, factories, trade and sometimes by Government Departments in Provinces and States. As against this position the measures that the railways have taken are: reduction of free time allowed for demurrage purposes from 9 hours of daylight to 6 hours. After that demurrage will be charged. Sundays are to count for demurrage purposes. The demurrage fees on some Railways like the E.I. Ry. and B.B. & C.I. and the G.I.P. Railways are also being raised.

Optimistic Outlook.—As regards prospects for the year 1948-49, a marked improvement by March 1949 is expected. My reasons for saying so are these. In view of a vast diversion of traffic that has been occurring recently, line capacity and marshalling capacity are being overstrained. As regards the line capacity, we have already taken in hand various schemes for doubling the line capacity, at various heavy congestion lines—Itarsi-Bhopal, Lucknow-Bareilly, Cawnpore-Etawah, the Moradabad section and others—has already been taken in hand. A target for completing these works by March 1949 has been set and if the target is achieved it would be possible to relieve congestion at some of the most important points on our railway system. A couple of months ago was reopened what used to be called the Dufferin Bridge, now called the Malviya Bridge, which was regirded and has now been opened for double-line traffic. It is a very important gateway of railway communication in the U.P. and its doubling will make considerable difference to the movement of traffic.

With regard to the remodelling and the extension of marshalling yards, there are a number of schemes in hand all of which are expected to be completed by March 1949—Ujjain, Lucknow, Cawnpore, Tundla, Gorakhpur, Arkonam and Tuticorin in the South and it is hoped that the extension and remodelling of the station yard at New Delhi will be taken in hand soon.

Next some figures with regard to the additional rolling stock which is expected to be produced in the course of 1948-49 may be given. The number of general service wagons, which are scheduled to be delivered by the manufacturers in India by the end of 1948 is 4,050. In addition to that it is expected that oil-tank wagons of the order of about 150 will also be delivered by the end of 1948. Then oil-tank wagons from Canada are expected to be delivered by March 1949. There are other classes of wagons numbering about 177, all scheduled to be delivered by the end of 1949. All of which comes to a total of over 4,000 wagons. In the present strained conditions in India regarding labour and material, it would not be possible for manufacturers to

deliver these things according to schedule. But if it is possible to put on the lines at least two thousand additional wagons in the course of the next year, it would make a perceptible improvement. Similarly it is expected 146 new locomotives will be delivered in the course of 1948 and this together with the improvement which is noticeable in the workshop position must make a difference for the better as regards locomotives.

The third reason for being hopeful about 1948-49 is that the shipping position appears to show some improvement. If it is possible in 1948-49 to divert to the sea route some of the heavy traffic from Calcutta to Bombay which now goes by rail it would very considerably ease the railway position.

With all this, however, it will not be possible to achieve normalcy in less than three years.

Passenger Traffic Improvement.—The great problem regarding passenger traffic today—and when one considers the question of amenities the problem that worries everyone most—is that of overcrowding. Today there are more than twice the number of passengers that the railways used to carry in 1938-39; but the amount of passenger train capacity that the railways are in a position to offer today is 14.5 per cent less than in 1938-39. That gives one straightaway in statistical terms the problem of overcrowding. It is one of the most interesting features of passenger traffic on the railways today that there is a steady decrease in the average distance travelled by III Class passengers. If there is a steady decrease in the average distance travelled by passengers the inevitable result is that at any point of time one will find a steadily decreasing congestion.

People who would ordinarily have travelled short distances by bus are now travelling by train. And until it is possible to restore the bus

position short distance travel by train will remain. Apart from that in 1948-49 the railways expected to place on the lines somewhere about 700 to 800 new coaches; 350 of them are coaches that the railways have ordered and a little over 400 coaches would, it is expected be returned by the Defence Department whom they have been loaned.

Ticketless Travel.—Another factor which is going to react on overcrowding is ticketless travelling. The problem is particularly acute in the United Provinces; and in consultation with the U.P. Government a scheme has been started there which consists of a considerable police force and a considerable complement of special magistrates devoted entirely to the problem of ticketless travel. The scheme was started on January 15 and the results so far have been definitely encouraging.

Similar arrangements are contemplated for West Bengal, Bihar and for Assam.

Then there are the passenger guides that we have been appointing recently. Conditions of third class travelling today provide an enormous scope for social service of the highest quality. The railways in consultation with various recognised social service organisations will select people with the right training, the right spirit and the right outlook to take up this work. A beginning has already been made.

Railway Rates Tribunal.—There was a proposal to set up a Railway Rates Tribunal by the first of April. On examination it was found that unless this tribunal was vested with statutory authority it would not be able to function in the way in which it ought to. So a Bill would be placed before the Legislature for the purpose of setting up a tribunal with a much wider scope than the present Rates Advisory Committee and with a mandatory and not merely an advisory jurisdiction.

PRODUCTS OF THE BAKELITE ORGANIZATION

BAKELITE^{*} PLASTICS

include moulding materials; laminated sheet, rod and tube; resins for paints and insulating varnishes; cements and liquid resins, adhesives for wood fabrication.

VYBAK^{*} PLASTICS

are recent additions to the Bakelite range. They are based on vinyl resins and at present include extrusion compounds for electrical cable coverings and compounds for coating cloth and for the manufacture of flexible and rigid sheets.

WARERITE^{*} LAMINATED PLASTICS

are used for wall panelling, bar and counter facings, table tops and other working surfaces. They can be supplied with either highly polished or matt finish in a range of colours, plain or with designs and even fabrics incorporated in the surface of the material.

^{*} BAKELITE and VYBAK are registered trademarks of Bakelite Limited in Great Britain and certain other countries. WARERITE is the trade mark of Warerite Limited (Unit of Bakelite Limited).

Roads

THE sub-continent's road system may be briefly described as follows.

There exist four great trunk roads, stretching diagonally across the sub-continent which form the framework with which most of the important subsidiary roads are linked. These trunk roads have been in existence for an immense period and are rich in historical association. The most famous is the ancient marching route—known as the Grand Trunk Road—which stretches right across the northern part of the sub-continent from the Khyber to Calcutta; the other three connect Calcutta with Madras, Madras with Bombay and Bombay with Delhi, and the four of them together account for about 5,000 out of the 95,000 miles of metalled road in the sub-continent.

None of these roads however can be considered safe "all weather" trunk roads according to modern standards. The Madras-Calcutta Road in particular is far from being bridged throughout its entire length. The other three roads also require a great deal of improvement; on the Grand Trunk Road from Calcutta to the North-West Frontier for example, there is as yet no road bridge over the river Son in Bihar, and on all of them there are places where floods are liable to cause serious interruption to traffic.

As regards the subsidiary roads, the best and most numerous are to be found in Southern India. As one would expect, the worst served regions are Rajputana, Sind and parts of the Punjab on the one hand, and Orissa and Bengal on the other, the former owing to its aridity and sparse population, and the latter because of the numerous unbridged and mostly unbridgeable waterways which dissect it. In addition there are numerous other parts of the country, such as the lower Himalayas, which suffer from a dearth of communications owing to the difficult terrain. Besides surfaced roads, there is a very large mileage of "kutch" roads amounting to approximately 201,000 miles, some of which are good for motor traffic during the dry weather.

DEVELOPMENT COMMITTEE

On the whole it is reasonable to say that the sub-continent's road system, even before the advent of motor transport was altogether insufficient for its needs and it is the increasing realisation of this fact that led to the appointment of the special Road Development Committee in 1927 whose functions were to examine the question of the development of road communications in view of the increasing use of motor transport and suggest ways and means of financing it.

The recommendations put forward by the Committee were carefully considered by the Government of India, whose conclusions upon them were embodied in a resolution and provided that the increase from four to six annas per gallon in the import and excise duties on motor spirit, which had been effected in March 1929, should be maintained for a period of five years in the first instance, and that the additional duty should be allotted as a block grant for expenditure on road development, and credited to a separate Road Development Account, whose unexpended balances should not lapse at the end of the financial year.

Allocation to Provinces.—The original resolution dealing with the disposal of the Road Development Account has since been amended thrice, the resolution at present in force having been passed by the Dominion Legislature in November 1947. Its main features may be described as follows: The special tax on petrol introduced in 1929 shall continue to be levied for road development, the proceeds of which, after retaining a reserve of 15% for administration, research and special grants-in-aid, shall be allocated for expenditure in the different provinces, States, etc., in the ratio of the petrol consumption in the various areas. These sums may be spent on the construction, re-construction or substantial improvement of roads and bridges including the cost of preparation of road schemes—but not for ordinary road upkeep or maintenance—on interest and amortization charges on road loans sanctioned hitherto by the Government of India and also on administration of Provincial Boards of Communications and establishment connected with the control of motor transport.

With the levy of a surcharge on petrol, the share of the petrol duty available for the Road Fund was increased from 2 annas to 2½ annas per gallon with effect from October 1, 1931. Up to the end of March 1945, the Fund had received Rs. 22½ crores, and after transferring Rs. 4.4 crores to the Reserve, the sum available for distribution to Provinces, Minor Administrations and States was Rs. 18.1 crores or Rs. 17.3 crores excluding Burma's share prior to separation. Of this, the actual distribution up to 31st March 1945 to the Provinces was Rs. 12.8 crores and to the Minor Administrations Rs. 67½ lakhs, as per details given in the accompanying statement. The States in addition received Rs. 2.2 crores.

Feeder Roads.—Up to the introduction of the Road Fund in 1929, all Provincial Roads were financed exclusively from the general revenues of the provinces and local roads from local revenues supplemented by provincial grants. The object of creating the Road Fund in 1929 was to supplement and not to replace the normal expenditure from provincial and local revenues, but unfortunately the ten years following the introduction of the Fund were marked by acute financial stringency, with the result that Provincial Governments and local bodies had to make drastic curtailments in the allotments made for roads from their revenue.

The effect of these curtailments was to starve the construction and development of feeder roads, as the Road Fund was originally being used exclusively for roads of inter-provincial and inter-district importance. The Government of India, however, subsequently laid down that at least 25 per cent. of the provincial shares in the Road Fund should be used on Feeder Roads and that not more than 25 per cent. can be used on roads which compete with the Railways.

Thus, in spite of the inauguration of the Central Road Development Fund, the total expenditure on roads suffered a decrease. The expenditure

in 1938-39, which amounted to Rs. 602.1 lakhs in the Governors' Provinces, was Rs. 41.7 lakhs less than in 1928-29.

The revenue from motor transport was steadily increasing in these years. In 1938-39, the total revenue of the Central Government and Provincial Governments from this source was Rs. 960 lakhs, representing an increase of Rs. 358 lakhs over the total road expenditure in the year.

WAR IMPROVEMENT

The war however brought about a slight change in the situation. Some works of road improvement were taken in hand to facilitate the operation of motor transport during the war years and are being continued. At the same time the cost of works, both in respect of road improvements and ordinary road maintenance, has risen through the general increase in cost of materials and labour.

As regards road revenue, on the other hand, petrol rationing restricts any large increase in Government's total receipts.

Nevertheless, in the year ending 31st March 1945, the total revenue from motor transport was over Rs. 11 crores in British India and the total road expenditure was less than Rs. 10 crores, as per particulars below:

Road Transport Revenue, 1944-45.

(The figures are in lakhs of rupees).

	Ra.
Central Government:	
Duties on motor spirit	359
Excise duty on tyres	114
Import Duty, motor vehicles	95

ROAD MILEAGE

On the administrative side roads are a provincial subject and may be divided into two main classes, Provincial Roads under the Public Works Department and Local Roads in charge of local

bodies. The extent to which the administration of roads has been delegated to local bodies varies considerably from province to province but in the Dominions as a whole about 80 per cent of the extra-municipal mileage is under the charge of District Boards or District Councils, including a certain mileage, mainly in the Central Provinces which is termed "Provincial" but maintained under their agency. Within Municipal areas, all roads, other than sections of main roads passing through the towns, are controlled by the respective Municipalities.

The grand total of the mileage of extra-Municipal roads maintained by public authorities in the sub-continent including the States was 296,468 on March 31, 1943; of this the total mileage for Governors' Provinces amounted to 218,066, for Centrally administered areas 8,057 and for the States 70,345.

The total mileage of roads with modern surface, either bituminous or cement roads, was 15,121 and the total mileage of waterbound macadam roads was 79,933, making a total mileage of roads which were either modern surfaced or water-bound macadam of 95,054.

The total mileage of lower types of roads was 201,414. These roads are of three types: firstly, roads with artificially admixed granular material, gravel, moorum, etc., on natural soil; secondly, roads of natural soil which are motorable in fair weather; and thirdly, roads of natural soil which are unmotorable.

The total mileage of roads that are motorable was thus 221,690, out of which 126,374 miles were motorable throughout the year, and the remaining 95,316 miles motorable in fair weather.

Out of the 226,123 miles of roads in British India, no less than 178,008 miles of roads were maintained by local bodies, while the P.W.D. and M.E.S. maintained 48,115 miles.

The province with the greatest road mileage was Madras with 38,047, out of which, however, only 464 was modern surfaced, while the province with the greatest mileage of modern roads was the Punjab with 4,983 miles, out of a total provincial mileage of 25,245.

There were, in addition, the roads maintained by Municipalities, the length of which was approximately 18,433 miles, made up of 10,840 miles of metalled roads and 7,593 miles of unmetalled roads.

BUILDING PROGRAMME

Considerable interest began to be taken before the end of the war in the need for an extensive programme of road development both for the purpose of assisting the transition from war to peace and for fostering the economic advancement of the sub-continent. In December 1943 the Chief Engineers of the various provinces and important States met in Conference at Nagpur and recommended that the country should be ready for a programme involving the improvement of the entire road system and designed to increase the road mileage to 400,000. This was estimated to cost Rs. 450 crores. If this scheme, known as the Nagpur Plan, is carried through, the sub-continent's total road

mileage, on completion of the plan, will be as under: National Highways 18,000; Provincial Highways 72,000; Major District Roads 60,000; Other District Roads 100,000 and village roads 150,000.

FIVE-YEAR PROGRAMME

While the Government of India as well as the Provincial Governments and States endorsed these recommendations in general terms, there was no general acceptance of a time-limit for the accomplishment of the plan. However five-year programmes for commencement from April 1947 and representing varying proportions of the Nagpur scheme were prepared by the Provinces for their respective areas in 1945-46. These Programmes, exclusive of National Highways (i.e. main arterial roads of all-India importance) were estimated to cost Rs. 146.89 crores over the five-year period, the following being the allotments (in crores of rupees) proposed by the individual provinces: U.P. 30.72; (old undivided) Bengal 23.34; Bombay 20.80; Madras 20.77; Bihar 13.60; (old undivided) Punjab 12.49; Sind 8.85; C.P. & Berar 7.00; Assam (before detachment of part of Sylhet) 5.32 and Orissa 4.00. The Programmes embrace the construction or improvement of 80,000 miles of roads as under:

Provincial & District Roads.

Mileage improvement	33,393
Mileage, new construction	17,509

Village Roads.

New construction & improvement ..	30,093
-----------------------------------	--------

Some of the provinces, particularly Bombay and Madras, have since announced that their five-year programmes are being revised and the allotments reduced.

NATIONAL HIGHWAYS

The Central Government, as part of their contribution towards post-war development in the provincial field and as part of a concerted plan for the co-ordinated development of land transport as a whole, have accepted liability for the construction and maintenance of the National Highways outside the States with effect from 1st April 1947. Of the 18,000 miles of National Highways at present delineated, 15,000 are in India & Pakistan and the remaining 3,000 in Indian States.

The Government's five-year plan for the development of National Highways is estimated to cost Rs. 36 crores. Although financed by the Centre, the actual execution of the work will be carried out through the Provincial P.W.D's. It is expected that as a result of this expenditure, about 5,421 miles of National Highways will be improved and 787 miles of new National Highways constructed in the Governors' Provinces.

The largest new construction of National Highways will be undertaken in Bihar, the Punjab area and the Bengal area—260 miles, 110 miles and 100 miles respectively. In the States it is planned to construct, during the next 15 years, 284 miles of new National Highways and to improve 2,654 miles, but the allocation of the cost between the Central Government and the States has not yet been settled. For the present, Rs. 2 crores have been provisionally earmarked for expenditure by the Central Government on National Highways in the States during the next 5 years.

Vehicles:—Civilian motor vehicles on the country's roads in March 1946 (excluding the States) numbered 144,694 made up of 10,142 motor cycles, 74,846 cars, 8,065 taxis, 20,821 passenger buses, 30,194 goods lorries and 1,126 miscellaneous vehicles. There are also 6,292,000 bullock carts in use.

Inland Water-Ways

IN pre-railway days inland navigation was highly developed in the sub-continent. But unfortunately it has not progressed in parallel with rail and road development as it has done in other countries like France or Germany or the U.S.A. There are several reasons for this but the most important single reason is the lack of a co-ordinating authority to maintain the water-ways and provide the appropriate navigation facilities. There is no question that the provision of navigable conditions on the water-ways is essential if we want to induce industrial and agricultural traffic to use the quickest and cheapest form of transport for heavy goods and bulk cargoes from the interior to the ports, both for internal distribution and export to world markets.

If we consider conditions in the old days on the main water-ways of India and Pakistan we find that the Indus was navigable from the sea to Attock, a distance of about 1,000 miles, the Chenab as far as Wazirabad, 800 miles, and the Sutlej as far as Ludhiana, 800 miles. The Ganges was navigable up to Kanpur as late as 50 years ago, and only a hundred years ago the Jumna was navigable as far as Agra. All these rivers are unnavigable today. Navigation on the Indus and other Punjab rivers is restricted to short distances up and down stream of the Sukkur Barrage and steamers seldom ply on the Ganges up-stream of Patna.

There are, of course, parts of the sub-continent where canal navigation is still active. In the Madras Presidency for instance, the Godavari Canals, including the Dummagudan Canal, the Kistna Canals, the Buckingham Canal, the Kurnool-Cudappah Canal, the West-Coast Canals and the Vedaranniyam Canals are important high-ways for water-borne traffic. The Godavari and Kistna Deltas are indeed the chief means of transport in that region and afford a cheap and ready mode of access to all markets. The Buckingham Canal has played an important part in the trade of the country traversed by it, and in particular during the last war when the traffic was heavy it afforded considerable relief to railways. On the West Coast the water-ways form the chief means of communication and transport in the interior of the country. In Orissa, too, there are some 250 miles of navigable canal in constant use.

Then there are the important water-ways of Bengal, East and West. The records of imports and exports into and from Calcutta show the extent to which the largest sea-port in India depends upon its water-way communications. Dealing first with imports, about 25 per cent. of the merchandise which flows into Calcutta from the rest of India is water-borne of which no less than 63 per cent. comes from Assam. As regards exports from Calcutta about 32 per cent. is carried by water and of this 72 per cent. goes to Assam. The total inland water-borne traffic of Calcutta amounts to approximately 45,00,000 tons of which 34 per cent. is carried by inland steamers and 66 per cent. by country boats. In 1945, 1,04,00,000 passengers were carried by steamer service in East and West Bengal.

Altogether it has been estimated that the amount of boat traffic over Government

maintained channels is in the neighbourhood of 250 mln. ton-miles per annum. But this figure works out to little more than one per cent of the pre-war goods traffic by railway. It is therefore obvious that as matters stand to-day inland water transport from an insignificant proportion of the nation's transport services. This becomes doubly clear when we consider the tremendous scope for expansion which still exists for the water-borne traffic of the sub-continent. The total length of water-ways in India and Pakistan which afford perennial flow amounts to about 25,000 miles, comprising 10,000 miles of rivers and 15,000 miles of canals. Of the former, as many as 6,000 miles are navigable to a minimum of about three feet draught and of these again about 5,000 miles are in the north-east of India comprising the Provinces of old Bengal and Assam. The canals are mostly for irrigation but is estimated that about 4,000 miles would be suitable for power-driven craft, and the remaining 11,000 could be utilized for boat traffic.

THE FUTURE

The question of improving India's natural water-ways is receiving close attention of the local Governments, and the Central Water-ways Irrigation and Navigation Commission is endeavouring to co-ordinate these efforts on a country-wide as well as multi-purpose basis. It is deplorable that in some areas navigation has been completely neglected for the over-ruling benefits of irrigation. Possible extension of navigation can only obtain fruition by consideration of the multi-purpose use of our water wealth on a regional basis irrespective of political boundaries.

Conservation of water resources on a multi-purpose basis offers the following potential new navigable water-ways, or the resuscitation of old ones:—

- i. **Bengal (East and West)**
 - a. A new canal to connect the coal-fields of Bengal and Bihar with the port of Calcutta.
 - b. Resuscitation of the Bhagirathi route to the Ganges.
 - c. Resuscitation of the inner boat route connecting Calcutta to East Bengal to shorten the existing route by 50 per cent.
 - d. Resuscitation of the river routes to North Bengal as visualized in the Tista Valley Project.
 - e. Resuscitation of the old Brahmaputra and Dhalleshwari Rivers in the Dacca and Mymensingh Districts.
- ii. **Assam**

Resuscitation of the Dihing, Dihu, Dhansiri and Kalung Rivers in Upper Assam.
- iii. **Bihar**
 - a. Resuscitation of the Gandak and Kosi series of rivers.
 - b. Extension of navigation on the Son River for about 150 miles as visualized in the Son Valley Project.

iv. United Provinces and Central India

- a. Resuscitation of the Gogra River which would afford navigation facilities up to Fyzabad as in former days.
- b. Flood control on the Betwa and Chambal rivers holds promise of ample discharge in the dry season, to permit navigation on the Jumna from Etawa to Allahabad, and on to Calcutta via the Ganges.

v. Central Provinces

The Narbada and Tapi pass through the Central Provinces and a number of States before they join the Arabian Sea in the Bombay Presidency. Investigations are in progress to assess the value of these rivers for multi purpose development including navigation.

vi. Madra

Possible development of the Godavari, Pranrita, Wardha, and Wainganga rivers suggest other main lines of communication and taking into consideration the possible

development of the Tapi river it may be found practicable to obtain a transcontinental line by connecting the Wardha and Tapi rivers.

vii. Orissa

- a. The Orissa coastal canal between the Hooghly and Dhamra rivers, together with an extension of the Mahanadi delta system to link with the Madras Canal system would afford inland navigation from Assam to Madras.
- b. The Mahanadi Project visualizes the provision of navigational facility on the Mahanadi river to Sambalpur about 300 miles from the sea.

viii. East Punjab, West Punjab, Sind

Resuscitation of the rivers Indus, Chenab and Sutlej would restore 2,600 miles of river communication to their former navigability, but the interests of established irrigation may stand in the way of reviving these communications to any extent.

Ports

BOMBAY

THE Port of Bombay is over 75 square miles in extent and is a comparatively modern creation. The decision of Government to constitute a Trust to administer the affairs of the Port originated in the apprehension of Government that the interests of trade were being seriously endangered by the monopoly of landing and shipping facilities being acquired by private companies holding large tracts of foreshore land, most notably the Elphinstone Land and Press Company, which was accordingly purchased by Government in the year 1869 and placed in the hands of a public trust.

During the first few years of its existence, however, the Board was faced with increasing deficits owing to competition from private wharf-owners holding the remainder of the foreshore land. The rights of these private wharf-owners were also, therefore, acquired by Government and vested in the Board in 1879, since when the Port of Bombay has been progressively developed and expanded.

The Board consists of a whole-time Chairman appointed by Government, and twenty-one members, of whom five are elected by the Bombay Chamber of Commerce, five by the Indian Merchants' Chamber, two by the Bombay Municipality, one by the Millowners' Association and the remaining eight, which include one representative of labour, are nominated by Government.

The entire administration of harbour conservancy and lighting, pilotage, docks, bunders, railway and land estates is vested in this Board and is subject to the provisions of the Bombay Port Trust Act, 1879.

HARBOUR

Bounded on the north and east by the mainland of India and on the west by a narrow

peninsula which forms a natural break-water, the harbour is naturally protected from the violence of the south-west monsoon and provides secure and ample shelter for shipping at all seasons of the year. It is about 12 miles long, 4 to 6 miles wide with a minimum of 32 feet at low water in the entrance fairway. Spring rise above datum is 14 feet 1 inch and the range between mean low and mean high water spring tides is 11 feet 6 inches so that the Port is well-endowed by Nature to accommodate deep-draft shipping.

The Port and its approaches are well-lighted, being served by the Prongs, Kennerly and Sunk Rock Light Houses, an unattended Floating Light Vessel, the South Entrance and Prongs Reef Light Buoys, and other subsidiary lights, the more important of which are the Dolphin Rock and Tucker Beacon Lights. The first two light-houses are directly connected by wireless with the Pilot Vessels and the Port Signal Station on the tower of Ballard Pier, while the Wireless Beacon installed on Kennerly Island enables ships fitted with direction-finding gear to take bearings from its signals when approaching Bombay.

PASSENGER FACILITIES

Trans-oceanic passenger traffic is mostly dealt with at the Ballard Pier Station, Coastal and Harbour Passenger traffic is dealt with at the New Ferry Wharf.

The total number of overseas passengers embarking and disembarking at Bombay in 1946-47 exceeded 110,000 while the number of passengers carried by the coastal and ferry services was over 1,700,000.

WET DOCKS

There are three wet docks, the main features of which are as follows:—

Name and date of completion	Width of entrance	Maximum available depth on sill at M.H.W.N.	Water area	Lin al feet quayside	Number of Berths
Prince's Dock (1880)	66'-0"	24'-9"	30 acres	6,910	9
Victoria Dock (1888)	80'-0"	26'-9"	25 "	7,805	13
Alexandra Dock 1914	100'-0"	33'-9"	49½ "	16,055	20 (plus 6 berths for ferr. steamers.)

Movement into and from Alexandra Dock is not restricted, ships being able to pass through an entrance lock 750'-0" by 100'-0" at all states of the tide.

The Victoria and Prince's Docks are connected by a communication passage. These Docks which were affected by the fires and explosions of April 1944 are in the course of reconstruction and are being provided with modern transit sheds.

The three Docks together have a water area of 105 acres and about 6 miles of quayside; extensive open storage and shed and warehouse accommodation for the reception and storage of goods, exists.

DRY DOCKS

The main features of the two Dry Docks are as follows:—

Name of Dry Dock and date of completion	Length	Width	Depth on sill at mean high water neaps	Remarks
Hughes Dry Dock (1914).	1000'-0"	100'-0"	32'-9"	Divisible into two compartments so that 2 ships can be accommodated at a time.
Merewether Dry Dock (1891).	525'-0"	65½'-0"	24'-9"	

Bundars and Timber Ponds.—Beyond the Docks are the "bundars" or open wharves and basins, where coasting and country craft traffic and overside cargo from the Docks and stream are handled. These bundars have an aggregate quayside of nearly 5 miles and are equipped with cranes, sheds and other facilities for loading, unloading and storing cargo, but the labour for handling cargo at the bundars is not provided by the Port Trust and so the wharfage charges are much lower than in the Docks.

The bundar traffic is an important item in the trade of the Port, over 12½ lakhs tons or roughly one-fourth of the total tonnage of the Port being handled annually over the bundar-wharves.

Adjoining the bundars are the Timber Ponds covering an area of over 60 acres, where every facility for storage and handling of timber is provided.

Bulk Oil Depots.—There are three groups of bulk oil installations, one each for liquid fuel and lubricating oil, kerosene oil, and petrol, all on land, aggregating 83 acres in extent, leased by the Port Trust.

Ample storage space is available within the Port area for grain (80 acres), cotton (127 acres, 1,000,000 bales), and manganese ore (30 acres, 300,000 tons). Large areas have also been reserved for the landing and storage of other commodities such as Coal, Bricks and Tiles, Building Stones and Iron.

PORT TRUST RAILWAY

The Port maintains its own railway system which handles nearly 50 per cent of the rail-borne goods traffic of Bombay. Its yearly traffic to and from the trunk Railways amounts to over 2,000,000 tons, and its local station-to-station traffic is approximately the same in volume. The principal commodities carried are cotton, grain and seeds, oil cake, manganese ore, sugar, kerosene and other bulk oils, coal, charcoal and china clay.

Though only 7½ miles in actual length, it comprises nearly 120 miles of main lines and sidings all directly linked with the inter-railway exchange yard at Wadala, the various storage depots and the Docks and Wharves.

REVENUE AND EXPENDITURE FOR THE YEAR 1946-47

	General Account	Pilotage Account	Special Receipts or Special Expenditure
Revenue	4,63,15,722	6,26,652	53,61,204
Expenditure	3,89,13,858	9,11,062	53,61,204
Surplus	74,01,863		
Deficit		2,85,011

BOARD OF TRUSTEES

Nominated by Government: Chairman, V. Bhide, I.C.S., *Brigadier F. J. Dillon, O.B.E., M.C. Commodore H. R. Inglo-Jones, C.I.E., R.N. K. G. Jacob, W. Hood, O.B.E., N. S. Sen, M.Inst. A. H. Mirza, J. S. Bharucha, B. K. Patel, I.C. Elected by the Bombay Chamber of Commerce R. W. Bullock, C. J. Damala, A. D. Finne C. W. Warrington, V. F. Noel-Paton. Elected by the Indian Merchants' Chamber M. A. Master, Sir Behram Karanjia, Ramd Kibachand, J. C. Setalvad, Madanmohan R. Rui Elected by the Municipal Corporation †Madhavji M. Bhatt, †F. M. Chinal. Elected by the Millowners' Association Krishnaraj Madhavjee Damodar Thackersey.

* Resigned; Nomination of a new Trustee by the Government is awaited.
† Resigned; Election of a new Trustee by the Corporation is awaited.

ADMINISTRATION

Secretary, A. S. Bakre.
 Deputy Secretary, E. H. Simoes.
 Chief Accountant, C. F. Lynn.
 Deputy Chief Accountant, V. D. Jog (on deputation).
 Deputy Chief Accountant, O. V. B. Hyde. (Ag.).
 Chief Engineer, F. M. Surveyor.
 Deputy Chief Engineer, P. E. Colvala.
 Docks Manager, F. Seymour-Williams.
 Deputy Docks Manager, G. K. Dukes, V. Vaz, Shaik A. K. M. Jafar, V. A. Kashikar.
 Railway Manager, H. A. Gaydon.
 Deputy Manager, Operation, P. M. Boyce.
 Deputy Manager, Commercial, M. E. A. Kizilbash.
 Deputy Conservator, R. C. Vint.
 Harbour Master, H. W. L. T. Davies.
 Manager: Land and Bunders Department, H. G. Doshi.
 Deputy Manager, E. M. Bhacka.
 Controller of Stores, R. C. Master.
 Chief Medical Officer, Dr. M. L. Mistry.
 Health Officer, Dr. A. J. Mhatre.
 Labour Welfare Officer, Batuk H. Mehta.
 Legal Adviser, S. D. Nariman.

CALCUTTA

Calcutta, the principal port in India is situated on the left bank of the River Hooghly which is formed by the uniting of three offshoots from the parent River Ganga. The port is about 80 miles from the mouth of the river and 126 miles from the Western Channel Light Vessel at Sandheads. Calcutta is both a receiving and distributing centre for Assam and the northern and central parts of the sub-continent. It is fed by products brought by a network of railways as well as by the water-borne traffic of the Ganga and Brahmaputra Rivers.

The River Hooghly is subject to strong tides and sudden alterations in the depths on the bars and pilotage is compulsory. To compensate for these sudden changes the Commissioners maintain a permanent River Survey Service and in addition to the daily publication of charts, maintain Tidal Semaphores and Track Boards to indicate the latest depths available. The bars are sounded to the nearest 3 inches and the pilots allot draughts to the same limit. Pilots board the vessels at the Sandheads from the Pilot Brigs which are fitted with W/T and D.F. gear. The largest vessel to enter the Port was 16,600 tons gross tonnage but the normal limit is 620 feet in length and 25-29 feet draught at spring tides depending on the time of year.

Navigation for small craft is not difficult as the channel is well marked but ignorance of the local rules may cause grave danger to sea-going vessels using the channel. Arrangements have been made by which small naval craft navigate from Sandheads to Diamond Harbour without a pilot but above that point all ships over 100 tons must have pilots. Approaches to the river can be mined.

Anchorage are available at Saugor Roads, Haldia, Kalpi, Diamond Harbour, Ulubaria and Garden Reach of which Haldia, Ulubaria and Garden Reach are available only for ships on passage to and from the Port or in emergency.

In the Port ships lie to moorings when in the stream or alongside jetties with cables forward and aft. The largest man-of-war so far accepted

in the Port has been 10,000-ton cruiser class and one berth is available for this class of ship. No experience has been gained by holding these ships during bore tides and it is considered that this would entail considerable risk.

Accommodation in the docks is not suitable for passenger ships as sanitary arrangements are provided for lascars crews only. Special arrangements can be made if notice of arrival is given.

Quayage and Docks.—The Kidderpore Docks and the King George's Dock are the two important docks in the Harbour. The former consist of Nos. 1 and 2 Docks and Turning Basin. There is a lock entrance 580 feet long by 80 feet wide from the river which gives access to the Dock system. Dock No. 1 is 2,700 feet in length by 600 feet wide, with a depth of 30 feet of water and has twelve berths serving single-storey cargo sheds. Dock No. 2 has a length of 4,500 feet by 400 feet and also provides a depth of 30 feet of water. It has five general berths serving double storey sheds and five coal berths. In addition three new general berths totalling 1,880 feet in length with a depth of water of 30 feet have been completed in Dock No. 2; the berths serve single storey transit sheds. One new coal berth and horse jetty in Kidderpore Dock No. 2, 488' 6" in length with a depth of water of 35' 0" has also been added.

King George's Dock comprises a lock entrance 700 feet long by 90 feet wide, five import berths, one export berth, a berth for the discharge of non-dangerous petroleum in bulk which is also equipped with 2 cranes of 2-ton capacity each and which can be used as a laying up berth. Three of the import berths are served by three storey sheds, two import berths by single-storey sheds, and the export berth by a two-storey shed. Each berth is 600 feet long and can accommodate vessels drawing up to 30 feet of water. The petroleum berth is 600 feet long. One laying up berth 500 feet long with a depth of water of 17 feet is provided. Three lighter berths, total length 900 feet with a depth of water of 8 feet, are situated on the South Bank and these berths are complete and in use. One heavy lift berth for Lighter 400 feet long with a depth of water of 7 feet is close by.

The River entrance to the Dry Docks has been permanently closed by the construction of a wall of steel sheet piling at the river end of the Dock. This permits removal of the caisson and increase the effective length of Dock No. 2 to 680 ft.

Five dry docks, owned by the Port Commissioners, are available for the use of shipping, three in Kidderpore Docks and two in King George's Dock. In the Kidderpore Dry Docks, one 4-ton crane is located between Nos. 1 and 2 Dry Docks. Breakdown cranes of 15 tons capacity can be brought close to No. 2 Dry Dock. A five ton crane is available at 13 Berth for lifting material ashore on to trucks for use as No. 2 Dry Dock, and in the King George's Dry Docks four 3-ton cranes are available two on each side of the dry docks.

Jetties.—The Garden Reach Jetties consist of a coaling jetty for ships up to 450 feet in length and four jetties for ships up to 600 feet,

the transit sheds are double storey. One jetty is at present unusable owing to a sunken vessel lying close to the quay face. Calcutta Jetties are situated on the riverside below Howrah Bridge. There are nine jetties with a total length of 4,735 feet, but only seven of them are available for ocean-going steamers, one berth is used for loading lighters and country flats and one berth is used as a workshop by the Commissioners' Engineering Department. The depth of water available below M.L.W.S.T. varies according to the season of the year.

Petroleum Wharves at Budge Budge are situated some 14 miles below the entrances to the docks. There are five pontoon jetties for ocean-going vessels and one for flats and barges at which non-dangerous petroleum and its products are discharged. Of the five pontoon jetties, one is reserved for the discharge of dangerous petroleum.

Warehouses.—The floor area of covered space under control of the Calcutta Port Commissioners is approximately: Transit Sheds 3,997,000 sq. ft.; Warehouses 2,840,000 sq. ft.; under construction Transit Sheds 77,000 sq. ft.

Coal.—There are at present six coaling berths at Kidderpore Dock No. 2 and one at Garden Reach Jetty. Two of the Dock berths are fitted with mechanical coal loading gear. One additional coal loading berth is at present under construction in Kidderpore Docks for manual loading, the completion date for this berth is 1st April 1945. The rate of supply to ships is 1,500 to 2,000 tons per day at the Labour Berths and 4,000 tons per day and night at the Mechanical Berths. At Garden Reach Jetties, 4,000 tons per day and night.

Water Supply.—Drinking water is supplied in the stream and in Kidderpore Docks, King George's Dock and at Jetties in the river. Ten crafts are available for supply of water to ships. Direct supplies from quays and jetties where hydrants are available are controlled by the Port Commissioners or the Calcutta Corporation. These supplies are obtained partly from Corporation mains but largely from tube wells recently constructed in the Dock Area and operated by the Commissioners.

Unfiltered water is supplied to ships in Kidderpore Docks, G. R. Jetties and at "B" Berth, King George's Dock at the rate of 18 tons per hour. Ships at Kidderpore Docks, King George's Dock and G. R. Jetties wanting unfiltered water for boiler use, pump it from the dock or the river with their own pumps, the rate of pumping depending on the capacity of the vessels' pumps.

Overall Capacity of Port.—The average daily deadweight tonnage, for the month of February 1945, of all import cargo discharged in the Port of Calcutta was 14,700, average daily export tonnage for the same period was 9,900. These figures can be taken as representing the average capacity of the port in a peak month. Coal exports for this period were appreciably below pre-war figures for other types of cargo were correspondingly higher. The maximum tonnage for both imports and exports on any one day during February 1945 was 30,000.

The Port is administered by a Port Commission with jurisdiction under the Calcutta Port Act, from Buj Buj to Konnagar and under Indian Ports Act from Sandheads to Kalna about 56 miles above Calcutta.

Commissioners for the Port of Calcutta.—N. M. Ayyar, O.I.E., I.O.S., Chairman; S. L. Dass, Deputy Chairman.

Elected by the Bengal Chamber of Commerce.—A. T. Orr Deas, J. P. Elton, H. D. Cumberbatch, A. J. Elkins, O.B.E., J. Morshead, N. Brodie. *Elected by the Calcutta Trades Associations.*—C. Ortnier; *Elected by the Bengal National Chamber of Commerce.*—Dr. S. B. Dutt, Bar-at-Law, S. M. Bose; *Elected by the Indian Chamber of Commerce.*—G. L. Mehta; *Elected by the Muslim Chamber of Commerce.*—Noor Mohamed Elias; *Elected by the Municipal Corporation of Calcutta.*—Purnendu Sekhar Basu; *Nominated by the Government.*—Commander (E) A. B. Collins, R.N., Khan Bahadur G. Faruque, O.I.E., O.B.E., T. H. Morris, O.B.E., S. C. Satyawadi.

Principal Officers.—Secretary.—P. C. Mitter; Traffic Manager.—K. Mitter, O.B.E.; Chief Accountant.—A. J. Rose, A.C.R.A.; Chief Engineer.—J. B. Murray, M. Inst., C.E.; Controller of Stores.—R. A. Delahanty; Chief Mechanical Engineer.—N. M. Irvine, B.Sc., M. mech. E.; Deputy Conservator.—Lt.-Comdr. E. L. Pawsey, R.N. (Retd.); Medical Officer.—Lt.-Col. F. J. Anderson, M.C., O.I.E., M.B.B.S., F.R.C.S., I.M.S. (Retd.); Consulting Engineers and London Agents.—Messrs. Rendel Palmer & Tritton.

COCHIN

The Port of Cochin, one of the six major ports in India, is a natural Harbour lying on the direct route to Australia and the Far East from Europe. It is open for deep-water traffic in the worst monsoons and provides a splendid anchorage at all times of the year. Any ship passing through the Suez Canal can enter the port even in the roughest weather. It has a strategic importance in South East Asia. It serves a vast hinterland of industrial planting areas comprising the States of Cochin and Travancore and the Southern districts of the Madras Province. Foreign and coastal steamer lines touch the Port regularly and Cochin is the passenger port for the United Kingdom, etc., in South India.

The Port consists of an area of 120 sq. miles of sheltered backwaters behind an opening 400 yards wide. Partly in Indian Dominion and partly in Cochin in State, its location is lat. 9° 58' and long. 76° 14' E.

A Broad gauge railway connects the Port through the Cochin State and S. I. Ry. to all the main cities in India. Willingdon Island aerodrome situated in Port area is a place of halt for Air India Service between Madras and Trivandrum.

The development of the harbour involved the cutting of a passage through the bar which blocked the entrance from the sea to an extensive backwater. The first cut through the bar of a wide and deep channel was made in 1928. The entrance channel is 450 ft. wide and about 3 miles long, buoyed on both sides according to regulations. The activities of the Port are mainly centred in Willingdon Island which has been

reclaimed in the back-waters by dredged soil from the inner channels. Since 1930 the harbour has been in regular use. A powerful tug has been provided for the convenience of shipping. A hotel on modern lines run by Spencer & Co. has been constructed by the Port to provide accommodation for passengers and other visitors to the Port.

Inside the harbour there are eighteen fore and aft berths, one swinging berth, one passenger berth and three warf berths. 12 level lashing wharf cranes have been provided at the wharf berths, capable of lifting weights upto 3 and 10 tons. A floating crane for lifts upto 8½ tons is also available. Sailing craft are moored with their own gear in a separate anchorage. One ware-house and eight sheds in Willingdon Island are available for storage of goods. There are three sheds at the main wharf for the handling of goods in transit. Vessels are brought into or taken out of harbour at practically any state of tide, day or night. There is a boat wharf with one 5-ton and three 2-ton hand cranes. There is a dry dock 240 ft. long and 44 ft. wide, suitable for vessels of less than 14½ ft. draft but this is mainly intended for docking craft close to the dry dock and there is fitting out wharf alongside, 300 ft. long with 11 ft. depth of water at L.W. Bunker coal, Diesel and fuel oil are available. Fresh water from tank barge is supplied at the rate of Rs. 1-8-0 per ton during day, night or holiday, with a minimum of Rs. 30-0-0 per vessel per day delivered on board.

The principal imports are foodgrains, mineral oils, coal, piece goods, hardware, metals and provisions.

The principal exports are coir and coir products, tea, rubber, cashew kernels, ginger, pepper and spices.

STATISTICS SHOWING THE GROWTH OF THE PORT FROM 1943-44 TO 1945-46

Year	Imports	Exports	Total
	Tons	Tons	Tons
1943-44	89,330	82,177	1,71,516
1944-45	2,26,118	71,257	2,97,375
1945-46	3,80,504	1,11,991	4,92,555

The affairs of the Port are under the administrative control of the Ministry of Transport of the Government of India and under the immediate control of the Administrative Officer and Chief Engineer appointed by that Government and advised by an Advisory Committee representing the Governments of India, Cochin and Travancore, the local Chambers of Commerce and Municipalities.

Administrative Officer and Chief Engineer.—A. G. Milne, C.I.E., M.Inst.C.E., M.I.Mech.E.; **Executive Engineer.**—Rao Sahib V. Srinivasan, B.A., B.E., A.M.Inst.C.E.; **Port Officer.**—H. G. Fletcher, J.P.; **Harbour Master.**—B. Brook; **Traffic Manager.**—Topen Bhose, B.A.; **Chief Accountant.**—A. N. Ayyaswami, M.A.; **Port Health Officer.**—Dr. B. Gopalakrishna Prabhu, L.M.S., B.Sc., D.T.M.(Cal.); **Mechanical Superintendent.**—R. Bazely.

KARACHI

LIGHTHOUSE on Manora Point is in Latitude 24° 47' 37" N., long. 66° 58' 36" E.

Accommodation.—Entrance channel High Water Spring Tides 38½ ft., at mean neaps 35 ft. 11 in. Vessels drawing 30 ft. can enter port during monsoon season; but Dry. Conservator may allow vessels of deeper draft to enter at discretion. During fair season vessels drawing 31 ft. to 32 ft. can enter or leave at 8 ft. tide.

Steamer wharves can accommodate three steamers of 375 ft., with 32 ft. dft., and one of 600 ft., with 34 ft. dft., nine steamers of 550 ft., two of 500 ft., one of 470 ft., three of 450 ft., one of 400 ft., and one of 430 ft., with 28 to 29 ft. of water alongside and one of 325 ft. with 18 ft. dft.

There are eleven electric cranes of 2 tons, five electric cranes of 3 tons, one steam Derrick Crane of 5 tons; eighty-nine hydraulic cranes of 35 cwt., four of 30 cwt., one of 30 tons on the wharves and one 30-ton Floating Crane self propelled.

Boat Basin, at the south end of the wharves, contains the Commissariat Wharf length of quayside, 150 ft.; depth at High water 17½ ft.; low water 8 ft., One 80-cwt. hydraulic crane; the Passenger Landing Pier (length of quayside 450 ft.; depth at high water 16 ft., low water 16½ dft.).

The Railway Wharf—length of quayside, 800 ft.; depth at high water 19½ ft., low water 10 ft. Three 30-cwt. hydraulic cranes.

Bulk oil Pier lies south of the Boat Basin; length of the quayside 403 ft., vessels 550 ft. can be berthed alongside; depth of low water 31 ft. Pipes are laid down from the pier to the oil installations, which are in the immediate neighbourhood. Liquid fuel pipes and connections are available from the Return Wharf and berths 1 to 11 of the Keamari wharves and are connected to the oil installations, permitting two ships to be bunkered with oil fuel simultaneously, or one ship being bunkered and one tanker discharging simultaneously, in addition to the service from the oil pier. A liquid fuel barge with a capacity of 450 tons is also available for bunkering and discharging ships at other berths and in the stream.

At the North-east end of the harbour are the Juna Bundar (length of quayside 1,235 ft.; depth at high water 17½ to 22½ ft.; low water 8 to 13 ft.), with five hydraulic cranes of 35 cwt.; one of 80 cwt.; one stationary hydraulic crane of 14 tons, one fixed 14-ton Hydraulic crane and the Napier Mole Boat Wharf (length of quayside, 1,824 ft.; depth at high water 21½ ft.; low water 12 ft.), with three hand cranes of 1-ton each. Five lightening piers and two lightening berths of 377 ft. and 519 ft. length and depth at low water of 6 to 10 ft. and at high water of 14½ and 18½ ft.; with one fixed 25-ton electric derrick crane at the shorter berth, for landing and shipping stores.

The Heavy Lift Pier north of ship wharves accommodation barges, at High Water 15 ft., at low water 5½ ft. One hydraulic crane of 14 tons. One ship repairing berth with a length of 300 ft. between dolphins and depth of 16 ft. and 25½ ft. at low water and high water respectively.

Seaplane Port at the West Wharf Reclamation with a slipway for the flying boats in connection with the Empire airmail service and a jetty for the landing and shipping of mails, general merchandise and passengers' luggage (not in use). Harbour moorings; five swinging moorings with a draft of 24 ft., and thirteen fixed moorings

for vessels of 500 to 600 ft., of which two are with a draft of 17 to 23 ft., four of 32 ft., and seven of 27 to 28 ft.

Dry dock, length on blocks, 236½ ft.; breadth at entrance 50 ft.; depth on sill at High Water Ordinary Spring Tides 12½ ft. Coaling performed at the wharves and from lighters.

Cargoes are discharged into and loaded from railway wagons at the steamer wharves on the east side. On the west side cargo is loaded from and discharged into both railway wagons and transit sheds.

Charges.—Port dues on sea-going vessels on entering the port, 2 annas per net registered ton once in the same month (month reckoned from the first day (inclusive) of one month to the first (exclusive) of the next month, or from the second day (inclusive) of one month to the second day (inclusive) of the next, and so on. Moorings fixed or swinging Re. 1 per day, or part thereof, per 100 tons net registered or part thereof, with a minimum charge of (a) Rs. 40 for the period of stay of every vessel under 1,500 tons, (b) Rs. 20 per day or part of a day for every vessel of 1,500 tons and over, with maximum Rs. 40. Berthing fees Rs. 1-8-0 per day or part thereof, per 100 tons net registered or part thereof (1) with a minimum charge of Rs. 40 for the period of stay of every vessel under 1,500 tons, (2) maximum charge of Rs. 40 per day, or part of a day, for every vessel of 1,500 tons and over. Additional charges of Rs. 10 per hour or part of an hour, and Rs. 50 for every 24 hours, or part thereof for use of pipelines, are payable by vessels bunkering and discharging petroleum respectively. Water supplied to vessels in the

stream at Rs. 7-6-0 per 1,000 gallons, and to vessels at the wharves at Rs. 4-0-0 per 1,000 gallons.

Pilotage.—Charge on sea-going vessels of 200 tons net reg. and upwards. Fair season, 300 tons and under Rs. 35; monsoon season (15th May to 30th September), Rs. 52-8-0. For every additional 100 tons, or part thereof, Rs. 4. Pilots board incoming vessels day or night about 2 miles off breakwater. For services of a tug for assisting in berthing or unberthing, Rs. 75.

Towage.—In or out, 3 annas per net reg. ton. Sailing vessels when towed in or out are charged half pilotage. Vessels not under stream towed from one part of the port to another: for use of one tug, Rs. 100, for every additional tug, Rs. 75. From 1st May to 30th September towage is compulsory for vessels leaving the wharves; charge Rs. 75. From 1st May to 30th September towage is N.C. in the case of vessels of 1,000 tons and under, and in case of vessels using the west wharf, but if a tug is used a charge of Rs. 50 is levied in the case of vessels of 1,000 tons and under; Rs. 75 for vessels over 1,000 tons.

The principal commodities imported and exported through the Port of Karachi are as under:—

Imports.—Coal, Iron & Steel, Kerosene, Oil, Liquid Fuel, Petrol, Sugar, Textiles, Machinery, Vehicles and Liquors.

Exports.—Bones, Cotton Raw, Flour, Grams, Hides & Skins, Oil Seeds, Wheat, Wool, Cement, Rice.

The income and expenditure for financial year ending 31st March 1947 was Rs. 1,14,85,176 and Rs. 1,27,56,982 respectively.

STATISTICS SHOWING THE GROWTH OF THE PORT FROM 1942-43 TO 1946-47

Year.	Imports	Exports	Total
	Rs.	Rs.	Rs.
1942-43	14,38,34,999	13,31,03,735	27,69,38,734

Qureshi, B.A.

MADRAS

The Madras Harbour is an artificial one formed by two arms projecting from a low, sandy coast. There is a lighter fleet consisting of 67 crafts which include licensed and unlicensed crafts owned by firms and others. Two tugs are available for assisting vessels and two for towing the lighter fleet. Loading and discharging by means of lighters are effected on a frontage of about 5/8 of a mile partly ferro concrete wharves and partly at the West Quay equipped with steam, electric and hydraulic cranes. There are about 8.2 acres of transit shedding alongside the quays for the accommodation of all types of cargo and also 0.6 acres of warehouses for lease to exporters or importers. There is a slipway for the repairs of small craft up to 900 tons. Ships get their water alongside the quays or from water boats. Large passenger vessels habitually use the quays which have direct railway connection with the neighbouring railways. Coal for bunkers and oil fuel are always available.

The affairs of the Port are administered by a Board of Trustees which operates under the Madras Port Trust Act.

The Port is about 3/5 mile square (excluding Boat Basin, etc.) with an area of approximately 200 acres.

There is accommodation for 18 vessels inside the harbour, 9 at Moorings and 9 at Quays. The depth at moorings ranges from 30 ft. to 31 ft. 6" and at quays from 26 ft. to 30 ft. Pilotage is compulsory. There are no navigational difficulties and the Port is approached direct from the open sea.

The Income and Expenditure for the year 1946-47 were Rs. 105,11,559 and Rs. 66,34,239 respectively.

The Chief imports are coal and coke, food grain, mineral oils, railway materials, metals, timber, building and engineering materials, cement, etc., Government stores, Motor cars, provisions, cycles and parts and accessories of cars and trucks, beer and wines, paper and stationery, tanning substances, including wattle bark, glass and glass ware, hardware and chemical manures. Seeds and nuts, hides and skins, vegetables and provisions, cotton, oil cake, bone meal, piece goods, food grains, turmeric, ores, and tobacco are the principal exports.

White, M.I.Mar.E., A.M.I.N.E., A.M.I.Mech.E.

VIZAGAPATAM

Vizagapatam Harbour was created in order to supply an outlet for a large area of fertile country adjacent to the east coast of India, with considerable mineral resources and no alternative access to the outside world. The scheme was first formulated many years ago in the days of the East India Company, but was not actually taken up before 1925. In 1933, the Harbour was first opened for sea-going vessels, and it now, provides the following facilities:—

An Entrance Channel, sheltered by hills, with a minimum depth sufficient to admit vessels drawing 28½ feet of water on any day of the year, gives access to a completely sheltered inside harbour, provided with three quay berths, each 500 feet long, and equipped with fully portal electric cranes, transit sheds, and railway lines, both behind and on the quay-side of the transit sheds. Two of these berths are specially equipped for the rapid shipment of manganese ore in bulk; one of them is also equipped as an auxiliary coal bunkering berth. In addition, a special coal bunkering jetty berth is provided, at which coal is carried on board ships direct over adjustable gangways. Four mooring berths are also provided, at which vessels are served by a fleet of lighters operated by the Port. A timber jetty berth for bunkering fuel oil has been provided. Behind this, oil storage tanks are installed.

Storage Sheds, for lease to import and export merchants, are provided with water frontage and rail service in the rear. From these sheds, export cargo can be carried directly alongside vessels by means of lighters.

The hauling equipment of the Harbour consists of four tugs of 1,000, 600, 450 and 400 H.P.

A graving dock with an entrance 60 feet 6 inches wide is provided; but in view of the fact that its length is at present limited to 360 feet, it is used principally for docking the craft of the Port, although it is also used by a certain number of small size vessels of other ownerships. The construction of another Dry Dock to take ships upto 800 ft. in length is being contemplated. The port has a floating crane and can deal with lifts upto 50 ton capacity.

There is a special railway connection, linking it with the Central Provinces. Additional Railway lines for development of the hinterland are being surveyed.

INCOME AND EXPENDITURE OF THE PORT FOR THE YEAR 1946-47

	Receipts. Rs.	Expenditure. Rs.
Port Fund ..	32,54,829	33,32,884
Pilotage Fund ..	67,306	62,275

STATISTICS SHOWING THE GROWTH OF THE PORT FROM 1944-45 TO 1946-47

Year	Imports	Exports	Total
	Tons	Tons	Tons
1944-45 ..	1,19,075	2,85,480	4,05,155
1945-46 ..	57,987	4,10,842	4,68,829
1946-47 ..	99,909	5,38,675	6,38,584

The Port is administered by the Government of India, Railway Department (Railway Board), through the Bengal Nagpur Railway.

Principal Officers.—**Port Conservator.**—S. J. P. Cambridge, General Manager, B.N.Rly., Calcutta; **Port Administrative Officer & Port Engineer.**—S. Nanjundiah, Vizagapatam; **Chief Accountant.**—E. R. A. Dent.

Other Ports

ALLEPPEY

Alleppey, the premier port and commercial centre in Travancore, is situated about 50 miles North of Quilon, and 35 miles South of Cochin. Alleppey is an open port. There is a mud bank off and near the Pier which affords smooth water for shipping operations. A canal connects the port with the interior backwaters. Its warehouses are a convenient depot for the storage and disposal of all fresh produce, and it possesses a roadstead affording safe anchorage during the greater part of the year.

Port dues 9 pies per registered ton.

The chief exports are copra, coconuts, coir fibre and matting, cardamoms, ginger and pepper.

Principal Port Officer.—P. N. Gopala Pillai, B.A.

BALASORE

Balasore, situated on the right bank of the Burabaling river and headquarters of the district of that name, was the only port of which Orissa could boast until the opening up of the country after the great famine of 1866. It was

frequented at that time by vessels with cargoes of rice from Madras and with cowries, then largely used for currency, from the Laccadives and Maldives. The port is of historical interest as being one of the earliest European Settlements in India, factories having been established here in the 17th century by English, Dutch, French, Danish and Portuguese Merchants.

Balasore as a port is practically defunct. Foreign ships have ceased to visit since 1904 and coastal ships since 1910. An occasional country craft of negligible tonnage enters during the cold weather season for paddy, but beyond that there is no sea-borne trade. There is no import trade.

BEDI

Bedi Bandar, the principal port in Nawangan State, is situated a few miles from the city of Jamnagar, at the head of a tidal creek some eight miles long. Near the mouth of the creek is the roadstead called Rozi, in which ocean-going vessels lie at anchor.

There is at the head of the creek a spacious basin equipped with warehousing accommodation and railway connections offering facilities to merchants for the effective conduct of extensive trade. Goods are transhipped between the basin and steamers which lie in the Gulf of Cutch by means of lighters which are towed up and down the creek by tugs as the state of the tide permits.

The consistent encouragement of the Ruler and the number and importance of the merchant class in Jamnagar with their trade connections at other places in Kathiawar and beyond, have all assisted in developing a large and important trade.

No merchandise is handled at Rozi. Its landing stage, connected by road and rail to Jamnagar, is used exclusively for mails and passenger traffic to and from Cutch.

BHAVNAGAR

Bhavnagar, the capital of Bhavnagar State, lies half way up the Gulf of Cambay on its western side. The Gulf is defined by a very great range of tide, attaining as much as 40 feet at Bhavnagar, which is situated on a creek several miles from the open waters of the Gulf. The port facilities comprise an anchorage 8 miles or more from the port proper, between which and large vessels at the anchorage goods are moved in lighters while the port itself can accommodate small coasting steamers which lie on the mud at low tide. There is ample warehouse accommodation and good direct railway communication with the whole of India.

BIMLIPATAM

Bimlipatam is 22 miles north-west of Waltair. It is connected by good roads with Vizianagram and Vizagapatam. The harbour is an open roadstead and ships lie about a mile off the shore and loading and unloading is effected by lighters. There were considerable exports of Bimlipatam jute, myrobalans, niger seeds, gingelly seeds and groundnut kernels.

Coastwise imports and exports are of little importance.

No steamers called at this Port from 3-7-1940 to end of war. Vessels anchor from 6 to 8 fathoms abreast the river 'Gousthani' during the south west monsoon, and a little further to north in the other monsoon (Bearings are different). Bottom is sandy and rocky.

Dues to be paid at this Port: Port dues as per schedule, overtime fees, ground rent, and boat license fees.

The Principal Officer in charge of the Port is the Port Conservator.

CALICUT

Calicut, the capital of the Malabar District, is some 42 miles south of Tellicherry and about 50 miles north of Cochin. It is 413 miles by rail from Madras. The Port is practically closed during the South-West Monsoon from the end of May until the latter half of August. The sea is very shallow and steamers anchor about three miles from the shore, connection being maintained by lighters and small boats. Nativecraft of 150 tons and below lie about 800 yards off the shore.

Beyport, seven miles to the south of the mouth of the river of that name, is regarded as a wharf of Calicut Port. It has a number of wharves along the river bank and native craft of 150 tons burthen are able to anchor half a mile from the mouth.

The principal exports are coir, coir fibre, copra, coffee, tea, pepper, ginger, rubber, groundnut, raw cotton and fish-manure. The foreign import trade, which is insignificant, consists chiefly of metals.

CHANDBALI

Chandball, situated on the left bank of the Baitarani River, is a port of some importance on the Orissa Coast. It has a flourishing coasting trade with Calcutta but there is no direct foreign trade as in former days. The exports consist mainly of rice and the imports are cotton twist, piecegoods, kerosene oil, salt and gunny bags.

CHITTAGONG

Chittagong in Eastern Bengal, lying on the right bank of the river Karnafuli at a distance of 9 miles from the sea, was already an important Port in the sixteenth century, when the Portuguese gave it the name of Porto Grande. The construction of the Assam-Bengal Railway has facilitated the trade with Assam and Eastern Bengal for which the Port of Chittagong is the natural outlet. Chittagong, Bengal, Lat. 23° 21' N; Long. 91° 50' E. 1947. Pop. Over a lac.

The chief imports are salt, Mineral oil, machinery, tea, estimate stores, rice, coal and railway material. The principal exports are wax, jute, tea, hides, cotton, capes, rice, paddy, eggs, poultry and live-stock.

Vessels of any size can proceed 9 miles up the Karnafuli to Chittagong at H.W. draught of 21 ft. to 26 ft. There are five berths for ocean-going vessels at the Eastern Bengal Railway Jetties, also one set of fixed moorings. Jetties are 2,205 ft. long, provided with hydraulic cranes 17 to lift 35 cwt. and 4 to lift 10 tons, ample shed accommodation, and jetties are in direct rail

communication with the Eastern Bengal and Assam Railway systems, cargo in bulk being dealt with direct into wagons. Depth at jetties are about 26 feet at L.W.S.T. Fresh provisions, good drinking water and coal are obtainable.

Conditions over the three river bars have been improved by river training works so that dredging has been practically eliminated.

The Port will have its berthage expanded during this year to accommodate five 500-foot ships at the jetty, it is learnt. Berths for salt ships will also be constructed.

The number of berths will be increased to a total of eleven thus giving the port an annual capacity of about three million tons.

Port dues 4 annas 6 pies per reg. ton. Harbour Master's fee Rs. 64, mooring and unmooring in fixed berths Rs. 64, swinging berths Rs. 32. Berth alongside jetties Rs. 80 per day, night work and holidays extra.

Towage is done by Port Commissioners' Tug. The Commissioners for the Port of Chittagong constitute the port authority.

Principal Officers.—Deputy Conservator.—Capt. J. T. Denley; Port Engineer.—F. J. Green, B.Sc., M.I.C.E., & Co.; Secretary and Chief Accountant.—P. Das Gupta, B.Sc., A.S.A.A.; Lloyd's Agents.—James Finlay & Co.

COCANADA

Cocanada, is situated on the Cocanada Bay, just north of the Godavari River, about 80 miles south of Vizagapatam and 270 miles north of Madras. In spite of several disabilities, it ranks fifth in importance among the ports of the Madras Presidency. Large steamers anchor about 6 to 7 miles from the shore and service is maintained with lighters which land cargo at the numerous small wharves and jetties constructed on the banks of the Cocanada Canal.

The principal shipments to Europe are raw cotton and groundnuts and castor-seeds. The import trade consists chiefly of kerosene from America, sugar from Java and metals from the United Kingdom, Germany and Belgium.

CUDDALORE

Cuddalore, is situated about 15 miles south of Pondicherry. Steamers anchor about a mile off-shore, and the harbour wharves are situated on the western bank of the Uppanar Backwater and have been provided with a quay wall to facilitate the loading and unloading of cargo boats therefrom.

The export trade consists principally of groundnut kernels and coloured piecegoods in small quantities. The coasting trade consists mainly of grain, pulse and coal. The foreign import trade is chiefly of boiled betelnuts from the Straits.

CUTCH MANDVI

The Harbour is situated in the Gulf of Kutch, is protected against westerly winds by the Albert Edward Breakwater, 1,850 feet long, and craft of from 9 to 10 feet draught can enter

the harbour at High Water Neaps. There is also a pier and pitched slope where country craft can secure alongside and work cargo.

The Port is unfortunately exposed to the full blast of the South-west Monsoon gales, and is closed for maritime traffic from about the end of April until the month of September.

During the fairweather season, coastal steamers of the B.I.S.N. Coy. and the B.S.N. Coy. call regularly and anchor about 1½ miles south of the port, passengers and cargo being discharged into small craft for conveyance between steamers and shore.

Cutch Mandvi Lighthouse. A Light is exhibited at an elevation of 115 feet from a white masonry tower 56 feet in height situated on the south-west bastion of Mandvi Fort. A Light is also exhibited at an elevation of 39 feet from the end of the Breakwater.

The trade of the Port amounts to Rs. 135 Lacs annually. Recent commercial undertakings include a Match Factory, Oil Mills and Metal Works.

CUTTACK

Cuttack, is situated 253 miles from Calcutta at the apex of a triangle formed by the Mahanadi and Katjuri rivers. It is on the main line of railway running between Madras and Calcutta and is connected by canal with Chandbali between which a small inland steamer trade exists and which links Cuttack with Calcutta. A short distance up the coast from Cuttack lies the port of False Point which has been closed since 1924, as the seaborne trade had entirely disappeared.

The decline of the small ports is said to be due to a variety of reasons and usually the chief reason quoted is that the Ports have silted up but this is not actually the case. The Ports have declined for two main reasons namely the coastal Railway which has automatically cut out the sea trade since it cannot assist it and secondly that larger deep draft steamers have taken the place of the smaller coasting steamers and sailing ships of 30 years ago. The long and deeper draft steamers cannot enter such small ports as Balasore, Chandbali and False Point and hence the trade which at one time found its way by sea has now been caught by the railway and carried to the larger ports like Calcutta from where it is distributed elsewhere.

DHANUSHKODI

Dhanushkodi is the terminus of the South Indian Railway on the South East extremity of the Island of Rameswaram at the junction of Palk Strait with the Gulf of Mannar and connected with Talaimannar in Ceylon 21 miles distant by steamer service, the journey being made in about two hours. The port is equipped with a pier belonging to the S.I.R. Cargo is loaded direct from the railway trucks on the pier into steamer batches.

The Port is an open roadstead. The ferry steamers of the S.I.R. are moored at their own pier. No other steamers call here.

There are no channels or anchorages at the Port.

Port dues are collected on the net tonnage of vessels calling under the Indian Ports Act XV of 1908. No other charges are collected at the Port.

Average annual receipts of the Port are Rs. 1,200 and charges Rs. 3,000.

The chief exports are fish (dry and salted), cotton piecegoods and beedies, and imports—aracanuts, cocoanuts, hides and skins and hardware.

IMPORTS & EXPORTS DURING 1946-47

	No. of packages	Tons
Imports	1,36,270	7,244
Export	6,90,249	28,130

The Port Conservator, Dhanushkodi, is the principal Officer of administration of the Port.

DWARKA

Just below Port Okha is Dwarka, a famous place of pilgrimage. After the development of Port Okha, Dwarka has lost its importance as a port. Consequently the ocean-going steamers between Bombay and Karachi at present generally do not touch at Dwarka but at Port Okha. Steamers lie off at some distance from the shore and the traffic is chiefly local.

GOPALPUR

Gopalpur in the Ganjam District is situated ten miles from Berhampur on the B.N.Rly. It lies between Lat. 19°13'N; long. 84°52'E. R of T. Sp. 6½ ft. Neap 4½ ft.

The chief imports are provisions, grain, tobacco, coriander seeds, soap nuts, empty bottles, potatoes, ginger, matches, cocoanut oil, and the exports are paddy, pigs, rice, gingelly seeds, dry leaves, horse grain, prawns, skins, and chuvea oil. There is passenger trade with Burma.

The port is an open roadstead. Cargoes are landed and shipped on beach. Anchorage in 6 to 7 fms., sand and mud.

Port dues: Foreign vessels 3 annas per ton per voyage; coasting vessels, 1 anna per ton once in 30 days. Working cargo, about 4 annas per ton and launching and shipping about Re. 1-4-0 per ton.

Port Conservator: A. D. Bhavanasi; Lloyd's Agents, The Coromandel Co. Ltd.

KANDLA

Kandla Creek forms a natural harbour with good anchorage and sufficient depth of water for large ocean-going cargo steamers. The Port was opened for traffic in 1931 and has been recognised in Admiralty Chart No. 43 in the Gulf of Kutch.

The port area consists of 13,70,000 square feet of reclaimed land and has immense space for extension of reclamation.

The port has 6 miles of anchorage with depth of water at L.W.M.O.S.T. of over 36 feet and with ample swinging space. The reinforced

concrete pier can berth 2 ships at a time. Steamers over 300 feet in length are moored along the outside of the pier. There is also a timber jetty which can accommodate vessels upto 800 tons. This jetty is also used for embarkation and disembarkation of passengers at any state of tide.

All-over the Kutch coast there are well equipped lighthouses which are efficiently maintained. The Channel leading from the Gulf of Kutch into the Port is well defined by Buoys and Beacons erected in the foreshore. Pilots meet steamers at the outer Tuna Buoy. There are sufficient facilities for warehousing and more are being provided. The Port is connected by telephone and telegraph and rail with the hinterland. There is a dispensary, a dharamasala and a guest-house.

Port charges are very moderate and it is the policy of the State to encourage shipping. Port dues are Re. 0-1-0 per nett registered ton. Pier dues vary from Rs. 5 to Rs. 24 per day according to the tonnage of a ship. Lighthouse dues of Re. 0-1-0 per nett registered ton are recovered once in six months.

The income from port dues and other port charges for the year 1946-47 was Rs. 57,000 and expenditure for general maintenance of the port was Rs. 49,000.

Year	Imports	Exports	Total
	Tons	Tons	Tons
1945-46	7,440	8,810	16,250
1946-47	35,812	43,634	79,446

Port Commissioner & Harbour Engineer.—Capt. E. Barry, M.Inst.C.E.; Collector of Customs.—T. H. Butani, B.A.; Port Engineer.—P. K. Dave, B.E. (Civil).

KETI BANDAR, SHAH BANDAR AND SOKHI BANDAR

These are the three minor ports in Sind. They are under the jurisdiction of the Collector of Customs, Karachi. None of them however is of sufficient importance to deserve detailed mention.

MANGALORE

To the South of Goa lies the Madras district of South Kanara whose district headquarters is Mangalore, open to the coasting trade of Karwar, Honavar and Bhatkal. Mangalore is situated at the junction of the Gopur & Netravati Rivers, about 170 miles south of Mormugao. It is a tidal port served chiefly by backwater communication with the hinterland. It is the North-Western terminus of the South Indian Railway.

It is an open roadstead, steamers anchor about 2 miles off the shore in 5 to 6 fathoms of water. Native craft of small draft enter the backwater at all states of the tides and anchor in the inner anchorage. Vessels of low tonnage berth at the

wharves. Vessels above 60 tons anchor in backwater, and the cargo is conveyed by lighters from the anchorage to the wharves. The length of the landing and shipping wharves at present is 3,156 ft. and an extension of 880 ft. opposite the Railway Goods shed is under construction to facilitate rail-cum-sea traffic. There are three hand cranes at this Port. One of 5 tons within Customs enclosures and the other two 1½ tons at North and South reclamation respectively. For the use of 5 tons crane a fee of 12 annas per ton lift, is charged by this department.

Motor Launch 'Mangalore' is available for towing lighters and vessels from backwater to sea and vice versa and conveying passengers and ship's papers to and from the steamers at the outer anchorage. In addition there are also 3 private launches available at the Port for hire.

The chief exports to Europe are pepper, tea and cashew kernels (exported also to the United States) from neighbouring areas, coffee and sandalwood from Mysore, rubber to Ceylon and tiles, rice, salt fish, dried fruits and fish manures to Ceylon, Goa and the Persian Gulf. The foreign import trade is steadily increasing.

Mangalore is the favourite port on the coast for the Laccadive and Amindivi Islanders, who bring their coir and other coconut produce there for sale.

The income and expenditure for the Minor Ports Fund for 1946-47 were Rs. 27,800 and Rs. 34,000 respectively.

MASULIPATAM

Masulipatam is the principal port in the delta of the Kistna River. It is an open roadstead. A flashing light is exhibited. There is a conical buoy 4 miles eastward of the Lighthouse marking the Position for boats to wait outside the bar in order to communicate with vessels approaching the Port. The roadstead is capacious and holding ground good. A convenient anchorage is in depths of 5½ fathoms, about 5½ miles east-south-eastward of the Lighthouse.

Port dues at Rs. 0-4-0 per ton. Landing or shipping fees are charged at Re. 0-6-0 per ton of cargo.

Average annual income is about Rs. 25,000 and expenditure is Rs. 20,000.

Chief commodity of export is groundnuts to foreign countries and ordinarily averages about 150,000 tons a year. Imports are small, mainly timber from Burma.

A port officer is in charge of the Port.

Port Officer.—L. G. Hardas.

NAVLAKHI

Navlakhi is the Chief Port of the State of Morvi and has a fine situation on the coast of Kathiawar. Ships anchor two miles from the pier. Navlakhi is the terminus on the metre-gauge line of the Morvi Railway and is thus directly connected with Delhi, Rajputana, Gujarat and Kathiawar. The port is open throughout the year and has been greatly developed in the last decade.

NEGAPATAM

Negapatam, the Chief Port in the Tanjore District is about 13 miles South of Karikal. The harbour is equipped with wharves and other facilities for the landing and shipment of goods and the considerable foreshore to the north is utilized for the storage of timber. Nagore is the eastern terminus of a branch of the South Indian Railway and a siding runs into the harbour premises at the Negapatam Beach Station. The port is further connected by river and canal with the tobacco growing areas to the south. The harbour is situated at the junction of the Kaduvaiyar River with the sea. Nagore, 5 miles to the north, a great place of pilgrimage for Muhammadans, is a wharf of Negapatam. Steamers anchor in the roads about a mile off from the shore and cargo is transported between ship and shore by country crafts of which abundant supply is available locally. The depth on the bar varies from 1½ feet to 3½ feet L.W.O.S.T. according to season.

Port dues two to six annas per ton. Landing and shipping dues 6 to 12 annas per ton.

The principal exports from Negapatam are groundnuts for Europe and coloured cotton piecgoods, tobacco and fresh vegetables for Penang, Singapore and Colombo, the port being the chief provisioning centre for the coolies who are constantly leaving by this route to work on rubber and tea estates in Ceylon and the Federated Malay States.

The principal imports are betelnuts and lunamedella logs.

Port Officer.—M. L. Advani.

OKHA

Port Okha, situated in a detached portion of Baroda State far distant from the Gaskwar's main territories in Gujarat is dissimilar from other Kathiawar ports. It is an entirely modern conception, begun and completed with enterprise for the express purpose of dealing with ocean-going traffic and commodities.

It lies in a strategic position at the extreme north-east point of the Kathiawar Peninsula, readily accessible to all steamers trading along that coast. The Harbour scheme has been well designed; there is an excellent ferro-concrete jetty, served by railway lines and trains, alongside which large vessels can lie at all states of the

Statistics showing the growth of the Port :—

TRAFFIC HANDLED IN TONS.

Year	Tons	Year	Tons	Year	Tons
1926-27	2,591	1933-34	1,49,521	1940-41	1,69,366
1927-28	15,194	1934-35	1,95,220	1941-42	2,40,116
1928-29	35,785	1935-36	1,98,713	1942-43	2,74,702
1929-30	28,872	1936-37	1,78,831	1943-44	2,09,125
1930-31	38,017	1937-38	2,32,188	1944-45	2,39,802
1931-32	1,08,647	1938-39	1,75,182	1945-46	2,05,550
1932-33	1,32,394	1939-40	2,37,408	1946-47	2,51,583

The expansion of the Port and trade is carried out on systematic lines. Areas are set apart for residential purposes where plots of suitable sizes are given on generous terms.—Industrial area

linked up with railway sidings to the Port and station with sea frontage, suitable for industries of various magnitude, from ship-building yard to oil mill, offers great facility for enterprise

tide, and there are also swinging moorings for other vessels in a protective position. The warehouse accommodation and railway connections are good. Okha is far removed from the large centres of population, being 221 miles from Wadhwan Junction through which railway centre its traffic must pass.

The State is rapidly pursuing a scheme of expansion by extending the pier to accommodate three vessels and creating two more mooring berths.

The Port has an area of 2 sq. miles and the harbour 6 sq. miles.

One R.C.C. pier which can accommodate ships up to 539 ft. long with a draft of up to 28½ ft. at all states of tide. There is also a single mooring buoy. Two to three coasting steamers can also lie at their own anchors in the harbour in stream. The berths at the mooring buoy and anchorage in stream are restricted to a draft of 18 ft. at present but as soon as a dredger is available, these berths will be able to accommodate steamers up to 26 ft. draft.

Steamers that cannot enter the harbour due to deep draft, are, weather permitting, allowed to discharge cargoes at the outer anchorage and barges can be supplied if asked for.

Ships are navigated during day light hours only. Small coasting steamers can enter and leave the harbour at any state of tide. The larger ships however have to wait for slack water.

Port dues Rs. 0-1-0 per ton, Pier dues Rs. 20 per day and Pilotage charge Rs. 100 each way.

The wharfage charge on cargo is recovered according to railway classification. It is very nominal and includes services of handling goods, warehousing and insurance against fire for six months.

Statistics of imports and exports of principal goods.—The principal commodities of export are, cement, salt, oil seeds and heavy chemicals. About 60 thousand tons of cement and salt each are exported. The imports comprise all varieties from coal, petroleum products, heavy and light machinery, railway materials and all types of merchandise, hardware, glassware to wines and spirits.

Principal Officers.—Port Officer.—B. M. Desai; Harbour Engineer.—B. C. Mehta; Harbour Master.—Capt. D. V. Singh.

PORBANDAR

The Capital town of Porbandar State is situated half way between the Ports of Bombay and Karachi. Ocean-going steamers anchor at about 1.2 mile from the shore. Port of Porbandar is an important regular Port of call for the B.I.S.N.Co. Ltd's steamers to embark and disembark passengers to and from Africa. It has been so for the last 25 years. The cargo is discharged into lighters at the open roadstead which are towed to the creek by Port tugs. The length of the quay wall, which runs throughout the length of the creek, is about 1,000 yards. The wharf area is more than one square mile. There is metre-gauge railway line running right along the quay wall, which connects Port of Porbandar with various important business centres in the interior of India, such as Delhi, Ahmedabad, Bombay. The Port being an open roadstead is closed for steamship traffic between 15th May and 15th September being the period of high seas and monsoon on this coast.

The principal imports at this port are wet and dry dates, timber, coal, sugar, machinery, petrol, kerosene, coconuts, jaggery, etc. The exports are salt, cement, ghee, white clay powder and stone.

During the War the trade of Porbandar was chiefly coastwise.

Commissioner of Ports & Chief Customs Officer, Porbandar State: R. S. Raja Iyer, B. com.

QUILON

Quilon, the "Coilum" of Marco Polo, has been a trading centre from very early times. It is connected with Alleppey by backwater, and is on the Shencottah-Quilon-Trivandrum branch of the South Indian Railway. Vessels anchor about 3 miles from the shore and a railway siding runs up to the landing place.

The chief exports are coconut oil, coir mats, timber, and fish, but the foreign trade is insignificant.

SURAT

Surat is situated 14 miles from the sea with which it is connected by a river negotiable only by small country craft. Surat was one of the earliest and most important of the East India Company's factories, and its trade was very considerable in agricultural produce and cotton, the value of which was estimated in 1801 at over £1,000,000. A hundred years later this total had contracted to £200,000 and in the last fifteen years the decrease has been even more marked, most of the trade being now transferred to Bombay owing to the linking up of the two ports by the Bombay, Baroda and Central India Railway.

TELLICHERRY

Tellicherry is situated on the Calicut-Mangalore extension of the South Indian Railway and is about 94 miles south of Mangalore and 14 miles south of Cannanore a town of about the same size with much smaller foreign trade.

Steamers which anchor about two miles off the shore can work at Tellicherry even during the monsoon when all the other Ports on the Coast are closed, owing to the natural backwater provided by the rocky approaches to the Port.

Facilities for landing and shipping of cargo are provided. There is a pier with 4 one-ton cranes and one five tons crane, wharf wall extending to nearly 600 feet on either side of the pier.

The principal exports are coffee and pepper brought down from interior areas connected with roads, copra, coconuts, sandalwood, tea, ginger, timber, rosewood and chief imports are grains and pulses, salt, kerosene oil, piece-goods, metals and glassware.

Port dues: Steamers foreign 4 annas; coasters 4 annas for western group for 30 days; sailing ship 2 annas per ton for 60 days at a Port, landing or shipping dues varying as per commodities.

TUTICORIN

Tuticorin, an important port of southern India, is situated near the southern edge of the Coromandel Coast. It has the largest trade in South India next to Madras and Cochin. The Port is open all through the year and ships have to anchor in open roadstead 5 to 6 miles off the shore. Hare Island upon which the lighthouse is situated affords considerable protection to lighters and other craft used for landing and shipping and the work is seldom interrupted by bad weather. The Port commands a very large import and export trade and is a direct link to Colombo, other coastal ports in India and foreign ports.

The chief articles of export are cotton, senna leaves, onions, chillies and livestock. The South Indian Railway runs along side the landing and shipping wharves from which goods can be transhipped to launches and lighters.

The port has an area of 15.7 acres.

Vessels anchor in open roadstead 5 or 6 miles from shore. There is a boat channel 400' wide from shore to deep water with depth of 11'-0" L.W.O.S.T. For handling the cargo from cargo boats, there are six piers of lengths 315', 478', 138', 288', 328' and 255'. Cargoes up to 5 tons can be handled by cranes.

The port is safe for ships all through the year. There are two lighthouses one at Hare Island and the other at Devil's point. The light at Hare Island is an Aga white light 1 second, eclipse 9 seconds, visibility 14 miles and candle power 1,000 British Candles. The light at Devil's point is a flash light giving 30 flashes per minute, visibility 11 miles and candle power 207 British candles.

Landing and shipping dues of Rs. 0.11-3 per ton are charged generally. Foreign steamers—3 annas per ton; coasting steamers—2 annas per ton; sailing vessels—1 anna per ton.

The Income and expenditure as per the Administration Report for 1945-46 were Rs. 5,31,873 and Rs. 3,16,010 respectively.

The Port stands second in rank among minor ports and third in the Province.

A total 1,48,613 tons of goods were imported in 1945-46; the chief imports being grains, coal, cotton and machinery, 1,30,078 tons of goods were exported in 1945-46, the principal exports being onions, chillies, cotton, yarn, fibre, senna and salt. The Port is administered by a Board of thirteen trustees.

Chairman, Port Trust.—T. S. Dhanaraj, B.A.; Port Officer and Secretary and Traffic Manager, Port Trust.—W. A. Dow Sainter.

Finance

THE gradual evolution of the present financial organisation of India is in many respects a reflection of her constitutional development. In the earliest days of British rule, the Provinces, and especially the older Presidencies, were for all practical purposes independent of the central government and responsible only to the authority sitting in London. After the middle of the nineteenth century the process was reversed, and the Government of India became all-powerful, controlling the Provinces down to the smallest items of their expenditure. This centralization reached its highest point during the long Viceroyalty of Lord Curzon, who was so jealous of his supreme authority that he sought to deprive the Presidency Governors of their right to correspond direct with the Secretary of State for India. This system was found to be too top-heavy in the days of his successors, and a continuous process of devolution set in. In the matter of finance the measures took the form of long-term "contracts" with the Provincial Governments, and later in the assignment of definite heads of revenues to the Provincial Governments, thus removing the dual authority and responsibility which had clogged progress. A much clearer cut was made when the reform scheme embodied in the Government of India Act of 1919 was passed. Here, for all practical reasons, Provincial finance was entirely separated from the finances of the Government of India. The system of provincial contributions to the centre disappeared for the first time from the Budget in 1928-29.

Federal Finance Committee

The financial organisation was again reviewed in 1931 as part of the work of the Round Table Conference. A sub-committee of the Federal Structure Committee was appointed under the Chairmanship of Lord Peel to examine the question of federal finance and the principles embodied in the sub-committee's report were endorsed by the parent Committee as a suitable basis. A Federal Finance Committee with Lord Eustace Percy as Chairman was appointed at the end of 1931 to subject to the test of figures, the suggested classification of revenues by the Peel Committee and to estimate the probable financial position of the Federal and of the Provincial Governments under the proposed scheme.

In the course of their report the Federal Finance Committee said that the transfer to the Provinces of taxes on income though defensible in principle would leave the Centre in deficit. Therefore the Peel Committee suggested a method of transferring to each Province a percentage of the share of income-tax estimated to be attributable to it. But in view of the incomplete data on which the estimates were made, a special review was held to be necessary at the time federation is established in order to fix the initial percentages. A strict allocation on a percentage basis would

RECENT INDIAN FINANCE

India, in common, with other countries of the world, felt the full impact of the economic blizzard which began in 1930 and attained its maximum the following year. The net result from the low point of the Government of India was the

still leave some Provinces in deficit and so to right their finances the Committee suggested spreading the charge over the other Provinces by giving them back less of the income-tax proceeds than they were entitled too.

Niemeyer Report

A necessary prelude to the introduction of the Constitutional Reforms was an investigation of their safety in the light of the financial situation and prospects of India. The investigation was carried out by Sir Otto Niemeyer whose report was published in April 1936. The Report proposed immediate financial assistance from the beginning of provincial autonomy to certain provinces partly in the form of cash subventions, partly in the form of cancellation of the net debt incurred previous to April 1, 1936, and partly in the form of distribution to the jute growing provinces of a further 12½ per cent. of the jute tax.

Annual cash subventions are as follows: To the U. P. Rs. 25 lakhs for 5 years only, to Assam Rs. 30 lakhs, to Orissa Rs. 40 lakhs, to the N.-W. F. Province Rs. 100 lakhs (subject to reconsideration, after 5 years), and to Sind Rs. 105 lakhs to be reduced by stages after 10 years.

The total approximate annual relief in lakhs aimed at by Sir Otto Niemeyer is as follows:—Bengal 75, Bihar 25, C.P. 15, Assam 45, N.-W.F. Province 110, Orissa 50, Sind 105, and U. P. 25, extra recurrent cost to the Centre Rs. 192 lakhs.

Orissa is to get a further non-recurrent grant of Rs. 19 lakhs and Sind of Rs. 5 lakhs by six equal steps beginning from the sixth year from the introduction of provincial autonomy, but subject to the proviso to section 138 (2) of the Act. The Centre is to distribute the income-tax to the provinces so that finally 50 per cent. of the distributable total has been relinquished in the intermediate five years, so long as the portion of the distributable sum remaining with the Centre, together with any contribution from the Railways, aggregates 13 crores.

As regards the provincial share of the proceeds from income-tax, Sir Otto Niemeyer recommended that half of the proceeds should remain with the Centre, while the other half should be distributed among the provinces on the following percentage division:—Madras 15, Bombay 20, Bengal 20, U. P. 15, Punjab 8, Bihar 10, C. P. 5, Assam 2, N.-W. F. Province 1, Orissa 2 and Sind 2.

Sir Otto Niemeyer suggested that the Centre would not be in a position to distribute any part of income-tax proceeds for the first five years from the beginning of provincial autonomy but that it might be in a position to distribute some of the proceeds, though not necessarily the percentage allocated, within the first ten years of provincial autonomy. But this, he said, largely depended on the financial condition of the railways and their ability once again to contribute to general revenues.

Introduction in 1931 of two budgets, the ordinary budget in the spring and a supplementary budget containing fresh taxation proposals in September. In the following two years, there was no change; but in 1934-35 the need for improving

the revenue by Rs. 1.53 lakhs was felt. The proposals included an excise duty on sugar, a reduction in the import duty on silver by as. 2½ to as. 5 an ounce and the abolition of the export duty on raw hides, handing over half the proceeds of the jute export duty to the jute producing provinces, and the levy of an excise duty on matches.

In 1935-36 budget the estimated surplus of Rs. 1.50 lakhs was used for lowering the silver duty to as. 2, abolition of export duty on raw skins, restoration of the emergency cuts in pay and reduction in surcharges on income-tax, leaving a nominal surplus of Rs. 6 lakhs. Further improvement in the finances helped the Government of India in 1936-37 to cut the surcharges by half, to abolish the income-tax on incomes below Rs. 2,000 and to raise the weight of the one anna letter from half to one tola and to adopt a scale of an additional half-anna for every additional tola.

The improvement in finances proved short-lived and the 1937-38 budget, estimating a prospective deficit of Rs. 1.58 lakhs owing to trade depression after transferring Rs. 1.84 lakhs from the revenue reserved fund, forced an increase in the sugar duties on a graduated scale import and excise duties from as. 2 to as. 3 per ounce, and in postal rates.

The budget of 1938-39 preserved the *status quo* in regard to taxation but provided for finance for the inauguration of provincial autonomy.

Second World War

On the basis of the maintenance of existing taxation and the adoption of the new system of income-tax embodied in the Income-Tax (Amendment) Act of 1939 and the "slab system" of assessment, the budget for 1939-40 estimated a revenue of Rs. 82.15 lakhs and an expenditure of Rs. 82.65 lakhs. To meet the prospective deficit, import duty on raw cotton was doubled to one anna per lb. From then on the growing need for financing war expenditure and counter-acting inflation became the key-note of Government's taxation policy. The first measure was an excess profits tax to provide for an impost of 50 per cent. on abnormal war profits above Rs. 30,000. For the same year (1940-41) petrol duty was raised by as. 2 per gallon and the excise duty on sugar from Rs. 2 to Rs. 3 with a corresponding increase in import duty on sugar. The supplementary budget of November 1940 imposed a surcharge of 25 per cent. on all taxes on income and an increase in postal rates and telegram and telephone charges. The 1941-42 budget raised the E.P.T. from 50 per cent. to 66½ per cent. and the surcharges on income-tax and super-tax from 25 per cent. to 33½ per cent.

Other proposals covered a 100 per cent. increase in match duty, an increase in import duty on artificial silk yarn and thread by as. 2 to as. 5 per lb. and an excise duty on pneumatic tyres and tubes.

The intensification of the tempo of the war in 1942-43 necessitated a further increase of 18½ per cent. in surcharge on taxation of incomes, a levy of 20 per cent. surcharge on import duties excepting cotton, petrol and salt, a 25 per cent. increase in petrol tax and a rise in post and telegram rates. In the following year the surcharges on taxation of income were raised to 66 per cent. and were applied uniformly over all levels of incomes.

The budget for 1944-45 placed the revenue deficit at Rs. 78.21 lakhs almost equally to the pre-war revenue. The Finance Member, Sir Jeremy Raisman, therefore, introduced (1) the system of advance payments of tax on incomes from which tax was not deducted at source and (2) the increase in compulsory deposit from 1/5 of the E.P.T. to 19/64 of the tax, and (3) a rise in the scale of income-tax and surcharges on tobacco and spirits under customs duties, and (4) brought betelnuts, coffee and tea under Central Excise besides raising the excise duty on tobacco. The latter duty was further raised in the following year along with an increase in the rate for postal parcels from as. 6 for the first 40 tolas and as. 4 for every 40 tolas thereafter to a uniform basis of as. 6 for every 40 tolas, an increase in the surcharge on telephone rentals from ½ to 1, on trunk calls fees from 20 per cent. to 40 per cent., and on telegrams by one anna for ordinary and two annas for express ones. A feature of the budget was the recognition of the practice prevailing abroad of differentiating between earned and unearned incomes.

War-Time Budgets

To understand the implications of the change in the wartime finance, it may be noted, that (a) the aggregate war expenditure in India, including recoverable war expenditure during the period 1939-40 to 1945-46 came to Rs. 3,484 crores, India's share being Rs. 1,744 crores or about 50 per cent. and (b) that the over-all Governmental outlay (war and civil expenditure) amounted to Rs. 3,996 crores of which Rs. 1,462 crores or 37 per cent. was met out of revenue, the balance being partly reflected in the accumulation of sterling balances and partly in the form of an addition to India's public debt which increased by Rs. 1,077 crores. The following table gives an idea of the change brought about by the war in India's public revenue, expenditure and debt between 1938-39 and 1945-46 :-

(Rs. in Crores)

	1938-39	1944-45	1945-46
I—Central Government Budget :			
Revenue	84.52	335.67	380.67
Expenditure	85.15	498.71	454.67
Deficit	-0.63	-161.14	-123.90
II—Total Governmental Outlay			
A. On India's Account :	85.15	970.98	894.20
(i) Civil Expenditure	38.97	101.22	124.84
(ii) Defence Expenditure	46.18	458.82	395.32
B. Recoverable War Expenditure	—	410.84	374.54

(Rs. in Crores)

	1938-39	1944-45	1945-46
III—Central Government Debt at the end of year—			
(i) Sterling Loans	464.94	34.10	33.84
(ii) Rupee Loans	437.87	1,212.14	1,492.20
(iii) Small Savings	141.45	159.18	221.52
(iv) Treasury Bills and Ways and Means Advances	46.30	86.70	83.33
(v) Total Interest Bearing Advances	1,205.76	1,860.44	2,282.38

General Rise

Total revenue, both tax and non-tax, increased during this period rapidly. Customs receipts in contrast began to shrink owing partly to transport difficulties as the war reached its climax. From being the main source of revenue in 1938-39, at Rs. 40.51 crores, it dwindled to Rs. 25.12 crores in 1942-43, although it recovered to Rs. 39.76 crores by 1944-45. Central excise duties expanded during war years to a remarkable extent reflecting the increased purchasing power in the hands of the public. This expansion was secured not only by enhancing the rate on existing items but also by adding new items such as tobacco, vegetable products, betelnuts, coffee and tea.

The largest expansion in yield was, however, from direct taxation under corporation, income and excess profits taxes. These three taxes contributed from 20.2 per cent. in 1940-41 to 49.1 per cent. in 1944-45. From 1942-43 to 1945-46 one half to three fifths of the total revenue came from these taxes. Total tax revenue increased from Rs. 72.34 crores in 1938-39 to the peak figure of Rs. 282.67 crores in the revised estimates for 1945-46. Non-tax revenue also spurted up, specially after 1940-41, owing mainly to increased contributions from Railways and Post and Telegraphs and the larger profits of the Reserve Bank of India.

The expenditure under Defence mounted up steadily, especially after 1941-42, i.e., after the entry of Japan into the war. From Rs. 49.54 crores in 1939-40 it rose to the peak figure of Rs. 458.32 crores in 1944-45, the last full year of the war. The charges for the servicing of debt more than doubled from Rs. 14.12 crores in 1938-39 to Rs. 22.21 crores in 1944-45 and Rs. 33.85 crores in the revised estimates for 1945-46 and this might have been larger still but for decreases in the effective rates of interest.

Deficits on revenue account grew in size from Rs. 6.53 crores in 1940-41 to Rs. 12.69 crores in 1941-42 and Rs. 112.17 crores in 1942-43 reaching the peak figure of Rs. 189.78 crores in 1943-44. With the deficit of Rs. 161.14 crores during 1944-45 and Rs. 144.95 crores in the following year, the total volume of deficits during the period 1940-41 to 1945-46 came to Rs. 627.26 crores.

Post-War Period

The year 1946-47 may be regarded practically as the first post-war year. Governmental finances in India, as in other belligerent countries

reflect in some respects, the effects of the termination of the war. Defence expenditure was reduced appreciably, enabling Government to afford a measure of relief to the tax payer and also to reduce substantially the huge wartime deficits on revenue account. But the budget for 1947-48, despite the new taxation imposed under it, discloses a deficit of about Rs. 30 crores which is partly explained by the fact that India's revenue in the post-war years has tended to fall from the wartime high levels. The Finance Member, therefore, stressed the need on the part of the Centre as well as the provinces for exploiting to the full their tax resources with due regard to the part played by private enterprise in the scheme of the country's industrial development.

The year 1946-47 had also for its background the possible effects on the country's economy of a steep fall in wartime expenditure and income levels, as well as the continued need closely to watch and control the position arising from the wartime legacy of inflation. The budget therefore, laid stress on subordinating fiscal policies to the broader aims of national economy with revenue receipts at Rs. 311.65 crores and total expenditure at Rs. 355.71 crores. The deficit envisaged was of the order of Rs. 44.06 crores, after taking into account new taxation measures and the transfer to revenue of the balance in the two war Risks Insurance funds amounting to Rs. 26.10 crores.

The new taxation proposals for 1946-47 offered a number of substantial concessions to industry and to persons of moderate means. Such concessions to industry included (1) the complete abolition of the Excess Profits Tax after the 31st March 1946, (2) the grant of special initial depreciation allowances of 10 per cent. on new buildings and 20 per cent. on new plant and machinery as well as allowances for expenditure on scientific research for purposes of income tax; the scope of the obsolescence allowance will be widened so as to include the loss of an asset by destruction or demolition, and also extended to buildings, (3) the relief from Customs duty on raw materials imported for industry and reduction of rates on such imported plant and machinery as are now dutiable, (4) a net reduction of 1½ annas in the present total rate of Super Tax and Income Tax (payable by a company) from 7½ annas to 6 annas, as a result of the lowering of Super Tax by 2 annas and the raising of the Income Tax by ½ anna and (5) the exemption from Income Tax for two years in the case of buildings for residential purposes and an initial depreciation allowance of 15 per cent. for buildings used as business premises. In

addition, the total rate on life insurance companies has been reduced from 5 annas 3 pies to 5 annas.

Other Concessions

Other concessions included (1) the reduction of the rate on the second slab of income of Rs. 3,500 from 15 pies to 12 pies and the rate on the third slab of Rs. 5,000 from 2 annas 1 pie to 2 annas, and (2) the raising of the earned income allowance from one-tenth of the earned income, (subject to a maximum of Rs. 2,000) to one-fifth (subject to a maximum of Rs. 4,000). Similarly in the Super Tax range there will be differential treatment in favour of earned income at the rate of 1 anna in the rupee between Rs. 25,000 and Rs. 2 lakhs and of 2 annas between Rs. 2 lakhs and Rs. 5 lakhs.

Under indirect taxation, the duty on kerosene oil was reduced by nine pies from 4 annas 6 pies to 3 annas 9 pies per imperial gallon, and on motor spirit from 15 annas to 12 annas per imperial gallon, the latter as an incentive to increased motor transport.

The following further concessions estimated to cost Rs. 5-12 crores to the Central Exchequer were announced by the Finance Member during the course of discussion on the Budget: (1) reduction in the duty on kerosene by an anna and half instead of only 9 pies as was originally proposed, (2) reduction in the excise duty on betel nuts from two annas to one anna per lb., (3) reduction by 6 pies of the increase in the customs duty on betel nuts originally proposed in the budget and (4) reduction in the duty on cinematographs film (not exposed) from 6 pies per linear foot as originally proposed to 3 pies. Other concessions announced were a reduction in the price of a match-box from 9 pies to 6 pies and a similar reduction in the price of a postcard from 9 pies to 6 pies to come into force respectively from August 1 and July 1, 1946.

Reductions in expenditure arising from the cuts by the Legislative Assembly amounted to Rs. 93-34 lakhs on revenue account and Rs. 3-46 crores under capital disbursements. In consequence of the changes in taxation and expenditure, the deficit of Rs. 44-06 crores for 1946-47 was expected to move up by Rs. 4-19 crores to Rs. 48-25 crores, with revenue at Rs. 341-87 crores and expenditure at Rs. 390-12 crores.

An innovation in the budget was the presentation of a Capital Budget separately from the Revenue Budget.

The 1947-48 Budget

The budget estimates for 1947-48 placed expenditure at Rs. 327-88 crores as against the revised estimate of Rs. 331-48 crores for the preceding year and Rs. 434-57 crores being the actual for 1945-46. The revenue, on the other hand, was placed at Rs. 279-42 crores on the basis of existing taxation as compared with Rs. 336-19 crores in the revised estimates for the preceding year and Rs. 360-67 crores in the actual for 1945-46.

In his budget speech, the Finance Member stated that the proposals he was making, whether involving the abolition of existing taxation or

the levy of fresh imposts, were based not merely on financial considerations but the need to achieve certain social objectives the chief of which was the reduction as far as possible of the glaring disparities of income between the classes and the masses. Proposals to afford relief to the lower income groups included the abolition with effect from 1st April, 1947 of the salt duty, involving a net loss to revenue of Rs. 8-25 crores, and the raising of the minimum exemption limit in respect of Tax on Incomes from Rs. 2,000 to Rs. 2,500, involving a loss of Rs. 25 lakhs. In view of the loss to revenue on account of these two measures, the deficit of Rs. 48-46 crores estimated on the basis of existing taxation would be increased to Rs. 56-96 crores (excluding any additional expenditure that may be incurred in giving effect to the recommendations of the Central Pay Commission). Of this gap, about Rs. 40 crores (apart from Rs. 4 crores which would go to the provinces as their share) was proposed to be met by additional taxation as shown below:—

	Estimated yield. Crores
1. A special Income Tax of 25 per cent. on business profits exceeding Rs. 1 lakh	30-00
2. A graduated tax on capital gains exceeding Rs. 5,000 made in recent years from the disposal of capital assets ..	3-50
3. A change in the scale of super tax so as to reach the maximum of 10½ annas in the rupee at Rs. 1-2 lakhs for unearned income and at Rs. 1-5 lakhs for earned income	2-50
4. Doubling of the rate of Corporation Tax to 2 annas	4-00
5. An increase in the export duty on tea from 2 annas per lb. to 4 annas ..	4-00
6. A further tightening up of the Dividend Tax imposed last year ..	NIL

The reports of the Select Committee on the bills relating to business profits tax suggested *inter alia* an abatement of five per cent. of the capital at charge in the case of non-director controlled companies or Rs. 1 lakh or whichever is greater and a similar abatement of six per cent. in the case of director-controlled companies and also for the raising of the exemption limit in the case of Hindu undivided families as well as partnership firms. As regards the capital gains tax, the Committee recommended for the raising of the exemption limit from Rs. 5,000 to Rs. 15,000 and for the fixation of the rate of tax at one anna in the rupee on the whole of Capital gains up to Rs. 50,000, rising by stages up to a rate of as. 5 in the rupee on the whole amount of capital gains exceeding Rs. 10 lakhs.

Further concessions were given in the final acts including (a) a reduction in the rate of business profits tax from 25 per cent. under the original proposal to 18½ per cent. (b) the fixation of a uniform abatement at six per cent. of the capital at charge or Rs. 1 lakh or whichever is greater in place of the different criteria for companies and (c) the exemption from the capital gains tax of gains from personal effects.

As regards Government's loan programme for 1947-48 the amount expected to be raised by market borrowing was placed at Rs. 150 crores as against Rs. 112 crores in the revised estimates, and Rs. 250 crores in the budget estimates for 1946-47. The small savings movement was also to be pursued more vigorously.

Referring to the financial aspect of post-war planning the Finance Member stated that the latest estimate showed that the total resources of the centre, including borrowing, in the first quinquennium for purposes of reconstruction would fall substantially below Rs. 1,000 crores estimated by Government in 1944-45.

Public Debt

With a further reduction in war-time expenditure and increased efforts towards minimising the gap between government revenue and expenditure, there was a comparatively smaller addition to the rupee debt of the Central Government in 1946-47 than in the preceding year; the increase in the debt amounted to Rs. 203 crores against Rs. 366 crores in 1945-46. The market borrowings during the year amounted to Rs. 112 which, however, fell short of the figure for long-term borrowing of Rs. 250 crores envisaged in the budget for 1946-47 owing to preoccupation of Government with the conversion operations of the 3½ per cent. non-terminable loans, the prevalence of disturbed conditions over a wide part of the country particularly towards the latter part of the year, and the emergence of stringent conditions in the money market.

An important feature of the current year's addition to the debt related to the creation and issue of special floating loans, in the shape of non-negotiable, non-interest bearing securities for Rs. 139-25 crores for paying subscription to the International Monetary Fund and for a part payment for buying India's quota of shares in the International Bank.

The proportions of the outstandings of undated and dated loans and treasury bills to total rupee debt declined respectively from 14.7 per cent., 62.4 per cent. and 4.3 per cent. respectively at the end of 1945-46 to 11.9 per cent., 59.3 per cent., and 3.6 per cent. at the end of 1946-47. The proportion of postal savings and other obligations, however, showed a rise from 18.0 per cent. to 25.1 per cent. over the same period.

General Statement of the Revenue and Expenditure

(In lakhs of Rupees.)

	Accounts 1945-46	Revised Estimates 1946-47	Budget Estimates 1947-48
Revenue—			
Customs	73.61	87.50	89.00
Central Excise Duties	46.36	42.78	40.93
Corporation Tax	75.73	69.53	44.14
Taxes on Income other than Corporation Tax ..	1,02.30	87.47	90.86
Salt	10.20	9.10	9.25
Opium	99	1,50	1.40
Intrest	1.67	1.33	1.27
Civil Administration	3.33	3.35	3.85
Currency and Mint	16.75	15.75	15.67

The public debt of India (including the unfunded debt and other obligations) registered a further increase of Rs. 198-17 crores at the end of March, 1947, with the total outstanding rising to Rs. 2,198-82 crores from Rs. 2,000-65 crores at the end of 1945-46. The sterling debt showed a slight decline from Rs. 63-70 crores at the end of 1945-46 to Rs. 59-06 crores made up of loans amounting to Rs. 55-44 crores and service funds Rs. 3-62 crores.

According to the Explanatory Memorandum on the Central Government budget for 1947-48, the total interest-bearing obligations of the Government of India increased by Rs. 1,176 crores from Rs. 1,206 crores at the end of 1938-39 to Rs. 2,382 crores at the end of 1946-47 (revised). The figures include *inter alia* liabilities in respect of the British war loan suspended since 1931-32, and the balances of depreciation and Reserve funds of Railways, Posts & Telegraphs and Income-Tax. After excluding these liabilities, the total regular interest-bearing debt would amount to Rs. 2,032 crores at the end of 1946-47 (revised) as compared with Rs. 1,158 crores at the end of 1938-39; according to the budget estimates it is expected to amount to Rs. 2,189 crores at the end of 1947-48.

Assets.—As against the total interest-bearing obligations of Rs. 2,382 crores at the end of 1946-47, the assets of the Government of India aggregate Rs. 1,515 crores comprising (1) the capital outlay on Railways, Rs. 808 crores, (2) the capital advanced to other commercial departments of the Central Government provinces and States, etc. Rs. 122 crores, (3) the debt from Burma, Rs. 45 crores, (4) the deposits with His Majesty's Government for redemption of Railway Annuities Rs. 22 crores, and (5) the cash and securities held on treasury account, Rs. 514 crores.

The transactions in respect of the repatriation of sterling stocks during the year related, as during the preceding year, to the repayment of stocks not surrendered earlier. Of the total amount of £ 324 million repatriated since 1937-38 at the purchase value of £ 322 million (Rs. 430 crores), stocks of the value of Rs. 156-76 crores were cancelled while rupee counterparts have been issued in respect of the balance of Rs. 273-58 crores. During the year 1946-47 stray lots of the face value of £ 0-76 million were repatriated at a cost of Rs. 1-06 crores, the rupee counter-parts at created being Rs. 1 lakh.

AUGUST 15, 1947

Following the political division of the country on August 15, 1947, Mr. Shanmukham Chetty, first Finance Minister of the Dominion of India presented the budget for the period August 15, 1947 to March 31, 1948 to the Constituent Assembly (Legislative). He announced: (1) For the present both the Dominions will continue the existing taxes and duties, (2) Till the end of September 1948, the two Dominions will remain under a common currency system managed by the Reserve Bank, although from April 1 next Pakistan will have its own over-printed notes and coin, (3) The initial liability for the outstanding loans, guarantees and financial obligations of the late Central Government at the time of the partition and for the pensions chargeable to it has been placed by law on the Indian Dominion subject to an equitable contribution from Pakistan, (4) The net deficit on revenue account, with a revenue of Rs. 171.15 crores and a revenue expenditure of Rs. 197.39 crores in the period covered by these estimates will be Rs. 26.24 crores; but the final figure may be higher, (5) The expenditure estimates include Rs. 22 crores for the evacuation and relief of refugees and inflated defence expenditure, (6) The existing export duty of three per cent. on cotton cloth and yarn will be replaced by a duty of as. 4 per square yard on cotton cloth and as. 6 a lb. on cotton yarn.

"This is the eighth consecutive deficit budget" said the Finance Minister, presenting the estimates. He added: "I do not wish in any way to minimise our present difficulties but once we reach fairly normal conditions,.... we should be able to balance the budget. It will be too optimistic to expect normal conditions for the next year." He also assured the Assembly that it has not been the intention of Government to so arrange its taxation policy as to stifle the growth of industries in the country.

LAND REVENUE

The principle underlying the land revenue system in the sub-continent has been from time immemorial on the basis that government is the Supreme Landlord and the revenue derived from land is by way of rent. The official term for the method of collection is "Settlement". These are of three types. The permanent *Zamindari* System is mainly found in the Bengal area, Bihar, the U.P. and parts of Madras and covers roughly an area of 120 million acres equivalent to 19 per cent. of the total agricultural area of the two Dominions. In the second group are the temporarily settled *Zamindars* such as *Malguzari*, *Mahareari*, *Khoti*, *Narvadari*, *Bhagdari*, *Inam* and *Talugdari*. These are found mostly in the C.P. the Punjab area, Sind and parts of the U.P. the Bengal area and Bombay covering about 30 per cent. of the area of the two Dominions. The remaining 51 per cent. or approximately 285 million acres are under the *ryotwari* system covering parts of Bombay and most parts of Madras, Berar, Sind, Assam and the Punjab area.

The Governments of E. Bengal, W. Bengal, Bihar and the United Provinces have accepted on principle that the *Zamindari* system should be abolished. The Government of Madras have also moved in that direction. The U.P. Government have fixed the compensation at six times the annual income of the property. The C.P. Government have adopted legislation for the abolition of the *Malguzari* system. The Bill to amend the *Khoti* Settlement Act, 1880, which became law in the Bombay Province in 1946, lays down that the *Khoti* villages will lapse to Government in the event of the co-sharers concerned failing to nominate a managing *Khoti* for two successive years. Towards the end of 1946, the Bombay Fragmentation (Prevention) and Consolidation of Holdings Bill was published for eliciting public opinion. The Bill seeks to prevent fragmentation and to achieve consolidation of scattered holdings and has now become Law.

INCIDENCE OF THE REVENUE

The incidence of the revenue charges varies according to the nature of the settlement, the class of tenure, and the character and circumstances of the holding. Under the Permanent Settlement in the old undivided Bengal Government derive rather less than £3,000,000 from a total rental estimated at £12,000,000. Under Temporary Settlements, 50 per cent. of the rental in the case of *Zamindari* land may be regarded as virtually a maximum demand. In some parts the impost falls as low as 35 and even 25 per cent. and only rarely is the proportion of half the rental exceeded. In regard to *Ryotwari* tracts it is impossible to give any figure that would be generally representative of the Government's share. But one-fifth of the gross produce is the extreme limit, below which the incidence of the revenue charge varies greatly.

About sixty years ago, the Government of India were invited in an influential signed memorial to fix one-fifth of the gross produce as the maximum Government demand. In reply to this memorial and other representa-

tions the Government of India (Lord Curzon being Viceroy) issued a Resolution in defence of their Land Revenue Policy. In it was stated that "under the existing practice the Government is already taking much less in revenue than it is now invited to exact" and "the average rate is everywhere on the down grade." This Resolution, together with the statements of Provincial Governments on which it was based, was published as a volume; it is still the authoritative exposition of the principles controlling the Land Revenue policy of the Government of India.

In a series of propositions claimed to be established by this Resolution the following points are noted:—(1) In *Zamindari* tracts progressive moderation is the keynote of the Government's policy, and the standard of 50 per cent. of the assets is more often departed from on the side of deficiency than excess; (2) in the same areas the State does not hesitate

to interfere by legislation to protect the interests of the tenants against oppression at the hands of the landlords; (3) in *Ryotwari* tracts the policy of long-term settlements is being extended, and the proceedings in connection with new settlements simplified and cheapened; (4) local-taxation (of land) as a whole is neither immoderate nor burdensome; (5) over-assessment is not, as alleged, a general or widespread source of poverty, and it cannot fairly be regarded as a contributory cause of famine. At the same time the Government laid down as principles for future guidance—(a) large enhancements of revenue, when they occur, to be imposed progressively and gradually, and not *per saltum*; (b) greater elasticity in revenue collection, suspensions and remissions being allowed according to seasonal variations and the circumstances of the people; (c) a more general resort to reduction of assessments in cases of local deterioration.

EXCISE

The Excise revenue in the sub-continent can be classified into two divisions—one derived from the Central Excise Duties and belonging to the Central Government's finance and the other derived from the manufacture and sale of intoxicating liquors, hemp drugs, toddy and opium. The latter is a provincial revenue. The revenue from the Central Excise Duties has increased by six times during the past decade. As against a comparatively small revenue of Rs. 7.66 lakhs in 1937-38 and Rs. 12.79 lakhs in 1942-43, the actuals for 1945-46 totalled Rs. 46.36 lakhs. The budget for 1947-48 estimated the revenue at Rs. 40.93 lakhs. These duties are at present levied on motor spirit, kerosene, sugar, matches, steel ingots, tyres, tobacco, vegetable product, betel-nut, coffee, tea and coal cess.

The Budget of the Government of India for 1944-45 brought in force important changes in the field of Central Excises. It raised the rates of duty on unmanufactured tobacco and on dfrs and cheroots and included in the Central Excise Tariff betel-nuts, coffee and tea.

A further change in respect of tobacco was proposed in the following year. Accordingly, the highest class of fine-cured tobacco in the excise tariff was sub-divided into three and subjected to a duty of Rs. 7-8, Rs. 5 or Rs. 3-8 per lb., according as it was intended for use in manufacturing cigarettes containing more than 60 per cent. more than 40 but not more than 60 per cent. or more than 20 but not more than 40 per cent. by weight of imported tobacco. In order to avoid double incidence, some of the provincial governments reached an agreement with the Centre by which they withdrew the provincial excise duty on tobacco in lieu of a share in the proceeds from the Centre's tobacco excise. Tobacco excise has been responsible for nearly half the receipts under Central Excise Duties.

As the result of the discussion in the Legislature on the budget for 1946-47, the duty on kerosene has been reduced from 4 annas six pias to 3 annas per imperial gallon. The duty on motor spirit has been lowered by three annas to 12 annas and that on betel-nuts from 2 annas to 1 anna per lb. A reduction in excise duty on matches was also announced with a view to

lowering the price of a match-box from 9 pias to 6 pias.

The provincial excise revenue in the sub-continent is derived from the manufacture and sale of intoxicating liquors, hemp drugs, toddy and opium. The percentage of excise to total revenues of the provincial Government increased from 18.0 to 24.5 between 1938-39 and 1945-46. Since then, however, excise revenue has been pushed into the background by the prohibition policy of the provincial governments. The budget estimates for 1948-49 foreshadowed a loss of over Rs. 9 crores in revenue of which Rs. 8.41 crores would be in Madras, Rs. 60 lakhs in the United Provinces and Rs. 37 lakhs in C.P. & Berar.

PROHIBITION

After the introduction of provincial autonomy in April 1937, it became the avowed policy of all provincial Governments to discourage the consumption of alcoholic beverages; but the Congress administrations which held office in seven provinces until September 1939 went further and, before they resigned, adopted an active policy of enforcing prohibition within a period of years. The measures taken by them varied from province to province, but generally speaking they took the form of declaring certain areas, either urban or rural, "dry" and banning the production, sale and consumption of liquor within those areas. Thus in Madras four districts were declared "dry"; a special excise regime was set up and active steps were taken to wean the people from the use of liquor. In the United Provinces, Bihar, Orissa, the Central Provinces, Sind and Assam similar steps were taken to prevent the people of certain areas from drinking alcohol. In order to discourage the consumption of alcohol in the United Provinces, the provincial government enhanced the excise duty in 1946-47. In Bengal and the Punjab before the partition (where Coalition Government were in office), on the other hand, there was no actual prohibition but only temperance propaganda.

In Bombay, the Congress scheme went further than elsewhere. The capital city Bombay and the second largest city Ahmedabad were declared "dry," subject to an elaborate system of personal "permits" for Europeans, Parsees and "confirmed addicts." The ban on sales of

foreign liquor was withdrawn as from July 2, 1940, and that on country liquor was modified subject to severe restrictions.

The restoration of provincial autonomy in the middle of 1946 was followed by a revival of the old policy of prohibition in the Congress provinces. The Madras Government have chalked out a two-year plan for complete prohibition. The C.P. Government have introduced prohibition in certain districts. A feature of their plan is to have a shopless zone of 10 miles round the "dry" areas.

The Government of Bombay have decided to have total prohibition in the province within four years beginning from April 1947. It is proposed to reduce the yearly consumption of all types of intoxicants by 25 per cent. and by closing the shops for progressively longer periods every year. For the first three years, it will be a sort of temperance arrangement which will evolve prohibition in the fourth year. On the financial side assessment duties on all types of liquors will be doubled. As a result there is likely to be a gain of nearly Rs. 175 lakhs in the first year; but the progressive diminution in revenue will result in the total disappearance of Rs. 752 lakhs of revenue from this source in the fourth year.

DRUGS

The narcotic products of the hemp plant consumed in the sub-continent fall under three main categories, namely, *ganja* or the dry flowering tops of the cultivated female hemp plant; *charas*, or the resinous matter which forms an active drug when collected separately; and *bang*, or the dried leaves of the hemp plant whether male or female cultivated or uncultivated. The main features of the existing system are restricted cultivation under supervision, storage in Bonded Warehouses, payment of a quantitative duty before issue, retail sale under licenses and restriction on private possession. Licenses to retail all forms of hemp drugs are usually sold by auction. The sale of *charas*

has been prohibited in the Bombay Presidency since 1922.

The general practice is to sell opium from the Government Treasury, or a Central Warehouse, to licensed vendors. The right of retail to the public is sold by annual auction to one or several sanctioned shops. Further legislation against opium smoking in clubs and dens is now under contemplation.

The revenue from opium is derived mainly from exports of what is called provision opium to foreign countries and from the sale to Provincial Governments of excise opium for internal consumption. The entire quantity is now exported under the system of direct sales to foreign and Colonial governments, the system of auction sales in Calcutta to traders for export to foreign countries having been stopped with effect from 7th April 1926. In no case are exports permitted without an import certificate by the Government of the country of import as prescribed by the now defunct League of Nations.

It was originally decided to reduce the total of the opium exported since the calendar year 1926 by 10 per cent. annually in each subsequent year until exports were totally extinguished at the end of 1935. The war, however, witnessed the revival of the trade.

Excise opium is sold to Provincial Governments for internal consumption at a fixed price based on the cost of production. This opium is retailed to licensed vendors at rates fixed by the Provincial Governments and varying from Province to Province. The price of opium was raised in 1946-47.

Opium, which was an important source of revenue till 1933-34, receded in importance gradually and became a burden on the general revenues in 1943-44 and in the following two years. Since then a slight recovery has been noted.

SALT

The salt revenue was inherited by the British Government from Pre-British rule, together with a miscellaneous transit dues. These transit dues were abolished and the salt duty consolidated and raised. The demand for the abolition of salt duty was pressed by Mahatma Gandhi in 1928 who later launched a Civil Disobedience Movement to enforce it. Under the Gandhi-Irwin Pact, the right of an individual to manufacture salt for his own needs without paying the duty was recognised. The establishment of the Interim Government was, however, followed by the Local abolition of the duty with effect from April 1, 1947.

There are four great sources of supply: rock salt from the salt range and Kohat Mines in the N.W.F.P.; brine salt from the Sambhar Lake in Rajputana; salt brine condensed on the borders of the lesser Rann of Cutch; and sea salt factories in Bombay, Madras and at the mouth of the Indus. Broadly, one-half of the indigenous salt is manufactured by Government Agency; and the remainder under license and excise systems. In the Punjab before the partition and Rajputana today the salt manufactories are under the control of the Northern India Salt Department, a branch of the Commerce and Industry Department. In Madras

and Bombay the manufactories are under the supervision of Local Governments. Special treaties with States permit of the free movement of salt except from the Portuguese territories of Goa and Daman, on the frontiers of which patrol lines are established to prevent the smuggling of salt into Dominion Territory.

From 1888-1903 the duty on salt was Rs. 2-8 per maund of 82 lbs. In 1903, it was reduced to Rs. 2; in 1905 to Rs. 1-8-0; in 1907 to Rs. 1 and in 1916 it was raised to Rs. 1-4-0. The successive reductions in duty have led to a largely increased consumption, the figures rising by 25 per cent. between 1903-1908. In 1923 the duty was doubled bringing it again to Rs. 2-8. In 1924 it was reduced to Rs. 1-4-0. The duty remained at Rs. 1-4-0 from March 1924 to 29th September 1931. It was raised to Rs. 1-9-0 with effect from 30th September 1931. Prior to 17th March 1931, the excise duty and import duty on salt were always kept the same, but by the Indian Salt (Additional Import Duty) Act XIV of 1931, a temporary additional customs duty of 44 annas per maund was imposed on foreign salt. In March 1933 the customs duty was reduced by two annas. With the last change the duty on salt manufactured in or imported by land stood at 1-9-0 per maund.

CUSTOMS

Import duties have varied from time to time according to the financial condition of the country. Before the 1857 upheaval they were five per cent.; the days of financial stringency which followed they were raised to 10 and in some cases 20 per cent. In 1875 they were reduced to five per cent.; at the opinions of Free Traders, and the agitation of Lancashire manufacturers who felt the competition of the Indian mills, induced a movement which led to the abolition of all customs dues in 1882. The continued fall in exchange compelled the Government of India to look for fresh sources of revenue and in 1894 five per cent. duties were imposed.

Since the Great War of 1914-18, there has been a growing tendency towards larger reliance on Customs duties to meet the financial needs of the Centre. Between 1913-14 and 1924-25, a certain amount of shifting of the burden from the richer class to the masses was evident. Then came the policy of discriminating protection and of Imperial Preference in terms of the Ottawa Trade Agreement of 1932, which, in addition to the financial consideration shaped the Customs tariffs. The Customs schedule had been completely recast in the Budget of 1916-17 in order to meet the budgetary deficit and the tariffs were raised again in 1921-22 to fill in the large gap between the revenue and the expenditure. The Supplementary Finance Act of 1931 imposed fresh increases in the import duties and the Tariff Amendment Act of January 1, 1933 provided for giving effect to the Ottawa Agreement.

On the eve of the First World War, the revenue from Customs duties had totalled only Rs. 11.13 crores. By 1929-30 it reached Rs. 51.28 crores when the law of diminishing returns became operative and by 1938-39 it declined to Rs. 40.51 crores following the reduction in the international trade in the subsequent years of the war. The proceeds from the Customs duties in 1942-43 amounted to only Rs. 25.12 crores being the lowest for a quarter of a century. Since then, however, there has been a reversal of the trend and the revised estimates for 1946-47 placed the receipts at Rs. 87½ crores as against Rs. 73.61 crores for the preceding year, Rs. 93 crores being the budget estimates for 1947-48.

INCOME-TAX

Income-tax was first imposed in India in 1860, in order to meet the financial dislocation caused by the 1857 upheaval. It was levied at the rate of four per cent. or a little more than 9d. in the pound on all incomes of five hundred rupees and upwards. Many changes have from time to time been made in the system, and the present schedule was consolidated in the Act of 1886. This imposed a tax on all incomes derived from sources other than agriculture which were exempted. On incomes of 2,000 rupees and upwards the rate was five ples in the rupee, or about 6d. in the pound; on incomes between 500 and 2,000 rupees the rate was four ples in the rupee or about 5d. in the pound. In March 1903 the minimum taxable income was raised from 500 to 1,000 rupees. The income-tax schedule was completely revised, raised, and graduated in the Budget of 1916-17 in the general scale of increased taxation imposed to meet the deficit arising out of war conditions.

The upward trend of receipts after 1942-43 is partly due to the improved situation in regard to imports and exports; but in the main it is to be traced to the surcharge imposed in that year and raised thereafter.

Important Changes.—Important changes affecting the policy underlying this tax were announced by the Finance Member in his budget speech for 1947-48. He met the demand for the relief from Customs duty of raw materials imported for industry and to reduce the rates on imported plant and machinery to the extent it was practicable without injury to the Indian manufacturers of similar goods. He proposed to give effect to the decisions by a notification under the Sea Customs Act.

While continuing the general surcharge for one more year, the Finance Act as finally passed has made the following important changes: (a) Reduction in the duty on kerosene from as. 4½ to as. 3 per imperial gallon, (b) Reduction in the duty on motor spirits from as. 15 to as. 12 on imperial gallon, involving a loss of Rs. 120 lakhs, (c) Increase in the surcharge on "wines" from one-fifth to one-half, (d) Replacement of *ad valorem* duty by specific duty in respect of cinematograph film, the duty on unexposed film being reduced from half an anna per linear footage as originally proposed to three ples, (e) Fixation of duty on imported betelnuts at as. 5 (without any surcharge) a pound as against the original budget proposal for as. 5½, to yield Rs. 155 lakhs, (f) Consolidation of the customs duty on raw cotton and that levied under the Cotton Fund Ordinance so as to raise the duty to as. 2 per pound, (g) Imposition of a specific duty on gold bullion and coin at the rate of Rs. 25, duty on gold bullion and coin to be varied from time to time to a total of 180 grains fine to be varied from time to time by a notification under the Sea Customs Act in order to attain in an orderly manner a reasonable measure of approximation to world prices, and (h) Increase in the existing duty of silver of three annas an ounce, with a surcharge of 7½ ples, to eight annas an ounce without any surcharge. No revenue provision has been made on account of the change in silver duty. The 1947-48 budget made certain changes in the export tariff by adding fresh duties on export of jute, raw cotton, tea and rice.

Since then the process has been almost continuous and in every financial difficulty the authorities have turned to the Income-Tax as a means of raising fresh revenue.

The Supplementary Finance Bill of 1931 imposed surcharges on income-tax and super-tax to meet the emergency of that year. The surcharges were subsequently scaled down in succeeding years, but were not completely abolished until after the passage of the Income-Tax (Amendment) Act of 1939.

Taxation on income under Corporation, Income and Excess Profits Taxes provided the largest expansion in yield during the war. These three taxes contributed an increasingly higher portion of the total revenue, from 20.2 per cent. in 1940-41 to 49.1 per cent. in 1944-45. In 1945-46 it was as much as 57.2 per cent. whence it started declining. The rise in the rates of

income-tax and the introduction of the Excess Profits Tax were the main contributory factors.

Relief to Industry.—The financial proposals for 1946-47 marked an important step in the direction of giving relief to the industry and the ordinary tax payer, though the year witnessed the amalgamation of the surcharges with the basic rates of income-tax and super-tax. These measures include:—(1) the grant of special initial depreciation allowances of 10 per cent. on new plant and machinery as well as allowances for expenditure on scientific research, (2) widening the scope of depreciation allowance so as to cover the loss of the asset by destruction or demolition and its extension to buildings, (3) the exemption from income-tax for two years in the case of buildings for residential purposes and an initial depreciation allowance of 15 per cent. for buildings used as business premises, (4) a net reduction of 12 annas in the present total rate of income-tax and super-tax payable by a company from annas 72 to annas 6 and additional super-tax at steepening rates on dividends, other than those payable at a fixed rate, in excess of 5 per cent. of the capital of a company (other than a private company) including reserves or 30 per

cent. of the total income, whichever is higher with a view to keeping the dividends within reasonable limits and encouraging the ploughing back of profits into industry, (5) reduction in the rate of tax in lower ranges and increase in the earned income allowance from one-tenth of the earned income, subject to a maximum of Rs. 2,000 in terms of income to one-fifth, subject to a maximum (in terms of income), of Rs. 4,000 (6) carry-over of the differential treatment in favour of earned income to the super-tax range at the rate of one anna in the rupee between Rs. 25,000 and Rs. 2 lakhs and of half an anna in the rupee between Rs. 2 lakhs and Rs. 5 lakhs, (7) an increase in the rate of income-tax on the balance of the income above Rs. 15,000 from annas 4-9 to annas 5-0, (8) an increase in the number of slabs subject to super-tax, resulting in a more gradual steepening of the rates, which will be more severe on the largest incomes than at present, (9) a reduction of the rate on life insurance companies from annas 5½ to annas 5, and (10) discontinuance of the provision for funding a portion of the tax in the case of income upto Rs. 6,000. In the following year, the minimum exemption limit was raised to Rs. 2,500.

OTHER TAXES ON INCOME

The Excess Profits Tax.—Was introduced in the budget proposals for 1940-41 when an impost of 50 per cent. on all abnormal War profits above a taxable minimum of Rs. 30,000 earned since September 1, 1939 was introduced. These excess profits were calculated on the basis of a standard year between 1935-36 and 1939-40 at the option of the assessee. In the following year the tax was raised to 66½ per cent. The total collection under this head since its introduction in April 1940 to the end of 1946-47 (Budget) amounted approximately to Rs. 3.50 crores or 43 per cent. of the total taxes on income or 19.3 per cent. of the total revenue during these years before deducting the provincial share. The tax was completely abolished after March 31, 1946. It might be noted that this tax was in force in 1919 and 1920.

The Business Profits Tax.—Was imposed in 1947-48. In justification of the proposal, the Finance Member stated that the complete abolition of the Excess Profits Tax in the last years' budget was premature. The object of the Bill was to impose a special income-tax on the profits exceeding Rs. one lakh of business, professions and vocations. The charge proposed was 25 per cent. of the taxable profits; but the exemptions to agricultural income, life insurance business etc. granted by the Excess Profits Tax were continued. The final Act reduced the rate of tax from 25 per cent. to 16½ per cent. and fixed a uniform abatement at 6 per cent. of the Capital or charge or Rs. 1 lakh or whichever is greater in place of the different criteria for companies and, for the purpose of computing abatement, the inclusion under paid-up capital of so much of the premia realised by a company for the issue of any of its shares as is retained in the business.

The Capital Gains Tax.—Was also imposed in April 1947 by the amendment of the Income-Tax and Excess Profits Tax Act. The Finance Member justified this proposal on the ground that the levy on Capital gains was based on the U.S. model and would affect only incomes which might

properly be described as unearned increment. The Bill sought to ignore capital gains upto Rs. 5,000 as well as distribution of assets on the dissolution of a firm or a company or under a gift or transfer on trust. The Select Committee watered down the exemption limit from Rs. 5,000 to Rs. 15,000 and recommended the levy of one anna in the rupee on the whole of capital gains upto Rs. 50,000 rising by one anna by stages upto a rate of five annas in the rupee on the whole amount of capital gains where that amount exceeded Rs. 10 lakhs. In the final Act further concession was given by exempting gains from the sale of personal effects.

The Taxation of Income (Investigation Commission) Bill.—Was also passed by the Legislature with certain amendments, recommended by the Select Committee, the most important of which is in regard to the initiative for investigation which will rest entirely with the Central Government who will refer to the Commission for investigation and report any *prima facie* case of tax evasion. "It is notorious", Bill "that recently businesses and properties have changed hands for very large sums of money. Government are anxious to know how in spite of very high rates of taxation the large fortunes which these transactions imply have been accumulated." Towards the end of 1947, the Government of India announced the personnel of the commission.

Progress of Revenue.—Prior to 1914, the receipts from taxation on income were hardly Rs. 3 crores; but they went up to Rs. 22 crores in 1921-22 owing to the increases in the rates. The industrial depression however, resulted in a setback in the following years and even in 1938-39, it did not exceed Rs. 17.28 crores. The war period witnessed a strong emphasis on this source for the purpose of Governmental finance and the revenue from this source realised in 1945-46 amounted to Rs. 178.03 crores representing 49.4 per cent of the total revenue.

Guide to Taxes on Income (1947-48)

RATES OF INCOME-TAX

A.—In the case of every individual, Hindu undivided family, unregistered firm and other association of persons not being a case to which paragraph B of this Part applies:—

	Rate.
1. On the first Rs. 1,500 of total income.	Nil.
2. On the next Rs. 3,500 of total income.	One anna in the rupee.
3. On the next Rs. 5,000 of total income.	Two annas in the rupee.
4. On the next Rs. 5,000 of total income.	Three and a half annas in the rupee.
5. On the balance of total income.	Five annas in the rupee.

Provided that—

- (i) no income-tax shall be payable on a total income which, before deduction of the allowance, if any, for earned income, does not exceed Rs. 2,500;
- (ii) the income-tax payable shall in no case exceed half the amount by which the total income (before deduction of the said

allowance, if any, for earned income) exceeds Rs. 2,500;

(iii) the income-tax payable on the total income as reduced by the allowance for earned income shall not exceed either—

(a) a sum bearing to half the amount by which the total income (before deduction of the allowance for earned income) exceeds Rs. 2,500 the same proportion as such reduced total income bears to the unreduced total income, or

(b) the income-tax payable on the income so reduced at the rates specified in this Schedule,

whichever is less.

B.—In the case of every company and Local authority, and in every case in which under the provisions of the Indian Income-tax Act, 1922, income-tax is to be charged at the maximum rate—

Rate.
On the whole of total income. Five annas in the rupee.

RATES OF SUPER-TAX

A.—In the case of every individual, Hindu undivided family, unregistered firm and other association of persons, not being a case to which paragraph B or paragraph D of this Part applies—

	Rate, if income wholly earned.	Rate, if income wholly unearned.
On the first Rs. 25,000 of total income.	Nil.	Nil.
On the next Rs. 5,000 of total income.	Two annas in the rupee.	Three annas in the rupee.
On the next Rs. 5,000 of total income.	2½ annas in the rupee.	3½ annas in the rupee.
On the next Rs. 10,000 of total income.	3 annas in the rupee.	4 annas in the rupee.
On the next Rs. 10,000 of total income.	4 annas in the rupee.	5 annas in the rupee.
On the next Rs. 10,000 of total income.	5 annas in the rupee.	6 annas in the rupee.
On the next Rs. 10,000 of total income.	6 annas in the rupee.	7 annas in the rupee.
On the next Rs. 15,000 of total income.	7 annas in the rupee.	8 annas in the rupee.
On the next Rs. 15,000 of total income.	8 annas in the rupee.	9 annas in the rupee.
On the next Rs. 15,000 of total income.	9 annas in the rupee.	10 annas in the rupee.
On the next Rs. 30,000 of total income.	10 annas in the rupee.	10½ annas in the rupee.
On the balance of total income	10½ annas in the rupee.	10½ annas in the rupee.

B.—In the case of every Local Authority—

Rate.
On the whole of total income. Two annas in the rupee.
C.—In the case of an association of persons being a co-operative society, other than the Sankatta Saltowners' Society in the Bombay Presidency, for the time being registered under the Co-operative Societies Act, 1912, or under an Act of the Provincial Legislature governing the registration of co-operative societies—

co-operative societies—	Rate.
On the first Rs. 25,000 of total income.	Nil.
On the balance of total income.	Two annas in the rupee.
D.—In the case of every company—	Rate.

D.—In the case of every company—

D.—In the case of every company—	Rate.
On the whole total income.	Two annas in the rupee.

and in addition, in respect of that part of the total income (as reduced by the amount of dividends payable at a fixed rate) which does not exceed the amount of dividends, not being dividends payable at a fixed rate, declared in British India in respect of the whole or part of the previous year for the assessment for the year ending on the 31st day of March 1947—

on the amount by which such part—

	Rate.
(a) exceeds 30 per cent., but does not exceed 40 per cent., of the total income as so reduced.	Three annas in the rupee.
(b) exceeds 40 per cent., but does not exceed 50 per cent., of the total income as so reduced.	Five annas in the rupee.
(c) exceeds 50 per cent., of the total as so reduced.	Seven annas in the rupee.

Provided that—

- (i) no additional super-tax shall be payable where such part is less than, or equal to, five per cent. on the capital of the company;
- (ii) where such part is more than five per cent. on the capital of the company, the additional super-tax payable shall be reduced by the amount of additional super-tax

which would, but for the provisions of clause (i) of this proviso, have been payable had such part been equal to five per cent. on the capital of the company;

Explanation.—For the purposes of the paragraph,—

- (a) the expression “capital of the company” shall be deemed to mean the paid-up share capital at the beginning of the previous year for the assessment for the year ending on the 31st day of March 1948 (other than capital entitled to a dividend at a fixed rate) plus any reserves other than depreciation reserves and reserves for bad or doubtful debts at the same date as diminished by the amount on deposit on the same date with the Central Government under section 10 of the Indian Finance Act, 1942, or section 2 of the Excess Profits Tax Ordinance, 1943.
- (b) the expression “dividend” shall be deemed to include any distribution included in the expression “dividend” as defined in clause (6A) of section 2 of the Indian Income-tax Act, 1922, and any such distribution made during the year ending on the 31st day of March 1948 shall be deemed to have been made in respect of the whole or part of the previous year.

Guide to Taxes on Income (1948-49)

RATES OF INCOME-TAX.

A. In the case of every individual, Hindu undivided family, unregistered firm and other association of persons, not being a case to which paragraph B, C or D of this Part applies—

	Rate.
1. On the first Rs. 1,500 of total income	Nil.
2. On the next Rs. 3,500 of total income	One anna in the rupee.
3. On the next Rs. 5,000 of total income	Two annas in the rupee.
4. On the next Rs. 5,000 of total income	Three and a half annas in the rupee.
5. On the balance of total income	Five annas in the rupee.

Provided that—

- (i) no income-tax shall be payable on a total income which, before deduction of the allowance, if any, for earned income, does not exceed Rs. 3,000;
- (ii) the income-tax payable shall in no case exceed half the amount by which the total income (before deduction of the said allowance, if any, for earned income) exceeds Rs. 3,000;
- (iii) the income-tax payable on the total income as reduced by the allowance for earned income shall not exceed either—
 - (a) a sum bearing to half the amount by which the total income (before deduction of the allowance for earned income) exceeds Rs. 3,000 the same proportion as such reduced total income bears to the unreduced total income, or
 - (b) the income-tax payable on the income so reduced at the rates herein specified,—whichever is less.

B. In the case of every company, not being a company to which paragraph C of this Part applies—

	Rate.
On the whole of total income	Five annas in the rupee.

Provided that in the case of an Indian Company—

- (a) where the total income, as reduced by seven annas in the rupee and by the amount, if any, exempt from income-tax, exceeds the amount of any dividends (including dividends any, exempt from income-tax, declared in respect of the whole or part of the previous year for payable at a fixed rate) declared in respect of the 31st day of March, 1919, and no order has the assessment for the year ending on the 31st day of March, 1922, been made under sub-section (1) of section 23A of the Indian Income-tax Act, 1922 (XI of 1922), a rebate shall be allowed at the rate of one anna per rupee on the amount of such excess;
- (b) where the amount of dividends referred to in clause (a) above exceeds the total income as reduced by seven annas in the rupee and by the amount, if any, exempt from income-tax, there shall be charged on the total income an additional income-tax equal to the sum, if any, by which the aggregate amount of income-tax actually borne by such excess (hereinafter referred to as “the excess dividend”) falls short of the amount calculated at the rate of five annas per rupee on the excess dividend; and
- (c) the income-tax payable, after deducting any rebate permissible under clause (a), but without including any additional income-tax chargeable under clause (b), shall not exceed the aggregate of—
 - (i) the income-tax which would have been payable under the provisions of paragraph C of this Part if the total income had been Rs. 25,000, and
 - (ii) half the amount by which the total income exceeds Rs. 25,000.

For the purposes of clause (b) of the above proviso, the aggregate amount of income-tax actually borne by the excess dividend shall be determined as follows:—

- (i) the excess dividend shall be deemed to be out of the whole or such portion of the undistributed profits of one or more years immediately preceding the previous year as would be just sufficient to cover the amount of the excess dividend and as have not likewise been taken into account to cover an excess dividend of a preceding year;
- (ii) such portion of the excess dividend as is deemed to be out of the undistributed profits of each of the said years shall be deemed to have borne tax,—
 - (a) if an order has been made under sub-section (1) of section 23A of the Indian Income-tax Act, 1922, in respect of the undistributed profits of that year, at the rate of five annas in the rupee, and
 - (b) in respect of any other year, at the rate applicable to the total income of the company for that year reduced by the rate at which rebate, if any, was allowed on the undistributed profits.

C. In the case of every Indian Company the total income of which does not exceed Rs. 25,000—

	Rate.
On the whole of total income	Two and a half annas in the rupee.

Provided that where the total income, as reduced by four and a half annas in the rupee and by the amount, if any, exempt from income-tax, exceeds the amount of any dividends (including dividends payable at a fixed rate) declared in respect of the whole or part of the previous year for the assessment for the year ending on the 31st day of March, 1949, and no order has been made under section (1) of section 23A of the Indian Income-tax Act, 1922, a rebate shall be allowed at the rate of half anna per rupee on the amount of such excess.

D. In the case of every local authority and in every case in which, under the provisions of the Indian Income-tax Act, 1922, income-tax is to be charged at the maximum rate—

	Rate.
On the whole of total income	Five annas in the rupee.

Explanation.—For the purposes of this Part,—

(a) the expression "dividend" shall be deemed to include any distribution included in the expression as defined in clause (6A) of section 2 of the Indian Income-tax Act 1922, and any such distribution made during the year ending on the 31st day of March 1949, shall be deemed to have been made in respect of the whole or part of the previous year;

(b) the expression "Indian Company" shall have the meaning assigned to it in clause (7A) of section 2 of the Indian Income-tax Act, 1922.

RATE OF SUPER-TAX.

A. In the case of every individual, Hindu undivided family, unregistered firm and other association of persons, not being a case to which any other paragraph of this Part applies—

	Rate, if income wholly earned.	Rate, if income wholly unearned.
1. On the first Rs. 25,000 of total income	<i>Nil.</i>	<i>Nil.</i>
2. On the next Rs. 15,000 of total income	Two annas in the rupee.	Three annas in the rupee.
3. On the next Rs. 15,000 of total income	Three annas in the rupee.	Four and a half annas in the rupee.
4. On the next Rs. 15,000 of total income	Five annas in the rupee.	Six annas in the rupee.
5. On the next Rs. 15,000 of total income	Six annas in the rupee.	Seven annas in the rupee.
6. On the next Rs. 15,000 of total income	Six and a half annas in the rupee.	Eight annas in the rupee.
7. On the next Rs. 50,000 of total income	Seven annas in the rupee.	Nine annas in the rupee.
8. On the next Rs. 1,00,000 of total income	Nine and a half annas in the rupee.	Nine and a half annas in the rupee.
9. On the next Rs. 1,00,000 of total income	Ten annas in the rupee.	Ten annas in the rupee.
10. On the balance of total income	Ten and a half annas in the rupee.	Ten and a half annas in the rupee.

B. In the case of every local authority—

	Rate.
the whole of total income	Two annas in the rupee.

C. In the case of an association of persons; being a co-operative society, other than the Sankata Saltowners' Society in the Bombay Presidency, for the time being registered under the Co-operative Societies Act, 1912 (II of 1912), or under an Act of a Provincial Legislature governing the registration of co-operative societies—

	Rate.
(1) On the first Rs. 25,000 of total income	<i>Nil.</i>
(2) On the balance of total income	Two annas in the rupee.

D. In the case of every company—

	Rate.
On the whole of total income	Three annas in the rupee.

Provided that a rebate at the rate of one anna per rupee of the total income shall be allowed in the case of any company which, in respect of its profits liable to tax under the Indian Income-tax Act, 1922, for the year ending on the 31st day of March, 1949, has made the prescribed arrangements—

(a) for the declaration and payment in the Provinces of India of the dividend payable out of such profits, and

(b) for the deduction of super-tax from dividends in accordance with the provisions of sub-section (3D) or (3E) of section 18 of the said Act.

INDIAN BUDGET FOR 1948-49

The main features of the budget of the Indian Dominion presented by the Hon. Mr. Shammukham Chetty to the Indian Parliament on February 28, 1948 were:—

	(Rs. in crores)
	Budget 1948-49
	Budget Revised Budget
Revenue ..	172.80 178.77 230.52
Expenditure ..	197.39 185.29 237.37
Defence ..	92.74 88.63 121.08
Civil ..	104.65 96.66 116.29
Revenue Deficit ..	24.59 6.52 20.85

Relief.—The following measures of relief in the present taxation were announced by the Finance Minister in his budget speech:

(1) Reduction in business profits tax from 10½ per cent. to 10 per cent. and the increase in the abatement from Rs. 1 lakh or six per cent. on the capital employed to Rs. 2 lakhs or six per cent. whichever is larger. (2) Increase in the limit for the application of the maximum rate of super-tax from Rs. 1½ lakhs for earned and Rs. 1.2 lakhs for unearned income to Rs. 3½ lakhs for both earned and unearned income, together with a rearrangement of the slab. (3) Abolition of the penal super-tax on companies distributing dividends above certain percentages and a rebate of one anna in income-tax on undistributed profits, i.e., as 5 on distributed profits and as 4 on undistributed profits of companies. (4) Reduction of income-tax on companies with an income of Rs. 25,000 and below to half the usual rates. (5) Exemption of donations to approved institutions and charities from taxation subject to a maximum of five per cent. of the companies' taxable income and 10 per cent. in the case of individuals, with an overall ceiling of Rs. 2½ lakhs. (6) Deduction of municipal taxes on property from the assessable income. (7) Conversion of the export duty of Rs. 4 per sq. yard on cotton cloth into 25 per cent. *ad valorem* and exemption of the handloom

cloth from export duty as well as withdrawal of the export duty on cotton yarn. (8) The withdrawal of the excise duty on betelnuts. The net effect of the changes will be a drop of Rs. 6.46 crores in the revenue.

New Taxes.—The new taxation proposals were:—

(1) Levy of an export duty of Rs. 80 per ton on oilsceda, Rs. 200 per ton on vegetable oils and of Rs. 20 per ton on manganese. (2) Increase in import duty on motor cars from 45 per cent. to 50 per cent. with preference of 7½ per cent. for the United Kingdom. (3) Excise duty of 25 per cent. on the ex-factory prices of cigarettes and the increase in the excise duty on certain categories of unmanufactured tobacco from as. 9 to as. 12 per lb. in some cases and from as. 3 to as. 4 per lb. in others. (4) Increase in excise duty on tea from as. 2 to as. 4 per lb., on coffee to as. 4 per lb., on vegetable products by 50 per cent., to Rs. 7-8 per cwt., on tyres by 50 per cent., and on matches by Rs. 2-8 per gross on all boxes containing upto 50 matches. (5) Increase in postal registration fee from as. 3 to as. 4 and increase in surcharges on trunk calls from 40 per cent. to 60 per cent. and their amalgamation with the basic rate. (6) Increase in the corporation tax from as. 2 to as. 3 with a rebate of one anna to companies declaring and distributing dividends in India. In the aggregate, these proposals are designed to yield Rs. 17.72 crores.

The Finance Minister indicated that the readjustment of taxes will add Rs. 11.26 crores and proposed to transfer Rs. 10 crores to revenue by crediting advance payments against taxes instead of treating them as deposits. This would leave a deficit of Rs. 5.59 crores; but since the railways were expected to contribute Rs. 4½ crores to the general revenue, the net uncovered deficit was expected to be Rs. 1.09 crores.

SOME PARTICULARS

Here are more points from the Budget: For refugees' relief and rehabilitation, there is a provision of Rs. 100.4 million. Besides the Government will advance Rs. 100 million for the setting up of the Rehabilitation Finance Administration. Expenditure on relief and rehabilitation in the current financial year will amount to Rs. 148.9 million against Rs. 220 million included in the interim budget.

Expenditure on food subsidies in 1948-49 is estimated at Rs. 199.1 million. Food imports in the first half of 1948 are expected to amount to about Rs. 610 million.

Provision in the Capital Budget for normal requirements and for the financing of the Central and Provincial schemes will be of the order of Rs. 1,655 millions in the coming financial year.

Borrowings from the market are expected to amount to Rs. 1,500 million. This will be stepped up if circumstances are propitious.

Balance of Payments.—India's adverse balance in recent years is ascribed to two causes. "Firstly it is the inevitable result of the absence of imports during the many years of war that the long pent up demand should seek to satisfy itself as soon as the goods become available. The second and by far the most important reason for this deficit is, as is well known, our imports of foodgrains."

Another feature of India's External Financial position is that since 1946-47 she has been running a deficit in her balance of payments with the U.S.A., "both because goods have become much more freely available in that country and because we have to purchase there a substantial portion of our food requirements." The position was no better in regard to other hard currency areas.

Sterling Balances Agreement.—The Government of India and the United Kingdom have agreed by an exchange of letters that the Interim Agreement of August 1947, which expired on December 31, 1947, should be extended up to June 30, 1948 with some modifications. Whereas the first agreement was concluded on behalf of both India and Pakistan, the present extension was on behalf of the Indian Dominion alone.

The object which has been kept in view is to make available to India sufficient foreign exchange resources to meet the estimated overall deficit of Rs. 520 million or £39 million, in the balance of payments during the first half of 1948. It has been agreed that the United Kingdom Government would transfer to India's No. 1 account a further £18 million. This fresh release, together with the balance at India's disposal under various accounts and some borrowing from the International Monetary Fund, should enable India to meet the anticipated deficit.

Settlement with Pakistan.—On a rough estimate the outstanding debt of the undivided Central Government on August 14, 1947 is likely to be of the order of Rs. 33,000 million. Total assets on that date are estimated at

Rs. 28,000 million leaving a net excess of liabilities over assets of about Rs. 5,000 million. The arrangement with Pakistan lays down that for all assets located in her territory she would take a debt equal to their book value. An exception is made in the case of strategic railways, the book value of which for the purposes of settlement is written down from a little over Rs. 320 million to Rs. 145 million. In addition, it is agreed that Pakistan will take over a debt equal to the amount of the cash balance of Rs. 750 million allocated to her out of the cash balance of the undivided Government and 17½ per cent. of the net excess of the Central Government's liabilities over its assets, already stated as Rs. 5,000 million. Pakistan's debt will, however, be reduced by the liability she takes over in regard to Postal Savings Bank, Postal Cash and National Savings Certificates outstanding in her area, pensions of the undivided Government paid in Pakistan and the liability for pensions earned by officers who have opted for service in that Dominion. Pakistan's share will take the form of an inter-state debt to India, and on a very rough estimate this debt is likely to be of the order of Rs. 3,000 million and the rate of interest about 3 per cent. Pakistan's total debt will be repaid in Indian rupees in 50 annual equated instalments for principal and interest, the repayment commencing in 1952. A satisfactory solution has also been reached in regard to the allocation of the sterling reserves of the Reserve Bank, which has ceased to be the currency authority and banker to the Pakistan Government since July 1st, 1948.

New Financial year.—At the existing level of taxation the total Revenue for the year would be Rs. 2,305.2 million and the expenditure charged to revenue Rs. 2,573.7 million leaving a deficit of Rs. 268.6 million.

The main heads of Revenue are as follows: Customs, Rs. 817.5 million; Central Excise Rs. 340 million; Receipts from Income-tax (including Rs. 120 million on account of Excess Profits Tax and Rs. 170 million on account of Business Profits Tax), Rs. 1,300 million; estimated divisible pool of Income-tax, Rs. 802.4 million, the Centre retaining Rs. 423.7 million leaving Rs. 378.7 million as the provincial share; revenue from Posts and Telegraphs, Rs. 262 million; and working expenses and interest, Rs. 258.2 million leaving a surplus of 3.8 million.

Post-War Planning.—Regarding Post-War Planning and Development, there will be no reduction in the extent of the assistance promised by the Centre to the provinces when the provinces were asked to draw up their plans for development. After allowing for the expenditure incurred up to partition and for the areas now in Pakistan, the outstanding balance of assistance to the provinces at the end of the current year is estimated at Rs. 1,700 to Rs. 1,800 million.

For Central schemes of development, including resettlement, a provision of Rs. 107.7 million has been made in the revenue budget and Rs. 255 million in the capital budget.

In addition Rs. 265 million has been provided for his year and Rs. 760 million next year for ordinary capital expenditure. The total provision in the capital budget for normal requirements and for financing the development schemes, both for the Centre and the Provinces, comes to the impressive figure of Rs. 700 million this year and Rs. 1,655 million next year.

Future Prospects.—As regards the prospects for 1949-50, the Finance Minister points out that if the large receipts of E.P.T. and B.P.T. in next year's revenue are allowed for the revenue in 1949-50 may be Rs. 200 million less than in the previous year. It is not unreasonable to expect a reduction of expenditure on refugees, subsidising of foodgrains and defence. Neither is it unreasonable to hope for a balanced budget in the future but he feels that in the transitional time it is "the path of prudence to strengthen our revenue position and keep down our expenditure as much as possible." The small uncovered deficit is an index of the efforts that Government

are making to close the era of war-time deficits and bridge the gap between revenue and expenditure.

Debt Position.—The total interest bearing obligations at the end of the budget year are estimated at Rs. 22,310 million against which the interests yielding assets are expected to amount to Rs. 12,370 million and cash and other investments to Rs. 1,300 million leaving a final uncovered debt of Rs. 8,640 million. These figures are to some extent approximate as the final figures of Pakistan's debt to India still remained to be worked out but they gave a broad indication of the position. The proportion of the country's debt to its national income also compares favourably with more advanced countries like the U.S.A. and the U.K. This country's debt is only half its probable national income while in the U.S.A. it is more than 1½ times and in the U.K. nearly 3 times the national income. The net burden of interest on the deadweight debt in this country amounts to only 10½ per cent. of the revenue next year.

736

The Currency System

THE history of Indian currency is fully summarised in the Reports of the Herschell, Fowler and Babington-Smith Committees, and the Chamberlain and Hilton Young Commissions. This historical retrospect is confined to a brief review of the facts and events of the past which chiefly influence the present and serve as a guide to the future.

Prior to 1818 India was suffering from political as well as currency chaos with a variety of coins of both silver and gold of different denominations in circulation. By the Act of 1818 the East India Company made the silver rupee of 180 grains 11/12ths fine unlimited legal tender for South India. In 1835 the Gold and Silver Coinage Act was enacted so as to make the rupee unlimited legal tender and deprive the gold coins of their legal tender character throughout British India. But in order to avoid the embarrassing fluctuations in the rate of exchange with gold standard countries consequent on the severe slump in the silver market from 1872 onwards, it was decided in 1893, in accordance with the recommendations of the Herschell Committee, to close the mints to the free coinage of silver. The stoppage of silver coinage was followed by an appreciation of the rupee, and by 1898 it had reached the level of 1s. 4d. The rupee remained unlimited legal tender, and was the standard of value for all internal transactions.

Sterling Exchange Standard.—The policy adopted in 1893, by the closing of the mints to the free coinage of silver, had for its declared object the establishment of a gold standard for India, and the Fowler Committee was invited in 1898 to consider how this object could best be secured. This Committee favoured the making of the British sovereign a legal tender and a current coin in India and recommended, at the same time, that "the Indian mints should be thrown open to the unrestricted coinage of gold on terms and conditions such as govern the three Australian branches of the Royal Mint. The result would be that, under identical conditions, the sovereigns would be coined and would circulate both at home and in India."

This recommendation was accepted by the Secretary of State for India and the Government of India and the effective establishment of a gold standard based on a gold currency thus became the recognised object of Government and their advisers. But Government's first attempt to introduce gold into circulation was not a success, and the Indian currency system developed in the years that followed along lines different from those foreseen in 1898. Gold never became a substantial part of the circulation. Apart from small change, the internal currency consisted almost entirely of tokens, one printed on silver, the rupee, and the other on paper, the currency note. Their value was maintained at 1s. 4d. gold (there was during this period no difference between gold and sterling) by the offer of the Secretary of State to sell bills on India without limit of amount at 1s. 4½d. and by the sale of drafts on the Secretary of State on occasions when, owing to temporary variations in the currents of trade, exchange tended to fall below the 1s. 4d. level.

The latter process was not, however, the subject of a statutory obligation, nor was it in practice carried out as a matter of course. For instance the Secretary of State had to be consulted before offers of reverse remittances were announced, and the Government of India never went so far as to undertake to offer sterling drafts in all circumstances. The standard thus evolved was commonly known as a gold exchange standard, although in truth in so far as it amounted to a definite standard at all, it was a standard of sterling exchange.

The Chamberlain Commission was appointed in 1913 to inquire, among other things, whether the then existing practice in currency matters was conducive to the interests of India. It reported: "The people of India neither desire nor need any considerable amount of gold for circulation as currency, and the currency most generally suitable for the internal needs of India consists of rupees and notes. A mint for the coinage of gold is not needed for purposes of currency or exchange, but if Indian sentiment genuinely demands it, and the Government of India are prepared to incur the expense, there is no objection in principle to its establishment either from the Indian or from the Imperial standpoint; provided that the coin minted is the sovereign or the half sovereign; and it is pre-eminently a question in which Indian sentiment should prevail. If a mint for the coinage of gold is not established, refined gold should be received at the Bombay Mint in exchange of currency. The Government of India should continue to aim at giving the people the form of currency which they demand, whether rupees, notes or gold, but the use of notes should be encouraged. The essential point is that this internal currency should be supported for exchange purposes by a thoroughly adequate reserve of gold and sterling."

Thus, in effect, the Chamberlain Commission abandoned the ideal of a gold standard based on a gold currency and accepted in its place an exchange standard with an excremental currency of sovereigns not essential to the working of the system. Owing to the outbreak of the First World War no action was taken on these recommendations.

Fluctuations.—The war of 1914-18 put the currency system of India, in common with those of other countries, to a severe test. The price of silver rose to unprecedented heights, and the material of the silver token became worth more than its face value. The Government found it difficult to continue their unlimited offer of rupees at the long-established rate. There was a keen demand for Indian exports, and there were exceptional disbursements to be made on behalf of the British Government. Internal currency had to be in some way provided, and it could no longer be provided on the old terms. Simultaneously there was a reduction in the output of the world's silver mines coinciding with an increased demand for the metal. The price of silver in 1915 was 27½d. per ounce; by May 1919 it was 58½d. and on December 17 of that year it reached 78d.

Confronted with these difficulties, the authorities allowed the rupee, so long anchored at 1s. 4d., to break loose from its moorings and follow the course of silver prices. The rate of exchange accordingly rose rapidly until it reached 2s. 4d. sterling in December 1919. The effect of these measures was to jettison the currency policy pursued from 1893 to 1915, the main object of which was to stabilise the rupee at 1s. 4d.

The 2s. Ratio.—The Babington-Smith Committee was appointed in May 1919 when the rate was 1s. 8d. "to examine the effect of the War on the Indian Exchange and Currency system and practice, to make recommendations as to the policy that should be pursued with a view to meeting the requirements of trade, to maintaining a satisfactory monetary circulation, and to ensuring a stable gold standard."

These terms of reference precluded the Committee from considering alternative standards of currency and the Committee recommended the stabilisation of exchange at 2s. gold after taking into account the high range of silver prices and the importance of safeguarding the token character of the rupee. It also recommended that during periods of exchange weakness, the Government of India should be authorised to announce, without previous reference to the Secretary of State, their readiness to sell weekly a stated amount of reverse councils. Furthermore, it advocated the movement of gold to and from India free from Government control, fixation of the statutory minimum for the metallic portion of the Paper Currency Reserve at 40 per cent. of the gross circulation and the revaluation of the sterling investments and gold in the Paper Currency Reserve at 2s. to the rupee.

An important member of the Committee, Mr. Dadiba Dalal of Bombay, appended a minority report in which he urged (1) the standard of the sovereign and gold mohur with rupees related at the ratio of 15 to 1, (2) the continuance of the then existing silver rupees of 185 grains of fine silver as full legal tender, (3) the stoppage of silver rupees of 165 grains being minted as long as New York quoted silver over 92 cents and the minting of 2 rupee silver coins of reduced fineness, and (4) the sale of reverse drafts on London only at 1s. 3-29/32d. and the meeting of drafts by the Secretary of State at a rate not below 1s. 4-3/32d. per rupee. In making its recommendations, the majority was largely influenced by (1) the rise in the gold value of silver and (2) the decline in the gold value of sterling which was then about 30 per cent. below par. Actually the subsequent fall in the price of silver from 89½d. per ounce in February 1920 to 44d. in June 1920 outstripped the preceding rise. Moreover while this report was being written, the British Government was accepting the Cunliffe Committee's Report prescribing a deflationary policy for Britain.

Fall in Value.—The majority's recommendations were, however, accepted by the Secretary of State. The publication of the Report in February 1920, however, coincided with a keen demand for remittances to London, and steps were at once taken to maintain the new exchange

rate of 2s. gold recommended by the Committee by the offer of reverse councils at a rate founded on that ratio, allowance being made for the depreciation of sterling in terms of gold, as shown by the dollar-sterling exchange. The rates for reverse councils offered by the Government thus varied from 2s. 3-29/32d. sterling to 2s. 10-27/32d. sterling. By the Indian Coinage Amendment Act of 1920 the sovereign was made legal tender at Rs. 10. The attempt to hold the rate of 2s. gold was not successful; and the Government of India thereupon tried, with effect from the weekly sale on June 24, 1920, to maintain it at 2s. sterling. This attempt also failed and was abandoned on September 28. The Government of India at this period were unable to contract currency in India at the pace at which world prices were falling. All they could do was to avoid further inflation and to effect some measure of contraction. This was insufficient to arrest the falling tide of exchange, which early in 1921 fell below the low level of 1s. 3d. sterling and 1s. gold. The 2s. ratio, passed in 1920, remained on the statute book and was ineffective for purposes of tender of gold to the currency office.

During this period the export trade was arrested and the import trade mounted when the precise converse was demanded and Government's action created an artificial movement of the transfer of capital from India to England; large war profits accumulated in India since 1914 were hurriedly liquidated and transferred to England. Then the difference between the reverse council rate and the market rate, which on some occasion was several pence, induced gigantic speculations. The Exchange Banks set aside all their available resources for bidding for Bills and at once sold their allotments at substantial profits.

Recovery.—In this way the weekly biddings for the million of reverse councils varied from 120 millions to 130 millions and the money market was completely disorganised. In turn, business was severely affected and immense losses were incurred by all importers. Government sold £55 millions of reverse councils before abandoning their effort to stabilise exchange at the new ratio, the loss on this account being Rs. 35 crores. According to an official statement, currency was contracted to the tune of Rs. 31½ crores in 1920-21 and the process was continued in the following two years by the transfer of sterling securities held in London to the Secretary of State's cash balance and by the discharge of the Indian Treasury Bills held in the reserve. The tide consequently definitely turned by January 1923; and Government exchange recovered to 1s. 4d. sterling, and showed a general tendency to move upward. It reached the level of 1s. 6d. sterling in October 1924 at which time it was equivalent to about 1s. 4d. gold. From that time till March 1926, the upward tendency of exchange continued, but it was prevented from rising above 1s. 6d. by free purchases of sterling in the part of Government. Meanwhile sterling was restored to parity with gold about the middle of 1925 and the rupee was in the neighbourhood of 1s. 6d. gold when the Hilton Young Commission was appointed in 1926.

HILTON YOUNG COMMISSION

The system existing in 1926 was summed up by the Hilton Young Commission in the following words: "At the present time Indian currency consists of two kinds of token, paper notes and silver rupees, which are mutually convertible. The paper notes are in form a promise by the Government of India to pay the bearer on demand a specified number of rupees. The rupee is a silver coin 180 grains in weight and 11/12ths fine.

"The value of both forms of token currency in relation to sterling is at present being maintained between the gold points corresponding to a gold parity of 1s. 6d. No obligation has been assumed, but Government as currency authority have freely purchased sterling when the rate has stood at 1s. 6-3/16d., and in April 1926, authorised the Imperial Bank, to make an offer on their behalf to sell sterling at 1s. 5 1/2d. The stability of the gold value of the rupee is thus based upon nothing more substantial than a policy of the Government, and at present that policy can be found defined in no notification or undertaking by the Government.

"For the purpose of maintaining the value of the token currency, the Government of India hold two reserves, the Paper Currency Reserve and the Gold Standard Reserve. The former is composed of the proceeds of the note issue and is held as a backing against the notes in circulation; the latter has been accumulated from the profits of the coinage of silver rupees and is designed primarily to maintain the external value of these coins. The permanent constitution of the Paper Currency Reserve provides for a holding of gold and silver metallic reserves of not less than 50 per cent. of the total note circulation, and for the balance to be held in rupee and sterling securities. These permanent provisions have not yet become operative and in the meanwhile the Reserve is governed by transitory provisions under which the fiduciary portion is limited to a maximum of Rs. 100 crores and the balance of the reserve is held in gold and silver coin and bullion. The Gold Standard Reserve at present amounts to £40 million. It is invested in British Treasury Bills and other sterling securities."

The Commission's views on this system were: (1) The system is far from simple, and the basis of the stability of the rupee is not readily intelligible to the uninstructed public. The currency consists of two tokens in circulation, with the unnecessary excessiveness of a third full-value coin which does not circulate at all. One form of token currency is highly expensive and is liable to vanish if the price of silver rises above a certain level. (2) There is a cumbersome duplication of reserves, with an antiquated and dangerous division of responsibility for the control of credit and currency policy (the former being with the Imperial Bank). (3) The system does not secure the automatic expansion and contraction of currency. Such movements are too wholly dependent on the will of the currency authority. (4) The system is inelastic. The utility of the provision for elasticity made on the recommendation of the Babington-Smith Committee is affected by the methods of financing Indian trade.

GOLD BULLION STANDARD

The Commission held the view that "the currency of the country must be linked with gold in a manner that is real and conspicuously visible." It, therefore, recommended a gold bullion standard whereby an obligation should be imposed by statute on the currency authority to buy and sell gold without limits at rates determined with reference to a fixed gold parity of the rupee but in quantities of not less than 400 fine ounces, no limitation being imposed as to the purpose for which the gold is required. It would establish the principle that gold is the standard of Indian currency at a fixed ratio. Simultaneously it recommended that the legal tender quality of the sovereign and the half-sovereign should be removed.

Other main recommendations of the Commission were:—

(i) The necessity of a unity of policy in the control of currency and credit for the achievement of monetary stability involves the establishment of a central banking system. Detailed recommendations are made about the constitution, functions and capacities of the Bank which should be a new organisation, referred to as the Reserve Bank of India.

(ii) An obligation should be imposed by statute on the Bank to buy and sell gold without limit at rates determined with reference to a fixed gold parity of the rupee but in quantities of not less than 400 fine ounces, no limitation being imposed as to the purpose for which the gold is required.

(iii) The conditions which are to govern the sale of gold by the Bank should be so framed as to free it in normal circumstances from the task of supplying gold for non-monetary purposes. The method by which this may be secured is suggested.

(iv) Government should offer "on tap" savings certificates redeemable in 3 or 5 years in legal tender money or gold at the option of the holder.

(v) The paper currency should cease to be convertible by law into silver coin. It should, however, be the duty of the Bank to maintain the free interchangeability of the different forms of legal tender currency, and of the Government to supply coin to the Bank on demand.

(vi) One-rupee notes should be re-introduced and should be full legal tender.

(vii) Notes other than the one-rupee note should be legally convertible into legal tender money, i.e., into notes of smaller denomination or silver rupees at the option of the currency authority.

(viii) No change should be made in the legal tender character of the silver rupee.

(ix) The Paper Currency and Gold Standard Reserves should be amalgamated, and the proportions and composition of the combined Reserve should be fixed by statute.

(x) The proportional reserve system should be adopted. Gold and gold securities should form not less than 40 per cent. of the Reserve, subject to a possible temporary reduction, with the consent of Government, on payment of a tax. The currency authority should strive to work to a reserve ratio of 50 to 60 per cent. The gold holding should be raised to 20 per cent. of the Reserve as soon as possible and to 25 per cent. within ten years. During this period no favourable opportunity of fortifying the gold holding in the Reserve should be allowed to escape. Of the gold holding at least one-half should be held in India.

(xi) The silver holding on the Reserve should be very substantially reduced during a transitional period of ten years.

(xii) The balance of the Reserve should be held in self-liquidating trade bills and Government of India securities. The "created" securities should be replaced by marketable securities within ten years.

(xiii) A figure of Rs. 50 crores has been fixed as the liability in respect of the contractibility in the rupee circulation. Recommendations are made to secure that an amount equal to one-fifth of the face value of any increase or decrease in the number of silver rupees in issue shall be added to or subtracted from this liability, and the balance of profit or loss shall accrue to or be borne by the Government revenues.

(xiv) The Reserve Bank should be entrusted with all the remittance operations of the Government. The Secretary of State should furnish in advance periodical information as to his requirements. The Bank should be left free, at its discretion, to employ such method or methods of remittance as it may find conducive to smooth working.

(xv) During the transition period the Government should publish a weekly return of remittances made. A trial should be made of the system of purchase by public tender in India.

(xvi) The cash balances of the Government (including any balances of the Government of India and of the Secretary of State outside India), as well as the banking reserves in India of all banks operating in India, should be centralised in the hands of the Reserve Bank. Section 23 of the Government of India Act should be amended accordingly.

(xvii) The transfer of Reserve assets should take place not later than 1st January 1929, and the Bank's obligation to buy and sell gold should come into operation not later than 1st January 1931.

(xviii) During the transition period the currency authority (i.e., the Government until the transfer of Reserve assets and the Bank thereafter) should be under an obligation to buy gold and to sell gold or gold exchange at its option at the gold points of the exchange. This obligation should be embodied in statutory form, of which the outline is suggested.

(xix) Stabilisation of the rupee should be effected forthwith at a rate corresponding to an exchange rate of 1s. 6d.

(xx) The stamp duty on bills of exchange and cheques should be abolished. Bill forms, in the English language and the vernacular in parallel, should be on sale at post offices.

(xxi) Measures should be taken to promote the development of banking in India.

(xxii) Every effort should be made to remedy the deficiencies in the existing body of statistical data.

Minute of Dissent.—In a minute of dissent to the report, Sir Purshotamdas Thakurdas said: "The position, as I view it, is that the Government and people of India stand committed to the principle recommended by the Fowler Committee and adopted by the Secretary of State and the Government of India. The Fowler Committee recommended and the Government adopted gold standard based on gold reserves and a gold currency as the currency system of India. I do not think that it is possible to improve upon the ideal of a gold standard based on gold reserves. India has today sterling and rupee securities equal to about four and a half times the value of her gold coin and bullion in reserve. It is neither feasible nor desirable that the sterling securities should be realised and converted into gold forthwith or in any manner other than the safest and most gradual to the markets of the world. The proportion of gold to securities in the currency reserves demonstrates the necessity of the free inflow of gold into India being permitted in the normal course."

On the question of the central banking institution, he held the view that the ends in view would be better served by developing the Imperial Bank of India into a full-fledged Central Bank.

As regards the exchange ratio, he said: "I look upon the question of the ratio in this Report as being no less important than the question of the standard to be adopted for the Indian currency system. I have very great apprehensions that if the recommendations of my colleagues to stabilise the rupee at 1s. 6d. is accepted, India will be faced during the next few years with a disturbance in her economic organisation. Why, therefore, gamble on uncertain factors if India's natural ratio of 1s. 4d., that stood for 20 years unshaken by the crisis of 1907-08 and shaken only after 1917 by a world convulsion and then too mainly because of the embargo on the import of gold, is still within India's reach? The facts and figures that I have stated, and the records from which I have quoted, conclusively show that the Executive had made up their minds to work up to a 1s. 6d. ratio long before this Commission was appointed to examine the question—indeed they have presented to us the issue in this regard as a *fait accompli* achieved by them, not having hesitated by manipulation to keep up the rate even while we were in session. I cannot conceive of any parallel to such a procedure in any country."

Act of 1927.—The Currency Bill of 1927 embodying the recommendations of the majority report was passed into an Act with an amendment that the obligation placed on Government was in regard to the purchase of gold and sale of gold or sterling and not gold exchange as originally proposed. The Act came into force on April 1, 1927. Its main features were:—

(1) The silver rupee, the silver half-rupee and the currency notes were all legal tender without limit, but open to issue at the will of Government. The parity of exchange was 8.47512 grains troy of fine gold per rupee.

(2) Gold coins were no longer legal tender, but could be received at any Government currency office and at any Government Treasury other than a Sub-Treasury as bullion at the rate of 8.47512 grains fine gold per rupee.

(3) Gold in the form of bars containing no less than 40 tolas (15 ounces) fine could be offered for sale in unlimited quantities to Government at the Bombay Mint, and Government was under a statutory obligation to buy gold at the rate of Rs. 21-3-10 per tola fine.

(4) Holders of legal tender currency were given the right of obtaining gold at the Bombay Mint or, at the option of Government, sterling for immediate delivery in London, provided they paid for an amount of gold or sterling of not less value than 1,065 tolas (400 ounces) of fine gold. As for sterling Rs. 21-3-10 was to buy as much sterling as was required "to purchase one tola of fine gold in London at the rate at which the Bank of England" was bound by law to give sterling in exchange for gold, after deducting therefrom an amount being the normal cost per tola of transferring gold bullion in bulk from Bombay to London, including interest on its value during transit. As the latter rate would vary, the Governor-General-in-Council had to notify from time to time the rate determined for this purpose.

Thus strictly speaking, the monetary standard created by the Act of 1927 was a sterling exchange standard with the proviso that it was like the gold exchange standard so long as sterling did not go off the gold parity. Moreover, it would have been a gold standard if Government had exercised the option of offering gold in exchange for rupees. While it retained most of the old features condemned by the Commission namely the conversion of silver rupee into paper currency, the duplication of reserves and the separation of currency from credit control, it represented an improvement over the pre-1916 standard by ensuring a statutory gold parity for the rupee and a statutory obligation on Government with regard to the purchase of gold and sale of gold or sterling.

Ratio Controversy.—The main controversy in the following years centred on the exchange ratio. From the beginning, however, Government were finding it necessary to take special measures to maintain the ratio of 1s. 6d. owing to its weakness. On February 10, 1927 when the Imperial Bank desired to borrow Rs. 2 crores from Government, it was charged seven per cent. as against the bank rate of six

per cent. This created the impression that Government had changed their regulations under the Indian Paper Currency Amendment Act of 1923 without making a public announcement and that this had been done as a part of the measures to sustain the rupee exchange at 1s. 6d. Government had to remit about £7 millions between February 15 and March 31 1930 during which sterling bills were difficult to obtain from the market and Government decided to raise the price of money in India by raising the interest on the emergency currency to be given to the Imperial Bank from 7 to 8 per cent. on February 14, 1930. The position deteriorated further by November 1930 owing to rumours about the change in the ratio, and sterling to the tune of £5,650,000 was sold between November 1930 and March 1931 on speculative account.

The weakness of the exchange was followed by contraction of currency during the same period. The net contraction of note currency during the five years ending 1931 was Rs. 102½ crores. The Secretary of State for India made the following statement in the House of Commons on February 11, 1931:—

"The Government regard the rupee question as having been settled in 1927, when the Indian Legislature passed the Currency Act by which the rupee was rated at 1s. 6d. gold. The Government will use all the means in their power to maintain this rate in accordance with their statutory obligations."

THE CRISIS OF 1931

By 1931 the situation had become critical owing to the economic depression resulting in the precipitate fall of agricultural prices, slump in trade and a serious deterioration in the budgetary position of the Government of India. The ways and means position was attempted to be buttressed by short term loans in the form of treasury bills which mounted upto Rs. 83.4 crores by August 1931 and thereafter by taxation and retrenchment. The flight of capital from India could not be checked and Government had to sell £11 millions sterling to maintain the ratio at the lower exchange point between August and September 19, 1931.

On September 21, 1931, the pound sterling was divorced from gold; India had a Currency Ordinance; and the Secretary of State announced Government's currency policy in terms which were not in conformity with the Currency Ordinance. The confusion thus created necessitated the declaration of moratorium for three days in respect of banks and this unprecedented event was followed by the issue on September 24 of the Gold and Sterling Regulation Ordinance of 1931. The first Ordinance sought to suspend the operation of Section 5 of the Currency Act of 1927 relating to Government's obligation to sell gold or sterling at rates fixed therein in view of the emergency, while the Secretary of State made it clear before the Federal Structure Sub-Committee in London that "it has been decided to maintain the present currency standard on a sterling basis."

The Indian Gold and Sterling Sales Regulation Ordinance of 1931 had the object of maintaining the sterling paper standard by strict regulation of dealings in foreign exchange and the prevention thereby of the export of capital by nationals. The Imperial Bank of India was authorised to allocate exchange for certain definite purposes such as normal trade needs, excluding the import of silver and gold, contracts done before September 21 and reasonable personal and domestic purposes. The linking of the rupee with sterling involving the loss of its freedom was strongly opposed by the public. Happily, however, the apprehensions did not materialise; but the change ensured the flow of trade between India and the British Empire while placing India at a disadvantage in respect of her trade with countries having a gold standard. An outstanding feature of our trade thereafter was the unusual exports of gold.

SECOND WORLD WAR

The table given below gives figures of money supply in India which is defined as the total of currency in circulation plus the demand deposits of banks, including the Reserve Bank, minus cash reserves of banks including their deposits with the Reserve Bank. This covers all forms of liquid assets in the country and includes not only cash balances with the public but also Government deposits with the Reserve Bank constituting the cash balances of Government. In the absence of accurate estimates of the amount of small coin in circulation, the figures for total

money supply exclude small coin. The figures for the cash balances with the public are derived by deducting from total money supply the deposits of Government with the Reserve Bank of India:—

During the war period the total money supply increased from Rs. 317 crores to Rs. 2,313 crores owing to the spectacular rise in the net accrual of sterling from the supplies balance of payments on private as well as on Government account, i.e., including the payments on account of the supply of goods and services to His Majesty's and Allied Governments in India against recoverable war expenditure. Though the war ended, the upward trend continued until the total money supply reached Rs. 2,643 crores at the end of 1945-46. From this peak it declined to Rs. 2,569 crores in the following year owing mainly to the sharp decline in Government deposits with the Reserve Bank of India which fell by Rs. 94 crores to Rs. 462 crores at the end of March 1947. There was a net increase of Rs. 26 crores in the cash balances with the public as compared with an increase of Rs. 251 crores in 1945-46 and of Rs. 470 crores in 1942-43. The increase in 1946-47 is small as compared with the increases in preceding years, reflecting a further acceleration in the rise of monetary expansion noticed since the wartime peak of 1942-43. The fall in the rate of expansion is mainly due to the curtailment of the defence expenditure of the Government of India and that on behalf of the Allied Governments to a negative balance of payment during the year.

	(Rupees in crores)			
	August 1939	August 1945	March 1946	March 1947
Notes in circulation	169	1,139	1,219	1,242
Demand deposits of Banks	141	671	728	714
Deposits with Reserve Bank	41	500	643	562
Deposits of banks with Reserve Bank	27	105	77	74
Cash held by banks	7	41	42	43
Total cash reserves of banks	34	146	119	117
Money supply excluding rupee coin and small coin.	317	2,164	2,471	2,403
Circulation of rupee coin	..	149	166	168
Total money supply excluding small coin	..	2,313	2,637	2,569

Sources of Supply.—As regards the sources of additions to money supply during wartime, the total net accrual of sterling from the balance of payments on private as well as Government's account was the largest part of what might be termed as the inflationary potential. The budget deficit on revenue account and the

defence expenditure on capital account were other constituents of this inflationary potential. The addition to the internal debt of the country acts largely as a deflationary influence but has been reflected partly in the high and rising level of Government balances recently and the expansion of the public's cash balances given by

the addition to the aggregate amount of note circulation, rupee coin and small coin and of deposits of banks, scheduled and non-scheduled, measures the extent of monetary inflation. The progressive series of each of these factors since 1939-40, are given below:—

	(Rupees in crores)		
	1939-40	1944-45	1945-46
Total net accrual of sterling to end of period since the beginning of the war	100	1,680	2,026
Budget deficit including Defence Capital Expenditure, progressive		635	795
Total of Both	100	2,315	2,821
Increase in note circulation, rupee coin and small coin circulation, and in total deposits of scheduled banks.	82	1,706	2,048
Increase in deposits with the Reserve Bank, progressive	9	346	596
Total of Both	91	2,052	2,644
Increase in the Rupee debt of the Central Government since March 31, 1939, progressive	18	860	1,200

Absorption of Currency.—The wartime absorption of legal tender currency amounted to Rs. 1,198.64 crores of which notes accounted for Rs. 988.89 crores or 8.5 per cent., rupee coin for Rs. 142.16 crores or 11.9 per cent. and small coin for Rs. 67.59 crores or 5.6 per cent. The decline in the relative as well as the absolute expansion of note circulation which began in 1943-44 was further accelerated in 1946-47. Notes in circulation registered an increase of Rs. 23.26 crores to Rs. 1,242.03 crores at the end of 1946-47 as against Rs. 133.89 crores in 1945-46, Rs. 202.39 crores in 1944-45 and Rs. 238.91 crores in 1943-44. The annual rate of expansion declined to 2 per cent. in 1946-47, from 12 per cent. in 1945-46, 23 per cent. in 1944-45 and 37 per cent. in 1943-44.

With the cessation of the legal tender character of the standard rupee coin with effect from November 1, 1943, the quaternary rupees and Government of India one rupee notes constitute as from that date the total amount of rupee coin in circulation. The aggregate amount in circulation of the Government of India one rupee notes and quaternary rupees stood at Rs. 123.81 crores at the end of October 1943. The circulation of rupee coin rose to Rs. 137.33 crores at the end of 1943-44, to Rs. 147.28 crores at the end of 1944-45, to Rs. 165.73 crores at the end of 1945-46 and to Rs. 167.67 crores at the end of 1946-47. The demand for rupee coin showed a steep fall during 1946-47 the absorption amounting to Rs. 1.94 crores as compared with Rs. 18.35 crores in 1945-46 and Rs. 10.05 crores in 1944-45. During the year the Bank received from the Government of India one rupee notes and coin.

The absorption of small coin was at its height during the war period and amounted to Rs. 67.59 crores between September 1939 and August 1945.

While the year 1945-46 witnessed a steep fall in the demand for small coin, it was not as steep as in the case of rupee coin and notes in the following year. The absorption in 1946-47 was smaller at Rs. 5.91 crores compared with Rs. 9.98 crores in 1945-46 and the record figure of Rs. 19.20 crores in 1944-45.

Seasonal Movements.—A study of the absorption and return of currency since 1920-21 indicates a fairly regular seasonality. The "busy" season when currency is absorbed begins usually in August, September or October and ends with December, January or February. The "slack" season of return of currency usually begins in January, February or March and extends upto July, August or September. In the pre-war years, there was a fair amount of regularity in the periodicity of the busy and the slack seasons. The war time monetary expansion distorted this even movement. The period of absorption that began in September, 1939 did not stop, as usual in the first quarter of 1940, but continued until the end of June, 1940, there being a return of currency from July to September. Again the next period of absorption beginning in October, 1940 extended over June, 1941 followed by a return of currency only during July, 1941. There was continued absorption during the entire period from August, 1941 to June, 1944, a period during which wartime monetary expansion reached its peak. Again there was a return of currency only during July, 1944. The period of absorption once more extended from August, 1944 to June, 1945 a return of currency taking place again in July, 1945. The next period of absorption which began in August, 1945 ended after December, 1945, there being a return of currency during January, 1946. There was an absorption of currency during February to June 1946, a period which is otherwise covered by the slack

season. The return of currency began once again in July, 1946 and ended after September, 1946, there being an absorption of currency from October, 1946 to March, 1947. Thus, the tide of currency expansion during the war, resulting from steadily growing Governmental outlays, submerged the seasonal ebb and flow of currency. However, the month of July appears to mark the bottom of the slack season, and despite the rising wartime trend in currency circulation, the seasonal fall in the demand for currency, reaching its maximum in July asserted itself in 1941, 1944 and 1945 when returns of currency were noticed in that month. With the end of the war, although the tempo of currency expansion slackened appreciably, seasonality did not immediately reappear, and currency absorption was noticed in the slack months of February to June, 1946. The return of currency from July to September, 1946, would, however, appear to indicate the beginning of a process of return to normal conditions and the reappearance of currency trends in conformity with the normal seasonal pattern.

Before the wartime expansion of currency and credit got under way, opposite trends were witnessed in the movements of the volume of currency circulation and of demand deposits in the busy and the slack seasons. Note circulation tended to rise and demand deposits to contract in the busy season and vice versa in the slack season. During the war both deposits and currency circulation continued to expand, the incidence of the seasons being reflected in their varying rates of expansion. There was a greater percentage increase in demand deposits than in note circulation during the first half of the year corresponding generally to the slack season, while a comparatively larger expansion in note circulation than in deposits occurred in the second half of the year, which corresponds to the busy season.

During the year 1946-47, the pre-war tendency for notes in circulation and demand deposits to move in opposite direction during the different seasons reappeared. In the first half of the year notes in circulation declined by 3 per cent. as against an increase of 7 per cent. in demand deposits while in the second half notes in circulation showed a rise of 5 per cent. against a fall of 9 per cent. in demand deposits. This emergence of the normal seasonal movements in currency and bank deposits followed the slowing down in the rate of a monetary expansion witnessed during the war years.

NOTE CIRCULATION

The denominational pattern of note circulation underwent a considerable change as a result of the promulgation of the 11th Denomination Bank Notes (Demonetisation) Ordinance, 1946, issued in January, 1946, under which notes of the denomination of Rs. 500 and above ceased to be legal tender. These notes were exchanged during the year for notes of lower denominations. The amounts of notes of these denominations outstanding on 31st December, 1946 were Rs. 3 lakhs in the case of Rs. 500 denomination, Rs. 131 lakhs of Rs. 1,000 denomination and Rs. 23

lakhs of Rs. 10,000 denomination, as against Rs. 26 lakhs, Rs. 113.37 lakhs and Rs. 18.46 lakhs respectively on 31st December, 1945. The circulation of Rs. 100 denomination fell from Rs. 495.84 lakhs at the end of 1945 to Rs. 488.71 lakhs at the end of 1946. Its proportionate share in the total circulation also fell from 41.2 per cent of the gross circulation of all notes except Rs. 10,000 at the end of 1945 to 38.8 per cent at the end of 1946. Against this there was a greater proportionate increase in the circulation of Rs. 10 and Rs. 5 denominations, whose share of the gross circulation, excluding Rs. 10,000 notes, rose from 35.3 per cent and 12.8 per cent respectively at the end of 1945 to 43.3 per cent and 15.7 per cent at the end of 1946. This was in reversal of the trend noticed since 1939 for the proportion of Rs. 10 and Rs. 5 denomination to decline as against the tendency of the proportion of notes of Rs. 100 denomination and above to rise. Rs. 2 denomination also maintained its tendency to rise, the circulation at the end of 1946 being Rs. 25.42 lakhs against Rs. 14.45 lakhs at the end of 1945, the proportionate share rising from 1.2 per cent to 2 per cent. The steep fall in the absorption of all denominations of small coin excepting pice pieces noticed last year continued during the year under review and extended to pice pieces also.

On the eve of separation of Burma from India, an Agreement, embodied in the India and Burma (Burma Monetary Arrangements) Order, 1937, was arrived at between the two countries, with the object of causing the least possible disturbance in the currency systems of India and Burma during the initial stages of separation. Under this Order, the currencies of both countries were to continue to be closely linked and managed by the Reserve Bank of India. Under the stress of the Japanese war, the Government of Burma and the office of the Reserve Bank of India in Rangoon temporarily moved to India. In June, 1942, the responsibility for Burma notes was transferred from the Reserve Bank of the Government of India along with the assets held by the Bank as cover against these notes, the intention being to hand over the liability along with the assets to the Government of Burma as soon as they re-established themselves in Burma. The outstanding liability for the pre-war issues of Burma notes, which had been transferred from the Reserve Bank of India to the Government of India in June, 1942 was transferred together with the assets held against them, to the Government of Burma in June, 1946.

In June, 1946, the Government of Burma decided to sever the currency link with India and to establish an independent currency to be managed by a Currency Board in London with effect from 1st April, 1947. Authority was taken by an Order-in-Council in August, 1946 to amend the India and Burma (Burma Monetary Arrangements) Order, 1937 with a view to terminating the joint monetary arrangements with India by six months' notice. This notice, which was served on the Governor-General with effect from 1st October, 1946, expired on 31st March, 1947 and with it the currency system of Burma was delinked from that of India. In order to enable the Reserve Bank of India to

wind up its affairs in Burma, the Reserve Bank of India Act, 1934 was amended in March, 1947 to provide for the deletion of all references to Burma appearing in the Act. The Reserve Bank's office in Rangoon formally ceased to function in that country on 1st April, 1947.

In view of the ample time given to all bonafide holders of high denomination notes, which had been demonetised on January 12, 1946, to exchange their holdings, the Government of India announced on February 28, 1947 that no further claim for their exchange would be received after that date. The total notes exchanged upto March 31, 1947 amounted to Rs. 134,72,97,000 consisting of Rs. 21,70,000 worth of Rs. 5,000 denomination, Rs. 112,44,87,000 of Rs. 1,000 denomination and Rs. 22,06,40,000 of Rs. 10,000.

EXCHANGE CONTROL

The exigencies of the war necessitated the institution of strict exchange control which was exercised by the Exchange Control Department of the Reserve Bank of India. Payments and remittances were allowed freely to countries within the sterling area but the same system of control through the medium of banks authorised to deal in foreign exchange was maintained for transactions with countries outside the sterling area. Sales of the currencies of countries outside the sterling area continued to be restricted, while exports to these countries were only permitted provided the foreign currency proceeds were sold to the authorised dealers in foreign exchange thus ensuring the full conservation and mobilisation of the country's foreign exchange resources. Despite the end of the war and the resumption of financial and commercial relations with many countries previously under enemy occupation, the Exchange Control policy remained unaffected.

On March 25, 1947, Foreign Exchange Regulation Act was enacted to retain the powers granted under the Financial Provisions of the Defence of India Rules with certain modifications. It closely followed the Exchange Control Bill in the United Kingdom. The effect of the new measure is to continue the existing system of exchange control. It is an enabling measure giving wide powers to the Central Government and the Reserve Bank to control transactions in foreign exchange and securities and the import and export of bullion and currency notes. The Finance Member in his speech at the second reading of the Bill said that it was the intention of Government to allow payments for current transactions freely but to restrict transfers of capital unless directly connected with the furtherance of trade, and to aim at making the rupee multilaterally convertible as soon as practicable. In the meantime, in order to maintain India's balance of payments in equilibrium, it was necessary to continue import control and also to take advantage of the transitional period allowed by the Fund rules, under which India could continue exchange control for a period of three years.

Rupee Unlinked.—In terms of the Anglo-American Loan Agreement signed in July, 1946, the United Kingdom undertook to negotiate with the holders of the sterling balances for the settlement of these balances and to make

currently-earned sterling multilaterally convertible for current transactions, within one year of the signature of the Agreement. Consequent on this obligation to negotiate settlement of the sterling balances, a delegation from the United Kingdom visited India in February for a preliminary discussion.

Another factor conditioning the background to foreign exchange relationships is the establishment of the International Monetary Fund and the International Bank for Reconstruction and Development. Consequent on India's membership of the Fund and the fixing of par values in accordance with the Articles of the Fund Agreement, sterling has ceased to be the sole determinant of the external value of the rupee. The convertibility of the rupee into other currencies was therefore provided, for by the enactment of the Reserve Bank of India (Second Amendment) Act, 1947, which was passed by the Central Legislature in April, 1947. The amendment repealed Sections 40 and 41 of the Reserve Bank of India Act which had obliged the Bank to buy and sell foreign exchange at such rates and on such terms and conditions as the Central Government may determine from time to time in conformity with their obligations as a member of the Fund.

BRETTON WOODS ORGANISATIONS

The year 1945-46 witnessed the establishment of the International Monetary Fund and the International Bank for Reconstruction and Development, as in terms of the Final Act, countries representing more than 65 per cent. of the total of the quotas had signed the Bretton Woods Agreement before December 31, 1945. In order to secure for India the advantages of original membership of the Fund and of the Bank, the Government of India promulgated an Ordinance on December 24, 1945, providing themselves with the necessary powers for signing the Agreement. This was done on December 27. The inaugural meeting of the Boards of Governors of the Fund and of the Bank was held at Savannah (Georgia) in March 1946. It dealt with the procedural steps necessary before these institutions could begin operations, and the year under review witnessed the process of the setting up of these two organisations. India, by virtue of being one of the five largest quota holders appointed one Executive Director on the Fund and one on the Bank. In September the thirty-nine members of the Fund were notified to communicate to the Fund, within thirty days, the par value of their currencies, expressed in gold or U.S. dollars, and based on the rates of exchange that prevailed sixty days before the Fund Agreement came into effect. According to the Articles of Agreement, the Fund could notify a member, or a member could notify the Fund that the par value communicated by it was unsatisfactory and could not be maintained without excessive dependence on the Fund. In such cases agreement on a suitable par value was to be reached between the Fund and the member within a reasonable period determined by the Fund. Before making a final decision as to the most satisfactory rate for the rupee, the Government of India invited proposals and comments from interested bodies and persons. After a thorough examination of the various

proposals had been made, the Government decided that the existing par value should be maintained, which, based on the rupee-sterling rate of 1s. 6d. and the London/New York parity of 4.03 dollars per pound, works out to Rs. 330 : 852 per \$100, or, with the U.S. Treasury's buying rate for gold of \$35 per fine ounce, the gold content of the rupee equals 0.268601 grammes. This par value was accepted by the Fund. On 18th December, 1946, the schedule of par values of the currencies of member countries was announced by the Fund.

India's Contribution.—India was called upon to pay to the Fund its subscription of \$400 million by 1st March, 1947. This had to be paid partly in the form of gold and partly in the form of rupees. Under the rules of the Fund, the gold subscription had either to be 25 per cent of a country's quota or 10 per cent of its net official holdings of gold and U.S. dollars whichever was less. As 10 per cent of India's gold and dollar holdings was the lower figure, gold of this value was transferred to the Fund. Of the rupee subscriptions, a certain amount was credited to the Fund's account in the books of the Reserve Bank and the balance was paid in the form of non-negotiable non-interest-bearing promissory notes convertible on demand into rupees by crediting the par value to the account of the Fund. After the receipt of the subscriptions, the Fund announced that it was in a position to commence operations and sell the currencies of members in accordance with its rules and regulations from 1st March, 1947.

In October, 1946, the Central Legislature, while approving the payment of India's subscription to the Bank, also approved the continued membership of the Fund and the Bank. The balance due on account of 2 per cent of India's subscription amounting to \$8,000,000 of which \$10,000, was paid on 27th December, 1945, was paid in U.S. dollars on 12th August, 1946. In payment of the 2 per cent of its capital subscriptions, the Bank received until the time of the first annual report \$143,786,883.70 in gold and U.S. dollars out of a total of \$153,400,000. Another call was made for the payment of 5 per cent of the subscriptions payable in the local currencies of the members by 25th February, 1947. India paid \$20,000,000 (Rs. 6,61,70,400) on account of this, partly in cash and partly in non-negotiable non-interest-bearing securities. Thus during the year under review, India paid \$60,000,000 to the Bank (15 per cent of its capital subscription), of which \$52,000,000 were paid in Indian currency.

Limited Help.—The present position is that certain countries of key importance in the world economy are rapidly running out of exchange resources, while the magnitude of the reconstruction task with which they are faced is far greater than was foreseen in 1945 and 1946. While the task is largely one of self-help, a continuance of the flow of imports is necessary to enable the countries engaged in reconstruction to utilize fully their own productive resources. The Fund and the Bank can give only limited financial help. If the reconstruction is not completed, the constructive efforts already made for international co-operation to attain greater production and higher living standard will be jeopardized. The world is approaching a

turning point at which the alternatives are clear. Either we seek through a concerted effort, the goals of expanded production and higher standards of living or we resign ourselves to economic conflict and impoverishment.

In the year ended June 30, 1947, five additional members were admitted to membership in the Fund, making a total of 44 members and two further applications were received. In accordance with the Fund agreement, the Fund has also taken action in prescribing a margin for gold transactions by members. This margin has been fixed at 1 of one per cent above and below par, exclusive of certain specified charges. These margins are directed at stabilizing the price of monetary gold for all members and preventing any significant divergencies from part of the external value of member currencies through transactions in gold. In June 1947, with a view to preventing the extension of external gold transactions at premium prices, which generally involve a loss of gold from monetary reserves and which might contribute to the undermining of exchange stability, the Fund requested all its members to co-operate in the elimination of such transactions.

A Catalyst: It must be stated that the International Bank cannot, and was never intended to provide the external financing required for all the projects of reconstruction and development of the post-war years. Its function is to provide a catalyst by which production may be generally stimulated and private investment encouraged. The Bank has upto now placed particular emphasis on the problems of European recovery. To date the loan requests from European countries have been primarily for reconstruction programmes and much progress has already been made towards the reconstruction of the nations of Europe, though it has not been uniform.

The capital funds of the Bank required to be paid in by member governments amount to only 20 per cent of the Bank's total subscribed capital; of the \$1,599,985,000 paid in capital only \$727,075,000 is represented by U.S. dollars, the remainder being in local currencies of the various members other than the U.S. At present, the demand is primarily for U.S. dollars and the availability of the Bank's capital funds for lending is practically limited to approximately 725 million dollars. For loanable resources in excess of this amount, the Bank must look to the sale of its securities in the private investment market, for the time being predominantly the U.S. market. However, it will not be possible for the Bank to sell its securities in the market unless investors have confidence that their funds will be used only for economically sound and productive purposes. On July 15, 1947, the Bank made the first public offering of its bonds consisting of \$100 million ten-year 2½ per cent and \$150 million 25 year 3 per cent at par. They were substantially oversubscribed. At present, however, the U.S. is the only market available in which the Bank's securities can be sold in large amounts. It may, however, be reasonably anticipated that in the future, as conditions improve, non-American capital may be tapped by the Bank's borrowing operations.

Coinage

THE act of 1818 marked the beginning of the Indian Coinage System when the silver rupee of 180 grains troy 11/12ths fine was made unlimited legal tender by the East India Company for South India where gold coins had been in circulation. Seventeen years later, the Gold and Silver Coinage Act was enacted to extend the unlimited legal tender character of the rupee to the whole of India (which then included Pakistan) by substituting monometallism for bimetalism.

Silver.—Mintage of silver rupees was undertaken in this country in 1835. It continued till June 26, 1893 when the Indian Coinage Act of 1870 was amended with a view to closing the mints for the unrestricted coinage of silver for the public. For four years, no Government rupees were coined with the object of attaching higher value to it as coin than bullion; but recoinage was again undertaken in 1897 and 1898 following the conclusion of arrangements with Bhopal and Kashmir for replacing the State currency by Government rupees. In 1899 there was again no coinage of rupees; but the need for it in the following year resulted in resuming its mintage which continued almost uninterruptedly till 1922 when it was suspended. The Currency Act of 1927 made the silver rupee and the silver half-rupee legal tender without limit, but open to issue at the will of Government.

In 1940 the then Government of India decided, as a measure of conserving silver resources as far as possible in view of the rapid absorption of silver price, to adopt the fineness of one-half silver and one-half alloy for all three coins. Incorporated in the new rupee was a new security edge device consisting of the insertion of a shallow re-entrant in the centre of the milled edge which was considered to be a virtually absolute safeguard against counterfeiting.

All Victoria and King Edward VII rupee and half rupee coins of the old fineness were withdrawn with effect from April 1, 1941 and May 31, 1942, respectively and King George V and King George VI standard silver rupees were called back with effect from May 1, 1943. These announcements marked the end of the policy which originated over 50 years ago of converting the rupee which had previously been a full value silver coin into a token. The return of coin was, however, meagre as, since the end of March 1943, the average price of silver was higher than the melting point of the standard silver rupee.

As standard silver coins have been demonetised, it is no longer illegal to hoard or melt them or to purchase or sell them at a value other than their face value; consequently, large quantities of coin have been hoarded or melted and sold for their bullion content. Under the Indian Coinage Amendment Act 1918, silver two anna pieces are no longer coined and issued, but coins previously issued continue to be legal tender.

New one-rupee notes were issued through the Reserve Bank of India in July 1941; the issue of these notes does not affect the earlier issue, the Government of India one-rupee notes of the 1935 King George V pattern which continue to be legal tender.

Between 1835 and 1946, the whole rupees coined and issued from the Indian mints totalled 755,29,90,130 comprising 16,39,78,572 of William IV, 352,13,80,138 of Victoria, 98,28,53,552 of Edward VII, 180,74,83,517 of George V, 98,02,178 of George VI standard and 106,74,92,173 of George VI quaternary standard.

The issue of quaternary rupee coin was discontinued from June 1946 when the reform for the introduction of the nickel rupee was launched.

Coins of smaller denominations, viz., the half-rupee, quarter-rupee and one-eighth of a rupee used to be of the same metal as the standard coin and they contained exactly one-half, one-fourth and one-eighth of the weight of pure silver in a rupee when they were first issued.

On March 11, 1940, Section 5 of the Indian Coinage Act of 1906 was modified by an Amending Act. The amendment reduced the silver content of the four-anna coin from 11/12 or 41-1/2 grains of fine silver to 50 per cent or 22-1/2 grains. This brought the silver four anna coin into line with the British subsidiary coinage. With a view to preventing counterfeiting, the Government of India directed on July 15, 1943, that the quarter-rupee coin minted during and after August 1943 should have the same security edge as quaternary rupees and half rupees.

In 1941-42, the design of the half-rupee, coin of 1941 and after was altered so as to make it conform to that of the quaternary rupee coin. The minting of the quaternary half and quarter rupee silver coins was, however, suspended by a notification in May 1946 in order to enable the Government to discharge the obligation to return in kind, within five years of the end of the war, the 226 million ounces of silver borrowed from the U. S. Government between 1943 and 1945.

Nickel.—By a notification issued on May 23, 1946 the Central Government directed that the half and quarter rupee coins of the same size and weight as the quaternary coins shall be printed in pure nickel.

The Act of 1906 also provided for the coinage of a nickel coin. It was directed that the nickel one-anna piece should thenceforth be coined at the Mint and issued. The notification also prescribed the design of the coin, which has a wavy edge with twelve scallops, the greatest diameter of the coin being 21 millimetres and its least diameter 19.8 millimetres. The advisability of issuing a half-anna nickel coin was considered by the Government of India in 1909 but after consultation with Local Governments it was decided not to take action in this direction until the people had become thoroughly familiar with the present one-anna coin. The two-anna nickel coin was introduced in 1917-18; and the four-anna and eight-anna nickel coins in 1919. The eight-anna nickel was withdrawn from circulation in 1924 but is still being received at issue offices only.

On account of war activities, the demand for small coin greatly increased and in January 1942 the Government of India issued a new

half-anna coin which economises metal and is convenient to the public. Further with a view to economising the use of nickel, it was decided to mint new half-anna pieces and the one anna coin and the later two anna coin in a nickel-brass alloy instead of the cupro-nickel alloy. The notification of January 24, 1942, provided for the mintage of the new half-anna coin of a square shape and equal to three-fourths the weight of one anna piece. According to this notification, the half-anna and one anna pieces were minted in nickel-brass composed of 79 per cent. copper, 20 per cent. zinc and 1 per cent. nickel. A similar change in the metallic contents of two anna piece was announced on March 21, 1942.

Towards the end of November 1945, the Government of India decided that further requirements of two anna and one anna pieces should be minted in the cupro-nickel alloy instead of nickel-brass alloy which had been adopted as a wartime expedient and later found unsatisfactory.

In May 1946 the Central Government authorised the minting and issue of half and quarter rupee coins in pure nickel owing to "inadequate supplies of silver in the open market and the prevailing high prices in India." These new coins were exactly the same size and weight as the early silver coins with designs usually adopted for decimal coins of 50 cents and 25 cents respectively. The new coins have no security edge and have been designed with the margin lettering and head of the King on one side and the name of the country, the denomination in three languages, English, Devanagari and Urdu, with the figure of an Indian tiger on the reverse.

The efforts started in 1906 to avoid the wasteful use of a metal of high value like silver for coinage achieved their objective in 1947 when the Indian Coinage Act was amended further with a view to authorising the Government to issue all coins including the rupee in any metal. In the case of the half-rupee coin, the existing position was that the silver half-rupee was legal tender for any amount but the nickel half-rupee only for a sum not exceeding one rupee, under the same Act and, all half-rupee coins are legal tender for a sum not exceeding ten rupees, while coins of smaller denominations would continue to be legal tender for one rupee as before.

Eight anna cupro-nickel coins were withdrawn with effect from October 1, 1924 and are now received at the Issue Offices only.

Copper and Bronze.—Copper coinage was introduced into the Bengal Presidency (now East and West Bengal) by Act XVII of 1835 and into the Madras and Bombay Presidencies by Act XXII of 1844. The weight of the copper coins struck under Act XXIII of 1870 remained the same as it was in 1835. It was as follows:—

	Grains troy.
Double pice or half-anna	200
Pice or quarter-anna	100
Half-pice or one-eighth of an anna	50
Pie being one-third of a pice or one-twelfth of an anna	33 1/3

The weight and dimensions of bronze coins were as follows:—

	Standard weight in milli-grains troy.	Diameter in metres.
Pice	75	25.4
Half-pice	37 1/2	21.15
Pie	25	17.45

Since 1924 double pice coin has been and is being withdrawn from circulation but it is still received at Treasuries and Issue Offices.

With a view to protecting further issues of pice against hoarding resulting from the black market value of the metallic contents rising above the face value, the Government of India issued in February 1943 a new design of pice, which economises the metal and is expected to be convenient to the public. The Finance Department notification dated February 23, 1943, provided for the mintage of the new pice with a smaller diameter and a circular hole in the centre, reduced in weight from 75 grains to 35 grains and with a metallic composition of 97 per cent. copper, 2 1/2 per cent. zinc and one-half per cent. tin instead of the former fineness of 95 1/2 per cent. copper, 3 per cent. tin and 1 1/2 per cent. zinc. The notification also provided for the discontinuance of the coinage of half-pice and pie pieces. The new pice was issued from the Bombay office of the Reserve Bank on February 1, 1943.

Gold.—Since 1870 there has been no coinage of double mohurs in India and the last coinage of single mohurs suspended as from 1891-92 was undertaken for a short period in 1918 only. The Currency Act of 1927 provided that "gold coins whether coined at His Majesty's Royal Mint or at any Mint established in pursuance of a proclamation of His Majesty's Royal Mint, shall not be legal tender in British India but such coins shall be received at any Government Currency Office..... at the rate of 8,47,512 grains troy of fine gold per rupee."

Decimisation of the Coinage.—With a view to simplifying accounting and facilitating calculations the Government of India have under consideration the introduction of a decimal system of coinage in India. The present occasion, calling for a huge recoinage programme necessitated by the unpopularity of the nickel brass coin introduced in 1942 as a wartime measure, is considered to be most opportune for the proposed reform. The proposals under this system are that the rupee would remain unaltered and the half-rupee and the quarter-rupee, while retaining their present shape, size and weight, would be issued as 50 cents and 25 cents coins. The existing lower denominations of small coin would, however, be discarded, and instead, cupro-nickel coins of 10 cents, 5 cents and 2 cents and bronze coins of 1 cent and, if necessary, 1/2 cent will be issued. A bill incorporating the above changes was introduced in the Central Legislative Assembly on the 18th February, 1946 and has been circulated to elicit public opinion.

Banking

MODERN banking in India owes its origin to the British agency houses operating in Bombay and Calcutta in the eighteenth century. The banks in those days were connected with the introduction of their notes. The crisis that overtook the agency houses in the first half of nineteenth century had an adverse effect on this type of banking. Broadly, the history of Indian banking may be divided into three sections, one connected with the influence of the Presidency Banks, second following the establishment of the Imperial Bank of India in 1921, and third under the guidance of the Reserve Bank of India.

PRESIDENCY BANKS

The history of the Presidency Banks again falls into three well-defined stages. The Bank of Bengal was started in 1806, and it took 34 years more before the Bank of Bombay came into existence. The Bank of Madras however came only three years later in 1843. Prior to 1862, these Banks had the right of note issue and their main activity was to facilitate the borrowing operations of the East India Company and the financing of the trade of British merchants. Naturally, they were subject to Government control and their business was restricted by the terms of their charter.

In 1862, these banks were deprived of the right of note issue and were authorised to transact paper currency business as agents of Government. As compensation for the loss of

their right of issue, they were given the use of the Government balances and the management of the treasury work in the cities and towns where they had their branches. Four years later, however, they were deprived of the paper currency business and by the Act of 1876 severe restrictions were imposed on their business. This system continued till 1920 when the Presidency Banks were merged into the Imperial Bank of India.

IMPERIAL BANK

Under the Imperial Bank of India Act of 1920, as amended by the Amendment Act of 1934, the control of the Bank is entrusted to a Central Board of Directors with Local Boards at Calcutta, Bombay and Madras and such other places as the Central Board may determine. A more detailed reference to the salient provisions in the Act will be found in the earlier editions of the Year Book; but it may be mentioned here that under the agreement with the Reserve Bank of India, the Imperial Bank continues to be the sole agent of the Reserve Bank at all places in the Indian Dominion where there was a branch of the Imperial Bank and no branch of the Banking Department of the Reserve Bank of India before 1934.

The Imperial Bank has at present 185 branches and over 200 sub-offices. Mr. A. R. Chisholm is the Managing Director, and Mr. N. G. Irvine is the Deputy Managing Director. The progress of the Bank is summed up below:—

(Rs. in lakhs)

	Capital	Reserve	Govt. Deposits	Other Deposits	Cash	Investments	Dividend for year
30th June							
1921	547	371	2,220	7,016	3,433	1,652	16 per cent.

Reserve Bank of India

The idea of a central banking institution for the Indian sub-continent was mooted as early as in 1836 and was the subject of a minute by Mr. James Wilson, the then Finance Member, in 1859. Eight years later, Mr. Dickson, the then Secretary of the Bank of Bengal, submitted detailed proposals for the amalgamation of the three Presidency Banks. The question was again revived in 1913 by the Chamberlain Commission which went into the Indian currency and finance and was later thrashed out by the Hilton Young Commission. The latter came to the conclusion that central banking functions should not be combined with commercial banking and since it did not wish to rob the Imperial Bank of its Commercial functions on the ground that such a step would arrest the progress of the country in one important sphere in which progress was most urgent and vital, it recommended a special central bank.

But the question remained undecided for nearly seven years owing to differences on its constitution. The matter was dropped after the introduction of two bills in the central Legislature and was reopened again in 1931 following the strong emphasis laid by the Central Banking Inquiry Committee in that year on the establishment of a Central Bank. The White Paper on Indian reforms carried the matter a step further when it laid it down as a condition that before responsibility in respect of finance was introduced at the centre a Reserve Bank free from political influence should be set up.

The Reserve Bank of India Act was passed by the Legislative Assembly and received the assent of the Governor-General on 8th March 1934 and the Bank began to function on 1st April 1935. From this date, the Reserve Bank took over the management of the Currency Department of the Government of India by the creation of a special department known as the Issue Department. The assets of the Gold Standard Reserve were transferred to the Bank and were combined with the assets of the Currency Department. On July 1st the Banking Department was opened and the scheduled banks deposited the required percentage of their demand and time liabilities. The Clearing House was transferred from the Imperial Bank to the Reserve Bank as from this date.

The share capital of the Reserve Bank is 5 crores of Rupees in shares of Rs. 100 each, fully paid up. The Reserve Fund of Rupees five crores is provided by Government to the Bank in the form of Government Rupee Securities.

The Bank maintains share registers at its offices at Bombay, Calcutta, Delhi and Madras.

Management.—The general superintendence and direction of the affairs and business of the Bank is entrusted to a Central Board of Directors which exercises all powers and does all acts and things which may be exercised and done by the Bank. The Board is composed of:—

(a) A Governor and two Deputy Governors appointed by the Central Government after consideration of the recommendations made by the Board.

(b) Four Directors nominated by the Central Government.

(c) Eight Directors elected on behalf of the shareholders on the various registers.

(d) One Government official nominated by the Central Government.

The Governor and Deputy Governors are the executive heads, and hold office for such term not exceeding five years as the Central Government may fix when appointing them, and are eligible for re-appointment. A Local Board is constituted for each of the five areas.

FUNCTIONS

The Bank is authorised to carry on and transact the following commercial business, viz:—The accepting of money on deposit without interest; the purchase, sale and rediscount of bills of exchange and promissory notes with certain restrictions; the making of loans and advances, repayable on demand but not exceeding 90 days, against the security of stocks, funds and securities (other than immovable property) against gold coin or bullion or documents of title to the same and such bills of exchange and promissory notes as are eligible for purchase or rediscount by the Bank; the purchase from and sale to scheduled Banks of sterling in amounts of not less than the equivalent of Rs. 1 lac; the making of advances to the Central Government and to Provincial Governments repayable in each case not later than three months from the date of making the advance; the purchase and sale of Government securities of the United Kingdom maturing within ten years from the date of purchase; the purchase and sale of securities of the Government of India or of a Provincial Government of any maturity or of a local authority in India and Pakistan or of certain States in the sub-continent which may be specified.

The Bank is authorised to act as Agent for the Secretary of State in Council, the Central Government or any Provincial Government or State in India for the purchase and sale of gold and silver; for the purchase, sale, transfer and custody of bills of exchange, securities or shares; for the collection of the proceeds, whether principal, interest or dividends, of any securities or shares; for the remittance of such proceeds by bill of exchange payable either in India or elsewhere, and for the management of public debt.

Bank Notes.—The sole right to issue bank notes in British India is vested in the Reserve Bank and at commencement the Bank shall issue currency notes of the Government of India supplied to it by the Central Government and on and from the date of such transfer the Central Government shall not issue any currency notes. The issue of bank notes shall be conducted by the Bank in an Issue Department which shall be separated and kept wholly distinct from the Banking Department.

The Bank shall sell to or buy from any person who makes a demand in that behalf at its office in Bombay, Calcutta, Delhi, Madras or Rangoon, sterling for immediate delivery in London at a rate not lower than 1*sh.* 5 ⁴/₆₄*d.* and not

higher than 1*sh.* 6 ³/₁₆*d.* respectively; provided that no person shall be entitled to demand to buy or sell an amount of sterling less than ten thousand pounds. In April 1947 The Reserve Bank Act was amended consequent on India's membership of the International Monetary Fund and the fixing of the par value of the rupee. The amended Sections 40 and 41 of the Act now require the Reserve Bank to buy and sell foreign exchange at such rates and on such terms as the Central Government may determine from time to time.

The Bank shall make public from time to time the standard rate at which it is prepared to buy or re-discount bills of exchange or other commercial paper eligible for purchase under the Act.

The Bank will publish the accounts of both the Issue and Banking Departments weekly in the *Gazette of India*.

Every bank included in the Second Schedule shall maintain with the Bank a balance the amount of which shall not at the close of business on any day be less than five per cent. of the demand liabilities and two per cent. of the time liabilities of such bank in India and Burma as shown in the return referred to in sub-section (2).

Allocation of Surplus.—After making provision for bad and doubtful debts, depreciation in assets, contributions to staff and superannuation funds, and such other contingencies as are usually provided for by bankers, and after payment out of the net annual profits of a cumulative dividend at such rate not exceeding five per cent. per annum on the share capital as the Central Government may fix at the time of the issue of shares, a portion of the surplus shall be allocated to the payment of an additional dividend to the shareholders calculated on the scale set forth in the Fourth Schedule and the balance of the surplus shall be paid to the Central Government:

Provided that if at any time the Reserve Fund is less than the share capital, not less than fifty lakhs of rupees of the surplus, or the whole of the surplus if less than that amount shall be allocated to the Reserve Fund.

(A) If the maximum rate of dividend fixed under section 47 is five per centum and so long as the share capital of the Bank is five crores of rupees—

(1) if the surplus does not exceed four crores of rupees—Nil

(2) if the surplus exceeds four crores of rupees—

(a) out of such excess upto the first one and a half crores of rupees a fraction equal to one-sixtieth;

(b) out of each successive additional excess up to one and half crores of rupees—one-half of the fraction payable out of the next previous one and a half crores of excess.

Provided that the additional dividend shall be a multiple of one-eighth of one per cent. on the share capital, the amount of the surplus allocated thereto being rounded up or down to the nearest one-eighth of one per cent. on the share capital.

(B) If the maximum rate of dividend fixed

under section 47 is below five per centum, the said fraction of one-sixtieth shall be increased in the ratio of the difference between six and the fixed rate to unity.

(C) When the original share capital of the Bank has been increased or reduced the said fraction of one-sixtieth shall be increased or diminished in proportion to the increase or reduction of the share capital.

Notwithstanding the provisions of section 47 of the Reserve Bank of India Act, 1934 (II of 1934) and of the Fourth Schedule to that Act (given above), the aggregate of the rate at which payment of the cumulative dividend and the additional payable to shareholders of the Bank under the said provisions is made shall not, so long as this Ordinance (the Reserve Bank of India Limitation of Dividend Ordinance of 1943) remains in force, exceed four per cent. per annum on the share capital of the Bank; and the balance of the surplus of the net annual profits of the Bank shall be paid to the Central Government.

Agricultural Credit Department.—The Bank shall create a special Agricultural Credit Department the functions of which shall be—

(a) to maintain an expert staff to study all questions of agricultural credit and be available for consultation by the Central Government [Provincial Governments], provincial co-operative banks, and other banking organisations.

(b) to co-ordinate the operations of the Bank in connection with agricultural credit and its relations with provincial co-operative banks, and any other banks or organisations engaged in the business of agricultural credit.

(1) the Bank shall, at the earliest practicable date and in any case within three years from the date on which this Chapter comes into force, make to the Central Government a report, with proposals, if it thinks fit, for legislation, on the following matters, namely:—

(a) the extension of the provisions of this Act relating to scheduled banks to persons and firms, not being scheduled banks, engaged in British India in the business of banking and

(b) the improvement of the machinery for dealing with agricultural finance and methods for effecting a closer connection between agricultural enterprise and the operations of the Bank.

(2) When the Bank is of opinion that the international monetary position has become sufficiently clear and stable to make it possible to determine what will be suitable as a permanent basis for the Indian monetary system and to frame permanent measures for a monetary standard it shall report its views to the Central Government.

The full text of the Act will be found in the earlier editions of the Year Book.

Nationalisation.—A proposal for the nationalisation of the Reserve Bank came up for consideration before the Central Assembly through a resolution on February 18, 1947. It may be recalled that the question as to whether the Reserve Bank of India should be a State or a shareholders' Bank aroused some controversy

at the time when the first Reserve Bank Bill for constituting a shareholders' Bank on the lines recommended by the Hilton-Young Commission was proposed by Government in January 1927. At that time, the majority of the members opposed the Bill on the ground that a State Bank alone would inspire confidence among the people and that a shareholders' Bank would make domination by private financial interests possible. An influential minority, however, argued that a shareholders' institution alone would ensure freedom from interference in its working by political parties. The Government was prepared to accept the majority proposal but as no agreement was possible on the composition of the Directorate, the Bill was not proceeded with.

After the war, with the nationalisation of the Bank of England but more particularly with the formation of the Interim Government at the Centre, the demand for the nationalisation of the Reserve Bank of India was revived in certain sections of the press and the non-official resolution mentioned above was the logical sequel. It was, however, withdrawn on the assurance of the Finance Member that Government would consider the proposition most carefully and sympathetically and if they were convinced that nationalisation of the Bank would be in the country's interests, they would not hesitate to take steps in that direction. This assurance was followed by an announcement by the Finance Member in the course of the budget speech on February 28, 1947 that Government had taken a decision to nationalise the Reserve Bank of India. He observed: "I have since given further thought to the matter and am convinced that the advantages of nationalisation outweigh any possible disadvantages. I have, therefore, come to the conclusion that the Reserve Bank of India should be nationalised, the time and manner of effecting the change being a matter of separate consideration in due course."

CENTRAL BOARD OF DIRECTORS

Governor.—Sir Chintaman D. Deshmukh.

Deputy Governors.—C. R. Trevor, M. G. Mehri.

Directors Nominated under Section 8 (1) (b).—Sir Homi Mehta, Bombay; Khan Bahadur Adam Hajeer Mohamed Sait, Madras; Sir Syed Maratib Ali, Lahore.

Directors elected under Section 8 (1) (c).—Bombay Register.—Sir Purshotamdas Thakurdas, Kashirbhai Lalbhai.

Calcutta Register.—B. M. Birla, K. P. Goenka.

Delhi Register.—Sir Shri Ram, Satya Paul Virmani.

Madras Register.—C. R. Srinivasan.

Director Nominated under Section 8 (1) (f).—V. Narahari Rao, Secretary, Finance Department, Government of India.

REPORT FOR YEAR

The report of the Central Board of Directors of the Reserve Bank of India for the year ended June 30, 1947 states that after payment of expenses and provision for sundry liabilities the net profit amounts to Rs. 8,02,27,300-15-11 as compared with Rs. 13,63,43,150-13-2 in the

preceding year. Of this amount Rs. 20 lakhs will be utilised for paying a dividend of four per cent. and the balance will be paid to the Central Government.

The year under review showed a further decline in the total number of shareholders from 45,692 on June 30, 1946 to 45,031 on June 30, 1947. The tendency noticed since 1944 for the number of shares on the registers of the Bombay and Calcutta areas to expand at the expense of the remaining areas continued; the Calcutta area recorded a large rise of 1689 as against a comparatively smaller increase of 308 in the Bombay area. The number of shares on the Madras and Delhi registers showed a decline of 1382 shares and 265 shares respectively.

Notes and Coins.—During the accounting year, no alterations were made in respect of paper, size, etc., of notes issued by the Bank. In the last year's report, mention was made of the introduction by the Government of India of half and quarter-rupee coins minted in pure nickel and also of the discontinuance of the issue from June 1946 of the quaternary-rupee coin with a view to introducing the nickel rupee. Under the authority given by the Amended Government issued on May 24, 1947 two Indian Coinage Act notifications authorising the minting of rupee coins, in pure nickel. These rupees were first issued on June 2, 1947. They are similar in design to the pure nickel half and quarter-rupees and are of the same weight as the quaternary rupee coins, though slightly smaller in diameter.

Applications for the exchange of high denomination notes demonetised under the High Denomination Bank Notes Ordinance of January 12, 1946 continued to be received. In view of the ample time already given to all bona fide holders of these notes, the Government of India announced on February 28, 1947 that no further claim would be received after that date. Out of a total of Rs. 143.97 crores of high denomination notes in circulation on January 11, 1946, notes of the value of Rs. 134.90 crores were exchanged upto the end of June 1947.

Early in 1945 currency affairs in Burma were placed in charge of the British Military Administration in Burma. Following the termination of the military regime on January 31, 1946, the Government of Burma took over responsibility for the note issue in Burma, the Reserve Bank continuing to act as banker to Government. In June 1946, the Government of Burma decided to sever this currency link and on March 31, 1947, the currency system of Burma was delinked from that of India.

Exchange.—There were no changes during the year in the principles on which Exchange control was operated. The main changes in the United Kingdom regulations affecting Indian trade were the provision of facilities for the finance of business in sterling with merchants resident in a country other than that for which goods were intended or from which they originated and for the finance of trade between two non-sterling area countries through sterling area intermediaries. The Bank of England also established a system of "transferable account" for Belgium, Holland, Portugal and Brazil under which the monetary authorities in these countries undertook that all transactions

passing through these accounts would be limited to current payments. A step towards making sterling multilaterally convertible was taken on July 15 when the Bank of England agreed to allow transfers to take place between the "transferable" accounts of Argentina, Canada, the U. S. A. sterling accounts and those of Belgium, Holland, Portugal and Brazil.

The Foreign Exchange Regulation Act, which came into force on March 25, 1947, conferred wide powers on the Central Government and the Reserve Bank in respect of transactions in foreign exchange and securities, import and export of bullion and currency notes.

Consequent on India's membership of the Fund and the fixing of the par value of the rupee, sterling has ceased to be the sole determinant of the external value of the rupee. The Reserve Bank of India (Second Amendment) Act, 1947, passed in April repealed section 40 and 41 of the Act which obliged the Bank to buy and sell sterling without limit at specified rates and replaced them by a section which requires the Bank to buy and sell foreign exchange at such rates and on such terms as the Central Government may determine from time to time.

Security Market.—Except for a comparatively short period of boom in the early part of the year, the gilt-edged market ruled easy during the greater part of the year, steady conditions, however, emerging again towards the close. The Economic Adviser's index number of Government securities with 1927-28 as base rose from 120.7 in June 1946 to 122.8 in August but thereafter almost continuously declined to a low of 117.4 in February, 1947 after which there was a slight rise, the index standing at 117.9 in May. The trend of the industrial share market corresponded generally with that of the gilt-edged, though the extent of fluctuations in the former has been larger. The Economic Adviser's general index number of prices of variable yield securities, with 1927-28 as base, for the 10 months ended May 1947 averaged higher at 261.2 as compared with 233.4 for 11 months of the corresponding period of the previous year. But the index for May 1947 was 215.2 as compared with 280.9 for June 1946. The range of decline in the case of individual groups varied from 3.9 per cent. in the case of tea shares to 34.3 per cent. in the case of iron and steel shares.

Conditions prevailing in the money market in India during the year under report reflect a return to the pre-war pattern of alternating slack and busy seasons, which was submerged during the war under the flood tide of money supply.

Issue Department.—The continuance and marked increase in the total of the balance sheet of the issue department, witnessed since the outbreak of the war, was replaced during the year by a moderate rise, the balance sheet total having increased only by Rs. 11.23 crores to Rs. 1,265.31 crores at the end of the year under review or by 0.9 per cent. compared with 22 per cent. and 8.9 per cent. in 1944-45 and 1945-46 respectively. On the liabilities side, notes in circulation stood at Rs. 1,223.55 crores showing a decrease of Rs. 13.32 crores in contrast with

an increase of Rs. 99.40 crores in the previous accounting year. The figure reached the bottom at Rs. 1,187.85 crores on September 27, 1946 owing mainly to the advent of the slack season and thereafter remained more or less steady round about Rs. 1,200 crores till the end of November. As the busy season started, the notes in circulation rose again in December reaching Rs. 1,244.68 crores on March 14, 1947 but declined subsequently. On the assets side, contrary to the trend noticed since the beginning of the war, the sterling securities remained steady at Rs. 1,135.33 crores throughout the year under review. Rupee coin which includes Government of India one rupee notes increased from Rs. 16.50 crores on June 30, 1946 to Rs. 27.73 crores at the end of June 30, 1947.

Banking Department.—The total of the balance sheet of the banking department fell from Rs. 617.94 crores as at June 30, 1946 to Rs. 548.41 crores on June 30, 1947 or by 11.25 per cent. as against an increase of 45.09 per cent. during the previous accounting year. This is mainly due to a decrease in "Central Government deposits" on the liabilities side and in "Balances held abroad" on the assets side. The deposits of the Central Government fell by Rs. 66.73 crores to Rs. 390.70 crores. The deposits of banks fluctuated widely between Rs. 111.96 crores for the week ended July 5, 1946 and Rs. 68.01 crores for the week ended February 7, 1947 and stood at Rs. 88.91 crores at the end of the accounting year. Apart from the seasonal factor, unsettled political and economic conditions in the sub-continent seem to account for the fluctuations in the deposits. The improvement noticed latterly, however, has partly arisen from the refund of the E. P. T. deposits and partly from the support extended to the market by the Reserve Bank. On the assets side, "Balances held abroad" fell by Rs. 128.25 crores to Rs. 430.82 crores partly in response to the demand for funds for financing imports. Investments, however, rose by Rs. 36.15 crores to Rs. 66.94 crores.

Agricultural Credit Department.—The Department continued to study the problems connected with the co-operative movement, land mortgage banks, debt legislation, etc. The rebate in the rate of interest was increased from one per cent. to 1½ per cent. in the case of accommodation against bills or promissory notes drawn by co-operative banks for financing seasonal agricultural operations or marketing of crops with a view to encouraging co-operative banks to make greater use of the Bank's facilities for re-discounts for and advances to provincial co-operative banks.

During the year, 19 banks were inspected under the Banking Companies (Inspection) Ordinance, 1946, and four under section 42 (6) of the Reserve Bank of India Act. Action against two banks was taken; one was prohibited from accepting fresh deposits from January 13, 1947 and the other was refused admission to the second schedule.

Sterling Assets.—The sterling assets of the Bank registered a decline by Rs. 128.25 crores during the year under report as against a net increase of Rs. 271.93 crores in the previous 12 months. This reversal of the rising trend which was in evidence for some years was partly

brought about by the disappearance of factors such as Government's war expenditure and purchases of stores on account of Allied Governments, and partly by larger imports particularly of food grains and fertilisers, stores and equipment on Government account. This also reflects presumably some repatriation of British capital from India. The total holdings in the issue and banking departments as on June 30, 1947 amounted to £1174.61 million or Rs. 1566.15 crores, which are maintained in the form of cash and investments in short-term British Government securities renewed from time to time. The sterling balances constitute about the entire foreign exchange reserve of this country accumulated at the cost of great hardship and sacrifice borne by the sub-continent.

Since the beginning of the war upto March 31, 1946, India earned dollars aggregating Rs. 405 crores and spent Rs. 240 crores, leaving a net surplus of Rs. 114 crores, after taking into account Rs. 51 crores representing the excess of total expenditure over earnings in other hard currency countries. Taking into account the unfavourable balance with hard currency countries to the extent of Rs. 22 crores during

1946-47, India's net earnings of the currencies of these countries during the period September 1939 to March 1947 amounted to Rs. 92 crores.

Bretton Woods Organisations.—The period under review witnessed the commencement of operations of the International Monetary Fund and the International Bank. During the year, 20 per cent. of India's subscription to the Bank amounting to \$80 million was paid, the first two per cent. being in U. S. dollars and the rest in rupees. As regards the par value, the Government of India decided that the existing par value which works out to Rs. 330.852 per \$100 or 4.145142857 grains of fine gold per rupee should be maintained. On September 18, 1946, the schedule of par values was announced and India was called upon to pay its subscription of \$400 million by March 1. Under the rules of the Fund, the "gold" subscription had either to be 25 per cent. of a country's quota or 10 per cent. of its non-official holdings of gold and U. S. dollars, whichever was less. As the latter was the lower figure in India's case, gold to this value was transferred to the Fund.

Below is given the table relating to the affairs of the Reserve Bank of India since its inception.

The Exchange Banks

The banks carrying on exchange business in India are merely branch agencies of banks having their head offices in London, on the Continent, in the Far East or the U. S. A. Originally their business was confined almost exclusively to the financing of the external trade of India; but in recent years, most of them, while continuing to play their main role, have also taken an active part in the financing of internal trade. Before the Great War, these banks used to do their business in India with money borrowed elsewhere; but the development of the money market in this country in the past three decades have enabled them to depend on internal deposits. No information is available as to how far each bank has secured deposits in India but the following statement published by the Reserve Bank of India throws light on the trend of their aggregate deposits and cash balances in India and Burma:—

Deposits and cash balances of the exchange banks in India and Burma.

INVESTMENTS

Discussing the question of investment in greater detail we find that so far as India is concerned they consist to a great extent of the purchase of bills drawn against imports and exports to and from India.

The financing of the import trade originated and is carried through however for the most part by branches outside India, the Indian branches' share in the business consisting principally in collecting the amount of the bills at maturity and in furnishing their other branches with information as to the means and standing of the drawers of the bills, and it is as regards the export business that the Indian branches are more immediately concerned. The Exchange Banks have practically a monopoly of the export finance in India and in view of the dimensions of the trade which has to be dealt with the Banks would under ordinary circumstances require to utilise a very large proportion of their resources in carrying through the business. They are able, however, by a system of rediscount in London to limit the employment of their own resources to a comparatively small figure in relation to the business they actually put through.

The bills against exports are largely drawn at three months' sight and may either be "clean" or be accompanied by the documents relating to the goods in respect of which they are drawn. Most of them are drawn on well-known firms at home or against credits opened by Banks or financial houses in England and bearing as they do an Exchange Bank endorsement they are readily taken up by the discount houses and Banks in London. Any bills purchased in India or Pakistan are sent home by the first possible Mail so that presuming they are rediscounted as soon as they reach London the Exchange Banks are able to secure the return of their money in about 16 or 17 days instead of having to wait for three months which would be the case if they were unable to rediscount. It must not be assumed however that all bills are rediscounted as soon as they reach London as at times it suits the Banks to hold up the bills in anticipation of a fall in the London discount rate while on occasions also the Banks prefer to hold the bills on their own account as an investment until maturity.

The Banks place themselves in funds in India and Pakistan for the purpose of purchasing export bills in a variety of ways of which the following are the principal:—

- (1) Proceeds of import bills as they mature.
- (2) Sale of drafts and telegraphic transfers payable in London and elsewhere out of India or Pakistan.
- (3) Purchase of Council Bills and Telegraphic Transfers payable in India from the Secretary of State.
- (4) Imports of bar gold and silver bullion.
- (5) Imports of sovereigns from London, Egypt or Australia.

The remaining business transacted by the Banks in India and Pakistan is of the usual nature and need not be given in detail.

GROWTH OF BANKING

The credit for giving an impetus to joint stock banking in India goes to a certain passage in the Indian Companies Act of 1900 which accepted the principle of limited liability, a factor indispensable to the raising of large amounts of capital. Till 1906 however, there were few banks in the country and their resources being meagre, the sphere of activity was also restricted. The *stradashi* movement in the country and indigenous banking activity in the country and between 1906 and 1913, the number of banks with capital and reserves in excess of Rs. 5 lakhs doubled and their deposits increased from Rs. 8 crores to Rs. 18 crores.

however, gave a rude shock when several banks led by the People's Bank of India and the Indian Specie Bank went into liquidation; and though the First World War did give a fresh impetus, the share of Indian joint stock banks in the aggregate deposits of banks in the country increased from 21 per cent. in 1914 to as much as 32 per cent. in 1920. It is a fact that as between 1913 and 1921 as many as 161 banks failed.

Between 1921 and 1931 the joint stock banks in the country were adversely hit by the world depression; but the economic recovery that

followed resulted in increasing the share of deposits of these banks from 31.6 per cent. in 1930 to 40.2 per cent. The increase was mainly achieved at the cost of the Imperial Bank of India and the Exchange Banks. Since then there has been a steady development till the outbreak of the Second World War excepting for a minor set-back in 1938 as the result of the closing down of the Travancore National and Quilon Bank, Ltd., and the pace of expansion accelerated during the war period as will be seen from the figures given below:—

SCHEDULED BANKS' CONSOLIDATED POSITION IN INDIA, PAKISTAN AND BURMA

A Big Increase.—The number of scheduled banks on April 1, 1935 stood at 50 as against 97 on June 30, 1947. There has also been a substantial increase in the number of non-scheduled banks and although complete statistics are not available, it is estimated that the number exceeds 700. The development of branch banking has been the main feature during the past 12 years, though the spade work in that connection was done by the Imperial Bank of India and the other four big banks as early as 1924 and the following years. As compared with 1,800 branch offices at the end of 1939, on June 30, 1947 there were 3,566.

The table below gives the position of scheduled banks as on June 28, 1946 and June 27, 1947 and compares it with the position on the eve of the Second World War :—

	(Rs. in Crores)		
	1-9-39	28-6-46	27-6-47
Demand Liabilities	135	709	667
Time Liabilities	102	311	346

Contrary to the trend noticed during the past few years, the total demand and time liabilities of the scheduled banks did not maintain their continuous upward trend throughout 1946-47. From Rs. 1,020 crores, they reached an all-time high of Rs. 1,097 crores on November 2, 1946 but receded thereafter. The proportion of demand to total liabilities increased from a little less than 57 per cent. on the eve of the War to 69.47 per cent. on June 28, 1946 and then slipped back to 65.82 per cent. in the following year. The increase in time liabilities in 1946-47 indicated a gradual progress towards pre-war pattern of bank deposits.

Though the deposits of banks increased since 1939, there was no corresponding rise in demand for bank finance in the war period and even though the subsequent increase was rather sharp, the banks were able to maintain high liquidity of their assets. This is illustrated by the following table :—

	(Rs. in Crores)		
	1-9-39	28-6-46	27-6-47
Advances	101	354	414
Bills Discounted	4	0.2	0.15
Cash and Balance with Reserve Bank	32	151	143

PRESENT POSITION

The following table shows the position of the better known existing banks as it appears in "Statistical Tables Relating to Banks in India and Burma for the years 1944 and 1945"—

(In Lakhs of Rupees)

	Capital.	Reserve.	Deposits.	Cash and Liquid Investments.	No. of Offices.
Allahabad Bank	46	97	28.75	15.75	75
Baroda Bank	100	102	29.68	20.07	33
Bank of India	149	189	59.02	41.30	30
Bharat Bank	201	18	26.91	18.04	214
Central Bank	251	274	105.23	80.51	308
Imperial Bank	563	603	259.37	195.78	433
Indian Bank	44	49	13.71	10.58	63
Punjab National Bank	80	81	51.52	39.32	197
Union Bank	40	16	5.05	4.44	1
United Commercial	200	8	23.89	17.61	1

War time Anxiety.—It would be seen from the above table and the previous one that the percentage of advances to total deposits fell sharply, owing to wartime restrictions on trade and Government being the main financier of the country's economic activity, from 44.3 per cent. on September 1, 1939 to 34.7 on June 28, 1946 but increased in the following year to 40.6. Similarly, the proportion of cash to total deposits rose from 13.5 per cent. just before the outbreak of the War to 14.8 per cent. and then contracted to 14.1 per cent. in the following year. It might be noted that the proportion of cash to deposits reached the peak at 20.7 per cent. on December 27, 1940 as a result of the fall in economic activity following the collapse of France.

The total number of non-scheduled banking companies working in India and submitting returns under section 277L of the Indian Companies Act was 659 at the end of 1946 as compared with 631 at the end of 1945. Their total deposits increased from Rs. 67.31 crores to Rs. 78.44 crores, the ratio of cash to deposits declining from 12 per cent. to 8.4 per cent.

Surveying the developments in 1946-47, Sir Chintaman Deshmukh, Governor of the Reserve Bank of India, told the annual meeting of the Bank on August 4, 1947 that the swift expansion in advances was not due entirely to the normal demands of trade and industry but due to an unwholesome extent, to abnormal factors like bullish markets and speculative imports. Such business was evidence of immature or imprudent bank management. With a view to restoring a proper balance between their capital and deposits and also because of the provisions of the projected banking legislation, banks continued to make applications for raising their capital.

"Banking practices," observed the Governor of the Reserve Bank, "still leave much to be desired. There is yet, for instance, a propensity towards declaring dividends from profits arising out of security transactions. I have also noticed a pronounced tendency on the part of some banks to window-dress their balance sheets. Considerable anxiety was felt about the ability of Indian banks to tide over smoothly the period of transition from war to peace, particularly because of the scramble for establishment of new banks during the years following 1943. As the year 1946 advanced, the public felt reassured that the worst was over."

The following figures appearing in the Statistical Tables Relating to Banks in India show the growth of the Capital, Reserve and Deposits of the Joint Stock Banks having a paid capital and reserves of Rs. 5 lakhs and over registered in India :—

	Capital.	Reserve.	Deposits.
1930	747	442	6325

LONDON OFFICES, AGENTS OR CORRESPONDENTS OF BANKS AND FIRMS (DOING BANKING BUSINESS) IN THE SUB-CONTINENT.

Name of Bank.	London Office—Agents or Correspondents.	Address.
Reserve Bank of India	London Office	31-33, Bishopsgate, E.C. 2.
Imperial Bank of India	Ditto	25, Old Broad Street, E. C. 2.
Other Banks & Kindred Firms.		
Allahabad Bank	Affiliated to Chartered Bank of India, Australia & China.	38, Bishopsgate, E. C. 2.
Bank of Baroda	Eastern Bank	2 & 3, Crosby Sq., Bishopsgate, E. C. 3.
Bank of India	Westminster Bank	41, Lothbury, E. C. 2.
Bank of Mysore	Eastern Bank	2 & 3, Crosby Sq., Bishopsgate, E. C. 3.
Bharat Bank	National City Bank of New York	117, Old Broad Street, E. C. 2.
Central Bank of India	Barclay's Bank and Midland Bank	168, Fenchurch Street, E. C. 3 and 122, Old Broad Street, E. C. 2.
Devikaran Nanjee Banking Co.	Barclay's Bank	168, Fenchurch Street, E. C. 3.
Exchange Bank of India & Africa.	Midland Bank (Overseas Branch).	122, Old Broad Street, E. C. 2.
Habib Bank	Ditto	Ditto.
Indian Bank	National City Bank of New York.	117, Old Broad Street, E. C. 2.
Punjab National Bank	Midland Bank	122, Old Broad Street, E. C. 2.
Union Bank of India	Westminster Bank	41, Lothbury, E. C. 2.
United Commercial Bank	National City Bank of New York.	117, Old Broad Street, E. C. 2.
Exchange Banks.		
American Express Co. (Inc.)	London Office	6, Haymarket, London (Temp.).
Banco Nacional Ultramarino	Anglo-Portuguese Colonial and Overseas Bank.	9, Bishopsgate, E. C. 2.
Bank of China	London Office	85, Gracechurch Street, E. C. 3.
Chartered Bank of India, Australia and China.	Ditto	38, Bishopsgate, E. C. 2.
Comptoir National d'Escompte de Paris.	Ditto	8-13, King William Street, E. C. 4.
Eastern Bank	Ditto	2-3, Crosby Sq., E. C. 3.
Grindlay & Co.	Ditto	54, Parliament Street, S. W. 1.
Hongkong & Shanghai Banking Corporation.	Ditto	9, Gracechurch St., E. C. 3.
Lloyds Bank	Ditto	71, Lombard Street, E. C. 3.
Mercantile Bank of India	Ditto	15, Gracechurch St., E. C. 3.
National Bank of India	Ditto	26, Bishopsgate, E. C. 2.
National City Bank of New York.	Ditto	117, Old Broad Street, E. C. 2.

Banking Legislation

Ever since 1913 when the banking crisis in this country stressed the need for separate legislation to govern the working of banks, this problem has been confronting the authorities. The Indian Central Banking Inquiry Committee examined the question in greater detail and advocated legislation for a Special Bank Act covering the various aspects of banking. Owing to the outbreak of War and subsequent constitutional developments, this measure could not be passed through the legislature and the bill, after seven years of severe trial, has emerged only from the Select Committee of the Indian Legislature. However, some of its more urgent provisions have been brought into effect either by the amendment of the Company law or by the issue of Ordinances.

The original bill provided for (1) a clear but simple definition of banking, (2) for minimum capital so as to permit them of reasonable profits, (3) restrictions on the mode of investment and (4) for acceleration of the liquidation proceedings in order to minimise the inconvenience of depositors. In 1942, the Government of India got the approval of the legislature to amend the Indian Companies Act whereby Section 277F was added so as to define the word "bank", "banker" or "banking". In 1943 following the Bombay High Court's ruling that the exemption granted to banks by Government under a notification on January 16, 1937, from showing in their balance sheets the provision for bad and doubtful debts, the Indian Companies Act was amended by providing specifically the same exemption under Form F in the Third Schedule.

By amending Section 277 I and adding Section 277 H, Government prevented the banks from employing managing agents or any person either on commission basis or on a contract exceeding five years. It also laid down that no bank registered after January 15, 1937 shall carry banking business unless its subscribed capital is not less than half the authorised capital and its shares consist of ordinary shares only. While the already registered banks were allowed to have preference shares, they were compelled to extinguish the deferred shares. It further regulated the voting rights on the basis of the contribution to the share capital. The whole object was to prevent the issue of mushroom banks which had been so prominent a feature of the War years.

The Banking Bill moved in the Central Legislature in 1944 sought to tighten the control more rigidly than the original legislation proposed in 1939 and provided for (1) a definite ban on trading by banks and disposal of trading assets of the defaulting borrower within a specified period, (2) ban on the grant of unsecured loans to directors, their firms and companies, (3) the licensing of banks registered outside British India, (4) submission of monthly returns to the Reserve Bank in respect of assets and liabilities and half yearly returns regarding particulars of advances and investments, (5) return of unclaimed deposits to be filed with the Reserve Bank, (6) a special form of balance sheet, (7) authority by which the Central Govern-

ment could direct the Reserve Bank to inspect the books of any bank, and (8) the Reserve Bank being the official liquidator of banks.

Select Committee Report.—The revised Bill was referred to a Select Committee whose report was presented to the Legislative Assembly on February 17, 1947. The consideration of the report has, however, been postponed to subsequent session. The main changes proposed by the Committee in the Bill are:—

(1) Limiting the Reserve Bank's emergency power to suspend the provisions of the Bill to 30 days. (2) Widening the definition of "banking" so as to include the acceptance of time deposits also. (3) Providing that no company other than a banking company shall accept deposits repayable on demand. (4) Making the existence of managerial contracts subject to confirmation by a general meeting of shareholders and making the Reserve Bank the arbiter in questions of disproportionate remuneration. (5) Introducing a somewhat elaborate but more workable basis for capital requirements replacing the original basis of population for capital requirements by one dependent on the territorial range of a company's activities. (6) Limiting the voting rights of any one shareholder to one-tenth of the total voting rights so as to prevent the control of the affairs of a banking company from passing into the hands of a small group. (7) Prohibiting a banking company from declaring dividends before it has written off all its capitalised expenses. (8) Debarbing a banking company incorporated in India from taking on its board a person who is already a director of another banking company. (9) Placing on all banking companies incorporated in India an obligation to build up and maintain a reserve fund equal to the paid-up capital. (10) Making it necessary for all banks to obtain the permission of the Reserve Bank before forming a subsidiary company for purposes other than those expressly permitted under clause 19. (11) Requiring all banking companies to take out licences. (12) Prohibiting a banking company from holding shares in any company in the management of which any manager or managing director of the banking company is in any way concerned or interested. (13) Bringing down the minimum percentage of cash and approved securities to be held from 25 per cent. to 20 per cent. (14) Giving the Reserve Bank free discretion to inspect a banking company at any time so that the public may not draw any pessimistic inference from the fact that a bank has been inspected. (15) Adding further to the powers and functions of the Reserve Bank so as to bring it into closer contact with banking companies and providing for an annual report by the Reserve Bank on the trend and progress of banking in the country. (16) Removing, in case of private banking companies, some of the exceptions granted under the Indian Companies Act. (17) Amending the Reserve Bank of India Act so as to enable the Bank under certain circumstances to come to the aid of a banking company by means of a loan against such securities as it may consider sufficient.

Unhealthy Developments.—The Committee has also suggested that the constitutional difficulties standing in the way of extending the provisions of the Bill to partnerships and individuals carrying on banking business should be examined with a view to introducing legislation to bring them within the purview of the Bill.

Pending the enactment of the Banking Companies Bill, 1946, and with a view to controlling the unplanned expansion of branches and checking certain undesirable developments such as excessive expenditure on branches in relation to their resources, employment of untrained staff, etc., a Bill for the licensing of branches of banking companies was introduced in the Assembly on November 4, 1946. After being approved, it became effective from November 22.

Section 31 of the Reserve Bank of India Act was amended on November 16, 1946 putting on a permanent footing the ban on the issue of promissory notes payable to bearer. The ban had been imposed by the Government of India on May 18, 1946 by an Ordinance with a view to putting a stop to the unhealthy practice noticed in the case of certain banks of issuing bearer promissory notes with a stated period of maturity, which, in effect, constituted substitutes for currency notes.

INDIGENOUS BANKERS

Long before the establishment of joint-stock banking companies in India or Pakistan indigenous bankers or *shroffs* flourished. Even at present they form an important credit agency in the banking system and are the only source of credit in many parts of the sub-continent. The difference between *shroffs* and money-lenders is that while the latter work generally with their own capital, the former use borrowed capital also either in the form of deposits from the public or by drawing and rediscounting *hundies*. A certain number of indigenous *shroffs* work on modern lines and transact all kinds of business which the ordinary joint stock banks transact, including the issue of pass books and cheque books. They do not, however, publish balance sheets and their management is entirely in the hands of a single proprietor or a firm of proprietors.

No reliable estimates of the capital employed by indigenous bankers are available; but it is recognised that amongst the agencies financing agriculture, internal trade and small industries, they occupy a prominent position. Their operations are not attended with formalities and delay, and the majority of them combine banking with some form of trade and the capital employed in banking is not distinguished from that employed in trade.

In Bombay indigenous bankers on the approved lists of joint-stock banks get advances from these banks up to their respective limits. Banks also make advances against *shroffs' hundies*, the period for which is usually 60 days. In all Provinces, the indigenous bankers get remittance facilities from the Imperial Bank on the same terms as the general public do.

In pursuance of the recommendations of the Central Banking Inquiry Committee for linking

indigenous bankers with the country's central banking institution, the Reserve Bank of India, on its formation, opened negotiations; but no agreement materialised since the indigenous bankers felt that the conditions laid down were rather irksome. The question was brought up for discussion again in 1946 when the Central Assembly considered the Banking Bill. The Select Committee has now suggested that indigenous bankers should be brought in line with joint-stock banks and the difficulties in the way of extending the legislation to them should be examined.

THE INTEREST STRUCTURE

Recent monetary theory looks on money rates as the basic influence at work in respect of a country's economy. Banks work within the conditions set by interest rates which, in turn, are regulated, under the modern monetary technique, by the central banking institution of a country. The yield on a non-terminable Government security is generally looked upon as a barometer of long-term interest rates, while the rate of the Imperial Bank on demand loans represents earnings on short term investments. The Imperial Bank's *hundi* rate is the rate at which the Bank discounts first class trade bills. The call money rate is the rate for surplus money seeking investment and repayable at the option of the borrower or the lender subject to a minimum period of 24 hours. Bazaar Bill rates are the highest rates in the Indian money market and they are the rates charged by *shroffs*.

In the monetary history of the sub-continent the normal relationship between the short term money rates and the long-term money rates is that the former stands higher than the latter. For three decades in the last century, the excess ranged between one and two per cent., but since then, the difference has narrowed down and the latest tendency is that the short-term loan rates are actually lower than the long-term interest rates. This is mainly due to the exceptional demand of Government for loans.

Formerly each Presidency Bank fixed its own Bank rate which was not uniform. After the amalgamation of the Presidency Banks the Imperial Bank fixed the rate for the whole of the sub-continent until July 4, 1935 when the right to fix the official Bank rate was exercised by the Reserve Bank. The rate fixed represents the rate charged by the banks on demand loans against Government securities and is the standard rate at which the Reserve Bank is prepared to buy or rediscount bills of exchange or other commercial paper eligible for purchase under the Reserve Bank of India Act. This rate enables the Reserve Bank to have direct contact with short-term rates and the money market and to encourage or discourage scheduled banks to obtain more cash.

The Bank rate of the Reserve Bank of India and the *hundi* rate of the Imperial Bank of India remained unchanged at three per cent. throughout 1946-47. Unlike the two previous years, money conditions were generally stringent during the greater part of 1946-47. However, the inter-bank call money rate quoted by the larger scheduled banks remained nominally

around $\frac{1}{2}$ per cent. during the major part of the year. The 12 months rate which was quoted at $1\frac{1}{2}$ to $1\frac{3}{4}$ per cent. at the end of last year was quoted at that level upto June 23 but thereafter recovered to $1\frac{1}{2}$ to $1\frac{3}{4}$ per cent. continuing unaltered throughout the remaining period under review.

Money Rates.—The following is the trend of the short-term money rates in the country since 1935-36 :—

Year.	Bank Rate.	Imperial Bank <i>Hundi</i> Rate.		Call Money.		Bazar Bill.		Average Treasury Bill Rate.	Annual Deposits.	
		High.	Low.	Highest.	Lowest.	H.	L.		H.	L.
1935-36	3	3 $\frac{1}{2}$	3	3 $\frac{1}{2}$	$\frac{1}{2}$	6 $\frac{1}{2}$	3	1.21	..	..
1936-37	3	3	3	1 $\frac{1}{2}$	$\frac{1}{2}$	5 $\frac{1}{2}$	3 $\frac{1}{2}$	0.78	..	..
1937-38	3	3	3	1 $\frac{1}{2}$	$\frac{1}{2}$	5 $\frac{1}{2}$	5 $\frac{1}{2}$	0.97	..	..
1938-39	3	3	3	2 $\frac{1}{2}$	$\frac{1}{2}$	5 $\frac{1}{2}$	3	1.63	2	1 $\frac{1}{2}$
1939-40	3	3 $\frac{1}{2}$	3	2 $\frac{1}{2}$	$\frac{1}{2}$	6 $\frac{1}{2}$	5 $\frac{1}{2}$	1.86	2	1 $\frac{1}{2}$
1940-41	3	3 $\frac{1}{2}$	3	1 $\frac{1}{2}$	$\frac{1}{2}$	6 $\frac{1}{2}$	5 $\frac{1}{2}$	0.89	2	1 $\frac{1}{2}$
1941-42	3	3	3	$\frac{1}{2}$	$\frac{1}{2}$	6 $\frac{1}{2}$	4 $\frac{1}{2}$	0.82	2	1 $\frac{1}{2}$
1942-43	3	3	3	$\frac{1}{2}$	$\frac{1}{2}$	6 $\frac{1}{2}$	5	0.87	2	1 $\frac{1}{2}$
1943-44	3	3	3	$\frac{1}{2}$	$\frac{1}{2}$	6	4 $\frac{1}{2}$	0.90	1 $\frac{1}{2}$	1
1944-45	3	3	3	$\frac{1}{2}$	$\frac{1}{2}$	5 $\frac{1}{2}$	4 $\frac{1}{2}$	0.49	1 $\frac{1}{2}$	1
1945-46	3	3	3	1	$\frac{1}{2}$	5 $\frac{1}{2}$	5 $\frac{1}{2}$	0.38	1 $\frac{1}{2}$	1 $\frac{1}{2}$
1946-47	3	3	3	$\frac{1}{2}$	$\frac{1}{2}$	7 $\frac{1}{2}$	5 $\frac{1}{2}$	0.43	1 $\frac{1}{2}$	1 $\frac{1}{2}$

Relative Rates.—The relationship between the long-term interest rates as represented by the yield on non-terminable Government loan and the short-term interest rates is established in the following table :—

Year.	Yield on 3 $\frac{1}{2}$ p.c. Rupee Security.	Average Bank rate.	Excess or Deficit of 2 over 1.
1870	4.3	5.16	+ 0.86
1880	4.3	5.01	+ 0.71
1890	4.0	5.92	+ 2.07
1900	3.64	5.51	+ 1.87
1910	3.72	5.47	+ 1.74
1920	5.9	6.20	+ 0.07
1930	5.1	5.88	+ 0.78
1931	5.5	7.04	+ 1.54
1932	5.7	5.02	— 0.70
1933	4.3	3.56	— 0.74
1934	3.9	3.50	— 0.40
1935	..	3.46	..
1936	3.52	3.0	— 0.52
1937	3.63	3.0	— 0.63
1938	3.55	3.0	— 0.55

* From this year, the yield is on 3 per cent. Rupee Paper.

Year.	Yield on 3 $\frac{1}{2}$ p.c. Rupee Security.	Average Bank rate.	Excess or Deficit of 2 over 1.
1940-41*	3.70	3.0	— 0.70
1941-42	3.69	3.0	— 0.69
1942-43	3.77	3.0	— 0.77
1943-44	3.57	3.0	— 0.57
1944-45	3.33	3.0	— 0.33
1945-46	3.14	3.0	— 0.14
1946-47	2.90	3.0	+ 0.10

Clearing Houses.—The Principal Clearing Houses in India and Pakistan are those of Calcutta, Bombay, Madras and Karachi, and of these the first two are by far the most important. In 1946-47 Clearing Houses were opened at Alleppey, Rajkot and Gaya and are being managed by the Imperial Bank of India. This brings the total number of Clearing Houses under the management of the Imperial Bank to 19. In Bombay, a Metropolitan Clearing Association was formed and registered in October 1946 to arrange for clearing for non-scheduled banks as the Bombay Bankers' Clearing House decided to restrict its membership and sub-membership only to scheduled banks.

GENERAL BACKWARDNESS

Though during the period of last war, Life Insurance business in the sub-continent registered a great progress over the past, when we compare the present position of Life Insurance business in the sub-continent with that of the other more advanced countries of the World we realise that we have yet a long way to go. The figures published in the Insurance Year Book, show that at the end of the year 1935 the total Life Insurance business in force amounted to Rs. 235 crores distributed over 11 lakhs Policies, whereas the total Life Insurance business at the end of the year 1945 amounted to Rs. 551 Crores distributed over 26 Lakhs Policies. As the sub-continent holds within its borders 400 million people constituting one-fifth of the total population of the World, these figures appear insignificant altogether. On an average taking 4 members in a family there should be 100 million families in India, over which are distributed 26 lakhs policies of Life Insurance. Thus only 2.6 per cent. of families can claim protection of Life Insurance, while 97.4 per cent. of the families are without such protection. This backwardness in the progress of Life Insurance in this country can only be attributed to the lack of development in the Commercial, Industrial, Agricultural and other allied fields, the lack of education and literacy in the masses, and above all the poverty of the Indian Nation. With the formation of National Government at the centre and with the popular ministries in the Provinces and with the various schemes for Post-War agricultural, industrial and economic development of the country envisaged by these Governments, life insurance is bound to thrive in the country. There are in all about 200 indigenous Life Offices in India. All have not enough business, owing mostly to the backward economic condition of the country. Due to the requirements under Insurance Act, 1938, as well as owing to the strict supervision of the department of the Superintendent of Insurance, Indian Insurance Companies in general have been improving from day to day. The three main factors on which the life insurance business depends are (1) Mortality experience (2) Interest yield and (3) Expenses. Mortality experience of Indian Companies is very satisfactory on the whole. The same however could not be said of the other two factors. In the year 1938 the average yield realised on the funds of Life Insurance Companies was 5.15 per cent. while in 1945 it was reduced to 3.48 per cent. which is likely to show further reduction in 1946 owing to the repayment of the 3½ per cent. loan by the Government of India. The first consideration in regulating the investments of Funds of Life Offices should be to safeguard the Capital. Without jeopardising the safety of Capital, Insurance Companies can be enabled to earn better interest yield. If more investments are permitted by Law in Securities other than the Government Approved Securities under Section 27 of the Insurance Act, 1938.

INCOME-TAX

Linked with the question of yield on investments is the question of income-tax to be paid by Life Offices. Insurance

Associations have already made representations to the Government of India to the effect that we should be assessed on the interest less expenditure basis as is done in the United Kingdom since the year 1923. The amounts paid to, reserved for or expended on behalf of the policyholders should be exempted from the income-tax. Pending consideration by the Government of the major question of the revision in the basis of the assessment of life offices, they have urged upon the Government of India to grant immediate relief to Life Offices by lowering the ceiling rate of tax from 60 to at least 45 pias in a Rupee. Insurance Companies claim that immediate relief in this respect is very necessary as the low interest yield now realised is being further reduced owing to its being subjected to a rate of tax as high as 5 annas in a Rupee. Further in the case of Life Offices which are being taxed on the surplus basis, it has been experienced that several such offices during recent years had not been able to disclose a substantial surplus owing mainly to the operation of the interest factor, in their business. However, tax is always deducted at the source at the highest rate prevailing under the provisions of the Income-Tax Act which remains to their credit with the Income-Tax Department and is refunded only subsequently if no surplus is disclosed at their following valuation. Owing to deductions of income-tax at source at the high rate of 60 pias in a Rupee a substantial amount of the revenue of interest on the investments remains locked up with the Income-tax Department which is refunded without interest after a considerable lapse of time. It is therefore essential in the interests of life policyholders that the Government of India should lower the ceiling rate of tax from the present high level to at least 45 pias in a Rupee. That, broadly speaking, is how the case is presented.

THE INSURANCE AMENDMENT BILL

The expenses of procurement of business as well as overhead expenses in this country are very high compared to other countries. The Insurance (Second) Amendment Bill contemplates the working of a Company through Chief Agents or Branches and licensed Agents. The present system of organisation adopted by a few big Companies who have large resources is having a Branch or Branches, under which are Inspectors paid on salary basis and licensed agents. Medium sized and small companies being not sure of the turnover of the business, have got in place of paid-inspectors, special agents, i.e. (Employer of Agents other than Chief Agents who are paid on the basis of commission). The provision in the Bill preventing the employment of intermediaries, either inspector or organiser or special agents, on terms other than salary basis, will hamper the working of companies by Chief Agencies and as a consequence the increase in costs will be inevitable. Such a provision will also place a handicap on companies at a time when companies will be required to make great efforts to reduce their costs to the limits in the Bill. It is suggested for the consideration of the legislature that Insurance Companies should be allowed the freedom to employ intermediaries like the Inspectors or Organisers or Special

Agents on the basis of commission or fixed remuneration or both. Such a provision would considerably assist Insurance Companies both in building up their business and in complying with the provision of the Bill as regards restriction of over-all costs.

DISTRIBUTION OF COMPANIES

The total number of insurers registered under the Insurance Act, 1938, up to 30th September, 1946 was 340 of which 239 Insurers were Indian insurers and 96 were non-Indian insurers.

Of the 239 Indian Insurers 88 had their head offices in the Bombay Presidency, 59 in the Bengal Presidency, 34 in the Madras Presidency, 17 in the Punjab, 12 in Delhi Province, 10 in the United Provinces, 3 in the Central Provinces, 5 in Sind each in Bihar, Assam, Ajmer-Merwara, and 8 in Indian States.

Of the 101 non-Indian insurers 67 (including 4 insurers holding standing contracts with Lloyds) were constituted in the United Kingdom, 21 in the British Dominions and Colonies, 9 in the United States of America, 3 in Switzerland and 1 in Java.

Most of the Indian insurers carry on life insurance business only. They are 152 in number, and of the remaining 87 Indian insurers, 48 carry on life business along with other insurance business, and 39 carry on insurance business other than life only. Of the Indian insurers, 49 are either Mutual Insurance Companies or Co-operative Insurance Societies. Further there are a few pension funds, mostly connected with Government services, and the Postal Insurance Fund which are exempt from the operation of the Insurance Act.

As regards non-Indian insurers, most of them carry on insurance business other than life. Out of the total number of 101 non-Indian insurers, 86 carry on insurance business other than life, 3 carry on life business only, and 12 carry on life business along with other insurance business.

LIFE INSURANCE BUSINESS

The total net new life insurance business effected in India during the year 1945 amounted to 599,000 policies insuring a sum of Rs. 13,538 crores and having an annual renewal premium of Rs. 7.47 crores, of which the new business done by Indian insurers amounted to 5,77,000 policies insuring a sum of Rs. 122 crores and having a yearly renewal premium income of Rs. 6.73 crores. The new life business effected by non-Indian insurers amounted to 22,000 policies insuring a sum of Rs. 12.40 crores and having a yearly renewal premium income of 0.74 crores.

The average sum insured per policy under the new policies issued in India by Indian insurers was Rs. 2,123 and under those issued by non-Indian insurers Rs. 5,727.

The total net life insurance business effected in India and remaining in force at the end of

total sum of Rs. 551.28 crores including bonus additions and having an annual premium income of Rs. 28.04 crores. Of this the share of Indian insurers is represented by 2,376,000 policies insuring a sum of Rs. 459.43 crores and having an annual premium income of Rs. 22.81 crores. The share of non-Indian insurers is represented by 216,000 policies insuring a sum of Rs. 91.85 crores and having an annual premium income of Rs. 5.23 crores.

The following table shows the New Sums Insured by Indian Life Offices, the Average Sum Insured Per Policy and the Total Sums Insured in Force at the end of the year:—

Year	New Sums Insured.		Total Sums Insured in Force.
	Sum Insured (in crores).	Average sum insured per policy.	Sum insured including bonus additions (in crores).
1932	19.66	1,697	105.02
1933	24.83	1,573	118.77
1934	28.92	1,547	136.65
1935	32.81	1,565	151.63
1936	37.80	1,532	174.67
1937	41.74	1,520	196.74
1938	46.68	1,498	218.86
1939	45.96	1,511	232.42
1940	35.23	1,685	243.91
1941	36.68	1,841	256.43
1942	37.89	2,193	266.60
1943	65.24	2,258	310.95
1944	95.20	2,206	366.15
1945	122.78	2,128	459.43

ANNUITY BUSINESS

The total new annuity business effected during the year 1945 was for the amount of Rs. 10,42,000 per annum, of which the share of Indian insurers was Rs. 4,30,000 per annum. The total annuity business remaining in force at the end of the year was the amount of Rs. 55,92,000 per annum, of which the amount payable by Indian insurers was Rs. 26,11,000 per annum, and by non-Indian insurers Rs. 29,81,000 per annum.

Some Indian Life Offices have been operating outside India also. The total new sums insured by these offices outside India in 1945 amounted to 12,700 policies insuring Rs. 4.22 crores having an annual renewal premium of Rs. 0.26 crore, and the total business remaining in force at the end of 1945 amounted to 77,000 policies insuring Rs. 21.79 crores and having an annual premium income of Rs. 0.95 crore.

The total income of Indian and non-Indian insurers during 1945, in respect of their life insurance business amounted to Rs. 35.96 crores.

The total income of Indian and non-Indian insurers during the year 1945, in respect of their life insurance business was made up of:—

(In lakhs of rupees.)		
Particulars of Income.	Indian Insurers.	Non-Indian Insurers.
Premium	24.11	5.27
Interest, Dividend and Rents	3.45	1.18
Other Receipts	82	1.13
Total	28.38	7.58

The total outgo of these insurers during the year in respect of the life insurance business was made up of:—

(In lakhs of rupees.)		
Particulars of Outgo.	Indian Insurers.	Non-Indian Insurers.
Claims by death	3.04	1.01
Claims by Maturity	3.67	1.82
Annuities	8	11
Surrender value	49	50
Expenses of Management	7.77	1.02
Depreciation and Transfer to Investment	29	18
Reserves, etc.	8	82
Miscellaneous	4	2
Transfer to Shareholders' Reserves and dividends	4	2
Total	15.40	5.48

INTEREST RATE & EXPENSE RATIO

The net rate of interest earned on the mean life insurance funds during the year 1945 by Indian insurers was 3.48 per cent. The net rates of interest realized on mean life insurance funds by the Indian insurers in each of five years were as follows:—

Year.	1941	1942	1943	1944	1945
Rate of Interest per annum ..	4.17	3.94	3.88	3.64	3.48

The total expenses of management of Indian insurers in respect of life insurance business, expressed as a percentage of the Premium income during each of five years was as follows:—

Year.	1941	1942	1943	1944	1945
Expense Ratio ..	27.4	26.7	27.9	31.2	32.2

If the source of half a dozen insurers having

expense ratio in the case of remaining insurers would be as under:—

Year.	1941	1942	1943	1944	1945
Expense Ratio ..	34.3	31.3	31.4	36.1	37.6

The net rates of interest realised in India on mean life insurance funds by the Non-Indian insurers in each of five years were as follows:—

Year.	1941	1942	1943	1944	1945
Rate of Interest per annum ..	3.63	3.50	2.79	3.35	3.22

The total expenses of management of Non-Indian insurers in respect of Life Insurance business in India expressed as a percentage of the premium income during each of five years was as follows:—

Year.	1941	1942	1943	1944	1945
Expense Ratio ..	15.6	17.8	16.0	18.6	19.3

NON-LIFE BUSINESS

The net Indian premium income of all insurers under insurance business other than life insurance during 1945 was Rs. 8.88 lakhs (Rs. 7.39 lakhs in 1944) of which the Indian insurers' share was Rs. 4.93 lakhs and that of the non-Indian insurers Rs. 3.94 lakhs. The total amount was composed of Rs. 4.69 lakhs from Fire, Rs. 2.13 lakhs from Marine, and Rs. 1.95 lakhs from Miscellaneous Insurance business.

The Indian insurers received Rs. 3.03 lakhs from Fire, Rs. 1.02 lakhs from Marine, and Rs. 88 lakhs from Miscellaneous Insurance business.

The non-Indian insurers received Rs. 1.60 lakhs from Fire, Rs. 1.11 lakhs from Marine, and Rs. 1.17 lakhs from Miscellaneous Insurance business.

Some Indian insurers who transact fire, marine and miscellaneous insurance business also operate outside India. These insurers had a net premium income of Rs. 1.31 lakhs in 1945 from business outside India.

ASSETS OF INSURERS

The assets of all the Indian insurers amounted to Rs. 13,783 lakhs on 31st December 1945, which were held invested in:—

(In lakhs of rupees.)	
Particulars.	Amount.
Indian Government Securities	Rs. 87.20
Securities of Indian States	95
British, Colonial and Foreign Government Securities	1.31
Municipal, Port Trust and Improvement Trust Securities	6.80
Mortgages on Property	1.36
Loans on Policies	6.72
Loans on Stocks and Shares	23
Other Loans	54
Shares in Indian Companies	13.04
Land and House Property	6.55
Agents' Balances, outstanding Premium and Interest, etc.	0.80
Deposit, Cash and Stamps	0.87
.. ..	1.40

The following table shows the assets in India of non-Indian Insurers :—

Insurers constituted in	Total Assets in India of (in lakhs of rupees.)	
	Life or composite companies	Non-life companies.
United Kingdom ..	15.81	2.44
Dominions and Colonies ..	18.69	1.44
U.S.A. ..	..	29
Switzerland ..	22	4
Java ..	..	4
Total ..	34.72	4.25

PROVIDENT INSURANCE SOCIETIES

Between 1st October 1945 and 30th September 1946, only 12 societies were newly registered under the Insurance Act and the registration of four were cancelled. On 30th September 1946 there were in existence 138 provident societies.

The total new business effected by the societies during the year 1945 amounted to 22,429 policies insuring a sum of Rs. 1,02,07,800 and annuities for Rs. 8,00,000 per annum. The premium income received during the year on these policies amounted to Rs. 4,36,500. The business in force at the end of the year amounted to 78,410 policies, insuring a total sum of Rs. 2,48,82,200 including bonuses and annuities for Rs. 22,00,000.

The total life insurance fund of these societies at the end of 1945 amounted to Rs. 54,49,000 showing a net increase of Rs. 1,99,000 over 1944.

The net rate of interest realized on mean life funds of the societies in the year was 3.63 per cent., and the total expenses of management expressed as a percentage of the premium income was 46.8.

Out of 118 Societies, which have submitted their returns for the year ending 31st December, 1945, 11 had renewal expense ratios in excess of 100 per cent, when calculated in the prescribed way, and 22 between 50 per cent, and 100 per cent. Further 10 Societies have not yet built up any life fund. There has been a slight improvement in this respect as compared with the year 1944 but the position was still far from satisfactory.

INSURANCE AGENTS

Insurance agents constitute an important pillar of the insurance structure. The rapid increase in their number during the last few years, as indicated by the table below, naturally raises the question whether the growth has kept within healthy limits or whether the evil of overcrowding is present in this profession as well.

Year.	1943	1944	1945
Number of Agents	65,921	89,202	122,926

It will be seen that the increase in the total number during 1945 was 40 per cent. of the total number of the licences issued during 1944. It is also evident that as many as about one-third of the total number of licenced agents did not renew their licences for the next year, these apparently being "Casual" agents who did not care to continue in the line.

This gradual increase in the volume of new business for the past several years does not in itself indicate that the country has become more insurance-minded. It is more or less a result of the war-time prosperity of the class taking to insurance. In this connection it is important to stress once again the oft-repeated warning about the relative importance of quality and quantity in life insurance business. Quantity implying merely the size of the premium income should never be the objective. Where insurance is at its best, the underwriter is supreme, ignoring the demand for premium income at the cost of the quality of the business.

In the case of companies doing insurance business other than life, the premium incomes, in the majority of cases, show a shrinkage in the Marine branch. This is an inevitable result of the complete cessation of war risk premiums. The disturbed post-war conditions have also contributed to this decline in as much as normal trade facilities are still lacking and war-time controls have not yet completely disappeared. It will be some time yet before the normal flow of trade begins. The claims have increased.

The premium incomes of both the Fire and Miscellaneous branches of these companies have generally increased. The claims in the Fire business show a welcome drop; while in the Miscellaneous business the position remains where it was in 1944.

Insurance in modern times plays an important part in civilian life. The world is engaged in far-reaching schemes of reconstruction and India is particularly engaged in schemes of industrial expansion which will help in raising the standard of living of its teeming millions. When these schemes come to maturity insurance business of all classes is bound to increase.

Stock Exchange

THE earliest reference to stock broking in the sub-continent dates back to the end of the 18th century when transactions in Government securities and the shares of the East India Company used to take place in Calcutta under a *neevatree*. Similar references are also available about business in shares in Bombay before 1840. The boom following the American Civil War gave a great impetus to this business.

The Native Share and Stock Brokers' Association of Bombay was formally constituted by an indenture dated December 3, 1887. It has now about 500 members on its roll who carry no business in the Brokers' Hall bought in 1887 from the funds of the Association. Trading is governed by the rules framed by the Governing Board. The present value of a broker's card is about Rs. 45,000.

This is the only share market where forward business used to be conducted in an organised way. This business is governed by separate rules approved by the Government of Bombay under powers vested in them by the Bombay Securities Contract Control Act. This legislation was enacted in 1925 in pursuance of the recommendations made by the Stock Exchange Inquiry Committee in 1923, with Sir Wilfrid Aitken as President. The majority report made a number of recommendations for the strengthening of discipline, extension of business hours, curtailment of holidays, annual election of the Board, annual declaration by members as to the class of business they propose to undertake, abolition of sub-brokers, use of a common transfer form, abolition of blank transfers on the reduction of the stamp duty, etc. The minority report of one member the late Mr. B. J. Desai laid stress on the reduction of holidays and minor improvements and was accepted by the Association.

Thirteen years later, the Government of Bombay appointed a Committee, with Mr. W. B. Morison as Chairman, "to examine and report on the organisation and methods of working of the Native Share and Stock Brokers' Association, to consider whether any modifications are desirable in the interests of the investing public and to make recommendations."

Bombay Bill.—In September 1947, the Government of Bombay brought forward a comprehensive Bill to control and regulate forward trading in the Province by consolidating the existing laws including the Bombay Securities Contract Control Act. The Bill seeks to vest wide powers in Government in the matter of framing the rules of a recognised trade body and superseding its Governing Board, makes contracts, hitherto known as void, a penal offence, defines a ready delivery contract and bans trading in forward contracts at any place other than the trading hall of a recognised association.

Besides the premier share market in Bombay, occasional attempts were made in the city to

have an additional share market. In 1917 the Bombay Stock Exchange Ltd. was registered, but it ceased to function after a brief period. A new stock market was opened in 1933 under the name of the Indian Stock Exchange, Ltd.

Calcutta Association.—The Calcutta Stock Exchange Association was founded at No. 2, New China Bazar Road (now known as 2, Royal Exchange Place), Calcutta, with 150 founder members in 1908. Fifteen years later, it was registered as a limited liability concern. The Association is controlled and managed by a Committee and has a membership of 232 brokers.

The only registered institution in South India of brokers dealing in shares and securities is the Madras Stock Exchange Association, Ltd. registered in 1937.

Of late, several stock markets have been started at other industrial centres. These include Delhi, Lahore and Cawnpore. Plans for setting up a share market in Karachi are now under way.

The Ahmedabad Stock Exchange is also a registered body and recognised by the Government of Bombay under the Bombay Securities Contract Control Act.

Among the States, Hyderabad has recently started a stock market of its own.

Wild Speculation.—The Bombay and Ahmedabad share markets are known for textile shares; the Calcutta market deals extensively in jute, tea, mining and engineering shares; and the Madras market attracts investors in rubber and tea plantations and in companies operating in Mysore State.

The wild orgy of speculation that started in the share markets all over the country in 1943 called for Governmental action. On September 11, 1943, the Government of India issued Rule 94-C under the Defence of India Rules, prohibiting with effect from the 21st of that month all stock exchanges in India from permitting or affording facilities for *hudda* transactions or for the making of any contracts other than for ready delivery contracts. Speaking about the working of this Rule at the annual meeting of the Native Share and Stock Brokers' Association in 1945, Mr. K. R. P. Shroff, however, complained that instead of achieving the objective, the Rule had only created "grey" markets all over the country. In December 1945, this rule expired following the termination of the War.

CAPITAL MARKET

Until the beginning of the Second World War the capital market had made a slow but steady progress; but its pace quickly accelerated during

the War period when the monetary inflation and the rising trend of industrial profits served as a first class stimulant to its growth which was spectacular. The post-war period has, however, served mainly towards consolidating the early gains. A broad idea of the expansion of the market can be had from the fact that between 1938-39 and 1946-47, the interest-bearing obligations of the Government of India increased by Rs. 1,176 crores, while consent for the issue of capital was granted to the tune of Rs. 6404 crores from May 17, 1943 to March 31, 1947.

To canalise the resources of the capital market in Government loans, the Government of India introduced on May 17, 1943 control over capital issues. The control passed through several amendments, namely, (1) discouragement of long-range schemes till April 1944, (2) relaxation in regard to long range schemes from April 1944 onwards, (3) exemption of companies, other than banking and insurance companies, for capital not exceeding Rs. one lakh with effect from August 1945, and (4) the raising of this exemption limit to Rs. 5 lakhs in December 1945.

In order "to secure a balanced investment of the country's resources in industry, agriculture and the social services," the Government of India introduced in March 1947 a Bill proposing to keep in existence for five years, control over capital issues, hitherto secured by Rule 94-A of the Defence of India Rules and later by the Ordinance. The final Act was enacted on April 19 with the following features: (1) The duration of the control was to be reduced from five years to three years. (2) If an application for the issue of capital was refused, the Central Government was required, upon the request of the applicant, to communicate to him in writing the reasons for such refusal. (3) An Advisory Committee consisting of not more than five members was to be set up for reference to and advise on matters arising out of the administration of the Act.

Government Loans.—An analysis of the available statistics for the 28 months ended September 30, 1945, which marked the end of the Japanese War, shows that 4,660 companies applied for an aggregate issue of Rs. 385 crores and consent was given to 3,784 companies involving a total capital of Rs. 2604 crores. On the other hand, between March 1943 and 1946, the Government of India were able to raise by way of loans Rs. 980 crores. In other words, the war period witnessed the facilitation of Government borrowing at the cost of industrial development.

The post-war period, however, witness a reversal of the trend. Whereas in the 28 months of the war period, the total capital sanctioned was Rs. 2604 crores, in the 18 months of the post-war period it was as much as Rs. 380 crores despite the fact that the nature of control as reflected in the proportion of consents to applications had been very nearly the same in both periods. Consents for immediate schemes, which had been given preference in the war period, showed a decline in the post-war period in respect of both the number of companies and

the amount sanctioned. Similarly, while the proportion of non-industrial issues to total issues had been larger during the war period, the industrial schemes predominated in the post-war period. An analysis of these statistics can be had on page 162 of the Currency Report for 1946-47. It is, however, significant that whereas capital issues allowed in 18 months ended March 31, 1947 amounted to Rs. 380 crores, Government borrowings during the financial year ended March 31, 1947 totalled only Rs. 126 crores in the country.

Investment Trusts.—The tremendous growth of the resources of the capital market has made the old investors, both institutional and individual, very powerful and has created a new set of investors. Besides the banks and insurance companies, several industrial investment trusts have come into existence and the States have been coming forward to participate in the promotion and development of new industries in their respective jurisdiction. The latest development is the decision of the Government of India to set up an industrial finance corporation and its lead is expected to be followed by the Provinces. As a result of these developments, the capital market has today become a broad based organisation indicative of the economic progress of the country during the past decade.

The following table shows the highest and lowest index numbers of variable yield securities in India (here includes Pakistan) since 1928-29:

Year	Highest	Lowest
1928-29	101.1	98.9
1929-30	101.2	98.2
1930-31	95.6	75.0
1931-32	74.5	58.5
1932-33	77.6	58.1
1933-34	92.8	81.4
1934-35	120.8	95.5
1935-36	112.4	102.7
1936-37	137.0	105.9
1937-38	128.7	108.5
1938-39	109.5	100.0
1939-40	180.7	98.6
1940-41	123.8	109.5
1941-42	161.6	118.2
1942-43	162.8	110.1
1943-44	201.0	168.8

INDIAN SECURITIES

The following table indicates the broad trend of the prices of Indian securities during the war period and thereafter on the basis of the index

numbers prepared in the office of the Economic Adviser to the undivided Government of India with 1927-28 as the base for the index :—

	Government Securities	Fixed yield Industrial Securities	Variable Yield Industrial Securities										General Index
			Cotton (22 shares)	Jute (20 shares)	Coal (13 shares)	Iron and Steel (3 shares)	Tea (19 shares)	Sugar (3 shares)	Cement (1 Share)	Paper (2 Shares)	Banking (8 Shares)		
August 1939	117.6	137.7	50.4	117.7	131.7	369.5	57.8	74.7	149.6	174.0	119.2	98.5	
1939-40	111.2	134.5	85.1	64.3	164.5	539.3	69.0	97.2	162.8	346.7	116.6	120.5	
1940-41	114.6	147.5	85.5	54.6	140.0	507.1	67.5	86.2	159.4	209.4	123.8	117.4

Initial Boom.—Stimulated by the widespread belief that the War would bring about soaring prices and monetary inflation, the stock markets developed a veritable boom right from September 1939 and Tata Deferreds were lifted up from Rs. 1,300 on July 25, 1939 to Rs. 2,332.8 on January 1, 1940. The series of German successes and the levy of the E.P.T. pricked the bubble thereafter and in May 1940, the market authorities in Bombay had to suspend work for a day and later suspend forward trading itself *sine die*. In the middle of June cash dealings were resumed but the shares on the forward list, in which the outstanding business amounted to Rs. 11 crores of which again Tata Steels alone accounted for two-thirds, were given the protection of the minimum prices. Between October and December 1940, the authorities managed to reduce the volume of outstanding forward account by half under a scheme permitting restricted forward business.

The year 1941 provided two sets of quotations for shares on the forward list, one for cash dealings and another for forward transactions which were justified on account of the outstanding business. Throughout the year, the sentiment remained bright and Tata Deferreds were marked up from Rs. 1,660 to Rs. 2,353.8 in the forward market and to Rs. 2,200 in cash on December 3, 1941. The news of Japan's entry into the War, however, gave a severe jolt to the industrial share market which collapsed rather abruptly. The market was unable to transact any business for several days and the minimum prices had to be fixed for 28 scrips. Tata Deferreds fell from Rs. 2,353.8 on December 3 to Rs. 1,600, the official floor price, on December 16, then to Rs. 1,525, the new floor, on February 16, and further to Rs. 1,265 on March 27, 1942, and then finally to Rs. 1,210 on April 7, 1942 following the withdrawal of the floor rates.

Rise and Fall.—The Central Government's announcement regarding war risks insurance scheme on April 8 brought a message of cheer to the market unnerved by wild rumours about Japanese air raids and helped Tata Deferreds to creep forward to Rs. 1,650 on June 9. The recovery, however proved temporary and the

general inclination to prune commitments owing to war uncertainty forced Deferreds to slip back to Rs. 1,382.8 on July 2. Thereafter the trend was generally upward; but the Congress resolution of "Quit India" on August 7, 1942 resulted in closing down the market. Trading was resumed on November 19 with Tata Deferreds at Rs. 1,670 and pushed that share to Rs. 1,790 on December 1; but the air raids on parts of the sub-continent depressed the rate to Rs. 1,460 on December 23, 1942. The steady improvement in the war that followed lifted Deferreds again to Rs. 2,095 on March 9; but the Finance Member's warning against speculation in cotton and restrictions on dividends had a bearish effect on the market.

In the following financial year, the favourable position of industries due to very high war demands, the elimination of fears about the country being attacked and the growing pressure of idle funds against limited investment opportunities contributed to a boom in industrials which recorded the largest gains in any single year since the outbreak of the war despite the levy of the E.P.T., the institution of cloth control, and restrictions on forward trading in bullion and on *bada* transactions in shares. Tata Deferreds touched the bottom at Rs. 1,837.8 during the year but advanced to Rs. 2,252.8 on March 20, 1944.

Upward Trend.—The upward trend was generally maintained thereafter; but the improvement was less marked owing mainly to the bearish view of favourable war news. Tata Deferreds dropped from Rs. 2,252.8 on March 20, 1944 to Rs. 1,967.8 by the middle of April 1944; but banks and insurance shares slumped heavily following the explosion in Bombay docks. With the restoration of confidence following Government agreeing to reimburse the losses from explosion, Deferreds moved up to Rs. 2,290 on July 3. The following three months noted a recession on prospects of the early end of the war and the plantation shares were the worst to suffer. Deferreds declined from Rs. 2,290 on July 3 to Rs. 2,018.12 by September 8, 1944; but were subsequently pushed to Rs. 2,422.8 on January 9, on

modification of peace psychology. The subsequent relapse was due to the budget jitters with Deferreds declining to Rs. 2,028-12 on March 28, 1945.

Beginning with a hesitant anticipation of early Allied victory in Europe, the market maintained stability till June 1945 despite the surrender of Germany in May and then staged an impressive upswing which was strengthened by a strong competitive position for the Tatas as revealed in the report of the Parliamentary Select Committee on British Expenditure in India and the announcement of the 2½ per cent. 1950 loan. Tata Deferreds, which had stood at Rs. 2,012 just before the VE-Day rose to Rs. 2,275 towards the middle of July and even the surrender of Japan in the second week of August did not create any nervousness. From the beginning of September again an optimistic sentiment was noticed with Calcutta assuming the leadership and was strengthened by the bullish statements of leading industrialists and by the issue of the 2½ per cent 1960 loan marking another milestone in Government's cheap money policy. The Indian Government's budget surpassed the most optimistic expectations and

the months of April to August constituted the upward phase during which the share prices reached their highest levels for the year and in many cases for all time. Tata Deferreds soared from Rs. 2,976 at the end of March to Rs. 3,640 in August 1946.

Strain and Stress :—As the boom was being reached, the impression seems to have gathered that it was to a certain extent artificial. The outbreak of communal disturbances, the declaration of a series of strikes including the postal strike and the long-drawn out strike at Hiraapur, the severe jolt given by the Budget, the partition of the country and the subsequent wild orgy of communal disturbances in the Punjab all contributed to a downward trend throughout the next 12 months. Tata Deferreds collapsed from Rs. 3,640 in August 1946 to Rs. 1,550 in September 1947. Throughout this period, the market worked under abnormal strain and stress and, on many occasions, trading had to be suspended.

The table below gives the prices of leading industrial shares on certain days in the year ended March 31, 1947 :—

	29-3-46	Pre-Riots 14-8-46	Budget Session	Closing 1946-47	Highest	Lowest.

Bullion

SILVER

PRECIOUS metals have always held a great place in the Indian economy both for the purpose of ornamentation and for their value as store mainly because of the insecurity, lack of alternative sources of investment, and the general illiteracy of the people. The demand, however, depends on the state of the crops and their prices, or the season of the year. If it is the season of festivals and marriages, for instance, the demand will be higher and so on.

Production—The following table gives details about the world's production of silver (in millions of fine ounces) since 1939 :—

	1939	1940	1941	1942	1943	1944	1945	1946
United States of America	57.8	67.0	69.1	54.5	41.5	34.9	28.2	21.2
Mexico	81.5	86.3	78.4	80.7	71.2	63.0	61.1	46.0

Total	264.2	213.2	201.9	173.2	146.0	138.4	133.7	107.1
India and Pakistan	0.023	0.023	0.023	0.020	0.019	0.014	0.014	0.011

History—The history of silver since 1934 has been dominated by the acquisition programme under the U.S. Silver Purchase Act passed in that year according to which one-fourth of the total monetary value of gold and silver stocks is to be in silver. While the domestic production was purchased at a specially favourable price by the U. S. Treasury, the country's stocks of the metal progressively increased till they reached 3,343 million ounces in 1942. Between 1934 and 1940 China, usually a buyer, lost large quantities of silver to the U.S.A. estimated at about 1,200 million ounces; India which had always been a major consumer of the metal could import on an average only 20 million ounces per year under the stress of the world trade depression during the 'thirties' as against 97 million ounces during the quinquennium ended 1930-31, while the Government of India had been a consistent seller since 1927.

During the War, the demand for silver increased for coinage as well as for war industries with the result that the U. S. stocks of silver declined by 340 million ounces, that is, from 3,343 million ounces in 1942 to 3,003 million ounces in 1944. To meet the demand, the U. S. A. passed the Green Act in July 1943 by which 410.9 million ounces of silver was given by the U. S. A. as lease-lend to be returned again, ounce for ounce, within five years after the declaration of the end of the emergency by the U. S. President. But this condition forced India and Britain to withdraw silver currency after the end of the war, with the result that the monetary demand for silver in the post-war period showed a downward trend. Simultaneously, the higher prices checked the consumption of silver by industries. After three successive years of decline, the U. S. Government holdings of silver showed a small gain of

1½ million ounces at 2,718½ million ounces at the end of 1946.

Price movements of silver were largely governed by developments in silver legislation in the United States, the trend towards demonetisation and by the various restrictions on imports and exports. Following the expiry of the Green Act on December 31, 1945, a Silver Bill was enacted on July 31, 1946 authorising the Treasury to sell or lease for manufacturing use any silver, not pledged as monetary backing for silver certificates, at not less than 90½ cents per fine ounce and also to purchase all domestic silver mined after that day, if offered within one year after being mined, at a net price of 90½ cents. At the same time, the U. S. Treasury's buying price of foreign silver, which had been raised from 44½ cents to 71.11 cents per fine ounce on September 21, 1945, continued to be in force. But when the silver legislation came into force, it was sold freely at 90½ cents. This continued between November and January and on January 20, 1947, the rate declined following the flow of demonetised silver to 70½ cents. The Indian buying boosted the price; but the ban on private imports of bullion into India checked the rise thereafter.

Owing to the control in the United Kingdom over the export and import of silver and its disposal for internal uses as well as control over foreign exchange, four categories of markets have been evolved in that country. They are: (1) Official silver made available for essential purposes at the official price fixed by the Treasury, (2) "Internal Free Silver" for domestic users who do not have to account in detail for the use they make of the metal acquired from private stocks, (3) "Exportable Silver" not involving any dollar payment, (4) "American Silver" purchased against dollars and resold for payment in dollars.

GOLD

Gold has played a key part in shaping the life and history of the world. Between 1493 and 1600, world's production of gold was placed at 24.2 million ounces. It steadily rose to 38 million ounces during the 50 years ended 1850. Since then, however, the production has risen rather spectacularly. The annual average output mounted from 3.5 million ounces in 1850 to 10.6 million ounces in 1920 and then to 35.2 million ounces in 1936, reaching the peak figure of 41 million ounces in 1940. The greatest part of this enormous increase came since the U. S. Administration raised its price

of gold from \$20.67 per ounce to \$35 an ounce which made the U. S. A. a sort of magnet strongly attracting the world's entire gold production. Details of Russian output since 1940 are not available; but it is believed to be considerable. During the war production received a set-back owing to the diversion of manpower and equipment from gold mines to war requirements, but the downward trend started in 1941 was reversed in 1946 as will be seen from the following table, which gives the figures for world gold production in thousands of fine ounces:—

Countries	1939	1940	1941	1942	1943	1944	1945	1946
I. British Empire	22,471	24,054	24,151	22,497	19,103	17,504	17,143	17,210
(a) Union of South Africa	12,822	14,047	14,386	14,121	12,800	12,277	12,214	11,918
(b) Canada	5,094	5,311	5,345	4,841	3,651	2,914	2,651	2,808
(c) Australia	1,646	1,644	1,497	1,154	751	657	656	840
(d) New Zealand	179	186	175	166	149	142	140	140
(e) India & Pakistan	317	289	286	260	252	187	168	131
II. United States	4,621	4,863	4,832	3,583	1,381	1,022	988	1,625
III. All Countries	39,033	40,702	39,595	34,200	27,500	24,900	24,300	25,000
British Empire percentage	57.6	59.1	61.0	65.8	69.5	70.3	70.5	68.8
South African percentage	32.8	34.5	36.3	41.3	46.5	49.3	50.3	47.7

Less Gold for Coins—While production was falling during the war period, the net consumption in industrial arts of gold was steadily on the increase and the upward trend has not received a set-back even in the post-war period. From the following table, it will be seen that the net consumption of gold in industrial arts has steadily mounted from one million ounces in 1940 to the peak level of 9.3 million ounces during 1946. The Eastern countries which, since September 1931, were exporting gold

on a substantial scale again resumed imports on private account from 1942. On account of the dwindling world output of gold on the one hand and the rising industrial demand on the other, the balance available for monetary use has continuously fallen, the quantity of 14.6 million ounces available for monetary use during 1946 representing a fall of 65 per cent. over the figure for 1940.

Here are the figures for gold consumption and distribution in millions of fine ounces:—

	1940	1941	1942	1943	1944	1945	1946
Estimated net consumption in Industrial Arts	1.0	2.0	2.8	4.4	5.8	7.5	9.3
Net private absorption by India, Pakistan, China, Hongkong and the Middle East	-2.2	-0.1	0.4	1.1	1.7	1.8	1.1
Resulting non-monetary absorption	-1.2	1.9	3.2	5.5	7.5	9.3	10.4
Gold production	40.7	39.6	34.2	27.5	24.9	24.3	25.0
Balance available for monetary use	41.9	37.7	31.0	22.0	17.4	15.0	14.6
Resulting World Stock of Monetary Gold at the end of the year	938.7	976.4	1,007.4	1,029.4	1,046.8	1,061.8	1,076.4

Here are figures in millions of dollars for value of monetary stocks of gold in certain countries*.

** Nominal after transfer to British Exchange Equalisation Fund.

† Covers all holding in gold.

INDIAN MARKET

Though India happened to be an important consumer of the world's production of silver and gold, the bullion markets were not on a organised basis nor had the merchants any direct contact with London until 1905. The Exchange Banks in prominent cities used to negotiate all the deals before 1901 when a prominent *choksy* in Bombay opened his London office. In 1913-14 an Association of Silver Merchants was formed for the first time in settlement of forward accounts. Bombay and rules were framed for the settlement of accounts. Forward trading in gold was started in 1915 when for the first time gold was frequently imported by a merchant from the U.S.A. to be taken for interpreting the bye-laws. The question of reorganising the bullion trade on a sound basis is now engaging the attention of the Government of Bombay. The following statement gives the highest and lowest prices of gold and silver in Bombay with import duties since 1926-27:—

778

Price Fluctuations—Until the outbreak of the Second World War, the prices of gold and silver in the sub-continent remained approximately on world parity, although there were occasionally independent fluctuations due to local speculative movements. Upto September 1931 when the United Kingdom went off the gold standard, the gold price in Bombay represented the import parity equivalent to the rate in London plus the cost of importing gold from abroad. After that date, India became an exporter of gold and the price was based on the export parity, namely, the London price minus the cost of shipment to the U.S.A. or Britain. In the case of silver the price movements were affected by the reimposition of the import duty in 1930 and by the subsequent change in rate of duty. The price of silver, on the whole, remained on the basis of the import parity subject to speculative fluctuations.

During the War, however, the suspension of private trade in bullion with overseas countries, the growing value of bullion as inflation hedge and the heavy speculative activity pressed heavily against the available stocks of bullion in India and Pakistan and the prices mounted up rapidly leaving the world prices far behind. Even the official sales of gold amounting to 7.5 million ounces and of silver amounting to 181 million ounces during the war period could have only a temporary effect of arresting the rise in prices and generally, the bullion market maintained a remarkably firm front.

In view of the abnormally high and artificial levels of Indian prices of gold and silver as compared with the prices in the United Kingdom and the United States, the Central Budget for 1946-47 imposed with effect from February 28, 1946 a specific duty on gold at the rate of Rs. 25 per tola and raised the duty on silver from three annas an ounce plus a surcharge of one-fifth to a composite duty of eight annas an ounce.

In 1946-47, the bullion market started shedding to a certain extent its wartime insularity following the partial relaxation of control over the movement of bullion and was subjected in a fuller degree to the impact of developments in foreign countries. The internal factors influencing the market were (1) increased speculative activity, (2) acute shortage of the actual stock, (3) bulls' control over the spot market, and (4) reduction of the import duty on bullion by 50 per cent. During the year, forward trading in bullion, which had been banned during the war, was permitted; but it had to be suspended often on account of frequent differences between bears and bulls over the fulfilment of forward contracts. The bullish trend was accelerated by the suspension by Government of the issue of licences for import of bullion from March 6, 1947 onward and both gold and silver touched all time record levels in September 1947.

Firm Trend—The range of fluctuations in the ready rates for gold in the Bombay market during 1946-47 was Rs. 26-12 as against Rs. 34-6 in the preceding year. The average rate of gold worked out higher at Rs. 101-1-2 as against Rs. 80-3 in the preceding year. The premium of the ready over the forward rate varied between Rs. 12-12 and Rs. 1-8 against Rs. 5-5 and nil in 1945-46. In April 1946, the rise was temporarily arrested by news about discovery of a new gold mine in South Africa and a steep fall in Egyptian gold prices; but from Rs. 96 on April 18, the spot rate was lifted to Rs. 111 by May 25 owing to acute shortage of stocks. In July again the price receded to Rs. 84-4 owing to gold sales by the Bank of Mexico and reduction in import duty; but the suspension of import licences on March 6 provided the requisite stimulant for the upward movement.

The firm trend in the silver market was assisted by (1) reports of transactions in the London market at above the pegged price of 44d., (2) the raising of the U. S. Treasury's purchase price of domestic silver on July 31, 1946 from 71-11 cents to 90-50 cents, (3) increase in the London Treasury's price of silver for essential purposes from 44d. to 55d. on August 6 (4) the acute scarcity of floating stocks, and (5) manipulations by bulls. The extent of fluctuations in the rates for ready silver was Rs. 63 as against Rs. 41-6 in the preceding year. The monthly average spot price for the year worked out at Rs. 162-4-10 as compared with Rs. 135-1-11 in 1945-46. The premium of the ready over the forward rate varied between Rs. 13-8 and minus Rs. 2-8 as against Rs. 5 and nil in the preceding year.

MOVEMENT OF BULLION

The statements below give the average quantity and value of imports and exports of gold coin and bullion as also of silver for each quinquennium from 1900-01 to 1920-30 and for each of the financial years from 1930-31. Prior to the departure of sterling from gold, India and Pakistan were net importers of both gold and silver but since the delinking in September 1931 which coincided with the world depression they became large exporters of gold. So far as silver was concerned, they continued to be net importers on private account. Since 1943-44, however, they again became net importers of gold, taking into account the gold sales in India and Pakistan on behalf of the Allied Governments. For the entire period from 1931-32 to the end of 1946, India and Pakistan have been net exporters of gold to the tune of 36 million ounces, while during the same period, their net imports of silver on private account amounted to about 237 million ounces.

Here are the figures since 1900-01 for the quantity and value of imports and exports of silver for India, Pakistan and Burma :—

NOTE.—Since 1941-42 figures are on post-separation basis. The figures for 1943-44 to 1945-46 exclude sales of [about 74 million ozs.] in India and Pakistan on behalf of the Allied Governments.

Mines and Minerals

MINERALS form the starting-point of those endless series of manufactures on which modern industrial civilisation rests. Mineral resources of India and Pakistan, though most of them lie in India) cannot be described as enormous for a country of its size and population. Except in minerals such as iron ore, aluminium ore, and possibly mica, manganese, magnesite, thorium and titanium of which the exportable surpluses are large and of world importance the deposits are of decidedly limited extent and call for a policy of strict conservation and planning. Certain new methods of discovery have just come into vogue and it is possible that by using these methods new deposits of petroleum, a few new coalfields, ore-bodies, large underground water deposits may yet be unearthed. But on the whole it is safer to take a modest view of India's mineral resources. The present position may be described as follows: Minerals of strategic importance are adequate in parts only: there is a serious deficiency in munition metals like tungsten, tin, lead, zinc, mercury, graphite and liquid fuels. But in the basic metals, such as iron, manganese, aluminium, magnesium and chromium, the country is well supplied; in the first three, in large excess.

RESOURCES

The following method of classification shows India's position on the mineral map of the world:

1. Minerals of which India's exportable surplus can dominate world markets are iron ore, titanium ore, mica. 2. Minerals of which India's exportable surplus forms an important factor are manganese ore, bauxite, magnesite, refractory minerals, natural abrasives, steallite, silica, gypsum, monumental granites, monazite, corundum, cement materials. 3. Minerals in which India may be considered self-sufficient for present needs and those of the immediate future are coal, aluminium ore, gold, chrome ore, building-stones, marble, slate, industrial clays, limestone and dolomite, mineral pigments, sodium salts and alkalies, rare earths, beryllium, alum, glass sand, pyrites, borax, feldspar, nitrates, phosphates, zircon, arsenic, antimony, barytes, precious and semi-precious stones, vanadium. 4. Minerals for which India has to depend largely or entirely on foreign imports are copper ore, silver, nickel, petroleum, sulphur, lead, zinc, tin, fluorides, mercury, tungsten, molybdenum, platinum, graphite, asphalt, potash.

LACK OF POLICY

Until recent times the subject of mineral development had received scant attention; and Provinces whose annual mineral production amounted to crores of rupees had no agency whatever for development and conservation of its mineral resources. Even today mining on systematic basis is almost wholly confined to foreign capitalists who have exclusively owned petroleum, gold and copper mines and have had a controlling share in other mines such as those of coal, manganese and chromium. Thus an unregulated traffic grew up, and by far the largest quantity of manganese ore, or mica, ilmenite, gold, chromite, refractories and a number of minor minerals were extracted mainly for the purpose of export trade

in the raw and at a rate which will in future years deplete the reserves of key minerals.

The attempt therefore lately made by the Labour Department to take under Federal control the regulation and development of minerals of All-India and strategic importance is not made too soon. But one cannot stop here. One has to go on to supplement this by a wide-range improvement in recent mining practice, measures for conservation of mineral assets, introduction of mining research and so on.

BUREAU OF MINES

In 1942, a utilisation Branch of the Geological Survey of India was established for exploring and mining of promising mining deposits. But it was a wartime measure and was soon abolished. The Department of Mines is concerned not with exploitation of mineral resources but with the inspection of mines, safety of underground workers, wages, etc.

At present there is no general policy guided by one Department. The salt mines are managed by the Central Board of Revenue, a number of coal mines are worked by the Railway Board and some by Labour or Supply Departments: gypsum mines are under Supply Department while some mica mines are worked by Labour Department which during the war controlled the entire output of this most valuable munition mineral.

In January 1947 a National Mineral Policy Conference was held at New Delhi under the Chairmanship of Mr. C. H. Bhabha, then Member for Works, Mines and Power. The following items were discussed: 1. Formulation of a mineral policy for India. 2. Central co-ordination and regulation of key minerals. 3. Acquisition of mineral rights by the State. 4. Executive machinery for the production, conservation and utilisation of minerals. 5. Legislation necessary to implement policy and execution. The attention of Provincial and States authorities was focussed on the question of formulating a national mineral policy for India. It was decided to establish a Bureau of Mines at the Centre.

FUTURE POLICY

Future policy has to be along three different lines. First, control should be vested in the Centre. Government, second there should be one single authority to deal with the whole problem and third policy should be directed to secure the following objectives: 1. Attainment of mineral and metal self-sufficiency as far as possible; 2. regulation amounting to stoppages of export of some key minerals such as manganese chromite, ilmenite, sillimanite, beryl, rare-earth etc. without a compensatory barter of minerals and metals in which the country is deficient; 3. encouragement of local manufacture, especially of non-ferrous metals and products now imported from abroad; 4. better adjustment of mineral tariffs in the levying of import and export duties and fixing of quotas; 5. revision of mineral taxation, royalty and lease laws, and lastly 6. a progressive change-over to state-ownership where economically feasible of coal, petroleum and basic metals mines,

THE HOUSE OF BYRAMJIS

THE CENTRAL PROVINCES SYNDICATE LIMITED, NAGPUR.

Registered Office:

Dolly Dale, BYRAMJI TOWN, NAGPUR, C. P.

*Pioneers in the Mining Industry in the
Central Provinces and Berar for over forty years.*

Telegraphic Address: "STAR", NAGPUR.

Telephone No. 271.

Managing Director:

Mr. D. P. R. CASSAD, M.Sc. (Eng.), London, B.Sc. (Bom.),
M.R.S.I. (Lon.), M.M.G.I., M.I.E., Chartered Engineer.

Proprietors of:

Kalichhappar Collieries, P. O. Damua Collieries (Via Junnardeo,
G. I. P.), Rly. Stn. Hirdagarh, G. I. P. Rly., District Chhindwara,
and other Collieries in Chhindwara Districts.

Managing Agents to:

The Kanhan Valley Coal Co. Ltd., Nagpur, Damua Collieries,
P. O. Damur Collieries (Via Junnardeo, G. I. P.), Rly. Stn.
Hirdagarh, G. I. P. Rly., District Chhindwara, C. P.

Mining Contractors for:

The Mining of Manganese Ore to Messrs. The C. P. Manganese
Ore Co., Ltd., Nagpur, and for Iron Ore to Messrs. The Tata
Iron & Steel Co., Ltd., Jamshedpur, Tatanagar.

Proprietors of:

Manganese Mines in Nagpur, Bhandara and Balaghat Dists., C.P.

GALVANIZING PLANT AND STORAGE TANKS

T.B. Hot Galvanising Plants, oil, gas or coal fired, are thermostatically controlled. They are notable for fuel economy and high output. We also specialise in welded storage tanks, of which the upper illustration of a group of 10,000 gallon storage tanks is an example. Send us your welding problems. We fabricate in all metals for all industries.

THOMPSON BROTHERS (BILSTON) LTD. BRADLEY ENGINEERING WORKS
BILSTON, STAFFS, ENGLAND.

The first table gives the production and other figures for the four principal minerals coal, iron, manganese, salt produced in the sub-continent, and the second table gives the total value of the others.

Mineral Resources of States

COAL. Hyderabad leads all States in the production of coal. Coal is produced or found in the following States also, Korea, Rewa, Bikaner, Raigarh, Bhopal, Surguja, Cochin and Kashmir.

MANGANESE. The States produce about one-fifth of the total production of Manganese ore in the sub-continent, and deposits have been located in the States of Dhar, Bonai, Gangpur, Kalahandi, Keonjhar, Patna, Mayurbhanj, Talcher, Sandur, Idar, Indore, parts of Travancore, and in the Bidar and Nizamabad Districts of Hyderabad.

IRON. Rich deposits of iron ore are found in Mayurbhanj, Sandur, Bhopal, Nilgiri, Bonai, Raigarh, Dhar, Bastar, Bandha, Talcher, Surguja, Mandi, Patiala, Alwar, Jhalawar, Nawanagar, and Adilabad and Nizamabad districts of Hyderabad.

GOLD. The Kolar Goldfields of Mysore State are responsible for over 90 per cent. of the total Indian output.

BAUXITE. Large deposits of bauxite have been located in Bhopal, Bonai, Nandgaon, Kashmir, Surguja, Kolhapur and Gwalior.

CHROME. Mysore produces part of the total annual output of chrome ore in India, the chief centres being Hassan, Mysore and Shimoga. Chrome ore is also found in the States of Seral-kela, Keonjhar, and Sawantwadi.

MICA. Mica is chiefly produced in Jaipur, Tonk, Kawardha, Kishengarh, Talcher, and in Mewar (in the districts of Saharan, Jhazpur, and Rashmi). Muscovite mica also occurs in Hyderabad in the districts of Warrangal and Nizamabad.

THORIA. The Monozite sands of Travancore have assumed great strategic significance as they contain Thoria, the source of thorium, which is one of the radio-active elements feared by experts as next in importance to uranium. Ilmenite and Zircon are also found in association with monozite.

The States can also claim deposits of other minerals and metals, e.g., copper, lead, zinc, wolfram, asbestos, ochres and graphite.

COPPER. Copper deposits are found in Indore, Sikkim, Bikaner, Kharsawan, Patiala, Bonai, Mayurbhanj, Gwalior, Alwar, Kishengarh, etc.

Coal

INDIA'S reserves of all workable coals down to 1000 feet depth have been calculated by the Geological Survey of India at 20,000 million tons, and of good quality coals down to a depth of 2,000 feet at 5,000 million tons. Reserves of coking coals for metallurgical use are computed at 1,500 million tons, of which only a portion, about 50 per cent. may be quarried.

Most of the coal raised in India comes from the Bengal and Bihar and Orissa—Gondwana coal fields. Outside Bengal, Bihar and Orissa the most important mines are those at Singareni at Hyderabad and in the C.P. but there are also a small number of mines at other places which have been worked at one time or another.

In 1947 the coal industry continued to remain under Government control—that is to say—price, production and distribution were fully controlled. The portfolio, however, changed hands from C. H. Bhabha to N. A. Gadgil. Some features of the year so far as the industry was concerned were increase in price, increase in production, introduction of several labour welfare measures and the search for new coal fields. The Government took steps to implement some of the recommendations of the Indian Coalfields Committee. But far and away the most important single development from the consumer's point of view was shortage in coal which was generally ascribed to three causes: the opting of some of the Muslim railway staff for service in Pakistan, unusually heavy consumption of coal by the railways for transportation of food and refugees and the outbreak of communal and labour trouble. The railways consequently undertook a vigorous drive for economy in coal.

The general improvement of production was maintained during the year. Production increased from 29,167,152 tons in 1945 to

29,276,893 tons in 1946. And the figures for the first half of 1947—15,647,028 tons—were even better, thus holding out a promise that the target of 32,250,000 set by the Indian Coalfields Committee may yet be reached, though it must be noted that the production figures for 1947 show a decline since March, and if the decline continues, the target may not after all be reached.

As regards consumption the bulk of the coal went to a few big consumers, viz., railways, iron and steel works, bunkers, cotton textile mills, bricks, tiles, cement and sugar factories and to some extent as soft coke for domestic purposes.

Not much progress has been made in the utilisation of coal for the manufacture of synthetic oils or dye-stuffs. While the Government Body of the Council of Scientific and Industrial Research at a meeting in February, 1948 set up a Committee consisting of Mr. G. D. Birla, Sir S. S. Bhatnagar, Sir J. C. Ghosh and Mr. D. N. Wadia to work out details of a scheme for the early establishment of a synthetic oil industry. Second and third grade quality coal would be used; this is an advantage as India's resources in first grade quality coal are limited.

There is hardly any export of coal in view of the domestic shortage. While the estimate coal requirements of the country from 1950 onwards are 41.53 million tons the present consumption is only about 32.25 million tons.

Mechanisation is urgent but mechanisation depends on transport which is the most important single problem facing the industry. While 3,582 wagons are needed per day to transport 32 million tons from Bengal and Bihar it railways have been able to commission only about 2,700 wagons a day. The problem was aggravated by the decision of the Muslim staff

which formed about 30% of the total railway staff to opt for Pakistan. The Government are meeting the transport problem by laying out more railway lines and the remodelling of stations and marshalling yards. A complaint which is sometimes heard is loss in transit, into which the authorities are now looking. The railways are also trying to economise coal.

Discovery of new coal deposits were reported from some areas, Panjsher near Kabul and in East Bengal, which should be of interest to Pakistan. Rich deposits were also found in Vrldhachalam and Cuddalore in Madras. It is expected this coalfield will commence operation next year and that in three or four years it may yield about 100,000 tons of coal a year.

The Indian Coalfields Committee submitted its report sometime towards the end of 1946. It made recommendations in regard to the acquisition of mineral rights the appointment of a committee to draw up a plan for coal production and transport, investigation into fragmentation of holdings, encouragement of sand-stowing operations, the abolition of excise duty on coal, the creation of a Department of Fuel and Power and the setting up of a National Coal Commission.

In regard to nationalisation the Committee expressed the opinion that while the principle was sound in itself it was impracticable until the mineral rights were acquired by the State. Actually, the only State-owned and State-operated mine today is at Kamptee in the C.P.

Iron Ore

ON account of the high ash of Indian metallurgical coke, it is usual in estimating the Indian iron ore reserves to accept only ores with an iron content of 60% and above. Ores below this iron content are used only in very small quantities in Indian blast furnaces. Large deposits of high grade ores are limited to a few areas of which the following fields require special mention:—

(i) *Singhbhum and Orissa*: In what is known as the Singhbhum Iron Belt, consisting of the Singhbhum District, in which the Tata Iron & Steel Company's Steel Works are situated, and the neighbouring States, there exist some of the richest iron ore deposits in the world. The iron content of the ore considered usable varies from 60% to 69% and these deposits have recently been estimated at 8,000 million tons, which are sufficient for the iron and steel requirements of India for centuries. In other parts of the world, Brazil for example, equally rich iron ore may be found, but rarely can it be loaded at the iron works so cheaply as in India. The advantage India possesses in the shape of iron ore is, therefore, very great.

(ii) *Mysore*: There are big deposits of quartz—magnetite ore in Mysore but they are of low grade and would require concentration before using them. The ores used in the Bhadravati Iron Works can be compared to Singhbhum ores containing about 60% Fe. and the quantity available of 60% iron content or more is from 30 to 60 million tons. In addition at least 100 million tons of about 55% iron content are available.

(iii) *Madras*: Very large deposits, mainly magnetite, occur in the Salem and Trichinopoly districts. They have been estimated at 300 million tons at least. They will, however, require concentration before use, and there may be considerable losses in the process.

(iv) *Bastar State*: The deposits of Bastar are as rich in grade as those of Singhbhum and are estimated at 600 million tons.

(v) *Other districts*: Similar rich ores occur in the Drug district (175 million tons), Sandur State (100 million tons), and Goa (estimates not available).

Salt

THE main sources of production of salt in India are in Sambhar Lake, in Bombay, and in Madras. Salt factories in Rajputana are managed by Government.

The total quantity of salt manufactured in the Indian Dominion and Pakistan from all sources in the year 1945-46 was 5 crore and 46 lakh maunds. Out of this the quantity manufactured in Pakistan was about one crore maunds, leaving 4 crore and 46 lakh maunds as the share of the Indian Dominion in 1945-46, and 3 crore 92 lakh maunds in 1946-47. These figures do not include production in Kathiawar and Travancore.

Salt was imported into the Sub-continent to the extent of 85 lakh maunds in 1945-46 and 40 lakh maunds in 1946-47. Salt was not exported from the sub-continent in any appreciable quantity during the above two years.

The Government of undivided India abolished the salt duty on March 1, 1947 to satisfy national sentiment. But subsequent events soon compelled them to reimpose the tax. In western Bihar, U.P., East Bengal, Bombay and the C.P. the price of salt rose higher than before the abolition of the duty. The stoppage of supply of salt from Pakistan areas added to the upturn. In areas where supplies were deficient, the

benefits of the abolition of salt tax went solely to the producers and middle-men and not to the consumers. The remission of the salt tax caused the Government of India a loss of Rs. 94 crores.

Plans for the development of salt industry, both short term and long-term are being completed by the Government of India. A complete survey of salt production, consumption, distribution, quality, imports and prices, has been undertaken. The necessity for fostering and directing the salt industry having been established, outlines of method of control have also been drawn up. To increase the production of salt in the sub-continent the Government deputed an expert officer in June 1946, to study the whole question of salt supply and demand, and suggest the changes in the administrative machinery necessary to make the sub-continent self-sufficient in the matter of salt.

In 1947, the controlled whole-sale rate for salt was Rs. 6-2-0 per maund.

On April 23, 1948 the Government of India declared that it would encourage individuals or groups to produce salt in an area in which they had full access to licences were needed.

During the year under review Pakistan experienced salt shortage.

The Alcohol Industry

ALCOHOL has three uses. It can be used as a drink. That is the use for which it is best known. Second, it can be used for industrial purposes, for instance in the manufacture of a number of chemicals. Third, it can be used as a motor fuel, for the production of mechanical power, when we call it power alcohol.

Alcohol does not occur free in nature. It is produced by a slow decomposition of the juices of certain fruit specially grapes, of palms or other sugary substances when they are exposed to warm or moist atmosphere. The process is called fermentation, caused by the presence of certain micro-organisms, popularly called yeast. Commercially alcohol is obtained by the conversion of certain plant products called carbohydrates which include celluloses, starches and sugars. The celluloses and starches are first broken down to simpler sugary matter and then fermented by yeast to produce alcohol.

Potable Alcohol.—Let us now deal with alcohol as drink in more detail. Three types of potable alcohol are produced in the Indian sub-continent, beer, toddy, arrack and certain varieties of 'foreign liquors.' Beer and toddy contain 2 to 10% alcohol while arrack and other liquors contain as much as 30 to 50%. Beer is produced from malted barley, and there are about 7 breweries in different parts of India and Pakistan. Arrack, a more popular drink, is obtained from the flowers of the mahua or mihwa tree or from fermented gur or molasses. But the most commonly used drink in the sub-continent is 'toddy' to give it its South Indian name. Toddy is obtained from the date palm. The palm is tapped and the juice is allowed to ferment.

There are, of course, the imported liquors but these are consumed chiefly by non-Asians and upper class Indians.

To pass to a statistical view of the liquor question, a great number of old pot, and coffee stills have always been in use but the major part of potable liquor is made in proper distilleries of which there are about 70 in India. Here is a table which gives a few facts about the production position in India. Asterisk shows that the figure is only an estimate.

Some statistics:—

Here are the figures for India:—

Year	No. of Distilleries and Breweries	Production in million gallons	Capital invested in lakhs	No. of men employed	Cane-molasses produced in tons	No. of Sugar factories
1930	26	4	150	2000	52,000	29
1942	52	6½	250	2600	3,69,100	150
1946	71	12	350	3000	3,50,000	145
1947	68	10.7	400	3000	3,18,000	146

And here are the corresponding figures for Pakistan:—

Year	No. of Distilleries and Breweries	Alcohol in million gallons	Capital invested in lakhs	No. of men engaged	Cane-molasses produced in tons	No. of sugar factories
1947	5*	3*	50*	200*	9,043	10

The figures for the imports of foreign liquors are given below:—

Year	Ale, beer, porter, stout in gallons	Spirits, liquors, wines, in gallons	Total gallons	Value of ale, beer, etc. in rupees	Value of spirits, etc. in rupees	Total Rs.
1943-44	3,01,454	9,08,196	12,09,650	11,96,911	1,47,34,030	1,59,30,941
1944-45	4,20,381	10,05,036	14,25,417	14,27,463	1,47,14,068	1,61,41,471
1945-46	1,42,632	10,75,446	12,18,078	5,83,805	2,31,69,313	2,37,53,118
1946-47	6,56,335	9,10,683	14,67,018	27,19,794	2,52,54,508	2,79,74,302

In comparison U.S.A. the country with the largest world-production (179 million tax gallons) and consumed 167 million gallons) of potable liquors had 12,942, 280 distilleries, 600 breweries and 1100 wineries. Its liquor industry spent 3 million dollars on taxes, wages and raw materials.

So much for the production side. Now for the revenue. The Provinces derive their excise revenue from taxes, fees and rents on local production and sale of liquors. Central Government derives its revenue from customs. Here are the customs figures in lakhs of rupees for the old undivided India:—

Year	Ale, beer, porter and other fermented liquor	Spirits and liquors	Wines	Total
1944-45	7.18	297.75	7.22	312.15
1945-46	2.0	480.0	20.0	502.0
1946-47	2.0	400.0	25.0	428.0

Prohibition.—Prohibition is now the accepted policy in India and Pakistan, and in every Province there is partial prohibition which is to attain completion in a definite number of years. For instance, there is prohibition in about half of C.P. and two-thirds of Madras. Madras expects to be completely dry on October 1, 1948 and Bombay on April 1, 1950. Few States have introduced prohibition either partial or complete though Mysore expects to go dry in five years' time.

Prohibition is mainly enforced by the Excise police; but in certain Provinces there are non-official voluntary bodies such as Vigilance Committees for detection and checking, or Prohibition Guards to help the regular Excise police. In Bombay no liquor advertisements are allowed in newspapers or liquor scenes in films. Liquor shops have been converted into tea and refreshment hotels in Madras, while Bombay is opening centres where 'nira' is served in the place of liquor. In nearly every Province one day or more have been declared as dry days. In the old undivided Punjab, students were prohibited from drinking and in Sind today liquor licenses cannot be given to Muslims or liquor served to young men below the age of 25.

Now that drunkenness is an offence in certain Provinces punishable with imprisonment or fine or both the need for an objective test for intoxication arises. It has been suggested in this connection that it would be a good idea if we applied the same test as is being increasingly applied in the U.S.A. In some of the American courts intoxication is considered as present if the concentration of alcohol in the person's blood is .16% or more. If the concentration is less than .15% and more than .05% the person's general behaviour and other circumstances are considered. The U.S. Courts have recognized the admissibility of such evidence and devised means of making such tests compulsory. One Supreme Court has ruled that the test of intoxication is not the amount of alcohol drunk, but the amount of alcohol present in the blood.

It is fully recognized, however, that legal prohibition alone is not enough to stamp out the evil of drink. Something must be done to

remove the causes that produce alcoholism. Among the major causes which produce alcoholism are poverty, overwork and a certain feeling of ennui. In the case of chronic alcoholics the cause may be deeper still, in a pathological condition of the person's mind or body. Therefore to achieve any lasting result a policy of negative prohibition should be backed by a constructive effort to provide better food, better housing, better living conditions, greater facilities for recreation and the proper type of education for the younger people. The need for a constructive effort of this nature is fully realized and every Provincial Government has its own programme for mass education and enlightenment in this direction.

When Prohibition is enforced there will naturally be a great loss in excise revenue at a time when nearly every Government is sorely pressed for money. But the loss will be partly made up by fresh taxation such as sales taxes, industrial profits taxes and so on. And second, the palms and the mihwa trees no longer tapped for toddy would now be available for the production of power alcohol resulting in a general increase of the country's fuel resources.

INDUSTRIAL ALCOHOL

We have already mentioned that alcohol is used not only as a drink but also for industrial purposes. Industrial alcohol is a very valuable material in the manufacture of chemicals like acetone, acetic acid, ether, chloroform, ethyl acetate, etc. It is also necessary as a solvent in the manufacture of fine chemicals, medical preparations, toilet etc. Since the last war its importance if at all has increased. It is now essential in the manufacture of ammunition and of artificial rubber.

In 1942 there were only 22 plants in India for the manufacture of industrial alcohol. In 1946 there were as many as 33 capable of producing 12 million gallons. But the actual production was as low as 5,031,400 gallons in 1945-46, and 3,734,600 in 1946-47. The undivided Government of India's Panel of Fine Chemicals, Drugs and Pharmaceuticals estimated that the medical requirements of the sub-continent

are one million gallons annually and industrial requirements 10 millions, a target which they said ought to be reached in 15 years' time. To make this possible, it is argued, the first essential is to abolish the present excise duty on industrial alcohol and the second is to have a uniform policy for the country as a whole. Industrial alcohol should not cost more than a few annas a gallon. As it is it costs the distiller 5 to 6 annas to make it. When the producer's and middleman's profit is added the price will increase to a point where it becomes uneconomic to use it.

AMERICAN RECORD

In this connection the experience of U.S.A. may be helpful. Before the war the normal

production in the U.S.A. was 100 million gallons. As more alcohol was needed to make smokeless powder for anti-aircraft shells and artificial rubber tyres for Army lorries the production rose to 600 millions between 1941 and 1945. So whisky distilleries were turned to the production of industrial alcohol. Synthetic alcohol was produced at 4 plants from natural and petroleum refinery gases. The point about synthetic alcohol is that it is cheaper than alcohol from molasses. Synthetic alcohol costs only 12 to 15 cents a gallon while molasses alcohol costs 40 cents when the price of molasses is 13-6 cents a gallon. The future lies therefore with synthetic alcohol.

Here are the production figures in million gallons for power alcohol in U.S.A. The figures for 1945 are for six months only.

Year	Synthetic	Molasses	Grain	Import	Total
1939	25	69	9	..	103
1940	32	86	8	..	126
1941	43	143	31	..	217
1942	50	114	133	1	298
1943	56	81	300	12	449
1944	60	150	359	33	602
1945	29	191	..	15	235

And here are the consumption figures:—

Year	Military	Lend-Lease	Synth. rubber	Anti-Freeze	Civilian and indirect military	Total
1939	..	..	..	..	104	104
1940	..	..	..	..	130	130
1941	18	9	23	..	165	215
1942	46	25	30	..	128	229
1943	40	63	126	51	148	428
1944	27	60	330	32	160	609
1945	15	23	155	9	81	283

POWER ALCOHOL

We now come to the third use of alcohol, i.e. as motor fuel for the production of mechanical power. A great many countries in the world have to depend on imported petrol. So as a security measure some power alcohol is always being produced in nearly every big European country from local raw material such as surplus potatoes, wheat, molasses and so on. Thus in 1941 about 200 million gallons of power alcohol were being produced all over the world from 187 plants in various countries. Of these France

had 47, Czechoslovakia 38, Germany 11, Italy 15, Brazil 16, South Africa 4 and Australia 3. During the War, of course, all the countries expanded their output.

Like the countries we have mentioned India and Pakistan too are large importers of petrol. There is no reason therefore why India at any time should not develop a power alcohol industry of her own especially when she is such a large producer of sugar. A great deal of the molasses which is a by-product in the manufacture of sugar is now going waste. Her

are some figures which make the position clear. India and Pakistan had 150 factories in 1942 in the sub-continent producing sugar. Now out of the 485,000 tons of molasses produced in that year about 100,000 tons were fermented to make potable alcohol, and another 50,000 tons used as fuel or manure or for tobacco curing or for making inferior sweets. The rest, that is to say, as many as 335,000 tons were simply wasted. If all the wastage was to be used for the production of power alcohol a secure market had to be guaranteed to the producer. This meant some sort of legislation to compel the users of petrol to mix in a certain proportion power alcohol with petrol in the ratio 20:80. The Joint Power Alcohol Enquiry Committee of U.P. and Bihar, the Indian Chamber of Commerce and the Indian Tariff Board were all recommending a scheme for the starting of a power alcohol industry before the war for it was clear that alcohol-petrol was superior as a fuel to neat petrol. But an appeal to the Government of India failed as it was frightened of antagonising oil interests. Some of the Provincial Governments, however, went ahead. Between 1939 and 1942, U.P., Bihar, Bombay, Hyderabad and Mysore all passed appropriate legislation for the purpose of encouraging use of power alcohol, Mysore giving the lead in this matter. During the War the Government of India fell into line but it was too late to get the necessary plant and equipment from the U.S.A. All it could do was to allow local fabrication of power alcohol plants. In 1946 there were 5 plants with a capacity of 2½ million gallons but the actual production was about a million gallons. In 1947 the number of plants increased to 9.

Panel Report.—Meanwhile the report of a Panel appointed by the undivided Government of India to review the situation and make recommendations has been published. It estimates that with the expected surplus of 430,000 tons of molasses 26 million gallons of alcohol can be produced. And out of 26 millions as many as 20 million could be used as fuel. They recommend therefore that all the existing plants should be modernized and if necessary expanded, and that 20 new plants with a capacity

of 1 to 1 million gallons a year should be built. As far as possible all plants were to be fabricated locally. The capital cost of the 20 plants is estimated at Rs. 2 crores. 20% of this will have to be used on imports of equipment which cannot yet be made in India or Pakistan such as boilers, generators, air compressors, yeast separators and control instruments. The rest of the equipment could be made in India with the help of the existing personnel. It is not necessary to import foreign experts but it may be useful to send out technicians from here to study the working of foreign plants so that they might be able to employ the latest methods in Indian and Pakistani factories. Further recommendations are a reduction in the excise duty on power alcohol to enable the blended fuel to be sold at the same price as neat petrol, and the appointment of an Alcohol Commissioner to regulate matters relating to molasses and the price and distribution of alcohol.

The Panel also makes a few recommendations about industrial alcohol. It recommends, for instance, the development of subsidiary industries for making chemicals, solvents, food-yeast, dry-ice, fertilizers, potash, etc. from alcohol and the by-products, and the starting of a research organization, to investigate possibilities of expanding production and discover alternative sources and raw material and further applications of industrial alcohol. To encourage such application it suggests that industrial alcohol should be free from any tax. Finally, to encourage the growth of the whole industry the Panel recommends a general reduction in railway freights on molasses and alcohol.

After the division of the sub-continent the position is roughly as follows:—75% of cane-acreage, and 97% of sugar, molasses and alcohol remain in India and the balance goes to Pakistan. U.P. and Bihar produce 10 to 14 million gallons of alcohol. Out of this 2½ to 4 millions may be used for blended fuel in the provinces and the rest could be exported.

Alcohol is of national importance as a strategic fuel and a uniform country-wide policy in regard to excise and power alcohol is imperative.

The Cement Industry

GROWTH OF INDUSTRY

IN the history of Trade Associations in India, the Cement Industry provides an illustrious example of successful co-operative endeavour. The cement industry owes its origin to the fortunes of the original companies through early vicissitudes, through subsequent co-operative endeavour to the attainment of the present position of strength and solidarity.

CEMENT FACTORIES

The first venture in the manufacture of Portland Cement in India took place in 1904, in a small factory just outside Madras, but it quickly went out of business.

A few years later three new Companies came into existence and laid the foundation of the Industry as it exists today.

Towards the end of the first Great War, the output of all Cement Factories was commandeered by the Government. The boom period which followed that war witnessed the springing up of a number of new Cement Factories. Most of these were erected within the geographical marketing areas of the existing Works and internal competition set up an insensate scramble for business at any price, and for delivery over any distance, ignoring entirely the basic economic principle that as a cheap building material, it cannot carry heavy distribution of freight charges. This intense competition almost brought the Industry to its knees. Three of the new Companies went into liquidation and the shareholders lost between 2 and 2½ crores of rupees.

FORMATION OF ASSOCIATIONS

In 1925, following the result of an enquiry by the Tariff Board, the necessity for co-operation amongst the manufacturing units was clearly emphasised and as a result, an Association known as the Indian Cement Manufacturers' Association was formed. This proved to be a complete success as could be seen from the fact that during the four years of its existence not one single case of price cutting was recorded. Although described as the "Manufacturers' Association", its functions were only to fix and regulate selling prices. Each Manufacturing Co. was still a separate entity with its own selling arrangements and each was out to obtain as much business as it could possibly secure.

The Association was also responsible for the next step in co-operation. Its members agreed to a levy of 5 annas per ton on the sales to finance a joint service known as the Concrete Association of India which was formed in 1927 for the purpose of educating the public in the uses of cement and to provide free technical aid and advice to the consumer.

CEMENT MARKETING COMPANY

With a certain measure of confidence inspired, the next step taken was the formation of the Cement Marketing Company of India, Ltd., but, over this, negotiations were both delicate and protracted. No member company liked the idea of giving up control of its own sales; on the contrary, it wanted to secure as large a sales quota as possible. This latter point presented a very thorny problem and after considering various formulae, an agreement was reached and a quota fixed based on the capacity of each.

In 1934, two new Companies joined the pool adding a further tonnage. With the aid of the Concrete Association of India and a comprehensive publicity programme, sales were increased and during the Marketing Company's regime the average selling price of cement throughout the whole of the country was reduced by over 25%.

Its real charter was to operate the agreement entered into between the member companies and in this, there were a number of defects which were the cause of many uncertainties and suspicions. The quota was fixed rigidly but there was nothing in the agreement to prevent any company from enlarging its works to any extent it deemed fit and it was soon apparent to all that provision for future expansion had to be undertaken.

ASSOCIATED CEMENT COMPANIES

It was to put an end to all doubts and uncertainties about the future that the late Mr. F. E. Dinshaw mooted the Merger Scheme, its object being to make and deliver cement as cheaply as possible through rationalised production and distribution. This brought about the fusion of all the Indian Cement Manufacturing Companies then in operation (with the exception of the Sone Valley Cement Co. Ltd.) into one unit known as the Associated Cement Companies Ltd., in 1936 whose Managing

Agents are Cement Agencies Ltd., operating eleven factories. The benefit that accrued to the Industry by the development of new sites taken over from member companies at suitable centres was passed on to the consumer by way of reduction in selling prices. This reduction resulted in an increased off-take which made it possible to make further reductions. Thus, there was an average total reduction all over India of about Rs. 10 per ton from 1930 to 1936, which, resulted in the consumers benefiting to the extent of crores of rupees.

The policy of the Cement Companies which eventually merged into the Associated Cement Companies, aimed at the establishment of a great national industry on sound business lines. Foreign competition was reduced to a minimum and as sales increased prices were reduced consistently each year. This was along the lines recommended by the Tariff Board and has definitely led to the advantages envisaged by them, viz., efficient running, cheaper production, low distribution costs and lower selling price to public.

DALMIA GROUP

The Industry was, again affected when, in 1938, the Dalmia Group of Companies which came into being competed with the Associated Cement Companies. Happily, this state of affairs did not last long, and by the end of 1940, an agreement was concluded between the two major groups to market their output through a central organization. The Cement Marketing Co. of India, Ltd., was again brought into operation. Prices were reduced further and thereafter stabilised at an economical level restoring the industry again to a healthy footing.

The Cement Marketing Company then controlled and managed the sales and distribution of all the cement manufactured by the Associated Cement Cos., and the Dalmia Group of Companies, the former having 12 factories in operation and the latter five factories. The output of all these factories represented about 85% of the whole industry as there were four other cement companies operating independently.

EFFECTS OF WAR

As in other Industries, so also in cement, the recent War has had many effects. With the rise in the cost of all materials required for the manufacture and packing of cement, production cost naturally increased. To off-set this, in part, the price of cement had to be raised but it was still maintained at a very reasonable level, the rate being controlled by the Industries and Civil Supplies Department. Even with the increase allowed by the Government after prolonged examination, the price of cement compares very favourably with the price of other building materials as most of them have gone up by over 200 to 400 per cent.

Just before and for some time after the outbreak of hostilities, the demand from export markets both for Government and public use began to develop, and India eventually became the supply centre of cement to the Middle and Far East. The internal demand similarly

increased. Practically 80% of the total output was taken by Government and the balance was strictly rationed for essential repairs. With the cessation of hostilities, the proportion of Government demand fell considerably but the total demand both of the Government as well as the public has increased enormously.

The two groups separated by mutual consent with effect from March 1948 and they market their output independently.

BENEFITS

The part which the cement industry plays in the welfare of the country may not be generally appreciated. Not only does it afford employment to thousands of men in the factories alone but also it is one of the largest consumers of Indian coal. The jute industry is also benefited because over 40 million jute bags are used annually for packing purposes. Then, there is the large freight revenue accruing to the Railways by the transport of coal, gunny bags and cement estimated at some crores per annum.

The progress which has been made has been largely due to the energy and enterprise of the Cement Marketing Company and the Concrete Association of India in educating the country in the uses of cement. Branch offices are maintained throughout India with a staff of

over 60 engineers, overseers and skilled masons who give technical assistance to cement users.

That the cement industry is working on the right lines and with an eye to the future, there is no doubt. They are spending a large amount annually on educational propaganda which will be repaid by increased sales, a matter of vital importance.

FUTURE DEVELOPMENT

With the return of peace, the cement industry has retained its national importance in the sense that it is one of the few commodities that can enter into every one of the main schemes of national programme, viz., communications, irrigation and agricultural development generally and proper housing of the working classes. The cement industry owing to the urgency of demand placed on it in the immediate post-war years and the orderly planning of future development has received due consideration from the Government. The industry has already a programme of expansion, with years of investigation and preparation behind it which will ensure its being fully utilised in the post-war years. Its plant, technical personnel, financial resources and vast All-India sales organization—all afford an assurance of its maintaining an important position in the country today, and the continuance of its policy to make available to the public the highest quality of cement at the lowest possible price.

Chemicals and Dyes

FOR purposes of industrial production, chemicals fall easily into one of two major groups: (a) Heavy Chemicals, and (b) Fine Chemicals. Heavy chemicals are produced in enormous tonnages and at a low cost, and are consumed almost wholly in industrial and agricultural operations. The term "Heavy Chemicals" is applied usually to substance such as the common acids, alkalies, fertilizers etc., which are the foundation of the entire chemical industry. Their industrial utility is determined by their use of processing the raw materials of other industries manufacturing essential commodities, such as, textiles, paper, soap, glass, leather, kerosene, motor spirit, lubricating oils, etc. Thus, while the cost of the basic chemicals will undoubtedly influence the development of the consumer industries, there must be an all-round development of the latter to enable the heavy chemicals industry to be placed on a sound footing.

Fine chemicals, on the other hand, are manufactured generally in relatively small amounts since their purity is important; their production requires great skill and care in each operation under accurately controlled conditions. In this

category are included photographic materials, drugs and pharmaceutical products, paints, varnishes and pigments, dyestuffs, etc.

HEAVY CHEMICALS.

With the notable exceptions of borax, nitre and elemental sulphur, the heavy chemicals do not occur in nature, and they have therefore to be manufactured from naturally occurring raw materials. The names of the various heavy chemicals manufactured in India and Pakistan are given in the first column of the following Table (the upper half of the table gives the figures for sulphuric acid and its derivatives, and the lower half for alkalies and allied products). The figures for their estimated production and imports during the pre-war period (1935-40) and for 1946-47 are given in columns 2 to 3; the figures for consumption are equal usually to the sum of the amounts produced and those imported. The figures for the targets for future production, suggested by The Advisory Planning Board of the Government of India and by other planning committees, are given in column 4. The last column indicates the main uses to which these chemicals are put. All the figures are in tons per annum.

Chemical.	Average pre-war (1935-40) figures of		Average figures in 1946-47 of		Main uses.
	Production	Imports	Production	Imports	
Sulphuric acid	26,000	200	80,000	negligible	Chief basic chemical
Aluminium sulphate and alums	3,500	2,500	17,000	860	Paper, textiles, water treatment
Copper sulphate	..	1,700	1,000	1,075	Insecticide, fungicide
Ferruginous sulphate	..	100	2,000	negligible	Textiles, inks, paints
Sodium sulphate	..	1,200	3,500	27	Sizing, pharmacy
Sodium hydrosulphite	..	1,600	2,000	30	Paper, textiles, Dyeing, pharmacy
Sodium sulphide	..	2,700	inadequate	2,030	Textiles, sugar
Sodium thiosulphate	..	600	400	2,065	Dyeing, paper tanning
Hydrochloric acid	..	40	2,500	62	Photography, leather, textiles
Calcium chloride	..	900	1,000	nil	Textiles, Galvanizing, preparation of other chemicals
Magnesium chloride	..	500	1,000	nil	Refrigeration, road-making
Zinc chloride	..	1,800	300	950	Textiles, Paper, cement
Nitric acid	..	500	2,750	nil	Sizing, flux, dry cells
Ammonia	..	150	1,500	150	Gold refining
Ammonia carbonate and bicarbonate	..	600	inadequate	150	Fertilizers, refrigeration, medicine
Ammonia chloride	..	1,700	600	160	Medicine, baking powder
Caustic soda	..	27,000	4,000	1,900	Flux, dry cells, sundry trades
Soda ash	..	69,700	37,000	38,500	Soap, textiles, paper, other sundry trades
Bleaching powder	..	10,800	4,500	70,000	Glass, textiles, paper, silicates, washing, flux, etc.
Chlorine	..	30,000	2,400	9,100	Textiles, paper, public health
Potassium chlorate	..	1,900	2,000	nil	Water treatment, bleaching powder, chlorinated products
Sodium bicarbonate	..	5,800	1,500	small	Medicine, food products, fire-extinguishers
Sodium cyanides and ferrocyanides	..	220	4,000	63	Medicine, extraction of Gold and Silver
Sodium silicate	..	..	3,500	78	Lining, silk, soaps
Sodium and potassium dichromates	..	..	..	nil	Textiles, leather, matches
Calcium carbide	..	3,200	..	3,500	Oxy-acetylene welding, mining operations

SULPHURIC ACID

The production of sulphuric acid has been tripled during the last ten years (cf. Fig. 1.), the present figures for production being in the neighbourhood of 80,000 tons/annum. Even with this substantial increase in the production figures, our per capita consumption of sulphuric acid is very far below than in the U.S.A., being 0.45 lbs. and 187 lbs., respectively. The pre-war production figures of hydrochloric and nitric acids were 550 tons and 500 tons per annum, respectively; their production increased substantially during the years of the World War II and, at present, nearly 2,500 tons of hydrochloric acid and 2,750 tons of nitric acid are manufactured annually.

Here are the production figures for sulphuric acid:—

	Thousands of Tons.
1937-38	26.8
1938-39	25.6
1939-40	30.7
1940-41	43.0
1941-42	40.7
1942-43	59.0
1943-44	65.0
1944-45	80.0
1945-46	..
1946-47	..

About 60 per cent of the sulphuric acid produced in the Indian sub-continent is by the Chamber process and the remainder by the Contact process. The Chamber acid is obtained from 32 small-sized plants, many of which are old and inefficient. There are only 5 Contact plants functioning at present, and 4 additional plants are in the process of being erected. Hydrochloric and nitric acids are manufactured at present by the action of sulphuric acid on common salt and nitre, respectively. This process is wasteful, and efforts should be made to manufacture the former by burning chlorine in hydrogen (both of which are by-products in the electrolytic alkali industry), and the latter by the oxidation of synthetic ammonia.

Manufacture.—Sulphuric acid is manufactured from elemental sulphur, and since the small quantities available at Koh-i-Sultan have proved uneconomical, the sulphuric acid industry is almost entirely dependent on imported sulphur. During the pre-war period (1935-40), India and Pakistan used to import about 28,800 tons of sulphur annually at a cost of about Rs. 100/ton. In 1946, after the War 37,000 tons of sulphur were imported at a cost of Rs. 210/ton.

In Western countries where native sulphur deposits are not available, the acid is manufactured as far as possible from other sulphur-bearing materials locally available. For instance, sulphuric acid was manufactured in Germany from gypsum or anhydrite, with cement as a by-product. In Great Britain, the spent oxide from Gas Works is used to recover its sulphur content in the form of sulphuric acid. So, sulphurous gases obtained in the smelting industries, involving the roasting of iron and copper pyrites and copper glance, are utilized in many countries as a source of sulphuric acid. It appears to be no reason why all the above mentioned methods should not be practised in India or Pakistan to make them at least partly sufficient with regard to this basic chemical.

Other Methods.—Further, in countries with meagre sulphur resources, it is considered desirable that industries should become independent of sulphuric acid as far as possible, with a view to avoiding the dependence of important chemical industries on imported sulphur. For instance, ammonium sulphate and superphosphate among fertilizers, and hydrochloric and nitric acids among the chief heavy chemicals, are manufactured now by processes which do not involve the use of sulphuric acid. Thus, ammonium sulphate is made from gypsum and ammonia, phosphatic fertilizers by the use of electrical energy, hydrochloric acid by burning chlorine in hydrogen, and nitric acid by the oxidation of synthetic ammonia. In India or Pakistan it may not be possible to apply all the above-mentioned methods immediately. For instance, the manufacture of phosphatic fertilizers by the electrical method might not be possible for some time to come. Until this is done, the production of large quantities of superphosphates will require large amount of sulphuric acid, because the manufacture of this fertilizer must go hand in hand with that of ammonium sulphate which will be produced shortly in plenty from gypsum and ammonia according to the plans prepared by the Fertilizer Mission. Similarly, the expansion of the already existing textiles, paint and metallurgical industries, and the starting of the rayon and dyestuffs industries, will take up huge quantities of this acid. It is surmized that the two latter industries alone will require about 30,000 tons and 20,000 tons per annum, respectively, of sulphuric acid in the initial stages.

ALKALIES

As a heavy chemical, caustic soda is of equal importance in the soap, paper, mercerized cotton, explosives, dyestuffs, vegetable oil, rayon, and other chemical industries. At present, about 40,000 tons of caustic soda are consumed annually out of which soap (45 per cent), textiles (30 per cent) and paper (15 per cent) are the major consumers. The figures for consumption may increase up to about 100,000 tons/annum within the next few years, with the probable expansion of the different industries and the establishment of the rayon industry here.

There is a general tendency abroad to change over from the lime-soda to the electrolytic process for the manufacture of caustic soda, as there is an increasing demand in the synthetic organic industry for the by-product chlorine obtained in the latter method. In India, or Pakistan however, there is every danger that all the chlorine may not find suitable outlets in the immediate future. Hence, the decision to set up electrolytic caustic soda plants must be considered in relation to the possibility of the utilization of the by-product chlorine. Among the possible uses for chlorine may be mentioned the manufacture of hydrochloric acid, bleaching powder, hypochlorite solution, chlorinated rubber products, chlorinated plastics, D.D.T., etc.

Soda ash is manufactured at present in India by 3 factories, the production capacity of which is equal to about 70,000 tons/annum. However, the actual production is of the order of only 37,000 tons/annum, and hence the remaining 70,000 tons of the consumer demand are met by imports. It is recommended that (i) the

production of the existing plants be increased to their capacity, and (ii) new plants be located at places where good quality lime and common salt occur together.

OTHER INORGANIC CHEMICALS

The World War II gave considerable impetus to the production of several heavy chemicals in the sub-continent. For instance the manufacture of important industrial chemicals, such as copper sulphate, sodium sulphide, anhydrous ammonia, bleaching powder, chlorine, dichromates, etc., was started, and the production of salts, such as aluminium sulphate, iron sulphate, etc., increased to a considerable extent. There was, however, no planning in these endeavours, and in some cases the quality of the product was also not sufficiently high.

The present position regarding most of these chemicals is fairly sound inasmuch as their manufacture depends essentially on the availability of sulphuric acid and the alkalies discussed earlier. The production of these chemicals can be stepped up whenever necessary without much difficulty.

The anhydrous ammonia being manufactured at present is converted almost entirely into ammonium sulphate, and very little is thus left over for refrigeration, medicine, and other uses. It should be possible to obtain about 300 tons/annum of anhydrous ammonia for these uses when the new plants for the manufacture of ammonium sulphate from gypsum and ammonia, now under construction, start functioning. The bleaching powder manufactured at present is poor in quality, and the defect is attributed to

low quality lime. It is necessary therefore to find deposits of and utilize high quality lime so that the available chlorine in the product is at least 30 per cent. Magnesium chloride and sulphate are now manufactured on the West Coast from sea and subsoil bitterns. Large quantities of the former were exported before the War (about 1,800 tons in 1939-40), and it is gratifying to note that the exports have now increased to 1920 tons.

Calcium carbide is a very important heavy chemical both in peace as well as in war. Its manufacture was not undertaken so far in India or Pakistan due largely to difficulties in finding a suitable site where coal and high-grade lime occur together, and a cheap supply of electricity is also available. It is however gratifying to note that efforts are now being made to instal a 5,000 ton plant in Bihar shortly.

FERTILIZERS

Food is one of the three dire necessities of human existence. To maintain crop yields in any established agriculture, it is essential to add the plant-food elements (nitrogen, phosphorus and potassium) to the soil year after year. The question of chemical fertilizers is thus of major importance in India and Pakistan with their rapidly increasing rate of population.

Pre-war production of ammonium sulphate and superphosphate was about 30,000 and 2,000 tons/annum, respectively, and it has remained almost steady at these figures.

The figures for production and imports of some of the important fertilizers are given in the following table. All figures are in tons per annum.

Fertilizer.	Average pre-war (1935-40) figures of		Average figures in 1946-47 of		Target estimated for next five years
	Production	Imports	Production	Imports	
Ammonium phosphate ..	30,000	3,750	26,000	225	400,000
Ammonium sulphate ..	63,500	6,100	500	50	5,000
Potassium chloride ..	small	2,500	15,000	small	50,000
Potassium nitrate ..	6,500	7,000	3,000	550	100,000
Superphosphate ..	2,000	2,100	..	..	..
Fish manures, etc. ..	..	..	..	..	..

It has been estimated that to provide a well-balanced diet for the whole population, the existing production of agricultural food products should be stepped up by the following margins: Cereals (10 per cent); Pulses (20 per cent); Oils and Fats (250 per cent); Fruits (50 per cent); and Vegetables (100 per cent). It has also been estimated that food production can be increased by about 25 per cent if about 400,000 tons of ammonium sulphate are used annually. The Government of India have, therefore, now under construction plants for the manufacture of 400,000 tons/annum of this fertilizer at Sindhri, Alwaye and Belagula. Although there is difference of opinion among some agricultural experts as to the utility of superphosphates in certain parts of the sub-continent, it is considered that a reasonable target for this fertilizer should be 100,000 tons/annum. The possibility of using ammonium nitrate as an alternative fertilizer to ammonium sulphate should also be investigated.

FINE CHEMICALS

The term "fine chemicals" is applied usually to substances such as photographic materials, drugs and pharmaceutical products, paints, pigments and varnishes, and dyestuffs. The raw materials necessary for the fine chemicals industry are derived from both inorganic and organic heavy chemicals, the former of which were dealt with in the preceding pages. Among the organic chemicals, by far the most important are coal and wood distillation products, fermentation products, and aliphatic and aromatic synthetic chemicals. Only a few of these organic chemicals are produced in India or Pakistan and their figures for production and imports, targets for their future production, and main uses are presented in the following Table. All the figures are in tons per annum except where otherwise stated.

Chemical	Average pre-war (1935-40) figures of		Average figures in 1946-47 of		Target estimated for next five years	Main uses
	Production	Imports	Production	Imports		
Acetic acid ..	unknown	350	300	380	17,000	{ Rayon, white lead, lead acetate, dyeing, rubber

Photographic Materials.—The basic chemicals required for the photographic industry are (i) gelatin, silver halides and sensitizers in the coating of film, plate and paper base, and (ii) hypo and sodium sulphite in the processing stages. Of these chemicals, the three former are not being manufactured in India or Pakistan. There was no production of sodium thiosulphate and sodium sulphite during the pre-war years, but due to the impetus given by World War II, production of these two chemicals was started and their present annual output is about 800 tons and 300 tons respectively.

The manufacture of gelatin for photographic purposes is a comparatively easy matter, particularly as we have abundant raw materials for its manufacture by way of hides, skins, bones, etc. The manufacture of potassium bromide and liquid bromine has been started by one concern on the west coast of India, but the quantities produced are very small. The manufacture of sensitizers, most of which are complex organic compounds, will perhaps present some difficulties.

Pre-war imports of raw film base into India and Pakistan were enormous, the film industry

alone consuming some 80 million ft. per annum. The Celluloid Industries Panel has recommended the installation of a factory for manufacturing 50 million sq. ft. of all types of raw film, and this should synchronize with the manufacture of gelatin, silver halides, sensitizers and other photographic materials in adequate quantities.

Drugs and Pharmaceutical Products.—Prior to World War II, India and Pakistan were almost entirely dependent on imports for the major portion of their requirements of drugs and medicines. The pharmaceutical industry developed considerably during the war period but is still in its infancy. Synthetic drugs manufactured at present in India or Pakistan are mostly made out of imported chemicals, and, to place the industry on a sound footing, it is of fundamental importance that the fine chemicals necessary as raw materials are produced in requisite quantities. The figures for production of certain natural vegetable drugs and synthetic chemicals, and the targets for their expansion, are given in the following table. All the figures are in lbs. per annum except where otherwise stated.

Drug.	Average production figure in 1946-47.	Target recommended for next five years.
Caffeine	20,000	30,000
Emetin	nil	2,000
Ephedrine	3,000	5,000
Morphine	2,000	3,000
Pyrethrum	nil	50,000 tons of dried pyrethrum flowers
Quinine	100,000	2,000,000
Santonin	2,000	3,000
Strychnine	15,000	16,000
Carbarsone	2,000	50,000
D.D.T.	very little	30,000 tons
Mepacrine	unknown	160,000
Penicillin	unknown	1,000,000 million Oxford units
Streptomycin	nil	As much as possible
Sulpha drugs	unknown	500,000
Sulpharsphenamine and Neosarsphenamine	unknown	50,000
Vitamin A	3,500 gals.	1,000,000 galls.
Anæsthetic ether	120,000	
Calcium gluconate	500	
Chloral hydrate	200	
Chlorosulphonic acid	25	
Potassium permanganate	36,000	
Tannic acid	13,450	

The raw materials from which drugs and pharmaceutical products are derived consist of various inorganic chemicals, coal and wood distillation products, fermentation products, petroleum products, animal and vegetable products, and aliphatic and aromatic synthetic chemicals. It should be possible to produce sufficient quantities of drugs and pharmaceutical

products in India or Pakistan in the very near future if (i) the heavy chemicals industry is expanded, (ii) the manufacture of intermediates from the coal tar distillation products is immediately taken up in hand, and (iii) the manufacture of adequate quantities of solvents of proper quality is well organized.

Paints and Varnishes.—There are at present 38 paint factories and 5 pigment and colour manufacturers in India and Pakistan. The raw materials employed in the manufacture of (a) paints and enamels, and (b) varnishes and lacquers, are pigments, drying oils and driers, solvents and thinners and naturally occurring and synthetic resins.

With the exception of synthetic resins, all the other raw materials are available in the Indian sub-continent in sufficient quantities. The figures for the existing production and proposed targets for the various major items are given in the following table. All the figures are in tons per annum except where otherwise stated.

Item	Average production figure in 1946-47.	Target recommended for next five years.
Paints and Enamels	50,000	100,000
Varnishes: All types	2,500,000 gals.	no target proposed
Superior	135,000 gals.	300,000 gals.
Pigments: Lithopone		5,000
Zinc oxide	4,000	6,000
White lead, red lead, litharge and lead chrome	4,500	8,000
Titanium whites		3,000
Carbon black		500
Aluminium powder	250	500
Mercuric and cuprous oxides		500

It has been recommended that the extra production of 50,000 tons/annum of paints and enamels should be achieved by increasing the capacity of the existing plants by 25,000 tons, and by the installation of new plants of 25,000 tons capacity.

Dyestuffs.—In the days prior to World War I, the vegetable dyestuff Indigo was produced in large quantities in India, and was usually being exported to Europe and elsewhere. The outbreak of War I and the establishment of a synthetic dyestuffs industry in Germany marked the end of the Indian indigo industry. Although, to keep abreast of the rapidly increasing rate of industrialization in the U.S.A. and in the West, we would naturally

like to establish a synthetic dyestuffs industry in India and Pakistan shortly, it might be useful to revive the Indigo industry with Government support because, besides keeping a large sum of money in the country that now goes abroad, (i) it would give considerable employment, (ii) it has great use to the peasant grower as a change crop, and (iii) it has a peculiar value as an organic manure since the leguminous plant brings nitrogen from the atmosphere into the soil.

There is no production of synthetic dyestuffs in India or Pakistan at present and we are therefore entirely dependent on imports, the figures for which are given in the following table. All figures are in lbs. per annum except where otherwise stated.

Dyestuff or Colouring material	Average figures of imports in		Value (in Rs.) of imports in	
	1935-40	1946	1935-40	1946
Arks for tanning (cwts.)	6,98,328	7,65,235	44,37,970	77,84,524
Ochineal (cwts.)	1,186	12,907	2,42,136	9,10,970

nline salts	2,38,200	9,00,291	1,09,583	13,42,659
thers	34,81,604	36,19,554	77,80,062	115,69,844
affron	7,189	5,774	5,82,529	6,56,263
Total			3,52,51,419	8,45,76,689

The cotton textile industry is by far the smallest industry in India, the capital invested in it being nearly 50 per cent of the total capital invested in all industries. Realizing that there is an acute cloth shortage in India the National Planning Committee has recommended that the present output of cloth be doubled in the very near future. It is thus unnecessary to stress the need and urgency of also establishing a dyestuffs industry in India and Pakistan. A survey made recently by the Department of Scientific & Industrial Research of the Government of India has shown that the position is on the whole favourable for the manufacture of dyestuffs, and that all the dyes which are now in substantial demand could be manufactured in large quantities within the next 15 to 30 years.

Raw Materials.—The raw materials necessary for the dyestuffs industry, namely, benzene, toluene, naphthalene, anthracene, carbazole, pyridine, etc., are derived from coal-tar. It is regrettable that in spite of an abundant supply of coal (about 30 million tons are raised annually) neither India nor Pakistan has developed the coal-tar-distillation industry to any appreciable extent. In pre-war years about 60,000 tons of coal were distilled; this has now dwindled to about 25,000 tons. There are, at present, 9 tar-producing plants with a total capacity of 7,375 tons, and 5 tar-distilling plants of 4,900 tons capacity. In pre-war years about 21 million lbs. of dyestuffs, were being imported for the production of which about 250 million

lbs. of refined coal-tar-distillation products would be required. Our present production of the latter is only about 66 million lbs./annum.

The major inorganic heavy chemicals required for the dyestuffs industry are sulphuric, nitric and hydrochloric acids, caustic soda and soda ash, salt, lime and alum. It is estimated that the dyestuffs industry will consume about 30,000 tons/annum of the three acids which consumption is not provided for in the targets presented in our first Table I. Although these acids, alkalies and other salts are being produced in India and Pakistan they are more or less fully allocated to existing consumer industries, and hence it is doubtful whether the dyestuffs industry will be able to draw upon their present production. Further, the prices in most cases may be too high, and it is therefore desirable from all points of view that the proposed Indian dyestuffs industry should manufacture its own requirements of heavy inorganic chemicals.

Besides coal-tar derivatives and inorganic heavy chemicals, the dyestuffs industry also requires aliphatic raw materials like ethyl alcohol, acetic acid and acetic anhydride. Of these, only ethyl alcohol is produced in sufficient quantities, and hence it will be necessary to establish the manufacture of the other two chemicals.

EXISTING UNITS

The distribution of the existing units of production in the Indian sub-continent is shown in the following table:

	Small-scale establishments	Large-scale establishments	Total
INDIA	436	35	471
PAKISTAN	37	3	40
HYDERABAD STATE	6		6
Total	479	38	517

The total capital invested in the Chemical Industry is about Rs. 5 crores, which is only 2.5 per cent of the total capital invested in various industries.

The plants being erected by the Government of India for the manufacture of ammonium sulphate from gypsum and ammonia, in accordance with the recommendations of the Fertilizer Mission, will cost about Rs. 11 crores. The cost of the capital equipment required to achieve the sulphuric acid target is of the order of Rs. 35 to 40 lakhs. It has been recommended that the target for caustic soda be achieved by manufacturing 45,000 tons by the electrolytic and the remainder 88,000 tons by the lime-soda process. Each new 5 ton/day plant for the former process is estimated to cost about Rs. 16 lakhs.

Plant and Equipment.—A rapid expansion of our chemical industry in the immediate future is possible only if a very large amount of capital equipment is imported from abroad. The equipment so obtained ought to be of the most modern design and maximum efficiency, and each unit of production should be

of an economic size. With such units, the cost of production in the Indian sub-continent will not compare unfavourably with that in other countries. It is desirable also that the erection and tuning up of these plants be entrusted to foreign experts, and the equipment manufacturers asked to guarantee the performance of each plant. The foreign technicians should also train Indian personnel to take charge of all the operations within a specified period of about 2 to 3 years.

For most of the subsidiary industries, such as those concerned with the manufacture of salts, drugs and pharmaceutical products, paints and pigments, etc., very elaborate equipment is not required and the plants can be set up locally with the available talent.

An important pre-requisite for a well established and self-sufficient chemical industry is the manufacture of equipment and precision instruments, such as, reaction vessels, vacuum pumps, pressure gauges, pyrometers, thermometers, etc., and every encouragement should be given to efforts made in this direction in India and Pakistan.

Labour and Skilled Personnel.—A fundamental pre-requisite for rapid industrialization is technical education and perhaps the most serious problem facing the chemical industry in India or Pakistan is the lack of competent technical personnel. There has recently been some realization of this vital gap in our industrial equipment, and attempts are being made to fill the breach.

The running of chemical industries requires skilled personnel comprising (i) managers, (ii) supervisors, and (iii) skilled workers. To meet the first need, the Government of India have plans for the establishment of 2 or 3 higher technological institutes on the model of the Massachusetts Institute of Technology, U.S.A. They have also a scheme, already in operation, for sending students for post-graduate and research work in foreign universities. Supervisory personnel are the most important; the Bevin Training scheme played an important role in supplying the needs of war-time industry, but it is no longer in operation and nothing has been devised as yet to take its place. To meet

the need for skilled workmen in the engineering trades, a special Committee was appointed in 1944 which drew up an elaborate scheme for training, but although the Committee reported in August 1945, no action seems to have been taken on its recommendations.

It will be necessary in the initial stages to import foreign technicians to assist most industries in varying degrees, and it would be highly desirable that the training of local personnel in workshop management and supervision, methods of production, and in the laying out and running of a modern factory, should be made one of the terms of such employment.

INDIA'S PLACE

The world production figures for recent years of the major heavy chemicals are not available as yet. However, it is interesting to compare the figures of production for some of the important chemicals manufactured in the Indian sub-continent and in the U.S.A., in order to obtain a fair picture of our position.

Chemical	Unit	Average production figures for 1946-47		
		U.S.A.		INDIA Per annum
		Per annum	Per day	
Ammonium Sulphate	Tons	350,000	1,166	26,000
Calcium (super) phosphate	Tons	150,000	500	3,000
Hydrochloric acid	Tons	400,000	1,333	2,500
Nitric acid	Tons	600,000	2,000	2,750
Sulphuric acid	Tons	9,000,000	30,000	80,000
Caustic soda	Tons	2,500,000	8,333	4,000
Chlorine	Tons	1,000,000	3,333	2,400
Soda ash	Tons	8,000,000	26,666	37,000
Ethyl alcohol	Gals.	560,000,000	1,866,666	26,000,000
Methanol	Gals.	75,000,000	250,000	18,414
Benzene	Gals.	170,000,000	566,666	2,400,000
Creosote oil	Gals.	150,000,000	500,000	500,000
Naphthalene	Tons	375,000,000	1,250,000	600

That the heavy chemicals industry in India or Pakistan has not developed to the same extent as in the U.S.A. is due to the fact that major consuming industries, such as, plastics, rayon, cellulose fibres, dyestuffs, petroleum, etc., which consume large amounts of acids, alkalies and organic heavy chemicals, have not been established either. Expansion programmes in the chemical process industries have a direct bearing on chemical production because the volume of chemicals made available for use must be attuned to the needs of the consuming outlets. Therefore, to achieve a planned economy, it is necessary that the setting up of these industries in India or Pakistan should synchronize with the growth of the heavy chemicals industry.

An apparent conflict has arisen in the minds of some between the claims of cottage industries and those of large-scale industries—whether we should go back to the villages or whether we should harness the atom. This conflict is largely one of emphasis. It is clear that in India and Pakistan today the development of cottage industries on a vast scale is essential for the well-being of the masses. It is equally clear that the rapid development of large-scale machine industry is an urgent need of the country. Without industrialization, no country can have political or economic freedom, and even cottage industries cannot develop to any large extent if economic freedom is absent.

The Coffee Industry

SUCH historical evidence as is available on the subject shows that coffee was first introduced into the Indian sub-continent from Mecca as early as the 16th century. The first coffee garden was planted by a European about 1840 but the industry thus started did not begin to flourish till about 1860.

The production of coffee in the Indian sub-continent is almost entirely confined to the South. The acreage under production in 1941 was estimated at 181,000 acres and there has been some increase since then. The crop fluctuates considerably from year to year, but an average annual crop may be taken at approximately 16,500 tons.

The following is a statement of coffee acreage and production during the six years ended 1945-46:—

Year	Acreage	Production (in tons)
1940-41	181,013	14,226
1941-42	180,412	17,886
1942-43	184,474	16,257
1943-44	198,446	17,215
1944-45	198,147	17,345
1945-46	198,700	25,000

Although the crop for 1945-46 was a record crop for many years, that for 1946-47 is believed to be very small owing to adverse weather conditions.

During the War, the coffee industry in India lost a considerable proportion of her export markets, resulting in a large accumulation of coffee within the country. Prices also fell to such a level that a vigorous propaganda drive

had to be undertaken to increase the internal consumption. In 1946 no less than 17,000 tons were absorbed by the internal market and it appeared as if the industry did not have to depend upon foreign markets.

Indian Coffee Board.—In 1942 legislation was enacted whereby the entire coffee crop of India was to be handed to the Indian Coffee Board Pool. The Board was responsible for marketing the coffee thus received. The growers expressed much satisfaction with the working of this scheme which helped to maintain fair prices for all and provide a market for the whole of the produce. The scheme at first was only intended to be in force for a period of five years, but it has now been extended without a time limit by the Coffee Market Expansion Act of 1947.

The average market prices at the beginning of 1947 were reported to be as follows:—

Plantation A	Arabica cherry flats	Robusta cherry flats
Per cwt.	Per cwt.	Per cwt.
Rs.	Rs.	Rs.
120 to 124	97 to 99	87 to 90

Towards the end of the year, growers appealed to the Government of India for an increase in price to enable them to meet the greatly increased cost of production. The Government of India responded by deputing a Cost Accountant to tour the plantations and enquire into the cost of production.

There was a serious shortage of labour supply during the War, but the position has much improved during the past two years.

The Coir Industry

COIR is the trade name given to the fibre obtained from the husk of the coconut fruit. The Indian sub-continent and Ceylon have a virtual monopoly in the production of this by-product of the coconut industry and its development in these countries has been rendered possible by the fact that these coconuts are usually harvested when the husk of the fruit is still green, though the coconut within is ripe. Good quality coir can only be produced from the fresh green husk of the ripe fruit. If this nut is not fully ripe the fibre in the husk has not developed its full strength, and if the fruit has dried the fibre is weak, dark coloured and difficult to extract.

In Ceylon, the extraction is done by mechanical means on a factory scale after the husks have been retted in water for two or three weeks, and under such methods it is not possible to obtain either the colour or cleanliness of the fully retted Indian coir. The process consists of holding the husk against a revolving spiked drum which

combs and extracts the fibre. The shorter fibres collect in the drum and after cleaning are classed as "mattress fibre." The longer fibres are retained in the hand of the operator and are classed as "bristle fibre" which is exported for use in the manufacture of brushes, etc. About 75 per cent. of the Ceylon produce is exported as raw fibre, and only 25 per cent. as yarn or manufactured coir.

The industry as far as the export trade is concerned, is confined to the backwater regions of the Malabar coast, Cochin, Travancore, and to the Laccadive and Divi Islands, which are administered by the Madras Government. The extraction of the fibre and the manufacture of coir yarn forms a well organised cottage industry. The freshly harvested nuts are purchased by merchants, dehusked and the husks are then conveyed down the backwaters to suitable places for retting. Such places are situated along the tidal reaches of the backwaters, and sites for retting are selected

in places where the ground contains a considerable admixture of sand. Here, pits are dug, either in the backwater itself or on the banks and after lining these with palm leaves they are filled with the husks. After filling they are covered with plaited coconut leaves and weighed down with soil or mud. The husks are left to ret in these pits for a period of about eight months, the tidal rise and fall of the water and the porous nature of the ground ensuring constant water movement through the mass of retting husks and thus supplying aeration for the necessary bacterial action.

Women's Work.—At the end of this period, the husks are removed from the retting pit, washed in clean water and distributed among the local people who extract the fibre. This is usually spare time work done by the women of the house. Firstly, the outer skin of the husk is removed and the husk is then beaten with a wooden mallet on a block of wood or stone. This separates the fibre from the decaying pithy matter in which it is embedded in the husk. The fibre thus extracted is dried in the shade and then beaten or willowed with thin bamboo canes. The fibre is then returned to the merchant who further cleans this in a revolving drum furnished with projecting spikes resembling thin saw blades made of iron. Then the fibre is sorted out into colour grade and distributed among the local people who spin this into yarn. This is fundamentally a cottage industry. The fibre is first made into "silvers" and is then either spun by hand or on a wheel. Then it is returned to the merchant who again grades this for colour and splices the short lengths into a continuous length of 450 yards. Finally it is tied into bundles and is sold to the factories where it is either baled up for export or is manufactured into matting, door mats, braid, ship's fenders, rope, etc.

The yarn is very carefully graded, both for manufacture and for export, according to its colour, which is, in reality, a gauge of proper retting. The best quality coir is of a golden-yellow colour and the lowest grade grey which shows that the husks have either been over-retted or that the conditions for retting have not been satisfactory.

Properly retted coir is much more easily spun than machine made coir, because its fibres are clean and free from adhering pith and much more even yarn is obtained from it. It is also much stronger than machine made coir because none of the long or "bristle" fibres have been removed in the process of extraction. The colour is not only attractive, but is an indication that retting has been carried through to the correct stage.

Coir fibre, when made into ropes, is extremely elastic and thus yields to heavy strains, and has therefore special uses. It does not rot easily when exposed to atmospheric conditions, or to salt or fresh water, and in manufacture it is found to take dyes readily.

The Government of Madras are conducting a coir training school at Bepore near Calicut under the control of the Director of Industries and Commerce, where students are trained in improved methods of cleaning fibre, of spinning of coir yarn on the wheel, of producing ropes, belts, mats, rugs, etc.

The Trade.—During normal times the value of the coir trade is considerable, the imports into Great Britain alone, which represent less than 20 per cent. of the Indian exports, are shown in the Board of Trade returns to amount in value to more than one million pounds per annum. It is an industry which provides a profitable occupation to the densely populated back water tracts of Western India, and it provides the raw material in the shape of yarn and fibre for a considerable part of industry in Europe. More than 80 per cent. of the manufactured coir products and more than 90 per cent. of the Coir Yarn imported into the United Kingdom are produced in India. The imports of coir fibre from India are inconsiderable and amount to only 25 per cent. of the quantity imported. The export of coir fibre from India represents in value only 0.35 per cent. of that of the total Indian exports of coir and coir products.

The War made a change to the Coir trade. Coir production in India considerably dwindled owing to the shrinkage of overseas markets. The United Kingdom which was India's principal market before the War reduced her imports very considerably, while all the European markets were lost to India on account of restrictions imposed by all the importing countries on imports of coir. But the U.S.A. and Canada became important buyers of coir floor-coverings from India which took the place of Japan, China and Java which were supplying weed and grass mats in the pre-war years. During the War, coir was found to be a suitable substitute for hemp and sisal for cordage purposes and began to be used as such on a large scale on account of the non-availability of Manila hemp and Javanese sisal, consequent on the Japanese occupation of the Philippine Islands and the Dutch East Indies. The War has shown that coir can be used for various other purposes also like making of roads or a good wearing surface.

The Film Industry

THE Indian film industry, which is now 34 years old, can well claim to be the largest of the medium-scale industries of the country. Early development took place in Bombay, which can today be called the "Hollywood of India". Upto 1946 about 66 per cent. or two-thirds of the total annual production of Indian films came from Bombay studios. Since the trouble in Calcutta and the Punjab the proportion has risen to 90, the balance coming from Madras and to a small extent Calcutta. Production in Lahore has for the time being been abandoned.

There are today about 60 film studios in India, and over 250 concerns engaged in producing films. The principal film producing studios are located at Bombay, Poona, Kolhapur, Calcutta, Madras, Salem and Coimbatore. Of the 3 studios in Lahore, one was burnt in the riots and the other two were sealed by the Government.

Although exact figures are not available in certain cases, it is roughly estimated that about Rs. 10 crores is invested in the Production, Distribution and Exhibition branches of the Indian film industry, in which some 15,000 persons find employment. Investment in production and distribution amounted to about Rs. 4½ crores; Investment in the construction and equipment of studios about Rs. 1½ crores, and investment in the construction and equipment of Cinemas about Rs. 4½ crores. Of the 15,000 employed in the industry some 4,000, mainly artistes and technicians are engaged in production, some 4,500, mainly clerical, are engaged in the distribution, and some 6,500 are engaged in the exhibition of films. The total salaries paid out in a year are estimated at about Rs. 1 crore.

(The statistical information given here relates

mostly to the period ending 31st Dec. 1946 as statistics relating to 1947 are not available.)

The average number of workers* employed in film studios registered under the Factories Act as on 31st December 1942 was:

Bombay Province	2,224
Madras	462
Calcutta and Lahore numbers are not available but are estimated at	850
Total	3,336

These employees receive under Rs. 200 a month. If the average salary is Rs. 100, the annual pay-bill of these employees will be Rs. 40,003,200.

(i.e., excepting Author, Photo-playwriter, Scenario Writer, Composer of Songs, Production Manager, Assistant Production Manager, Costume Designer and his assistants, Art Director and his assistant, Music Director, Cameraman-in-chief, Sound Engineer, Chief Recordist, Sculptor, Make-up Supervisor, Painter, Decorator, Property Man, and Orchestra.)

Raw Film Imports
The following are the import figures for raw films since 1937-38 :-

Year of Import.	Footage of Raw Film Imported.
1937-38	7,42,35,103
1938-39	7,38,55,853
1939-40	8,80,00,000
1940-41	7,00,00,000
1941-42	9,30,00,000
1942-43	8,65,53,000
1943-44	7,67,58,000
1944-45	8,72,18,234
1945-46	8,09,93,563
1946-47 (for the nine months ending 31-12-1946)	10,10,03,449

35 MM. FEATURES

The following table gives the number of short and feature films exhibited in the sub-continent. The table has been compiled from reports of Censors at Bombay, Calcutta, Madras and Lahore.

Year	FEATURES		SHORTS		GRAND TOTAL	
	Indian	Foreign	Indian	Foreign	Indian	Foreign
1920 (figures not available).	..	..	..	..	..	..
1922 (figures not available).	..	..	..	..	..	..
1924	59	405	26	903	85	1308
1925	95	456	53	1076	148	1532
1926	117	598	120	1009	237	1607
1927	261	699	68	1029	324	1728
1928	342	472	138	989	480	1461
1929	287	393	96	1133	333	1526
1930	202	449	69	1491	271	1940
1931	196	417	109	1470	305	1887
1932	247	397	91	1416	338	1812
1933	229	399	97	1425	326	1824
1934	180	395	64	1181	244	1576
1935	163	277	not known	826	163	1108
1936	146	224	..	672	146	895
1937	162	201	..	604	162	805
1938	137	169	..	201	..	370
1939	165	197	..	153	..	350
1940	183	212	..	202	..	414
1941	124	298	630	812	754	1110
1942	98	332	689	664	787	996
1943	200	364*	134**	502	334	1052
1944	..	..	..	207†	..	..

The 16 mm. features and shorts for 1946 were features (foreign) 39, shorts (Indian) 21†, shorts (foreign) 178, grand total (Indian) 21 and grand total (foreign) 217.

* Including 4 narrated in Hindustani.

** Being newsreels.

† Newsreels.

‡ Including 5 newsreels reduced from 35 mm.

The substantial increase in Indian feature film production in 1946 is explained by the fact that this year the industry could take full advantage of the removal of the control on the import and consumption of raw films and meet the deficiency apparent from the low production in 1945. The general inflation also helped the expansion. On the other hand the drop in Indian short films is due entirely to the fact that the Government of India stopped production of their Information Films on 1st April 1946. Thereafter the News Parade was produced for a short while, but this was also stopped with the lapse of D.I.R. 44-A on the 30th September 1946.

There was no worthwhile increase in the import of foreign feature and short films. But the foreign film entered the 16 mm. field in a bid to introduce the foreign film in the many small towns which had not yet shown the foreign film. This attempt was not very successful mainly because of the fact that the people in these small towns could not follow spoken English. For the same reason, the attempt to introduce the 35 mm. foreign films with the original English dialogue toned down and the story made intelligible by intermittent commentary in Hindustani also failed.

The following Table gives the country of origin of feature films exhibited in the sub-continent for the years 1936 to 1946 :-

	1936	1937	1938	1939	1940	1941	1942	1943	1944	1945	1946
India and Pakistan	229	180	163	146	162	137	165	183	124	98	200
America ..	314	312	220	178	178	167	167	180	250	290	295
Britain ..	83	80	55	39	22	33	22	30	30	30	63
Other Countries ..	2	3	2	9	1	..	2	2	18	12	6
Total ..	628	575	440	370	363	337	356	395	422	430	564

DISTRIBUTORS

There are about 150 distributors in all, of whom 9 are distributors of foreign films. Eight of these represent American, one represents British producers, while one more distributes both Indian and British films. These distributors imported on an average about 250 Feature Films and 300 Shorts every year.

During the period of World War II the import of feature films fell by one-fourth, while that of short films became negligible as exhibitors were compelled under the Defence of India

Rules to exhibit not less than 2,000 ft. of such films as were approved or produced by the Government of India which took away all the time that was formerly used for showing imported short films.

The distributors are mainly centred in Bombay, Calcutta, Delhi, Madras, Bangalore and Bhusawal to supply cinemas, throughout the country with pictures for exhibition. Distribution in Western Pakistan was very greatly upset following the disturbed conditions in that region.

CINEMAS

When compared to the world's film business, Pakistan is 117. Britain for a population of the Indian film industry rates below 3 per cent. For a population of 400,000,000 in India and America with a population of 122,775,046 has permanent or touring. Of these the number in

as many as 17,000 cinemas.

Country.	Population.	Cinema Houses.	Persons per cinema.	Cinemas per 1,000 population.
Great Britain	47,416,842	5,000	9,483	0.01
U. S. A.	122,775,046	17,000	7,222	0.14
India	310,000,000	1,384	235,294	0.0040
Pakistan	90,000,000	117	789,231	.000001

There is no prospect of the number of cinemas increasing either in India or Pakistan unless the needs for residential accommodation is satisfied and there is peace and quiet throughout the two Dominions.

The gross annual income of cinemas showing Indian films amounted in pre-war time to about Rs. 2.40 crores. Although there is a source of income from abroad for Indian films this does not amount to much. About 5 per cent.

only of the total income from Indian films came from abroad until the embargo on trade with Africa was imposed as a measure of retaliation against South Africa's anti-Indian policy, but now it is only a nominal figure. It is therefore safe to say that the industry does not have any worthwhile foreign income. About 95 per cent. of the total income comes from the sub-continent itself. The gross annual income of cinemas showing foreign films was estimated pre-war at about Rs. 60 lakhs.

The following table gives the production of films in the year 1940 to 1946:—

Language	1940	1941	1942	1943	1944	1945	1946
Tamil	35	30	21	11	13	11	13
Telugu	12	13	10	4	5	4	10
Kanarese	1	2	2	4	..	1	..
Malayalam	1	1	..	..	..	..	..
Bengali	18	20	15	20	12	9	14
Punjabi	8	8	3	3	1	..	..
Sindhi	..	..	1	..	..	..	..
Marwari	..	..	1	1	..	..	2
Gujrati	..	1	..	..	..	..	1
Marathi	10	10	13	7	5	..	..
Urdu	1	..	..	..	..	6	9
English	..	1	..	..	..	..	..
Arabic	..	..	..	1	..	..	..
Hindi	77	51	99	98	88	67	151
Grand Total	162	137	165	149	124	98	200

The provincial production showed that Bombay maintained its ascendancy in production with 151 pictures in 1946.

The majority of the films produced came from independent producers who shot their films in rented studios.

TAXATION

The taxation includes (1) Import Duty on Raw Films and Production and Projection Machinery, (2) An Octroi or Terminal Tax which is levied by most District Municipalities, (3) An Advertisement Tax on cinema publicity of every sort including slides shown on the screen in the cinemas. This tax is levied by important Municipalities, (4) Government Electricity Duty, (5) Entertainment Tax, (6) Income-Tax, Super Tax and Excess Profits Tax upto 31st March 1946. The sum total of these taxes is estimated at 40 per cent. of the gross annual income of the industry. Thus, on the industry's gross income in 1946 of approximately Rs. 600 lakhs roughly Rs. 240 lakhs were paid in these taxes.

IMPORTS OF FILMS

The following table gives in footage and value the totals of raw and exposed films imported into the sub-continent and of the import duty paid to Government:—

Year	Footage		Value	Total Import Duty
1922-23	..	73,10,429	13,23,993	2,55,985
1923-24	..	72,01,655	14,10,637	2,25,407
1924-25	..	94,44,780	15,02,823	2,60,709
1925-26	..	139,17,199	21,05,533	3,54,265
1926-27	..	174,82,664	23,21,508	4,22,654

HISTORY

When some peripetetic exhibitors showed pictures of the Coronation of King George V and Queen Mary on Bombay's Esplanade Malden about 1911 they laid the foundations of the Indian film industry which now embraces all the three branches of production, distribution and exhibition. The pictures of the coronation proved to be so popular that the temporary structures became permanent ones. More pictures began to arrive in the country and the film industry got started on its career.

In the early days the entire business was controlled by four people: Alexander Hague, F. H. Sidhwa, Chunilal Munim and J. F. Madan. Of the four the last was the most influential chiefly because of the large chain of cinemas which he had acquired throughout the sub-continent.

The American film held undisputed sway in the early days. The number of American films exhibited was much higher than even that of Indian films. And British films, chiefly because of their poor quality, were hardly in the picture so much so that the question was raised in the Council of State. In 1947, a Committee of Enquiry was set up by the Government. But no action was taken on any of its recommendations for two reasons. The recommendations lacked unanimity, and the Committee had nothing to say about the desirability of showing British pictures. The success of the foreign films, however, was fully deserved for not only were they technically superior but even in their intellectual or emotional content they were much better than anything which Indian producers could show. The hold which the American film had acquired over the Indian market lasted nearly two decades (1912-1930); it was shattered only when the talkie came to India and the silent film disappeared from the market.

INDIAN PRODUCERS

Meanwhile a number of Indian producers had entered the field, notably R. N. Patankar and D. G. Phalke. Phalke produced a four-reel mythological feature *Raja Harishchandra* which entitled him to be called the 'father' of the production branch of the film industry. This was shown in Bombay at the Kohnoor Cinema

on Sandhurst Road. And later Phalke went round the country showing it to excited and appreciative crowds who flocked to see it both because of the novelty of the experience as well as the nature of the theme.

Then came World War I and a host of difficulties. But despite these difficulties Phalke succeeded in releasing further mythological features like *Krishna Janma*, *Kalia Mardan*, and a comic strip called *Pithache Panje* which proved to be as popular as a Charlie Chaplin comedy. Phalke's successful career was suddenly interrupted when owing to disagreement with his financiers he retired to Benares. And though he did come back later to act as general adviser to the Hindustan Film Co.—the only company which never suffered any losses during its ten-year old career or engaged a woman to play feminine roles—he was never able to recapture some of the old magic of his earlier effort.

There were others who had entered the production business, the more noteworthy among whom were Dwarkadas Narandas, Maneklal Chunilal, Ardeshir Irani, Mayashanker Thakkar and the successors of J. F. Madan (the last of whom tried to brighten up the pictures by getting European actresses to play leading roles). But, on the whole it was a sad story. For none of the producers were able to organize the film business on any thing like the solid foundation that it has built for itself in the U.S.A., for instance. In fact, the foundations were always shaky. There was a great deal which the Government or the bankers could have done to place the industry on a sound footing. The Government could have reduced the incidence of the taxation (most of it of an indirect nature), which fell so heavily on the infant industry. The bankers for their part, could have granted long or short-term loans at reasonable rates of interest. But neither the Government nor the bankers proved to be of any help, and this despite the recommendations of the Indian Cinematograph Committee in 1928. The result was that the young industry had to fight for survival as best it could against much stronger and better organized foreign companies. When at last the talkies burst upon the country in 1930 the Indian companies found that they were totally unprepared to withstand the shock.

A great many of them simply succumbed. But others gifted with ideas or inspired by enthusiasm made a fresh start under new conditions.

TALKIES

Foremost among these latter was Ardeshir Irani, a man who had started his career as a cinema projectionist. It was he who laid the foundations of the new industry with the first talkie *Alam Ara* which he produced in 1931. There were circumstances which favoured the growth of an indigenous film industry in the country. A great many people were unable to follow the spoken English of the foreign talkie and had to turn to talkies made in their own language for entertainment. Thus Indian talkies got a tremendous impetus. But investors were still hesitant and the industry was starved of finances. Nevertheless the industry made rapid progress: production rose, new talkie houses were constructed, theatres meant for stage-plays were converted into talkie houses. The exhibition of foreign pictures received a serious set-back.

Thus in 1939, the number of Indian films produced rose to 165, the number of permanent cinemas to 1,265 with some 400 as travelling cinemas. 80 per cent of the total exhibition time was (and still is), devoted to Indian films, with only 18 per cent to American films and a mere 2 per cent to British films. The income at the box office, computed for the first time, was estimated at Rs. 292 lakhs which, together with the fact that a little over a third had to be paid as taxes and fees, led one for the first time to suppose that the cinema, in its three branches, was collectively an industry capable of development into a major industry as in the U.S.A.

This encouragement induced production ventures in Madras and occasionally in Lahore and established the reputation once for all of the Prabhat Film Co. of Poona in the Bombay Province and New Theatres of Calcutta in Bengal (now West Bengal) as producers of pictures that were assured of success and of huge box-office returns.

Mr. V. Shantaram, a partner of Prabhat, shot into fame as a producer of genius. After a tentative start the average quality of the Indian film rapidly improved between 1935 to 1937 so as to stand comparison with the best production of American and English studios. Mr. Shantaram's *Dharmatma* for instance can rank even today with the world's best pictures. But after 1937 production took on a different quality. There appeared a tendency to blindly imitate Western themes and ideas, thus losing much of its value as an instrument of entertainment or of enlightenment.

WAR YEARS

Then came world War II. To the industry as a whole, with high profits as the sole motive, the war proved to be heaven sent boon. From a gross income of Rs. 292 lakhs in 1939 the income rose to the unprecedented figure of Rs. 12.82 lakhs in 1945, though the number of permanent cinemas remained throughout the war at practically the same level as in 1939. The principal reasons for this great prosperity were: the presence of large bodies of the armed forces in the sub-continent; the fact that almost every able-bodied male and a large proportion of the adult female population was engaged in some

gainful occupation; and that the people as a whole, had more money in their pockets than in the past with no goods to spend it on. The gross income on each picture rose to unprecedented heights because owing to the shortage of material and rise in the cost of production the number of talkies produced fell. The number of picture houses in the bigger cities too were relatively few and as the cities themselves were getting filled out the opportunity for graft and corruption increased. Financially, therefore, every section of the industry profited by the War. But this profit was not reflected in the artistic, technical or cultural aspects of the film. In fact the content, quality, technique, very greatly deteriorated. Moreover, the industry, not wishing to aid the war effort refused to produce the short "Information" films required by Government, even though these short films would have created for the production branch a new section which could have spread much useful information about India abroad and afforded a sort of training-ground for new technicians, artists and for new art-forms. The refusal in 1943 to produce the Information Films compelled the Central Government to undertake that responsibility at substantial loss to the public exchequer and by the promulgation of D.I.R. 44-A it served to introduce for the first time in India, the habit of regimentation about to be introduced again by the new Government. Nor was all the war profit put aside for improvements in technical processes or for removing collective financial handicaps under which the industry has for years suffered.

PRESENT POSITION

The failure to use the profits for the benefit of the industry had the most disastrous effect immediately the War was over in September 1945. The box office income began to fall. Another misfortune was the riots which broke out in Calcutta, Bombay, Noakhali and the Punjab.

Cinemas had to close in the disturbed towns, and business was restricted for months on end. This has produced a huge backlog of some 300 unreleased pictures. Release in the 57 key towns is not possible except on payment of special gratuities or surrender of some right or concession such as sole distribution rights. All this has caused the major producers to severely restrict, if not altogether suspend production. The financiers who lent money for the production in 1947 of a new record number of pictures (193), of which no more than about 80 have been released are also feeling unhappy.

In sum, the industry as much because of its failure to use the huge war-time profits as because of the effects of partition and the country-wide disturbances has been reduced, in a period of some 15 months, to the economic position it held in 1939. Of this no greater evidence is necessary than the fact that the gross income of the industry in 1947 is not estimated at higher than Rs. 345 lakhs, of which again roughly 20 per cent is in respect of foreign films and nearly 40 per cent represents taxes paid or payable.

The number of cinemas now is: India 1,384; Pakistan: 117. Of the 3 studios in Pakistan, one has been destroyed, while the other two have been sealed by Government in the hope that

its old proprietor would return to resume production. If he does not return they propose to use the studios for the production of Government-sponsored films.

A PROPOSAL

A proposal which has been put forward in this connection is that all the producers should join together to form a corporation with a subscribed capital of a crore of rupees. The total demand for new pictures should be accurately assessed and no more pictures should be produced than can actually be shown so that backlog is avoided. A limit must be set on the cost of production of a picture in relation to what it can earn after release. Themes must be found not in foreign pictures or foreign literature but in indigenous literature. Well-known writers should be commissioned to prepare the script. The screen-plays should also be prepared under their direct supervision.

Again, as the industry itself has no production code of its own there should be some sort of pre-censorship so that loss and wastage at a later stage could be avoided. Production time should be reduced from six months to about one and a half months. The salary of an artiste should be restricted to about Rs. 1,000 a month, though he should be allowed a share in the net profits. There should also be an agreement that no artiste might work on more than one picture at a time. And so on. It is clear that it is along some such lines as these that reorganization has to be sought.

NEW MARKET

A substantial portion of the serious depletion in income can be more than made good if the industry pays due attention to the large untapped market in India proper. India's 1,384 cinemas are spread in only about 550 cities and towns, and there are at least about 1,700 towns which do not yet have a cinema.

These towns have been without a cinema so far because the population of each of them is not large enough to maintain a 35 mm. cinema, the construction and maintenance of which are costly. But with the extraordinary advance made, mainly during the last War, in perfecting 16 mm. projection equipment, which is much less costly than the 35 mm. equipment, it is possible to provide these towns with small 16 mm. cinemas maintainable within the income they can yield. A beginning should be made in each of these towns with a temporary 16 mm. cinema which should be converted into a permanent house if the actual results of the travelling cinema warrant such action.

The exploitation of this new market calls for additional investment, which the industry ought to find from the profits which it made during the war. The provision and operation of these cinemas presuppose an organizational and technical effort, which is beyond the capacity of individual exhibitors, but the industry as a whole is in a position to finance the venture. Thus organized these cinemas can yield as much net profit as the present 35 mm. cinemas, which is the main reason why the effort should be made. It may be mentioned in passing that individual effort in this vast field was made in 1946 and 1947 but it failed badly.

PLANT AND EQUIPMENT

The plant and equipment required, whether for the production or exhibition has always been imported. The number of studios is too small to make manufacture of the production equipment economically possible, which must, therefore, continue to be imported. On the exhibition side, various mechanical parts were indigenously manufactured and used during the last War, though the quality was far below that of the imported article. There was some talk that immediately the War was over, and the necessary precision manufacturing capital goods were available, almost the whole range of projection equipment, except the optical parts, would be manufactured in the country, but nothing of the kind has materialised yet though the capital goods are available, mainly from the U.S.A. Nothing in fact can be done unless Government prohibit the import of any equipment which can be manufactured in this country. It is then possible that some American Manufacturer would establish the necessary factory in this country, exactly as has already been done in the United Kingdom. In the last resort it would appear that this manufacture would be undertaken only with the progress of the Machine Tools and Radio manufacture in this country.

LABOUR

The majority of the people in the industry have been trained by practical experience in the studio or the cinema. There is a tendency, however, to engage qualified people as sound recordists and projectionists. But the tenure of service and employment is at present so uncertain, the organization so poor, that qualified people see no prospect for themselves in the industry. Permanency can be assured only if the reorganization on the lines mentioned above are adopted. The occasional foreign technician, who has seen things for himself, has been wholly dissatisfied with conditions in the industry. However, what is needed is not foreign help but facilities to test the advances in film technique reported in foreign journals. The industry is not in a position to provide these facilities, which can, in the circumstances, be provided only by Government as part of over all industrial research. As long as studio technique does not reach American standards, it would be futile to invite foreign technicians or train Indian technicians in foreign lands because they will not have the equipment or other facilities to put into practice what they have learnt.

Comparison with World Position.—Beyond the fact that the number of pictures produced per year is second only to that of Hollywood, there is little to be said which is to the credit of the Indian film industry. The mainstay of the film industry of any country is its cinemas, which in India amount to no more than 1,384, whereas Great Britain and France, whose individual output of pictures is much below that of India, have over 4,000 each. The greater the number of cinemas, the greater is the income per picture and the higher the quality of the picture produced. Lack of resources is no discouragement. For as an example of how a little money could be made to go a long way we have the French film industry, the quality of whose production is second to that of none in the world.

810

The Glass Industry

IT would be helpful to set out the main facts about the glass industry before going into greater detail. The figures given are for 1945 which are the latest ones available.

The Indian sub-continent as a whole produced about 153,450 tons of glass including glassware. Of this 142,500 were produced in the two Dominions and 10,950 tons in the States. There are in all 174 factories manufacturing glass and glassware in the sub-continent. Of these, 162 are in the two Dominions, and 12 in the States. Passing next to Import-Export trade we find that the total value of the goods exported in 1940-41 (latest available) was Rs. 583,800 and the total value of the goods imported was Rs. 107,900. Among the places to which the goods were exported are Aden, Bahrain, Ceylon, Burma, Malay States, Arabia and Iran. The predominance of the Far East in the export trade of the sub-continent is striking. As regards imports the total value of the goods which came in was about 108 lakhs.

The range of glassware manufactured in the sub-continent today is extremely wide. It extends from bangles at one end to glass instruments at the other and includes bottles, globes, tumblers, jars, beads, electric lamp shells, other lamp ware, boiler gauges, steam ware, hospital ware and technical articles required for defence purposes. It is estimated that the industry can meet about 80 per cent of the internal demand in the sub-continent today.

PREDOMINANCE OF U.P.

The industry is not uniformly spread over the sub-continent, but is concentrated in certain areas such as U.P., Calcutta, Belgaum in Bombay and in the Mysore State. The predominance of U.P. is striking. Out of the 170 glass factories in India as many as 70 are in U.P. alone, with Ferozabad leading in the manufacture of bangles. The U.P. supplies the bulk of the glass consumed in the sub-continent. Next to U.P. stands Calcutta, where a number of small and medium-sized factories have come into existence. In Bombay one old-established bottle factory has greatly enlarged the quantity and improved the quality of its products and has even ventured into the field of glass instrument making. There are also several other factories of recent origin in Bombay.

The position in U.P. where over 40,000 people are engaged in the glass trade is worth a separate note. The glass industry has flourished in U.P. because of three advantages—the availability of the right type of sands, the existence of skilled workers, and most important of all the help given to the industry by the Provincial Government which has been a pioneer in this field. In 1938 special action towards development of this industry was taken by the Government.

A glass Technology Section was established at Benares under the direction of Dr. A. Nadel, Glass Technologist to the U.P. Government. Since then modern re-

cupative furnaces have been introduced, and the large scale industry as a whole changed over from pot-furnaces to tank-furnaces which are more economical and better suited for mass production. Numerous glass shaping, refining and decorating machines of a modern type have been installed in factories, in some cases at Government expense, according to development plans implemented by the Section. Various new lines, never before attempted in the sub-continent, like boiler gauges, steamware, hospitalware, technical articles required by the Defence Departments, etc., have also been evolved in the Laboratory of the section and handed over to the industry for regular production.

The production of laboratory ware was initiated and also the manufacture of glass beads was introduced, as an entirely new cottage industry, following a process hitherto unknown in the sub-continent. The glass section strives to improve working conditions in Ferozabad and other centres and experiments with new types of decorative glasses for the bangle and bead industry. Several modern glass factories were built by the section to cope with war supplies of articles never before made in the sub-continent. They are now in full production. In particular, the bottle industry has been organised on semi-automatic lines and the production of glass elements for the use of electric lamp factories has been established on a large scale. One factory situated at Shikohabad specialises exclusively in electric lamp shells.

ORGANIZATION

The glassware industry in the sub-continent is organized in two well-defined forms. (1) indigenous cottage industry and (2) modern factory industry. The former, which is represented in several parts of the country, has its chief centres in the Ferozabad area in the United Provinces. It is mainly concerned with the manufacture of cheap bangles made from glass blocks manufactured in large quantities. With the coming of the factory-scale manufacture of bangles, the cottage industry has had to struggle hard for its existence. The factory industry is turning out much better quality bangles and has also successfully eliminated Japanese imports. Ferozabad has been in full control of the bangle market since the Second World War. It experienced great prosperity in the first three years of the war, later there was a slack due to shortage of coal. Records of pre-war Indian ventures have shown, however, that failure in some cases was due in part at least to lack of enlightened management and of expert guidance.

In other fields the factory industry is mainly concerned with the manufacture of bottles, lamp chimneys and globes, tumblers and jars, the chief centres of production being the United Provinces, Calcutta and Bombay.

THE FUTURE

What of the future? There is no doubt that the future should be bright. For one thing there is a world shortage of metals and glass should be able to meet part of the consumer's need in this

regard. Glass is, in fact, being increasingly adopted for uses hitherto unsuspected. It is for instance, being used to replace metal in centrifugal pumps, ball bearing, gauge, pipe, etc. It is also being widely employed as conditioning material. Also the appearance of the unbreakable variety has helped to remove one of the material's most serious disadvantages. Altogether the glass industry has a great, expanding future.

There are, of course, obstacles which the Indian manufacturer has to overcome and adjustments which he has to make if he is to take full advantage of his opportunities. There is, for instance, the question of raw material. One of the three raw materials necessary for the production of glass, soda ash, has to be imported as only a very small amount is being produced at Dhrangadra. The Government have, it is true, agreed to give a rebate on customs duty on imported soda ash. And two leading firms are preparing plans to put Indian made soda ash on the market. But the supply of soda ash in sufficient quantity is a problem which has still to be tackled in any adequate degree. This is indeed part of a larger question for good glass cannot be manufactured without an adequate supply of standardized chemicals, high grade coal and refractories of standard quality.

An allied question which the Indian producer has to look into is the question of the standardization of the quality of glass on which the industry's reputation so largely depends. Along with the standardization of the product the question of organizing an efficient marketing system has also to be tackled if the industry is to serve the best interests both of itself and of the consumers.

WAR YEARS

The growth of the industry has been very rapid, specially during the last ten or twelve years. Here are a few figures to illustrate the rapidity of the expansion. In 1938-39 the total number of glass factories in the sub-continent was 80. Today the number has risen to 174. Before 1939 the internal production was estimated at 2 crores of rupees. In 1941-42 it increased to 4 crores. Before 1914 the Indian industry could supply only about 25 per cent of the country's needs. Today it is in a position to supply as much as 80 per cent of its needs. A look at the import and export figures tells the same story. In 1929-30 the imports were valued at 480.9 lakhs. By 1941 they had fallen to 107.9 lakhs. The exports have risen as rapidly as the imports have fallen. In 1929-30 the sub-continent exported glassware worth 103.5 lakhs. In 1941 the value of the exports had shot up to 583.8 lakhs.

The development of the industry has not been lopsided either: every type of glassware has shared in the general expansion. But progress has been most striking in respect to glass sheets, hollow ware and bottles. The production of glass sheets, for instance has risen from about 1,000 tons in 1938-1939 to about 5,500 tons in 1940-41. Three sheet glass factories are at present in existence and two in construction while before the War there was only one sheet glass factory; and it is now believed that this section of the industry at least will be able to compete with foreign manufacturers on equal terms.

Equally striking progress has been made in the manufacture of hollow glassware like tumblers, lamps and globes. Plants engaged in the production of hollow ware are fully equipped with tank furnaces and are in a position to meet the ever increasing demand in the country. It should be noted here that finishing machines for the manufacture of quality glassware were set up on the initiative of the Government. The introduction of jar making machines also owes a great deal to Government initiative and enterprise.

Talking of bottles, the U.P. alone is able to put on the market 10,000 tons of bottles a year. Besides, there are as many as 50 workshops which concentrate on the manufacture of toys and other fancy goods such as buttons, pendants, pearls and beads. Bombay has taken the lead in the manufacture of thermos flask refills. Attempts to produce precision instruments in the same place have already been mentioned. Then there is the manufacture of glass shells for electric bulbs which is yet another interesting development which is worth noting.

HISTORY

The most important single development which revolutionized the technique of glass manufacture in the sub-continent was the change-over from the pot furnace to the tank furnace, to which reference has already been made. The chief advantage is the economy in the use of coal and the regulation of temperature for fusion and melting which the tank furnace or the modern pot furnace makes possible. During the war, designs were obtained from abroad and the construction of the plant in the sub-continent subsidized. The furnace at the Ganga Glass Works at Balawali is the first of its kind in the sub-continent constructed wholly out of parts made in India. Since 1942 almost all factories have been using the tank furnace for the manufacture of quality glass. This has not only cheapened production, but it has also simplified the melting of glass and improved its quality.

We may wind up with a few words about the history of glass-making in the sub-continent in ancient times.

Glass was manufactured in the sub-continent centuries before Christ. Pliny mentions "Indian glass" as being of superior quality.

As a result of recent archaeological excavations a number of small crude glass vessels indicative of the very primitive stage of the industry at the time, have been discovered.

The first Indian, references to glass are in the Mahavamsa, the Chronicles of the Sinhalese Kings (306 B.C.), when glass mirrors were carried in processions.

It is certain, according to Sir Alfred Chatterton, that by the sixteenth century, glass was an established industry in the sub-continent, producing mainly bangles and small bottles. The quality of the materials was bad and the articles turned out were very crude.

Manufacture of glass in the sub-continent on modern European lines dates from the nineties of the last century, when pioneer efforts were made in this direction.

Finally here are four statistical tables which throw further light on the state and the development of the glass industry.

PRODUCTION IN 1945

Province	Production in tons for 1945	No. of factories included

Hides, Skins and Leather

THE Indian sub-continent is regarded as a surplus area in respect of its resources of raw hides and skins. It is estimated that normally it produces 20 million cattle hides, 5.7 million buffalo hides, 27.5 million goat and 17 million sheep skins a year. Only a portion of the cattle and buffalo hides is obtained from slaughtered animals and the bulk, about 75 to 80 per cent., is derived from animals that die a natural death. On account of this the output of hides increases when famine, flood, cattle epidemics, etc., take an undue toll of livestock. Goat and sheep skins are, however, derived from animals slaughtered for meat and their production remains more or less at a steady level. In normal times the sub-continent also imports annually mostly from the neighbouring countries about 1 million hides and 5 million goat and sheep skins. So the total quantities of hides and skins normally available are about 26.7 million hides and 50 million goat and sheep skins annually.

Just before the Second World War, about 10 per cent. of the buffalo hides, 22.5 per cent. of the cow hides (kips), 6.5 per cent. of the sheep skins and 80 per cent. of the goat skins available in the sub-continent annually were exported and the balance tanned in the sub-continent itself. But over a course of time the surpluses for export dwindled considerably except in the case of goat skins. This was due to the expansion of hide and sheep skin tanning in India. Goat skin tanning did not expand much.

Curing Methods.—Cattle hides are cured for the export trade by air drying and dry salting. The better grades of the former are dried out, being stretched lengthwise on frames, and are called "framed" hides, and the inferior ones are dried by spreading on the ground and are known as "crumpled" hides. Air dried hides are treated with a solution of arsenic to ward off insect damage before export.

Dry salt curing is done mostly in Bengal with a saline earth known as "Khari Salt" which consists principally of sodium sulphate mixed with varying proportions of sodium chloride and earthy matter. Goat skins are mostly dry salted and to a lesser extent air dried.

The Agricultural Marketing Adviser to the old undivided Government of India attempted to grade slaughtered cattle hides. Hide-grading stations were started at slaughter houses at Delhi, Agra, Bandra (Bombay), Bareilly, Karachi and Rampur, and specifications for grades were formulated. Hides and skins were included in the Schedule to the Agricultural Produce (Marketing and Grading) Act of 1937. An attempt was made by the Central Agricultural Marketing Department, Government of India, to improve drying in the slaughter houses where grading stations were started by giving a bonus to flayers.

The Department has published a Report on the Marketing of Hides in India and Burma (Marketing Series No. 38) and another Report on the Marketing of Skins in India and Burma (Marketing Series No. 40) which contain valuable information regarding Indian hides and skins.

Primitive Tanning.—The Indian tanning industry may be divided into 2 categories, primitive and modern.

Primitive tanning is carried out principally by the people of the tanning caste which is a depressed Hindu community known as the Chamar. They tan according to indigenous methods and their products may be divided into a number of typical groups, viz., (i) the miscellaneous crude leather produced in the villages to meet local needs, (ii) the bag tanned buffalo sole leather produced in the Punjab, Calcutta, Bombay and many other places which is extensively used for making shoes, (iii) tanned sheep skins of the Punjab known as "Kabuli Bheris" used as a cheap book-binding leather throughout the sub-continent, (iv) half-tanned leather of Madras and Bombay.

The first three varieties are all consumed in the sub-continent while the better grades of the fourth are exported chiefly to the United Kingdom and from there to other countries. The half-tanned cattle hides and calf skins are known in the international trade circles as East India tanned Kips and Calf skins. These are retanned and finished in the importing countries for making shoe upper and other varieties of dressing leather. The cattle hides used to be tanned formerly with avaram or turwar bark (*Cassia auriculata*) which occurs in south and western India. But since the First World War they are being tanned in Madras with wattle bark, large quantities of which are imported from South Africa. The goat and sheep skins in Madras and these as well as cattle hides in Bombay are still tanned with avaram bark. During the war, the production of half tanned leather in South India suffered a reduction due to lack of hides and skins. Just before the war in 1939 about 7,000 bales of tanned kips used to be exported monthly from Madras port chiefly to U.K. In 1944 this dwindled to 1,700 bales monthly, but U.K. wanted much more. To stimulate the production and export of tanned kips the British Government purchasing Agency at Madras introduced a bonus scheme since 1st August 1945 according to which a bonus was paid to the Kip tanners over the ceiling price in an ascending scale from two annas to seven annas per pound as purchase and export by the British Government Agency in any month exceeded certain limits. This scheme resulted in increasing the export of tanned kips from Madras for 1,700 bales monthly in 1944 to 4,781 bales in March 1946. It is understood that the bonus scheme has been now withdrawn.

Tanning of goat and sheep skin in Madras, however, got a set-back during the war. The export of tanned goat and sheep skins was prohibited to any country except U.K. & U.S.A. and their prices were also controlled. But now the price control has been lifted. As the country's tanning capacity has increased greatly all available hides and sheep skins can be tanned in the country itself. So according to some, prohibition of export is no great important.

Modern tanning.—Leather for harness and saddlery for military equipment has long been manufactured at Cawnpore by western processes of vegetable tanning in pits from buffalo and heavy cow hides using the local tanstuffs, babul

bark (*Acacia arabica*) and myrobalans (*Terminalia Chebuli*). At present large quantities of South African wattle bark and its extract (Mimosa Extract) are also being used as the supply of babul bark is getting inadequate.

Since the First World War sole leather has also been manufactured in Cawnpore, Agra, Calcutta and Madras from buffalo hides according to modern process for use in ammunition boots and better types of civilian footwear. Its output is now quite considerable in the sub-continent and is increasing. The Second World War greatly stimulated the production of vegetable tanned harness and sole leather and all the big and medium sized tanneries in the sub-continent capable of producing these leathers were engaged in their manufacture. Most of them had to extend their plants to cope with the war demand for leather and all were supplying practically the whole of their output to the Government.

Forty-three tanneries producing pit tanned buffalo sole leather were brought under Government control and their productive capacity increased to about 2 million buffalo hides annually. During the war the tanneries could not work to full capacity through lack of raw hides. The supply of buffalo hides has not improved even after the war. Owing partly to this and also to post war falling off of demand for pit tanned sole leather the tanneries producing it are not still working to capacity.

Chrome tanning.—The outstanding feature in the field of modern tanning in the sub-continent since the first world war is the phenomenal development of chrome tanning, especially for the manufacture of the shoe upper leather, Box and Willow sides from cattle hides and Box and Willow calf from calf skins. A number of tanneries in Cawnpore, Calcutta and Madras are engaged in the production of these leathers. Some of the tanneries are quite big and equipped with the latest chrome tanning machinery while there are large numbers in Calcutta which are small. Indian Box and Willow sides have been regularly exported to Burma, the Straits Settlements, Iraq, Persia and Africa since the first world war. But after the Ottawa Trade Pact of 1933 Indian Box and Willow sides and Calf were exported in increasing quantities to the United Kingdom, being helped by a preferential tariff in favour of the sub-continent. The export of these leathers to the United Kingdom rose to Rs. 54,15,500 worth in 1937. The Ottawa Trade Pact has also helped the development of the manufacture of glaze kid in the sub-continent and its export. The export of glaze kid rose to the value of 9.3 lakhs of rupees in 1938.

Fairly large quantities of embossed stout chrome upper leather were manufactured during the Second World War by a number of Chrome tanneries in the sub-continent for ammunition boots. Export of chrome leather to U.K. and other countries was considerably reduced during the last war due to war time exigencies. After the war its demand from overseas markets continues to be keen and its export has been resumed. Its demand and consumption in the sub-continent are also increasing for the manufacture of civilian shoes.

Other items of modern tanning which have made some progress are belting leather, chamols leather, suede leather, vegetable and chrome

patent leather, improved type of case leather, picking bands, roller skins, chrome lace leather, etc.

There are a few training centres among which the Bengal Tanning Institute in Calcutta and Jullundur Tanning Institute, Jullundur City, Government Tanning Institute, Bombay, maintained respectively by the old undivided Governments of Bengal, and the Punjab and the Government of Bombay may be mentioned. There are also peripatetic tanning demonstration parties under the Industries Departments of the Governments of U.P., Bihar, Orissa and the old undivided Governments of Bengal and the Punjab which hold instructional classes in rural areas to introduce improved processes of tanning.

To look after the interests of the Indian Tanning Industry a Tanners' Federation was started a few years ago. Its headquarters are at the Upper India Chamber of Commerce, Cawnpore. Most of the organised tanneries in India are members of the Federation.

Recent Developments.—There has not been any appreciable progress in the leather industry during 1947. Production of leather has decreased in comparison with that during the war period. This has been due to shortage of raw materials such as raw hides and skins, vegetable tanstuffs and tanning chemicals, insufficient transport and the partition of the sub-continent and consequent exchange of population. The stoppage of import of South African wattle bark has created a shortage of vegetable tanstuffs needed for the production of sole and half tanned leathers.

Future prospects of the leather industry are bright. The shoe wearing habit of the Indian peoples is increasing and demand for shoes is also on the rise.

The glaze kid industry is still undeveloped in the sub-continent. This holds out a good prospect of development as the area produces goat skins which are very suitable for making glaze kid.

Other possible lines of development are industrial leather goods like leather belts, picking bands, pickers, roller skins, etc. Production in these lines has already commenced.

Turning to the question of capital we find that the leather industry of the sub-continent is still mostly unorganised and consists of an innumerable number of small units for tanning, and shoe and leather goods making. It is, therefore, not possible to secure accurate information regarding the capital invested in it. At a rough estimate it may be placed at about Rs. 20 crores.

Plant and equipment are partly locally manufactured and partly imported. In tanneries the tanning drums and paddles which are made of wood are locally made, while tanning machines are mostly imported. Recently four firms, 2 in the Punjab area and 2 in Calcutta started making tanning machines. They are still in a small way and can make only the simpler sort of machines. Shoe machinery is wholly imported.

Tannery labour is mostly recruited from the Chamar community. There is as yet no shortage, and the recruits pick up modern methods of work and machine operations quite well. Skilled personnel to work as technical assistants in tanneries are being trained in the provincial tanning institutes. The trained men

are giving a good account of themselves in commercial tanneries. There appears to be a dearth of skilled supervisors for the shoe industry as training institutes for the shoe industry are still lacking in the sub-continent. There is thus a great need for provincial shoe institutes. Foreign help is necessary to develop new lines of manufacture like glaze kid. For other lines local talent appears to be adequate.

Compared with the leather industries of Europe and U.S.A., Indian leather industry is still unorganised and inadequately developed. It has to depend upon Europe and U.S.A. for machinery, chemicals and many other materials. Until these ancillary industries develop in the sub-continent the Indian leather industry will be handicapped in comparison with the leather industry of Europe and America.

The Jute Industry

JUTE, the golden fibre, is India's greatest contribution to world trade. The growing of jute provides the agricultural population of East Bengal (now mainly part of Pakistan) with an annual income averaging Rs. 44 crores, or about a half of their money income in normal years. As an export product it has, perhaps, no equal, considering that raw and manufactured jute has consistently represented by value about 25 per cent. of (undivided) India's outgoing merchandise trade. It has been truly stated that, as the world's foremost packing fabric, jute is practically omnipresent in world's commerce. The special characteristics of the jute fibre make it an ideal packing material for sugar, coffee, cocoa, cotton and wool, and a variety of textile products, including cordage, roofing felts and even decorative fabrics.

HISTORY

Considering its present dimensions, the jute industry of Bengal is of very recent origin. The first jute mill in Bengal was started at Rishra in 1855, and the first power-loom was introduced in 1859. The original output was only 8 tons per day. Another interesting thing about the jute industry is that, although it is practically a monopoly of Scotsmen from Dundee, the industry itself owes its inception to an Englishman. The founder of the industry was George Acland, an Englishman, who began life as a midshipman in the navy, and was for some years in the East India Marine Service. He quitted this service while still a young man, and engaged in commercial pursuits at Ceylon, where he was successful.

Later on he turned his attention to old undivided Bengal, and arriving in Calcutta about 1853 he got into touch with the management of the paper works, then at Serampore, where experiments were being tried with country grasses and fibre plants to improve the quality or cheapen the manufacture of paper. This seems to have suggested to Acland the manufacture of reha, and in 1854 he proceeded to England, with a view to obtaining machinery and capital in order to manufacture goods from that material. During this trip he visited Dundee, and while there Mr. John Kerr, of Douglas Foundry, suggested to him the importing of machinery into Bengal "where the jute comes from and spin it there."

This suggestion bore fruit, for shortly afterwards Acland placed orders with Kerr for a few systems of preparing and spinning machinery, and returned to India the same year accompanied by his two sons and a few Dundee mechanics who were to assist him in erecting and operating the first jute mill in Bengal. This, as has been stated, was at Rishra, the site of the present Wellington mills, near Serampore, and here, in 1855, the first machine-spun jute yarns were made. As not infrequently happens the pioneer got very little out of his venture. After several ups and downs the Acland interest in the Rishra mill ceased in 1887, and the company which Acland had formed in 1854 was wound up in 1888.

Power-Looms.—The pioneer's example was followed by Mr. George Henderson of that silk firm, and in 1859 the Borneo Jute Co. was launched under his auspices. To this company is due the credit of introducing the power-loom for jute cloth. Unhindered by the financial difficulties which had burdened the Aclands, the Borneo Jute Co. made rapid progress, doubling their works in 1864, and clearing their capital twice over. In 1872 the mills were turned into a limited liability company, the present "Barnagore Jute Factory Co., Ltd." Four other mills followed in succession—Gouripore, Seraljunge, and India Jute Mills.

"From 1868 to 1873", writes Mr. David Wallace in "The Romance of Jute," "the five mills excepting the Rishra mill simply coined money and brought the total of their looms upto 1,250." To illustrate the prosperity of the industry at this period we may take the dividends paid by the Barnagore Company. On the working of their first half year, a 15 per cent. interim dividend was declared, which seemed to justify the enormous capital at which the company was taken over from the Borneo Company, and shares touched 68 per cent. premium. The dividend for the first year, ending August 1873, was 25 per cent., for 1874, 20 per cent., and for 1875, 10 per cent. Then came a change. The investing public had forgotten the effect of the Port Canning bubble, and the condition of the jute industry in 1872-73 seeming to offer a better return than coal or tea, both of which had just enjoyed a boom, it was only necessary to issue a prospectus of a jute mill to have all the shares snapped up in the course of an afternoon.

PROGRESS OF INDUSTRY

The record of the jute industry may well be said to be one of uninterrupted progress. The following statements show the number of mills, capital invested, number of looms and spindles employed in the industry—from 1914 to 1938-39.

INDIAN JUTE-MILL STATISTICS

Year.	Mills (number)	Looms (number)	Spindles (number)	Year.	Mills (number)	Looms (number)	Spindles (number)
1914	70	38,379	795,528	1927	93	52,221	1,105,634

LATEST STATISTICS

According to the latest available statistics (that is, those for the year ended 31st Dec. 1947), the total number of mills in the Indian Union is 113 and their aggregate loomage 68,547. The total number of mill companies in the I.J.M.A. in the Bengal area are 69, and outside the Bengal area 6. The total number of mill companies outside the I.J.M.A. in the Bengal area are 3, outside the Bengal area 7. The grand total of all the mill companies is 85. The number of mills in the I.J.M.A. in the Bengal area are 97, and outside the Bengal area 6. The total number of mills outside the I.J.M.A. in the Bengal area are 3, and outside the Bengal area 7. The grand total of all the mills is 113. The number of looms in the I.J.M.A. in the Bengal area are 63,826, and outside the Bengal area 1711. The total number of looms outside the I.J.M.A. in the Bengal area are 1,531; and outside the Bengal area 1,479. The grand total of all the looms is 68,547.

The following statistics relating to the number of mills, looms, spindles, hands employed will be found instructive:

(a) Total number of working looms in the Mills in January			
Do.	1947	56,201	
Do.	1946	54,233	
Do.	1945	55,729	
(b) Total number of spindles at work in January			
Do.	1947	11,15,002	
Do.	1946	10,89,763	
Do.	1945	11,11,429	
(c) Average daily number of hands employed during			
Do.	1946	2,89,855	
Do.	1945	2,96,382	
Do.	1944	2,77,289

EXPORTS

The total exports of raw jute for 1942-43 were 235,000 tons; for 1943-44 were 170,200; for 1944-45 187,600; for 1945-46 391,000;

and the first two months of 1946-47 25,800 and 15,000 respectively.

More detailed figures for the export of Jute manufacture are given below:

EFFECTS OF PARTITION

The partition on 15th August, 1947, of India into the two Dominions of India and Pakistan split up the jute industry and the jute growing areas. The manufacturing centres were cut off from their sources of raw material. This has meant difficulties both for the jute cultivators and the burlap industry, which has been responsible for a large part of India's foreign exchange resources.

Approximately 70 per cent of the jute is grown in East Bengal (Pakistan) while the bulk of the exports is from West Bengal (India). All the jute mills are situated in and around Calcutta even those mills outside Calcutta being in the Indian Union while the better quality of jute and nearly 75 per cent of the total crop is grown in East Pakistan.

According to one forecast for 1946-47, the area under jute in Pakistan is 1,358,800 acres out of the total of 1,880,000 acres in the whole of the sub-continent a percentage of 72.3 to Pakistan. The yield of raw jute is estimated at 4,076,000 bales (one bale=400 lbs.) for Pakistan, while for India it is 1,474,500, the share of Pakistan being 73 per cent of the total yield. The yield in West Bengal is estimated at about half a million bales, while Nepal, Bihar, Assam and Orissa yield about one million bales.

It is clear from the above analysis that the Indian Union is the biggest consumer of raw jute, while Pakistan is the biggest supplier. In other words, the prosperity of the grower of jute in East Bengal is dependent of the prosperity of the Indian Jute Industry.

When partition was effected high hopes were entertained on both sides that until the completion of the transitional period, the *status quo*, with regard to control, customs and tariffs would be maintained. In November 1947 the Government of Pakistan decided to levy a land tax on all raw jute passing over its borders. The rates of the new tax were the standard rates levied for exports—Rs. 15 per bale of 400 lbs. in the case of pucca bales and Rs. 3 per maund for kutcha bales and loose jute. This action resulted in killing the raw jute market involving crores of rupees in the then current contracts. There

was the additional hardship arising from the order that remittances to jute districts from Calcutta should pass through the Foreign Exchange Departments of the two Dominions. Money had first to be remitted to Dacca where arrangements to handle it were deplorably poor. All this resulted in a huge hold-up.

The Government of India took parallel action on 23rd December 1947, by declaring Pakistan Dominion as foreign territory for purposes of customs duty on the export of raw jute and jute manufactures from India to Pakistan.

This unpleasant development in the jute trade began seriously to affect the supply position of the mills. As supplies of jute declined prices soared higher. The Stand Still Agreement was allowed to lapse on 31st March 1948 by both the Dominions. This aggravated the economic hardships and inconveniences of traders owing to the creation of customs barriers and restrictions.

INTER-DOMINION CONFERENCE

On the initiative of the Government of India, an Inter-Dominion conference was held in Calcutta which concluded on the 19th April 1948, with agreement being reached among others on a number of points relating to jute.

The following were the two main recommendations approved by both parties to the conference. Restrictions whether imposed by a Central or Provincial Government on the movement between the two Dominions of commodities duties thereon, must be removed.

Both the Dominions should re-examine their tariff schedule and their import and export control notifications to see what relaxations are possible.

Partition has completely disorganised the jute industry. Jute, which is the raw material of this industry and around which is built the industrial prosperity of West Bengal, became, on 15th August 1947, a foreign commodity in major part. There is now a movement in India to increase its own jute cultivation so as to make itself progressively self-sufficient in regard to this commodity. This, it is contended, can be done, first, by increasing acreage of jute cultivation, and secondly, producing better seeds,

better methods of cultivation and better controls over all that affects agricultural crop.

At its meeting held in Calcutta on 10th December 1947, the Governing Body of the Indian Central Jute Committee devoted serious attention to the question of increasing jute cultivation in the Indian Dominion. Sir Datar Singh, who presided emphasised that the production of jute in the Union should be increased by nearly 20 lakh bales, by growing early varieties of jute as a second crop in some of the lands now confined to 'Amam' paddy in West Bengal, Bihar and Orissa. He pointed out that the

area under 'Amam' crop in these three provinces was approximately 10 million acres, a considerable portion of which could be utilised for immediate cultivation of jute by adopting a system of double-cropping. The West Bengal Government was the first to take necessary action; especially procuring seed.

The Jute Committee decided to establish five research centres for investigation into the economics of jute growing in India. It resolved to close down its research station in Dacca and to open in India a most up-to-date and well-equipped central agricultural jute research institute.

The following table gives the Area and Yield of Jute Crop in the Districts of The Indian Union and Pakistan:—

WEST BENGAL	Area under Jute (in Acres)		Yield of Jute (in bales 400 lbs.)		Average Yield (per Acre).
	1940	1946	1940	1946

EXPORT QUOTA SYSTEM

The control over export of jute and jute goods was first introduced as part of economic warfare during 1942-43. No quantitative restrictions were imposed at that time as the only object then in view was to prevent these goods reaching the enemy. Later on, it was discovered, in view of the world shortage of this essential commodity, that these arrangements were not satisfactory from the point of view of the recipient allied countries. The control over distribution was therefore assumed in 1943 by the Combined Raw Materials Board in Washington and definite allocations were made to various countries in consultation with that Board. Exports were allowed within those destination quotas on the basis of the "first come, first served" principle. This system continued in force till June 1946.

The war-time controls on jute trade were removed by the Government of India in October 1946. However, it immediately imposed a new control system based on quantity and destinations, the aim being to achieve an equitable distribution of the jute products and raw material among regular customers, particularly to those

from whom food was imported. This system was subjected to severe criticism by the business community on the ground that it affected free trade. The quota for 1947-48 was fixed at 4,70,000 tons for raw jute, and 8,77,000 tons for manufacturers. There were 36 countries marked for export of raw jute and 85 countries for manufacturers, the U.K. and the U.S.A. being given the first place.

The jute year is from the 26th June to the 25th June of the following year. For purposes of administration of jute export control, it is found convenient to divide the jute year into two half-yearly periods, namely, from the 26th June to the 25th December, and from the 26th December to the 25th June, and to distribute quotas on a half-yearly basis. The licensing procedure in vogue was to invite applications bi-monthly from intending exporters accompanied by evidence of sales and availability of freight. Licences were issued according to the quantities applied for and the quantities available for distribution on a *pro rata* basis. There was no restriction as regards the eligibility of applicants and the qualification prescribed was the ability of the applicant to the business. The system obtained upto the end of the jute year 1946-47.

The following table indicates the position of export of Jute in a number of years :—

Year	Jute Manufacturers.	Raw Jute.	Total Export Trade.	Percentage of	
				Raw Jute to Total Export Trade	Manufacturers to Total Export Trade
	Rs.	Rs.	Rs.	%	%
1938-39	26,21,96,737	13,35,14,680	162,77,36,883	8.20	16.11
1943-44	49,47,18,495	8,32,91,039	199,87,98,131	4.16	24.7

1945-46	59,52,99,817	15,83,69,185	240,38,83,119	6.17	24.7
1-4-46 to 31-12-46 ..	47,86,06,926	12,69,53,740	207,54,07,609	6.11	23.06

NEW SYSTEM

Objections were however raised to this system on the grounds that—

- those firms which received information regarding the destination quotas or which had large funds and connections abroad were in a position to secure larger quotas;
- wide powers were delegated to the local officials at Calcutta which were being misused;
- the *pro rata* system held up allocations and impeded the smooth flow of trade; and
- quotas were getting into the wrong hands and were being hawked in the streets.

In 1947, therefore, Mr. Chundrigar, the then Commerce Minister, decided that exports should be allowed on the basis of the Established Shippers principle according to which 90% of the quotas were reserved for established shippers and allotments were made on the basis of the percentage share of their exports in the year selected by them. They were given the option of selecting any basic year in the ten years ending 25th June 1946 in the case of raw jute and 31st December 1946 in the case of jute goods. The balance *viz.*, 10% of the quota, was reserved for newcomers for which applications were invited at the beginning of the jute year. This system was brought into force on the 26th June 1947. The first half-yearly quotas for the established shippers (i.e.,

45% of the total) and the new comers' quotas for the entire year (i.e. 10%) have already been distributed.

This system came in for much adverse criticism both in the Legislature and in the Press as introducing an entirely new feature into the jute trade which had not existed even in the war years and as favouring mostly non-Indian firms in large numbers had actually started doing substantial business only in 1946 and in the beginning of 1947. Even during this period, since these firms had only just started business, they could not achieve much though they showed considerable improvement during the latter stages.

The Government of West Bengal, which came into office on partition, also pointed out the undesirable state of affairs that had arisen as a result of the introduction of the Established Shippers principle and statistics furnished by them are illuminating.

	European firms.	Indian firms.
Shipments Jan.-June 1947 (under the old system.)	50%	50%
Shipments July-October 1947 (under the Established Shippers Scheme.)	70%	30%

Thus, whatever may have been the merits of the Established Shippers' Scheme, it certainly canalised under Government auspices, a larger proportion of the trade in the hands of non-Indians.

As regards the New-Comers Scheme, since allotments were made on the basis of the orders produced by them before the Chief Controller of Exports and not on their ability to do business, a very large number of undesirable persons got licences which they openly advertised for sale in the press and in the bazaar.

As stated above, 45% of the quotas of the jute year 1947-48 were allotted to established shippers during the half year ended 25th December 1947 and the entire quota for the new comers (10%) was subsequently distributed. When the question of allotting the balance of 45% quota came up for consideration, it was decided, after careful consideration, to abandon the Established Shippers Scheme and to revert to the *pro rata* system with a view to securing for Indian exporters as large a share of the trade as possible. It was recognised, however, that there were drawbacks to this arrangement, but it was felt that the advantages were more than likely to outweigh the disadvantages and that the drawbacks could be obviated by more careful attention being paid to the placing of orders and the entering into firm contracts. It was felt that a *pro rata* allocation supported by proof of confirmed sale and letters of credit would materially assist in avoiding the evils which had crept into the old system. To speed up exports a time limit of a fortnight was fixed for quota holders to produce letters of credit after the quotas had been provisionally allotted on the *pro rata* basis. In accordance with this decision, applications for quotas were scrutinised by the Ministry of

Commerce and provisional quotas were allowed on a *pro rata* basis on the basis of firm orders produced by the applicants. They were informed that their provisional quotas would be confirmed only if they produced letters of credit within 15 days of the issue.

Instructions were also issued to the Deputy Chief Controller of Exports, Calcutta, to the effect that he should ensure that the letters of credit were (1) from the same parties who placed the orders originally and (2) in their own names. Those who were unable to produce the letters of credit in their own names from foreign buyers would have their quotas cancelled and would further be debarred from applying for the next shipping period.

CRITICISM

The new procedure also came in for a spate of criticism, which may briefly be summarised as follows :—

- The new procedure would automatically lead to black marketing as new comers in the trade would not be able to ship the goods against their quotas, but would sell their quotas to established shippers with insufficient quotas and that established shippers would also be seriously embarrassed as they would not be able to meet the demands of their regular customers abroad.
- nearly half the quotas have been granted to new-comers, i.e. firms which were not in the trade in the past and that most of these new comers are firms in Bombay, Madras and other places which have no connection with the jute trade;
- another result of the new procedure would be that foreign countries would not be able to get the goods in time as new comers would not be able to utilise their quotas. Mr. M. P. Birla pointed out that exports in January were 26% below the average of the past six months and that local stocks are increasing; and
- even though applications were invited for the January to February period, quotas had been granted to countries like Australia, Canada and U.S.A. for the entire six-monthly period ending June 1948. Consequently those firms which wished to apply for the March-June period would now have no chance of doing so.

In answer to the above, under the new arrangements provisional quotas were allotted by the Government of India strictly on the basis of firm orders and allottees were informed that their provisional quotas would be confirmed only on their producing within 15 days the necessary letters of credit in their own names. In the opinion of the Commerce Ministry, this step should prevent the sale of quotas and should allow a bona fide trader to secure his business without having to resort to the black market.

As regards the criticism that Calcutta had fared badly in the allocation of these quotas, the Deputy Chief Controller of Exports stated that Calcutta firms had got for the U.K. 12,000 tons against 6,300 tons allotted to non-Calcutta firms. For U.S.A. they had got 1,43,000 tons against 45,419 tons allotted to non-Calcutta firms. It should be remembered in this connection that out of the quantities which had gone to non-Calcutta firms, a good proportion must have gone to established shippers in Bombay who had done jute business even in pre-war years. It should also be remembered that the allocations to non-Calcutta firms were not final and that it was unlikely that all of them would be able to produce letters of credit in respect of the quotas issued to them in which event they would not be eligible for licences.

In the Government's view, misgivings that foreign countries would not be able to get their goods seemed unwarranted. A certain amount of delay had, of necessity, occurred due to the time taken in the issue of the quota slips, but this was unavoidable having regard to the fact that a switch over was made to the old arrangement and that a very large number of applications were received and had to be carefully scrutinised. This temporary hold-up in the despatch of goods to over-seas destinations, the Government felt, would disappear and should cause no anxiety either to India or to the overseas buyers.

It was also argued that the *pro rata* scheme has shaken the confidence of overseas consumers in regard to the ability of Indian industry to meet world demands and that solution to the problem lies in the abandonment of the system of quota controls. The Government emphatically refuted this, asserting that nothing could be farther from the truth so far as the first part of the argument was concerned, the vociferous nature of the representations made being undoubtedly from vested interests who had lost some of their market as a result of the abandonment of the Established Shippers principle. So far as quota control is concerned, it is necessary in the case of jute and jute goods where the quantum of goods available for distribution is far from sufficient to meet the world demand. Such control is also inevitable if (a) directional trade to the hard currency areas is to be conducted, (b) jute goods are to be prevented from reaching South Africa and (c) bargains for foodgrains are to be effectively negotiated.

Indian Central Jute Committee—A Central Jute Committee is in being, constituted by the Government of India with 27 members. Representation is found in the Committee for trade and agricultural interests and for the Provincial Governments most concerned, namely, Bengal, Bihar and Assam.

The formation of the Committee is the result of a recommendation made by the Royal Commission on Agriculture.

The functions of the Committee include agricultural, technological and economic research; the improvement of crop forecasting, of production, of testing, and of distribution of improved seeds; enquiries and recommendations relating to banking and transport facilities and transport routes; improvement of marketing in the interests of the jute industry; and collection and distribution of all relevant information on Jute.

The Committee will also advise the Local Governments concerned on any points within its prescribed functions which may be referred to it.

A decision to change the constitution of the Indian Central Jute Committee, consequent on the partition of India into two Dominions, was taken at the Committee's annual meeting held on 10th December, 1947. The committee decided to exclude those members, who were representing the interest of jute growers in the areas, which lay in the Dominion of Pakistan. As provided by the Government of the Indian Union, it was decided to terminate the activities of the Committee outside the Dominion of India. Representation of communal organisations in the committee was also terminated.

The Offices of the Committee are situated in Calcutta.

Agricultural Research—The Jute Agricultural Research Laboratories are situated at Dacca and are working on (1) the improvement of the plant, both in regard to quality and yield (2) the improvement in the methods of jute-growing, (3) the reduction of loss caused by diseases and insects, and (4) the improvements in the methods of retting. These aspects of research are being tackled in five sections *viz.*, Botany, Agronomy, Mycology, Entomology and Chemistry.

In the field of genetics considerable progress has been made, the mode of inheritance of branching habit, pigmentation patterns and other important characters have been worked out.

Technological Research—The work undertaken at the Technological Research Laboratories of the Committee at Tollygunj, Calcutta, includes the spinning of samples of fibre obtained in agricultural experiments (breeding, manurial trials, etc.) and reporting on their quality as indicated by the results obtained. The spinning tests are carried out at a standard temperature and humidity and a special technique has been worked out to give good results with as little as 12 lb. of fibre.

Work of fundamental importance includes the investigation of the relations that may exist between spinning quality and measurable chemical or physical characters of the fibre. In this considerable progress has been made.

Problems dealt with, which are of direct interest to the mill, comprise the effect of twist on yarn strength, the improvement of jute bags for storing commodities such as sugar and cement in damp atmospheres and the spinning of flax and other fibres on jute machinery, either alone or blended with jute.

Marketing—During 1938 and part of 1939, the Marketing Section carried out a comprehensive enquiry into the conditions governing the marketing and transport of jute in the principal jute growing districts of East and West Bengal, Assam, Bihar, Orissa and the United Provinces. The data, thus collected, were published in two reports entitled, "Report on the Marketing and Transport of Jute in India" (1940) and "Report on the Marketing of Jute and Jute Products" (1941). The former embodies the results of the

enquiry relating to the marketing and transport of raw jute so far as inland business is concerned while the latter embodies that relating to the jute export trade and manufacturing industry. Thus, the two reports will appear to give a complete picture of the jute industry and trade in India.

For the last few years, the Section has been engaged in certain developmental work of which the main are:—

1. Dissemination of Jute prices in the mofussil.
2. marketing of fibre grown from improved seed.
3. organization of grading parties.
4. establishment of co-operative jute sale societies.
5. study of Indian market with a view to increasing the consumption of jute and jute goods.

Economic Research—The Economic Research Section keeps constant vigilance over all aspects of the economics of jute. Some important findings relating to the world consumption of jute, its trend in recent years and its relation to the changes in the world market, such as those brought about by the war, have been published in the Committee's *Economic Research Bulletin No. 1*. Other investigations have thrown light on some important aspects of the jute industry, such as the productive capacity of the Indian Jute Mills, the possibility of extending the market for jute goods manufactured in India, etc. The effect of the growth of jute substitutes and of new uses of jute on the jute trade is also being investigated.

Besides research work on the economics of jute, a large volume of information on various subjects pertaining to jute is regularly collected from authoritative sources in different parts of the world. The Committee has also a special correspondent in the Argentine Republic to report on the conditions of the jute trade in that country. A close watch is maintained on all developments in economic and commercial policy abroad calculated to replace jute by its possible substitutes, and prompt steps are taken to collect all relevant information on the subject to place it at the disposal of the trade and others concerned.

Publicity—A monthly journal, known as the *Indian Central Jute Committee Bulletin*, the annual subscription of which is Rs. 5-8 or 10s. (including postage), is published monthly, containing figures of production, consumption, prices, stocks, imports and exports of jute and jute manufactures, and also information regarding the prices and utilisation of jute substitutes. It also includes items relating to export and import restrictions imposed on various countries and other information regarding the economics of jute and its competitors, as well as general information of interest to the trade. The Committee also disseminate information to the grower to assist him towards improved methods of growing and retting, and getting better prices for his crop. A preliminary investigation into the economics of jute growing has been undertaken in three representative villages of Bengal.

The Lac Industry

LAC is a resin which finds extensive application in industries chiefly for gramophone records, furniture polish, sealing-wax, felt hats, abrasive wheels, electrical insulation, leather dressings, etc. The Indian sub-continent holds practically a monopoly for this kind of resin, as it accounts for 85 per cent of the world production.

Resin secreted by insects known as *Laccifer lacca* which live on the twigs of trees mostly in Bihar, Central Provinces and the neighbouring regions. Important trees that lend themselves to successful lac culture are *Palas*, *Ber* and *Kusum*.

Lac cultivation is carried on extensively by thousands of villagers each of whom collects only a few pounds and sells it to manufacturers or their agents. The raw lac that is thus collected is converted by washing and melting into refined forms by about 350 factories which are mostly situated in Bihar. These factories are small establishments with small capital outlay and employ labour only intermittently. Most of the operations are carried out by manual labour. There is, however, one large factory near Calcutta where refined lac of various grades is made on a large-scale with mechanical equipment and processes.

For a few years before World War II, the production of lac was in excess of demand and prices were low. But prices increased and production decreased during the first phase of the war after which the prices were controlled

by Government and for a time all purchases for export were canalised through the Ministry of Supply. With the cessation of hostilities and removal of restrictions prices have gone up but production is still below normal. If the output of raw lac is increased the existing factories could easily double their production without much additional capital or equipment and neither materials nor personnel need be imported.

The annual production of raw lac in India and Pakistan is about 50,000 tons which when refined yields about 30,000 tons of seed-lac, button-lac and shellac in which forms they are used in industries. But the world demand for lac is still in excess of supply and synthetic resins are seriously threatening to replace natural lac for the manufacture of gramophone records and other purposes because of the high prices now prevailing.

The Indian Lac Cess Committee is conducting a research institute at Namkum, Ranchi, where investigations are in progress for better methods of cultivating lac and for its wider uses. Results already obtained are being demonstrated through a specially trained staff. Among new materials arising out of the recent researches of the Institute are plastic moulded articles, baking insulating varnishes and paints, waterproof emery paper and flexible micanite. A Lac Information Office is attached to the Institute to answer all enquiries regarding the utilisation of lac in industries.

The Non-Ferrous Industry

THE Non-ferrous industry in the sub-continent is comparatively of recent origin, and most of the development has taken place during the present decade. The whole Non-ferrous industry of the pre-partition India is located in the Union of India, and at present there is practically no Non-ferrous industry in Pakistan.

The last war gave a great fillip to the Non-ferrous industry. India was one of the principal bases of supply for the Allied armies. Foreign supplies of non-ferrous metals and manufactures, on which India was dependent till then, were practically cut off, but at the same time a large and urgent war demand for non-ferrous metals and semi-manufactures for the various Defence services had to be met somehow. This critical situation called for special effort and led to the establishment of a large and well diversified Non-ferrous industry.

The Non-ferrous industry has now been recognised by the Government of India as one of the basic industries of the country for whose development, Government is willing to give financial and other assistance which may be necessary according to the statement of Government's Industrial Policy made by Sir Ardeshir Dalal in March, 1945. When the Tariff Board was appointed by the Government of India in November 1945, the Non-ferrous industry was the first on the list of industries, which were referred to the Tariff Board for enquiry.

STRUCTURE

The Non-ferrous industry falls under three distinct and well-defined stages:

- 1) Production of virgin metals from ores which covers mining of ores, and smelting and refining of metals from ore; 2) Refining of scrap and recovery of metals from scrap; 3) Processing of metals and production of what are called semi-manufactures of metals. This last falls under four main categories, which are as follows: (a) Sheets, strips and rolls of copper, brass, aluminium, lead, zinc, etc.; (b) Rods, tubes, and other sections of copper, brass, aluminium, lead, etc.; (c) Cables and wires of copper, brass, aluminium, lead, etc.; (d) Alloys and castings of all kinds including bearing metals, anti-friction metals, type metals and solders, etc.

The actual structure of Non-ferrous industry in each country depends on a variety of circumstances prevailing in that country. The production of virgin metals in a country largely depends on the mineral resources of that country. But most of the highly industrialised countries have developed smelting and production of virgin metals from imported ores and ore concentrates. For instance, before the war the entire zinc ore produced in Burma was sent to Belgium in the form of concentrates containing 60% zinc. Practically all the production of virgin metals in U. K., Germany, Japan and Belgium was from imported ores and ore concentrates. In 1938-39 the United Kingdom imported 3,02,000 tons of Bauxite ore, 1,78,000 tons of zinc ore, 64,000 tons of tin ore, and 34,000 tons of copper ore and concentrates.

The refining of scrap and the production of semi-manufactures is largely dependent on the degree of industrialisation reached in the country. The use of non-ferrous semi-manufactures like sheets, rods, tubes, wires and alloys is essential in such basic industries as transport, electrical and chemical industry. The highly industrialised countries are the largest consumers of non-ferrous manufactures, and consequently the production of semi-manufactures and refining of scrap is developed most in such countries, irrespective of the virgin metals' production in those countries. The less advanced industrial countries, who are producers of virgin metals are exporting most of their production to countries like U. K., U.S.A., Germany and Belgium, which are utilising them for semi-manufactures.

The United Kingdom produces 15,00,000 tons of non-ferrous semi-manufactures, for which she imports nearly 10,00,000 tons of non-ferrous metals on an average, and utilises about 5,00,000 tons of metals produced in the country from imported ores and concentrates and by recovery from scrap. It will thus be seen that the development of the Non-ferrous industry is not primarily dependent on the availability of non-ferrous metals in the country itself.

INDIA'S RESOURCES

According to Dr. D. N. Wadia, Mineral Adviser to the Government of India, mineral resources of India for aluminium, copper and antimony are sufficient to meet our present and future requirements. As regards lead, zinc and tin, our resources are not likely to be sufficient and imports will be required to meet the deficiency in these metals. And about the rest of the other non-ferrous metals, our mineral resources are negligible. The position regarding these metals is briefly described below:

(a) **Aluminium Ores** :—India is rich in deposits of high grade Bauxite which are estimated at 250 million tons. These are generally located in Jubbulpore and Balaghat Districts of C. P., Belgaum, Kolhapur, Thana and Khairat Districts in Bombay; Ranchi Plateau in Bihar; and Shevaroy Hills in Salem.

(b) **Copper Ores** :—Copper pyrites is the principal ore of copper. The deposits of copper pyrites in India are in Singhbhum and Baragunda in Bihar; Khetri mines in Jaipur State; Sikkim State, Mysore State and in Salem District. Although only Singhbhum deposits are worked at present, the copper belts of Sikkim and Khetri seem to be very promising.

(c) **Lead Ores** :—The Lead ores are known to occur at a number of places in India. Special mention may be made, however, of lead deposits in Jaipur State, and in Zawar Mines in Udaipur State, where lead is found in association with zinc; in Chhotia Udaipur State in Gujarat and in Hazaribagh in Bihar.

(d) **Antimony Ores** :—Antimony ore deposits have been found at the Shigree Glacier in Lahaul, Kangra District, East Punjab, and at Shagor in Chitral State (Pakistan).

(e) **Zinc Ores** :—At present zinc deposits are known to occur at only two places in India; Zawar mines in Udaipur State and in the Masin District in Kashmir State.

(f) **Tin Ores** :—Several localities are known in India where tin stone (Cassiterite) has been found in small quantities. The most interesting of these areas is that in the Hazaribagh District. None of these ores are said to be very promising.

POSITION BEFORE 1939

The only non-ferrous metal produced in India before the war was copper. The Indian Copper Corporation Ltd. started working the Singhbhum copper deposits in Bihar in 1923-29. The average production of refined copper before the war was 6,000 tons per annum.

There was practically no Refining industry for the recovery of metal from scrap and most of the industrial non-ferrous scrap was exported to Japan and Germany.

As regards processing of semi-manufactures, the only production was of brass sheets by the Indian Copper Corporation Ltd. averaging about 8,000 tons per annum, and electric copper wires and insulated cables by the Indian Cable Co. Ltd. According to the report of the Tariff Board in 1931, the production of this company in 1930-31 was about 1,250 tons and its maximum capacity was about 3,500 tons.

DEVELOPMENT SINCE 1939

(a) **Production of Virgin Metals** :—The Indian Aluminium Co. achieved production of **ALUMINIUM** ingots in 1943 and the Aluminium Corporation of India started production in 1944. The Indian Aluminium Co. started at first by reducing imported alumina from Canada into aluminium in their Smelter Plant at Alwaye in Travancore State. Their Alumina Works is situated at Muri in Bihar and has been engaged in production since 1947. The Aluminium Corporation of India has its Smelter and Alumina Plant near Asansol. The combined capacity of both these concerns for aluminium ingots is 7,000 tons per annum. The total production in 1945 was about 1,000 tons, in 1946 about 2,500 tons, and production in 1947 is estimated to be about 4,000 tons.

A Smelter was set up at Bombay by the Star Metal Refinery with a capacity of 300 tons of **ANTIMONY** per annum. The ore brought from Chitral State was used for smelting antimony and the plant had reached full production in 1946-47. After the partition of the country, the ore supplies from Chitral have been cut off and the production has suffered. If ore cannot be obtained from Chitral either due to political difficulties or transport difficulties, antimony ore required for the Smelter could be obtained from Burma and China.

The average annual production of copper during the war years 1940 to 1946 was 61,000 tons thus showing only a slight increase over pre-war production. The production could be increased, if the lower grade ore was also utilised which at present is rejected in the process of mining. The prospecting of copper mines in Khetri at Jaipur State was started about three years ago, but the work has not been pursued with enough vigour so far, and no concrete results have been achieved.

A small Smelter for utilising the **LEAD** ore from Jaipur State in Rajputana has been set up at Katrasgarh in Bihar. The location of the Smelter in Bihar was influenced largely by the proximity of coal. So far, however, very little production has been achieved. Prospecting for lead ore is also being done in Chhotia Udaipur State in Gujarat and the results of the work done so far seem to be promising.

Considerable prospecting for **ZINC** was done by the Government of India at the Zawar Mines in Udaipur State, and about Rs. 12 lakhs were spent on this work which was given up at the end of the war. These mines have now been leased to a firm for further prospecting and working the mines.

(b) **Production of Semi-manufactures** :—The greatest progress in the Non-ferrous industry made since 1939 is in regard to the semi-manufactures. Several brass and copper rolling plants have been started for rolling brass and copper **SHEETS** mainly in Bombay. The combined capacity of these new plants which are already set up is about 13,000 tons per annum, including one large rolling plant set up by Kaman Metals & Alloys Ltd. Two other plants with a capacity of about 10,000 to 12,000 tons will be added very shortly in the Bombay area.

The two aluminium producing companies have also set up plants for rolling aluminium sheets. The present combined capacity of both these plants is only about 2,500 to 3,000 tons.

Some lead sheets are also manufactured in the Calcutta area, but at present they are rolled in 3 ft. width, while the chemical industries require lead sheets of 7 to 9 ft. width. Aluminium and lead rolls for tea-chests are also manufactured in the Calcutta area and the present capacity is estimated to be sufficient to meet India's requirements.

Several rolling plants for **RODS** and **BARS** of brass, copper, etc. were started during the war, and recently an Extrusion Press is being set up in Calcutta. Arsenical copper rods which are required for Railway locomotives as boiler stays were manufactured in Jaipur by the Jaipur Metal Industries Ltd. during the war and all the requirements of Railways can be met by indigenous production. The present capacity for rods and tubes of brass and copper may be estimated at about 10,000 tons, which will meet the present requirements of the country. The manufacture of lead pipes was started during the war at Konnagar in Bengal. The present production is about 500 tons per annum, but this could be increased to 700 to 800 tons, if required.

A plant for the manufacture of electrical **WIRES** and **CABLES** was set up near Calcutta during the war by the National Insulated Cable Co. The total production of electrical bare copper wire and cables of this company and the Indian Cable Co. is estimated to be about 10,000 tons per annum.

A number of concerns have been started for manufacturing different kinds of non-ferrous **ALLOYS**. The refining and reconditioning of Railways and other industrial non-ferrous scraps is now done in this country, which was formerly largely exported. The total present

alloying capacity in the country may be estimated at about 20,000 to 25,000 tons per annum.

TARIFF BOARD ENQUIRY

The Indian Tariff Board has made a detailed enquiry into the Aluminium Industry and also the Non-ferrous Semi-manufacturing Industry. The Tariff Board has submitted its report and recommendations for granting adequate protection to these industries, but the final orders of the Government have not yet been passed on these recommendations.

In the case of various semi-manufactures like sheets, rods, tubes and alloys, considerable relief has already been given in the form of removal of 30% duty on imports of copper, lead and zinc and also on copper, lead, zinc and brass scrap.

As regards aluminium, adequate protection to indigenous production was granted through the working of a Pool arrangement which was introduced during the war. Under this arrangement the indigenous production was paid a price which was determined every year after examining the cost of production. As the price of indigenous production was higher than that of imported aluminium, the cost of indigenous aluminium and of imported aluminium were pooled together, and aluminium was issued to all the consumers in the country

at a uniform price. Aluminium is allowed to be imported only through the Pool Agents. The 4 Pool Agents at present are:—(1) Messrs. Jeewanlal (1929) Ltd., (2) Messrs. Wolverhampton Works Ltd., (3) Messrs. Aluminium Corporation of India Ltd., and (4) Messrs. Kamani Brothers Ltd.

IMPORTS

A study of the import figures of non-ferrous metals and manufactures gives the best indication of the progress which has been made in India regarding the development of various metals processing industries mentioned above. Before the war the imports consisted predominantly of semi-manufactures. During the quinquennial 1930-31 to 1931-35, the imports of metals constituted only about 25% of the total imports, from which it increased to 50% during the quinquennial 1935-36 to 1939-40. During the war years the imports were very much restricted due to various factors and the imports of metals constituted about 75% of the total imports. During 1945-46 there was a great rush of imports of sheets and other semi-manufactures just after the end of the war; but subsequently the predominance of imports of metals has reasserted itself and during the first 9 months of 1946, the imports of metals constituted nearly 65% of the total imports. The detailed import figures are given below:—

IMPORTS OF NON-FERROUS METALS & MANUFACTURES

	Average Annual 1930-31 to 1931-35. (Tons)	Average Annual 1935-36 to 1939-40. (Tons)	Average Annual 1940-41 to 1944-45. (Tons)	1945-46. (Tons)	1946 (April to December). (Tons)
METALS:

The Non-Ferrous Industry

FUTURE DEVELOPMENT

Considerable progress has already been made in the production of semi-manufactures like sheets, rods, tubes and wires, and the new development schemes which are well under progress, particularly regarding the manufacture of sheets, which is the largest item of non-ferrous manufactures required in the country, will make the country more or less self-sufficient in respect of practically all the requirements of semi-manufactures of non-ferrous metals.

As regards production of virgin metals very little progress has been achieved so far in spite of the fact that there are deposits of important non-ferrous metals like copper and lead found all over the country. Careful planning will be necessary for developing production of metals in the country, if any progress is to be achieved. Any such planning must take into consideration the following important factors:—

1) The development of mining industry is full of great risks and private capital and enterprise is not readily forthcoming under the present circumstances for the development of non-ferrous mining unless some special assistance is granted by the Government. The development of mining requires very large capital, unlike the semi-manufacturing industry which can be started in relatively small units by private capitalists largely with their own private resources. In order to start big companies with large capital from the public for financing such mining concerns, it would be essential to have some financial contribution and assistance from the Government in the form of subscription of share capital, sharing a portion of expenses for prospecting work, and even guaranteeing a certain minimum return on the capital, in order to inspire confidence in the investing public and induce them to put in their capital in such ventures.

2) It is also essential that Government should clearly recognise and declare the whole non-ferrous industry, including the semi-manufacturing branch of the non-ferrous industry as a basic industry, which should be assured the grant of an adequate protection and all reasonable financial assistance which may be necessary for its proper development.

3) There is a great need for a thorough investigation of India's mineral resources, as the work done so far is mostly of a superficial nature. Government should undertake intensive mineral surveys and prospecting work for these metals in selected cases as was done for prospecting zinc in the Zawar mines.

4) As long as India's own production of virgin metals is not sufficient to meet all possible requirements of Defence, industrial and civil needs, it is essential that Government should also maintain a stock pile of important metals like tin, copper, lead, aluminium, nickel and zinc. At present, most of the industrially advanced countries are maintaining large and regular stock piles of such metals which have been considered essential both from strategic and economic point of view. In the absence of such stock piles, there is the greatest danger of the non-ferrous manufacturing industry and the industrial and economic life of the country being dislocated by a sudden cutting off of foreign supplies, unless the country has sufficient reserves of such metals.

TARIFF POLICY

The Government of India, in their Resolution dated 11th June 1948, accepted the following principal recommendations of the Tariff Board on the Non-ferrous Industry.

Copper unwrought, copper scrap, lead ingots, lead scrap, zinc ingots, slabs, blocks or bars and zinc scrap should continue to be free of import duty. The present duty on tin, tin scrap and tin plate scrap, nickel and nickel scrap, cobalt, chromium, tungsten, magnesium, muzzak and scrap of all other non-ferrous metals and alloys should be removed.

A protective duty, to remain effective till March 31, 1950, should be levied on brass ingots at 10 per cent *ad valorem*; on zinc sheets and lead sheets at 20 per cent *ad valorem*; on yellow metal alloys other than brass, tin solder, other white metal alloys, type metal, nickel alloy, brass sheets, manufactured goods such as steam and sanitary fittings tubes, pipes and sections of brass and cables, A.C.S.R. (Aluminium conductors steel reinforced) at 30 per cent *ad valorem*; on copper sheets and pipes and tubes of copper at 24 per cent *ad valorem* (British manufacture) and 36 per cent *ad valorem* (non-British manufacture) on copper rods other than electrolytic copper rods at 35 per cent *ad valorem* (British manufacture) and 45 per cent *ad valorem* (non-British manufacture) and rods at 35 per cent *ad valorem* and on electrolytic copper rods at 20 per cent *ad valorem* (British manufacture) and 30 per cent *ad valorem* (Non-British manufacture).

WORLD PRODUCTION

The following tables give figures of production in the 6 largest producing countries of the world for copper, aluminium, zinc and lead which are the most important of the non-ferrous metals.

COPPER

(In tons of 2,000 lbs.)

Name of Country	1940	1941	1942	1943	1944	1945
U. S. A.	1,079,000	1,190,000	1,301,000	1,338,000	1,213,000	945,000
Canada	283,000	281,000	269,000	256,000	247,000	219,000
Rhodesia	292,000	258,000	250,000	277,000	246,000	216,000
Belgian Congo	164,000	179,000	183,000	173,000	182,000	177,000
Russia	125,000	140,000	160,000	190,000	190,000	..
Japan	115,000	125,000	130,000	135,000	140,000	..

ALUMINIUM

(In tons of 2,000 lbs.)

Name of country	1940	1941	1942	1943	1944	1945
Germany	205,000	223,000	254,000	242,000	236,000	..
U. S. A.	187,000	280,000	472,000	834,000	704,000	469,000

The Opium Industry

OPIUM, which is one of the most important and remarkable vegetable drugs known to man, is a light brown to dark looking tough solid with a characteristic smell and bitter taste. It is obtained from the unripe capsule or fruit of the poppy, *Papaver Somniferum*, to give it its scientific name. The capsule or fruit is scratched or cut and the juice which keeps slowly exuding from the cuts during the night is removed early in the morning and allowed to dry further in the shade before it is ready for packing.

Opium is one of the best drugs for sleeplessness produced by painful disease, and along with its derivatives it is a fine remedy for cough, asthma, diarrhoea, piles and other nasal and throat disorders. It is also an expectorant and an anti-spasmodic. Though opium has great uses as medicine it can also be foully abused. It is a habit forming drug and can be dangerous to both mind and body. The opium addict becomes a physical and mental wreck in course of time losing all interest in life and business, or he becomes a hardened criminal. The opium dens of the world are indeed notorious for their vice and crime. For these reasons most countries regulate the sale and distribution of opium under Dangerous Drugs Rules. To combat illicit traffic in drugs international control organs have been set up, such as the Opium Advisory Board, Permanent Control Opium Board, and Drug Supervisory Board. During the last war, illicit traffic increased especially in Iran, Mexico and Yugoslavia, in China and the Japanese-held territories in the Far East. And so at the San Francisco Conference in 1946 it was decided that the international control agencies should be brought into relation with the Economic and Social Council of the UNO to be better able to fight the evil.

The poppy is grown chiefly in Eastern Europe and Asia specially in U.S.S.R., Turkey, Iran, India and China, the last of which is a big producer as well as consumer. The world medical requirements of opium are estimated at 1000 tons. And though world production has tended to fall since 1936 it was still as high as 1800 tons in 1938 (excluding China and Afghanistan) that is to say, 600 tons in excess of the world's medical needs.

History.—In India, the opium trade was created a Government monopoly in 1773 and in 1817 cultivation of poppy was forbidden in India except for supply to the East India Company. The Company made immense profits by the export of the noxious drug to China which unsuccessfully fought two wars to keep it out of the country. But in the end world opinion asserted itself and an agreement was arrived at in 1907 to suppress the opium export to China. The opium factory at Patna was shut down in 1908 and exports to China wholly ceased in 1913. In 1923 the Certificates System came into effect in the importing countries and finally in 1926 the Government of India came out with a declaration that the export of opium except for medical purposes would be completely prohibited. By the end of 1935 all exports of 'provision' opium as it is called came to a stop.

Here are a few figures which show how in India the cultivation of the poppy and the production of opium steadily diminished from 1907 to 1940.— Since 1940, however, production has slightly increased to meet increased medical and other legitimate requirements.

Year	Acres Grown	Production (Mds.)
1907-8 ..	488,548	71,340
1911-12 ..	200,672	31,473
1913-14 ..	145,000	..
1930-31 ..	36,537	7,656
1939-40 ..	4,898	1,306
1941-42 ..	15,301	..
1943-44 ..	36,415	9,870

The following figures show how exports have fallen from 1913 to 1937:—

Year	Exports (Cwts.)
1913-14 ..	16,858
1918-19 ..	9,609
1929-30 ..	5,500
1931 ..	4,702
1932 ..	3,583
1933 ..	1,162
1934 ..	2,823
1935 ..	604
1936 ..	257
1937 ..	..

1 Chest = 140 lbs.
1 Md. = 82 2/7 lbs.
1 Seer = 2 lbs.

Along with the fall in exports the net receipts of the Government of India have fallen too:—

Year	Rs.
1910-11 ..	801 lakhs
1920-21 ..	183
1935-36 ..	27
1936-37 ..	10
1938-37 ..	2
1943-44 ..	5
1944-45 ..	51
1945-46 ..	8
1946-47 ..	..

And finally here are figures which show how while the consumption of opium for medical purposes has increased, excise opium sold to Provincial Governments has diminished from 1929 to 1940.

Year	Excise Opium (Mds.)	Medical Opium (Mds.)
1929-30 ..	7,797	22.9
1931 ..	8,128	27.6
1932 ..	8,403	21.0
1933 ..	8,000	23.7
1934 ..	8,559	24.3
1935 ..	8,873	25.4
1936 ..	8,696	24.1
1937 ..	8,882	25.3
1938 ..	8,384	24.5
1939 ..	8,393	32.5
1940 ..	8,347	32.9

Present Position.—The policy of the Government of India before the transfer of power was one of suppression of excessive indulgence but non-interference with moderate use. In effect this remains the policy of the Government today. In 1945, there were 12,000 to 14,000 licensed shops in the Indian sub-continent selling opium albeit in small quantities and the average consumption in eating and smoking

was on an average 200 tons per annum in the decade 1930-40.

The poppy is grown today in U.P. and in some of the States in Central India, Rajputana and Gwalior. This opium is bought by the Government of India at the fixed rate of Rs. 9 a seer and made into three kinds of opium at the factory in Ghazipur—1. provision opium (71° opium) for export, 2. excise opium (90° opium) sold to Provincial Governments for local consumption, and 3. medical opium (87.5° opium) for the Medical Department in India and Pakistan and for export to London for sale to chemists. The exports are made to Aden, Burma, Nepal, Zanzibar and so on by agreement with their respective Governments. The price of the opium sold to the Provinces is Rs. 18 per seer and of the opium exported is 129 to 5240 per cwt.

Apart from the medical needs of the Indian sub-continent which amount to about 25 cwts., and of the exports for medical purposes to the U.K., which amount to 15 to 25 tons annually, some opium is also used to manufacture morphine and codeine in India. In 1943 the Government Alkaloid Works at Gazipur produced

2,000 lbs. morphine and 424 lbs. codeine with their salts. The Government of India Panel on fine chemicals (before partition) estimated a target production of 3,000 lbs. and 1,500 lbs. of morphine and codeine salts respectively for 1946. The requisite opium needs for this purpose were estimated to be in the neighbourhood of 50 tons. In the future, however, the Government of India is expected to limit the production of opium to the medical and scientific requirements of India and for exports according to international agreements.

On the whole though the net revenues of the Government of India from opium traffic have progressively diminished the expenditure on opium consumed in the Indian sub-continent still amounts to about Rs. 2 to 3 crores per annum. Whatever may have been the policy in the past it is vitally necessary to stamp out addiction to the noxious drug. Assam led the way when it introduced prohibition in March 1941. The loss of Provincial excise revenue may be as high as 3 crores (duties vary from Rs. 51 to Rs. 140 per seer) but it will be amply compensated by higher national health and morale.

The Paper Industry

PAPER-MAKING in the sub-continent is of some antiquity. The manufacture by hand was practised from quite early times. The first paper-making machine in India was erected and operated by a famous missionary, Dr. William Carey, over a century ago at Serampore on the Hooghly River near Calcutta, but the establishment of paper making as a modern industry may be said to date from 1867. In that year the Royal Paper mill was established at Bally, only a few miles away, using in the first instance Dr. Carey's original plant and machinery. About 15 years later the Upper India Couper Paper Mill at Lucknow and the Titagur Paper Mills at Titagur, near Calcutta, were started. Other mills at Raneeungee and Kankinara, in the Bengal area and other Provinces soon followed. Production then increased so that by about 1900 it amounted to approximately 20,000 tons a year.

Today the quality of paper produced in the sub-continent is accepted as equal to that of most imported paper of the same class, and the range of qualities has been extended to include coloured banks and bounds, tub-sized rag papers, embossed covers and writings, super-calendered tinted printings, and imitation art and craft.

Raw Materials.—In its early days the Indian industry considered the manufacture of high class white paper rather beyond its capacity, and this was to some extent due to its dependence upon rags and waste paper for its raw

material. But this crude practice of using rags and waste paper was soon to change. Routledge in 1860 proved the virtues of esparto—a semi-tropical grass—and in 1875 and 1879 reported upon the possibilities of Indian bamboo which served to draw attention to other Indian fibres. There are only incomplete records of the early experiments with Indian fibres, but it is known that two mills made use of Moonj (*Saccharum Moonja*) and Sabal (*Ischaemum Angustifolium*) in their first years. Moonj seems to have held the field in the beginning, for it made a very good paper. Sabal, however, presented less difficulty as regards treatment, and, therefore, soon came into universal favour among Indian mills. Having found in Moonj and Sabal ample resources of plant fibre it was perhaps natural that the Indian mills then in operation should have made no effort to follow up Routledge's researches in bamboo—a much more difficult problem. If they had India might possibly have become a producer of pulp and paper. What actually happened was that the industry based as it was on Sabal grass, while relatively still in its infancy, was almost put out of business by the competition of wood pulp. Nevertheless it later found a new raw material of great value in bamboo.

The Bamboo Paper Industry (Protection) Act of 1925 not only gave Indian mills an opportunity of repairing the damage to their plant and machinery caused by the incessant and intensive work required by India's first world war demands, and of overcoming the difficulties of

getting stores and machinery replacements, but also encouraged and enabled them to develop bamboo pulp as their main fibre. The protective tariff on paper was renewed by the Government of India on the recommendation of the Tariff Board in 1932, and imported wood-pulp was also made subject to a duty of Rs. 45, or approximately £3 a ton. This pulp duty naturally had the direct effect of preventing the establishment of new paper mills designed to work only on imported wood-pulp. The mills, therefore, immediately began to develop and increase the production of bamboo pulp, which had already been proved to be eminently suitable for all the usual classes of fine writing and printing papers, banks ledgers, &c. Bamboo pulp is now the main material though Sabal grass, which is the Indian equivalent of esparto, is also used by some of the mills. Incidentally the manufacture of pulp from bamboo is at present practically confined to India.

The protective tariff attracted others to a profitable field of industry, and there are at present 16 paper mills operating 32 machines with a total production of nearly 100,000 tons. The protective tariff however, was abolished in 1947 as the Government decided that the paper industry no longer required any special assistance.

For many years the paper pulp section of the Forest Research Institute at Dehra Dun has been carrying out experimental work in connection with the development of new fibres for paper-making, and it has been reported that considerable success has been obtained in making craft paper from bamboo pulp. Two paper mills have now been successfully manufacturing craft papers from bamboo for over a year.

Newsprint.—With the assistance and encouragement of the Commerce Department of the old undivided Government of India, newspapers have now come to an arrangement to ration supplies of imported newsprint and to charge certain agreed prices for various sizes of newspapers. Imports of newsprint from U.S.A. and Canada are permitted up to certain limits by a system of licenses. The controls imposed during the war still remain in force.

None of the paper mills in the sub-continent are in a position to meet any part of the newspaper requirements of newsprint. The

whole of the sub-continent's newsprint requirements is imported, it being not possible so far to produce it on an economical basis in India or Pakistan owing to the lack of the necessary raw materials. Recent enquiries show that the Kashmir and Tehri-Garhwal States can supply fir and spruce in quantities sufficient for the establishment of a newsprint mill in each of the two States. The two species of wood are well known raw material for the production of mechanical pulp for use in newsprint manufacture and the suitability of both the species from the two States has recently been tested at the Forest Research Institute, Dehra Dun. Most of the established mills have plans for the expansion of production and several new companies have been floated for the manufacture of paper, board and also newspaper which last is to be manufactured from the timber found in the forests of the Central Provinces. But the abnormal rise in the cost of machinery and the difficulties of importing these from abroad, however remain.

The industry had made such headway that the outbreak of the Second World War found it ready to take up the vastly increased demand for Indian paper brought about by the difficulty of importing it from abroad. Imports of fine papers are very limited and all paper mills are working to full capacity. The emergency has undoubtedly given the newer mills an excellent opportunity of establishing themselves but with the considerably increased consumption of paper by the Central and Provincial Governments and the Army, a serious shortage of paper has been felt by industry and commerce and the general public.

From April 1, 1943, the old undivided Government of India decided to release for civilian consumption 30 per cent of the total production of home made paper, which was further reduced by an Ordinance issued in June 1944 to 30% of the quantity used in 1943. Government have also taken action to increase the output of the mills by giving them every possible assistance in the matter of transport facilities for raw materials and also in obtaining chemicals such as sulphur, alum, caustic soda, etc. The paper mills have also been asked to confine production to 6 or 7 standard varieties so as to permit of longer runs on machines and allow for the production of the maximum amount of writing surface.

The Plastics Industry

THOUGH caseln was known to the Egyptians and celluloid was discovered as early as 1805 it would be correct to describe the plastics industry as one of the newer industries. But once established the plastics industry went from strength to strength and still continues to advance at an astonishing pace. The reasons for its rapid expansion are mainly two. It has received all the financial capital it has ever needed, and the market for its products has always gone on expanding. Investors in U.S.A. and England and Germany and Japan (which have been the chief producers of plastic goods) had an impression that the plastics industry was a sort of El Dorado where enormous fortunes could be made in a comparatively short time. The progress of the industry justified the hopes of the investor to a great degree chiefly because its products cater for an enormously wide field. There is hardly any industry which does not use at some stage or other someone or other of its products. The makers of plastics, for instance, can count on substantial orders from the electrical, building, motor vehicle, ship-building, packaging and container, railway synthetic chemical, aircraft, machinery, shop and office fitting and house-hold equipment, not to speak of the tremendous potentialities of plastics in the manufacture of sugar and textiles.

The plastics industry in the Indian sub-continent unlike that in U.S.A. or England is of recent origin. It received a great stimulus during the War when imports of plastic goods from U.S.A., England, Germany and Japan considerably dwindled. A number of factories started functioning but at first they confined themselves exclusively to the manufacture of articles meant for domestic use. Later, however, some of them widened their field and today they are all manufacturing electrical appliances as well, such as switches, ceiling roses, cut outs, lamp stands, and shades.

Present position.—As in other cases statistics are lacking but the present position of the plastics industry can be roughly described as follows: The number of factories in operation at present is a little more than 35 and the total capital invested is in the neighbourhood of 2 crores. But new factories are springing up and it is estimated that another 2 crores are likely to be invested. That there is great scope for further expansion is clear from the fact that the market for plastics has also rapidly expanded in the course of the last few years. During the three years preceding the War, i.e. 1936-39 the approximate consumption of plastic goods in the Indian sub-continent is computed at Rs. 50 lakhs a year. But in the years 1943-46 the value of the plastics goods consumed in the country rose to as high a figure as 5 crores a year. But this cannot be regarded as a peak. That there is scope for still further expansion is clear from a consideration of some of the conditions prevailing in India and Pakistan at the present moment. 1. There is a great accumulated demand for goods of all types as

the result of the War as well as the increased buying power of the public. 2. Germany and Japan both of whom ranked high among producers of plastic goods before the War have withdrawn from the Indian or Pakistan market. 3. The demand for plastic goods and materials has been greatly stimulated by the shortage of other materials such as rubber, timber, leather and textiles. 4. Owing to developments which have occurred in new plastic materials and in new applications as a result of War experience the whole field has been widened. There is thus a huge potential market which continues to expand with time.

The Indian sub-continent has some natural advantages too by way of raw material. The three principal sources from which the plastic industry obtains its raw material are coal, petroleum, and forest and agricultural products. Though India and Pakistan may not be rich in coal and petroleum their forest and agriculture produce is unlimited. Besides, the Indian sub-continent has easy access to such natural resins like lac, which forms yet another source of raw material for the plastics industry. It is also known that facilities for the manufacture of Phenol formaldehyde resins exist in Behar. The Council of Scientific and Agricultural Research (now limited to the Dominion of India) has been very active in this field and the whole question of developing India's natural resource is being thoroughly investigated under the supervision of Sir Shanti Swarup Bhatnagar.

Some difficulties.—But that is only on half of the story for though the plastic industry in the old undivided India did very well during the War (chiefly because foreign competition was eliminated) it is once again finding itself in grave difficulty now that the War has ended. The reasons are fairly obvious. Imports of plastic goods especially from England and the U.S.A. have enormously increased so much so that according to Indian manufacturers supply had actually exceeded demand. They complain that foreign manufacturers are dumping their goods in India at selling them at a price which appears to be below the cost of production. A pound of imported raw material costs more than a pound of manufactured goods and the latter are sometime sold at a price which is 50 per cent less than their landed costs. And so, the spokesmen for the Indian manufacturers argue, the whole future of the plastics industry would be in peril if the Indian Government did not come to their help.

It would appear that in the ultimate analysis the future of the industry hinges on the ability of the Indian manufacturers to import plastic powders from U.S.A. or England or in the alternative to produce them in the country itself. For the present the industry is chiefly dependent on the powders that are being imported from the U.K. and the U.S.A. through the Imperial Chemical Industries, Bakelite, Ltd. and Volkart Brothers who buy the powders abroad and supply them to the manufacturers of plastics.

goods in the sub-continent. Here are a few figures which give us some idea of the quantity in which the powders are imported:

Year.	Quantity (Cwt.)	Value Rs.
1937-38	542	29,917
1938-39	884	43,483
1939-40	587	28,434
1945-46	1,661	1,65,561

Government support.—It may be mentioned here that though there is a 30 per cent. duty on imported plastic goods, there is also a 30 per cent duty on imported plastics powder.

The trouble, however, is that supplies of imported bakelite powders have shown a tendency to fall. More and more of the bakelite powders are being used up in U.K. and U.S.A. leaving less and less for purposes of export. Thus the Indian manufacturers are finding their sources of supply of bakelite powders being progressively reduced. One of the ways in

which they are trying to meet the shortage is to manufacture the powders in India itself. There are, for instance, two companies in Bangalore, Messrs. Tipco, Ltd. and Government Electric Factory engaged in the manufacture of bakelite. But these factories cannot produce urea or thermoplastics powders in sufficient quantity. In any case they cannot cope with the demands of the Indian industry which increase with every year.

That, broadly speaking, is the position in which the industry is finding itself today. It is well financed and adequately equipped. Some of the factories are under the direction of European experts. Indian labourers are being trained, and some of them have already acquired a great degree of skill and can turn out precision work. The quality of the goods produced in India compares favourably with that of the goods imported from abroad. The industry has enough resources to meet the entire needs of the country in plastic goods, so far as domestic articles, at any rate, are concerned.

The Rubber Industry

THE Indian sub-continent produces about 16,500 tons of rubber a year which is a little more than one per cent of the world production of rubber. Broadly speaking there are eight major areas in the world where rubber is produced, and if all these areas were placed in order of their importance as producers of rubber the Indian sub-continent would come last but one. The figures quoted below are for 1943 which are the latest available ones:

Countries	Quantity in tons (One ton = 2,240 lbs.)
Straits Settlements, F.M.S., ..	651,500
U.M.S. & Brunel.	651,000
Netherlands India	110,000
Ceylon	17,750
Indian sub-continent	13,750
Burma	21,000
States of N. Borneo	44,000
Sarawak	60,000
Thailand	15,69,000
Total ..	15,69,000

Certain of the areas were, of course, destroyed in the course of the war and the present world production of rubber would be round about 2 lakhs of tons.

Area Under Cultivation.—The area under rubber cultivation in the Indian sub-continent earlier than the year 1925 was nearly 68,000 acres. Today the area under cultivation stands roughly at 158,322.145 acres, that is to say, an increase of more than 90,000 acres. This increase in acreage is largely made up of 1,600 small gardens each below 50 acres in extent owned by small peasant proprietors.

More than twenty years ago, about 90 per cent. of the rubber plantations were owned by Europeans. Today the whole industry is predominantly Indian in character and composition.

	Acres
Planted earlier than 1925 ..	67,999.91
Planted during .. 1925 ..	4,816.78

Total	158,322.145

Of the whole area under cultivation by far the biggest single part is in the State of Travancore as the following figures taken from the statistics for 1943 make clear:

	Acres
(1) Travancore State	113,731.60
(2) Mysore State	639.30
(3) Cochin State	14,154.22
(4) British India	20,797.025
Total..	158,322.145

Some of the estates are over 100 acres in extent but the overwhelming majority are less than 5, and in between 100 and 5 there are all gradations:

	No.	Total area in acres
Estates of and above 100 acres	215	93,304.93
Estates of and above 50		
and below 100	187	12,458.57½
Estates of and above 25		
and below 50	323	10,983.78
Estates of and above 10		
and below 25	988	13,897.29
Estates of and above 5		
and below 10	1,290	8,595.40
Estates below 5	13,156	19,082.17
Total ..	16,159	158,322.14½

Total Production.—The most important statistics of all relate to the total amount of the production of rubber in the sub-continent. As has already been stated, this is about 17,000 tons a year. The yield per acre is disappointing and compares unfavourably with the average yield in Ceylon or Malay or the Netherlands East Indies.

While the average yield per year per acre in the Indian sub-continent varies from 294 to 315 lbs., the average yield per acre in Ceylon is about 350 lbs. In Malay and the East Indies it is higher still, being as much as twice the Indian yield. The Indian grower ascribes the difference in yield chiefly to difference in soil, climate and the distribution in rainfall, which result in high production cost. According to the Government speaking through the Member for Industries and Commerce (Sept. 4, 1947), however, the low yield can be ascribed to out-of-date methods adopted in growing rubber even after due allowance is made for climatic conditions. Here are the production figures for the Indian sub-continent:

Year	Production in tons	Acreage per annum per bearing	Average yield per acre in pounds
1940	16,671	123,820	302
1941	16,295	124,135	294
1942	16,597	123,476	301
1943	16,629	121,647	306
1944	17,174	122,191	315
1945	16,077	122,444	294
1946	10,374*	125,521	185*

*The figures for 1946 are only for up to end of September.

The total amount invested by the rubber producing industry in the Indian sub-continent is roughly 12 crores, Rs. 11,87,41,608.75 to be more precise. This figure works out to about Rs. 750 an acre. Here are a few more figures which together give us some idea of the importance of the rubber growing industry for the economy of the sub-continent. The number of men employed on the rubber estates during 1942 was 46,887 which includes the supervisory staff employed on the estates, the staff at the head offices of the companies and also persons employed in the handling and transport of rubber. At the present time the total number of men employed would be much nearer the 50,000 mark. The estimated value

of rubber produced in the Indian sub-continent in 1945 at the rate of Rs. 100 per 100 lbs. is 360 lakhs of rupees. All the figures we have cited together testify to the part played by the rubber growing industry in the economy of South India and the importance of ensuring that the industry pays its way.

Present Position.—Till about the middle of 1934 there was practically very little consumption of indigenous rubber in the Indian sub-continent. Even as late as 1939, out of a total of 16,500 tons produced only about 5,600 tons were accounted for by internal consumption. About two-thirds of the rubber produced was thus available for export, a fact which necessitated Indian participation in the international agreement on the export of rubber. As has already been stated, in 1939 internal consumption rose to 5,600 tons. From then on it continued to increase steadily till in 1941 it reached the figure of 14,297. During the war the demand for rubber soared higher still partly because of the greater requirement of the Allies and partly because supplies from the chief rubber producing countries, like Malay, Java and Burma were not available.

The present position of the rubber growing industry is different from its position either before the war or during the war. There is a big internal market, for a great rubber manufacturing industry (i.e., using rubber as its raw material) has grown up. It consumes more rubber than the growers can produce so that some two to three thousand tons have actually to be imported to meet its total requirements. And when rubber-manufacturing enterprises, now in the process of formation, start operating the industry will need larger imports still or a much larger production than exists today. But though the market for raw rubber has expanded, danger threatens the growers from two directions. There is competition from imported rubber, and second there is competition from synthetic rubber. The danger from foreign competition is all the greater because it is believed that world supply is actually in excess of world demand, and second while the world price of rubber is at present about Rs. 50 for 100 lbs., the Indian grower cannot afford to sell at that price as the cost of production in the Indian sub-continent is much higher.

Indian Rubber Board.—All this was fully expected and it was with the idea of meeting just this situation that the old undivided Government of India appointed an *ad hoc* committee

presided over by Sir Frederick James in December 1945. The report of this Committee was considered at a Conference of representatives of planters, manufacturers, dealers and of the various Governments held at Coimbatore in June 1946. The recommendations of that Conference were generally accepted by the old undivided Central Government and the Governments of Travancore and Cochin, and legislation to implement these recommendations have also been brought into force by these Governments.

Finally a body under Central Control, called the Indian Rubber Board was constituted with headquarters at Kottayam by an Act of the Central Legislature in 1947. The Board was to consist of the following:

- two members representing the Central Government to be nominated by that Government;
- one member representing the Indian Council of Agricultural Research to be nominated by the Central Government;
- one member to be nominated by the Provincial Government of Madras;
- three members to be nominated by the Government of Travancore;
- Two members to be nominated by the Government of Cochin, of whom one shall be a person representing rubber producing interests;
- three members to be nominated by the United Planters' Association of Southern India, Coonoor;
- three members to be nominated by the Rubber Growers' Association of India, Kottayam;
- three members to be nominated by the Association of Planters of Travancore, Kottayam;
- three members representing manufacturers, nominated respectively by the Central Government, the Indian Rubber Industries Association, Bombay, and the Association of Rubber Manufacturers in India, Calcutta;

(j) one member to be nominated by the Central Government from among dealers;

(k) the Rubber Production Commissioner (ex-officio).

The Problem.—The objects of the Board were to develop the rubber industry, to see to the marketing of rubber, to regularize import and export and generally to look after the interests of the industry.

Two of the questions with which the Board will deal are what prices should be maintained for Indian rubber in the interests of both the producing and consuming sections of the rubber industry and second what level of imports should be permitted. The grower's case is that he should be assured of the Indian market. This can be done by controlling imports and fixing the price of rubber at a level which will make production possible. The grower cannot be exposed to the full blast of world competition for the world price is only about Rs. 50 while the price fixed by the Central Government during the war varied between Rs. 71½ in 1942 and Rs. 110-10-3 in 1945. That is the grower's case. But then the interests of the consumer of rubber have also to be safeguarded for the manufacturing industry is in a position to build up valuable export markets at a time when foreign currency is of crucial importance in the economic development of the whole sub-continent. Hence price-fixing and import control is a delicate business for the interests of neither the grower nor the consumer can be jeopardized. There is also a growing feeling that the producer of rubber can do a great deal to increase his own efficiency and competitive power. The yield can be improved and so can the quality by the adoption of better and more scientific methods. There could be less carelessness in the collection of raw rubber and in grading and baling. And the whole marketing organization too can improve. For all this the grower can, of course, rely on the Board for help and advice.

The Silk Industry

SERICULTURE has been practised in the sub-continent for the last two thousand years and a lot of silk used to be exported in days long gone by. Now, however, the sub-continent has lost its export market and imports annually about Rs. 13,000,000 worth of silks, on an average. Switzerland and United Kingdom never exported raw silk to India. Italy's export stopped long ago. China and Japan used to export till the last Great War. At present the sub-continent does not import silk from any foreign country. The world demand for silk and silk waste has shrunk and there is increasing competition from foreign silk goods and mixtures and artificial silk substitutes. In Assam, eri, mulberry and muga silk-worms are being reared and on an average about Rs. 1,70,000 worth of silk is annually produced there. Bengal produces on an average about Rs. 20,00,000 worth of mulberry silk. Bihar and Orissa about Rs. 42 lakhs worth of tasar and a little eri silk. A little mulberry silk is also being produced in Bihar in the district of Purnea. The Central Provinces produce about Rs. 14 lakhs worth of tasar silk on an average.

The average annual production in Mysore, Kashmir, Jammu, Madras and the pre-partition Punjab would be about Rs. 38,00,000, Rs. 10,00,000, Rs. 2,00,000, Rs. 5,00,000, Rs. 16,600 worth of silk respectively. Bombay and the United Provinces are investigating whether Sericulture can be introduced. The new era industry in Baroda is spreading. Some of the States, and the Provinces of Madras and East and West Punjab are trying to introduce era silk-worm rearing.

The industry has been declining in almost all parts of the sub-continent. China is exporting more silk to India and Pakistan than Japan in

spite of the tariff wall. In the sub-continent it is only in Mysore and Kashmir that the industry is progressing. It is believed that the moribund industry will be resuscitated if sufficient duty is imposed on foreign silks.

The price of indigenous raw silk has increased by about 300 per cent. on account of the stoppage of the import of raw silk from China and Japan due to the war. Almost all the above Provinces and States are trying to increase their production both in quality and quantity. The production of raw silk has also gone up about 200 per cent. due mainly to an increase in its price.

As for post-war development Bihar has prepared a very ambitious plan which is going to be launched in a short time.

THE RAYON INDUSTRY

World's first rayon factory capable of producing about a hundred pounds a day was erected in France in the year 1884. Today the world production of rayon, inclusive of staple fibre, has risen to the staggering height of over 2,000 million pounds. This man-made fibre has beaten age-old textile fibres like silk and wool quantitatively and now occupies a position second to that of cotton, which is also being threatened by staple fibre.

But in spite of the large production and consumption (amounting to some 75 tons of yarn per day and costing about five crores of rupees to this country annually, as evidenced by the figures reproduced in Table I below), the rayon industry was unknown in India till 1945 and even now it is only in its incipient stages.

TABLE I

Imports of Rayon goods into India (in 1,000 Rs. and lbs.)

		1937-38	1938-39	1939-40	1940-41
Rayon Yarn ..	Lbs.	31,589	17,248	30,764	33,889
	Rs.	20,535	9,588	21,205	26,482

	Rs.	1,924	2,008	5,408	8,295
TOTAL ..	Lbs.	52,141	25,562	48,957	54,508
	Rs.	44,359	21,582	47,934	59,297

* Original quantity in yards, but converted into weight taking five yards to weigh one pound of yarn.

The Indian Central Cotton Committee and the Board of Scientific and Industrial Research evinced early interest in this new industry and did very useful spade work by instituting research and collecting reliable data. The first industrial concern to be formed with the object of manufacturing rayon in India was the Travancore Rayons Ltd., which was quickly followed by the Sirsilk Ltd., and the National Rayon Corporation Ltd. The following table affords certain particulars about these companies:—

TABLE II

Name of Company	Formed in	Authorised Capital in lakhs	Issued Capital in lakhs	Process of manufacture	Projected production per day	Plant located in
The Travancore Rayons Ltd.	January 1946	Rs. 200	Rs. 150	Viscose	5 tons Rayon; 1½ tons Transparent Paper	Travancore State
The Sirsilk Ltd.	August 1946	500 (O.S.)*	200 (O.S.)*	Acetate	5 tons Rayon	Hyderabad State
The National Rayon Corporation Ltd.	1946	1,000	350	Viscose	6½ tons Rayon	Bombay Province

*100 Indian Rupees = Approximately 116 O.S. Rupees.

The year 1947 saw no new companies. Activity on the rayon front was restricted to putting the already projected plants into production. So far no rayon factories have been started in Pakistan.

The mechanical equipment required for producing rayon is highly complicated and has for the present to be obtained from specialised firms in foreign countries. The Travancore plant will be British cum Swiss, and the Hyderabad plant probably entirely British, while the Bombay plant will be American. However, there are several simple items of machinery such as tanks, containers, etc., which could doubtless be made locally and this fact will certainly not be lost sight of by the industry in its own interest.

QUESTION OF TECHNICIANS

The absence in this country of technicians, capable of looking after the new rayon industry is a problem for the Managing Agents. There is, however, only one way of solving the difficulty; and that is to give a thorough training to selected young men in rayon factories either at home or if possible abroad. Anyway, the industry has no alternative for the present but to get foreign experts. There is little likelihood of any serious difficulty arising out of lack of trained labour as the Indian labourer has enough intelligence to grasp and enough dexterity to execute new methods of work.

The combined daily production of the three plants, operating at full capacity, will be 16½

tons of rayon, which is about 20 per cent. of India's pre-war consumption. In spite of the separation of Pakistan from India this percentage will, in all probability, hold good for India today, because of the increased demand for rayon, in the intervening years. Obviously there is vast scope for expansion of this industry in India and in Pakistan.

Any review of the rayon industry would be incomplete without a consideration of staple fibre, which is nothing but cut rayon. Staple fibre which is a little over a decade old, showed a higher production figure than that of filament rayon during the war. It was originally invented as a substitute for cotton in those countries which had no direct access to raw cotton. Although this new fibre offers today immense possibilities of permutation and combination in spinning and weaving, it will suffice for the present to look upon it only as a substitute for cotton.

As the bulk of the cotton grown in India has a short staple, the country has got to depend on imported cotton for spinning finer counts. Although the efforts of the Indian Central Cotton Committee spread over nearly a quarter of a century succeeded in growing long staple cotton, the actual yield of this variety formed just a fraction of India's requirement and by far the major portion of that fraction now comes from Pakistan. India thus suffers from a serious shortage of long staple cotton, which could best be substituted by staple fibre manufactured in the country itself.

The Steel Industry

THE art of smelting and shaping iron has been known and practised in the Indian sub-continent from very early times and a regular trade in iron with foreign countries is known to have been in existence. The famous iron pillar at Delhi, which is estimated to have been erected some 2,000 years ago, bears adequate testimony to the skill and craftsmanship of the early Indian workers. India also supplied steel from which the famous Damascus or the Wootze sword or dagger blades used to be made.

The aborigines of Central India and other neighbouring districts have also been known to smelt ore into iron in small mud furnaces with the aid of wooden bellows for the supply of the necessary blast to produce the metal. This primitive method of smelting iron, however, almost died out with the gradual industrialisation of the country, although even during the recent years the aborigines round about the steel town of Jamshedpur have been found smelting iron ore in this way. After the abortive efforts of Mottee and Farquhar in 1779 which were the first recorded attempts made in the Indian sub-continent to manufacture iron and steel on a commercial basis, one Mr. Josiah Heath, a retired Madras Civil Servant, attempted to establish a Works at Porto Novo with the monetary assistance given by the East India Company but unfortunately with his death and owing to a number of other difficulties which were experienced that project also met with complete failure.

The next commercial enterprise was the Barakar Iron Foundry at Kulti which ultimately passed into the hands of the Barakar Iron & Steel Co. in 1887. Two years later, this plant was modernised and became known as the Bengal Iron Co. They were the first to produce pig iron in the sub-continent on modern lines.

Jamsetji Tata.—The first successful and the most outstanding attempt to manufacture steel in India on a commercial basis was, however, that of the Tata Iron & Steel Co. and credit is due to the indefatigable perseverance and foresight of Jamsetji Tata for his pioneer efforts for the establishment of a steel industry in India. Jamsetji Tata's sons and their Indian associates with the valuable assistance of American technical experts succeeded in establishing the Tata Iron & Steel Co. which started its Steel Works at Sakchi in the year 1908. Pig iron was made in 1911 and the first steel ingot a year later. Several additions to the plant have since been made from time to time and this Company has now capacity to produce over 850,000 tons of finished steel per annum. What was before a small village of Sakchi has thus today grown into the foremost industrial city of India, and has been renamed "JAMSHEDPUR" in memory of the founder of the Company.

The Indian Iron and Steel Co. was started in 1918 at Hirapur a few miles from Kulti and in 1936, it acquired the Bengal Iron Co. The amalgamation of these two companies made it possible for the Steel Corporation of Bengal to come into existence. The close proximity of the works of the Steel Corporation of Bengal to

those of the Indian Iron and Steel Co. enables the Steel Corporation of Bengal to get from the latter not only pig iron but also gas, power, water, etc. The first ingots were made at the Steel Corporation's Works on 11th November 1939. Five days later, the first ingots were rolled on their 14" Blooming Mill. Production of sheets commenced on 12th February 1940. The construction of the Duplex Plant at the Napuria Works of the Steel Corporation of Bengal was completed in 1946.

The Steel Corporation of Bengal, in addition to the difficulty of obtaining quick delivery of machinery which they had ordered just prior to the outbreak of the War, experienced considerable difficulty in obtaining skilled labour and supervisory staff but in the end they overcame the obstacles and were able to make valuable contribution to India's industrial progress. Their plant has capacity to produce 250,000 tons finished steel per annum.

Another Iron Works at Bhadravati in Mysore State was started in 1921 to which a steel plant was added in 1934. During World War II, a 25 tons basic furnace together with two small electric furnaces were installed. Their present annual production capacity for finished steel is about 25,000 tons. They have an ambitious programme of expansion in the post-war period.

Mention may also be made of the various steel re-rolling mills in the sub-continent which produce certain sections of steel materials from billets and scrap supplied by the main steel producers. There were about 99 recognised Steel Re-rolling Mills in 1946 and their production for that year was 69,000 tons of steel materials. The total estimated capacity of the re-rollers is about 1,50,000 tons a year. They are, however, handicapped by the insecurity in respect of supply of their raw materials and this has, perhaps, to some extent, retarded the natural development of the industry.

High Quality Steel.—While the first World War gave an impetus to the Steel Industry in India and enabled it to supply steel rails to be laid for war purposes in the Middle East, World War II has witnessed still greater developments.

The steel industry before World War II had mostly confined itself to the manufacture of ordinary mild steel. Only the ordnance factories and some electric foundries made small-scale attempts to manufacture special grade high quality steels. High tensile steels, corresponding to the American high-yield strength, corrosion resistant structural steels, as well as the English high tensile steels were, however, developed even before World War II by Tatas and these high tensile steels are known as "TISCOR" and "TISCROM". The latter which is a chrome-manganese-copper, high tensile structural steel fully satisfied the requirements of the British Standard Specification 584 and is corrosion-resisting with high tensile strength and good ductility. About 17,000 tons of this steel were used in the construction of the new Howrah Bridge which spans the river Hooghly at Calcutta—the third largest cantilever bridge in the world. With the outbreak of World War II, the strategic position of the

second-hand Machinery? or new

sub-continent and the gradual stoppage of Imports owing to increased shipping difficulties, threw a challenge to India's iron and steel industry, and the industry rose to the occasion and successfully produced almost all the varieties of steel used in general engineering practice and machine construction, such as high-speed steels, hot-die steels, tap steels, nickel-chrome steels, special steels for shear blades and punches, die steel for the mints, etc.

Some Achievements.—The main developments in steel-making under the pressure of war-time necessity occurred at the Tata Iron & Steel Co.'s Works. Tatas made special alloy steel products for direct War demands such as bullet-proof armour plates varying in thickness from 4 mm. to 14 mm. for the fabrication of armoured vehicles, bullet-proof rivet bars for the manufacture of rivets for use on these vehicles, bullet-proof plates for Howitzer shields and gun turrets on armoured vehicles, nickel-chrome steel rounds for the production of 18 and 25 pounder armour piercing shells, special deep drawing quality steels for cartridge cases and for rifle and machine-gun magazines, stainless steels for surgical instruments, special steel sheets for the manufacture of nose containers for high explosives aircraft bombs and nickel-chrome-molybdenum steel bars for the manufacture of parachute equipment, etc. These are only an indication of the rich variety of special quality steels developed by the Tata Iron & Steel Co. Research on permanent magnet steels using indigenous raw materials was also undertaken in order to meet the urgent demands of the Posts and Telegraphs Departments of the undivided Government of India, owing to the acute paucity of imported magnet steel bars.

While Tatas as the principal steel producers in India or Pakistan were responsible for the development of special steels, the Mysore Iron & Steel Works also made use of the resources at their command in manufacturing special steels at their Works. With the outbreak of the Second World War, they made additions to their plant and installed a half-ton Heroult furnace and a Hoskins crucible furnace. In 1941 a Moore's Electromelt furnace of 3½ tons capacity was installed which enabled them to make high-speed tool steels, shear blade steels, heat and wear-resisting steels, austenitic heat-resisting nickel chrome alloy steel, stainless steel, etc. In 1944, at the instance of the Council of Scientific and Industrial Research, the Mysore Works developed and successfully manufactured nichrome steel suitable for drawing into wire.

A Milestone.—Mention may also be made here of the research carried out on refractory materials and clays particularly at the Testing Laboratory in the Research and Control Department at Jamshedpur which ensured the industry, during the War, a supply of improved quality bricks and shapes for the building and repair of the various furnaces in the Steel Works. Another point of interest is the valuable work that has been done with regard to high temperature mortars or which the industry had to depend hitherto on imported products at very high prices. This determined research has now enabled the Tata Iron & Steel Co. to develop very superior types of mortars for high temperature work.

The establishment of a Wheel, Tyre and Axle Plant at Jamshedpur in 1941 may be regarded as an important milestone in the progress of Indian steel industry. At that time it was hoped that the opening of this plant would be a prelude to a large-scale manufacture of locomotives in India. Within two years of the opening of the Wheel, Tyre and Axle Plant at Jamshedpur, the Jamshedpur Engineering and Machine Manufacturing Co. commenced making chilled wheels for the State Railways. Efforts in this direction were previously made by Indian firms but the operating conditions in the manufacture of Indian pig iron, the high percentage of ash in the coke and the humidity due to which the chill becomes uncontrollable stood in the way. The Jamshedpur Engineering and Machine Manufacturing Co.'s entry in this field, however, has been a success.

On 1st June, 1945, the East Indian Railway Workshops at Singhbhum were transferred to Tatas for the manufacture of boilers and locomotives. Steam locomotives complete with boilers have been manufactured in Indian Railway Workshops at Jamalpur and Ajmer. The Jamalpur unit built as many as 214 broad-gauge locomotives, 103 boilers and 99 tenders till 1926 (when the locomotive workshop was closed), and the Ajmer Workshop manufactured no less than 435 metre-gauge locomotives between 1896 and 1940. The starting of the Tata Engineering and Locomotive Co. is, however, the first attempt by a private firm to manufacture boilers and locomotives on a commercial basis. In addition to the Telco Works, two plants for the manufacture of locomotives are under contemplation by the Government of India.

A Few Figures.—The block capital invested by the Tata Iron & Steel Co. in their Works including collieries is Rs. 36,77,95,123 and that invested by the Steel Corporation of Bengal and the Mysore Iron & Steel Works in plants is Rs. 14,41,83,925 and Rs. 2,11,22,215 respectively.

The plant and equipment used in the steel industry in India are mostly of foreign manufacture and unfortunately the industry has to continue to depend on imported machinery for the present.

Where only a quarter of a century ago, India had to depend chiefly on foreign technicians for the development of the industry, during the last few years labour and skilled personnel employed in the Indian steel industry have been mostly Indian. This has been possible owing to the foresight of the managements in training suitable Indian youths for the steel industry. Tatas today have a technical institute at Jamshedpur where there are two classes of apprenticeship. One is the Trade Apprenticeship Course, the duration of which is two years. The other is the Graduate Apprenticeship course, the duration of which is also two years. After the period of training is over, these apprentices are generally absorbed by the Company in vacancies which occur from time to time.

The total world production of steel is roughly 131,400,000 tons per annum of which the U.S. contributes 80 million tons and the U.K. 13,000,000 tons while India contributes only about 1,300,000 tons, which is roughly 1 per cent. of the total world production.

The Sugar Industry

THE present position and importance of the sugar industry in the industrial economy of India is due in a large measure to the liberal tariff policy pursued by the Government of India in granting tariff protection to the industry from 1932. An important landmark in the history of the sugar industry was the year 1930-31, when at the instance of the (then Imperial) Indian Council of Agricultural Research, the question of protection to the industry was referred to the Tariff Board by the Government of India. Pending consideration of the Tariff Board's report, the revenue duty on sugar was enhanced to Rs. 7-4-0 per cwt. in March 1931. In addition, a revenue surcharge

of 25 per cent. amounting to Rs. 1-13-0 per cwt. was imposed from September 1931. A few months later, the Government of India announced their decision and fixed a protective import duty on sugar at the rate of Rs. 7-4-0 per cwt. with effect from 1st April 1932, on the recommendations of the Tariff Board. The total import duty, along with the surcharge, was Rs. 9-1-0 per cwt. till 31st March 1934.

Excise & Import Duty.—The following table will show at a glance the changes in the excise duty and import duty on sugar, sugar candy* and molasses in India from 1932 till 31st March 1948:—

On Sugar per cwt.	Protective Import Duty per cwt.	Additional Duty per cwt.	Total Import Duty per cwt.
	Rs. a. p.		Rs. a. p.
From 1st April, 1932 to 31st March, 1934	7 4 0	Revenue surcharge @ 25 % of protective duty Rs. 1-13-0	9 1 0
From 1st April 1934 to 27th February, 1937	7 12 0 (0-8-0 being additional margin)	Equivalent excise duty Rs. 1-5-0	9 1 0
(Rs. 1-5-0 Excise Duty on domestic production of factory sugar)			
From 25th February, 1937	7 4 0	Equivalent excise duty Rs. 2-0-0	9 4 0
(Rs. 2-0-0 Excise Duty on domestic production of factory sugar)			
From 1st April, 1939	6 12 0	Equivalent excise duty Rs. 2-0-0	8 12 0
(Rs. 2-0-0 Excise Duty on domestic production of factory sugar)			
From 1st March, 1940	6 12 0	Equivalent excise duty Rs. 3-0-0	9 12 0†
(Rs. 3-0-0 Excise Duty on domestic production of factory sugar)			
From 1st April, 1942	6 12 0	Revenue surcharge of 20% on import duty and Equivalent excise duty of Rs. 3, with 20 % surcharge thereon	11 11 2‡
(Rs. 3-0-0 Excise Duty on domestic production of factory sugar)			

* From 20th February 1934, a revenue duty of Rs. 10-8-0 per cwt. was imposed on sugar candy in place of Rs. 9-1-0 per cwt. The rate of import duty on molasses is 3½ per cent ad valorem since April 1932.

† The import duty of Rs. 11-11-2 per cent per cwt. works out at Rs. 8-9-6 per maund and Rs. 3-0-0 excise duty per cwt. works out at Rs. 2-3-3 per maund.

This import duty has been continued till 31st March 1948, on the recommendations of the Tariff Board of 1947, by the Government of India.

‡ Total import duty including surcharge of 20 per cent as from 1st April 1942.

Protection.—It would be interesting to observe here that protection to the sugar industry, which was given initially for a period of 14 years, under the Sugar Industry (Protection) Act 1932, expired on the 31st March 1946. Protection was continued by the Government of India till 31st March 1947, and a Tariff Board inquiry was undertaken in January 1947 to decide what action was to be taken in regard to the duty on sugar after 31st March 1947. On the basis of the recommendations of the Tariff Board which conducted a summary enquiry, protection has been continued at the same level

by the Government of India till 31st March 1948, and an announcement will soon be made for its further continuance till 31st March 1949.

PRODUCTION

During this period of fifteen years, production of sugar in the country has risen considerably, from 2,90,000 tons in 1932-33 to 12,41,000 tons in 1939-40. This has been the maximum production so far. During the war period production has been generally on the decline and is well under 10,00,000 tons.

The Sugar Industry

The following table shows the number of cane/neries, khandisari, net import of sugar in British factories working in India, including States, and India and import in Kathiawar ports during the production of sugar from cane factories, gur ref- last 15 years, and estimates for 1947-1948.

Year (November-October)	No. of Cane Factories working in India	Cane Factory Production (November-October)	Sugar Refined from Gur (January-December)	Khandisari Conjectural estimates (Nov.-Oct.)	Total Production of Sugar in India (Nov.-Oct.)	Net Imports (Excluding Re-exports) of Sugar in British India (Nov.-Oct.)	Imports of Sugar in Kathiawar Ports Nov.-Oct.

‡ Sugar Controller's estimate for Khandisari for 1943-44 is smaller.

The acreage under cultivation of sugarcane has kept pace with the increased production of sugar. From 30,76,000 acres in 1931-32 it went up to 47,00,000 acres in 1940-41. The acreage has, however, fallen from that high level in subsequent years, and in 1946-47 it was in the vicinity of 41,00,000 acres.

The acreage under improved varieties has one up from 11,70,000 acres in 1931-32 to nearly 5,00,000 acres in recent years. The average

cane production per acre has not however increased during all these years, and this factor is greatly responsible for the present high cost of sugarcane and sugar in the country.

The following table shows the acreage under sugarcane, under improved varieties, production of cane per acre, gross production of gur, and calculated production of cane-crop* from 1931-32 to 1946-47.

Year	Total acreage under sugarcane in thousand acres	Acreage under improved varieties in thousand acres	Average cane production per acre (in tons)	Gross production expressed as gur (in thousand tons)	Calculated production of sugarcane (10-11 factors) (in thousand tons)
331-32 ..	3,076	1,170	14.1	4,116	43,316
332-33 ..	3,425	1,845	14.9	4,859	51,129

* Vide "Indian Trade Journal", 10th October 1946 and 4th September 1947.

The sugar industry was controlled since 1942 by the Government of India, and this control was maintained all throughout the period of the war and up to 10th December 1947, when control over sugar was lifted. Along with sugar, production of gur was also controlled. While the control succeeded to a certain extent in achieving its object, namely, check over indiscriminate rise in prices, it failed to increase production of sugar, although it was the avowed object of the Government to increase production. With the decontrol of sugar and the fixation of higher prices of sugar by the Government of India, with effect from the 1947-48 crushing season, in order to enable them to enhance the minimum price of the raw-material, namely, sugarcane, from Rs. 1-4-0 per maund to Rs. 2-0-0 per maund in the U. P. and Bihar, principal sugar-producing provinces of the country, it is hoped that larger quantities of sugarcane will be available to sugar mills for crushing, and that consequently production of sugar will increase in order to meet the requirements of sugar in the country which have been steadily going up since the last few years.

CONSUMPTION OF SUGAR

The *per capita* consumption of sugar in the sub-continent at the present time is very low and works out to only about 6 lbs., in addition, of course, to 24 lbs. of gur, the total *per capita* consumption of sugar and gur being about 30 lbs. during the last few years. The *per capita* consumption of sugar in various other countries is considerably higher as can be seen from the following table, and it is hoped that before long the sugar industry in India will be able to produce a much larger quantity of sugar than at present.

Per capita consumption of sugar in various countries (pre-war)

United Kingdom	..	108	lbs.	per head
U.S.A.	..	97	"	"
Brazil	..	34	"	"
France	..	52	"	"
Australia	..	116	"	"
Germany	..	52	"	"
Cuba	..	88	"	"
Java	..	11	"	"
Japan	..	37	"	"
Union of South Africa	..	47	"	"
Netherlands	..	64	"	"
India	..	6 (in addition to 24 lbs. Gur)		

It must be observed here that the Government of India appointed a Sugar Panel to investigate the possibility of increasing the sugar output of India. The report of this panel was published in 1946. They recommended a target of production of 16,00,000 tons of sugar to be reached at the end of 5 years, of which 15,50,000 tons were for internal consumption and 50,000 tons for export outside India. During 1947, the Government of India, after reviewing the recommendations of the panel, came to the conclusion that the above target should be increased to 18,50,000 tons of sugar per annum and for that purpose they decided to allot a further 25 new units of sugar factories among the various provinces.

Capital Outlay.—The capital invested at the present time in the sugar industry is roughly of the order of 35 crores of rupees. The Sugar Panel estimated that the total cost of machinery required for (a) fuller exploitation of the existing capacity of the sugar factories, (b) enhancement of the capacity of the existing small plants,

and (c) construction of 20 new factories of 1,000 tons of cane per day crushing capacity, would be about 11-12 crores of rupees. If to this we add the cost of establishment of 25 new factories decided by the Government of India while reviewing the recommendations of the Sugar Panel in 1947, the total cost would be about 22 crores of rupees for the machinery.

A large bulk of the existing sugar machinery had been imported from various countries *e.g.*, U.K., Germany, Czechoslovakia, France, etc., but it is impossible that in the years to come certain units of the sugar machinery can be fabricated in India, and if the new plants are fabricated in India, it would be of great help to the engineering industry of the country as well.

Production Target.—It must be observed here also that with the creation of the separate Dominion of Pakistan with effect from 15th August 1947, the Government of India will have to revise their target of production. Normally the consumption of sugar in the Pakistan area is estimated at about 2,85,000 tons as against a production of about 35,000 tons in that area, and it is quite likely that the Government of India may have to reduce the number of new units by about 20.

It might be of interest to note that the number of working sugar mills in the territory of the Dominion of India at the present time is 135, and in the Dominion of Pakistan, 10, which latter are capable of producing about 35,000 tons of sugar. The acreage under cane in the Union of India will be approximately 30,00,000 acres and in Pakistan, approximately 10,00,000 acres.

It will also be of interest to note here that although the total acreage under cane, namely, 40,00,000 acres, appears to be very large, it comes to only about 2 per cent. of the cultivated area in India and Pakistan, and is approximately 35 per cent. of the world's sugarcane acreage.

The estimate of the total value of sugar and gur in India made in 1947 worked out to 200 crores of rupees, and the *per capita* expenditure on sugar thus works out to Rs. 5-0-0. The sugar industry gives employment to 3,000 Graduates, 1,25,000 skilled and unskilled workmen, and interests not less than 20 million cultivators. (*Vide* the Indian Sugar Industry Annual, 1946-47: by M. P. Gandhi).

Import Possibilities.—Although production of sugar in India at the present time is slightly less than its estimated consumption, it is not likely that there will be any large-sized import of sugar from foreign countries, firstly because production of sugar in the world is at present smaller than the consumption, there are difficulties regarding currency and exchange, and Java which used to be the largest supplier of sugar in the past, is producing at the present time sugar in negligible quantities. Judging from the reports about the economic and political conditions in Java, it would take at least three years before Java is able to produce the quantity of sugar it did in the pre-war years, namely, 15,00,000 tons, and indeed may take a longer period still for Java to rehabilitate its industry to its previous size, due to the ruination brought about by the world war in the economy of the industry. There is, therefore, little danger of large sized imports of

sugar from foreign countries, but it appears that the Union of Pakistan for developing the industry protection to the sugar industry will have to be continued for some time because any disturbance in the present protection would adversely affect the cultivation of cane in India. The Tariff Board of 1947, in their report, while recommending protection to the sugar industry, observed that protection to the sugar industry was in effect protection to the sugarcane cultivation in India which was an integral part of India's agricultural economy. The extent and the speed of the development of the sugar industry in India will depend to some extent upon the attitude of

the Union of Pakistan for developing the industry within its Dominion and the arrangements which they make for getting their requirements of sugar in the meanwhile, *i.e.*, from India or foreign countries.

Gur Production.—Having discussed the production of sugar in this detail, it would be of interest to see the production of *gur* which is an article of direct consumption in India, and the production of which is 3 times as large as that of sugar. The following table shows the calculated net production* of *gur* in India for direct consumption from 1931-32 to 1946-47.

Year (November-October)	Calculated net Annual Production of Gur for direct consumption (in Tons)	Year (November-October)	Calculated net Annual Production of Gur for direct consumption (in Tons)
1931-32	2,758,000	1939-40	2,441,000
1932-33	3,240,000	1940-41	3,414,000
1933-34	3,486,000	1941-42	2,829,000
1934-35	3,701,000	1942-43	3,015,000
1935-36	4,101,000	1943-44	3,499,000
1936-37	4,268,000	1944-45	3,633,000
1937-38	4,364,000	1945-46	3,578,000
1938-39	2,131,000	1946-47	3,630,000

* The net production of *gur* is calculated by deducting from the total yield of cane expressed in terms of *gur*, and published in the "Final General Memorandum on the production of the Principal Crops in India," by the Director-General, Commercial Intelligence and Statistics, the *gur* equivalent of the cane used for purposes other than *gur* manufacture. *Vide* letter No. 3174 stat., dated 2nd July 1947, from the Director, Imperial Institute of Sugar Technology, Cawnpore, to the Chairman, Sugar Commission, U.P. and Bihar, Cawnpore, for figures from 1944-45 to 1946-47.

SUGAR PRICES

Prices of sugar were fixed since 1942 by the Sugar Controller for India for all factories and they were compelled to sell their sugar at controlled rates and also to consign their sugar to destinations which have been specified by the Sugar Controller from time to time. The average price of sugar in 1942 was Rs. 12-4-0 per maund, in 1943 Rs. 14-9-0 per maund. In 1944 Rs. 15-6-0 per maund, and in 1945 Rs. 16-12-0 per maund. The price fixed in 1946-47 was Rs. 20-14-0 per maund. The minimum price of sugarcane was also on the increase during this period, to compensate the cultivator for the higher cost of cultivation.

Immediately after sugar was decontrolled on the 10th December 1947, the maximum price of sugar was fixed at Rs. 25-7-0 per maund, and at the same time the minimum price of cane,

which was Rs. 1-4-0 per maund in 1946-47 season, was increased to Rs. 2-0-0 per maund, both in U.P. and Bihar.

At the present price, sugar is being sold in retail at about 8 annas per lb. It is essential to bring about a reduction in the price of sugar, particularly if India has any ambition to export sugar to other countries, but unless the cultivation of cane improves and unless it is possible to bring about a great increase in the average yield of cane per acre, from its present average of about 14 tons to at least 30 tons per acre, it is not likely that there will be any appreciable fall in the price of sugar. It may be noted as a matter of interest, however, that India is the largest producer of sugar (including *gur*) amongst the countries of the world and the Indian sugar industry is now the second largest industry in India, second only to the Cotton Textile industry.

The Tea Industry

AMONG plantation crops in both India and Pakistan tea is the most important. The indigenous tea plant, growing in a wild condition, was first discovered in Assam about 1820. It soon drew the attention of the East India Company, which after some enquiries started an experimental garden in 1835. After working for five years, the plantations of the Government were sold in 1840 to the Assam Company, the first tea concern and to this day the largest company in the sub-continent. It fared badly during the first ten years of its existence, but about 1852, its condition began to improve and its success made the prospects of the industry appear so promising and attractive that speculators eagerly rushed into it.

The discovery of the indigenous tea in Sylhet and Cachar gave the necessary impetus for an expansion of the industry into the Surma valley, and in a few years thereafter the whole of the upper portions of the north-east region (both Brahmaputra and Surma Valley) was converted into a huge tea plantation. Thus, the foundations of the present tea industry were laid during the fifties of the last century. Since that period the growth of the industry has been phenomenal and in less than a hundred years the sub-continent has become the tea garden and tea-shop of the world.

The following table shows the growth of the industry since 1900:—

Year	Area under tea in hundreds of acres	Production in lakhs of lbs.	Year	Area under tea in hundreds of acres	Production in lakhs of lbs.
1900-1904 (Average)	523	201	1933	841	384
1905-1909 "	539	242	1934	841	395
1910-1914 "	591	290	1935	841	389
1915-1919 "	662	374	1936	842	390
1920-1924 "	709	336	1937	842	423
1925	728	364	1938	840	447
1926	739	393	1939	841	463
1927	756	391	1940	840	471
1928	776	404	1941	840	500
1929	788	433	1942	841	570
1930	804	391	1943	843	552
1931	807	394	1944	842	507
1932	840	434	1945	841	523
			1946	841	585

It will be seen from the above table that since the beginning of the present century, while the area under tea has risen by 60 per cent., the production has increased by approximately 180 per cent.

Assam and East and West Bengal are the two important centres of the tea industry in the sub-continent, Assam alone accounting for more than half the total production. In 1945, Assam produced 288 million lbs. or 54½ per cent. of the total production. Old undivided Bengal produced 141 million lbs. or 27 per cent., Southern India 92 million lbs. or 17 per cent., while the balance was grown in Bihar, United Provinces, Tripura State and Nepal.

The figures are, of course, in respect of an undivided India, but it is estimated that out of the total North Indian crop of 448 million lbs. grown in 1947, 42 million lbs. were produced in Pakistan.

EXPORT TRADE

Although there has been a steady increase in the domestic consumption of tea in recent years, the sub-continent is still able to export large quantities to other countries, the principal among which is the United Kingdom. In some years over 80 per cent. of the total quantity of tea produced was exported but this figure dropped in 1945-46 to 70 per cent. Of the total exports of 363 million lbs. during this year, the United Kingdom alone took 238 million lbs.

Consequent on the sterling work done by the Indian Tea Market Expansion Board constituted under the Indian Tea Cess Act 1903 the consumption of tea in India and Pakistan during the last ten years has risen from 70 million pounds per annum to the present figure of 140 million pounds per annum. The Indian sub-continent thus becomes one of the leading tea consuming areas although its per capita consumption compared with such countries as the U. K., Eire and Australia is exceedingly low.

The year 1932-33 was one of the worst for the tea industry, as in addition to the worldwide depression, there was considerable over-production with the result that producers of tea all over the world were faced with declining prices and accumulating stocks. The preference granted to Empire teas did not prove sufficiently effective to check the consumption of cheap Java teas. Besides this there was only a small difference in the price of medium and common teas and there was thus no inducement to grow the former. To check over-production a scheme was, therefore, introduced to restrict production and to limit exports. A Bill giving legislative effect to the scheme was passed at the autumn session of the Legislative Assembly in 1933. The industry has consequently been able to enjoy more stable conditions than would otherwise have been possible in the circumstances of the last six years. The export quota which was fixed at 82½ per cent. of the standard exports in 1935-36 rose steadily to 92½ per cent. in 1938-39. Due to accumulation of stocks and decline in prices the quota for the following year was fixed at 90 per cent. but the restriction of supply and an increase in demand had the effect of placing the industry again in a favourable position in the world market even before the outbreak of the war.

WAR YEARS

The outbreak of war gave rise to entirely new conditions. In the United Kingdom, the entire tea trade passed under the control of the Government. A Tea Controller for India was appointed to administer the emergency tea control scheme. Owing to the suspension of re-exports from London, the need for replenishing their stocks by America and the Colonies and the transfer of their demand by some of the markets supplied by Java to Indian tea, there was a strong demand for practically all kinds of tea and the export quota was, therefore, raised to 95 per cent. In October 1939 and was kept unchanged at 95 per cent. for the next season. In June 1940, however, the International Tea Committee reduced the quota for 1940-41 to 90 per cent. for all participating countries. The reduction had a stimulating effect on the markets, but it was soon discovered that in view of the increased requirements of the United Kingdom, U. S. A., and other countries, the maintenance of the export quota at 90 per cent. would result in a severe curtailment of the available supplies and the quota was revised to 92½ per cent. in October 1940. The export quota for 1941-42 was fixed at 110 per cent. of the standard exports and for the duration of the war the figure remained around this latter level. The

export quota figure for 1947-48 up to the time of writing (November 1947) stands at 72½ per cent. and it is anticipated that this figure will be considerably increased before the end of the tea year, i.e. 31st March 1948.

The International Tea Agreement which was due to expire on 31st March 1943 was extended to cover the period of the duration of hostilities and a clear two years thereafter. Thus the present Agreement expires on 31st March 1948 and it is understood that negotiations are now in train with the various Governments concerned to draw up a new Agreement from 1st April 1948.

The following table shows tea exports by sea from the sub-continent to the chief importing countries.

Country	1933-34 (Millions of lbs.)	1938-39 (Millions of lbs.)	1945-46 (Millions of lbs.)
United Kingdom ..	278.8	307.9	237.9
U. S. A. ..	8.3	13.4	52.3
Canada ..	15.1	27.1	19.7

Ceylon ..	3.2	3.9	2.9
Arabia ..	0.5	0.3	2.4
Chile ..	—	—	2.0

PRICES

In 1932-33 the fall in tea prices was almost catastrophic. The average price of tea per lb. realised at Calcutta auction sales during 1932-33 was 5 as. 2 p. as against 6 as. 5 p. in 1931-32 and 9 as. 4 p. in 1930-31. Prices have, however, risen very considerably since then. After the outbreak of war they rose steadily and the average auction prices of Rs. 1-0-9 and Re. 1 for the years 1941 and 1942 respectively were higher than in any previous season. Auction sales for teas with export rights were suspended from 15th September 1942 until 1947 and block purchases were made by the British Ministry of Food on behalf of all Allied and certain neutral countries. Prices paid were based on the average received by growers in the years 1936, 1937 and 1938 together with an allowance to cover the extra cost of war time production. The upward trend in tea prices which had begun during the early years of war was maintained when auctions of tea with export rights were renewed in Calcutta in 1947.

The following table shows the variations in the average prices of tea sold at auction sales in Calcutta and the index numbers of these prices with base 1901-2 to 1910-11 = 100:—

Year	Average prices at auction sales			
	Teas with export rights		Tea for internal consumption	
	Price per lb.	Index No.	Price per lb.	Index No.
	Rs. a. p.		Rs. a. p.	
1901-2 to 1910-11 ..	0 6 0	100	For the years before the Regulation Scheme (1933) all sales are included under the heading "With Export Rights"	
1927-28 ..	0 14 10	247		
1928-29 ..	0 11 4	189		
1929-30 ..	0 9 11	165

The rate of duty under the Indian Tea Cess Act of 1903 was raised to Rs. 1-6-0 per 100 lbs. with effect from March 1939. It stands at present at Rs. 1-0-0 per 100 lbs. but it is expected to be again raised in the immediate future to Rs. 1-6-0. The Indian Tea Cess Act was due to expire on 31st March 1938, but at the request made by the producers through the Indian Tea Market Expansion Board, the Government of India agreed to extend the life of the Act for a period of ten years. That period as has already been mentioned, has now come to an end and a conference with the various producer-Associations and Chambers of Commerce was held by the Government of India at Calcutta on 10th-12th December 1947. At the time of going to press the result of these deliberations was not known.

The Textile Industry

COTTON

THE Indian sub-continent has been the home of the cotton trade from the earliest times. Its cotton, known as white wool, was well-known to the ancients and its cloth was familiar to the West in the days when the trade was carried on overland.

The export of cotton from the Indian sub-continent began to assume importance with the opening of the sea route. It received an immense stimulus during the American Civil War, when the close blockade of the Confederate ports produced a cotton famine in Lancashire, and threw the English spinners back on India for their supply of raw material. When the war broke out the shipments of Indian cotton were 528,000 bales but during the last year of the war they averaged 973,000 bales. Most of this cotton was sold at an enormously inflated price, and induced a flow of wealth into Bombay, the great centre of the trade, for which there was no outlet. The consequence was an unprecedented outburst of speculation known as the "Share Mania," and when the surrender of Lee re-opened the Southern ports widespread ruin followed. It is estimated that the surplus wealth brought into the country by the American Civil War aggregated £92 millions.

The principal varieties are Dholleras, Broach, Oomras (from the Berars), Dharwar and Coomptas. Broach is the best cotton grown in Western India. Hinganghat cotton, from the Central Provinces, has a good reputation. Bengals is the name given to the cotton of the Ganga valley, and generally to the cottons of the north. The Madras cottons are known as Westerns, Coconadas, Colmbatores and Tinnevellys. The best of these is Tinnevely. Cambodia cotton has been grown with success in Southern India, but it shows a tendency to revert.

Broach.—The cultivation of cotton in the sub-continent has shown a marked variation by way of adjustments to the world cotton conditions and domestic price fluctuations mainly dictated by overseas markets which happened to be the main customers for Indian cotton in the pre-war years. The gradual decline in the average price of Broach from Rs. 255 in 1873 to Rs. 150-8 in 1899 checked the growth of this crop; but thereafter the growing demand and upward price trend reaching the climax at Rs. 501 in 1923-24 gradually raised the production to 6,098,000 bales in 1924-25 as against 1,090,000 bales in 1899-1900. A downward twist given to the prices by the depression reduced the size of the crop to 4,007,000 bales in 1931-32. After a minor recovery, the prices slumped to the bottom of Rs. 157 following the decision of Japan to reduce her purchases from the sub-continent, and the Indian Central Cotton Committee was forced to launch a campaign for reducing the acreage under short stapled cotton for which Japan was the best customer. As a result, the production was voluntarily brought down to 4,909,000 bales in 1939-40 from the all time record level of 6,234,000 bales in 1937-38.

The outbreak of the Second World War reminded the growers of the fortunes they

had made in the past wars and the crop was stepped up under the stimulus of the upward trend of cotton prices to 6,223,000 bales in 1941-42. The war developments, however, upset the calculations and the quotation for Broach fell precipitately to Rs. 148. Simultaneously, the Government was forced to launch the grow-more-food campaign. The combined effect was a sharp cut of 22 per cent. in acreage and 26 per cent. in the output of cotton in 1942-43. The crop was higher in the following year in sympathy with the better cotton prices; but the statutory ceilings on cotton prices and legal limitations on cotton cultivation reduced the acreage to the 32 years old record low level of 14,803,000 acres yielding 3,543,000 bales in 1944-45.

Cotton Committee.—The constitution of the Indian Central Cotton Committee in March 1921 has proved an important landmark in the history of this leading cash crop of the country. The introduction and extension of super varieties of cotton on which the Committee has been spending nearly Rs. 10 lakhs every year has gradually changed the face of Indian cotton. The production of 'medium and long staple' cotton (7/8 inch and above) increased in 1943-44 by 1,534,000 bales or 95 per cent. as compared with the figure for 1922-27, while there was a reduction of 1,889,000 bales or 49 per cent. during the same period under 'short staple' cotton (below 7/8 inch). The production of cotton of staple length, one inch and above, was nil in 1922-27; but it amounted to 654,000 bales in 1943-44. While tackling the question of improving the quality of Indian cotton, the importance of raising the yield per acre has not been overlooked by the Committee. The average yield per acre rose from 96 lbs. in the quinquennium 1922-27 to 109 lbs. in the quinquennium 1937-42; it rose still higher, to as much as 112 lbs. in 1943-44.

Cotton Trade.—Bombay is the heart of the cotton trade with Karachi next in importance and a network of regulated markets spread throughout the cotton growing tracts. Trading in futures forms an integral part of the markets in Bombay and Karachi. The year 1942-43 was a most eventful year during which speculation took up the cotton price to the record peak of Rs. 637 on March 12, 1943 and forced the Government of India to close down the futures market on May 1, 1943. This was followed by regulation of movement of cotton, fixation of floors and ceilings for the various varieties, and the resumption of trading in new crop.

The introduction of the Indian cotton contract, based on Khandesh Jarilla cotton of 7/8 inch staple with other varieties having staples between 7/8 inch and 1 1/8 inch tenderable against the contract, was an important innovation in 1942-43. The new contract replaced the Broach, Bengal and Oomra contracts which had served the trade for nearly a quarter of a century. It was the outcome of the necessity to establish a close identity between the hedge contract and the type of cotton required by the domestic textile industry.

Indian cotton assumed importance in the past mainly as an exportable commodity and until 1936-37, export markets formed the most important outlets for the commodity. Among them Japan was, of course, the most valuable buyer responsible for the offtake of over one-fourth of the crop. Thereafter the Japanese textile industry was switched on to the Chinese cotton with the result that the Indian sub-continent's total exports fell from the all time record level of 4,268,000 bales during the financial year ended March 31, 1937 to 2,703,000 bales in 1938-39. The bottom was knocked

out by the war developments and exports were reduced to 282,000 bales in 1943-44.

The consumption of indigenous cotton by the domestic textile industry became an important feature of the cotton trade only after the 1936-37 cotton season. For the first time in the history of the trade, mill consumption outstripped the export figure in 1937-38 season. The figure for the absorption of indigenous cotton within the country reached the peak in 1942-43 when the mill industry used 4,280,817 bales, while foreign markets were able to buy only 301,000 bales. This trend has continued since then.

Exports—The figures for export by sea of Indian cotton from India to foreign countries for the five fiscal years (ending March) 1941-42 to 1945-46 are shown in the table below:—

(In thousand bales of 400 lbs. each)

Countries	1941-42	1942-43	1943-44	1944-45	1945-46

COTTON MILL INDUSTRY

Reference has been made to the popularity of the Indian handloom cloths in the earliest days of which we have record. This trade grew so large that it excited alarm in England, and it was killed by a series of enactments, commencing in 1701, which prohibited the use or sale of Indian calicoes in England. The invention of the spinning jenny and the power loom and their development in England converted India from an exporting into an importing country, and made her dependent on the United Kingdom for the bulk of her piece-goods.

The foundations of the Indian cotton mill industry were laid as early as in 1818 when the first mill was erected at Calcutta. Bombay saw its first mill in the year 1854 owing to the enterprise of a Parsee merchant, Mr. Cowasjee Nanabhoy Davar. Till 1877 Bombay city was the exclusive home of the industry, but its development was thereafter widely distributed because the crop itself was widely distributed over the sub-continent. The factory legislation first undertaken in 1881 led to the diversion of the industry to the States.

The following table shows how by successive stages, the industry's productive capacity has grown:—

Year	Number of Mills	Number of Spindles	Number of Looms
1880 ..	56	1,461,590	13,502
1890 ..	137	3,274,196	23,412
1900 ..	193	4,945,783	40,124
1905 ..	197	5,163,486	50,139
1910 ..	263	6,195,671	82,725
1915 ..	272	6,848,744	108,009
1920 ..	253	6,763,076	119,012
1925 ..	337	8,510,633	154,292
1930 ..	348	9,124,768	179,250
1935 ..	365	9,685,175	198,867
1940 ..	388	10,005,785	200,076
1941 ..	390	9,961,178	198,574
1942 ..	396	10,026,425	200,170
1943 ..	401	10,130,568	200,890
1944 ..	407	10,222,107	201,761
1945 ..	417	10,238,131	202,888
1946 ..	421	10,305,169	202,814

It may be noted that the rate of development has not been uniform in all centres of the industry in the sub-continent and although in the initial stages, the industry was concentrated in Bombay owing to its advantageous geographical and climatic situation, this pre-eminence of Bombay was not maintained in subsequent years. The number of mills in Bombay City was around 81 till 1931, while at present there are only

65 mills. The industry's development in later years has been more rapid in other Provinces in India and particularly in the States. Out of 417 mills, Bombay Province can boast of 209 mills, Madras has 69, Bengal (West and East), 37 and the U.P. 30.

From 1860 to 1865, progress was materially assisted by the accession of wealth which accrued to the Bombay commercial interests owing to the high prices at which Indian cotton was sold during the American Civil War. Another factor which contributed to the rapid growth of the industry was the establishment of a profitable export yarn trade with China. In the years 1865 to 1871, the industry suffered a severe set-back to its prosperity owing to the financial crash which followed the American Civil War. In the early 'seventies, after the restoration of credit, the industry made rapid progress, though in the initial stages, the development of the weaving side of the industry was comparatively slow. The profitable yarn trade with China enabled the Bombay mills to make further progress in the 'seventies and 'eighties of the last century.

Cotton Excise Duty.—The growth of the industry in the sub-continent during the early years was regarded with a jealous eye by the Lancashire manufacturing interests whose agitation resulted in the Government of India exempting from import duty coarse yarn and cloth in 1878. This resulted in the substitution of the exempted classes of goods for the medium and fine goods previously imported from England, to the detriment of the growing indigenous industry. In 1893, the Indian mints were closed to the free coinage of silver. This step had a disastrous and almost immediate effect on the industry. With the precision of an automatic machine, business with China and Japan came to a standstill as the exchange dropped by about 12 to 15 per cent. to the detriment of the sub-continent. This measure was followed three years later by the imposition of an excise duty of 3½ per cent. on cloth manufactured in Indian mills for the purpose of countervailing the import duties which had been re-imposed at the end of 1894. From the date of its imposition, until it was finally abolished in the year 1926 this excise duty was condemned by all shades of public opinion in the sub-continent as an inequitable and unjust burden on the indigenous industry. The closing years of the last century also witnessed the beginnings of the growth of a mill industry in China and Japan, which contributed greatly to the cutting off of the Indian yarn trade with the Far East in the following years. Japan later proved to be a very formidable rival to India in the China market, and eventually threatened the very existence of the Indian industry even in its home market. The loss of the export trade with China and Japan, with whom Indian mills were doing a profitable business in yarn was a serious matter, and was the main reason for the development of the weaving side of the Indian industry, which had previously been relatively neglected.

The first Swadeshi Movement afforded a temporary fillip to the Indian industry in the years 1905 to 1907. The intensification of the movement during these years gave a considerable

impetus to the cotton manufacturing industry, and as the yarn trade with China was not then profitable, attention was naturally turned to the installation of more looms in the mills, so that the yarn spun in the mills might be turned into piece-goods instead of being exported to China. In 1907 there were large failures of commercial houses, particularly in Bombay, consequent on the heavy fall in the prices realised for yarn in China, the fall in demand from that country following a famine, and violent fluctuations in the silver exchange. The next three years saw the industry passing through a difficult period accentuated by the enhancement of the duty on silver. The adverse conditions persisted with brief spells of partial recovery until 1917 when the boom arising from the Great War set in, which lasted up to the year 1922. The capital investment in the industry increased from Rs. 20.84 crores in 1917-18 to Rs. 40.98 crores in 1921-22. Production was up during this period by about 50 per cent. while exports of piece-goods were double the pre-war average. The mills' profits soared and the industry paid high dividends amounting to 40.1 per cent. of the paid up capital in 1919, 35.2 per cent. in 1920 and 30 per cent. in 1921.

Abolition of Excise Duty.—This boom was followed by a period of severe depression, especially in Bombay. This depression, combined with the growing severity of Japanese competition in the home market, assisted as it was by inferior labour conditions, led in the years following 1923 to a renewed agitation for the repeal of the cotton excise duty. In August 1925, a deputation from the Bombay and Ahmedabad Millowners' Associations waited on His Excellency the Viceroy. The situation worsened in the following months, and in December 1925, the excise duty was suspended. In March 1926 it was finally abolished.

Protection.—A special Tariff Board was appointed soon after to enquire into the position of the industry, the causes of the depression, the extent to which it was due to foreign competition and the necessity or desirability of protection. The Board found that the difficulties of the industry were mainly due to the unfair advantage which Japan enjoyed owing to the adoption of the double shift system and the employment of women and children at night. The Board, however, presented a majority and a minority report. Government were unable to accept the recommendations made, but as a measure of partial relief, they removed the import duties on mill stores and textile machinery.

The general disappointment felt at Government's decisions on the Tariff Board's recommendations and the grave crisis which then faced the industry were brought to the notice of His Excellency the Viceroy by a deputation of millowners from all parts of the sub-continent which waited on His Excellency on 12th July 1927. As a result of this deputation Government revised their original decisions and imposed a minimum specific duty of 1½ annas per pound on imported yarns with effect from September 1927, for a period of three years. By the end of this period, although labour conditions in Japan had improved, a new danger had arisen in the shape of a large import trade from China where labour conditions were far inferior to

those in the Indian sub-continent. The protective duty was, therefore, extended for a further period of three years ending on 31st March 1933.

The utter inadequacy of the protection extended to the industry by the Yarn Protection Act of 1927 was abundantly evidenced by the increasing imports of piece-goods from Japan in the following years. On 22nd July 1929, on the suggestion of the Bombay Millowners' Association, Mr. G. S. Hardy was appointed by Government to examine the possibility of substituting a system of specific duties for the then existing system of *ad valorem* assessment. Mr. Hardy's conclusions, which revealed that Japanese competition was extremely severe in certain classes of goods manufactured in the sub-continent were discussed at a conference of millowners convened by the Government of India towards the end of 1929; and in February 1930, Government introduced in the Legislative Assembly the Cotton Industry (Protection) Bill, which, as finally passed, provided for a change in the then existing revenue duty of 11 per cent. to a protective duty of 15 per cent. in the case of British cotton piece-goods and of 20 per cent. in the case of foreign goods, with an alternative minimum specific duty in either case of 3½ annas per pound on plain grey goods. For revenue reasons, these *ad valorem* rates were raised by 5 per cent. in March 1931, and a surcharge of 25 per cent. of the enhanced duties was imposed in October of the same year, bringing the rate of duties to 25 per cent. (British) and 31½ per cent. (foreign) with a minimum specific duty of 4½ annas per pound on plain greys. At the same time, an import duty of 6 pies per pound on all raw cotton and of 10 per cent. on machinery and dyes used by the industry was also levied. The duty on raw cotton was raised in 1930, again for reasons of revenue, to one anna per pound.

Early in 1932 Government directed the Tariff Board to enquire into the question of the grant of substantive protection to the industry. In the meantime the depreciation of the Japanese exchange, consequent on Japan's going off the Gold Standard in 1932, enabled her to place her piece-goods on the Indian market at abnormally low prices, and offset to a very great extent the protection conferred on the Indian industry by the 1930 Act. Government, therefore, directed the Board to hold a special enquiry into this question, and in accordance with the recommendations of the Board, the duties on foreign piece-goods were raised from August 1932, to 50 per cent. or 5½ annas per pound, whichever was higher, but in view of the continued severity of the Japanese competition, Government once again found it necessary in June 1933 to raise the level of the duty on foreign piece-goods to 75 per cent. *ad valorem* or 6½ annas per pound. At the same time notice was also given of Government's intention to abrogate the Indo-Japanese Trade Convention of 1904.

Foreign Trade Delegations.—This was followed by the arrival in the sub-continent of an official Delegation from Japan and an unofficial Trade Delegation from the United Kingdom. The United Kingdom unofficial Delegates' deliberations with Indian millowners culminated in what has been termed the Mody-Les Pact of 1933, an understanding, which was to be in force until the end of 1935. Similar discussions

between certain unofficial delegates from Japan and Indian millowners proved abortive, but the efforts of the Japanese official delegates resulted in a fresh Convention and Protocol being agreed to early in 1934, under which a link was established between the exports of Indian raw cotton to Japan and the imports of cotton piece-goods from Japan. Japan agreed to take one million bales of Indian raw cotton in return for the right to export 325 million yards of cotton piece-goods to the Indian sub-continent, with a maximum limit of 400 million yards for an aggregate of 1½ million bales of Indian raw cotton. Japan was also accorded most-favoured-nation treatment in respect of her miscellaneous trade. In virtue of the terms of the Protocol, the duties on Japanese cotton piece-goods were reduced, with effect from 8th January 1934, to 50 per cent. *ad valorem* with a minimum specific duty of 5½ annas per pound on plain grey goods.

The protective duties on cotton yarn and piece-goods imposed by the Cotton Textile Industry (Protection) Act, 1930, were due to expire on 31st March 1933, but as Government were not able to complete their consideration of the report of the Tariff Board of 1932 (which had recommended the institution of specific duties based on weight subject to their being combined with alternative *ad valorem* duties to prevent a loss of revenue and the imposition of a duty of one anna per pound in the case of yarns below 50s count) before that date, they extended the provisions of the Act for another year.

Textile Protection Bill.—The Cotton Industry (Textile Protection) Bill of 1934 sought to give effect to the recommendations of the Tariff Boards on the cotton and sericultural industries in the light of the Indo-Japanese Protocol and the unofficial agreement entered into between Indian and Lancashire millowners. So far as yarn was concerned, the Act, as passed, fixed the rates of duties at 5 per cent. (British) and 6½ per cent. (non-British) with a corresponding alternative minimum specific duty of 1½ annas and 1½ annas per pound on counts up to and including 50s. In the case of piece-goods, the levels of the duties were fixed at 25 per cent. and 50 per cent. on British and non-British goods respectively, with a minimum specific duty of 4½ annas and 5½ annas per pound on plain grey goods. The Act also guaranteed protection to the industry for a period of five years ending March 1939, but recognized the need for an examination of the scale of duties on two occasions: firstly on the expiry of the Mody-Les Pact at the end of 1935, and secondly, at the end of the Indo-Japanese Protocol in March 1937. Accordingly, at the end of 1935, Government directed the Tariff Board to examine the adequacy of the then existing levels of duty on British goods. Accepting the recommendations of the Board, Government reduced, with effect from June 25, 1936, the duty on all United Kingdom cotton piece-goods, with the exception of prints, to 20 per cent. *ad valorem* with a minimum specific duty of 3½ annas per pound on plain grey goods.

Trade Protocol.—The Indo-Japanese Trade Protocol was subsequently renewed for a further period of three years ending March 1940,

without any material modification in the rates of duties applicable to Japanese cotton piece-goods. With the separation of Burma from India in April 1937, however, the basic quota of cotton piece-goods for the sub-continent was reduced to 283 million yards, rising to a maximum of 358 million yards leaving a margin of 42 million yards for Burma.

The negotiations between the Government of India and His Majesty's Government in the United Kingdom for the conclusion of a new Trade Agreement in replacement of that entered into at Ottawa in 1932 were brought to a conclusion early in 1939, and the new Agreement specifically provided for a reduction of the basic rates of duties on United Kingdom cotton piece-goods as under:—

Printed goods .. 17½% *ad valorem*

Grey goods .. 15 % *ad valorem* or As. 2-7½ ps. per lb., whichever is higher

Others .. 15 %

The basic rates were subject to a reduction of 2½ per cent. if imports from the United Kingdom in any year were less than 350 million yards and to an increase to the same extent in the event of United Kingdom imports exceeding 500 million yards. The new rates of duty came into force on April 1, 1939. In the year 1939-40, the European War affected imports from the United Kingdom, and as her sendings of piece-goods did not exceed 350 million yards, the duties on all classes of British piece-goods were reduced by 2½ per cent with effect from April 17, 1940.

Protection Ends.—By the Indian Tariff (Textile Protection) Amendment Act, 1934, the Government of India imposed protective duties on certain types of cloths and yarn imported into British India, for a period of five years, i.e., upto 31st March 1939. By the Indian Tariff (Third Amendment) Act, 1939, protection was extended for a further period of three years terminating on the 31st March 1942. The protection was, further, extended from time to time and the last such extension was due to expire on 31st March 1947.

Towards the end of 1946, the Government of India requested the Tariff Board to hold a summary enquiry and advise whether, in the present circumstances, protection at the existing or at a different scale should be granted to the cotton textile manufacturing industry for a further year after the 31st March 1947. The Tariff Board after consulting the interests concerned, made the following recommendations:—

(i) The industry has failed to substantiate its demand for extension of protection, and the protective duties should be allowed to expire on the 31st March 1947, to be replaced, however, by such revenue duties on cotton textiles as may be imposed on budgetary considerations. There should be only one scale of duties and that should be the lower of the two existing scales.

(ii) Any declaration of expiry of protection should be accompanied by a definite and cate-

gorical announcement that deprotection does not signify any weakening in the interests of Government in the well-being and integrity of the cotton textile manufacturing industry which is the premier industry of the sub-continent. A tariff enquiry should definitely be guaranteed to the industry as soon as imports of cotton piece-goods exceed for three months running, a monthly average of 25 million yards unless the industry, itself asks for a tariff enquiry earlier, in order to determine whether the volume and prices of imports affect the position and integrity of the Indian industry so as to call for re-imposition of protection.

(iii) The import duty on yarn is doing no good to the Indian mill industry, while its existence imposes some hardship on the handloom industry; there should, therefore, be no duty on yarn, protective or revenue.

(iv) The recommendations in regard to duties on cotton textiles should apply to the imports of artificial silk and cotton and art silk mixed fabrics.

Government after carefully considering the report submitted by the Tariff Board, announced their decisions as under:—

1. Government accepted recommendation (i) of the Board on the main issue before it, i.e., the protective duties on cotton piece-goods and yarn should expire on the 31st March 1947.
2. Recommendation (ii) also was accepted.
3. As regards recommendation (iii), Government stated that the rates of revenue duties which would be imposed on imports of cotton piece-goods and yarn were under consideration and would be announced at the proper time. Accordingly, by the Indian Tariff (Amendment) Act, 1947, the existing protective duties on cotton cloth and yarn were converted into revenue duties without any change whatsoever in the quantum.
4. Government did not accept recommendation (iv) and the protection for piece-goods, cotton and artificial silk mixed fabric was continued for another year.

Inter-War Years.—This was a period of chequered career for the industry. Yet it recorded such a good progress in the inter-war period that the share of imports in the cloth requirements of the country decreased from about four-fifths to much less than a fifth. In the same period, the number of mills in British India increased from 227 to 355, the number of spindles from 6.2 millions to 8.4 millions and the number of looms from 109,000 to 168,000. The output of yarn more than doubled in weight and the output of piece-goods nearly trebled in length. Many technical improvements were effected by the industry during this period, chief among these being the installation of modern machinery for spinning and weaving and the development of new bleaching, dyeing, printing and finishing processes.

The following table shows at a glance the progress made by the Indian cotton mill industry during the last forty-five years:—

Progress of Cotton Mills in India, Pakistan and the States since 1900

Years ending 30th June	Number of Mills	Number of Spindles installed	Number of Looms installed	Average No. of Hands employed daily	Approximate quantity of Cotton consumed	
					Cwts.	Bales of 392 lbs.
1901	193	50,06,936	41,180	1,72,883	47,31,090	13,51,740
1902	192	50,06,965	42,584	1,81,031	61,77,633	17,65,038

† Excludes Burma and Ceylon.

The following statement shows the quantity (in pounds) of yarn of various counts produced in the sub-continent during the last five years:—

	1941-42	1942-43	1943-44	1944-45	1945-46
1s to 10s	152,256,756	166,572,951	162,804,774	179,802,024	182,837,927
11s to 20s	797,386,289	817,603,852	869,417,781	854,886,410	819,076,803
21s to 30s	339,112,715	315,557,326	373,466,316	338,246,237	342,480,082
31s to 40s	171,769,046	149,509,217	169,992,951	168,018,790	156,232,652
Above 40s	108,326,602	65,922,583	85,392,373	90,106,221	91,157,737
Wastes, etc.	19,326,171	18,510,260	19,388,389	21,864,844	23,031,645
Grand Total ..	1,577,177,579	1,533,736,189	1,680,462,682	1,650,925,426	1,614,810,846

Fine Count Yarn.—Substantial progress has been made in the last few years in the direction of spinning fine count yarn. Much, however, remains to be accomplished; but the duty of one anna per pound which Indian mills have now to pay for long staple cotton imported from abroad is a factor which is likely to hamper more rapid progress.

The statement below shows the total quantities of woven goods manufactured during the past four years:—

	1942-43	1943-44	1944-45	1945-46
	Yds.	Yds.	Yds.	Yds.
Grey & Bleached goods	3,020,518,284	3,765,350,893	3,603,103,822	3,550,024,461
Coloured Piece-goods	1,088,818,506	1,105,336,010	1,118,368,451	1,125,609,860
Grand Total ..	4,109,336,790	4,870,686,903	4,726,472,273	4,675,634,321

Here again, it may be pointed out that the mills are now turning out increasingly larger quantities of fine Dhories, Cambrics and fine Longcloth on the lines recommended by the first Tariff Board (1927).

The War Years.—After a continuous period of almost unrelieved gloom extending over a period of nearly two decades, culminating in measures being actively explored with a view to bringing about an organised curtailment of production throughout the country, the war in Europe which commenced in September 1939 opened up the prospect of a spell of prosperity for the industry. Following the cessation of trade with Japan, which happened to be the leading supplier of cotton textile to the East in December 1941, the Indian cotton textile industry enjoyed a completely monopolistic position. It was faced with a steadily expanding demand from overseas, an increasing volume of war orders and growing domestic requirements for civil purposes stepped up by inflationary forces. The cloth production was stepped up from 4,012.4 million yards in 1939-40 to the record level of 4,870.6 million yards in 1943-44. Yet the industry was unable to meet the growing demand and the prices were pushed up to four times the pre-war levels.

In May 1943 the Government of India issued the cotton cloth and yarn (control) order based on an agreement between the Government of India and the representatives of the textile industry. Its objects were to reduce prices and stimulate production by controlling the cost and supply of mill stores and by regulating the price of raw cotton and by superintending the distribution of cloth from the mills to the retailers. The control authorities were, however, faced with a formidable task created by reduction in output due to coal shortage and *harkals* on the one hand and growing demand on the other. Consequently, though in the following

two years, the prices stamped on the cloth were brought down by about 60 per cent. the full benefit was not passed to the consumer owing to widespread black market activity, mainly encouraged by illicit exports due to trade regulations and large scale hoarding as inflation hedge.

The latest supply position was reviewed by the Chairman of the Textile Control Board recently when he said: "In the calendar year 1945, Indian cotton mills produced 4,687 million yards of cloth and 1,625 million lbs. of yarn in 1944 and 4,715 million yards of cloth and 1,620 million lbs. of yarn in 1943. The loss in production in 1944 is primarily due to stoppages of mills for lack of coal or inferior coal. In 1945 a higher production might have been attained had it not been for a large number of spindles and loom hours lost through *harkals*, shortage of labour, shortage of raw materials, etc. It is estimated that the total quantity of cloth and yarn exported in 1945 would be approximately 387 million yards of cloth and 13 million lbs. of yarn as compared with 434 million yards of cloth and 18 million lbs. of yarn in 1944. Supplies of cloth and yarn for defence services in 1945 have amounted to 417 million yards of cloth and 25 million lbs. of yarn as compared with 583 million yards of cloth and 28 million lbs. of yarn in 1944. The net available supplies of mill made cloth for civilian consumption in 1945 amount, therefore, to 3,883 million yards as compared with 3,794 million yards in 1944. Including handloom, it is estimated that the cloth available for the civilian population of the sub-continent in 1945 is approximately 14 yards per head per annum for a population of 400 million."

Exports.—The table below sets out the exports of cotton twist and yarn from the sub-continent to its chief export markets:—

	1941-42	1943-44	1944-45	1945-46
	lbs.	lbs.	lbs.	lbs.
United Kingdom	3,651,838	..	..	..
Burma	29,165,816	..	..	..
Straits Settlements	2,506,320	..	..	..
Hongkong	3,891,286	..	..	..
Syria	1,547,100	14,000	841,360	482,900
Others	49,776,205	18,922,952	16,077,053	14,014,041
Grand Total ..	90,528,565	18,936,952	16,918,413	14,496,941

The table below sets out the exports of cotton piece-goods to foreign countries:—

	(In thousands of yards)					
	1940-41	1941-42	1942-43	1943-44	1944-45	1945-46
Burma	117,706	61,827	..	..	..	..
Iran	36	7,784	39,658	8,900	11,565	5,367
Iraq	5,710	19,608	77,773	12,750	25,172	34,063
Straits Settlements ..	24,719	35,133	..	..	..	..
Aden, etc. ...	552	23,108	41,715	34,460	52,760	37,089
Kenya, etc. ..	45,587	69,337	42,030	40,589	28,614	37,833
Ceylon	27,001	26,273	45,419	37,646	43,800	27,585
Portuguese East Africa ..	5,093	2,201	2,094	204	285	818
Others	109,477	400,584	439,149	329,788	260,816	297,755
Grand Total ..	335,881	645,855	688,738	461,337	423,021	440,510

In relation to the world cotton textile industry, the Indian industry ranks second from the point of view of the volume of cotton consumed, and fifth in point of spindles and looms installed. The position of the mill industry in the economy of the sub-continent will be evident from the fact that, at the present time, it consumes more than 70 per cent. of the total cotton crop, directly gives employment to over 500,000 workers, and affords subsidiary employment to large numbers of persons who are engaged in various trades which directly depend for their existence upon the cotton mill industry.

Hand Weaving Industry.—Hand weaving is the largest single unit among the sub-continent's small scale industries controlled mainly by a small class of entrepreneur. It is essentially an urban industry and turns out approximately 1,600 million yards of cloth representing nearly 25 per cent. of the goods available for domestic needs. The recent estimates indicate that the total number of handlooms is about 2½ millions of which nearly 64 per cent. are throw-shuttle looms and 35 per cent. fly-shuttle looms. The industry supports nearly 10 million persons including 2,400,000 weavers and 3,600,000 auxiliary workers, a number greatly in excess of that dependent on any other industry except agriculture.

The first 15 years of the current century witnessed a steady rise in the production of handloom cloth; but the unsteady supply of yarn during the First World War resulted in a sharp decline of over 60 per cent. in its output. The industry was thereafter able to raise its

head; but no appreciable progress could be made owing mainly to the political movement which created a strong prejudice against the use of imported yarn thereby preventing the handloom weaver from finding market for cloth of finer counts woven by him. That was followed by the change in the clothing habits and the competition from the mill made cloth with the result that the hand weaving industry had to face a long period of depression in the 'thirties.

The economic plight of the handloom weaver focussed the attention of the Government of India and the Provincial Governments on the remedial measures and as a result of the recommendations of the Industries Conference held in 1933, grants-in-aid were allotted to the Provincial Governments to organise the industry by providing facilities for improving its technique, production methods and marketing system.

One of the recent developments in the history of the industry is the entry of small power looms. In 1941, there were 11,604 power looms of which about 55 per cent. were located in Bombay Province alone. The latest information indicates that their number has gone up to 18,758.

The report of the Fact-Finding Committee (Handloom and Mills) appointed by the Government of India in 1941 to survey the position of the industry reveals that the cost of production of the industry is high on account of the heavy profit of the middlemen, while the existing marketing system robs the weaver of a reasonable

return owing to the high margin of profit varying up to 46 per cent. usurped by a chain of middle men.

With a view to improving the position of the industry, the Government of India have constituted the All-India Handloom Board (now limited to the Dominion of India) on which the weaver, the Provincial Governments and the States interested in the industry are represented. The recommendation of the Board favouring the increase of the present yarn supply to the industry by reserving half the production from the spindles to be installed during the first five years of the post-war development plan has been accepted by Government. Proposals for organising the industry on a sound footing by rationalising and standardising its products and consolidating its markets are under examination. A scheme is being evolved for ensuring free inter-Provincial movement of handloom cloth in order to enable the industry to regain the pre-war markets within the country.

Post-War Plan.—The expansion of the sub-continent's present productive capacity of mill-made cloth from 4,800 million yards to 7,200 million yards per annum is desirable but impracticable at present because of difficulty in securing the necessary machinery. It says a press note announcing the post-war plan for the industry issued by the Industries and Supplies Department, Government of India, on May 3, 1946. It adds that an expansion of about 2·75 million spindles proposed as the immediate target will produce an additional 1,700 million yards a year, consisting of 510 million yards of fine and 1,190 million yards of coarse cloth. This production, together with handloom cloth, will help to provide approximately 18 yards per head per annum after allowance for exports of 10 per cent. of the total production.

Planning must be on an all-India basis (now applies only to the Dominion of India) and

the distribution of new plants and extensions of the existing plants should follow territorial divisions of India. The plan will in the present circumstances be an interim plan and it is the intention of the Government of India to review it when world economic conditions or other circumstances make a review desirable. In order to ensure increased supplies of yarn for handloom weavers and other consumers, the Government of India have directed that at least 25 per cent. of the new spindles installed shall be left uncovered by looms. Each Indian Province and State would of course be the best assessor of its own exact needs, and the Government of India propose, therefore, that the Provinces and States may, if so advised, reserve a larger spindleage for such purpose.

On the question of reduction in the duty of foreign cotton and a full rebate of import duty paid on cotton for the benefit of India's export trade, the press note says that the Government of India will review the matter when competitive conditions return in order that the Indian export trade may be able to compete in world markets on equal terms with other countries.

The Government of India have turned down the suggestion for banning imports of second-hand machinery on the ground that it will be some years before India can produce enough cloth for her own requirements. They will, therefore, allow import licences for second-hand machinery for the present if they are fully satisfied that the machinery in question will be serviceable for a reasonable period and suitable for economic production. As regards the suggestion that import of certain machinery should be permitted freely from any country in the world, Government consider that import should be permitted only when there is reason to believe that the plant will be delivered appreciably earlier or will be considerably cheaper or better than if obtained from the sterling area.

The Tobacco Industry

THE Portuguese are credited with having conveyed the tobacco plant and the knowledge of its properties to the sub-continent about the year 1508. Though there are many species in the genus *Nicotiana*, the tobacco of commerce comes only from the two species *Nicotiana tabacum* and *Nicotiana rustica*. Of the two, the former is more common and also commercially more important.

The Indian sub-continent is one of the principal tobacco producing regions of the world, being second only to the United States of America.

In 1945-46, the area and production of tobacco in the major tobacco growing Provinces and States was as follows :—

Name of Province or State.	Acres.	Yield (tons)
Madras	2,30,680	(a)
Bombay	1,85,257	42,427
Bengal (E. and W.)	(b)	(c)
Bihar	12,435	(a)
	(estimated)	
C.P. & Berar	10,143	2,613
N.-W.F.P.	12,900	12,210
U.P.	64,511	(a)
Assam	22,300	11,400
Mysore	23,225	4,647

Note :—(a) Figures not available.
(b) 2,99,000 acres in 1944-45.
(c) 1,20,300 tons in 1944-45.

RESEARCH

A great deal of research work has been done in the sub-continent during the last 30 years both by the Government and by private agencies.

A sum of rupees ten lakhs is now being annually set apart for research and development work on this commodity, out of the receipts of excise duty which was levied on tobacco on April 1943.

The Government of India have set up an Indian Central Tobacco Committee on the lines of the Indian Central Sugarcane Committee and other such Committees already functioning. This Committee whose jurisdiction is now limited to the Dominion of India is fully representative of all interests relating to tobacco from the grower to the consumer, including research workers. This Committee came into being in November, 1945, and the annual grant of Rs. 10 lakhs set aside for the improvement of production and marketing of tobacco has been placed at the disposal of this Committee.

The Committee has already established a Central Tobacco Research Station at Rajahmundry (Madras) for research on all types of tobacco and a Main Experimental Research Station for cigarette tobacco at Guntur (Madras) and a Main Experimental Research Station for bidi tobacco at Anand (Bombay). Laboratories for these stations have yet to be constructed and equipped. A Research Station for cigar and cheroot tobacco is to be set up shortly at Dindigul (Madras), while the Main Research

Station for Hookah-cum-chewing types of tobacco will be located in Bihar. The necessary lands for these stations have yet to be acquired.

Apart from these stations there will be a number of sub-stations in various parts of the country. The Committee has also arranged to carry out exploratory work in different parts of the country with a view to finding out which localities are capable of growing Virginia Cigarette tobacco, of good quality and high yield. The Committee's Headquarters are in Bombay.

The Indian Agricultural Research Institute, Pusa (now at New Delhi), isolated Pusa T. 28 and T. 63 among *N. tabacum* varieties and Pusa T. 18 among *N. rustica* for chewing and hooka purposes respectively. Details of the methods of flue-curing of Virginia tobacco were worked out in 1928.

On the Tobacco Research Station at Nadlad the Bombay Department of Agriculture, isolated Gandiu 6, Piliu 45, Keliu 28 and Kailu 49, heavy yielding *bidi* and chewing tobacco strains. Attempts are also being made to improve the Nipani tobacco on the Tobacco Research Station at Nipani.

SUPERIOR VARIETIES.—In East Bengal, trials are being carried out on the Government Agricultural Farm at Burirhat (Rangpur) to find out the possibility of growing superior varieties of cigar tobacco from Sumatra, Havana, Manila and Pennsylvania.

The Madras Department of Agriculture on the Agricultural Research Station at Guntur isolated the high yielding strain T. 20 in *Natu* or country tobacco for *cheroot* and pipe purposes and early maturing strain (HS 9) of Harrison special, the cigarette tobacco variety which is very popular in the sub-continent.

The Indian Council of Agricultural Research, New Delhi, started in 1936 a Tobacco Research Sub-station at Guntur for the improvement of the quality of cigarette tobacco. It was found that jowar (*Andropogon Sorghum*) as a preceding crop to tobacco helped to improve the quality of cigarette tobacco better than maize and variga (*Panicum Miliaceum*).

A strain of cigarette tobacco called Amarelo 5 which is reported to be superior to HS 9 in its curing properties and yield of top-grade leaves has also been evolved recently at the station.

The India Leaf Tobacco Development Company, the largest buyers of tobacco in the sub-continent have been experimenting since 1920, chiefly in the Guntur area (Madras) and also in Saharanpur (United Provinces) and Whitefield (Mysore State), on the commercial possibilities of Virginia tobacco production and have helped to build up the Virginia Tobacco Industry to the position it now occupies.

The cultivation of Virginia tobacco in the Mysore State has increased appreciably during recent years due to the impetus given by the Mysore Tobacco Company.

MARKETING

The marketing survey of tobacco conducted by the Agricultural Marketing Adviser to the Government of India revealed the urgent need

for standardising the methods of grading and preparing tobacco before putting it on the market. With a view to assisting the trade in this direction, the Indian Tobacco Association, which consists of representatives of growers, dealers and manufacturers, was formed at Guntur. Since then, another association known as the East India Tobacco Federation, has come into being with the same object in view. Under the Agricultural Produce (Grading and Marking) Act, rules were framed in 1937, laying down grade designations, definitions of quality, methods of marking and packing for unmanufactured flue-cured and sun-cured Virginia and sun-cured *Natu* (country) tobacco. Grade specifications for unmanufactured sun-cured "Jutti" (Madras), sun-cured Motihari (*Nicotiana Rustica*), Jati Bishpath (*N. Rustica*), and Jati tobacco (*N. Tobasum*) all grown in the Bengal area have since been prescribed.

With a view to controlling the quality of tobacco exported from the sub-continent, the Government of India have banned under the Sea Customs Act of 1878 the export of unmanufactured tobacco of flue-cured and sun-cured Virginia sun-cured *Natu* (country) and *Motihari* varieties unless such tobacco conformed to Agmark standards and was certified as such. An Inspectorate staff was appointed in 1945 consisting of a Chief Inspector and several Inspectors for examining the quality of tobacco and for supervising its grading on the basis of specifications laid down for Agmark grades. The staff was considerably augmented at the beginning of 1946. A panel of members from the trade has also been set up to settle disputes between the Inspectorate and the authorised packers in respect of the quality of tobacco. In 1949, January to December 1,61,063 packages of flue-cured tobacco, 13,183 of sun-cured Virginia, 62,322 of sun-cured *Natu* (country), 31,227 of Jutti, 505 of scrap, 468 of Motihari tobacco were graded.

Another important aspect of marketing improvement is the regulation of markets. Attempts at regulating the market charges for tobacco have been made only in Madras so far, where the provisions of the Madras Commercial Crops Markets Act were applied to tobacco in Guntur District and Bezwaada taluq of Kistna District in 1939. In this connection, the Guntur Tobacco Market Committee was set up in the same year, and this Committee took up the regulation of market practices regarding weighing, trade allowances and methods of sale. Market yards have been opened by the Committee where the growers and dealers are given facilities for transacting their business in tobacco. This Committee is also attending to the dissemination of market news and propaganda for improving the cultivation of tobacco. The progress achieved so far is not however appreciable and there seems to be clear need for reorganising the organisation in Guntur.

PRODUCTION

More than half the Indian production is concentrated in 5 clearly defined zones, viz :—

(1) THE NORTH BENGAL AREA comprises the districts of Rangpur, Jalpaiguri and Dinajpur of old, undivided Bengal including the Cooch

Behar State. About three-fourths of the crop in this area is under *N. tabacum* which includes the varieties locally known as *Jati*, *Bhengi*, *Naokhol* and *Hingli*. The remaining one-fourth is under *N. rustica* which includes the local *Vilaiti* and *Motihari* varieties. *N. tabacum* varieties are mainly used for cigar and cheroot making and *N. rustica* varieties for hookah and chewing purposes.

The soils are grey ashy coloured loams rich in potash. Tobacco is sown in the nurseries from August to September and transplanting of seedlings is done from October to December. The crop is irrigated from temporary wells and is harvested from January to March. The leaf is cured by air-curing and sun-curing methods. The produce is marketed from March to October. The finer qualities of *Bhengi* are shipped to Burma, while the poorer qualities are sold in the sub-continent for cigarette manufacture. *Hingli* and part of *Motihari* are sold for making snuff.

(2) THE GUNTUR AREA comprises the districts of Guntur, Kistna and adjoining portions of Hyderabad State. Varieties of *N. tabacum* are exclusively grown in this area. Prior to the introduction of flue-curing of Virginia tobacco in 1928, all the tobacco was sun-cured. The tobacco produced in this area is grouped into (i) Virginia :—(a), Flue-cured (b), Sun-cured, (ii) Country or *Natu* tobacco, invariably sun-cured. In the first group, Harrison Special and in the second group *Thoka*, *Aku*, *Kara* *Aku* varieties are important. Flue-cured tobacco is being used in the sub-continent and is also exported to the United Kingdom and Egypt for manufacture of cigarette and pipe tobacco. The sun-cured Virginia and *Natu* tobacco are used for making cheaper cigarettes, etc.

The soils are deep, heavy black cotton soils and rich in lime. Tobacco seed is sown in August and seedlings are transplanted from October to November. The crop is grown invariably without the help of irrigation and is harvested from January to March. The flue-cured Virginia tobacco is marketed from January to April while the sun-cured Country and Virginia tobaccos are marketed from March to June. There are nearly 6,000 flue-curing barns and the Virginia tobacco is cured by means of artificial heat radiated from hot iron pipes arranged on the floor of the barn. The sun-curing is done by stringing the leaf to jute twine and curing them on racks pitched on the open field for drying in the sun.

To the Indian Leaf Tobacco Development Company Ltd. goes the credit for establishing the industry of Virginia tobacco production and for assisting the growers in seed and seedling distribution, research and propaganda in manurial requirements, proper methods of curing and ensuring a market for the tobacco by buying the major portion of the production.

(3) THE NORTH BIHAR AREA comprises the districts of Muzaffarpur, Darbhanga and Purnea. In this area both the *N. tabacum* and *N. rustica* varieties are grown in the proportion of two-thirds to one-third. A major portion of the production of *N. tabacum* is utilised for chewing, while a fairly large quantity is bought by cigarette

manufacturers in the sub-continent. The production from *N. rustica* is utilised for hookah purposes.

The soils are light, ash-coloured, deep, and of Gangetic alluvium, rich in lime generally and in potash in isolated areas. The raising of seedlings commences in August and transplanting in October-November. The crop is generally not irrigated. Harvesting begins in February-March and the produce is ground-cured. It is marketed from April to the middle of June.

(4) THE CHAROTAR (GUJARAT) AREA comprises Anand, Borsad and Nadiad talukas of Kaira district and Petlad and Bhadrav talukas of Baroda State. This area is grown wholly with varieties of *N. tabacum*, chief among which are (i) *Gandiu*, (ii) *Piliu*, (iii) *Keliu*, (iv) *Kaliu*, (v) *Saipur*. Of late, attempts are being made to grow a few acres under *Calcuttia* variety of *N. rustica*. The first three varieties of *N. tabacum* provide the *bidi* tobacco, while *Kaliu*, being irrigated with well water rich in salts (Nitrates), is eminently suited for hookah and snuff purposes. *Saipur* is used extensively for chewing. Besides, the Bombay Department of Agriculture and the Baroda State have been doing work for the introduction of Virginia tobacco cultivation in the area. The Virginia tobacco was successfully cultivated and cured over about 100 acres and serious attempts are being made to extend the area under this type.

The soils are light sandy loams to dark coloured heavy clays. Sowing is done in July and planting of seedlings in August. *Piliu* and *Keliu* are grown without irrigation, while *Gandiu* is grown dry or irrigated. *Kaliu* and *Saipur* are irrigated. The crop is harvested in December-January. The leaf is either air or ground-cured. The tobacco is sold from the latter half of December to the end of June with the peak period in March and April.

(5) THE NIPANI AREA includes the Belgaum and Satara districts of Bombay along with Kolhapur, Sangli and Miraj States. In this area varieties of *N. tabacum*, viz. *Mirji*, *Sangli*, *Nipani*, *Jawari*, *Kare Baglani* and *Surti* are mainly grown. Of the varieties of *N. rustica*, *Pandharipuri* the one which is most widely grown. Except the tobacco produced on the riverine soil, which is used as *Hathpan* for chewing, all the tobacco is converted into *Jarda* for *bidi*s. The *Pandharipuri* tobacco is very strong, while the *Nipani* tobacco is very mild and sweet.

The soils are of trap and alluvial slate origin, black and deep heavy clays, though tobacco is

grown on a small area on the red loams. The nurseries are sown in the middle of June and the planting is done in the first week of August. The crop is harvested in January and is ground-cured. Supply of tobacco to the market is greatest in February and March and starts dropping by June.

Most of the tobacco exported from the sub-continent to Aden and the Dependencies is from the Charotar and Nipani areas. Apart from these five important areas, each Province and State grows a fairly large quantity of tobacco mostly consumed in the respective areas themselves, and attempts are in progress, through *ad-hoc* committees established for the development of tobacco to grow the several types, e.g., cigarette, *bidi*, hookah, chewing and snuff tobaccos up to the limit of their requirements in the first instance. The Indian Council of Agricultural Research, New Delhi, and now the Indian Central Tobacco Committee, have been rendering great help in this direction.

MANUFACTURED PRODUCTS

Tobacco is manufactured into many different forms for different purposes. The importance of the manufactured products can be gauged by the ex-factory value of the various products mentioned below. The figures in brackets show the value of the product in crores of rupees.

(i) Hookah (9.60), (ii) Cheroots (9.20), (iii) *Bidis* (7.52), (iv) Cigarettes (5.86), (v) Chewing (3.02), (vi) Snuff (1.53), (vii) Cigars (0.15) (Total=36.88).

Apart from cigarettes, the other tobacco products are prepared with little or no standard machinery, leaving room for mushroom manufacturers thus leading to a great variation in the quality of products, standardisation of which is engaging the attention of the manufacturers.

In 1945-46 tobacco worth Rs. 361 lakhs was imported through the two Dominion ports representing an increase of 55 per cent as compared with the value of imports in 1944-45. The total value of the tobacco exported from the two Dominions in 1945-46 was Rs. 185 lakhs as against Rs. 96 lakhs in 1944-45 i.e. an increase of 92 per cent.

INDIA

With the partition of the sub-continent the estimated area and production of tobacco in the two Dominions is somewhat as follows:—

Province	Type	Acreage	Yield (tons)
MADRAS	N. Tabacum (Desi type)	2,28,436	1,02,290
	N. Tabacum (Virginia flue-cured)	99,749	30,310
BOMBAY	N. Tabacum (Desi type)	1,41,771	38,048
	N. Tabacum (Virginia)	63	22
	N. Rustica	1,275	402
UNITED PROVINCES	N. Tabacum (Desi type)	33,754	13,004
	N. Rustica (Calcuttic)	48,459	19,668
C. P. & BERAR	N. Tabacum (Desi type)	8,206	2,327
	N. Tabacum (Virginia)	—	—
BIHAR	N. Tabacum (Desi & Wilayat types)	1,21,100	47,200
ORISSA	N. Tabacum	32,709	10,812
ASSAM (excluding Sylhet)	N. Tabacum	18,700	9,500

INDIA—contd.

Province	Type	Acreage	Yield (tons)
EAST PUNJAB (excluding the districts of Gurdaspur & Lahore, which have been divided)	N. Tabacum (Desi type)	9,965 (11 Mds. average per acre)	3,915 (estimated)
	N. Tabacum (Virginia)	3,530 (12 Mds. average per acre)	1,513 (estimated)
	N. Rustica	3,214 (10 Mds. 12 Srs. average per acre)	1,182 (estimated)
GURDASPUR	N. Tabacum (Desi type)	935 (10 Mds. 12 Srs. average per acre)	344 (estimated)
	N. Rustica	284 (10 Mds. 12 Srs. average per acre)	105 (estimated)
*WEST BENGAL	N. Rustica	34,789 (estimated)	13,263 (estimated)
	TOTAL	7,86,939	2,94,805

PAKISTAN

Province	Type	Acreage	Yield (tons)
N.-W.F.P.	N. Rustica	12,873	12,209
SIND	N. Rustica & Tabacum	3,610	2,650 (estimated)
*WEST PUNJAB	N. Tabacum	31,953	12,000 (estimated)
	N. Tabacum (Virginia)	7	2.75 (estimated)
	N. Rustica	163	60 (estimated)
LAHORE	N. Tabacum (Desi Type)	2,179	855 (estimated)
	N. Tabacum (Virginia)	Nil	Nil
	N. Rustica	Nil	Nil
*EAST BENGAL	N. Rustica	2,65,111 (estimated)	1,07,037
SYLHET	N. Rustica	3,600	1,800
	TOTAL	3,19,496	1,36,61,375

The Vegetable Oil Industry

DURING the last ten or fifteen years the production of oil seeds in the former Indian Empire, now split up into Indian Dominion and Pakistan, has remained stagnant at about 7,000,000 to 8,000,000 tons. The production, on the other hand, had shown a definite increase from about 24,000,000 tons in 1930 to about 30,000,000 tons in 1939, when the second world war was started. Statistics of production in several important producing countries being unavailable since then, world production cannot be estimated with any

accuracy at the present time. Before the second world war, the Eastern Group of countries consisting of China, India and the Indonesian Group of Islands accounted for nearly three-quarters of the world production of oil seeds. The Japanese war having cut off this source of supply to the American continents, the United States of America, Canada, Brazil and Argentina increased their efforts to become self-sufficient in their needs for vegetable oils. This growth is illustrated in Table No. 1 below.

PRODUCTION OF OIL SEEDS IN NORTH AND SOUTH AMERICAS

Ref.: Reviews of Frank Fehr. & Co., London. Figures in 1,000 tons

CROP	1930	1931	1932	1933	1934	1935	1936	1937

TOTAL ..	8,414	10,548	10,056	13,037	16,937	16,001	16,051	12,640

Though there has been this phenomenal growth in oil seeds production in the American continents, the total world production has not however increased proportionately since the beginning of the second world war as there has been a corresponding fall in the Eastern countries. The cessation of hostilities in 1945 has not improved the situation since political

conditions are still unstable in the two countries, China and Indonesia. Russia, whose annual pre-war production was nearly 4,000,000 tons, has not published her figures of production since 1941. Therefore, until statistics of production of these areas are again available, one cannot correctly gauge the extent of the present world production.

MARKET PRICES

For several years before the beginning of the war, there had been a world depression. Prices in the international oil seeds markets had been dropping since the boom created by the first world war spent itself and the prices reached their lowest levels in 1933-34. There was a temporary recovery but again prices began to drop in 1937 till the beginning of the second world war. During the war period, the open international market disappeared. Almost all governments introduced price controls as also controls on imports and exports. Whatever trade was conducted was through the respective governments. Internal prices were however uncontrolled till 1943 and even then, it was introduced only in regard to copra and coconut oil imported from Ceylon. As a result of general inflation, increased demands, shortage of production, prices of oil seeds rose steeply. This is illustrated graphically in Figures Nos. 1 to 6. In the Bombay Market, groundnuts rose from about Rs. 124 per ton in August 1939 to Rs. 695 per ton in July 1947. In the Cochin Market, copra rose from Rs. 148 per ton in August 1939 to Rs. 1,556 in November 1946. In the case of Mawrah seeds, the Bombay Market showed a rise of over seven times the pre-war prices.

Even though the price of oil seeds has increased far more than either the cost of living or the general level of prices published by the Economic Adviser to the Dominion Government, the production of oil seeds has not increased appreciably. This is to some extent due to the restrictions imposed by Government on the sowing of crops other than cereals.

PRODUCTION OF OIL SEEDS

As the former Indian Empire was split up practically overnight into the two independent States of the Dominions of India and Pakistan in August 1947, no statistics are available regarding the state of the vegetable oil industry in the two States. There is, however, no doubt the industrial development of each unit will be affected to a considerable extent. Further, it is too early to forecast what effect the mass migration of millions of people from one State to another which has recently taken place will have on each State. Therefore the following analysis based on available statistics of the former Indian Empire is to be considered as only a rough one.

The principal oil seeds of India and Pakistan are:—Groundnuts, Cotton-seed, Rape-seed, Linseed, Copra, Castor and Sesamum.

Groundnuts.—Of all the oil seeds produced in the sub-continent, groundnut is the most important. It forms over one-third of the total production. It is produced mostly in the Indian Dominion. The annual production is about 3,000,000 tons of unshelled nuts equivalent to 2,100,000 tons of Kernels. Being a cash crop, the fluctuation in world prices affects the area devoted annually to this crop. In 1934-35, one of the worst years for groundnuts, the total production was as low as 1,884,000 tons of unshelled nuts.

Madras Province produces nearly 45 per cent. of the total production, followed by Bombay 25 per cent. Hyderabad State 20 per cent. and the rest of the sub-continent 10 per cent. As a result of the expansion of the Vanaspathi industry and increased demand attempts are being made to extend the area for cultivation of groundnuts in U. P. and the two Punjabs.

A considerable quantity of nuts are used for edible purposes. Before the second world war, India was one of the principal exporting countries in groundnuts. During the war, an impetus was given to the crushing industry as Government banned free export in order to conserve groundnut cake as cattle feed and fertilisers and encouraged the manufacture of Vanaspathi, popularly known as Vegetable Ghee. Though no statistics of groundnut crushing are available, an idea of the rapid growth can be obtained from the large number of expellers of indigenous manufacture installed during the war.

After an exhaustive inquiry, the Central Agricultural Department estimated that 840,000 tons of groundnut kernels were crushed annually prior to the war. During the last four years a conservative estimate would be about 1,400,000 tons, yielding about 545,000 tons of oil and 825,000 tons of cake. About 140,000 tons of oil are used by the Vanaspathi Industries, 350,000 tons of oil for edible purposes either as straight cooking oil by the poorer classes or as an adulterant to the costlier sesamum oil and 55,000 tons for industrial uses including soaps, lubricants, etc. The cake is used for feeding cattle and as fertilisers.

Cotton Seed.—Though the Indian sub-continent produces nearly 2,000,000 tons of cotton seed annually, the crushing industry had ignored till lately the possibilities of this raw material. The export market also had not taken much notice of it. The Dominion of India produces, about 1,600,000 tons and Pakistan about 400,000 tons. As both Sind and Western Punjab are deficient in other oil seeds, what little crushing of cotton seeds was done in the country during the last fifteen years was in this area. With the partitioning of the country, it is to be expected that Pakistan will exploit cotton seed crushing to the fullest extent so that cotton seeds will hereafter provide lint for medical dressings, hydrogenated oil for human consumption and a nutritive oil cake to the cattle.

If the findings of the Special Committee appointed by the Dominion Government to conduct a concerted programme of research on the food value of Vanaspathi are in favour of its development, rapid development of cotton seed crushing in the Indian Dominion may also be expected in future. In the Indian Dominion cotton seed is being used as a straight cattle feed. This is a source of national waste of millions of rupees as the lint and the oil content of the seed have no food value to cattle.

An important reason for the unpopularity of cotton seed with oil millers is the fact that it requires special preparatory machinery known as delinters to prepare the seed for crushing and special tempering apparatus to remove the gossipol from the cake. If these precautions

are not taken, not only will the oil be of a poor quality but the cake will not be of use as cattle feed. In cold pressing of cotton seed, gossipol would be retained in the cake making it unfit for feeding cattle.

Rape Seed.—Several varieties of Rape seed are grown in Pakistan and the Dominion of India. The total pre-war production in the two States was about 1,000,000 tons. Statistics of the former Indian Empire indicate that nearly one-eighth of the total area under Rape used has gone to Pakistan and the rest has remained in India. Of the many varieties, Mustard is not only the most popular but is the most highly valued. Other varieties are Toria, Taramira and Sarson.

Mustard oil is used as a cooking oil all over the north. Rape oils are used to a great extent for adulterating the Mustard oil. As it makes a good lubricating oil, it is used as such in the outlying crushing mills, ginning factories and other small industrial establishments where it is locally available and the mineral lubricating oils are costlier due to transport. About 800,000 tons are estimated to be crushed annually.

Copra.—Though the coconut palm is well known in many parts of the sub-continent the production of milling copra is confined to the south-west coast of the Indian Dominion comprising South Kanara, Malabar, Cochin and Travancore. No statistics of production has been published at any time for copra.

The Agricultural Marketing Department after an exhaustive inquiry estimated that the annual production was about 200,000 tons prior to the outbreak of the second world war, and three-fourths of this quantity was crushed to produce coconut oil and coconut cake. As the demand for coconut oil was far in excess of the Indian production, considerable quantities of copra and coconut oil were imported from Ceylon, Malaya, Java, Seychelles and East Africa. The copra crushing industry on the south-west coast where milling copra is produced, though widely developed, cannot be considered satisfactory, as the machinery employed is of an antiquated type with the result that a high percentage of oil is retained in the oil cake. Both Bombay and Karachi have, however, a better organised crushing industry with modern oil expellers for extraction. These centres are, however, entirely dependant on imported copra.

The Indian Central Coconut Committee estimate that the quantity of indigenous copra crushed in 1945-46 is 176,000 tons and that of Ceylon Copra is 75,000 tons. Of the 158,000 tons of oil produced thereby, they further estimate that 36,000 tons was consumed in the soap industry, 47,000 tons were used in the manufacture of toilet articles, 70,000 tons were used for edible purposes, and the balance of 5,000 tons for other sundry purposes. As coconut cake is entirely used for feeding cattle in this country, it follows that all the 87,000 tons produced from the crushing of 251,600 tons has been consumed for that purpose.

In the year 1941-42, India attained the peak in her imports of copra and coconut oil amounting to an equivalent of 184,000 tons in terms of copra. As political conditions

become more stable in Indonesia, there is every likelihood of increasing imports in the coming years.

Linseed.—The production of linseed in the former Indian Empire was about 400,000 tons per annum. Pakistan has a negligible production as all the important producing regions are in the Indian Dominion. Central Provinces and Berar account for nearly a third of the production, U.P. a quarter, Bihar and Orissa a fifth and Hyderabad State a tenth. The rest of India accounts for the balance. About half the production was exported before the war and the rest crushed in the country producing about 77,000 tons of oil and 133,000 tons of cake. The paint and varnish industry of the country, being still undeveloped, consumes only a third of this production. A small quantity is used for edible purposes in the immediate vicinity of the producing centres and the balance exported. The major portion of the linseed cake was exported before the war, as the European dairy farmer values it highly for feeding milch cattle.

Sesamum Seed.—The annual production of Sesamum or Til seed is about 400,000 tons. It is grown in most parts of the Indian Dominion, U.P. and Madras being the largest and accounting for one-fourth and one-fifth of the production respectively. Both for edible purposes and for toilet use it is more highly appreciated than any other vegetable oil. The Til cake too is extremely popular for feeding both milch and draught cattle. The high market value of the products and its availability all over the country have made it the most popular seed for the village oil-monger for crushing in his *ghani*. It is estimated that over 300,000 tons are crushed in the *ghanies* and oil mills annually.

Castor Seed.—The annual production is about 140,000 tons, of which Hyderabad State produces more than half. The Province of Madras produces about 30,000 tons and the balance is accounted for mainly by Mysore and Bombay. Before the war, more than half the crop was exported but after 1942, the heavy military demand for castor oil gave an impetus to the crushing industry. Now, nearly 120,000 tons are crushed in the country yielding 41,000 tons of oil and 72,000 tons of cake. It is estimated that 30,000 tons are used for lubrication, 4,000 tons for medicinal purposes and the balance for industrial uses such as manufacture of textile oils, soaps, etc. The cake, though useless for feeding cattle, has a high Nitrogen content and hence is used as a valuable fertilizer for sugarcane.

Several other oil seeds are also available in the country, but at the present time the total production of all of them does not exceed 100,000 tons. These are Mawrah, Niger seeds, Kardi seed, Hongay, Neem, etc. There is considerable potential value in several of them as Mawrah yields a very valuable soapmaking oil, Kardi and Niger seeds yield drying oils.

PRESENT POSITION

As there are no authoritative statistics of production for the Vegetable Oil Industry, and whatever information is available is only from indirect sources, it is impossible to get

a true picture of the state of the industry today. According to the Agricultural Marketing Reports on Linseed, Groundnuts and Copra, it was estimated that 25 lakhs to 30 lakhs of tons of seeds were crushed annually in the Indian Empire in the pre-war days. On the outbreak of the war (as has already been stated), not only was the export of oil seeds severely curtailed but there was a very rapid rise in the price of oil seeds, oils and oil cakes. These two factors gave a tremendous impetus to the oil crushing industry. A survey conducted during 1944-45 indicated that nearly 35 lakhs of tons were being crushed annually.

According to the Marketing Reports referred to above, it is gathered that the machinery employed in the crushing industry consisted of 400,000 bullock-driven *ghanies*, 1,000 manually-operated screw presses, 10,000 power-driven rotary mills, 900 expellers, and 75 hydraulic presses. On this basis the block capital invested in the industry would exceed Rs. 12 crores.

The *ghanies* were responsible for crushing nearly 1,000,000 tons of oil seeds. They were spread all over the country, mostly in villages. They are mostly used in crushing sesamum and mustard seeds, as the cold pressed oils of these seeds are sold at a premium on account of their superior flavour. The screw press is mostly used for crushing castor seed as application of heat is necessary to extract its oil. The power-driven rotary mill is popular for crushing copra and rape seed. All these three types of machines, namely, the *Ghani*, the Screw Press and the Rotary Mill were developed in this country and hence the oil miller has not to go far to buy new ones or to repair old ones.

Both the Expeller and the Hydraulic Press were imported into this country during the last forty years. The Expeller is becoming more and more popular for crushing groundnuts and is displacing the other indigenous types. The Hydraulic Press is used for crushing mowrah and cotton seed.

Even though several Indian workshops took up the manufacture of expellers during the war, the large increase cannot be explained unless the earlier surveys were defective.

THE FUTURE

During the last few years, the Central Government has evinced considerable interest in the development of the Vegetable Oil Industry in the country. The Post-War Planning Department of the Government appointed the Oils and Soaps Panel in 1944, to survey the existing state of the industry and to suggest future lines of development. This Committee completed its investigations in 1946 and submitted the results of their survey and their recommendations for the future expansion of the industry.

The Government constituted the Indian Central Coconut Committee under an Act of the Legislature in 1944, with the primary object of fostering the growth of coconut and developing the copra and coir industry.

This Committee has already established two Research centres, one at Kasargod, South Kanara and the other at Krishnapuram, Travancore State, for conducting research on the various aspects of the growth of the coconut tree, and also several nurseries for the supply of seedlings of approved variety to the growers. They publish a monthly Bulletin which is of great value to all interested in the copra industry.

Besides the Indian Central Coconut Committee, the Dominion Government has recently constituted an Indian Oil Seeds Committee to develop the growing, marketing and manufacture of oil seeds and their by-products. One of the fundamental questions which this Committee has taken up for consideration is to decide whether this country should go in for the increased utilisation of oil seeds at home or revert to the pattern of pre-war economy under which oil seeds constituted an important item of the export trade of this Dominion.

VANASPATHI

Though the action taken by the Dominion Government in the formation of these Committees gave considerable encouragement to the Oil Seed Trade and the Vegetable Oil Industry, the Vanaspathi Industry received a set-back early in 1947. The Vanaspathi Industry, though a minor branch of the Vegetable Oil Industry, is one of the most highly organised and efficient industries. Its history is interesting. It started on a small scale in 1930. Then it grew rapidly as shown in the Table below:—

Year	No. of factories	Sale in sub-continent in Tons
1935	5	18,000
1936	5	22,000
1937	5	32,000
1938	5	40,000
1939	9	51,000
1940	11	65,000
1941	12	84,000
1942	12	71,000
1943	16	87,000
1944	18	1,03,000
1945	21	1,34,000
1946	22	1,37,000

In 1944, the Government introduced legislation to control the industry by establishing a Vegetable Oil Products Controller and also promulgated the Vegetable Oil Products Control Order. Under this control, the quality of the product was standardised and new factories had to obtain permits before starting operations. The number of factories in 1944 were 18 with a total capacity of 1,66,000 tons. The Government gave permits to 17 applicants to start new factories, and planned their location both from the point of view of supply of groundnuts and

the consuming markets. According to this plan, the capacity of the 35 factories would be 4,500,000 tons by 1950.

Early in 1947, however, the Food Minister raised doubts in the minds of the consuming public about the suitability of Vanaspathi for edible purposes. There was even a threat of the total stoppage of Vanaspathi manufacture, if the experiments that were being conducted at the Biological Institutes of Government proved that it was harmful to human beings. This attitude of Government has introduced an element of nervousness in the Vanaspathi industry. As the capital invested in the industry exceeds Rs. 20 crores and as it employs several thousands of workmen it is obvious that if the Government should take the threatened step, it will be disastrous to the industry as a whole.

As a result of protests from several quarters the Government has, however, assured the industry that no hasty step will be taken.

If the research conducted in the Western countries on the nutritive value of products similar to Vanaspathi can be relied upon, it seems reasonable to expect a favourable report from the Indian Biologists too. The Vanaspathi Industry will then be assured of its place in the Indian Vegetable Oil Industry.

It seems reasonable to expect that the expansion of the Vegetable Oil Industry which began during the war will continue for several years more as the same factors are still prevalent. There is no likelihood of the world shortage in oilseeds, oils and oil products being made up for a long time to come and hence the present high prices are likely to continue. Further with the active support of the Dominion Government and the rising standards of living in the country, the industry can safely look forward to a long period of prosperity.

The following diagrams show the change in the prices of mawrah seeds and mawrah oil (in Bombay) and copra and C. N. oil (in Cochin):

(FIG. 1) PRICE MOVEMENT OF MAWARAH SEEDS AND MAWARAH OIL (IN BOMBAY).

(Fig. 2)

(FIG. 4) PRICE MOVEMENT OF COPRA AND C.N. OIL (IN COCHIN).

The Woollen Industry

THE Indian woollen industry has a long and illustrious tradition—the shawls of Kashmir have maintained the world reputation for a considerable time—though it was only in the eighteen-seventies that the power-loom was first introduced in the woollen industry. That the indigenous handloom woollen industry covering a wide variety of fabrics from fine shawls to coarse blankets—or *Kambhis*, to give their vernacular name—has not been entirely replaced by the mill industry is itself a tribute to the skill of the Indian worker. The Indian woollen industry has, however, a long leeway to make up before it can either supply the needs of a growing population or satisfy the demand for better varieties of woollen wear.

The first power spinning plant appears to have been the Cawnpore Woollen Mills, established in 1876, followed in 1882 by the New Egerton Woollen Mills, Dhariwal, the Bangalore Woollen, Cotton and Silk Mills also in 1882 which took over a concern known as the Bangalore Woollen Mills and by the Bombay Woollen Manufacturing Company at Dadar in 1888. The mills at Amritsar were chiefly meant for producing carpet yarn. The first world war gave a fillip to the woollen industry, both the mill industry and the handloom industry. After the end of the war, more mills were started, especially during the period 1919-20, and the capital invested in the industry reached the total of nearly Rs. two crores. The war-time prosperity, however, proved impermanent and the industry had to face severe competition, especially from Japan.

This will be clear from the fact that, while the total imports of woollen cloth increased between 1931-32 and 1934-35 from 5.5 million yards to 13.7 million yards, imports from Japan alone increased from 1.2 million yards to 7.3 million yards. Representations were made to the Government of India about the need for protecting the Indian woollen industry. The Tariff Board examined the case for protection of the woollen industry in 1935 and recommended a scale of protective duties ranging from four annas per lb. to one rupee per lb., depending upon the class of goods imported, in addition to *ad valorem* duties of 25 to 40 per cent. The Government of India, however, did not accept these recommendations, on the ground that the industry especially the worsted branch depended upon imported raw materials and therefore, was not entitled to protection. As regards the woollen branch the Government of India felt that the Board's recommendations were vitiated by the fact that an important section of the industry had failed to appear before the Board to tender evidence. The only recommendation that was accepted by the Government was of a minor nature and related to the need for technical advice and assistance to the small-scale woollen industry. The Government of India made a grant of Rs. five lakhs to the woollen industry with a view to helping this section of the woollen industry.

The outbreak of World War II hit the Indian woollen industry in a variety of ways, the most important of which was the industry's difficulties in getting supplies of yarn. The power-loom

weaving mills in Amritsar and Ludhiana, producing shirtings, light weight suitings and shawls, were particularly depressed, owing to shortage of yarn, though some relief was later provided to the mills, thanks to imports of yarn from the U.K. and Australia arranged by the Government of India. The war-time demand, however, provided a fresh impetus to the industry and the annual out-turn per shift increased from seven million lbs. before the war to nearly 16 million lbs.

PRESENT POSITION

There are three main groups of mills, those which operate both woollen and worsted systems, those with woollen or worsted systems only, and lastly, the Amritsar group of mills which purchase ready spun yarn, and from that stage occupy themselves in weaving, dyeing and finishing.

Among the first group, the Cawnpore Woollen Mills and the New Egerton Woollen Mills, Dhariwal each with more than 15,000 spindles and operating both woollen and worsted systems, are the largest units in the sub-continent at the present time. Raymond Woollen Mills, Bombay, are recorded to have 13,280 spindles in 1946 of which a large proportion are worsted spindles.

The present output of the industry is difficult to estimate, in view of the paucity of statistics. At the outbreak of the war (1939) there were fourteen woollen mills in the sub-continent, and adding the Amritsar units erected later the total capital employed has been estimated at Rs. three to four crores.

Of the fourteen mills, four were fitted out for woollens and worsted, one was purely a worsted spinning mill, while the rest were mainly woollen mills producing rugs and coarse woollen cloth. Two new woollen mills, one at Allahabad and the other at Bangalore were started in 1943 for producing blankets.

The existing capacity of the woollen industry consists of about 50,000 woollen spindles, 37,500 worsted spindles, 2,300 power-loom and 500 handlooms. Out of the 2,300 power-loom about 800 power-loom were in the Amritsar area. The Amritsar group of mills also had 2,400 woollen and 18,000 cotton spindles while there were about 700 power-loom and 4,000 handlooms located in that area, which were not usually working on woollen fabrics. The demand for woollen piece-goods cannot still be met and there is no doubt in the great scope for extension of production in a number of varieties, particularly of finer varieties. It may be mentioned here that the weight of piece-goods imported during 1935-36 to 1939-40, averaged eight ounces to a yard as against the Indian average of 16 ounces to a yard, which indicates the demand for finer varieties of woollen fabrics. There is also a considerable demand for soft blanket and rugs of the type manufactured on the Continent. Indeed, the Panel on woollen industry appointed by the Government of India in 1945 estimates that the approximate Indian consumption of mill made woollen fabrics should be at least 60 per cent. more than it was before

the war. The following table gives as estimated production, imports and post-war Indian by the Panel on woollen industries the Indian requirements of woollen goods:

	Annual average of 1936-39.			Est. Demand (In million lbs.)
	Output lbs.	Imports lbs.	Total lbs.	
Woollen knitted apparel	269,000	950,000	1,219,000	2.2
Woollen worsted piece-goods ..	2,153,000	1,347,000	3,500,500	5.5
Mixtures	1,413,000	74,500	1,487,500	2.5
Blankets and rugs	3,635,000	2,137,000	5,772,000	9.4
Worsted yarn	1,617,000	59,000	1,676,000	3.0
Knitted wools and hosiery yarns ..	1,169,000	430,000	1,599,000	2.6
Shawls and Lohis	Nil	672,000	672,000	1.0
Carpet yarns	Nil	1,856,000	1,856,000	3.0
Mechanical cloth	144,000	67,000	211,000	0.3
Other goods	700,000	334,000	1,034,000	1.0
Total	11,100,000	7,927,500	19,027,500	30.5

Quality Must Improve.—It will be seen from the above table that the Indian woollen industry has considerable scope for advance in most varieties of woollen manufacture, the extent of the increase envisaged by the Panel being from 19,027,500 to 30,500,000 million lbs. or about 55 per cent.

Workmanship has improved steadily and a much greater variety of designs is available. But the chief volume in woollen yarns and materials however is still in medium and coarse qualities, though in worsted and in hosiery yarns and fabrics the tendency towards finer qualities has been much more pronounced. It is for this reason that the Panel thinks that the industry would be well-advised to concentrate on the following types of goods:

1. Cheap blankets and rugs of the Continental type using blends containing processed wools;
2. Tweeds and allied fabrics of the cheaper varieties;
3. Light weight worsted; and
4. Mixture cloths and tropicals.

Thus, while the question of increasing the production of woollen materials is an important one, it is no less important that this increase should be accompanied by improvement in quality. There is still much progress to be made before they can compete with the more highly specialised foreign varieties. But this is in a way dependent on improved types of raw material and of machinery being made available to the industry. The finer types of wool, for instance (used for making tweeds, overcoatings, civilian blankets, rugs, and serge waft yarns) have generally to be imported from abroad.

One encouraging sign, however, is that experiments conducted in sheep breeding centres in the sub-continent have indicated that it is possible to improve the quality of Indian Wool.

It may be mentioned, in this connection, that following the report of the Wool Survey Mission deputed by the International Wool Secretariat which visited the sub-continent early in 1947, the Executive of the Secretariat has decided to set up a branch to function in the sub-continent to assist the industry in using more of its own wools by suggesting methods of blending with imported grades and also in the task of classifying Indian wool. It is noteworthy that the Panel on woollen industry also emphasised the need for starting woollen development sections as a part of the Industries Departments in the different Provinces and States and for making arrangements to train woollen technicians in India and abroad.

A Word of Caution.—The problem of technical re-equipment of the woollen industry depend for its solution on the availability of machinery from abroad. The war-time backlogs in replacements need urgently to be tackled. It is stated that, in the last year or two, orders for 32,000 woollen and 66,000 worsted spindles have been placed with foreign firms, though it is not known how far these orders have been fulfilled. The Panel on woollen industry, it might be noted in this connection, considered it desirable that "the manufacture of woollen machinery, at least the essential parts, should be established in this country." This question will perhaps be taken up when the efforts now being made in the sub-continent for the manufacture of cotton textile machinery begin yielding

concrete results, since the manufacture of woollen machinery has many things in common with the manufacture of cotton textile machinery.

During the war years practically all the mills were fully employed on orders for Government. This resulted in a gradual using up of all stocks available for the general public from the retail shops. At the end of 1946 therefore, when the controls were withdrawn the Mills anticipated a very big demand for the 1947 winter season. In actual fact the demand was overwhelming and it is expected that the demand will remain in excess of supply for some time to come. Doubts, however, have been expressed whether the boom period will last long enough to justify the erection and establishment of new mills in the sub-continent; it is feared that any new mills erected at the present time of high prices for plant might later find themselves in great difficulties.

Orders registered for additional spindles are reported to be enough already, in combination with the existing mills, to increase production beyond the estimated target figures of likely post-war consumption. The possibility of over-production and part-time working in the not too far distant future therefore is already on the horizon.

COTTAGE WOOLLEN INDUSTRY

The cottage woollen industry, the products of which have maintained through centuries a reputation for quality, is now facing some very difficult problems, such as, lack of facilities for the purchase of raw materials, and equipment, lack of finishing and marketing facilities, lack of standardisation of the products of the industry and absence of adequate technical guidance and finance. The industry suffered much during the pre-war years from the change of fashions and also from competition from shoddy fabrics from Italy and Poland. At the outbreak of the war which brought some prosperity to the industry, there were about one lakh handlooms working in the sub-continent. The wartime prosperity has again proved too shortlived for the cottage woollen industry. Co-operative effort in production and marketing of goods will help to solve some of these problems.

The Panel on woollen industry made two notable recommendations in this respect. In the first place, the Panel recommended that the Provincial and the State Department of Industries should establish carding, designing, dyeing and finishing centres at suitable places. Secondly, the Panel emphasised that the cottage

woollen tweed and rug industry which "prospered during the war as a result of scarcity and of high prices can only survive if it turns its attention to the production of exclusive lines of woollen goods, in other words, prestige products." The cottage woollen industry is at present largely engaged in the production of coarse blankets, that is *Kambhis*. However, with suitable financial help and technical guidance the Indian worker, to whose skill the World Survey Mission paid handsome tribute during its visit to the sub-continent should be able to turn out better types of woollen fabrics.

Among the different woollen fabrics manufactured on cottage industry basis in the sub-continent, the most important is perhaps the hand-made carpets, an industry which can be traced to the early Mughal period. Indian carpets form an important item of the country's export trade and constitute the major portion of the exports of woollen manufactures. In pre-war years, carpets and rugs used to be exported to the tune of eight to nine million lbs. valued at Rs. 80 to Rs. 100 lakhs.

The chief centres of the industry are Kashmir, Amritsar, Agra, Gwalior and Jaipur for high class carpets, Mirzapur and Bhadoi for medium and cheap class carpets, Bangalore and Warangal in the South for druggets. When the demand for carpets is normal the industry employs 30,000 to 40,000 workers on its eight to ten thousand looms.

The industry faces two chief difficulties. In the first place, there is considerable uncertainty in marketability, largely due to the fact that the industry deals in luxury goods, nearly 90 per cent. of which is exported abroad. Secondly, the industry has to compete, on the one hand with cheap machine-made carpets in foreign markets and, on the other, with similar classes of carpets from China and Persia. There would appear to be considerable scope for market research in this field. It must be emphasised here that the sub-continent has all the raw materials needed for machine-made carpets, like wool, cotton and jute, and the cheap "machine-made carpets", such as those which enter into competition with Indian carpets can also be made, provided the requisite types of machinery are imported from abroad. The establishment of this industry, as the Wool Industry Panel has pointed out, "will supplement and not compete with the demand for hand-made carpets and, if properly organised, will open a very useful vista for a considerable volume of exports."

Chambers of Commerce

All-India Muslim Chamber of Commerce and Industry, 371, Hornby Road, Fort, Bombay. The All-India Muslim Chamber of Commerce and Industry, Bombay, was founded in 1939, and it is the premier institution of the Muslim Commercial Community in the Indian Dominion. It has its headquarters in Bombay, and a branch office at Delhi. Its annual subscription is Rs. 50 only, and it has a membership of about one thousand commercial firms and houses. Besides the individual members, many sectional trade associations all over the country are affiliated to this Chamber.

The objects of the Chamber are: To encourage friendly feelings and unanimity among the Muslim business community on all subjects connected with the common good of the Indian Merchants; to secure organised action on all subjects relating to the interests of the Muslim business community in matters of inland and foreign trade, shipping and transport, industry and manufacture, banking and insurance and in all allied subjects. The Chamber collects and disseminates statistical and other information, and makes efforts for the spread of commercial and economic knowledge among the Muslims.

The Chamber issues Bulletins and other periodical circulars containing latest commercial information for the use of its members. The Chamber is a registered body under the Indian Companies' Act, and has representation on a number of Committees.

Honorary Secretary: S. M. Jamil; *Assistant Secretary*: F. X. de Souza; *Branch Secretary at Delhi*: M. A. Hashmi, M.A.

Associated Chambers of Commerce of India, Royal Exchange, Calcutta. (Head Office located in Calcutta)—Registered in 1920 under Act VII, 1913 (Indian Companies' Act, 1913) later on name altered from "Associated Chamber of Commerce of India and Ceylon" to "Associated Chamber of Commerce of India" as per special resolution of the Association in 1932 and under section II, sub-section (5) of Act VII, 1913 (Indian Companies' Act, 1913).

Objects:—To promote and protect the trade, commerce, industries and manufactures of the country; to take up, consider and discuss questions connected with or affecting such trade, commerce, industries and manufactures; to promote or oppose Legislation or other measures affecting same; to collect and circulate statistics and other information relating to same; to act as arbitrator in the settlement of disputes arising out of commercial transaction; to support and establish, or aid in the establishment and support of associations, institutions, funds, trusts and conveniences calculated to benefit employees of the association or the dependants or connections of such persons, and grant pensions and allowances and to make payments towards insurance and subscribe or guarantee money for charitable or benevolent objects or for any public general useful objects etc., etc.

In all these are three classes of members, viz., Original, Additional and Associate, there are about 16 Chambers of Commerce from different parts of the country as members of the association. Annual subscription of each member whether Original, Additional or Associate is Rs. 60 per vote.

President: H. D. Cumberbatch of Messrs. Andrew Yule & Co., Ltd., Calcutta; *Secretary*: D. C. Fairbairn, M.A., C.I.E.

Bengal Chamber of Commerce.—The Bengal Chamber of Commerce was founded in 1834. Its headquarters are in Calcutta. The Bengal Chamber is registered with a declaration of membership of 300. Its objects are the usual purposes connected with the protection of trade "in particular in Calcutta." There are two classes of members. Permanent (Chamber and Associate) and Honorary.

Merchants, bankers, shipowners, representatives of commercial, railway and insurance companies, brokers, persons and firms engaged in commerce, agriculture, mining or manufacture, and joint-stock companies or other corporations, formed for any purpose or object connected with commerce, agriculture, mining or manufacture, and persons engaged in or connected with art, science or literature, may be elected as permanent members of the Chamber.

The following are the office-bearers of the Chamber for the year 1947-48:—

President:—H. D. Cumberbatch (Messrs. Andrew Yule & Co., Ltd.).

Vice-President:—A. P. Benthall (Messrs. Bird & Co.).

Committee Members:—A. J. Elkins (Gillanders Arbuthnot & Co.); H. W. Hain (Braithwaite & Co. (India) Ltd.); C. W. Miles, O.B.E. (Shaw Wallace & Co.); A. T. Orr Deas (Mackinnon Mackenzie & Co.); A. C. Watkins (Chartered Bank of India, Australia and China); W. A. Bell (Imperial Chemical Industries (India) Ltd.); E. A. Paterson (Jardine Skinner & Co.).

Secretary:—D. C. Fairbairn, M.A., C.I.E.; *Deputy Secretary*: J. J. B. Sutherland; *Assistant Secretaries*: W. D. Bryden, T. R. Crook and J. J. Rattray.

The following are the public bodies (among others) to which the Chamber has the right of returning representatives, and the representatives returned, for the current year.

The Council of State.—The Hon'ble Mr. H. D. Townend.

The Bengal Legislative Assembly.—D. Gladding, C.I.E.; J. R. Walker, F.T.I.; R. Haywood; A. W. Taylor; H. Rowan Hodge; C. W. Miles and F. F. M. Ferguson.

The Calcutta Port Commission.—A. T. Orr Deas; A. J. Elkins, C.B.E.; J. P. Elton; J. Morhead; Nell Brodie; H. D. Cumberbatch.

The Calcutta Municipal Corporation.—J. B. Elias; E. H. Edney; W. H. Humphrey; J. N. Smart and A. A. Wise.

The Board of Trustees for the Improvement of Calcutta.—T. Godley.

The Bengal Boiler Commission.—J. M. Grant; G. P. Chestney and W. H. W. Urquhart, A.M.I. mech. E.

The Bengal Smoke Nuisances Commission.—R. J. Oliver; A. Nicoll.

The Chamber elects representatives to various other bodies of less importance, and to numerous subsidiary associations. The following are the recognised associations of the Bengal Chamber of Commerce:—

Calcutta Grain, Oilseed and Rice Association; Indian Jute Mills Association; Indian Tea Association; Calcutta Tea Traders' Association; Calcutta Insurance Association; Calcutta Import Trade Association; The Wine, Spirit and Beer Association of India; Indian Mining Association; Calcutta Baled Jute Association; Indian Paper Makers' Association; Indian Engineering Association; Calcutta Jute Fabrics Shippers' Association; Calcutta Hydraulic Press Association; Jute Fabric Brokers' Association; Calcutta Baled Jute Shippers' Association; Calcutta Jute Dealers' Association; Calcutta Hides and Skins Shippers' Association; Calcutta Flour Mills' Association; Calcutta River Transport Association; The Masters Stevedores Association and the Paint Federation; Calcutta Freight Brokers' Association and European Mofussil Jute Balers' Association.

The Chamber does not assist in the preparation of official statistical returns. It publishes weekly the *Calcutta Prices Current*, and also publishes a large number of statistical circulars of various descriptions in addition to a monthly abstract of proceedings and many other circulars on matters under discussion.

The Chamber maintains a Tribunal of Arbitration for the determination, settlement and adjustment of disputes and differences relating to trade, business, manufactures, and to customs of trade, between parties, all or any of whom reside or carry on business personally or by agent or otherwise in Calcutta or elsewhere in India or Burma, by whomsoever of such parties the said disputes and differences be submitted. The Secretary of the Chamber acts as the Registrar of the Tribunal, which consists of such members or assistants to members as may from time to time, annually or otherwise be selected by the Registrar, and willing to serve on the Tribunal. The Registrar from time to time makes a list of such members and assistants.

The Chamber also maintains a Licensed Measures' Department controlled by a special committee. It includes a Superintendent (G. G. Gee Smyth), Head Office Manager (F. W. Kendall) and Assistant Superintendents (Messrs. J. B. Hefnrey, on active service, B. Perry and S. J. Warwick) and the staff at the time of the last official returns consisted of 110 officers. The usual system of work for the benefit of the trade of the port is followed. The Department has its own provident fund and compassionate funds and Measures' Club.

Bengal National Chamber of Commerce.—The Bengal National Chamber of Commerce, the premier institution of the Indian Commercial Community in Bengal, was founded in 1887. The objects of the Chamber are to aid and stimulate the development of commercial, agricultural and industrial enterprises in Bengal and Assam and to protect the commercial interest of all persons trading therein; to promote unanimity and uniformity of practice amongst the members of the commercial community; to represent their views and requirements to the Government, railway and port authorities; to arrange for organised action on all matters involving the interests of members including conditions of employment of industrial labour; to arbitrate when occasion occurs between parties willing to submit their differences to the Association, and generally to do all such things as may be conducive to the interests of the commercial classes of Bengal and Assam.

The constitution of the Chamber extends the facilities of Associate and Honorary Membership to the entire trading community in Bengal. The number of Ordinary members on the roll is about 600. Almost all the leading Indian commercial and industrial firms and persons in every branch of the inland and foreign trade in Bengal are members of the Chamber. A considerable portion of the joint-stock capital invested in Bengal in banking, insurance, steamer services, cotton mills, etc., is also represented. The constitution of the Chamber provides for a close association as between the Chamber and various sectional organisations of trades and industries in Bengal.

List of Associations Affiliated to the Chamber.—All-India Jute Mill Bobbin Manufacturers' Association; All-Bengal Electrical Contractors' Association; All-India Soap Makers' Association; All-India Tea Growers' Federation; Association of Engineers; Bengal Brickfield Owners' Association; Bengal Motion Pictures Association; Bengal Hosiery Manufacturers' Association; Bengal Glass Manufacturers' Association; Bengal Banks' Association; Bengal Galvanized Sheet Merchants' Association; Bengal Cotton Association, Ltd.; Bengal Industries Association; Bengal Knitting & Millowners' Association; Bengal Stationers' Association; Bengal Bus Syndicate; Bengal Trades' Association; Bengal Tanners' Association; Bengal Oil Mills' Association; Brickfield Association, Kotrung; Bengali Jute Dealers' & Brokers Association; Brahmanbaria Merchants' Association; Calcutta Retail Cloth Shops Association; Calcutta Electric Traders' Association; Calcutta Flour Dealers' Association; Calcutta Iron Merchants' Association; Calcutta Jute Exchange, Ltd.; Calcutta Paper Traders' Association; Calcutta Rice Dealers' Association; Calcutta Timber Merchants' Association; Calcutta Salt Association, Ltd.; Calcutta Rice Mills' Association; Calcutta Stevedores' Association; Calcutta Wine Association; Dacca District National Chamber of Commerce; East India Jute & Hessian Exchange Ltd.; Faridpur Local Merchants' Association; Gramophone & Radio Dealers' Association; Grain & Pulse Dealers' Association; Indian Insurance Institute; India Society of Engineers;

The Berhampur Chamber of Commerce (Orissa).—The Berhampur Chamber of Commerce was established soon after the formation of the new province of Orissa. It is registered under the Indian Companies' Act and is recognised by the Government of Orissa. It maintains a library and an information service, arranges commercial arbitration and makes com-

mercial opinion available to Government. It has nearly 100 members on its rolls and is represented on all important Committees set up by Government for various purposes.

President:—P. Narayana Rao, B.A., B.L.; *Vice-President:*—The Agent of Messrs. Haji Jamal Nur Mohamad; *Hon. Jt. Secretaries:*—I. Rama Murli and T. R. Mohana Rao, B.A. *Address:*—Berhampur, Ganjam Dist., B. N. Rly.

Bombay Chamber of Commerce.—The object and duties of the Bombay Chamber, as set forth in the Memorandum and Articles of Association, are to encourage and promote a friendly feeling and unanimity among commercial men on all subjects involving their common good; to promote and protect the general mercantile interests of this Presidency, to collect and circulate information on all matters of general commercial interest; to obtain the removal, as far as such a Society can, of all acknowledged grievances affecting merchants as a body, or mercantile interests in general; to receive and decide references on matters of usage and custom in dispute, recording such decisions for future guidance, and by this and such other means, as the Committee for the time being may think fit, assisting to form a code of practice for simplifying and facilitating business; to communicate with the public authorities, with similar Associations in other places and with individuals on all subjects of general mercantile interest; and to arbitrate between parties willing to refer to, and abide by, the decision of the Chamber.

The Bombay Chamber was established in 1836, under the auspices of Sir Robert Grant, who was then Governor of the Presidency, and the programme described above was embodied in their first set of rules. According to the latest returns the number of Chamber members is 261. Of these 12 represent banking institutions, 7 shipping agencies and companies, 3 firms of solicitors, 3 railways, 19 insurance companies, and 217 firms engaged in engineering and general mercantile business.

All persons engaged or interested in mercantile pursuits desirous of joining the Chamber and disposed to add in carrying its objects into effect are eligible for election to membership by ballot. The Chamber member's subscription is Rs. 360. Gentlemen distinguished for public services, or "eminent in commerce and manufactures," may be elected honorary members and as such are exempt from paying subscriptions. Any stranger engaged or interested in mercantile pursuits and visiting the Presidency may be introduced as a visitor by any Member of the Chamber inserting his name in a book to be kept for the purpose, but a residence of two months shall subject him to the rule for the admission of members.

Officers of the Year.—The affairs and funds of the Chamber are managed by a committee of twelve ordinary members, consisting of the President and Vice-President and ten members. The committee as a rule meet at least once a week and the minutes of its proceedings are open to inspection by all members of the Chamber, subject to such regulations as the committee may make in regard to the matter.

A general meeting of the Chamber must be held once a year and ten or more members may requisition, through the officers of the Chamber, a special meeting at any time, for a specific purpose.

The Chamber elects representatives as follows to various public bodies:—

The Council of State, one representative.
Bombay Legislative Assembly, two representatives.

Bombay Municipal Corporation, one member, elected for three years.

Board of Trustees of the Port of Bombay, five members, elected for two years.

The following are the officers of the Chamber for the year 1947-48 and its representatives on the various public bodies:—

The General Committee.—President: A. I. Hutson. Vice-President: L. A. Halsall. Committee: C. R. Agar; F. S. Binnie; R. W. Bullock; C. J. Damala; A. D. Finney; H. C. Maccoll; H. C. de Mierre; V. F. Noel-Paton; A. W. Percy. Secretary: L. Boulton.

Representatives on—

Council of State: The Hon'ble Mr. J. M. B. Gibbons.

Bombay Legislative Assembly: D. W. Mullock; C. R. Sharpe.

Bombay Port Trust: R. W. Bullock; C. J. Damala; A. D. Finney; C. W. Warrington; V. F. Noel-Paton.

Bombay Municipal Corporation: C. B. Cockayne. Sydenham College of Commerce Advisory Board: R. W. Bullock.

Bombay Smoke Nuisances Commission: J. G. Milne.

Persian Gulf Lights Committee: C. F. Morris. Indian Central Cotton Committee: L. F. H. Goodwin.

Empire Cotton Growing Corporation: S. B. Samollys.

Back Bay Reclamation Scheme—Standing Advisory Committee: L. A. Halsall.

Ex-Services Association, India: A. W. Percy. Ex-Services Association, Bombay Branch: C. R. Agar.

Bombay Seamen's Society: L. A. Halsall. Indian Sailors' Home: A. W. C. Brown.

I. M. M. T. S. Dufferin: A. D. Finney. Traffic Advisory Committee: J. S. R. Spelman.

Federation of Chambers of Commerce of the British Empire: Sir Geoffrey Winterbotham, Kt.

Railway Advisory Committees—

G. I. P.: C. W. Warrington.

B. E. & C. I.: C. W. Warrington.

Railway Rates Advisory Committee: L. A. Halsall; C. J. Damala; A. P. Darlow and A. L. Hutson.

Government of Bombay Board of Communications: W. R. Wood.

Bombay University: The Hon'ble Mr. J. M. B. Gibbons.

Bombay Provincial Transport Authority: W. W. Russell.

Bombay City and Suburbs Post-War Development Committee: A. W. Percy.

Bombay Joint Town Planning Committee: A. W. Percy.

Provincial Industries Committee (Bombay) and Miscellaneous Industries Sub-Committee: L. A. Halsall.

Special Work.—One of the most important functions performed by the Chamber is that of arbitration in commercial disputes. Rules for this have been in existence for many years and have worked most satisfactorily. The decisions are in all cases given by competent arbitrators appointed by the General Committee of the Chamber and the system avoids the great expense of resort to the Law Courts.

A special department of the Bombay Chamber is its Statistical Department, which prepares a large amount of statistical returns connected with the trade of the port and of great importance to the conduct of commerce. The department consists of 21 Indian clerks who, by the authority of Government, work in the Customs House and have every facility placed at their disposal by the Customs authorities. They compile all the statistical information in connection with the trade of the port, in both export and import divisions, which it is desirable to record. No other Chamber in India does similar work to the same extent.

The Bombay Chamber publishes a Daily Arrivals Return which shows the receipts into Bombay of cotton, wheat and seeds, and a Daily Trade Return, which deals with trade by sea and shows in great detail imports of various kinds of merchandise and of treasure, while the same return contains particulars of the movements of merchant vessels.

The Chamber publishes twice a week detailed reports known as Import and Export manifests, which give particulars of the cargo carried by each steamer and country craft to and from Bombay.

Four statements are issued once a month. One shows the quantity of exports of cotton seeds and wheat from the principal ports of the whole of British India. The second gives in detail imports from Europe, more particularly in regard to grey cloths, bleached cloths, Turkey red and scarlet cloths, printed and dyed goods, fancy cloth of various descriptions, woollens, yarns, metals, kerosene oil, coal, aniline dyes, sugar, matches, wines and other sundry goods. The third shows classified, the number of packages of piece-goods and yarns imported by individual merchants. The fourth gives the number of bales of cotton exported by each firm to each country during the month with a running total of the number of bales exported during the year.

Another "Monthly Return" issued by the Chamber shows clearances of a large number of important designations of merchandise. A return of "Current Quotations" is issued

every Monday and shows the rates of exchange for Bank and Mercantile Bills on England and a large quantity of general banking and trade information.

The Chamber has also a Measurement Department with a staff of 18, whose business is that of actual measurement of exports in the docks before loading in steamers. Certificates are issued by these officers with the authority of the Chamber to shippers and ship agents as to the measurement of cotton and other goods in bales or packages. From the measurements given in these certificates the freight payable by the Shippers of goods is calculated. The measurers are in attendance on the quays whenever there are goods to be measured and during the busy season are on duty early and late.

Calcutta Chamber of Commerce—Object.—To foster and develop mutual help and co-operation amongst those who are directly or indirectly interested in Trade, Commerce, Industry, Agriculture, etc. and safeguard the interests of commercial communities of India.

Membership.—Any firm, company, corporation, or individual doing business, lawyer, physician, banker or man of public importance is eligible for membership on payment of subscription as determined by the committee and on recommendation in writing by any two of its members subject to the approval of the committee.

Administration.—The affairs of the Chamber shall be administered by an Executive Committee the members of which are:—

Patron:—Moulvi A. K. Fazlul Huq, M.A., B.L., Ex-Premier, Bengal; *President:*—Nandalal Chatterji, B.L.; *Vice-President:*—Mrs. Protiva Sasmal; *Hon. Secretary:*—Jamnadas G. Bhatia; *Hon. Treasurer:*—Syed Amjad Ali.

Members of the Executive Committee:—Bhupal Chandra Rai Choudhury of the Churamon Estate, Dinajpur; Chandra Nath Mookerjee of Uttarpara; M. M. Sengupta; B. N. Chatterji, Landholder, Tollygunge; Miss Maya Debi; R. Roy, B.A.; S. P. Mehta; Sivananda Sarker of the Zambazar Estate; H. Chakravorty; Anil Chandra Banerjee; Dr. R. G. Guha Thakur, M.B.B., A.M.C. (Eng.), M.C.P.S. (Cal.); S. Acharya Chowdhury of Mymensingh; Y. Johnson; K. N. Desai, B.Sc.; S. K. Gangopadhyaya, T. P. Mitra; Begum Bibi; Mrs. Peacock.

The Committee shall co-opt members if recommended by any two of its members and by the committee.

Address:—91, Dr. Daudor Rahaman Road, Lake-side, Calcutta; 115, Canning Street, Calcutta. Phone: Cal. 4231.

Cocanada Chamber of Commerce.—The Cocanada Chamber of Commerce was established on 29th October 1908.

The following are the members of the Chamber, which has its headquarters at Cocanada, the chief port on the Coromandel Coast north of Madras:—

Members.—The Coromandel Co., Ltd.; Ripley & Co.; Gordon, Woodroffe & Co. (Madras) Ltd.; Wilson & Co.; Best & Co., Ltd.; Burmah-Shell Oil Storage and Distributing Co. of India

Ltd.; The Agent, Imperial Bank of India; The Deccan Sugar and Abkhari Co., Ltd.; Samalkot & Parry & Co., Ltd., Vizagapatam; Oriental Salt Co. (1907) Ltd., Cocanada.

Members of the Committee.—S. A. Cheesman (Chairman), W. Le Faucheur, J. D. James, W. Le Faucheur (Honorary Secretary).

The rules of the Chamber provide that by the term 'member' be understood a mercantile firm or establishment, or the permanent agency of a mercantile firm or establishment, or a society of merchants carrying on business in Cocanada or other place in the Districts of Kistna, Godavari, Vizagapatam, and Ganjam, and duly elected according to the Rules of the Chamber, and that all such be eligible but only members resident in Cocanada can hold office. Members are elected by ballot. The Committee, when called upon by disputing members or non-members of the Chamber, give their decision upon all questions of mercantile usage and arbitrate upon any commercial matter referred to them for final judgment. In either case a minimum fee of Rs. 16 must accompany the reference with Rs. 5 from a non-member and Re. 1 from a member as payment for the Chamber's Sealed Certificate.

The Committee consisting of 3 members, including the Chairman, is elected by ballot at the general meeting in January in each year for a term of 12 months. The entrance fee for each member, whose place of business is in Cocanada, is Rs. 100 and for each member whose place of business is elsewhere is Rs. 50. Subscription for members whose place of business is in Cocanada, Rs. 120 per annum, payable quarterly, for others Rs. 60 per annum, payable in advance. The Committee usually meets once a month on the penultimate Thursday and the general body meets on the last Thursday.

A Fortnightly Circular of current rates of produce, freights, and exchange is drawn up by the Committee.

Federation of Indian Chambers of Commerce and Industry.—The Federation has 102 Chambers of Commerce and Commercial Associations affiliated to it as Ordinary Members and 3 Associate Members, and is recognised by the Central Government as the premier organisation representing commercial and industrial interests in the country. The headquarters of the Federation are situated in New Delhi. There are two classes of Members, Ordinary and Associate.

Among the objects for which the Federation is established are the following:—

- To promote Indian businesses in matters of inland and foreign trade, transport, industry and manufactures, finance and all other economic subjects.
- To encourage friendly feeling and unanimity among the business community and association on all subjects connected with the common good of Indian business.

- (c) To enter into any arrangement with any Government or authority supreme, municipal, local or otherwise, that may seem conducive to the Federation's objects or any of them, and to obtain from any such Government or authority all rights, concessions, and privileges which the Federation may think desirable to obtain and to carry out, exercise and comply with any such arrangements, rights, privileges and concessions.
- (d) To sell or dispose of the undertaking of the Federation or any part thereof for such consideration as the Federation may think and in particular for shares, debentures or securities of any other company having objects altogether or in part similar to those of the Federation.
- (e) To take or otherwise acquire and hold shares in any other company having objects altogether or in part similar to those of the Federation.
- (f) To undertake and execute any trusts the undertaking of which may seem to the Federation desirable either gratuitously or otherwise.
- (g) To draw, make, accept, discount, execute and issue bills of exchange, promissory notes, bills of lading, warrants, debentures and other negotiable or transferable instruments or securities.

OFFICE-BEARERS FOR 1947-48.

President.—M. A. Master, Bombay.
Vice-President.—Lalji Mehrotra, Karachi.
Hon. Treasurer.—Dr. S. B. Dutt, R.D. (Lond.), Bar-at-Law, Calcutta.
Secretary.—D. G. Mulherkar.
Office.—28, Ferozshah Road, New Delhi.

Indian Chamber of Commerce, Calcutta.—The Indian Chamber of Commerce was established in November 1925 to promote and protect the trade, commerce and industries of India and in particular the trade, commerce and industries in or with which Indians are engaged or concerned; to aid and stimulate the development of trade, commerce and industries in India with capital principally provided by or under the management of Indians; to watch over and protect the general commercial interests of India or any part thereof, and the interests of persons, in particular, the Indians, engaged in trade, commerce or industries in India; to adjust controversies between members of this Chamber; to arbitrate in the settlement of disputes arising out of commercial transactions between parties willing or agreeing to abide by the judgment and decision of the Tribunal of the chamber; to promote and advance commercial and technical education and such study of different branches of Art and Science as may tend to develop trade, commerce and industries in India; to provide, regulate and maintain a suitable building or room or suitable buildings or rooms for a Commercial Exchange in Calcutta; and to do all such other things as may be conducive to the

development of trade, commerce and industries, or incidental to attainment of the above objects or any of them.

There are two classes of members, local and mofussil. The local members pay an annual subscription of Rs. 300 and the Mofussil members Rs. 150. Merchants, Bankers, Ship-owners, representatives of commercial, transport or insurance companies, brokers and persons engaged in commerce, agriculture, mining or manufacture, and persons engaged in or connected with art, science or literature who are Indians shall be eligible for election as members of the Chamber.

Members of the Committee for 1948.—**President:** K. P. Goenka; **Senior Vice-President:** K. M. Naik; **Vice-President:** Shantiprasad Jain. **Members:** Darab Cursetji Driver; K. D. Jalan; B. M. Birla; M. L. Shah; R. L. Nopany; K. L. Jatia; L. N. Birla; Dr. H. Ghosh; Lala Karam Chand Thapar; Sir Bijoy Prasad Singh Roy; Sir Abdul Halim Ghuznavi; Sir Padamji P. Givwala; P. D. Himatsingka; B. T. Thakur; Rangnath Bangur; G. D. Binani; Mulchand C. Parekh and Nandlal Kanoria.

Secretary.—Dr. R. D. Tiwari, M.A., LL.B., Ph.D., D. Litt.

Deputy Secretary.—L. S. Bisht, B.Sc., LL.B.

The following Associations are affiliated with the Chamber:—

Indian Sugar Mills' Association; Indian Chemical Manufacturers' Association; Indian Paper Mills' Association; Engineering Association of India; Indian Insurance Companies' Association; Indian Paint Manufacturers' Association; Indian Colliery Owners' Association; Indian Hemp Association; Calcutta Tea Merchants' Association; Indian Steel Makers' Association; Indian Re-Rolling Mills' Association; Calcutta Chemical Merchants' Association; East Indian Jute Association Ltd.; Jute Balers' Association; Gunny Trades' Association; Calcutta Hessian Exchange Ltd.; Indian Tea Brokers' Association; Calcutta Kirana Association; Indian Coal Merchants' Association; Shareholders' Association; Calcutta Tube Importers' Association; Calcutta Metal Merchants' Association; Marwari Rice Mills' Association; Calcutta Rice Merchants' Association; Indian Produce Association; Sindh Merchants' Association; Bengal Sugar Merchants' Association; Calcutta Ice Makers' Association; Indian Non-Ferrous Metal Manufacturers' Association; All-India Plywood Manufacturers' Association; Bengal Cosmetic Manufacturers' Association.

The Indian Chamber of Commerce also appointed in 1927 a Tribunal of Arbitration to arbitrate in all disputes relating to various trades. With a view to covering the varying nature of disputes arising in different trades, separate panels of Arbitration are appointed on the Tribunal of Arbitration for each of the following trades:—(1) Jute; (2) Gunny; (3) Sugar; (4) Piece-goods and Yarn; (5) Iron and Steel; (6) Coal and Minerals; (7) General.

Members of the Executive Committee: Sirdar P. S. Sodhbans, F.L.A.A. (Lond.), P.A.; R. B. Kanwar Raj Nath; Lala Yodh Raj; Seth Kishen Chand; Kanshi Ram Khosla; R. B. Sohan Lal; Sirdar Dilawar Singh; Lala Shiv Raj; R. K. Jain; R. B. Seth Ram Rattan; Sirdar Ujjal Singh; Seth Satya Paul Virmani; H. S. Balhaya; Seth Sudershan, M.L.A.; H. D. Mehta; **Assistant Secretary:** Bawa Devinder Singh, B.A., LL.B., F.I.S.A. (India).

Representation on Different Bodies: **Eastern Punjab Railway Local Advisory Committee:** R. B. Lala Janki Dass; **State Aid Board of Industries, East Punjab:** Sirdar P. S. Sodhbans; **Railway Rates Advisory Committee:** Seth Kishen Chand; **Seth Satya Paul Virmani;** G. S. Salariya; K. R. Khosla; **East Punjab Employment Advisory Committee, East Punjab Legislative Assembly:** L. Bhagwan Dass, M.L.A.; **Development of Industries in East Punjab and Excess Profit Tax Board of Referees:** Sirdar P. S. Sodhbans, New Delhi.

Indian Merchants' Chamber.—The Indian Merchants' Chamber was established in the year 1907. Its objects are:—

- To encourage friendly feeling and unanimity among the business community on all subjects connected with the common good of Indian merchants.
- To secure organised action on all subjects relating to the interests of the Indian business community directly and indirectly.
- To promote the objects of the Indian business community in matters of inland and foreign trade, shipping and transport, industry and manufacture, banking and insurance.
- To collect and disseminate statistical and other information securing the promotion of the objects of the Chamber, and to make efforts for the spread of commercial and economic knowledge.
- To take all steps which may be necessary for promoting, supporting or opposing legislation or other action affecting the aforesaid interests by the Government or any Department thereof or by any local body or bodies, and in general to take the initiative to secure the welfare of the business community in all respects.
- To make representations to Local, Central or Imperial authorities, Executive or Legislative, on any matter affecting trade, commerce, manufacture or shipping, banking or insurance.
- To undertake by arbitration the settlement of commercial disputes between merchants and businessmen and also to provide for arbitration in respect of disputes arising in the course of trade, industry or transport, and to secure the services of expert technical and other men to that end if necessary or desirable.

- (h) To advance and promote commercial and technical education and to found and support establishments and institutions for such purposes.
- (i) To undertake special enquiries and action for securing redress for legitimate grievances of any branch of trade or industry as also all such other action as may be conducive to the extension of trade, commerce or manufacture or incidental to the attainment of the above objects.
- (j) To secure the interests and well-being of the Indian business communities abroad.
- (k) To secure, wherever possible, organised and/or concerted action on all subjects involving the interests of members including 'regulating conditions of employment of industrial labour in various industries represented by the members of the Organisation.
- (ii) To nominate delegates and advisers, etc., to represent the employers of India at the Annual International Labour Conference of the League of Nations.
- (iii) To take up, consider and formulate ideas on the subjects which are on the Agenda of each International Labour Conference.
- (iv) To take all steps which may be necessary for promoting, supporting or opposing recommendations or conventions of the International Labour Conference.
- (l) And generally to do all that may be necessary in the interests of the realisation of the above objects of the Chamber directly or indirectly.

Under the Montagu-Chelmsford Reforms the Chamber has the right of electing one representative on the Central Legislative Assembly and under the Government of India Act, 1935 it has the right of electing one representative on the Bombay Legislative Assembly. The Chamber also has the right to elect five representatives on the Bombay Port Trust, and one representative on the Bombay Municipal Corporation.

President.—Ratilal Mulji Gandhi, M.L.C. (Provincial).

Vice-President.—Ramdas Kilachand.

Representatives of the Chamber on various public bodies:—

Bombay Legislative Assembly.—Chhotabhai S. Patel, M.L.A.

Bombay Port Trust.—J. C. Setalvad; M. A. Master; Sir Behram N. Karanjia; Ramdas Kilachand; M. R. Rula.

Bombay Municipal Corporation.—Dhiraajlal C. Modi.

University of Bombay.—Mangaldas B. Mehta.

Sydenham College of Commerce Advisory Committee.—The Hon'ble Sir Rahimtoola M. Chinooy.

G.I.P.Rly. Local Advisory Committee.—Madhavlal M. Bhatt.

B. B. & C. I. Rly. Local Advisory Committee.—Ratilal M. Nanavati.

Trustees of the Chamber.—Seth Chatrabhuj Gordhandas; Seth Pranlal Devkar; Nanjee; Gordhandas G. Morarji.

Bombay Board of Communications.—Keshav-prasad C. Desai.

Royal Institute of Science Advisory Committee.—Dr. K. A. Hamied.

Traffic Advisory Committee.—Prof. M. P. Gandhi.

Indian Sailors' Home Committee.—C. A. Buch.

Secretary.—A. C. Ramalingam.

Asst. Secretary.—K. P. Daru.

Address:—Lalji Naranji Memorial, Indian Merchants' Chamber Building, Back Bay Reclamation, Churchgate Street, Fort, Bombay. **Phone.**—Bombay, 25212. **Grams.**—"Inchambu."

International Chamber of Commerce, Indian National Committee.—The Indian National Committee of the International Chamber of Commerce was established for the following purposes in the year 1928:—

- (a) To participate in the promotion of the objects for which the International Chamber of Commerce, hereinafter called the "International Chamber," is established, namely:
- (i) To facilitate the commercial intercourse of countries.
- (ii) To secure harmony of action on all international questions affecting finance, industry and commerce.
- (iii) To encourage progress and to promote peace and cordial relations among countries and their citizens by the co-operation of businessmen and organisations devoted to the development of commerce and industry.

The Indian National Committee has on its roll 37 commercial bodies as Organisation Members and 48 commercial firms as Associate Members.

OFFICE-BEARERS FOR 1947-48.

President.—M. A. Master, Bombay.

Vice-President.—Lalji Mehrotra, Karachi.

Honorary Treasurer.—D. N. Sen, Calcutta.

Secretary.—D. G. Mulherkar.

Office.—28, Ferozshah Road, New Delhi.

Karachi Chamber of Commerce.—The objects and duties of the Karachi Chamber of Commerce are set forth in terms similar to those of Bombay. Qualifications for membership are also similar. Honorary Membership may be conferred by the Committee upon "any gentleman interested in the affairs and objects of the Chamber." All new Members joining the Chamber pay Rs. 750 entrance fee and the monthly subscription is Rs. 18. The subscription to the Chamber's periodical returns is at present fixed at Rs. 150 per annum per set

for Members and Rs. 280 per annum per set for non-Members. The set comprises:—

(i) a Daily Trade Return containing lists of commodities entered in the Customs House for export, and imports cleared from Customs on each working day, shipping information and statistics of commodities entering Karachi by rail, and leaving by sea,

(ii) a Weekly Price Current and Market Report which, besides giving quotations for commodities traded in the Karachi Markets, also contains statistics of exports and imports compiled from Ships' Manifests, and shipping movements,

(iii) Export Manifests of all Steamers leaving Karachi for Foreign Ports,

(iv) Monthly Import and Export statistics for the main commodities compiled from Ships' Manifests.

The affairs of the Chamber are managed by a Committee of ten Members, consisting of a Chairman, Vice-Chairman and eight other Members, elected at the annual general meeting of the Chamber held early in each year. The Chamber elects a representative to the Sind Legislative Assembly, four representatives to the Karachi Port Trust, one to the Karachi Municipal Corporation and two to the North-Western Railway Advisory Committee, Karachi. There were 63 Members of the Chamber in Oct. 1947. The following are the officers for 1947-48:

Chairman.—R. L. Coghlan.

Vice-Chairman.—B. R. Graham.

Members of Committee.—M. S. Ahmed; G. Gow; H. K. C. Hare; Lt.-Col. W. B. Hossack, M.L.A., J.P.; G. H. C. Lee; R. E. Markley; G. O. Pike, J.F.; Jos Rasom; S. Ellis White, O.B.E. **Secretary.**—H. J. Martin. **Asst. Secretary.**—J. S. Lobo. **Public Measurer.**—J. Johnston.

Representative on the Sind Legislative Assembly.—Lt.-Col. W. B. Hossack, M.L.A., J.P.

Representatives on the Karachi Port Trust.—B. R. Graham; H. K. C. Hare; G. D. Longhurst; G. O. Pike, J.P.

Representative on the Karachi Municipal Corporation.—Sohrab K. H. Katrak, F.R.S., J.P.

Representatives on the North-Western Railway Local Advisory Committee, Karachi.—B. R. Graham and J. N. Kerr.

The following are the principal ways in which the Chamber gives special assistance to Members:

The Committee take into consideration and give an opinion upon questions submitted to them regarding the customs of the trade or of the Port of Karachi. The Committee undertake to nominate arbitrators and surveyors for the settlement of disputes. When two Members of the Chamber or when one Member and a party who is not a Member have agreed to refer disputes to the arbitration of the Chamber or of an arbitrator or arbitrators nominated by the Chamber, the Committee will undertake to nominate an arbitrator or arbitrators, under certain regulations. Similarly, the Chamber, under certain regulations, will undertake to appoint an arbitrator or arbitrators for the settlement of disputes in which neither of the parties

are Members of the Chamber. A public measurer is appointed under the authority of the Chamber to measure merchandise arriving at or leaving the port.

Madras Chamber of Commerce.—The Madras Chamber of Commerce was founded in 1834. Any person or firm, interested in the general trade, commerce, or manufactures of the Madras Presidency is eligible for Chamber membership. Distinguished persons, members of kindred associations, and officials interested in trade, commerce or industry in the Madras province may be elected Honorary Members of the Chamber. Honorary Members do not have to pay any subscription and are not entitled to exercise the privileges of Ordinary Members except to speak at an ordinary meeting of the Chamber. Other Chambers of Commerce may be Affiliated Members. Election for membership is by ballot. Every member other than an Honorary Member pays an entrance fee of Rs. 100, provided that banks, corporate bodies and mercantile firms may be represented on the Chamber by one or more members and are liable for an entrance fee of Rs. 100 once in every 10 years. The subscription shall not exceed Rs. 300 per annum, payable quarterly in advance, for each representative. Each Affiliated Member shall pay an annual subscription of Rs. 50 payable at the beginning of the calendar year.

The Chamber undertakes arbitrations and surveys, and the granting of certificates of origin.

There are 67 Firms, who are Members of the Chamber; and there are 5 Affiliated Members and 8 Honorary Members of the Chamber in 1948. The officers and the committee of the Chamber are as follows:—

Chairman.—H. I. Wonfor. **Vice-Chairman.**—H. G. P. Wordroffe. **Committee.**—D. V. Bulloch; K. H. Chambers; H. R. Goosey; D. G. Leonard, M.L.A.; P. N. Miller. **Secretary.**—T. L. F. Mack.

The following are the Chamber's representatives on various public bodies:—

Corporation of Madras: K. H. Chambers; I. Cumming and F. M. Thomas. **Madras Port Trust:** E. Barrington Smyth; J. R. Galloway; H. I. Wonfor and R. W. Theobald. **Madras and Southern Mahratta Railway Advisory Committee:** Vacant. **South Indian Railway Advisory Committee:** W. L. Knopp. **Board of Communications:** J. M. Kennedy. **Senate of the University of Madras:** H. I. Wonfor. **Senate of the Annamalai University:** F. H. Oakley. **State Technical Scholarship Board:** F. H. Oakley. **Board of State Aid to Industries:** S. G. H. Davies. **South Indian Nursing Association:** F. H. Oakley. **Madras City Excise Licensing Board:** C. D. Allerton. **Trade Marks Advisory Committee:** B. W. Batchelor. **Madras City Improvement Trust:** R. W. Theobald.

Maharashtra Chamber of Commerce.—The Maharashtra Chamber of Commerce was started in September 1927 with the object of establishing friendly relations among merchants and factory-owners of Maharashtra, safeguarding their interests against measures likely to affect them adversely, collecting financial, industrial and trade statistics, and disseminating information thereabout amongst members of the Chamber.

Membership of the Chamber is confined to merchants and factory-owners belonging to the City of Bombay, Bombay Suburban District, Poona, Sholapur, Satara, Ratnagiri, Kolaba, Nasik, Ahmednagar, Thana and East and West Khandesh and Belgaum and the Indian States in and about these, namely, Kolhapur (with its Jagirs), Sangli, Miraj (Senior and Junior), Kurundwad (Senior and Junior), Jambhandi, Sawantwadi, Mudhol, Ramdurg, Jath, Akalkot, Phaltan, Aundh, Bhor, Sargana, Jawhar and Janjira.

President:—D. R. Nalk, J.P.
Vice-Presidents:—Messrs. G. V. Purnanik; V. P. Varde and W. W. Wagh.
Secretary:—D. V. Kelkar, M.A.
Address:—Industrial Assurance Building, Church Gate, Bombay.

The Maharashtra Chamber of Commerce.—Maharashtra Chamber of Commerce & Industries Building, 587-9, Shukrawar Peth, Tilak Road, Poona 2.—The Maharashtra Chamber of Commerce and Industries has been the premier institutional organisation of a long standing representing the economic, commercial and industrial interests of Poona and the Southern Deccan. It was established in 1934. Leading representatives of all branches of economic activities are its members. The Rajasaheb of Phaltan and above thirty leading industrial and commercial companies have become patron-members of the Chamber by subscribing a thousand rupees each. The Chamber enjoys a sound financial position.

General and Special Activities.—From its very inception it has evinced keen interest in the industrial, commercial and economic advancement of the Province. It has taken deep interest in the propagation of commercial education, economic lectureship and industrial Prize Endowment. Further, the Chamber has played a constructive role in the ushering of Modern Commercial Institutions in the business life of this part of the country.

Establishment of a General Insurance Company has also been an achievement of the Chamber. Chambers affiliation to National and International Institution has been given official and non-official recognitions by the Government of Bombay and Government of India.

Executive Committee of the Chamber:—
President: S. V. Kirsoskar. **Vice-Presidents:** 1. G. Dandekar; G. R. Sathe; G. V. Purnanik; 2. V. Poddar, B.E., M.I.E. **Treasurer:** D. G. Japat. **Hon. Secretaries:** A. R. Bhat, M.Com.; 3. D. Apté, B.A., G.D.A., R.A. **Assistant Secretary:** D. B. Kulkarni, M.A.

Marwari Chamber of Commerce.—Established 1900. The main object of his Chamber is to foster the growth of commerce and industry in the country, to safeguard the interests of the commercial communities, to protect and promote the trade, commerce, manufactures, agriculture and industries of Bengal, to watch over and protect the general commercial interests of persons engaged in trade, commerce, manufactures, agriculture or industries in India and in

particular of Calcutta, and to deal with all questions connected with trade, commerce, agriculture, manufacture and industries. It arbitrates in disputes arising out of commercial transactions and also issues certificates of origin to exporters of indigenous goods. The Chamber is generally consulted by Government on questions of public interest and commercial matters. It undertakes special enquiries and action for securing redress of legitimate grievances of any branch of trade or industry. The Chamber is the Calcutta agent of the Central Cotton Committee and controls most of the Calcutta piece-goods market. It has an ordinary membership of about 750.

The Chamber accepts surveys to be conducted in the Technological Laboratory, Matunga, Bombay.

President:—B. L. Jalan.

Vice-Presidents:—S. P. Jain and P. L. Sarangi.

Acting Secretary:—B. N. Sengupta.

The following Associations are affiliated with the Chamber:—Marwar Association, Kallimpong; District Marwari Merchants' Association, Darjeeling; The Wheat and Seeds Association, Calcutta; Sonada Merchants' Association, Sonada; The Indian Jute & Cotton Association Ltd., Calcutta; Assam Marwari Chamber of Commerce; Calcutta Salt Association; Cloth Merchants' Association, Siliguri; Upper Assam Marwari Chamber of Commerce, Jorhat; Bogra Cloth and Yarn Merchants' Association; Bengal Textile Unit Holders' Association.

Address: Imperial Bank Building, Burra-bazar Branch, Calcutta.

Telephone No. B.B. 2265.

Grams:—"Marchamer."

Merchants' Chamber of United Provinces, Cawnpore.—The Merchants' Chamber of United Provinces was established in November, 1932, with the object of safeguarding the interests of trade and industry in the United Provinces, providing regular and efficient statistical and intelligence service to the business firms of the province and generally helping the promotion of trade and business in the United Provinces through proper organisation of commercial opinion. The Chamber represents almost entirely Indian capital and has affiliated to its membership, Cotton Mills, Sugar Mills, Jute Mills, Silk weaving and Hosiery works, Oil Mills, Banks and Firms engaged in extensive dealings in Piece-goods, country produced Hide and Leather. Ten Commercial Organisations and Trade Associations of the Province are also affiliated to the Chamber. The Chamber maintains a ceaseless channel of correspondence with the Central and Provincial Governments and the various Railways on all points of commercial grievances, whether of general or of specific interest. It issues every month an English and Hindi Bulletin to its members who are scattered over the entire province. The report of the activities of the Chamber is a regular feature of the daily press of the province. The Chamber is represented on the U.P. Legislative Assembly, Court of the Lucknow

University, Rly. Advisory Committees, Provincial Economic Advisory Board, U.P. Price Advisory Board, Governing Body of the Agricultural College, Cawnpore, Provincial Board of Agriculture and Animal Husbandry, Cawnpore Municipal Board, United Provinces Food Advisory Council and about 15 other spheres of public service. The constitution of the Chamber which is registered under the Indian Companies Act, 1913, with a license under Section 20, provides for an Executive consisting of a President, a Vice-President and 19 Members of the Council. A whole-time Secretary is attached to the Council.

President.—L. Lakshmi Pat Singhania.

Vice-President.—K. C. Puri, B.A., F.I.B. (London), M.L.A.

Secretary.—J. V. Krishnan, M.A.

Asst. Secretary.—R. Chandra, M.A., B.Com.

Head Asst.—Shri Ram, B.Com.

Office.—15/57, Civil Lines, Cawnpore.

Grams.—"Mercham."

Phone.—Cawnpore No. 2469.

Northern India Chamber of Commerce.—The Northern India Chamber of Commerce was founded in 1923 and has its headquarters at Lahore. The business of the Chamber is conducted by the Chairman, and a Committee consisting of a minimum of eight but not more than 11 elected members, and a maximum of 3 co-opted members and ex-officio members.

The Chamber is represented on the Communications Board, Punjab; and Joint Development Board, Punjab; the North-Western Railway Advisory Committee, Lahore Branch; the Managing Committee of the Hailey College of Commerce, Lahore; Board of Economic Enquiry, Punjab; Board of Industries, Punjab; Electricity Board, Punjab; Industrial Survey Advisory Committee, Punjab; Executive Committee S.P.C.A., Lahore; Industrial Planning Committee, Punjab; Food and Civil Commodity Advisory Board, Punjab; Punjab Board of Film Censors; Punjab Industrial Research Committee and also nominates a panel for the Railway Rates Advisory Committee and Employment Advisory Committee, Punjab.

The Chamber is affiliated with the Associated Chambers of Commerce of India, and with the Federation of Chambers of Commerce of the British Empire, London.

A Tribunal of Arbitration has been set up under the Rules of which arbitration relating to commercial disputes are carried out on behalf of members and non-members. Surveys of merchandise are also frequently held. Certificates of origin are issued for goods manufactured in West Pakistan.

The aim of the Chamber is to protect and further commercial, industrial and agricultural interests in West Punjab and N.-W.F. Province by every possible means, and it is the constant endeavour of the Chamber to achieve as much as possible for the good of the common interest of members—the business prosperity of West Punjab and N.-W.F. Province.

Chairman:—S. B. S. Sapuran Singh Chawla.
Vice-Chairman.—N. Burrell.
Secretary.—G. J. Lumb.
Head Clerk.—S. Mohd. Hussain Bokhari, D.Com.

Address: Commerce House, 14, Lawrence Road, Lahore.

Telegraphic Address: "Commerce."

Telephone No. 2237.

Punjab Chamber of Commerce.—The Punjab Chamber of Commerce has its headquarters at Delhi and exists for the care of mercantile interests on the usual lines in the Punjab, Delhi and Northern India. Memberships generally is restricted to Banks, Merchants (wholesale), Railways and proprietors of large industrial interests. The entrance fee is Rs. 250 and the rate of subscription Rs. 200 per year or if the member has no place of business in Delhi proper, Rs. 140 p.a. The Chamber returns one member to a seat on the Punjab Legislative Assembly jointly with the Punjab Trades Association and two other Chambers. The Chamber is a member of the Federation of Chambers of Commerce, London. The Chamber is represented on the Municipal Committee of Delhi as well as various other Committees and Local Government Bodies.

Members of the Managing Committee, 1947-1948.—C. J. L. Stokoe, Bird & Co., New Delhi. **Chairman:** Lala Shankar Lall, Curzon Road, New Delhi; **Deputy Chairman:** Rai Bahadur P. Mukerji, Messrs. P. Mukerji & Co., Ltd., Grand Trunk Road, Delhi; J. F. Sinclair, Messrs. Burmah Shell Oil Storage and Distributing Co., Ltd., Connaught Circus, New Delhi; C. P. Lawson, Imperial Chemical Industries (India) Ltd., New Delhi; S. J. Elgar, Mercantile Bank of India, Ltd., Delhi; The Hon'ble Sardar Bahadur Sir Sobha Singh, O.B.E., A-1, Queensway, New Delhi; Khan Bahadur S. M. Abdulla, Messrs. S. M. Abdulla & Sons, Masjid Fatehpuri, Delhi; Sir U. N. Sen, C.B.E., Western Court, New Delhi; L. G. Heasman, Messrs. Dyer Meakin Breweries Ltd., Solan Brewery, P. O. Simla Hill; G. E. Longdin, The New Egerton Woollen Mills, Dhariwal; H. E. Ormerod, Associated Cement Companies Ltd., Wahi; Lachmi Narain, Messrs. B. M. Lachmi Narain, Cloth Market, Amritsar; Satya Paul Virmani, Messrs. Jawala Flour Mills, Amritsar; Rai Bahadur Lala Sohan Lall, M.L.A., No. 3, Darapur Road, Lahore; S. B. S. Sapuran Singh Chawla, Amritsar Distillery Co., Ltd., Amritsar. S. Vaidyanath Aiyer, Messrs. S. Vaidyanath Aiyer & Co., Delhi; H. Holman, The Patiala Cement Co. Ltd., Surajpur.

Address:—Punjab Chamber of Commerce, Post Box No. 24, New Delhi.

Phone: No. 7460.

Grams:—"Chamber," New Delhi.

Southern India Chamber of Commerce.—The Southern India Chamber of Commerce established in 1909 has its Registered Office in Madras. The objects of the Chamber are those usual for such bodies, concerning the promotion of trade, especially in the Madras Presidency,

and the interests of members. Special objects are stated to be:—

"To maintain a Library of books and publications of commercial interest, so as to diffuse commercial information and knowledge amongst its members.

"To establish Museums of commercial products or organise exhibitions, either on behalf of the Chamber or in co-operation with others."

There are three classes of members, Affiliated, Resident and non-Resident. The usual conditions as to eligibility for election prevail.

The Chamber is a member of the Federation of Indian Chambers of Commerce, the Indian Chamber of Commerce in Great Britain, and the Indian National Committee of the International Chamber of Commerce, Paris.

The Chamber holds survey and arbitration, issues certificates of origin and certificates of invoices; certificates of sampling, analysis and weights.

The right of electing three representatives to the Madras Port Trust was accorded to the Chamber by the Madras Port Trust Amendment Act, 1941. Members of the Chamber hold seats in the Madras Legislative Assembly, and the Chamber has also been accorded the right of electing a representative to that body. Co-jointly with the Nattukottal Nagarathar Association the Chamber has the right of electing a representative to the Federal Assembly. Under the Madras City Municipal Amending Act, 1936, the Chamber has the right of electing one Councillor to the Madras Corporation. Under the State Aid to Industries Act, 1923, the Chamber has the right to elect one member to the Board of Industries.

The Chamber also sends its representatives to the Madras Legislative Assembly, the Madras Port Trust, the South Indian Railway Local Advisory Committee, the M. & S. M. Railway Local Advisory Committee, Senate of the Madras University, Senate of the Annamalai University, Board of Industries, Board of Communications, the City Improvement Trust, the Indian Tea Market Expansion Board, the Textile Trade Marks Advisory Committee, the Madras Port Committee and the Board of Referees, Excess Profits Tax.

The Chamber has about 750 members on the rolls and has its own building. Forty-eight Associations in the City of Madras and Chambers of Commerce in the mofussil have been affiliated to this Chamber.

President:—V. Pandurangiah.
Vice-Presidents:—T. S. Kachapikese Mudaliar, B.A. and A. M. M. Murugappa Chettiar.
Secretary:—F. Raghuvaran Nair, B.A., B.Com.

United Provinces Chamber of Commerce:—The United Provinces Chamber of Commerce was established in 1914, and represents all the important commercial and industrial interests of the Province. The Chamber is recognised both by the Provincial and Central Governments and jointly returns a representative to the United Provinces Legislative Assembly. It is represented on the Cawnpore Municipal Board, the Local Advisory Committee of the East Indian Railway, Great Indian Peninsula Railway, Rohilkhand Kumaon Railway, Bengal and North-Western Railway and on the Informal Committee of the East Indian Railway. The

Chamber's representatives also sit on the Provincial Boards of Industries, Economic Enquiry and Agriculture, High School and Intermediate Education and Governing bodies of Government, Textile and Dyeing and Printing Schools, Agricultural College, Sir H. B. Technological Institute, Cawnpore, Board of Traffic and Communications, Senate of the Lucknow University, and Employment Board, U.P. and various other public bodies in the Province. The Chamber is affiliated to the Federation of Indian Chambers of Commerce and Industry as also to the National Committee of the International Chamber of Commerce.

Membership:—Any firm, individual, company, corporation or association engaged or interested in trade, commerce or industry is eligible for membership of the Chamber. The number of members on register is 260.

The following are the office-bearers of the Chamber for the current year.

President.—J. K. Srivastava, M.L.A.

Vice-Presidents.—H. S. Bagla and Hirdey Narain.

Secretary.—Satya Narain Bagla.

Jt. Secretary.—Gajanan Sutarwala.

Head Assistant.—Ram Jiwan Gupta, M.Com.

Upper India Chamber of Commerce:—The Upper India Chamber of Commerce, established in 1888, is concerned with trade, commerce and manufactures in the United Provinces and has its registered office at Cawnpore. Members are elected by the Committee, subject to confirmation by the next general meeting of the Chamber. Gentlemen distinguished for public service, or eminent in commerce or manufactures, may be elected honorary members of the Chamber by the members in a General Meeting and such shall be exempted from paying any subscription to the Chamber. There is no entrance fee for membership, but subscriptions are payable as follows:—A firm, company or association having its place of business in Cawnpore, Rs. 500 a year; an individual member resident or carrying on business in Cawnpore, Rs. 500; firms or individuals having their places of business or residence outside Cawnpore pay Rs. 150 a year but the maintenance of a branch office in Cawnpore necessitates payment of full rates.

The affairs and funds of the Chamber are managed by a Committee of ten members, which has power to constitute Local Committees of from four to seven members each at trade centres where membership is sufficiently numerous to justify the step. Such Local Committees have power to communicate only with the Central Committee.

The Chamber appoints Arbitration Tribunals for the settlement and adjustment of disputes, when invited to do so, members of the Tribunals being selected from a regular printed list of arbitrators.

The Chamber has a membership of 137 excluding 2 honorary, 12 affiliated members.

President.—H. Crighton, C.A.

Actg. Secretary.—S. V. Subramaniam.

Head Clerk.—R. K. Mehra.

Trade

THE Indian sub-continent is an agricultural region with farming regarded by the people as a tradition rather than as business.

It has, however, large deposits of raw materials vitally needed for the development of industries. It is the biggest producer of raw cotton and tobacco except the U.S.A. It has the monopoly of jute and is the largest producer of sugar today. It is also the largest grower of oilseeds and has vast mineral resources, most of which have remained untapped. It possesses the world's largest reserves of the richest class of iron ore and manganese ore. There is no lack of tungsten, chromium and cobalt which are necessary for manufacturing alloy steel. The sub-continent also leads in mica and bauxite. Great discoveries of sulphur have been made recently. As regards the position of oil, the sub-continent is relatively near to the world's largest oil deposits around the Persian Gulf and fresh resources of oil have recently been struck in a number of places in the sub-continent. These advantages have enabled it to make a steady progress towards industrialisation during the past quarter of a century.

If we look back on the course of agriculture over a long period of years, we note a striking development towards stability. In the days that are past, the outturn of the soil was subjected to periodic shocks from famines arising from the failure of the rains, when the export trade in these staples dwindled to small proportions. But the spread of irrigation has produced a great change, and though no doubt in future heavy losses may be incurred from the weakness of the monsoons, they are never likely to be as catastrophic as in such years as 1896-97 and 1899-1900. Projects for mobilising the resources of Damodar Valley, Hirakud, Mahanadi and Narbada Valley are under way, and when complete will off-set the effects of the failure of a monsoon.

AGRICULTURE

Thirty years ago in the sub-continent the second largest producer of raw cotton in the world—long staple varieties of cotton were almost unknown. The position at the outbreak of the last war was that the Indian textile industry was meeting a considerable portion of its long staple requirements from indigenous production. The improvement in the quality of the crop was accompanied by an increase in the average yield per acre of the order of 30 per cent. during the same period.

The record of jute has not, however, been one of uninterrupted progress. The steeper, fall in the prices of raw jute during the world depression, accompanied by a cut in acreage, was estimated to have reduced the income of the average jute grower by about two-thirds. The plight of the cultivator no doubt improved later but the difficulties of the jute manufacturing industry resulted in a fall in the consumption of raw jute and this necessitated a large measure of State control in regard to the area under the crop.

Sugarcane:—The progress of sugarcane cultivation was limited solely by the capacity of the internal consumption of sugar to increase. The estimated production of cane in 1924-25 was less than 30 million tons, but by 1936-37 it had exceeded 67 million tons. This turned out to be far in excess of the effective demand and the manufacturing industry was in a state of over-production. As a result, the production of cane came down to the low level of 36 million tons in 1938-39, but it improved to 48 million tons in the next year. A large proportion of the total area under sugarcane in the sub-continent is now devoted to the improved *Coimbatore* varieties with a yield per acre higher than that of other varieties by more than 30 per cent.

Groundnut:—The one agricultural commodity whose fortunes were not appreciably affected by the world depression was groundnut. A quadrupling of the area and a proportionate increase in output in the course of two decades is a record which is not shared by any other crop. This phenomenal increase in acreage is explained by the highly remunerative nature of the crop. The greater part of the increased production was exported; as a result groundnut had steadily displaced the other oilseeds from the export trade of the sub-continent and moreover by 1939 the sub-continent had become first among the groundnut exporting regions of the world.

Rice:—This story of continued progress has to be varied somewhat in relation to the production of foodgrains. The output of rice has obstinately refused to improve in spite of the best efforts of the Agricultural Departments. About 4½ million acres of rice land were brought under improved varieties but this has no perceptible effect on the total production; actually, the output declined by something like 10 per cent. as between 1920-21 and 1940-41. The tendency to substitute other crops for rice was greatly accentuated by the availability of an abundant supply of cheaper varieties of imported rice.

Wheat:—The results of research have been applied with much greater success in the case of wheat. About a third of the total area under wheat has been brought under improved crop and in the course of 20 years the total output of wheat has increased from 6,000,000 tons in 1920-21 to 8,000,000 tons in 1940-41. The cost of production, however, remained very high in comparison with the other wheat-producing countries of the world and the Indian wheat grower was hit so hard by the fall in the world prices of wheat during the depression that in his interest a protective duty had to be imposed on imports of wheat.

The experience of the other cereals, particularly millets, was more or less similar to that of rice. The millet crops are concentrated in areas of very poor rainfall and it is in such areas that any improvement in cultivation is of peculiar difficulty.

AREA UNDER CROPS

The following statements summarise the data relating to area under crops in India and the per acre yields of certain important crops. The figures are in 000 acres:—

(Figures in 000 acres)

Crops.	Average Triennium ending 1933-34.	Average Triennium ending 1939-40.	Average Triennium ending 1942-43.	1945-46.
Total acreage under all crops	3,19,067	3,16,860	3,24,223	..
Major Cereals	1,68,563	1,70,865	1,71,360	1,85,868
Cereals and Pulses	2,37,811	2,34,627	2,40,296	..
Oil Seeds— Edible	17,344	18,663	18,093	19,166
Non-edible	6,432	7,391	6,879	4,613
Total	23,776	26,054	24,972	23,779
Cotton	20,447	21,285	20,281	14,480
Sugarcane	3,200	3,546	3,004	3,847

The statement below shows the triennium average of yield for selected crops in reporting areas in India, in lbs. per acre.

	Triennium ending 1933-34.	Triennium ending 1939-40.	Triennium ending 1942-43.	Triennium ending 1945-46.
1. Rice	852	766	731	779
2. Wheat	607	671	674	624
3. Cotton	78	89	102	105
4. Groundnut	939	857	870	799
5. Linseed	272	241	260	216
6. Sugar (raw)	2,985	2,832	2,915	3,061
7. Jute	1,263	1,094	902	1,189

It should be noted that the total acreage under crops in the country has increased very slowly. The per acre yields of important crops for which statistics are available reveal no trend towards a general increase in per acre yields. Agricultural production in India fluctuates greatly from year to year. These fluctuations are due, in the main, to the nature of the agricultural season. During some years of the war, the incentive to increased production by way of high prices was considerable but there is nothing in the statistical data to indicate any general increase in productive capacity.

INDUSTRIES

Thus while the sub-continent's economy is essentially agricultural, it ranks as one of the eight greatest industrial countries of the world. Although the basic raw materials of industry

were present in great abundance, it was not generally realized until the early twenties of this century that with the development of the necessary manufacturing processes it would be possible to effect a gradual displacement of various categories of imports by home-made articles. The pace of industrial development since that period has been greatly accelerated by the policy of active assistance pursued by the State both by way of granting tariff protection in deserving cases and of giving preference to the products of Indian industry in purchasing Government requirements. The prospects of continued Government help and the anticipation of handsome profits encouraged a rapid flow on private capital into industry. New capital invested in joint stock enterprise alone in the inter-war period was something like Rs. 150 crores.

Iron and Steel—The outstanding instance of an industry which was greatly fostered by State encouragement is the iron and steel industry. The real growth of the industry took place in the last two decades, and it is remarkable that the industry recorded the most rapid progress during the world depression. Between the year 1932-33, when the regular collection of production figures started, and the year 1940-41, the steel ingot production of the country increased from less than 6 lakhs tons to more than 1.3 million tons. During the same period the output of finished steel jumped up from 359,000 tons to 925,000 tons. This development was accompanied by an expansion of the activities of various ancillary industries like foundries and the structural steel and wagon-building industries, the last-named of which had received an early promise of preference from the Railways.

Textile—The cotton textile industry recorded such good progress in the inter-war period that the share of imports in the cloth requirements of the country decreased from about four-fifths to much less than a fifth. In the same period the number of mills increased from 227 to 355, the number of spindles from 6.2 millions to 8.4 millions and the number of looms from 109,000 to 168,000. The output of yarn more than doubled in weight and the output of piece-goods nearly trebled in length.

Many technical improvements were effected by the industry during the period, chief among these being the installation of modern machinery for spinning and weaving and the development of new bleaching, dyeing, printing and finishing processes.

The jute manufacturing industry had, however, to face numerous troubles in the last twenty-five years but in the period taken as a whole the industry did show a fair degree of improvement.

Sugar—The history of the sugar industry may be said to begin with the grant of protection to the industry. The output of sugar which was only about 300,000 tons in 1932-33 has now risen to over a million tons. The industry had to contend for a time against a number of difficulties arising from organisational weaknesses but to offset this there has been the steady improvement in the quality of cane which, in conjunction with the recent technological advances, has made possible a higher percentage recovery of sugar from cane.

Paper—The paper industry would have languished in the decade following the last war but for the protection granted to it in 1925. The duty imposed on imported wood pulp some years later was instrumental in the development of the production of indigenous bamboo pulp which is now the main raw material for paper making in the country. The production of fine writing and printing paper increased rapidly in the last decade. The same was the case with kraft or packing paper; but in the absence of proper raw materials for making mechanical pulp all efforts made by the Forest Research Institute to produce newsprint in this country have not been crowned with success so far and the whole of our annual requirements totalling about 50,000 tons of newsprint has to be imported from abroad.

Cement—Among the industries that were struggling for existence in the early years but which stabilised themselves without direct outside assistance, first mention should be made of the cement industry. It staged a surprising recovery in the thirties on the basis of a mutual agreement and the greater part of the credit for the enormous increase in the consumption of this relatively new building material goes to the industry itself.

Chemical Industry—The Development of the Indian chemical industry was handicapped from the beginning by the absence of indigenous supplies of sulphur and in view of the fact that the industry had a measure of protection only for the short period of less than two years; the increase in the output of sulphuric acid by more than 60 per cent. in less than eight years should be considered a creditable achievement for the industry.

The other acids also showed a similar improvement but in the case of salts the progress was not an uninterrupted one. The production of ammonium sulphate, to take one instance, which increased from 8,000 tons in 1932-33 to 18,000 tons in 1936-37 fell to 15,000 tons in 1938-39. The import difficulties created by the last war led to an expansion of the indigenous production of ammonium sulphate as evidenced by the output of 28,000 tons in 1940-41 but the industry will have to increase its capacity much more if the greatly enlarged internal demand is to be satisfied.

An obvious lacuna in the country's production of chemicals is in respect of alkalis, particularly soda-ash, the available supply of which remained the sole limiting factor in the expansion of the glass and soap industries in the country in recent years.

Smaller Industries—Steel, Sugar, Paper and Cement are four major instances of industries which have established themselves in the last twenty years but there are several smaller industries which have witnessed a striking advance in the past ten years. Among the comparatively new industries are paints, soap, matches and chemicals. At the outbreak of the last war although many important constituents, as for example the finer varieties of pigments for the paints industry and soda-ash for the soap industry had still to be imported from abroad, the position was that two-thirds of the country's requirements of paints and almost the whole of the supply of soap came from local production whereas at the end of the first World War only a very small portion was so met in either case. This is largely true of the match industry as well.

The growth of organised industry in the sub-continent was necessarily accompanied by a number of developments not all of which have been beneficial to the country's economy. In the first place the increased output of factory products led to a gradual decline in handicrafts with the solitary exception of handloom weaving. With the decline of handicrafts a large number of artisans were thrown out of work and while a considerable proportion of these were no doubt absorbed by the expanding organised industries, the rest had to fall back on agriculture for their livelihood thus increasing the already heavy pressure on land.

IMPORTS

The most important outcome of the policy of industrialisation was a significant change in the composition of India's import trade. Imports of finished goods accounted for 84 per cent. of the total value of the imports of India including Burma in 1920-21. By 1936-37 the corresponding percentage had declined to 75. In values the fall was from Rs. 274 crores to Rs. 92 crores. An even more striking development on the import side was the steady increase in the share of industrial raw materials from 5 per cent. to 16 per cent. During a period in which the total value of imports declined by nearly two-thirds, the value of imports of raw materials increased by more than 10 per cent. These tendencies have been greatly accentuated by the last war and the position in 1941-42 was that manufactured articles formed but 55 per cent. of the total imports while the share of industrial raw materials had risen to the high figure of 29 per cent.

The sub-continent's increased demand for foreign raw materials was not, however, accompanied by a decline in her raw material exports; on the other hand between 1920-21 and 1936-37 the proportion of industrial raw materials in total exports increased from 45 per cent. to 53 per cent. During the same period the share of manufactured goods in the total exports declined from 36 per cent. to 26 per cent. owing chiefly to a steep fall in the value of exports of cotton and jute manufactures.

Thus it would appear that before the last war the progress of industrialisation was reflected mainly in the development of the then existing industries catering mostly to the internal demand for finished goods rather than in the establishment of new industries merely for the purpose of processing the raw materials that were being exported as such. During the last war, however, the outlook underwent a vital change. This is well illustrated by the fact that the proportion of raw materials in exports has fallen to 28 per cent. and the exports of manufactures has risen to 47 per cent.

DIRECTION OF TRADE

These changes in the composition of trade were accompanied by even more remarkable changes in its direction. In 1920-21, 61 per cent. of the imports were derived from the United Kingdom, but in 1936-37 only 38 per cent. came from that country. Only a small portion of the trade lost by the United Kingdom was captured by the other Empire countries whose share increased from 5 per cent. to only 11 per cent. during the same period, while foreign countries, particularly Japan, Germany and the U.S.A., improved their position from 34 per cent. to 51 per cent. After the last war, the share of the United Kingdom declined still further to 21 per cent. in 1941-42 but the other Empire countries not only filled the gap thus created but also improved their position further at the expense of the foreign countries, the share of the two later groups in India's imports in 1941-42 being 40 per cent. and 39 per cent. respectively.

The main changes noticeable in the direction of export trade were an increase of the share of the United Kingdom from 22 per cent. to

32 per cent. between 1920-21 and 1936-37, decrease in the share of the rest of the Empire from 21 per cent. to 14 per cent. and a relative stability in regard to the foreign countries. The war was accompanied by a slight decline in the share of the United Kingdom, pronounced decline in the case of foreign countries and a rise from 21 to 30 in the percentage share of the Empire countries.

BILATERALISM

An interesting consequence of these shifts in the direction of trade was the introduction of an element of 'bilateralism' in India's trade with the Empire as a whole. In 1920-21 the Empire took only 43 per cent. of India's exports but supplied 66 per cent. of her imports but by 1936-37 the proportions had very nearly balanced themselves at 46 and 49 per cent. respectively. This movement was further accelerated by the last war and in 1941-42 the Empire's share of India's exports as well as imports was 61 per cent.

Of equal importance with the remarkable changes that took place in the composition and direction of trade were the developments concerning India's balance of trade. Only on rare occasions did India's total imports exceed her exports as for instance during the year 1920-21 and 1921-22; during the succeeding years, the merchandise balance of trade remained in her favour and the size of the balance was large enough to permit a considerable importation of gold and silver even after meeting the country's external obligations. This continued upto 1930-31 but the trade depression which had become very severe by this time resulted in a steeper fall in the prices of India's exports than in the prices of her imports and as a consequence the merchandise balance of trade dwindled to almost nothing. This would have led to difficulties in regard to India's external payments; but following the steep rise in the rupee price of gold resulting from the monetary events of the period, India had become a net exporter of this precious metal. The balance of transactions in treasure which had thus turned in India's favour largely made up for the decline in the merchandise balance of trade.

ECONOMIC SITUATION

After about six years of total war, the year 1945-46 witnessed the return of peace following the unconditional surrender of Japan early in August 1945 within about four months of the surrender of Germany. India's industrial equipment was overworked to almost breaking point, and her plans for reconstruction were delayed owing mainly to her inability to import the necessary capital goods. The diversion of large fractions of the country's productive capacity to purposes of war production had resulted in enormous shortages of consumer goods, the situation being further aggravated by reduced imports. The decrease in the expenditure recoverable from His Majesty's Government from Rs. 411 crores in 1944-45 to Rs. 347 crores in the revised estimates for 1945-46 reflected partly the success of the Hydari Mission's effort to secure a reduction of the demands for war purposes on India's productive capacity.

With the termination of the war with Japan, Government were also faced with the immediate problems of transition which included demobilisation, re-settlement of ex-servicemen and war workers and re-conversion of industry to peace time production. The food situation further deteriorated and Government tried to meet the crisis through efforts to obtain supplies from abroad. Following the earlier stabilisation measures, as well as the improvement in the overall supply position and modification of controls during the year, prices were maintained at the previous year's level according to the Economic Adviser's index which averaged 245.0 in 1945-46 as against 244.2 in 1944-45.

Trends in International Trade.—The cessation of hostilities in 1945 put an end to the commercial seclusion of a large part of Europe and the Far East and to the arbitrary diversion of the productive resources of these two regions to fulfil the economic needs of Germany and Japan. The sterling areas' inadequate holding of non-sterling exchange constituted the dominant consideration for its continuing the existing restrictions on trade with the outside countries. The termination of lend-lease in September 1945 marked an important phase in the transition from war to peace-time trading conditions. The Anglo-U.S. financial agreement providing for a loan of \$4.4 billion to Britain marked the first practical step in the direction of liberating the existing restrictions on foreign trade. The establishment early in 1946 of the International Monetary Fund and the International Bank represented a definite step in economic collaboration of the nations towards re-establishing the commercial and financial relations on a stable multilateral basis.

Import Policy.—The movements in the recorded foreign seaborne trade during the year were mainly influenced by the extension or relaxation by Government of import and export trade controls.

Government's import policy during the year had to be adjusted to the deterioration in the country's balance of payments position caused to a considerable extent by large imports of food. In the first quarter of the year, it was decided that a more liberal policy should be adopted in the issue of import licences, which upto then had been granted freely only for goods in essential categories, in order to counter inflationary tendencies and to encourage the production of food through consumer goods being made increasingly available to cultivators. In accordance with this new policy, a large number of items was added to the Open General Licence No. VII which permitted the import of goods from Empire Countries within the sterling area without individual licences; and a new Open General Licence No. VIII was also issued, covering the import of a limited range of goods from all countries. In addition, licences were issued freely for importing a large number of consumer goods.

The full effects of this relaxation were not, however, felt until the last quarter of 1946 when imports arrived in large quantities. It was found that the goods received were mostly of a luxury and non-essential variety, essential

goods being still in short supply in the leading manufacturing countries. In certain cases the volume of imports was even found to exceed the demand. Also, owing to rising prices imports of foodgrains had led to a large utilisation of foreign exchange than was originally anticipated, while exports had not expanded both on account of increased internal consumption and the continuance of restrictions on acreage under the leading cash crops, such as cotton and jute, in order to grow more food.

As a result, India had, during the year, a heavy adverse balance of payments (as distinguished from the favourable trade balance on private account) indicated by a fall in the sterling balances. It was, therefore, felt necessary that the import policy should be reviewed and early in March, the Open General Licence No. VIII was cancelled and the issue of licences for non-essential commodities was severely curtailed. In accordance with this new policy, the Reserve Bank ceased issuing licences for the import of gold and silver which, owing to the high prices prevailing in India, had been imported in very large quantities during the first quarter of 1947.

Export Control.—The diversion of acreage from cash crops to food crops necessitated by the country's over-all food shortage continued to influence not only the volume of production of the cash crops, which constituted the bulk of India's export, but also Government's export policy, which was governed by the desire to conserve essential raw materials to be exchanged against food imports from other countries. The relaxation of export controls was consequently gradual and was applied only to such articles as were in excess of domestic needs, although there was also the awareness of the need to secure as great an expansion of exports as possible to provide for the increased import requirements of the country. While control over exports in respect of a large number of commodities of a non-essential nature was removed in July, it was retained or modified in respect of items, such as foot-ware, sheepskins, raw hides, oil-seeds, long staple cotton etc., and the export of groundnuts was altogether prohibited during the year. The export of cloth and jute to some countries was permitted in order to secure imports of needed food-stuffs. Adequate peace-time powers to regulate the exports from and imports into the country for a period of three years with effect from 25th March, 1947 were also taken in hand by Government through the Imports and Exports (Control) Act, 1947, this legislation being intended to help the Government to take such measures as are necessary to ensure a smooth and orderly transition in the trade of the country.

BALANCE OF TRADE

The future of India's commercial policy is bound up also with the decisions likely to emerge out of the discussions for multilateral reduction of tariffs and preferences at the second meeting of the Preparatory Committee on World Trade and Employment in session at Geneva. This country has already played a significant role in espousing the cause of industrially-backward countries (a) by securing, at the first session of the Committee, international agreement for the

proposed inclusion in the Charter of Clauses relating to the development of backward countries, (b) by pressing the need, in certain cases, for reservations in regard to the use of quantitative restrictions for development purposes and (c) by securing recognition within limits of their right to develop their resources through the method of tariff protection.

India's visible balance of trade in merchandise and treasure during the twelve months, April to March, 1943-44, 1944-45 and 1945-46 is shown in the following table. The figures are arrived at by combining the balances of transactions in private merchandise and treasure on private account. In these balances the sign *plus* (+) indicates net export and *minus* (—) net import.

	Twelve months, April to March.		
	1943-44.	1944-45.	1945-46.
	Rs. in Lakhs.	Rs. in Lakhs.	Rs. in Lakhs.
Exports of Indian merchandise (private) ..	+ 199.88	+ 211.05	+ 240.39
Re-exports of foreign " " ..	+ 10.96	+ 16.09	+ 23.47
Imports of foreign " " ..	— 117.67	— 203.57	— 240.49
Balance of Trade in merchandise ..	+ 93.17	+ 24.17	+ 23.37
Gold (private)	— 13	— 8	+ 28
Silver "	+ 13	+ 14	— 20
Currency notes (private)	+ 3.66	+ 4.49	+ 6.26
Balance of transactions in treasure (private) ..	+ 3.66	+ 4.55	+ 6.34
Total visible balance of trade	+ 98.83	+ 28.72	+ 29.71
Gold earmarked on account of purchases abroad	10.19	18.97	— 9.76
Purchases of Sterling by the Reserve Bank of India	— 144.83	— 141.69	— 139.47
Sales of Sterling by the Reserve Bank of India ..	+ 4.42	+ 19.30	+ 63.40
Transfers of Government Securities	— 6	— 4	— 1
Interest drafts on India in respect of Government of India Securities	— 7	— 7	— 7
Balance of remittances of funds	— 140.54	— 122.50	— 76.15

The total value of India's foreign sea-borne trade, which has been going up since the outbreak of the last war owing mainly to the rise in commodity prices, reached the new high level of Rs. 504 crores compared with Rs. 431 crores in 1944-45 and Rs. 327 crores in 1943-44. The growing favourable balances of trade, which had reached the peak figure of Rs. 93.17 lakhs in 1943-44 was reduced to Rs. 24.17 lakhs in the following year and further down to Rs. 23.37 lakhs in the year under review. Imports increased from Rs. 203.57 lakhs in 1944-45 to Rs. 240.49 lakhs and showed an increase of 104.4 per cent. over the 1943-44 figure of Rs. 117.67 lakhs. On the other hand, re-exports

continued their steady improvement from Rs. 10.96 lakhs in 1943-44 to Rs. 16.69 lakhs in 1944-45 and Rs. 23.47 lakhs in 1945-46. Exports were up from Rs. 211.05 lakhs in 1944-45 to Rs. 240.39 lakhs in the year under review as compared with Rs. 199.88 lakhs in 1943-44.

DIRECTION OF TRADE

The following table shows the more important changes in the direction of India's trade and the balance of trade with important countries and groups in lakhs of rupees for the two years 1944-45 and 1945-46 and compares them with the pre-war year 1938-39:—

	1938-39.			1944-45.			1945-46.

ADVERSE BALANCE

During 1945-46 India's usual favourable trade balance, without taking into account re-exports, was converted into an unfavourable one. Further reductions were recorded in India's surplus trade balances with the Empire countries and the reductions in import surpluses with foreign countries were not sufficient to compensate the loss in export surplus with the Empire countries. As a result, the favourable trade balance of Rs. 81.25 lakhs in 1943-44 was reduced to Rs. 7.45 lakhs in the following year and was converted into a nominal deficit of Rs. 10 lakhs in the year under review. As regards the Empire countries the imports from the United Kingdom increased from Rs. 40.29 lakhs in 1944-45 to Rs. 61.07 lakhs while exports rose by Rs. 6.13 lakhs to Rs. 67.91 lakhs with the result that our export surplus with that country received a sharp set-back from Rs. 21.49 lakhs to Rs. 6.84 lakhs only. Likewise India's trade balance with Ceylon and Australia decreased from Rs. 14.54 lakhs and Rs. 4.41 lakhs respectively to Rs. 13.01 lakhs and Rs. 3.21 lakhs respectively. Owing to substantially higher imports from Canada compared to exports, the favourable trade balance with that country shrank from Rs. 2.62 lakhs to Rs. 1.10 lakhs; similarly the sharp decline in exports to South Africa from Rs. 11.88 lakhs to Rs. 7.21 lakhs reduced the export surplus with that country from Rs. 8.92 lakhs to Rs. 4.54 lakhs. During the year, imports from and exports to the Empire countries respectively accounted for 42.3 per cent. and 55.5 per cent. of the total as against 38.6 per cent. and 65.3 per cent. in the previous year.

While India's favourable balance of trade with Empire countries was reduced from Rs. 59.35 lakhs to Rs. 31.77 lakhs, India's import surplus with non-Empire countries did not drop to the same extent. The total imports

from foreign countries rose by 11.1 per cent. to Rs. 138.66 lakhs as against an increase of 46.1 per cent. in exports of Indian merchandise from Rs. 73.06 lakhs to Rs. 108.79 lakhs. Imports from the United States rose by 28.5 per cent. from Rs. 52.44 lakhs to Rs. 67.40 lakhs; but the sharp rise in exports from Rs. 44.69 lakhs to Rs. 61.82 lakhs reduced the adverse trade balance from Rs. 7.75 lakhs to Rs. 5.78 lakhs. The import surplus from Iran and Egypt also shrank owing to reduced imports from both the countries.

Certain striking features are noticeable in regard to the direction of India's trade during the war period. Of the Empire countries while the total value of India's trade with the United Kingdom increased from Rs. 102 crores in 1938-39 to Rs. 129 crores, that with Australia and South-Africa which had shown a marked expansion between 1938-39 and 1944-45 declined slightly in the year under review. Trade with Canada also received a set-back along with Ceylon. Amongst the non-Empire countries, marked increases have taken place in respect of the U.S.A., Egypt and Iran. The total value of trade with the U.S.A. rose from Rs. 23 crores in the pre-war year to Rs. 129 crores in the year under review. With Iran the rise is roughly twelve-fold while that with Egypt is three-fold.

COMPOSITION OF TRADE

The following table gives the composition of India's imports and exports (including re-exports) according to the main commodities during the years 1944-45 and 1945-46 and compares them with the pre-war year 1938-39. Although the exclusion of trade on Government account detracts from the value of these figures, they serve as a comparative guide to the distribution of trade over the constituent categories during the period under review. The figures are in crores of rupees:—

	1938-39.		1944-45.		1945-46.	
	Rs.	Per cent.	Rs.	Per cent.	Rs.	Per cent.
IMPORTS.						
Food	24.00	15.7	18.85	9.3	22.25	9.3
Raw Materials	38.18	21.7	117.25	58.5	116.57	48.5
Manufactured Goods	92.79	60.8	65.08	31.0	97.53	40.6
EXPORTS.						
Food	39.43	23.3	77.75	23.5	58.44	22.5
Raw Materials	76.28	45.1	58.19	21.5	84.85	26.5
Manufactured Goods	50.72	30.0	115.77	53.5	114.68	46.0

The trade returns for 1945-46 fully reflected the change, brought about by the first sight of peace after six years of global war, in the face of India's economy. Imports of manufactured goods, which had been relegated to the back-

ground by the reduction of their percentage to total trade from 60.8 in the pre-war year 1938-39 to 31.0 in 1944-45 under the stress of the war, tended to return to the pre-war pattern in the following year when their proportion to total

IMPORTS OF MERCHANDISE

India's import trade in private merchandise reached a new high level at Rs. 240.49 lakhs in 1945-46 showing an increase of Rs. 36.90 lakhs over the preceding year. The upward trend was mainly attributable to the relaxation of the import trade control following the end of the war. Imports of oils accounted for one-third of the total value of the import trade as against 40 per cent. in the preceding year, while raw cotton and cotton waste and machinery ran closely for the second place. Arrivals of tobacco, cutlery, dyes, electrical goods, metals, paper, vehicles and textile fabrics registered an impressive advance over the preceding year, while the receipts under seeds, wood, chemicals, rubber manufactures, jute manufactures and salt were either stationary or lower than the preceding year.

The slow return of the export trade to the pre-war pattern was also simultaneously noted. While exports of foods were more or less stationary in terms of their share in the trade the proportion of raw materials, which had steadily declined from 45.1 per cent. in 1938-39 to 21.5 per cent., in 1944-45, staged a recovery to 26.5 per cent. in the year under review, while those of manufactured goods retreated to 46 per cent. in 1945-46 after advancing from 30.0 per cent. in 1938-39 to 53.5 per cent. in 1944-45.

The following table shows the comparative importance of the principal articles imported into British India in thousands of rupees:—

	1943-44.	1944-45.	1945-46.	Percentage of total imports.
Oils	36,48.04	80,70.49	79,37.69	33.01
Cotton, raw and waste	17,52.78	24,00.63	22,86.65	9.51
Machinery	11,30.16	16,29.76	22,09.44	9.42
Dyes and colours	8,29.55	7,92.39	11,41.22	4.74
Grain, pulse and flour	30.72	8,09.18	9,18.93	3.82
Iron and Steel	2,02.33	3,55.87	6,65.44	2.77
Cutlery, hardware, etc.	2,77.00	3,68.87	6,40.96	2.67
Chemicals	4,97.05	6,87.90	6,04.79	2.51
Vehicles	1,26.98	4,35.64	6,04.59	2.51

Oils (Rs. 79.38 lakhs)—Imports of oils, vegetable, mineral and animal, which had mounted up from Rs. 30.48 lakhs in 1943-44 to Rs. 80.70 lakhs in 1944-45, dropped in value to Rs. 79.38 lakhs in the year under review. The bulk of the imports were in respect of mineral oils which registered a further advance in quantity from 983 million gallons in 1944-45 to 1,093 million gallons in 1945-46, but declined in value from Rs. 79.64 lakhs to Rs. 77.80 lakhs as compared with 574 million gallons valued at Rs. 35.22 lakhs in 1943-44. Out of this again, mineral oils, other than kerosene, accounted for 969 million gallons valued at Rs. 69.75 lakhs in the year under review compared with 887 million gallons valued at Rs. 73.15 lakhs in 1944-45 and 493 million gallons valued at Rs. 29.61 lakhs in 1943-44.

Imports of motor spirit advanced from 214 million gallons valued at Rs. 19.11 lakhs in 1943-44 to 529 million gallons valued at Rs. 55.18 lakhs in the following year but declined to 486 million gallons valued at Rs. 41.90 lakhs in the year under review.

Imports from Iran declined from 300 million gallons valued at Rs. 27.95 lakhs in 1944-45 to 261 million gallons valued at Rs. 22.83 lakhs in the year under review and those from the U.S.A. from 191 million gallons valued at Rs. 23.50 lakhs to 185 million gallons valued at Rs. 22.83 lakhs. Petroleum, other than motor spirit, which had advanced from 18 million gallons worth Rs. 1.81 lakhs in 1943-44 to 61 million gallons valued at Rs. 5.84 lakhs in the following year, declined sharply to 34 million gallons valued at Rs. 3.18 lakhs in the year under review.

Arrivals of kerosene reached a new high level of 124 million gallons valued at Rs. 8.04 lakhs in the year under review as compared with 99 million gallons worth Rs. 6.49 lakhs in the

preceding year and 80 million gallons valued at Rs. 5.62 lakhs in 1943-44. The bulk of receipts were from Iran which accounted for 105 million gallons valued at Rs. 6.83 lakhs as against 84 million gallons valued at Rs. 5.71 lakhs in 1944-45 and 65 million gallons valued at Rs. 5.62 lakhs in 1943-44. Fuel oils accounted for an intake of 411 million gallons valued at Rs. 11.59 lakhs in the year under review compared with 272 million gallons valued at Rs. 7.21 lakhs in 1944-45 and 239 million gallons valued at Rs. 4.81 lakhs in 1943-44.

Imports of lubricating oils, which had shown a small improvement from 22 million gallons valued at Rs. 3.72 lakhs in 1943-44 to 24 million gallons valued at Rs. 4.70 lakhs in the following year, registered a phenomenal rise to 33 million gallons valued at Rs. 5.60 lakhs in the year under review. As in respect of kerosene, the bulk of the receipts of fuel and lubricating oils were from Iran.

Imports of animal oils were comparatively insignificant though the trend was upward. The receipts of non-essential vegetable oils were almost wholly of coconut oil and showed an advance from 24 million gallons valued at Rs. 57 lakhs in 1944-45 to 2.8 million gallons valued at Rs. 804 lakhs in the year under review, the figures for 1943-44 being 3.9 million gallons valued at Rs. 89 lakhs. Ceylon which had cut down its shipments from 3.9 million gallons valued at Rs. 89 lakhs to 2.5 million gallons valued at Rs. 57 lakhs raised its exports to 2.8 million gallons valued at Rs. 804 lakhs in the year under review. The total imports of non-essential vegetable oils, including coconut and linseed stood at 2.8 million gallons valued at Rs. 80.8 lakhs in the year under review compared with 4 million gallons valued at Rs. 91 lakhs in 1943-44 and 2.5 million gallons valued at Rs. 57.5 lakhs in 1944-45.

Cotton, raw (Rs. 22.87 lakhs)—Imports of raw cotton from abroad showed a small

setback in the year under review. The total receipts, which had mounted up from 76,102 tons valued at Rs. 17.53 lakhs in 1943-44 to 89,717 tons valued at Rs. 24.01 lakhs in the following year, declined to 86,009 tons valued at Rs. 22.87 lakhs in 1945-46. Bombay accounted for an intake of 82,510 tons valued at Rs. 21.88 lakhs in the year under review as against 89,570 tons valued at Rs. 23.97 lakhs in 1944-45 and 76,764 tons valued at Rs. 17.48 lakhs in 1943-44.

Egypt headed the list with a shipment of 38,783 tons valued at Rs. 12.23 lakhs in the year under review compared with 49,659 tons valued at Rs. 15.06 lakhs in 1944-45 and 43,431 tons valued at Rs. 10.21 lakhs in 1943-44. The decline in imports of raw cotton from Egypt was partly offset by higher receipts from Kenya Colony which shipped 10,860 tons valued at Rs. 2.42 lakhs in 1943-44, 30,490 tons valued at Rs. 6.79 lakhs in 1944-45 and 37,581 tons valued at Rs. 8.39 lakhs in 1945-46. The Tanganyika Territory also improved its exports of raw cotton to India from 5,334 tons valued at Rs. 1.21 lakhs in 1944-45 to 6,596 tons valued at Rs. 1.47 lakhs in the following year but still showed a fall over 1943-44 during which the shipments from this source totalled 8,798 tons valued at Rs. 1.96 lakhs. Anglo-Egyptian, Sudan, which had sent as much as 12,243 tons valued at Rs. 2.74 lakhs in 1943-44, gave way further in the year under review for which imports from it totalled only 806 tons valued at Rs. 10 lakhs as compared with 3,948 tons valued at Rs. 88 lakhs in 1944-45. The U.S.A. which had shipped no cotton to India in the preceding two years, accounted for 245 tons valued at Rs. 7 lakhs in the year under review.

Machinery (Rs. 22.69 lakhs)—Imports of machinery reached a new high level of Rs. 22.69 lakhs in the year under review showing an increase of Rs. 6.40 lakhs over 1944-45 and Rs. 11.39 lakhs over 1943-44. The following figures are in lakhs:—

	1943-44.	1944-45.	1945-46.
Textile machinery	3.19	3.38	4.34
Electric machinery	2.24	3.01	3.22
Metal working machinery	54	1.53	1.81
Prime movers	62	76	1.44
Belting for machinery	85	1.10	1.17
Mining machinery	25	77	1.09
Oil crushing machinery	4	4	6
Paper mill machinery	25	25	24
Typewriters and parts	6	13	79
Printing lithographic machinery	4	4	14
Sewing and knitting machinery and parts	19	27	63
Sugar machinery	8	11	30
Tea machinery	22	43	48
Pumping machinery	25	32	46
Refrigerators	7	5	14
Rice and flour mill machinery	3	3	6
Saw mill and wood working machinery	10	17	22
Boilers	45	70	1.12
Agricultural	2	9	27
Boot and shoe manufacturing machinery	2	3	6
Leather tanning machinery	1	1	1

The list continued to be headed by TEXTILE MACHINERY which accounted for nearly one-fifth of the share under this group. Imports of cotton machinery in 1945-46 amounted to Rs. 2.91 lakhs of which the spinning machinery accounted for Rs. 2.11 lakhs and weaving machinery Rs. 44 lakhs as compared with Rs. 2.27 lakhs in 1944-45 and Rs. 2.40 lakhs in 1943-44. The arrivals of JUTE MACHINERY improved from Rs. 24 lakhs in 1943-44 to Rs. 55 lakhs in the following year and stood at Rs. 59 lakhs in the year under review. The bulk of the imports were from the United Kingdom.
