The House of

Godrej

गोदरेज
گودریج

40
49.1.1937

HALF a century ago the inspiration of an idealistic pioneer began a business which has been serving this sub-continent on the principles of National *self-sufficiency*, which he laid down. From making Locks, the firm developed the manufacture of Safes and other security equipment, then Metal Furniture. Godrej are by far the *largest* manufacturers in their lines of metal products in the East.

THE same patriot envisaged the great necessity of a swadeshi soap industry; so was founded another pioneer industry, and the soaps have made "Godrej" a household word in India and Pakistan. Glycerine is another important product of this industry.

GIVEN the indispensable raw materials, like steel, Godrej could supply more and more of their essential goods, thus ensuring better National economy, also by exporting.

COOPER ENGINEERING LIMITED

SATARA ROAD

India's industrial needs have expanded so considerably with the new national set-up, that our country's manufacturer of machinery and industrial equip-

ment will now receive the greatest fillip. To meet the demands, we manufacture the following, to the highest standard of specification.

DIESEL OIL ENGINES: Being the largest manufacturers of Internal Combustion Engines in India, we can supply Diesel Engines for industrial purposes both single and multi-cylinder types—from 8 B.H.P. to 256 B.H.P. The engines are all four stroke types.

Modelled on the latest designs, they are easy to install, economical in fuel consumption, simple in design and strongly built—skilled attention is unnecessary.

MACHINE TOOLS: We also manufacture the following to the required specification: Shaping Machines, Capstan Lathes, Sliding, Surfacing & Screw Cutting Lathes and Drilling Machines upto 14" capacity. All Machine Tools can be supplied either for belt drive or electric drive.

TEXTILE MACHINERY: Cooper Power Looms, Dobbies and Drop Boxes are well known and are working efficiently in many mills.

AGRICULTURAL MACHINERY: We have given careful attention to the vast agricultural needs and particularly of the special requirements of the Indian farmer. Our agricultural implements and machinery have been designed and built to the exacting needs of the farmer.

CASTINGS: We manufacture all types of castings and we can supply your special requirements.

General Engineering Castings, Wear Resisting Castings, Heat Resisting Castings, Corrosion Resisting Castings, etc., can all be supplied by us to suit your various requirements.

MEEHANITE: This High Duty Iron is manufactured in our factory and we are the sole licensees for India, Burma & Ceylon for this famous brand. Sub-licenses for Meehanite High Duty Irons, etc., have been given to the following Firms:

Messrs. Indian Hume Pipe Co. Ltd., Wadala, Bombay.
Messrs. Jessop & Co. Ltd., 93, Clive Street, Calcutta.
Messrs. Jay Engineering Works Ltd. - - - Calcutta.
Messrs. Binny & Co. (Madras) Ltd. - - - Madras.

Please write or call on us for detailed particulars

COOPER ENGINEERING LTD.

BADSHAH & SONS

*Aerated Water Manufacturers
and Sole Agents for "Vimto"*

Standard Works, Station Road,
HYDERABAD (DN.).

• • •

ESTABLISHED in 1898 as a modest venture, Badshah & Sons has rapidly developed into a substantial concern, with invested capital exceeding a lakh of rupees. Automatic plants for cleansing and bottling ensure strictly hygienic conditions the purest ingredients are used to maintain a consistently high standard. Constant research is carried out to improve the quality of products and to better existing methods of manufacture. Year after year, the highest awards have been won at the Hyderabad Industrial Exhibition.

Mainly responsible for these modern developments is Mr. Mohammed Fasihuddin, the proprietor. Born in 1897, he displayed an early interest in his father's factory, joining the management in 1914. With meagre resources, he worked 18 hours every day of the week, striving unceasingly to place his business on solid foundations. Success came with the passing of the years. Today, with new processes, advanced technique and the installation of up-to-date equipment, the firm holds an unrivalled position in the State, achieving the enviable distinction of being appointed suppliers to royalty.

Mr. Fasihuddin.

Apart from his business activities, Mr. Fasihuddin takes a prominent part in social and religious matters, is generous in assisting a worthy cause, takes a kindly and sympathetic interest in his staff and is deservedly popular among his large circle of friends.

Mr. Qamruddin, the proprietor's eldest son, joined the business as manager in 1943. His enthusiasm and energy have resulted in further improvements and increased production. An additional factory has already been erected and work is expected to start very soon.

MYSORE STONEWARE

For the health and sanitation of modern towns underground drainage is an essential need. To meet this, this Company was started in 1937 in Bangalore with the encouragement of the Government of Mysore. From then, the Company has progressed in rapid and large strides. The concern is now a pioneer and the largest of its kind in South India. During the last three years, the Company met the entire demand from the whole

of the Southern Army area. In fact the largest Hospital Town project in the world exclusively used its products for drainage. These products are now doing silent and quiet service to the health of mankind all over South India.

The Factory's output of salt-glazed drainage pipes, fittings, refractories, ink jars and ink bottles is now free for supply against requirements of Government Departments, Municipal Corporation and the Public.

"Reading Maketh A Full Man

.....

Writing An Exact Man."

Francis Bacon

The promotion of reading and writing on a vastly increased scale in order to equip her teeming millions for full and enlightened citizenship is one of the first responsibilities which Freedom has brought to India.

Hundreds of thousands of tons of printing and writing paper will be needed every year for this gigantic task of national regeneration.

The Mysore Paper Mills will continue to assist in this great task by holding their production of high quality "BISON BRAND" papers — PRINTINGS and WRITINGS as well as LEDGERS, MANIFOLDS and BONDS — at the disposal of the country in the years to come.

Physiography

BEFORE describing the physiography of India, there is a little point about nomenclature which must be settled. Right down to August 15, 1947, India was politically and geographically one and there was no doubt what the expression 'India' meant. But on August 15, 1947, politics and geography parted company. For, on that day India was formally divided into two independent political units. One of the two units they decided to call Pakistan, and the other, after some deliberation, they decided to call India. Now the question which arises is this: If India minus Pakistan is India what is India to be called? In other words, what are we to call the great mass of land which lies to the south of the Himalayas and which now comprises the Dominion of Pakistan and the Dominion of India? Two answers appear to be possible. We might call it the Pakistanian sub-continent or we might call it the Indian sub-continent. Actually the expression 'Indian sub-continent' has long been in use as an alternative to old undivided India; and so it would be more in keeping with tradition if we decided to call the mass of land comprising India and Pakistan as the Indian sub-continent rather than as the Pakistanian sub-continent, and that is the expression which is used throughout this book.

A minor point about nomenclature may also be mentioned here. In the north-west of the Indian sub-continent the boundary between India and Pakistan cuts right across what was old Punjab; similarly in the north-east, the boundary between India and Pakistan cuts right across what was old Bengal. Hence expressions like 'Punjab' or 'Bengal' have no meaning in the present context. Instead we have East Punjab and West Punjab and East Bengal and West Bengal, East Punjab and West Bengal being parts of India, and West Punjab and East Bengal being parts of Pakistan. But it is a fact that 'Punjab' and 'Bengal' are still occasionally used and when they are so used they stand for the old undivided Punjab and the old undivided Bengal respectively. The important point to remember is that whatever the expression used at the moment may be, Punjab, Bengal, India, the Government of the Punjab, the Government of Bengal and so on, the context will make clear in every case what the expression is meant to stand for.

The Indian sub-continent, it may be noted once more consists of the Dominion of India, the Dominion of Pakistan, the Portuguese possessions of Goa, Daman and Diu, the French possessions of Mahe, Karikal, Pondicherry, Yanam and Chandernagore, and the independent kingdom of Nepal. There are two areas which lie outside the geographical limits of the sub-continent and are still part of one or the other of them. These are Baluchistan which is now a part of the Dominion of Pakistan, and the inhabited plateau of northern Kashmir, now a part of the Dominion of India.

Though politically separate, India and Pakistan are geographically one, and in the whole of the present section they will be

treated as one and will be referred to together as the Indian sub-continent.

We will now proceed to give a physiographical description of the sub-continent. In form the sub-continent is like a triangle with its base resting on the Himalaya Mountains in the north and its apex running far into the ocean in the south. At the southern extremity the triangle tapers with a pear-shaped curve to a point called Cape Comorin.

LOCATION AND SIZE

The Indian sub-continent lies entirely to the north of the equator. From south to north it stretches from 8° north latitude to 37° north latitude, with the Tropic of Cancer cutting the sub-continent roughly into two halves. West to east it stretches from 62° east longitude to 97° east longitude.

Broadly speaking the Indian sub-continent is shut off from the mainland of Asia by the Himalaya Mountains, the highest mountain range in the world. Going from west to east along the sub-continent's land frontier are Persia, Afghanistan, Russian Turkestan, Tibet, China and Burma. In the south, the sub-continent is surrounded on all sides by water—the Arabian Sea in the west, the Indian Ocean in the south and the Bay of Bengal in the east.

Here are a few figures which indicate the enormous size of the sub-continent. It is about 2,300 miles from east to west, and about 2,000 miles from north to south. Its land frontier is 6,000 miles long and the sea frontier 5,000 miles. The total area involved is 1,575,107 sq. miles, which is about twenty times the size of Great Britain. Another method of comparison which is often employed is to say that the Indian sub-continent is as large as the whole continental Europe without Russia. The total population is 388.8 millions, which is about one-fifth of the population of the whole world.

Ports.—Compared with the size of the sub-continent, the coast-line is short, as there are few bays or inlets. Hence there are also very few harbours. The fact is the west coast is rocky and the sea is deep near the coast, while in the east the sea is extremely shallow, so that big ocean-going ships have to weigh anchor at some distance from the shore. The only so-called natural harbours are Bombay and Goa. While Madras, Vizagapatam and Port Okha are examples of purely artificial harbours, built by human enterprise.

The principal ports in the Indian sub-continent are (going from west to east along the coast) Karachi, Bedi Bunder, Port Okha, Porbandar, Surat, Bombay, Marmugoa, Mangalore, Calicut, Cochin, Alleppey, Quilon, Tuticorin, Dhanushkodi, Negapatam, Karikal, Cuddalore, Pondicherry, Madras, Masulipatam, Coconada, Vizagapatam, Calcutta, and Chittagong. Of these, Karachi and Chittagong are in Pakistan, Karikal and Pondicherry belong

to France, Marmugoa belongs to Portugal, while the rest are in the Dominion of India. (For more details see section on ports.)

THE MOUNTAIN WALL

The Indian sub-continent can be divided into three natural regions as shown in the physical map—1. the mountain wall, 2. the Plain of Hindustan, and 3. the Indian Plateau.

Let us take the mountain wall first. From the Pamir Knot in the far north two mountain ranges radiate one in the south-east and easterly direction called the Himalayas, and the other in a south-western direction reaching almost down to the sea, called the Sulaiman Range in the north and the Kirthar Range in the south. In the east the mountain wall between the Indian sub-continent and Burma is called by different names in different places. In the north, for instance, it is known as the Patkoi Hills, further south as the Naga Hills. In Assam it is called Jaintia, Khasi and Garo. Southward are the Lushai Hills, then finally there are the Arakan Yoma which reach the sea at Cape Negrais and continue in the Andaman and Nicobar Islands.

Of the three ranges which constitute the mountain wall the Himalayas are the most noteworthy. Extending like a scimitar for a distance of 1,500 miles along the northern frontiers of the Indian sub-continent they form the loftiest mountain range in the whole world, and contain many of the highest mountain peaks, Mount Everest 29,000 ft., Mount Godwin Austen 28,250 ft., and Kincanjinga 27,615 ft.

Passes.—There are no easy ways in and out through the mountain wall which shuts off the sub-continent from the rest of Asia, but there are a few difficult passes. From north-west to south are the Khyber Pass, the Kurram Pass, the Tochi Pass, the Gomal Pass and the Bolan Pass. Of these the Khyber Pass which leads from Peshawar to Kabul and the Bolan Pass which leads from Quetta to Kandahar are the most famous. In the very north are the Zojila Pass and the Shipki Pass which lead out of Kashmir and the Punjab respectively. Then from Shipki right down to Darjeeling there is no route across the mountain wall. Across the Burma frontier again there are a few routes but they are of little use for purposes of communication.

Detailed Survey.—The following is a more detailed description of the mountain region.

In the east on the border of Burma and comprising part of Assam and East Bengal, the mountain wall is much lower. Here it can more accurately be described as a range of hills rather than of mountains. This region is wet, forested and very thinly populated. The region round about Cherrapunji in Assam has the highest rain-fall in the world.

Then from Darjeeling to Kashmir are the Himalayas proper, over 2,000 miles in length and 150 to 200 miles in breadth. The Himalayas

are thus not a mountain chain in the proper sense of the word. They can be described as a series of parallel but converging ranges intersected by valleys and big plateaus. On the whole, the slopes of the mountains facing the Indian sub-continent are very steep, while those facing north are much more gentle. We say, on the whole, because though the Eastern Himalayas (in West Bengal and Bihar) rise abruptly from the plains, in the west (western U. P. and East Punjab) the rise from the plains is a little more gradual. Hence the Himalayas themselves can be further sub-divided into three parallel zones, the Great Himalayas with an average elevation of 20,000 ft., always covered with snow; the Lesser Himalayas, the middle range, with an average elevation of 15,000 feet; and finally the Outer Himalayas lying between the Lesser Himalayas and the plains with an average elevation of about 3,500 feet. The last are a sort of foot-hills to the Great Himalayas, and are usually described as forming the sub-Himalayan region, a region which extends from eastern Bihar to East Punjab all along the Plain of Hindustan.

In the north and the north-west the altitude of the range is much lower: there are few peaks which exceed a height of 20,000 feet. The Punjab Himalayas are comparatively dry, and the snow-line is much higher than elsewhere. The northern slopes are bare while the southern slopes are forested.

Two of the longitudinal valleys which separate the mountain ranges are worth a note. They are the Vale of Kashmir and the valley of Khatmandu in Nepal. They are both fertile extensive and from a tourist's point of view a dream of beauty.

Thus it is clear the whole region possesses great variety in climate and a range of vegetation stretching from the tropics to the poles.

The north mountain wall has a tremendous influence on the physiography of the Indian sub-continent. On the one hand it keeps out the bitterly cold winds which blow from Central Asia and Tibet during the winter, and on the other it intercepts the moisture laden winds which blow from the sea in the south so that the northern plains of the sub-continent have rain during the monsoon. Second, the melting snow and rain falling on the mountains go to form the chief source for the water of the rivers which flow from the Himalayas. Hence the rivers of Hindustan never go completely dry in the summer. In short, if Egypt is a gift of the Nile, the Plain of Hindustan is no less a gift of the Himalayas.

THE PLAIN OF HINDUSTAN

Geologically, the Indus-Ganga Plain can be considered as the fore-deep of the mountains to the north of it. This fore-deep extends thousands of feet below the sea-level, though since its formation it has been filled in by deposit. In the east this deposit consists of alluvial material from the mountains, in the west it consists of material blown by the wind. All through the deposit is fine grained made up chiefly of muds and sands.

Physiography

The Hindustan Plain extends from the Bay of Bengal in the east to the Afghan frontier in the west, that is to say, it is more than 2,000 miles long and from 150 to 200 miles broad. Throughout this vast tract of land not a hill can be seen, the slope from the mountains to the sea is so gradual that about 100 miles from the mouth of the River Ganga the surface is no more than 500 feet above sea-level.

The Plain of Hindustan is probably the most important part of the sub-continent. For one thing, it contains some of the richest soil in the world. Second, it is on the Plain of Hindustan that the whole drama of race conflict and race assimilation was played out, a drama which finally shaped the political and cultural destiny of the entire sub-continent.

Going into more detail the Plain of Hindustan is formed by the basins of three distinct river systems. In the far west is the Indus and its tributaries, the Jhelum, Chenab, Ravi, Bias and Sutlej, draining into the Arabian Sea. Further east is the River Ganga with its tributaries the Yamuna, Gogra, Rapti and Gandak which flows south-eastwards into the Bay of Bengal. The capital of the Indian Dominion, Delhi, stands on the water-shed between the Indus and the Ganga river basins. The third of the three river systems, the Brahmaputra rises, like the Indus, beyond the Himalayas, turns east and enters the sub-continent at its eastern extremity and joins the Ganga before reaching the Bay of Bengal. The Brahmaputra has no important tributaries.

On the Himalayas these rivers are rushing, roaring torrents, cutting their way through steep and rocky gorges. But when they reach the vast plains they broaden out and wander slowly till they get to the sea. The land is so flat that the rivers sometimes leave their old beds and cut out new channels flooding the surrounding area.

The rivers of Hindustan are notable for three reasons. 1. They give a constant supply of water. 2. The land through which they flow is broad, flat and fertile and eminently suitable for irrigation. 3. Because water flows perennially they are navigable through the greater part of the year.

As we go from west to east in the Plain rainfall increases and so does the fertility of the soil.

The whole plain can be sub-divided according to climate into a number of natural regions. There is first the lower Indus valley, comprising the Province of Sind, a dry alluvial plain which depends for cultivation on the inundation canals of the Indus. Then there are the plains of the north-west, of the Upper Indus, comprising the Provinces of East and West Punjab, another dry area depending on the irrigation canals of the tributaries of the Indus for its water. Third, is the valley of the Upper Ganga covering the major part of the United Provinces, a comparatively dry region which depends for its cultivation on the irrigation canals of the Ganga and the Yamuna. Fourth, we have the valley of the middle Ganga embracing the Province of Bihar, which is an intermediate zone, with both

wet and dry cultivation. As we go further east we have the lower valley of the Ganga, comprising the whole of West Bengal and part of East, a wet region with considerable rainfall growing rice and jute.

THE INDIAN PLATEAU

The third of the natural regions into which the sub-continent is divided is called the Indian Plateau because it comprises a three-sided table-land covering the whole of the sub-continent in the south except for two coastal strips one very narrow in the east, and the other a little broader in the west. The Indian Plateau is marked off from the Plain of Hindustan by a confused mass of ranges running with a general direction of east to west. Three of these ranges have been distinguished by the names of Vindhya, Satpura and Ajanta respectively. They stand from 1,500 feet to over 4,000 feet high and though pierced by road and railway at the present time were not easy to cross in the old days and thus formed a barrier of hill and jungle between the northern and the southern portions of the sub-continent.

The Indian Plateau is higher in the west and the south than in the east and north. Along the western and eastern edge of the plateau run the Western and Eastern Ghats. They start southward, from the extremities of the Vindhya mountain system and run along the western and eastern coasts of India and unite to form a sort of upheaved angle towards their southern extremity. The Western Ghats run through the Province of Bombay and ascend to an average height of about 3,000 feet while some of the peaks are anything between 5,000 feet and 9,000 feet high. The Eastern Ghats stretch down the Province of Madras and have an average elevation of 1,500 feet. The inner triangular plateau which the Western and Eastern Ghats form far in the south is seamed with little ranges of hills exceeding 4,000 feet in height the best known among which are the Nilgiris. It is on the Nilgiris that Ootacamund the famous summer capital of the Madras Province stands.

Drainage Systems.—There are three systems of drainage in the Indian Plateau—one towards the north, the second towards the west and the third towards the east. The drainage from the northern or Vindhya edge of the plateau falls into the Ganga. Two rivers Narmada and Tapi carry the rainfall of the southern slopes of the Vindhya and Satpura mountains respectively in almost parallel lines into the Arabian Sea. Further south, as we have already stated, the plateau is much higher in the west than the east. So the drainage has to make its way across the whole breadth of the plateau eastwards until it falls into the Bay of Bengal. The most important rivers are the Mahanadi, the Godavari, the Krishna and the Cauvery. These rivers differ from the rivers of the Plain of Hindustan in three ways; 1. They are fed only by the monsoon rains and therefore do not yield a constant supply of water. 2. Their valleys are less suitable for irrigation. 3. And finally, they are not navigable for certain seasons in the year when parts of the river dry up.

From a geological point of view the Indian Plateau consists mainly of very old crystalline rocks—much older than the Himalayan fold mountains. On some of the edges of the plateau

In the north-east for instance, are areas of sedimentary rocks from which the sub-continent obtains most of its coal. About nine-tenths of the coal resources of the sub-continent lie in Jharia in Bihar and Raniganj in West Bengal, though coal-bearing beds are also found in the valley of the Godavari and the northern slopes of the Vindhya. The north-west of the plateau is covered by vast stretches of lava called the Deccan lavas. This region is one of the largest areas of lava in the world, covering as it does an area of 250,000 square miles with a total thickness of several thousand feet. In spite of the great extent of the lavas there are few or no signs of volcanoes. In the rest of the Plateau valuable minerals occur here and there among old crystalline rocks. Gold is obtained in Kolar, manganese in Vizagapatam, Mysore and the Central Provinces, copper and iron in Bihar and Orissa, mica in Madras and the south-east. The point about diamonds is of some interest. They occur in sand-stones or conglomerate in Pannah in Bundelkand or Karnul in Madras, though no diamond-bearing igneous rocks are found.

Natural Regions.—From the point of view of climate and vegetation the Indian Plateau can be divided into ten natural regions. There are first of all the coastal regions round the plateau. In the north covering part of the Province of Bombay is the Gujerat region, moderately dry and hilly in places. Further south is the west coast region covering part of Bombay and part of Madras, very narrow and very wet. In the east is the Carnatic or Tamil region comprising part of Madras, moderately wet but wider than in the west. In the north is what is called the Northern Circars region covering part of Madras and part of Orissa, also moderately wet. Then there are the dry regions lying to the north of the Vindhya mountains sloping downwards to the Plains of Ganga and the Indus. These are the Thar or Great Indian Desert, the Rajputana uplands dry and hilly, and the Central Indian Plateau comprising part of the Central Provinces. Finally there is a third group of regions which can be distinguished, all lying in the Indian Peninsula proper. These are first the southern part of the plateau covering the whole of Mysore and parts of Madras and Bombay, dry, somewhat barren and thinly populated; second, the Deccan lavas region in the north-west, containing parts of Bombay, Hyderabad and the Central Provinces, dry but with fertile black soil suitable for cotton and moderately thickly populated; and lastly, the North-Eastern Plateau covering parts of Bihar, the Central Provinces, and Orissa. This last mentioned region has moderate rainfall, is thinly populated, but thickly forested. The inhabitants are mainly concentrated in two river valleys.

Ceylon is the only important island lying off the coast of the sub-continent to which it is joined by a line of sand flats collectively called Adam's Bridge. But Ceylon is politically separate from the Indian sub-continent. Two groups of very small islands in the Bay of Bengal, the Andamans and the Nicobars, and one group in the Arabian Sea the Laccadives are part of the Dominion of India. So is the island of Cutch off the Kathiawar Peninsula in Western India. But Cutch is a dry, rocky, treeless country.

VEGETATION

The Indian sub-continent is thickly populated and so over a greater part of the country the natural vegetation has been removed. The sub-continent has no distinctive botanical features peculiar to itself. Where the rainfall is more than 80 inches a year there are ever green forest on the hills. The wood from these forests is hard but the forests have not yet been commercially exploited. These ever green forests are chiefly found on the slope of the Western Ghats, the wetter eastern parts of the Himalayas up to a level of 5,000 feet, and in Assam.

Where the rainfall is less than 80 inches but more than 40 we have what are called the monsoon forests, so-called because the trees in these forests lose their leaves in the dry season. The monsoon forests are very valuable, because they contain the two most important kinds of tree, the teak and the sal. The teak is found chiefly in the western parts of the sub-continent while the sal is obtained in the lower slopes of the Himalayas and the north-east of the plateau. Where the rainfall is less than 40 inches, in the drier parts of the sub-continent, we find small thorny trees, sometimes so small that they are more like bushes than like trees. In the driest parts where the land is desert or semidesert even bushes cannot grow. There we find plants with thick fleshy stems and long roots. As we go up the mountains too the vegetation changes. In the higher reaches of the mountains, above 5,000 feet in the south, and 3,000 feet in the north the forests are similar to those found in temperate lands. Some of the trees have broad leaves and are like the oak while others are tall and have needle-shaped leaves like the pine.

On the highest parts of the mountains it is too cold and too dry for trees to grow and so we find only small bushes and short grass.

Along the sea-coasts and in the great river deltas where the land is flat and muddy grows a kind of tree called mangrove. These trees are most frequent in the deltas of the River Ganga where they are called Sundarbans.

There is not much grass land in the Indian sub-continent though in the hills in the monsoon areas a few patches can be seen. (For a description of the forest wealth of the sub-continent see section on forests.)

The main cultivated plants include rice, wheat, pulses and grains. Among the important seeds grown are castor, sesamum and ground nut. The chief fruit trees include mango, coconut, arecanut and certain citrus fruits. Apples, peaches, pears, apricots and walnuts are confined chiefly to the Himalaya valleys. There are tea plantations over large areas on the mountains in the north-east and south, while coffee, cardamom, pepper and rubber are extensively grown in the south of the sub-continent. In some of the damper regions the cinchona is successfully cultivated. (For more detailed description see section on agriculture.)

ANIMALS

Just as natural vegetation has disappeared over the greater part of the land so have a great many wild animals. The lion, for instance, was not uncommon within historical times in the north. Today it is confined wholly to the Gir forest in the State of Junagadh in Kathiawar.

The most famous among the wild animals which survive are the tiger and the elephant. The leopard or panther is more common than the tiger and equally destructive of life and property. The cheetah or the hunting leopard is found only in the Deccan and is generally trained for hunting the antelope. Other wild Indian animals of the cat family are the marbled cat and the so-called jungle cat.

In the open country-side wolves are plentiful and usually prey on sheep. The Indian fox is comparatively scarce but the jackal is very common. The wild dog is found in the denser jungles and generally hunts in packs. Among other dogs are the pariah common in the south, and the grey hound used for hunting.

The black bear is common wherever rocky hills and forests occur. It lives on ants, honey and fruit but if agitated it may prove dangerous. The Himalayan bear which is found only in the north, stays in the mountains during the summer but comes lower down during the winter.

The rhinoceros found in the sub-continent are of three different types, two have a single horn and one has double. The rhinoceros is commonest in the Brahmaputra valley and in the Sundarban. With the rhinoceros might be mentioned the crocodile which can be very dangerous specially in the rivers of the north. The wild hog is also well-known in certain parts of the sub-continent and is very destructive of crops.

In the remote parts of the deserts of Sind and Cutch is found the wild ass but its contacts with man are few. Many wild varieties of sheep and goat can be come across in the mountain ranges of the north.

The antelope proper is more widely distributed. On the coasts of Gujerat and Orissa, for instance, a herd of does accompanied by a single buck is a common sight. The gazelle can also be found in the sub-continent. The sambar is confined to hill forests, while the spotted deer is considered to be the most beautiful animal of the Indian jungle.

In the Western Ghats, and in the Jhill jungles of Assam and the Central Provinces is found the bison. It is a fierce animal and almost as dangerous to hunt as the tiger. Akin to the bison is the wild buffalo very common in Assam.

The rat and the mouse are a perpetual nuisance. The bandicoots some of which can be as long as 2 feet burrow under stores and godowns and are often deadly to plants and fruit.

The reptiles abound in garden and jungle and even intrude into dwelling places specially during the rains. Thousands of people die every year in the country-side of snake-bite. The most dreaded of the reptiles is the cobra. There is another variety called Russell's viper whose bite is equally fatal. Generally speaking the salt-water snakes are dangerous while the fresh-water ones are harmless. The bigger variety scorpion which abounds in parts of Madras is a terror.

Of all the wild animals in the sub-continent the elephant is the most interesting as well as the most useful. It generally lives in the wilder

parts of the monsoon forests and being an intelligent animal can be trained to do heavy work such as dragging great logs of wood, or arranging them in neat piles. The elephant is also excellent as a transport animal as it can push its way through the thickest jungle where roads cannot be built.

Domestic Animals.—So much for the wild animals. Among the domestic animals the most useful are the oxen. It is estimated that there are about one bullock or cow to every two people in the sub-continent. Milk is not a staple article of food and the oxen are chiefly used for ploughing or drawing carts. The bullocks are more valuable than the cows though in parts of the sub-continent like the United Provinces dairy-farming is an important industry. One handicap is that in most parts of the country fodder has to be specially grown for the cattle.

There are 40 million buffaloes in the sub-continent. The buffalo is stronger than the bullock and is chiefly used for ploughing. The she-buffalo is the typical dairy animal.

It is estimated that there are about 25 million sheep in the two Dominions together. But they are a very poor specimen and do not give good wool or meat. Sheep are most numerous in Madras and live chiefly on waste land which is not good enough for cattle. Goats are found everywhere because it does take much to keep them alive. They can feed on the poorest grass or shrub and so find enough to eat even in the driest parts of the sub-continent.

There are about two million horses and ponies, most of which are used as draught animals. Mules, donkeys and camels are also used for purposes of transport; mules and donkeys on the hilly parts, and camels in the sandy desert.

The birds of the Indian sub-continent though not as gorgeous as those of some other tropical lands deserve mention. The parrot is easily the most beautiful of the Indian birds. The peacock is another beautiful bird, while the maina like the parrot lives happily in a cage and talks well. Of the vulture there are four varieties which include the common scavenger. There are many types of eagle too and some of the falcons can be trained for hawking. A bird much sought after for its plumage is the king-fisher and among the birds which are hunted for their flesh are pigeons, ducks, partridges, plover, quail and snipe. The jungle fowl, however, is not considered good for eating.

There are many beautiful butterflies in the Indian sub-continent, while among the more useful insects are the bee, the silk-worm, the *coccus lac*, that is, the insect which gives lac. Certain varieties of Indian moth and ant are very destructive. Locust invasions are not frequent but when they appear they leave complete destruction behind them. Mosquitoes abound everywhere.

In the Indian sub-continent fish is eaten fresh as methods of fish preservation are either primitive or not practised. Among the edible Indian fishes are the carp family and the cat fishes. But the most delicious is the hilsa which is also a rich food. A fish which is found in all hill streams is the mahseer. (For a more detailed discussion see section on fisheries).

THE TWO DOMINIONS

Politically the Indian sub-continent now comprises the Dominion of India, the Dominion of Pakistan, the States governed by Indian Princes and the French and Portuguese possessions already mentioned.

The Dominion of India comprises the Provinces of East Punjab, the United Provinces, Bihar, West Bengal, Orissa, the Central Provinces, Bombay and Madras, and the centrally administered areas of Delhi, Ajmer-Merwara, Coorg, Panth Piploda and the Andaman Islands.

The Dominion of Pakistan comprises the Provinces of West Punjab, the North West Frontier, Baluchistan, Sind and East Bengal.

Of the States ruled by Indian Princes, Bhanuwalpur, Khairpur, Kalat, Chitral, Dir and Swat have acceded to the Dominion of Pakistan, while the rest of the 500 odd States with the exception of Hyderabad have acceded to the Dominion of India. Some of the smallest like those in Chatisgarh in the Central Provinces and on the borders of Orissa have been absorbed into the nearest Provinces of the Indian Dominion while others contiguously situated have coalesced to form larger administrative units. Examples are Saurashtra, Rajasthan and Vindhya Pradesh.

The partition of what was British India took place on August 15, 1947. Broadly speaking, the areas in the north-west and the north-east inhabited predominantly by people belonging to the Muslim religion were cut off and formed into a separate independent Dominion. Only two Provinces were primarily affected by the decision to partition the sub-continent, and a third to a smaller degree. The two which were primarily affected were the Punjab in the West and Bengal in the East. The old Punjab was divided into West Punjab which is part of Pakistan and East Punjab which is part of India. The old Bengal was divided into East Bengal now part of Pakistan and West Bengal now part of India.

The Province of West Punjab includes the whole of the Multan and the Rawalpindi Divisions and the Districts of Gujranwala, Sheikhupura and Sialkot of the Lahore Division. The Province of East Punjab includes the whole of the Jullundur and Ambala Divisions and the Amritsar District of the Lahore Division. The Gurdaspur and Lahore districts of the Lahore division are divided between the two new Provinces.

In the east the Province of East Bengal includes the whole of the Chittagong and the Dacca Divisions and the Districts of Rangpur, Bogra, Rajshahi, Pabna and Khulna. The Province of West Bengal includes the whole of the Burdwan Division and the Districts of Calcutta, the 24 Parganas, Murshidabad and Darjeeling. The Districts of Nadia, Jessore, Dinajpur, Jalpaiguri and Malda are divided between the two Provinces.

The Province of Assam too was affected to a minor degree. Except four thanas the whole of the District of Sylhet was transferred to the newly created Province of East Bengal.

RELATIVE POSITION

An attempt is made below to summarize the present position in regard to the population etc. of the two Dominions. But the estimate can only be regarded as very provisional for the following reasons: First, the latest figures that are available are for 1944-45; in some cases indeed one has to go even further back. Second, big changes have recently taken place as between the two Dominions in men and material for which no figures can so far be obtained. Thirdly, the allocation of resources in the divided Provinces of Punjab and Bengal are not yet final.

The population of India is roughly 297,542,000 and that of Pakistan 71,096,000.

The area of the Indian Dominion is 1,055,621 sq. miles and that of the Dominion of Pakistan 361,218 sq. miles. Another estimate puts this latter figure at 233,000.

The general economic position can roughly be summarized as follows:

As we have seen, the bulk of the population and territory go to India. Most of the roads and railways also fall to India's share as well as most of the ports and air-fields. The canal system is divided while the largest dams remain in India.

As regards food resources India as a whole is deficient while Western Pakistan is expected to have a surplus of 1½ million tons of which about half a million may have to be sent to Eastern Pakistan to meet the latter's deficiency. Pakistan has a good deal of cotton to spare and holds a virtual world monopoly in jute. But Pakistan has to import textile goods in which she is deficient. Nearly all the jute mills are also in India, but unless India imports a good deal of the jute of Pakistan, most of the mills will be idle. The major part of the mineral resources of the sub-continent with the possible exception of chromium remain in India. And out of about 780 factories covering all the major industries Pakistan's share will be 9 and India's 771.

As regards fuel, India keeps most of the coal, but this is not very much. Hydro-electric power is going to be much more important in the future than it is today. And though India produces almost all the electric power in the sub-continent at present, Pakistan's potentialities are much bigger. At the present moment, however, Pakistan cannot do without Indian coal for her railways, of which she has to import about 2½ million tons a year.

As regards foreign trade Pakistan is expected to have a favourable balance of Rs. 18 crores while India will have an unfavourable balance of Rs. 110 crores owing mainly to the need to import food.

Communications.—That is a rough over-all picture. A more detailed account is given down below through a series of statistical tables. It must be emphasized once again that only a rough estimate is all that is possible.

India has 264,605 miles of road and 25,970 miles of railway while Pakistan has 49,863 miles of road and 14,542 miles of railway. As has already been stated in the earlier part of this section all the major ports except Karachi and Chittagong are in India. Of the 19 of the largest air-fields in the sub-continent India has 15 and Pakistan has 4. There are 3 large canal

systems, Sukkur, Sarda and the Sutlej valley. Of the three the first is in Pakistan (Sind), the second is in India (U.P.), and the third is divided between the two. The sub-continent is well known for its large dams. Of these the largest are in India (Madras, Bombay). Of the larger dams which are under construction at present, the Bakra, the Damodar, the Tungabhadra and the Thal, the first three are in India (East Punjab Bihar and Madras, respectively) while the last is in Pakistan (West Punjab). One generalization which may be permitted is while the States which have acceded to the Indian Union add substantially to its economy those which have acceded to Pakistan (with the exception of Khairpur) do not.

Agricultural Produce.—Here are the figures for the chief food crops in tons.

Cereal	Total	India	Pakistan	States
Rice	26,249,000	17,154,500	8,662,500	432,000
Wheat	10,458,000	6,901,000	3,457,000	100,000
Jowar	7,446,000	6,020,000	199,000	1,227,000
Bajri	4,249,000	3,672,000	411,000	166,000
Maize	2,952,000	2,518,000	382,000	52,000

The position in regard to cash crops is somewhat as follows:

Cash Crop	Total	India	Pakistan	States
Jute (in bales)	7,991,100	1,455,700	6,535,400	..
Cotton (in bales)	3,438,000	2,059,000	1,118,000	321,000
Rubber (lbs.)	35,530,000	4,695,000	..	30,835,000
Linseed (tons)	432,000	382,000	7,000	43,000
Sesamum (tons)	433,000	426,000 (States included)	7,000	..
Castor seed (tons)	105,000	..	Nil	..
Groundnut (tons)	3,702,000	3,702,000	Nil	..
Coffee (lbs.)	34,822,000	34,822,000 (includes States)	Nil	..
Tea (lbs.)	4,63,881,000	4,63,881,000 (includes States)	Nil	..

So far as tobacco, copra and hemp are concerned the whole of the supply comes from India, while the position in regard to wool is obscure.

Mineral Resources.—And this is how the mineral resources (in tons) are roughly distributed:

Ore	Total	India	Pakistan
Coal	28,342,906	28,118,000	100,837
Petroleum (gallons)	87,082,371	65,968,951	21,113,420
Chromium	44,000	22,100	21,900
Copper	288,100	288,100	Nil
Iron	2,743,675	2,743,675	Nil
Mica (cwts.)	1,23,169	123,169	Nil
Gold (ounces)	321,138	321,138	Nil
Silver (ounces)	22,300	22,300	Nil
Magnetite	25,611	25,611	Nil
Saltpetre (cwts.)	148,824	148,824	Nil
Bauxite	14,768	14,768	Nil
Manganese	992,795	992,795	Nil

Other minerals of which India has a much bigger supply than Pakistan are ilmenite, steatite, graphite, monazite and some others containing radio-active substances.

And here finally are the production figures for the chief industrial goods :

Goods	Total	India	Pakistan
Iron and Steel ..	18 works 1,959,000 tons ingots 978,000 tons finished	18 works. 1,959,000 tons ingots 978,000 tons finished	Nil
Textiles	389 mills	380 mills 5 billion yds. 1½ billion lbs. of yarn	9 mills
Chemicals		42,000 tons of sulphuric acid 22,000 tons of ammonium sulphate	very little
Paper		73,138 tons	very little

Almost all other industrial plants such as those making matches, paints, glue, glass, soap, aluminium, cement, etc., are in India. The great bulk of hydro-electric power too as we have stated is produced in India. In rural electrification, for instance, development is most advanced in Madras, Mysore and the United Provinces, two of which are in India while the third (Mysore) has acceded to the Indian Union. The great hydro-electric projects now under construction are also in India. But it is believed that the potentialities of Pakistan in this regard are much higher.

Meteorology

THE all-important fact in the meteorology of the sub-continent is the alternation of the seasons known as the summer and winter monsoons. During the winter monsoon the winds are of continental origin and hence, dry, fine weather, clear skies, low humidity and little air movement are the characteristic features of this season. The summer rains cease in the East and West of the North-West Frontier Province and Punjab about the middle of September after which cool westerly and northerly winds set in over that area and the weather becomes fresh and pleasant. These fine weather conditions extend slowly eastward and southward so that by the end of October, they embrace all parts of the country except the southern half of the Peninsula, and by the end of the year have extended to the whole land and sea area, the rains withdrawing to the Equatorial Belt. Thus the characteristics of the cold weather from October to February over the sub-continent are :—Westerly winds of the temperate zone over the extreme north, to the south of these the north-east winds of the winter monsoon or perhaps more properly the north-east Trades and a gradually extending area of fine weather which, as the season progresses, finally embraces the whole land and sea area.

Two exceptions to these fine weather conditions exist during this period, viz., the Madras coast and the north-west. In the former region the north-east winds which set in over the Bay of Bengal in October coalesce with the damp winds of the retreating summer monsoon, which current curves round over the Bay of Bengal, and blowing directly on to the Madras coast gives to that region the wettest and most disturbed weather of the whole year, for while the total rainfall for the four months June to September, i.e., the summer monsoon, at the Madras Observatory amounts to 15.46 inches the total rainfall for the three months October to December amount to 31.78 inches. The other region in which the weather is unsettled, during this period of generally settled conditions, is the north-west. This region during January, February and part of March is traversed by a succession of shallow storms from the westward. In normal years, in the north periods of fine weather alternate with periods of disturbed weather (occurring during the passage of these storms) and light to moderate and even heavy rain occurs.

These two periods of subsidiary "rains" are of the greatest economic importance. The fall in Madras is, as shown above, of considerable actual amount, while that of the north-west though small in absolute amount is of the greatest consequence as on it largely depend the grain and wheat crops of the north.

THE SOUTH-WEST MONSOON

It is now necessary to trace the changes which occur and lead up to the establishment of the south-west monsoon period. The sun at this time is progressing slowly northward towards the northern Tropic. The temperature increases rapidly and barometric pressure diminishes.

owing to the air rising and being transferred to neighbouring cooler regions—more especially the sea areas. Thus we have the southern Trade circulation extending northward and the local land and sea circulation extending southward until about the beginning of June the light unsteady interfering circulation over the Arabian Sea finally breaks up, the immense circulation of the south-east Trades, with its cool, moisture laden winds rushes forward, becomes linked on to the local circulation proceeding between the land area and the adjacent seas and the sub-continent is invaded by oceanic conditions—the south-west monsoon proper. This is the most important season of the year as upon it depends the prosperity of at least five-sixths of the people.

When this current is fully established a continuous air movement extends over the Indian Ocean, the seas and the land area from Lat. 30° S. to Lat. 30° N, the southern half being the south-east Trades and the northern half the south-west monsoon. The most important fact about it is that it is a continuous horizontal air movement passing over an extensive oceanic area where steady evaporation is constantly in progress so that where the current enters the seas and flows over the land it is highly charged with aqueous vapours.

The current enters the Indian seas quite at the commencement of June and in the course of the succeeding two weeks spreads over the Arabian Sea and Bay of Bengal up to their extreme northern limits. It advances over the sub-continent from these two seas. The Arabian Sea current blows on to the west coast and sweeping over the Western Ghats prevails more or less exclusively over the Peninsula, Central India, Rajputana and north Bombay. The Bay of Bengal current blows directly up the Bay. One portion is directed towards East Bengal and Assam while another portion sweeps over Bengal (East and West) and after meeting the Himalayas gets deflected and blows as a south-easterly and easterly current right up the Ganga plain.

DISTRIBUTION

The south-west monsoon continues for three and a half to four months, viz., from the beginning of June to the middle or end of September. During its prevalence more or less general though far from continuous rain prevails throughout the sub-continent, the principal features of the rainfall distribution being as follows. The greater portion of the Arabian Sea current, the total volume of which is probably three times as great as that of the Bengal current, blows directly on to the west coast districts. Here it meets an almost continuous hill range, is forced into ascent and gives heavy rain alike to the coast districts and to the hilly range, the total averaging about 100 inches, most of which falls in four months. The current after parting with most of its moisture advances across the Peninsula giving occasional uncertain rain to the Deccan and passes out into the Bay where it coalesces with the local current.

The northern portion of the current blowing across the Gujarat, Kathiawar and Sind coasts gives a certain amount of rain to the coast districts and frequent showers to the Aravalli Hill range but very little to Western Rajputana, and passing onward gives moderate to heavy rain in the Eastern Punjab, Eastern Rajputana and the North-West Himalayas. In this region the current meets and mixes with the monsoon current from the Bay.

The part of the monsoon current over the southern half of the Bay of Bengal which advances sufficiently far northward to blow over Bengal and Assam gives very heavy rain to the low-lying districts of East Bengal and immediately thereafter coming under the influence of the Assam Hills is forced upwards and gives excessive rain (perhaps the heaviest in the world) to the southern face of these hills. The remaining portion of the Bay current advances from the southward over Bengal, is then directed westward by the barrier of the Himalayas and gives general rain over the Ganga plain and fairly frequent rain over the lower ranges of the Himalayas from Sikkim to Kashmir.

To the south of this easterly wind of the Bay current and to the north of the westerly wind of the Arabian Sea current there exists a debatable area running roughly from Hissar in East Punjab through Agra, Allahabad and part of Chota Nagpur to Orissa, where one or the other current of the monsoon prevails. In this area the rainfall is conditioned by the storms from the Bay of Bengal which exhibit a marked tendency to advance along this track and to give it heavy falls of occasional rain.

The total rainfall of the monsoon period (June to September) is 100 inches over part of the west coast, the amount diminishes eastward, is below 20 inches over a large part of the centre and east of the Peninsula and is only 5 inches in South Madras; it is over 100 in the north Assam Valley and diminishes steadily westward and is only 5 inches in the Indus Valley.

The month to month distribution for the whole of India including Burma is:—

May	..	..	3.1	inches.
June	..	..	7.9	"
July	..	..	11.2	"
August	..	..	10.3	"
September	..	..	7.0	"
October	..	..	3.3	"

Cyclonic storms are an almost invariable feature of the monsoon period. In the Arabian Sea they ordinarily form at the commencement and end of the season, viz., May and November, but in the Bay they form a constantly recurring feature of the monsoon season.

METEOROLOGICAL DEPARTMENT

Now there are two Meteorological Departments, one for India with headquarters in Delhi and the other for Pakistan with headquarters in Karachi. Both the Departments perform much the same kind of functions the more important of which are:

(a) The issue of warnings to ports and coastal districts of the approach of cyclonic storms.

(b) The issue of storm warnings by wireless to ships in the Indian seas, and the collection of meteorological data from ships.

(c) The maintenance of systematic records of meteorological data and the publication of climatological statistics.

(d) The issue to the public of up-to-date weather reports and of rainfall forecasts.

(e) Meteorological researches of a general character, but particularly regarding tropical storms and the forecasting of monsoon and winter rainfall.

(f) The study of agricultural meteorology, i.e., the study of the meteorology of soil, air and the air layers near the ground with particular reference to the growth of plants and crop production.

(g) The issue of seasonal rainfall forecasts.

(h) The issue of telegraphic warnings of heavy rainfall and frost (cold wave) mainly to Government officials (e.g., Canal and Railway Engineers, Collectors, Directors of Agriculture, etc.) and through the newspapers to the public in general.

(i) Determination of time and the issue of time-signals, also the determination of errors of chronometers for the Royal Indian and Pakistan Navies.

(j) Maintenance of seismological instruments at various centres.

(k) Issue of weather forecasts to Civil Aviators.

(l) The issue of weather bulletins to farmers broadcast by the Provincial Broadcasting stations.

1947 Monsoon

The chief features of the 1947 monsoon are: (i) Unusual delay in the setting in of the monsoon in the interior of the country; (ii) bad distribution according to time of rainfall in many parts, a period of drought during the first six weeks followed by a period of excessive rainfall; (iii) excessive rainfall in East Bengal during July and August and in East Punjab during the last week of September, resulting in disastrous floods in those regions.

Here is a summary month by month:

June.—The monsoon appeared over Malabar on 3rd June which is about the usual date, but remained confined with rather feeble activity, mainly to the coastal regions up to the Konkan during the first three weeks. In association with a depression from the north Bay of Bengal, it temporarily advanced into the Deccan the central parts of the country and South Bengal for a short period during the second week. There was again an increased activity of the monsoon in the country outside the north-west and Gujarat during the last week of June in association with a cyclonic storm from the north Bay; but the rainfall during the month was normal only in the north-east, the south Peninsula and Kashmir while it was in large defect in the north-west, Gujarat and the west United Provinces and in moderate defect over most other areas.

July.—There was a distinct improvement in the behaviour of the monsoon during July, although even through this month the drought over the north-west and Gujarat continued. Two depressions moved from the north Bay to the Central Provinces during the second and third weeks respectively and caused particularly heavy rain in south-east Bengal, the central parts of the country and the east United Provinces. The Arabian Sea branch which had strengthened considerably during the second week, became vigorous for a short spell and extended to Gujarat and east Rajputana in the third week when very heavy rain fell in the Konkan, Gujarat, east Rajputana, the southern divisions of the United Provinces and in and near Central India. The rainfall for July was therefore normal or in excess over the Peninsula, the Central parts of the country, the United Provinces and the north-east and in marked defect in Baluchistan, the North-West Frontier Province and west Rajputana, while Sind had no rain at all. Considering June and July together, the rainfall was in large defect in Gujarat, the Punjab, west Rajputana, Sind, Baluchistan and the North-West Frontier Province and in slight to moderate defect in East and West Bengal, Chota-Nagpur, Orissa, east Rajputana, west Central India, Berar, the Bombay Deccan and north Hyderabad. Elsewhere the rainfall was normal or in slight excess.

August.—During the first half of August, the activity of the monsoon was confined to the north-east, the east United Provinces and Malabar. The Peninsula, however, had its normal share of rainfall from frequent thunderstorms. The weather was dry in the north-west except for a few days of thundershowers in north Baluchistan, East Punjab and north of East and West Punjab and Kashmir during the second week. The Arabian Sea branch strengthened on the 15th and extended vigorously into

the Konkan, Gujarat, east Rajputana and the central parts of the sub-continent between the 16th and 20th. A depression formed in the north Bay on the 19th, travelled across the central regions and south Rajputana into lower Sind and intensified into a cyclonic storm over north Cutch by the 30th. It served to strengthen and maintain the activity of the monsoon over the eastern divisions of the north-east, the central parts of the sub-continent and the Peninsula and to extend it to west Rajputana, Sind, Baluchistan and East and West Punjab. During the second half of August, the rainfall was therefore in moderate to large excess over these regions and this excess made up to a large extent the deficiencies of the previous monsoon months in regions like Gujarat, Sind, west Rajputana and the south-west of West Punjab.

September.—Under the influence of the Cutch cyclonic storm of the last week of August and two Bay depressions, the first of which moved up to the east Central Provinces and the other to the west United Provinces the monsoon continued active too strong over the country outside south-east Madras, the south Deccan and the western divisions of the north-west. During the second week widespread thundershowers occurred in the south Peninsula in association with unsettled conditions over the Bay of Bengal. During the latter half of September rainfall decreased in the northern regions and increased in the Peninsula and central regions. A low pressure area moved across the Deccan into the east Central Arabian Sea by the 23rd, intensified into a deep depression which moved north-eastwards to cross the coast near Surat and finally filled up over East Punjab by the 27th. Under its influence widespread and locally heavy rain fell in the Peninsula south of Lat. 23°N between the 21st and 24th and in East Punjab and the hills of the west United Provinces between the 25th and 27th. The rainfall in East Punjab caused serious floods in all the rivers there, damaging most of the bridges and bringing all transport completely to a standstill. The filling up of this depression marked the withdrawal of the monsoon from the north-west and the central parts of the sub-continent. In association with a depression from the central Bay of Bengal which crossed the coast near Vizagapatnam and moved up to the north Bombay Deccan, widespread rain fell along the Circars coast, in Hyderabad, the east Central Provinces, the north Bombay Deccan, the north Konkan and east Gujarat during the last three days of the month. By the end of September the monsoon had more or less withdrawn from the entire sub-continent excepting the eastern divisions of the north-east.

The total rainfall for the month was in large excess in the west United Provinces, East Punjab and north of West Punjab, Sind, Rajputana, Gujarat, west Central India, Berar, the Konkan and Malabar, and in slight to moderate excess in the Bay Islands, Assam, Bengal, Chota Nagpur, east Central India, the Central Provinces, north Hyderabad and in the rest of the Madras Presidency. Elsewhere it was normal or in slight defect except in Orissa where it was in moderate defect and in Baluchistan where no rain fell. Data for Kashmir and the North-West Frontier Province are not available. Averaged over the plains of India and Pakistan the month's rainfall was 47 per cent. in excess.

Season as a whole.—Though the monsoon arrived at the usual time in June, it was very feeble during the first three weeks and did not extend into the interior of the country so that the rainfall for the month was in moderate to large defect excepting in the north-east, Kashmir and the south Peninsula. Increased activity of the monsoon and its extension into the central parts of the country, the United Provinces and the Peninsula during July gave more than normal rain over these regions while Gujarat and the north-west still continued to be in large defect. The monsoon got into its stride by about the middle of August and extending into Gujarat and the north-west gave very heavy rain over most parts of the sub-continent and made up, to a large extent, the deficiencies of the previous months. It continued active in the United Provinces, the central parts of the sub-continent and in the north-east outside Orissa during September, and the rainfall for the month was normal or in excess over these areas. It withdrew from the north-west and the centre after the 25th of September, and from the rest of the sub-continent excluding Assam and West Bengal by the end of the month. Averaged over the plains of India and Pakistan the rainfall for the season as a whole was 7 per cent. in excess.

The following table contains information about rainfall during the period June to September 1947.

SUB-DIVISION.	Period, June to September 1947			
	Actual	Normal	Departure from Normal	Percentage Departure from Normal
1	2	3	4	5
1. Bay Islands	89.2	70.8	+ 18.4	+ 26

Mean of India excluding Bay Islands, Kashmir and Baluchistan.	+ 34.5	32.3	+ 2.2	+ 7

* The sub-divisions of Assam and Bengal comprise of the following districts:—

Upper Assam.—Lakhimpur, Sibsagar, Nowgong, Darrang, Kamrup and Goalpara.

Lower Assam.—Garo Hills, Khasi and Jaintia Hills, Sylhet, Cachar, Naga Hills, Manipur and Lushai Hills.

Bengal, North.—Pabna, Bogra, Rangpur, Cooch Behar, Jalpaiguri, Darjeeling, Dinajpur, Malda and Rajshahi.

Bengal, South-East.—Bakarganj, Faridpur, Dacca, Mymensingh, Tipperah, Noakhali, Chittagong, Chittagong Hill Tracts and Tripura.

Bengal, South-West.—24 Parganas, Khulna, Jessore, Nadia, Murshidabad, Birbhum, Burdwan, Bankura, Hooghly, Howrah and Midnapore.

† Mean of India excluding N.-W.F.P. also.

Earthquakes

THE Indian continent is divided geologically and therefore physiographically into three distinct and well-defined units. The northernmost unit consisting of sedimentary and crystalline rocks comprises the great mountain ranges of the Himalayas that were upraised, geologically speaking, in comparatively recent times, and are believed to be still undergoing elevation. They constitute the sub-continent's most unstable region and are therefore the seat of the most violent earthquakes. The north-south running mountains of Burma are components of the same mountain system, the Andaman and Nicobar Islands being their southern continuation, and Burma likewise pays the same penalty for their instability.

The southward push of these mountains caused a sinking of the Himalayan foreland—the region of the Indo-Gangetic basin, now filled with alluvium. This constitutes the second unit, and on account of its proximity to the restless mountains in the north, it shares, though in a lesser degree, the effects of the Himalayan earthquakes. But it also makes its own independent contribution of such catastrophes, as we know from the Bihar earthquake of January 1934.

The triangular portion of the Peninsula proper constitutes a stable landmass—a Horst—as the geologists call it—and is the third and most stable region in the sub-continent, being comparatively free from any severe earthquakes. Only one earthquake which did any considerable damage has been recorded from this region (April 1843). From the apex of the Peninsula to Madras, however, runs a region of minor shocks, probably connected with some dislocation in the earth's crust, though there is no direct evidence of this.

These three units, then, constitute regions of decreasing intensity of earthquakes as we travel from north to south. They are indicated on the accompanying map, which is essentially the same as the one prepared by W. D. West of the Geological Survey of India.

CAUSES

It will be unnecessary to go into the origin of the individual earthquakes, but a few remarks on the main causes of these phenomena will be illuminating. While minor earthquakes may be due to volcanic activity, the major ones are almost invariably the result of movement along dislocations in the earth's crust or "faults" as the geologists call them, and thrust planes.

A number of important faults run close to the southern edge of the Himalayas and the Himalayan foot is therefore a very unstable region. A similar fault runs along the foot of the Shan Plateau in Burma while the Kyauk-kyan fault runs north and south in the Northern Shan States, and has probably given rise to earthquakes.

It may, however, be pointed out that it is only such "faults" as are still active that give rise to earthquakes. Thus the faults in the Peninsular area appear to be inert and there-

fore few earthquakes occur there. Although the immediate cause of the shocks may be movement along a fault or faults, the ultimate cause is often the rapid denudation of steep ranges, which upsets the equilibrium of the earth (Kangra, 1905) in the readjustment of which these movements occur. The same result is achieved by the slipping of large alluvial masses in deltaic areas or their uplift owing to tectonic forces (Rangoon Dec. 1927). The regions where mountain ranges, take sharp bends, being highly folded, are naturally areas of pent-up strains seeking relief and are therefore zones of great danger. The violent Quetta earthquake of 1935 and the earlier ones of Mach and Sharigh (1931) were of this nature, for these places lie near sharp bends in the Suleiman, Bugti or Kirthar ranges.

Recent Shocks.—Numerous earthquake shocks were experienced during the year 1946 in various parts of the Union of India and in Pakistan, but none of these appear to have caused any serious damage or loss of life. In the Union of India shocks of varying intensity were recorded at Digbol, in Assam (7th March, 1946), at Srinagar in Kashmir (25th February, 1946), at Subulpur in C.P. (19th January, 1946), at Dehra Dun in the United Provinces (4th September, 1946), and at Faridpur (12th September, 1946) where the hitherto calm water of the river was agitated and rose to a height of 2 feet, the phenomenon being observable for 15 seconds.

In Pakistan, earthquake shocks were recorded from Drosh, where a continuous shock was felt for 40 seconds (31st January, 1946) at Nagar Parker (Sind) where shocks lasted for 20 seconds (14th July, 1946). Shocks were also felt at Peshawar on the 26th of December, 1946, and lasted from 1 to 3 seconds.

Very little is known of the Indian earthquakes previous to the year 892 A.D. and accounts of the earlier of the recorded earthquakes are necessarily incomplete. T. Oldham has recorded the different sources of information of the earlier Indian earthquakes in his catalogue. Among the works in which records of Indian earthquakes later than 892 A.D. occur are the *Tārīkhul Khulafā* (History of the Caliphs), the *Alkāmīl-fī Tārīkh* by Ibnulathir—a historical work of the Arabians, the *Mirāt-ul-Ālam*, an unpublished work in the library of the Royal Asiatic Society of Bengal, *Baddoni* (Bibliotheca Indica), Bāber's memoirs, Khāfi Khāns *Muntakhabulqādb*, etc.

Much information is also gleaned from the journals of the *Royal Asiatic Society of Bengal* the *Philosophical Transactions*, etc. Accounts of the later earthquakes appear in detail in the records and memoirs of the Geological Survey of India, from which much of the information here given is drawn.

HISTORICAL REVIEW

The chronological occurrence of the more important earthquakes may now be given.

The earliest earthquake authentically recorded in India took place about the close of the year 893 A.D. or early in 894 A.D., when Balbul or

Balbul, an important town on the coast of the Indian Ocean was severely shaken and about 150,000 persons lost their lives. As noted by Oldham a record of this earthquake appears both in the *Tārīkhul Khulafā* (History of the Caliphs) and in *Alkāmīl-fī Tārīkh*.

The earthquake of July 6, 1505 affected Afghanistan and the northern part of the sub-continent. It is recorded that great fissures appeared in many parts and there were extensive landslips causing much damage and loss of life. In one day as many as thirty-three shocks were felt and continued for a whole month.

The Province of Kashmir was shaken by an earthquake in 1552, but no details are available.

Several earthquakes of less intensity took place between the years 1618 and 1664. On the 26th of May, 1618, Bombay experienced an earthquake in which nearly two thousand lives were lost. The accompanying hurricane resulted in the destruction of several vessels. Lakhnagar in Assam suffered an earthquake on the 7th February 1663. Shocks were felt in certain parts of eastern Bengal for a period of thirty-two days during the year 1668.

The next earthquake of great intensity which affected the sub-continent occurred in 1688, between the dates 2nd—11th May. Its effect was so serious that Samāji or Samāwāni—a town of 30,000 inhabitants sank into the ground.

Following this terrible catastrophe there was a period of comparative quiescence of about 50 years. Upper India was however shaken by an earthquake on the '14 Muharam of Aurangzib's 12th year' (Mirāt-ul-Ālam, an unpublished work of Bakhtiar Khan) that is, the 4th of June 1689. This earthquake was accompanied by a big shower of meteors, which, it is reported, falling into a lake caused its waters to overflow.

Kashmir and Attock were affected by shocks on 22nd and 23rd June 1689 respectively, but not much damage appears to have been done.

Delhi Earthquake.—A severe earthquake shook Delhi on Friday, the 17th of July 1720, at about mid-day and was accompanied by considerable damage to the fortress, Fatehpur Mosque and other property, as well as loss of life. It is reported that comparatively severe shocks continued for more than a month, so much so that the population of Delhi had to sleep out of doors during this period!

A violent earthquake accompanied by a hurricane of great intensity occurred in Calcutta and the delta of the Ganges in October 1737. It is reported that 20,000 craft plying on the Ganges were cast away, the steeple of a church sank completely into the ground, and 300,000 people lost their lives. It is further reported that 60 ton barques were blown two leagues up the river!

Bengal, Burma and the Arakan coast were affected on 2nd April 1762. In fact it is reported that the emergence of the Arakan coast from the sea is due to this earthquake, but that is an obvious exaggeration, though partial elevation of the coastal strip probably occurred. It is stated that oysters were found

attached to rocks forty feet above ground level. Near Chittagong 60 square miles of land sank permanently under water.

Several shocks of varying intensity occurred in different parts of the sub-continent—Calcutta, Kashmir, Ongole and the upper reaches of the Ganges between 13th July 1762 and 22nd May 1803, but they were not of much importance.

A violent earthquake took place on 1st Sept. 1803, affecting Mathura, Calcutta, Garhwal, Kumaon and Delhi. At Mathura the domes of several mosques erected by Ghazi Khan sank into the ground. Several villages were swallowed up in Garhwal.

This earthquake is noted for the fact that the upper portion of the famous Qutab Minar fell as a result of it, though it is stated that the Minar was also struck by lightning.

The earthquake of June 16, 1819 was one of the worst earthquakes experienced in the sub-continent. Its effect was the severest in Cutch, the chief town of which—Bhuj—was completely ruined and 2,000 persons perished. Ahmedabad, Broach, Surat and Poona were all affected.

A Town Submerged.—In the western region of Cutch the town of Sindree and the neighbouring area was submerged as a result of tidal waves. A tract 15 miles wide was raised in front of a branch of the Indus and the river had to cut a fresh channel across it. This ridge is known to the local inhabitants as Allah Band, or God's Embankment.

One very severe shock followed by minor ones occurred on 29th October 1826 and resulted in several houses falling in Khatmandu and Patan, in Nepal.

Sometime in September 1827 the fort of Kolitaran, near Lahore, was destroyed and about 1,000 persons lost their lives. It is stated that a hill falling into the river Ravi resulted in extensive floods.

There is record of at least eighty earthquakes affecting the Indian sub-continent between June 6, 1628 and the year 1839, but of these only two are worth mentioning, namely, the one that shook the vale of Kashmir on June 6, 1628 and the other that affected Nepal and the eastern and central region in the north. In Kashmir alone over a thousand persons lost their lives and for at least two months following the earthquake the number of shocks was as high as one to two hundred per day.

The earthquake of August 26, 1833 was felt in Khatmandu (Nepal) and North Bihar. In Khatmandu alone 100 houses were levelled to the ground and a similar fate overtook other places. There was continuous agitation for full 24 hours.

The earthquake of February 19, 1842 lasted for about three minutes in Kabul and affected Peshawar, Jallalabad, etc. It was very destructive at Peshawar and one-third of the town of Jallalabad was destroyed. Hot springs at Sonah became cold and the amount of water also diminished. The area affected was about 216,000 square miles. The epicentral area was probably near Jallalabad.

Two earthquakes which affected the Deccan in March and April 1843 may be here recorded, for the Deccan, being a stable landmass, is rarely affected by earthquakes of any intensity. Sholapur, Maktal, Singrurgarh, Bellary, Kurnool, Belgaum were all affected and much damage was done. This is the only earthquake known in the Deccan which caused considerable damage. The epicentre was near Bellary.

Upper Sind—Severe shocks, local in their effect, occurred in Upper Sind on 24th January 1852. Fort Kahan was completely ruined and about 350 persons were killed.

An earthquake occurred on January 10, 1869 in Assam (Cachar). The total area where shocks were felt extended 250,000 square miles.

A severe earthquake occurred in the Bay of Bengal on the morning of 31st December 1881. The radius of the area affected was about 800 miles, and the total area over which the shock was felt was in the neighbourhood of 2,000,000 square miles, most of it being sea. It was felt at Gaya, Hazaribagh, Agra, Ootacamund and Calcutt in India. The northernmost point affected was near Monghyr.

The earthquake of May 30, 1885 although comparatively not so severe, resulted in heavy loss of life and about 3,000 persons perished in Kashmir. The epicentre was a few miles west of Srinagar. The radius of felt area was 300-450 miles, the total area affected being about 110,000 square miles.

The epicentre of the earthquake of July 14, 1885 was north-west of Dacca. It was felt violently throughout East and West Bengal, but extended also into Chota Nagpur, Bihar, Sikkim, Bhutan and Assam. The area affected was approximately 230,400 square miles.

There was an earthquake on December 20, 1892, which was felt over the greater part of Baluchistan, and was connected with an old fault line that runs along the foot of the Kojak range in a N.N.E. direction. The foot of the range is marked by a depression and numerous springs which are indicative of the fault. It is interesting to note that as a result of this earthquake the area west of the fault subsided about one foot and moved southward about 2½ feet. The earthquake was, however, local in its effects.

The Worst Ever—The worst earthquake which has affected Assam and probably the greatest within historic times occurred on 12th June 1897. Stone buildings in Shillong, Goalpara, Gauhati, Nowgong and Sylhet were almost entirely destroyed everywhere and Calcutta was seriously affected. Over 1,600 lives were lost and the earthquake was felt in an area of 1,730,000 square miles. The earthquake was caused by a "movement along a thrust-plane or thrust-planes, and along secondary thrust and fault-planes, which had a maximum length of about 200 miles and a maximum width of about 50 miles." This movement was due to the relief of differential strains set up in the interior of the earth.

The district of Kangra in the Punjab suffered heavily on 4th April 1905, more particularly because the shocks occurred early in the morning

when people were still asleep. There was heavy loss of life—20,000 persons having perished. The area affected was 1,625,000 square miles. Kangra and Dharamsala were completely destroyed. The main shock was from north to south, followed by an equally severe one from south to north. The earthquake is ascribed to movement along one of the reverse faults of the Himalayas.

The earthquake of October 21, 1909 affected only the Kachhi plain, Baluchistan. Considerable damage was done and over 200 lives were lost. The radius of the felt area was about 15-45 miles. The elongated epicentre was N.W.-S.E. in direction. The earthquake was presumably due to the presence of a fault, though, the area being covered with alluvium, this is more or less conjectural.

A violent shock was felt on 8th July 1918 which affected East Bengal, Assam, Burma, and the north-west as far as Lahore. It was most strongly felt in Srimangal (Assam) where many tea-estates were ruined. The total area over which it was felt was 800,000 square miles. This earthquake was due to subsidence along a fault. It was accompanied by pouring out of sand, mud and water from fissures created in the ground.

The areas around Rawalpindi, Peshawar and Attock are regarded as very unstable, as one big fault and numerous smaller ones are located in this region. The earthquake on 1st February 1920 in the north-west Himalayas was at first thought to be connected with these faults. But it has been shown that the focus of this earthquake lay at a considerable depth—160 kms. Which is a point of interest, for it shows that the shocks were not connected with any surface features such as faults. The epicentre was situated about 25 miles north-west of Abbottabad. Some damage was done to property and a few lives were lost.

Assam was shaken by a severe earthquake on 3rd July 1930, after about 12 years of comparative quiescence. The total area affected was about 350,000 square miles. The town of Dhubri suffered considerable damage, but fortunately no loss of life occurred. This is probably due to the fact that many houses are built of 'flexible superstructure supporting light, often galvanised iron roofs' and at that time of the year many persons were not sleeping inside their houses. The earthquake was probably due to weakness at the foot of the Assam range, movement along which zone was assisted by the rapid denudation of the mountains, which presumably upset the equilibrium.

The earthquake of August 27, 1931 was one of the worst of the Baluchistan earthquakes, and about 200 lives were lost. It was preceded on the 25th by an earlier earthquake the epicentre of which was near Sharigh. The March earthquake was felt over an area of 370,000 square miles. Both these earthquakes were connected with the sharp bends of the Sulaiman, Bugti and Kirthar hills for such bends are regions of strain where earth movements are likely to occur.

The earthquake of January 15, 1934, the North Bihar earthquake, is still fresh in our minds. It was one of the most violent earthquakes that have affected the Indian sub-continent. It is estimated that over 10,000 lives were lost and several crores worth of property was damaged. Sitamarhi, Madhubani, Monghyr, Patna, Jamalpur, Muzaffarpur, Darjeeling, etc., and the Nepal valley suffered heavily. The epicentre of this earthquake ran from near Motihari through Sitamarhi to Madhubani. The total area over which it was felt was 1,900,000 square miles. The earthquake is attributed to faults underlying the alluvium. It is fortunate that it occurred in the afternoon (about 2-15 p.m.), for had it occurred at night it would have been one of the worst of such disasters ever experienced by mankind.

Quetta Earthquake.—The Quetta earthquake of May 31, 1935 was one of the latest of the more violent catastrophes that have overtaken the Indian sub-continent. This can be seen from the fact that 25,000 people perished and damage to private property, railway lines, etc., ran into several crores. The town of Quetta was practically destroyed and the area affected was about 100,000 square miles. The causes leading to these earthquakes are unknown, but the focus was probably shallow. The earthquake is probably connected with the sharp bend in the hill ranges near Quetta.

The frequency of aftershocks of the Quetta earthquake of May 1935, according to the Geological Survey of India, appears to be considerably diminished, but several sharp shocks were felt during the year in the Assam seismic area, including those of 16th January at about 18.45 hours and of 21st March at 21.45 hours, Indian standard time.

The last severe earthquake to be experienced in the Indian sub-continent occurred in the Hindu Kush on 14th November 1937, and was felt throughout the North-West Frontier Province, Kashmir, as well as largely over East and West Punjab, United Provinces, northern Sind and Baluchistan. Severe shocks were felt at Lahore, Rawalpindi, Peshawar, Kangra, Chitral and Drosh, and considerable damage was done. No loss of life was reported.

Although minor earthquakes have been reported from different parts of the sub-continent later than November 1937, none of these has caused damage or loss of life. Details of some of these are given below:

5th January 1938.—Two shocks were felt at Drosh in the Chitral District, North-West Frontier Province. Another shock of the same intensity was felt on the 7th January, but there was no damage or loss of life.

3rd May 1938.—Two shocks were felt at intervals of about five seconds at Shillong in Assam, at 10-21 p.m. The shocks lasted for about 40 seconds. There was very little damage to property and no loss of life.

7th February 1939.—Two shocks were felt at Drosh in Chitral at intervals of two seconds, but there was neither material damage nor loss of life.

In 1939.—Mention must also be made of the earthquake of 21st November, 1939, which was felt at Jammu, Mianwali, Delhra Ismail Khan, Peshawar, Rawalpindi, Srinagar, Dalhousie, Kabul, Gilgit, Skardu, etc. Its epicentre was in the Hindu Kush range being situated at 36° N. 75.5° E. Its focal depth was 200 KM.

The intensity of this earthquake at Srinagar and Gilgit was VII on the Mercalli scale. At Srinagar three shocks were felt at intervals of 10 seconds each. Cracks developed in the walls of the Observatory and other buildings in the city. At Gilgit, which suffered three shocks at intervals of 2 seconds each, boulders slipped down from the surrounding mountains and dust spread all over the valley.

During 1940 earthquake shocks were felt at Gulmarg in Kashmir, at Barmer (Rajputana) and at Bhuj and Radhanpur in the Western Indian States.

At Gulmarg two shocks of moderate intensity were felt on the 3rd August at 14.45 (I.S.T.) and cracked walls of *kutchas* houses. Shocks of moderate intensity were also felt on 8th August and 21st September, 1940, but apart from cracks in *kutchas* houses no damage was done. Barmer and Bhuj experienced a slight shock on 31st October while Bhuj had another shock on 13th November, 1940.

There was no loss of life or serious damage to property during any of these earthquakes.

In 1941.—A large number of earthquake shocks occurred in the sub-continent during the year 1941. It is unnecessary to give details of all these but particulars of three or four of the more important ones may be given.

An earthquake of moderate intensity took place on the 21st of January 1941 at 18-16 hours (I.S.T.) with its epicentre to the north of Assam. The shocks lasted for about one minute but no damage was caused.

Another earthquake occurred on the 26th June at 17-27 hours (I.S.T.) This earthquake whose epicentre lay in the neighbourhood of Nicobar Islands, was of very great intensity and was felt in Madras, Chittagong, Chandwadi, Colombo, etc. Extensive damage to buildings occurred in Port Blair where 4 persons were killed and 4 seriously injured. The duration of the shock was less than half a minute.

On the 30th of June at 23-58 hours (I.S.T.) a shock of moderate intensity was felt at Port Blair. Its epicentre lay in the neighbourhood of north Andaman.

Another earthquake occurred on the 20th of September at 8-5 hours (I.S.T.) at Quetta. The shocks lasted for about 35 seconds and caused damage to *kaccha* buildings and mud houses in Quetta.

Three earthquakes of slight to moderate intensity were recorded during the year 1942. An earthquake of slight intensity with its epicentre in Assam was felt at 16-17 hours (I.S.T.) on 22nd February in parts of old undivided Bengal and Assam. No loss of life or damage was reported. On 22nd March a quake of moderate intensity was felt at 7-38 hours at Lahore, Rawalpindi and Simla. The epicentre

was in the Hindu Kush Mountains. A third earthquake of slight intensity was felt in parts of India on the 15th of May 1942 at 22-25 hours (I.S.T.). The epicentre lay in the Hindu Kush. There was no loss of life or damage to property.

Srinagar.—Two shocks of slight intensity were felt at Srinagar in Kashmir and at Dosh in Chitral, on Feb. 6, 1943, at intervals of 30 seconds. On Feb. 9, an earthquake of slight intensity was felt in parts of Assam. Slight shocks were felt over a wide area—Rawalpindi, Muzaffarabad, D. I. Khan, Gauhati, Gulmarg and Srinagar on 9th Sept. 1943, at 10-36 I.S.T. The epicentre of this earthquake was near the Hindu Kush Mountains. An earthquake of great intensity with epicentre in Assam was felt in parts of Assam and North Bengal, on Oct. 23 at 23-54 I.S.T. Slight shocks were felt at D. I. Khan on Nov. 27 at 15.15 I.S.T.

Although a large number of earthquakes have occurred during 1944-45, with the exception of one they were all of comparatively small intensity. An earthquake of moderate intensity was felt on the 25th December, 1944, at Silchar, Shillong and Calcutta, at about 9-25 p.m., I. S. T. At Silchar shocks were felt over a period of 3 minutes and several houses suffered damage. No damage was, however, reported from either Shillong or Calcutta.

Another earthquake of slight intensity was felt at Patna, Bihar district, at 10-25 p.m. on the 18th February, 1944. Though the shocks felt were fairly sharp no damage to property or loss of life took place.

On Feb. 29, 1944, an earthquake of great intensity, with epicentre in the Maldives Islands, was felt in the Ceylon region at 22-58 I.S.T. An earthquake of moderate intensity with epicentre near the Andaman Islands, was recorded on Sept. 27, 1944. During 1944 further shocks were felt in different parts of India—Kashmir, Bihar, Assam—but none of them is of much importance.

Between January 1945 and March 1945 the reported shocks are all of small intensity and occurred in Nepal and Assam.

A severe earthquake however took place on the 25th November, 1945, and shocks were felt intermittently for a period of two hours, commencing at 3 hours 31 minutes, over a wide area in north-western India. This earthquake was due to a submarine land slide. A characteristic feature of this earthquake was the high tide which swept the coastal region of Mekran and neighbouring areas, causing heavy floods, damage to property and loss of life. A lasting visible effect of this earthquake was the appearance of two small islands about 10 miles into the sea, off the Mekran coast.

Population

THE main facts can be easily stated. The population of the sub-continent is about 389 millions (388,997,955). Out of this roughly 230 mlns. are in the Dominion of India, 80 mlns. are in the Dominion of Pakistan, and 80 mlns. in the States ruled by Princes. Out of the 80 mlns. in the States again more than 78 mlns. live in the States which have acceded to the Dominion of India and about 2 mlns. in the States which have acceded to Pakistan.

Of the total population 201 mlns. are males and 188 mlns. are females. The urban population is about 50 mlns. while the rural population is about 340 mlns. The birth-rate is about 40 per thousand, and the death-rate is about 30 per thousand.

Seven physical types can be distinguished among the people living in the sub-continent: the Turko-Iranian, the Indo-Aryan, the Scytho-Dravidian, the Aryo-Dravidian, the Mongolo-Dravidian, the pure Mongolian and the pure Dravidian. But the types are all so mixed together that it is much easier to classify the people according to the language they speak or the religion they profess.

The chief religions of the sub-continent are Hinduism, Islam, Buddhism, Sikhism, Jainism, Christianity, Zoroastrianism, and Animism. The number of Hindus are 240 mlns. of Muslims about 94.4 mlns. of Buddhists about 13 mlns. of Sikhs about 5.7 mlns. of Christians about 6.3 mlns. of Parsis about 110,000 and of Animists roughly 8 mlns. To represent the figures in the form of a ratio, Hindus form about 64 per cent. of the total population, Muslims about 27 per cent., Buddhists about 3.5 per cent., Sikhs 1 per cent., Jains 4 per cent., Christians 1.6 per cent., Parsis .03 per cent., and Animists 2.5 per cent.

According to a linguistic survey no fewer than 220 languages are spoken throughout the sub-continent. But they all fall into four main groups: the Munda languages, the Dravidian languages, the Indo-Aryan languages and the Tibeto-Chinese languages.

Literacy is very low, being about 12 per cent.

ECONOMIC SET-UP

A few more figures from the economy of the sub-continent will complete the over-all picture. The per capita income is about Rs. 65 a year which is among the lowest in the world. In the U.S.A. it is Rs. 1,406 and in Japan Rs. 281. A word of caution is, however, necessary here. The figures given above represent income in terms of money. And it is possible that real incomes, that is, the amount of goods which the money can buy, do not vary as much.

About 44 per cent. of the population was enumerated as workers in the census of 1931. Out of this about 67 per cent. was engaged in agriculture, 10.2 per cent. in mining and industry and the rest, 22.8 per cent. in trade, transport, etc.

In 1931 the average worker in agriculture earned about Rs. 86, in industry and mining Rs. 192, and in trade and transport Rs. 305 a year respectively.

Carrying the analysis of industry further, there are two types of industry, cottage industry and

large-scale industry. About 90 per cent. of the total industrial population is engaged in small scale or cottage industry, and 10 per cent. in large-scale industry. The average monthly income varies from Province to Province. In Bombay in 1936-37 the average income of a worker in cottage industry was Rs. 15, while the average earnings in organised industry was Rs. 27 a month. These figures could be taken as representative for the sub-continent as a whole.

Turning to agriculture, the amount of land available for cultivation is 362 mlns. acres. The number of workers in agriculture which comprises cultivating owners, tenant cultivators, etc., was 664 mlns. according to the census of 1931. Thus the amount of land per worker works out at 54 acres. 70 per cent. of all farms are less than 5 acres each, and a good percentage are actually less than one acre each.

We shall leave the vital statistics to a later section, and deal with the rest of the items one by one in greater detail.

PHYSICAL TYPES

As we have already stated the physical type found in the sub-continent varies considerably from place to place. No one, for instance, would confuse the main types, such as Gorkhas, Pathans, Sikhs, Rajputs, Nagas, Tamils, etc., nor does it take long to carry the differentiation much farther. The typical inhabitants of the sub-continent—the Dravidians—differ altogether from those of Northern Asia, and more nearly resemble the tribes of Malaya, Sumatra and Madagascar. Whatever may be their origin, it is certain that they have settled in the sub-continent for countless ages and that their present physical characteristics have been evolved locally. In the north-west they have been displaced by successive hordes of invaders, including Aryans, Scythians, Pathans and Moghals, and in the north-east by Mongoloid tribes allied to those of Burma. Between these foreign elements and the pure Dravidians is a borderland where the contiguous races have intermingled.

The people of the sub-continent are generally divided into seven main physical types. There would be eight if the Andamanese were included, but this tiny group of Negritos may be disregarded.

The Turko-Iranian type is represented by the Baloch, Brahui and Afghans of Baluchistan and the North-West Frontier Province. It was formed by a fusion of Turk and Persian elements, in which the former predominate. Typical characteristics are: stature above mean; complexion fair; eyes mostly dark but occasionally grey; hair on face plentiful; head broad; nose moderately narrow, prominent, and very long. The feature that strikes one most prominently is the portentous length of the nose, and it is probably this peculiarity that has given rise to the tradition of the Jewish origin of the Afghans.

The Indo-Aryan type is found in the Punjab, Rajputana, and Kashmir, and has as its characteristic members the Rajputs, Khattris, and Jats. This type, which is readily distinguishable from the Turko-Iranian, approaches most closely the traditional Aryan type which colonised the

sub-continent. The stature is mostly tall; complexion fair; eyes dark; hair on face plentiful; head long; nose narrow and prominent but not specially long.

The Scytho-Dravidian type comprises the Maratha Brahmans, the Kunbis, and the Coorgs of Western India. It is formed probably by a mixture of Scythian and Dravidian elements. This type is clearly distinguished from the Turko-Iranian by a lower stature, a greater length of head, a higher nasal index, a shorter nose, and a lower orbito-nasal index. All of these characters, except perhaps the last, may be due to an intermixture of varying degree with the Dravidians. In the higher groups the amount of crossing seems to have been slight; in the lower Dravidian elements are more pronounced.

The Aryo-Dravidian or Hindustani type is found in the United Provinces, in parts of Rajputana and in Bihar and is represented in its upper strata by the Hindustani Brahman and in its lower by the Chamar. This type is probably the result of the intermixture, in varying proportions of the Indo-Aryan and Dravidian types. The head-form is long with a tendency to medium; the complexion varies from lightish brown to black; the nose ranges from medium to broad, being always broader than among the Indo-Aryans; the stature is lower than in the latter group and usually below the average according to the scale. The higher representatives of this type approach the Indo-Aryans while the lower members are in many respects not very far removed from the Dravidians. The type is essentially a mixed one, yet its characteristics are readily definable, and no one would take even an upper class Hindustani for a pure Indo-Aryan or a Chamar for a genuine Dravidian. The distinctive feature of the type, the character which gives the real clue to its origin and stamps the Aryo-Dravidian as racially different from the Indo-Aryan is to be found in the proportion of the nose.

The Mongolo-Dravidian, or Bengali type of Lower Bengal and Orissa, comprising the Bengal Brahmans and Kayasthas, the Muslims of eastern Bengal, and other groups is peculiar to this part of the sub-continent. This type is a blend of Dravidian and Mongoloid elements, with a strain of Indo-Aryan blood in the higher groups. The head is broad; the complexion is dark; hair on face usually plentiful; stature medium; nose medium, with a tendency to broad. This is one of the most distinctive types in the sub-continent and its members may be recognised at a glance. Within its own habitat the type extends to the Himalayas on the north and to Assam on the east, and probably includes the bulk of the population of Orissa; the western limit coincides approximately with the hilly country of Chota Nagpur and western Bengal.

The Mongoloid type of the Himalayas, Nepal, and Assam is represented by the Kanets of Lahul and Kulu; the Lepchas of Darjeeling and Sikkim; the Limbus, Murnis and of Gurungs of Nepal; and the Bodo of Assam. The head is broad; the complexion is dark, with a yellow tinge; hair on face scanty; stature short or below average; nose fine to broad, face characteristically flat; eyelids often oblique.

The Dravidian type extends from Ceylon to the valley of the Ganga and pervades Madras, Hyderabad, the Central Provinces, most of Central India and Chota Nagpur. Its most characteristic representatives are the Paniyans of Malabar and the Santals of Chota Nagpur. Probably this was the original type of the population of the sub-continent, now modified to a varying extent by the admixture of Aryan, Scythian, and Mongoloid elements. In typical specimens of this type the stature is short or below mean; the complexion very dark, approaching black; hair plentiful, with an occasional tendency to curl; eyes dark; head long; nose very broad, sometimes depressed at the root, but not so as to make the face appear flat. This race, the most primitive of the Indian types, occupies the oldest geological formation in the sub-continent, the medley of forest clad ranges, terraced plateau, and undulating plains which stretch roughly speaking, from the Vindhya to Cape Comorin. On the east and the west of the peninsular area the domain of the Dravidian is continuous with the Ghats, while further north it reaches on one side to the Aravallis, and on the other to the Rajmahal hills. Where the original characteristics have been unchanged by contact with Indo-Aryan or Mongoloid people, the type is remarkably uniform and distinctive. The Dravidian is a hard labourer and is found wherever there is demand for hard manual labour whether hoeing tea in Assam, the Duars, or Ceylon, cutting rice in the swamps of eastern Bengal or doing scavenger's work in the streets of Calcutta, Rangoon and Singapore, he is recognizable at a glance by his black skin, his squat figure, and the negro-like proportion of his nose. In the upper strata of the vast social deposit which is here treated as Dravidian these typical characteristics tend to thin and disappear, but even among them traces of the original stock survive in varying degrees.

RELIGION, COMMUNITY

The main facts have already been stated. Hindus form about two-thirds of the whole population, Muslims a little less than a third; while Sikhs, Christians and Parsis, and others cover the rest. In the omnibus head 'others' go foreigners and minor elements not falling within the main divisions. Further on a table is given which shows the distribution of population by religion in the provinces of India and Pakistan and some of the chief States and States groups.

Community.		India & Pakistan (millions)	States (millions)
Hindus	Scheduled Castes	39.9	8.9
	Others	150.9	55.2
Muslims		79.4	15.0
Tribes		16.7	8.7
Sikhs		4.2	1.5
Christians		3.5	2.8
Others		1.2	1.0

Hindus largely predominate in the centre and south of the sub-continent, and in the Madras Province they are no less than 87 per cent. of the population. Hindus are in the majority in Bihar, Orissa, the United Provinces, the Central India tracts, Rajputana and Bombay. Muslims monopolise the North-West Frontier Province, Baluchistan, and Kashmir and are considerably in excess in western Punjab and eastern Bengal and Sind. They form about 34 per cent. of the population of Assam, 15 per cent. in the United Provinces.

The Sikhs are localised in the Punjab and the Jains in Rajputana, Ajmer-Merwara and the neighbouring States.

More than half of the total number of Christians reside in south India including the Hyderabad State. The remainder are scattered over the continent, the larger numbers being returned in the Punjab, the United Provinces, Bengal, Bihar and Bombay. The Parsees and Jews are chiefly residents of the Bombay Presidency.

The Christian community now numbers just 6.3 millions of persons in the sub-continent or 1.7 per cent. of the population. This constitutes an increase of 6 per cent. over the last census. Nearly 60 per cent. of Christians are returned from the Madras Province and its States, and the community can claim 40 persons in every 1,000 of the population of Madras and as large a proportion as 29 per cent. in Cochin and 32 per cent. in Travancore. Elsewhere the Christians are scattered over the larger Provinces and States, the two Punjabs, Bihar and Orissa.

Comparing with the older figures we find that the Muslims have gradually increased over the continent as a whole, but the increase is very small. The ratios in East and West Bengal remain about the same. In the Punjab as a whole the Muslim population has increased by $\frac{1}{2}$ to 1 per cent. Within the Punjab itself, however, the population has resorted. There are hardly any non-Muslims left in West Punjab, or the N.W.F.P. and Baluchistan for the matter of that, and hardly any Muslims in East Punjab. The most noticeable rise is in the Assam area which for the present purpose includes Sylhet, the rise being a consequence of migration from Mymensingh Dt. in East Bengal. In some provinces the ratio of Muslims has dropped. Sind for instance, registered a drop of 1 per cent. but now the balance may be more than restored by the recent migrations in and out of the Province. Other areas where a drop is registered are Ajmer 2 per cent. and Kashmir 1 per cent. Once again recent events may have helped to reinforce the tendency both in Ajmer and Jammu.

The proportion of Hindus shows little change over the sub-continent as a whole. There is a small rise in Delhi, Ajmer, Gwalior and Travancore, while there is a small drop in Madras ($\frac{1}{2}$ per cent. due to ex-cision of Ganjam and Koraput), Bengal ($\frac{1}{2}$ per cent.), U.P. ($\frac{1}{2}$ of 1 per cent), and Bihar, C.P., Assam and Mysore. The overall position is substantially unchanged, though recent developments have tended to make Hindu areas more Hindu and Muslim areas more Muslim in the north-west and the north-east.

In the census of 1941 religion as a census criterion was dropped in favour of the concept of community. The chief reason was that there

were a great number of tribes who were more or less assimilated towards Hinduism so that it was always difficult to draw the line of demarcation.

For this reason it was felt that enumeration by community rather than by religion would not only be simpler but actually give a more accurate picture of the whole set-up.

Here is a table which shows the number of people of some of the chief castes among the Hindus in the sub-continent. Certain of the castes are grouped together as 'scheduled castes' or 'Harijans' as Mahatma Ghandhi calls them. The scheduled castes number between 50 to 60 mins. and are one-fifth of the Hindus as a whole, or one-eighth of the total population of the sub-continent.

Baniya	2,800,000
Brahmin	14,250,000
Chamar	11,260,000
Dhobi	2,000,000
Gond	2,900,000
Hajjam	2,000,000
Jat	7,400,000
Kayasth	2,300,000
Koli	2,500,000
Kumbar	3,350,000
Kumbi	8,300,000
Lingayat	2,700,000
Mahar	3,000,000
Mahratha	6,600,000
Namasudra	2,200,000
Rajput	9,800,000
Teli	4,200,000

LANGUAGES

A note on language will not be out of place here. As we have already stated there are four main groups of languages, the Munda languages, the Dravidian languages, the Indo-Aryan languages and the Tibeto-Chinese languages.

The Munda languages are spoken by the pre-Dravidian inhabitants of the sub-continent now confined chiefly to the hills and jungles of the Chota Nagpur plateau.

The principal Dravidian languages, Tamil, Telugu, Malayalam, Kanarese and Tulu have a much wider distribution. Once they were spoken over the whole sub-continent. Now they are limited to peninsular India. The last-named language Tulu is indeed spoken in just one district in the whole sub-continent, viz. South Canara in the Madras Presidency.

The Indo-Aryan languages were introduced by the invaders coming from the north-west. But the languages have now spread over the whole of the north and have penetrated further south than the Vindhya. In the far north-west are found Baluchi, Pushto, and Brahui. Going east we find Pahari, Lahnda, Punjabi, Kashmiri, Hindi, Bihari, Oriya and Bengali. Going south

we find Rajasthani, Gujerati and Marathi. Another language which is generally grouped with Hindi is Urdu. Urdu was born in the bazaars of northern India when the Moghul soldiers came into touch with the local population. Urdu may be called Persianized Hindi and is widely spoken by the Muslims in the north and in certain areas by the Hindus as well.

The Tibeto-Chinese languages are not important as they are confined wholly to Himalayan hill tribes such as Lepchas.

The following figures are intended to give some idea of the distribution of the various Indian languages mentioned above:—

Hindi	79,000,000
Bengali	54,000,000
Telugu	26,000,000
Marathi	21,000,000
Tamil	20,000,000
Punjabi	16,000,000
Rajasthani	14,000,000
Kanarese	12,000,000
Oriya	11,000,000
Gujerati	11,000,000
Malaya'lam	10,000,000
Sindhi	4,000,000
Assamese	2,000,000
Kashmiri	1,500,000
Baluchi	600,000
Munda languages	4,000,000

URBAN AND RURAL

Passing next to the question of the distribution of population between urban and rural areas we find, as we have already stated, that the percentage of the urban population to the rural is about 13, which shows an increase of 2 per cent over the last census due partly to natural increase and partly to migration from rural areas.

The percentage of urban population ranges from 2.8 in Assam to 26.0 in Bombay which is the most urbanized of the major Provinces. The relative figures for the major Provinces and States—and States groups are given in a table further on.

India and Pakistan are so often referred to as a land of villages that one is apt to overlook the real dimensions of the urban population. It is true that only 2 per cent. of the population is urban; but then it is a 2 per cent. of 389 mins., which makes it 50 mins., that is to say, 3 mins. more than the population of Britain which is always referred to as a highly urbanized country. In the same way it is true that there are 700,000 villages in the sub-continent. But there are also nearly 3,000 urban areas, that is, areas with a population of more than 5,000. Of these urban areas 50 are cities, towns with a population of 100,000 and more. In 1931 there were only 38 cities which means that the number of cities had risen by 19 by 1941. Only one place Tinnevely-Tamalecottah has been reduced from the status of a city to that of a town.

The new cities are Surat, Jamshedpur, Jullunder, Kolar, Peshawar, Coimbatore, Trivandrum, Bikaner, Hyderabad, Jodhpur, Calicut, Bhatpara,

Aligarh, Ludhiana, Shahjhanpur, Saharanpur, Gaya, Jhansi, Bhavnagar, Hyderabad (Sind).

City.	Population 1941.	Population 1931.
Calcutta with Howrah ..	2,488,083	1,388,644
Bombay	1,489,883	1,161,383
Madras	777,481	647,230
Hyderabad	739,159	466,894
Delhi	521,849	347,539
Lahore	674,659	429,747
Ahmedabad	591,267	310,000
Bangalore with Civil and Military Station ..	406,760	306,470
Lucknow	387,177	274,659
Amritsar	391,010	264,840
Karachi	359,492	247,791

Hyderabad (Sind)	127,521	96,021

The population of the cities as a whole increased from 9.1 mln. to 16.5 mln., a rise of 81 per cent. which is in notable contrast with the 15 per cent. rise in the sub-continent as a whole.

It is interesting to note how the urban element has gradually risen over a number of years from 1891. Here is a short table which makes the trend quite clear.

Year	Rural	Urban.
1891	90.5	9.5
1901	90.1	9.9
1911	90.6	9.4
1921	89.8	10.2
1931	89	11
1941	87	13

The United Provinces shows the largest accretion in number to the city category with the Punjab (East and West) coming second. Over a third of the new names come from these three Provinces. The growth of Rawalpindi is conspicuous as a military centre, while industrialism is chiefly responsible for the growth of Sialkot in West Punjab and Jamshedpur in Bihar.

In a relative sense the United Provinces has always had more large towns than any other Province. Bengal (East and West) presents a very interesting contrast in this respect. It has the highest population but the least number of urban centres. It has only one metropolis—Calcutta, only one city practically suburban to Calcutta—Howrah, and one new arrival—Bhatpara.

On any showing both India and Pakistan are in for urbanization on a big scale, which will affect more pronouncedly really large towns than the smaller ones. Much of this urbanization is attended by the usual evils of lack of control, squatters' freedom and general squalor. The approach to some of the fast growing towns like Delhi or Calcutta are hideously defaced by brick-fields, squatter's camps and general riff-raff. The matter of the spreading town cries aloud for a plan.

The rate of growth is much higher in the larger units than in the smaller ones. Reasons: First, industrialization which has for instance largely created Coimbatore as a modern phenomenon. The case of Coimbatore is interesting as it is the first striking instance of a large town based on electric and not steam power.

A contributory cause of the growth of large towns is the fact that city life has begun to appeal to the middle and lower middle classes in the sub-continent. Accommodation which is within its means and to its taste is now available. There are the huge blocks of flats with such amenities as electric lights and running water which have altered the face of cities like Bombay and Calcutta. Other city features like trams, buses, cinemas also appeal. Education is not only better in the towns it is sometimes not available in the rural areas. Thus housing, transport, and the sheer conveniences of life in the city have led to a steady stream of migration into the larger towns of the sub-continent. During the war, owing to the enormous demand for manual and clerical work, the stream of migration became a flood which overwhelmed cities like Bombay, Calcutta and Delhi. The present population of Bombay is estimated at three millionst while that of Calcutta at four millionst. After London, New York and Moscow, Calcutta was the largest Allied capital during the War.

LITERACY

We can now wind up the first half of this survey with a short note on the literacy position.

Literacy by which was meant, until the 1931 census, ability to read a letter and write a reply was in the 1941 census expanded to provide for a record of partial literacy, i.e. ability to read only. According to the latest census, 120 out of every 1,000 of the population are now literate as against 95 ten years ago and less than 40 half a century ago. The increase in the sub-continent as a whole amounted to 70 per cent. over 1931 of which the male increase was 60 and the female 150. The reason for the disparity is that in the case of women the field for improvement was much bigger.

For the Provinces the increase was 80 and for the States 70, with the sex components more or less the same. The most remarkable figures are returned by the old undivided Punjab which professes a 140 per cent. increase to a present literacy of 13. This figure covers 110 increase for males and no less than 390 per cent. for females. In the U.P. the literacy figure is below that of other areas and all major Provinces and is still only 8 per cent. for the whole population but the decade increase is 80 per cent. all over, 70 for men and 170 for women. Even now, however, the percentage of literacy among women is only 2.

Bombay leads the Provinces, as it did in 1931, and shows also an increase of over 100 per cent. to produce a 30 per cent. literacy for males and 9 per cent. for females. Old undivided Bengal follows with 16 per cent. all over, representing 25 for males and 7 for females. The percentages are on the total population.

These figures are left far behind by Travancore and Cochin, which show a literacy figure over the whole population of 45 per cent. representing 56 for men and 34 for women. The latter figure is four times the highest from any Province of India or Pakistan.

The primary reason for the growth of literacy is the great expansion in education which took place all over the sub-continent between the years 1920 and 1930 and specially the general strengthening of the primary education side. It is the fruit of this expansion which has shown itself so strikingly—in the census of 1941. A second cause but a minor one of the rise in literacy is the anti-illiteracy drive among adults which was so prominent a feature of the 1930-1940 decade. The fact must be bluntly stated, however, that the quality of literacy attained, through the adult literacy movement is very low.

There is no doubt that the diminution in illiteracy revealed this time will be continued at future census and at an accelerating rate. A democratic system and a mainly illiterate population go ill together and in some ways are very nearly a contradiction. There is a great stirring of consciousness among the people themselves in this regard. More and more people are feeling the need for literacy either for themselves or more probably for their children and despite obvious difficulties of the position this want will insist on being answered in some form or other.

VITAL STATISTICS

The main facts have already been stated. The total population of the sub-continent is 388,997,955. Out of this 201,025,728 are males and 187,972,229 are females. 339,301,902 live in rural areas, and 49,696,053 in urban areas. Out of the 339,301,902 who live in rural areas 173,638,089 are males and 165,663,813 are females. And out of the 49,696,053 who live in urban areas, 27,387,637 are males and 22,308,416 are females.

VITAL STATISTICS
The following table shows the distribution of population (based on 1941 figures) in the Provinces of India and Pakistan:—

	Area in sq. miles.	Total population.	Density per sq. mile.	Male	Female	Rural	Urban
India	1,055,621	297,542,000	246				
Madras	126,166	49,341,810	391	24,557,143	24,784,667	41,476,927	7,864,883
Bombay	76,443	20,349,840	272	10,817,333	10,032,507	15,437,671	5,412,169
W. Bengal	28,215	27,196,453	751	11,493,305	9,703,148	16,582,503	4,613,860

VITAL STATISTICS—contd.

States.—These are the corresponding figures for some of the major States or States groups which have acceded to the Dominion of India :—

	Area in sq. miles.	Total population	Density per sq. mile.	Male	Female	Rural	Urban
Assam States	12,408	725,655	58	337,951	387,704	600,949	134,706
Baroda	8,236	2,855,010	345	1,472,909	1,382,101	2,135,738	710,272
Central India	52,047	7,506,437	144	3,854,781	3,651,646	6,625,983	880,444
Cochin	1,493	1,422,875	953	696,889	725,986	1,155,039	267,816
Gujarat and Kolhapur	10,870	2,785,428	257	1,405,571	1,379,857	2,267,347	518,081
Gujarat States	7,352	1,435,702	198	755,388	703,314	1,336,856	121,846
Madras	82,008	4,006,159	154	2,116,568	1,889,591	3,456,183	549,976
Muslims, including Feudatories	26,238	4,021,616	49	2,129,872	1,891,744	3,607,181	414,435
Nagpur States	1,602	498,754	311	243,166	255,588	402,155	96,599
Mysore	29,458	732,140	249	376,318	355,822	598,294	134,606
Rajputana States	132,559	13,670,208	103	7,169,527	6,500,681	11,728,511	1,941,697
U.P. States	7,662	6,070,018	792	3,045,102	3,024,916	5,378,993	691,025
Western India State	1,760	928,470	528	491,117	447,293	784,302	114,168
Madras	37,894	4,904,136	129	2,477,928	2,426,228	3,750,428	1,153,730
Kanpur	8,650	512,069	59	249,183	262,886		
Kashmir	3,788	213,586	56	108,763	104,818		
Cochin Behar	1,321	640,842	485	340,981	299,861		
Tripura	4,049	513,010	127	272,025	240,985		
Mizoram	4,034	990,977	246	494,210	496,767		
Karnataka	645	378,380	587	202,155	176,225		
Patilkot	637	199,253	312	108,396	90,854		
Patilal	5,942	1,936,259	326	1,066,105	870,154		
Jind	1,299	361,812	279	193,004	168,808		
Nabha	947	340,044	359	184,493	155,551		

And here are the figures for the States which have acceded to the Dominion of Pakistan :—

	Area in sq. miles	Total population	Density per sq. mile	Males	Females	Rural	Urban
Bahawalpur	17,494	1,341,209	71	737,474	603,735		
Khatpur	5,989	305,787	51	168,043	137,744		
Khat	53,995	253,305	5	138,500	114,715		

And here are the figures for Hyderabad: area, 82,313 sq. miles; Pop.: 16,333, 534; Urban: 2,194,294; Rural: 14,144,240; Males: 8,346,775; Females: 7,591,759; Density: 198.

The position has to be interpreted from a to form new administrative units. Here are the figures for the new set-up :—

	Area in sq. miles	Total population	Density per sq. mile	Males	Females	Rural	Urban
1. Madhyabharat	47,000	7,000,000	149	3,500,000	3,500,000		
2. Rajasthan	29,000	4,400,000	152	2,200,000	2,200,000		

Some others big and small have coalesced.

A word of explanation about the sex ratio is needed. The present position is this: In the sub-continent as a whole there are 940 women for every 1000 men. Reckoning by the community, there are 902 women for every 1000 men among the Muslims, and among the Hindus 944 women for every 1000 men. The only Provinces in which there is an excess of women over men are Madras and Orissa, though the Central Provinces can be added if Berar is excluded.

All these figures show that the proportion of women to men has continued to fall from the beginning of the century. This shortage of women is peculiar to the Indian sub-continent, table in the mortality conditions of men and women in the sub-continent. For ages of 11 and beyond the female death rate exceeds the male, and the margin of excess increases with the advance of years. These conditions should be sufficient explanation for the relative scarcity of women in the sub-continent. The higher mortality of women may be the result of the more strenuous labour that the women are called upon to do. It is also a fact that adverse living conditions like poverty, ignorance and the absence of usual aids to health tell more heavily on women than on men.

DISTRIBUTION BY COMMUNITY

A second way of sorting the population is by religion or community :—

India	Total population	Hindus		Muslims	Christians	Sikhs
		Caste	Scheduled			
Madras	49,341,810	34,791,320	8,068,492	3,806,452	2,001,082	418
Bombay	20,419,840	14,700,242	1,855,148	1,920,368	338,812	8,011
W. Bengal	21,108,157	11,330,930	1,555,148	3,301,696	160,596	15,087
U. P.	55,020,617	34,094,511	11,717,158	8,416,368	131,357	232,445
E. Punjab	12,169,094	23,173,890	4,540,379	4,716,814	24,693	13,213
Bihar	26,340,151	9,880,583	3,051,413	1,783,697	38,200	14,996
C.P. and Berar	15,813,581	2,901,083	3,051,413	1,146,433	33,724	3,742
Assam	7,404,091	5,594,532	1,238,171	1,146,801	26,984	232
Orissa	12,082,431	3,748,232	1,222,693	80,800(?)	10,494	16,137
Delhi	917,939	378,081	25,740	14,730	3,805	867
Amer-Merwara	583,693	103,093	25,740	3,309	216	—
Coorg	168,728	5,267	8,127	8,005	1,032	744
Panjab-Piploda	5,267	8,127	8,005	8,005	1,032	744
Andamans and Nicobars	33,768	8,127	8,005	8,005	1,032	744

Pakistan	Total population	Hindus		Muslims	Christians	Sikhs
		Caste	Scheduled			
W. Punjab	18,746,000	?	?	18,310,000	4,26,000	?
N.W.F.P.	3,585,067	...	...	2,788,797	5,426	...
Sind	4,535,085	...	...	3,208,325 (?)	13,232	...
Baluchistan	501,631	...	...	435,930 (?)	2,633	...
E. Bengal	41,949,710	11,736,027	...	29,481,099	56,882	1,197

AGE GROUPING

A third way of grouping the population and one which is very important from an economic point of view, is by age. The table below shows the age distribution of 10,000 males and females of the population of the sub-continent by 10-yearly age-groups at the 1931 census.

Age-groups	1931		1921	
	males	females	males	females
10-20 ..	2,086	2,062	2,087	1,896
20-30 ..	1,768	1,856	1,640	1,766
30-40 ..	1,431	1,351	1,461	1,839
40-50 ..	968	891	1,013	967
50-60 ..	561	545	619	606
60-70 ..	269	281	347	377
70 and over ..	115	125	160	180
Mean age	23.2	22.8	24.8	24.7

If we were interpreting the same figures as a ratio we should set out the position as follows.

Age-Period	Male	Female
1-4 ..	14.7	15.9
5-9 ..	13.2	12.8
10-14 ..	12.0	11.9
15-19 ..	8.9	9.4
20-24 ..	9.1	9.8
25-29 ..	8.6	8.7
30-34 ..	7.9	7.6
35-39 ..	6.4	5.9
40-44 ..	5.5	5.0
45-49 ..	4.2	3.9
50-54 ..	3.3	3.2
55-59 ..	2.3	2.3
60-64 ..	1.8	1.9
65 ..	2.1	2.3

The table makes it quite clear that the population of the sub-continent is a very young population. As high as 39.9% of males and 40.6% of females is in the age-group 0-14. For purposes of comparison the percentages for England and Wales may be given, which are 25.2% and 22.6% respectively. At the other end of the scale, we find that only 9% of males and 9.7% of females are 50 and above. The corresponding figures for England and Wales are 22.8% and 23.6% respectively.

Another point which must be noted is the very low mean age—23.2 for males, and 22.8 for females.

One reason for grouping the inhabitants of a country by age is to show the size of its working population, that is to say, that part of the population which is engaged in producing wealth. Other things being equal, the larger the size of the working population the bigger the national dividend.

Now if we assume the working age of the population in the Indian sub-continent is from 15 to 60 about 44% of the aggregate population could be classed as workers. 'Aggregate' because in India or Pakistan women in the lower classes at any rate usually join the men-folk in their work and so can be classed as workers. In the rural areas this practice is probably universal. At the 1931 census, for instance, it was found that for every 1,000 men there were as many as 465 women workers. But the percentage of the working population high as it is, actually less than the percentage for England and Wales which is 47%. If we take males only the disparity is still higher—57% as against 63%. It becomes higher still, if we extend the working age of the English people to 64—68%. Thus in the race for production India and Pakistan are handicapped as against a European country because of the age composition of their population.

The national dividend is influenced not merely by the percentage of the working population but by the working period. Consider the following facts, for instance: Out of every 1000 males born in the sub-continent 541 survive to enter the working period. Out of these 541 again only 14 survive to reach the age of 60. So out of a theoretical maximum of 45 years of working life a person of 15 in India can expect to get only 30, while a European can look forward to 40 years of working life. The whole argument, in short, leads to two conclusions: One, the Indian sub-continent has a smaller proportion of people in the working age, and for every person reaching the working age the working period which is available is also much shorter.

INCREASE IN POPULATION

So far we have given what may be called an instantaneous picture of the community, Indian as well as Pakistanian, that is to say, a picture which affords some knowledge of numbers and conditions, valid only for a particular point. But a community is subject to change; there are drifts and currents in national life and they must be defined and measured. Thus census have a second aspect. They are not only a source of statical

Population.

knowledge but one item in a consecutive series which afford the necessary data for forecasting future trends and developments. Among the more important of these data is the one relating to the population trends in a country.

In 1931, the population of British India (now includes India and Pakistan) was 256.8 mns. and that of the States was 81.3 mns. making a total of 338.1 mns. The present figures which have already been given are roughly 230 for India, 80 for Pakistan, and 80 for the States making a total of 390 mns. people in all. That is to say during the last 10 years the population of the sub-continent as a whole has risen by about 50 mns., 39 mns. in India and Pakistan, and 11 mns. in the States.

The following Table gives the trend of population since 1881, and the percentage increase:

Year	Population	Increase	Percentage
1881	253,896,330	47,733,970	23.2
1891	287,314,671	33,418,341	13.2
1901	294,361,056	7,046,385	2.5
1911	315,156,396	20,795,340	7.1
1921	318,942,480	3,786,084	1.2
1931	352,837,778	33,895,298	10.6
1941	388,997,955	50,878,801	15.0
Total 1881 to 1941		149,820,249	39

Provinces and States—The following Table shows how the population of some of the major Provinces has risen from 1891 to 1941:

Province	1891	1901	1911	1921	1931	1941
Madras	33,732,664	36,258,955	39,129,111	40,126,512	44,205,243	49,341,870
Bombay	15,085,427	15,319,405	16,130,666	16,012,342	17,992,053	20,849,840
Bengal E. and W. ..	39,097,023	42,149,154	45,491,056	46,703,702	50,115,548	60,306,525
U.P.	46,501,064	47,312,031	46,806,203	45,374,658	48,408,482	53,020,617
Punjab E. and W. ..	18,652,614	19,942,715	19,579,047	20,685,478	23,580,864	28,418,819
Bihar	28,200,818	28,250,853	29,347,372	29,023,240	32,367,909	36,340,151
C.P. and Berar ..	12,946,195	11,843,115	13,758,993	13,741,952	15,323,058	16,813,584
Assam	5,364,240	6,579,387	7,450,657	8,622,791	10,204,733	11,813,584
N.W.F.P.	1,857,519	2,041,534	2,196,933	2,251,340	2,425,076	3,038,067
Orissa	6,709,813	7,127,077	7,582,362	7,351,414	8,025,671	8,728,544
Sind	2,875,100	3,210,910	3,513,435	3,279,377	3,887,070	4,535,068
Baluchistan	482,246	582,106	414,412	420,648	463,508	501,631
Almer-Merwara ..	420,127	440,232	440,232	446,842	506,964	583,603
Andamans and Nicobars ..	15,609	24,649	26,459	27,086	29,463	33,768
Coorg	173,055	180,607	174,976	163,838	163,327	168,726
Dehi	373,136	405,819	413,851	488,452	636,246	917,939
Panth-Piploda ..	4,093	3,544	4,483	4,406	4,545	5,267

And here are the figures which show the population trends in some of the major States and States groups:

States and States groups	1891	1901	1911	1921	1931	1941
Baroda	2,422,731	1,958,445	2,036,736	2,131,755	2,448,283	2,855,010
Cochin	722,906	812,025	918,110	979,080	1,205,016	1,422,875
Gwalior	—	3,073,651	3,235,303	3,193,176	3,523,070	4,006,159
Hyderabad	11,537,040	11,141,142	13,374,676	12,471,770	14,436,148	16,338,534
Kashmir	2,543,952	2,905,578	3,158,126	3,320,518	3,646,243	4,021,616
Mysore	4,943,604	5,539,399	5,806,193	5,978,802	6,557,302	7,329,140
Travancore	2,557,736	2,952,157	3,428,975	4,006,062	5,095,973	6,070,018

U.P. States ..	938,705	894,569	889,055	816,467	856,497	928,470
Western India States ..	4,228,408	3,390,619	3,680,053	3,723,170	4,220,595	4,904,156

Two Swarming Areas—These tables speak for themselves but a few explanatory notes may be added. The population of the sub-continent has risen by 50 mlns. in a decade. This is more than the entire population of any European country except Russia or Germany. And in the fifty years preceding the census of 1941 the population of the sub-continent increased by 110 mlns. or 39%. We realise something of the enormity of the whole problem when we remember that the aggregate population of France and Germany is only slightly greater than 110 mlns. But large as these figures are it still remains true that the population of the Indian sub-continent expanded less rapidly than that of some other countries. Here are two corresponding figures. The increase for Europe minus Russia was 60%, and for Japan it was as high as 113%.

A second point which must be noticed is that the increase in the 1931-1941 decade is not uniform all over the sub-continent, though a greater rise than in the 1921-1931 decade is universal. Coming back to the 1941 census, we find that the rate of increase is greater in the north than in the south, and two areas stand out as peaks, as it were, the west and the north-west, and the east. In fact, the Punjab and East Bengal form two swarming areas. This is no matter for surprise. For, where there is an empty country with the means for filling it the country gets filled up very quickly. We see much the same process going on in Bikaner and Bahawalpur. In every case the means for filling the country came from irrigation projects. This, of course, does not apply to East Bengal, but East Bengal too is a young country from a habitation point of view.

Another reason for the difference between the north and the south may also be noted. The boycott of the 1931 census was more effective in the north generally than in the south, so the rates of increase in the 1941 census are correspondingly higher in the north than in the south. The present figure for Ahmedabad, for instance, bears no relation to the 1931 determination. Not only were the 1941 census not boycotted people everywhere were very anxious that they should not be left out; they were much more census-conscious, so to say, than ever before. The reason for this active interest was that communal considerations were becoming important. In certain areas every Hindu and Muslim went to great trouble to see that he was not left out. The effect of this attitude is once again more noticeable in Bengal and Bihar, for instance, than in Madras and Mysore.

BIRTH-RATE

The size of the population depends upon a country's birth and death-rates, that is by the number of births and of deaths per thousand of its population. The following table shows the birth and mortality rates from 1920 to 1940:

Year	Birth-rate	Death-rate	Infant mortality
1920	33	31	195
1921	32	31	198
1922	32	24	175

Birth-Rate—Contd.

Year	Birth-rate	Death-rate	Infant mortality
1923 ..	34	25	176
1924 ..	33	28	180
1925 ..	32	24	174
1926 ..	33	25	180
1927 ..	33	23	167
1928 ..	34	24	173
1929 ..	33	24	178
1930 ..	33	25	180
1931 ..	35	25	179
1932 ..	34	22	160
1933 ..	36	23	171
1934 ..	34	25	187
1935 ..	35	24	164
1936 ..	36	23	162
1937 ..	35	22	162
1938 ..	34	24	167
1939 ..	34	22	156
1940 ..	33	22	160

Let us take the question of the birth-rate first. The officially recorded birth-rate for 1940 was 33, but this is known to be an underestimate, for in a backward country like India or Pakistan about a third of the births are likely to go unregistered, so that we would not be far wrong if we assumed that the actual birth-rate is in the neighbourhood of 47 or 48 per thousand.

This is the highest birth-rate in the world and only about four points less than the highest possible—52. There are a few countries including Palestine whose birth-rate is about the same but they are all unimportant. The birth-rate of the more important countries are far below 40 and in the most advanced of them the birth-rate is as low as 20 or even 15. If we restate the same position in absolute numbers about 1,250,000 babies are born every year in the sub-continent. Only a third of them live to be 30, while a fourth of them die before they are one year old.

Reproductive Capacity—Now the birth-rate of a people depends among other things on three important factors: the number of women of child-bearing age in the community, the number of women of child-bearing age who are married, and the age at which the women generally marry, for fertility rate is higher in the first half of the child-bearing age than in the second half.

Let us see the position statistically first. The following table gives the proportion of women in each group per 10,000 women according to the 1931 census:

Ages	1931 per 10,000	1921 per 10,000
5-9 ..	1,280	1,494
10-14 ..	1,124	1,081
15-19 ..	938	815
20-24 ..	985	881
25-29 ..	868	885
30-34 ..	750	833
35-39 ..	595	565
40-44 ..	505	621
45-49 ..	389	346

If we assume that the reproductive period of Indian women ranges from 15 to 45 we find that for every 10,000 women there are about 5,036 women of child-bearing age, 40.47%. To convert this into absolute numbers, there were about 75.4 mlns. women in the sub-continent in 1931 in the age group 15-45 compared with 79.9 mlns. men. Women fell short of men by about 4.5 mlns.

In a number of European countries, on the other hand, England for instance, women are always in excess of men. The excess of women over men in this particular age-group in England is about 1.7 mlns. At first sight therefore the sex ratio in the sub-continent, would appear to be unfavourable from the reproduction point of view. But actually the sex ratio has not affected reproductive capacity because the men in the sub-continent find their wives from a much wider age-group than elsewhere and are not averse to marrying much below their age.

Again we have assumed the reproductive period of Indian women to be from 15-45. Actually, there is a great deal of evidence to show that the period starts at least two years earlier at the age of 13, but then it also ends two years below 45 and so it is not necessary to make any adjustments as the variations at either end cancel each other. In any case, we have no figures except for the five year age periods on which to base any calculations.

Incidence of Marriage—A second factor which influences reproductive capacity is the number of women of child-bearing age who are married.

Here is a table which gives the proportion of married women per thousand women at the same ages:

Ages	1931 per thousand	1921 per thousand
15-20 ..	818	771
20-25 ..	886	877
25-30 ..	869	863
30-35 ..	824	797
35-40 ..	703	727
40-45 ..	627	599
45-50 ..	473	527

In 1931, that is to say, about 49.3% of Indian women were recorded as married. The corresponding figure for England and Wales was 41.3. The reason for the disparity between the figures for the Indian sub-continent and those for England is that there are more men than women in the Indian sub-continent, and marriages are mostly arranged by parents so that it is rarely that a marriageable girl goes unmarried. Also in the Indian sub-continent people marry very young. The following table gives the number of unmarried women for every 1,000 women in the different age-groups:

Age	Unmarried per 1000
0-4	969
5-9	802
10-14	609
15-19	148
20-29	44
30-39	17
40-60	11
60 and over	10

Only 1% of the women are unmarried by the time they reach 60 which compares favourably with 13.6% in England and Wales. Notice the fall from the age-group 15-19 to the age-group 20-29. By the time they are 29 almost all marriageable girls are married.

Fertility Rate—There is yet another point which has to be taken into account when calculating the reproductive capacity of people. In the child-bearing period itself the frequency of child-bearing varies from age to age. The earlier years, and 15-25 particularly, are markedly more fertile than the later ones in the reproductive span, so that distribution by age of reproductive women is as important as the proportion which the women in the aggregate bear to the total population. When we look up the appropriate table we find that the first half of the productive period contained as many as 60% of women of child-bearing age. The corresponding figure for England is 53.5%.

To sum up, about 80% of the women in the age-group 15-45 are married and of these 64% are in the age-group 15-30 when the rate of fertility is very high.

That brings us to the last of the elements which go to make up reproductive capacity—the rate of fertility. Fertility rate is different from birth-rate. Birth-rate is the number of children born per thousand of a people. Fertility rate is the frequency of births among the women. The fertility rate simply shows how prolific the women are.

The only data which we possess for calculating fertility rate for the sub-continent relate to the States of Cochin and Travancore but then these

data can be taken as representative for the sub-continent as a whole. The following table gives the fertility rates for married women in Cochín and also, for purposes of comparison those for married women in England and Wales:—

Age period	Cochin	England and Wales
15-19	224	372
20-24	249	267
25-29	253	187
30-34	246	127
35-39	182	81
40-44	120	33
Total Fertility	6,370	5,335

* Thus we find that while the disparity between the birth-rates in the Indian sub-continent and in England is very great, the disparity between the fertility rates is very narrow. The average Indian woman leaves about 6 children behind her while the average English woman leaves about 5. Contrary to general impression the Indian woman is not very much more fecund than the English

woman. And if we consider certain national habits like the use of contraceptives, for instance, it may turn out that the Indian woman is actually less fecund than the English woman.

A second point which we notice is that the fertility rate among English women varies more sharply from age-group to age-group than the fertility rate among Indian women. The fertility rate among English women belonging to the first age-group, is more than ten times that among English women belonging to the last age-group, while the corresponding ratio for Indian women is only 2.

DEATH-RATE

So far we have been concerned with the question of birth-rate and allied problems. But the population of a country depends not only on its birth-rate but also on its death-rate. The death-rate indeed affects the aggregate population in a double sense. In the first place it reduces the number of people who are living, and secondly it reduces future accretion by killing off potential mothers. The effects of mortality must therefore be studied in both these aspects.

The death-rate and, the infant mortality rate, have already been given in a previous table. For purposes of comparison the death-rate for the sub-continent may be set out once again along with the death-rates for a number of other countries:—

	1911-13	1921-25	1926-30	1931-35	1936	1937	1938	1939
Indian sub-continent ..	29.9	26.0	23.5	24.3	22.6	22.4	21.3	21.1
Germany	14.8	13.3	11.2	11.8	11.8	11.7	11.6	12.3
France	19.7	17.2	15.7	16.8	15.3	15.0	15.4	15.3
U.K.	14.2	12.4	12.5	12.3	12.3	12.8	11.8	12.2
U.S.A.	14.1	11.8	10.9	11.8	11.6	11.3	10.6	10.6
Australia	10.9	9.5	9.0	9.3	9.5	9.4	9.6	9.9
Japan	20.7	21.7	17.8	19.3	17.6	19.1	17.6	17.6

Even as it is the death-rate in the sub-continent is high. But these figures are really not comparable for while vital statistics are very accurate in every one of the countries cited above they are notoriously defective in the Indian sub-continent. It is difficult to say how faulty the figures are but according to one estimate an average death-rate of 33 would be near enough. Assuming that is so we have a death-rate in the sub-continent which is nearly double that of Japan, a little more than double that of France, and over three times that of Australia.

If instead of converting the figure into a ratio we simply put down the total number of deaths in India and Pakistan, we will get some idea of the enormous scale of Indian mortality. The average recorded deaths per year in the sub-continent from 1921-1938 were 6.40 mns. But the total actual deaths were probably in excess of 8 mns. Compare this with the scale of mortality in Europe. The total number of deaths per year in Europe minus Russia was 5.28 mns. This means that in the years between 1921 and 1938 about 64 mns. more people died in India and Pakistan than in Europe minus Russia. Or

to put it differently about the same number of people died in the sub-continent between 1921 and 1938 as the population of Britain and Canada taken together.

Distribution of Death-Rate:—Not only is the death-rate in the sub-continent high but the distribution of death according to age and sex is not very favourable either. Consider the figures for deaths per 10,000 of either sex given in the table below:

Age group	Male	Female	Female as percentage of male
0-1	1,844	1,671	95.5
1-4	376	346	92.0
5-9	100	99	99.0
10-14	63	63	100.0
15-19	89	106	119.0
20-29	95	119	125.3
30-39	126	113	105.6
40-49	187	163	87.2
50-59	318	283	89.0
All ages ..	236	119	..

As we have already said the death-rate is high all along the scale. It is very high among first year infants—about 20% of them die every year, 60% of them in the first week after birth. In the second age-group the death-rate comes down but compared with European standards it is still very high. Then from 5 year onwards it continues to fall till the 10-14 age-group is reached when it starts rising again till it reaches the climax in the 50-59 and over group.

Now considering the same figures from the point of view of sex distribution we find that during infancy and childhood the female death-rate is higher than the male. In the 10-14 age-group it is about equal. Then the female death-rate begins to overtake the male. In the age-group 15-29 the female death-rate is higher. Then it begins to fall below that of the male, and thenceforth is always lower than the male.

Thus we find that the odds against women are specially high in the reproductive age which means that maternal mortality is abnormally high in the sub-continent. There are no records for maternity mortality for the sub-continent as a whole. But two enquires, one made in 1933 and the other in 1936 reveal that the average mortality rate might be in the neighbourhood of 24 per thousand births. That is to say, the maternal death-rate in the sub-continent was about eight times as high as that in England and Wales.

Effect on Standard of Living:—The incidence of mortality in the sub-continent specially the distribution by age greatly hampers economic advancement. The reason for this will be clear if we follow the progress of a group of 1,000 newly born babies and see what happens as they move from infancy to old age through youth and manhood. The following table shows how many of a group of 1,000 babies survive through successive stages to contribute to the country's economic wealth.

Age	Indian sub-continent		England	
	Males	Females	Males	Females
1	751	758	928	945
5	692	628	901	920
10	565	503	890	911
15	541	568	883	904
20	512	528	872	894
25	478	479	858	881
30	430	427	844	868
35	395	373	829	853
40	346	318	803	837
45	294	264	784	817
50	243	215	750	790
60	149	132	636	702
70	70	66	434	531

Interpreting the figures we find that about 250 people have died before the first year is reached. By the age of 5 another 150 have dropped out. With the age of 20 when a person is mature enough to take a hand in the economic business of the country only about half are left. And in the age-group 25-50 which period represents the

major part of a man's working life there are on an average only about 360 people to shoulder the whole burden.

If we now turn to conditions in England we see how different the picture is. After the first five years are over, the loss is insignificant. And in the age group which is most crucial for the present purpose there are as many as 750 men out of the original 1,000 to enter into the business of production.

Applying the same analysis to the incidence of mortality among women about 450 die before they enter the reproduction stage, and of those who enter the reproduction stage only 346 live through the whole of it. Second, the heavy mortality among women in the child-bearing age leads to a certain scarcity of partners for married life. One way in which this difficulty is circumvented is by forming unequal partnerships, unequal in the sense that the difference in age between a husband and wife is very great. Though this situation leaves little scope for spinsterhood among women it produces a great number of widows. In 1931 as many as 15.5% of all women in the sub-continent were recorded as widows while the corresponding percentage in England was only 8.7. The incidence of widowhood is particularly high in the reproductive stage—about 14%. Going up the scale we find that as the proportion of spinsters diminishes the proportion of widows increases.

Causes of Mortality:—We can wind up this section with a short note on the chief causes of mortality in the Indian sub-continent.

The overwhelming majority of deaths are caused by such typical tropical diseases as small-pox, typhoid, dysenteries, cholera and malaria. Out of 6,165,234 deaths in 1939 1,411,614 were caused by malaria, 260,300 by diarrhoea and dysenteries, 97,566 by cholera and 48,103 by small-pox. Tuberculosis which is one of the biggest killers in the larger cities continues to spread. Malnutrition and nutritional diseases are very common. This is no surprise considering the general poverty of the people. In fact, it would be no exaggeration to say that poverty and the consequent lack of vitality and resisting power are the root cause of the overwhelming majority of deaths from diseases in the sub-continent. Remedies for most of the diseases mentioned above exist but no medicine can be of any help where a patient has little or no reserves on which he can call in time of danger. This is the chief reason why in a general campaign against disease measures aimed at raising the average income of the citizen will bring in a quicker return than an extension of medical facilities. In other words, the most important single disease which has to be fought and overcome in the Indian sub-continent is poverty.

The figures for the larger cities like Calcutta, Bombay or Madras are generally more accurate than figures for the smaller towns or rural areas. Here is a table which shows the specific death-rates per thousand for Calcutta, Madras and Bombay and also for purposes of comparison for London and New York:

	Calcutta	Bombay	Madras	London	New York
Tuberculosis	270.0	170.0	113.0	87.0	47.0
Dysentery and Diarrhoea ..	250.0	252.0	436.0	0.0	0.0
Typhoid	90.0	40.0	16.0	0.4	0.2
Cholera	50.0	0.0	0.0	0.0	0.0

Turning to infant mortality figures in the larger towns we find that there has been no perceptible improvement as the following table makes the position quite clear:

City	1935	1936	1937	1938	1939	1940	1941
Bombay ..	248	250.2	246.3	267.9	212.2	201.5	211.4
Calcutta ..	239	241.6	252.7	218.6	205.4	212.5	208.9
Madras ..	227	218.3	223.8	222.1	241.6	205.7	208.9
Lucknow ..	224	224.4	223.5	226.4	212.2	214.4	134.3
Lahore ..	221	223.5	234.6	264.2	226.2	294.6	218.8
Nagpur ..	221	223.5	234.6	264.2	226.2	294.6	218.8
Delhi ..	190	170.0	187.4	156.0	160.9	173.8	185.9
Karachi ..	151	167.0	142.2	149.6	135.7	136.8	127.8
Ahmedabad ..	280	303.4	280.2	283.0	267.4	310.2	133.2
Hyderabad (Sind)	232	195.2	205.1	192.6	182.4	259.1	220.6

Special causes contribute to the high mortality of infants in the sub-continent.

Owing to the custom of early marriage, cohabitation and child birth commonly take place before the woman is physically mature and this, combined with the primitive and insanitary methods of midwifery, seriously affects the health and vitality of the mother and through her of the child. If the child survives the prenatal and natal chances of congenital debility and the risks of child birth, it is exposed to the dangers of death in the early months of life from diarrhoea or dysentery. According to the Executive Health Officer of Bombay city, by far the greater number of infantile deaths are due to infantile debility and malformation, including premature birth, respiratory diseases coming next, then convulsions, then diarrhoea and enteritis.

[N.B.—Part of this section is based on D. Ghosh's "Pressure of Population and Economic Efficiency in India" which represents some of the latest work done in this field. The figures for communities and languages were taken from Dudley Stamp's "Geography."]

There has not been any marked reduction in the general rate of mortality due to specific diseases over the last two decades either:

Year	Cholera	Small-pox	Plague
1920 ..	0.6	0.4	0.4
1925 ..	0.5	0.3	0.5
1930 ..	1.3	0.3	0.3
1931 ..	0.9	0.1	0.2
1932 ..	0.3	0.2	0.2
1933 ..	0.3	0.4	0.2
1934 ..	0.8	0.3	0.3
1935 ..	0.8	0.3	0.1
1936 ..	0.6	0.4	0.04
1937 ..	0.4	0.2	0.1
1938 ..	0.9	0.1	0.06
1939 ..	0.4	0.2	0.1
1940 ..	0.3	0.3	0.7

Next to the complexion of the people, which varies from fair to black, the tourist's attention in India is drawn by their dress and personal decoration. In its simplest form the dress of a Hindu consists of a piece of cloth round the loins. Many an ascetic, who regards dress as a luxury, wears nothing more, and he would dispense with even so much if the police allowed him to. The Muslim always covers his legs, generally with trousers, sometimes with a piece of cloth tied round the waist and reaching to the ankles. Men and women on the hills who at one time wore a few leaves before and behind and were totally innocent of clothing, do not appear today within the precincts of civilisation and will not meet the tourist's eye. Children, either absolutely nude or with a piece of metal hanging from the waist in front, may be seen in the streets in the most advanced cities, and in the homes of the rich. The child Krishna, with all the jewels on his person, is nude in his pictures and images.

Dress—The next stage in the evolution of the Hindu dress brings the loincloth nearly down to the feet. On the Malabar coast, the ends are left loose in front. In the greater part of the sub-continent they are tucked up behind—a fashion which is supposed to befit the warrior, or one end is gathered up in folds before and the other tucked up behind. The simplest dress for the trunk is a scarf thrown over the left shoulder, or round both the shoulders like a Roman toga. Under this garment is often worn a coat or a shirt.

When an Indian appears in his full indigenous dress, he wears a long robe, reaching at least down to the calves; the sleeves may be wide, or long and sometimes puckered from the wrist to the elbow. Before the Europeans introduced buttons, a coat was fastened by ribbons, and the fashion is not obsolete. The Muslim prefers to button his coat to the left, the Hindu to the right. A shawl is tied round the waist over the long coat, and serves as a belt, in which one may carry money or a weapon, if allowed.

The greatest variety is shown in the head-dress. More than seventy shapes of caps, hats, and turbans, may be seen in the city of Bombay. In East and West Punjab and the United Provinces, in Bengal, and in Madras other varieties prevail. Cones and cylinders, domes and truncated pyramids, high and low, with sides at different angles, folded brims, projecting brims, long strips of cloth wound round the head or the cap in all possible ways, ingenuity culminating perhaps in the "parrot's beak" of the Maratha turban—all these fashions have been evolved by different communities and in different places, so that a trained eye can tell from the head-covering whether the wearer is a Hindu, Muslim or Parsi, and whether he hails from Poona or Dharwar, Ahmedabad or Bhavnagar.

Fashion Variations—Fashions often vary with climate and occupation. The Bombay fisherman may wear a short coat and a cap, and may carry a watch in his pocket; yet, as he must work for long hours in water, he does

not cover his legs, but suspends only a coloured kerchief from his waist in front. The Pathan of the cold north-west wears loose baggy trousers, a tall head-dress befitting his stature and covers his ears with its folds as if to keep off cold. The poorer people in East and West Bengal and Madras do not cover their heads, except when they work in the sun or must appear respectable.

Many well-to-do Indians and Pakistanis wear European dress at the present day, or a compromise between the Indian and European costumes; notably the Christians and Parsis. Most Parsis however have retained their own head-dress, and many have not borrowed the European collar and cuffs. The majority of the people do not use shoes: those who can afford them wear sandals, slippers and shoes, and a few cover their feet with stockings and boots after the European fashion in public.

On ceremonial or religious occasions indigenous dress is almost always preferred and with the recent change in the political landscape, it is possible that blind imitation will give place to intelligent selection.

There is also a certain tendency to economise in the use of cloth. At the present moment cloth is scarce, dear and rationed. One way in which people in urban areas are trying to meet the situation is to make, what they call, bush shirt' or 'bush coat' which is really a cross between a coat and a shirt and can be made to do duty for either.

Women's Costumes—The usual dress of a woman consists of a long piece of cloth tied round the waist, with folds in front, and one end brought over the shoulder or the head. The folds are sometimes drawn in and tucked up behind. In the greater part of the sub-continent women wear a bodice: on the Malabar coast many do not, but merely throw a piece of cloth over the breast. In some communities petticoats, or drawers, or both are worn. Many Muslim ladies wear gowns and scarfs over them. The vast majority of Muslim women are *goshas* and their dress and persons are hidden by a veil when they appear in public: a few of the converts from Hinduism have not, however, borrowed the custom. In the north, Hindu women have generally adopted the Muslim practice of seclusion. In the Deccan and in Southern India they have not.

As a rule the hair is daily oiled, combed, parted in the middle of the head, plaited and rolled into a chignon, by most women. Among high caste Hindus, widows sometimes shave their heads in imitation of certain ascetics, or monks and nuns. Hindu men do not, as a rule, completely shave their heads, some Muslims, however, specially in Malabar, do. The orthodox remove the hair from a part of the head in front, over the temples, and near the neck and grow it in the centre, the quantity grown depending upon the fancy of the individual. Nowadays many have their hair combed in the European fashion which is also followed by Parsis and Christians. A great many Muslims grow beards. But

most Hindus do not, except in places as in the north where Muslim influence was paramount in the past. Parsis and Christians follow their individual inclinations. Hindu ascetics, known as Sadhus or Bairagis as distinguished from Sanyasis, do not clip their hair, but coil it into a crest, in imitation of the God Shiva.

Hindu women wear more ornaments than women of any other community. Ornaments bedeck the head, the ears, the nose, the neck, the arms, wrists, fingers, the waist and the toes, until motherhood is attained, and by some even later. Children wear anklets. Each community affects its peculiar ornaments, though imitation is not uncommon. Serpents with several heads and flowers, like the lotus, the rose and the champaks, are among the most popular object of representation in gold or silver.

Caste Marks—Caste marks constitute a mode of personal decoration peculiar to Hindus, especially of the higher castes. The simplest mark is a round spot on the forehead. It represents prosperity or joy, and is omitted in mourning and on fast-days. It may be red, or yellowish as when it is made with ground sandalwood paste. The worshippers of Vishnu draw a vertical line across the spot to represent Lakshmi who is the goddess of prosperity. A more elaborate mark on the forehead has the shape of a U or a V, generally with a central line, sometimes without it, to represent Vishnu's foot. The worshippers of Shiva adopt horizontal lines, made with sandalwood paste or ashes. Some Vaishnavas stamp their temples, near the corners of the eyes, with figures of Vishnu's

conch and disc. Other parts of the body are also similarly marked. The material used is a kind of yellowish clay.

To smear the arms and the chest with sandalwood paste is a favourite kind of toilet, especially in the hot season. Beads of Tulsi or sacred Basil, and berries of Rudraksha *elococarpus ganitrus*, strung together are worn round their necks by Vaishnavas and Shaivas respectively. The Lingayats, a Shaiva sect suspend from their necks a metallic casket containing the Linga or phallus of their god. Bairagis, i.e., ascetics, besides wearing Rudraksha rosaries round their necks and matted hair, smear their bodies with ashes. Religious mendicants suspend from their necks figures of the gods in whose name they beg. Strings of cowries may also be seen round their necks. Muslim dervishes sometimes carry peacock's feathers.

Hindu women mark their foreheads with a red spot or horizontal line. High caste widows are forbidden to exhibit this sign of happiness, nor may they deck themselves with flowers or ornaments. Flowers are worn in the chignon. Hindu women smear their faces arms and feet sometimes with a paste of turmeric, so that they may shine like gold. It is not always possible to say why a particular colour has been selected. The red liquid with which the evil eye is averted may recall the blood of the animals slaughtered for the purpose in former times. But many other cases this particular colour has no such associations. The Muslim dervish affects green; the Sikh Akali is fond of blue, the Sanyasi adopts orange for his robe, and no reason can be assigned for the choice.

Festivals and Observances

Bara Wafat—(Death on the 12th) is called in Bengal Fatiha-i-Du-wazdahum (Prayers of the 12th). In Turkey and Egypt the day is known as Mauludu-n-Nabi (Birth of the Prophet). The date is 12 Rabi I.

It is a joint celebration of the birth and the death of the Muslim Prophet. In some parts of the sub-continent it is celebrated only as the birthday of the Prophet, (Jashn-i-Milad-Sharif). It is believed that his birth and death took place on the same day, although there are differences of opinion on this. It is a great day of feasting for Muslims (the Wahhabis, however, do not observe it; they regard it to be an innovation or *Bidat*). On this occasion the life story of the Prophet is recited and its points of excellence stressed. Prayers are offered for the benefit of his soul. Prayers are also read over cooked food which is then given to the poor. Some observe it on the second day of the month. As the date is disputed, the more devout read the prayers on all the days from the 1st to the 12th day of the month.

Dasara (DASHAMA—TEN DAYS)—This festival is held on the 10th of Ashwin Shuddh (Oct.). It is called *Durga Puja* or *Durgotsava*, and is supposed to relate to the autumnal equinox. The festival commemorates the victory of Devi, wife of Sniva, over the buffalo-headed demon Mahishasura. Her image is worshipped for nine days and afterwards consigned to the river.

This is also the day on which Rama marched against Ravana, the demon king of Lanka (modern Ceylon). Early in the morning Hindus perform *puja* to their household gods or religious books. Marathas and Kshatriyas, or those who consider themselves of the martial race, worship their weapons and ask protection for them throughout the year in the faith that, to the propitiousness of the sword, they owe every prosperity. In the afternoon they go to the temple in procession.

The day is also considered most auspicious by the Hindus to begin education of their children. The nine preceding days of Dasara are called *navratra*, a compound word for 'nine nights'. During this period devotees of Durga engage a Brahman to read hymns before her image, extolling her exploits and describing her rewards to her votaries. On the ninth day, at every temple of Durga, the sacred fire is made and fed with rice and ghee to the chanting of *mantras*. It is customary among Bania women to keep up a dance called *garba* during these nine nights.

The celebration of Dasara is also said to owe its origin to the Pandavas (the five sons of Pandu) who selected this day as an auspicious one for making preparations for their war with their paternal cousins, the Kauravas, which is narrated in detail in the *Mahabharata*.

In modern times Dasara is observed with great pomp in Mysore State.

Dipavali—(Popularly termed Divali or Dewali).—Dipa means a lamp and Dipavali means a row or collection of lamps. It is a festival of rejoicing at Lord Krishna's triumph over Narakasura, a demon. Rows of lamps at all places, sacred and secular, make a most beautiful feature on the occasion. Exhibitions of fireworks, crackers, etc., add to its festive nature.

On the 14th day of the waning moon of Kartika (Sept.-Oct.), known as Naraka or Bhuta Chaturdashi (Chaturdashi means 14th lunar day), Krishna destroyed Narakasura. The demon was, however, a great devotee of Krishna and had done severe penance to propitiate the Lord, but he had abducted 16,000 women for his harem and had to be destroyed for his sins. In view of his piety, however, the death anniversary was enjoined to be observed as a sacred day. In the morning a bath is taken and certain rites with a lamp made of rice-dust, etc., are observed. New dresses are worn and sweets are served.

Gahambars—These are traditional festivals of Iran (Persia) adopted by the Parsis, and mark the six festivals of the six seasons of the year. The first one commences on the 11th day of Ardibehesht (Oct. 15), the second on the 11th day of Tir (Dec. 14), the third on the 26th day of Shehrover (Feb. 27), the fourth on the 26th day of Meher (March 29), the fifth on the 16th day of Dai (June 17) and the 6th on the 1st day of Gatha at the end of the Parsi year (Aug. 31). They were mainly agricultural festivals and necessarily formed formal seasonal celebrations. The Parsis hold public feasts on the days of the Gahambars.

Ganesh Chaturthi—On this day was born Ganpati, or Ganesh, who is regarded as the god of wisdom and one to be propitiated for the removal of obstacles. As such he is invoked at the commencement of all ceremonies and undertakings. There are varying versions of the circumstances attending his birth. One relates that as the god Kartikavirya was created by Shiva without connubial assistance, in like manner Ganpati was formed by his consort Parvati from the turmeric and oil scraped from her body while bathing. The loss of his human head and the substitution of that of a female elephant with one tusk are also variously explained. By some his head is said to have been cut off by Shiva when he endeavoured to prevent the god from entering the chamber of Parvati when she was performing her ablutions. According to others, it was reduced to ashes by a glance from Shani (Saturn) who, with all the gods, went to look at the newborn child, and it was replaced by that of the animal first found, which happened to be an elephant.

The fourth of Bhadrpad Shuddh (Aug.) is the period appointed for the celebration of this festival in honour of Ganpati's birth. His image is installed in Hindu households and offered *puja*. Some people keep the image for a day and a half; some for five or ten days, according to the wealth and wish of the household. On the final day, the image is taken in procession and eventually committed to the river, sea or tank.

There is a legend that one day Ganpati while riding his favourite mouse had a fall, at which

the moon laughed. Enraged at the insult Ganpati cursed the moon and all who shot look at her, but afterwards restricted it to a day, viz., his birthday. Thus, on the day Ganesh Chaturthi, Hindus avoid the moon lest they should incur any calamity during the year. If by any chance they happen to see the moon, they try to provoke their neighbor into reviling them in the belief that its effects will stop at such abuse.

Gokulashtami—(Also known as Janmashtami and Krishnashtami). The occasion marks the celebration of Krishna's birth on the 8 day of the dark moon in the month Shrawana (July-August) or Bhadra (Aug.-Sept). In each case (i.e., either in Shrawana or Bhadra) different sects observe it on either of the two consecutive days of Ashtami. At the temple of Puri a Brahmin and a dancing girl play the roles of Vasudeva and Devaki, the parents of Krishna.

To the Vaishnavites, the devotees of Vishnu and therefore also of Krishna (who was one of Vishnu's incarnations), the occasion is a great festival. It is also observed by non-Vaishnavites, and thus sets an example of the spirit of toleration. Janmashtami is a day of fasting. A large part of the day is spent in worshipping Krishna. Shri (the consort of Vishnu) and Devaki the mother of Krishna, *Kirtans* or religious songs (relating to Krishna) make a notable feature. Dances (East Bengal) bring out a great procession on this occasion.

Grahana—Grahana means an eclipse. Hindu astronomers were the first to declare that the earth is round and Hindu astronomy was the first to discover the scientific facts relating to eclipses. The popular tradition of other days, however, stuck in the popular mind. And the sight of an eclipse continues to suggest to the ignorant person that *rahu* (the ascending node), the trunkless demon, is devouring the sun or the moon as the case may be. Rahu in the guise of a god had attempted to share the nectar along with the gods. As soon as his tongue had tasted the nectar (a drink having the power of making those drinking it immortal) Vishnu detected the false god and struck off his head. Trunkless, up to the throat, as the nectar had passed, Rahu became immortal. Necessarily when he gulps the divine orbs they emerge out down his throat. Acceptance of the version therefore makes it an unholy sight and the defilement of the gods entails a defilement of the earth. Defilement requires a bath and a bath in holy water is held to be particularly efficacious on this occasion. As a matter of fact, two baths are required, one at the first contact of the eclipse and another when it terminates. People flock to the Ganges and other holy sites for baths are resorted to. The occasion, naturally, reminds one of death and oblations are offered to the dead. To ensure full merit of the bath, gifts must be offered after the bath. As a matter of fact gifts make an essential condition of all Hindu fasts and festivals. It would be normal to surmise that the same were to an extent ordained to ensure a spirit of charity. The period of the eclipse is a period of fasting. No food should be prepared during this period. Food prepared earlier cannot be used later.

Haj—It means "setting out" or "tending towards," and is the term used for the pilgrimage to Mecca. The performance of the *Haj* is to all good Muslims a most cherished ambition. It is one of the five pillars of the practices of Islam (Arkan), and there are the highest Quranic injunctions for its observance. The rites of the *Haj* may be divided into three groups; *Farz* or compulsory; *Wajib* or obligatory (in a lower degree than *farz*); and optional. *Farz* compulsions are three in number; wearing of Ihram (two seamless garments, one worn round the waist and another thrown loosely over the shoulder; standing in *Arafat* and doing the *Tawaf* (circumambulation of the Ka'bah). The *Wajib* rites are five in number in the case of those who do not belong to Mecca; to run between Mount As-safa and Mount Al-Marwah, to remain in Al-Muzdallifah, to cast stones to the three pillars of Mina (Ram-yu'r-Rjam), to perform a second *tawaf* and shave the head as the final ceremony. The month of Zul-Hijjah (the 12th Muslim month) is the month of the Haj.

Idul-Azha (also called Iduz-Zuha)—It is the Muslim counterpart of the Passover. It is enjoined in the *Quran* (xxii 33-38) and falls on the 10th Zul-Hijjah. The words of the prophet are: Man cannot (by any act) on this day propitiate God better than by shedding blood.

Idul-Azha means the (great) sacrificial ceremony or festival. The festival commemorates Abraham's offer to sacrifice the object dearest to him, his son Ishmael (not Isaac), on Mount Mina close to Mecca (the Bible gives the name of the land as Moriah). Its observance is one of the necessary acts in the performance of the Haj. All adult Muslims who can afford it are required to make a sacrifice of an animal. If the animal is a big one (e.g., a camel or a cow), it is allowed to be the joint offering of seven, (according to some authorities as many as seventy). It is meritorious to sacrifice one animal for each member of the family, but on economic grounds the sacrifice of one animal for a whole family is allowed. A fully grown-up and sound camel, cow, goat or sheep is considered best. The sacrifice is offered with a short prayer absolutely surrendering the soul to Allah and acknowledging His greatness as the accepted creed. The meat is distributed equally among the poor, the relatives and friends and members of the household.

In India the cow is the usual beast of sacrifice. In other Muslim countries the camel takes its place. The cow being held most sacred by Hindus, the more popular Muslim monarchs of India (possibly a few of Afghanistan as well) had stopped its slaughter out of consideration for Hindu sentiment.

Id-ul-Fitr—The festival of breaking fast," called also *Ramazan-ki-Id*, and "the feast of alms," is celebrated on the 1st of Shavval. On this day Muslims bathe, put on new clothes, apply antimony to the eyes, and perfume themselves; then distribute the *fitr* or *sadaqah*, which is 2½ seers of wheat, dates, or any grain used for food, to the poor or religious mendicants. All then proceed to the *Idgah*, repeating "God is great. There is no God but God." The Mulla ascends the *minbar* or pulpit, and after a short thanksgiving reads the *Khutbah* or sermon. He then descends to the lowest step (which with the

Shahs is the third, but the fourth with the Sunnis) and recounts the virtues of the king, and prays for him. Then a general prayer is offered, and the congregation rise with a shout of *Din!*—"Faith!" and fire of muskets. The evening is spent in rejoicing and merriment.

Khordadai—The birthday (the 6th day of the 1st Parsi month, Farvardin, 10th Sept.) of Zaratustra, the Prophet of the Parsis. He is the earliest known founder of a great religion of faith, courage and hope. The exact date and place of his birth have not yet been fully ascertained. Probably he was born in the province of Media, Iran (Persia) about 3,000 years ago. His great sermons are preserved in the Gathas (Parsi Scriptures). He was held in great respect by the court of Gushtasp. He professed the doctrine of monotheism and held that Ahura Mazda is the Creator of the Universe. He preached the doctrine of *Asha* or piety, which would infuse in man the spirit to fight the force of evil and attain the beatific region of Ahura Mazda.

Muharram (Ar. Muharram, 'most sacred')—The mourning held annually in remembrance of the first martyrs of Muslims, Hasan and Husain, from whom the whole race of Sayids are descended. Abu Muhammad al Hasan and Husain were the two sons of 'Ali bin Abi Taleb, the cousin, and Fatimah, the daughter of Muhammad. The Muslims are divided into two distinct sects, called the Shahs and the Sunnis; the former regard Ali and his descendants, Hasan, Husain, Zain-ul-Abidin, Muhammad Baqar, Jafar Sadiq, and Ismail bin Jafar Sadiq, as the lawful leaders after Muhammad, and the latter, the Caliphs, as Abubakar, Omar, Osman and 'Ali—hence quarrels, animosities, and dislikes are hoarded up to be avenged during Muharram. Taziya (a term signifying grief, applied to a representation of the mausoleum erected over the remains of Imam Husain at Karbala) made of ivory, ebony, sandalwood, cedar, and sometimes wrought in silver filigree—and indeed of every variety of material, from pure silver to bamboo and paper, according to the rank and wealth of the party—are exhibited and conveyed in procession through the streets.

Navroz, Navrooz—Jamshed of "the seven-ringed cup," who fixed the Parsi calendar, marked the day on which the Sun enters Aries (20th or 21st March) to be the New Year's Day. It is held that he chose to make the State entry on this day to the newly founded capital of Persepolis. The festival was given the name of Id of Jamshed and it has been celebrated with the greatest eclat in both Parsi and Muslim Iran (Persia). Shah Jalaluddin commenced his administrative year from this day. The Shahs celebrate the day as Id-i-Khilafat or the festival in commemoration of 'Ali's formal succession on this day to the Caliphate. For the Parsis it is only next to Pateti as a festival of social merriment and they begin the Fasil (agricultural) year on this day. Navroz is one of the three celebrated Jashams of ancient Iran. Modern Iran celebrates the festival as a national event.

Pajusana—A great Svetambara Jain festival. Literally it means serving with a whole-hearted devotion. Formerly it was only observed by the ascetic order, but now the laity also do so. The festival, as is common to all

Jain festivals, is marked with rigorous fasting and penance.

Two schools, both of the Svetambara sect, observe the festival on slightly different dates, either from the 12th or the 13th day of the dark fortnight to the 9th or the 5th day of the bright fortnight of Bhadra (Aug.-Sept.). In either case it lasts for eight days. The more devout observe complete fasting during the whole period, while others fast on the last day only.

Pateti—The Parsi New Year, being the first day of the first month Farvardin (Sept. 5). Firdausi associates many historical events of Zoroastrian Iran (Persia) with this day. It is the greatest social festival of the Parsis. In the great gatherings in their Fire Temples the cause of purity and chastity is preached.

Ram-Lila—An open-air amateur dramatic representation of selected episodes from Rama's life. The performance continues all through the Navaratra (the first nine days of the bright fortnight of Asvin) (Sept.-Oct.) and the Vijaya-Dashami (the tenth lunar day). Every day in the afternoon one act is played, the battle between Rama and Ravana being the most popular theme.

Ram-Lila is an important festival observed in the Hindi-speaking provinces.

Ram-Navami—It celebrates the birth of Rama, one of the incarnations of Vishnu of the Hindu Trinity, on the 9th lunar day (*navami*) of *Chaitra* (March-April). Besides Rama, his consort Sita, and brothers Lakshmana, Bharata and Shatrughna are also worshipped. Prayers are offered to them at intervals of three hours. The day is one of strict fasting. The night is spent in worshipping. The learned give discourses upon Rama's life, stressing its excellent points as examples for man to follow. A legend (the *vrata-katha*) relating to the origin of this ceremony with pointers to the merits of observing it is recited. At Puri (*Jagannath*), an incarnation of Rama (*Vishnu*), in his representative figure *Madanamohana* is dressed as Rama and worshipped with great eclat. On this day oblations are offered to the departed ones.

In some cases, preparatory ceremonies commence from the first day of the waning moon. In the evenings sermons or discourses (*kathas*) are delivered in the temples of Rama. The birth is celebrated at 12 noon of the ninth day. This day is observed by a great many people as the New Year's day.

Ramzan—This Muslim fast commences from the morning after the new moon of Ramzan is first observed, and is kept each day throughout the month of this name from 4 a.m., or when the first streak of light borders the eastern horizon, till the stars are clearly discerned in the heavens. During the whole period not the slightest particle of food, or a single drop of water or any other liquid should pass the lips. The day is spent in occasional prayers, besides the usual *namaz*, and in reading the *Quran* or the life stories of the prophets. The fast is generally broken by a cooling draught, called *Dandhi*. On the 21st and 22nd the Shahs celebrate the night of Ali, the nephew and adopted son of Muhammad, who is said to have died on one of these two nights. They perambulate the streets, carrying a *tabut* and

beating their breasts. The odd ones of the last ten nights are called, *Lailat-ul-Kadr*, or 'night of power,' because it is said the *Quran* descended from heaven during one of those nights. It should be observed as a vigil.

Shiva-Ratri—The 14th night of the dark fortnight in Megha (Jan.-Feb.) is known as the night specially consecrated to Shiva. The 13th night of the waning moon of each month is held as the night of Shiva (Shiva-Ratri). The month of Shrawana (July-August) is very sacred to Shiva. Hence, Shivaratri of Magha is generally called Mahashivaratri (maha meaning great).

In the *Mahabharata*, Bhishma, the great celibate, most scholarly and valorous prince, relates that King Chitrabhanu of the Ikshvaku dynasty popularised the festival. On this day when the King was fasting, a sage suggested to him that the human soul being one with God, indulgence in pleasure to the self and not infliction of pain to it by fasting would please God best. The King explained that the self of flesh and blood was not the real self and narrated the legend of a fast. In a previous life, the King was born a hunter. One dark night he lost his way in the forest and took shelter for the night on a *bilva* or bel (Indian wood apple) tree. The hunter had no food for the whole day and was ruminating on how his family must keenly feel the double misery of starving and missing him. He wept bitter tears. To make himself comfortable and also to have a better view of the life of the land and approaching game, he tore away and threw down the boughs and leaves obstructing his vision. It so happened that that night Shiva was under that *bilva* tree, and the tears and leaves fell on him. Shiva was propitiated by this act of the hunter, although unknowingly done, and declared that if anybody fasted on that day and worshipped him with offerings of water and *bilva* petals he would, on death, be accepted in Shiva's heaven.

Another account in later Puranic stories (e.g., *Linga-Purana*) narrates that a hunter spending the day imprisoned in a Shaiva monastery or temple for having failed to pay his debt, was let out on parole. His way home lay through a forest and as night grew too dark to continue the journey, he took shelter on a *bilva* tree with his store of water. Hunger, anxiety and expectation of game kept him awake all through the night. Throughout the day in the monastery he had nothing to do but listen to the incessant recitation of Shiva's name, which had made an almost indelible impression upon his weakened brain. He filled his time mumbling the term in mock fashion, plucking the *bilva* leaves and throwing them down. Often his water pot was knocked about, either by his movements or the wind and its contents trickled down. Shiva happened to be resting under the tree and was propitiated. The moral is that acts of devotion, even if not meant to be so, are accepted by the Lord.

Zarthosti-No-Diso—The anniversary day of Zoroaster's death. The Parsi Prophet died a martyr's death, at the age of 77, while at prayer in a fire temple, at the hand of Turbatrur. On this solemn occasion of mourning, discourses on the life and teachings of the Prophet form the most important feature.

Art

Sculpture & Painting

Characteristics:—Indian Art (which here includes the art of Pakistan too) is almost completely a religious art. Creation as well as contemplation of a work of art is a devotional act. From this it follows that Indian art is predominantly spiritual and contemplative and not concerned with the representation of appearances. Form in Indian art achieves symbolical meaning. Without the help of correct anatomy and perspective, Indian artists fill their works with life from within. Naturalistic to a degree, they give expression to the internal forces of nature through its visible form. The essential qualities of Indian Art are its inherent rhythm and vitality and its plastic power which, in painting and sculpture alike, reaches a perfection hardly ever matched in world art.

Indian art, up to very recent times, was anonymous, i.e., hardly any names of individual artists were known or connected with any particular work of art. The arts of ancient and medieval India sprung from the co-operative effort of craftsmen guilds who worked in the employ of rulers or religious institutions. In the course of time a collection of scriptures came into being, the *shilpa shastra*, which laid down certain rules to be followed in the creation of religious images, buildings, etc. While these manuals were originally meant to guide design without interference in the creative work of the artist, they had, in the long run, a sterilizing effect on the artists' imagination and may have contributed to the decline of Indian art.

History:—Art in India is always Indian regardless of the religious or dynastic powers which it happened to serve at different times. The idiom of expression was always Indian. Racial and provincial peculiarities can be traced in all Indian styles, but "what separates the provinces of Indian art is subsidiary to what they have in common" (S. Kramrisch). The inherent strength of this art enabled it to absorb and overcome numerous foreign influences (such as Greek, Persian, Scythian, etc.) without being altered in its course.

The chronology of Indian art is a difficult problem. The classification of periods given here tries to do justice to the development of styles and is based on a broad dynastic framework.

Early Art:—The excavations of Sir John Marshall and others in the Indus valley at Mohenjodaro and in Harappa in the Punjab discovered an ancient civilisation which in about 3000 B. C. had already reached a considerable degree of refinement. In many forms and symbols Mohenjodaro heralds the beginning of Indian art with a strong Dravidian flavour. Outstanding are animal engravings on seals and little statuettes in terracotta, stone or bronze, amongst which a bronze girl in a dancing pose anticipates later qualities of Indian plastic art.

From Mohenjodaro to about 300 B.C. hardly any traces of artistic activities survive. Yet we know from the description of houses

and palaces in the great epics that painting, image making and the minor arts existed. The intervening time saw the arrival of the Aryans in India and the coming into being of the three great Indian religions, Brahmanism; Buddhism and Jainism. The archaic sculptures, made under the patronage of the Buddhist Maurya rulers, retain vestiges of earlier and more primitive cults in the large "yaksha" stone statues of Besnagar and Mathura (Muttra). Soberly naturalistic animal sculpture adorns the capitals of Asokan edict pillars.

Beginnings of Classic Art:—After the fall of the Maurya Empire, the Sungas ruled in the North, the Andhras in the South (2nd—1st century B.C.). The robust sculpture of earlier stages is made pliable by a penetrating flowing rhythm. The characteristic voluptuous forms of Indian art, through which pulsates the sap of life, make their appearance in the Yakshi figures of the Bharhut stupa rails. A certain angularity and flatness of modelling are gradually being overcome. The art of the period is almost exclusively Buddhist. Its famous centres are Bharhut, Sanchi, Bodhi Gaya, Mathura and Pataliputra (Patna), Bhaja in the Western Ghats and Vengi in South India. Sculpture and relief (and most probably not surviving painting) were used to illustrate religious teaching on the rails, gates and walls of stupas (relic mounds which had become the centres of worship) and in the monasteries and chapels attached to them. In the reliefs depicting Buddha's life or that of his previous incarnations (*jatakas*) Buddha is never presented in human form, but his presence is shown by symbols such as the tree of enlightenment, his footprints, the throne on which he sat or the platform on which he used to walk.

Kushan and Andhra Art:—The first and second centuries A.D. saw the power of the Kushan Empire establishing itself in the north-west and north, while the Andhras ruled the south. The classic progress shows itself in increased plastic penetration of large-size sculptures and in greater vitality. The centre of artistic creation is Mathura (Muttra). Buddhism is still the predominant theme. Mathura creates the Indian Buddha image in direct continuation of the Mauryan tradition of large-size stone figures, overcoming bulk and crudeness in spirited modelling. Frankly sensuous, but in a different way from the nudes of the Greek schools, are the female figures of Mathura and other centres. Most probably originating from aboriginal symbols of fertility, these graceful if voluminous nymphs fix, for centuries to come, the round-breasted, narrow-waisted, full-hipped ideal of female beauty for the Indian artist. In the South, the stupa of Amaravati has yielded a wealth of magnificent sculpture.

Belonging to the first century B.C., the fresco paintings in cave 9 and 10 in Ajanta (Nizam's Dominions) are the earliest well-preserved paintings, though still earlier work survives in several other localities. The high level of competence in Ajanta proves a long, but lost, history of this art.

Graeco-Indian Art:—From the first century A.D. onwards a peculiar hybrid art develops in the north-west, the Gandhara country. Through direct contact with Graeco-Scythian and Parthian neighbours, Hellenistic forms were applied to Indian Buddhist themes. The Gandhara school is famous for the quantity of its output and for fine workmanship. From an artistic point it is inferior and derivative. Its chief interest is archaeological.

THE GUPTA AGE

In 320 A.D. Chandragupta founded the Gupta dynasty in Patna, which was to be the dominant power in India for about 250 years. Pauranic Hinduism came to the forefront during this period and the most powerful Brahmanical art was produced all over the sub-continent especially in Deogarh, Badami and Althole (Deccan), Udaygiri (near Sanchi), Gwalior and many other places. The art of the Gupta period can best be characterised by the word spiritual. The latent naturalism of earlier periods is now overcome or harnessed to the spiritual representations of superhuman, elementary or cosmical powers. The human figure is only the vehicle of transcendental forces. The artist masters every mood from the lyrical to the terrible. The Buddha images of Mathura and Sarnath are in their classic simplification and perfection of modelling, in their serene spirituality and dignity amongst the world's supreme religious images. The boar incarnation of Vishnu in Udaygiri is of impressive power which changes primitive terror to a deep experience of divine force. The iconography of the Hindu pantheon is developed during this age.

Painting:—During the sixth and seventh centuries the Gupta spirit survives in Indian art in spite of the decline and overthrow of the Gupta empire; therefore, in our classification of styles they are included in Gupta art. The art of fresco painting had then reached its zenith. Ajanta, Bagh (Buddhist) and Badami (Brahmanical) are the chief centres of this art as it survives today, but the Jain paintings of Sittanavalai (South India), the Brahmanical paintings of Tirumalaipuram and the Singhalese rock pictures of Sigiriya (Ceylon) testify to its distribution over the whole sub-continent.

All these paintings are mostly narrative in character. The painters depict religious legends in easily understandable form, making use of the costume, scenery and manners of their own time. The colours, made from minerals, are bright green, red, brown, yellow, black and blue (Ajanta). The greatest artistic merit of these paintings lies in their rhythmic, flowing outline which indicates the plastic volume of a body. Light and shade are unknown, but forms are modelled with colour shading. Perspective in the Western sense was not known but compositions achieve a surprising degree of depth.

Climax of Indian Art:—During the seventh and eighth centuries sculpture reaches its high water mark. The surging power of Brahmanism fills Indian sculpture with unheard-of virility. Sweeping movement becomes an expression of force; the swelling, rounded forms of human or animal bodies become signs of

pent-up energies. The rock-hewn sculptures of Elephanta (near Bombay), Ellora (Deccan) and Mahavallipuram (seven pagodas, near Madras) are the finest representatives of this period. In Ellora, the close union between sculpture and architecture, so typical for Indian art, is carried to an extreme in the Kallasanatha temple which, an enormous building, was carved out of solid rock as a whole.

Medieval Art:—From the 9th and 10th centuries onwards Hindu art conquered every corner of the sub-continent. With wider distribution, local schools and styles developed in the course of time, without, however, breaking its unity. Medieval sculpture was called upon to decorate with stone carvings the innumerable temples, that were being built, and to provide images for worship in temples and private chapels in stone, bronze or wood.

While much of the grandeur of the classical age survives in medieval sculpture its simplicity and force are gradually lost in an over-elaboration of decorative by-work such as jewellery and the iconographical attributes of deities. The tendency towards spiritualism is accentuated especially under the influence of *tantric* symbolism. In the end, the demands of iconographical correctness, made on the artist by the priests, suppressed his own imagination and sensitivity and produced an enormous volume of indifferent and mediocre work.

Paintings:—It was, not so long ago, a widely accepted belief that the art of painting died out in the Indian sub-continent after the 7th century and was not revived till the 16th century by the miniature paintings of the Moghul Court. Just there is enough evidence now to show that mural painting was practised throughout the medieval period even if, owing to large-scale destruction (especially in the North) and to neglect, little of it survives. Medieval painting is of varying vigour and excellence and tends, like sculpture, towards an over-emphasis of decorative detail and to a hardening of accepted forms. In Ellora paintings of the 8th-10th century are preserved, in Tanjore frescoes of the 11th century, in Polonnaruwa in Ceylon Buddhist work of the 12th century. Later work of the Vijayanagar period is known and a large volume of murals survives in Jain temples and monasteries of Gujarat and in the palaces of Rajputana, all dating from a much later time. In Cochin and Travancore many examples of elaborate Kerala painting can be found belonging to the 16th-18th century. Jain paintings in Conjeevaram of the 17th and 18th century illustrate the close affinity between medieval mural art and miniature book illustrations.

The illuminating and illustrating of religious scriptures was a widespread art in the sub-continent even if little of it escaped destruction with the exception of a large number of Jain manuscripts from Gujarat. The earliest, painted on palm leaves, date from the 12th and 13th centuries. They have highly conventionalized figures with sharp noses and protruding eyes. The background is first red, later blue.

Rajasthani and Pahari:—The middle of the sixteenth century sees the beginning of an Indian School of miniature painting in Rajputana of great vitality, charm and artistic merit.

The early Rajasthani paintings are known as *ragmalas*, pictorial representations of musical moods (*Ragas*). These paintings have an intimate, lyrical flavour and are full of the loving devotion which the Vaishnava revival brought with its intense cult of Krishna. Rajasthani painting, like the *pahari* Schools of the North, is strictly formalised, i.e., human figures, animals and trees are represented in a simplified, conceptual manner but are, nevertheless, very alive and expressive. The plastic quality of the great frescoes is absent, the line very gentle and sensitive. The colours are flat, yet brilliant and colour schemes vary in the different schools (*kalams*). Perspective is attempted but not in the Western, scientific manner. The *pahari* (Hill) Schools of the Hill States in the North, are similar in type to Rajasthani painting. They flourished in several *kalams* (Kangra, Basholi, Jammu, etc.) from the 17th to 19th century.

Mughul—Derived from the Timurid School of miniature painting in Persia and beginning under strong Persian influence in the middle of the 16th century, Mughul painting developed into an Indian art, if that term can be accepted with reservations. Already Akbar employed indigenous artists who under the guidance of Persian masters were put to the task of illustrating manuscripts. Under Jahangir and Shahjahan Mughul painting reached its climax. Mughul art is a court art, limited in its scope, and overshadowed by the demand for extreme technical perfection. It is individualistic with a clear development of personal styles of different artists which are known by name (a thing rarely heard of in popular Indian art). It is illustrative, and mainly concerned with the representation of court scenes, portraits, historical events, or the skillful rendering of flowers or animals. But Indian painters did not only introduce Hindu themes into Mughul art, but gradually flavoured it with a Hindu spirit. In technical excellence, accurate and delicate drawing, observance and taste Mughul art is unsurpassed. The wrong notion that the Mughul court art was responsible for the revival of painting in the sub-continent must be given up though a strong influence on Rajasthani and *Pahari* painting is obvious.

MODERN ART

With the eclipse of medieval powers and the arrival of European civilisation, the indigenous arts experienced a rapid decline. Art schools were initiated in the sub-continent on British models in the 19th century and attached to the educational system. In these the arts of drawing, painting and modelling and certain arts and crafts were taught on the lines of Western academic tradition.

At the beginning of this century, a revival of traditional and indigenous art was propagated by Mr. Havell, then Principal of the Calcutta Art School, and by Abanindranath Tagore and his followers. By a reorientation on the lines of Ajanta and medieval miniature painting these men began a powerful and successful art movement, which, known as the Bengal School, very soon influenced artists throughout the sub-continent. An outstanding figure of this school is

Nandalal Bose whose imaginative force is great. Jamini Roy, the celebrated artist of India to-day with an international reputation, is also a Revivalist although not belonging to the Tagore School of re-orientation. Jamini Roy, first studying the naturalistic approach gradually became interested in the indigenous art of Bengal from which he evolved a style and technique of his own, unequalled among his contemporaries for its excellence of art forms and aesthetic import.

Concurrently with the Revivalist movement, there was a school of painters who believed in the naturalistic approach to art and persisted in its work although the intellectuals at that time were not in favour of it. On the dwindling of the Revivalism, however, this school rose into prominence attracting artistic talents and compelling a recognition of its own. Notables in this line are J. P. Gangooly, H. Mazumdar, Atul Bose and Zainul Abedin.

There is yet another School of Art which may be termed Modernistic, after its marked tendencies in that direction gaining a wide field of admirers in recent times. The evident learnings of Gagnendranath Tagore and later Rabindranath Tagore in their approach to art, although exclusive and individualistic, nonetheless, justify their being regarded as the precursors of this School. Well-known among those experimenting in this line are Rathin Maitra, Gopal Ghose and Paritosh Sen. The three distinct currents in the flow of art movements mentioned here apply actually to Bengal alone, but these are traceable in the art world of India generally too.

Institutions—The Government School of Art, Calcutta teaches Fine Art, Indian Painting, Commercial Art, Modelling, Lithography, Wood-Engraving and Draftsmanship and has a Teachership Department for post-graduate studies. The present principal is Atul Bose.

Under its successive principals Messrs. Lockwood Kipling, Griffiths, Greenwood, Cecil Burns, Gladstone Solomon and Charles Gerrard, the Sir J. J. School of Arts in Bombay has grown into a large and many-sided institution. The School favoured thorough training on European lines. Under Mr. Gladstone Solomon a class of mural painting was added in which Western art was fused with Indian decorative principles.

The J. J. School teaches a variety of crafts and industrial arts, such as stone carving, metal work, leather work, textile design, etc. It has also a large commercial art and photographic section. Under Mr. Gerrard interesting modern tendencies developed in painting which seem to indicate a union of contemporary European work with sound Indian traditions.

Many art schools flourish in India and Pakistan in different centres such as Lahore, Delhi, Lucknow, Benares, Shantiniketan, Madras, Mysore, Travancore, Patna, etc., under the patronage of provincial governments, State governments or as private institutions. Indian and Pakistan artists of today strive for new forms of expression which would be in tune with present day life without breaking with the ancient traditions of their country. An impressive solution for this problem was attempted in the moving paintings of Amrita Sher Gil who died prematurely in 1941.

Arts and Crafts

IT is in the arts and crafts of a people that its heritage of artistic feeling, design and religious belief remain alive over many hundreds, if not thousands, of years. The Indian sub-continent absorbed throughout its long history innumerable foreign influences into its arts. Beginning with the fusion of Aryan and Dravidian art during the first millennium B.C., over the influx of Greek, Persian, Hellenistic, central Asiatic or Far-Eastern elements in pre-Gupta and Gupta times, to the blending of Islamic with Hindu forms of design after the Muslim conquest and even to the absorption of European features, the arts and crafts of the Indian sub-continent have adopted new designs, fused them with old ones and infused them with the spirit and the sensitiveness of this country. Two main elements can be discerned; on the one hand we have the geometrical element of the Northern nomads in which all natural forms are reduced to decorative patterns. This element came into the country in successive waves with the Aryans, the Scythians, the White Huns, the Mongols and the Muslims. The other element, which might be taken as belonging to the indigenous Indian South, is more exuberant and uses natural forms such as human or animal figures with greater freedom. The desire to decorate even the humblest articles of daily use and to introduce beauty into every feature of life has been inherent in the Indian sub-continent from time immemorial and has even survived, sadly weakened, the industrial revolution of our age. The gay and tasteful dresses of the village folk of today testify to the indestructible artistic sense of this ancient race.

Pottery—In the excavations of Mohenjo-daro and other Indus valley sites pottery of the 4th and 3rd millennium B.C. has been found, of pleasing shape and with very decorative paintings in black or red in which animal forms feature prominently. Up to the present time, the potter's wares have usually been of good functional design and quite often they have been painted. Well known is the glazed ware from Agra. Terracotta work has found manifold adaptations throughout the ages, a particularly beautiful one in the terracotta reliefs on 17th century temples in Bengal. Glazed tiles were used by the Muslims for architectural decoration. The many coloured tile mosaics of Lahore Fort are famous.

Stone Work—Carved stone work is the principal form of decoration on Hindu or Muslim buildings. Ranging from fully sculptured figure friezes to the finest trellis work it is found on buildings of every epoch. Well known for the skill and the imagination displayed, are the Jain marble temples of Dilwara in Mount Abu and the Hoysala temples of Mysore. Muslim buildings are soberer in their ornamentation. The stone carvers of Ahmedabad excelled in delicate "jali" (stone tracery) work for windows (Sidi Sayyid's mosque). On buildings of the Pathan dynasty of Delhi wonderful decorative use has been made of carved Persian or Arabic lettering (Qutb Minar). The use of marble inlay and mosaic work became fashionable under the Moghuls and led to mastery in the costly art of "pietra dura" in which precious stones are laid in marble in most delicate and delightful flower patterns. The stone masons of modern Jaipur are highly skilled in architectural carving.

Wood Work—Wood carving was, as elsewhere, the mother of the art of stone carving. With a fine range of precious timbers suitable for the purpose, wood has always played an important part in building and decoration. Typical are the carved house fronts in Ahmedabad and other Gujerat cities, in Nasik and in the Punjab. 16th and 17th century Jain temples in Ahmedabad are carved in wood and painted right up to their domes teeming with multitudes of figures. They are the prototype of the stone carved temple ceilings of Mount Abu. Richly carved furniture is made today in Kashmir (walnut) and in South India (rosewood and blackwood). Decorative carving in sandalwood for domestic or religious purposes is at home in South India.

Ivory—An inscription in Sanchi (1st century B.C.) says that part of the stone relief work of the Southgate was done by the Ivory carvers of Besnagar. This alone proves the close interrelation of all the arts and crafts in the Indian sub-continent. Still a flourishing art in South India (Mysore, Travancore) and in Delhi, Ivory articles find a ready market inland and overseas. Though of perfect finish, modern work lacks the sensitive sculpturing of earlier work.

Metal Work—With the exception of weaving the metal industry employed and still employs the greatest number of craftsmen and the greatest variety of methods and techniques. There is hardly a place where metal objects are not made in one form or other. Iron and steel, known from early times, were mainly used in weapons. The best damascened blades come from South India and Rajputana. Brass and copper go to make the plain but beautiful utensils of domestic use (*lota, hugga*, etc.) and ceremonial lamps, images, vessels, etc., for religious worship. These articles are cast, hammered, chased, inlaid, encrusted or otherwise worked. The South Indian image maker's (*sthapati*) bronze or brass castings are a marvel. Well known is *bidri* ware (from Bidar in Hyderabad) in which silver is inlaid in a dark metal alloy or *koftgari* ware, the best specimens of which come from Muradabad and the Punjab, in which gold and silver are inlaid in steel. Gold and silver in repoussé or filigree, are worked into fine articles in Kashmir, Lucknow and other places.

Jewellery—From time immemorial jewellery of rich design was made in the Indian sub-continent, and worn by both sexes. Simple beads of polished precious stones have been found in many pre-historic and early historic sites. Classic and medieval sculptures and paintings tell us about the endless variety of jewellery, to describe which would require a large treatise. Flowers being the most primitive form of adornment, many forms of jewellery, up to the present day, derive their name and shape from floral prototypes. Perhaps the finest jewellery work is done in gold enamelling, Lahore and Jaipur giving the choicest pieces. Typical is the incrustation of gold and silver with gems which are always *cachoch* cut (never faceted as modern European jewellery) for a fuller colour effect. Another very ancient technique is gold and silver filigree applied to ornaments. Nothing can compare with the exuberant splendour of

the country's jewellery, though the skill in stone-cutting and also in setting has not always reached the level of Western craftsmen.

Lacquer Work and Papier Mache—Lac being an indigenous product, lacquer work in various techniques has assumed industrial proportions in parts of the sub-continent. Best known perhaps are the products of the Kashmiri craftsmen, especially in connection with papier maché painting. Lac turnery for furniture, toys and other objects is a widespread art in western India, especially in Kathiawar and Gujerat. In Sawantwadi (Konkan Coast) a small lacquer industry produces artificial fruit, playing cards, toys, etc.

Textiles—No other country, East or West, has ever excelled the Indian sub-continent in the weaving of cotton and silken fabrics. Since ancient times, Indian textiles were in great demand in all world markets. There is hardly a technique or art in fabric making that was or is not known in some part of India or Pakistan. A very short enumeration must suffice. *Patola* silks of Gujerat, in which the threads are variously dyed before weaving; fine silks and brocades from Benares, Murshidabad, Hyderabad, Madras, Tanjore and other places; finely woven woollen Kashmir shawls; delicate muslins from Dacca; tie-dyed fabrics from Rajputana; various forms of dye-painting on cotton (*qatmandar*, similar to Javanese batik) from South India; printed silks and cottons from all parts north or south with some of the finest cotton prints coming

from Sanganiir near Jaipur. As there is no limit to the styles of embroidery, mention may be made only of the *phulkari* work of the Punjab, the colourful embroideries of Kathiawar and the world-famous Kashmir shawls. Carpet making is at home in the North. Especially under Akbar in the 16th century, gorgeous rugs and carpets were made, exquisite in colour and fabric, though the finest work from Persia was never equalled.

It has been estimated that there are still 2½ million handlooms in India and Pakistan and the industry though depressed by the competition of the power loom, survives with part of its old artistic sense and skill.

Rangolis—Worth mentioning are the artistic designs made by the women with coloured powders on the floor or on the doorsteps of their houses as festival decoration. Preserving the age-old designs of religious symbolism, they are known in all parts of India in a great variety of patterns (*rangoli* in Gujerat, *atpona* in West Bengal, *kolam* in South India, etc.).

There can be no doubt that the skill and artistic sense of the craftsman is still alive, perhaps slumbering. As Mr. Fred H. Andrews said, "deterioration is not the fault of the craftsman but of his employer." Well directed official and private patronage can do much to save the cultural heritage of the arts and crafts in India and Pakistan which may, otherwise, fall a victim to progressive industrialisation.

Archæology

ALTHOUGH the Indian sub-continent is one of the most ancient lands in the world and the cradle of an ancient civilization, it has long remained in the background owing to the absence of written histories going back to the earliest recorded period as in the case of other ancient lands such as Egypt or Mesopotamia. Just over a hundred years ago the foundation of Indian Archæology was laid by Prinsep, who first deciphered the ancient Brahmi script and thus opened the way to a knowledge of the edicts of the Emperor Asoka and other ancient documents, which till then were a sealed book to the people of India and Pakistan. Since then a large number of scholars Indian, Pakistani and European have helped in building up the edifice of Indian and Pakistani Archæology which though fairly comprehensive is still incomplete in several respects.

PRE-HISTORY

The story commences with the beginnings of human existence in the vast sub-continent. The roughly chipped stone implements discovered in various parts of the sub-continent, particularly in the eastern districts of the Madras Presidency, and the valleys of the Sabarmati, Narmada and Godavari show the first attempts made by man to work his tools with which to master his surroundings. Two of these palæolithic implements were found in association with the bones of extinct animals, one at Bhutra in

Narsingpur district, G.P. on the banks of the Narmada and the other at Mungl on the upper Godavari. The age of the palæoliths determined mostly by geological considerations may be anywhere from 50,000 to 200,000 years, and the great interval of time between the microlithic and the palæolithic periods is shown by nearly a hundred feet of alluvial and wind-blown loam deposits in the valley of the Sabarmati river.

Stone Age—The whole field of prehistory is receiving increasing attention, which is expected to systematise our knowledge of the earliest inhabitants of the Indian sub-continent and systematic work has been recently attempted at several sites in Madras, and Mayurbhanj, Rajpipla and Baroda State.

Neolithic man, who used a large variety of polished stone implements, was more widely distributed throughout the continent, particularly in the Peninsula and the Vindhyan regions and his skeletal remains have for the first time been unearthed in Gujerat. On the other hand the megalithic tombs which occur in a great variety of forms in the central and southern parts of the Peninsula, belong to the Iron age and some even persist to our own age. The knowledge of metals developed differentially in the North and the South. Thus in the North the copper implements of the Gangetic Valley and the copper and bronze antiquities of the Indus culture exclude any knowledge of iron. In the South, however, though, certain recent finds in Ralchur Dt. do not exclude

the knowledge of copper smelting in the Peninsula, the neolithic settlements of the Bellary district seem to have been immediately followed by the knowledge of the smelting of iron, as evidenced by the large scale furnaces which stand in the shape of cinder mounds notably at Kudatini. It is clear, however, that while copper and bronze were known in the North in the third millennium B.C. the South may have been generally content with the use of stone implements right down to the first millennium B.C. until stone was supplanted by iron. It is remarkable that in some of the localities in the ancient Deccan, comprising the Bombay Karnatic, the Ceded Districts of Malras, South Hyderabad and North Mysore, stone implements and painted pottery are followed by antiquities of the regular historic period. This gives the hope that a regular sequence can be established and links forged between the history and the prehistory of the Deccan.

INDUS VALLEY

The most interesting and significant phase of the prehistoric civilization of the sub-continent is, that represented by the excavations at Harappa in the Punjab and Mohenjodaro in Sind. These have completely revolutionized ideas on this subject and proved that as far back as the 3rd millennium B.C. we were in possession of a highly developed civilization with well-planned and populous cities, well built houses and public buildings of brick, carefully constructed wells and a system of drains and many other amenities not always enjoyed at that period by the peoples of Mesopotamia and Egypt. Both at Mohenjodaro and Harappa there are the remains of some 5 or 6 cities super-imposed one upon the ruins of another.

Mohenjo-daro—The structures that have so far been exposed at Mohenjodaro include a large bath, surrounded by fenestrated galleries and halls. Another massive and extensive building found at Harappa appears to have been a public granary. All were built of well burnt brick and most of them were of two or more storeys with staircases giving access to the upper rooms. In and around the ruins have been found many minor antiquities including gold and silver jewellery some remarkable statuary in stone and copper, engraved seals of stone, ivory and paste, some of them exquisite specimens of glyptic art, copper implements and vessels, terracotta figurines and toys, shell ornaments, pottery, both painted and plain, and polished stone weights, progressively ascending in a regular scale—all denoting a well-developed artistic sense and business-like habits.

These discoveries establish the existence in Sind and the Punjab during the 3rd millennium B.C. of a highly developed city life; and the presence, in many of the houses, of wells and bathrooms as well as an elaborate drainage system betoken a social condition of the citizens at least equal to that found in Sumer and superior to that prevailing in contemporary Babylonia and Egypt. The inhabitants of these cities lived largely no doubt by agriculture and

It is a point of interest that the specimens of wheat found at Mohenjodaro and Harappa resemble the common variety grown in the north-west today. Their food appears to have included bread, beef, mutton, and pork, the flesh of tortoises turtles and gharial, fresh fish from the Indus and dried fish from the sea coast. Among their domesticated animals were the humped bull, the buffalo, a short horned bull, the sheep, pig, dog and elephant. Besides gold and silver they used copper, tin, bronze and lead; they were familiar with the arts of spinning, weaving and the cultivation of cotton, and had attained a high degree of proficiency in the jeweller's and potter's arts.

That they possessed a well-developed system of writing is evidenced by the discovery of over a thousand tablets engraved with well-executed animal devices and pictographic legends in an unknown script. The method of the disposal of the dead during the Indus Valley period, as revealed by the excavations at Harappa during 1949, was that of inhumation. The body usually oriented from north to south and laid supine, was buried in a grave together with funerary pottery; sometimes a few ornaments and toilet objects were also placed. A unique example was that of a "coffin-burial" with reed-shroud, the only one of its kind so far known in the Indus Valley but of a type common in contemporary Mesopotamia.

Previous excavations revealed "pot-burials" which contained a skull and some other human bones. These are seemingly post-exposure burials, and are later in point of time than the proper Harappa burials.

Other Sites—The 1946 excavations also discovered fortifications in the western part of the city of Harappa around an area of 450 yards by 250 yards. The main wall, built of mud-bricks, is 40 feet wide and now stands to a height of over 30 feet. It is battered both internally and externally and has a baked-brick facing on the outside. The wall is reinforced at intervals on the outside by rectangular bastions. The discovery of defences points to a "citadel-rule" under whose shadow was carried on the highly centralised life of the Indus people.

The late Sir Aurel Stein's survey of the whole of Baluchistan and his last journey in Bahawalpur and Las Bela States have added to our knowledge a number of ancient sites of the pre-historic epoch. Among the 20 or more sites in Sind, discovered mostly by the efforts of the late Mr. Majumdar, at least three are now recognised as representing distinct phases, some earlier and some later than the main culture of Harappa and Mohenjodaro.

The Indus Valley culture has now been traced in the North-east as far as Rupar in the Ambala District, relatively close to the watershed of the Sutlej and Jumna and it is therefore highly improbable that this civilization was confined to the Indus Valley. There can hardly be any reasonable doubt that future researches will trace it or its successors into the valley of the Ganges where already painted pottery has been traced in the earliest levels. In the south-east, this pre-historic culture has been traced upto Limbdi State in Kathiawar.

Of the long period of more than 2,000 years that separates the pre-historic monuments referred to above from the historic period little is yet known except some painted pottery but there is every hope that this gap in our knowledge may be filled in by further finds in western U.P. and East and West Punjab.

BUDDHIST MONUMENTS

From the time of the Mauryas, i.e., 4th century B.C., the history of architecture and of the formative arts is clear and can be traced with relative precision.

The earliest monuments of the historical period that have come down to us relate to the Mauryan period from which time onwards the main currents are pretty clear. The Mauryan monuments include certain caves in the Barabar hills near Gaya the remains of a pillared hall near Patna (ancient Pataliputra), remains of the wooden palisade near Patna, a number of stupas at different places, built of large sized bricks traditionally attributed to Asoka, and a wealth of minor antiquities such as sculptures, terracottas, beads, etc., recovered in the excavations at Patna, Taxila (Bir Mound), Benares and Sarnath and in course of the sewage operations at Patna.

Asoka's edicts.—The rock and pillar edicts of Asoka (c. 250 B.C.), deserve special mention. His major rock edicts are engraved in seven places, ranging from Shahbazgarhi in the Peshawar District to Jonnagiri in the Karnul District in the south. Amongst the thirteen pillars of Asoka (besides the Elephant capital of a 14th at Sankisa and a fragment of a 15th at Benares) ten bear his inscriptions. Of these the Lauriya-Nandangarh column in the Champaran District, Tirhut, is practically uninjured. Special mention must be made here of the stupa at Piprahwa opened by Peppé in 1898, which yielded a large stone box containing an inscribed steatite or soap-stone reliquary with a number of relics and beautiful precious stones now preserved at the Indian Museum, Calcutta. The inscription written in characters of the 4th-3rd century B.C., speaks of the relics being of the Buddha himself and enshrined by his kinsmen, the Sakyas.

The Mauryas were followed in the second century B.C. by the Sungas in the east, while in north-west Græco-Bactrian rulers were gradually extending their sway. The Buddhist stupa at Bharhut (Nagaud State, Central India) is the most typical and remarkable monument of this period illustrating the simple but expressive character of the art. Besides dedicatory inscriptions the labels inscribed on the Bharhut panels are of unique importance. Antiquities of this period particularly terracotta figurines with exquisite ornamentation have been found in the excavations of city sites all over the North notably Kosam and Bhita near Allahabad, Ahichchhatra near Bareilly, and Benares and Patna.

Taxila.—The best preserved in the series of early Buddhist monuments are the magnificent Buddhist remains at Sanchi in Bhopal State. Here the main stupa of which the core probably belongs to the time of Asoka,

was later faced with stone and surrounded by a stone railing with four great gateways, one at each cardinal point, sometime about the first century B.C. Besides the stupas, a number of other buildings, temples, apsidal halls and monasteries of different periods form a splendid galaxy, illustrating the principal phases of the religion of the Buddha, from its early days to its decline.

The extensive remains of the ancient city of Taxila, near Rawalpindi, are among the most important in the land, constituting three different cities that flourished in adjacent sites in successive epochs and a number of monastic establishments centered around stupas, situated in the suburbs or perched on the tops of hillocks in the vicinity. For over a quarter of century, Sir John Marshall's labours here have served to elucidate the splendid history and culture of this centre, the meeting-place of the three great civilizations of Greece, Persia, and the Indian sub-continent.

Mathura.—The most prosperous of the cities was an Indo-Scythian city, now known as Sirkap, dating from a century on either side of the Christian era with regularly planned streets, houses and palaces, the antiquities from which including exquisite jewellery, beads, coins, all kinds of household objects and pottery, etc., form the bulk of the exhibits of the fine Museum on the spot.

Mathura, one of the most important religious and art centres in the north from ancient times was galvanised into activity from the second century A.D. onwards. Here the abundance of red sandstone in the neighbourhood was availed of by the followers of all the religions and some of the earliest Brahmanical and Jain images were manufactured here in a peculiarly attractive and playful though sensuous art. From Mathura the Buddha image and some of the Hellenistic motifs travelled further to the east and south and even to the distant Buddhist school of the lower Krishna valley as at Amravati, Nagarjunikonda and other places. By the fourth century A.D. the Hellenistic element in native art was, however, completely absorbed when under the stimulus of the Gupta Empire it reached its golden age.

THE GUPTA AGE

The rise of the Gupta dynasty early in the fourth century was a signal for the high water mark of Hindu achievement in literature and sculpture.

The best sculpture of this period has been found in Sarnath, Muttra, Deogarh in Garhwa in the United Provinces, while examples of terracotta and minor arts have been found in all the excavations in the North. Sarnath, where Buddhism first saw the light of day, was the most prosperous centre of Buddhism at this time and, significantly enough, is the centre of Buddhist revival in India, the Mulagandhakuvihara founded here by the Mahabodhi Society having received from the Government of India three Buddhist relics recovered from excavation at Nagarjunikonda in Madras, Mirpurkhas in Sind and Taxila in West Punjab.

In the field of religion the Brahmanical faith was steadily in the ascendancy while Buddhism still held its own, the intellectualism of the age finding expression in a broad spirit of tolerance, simplicity of conception and restrained ornament is the keynote of the architecture of this period, examples of which are found at Sanchi, Bhumara, and Deogarh in stone and Bhitaragaon, Ahichchhatra and other places in brick. A well known monument of the Gupta period is the iron pillar standing in the middle of the open court of the mosque near the Qutb Minar near Delhi, which has an inscription referring to King Chandra (identified with Chandragupta II) circa A.D. 379-413. It is wonderful to find that a bar of wrought iron of such dimension should have been made at this early period and still more surprising that not a speck of rust appears anywhere on it in spite of the weather action of 15 centuries. Other interesting examples of wrought iron are the beams from Konarak, 12th century, and the iron pillar at Dhar, C.I., dating back to the time of the Paramara King Bhoja early 11th century.

INSCRIPTIONS

We now come to inscriptions, of which vast numbers have been brought to light and which are particularly numerous in South India. They have been engraved on varieties of materials, but principally on stone and copper. The former are mostly associated with temples of which they record the construction or donations, while the copper plate records are usually grants of land made by kings on special occasions. In either case, the mention of the exploits of the donor and his ancestors and the dates (where specified) give the student of history, valuable contemporary material.

The earliest of these are found incised in two distinct kinds of alphabet, known as Brahmi and Kharoshthi, the latter being confined to the north-west. Brahmi was read from left to right, and from it have been evolved all the modern vernacular scripts of India. The Kharoshthi script was written from right to left, and was a modified form of the ancient Aramaic alphabet introduced into the north-west during the period of the Persian domination in the 5th century B.C. It was prevalent up to the 4th century A.D., and was supplanted by the Brahmi.

The earliest dateable inscriptions are the celebrated edicts of Asoka to which a reference has been made above. One group of this has been engraved on rocks, and another on pillars. They have been found from Shahbazgarhi, 40 miles north-east of Peshawar to Nigiva in the Nepal Tarai, from Gilnar in Kathiawar to Dhaul in Orissa, from Kashi in the lower Himalayas to Jonnagiri in Madras showing by the way the vast extent of territory held by him.

The reference in his Rock Edicts to the five contemporary Greek Princes, Antiochus II of Syria, Ptolemy Philadelphus, and so forth is exceedingly interesting, and fixes B.C. 289 as the date of his coronation. His Rumminder pillar inscription, again, discovered in Nepal Tarai, now settles beyond all doubt, the birth-place of Buddha which was for long disputed. Another

noteworthy record is the inscription of the Benagar Pillar, at Benagar, near Bhilsa, C.I., which records the erection of this column, which was a Garuda Pillar, in honour of the god Vasudeva by one Heliodoros, son of Dion, an envoy of King Antialkidas of Taxila. Heliodoros is herein called a *Bhagavata* which shows that though a Greek he had become a Hindu and a Vaishnava. Another inscription worth noticing in this connection is that of Cave No. 10 at Nasik, in which Ushavadata, who calls himself a Saka or an Indo-Scythian, granted three hundred thousand kine and sixteen villages to gods and Brahmans and annually fed one hundred thousand Brahmans. Here is another instance of a foreigner having embraced Hinduism.

The part played by Numismatics in reconstructing the continent's ancient history may also here be mentioned. The earliest coins are those of the silver punch-marked series, going back at least to the 4th century B.C., and found all over the land in large hoards, which are still being systematically studied. Next come the cast coins issued by almost all the tribes and rulers of the North. For the Indo-Greek, Indo-Scythian and Indo-Parthian periods, coins are our almost exclusive source of information, having revealed the names of scores of rulers, otherwise unknown. The entire genealogy, succession and regnal years of the kings of Kathiawar and surrounding territories, known as the Western Kshatrapas (2nd to 4th centuries A.D.) has been built up on the numerous coins issued by them.

ARCHAEOLOGICAL DEPARTMENT

The work of the Archaeological Department is primarily twofold, conservation, and research and exploration. None but spasmodic efforts appear to have been made by Government in these directions till 1870 when they established the Archaeological Survey of India and entrusted it to General (afterwards Sir) Alexander Cunningham, who was also the first Director-General of Archaeology. The first systematic step towards recognising official responsibility in conservation matters was taken by Lord Curzon's Government who established most of the Archaeological Circles that now obtain, placed them on a permanent footing and united them together under the control of a Director-General, provision being also made for subsidising local Governments out of Imperial funds, when necessary. The Ancient Monuments Preservation Act was passed for the protection of historic monuments and relics especially in private possession and also for State control over the excavation of ancient sites and traffic in antiquities.

Under the direction of Sir John Marshall, Kt., C.I.E., late Director-General of Archaeology, a comprehensive and systematic campaign of repair and excavation was prosecuted and at present the Central Governments bear all expenditure in connection with the preservation and maintenance of monuments, as well as with excavation and research. Under later Directors-General it was continued with equal vigour and the result of it is manifest in the present altered conditions of many old and historic buildings and in the scientific excavation of buried sites such as Taxila, Pataliputra, Sanchi in the Bhopal State, Sarnath near Benares, Nalanda in Bihar, Pahar-

pur in Bengal and Nagarjunikonda in Madras, and in the Indus Valley at Harappa in West Punjab and Mohenjo-daro in Sind. The last systematic excavations were those at Ramnagar (ancient Ahichhatra) in Bareilly District, U.P., where an extensive walled town inhabited from before the fourth century B.C. to the ninth century A.D. has been unearthed stratum by stratum with far-reaching results for the study of archaeology throughout the sub-continent's age-long history. The present Director-General, Dr. R. E. Mortimer Wheeler (India) opened an excavation training centre at Taxila in 1944, where a large number of students were trained in the latest methods of archaeological excavation. He has also carried out excavations at the ancient port of Arikamadu near Pondicherry, which have yielded vestiges of Roman intercourse and have thus helped in the dating of an associated Indian culture of the 1st and 2nd centuries A.D.

Museums—The Archaeological Survey of undivided India has devoted great attention to the organization of museums as centres of research and education. It maintains the archaeological section of the Indian Museum at Calcutta, small museums at the Forts at Delhi and Lahore, and at the Taj, and the Central Asian Antiquities Museum at New Delhi. Local museums have also been established at the excavated sites of Taxila, Sarnath, Nalanda, Mohenjo-daro and Harappa with the object of keeping the principal movable antiquities recovered at these sites in close association with the structural remains to which they belong.

Duplicates of antiquities from Mohenjo-daro and Harappa have, however, been widely distributed among other museums.

The epigraphical material dealt with by the Archaeological Survey has enabled the history of the various dynasties of undivided India to be established on a firmer basis and in greater detail. The "Epigraphia Indica" is now in the 26th volume, a revised edition of the Asoka inscriptions has been recently published, while the companion volume of post Asokan Brahmi inscriptions is under preparation along with two others devoted to the records of the Gupta and Kalachuri epochs. The volume of work done in South India, which is particularly rich in lithic records, will be apparent from the fact that over 20,000 inscriptions have been copied and noticed in the Annual Reports on South Indian epigraphy and a large number published *in extenso*.

THE STATES

The example of the Dominion has stimulated several of the progressive States to create their own Archaeological Departments. Prominent among these must be mentioned Hyderabad, Mysore, Gwalior, Baroda and Jaipur. In Hyderabad the systematic and scientific treatment of the frescoes at Ajanta is an outstanding achievement of the Archaeological Department of the State. Besides this, attention has been devoted to the rock cut

temples at Ellora and many other structural temples. Among the Islamic monuments the great mosque of Gulbarga and the Bahamani mosque at Bidar have been fully conserved. Of late, systematic excavation of ancient sites as at Maski and Paithan has been a regular feature of the Department's work the latest excavations at the Andhra city site of Kondapur and at Kallur in Raichur being fraught with results of immense importance.

The Mysore Archaeological Department has nearly completed half a century of its existence. The first Director, Mr. B. L. Rice, published some 10,000 inscriptions in 12 volumes of the Epigraphia Karnatica. This progress has been well maintained, and the conservation work has rescued many famous temples, such as the Kesava temple at Somanathpur, and the temples at Belur and Halebid. Excavations conducted at Chandravalli and Brahmagiri have been very fruitful.

In Gwalior the Department established in 1913 has done excellent work in exploration of ancient sites, such as Pawaia, Ujjain, Besnagar and Mandasor. The conservation of the Bagh caves and other ancient monuments and the maintenance of a good museum are among the other achievements of the Department.

In Jaipur excavations initiated by the late Rai Bahadur Daya Ram Sahni have revealed the existence of a unique Buddhist establishment at Balrat and a city site near the Sambhar lake. The excavations at Raih, an ancient commercial and industrial mart, have brought to light large hoards of punch-marked and other coins of early date, and the work now started at the great site of Karkotanagar bids fair to assume great importance.

The recently started Archaeological Department of the Baroda State has done valuable work in the listing of monuments and the exploration of several sites including Amreli in Kathiawar and Pattan in Gujarat.

Indore, Mayurbhanj, Travancore, Jodhpur, Kashmir, Pudukkottai, Patna, Rewah, Cochin and Rajpipla are some of the other States that maintain Archaeological Department of their own.

The recently amended Ancient Monuments Preservation Act has established a system of licenses for scientific excavations to non-official bodies. The first Society to take part in this work was the American School of India and Iranian Studies which, co-operating with the Boston Museum of Fine Arts, organized an expedition for work in Chanhudaro in Sind in 1936. Here several phases of the pre-historic culture of the Indus Valley represented by Harappa were unearthed. Unfortunately the work was discontinued after the first season. The University of Calcutta have conducted excavations at Bangarh in North Bengal for a number of years with success and the Punjab Exploration Fund have done work at the site of Bhera in the District of Punjab.

Architecture

THE first comprehensive work, accessible to lay readers, to give a history of styles in architecture in the Indian sub-continent is Percy Brown's *Indian Architecture* in two volumes which marks a definite advance in the treatment of the subject over Fergusson's *Indian & Eastern Architecture* which, for many years, is considered to be the standard work.

The chief characteristics of our architecture, especially in its later stone phase, are (a) use of heavy masses; (b) construction based on vertical not lateral pressure, i.e. without true arches or true domes; (c) its plastic treatment and close relationship with sculpture; (d) its undeveloped treatment of space and (e) its spiritual significance and symbolism.

Hindu Styles—In Harappa and Mohenjo-daro and other sites of the Indus valley tentative cities have been discovered under the mud and sand of the river. These cities were built from c. 3000—2000 B.C. by a people whose chief occupation was trading. The buildings, which are carried out in brick in "English bond", are plain, functional and without great artistic merit. They are mainly houses, store houses, baths and wells and no certain traces of temples or palaces have yet been found. The drainage system was perfect. The corbelled arch was used, the true arch being unknown.

With the invasion of the Aryan tribes a new architecture came into existence which, originating from the village, developed into the city and palace architecture of the epic period. Wood being the only building material, hardly any visible traces of this period exist. The main forms were the long house with a vaulted roof of constructed with bamboo or reed and with arse-shoe shaped "sun windows" on either end; regular village huts (and perhaps shrines) with the wooden fence with wooden "cowgates"; in the South are found "dolmens" covered with a single slab of stone, and in Rajgriha, the ancient capital of Maghada, cyclopean fortifications in stone were carried to a height of 12 feet.

With the establishment of a large political power under Asoka the use of a more permanent architecture was gradually introduced. Monuments of this period include (a) 13 monolithic pillars, some with beautifully carved animal figures on bell shaped capitals (Persian influence); (b) remains of a large, three storied wooden palace near Patna supported on stone pillars; (c) several stupas or Buddhist relic mounds built largely in brick and (d) a group of rock-cut caves in the Barabar Hills in Bihar.

Buddhist Styles—During almost four centuries, from 200 B.C. to 200 A.D., under so great dynasties, the Sungas of the North and the Andhras of the South, Buddhist zeal gave us some of our most remarkable monuments. In this period the stupas are unadorned, with a stone casement and umbrella on top, surrounded by stone railings in which are set four doorways or toranas. All forms though carried out in stone, betray their wooden origin. Sculpture and relief are used profusely to decorate the sacred shrines. The most

State), Barhut (C.I.), Budh Gaya, Sarnath and Amaravati in Madras Presidency which is the latest and most elaborate one.

To serve priests, monks and lay worshippers, temples and monasteries were built, mainly in brick and wood. Little of these has survived but their exact replicas have come to us, carved from solid rock in the shape of cave temples and monasteries; the largest caves (Karli, 124 ft. long 46½ ft. wide and 45 ft. high) reach considerable proportions.

Buddhist caves are generally of two types—*chaityas* or chapels, and *viharas* or monasteries. The *chaityas* are long apsidal buildings with a vaulted roof and a horse-shoe window over the entrance. The interior is divided into a nave for the priests and aisles for the lay worshippers by means of a double row of pillars. At the apsidal end is a *stupa*. *Vihas* are rectangular halls surrounded by cells and having (in a later development) a sanctum in the centre of the backwall containing a Buddha image. The most important groups of caves of this period are those of Bhaja, Kondane, Pitalkhora, Bedsa, Nasik, Ajanta, Ellora, Junnar and Kanheri, all in Western India.

During the Gupta age (c. 350—650 A.D.) a flood of creative energy swept over India. It is during this period that the later Hindu temple begins to take shape. Wood architecture is gradually replaced by stone masonry. Builders used the simple construction of pillar and bracket supporting beams. Arches, except corbelled arches, were not used. Pillars and beams are, preferably, monolithic i.e., made from single large slabs of stone. Masonry consists of large, very well worked stones bonded without mortar.

The reawakening of Brahmin culture soon developed its own forms for houses of worship. Typical of the age are flat roofed temples consisting of a square sanctum with a pillared porch. They are found in Udaygiri (Bhopal), Sanchi, Tigrova, Bhumara and Nachna Kuthara (C.I.) and in Aihole (Lad Khan Temple). Some have another cell on the roof which may mark the first beginnings of the *shikhara*. In the Ganges valley originates a form of brick temple consisting of a square shrine with a pyramidal roof which is made up by duplicating the roof twice or repeatedly (Bhitargaon near Cawnpore). The northern temples have pillars with bell-shaped capitals or with "vase and flower" capitals, the Deccan temples use square pillars with heavy brackets.

Temples—During the 200 years from 600 to 800 A.D. the medieval temple is established in its main forms and styles. The typical temple consists of a cell which houses the image (*Garbha Graha*—womb-house), and a pillared hall (*mandap*). Originally not connected, these two parts were joined by an intermediate chamber (*antarala*). Leading into the main hall are one or several porches (*ardhi-mandap*). The cell is surmounted by a *shikhara* (spire or pyramidal roof) which is the main distinguishing mark of temple styles. The whole temple may be raised on a platform and be surrounded by an enclosure through which leads a gateway

At Bhuvaneshvar in Orissa, the northern style unfolds in many beautiful temples (from 750 A.D.). The rock-cut temples of the "seven pagodas" at Mahavalipuram near Madras, excavated by the Pallavas of the 7th century, show how the earliest southern temples grow out of common forms of preceding times; the house, the village shrine, the Buddhist *chaitya* and the many-storied Buddhist monastery. Under the Rastrakuta family which overwhelmed the Chalukyans in Western India during the 8th century, rock-cut caves and temples, Shaiva in character, were excavated in Elephanta and Ellora (Deccan). The Kailasanath temple of Ellora is a complete Dravidian structural temple carved in solid rock.

The time from the 8th to the 13th century is the great age of temple-building in India. The three main styles are now clearly differentiated, the northern or Indo-Aryan style emphasising the perpendicular, the southern or Dravidian style stressing the horizontal, while the Chalukyan or western style combines elements of both. Apart from Bhuvaneshvar in Orissa, the northern style comes into full flower in Khajuraho in Bundelkand, in Itajputana (Mount Abu), Gujarat (Modhera), Osia in Marwar, in the Deccan (Ambarnath) and many other places.

In the south, temple architecture develops independently through its successive phases. Typical of the southern temple is the addition of spreading pillared halls and long covered corridors. The temple compound expands into a whole complex of buildings surrounded by large walls. The entrance gates are marked by impressive pyramidal towers (*gopurams*) which grow larger in time and far exceed the *vimana* in size. Famous Dravidian temples, in their order of origin, are the Kailasanath of Conjeeveram, the great temple of Tanjore, the Vithala temple of Vijayanagar and the Meenakshi temple of Madura.

Indo-Saracenic Architecture—This begins with the 13th century after the permanent occupation of the Muslims. Their first mosques were constructed of the materials of Hindu and Jain temples, and sometimes with comparatively slight alterations. The *Quwat-ul-Islam* mosque near the Qutb Minar in Delhi and the *Ahmad-din ka-jhompra* mosque in Ajmer are the best examples of this kind. Gradually new methods and principles of construction were introduced from Persia and other Islamic countries of the West. The Muslims brought the arch and the true dome, they used mortar (which became necessary because of the lateral pressure exercised by arches) and they introduced novel types of buildings (the mosque and the tomb). They laid greater emphasis on the perfection and the proportions of interior spaces than the temple builders who did not require lofty spaces.

The early Pathan architecture of Delhi was massive and at the same time characterised by elaborate richness of ornamentation. The Qutb Minar and the tombs of Iltutmish and Alau-din Khilji are typical examples. The tomb of Ghiasuddin Tughlak at Tughlakabad, the Lodi tombs, and lastly the tomb of Sher Shah at Sasaram in Bihar clearly illustrate the subsequent progress of Pathan architecture.

The Rulers of the Bahmani dynasty of Gulbarga and Bidar were great builders, and adorned their capitals with important buildings. The most striking of these is the great mosque of Gulbarga, which differs from all mosques in the country in having the whole central area covered over so that what in others would be an open court is here roofed by sixty-three small domes.

"Of the various forms which the Saracenic architecture assumed," says Fergusson, "that of Ahmedabad may probably be considered to be the most elegant." It is notable for its carved stone work; and the work of the perforated stone windows in Sidl Sayyid's mosque, the carved niches of the minars of many other mosques, the sculptured *Mihrabs* and domed and panelled roofs is so exquisite that it will rival anything of the sort executed elsewhere at any period. No other style is so essentially Hindu.

In complete contrast with this was the form of architecture employed by the Adil Shahi dynasty of Bijapur. There is here relatively little trace of Hindu forms or details. The principal buildings now left at Bijapur are the Jamil Masjid, Gagan Mahal, Mihari Mahal, Ibrahim Rauza and Mosque and the Gol Gumbaz. The latter is supposed to have the largest dome in existence.

Like their predecessors, the Pathans of Delhi, the Moghuls were a great building race. Their style first began to evolve itself during the reign of Akbar in a combination of Hindu and Mohammedan features. Noteworthy among the Emperor's buildings are the tomb of Humayun, and the palaces at Fatehpur Sikri and Agra. Of Jehangir's time his tomb at Lahore and the tomb of Itimad-ud-daula at Agra are the most typical structures. The force and originality of the style gave way under Shah Jahan to a delicate elegance and refinement of detail and it was during his reign that the luxurious buildings in the forts at Delhi and Agra and the most splendid of the Moghul tombs, the Taj Mahal at Agra, the tomb of his wife Mumtaz Mahal, were constructed. The Moti Masjid in Agra Fort is another surpassingly pure and elegant monument of his time.

Modern Architecture—With the arrival of Europeans western styles of architecture were soon introduced. The Portuguese built churches and palaces in an agreeable baroque style. The early British colonial style of which many pleasant examples survive, especially in South India, was appealing in its simplicity and its clever adaptation to the local climate. During the 19th century public buildings were erected in a hybrid style composed of classic, romanesque, Gothic and Indian elements comparable with the derivative styles of the Victorian epoch. In Europe. In more recent times, two schools of thought have fought for supremacy; the one propagating a revival of indigenous art as still practised by Hindu and Muslim "master builders" surviving in Rajputana and other parts of the country; the other proclaiming the development of a modern architecture on western lines. The western school has found more widespread acceptance. The work of building the new capital in Delhi was entrusted to Sir Edwin Lutyens and Sir Herbert Baker. This most ambitious scheme, incorporating the design and planning of a whole new city, has led to a

new style of official architecture, the merit of which is still a controversial question. The contemporary use of reinforced concrete structures, though indubitably cheaper, safer and faster, emphasises the dangers of standardisation and suppression of national character. The solution to the problem will have to be found by a young generation of architects who, while fully trained in modern methods of construction, are yet conscious of the glorious artistic heritage of their country.

A School of Architecture, recognised by the R.I.B.A., is part of the Sir J. J. School of Arts in Bombay. Its professors of Architecture since 1913 were R. W. Cable, H. Foster King and Claude Batley. The present Professor of Architecture is Mr. C. M. Master, M.A., F.R.I.B.A., The Indian Institute of Architects, affiliated to the Royal Institute of British Architects in 1925, co-operate with the R.I.B.A. in conducting the Final R.I.B.A. Examinations in Bombay.

Literature

Modern Indian Literature

INDIA (meaning India and Pakistan) achieved her political freedom on 15th August 1947. But she had attained her intellectual independence many years earlier. For on the day she began to react *creatively* to the impact of the West, she not only re-claimed her ancient cultural heritage but also commenced enriching it with further fresh contributions. Roughly speaking, this came to pass towards the end of the last century. Till then the principal Indian Literatures—Assamese, Bengali, Gujarati, Hindi, Kannada, Marathi, Malayalam, Maithili, Oriya, Punjabi, Tamil, Telugu, Sindhi, Urdu—which are some of the windows to the indigenous mind, more or less were either in the stage of imitation of the thought of the West *via* English literature or on the defensive. Then followed a period of assimilation and re-creation, which received a much-needed impetus during the twenties of the present century. The Indian literatures, therefore, are to-day in spring, though in the words of Dr. Grierson it must be said that "whether the nation has made the literature, or the literature the nation, I know not."

The common characteristics of present-day literary aspiration and activity in India in the main are two; namely, an attitude of realism and an angle of world-vision as against narrow nationalism and cloud-capped idealism of the immediate past. The result is a kind of scientific humanism. Man is the hub of the universe, but man as understood with the aid of the scientist's gospel and gadgets. But soon the study of man in all his integrality, including his entity as Spirit, will become the aim of Indian literature, thus falling into line with the age-long tradition.

In this bird's-eye view of current Indian literatures only names of important authors and here and there of their well-known works can be given. And this is all that is attempted here together with an indication of the trend towards the future of the Indian literatures.

Modern Assamese literature dates back to the publication of *Jonaki* (Moonlight), a monthly magazine, published in 1899, and conducted by Lakshminath Bez Baruah, Chandrakumar Agarwalla and Hemchandra Goswami. This trio essayed in every branch of literature and soon others followed: poets like Kamalakanta, Ambikagiri and Nalinibala Devi; novelists like Rajanikanta, Padmanath Gohain Barooah,

Saratchandra Goswami, Paziruddin Ahmed and Moulvi Fazizuddin Jazirika; and research scholars like Dr. S. K. Bhuyan, Dimbeshvar Neog, Kaliram Medhi and Birinchi Kumar Barua.

Bengali literature came into its own during the time of Raja Ram Mohan Roy. Then came the poet Michael Madhusudan Datta, the novelist Bankimchandra and the many-sided genius Rabindranath. Satyendranath Dutta, Sarat Chandra Chatterji, the prince among story-writers, Kazi Nazarul Islam, the poet of the people, and Mir Mosharraf Hossain, Latfur Rahman and Begum Rokaya among young Muslim writers, Itananda Chatterji and Pramatha Chaudhuri, Gokul Nag, Premendra Mitra, Jibananda Das, Buddhadeva Bose, Achintya Sengupta, Annada Sankar Ray, Bishnu De, Manik Bandyopadhyaya, "Banaphul," Bibhutibhusan Bandyopadhyaya, Tarasankar Bandyopadhyaya, Sailajananda Mukhopadhyay Sudhindra Datta and Prabodhkumar Sanjay among young Hindu writers.

Mahatma Gandhi—Narmadashanker is the parent of present-day **Gujarati literature**. He was succeeded by Dalpatram Mahipatram, Nandashanker Ranchhodhbhai and Mansukhram. Then appeared the Bombay University group of scholars: Govardhanram, Manilal, Narasimharao, Keshavlal, Itanambhal, Manishankar, "Kalapi," Anandshanker and Balwantrai. Keshavlal Dhruva's translations of Sanskrit classics, critical studies, Ramanbhai's *Bhadra Bhadra* and *Kavita ane Sahitya*, Govardhanram's *Saraswati Chandra*, Kalapi's *Kekarava*, Balwantrai's *Prithvi Chhanda*, Khabardar's *Kalika* are considered milestones. This group passed on the torch to Kavi Nanalal and Kanalyalal Munshi, when there appeared on the scene Mahatma Gandhi whose contribution to Gujarati literature is at once voluminous, varied and vital. In his wake have come Kaka Kaleikar, Ramnarayan Pathak, Gaurishankar Joshi, Ramanlal Desai, Jhaverchand Meghani, Krishnalal Jhaveri, Sundaram, Umashankar Joshi, Chandravadan Mehta and lady-writers like Vidyagauri, Sumati Trivedi, Dipika Desai, Jyotsna Shukla, Lilavati Munshi and Hansa Mehta.

The **Hindi literature** of today can be traced back to Bharatendu Harishchandra and to Nagari Pracharini Sabha which developed

Khari Boli literature in all its variety, under the guidance of Pandit Mahabir Prasad Dwivedi. A band of poets then sprang into being: Ayodhya-singh Upadhyaya whose *Priya Pravas* is a classic, Maithili Sharan Gupta of *Bharat Bharati* fame, Nathuram Shanker Sharma, Rai Devi Prasad Purna and Kampta Prasad Guru. The coming of Munshi Premchand opened the floodgates of fiction-writing. His *Godan*, *Karmabhumi* and *Sevasadan* have been the enjoyment and inspiration of many. He was followed by Jeyanandra Kumar, Bhagwati Charan Verma, Brindaban Lal, Kaushik, S. H. Vatsayana and several others. A school of critics also came into existence, led by Pandit Ram Chandra Shukla, Pandit Hazari Prasad Dwivedi and Mata Prasad Gupta. Shri Jaya Shanker Prasad, Pandit Sumitra Nandan Pant and Shrinati Mahadevi Verma are the mystical poets whose *Kamayani*, *Pallava* and *Yama* are highlights. The drama had its exponents in Madhava Shukla, Makhanlal Chaturvedi, Govind Ballabha Pant, Laxminarain Misra and Upendranath "Ashk."

"The æsthetic crystallisation of the new consciousness in **Kannada literature**" took place, it is said, in *Kamashamedha* of Muddana. It was canalised by Karibasava Shastri, Santa Kavi, Panje Mangeshwar, B. Venkatachar and V. T. Galaganath and others. Devadu Hoyasala, B. S. Mandala, Karanth and Rajaratnam have appreciatively contributed to children's literature. B. M. Srikantha, D. V. Gundappa and Masti Venkatesa Iyengar are some of the other pillars of the pantheon. The "wizard" is D. R. Bendre, followed by Sali Khanolkar, K. V. Puttappa, V. Sitaramiah, V. K. Gokak, P. Sadasiva Rao, R. S. Mugali and others. Among the novelists there are A. N. Krishna Rao, Kerur and N. K. Kulkarni; among the short story writers, K. Betigeri and Gopala Krishna Rao; among the dramatists, T. P. Kailasam and R. V. Jagirdar; and among the women writers there are Mrs. Gouramma, Kalyanamma, Shyamala.

ATurning Point—Mahamahopadhyayas Murali-dhara Jha, Parameshwara Jha, Ganganath Jha, Madhusudan Jha and Ramachandra Mishra are the inaugurators of the modern **Maithili literature**. Among the leading writers are the poets Bhanu-nath Jha, Bhola Jha, Munshi Raghunath-danadatta, Acyutanandadatta and Sitaram Jha; dramatists Ishanatha Jha and Tantranath Jha; novelists Kashinath Jha and Gangananda Sinha; and women-writers Arundhati Devi, Harilata and Yoganaya.

"The *Gitanjali* of Rabindranath Tagore was the turning-point in the history of contemporary **Malayalam poetry**," says an eminent scholar. The death of Kerala Varma Valla Koll Thampuran, the acknowledged king in the literary domain in 1914 was the beginning of the present renaissance, to the ushering in of which Vallathol, Ullur S. Parameshwara Aiyer, Nalapatt Narayana Menon, K. M. Panikkar, Krishnan Tampi, C. V. Raman Pillai, T. M. Appu Nedungadi, Sankara Pillai, Hari Sharma and Dr. C. Kunhan Raja have contributed a good deal.

In modern **Marathi literature** after the stalwarts, Chiplunkar, Tilak and Agarkar, the names of writers to be conjured with are Hari Narayan Apte, Keshavsuta, S. M. Paranjape,

N. C. Kelkar, Phadke, Sane Guruji, Khadilkar, P. K. Atre, V. M. Joshi, Gadkari and T. M. Patwardhan.

To Radhanath Rai, Fakir Mohan Senapati and Madhusadan goes the credit of creating the modern **Oriya literature**. They have been succeeded by a chain of writers: Gangadhar Meher, Ram Shankar Rai, Nandakishore Bal, Pandit Gopabandhu, Sri Padma Charan, Nilakantha Das, Gopal Chandra Praharaj, Godavarish Mahapatra, Kuntala Kumari Devi and Kanhu Charan—poets, essayists and story-writers.

The **Punjabi literature** of to-day is dominated by the personality and performance of Bhai Vir Singh, who has been ably assisted by Mohan Singh Valiya in the work of "revival." Dhani Ram Chatrak, Puransingh, Charan Singh, I. C. Nanda, young Mohan Singh, Amrita Pritham, Nanak Singh, Joshua Fazal Din and Gurbux Singh constitute the present shining ranks of writers.

In **Sindhi literature** the school of writers proceeding the present one was a creation of Dayaram Gidumal, Nirmaldas Patchchand, Kalich Beg Mirza, Allah Bakhsh Abjho, Fermananda Mewaram and Kourmal Chandanmal. Among the writers who hold public attention these days are Kishinchand Bewas, Hyder Bakhsh Jatoti, Akbar Ali Ayaz, Eherumal Mahirchand, Jethmal Parsram, Lalchand Jagtiani, Ansari, Ram Punjwani, Narain Malkani, Nanki Gidwani and Gulii Sadarangani.

The **Future**—Modern **Tamil literature** has been usually divided into three sections: the era of origin, the era of Bharathi and the era of Gandhiji. Arumuga Navalar of Jaffna was a pioneer in simple prose style. Subramania Bharati was a poet and translator. Kavi Ramalingam, Shuddhananda Bharati, T. S. Chokkalingam and R. Krishnamurti are among the prominent writers of the Gandhian era, while among the women writers mention must be made of V. M. Kothianayagi Ammal, Swarnambal Subramaniam and Ambujammal. P. Sambanda Mudaliar, Rajam Iyer, "S.V.V.," "Va Ra" are leading dramatists and story-writers.

Veerasalingam, Chilakarmarti Lakshminarasimham and Guruzada Appa are the fathers of **Telugu literature** in the twentieth century. They were followed by Gidugu Ramamurti Pantulu, Venkata Parvatisvara Kavulu, Tallavajjala Sivasankara Sastry, Vajjhababu, Nori, Chintia, R. V. M. G. Ramarao Bhadr, Gadiyaram Venkata Sesha Sastry, author of *Siva Bharatamu* and Dr. C. Narayana Rao.

Modern **Urdu literature**, before Iqbal was dominated by Sir Syed Ahmed, Shibli and Iqbal. They have been succeeded by Abul Kalam Azad, Syed Sulaiman Nadvi and Mohammad Ali as well as by Sh. Abdul Qadir, Qazi Abdul Ghaffar and Sajjad Hyder. *Ghazal* has been developed intensively during this period. The other writers who deserve a mention are Bedi, Josh, Krishna Chandra Akhtar, Ansari, Sharar, Hasrat, Fani, Asghar and Jigar.

The recent political changes in the country have for the present deprived Urdu of one of its

ancient homes, as they have Punjabi. Its emergence in "pastures new," as that of Punjabi, will be watched with anxious interest, just as the future of English as a medium of literary expression will be, though the writings in this language of Sri Aurobindo Ghosh, Rabindranath Tagore, Sarojini Naidu, Gandhiji and Radhakrishnan will continue to spur many of the educated people to employ this medium at least for a generation more to come.

A word about **Sanskrit literature**. It is not "dead," as is wrongly supposed so often. Not only does it continue to function as the fountain-head of inspiration to almost all the Indian languages, but also in the critically edited editions of classics as well as in several original works.

Aspects of Indo-Anglican Literature

An Indian writing in English starts off with a crushing handicap. He has to attain a certain degree of mastery over the medium before proceeding to use it as a vehicle for self-expression at the level of literature. Now it is true that Indians have scored certain remarkable triumphs in their use of the English language. Some have used it with great precision and clarity as, for instance, Mahatma Gandhi. Others speaking in English have reached remarkable heights of eloquence—Gokhale or Balabhai Desai in the latter days of his career. Yet others have been able to acquire a manner of writing whose rhythms are indistinguishable from those of an Englishman's English—G. K. Chettur, for instance, who had a true feeling for the English language, or V. S. Shrinivasa Shastri whose expression was always lucid, idiomatic and absolutely correct according to the best English standards. Finally, there are those like Pandit Jawaharlal Nehru, who for expressiveness or animation or range of subject-matter challenge comparison with the best work that is produced in England or other English-speaking countries.

But there is something which escapes even the best-schooled and the most sensitive among the writers, something which makes the higher branches of Indo-Anglican writing seem hollow and unreal. The truth is that while control over English for purposes of law or political and social discussion may come easily to the foreigner, control over English for purposes of self-expression at the highest level is a much more difficult achievement. This is just the reason why Indians writing in English have made a better showing in the literature of political, legal or general discussion than in literature properly so-called such as poetry, drama, fiction, essay or criticism.

POETRY

In poetry, for instance, which is the quintessence of literature, a great deal of early Indo-Anglican effort appeared quite stale and flat. Indeed here we come upon yet another obstacle which Indo-Anglicans have had to overcome in their struggle for creative expression. For not only was the medium in which the poet

Whether Indian literature? With an answer to this question this brief survey may be concluded. It is at the threshold of still greater achievements inasmuch as freedom brings out the best in the people and their artists and authors. Add to it the expected redistribution of the Provinces on a linguistic basis, which is bound to give a great fillip to further and fuller growth in each of the literatures. But there is also a danger in this, a note of warning against which must be sounded—the danger of decentralization resulting in a narrowing down of the all-India angle of vision and attitude, on the one hand, and of world loyalty on the other. Prudence lies, however, in co-operating with the evolutionary spirit which is steadily moving towards one world, one religion, one people, one philosophy of life.

was trying to express himself foreign but the very sources from which he drew his inspiration were also strange and alien. A great many Indo-Anglicans knew little about the tradition in which they were born and their ancient culture and heritage. The history which they learnt at school was English history. The literature which fed their imagination was English literature. In fact much of the passion of young India for education around English language and literature. Young Tamils and Punjabis, Bombay Parsis and Calcutta Babus drunk in fascination at the fount of English literature. They who had never heard an English skylark sing over an English meadow wrote whole essays on Shelley's *Ode to the Skylark*. In the hot aridity of an Indian summer, they puzzled over Keats's exact meaning when he called autumn a season of mists and mellow fruitfulness. The result was that when later they felt the need for self-expression themselves it was to the sights, the smells and the sounds of the English countryside that they turned for inspiration. Early Indo-Anglican writing was full of the song of the nightingale, the smell of the musk-rose, the beauty of the English spring or the bleakness of the English winter. The result was pure disaster for Indo-Anglican poetry. Neither in India nor in England did it carry any special appeal. To the Indian the verses seemed unreal, while to the Englishman they seemed at best like clever machine-made imitations of English classics. Not even such a gifted poet as Mrs. Sarojini Naidu succeeded in making robins and skylarks seem authentic. Everyone knows the advice which the famous English critic Edmund Gosse gave her "....write no more about robins and skylarks....set your poems firmly among the mountains, the gardens, the temples....introduce to us the vivid populations of your own voluptuous and unfamiliar province....In other words be a genuine Indian poet of the Deccan, not a clever machine-made imitator of the English classics." Mrs. Naidu promptly changed her tune and turned to such typical Indian figures as the corn-grinder, the palanquin bearer, the bangle-seller or such authentic Indian landscapes as the call of the bulbul from a

cassia plume, the song of the weaver at work at the loom, the voice of the shepherd gathering his flock under the pipal tree or the shout of the young Banjira woman driving her cattle across the fields. Here was Indo-Anglican poetry at its best—sweet, sensuous, sincere and unmistakably Indian.

Indeed Mrs. Naidu's success marked a turning point in the history of Indo-Anglican poetry. It taught other practitioners of the art where to look for inspiration if they were to produce any worthwhile stuff. They saw that all genuine poetry was rooted in the tradition in which the poet was born or in modes of thought and action which were common to all humanity such as love, faith, desire, devotion, self-sacrifice. Thus, to cite a few examples, we have G. K. Chettur writing about a temple-tank or the Bevanje waterfall, Sheshadri about champak leaves, or Joseph Furtado about Brahmin girls. Best of all there is the example of Tagore himself describing a typical rustic scene such as a farm-labourer plodding along a dusty road to the market. In a different category there is once again G. K. Chettur celebrating the triumph of heavenly over earthly love, Armando Menezes pouring out the thoughts of an exile from his native Goa, or S. K. Donkerkery wondering where the secret of music lies. At a still higher level, we have the philosophical poetry of Aurobindo Ghosh, Sadhu Vaswani and J. Krishnamurti describing the adventures of those who set out in quest of Truth, Beauty and Goodness.

LANGUAGE PROBLEM

The poets seemed to have solved their problem in regard to subject-matter. Thenceforward the subject of Indian poetry was to be wholly Indian—Indian people, Indian landscape, Indian mythology and Indian history, which were as rich a source of inspiration as the heritage of any other country. But the other difficulty, namely, the difficulty about language remained as acute as ever, retarding complete freedom of expression, inhibiting mental processes and generally introducing an element of unreality into the work of the Indo-Anglicans. The language problem was not, of course, peculiar to the poets: it was common to all practitioners of the art of literature—novelists, dramatists, essayists, short story writers as well as to poets, and unless the means were found of solving the language problem there was no chance of Indo-Anglican literature developing along healthy and vigorous lines. One suggestion was that Indians could evolve an English of their own. There was American English, Irish English, Welsh English. Why not, it was asked, Indian English? But then a further question arose: what is Indian English and exactly how does it differ from English English? Neither Raja Rao nor Mulk Raj Anand and the two supporters Mulk Raj Anand wrote a pamphlet in which hotly attacked English English under the name King Emperor's English. But the kind of language in which he wrote the whole pamphlet did not seem very different from the kind of language which he was engaged in attacking at the moment. Indeed if one was to judge from the idiom which the other exponent of the theory used

in his novel *Kanthapura* it would seem as though the new English consisted in little more than literal translation of Indian swear-words (son of a bitch, son of a widow) or Indian word groups (killing flies to mean whiling away time) into English. It was quite clear that the solution of the language problem did not lie along the lines suggested by Raja Rao or Mulk Raj Anand. It cannot for the simple reason that the real problem is of a totally different nature. This may be stated in some such way as this. How exactly are Indians to acquire with the greatest economy a thorough command of whatever sort of English it is that they wish to employ? One has merely to put the question in this way to realize that it is more concerned with methods of teaching than with the creation of a new species of language.

A second way in which the language problem has sometimes been met is through collaboration between an Indian and an Englishman. This has, on the whole, produced happier results though for obvious reasons it is not a solution which is frequently possible. Two examples of collaboration may be mentioned here. One is the autobiography of Mahatma Gandhi. The Mahatma himself has told his readers how the manuscript of his autobiography was touched up by his English disciple Miss Margaret Slade better known as Mira Ben. The Mahatma, of course, wrote in a language which was entirely adequate for his purpose. But surely something of the even flow and the quiet beauty of the narrative can be partially ascribed to Mira Ben's co-operation. The autobiography of Mahatma Gandhi cannot, of course, be regarded as a good example of collaboration since the parts played by Mahatma Gandhi and Mira Ben in the writing of it were very unequal. A better example of collaboration is afforded by Hilda Werner and Huthi Singh in their novel about Indian village life entitled *The Land and the Well*. Hilda Werner who is the principal author has lived in such a village as she describes in the book; but she wisely sought the assistance of an Indian collaborator to make her ground doubly sure. The result is an authentic and fascinating record of the hopes and fears, joys and tragedies of peasant life in a north Indian village.

FICTION

Turning to Indo-Anglican fiction we find that there are many failures but there is also a large measure of achievement. There are some Indian novelists who tend to fall between two stools. They aim to attract and please the English reader and at the same time to attract and please the Indian. This leads inevitably to inconsistencies. Mr. Hilton Brown (to whose Indian novel is indebted) gave the Indo-Anglican novelists the same kind of advice as Edmund Gosse gave the Indo-Anglican poets. Mr. Hilton Brown told Indo-Anglican novelists that they would never do any good till they dropped the horrible habit of forcing Indian pictures into European frames, of distorting a Hindu story into the mould of the *Strand Magazine*. "Write well as an Indian," he said, "And Europeans will read you."

One of the difficulties of the Indian novelist is that in India sex does not make stories as in Europe. And if someone does try to compose love stories on Western lines he will be doomed to allure for he is at once introducing an unnatural and jarring element. If he is to succeed at all he must contrive as R. K. Narayan and K. Nagarajan have contrived to handle the love interest in the delicate, elusive, unsubstantial form. And if he cannot so contrive he must leave it out altogether. But then, if sex and love interest are to be barred what is left? Once again R. K. Narayan has pointed the way. The Indo-Anglican novelist must fall back, as Narayan has done, on the components which make up the social sketch or skit—such as family and social humours, life's daily business and mischiefs, the difficulties of political intercourse, the hopes and renunciations of youth, the clash of modernity on old established tradition. He could write about the arrangement for a marriage, the election to a municipal council or a deal in tamarind or betel-nut, a transaction in the black market—write in such a way as to elevate these commonplace into literature. R. K. Narayan's *Bachelor of Arts*, for instance, contains no striking events. But it is a deft, vivid, truthful piece of writing for all that. It depends wholly on character and atmosphere. Its people are charming people and its picture of an Indian family is actually real. It does contain love interest, but the love interest is decidedly of the Indian brand. The first girl cannot even be spoken to and the final bride only gets the length of casting down her eyes. And indeed little more than that happens at all.

This type of novel is really an extension of social sketch. But then there is also the novel proper which describes the general doings of men and women over a period of time. A typical example is K. S. Venkataramani's *Murugan the Tiller* a novel which has fine descriptive power, a few great ideas and is thoroughly Indian. Another good example in this genre is K. Nagarajan's *Athavar House* which along with Raja Rao's *Kanthapura* and Ahmed Ali's *Twilight in Delhi* is the nearest thing to a full-dress novel Indo-Anglican literature has yet produced. *Athavar House* deals with the financial, matrimonial and social ups and downs of a Bhramin family. Its characters are sound and real, its episodes coherent and probable and its essence genuine.

Of late Indian novelists have inevitably turned to politics for ideas. The scope is wide enough. The escape of Subhas Chandra Bose, the L.N.A. movement, the Bengal famine, the Punjab upheaval and consequent mass migration or the British withdrawal from India should all prove to be a fruitful source of material for the fiction-writer. But so far the whole of this field remains unexplored with one notable exception—the Bengal famine which is the subject of a heart-rending novel entitled *So Many Hungers* by Bhambhani Bhattacharya.

Tagore has, of course, dealt with some of the political movements of his time in a story entitled *Four Chapters*, while in the most famous of his longer novels *Gora* he has given the reader a wonderful picture of the home life of Bengal

and the changes which came over it during the last century. To give yet another example, A. Subramaniam has written a novel entitled *Indira Devi* in which he looks forward to 1951 when Indians and Europeans are found living side by side on the most intimate terms, and inter-marry quite naturally, and where barriers of all sorts have vanished with the years.

But the typical political novel at the moment is concerned with proletarian questions. Mulk Raj Anand, the author of the *Untouchable* and the *Coolie* is the best known representative. *The Coolie* which is the life-story of a young man from the hills who works successively as domestic servant, factory boy, mill-labourer and rickshaw-puller is in its fashion quite perfect. Mr. Anand writes of the working class not as so many proletarian writers do in a superior condescending fashion but with dignity and comradeship. There is not a single false note in this novel, no touch either of sentimentality or caricature. But there is no hiding the conviction that the social structure of India is thoroughly decadent, a natural result of the heartless behaviour of men to one another. Mr. Anand pleads for greater joy in life and more love in the relations between different classes of society.

ESSAY

So much for fiction. Let us next rapidly pass under review Indo-Anglican achievement in essay, drama, criticism and biography.

Not many Indo-Anglicans have used the essay form for the simple reason that it does not constitute a natural vehicle for the expression of Indo-Anglican artistic genius. The one outstanding success is S. V. V. of the *Hindu* for whom no praise could be too high. Some of the stuff which he wrote was of the most delicious kind, light as a feather, satirically humorous, most intimately revealing of Hindu life. It can indeed bear comparison with the kind of work which E. M. Delafield used to do for *Punch*. No praise could be higher. Then there were the group of writers who flourished in the hey-day of the *Jfy Magazine* and *Merry Magazine* like R. Bangaruswami and A. T. Macnoughton Thomas. They did some fine work and gave their readers immense pleasure, but it must be confessed that a great deal of the humour was coarse and most of the language undignified. G. K. Chettur who always wrote with a sensitiveness to the finer points of the language was a more considerable figure. His work does not bulk large but some of his efforts are in the best English tradition. But the truth must be faced. The essay properly so-called is the expression of an attitude of mind which is rare in this country. As a branch of literature the essay originated with Montaigne in France but it has had its spiritual home in England where there is a certain disposition to deal with the minor occurrences of life in a big, light-hearted, mock-serious fashion. But the Indian spirit is flatly opposed to this mode of expression. It is deadly serious for one thing. For another it is disposed to deal with big issues in a big way. It can, for instance, describe with great subtlety the sensations produced by the sight of a star. But in the presence of a loaf of bread it may be dumb.

DRAMA

In the realm of drama the Indo-Anglican output is even more scanty. Whatever drama has been produced, is either heavily symbolical like that of Tagore, or frankly propagandist like that of Harindranath Chattopadhyaya. Taking the latter as a typical example, we find that Mr. Chattopadhyaya's plays are more in the nature of Socialist propaganda than genuine expressions of the dramatic spirit. His characters are mere puppets and neither speak nor act like human beings. Where, however, Mr. Chattopadhyaya lays aside his didactic purpose and follows his characters the dialogue acquires considerable force and eloquence. His treatment of abnormal psychology is wholly convincing. In a play called *Evening Lamp* the creeping crawling sea of shadows envelopes and overpowers the reader with an insidious terror such as we find in the more poetical parts of Ibsen. Another play entitled *The Parrot* reels with a magnificent drunkenness which imparts to it a structural as well as symbolic beauty, and in the end an almost dramatic power. Mr. Chattopadhyaya is a writer of genius and it is hard to believe that he can escape his character and destiny very long.

CRITICISM

Much of Indo-Anglican criticism is dull and lifeless. In the first place, there is hardly any scholarly reviewing of books in Indian newspapers and periodicals; very few reviewers have, in fact, the mental equipment necessary for the task to which they address themselves. Criticism of poetry like the writing of it can be specially difficult. In any case critical work by Indo-Anglicans can be justified only if the point of view from which the criticism is presented is thoroughly Indian. As it is, much of what passes for criticism is a mere rehash of the work of foreign critics lacking conviction, vigour or originality. There is one man, however, to whom the above criticism does not apply, one who stands out of the general run by reason of his scholarship and critical judgment. That is the man whose reviews used to appear in the *Hindu* under the initials "K.S." K.S. is streets above any other Indian reviewer. He is witty, original, fearless and his critical judgments are always backed by a wide reading and real appreciation of English literature. His introduction to an abridged edition of Trevelyan's *Life of Macaulay*, for instance, is a masterpiece of its kind. So are some of the obituary notices of well-known South Indian literary figures which he was in the habit of writing in the columns of the *Hindu*. His criticism of Chattopadhyaya which is reproduced in the course of his article is a good example of his work.

Of late much critical work has come out of Indian Universities from painstaking conscientious scholars preparing themselves for a doctor's degree. The outstanding name here is that of C. Narayana Menon whose *Shakespeare Criticism* is far and away the most notable contribution made by any Indian to the scholarly study of English literature. Mr. Menon who has knowledge, wisdom, tolerance, has synthesized a vast mass of Shakespeare criticism. By illuminating paraphrases of certain well-known Shakespearean passages and by some unconventional

character-interpretation of Falstaff, Brutus, Hamlet, Macbeth, Lear, Othello and Cleopatra, he leads the reader to an exhilarating and completely satisfying apprehension of Shakespeare's plays and a clear comprehension of his multifarious critics. Dr. Menon should now take rank along with Raleigh, Bradley and Dover Wilson among the few inevitable critics whom no serious student of Shakespeare can afford to ignore.

BIOGRAPHY

Indo-Anglicans have made a better showing in the art of biography than in criticism. Wisely enough no attempt was made to imitate the manner of Lytton Strachey except in some of the smaller sketches. Nor is there anything in the style of Boswell which attempts to recreate a living personality by the sheer accumulation of detail. Most Indo-Anglican biographers are content to record in a straightforward manner the main facts in the life and times of their subject. Such, for instance, are the series of lectures given by V. S. Shrivastava Shastri on Gopal Krishna Gokhale, which together go to make up a clear, lucid and moving account of the life and times of the great Liberal leader. Professor P. A. Wadia's *Mahatma Gandhi*, another outstanding work in this class is set out in the form of a discussion and is concerned more with the Mahatma's personality than about his life. Then there are the biographies published by G. A. Natesan & Co.—workman-like little books with no claim to literary merit but entirely adequate for their purpose.

The greatest Indo-Anglican work in autobiography is, of course, Mahatma Gandhi's *Experiments with Truth*. The simplicity and the complete candour with which the Mahatma wrote make it one of the most moving personal documents of all time. Pandit Nehru's *Autobiography* is more in the nature of an exposition of Indian politics than an account of personal development. As politics it is excellent, but as autobiography it is much inferior in human interest to the autobiography of Mahatma Gandhi. Much of its celebrity would today be ascribed to the eminence of the author rather than to any intrinsic autobiographical qualities in the work.

A much humbler work which belongs to the same class is the *Last Enchantment* by G. K. Chettur. G. K. Chettur was one of those remarkable men who wrote English like a native. For sheer literary merit the account of his experiences at Oxford is inferior to none in the whole domain of Indo-Anglican literature.

THE PRESENT

So much for the perspective. Now for the present. We shall select four books for special notice as typical of the work which is being done by Indo-Anglicans at the present moment—a novel (*So Many Hungers*), an autobiography (*Girl in Bombay*), a book of travel (*Delhi-Chungking*) and a historical-philosophical-political sketch of India (*The Discovery of India*).

Girl in Bombay by Ishvani, is the first volume of an autobiography of an Indian girl belonging to the upper middle class. Its importance lies in the fact that it gives a pen-picture of a

society in transition—the gradual breaking up of the old India and the birth of the new of which the author regards her own mental development as a kind of symbol. The joint family system, the petty intrigues, the ludicrously grave grand-mothers, the innumerable relations and the obsequious servants are all presented with a kind of cynical humour. One would not regard it as a great book. But it is written with much charm and wit and as representative of a certain kind of writing it is very effective indeed.

Another book published recently which found its mark is *Delhi-Chungking* by K. P. S. Menon the record of the author's travels through Sinkiang. Mr. Menon followed the old caravan route which the famous Chinese traveller Huan Tsang took in the seventeenth century when he visited the Indian sub-continent in search of Buddhist scriptures. The man who reads for pleasure will find in the book many good stories and much delightful descriptions of the scenery through which the author's route lay. And the man who reads for profit will find many interesting side-lights on religion, archaeology, and politics and the inter-play of Russian and Chinese policies in a region where three empires met and manoeuvred for supremacy. What gives the book its value, however, is the author's zest for life and the quiet humour with which he records his observations.

So Many Hungers by Bhabhani Bhattacharya has had the unique honour of being selected by the Left Book Club for distribution among its members. The novel takes its background from one of the greatest tragedies of the War—the Bengal famine. The story is concerned with the lives of a village family which is perfectly happy and contented until the great famine strikes them. They then flee to Calcutta where they fight with dogs around garbage heaps for scraps of food. Mr. Bhattacharya piles horror on horror until a picture of Bengal in the grip of famine takes shape in all its stark nakedness. A woman is eaten alive by jackals; a child offers jasmine to the image of a goddess, praying to be injured by a Japanese bomb so that he might find food and shelter inside a hospital. Mr. Bhattacharya is equally pitiless in his castigations of the Government, and the profiteers of 'Bengal Rice Limited' who inflict such ghastly suffering on fellow men and women.

The fourth book selected for special notice is *An Astrologer's Day* by J. K. Narayan, a collection of short stories. There is nothing original about these stories; the central incidents are perfectly commonplace—the ruining of a trusting employer by a smart employee, for example, or the unwillingness of a child to go to school. It is the manner of the writing. Mr. Narayan has pathos, irony, guile, but never more than his simple material will allow. He has great understanding for his characters and what is more important, great liking for them. The result is that these stories afford pleasure out of all proportion either to their subject matter or the skill with which they are built up.

The Discovery of India by Jawaharlal Nehru, the last book in our list, is as much the story of the discovery of his own self as of the country of which he is the leader. When he returned to

India from England at the age of twenty-three, Nehru was in mind and habit a Westerner. Hinduism meant nothing to him. His approach was that of a scientist and a rationalist. He was a stranger in India. The awakening came at the age of thirty when Mahatma Gandhi emerged as the leader of a nationalist movement, making its appeal for the first time to the Indian masses. Pandit Nehru's response was immediate and vigorous. He made a self-discovery which changed the current and object of his life; one of the results is this amazing book of nearly 500 closely printed pages, which starts with the early times and, takes the story right down to the 'Quit India' movement of 1942. The vivacity of the writing never slackens from beginning to end. Whether it is about Vedic civilization, the founders of religion, the sacred books, the emperors, the waves of conquest, the writing is lucid, abundant and animated.

TAGORE

Even the briefest survey of Indo-Anglican literature would be incomplete without an appreciation of Rabindranath Tagore who is one of its chief glories. In a sense, Tagore belongs to Bengal. His poems are full of the beauty of Bengal scenes. And it is surprising how much of his work was originally published in Bengali—*Gitanjali*, *The Crescent Moon*, *Chitra*, *The Post Office*, *The Gardener*, *Fruit Gathering*, *The Home and the World*, all the works in fact which made Tagore famous were all translations from original Bengali. But in a sense too he belongs to the whole of India as much as any man whose country has produced, the country whose heritage and culture he enshrined in such matchless prose and poetry.

Tagore had an abiding sense of the beauty of the world. Nothing on earth was dull for him; the most ordinary things had a new and wonderful meaning. Rain or harvest, a rice-field or a clump of bamboos—such things stirred Tagore to noble and unique utterance. Tagore's work is permeated not only by a sense of the beauty of the universe but also by a sense of its abiding mystery. The dark depths of the earth, the infinite distances of the sky filled him with consciousness of God. To him earthly beauty is a reflection of eternal beauty.

Tagore was not only a poet, he was a prophet and also a patriot—the creator of Vishwabarati, the interpreter of the East to the West, the citizen of the world. But it is impossible to separate in him the poet from the patriot or the patriot from the citizen of the world. In him they were all one and of that one the poem and the plays are the undying voice.

A SELECTION

Here is a selection from among the works of Indo-Anglicans made with the help of K. R. Shrivastava Iyengar's *Indo-Anglican Literature*:

POETRY

Rabindranath Tagore: *Collected Poems and Plays*. Tour Dutt: *Ancient Legends and Ballads of Hindustan*; *A Sheaf Gleaned in French Fields*. Sarojini Naidu: *The Bird of Time*; *The Broken Wing*; *The Golden Threshold*. R. C. Dutt:

The Mahabharata; The Ramayana. Aurobindo Ghosh: *Collected Poems and Plays.* Brijendranath Seal: *The Quest Eternal.* Harindranath Chattopadhyaya: *Ancient Wings; The Dark Well; The Feast of Youth; The Magic Tree; The Perfume of Earth.* K. S. Venkatramani: *On the Sand-Dunes.* Humayun Kabir: *Poems.* G. K. Chettur: *Gumataranga; The Shadow of God; The Temple Tank; The Triumph of Love.* Armando Menezes: *Chaos and Dancing Star; Chords and Discords; The Emigrant; The Fund; A Mock Epic.* Josephi Furtado: *A Goan Fiddler; Songs in Exile.* T. B. Krishnaswamy: *Swallow Flights.* K. P. Appaji Rao: *Dawn and Other Poems.* P. Seshadri: *Bilhana; Champak Leaves; Sonnets; Vanishing Hours.* Muhammad Iqbal: *Himalayan Mountain.* Mrs. Dennis Stoll (Bharati Sarabhai): *The Well of the People.* S. R. Dongerkerry: *The Ivory Tower.*

FICTION

Rabindranath Tagore: *Gora; Home and the World; The Wreck; Hungry Stones and Other Stories; Mashi and Other Stories.* R. C. Dutt: *The Lake of Palms; The Slave Girl of Agra.* Cornelia Sorabji: *Love and Life behind the Parda; Between The Twilights; Sun-babies.* T. Ramkrishna: *Padmini; The Dive for Death.* K. S. Venkatramani: *Murugan the Tiller; Kandan the Patriot; Jatadharan and Other Stories.* K. Nagarajan: *Athawar House.* A. Subramaniam: *Indira Devi.* K. Raja Rao: *Kanthapura.* B. K. Narayan: *Bachelor of Arts; The Dark Room; The English Teacher; Malgudi Days; Swami and His Friends; Astrologers' Day.* Mulk Raj Anand: *The Coolie; The Untouchable; The Village; Across the Black Waters; Two Leaves and a Bud; The Tractor and the Corn Goddess.* Ahmed Ali: *Twilight in Delhi.* Shanker Ram: *The Children of Caveri; The Love of Dusts.* A. S. P. Iyer: *Indian After-Dinner Stories.* G. K. Chettur: *The Ghost City and Other Stories.* S. K. Chettur: *Bombay Murder; The Cobras of Dharmashevi.* K. Ahmed Abbas: *Rice.* Hilda Wernher and Huthi Singh: *The Land and the Well.* Humayun Kabir: *Men and Rivers; Three Stories.* Bhabhani Bhattacharya: *So*

Many Hungers. Santa Devi and Sita Devi: *Tales of Bengal; The Garden Creeper.* Sita Devi: *The Cage of Gold.*

DRAMA

Rabindranath Tagore: *Chitra; Post-Office; The King of the Dark Chamber.* Chattopadhyaya: *Five Plays.* Fyzeo Rahamin: *Daughter of Ind.* V. V. Shrinivas Iyengar: *Dramatic Diversions.* Armando Menezes: *Caste; A Social Comedy.* V. N. Bhushan: *Anklet Bells; Ear Rings; Mortal Coils; Samyukta.*

CRITICISM

C. Narayana Menon: *Shakespeare Criticism: An Essay in Synthesis.* Amiya Chakravarti: *The Dynasts and the Post-war Age in Poetry.* Aurobindo Ghosh: *The Future of Poetry.* Amarnath Jha: *Shakespearean Comedy and Other Studies.* K. R. Shrinivas Iyengar: *Lytton Strachey: A Critical Study.* V. K. Ayappan Pillai: *Shakespeare Criticism.* Brijendranath Seal: *New Essays in Criticism.* Humayun Kabir: *Poetry, Monads and Society.*

MISCELLANEOUS

Rabindranath Tagore: *The Religion of Man; Sadhana.* Aurobindo Ghosh: *Essays on the Gita; The Life Divine.* S. Radhakrishnan: *The Hindu View of Life; An Idealist View of Life.* M. K. Gandhi: *My Experiments with Truth.* Jawaharlal Nehru: *Autobiography; Glimpses of World History; Letters from a Father to His Daughter; The Discovery of India.* P. A. Wadia: *Mahatma Gandhi.* R. P. Masani: *Dadabhai Naoroji.* V. S. Shrinivasa Shastri: *Life of Gokhale.* G. K. Chettur: *The Last Enchantment.* Khasa Subba Rao: *Men in the Line-light.* A. S. P. Iyer: *An Indian in Western Europe.* D. F. Karaka: *I Go West; Chungking Diary.* S. Natarajan: *West of Suez.* K. P. S. Menon: *Delhi-Chungking.* Minoo Masani: *Our India.* K. S. Venkatramani: *A Dry with Shambhu; Paper Bouts.* S. V. V.: *Chaff and Grain; Soap Bubbles; More Soap Bubbles.* R. Bangaruswami: *Misleading Cases.*

Indian Standard Time

FOR many years Indian time was in a state of chaotic confusion. What was called Madras or Railway time was kept on all the railways and each great centre of population kept its own local time, which was not based on any common scientific principle and was divorced from the standards of all other countries. It was with a view to remedying this confusion that the Government of India took the matter up in 1904, and addressed the Provincial Governments and through them all local bodies, a long letter which reviewed the situation and made suggestions for the future.

The Government pointed out that the Madras local time kept on all railway and telegraphic lines is not useful. So the timing arrangement was completely altered for international scientific purposes in India. This was done in such a manner as to bear a simple and easily remembered relation to Greenwich time.

It was proposed, therefore, by the Government of India, to put on all the railway and telegraph clocks in the sub-continent by 8m. 50s. This represented a time 5½ hours faster than that of Greenwich, which would be known as **Indian Standard Time**; and the difference between standard and local time

at the places mentioned below were approximately as follows, the figures representing minutes, and F. and S. meaning that the standard time is in advance of or behind local time respectively.—Dibrugarh 51 S., Shillong 38 S., Calcutta 24 S., Allahabad 2 F., Madras 9 F., Lahore 33 F., Bombay 39 F., Peshawar 44 F., Karachi 62 F., Quetta 62 F.

On the 1st of January 1906 all the railway and telegraph clocks in India were put at Indian Standard Time. Bombay local time is retained only in the clocks which are maintained by the Municipality and in the establishment of some orthodox Hindus. Elsewhere Standard Time is universal.

The Bengal Government decided from October 1, 1941, to move forward their clocks by 36 minutes. Bengal time therefore became an hour ahead of Indian Standard Time and 36 minutes ahead of Calcutta local time. This was followed by the Indian Standard Time also being advanced by one hour with effect from September 1, 1942, making it 6½ hours ahead of Greenwich Mean Time. With the end of the Second World War the old Indian standard time was restored with effect from 2 a.m. on October 15, 1945.

Weights and Measures

THE maund is the denomination of weight common all over the sub-continent, but we may find that in a given city there are nearly as many maunds as there are articles to weigh. It varies even from district to district. Thus in the United Provinces itself the maund of sugar weighs 48½ seers in Cawnpore, 40 in Muttra, 72½ in Gorakhpur, 40 in Agra, 50 in Moradabad, 43½ in Saharanpur, 50 in Bareilly, 46 in Fyzabad, 48½ in Shahjehanpur, 51 in Goshangunge. Thus the maund varies throughout the sub-continent from the Bengal or railway maund of 82·2/7 lbs. to the Factory maund of 74 lbs. 10 oz. 11dms., the Bombay maund of 28 lbs., which apparently answers to the forest Department maund in use at the Fuel depot, and the Madras maund, which some authorities estimate at 25 lbs. and others at 24 lbs.

Committees of Inquiry—As there are variations in the weights and measures from one place to another in the sub-continent there is much confusion and sometimes heavy individual loss. And Municipal and commercial bodies are continually returning to the problem with a view to devising a practical scheme of reform. The Central and Provincial Governments have made various attempts during the past to solve the problem of common units of weights and measures; commercial and trade interests have agitated about the question for the past century. The Indian Railways and Government departments adopted a standard tola (180 grains), seer (80 tolas) and maund (40 seers) and it was hoped that this would act as a successful "lead"

which would gradually be followed by the whole trade throughout the empire, but the expectation has not been realised.

The Government of India considered the whole question in consultation with the provincial Governments as early as 1890-1894 and various special steps have at different times been taken in different parts of India with a view to uniformity. The Government of Bombay appointed a committee in 1911 to make proposals for reform for the Bombay Presidency. Their final report was not published, but they presented in 1912 an *ad interim* report which was issued for public discussion. It points out the practical impossibility of proceeding by compulsory measures affecting the whole of the sub-continent. The Committee stated that over the greater part of the Bombay Presidency a standard of weights and measures would be heartily welcomed by the people. They opined that, legislation compulsorily applied over large areas subject to many diverse conditions of trade and social life would not result in bringing about the desired reforms so successfully as a "lead" supplied by local legislation based on practical experience.

Weights—The various systems of weights used in India combine uniformity of scales with immense variations in the weights of units. The scales used generally throughout Northern India, less commonly in Madras and standardized in Bombay Presidency under the Bombay Weights and Measures Act, 1932, may be thus expressed as one maund=40 seers,

one seer=80 tolas. The actual weight of seer varies greatly from district to district and even from village to village except in Bombay Presidency. In the standard system the tola is of 180 grains, and seer thus weighs 2.057 lbs. and the maund 82.28 lbs. This standard is also used in official reports.

Retail—For calculating retail prices, the universal custom is to express them in terms of seers to the rupee. Thus, when prices change what varies is not the amount of money to be paid for the same quantity, but the quantity to be obtained for the same amount of money. In other words, prices in India are quantity prices, not money prices. When the figure of quantity goes up, this of course means that the price has gone down. If it be desired to convert quantity prices from Indian into English denominations without having recourse to money prices (which would often be misleading), the following scale may be adopted—based upon the assumption that a seer is exactly 2 lb., and that the value of the rupee remains constant at 1s. 4d., 1 seer per rupee—(about) 3 lb. for 2s., 2 seers per rupee—(about) 6 lb. for 2s., and so on.

The name of the unit for square measurement in India generally is the *bigha*, which varies greatly in different parts of the country. So the areas have been expressed here either in square miles or in acres.

Attempts At Reform—A lead is apparent in the East Khandesh District of the Presidency, where the then District Officer, Mr. Simcox, during the course of three years, gradually induced the people to adopt throughout the district uniform weights and measures, the unit of weight in this case being a tola of 180 grains. But the committee abstained from recommending that the same weights and measures should be adopted over the whole Presidency, preferring that a new system started in any area should be as nearly as possible similar to the best system already prevailing there.

The whole problem was again brought under review by the Government of India in October, 1913, when the following committee was appointed to inquire into the entire subject anew:—

C. A. Sliberrard (President).

A. Y. G. Campbell.

Rustomji Fardoonji.

This Committee reported, in August, 1915, in favour of a uniform system of weights to be adopted in India based on the 180 grain tola, viz.:—

8 khaskhas	= 1 chawal
8 chawals	= 1 rattl
8 rattles	= 1 masha
12 mashas or 4 tanks	= 1 tola
5 tolas	= 1 chatak
16 chataks	= 1 seer
40 seers	= 1 maund

The tola is the tola of 180 grains, equal to the rupee weight. The viss has recently been fixed at 3.60 lbs. or 140 tolas.

Government Action—The Government of India at first approved the principles of the Report and left the Provincial Governments to take action, but they passed more detailed orders in January, 1922. They also announced their decision not to adopt all-India standards of length or area.

As regards weights they decided in favour of the standard mentioned under the heading "Weights", earlier. These were recommended by a majority of the Weights and Measures Committee and received the unanimous support of the Local Governments. At the same time they provisionally undertook to assist provincial legislation on standardisation and stated that if subsequently opinion developed strongly in favour of an Imperial standardisation of weights, the Government of India would be prepared to undertake such legislation but for the time being they considered that any such step would be premature.

STANDARDS OF WEIGHTS ACT, 1939

By 1939 opinion in favour of legislation by the Government of India for the standardisation of weights crystallised to the extent that the Indian Legislature passed the Standards of Weight Act (Act No. IX of 1939) applicable to the whole of British India. The Act received the assent of the Governor-General of India on the 28th March, 1939, and was published in Part IV of the Gazette of India of the 1st April, 1939. The Act laid down the following standard weights:—

- (a) the standard tola, being a weight of 180 standard grains;
- (b) the standard seer, being a weight of 80 standard tolas or 14,400 standard grains;
- (c) the standard maund, being a weight of 40 standard seers;
- (d) the standard pound, being a weight of 7,000 standard grains;
- (e) the standard ounce, being one-sixteenth part of the weight of a standard pound;
- (f) the standard hundred-weight, being a weight of 112 standard pounds;
- (g) the standard ton, being a weight of 2,240 standard pounds.

Under sub-section (2) of section 4 of the Act, the Central Government undertook to supply to each Provincial Government a complete set of duly authenticated standard weights. Accordingly in October, 1941, Government of India supplied to the Provincial Government of Bihar a complete set of Reference Standard Weights, which was placed under the charge of the Senior Marketing Officer, Bihar.

The enforcement of standard weights throughout the Province of Bihar, was awaiting a supplementary provincial legislation which may be possible under normal conditions. But the Government of Bihar in their notification No. 185 D.R. dated the 7th May, 1942, in exercise of the power conferred by sub-section (1) of section 92 of the Government of India Act, 1935, have directed that the Standards of Weight Act, 1939 (IX of 1939), shall apply to the Chota

agpur Division and to the Santal Parganas district, as a special measure. In Bihar it was held that it may be convenient to start with the enforcement of standard weights alone in the first instance, and the measures of capacity may be left alone for some time to allow the buyers and sellers to adjust the measures on the basis of the standard weights.

BOMBAY WEIGHTS

The following are the Standard Weights and measures according to the Bombay Weights and Measures Act of 1932:—

weights—

- (i) The Bombay Tola of 180 grains.
The Bombay Seer of 80 tolas.
The Bombay Maund of 40 seers.
The sub-multiples $\frac{1}{2}$, $\frac{1}{4}$, $\frac{1}{8}$, $\frac{1}{16}$ and $\frac{1}{32}$ of the multiples 2, 4 and 8 of the tola, seer and maund.

The pound avoirdupois equal to 7,000 grains is the sub-multiples $\frac{1}{2}$, $\frac{1}{4}$, $\frac{1}{8}$, $\frac{1}{16}$, $\frac{1}{32}$ and 8 inches, the multiples 1, 2, 4, 7, 14, 28 lbs. quarter, 56 lbs., 112 lbs. (1 cwt.) and 2,240 s. (1 ton).

- (ii) The Bullion Tola of 180 grains. Multiples 2, 3, 4, 5, 10, 20, 30, 50, 100, 200, 300, 500, 1,000 and 2,000 and sub-multiples $\frac{1}{2}$, $\frac{1}{4}$ and $\frac{1}{16}$ of a Tola.
The Val. = $\frac{1}{40}$ of Tola = 4.5 grains.
Sub-multiples $\frac{1}{2}$ and $\frac{1}{4}$ of Val.

- (iii) The Rati = $\frac{1}{62}$ of Tola. Multiples 2, 3, 6, 12, 24, 48, 72, 120, 240 and sub-multiples $\frac{1}{2}$, $\frac{1}{4}$, $\frac{1}{8}$, $\frac{1}{16}$, $\frac{1}{32}$ and $\frac{1}{64}$ of Rati.

- (iv) The dram is equal to $\frac{1}{16}$ th part of an ounce or $\frac{1}{256}$ part of a lb. Sub-multiples $\frac{1}{2}$, $\frac{1}{4}$, $\frac{1}{8}$ of dram and multiples 2, 4, 8 drams.
The grain and sub-multiples .01, .02, .03, .05, .06, .1, .2, .25, .3, .5, .6 and multiples 2, 3, 4, 5, 6, 8, 10, 12, 16, 20, 24, 30, 48, 50, 60, 72, 100, 120, 240.

- (v) (APOTHECARIES)
Apothecaries ounce equal to 8 drachm or 480 grains.
Apothecaries drachm equal to 60 grains.
Sub-multiples $\frac{1}{16}$, $\frac{1}{8}$, $\frac{1}{4}$, $\frac{1}{2}$ and multiples 2, 4, 6, 8 and 10 apothecaries oz. The Scruple equal to $\frac{1}{3}$ drachm or 20 grains.
Sub-multiples $\frac{1}{2}$ and multiples 2 of Scruple.

etc.—Apothecaries weights from 10 oz. to 1 oz. should be marked "Apoth".

7y measures—

- (i) The Bombay Seer.
The sub-multiples $\frac{1}{2}$, $\frac{1}{4}$ and $\frac{1}{8}$ seer.
The Bombay Chatak = $\frac{1}{16}$ seer.
The Adpao = $\frac{1}{8}$ seer.
The Adholi = 2 seers.
The Bombay Payal of 4 seers.
The Bombay Maund of 16 payals.
The Bombay Map of 2 maunds.
Sub-multiples $\frac{1}{32}$ seer.
Sub-multiples $\frac{1}{2}$, $\frac{1}{4}$, $\frac{1}{8}$ of Bombay Maund.

Liquid measures—

- (i) The Bombay Seer.
The sub-multiples $\frac{1}{2}$, $\frac{1}{4}$ and $\frac{1}{16}$ seer.
The multiples 2, 4 and 8 seers.
The Imperial gallon.
The Pint = $\frac{1}{2}$ gallon.
- (ii) Sub-multiples $\frac{1}{32}$ and $\frac{1}{64}$ and multiples 10, 20, 30 and 40 seers.
The maund = 40 seers.
Sub-multiples $\frac{1}{2}$, $\frac{1}{4}$, $\frac{1}{8}$ and multiples 2, 4, 5, 8, 15, 16, 20, 25, 40, 50, 100 and 200 of Imperial Gallon.
The Gill = $\frac{1}{4}$ pint.
Sub-multiples $\frac{1}{2}$, $\frac{1}{4}$ and multiples 2, 4, 8, of Pint and Gill.
- (iii) Liquid measures (For Road Tank Vehicles used as Measures)—
All multiples of Imperial Gallon.
- (iv) APOTHECARIES—
Fluid oz. = $\frac{1}{160}$ Imperial Gallon.
Fluid drachm = $\frac{1}{80}$ Fluid oz.
Minim = $\frac{1}{60}$ Fluid drachm.
All measures of capacity from 40 fluid oz. down to a half-fluid oz.
All measures of capacity from 16 fluid drachm down to $\frac{1}{2}$ half-fluid drachm.
- (v) All the measures of capacity from 60 minims down to 1 minim.
- (vi) The liquor dram = $\frac{1}{48}$ of Imperial Gallon.
Sub-multiples $\frac{1}{2}$, $\frac{1}{4}$ and multiples 2, 4, 8, drams.
The Peg = 2 fluid oz. or $\frac{1}{80}$ Imperial Gallon.
Sub-multiples $\frac{1}{2}$ Peg.

Length—

- (i) The Inch = $\frac{1}{36}$ th yard, and
The Foot = $\frac{1}{3}$ rd yard.
The Furlong of 220 yards.
The Mile of 1,760 yards.
The yard is that unit of length which is exactly equal to the certified yard kept in the custody of the Mint Master, Bombay.
- (ii) Sub-multiples $\frac{1}{2}$ of the Yard.
Multiples 2, 3, 4, 5, 6, 7, 8, 9, 10, 20, 25, 33, 50, 66, 100 of the Foot.
Multiples 6, 18, 30, 42, 50, 66 and 100 all sub-multiples of the inch.

Area and volume—

- (i) The Square Yard, Square Foot and Square Inch.
The Cubic Yard, Cubic Foot and Cubic Inch and sub-multiples of a Cubic Inch.
The Anna of $\frac{1}{2}$ of the guntha.
The Guntha of 121 square yards and the acre of 4,840 square yards for land measurement.
The Square of 100 square feet.
The Brass of 100 cubic feet.
- (ii) Sub-multiples $\frac{1}{2}$, $\frac{1}{4}$ and $\frac{1}{8}$ of Brass.

Education

SINCE August 15, Education at the Centre has been constituted into a separate Ministry of Education, the present Minister for Education being Maulana Abul Kalam Azad. The provincial Governments are fully autonomous in regard to educational matters except in respect of educational development programme for which they receive grants-in-aid from the Central Government. Such programme has to be approved by the Central Government who have to examine whether it is in accord with the All-India approved educational policy.

The Minister is advised by an Educational Adviser who is also the Secretary to the Ministry. There is one Deputy Secretary cum Deputy Educational Adviser, in charge of the Overseas Division of the Ministry which deals with the award of Overseas Scholarships and one Educational Adviser in charge of Technical Education. These officers in turn are assisted by Assistant Educational Advisers, Education Officers and Assistant Education Officers. The Ministry has also an Educational Liaison Officer in the U.S.A., whose headquarters are at Washington. Assisted by his Deputies, the Educational Liaison Officer is responsible for securing admission for Indian students in American Universities and other institutions of higher education, and looking after the welfare of Indian students abroad. The Education department of the Office of the High Commissioner for India in London has also been expanded for the same purpose.

PROVINCIAL ORGANISATION

In Provinces also, the subject 'Education' is under the control of a Minister. The Director of Public Instruction is the permanent head of the Department and acts as an expert Adviser to the Minister in charge of Education. The Director controls the inspecting staff and the teaching staff of the Government institutions. In Bombay there is an Educational Adviser in addition to the Director of Public Instruction. A list of the Provincial Ministers of Education with their Directors of Public Instruction is given below :—

In the Centrally Administered Areas of Delhi and Ajmer, there is a Superintendent of Education, and for Coorg, there is an Educational Officer. These Officers perform the functions of Directors of Public Instruction in provinces.

The authority of Government in controlling the system of public instruction is in part shared with and in part delegated to Universities, and Boards of Secondary and Intermediate Education as regards secondary education and to local bodies as regards elementary education.

Certain forms of Technical Education are under the technical departments concerned and come within the purview of the Minister in charge of those Departments.

ASSAM

Education Minister.—The Hon'ble Sri Jut Gopinath Bordoloi, M.A., B.L.
D.P.I.—P. C. Sanyal, Esq., M.A., M.B.E.

WEST BENGAL

Education Minister.—The Hon'ble Sri H. N. Chaudhury.
D.P.I.—Dr. Snehamooy Dutta, M.Sc.(Cal.), D.Sc., (London), D.L.O., F.N.I.

BIHAR

Education Minister.—The Hon'ble Acharya Badri Nath Verma.
D.P.I.—Kamta Prasad, Esq., B.A.(Cantab.), O.B.E.

BOMBAY

Education Minister.—The Hon'ble B. G. Kher, M.A., LL.B.
D.P.I.—D. C. Pavate, Esq., M.A.(Cantab.).
Educational Adviser.—K. G. Saiyidain, M. Ed. (Leeds).

CENTRAL PROVINCES & BERAR

Education Minister.—The Hon'ble S. V. Gokhale.
D.P.I.—Dr. V. S. Jha, Ph.D.

MADRAS

Education Minister.—The Hon'ble Sri T. S. Avinashlingam Chettiar.
D.P.I.—D. S. Reddi.

ORISSA

Education Minister.—The Hon'ble Pandit Lingaraj Misra, M.A.
D.P.I.—S. C. Tripathi, O.B.E., M.A., I.E.S.

EAST PUNJAB

Education Minister.—The Hon'ble Dr. Gopi Chand Bhargava.
D.P.I.—G. C. Chatterji, M.A., I.E.S.

UNITED PROVINCES

Education Minister.—The Hon'ble Sri Sampurnanand, B.Sc.
D.P.I.—Raj Bahadur Chuni Lal Sahney, M.Sc.

SIND

Education Minister.—The Hon'ble Pir Illahi Baksh.

NORTH-WEST FRONTIER PROVINCE

Education Minister.—The Hon'ble Mian Jaffer Shah.

WEST PUNJAB

Education Minister.—The Hon'ble Sheikh Karamat Ali.

EAST BENGAL

Education Minister.—The Hon'ble Abdul Hamid.

In India there are six Boards of Intermediate and/or Secondary Education, and 20 Universities. The names of the Vice-Chancellors of the Universities are given below :—

1. *Agra University.*—Dr. Narain Prashad Asthana, M.A., LL.D., C.I.E.
2. *Aligarh Muslim University.*—Mr. Mohamed Ismail Khan.
3. *Allahabad University.*—Dr. D. S. Bhattacharya.
4. *Andhra University.*—Sir C. R. Reddy, M.A. (Cantab.), Hon. D. Litt. (Andhra).
5. *Annamalai University.*—M. Ruthnaswamy, Esq., C.I.E., M.A., Bat-at-Law.
6. *Benares Hindu University.*—Pt. Amara Natha Jha.
7. *Bombay University.*—Mahamahopadaya Pandurang Vainan Kane, M.A., LL.M.
8. *Calcutta University.*—P. N. Bannerjee, M.A., B.L., Bar-at-Law.

9. *Delhi University.*—Sir Maurice Gwyer, K.C.B., K.C.S.I., D.O.L., LL.D.
10. *Lucknow University.*—Raja Rajeshwar Dayal Seth.

11. *Madras University.*—Dewan Bahadur Sir A. Lakshmanaswami Mudaliar, M.D., LL.D., D.Sc., F.R.C.O.G., F.A.C.S.

12. *Mysore University.*—M. Sultan Mohlyuddin, Esq., M.A., LL.B., B.Ed.

13. *Nagpur University.*—Lt.-Col. Pandit K. L. Dubey, B.A., LL.B.

14. *Osmania University.*—Dr. Wall Mohammed, M.A., Ph. D.

15. *Patna University.*—Sir Chandresvar Prasad Narayan Singh, C.I.E., M.A.

16. *Travancore University.*—H. C. Papworth, Esq., O.B.E., M.A.

17. *Utkal University.*—P. Prija, Esq., O.B.E., M.A. (Cantab.), I.E.S.

18. *Saugar University.*—Sir Hari Singh Gour.

19. *Rajputana University.*—Dr. G. F. Marajani.

20. *East Punjab University.*—(Registrar) Mr. D. N. Bhalla, M.A. (Punjab), B.A. (Cambridge)

THREE STAGES

The whole structure of education in India is being remodelled. Old Primary Schools, which in some provinces comprised of four classes, in others of five and six, in still others of seven or eight are giving place to Junior and Senior Basic Schools; High Schools will be/are being reorganised into Higher Secondary Schools to include the 1st Year of Intermediate Education, leading up to three year degree course. So far, only in Delhi Province has this change been introduced. Technical Education is in the forefront and definite vocational bias is being given to education in Basic Schools.

The Central Advisory Board of Education in India, has since its revival in 1935 been considering the question of educational reconstruction in India. At their meeting held in December, 1935, the board passed the following resolution on the subject.

(1) The Board is of opinion that a radical readjustment of the present system of education in schools should be made in such a way as not only to prepare pupils for professional and university courses, but also to enable them at the completion of appropriate stages, to be diverted to occupations or to separate vocational institutions.

(2) These stages should be:—

- (a) The primary stage, which should aim at providing at least a minimum of general education and training and still ensure permanent literacy.
- (b) The lower secondary stage, which will provide a self-contained course of general education either for higher education or for specialised practical courses.

In rural areas, the courses at this stage should be attuned to rural requirements.

Higher Secondary Stage.—Some form of manual training at this stage should be provided which would aim at the development of practical aptitudes and be made compulsory.

- (c) The higher secondary stage, in which would be included institutions with varying length of courses:—

- (i) preparing students for admission to universities in arts and science;
- (ii) for the training of teachers in rural areas;
- (iii) for agricultural training;
- (iv) for clerical training, and
- (v) for training; in select technical subjects which should be chosen in consultation with employers.

Where separate institutions are not possible for the diversified courses, some of them might be incorporated in a higher secondary course of enlarged scope which would permit a choice of alternative groups of subjects and would end in leaving certificates.

(3) At the end of the lower secondary school course there should be the first public examination.

(4) Candidates desirous of joining the subordinate clerical service of Government and of local bodies should pass such qualifying examinations as might be prescribed by proper authority and should not be more than 19 years of age at the date of their examinations.

The certificate granted to pupils completing other specialised courses should receive Government recognition.

(5) Expert advice would be of value in organising the scheme of reconstruction outlined above; and also for suggesting methods of training masters who would assist pupils and selection, by the pupils, of courses of study with due regard to their aptitudes.

WOOD-ABBOT REPORT

As the board had recommended that expert advice will be necessary for planning educational reorganisation, Messrs. A. Abbot, C.B.E., formerly Chief Inspector of Technical Schools, Board of Education, England, and Mr. S. H. Wood, M.C., Director of Intelligence, Board of Education, England, were invited to India for the purpose. Their visit resulted in the production of the famous report on educational reconstruction commonly known as 'Wood-Abbot Report'. The most important recommendations outlined in this report are:—

- (a) Infant classes should, so far as possible, be entrusted to trained women teachers; and for this and other reasons the development of educational provision for girls and women is of paramount importance.
- (b) The education of children in the Primary Schools should be based more upon the natural interests and activities of young children and less upon book learning. Concentrations on literacy as a narrow objective is unsound.

- (c) The curriculum of the rural Middle (or Lower Secondary) Schools should be closely related to children's environment; and if English is taught to any children of middle "school" age it should not be allowed to result in an excessive amount of time being devoted to linguistic studies.
- (d) The Vernacular language should, so far as possible be the medium of instruction throughout the High (or Higher Secondary) Schools, but English should be a compulsory language for all pupils in these schools.
- (e) The teaching of English should be made more domestic and less attention should be devoted by the average boy to the study of English "prose and poetry"—arrangements being made to meet the needs of those boys specially qualified to pursue more advanced English studies.
- (f) More systematic attention should be paid to the teaching of Art; and steps should be taken to secure for the High (or Higher Secondary) Schools a supply of qualified teachers of Art.
- (g) The pre-employment course of training for teachers of Primary and Middle (or Lower Secondary) Schools should be three-year course following without any gap, the completion of Middle (or Lower Secondary) School course.

OTHER REPORTS

In conjunction with the Wood-Abbot Report, the Board gave their considered thought to the scheme of educational reconstruction whose real author was Mahatma Gandhi, which had emerged in the shape of Dr. Zakir Hussain Committee report. The Board accepted the Basic Education Scheme with certain essential modifications, and on this subject two very important reports known as Kher Committee reports were published.

In the expectation that sooner or later the problem of providing India with a system of education approximation to those available in other countries will have to be tackled, serious attention was devoted to the surveying of the main fields of educational activity so as to ascertain the minimum provisions required. Thus since the Board's revival in the year 1935, the various committees of the Board reported on following subjects, up to the year 1945.

(1) Basic Education; (2) reports; (3) Adult Education; (4) The Physical Welfare of School-children; (5) School Buildings; (6) Social Service; (7) The Recruitment, Training and Conditions of Service of Teachers in Primary, Middle and High Schools; (8) The Recruitment of Education Officers; (9) Technical (Including Commercial and Art) Education; (10) Text-Books; (11) Examinations; (12) Educational Administrations; (13) Agricultural Education; (14) Religious Education; (15) Selection of Pupils for Higher Education.

At their meetings held in October, 1943 and January, 1944 the Board reviewed the recommendations of their Committees with special reference to post-war needs and developments.

They were satisfied that the Educational Adviser's Memorandum on Post-war Educational Development in India, subject to the modifications suggested by them, would provide the foundation upon which an efficient system of public instruction, suited to the needs and circumstances of the country could effectively be erected. Their final recommendations are contained in the published Report on Post-War Educational Development in India. These have been given in the previous issue of the Year Book, and are repeated here for convenience.

BASIC (PRIMARY AND MIDDLE) EDUCATION

(a) A system of universal, compulsory and free education for all boys and girls between the ages of six and fourteen should be introduced as speedily as possible though in view of the practical difficulty of recruiting the requisite supply of trained teachers it may not be possible to complete it in less than forty years.

(b) The character of the instruction to be provided should follow the general lines laid down in the reports of the Central Advisory Board's two Committees on Basic Education.

(c) The Senior Basic (Middle) School, being the finishing school for the great majority of future citizens, is of fundamental importance and should be generously staffed and equipped.

(d) All education depends on the teacher. The present status and remuneration of teachers and especially those in Primary Schools are deplorable. The standards in regard to the training, recruitment and condition of service of teachers prescribed in the report of the Committee approved by the Central Advisory Board in 1943 represent the minimum compatible with success of a national system. These should be adopted and enforced everywhere.

(e) A vast increase in the number of trained women teachers will be required.

PRE-PRIMARY EDUCATION

(a) An adequate provision of pre-primary instruction in the form of Nursery Schools or classes is an essential adjunct to any national system of education. The provision in this respect at present is negligible.

(b) In urban areas, where sufficient children are available within a reasonable radius, separate Nursery Schools or department may be provided; elsewhere Nursery classes should be attached to Junior Basic (Primary) Schools.

(c) Nursery Schools and classes should invariably be staffed with women teachers who have received special training for this work.

(d) Pre-primary Education should in all cases be free. While it may not be feasible to make attendance compulsory, no efforts should be spared to persuade parents to send their children to school voluntarily, particularly in areas where housing conditions are unsatisfactory and/or mothers are accustomed to go out to work.

(e) The main object of education at this stage is to give young children social experience rather than formal instruction.

HIGH SCHOOL EDUCATION

(a) The High School course should cover six years and the normal age of admission should be about eleven.

(b) Entry to High Schools should be of a selective basis; only those pupils should be admitted who show promise of taking full advantage of the education provided. Additional places may be provided for those not selected provided that no cost falls on public funds.

(c) In accordance with the general principle set out in (b) above, places in High Schools should be provided for at least one child in every five of the appropriate age-group.

(d) In order to secure the right children, the methods of selection to be employed will require the most careful consideration. Special arrangements will have to be made for the transfer from Senior Basic (Middle) Schools to High Schools of suitable children and particularly of those who show signs of late development.

(e) High Schools should be of two main types (A) Academic (B) Technical. The objective of both should be to provide a good all round education combined with some preparation in the later stages for the careers which pupils will enter on leaving school.

(f) The curriculum in all cases should be as varied as circumstances permit and should not be unduly restricted by the requirements of Universities or examining bodies.

(g) In order that no poor child of ability may be excluded, liberal assistance in the form of free places, scholarships and stipends should be available throughout the course.

(h) In order to secure teachers of the right type, the salaries paid in all recognised schools, whether maintained by the State or by private bodies, should not be less than those prescribed by the Central Advisory Board of Education.

UNIVERSITY EDUCATION

(a) Indian Universities, as they exist today, despite many admirable features do not fully satisfy the requirements of a national system of education.

(b) In order to raise standards all round, the conditions for admission must be revised with the object of ensuring that all students are capable of taking full advantage of a University Course. The proposed reorganisation of the High School system will facilitate this. Adequate financial assistance must be provided for poor students.

(c) The present Intermediate course should be abolished. Ultimately the whole of this course should be covered in the High School but as an immediate step the first year of the course should be transferred to High School and the second to Universities.

(d) The minimum length of a University degree course should be three years.

(e) The tutorial system should be widely extended and closer personal contacts established between teachers and students.

(f) The importance of establishing a high standard in post-graduate studies and particularly in pure and applied research should be emphasised.

(g) Steps should be taken to improve the conditions of service, including remuneration of University and College teachers where those now in operation are not attracting men and women of the requisite calibre.

(h) An Indian University Grants Committee should be constituted for the purpose and with the terms of reference set out in this chapter.

TECHNICAL, COMMERCIAL & ART EDUCATION

(a) In view of the prospective needs of post-war industry and commerce for skilled technicians, and in order to cater for the aptitudes of those who will derive greater benefit from a practical course, the establishment of an efficient system of Technical Education at all stages on the lines set out in the report of the Technical Education Committee, is a matter of great urgency.

(b) Due regard should be had to the recommendations of the Abbot-Wood Report in respect of the scope and content of Technical Education.

ADULT EDUCATION

(a) Comprehensive arrangements on the general lines set out in the Adult Education Committee's report should form an integral part of education. These are particularly important in India today in view of the very high percentage of illiterates.

(b) Literacy is a means not an end in itself. Although the main emphasis in the beginning may be placed on the liquidation of illiteracy, adult education in the full sense must be provided for those already literate. The amount of this should progressively increase as illiteracy disappears.

(c) It is estimated that even with introduction of a universal system of Basic education there will be over 9 crores of illiterates (age group 10-40) to be dealt with. Plans should be made to solve this problem by a campaign spread over twenty years. Before this campaign opens, five years should be devoted to the necessary preparation, including the recruitment and training of the staff of teachers required.

(d) In this as in all branches of education the quality of the teachers is of supreme importance. The difficulty of obtaining a sufficient number of teachers of the right type, particularly women, must on no account be underestimated.

(e) The responsibility for adult education must rest with the State but every effort should be made to enlist the aid of suitable voluntary organisations wherever available.

TRAINING OF TEACHERS

(a) The proposals for the recruitment and training of teachers as set out in the Report approved by the Central Advisory Board in January, 1943 should be generally adopted.

(b) The existing training institutions are barely sufficient to meet wastage among existing teachers to train those hitherto untrained.

(c) New Training Schools and Colleges (including University Education Department) must be provided to supply the additional teachers whom a national system will require. These will amount to over 20,00,000 non-graduates for schools of all types and 180,000 graduates for High Schools.

(d) Arrangements should be made to pick out suitable boys and girls towards the end of the High School course. This is particularly important in Girls' High School in view of the vast increase in the number of women teachers required.

(e) The courses provided should be essentially practical and should be specially related to the needs of the schools in which the trainees will subsequently serve.

(f) No fees should be charged either in Training Schools or Training Colleges; liberal assistance should be available for the maintenance of poor students.

(g) Refresher courses are of the utmost importance and should be provided for all types of teachers but particularly for those in remote rural areas. Facilities should be provided for research and selected teachers should be encouraged to study educational methods in foreign countries.

The Health of the School Child:—Provision for ensuring the physical welfare of all pupils and students should be made on the lines set out in the report of the Joint Committee.

THE EDUCATION OF THE HANDICAPPED

(a) Provision for the mentally or physically handicapped should form an essential part of a national system of education and should be administered by the Education Department.

(b) Hitherto in India Governments have hardly interested themselves at all in this branch of education; what has been done has been due almost entirely to voluntary effort.

(c) Wherever possible, handicapped children should not be segregated from normal children. Only when the nature and extent of their defect make it necessary, should they be sent to special schools or institutions. Partially handicapped children should receive special treatment at ordinary schools.

(d) The blind and deaf need special educational arrangements, including specially trained teachers. It may be desirable to establish central institutions for training the teachers required.

(e) Particular care should be taken to train the handicapped, wherever possible for remunerative employment for them. After care work is essential.

RECREATIVE & SOCIAL ACTIVITIES

(a) The provision of recreative and social activities on an adequate scale is an essential feature of any modern educational system.

(b) Apart from the needs of boys and girls in schools and colleges special attention should be paid to those in the 14-20 age-group who are no longer attending school. To serve these a Youth Movement on an All-India basis should be set up.

(c) A Youth Movement should aim at co-ordinating and supplementing rather than superseding the work of organisations already dealing with aspects of this problem.

(d) This main need of a Youth Movement will be for leaders, both men and women, who will have to be specially trained. The possibility of finding suitable recruits among demobilised Officers and N.C.O.'s should be explored.

(e) The provision of social and recreative facilities for adults should form an important part of any Social Service Scheme. Reference is invited to the report of the Board's Committee on Social Service and Public Administration (1941).

Employment Bureaux:—(a) Employment Bureaux form an essential part of educational administration: they are especially necessary in India in view of the restricted openings at the moment for progressive employment.

(b) Employment Bureaux, if they are to fulfil successfully the functions set out in this chapter, must be staffed by trained experts with practical experience of teaching and of industrial conditions.

(c) While contact should be maintained with Unemployment Exchanges, Labour Tribunals, etc. established by other Departments, Employment Bureaux which deal with the output of educational institutions should be under the control of the Education Department.

ADMINISTRATION

(a) The Provinces should remain the main units for educational administration except in regard to University and Higher Technical Education, the activities of which could be co-ordinated on an All-India basis.

(b) In the event of the Indian States taking part in educational development on an All-India scale it may be necessary in order to form economic educational units to group the smaller ones or attach them to larger States or contiguous Provinces.

(c) A national system of education will mean closer co-operation, financial and otherwise between the Central and Provincial Governments.

(d) Provincial Governments should be left to make such changes in their administrative arrangements as the carrying out of education developments on the scale contemplated may require. Experience, however, suggests that they would be well-advised to resume all educational powers from local bodies, except where these are functioning effectively.

(e) In order to enlist local interest in education, School Managing Bodies, School Boards and District Education Committees may be constituted, if and when sufficient people of the right type are available to serve on them. An Educational Advisory Board for the whole Province may be desirable.

(f) A strong Education Department will be required at the Centre and in this connection the scope and functions of the Central Advisory Board should be enlarged.

(g) Steps should be taken in accordance with the recommendations of the Board's Committee on the Recruitment of Education Officers (1943) to check the present deterioration in the status and calibre of the educational administrative service

and to enable it to secure the services of the type of officer who will be capable of carrying a scheme of the kind contemplated into successful operation.

(h) Arrangements should be made for the exchange of officers between the Centre and the Provinces and between one Province and another. The desirability of establishing a senior educational administrative service on an All-India basis should receive consideration.

(i) The Director of Public Instruction should be directly responsible for the general administration of education, other than University and Higher Technical Education, throughout the Province. He should also be Secretary for Education, should it be thought necessary to keep in existence a separate post of this kind.

SOME OBJECTIONS

(i) Forty years is too long a period, in which the whole scheme is to be brought into effect. Such a scheme is in grave danger of being put on one side and neglected. During this period, so many changes may take place which may bring the wheel back to the starting point.

(ii) Any educational post-war reconstruction scheme, should give, subject to a minimum fitness an equal opportunity for all rich and poor, those from the rural areas as well as those from the urban areas, and from backward communities as well as from the more advanced communities. Selection for higher education on merits will be an injustice to students of backward communities and groups which for whatever reason take longer to develop mentally.

(iii) Compulsion has existed for many years in some areas in India, but on the whole it has been a failure, because it was never properly enforced. A plan for universal compulsory education in India must at the very outset indicate a strong enough possibly governmental machinery, for seeing that compulsion is actually effective.

(iv) The idea that where compulsory education can only be introduced by stages, the progress should be from area to area and not from age-group to age-group, may create serious conflicts, since the people in certain areas may have to wait a long time for educational advantages which those in other areas may already be enjoying.

GOVERNMENT APPROVAL

As a result of the general agreement which Provincial Governments expressed with the policy outlined in the Board's report the Government of India generally accepted, subject to the limitation of finance, the principles and objects of the Board's scheme.

In 1944, the Government of India asked the Provincial Governments to prepare their Five-Year Post-War Educational Development Plans on the general lines laid down in the report of the Central Advisory Board of Education. Early in 1946, the Provincial Governments were asked to select a few important schemes like Training of Teachers, and Compulsory Primary Education from their plans, and start implementing them after their approval by the Government of India. All the schemes submitted by the Provincial Governments to the Government of India have been examined, and such of them as conformed

to the recommendations contained in the Report have been approved by the Government of India for immediate execution. The outstanding feature of the Provincial Development schemes is that the scales of pay of teachers will be appreciably raised, so as to secure for them a 'living wage'. For example, the teachers who get in certain provinces a salary from Rs. 8 to 15 will henceforth get at least Rs. 20 if not Rs. 25, and matriculate trained teachers will invariably be placed in the scale of pay recommended by the Central Advisory Board of Education, viz., Rs. 30-1-35-3 (biennially)-50 p.m. plus house rent and other allowances recommended. Even these salaries are not adequate, but they certainly effect some improvement on the existing lamentable plight of the teachers. Free and compulsory basic education for boys and girls of the age-group 6-11 will be introduced forthwith, and it will be extended to the 11-14 group. On the University education side, there will be general improvement in the scales of pay of teachers, increased facilities for scientific education and for research work. Technical and Adult Education will also receive their due share.

The 1947-48 Educational Development Programme of the Provincial Governments which is also based on the Central Advisory Board of Education Report has also been approved by the Central Government in almost all cases, and is being implemented.

Financial Assistance:—The Government of India undertook that the entire expenditure incurred by the Provincial Governments on their educational development plans, approved by the Centre, during 1946-47 will be borne by the Central Government. They have further undertaken to give over forty crores of rupees to Provincial Governments for their entire Post-War Development Programme during 1947-48. Whatever portion of the total development budget is allocated by a Province to educational development the same portion of the total Central grants is assumed to be the contribution of the Centre towards education (in that Province) e.g., if a Province is spending 10 per cent. of its development budget on education, then 10 per cent. of the Central grant is deemed to be the Centre's contribution for education.

Financial Aspect of Central Schemes:—The Government of India in the Ministry of Education have also drawn up their Five-Year Plan which is complementary to the Development Plans of the Provinces and is expected to cost over Rs 23.71 crores. A start has already been made with a number of Central Schemes, e.g. Training of Teachers for Basic Schools, Technical Education, Development of Central Universities, and so on.

PROVINCIAL SCHEMES

Here is a brief account of the Five-Year Educational Plans (1947-52), Province by Province.

ASSAM

Basic Education:—Assam proposes to adopt the 'basic' system of education, though compulsion is not contemplated. Junior Basic primary education is already free in this province. During the first quinquennium 1,250 junior basic (1,000 two-teachers and 250 one-teacher) and

(b) The Provincial Government's policy is to provide a school for each school-less village (population 400 to 1000) through private bodies who will be given grants-in-aid for the purpose; 1400 school-less villages with a population of 400 to 700 will be provided with schools by private bodies, and in villages with a population of 700 to 1000, District Local Boards will be encouraged to open 300 schools on payment of grants-in-aid equal to the actual expenditure on the schools.

The total cost on this scheme for the five-year period has been estimated at Rs. 28.3 lakhs.

(c) For the construction of some 6,000 new buildings required for providing additional accommodation in the existing schools or for new schools to be opened under the compulsory elementary education scheme, the total expenditure is estimated for the five-year period at Rs. 2.13 lakhs N.R. and Rs. 5.5 lakhs R.

(d) The Provincial Government have finally decided to introduce basic education by stages in all primary schools. As a first step it is proposed to introduce the teaching of a suitable craft in every primary school as soon as it is possible to secure a teacher to teach the craft concerned. For giving effect to this proposal a sum of Rs. 138 lakhs N.R. and Rs. 60.8 lakhs R. has been estimated as the probable cost for the five-year period.

The Government proposes to ask local Authorities to convert 100 full grade primary schools into Agricultural Bias schools during 1947-52 at the rate of 20 per year. Also 20 hostels will be attached to centrally situated Agricultural Bias schools in places where there is need for such hostels.

The estimated total cost for the five-year period is Rs. 25.9 lakhs of which Rs. 8.7 lakhs will be N. R.

Secondary Education—(a) In order to improve the standard of the secondary schools, many of which depend for their finances on the fees collected and Government grants, it is proposed to give increased grants. Thereby the schools will improve the pay scales and conditions of service of teachers. A sum of Rs. 70 lakhs is the estimated cost for the five-year period.

(b) At present, Provincial Government maintains 4 Agricultural High Schools in the Province. It is proposed to raise the number to 8, and for this purpose an expenditure of Rs. 0.7 lakhs N.R. and Rs. 4.1 lakhs R. has been estimated for the five-year period.

(c) Also there is a proposal to increase the number of existing Technical High Schools from 2 to 12. An expenditure of Rs. 56.6 lakhs N.R. and Rs. 8.2 lakhs R. has been estimated for the quinquennial period.

University Education—The Government has accepted the principle of the establishment of Regional Universities in the Province for Maharashtra in 1948-49, for Gujarat and Karnataka in 1949-50 and 1950-51 respectively. On this proposal, the estimated expenditure for the five-year period is Rs. 24 lakhs N.R. and Rs. 49.0 lakhs R.

Technical, Commercial and Art Education—There are at present 39 Technical

schools and 6 Technical Colleges or Institutions for advanced studies in the province. It is proposed to undertake expansion of 2 Senior Technical Institutions and the reorganisation of one Industrial School and the expansion of Apprenticeship scheme. It is also proposed to start 4 new industrial schools.

Adult Education—At present adult education classes are maintained by private bodies or individuals and given grant-in-aid by Government. Since 1945, a small area of suitable size in some 5 districts has been selected for concentrated effort and adult education classes organised. It is proposed to extend the scheme to 21 other compact areas during the year 1946-47, and to all the 190 Talukas in the whole province within 5 years from 1947-48. The annual cost of each area is Rs. 9,400 and it is intended to make about 1,000 adults literate during a year in each area.

The total cost of the scheme during the five-year period has been estimated at Rs. 58.6 lakhs.

In addition it is proposed to spend a sum of Rs. 2.4 lakhs on imparting literacy at Labour Welfare Centres.

Training of Teachers—(a) In order to increase the output of trained teachers it is proposed to expand the existing training institutions and to open 13 new training colleges 7 for men and 6 for women in addition to the 3 training colleges for men already opened in 1945-46.

The estimated expenditure on the scheme for the five-year period is Rs. 52.6 lakhs N.R. and Rs. 51 lakhs R.

(b) It is proposed to open 36 Lokshalas during the five-year period 1947-48 to 1951-52, in addition to the four opened in 1946-47, which will be attached to Government Secondary Schools or full-grade Primary Schools or Training Colleges. The total expenditure on this scheme in the five-year period has been estimated at Rs. 24.8 lakhs.

Health of the School Child—(a) It is proposed to create a School Health Service to provide for (i) the medical examination of all children in Primary and Secondary Schools once on entry into a primary school and again at the ages of 11, 14 and 17 (ii) the re-examination every year of those who are not found fit and (iii) their treatment locally or at some central place. It has also been proposed to appoint a Chief Medical Officer to make a general survey in the whole province and to submit detailed proposals for the organisation of the scheme from 1948-49. On this scheme, the estimated expenditure for the five-year period is Rs. 58.6 lakhs.

(b) It is proposed to provide a light mid-day meal to primary school children in 10 selected backward districts of the province as an experimental measure. The total cost for the 3rd, 4th and 5th year period has been estimated at Rs. 34.4 lakhs.

(c) It is proposed to hold short-term courses for the training of primary and secondary teachers in physical education, to create 32 posts of Assistant Deputy Education Inspectors, and a post of Chief Inspector of Physical Education for the province. The total estimated expenditure for the five-year period is Rs. 26.3 lakhs.

Administration—It is proposed to strengthen the existing inspecting staff by the creation of 220 additional posts of Assistant Deputy Educational Inspectors (180 for men and 40 for women) during the five-year period. The expenditure proposed for the purpose is Rs. 14 lakhs.

In addition there are certain other miscellaneous schemes for educational development.

MADRAS

Basic Education—At present there are about 3 million children at school and 4 million remain to be brought under instruction. The Provincial Government have proposed to bring about 1.33 millions of children under instruction in the course of the first five years, compulsion being applied upto the V standard, though the ultimate objective is to make education free and compulsory for both boys and girls throughout the province upto the senior basic stage (6-14 age-group) in a period of 20 years.

The total expenditure proposed on this scheme for the five-year period is Rs. 700 lakhs.

Technical Commercial and Art Education—There are at present 84 Technical Schools and 6 Technical Colleges or Institutions for advanced studies. It is proposed in the Five-Year Plan to start 6 new Polytechnics, 2 new Engineering Colleges, 1 Research Institution and 15 new Junior Technical Schools.

Training of Teachers—(a) As additional trained teachers will be required for the introduction of compulsory elementary education in the province, it is proposed to provide additional sections in the existing training institutions, and to a limited extent to open additional training schools, where necessary. For this purpose a sum of Rs. 60 lakhs has been proposed for the five-year period.

(b) It is proposed to train 1,250 instructors and instructresses in Physical Education in order to attach them to boys' and girls' Secondary Schools at the rate of one instructor or instructress for every 250 pupils. The total expenditure proposed on this scheme is Rs. 5.65 lakhs.

The Health of the School Child—(a) It is proposed to provide for mid-day meals for children attending elementary schools. In the first year provision is required to be made for about 6 lakhs of children.

At the rate of one anna for a meal and for 220 days in a year an expenditure of Rs. 12.70 lakhs is provided under this scheme.

(b) It is proposed to make suitable arrangements for the Medical Inspection of school pupils through the agency of registered medical practitioners. So far as colleges are concerned, the medical inspectors' remuneration will be covered by fees recovered from students and in secondary schools only a portion will be met from fees receipts. The total expenditure proposed under this scheme is Rs. 60 lakhs.

Scales of Pay of Teachers—It is proposed to introduce the minimum scales of pay suggested in the report of the Central Advisory Board of Education while the additional cost of applying the scales will fall wholly on Government in respect of institutions directly controlled by them.

the additional cost in respect of institutions maintained by local bodies and private managements will be borne by Government to the extent to which the managing agencies cannot be made to share it. The five-year estimated expenditure on the scheme is Rs. 894 lakhs.

ORISSA

Primary Education—(a) The aim of the Provincial Government is to introduce compulsory free education all over the province upto the junior basic stage, 6-11 age-group, in a period of 40 years. In the first five-year period compulsory free education will be introduced in all municipalities and in selected rural areas in each thana, 24,000 children will be brought to school every year from the 3rd year.

Necessary improvements and enlargement of the scope of existing primary schools is contemplated, since it is felt that all the schools are in need of improvement in the matter of building, playground, equipment and furniture.

The total expenditure proposed on these schemes in the five-year period is Rs. 101.4 lakhs (Rs. 67.7 lakhs N.R.)

In addition to the schools required under compulsory education system, 500 junior basic (Primary) schools will be opened in partially excluded areas where it may not be possible to introduce 'compulsion' at the start.

(b) In Orissa, the minimum pay of a teacher in a primary school is Rs. 10, in the case of an untrained and Rs. 13, in the case of a trained teacher inclusive of the dearness allowance of Rs. 3. It is proposed to give a minimum pay of Rs. 20-1/2 to 25 a month to trained teachers and of Rs. 15-1/2 to 20 to untrained teachers. Women teachers will be given a special pay of Rs. 5 a month each besides rent free quarters, and a special pay of Rs. 2 a month for teachers serving in urban areas.

The total expenditure proposed on this scheme is Rs. 33.73 lakhs R.

Senior Basic (Middle School) Education—It is proposed to open mostly in partially excluded areas 25 middle English Schools for boys with a vocational class attached to each school such as carpentry, weaving, agriculture etc.; to provide each Middle English School with an additional teacher and a Physical Instructor, to introduce vocational classes in 1/3 of the existing schools and to make non-recurring grants for buildings, hostels, furniture and equipment. It is further intended to open 20 Middle English Schools for girls in populous villages, and to effect necessary improvements in the existing aided Middle English Schools for girls.

The total estimated expenditure on these schemes is Rs. 51.8 lakhs (Rs. 26.2 lakhs included).

High School Education—(a) It is proposed to establish 30 high schools for boys through adequate grants-in-aid, to open 10 Government High Schools for girls, to improve the existing high schools for boys by providing for the teaching of Science, Manual Training, Physical Education and Playgrounds, to improve the existing high schools for girls by providing them with hostels, playgrounds, teachers' quarters and extensions to buildings. In addition, an allowance of Rs. 25 p.m. is proposed for graduate teachers in each

high school to act as Career Adviser, assisted by a co-ordinating officer attached to the office of the D.P.I.

The total expenditure proposed on all these schemes for the five-year period is Rs. 66.5 lakhs (Rs. 50.3 lakhs N.R.)

(b) It is further proposed to convert the existing Government Zila Schools in North Orissa into Technical High Schools, and to establish two Technical High Schools.

Expenditure proposed is Rs. 7.8 lakhs (Rs. 4 lakhs N.R.)

(c) It is proposed to spend a sum of Rs. 12.5 lakhs (N.R.) during the five-year period on the construction of quarters for teachers of existing Government High Schools for boys.

University Education:—It is proposed to give grants to private aided colleges for buildings and equipment, to start teaching of certain additional useful subjects in other colleges, to open a college for women and to construct buildings for Utkal University.

The expenditure proposed is Rs. 123 lakhs (including Rs. 104 lakhs N.R.)

Technical Commercial and Art Education:—It is proposed to establish a College of Commerce, to construct buildings for a law college, and to open a 'Sava Sadan' (Occupational Institution for women) and a School of Arts and Crafts. It is also proposed to give grants to a School of Music.

The total five-year expenditure proposed is Rs. 10.1 lakhs (Rs. 9.1 lakhs N.R.)

Adult Education:—It is proposed to make provision for the education of adults in areas in which Village Welfare Centres are started. In the first instance, illiteracy among adults will be removed.

A sum of Rs. 3.7 lakhs—recurring—is proposed for the purpose.

Training of Teachers:—(a) At present there are 13 Elementary Training Schools in which 140 pupil-teachers are admitted annually and 220 bi-annually. Now it is proposed to open 6 Elementary Training Schools to increase the output of teachers, and 2 for women teachers.

(b) It is proposed to expand the two existing Secondary Training Schools to increase the annual admission by 150. Provision has been made for a stipend of Rs. 15 a month for each candidate. It is also proposed to expand the training college at Cuttack, so as to increase the output of graduate teachers for high schools, and Sub-Inspectors of Schools.

(c) It is also intended to open a Secondary Training School for women teachers, required for the opening of a large number of girls' Middle English and High Schools.

(d) It is proposed to provide a suitable school building with modern equipment and hostel for the pupil-teachers and quarters for mistresses for the Hindu Women's Training Institute at Cuttack.

(e) It is proposed to train every year ten suitable candidates as Physical Instructors for High School who will be granted stipends of Rs. 50 p.m. In addition a College of Physical Education will be started.

(f) The total expenditure proposed on all these schemes is Rs. 33.3 lakhs (Rs. 20.0 lakhs N.R.)

Health of the School Child:—(a) It is proposed to provide for the physical welfare of all pupils and students by appointing 1 Chief Inspector of Physical Education, 6 Inspectors and 1 Chief Inspectress of Physical Education.

(b) It is proposed to give a subsidy to provide poor pupils in schools with mid-day refreshment. This will include free distribution of powdered milk, multi-vitamin tablets to deserving pupils.

The total expenditure on the two schemes is Rs. 7.4 lakhs (Rs. .9 lakhs N.R.)

Education of the Handicapped:—It is proposed to open a school for the education of blind children, to construct a building for the institution, and to provide stipends for poor students. The existing Deaf and Dumb School will be provided with new buildings and arrangements for stipends to poor students will be made.

A sum of Rs. 1.2 lakhs (Rs. .8 lakhs N.R.) is proposed.

Administration:—It is proposed to increase staff attached to the Directorate of Public Instruction, and to appoint 1 Inspectress, 1 District Inspectress and 2 Deputy Inspectresses, 6 District Educational Officers and 78 Inspecting Officers in subordinate Educational Services.

The total expenditure is Rs. 20.5 lakhs (Rs. 13 lakhs N.R.)

Miscellaneous:—Provision is made for sending annually 8 graduates for higher study abroad, and 3 school teachers and inspecting officers for study in educational methods, for more scholarships, books, etc., to the students of scheduled castes, backward classes and hill tribes; awarding of 5 research scholarships and 5 post-graduate scholarships outside the province for the encouragement of higher education, and for training research workers; stipends to women students for study in certain subjects outside the province. Also it is proposed to extend female education by increasing the number of peripatetic teachers encourage Oriya literature and to give increased grants-in-aid to Tole and Madrassahs, etc.

The total expenditure proposed on the Miscellaneous schemes is Rs. 19.6 lakhs (Rs. 3.6 lakhs N.R.)

UNITED PROVINCES

Basic Education:—In the first five-year period it is proposed to introduce compulsory free education up to the junior basic stage in 12 districts for boys and girls of the age-group 6-11. During this period, about 16 lakhs boys and girls will be brought under instruction. Provision for the extension of the scheme to other areas and to the higher age-group (11-14) is to be made in the 2nd five-year period.

Apart from Schools to be opened under the compulsory scheme 200 junior basic schools will be opened in villages not having a school which supplied recruits during the war.

It is proposed to give a scale of Rs. 30-50 to 7,774 basic school trained teachers.

It is proposed to convert 7,270 Local Bodies schools for boys and 1,319 for girls into basic schools. Government will bear all the expenses involved.

The total expenditure on all these schemes is Rs. 467 lakhs (Rs. 130 lakhs N.R. included).

Middle School Education:—(1) It is proposed to establish an Anglo-Vernacular Middle School for boys (Classes III to VIII) and 2 such schools for girls.

(ii) With a view to providing better facilities for education for the children of the soldiers, introduction of manual training in 7 selected vernacular middle schools is contemplated.

The total proposed expenditure is Rs. 4.2 lakhs.

High School Education:—(a) It is proposed to open 70 new high schools for girls in the municipalities where no such schools already exist.

(b) In order to help the aided institution to come into line with the scheme of reorganisation of secondary education in the province and to rise their standards, it is proposed to give additional recurring grants to all the Intermediate Colleges and High Schools run by private bodies, as well as for their building programme.

(c) It is proposed to introduce the study of vocational subjects, e.g., like commerce, and manual training in certain high schools.

The total expenditure proposed on these schemes is Rs. 1,116 lakhs (Rs. 103 lakhs N.R.).

(d) In addition there are schemes relating to the construction of building for new girls' high school and for intermediate classes to be attached to a high school.

An expenditure of Rs. 18.1 lakhs N. is proposed.

(e) It is proposed to establish 5 Technical High Schools on the lines recommended by the Central Advisory Board of Education.

An expenditure of Rs. 80 lakhs (Rs. 50 lakhs N.R.) is proposed.

University Education:—To enable the degree colleges to improve the staff, buildings, and to undertake research work, it is proposed to give additional recurring and non-recurring grants. It is also proposed to give similar war grants to the Universities of Lucknow and Allahabad.

The total expenditure proposed is Rs. 145 lakhs (Rs. 80 lakhs N.R.).

Adult Education:—It is proposed to introduce adult education in 7 out of the 12 districts selected for the application of the compulsory primary education. The total number of adults who will come under this scheme is about 53 lakhs. This scheme provides for post-literacy work as well as 10 per cent. of the expenditure on adult literacy.

The total expenditure proposed is Rs. 1,40,81,210 N.R.

Training of Teachers:—(a) It is proposed to open 10 Normal Schools for the training of teachers for compulsory primary education in specially selected areas, and to construct buildings for the schools.

(b) It is proposed to convert Primary Teachers' Certificate Course into Vernacular Teachers' Certificate Course for men teachers by advancing the period of training to 2 years with a view to improving the quality of teachers. Similarly, the senior Basic Education Refresher Course Centres will be converted into Normal Schools.

(c) To serve as a Practising School for teachers, a Middle School for girls is proposed to be attached to the Training College for women at Allahabad.

(d) Construction of buildings proposed for the existing Teachers' Training College for women at Allahabad, the Training College for Undergraduate Women Teachers at Lucknow and for five existing Normal Schools for girls.

The total expenditure proposed on these schemes is Rs. 51.8 lakhs (Rs. 30.5 lakhs N.R.)

Administration:—To help the D.P.I. in carrying out the work of educational reconstruction, it is proposed to appoint an Additional Deputy D.P.I. and another Officer in Class II service.

The total expenditure proposed is Rs. 1,65,728

Health of the School Child:—Physical Education is compulsory both for Vernacular and Anglo-Vernacular Schools, and consequently there is a need for trained teachers in the subject, for whom no facilities exist at present. It is therefore proposed to establish a College for Physical Education at Allahabad where both men and women teachers will be trained for two years.

The total expenditure proposed is Rs. 2.3 lakhs (Rs. .8 lakhs N.R.)

Miscellaneous:—There is a provision for six foreign scholarships for the teachers of the soldiers' sons and daughters, and for the improvement of education of scheduled caste children.

On all these schemes, the total expenditure proposed is Rs. 11.6 lakhs (Rs. 6.9 lakhs N.R.).

AJMER-MERWARA

It is proposed to introduce compulsory primary education up to junior basic stage in selected areas, to provide technical sections in a Government High School, to give stipends for poor students in existing schools, and to strengthen the inspecting and administrative staff. The teachers in training schools will get maintenance allowance, and prospective teachers scholarships. The activities of existing educational institutions will also be expanded.

The total development programme provides for an expenditure of Rs. 43 lakhs.

COORG

The post-war educational development programme of Coorg includes provision for stipends and training of 3 graduate teachers, for buildings for three high schools, for compulsory primary education in one area, for a first grade college, and for remodelling and expansion of Elementary School buildings. The total expenditure proposed for the five-year period is Rs. 12 lakhs.

DELHI

The development programme includes provision for compulsory and free primary education throughout the province, for new High Schools, and two Training Schools, for adult education, improvement of scales of pay of teachers, education of handicapped, and strengthening of administrative staff. It is also proposed to provincialize all the local bodies' schools.

The total expenditure proposed on these schemes is Rs. 1.81 lakhs.

CENTRAL SCHEMES

The Central Plan provides for facilities not aimed at in Provincial Plans, and to supplement key services such as the training of teachers.

Higher Technical Institutions :—(i) It is proposed to establish two high grade technical institutions, one in the Eastern and the other in the Western Zone, to provide for the training of high grade engineers, technologists (designers, planners, research workers and production experts, etc.), to take up positions of trust and responsibility in industry. Each of them will have an annual output of about 1,000 technologists.

(ii) A High Voltage Engineering Laboratory and a Power Engineering College will be established at the Indian Institute of Science, Bangalore.

(iii) The Delhi Polytechnic will be developed into a college of Technology and will eventually constitute the Technological Wing of the Delhi University.

(iv) The Overseas Scholarship Scheme to depute about 500 scholars each year to receive training in Technology and applied Science subjects.

Institute of Education :—A Central Institute of Education has been established at Delhi. There are proposals for an institute for Physical Education, for increased provision for Home Science and Economics, Arts and Crafts, and Music. The Marris College of Hindustani Music (Sangit Vidyapith), Lucknow, and Kala Kashetra, Adyar, are being given grants by the Central Government for expansion of their activities in certain fields. There is also a proposal for the establishment of a Central College of Karnataka Music in Madras.

University Grants Committee :—There are proposals for the development of Scientific Research (fundamental) in Universities and All-India Research Institutions. The scope and functions of Delhi University are being expanded. The University Grants Committee, which was set up as an advisory body to deal with the Central Universities, i.e., Aligarh, Benares and Delhi only, has been expanded and given wider functions.

There is a consensus of opinion in the country among top-rank educationists that the improvement of existing facilities for advanced training in India in all subjects is a matter of immediate urgency, since this alone will prevent the drainage of money from this country to other countries for sending abroad a large number of trainees.

The Central Government have also proposed to set up a National Museum and a Central Reference Library, for developing the Archaeological and Anthropological Surveys, and for creating a National Cultural Trust.

INSTITUTE OF EDUCATION

In regard to the progress made in the execution of the Central Schemes, it may be pointed out that the Central Institute of Education came into being in a unclear form during the third week of December, 1947. The Institute will not only train post-graduate teachers, but will also provide facilities for high class research in education.

The Stock of the Central Library of Educational and Cultural Films is being increased by a further addition of films. A projector has also been purchased.

A Uniform Braille Code covering all the major Indian languages including the Perso-Arabic group, devised by a Committee of experts was finally approved by the Expert Braille Committee of the Central Advisory Board of Education at its meeting held in Simla on June 17, 1947. This code known as the Uniform Indian Braille has been finally accepted by the Government of India.

The accepted Code will replace eight Braille Codes in current use and two to be introduced and this will facilitate the publishing of embossed literature for the Blind on a large scale. The Central Bureau of Education have brought out a new handbook (Phamplet No. 16, Amended Reprint, 1947) containing ink-print codes, with a short history, and instructions for their use.

The setting up of a Central Braille Press and Central Library is also receiving active consideration of the Ministry of Education.

TECHNICAL EDUCATION COUNCIL

The progress made in the field of Technical Education may be summed up under two main headings :—

(1) All-India Council for Technical Education.

(2) Central Technical Institutions—Development Schemes.

On the recommendation of the Co-ordinating Committee of the All-India Council for Technical Education which met in February, 1947, five Visiting Committees were appointed to inspect some of the high grade technical institutions in the country and to make recommendations in regard to their improvement. The Reports of these committees were considered by the Council in May, 1947. As the recommendations did not appear to have been based on uniform principles, a small committee was appointed by the Council to scrutinise the reports. The Council also appointed three more Visiting Committees to inspect some other important technical institutions.

The reports of the visiting committees on several technological institutions were considered by the Co-ordinating Committee of the All-India Council for Technical Education in November, 1947 together with the recommendations of the Scrutinising Committee referred to above. The Co-ordinating Committee have recommended that grants from the Central Revenues to the extent of Rs. 1.5 crores on special expenditure and Rs. 30 lakhs on recurring expenditure be made to some important high grade technical institution in the country for improvement and expansion. The committee have further recommended that these grants should be spread over a period varying from three to five years beginning with the financial year 1947-48. These recommendations are now under the consideration of the Government of India.

Regional Committees :—The question of setting up the Regional Committees of the All-India Council for technical Education had to be kept in abeyance owing to the necessity for redemarcation of the regions in the light of the new political set up and changed geographical and economical situation. This is being taken in hand now. The functions for the Regional Committees will in no way overlap those of the Provincial Governments.

At its second meeting held in May, 1947 the Council decided that :—

(i) The All-India Diploma Courses should be equivalent in standard to the Degree Courses in Universities, but greater emphasis should be laid on the practical side.

(ii) The All-India Certificate Courses should be equivalent in standard to the Foremanship courses and should be so designed that these can be taken mainly on a part-time basis.

(iii) Admission qualifications should be so prescribed and rules and regulations so framed that persons engaged in full or part time occupation in appropriate branches of technology may acquire these "All-India" qualifications by taking the courses on part-time basis.

A comprehensive memorandum on the above decisions was considered by the All-India Boards of Technical Studies at their meetings held during July-August, 1947. The Boards are now engaged in working out details of the schemes in the light of the above decisions of the Council.

Co-ordination with University :—To ensure co-ordinated development in the field of technical education the Council decided that the Inter-University Board should be asked to consider the advisability of appointing a committee with which a small committee of the All-India Council for Technical Education may co-operate in drawing up the general principles to be observed in regard to technical education in University and non-University Institutions of technology.

The Council passed a resolution expressing the opinion that higher technical education should be under the directive of the Council and that for the promotion of higher technical education the Central Government should provide funds for the next five years at least.

CENTRAL TECHNICAL INSTITUTIONS

The development scheme in regard to technical institutions centres round the expansion of the Delhi Polytechnic and of the Indian Institute of Science at Bangalore. The expansion of the Delhi Polytechnic includes the opening of a training college of teachers in technology while the expansion of the Indian Institute of Science includes the establishment of a high-voltage engineering laboratory and of a power engineering department besides a four-year development plan of the Institute itself.

Delhi Polytechnic :—With a view to making the Delhi Polytechnic a really first class technological institution, a four-year development scheme of Delhi Polytechnic, costing about Rs. 80 lakhs was accepted in principle by the Government of India in 1945. This scheme

included provision for fully equipped workshop and laboratories and new buildings. The scheme could not be implemented fully on account of war-time limitations but a fair amount of progress has been made in achieving the object with which the institution was started. The Polytechnic comprises a Technical High School and six Senior Departments namely, Engineering, Architecture, Commerce, Chemical Engineering and Technology, Art and Chemical Technology. It also provides facilities for All-India Diploma Courses in some subjects besides the Polytechnic Courses.

The proposal to introduce degree courses in certain departments, and to shift Senior Departments to a new site near Delhi University, have necessitated a revision of the original plan. The revised plan is estimated to cost Rs. 91.2 lakhs non-recurring and an ultimate recurring expenditure of Rs. 9.6 lakhs in 1949-50. It envisages expansion of the existing facilities, introduction of new courses and affiliation of certain Departments to the Delhi University.

The Scheme for the starting of a training college for teachers in technology could not be taken up on account of lack of accommodation at the Polytechnic. This scheme has now been merged in the revised development plan of the Delhi Polytechnic.

Indian Institute of Science :—An all-round development of the Indian Institute of Science, Bangalore, is being carried out with financial assistance from the Government of India. The important development schemes in hand are briefly described below :—

(i) Establishment of High Voltage Engineering Laboratory :—

Capital cost	Rs. 23,13,000
Ultimate annual recurring cost	Rs. 45,000

The scheme has been taken in hand and a special Officer from England has been appointed by the Council of the Institute for setting up the Laboratory.

(ii) Four-year development plan :—

Capital cost	Rs. 40,00,000
Ultimate recurring cost	Rs. 3,59,000

The Plan is in the second year of its execution and steps taken so far are :—

1st year programme 1946-47.—Opening of a division of General Chemistry in the Department of Pure and Applied Chemistry.

2nd year programme 1947-48.—Expansion of the activities of the Departments of Metallurgy and Internal Combustion Engineering.

Enlarging the scope of the Departments of Pure and Applied Chemistry, Bio-Chemistry, Electrical Technology and Metallurgy;

Efficient maintenance of the water, gas and sanitary systems, roads and buildings.

(iii) Establishment of a power Engineering Department :—

Capital cost	Rs. 40,00,000
Ultimate annual recurring cost	Rs. 8,90,000

Overseas Scholarships—136 Scholarships were awarded in the year 1947-48 by the Central Government in various subjects. Of the selected scholars, 31 opted for Pakistan, and the scholarships of 14 others were cancelled for various reasons, leaving a balance of 91 on the list, 42 of the scholars have already gone abroad. The question of continuing the scheme next year is still under consideration.

Scheduled Castes Scholarships—In order to make adequate financial provision to meet the educational needs of the Scheduled Castes, the Government of India have sanctioned an annual grant of rupees three lakhs for a period of five years from the year 1944-45. During the years 1944-47, 888 scholarships were awarded for Post-Matriculate studies in India.

CENTRAL BOARD OF EDUCATION

The thirteenth meeting of the Central Advisory Board of Education in India was held at Bombay in January, 1947. At this meeting many questions of educational importance were discussed. A short account of these is given below—

Basic English—The Board considered the report of the Committee on Basic English in relation to the Indian Education system and endorsed the views expressed therein that Basic English cannot be considered as a really satisfactory method of teaching the English language to beginners in India nor is it an adequate medium for scientific communications and publications. The main conclusions of the Committee are:

(i) That for a period of 6 years in the first instance Basic English should be taught in some Senior Basic and Standard English in others as far as practicable under identical conditions and by equally competent and trained teachers.

(ii) At the end of 6 years, the position should be reviewed with the object of determining whether Basic English is quicker and easier to acquire and if so, whether it gives to the pupils the requisite ability to use English for purposes of everyday life.

(iii) Simultaneously, an endeavour should be made to examine and work out various plans and schemes for improving and simplifying the teaching of English at this stage.

(iv) It would be necessary to ensure that the price of books in Basic English approximates to that of other books of the same standard.

(v) It would be necessary to ensure that Basic Text Books used in India will suit Indian conditions.

(vi) In the Secondary Schools only Standard English should be taught.

(vii) The question of transition from Basic to Standard English needs very careful examination. In the 3rd or final year of the Senior Basic (Middle) Schools and in the 4th or 5th High Schools, the English course should be approximated so as to ease the transition from Basic to normal English for those who are to be transferred to High Schools from Senior Basic (Middle) schools.

(viii) Basic English cannot prove useful as a method for the teaching of standard English to beginners.

(ix) Provision should be made for the teaching of both standard and Basic English for such adults as desire to have a knowledge of English, Standard for those who desire it for cultural purposes and Basic for those who have a limited time at their disposal and who wish to acquire a knowledge of English for strictly utilitarian purposes.

(x) Basic English is not suitable for use at International gatherings.

Secondary Schools Examination Council—The Board expressed their general agreement with the recommendations of the Committee appointed to examine the formation of a Secondary Schools Examination Council for India and hoped that it would be possible to set up the proposed Council at an early date as an advisory and co-ordinating agency with a view to ensuring a proper standard in School Leaving Examination throughout the country. The main standard conclusions and recommendations of the Committee are:

(i) It should be in the public interest to have one examination at the end of the school course and every effort should be made to meet the requirements of the Universities in that Examination.

(ii) It is desirable to amend the syllabus framed by the Joint Committee of the Central Advisory Board of Education and Inter-University Board on Matriculation Examination.

(iii) The examination to be held at the end of the High School course should serve both the purposes, viz. (a) for entry into the University and (b) employment on leaving school, and as far as possible, papers should be restricted to a maximum duration of 2½ hours.

(iv) The Secondary Schools Examination Council for India should not be an examining body and should, for the present at any rate, be endowed with advisory functions only. It should be concerned with examinations at the end of High School stage for entry to the Intermediate courses of Universities which have four-year Degree courses and examinations for entry to the three-year Degree course of Universities which have adopted such a course.

(v) The proposed All-India Council should consist of representatives of Universities, Boards of Secondary Education and Provincial Education Departments and distinguished teachers.

National Cultural Trust—The Board were of the opinion that the formation of a National Cultural Trust for India would go a long way towards stimulating and co-ordinating cultural activities in this country. The main conclusions and recommendations of the Committee appointed to examine the proposal for the formation of such a Trust are:

(i) It is desirable to establish an autonomous body called the "Indian Cultural Trust" to stimulate and promote the cultural life of the country.

(ii) The Trust should be constituted by a Charter or an Act of the Legislature and should be handsomely endowed by Government.

(iii) The functions of the Trust should be:

(a) To encourage cultural education and research with particular reference to the preservation and development of traditional Indian Culture in relation to such subjects as literature, architecture, sculpture, painting, music, dramatic art and dancing.

(b) To acquire for the State sites, monuments, manuscripts, pictures or other subjects of importance from the point of view of Indian culture.

(c) To advise the Government of India and the provincial Governments with regard to cultural matters.

(d) To co-operate with Indian Universities in the development of activities in the purely cultural fields.

(e) To co-operate with the learned societies of India in order to encourage and expand the cultural side of the work now performed by them.

(f) To publish suitable popular literature on cultural matter.

(g) To maintain close touch with all parts of India (including the States) by holding periodical conferences.

(h) To organise Archaeological and other cultural missions to foreign countries and generally to develop and extend existing cultural contacts between India and other countries.

(iv) The main activities of the Trust should be carried on through Academies of which the following three should be constituted in the first instance:—

(a) The Academy of Letters which will deal with Indian Languages and Literature, Philosophy and History.

(b) The Academy of Arts (including the Graphic, Plastic and Applied Arts) and Architecture.

(c) The Academy of Music, Drama and Dancing.

(v) Each Academy should be an autonomous body with a separate endowment which may be supplemented by grants-in-aid from the Trust and donations from other sources.

(vi) The Trust will exercise a general control over the Academies in regard to financial matters by means of regulations. In other matters, the Academies will be independent of the Trust.

(vii) The object of these Academies will be to foster and develop the subjects with which they deal and to promote the study of those subjects with a view maintaining the highest possible standards of achievement.

(viii) The initial endowment of the Trust should be not less than Rs. 4 crores to enable the Trustee to function properly. If the Central Government contributed half of this sum, a quarter could be raised from the Provincial Governments and the balance from the States.

University Commission—The Board considered it desirable that the work of the Indian Universities should be reviewed that for this purpose the Government of India in consultation with other Governments concerned should appoint a Commission on the lines of the Sadler Commission to report on Indian University Education and to suggest improvements and extensions that may be desirable to suit the present and future requirements of the country. They also suggested that the Commission so appointed should mainly be composed of eminent educationists with University experience including some eminent educationists from foreign countries.

Other important questions considered by the Board included (i) the use of Roman Script for learning Hindustani as a Lingua Franca, (ii) Provision for suitable broadcasts for school children, (iii) teaching of Physiology in Primary and Secondary Schools and in Colleges and Universities, and (iv) production of suitable magazines for children by the Government of India. Among the Committees appointed by the Board was one to examine the question of the formation of a National Education Commission for India and another to draw up curricula for Junior and Senior Basic Schools.

JANUARY MEETING

A meeting of the Central Advisory Board of Education was held at New Delhi on the 13th, 14th, and 15th January, 1948. The Board's agenda consisted of 23 items. A brief account of the important ones is given below.

Basic Education—In 1946-47 in Assam, ten more teachers and five women teachers were sent for training in the basic method of education.

In Cochin State a Compulsory Education Bill was passed by the Legislative Council, and its introduction was under consideration. There were 507 primary schools, of which 376 were under private management. The total number of children attending primary classes was 1,85,656.

In Mysore, the principles of basic education have been accepted and accordingly a training centre for teachers has been started.

In Travancore, compulsory primary education was introduced in 1946-47 in 7 out of the 30 talukas of the State. It is reported that due to the introduction of compulsory training education, the enrolment in primary classes has risen by 50 per cent.

Development in Adult Education—In Assam, the scheme of mass literacy movement was taken up by the successive Governments from the year 1940. During the period 1940 to 1946, about 200,000 persons were made literate. It is reported that women literacy organisations have been established practically in all the districts, but the progress of work is handicapped for want of funds.

In Bihar, literacy work was continued on an intensive scale in selected areas during the year 1946-47. In this connection, the active co-operation and support of public associations like All-India Spinners' Association, All-India Village Industries Association, Harijan Sewak Sangh, etc., was invited. The total number of voluntary workers in the literacy centres was 7,981 of whom 1,423 were teachers and 6,558 non-teachers. 1,94,185 persons passed the literacy and post-literacy tests.

In Coorg, there are no regular schools for adults, except a night school with an enrolment of 25 students. There is a keen desire among the women folk to learn Hindi.

It is reported from Cochin that a few adult education centres which were in existence during the previous year were closed down in 1946-47 on account of poor strength. A new scheme is however under consideration.

The Mysore Adult Literacy Council runs two months course for literacy and three months for post-literacy work. The teaching is done by primary school teachers who have undergone training in the teaching of adults. A Vidyapith has also been started for the furtherance of adult education. The course extends over five months and training is given in Agricultural, Weaving and Home Crafts, besides general education. During the year 1946-47, 4,547 literacy classes were conducted and 73,010 persons were made literate. It is reported that from the year 1941-42 when the Council started its activities, 2,35,010 persons have been rendered literate.

In Travancore, adult education work is carried on through departmental rural libraries situated in villages. During 1946-47, there were 124 such libraries. Besides there were 72 aided Libraries.

Overseas Scholarship Scheme—It is intended to produce a sufficient number of highly trained persons, likely to be required for various development plans of the Central and Provincial Governments. In the selection of candidates greater importance is attached to their intellectual attainments and potential ability than to actual practical experience, though practical and research experience also receive considerable weight. This is essentially a short-term measure and is intended to last only so long as adequate facilities for advance training are not available in India. The Central Government pays the entire cost of training in respect of scholars selected for the centre, and meets half the total cost in respect of scholars selected on behalf of Provincial Government.

Overseas Information Bureau—With a view to providing information and advice for students proceeding overseas the Government of India has set up an Overseas Information Bureau. The main function of this Bureau is to provide an up-to-date information service regarding various aspects of advanced studies abroad. It maintains a good reference library giving information about the universities and educational institutions in the U.K., the U.S.A. and other countries. It is available for consultation and reference. The Bureau publishes a Monthly Bulletin providing latest information regarding educational facilities available abroad, as well as all matters which would help Indian students in their studies abroad.

The Government of India have urged the Provincial Governments, University authorities and States to take steps for revitalising existing Advisory Bureaux and setting up new ones wherever they do not exist. No-one except the United Provinces have adequate organisations of this type at the present moment.

Adult Education—Percentage of literacy in the country should be raised to at least 50 during the next three years, and in this connexion, the resources and personnel of the country should be fully mobilized. The army of teachers required, whole-time and part-time workers and volunteers, are to be recruited from among the intelligentsia in Government employment and from private bodies. The use of the radio, films, etc., will also be made. It was recommended that funds should be provided by the Central and Provincial Governments at the minimum rate of one anna per person to be educated.

Secondary Education—It was recommended that a Commission be appointed to investigate the state of secondary education in India and to report on its aim and scope in the light of present conditions and future requirements.

Medium of Instruction—In regard to the medium of instruction and examination in Indian Universities, suggestions were made that the present position may continue for a period of five years.

Basic Education—It is accepted on all hands that without such education a modern democratic state, cannot flourish or perform those functions which are expected of it. The scheme of Post-War Education Development prepared by the Central Advisory Board of Education has not only been accepted by the Central and provincial Governments but steps are already under way for the implementation of the first five-year programme. But the whole programme has to be hastened. As the Minister for Education, Government of India, put it, "No one will for a moment tolerate today that 40 years must elapse before the full scheme of basic education for all the inhabitants of this land can be implemented. In fact even half that period will seem to many to savour of delay and procrastination. We must, therefore, devise measures by which the educational progress of this country can be so accelerated that we reach our objective within much shorter time".

Religious Instruction—About Religious Education the Minister made the following points.—"In connection with the scheme of the Basic Education the question of religious instruction had cropped up at the time. Two Committees of the Board pondered over it but they could come to no agreed decision. I should like that this question may be reconsidered in the light of the changed circumstances. For our country this question has a special importance. Our present difficulties, unlike those of Europe, are not a creation of materialistic zealots but of religious fanatics. If we want to overcome them, the solution lies not in rejecting religious instruction in elementary stages but in imparting sound and healthy religious education under our direct supervision so that misguided credulism may not affect the children in their plastic stage.

"But if religious instruction is to be a part of Basic Education, what will be the proportion? How is it to be managed? These are questions which are to be thoroughly considered. Indeed there will be difficulties in the way. If the main issue is settled, details can be tackled later on. In any case I request you to appoint a committee to go into the question *ab initio*. It may be authorised to send its recommendations directly to the Government."

Medium of Instruction—In regard to this question the Minister said, "In future English cannot remain the medium of instruction. Whatever the change may be in this direction, it should not be sudden but gradual. In my opinion so far as Higher Education is concerned, we should come to the decision that the *status quo* may be preserved for five years. But along with it provision may be made by the Universities for the coming change.

"But in this connection a fundamental question arises with regard to Indian languages. How is the change to be brought about? Is University education to be imparted through a common Indian language or Provinces may be given an opportunity to have their own regional languages for University teaching? English was a foreign language. We were handicapped by having it as our medium of instruction. But we were also benefited in one way that all the educated people in the country thought and expressed themselves in the same language. It cemented the national unity. It was such a great boon to us that I should have advocated its retention as the medium of instruction, had it not been fundamentally wrong to impart education through a foreign language. But obviously I should desist from offering this advice. I put it to you if only till recently a Madras or Punjabi or a Bengali felt no difficulty in receiving education through a foreign language, why should he be handicapped if he were to be educated through one of the Indian languages? Instead of English we adopt an Indian language, we shall certainly be able to retain the same intellectual unity which was created for us by the English language.

"The alternative course before us is to have regional languages for university teaching and one common compulsory language for Central Government and for Inter-Provincial communication".

INTER-UNIVERSITY BOARD

The activities of this body should be mentioned in a survey of recent educational progress. A meeting of the Inter-University Board of India was held at Jaipur on the 3rd and 4th December, 1946, under the Chairmanship of Dr. Amarnath Jha, Vice-Chancellor, Allahabad University, in the absence of the Chairman Dr. J. C. Chatterjee, Vice-Chancellor of the University of Agra. As usual questions of great importance relating to University Education were discussed.

Indian National War Academy—The Board welcomed the establishment of the Academy and noted that the syllabus for the Diploma to be instituted by the Academy compared favourably with that for the Degree Examination of an Indian University. The Board resolved to request the Universities to examine the syllabus

in detail and to extend to the students of the Academy such benefits of continued study in the University as may be agreed upon based on equivalence of study and examination.

The Board decided that holders of special war certificates can be admitted to a University only after they pass the Matriculation or equivalent examination, but that conditions relating to attendance and residence may be waived for them.

Practical Bias—In view of the need for specialised training for candidates who will be recruited for foreign services, the Board recommended that suitable courses of studies for their training should be instituted in Indian Universities for preparing persons for Political, Trade and Diplomatic services in foreign countries. For this purpose, the Government of India, Provincial Governments and States were asked to allot funds to Universities.

Administration—In regard to the recommendation made by the Central Universities Grants Committee about the desirability of having a full-time Vice-Chancellor and an approved Finance Committee with the treasurer as chairman in each University for ensuring efficient administration the Board decided that

- (i) All Universities should have full-time Vice-Chancellors.
- (ii) In each University a Finance Committee should be constituted.
- (iii) The question of appointment of a Treasurer be referred to the different universities for opinion.
- (iv) The Government is requested to enlarge the scope of the Universities Grants Committee, and to place at its disposal more funds to enable it to make special grants to all Indian Universities for specified purposes. The grants so made should not disturb the autonomy of the Universities and the Committee should generally follow the procedure adopted by the Universities Grants Committee in England and Wales, for satisfying itself that the funds placed at the disposal of the University are properly spent. The Board further recommended that the Grants Committee should be remodelled on the lines of the Universities Grants Committee in England and Wales. In the opinion of the Board, the functions of the Grants Committee should be

- (a) to assess and distribute grants from public funds to the Universities.
- (b) To examine and advise upon all schemes for major developments.
- (c) To visit the Universities once in five years and make recommendations.

Text-Books—The Board recommended that books meant for educational institutions should as far as possible present an objective historical view and should not contain statements which have not passed the test of facts and critical judgment.

A Commission—The Board resolved that it was desirable that the work of Indian Universities be reviewed and that for this purpose the Government of India should constitute a Commission to report on the lines of the Sadler Commission to report on the work of Indian Universities and to suggest any changes that may be deemed desirable in the light of modern conditions and changes in educational policies

adopted in other countries and to suit modern requirements in India. This Commission should be mainly composed of eminent educationists with university experience including some eminent educationists from foreign countries.

The appointment of the Commission is under the consideration of the Government of India.

Scales of pay recommended for teachers in Schools by The Central Advisory Board of Education in India (All Pre-War Standards).

MINIMUM NATIONAL SCALES

(a) **Primary Schools (Including Infants and Nursery Schools)**—Rs. 30-1-35-3 (biennially)-50 p.m. (for men and women teachers). Teachers of Village Schools should have free houses: where this is not possible, 10 per cent. should be added to their salaries. This is the scale for normal rural areas, and may be increased upto 50 per cent. to meet the needs of areas where the cost of living or other factors necessitate a more generous scale, e.g., in Delhi or one of the provincial Capitals the initial salary for primary teachers may be raised to 45 and the maximum to 75.

(b) **Senior Basic (Middle) Schools**—Rs. 40-2-80 p.m. with the same provision as in the case of primary teachers for increasing it to the needs of more expensive areas. Men and women will get the same scales of pay.

(c) **High Schools**:

NON-GRADUATE TRAINED TEACHERS—Rs. 40-2-80 p.m. + 6½ p.c. Contributory Provident Fund, 10 per cent. house allowance

in normal rural areas; possible increase up to 50 per cent. to meet higher cost of living or other special circumstances.

GRADUATE TRAINED TEACHERS IN HIGH SCHOOLS

Rs. 70-5-150 p.m. + 6½ per cent. Contributory Provident Fund, 10 per cent. house allowance in normal rural areas; possible increase up to 50 per cent. to meet higher cost of living or other special circumstances.

[N.B. Special posts of responsibility to be created among the senior teachers in High Schools which would carry Rs. 20 p.m. in addition to ordinary salary. Such teachers would be in charge of main groups of studies, e.g., Languages, Science, etc., or of libraries, games, hostels and important features of school life.]

SCALES FOR HEAD TEACHERS IN ALL GRADES OF SCHOOLS

[N.B. As in the case of Assistant Teachers scales may be increased up to 50 per cent in areas where cost of living by pre-war standards is more expensive:

Grade	Size of School	Salary scale p.m.	Remarks
1.	Primary Schools		
A.	1 or 2 class sections	*Rs. 10 above scale for assistants.	Same scale for men and women. Where no house is provided 10 per cent. should be added to salary.
B.	3, 4 or 5 class sections	Rs. 50-4-70	
C.	5 or 6, 8 or 10 class sections	Rs. 60-4-80	
D.	Above 8 or 10 class sections	Rs. 80-4-100	
2.	Middle Schools (Vernacular and Anglo-Vernacular)		
A.	3 or 4 class sections	Rs. 80-4-100	Same scale for men and women. Where no house is provided 10 per cent. should be added to salary.
B.	4 or 5 to 6 or 8 class sections	Rs. 90-4-110	
C.	Over 6 or 8 class sections	Rs. 110-4-130	
3.	High Schools		
A.	Upto 250 pupils on roll	Rs. 175-10-255	Same scale for men and women.
B.	251-500 pupils on roll	Rs. 250-10-350	
C.	Over 500 pupils on roll	Rs. 350-15-500	

POST OF RESPONSIBILITY IN ALL TYPES OF SCHOOLS EXCEPT THE SMALLER ONES

Such posts to relieve head teachers of a certain amount of routine administrative responsibility and so to free them for attention to their more important duties and to act as a further incentive to the more ambitious type of teacher.

Primary Schools.

Grades A & B	None	Rs. 5 p.m. in
Grade C	1	addition to
Grade D	2	the ordinary scale.

Middle Schools

Grade A	None	Rs. 10 p.m. in
Grade B	1	addition to the
Grade C	2	ordinary scale.

High Schools

Grade A	2	Rs. 20 p.m. in
Grade B	4	addition to the
Grade C	4	ordinary scale.

Appointments to posts of special responsibility to be made for three years, the teachers in question being eligible for re-appointment subject to satisfactory service.

REMUNERATION OF SPECIALIST TEACHERS

It will be divided into two grades.

(a) Teachers of special subjects in Vernacular Middle (Senior Basic Schools), in Anglo-Vernacular

(a) UNIVERSITY DEPARTMENTS

Professors	Readers	Lecturers	Junior Lecturers
Rs. 1,000 to 1,250	Rs. 500-25-800	Rs. 300-20-500	Rs. 210-15-300

(b) AFFILIATED AND CONSTITUENT COLLEGES.

Principal	Readers	Lecturers	Junior Lecturers
Rs. 800 to 1,000	Rs. 500-25-800	Rs. 300-25-500	Rs. 210-15-300

(in Technical and Engineering Colleges and in subjects which require a certain amount of professional experience) and for others Rs. 150-15-300.

Where a college teacher is given or allowed to retain the title of Professor, this should not automatically entitle him for the salary prescribed in the case of a University Professor. In such cases, the rate of remuneration should be settled

by consultation between the University and College authorities.

No distinction is to be drawn between teachers on account of their sex, the scales mentioned above being applied to both men and women.

vernacular Schools and in all middle classes of high schools;

(b) Graduates.

No. (a) above to be granted one year's seniority in the appropriate scale together with Rs. 2 p.m. as a personal allowance; No. (b) to receive no additional remuneration.

PENSION OR PROVIDENT FUND

It has been recommended that all recognised teaching service should ultimately become pensionable and that where no pension funds exist or can be expected to exist in the near future, contributory provident funds should be established on the basis of 50 per cent. of contribution from the teacher and 50 per cent. from the employer.

TRANSFER OF TEACHERS

Where teachers are transferred from one school to another, either in the same area or in different areas, the periods which they have spent in recognised service should be taken into account in determining their salaries in the new school or area.

SCALES FOR UNIVERSITY TEACHERS

The following minimum scales have been recommended by the Central Advisory Board of Education for different grades of teachers:

Scales of Pay for Teachers in Delhi and Ajmer-Merwara accepted by the Government of India.

Name of Post.	Prescribed Scale.
Headmasters and Headmistresses of Vernacular and Anglo-Vernacular Schools.	(i) Rs. 100-8-140-10 200 (upto six classes). (ii) 140-10-200-E.B. 10-300 (for more than six classes).
Headmasters and Headmistresses, High Schools	(i) 200-10-300 (ii) 300-20-400 (iii) 400-20-500
Principals of Higher Secondary Schools.	Rs. 350-25-500-30-590.
Teachers in Primary Schools (if untrained).	Rs. 35-1-40-2-60.
Trained Teachers in Primary Schools.	(i) Rs. 50-2-60-3-00 (non-matriculate).
Vernacular or Senior Basic Schools, Anglo-Vernacular Schools, and teachers in the middle classes of High Schools.	(ii) Rs. 68-4-120 5-170 (matriculates).

HISTORICAL SKETCH

Having surveyed the present position we can next pass on to a brief sketch of the history of Indian education with special emphasis on recent developments.

Indian education is in fact unintelligible except through its history. The structure is top heavy. The lower classes are largely illiterate while the middle classes who constitute the bulk of the *intelligentsia* are in point of number at least educated to a pitch equal to that of countries whose economic conditions are more highly developed. As might be expected from this abnormal distribution of education, the form which it has eventually assumed contains corresponding defects. In recent years, however, strenuous efforts have been made to remedy these defects. Primary Education Acts have been passed in several provinces in favour of the expansion of primary education among the masses. On the other hand, the numbers of students in colleges and universities have grown apace. The volume of educated unemployment had at one time reached alarming proportions, but in recent years, owing to the conditions of war and its aftermath many educated young men have been absorbed in the services; still the problem of finding suitable employment for all educated men in peace time has yet to be tackled successfully.

INTRODUCTION OF WESTERN LEARNING

In the early days of its dominion in India, the East India Company had little inclination for the doubtful experiment of introducing western learning into India. Warren Hastings, the dominating figure of the time, was a genuine admirer of the laws and literature of the East. His policy was to enable the ancient

Graduate teachers in Rs. 80-5-120-8-200
High Schools.
10/2-220
Selection Grade
Rs. 150-15-300.

Graduate teachers in Rs. 250-15-400-20-500.
High Schools with qualifications similar to those of College Lecturers who are expected to teach in higher classes.

Headmasters and Headmistresses in Primary Schools. (i) Grade pay + S.P.
Rs. 10 for Schools with one or two class sections.

(ii) Grade pay + S.P.
Rs. 20 for Schools with three, four, or five class sections.

(iii) Rs. 100-5-125 6-155-E.B. 6-185, for Schools with more than five class sections.

learning to revive and flourish under the protection of a stable government, and to interfere as little as possible with the habits and customs of the people; and mass education was not touched.

It was from sources other than Government that the desire for western knowledge arose in India. In 1816, David Hare, an English watchmaker in Calcutta, joined hands with the great Indian reformer, Raja Ram Mohan Roy, to institute the Hindu College for the promotion of western secular learning. Fifteen years later, the Committee of Public Instruction in Bengal reported that a taste for English had been widely disseminated and that independent schools, conducted by young men reared in the Hindu College, were springing up in every direction. A still more remarkable innovation was made in 1835 by the establishment of the Calcutta Medical College, whose object was to teach "the principles and practice of medical science in strict accordance with the mode adopted in Europe." Many pronounced the failure of the undertaking to be inevitable; for, under the Hindu custom the higher castes were forbidden to touch the dead. This obstacle was surmounted by Madhusudan Gupta who, with a few courageous pupils, began the dissection of the human body.

The Missionaries.—Another impetus to the introduction of western learning was the devotion of Christian missionaries. Carey, Marshman, and Ward opened the first missionary College at Serampore in 1818; and twelve years later, Alexander Duff reversed the whole trend of missionary policy in India by his insistence on teaching rather than preaching and by founding his school and College in Calcutta.

Lord William Bentinck's minute of 1835 (based upon Macaulay's famous minute) marks a somewhat tardy acceptance by Government of the new policy. Government then determined while observing neutrality in religious matters to devote its available funds to the maintenance of secondary schools and colleges of Western learning, to be taught through the medium of English. But this decision did not entail that Oriental learning should be neglected; still less that the development of the vernacular should be discouraged. Other changes powerfully contributed to the success of the new system. The freedom of the Press was established in 1835; English was substituted for Persian as the language of the Courts in 1837; and in 1844 Sir Henry Hardinge ordained that preference in Government appointments should be given to those who had received western education. In the following decade the new learning took firm root in India; and, though the Muslims

still held aloof, the demand for English schools outstripped the means of Government for providing them. Fortunately there has been of late a marked appreciation among Muslim leaders of the need for improving the instructional level of their co-religionists; and in many of the provinces of India a great impulse towards educational advance among the Muslim community is now noticeable. The Muslim University at Aligarh, more recently the Osmania University of Hyderabad, Deccan, are direct outcomes of the urge for higher education felt by the leaders of the Muslim community.

To Missionary Societies is due the initiative in the modern education of women, strongly supported by Hare and Ram Mohan Roy. The establishment of a Girls' school in Calcutta in 1849, by Drinkwater Bethune is a landmark in the history of female education in India.

WOOD DESPATCH

An epoch in Indian educational history is marked by Sir Charles Wood's despatch in 1854. Perhaps its most notable feature was the emphasis which it laid on the importance of primary education. The old idea that the education imparted to the higher classes of society would filter down to the lower classes was discarded. The new policy was boldly "to combat the ignorance of the people which may be considered the greatest curse of the country." For this purpose Departments of Public Instruction were created on lines which do not differ very materially from the Departments of the present day. The despatch also broke away from the practice followed since 1835, whereby most of the available public funds had been expended upon a few Government schools and colleges, and instituted a policy of grants-in-aid to private institutions. It emphasised the importance of encouraging the study of the vernaculars as the only possible media for mass education.

Another feature of the despatch was an outline of a university system which resulted in the foundation of the Universities of Calcutta, and of Madras and Bombay three years later. The affiliating type of university then became the pivot of the Indian education system. It has undoubtedly been of value in several ways. It enabled Government to select recruits for its service on an impartial basis; it did much, through the agency of its colleges to develop backward places; it accelerated the conversion of Indians to a zeal for western education; and it cost little at a time when money was scarce. On the other hand, the new universities were not corporations of scholars, but corporations of administrators; they did not deal directly with the training of men, but with the examination of candidates; they were not concerned with learning, except in so far as learning can be tested by examination. The colleges were fettered by examination requirements and by uniform courses; their teachers were denied that freedom which teachers should enjoy and their students were

encouraged not to value training for its own sake but as a means for obtaining marketable qualifications.

In certain important respects the recommendation in the despatch were not followed. Directors did not intend that university tests, as such should become the sole tests qualifying for public posts; they also recommended the institution of civil service examinations. They did not desire the universities to be deprived of all teaching functions; they recommended the establishment of university chairs for advanced study. They were aware of the dangers of a literary course of instruction; they hoped that the system of education would rouse the people of India to develop the vast resources of their country.

The encouragement of the grants-in-aid system was advocated to an even greater extent by the Education Commission of 1882, which favoured the policy of withdrawing higher education from the control of Government within certain limits and of stimulating private effort. In theory the decision was correct, but in practice it was irretrievably wrong. In its fatal desire to save money, Government deliberately accepted the mistaken belief that schools and colleges could be maintained on the low fees which the Indian parent could be expected to pay. And, in the course of time, an unworkable system of dual control grew up, whereby the Universities with no funds at their disposal were entrusted with the duty of granting recognition to schools and the Departments of Public Instruction were encouraged to cast a blind eye on the private institutions and to be content with the development of a few favoured Government institutions.

THE UNIVERSITIES COMMISSION

In 1902, the Universities Commission was appointed by Lord Curzon's Government, and its investigation was followed by the Universities Act of 1904. The main object of the

Act was to tighten up control, on the part of Government over the universities, and on the part of the universities over the schools and colleges. The Government retained the power of cancelling any appointment and all university resolutions and proposals for the affiliation or disaffiliation of colleges were to be subject to Government sanction. The universities were given the responsibility of granting recognition to schools and of inspecting all schools and colleges, the inspection of schools being ordinarily conducted by the officers of the Department of Public Instruction. Permission was also given to the universities to undertake direct teaching functions and to make appointments, subject to Government sanction, for these objects, but their scope was in practice, limited to post-graduate work and research. The territorial limits of each university were defined, so that universities were precluded from any connection with institutions lying outside those boundaries.

Neither the Commission nor the Government discussed the fundamental problems of university organisation, but dealt only with the immediate difficulties of the Indian system.

1913 Resolution.—The Indian Universities Act of 1904 was followed by two important resolutions of the Government of India on Indian educational policy—one in 1904 and the other in 1913. The resolution of 1904 was comprehensive in character and reviewed the state of education in all its departments. The following passage from it summarises the intentions of Government:—"The progressive devolution of primary, secondary and collegiate education upon private enterprise and the continuous withdrawal of Government from competition therewith was recommended by the Education Commission in 1883 and the advice has generally been acted upon. But while accepting this policy, the Government of India at the same time recognise the extreme importance of the principle that in each branch of education Government should maintain a limited number of institutions, both as models for private enterprise to follow and in order to uphold a high standard of education. In withdrawing from direct management it is further essential that Government should retain a general control, by means of efficient inspection, over all public educational institutions." The comprehensive instructions contained in this resolution were followed in the next few years by the assignment to the provinces of large Imperial grants, mainly for University, technical and elementary education.

The resolution of 1913 advocated, *inter alia*, the establishment of additional but smaller Universities of the teaching type; it reaffirmed the policy of reliance on private effort in secondary education; it recommended an increase in the salaries of teachers and an improvement in the amounts of grants-in-aid; and it insisted on proper attention being paid to the formation of character in the education given to scholars of all grades. It further discussed the desirability of imparting manual instruction and instruction in hygiene; the necessity for medical

inspection; the provision of facilities for research; the need for the staffing of the girls' schools by women teachers and the expansion of facilities for the training of teachers. The policy outlined in 1913 materially accelerated progress in the provinces, but the educational developments foreshadowed were in many cases delayed owing to the effects of the First World War.

The Reforms Act.—The Reforms Act of 1919 altered the conditions of educational administration in India. Education became a provincial 'transferred' subject in the Governors' provinces under the charge of a Minister, but the education of Europeans was made a provincial 'reserved' subject, i.e., it was not within the charge of the Minister of Education. The introduction of provincial autonomy under the Government of India Act, 1935, brought education in these provinces under the full control of their Ministers of Education.

Broadly speaking, an educational policy for India as a whole no longer existed, but in order that Provinces may co-ordinate educational activities and follow a uniform policy of development, the Central Advisory Board of Education was reconstituted in 1935. This Board in which all the provincial governments are represented meets annually to discuss all matters of education, and devise an all-India educational policy. Its function is, however, purely advisory.

At the time of handing over the administration of education to the provinces, the Government of India retained under their immediate control all education in the Centrally Administered Areas. They still deal with matters relating to Universities like Aligarh, Benares and Delhi.

ADMINISTRATION

The Director of Public Instruction is the permanent head of the Department of Education and acts as expert adviser to the Education or Adviser in charge of Education. He controls the inspecting staff and the teaching staff of Government institutions and is generally responsible to the provincial government for the administration of education. The authority of Government in controlling the system of public instruction, is in part shared with and in part delegated to Universities as regards higher education and to local bodies as regards elementary education and education through the mother-tongue.

The Central Provinces have a High School Board and Madras has an S.S.I.C. Board for control over secondary education, while old undivided Bengal (for Dacca area only) and the United Provinces (for the whole province except the areas under the jurisdiction of Benares Hindu and Aligarh Muslim Universities) had and still have Intermediate and Secondary Education Boards which control high school and intermediate education in the areas under their control. Delhi has a Board of Higher Secondary Education. The Rajputana (including Ajmer-

Merwara), Central India and Gwalior High School and Intermediate Board has jurisdiction over schools and Intermediate Colleges in Ajmer-Merwara and Central India besides such institutions in Rajputana and certain other states.

PRESENT POLICY

The publication of the report of the Central Advisory Board of Education, Post-War Educational Development in India, and acceptance generally of the principles and objects of that report by the Government of India, which is subject to the limitation of finance, make a landmark on the history of education in India. Until the recommendations contained in the report for all round educational development and reorganisation are fully implemented, this report will remain a 'watchword' in the field of education for many years to come.

Some of the principles underlying the new policy have already been set out in the earlier part of this section. Other recommendations are summarized below along with the action so far taken by Government to give effect to these recommendations.

(i) **Education Department.**—The Board had recommended that a strong Education Department would be required at the Centre and in this connection the scope and functions of the Central Advisory Board of Education should be enlarged.

The Government of India constituted a separate Department of Education with effect from the 1st September, 1945, consisting of several technical officers, besides Secretariat Officers. Besides, there are at present two Education Liaison Officers for India in U.S.A. and two Assistant Educational Advisers attached to the Office of the High Commissioner for India, London, in connection with the welfare of Indian students abroad.

The Department deals with education in the Centrally Administered Areas, Central Universities, Universities Grants Committee, Central Advisory Board of Education, Bureau of Education, Technical Education, Government Scholarships for technical training abroad, welfare of students overseas, Scientific Liaison Officers, Cultural Co-operation, and further education of demobilised personnel.

(ii) **Universities Grants Committee.**—The Central Advisory Board of Education had recommended that an Indian Universities Grants Committee should be constituted for the purpose and with the terms of reference set out in their report.

In accordance with this recommendation, the Government of India constituted such a Committee consisting of four members, with Sir Mirza Ismail as Chairman of the Committee. The present Chairman is Dr. M. R. Jayakar. This Committee was to act in the first instance in a consultative and advisory capacity only with regard to the three Central Universities. It may also consider application from others if and when received.

At their first session held in January, 1946, the Grants Committee considered schemes of development from the Aligarh Muslim Univer-

sity, the Benares Hindu University, and the Delhi University. They also considered some research schemes of all-India importance from a few provincial universities. As we have already stated recommendations have been made for enlarging the scope of the Committee.

(iii) **Council of Technical Education.**—The Central Advisory Board of Education had recommended that all technical education beyond school stage other than that given in the technological departments of universities should be placed under a Central controlling Body (to be called All-India Council for Technical Education) having representatives of all the interests concerned.

In pursuance of this recommendation, the Government of India set up an All-India Council for Technical Education with Mr. N. R. Sarkar as its Chairman.

The Council's immediate task is (a) to survey the entire field of technical education, (b) to consider immediate projects already under the consideration of the various Departments of the Government of India, and (c) to conduct preliminary investigation with a view to securing co-operation in an all-India scheme for Technical Education.

An *ad hoc* Committee, called the Higher Technological Education Committee has also been set up under the Chairmanship of Mr. N. R. Sarkar to advise on the provision of facilities for technical education in India on the lines of the Massachusetts Institute of Technology.

PRESENT SITUATION

The future plans have already been described earlier. The rest of the section will be devoted to a brief description of the present situation from the pre-primary to the university stage.

Pre-Primary Education.—At present the facilities available for this kind of education are negligible; there are a few schools scattered here and there in the Bengal area. In some provinces, pre-primary classes for children of the age-group 4-5 are attached to primary schools.

Middle School Education.—At present there are two types of middle schools; (i) Middle English Schools, with 1 to 8 classes generally; English is taught as a compulsory subject in the middle stage; and these schools are feeders for high school education. (ii) Middle Vernacular Schools or Indian Middle Schools, where the teaching is in the mother tongue, English is not taught as a compulsory subject, and education in these schools has a rural bias, and is of a practical nature. The teachers for primary schools are generally selected from the output

of these schools, who receive a 2-year course of training in a normal, or an elementary training school.

High School Education.—The existing high school education system flows into three streams. In certain provinces high schools have primary, middle and high classes; in some middle and high classes, while in certain cases, notably the North-West Frontier Province, the Punjab area and the United Provinces, high classes are also attached to the Intermediate classes constituting 'Intermediate Colleges'.

Again in some provinces a high school stage consists of two classes IX—X (Punjab, N.W.F.P. and United Provinces); in some three, IX, X & XI, (C.P., Madras and Orissa) while in some four classes. Against this unhomogeneous and non-uniform system, the Central Advisory Board of Education has recommended that high schools should be treated as distinct units differing in outlook and objective from the ordinary Senior Basic (Middle) schools, and that in future the High School Course should cover six years from about the age of eleven. Primary Departments, even if housed in the same premises as high schools should be regarded as entirely distinct units and organised separately.

In the re-organised system of education, high schools will be of two main types—(i) the Academic High Schools, and (ii) the Technical High Schools. The former are required to impart instruction in arts and pure Sciences, while the latter to provide training in the applied sciences, and in industrial and commercial subjects. In both types of schools, the course in the junior department, i.e., middle stage, will be very much the same, with a common core of the 'humanities' throughout. There will be no differentiation between boys and girls high schools except that in the latter class of schools, Domestic Science will be added to the courses of study.

University Education.—Though the Central Advisory Board of Education has recommended as an essential and urgent reform the introduction of a three-year degree course in place of the existing two-years' one with the consequence that the one year of the intermediate stage will be added to the University course, and the other to the high school course, this change has not so far been effected in any province except Delhi. It appears that other Universities will fall in step with Delhi only if this experiment proves successful.

The Board had estimated that under the national system of education now proposed, roughly 11 lakhs out of an estimated total of over 33 lakhs of pupils in the Senior department of high schools, will be leaving school every year. They believed that at least one in fifteen of those leaving the high school would be able to reach the level of attainments required for and to be prepared to embark on a university course. In the year 1944-45, 52,938 boys and 6,324 girls were in the 1st year of the collegiate stage, showing that there is yet great room for the expansion of university education, the need for which will be accentuated when the high school education system has sufficiently developed, as recommended by the Board.

FINDING TEACHERS

The Central Advisory Board of Education were of the opinion that the fundamental requirement of any comprehensive development in the educational system is the provision of an adequate establishment of teachers and of the necessary institutions for training them. They therefore recommended that as the existing institutions were barely sufficient to meet wastage among existing teachers, new training schools and colleges (including University Education Depts.) must be provided. The minimum qualification of a teacher for a junior Basic School which has been prescribed by the Board is the possession of a Matriculation examination certificate or its equivalent followed by a two or three years course of professional training, and for a high school teacher, the possession of a degree followed by one year's training. The minimum scale recommended for a matriculate trained teacher is Rs. 30-1-35-3 (biennially)-50, in a senior basic (middle) school Rs. 40-2-50, and for a graduate trained teacher Rs. 70-5-150 p.m.

It has been recommended that the teachers of village schools should have free houses; where this is not possible, 10 per cent. should be added to their salaries. Further the scale of matriculate trained teacher, may be increased to 50 per cent. to meet the needs of areas where the cost of living or other factors necessitate a more generous scale. In the case of non-graduate and graduate trained teachers, 10 per cent. house allowance in normal rural areas, possible increase upto 50 per cent. to meet higher cost of living or other special circumstances, plus 6½ per cent. *contributory provident fund*.

The present output of matriculates is too small to meet the needs of basic schools. Eight years continuous education in a basic school imparted in an Indian language, is sufficient to make a scholar reach the present matriculation standard except English. Two to three years further education in a training institution given to these students will equip them to become suitable teachers for junior basic classes. In order to accelerate the rate of progress of education, and to enable to open a school in all villages having sufficient children of school-going age for a school within the shortest possible time, it is necessary that the best products from senior basic schools are encouraged to become teachers, alongside of willing matriculates.

ADVISORY BOARD MEETING

A report of the meeting of the Central Advisory Board of Education held at Mysore in January 1946 may also be given.

(1) **Religious Education:**—The members of the Board were not unanimous in their views on the issue involved. While some members felt that the teaching of religion should be restricted exclusively to broad moral and ethical principles others held that the denominational teaching constituted the essence of religious instruction and must be provided for in schools.

Accordingly the Board resolved that while fundamental importance of spiritual and moral instruction in the building of character is duly cognised, the provision for such teaching, except here it can be provided in the normal course of secular instruction, should be the responsibility of the Home and the Community to which the pupil belongs.

(2) **Conditions of Employment:**—The report of the Committee on conditions of service of teachers was adopted by the Board with minor amendments and it was decided to forward it to the Provincial and State Governments for necessary action.

Among the main recommendations made by the Committee are:

(i) Selection Committees should be established for the appointment of teachers in all types of schools on the lines recommended. Teachers of all grades when confirmed in their appointments should be placed on a Provincial cadre.

(ii) Teachers should be appointed on a written contract basis.

(iii) Teachers should become entitled to 15 days' sick leave on full pay for every 6 months' service and should be allowed to accumulate it up to a maximum of 12 months.

Women teachers may avail themselves of three months' leave in the way of maternity benefit upto a maximum of one year in addition to the usual sick leave.

(iv) The size of a class should not exceed 40 students.

(v) Schools should be open for not less than 200 days or 400 sessions a year, each session consisting of 2½ hours approximately. A working day will consist of only two sessions.

(vi) Teachers should be given study leave on full pay.

(vii) The normal age of retirement should be fixed at 55, to be extended upto 60 when desirable.

(3) **Selection of Students:**—The report of this committee was also adopted by the Board with certain amendments, and it was decided to forward it to Provincial Governments for necessary action.

Among the main recommendations made by this Committee are the following:—

(i) The first selection of pupils for admission into the different types of high schools should be made at the end of the Junior Basic (Primary) stage, i.e., at about the age of 11 plus.

(ii) A further selection stage at the age of 14 plus with a view to transferring to suitable high schools those pupils who have developed at a comparatively late stage and those who for some reason or other were missed at 11 plus.

(iii) The school record should give relevant and definite information, capable of being recorded in a convenient manner. But the form should include the following essential items of information:

(i) Attainment of subjects, which will furnish evidence of further educational promise.

(ii) Intelligence Quotient.

(iii) Personal qualities as a guide to the type of higher education best suited to the pupil.

(iv) It is important to have an assessment of the personal qualities of each selected candidate from the Head Teacher.

(v) The educational authorities should investigate the possibilities of applying modern technique of selection for admission into institutions.

(vi) The Committee consider that the Employment Selection Bureau established under the Home Department provides the suitable foundation on which an adequate organisation can be built for conducting research in selective methods and standardising tests of various types.

(vii) Until equal educational opportunities are made available to all in the selective process, special provision will have to be made to ensure the admission of a reasonable number of children from educationally backward communities and the selection should be confined, in filling such special places only to backward minority communities.

(4) **Teaching of Modern Languages.**—The question of the introduction of Russian, Chinese and other modern languages at the high school stage was another subject of importance discussed by the Board. It was agreed that the teaching of these languages at the high school stage was impracticable, but they should be taught in universities.

(5) **U. N. O.**—The Government of India had appointed a delegation consisting of Sir John Sargent, Rajkumari Amrit Kaur, Dr. Zakir Husain, Dr. Amarnatha Jha, Mr. K. G. Saikaldin and Dr. T. Quayle to attend the United Nations Conference held in London in November, 1945 for the purpose of considering the establishment of a permanent Educational, Scientific and Cultural Organisation.

The delegation from India was unanimous that it is well worthwhile for the Government of India to ratify the conclusions reached at the conference and to give their full support to the United Nations Educational, Scientific and Cultural Organisation, since India stands to gain very much from association with progressive educational countries and may derive great practical assistance from the machinery of co-operation which it will be one of the objects of the permanent organisation to establish.

(6) **Secondary Schools Examination Council.**—The Board considered the desirability of a Secondary Schools Examination Council with a view to bringing examinations upto a common standard, and decided to appoint a Committee to examine the ways and means of establishing such a body and its constitutions and to report.

(7) **Physical Education.**—The Board sympathised with the objective that the schools should take all possible care for the promotion of the physical welfare of children in their care, but

they were unable to go so far as to say that "Physical fitness" should be included as an examination subject, as it was felt that the object of physical education would be defeated if the suggestion was accepted.

With regard to the question of Indian languages as the medium of instruction in Collegiate stage, the Board recommended that (i) it was for the Central and Provincial Governments and States to subsidise the production of books of university standard in the different Indian languages, (ii) for the universities to select certain areas and institutions where the medium of instruction should be an Indian language and where special grants should be made for the employment of qualified teachers and the upkeep of such colleges, (iii) in the case of such languages as are common to more than one university there should be Inter-University and Inter-Governmental co-operation in the production of suitable text-books.

The Board further expressed the opinion that in order to encourage such universities that employ the Indian languages as media of instruction, it would be desirable that, other things being equal, the alumni of these institutions should receive special preference in the matter of employment, particularly in the Education Department and such other Departments where proficiency in the Indian languages is likely to prove an added qualification.

THE NATIONAL PLANNING COMMITTEE

The report of the Sub-Committee of the National Planning Committee, outlining a national system of Technical Education and Scientific Research in India states that the system in the Wardha scheme of a child learning a craft by the end of the school career to start a vocational life, is spiritually harmful to the child, as the vocation becomes the principal object of education. This gives a narrow and shallow knowledge of the subjects taught.

While accepting the syllabus for the primary schools under the Wardha scheme as satisfactory, the committee suggests that algebra should be taught side by side with arithmetic, and British units of length, area, volume, weight and currency may be avoided and Indian units substituted.

The report is not in favour of what is known as the exchange motion under the Wardha scheme, according to which current expenditure of the school is expected to be met by the sale of the goods produced in the technical section by the students. The report emphasizes that these schools should be a direct burden on the State.

Primary education covering a period of seven years, according to the report, should be free and compulsory for all children and may be co-educational, the medium of instruction being the mother tongue.

After the primary course of seven years, secondary schools of general arts and sciences of three or four years' course should be established, and these three or four years should prepare students for admission to the university or higher technical or professional courses. Secondary schools, admission to which is not to be compulsory, should provide the study of Western

languages, preferably English, the medium of instruction remaining the mother tongue.

A regular sifting of students is to be made after completion of the primary school course. Only those intellectually fitted will enter the secondary schools and the rest will enter what are called "continuation schools" for training in arts and crafts and industries such as drawing, artistic designs, general economics, civics, accounts and physical culture and gymnastics.

EDUCATION IN THE INDIAN ARMY

Before the war the Indian Army had a system of education whereby all soldiers received instruction as an integral part of their training. Their school knowledge, if any, was revised and extended. Illiterate recruits were taught to read and write in Roman Urdu and further graded instruction was given upto roughly the Matriculation standard.

The outbreak of war and the consequent expansion of the army brought in large numbers of recruits, many of them illiterate, of different races, and speaking different languages. These had to be educated in a short time up to the standards required for the ranks they might hold and the parts they would have to play in a complicated mechanised army. And they had to be considered not merely as units of a machine but as individuals and prospective civilians of a developing State.

To deal with the problem that arose, the Army Educational Corps on whom the responsibility for their educational training devolved was expanded—largely by the intake of Indian Officers. And the educational training of the men was divided into two parts—normal and wartime.

Normal education is a development of the pre-war system, simplified and intensified. Wartime education, in spite of its title, dealt with war and peace. The technique adopted was that of the discussion group, within the unit, led by the platoon Comdr., under supervision of an officer of the unit.

The unit discussions and associated activities are based on handbooks and periodical pamphlets issued by the Directorate of Army Education at General Headquarters (India).

On cessation of hostilities, an elaborate educational plan was put into operation by the Army—THE RELEASE PERIOD EDUCATION SCHEME (INDIAN TROOPS)—The object of the scheme was to use the time between the cessation of hostilities and the date fixed for the soldier's release from service to prepare him for return to civil life as a better, more useful citizen educationally, more capable of obtaining a better position in civil life. The scheme not only constituted a powerful drive against illiteracy, but also included graded instruction from the literacy stage in a man's own vernacular to the Matriculation stage in English. The I.A. SPECIAL certificate of Education, the highest certificate obtainable in the I.A. is now recognised by most universities in India as equivalent to their Matriculation standard. The scheme also provided for intensive instruction in the principles of citizenship and rural and urban development.

THE DOON SCHOOL.

This School which is established in the Chand Bagh and Skinner's Estates at Dehra Dun owed its origin to the initiative and enthusiasm of S. R. Das. The aim of the school is to develop in an atmosphere of Indian culture and social environment the best features of English Public Schools. The school prepares the boys for the Senior Cambridge Examination (Cambridge School Certificates) and for the Intermediate of the Board of High School and Intermediate Examinations of the United Provinces. Some boys take the Cambridge Higher School Certificate. The school is open to all boys without distinction of caste, creed, or social position and aims at providing a thorough general education from 11-13 to 18 years. Particular emphasis is laid on games, extra curricular activities and the management of school affairs as far as possible by the boys themselves. The annual inclusive fee is Rs. 1,800.

THE INDIAN PUBLIC SCHOOLS CONFERENCE

The conference was founded in 1939. It is composed of the heads of certain institutions

which set out to give an all-round training of the character, emotions and body as well as of the mind, under conditions somewhat similar to those of the best Public Schools in England. All of the present member-schools are mainly boarding schools, though several of them admit day-boys also; but there is nothing in the rules of the Conference to exclude a Day School. Many of the schools started life as Chiefs' Colleges, but they have now bound themselves to abolish social exclusiveness as a qualification for entrance and all social privileges and distinctions within their walls.

Members of the Conference meet yearly in rotation normally at one another's schools and discuss matters of common interest.

The general views of the Conference on education can be found in their Pamphlet "The Indian Public School" (O.U.P.). Membership is at present confined to the following schools:—

The Doon School, Dehra Dun; The Daly College, Indore; The Scindia School, Gwalior; The Rajkumar College, Raipur; The Rajkumar College, Rajkot; The Shivaji Military School, Poona; St. Xavier's School, Patna; The Sadul School, Bikaner.

EDUCATIONAL STATISTICS

The progress made in education measured in terms of statistics is given in the succeeding tables. The latest figures available are for the year 1944-45. Certain consolidated provisional statistics in respect of institutions and scholars in 1945-46 in old British India, including Ajmer-Merwara, British Baluchistan, the Civil and Military Station of Bangalore, and the administered areas in Indian States, is however shown below:

Type of Institution.	No. of Institutions.		Scholars.	
	Males.	For Females.	Males (*).	Females*.
GENERAL EDUCATION:				
Universities	16	64	157,069	18,408
Arts and Science Colleges	390	685	1,723,011	250,507
High Schools	4,264	1,549	1,328,064	297,936
Middle Schools	10,571	20,827	8,834,742	3,208,445
Primary Schools	147,014			
SPECIAL EDUCATION:				
Professional and Technical Colleges	82	3	34,793	1,513
Training Colleges	22	16	1,674	879
Training Schools	395	122	21,460	5,305
Other Special Schools	9,315	665	357,725	45,167
Unrecognised Institutions	10,318	3,246	333,287	133,960
Total	182,371	27,177	12,791,825	4,028,126
Grand Total	209,548		16,819,951	

Expenditure = Rs. 46,00,37,191.

* Six Boards of Secondary or Intermediate Education in the Dominions are not included in this table.

(*) These include male scholars reading in institutions for males as also those in institutions for females.

There were in 1945-46, in British India, 106,000 'recognised' institutions with 16,352,698 scholars; and 13,564 'unrecognised' institutions with 467,253 scholars.

TECHNICAL AND ART EDUCATION

The existing provision in this respect is meagre: in certain provinces proper facilities do not exist for medical education, in some for Engineering, or for Agricultural education while in others for all types of higher Technical Education. The position is summed up in the statistical statement below :—

Province.	Agricultural Colleges.		Commercial Colleges.		Engineering Colleges.		Law Colleges.		Medical Colleges.

[illegible]

The expansion of technical and professional side of education has engaged the attention of provincial Governments. The indications are that they will give this side a proper place in their educational development programme.

The Training of Teachers.—The available facilities in respect are meagre in some provinces while in others they are quite abundant. The tables below tell their own tales:

Province.	Training Colleges.			Training Schools.			
	No. of Institutions.	No. of Men under training.	No. of Women under training.	No. of Institutions.		Enrolment.

A Review of the Year (Jan. 1947—Apr. 1948)

ATMOSPHERE CLEARS

A series of events, occurred beginning with the last week of February which helped partially to clear the political atmosphere. The statement of February 20 made the country realise for the first time that Britain was really serious in her intention of granting India immediate independence. At the same time political thought and feeling in the Congress began to crystallize. The leaders came to regard partition as inevitable, the discussion now centring round the boundaries of Pakistan rather than on the principle of Pakistan itself. A second event which influenced the course of political development was the recall of Lord Wavell and his substitution by Lord Louis Mountbatten. From then on events moved rapidly to their inevitable conclusion. The British Prime Minister announced on June 3, 1947 that Britain was prepared to transfer power immediately on the Dominion Status basis to one or more successor powers in India. The procedure for arriving at a decision on the partition issue was also decided on as quickly and was immediately set in motion. The result was a vote in favour of partition both in the Punjab and Bengal Legislatures. Once the decision was taken no time was lost in making arrangements to divide the assets of the undivided Indian Government. Simultaneously the British Prime Minister introduced the Indian Independence Bill which provided for the establishment of two Dominions on August 15 and for a Boundary Commission consisting of three members to demarcate the boundary between the two Dominions.

Meanwhile, immense preparatory work had been put through by Lord Mountbatten with the help of the Indian leaders. On August 15 the two Dominions were formally inaugurated. Lord Mountbatten became the first constitutional Governor-General of India at the invitation of the Indian Dominion and M. A. Jinnah of the Dominion of Pakistan. On the same day British troops started evacuating the territories of the Indian Dominion and of Pakistan, an evacuation which was completed on February 28, 1948, when the last Regiments sailed from Bombay and Karachi.

CHANGE-OVER CEREMONY

The change-over ceremony took place in the Constituent Assembly which met for the purpose at 11 p.m. on August 14, 1947.

At the hour of midnight when the clock struck twelve the 250 members of India's Constituent Assembly stood up in their seats to take a solemn pledge to dedicate themselves to the service of India.

Meanwhile ominously little news was through from the Punjab where a stor brewing. A certain amount of sub anticipated by the formation of a Bo Force. But no one prepared against a of such gigantic proportions and the dest of life and property on such a colossal Pandit Nehru gave the official figure

WITH the establishment of the two Dominions of India and Pakistan on August 15, the year 1947 witnessed the partial dissolution of the British Empire. In one sense indeed power had been transferred in the Indian sub-continent not on August 15, 1947 but very much earlier, on September 2, 1946 when Lord Wavell set up an Interim Government with Pandit Nehru at its head.

Before September 2, 1946 the members of the Governor-General's Executive Council, however eminent as individuals, served at the pleasure of the Viceroy. He appointed them at his discretion, he could dismiss them at any moment he liked without producing unpleasant reactions in the country. There was no doubt at any time who was the master, and who the servant. But the men who constituted the Interim Government fell into a different category. They happened to be in the Cabinet in their own right, so to say; they were the leaders of two well organized, very powerful political parties, which together represented the whole country. These men were not of the Viceroy's choosing; they chose themselves and could not be dismissed even on a major issue without provoking a political convulsion of the first magnitude in the country. Thus effective self-government in India should be dated not from August 15, 1947 when the formal change-over took place, but from September 2, 1946, when the Interim Government assumed office.

GLOOMY OUTLOOK

The year itself did not open cheerfully. In fact, the outlook was decidedly gloomy, and the atmosphere heavy with fear, distrust and uncertainty. There was no relaxation of communal tension which incidentally resulted in long continuing business dislocation. Sporadic outbreaks were occurring in the major cities. The inhabitants, particularly in the north, were resorting themselves: Hindus were leaving Muslim localities and Muslims were leaving Hindu localities. It seemed as if the country was living on the top of a volcano which might erupt at any moment with disastrous results. A League protest demonstration in Calcutta ended in slaughter on a colossal scale. Reverberations were felt in Noakhali, Bihar and distant Quetta, where the minorities were massacred with revolting brutality.

As for the Government, there was a general deterioration in administration everywhere which further encouraged forces making for disorder and disruption. There was a certain feeling that the old order was passing with no alternative authority capable of preserving law and order, ready to take its place. The British members of the services felt they had no stake in the future; most of them were only waiting to get away as soon as possible. The Indian members were in no mood to take any major decision such as might imperil their own career, and were thus losing all sense of initiative. General morale was also at a low ebb, while the unparalleled temptations provided by war conditions. The profiteer and the black marketeer were pursuing their giddy career, unhampered by business or patriotic scruples.

counted as dead. Many think that those uncounted are at least two to three times as many. Some even think that they may be as many as ten times the official figures.

Pandit Nehru and Mr. Liaquat Ali Khan made a tour of the Punjab in the early days of the upheaval. In the course of the tour they addressed conferences, issued appeals, set up peace committees—in the belief that the trouble was entirely of a local nature and would soon cease. The reality was enormously more terrifying. The trouble was neither local nor did it show any signs of abating. On the contrary it spread like a forest fire throughout the length and breadth of the whole Province. Entire villages were attacked and destroyed accompanied by acts of the utmost brutality. No quarter was asked or given; none was spared; neither the old nor the young, neither women nor children. Murder, arson, loot, rape and every species of torture which the wit of man could devise held free and undisputed sway.

Before ten days had passed it was clear that what was involved was not mere local rioting but mass uprisings and also mass migration of whole peoples from one part of the Punjab to the other. The migration started as a trickle and soon assumed the proportions of an uncontrollable flood. The moment the nature of what was occurring became clear all that the authorities could do was to regulate the mass movement and give it a proper direction, that is to say, to protect the routes, establish collecting and stopping points, look to the supply of food and clothing and combat disease. Flood and cold later added to the trouble. The sufferings of the minorities and of the refugees on the march were severe in the extreme. Many were attacked and killed on the way, others fell by the wayside to die of hunger and exhaustion. In less than two months about four millions had left their ancestral homes. By the end of the year another four millions had migrated. A great many are still waiting in refugee camps to be transported to places where they have promise of a new life.

What had happened? The truth may never be known for the whole question is wrapped up in partisan propaganda and deep-seated natural sympathy with one or the other side. To call it a Sikh uprising as some did is obviously an over-simplification. It would probably be truer to regard it as only a link in a chain of nation-wide retaliations.

Not only the facts themselves but even the sequence of events appear to be in doubt. But there are certain facts which do stand out. Even as early as the beginning of August authority was breaking down over wide areas in the Punjab especially in the middle Punjab where the three communities were living inextricably mixed together. There was no ministry either in East or West Punjab and after the purge of Muslim personnel from the security services in East Punjab nothing remained, but a nuclear organization quite unable to cope with a problem of this dimension. The so-called Boundary Force established on August 4 and disbanded on August 20 proved utterly inadequate as it was meant to preserve law and order in the border area and not to quell a mass uprising of Province-wide dimensions.

REPERCUSSIONS.

The refugees spilled over the neighbouring areas carrying a spirit of hatred and revenge—the Muslim refugees into N.W.F.P., the Sind and the States of Khairpur and Bahawalpur, and the Hindu refugees into West U.P., Rajputana and the States of Patiala, Faridkot and Kapurthala. The main impact was felt in Delhi, the capital of the Indian Dominion where masses of refugees converged in the hope of finding food, shelter and employment under the immediate auspices of the Central Government.

Towards the end of August communal tension in the capital redeveloped and continued to mount. On the evening of September 4 the storm burst in the city when Muslim street vendors were attacked at Connaught Place in the very heart of New Delhi. What followed is described not as riot but as massacre. Looting and killing lasted for some days; and nothing but the courage and firmness of the Government, led by Pandit Nehru prevented a general collapse of all ordered Government. When control was re-established most of the Muslims in Delhi were in refugee camps and the whole complexion of the city had changed beyond recognition. A particularly vicious feature of the outbreak were the organised attacks on railway stations and airport concentrations. The official figures given of killed and wounded were 1,000.

Later still minor outbreaks in Quetta, Ajmer, Karachi and in Saharanpur, Mussoorie and Dehra Dun coupled with attacks on refugee camps and refugee trains at Parachinar in N.W.F.P. and Gujrat in West Punjab started a second wave of migration from one Dominion to another. Trouble also simmered in Calcutta; and nothing but Mahatma Gandhi's fast prevented that great city and all Bengal from following the Punjab down the slope to massacre and civil war.

The two young Dominions, in short, passed through a baptism of fire. A legacy of the trouble was the enormous problem of relief and rehabilitation of the refugees, a problem which both the Dominions set out to tackle with skill and vigour.

THE STATES

While the forces let loose in the Punjab were working largely for the disintegration of Indian and Pakistan economy, on another front a different set of forces were working towards the assimilation of hitherto outside elements into the body politic of India and Pakistan. This is the front of what used to be called the Indian Native States. The assimilation of the States took four different forms: 1. accession to India or Pakistan depending largely on the geographical factors, 2. an outright merger with the neighbouring Indian province, e.g., Chhatisgarh States with the C.P. or Orissa, or the Deccan States with Bombay, 3. a coalition of smaller States to form a sizable union, e.g., the Saurashtra Union of the Kathiawar States, the Matsya Union of the States of Bharatpur, Alwar, Dholpur and Karauli, 4. the introduction of a greater or smaller measure of responsible government on the Indian model. The general procedure was the same in every State affected by the new forces: the formal announcement of reforms the

POLITICAL TRENDS

Meanwhile hard blows were struck at all radical communal organizations, private volunteer armies and leaders of extremist thought. The R.S.S. and the Muslim National Guards were the two most outstanding organizations which were immediately placed under a ban. Raids were carried out and a number of persons believed to have conspired in the assassination of Mahatma Gandhi and a plot to kill members of the Central Government for their so-called 'anti-Hindu' policy were rounded up. There were also outbreaks of rioting in which violence was directed chiefly against the persons and property of the Hindu Mahasabha and the R.S.S. The riots in the Bombay Presidency, particularly in the Deccan States, were prolonged and severe.

It must be noted in passing that only one State stood outside the main stream of current history. That State was Hyderabad, situated in the geographical heart of South India. In the main this State remained untouched by any of the four drifts towards assimilation which we described above. Hyderabad had a temporary Stand-Still Agreement with the Government of India but so many questions arose to cause friction between Hyderabad and the Indian Dominion (border raids, Razaakar activities, movement of military stores, loan to Pakistan, responsible government) that the relations between the two were in an extremely unstable condition.

The process of consolidation, however, went on apace after the transfer of power. Out of the 600 odd States which existed at the time of British withdrawal less than 30 retained any separate political identity by the end of April 1948. All the accessions were effected without a hitch except two—Junagadh and Kashmir. Kalat acceded to Pakistan after some deliberation.

ASSASSINATION

On the evening of January 30, 1948, an incident occurred which sent a thrill of horror throughout the civilized world. This was the assassination of Mahatma Gandhi, who was shot while he was on his way to his prayer meeting.

The news of the Mahatma's assassination burst on an incredulous world when programmes of All-India Radio went off the air at five minutes to six and the announcer said: 'You will now hear a very important announcement. And in solemn words went on to announce the news of the death of Mahatma Gandhi.'

State mourning was observed for 13 days from January 30.

On 12th February the ashes of Mahatma Gandhi were immersed with reverent ceremonies at various 'Kshetras' (holy places) throughout India (where they had been carried by the Prime Ministers and Governors) from the foothills of the Himalayas in the north to Kaniya Kumari at the southernmost tip of India in the south, at several places associated with Mahatma Gandhi's life work, in all the holy rivers of India, and in principal cities and towns.

The whole country observed as complete a halt during the day as was ever experienced in its history, with a total stoppage of activity except that of paying the last tribute to the Father of the Nation. All newspapers in India—as well as in Pakistan—remained closed during the day.

Vast crowds joined the immersion processions at all places, all communities being represented in them. The proceedings everywhere were marked by solemnity and discipline.

The main ceremony took place at the Sangam in Allahabad, where the ashes were carried in a special train from Delhi,

Ever since the transfer of power and the division of the sub-continent two trends became apparent in the political life of the country. First, there was a marked tendency towards secularization in politics, that is to say, the formation of parties based on economic principles rather than religious belief. This tendency received a powerful impetus with the assassination of Mahatma Gandhi by a Hindu communalist. The Hindu Mahasabha at once resolved to modify its political outlook at a conference in Calcutta and all Muslim League Legislature parties except Madras were voluntarily liquidated.

The second trend in the political life of the country was a certain shift in opinion towards the Left. The Communists, for instance, who had supported the National Government ever since its formation in September 1947 withdrew their support on the ground, as they explained at the party conference in Calcutta, that the Nehru Government was little more than a capitalist Government at heart. They then went on to build up what they called a united front of all Left Wing parties, which, they hoped, would include the Socialists too to fight 'capitalist' and 'foreign' elements. A second illustration of the trend towards the Left was the break between the Congress and the Socialists who had till March 1948 formed a Left Wing group in the Congress. The Socialists organised a separate party of their own and instructed all members to resign from the Dominion Parliament, the Provincial Legislatures and all municipal and district local boards if they were elected to these bodies on a Congress ticket. The Socialists were encouraged to take this step by the results of the elections to the Bombay Corporation which were, for the first time in India or Pakistan, based on adult suffrage.

Third, official Congress policy itself moved still further to the Left. The Congress constitution was revised to include the entire body of Indian citizens who if pledged to the party now form the Congress electorate entitled to vote in the election of Congress panchayats. What is more significant the economic policy of the Congress as formulated by its Programme Committee showed a pronounced Left Wing slant. In the event Congress policy became the object of heated criticism from various employers' groups like Chambers of Commerce and Federations of Industry.

There were signs of a parallel development in the Muslim League Party in Pakistan. Though the Party refused to change its communal basis Left Wing points of view had begun to appear in its councils.

DECONTROL

The struggle for food, clothing and shelter continued as before. Export and import control was in full force as foreign currency had to be conserved for purposes of buying priority goods such as food and capital equipment. Internally the Government of India followed what was called a policy of progressive decontrol in regard to food, sugar, gur and cloth. Cloth, sugar and gur were decontrolled everywhere while food remained under control only in certain urban areas. The decontrol policy was based chiefly on two grounds. First, the belief that if control on price was removed hoarded goods would begin to flow into the open market once again; and second, that controls were bad for public morale, an argument which received powerful support from Mahatma Gandhi. In the ultimate analysis, all arguments in favour of decontrol were based on the presumption that there was no scarcity except what was created by the system of control itself.

The immediate results of decontrol could be quickly summarised. The price of popular cereals like wheat and rice went up by about 50 to 300 per cent. of the old controlled price. High prices prevailed particularly in the deficit areas, both urban and rural, of the Provinces of Madras, Bombay and West Bengal. The Madras Government, for instance, was forced to set up fair price or relief shops in a number of places so great was the outcry. In regard to sugar and gur, the position was a little more satisfactory.

INDUSTRIAL TRUCE

Production had to be increased if the average citizen was to enjoy a decent standard of living. The attitude of Labour was crucial in this regard as strikes had broken out all over the sub-continent and the numbers of working days lost was mounting. The solution appeared to be some sort of truce between capital and labour whereby labour agreed to pull its weight in return for economic concessions. To achieve this end, a tripartite conference of representatives of Labour, Capital and Government met in New Delhi and after deliberation came to certain broad conclusions about future programme of action in industry. First, there was to be a fair return both to capital and labour; second, Labour was to have a general say in the management of industry; and third, if there were differences between an employer and his workers the latter were to make full use of the machinery of arbitration and conciliation before launching out on a strike. The Government backed up the 'industrial truce' idea with an ambitious programme of labour welfare legislation which included a factory act, a minimum wage act, sickness insurance and provision for building houses for workers. A declaration of policy in regard to nationalization followed. This became necessary as employers were betraying signs of nervousness about the future. According to this policy there were to be three types of industry, first, both owned and controlled by Government,

second, partly owned and controlled by Government and third, privately owned and privately controlled. Government also gave an assurance that they would not take over any new industrial undertaking for ten years. Meanwhile certain tax concessions were also made to industrialists in the 1948-49 budget.

Pakistan's industrial policy was outlined by its Commerce Minister. Industries which were to be owned by the State would include railways and road transport, arms and munitions of war, generation of hydro-electric power, manufacture of railway, telegraph, telephone and wireless equipment. In 13 industries including coal, cement, textile mills, heavy chemicals, minerals and shipbuilding, Pakistan nationals were to be given the option to subscribe at least 51 per cent. of all classes of share capital and debentures. With regard to other industries 30 per cent. were to be reserved for the nationals of Pakistan but if, indigenous capitalists were not forthcoming the balance might be made up by foreign investors.

In general because of the predominantly rural economy of Pakistan the initial emphasis in industrialisation must, perforce, be on agriculture and industries based on agricultural produce like jute, cotton and sugar.

Having given a brief account of the internal situation of India and Pakistan we will now turn to a review of the relations between the two Dominions.

INDO-PAKISTAN RELATIONS

Ever since partition was finally decided on, the whole process of economic and administrative separation of India and Pakistan went forward without engendering undue heat or passion. First came the division of the armed forces which was carried through under the auspices of the Joint Defence Council a body set up for the purpose. When the work of division was complete the Joint Defence Council was wound up though a committee at secretariat level was established to put the finishing touches. Next came the most important question of the division of assets and liabilities. It was a highly complex issue; but it was also settled out of court in a friendly and cordial atmosphere. The fact that the intervention of the Arbitral Tribunal did not become necessary was hailed as a signal triumph for Indian and Pakistani statesmanship and the hope was expressed that this would mark a turning point in the history of the relations between the two Dominions. It may be noted by the way, that the disputes between the newly created Provinces (East Bengal vs. West Bengal, and East Punjab vs. West Punjab) could not be settled except by reference to the Arbitral Tribunal.

In other directions too the process of political and economic separation was in full swing. Pakistan set up its own postal system and its own currency. A tariff barrier also sprang up between the two Dominions and goods passing from one Dominion to another became liable to customs duties. The Pakistan Government, for instance, levied a duty on jute exported to India, while the Government of India for their part taxed the jute products which were being exported to Pakistan. On July 1, 1948 a State Bank was established for Pakistan.

In the field of party politics and party organisation too all extra-territorial links were severed. The Congress organisation in Pakistan was completely separated from the Congress organisation in India. So was the Muslim League organisation in India completely separated from the Muslim League organisation in Pakistan. The Socialists and Communists quickly followed suit so that today no major political party in India or Pakistan has any extra-territorial affiliations.

When partition was put through there was a hope that during the transition the *status quo* with regard to control, customs and tariffs would be fully maintained. In order to ensure this a Stand-Still Agreement was signed under which there was to be complete freedom of movement of goods across the frontiers and no import or export duties were to be imposed on such goods. It was also agreed that each Dominion was to retain the taxes which it levied. This arrangement was to cover the period August 15, 1947 to March 31, 1948, which was regarded as being transitional. Unhappily the Agreement did not work out in the way it was intended to work. There were accusation of breach of faith followed inevitably after a time by counter-accusations of a similar nature.

CALCUTTA CONFERENCE

When trade conditions threatened to become chaotic an attempt was made to arrive at a fresh agreement so that trade could flow as freely as before to the benefit of both the peoples. In April an inter-Dominion conference met in Calcutta and arrived at a number of agreements of a general nature.

Agreements of a specific nature were also made for the exchange of food and other commodities between the two Dominions. For instance there was an agreement to exchange Indian wheat for Pakistan rice, Indian textiles for Pakistan cotton and also for the supply of Indian sugar to Pakistan. Other questions on which agreement was arrived at were the division of the sterling balances, the fixing of postal and telegraph rates, and the sharing of the waters from the Sutlej head-works between East and West Punjab commonly known as the Punjab Canals dispute. In this way attempts towards a reintegration at some points of an economy which was so suddenly disrupted on August 15, 1947 were being continually made.

CAUSES OF FRICTION

Causes of friction were, of course, inherent in the very nature of the situation. Partition itself had left a bitter feeling between the two Dominions. The tragedy in the Punjab served to raise it to boiling point. There were other irritants which contributed to the general bitterness such as border raids, search of refugees, the withholding of military stores and Pakistan's share of the assets of the Reserve Bank by the Government of India, the tariff war over jute and finally the issue over the accession of the States of Junagadh and Kashmir which brought the whole question of the future relations between the two Dominions to a head.

The facts about Junagadh may be summed up as follows: The Ruler of Junagadh acceded to

Pakistan. The accession was strictly in order as the Nawab was a free agent but India contented that there was an unwritten understanding that in the matter of accession due regard was to be paid to such points as contiguity and the general wishes of the inhabitants of the State. The case of Alirajpur, Babariawad, and Mongrol were all more or less in the same class as Junagadh.

The accession, however, created an outcry in Kathiawar and some of the Princes sent a protest to the Government of India that the Nawab's action had endangered the security of the whole Peninsula. Meanwhile demonstrations were organised to move on the State itself, and the Nawab eventually left for Karachi, carrying away part of his movable property. The administration in the State appeared to be breaking down when a British Officer approached the Central Government on behalf of the Dewan and asked them to take over the administration. Indian troops moved in and the Government of India assumed charge of the State through an administrator. A plebiscite was subsequently held in Junagadh, Mongrol and Babariawad, which resulted in an overwhelming majority voting in favour of accession to India.

KASHMIR

A more serious issue was that of Kashmir. After the establishment of Dominion *status* this State announced its intention of negotiating a Stand-Still Agreement with the two Dominions. Soon the Kashmir Government began to complain that Pakistan authorities were cutting off supplies of food, petrol and other essential commodities and were hindering the free transit of travellers between Kashmir and Pakistan. Alongside of this economic pressure, the Kashmir Government further complained, border raids in support of a rebellious movement were also beginning to occur. A complicating factor appeared to be that the southern districts of the State had become a sort of channel through which Muslim and non-Muslim refugees were moving, the one from East to West Punjab, and the other from West to East Punjab. Fighting was reported between the State forces and the raiders in the Rawalkot and Mirpur areas in the beginning of October. On the 15th of October the State troops were forced to evacuate Fort Owen. On the 18th the Kolti-Poonch Road was breached and heavy fighting took place. Action was also reported in Bhimbhar, Checklam Mangla and Kotli areas. An undeclared war was already raging.

The main attack on State territory began in the third week of October. The central column of the invaders made considerable progress along the Kohala-Baramula road towards Srinagar fanning out in all directions. Uri and Baramula were captured in quick succession and the road to Srinagar lay open to the invaders.

On the 24th of October, the Maharaja approached the Government of India for help. Two days later the State formally acceded to India. And on October 27 the first contingent of Indian airborne troops landed in Srinagar.

When Indian troops opened a counter-offensive the invaders had advanced as far as Pattan only 17 miles from Srinagar. Baramula was

quickly recaptured. Indian troops then took Uri and finally removed any serious threat to Srinagar and to the surrounding valley.

Next the Indian troops turned their attention to the Jammu Province where large areas like Nowshera and Koli were relieved.

Simultaneously the happenings in Kashmir became a matter dispute between India and Pakistan. On October 30 the Government of Pakistan announced that it could not recognise Kashmir's accession to India as it was based on 'fraud and violence'. Pandit Nehru answering the charge on behalf of India maintained that the accession was legally made by the Maharaja and the State had taken into consultation Sheikh Abdullah, the leader of the All-Jammu and Kashmir National Conference (who had meanwhile been sworn in as head of the administration). Nevertheless, in accepting accession, Pandit Nehru went on to declare, the Government of India were regarding the agreement as purely provisional until such time as the will of the State people could be ascertained.

APPEAL TO U. N. O.

On December 30 India decided to appeal to the United Nations Security Council on the ground that the situation was one 'whose continuance was likely to endanger international peace and security'. India asked the Council to call on Pakistan to put an end immediately to its aid to rebel tribesmen, failing which India might be compelled in self-defence to enter Pakistan territory to deal with the rebel bases. Pandit Nehru maintained at a press conference on January 2, that this step would not be taken if

it could be avoided and if taken it would not amount to war against Pakistan. A spokesman for Pakistan who answered Pandit Nehru's charges, however, made it clear that any move by Indian troops across the border would be regarded as an act of war and suggested that all disputed matters between the two Dominions and not only Kashmir should be brought before the United Nations for settlement.

The solution which the United Nations Security Council eventually proposed was that a commission consisting of five members was to be established to arbitrate in the dispute.

The commission was to go to Kashmir to investigate the facts, exercise mediatory influence and submit to the Security Council its conclusions and proposals from time to time.

Both India and Pakistan agreed to the establishment of the commission but disagreed on the terms of reference. Pakistan wanted the commission to have the widest possible powers which would include power to order cease fire, freedom to consult with all parties on equal terms including representatives of the Free Kashmir Movement, power to act in the nature of a neutral administration which would organise and supervise the holding of a plebiscite. Pakistan also asked that the commission should investigate other questions like 'Junagadh', 'geno-cide' and the 'implementation' of the Pact between India and Pakistan. The Indian view was that the proposed commission should be concerned firstly to stop the fighting and second to act as observer during the plebiscite which would be conducted by the present Kashmir administration.

Some Notable Dates (Jan. 1947—Mar. 1948)

JANUARY 1947

- Jan. 2: Mahatma Gandhi starts walking tour of Bengal villages.
- Jan. 5: Congress Working Committee recommends acceptance of Dec. 6, statement to A.I.C.C.
- Jan. 6: A.I.C.C. adopts official resolution by 99 votes to 52.
- Jan. 10: The Maharaja of Cochin welcomes Constituent Assembly resolution on people's sovereignty—first Indian Prince to do so.
- Jan. 15: Communist offices raided all over country.
- Jan. 16: K. P. S. Menon appointed Ambassador to China.
- Jan. 20: Constituent Assembly reopens in Delhi.
- Jan. 22: Assembly adopts Objectives Resolution.
- Jan. 23: Madras Public Safety Ordinance promulgated; Communists rounded up.
- Jan. 24: League leaders arrested in the Punjab.
- Jan. 25: Sir Akbar Hydari appointed Governor of Assam.
- Jan. 26: Arrested League leaders in the Punjab released.
- Jan. 28: Punjab League leaders rounded up at midnight.
- Jan. 29: Princes' terms for participation in Constituent Assembly deliberations defined at Standing Committee meeting.
- Jan. 31: Muslim League Council rejects Constituent Assembly plan.

FEBRUARY 1947

- Feb. 8: Baroda carries on independent negotiations with the Constituent Assembly.
- Feb. 13: The Dewan of Baroda explains the step taken by State.
- Feb. 15: Ministerial crisis in Madras.
- Feb. 17: Railway Budget presented in the Legislative Assembly.
- Feb. 20: Statement that Britain would quit by June 1948 made in British Parliament by the Prime Minister.
- Feb. 23: Mob outbreaks in Lahore and Jullundur.
- Feb. 25: Lords debate India.
- Feb. 26: Conservative motion withdrawn; compromise reached between the Unionist Ministry and the League in the Punjab.
- Feb. 28: Salt tax abolished by Central Government; Madras Congress Legislators elect new leader.

MARCH 1947

- Mar. 1: Negotiations Committee of the Constituent Assembly discusses question of seats with Princes Chamber.
- Mar. 2: Unionist Ministry resigns in the Punjab.
- Mar. 4: Hindu-Sikh demonstrations in Lahore against proposed League Ministry.
- Mar. 5: Governor takes over administration in the Punjab; Mahatma Gandhi arrives in Patna from Noakhali.
- Mar. 6: Government motion on India passed by House of Commons.
- Mar. 9: Congress invites League to discuss issue of transfer of power.

- Mar. 11: Anti-Pakistan day demonstrations in Lahore.
- Mar. 12: Bhavnagar, Gwalior, Jaipur and Jodhpur decide to join Constituent Assembly.
- Mar. 15: Hindu Mahasabha demands partition of Bengal.

APRIL 1947

- Apr. 2: Asian Conference concludes.
- Apr. 6: Fundamental Rights Committee presents draft report to Constituent Assembly.
- Apr. 11: League starts civil disobedience in Assam.
- Apr. 16: Mahatma Gandhi and Quaid-e-Azam Jinnah make joint appeal for cessation of civil strife.
- Apr. 17: Lord Pethwick Lawrence resigns and Lord Listowel takes his place.
- Apr. 22: Madras Legislative Assembly decides in favour of linguistic provinces.
- Apr. 28: Third session of Constituent Assembly opens; representatives of eight States participate.
- Apr. 29: Mysore Dewan concedes representative Government to State.

MAY 1947

- May 2: Constituent Assembly adjourns.
- May 13: Calcutta Corporation votes in favour of partition of Bengal.
- May 15: Report of Pay Commission published.
- May 18: Lord Mountbatten leaves for London for consultation; Sir John Colville assumes office as acting Viceroy, and Sir S. V. Khamamurthy as Governor of Bombay.
- May 19: Lord Mountbatten meets Mr. Attlee and the Cabinet.
- May 21: Quaid-e-Azam Jinnah asks for corridor to connect West and East Pakistan.
- May 23: The Maharaja of Udaipur appeals to Princes to join Constituent Assembly.
- May 24: Bengal Anglo-Indians declare against partition.
- May 25: Pudukotah decides to join Constituent Assembly.
- May 28: Bengal Scheduled Caste Conference meets in Calcutta and demands partition.
- May 30: Lord Mountbatten arrives in India.
- May 31: Rioting breaks out in Gurgaon villages.

JUNE 1947.

- June 1: Viceroy visits Gurgaon.
- June 2: Leaders Conference convened by Viceroy meets in Delhi.
- June 3: Leaders accept British plan; Viceroy and leaders broadcast.
- June 4: Lord Mountbatten holds press conference.
- June 6: Cabinet sub-committee appointed to put through plans for partition.
- June 7: 'Stay Still' order given to Central Government Departments in New Delhi.
- June 8: Jaipur and Bikaner Dewans appeal to Princes to join Constituent Assembly.
- June 9: League Council accepts British plan.
- June 11: Bengal Governor appoint Group Presidents.

June 13: Sikh conference accepts plan on condition that partition does not split the community; Nizam declares independence and non-participation in either Constituent Assembly.

June 14: Congress Working Committee approves of British plan.

June 15: A.I.C.C. votes in favour of acceptance of British plan.

June 17: Mysore Maharaja declares Mysore would join Constituent Assembly.

June 18: Sir Olaf Caroe, Governor of N.W.F.P. goes on leave; Sir Rob Lockart takes his place.

June 20: Western section in Bengal votes in favour of partition.

June 22: Dr. Khan Sahib, Premier of N.W.F.P. demands establishment of independent Pathan State.

June 23: Punjab votes in favour of division.

June 24: N.W.F.P. Congress decides to boycott referendum.

June 26: Pakistan Constituent Assembly comes into existence.

June 28: Baluchistan decides to join Pakistan.

June 30: Boundary Commissions appointed.

JULY 1947

July 1: Dual Government established in Bengal.

July 3: New Bengal Cabinet sworn in.

July 4: Indian Independence Bill introduced in Parliament.

July 7: Interim Cabinet resigns.

July 8: Talks on sterling assets open in London.

July 10: Lord Mountbatten and Qauld-e-Azam Jinnah to be Governors-General of India and Pakistan respectively.

July 13: Sylhet incorporated into Pakistan.

July 14: Indian Constituent Assembly meets.

July 15: Third reading of Indian Independence Bill passed in Commons.

July 16: Indian Independence Bill passed by House of Lords.

July 18: Indian Independence Bill receives assent of King; Sir Shaaft Ahmed Khan dead.

July 20: N.W.F.P. decides to join Pakistan.

July 22: National Flag adopted by Indian Constituent Assembly.

July 23: Minorities Committee of the Constituent Assembly decides in favour of joint electorates.

July 25: Attempt made on the life of Sir C. P. Ramaswamy Iyer.

July 27: Akalis meet in Amritsar in defiance of ban.

July 29: Afghan claims on N.W.F.P. rejected.

July 31: Travancore accedes to Indian Union.

AUGUST 1947

Aug. 3: Appointment of new Governors announced.

Aug. 8: Qauld-e-Azam Jinnah bids farewell to Indian Union.

Aug. 10: Pakistan Constituent Assembly meets; Mysore accedes to Indian Union.

Aug. 11: Qauld-e-Azam in speech to Pakistan Assembly reassures minorities.

Aug. 14: Change-over ceremony at mid-night at New Delhi; Lord Mountbatten and Qauld-e-Azam Jinnah assume charge as Governors-General of India and Pakistan respectively.

Aug. 15: Independence day celebrated throughout India and Pakistan.

Aug. 16: Khan of Kalat declares independence.

Aug. 18: Premiers of India and Pakistan issue joint appeal for peace.

Aug. 19: Sir C. P. Ramaswamy Iyer resigns Dewanship of Travancore.

Aug. 22: Congress Ministry in N.W.F.P. dismissed.

Aug. 23: New Frontier Cabinet sworn in.

Aug. 24: Reports of worsening situation in Punjab; riots break out in Quetta.

Aug. 28: Indian Constituent Assembly decides to abolish separate electorates.

Aug. 30: Sardar Baldev Singh and Sardar Abdur Rab Nishtar visit Punjab.

Aug. 31: Pandit Nehru, Liaquat Ali Khan and Sardar Patel visit Punjab.

SEPTEMBER 1947

Sept. 1: Mahatma Gandhi goes on fast at Calcutta; Satyagraha campaign opens in Mysore.

Sept. 2: Joint Committee constituted for exchange and safe conduct of refugees; reports of mass evacuation in Punjab.

Sept. 3: Indian memorandum on South African issue submitted to U.N.O.

Sept. 4: Mahatma Gandhi breaks fast; Travancore Ruler issues proclamation granting self-government to his subjects.

Sept. 6: Mr. K. C. Neogy appointed Minister for Refugees and Rehabilitation.

Sept. 8: Delhi declared disturbed area.

Sept. 9: Mahatma Gandhi arrives in Delhi.

Sept. 20: Delhi Muslims surrender arms to Mahatma Gandhi.

Sept. 24: Mysore scheme for self-government published.

Sept. 25: Kathiawar States protest against accession of Junagadh to Pakistan.

Sept. 30: Pakistan admitted to membership of U.N.O.

OCTOBER 1947

Oct. 5: Indian Government refuses to recognize Junagadh's accession to Pakistan.

Oct. 15: Border clashes reported in Kashmir.

Oct. 16: Indian victory over South African issue at U.N.O.

Oct. 19: Kashmir Government protests to Pakistan.

Oct. 25: Attack in the direction of Srinagar gathers momentum.

Oct. 26: Kashmir Premier appeals for Indian help.

Oct. 27: Kashmir accedes to Indian Union; Asian Labour Conference meets in New Delhi.

Oct. 31: Situation in Kashmir eases.

NOVEMBER 1947

Nov. 1: Indian troops enter Mongrol and Bahariawad.

Nov. 8: Indian troops enter Junagadh; administration passes to Government of India.

Nov. 10: C. Rajagopalachari assumes charge as acting Governor-General of India.

Nov. 15: Acharya Kripalani submits resignation of Presidentship of Congress.

Nov. 17: Dr. Rajendra Prasad elected President of Congress; G. V. Mavlankar elected Chairman of Union Assembly.

Nov. 25: Stand-Still agreement between India and Hyderabad arrived at.

Nov. 26: Budget introduced into Union Assembly.

Nov. 28: Nizam signs Stand-Still pact with India.

Nov. 30: General Auchinleck resigns post of Supreme Commander.

Feb. 5: Country-wide arrests of Mahasabha and R. S. S. Members; V. D. Savarkar detained.

Feb. 6: Mahasabha leaders discuss need for reorientation of Mahasabha policy.

Feb. 7: The Maharaja of Alwar and the Prime Minister Dr. B. N. Khare entered from State.

Feb. 8: Muslim National Guards and the Khaksars declared unlawful organisations.

Feb. 11: Bharatpur State temporarily taken over.

Feb. 12: Referendum on the issue of accession opens in Junagadh; the ashes of Mahatma Gandhi immersed in sacred waters.

Feb. 13: Kashmir debate in U.N.O. adjourned.

Feb. 14: U.P. League Parliamentary Party decides to liquidate itself.

Feb. 15: United States of Kathiawar (Saurashtra) inaugurated at Jamnagar by Sardar Patel; Mahasabha decides to withdraw from political activity.

Feb. 17: Pandit Nehru explains policy in regard to nationalization of industry in Parliament.

Feb. 19: Deccan Rulers sign agreement for merger with Bombay Presidency.

Feb. 20: Ranganapalle State taken over by Madras Government.

Feb. 21: A.I.C.C. approves new Congress constitution.

Feb. 22: Financial agreement between Britain and India reached.

Feb. 23: Indian Military Mission arrives in London.

Feb. 24: Junagadh votes for accession to India; Parliament passes Railway budget.

Feb. 25: Draft constitution for India published.

Feb. 26: Government of India declares Pakistan foreign territory for customs purposes.

Feb. 29: General budget introduced into Parliament; The Maharaja of Nawanagar lays foundation-stone of Mahatma Gandhi's statue in Bombay.

DECEMBER 1947

Dec. 4: Attempt made on Nizam's life.

Dec. 8: Sugar de-controlled by Government of India.

Dec. 9: Complete agreement with Pakistan on partition issues announced by Sardar Patel.

Dec. 12: Terms of Agreement published.

Dec. 16: Interim Government formed in Hyderabad.

Dec. 18: Delhi Industrial conference meets; Pandit Nehru appeals for industrial truce.

Dec. 27: Union Muslims' conference sponsored by Moulana Azad meets in Lucknow.

Dec. 31: Indian Government decides to refer Kashmir dispute to U.N.O.

JANUARY 1948

Jan. 1: C. P. and Orissa take over outlying States.

Jan. 2: Kashmir dispute placed before U.N.O.

Jan. 6: Attack on Sikh refugees in Karachi; Gurudwara burned down.

Jan. 7: Indian Princes meet in Delhi.

Jan. 9: Proclamation announces reforms in Baroda.

Jan. 13: Mahatma Gandhi goes on indefinite fast.

Jan. 14: Personnel of New Congress Working Committee announced; P. C. Ghosh, Premier of West Bengal, resigns.

Jan. 15: B. C. Roy to be Prime Minister of West Bengal.

Jan. 17: Mahatma Gandhi lays down conditions on which he is prepared to break fast.

Jan. 18: Mahatma Gandhi breaks fast after receiving pledge.

Jan. 20: Country-made bomb explodes at Mahatma Gandhi's prayer meeting; U.N.O. commission appointed to mediate on Kashmir dispute.

Jan. 22: Indo-Pakistan dispute agenda widened at Pakistan's request.

Jan. 30: Mahatma Gandhi assassinated.

FEBRUARY 1948

Feb. 1: Government of India issues statement to the effect that it will stick to Mahatma Gandhi's programme.

Feb. 2: Indian Parliament pays homage to the Mahatma.

Feb. 4: Rastriya Sevak Sangh declared unlawful body.

MARCH 1948

Mar. 3: Pudukotah merges into India.

Mar. 5: White paper on Kashmir dispute presented to Dominion Parliament.

Mar. 8: Pandit Nehru expounds India's foreign policy in Dominion Parliament.

Mar. 9: Kashmir issue before U.N.O.

Mar. 10: Indian Council of Muslim League meets in Madras and decides to continue present organization.

Mar. 14: Sarvodaya Samaj set up; Pandit Nehru launches first Indian made ship at Vizagapatam.

Mar. 17: Matsya Union inaugurated.

Mar. 23: Responsible Government introduced in Travancore.

Mar. 24: Rajasthan Union inaugurated.

Mar. 25: Communist Party declared unlawful in West Bengal.

Mar. 28: Kalat accedes to Pakistan.

The Government of India

THE impulse which drove the British to the Indian sub-continent was not conquest but trade. The Government of India represents the slow evolution from conditions established to meet trading requirements. On September 24, 1599, a few years before the deaths of Queen Elizabeth and Akbar, the merchants of London formed an association for the purpose of establishing direct trade with the East and were granted a charter of incorporation. The government of this Company in England was vested in a Governor with a General Court of Proprietors and a Court of Directors. The factories and affairs of the Company on the east and west coasts of the sub-continent, and in the Bengal area, were administered at each of the principal settlements of Madras (Fort St. George), Bombay and Calcutta (Fort William), by a President or Governor and a Council consisting of the senior servants of the Company. The three "Presidencies" were independent of each other and subordinate only to the Directors in England.

H.E. Chakravarty Rajagopalachari

Territorial Responsibility.—The collapse of government in the sub-continent consequent on the decay of Moghul power and the intrigues of the French on the east coast forced the officers of the Company to assume territorial responsibility in spite of their own desires and the insistent orders of the Directors. Step by step the Company became first the dominant, then the paramount power.

In these changed circumstances the system of government by mutually independent and unwieldy councils of the merchants at the Presidency towns gave rise to grave abuses. Parliament intervened, and under the Regulating Act of 1773, a Governor-General and four

councillors were appointed to administer the Presidency of Fort William (Bengal); and the supremacy of that Presidency over Madras and Bombay was for the first time established. The subordinate Presidencies were forbidden to wage war or make treaties without the previous consent of the Governor-General of Bengal in Council, except in cases of imminent necessity.

Pitt's Act of 1784, which established the Board of Control in England, vested the administration of each of the three Presidencies in a Governor and three councillors, including the Commander-in-Chief of the Presidency Army. The control of the Governor-General-in-Council was somewhat extended again by the Charter Act of 1793.

Under the Charter Act of 1833 the Company was compelled to close its commercial business and it became a political and administrative body holding its territories in trust for the Crown. The same Act vested the direction of the entire civil and military administration and sole power of legislation in the Governor-General-in-Council, and defined more clearly the nature and extent of the control to be extended over the subordinate governments.

After the outbreak of 1857, there was passed, in 1858, an Act transferring the Government of India from the Company to the Crown. This Act made no important change in the administration in the sub-continent, but the Governor-General, as representing the Crown, became known as the Viceroy. The Governor-General was the sole representative of the Crown; he was assisted by a Council, composed of high officials, each of whom was responsible for a special department of the administration.

FUNCTIONS OF GOVERNMENT

The functions of the Government in India or Pakistan are perhaps the most extensive of any great administration in the world. It claims a share in the produce of the land and in some provinces it has restricted the alienation of land from agriculturists to non-agriculturists. It undertakes the management of landed estates where the proprietor is disqualified. In times of famine it undertakes relief work and other remedial measures on a great scale. It manages a vast forest property and is the principal manufacturer of salt and opium.

It owns the bulk of the railways of the country, and directly manages a considerable portion of them; it has constructed and it maintains most of the important irrigation works; it owns and manages the post and telegraph systems; it had until 1st April 1926 the monopoly of the note issue, and it alone can set the mints in motion. It lends money to municipalities, rural boards, and agriculturists and occasionally to owners of historic estates. It controls the sale of liquor and intoxicating drugs and has direct responsibilities in respect to police, education, medical and sanitary operations and ordinary public works of the most intimate character. The Government has also close relations with the States and Unions formed by some of them joining together.

The distribution of these great functions between the Central Government and the provincial administrations has fluctuated. It was definitely regulated by the Reform Act of 1919, and the democratic principle then widely implanted is greatly developed in the constitutions for the Provinces and the Centre enacted by the British Parliament in 1935.

THE REFORMS OF 1919 AND 1935

Great changes were made in the system of government in British India by the Government of India Act, 1919, which, together with the rules framed under it—almost as important in their provisions as the Act itself—came into general operation in January 1921, having received the Royal Assent on 23rd December 1919. (For detailed particulars see *The Indian Year Book*, 1936-37 and preceding years).

Still vaster changes in the direction of Indian self-government and of Dominion Status were brought about by the Government of India Act, 1935, which received the Royal Assent on 2nd August 1935. The new Act embodied two main principles—(1) Provincial Autonomy, with a Government responsible to an elected Legislature in every Province, and (2) at the centre a dyarchic form of Government, based on a federation of British Indian Provinces and Indian States. Detailed provisions for the whole scheme were made in the Act of 1935, which includes 321 sections and 10

schedules and was the largest and most complex legislative enactment of the kind ever negotiated on to a statute book.

Still more momentous changes were later made by the Indian Independence Act, 1947, which transferred full power to the two Dominions of India and Pakistan.

The constitutional provisions of the 1935 Act relating to the Provincial Governments were brought into force on 1st April 1937. Under the provisions of the Act it was contemplated that the States should enter into Federation with British India by executing Instruments of Accession. The federal programme was suspended on the outbreak of the war, but has been revived in a new form with the establishment of the Dominion of India on the 15th August 1947. Pending the inauguration of the permanent constitution to be framed by the Constituent Assembly the 1935 Act remains in force with adaptations made by Governor-General's orders under section 9 of the Indian Independence Act.

THE PROVINCES

The following are under the Act of 1935 the Governors' Provinces of British India (there being besides these Provinces certain Chief Commissioners' Provinces)—Madras, Bombay, Bengal, the United Provinces, the Punjab, Bihar, the Central Provinces and Berar, Assam, the North-West Frontier Province, Orissa, Sind. The Act recognises Berar as being under the sovereignty of H. E. H. the Nizam of Hyderabad whose heir presumptive is elsewhere created Prince of Berar and the Act specially provides for its administration along with the Central Provinces as one Governor's Province. These arrangements are continued by the Act as adopted.

The Act creates Orissa and Sind as separate Governors' Provinces and provides for the separation of Burma from India and for its constitution as a separate country under the Crown. The Act also gives powers for the creation of other Governors' Provinces.

The following are by the Act constituted as Chief Commissioners' Provinces.—Delhi, Ajmer-Merwara, Coorg, the Andaman and Nicobar Islands, Panth Piploda and British Baluchistan. Provision is made for the possible creation of others. A Chief Commissioner's Province is to be administered by the Governor-General acting, to such extent as he thinks fit, through a Chief Commissioner to be appointed by him.

The Constitution provides for the exercise of the executive authority of a Province (which extends to matters included in the Provincial and Concurrent Legislative Lists) on behalf of His Majesty by the Governor. It also provides for a "Council of Ministers to aid and advise the Governor in the exercise of his functions."

The Governor chooses his Ministers, who hold office during his pleasure.

The Legislature.—The Act provides that there shall for every Province be a Provincial Legislature consisting of His Majesty represented by the Governor and (a) in the Provinces of Madras, Bombay, the United Provinces and Bihar two Chambers and (b) in the other Provinces one Chamber, the two Chambers being called the Legislative Council and the Legislative Assembly and where there is only one Chamber the Legislative Assembly.

Every Legislative Council is to be a permanent body not subject to dissolution but as near as may be one-third of its members are to retire every third year. Every Legislative Assembly of every Province unless sooner dissolved is to continue for five years.

Representation in the Legislative Assembly is by separate electorates for each community based on the provisions of the Communal Award as modified by the Poona Pact of September 26, 1932, under which a number of seats out of the seats classified as general seats are reserved to the Depressed Classes. The life of the Provincial Assembly is 5 years, while the Legislative Council is a permanent body periodically renewed.

While there are no nominated members and no officials in the Assembly—all members of the Lower House are elected—the Governor has the right to fill some seats in the Provincial Council wherever one exists. (See tables at the end of this Chapter for the composition of the Provincial Councils and Provincial Assemblies.)

The Acts of 1915 and 1919 provided for an electorate of approximately 3 per cent. of the total population, the franchise based mainly on a property qualification. Under the reformed constitution about 10 per cent of the total population were enfranchised. Women have a much wider franchise: there are over 6,000,000 women voters as compared with 315,000 provided by the Acts of 1915 and 1919. The Act of 1935 secures representation for women, for the Depressed Classes, for industrial labour and for special interests and for the bulk of the small landholders, small cultivators, urban ratepayers as well as a substantial section of the poorer classes.

Under the old constitution the Provinces had no original or independent powers. The local Governments were under the superintendence, direction and control of the Governor-General-in-Council and the Secretary of State for India.

The first step which the new constitution took was to create autonomous provinces and to assign to them a certain exclusive share of the activities of Government. All subjects have been transferred to the control of the legislature. Subjects which are classified as provincial

are as indicated below, exclusively dealt with by the Provincial Government which have power to make laws for peace and good government. There are no more "reserved" subjects. All subjects are "transferred." The subjects include public order, courts, police, prisons, education, health and sanitation, public works, agriculture, forests, land revenue, excise, tolls, unemployment and certain classes of taxation.

Both the Upper and Lower Houses have power to initiate legislation except that Money Bills can be initiated in the Lower House only. Should there be a difference of opinion between the two Houses with regard to a Bill the Governor has power to convene a joint session of the two Houses. Any Bill affirmed by the majority in the joint session shall be taken to have been duly passed.

Special provisions are made for cases in which the Governor finds himself unable to assent to Bills passed by the Legislature.

The Governor of a Province is given power to promulgate ordinances if, when his Legislature is not in session, he is satisfied that circumstances necessitate immediate action.

DIVISION OF POWERS

The Act provides for the institution of a Federal Court consisting of a Chief Justice of India and such other judges as His Majesty may deem necessary, the seat of the Court being Delhi and its original jurisdiction extending to disputes between the Dominion, any of the Provinces or any of the acceding States, its appellate jurisdiction to include certain classes of appeals from the High Courts and appeals laying from it to His Majesty in Council. The Federal Court held its first sitting on 6th December 1937.

Provisions are made in the Act in relation to the recruitment and control of the Public Services and for the appointment of a Public Service Commission for the Dominion of India and of one for each Province. The duties and powers of these Commissions in regard to the Services are laid down in the Act, which also provides that two or more Provinces may agree to have one Commission between them.

The Act abolished the Council of the Secretary of State for India and made him a Minister of the Crown individually responsible for the exercise of all authority vested in the Crown in relation to the affairs of India.

Provincial Legislation.—The Act provides for a new division of functions between the Central and Provincial authorities and the following is the new Provincial Legislative List, which came into operation on 1st April 1937 as amended and adapted.

1. Public order (but not including the use of His Majesty's naval, military or air forces in aid of the civil power); the administration of justice; constitution and organisation of all courts, except the Federal Court, and fees taken thereon; preventive detention for reasons connected with the maintenance of public order; persons subjected to such detention,

2. Jurisdiction and powers of all courts except the Federal Court, with respect to any of the matters in this list; procedure in Rent and Revenue Courts.

3. Police, including railway and village police.

4. Prisons, reformatories, Borstal institutions and other institutions of a like nature, and persons detained therein; arrangements with other units for the use of prisons and other institutions.

5. Public debt of the Province.

6. Provincial Public Services and Provincial Public Service Commission.

7. Provincial pensions, that is to say, pensions payable by the Province or out of Provincial revenues.

8. Works, lands and buildings vested in or in the possession of His Majesty for the purposes of the Province.

9. Compulsory acquisition of land.

10. Libraries, museums and other similar institutions controlled or financed by the Province.

11. Elections to the Provincial Legislature subject to the provisions of this Act.

12. The salaries of the Provincial Ministers, of the Speaker and Deputy Speaker of the Legislative Assembly, and, if there is a Legislative Council, of the President and Deputy President thereof, the salaries, allowances and privileges of the members of the Provincial Legislature; and, to such extent as is expressly authorised by Part III of this Act, the punishment of persons who refuse to give evidence or produce documents before Committees of the Provincial Legislature.

13. Local government, that is to say, the constitution and powers of municipal corporations, improvement trusts, district boards, mining settlement authorities and other local authorities for the purpose of local self-government or village administration.

14. Public health and sanitation; hospitals and dispensaries; registration of births and deaths.

15. Pilgrimages, other than pilgrimages to places beyond India.

16. Burials and burial grounds.

17. Education, including Universities other than those specified in paragraph 13 of List I.

18. Communications, that is to say, roads, bridges, ferries, and other means of communications not specified in List I; minor railways subject to the provisions of List I with respect to such railways; municipal tramways; ropeways; inland waterways and traffic thereon subject to the provisions of List III with regard to such waterways; ports, subject to the provisions in List I with regard to major ports; vehicles other than mechanically propelled vehicles.

19. Water, that is to say, water-supplies, irrigation and canals, drainage and embankments, water storage and water power.

20. Agriculture, including agricultural education and research, protection against pests and prevention of plant diseases; improvement of stock and prevention of animal diseases; veterinary training and practice, pounds and the prevention of cattle trespass.

21. Land, that is to say, rights in or over land, land tenures, including the relation of landlord and tenant, and the collection of rents; transfer, alienation and devolution of agricultural land; land improvement and agricultural loans; colonization; Courts of Wards; encumbered and attached estates; treasure trove.

22. Forests.

23. Regulation of mines and oilfields and mineral development subject to the provisions of List I with respect to regulation and development under Dominion control.

24. Fisheries.

25. Protection of wild birds and wild animals.

26. Gas and gasworks.

27. Trade and commerce within the Province; markets and fairs; money-lending and money-lenders.

28. Inns and innkeepers.

29. Production, supply and distribution of goods; development of industries, subject to the provisions in List I with respect to the development of certain industries under Dominion control.

30. Adulteration of foodstuffs and other goods; weights and measures.

31. Intoxicating liquors and narcotic drugs that is to say, the production, manufacture, possession, transport, purchase and sale of intoxicating liquors, opium and other narcotic

drugs, but subject, as respects opium, to the provisions of List I and as respects poisons and dangerous drugs, to the provisions of List III.

32. Relief of the poor; unemployment.

33. The incorporation, regulation and winding-up of corporations not being corporations specified in List I or Universities; unincorporated trading, literary, scientific, religious and other societies and associations; co-operative societies.

34. Charities and charitable institutions, charitable and religious endowments.

35. Theatres, dramatic performances and cinemas, but not including the sanction of cinematograph films for exhibition.

36. Betting and gambling.

37. Offences against laws with respect of any of the matters in this list.

38. Inquiries and statistics for the purpose of any of the matters in this list.

39. Land revenue, including the assessment and collection of revenue, the maintenance of land records, survey for revenue purposes and records of rights, and alienation of revenue.

40. Duties of excise on the following goods manufactured or produced in the Province and countervailing duties at the same or lower rates on similar goods manufactured or produced elsewhere in India:—

(a) alcoholic liquors for human consumption;
(b) opium, Indian hemp and other narcotic drugs and narcotics; non-narcotic drugs;

(c) medicinal and toilet preparations containing alcohol or any substance included in sub-paragraph (b) of this entry.

41. Taxes on agricultural income.

42. Taxes on lands and buildings, hearths and windows.

43. Duties in respect of succession to agricultural land.

43A. Estate duty in respect of agricultural land.

44. Taxes on mineral rights, subject to any limitations imposed by any Act of the Federal Legislature relating to mineral development.

45. Capitation taxes.

46. Taxes on professions, trades, callings and employments, subject, however, to the provisions of section 142A of the Act.

47. Taxes on animals and boats.

48. Taxes on the sale of goods and on advertisements.

48A. Taxes on vehicles suitable for use on roads, whether mechanically propelled or not, including tramcars.

48B. Taxes on the consumption or use of electricity, subject, however, to the provisions of section 154A of the Act.

49. Cesses on the entry of goods into a local area for consumption, use or sale therein.

50. Taxes on luxuries, including taxes on entertainments, amusements, betting and gambling.

51. The rates of stamp duty in respect of documents other than those specified in the provisions of List I with regard to rates of stamp duty.

52. Dues on passengers and goods carried on inland waterways.

53. Tolls.

54. Fees in respect of any of the matters in this list, but not including fees taken in any Court.

Concurrent List.—There is also prescribed a concurrent Legislative List containing subjects in regard to which both the Central Government and the Provincial Governments enjoy legislative powers.

PART I

1. Criminal law, including all matters included in the Indian Penal Code at the date of the passing of this Act, but excluding offences against laws with respect to any of the matters specified in List I or List II and excluding the use of His Majesty's naval, military and air forces in aid of the civil power.

2. Criminal Procedure, including all matters included in the Code of Criminal Procedure at the date of the passing of this Act.

3. Removal of prisoners and accused persons from one unit to another unit.

4. Civil Procedure, including the law of Limitation and all matters included in the Code of Civil Procedure at the date of the passing of this Act; the recovery in a Governor's Province or a Chief Commissioner's Province of claims in respect of taxes and other public demands including arrears of land revenue and sums recoverable as such, arising outside that Province.

5. Evidence and oaths; recognition of laws, public acts and records and judicial proceedings.

6. Marriage and divorce; infants and minors adoption.

7. Wills, intestacy, and succession, save as regards agricultural land.

8. Transfer of property other than agricultural land; registration of deeds and documents.

9. Trusts and Trustees.

10. Contracts, including partnership, agency, contracts of carriage, and other special forms of contract, but not including contracts relating to agricultural land.

11. Arbitration.

12. Bankruptcy and insolvency; administrative and official trustees.

13. Stamp duties other than duties or fee collected by means of judicial stamps, but not including rates of stamp duty.

14. Actionable wrongs, save in so far as included in laws with respect to any of the matters specified in List I or List II.

15. Jurisdiction and powers of all courts except the Federal Court, with respect to any of the matters in this list.

16. Legal, medical and other professions.

17. Newspapers, books and printing presses.

18. Lunacy and mental deficiency, including places for the reception or treatment of lunatic and mental deficient.

19. Poisons and dangerous drugs.

20. Mechanically propelled vehicles.

21. Boilers.

22. Prevention of cruelty to animals.

23. European vagrancy; criminal tribes.

24. Inquiries and statistics for the purpose of any of the matters in this Part of this List.

25. Fees in respect of any of the matters in this Part of this List, but not including fees taken in any Court.

PART II

26. Factories.

27. Welfare of labour; conditions of labour; provident funds; employers' liability and workmen's compensation; health insurance, including invalidity pensions; old age pensions.

28. Unemployment insurance.

29. Trade unions; industrial and labour disputes.

30. The prevention of the extension from one unit to another of infectious or contagious diseases or pests affecting men, animals or plants.

31. Electricity.

32. Shipping and navigation on inland waterways as regards mechanically propelled vessels, and the rule of the road on such waterways carriage of passengers and goods on inland waterways.

33. The sanctioning of cinematograph films for exhibition.

34. Persons subjected to preventive detention under Dominion's authority.

35. Inquiries and statistics for the purpose of any of the matters in this Part of this List.

36. Fees in respect of any of the matters in this Part of this List, but not including fees taken in any Court.

By an amendment passed in 1939, it was provided *inter alia* that in the event of a war emergency being proclaimed by the Governor-General the Central Government may assume executive in addition to legislative authority over any field and can also with the specific sanction of the Governor-General empower Federal officers to perform functions ordinarily the concern of provincial administrations.

Another amending Act was passed in 1940 (introduced in Parliament in 1939) to make certain readjustments found necessary in the operation of the 1935 Act. To safeguard provincial exchequers taxes on mechanical or other road vehicles or on the sale or consumption of electricity were added to the Provincial list.

THE CENTRAL GOVERNMENT

The structural changes made by the Act of 1919 in the system of government outside the "Governors' provinces" were of comparatively minor scope, though considerable modifications were made in the relationship hitherto subsisting between the Provincial Governments on the one hand and the Government of India and the Secretary of State in Council on the other.

The Act of 1935 provided for further extensive changes at the Centre, but these were only to come into force when the States acceded to Federation and meanwhile, at the Centre, the constitution established by the Act of 1919 prevailed, subject to certain modifications required to bring it into harmony with the new conditions in the Provinces. One of these changes was the vesting of certain powers in the Governor-General "in his discretion" which meant that they were vested in the Governor-General personally as distinct from that of the Governor-General in Council.

The Act of 1935 also took the relations between the Crown and the States outside the purview of the Governor-General in Council and entrusted them to a new authority called His Majesty's Representative for the exercise of the functions of the Crown in its relations with the States (Crown Representative for short). The offices of Governor-General and Crown Representative were held by the same person.

The only concrete changes made in the constitution of the Central Government by the 1919 Constitution were the removal of the statutory bar to the appointment of more than six members of the Governor-General's Executive Council (which, however, had the far-reaching consequence that a majority of the members of the Council were Indians) and the reconstitution in a much more enlarged representative and independent form of the Central Legislature. This became, like the Legislative Council in a Governor's province, a legislature with all the plenary powers generally given to such a body save (such as are specifically withheld by the terms of the Act).

It consisted of two Chambers. The "Council of State" was a body of 68 members, including 32 elected and 26 nominated, of whom not more than 20 might be officials. The "Indian Legislative Assembly" consisted of 141 members, of whom 102 were elected. Of the 39 nominated members, not fewer than one-third were required to be non-officials. The members of the Governor-General's Executive Council were not made *ex-officio* members of either Chamber, but each of them had to be nominated a member of one or other Chamber, and could vote only in the Chamber of which he was a member. Any member of the Executive Council could, however, speak in either Chamber.

The President of the Upper Chamber was appointed by the Governor-General. So also, for the first four years after the constitution of the Chamber, was the President of the Legislative Assembly. But after that period the Lower Chamber elected its own President: its

Deputy-President it elected from the very outset. The normal lifetime of each Council of State was five years, and of each Legislative Assembly three years; but either Chamber, or both simultaneously, could be dissolved at any time by the Governor-General who had also the power to extend the lifetime of either Chamber in special circumstances.

The following table shows the original allotment of the elective seats plus one added later for the North-West Frontier Province in the 1919 Act:—

	Legislative Assembly.	Council State.
Madras	16	5
Bombay	16	6
Bengal	17	6
United Provinces ..	16	5
Punjab	12	4
Bihar and Orissa ..	12	3
Central Provinces ..	6	2
Assam	4	1
North-West Frontier Province	1	..
Burma	4	2
Delhi	1	..
	105	34

The Government of India Act, 1935, by separating Burma from India eliminated the Burma members.

Till 1937 Berar was represented by nomination. After the commencement of the Government of India Act, 1935, the number of elected seats both in the Assembly and the Council of State were increased by one and assigned to Berar.

LATER AMENDMENTS

In order to validate a scheme of attaching the smaller States to bigger States, to ensure better administrative facilities, Parliament in the spring of 1944 enacted a measure which marks a departure from some of the provision of the Government of India Act of 1935. The measure was called the India (Attachment of States) Act of 1944. Here is the text:—

1. At the instance, or with the consent of His Majesty's Representative for the exercise of functions of the Crown in its relations with Indian States, any Indian State not mentioned in divisions I to XVI of the table of seats appended to part 2 of the First Schedule to the Government of India Act, 1935 (as in force at the passing of this Act), may be attached to any other Indian State and in connection with the attachment, provision may be made for:—

(a) The exercise by, or transfer to Courts and officers of the second mentioned Indian State, with or without limitations or conditions, of any powers or jurisdiction in or in relation to the first mentioned State which were or could have been exercised by or on behalf of the Crown therein before attachment.

(b) The relinquishment, as a consequence of attachment, of any such powers or jurisdiction of the Crown as aforesaid; and

(c) The transfer of cases pending at the date of attachment before courts or officers of the Crown, and this sub-section shall have effect notwithstanding anything in the Foreign Jurisdiction Act of 1890, the Government of India Act of 1935, any other Act for the time being in force, or any Letters Patent, Orders in Council, or other Instruments.

2. This section shall be deemed always to have had effect. Provided that His Majesty's Representative for the exercise of the functions of the Crown in its relations with Indian States may give such directions, if any, as he thinks proper for rendering valid or lawful anything done or omitted before the passing of this Act which would be invalid or unlawful by virtue of the provisions of this sub-section.

3. The Act may be cited as the India (Attachment of States) Act, 1944.

Other Changes.—In March 1945 Parliament amended the Constitution Act to enable the Legislatures in India to authorise the imposition of estate duty and provided for the manner in which the proceeds were to be distributed.

In October of the same year Parliament passed an Act to remedy the anomalous situation in which persons who had been on war service lost their voting rights in some cases by failing to retain their "residential qualification."

ACT IN OPERATION

Formally inaugurated in April 1937, the provincial part of the new constitution functioned for about two and a half years with a fair amount of smoothness, but at the end of that period it broke down in seven out of the eleven provinces because of the resignation of their office by the Congress Ministers on the war issue. Thereupon the Governors of those provinces assumed sole charge of the Administration aided by Advisers responsible to them. The constitution remained virtually suspended in those provinces.

At the end of the war Congress Ministries were re-established in eight provinces and in another (the Punjab) the Congress participated in a coalition.

The federal part of the constitution could not be inaugurated according to plan owing to diverse factors—the difficulties experienced by the Princes in acceding to Federation except on the fulfilment of certain conditions, the internal, political and communal differences in British India and, above all, by the declaration of war which militated against any major changes in the governmental machinery at the Centre.

The Viceroy openly announced that steps for the enforcement of the federal part of the constitution would remain suspended, although he also expressed the hope that conditions, internal as well as external, would so settle down as to permit of a reconsideration of the position at an early date. Apart from the war situation, which precluded any major undertaking relating to the Indian constitution, the steadily deteriorating internal political situation pushed into the background measures for the revival of the Federation envisaged by the Government of India Act.

In February 1946 an amending Act authorised the Central Legislature, when a Proclamation of emergency under section 102 of the Constitution Act is in force, to make laws upon matters which are not included in any of the Legislative Lists.

In March of the same year an Act was passed by which the provision that there should be three Service Members in the Viceroy's Executive Council, and one Member with stated legal qualifications, was removed. This was to enable a "political" Government to be formed at the Centre made up entirely of non-officials.

By this time the war was over and it was proposed to revoke the Proclamation of emergency under section 102. But the Centre would then have lost their war-time powers in matters which normally fall within the Provincial sphere. As the economic dislocation created by the war still persisted, it was desired that, in the interests of a smooth transition from the conditions of war to those of peace, the emergency powers of the Centre in regard to certain matters should continue for some time more. The Parliamentary Act referred to above accordingly continued temporarily for a maximum period of 5 years certain powers in respect of foodstuffs and some substances essential for the civil population such as paper, textiles, iron and steel, etc.; unemployment among war-workers; and the requisitioning of land and buildings.

Provincial Governments.—The Provincial Constitution was suspended in seven out of eleven provinces as the indirect result of the war—the popular Ministers in those provinces having resigned on the war issue and rendered the formation of other Ministries in their places impossible owing to the numerical disposition of the party strength.

The constitution was restored in one of the provinces, namely, Orissa, in the autumn of 1941, thanks to the successful efforts of the Opposition to wean away certain members from the majority party. This Ministry fell in 1944 and the Governor was once again forced to take over the administration.

Assam faded out of the picture during Christmas week in 1941. Following the resignation of one of his principal supporters in the Cabinet, the Premier of Assam resigned and the Governor, finding it impossible to form a stable Ministry, took over the reins of administration by invoking section 93 of the Government of India Act. Eight months later the same Premier succeeded in forming a Coalition Ministry and obtaining adequate support for it.

Similarly in 1943 a Ministry was formed in the North-Western Frontier Province, where, too, the operation of section 93 of the Act was abrogated. Old undivided Bengal, which had had a fairly good run of provincial autonomy, came under a cloud in 1944 when consequent on the failure of the Ministry to command the confidence of the legislature, the Governor applied section 93 to the province. Subsequent to the general elections held in the cold weather of 1945-46, ministerial Government was restored in all the Provinces.

INDEPENDENCE ACT

Soon after the Labour Government took office it initiated measures to end the political dead-lock in the sub-continent. They first sent out a Parliamentary Delegation consisting of eight members to ascertain the views of Indian leaders and convey to them the broad general attitude of the political parties in Britain. After some time the British Government sent out a Cabinet Mission consisting of Lord Pethwick-Lawrence, Sir Stafford Cripps and A. V. Alexander who were authorised by the Cabinet to negotiate and settle within the broad framework of the British Government's policy the constitutional and political problems of India in association with the Viceroy. The Mission arrived in India on March 23, 1946 and remained in the country for about three months. (It left on June 30).

After prolonged consultations which showed that there was no agreement among the two major political parties on such fundamental issues as one state or two, the Cabinet Mission formulated its own proposals for the setting up of a machinery to draw a constitution for the sub-continent. These proposals were published on May 16.

MISSION PROPOSALS

At the outset the mission flatly declared that they were against the division of the sub-continent into two independent States but at the same time recognized the need for meeting the point of view of the Muslim League.

Inevitably the proposals took the form of a compromise both as regards the nature of the final constitution as well as of the machinery for drafting it. Broadly speaking, the Mission suggested what has been called a three-tier

constitution consisting of a Union centre, the Provinces, and an Intermediate authority formed by grouping contiguous Provinces according to a certain pattern.

The procedure for drafting such a constitution was also in the nature of a compromise. First there was to be a Constituent Assembly formed by representatives drawn from the Provincial Assemblies, the number of representatives to be proportional to the numerical strength of the community in the respective Provinces. Only three elements were to be recognized for purposes of representation, the Muslims, the Sikhs, and the rest grouped together and called general. After a preliminary meeting to decide general business, etc. the Provincial representatives in the Constituent Assembly were to divide up into three sections, one formed, broadly speaking, by those coming from the north-west, a second by those coming from the east, and a third by those coming from the rest of the country. These sections were then to settle Provincial constitutions for the Provinces included in each section, and also to decide whether any group constitution was to be set up and if so with what Provincial subjects the group authority was to deal. In other words, the Constituent Assembly was a sovereign law-making body within certain limits and could frame whatever constitution it liked. India could remain within the Commonwealth, or if she so desired she could leave it.

At this point it would be interesting to set out the composition of the Constituent Assembly as proposed by the Mission, for it is this very same Assembly shorn of its representatives from Pakistan that is functioning today both as a Constituent Assembly as well as a parliament for the Dominion of India.

NOTE.—In order to represent the Chief Commissioners' Provinces there was added to Section A the member representing Delhi in the Central Legislative Assembly, the member representing Ajmer-Merwara in the Central Legislative Assembly and a representative elected by the Coorg Legislative Council. To Section B was added representative of British Baluchistan.

INTERIM GOVERNMENT

India also needed a new Government having popular support to carry through some of the heavy tasks with which the Administration was faced. So the Cabinet Mission also proposed that while the Constitution-making proceeded, an Interim Government consisting of leaders drawn from the major political parties was to be immediately formed.

Such, in outline were the main recommendations of the Cabinet Mission to help solve the political problem. Neither the Congress nor the League gave these recommendations whole-hearted acceptance. Both sides expressed doubts and fears so that on a number of occasions the Mission had to come out with statements intended to clarify some point or other. Another factor which served to complicate the situation was that neither the Congress nor the League believed in the good faith of the other: each claimed that it had accepted the proposals while the other had rejected them. The problem of forming an Interim Government also presented enormous difficulty. After prolonged negotiations conducted by the Viceroy, however, the Congress agreed to accept office and an Interim Government was at last formed on Sept. 2. But the League continued to stand out and violent demonstrations occurred all over the country. The Viceroy followed up with further negotiations and, at last the League too agreed to join the Government (October 15), but refused to co-operate with the work of the Constituent Assembly on the ground that the Congress had not really accepted the Mission proposals in regard to certain points in the procedure.

Meanwhile temper both inside the Government and out in the country continued to rise, making any compromise between the two points of view impossible. The Congress argued that if the League did not co-operate in the work of the Constituent Assembly it could not stay in the Interim Government as the Constituent Assembly and the Interim Government were integral parts of a single formula. The League retorted that as the Congress had accepted neither the letter nor the spirit of the Mission proposals the League had as good a right to stay in the Cabinet as the Congress. A conference in London (December 5), availed little, except to make confusion worse confounded. The whole situation was fast getting out of hand and when at last the Congress bluntly demanded that the League must leave the Government and the League equally bluntly asked for the dissolution of the Constituent Assembly it was quite clear that a decision could no longer be postponed.

WITHDRAWAL PLAN

One way of trying to make the two sides agree was for Britain to declare that she would leave India by a certain fixed time regardless of whether the two sides had come to an agreement or not by then. This Britain at last did through an announcement made by the Prime Minister in Parliament. The date fixed by the British Government for withdrawal was June, 1948. It is worthwhile reproducing the relevant parts of the declaration made by Mr. Attlee on February 20, 1947 as it constitutes a landmark in the progress of India towards independence:

"It has long been the policy of successive British Governments to work towards the realisation of self-government in India. In pursuance of this policy, an increasing measure of responsibility has been devolved on Indians, and today the civil administration and the Indian armed forces rely to a very large extent on Indian civilians and officers. In the constitutional field, the Acts of 1919 and 1935 passed by the British Parliament each represented a substantial transfer of political power. In 1940, the Coalition Government recognised the principle that Indians should themselves frame a new constitution for a fully autonomous India, and in the offer of 1942 they invited them to set up a Constituent Assembly for this purpose as soon as the war was over.....

JUNE 1948

"The declaration of the Prime Minister of March 15 last, which met with general approval in Parliament and the country, made it clear that it was for the Indian people themselves to choose their future status and constitution and that, in the opinion of His Majesty's Government, the time had come for responsibility for the Government of India to pass into Indian hands.

"The present state of uncertainty is fraught with danger and cannot be indefinitely prolonged. His Majesty's Government wish to make it clear that it is their definite intention to take necessary steps to effect the transference of power to responsible Indian hands by a date not later than June, 1948.....

"His Majesty's Government are anxious to hand over their responsibilities to a Government which, resting on the sure foundation of the support of the people, is capable of maintaining peace and administering India with justice and efficiency. It is therefore essential that all parties should sink their differences in order that they may be ready to shoulder the great responsibilities which will come upon them next year.

"After months of hard work by the Cabinet Mission a great measure of agreement was obtained as to the method by which a constitution should be worked out. This was embodied in their statements of May last. His Majesty's Government there agreed to recommend to Parliament a constitution worked out in accordance with the proposals made therein by a fully representative Constituent Assembly.

"But if it should appear that such a constitution will not have been worked out by a fully representative Assembly before the time mentioned, His Majesty's Government will have to consider to whom the powers of the Central Government in British India should be handed over, on the due date, whether as a whole to some form of Central Government for British India, or in some areas to the existing Provincial Governments, or in such other ways as may seem most reasonable and in the best interests of the Indian people."

PROCEDURE

This declaration did not by any means put an end to conflict. For though the British offered to withdraw they did not say to whom power was to be transferred in any particular

area in case no agreement had meanwhile been reached among the major parties in the country. Worse still, there were one or two passages in the statement which led one to infer that power would be transferred to those who happened to be in actual possession of it at the time of the withdrawal. This led to a mad struggle for power through mass movement in such of those Provinces as had a Muslim majority but a non-Muslim League Government. A mass movement in Assam too appeared to be imminent. Matters had undoubtedly come to a head and if an explosion was to be avoided yet another attempt had to be made to bring the two parties together and agree on a common solution. The instrument through which a common solution was at last reached was the person of Lord Mountbatten who had meanwhile taken the place of Lord Wavell as Viceroy and Governor-General (March 24, 1947). As soon as he assumed office Lord Mountbatten opened fresh negotiations with the Congress and the League and after prolonged talks with both sides succeeded in bringing about an agreement based on the division of India, the partition of the Punjab, Bengal and Assam, and the early transfer of complete power on the basis of Dominion Status. The procedure to be followed for dividing the country was simultaneously announced in London and in India on June 3.

The Provincial Legislative Assemblies of Bengal and the Punjab (excluding the European members) were each to be asked to meet in two parts, one representing the Muslim majority districts and the other the rest of the Province. For the purpose of determining the population of districts, the 1941 census figures were to be taken as authoritative.

The members of the two parts of each Legislative Assembly sitting separately would be empowered to vote whether or not the Province should be partitioned. If a simple majority of either part decided in favour of partition, division would be made accordingly.

Before the question as to the partition is decided, it is desirable that the representatives of each part should know in advance which Constituent Assembly the Province, as a whole would join in the event of the two parts subsequently deciding to remain united. Therefore if any member of either Legislative Assembly so demands, there should be held a meeting of all members of the Legislative Assembly (other than Europeans) at which a decision would be taken on the issue as to which Constituent Assembly the Province as a whole would join if it were decided by the two parts to remain united.

In the event of partition being decided upon, each part of the Legislative Assembly would, on behalf of the areas they represent, decide which of the alternatives mentioned above to adopt.

Two Parts.—For the immediate purpose of deciding on the issue of partition, the members of the Legislative Assemblies of Bengal and the Punjab would sit in two parts according to Muslim majority districts and non-Muslim majority districts.

This was only a preliminary step of a purely temporary nature as it was evident that for the purpose of a final partition of these Pro-

vinces a detailed investigation of boundary questions would be needed and as soon as a decision involving partition had been taken for either Province a boundary commission would be set up by the Governor-General, the membership and terms of reference of which would be settled in consultation with those concerned. It would be instructed to demarcate the boundaries of the two parts of the Punjab on the basis of ascertaining the contiguous majority areas of Muslims and non-Muslims.

It would also be instructed to take into account other factors. Similar instructions would be given to the Bengal Boundary Commission. Until the report of a boundary commission had been put into effect, the provisional boundaries indicated in the Appendix would be used.

Sind.—The Legislative Assembly of Sind (excluding the European members) would at a special meeting also take its own decision on the alternatives mentioned above.

N.W.F.P.—The position of the N.W.F.P. was exceptional. Two of the three representatives of this province were already participating in the existing Constituent Assembly. But it was clear, in view of its geographical situation, and other considerations, that if the whole or any part of the Punjab decided not to join the existing Constituent Assembly, it would be necessary to give the N.W.F.P. an opportunity to reconsider its position.

Accordingly, in such an event, a referendum would be made to the electors of the present Legislative Assembly in the N.W.F.P. to choose which of the alternatives mentioned above they wished to adopt. The referendum would be held under the aegis of the Governor-General and in consultation with the Provincial Government.

British Baluchistan.—British Baluchistan had elected a member but he had not taken his seat in the existing Constituent Assembly. In view of its geographical situation, this Province would also be given an opportunity to reconsider its position and to choose which of the alternatives mentioned above to adopt. If, the Governor-General was examining how this could most appropriately be done.

Assam.—Though Assam was predominantly a non-Muslim Province, the district of Sylhet which was contiguous to Bengal was predominantly Muslim. There had been a demand that, in the event of the partition of Bengal, Sylhet should be amalgamated with the Muslim part of Bengal. Accordingly, if it was decided that Bengal should be partitioned, a referendum would be held in Sylhet district under the aegis of the Governor-General and in consultation with the Assam Provincial Government to decide whether the district of Sylhet should continue to form part of the Assam Province or should be amalgamated with the new Province of Eastern Bengal, if that Province agreed.

If the referendum resulted in favour of amalgamation with Eastern Bengal, a Boundary Commission with terms of reference similar to those for the Punjab and Bengal would be set up to demarcate the Muslim majority areas of Sylhet district and contiguous Muslim majority areas of adjoining districts, which would then be

transferred to Eastern Bengal. The rest of the Assam Province would in any case continue to participate in the proceedings of the existing Constituent Assembly.

If it was decided that Bengal and the Punjab should be partitioned, it would be necessary to hold fresh elections to choose their representatives on the scale of one for every million of population according to the principle contained in the Cabinet Mission's Plan of May 16, 1946. Similar elections would also have to be held for Sylhet in the event of its being decided that this district should form part of East Bengal. The number of representatives to which each area would be entitled was as follows:—

Province	General Muslims	Sikhs	Total
Sylhet District	1	2	Nil
West Bengal ..	15	4	Nil
East Bengal ..	12	29	Nil
West Punjab ..	3	12	2
East Punjab ..	6	4	2

In accordance with the mandates given to them, the representatives of the various areas would either join the existing Constituent Assembly or form a new Constituent Assembly.

INDIAN INDEPENDENCE ACT

Such were the terms of the procedure agreed upon for effecting the constitutional changes. The terms relating to independence announced by Lord Mountbatten were embodied in an Act called the Indian Independence Act which was introduced into Parliament on July 5, passed on July 15 and became law at 10.45 A.M. on July 18. The more important clauses of the Act are reproduced below:

Clause 1, Section 1: As from August 15, 1947, two independent Dominions shall be set up in India, to be known respectively as India and Pakistan.

Section 2: The said Dominions are hereafter in this Act referred to as 'the new Dominions' and the said 15th day of August is hereafter in this Act referred to as 'the appointed day'.

Clause 2, Section 1: Subject to the provisions of sub-sections (3) and (4) of this section the territories of India shall be the territories under the sovereignty of His Majesty which, immediately before the appointed day, were included in British India except the territories which, under sub-section (2) of this section are to be the territories of Pakistan.

Pakistan Territories.—"Section 2: Subject to the provision of sub-section 3 and 4 of this section, the territories of Pakistan shall be: the territories which, on the appointed day, are included in the Provinces of East Bengal and the West Punjab, as constituted under the two following sections; the territories which, at the date of the passing of this Act, are included in the Province of Sind and the Chief Commissioner's Province of British Baluchistan; and if, whether before or after the passing of this Act but before the appointed day, the Governor-General declares that the majority of the valid votes cast in the referendum which at the date of the passing of this Act is being or has recently been held in that behalf under his authority in the North-West Frontier Province are in favour

of representatives of that Province taking part in the Constituent Assembly of Pakistan, the territories which, at the date of the passing of this Act, are included in that Province....

Section 5: For each of the new Dominions, there shall be a Governor-General, who shall be appointed by His Majesty and shall represent His Majesty for the purpose of the Government of the Dominion.

Provided that, unless and until provision to the contrary is made by a law of the legislature of either of the new Dominions, the same person may be Governor-General of both the new Dominions.

Legislature.—Section 6, Sub-section 1: The legislature of each of the new Dominions shall have full power to make laws for that Dominion, including laws having extra-territorial operation.

Sub-section 2: No law and no provision of any law made by the legislature of either of the new Dominions shall be void or inoperative on the ground that it is repugnant to the law of England, or to the provisions of this or any existing or future Act of Parliament of the United Kingdom, or to any Order, Rule or Regulation made under any such Act; and the powers of the legislatures of each Dominion include the power to repeal or amend any such Act, Order, Rule or Regulation in so far as it is part of the law of the Dominion.

Sub-section 3: The Governor-General of each of the new Dominions shall have full power to assent in His Majesty's name to any law of the legislature of that Dominion and so much of any Act as relates to the disallowance of laws by His Majesty, or the reservation of laws for the signification of His Majesty's pleasure thereon or the suspension of the operation of laws until the signification of His Majesty's pleasure thereon shall not apply to laws of the legislature of either of the new Dominions.

States.—Section 7, Sub-section 1 As from the appointed day:

(a) His Majesty's Government in the United Kingdom have no responsibility as respects the Government of any of the territories which, immediately before that day, were included in British India.

(b) The suzerainty of His Majesty over the Indian States lapses, and with it, all treaties and agreements in force at the date of the passing of this Act between His Majesty and the Rulers of Indian States; all functions exercisable by His Majesty at that date with respect to Indian States, all obligations of His Majesty existing at that date towards Indian States or the Rulers thereof, and all powers, rights, authority or jurisdiction exercisable by His Majesty at that date in or in relation to Indian States by treaty, grant, usage, sufferance or otherwise....

Constituent Assemblies.—Section 8, Sub-section 1: In the case of each of the new Dominions, the powers of the legislature of the Dominion shall, for the purpose of making provision as to the constitution of the Dominion, be exercisable in the first instance by the Constituent Assembly of that Dominion, and references in this Act to the legislature of the Dominion shall be construed accordingly.

Sub-section 2: Except insofar as other provision is made by, or in accordance with a law made by the Constituent Assembly of the new Dominion under sub-section 1 of this section, each of the new Dominions and all Provinces and other parts thereof shall be governed as nearly as may be in accordance with the Government of India Act of 1935; and the provisions of that Act, or the Orders-in-Council, Rules and other instruments made thereunder, shall, so far as they are applicable, and subject to any express provisions of this Act, and with such omissions, additions, adaptations and modifications as may be specified in orders of the Governor-General under the next succeeding section, have effect accordingly.

Provided that—

(a) The said provision shall apply in relation to each of the new Dominions and nothing in this sub-section shall be construed as continuing on or after the appointed day any Central Government or legislature common to both the new Dominions.

(b) Nothing in this sub-section shall be construed as continuing in force on or after the appointed day any form of control by His Majesty's Government in the United Kingdom over the affairs of the new Dominions, or of any Province or other parts thereof.

(c) So much of the said provisions as requires the Governor-General or any Governor to act in his discretion or exercise his individual judgment as respects any matter shall cease to have effect as from the appointed day.

(d) As from the appointed day, no provincial Bill shall be reserved under the Government of India Act, 1935, for the signification of His Majesty's pleasure, and no provincial Act shall be disallowed by His Majesty thereunder."

Legislature's Power.—(e) The powers of the Federal legislature or Indian legislature under that Act, as in force in relation to each Dominion, shall in the first instance be exercisable by the

Constituent Assembly of the Dominion, in addition to the powers exercisable by that Assembly under sub-section 1 of this section.

Sub-section 3: Any provision of the Government of India Act, 1935, which as applied to either of the new Dominions by sub-section 2 of this section and the order therein referred to, operates to limit the power of the legislature of that Dominion shall, unless and until other provision is made by, or in accordance with a law made by the Constituent Assembly of the Dominion in accordance with the provisions of sub-section 1 of this section, have the like effect as a law of the legislature of the Dominion limiting for the future the powers of that legislature....

Instruments of Instructions.—Section 16, Sub-section 4: It is hereby declared that the Instruments of Instructions issued before the passing of this Act by His Majesty to the Governor-General and the Governors of Provinces lapse as from the appointed day, and nothing in this Act shall be construed as continuing in force any provision of the Government of India Act, 1935, relating to such Instruments of Instructions.

Sub-section 5: As from the appointed day so much of any enactment as requires the approval of His Majesty-in-Council to any rules of court shall not apply to any court in either of the new Dominions.

TWO DOMINIONS

The Act, in short, established two independent Dominions, called India and Pakistan as from August 15, 1947 and transferred all power and authority in the respective areas to the Constituent Assembly of India which was already in existence, and the Constituent Assembly of Pakistan which was yet to be formed.

Pending the drafting and promulgation of the new constitution, the form of administration continued as under the 1935 Act as adapted by orders made by the Governor-General.

DRAFT CONSTITUTION

The Indian Constituent Assembly, set up on the recommendation of the Cabinet Mission, appointed a Committee (Aug. 29, 1947) consisting of Dr. B. R. Ambedkar, Mr. N. Gopalaswamy Iyyengar, Mr. K. M. Munshi, Saliyd Mohamed Saadulah, Mr. N. Madhava Rao and the late D. P. Khaitan with Dr. B. R. Ambedkar as chairman to draft a constitution for India. This committee submitted its report to the President of the Constituent Assembly on Feb. 21, 1948. Though there may be difference in detail the main features of the new Constitution will probably be the same as those proposed by the Draft Committee. Here is a summary of the draft constitution:

Preamble.—The preamble which closely follows the Objectives Resolution of the Constituent Assembly declares that the aim of the new Constitution is to constitute India into a Sovereign Democratic Republic; to secure to all its citizens justice, social, economic and political; liberty of thought, expression, belief, faith and worship; equality of status and of opportunity;

and to promote among all Fraternity assuring the dignity of the individual and the unity of the Nation. In a foot-note to the Draft, the Committee explains that the question of the relationship between this Democratic Republic and the British Commonwealth of Nations remains to be decided subsequently. The reference to "Fraternity" in the preamble is of especial significance at the present moment as the need for fraternal concord and good-will in India is never greater than now.

Part I deals with the Union and its territory and jurisdiction.

India is described as a Union of States and for the sake of uniformity the Units of the Union have been described as 'States' whether they are known at present as Governors' Provinces or Chief Commissioners' Provinces or Indian States. The States have been divided into three classes:—

(a) States enumerated in Part I of the First Schedule which correspond to the existing Governors' Provinces;

- (b) States enumerated in Part II of the First Schedule which correspond to the existing Chief Commissioners' Provinces; and
- (c) States enumerated in Part III of the First Schedule which correspond to the Indian States which have acceded to the Dominion.

In addition, the territory of India includes the Andaman and Nicobar Islands enumerated in Part IV of the First Schedule and any other territory which may be acquired by the Union.

Provision has been made for the admission, establishment and formation of new States.

CITIZENSHIP

Part II deals with citizenship.

Article 5 of the Draft lays down who shall be a citizen of India at the date of the commencement of the new Constitution. Every person who or either of whose parents or any of whose grand-parents was born in the territory of India as defined in the Constitution and who has not made his permanent abode in any foreign State after the first day of April, 1947; and every person who or either of whose parents or any of whose grand-parents was born in India as defined in the Government of India Act, 1935 (as originally enacted), or in Burma, Ceylon or Malaya, and who has his domicile in the territory of India as defined in the Constitution, shall be a citizen of India, provided that he has not acquired the citizenship of any foreign State before the date of commencement of the Constitution. The main principle embodied in this Article is that in order to be a citizen of the Union at its inception a person must have some kind of territorial connection with the Union, whether by birth or descent or domicile. The Article also keeps in view the requirements of the large number of displaced persons who have had to migrate to India within recent months and provides for them a specially easy mode of acquiring domicile and, thereby, citizenship; for, under the explanation to the Article, a person shall be deemed to have his domicile in the territory of India if he would have had his domicile in such territory under Part II of the Indian Succession Act, 1925, had the provisions of that Act been applicable to him, or if he has, before the date of commencement of the Constitution, resided in the office of the District Magistrate declaration in writing that he desires to acquire such domicile and has resided in the territory of India for at least one month before the date of the declaration.

The acquisition of citizenship after the date of commencement of the Constitution has been left to be regulated by law by the Parliament of the Union.

FUNDAMENTAL RIGHTS

Part III deals with Fundamental Rights.

The Fundamental Rights are based on the decisions of the Constituent Assembly.

These rights have been grouped as follows: rights of equality, rights relating to religion, cultural and educational rights, right to property and right to constitutional remedies. There is an express prohibition of discrimination on

grounds of religion, race, caste or sex. A citizens are assured of equal opportunity in matters of public employment. 'Untouchability' is abolished and its practice in any form is forbidden. The State is prohibited from conferring any title and no citizen is to accept any title from any foreign State. Certain rights regarding freedom of speech, freedom of assembly peacefully and without arms, to form associations or unions, to move freely throughout the territory or to reside or settle in the territory of India or to acquire, hold and dispose of property or to practise any profession, or to carry on any occupation, trade or business are protected. It is declared that all persons are equally entitled to freedom of conscience and the right to profess practice and propagate religion. Traffic in human beings and *begar* and other similar form of forced labour are prohibited. The cultural and educational interests of minorities are also protected. The right to move the Supreme Court for the enforcement of the Fundamental Rights is guaranteed.

STATE POLICY

Part IV deals with the Directive Principles of State Policy and contains provisions which though not enforceable by any Court are nevertheless fundamental in the governance of the country and it is specifically provided that it shall be the duty of the State to follow these principles in making laws. The new State is to promote the welfare of the people by establishing and maintaining a social order in which justice, social, economic and political, shall inform all the institutions of national life. This Part also contains various injunctions regarding the right to education, to just and humane conditions of work, to a living wage for workers, and so forth.

THE UNION

Part V deals with the Union.

The Union Executive.—The head of the State is to be the President of India. All executive power of the Union is vested in the President, to be exercised by him on the advice of responsible Ministers. He is to be elected by the members of an electoral college consisting of the members of both Houses of Parliament, and the elected members of the Legislatures of the States. He is to hold office for a term of five years and is eligible for re-election once, but only once. The President must be a citizen not less than thirty-five years of age and qualified for election as a member of the Lower House of Parliament. The President may be impeached for violation of the Constitution. The Draft makes provision for a Vice-President also. He is to be the ex-officio Chairman of the Council of States and is to be elected by the members of both Houses of Parliament assembled at a joint sitting in accordance with the system of proportional representation by means of the single transferable vote. He is to hold office for a term of five years. Whenever the office of President becomes vacant, the Vice-President discharges its duties until another President is elected. All doubts and disputes arising out of or in connection with the election of a President are to be inquired into and decided by the

Supreme Court whose decision is to be final. The Draft provides for a Council of Ministers with the Prime Minister at the head, to aid and advise the President in the exercise of his functions. The Council is to be collectively responsible to the House of the People. All executive action of the Government of India is to be expressed to be taken in the name of the President. It is the duty of the Prime Minister to furnish information to the President relating to the administration of the affairs of the Union and proposals for legislation whenever the President may call for the same. Provision has been made also for the appointment of an Attorney-General corresponding to the Advocate-General for India under the existing Constitution.

The Union Parliament.—The Union Parliament is to consist of a President and two Houses to be known respectively as the Council of States and the House of the People. The Council of States is to consist of 250 members of whom 15 members are to be nominated by the President to represent literature, art, science, etc., and the remainder are to be the representatives of the States. The House of the People is to consist of not more than 500 representatives of the territories of the States elected on the basis of adult suffrage, and there is to be not less than one representative for every 750,000 of the population and not more than one representative for every 500,000 of the population.

The Council of States will not be subject to dissolution, but as nearly as possible one-third of the members will retire on the expiration of every second year.

The House of the People is to continue for a period of five years and the expiration of that period operates as its dissolution, but provision has been made for extension of the duration of the House of the People for a period not exceeding one year during any emergency.

The usual provisions for the summoning, prorogation and dissolution of the Houses of the Union Parliament, the conduct of business therein, the disqualifications of members thereof and the Legislative procedure of the two Houses, including procedure in financial matters have been included generally on the lines of similar provisions contained in the Government of India Act, 1935. It has however been provided, following the practice prevalent in the Parliament of the United Kingdom that at the commencement of every session the President shall address both Houses of Parliament assembled together and inform Parliament of the cause of its summons.

A special procedure has been prescribed with regard to Money Bills on the lines of the practice in the Parliament of the United Kingdom.

It has been also provided that in the Union Parliament business shall be transacted in Hindi or English but that the Presiding Officer of the House may permit any member, who cannot adequately express himself in either of these languages, to address the House in his mother tongue.

Legislative Powers of the President.—Power has been given to the President to promulgate Ordinances at any time except when

both the Houses of Parliament are in session. The President will promulgate such Ordinances on the advice of his Ministers, and such Ordinances will cease to operate at the expiration of six weeks from the re-assembly of the Union Parliament.

Federal Judicature.—There will be a Supreme Court of India consisting of a Chief Justice of India and not less than seven Judges. Provision has been made for the appointment by the Chief Justice of India of Judges of High Courts as *ad hoc* Judges at the sittings of the Supreme Court for specified periods following the practice prevalent in the Supreme Court of Canada. Provision has also been made for the attendance of retired Judges at sittings of the Supreme Court as in the United Kingdom and in the United States of America. Any person who has held office as a Judge of the Supreme Court (or of a High Court) is prohibited from practising in any court in India.

The Supreme Court is to have original, appellate and advisory jurisdiction. Its original jurisdiction extends to disputes between the Union and a State or between two States, if and in so far as the dispute involves any question whether of law or fact on which the existence or extent of a legal right depends. Disputes arising out of certain agreements have, however, been left out of the purview of the Supreme Court. The appellate jurisdiction of the Court extends to cases involving the interpretation of the Constitution and to all other cases from which an appeal now lies to the Federal Court or to His Majesty-in-Council. The minimum pecuniary limit of the subject matter of the dispute in the case of civil appeals has been fixed at Rs. 20,000. The Supreme Court has advisory jurisdiction in respect of questions which may be referred to that Court by the President for opinion.

Provision has been also made for special leave to appeal to the Supreme Court from any judgment, decree or final order in any Cause or matter passed or made by any court or tribunal in the territory of India.

In a foot-note the Committee has observed that in the Supreme Court of the United States of America all the Judges of the Court are entitled to participate in the hearing of every matter, that the Court never sits in divisions and that the Judges of that Court attach the greatest importance to this practice. The Committee has expressed the opinion that this practice should be followed in India at least in two classes of cases, namely, those which involve questions of interpretation of the Constitution and those which are referred to the Supreme Court for opinion by the President, and that whether the same practice should not be extended to other classes of cases may be left to be regulated by Parliament by law.

Auditor-General of India.—Provisions similar to those existing in the Government of India Act, 1935, have been made for an Auditor-General of India.

STATES

Part VI deals with States which correspond to Governors' Provinces.

The Executive in such States.—Each State will have a Governor and the executive power of the State is vested in him.

As to the mode of selection of the Governor, the Draft contains alternative provisions. One alternative, following the decision of the Constituent Assembly, provides that the Governor shall be elected by direct vote of all persons who have the right to vote at a general election for the Legislative Assembly of the State. The other alternative, favoured by some of the members of the Committee who feel strongly that the co-existence of a Governor elected by the people and a Chief Minister responsible to the Legislature might lead to friction and consequent weakness in administration, provides that the Governor shall be appointed by the President from a panel of four persons (who need not be residents of the State concerned) elected by the Legislature of the State.

The term of office of the Governors is to be five years. Provision has been made for impeachment of a Governor for violation of the Constitution.

The Committee has not thought it necessary to make any provision for Deputy Governors, because a Deputy Governor will have no function to perform so long as the Governor is there. At the Centre, the position is different, because the Vice-President is also the ex-officio Chairman of the Council of States; but in most of the States there will be no Upper House and it will not be possible to give the Deputy Governor functions similar to those of the Vice-President. There is a provision in the Draft enabling the Legislature of the State (or the President) to make necessary arrangements for the discharge of the functions of the Governor in any unforeseen contingency.

Provision has been made for a Council of Ministers with the Chief Minister at the head to aid and advise the Governor in the exercise of his functions. The Governor is to act on the advice of his Ministers, except in respect of certain matters, such as, the summoning and dissolving of the Legislature, the appointment of the Chairman and members of the State Public Service Commission and the Auditor-in-Chief of the state and the issue of a proclamation suspending the constitution in case of grave emergency threatening the peace and tranquillity of the state. This last-mentioned power can be exercised only for a period not exceeding two weeks and the Governor is required to report the matter to the President. All executive action of the Government of the State is to be taken in the name of the Governor. It is the duty of the Chief Minister to furnish information to the Governor relating to the administration of the affairs of the State and proposals for legislation whenever the Governor may call for the same.

Advocate-General for the State.—There is to be an Advocate-General for every State whose functions are similar to those of the Advocate-General of the corresponding Province under the Government of India Act 1935. The Advocate-General is to retire from office upon the resignation of the Chief Minister of the State.

THE STATE LEGISLATURE

The State Legislature is to consist of the Governor and two Houses (Legislative Assembly and Legislative Council) in a few States and one House (Legislative Assembly) in all other states. The names of the States which will have two Houses have been left blank for the present.

The Legislative Assembly is to consist of members (not being in any case more than 200 or less than 60) who are to be chosen by direct election on the basis of adult suffrage in territorial constituencies. There is to be not more than one member for every lakh of the population except in the case of certain areas known as the "Autonomous districts" of Assam.

The total number of members of the Legislative Council of a State having such a Council is not to exceed 25 per cent of the total number of members in the Legislative Assembly of the State. One-half of the members of the Council are to be chosen from panels on functional basis and one-third of the members to be elected by the members of the Legislative Assembly in accordance with the system of proportional representation by means of the single transferable vote and the remainder are to be nominated by the Governor.

The Legislative Assembly is to continue for five years and the expiration of that period operates as its dissolution. The Legislative Council will not be subject to dissolution but as nearly as may be one-third of the members will retire on the expiration of every third year.

The usual provisions for summoning, proroguing and dissolving the House or Houses of the Legislature of the State, the conduct of business therein, the disqualifications of members thereof and the legislative procedure, including procedure in financial matters, have been included.

It has been provided that in the Legislature of a State business shall be transacted in the language or languages generally used in that state or in Hindi or English but that the Presiding Officer of the Legislature may permit any member who cannot adequately express himself in any of these languages, to address the Legislature in his mother tongue.

Legislative Powers of the Governor.—Power has been provided for the promulgation of Ordinances by the Governor of a State at any time except when the Legislature of the State is in session. The Governor will promulgate such Ordinances on the advice of his Ministers and they cease to operate at the expiration of six weeks from the re-assembly of the Legislature of the State.

Provision in cases of grave emergencies.—Provision has been made empowering the Governor in cases of grave emergency threatening the peace and tranquillity of the State to issue a proclamation suspending certain provisions of the Constitution for a period of two weeks only, and the Governor is required to report the matter to the President. Upon receipt of the report the President may either revoke the proclamation or issue a fresh proclamation of his own, the effect of which will be to put the Central Executive in place of the State Executive and the Central Legislature in place of the State

legislature, or, in other words, the State concerned will become a centrally administered area for the duration of the proclamation. This replaces the "section 93 regime" under the Act of 1935.

Scheduled and tribal areas.—Special provision has been made in the Fifth and Sixth schedules to the Draft Constitution for the administration, respectively, of the Scheduled areas in the States other than Assam and of the tribal areas in Assam, which mostly correspond to the excluded and partially excluded areas under the Government of India Act, 1935.

The High Courts in States.—The provisions with regard to High Courts in States corresponding to the Governors' Provinces and the Chief Commissioners' Provinces are mostly the same as in the Government of India Act, 1935. It has however been provided that a Judge of a High Court may hold office until he attains the age of 60 years or such higher age not exceeding 35 years as may be fixed in this behalf by the Legislature of the State. It has also been provided that a person who has held office as a Judge of a High Court shall be prohibited from practising in any court or before any authority within the territory of India.

Provision has also been made for the employment of retired Judges at sittings of the High Court following the practice in the United Kingdom and in the United States of America.

It has also been provided that the Union Parliament may by law extend the jurisdiction of a High Court to or exclude the jurisdiction of a High Court from any State other than the State in which the Court has its principal seat.

Auditors-in-Chief.—The person performing the functions of an Auditor-General in a State is to be designated as Auditor-in-Chief to distinguish him from the Auditor-General of India and provisions similar to those contained in the Government of India Act, 1935, in respect of Auditors-General for the Provinces have been made with respect to Auditors-in-Chief for the States.

CHIEF COMMISSIONERS' PROVINCES

Part VII deals with States which correspond to the Chief Commissioners' Provinces of Delhi, Ajmer-Merwara, Coorg and Panth Piploda which are at present administered by the Centre. Provision has been made for the administration of these States either through a Chief Commissioner or a Lieutenant-Governor, or through the Governor or the Ruler of a neighbouring State. What is to be done in the case of a particular area is left to the President to prescribe by order. He will, of course, in this, as in other matters, act on the advice of the responsible Ministers. The President has also been empowered to set up local legislatures and councils of advisers for these areas and to prescribe their Constitution and powers.

It has also been provided that Indian States (such as those of the Orissa group) which have ceded full authority, jurisdiction and power to the Central Government may be administered as if they were centrally administered areas, i.e., through a Chief Commissioner or a Lieute-

nant-Governor or through the Governor or the Ruler of a neighbouring State, according to the requirements of each case.

Part VIII deals with the administration of the territories which are comprised within the territory of India but are not States, e.g., the Andaman and Nicobar Islands. These territories will be administered by the President through a Chief Commissioner or any other authority appointed by the President. The President will have power to make regulations for the peace and good government of these territories.

UNION-STATES RELATIONS

Part IX deals with the legislative and administrative relations between the Union and the States. For the most part the Drafting Committee has made no change in the Legislative Lists as recommended by the Union Powers Committee and adopted by the Constituent Assembly.

The Committee has, however, provided that when a subject which is normally in the State List assumes national importance, then the Union Parliament may legislate upon it. To prevent any unwarranted encroachment upon State powers it has been provided that this can be done only if the Council of States, which may be said to represent the States as Units, passes a resolution to that effect by a two-thirds majority.

The Committee has also considered it desirable to put into the Concurrent List the whole subject of "succession" instead of only "succession to property other than agricultural land."

The Committee has also included in the Concurrent List all matters in respect of which parties are now governed by their personal law, so that the enactment of a uniform law in India in these matters may be facilitated. While putting land acquisition for the purposes of the Union into the Union List and land acquisition for the purpose of a State in the State List, the Committee has provided that the principles on which compensation for acquisition has to be determined shall in all cases be in the Concurrent List in order that there may be some uniformity in this matter.

In addition, in view of the present abnormal circumstances which require central control over essential supplies, it has been provided, on the lines of the India (Central Government and Legislature) Act, 1946, that, for a term of five years from the commencement of the Constitution, trade and commerce in, and the production, supply and distribution of, certain essential commodities, such as, cotton textiles, food-stuffs, and petroleum, as also the relief and rehabilitation of displaced persons, shall be on the same footing as Concurrent List subjects.

As regards the administrative relations between the Union and the States provision has been made for enabling a State which corresponds to an Indian State to enter into agreement with the Union or with any State which corresponds to a Governor's Province for the undertaking of executive, legislative and judicial powers in the former State by the Union or the latter State. Provision for settlement of the disputes

regarding inter-State water-supplies on the lines of the existing provision in the Government of India Act, 1935, has also been included.

As respects inter-State trade and commerce, all preferences or discrimination to one State over another have been prohibited. Provision has, however, been made to enable any State to impose reasonable restrictions in the public interest.

Provision has also been made for the appointment by the President of an Inter-State Council for the settlement of disputes between the States and for the better co-ordination of policy.

FINANCE, PROPERTY

Part X deals with Finance, Property, Contracts and Suits.

Provisions relating to the distribution of revenues between the Centre and the States and the grant of financial aid to the States have been retained for the present as in the Government of India Act, 1935. A provision has been included for the appointment of a Finance Commission at the end of five years from the commencement of the new Constitution to make recommendations as to the distribution of such revenues and other matters between the Union and the States.

The other provisions in this Part are mostly the same as in the Government of India Act, 1935.

EMERGENCY POWERS

Part XI deals with Emergency Powers. The President has been given power to issue a Proclamation of Emergency when a grave emergency exists whereby the security of India is threatened whether by war or domestic violence. The provisions relating to the Proclamation of Emergency are modelled on the existing provisions in the Government of India Act, 1935.

SERVICES

Part XII deals with services. Detailed provisions as to the services have been left to be regulated by Act of the appropriate Legislature.

Provisions for the Union and the State Public Service Commission have been included on the lines of the existing provisions in the Government of India Act, 1935.

ELECTIONS

Part XIII deals with Elections. Provision has been made for the superintendence, direction and control of all elections to Parliament by an Election Commission to be appointed by the President and of all elections to the Legislatures of States by an Election Commission to be appointed by the Governor of the State. The Committee has not thought it necessary to incorporate in the Constitution electoral details including delimitation of constituencies, and these have been left to be provided by auxiliary legislation.

MINORITIES

Part XIV deals with the safeguards for minorities. Provision has been made for the reservation of seats for the Muslim community, the Scheduled Castes, the Scheduled Tribes and the Indian Christians (in Madras and Bombay only) in the House of the People and in the Legislative Assemblies of the States for a period of ten years.

Special safeguards for the continuance of certain rights in respect of services and educational grants for the Anglo-Indian community have been provided for a period of ten years.

Provision has also been included for the appointment of a special officer for minorities both for the Union and for the States and for the appointment of a periodic Commission to investigate the conditions of the backward classes. Provision has also been made for the appointment of a Commission to report on the administration of scheduled areas (which mostly correspond to the excluded and partially excluded areas in the present Constitution) and the welfare of scheduled tribes.

Part XV contains miscellaneous provisions.

Protection of the President and Governors.—Provision has been included in this Part for the protection of the President and the Governors from civil and criminal process during the term of their office.

AMENDMENTS TO CONSTITUTION

Part XVI contains provisions for the amendment of the Constitution. Ordinarily such amendment will require a two-thirds majority of the members of each House of the Union Parliament present and voting as well as an absolute majority of the total membership of each House. In the case of an amendment to make any change in the Legislative Lists or the representation of States in Parliament or the powers of the Supreme Court, the amendment will also require ratification by the Legislatures of not less than one-half of the States which correspond to the Governors' Provinces and not less than one-third of the States which correspond to the Indian States.

Provision giving limited constituent powers to the State Legislatures in respect of certain definite matters has also been included.

TRANSITIONAL PROVISIONS

Part XVII deals with temporary and transitional provisions. It has been provided that all existing laws shall continue in operation subject to such adaptations made by the President by order as may be necessary to bring them into conformity with the provisions of the new Constitution. It has also been provided that until the Houses of Parliament have been duly constituted and summoned to meet for the first session, the Constituent Assembly itself will exercise the powers of the Union Parliament. Such person as the Constituent Assembly of the Dominion of India shall have elected in this behalf will be the provisional President of India until a President has been duly elected in accordance with the provisions of the new Constitution.

Ministers for the Dominion immediately before the commencement of the new Constitution will become Ministers of the provisional President under the new Constitution.

Similar provisions have also been made in respect of the Governors, Legislatures and Ministers in the States corresponding to Governors' Provinces.

Judges of the Federal Court shall, unless they have elected otherwise, become Judges of the Supreme Court, and the Judges of the High Courts, unless they have otherwise elected shall become Judges of the High Courts in the corresponding States.

Provision has been made for enabling the President to remove difficulties by order made under this Part; such orders may be made until the first meeting of the Union Parliament after the Parliament has been duly constituted under the new Constitution.

Part XVIII deals with commencement and repeals. The date on which the Constitution shall come into operation has been left blank, to be filled in afterwards. The Indian Independence Act, 1947, and the Government of India Act, 1935, and all other enactments amending or supplementing the latter Act will cease to have effect on the Commencement of the new Constitution.

SCHEDULES

First Schedule.—The First Schedule contains four Parts. Part I mentions the States which are at present the Governors' Provinces. Part II mentions the States which are at present Chief Commissioners' Provinces. Part III will contain the names of all the States which have acceded to the Dominion of India immediately before the commencement of the new Constitution. Part IV mentions the territory of the Andaman and Nicobar Islands.

CONSTITUENT ASSEMBLY OF INDIA

President.—The Hon'ble Dr. Rajendra Prasad.

Speaker.—The Hon'ble Shri G. V. Mavalankar.

Secretary.—M. N. Kaul, Bar-at-Law.

Deputy Secretary.—A. J. M. Atkinson.

Asst. Secretary.—I. N. C. Namdi.

Asst. Secretary II.—C. V. Narayana Rao.

MADRAS

General.—O. V. Alagesan; Shrimati Ammu Swaminathan; M. Ananthasayanam Ayyangar; The Hon'ble Shri K. Chandramouli, M.L.A.; Shrimati Dakshayani Velayudhan, M.L.C.; Shrimati G. Durgabai; The Hon'ble Shri B. Gopala Reddi; The Hon'ble Shri N. Gopalaswami Ayyangar; D. Govinda Doss; Rev. Jerome D'Souza, S.J.; P. Kakkav, M.L.A.; K. Kamaraja Nadar, M.L.A.; V. C. Kesava Rao; T. T. Krishnamachari; Alladi Krishnaswami Ayyar; L. Krishnaswami Bharathi; P. Kunkuraman; The Hon'ble Shri K. Madhava Menon, M.L.C.; V. I. Muniswami Pillai, M.L.A.; Kummaraja Sir M. A. Muthiah Chettiyar, M.L.A.; V. Nadimathu Pillai; S. Nagappa, M.L.A.; P. L. Narasimha Raju, M.L.A.; Dr. B. Pattabhi Sitaranayana; C. Perumalswami Reddi, M.L.C.; T. Prakasam; S. H. Prater, O.B.E., J.P., C.M.S., M.L.A.; Raja of Bobbili; The Hon'ble Shri R. K. Shanmukham Chetty; T. A. Ramalingam Chettiyar; Ramnath Goenka; The Hon'ble Shri O. P. Ramaswami Reddy, M.L.C.; Professor N. G. Ranga; N. Sanjeeva Reddi, M.L.A.; K. Santhanam; B. Shiva Rao; The Hon'ble Shri H. Sitaranama Reddi, M.L.A.; U. Srinivasa Mallayya; Dr. P. Subbarayan; C. Subramanyam; Dr. V. Subrahmanyam; M. C. Veerabahu Pillai; P. M. Velayudhan, M.L.A.; The Hon'ble Shri Kala Venkata Rao, M.L.A.; T. J. M. Wilson, M.L.A.

Muslim.—Haji Abdul Sattar Haji Ishaq Saif; K. T. M. Ahmed Ibrahim Sahib Bahadur, M.L.C.; Ma'sboob Ali Baig Sahib Bahadur, M.L.A.; B. Paker Sahib Bahadur, M.L.A.

BOMBAY

General.—Bhalechandra Meheshwar Gupte, M.L.A.; Shrimati Hansa Mehta, M.L.C.; Hari Vinayak Pataskar, M.L.A.; The Hon'ble Dr. B. R.

Second Schedule.—This deals with the salaries, allowances, etc., to be paid to the President, the Governors, the Ministers, and the Judges of the Supreme Court and the High Courts.

Third Schedule.—This contains forms of oaths of office and secrecy to be taken by the Ministers for the Union and the States and of the declarations to be made by the members of the Union Parliament and the Legislatures of the States and the Judges of the Supreme Court and High Courts.

Fourth Schedule.—This Schedule contains the Instrument of Instructions for the Governors of the States. This follows the existing Instrument of Instructions to the Governors under the Government of India Act, 1935.

Fifth and Sixth Schedules.—These Schedules contain, respectively, provisions with respect to the scheduled areas and the scheduled tribes, in the States other than Assam and tribal areas in Assam.

Seventh Schedule.—This contains the Legislative Lists already referred to.

Eighth Schedule.—This contains the lists of scheduled tribes in the different States which correspond to Governors' Provinces.

Ambedkar; Dr. Joseph Alban D'Souza, M.L.A.; Kanayyal Nanabhai Desai, M.L.A.; Keshavrao Maruti Rao Jedhe; Khandubhai Kasanjil Desai; The Hon'ble Shri B. G. Kher; M. R. Masani; K. M. Munshi; The Hon'ble Shri Narhar Vishnu Gadgil; S. Nijalingappa; S. K. Patil; Ramchandra Manohar Nalvade, M.L.A.; Ranganath Ramchandra Diwaker; Shankar Dattatraya Desai; G. V. Mavalankar; The Hon'ble Sardar Vallabhbhai J. Patel.

Muslim.—Abdul Kadar Mohammad Shaikh, M.L.A.; Abdul Kadir Abdul Aziz Khan.

WEST BENGAL

General.—Prafulla Chandra Sen; Arun Chandra Guha; Mihir Lal Chattopadhyaya; Pandit Lakshmi Kanta Maitra; Satish Chandra Samanta; Suresh Chandra Majumdar; Upendra Nath Barman; Debi Prasad Khaitan; Basanta Kumar Das; Shrimati Renuka Ray; Dr. H. C. Mookerjee; Surendra Mohan Ghosh; Mukunda Bohary Mallick; Damber Singh Gurung, M.L.A.; R. E. Platel.

Muslim.—Raghib Ahsan; Jalumuddin Ahmed, M.L.A.; Naziruddin Ahmad; Abdul Hamid.

UNITED PROVINCES

General.—Ajit Prasad Jain, M.L.A.; Algu Rai Shastri, M.L.A.; Bakrishna Sharma; Banshi Dhar Misra, M.L.A.; Bhagwan Din, M.L.A.; Damodar Swarup Seth; Dayal Das Bhagat, M.L.A.; A. Dharan Das, M.L.A.; Dr. Dharam Prakash; R. V. Dhulekar, M.L.A.; Feroze Gandhi; Gopal Narain, M.L.A.; The Hon'ble Pandit Govind Ballabh Pant; Pandit Govind Malaviya; Hariv Govind Pant; M.L.A.; Harihar Nath Shastri, M.L.A.; Pandit Hriday Nath Kunzru; Jagannath Bakesh Singh; M.L.A.; Jaspal Roy Kapoor; The Hon'ble Pandit Jawahar Lal Nehru; Sardar Jogendra Singh; Acharya Jugul Kishore, M.L.A.; Sir Jwala Prasad Srivastava, K.C.S.I., K.B.E.; Dr. B. V. Keskar; Shrimati Kamala Chaudhri; Kamalapati Tiwari, M.L.A.; Khurshed Lal; Acharya J. B. Kiplani; Mahavir Tyagi, M.L.A.; Masuria Din, M.L.A.; The Hon'ble Shri Mohan Lal Saxena; Sir Padam-pat Singhania; Phool Singh, M.L.A.; Pragi Lal, M.L.A.; Shrimati Purnima Banerji, M.L.A.; The

Hon'ble Shri Purshottam Das Tandon; S. Radhakrishnan; Ram Chandra Gupta, M.L.C.; Prof. Shibban Lal Saksena, M.L.A.; The Hon'ble Pandit Shri Krishna Dutt Paliwal; The Hon'ble Dr. John Matthai, C.I.E.; Shrimati Sucheta Kripalani; Sunder Lal; Venkatesh Narayan Tivary, M.L.A.; Mohan Lal Gautam; Vishwambhar Dayal Tripathi, M.L.A.

Muslim.—Begum Aizaz Rasul, M.L.C.; Maharajkumar Amir Haldar Khan of Mahmudabad, M.L.A.; Aziz Ahmed Khan, M.L.A.; Maulana Hasrat Mohani, M.L.A.; Nawab Muhammed Ismail Khan; The Hon'ble Mr. Rafi Ahmed Kidwai; S. M. Rizwan Allah, M.L.A.

EAST PUNJAB

General.—Dr. Bakshi Tek Chand; Pandit Thakur Dass Bhargava; Prof. Yashwant Rai; Bikramlal Sondhi; Ch. Ranbir Singh.

Muslim.—S. M. Iqbal; Ch. Mohd. Hassan, M.L.A.; Suif Abdul Hamid Khan, M.L.A.; Maulana Daud Ghaznavi.

Sikh.—The Hon'ble Sardar Baldev Singh; Giani Gurumukh Singh Musafar.

BIHAR

General.—Amiya Kumar Ghosh, M.L.A.; The Hon'ble Shri Anugrahnarayan Sinha; Banarsi Prasad Jhunjhunwala; Bhagwat Prasad, M.L.A.; Boniface Lakra, M.L.C.; Brajeshwar Prasad; Chandrika Ram, M.L.C.; Prof. K. T. Shah; Devendra Nath Samanta, M.L.C.; Dip Narayan Sinha, M.L.A.; Guptanath Singh, M.L.A.; Jadubans Sahai, M.L.A.; Jagat Narain Lal, M.L.A.; The Hon'ble Shri Jagjivan Ram; Shri Jaipal Singh; Maharajadhiraja Sir Kameshwara Singh, C.I.E.; Kameshwari Prasad Yadav, M.L.A.; Mahesh Prasad Sinha, M.L.A.; Phulam Prasad Varma, M.L.A.; Dr. Raghunandan Prasad, M.L.A.; The Hon'ble Dr. Rajendra Prasad; Rameshwar Prasad Sinha, M.L.A.; Ramnarayan Singh; Dr. Sachchidananda Sinha, M.L.A.; Sarangdhar Sinha, M.L.A.; Satyanarayan Sinha; Dr. P. K. Sen; The Hon'ble Shri Krishna Sinha; Rai Bahadur Sri Narain Malhotra; Rai Bahadur Syamanandan Sahaya, C.I.E., M.L.A.

Muslim.—Hussain Imam; Saliyd Jafar Imam, M.L.A.; Latifur Rahaman, M.L.A.; Mohd. Tahir, M.L.A.; Tajamul Hussain, M.L.A.

C. P. and BERAR

General.—Guru Agamdas Agarmandas, M.L.A.; The Hon'ble Rajkumari Amrit Kaur; Bhagwantrao Annabhu Mandloi, M.L.A.; Brijlal Nandlal Biyani; Thakur Chhedilal, M.L.A.; Seth Govinddas; Dr. Sir Hari Singh Gour; Hari Vishnu Kamath; Hemchandra Jagobaji Khandekar; V. R. Kalappa, M.L.A.; Lakshman Shrawan Bhatkar; Dr. Punjabrao Shamrao Deshmukh; The Hon'ble Pandit Ravi Shankar Shukla; Rustom Khurshedji Sidhwa, M.L.A.; Shankar Tryambak Dharmadhikari; Frank Reginald Anthony.

Muslim.—Kazi Syed Karimuddin, M.L.A.

ASSAM

General.—Prof. Nibaran Chandra Laskar; Dharanidhar Basu Matarai, M.L.A.; The Hon'ble Shri Gopinath Bardoloi; The Hon'ble Rev. J. J. M. Nichols-Roy; Rohini Kumar Chaudhury.

Muslim.—Saliyd Mohd. Saadulla, M.L.A.; Syed Abdur Rouf.

General.—B. Das; Biwanath Das; Maharaja of Parlakimedi; The Hon'ble Shri Hare Krishna Mahatab; Lakshminarayan Sahu, M.L.A.; Lokanath Misra, M.L.A.; Nandkishore Das; Raj Krishna Bose, M.L.A.; Santanu Kumar Das, M.L.A.

DELHI

Deshbandhu Gupta.

AJMER-MERWARA

Pandit Muhut Bihari Lal Bhargava.

COORG

C. M. Poonacha, M.L.C.

INDIAN STATES

Mysore.—Diwan Bahadur Sir A. Ramaswamy Mudaliar; K. Chengalaraya Reddy; H. R. Guruv Reddy; S. V. Krishnamurthy Rao; D. H. Chandrasekharaya; Mahomed Sheriff; T. Channiah.

Gwalior.—M. A. Sreenivasan; Lt.-Col. Brijraj Narain; Gopikrishna Vijayavargiya; Ram Sahai.

Baroda.—Durbar Gopaladas A. Desai; Chunilal P. Shah.

Cochin.—P. Govinda Menon.

Udaipur.—Dr. S. V. Ramamurthy, K.C.I.E.; Manikyal Varma.

Jaipur.—Rao Bahadur Sir V. T. Krishnamachari, K.C.S.I., K.C.I.E.; Pandit Hiralal Shastri Raja Sardar Singhji Bahadur of Khetri, M.L.C.

Jodhpur.—C. S. Venkatachar, C.I.E., O.B.E., I.C.S.; Shri Jainarain Vyas.

Bikaner.—Sardar K. M. Panikkar.

Alwar.—Dr. N. B. Khare.

Kotah.—Lt.-Col. Dr. Dalal Singhji, M.A.

Indore.—V. S. Sarvate.

Rewa.—Raja Lal Shiva Bahadur Singh Rao of Churhat; Lal Yadvendra Singh.

Kolhapur.—A. B. Latthe.

Patiala.—Sardar Jaijiv Singh, Bar-at-Law.

Mayurbhanj.—Lal Mohan Patil.

Frontier Groups

Sikkim & Cochin Behar Group.—Himmat Singh K. Maheshwari.

Tripura, Manipur & Khasi States Group.—G. S. Guha.

Interior Groups

U. P. States Group.—Col. B. H. Zaidi, C.I.E.

Eastern Rajputana States Group.—Maharaj Mandhata Singh; Maharaj Nagendra Singh; Gokulbhai Daulatram Bhatt.

Central India States Group (Including Bundelkhand and Malwa).—Rao Raja Jayendra Singh Ju Dev; Major Maharaj Kumar Pushpendra Singhji; Pandit Chaturbhuj Pathak.

Western India States Group.—Col. Shri Maharaj Himmat Singhji, C.I.E.; A. P. Pattani; Bhawanji Arjan Khimji.

Gujarat States Group.—Khan Bahadur F. Kotahwala; Vinayakrao B. Vaidya.

Deccan & Madras States Group.—M. S. Aney; B. N. Munavalli.

Punjab States Group.—H. H. Raja Anand Chand of Bilaspur; Maharajkumar Balendu Shah; Chaudhri Nihal Singh Taxak.

Eastern States Group I.—N. Madhava Rau, C.I.E.; Rai Bahadur Jala Raj Kanwar; Sarangdhar Das; Yudhisthir Misra.

Eastern States Group II.—Raghuraj Singh; Kishorimohan Tripathi; Ramprasad Potai.

Residuary States Group.—Balwant Rai Gopalji Mehta; Jai Sukh Lal Hathi; Kunwar Shamsher Jang.

11. *The Indian Railways (Second Amendment) Bill*.—Introduced on April 9, 1948.

POLICY AND PROGRAMME

The Dominion Parliament held two sessions, one in November 1947 and the other in January 1948. The combined legislative output of the two sessions was fifty-one bills; seventeen in the November session and twenty-four in the January session. Eleven bills are still pending.

Both sessions, so to say, were Budget sessions. In the November session, the Dominion Parliament was presented with the partition Budget, covering the period August 15, 1947 to March 31, 1948. The annual budget was presented during the January session.

Industrial Policy.—The most notable event was the Government's statement on industrial policy which mentioned the industries in regard to which the State propose to acquire ownership and those which would be subject to State Control. The statement was approved by the Parliament after a full-dress debate.

Indian Banking Abroad.—There are in all 30 branches of Indian Banks abroad. The Government have already taken steps to help Indian Banks to play their legitimate part in the exchange field by providing full facilities.

to all deserving Banks and actively to participate in the foreign trade of the country. The Government while naturally welcoming any move by authorised Indian Banks to increase their share in the business, feel that the facilities at present available through the operation of foreign banks are adequate to meet the needs of India's foreign trade. The establishment of branches has no direct bearing on the finance of foreign trade, which in certain circumstances may be more economically handled by Indian Banks through foreign correspondents.

Increased Production.—Government have a short-term plan for increased production in 42 elected industries, the more important ones being alcohol, automobiles, bichromates, bicycles, austic soda, cement, ceramics, diesel engines, drugs, electric motors, glass, machine tools, watches, metal, paper, plastics, plywood, rayon, refractories, rubber, shipbuilding, silk, soda-ash and super phosphates.

Among important schemes for increased production under consideration are those relating to iron and steel, aircraft, salt and synthetic oil. Provided present expectations are realised, the short-term plans should bear fruit within the next three to five years.

Andamans Forests.—Messrs. Hind Construction Ltd., Dalmia Jain Limited, Himmatnigra Timber Ltd. and Anamallai's Timber Trust Ltd.—the four promoting firms—and the Government with shareholders from the public will form a corporation named the Andamans Forest Industries Ltd. Out of the authorized capital of 25 million rupees 51 per cent of the shares will be held by the Government of India, 40 per cent by the firms, and 9 per cent will be issued to the public. The Corporation will enter into an agreement with Government for working the forest in north and middle Andamans, subject among other things to the condition that the period of the agreement will be 15 years.

Food Agreement With Australia.—Government have entered into an agreement with the Australian Government according to which the latter will supply to India 25 million bushels which is approximately equal to 665,000 tons of wheat during 1948. There is a further provision under the agreement, that if the Australian Wheat Board is able to procure 210 million bushels, a further 4 million bushels will be sold to India by Australia.

India's Export Policy.—The policy of Government is to encourage as far as possible the export of manufactured goods and processed or semi-processed articles with a view to encouraging indigenous industries and the utilization to the fullest extent possible of the supplies of raw material available in the country. The Provincial Government concerned will no doubt consider what facilities should be given in this direction to the various interests concerned.

Nationalisation Of Banks.—The Government of India intend to take steps to nationalise the Reserve Bank of India as soon as possible after September 30, 1948. As regards the Imperial Bank of India, the Government accept the policy of nationalisation, but before that policy is implemented relevant technical questions will have to be examined.

Nationalisation of the Reserve Bank can be effected only after September 30, 1948 when the Reserve Bank ceases to be common banker to India and Pakistan under the terms of the Pakistan (Monetary and Reserve Bank, etc.) Order, 1947. Government propose to take steps to see that the nationalisation of the Bank is effected as soon thereafter as possible.

Government's intention is to acquire its shares at the average of the monthly market value of the shares during the period March 1947 to February 1948, taking the opening quotations for each month and to issue in lieu thereof to the shareholders 3 per cent long-dated stock of equivalent value of appropriate maturity.

In regard to the Imperial Bank of India, Government propose to adopt a similar basis for the acquisition of its share capital. The period for which the average of the market value of the shares is to be taken will be determined at the time of nationalising the Bank.

Government accept the policy of nationalising the Imperial Bank of India but as the Bank has branches outside India, Government propose to examine carefully the various technical questions that would arise in connection with the nationalisation of the Bank before the policy is implemented.

It is not the intention of the Government to nationalise other commercial banks. The Imperial Bank of India, which has been incorporated by a Special Act of the Indian Legislature, stands on a separate footing.

Rail-Road Co-ordination.—Rail-road co-ordination in the matter of passenger transport is proposed to be achieved by the formation of road transport undertakings in which railways would be given a minimum of 20 per cent financial interest.

In the matter of goods transport, the policy of the Central Government is to encourage road transport for short distances and to reserve long distance traffic, except in perishable and fragile goods for the railways. A majority of the Provincial Governments who considered the matter have accepted it and correspondence with the rest is proceeding.

The new concerns are proposed to be operated on a monopolistic basis ultimately.

New Airports.—The Government of India propose to construct new civil aerodromes in 14 places, viz., Ajmer, Aligarh, Berhampur, Calicut, Cuddalore, Dehra Dun, Hubli, Mangalore, Nellore, Ootacamund, Salem, Ratnagiri, Saugor and Surat.

Major construction works are in progress in three international, six major, two intermediate and three minor aerodromes. The works programme is to cover a period of five years.

Ships From Abroad.—The total tonnage of merchant ships purchased from foreign countries during the period from 1st April 1944 to 31st March 1947 was 138,520 gross.

Production Of Aircraft.—The Hindustan Aircraft Limited is at present engaged in the construction of trainer type aircraft under an arrangement with the Percival Aircraft Company, Luton, England. Fifteen such aircraft will be assembled from imported components; five will

be constructed from detailed parts supplied by manufacturers and 30 would be constructed using Indian raw materials to a large extent, with the exception of the engine and instruments. It is expected that this work which is now in hand will be completed in 18 months. The first planes are expected to be ready by August this year.

Aviation Training—A scheme for the training of commercial pilots, ground engineers, and flying control officers is expected to be put into operation during the next cold weather, possibly even earlier.

The present plans of Government contemplate the opening of a flying training and aerodrome school at Allahabad and an aircraft engineering school at Barrackpore. Government have no plans at this stage for opening training schools at other centres.

Import Of Cars—For January-June 1948 licensing period certain monetary ceilings have been fixed for imports of cars and trucks. Licences are issued with the value as the limiting factor, but also with price limits in regards to each car or truck unit. In respect of imports from the U.S.A. the value of a C.K.D. (completely knocked down) car should not exceed Rs. 5,000 and that of a C.K.D. truck Rs. 4,000. In respect of imports from the U.K. the price of a car should not exceed Rs. 6,250 if assembled and Rs. 5,000 if C.K.D. No licences are issued for imports of assembled cars from dollar area. No licences have yet been issued for other countries.

Licence for C.K.D. cars and trucks have been granted so far to firms who have their own assembly plants in India and on the basis of their capacity to assemble components and for assembled vehicles to accredited dealers on the basis of their past imports of particular makes of cars.

Diesel Oil Shortage—The consumption of light diesel oil in India in 1945 was 429,923 tons and in 1946, 379,546 tons. Consumption of

high speed diesel oil in 1945 was 149,535 tons and in 1946, 50,569 tons. The total quantity available in undivided India in 1947 was 462,067 tons of light diesel oil and 62,560 tons of high speed diesel oil. The quantity available for the whole of 1948 is not yet known. On the basis of actual availability for the first quarter of 1948 there should be 265,360 tons of light diesel oil and 30,000 tons of high speed diesel oil for the Indian Union.

The shortage became very pronounced from the beginning of this year. The shortage of light diesel oil and in particular high speed diesel oil is bound to have serious effect on private enterprises as well as on the industrial and agricultural projects sponsored by Government. The possibility of imposing control over consumption with a view to safeguarding the interests of essential consumers is being examined. Government are also taking steps to establish direct contact with the suppliers of oil outside India and those who are responsible for the allotment of petroleum products to this country in order to obtain increased supplies for the remainder of the year.

New Steel Factories—Steps are being taken to set up two new major steel producing units. Each would have 500,000 ingot tons capacity, capable of being doubled. The total estimated capital would be Rs. 480 million. Matters regarding the operation, location, design and construction of the plants and the nature of the foreign technical assistance required are under active consideration.

Government are also giving every assistance to the industry both for their production up to existing capacity and for their schemes of expansion.

Indian Air Services—While the Indian air service to U.K. has already started (June 1948), the question of establishing Indian air services to neighbouring foreign countries is under consideration by the Government of India.

Pakistan

(A Background)

PAKISTAN was established on August 15, 1947 as a Dominion by the division of the Indian sub-continent, according to an agreed plan between the British Government and the two main Indian political parties—the Indian National Congress and the All-India Muslim League. The word Pakistan has variously been construed but the general Muslim view is that it stands for all that is pure and noble in Islam.

The conception of Pakistan was first put forward by Sir Mohammad Iqbal in the course of his presidential address to the Muslim League in December 1930. The scheme was, however, not officially adopted by the Muslim League, and remained an ideal till after a decade. Meanwhile, Mr. C. Rahmat Ali, a barrister, founded the Pakistan movement in 1931 with the object of dividing India into Pakistan and Hindustan. His Pakistan comprised the Punjab, North-West Frontier (the land of the Pathans), Kashmir, Sind and Baluchistan, and the rest was Hindustan. This proposal was circulated to members of the First Round Table Conference, but the Muslim League spokesmen did not at this stage officially sponsor the scheme in spite of the general sympathy of Muslims for the movement.

QUAID-E-AZAM

Although, since its inception in 1905, the Muslim League sought to arouse political consciousness among Muslims, this organisation did not become very powerful till Quaid-e-Azam Jinnah became its President at the Bombay session in 1926. The next ten years saw slow but steady consolidation of the Muslim League under his leadership. All the rival Muslim groups and parties, both inside and outside the Indian National Congress, were losing ground rapidly by the time the Second Round Table Conference concluded in London. As the Congress and the Muslim League could not reach any agreement on a future constitution the then British Prime Minister Mr. Ramsay MacDonald gave a decision generally called the Communal Award under which the Muslims got separate representation. When the first elections were held under the 1935 Government of India Act reforms, the Muslim League did not win as great a victory as was expected, although a majority of Muslim seats were captured by it. Nothing daunted, Mr. Jinnah continued to organise provincial branches. The hope that under the new constitution both Congress and the League would work Provincial Autonomy in such manner as would prepare them for a joint shouldering of higher responsibility under a federal centre, as conceived under the 1935 India Act, disappeared when the Muslim League declined to sign the Congress pledge and merge its parliamentary party with that of the Congress, a condition on which the Congress insisted for the formation of Coalition Ministries. The Quaid-e-Azam refused to convert the League into as he called it "an understudy of the Congress."

The Lucknow session of the Muslim League in the autumn of 1937 found the League the most authoritative and representative organisation of the Muslims of India, although it was not the only spokesman for the community as many Muslims still remained outside the League either as members of the Congress or as members of other parties. When the Congress Ministries took non-League Muslims into the Government, it was construed as adding insult to injury, and a wide-spread campaign against the Congress administration ensued.

H. E. Quaid-e-Azam Mahammad Ali Jinnah

The outbreak of the Second World War came also as a blessing in disguise for the Muslim League which enhanced its power and prestige among the Muslims and its bargaining position with the British Power. Again the Congress attitude of neutrality to the war and its opposition to the war effort also helped the Muslim League whose Working Committee declared that it was ready to offer whole-hearted co-operation if the Government recognised the League as the sole representative organ of the Muslims. The rift with the Congress became wider still when the resignation of Congress Ministries was celebrated as a "Day of Deliverance" by Muslim Leaguers throughout India.

In October 1939, the then Viceroy, Lord Linlithgow, initiated a series of negotiations in order to bring about rapprochement between the two parties. One of the purposes of the Conference was to make known the British war aims *vis-a-vis* India. The subsequent Viceregal pronouncement was hailed as a charter of freedom for minorities, particularly for the Muslims of India.

THE RESOLUTION

The next and in fact, the most important landmark in the history of Indian Muslims, is the resolution passed at the Lahore session of the Muslim League, urging the establishment of Pakistan. The resolution stated:

"While approving and endorsing the action taken by the Council and the Working Committee of the All-India Muslim League, as indicated in their resolutions dated the 27th August, 18th September, 22nd October 1939, and 3rd February 1940, on the constitutional issue, this session of the All-India Muslim League emphatically reiterates that the scheme of federation embodied in the Government of India Act 1935 is totally unsuited to, and unworkable in the peculiar conditions of this country, and is altogether unacceptable to Muslim India.

"It further records its emphatic view that while the declaration dated the 18th October 1939 made by the Viceroy on behalf of His Majesty's Government is reassuring, in so far as it declares that the policy and plan on which the Government of India Act 1935 is based will be reconsidered in consultation with the various parties, interests and communities in India, Muslim India will not be satisfied unless the whole constitutional plan is reconsidered *de novo* and that no revised plan would be acceptable to the Muslims unless it is framed with their approval and consent.

"Resolved that it is the considered view of this session of the All-India Muslim League that no constitutional plan would be workable in this country or acceptable to the Muslims, unless it is designed on the following principle—*viz.*, that geographically contiguous units are demarcated into regions which should be so constituted with such territorial adjustments as may be necessary, that the areas in which the Muslims are numerically in a majority as in the north-western and eastern zones of India, should be grouped to constitute "independent states" in which the constituent units shall be autonomous and sovereign.

"The adequate, effective and mandatory safeguards should be specifically provided in the constitution for minorities in these units and in the regions for the protection of their religious, cultural and economic, political, administrative and other rights and interests, in consultation with them; and in other parts of India where the Mussalmans are in a minority, adequate, effective mandatory safeguards shall be specifically provided in the constitution for them and other minorities for the protection of their religious, cultural, economic, political administrative and other rights and interests in consultation with them.

"The session further authorises the Working Committee to frame a scheme of constitution in accordance with these basic principles providing for the assumption finally by the respective regions of all powers such as defence, external affairs, communication, customs and such other matters as may be necessary."

In a nutshell the resolution intended that the provinces of Sind, Punjab, N.W.F.P. and Baluchistan in the north-west region and Bengal in

the eastern region, should be constituted into independent states, and there should be no common centre for the Hindustan and Pakistan parts of the sub-continent.

THE BIRTH

From this day onwards, Quaid-e-Azam Jinnah who had become the permanent and undisputed President of the Muslim League, refused to consider any arrangement which did not recognise the validity of the two-nation theory. He explained that Pakistan alone would save Muslims from the tyranny of the Hindu majority in India. The two-nation theory caught the imagination of the Muslim mind and the stronger the Congress objection the more insistent the Muslims became. At the Madras session of the Muslim League in 1941, the Quaid-e-Azam called on the British Government to divide India and establish separate western and eastern zones where Muslims were in majority so that they were free to manage their affairs as they chose while adequate safeguards were to be provided for Muslims in Hindu areas. Later the League declared its opposition to the Cripps proposals which conceded the principle of provincial autonomy partly on the ground that the Congress had already rejected them and partly that they did not go far enough. It was about this time that the Quaid-e-Azam sought to establish League Ministries in provinces where Muslims were in a majority, and except in Sind and N.W.F.P. he quickly succeeded; later Sind also swung into line when Khan Bahadur Allahbakhshi, Sind's non-League Premier was dismissed from office, for renouncing his titles.

The "Quit India" movement started by Mahatma Gandhi in 1942 actually gave the Muslim League a new slogan "divide and quit". But efforts were made to find a solution by both Mr. C. Rajagopalachari the Madras Congress leader, and later by Mahatma Gandhi himself, which would meet the League claim for Pakistan without loss of Indian unity. But it was too late. Still a last effort was made by the British Cabinet Mission consisting of Lord Pethwick-Lawrence, Sir Stafford Cripps and Mr. A. V. Alexander to preserve Indian unity. These three formulated a scheme which conceded the substance of the League demand of sovereign autonomous governments in the Western provinces of the Punjab, Sind, N.W.F.P. and Baluchistan, and the eastern provinces of Bengal and Assam, with an All-India federation having only three common subjects of defence, communications and foreign affairs. The League agreed; but the Congress rejected the grouping principle unless the provinces were given the right to opt out of a group, a right which the League would not allow. This again resulted in deadlock and having failed in their last effort to maintain the unity of India the British Government at last decided, with the agreement of the two parties to divide the country. And so a new state called Pakistan came to be established.

Pakistan is the fifth biggest state in the world, and the largest among Muslim states. It is bifurcated into two zones, separated from each other by over a thousand miles—one lying

to the north-west of the Indian Union and the other in the east sandwiched between two of India's eastern-most provinces. It comprises Sind, N.W.F.P., Baluchistan and the western part of the Punjab in the west, and the eastern part of Bengal coupled with the Sylhet district of Assam in the east.

PAKISTAN CONSTITUENT ASSEMBLY

The first meeting of the Pakistan Constituent Assembly took place in the Assembly Chamber at 10 a.m. on Sunday August 10. Mr. Liaquat Ali Khan, the Prime Minister proposed and Khwaja Nazimuddin seconded Mr. Jogendra Nath Mandal to be temporary Chairman. Taking the Chair, Mr. Mandal said:

"It is hardly necessary for me to impress on you the gravity and solemnity of the occasion. I hope you will agree with me when I say that the free independent state of Pakistan will bring to one and all citizens, prosperity, happiness and peace. I believe and it is my firm conviction, that the state of Pakistan will be one of the most powerful, resourceful and magnificent states in the world.

"I cannot help expressing on this momentous occasion my gratitude to and admiration of the Muslims of India, for Quaid-e-Azam Mohammad Ali Jinnah, the great creator and architect of the state of Pakistan. I have every confidence that under his able leadership, astute statesmanship, and through his untiring devotion to the cause of Pakistan, all prosperity and happiness will come to the people of Pakistan. It is needless for me to reiterate that Quaid-e-Azam Mohammad Ali Jinnah is the greatest statesman, and one of the greatest men in the world today.

"I would like to point out that not only will the people of Pakistan and India, but the people of the whole world, look to the Pakistan Constituent Assembly and find for themselves that the Muslim community which was determined to acquire their legitimate rights and privileges and determined to have a separate state of Pakistan, will never lack in the quality of doing not only justice and fairness, but acts of generosity towards the people of minority communities."

ELECTION OF PRESIDENT

The election of the President took place the next day.

Quaid-e-Azam Jinnah was proposed and seconded by seven members for the Presidency and as there was no other candidate, he was declared elected. The President was then congratulated by Messrs. Liaquat Ali Khan, M. A. Khuroo, Abdul Kasem Khan, Begum Shah Nawaz (League), Jogendra Nath Mandal (Depressed Class League) and Kiran Shanker Roy (Congress).

Mr. Liaquat Ali Khan said: "You have been rightly described as the architect of Pakistan and what greater fortune could we have than to have you as the President of this sovereign body to build the State which we have got through your devotion, untiring zeal, selfless service and unshakable determination?"

The Congress leader, Mr. Kiran Shanker Roy, said that having been a dreamer of Pakistan, it was but fair that Mr. Jinnah should also have the privilege of giving shape to his dream and be architect of its constitutional structure. He said that the Quaid-e-Azam was a great leader of Muslims and now the time had come for him to take up the leadership of the State which included not only Muslims but all communities.

The President, Quaid-e-Azam Jinnah, thanked the members for their tributes and said:

"I sincerely hope that with your support and your co-operation, we shall make this Constituent Assembly an example to the world." He said that they had the very onerous and responsible task of framing Pakistan's future constitution. They had also to function as a full and complete sovereign body and as the federal legislature of Pakistan.

SOCIAL EVILS

Describing the functions of the new State, the Quaid-e-Azam said:

"The first duty of a government is to maintain law and order, so that the life, property and religious beliefs of its subjects are fully protected by the State. The second thing that occurs to me is this: one of the biggest curses from which India is suffering—I do not say that other countries are free from it, but I think our condition is much worse—is bribery and corruption. That really is a poison. We must put that down with an iron hand, and I hope that you will take adequate measures as soon as it is possible for this Assembly to do so. Blackmarketing is yet another curse. Now you have to tackle this monster too which today is a colossal crime against society in our distressed condition when we constantly face shortage of food and other essential commodities of life."

The Quaid-e-Azam continued: "I know there are people who do not quite agree with the division of India and the partition of the Punjab and Bengal. Much has been said against it, but now that it has been accepted, it is the duty of every one of us loyally to abide by it and honourably act according to the agreement which is now final and binding on all. A division had to take place. In my judgment, there was no other solution, and I am sure future history will record its verdict in favour of it. And what is more, it will be proved by actual experience as we go on that that was the only solution of India's constitutional problem.

"Now if we want to make this great State of Pakistan, happy and prosperous, we should wholly and solely concentrate on the well-being of the people and especially masses of the poor. If you will work in co-operation, forgetting the past, burying the hatchet, you are bound to succeed."

MAJORITY AND MINORITY

"We should begin to work in that spirit and in course of time all these angularities of the majority and minority communities—the Hindu and the Muslim community—because even as regards Muslims you have Pathans,

Punjabis, Shias, Sunnis and so on, and among the Hindus, you have Brahmins, Vishnavas, Khatris, and also Bengalees, Madrasis and so on,—will vanish. Indeed, if you ask me, this has been the biggest hindrance in the way of India's attaining its freedom and independence and but for this we would have been free peoples long ago. No power can hold another nation, and especially a nation of four hundred million souls in subjection. Nobody could have conquered you, and even if it had happened nobody could have continued its hold on you for any length of time but for this. Therefore, we must learn a lesson from this. You are free, free to go to your temples, you are free to go to your mosques or to any other places of worship in this State of Pakistan. You may belong to any religion, or caste or creed—that has nothing to do with the business of the State. We are starting with this fundamental principle that we are all citizens and equal citizens of one State."

In conclusion, the President said: "I shall always be guided by the principles of justice and fairplay, I am sure that with your support and co-operation, I can look forward to Pakistan becoming one of the greatest nations of the world."

The President then read the goodwill message he had received from the United States of America which hoped that the Constitution which the Pakistan Assembly would present to the world would reflect the steadfast devotion of its leaders to the principles of democracy and peace.

NATIONAL FLAG

Moving the resolution on the National Flag of Pakistan, Mr. Liaquat Ali Khan said that it was three fourth green with inset of Crescent and Star, and one fourth white at mast end. He then unfurled it before the House saying that it would stand for freedom, liberty and equality. "This flag will protect and defend the integrity of the State. We have been exploited for the last two hundred years and we should be the last people to use our flag for the purpose of exploiting other nations. Therefore, this flag of freedom will not only be for the people of Pakistan; this flag will be an emblem of peace to help in maintaining the peace of the world."

Then the West Punjab Congress member, Mr. Bhim Sen Sachar, asked the President whether he would be permitted to address the House in Hindustani. The President ruled that the language of the House was English, unless any member was unable to express himself adequately in English. Speaking in English, Mr. Sachar suggested a Committee of seven members to determine the design of the flag and report by next morning as the flag presented to the House by Mr. Liaquat Ali Khan did not have the previous approval of the minorities concerned.

The mover Mr. Liaquat Ali Khan, explained that as they had to have a flag on Pakistan Dominion Day (August 14) and as the time factor was important, he could not consult all members including even Muslim members. He pointed out that the white portion stood for the minorities. He asked the mover not

to press his amendment. The mover however pressed the amendment which was negatived. The original motion on the flag was then accepted.

The President nominated the following members on the panel of Chairmen: Mr. Taimuzuddin Khan, Dr. Omar Hayat Malik, Khan Sardar Bahadur Khan and Kiran Shanker Roy. No division was called during the session.

COMMITTEES

The following members were elected to serve the Committee on Rules of Procedure:

Mr. M. H. Gazdar, Mr. Dhirendranath Datta, Khan Sardar Bahadur Khan, Mr. Taimuzuddin Khan, Mr. Nur Ahmed, Mr. Nazir Ahmed Khan and Iqbal Awa'ar Narain Gujral. The Hon'ble Mr. Ismail Chundrigar was appointed Chairman of the Committee.

The Assembly then resolved to appoint the following Committee to advise the Assembly on Fundamental Rights of Citizens of Pakistan and on matters relating to the minorities with powers to the President to nominate not more than seven other members who need not be members of the Constituent Assembly.

Sardar Abdur Rab Nishtar, Dr. Mahmood Hussain, Mr. Bhim Sen Sachar, Mr. M. A. Khuroo, Sheikh Karamat Ali, Prof. Rajkumar Chakravarty, Hon'ble Ghazanfar Ali Khan, Mr. Prem Nari Barma, Hon'ble Fazlur Rahman, Begum Shah Nawaz, Mr. Bhirat Chandra Mandal, Dr. Ishtiaq Hussain Quershi, Mr. Abdul Kasim Khan and the Hon'ble Jogendra Nath Mandal.

The Assembly passed a resolution moved by Sardar Abdur Rab Nishtar authorising the President to set up a Committee in such a manner as he may from time to time determine for the purposes of negotiating with representatives of Indian States, Tribal Areas, Excluded Areas and Partially Excluded Areas, regarding their participation and representation in the Constituent Assembly.

KING'S MESSAGE

On August 14, the Governor-General of India, Lord Louis Mountbatten, having arrived in procession with the President of the Constituent Assembly of Pakistan, Quaid-e-Azam Jinnah took his seat. His Excellency read out His Majesty the King's message which stated.

"I send you my greetings and warmest wishes on this great occasion when the new Dominion of Pakistan is about to take its place in the British Commonwealth of Nations. In thus achieving your independence by agreement, you have set an example to all freedom loving people throughout the world.

"I know that I can speak for all sections of opinion within the British Commonwealth when I say that their support will not fail you in upholding democratic principles. I am confident that the statesmanship and spirit of co-operation which have led to the historic developments you are now celebrating, will be the best guarantee of your future happiness and prosperity.

"Great responsibilities lie ahead of you and your leaders. May the blessing of the Almighty sustain you in all your future tasks. Be assured always of my sympathy and support as I watch your continuing efforts to advance the cause of humanity."

LORD MOUNTBATTEN'S PLEA

His Excellency Lord Mountbatten said: "Tomorrow two new sovereign states will take their place in the Commonwealth; not young nations but heirs of old and proud civilisations; fully independent states whose leaders are statesmen already known and respected throughout the world, whose poets and philosophers, scientists and warriors have made their imperishable contributions to the service of mankind; not immature governments or weak, but fit to accept their great share of responsibility for the peace and progress of the world."

"The birth of Pakistan is an event in history", added His Excellency, and went on to pay a tribute to Quaid-e-Azam Jinnah, the Pakistan Governor-General. He said: "All this has been achieved with toil and sweat. I wish I could say also without tears and blood, but terrible crimes have been committed. It is justifiable to reflect however that far more terrible things might have happened if the majority had not proved worthy of the high endeavour of their leaders, or had not listened to that great appeal which Mr. Jinnah and Mahatma Gandhi together made and which the respective future governments reiterated in a statement in Partition Council. The two governments declared that it is their intention to safeguard the legitimate interests of all citizens irrespective of religion, caste or sex. Both Governments further undertook that there shall be no discrimination against those who, before August 15, may have been political opponents. The honouring of these words will mean nothing less than a charter of liberty for a fifth of the human race."

Striking a touching note, Lord Mountbatten said: "This is a parting between friends who have learned to honour and respect one another, even in disagreement. It is not an absolute parting, I rejoice to think, not an end of comradeship. Many of my countrymen for generations have been born in this country, many lived their lives here; and many have died here. Some will remain for trade and commerce; and others in Government service, and in the Armed Forces who count it an honour they have been invited to serve you. During the centuries that British and Indians have known one another, the British mode of life, customs, speech and thought have been profoundly influenced by those of India, more profoundly than has often been realised."

AKBAR'S RULE

His Excellency then reminded the audience of Akbar's rule whose reign was marked by perhaps as great a degree of religious and political tolerance as has ever been known before or since. "Akbar's tradition has not always been consistently followed by British or Indians, but I pray for the world's sake, that we will hold fast, in the years to come, to the principles that this great ruler taught us. May Pakistan

prosper always. May her citizens be blessed with health and happiness. May learning and the arts of peace flourish in her boundaries, and may she continue in friendship with her neighbours and with all nations of the world," Lord Mountbatten concluded.

The President requested the Governor-General to convey to His Majesty the King an assurance of the goodwill and friendship of Pakistan for the British nation and His Majesty as the crowned head of the British Government.

"I thank your Excellency for your expressions of goodwill and good wishes for the future of Pakistan," said the Quaid-e-Azam. "It will be our constant effort to work for the welfare and well-being of all communities in Pakistan. The tolerance and goodwill that the great Emperor Akbar showed to all the non-Muslims is not of recent origin. It dates back thirteen centuries ago when our Prophet not only by words but by deeds treated the Jews and Christians handsomely after he had conquered them. He showed to them the utmost tolerance and regard and respect for their faith and beliefs. The whole history of Muslims, wherever they ruled, is replete with those humane and great principles which should be followed and practised by us."

FRAMING OF CONSTITUTION

Although preliminary preparations have been made, the Pakistan Constituent Assembly has not yet undertaken the actual framing of the Dominion constitution despite the fact that it is eight months since Pakistan was established.

Two unexpected developments have caused delay; firstly, preoccupation of both the Government and the people with the many-sided problems of rehabilitation and resettlement of refugees; and secondly, the unsettled condition involved in the mass exchange of population between the two Dominions.

Quaid-e-Azam Jinnah, Pakistan's Governor-General at a function held in honour of the Prophet's birthday at the end of January 1948, indicated that the future constitution of Pakistan would be based on Islamic principles and minorities would be treated justly, fairly and even generously. Speaking again at the Royal durbar at Sibi on February 14, the Quaid-e-Azam revealed that "It may take 18 months or two years before the final constitution of Pakistan, framed by the Constituent Assembly, can come into operation."

Meanwhile, in order to enable the Pakistan Governor-General to run the administration and meet emergencies, the Pakistan Assembly at its last session passed a bill amending the Indian Independence Act providing for extension of the period of adaptation which ended in March this year by a further period of one year.

During the three-day session when the Assembly met as a constitution-making body on February 24, 25 and March 2, it passed the report of the Committee on Rules of Procedure. The Committee made several departures from the Indian Central Assembly rules which however formed

the basis of its report. It was decided to have no Speaker but only a Deputy President as Qaid-e-Azam was already President. Mr. Taimuzuddin Khan, a former Minister of undivided Bengal and a politician of vast parliamentary experience was elected by the House unanimously as its Deputy President.

REDISTRIBUTION OF SEATS

The second important decision taken during the session was in regard to redistribution of seats in the Assembly necessitated by the mass exchange of population that had taken place since the June 3 plan was announced. The composition of the present Assembly, which has a seat for every million of population, is as follows: East Bengal including Sylhet 44 seats (31 Muslim and 13 general); West Punjab 17 seats (12 Muslim, 3 general and 2 Sikh); Sind 4 (3 Muslim, and 1 general); North-West Frontier 3 (all Muslim); and Baluchistan 1 (Muslim) making a total 69 seats.

Since the last session, a majority of non-Muslims of the West Punjab have migrated followed by their representatives in the Pakistan Assembly. Mr. Jairamdas Daulatram elected from the Sind general seat resigned from the Assembly last September. In East Bengal, Mr. Kiran Shanker Roy, leader of the Congress party in Pakistan, resigned his seat and went to West Bengal. There has been an unprecedented exodus of non-Muslims from Western Pakistan and, moreover, the Muslim population in the West Punjab has increased by two millions, according to official estimates. On March 11, the Qaid-e-Azam issued an order which enabled former members of the Punjab Assembly belonging to East Punjab becoming members of the West Punjab Assembly.

The Pakistan Constituent Assembly appointed a committee with Mr. Ghazanfarali Khan, Pakistan Minister for Refugees, as Chairman and Begum Shah Nawaz, Kwaja Shahbuddin, Mr. M. A. Khuhro (Sind Premier) and Congressman Mr. Dhirendranath Datta as members to consider the question of addition and/or redistribution of seats in the Assembly and report their conclusions by April 1, 1948. Meanwhile, the Pakistan Government took a census of the population also. A questionnaire was also issued asking the public to suggest how best representatives of refugees could be chosen without violating the principle of the British Cabinet Mission's plan on which the present Assembly is based. The public was asked in the course of the questionnaire whether after necessary modifications in the existing rules, the representatives of refugees should be nominated by the Qaid-e-Azam.

While the position of Hindu and Sikh representatives has become anomalous with the migration of most of their constituents in West Punjab and Sind, the Pakistan Assembly Committee has to consider whether some representation should not be given to other smaller but influential minorities like the Parsis, the Anglo-Indians or Indian Christians. If each of these minorities cannot get a seat by strength

of number, the Committee has to find a device whereby they could separately or jointly get representation.

While it is impossible to forecast the nature of the recommendations, it is obvious that Western Pakistan will get much more Muslims representation than it has at present in the Assembly.

Another important step by the Pakistan Assembly during the budget session was to amend the Government of India Act in order to transfer certain items (including the sales tax) from provincial schedule to the Centre. This was necessary as the Pakistan Government, after consulting Provincial Governments, has decided to share the revenue from the sales tax among themselves.

COMMITTEES

The Constituent Assembly has also appointed a number of committees to deal with tribal areas, States acceding to Pakistan, fundamental rights and rights of minorities in order to prepare the ground for constitution-making as early as possible.

According to Pakistan's interpretation of the British Cabinet Mission plan, all the States whatever their geographical position or the character of their population were given the option to accede to either of the Dominions. This is the main reason why Pakistan approved of the accession to Pakistan of Junagadh, which is situated in Kathiawar, and has a Hindu majority and Muslim ruler. Both Junagadh and Manavadar are expected to get a seat. Other States which have joined are Bahawalpur, Khairpur, Dhr. Swat, Chitral, Kharan, Las Bela and Kalat, but the method and manner of their representation has to be determined by the committee appointed for the purpose of negotiating with tribal areas and people.

The following are the personnel of the States Negotiating Committee, the Tribal Areas Negotiating Committee and the Fundamental Rights Committee respectively:

STATES: Mr. Liaquat Ali Khan (Chairman), Mr. Ghazanfarali Khan, Sardar Abdur Rab Nishtar, Kwaja Shahabuddin and Pir Ilahibaksh.

TRIBAL AREAS: Mr. Liaquat Ali Khan (Chairman), Sardar Abdur Rab Nishtar, Sardar Aurangzeb Khan, Sardar Bahadur Nawab Mohammad Khan Jozgazi, Prof. L. K. Hyder, Pir Sahib of Manki Sharif and Kwaja Nazimuddin.

FUNDAMENTAL RIGHTS AND MINORITIES RIGHTS COMMITTEE: C. E. Gibbon (Anglo-Indian leader in Pakistan), Dewan Bahadur S. P. Singha (Indian Christian leader), Sir Mohammad Zafrullah (Pakistan Minister for Foreign Affairs), Mr. Jamshed Nusserwanji (leader of Parsi community in Karachi), Chaudhri Nazir Ahmed Khan, Kwaja Shahbuddin and Babu Phani Bhushan Barua (members of the Pakistan Constituent Assembly).

TRIBUTES TO MAHATMA

Meeting for the first time since the establishment of Pakistan as legislative body, the Pakistan Assembly held 12 sessions from February 23 to March 12 during which it considered and passed the first budget of the new Dominion, passed six official bills, appointed 17 advisory committees and asked 218 questions.

On the opening day, with the Qaid-e-Azam in the chair, the Assembly made brief references to the passing away of Mahatma Gandhi which members said was an irreparable loss to India and Pakistan at the present juncture. Mr. Liaquat Ali Khan, leader of the House, said that Gandhiji was one of the greatest men of our times and the prominent place which the Congress Party enjoyed was due mostly if not entirely to him. He hoped that Gandhiji's mission of establishment of peace and communal harmony which could not be realised in his life-time would be achieved after his death.

The Premiers of Eastern Pakistan, Sind and the Finance Minister of West Punjab and the leader of the Congress Party in the Pakistan Assembly also paid their tributes to Gandhiji. The President, Qaid-e-Azam who shared the sorrow associated himself with the tributes paid to his greatness said: "Mr. Gandhi was a man of principle and died a noble death in the discharge of his duty."

PAKISTAN'S FIRST BUDGET

On February 28, the Pakistan Finance Minister Mr. Ghulam Mohamad presented the budget to Parliament. The budget included the railway income and expenditure as follows:

GROSS REVENUE:	(In lakhs Rs.)	
	1947-48	1948-49
Principal heads of revenue ..	17.37	31.20
Railways and Posts and Telegraphs ..	20.10	36.89
Other heads ..	5.32	11.48
TOTAL ..	42.79	79.57

GROSS EXPENDITURE:		
Defence Services ..	34.24	37.11
Railways and Posts and Telegraphs ..	22.15	37.15
Other Expenditure ..	9.81	15.42
TOTAL ..	66.20	89.68

DEFICIT ..	-23.41	-10.11
Effect of taxation proposals +	40	+10.10

FINAL POSITION .. -23.01 + 5

During the current year, the loss on Pakistan railways was estimated at Rs. 150 lakhs but next year there would be a small surplus.

Lack of industrial development (a legacy of the past), two million refugees in excess of vacancies from Pakistan, disruption of banking and insurance, disproportionately heavy burden of defence expenditure and loss on working of

strategic railways and heavy responsibility of maintaining proper defence arrangements on a long frontier were some of the factors which the Finance Minister had to take into account in the preparation of his budget.

Striking a note of optimism, the Finance Minister emphasized: "Our future lies in tapping the vast natural resources of Pakistan which are simply waiting to be harnessed. We have been endowed by Nature with abundant resources and it is now up to us to exploit these resources and to use them for the happiness and welfare of our people. The development of industry offers vast possibilities both in view of Pakistan's natural resources as also the existence of a large and ready demand for consumers goods."

The Finance Minister revealed that Pakistan would go to the outside world to obtain substantial capital, capital goods and adequate technical skill as that was the only way in which Government could effectively reconstruct the economic and financial life of Pakistan.

FINANCES

The Finance Minister said that India had paid Rs. 50 crores out of Rs. 55 crores of Pakistan's share of cash balances. He hoped that the balance and other aspects of Indo-Pakistan financial agreement would be implemented. He also referred to Anglo-Pakistan sterling balances settlement as a result of which Pakistan started its carrier with £20 million as her share of releases up-to-date. He thought that £3.3 million set apart for conversion to dollar and other hard currencies fell short of Pakistan's requirements and so he had to cut down their imports from hard currency countries.

The Finance Minister also revealed the proposal for the establishment of a State Bank for Pakistan with a total paid-up capital of Rs. 3 crores of which 51 per cent would be taken out by the State and 49 per cent would be open to public subscription. He said that the State Bank would be open as soon as negotiations now being conducted with India are completed.

Other features of the budget speech were: a provision of Rs. 10 crores for loan to Provincial Governments in the estimates for 1948-49; grant of 1.5 crores to Sind, West Punjab and North-West Frontier for refugee relief; setting up of a refugee rehabilitation corporation with a capital of Rs. 3 crores of which the Centre would subscribe Rs. 1 crore; revision of the allocations of revenue between Centre and Provinces in the light of the new set-up; setting up of an industrial finance corporation to assist industry; grant of five lakhs for scheduled classes' education, and Rs. 10 lakhs for tribal areas and one lakh for an academy to be named after Sir Mohammad Iqbal.

NEW TAXES

The Finance Minister also hinted at a rational readjustment of the entire tax structure. He also referred to the appointment of a Pay Commission for Pakistan to fix scales of pay for all cadres of Pakistan Government servants in the light of the requirements of the State and commensurate with the revenues of the Dominion.

The following were the new taxation proposals announced by the Finance Member to cover the deficit:

(1) Central sales tax (after giving a share to the provinces) Rs. 375 lakhs; (2) Cotton export duty at Rs. 60 per bale yielding Rs. 2 crores; (3) 10 per cent *ad valorem* export duty on hides and skins to yield Rs. 80 lakhs; (4) 10 per cent *ad valorem* export duty on cotton seeds to yield Rs. 30 lakhs; (5) Increased import duty on sugar (Rs. 20 per cwt.) and sugar-candy (Rs. 21 per cwt.), increased import duty on books and shoes (40 per cent), further surcharge on duties on beer, wines and spirits, tobacco, cigars and cigarettes, motor cars, wireless sets, with higher charges on more expensive goods, altogether yielding Rs. 135 lakhs; (6) Import and excise duty on kerosene to be raised from three annas to four annas per gallon, and immediate increase in petrol tax from 12 annas to 15 annas per gallon, (this may go up to Rs. 1-2-0 per gallon but combined provincial and central taxes will not exceed Rs. 1-2-0) together expected to yield Rs. 50 lakhs; (7) Increase in Hookah tobacco excise duty from 3 annas to 12 annas per pound, biri tobacco from nine annas to 12 annas per pound, and betul nut duty two annas per pound, all these duties yielding Rs. 120 lakhs; (8) Post card to cost nine pies instead of half an anna, postal packets to cost one anna instead of nine pies for the first five tolas and 6 pies instead of 3 pies for additional 2½ tolas, airmail fees raised from one anna to one and half anna per tola on letters and six pies to nine pies on post cards, all yielding Rs. 26 lakhs.

The Finance Minister said that prospects of estate duty on both agricultural and non-agricultural property were being explored.

CONCESSION TO INDUSTRY

Announcing his concessions to new industries to give a fillip to industrialization in Pakistan, Mr. Ghulam Mohamad said that for five years new industrial undertakings would be exempt from direct taxation on profits not exceeding 5 per cent. In order to attract new industries from abroad, he said that besides initial depreciation of 15 per cent on new buildings, a special depreciation of 20 per cent for another five years would be permitted on machinery and plant brought into use for the first time in Pakistan even if it had been previously used elsewhere.

When the general debate took place on March 1, Mr. Ghulam Mohamad was congratulated on presenting the State's first budget which far from being a deficit one actually showed a surplus. By March 6, only 14 demands out of 63 had been voted and so the rest of the grants had to be passed by guillotine.

The budget was finally passed on March 8, and the bill to give effect to the financial proposals as from April 1, 1948 were also passed into law. In the same session the Finance Minister introduced a Bill to further amend the Income-tax, Excess Profits Tax and Business Profits Tax Acts.

The first division in the Pakistan Parliament took place over a resolution of the Commerce Minister, Mr. Ismail Chundrigar, to extend for

a year the Pakistan Government's control over eight essential commodities. As only the Congress Party opposed it, it was passed by 19 votes against 6. There was however strong criticism from all parts of the House on the way controls were being administered in Pakistan resulting in alleged corruption, profiteering and black-marketing. The Commerce Minister admitted that the controls were considered irksome by all and that he would shortly convene a conference of Provincial Government representatives and non-officials connected with trade to decide which of the articles could be freed from restrictions. He assured the House that controls would not be maintained a day longer than necessary.

The House also passed the Sales Tax Bill and a Bill to amend the Railways Transport of Goods Act of 1947 on March 11. The last day of the session saw the members voting an allowance for themselves at the rate of Rs. 45 per diem for days each of them attended the session or committees.

The House then adjourned *sine die* after appointing the following committees for association with administrative departments concerned such as Standing Advisory Committee for the Ministry of Law and Labour; Standing Committee on Pilgrimage to Mejjaz; Advisory Committee for the Ministry of Interior, Information and Education; Committee to review organization, structure, and the level of expenditure of Ministries, and Departments, etc. (See personnel for a full list of the Committees).

AREA, POPULATION AND RESOURCES

The Dominion of Pakistan comprises two stretches of territory one situated to north-west of the Indian Union and the other in the east of it, separated from each other by a distance of over 1,000 miles. The total area of Pakistan is 233,000 square miles approximately, or 14.7 per cent of former British India plus the Indian States.

The area of Western Pakistan comprising West Punjab, North-West Frontier Province, Sind and Baluchistan is 179,000 square miles, while the area of Eastern Pakistan comprising Eastern Bengal and the district of Sylhet, amalgamated to it as a result of the Radcliffe Award, is 54,100 square miles.

The population of Pakistan, as it existed on August 15, 1947, was 65.6 millions of which 47.8 millions are Muslims. Western Pakistan had 23.8 millions of which 18.2 millions were Muslims, while Eastern Pakistan had 41.8 millions of which 29.6 millions were Muslims. As a result of mass exchange of populations in the two parts of the Punjab and the continued exodus from Sind, North-West Frontier, Baluchistan and East Bengal of Hindus, the whole population complexion has changed since the Dominion was established. In the West Punjab, for instance, there are today 2 million more Muslims than there were before the partition of that province while practically 2 million Sikhs, and considerable percentage of the Hindu population have migrated from there to East Punjab. In Sind also, out of a population of

14 lakhs of Hindus, over 6 lakhs have left that province for India and it is expected that the majority of Hindus will leave Sind. From East Bengal, about 40 lakhs of Hindus are reported to have migrated to West Bengal. Thus the Sikh and Hindu percentage has been substantially reduced while that of Muslim in all these provinces has proportionately increased.

The Pakistan Constituent Assembly appointed a committee with the Pakistan Refugee Minister, Mr. Ghazanfarali Khan as chairman, to study the nature and complexion of the existing population, on the basis of census figures collected by the Pakistan Government recently, and report to the Assembly by April as to how redistribution of seats in the Assembly should be effected so as to do justice to the areas as well as communities concerned. According to the Cabinet Mission's plan, there should be a seat for every million of population. Although the final conclusions of this committee cannot be anticipated, Punjab's Muslim strength in the Constituent Assembly would definitely be increased as a result of any consequent change in the composition of the Assembly.

AN AGRICULTURAL COUNTRY

Pakistan is essentially an agricultural country. According to 1938-39 figures, the total sown area in Pakistan was 43.9 million acres as against 209.4 million acres sown in British India. The percentage of the Pakistan area to that of India was 20.9.

Food Crops.—The two main food crops of Pakistan are wheat and rice and cash crops cotton and jute. Rice is the staple food of East Bengal while wheat is the staple food of Western Pakistan. Wheat is cultivated mostly in Western Pakistan and rice in almost all parts of the Dominion. The total area under rice in 1944-45 was 25.6 million acres as against 78.8 million acres in India. Pakistan produced 8.9 million tons of rice which is 33.7 per cent of the total Indian yield. Sind produces 5 lakhs tons of rice of which in normal years it can export 200,000 tons. West Punjab has an exportable surplus of about 150,000 tons of the total production of 430,000 tons. In 1944-45, the total rice yield in Eastern Pakistan was 79,00,000 tons.

The wheat area in 1944-45 was 9.9 million acres as against 26.9 million acres in British India. Pakistan areas yielded in the same period 35,00,000 tons of wheat against a total production of 85,00,000 tons in British India.

Other cereals produced in Pakistan are gram, barley, jowar and bajra. Sind and West Punjab export about 128,000 tons of gram every year and 20,000 tons of other cereals.

In both East Bengal and West Punjab perennial rivers feed the cultivable land through a network of canals. Eastern Pakistan has also considerable rainfall. In Sind, where rainfall is scanty cultivable area is being extended by building barrages across the Indus river. Already with the Sukkur (Lloyd) Barrage system, about six million acres of waste land have been

one in Lower Sind and the other in Upper Sind would bring six more million acres under cultivation when they are completed, although it would take at least five more years before cultivation can start. It is therefore clear that from the point of view of food, Pakistan is not only self-sufficient but will be able to export considerable portion of its food grain. Pakistan has also oilseeds, the 1944-45 yield being 245,500 tons.

Jute and Cotton.—The golden fibre of Bengal, raw jute, is largely produced in Eastern Pakistan. According to 1946-47 figures, the area under jute in Pakistan is 1,358,800 acres out of a total of 1,880,000 acres in India, which means that just over 72 per cent of Indian jute is produced in the new Pakistan Dominion. The present yield of raw jute is estimated at 7,000,000 bales (one bale being equal to 400 lbs.) forming 75 per cent of world production. Pakistan's main handicaps have been lack of presses as jute mill industry is mostly located in Calcutta and its suburbs, and the limited capacity of Chittagong, but both these handicaps are being overcome by immediate procurement of presses and topmost priority being given to the expansion and development of Chittagong as a major port of Pakistan.

Pakistan's cotton comes from West Punjab and Sind, and also from North-West Frontier Province to some extent. The area under cultivation in Western Pakistan in 1944-45 was 29,50,000 acres and the yield 1,210,000 bales. Sind which produced only 50,000 bales in 1934 increased its share to 480,000 bales in 1944. In 1946-47, the total yield of cotton in Pakistan was 1.7 million bales. The best varieties of Indian cotton like the Sind and Punjab, American are produced in Pakistan. These are long staple cottons with staple one inch long, but Pakistan also produces medium variety. The total value of cotton produced during 1946-47 is about Rs. 45 crores. As a result of dislocation and disruption of rural economy in Sind and West Punjab due to the exodus of Hindus who mainly controlled this business, full benefit of these cash crops could not obviously be realised in the first year of Pakistan's existence, but when things become normal, the authorities hope to produce much more cotton and get better revenue.

Out of the exportable surplus of Pakistan cotton, India would normally require about a million bales of Americans for its cotton mills. Till Pakistan establishes its own cotton mills, most of this would be available for India.

Tea and Tobacco.—According to the 1944 figures, the area in Eastern Pakistan under tea cultivation was 80,000 acres yielding 4,199,000 lbs. After taking into consideration Pakistan's future productive capacity, it is estimated that Pakistan can export about 30 million lbs. of tea every year.

The latest figures for cotton are not available. In 1938-39 Pakistan produced about 150,000 tons of tobacco.

INDUSTRIES

Pakistan is essentially an agricultural country, but its Government is determined to develop the country industrially too. At the time of partition

4 glass factories and one woollen factory were located in Pakistan territory. The Industries Conference which was held in the second week of December under the chairmanship of the Commerce Minister, Mr. Ismail Chundrigar, selected 27 industries which should be under the Centre for development. Among these the armament industry, the railways, the posts and telegraphs, and broadcasting and hydro-electric power would be State-owned. The Minister said that the question of state ownership of the coal industry, of the road and air transport and waterways services would also have to be considered, but air transport would for the time being be under private enterprise with partial government control and supervision. All mineral and oil rights must vest in the State.

An Industrial Financing Corporation is being set up to assist industries. The Pakistan Finance Minister has formulated his taxation plans in his first Dominion budget in such manner as to induce capitalists to come forward and establish factories in Pakistan. He also made it clear that Pakistan would have to go to the outside world for getting substantial capital and technical skill in order to carry out these industrial schemes. Employment of foreign capital in industries will be controlled only to secure some participation of Pakistan nationals both in capital structure and management.

The Sind Government have established an industrial trading estate in Karachi estimated to cost over 12 crores of rupees in the West Wharf area. They have sanctioned Rs. 25 lakhs for their year for its initial development and among the industries to be established there are a shipbuilding yard, textile mills and factories for making small steel tools and chemicals. Similar estates would be established at Hyderabad and Sukkur. These are based on British industrial estates which were established in the United Kingdom after the first world war to fight depression and unemployment.

MINERALS

Pakistan's mineral resources are stated to be considerable although they still have to be developed. Petroleum is known to exist in West Punjab, Sind, Baluchistan and parts of East Bengal. There are two large petroleum refineries in West Punjab.

Large deposits of salt and gypsum are to be found in West Punjab, while coal, sulphur, chromite and other minerals are also stated to exist. At present, Pakistan suffers from inefficiency in coal. During 1944 the coal production of the area now included in Pakistan was 230,000 tons. Coal was discovered in Chittagong and Peshawar some time ago and its quality is being investigated by experts. In 1944, Punjab produced 5,100 tons of salt petre. In the same year, petroleum amounted to 15,157, 30 gallons from the two producing zones in West Punjab. In Sind investigations by the Burma Oil Concessions are in full swing at Lakhra in the interior and in Karachi district. There is a big salt factory at Khewra which has a producing capacity of 92,000 tons a year.

TRADE

Karachi and Chittagong are the main ports of trade for Pakistan. The port of Chittagong is being developed to handle a vast jute trade. During the year 1946-47, goods to the value of 42 crores were exported through Karachi which included cotton, wheat, rice, hides and skins, and oilseeds. Among the importing countries were Great Britain, the United States, China, Afghanistan, Belgium, Italy, Iran and Canada. During the same period the total value of imports entering through Karachi was Rs. 48.8 crores. Peshawar is the post for export and import to Afghanistan.

SIR A. ROWLANDS' VIEW

This review of the area and resources of Pakistan would not be complete without some reference to the report which Sir Archibald Rowlands, former Finance Member of undivided India, submitted to Quid-e-Azam Jinnah, after three months' study.

Sir Archibald expressed great optimism about the economic future of Pakistan. He said: "Pakistan is an agricultural country. But so was Canada, Australia, Argentina, and even the United States at one time. Pakistan has great natural resources which can be developed in the same way as other western countries have done. Pakistan starts on its career with four great advantages. Firstly, it has an active and robust people. It has a compact and stable political structure which, unlike many other neighbouring countries in similar position, is free from fissiparous tendencies. It has plenty of food for its people. It has a favourable balance of trade."

Referring to Pakistan's handicaps, Sir Archibald said: "It has no industries. Though it produced 73 per cent of the total jute crop of India, it had not a single jute mill. Similarly though Pakistan produced one-third of the Indian cotton—a lot of long staple too—it had only one-thirtieth of total textile mills in the Indian sub-continent. In hides and skins again, though Pakistan's share of raw products was very high, it had no tanneries. Besides the absence of other industries, the capital resources were limited because of its agricultural character. There was then shortage of skilled labour, lack of managerial experience as well as lack of political experience. All this leeway had to be made up."

He said that the safest base on which future industrial economy of the country could be built was round its natural resources. Jute mills, textile mills and tanneries were the obvious industries which could be started fruitfully immediately. The secondary industries would follow. The country could attract sufficient foreign capital for industrialisation.

Declaring that the value of national currency was determined by internal purchasing power and balance of international trade, Sir Archibald Rowlands said that both these factors were in favour of Pakistan. Pakistan moreover with its surplus raw products was assured of a favourable position for a long time to come.

Emphasizing the need for industrialisation again, Sir Archibald said: "Pakistan has to industrialise itself and industrialise it must, if it wants to survive." Till the country was sufficiently industrialised to bring in additional sources of revenue, he added, Government would have to tap agricultural sources.

It may be mentioned that much of Sir Archibald Rowlands' suggestions have been in some way or other utilised by the Pakistan Government in their administrative policy, and even the first budget was prepared with Sir Archibald Rowlands' report as its background.

PAKISTAN GOVERNMENT AT WORK

Soon after the decision to establish the Pakistan capital at Karachi was taken by Quid-e-Azam Jinnah in response to the invitation of the Sind Government, a batch of engineers arrived from New Delhi in the middle of July last year and prepared the lay-out of the Central Pakistan Secretariat. The Sind Government shifted their offices to the military barracks in the outskirts of the city in order to make room for the Pakistan Central Government offices. It was decided that these offices should be distributed in the main Sind Assembly building, the Chief Court building facing it and the P.W.D. building further behind; and in order to supplement accommodation, a number of hutments were built with lightning speed adjacent to these main offices. The first team to reach Karachi from New Delhi was the staff of the Pakistan Constituent Assembly who had to get ready for the opening of the Assembly on August 13, 1947.

Quaid-e-Azam Jinnah took his residence at Government House, former residence of the Sind Governor. A few special trains brought from Delhi Pakistan personnel with their records in the following week. Mr. Liaquat Ali Khan was in charge of the arrangements both for running the administration and for conducting the business of the Constituent Assembly smoothly and efficiently.

ORIGINAL CABINET

As has been mentioned before Mr. Jogendra Nath Mandal, the Scheduled Castes leader in Pakistan, presided over the historic opening session of the Pakistan Constituent Assembly on August 13. Later Quid-e-Azam Jinnah was unanimously elected President of the Constituent Assembly.

On August 14, both Quid-e-Azam and Lord Mountbatten arrived in procession to the Assembly when the transfer of power was implemented. In conveying the King's message to Pakistan and its people, Lord Mountbatten wished all peace, progress and prosperity to them. The next day, Quid-e-Azam was sworn-in as the Governor-General of Pakistan at Government House by the Chief Justice of the Lahore High Court, the Hon'ble Mr. Justice Abdul Rashid. Thereafter Quid-e-Azam swore-in his first Cabinet of ministers as follows:

Mr. Liaquat Ali Khan, *Prime Minister in Charge of Foreign Affairs, Commonwealth Relations and Defence.*

Mr. Ismail Chundrigar, *Minister for Commerce, Industry and Works.*

Mr. Ghulam Mohammad, *Minister of Finance.*
Sardar Abdur Rab Nishtar, *Minister of Communications.*

Mr. Ghazanfar Ali Khan, *Minister of Food, Health and Agriculture.*

Mr. Jogendranath Mandal, *Minister of Law and Labour.*

Mr. Fazlur Rahman, *Minister of Interior, Information and Education.*

Simultaneously with the ceremony at Government House in Karachi, the following Governors of provinces were also sworn-in in their respective capitals:

Mr. Ghulam Hussain Hidayatullah, *Governor of Sind.*

Sir Francis Mudie, *Governor of West Punjab.*

Sir George Cunningham, *Governor of North-West Frontier Province.*

Sir Frederic Bourne, *Governor of East Bengal.*

Taking the earliest opportunity after the birth of Pakistan to enunciate the new Dominion's foreign policy, Mr. Liaquat Ali Khan said that it would be governed by "unreserved co-operation with the United Nations in every possible way in the great task of stabilising world peace."

A week later, the Boundary Commission under the Chairmanship of Sir Cyril Radcliffe published their award regarding partition of the Punjab and Bengal and marking the new frontiers of Pakistan and India. Serious repercussions occurred scarcely two days after this historic announcement. Although the Prime Ministers of Pakistan and India had jointly issued a statement that whatever the cost, peace and order would be restored, mass murders took place in the Punjab on an unprecedented scale. Quid-e-Azam Jinnah himself flew to Lahore thirteen days after he assumed the leadership of the new State to study the situation on the spot. A series of inter-Dominion conferences took place at Lahore, but the communal poison had gone so deep that murder, arson, rape, loot and lawlessness went on for days together. Undaunted both the Governments struggled hard and succeeded in effecting as peaceful a mass exchange of population as was possible under the circumstances.

THE SECRETARIAT

Meanwhile a Cabinet Secretariat was being built up at Karachi with Mr. Mohamad Ali as the Secretary-General. As it was impossible to transport the urgently needed Pakistan personnel by train across the stricken Punjab, the Pakistan Government decided to bring by air the most essential among them. The British Overseas Airways Corporation carried out this unique operation so efficiently that India too sought their help for a similar mission of mercy. About 7,000 Pakistan personnel including their families were brought in British aircraft from New Delhi to Karachi.

Accommodation being limited, the Government of Sind had to requisition some of the buildings to house officers of the Pakistan Central Secretariat. A number of colonies also sprang up in

the outskirts of the city for accommodating clerks and other lower grade staff. Still many are forced to live even to this day either in public institutions or tents.

With the Prime Minister's preoccupation with the inter-Dominion conferences at Lahore and New Delhi, two far-reaching developments necessitated the expansion of the Pakistan Cabinet at the end of the year. The accession to Pakistan of Junagadh, a small state in the heart of Kathiawar with a Muslim ruler, in October, led to a controversy about the conditions in which Indian States could accede to either of the Dominions. The other problem was that of rehabilitation and resettlement of refugees, a problem which had assumed gigantic proportions. Sir Mohamad Zafrullah, who had returned from the United Nations after representing Pakistan at the discussion of the proposal to partition Palestine, was called upon to take over the portfolio of Foreign Affairs and Commonwealth Relations. Mr. Ghazanfarali Khan was given exclusive charge of refugees, while Pirzada Abdus Sattar of Sind became the Minister of Food, Health and Agriculture.

KASHMIR

Meanwhile, trouble was brewing in Kashmir. The Maharajah found himself confronted with an uprising in Poonch which had the support of turbulent tribesmen from the Frontier. Earlier the Quaid-e-Azam Jinnah had advised the Maharajah of Kashmir to meet him to discuss the whole situation, but the Ruler turned to India for military aid to repel the invaders. In the event Kashmir also acceded to India. The war in Kashmir threatened to widen the gulf between the two Dominions; for Pakistan considered the accession of Kashmir, a state with a Muslim majority to India as improper and unjust. Pakistan, however, repudiated any responsibility for the invasion by the tribesmen although it declared that its sympathy lay with the anti-Government forces fighting what it called Dogra tyranny. Inter-Dominion parleys over the States question led to no concrete results and India ultimately decided to refer the dispute to the United Nations—a proposal which the Prime Minister of Pakistan claimed he had made to India earlier. When India placed the question before the United Nations Pakistan claimed that there were other points of disagreement between the two Dominions which if not solved in time might result in open war. And so Sir Zafrulla Khan went on to put the case of Junagadh before the United Nations.

Even other agreements which were reached between the two Dominions out of court including the one on all outstanding financial issues seemed to be in peril when India refused to pay Pakistan's share of cash balances because of Kashmir. Pakistan fought its financial case with India through correspondence and at last succeeded in persuading the latter to pay Rs. 50 crores. Meanwhile India, Pakistan and Britain concluded mutually acceptable interim agreements on the sterling balances.

Inter-Dominion differences spread to the economic field too. Following India's decontrol of cotton textiles, Pakistan imposed an export duty of Rs. 20 on cotton which she trebled by

March 1948 and declared India a foreign country for purposes of export. Pakistan also imposed a land export duty on jute when India refused to share customs revenue on Pakistan's terms. Later, Pakistan set up a customs cordon when India declared Pakistan foreign territory on the lapse of the standstill agreement on customs on February 29, 1948.

There were other fields, however, in which amicable relations prevailed. Both the Governments for instance agreed upon a compromise formula for the exchange of Pakistan cotton with Indian cloth. On the food front too, there was good understanding on both sides and the terms of the agreement were faithfully implemented by both the Dominions.

Quaid-e-Azam Jinnah visited Sibi in the second week of February when he announced at a Royal durbat the appointment of a Governor-General's Advisory Council for Baluchistan to prepare that most backward of the Pakistan provinces for provincial autonomy under the new constitution. The Pakistan Governor-General also discussed the question of Kalat's accession to Pakistan with the Ruler who after prolonged negotiations decided to accede. Some of the States in and adjoining Pakistan like Bahawalpur, Khairpur and the tiny frontier States of Dhr, Chitral and Swat also expressed their willingness to accede to Pakistan.

The Pakistan Governor-General paid a visit to Eastern Pakistan in the last week of March.

The following paragraphs give a detailed account of activities of various Ministries since the Pakistan Dominion was established.

1. MINISTRY OF FOREIGN AFFAIRS

The Ministry of Foreign Affairs handles also questions of Commonwealth Relations and the States which have acceded to Pakistan. A few weeks after its birth, Pakistan joined the United Nations. Pakistan has also established diplomatic offices at Washington, London, New Delhi, Cairo and Teheran. Where Pakistan has no representative, British diplomatic missions are looking after its interests for the time being.

Pakistan sent a delegation to Canberra to attend the preliminary Commonwealth conference on the Japanese treaty. In September, 1947, Sir Mohammad Zafrullah, who later became the Foreign Minister, led the Pakistan delegation to the United Nations when the Palestine issue was discussed. Pakistan also sent a team to the International Trade and Employment Conference held at Havana, the second session of the Economic Commission for Asia and the Far East at Baguio in the Philippines, the Regional I.L.O. conference at Delhi, and the Special Committee on the Balkans at Salonika. The most important of these delegations is the one sent to the United Nations this year when the Indo-Pakistan dispute on Kashmir and allied questions were considered.

The Foreign Ministry is directly responsible for the administration in the tribal areas of the Frontier, and for Baluchistan, the status of which has been enhanced as already stated by the appointment of an Advisory Council.

Pakistan and Afghanistan have exchanged special envoys to discuss issues outstanding between them, particularly with regard to trade and the tribal areas.

The Foreign Ministry is located in the Mohatta Palace at Clifton, a sea side suburb of Karachi.

2. MINISTRY OF DEFENCE

The Pakistan Prime Minister, Mr. Liaquat Ali Khan, holds the portfolio of Defence and he is the most hard-worked Minister of the State. Not only had he had to attend the inter-Dominion conferences held from time to time at Lahore and Delhi, but also look into all important affairs of the State, particularly its defence problems.

The armed forces of Pakistan are now being reconstituted and reposed in conformity with new strategic and geographical considerations. For the time being, Rawalpindi is the head quarters for the Defence Forces, but it is intended to shift it to Karachi when the accommodation problem becomes easier. The main task of the Army hitherto has been to maintain law and order and protect and escort refugees from East Punjab to Pakistan.

A far-reaching decision taken by the Pakistan Government was the withdrawal of its Army from Frontier out posts as it was felt that there should be a change of policy towards the tribesmen. It also meant considerable saving in military expenditure, while troops became available for deployment elsewhere. The withdrawal took place in December 1947 and the Defence Minister took the earliest opportunity which was a fortnight later to tour the tribal areas and explain to the people the historic and moral significance of the withdrawal of troops from Waziristan.

At a press conference held in Karachi on December 31, 1947, the Pakistan Defence Minister gave a picture of Pakistan's defences. He said that nationalisation would be completed in about three years' time. On August 15, 1947, the number of British officers in the Pakistan Army was 1,600. On January 1, 1948, out of a total of 3,371 officers in the army, 2,790 were Pakistani and 584 British. Out of 673 British officers who volunteered to serve Pakistan, 355 were selected on varying terms not exceeding three years. Efforts were now being made to secure the balance of 229 British officers. The Pakistan Army had now 11 Major-Generals of whom 6 were British and 5 Muslims, 32 Brigadiers, 17 of whom were British and 15 Muslim and 4 Area Commanders, 3 Muslim and 1 British.

A military academy is being established at Kakur in the Hazara district of the Frontier Province where officers will be trained. In the Pakistan Air Force, there are 232 Muslim and 27 British officers. One of the Air Commodores is a Muslim. The Air Force has two fighter squadrons and a few transport aircraft being Pakistan's share of the defence forces of undivided India. In the Pakistan Navy, of which Rear Admiral J. W. Jefford is the chief, only 27 British officers are being taken as Pakistan has 104 commissioned officers and 70 warrant officers.

Pakistan has three main shore establishments—the gunnery school, and the senior and junior boys' training schools. A nava' depot is being established in Eastern Pakistan where a part of the Navy will be based. Pakistan has a fleet of nine ships which she received as her share of undivided India's naval forces. Government is negotiating with His Majesty's Government for the purchase of two destroyers.

An ordnance factory is to be established in Pakistan to produce small arms, explosives and ammunition. Mr. Newton Booth (until recently Chief Mechanical Engineer of Royal Woolwich Arsenal) and Mr. B. Farley (director of Machine Tools in the British Ministry of Supply) have arrived from the U.K. and are studying Pakistan's requirements in this field.

Pakistan is also to raise an unlimited volunteer force under the control of the Army called the Pakistan National Guards. A women's wing is also being created. This will be a second line of defence. Pakistan's defence expenditure for the first seven and a half months was Rs. 34.24 crores and in 1948-49 the expenditure is expected to rise to Rs. 37.11 crores. This is apart from the capital outlay of over two crores for both the periods.

3. MINISTRY OF FINANCE

Pakistan's Ministry of Finance has a band of trained and experienced officers. Its very first work on setting its department in motion was to negotiate a financial agreement with India on all outstanding issues. Complete agreement was reached and Pakistan got as its share of cash balances Rs. 55 crores. In view of strained Indo-Pakistan relations over Kashmir, India at first refused to pay the sum immediately, but after prolonged negotiations conducted on behalf of Pakistan by Mr. Gulam Mohammad India agreed to make a first payment of Rs. 50 crores out of its 55 crores. The payment has already been made and the balance is the subject of negotiations.

Another success for the Pakistan Finance Ministry was the agreement reached with the British Government and India over the next interim six-month release of sterling balances. Pakistan will have in her account £20 million while £3.3 million would be made available for her for conversion into hard currency.

Pakistan made her first venture into the money market a few days before the first budget was presented by floating four loans on February 14, 1947. They were kept on tap without any limit to subscription. At the time of writing, about Rs. 10 crores were subscribed, according to reports published.

Pakistan's first budget had to be prepared with great care and skill. Pakistan's lack of industry, the general dislocation of economic life due to communal disorders, the exodus of Hindus and Sikhs who had till then controlled the trade, a disproportionate defence expenditure and the loss of strategic railways were the main odds against which the Finance Minister had to wrestle in preparing his budget. But the Finance Minister not only succeeded in

balancing his budget but was also able to show a surplus of Rs. 5 lakhs. The budget estimated Pakistan's gross revenue at Rs. 79.57 crores and expenditure at Rs. 89.68 crores in 1948-49. The deficit was made up by a number of taxes. Most of the taxation is levied on the foreign buyer of Pakistan's raw materials and on the importers of luxury goods. With a view to giving a fillip to industrialisation, tax concessions were granted to factory owners.

4. MINISTRY OF COMMERCE

This Ministry includes Industries and works also. A skeleton staff started the work of the Office of the Chief Controller of Imports and Exports. Pakistan recently announced its import policy for the first half of 1948. A large number of articles which were prohibited are now being allowed to be imported freely under open general licence. The object of the new policy is to encourage expansion and flow of trade. Pakistan's export policy is in process of formulation and will be announced when it is decided upon. Import and export controls will however continue so long as the necessity to conserve Pakistan's foreign exchange exists.

Owing to misunderstanding with India over the Partition Council decisions, Pakistan had to get her jute to Chittagong and also impose excise duty on raw jute at Rs. 3 per maund if it passed through India. As regards cotton, Pakistan had to revise its entire policy. The export duty which was doubled from Rs. 20 to Rs. 40 was further increased to Rs. 60 per bale of 400 lbs. India, for purposes of export, was made a foreign country and ceilings and floors were also abolished. Pakistan explained that this was an inevitable consequence of India's decontrol of cotton and cotton textiles.

An organisation for statistics and commercial intelligence has also been set up. A weekly statement and weekly index of wholesale prices in Karachi, a fortnightly account of trade enquiries received from firms in and outside Pakistan, and a periodical review of the cotton market are being regularly published. Plans to publish a statistical digest of Pakistan on lines of the "Indian Trade Journal" are also under consideration.

Karachi and Chittagong, the premier ports of Pakistan, have been declared ports of registry for all ships. Now, Indian seamen, most of whom belong to Pakistan, can register themselves in ports nearer their home and independent shipping offices will shortly be opened.

Industries Division.—This department looks into the question of procurement and distribution of cotton textiles, coal, paper, iron and steel. The first Pakistan Industries Conference was held in Karachi in December 1947. The conference surveyed the problems confronting Pakistan and made a number of recommendations in respect of cotton textile mills, generation of hydro-electric power and heavy chemical industry. Sir Henry Howard, Adviser on hydro-electric power to the Madras Government, was specially deputed to study development of hydro-electric power and his report is under Government's consideration. More than a score of industries have been chosen for central control including

arms and ammunition, shipbuilding and manufacture of locomotives, and jute. The conference recommended establishment of additional presses in East Bengal to enable Pakistan to handle jute export to the extent of 30 lakhs bales a year by 1949-50, and a total loomage of 15,000 during next 20 years.

The conference recommended the procurement of one million spindles for the cotton textile industry to be distributed for allocation in different provinces and States as the target during the first five years and another 1.5 million spindles during the next five year period. A cotton committee was also established for improvement, marketing and manufacture of Pakistan cottons.

Prominent among the trade delegations which visited the Pakistan capital in the last six months were one from Egypt seeking jute and the other from Transjordan. The Indo-Pakistan cotton negotiations were also carried on in the early part of 1948; and later a comprehensive agreement was arrived at.

5. MINISTRY OF COMMUNICATIONS

One of the biggest Ministries this, under Sardar Abdur Rab Nishtar, and combines the three departments of railways, posts and telegraphs, and transport.

General disorganisation of the railways consequent on partition and the communal disorders and inadequate supplies of coal from India necessitated drastic curtailment of passenger and goods traffic for some weeks, but the position improved early this year. The railway rates have been increased approximately by 22 per cent over the previous rates since January 1948.

Following the initial loss sustained by Government due to ticketless travel to the tune of over three crores of rupees in the first two months of administration, vigorous measures were taken to check the evil at all stations as a result of which normal revenue is being recovered.

Since August 15, 1947, about 83,500 employees who opted for Pakistan had to be transported to their respective posts of duty. Over 7,000 hands were found to be surplus in view of the limits of the Pakistan railway system. Alternative employment has to be found for them, and Government is doing their best in this direction.

Pakistan civil aviation is still in its infancy. Orient Airways are operating most of the feeder and trunk services. A bilateral air pact has been concluded between India and Pakistan. Private enterprise would continue and would be permitted, if it could, to run air services to the Middle East, East Africa, Ceylon and Burma. An air training centre is being established at Karachi.

Karachi continues to be the fulcrum of Empire air communications and as many as a dozen international air services including the B.O.A.C., Pan-American Airways, the K.L.M. and Air France run their regular services across Pakistan to various countries of the world.

The Posts and Telegraphs which suffered owing to shortage of scores is improving in its organisation and efficiency. A wireless link between Karachi and Chittagong was established

within a few weeks after the establishment of Pakistan. Karachi is now linked with almost all foreign countries by cable. A telegraph workshop is also being organised.

Pakistan inherited an efficient system of meteorological service set up during war-time at Karachi. They provide regular weather charts for public information (as at Poona) and help fliers with all necessary particulars.

The Communications Ministry is located in the old Sind P.W.D. buildings behind the Chief Court buildings, while the Minister himself works in his chamber in the main Secretariat building. A number of hutments nearby accommodate overflowing sections of this department.

6. MINISTRY OF FOOD

Besides food, this Ministry under the youngest of Pakistan Ministers, Pirzada Abdus Sattar, controls departments of Health and Agriculture. It suffered from neglect in the early stages when Mr. Ghazanfarali Khan had too many portfolios to carry, but much headway is now being made.

Pakistan is normally surplus in food, but owing to the necessity of feeding millions of refugees in Western Pakistan and due to the havoc caused by floods in Eastern Pakistan, there was acute wheat shortage. Fortunately the Indo-Pakistan agreement saved the situation from reaching famine stage. Pakistan got from India 28,000 tons of wheat, partly in return of loan, 12,000 tons of barley and 15,000 tons of sugar and gave India in turn 40,000 tons of rice. The whole agreement was implemented by the end of March this year.

Following decontrol of sugar and foodgrains in India, there was an agitation for similar action in Eastern Pakistan, but the Pakistan Central Government stood firm and refused to decontrol. But it was explained that the long-term policy was one of progressive decontrol.

In order to improve agriculture, the Pakistan Government held a conference at Lahore in October 14, 1947, when important decisions for mechanisation of agriculture and intensifying food production were taken. A 'grow-more-food' campaign has also been launched. Forest and soil conservation and animal husbandry are also being organised.

7. MINISTRY OF INTERIOR

The Ministry comprises the departments of Home, Education and Information. In the Home division, Government have organised a system of internal security and national reconstruction.

An All-Pakistan Educational Conference was held at Karachi at the end of last year when decisions for reorientation of education in accordance with Islamic principles and for further expansion of education were taken. The Pakistan Government have also appointed technical and advisory boards of education. A Pakistan National Academy will also be established

As for broadcasting, there are already radio stations functioning at Lahore, Peshawar and Dacca. Pakistan will install two short wave 60 kilowatt transmitters at Karachi, one for centralised news service and the other for external broadcasts. In Sind, two 10 kilowatt sets would be installed at Karachi and Hyderabad respectively for local needs. A 7.5 kilowatt short wave transmitter will be installed at Dacca, which will connect Eastern and Western Pakistan.

The Press Information department is built on the same lines as the one existing in India. Great attention is paid particularly to foreign publicity and the provinces are linked with the Central Department in the matter of exchange of information.

8. MINISTRY OF LAW AND LABOUR

Silently, this department is working under the Law and Labour Minister, Mr. Jogendra Nath Mandal, who is also the leader of Scheduled Castes in Pakistan. A nucleus of Pakistan Federal Court has already started functioning and very soon judges would be appointed.

In the Labour section Pakistan became a member of the International Labour Organisation from October 1947. There are a number of Bills affecting labour welfare which are awaiting passage through the Dominion Legislature.

The Ministry successfully settled through its conciliation machinery labour disputes in Karachi, a railway dispute at Dacca and a dockworkers' dispute at Chittagong. The Government of Pakistan set up an industrial tribunal under Mr. Muhammad Wasim, Pakistan's Advocate-General, for the adjudication of industrial disputes.

9. MINISTRY OF REFUGEES

The portfolio of refugees was originally held by the Information Minister, Mr. Fazlur Rahman, but since Mr. Ghazanfarali Khan, who hails from the Punjab, had to do most of the work on the spot, it was transferred to him. The problem assumed such gigantic proportions that ultimately one full-time Minister had to be appointed. Mr. Ghazanfarali Khan then shifted his headquarters to the Punjab. He set up his secretariat at Lahore and as the mass exchange of population took place, Muslim refugees who poured into the West Punjab by foot and train, were distributed systematically over different camps before they were resettled on land abandoned by non-Muslims in Western Pakistan. The Minister had also to see that a similar movement of non-Muslim convoys were safely transported into East Punjab. Such movement was rendered difficult by outbreak of communal riots in the whole of the Punjab area, but it is a tribute to both Governments that they were able to save millions of refugees from wholesale slaughter.

The problem of rehabilitation and resettlement has lain heavily on the financial resources of West Punjab. According to its Finance Minister, the province had to absorb two million more people than those who left West Punjab; over five crores of rupees have already been spent.

It would require another Rs. 7 crores in the coming year. Sind has also absorbed lakhs of refugees and incurred considerable expenditure. The Central Government of Pakistan have sanctioned one and a half crores of rupees in the current budget for provinces towards refugee rehabilitation expenditure. The entire land tenure had to be revised so as to make an equitable distribution of land among refugees in West Punjab and similar measures would be necessary in other parts of Pakistan.

Side by side, humanitarian and moral problems like the recovery of abducted women and allied issues are engaging the attention of both the Dominions. Common lines of policy and programme will also be decided upon by India and Pakistan in regard to such matters as the settlement of abandoned property belonging to the people who had migrated.

10. MINISTRY OF ECONOMIC AFFAIRS

This Ministry was created as a result of criticism made during the budget session of the Dominion Parliament held in March this year. A Cabinet Committee has been appointed with the Premier, Mr. Liaquat Ali Khan as the President and Ministers of Finance, Commerce, Communications and Agriculture as members to take high-level decisions on issues submitted to it by two other subsidiary bodies—the Development Board and the Planning Advisory Board.

CONSTITUENT ASSEMBLY OF PAKISTAN

President.—H. E. Qaid-e-Azam Mohammad Ali Jinnah.

Secretary.—M. B. Ahmad.

Deputy Secretaries.—S. G. Hasnain; K. Ali Afzal.

Assistant Secretary.—Hasan Mohammad Khan.

EAST BENGAL

Muslim.—Abdul Masud Abdul Hamid; Abdulla Almahmood; Maulana Md. Abdullaehi Baqui; Abul Kasam Khan; Maulana Md. Akram Khan; Azizuddin Ahmad; Moulavi Ebrahim Khan; A. K. Fazlul Huq; The Hon'ble Mr. Fazlur Rahman; Ghyasuddin Pathan; The Hon'ble Mr. Hamidul Huq Chowdhury; H. S. Suhrawardy; Professor Ishtiaq Husain Qureshi; The Hon'ble Mr. Liaquat Ali Khan; Maizuddin Ahmad; Dr. Mahmud Husain; Dr. A. M. Malik; Martuza Raza Chowdhury; Mohammad Ali; The Hon'ble Mr. Muhammad Habibullah Bahar; The Hon'ble Khwaja Nazimuddin; Nur Ahmed; The Hon'ble Mr. Nurul Amin; Serajul Islam; Maulana Shabbir Ahmad Osmani; Khwaja Shahabuddin; Begum Shaista Suhrawardy Ikramullah; Tamizuddin Khan; Abdul Matin Chaudhury; The Hon'ble Mr. Abdul Hamid.

General.—The Hon'ble Mr. Jogendra Nath Mandal; Prem Hari Barma; Dharendra Nath Datta; Kiran Sanker Roy; Professor Raj Kumar Chakravarty; Sris Chandra Chattopadhyaya; Bhupendra Kumar Dutta; Jnanendra Chandra Majumdar; Bijat Chandra Mandal; Dhananjay Roy; Sachindra Narayan Sanyal; Harendra Kumar Sur; Akshay Kumar Das.

The Development Board with the Commerce Minister, Mr. Ismail Chundrigar as Chairman has as members Secretaries of all the Ministries mentioned above. The main functions of this body are firstly to co-ordinate central and provincial projects, secondly serve as a clearing house of information, thirdly remove bottlenecks and difficulties that obstruct smooth progress, and finally make periodical reports to the Cabinet Committee on the progress made. The Planning Advisory Board is a bigger organisation which comprises the Cabinet Committee and Development Board and two representatives from each of the Pakistan provinces and States and ten persons nominated by Government to represent special interests like trade, banking, insurance, health and education. This body advises Government on all aspects of planning and development.

The Development Board with Mr. Nazir Ahmed as Secretary has been functioning for some months past and has done all the necessary spade-work for the proper economic planning and development of the resources and potentialities of Pakistan.

The Ministry is now under the supervision of the Finance Minister, Mr. Ghulam Mohammad, but very soon a full-fledged Cabinet Minister will take charge of this most vital department of the Dominion administration.

WEST PUNJAB

Muslim.—Mian Muhammad Iftikhar-ud-Din; Chaudhri Nazir Ahmad Khan; Malik Mohammad Firoz Khan Noon; Mian Mumtaz Muhammad Daultana; Sheikh Karamat Ali; Dr. Iqbal Hayat Malik; Begum Jahan Ara Shah Nawaz; The Hon'ble Sardar Shaikat Hyat Khan; The Hon'ble Mr. Ghazanfar Ali Khan; The Hon'ble Sardar Abdur Rab Khan Nishtar; His Excellency Qaid-e-Azam Mohammad Ali Jinnah; The Hon'ble Khan Iftikhar Hussain Khan of Mamdot.

General.—Lala Avatar Narain Gulraj; Bhim Sen Sachar; Rai Bahadur Ganga Saran.

Sikh.—Sardar Kartar Singh; Sardar Ujjal Singh.

SIND

Muslim.—The Hon'ble Pirzada Abdus Satar Abdur Rahman, J.P.; Alhaj Muhammad Hashim Gazdar, J.P.; Pt. A. Khuhro.

NORTH-WEST FRONTIER PROVINCE

Muslim.—Khan Abdul Ghaffar Khan; Khan Sardar Bahadur Khan.

BALUCHISTAN

Sardar Bahadur Nawab Mohammad Khan Jogezal.

Government of Pakistan Personnel

GOVERNOR-GENERAL OF PAKISTAN

His Excellency Qaid-e-Azam Mahammad Ali Jinnah.

PERSONAL STAFF OF THE GOVERNOR-GENERAL

Private Secretary.—S. M. Yusuf.

Assistant Private Secretary.—Farrukh Amin.

Personal Secretary.—K. H. Khurshid.

Military Secretary.—Col. G. Knowles.

Assistant Secretary.—K. B. Mohammad Latif Reshi, I.S.O.

Comptroller.—Mir Karimullah.

Aide-de-Camp.—Lt.-Comdr. S. M. Ahsan, D.S.C., R.P.N.

Aide-de-Camp.—Captain S. A. Hussain.

Aide-de-Camp.—F/Lt. Aftab Ahmad, R.P.A.F.

Honorary Personal Physician.—Col. Dr. A. Rahman, M.B., Ch. B. (Edin.).

THE CABINET

The Hon'ble Mr. Liaquat Ali Khan
Prime Minister

Prime Minister and Minister of Defence.—The Hon'ble Mr. Liaquat Ali Khan.

Minister of Foreign Affairs and Commonwealth Relations.—The Hon'ble Sir Muhammad Zafrulla Khan.

Minister of Finance.—The Hon'ble Mr. Ghulam Mohammad.

Minister of Commerce, Industries and Works.—The Hon'ble Mr. Ismail Chundrigar.

Minister of the Interior, Information and Education.—The Hon'ble Mr. Fazlur Rahman.

Minister of Communications.—The Hon'ble Sardar Abdur Rab Nishtar.

Minister of Food, Agriculture and Health.—The Hon'ble Pirzada Abdus Sattar.

Minister of Law and Labour.—The Hon'ble Mr. Jogendra Nath Mandal.

Minister of Refugees and Rehabilitation.—The Hon'ble Raja Ghazanfar Ali Khan.

The Hon'ble Mr. Ismail Chundrigar and The Hon'ble Raja Ghazanfar Ali Khan have now been appointed as Ambassadors to Afghanistan and Iran respectively.]

CABINET SECRETARIAT

Cabinet; E=Establishment; P=Partition.]
tary to Cabinet and Secretary-General to Government of Pakistan, Mohammad Ali.
ty Secretary (C), S. Osman Ali.
ty Secretary (E), H. P. Goodwyn.
r-Secretary (C), A. Rashid Ibrahim.
r-Secretary (P), Vaqar Ahmad.
tant Secretary (E), Abdulla Jan.
tant Secretary (E), G. A. Farwez.

DEVELOPMENT BOARD

ary, Development Board, Dr. Nazir Ahmad.
rch Officer, A. P. Hassamani.

JOINT CIPHER BUREAU

Officers-in-Charge, T. H. Gould, Capt. I. A. Malik.

PAKISTAN PUBLIC SERVICE COMMISSION

Member, S. Suhrawardy.

Secretary, H. P. Goodwyn.

Assistant Secretary, Sardar Ahmad.

Private Secretary to P.M., A. A. Hamid.

Personal Assistant to P.M., M. I. Sufi.

MINISTRY OF FOREIGN AFFAIRS AND COMMONWEALTH RELATIONS

P = Protocol; F = Frontier; S = States; C = Conference; G = General; A = Accounts.
Minister, The Hon'ble Sir Muhammad Zafrulla Khan.

Secretary, M. Ikramullah, C.I.E.

Joint Secretary (P), T. B. Creagh Coen, C.I.E.

Joint Secretary (F), Major A. S. B. Shah, O.B.E.

Officer on Special Duty, Lt.-Col. E. W. Fletcher.

Deputy Secretary (S), Akhtar Hussain.

Deputy Secretary (F), Major M. G. Dixon.

Deputy Secretary (P), A. Hillaly.

Deputy Secretary (C), Khan Bahadur S. Itaat Hussain.

Deputy Secretary, Nasim Husain.

Under Secretary (S), Khan Sahib Z. H. Burney.

Assistant Secretary (P), M. Y. Butt.

Assistant Secretary (G), Khan Sahib Taj-ud-Deen.

Assistant Secretary (A), S. H. Feroze.

Assistant Secretary, K. S. Sufi Ghulam Qudir.

Assistant Protocol Officer, S. Zafar Ali.

MINISTRY OF DEFENCE

Minister, The Hon'ble Mr. Liaquat Ali Khan.

AT KARACHI

Secretary, Lt.-Col. Iskandar Mirza, C.I.E., O.B.E.

Joint Secretary, A. T. Naqvi, O.B.E.

P.S. to Secretary, M. Ahmed.

Under-Secretary, S/L. Abdul Ghayur.

Under-Secretary, Major L. H. Baaden.

Private Secretary to H. M., Wazir Ali.

AT RAWALPINDI

Deputy Secretary, S. I. Haque.

Deputy Secretary, W/C. R. Milroy-Hayes, O.B.E.

Under-Secretary, Khan Sahib Fazal-ud-Din.

Assistant Secretary, Abdul Rabb.

Assistant Secretary, S. M. Matin.

Director of Lands and Cantonments, Ex-Officio Under-Secretary, Mohammad Ashraf, M.B.E.

Assistant Secretary, C. Mills.

Chief Administrative Officer, C. W. Ayton.

Deputy Chief Administrative Officer, H. U. Butt.

Security Officer, K. S. Rashid Ahmed Khan.

Administrative Officers, (Assistant Secretaries).—

Azizul Haq, Akhtar Ali Khan, Nasirul Haq,

R. M. Massingham, J. W. Jackson.

ARMY HEADQUARTERS, RAWALPINDI

Commander-in-Chief, Gen. Sir Douglas Gracey,

C.B., C.B.E., M.C.

MINISTRY OF FINANCE

Minister, The Hon'ble Mr. Ghulam Mohammad.

Private Secretary to the Hon'ble the Finance Minister, M. M. Naz.

Secretary, Sir Victor A. C. Turner, C.S.I., C.I.E.,

M.B.E., I.C.S.

Officer on Special Duty, C. W. St. John Turner.

ESTABLISHMENT AND EXPENDITURE DIVISION

Joint Secretary, M. Hashim.

Deputy Secretary, M. A. Mozaffar.

Deputy Secretary, V. H. Mumford.

Under-Secretary, A. H. Qarni.

Assistant Secretaries, Shamoon Ahmad, Hafiz

Hasan, Ghulam Sarwar.

Private Secretary, Major J. M. E. Wainwright.

Military Assistant, Major M. H. Khan.

Aide-de-Camp, Capt. H. F. Hamilton Dalrymple.

Aide-de-Camp, Capt. Aziz Ullah Khan.

Chief of Staff, Major-General R. C. MacCay, C.B.,

C.B.E., D.S.O.

Deputy Adjutant General, Major-General J. B.

Dalison, C.I.E., O.B.E.

Deputy Quarter-Master-General, Major-General

F. J. Walsh, C.B.E.

AT KARACHI

Deputy Chief of Staff, Major-General N. G. Gane,

O.B.E.

NAVAL HEADQUARTERS, KARACHI

Flag Officer Commanding Royal Pakistan Navy,

Rear Admiral J. W. Jefford, O.B.E.

Chief of Staff, Captain H. M. S. Choudhri, M.B.E.,

R.N.R.

Civil Liaison Officer, R. W. Reeve.

AIR HEADQUARTERS, PESHAWAR

Air Commanding, Air Vice-Marshal A. L. A.

Perry Keen, C.B., O.B.E.

Staff Officer, Administration, G/Capt. M. K. Janjua.

Finance Officers, A. A. Ansari, E. A. Naik,

M. M. Ali.

Superintendents, Shamsul Islam, M. Muftaba,

Ghulam Sadiq.

BUDGET AND FINANCE DIVISION

Joint Secretary, Abdul Qadir.

Officer on Special Duty, Mumtaz Hasan.

Deputy Secretary, Anwar Ali.

Officer on Special Duty, Dr. L. Nemenyi.

Assistant Secretaries, Nawab Ali, Nasirud Din.

Finance Officer, Altaf Husain Gauhar.

Superintendents, B. Zaman, Ahmad Hussain.

REVENUE DIVISION (CENTRAL BOARD OF REVENUE)

Joint Secretary and Member, Central Board of Revenue, J. B. Shearer, O.B.E., I.C.S.

Deputy Secretary and First Secretary, Central Board of Revenue, A. A. Burney.

Under-Secretary and Second Secretary, Zafrullah.

Under-Secretary and Third Secretary, K. S. Rahim Bakhsh.

Officers on Special Duty, Walayat Hussain, L. G. O'Leary.

COMMUNICATIONS DIVISION

Financial Adviser, Communications, K. Ubald-ullah.

Joint Financial Adviser, Communications, Mushtaq Ahmad.

Deputy Financial Adviser, Communications, Hafeez Ahmad.

DEFENCE DIVISION (MINISTRY OF FINANCE)

Financial Adviser, M. Shoalb.

Joint Financial Adviser, Mumtaz Mirza.

Assistant Financial Advisers, Zahirud-Din, M. Yaqub.

Assistant Financial Adviser (Navy), K. S. H. Abdus Salam.

Assistant Financial Advisers, G. A. M. Smith, Qazi Mohd. Ashraf, Ghulam Hussain, Shahid Ahmed.

Deputy Assistant Financial Advisers, Ausaf Ali Khan, Mohd. Shah.

Deputy Economic Adviser, Dr. Anwar Iqbal Qureshi.

PAKISTAN SAVINGS CENTRAL BUREAU

Central National Savings Officer, H. B. Kazi.

(REVENUE DIVISION)

Member of the Board and Joint Secretary, John Burt Shearer, C.I.E., O.B.E.

First Secretary to the Board and Deputy Secretary, Ashfaq-I-Azlim Burney.

MINISTRY OF COMMERCE, INDUSTRIES AND WORKS

Minister, The Hon'ble Mr. I. I. Chundrigar.

Secretary (Commerce & Works), A. MacFarquhar.

Secretary (Industries), Khan Bahadur G. Faruque.

Joint Secretary, S. A. Hasnle.

Joint Secretaries, A. Khaleel, Karamatullah.

Deputy Secretaries, M. Ayub, Mohd. Nasrullah, A. A. Sald, B. W. Budd.

Under-Secretaries, Abdul Hakim, K. A. Waheed, Q. U. Shahab, Capt. Nasrullah Khan, Dr. I. H. Usmani.

Assistant Secretaries, M. A. Ghani, Azizul Haq, Siddiq Hassan.

Under-Secretary, N. N. A. Kureshi.

CHIEF CONTROLLER OF IMPORTS & EXPORTS, KARACHI

Officiating Chief Controller, M. Ismail.

Second Secretary to the Board and Under-Secretary, Zafar Ullah.

Standing Committee for the Ministry of Foreign Affairs and Commonwealth Relations.—Dhirendra Nath Datta, Malik Mohammad Firoz Khan Noon, Professor I. H. Qureshi, Begum Jahan Ara Shah Nawaz, Mohammed Ali.

Assam

THE pre-Partition Province of Assam covered a total area of 87,334 sq. miles, excluding Tribal territory. It enclosed States with an area of 12,320 sq. miles. The net area of the territory was 55,014 sq. miles. The Province is formed of the Assam or Brahmaputra Valley, and the Surma Valley and portions of the hills which surround these valleys on the North, East and South or separate the valleys from one another. To the West lie the plains of Bengal.

Population—The total population of the Province in 1941 was 10,204,733, of which nearly 4½ millions were Hindus, over 3½ millions Muslims, 2½ millions belonged to tribal peoples.

With the partition the whole of the District of Sylhet except four thahas became part of East Bengal. Hence the area as well as the population have been correspondingly reduced. The following is a rough estimate of the present position; area in square miles 49,599.29; total population 7,404,094 out of which 3,9,23,750 are males and 3,4,80,344 are females. The number of Hindus is 2,9,47,989, of Muslims 1,7,10,423, of Sikhs 3,742, of Christians 35,724. The density of the population is 149.53.

43 per cent of the population were recorded as speaking Bengali, 21 per cent Assamese. Other languages spoken in the province are Hindi, Uriya, Mundari, Nepali and a great variety of languages classified under the general heading of the Tibeto-Burman languages.

Agricultural Products—The river basins are naturally fertile and present in the main few difficulties to the cultivator. Rice is the staple food crop, nearly 5,46,795 acres in 1946-47 being devoted to this crop. Rainfall being high, the problem in general is to dispose of the surplus water and to control the action of floods rather than irrigation in the usual sense. Tea and jute are the most important crops grown for export. The area under tea was 442,072 acres in 1946-47. About 56,000 acres are devoted to sugar-cane. A good deal of short staple cotton is grown in the hills.

Meteorological Conditions—Rainfall is everywhere abundant, and ranges from 50 to 258 inches a year leaving aside the highest recorded rainfall in this part of India with the maximum reached at Cherrapunji in the Khasi Hills (569.50); this is one of the wettest places in the world. Temperatures are moderate. Earthquakes of considerable severity have taken place, by far the worst being that which occurred in 1897.

Accounts of the petroleum occurrences in Assam have been published in the memoirs of the Geological Survey of India. The petroleum localities in this province are confined to a curved belt of country along the basins of the Brahmaputra and the Surma. This belt is traceable over a distance of some 800 miles from N. E. Assam through Cachar and Chittagong to the Arakan coast, where it has a S. S. E. trend.

Mines and Minerals—The only minerals in Assam worked on a commercial scale are coal, limestone and petroleum oil. Petroleum output during 1946-47 was 6,18,77,535 gallons; coal

output 3,22,942 tons; and limestone output 9,84,677 tons. The most extensive coal measures hitherto worked are in the Naga Hills and the Lakhimpur districts. Important deposits also exist in the Garo Hills. Limestone is quarried

H. E. Sir Akbar Hydari

in the Khasi and Jaintia Hills. Petroleum is worked only in Lakhimpur and Cachar, and has only been refined in Lakhimpur.

MANUFACTURES AND TRADE

Silk is manufactured in the Assam valley, also cotton weaving as a cottage industry, women playing a predominant part. In this valley there are no caste weavers but in the Surma Valley they carry on a brisk manufacture on commercial scale. These handloom products find ready market on account of the great scarcity of mill made goods. Tea is of course the main industry, but there is a large petroleum mining concern and also some coal mines. There is a cement factory at Sylhet called Parker Cement Factory and a big match manufacturing concern at Dhubri. Boat-building, brass and metal and earthenwares, and limestone burning, cane and bamboo work, furniture making, sola hat, smithy, brick making, mustard oil pressing, rice and saw mills and other industries but agriculture employs about 80 per cent. of the population. Assam carries on a considerable trade with the adjoining hill tribes and countries.

Communications—Much of the trade of Assam is carried by river. The extensive system of river communications makes the province less dependent upon roads than other parts of the sub-continent but there has been much advance in recent years in road communication. A fleet of steamers maintained by the India General Navigation Company and the Rivers Steam Navigation Company plies on the rivers.

in both Valleys. An alternate day service of passenger-boats runs between Tezpur and Neamatil.

There are two trunk roads on either bank of the Brahmaputra most of which are metalled or gravelled. There are excellent metalled roads from Shillong to Gauhati, Shillong to Sylhet, Shillong to Cherrapunji, and also between Dimapur, on the Bengal and Assam Railway (A. B. zone) and Imphal, the capital of the Manipur State. The Government of Assam had in 1928 carried out a considerable programme of road improvement and another programme which aimed at the improvement of nearly 300 miles of road either by metalling or gravelling and the construction of 12 big bridges was also quickly completed. In September, 1937, a further road improvement programme totalling Rs. 1,05,25,000 was drawn up, from which 22 schemes costing Rs. 41,11,054 were selected as priority class. The Government of India had approved a programme under which 15 of these priority class schemes costing Rs. 32,00,000 were financed from the Road Fund. The work on these projects is already completed. Besides, the Government of India have asked the Government of Assam to prepare another road improvement programme totalling Rs. 35 lacs, a programme which envisages improvement of 115 miles of roads.

Kutch roads are being maintained by means of mechanical plant which has proved successful in maintaining, throughout the year, a surface fit for motor vehicles. Motor traffic has increased on all sides and the demands for better roads have been insistent.

The open mileage of railway has also shown a steady improvement and several branch lines to the Bengal Assam Railway (A. B. zone) system have been added in recent years. The main Bengal Assam Railway (A. B. zone) line runs from Chittagong Port, in East Bengal, through the North Cachar Hills to Tinsukia, a station on the Dibru-Sadiya Railway, and connects the Surma and Brahmaputra Valleys. A branch of the line runs from Badarpur to Silchar at the Eastern end of the Surma Valley and another runs west down the Assam Valley from Lumding to Pandu where it effects a junction with the Bengal Assam Railway (A. B. zone). The Bengal Assam Railway (E. B. zone) connects Assam with the Bengal system via the Valley of the Brahmaputra. Railhead is now at Rangapara north of Tezpur. Both Assam Bengal Rly. and Eastern Bengal Rly. have been amalgamated from 1st January 1942 and have been named Bengal Assam Rly.

Since August 15, 1947 the Bengal Assam Railway has been divided into two separate sections. The section within Assam has been called Assam Railway with headquarters at Pandu. The Government of India are taking steps to link up Assam with the rest of India by railway without touching the Dominion of Pakistan.

The first direct link by air between Calcutta and Gauhati was established on December 14, 1947. This air service was originally on a non-scheduled basis but very soon it became a daily service which has since been extended to Dibrugarh on a frequency of three days a week.

The Assam Government have undertaken an experiment in communication with the nationalisation of motor transport on a 75-mile long road connecting Gauhati and Nowgong.

ROAD IMPROVEMENT

Post-war road improvement programme envisages an expenditure of Rs. 5 crores over a period of 5 years. It covers not only construction of new roads but also includes improvement of existing roads to a higher and better standard. The scheme also embraces a large bridging programme.

Roughly the 5 years programme covers 40 miles of District roads and 1341 miles of village roads. Over 15 roads covering a mileage of 675 were taken up during 1946-47 while 21 road covering a mileage of about 200 have been taken up during 1947-48.

The road programme has its special significance in that it is being designed with a view to making Assam self-sufficient in the matter of having its export and import to and from other parts of the Indian Dominion transported quickly without having to pass through the Pakistan Dominion. At the same time communications within the province have also been improved by provision of necessary feeder roads from and to the arterial road system of the Province with a view to securing good market for the surplus produce of certain localities.

ADMINISTRATION

The province of Assam was originally formed in 1874 in order to relieve the Lieutenant Governor of Bengal of part of the administration of the huge territory then under him. In 1905, as the result of further deliberations, it was decided to add to the small Province of Assam the eastern portion of its unwieldy neighbour and to consolidate those territories under a Lieutenant-Governor. The Province of Eastern Bengal and Assam as then constituted was again broken up on the 1st of April, 1912; the Eastern Bengal Districts were united with the Bengal Commissionerships of Burdwan and the Presidency to form the Presidency of Bengal under a Governor-in-Council, Bihar, Chota-Nagpur and Orissa were formed into a separate province, while the old Province of Assam was reconstituted under a Chief Commissioner.

Under the Indian Reforms Act of 1919 the Province was raised in status to that of administration by a Governor-in-Council and was thereby ranked with the older major provinces of India.

With Independence the Province is administered according to the Government of India Act of 1935 as modified by subsequent Governors' ordinances under the Indian Independence Act.

The capital is Shillong, which has for a number of years been growing rapidly and is now in parts overcrowded. The town has grown up on somewhat rustic lines in very beautiful country on the slopes of the Shillong Range which rises to a height of 8,450 feet above the sea. It was destroyed in the earthquake of 1897 and was rebuilt with methods of construction more fitted to withstand the shocks of earthquake.

THE FINANCES OF ASSAM

In common with the other Provinces of India, Assam secured substantial financial autonomy under the Reform Act of 1935. The present financial position for 1948-49 is set out in the following table:—

HEADS OF REVENUE.	Budget Estimate for 1948-49.	HEADS OF EXPENDITURE.	Budget Estimate for 1948-49.
	(In thousands of Rupees)	A—Direct Demands on the Revenue—	(In thousands of Rupees)

GOVERNOR

His Excellency Sir Muhammad Saleh Akbar Hydari, K.C.I.E., C.S.I., I.C.S.

PERSONAL STAFF OF HIS EXCELLENCY THE GOVERNOR.

Adviser to the Governor for Tribal and Excluded Areas and States, N. K. Rustomji, I.C.S.

Assistant to the Adviser for Excluded Areas and States, M. C. Bhorali, B.A.

Secretary to the Adviser for Tribal Areas, H. Dutta, M.A.

Military Secretary, Major R. Yussuf Ali, The Rajput Regiment.

Private Secretary, B. C. Bhuyan, B.L.

Aide-de-Camp, Lieut. J. C. Dhamija, IND. SIGS.

Honorary Aide-de-Camp, Lt.-Col. J. Turnbull, M.O., E.D.

Honorary Aide-de-Camp, Sardar Bahadur Subedar-Major Nainsing Mall, Bahadur, I.D.S.M., O.B.I.

Honorary Aide-de-Camp, Subedar Sundar Sing. Chhatral.

COUNCIL OF MINISTERS

Hon'ble Srijut Gopinath Bardoloi, M.A., B.L. Premier.

Hon'ble Srijut Bishnu Ram Medhi, M.Sc., B.L.

Hon'ble Maulavi Abdul Matlib Mazumdar, M.A., B.L.

Hon'ble Rev. J. J. M. Nichols-Roy, B.A.

Hon'ble Srijut Ramnath Das, B.L.

Hon'ble Srijut Rupnath Brahma, B.L.

Hon'ble Srijut Omeo Kumar Das, B.A.

Hon'ble Maulana Md. Tayyebulla, B.L.

Hon'ble Srijut Lakshesvar Borooah, B.L., Speaker.

Mrs. Bonily Khongmen, B.A., Dy. Speaker.

SECRETARIES, ETC., TO GOVERNMENT.

Chief Secretary, S. P. Desai, I.C.S.

Secretary, Appointment Department, D. C. Das, I.C.S.

Secretary to Government, Finance and Revenue Departments, S. J. Duncan.

Secretary to Government, Education and Local Self-Government Departments, S. L. Mehta, I.C.S.

Secretary to Government in the Judicial Department and Legislative Department, S. M. Lahiri, M.A., B.L.

Secretary to Government in the Department of Supply, S. K. Datta, I.C.S.

Under-Secretary to Government, Finance Department, Rai Sahib Dilip Chandra Das.

Deputy Secretary to Government in the Education and Local Self-Government Departments, Secretary to the Legislative Assembly, Annada Kanta Barua, B.A.

Secretary to Government in the Public Works Department, R. Chandra, B.Sc., C.E. (Hons.), M.I.E. (Ind.), I.S.E. Also Chief Engineer.

Joint Secretary to Government in the Home Department, J. E. Reid, O.B.E., E.D., I.P.

Under-Secretary to Government in the Departments, under the Chief Secretary, S. C. Ragti, B.Sc., A.C.S.

Under-Secretary to Government in the Education and Local Self-Government Departments, Anwar Hussain, B.A., A.C.S.

Director of Publicity, S. C. Bhattacharjee.

Under-Secretary to Government in the P.W.D., Rai Sahib Bidhu Bhusan Chaudhuri.

Parliamentary Secretaries, Srijut Mahendra Mohan Chaudhuri, B.L., Srijut Siddhi Nath Sarma, B.L., Srijut Bimalaprasad Chaliha, Srijut Pwenananda Chetia, B.A.

Deputy Director of Supply (Accets.), Rai Sahib K. M. De.

Under-Secretary to Govt. in the L.S.G. (Industries—Textile) Dept., M. E. St. John Perry.

Under-Secretary to the Govt. in the Department of Supply (Ex-officio), Jnanendra Kuar Dutta

Registrar, Assam Secretariat (Civil), K. K. Chaudhuri, (Offg.).

Registrar, Assam Secretariat (P.W.D.), M. Ahmed (Offg.).

ASSAM PUBLIC SERVICE COMMISSION

Chairman, Srijut Kameswar Das, M.Sc., B.L.

Members, Maulavi Sayidur Rahman, M.A., B.L.; Josingh Rynjah, B.A.

Superintendent, P. N. Deb Goswami, B.A.

Advocate-General, F. A. Ahmed, Bar-at-Law.

HEADS OF DEPARTMENTS

Director of Land Records & Surveys, I. G. Registration, etc., K. L. Majumdar.

Director of Industries and Registrar of Co-operative Society & Village Authorities, T. T. S. Hayley, I.C.S.

Director of Agriculture, R. C. Woodford, O.B.E.

Director, Veterinary Department, A. K. Mitra, M.R.C.V.S., P.G.

Conservator of Forests (Senior), Assam, P. D. Stracey, M.A.

Conservator of Forests (Junior), Assam, M. C. Jacob, B.A.

Commissioner of Excise, Registrar of Joint-Stock Companies, Assam, Maulavi A. N. M. Saleh, M.A.

Superintendent and Remembrancer of Legal Affairs and Administrator-General, S. M. Lahiri, M.A., B.L.

Inspector-General of Police, J. E. Reid, O.B.E., E.D., I.P.

Director of Public Instruction P. C. Sanyal, M.B.E., M.A.

Inspector-General of Civil Hospitals, Col. A. N. Chopra, O.B.E., M.B.B.S., D.T.M. (Liv.), D.P.H. (Eng.), I.M.S.

Director of Public Health, Col. A. N. Chopra, O.B.E., M.B.B.S., D.T.M. (Liv.), D.P.H. (Eng.), I.M.S.

Chief Engineers, R. Chandra, B.Sc., C.E. (Hons.), M.I.E. (Ind.), I.S.E., in charge of Northern Assam Area; H. F. Barua, B.Sc., M.I.E. (Ind.), I.S.E., in charge of Southern Assam Area.

Comptroller (Govt. of India), S. Gupta, M.Sc.

Bihar

BIHAR lies between 20°-30' and 27°-30' N. latitude and between 82°-31' and 83°-26' E. longitude and includes the provinces of Bihar and Chota Nagpur, and is bounded on the north by Nepal and the Darjeeling district of West Bengal; on the east by West Bengal and the Bay of Bengal; on the South by the province of Orissa; and on the west by the United Provinces of Agra and Oudh and the Central Provinces.

The area of the territories which constitute the Governorship of Bihar is 69,348 square miles. The Province comprises the valley of the Ganges from the spot where it issues from the territories of the Governor of the United Provinces of Agra and Oudh till it enters west Bengal near Rajmahal. South of Bihar lies Chota Nagpur. Following the main geographical lines there are four Civil Divisions with headquarters at Patna, Muzaffarpur (for Tirhut), Bhagalpur and Raebari (for Chota Nagpur). The headquarters of Government are at Patna. The new capital which lies between the Military Cantonment of Dinapore and the old civil station of Bankipore is known as "Patna," the old town being called "Patna City."

Recently the States of Serailkela and Kharswan have been incorporated into the Province after prolonged dispute with Orissa. Bihar has also put forward claims along with C.P. to two other States, Sarguja and Jashpur.

THE PEOPLE

The Province has a population of 36,340,151 persons. Even so with 521 persons per square mile, Bihar is more thickly populated than Germany. There are only four towns, which can be classed as cities, namely, Patna, Gaya, Jamshedpur and Bhagalpur. During the last ten years the population of Patna has been steadily increasing. Hindus form an overwhelming majority of the population. Though Muslims form about one-tenth of the total population they constitute more than one-fifth of urban population of the province. Animists account for 5.7 per cent. These are inhabitants of the Chota Nagpur plateau and the Santal Parganas, the latter district being a continuation of the plateau in a northerly direction.

INDUSTRIES

Although there is a great deal of mineral wealth in Chota Nagpur and important industries are developing in connection with it, still for the bulk of the population of the province agriculture continues to be the basic occupation. Over 80 per cent. of the population depends wholly on agriculture, while only 7.8 depends on industries.

The soil throughout the whole of that portion of the Indo-Gangetic plain lying within the provincial boundaries is extremely fertile, particularly in North Bihar, in parts of which the density of the population is more than 900 people to the square mile. The province occupies a transitional position between Ganges delta with its damp climate so suitable for the paddy crop and the provinces to the north and west where

large irrigation schemes have had to be provided to enable the soil to produce its bounty. As in the delta of the Ganges, rice is by far the most important crop as it occupies normally an area of approximately 12 million acres or about 52 per cent. of the net cropped area of the province. The area under rice is about 9,300,000 acres. As canal irrigation is available only in the Sonne valley and to a moderate extent in Champaran district, the importance of the south-west monsoon to the province of Bihar cannot be over-estimated.

H.E. Madhao Shrihari Aney

In addition to the rice crop, however, other grain crops are grown on a tolerably large scale. Of the monsoon cereals, maize is grown in a normal area of about 16 lakhs of acres while in the cold weather wheat and barley are extensively grown and occupy approximately 13 lakhs of acres. The cultivation of oilseeds like castor, mustard and linseed forms a large and important part of the agriculture of Bihar, the normal area under spring oilseeds being estimated at more than 17 lakhs of acres. The areas under maize, wheat, barley and spring oilseeds are about 1,513,100 acres, 1,220,800 acres, 1,279,100 acres and 1,504,300 acres respectively.

After the United Provinces, Bihar is the most important white sugar area in India, some 26 per cent. of the total production of white sugar in the country being turned out in Bihar factories. The importance of the agricultural aspect of the industry cannot be overestimated. In 1942-43, for instance, 4 crore of rupees were paid to the growers for cane purchased and crushed by the factories. Apart from this numbers of young graduates and a large labour force find employment at the factories from year to year. The number of factories in the province has risen from 12 in 1931-32 to 31 at the present time.

Jute is also an important crop and is confined almost entirely to the Purnea district on the West Bengal border where about 95 per cent. of the total crop in the province is produced. The total area under jute crop is about 202,200 acres but little of the produce is manufactured within the province.

Tobacco is a crop of increasing importance in the province and one which is likely to expand in importance. The area under the crop is about 110,000 acres. There are two factories at present in the province.

MANUFACTURES

Opium was formerly, with indigo, the chief manufactured product of Bihar, but in consequence of the agreement with the Chinese Government the Patna Factory was closed. At Monghyr the Peninsular Tobacco Company have erected one of the largest cigarette factories in the world and as a result tobacco is being grown much more extensively. The Tata Iron and Steel Works at Jamshedpur in Singhbhum district are also one of the largest in the world and numerous subsidiary industries are springing up in their vicinity. The most important of these are the Tinplate Company of India, Agricultural Implements, Ltd., Enfield Cable Company of India, Enamelled Ironware, Limited, and Indian Steel Wire Products. The population of Jamshedpur has passed the 100,000 limit and it consumes 1½ million tons of coal annually. This part of the province has also some of the richest and most extensive iron mines in the world and supplies the iron and steel works in both West Bengal and Bihar with raw materials, but the raising of coal is still the most important of the mineral industries in the province. The coalfields in the Manbhum District have undergone an extraordinary development in the past twenty years, while valuable new fields are being developed at Ramgarh, Bokaro and Karanpura in Hazaribagh. This same district is the most important mica mining centre in the world both on account of the quality as well as the size of its output. Manbhum, Palamau, Ranchi, the Santal Parganas and Gaya are also the chief centres for the production of lac and the manufacture of shellac, the latter of which is exported from India to the value of ten crores annually. Cement is the other important industry of the province which is produced from the limestones available in Palamau and Shahabad.

ADMINISTRATION

The Province on first constitution was administered by a Lieutenant-Governor-in-Council, thus being unique in India as the only Lieutenant Governorship with a Council. It was raised to the status of a Governorship, with an Executive Council and Ministers under the Reform Act of 1919. The principles of the provincial administration are fully explained elsewhere.

PUBLIC WORKS

The Public Works Department in the Province of Bihar consists of two separate branches, viz.:—(1) the Buildings and Roads which includes Railways, and Public Health Engineering Branches and (2) Irrigation and Electric Branches. There are two Chief Engineers,

Chief Engineer I is in charge of the Buildings and Roads. Chief Engineer II is in charge of the Irrigation and Electric Branches of the P. W. Dept. In addition to this, there is another Deputy Secretary to Government (communications) and a Deputy Secretary to Government and also a non-technical Assistant Secretary in the Irrigation and Electric Branch. The Electrical work of the Province is carried out by an Electric Inspector and Electrical Engineer and a staff of subordinates; while the Public Health Engineering works are looked after by the S. E. Public Health Engineering Department who is in charge of the P. H. Engineering Department and a staff of subordinates.

The whole organization of the P. W. and Irrigation Departments is now under a non-technical Secretary to Government with C.E.'s for Buildings and Roads, Irrigation, P. H. E. and Electrical working as Heads of Departments.

JUSTICE

The administration of justice is controlled by the High Court of Judicature at Patna. In the administration of civil justice below the High Court are the District Judges as Courts of Appeal, the Subordinate Judges and the Munsiffs. The jurisdiction of a District Judge or Subordinate Judge extends to all original suits cognizable by the Civil Courts. It does not, however, include the powers of a Small Cause Court, unless these be specially conferred. The ordinary jurisdiction of a Munsif extends to all suits in which the amount or value of the subject matter in dispute does not exceed Rs. 1,000 though the limit may be extended to Rs. 4,000. On the criminal side the Sessions Judge hears appeals from Magistrates exercising first class powers while the District Magistrate is the appellate authority for Magistrates exercising second and third class powers. The District Magistrate can also be, though in point of fact he very rarely is, a court of first instance. It is usual in most districts for a Joint Magistrate or a Deputy Magistrate to receive complaints and police reports, more important or complicated cases being referred to the District Magistrate who is responsible for the peace of the district. In the Santal Parganas and in the Chota Nagpur Division the Deputy Commissioners and their subordinates hear rent suits. In the Santal Parganas the Deputy Commissioner and his subordinates also exercise civil powers.

LAND TENURE

The whole of the land tenure system will be completely changed by the passage of the Bihar State Acquisition of Zamindaris Bill which was passed by the Bihar Legislative Assembly on April 20 and by the Legislative Council on May 11. The Bill seeks to provide for the transference to the crown of interests of proprietors and tenure holders in land and of mortgagees and lessees of such interests, including their interests in trees, forests, fisheries, "jalkars", ferries, "hats", "bazzars", mines and minerals.

In regard to compensation, the Congress Working Committee to whom the Zamindars went in deputation has made the following suggestions to the Bihar Government: 1. The compensations should be paid in 40 equal instalments. 2. It should be paid in negotiable

bonds bearing a uniform rate of interest of 2½ per cent. per annum. 3. In calculating the income of a proprietor or tenure holder the average of 10 years actual realization of rent should be taken in order that a deduction may be made on account of unrealizable arrears.

It is understood that Government have fixed September 1 as the dead-line for the completed liquidation of the Zamindari system.

At present almost the whole of the province of Bihar is covered by the permanent Settlement of 1793. A number of estates are held direct by Government, having come into the direct management of Government in various ways. Other estates are managed temporarily by the Board of Revenue under the Court of Wards Act, while in Chota Nagpur a number of estates are managed by Managers appointed under the Chota Nagpur Encumbered Estates Act. There are two Tenancy Acts in force in the Province:—In Bihar the Bihar Tenancy Act is in force. This is the same as the Bengal Tenancy Act, 1885, with a number of important differences consequent on recent amendments of the Act. In Chota Nagpur, which is largely inhabited by aboriginal peoples, the Chota Nagpur Tenancy Act, 1908, an Act specially adopted to their requirements, is in force. It has also recently undergone several important amendments beneficial to the people of Chota Nagpur. There is a third tenancy system in the Santal Parganas where the tenancy law is contained in Regulation III of 1872 and II of 1886 and the record-of-rights prepared in the settlement. Finally in a small part of South Bihar where there is a large aboriginal population a special chapter of the Bihar Tenancy Act designed to prevent alienation of land by aborigines is in force.

Throughout the province a system of periodic settlements is in vogue. In these settlements the maps and cadastral ledgers are revised and fair rents settled. In many districts the settlement records are now out of date and in one or two it is nearly 40 years since the last settlement was undertaken.

In the greater part of the Santal Parganas and in many parts of Chota Nagpur the headmen system prevails. The usual practice is that the headmen are responsible for the collection of the rents and their payment to landlords after deduction of a percentage as their remuneration. Special steps have been taken in the settlements to record the rights

and duties of the headmen, and the special rights and privileges of certain privileged classes of tenants among the aboriginals.

POLICE

The Departments of Police, Prisons and Registration are each under the general direction of Government, supervised and inspected by an Inspector-General with a staff of assistants. The Commissioner of Excise and Salt is also Inspector-General of Registration.

Under the Inspector-General of Police are three Deputy Inspectors-General and 24 Superintendents. There are also 24 Assistant Superintendents of Police and 48 Deputy Superintendents. The force is divided into the District Police, the Railway Police and the Military Police. There is a college for the training of officers and two Schools for the training of recruit constables. Both the institutions have selected Police officers on their staff. A Criminal Investigation Department has also been formed for the collection and distribution of information relating to professional criminals and criminal tribes whose operations extend beyond a single district and to control, advise, and assist in investigations of crime of this class and other serious action which its assistance may be invoked. Under this department three Bureaus are working, i.e., Finger Print Bureau, Photo Bureau and the Handwriting Bureau. There are 11 companies of Unmounted Military Police and seven troops of Mounted Military Police which are maintained as reserves to deal with serious and organised disturbances and perform no ordinary civil duties. The Unmounted Military Police is under the charge of a commandant who is an officer of S.P.'s rank.

EDUCATION

Implementation of important post-war educational schemes has been entrusted to the Director of Public Instruction with a special staff. The Province has made notable progress in the development of Basic education.

The mass literacy movement launched in 1938 is being further expanded under an Adult Education Board with its publication and publicity sections working in co-operation with various Departments of Government. The percentage of literacy is 0.2 according to the 1941 census.

The Province has one University, the University of Patna.

INSTITUTIONS

	1936-37.	1941-42.	1946-47.
Number of arts and science colleges	9	16	23
Number of high schools	208	294	400
Number of middle schools	776	1,260	1,542
Number of upper primary schools	3,082 + 13*	3,845 + 13*	4,114 + 13*
Number of lower primary schools	17,695	18,418	16,133

* European schools.

SCHOLARS

There has been likewise a rapid increase in the number of pupils reading in these institutions except primary schools, as table below indicates :

	1936-37.	1941-42.	1946-47.
Number of scholars in arts and science colleges	3,620	6,407	12,767
Do in high schools	59,639	85,120	1,40,904
Do in middle schools	1,01,810	1,53,443	2,02,504
Do in primary schools	7,58,231	9,07,970	9,06,396

PERCENTAGE

The percentage of pupils attending schools to the total population has correspondingly increased as the table below will show :

Percentage of pupils to the total population.	1936-37.	1941-42.	1946-47.
Male	5.12	5.66	6.17
Female	.69	.86	.88
Total	2.91	3.24	3.54

EXPENDITURE

The direct expenditure from all sources has also increased as will appear from the figures given below:

	1936-37.	1941-42.	1946-47.
In arts colleges	Rs. 10,51,347	Rs. 13,44,624	Rs. 20,68,766
In high schools	26,57,375	33,62,825	55,47,223
In middle schools	18,82,587	26,47,206	40,13,028
In primary schools	49,04,881	54,56,903	83,07,424

PUBLIC FUNDS

The net expenditure from public funds, unlike the previous quinquennium, appreciably increased during the present quinquennium as figures below show :

	1936-37.	1941-42.	1946-47.
Expenditure from Government funds	Rs. 84,48,179	Rs. 85,30,094	Rs. 1,14,94,447
Expenditure from Boards' own funds	20,87,692	26,57,275	42,38,629
Total public funds	1,05,35,871	1,05,87,369	1,57,33,076

WOMEN'S EDUCATION

The rate of progress in girls' education has been rather slow during the quinquennium as will be clear from the following figures :

	1936-37.	1941-42.	1946-47.
Number of institutions for girls	2,091	2,395	2,110
Total number of girls reading in all institutions for boys and girls	1,11,942	1,56,130	1,50,297
Percentage of girls receiving education to total female population of the province	.69	.86	.88

EXPENDITURE

The table below gives the average expenditure per pupil per year for all kinds of institutions :

	1931-32.	1936-37.	1941-42.	1942-43.	1943-44.	1944-45.	1945-46.	1946-47.
Expenditure, per pupil per year	Rs. a. 16 12	Rs. a. 17 13	Rs. a. 16 1	Rs. a. 18 3	Rs. a. 20 3	Rs. a. 18 9	Rs. a. 22 8	Rs. a. 23 4

MEDICAL

The Medical Department is under the control of the Inspector-General of Civil Hospitals. Under him there are 16 Civil Surgeons who are responsible for the medical work of the districts at the headquarters of which they are stationed. 57 hospitals & dispensaries are maintained by Government in addition to 632 dispensaries maintained by Local Bodies, always, private persons, etc. About 7,000,000 patients including 1,20,000 in-patients are treated in all the dispensaries every year. The total expenditure on the dispensaries maintained by Government and Local Bodies including that of the private aided institutions amounts to about 40,00,000 a year.

There is a large mental hospital for Europeans & Ranchi receiving patients from Assam, Bihar, W. and E. Bengal, Baluchistan, the C. P., the W.P.P., Orissa, W. and E. Punjab and the United Provinces and another similar institution for Indians for the treatment of mental patients from Bihar, Orissa and W. and E. Bengal. A sanatorium has been established at Itki in the district of Ranchi for the treatment of tuberculosis. There is a Medical College at Patna with a large and well equipped hospital attached to it including an Institute for Radium treatment. There is a Medical School at Darbhanga which also has a large hospital attached to it. Centres for anti-rabic treatment have been opened at Patna and other suitable places in the province.

The province has a laboratory for the preparation of cholera-phage and bacterio-phage which are supplied to other provincial Governments for use in the prevention of epidemics.

PUBLIC HEALTH

The Public Health Department aims at the promotion of the well being and the health of the people by the prevention of the epidemic diseases, improvement in sanitation, and nutritional state of the people. All factors that have bearing on health come within the purview of this department. The department is under the control of the Director of Public Health, Bihar. For purposes of efficient public health administration the province has been divided into three circles, known as North Bihar, South Bihar and Chota Nagpur Circle with their headquarters at Muzaffarpur, Patna and Ranchi. The Assistant Directors of Public Health act as reporting and inspecting officers of Government on matters pertaining to the health and sanitation of their respective circles. They also inspect and supervise the working of the public health administration under the local bodies.

There are sixteen districts in the province, each one of them is provided with a Health Officer, who is in direct charge of the Health Administration of the district. Local bodies are responsible for health administration in their own areas. Out of fifty-four Municipalities, eight are provided with Health Officers.

A senior Officer of this department known as Senior Executive Medical Officer is placed in charge of the flood affected areas of the Kosi where a special scheme of medical and Public Health relief has been introduced.

The other public health services, maintained by the department are the offices of the Chemical Analyst, Nutrition Department, Bacterio-phage and that of Excise Chemist, which are all located in Public Health Laboratory.

All supplies of vaccine lymph are manufactured at the Vaccine Institute, Namkum. The department maintains two depots, main one at Patna and the Sub-depot at Ranchi where anti-malarial drugs, vaccines, disinfectants and equipments are stocked for supply to local bodies in the province. The department takes special measures for control of epidemics, malaria, kala-azar and plague.

For the medical inspection of schools, four School Medical Officers, one in charge of each of the four divisions of the province are maintained. A lady school Medical Officer for the inspection of girl schools is also employed.

The Department carry out Public Health Propaganda by means of leaflets, pamphlets, posters, health exhibitions, slides and films.

The budget of the Public Health Department is about rupees forty lacs every year.

FINANCE

The total revenue of the Province is 17.93 crores (Revised 1947-48) and 21.57 crores (Budget 1948-49) and the total expenditure on the revenue account is 16.90 crores (Revised 1947-48) and 20.09 crores (Budget 1948-49).

I. The main heads of revenue are as follows :-

	Tax (Revised 1947-48).
(i) Taxes on Income other than Corporation	3.29.24
(ii) Land Revenue	1.35.00
(iii) Provincial Excise	4.50.00
(iv) Stamps	1.76.00
(v) Other Taxes and Duties	1.09.92
(vi) Extraordinary Receipts	2.81.32

II. The main heads of expenditure on beneficent Departments :-

	Tax (Revised 1947-48).
(i) Education	1.25.01
(ii) Medical	56.85
(iii) Public Health	1.08.21
(iv) Agriculture	70.55
(v) Veterinary	9.40
(vi) Corporation	18.06
(vii) Industries	31.36

ADMINISTRATION

GOVERNOR.

His Excellency Sri Madhad Shrihari Aney.

PERSONAL STAFF.

Secretary to Governor, K. S. V. Raman, I.C.S.

Military Secretary to Governor, Major B. G. Deoskar.

Honorary A. D. Cs., Risaldar Major and Hon. Capt. Abdul Latif, Khan Bahadur, O.B.I., I.D.S.M., late 2nd Royal Lancers (Gardener's Horse).

CABINET MINISTERS.

Prime Minister for Home Affairs, The Hon'ble Mr. Sri Krishna Sinha.

Minister of Finance, Labour and Supply and Price Control, The Hon'ble Mr. Anugrah Narayan Sinha.

Minister for Development and Transport, The Hon'ble Dr. Saiyid Mahmud.

Minister for Public Health, The Hon'ble Mr. Jaglal Chaudhury.

Minister for Irrigation, Public Health (Engineering), Electrification and Legislative, The Hon'ble Mr. Ramcharitar Singh.

Minister of Education and Information, The Hon'ble Mr. Badri Nath Verma.

Minister for Revenue, Forest and Excise, The Hon'ble Mr. Krishna Ballabh Sahay.

Minister of L. S. G. and Medical, The Hon'ble Mr. Binodanand Jha.

Minister for P.W.D. (Roads and Buildings) and Cottage Industries, The Hon'ble Mr. Abdul Qayyum Ansari.

SECRETARIAT.

Chief Secretary to Government, Political and Appointment Departments, V. K. B. Pillai I.C.S.

Secretary to Government, Finance Department L. P. Singh, I.C.S.

Secretary to Government, Supply & Price Control Dept., B. D. Pande, I.C.S.

Secy. to Govt. Rev. and Labour Dept., K. Raman I.C.S.

Secretary to Government, Judicial Department, T. G. N. Ayyar, I.C.S.

Chief. Eng. to Government, P.W.D., M. L. Bahl, I.S.E.

Secretary to Govt. P.W.D., T. P. Singh, I.C.S.

Second Chief Engineer & Addl. Secy. to Govt., P.W.D., S. D. Khangar, I.S.E.

Dy. Chief Engineer and Dy. Secy. to Govt. (Communications), H. K. Nivas, I.S.E.

Dy. Chief Engineer, and Dy. Secy. to Govt., Irrigation, D. Mehta, I.S.E.

Secretary to Government, Education Department, S. K. Aikat.

Secretary to Government, Local Self-Government Department, Pandey Ramchandra Saha.

Secretary to Government, Legislative Department, Khalileu Rahman.

Public Service Commission (for Bihar, C.P. and Berar and Orissa), Rajandhari Sinha, C.I.E.;

Chairman: R. K. Ratho, M.A., LL.B. and Dr. H. C. Seth, M.A., Ph.D. (Lond.), Members:

V. Das, B.A. (Hons.), Dip.-in-Edn., Secretary.

Secretary to Govt., Dev. Dept., Qamrul Huda.

Secretary to Govt., Welfare Dept., Pushkar Thakur.

GOVERNORS OF BIHAR

Lord Sinha of Raipur, P.O., K.C. .. 1920

Sir Henry Wheeler, K.C.S.I., K.C.I.E., I.C.S. .. 1921

Sir Hugh, Lansdown Stephenson, K.C.S.I., K.C.I.E. .. 1927

Sir James David Sifton, K.C.S.I., K.C.I.E., I.C.S. .. 1932

Sir Maurice Garnier Hallett, K.C.I.E., K.C.S.I., I.C.S. .. 1937

Sir Thomas Alexander Stewart, K.C.I.E., K.C.S.I., I.C.S. .. 1939

Sir Thomas George Rutherford, K.C.S.I., K.C.I.E., I.C.S. .. 1943

Sir Robert Francis Mudie, K.C.I.E., C.S.I., C.I.E., O.B.E., I.C.S. .. 1943

Sir Thomas George Rutherford, K.C.S.I., K.C.I.E., I.C.S. .. 1944

Sir Hugh Dow, K.C.S.I., C.I.E., I.C.S. .. 1946

Sir Jai Ramdas Daulatram .. 1947

BIHAR LEGISLATIVE COUNCIL

President: The Hon'ble Sir Rajjvaranjan Prasad Sinha, Kt., M.A.

Deputy President: Shyama Prasad Sinha.

Deputy Secretary: Raghu Nath Prashad, M.A., B.L.

Deputy Secretary: Shri Chand Lall, B.A. (Cal.), B.A. Hons. (Lond.), Dip.-in-Edn. (Lond.), Bar-at-Law.

Assistant Secretary: Bisheswar Prasad.

The Hon'ble Sir Rajjvaranjan Prasad Sinha, Kt., M.A. (North Patna Division General); Sooraj Narain Sinha (Gaya General); Jayadeva Narain Sinha (Saran cum Champaran General); Ral Bahadur Maheshwar Prasad Narayan Singh (Muzaffarpur General); Ganga Nand Singh (Darbhanga General); Ramjiwan Himat Singka (Monghyr cum Santal Parganas General); Naresh Mohan Thakur (Bhagalpur cum Purnea General); Satis Chandra Sinha (Hazaribagh cum Manbhum General); Ral Sahib Nalini Kumar Sen (Ranchi and Palamau cum Singhbhum General); Muhammad Mahmood (Patna cum Shahabad Muhammadan); Saiyid Muhammad Mehdi (Gaya cum Chota Nagpur Division Muhammadan); Saiyid Mobarak Ali (Tirhut Division Muhammadan); Jamilur Rahman (Bhagalpur Division Muhammadan); Vacant (Bihar European); Ral Brijraj Krishna (Elected by the Bihar Legislative Assembly); Shyama Prasad Sinha (Elected by the Bihar Legislative Assembly); Gajindra Narayan Singh (Elected by the Bihar Legislative Assembly); Puneeydeo Sharma (Elected by the Bihar Legislative Assembly); Shah Muhammad Umair (Elected by the Bihar Legislative Assembly); Radha Govind Prashad (Elected by the Bihar Legislative Assembly); Devendra Nath Samanta (Elected by the Bihar Legislative Assembly); Boniface Lakra (Elected by the Bihar Legislative Assembly); Shah Ozair Muhammad Munim; Abdul Malik (Elected by the Legislative Assembly); H. B. Chandra (Elected by the Legislative Assembly); Srimati Saraswati Devi (Elected by the Legislative Assembly); Vacant (Nominated); Mrs. Nayama Khatoun Haider (Nominated); Chandrika Ram (Nominated); Jai Deva Prasad (Nominated).

BIHAR LEGISLATIVE ASSEMBLY

Speaker: The Hon'ble Mr. Vindhyeshwari Prasad Varma, B.A., B.L.

Deputy Speaker: Deva Saran Singh.

Secretary: Raghu Nath Prashad, M.A., B.L.

Deputy Secretary: Shri Chand Lall, B.A. (Cal.), B.A. Hons. (Lond.), Dip.-in-Edn. (Lond.), Bar-at-Law.

Asstt. Secretary: Bisheswar Prasad.

Sarangdhar Sinha (Patna City General Urban); Jagat Narain Lal (Patna Division General Urban); Murli Manohar Prasad (Tirhut Division General Urban); Gauri Shankar Dalmia (Bhagalpur Division General Urban); Amiyo Kumar Ghosh (Chota Nagpur Division General Urban); Deva Saran Singh (Central Patna General Rural); Shyam Nandan Singh (Dinapur General Rural); Jagadish Narain Sinha (Bihar General Rural); Vacant (East Bihar General Rural); Mahabir Ram (East Bihar General Rural, Reserved); Birendra Bahadur Sinha (South Gaya General Rural); Sakti Kumar (South Gaya General Rural, Reserved); The Hon'ble Mr. Anugrah Narayan Sinha (Aurangabad General Rural); Jamuna Prashad Singh (Nawada General Rural); Chetu Ram (Nawada General Rural, Reserved); Mosaheb Sinha (North Gaya General Rural); Harigobing Misra (Buxar General Rural); Guptanath Singh (Bhakhua General Rural); Sardar Harihar Singh (North-East Shahabad General Rural); Deo Narayan Singh (East Central Shahabad General Rural); Jagjivan Ram (East Central Shahabad General Rural, Reserved); Jagannath Singh (Sasaram General Rural); Pandit Girish Tewari (West Saran Sadr General Rural); Ram Binod Sinha (East Saran Sadr General Rural); Jhulan Sinha (North-East Siwan General Rural); Mahamaya Prasad Sinha (South-West Siwan General Rural); Prabhatnath Sinha (East Gopalganj cum Mahrak and Marhaurah General Rural); Phulan Prasad Varma (West Gopalganj General Rural); Ram Basawan Ram (West Gopalganj General Rural, Reserved); Ganesh Prasad Sah (North-West Champaran Sadr General Rural); Pandit Prajapati Misra (East Champaran Sadr General Rural); Harivans Sahay (South-West Champaran Sadr General Rural); Jaynarayan Prasad (South Bettiah General Rural); The Hon'ble Mr. Badri Nath Verma (North Bettiah General Rural); Yamuna Ram (North Bettiah General Rural, Reserved); Mahesh Prashad Sinha (East Muzaffarpur Sadr General Rural); Shiva Nandan Ram (East Muzaffarpur Sadr General Rural, Reserved); The Hon'ble Mr. Vindhyeshwari Prasad Varma (West Muzaffarpur Sadr General Rural); Dip Narayan Sinha (East Sitamarhi cum Katra and Minapur General Rural); Rameshwar Prasad Sinha (South-West Hajipur General Rural); Bir Chandra Patel (North-East Hajipur General Rural); Ramasis Thakur (North Sitamarhi General Rural); Thakur Giaga Nandan Singh (West Sitamarhi General Rural); Pandit Dhanraj Sharma (North Madhubani General Rural); Harinath Mishra (South Madhubani General Rural); Jai Narayan Vinut (East Madhubani cum Bahera General Rural); Radhakant Choudhary (Darbhanga Sadr General Rural); Ramghulam Choudhary (Darbhanga Sadr General Rural, Reserved); Rajeshwar Prasad Narin Sinha (North-West Samastipur

General Rural); Ramcharan Sinha (South-East Samastipur General Rural); Sunder Mahto Pasi (South-East Samastipur General Rural, Reserved); The Hon'ble Mr. Sri Krishna Sinha (South Sadr Monghyr General Rural); Dr. Raghunandan Prasad (South Sadr Monghyr General Rural, Reserved); Kamleshwari Prasad Jadaab (North Sadr Monghyr General Rural); The Hon'ble Mr. Ramcharitra Sinha (West Begusarai General Rural); Sarjoo Prasad Sinha (East Begusarai General Rural); Kalika Prasad Singh (Jamui General Rural); Rash Bihari Lal (South Bhagalpur Sadr General Rural); Shivadhati Singh (North Bhagalpur Sadr cum Kishanganj General Rural); Hari Kishore Prasad (Banka General Rural); Rajendra Misra (Supaul General Rural); Shivanandan Prasad Mandal (Madhipura General Rural); Bhagwat Prasad (Madhipura General Rural, Reserved); Basudeva Prasad Sinha (North-West Purnea General Rural); Dr. Kishori Lal Kundu (East Purnea General Rural); Lakshmi Narayan Singh "Sudhansu" (South-West Purnea General Rural); Bhola Pasawan (South-West Purnea General Rural, Reserved); The Hon'ble Pandit Binodanand Jha (Deoghar cum Jamtara General Rural); Pandit Budhinath Jha (Goddia General Rural); Lambodar Mookherjee (Santal Parganas Sadr General Rural); Barlar Hembram (Santal Parganas Sadr General Rural, Reserved); Briljal Dokania (Pakaur cum Rajmahal General Rural); Jahram Murmu (Pakaur cum Rajmahal General Rural, Reserved); The Hon'ble Mr. Krishna Ballabh Sahay (Central Hazaribagh General Rural); Khara Manjhi (Central Hazaribagh General Rural, Reserved); Sukhlal Singh (Giridih cum Chatra General Rural); Mangar Dhoobi (Giridih cum Chatra General Rural, Reserved); Deoki Nandan Prasad (Ranchi Sadr General Rural); Soma Bhagat (Ranchi Sadr General Rural, Reserved); Nagar Mal Modi (Gumla cum Simdega General Rural); Raj Sahib Bundi Ram Oraon (Gumla cum Simdega General Rural, Reserved); Dr. Purna Chandra Mitra (Kinki General Rural); Raj Kishore Singh (North-East Palamau General Rural); Jitu Ram (North-East Palamau General Rural, Reserved); Jadbans Sahay (South-West Palamau General Rural); Sagar Mahto (South Manbhum General Rural); Tika Ram Manjhi (South Manbhum General Rural, Reserved); Sris Chandra Banerjee (Central Manbhum General Rural); Nakul Chandra Sahis (Central Manbhum General Rural, Reserved); Purushottam Chohan (North Manbhum General Rural); Kishori Mohan Upadhyay (Singbhum General Rural); Danardan Aldo Ho (Singbhum General Rural); Sidul Hembram (Singbhum General Rural, Reserved); Saiyid Jafar Imam (Patna City Muhammadan Urban); Muhammad Nauman (Patna Division Muhammadan Urban); Muhammad Abdul Ghani (Tirhut Muhammadan Urban); Ali Ahmad Buland Akhtar (Bhagalpur Division Muhammadan Urban); Khan Sahib Saiyid Mazhar Imam (Chota Nagpur Muhammadan Urban); Sharfuddin Husain (West Patna Muhammadan Rural); Mehdi Hasan (East Patna Muhammadan Rural); Khaja Gulam Ahmad (East Gaya Muhammadan Rural); Latifur Rahman (West Gaya Muhammadan Rural); Gulam Mohiuddin (Shahabad Muhammadan Rural); Nur Hasan Mian (Saran Sadr Muhammadan Rural); Muhammad Qasim (Siwan Muhammadan Rural); Moynuddin Ahmad Khan (Gopalganj Muhammadan Rural); The Hon'ble Dr. Saiyid Mahmud (North Champaran Sadr Muhammadan Rural); Saiyid Baduddin Ahmad (South Champaran Sadr Muhammadan Rural); Khan Sahib Saiyid Mazhar Alam (Bettiah Muhammadan Rural); Tajamul Husain (Muzaffarpur Sadr Muhammadan Rural); Badrul Hassan (Hajipur Muhammadan Rural); Zaid Hussain (Sitamarhi Muhammadan Rural); Abdul Abad Muhammad Noor (North-East Darbhanga Muhammadan Rural); Muhammad Farid (North-West Darbhanga Muhammadan Rural); Dr. Ghulam Rasul Khan (Central Darbhanga Muhammadan Rural); Muhammad Khalil (South Darbhanga Muhammadan Rural); Nawab Muhammad Nazirul Hassan (North Monghyr Muhammadan Rural); Saiyid Muhammad Abu Zaffar (South Monghyr Muhammadan Rural); Saiyid Maqbul Ahmad (Bhagalpur Sadr cum Banka Muhammadan Rural); K. B. Mobarak (Madhipura cum Supaul Muhammadan Rural); Ziaur Rahman (Araria Muhammadan Rural); Muhammad Shafiqul Haque (South Kishanganj Muhammadan Rural); Khan Sahib Muhammad Fazlur Rahman (North-West Kishanganj Muhammadan Rural); Muhammad Islamuddin (North-East Kishanganj Muhammadan Rural); Muhammad Raziuddin (South-East Purnea Sadr Muhammadan Rural); Muhammad Tahir (North Purnea Sadr Muhammadan Rural); Muhammad Yasin (South Santal Parganas Muhammadan Rural); Burhanuddin Khan (North Santal Parganas Muhammadan Rural); Muhammad Yasin (Hazaribagh Muhammadan Rural); The Hon'ble Mr. Abdul Qayyum Ansari (Ranchi cum Singbhum Muhammadan Rural); Ramzan Ali (Palamau Muhammadan Rural); Saiyid Amin Ahmad (Manbhum Muhammadan Rural); Sunder Devi (Patna General Urban Women's); Srimati Bhagwati Kuer (Muzaffarpur Town General Urban Women's); Srimati Sushama Sen (Bhagalpur Town General Urban Women's); Mrs. Tohru Ahmad (Patna City Muhammadan Urban Women's); M. Morris (Anglo-Indian); A. K. Richards (Patna and Tirhut cum Bhagalpur European); G. W. Hogg (Chota Nagpur European); Ignace Beck (Indian Christian); Hira Lal Saraf (The Bihar Chamber of Commerce); Rai Bahadur Syannandan Sahaya (The Bihar Planters' Association); Munindra Nath Mookherjee (The Indian Mining Federation); W. Forest (The Indian Mining Association); Rameshwar Prasad Singh, C.B.E. (Patna Division Landholders); Chandreshwar Prasad Narain Sinha (Tirhut Division Landholders); Taranand Sinha (Bhagalpur Division Landholders); Raja Bahadur Kamakshya Narayan Singh (Chota Nagpur Division Landholders); Prabhat Chandra Bose (Trade Union Mining Labour); Michael John (Jamtara Factory Labour); Nirapada Mukharji (Monghyr cum Jamalpur Factory Labour); Dr. Sachchidananda Sinha (University); The Hon'ble Mr. Jaglal Chaudhuri.

Bombay

THE Bombay Province stretches along the west coast of India, from Gujarat in the north to Kanara in the south. It has an area of 76,443 square miles and a population of 20,849,840. Geographically included in the Province but under the Government of India is the first-class State of Baroda, with an area of 8,176 square miles and a population of 2,855,010. There are no States in political relations with the Government of Bombay, as they are all now under the Government of India. With the merger of 16 Deccan states the area of the Province has increased by more than 7,000 sq. miles, the total population by over a million and a half and the provincial revenue by about 2 crores. When the Gujarat States merge with Bombay (and this is now only a question of time) the area, the population and the revenue will increase still further.

H.E. Sir Maharaj Singh

The Province embraces a wide diversity of soil, climate and people. In the Province there are the rich plains of Gujarat, watered by the Nerbudda and the Tapi, whose fertility is so marked that it has long been known as the Garden of India. South of Bombay City the Province is divided into two sections by the Western Ghats, a range of hills running parallel to the coast. Beyond the Ghats are the Deccan Districts; south of these come the Karnatic districts. On the sea side of the Ghats is the Konkan, a rice-growing tract, intercepted by creeks which make communication difficult.

THE PEOPLE

The population varies as markedly as soil and climate. Gujarat has remained true to Hinduism although long under the domination of powerful Muslim kings. Here there is an amplitude

of caste divisions, and the people, who although softened by prosperity, are amongst the keenest trading races in the world. The Deccan peasant has been seasoned by adversity; the saying goes that the Deccan expects a famine one year in every three, and gets it. The population of the Deccan is much more homogeneous than that of Gujarat thirty per cent. being Mahrattas. The Karnatic is the land of the Lingayets, a Hindu reforming sect of the twelfth century, and in the Konkan there is a large proportion of Christians. Three main languages are spoken. Gujarati, Mahrathi and Kannada with Hindustani a rough *lingua franca* where English has not penetrated. The main castes and tribes number about five hundred.

The following figures give the distribution of population according to communities:

Scheduled Castes	18,55,148
Other Hindus	14,7,00,242
Sikhs	8,011
Jains	2,66,231
Buddhists	1,433
Muslims	19,20,368
Christians	3,75,486
Zoroastrians	86,270
Jews	14,741
Trials	16,14,298
Others	7,882

INDUSTRIES

The principal industry is agriculture, which supports sixty-four per cent. of the population. In Gujarat the soils are of two classes; the black cotton soil, which yields the famous Broach cottons, the finest in India, and alluvial, which under careful cultivation in Ahmedabad and Kaira makes splendid garden land. The dominant soil characteristic of the Deccan is black soil, which produces cotton, wheat, gram and millet and in certain tracts rich crops of sugarcane. The Konkan is a rice land, where the crop is grown under the abundant rains of the submontane regions, and in the south the Dharwar cotton vies with Broach as the best in India. There are no great perennial rivers suitable for irrigation, and the harvest is largely dependent upon the seasonal rainfall, supplemented by well irrigation. A chain of irrigation works, consisting of canals fed from great reservoirs in the region of unfailing rainfall in the Ghats, is gradually being completed, and this will ultimately make the Deccan immune to serious drought.

More than any other part of India the Bombay Province has been scourged by famine and plague. The evils have not been unmixd, for tribulation has made the people more self-reliant, and the rise in the values of all produce, synchronising with a certain development of industry, has induced a considerable rise in the standard of living. The land is held on what is known as the ryotwari tenure, that is to say, each cultivator holds his land direct from

Government under a moderate assessment, and as long as he pays this assessment he cannot be dispossessed.

MANUFACTURES

Whilst agriculture is the principal industry, others have no inconsiderable place. The mineral wealth of the Province is small and is confined to building stone, salt extracted from the sea, and a little manganese. But the handicrafts are widely distributed. The handloom weavers produce brightly coloured saris, and to a diminishing extent the exquisite kincobas of Ahmedabad and Surat. Bombay silverware has a place of its own, as well as the brass work of Poona and Nasik.

But the tendency is to submerge the indigenous handicrafts beneath industry organised on modern lines. Bombay is the great centre in India of the textile trade. This is chiefly found in the provincial capital Bombay, and in Ahmedabad.

Number of looms in Bombay Island.	65,948
Number of spindles in Bombay Island.	28,22,530
Number of hands employed in the Textile Industry in Bombay Island (daily average)	1,96,554
Consumption of Cotton by the Mills in Bombay Island (in bales of 784 lbs.)	6,81,243
Number of Spindles in Ahmedabad.	18,26,795
Number of Looms in Ahmedabad	43,421
Number of Spindles in Sholapore Dist.	2,90,040
Number of Looms in Sholapore Dist.	6,980
Number of Spindles in the Bombay Province (excluding Bombay Island and Ahmedabad)	12,36,886
Number of Looms in the Bombay Province (excluding Bombay Island and Ahmedabad)	25,043

ADMINISTRATION

With the introduction of Provincial Autonomy on April 1, 1937, the administration of the province has been largely altered at the top. Except in unusual circumstances, there is now a Governor and a council of ten Ministers to aid and advise him in all matters. The executive power of the province extends to all matters in which it may legislate.

In the legislative sphere the Governor is assisted by two Chambers, known as the Bombay Legislative Assembly and the Bombay Legislative Council. The Council is a permanent body. One-third of the members retire every three years and the Assembly, unless sooner dissolved, lasts for five years. The strength of the Assembly is 175 members of whom 30 are Muslims, 3 Indian Christians, 2 Anglo-Indians, 3 Europeans, 2 Landholders, 7 Commerce and Industry, 7 Labour, 1 University and the remaining 120 are Hindus including 15 Scheduled Castes and 7 Marathas. There are also six women.

The Legislative Council contains not less than 29 and not more than 30 members of whom not less than three and not more than four are nominated by the Governor. Twenty are elected by general constituencies, 5 by Muslims and 1 by Europeans.

The senior of the Civilian Secretaries is entitled the Chief Secretary.

The Government is in Bombay from November to the end of May; and in Poona from June to November; but the Secretariat always remains in Bombay.

Under the Local Government the Province is administered by three Commissioners, namely, the Commissioner for the Northern Division, with the headquarters at Ahmedabad, the Central Division with the headquarters at Poona, and the Southern Division with the headquarters at Belgaum. Each District is under a Collector usually a covenanted Civilian, who has under him one or more Civilian, as Assistant Collectors, and one or more Deputy Collectors. A collectorate contains on an average from eight to ten talukas, each consisting of from one to two hundred villages whose whole revenues belong to the State. The village officers are the patel, who is the head of the village both for revenue and police purposes; the talati or kulkarni, clerk and accountant; the messenger and the watchman. Over each taluka or group of villages is the mamlatdar, who is also a subordinate magistrate. The charge of the Assistant or Deputy Collector contains three or four talukas. The Collector and Magistrate has jurisdiction over the whole District. The Commissioners exercise general control over the Districts in their Divisions.

JUSTICE

The administration of justice is entrusted to the High Court sitting in Bombay, and comprising a Chief Justice, who is a barrister, and ten puisne judges, either Civilian, Barristers, or Indian lawyers and three additional Judges. Of the lower civil courts, the court of the first instance is that of the Subordinate Judge recruited from the ranks of the local lawyers. The Court of first appeal, is that of the District or Assistant Judge, or of a first-class subordinate judge with special powers. District and Assistant Judges are Indian Civilian, or members of the Provincial Service or the Bar. In cases exceeding Rs. 5,000 in value an appeal from the decision of the Subordinate or Assistant Judge and from the decision of the District Judge in all original suits lies to the High Court. District and Assistant Judges exercise criminal jurisdiction throughout the Province but original criminal work is chiefly disposed of by the Executive District Officers and Resident and City Magistrates. Capital sentences are subject to confirmation by the High Court.

In some of the principal cities Special Magistrates exercise summary jurisdiction (Bombay has six Presidency Magistrates, as well as Honorary Magistrates exercising the functions of English Justices of the Peace) and a Court of Small Causes, corresponding to the English County Courts.

LOCAL GOVERNMENT

Local control over certain branches of the administration is secured by the constitution of local boards and municipalities, the former exercising authority over a District or Taluka, and the latter over a city or town. These bodies are composed of members either nominated by Government or elected by the people, who are empowered to expend the funds at their disposal on education, sanitation, the construction of roads and tanks, and general improvement. Their funds are derived from cesses on the land revenue, the toll, ferry funds and local taxes. The tendency in recent years has been to increase the elective and reduce the nominated element, to allow these bodies to elect their own chairmen, whilst larger and larger grants are made from the general revenues for water-supply and drainage.

The Bombay Municipal Boroughs Act of 1925 made further advance in the matter of local self-government in the Province. The Act provided more adequate basis for Municipal Administration in the larger cities of the Bombay Province. The larger municipalities are now styled as Municipal Boroughs and are 27 in number. The executives of these Borough Municipalities are invested with larger powers than before. Another important change introduced by the Act was the extension of municipal franchises to occupiers of dwellings or buildings with annual rental values of Rs. 12 or with capital value of not less than Rs. 200.

Mention must be made here of a Bill to amend the Bombay Village Panchayats Act. A feature of the Bill is the recognition of the fact that the villages are entitled to a share in the land revenue collection. It is now proposed to hand over to the village panchayats 15 per cent of land revenue collected in the respective villages provided the panchayat levied one or the other of a list of specified taxes. It is also proposed to widen the powers of the nyaya panchayats which dispense justice to villagers. The hope underlying the Bill is that in the next few years 5,000 self-sufficient and self-reliant village panchayats would come into being to play their proper role in the life of the nation.

A shift in the control of primary education which has vitally affected the powers of local authority has also to be noted. This came about through some of the provisions of the Primary Education Bill which was passed by the Assembly at its Poona Session in 1947. The new legislation divests district local boards of responsibility for administering primary education in the rural areas because competent authorities hold these local bodies to be incapable of bearing the financial burden and would in any case be inefficient in the administration of education. Although there is a strong case for Government taking complete control of primary education a compromise was agreed to by which local bodies have been asked to elect school boards the chairman of which would be associated with the administration of primary education.

A third point which deserves mention is the proposal to build up a Greater Poona and endow the whole area with a Municipal Corporation on the same lines as those of the Bombay Corporation.

This is a recommendation of a Committee set up for the purpose and a draft bill providing for such a reconstitution of the Poona area has also been prepared. The Committee has recommended the amalgamation of the areas now included within the limits of the Poona City Municipality, the Poona Suburban Municipality, the Poona Cantonment Board and the villages of Hingne, Badruk, Kothrud, Pashan, Aundh, Dapodi, Borodi, Yervada, Ghorpadi, Vanvdi, Kondhwa, Manjri and Parvati.

The Committee has also recommended that a master plan should be prepared for the whole area within a radius of 10 miles from the Poona City Post Office to facilitate a systematic reconstruction of the already built-up areas in Greater Poona and orderly development of the open lands therein as well as beyond it where expansion is likely to take place in years to come.

The constitution will consist of three co-ordinate authorities, namely the municipal corporation with 85 councillors, a standing committee of twelve members and a Municipal Commissioner to be appointed by Government. Besides the Commissioner, the Corporation will have a Deputy Commissioner, a Chief Engineer, a Health Officer and Education Officer, a Secretary and a Chief Auditor.

PUBLIC WORKS

The Public Works Department is under the control of a Chief Engineer who acts as Secretary to the Government. Under him are Superintending Engineers in charge of Circles and Executive Engineers in charge of divisions, and the Electrical Engineer.

There is a chain of protective irrigation works; originating in reservoirs in the Ghāt regions. The principal works are the Nira Canals fed by Lake Whiting impounded by the Lloyd Dam at Bhatgar, the Pravara Canals fed by Lake Arthur Hill, impounded by Wilson Dam at Bhandardara, the Mutha canals fed by Lake Fife at Khadakvasla, the Godavari Canals fed by Lake Reale at Nandur Madhmeshwar and the Gokak Canal.

The Mutha Canals and the Gokak Canal were completed in 1896-97, the Nira Left Bank Canal in 1905-06, the Godavari Canals in 1915-16 and the Pravara Canals in 1926-27. The Nira Right Bank Canal which has been under construction since 1912 is practically complete. The Wilson Dam at Bhandardara, the second highest yet constructed by engineers the world over, was opened in 1926. The Lloyd Dam at Bhatgar which is 5,333 feet in length, 190 feet in height and 124 feet in width was opened in 1928. It cost Rs. 172 lakhs. It is remarkable as being the largest Dam in volume hitherto constructed and contains 21½ million cubic feet of masonry. The Assuan Dam in Egypt is popularly supposed to be the largest Dam in existence but that contains only 18 million cubic feet. It costs nearly 50 per cent. more than the Lloyd Dam. An idea of the magnitude of the Lloyd Dam can be gathered from the fact that if a wall 6 feet high and 15 inches thick were constructed from the masonry in the Dam it would stretch to a distance of 520 miles, say from Bombay to Nagpur. These projects will irrigate certain tracts most liable to famine.

POLICE

The Police Force is divided into 3 categories, viz., District Police, Railway Police and the Bombay City Police. The District and Railway Police in the Province proper are for the purpose of control under the Inspector-General of Police who is assisted by three Deputy Inspectors-General, of whom two are in charge of Ranges and the third is in charge of the Criminal Investigation Department and the Finger Print Bureau. The executive management of the Police in each district and on Railways in the Province proper is vested in a Superintendent of Police under the general direction of the Magistrate of the District concerned except in the case of the Railway Police.

For purposes of effective supervision over the investigation and prevention of crime, some of the larger districts are divided into one or more sub-divisions each under a Sub-Divisional Officer who is either an Assistant Superintendent of Police, or an Inspector of Police, or a Deputy Superintendent of Police, Sub-Inspectors are the officers in charge of Police Stations and are primarily responsible under the law, for the investigation of offences reported at their Police Stations. Officers appointed directly to the posts of Assistant Superintendents of Police, Deputy Superintendents of Police, Inspectors and Sub-Inspectors undergo a course of training at the Central Police Training School at Nasik before being posted to Districts for executive duty. The Bombay City Police is a separate force under the Commissioner of Police who is directly responsible to Government.

A sort of voluntary auxiliary police force to help in the maintenance of law and order during a difficult time has been formed in several places in the Bombay Presidency, particularly in the City of Bombay and in Ahmedabad. This force is popularly known as Home Guards. During the communal disturbances towards the end of 1946 and the early months of 1947 it was found that the normal strength of the police was not sufficient to cope with the situation, and to permanently enlarge the force would mean placing a heavy burden on the revenues of the province. The answer to the situation appeared to be the formation of a voluntary body who can be called upon to help the police in moments of grave disorder. Thus the Home or Civic Guards organization was formally constituted in November 1947 in Bombay with headquarters at Churchgate Reclamation, 'E' Road. The strength of the Home Guards in Greater Bombay is about 2,500.

HOME GUARDS

In April 1947 platoons of the Home Guards were on duty in riot-affected areas of Bombay for the first time for a period of 9 days. The number of officers and men on duty was 350 and the average daily attendance was 130. They gave every co-operation to the police and were particularly useful in the search for suspects and hidden arms.

To encourage recruitment to the Home Guards, Government have directed that regular members of the Home Guards should be given preference in the recruitment to posts in the local police and

also that membership of the Home Guards should be regarded as an additional qualification for recruitment to all posts in Government service. Here are more particulars about Home Guards:

Home Guards have been formed in Ahmedabad, Broach, Panch Mahals, Kaira, Surat, Thana, Ahmednagar, East Khandesh, West Khandesh, Nasik, Poona, Satara, Sholapur, Belgaum, Bijapur, Dharwar, Kanara, Kolaba and Ratnagiri.

Some of the top men in the organization are N. M. Kanite, Founder Commandant; U. H. Rana, Second Commandant; M. J. B. Maneckji, the present Commandant for Greater Bombay.

Freshers' training (drill without arms, P.T., 2 parades a week) lasts 3 weeks.

Recruits training (foot drill, drill with arms and signals, 1½ hours daily) lasts 15 working days.

Advance stage training (weapon training drill, bayonet training, range miniature and long) lasts 24 working days.

Special camp training (P.T., foot drill, drill with arms, guard mounting and weapon training, Rifle and Sten Gun) lasts 14 days.

In addition the Home Guards are taught first aid, police law, ju-jitsu, and how to control traffic. It is also proposed to give them training in wireless and general instruction by means of documentary films.

There are special camps under expert military authorities for officers only. This facility is offered only to Bombay Home Guards and nowhere else.

Apart from patrolling during the riots the Home Guards help the police in controlling traffic, bringing to book anti-social elements like satta gamblers, and generally keeping *bandobast* on festivals or other occasions.

Three minor developments which have to be noted are: (1) the establishment of police posts at the Victoria Terminus, the Bombay Central and the Poona and Ahmedabad Railway stations to afford assistance to the travelling public; (2) the establishment in Ahmedabad of an Advisory Committee of leading citizens to advise the police in the administration of the city. This committee is to meet every three months when the Superintendent of Police will acquaint the members with the work done to help the public and to receive suggestions from the Committee; and (3) the starting of crime detection bureaus on the British model, the first of which is to be set up in Ahmedabad. There will be photograph and finger-print departments attached to the bureaus.

Two other points of general interest which will bear mention are: (1) the appointment for the first time in India of a woman sub-inspector to supervise the work of the 40 women constables who are an integral part of the Bombay City Police force. She will be attached to the Vigilance Branch of the C.I.D. and her duties will be mainly connected with personal search and supervision of women prisoners; (2) the issuing of a new type of uniform which consists of blue drill coats with closed stand-up collar, blue drill shorts, blue woollen puttees and hose tops, a leather waist belt with a buckle plate. Field service caps of the Armed Police take the place of the present yellow turbans.

EDUCATION

Education is imparted partly through direct Government agency, and partly through the medium of grants-in-aid. Government maintain Arts Colleges at Bombay, Andheri, Ahmedabad and Dharwar. Other Colleges maintained by Government are the Grant Medical College, the Poona College of Engineering, the Agriculture College, Veterinary College, School of Art, Law College and the Sydenham College of Commerce. Most of the secondary schools are in private hands. The primary schools are maintained by Local Authorities, with a grant-in-aid. The Bombay Municipality is responsible for primary education in Bombay City (G. V., Education).

The total number of institutions at the end of the year 1946-47 was 23,991. The total number of pupils in recognised institutions was 2,091,145. The recognised institutions consisted of 32 Arts and Science Colleges including the University School of Economics and Sociology, 24 Professional Colleges, 1,181 Secondary Schools and 18,992 Primary Schools.

There are 21,657 towns and villages in this Province. Of these, 13,433 possessed schools. The area served by a town or village with school was 5.7 square miles.

Altogether there were 2,114,905 pupils under instruction at the end of the year 1946-47. The percentage of pupils in recognised institutions to the total population of the Province was 5.79 as against 5.59 in the preceding year.

The total expenditure on public instruction was Rs. 960.1 lakhs. Out of this amount 46 per cent. was met from Provincial Revenues, 14.8 per cent. from Local Funds, 23.3 per cent. from fees and 10.9 per cent. from other sources.

The Educational Department is administered by a Director, with an Inspector in each Division and a Deputy or Assistant Inspector in each district.

Higher education in the Province is controlled by the Bombay University which was established in 1857. The constitution of the University underwent considerable changes in virtue of the Bombay University Act of 1928. This Act altered the whole constitution of the University so as to make it adequately representative with a view to bringing it into closer association with the public, and the industrial, and commercial and civic life of the people of the Province, to enable it to provide greater facilities for higher education in all branches of learning.

Estimated Revenue for 1948-49—(in thousands of Rupees).

PRINCIPAL HEADS OF REVENUE.		Rs.
IV Taxes on Income other than Corporation tax	..	7,57,26
VII Land Revenue..	..	3,68,55
VIII Provincial Excise ..	..	6,70,00
IX Stamp—		
A. Non-Judicial ..	..	2,45,27
B. Judicial..	..	70,02
X Forest ..	..	1,95,61
XI Registration ..	..	23,18
XII Receipts under Motor Vehicles Acts	..	77,54
XIII Other Taxes and Duties	..	8,61,38
Total ..	..	32,73,81

including Technology and to undertake on a larger scale than hereto for post-graduate teaching and research, while continuing to exercise dual control over the teaching given by colleges affiliated to it from time to time.

The new University Department of Chemical Technology was started in 1933. The authorities of the University, as now constituted, are chiefly the Chancellor, the Vice-Chancellor, the Syndicate, the Academic Council and the Senate. The Senate consisting of fellows is the supreme governing body of the University. The number of fellows is 114 of whom 40 are nominated by the Chancellor and 11 are ex-officio. The Academic Council consisting of educational experts deals with all purely academic questions. This body works in collaboration with the Syndicate which is the principal executive of the University.

MEDICAL

The Medical Department is in the charge of a Surgeon-General who is a member of the I. M. S., and Public Health in that of a Director of Public Health, who is usually a non-I. M. S. Officer. Civil Surgeons stationed at each district headquarters are responsible for the medical work of the district; whilst sanitation is entrusted to one of the Assistant Directors of Public Health.

Four large hospitals are maintained by the Government in Bombay, and the accommodation in them has been recently increased. The total number of beds available in all the hospitals and dispensaries in the Province including private institutions is 8,000 roughly. Well-equipped hospitals exist in all important up-country stations. The Province contains 5 lunatic asylums and 14 institutions for the treatment of lepers. Vaccination is carried out by a staff under the direction of the Director of Public Health. Sanitary work has received an immense stimulus from the large grants made by the Government from time to time.

Two important schemes have been recently sanctioned for providing medical relief in rural areas.

The first relates to the extension of a formal scheme for subsidising medical practitioners in six selected rural centres. Government have now decided to open, in all, 330 centres for medical aid in the Province by giving subsidies to private medical practitioners. The subsidy will be given to allopathic medical practitioners and to some Ayurvedic and Unani practitioners.

THE ADMINISTRATION

Governor
His Excellency Raja Sir Maharaj Singh

Personal Staff.

Private Secretary to H.E. The Governor—L. M. Nadkarni, B.A. (Hons.) (Bom), M.Sc. (Econ.) (Lond.), I.C.S.

Comptroller of the Household of H.E. The Governor—Major R. J. Pavri, 3/5 Royal Gurkha Rifles.

Hon. Surgeon—Dr. S. B. Cooper, F.R.C.S. (England).

Aides-de-Camp—Lt. K. N. Bahl, R.I.N., Rusi S. Modi.

Hon. Aides-de-Camp—D. G. Moore, Capt. Sardar Raja Shahu Pratapsinh alias Dalasahab Bhonsle, L. A. Paddon Row, I. P., J. P.

COUNCIL OF MINISTERS.

B. G. Kher, Prime Minister in charge of the Portfolios of Political, Services and Education.
Morarji R. Desai, Minister for Home and Revenue.
M. D. D. Gilder, Minister for Health and Public Works.

L. M. Patil, Minister for Excise and Reconstruction.
Dinkarrao N. Desai, Minister for Legal and Civil Supplies.
Valkunth L. Mehta, Minister for Finance, Co-operation and Village Industries.
G. D. Vartak, Minister for Local Self-Government.
Gulzarilal Nanda, Minister for Labour.
M. P. Patil, Minister for Forest and Agriculture.
G. D. Tapase, Minister for Industries, Fisheries and Backward Class Department.
Parliamentary Secretaries: Y. B. Chavan, Miss Indumati C. Sheth, D. K. Kunte, S. N. Mane, K. F. Patil, P. K. Sawant, D. N. Wandrekar, S. P. Gaonkar.

SECRETARIES TO GOVERNMENT

Chief Secretary, Political and Services Department.—M. D. Bhatt, C.I.B., I.C.S.
Home Department.—V. T. Dabheja, I.C.S.
Revenue Department.—V. N. Sardesai, I.C.S.
Health & Local Govt. Dept.—D. R. Bodhan, I.C.S.
Edu. & Ind. Department.—D. S. Joshi, I.C.S. (Jt. Secy.).

Finance Department.—B. Venkatappaiah, M.A., I.C.S., J.P.

Legal Department and Remembrancer of Legal Affairs.—P. M. Lad, I.C.S.

Public Works Department.—N. P. Gurjar, B.E. (Irrigation); B. S. Vyas, B.E., M.I.E. (Ind.), (Roads & Bldgs.).

Civil Supplies Department.—A. L. Dias, I.C.S., (Jt. Secy.).

Legislative Deptt. Secretary.—S. K. Sheode, B.A., LL.B.

Public Services Commission for the Province of Bombay

Chairman.—Y. A. Godbole, C.I.E., I.C.S. (Retd.).

Members.—P. G. Shah, C.I.E., A. A. A. Fyze, M.A. (Cantab.), LL.B., Bar-at-Law.

Secretary.—K. B. H. D. Warden, B.A., B.Sc., J.P.

MISCELLANEOUS APPOINTMENTS

Commissioner of Income-Tax.—Dewan Bahadur R. Varadachari, B.A., J.P.

Director of Veterinary Services.—Rai Bahadur P. N. Nanda, M.R.C.V.S.

Advocate-General.—C. K. Daphtary, B.A. (Cantab.), Bar-at-Law.

Inspector-General of Police.—N. M. Kampte, M.B.E., B.A., G.(H.S.).

Director of Public Instruction.—D. C. Parte, M.A. (Cantab.).

Surgeon-General.—Dr. B. B. Yodha, M.B.B.S. (Bom.), M.R.C.S. (Eng.), M.R.C.P. (Lon.), D.T.M. & H. (Eng.).

Oriental Translator.—J. H. Dave, M.A.

Chief Conservator of Forests.—E. T. C. Vas, M.A., B.Sc. (Edin.).

Inspector-General of Registration and Director of Land Records.—T. T. Kothawala, C.I.E., M.A., B.Sc., J.P.

Director of Agriculture (Extension).—V. Iswaran.

Director of Agricultural Engineering.—W. X. Mascarenhas, B.E., M.I.E., (India).

Director of Agriculture (Research and Education) and Principal Agricultural College, Poona.—Dr. B. N. Uppal, M.B.E., Ph.D. (Iowa, U.S.A.), F.N.I.

Registrar of Co-operative Societies and Director of Agriculture, Marketing & Rural Finance.—S. M. Ikram, M.A. (Punjab), I.O.S.

Municipal Commissioner, Bombay.—B. K. Patel, I.C.S.

Vice-Chancellor, the Bombay University.—Maha Mahopadhyaya P. V. Kane.

Registrar, Bombay University.—S. R. Dongerkery, B.A., LL.B.

Commissioner of Police Bombay.—J. S. Barucha, I.P.

Director of Public Health.—K. A. Gandhi, D.P.H.

Accountant-General.—B. C. Dutt, M.A., J.P.

Inspector-General of Prisons.—Lt.-Col. R. T. Advani, M.B.B.S. (Bom.), I.M.S.

Post Master General.—Lt.-Col. K. J. Thouless, M.A.

Collector of Customs.—V. G. Matthews, I.O.S.

Collector of Central Excise.—K. G. Jacobs, M.A.

Commissioner of Excise.—M. D. Bhansali, M.A., LL.B. (Cantab.), Bar-at-Law, J.P.

Consulting Surveyor to Government.—Habibullah Khan, F.S.I., A.I.A.A. (Lond.), A.I.I.A. (Ind.).

Registrar of Companies.—Byramji M. Modi, B.Com., F.S.A.A., R.A.

Director of Publicity.—S. A. Ayer.

Commissioner of Labour.—S. V. Joshi, B.A. (Cantab.), J.P.

Labour Officer, Bombay.—A. S. Iyengar, B.A., LL.B., J.P.

Sheriff.—M. L. Dahanukar.

GOVERNORS OF BOMBAY

Sir Abraham Shipman 1662

Died on the island of Anjediva in Oct. 1664

Humfrey Cooke 1665

Sir Gervase Lucas 1666

Died, 21st May 1667.

Captain Henry Garey (Officiating) 1667

Sir George Oxenden 1668

Died in Surat, 14th July 1669.

Gerald Aungier 1669

Died in Surat, 30th June 1677.

Thomas Rolt 1677

Sir John Child, Bart. 1681

Bartholomew Harris 1690

Died in Surat, 10th May 1694.

Daniel Annesley (Officiating) 1694

Sir John Gayer 1694

Sir Nicholas Waite 1704

William Aislabie 1708

Stephen Strutt (Officiating) 1715

Charles Boone 1715

William Phipps 1722

Robert Cowan 1729

Dismissed.

John Horne 1734

Stephen Law 1739

John Geek (Officiating) 1742

William Wake 1742

Richard Bourchier 1750

Charles Crommelin 1760

Thomas Hodges 1767

Died, 23rd February 1771.

William Hornby 1771

Rawson Hart Boddam 1784

Rawson Hart Boddam 1785

Andrew Ramsay (Officiating) 1788

Major-General William Medows 1788

Major-General Sir Robert Abercromby, K.O.B. (d). 1790

George Dick (Officiating) 1792

John Griffith (Officiating) 1795

Jonathan Duncan 1795

Died, 11th August 1811.

George Brown (Officiating) 1811

Sir Evan Nepean, Bart. 1812

The Hon. Mountstuart Elphinstone 1819

Major-General Sir John Malcolm, G.C.B. 1827

Lieut.-General Sir Thomas Sidney Beekwith, K.C.B. 1830

Died, 15th January 1831.

John Romer (Officiating) 1831

The Earl of Clare 1831

Sir Robert Grant, G.C.H. 1835

Died, 9th July 1838.

James Farish (Officiating) 1838

Sir J. Rivett-Carnac, Bart. 1839

Sir William Hay Macnaghten, Bart. (b) 1841

George William Anderson (Officiating) 1842

Sir George Arthur, Bart., K.C.H. 1846

Lestock Robert Beld (Officiating) 1847

George Russell Clerk 1848

Viscount Falkland 1850

Lord Elphinstone, G.C.H., F.C. 1862

The Right Hon. William Robert Seymour Vesey Fitzgerald. 1863

Sir George Russell Clerk, K.C.B. (2nd time) 1863

Sir Henry Bartle Edward Frere, K.C.B. 1867

Sir Philip Edmond Wodehouse, K.C.B. 1872

Sir Richard Temple, Bart., K.C.S.I. 1877

Lionel Robert Ashburner, C.S.I. (Acting) 1880

The Right Hon. Sir James Fergusson, Bart., K.C.M.G. 1885

James Braithwaite Reile, O.S.I. (Acting) 1885

Baron Reay 1885

Baron Harris 1890

Herbert Mills Birdwood, C.S.I. (Acting) 1895

Baron Sandhurst 1895

Baron Northcote, C.B. 1900

Sir James Monteth, K.C.S.I. (Acting) 1903

Baron Lamington, G.C.M.G., G.C.I.E. 1903

J. W. P. Muir-Mackenzie, C.S.I. (Acting) 1907

Sir George Sydenham Clarke, G.C.M.G., 1907

G.C.I.E. (d). 1927

Baron Willington, G.C.I.E. 1913

Sir George Ambrose Lloyd, G.C.I.E., D.S.O. (d) 1918

Sir Leslie Orme Wilson, P.C., G.C.I.E., 1923

C.M.G., D.S.O. 1923

Sir Henry Staveley Lawrence, K.C.S.I., 1923

I.C.S., acted for two months and twenty-two days for Sir Leslie Wilson. 1923

Sir Frederick Hugh Sykes, P.C., G.C.I.E., 1923

G.R.E., K.C.B., C.M.G. 1923

Sir Ernest Hotson, K.C.S.I., O.B.E., I.C.S., acted 1933

for six months for Sir F. H. Sykes. 1933

The Rt. Hon. Michael Herbert Rudolf 1933

Knatchbull, Lord Brabourne, G.C.I.E., M.C. 1933

Sir Robert Bell, K.C.S.I., C.I.E., I.C.S., acted 1933

for four months for Lord Brabourne. 1933

Sir Lawrence Roger Lumley, G.C.I.E., T.D. 1937

Sir John Colville, G.C.I.E., T.D. 1943

Sir Andrew Clow, K.C.S.I., C.I.E., I.C.S., 1943

acted for 3 months for Sir John Colville. 1943

(a) Proceeded to Madras on duty in Aug. 1793 1793

and then joined the Council of the Governor-General as Commander-in-Chief in 1793

India on the 28th Oct. 1793. 1793

(b) Was appointed Governor of Bombay by 1841

the Honourable the Court of Directors on 1841

the 4th Aug. 1841, but, before he could take 1841

charge of his appointment, he was assassinated in Cabul on the 23rd Dec. 1841. 1841

(c) Afterwards (by creation) Baron Sydenham. 1841

(d) Afterwards (by creation) Baron Lloyd. 1841

Sir Vepa Ramamurthi acted for Sir John Colville, 1947

16th May 1947—2nd June 1947. 1947

BOMBAY LEGISLATIVE COUNCIL

President: The Hon'ble Mr. Ramchandra Ganesh Soman.

Deputy President: Shantilal Harjiwan Shah, B.A., LL.B.

Sir Abdul Latif Haji Hajrat Khan (Central Division, Muhammadan Rural); Dattatraya Venkatesh Belvi, B.A., LL.B. (Sholapur cum Belgum cum Bijapur, General Rural); Madhavrao Gopalrao Bhole (East Khandesh cum West Khandesh, General Rural); Sir Currimbhoy Ebrahim, Bart. (Bombay City cum Bombay Suburban District, Muhammadan Urban); Vishnu Vaman Dandekar (Thana cum Nasik cum Ahmednagar, General Rural); Professor Sohrab R. Davar, Bar-at-Law, J.P. (Bombay City cum Bombay Suburban District, General Urban); Narsingrao Shrinivasa Desai (Dharwar cum Kanara, General Rural); V. S. Dongre, B.A., Bar-at-Law (Nominated); Ratilal Mulji Gandhi (Bombay City cum Bombay Suburban District, General Urban); F. D. Ghodke (Nominated); Mahabeshwar Ganapatihhat Gopi (Dharwar cum Kanara, General Rural); Dr. K. A. Hamied, B.Sc., M.A., Ph.D. (Berlin), A.I., F.R.C.S. (London), (Bombay City cum Bombay Suburban District, Muhammadan Urban); Nagappa Bandappa Kadadi (Sholapur cum Belgum cum Bijapur, General Rural); Sir Behram Naoraji Karanjia (Bombay City cum Bombay Suburban District, General Urban); Kashinath Mannalal (Thana cum Nasik cum Ahmednagar, General Rural); Aziz Gafoor Kazi (Southern Division, Muhammadan Rural); Dr. Ganesh Sakharam Mahajani, M.A., Ph.D. (Poona cum Satara, General Rural); Ramchandra Narayan Mandlik (Kolaba cum Ratnagiri, General Rural); Mrs. Hansa Jivraj Mehta (Bombay City cum Bombay Suburban District, General Urban); Alibhai Esabhai P. Patel (Northern Division, Muhammadan Rural); Maganlal Bhikhabhai Patel (Ahmedabad cum Kaira, General Rural); Sonusing Dhansing Patil (East Khandesh cum West Khandesh, General Rural); Chandulal Surajmal alias Bhikhabhai Satia (Ahmedabad cum Satara, General Rural); Shantilal Harjiwan Shah, B.A., LL.B. (Broach and Panch Mahals cum Surat, General Rural); The Hon'ble Mr. Ramchandra Ganesh Soman (Poona cum Satara, General Rural); Vasantrao Madhavrao Vedak (Kolaba cum Ratnagiri, General Rural); Mrs. Violet Alva, M.A., LL.B. (Nominated); V. S. Dongre, B.A., Bar-at-Law (Nominated).

BOMBAY LEGISLATIVE ASSEMBLY

Speaker: The Hon'ble Mr. Kundanmal Sobhachand Firodia.

Muhammadhusen Abdulsattar (Sholapur District, Muhammadan Rural); Ahmedmiya Sharumiya (Ahmedabad District, Muhammadan Rural); Chenbassappa Jagadevappa Ambli (Bijapur South, General Rural); Shanmukhappa Ningappa Angadi (Belgaum South, General Rural); Dr. Krishna Bhimrao Antolikar (Sholapur City, General Urban); Muhammad Mohsin Muhammad Bhajji (Kolaba District, Muhammadan Rural); Prabhakar Kondaji Bhapkar (Ahmednagar South, General Rural); Shaligram Ramchandra Bhartiya (West Khandesh East, General Rural); Laxman Babaji Bhingardev (Sholapur North-East, General Rural); Dattatray Malhar Bidkar (Nasik East, General Rural); Sitaram Hirachand Birla (East Khandesh West, General Rural); Sayad Manzur Husain Mubaraksha Bukhari (East Khandesh District, Muhammadan Rural); B. B. Chakranarayan (Poona cum Ahmednagar, Indian Christian); Chunnusing Kalyansing Chande (Sholapur City, Textile Labour); Bhau Govind Chaudhari (West Khandesh West, General Rural); Yeshwant Balvant Chavan, B.A., LL.B. (Satara South, General Rural); Fulsinhji Bharatsinhji Dabhi (Kaira District, General Rural); Ningappa Badhur Dalval (Belgaum South, General Rural); Shripad Amrit Dange (Bombay City and Suburban Textile Unions, Labour); Krishnaji Abaji Dawoor (Kolaba District, General Rural); The Hon'ble Mr. Dinkarrao Narbheram Desai (Broach Sub-Division, General Rural); Hariprasad Vrajai Desai (Ahmedabad City, General Urban); Khandubhai Desai (Ahmedabad Textile Unions, Labour); The Hon'ble Mr. Morarji Ranchooji Desai (Surat District, General Rural); Bhagvantrao Damodar Deshmukh (East Khandesh East, General Rural); Dattu Appaji Deshmukh (Ahmednagar North, General Rural); Govind Hari Deshpande (Nasik West, General Rural); Dewa Bhikha (Surat District, General Rural); Sidramappa Basappa Dhumma (Sholapur North-East, General Rural); Andaneppa Jnanappa Doddameti (Dharwar North, General Rural); Dr. Joseph Alban D'Souza (Bombay City, Indian Christian); K. B. Dundur (Dharwar North, General Rural); Haji Hassanally P. Ebrahim (Bombay City South, Muhammadan Urban); The Hon'ble Mr. Kundanmal Sobhachand Firodia (Ahmednagar South, General Rural); Baburao Parasharam Galkwad (Poona East, General Rural); Abdul Satar Abdul Wahed Gandhi, B.A., LL.B., Advocate (Surat District, Muhammadan Rural); Maneklal Maganlal Gandhi (Panch Mahals West, General Rural); Sannappa Parmeshwar Gaonkar, B.A. (Kanara District, General Rural); Keshav Raghunath Garud (Ahmednagar North, General Rural); Ramchandra Sambhaji Gavale (Thana South, General Rural); Abdulmajid Abdulkadar Gheewale (Belgaum District, Muhammadan Rural); Ramchandra Balwant Ghorpade (Poona City, General Urban); The Hon'ble Dr. Manchershia Dhanjibhai Dorabji Gilder (Bombay City, Byculla and Parel, General Urban); P. V. Gillespie (Presidency, Anglo-Indian); Ramchandra Bhagwant Girme (Ahmednagar North, General Rural); Purshotam Pandurang Gokhale, B.A. (Satara South, General Rural); Raziuddin Hatelsab Goodwala (Dharwar District, Muhammadan Rural); Mrs. Sumatibai Narayan Gore (Poona City, Women's, General Urban); Dattatray Krishna Gosavi (Satara North, General Rural); Bhalchandra Maheshwar Gupte (Poona West, General Rural); Khan Saheb Abdul Rahim Baboo Hakeem (Nasik District, Muhammadan Rural); S. M. Hasan, Bar-at-Law (East Khandesh District, Muhammadan Rural); Hajisa Ibrahimisa Hattiwale (Bijapur District, Muhammadan Rural); Babu Rama Hujare (Bijapur North, General Rural); Ramarao Shrinivasrao Hukkerikar (Dharwar North, General Rural); Khan Saheb Allisabeb Nabisaheb Ilkal (Bijapur District, Muhammadan Rural); Miss Indumati Chimanlal (Ahmedabad City, Women's, General Urban); Sayad Madomed Ismail (Ahmednagar District, Muhammadan Rural); Bhikaji Ramchandra Jadhav (Nasik West, General Rural); Madhavrao Laxmanrao Jadhav (Nasik East, General Rural); Tulidas Subhana Jadhav (Sholapur North-East, General Rural); Ganesh Waman Joshi, B.A., LL.B., Advocate (Sholapur South-West, General Rural); Moreswar Dinkar Joshi (Ratnagiri South, General Rural); Narayan Sadoba Kajrolkar (Bombay City-Byculla and Parel, General Urban); Hiralal Indal Kalyani (East Khandesh East, General Rural); Shivanlingappa Rudrappa Kanthi, B.A., LL.B. (Bijapur South, General Rural); Shivram Laxman Karandikar (Ratnagiri North, General Rural); Khwaja Bashiruddin Khwaja Moineddin Kazi (West Khandesh District, Muhammadan Rural); Abdul Kadir Abdul Aziz Khan (Poona City, Muhammadan Rural); Ganpat Sambhaji Kharat (Poona West, General Rural); Sudkoji Baburao Khedekar (Ratnagiri North, General Rural); Ramchandra Annaji Khedikar (Railway Unions, Labour); The Hon'ble Mr. Bal Gangadhar Kher (University); Bhavanji Arjun Khimji (Bombay City-Fort, Mandvi, Bhuleswar and Girgaum, General Urban); Vasudev Vishnu Kirtane (Thana North, General Rural); A. A. Kittur Vakil (Dharwar District, Muhammadan Rural); Marutirao Kondiba Kudale (Sholapur South-West, General Rural); Raghendra Annaji Kulkarni, B.A., LL.B. (Belgaum North, General Rural); Dattatraya Kashinath Kunte (Kolaba District, General Rural); Sadashiv Bapusaheb Kutre (Belgaum South, General Rural); Prof. Ellis Phillip Kuvel, M.A., B.T. (Thana cum Bombay Suburban District, Indian Christian); Abdul Razak Mohamed Azim Kuwari (Thana District, Muhammadan Rural); Dr. Balkrishna Chintaman Lagu (Poona East, General Rural); Bhogilal Dhiralal Lala (Ahmedabad City, General Urban); Lalubhai Makanjil (Surat District, General Rural); Maganlal Ranchhodas (Ahmedabad North, General Rural); Shripad Sadashiv Mahajan (Ratnagiri South, General Rural); Shankerlal Purshotamdas Makwana (Kaira District, General Rural); Shantaram Nanasab Mane, B.A., Bar-at-Law (Belgaum North, General Rural); Meherban Sardar Mansinhji Bhasaheb, Thakore Saheb of Kervada (Gujarat Sardars and Inamdars, Landholders); Chhotubhai Bhaldas Marfatla (Surat and Rander Cities, General Urban); Sidney James McCann (Bombay Chamber of Commerce and Bombay Presidency Trades Association, Commerce and Industry); The Hon'ble Mr. Valkunth Lalubhai Mehta (Bombay City North and Bombay Suburban District, General Urban);

Madhavrao Narayanrao Memane (Poona East, General Rural); Akhtar Hasan Mirza (Trade Union of Seamen and Dock Workers, Labour); Mrs. Tarabai Modak (Bombay City, Girgaum, Women's General Urban); Sukdeo Totaram More (West Khandesh East, General Rural); Wamanrao Sitaram Mukadam (Panch Mahals West, General Rural); D. W. Mullock (Bombay Chamber of Commerce and Bombay Presidency Trades Association, Commerce and Industry); Mrs. Lilavati Kanhayalal Munshi (Bombay City-Bhuleswar, Women's, General Urban); Vasant Narayan Naik (Nasik West, General Rural); Ramchandra Manohar Nalawde (Ahmednagar South, General Rural); The Hon'ble Mr. Gulzarilal B. Nanda (Ahmedabad Textile Unions, Labour); Jayant Ganpat Natwarkar (West Khandesh West, General Rural); Dr. Moreswar Narayan Natu, B.Sc., M.B.B.S. (Deccan Sardars and Inamdars, Landholders); Timmappa Rudrappa Nesvi (Dharwar North, General Rural); Haji Noormohamed Ahmed (Bombay City North and Bombay Suburban District, Muhammadan Urban); Purshotam Vasudev Paranjpe (Thana South, General Rural); Homi Rustomji Pardiwala (Bombay City-Fort, Mandvi, Bhuleswar and Girgaum, General Urban); Chandulal Pitamberdas Parikh (Ahmedabad Millowners' Association, Commerce and Industry); Wajihuddin Ahmed Parkar, B.A., LL.B. (Ratnagiri District, Muhammadan Rural); Hari Vinayak Pataskar (East Khandesh West, General Rural); Ahmed Adam Suleman Patel (Broach Sub-Division, Muhammadan Rural); Khan Saheb Dr. Alibhai D. Patel (Broach Sub-Division, Muhammadan Rural); Babubhai Jashbai Patel (Kaira District, General Rural); Chhotabhai S. Patel (Indian Merchants' Chamber, Commerce and Industry); Dr. Chhotubhai Jivabhai Patel (Ahmedabad North, General Rural); Morarbhaji Kasanbhai Patel (Surat District, General Rural); Jaitu Namaji Patil (Thana South, General Rural); Kallangowda Fakirpowda Patil, B.A. (Dharwar South, General Rural); The Hon'ble Mr. L. M. Patil (Ahmednagar North, General Rural); Madhav Gotu Patil (East Khandesh West, General Rural); The Hon'ble Mr. Malaganda Pangaunda Patil, B.A., LL.B. (Belgaum North, General Rural); Nawal Ananda Patil (West Khandesh East, General Rural); Sajan Ragho Patil (Nasik East, General Rural); Supdu Bhadu Patil (East Khandesh West, General Rural); Vyankatrao Pirajirao Pawar, B.A., LL.B. (Satara South, General Rural); Shantaram Laxman Peje (Ratnagiri North, General Rural); Ramnath A. Podar (East India Cotton Association, Commerce and Industry); Virangoda Vercabasangowda Police-Patil (Dharwar South, General Rural); Ramchandra Mukund Prabhu, B.A., LL.B. (Kanara District, General Rural); Stanley Henry Prater (Bombay City cum Bombay Suburban District, Anglo-Indian); Mohamed Umar Rajab (Bombay City North and Bombay Suburban District, Muhammadan Urban); Shivram Rango Rane (East Khandesh East, General Rural); Amritrao Dhondiba Rankhambe (Nasik West, General Rural); Rajaram Balkrishna Raut (Kolaba District, General Rural); Khan Saheb Abdulla Haji Sadwa (Panch Mahals Sub-Division, Muhammadan Rural); Gurupadappa Siddlingappa Sajjan, B.A., LL.B. (Bijapur North, General Rural); Sir Sorabji Dorabji Saklatvala (Bombay Millowners' Association, Commerce and Industry); Mrs. Yallawa Dharmappa Sambrani (Dharwar District, Women's, General Rural); Nilkanth Ganesh Sane (East Khandesh East, General Rural); Mukund Jivan Sankhe (Thana North, General Rural); Parsharam Krishnaji Sawant (Ratnagiri South, General Rural); Maganlal Hira-chand Shah (Bijapur North, General Rural); Popatlal Ramchand Shah (Poona West, General Rural); Abdul Kadar Mohamad Shaikh (Surat and Rander Cities, Muhammadan Urban); Jukaku Hussein Shamsuddin, B.A., LL.B. (Kanara District, Muhammadan Rural); C.R. Sharp (Bombay Chamber of Commerce and Bombay Presidency Trades Association, Commerce and Industry); Shivrao Shivram Shastri, B.A., LL.B. (Kanara District, General Rural); Baijrao alias Babasaheb Jagdeo Rao Shinde (Satara North, General Rural); Rajaram Nagesh Shinde (Ratnagiri North, General Rural); Shiv-bishalsing Harpalsing (Railway Unions, Labour); Laxmidas Mangaldas Shrikant (Panch Mahals East, General Rural); Sayaji Laxman Silam (Bombay City, Fort, Mandvi, Bhuleswar and Girgaum, General Urban); Gaurihar Eknath Sinha (Satara North, General Rural); Savalaram Gundaji Songavkar (Bombay City North and Bombay Suburban District, General Urban); Sitaram Murali Subhedar (Ratnagiri South, General Rural); Syed Dadamiya Syed Ibrahim (Satara District, Muhammadan Rural); Dattatraya Maloji Jilgaonkar (Kolaba District, General Rural); Venkreddi Siddareddi Tulimareddi (Belgaum North, General Rural); The Hon'ble Mr. Ganapati Devaji Tapase (Satara North, General Rural); Mrs. Khadija Shuffi (Ayabail (Bombay City-Girgaum, Women's, Muhammadan Urban); Macklal Chhunilal Vakil (Ahmedabad South, General Rural); Shivshanker Chhaganlal Vakil (Broach Sub-Division, General Rural); The Hon'ble Mr. Govind Dharmaji Vartak (Thana North, General Rural); Chhotalal Anupram Vyas (Kaira District, General Rural); Dattatraya Nathoba Wandrekar (Bombay City North and Bombay Suburban District, General Urban); Abdulla Muhamad Yamni (Ahmedabad City, Muhammadan Urban); Fazleabbas Tyebali Zamiladar (Kaira District, Muhammadan Rural).

The Central Provinces and Berar

THE Central Provinces and Berar compose a great triangle of country midway between Bombay and Bengal. Their area is 1,18,710 sq. miles, of which 80,766 are Indian Dominion proper, 17,809 (*viz.* Berar) held on perpetual lease from H.E.H. the Nizam and the remainder held by Feudatory Chiefs. The total population is 16,813,584. Various parts of the Central Provinces passed under British control at different times in the wars and the tumults in the first half of the 19th century and the several parts were amalgamated after the 1861 upheaval into the Chief Commissionership of the Central Provinces. Berar was, in 1853, assigned to the East India Company as part of a financial arrangement with H.E.H. the Nizam for the maintenance of the Hyderabad Contingent, and was leased in perpetuity to the Central Provinces in 1903, as the result of a fresh agreement with H.E.H. the Nizam.

With the taking over of the 14 Chhatisgarh States the area of the Province has increased by about 35,000 sq. miles, the population by about 4 million and the revenue by about 1½ crores.

THE COUNTRY

The Central Provinces may roughly be divided into three tracts of upland, with two intervening ones of plain country. In the north-west, the Vindhya plateau is broken country, covered with poor and stunted forest. Below its precipitous southern slopes stretches the rich wheat growing country of the Nerbudda valley. Then comes the high Satpura plateau, characterised by forest-covered hills and deep water-cut ravines. Its hills decline into the Nagpur plain, whose broad stretches of "deep" black cotton soil make it one of the most important cotton tracts of India and the wealthiest part of the C. P. proper. The Eastern half of the plain lies in the valley of the Wainganga and is mainly a rice growing country. Its numerous irrigation tanks have given it the name of the "lake country" of Nagpur. Farther east is the far-reaching rice country of Chhatisgarh, in the Mahanadi basin. The south-east of the C. P. is again mountainous, containing 24,000 square miles of forest and precipitous ravines, and mostly inhabited by jungle tribes. The States of Bastar and Kanker lie in this region. Berar lies to the south-west of the C. P. and its chief characteristic is its rich black cotton-soil plains.

THE PEOPLE

The population of the province is a comparatively new community. Before the advent of the Aryans, the whole of it was peopled by Gonds and other primitive tribes and these aboriginal inhabitants fared better from the Aryans than their like in most parts of India because of the rugged nature of their home. But successive waves of immigration flowed into the province from all sides. The early inhabitants were driven into the inaccessible forests and hills, where they form nearly a quarter of the whole population of the Central Provinces being found in large numbers in all parts of the province, particularly in the south-east. The main divisions of the new-comers are indicated by the language divisions of the province. Hindi

brought in by the Hindustani-speaking peoples of the North, prevails in the North and East, Marathi in Berar and the West and centre of the Central Provinces. Hindi is spoken by 56 per cent. of the population and is the *lingua franca*. Marathi by 31 per cent. and Gond 7 per cent.

H. E. Mangaldas Mancharam Pakvasa

The effects of invasion are curiously illustrated in Berar, where numbers of Muslims have Hindu names, being descendants of former Hindu officials who on the Muslim invasion adopted Islam rather than lose their positions. The last census shows that a gradual Brahmanising of the aboriginal tribes is going on. The tribes are not regarded as impure by the Hindus and the process of absorption is more or less civilising.

INDUSTRIES

When Sir Richard Temple became first Chief Commissioner of the C. P., the province was land locked. The only road was that leading in from Jabulpore to Nagpur. The British administration has constructed roads in all directions, the two trunk railways between Bombay and Calcutta run across the province and in the last few years a great impetus has been given to the construction of subsidiary lines. These developments have caused a steady growth of trade and have led to vigorous progress in every department of life.

The prime industry is, of course, agriculture, which is assisted by an agricultural department which is now receiving additional strength by a phenomenal growth of the co-operative credit movement. The land tenure is chiefly on the *malguzari*, or landlord system, ranging with numerous variations, from the great feudal chiefships, which are on this basis

to holdings of small dimensions. A system of land legislation has gradually been built up to protect the individual cultivator. Berar is settled on the Bombay *ryayatwari* system.

10,086 square miles of the C. P. is Government Reserved forest; in Berar the forest area is about 3,335 square miles, the total forest area being one-fifth of the whole Province. The rugged nature of the greater part of the country makes forest conservation difficult and costly. Excluding forest and waste, 67 per cent. of the total land is under cultivation; for the two most advanced districts in the Central Provinces, the proportion averages 81 per cent., while the average figure for the Berar Districts is 73 per cent. The cultivated area has extended almost continuously except for the temporary checks caused by bad seasons. Rice is the most extensive single crop of the Central Provinces, covering nearly 34 per cent. of the cropped area. Wheat comes next with over 14 per cent., then pulses and other cereals used for food and oil-seeds with nearly 49 per cent., and cotton nearly 3 per cent. In Berar cotton is 35 per cent. and *juar* 35 per cent., respectively. And then come pulses and other cereals and oil-seeds of the cropped area. More than half the working population engaged in agriculture is female.

COMMERCE AND MANUFACTURES

Industrial life is only in its earliest development except in one or two centres, where the introduction of modern enterprise also on the railway routes has laid the foundations for great future developments of the natural wealth of the province. Nagpur is the chief centre of a busy cotton spinning and weaving industry. The Empress Mills, managed by Messrs. Tata Sons Ltd., were opened there in 1877 and the general prosperity of the cotton trade has led to the addition of many mills here and in other parts of the province.

The largest numbers engaged in any of the modern industrial concerns are employed in manganese mining which in 1942 employed 29,395 persons and raised 6,43,773 tons. Then follows coal mining with an output of 18,36,522 tons and 17,350 persons employed, the Jabulpore marble quarries and allied works, the limestone quarries and the mines for pottery clay, soapstone, etc.

The total number of factories of all kind legally so described was 1208 and 1,217 in 1914 and 1945 respectively the latest period for which returns are available and the number of people employed in them 1,00,850 and 1,10,263 respectively. The same economic influences which are operative in every progressive country during its transition stage are at work in the C. P. and Berar, gradually sapping the strength of the old village industries, as communications improve, and industries are fading away, a large development of trade has taken place.

After the introduction of Food Controls, the movements of food crops under the Government of India's Basic Plans, were as under. Exports

are indicated (—) and the imports (+). The figures are in tons :—

Year	1st April-31st March.	Rice	Juar	Wheat
1943-44	..	145,000	—7,000	+ 34,000
1944-45	..	214,000	—69,000	+ 80,000
1945-46	..	204,000	—49,000	+ 46,000
1946-47	..	75,000	+400	+ 48,000

ADMINISTRATION

The administration of the Central Provinces and Berar is conducted by a Governor who is appointed by the Crown. He is assisted by eight Secretaries and six Under-Secretaries. Under the provisions of the Government of India Act, 1935, the administration is conducted by a Governor with a council of ministers, chosen and summoned by him and sworn as members of the council.

This Province, which has a unicameral Legislature, consists of 111 members distributed as follows :—

Class of constituency or constituencies—			
General Urban	10	No. seats.	
General Rural	74		84
Muhammadan Urban	2		
Muhammadan Rural	12		
Women	3		
Anglo-Indian	1	seat.	
Backward areas & Tribes	1		
Commerce	2	seats.	
Landholders	3		
Labour	2		
University	1	seat.	

Of the 84 General seats 20 seats are reserved for members of the Scheduled castes.

Till the 15th of August 1947 the Legislative Assembly of the Province consisted of 112 elected members but since the 15th of August it consists of 111 members, the European constituency having been abolished as a result of constitutional changes.

The C. P. are divided for administrative purposes into three divisions. Berar constituting a division by itself. Each of these is controlled by a Commissioner. The divisions are subdivided into districts, each of which is controlled by a Deputy Commissioner, immediately subordinate to the Commissioner. The principal heads of Provincial departments are the Commissioner of Settlements and Director of Land Records, the Chief Conservator of Forests, the Inspector-General of Civil Hospitals, the Director of Public Health, the Inspector-General of Police, the Inspector-General of Prisons, the Director of Public Instruction, the Excise Commissioner and Superintendent of Stamps and Inspector-General of Registration, and Registrar-General of Births, Deaths and Marriages, the Director of Agriculture, the Registrar of Co-operative Societies, the Director of Industries, the Legal Remembrancer, the Director of Veterinary Services and a Chief Engineer, Public Works Department, Buildings and Roads and Irrigation Branches, Commissioner of Food Supplies.

The Deputy Commissioners of districts are the chief revenue authorities and District Magistrates and they exercise the usual powers and functions of a district officer. The district forests are managed by a forest officer, over whom the Deputy Commissioner has certain powers of supervision, particularly in matters affecting the welfare of the people. Each district has a Civil Surgeon (except Mandla, Drug and Balaghat where there are Assistant Surgeons), who is generally also Superintendent of the District Jail except at Central Jails at Nagpur and Jabulpore and District Jails at Raipur, Narsinghpur and Akola where there are whole time Superintendents and whose work is also in various respects supervised by the Deputy Commissioner. The Deputy Commissioner is also the Marriage Registrar and manages the estates of his district which are under the Court of Wards. In his revenue and criminal work the Deputy Commissioner is assisted by (a) one or more Assistant Commissioners, or members of the Indian Civil Service; and Indian Administration Service; (b) one or more Extra Assistant Commissioners, or members of the Provincial Civil Service, including a few Anglo-Indians and (c) by Tahsildars and Naib Tahsildars, or members of the Subordinate service.

The district is divided for administrative purposes into tahsils, the average area of which is 1,500 square miles. In each village a lambardar or representative of the proprietary body is executive headman.

JUSTICE

The High Court of Judicature at Nagpur, which was established in January 1936, is the highest court of appeal in civil cases, and also the highest court of criminal appeal and revision for the Central Provinces and Berar including proceedings against European British subjects and persons jointly charged with European British subjects.

Subordinate to the High Court are the District and Sessions Judges (9 in number) each of whom exercises civil and criminal jurisdiction in a Civil and Sessions district comprising one or more Revenue districts. The civil staff below the District and Sessions Judge consists of civil Judges of the first and second class.

LOCAL SELF-GOVERNMENT

Municipal Administration was first introduced under the Punjab Municipal Act and the Municipality of Nagpur dates from 1864. Several revising Acts extend its scope and the C. P. Municipalities Act passed towards the end of the year 1922 has considerably increased the powers of the Municipal Committees. The C. P. Municipalities Act has also been extended to Berar. Viewed generally, municipal self-government is considered to have taken root successfully. The larger towns have municipalities, there being 82 such bodies in the Province. It is proposed to establish Municipal Corporations at Nagpur and Jabulpore and the bill for this purpose has been placed before the Legislature.

Under the Central Provinces Local Self-Government Act passed in 1920 as amended in 1931 there is a local board for each tahsil

and a district council for each district excepting Hoshangabad, Chhindwara and Saugor districts each of which has two district councils. The local board consists of elected representatives of circle. The constitution of the district council is a certain proportion of elected representatives of local boards, and of members selected by those representatives. If the members elected on the local board or the district council do not include a Muslim, a Harijan and a woman, the elected members of the local board of the district council as the case may have or select a Muslim, a Harijan or a woman as may be required to be a member, and if they fail to do so the Provincial Government can appoint a Muslim, a Harijan or a woman as may be required. The system of local Self-Government is proposed to be overhauled to secure the following objectives:—

(1) decentralisation of Governmental functions so that representatives of the people are associated more intimately with the administration and it is consequently made more responsible and responsive, (2) intensive supervision and control in regard to Governmental functions in the district, (3) efficient and expert administrative staff for the due discharge of responsibilities of the district administration, (4) improvement in the resources of local Self-Government institutions and (5) enlargement of franchise.

A bill for this purpose has been framed and is under the scrutiny of a special committee appointed by Provincial Legislature.

The district councils in the Central Provinces have power of taxation within certain limits and local boards derive their funds in allotments from the District Councils. The new Central Provinces Local Self-Government Act has also been applied to Berar. The office-bearers of all the district councils, and with few exceptions of local boards, also are non-officials.

Rural education, sanitation, medical relief and rural communications are among the primary objects to which these bodies direct their attention, while expenditure on famine relief is also a legitimate charge upon the District Council funds.

The Central Provinces and Berar Village Panchayats Act, 1920 has now been repealed and its place taken by the Central Provinces and Berar Panchayats Act, 1946 (I of 1947). Under this Act the Village Panchayat is designed to be made a centre of all social, economic and development activities. 5,500 Gram Panchayats and 1,300 Nyaya Panchayats are to be established in the whole province. In the place of Village Panchayat Officer the Director of Panchayats, C. P. and Berar has been appointed with effect from the 10th October 1947.

PUBLIC WORKS

The Public Works Department, which comprises Buildings and Roads and Irrigation Branches, is under the control of the Chief Engineer. There are two Superintending Engineers who between them supervise the work of both branches. The Province is fairly well served by a network of roads, but in a number of cases they are not fully bridged and are therefore impassable to traffic at times during the rains.

State Irrigation was introduced early in the present century mainly as a result of the recommendations of the Irrigation Commission (1901-03). During the last forty-five years a sum of Rs. 7.23 crores has been expended on the construction of irrigation works, of which the more important are the Wainganga, Tandula-Mahanadi, Kharung and Manlari canals.

Three works, viz., the Mahanadi and Wainganga Canals and the Asola Mendha tank, were sanctioned originally as productive works and the remainders were all sanctioned as unproductive works. The three works sanctioned as productive all failed to justify their classification in that category and were transferred to the unproductive list. The conditions in the province are such that irrigation works cannot be expected to be productive and their construction is justified only on account of their value as a protection against famine. The normal area of annual irrigation is at present about 7,68,000 acres, mainly rice and the income from these works covers more than the expenditure incurred on their maintenance and management.

POLICE

The police force was constituted on its present basis on the formation of the Province, the whole of which including the Cantonnments and the Municipalities, is under one force. The strength is equal to one man per 5.3 square miles of area. The superior officers comprise an Inspector-General, whose jurisdiction extends to Berar, three Deputy Inspectors-General, for assistance in the administrative control and supervision of the Police force, including the Criminal Investigation Department, and the usual cadre of District Superintendents of Police, Assistant and Deputy Superintendent and subordinate officers.

On railways, special Railway Police are employed under the control of two Superintendents of Railway Police with headquarters at Raipur and Hoshangabad. There is a Police College under the control of a Superintendent of Police at Saugor and Constables' Schools under the control of Deputy Superintendents at Nagpur and Jabulpore. A special Armed Force of 3,995 men is distributed over the headquarters of eight districts, for use in dealing with armed disturbers of the peace in whatever quarter they may appear. There is a small force of Mounted Police consisting of 1 Head Constable and 7 Constables for the escort of His Excellency the Governor.

The Central Provinces has no rural police as the term is understood in other Parts of India. The village watchman is the subordinate of the village headman and not a police official and it is considered very desirable to maintain his position in this respect.

During the war there was an expansion of the District Police and the special Armed Force and the formation of a battalion of special armed constabulary.

EDUCATION

The Education Department of the Central Provinces and Berar is administered by a Director of Public Instruction assisted by (i) a Personal Assistant, (ii) two Deputy Directors

of Public Instruction—one for Primary and Secondary education and the other for Technical Education, the former being assisted by two Technical Assistants, (iii) an Officer on Special Duty for Post-War Reconstruction Scheme, (iv) an Officer-in-charge of Muslim Education, (v) six Divisional Superintendents of Education each assisted by a Personal Assistant, (vi) nineteen District Inspectors of Schools assisted by eighty-seven Assistant District Inspectors of Schools, and (vii) two Inspectresses of Schools, assisted by six District Inspectresses of Schools and five Assistant District Inspectresses of Schools.

The Director of Public Instruction is no longer the Secretary to Government in the Education Department. The Education Department has now an I.C.S. Secretary like other Departments of Government and an officer of the Education Department acts as Under Secretary.

Schools.—Schools are divided into (a) schools for general education and (b) schools for special education. The latter are schools in which instruction is given in a special branch of technical or professional education. The main division of schools for general education is into Primary and Secondary. In the Primary Schools teaching is conducted wholly in recognised Indian languages of the province and these schools are known as Primary Schools. The Secondary Schools are divided into Middle and High Schools. The former may be either Middle Schools in which instruction is given (a) wholly in a recognised Indian language or (b) mainly in a recognised Indian language with the option of English as an additional language, or Indian English Middle Schools in which instruction is given in a recognised Indian language but English is a compulsory subject. In the High School classes instruction has been and is being given through the recognised Indian language since 1922 but for the convenience of pupils whose mother tongue is not a recognised Indian language of the locality as also for those who otherwise desire to learn through English, a few English medium sections are still maintained.

Primary Education is mostly under the control of District Councils, Municipal Committees and Notified Area Committees. The Primary Education Act empowers local authorities to introduce compulsion and this is in force in several areas.

Technical Education.—Among the schools for special education are the Government Engineering School, Nagpur, and three Government Schools of Handicraft and twelve aided Industrial Schools. The Engineering School teaches upto the diploma standard in Civil, Mechanical and Automobile Engineering and is affiliated to the Nagpur University. The Schools of Handicrafts Industrial Schools have recently been transferred to the Education Department from the Commerce and Industry Department and teach carpentry, blacksmithy, tailoring, shoe-making, cotton-weaving, carpet and durrie making, toy making and lacquer work, cane and basket manufacturing. They are under the administrative control of the Director of Public Instruction, who is assisted by an Inspector of Industrial Schools.

Higher Education is under the control of the Nagpur University of which the following are constituent colleges:—at Nagpur: Morris College, National College, College of Science, Hishop College, Laxmi Narayan Technological Institute, City College, Agriculture College (under the Agriculture Department), University College of Law, Central College for Women, and University Training College (for teachers); at Jubbulpore: Robertson College, Hittkarhi City College, Spence Training College (for teachers) and Hittkarhi Law College; at Amraoti: King Edward College; at Wardha: Commerce College; at Akola: Berar Arts College; at Raipur: Chhattisgarh Arts College and at Bilaspur, Shree Bhagwan Rameshwar Lal Arts College. There is also a Medical School at Nagpur under the Medical Department.

Secondary Education is under the control of the Board of High School Education, on which the University is represented. The Director of Public Instruction is the *Ex-officio* Chairman of the Board and is assisted by a Secretary. The High School Certificate awarded by the Board qualifies for entrance to the University.

MEDICAL

The Medical and Public Health Services of the Province are respectively controlled by the Inspector General of Civil Hospitals and Director of Public Health. The Medical Department has made some progress since the year 1911. A striking advance has been made in recent years with urban sanitation and the opening of a Medical School at Nagpur in 1914 supplies a long felt need. The principal medical institutions are the Mayo Hospital at Nagpur (opened in 1874) with accommodation for 222 in-patients; the Victoria Hospital at Jubbulpore (opened in 1886) with accommodation for 175 in-patients; the Daga Memorial (Dufferin) Hospital and the Mure Memorial Hospital at Nagpur and the Lady Elgin Hospital and the Crump Children's Hospital at Jubbulpore, these last four being for women and children and can together accommodate 341 in-patients. In addition to these, hospitals for women exist at Chhindwara, Gondia, Sangor, Khandwa, Amraoti, Murizapur, Shegaon and Khamgaon and at all district headquarters where no separate women's hospitals exist, sections have been opened at the main hospitals for the treatment of women by women doctors.

The Mayo Hospital at Nagpur was provincialised in 1923, the Irwin Hospital at Amraoti in 1925, the Victoria Hospital at Jubbulpore in 1926 and the Silver Jubilee Hospital at Raipur in 1928. In accordance with recent policy 178 out of 251 local fund dispensaries have been transferred to the administrative and executive control of local bodies. With the object of bringing medical relief within easy reach of the rural population, Government has sanctioned (i) subsidising 22 medical practitioners (allopathic) one in each district council (4); (ii) subsidising 83 vaidyas and hakims, one in each tahsil (28); (iii) establishment of 83 Ayurvedic and Unani dispensaries in each tahsil (58). (The figures in brackets indicate the number in actual operation at present). The Province has one Mental Hospital at Nagpur. Four

tuberculosis clinics have been opened at Nagpur, Jubbulpore, Raipur and Amraoti during the year 1937 and 40 beds have been reserved at the Pendra Road Sanatorium for the treatment of patients sent by Government.

There is a great deal of eye disease in the province and the problem is receiving special attention. The Central Provinces and Berar Blind Relief Association and the Sant Parmanand Blind Relief Mission, Delhi is doing propaganda work and helping the blind. So far 25 assistant medical officers have been given training in eye work for six months at the Mayo Hospital, Nagpur. These specially trained officers are posted to eye centres in the Province. Anti-rabies treatment is now available at 14 centres in the province, viz., Nagpur, Jubbulpore, Raipur, Akola, Wardha, Hoshangabad, Sangor, Chanda, Chhindwara, Khandwa, Yeotmal Amraoti, Mungell and Bilaspur. A new medical college at Nagpur was started on July 15, 1947 with accommodation for 110 students. In order to reserve stocks of medicines, dressings, clothings or blankets for use in the hospitals of the Province, a Provincial Medical Store Depot was also established at Nagpur in April 1947. Nurses training schools exist in 11 hospitals in the Province and these are being enlarged and improved as fast as staff permits.

PUBLIC HEALTH

The Public Health services of the province are controlled by the Director of Public Health. In 1939, a separate cadre of Sub-Assistant Health Officers was sanctioned by the Government. An appreciable advance has been made in rural sanitation. The principal institutions working under the Department are:—

1. The Central Provinces Vaccine Institute which was founded in the year 1913. Here, small-pox vaccine lymph is manufactured for the whole province and the neighbouring feudatory states. Vaccinators are also trained at the Institute.
2. Public Health Institute established in the year 1928 undertakes the examination both chemical and bacteriological, of samples of water and food stuffs under the Food Adulteration Act. Facilities also exist for the examination of pathological specimen and clinical material of indigent cases of infectious diseases free of charge.
3. There is a Health School at Nagpur, where Health Visitors are trained.
4. The problem of leprosy is being energetically tackled in the province and the department has a leprosy specialist who is in charge of treatment, propaganda and survey work. There are 27 leprosy Assistant Health Officers who are running 56 leprosy centres. Of these, 6 centres are run by the British Empire Leprosy Relief Association (Provincial Branch). Recently the Provincial Government has taken over the Leprosy Home and Hospital at Raipur formerly run by the Raipur Mission to Lepers.

5. There are 82 Assistant Health Officers in charge of epidemic dispensaries (One in each Tahsil).
6. One mechanised travelling dispensary in charge of an Assistant Health Officer with a trained compounder is working under the department. This dispensary visits roadside villages and renders medical aid to the aboriginals.
7. A scheme for eradicating the disease of Yaws is in operation in Chanda and Bilaspur districts where the incidence of Yaws is high. The results are satisfactory.
8. A Nutrition Officer has been appointed. The first task of this Officer is to carry out diet surveys on standard lines, gauge the extent of mal-nutrition and to tackle other problems concerning Nutrition. In addition he has been appointed temporarily as medical supervisor to carry out industrial surveys with a view to improving the health of the industrial concerns in the Province.
9. The following sections have been opened as post-war measures:—
 - (i) Maternity and Child Welfare Section under Assistant Director of

Public Health (M. & C.W.) to reduce infant and maternal mortality in the Province.

(ii) Malaria Section under A.D.P.H. (Malaria) to reduce the incidence of Malaria in the Province by carrying out malaria surveys and control measures. Four anti-malaria units are now operating in highly malarious parts in the Province.

(iii) Public Health Engineer Section to assist municipalities in preparing water drainage, town planning and housing schemes and the district councils with regard to the provision of adequate water supply in rural areas.

Training classes for Stockmen-cum-Health Assistants have been opened at Wardha with a view to enabling the trained personnel to render both veterinary and medical first aid in rural areas. In addition they will be carrying certain Public Health Duties like vaccination, inoculation, disinfection of water supply and collection of vital statistics.

Vaccination is compulsory in 105 towns and 16,843 villages out of a total of 119 towns and 38,985 villages respectively.

1948-49 BUDGET

The revenue is estimated at Rs. 15,29.50 lakhs, which includes Rs. 230.30 lakhs, half the estimated expenditure on development and "Grow More Food" schemes, as a grant from the Centre. The expenditure is estimated at Rs. 15,74.44 lakhs.

It is proposed to withdraw Rs. 45 lakhs from the Post-War Reconstruction and Development Fund in order to balance the Budget. There will then be a nominal surplus of Rs. 6,000.

No new taxes are being levied, but step will be taken to place on the Statute Book permanently the exchanges on court fees and stamps.

Provision has been made for the continuance of Government grants for raising the salaries of primary school teachers and for the payment of the enhanced cost-of-living allowance to secondary school teachers.

Referring to the Rs. 66-crore development plan, the Finance Minister in the course of his budget speech said the financial position was now not so pessimistic, as they could depend upon the Centre to the extent of at least Rs. 14 crores.

In addition to purely irrigation projects, Government have been examining the possibilities of multi-purpose development of the principal river valleys of the Province. It has been decided to ask the Central Waterways, Irrigation, and Navigation Commission for permission to undertake an irrigation-cum-power project near Bagri. The scheme is estimated to cost Rs. 6.25 crores for making available 25,000 k.w. of power and the irrigation of 130,000 acres.

By another scheme at a cost of Rs. 33.55 crores the Province would be able to secure 250,000 k.w. of power and to irrigate one million acres near Warsa. Detailed investigation of this scheme has been authorised.

Education Grants.—It is proposed to give grants to Saugor University, to a scheme for the compulsory military education of students seeking university degrees, to the Science College at Kamgaon, to the Central College for women at Nagpur and the Science College proposed to be started at Nagpur by the Nagpur Shikshan Prasarak Mandal.

Government plan to open eight new rural dispensaries and to construct a tuberculosis clinic and ward at the Irwin Hospital, Amraoti.

In the sphere of agriculture, provision has been made for continuing the various schemes for the subsidised distribution of good seed and fertilisers and liberal provisions of taccavi and subsidies for the construction of field embankments.

New schemes are also proposed for repairs to village tanks for irrigation purposes, and for bringing under the plough a large area of fallow land.

As to the veterinary department, more dairy units in towns are being established. This is linked to a scheme of the Rural Development Department for improving cattle in villages.

It is proposed to introduce a plan for the encouragement of Khadi next year. An experiment is being made in the formation of labour co-operative societies.

EAST BENGAL

[Details appear towards end of book]

East Punjab

THE East Punjab is the western-most province of the Indian Union. It is in fact the Union's frontier province. Created in the middle of August 1947 it came into being as a result of the partition of the

boundary of that village and then runs down its eastern boundary to its junction with village Waigal. It then runs along the eastern boundary of village Waigal to its junction with village Kalia and then along the southern boundary of village Waigal to its junction with village Panhuwan. The boundary then runs down the eastern boundary of village Panhuwan to its junction with a village Gaddoke. The line then runs down the eastern border of villages Gaddoke, Katluni Kalan, to its junction with villages Kals and Mastgarh.

H. E. Sir Chandulal Trivedi

Punjab. The old Punjab was the land of the five rivers. East Punjab is the land of the two rivers, Sutlej and Beas.

BOUNDARIES

On the north, the boundary starts at the point where the west branch of the Ujh river enters the Punjab Province from the State of Kashmir. The boundary follows the line of that river down the western boundary of Pathankot tehsil to the point where the Pathankot, Shakargarh and Gurdaspur tehsils meet. From this junction of the three tehsils, the boundary follows the line of the Ujh river to its junction with the river Ravi and therefore in line of the river Ravi along the boundary between the tehsils of Batala and Shakargarh, the boundary between the tehsils of Batala and Narowal, the boundary between the tehsils of Ajnala and Narowal and boundary between the tehsils of Ajnala and Shahdara to the point on the river Ravi, where the district of Amritsar is divided from Lahore.

From this point the boundary turns southwards following the boundary between the tehsils of Ajnala and Lahore and then the tehsils of Tarn Taran and Lahore to the point where the tehsils of Kasur, Lahore and Tarn Taran meet. The line then turns south-westward along with the boundary between the tehsils of Lahore and Kasur to the point where that boundary meets the north-east corner of village Theh Jharollan. It then runs along the eastern boundary of that village to its junction with village Chatianwala, turns along the northern

It then runs along the southern boundary of Katuli Kalan and then western boundary of village Kals to its junction with village Khem Karan. The line then runs along the western and southern boundaries of village Khem Karan to its junction with village Maewala. It then runs down the western and southern boundaries of village Maewala proceeding eastward along the boundaries between village Mahaidpur on the north and villages Sheikhpura Kuhua, Kamalpuran, Fatehwala and Mahewala. The line then turns northward along the western boundary of village Sajhra to its junction with villages Mahaidpur and Machhike. It then turns north-westward along the boundaries between villages Machhike and Sajhra and then proceeds along the boundary between villages Ratoke and Sajhra to the junction between villages Ratoke, Sajhra and Mabbuke. The line then runs north-east between the villages Ratoke and Mabbuke to the junction of villages Ratoke, Mabbuke and Gajjal. From that point the line runs along the boundary between villages Mabbuke and Gajjal, and then turns south along the eastern boundary of village Mabbuke to its junction with villages Nagar, Almapur. It then turns along the north-eastern boundary of village Nagar Almapur and runs along its eastern boundary to its junction with village Mastoke. From there it runs along the eastern boundary of village Mastoke where it meets the boundary between the tehsil of Kasur and Ferozepore.

The line then runs in a south westerly direction down the Sutlej river on the boundary between the districts of Lahore and Ferozepore to the point where the districts of Ferozepore, Lahore and Montgomery meet. It continues along the boundary between the districts of Ferozepore and Montgomery to the point where this boundary meets the border of Bahawalpur State. The district boundaries and not the actual course of the Sutlej river in each case constitutes the boundary between the East and West Punjab.

Jammu and Kashmir State lies to the north of the East Punjab province and it extends to the west of the river Jamma enclosed by Rajputana to the south.

East Punjab now includes Jullundur and Ambala Divisions and the Amritsar District of Lahore Division and part of Gurdaspur and Lahore Districts. Altogether it contains 13 districts as compared with 29 in the old undivided Punjab. The names of the Districts are (in the Ambala Division) as follows: Hissar, Rohtak, Gurgaon, Karnal, Ambala and Simla and in

the Jullundur Division Kangra, Hoshiarpur, Jullundur, Ludhiana, Ferozepur, Gurdaspur (excluding Shakargarh Tehsil) and certain portions of Kasur Tehsil have also been allotted to East Punjab.

The territory is not homogeneous. In the north-east lie the hill ranges of Shivalik and the Kangra Valley. The Jullundur division contains rich alluvial soil while parts of Ambala Division or Hariana Prant are dry and waterless tracts. Linguistically too the Province is not homogeneous. Punjabi, Western Hindi, Pahari and Rajasthani are all spoken in the different parts of the Province.

The total area of East Punjab is about 35,600 sq. miles and the total population according to the 1941 census figures is 1,24,09,924. These figures do not, of course, take into account the recent migrations between East and West Punjab. Broadly speaking, however, as many Muslims have left East Punjab as non-Muslims have come in, so that on balance the relative population remains unchanged.

The main languages of the Province are, as already mentioned, Punjabi and Western Hindi. That is to say, Hindustani with an accent. Punjabi is spoken in the whole of the Jullundur Division and part of Ambala District while 'Western Hindi' is the chief language in the Ambala Division. Two minor languages are 'Eastern Pahari' spoken in the hill tracts of Gurdaspur, Kangra and Simla and Rajasthani spoken in the Western parts of Hissar District bordering on Rajputana. All States in East Punjab have acceded to the Indian Union. Some States have merged into the Province. With the inauguration of the Dominion the offices of Residents in the States and of Agent to the Governor-General, Punjab States have been abolished.

The thirteen districts of East Punjab offer tremendous possibilities of development. It has been estimated that in the field of agriculture the famine-stricken areas of Rohtak, Hissar and Gurgaon will be turned into thriving and flourishing canal colonies with the construction of the Bhakra Dam at Bhakra on the Sutlej in Bilaspur State. In addition to irrigation the project will also generate electric power. The Bhakra and Nangal schemes will open up the south east parts of the Province and provide scope for new industries.

A word about the capital of the new Provinces will not be out of place here. The provisional capital is, of course, Jullundur. The permanent capital, however, it has been decided, will be located in the sub-mountainous area between Rupar and Chandigarh.

The selected site is about 20 miles from Ambala Cantonment on the south of the road which connects Panchkoola with Kharar. a tehsil headquarters.

The nearest railway station is Chandigarh, at a distance of three miles on the Ambala-Kalka section of the East Punjab railway.

According to an expert engineer, the completion of the capital will take about three years.

The climate of East Punjab is one of extremes. The rainfall in most districts ranges from 15 inches to 25 inches and it is usually sufficient

for cultivation without recourse to artificial irrigation. But in the greater part of Ambala Division the margin is so small that except where artificial means exist any material reduction in rainfall means famine.

AGRICULTURE

With the exchange of population, it is not possible to state what percentage of the population depends on Agriculture. Similarly the position regarding the ownership, etc., of the land cannot be indicated unless definite decision is arrived at about the lands vacated by Muslims. The area preserved as forest land in the hills and elsewhere has been reduced to a large extent, being about 7.5 lakh acres as against 12 lakh acres in West Punjab.

Despite many changes due to partition, agriculture continues to be the staple industry of the Province, affording the main means of subsistence to a large proportion of the population. Of the crops grown, wheat is the most important so far as production is concerned. Next in importance to wheat in the matter of total yield is gram.

The area of the land (excluding Patti sub-tehsil of Amritsar district for which figures are not yet available) in 1945-46 was 22,756,900 acres, and its classification under various heads was as follows:—

	Acres
Forests	768,700
Not available for cultivation ..	6,130,000
Other uncultivated lands excluding current fallows	2,392,800
Current fallows	729,000
Net area sown during the year ..	12,736,400

The total area of crop sown in the province was 10,365,700 acres (irrigated 5,132,800 and unirrigated 11,232,900) acres. The area and outturn of principal crops was as shown below:—

	Area in acres.	Outturn in tons.
Rice	431,600	175,000
Wheat	3,312,200	1,043,400
Barley	515,100	105,400
Jowar	445,100	43,700
Bajra	2,212,500	293,900
Maize	856,500	296,000
Gram	4,105,400	726,600
Rabi Oil Seeds	341,200	53,600
Sugarcane	300,600	370,900
Cotton Cleaned—		
Desi	274,100	100,600
American	91,300	39,900

The area irrigated by various sources was as follows:—

Government canals 2,604,500; private canals 421,100; tanks 7,100; wells 1,931,200 and other sources 20,200.

The development of irrigation on the completion of Bhakra Dam is expected to lead to a great expansion of the area under wheat. Other important crops are bajra, maize, barley, rice, jowar, oil-seeds (sarsun, taramira, toria, groundnut and sesamum) cotton and sugarcane. The short staple indigenous varieties predominate in East Punjab, the American cotton covering only about 1/3rd of the total area under cotton.

LAND TENURE

The great mass of the landed property in the Punjab is held by small proprietors, who cultivate their own land in whole or part. The chief characteristic of the tenure generally is, that these proprietors are associated together in village communities, having, to a greater or lesser extent, joint interest; and under the present system of cash payments, limited so as to secure a certain profit to the proprietors, jointly responsible for the payment of the revenue assessed upon the village lands. It is almost an invariable incident of the tenure, that if any of the proprietors wishes to sell his rights, or is obliged to part with them in order to satisfy demands upon him, the other members of the same community have a preferential right to purchase them at the same price as could be obtained from outsiders.

2. In those communities with partial or entire separation of proprietary title, the measure of the rights and liabilities of the proprietors vary very much. It sometimes depends solely upon original acquisition and the operation of the laws of inheritance; in other cases definite shares in the land of a village or sub-division, different from those which would result from the law of inheritance, have been established by custom; in yet other cases, reference is made not to shares in lands, but to shares in a well or other source of irrigation; and there are also many cases in which no specified shares are acknowledged but the area in the separate possession of each proprietor is the sole measure of his interest.

3. In the Simla hills and in the more mountainous portions of Kangra district the present village communities consist of numerous small hamlets, each with its own group of fields and separate lands, and which had no bond of union until they were united for administrative purposes at the time of the Land Revenue Settlement.

4. In some cases the village communities, while holding and managing the land as proprietors, are bound to pay a quit rent to superior proprietors under whom they hold. The Settlement is made according to circumstances, either with the superior proprietor, who collects the Government revenue as well as his quit rent from the communities, or with the communities in actual possession of the land, who pay the land revenue to Government and the quit rent to the superior proprietor. In either case the amount which the superior proprietor is entitled to collect is determined at Settlement as well as the amount of land Revenue demand.

5. There are sometimes also proprietors holding lands within the estates of village communities, but who are not members of the communities, and are not entitled to share in the common profit nor liable for anything more than the revenue of their own lands. They are called "Malikan Qabza". They pay village charges as well as quit rent if any to the proprietary body of the village. The most common examples of this class are the holders of plots at present or formerly revenue free, in which the assignees were allowed to get proprietary possession in consequence of having planted gardens or made other improvements or because they had other claims to consideration in the part of the village community.

The official classification of village tenure is as below:—

(1) Zamindari	(a) Landlord (Khalls or Wahid).
	(b) Communal (Mushtarka).
(2) Pattidari	(a) Perfect (Mukamil).
	(b) Imperfect (Ghair Mukamil).
(3) Bhaichara	(a) Perfect (Mukamil).
	(b) Imperfect (Na-Mukamil).

The Province being preponderantly agricultural, a considerable proportion of the wealth of the people lies in livestock. Large profits are derived from the cattle and dairy trades and wool is a staple product in Kangra district and throughout the plains generally. Though the trade in hides and skins has a bright future, for the Punjab as a whole the industry is not likely to flourish in the new set-up.

INDUSTRY

The industrial structure of the province is pyramidal in character, with a very wide and durable base of cottage industries, a fair sized body of small scale and organised industries. Another striking feature of the industrial pattern is uneven distribution of industrial activity as is shown in the following table:—

District.	No. of factories.	No. of operatives.
1. Amritsar	177	17,421
2. Gurdaspur	46	4,281
3. Ferozepore	40	4,981
4. Jullundur	58	3,605
5. Ludhiana	65	3,240
6. Hoshiarpur	13	209
7. Kangra	13	218
8. Ambala	47	5,445
9. Simla	3	523
10. Karnal	13	647
11. Rohtak	5	156
12. Hissar	27	3,863
13. Gurgaon	8	760
Total	509	44,759

It will be seen that there is a concentration of industry in the districts of Amritsar, Gurdaspur and Ferozepore, which touch the Radcliff border. Over half of the registered factories and about 60 per cent of workers engaged in organised industry are in these three districts. In the south-eastern districts of Gurgaon and Rohtak and the hilly district of Simla there is hardly any industry.

Perennial Factories—Another notable feature of the industrial fabric of the province is that 75 per cent of the registered factories are perennial. Amongst the perennial factories, textile and hosiery mills, foundries and engineering workshops, paper and glass factories, flour mills and chemicals are most important. The Dhariwal Mills is one of the two biggest woollen mills in India, which manufactures about half of the woollen fabrics made in the whole country. Ludhiana is the centre of hosiery industry and still occupies the premier position in the whole of the Indian Dominion.

The other industrial concerns of note in the province are embroidery mills, absorbent cotton and antiseptic dressing factories, glass and several carpet factories at Amritsar, metal foundries at Batala and Jullundur, paper and pulp mill, a starch factory and a sugar mill at Abdullahpur, a plywood factory at Ludhiana, factories manufacturing nuts and bolts at Jullundur and Ludhiana, steel rolling mills at Amritsar, Khanna and Ludhiana, tanneries at Jullundur, factories for the manufacture of scientific apparatus at Ambala and Amritsar, fruit preservation at Pathankot and Ambala and chemicals at Amritsar.

Cottage Industries:—The small scale and cottage industries are quite numerous and varied. Handloom weaving, including manufacture of blankets and rugs, at Panipat, hosiery industry at Ludhiana, utensil making at Rewari and Jagadhri, tanning and wood working in Jullundur and Hoshiarpur, rank probably the foremost amongst the cottage industries. The sericulture industry is expanding gradually and a large number of agriculturists in the sub-montane tracts are increasingly taking to it.

The disturbances that followed the partition of the province have adversely affected its industrial life however. At present most of the industries are not working to their full capacity. Raw materials are in short supply, skilled labour is not easily available, markets have been dislocated and banks are not functioning properly. It will take sometime before normal working is resumed.

MEDICAL

The Medical Department is controlled by the Inspector-General of Civil Hospitals, Punjab. He is assisted by an Assistant Inspector-General of Civil Hospitals, Punjab, and an officer on Special Duty, who are Officers of the Provincial Civil Medical Service of the rank of a Civil Surgeon; and a Personal Assistant of Gazetted rank.

PUBLIC HEALTH

The following personnel of the Punjab Public Health Deptt., are responsible for the control of disease and for the carrying out of work designed to improve the health of the people:—

Headquarters staff:—

Director of Public Health, Assistant Director of Public Health, Malariaology, Provincial Public Analyst, Provincial Leprosy Officer, Entomologist, Statistical Officer, Inspectress, Health Centres.

Public Health work is organised in 2 "Ranges" each in charge of an Assistant Director of Public Health. The 13 districts of Punjab are included in these Ranges.

The basic public health staff for a District is:—
1 District Medical Officer of Health, 4 Sanitary Inspectors, 1 Superintendent of Vaccination, 16 Vaccinators.

The basic district staff is reinforced from the following cadres organised for special work:—

A. Public Health Corps concerned primarily with the control of epidemic disease and sanitation in villages.

There are 12 units in the corps each consisting of:—

- 1 Sub-Assistant Health Officer, 1 Sanitary Inspector, 2 Sanitary Supervisors, 12 Sanitary Patrols (Labourers).

One such unit is normally attached to each district. An anti-malaria organisation of 6 units, each consisting of:—

- 1 Sub-Assistant Health Officer, 1 Entomological Assistant, 5 Anti-malaria Supervisors, 25 Anti-malaria Patrols.

Problems relating to nutrition are investigated by specially trained staff which includes:—

- 1 Nutrition Officer, 1 Lady Doctor, 1 Sub-assistant Health Officer, 2 Sanitary Inspectors.

Increasing effort is being directed towards ensuring that food-stuffs sold throughout the Province are of good quality. Sixteen Government Food Inspectors are employed, in addition to those appointed by local bodies, who regularly sample wholesale and retail stocks. Samples are examined at a Headquarters Laboratory at Ambala.

Government has recently expanded maternity and child welfare work. There are now throughout the Province 60 maternity and child welfare centres staffed by fully trained lady health visitors, who supervise the training and work of indigenous dais. About 37 additional centres are being formed.

Hookworm:—A special organisation for the prevention and treatment of Hookworm disease is in operation in the areas in which this disease is prevalent.

The following personnel carry out the work:—

Consisting of 2 Sanitary Inspectors, Eight units each consisting of:—

- 1 Sub-Asstt. Surgeon, 1 Dispenser.
1 Entomologist, 2 Sub-Assistant Health Officers, 1 Field Assistant, 6 Sanitary Supervisors, 12 Sanitary Patrols, 2 Laboratory Assistants, 2 Laboratory Attendants.

An Anti-leprosy cadre consisting of:—

- 1 Provincial Leprosy Officer, 1 Assistant Leprosy Officer, for Kangra, 1 Assistant Leprosy Officer, for Kulu, 1 Nurse Dai.

Leprosy surveys are undertaken and measures instituted for the control of the disease.

Whole-time Municipal Medical Officers of Health are employed in the following towns:—
Amritsar, Ferozepore, Jullundur, Ludhiana.

All District & Municipal Medical Officers of Health are Inspectors under the Factory Act and are responsible for ensuring that the rules laid down for safeguarding the health of workers are observed.

There is a Public Health Branch of the Public Works Deptt., which is concerned with the planning and carrying out of work in connection with the provision of water-supplies and drainage and sewerage schemes in towns and villages. This organisation consists of a Chief Engineer who is a Secretary to Government, 2 Superintending Engineers and the following additional personnel:—

Executive Engineers, Sub-Divisional Officers, Subordinates.

EDUCATION

Rapid strides have been made in education in East Punjab. The advance has not been confined to any one form of education but is spread over all grades and varieties. In addition to Institutions maintained in all parts of the province by private enterprise, Government itself maintains 7 arts colleges, (including 2 for women) 2 training colleges, one for males and the other for females. One normal school for males, 3 training classes and combined institutions for females, 70 secondary schools for boys and girls and 17 centres for vocational training. Apart from these institutions for general education, Government maintains one higher grade professional institution, viz., Glancy Medical College, Amritsar. In addition there are several technical and industrial schools scattered over the province.

The Department of Education is in the charge of the premier who is assisted in the work of administration by the Director of Public Instruction.

POLICE

The Police force is divided into District Police, Railway Police, Criminal Investigation Department and Provincial Additional Police. The combined force is under the control of the Inspector-General, who is a member of the gazetted force has under him two Deputy Inspectors-General in charge of ranges comprising several districts. The Criminal Investigation Department is controlled by the Asst. Inspector-General, who is also in charge of the Finger Print Bureau at Phillaur. There is a Police Training School at Phillaur in charge of a Principal of the rank of Superintendent of Police. The Railway Police is under an Assistant Inspector-General. The Provincial Armed Police is controlled by a commandant. The District Police are controlled by Superintendents each of whom is in charge of a district and has under him one or more Assistant Superintendents or Deputy Superintendents.

As a Security Measure the creation of National Volunteer Corps has also been effected. It is under the control of an Assistant Inspector-General of Police.

JUSTICE

The administration of Justice is entrusted to a High Court, which is the highest court in East Punjab and Delhi in civil cases, final appellate authority in criminal cases, and has powers of original criminal jurisdiction in cases where European British subjects are charged with serious offences and original civil jurisdiction in special cases.

The Court sits at Simla and is composed of a Chief Justice, five puisne Judges and one additional Judge (either Civilian or Barristers or Advocates). Subordinates to the High Court are the District and Sessions Judges (10 in number) each of whom exercises civil and criminal jurisdiction in a civil and session division comprising one or more districts.

THE REFUGEE PROBLEM

No review of East Punjab will be complete without a reference to the refugee problem. This problem has been dealt with in greater detail in another section for, in a sense it is an All-India problem though East Punjab is more immediately affected.

About 4 million Hindus and Sikhs left West Punjab for East and about the same number of Muslims left East Punjab for West. This upheaval presents three main problems, evacuation, relief and rehabilitation. The present position may be summarized as follows: There are now about 700,000 Hindus and Sikhs staying in refugee camps at Amritsar, Cheharta, Gurdaspur, Ferozepore, Jullundur, Ludhiana, Hoshiarpur, Hissar, Rohtak, Ambala, Karnal, Panipat, Shahabad, Kurukshetra and Gurgaon. The largest camp is at Kurukshetra and is being directly run by the Central Government. Shelter was provided wherever possible. All schools and colleges were closed upto February 29, 1948 and all available living space requisitioned. Tents too have been put up. Adequate arrangements have been made for feeding the refugees and the following scale of ration has been fixed: Atta or rice 10 oz.; dal 10z.; vegetables 1 oz.; oil or vegetable ghee 10z.; gur or sugar 10z.; salts and condiments 10z.; milk per day for children below five 1 lb.; fruit, milk and vitamin tablets and other special items are issued on medical advice. In addition, nursing and expectant mothers and the certified sick get 1 lb. of milk a day. Then the refugees are provided with clothing and medical relief when necessary. Vaccination and inoculation are also undertaken to prevent spread of disease. Altogether the East Punjab Government expect to spend a little over Rs. 7 crores on refugee relief and rehabilitation.

THE BUDGET

A deficit of Rs. 6.69 crores was revealed by Dr. Gopichand Bhargava, Premier and Finance Minister, presenting to the East Punjab Assembly the first annual budget of the Province for the year 1948-49. The Premier estimated the revenue receipts at Rs. 11.13 crores and the revenue expenditure at Rs. 17.82 crores.

A feature of the budget is the enhancement of excise duty on country spirit, Indian-made foreign spirit, onion and *bhang*, which is estimated to yield an additional revenue of Rs. 33 lakhs.

The Premier disclosed that, out of a total expenditure of Rs. 4.81 crores on civil administration, the police alone accounted for Rs. 2.69 crores with the result that, whereas in joint Punjab the expenditure on police was about 14 per cent. of the total revenue expenditure in East Punjab.

Referring to the food situation, Dr. Bhargava said that with the incoming of the new crop it was proposed to decontrol food grains and withdraw rationing.

Dealing with refugees and rehabilitation, the Premier revealed that during the next year the department expected to spend a little over seven crores of rupees.

The Premier announced the following taxation proposals designed to supplement the revenues to a little over Rs. 1 crore.

(1) The sales tax exemption limit is to be raised from Rs. 10,000 to Rs. 19,999 and to levy the tax at a uniform rate of 1/9 per cent. in case of annual turnovers of Rs. 20,000 and above.

(2) Petrol tax which is levied at the rate of one anna six pies per Imperial gallon is proposed to be raised to three annas per Imperial gallon.

(3) The Government propose to raise the rate of property tax also from 7-1/2 to 10 per cent. per annum.

GOVERNMENT

Prior to the amendment of the Government of India Act in 1919 the head of the administration was a Lieutenant-Governor, drawn from the ranks of the Indian Civil Service. Under the Act of 1919 the province was raised to the status of a Governorship, with an Executive Council and Ministers, the Governor-in-Council being in charge of the Reserved Subjects and the Governor with his Ministers of the Transferred Subjects. With the introduction of part III of the Government of India Act, 1935, this Executive Council has been substituted by a Council of Ministers and the Legislative Council by an enlarged Legislative Assembly with wide powers of legislation and control. With the passing of the Indian Independence Act of 1947, the Province was partitioned and thus the new Province of East Punjab came into existence.

The business of Government as before is carried on through the usual Secretariat which consists of five Secretaries, designated (1) Chief, (2) Home, (3) Finance, (4) Medical and Local Government and Industries and (5) Civil Supply Department; four Under-Secretaries, and two Assistant Secretaries. In the Public Works Department, there are five Chief Engineers two in the Buildings and Roads Branch, one in the Electricity Branch and two in the Irrigation Branch while the Legal Remembrancer is also the Secretary to Government in the Legislative Department. The head of the Police Department is Joint Secretary and of the Education Department a Secretary to Government. Under the Governor the province is administered by two Commissioners for Jullundur and Ambala divisions, who exercise general control over the 13 Deputy Commissioners in districts.

The principal heads of Department in the province are given below.

ADMINISTRATION

GOVERNOR, H. E. SIR CHANDULAL MADHAVLAL TRIVEDI, K.C.S.I., C.I.E., O.B.E., I.C.S.

PERSONAL STAFF

Secretary, N. K. Mukarji, I.C.S.
Military Secretary, A. R. N. Davies, J.
Aide-de-Camp, Captain P. S. Mehta.

COUNCIL OF MINISTERS

Premier—The Hon'ble Mr. Gopi Chand Bhargava.
Minister for Law and Order, Justice, Jails, Land Revenue, Irrigation and Electricity—The Hon'ble Sardar Swarn Singh.
Minister for Public Works, Civil Supplies and Transport—The Hon'ble Captain Ranjit Singh.
Minister for Relief and Rehabilitation—The Hon'ble Sardar Pratap Singh.
Minister for Forests, Agriculture, Veterinary and Co-operation—The Hon'ble Giani Kartar Singh.
Minister for Finance, Local Self-Government and Industries—The Hon'ble Choudhary Krishna Gopal Dutt.
Minister for Labour and Excise—The Hon'ble Shree Prithvi Singh Azad.

CIVIL SECRETARIAT

Chief Secretary—M. R. Sachdev, C.I.E., O.B.E., I.C.S.
Secretary, Medical, Local Government and Labour Departments—M. R. Bhida, I.C.S.
Secretary, Industries Department—J. M. Shrinagesh, C.I.E., I.C.S.
Secretary, Civil Supplies Department—M. R. Sachdev, C.I.E., O.B.E., I.C.S.
Secretary, Finance Department—K. S. Malhotra, I.A. & A.S.
Home Secretary and Provincial Transport Controller—Nawab Singh, I.C.S.
Additional Secretary, Civil Supplies Department—E. N. Mangat Rai, I.C.S.
Finance Commissioner, Revenue and Development Departments—P. K. Kaul, I.C.S.
Financial Commissioner, Refugees & Rehabilitation Departments—P. N. Thapar, C.I.E., I.C.S.

PUBLIC WORKS DEPARTMENT

Irrigation Branch
Secretary—(Canals), R. B. Shri Gita Ram Garg.
Secretary—(Projects), S. B. Salder Sarup Singh.
Buildings and Roads Branch.
Secretary—(1) R. B. Brij Mohan Lal, I.S.E.
Secretary—(2) P. L. Varma, I.S.E.

MISCELLANEOUS DEPARTMENTS

Director of Agriculture—S. B. S. Lal Singh.
Director of Land Records—Pandit Lakshmi Chander Vashishta, P.C.S.
Director of Public Instruction—G. C. Chatterji, M.A., I.E.S.
Inspector-General of Police—S. Sant Parkash Singh, I.P.
Chief Conservator of Forests—J. Singh, M.B.E., I.F.S.
Inspector-General of Civil Hospitals—Col. B. S. Nat.
Director of Public Health—Dr. A. R. Mehta, D.P.H.
Inspector-General of Prisons—R. B. P. Katoch.
Accountant-General—R. C. Khanna.
Post Master-General—R. S. L. Dhanpat Rai.

PUBLIC SERVICES COMMISSION

Chairman—Ram Chandra, C.E.I., M.B.E., I.C.S.

Members—S. S. Sant Singh, P.C.S.; Ch. Bhara Singh, B.A., LL.B.

Madras

THE Madras Presidency occupies the whole southern portion of the Peninsula, and, excluding the States, all of which have now acceded to the Government of India, has an area of 124,363 square miles. It has on the east, on the Bay of Bengal, a coast line of about 1,250 miles; on the south, on the Arabian Sea, a coast line of about 450 miles. In all this extent of coast, however, there is not a single natural harbour of any importance; the ports, with the exception of Madras, and perhaps of Cochin and Vizagapatam are merely open roadsteads. A plateau, varying in height above sea-level from about 1,000 to about 3,000 feet and stretching northwards from the Nilgiri Hills, occupies the central area of the Presidency; on either side are the Eastern and the Western Ghats, which meet in the Nilgiris. The height of the western mountain-chain has an important effect on the rainfall. Where the chain is high, the intercepted rain-clouds give a heavy fall, which may amount to 150 inches on the seaward side, but comparatively little rain falls on the landward side of the range. Where the chain is low, rain-clouds are not checked in their westward course. In the central tableland on the east coast the rainfall is small and the heat in summer excessive. The rivers, which flow from west to east, in their earlier course drain rather than irrigate the country; but the deltas of the Godavari, Krishna and Canavery are productive of fair crops even in time of drought and are the only portions of the east coast where agriculture is not dependent on a rainfall rarely exceeding 40 inches and apt to be untimely.

POPULATION

The population of the Presidency was returned at the census of 1941 as 40,840,664, an increase of 5,181,826 over the figure of 1931. The increase was not uniform. The districts which had suffered most in 1921 tended to show large increases in 1931—Bellary and Agencies were marked illustrations. As a natural corollary to an increase in population the Presidency density has risen. Hindus account for 86.7 per cent. of the Madras population, Muslims 7 per cent. and Christians 4 per cent. The actual number in other communities is inconceivable. The vast majority of the population is of the Dravidian race and the principal Dravidian languages, Tamil and Telugu are spoken by 19 and 18 million persons respectively. 40 per cent. of the population talk Tamil, 37 per cent. Telugu, 7.9 per cent. Malayalam, Oriya, Kanarese, Hindustani, Tulu follow in that order with percentages above 1.

The executive authority of the Province is exercised on behalf of His Majesty by the Governor who is aided by a Cabinet of 13 Ministers.

AGRICULTURE AND INDUSTRIES

The principal occupation of the province is agriculture engaging about 68 per cent. of the population. The principal food crops are rice, cholam, ragi and embu. The industrial crops are cotton, sugarcane and groundnut. Agricultural education is rapidly progressing in

the Presidency. The activities of the Agricultural Department in matters educational consist in the running of two colleges, one at Colimbatore affiliated to the University of Madras, and another at Bapatla in the Guntur District affiliated to the Andhra University, four farm labourers and schools, and numerous demonstration farms. Short practical courses in farm management and allied subjects have been instituted at the Agricultural College.

H. E. Sir Archibald Nye

While paddy which is the staple food of the population, occupies the largest cultivable area, cotton and sugarcane are by no means inconsiderable crops of the province and are receiving close attention at the hands of the local agricultural authorities. The area under cotton irrigated and unirrigated was 1,566,530 acres in 1946-47 and, as in the case of paddy, efforts are being made to produce better strains of cotton suited to different localities by means of both selection and hybridization. From existing good staple areas, improved varieties have been systematically introduced.

A special feature of the agricultural activities in the Presidency is the large industry which the planting community have built up, contributing substantially to the economic development of the province. They have organised themselves as an unregistered, body under the title of "The United Planters' Association of South India," on which are represented coffee, tea, rubber and a few other minor planting products.

The aggregate value of the seaborne trade of the Presidency was Rs. 82.58 crores in 1936-37,

Rs. 88.49 crores in 1937-38, Rs. 79.04 crores in 1938-39, Rs. 82.89 crores in 1939-40, Rs. 75.48 crores in 1940-41, 76.34 crores in 1941-42 and 66.51 crores in 1942-43. As in other provinces, the forest resources are exploited by Government. There are close upon 18,778 square miles of reserved forests.

Sixty-seven spinning and weaving mills were at work during 1945-46 with 8,887 looms and 15,15,794 spindles. The number of jute mills at work was four. At the close of the year 1946 the number of the other factories in the Presidency was 1,762. These consisted of oil-mills, rope works, tile works, etc. Tanning is one of the principal industries of the Presidency. Exports of tanned hides, amounted to 5,229 tons valued at Rs. 214.66 lakhs during 1945-46. The manufacturing activities which are under the direction of the Department of Industries are mainly confined to the production of flature silk soap and shark liver oil. There are a number of indigenous match factories run on cottage lines. It is slowly becoming recognised that the Madras Presidency is one of the most suitable parts of India for sugarcane cultivation and that the several deep-rooted varieties of cane which have been evolved at Coimbatore and require very little water are especially suited for the conditions which obtain in several areas of the Presidency where they grow better than in the north. The departments of Industries and Agriculture assist the development of the sugar industry by demonstration of the methods of manufacture of white sugar by centrifugals by getting trained sugar technologists, by the award of scholarships and by investigating schemes for starting sugar factories.

EDUCATION

There were at the end of the official year 1945-46 about 37,470 public institutions, ranging from village primary schools to arts and professional colleges, their total strength being about 3,719,190. Special efforts are being made to provide education for boys belonging to the communities eligible for help by the Labour Department. The total expenditure of the Province on education is in the neighbourhood of Rs. 1,027 lakhs.

The principal educational institutions in the province are the Madras, Andhra and Annamalai Universities, the Presidency College, the Christian College, the Loyola College, the Pachaiyappa's College, the Law College, the Queen Mary's College for Women and the Government Muhammadan College, Madras; the St. Joseph's College, Trichinopoly; the American College, Madras; the St. Aloysius' College, Mangalore; the Government College, Kumbakonam; the Ceded Districts College, Anantapur; the Government College, Rajahmundry; the Victoria College, Palghat; the Government College, Mangalore; the Government Brennen College, Tellichery; the Government College, Coimbatore; the Agricultural College, Coimbatore; the Veterinary College, Madras; the Madras Medical College; the Stanley Medical College, Rayapuram (Madras); the Andhra Medical College, Vizagapatam; the Engineering College at Madras (Guindy); the

Teachers' College, Saidapet; the Lady Willington Training College for Women, Madras; the Government Training College, Rajahmundry; C. R. R. College, Ellore; Bhimavaram College, Bhimavaram; Veerasaiva College, Bellary; the Devasthanam College, Tirupati; Agricultural College at Bapatla; Andhra University College of Law, Masulipatam; the Arthur Hope College of Technology, at Coimbatore. The percentage of literacy in the Presidency is 7.5.

CO-OPERATION

The year 1945-46 was one of marked progress. The number of societies increased from 15,724 to 16,063, their membership from 17,43,000 to 18,82,000, the working capital from Rs. 3,415.97 lakhs to Rs. 3,862.4 lakhs, the loans issued from Rs. 2,430.9 lakhs to Rs. 2,904.22 lakhs and the divisible profits from Rs. 25.37 lakhs to Rs. 27.36 lakhs. The collections by Central Banks were very good and the percentage of overdues was 6.22 as against 6.99 in 1944-45 which was itself the lowest for three decades. There was an increase in the loan business of Land Mortgage Banks, agricultural credit societies and sale societies.

The activities of the Co-operative Stores continued to expand. The sales turnover of both the primaries and the wholesales reached the peak figure of Rs. 26.24 crores. There were 1,346 primary stores with 969 branches or depots. Their purchases and sales amounted to Rs. 1,266.54 lakhs and Rs. 1,357.55 lakhs as against Rs. 1,099.24 lakhs and Rs. 1,176.86 lakhs, respectively in the previous year. The trade of the wholesale stores also recorded a striking increase, the purchases and sales amounting to Rs. 1,148.8 lakhs and Rs. 1,266.58 lakhs against Rs. 975.18 and Rs. 963.17 lakhs respectively in 1944-45. Some of the important features of the working of the stores were their participation in schemes of statutory rationing and procurement, their sales to non-members (66 per cent), formation of stores societies for the benefit of industrial labourers and extension of the consumers movement in rural areas.

The total deposits and borrowings of the Madras Provincial Co-op. Bank increased from Rs. 280.32 lakhs to Rs. 350.97 lakhs in common with all other banks in the country. There was a decrease in its loan business (from Rs. 148.04 lakhs to Rs. 142.88 lakhs) mainly due to the inflow of deposits in most central banks which were able to finance societies in an increasing measure with their own resources. By virtue of its position as the apex bank, the Provincial Bank continued to guide, supervise and control the financial policy of central banks. The working capital of central banks increased from Rs. 850.33 lakhs to Rs. 997.52 lakhs. Their total profits increased from Rs. 6.27 lakhs to Rs. 6.56 lakhs. The Madras Co-op. Central Land Mortgage Bank Ltd. made a rapid recovery in its loan business which increased from Rs. 24.78 lakhs in 1944-45 to Rs. 42.78 lakhs in 1945-46. The maximum amount for which the Government have guaranteed the debentures of the Bank is Rs. 400 lakhs. The value of debentures in circulation at the end of

1945-46 was Rs. 324.8 lakhs. A new series of debentures for 32.5 lakhs was issued by the Bank during the year. Government continued to give short-term advances to the Bank, whenever required.

LAW AND ORDER

The Superior Court for Civil and Criminal Judicial work in the Presidency is the High Court at Madras, which consists of a Chief Justice and fifteen puisne judges of whom two are temporary. The existing order provides for a maximum of 15 puisne Judges. For the administration of criminal justice there are 34 Sessions Judges in the Mufassal (including 6 for agency tracts), Additional and Assistant Sessions Judges being provided to assist Courts in which the work is heavy. Then there are the District Magistrate, the Subordinate Magistrates and Honorary

Magistrates. The administration of civil justices carried on by 26 District Judges, and 37 Subordinate Judges and 140 District Munsiffs. In the Presidency Town there are a City Civil Court consisting of two Judges and a Small Cause Court consisting of a Chief Judge and two other Judges. Madras is a litigious province and the records show one suit for every 226 persons in 1946.

The Police department is under an Inspector-General who has six deputies, four in charge of ranges of the Presidency, one in charge of the Railway Police and the Criminal Investigation Department and one in charge of the Madras City Police as Commissioner of Police. A Superintendent is stationed at each district. The sanctioned strength of the Permanent Police Force is 36,810 excluding the Malabar Special Police.

Shetty (Coondapoor, General, Rural); Srimathi Vallabhaneni Sittamahalakshamma (Bandar, General, Rural); The Hon'ble Sri H. Sitarama Reddi (Bellary, General, Rural); The Hon'ble Sri J. Sivashanmukham Pillai (Madras City, South Central, General, Urban, Scheduled Castes); P. R. Srinivasa Padayachi (Tirukkoyilur, General, Rural); W. S. Srinivasa Rao (Ranipet, General, Rural); K. K. Subbana Gounder (Gobichettipalayam, General, Rural); N. M. R. Subbaraman (Madura Town, General, Urban); Kallur Subbarao (Penukonda, General, Rural); P. Subbiah (Ongole, General, Rural, Scheduled Castes); R. Subba Iyer (Chingleput, General, Rural); The Hon'ble Dr. P. Subbarayan (Dharmapuri, General, Rural); Dr. S. Subrahmanya Ayyar, M.B., B.S. (Tirupattur, Ramnad, General, Rural); A. Subrahmanyam (Salem, General, Rural); K. Subrahmanyam (Coimbatore Town, General, Urban); Srimathi Allum Sumangalamma (Bellary, Women, General, Rural); Kollipara Surayya (Bezwada, General, Rural); Raja Rao Venkata Mohipati Gangadhara Rama Rao Bahadur, The Yuvarajah of Pithapur (Northern Landholders I); R. V. Swaminathan (Sivaganga, General, Rural); M. R. P. Syed Muhammad Sahib (Ramnad, Muhammadan, Rural); R. Thangavelu (Thiruvannamalai, General, Rural, Scheduled Castes); T. K. T. N. R. Tatachari (Chandragiri, General, Rural); Thiagoo Volkkarar (Mannargudi, General, Rural, Scheduled Castes); A. E. Thompson (European Commerce, the Madras Chamber of Commerce and the Madras Trades Association); M. D. Thyagaraja Pillai (Negapatam, General, Rural); G. Thyagaraja Sholagar (Tanjore, General, Rural); A. Vaidyanatha Ayyar (Melur, General, Rural); K. Varadachari (Tiruttani, General, Rural); N. S. Varadachari (Madras City, South, General, Urban); A. Vedaratnam Pillai (Mannargudi, General, Rural); Kankipatti Veeranna Padal (Backward areas and tribes); Nukala Veeraraghavalu (Bezwada, General, Rural); P. M. Velayudapani (Ranipet, General, Rural, Scheduled Castes); P. S. Veluswami Gounder (Periakulam, General, Rural); G. Venkanna (Ellore, General, Rural, Scheduled Castes); B. Venkatachalam Pillai (Ariyalur, General, Rural); Pyndah Venkatanarayana (Cocanada Town, General, Urban); B. Venkatanarayana Reddi (Gudur, General, Rural); B. Venkataratnam (Rajahmundry, General, Rural); Gopavaram Venkata Reddi (Nandyal, General, Rural); Reddiyar Venkatarreddi (Chittoor, General, Rural); Ammapet P. Venkatarama Ayyar (Tanjore cum Kumbakonam Town, General, Urban); M. Venkataraju (Ongole, General, Rural); The Hon'ble Sri K. Balu Venkata Rao (Amalapuram, General, Rural); Nivarthi Venkata Subbayya (Kurnool, General, Rural); T. Viswanathan (Vizagapatam Town, General, Urban); H. B. Walford (European Commerce, the Madras Chamber of Commerce and the Madras Trades Association); Rao Bahadur Meka Venkatarani Appa, Zamindar of Mirzapuram (Northern Landholders II).

North-West Frontier Province

THE North-West Frontier Province, as its name denotes, is situated on the north-west frontier of the Indian sub-continent. It is an irregular strip of country lying north by east and south by west and may generally be described as the tract of country, north of Baluchistan, lying between the Indus and the Durand boundary line with Afghanistan. To the north it extends to the mountains of the Hindu Kush. From this range a long broken line of mountains runs almost due south, dividing the province from Afghanistan, until the Sulaiman Range eventually closes the south of the Province from Baluchistan.

H.E. Sir Ambrose Dundas

The greatest length of the Province is 408 miles, its greatest breadth 279 miles and its total area about 39,276 square miles, a little more than half of Bombay Province, or more than three-fifths of the size of England without Wales. The territory falls into three main geographical divisions: the Cis-Indus district of Hazara; the narrow strip between the Indus and the Hills containing the Districts of Peshawar, Mardan, Kohat, Bannu and Dera Ismail Khan, and the rugged mountainous regions on the north and west between those districts and the border line of Afghanistan. Hazara and the five districts in the second division contain 14,290 square miles.

The mountain regions, north and west, are occupied by tribes subject only to the political control of the Governor in his capacity as Agent to the Governor-General. The area of this tract is roughly 24,986 square miles and in it are situated, from north to south, the political agencies severally known as the Malakand, Khyber, Kurram, North Waziristan and South Waziristan Agencies.

Each of the Deputy Commissioners of the six administered districts is responsible for the management of political relations with certain tribes or sections of the tribes across the frontier. A few hundred miles of the trans-border territory are internally administered by the Political Agents, but the bulk of the trans-border population is free from any internal interference, so long as offences are not committed and the tribes observe the conditions on which allowances are paid to many of them.

The key to the history of the people of the N.-W. F. lies in the recognition of the fact that the valley of Peshawar was always more closely connected politically with Eastern Iran than with India, though in pre-Muslim times its population was mainly Indian by race. Early history finds the Iranians dominating the whole Indus valley. Then came the Greek invasion under Alexander the Great, in B.C. 327, then the invasions of the Sakas, and of the White Huns and later the two great waves of Muslim invasion. Last came the Sikh invasion beginning in 1818.

The Frontier Territory was annexed by the British in 1849 and placed under the control of the Punjab Government. Frequent warfare occurred with the border tribes. The most serious phases of these disturbances were the war provoked by the aggression of Afghanistan in 1919 and the protracted punitive operations against the Waziris and Mahsuds in 1919-1920. These resulted in the establishment at Razmak, a position dominating the Mahsud Waziri country, of a permanent garrison of 10,000 troops drawn mostly from stations lying in the plains immediately below the hills. A circular road from Bannu, through Razmak to Sararogha, Jandola and back to the Derajat provided communications and transport with this force and facilitated its mobility. The effect of this measure was a marked improvement in the internal peace of the Tribal area.

The separation of the Frontier Province from the Punjab aimed at achieving the double object of securing closer and more immediate control and supervision of the Frontier by the Supreme Government and of making such alterations in the personnel and duties of frontier officials as would tend to the establishment of improved relations between the local British representatives and the independent tribesmen. The province was eventually removed from the control of the Punjab administration in 1901. To it was added the political charge of Dir, Swat and Chitral, the Political Agent of which had never been subordinate to the Punjab. The new Province was constituted under a Chief Commissioner and Agent to the Governor-General, with headquarters at Peshawar, in direct communication with the Government of India in the Foreign and Political Department.

In April 1932 the Province was constituted a Governor's Province. In political questions there is no intermediary between the Governor and the local officer; an arrangement designed

to secure both prompt disposal of references and the utilisation of the expert knowledge of frontier conditions for which the head of the administration is selected.

The advisability of re-uniting the Province with the Punjab was much discussed in certain Indian political circles and as a result of the views expressed upon the matter in the Legislative Assembly the Government of India in 1922 appointed a Committee of officials and non-officials to investigate it. The Committee, presided over by D. de S. Bray, the then Joint Foreign Secretary, toured the Frontier Province and the Punjab and heard numerous witnesses. Its members were Messrs. Raza Ali, M.C.S., T. Rangachariar, Chaudhri Shahabuddin, N. M. Samarth and K. B. Abdur Rahim Khan, then members of the Legislative Assembly, H. N. Bolton, I.C.S. (Foreign Dept.) and A. H. Parker, I.C.S. (Punjab). The inquiry developed practically into a contest between Muslims and Hindus on communal lines. The Hindus, allied in sympathy with their co-religionists in the Punjab, demanded the reunion of the administered districts of the Province with the Punjab or, if that were not attainable then the placing of the judicial administration of the Province under the Punjab High Court at Lahore. The Muslims on the other hand claimed the right of their Province to a status corresponding with that enjoyed by other Provinces of India and to immediate reforms initiating and providing for progress along that line. The Hindus argued that a separate Pathan Province on the Frontier would cause a dangerous sentimental division from the rest of India, with leanings towards the allied racial elements outside British India. The answer to that was that a contented Pathan Province would be a valuable buttress against hostile feeling across the border.

The Committee's deliberations ended in disagreement, the two Hindu members writing each a separate report favourable to the Hindu viewpoint already explained, and the majority of the Committee, comprised of all its other members, recommending advance on a Provincial basis. Their principal recommendations were for—

Retention of the Settled Districts and Tribal Tracts as a separate unit in charge of a minor administration under the Government of India;

Early creation of a Legislative Council for the Settled District and appointment of Member of Council and Minister;

Appointment of a second Judicial Commissioner which was later sanctioned and reform of the judicial administration in various directions, including interchange of officers with the Punjab, so that the members of the Service in the smaller Province should have the advantage of experience in the larger one.

"If (concluded the Majority) the Pathan nationality is allowed self-determination and given scope for that self-development within the Indian Empire under the Reforms Scheme after which it is now striving, we are assured that with a contented Frontier population India can face with calm resolution the future that the Frontier has in store for her."

Under the Government of India Act of 1935, N.-W.F.P. became a full-fledged Governor's Province; and on the division of the Indian Sub-Continent into India and Pakistan the people of the Frontier Province in a referendum voted for joining the latter and so the Province now forms part of Pakistan.

THE PEOPLE

The total population of the N.-W.F.P. (1941 census) 5,415,666, made up as follows:—

Hazara	..	..	796,230
Trans-Indus Districts	..	..	2,241,837
Trans-Border Area	..	..	2,377,699

This last figure also includes estimated population for these parts of the Agencies and district tribal territory where no census was taken.

There are only 632.3 females per 1,000 males in the towns and 887.6 females per 1,000 males in rural areas. This disproportion of the sexes cannot at present be explained in the N.-W.F.P. any more than in other parts of Northern India where also it appears. The discrepancy is greater here than in any other Province of India. Both the birth and death-rates of the Province are abnormally low. The birth-rate in the administered districts, according to the last available official reports (1945) is 16.74 and the death-rate 11.14.

The dominant language of the Province is Pushtu and the population contains several lingual strata. The most important sections of the population, both numerically and by social position, are the Pathans. They own a very large proportion of the land in the administered districts and are the ruling race of the tribal area to the west. There is a long list of Pathan, Baluch, Rajput and other tribal divisions. The Muslim tribes constitute almost the whole population and before partition Hindus amounted to only 5 per cent of the total and Sikhs to a few thousands. This percentage has further decreased owing to the migration of Hindus and Sikhs to the Indian Union since the establishment of Pakistan. The occupational cleavage of the population confuses ethnical divisions.

Under the Muslim Personal Law (Shariat Act) Application Act VI of 1935 Shariat or Muslim Law governs all questions regarding succession, special property of females, betrothal, marriage, divorce, dower, guardianship, minority, bastardy, family relations, wills, legacies, gifts or any religious usage or institution including Waqf (trust and trust property) in cases, where the parties are Muslims, except in so far as such Law has been altered or abolished by legislative enactment or is opposed to the provisions of the North-West Frontier Province Law and Justice Regulation, 1901.

In cases where the parties are Hindus the rule of decision applicable in such matters is usually custom or in the absence of custom the Hindu Law (see Section 27 of the North-West Frontier Province Law and Justice Regulation, 1901). The total number of civil suits instituted was 13,302 and the total number of offences reported was 52,417 in 1945.

The climatic conditions of the N.-W.F.P. which is mainly the mountainous region, but includes the Peshawar Valley and the river in tracts of the Indus in Dera Ismail Khan District, are extremely diversified. The latter district is one of the hottest areas of the Indian sub-continent, while on the mountain ranges the weather is temperate in summer and intensely cold in winter. The air is generally dry and hence the annual ranges of temperature are frequently very large. The Province has two wet seasons, one the S. W. Monsoon, when moisture is brought up from the Arabian Sea and the Bay of Bengal; the other in winter, when storms from Mesopotamia, Persia and the Caspian Districts bring widespread rain and snowfall. Both sources of supply are precarious and not infrequently either the winter or the summer rainfall fails almost entirely.

TRADE AND OCCUPATIONS

The population derives its subsistence almost wholly from agriculture. Wheat covered 10,87,525 acres of land in 1944-45 of which the area under irrigation was 398,019 acres. The total area of the province under maize was 4,47,561 acres, and the total area under sugarcane 96,000 acres. The Province is practically without manufactures. There is no considerable surplus of commercial products for export. Any commercial importance which the province possesses it owes to the fact that it lies across the great trade route which connects the trans-border tribal territories and the marts of Afghanistan and Central Asia with India, but the influence of railways is diminishing the importance of these trading interests. The new roads in Waziristan are already largely utilised by the Tribal inhabitants for motor traffic. Prices of agricultural produce have in recent years been high, but the agriculturists, owing to the poor means of communication, have to some extent been deprived of access to outside markets and have therefore been unable to profit by the rates prevailing. On the other hand, high prices are a hardship to the non-agricultural classes. The effects of recent extensions of irrigation have been important. Land tenures are generally the same in the popularly administered districts as in the Punjab. The cultivated area of the land amounts to 25 per cent. and uncultivated 75 per cent.

The work of civilisation made steady progress, both by the improvement of communications and otherwise. Relations with the tribes generally improved, trade advanced, free medical relief was vastly extended, police administration was reformed and the desire of people for education was judiciously and sympathetically fostered, though in this respect there was complaint against the limitations imposed by financial embarrassments. In the popularly administered districts the total percentage of male scholars to the total male population is 6.2 and that of female scholars to the total female population is 1.7 for the year 1944-45. 25 per cent males and 7 per cent females of the total population are returned as literates. The figures for males denote a very narrow diffusion of education even for the sub-continent. Those for females are not notably low, but they are largely affected by the high literacy amongst

Sikh women, of whom 13.3 per cent are returned as literate. Most of these women have probably left the province. The inauguration of a system of light railways throughout the Province, apart from all considerations of strategy, must materially improve the condition of the people and also by that means strengthen the hold of the administration over them. The great engineering project of the Upper Swat River Canal, and the lesser work of the Paharpur canal, completed a few years ago, are bringing ease and prosperity to a number of peasant homes.

The number of hospitals and dispensaries in 1946 was 199 and the total expenditure Rs. 14,50,976. The total number of doctors was as under: I.M.S. officers 6; W.M.S. officers 2; I.M.D. officer 1; Assistant Surgeons 32 and sub-assistant Surgeons 101.

ADMINISTRATION

The administration of the North-West Frontier Province is conducted by H. E. the Governor and Agent to the Governor-General with the Council of three ministers as follows:—

- (1) Hon'ble Abdul Qayum Khan (Chief Minister).
- (2) Hon'ble Mohd. Abbas Khan (Revenue, Civil Supplies).
- (3) Hon'ble Mian Jaffer Shah (Education).
- (1) Officers of the old Indian Political Service.
- (2) Officers of the old Indian Civil Service.
- (3) Members of the Provincial Executive and Judicial Service.
- (4) Members of the Subordinate Civil Services.
- (5) Superintendents and Assistant Superintendents of Police.
- (6) Officers recruited for the service of departments requiring special knowledge—Military, Engineering, Education, Medicine and Forestry.

The cadre posts reserved for officers coming under the 1st head above are:—

Administration ..	Chief Secretary, Revenue and Divl. Commr.	4
	Secretary, Development Departments.	
	Home Secretary.	
	Dy. Commissioners 6 Political Agents .. 5	
Hon'ble the Judicial Commissioners' Court & District Judges.	Asst. Commissioners and Asst. Political Agents.	14
	The Judge.	
	The Hon'ble Judicial Commissioner's Court.	
	Three District and Sessions Judges. Two Additional District and Sessions Judges. One Senior Sub-Judge, Peshawar.	

The districts under the Deputy Commissioners are divided into two to three sub-collectorates in charge of tahsildars, who are invested with criminal and revenue powers, and are assisted by naib-tahsildars, who exercise similar powers. Some sub-divisions are in charge of Assistant or Extra Assistant Commissioners. The village community characteristic of some parts of the Indian sub-continent is not indigenous among the Pathans. Its place as a social unit is to some extent taken by the tribe, which is held together by the ties of kinship and ancient ancestry, real or imaginary.

Modern municipal local government has been introduced into the towns. There are also district boards. The district is the unit for police, medical and educational administration and the ordinary staff includes a District Superintendent of Police, a Civil Surgeon, the Superintendent of Jail and a District Inspector of Schools. The Province forms a single educational circle and only possesses two forest divisions, that of Hazara and of Kohat. The P.W.D. of the Province carries out duties connected with both Irrigation and Buildings & Roads. It is organised in two circles (in all seven Divisions) under a Chief Engineer, P.W.D., who is also ex-officio Secretary to H.E. the Governor. The administration of the civil police force of the districts is vested in an Inspector-General. There is a special force of Frontier Constabulary. Of the Agencies only Kurram and Tochi Valley pay land revenue to the Government. The revenue administration of all six administered districts is controlled by the Revenue and Divisional Commissioner. For the administration of civil and criminal justice there are three Civil and Sessions Judges and two additional District and Sessions Judges and several Magistrates and sub-judges. The court of the Judicial Commissioner which consists of the Judicial Commissioner and another judge is the controlling authority in the Judicial branch of the administration and is also the highest criminal and civil tribunal in this Province.

FINANCES

In order to meet the excess in expenditure over the income of the Provinces a subvention of Rs. one crore per annum is given by the Government of Pakistan out of Central Revenues.

Revenues are expected to reach a figure of Rs. 4,20,22,000 and expenditure Rs. 4,17,99,000, giving a surplus of Rs. 2,23,000 for the year 1947-48. The Central Pakistan Government will continue to pay the usual subvention of one crore of rupees. The sales tax on cloth has been raised from six pices to one anna. A cess of six pices per maund has been imposed on sugar-cane. Sales tax has been levied on cement and ice. The Province is to go dry as early as possible.

ADMINISTRATIVE PERSONNEL

The principal officers in the present Administration are:—H. E. the Governor and Agent to the Governor General.—

H. E. Sir Ambrose Dundas.
Secy. to the Governor—E. J. M. Dent.

Judl. Commissioner—Hon. K. B. Muhd. Ibrahim Khan, B.A., LL.B.

Judge, Judl. Commrs. Court—Hon'ble Sheik Mohammed Shah.

Rev. & Divl. Commr.—Lt.-Col. V. M. H. Cox.
Under Secy., Rev.—K. B. Mohammed Amir Shah, B.A. (officiating Under Secy., Local Self Govt.).

Ch. Secy.—Major Dring, A.J., C.I.E.

Commr. & Secy. to Govt., Dev. Depts—Abdul Hamid Sheikh.

Director of Civil Supplies and Jt. Secretary—Abdul Hamid Khan; K. S. Sheikh, B.A., LL.B.

Home Secretary—Hidayatullah Khan, K.B., M.A.

Financial Secretary—Hally, Major, P.C., O.B.E.

Ad. General and Secy. to Govt., Leg. Dept.—Mallik Khuda Bakhsh Khan, B.A., LL.B.

Director of Information & Under Secretary, Dept. of Information—A. K. Queresht.

Asst. Secy., Finance—Abdul Jalil.

Asst. Secretary (Poll.)—M. R. Gallyot.

Indian Personal Asst. to H. E. the Govt.—K. S. Ghulam Sarwar Khan.

Registrar, Civil Secretariat, N.-W.F.P.—P. W. Martin.

Secretary, Public Works Dept.—Col. W. G. Lang-Anderson, O.B.E., R.E.

Inspector-General, Civil Hospitals—Col. A. K. Sahib-Zada, O.B.E., I.M.S.

Inspector-General of Police—O. G. Grace, C.I.E., O.B.E., I.P.

Commandant, Frontier Constabulary—H. F. Scroggie, O.B.E., I.P.

Director of Public Instruction—Mohammed Aslam Khattak, M.A. (Oxon.), Bar-at-Law.

Superintendent, Archaeological Survey—Dr. M. Nazim, M.A., Ph.D. (Cantab.).

Dist. and Sessions Judge—K. B. Muhd. Safdar Khan, B.A., LL.B.

Addl. Dist. and Sessions Judge—K. S. Abdul Ghafur Khan, B.A.

2nd Addl. Dist. and Sessions Judge, Peshawar—Khan Habib Ullah Khan, B.A., LL.B.

Dist. and Sessions Judge, D. I. Khan—Arbab Taj Mohammed Khan, B.A., LL.B.

Dist. and Sessions Judge, Hazara—Khan Abdul Latif Khan.

Resident and Political Agents.
Lt.-Colonel Khurshid, S. M., Political Resident in N.-W.F.P.

K. B. Nawab Sh. Mahbub Ali Khan, O.B.E., Dir., Swat and Chitral.

Lt.-Col. R. N. Bacon, O.B.E.

Atta-Ullah Jan Khan, K. S., B.A., LL.B.

P. T. Duncan.

Lt.-Col. W. C. Leeper, O.B.E.

Deputy Commissioners.

K. B. Arbab Ahmad Ali Jgn.

K. S. Ghulam Sarwar Khan, B.A., LL.B.

Captain Allah Dad Khan.

Hony. Lt. K. S. Sher Afzal Khan, M.C.I., D.S.M.

K. S. Abdur Rashid Khan, M.A., LL.B.

Lt.-Col. W. C. Leeper, O.B.E., Mardan.

Former Chief Commissioners.

The Hon'ble Lieutenant-Colonel Sir Harold Deane, K.C.S.I., from 9th November 1901 to 3rd June 1908. Died 7th July 1908.

The Hon. Lieutenant-Colonel Sir George Roos-Keppl, G.O.I.E., K.O.S.I., from 4th June 1908 to 9th September 1910.

The Hon'ble Sir Alfred Hamilton Grant, K.C.S.I., K.O.I.E., from 10th September 1919 to 7th March 1921.

The Hon'ble Sir John Loader Maffey, K.C.V.O., C.S.I., C.I.E., I.C.S., from 8th March 1921 to 6th July 1923.

The Hon'ble Sir Horatio Norman Bolton, K.C.I.E., C.S.I., I.C.S., from 7th July 1923 to 30th April 1930.

The Hon'ble Sir Steuart Pears, K.C.I.E., C.S.I., I.C.S., from 10th May 1930 to 9th September 1931.

The Hon'ble Lieut.-Col. R. E. H. Griffith, C.I.E., from 10-9-30 to 17-4-32.

Former Governors.

H. E. Sir Ralph Griffith, K.C.S.I., C.I.E., from 18th April 1932 to 1st March 1937.

H. E. Sir George Cunningham, G.C.F.E., K.O.I.E., O.B.E., from 2nd March 1937 to 2nd March 1946.

H. E. Sir Olaf Caroe, March 1946.

H. E. Sir George Cunningham, Aug. 1947—April 1948.

NORTH-WEST FRONTIER PROVINCE LEGISLATIVE ASSEMBLY

Speaker.—The Hon'ble Nawabzada Alah Nawaz Khan, Bar-at-Law (D. I. Khan, South Mohammadan Rural).

Deputy Speaker.—L. Girdhari Lal Puri (Peshawar East, General Rural).

The Hon'ble Khan Abdul Qayum Khan, Bar-at-Law (Peshawar City, Mohdn. Urban): The Hon'ble Khan Mohd. Abas Khan (Mansehra North, Mohdn. Rural); Khan Abdul Aziz Khan (Utmannama, Mohdn. Rural); Khan Abdullah Khan (D. I. Khan North, Mohdn. Rural); Khan Abdul Latif Khan (Lakki West, Mohdn. Rural); Khan Abdul Qayum Khan, B.A., LL.B. (Upper Pakhli, Mohdn. Rural); Arbab Abdul Rahman Khan (Doaba Doudzai, Mohdn. Rural); Malik Akbar Ali Khan (Bannu West, Mohdn. Rural); Khan Amin Jan Khan-Khalils (Mohdn. Rural); K. S. Asadullah Jan Khan (Kulachi, Mohdn. Rural); Khan Ali Gohar Khan (Power Pakhli, Mohdn. Rural); Qazi Ataullah Khan, B.A., LL.B. (Ammazai, Mohdn. Rural); L. Bhanju Ram Gandhi, B.A., LL.B. (D. I. Khan Town, General Urban); K. S. Sultan Hassan Ali Khan (N. W. F. P. Landlords); Sardar Ishar Singh, Bar-at-Law (Hazara Mardan, Sikh Rural); Mian Jaffar Shah (Nowshera South, Mohdn. Rural); K. B. Khan Jalal-ud-Din Khan (N. W. F. P. Towns); L. Kanwar Bhan (D. I. Khan, General Rural); Mehta Madan Lal, B.A., LL.B. (Peshawar West, General Rural); L. Mehr, Chand Khanna (Peshawar Cantonment, General Urban); L. Kewal Ram, B.A., LL.B. (Bannu Town, General Urban); L. Kotu Ram, B.A., LL.B. (Bannu, General Town); Dr. Khan Sahib (Hashnagar South, Mohdn. Rural); L. Mohan Lal Gulati (Kohat, General Rural); Khan Mohd. Ishaq Khan (Kamalzai, Mohdn. Rural); Khan Mohd. Aslam Khan (Teri North Mohdn. Rural); Khan-Mohd. Farid Khan (Tanawal, Mohdn. Rural); Arabab Mohd. Sharif Khan (Bara-Mohmands, Mohdn. Rural); Khan Mohd. Yaqub Khan (Bannu East, Mohdn. Rural); Syed Mohd. Yaqub Shah (Nowshera North, Mohdn. Rural); K. B. Mohd. Zaman-Khan (Haripur North, Mohdn. Rural); Khan Mohd. Zarin Khan (Baizai, Mohdn. Rural); Khan Munhatullah Khan (Razar, Mohdn. Rural); K. B. Mian Musharaf Shah (Peshawar Landlords); S. Partab Singh (Peshawar, Sikh Rural); Pir Shahinshah (Kohat, Mohdn. Rural); S. Qaim Shah, B.A., LL.B. (Hashnagar North, Mohdn. Rural); Nawab Qutab-ud-Din Khan (Tank, Mohdn. Rural); Sardar Ram Singh (Southern Districts, Sikh Rural); Khan Sahib Gul Khan (Teri South, Mohdn. Rural); Khan Sardar Bahadur Khan, B.A., LL.B. (Haripur Central, Mohdn. Rural); Captain Zain Mohd. Khan, B.A., O.B.I. (Abbottabad West, Mohdn. Rural); Khan Yahya Jan Khan, M.A. (Peshawar City, Mohdn. Urban).

Orissa

LIKE Sind, Orissa was constituted a separate Province on April 1, 1936, by the Government of India (Constitution of Orissa) Order, 1936. Whereas Sind was a separate geographical, ethnological and linguistic unit inside the administrative boundary of the Bombay Presidency, the new Province of Orissa is the result of partial amalgamation of various

surpassed by none either in the ancient or the modern world. Puri still remains among the greatest spiritual centres of the Hindu world.

Orissa lost its independence in 1565 A.D. and the kingdom was broken up. The dismembered people under alien rule gradually lost race consciousness, although common language and literature continued to act as a link to bind them together.

Orissa ceded to the Mahrattas by Allvardi Khan in 1751, was conquered by the British in 1803. In 1804, a Board of two Commissioners was appointed to administer the Province but in the following year it was designated the District of Cuttack and was placed in charge of a Collector, Judge and Magistrate. In 1823 it was split up into three regulation districts of Cuttack, Balasore and Puri. The non-regulation Tributary States continued to be administered by their own chiefs under the aegis of the British Government. Angul, one of these Tributary States, was annexed in 1847 and with the Khondmals, ceded in 1835 by the Tributary chief of the Baudh State, constituted a separate non-regulation district. Sambalpur was transferred from the Central Provinces to Orissa in 1905. These districts formed an outlying tract of the Bengal Presidency till 1912 when they were transferred to Bihar constituting one of its divisions under a Commissioner. Thus as we already stated Orissa proper, considered as a linguistic and cultural whole, was long divided between Bihar, Central Provinces and Madras.

Race consciousness was, however, revived with the spirit of education under the British regime and after the great famine of 1860, Sir Stafford Northcote suggested the separation of Orissa from Bengal. The proposal was turned down but the patriotic fervour underlying the new move persisted and gave rise to a series of fresh demands.

H. E. Asaf Ali

Oriya speaking peoples who had till then belonged to three separate Provinces, viz., Madras, Bihar and Orissa and Central Provinces.

HISTORY

The Oriyas trace their traditions as far back as the days of Mahabharata when there was a kingdom of Utkal embracing a wide territory. Through successive conquests and annexations in the historical period, the kingdom of Kalinga, the later name of Utkal, extended in the 12th century from the River Ganga in the north to the River Godavari in Madras Presidency in the south. Besides, there were kingdoms in the far south upto the banks of the River Cauvery which bore allegiance to the Kings of the Ganga dynasty of Orissa.

Tradition says that the Oriyas of those days were a great race whose maritime traders established colonies in Java, Bali and Sumatra, etc., in the East Indies and on the Martaban coast in Burma. There are ruins of Orissa architecture in these places which fully bear out the tradition.

The art, architecture and literature of the period also were of a very high order. The temples of Lord Jagannath at Puri, of Sun-God at Konarak and that of Siva at Bhubaneswar and the stone embankments of the Rivers Mahanadi and Kathjori at Cuttack are still considered to be marvels of engineering skill.

AMALGAMATION WITH BIHAR

The first stage of success was achieved in 1912 when the Orissa portion separated from Bengal together with the district of Sambalpur separated from Central Provinces, was amalgamated with Bihar to form what came to be known as the Province of Bihar and Orissa. Although the position of the Oriyas and of the States of Orissa improved the formation of the new Province of Bihar and Orissa, it fell far short of the expectations of Oriyas; and the advocates of Oriya unity continued to press their claim for the formation of Orissa into a distinct administrative unit. E. S. Montague and Lord Chelmsford saw the reasonableness of this claim and generally favoured the redistribution of Provinces on a linguistic basis for the success of responsible Government. They left it, however, to the Provincial Governments concerned to formulate opinion and make concrete proposals after the advent of the Montford constitution in 1920.

The Bihar and Orissa Legislative Council was opposed to a change in the *status quo* while the debate in Madras Council proved inconclusive. The Madras Government, however, was against the surrender of any of its territory while the Central Provinces Government had an open mind.

The Government of India then appointed what is called the Phillip-Duff Committee to make local inquiries with a view to ascertaining the attitude of the Oriya-speaking people in the north of the Madras Presidency on the question of union with Orissa. Messrs. C. L. Phillip and A. C. Duff reported that there was "a genuine, long-standing and deep-seated desire on the part of the educated Oriya classes of the Oriya-speaking tracts for amalgamation of these tracts with Orissa under one administration."

The next stage came with the appointment of the Simon Commission which recommended the creation of a separate administrative unit for Orissa, agreeing with the Oriyas' contention that under the autonomous conditions proposed by the Commission, the Oriyas would be an ineffective minority in Madras, Bengal, Bihar and Orissa and Central Provinces.

SEPARATE PROVINCE

When the idea of a federation of autonomous units was put forward at the first Round Table Conference, the Oriyas' demand was presented in a well-reasoned statement by the Maharaja (then Raja) of Paralakimedi who asked for a separate Province for Orissa. "We want a separate Province of our own on the basis of language and race," he said. "So that we can be a homogeneous unit with feelings of contentment and peace to realise, and be benefited by, the projected reforms and look forward to the day when the United States of India will consist of small federated states based on common language and race."

The Oriyas' demand derived adventitious support from the strength of the Muslim claim for the constitution of Sind as a separate Province. Those who supported the case of Sind at the Round Table Conference could not oppose the Oriyas' claim, which, therefore, came to be recognised as valid.

In Sept., 1931, the Government of India appointed the O'Donnel Committee to examine and report on the financial and other consequences of setting up a separate administration for Orissa and to make recommendations regarding the boundaries in the event of separation. The Committee recommended the creation of a new Province including the Orissa division, Angul, the Khariar Zamlindari of the Raipur district and the greater part of the Ganjam district and the Vizagapatam agency tract. According to the Committee, the new Orissa Province was to have an area of 32,681 sq. miles and a population of about 8,174,000. On the question of financial and other consequences of separation, the Committee made recommendations generally on the lines of the Sind Committee.

In January, 1936, an Order-in-Council was issued by His Majesty's Government constituting Orissa as a separate Province to be brought into line with other Provincial units on the inauguration of provincial autonomy on April 1, 1937.

POPULATION

The area of the Province proper is 32,198 sq. miles with a total population of 8,728,544 (1941 Census). The figures of the classification of the population by community were: Hindus (excluding Scheduled Castes) 6,594,535; Scheduled Castes 1,238,171; Muslims 146,301;

Christians (including Anglo-Indians and Europeans) 27,690; Buddhists 454; Sikhs 232; Jains 139; Parsees 13; Jews 3 and the tribes 1,721,006. With the recent integration of the Eastern India States with the Province the total area under the administrative control of the province has increased to 60,436 (Mayurbhanj State has not amalgamated) and the population to 13,973,512 of which the total tribal population is 36,19,349.

The principal language of the Province is Oriya, though Bengali in the north and Telegu in the south are understood. The principal occupation of the people is agriculture. Though the Oriyas are becoming more and more industrial-minded, at present less than 10 per cent. of the population is engaged in industries most of which are of the cottage type.

CONGRESS GOVERNMENT

Sir John Austen Hubback, K.C.S.I., I.C.S., was appointed the first Governor of the infant province. He held the governorship from April 1, 1936 to March 31, 1941, when Sir William Hawthorne Lewis succeeded him. The third Governor, Sir Chandulal Madhavlal Trivedi, K.C.S.I., I.C.S., held office from April 1, 1946 till Dr. Kailas Nath Katju, M.A., LL.D., was appointed as the Governor on 15th August, 1947 under the new constitution.

The first general elections under the constitution which established Orissa as a separate Province resulted in a clear majority for the Congress Party. Out of 56 elective seats in the Assembly (four are nominated, making a total of 60) the Congress counted 36 as its adherents. The Governor thereupon summoned the leader of the Congress Party to form a ministry but the latter, under directions from party headquarters, declined to do so unless he was given certain assurances by the Governor in regard to the Governor's special powers, etc. After prolonged negotiations this point was amicably settled and the Congress Party leader formed a cabinet and took over the administration.

Late in 1937, the Legislature decided that the capital of the Province should be located at Cuttack-Choudwar.

The working of responsible Government in the infant Province was threatened with interruption twice in 1938—once early in the year and next sometime about the middle. The first of the two crises did not relate directly to Orissa but the second did. Briefly the facts were as follows. Sir John Hubback the Governor wished to go on leave for reasons of health. Someone had to take his place while he was away and the man chosen to fill the post was the Revenue Commissioner of the same Province. The appointment was, of course, in keeping with tradition as the Chief Commissioner was the senior most Civilian in the Province. But the situation was unusual as there was a responsible ministry in office. Naturally the Prime Minister opposed the appointment on the ground that it was wrong in principle and insulting to his sense of self-respect to ask a Minister to work under a Governor or who only the other day took his orders from the self-same minister and would continue to do so on reversion to his former post after the Governor's return. The Premier's complaint was finally taken up by the Congress and Mahatma Gandhi and at one time it looked as though the whole

question would assume all-India dimensions. Fortunately however a crisis was averted through the public-spiritedness and sense of self-sacrifice of Sir John Hubback who offered to stay on and postpone his leave.

SECTION 93 RULE

Thus assured of a period of peaceful progress, the Province continued to be administered by the Congress Ministry for some months when in the autumn of 1939 its career was suddenly cut short by the political crisis which overtook all the Congress administered Provinces. The Orissa ministry resigned along with other Congress cabinets and there being no prospect of formation of an alternative Government with any reasonable chance of stability, the Governor, as in other similarly situated Provinces, assumed charge of the entire Province under section 93 of the Government of India Act, 1935. By a resolution in Parliament in April, 1940, this act of emergency was approved and the period of its operation extended by a year. In the absence of a ministry, the Governor administered the province with the aid of an Adviser.

With the object of replacing the Governor's rule by a popular administration for the purpose of organising an all out effort against the Axis-powers the Opposition party led by the Maharaja of Paralakimedi joined with a number of seceders from the Congress Party and formed a ministry which assumed office on November 24, 1941. The Government at once came up against strong opposition including several motions of non-confidence. The purely political difficulties however disappeared when the majority of the Congress M.L.A.'s were arrested and detained in August 1942. But the Government encountered trouble of a different nature. There was an India-wide shortage of foodgrains; free trade in grain which was established by the Central Government led to such heavy drain of foodstuffs from surplus Provinces that deaths due to malnutrition and starvation began to occur in large numbers. The privation and distress which followed were just as acute and widespread as in Bengal though they created much less stir in the country.

SECOND CONGRESS GOVERNMENT

In the summer of 1944, the United Nationalist Party's coalition ministry broke up and the Province once again came under section 93 of the Government of India Act, 1935, and was administered by two Advisers, viz. S. L. Marwood, C.I.E., I.C.S., and B. K. Gokhale, C.I.E., I.C.S. The Advisers' rule terminated after 1½ years when the second general elections under the new constitution took place after all the Congress M.L.A.'s had been released. As a result of the new elections, the Congress Party captured 40 out of 56 elective seats (including 4 seats for Scheduled Castes), in a House of 60 members.

The most notable occurrence during the present regime is the merger of 25 so-called Orissa States with the Governor's Province.

It had all along been a dream of the Oriya-speaking people to become united under a single administration. Both the Rulers of the Oriya States and the people realised this as a historical necessity with the result that for the first time

all the Oriya people have been brought together under a single administration and their political unity secured.

EDUCATION

The percentage of literacy in the Province of Orissa as per census figures of 1941 is 9.6.

The Utkal University is an affliating and examining University. During the year Government opened a second grade College at Jeypore in the district of Koraput with a view to spreading higher education among the hill tribes of the district. A second grade Arts College at Jaipur in the district of Cuttack was also started by private enterprise. Thus the number of Colleges in the province rose from 13 to 15, of which 11 are Arts Colleges, 2 Oriental Colleges and 2 Professional Colleges (Medical and Education). Of the 11 Arts Colleges 8 are first grade including a Women's College and 3 second grade Colleges.

Of these, six degree Colleges including the Women's College, two professional Colleges and a second grade College are maintained by Government and the rest by private agencies. During the year Government have taken over the management of the Maharaja's College at Paralakimedi as a temporary measure. The Ravenshaw College at Cuttack has Law Classes attached to it and the Sambalpur College is affiliated up to the degree stage in Commerce.

With a view to improving the standard of education among the hill tribes, Government have taken over the management of the Board High School at Rayagada in the district of Koraput with effect from the school session 1947-48 so that it may serve as a model for the other high schools in that district.

Secondary Education.—The number of Secondary Schools increased from 328 to 362. The status of many middle and primary schools has been raised to that of high and middle schools respectively during the year. On account of these changes, there were at the beginning of the year 89 high schools (83 for boys and 6 for girls) and 273 middle schools (253 for boys and 20 for girls) as against 70 (64 for boys and 6 for girls) and 258 (239 for boys and 19 for girls) respectively last year.

The number of primary schools for boys rose from 6,298 to 6,409, but the number of schools for girls decreased from 216 to 206. The number of special schools for boys rose from 145 to 147 and that for girls remained stationary at 4. These special schools consist of 17 training schools including 3 for women, one medical school, one engineering school, 7 technical and Industrial schools including one for women, 2 commercial schools, one deaf and dumb school, one Gymnasium, 116 tols and 5 Madrasahs.

Besides these, there are 826 unrecognised institutions (822 for males and 4 for females) as against 777 (775 for males and 2 for females) of last year.

To encourage female education in the Province, education is made free for girls up to the Middle School stage and it is also made free for 5 years as an experimental measure in the High School and College stages for girls whose parents do not pay income-tax. And girls whose parents do pay income-tax are charged only half the prescribed fees.

PUBLIC HEALTH

The Health organisation under local bodies have been provincialised. The headquarters staff have been strengthened by the appointment of one more Assistant Director of Public Health. The Existing Provincial Malaria Unit attached to the Public Health Directorate has been expanded by the appointment of an Entomologist and some other subordinate staff. An inter-departmental committee to co-ordinate nutrition activities in the Province has been set up. Sufficient quantity of milk powder and multi-vitamin tablets have been obtained for distribution to expectant and nursing mothers through maternity centres.

Steps are taken for the distribution of anti-malarial drugs to the rural people. Antimosquito and anti-malaria measures are taken extensively. Two control units have been established and arrangements are nearing completion to establish another four. Schemes for provision of drainage and water-supply are also being considered by Government. A training school is held every year for training of Health Inspectors. In order to take prompt and timely measures to deal with any epidemic and to reduce the loss of life to a minimum, Government have established mobile field hygiene units in each district for operation in rural areas.

Besides the Orissa Medical College Hospital at Cuttack, there are State hospitals in the District Headquarters and sub-divisional headquarters which have been recently provincialised.

Orissa Medical College.—There was a Medical School at Cuttack started in 1885 which was preparing students for the L.M.P. Diploma. In 1944 the Medical School was converted into a Medical College with a 5 years degree (M.B.B.S.) course. The College is affiliated to the Utkal University. Recently a condensed M.B.B.S. course has been introduced in the college for affording facilities to the licentiates to qualify themselves for the M.B.B.S. degree.

A Midwifery Training School at Berhampur has been established. It is now proposed to expand it. The question of establishing a Health School is also under consideration.

The training of technicians and laboratory assistants has also been undertaken in addition to the compounders and dressership training at the Orissa Medical College. Training *dais* under the auspices of the Victoria Memorial Scholarship Fund has also been started. refresher course has also been organised for acting *dais*.

Government have detailed a number of their officers for advance training in various branches of Medicine to foreign countries, and also to various places in India.

Medical Relief Centres.—There are maternity & child-welfare centres at Cuttack, Puri, lasore, Berhampur and Sambalpur managed by local committees with Government aid. The question of provincialising these centres is under consideration. One of them in fact has already been provincialised.

In addition to this it is proposed to open 611 centres in each District of the province in rural areas except in Koraput where only one is considered to be enough.

All the District Headquarters Hospitals of the Province have since been taken over by Government. Steps are being taken to provide them with (1) efficient and adequate staff, (2) adequate accommodation, (3) X-ray, ambulance and laboratory facilities, (4) air-conditioned operation theatre, (5) properly organised out-door department, (6) clinics for (a) tuberculosis, (b) venereal diseases, (c) leprosy, (7) six beds for Tuberculosis patients, (8) incubators and (9) properly equipped maternity sections.

An infectious diseases Hospital has already been established at Puri.

There is no separate tuberculosis hospital or sanatorium in this Province, the establishment of which is under the active consideration of Government.

Orissa has no separate mental hospital of its own either but shares it at Kanke with Bihar and Bengal.

Sufficient amount is being spent for the treatment of venereal diseases cases.

LOCAL SELF-GOVERNMENT

Local self-government in the Province has not yet a uniform pattern everywhere; three northern coastal districts for instance follow the Bihar and Orissa laws. In south Orissa districts the Madras Laws, and in the western district of Sambalpur, the Sambalpur L.S.G. Act, 1939 and Bihar and Orissa Municipal Act, 1922 are in force. This lack of uniformity has resulted in a great deal of confusion in the sphere of local self-government. Plans are however included in the post-war five-year programme to remodel and improve the general condition of the local bodies and unify the L.S.G. Laws.

IRRIGATION AND PUBLIC WORKS

More than half of the Orissa coastal plains is formed by the combined deltas of the rivers Mahanadi, Brahmini and Baitarani, with their numerous branches and this area is partly exposed to damage through floods which are frequent. A flood protection policy has been carefully worked out by Government and is being gradually implemented. Orissa inherited a canal system, constructed in the latter half of the nineteenth century by a private company for combined navigation and irrigation purposes. The demand for water for cultivation is not so great as was anticipated at the time and the canal system has a very slight margin of profit now that the capital debt has been taken over by the Government of India. From the point of national food resources and famine insurance, however, it is most important.

Under the Grow More Food scheme many small irrigation projects have been put through in the Province with partial financial assistance from the Centre.

In the post-war five-year Plan an ambitious scheme has been prepared for a multi-purpose reservoir on the Mahanadi river at Hirakud near Sambalpur. This reservoir will control excess flooding in the Mahanadi delta, provide electric power and also be used for the irrigation of a considerable area. Further projects on the

control and utilization of the Mahanadi river on the model of the Tennessee Valley authority are the two multi-purpose reservoirs further downstream.

Hirakud Dam near Sambalpur is expected to cost about Rs. 47.81 crores; work has been started and will be carried out by C.W.I.N.C. (on behalf of Orissa Government).

The 1937 proposal to establish the new Capital of Orissa in Cuttack was revised in 1946 and it is now decided that the new Capital will be constructed in a new and spacious site, north of Bhubaneswar, the famous Hindu shrine. Survey work and jungle clearance has been started and construction work is expected to begin in 1948. The new capital site will be connected with Orissa and the rest of India by the conversion of the existing old trunk road into a National Highway with bridges over the present unbridged rivers. The construction of the new bridges and the improvement of existing roads up to the new road standard of National Highways, Provincial Highways, Major District Roads, etc., has already started under the first of two five-year programmes so that in 10 years time all the important towns and villages in the Province will have all-weather communications.

AGRICULTURE AND INDUSTRY

Even after the formation of a separate Province on the 1st of April, 1936, the Agricultural Department of Orissa remained under the control of the Revenue Commissioner till November, 1936, when it was taken over by a Director of Development, who remained in charge of the Department upto the end of March, 1945. Due to increased work in the Agricultural Department brought about by the introduction of a large scale production campaign, a separate post of Director of Agriculture was created for Orissa on 1st April, 1945, and Dr. P. Parija, O.B.E., D.Sc., M.A. (Cantab.), I.E.S. (Retd.), was appointed to the post.

The Director of Agriculture is assisted on the Food Production side by three Agricultural Engineers including one Drilling Engineer, one Biochemist, an Assistant Director of Agriculture for multiplication of improved seeds, Fruit Development Officer, Assistant Fruit Technologist attached to the Headquarters office and District Food Production Officers in the Districts. These officers attend to the subsidised distribution of seeds and manure, including hiring out of improved agricultural machines and implements to cultivators and staking of tubewells and also to general propaganda work. A nucleus field staff of one Overseer or Sub-overseer and two fieldmen is maintained at every Police Station.

The minor irrigation programme of the Food Production campaign is in charge of Agricultural Engineers, who are attached to the office of the Director of Agriculture. Advancing of cash loans under the L.I. Loans Act and Agricultural Loans Act, is done by a Special Deputy Collector at the District Headquarters and Sub-Deputy Collectors at the Sub-divisional Headquarters under the direct supervision of District Officers.

On the research and experimental side there is a Deputy Director of Agriculture, an Economic Botanist, one Horticulturist, a Mycologist, an Entomologist and an Agricultural Chemist.

The cultivation of rice is the principal occupation of nearly 80 per cent of the population. A small quantity of jute is produced. Cereals and sugar-cane are grown for local consumption. Turmeric is extensively cultivated in the uplands of the district of Ganjam and practically the whole of it is exported.

One textile mill at Chowduar and one Vegetable Ghee plant at Berhampur are in the process of establishment as part of the post-war development programme.

1947-48 BUDGET

The estimated revenue of the Province for the year was Rs. 4,05,87,000, principal items being Income-tax, 39 lakhs; Land Revenue, 61 lakhs; Excise, 81 lakhs; Stamps, 23 lakhs; Forest, 16 lakhs; Industries, 7 lakhs; Works, 5 lakhs; Subvention from the Centre, 40 lakhs; and extraordinary receipts, 1.14 lakhs.

Receipts other than Revenue receipts, e.g., Loan money, Civil Deposits, Reserve Bank Remittances and Inter-Provincial suspense accounts were calculated at Rs. 13,68,01,000. This together with the opening balance of Rs. 37,50,000 made up a total of Rs. 18,11,38,000 for budget purposes.

Against this the total expenditure charged to revenue was estimated at Rs. 4,55,39,000 for the year, the main items of which are detailed below in lakhs of rupees.

Land Revenue, 4.5; Excise, 13.5; Forest, 11.2; Registration, 2.3; Appropriation, for reduction of debt, 17.1; General Administration, 50.6; Justice, 8.7; Jails, 7.5; Police, 45.5; Education, 65.9; Medical, 26.7; Public Health, 11.8; Agriculture, 25; Veterinary, 8; Co-operation, 4.4; Industries, 11; Miscellaneous, 6.8; Civil Works, 62.9 and Pensions, 13.8.

The total expenditure not charged to revenues was estimated at Rs. 13,32,09,000.

Of the total sum of Rs. 1,88,81,789 included as new expenditure in the Budget, a sum of Rs. 1,13,83,085 represented expenditure in connection with the execution of post-war schemes.

The Budget thus revealed a deficit of Rs. 49,52,000.

1948-49 BUDGET

The estimates for 1948-49 reveal a revenue deficit of Rs. 69,60,000. The total revenue for the year 1948-49 is estimated at Rs. 6,81,55,000 compared with the revised estimate of Rs. 6,49,07,000 of 1947-48 and expenditure charged to revenue at Rs. 7,51,15,000 in 1948-49 compared with Rs. 6,03,57,000, of the revised estimate of 1947-48.

The Province's share from surplus income-tax is increased from two per cent to three per cent. Actually, it is contended that the Province has a good case for a considerably higher percentage now that the size of the province has increased by 75 per cent, and its population by 50 per cent.

A small reform in the revenue department is the abolition of *sarbarakari* system in the Government estates in Khurda, Banki and Angul with effect from April 1, 1948 and the collection of Government revenues by paid officials. It has been decided to reorganise and strengthen the military police. A wireless training class has been opened in Cuttack.

ADMINISTRATION

Governor.—His Excellency Asaf Ali.
 Secretary to His Excellency the Governor.—Rai Sahib Bhabagrabhi Misra.
 Aid-de-Camp.—Captain G. N. Katju.
 Prime Minister and Minister for Home, Finance, Planning and Reconstruction.—Sri Harekrishna Mahtab.
 Development, Law, Commerce.—Hon'ble Sri Nityananda Kanungo.
 Revenue, Supply, Transport.—Hon'ble Sri Naba Krishna Choudhury.
 Education, Health, Local Self-Government.—Hon'ble Sri Lingaraj Mishra.
 Labour, Public Works, Backward Classes Welfare.—Hon'ble Sri Radhakrishna Biswasray.
 [Mr. Choudhury and Mr. Biswasray have resigned.]

SECRETARIES.

Chief Administrator and Special Commissioner.—N. Senapati, I.O.S.
 Revenue Commissioner.—Rai Bahadur Samuel Das.
 Chief Secretary (Home, P., R. and Finance).—B. C. Mukharji, I.O.S.
 Secretary, Revenue Department.—Rai Bahadur P. C. Das.

ORISSA LEGISLATIVE ASSEMBLY

Speaker :—The Hon'ble Mr. Lal Mohan Pattnaik.

Dy. Speaker :—Mrs. A. Lakshmi Bai.

Gouranga Charan Das (West Cuttack Sadr. General); Bijoyananda Pattnaik (Central Cuttack Sadr. General); Bhairab Chandra Mohanty (North Cuttack Sadr. General); Kanhu Charan Das (North Cuttack Sadr. General); Sarangadhar Das (East Cuttack Sadr. General); The Hon'ble Sri Nityananda Kanungo (South Cuttack Sadr. General); Dinabandhu Sahu (Central Kendrapara General); The Hon'ble Sri Nabakrushna Choudhury (North Kendrapara General); Rajakrishna Bose (East Kendrapara General); Gadadhar Datta (East Jajpur General); Santanu Kumar Das (East Jajpur General); Dwarikanath Das (West Jajpur General); Madan Mohan Pattnaik (North Jajpur General); Hrushikesh Tripathy (Angul District General); Jayakrishna Mohanty (East Puri Sadr. General); Lokanath Misra (South Puri Sadr. General); The Hon'ble Sri Lingaraj Mishra (North Puri Sadr. General); Purnananda Samal (North Puri Sadr. General); Banamali Pattnaik (East Khurda General); Satyabadi Nanda (West Khurda General); Surendra Nath Das (Central Balasore Sadr. General); Kailash Chandra Mohanty (South Balasore Sadr. General); Karunakar Panigrahi (North Balasore Sadr. General); The Hon'ble Sri Harekrishna Mahatab (East Bhadrak General); Bhagabat Sahu (West Bhadrak General); Brundaban Chandra Das (West Bhadrak General); Mohan Singh (Sambalpur Sadr. General); Lall Ranjit Singh (West Bargarh General); Lakshminarayana Misra (East Bargarh General); Bist Bibhar (East Bargarh General); Lall Rudramadhab Deo (Khariar General); Dinabandhu Behera (Ghumur General); Jagannath Mishra (Kudala General); Narayan Panda (Chatarpur General); Madhu Sudan Mohapatra (Aska Surada General); Iswar Nalko (Aska Surada General); Uma Charan Pattnaik (Berhampur General); Somnath Panda (Berhampur General); Narayanmurti Gade (Berhampur General); Narayan Patra (Baltiguda Khondamad General); Ananta Tripathy (Parlakimedi General); Sadasiba Tripathy (Nourangapur General); Radhakrishna Sahu (Jeypore Malkangiri General); The Hon'ble Sri Radhakrishna Biswasray (Koraput General); Maulavi Muhammad Yusuf (Cuttack Sadr. Muhammadan); Maulavi Sayed Fazle Haque (North Cuttack-cum-Angul Muhammadan); Maulavi Muhammad Khan (Balasore-cum-Sambalpur Muhammadan); Maulavi Latifur Rahaman (South Orissa Muhammadan); Srimali Priyambada Devi (Cuttack Town Women's); Ghatashyam Das Thirani (Orissa Commerce and Industry); Sallendra Narayan Bhanu Deo Tikayat (East Orissa Landholders); Rai Bahadur Lokanath Misra (West Orissa Landholders); Baldyanath Nath (Orissa Labour); Lakshminarayan Sahu; Miss Anne Catherine Munro; Antarnjami Mallick; Godavartil Ramadas;

Secretary, Development, Commerce and Labour Department.—V. Ramanathan, I.O.S.

Secretary, Education and Health and L.S.G. Department.—Rai Bahadur Somanath Mohapatra.

Secretary, Law Department.—R. L. Narasimham, I.O.S.

Secretary, Supply and Transport Department.—B. Sivaraman, O.B.E., I.O.S.

Secretary, Public Works Department (Irrigation).—R. R. Handa, I.S.E.

Secretary, Public Works Department (R. & B.).—K. C. Wadia, B.E., A.M.I.C.E.

Secretary, Legislative Assembly.—Giridhari Dhal.

It may be noted here that Orissa maintains a joint cadre with Bihar in respect of officers of All-India Services.

Orissa Legislative Assembly

Orissa has a single chamber and has no Legislative Council. The Assembly consists of a House of 60 members of which four are nominated, one is labour, two are landholders, one is Indian Christian, one is Commerce, four are Muslims, two are women and the remaining 45 are general seats.

Sind

WITH the division of the Indian sub-continent on the basis of the Indian Independence Act, 1947 the province of Sind was constituted a part of the Dominion of Pakistan.

Sind is one of the two provinces created in 1936, the other being Orissa. Unlike the latter, which has been carved out on a linguistic basis from three older provinces, Sind was a compact unit and was considered a province within a province even before its separation. From the point of view of geography, ethnology and language, Sind has greater affinity to the Punjab than to Bombay. Nevertheless it has been attached to the Bombay Presidency administratively ever since its conquest by Sir Charles Napier in 1843.

The demand for its separation into a distinct political entity is of comparatively recent origin. It was only about twenty years ago that Muslim leaders started the demand that Sind, where the Muslims are in an overwhelming majority, should have separate administrative machinery under the next reformed constitution. What was started as a bargaining point in inter-communal negotiations has now become an accomplished fact.

The Muslim delegation at the first Round Table Conference put forward the demand in London in the winter of 1930. The question was referred to a committee which accepted the principle of separation, suggested an expert inquiry to ascertain the financial aspect of the separation, and threw the burden of proving the feasibility of separation on those who asked for it. An expert inquiry was held and it drew a gloomy picture of the financial future of Sind. Its findings can best be summarised by its remark, "There is thus obviously no question of Sind standing surety for the Barrage—the problem is whether the Barrage can stand surety for Sind."

DEMAND FOR SEPARATION

A conference of representatives of the people of Sind met in 1932 to devise measures to meet the financial objections to the separation. Wide divergence of opinion prevailed at this conference, whose chairman eventually submitted a report according to which the annual deficit of the new province for the first six years of its life would be Rs. 80 lakhs, the revenue from the Barrage being eaten up by interest charges. Roughly from 1945 onwards, there would be a surplus from the Barrage to help the province. Based on this assumption the authorities set about perfecting the administrative machinery in preparation for the inauguration of the new regime.

With the stage set for the advent of the new province, an Order-in-Council was issued in January, 1936, announcing that the new province would start on its career on April 1, 1936, and creating transitional machinery for the conduct of government till provincial autonomy is inaugurated in accordance with the provisions of the Government of India Act, 1935.

Of a permanent character were those provisions of the Order-in-Council which sever Sind from Bombay and settle the liabilities of the parent and the infant in respect of development loans incurred during the joint family period. Lands, forests, buildings, property, etc., would pass to the province where they were situated. Arrears of taxes would belong to the province where the taxed property was situated or the taxed transactions took place. Of the outstanding Bombay Irrigation Debt incurred before April 1, 1921, Rs. 2,74,96,384, including Rs. 73,687 of the debt on account of the Lloyd Barrage and Canals system, would be borne by Sind, and the rest by Bombay.

H. E. Sir Ghulam Hussain Hidayatullah

Of the debt incurred on account of the Lloyd Barrage and Canals system, all except the portion relating to the Nasirabad section (which is chargeable neither to Bombay nor to Sind) would be borne by Sind. The outstanding Bombay debt on account of the Bombay Development Scheme would be the debt of Bombay alone. Other loan works would be chargeable to the province where the works were located.

It was also understood that the Central Government would have to come to the rescue of Sind by providing the funds to meet the deficit in the first few years. In order to make arrangements for such a subvention to Sind and Orissa and for other weak provinces and generally to adjust the financial relations between the Central and the provinces under the provincial autonomy scheme, Sir Otto Niemeyer, a financial expert, was asked to conduct an inquiry. He completed his investigations and submitted his

report, according to which Sind got a cash subvention of Rs. 105 lakhs for a period of ten years, after which the aid would be progressively decreased. According to the Niemeyer recommendations, Sind would get after the first five years of provincial autonomy 2 per cent., of the distributable portion of the income-tax revenue.

POPULATION

Sind has an area of 48,136 sq. miles and a population of 4,535,008 (1941 census). Of this, the Hindus (including Scheduled castes) numbered 1,229,926 and the Muslims 3,208,325. As a result of the recent upheaval nearly 8 lakhs of Hindus including 20,000 Sikhs have migrated to India since August 1947. There has been a corresponding migration of Muslims into Sind as a result of which the Muslim population has increased by about a million. The rest of the population is made up of 20,209 Christians; 31,011 Sikhs; 3,687 Jains; 3,838 Parsis; 1,082, Jews and 36,930 others.

According to the census of 1941, 389,333 males and 90,020 females in the Province of Sind are literate, representing 15.6 per cent. and 4.4 per cent. female population respectively. 138,249 Muslim males and 16,416 Muslim females; 231,869 Hindu males and 64,498 Hindu females are literate.

The language of the Province, Sindhi, though it bears many marks of Arabic and Persian influence and is written in Perso-Arabic script, is nearer the original Sanskrit than any other Indian language. The Hindus are far more advanced than the Muslims and in the pre-Partition days enjoyed a virtual monopoly of the trade of the province. As against 263 Hindu literate males per 1,000 only 44 Muslims per 1,000 were literate; 51 per 1,000 literate Hindu females compared against five literate Muslim females. The number of those literate in English are 119 per 10,000—186 per 10,000 males and 34 per 10,000 females.

On March 31, 1947 there were 3,778 educational institutions of all kinds in Sind out of which 5.37 were for girls. There were ten colleges in the province with 4,236 students on the rolls. There were 235 secondary schools for boys with 41,922 students on the rolls, and 33 for girls with 9,251 students. There were 2,511 primary schools for boys with 168,937 students on the rolls and 426 schools for girls with 41,735 students.

Out of every 100 workers in Sind 59 are engaged in agriculture and animal husbandry. Ten per cent. are engaged in manufacturing industries, most of which are, however, of the cottage type, there being very few factories in Sind.

The cultivable area of the province is mostly commanded by the Sukkur Barrage and Sind canals, which, with other canals and the Indus river itself, supply water to 7,500,000 acres. The Barrage works have cost nearly 24 crores of rupees.

LLOYD BARRAGE

The Barrage owes its existence largely to the zeal of Lord Lloyd, an ex-Governor of Bombay, whose name it bears. Started in July 1923, it was completed in January 1932. It was the completion of the dream of many an engineer and

almost incredible boon to the cultivator, who formerly carried on his agricultural operations in a haphazard manner, being unable to depend on the proverbial vagaries of the Indus. What it means to the Sindhi, the Sindhi alone knows, for the Barrage has converted a waterless desert into a smiling garden flowing with milk and honey.

The Lloyd barrage is a huge water regulator consisting of 66 spans, each sixty feet wide, the openings being regulated by steel gates, each weighing fifty tons. The Barrage is about a mile long, about five times the length of London Bridge. Thousands of miles of new channels were excavated varying in width from 346 feet in the case of main canals to only two or three feet in the case of water courses. The total length of Government channels which were excavated was over 6,000 miles, and that of water courses over 30,000 miles. The total length is thus some 36,000 miles, which means about 1½ times the circumference of the earth.

The total quantity of earthwork involved, extending that for the watercourses was 623 crores cubic feet of earthwork which means a solid column measuring 100 feet by 100 feet extending to a height of over 115 miles.

The function of the Barrage is to head up the river at Sukkur and from that to distribute it all the year round according to requirements of cultivators. The distribution is made through seven great canals, regulated through regulators on both banks of the river—four on the left bank, three on the right. Those on the left bank are Rohri, the Eastern Nara, the Khairpur Feeder East and the Khairpur Feeder West. Those on the right bank are the North Western Canal, the Ríce Canal and the Dadu Canal.

The total number of openings in all the canal head regulators is 55, each being of 25 feet span and each opening being equipped with three electrically operated gates. The total discharge of water into all the canals is approximately 45,743 cusecs or 285,100 gallons per second. The total length of all irrigation channels including old and new watercourses is 54,300 miles. To accomplish this staggering feat, excavation of earthwork to the extent of 7,500,000 cubic feet was involved, as much as would fill a drain 14 feet wide and four feet deep, dug round the equator. It was estimated that the ultimate area of annual cultivation on the scheme would be over 5,000,000 acres and this would be under various crops approximately as follows:

Wheat 2,440,000 acres; cotton 850,000 acres; rice 625,000 acres; *jawari*, *bajri*, etc., 635,000 acres; and oilseeds 410,000 acres.

This denoted in produce would mean the following approximate quantities:

Wheat 1,133,000 tons; cotton 549,000 bales; rice 447,000 tons; *jawari*, *bajri*, etc., 271,000 tons; and oilseeds 117,000 tons.

The area irrigated in Sind by the Barrage canals and other capital work during 1943-44 was 5.21 million acres.

With the construction of the Barrage the area under cotton cultivation has increased from the pre-barrage figure of 253,232 acres to 878,627

acres in 1943-44. The area under wheat increased from 480,000 in the pre-barrage period to 1,259,212 acres in 1943-44. The area under rice cultivation in 1943-44 was 1,385,825 acres.

FINANCES

The Sind Government have already started preliminary work connected with building of another barrage across the Indus river in Lower Sind involving a total cost of 23.57 crores. The project consists of a barrage to be constructed above Kotri, a quarter mile below the Jamshoro regulator of the Fuleli Canal, a feeder on the right bank of the Indus. The barrage is designed to be strong and big enough to pass a flood of 7,50,000 cusecs as against a maximum in the last 40 years of 6,13,000 reduced by future Punjab and Upper Sind withdrawals. The barrage, when completed in 1953 is expected to irrigate 22.5 lakhs acres.

Sind has, for some years, enjoyed a fair share of Indian prosperity as reflected in the provincial budgets. On the eve of partition, Sind wiped off all her debts to the undivided Government of India and thanks to war-boom, built up her finances through large land sales and sale of foodgrains, apart from war-time benefits from the Allied operations.

After a series of surplus budgets, Sind returned a deficit of 257 lakhs (revenue 805 lakhs, expenditure 1,062 lakhs) in 1947-48 (revised), and Rs. 52 lakhs deficit (revenue 843 lakhs and expenditure 895 lakhs) in 1948-49. The Sind Premier decided to convert this deficit into a surplus of Rs. 3 lakhs by taxation to the tune of Rs. 55 lakhs.

Sind's most remarkable enterprise in the last few months is the development of industrial trading estates at Karachi, Hyderabad and Sukkur, on the lines of those established in Great Britain after the depression of 1931. The Karachi Industrial Estate has already made a beginning and the Government have sanctioned Rs. 25 lakhs towards the expenses. Preparations are in full swing for the construction of a textile mill, a chemicals factory and a big shipbuilding yard to be built with the technical help of the famous British ship-builders, John, Brown and Co., who built the "Queen Elizabeth". The estate will be situated near West Wharf.

KARACHI

No account of Sind will be complete without a reference to Karachi. It is a comparatively new town, for according to known facts it was as recently as 1729 that a few traders of the neighbouring State of Kalat migrated to the "Kalachi" the land of the sand-dunes. It was several years later that its potentialities as a harbour were realised by the British—Sir Charles Napier, the Conqueror of Sind, is said to have forecast that Karachi would some day become the "Glory of the East." Developments during the last fifteen years have only served to fulfil these hopes, for with the growth of aviation, Karachi, which is on the main line of Imperial aerial communication between London and Australia right across India, has become a vital airport. In addition to being the capital of Sind, Karachi is the outlet for the products of the Punjab.

It has been decided that Karachi, which was originally intended to be the temporary capital of Pakistan, would continue to be so permanently. As the Pakistan Premier recently pointed out, Karachi is considered the most suitable city in Pakistan to be the permanent capital of the Dominion. As a result of this decision, a committee with representatives of both the Sind and Central Governments was appointed in February to go into the administrative details arising out of this decision. Karachi continues to be the Sind Government's headquarters but a final decision is expected to be taken after the submission of the report of the above committee.

The establishment of the Pakistan capital has expanded the area of the city and a scheme is now under preparation by Lt.-Col. Swayne-Thomas, Adviser to the Sind Government, for the planned and scientific development of the city so as to link a number of suburbs with a network of railway communications.

LEGISLATIVE ASSEMBLY

The Sind Legislative Assembly, which has a strength of 58 members, had its first session under the new political dispensation from January 26 to February 20. The Sind Premier, Mr. M. A. Khuhro, presented the budget on February 7 and general discussion and voting on grants took about a week of the session. The Assembly passed a number of legislative measures including a bill to rehabilitate the economic life of Sind necessitated by the exodus of non-Muslims who had monopolised trade and commerce and the ingress of Muslim refugees into the province.

Throughout the session, there was no division as out of 20 members of the Congress Party, only six Hindu members attended the session, the rest including the leader, Prof. Ghanshyam Jethanand, having either resigned or migrated to India.

The proposed move to separate Karachi from the province of Sind aroused strong opposition and the House gave a mandate to the Sind Government to resist such a move when and if taken.

The Assembly also passed a resolution at the outset mourning the tragic death of Mahatma Gandhi.

ADMINISTRATION GOVERNOR

H. E. Shaik Ghulam Hussain Hidayatullah.
PERSONAL STAFF OF THE GOVERNOR
Secretary: S. H. Raza.
Personal Secretary: J. Codeiro.
Military Secretary: Capt. F. R. Mo. F. Kernan.
A.D.C.: Capt. Sher Ali.

MINISTERS AND PORTFOLIOS

Prime Minister and Minister In-charge of Political Services and General Administration, Home, Legal and Education: The Hon'ble Mir Ilahi Bakhsh.
Minister In-charge, Revenue and Public Works Departments: The Hon'ble Mir Ghulamali.

Minister In-charge, Finance, Refugees Rehabilitation and Rent Control, Local Self-Govt. and Public Health Departments: The Hon'ble Syed Miran Mohammed Shah.
Minister In-charge, Food and Civil Supplies, Agriculture and Industries Dept.: The Hon'ble Mr. Mohammed Azam.

PERSONAL STAFF OF MINISTERS

Parliamentary Secretaries to the Chief Minister: Mohammad Azam Khan, M.L.A.; Mrs. J. G. Allana, M.L.A.; Mohammad Mujtaba Kazi, M.L.A.
Secretary to Hon'ble the Chief Minister: Agha Shahi.
Personal Assistants to Hon'ble the Chief Minister: G. N. Pandhiani; Pereira.
Parliamentary Secretary to Hon'ble Minister for Education, etc.: Mohammad Akhtar Kazi, M.L.A.
Personal Assistants to Hon'ble Minister for Education, etc.: Mohammad Moshan; G. D. Memon.
Parliamentary Secretary to Hon'ble Minister for Agriculture, etc.: Mir Ahmad Khan Talpur, M.L.A.
Personal Assistants to Hon'ble Minister for Agriculture, etc.: Ijaz Ali Talpur; Murad Ali Talpur.
Parliamentary Secretary to Hon'ble Minister for Revenue, etc.: Noor Mohammad Shah, M.L.A.
Personal Assistant to Hon'ble Minister for Revenue, etc.: Mohammad Amin Zuberi.

SECRETARIES TO GOVERNMENT

Chief Secretary and Secretary, Political, Services & General Administration: J. Booth.
Revenue Secretary and Revenue Commissioner, S. Ridley.
Home Secretary: N. A. Faruqi.
Secretary, Public Works Deptt. & Chief Engineer, Sind: S. G. Mustafa.
Secretary, Public Works Deptt., Lower Sind Barrage and Chief Engineer, Lower Sind Barrage: T. A. W. Foy.
Finance Secretary: D. R. C. Halford.
Secretary, Agriculture, Industries & Labour Departments: K. S. G. S. Kehar.
Secretary, Legal: Mohammad Bakhsh Memon.
Secretary, Education, Health & Local Self-Government: K. S. Yar Mohd. A. Memon.
Secretary, Food & Civil Supplies: R. R. Pearce.
Secretary, Sind Legislative Assembly: Zafarali Shaikh.

HEAD OF DEPARTMENTS, ETC.

Development Commissioner and Labour Commissioner: J. Booth.
Revenue Commissioner: S. Ridley.
Inspector-General of Police: A. W. Pryde.
Additional Inspector-General of Police: S. Kazim Raza.
Inspector-General of Prisons: Dr. B. Baluch.
Chief Conservator of Forests: Khan Bahadur Abdul Rahim.
Deputy Commissioner of Excise, Sind: Capt.

Director of Public Instruction: Shamsul Ulma Dr. U. M. Daudpota.

Director of Public Health: Dr. O. M. Akbani, M.B.B.S., D.Ph.

Inspector-General of Civil Hospitals: Dr. A. M. Abbasi, M.B. B.Sc., D.Ph.

Director of Agriculture: A. M. Mustafa.

Director of Industries: R. L. Sethi.

Director of Fisheries: Dr. M. Ram Swami Naidu, B.A., Ph.D.

Director of Veterinary Services: M. Mohey-Deen, M.R., C.V.S.

Registrar, Co-operative Societies: Mohammad Azam Abdul Khalik Awan.

Superintendent, Government Press: I. H. Siddiqi.

HEADS OF DEPARTMENTS—CENTRAL

Commissioner of Income-Tax and Collector of Central Excise and Salt: L. W. Thompson.

Collector of Customs, Sind and Baluchistan: Imuddin.

Director of Posts & Telegraphs, Sind and Baluchistan Circle: S. Nusrat Ali, M.B.E.

Deputy Central Intelligence Officer: Abdullah Fateh Din.

D.S.P., Special Police Establishment: Khan Sher Hasan Khan.

JUDGES OF THE CHIEF COURT OF SIND

Chief Judge: The Hon'ble Mr. Justice H. B. Tayabji.

Judges: The Hon'ble D. N. O'Sullivan; The Hon'ble V. T. Thadani; The Hon'ble G. B. Constantine; The Hon'ble H. G. Agha.

Registrar: B. J. Desa.

PUBLIC SERVICES COMMISSION

Members: H. B. Hingorani; N. M. A. Siddiki.

Secretary: K. S. Qazi Abdul Ghanl Faiz Mohammad.

SIND LEGISLATIVE ASSEMBLY

[At the time of partition of India and establishment of Pakistan, the Sind Legislative Assembly had 60 members but the representation of the European community was reduced from three seats to one. After the budget session of the Assembly, held in the last week of February 1948, eight members of the Congress Party resigned from the Legislature. In the by-election caused by the elevation of the Hon'ble Mr. Ghulam Hussain Hidayatullah as the Governor of the province, Mr. Ghulam Nabi Khan Pathan was elected. The Congress members who have submitted their resignations so far are: Prof. Ghanshyam Jethanand, leader of the Congress Party, Swami Krishnanand, N. R. Malkani, Nevandram Vishindas, Nihchal-das C. Vazirani, P. V. Tahirramani, R. K. Sidhwa and Vishnu Nenuram Sharma.]

Speaker:—Syed Miran Mohammed Shah.

Deputy Speaker:—Badraddin Aga.

Members:—Abdus Sattar Abdul Rahman Pirzada; Mir Ahmed Khan Abdullah Khan Shivalomai; Mahmood Abdullah Haroon; Haji Alimahomed Attamahomed Mari; Ali Gohar Khan Haji Khan Mahar; Pir Ali Shah Bhawanshah; Agha Badruddin Ahmed Shamsuddin Khan Durani; Anwar Hussain Ghulam Hussein Hidayatullah; Mir Bandeali Khan Talpur; Choithram T. Valecha; Haji Fazul Mahomed Khan Laghari; Fazlullah Ubeidullah Kazi; Mir Ghulam Ali Khan Talpur; Ghulam Nabi Khan Pathan; Makhdom Ghulam Hyder Zahiruddin Qureshi; Ghulam Muhammad Muhammad Hashim Vassan; Ghulam Nabi Muhammad Ibrahim Dehraj; Haji Ghulam Rasool Khan Jatoli; Dr. Gobindram D. Punjabi; Haridas Lalji; Holaram H. Koswani; Lt.-Col. W. B. Hossack; Mir Haji Hussainbakh Khan Talpur; Hon'ble Pir Illahi Bakh Nawazali; Issardas Varindmal; Jaffer Khan Taj Mahomed Khan Jamali; Mrs. Jenubai G. Allana; Miss Jethi T. Sipahimalani; Sardar Kalsar Khan Gulmahomed Khan Bozdar; Madhowdas Shivalomai; Mahmood Abdullah Haroon; Menghumal Perumal; Miran Muhammad Shah Zainulabdin Shah, Sayed; K. B. Haji Moula-bakhsh Muhammad Umer Soomro; Dr. Muhammad Akbar Abdul Qayoom Kazi; Muhammad Ayub Shah Muhammad Khan Khuhro; Muhammad Azam Muhammad Ibrahim; Muhammad Khan Nawab Ghaibi Khan Chandio; Haji Muhammad Hashim Gazdar; Muhammad Mujtaba Muhammad Mustafa Kazi; Sardar Nabibakhsh Illahibakhsh Khan Bhutto; Nur Muhammad Khan Sher Muhammad Khan Bijarani; Nur Muhammad Shah Muradali Shah Partabrai Khaisukhdas; Rahimbakhsh Allahbakhsh Khan Soomro; Sardar Khan Dilmurad Khan Khoso; Sirumal Kirpaldas; Sirumal Vishindas Tahirram Tekchand; Togachi Mir Mahomed Nohari.

The United Provinces

THE United Provinces lies in practically the centre of Upper India. It is bounded on the north by Tibet, on the north-east by Nepal, on the east and south-east by Bihar, on the south by two of the Chota-Nagpur States of the Central India Group, and the Saugor district of the Central Provinces, and on the west by the States of Gwalior, Dholpur, Bharatpur, Sirmoor, and Jubbah, and by the provinces of Delhi and East Punjab. Its total area amounts to 108,247 square miles, to which may be added the area of the three Indian States of Rampur, Tehri-Garhwal and Benares with a total area of 6,270 square miles, giving a total of 112,523 square miles. The total population according to the 1941 census is 56,346,456.

The Province, originally termed the North-Western Provinces and so amalgamated in 1877, was named the United Provinces of Agra and Oudh in 1902 and received its present designation on April 1, 1937. It includes four distinct tracts of country: portions of the Himalayas, including the Kumaon division which consists of three hill districts, two of which are entirely in the hills and one partly in the submontane belt; the sub-Himalayan tract; the great Gangetic plain; and portions of the hill systems of Central India including Bundelkhand. The Gangetic plain is protected by an extensive canal system, which though somewhat liable to run short of water in extremely dry years, of great benefit in all ordinary years and years of limited drought.

The first two of these tracts are infertile and support a very sparse population and the Central Indian plateau is almost equally infertile, though better populated. The soil of the Gangetic plain, however, possesses an extreme fertility and here the density of population varies from 542 persons per square mile in the west to 555 in the centre and 753 in the east, which gives the Province as a whole a greater population pressure on the soil than any other part of the sub-continent save Delhi and the Bengal area. In the south there are low rocky hills, broken spurs of the Vindhya mountains, covered with stunted trees and jungle, and in the north the lower slopes of the Himalayas, clothed with dense forest, affording excellent big and small game shooting, and rising beyond in a tangled mass of ridges, ever higher and higher, until it reaches the line of the eternal snows, but the greater part of the province consists of level plain, teeming with highly-cultivated fields and watered by three rivers—the Ganga, Jumna and Gogra.

ADMINISTRATION

The Province was until the close of 1920 administered by a Lieutenant-Governor chosen from the ranks of the Indian Civil Service. Under the Reform scheme the Province was raised to the status of a Governor's province, the Governor being assisted by two members of the Executive Council in charge of the Reserved Subjects and two Ministers in charge of the Transferred Subjects. With effect from April 1, 1937, provincial autonomy was inaugurated in this Province and a Cabinet of

6 Ministers to assist the Governor was formed, under the G. I. Act of 1935. This Ministry remained in office from July 17, 1937 to November 3, 1939. But after the outbreak of the European War it resigned and the powers of administration were assumed by the Governor under section 93 of the G. I. Act of 1935. He appointed 3 Advisors on November 4, 1939, and a fourth one on September 14, 1943, to assist him in the administration of the Province.

H.E. Mrs. Sarojini Naidu

The medium for the transaction of public business is the Secretariat, the staff of which consists of Secretaries (including Chief Secretary), and Deputy Secretaries including one Deputy Legal Remembrancer who is *ex-Officio* Deputy Secretary in the Judicial Department. There are also Under-Secretaries including one Assistant Deputy Legal Remembrancer who is *ex-Officio* Under-Secretary in the Judicial Department and one Secretary, Council of Physical Culture who is *ex-Officio* Under-Secretary in the Education Department and Assistant Secretaries.

The Board of Revenue is the highest court of appeal in revenue and rent cases lying within its jurisdiction, being the chief revenue authority in the province. There are forty-nine districts, thirty-seven in Agra and twelve in Oudh, average area 2,213 square miles and average population a million. Each district in charge of a District Officer, termed a Magistrate and Collector in Agra, a Deputy Commissioner in Oudh and Kumaon and Superintendent in Delhi and Dun district. The districts are grouped together in divisions. Each division is under a Commissioner, except the Kumaon division, the charge of which is held by the Deputy Commissioner, Naini Tal, in addition to his duties.

There are ten divisions having an average area of nearly 10,600 square miles and an average population of nearly 5 millions. The districts are sub-divided into *Tahsils*, with an average area of 518 square miles and an average population of 236,000. Each *Tahsil* is in charge of a *Tahsildar*, who is responsible for the collection of revenue, and also exercises judicial powers. *Tahsils* are divided into *parganas* which are units of importance in the settlement of land revenue. Subordinate to the *Tahsildars* are *naib tahsildars* and *kanungos*. Ordinarily there are three *kanungos* and one *naib tahsildar* to a *tahsil*. The *Kanungos* supervise the work of the *patwaris*, or village accountants, check their papers and make such inquiries as may be entrusted to them by superior Officers.

For judicial purposes (revenue and criminal), the District Officer assigns a sub-division, consisting of one or more *tahsils*, as the case may be to each of his subordinates, who may be covenanted *Magistrates* (Joint and Assistant Magistrates and Assistant Collectors) or members of the Provincial Service (Deputy Collectors and Magistrates).

MANUFACTURES

The province is not rich in minerals. Iron and copper ore are found in the Himalayan districts. The ore mines of importance there formerly, but owing to high cost of production and inaccessibility, most of them have been closed. Gold fields exist in the district of Mirzapur in *Tahsil Sanghauli* on the border of Rewa State. Gold is found in minute quantities by washing the sands in some of the rivers in the hills. Limestone is found in the Himalayas and in the districts of Etawah and Banda, and stone is largely quarried in the Mirzapur district. Other kinds of stone quarried, though in small quantities, are kankar and slates.

Cottage and artistic industries, however, abound in U.P. Cotton is ginned and spun throughout the Western districts of the province as a home industry; and weaving by means of handlooms is carried on in most districts. Chief handloom weaving centres are Tanda (Fyzabad), Benares, Mau (Azamgarh), Mubarakpur, (Azamgarh), Mau Aima (Allahabad), Gorakhpur, Maghar (Basti), Khalilabad (Basti), Bara Banki, Sandila (Hardoi), Etawah, Amroha (Moradabad), Meerut, Sikandrabad (Bulandshahr), Deoband (Saharanpur), Sikandrarao (Aligarh), and Dhampur (Bijnor). Kanpur is the chief centre for cotton spinning and weaving mills. According to the latest figures available, 2,650 persons are employed in cotton spinning, cleaning and pressing factories and 58,010 in spinning and weaving mills. The number of actual handloom weavers is about 250,000. Natural and artificial silk weaving used to be confined to Benares (where the famous 'kimkhab' brocade is made), Sandila, Mau (Azamgarh) and Bisalpur (Pilibhit). Embroidery work is done at Lucknow, where the noted 'Chikan' work of cotton on muslins is produced, and in Benares where gold and silver work is done on silk, velvet, crepe and georgette. Benares uses local gold thread for embroidery work and 'Kimkhab' weaving. Gorakhpur has lately specialised in the manufacture of crepe and turkish towels.

Glass Industry.—The glass industry is important at Bahjoi, Balawali, Sassi, Hathras, Haran-

gau, Shikohabad, Makhanpur Naini (Allahabad), Ghaziabad and Benares State. Firozabad, the chief centre of manufacturing glass bangles in India.

There are in all about forty hollow-ware factories, and eighty glass bangle factories in the Province. Out of the forty hollow-ware factories nine are large scale factories and the others are comparatively small. The total value of the goods produced in these hollow-ware factories is estimated at 15,000 tons per year valuing at 1.2 crores of Rupees per year. The eighty bangle factories at Firozabad produce about 9,000 tons of bangles per year, valuing at Rs. 2.7 crores per year.

Besides, cottage small phal industry exists in the District of Bijnor. There are about 120 cottage workshops having a total production amounting to rupees 15 lacs per year. Recently the glass bead industry has been developed in the Province due to the efforts of the Glass Technology Section, Department of Industries, U.P., and at present about 50 cottage workshops are engaged in this trade producing goods to the total value of 2.3 lacs per year. The total labour engaged in the glass industry and cottage industry is estimated at 50,000 to 55,000.

Moradabad is noted for its lacquered brass work, Benares for brassware engraving and repousse; Farrukhabad, Pilkhawa (in Meerut district) and Muttra for their calico prints and Agra for its durries and marble and alabaster articles; porcelain wares are now made at Kurja and glazed pottery at Chunar and Meerut; Clay figures of men and fruits at Lucknow; woollen carpets at Mirzapur and Bhadohi (Benares State) and cotton carpets at Shahjahanpur and leather goods in Kanpur, Agra, Lucknow and Meerut.

The making of brass utensils at Mirzapur, Farrukhabad, Hathras, Moradabad, Shamli (Muzaffarnagar), Benares, Bahraich and Oel (District Kheri), the carving and inlay work of Nagina and Saharanpur; the art silk industry of Tanda (Fyzabad), the lock and brass fittings industry at Aligarh, Cutlery at Kaimganj and Hathras, the copper utensil industry of Almorah, the durries of Khairabad (Sitapur), Kanpur, Agra and Bareilly, the pottery at Nizamabad (District Azamgarh) and the ivory work of Lucknow and manufacture of scissors at Meerut also deserve mention.

As a result of World War II blanket making has developed on a large scale in the districts of Muzaffarnagar, Meerut, Najibabad (Bijnor), Mirzapur and Bhadohi (Benares State) and the manufacture of locks, safety and split pins and other miscellaneous iron articles at Aligarh. The weaving of tweeds has developed as a new industry in Almorah district.

Trade Centres.—Important trade centres are Kanpur, Allahabad, Mirzapur, Benares, Lucknow, Meerut, Aligarh, Hathras, Mathura, Agra, Farrukhabad, Moradabad, Chandausi, Bareilly, Saharanpur, Muzaffarnagar, Ghaziabad, Khurja, Gorakhpur, Ghazipur, Pilibhit, Shahjahanpur and Hapur.

Kanpur is the chief industrial centre. It has tanneries, leather goods factories, soap factories, oil mills, cotton, woollen and jute mills, engineering workshops, aluminium utensil factories,

hosery factories, plastic products, starch factories, glue refinery, chemical and pharmaceutical works, ordnance factories and other mills. The Kanpur Woollen Mills is the largest in India. Lucknow possesses an important paper-mill and also a cotton mill. There are cotton, spinning and pressing factories at Aligarh, Meerut, and Bareilly and cotton mills at Agra, Hathras, Benares, Kanpur, Moradabad and Aligarh. There are now 73 Sugar Factories in the province producing sugar by vacuum process. They are situated in Gorakhpur, Rohilkhand, Meerut, Lucknow, Fyzabad, Benares and Allahabad divisions. A certain amount of sugar is also made by the open pan process and a large quantity of gur is made in the villages. Excellent furniture is made at Bareilly mostly on cottage lines.

Sodium Silicate is manufactured at Firozabad, Kanpur, Benares and Allahabad. Electroplating is carried on at Moradabad, Aligarh and Kanpur. Anodisation is done at Benares. Hydrogen peroxide is manufactured at Kanpur. Super Phosphate is made at Aligarh, glue at Kanpur and Hapur, and refined glue and gelatine at Kanpur. Casein is made at Aligarh, Dayalbagh and Firozabad. Starch is made at Kanpur, Rampur and Nawabganj. Methylated and rectified and potable spirits are made at Kanpur, Unao, Rpsa, Lucknow, Saharanpur, Meerut, Mansurpur, Nawabganj (Gonda), Daurala and Rampur.

There is a paper factory, a strawboard factory and a cigarette factory at Saharanpur. Attars and perfumes are made at Lucknow, Kanau, Jaunpur and Naini. Dayalbagh (Agra) has a tannery, a leather goods factory, a textile factory, a hosery factory, a dairy, a chemical and soap factory and a factory for manufacturing doors, bolts, lanterns, electrical goods, fountain-pens, chemical balances, etc. Fountain-pens are made in Kanpur, Lucknow and Benares. Shoe laces and elastic are made in Kanpur. Scientific balances and instruments are made at Benares and Dayalbagh (Agra).

There is a plywood factory at Sitapur, a strawboard factory at Meerut, a bonemeal at Magarwara (Unao) and at Hapur (Meerut), a turpentine and rosin factory, a match factory, a catechu factory and a bobbin factory at Clutterbuckganj (Bareilly); brushes are manufactured at Kanpur, Agra and Meerut; cardboard boxes at Kanpur and Lucknow. Acids are manufactured at Agra, Ghaziabad and Kanpur and power-alcohol at Meerut. Chemical and pharmaceutical works are at Kanpur, Aunauli (Lucknow) and Benares. Vegetable ghee is manufactured at Kanpur, Begamabad and Ghaziabad (District Meerut).

Oils.—There are four factories manufacturing vegetable ghee with a capacity of about 150 tons per day. The oil crushing industry is well developed in the Province since U. P. produces 2 crore maunds of oil-seeds. There are over 140 big oil mills registered under factories Acts and over 200 small oil mills working with power. Refining of oils has been started by four big oil mills. Oil crushing by bullock driven wooden ghans is also well developed in the villages. There are about 20 big soap factories besides a large number of small manufacturers. Paints and varnishes industry is beginning to be developed

with the coming into existence of 3 paints and varnishes factories. Boiled oil is already being manufactured by some firms. Allied industries like some textile auxiliaries and toilets are being manufactured at some places. Tin canisters are made at Agra and Ghaziabad. There are 65 sugar factories, the total sugar produced being 525,800 tons and molasses 171,800.

AGRICULTURE

The chief industry is agriculture, which is the principal source of livelihood of a little over 70 per cent of the population and a subsidiary source of income to a further 8 per cent. The soils of the province fall into three groups; the valley soils of the Himalayas, the main alluvium and the Central Indian alluvium. The chief characteristic soil or the Central Indian alluvium is the black soil, with a lighter variant, though here also there are light loams and gravel. The Himalayan soils are of local origin and vary with the nature of the rock from which they have been formed, whilst the main alluvium soils are sand, clay and loam, the loam being naturally the most productive. The soil generally yields excellent crops of rice, millet, maize, linseed, mustard, cotton, wheat, barley, gram, sugarcane, pulses and potatoes, rice being grown mostly in low-lying heavy clays, and potatoes on the higher valleys.

The greater part of the Province is highly cultivated. The rainfall varies from 50 to 70 inches in the hills to 40 to 60 inches in the Benares and Gorakhpur Divisions, while the Agra Division receives only about 25 to 30 inches annually. Drought seriously affected Bundelkhand and the Agra Divisions in the past: better drainage and irrigation facilities have effected considerable improvements. In the latter area, however, shortage of water in the canals and the general lowering of the water level still continue to react against full agricultural returns. Steps are being taken to increase the amount of water passing down the canals.

The price of rice rose more or less steadily till September, 1946, when the maximum price was attained, followed by slight decline. The maximum price of wheat was attained during February and declined thereafter till May, gradually to rise again attaining the maximum of the year in December. As regards barley and gram, the prices showed slight variations in the early part of the year, but steadily rose from May when barley attained its maximum in October with again a steady fall, but gram continued to rise to attain its maximum in December. The price of *arhar dal* rose more or less steadily throughout the year and attained the maximum in December.

There was some decrease in the area under wheat as compared with the corresponding figures for the preceding year, the average outturn being more or less the same. Although there was a slight increase in the area under rice there was some slight decrease in the total outturn and thus the average outturn was slightly less. There was a decrease in the area under cotton but the area under sugar-cane increased slightly as compared with the corresponding figures for the previous year. The average outturn for cotton and sugar-cane decreased slightly.

Land is held on Zamindari tenure in Agra and Taluqdari tenure in Oudh. The principal land owners in Oudh are the Taluquars, some of whom own very large estates. The area held in Taluqdari tenure amounts to 54 per cent of the total area in Oudh.

The Provincial Legislative Assembly passed on August 8, 1946 a resolution accepting the principle of abolition of Zamindari system in the Province and requested Government to appoint a Committee. In pursuance of this resolution, Government appointed a Committee in October 1946, to prepare a scheme for abolition of zamindari system in the Province. Though the report of the Committee is still awaited it is gathered that the Committee has arrived at certain tentative conclusions in regard to the amount of compensation to be paid.

THE PEOPLE

The population is mainly Hindi. The 1941 census has disclosed slight variations in the communal percentages. The Hindus were 83.27 per cent as against 84.4% in 1931, the Muslims numbering 15.28% as against 15% at the previous census. The total of all other communities was 1.44% comprising of Indian Christians, Anglo-Indians, other Christians, Sikhs, Jains, Parsees, Buddhists, Jews, Tribes other than scheduled castes and of persons who declared themselves as belonging to no caste or religion. Among the Hindus are included scheduled castes, caste Hindus and Arya Samajists.

The three main physical types are Dravidian, Aryan and Mongoloid, the latter being confined to the Himalayan and sub-Himalayan districts and the former to South Mirzapur and Bundelkhand, whilst the high caste Aryans are frequent in the western district of the Province. Most of the people, however, show a mixed Arya-Dravidian origin.

The spoken language of the Province is Hindustani, written in Nagri and Persian characters. There are distinct literatures in Hindi and Urdu languages respectively and a certain proportion of residents in urban areas, irrespective of their religion, speak and write in Urdu which has a close relationship with Persian and Arabic. But Hindi is the language of the vast majority of the people and Government have made Hindi written in the Devanagari script the State language of the Province.

LOCAL SELF-GOVERNMENT

The main units of local self-government are the district and municipal boards, which have non-official Chairmen. Most of the municipal boards having an annual income of Rs. 50,000 or over have executive officers to whom certain administrative powers are reserved. The administrative functions of the municipal and district boards are performed by the Chairman and Executive Officer or the Secretary, but the boards themselves are directly responsible for most of the administration. The constitution of Municipal and District boards is now being liberalised, with direct election of chairman, widened franchise and joint electorate with reservation of seats for minorities as the main features of the reform.

The district boards obtain 50.68 per cent. of their income from Government grants. The other chief sources of income are the local rate levied from the land owners and the tax on circumstances and property imposed by some of the boards. The United Provinces Motor Vehicles Taxation Act came into force with effect from January 1st, 1936. The tax realised under this Act is also utilized in the payment of grants to local authorities for purposes of expenditure on the construction, maintenance and improvement of roads. The chief source of municipal income is the octroi or terminal tax and toll which is an octroi in modified form. Local opinion is strongly in favour of indirect as opposed to direct taxation for municipal purposes.

JUSTICE

Justice is administered by the High Court of Judicature at Allahabad in the portion of the province known as Agra and by the Chief Court sitting at Lucknow in the portion of the province known as Oudh. They are the final appellate authorities in both criminal and civil cases. The former consists of a Chief Justice and ten permanent, and additional Judges, one of whom is a European and the latter consists of a Chief Judge and three permanent and two additional Judges, one of whom is an Anglo-Indian. There are 30 posts of district and sessions judges of which nine are held by officers not belonging to the Indian Civil Service as they have been listed to the provincial service and the bar. Usually they exercise appellate jurisdiction in civil and criminal cases and in certain conditions in cases under the United Provinces Tenancy Act. The High Court has extraordinary original jurisdiction. The Chief Court's original jurisdiction was abolished in 1939 by an Act of the Provincial Legislature.

District Officers and their assistants including tahsildars, preside in criminal courts as magistrates and as collectors and assistant collectors, in rent and revenue courts and dispose of a good deal of the work. Honorary magistrates and honorary assistant collectors who function in all the districts also deal with criminal, revenue and rent cases. Stipendiary Revenue officers have been appointed temporarily all over the Province to assist in the disposal of rent and revenue case work, and judicial officers have been similarly appointed temporarily to assist in the disposal of criminal cases. Kumaon was brought under the Civil Jurisdiction of the High Court in 1926. The deputy and assistant commissioners exercise inferior civil powers in this division which has no separate civil courts. In the rest of the province there are civil judges, Judges of small cause courts and Munsiffs who dispose of a large number of civil suits. The jurisdiction of a civil judge extends to all original suits without pecuniary limit and a Munsiff can hear cases ordinarily of a value not exceeding Rs. 2,000 and if specially empowered up to Rs. 5,000.

Some civil judges in the Province have been invested with powers of Assistant Sessions Judge to try Sessions cases of lesser importance and some munsiffs have been invested with magisterial powers for trying criminal cases.

Appeals from munsiffs always lie to the district judge while those from the civil judges go to the High Court or the Chief Court, except in cases of a value of Rs. 5,000 or less which are heard by the district judge. Small cause court judges, ordinarily try suits to the value of Rs. 500 but the Senior Judges of Small Cause are empowered to try suits of a civil nature of which the value does not exceed Rs. 1,000. There are also honorary munsiffs whose jurisdiction is limited to Rs. 200, and village munsiffs whose jurisdiction is fixed at Rs. 20.

PUBLIC WORKS DEPARTMENT

The Public Works Department (Buildings Roads and Irrigation Branches), is under the Hon'ble Minister for Public Works and Irrigation and the post of Secretary to Government is held by a member of the Indian Civil Service.

The Buildings and Roads Branch is administered by three Chief Engineers, two on the Administrative side and one for Post-War Planning. The Province is divided into 7 circles and 27 divisions. Each circle is in the charge of a Superintending Engineer and each division is under an Executive Engineer. This Branch of P.W.D. is entrusted with the maintenance of all Provincial metalled and unmetalled roads and the construction of all departmental buildings (except those of Irrigation Branch) each costing more than Rs. 7,500.

The Buildings and Roads Branch has increased to more than thrice its size since the outbreak of the war and has now undertaken an extensive programme of Road and Building construction.

COMMUNICATIONS

The road construction scheme is proposed to be spread over 10 years in two phases of 3 and 7 years respectively and would cost nearly 60 crores. Roads have been classified into 4 classes. (1) National Highways—These would traverse several Provinces or States and would be of National importance. (2) Provincial Highways—These would be main roads running along and across the length of the Province. (3) Major District Roads—These would mainly serve the needs of each district and are being taken over from District Boards for reconstruction. (4) Village and other District Roads—These would serve the villages and will run each village within reach of at least 5 to 6 miles of a pucca road. On the completion of first phase of the programme (1946-49) which is estimated to cost 15.5 crores the province will have 9,631 miles of metalled roads 5,611 miles of unmetalled roads and 508 miles of cement concrete tracks. On completion of the second phase of the programme, the Province will have 15,160 miles of metalled roads, 10,000 miles of unmetalled roads and 3,000 miles of cement concrete tracks.

BUILDINGS

In the Post-War Building Scheme 410 buildings costing about 3 crores are proposed to be constructed throughout the Province during 1946-47. The important buildings to be taken up for construction are mostly of Medical, Animal Husbandry, Agricultural and Educa-

tional Departments, i.e. (1) new Medical College at Agra, (2) extension of Medical College at Lucknow, (3) Veterinary College at Fyzabad, (4) Nurses Training Centre at Kanpur, (5) Colonization Scheme, (6) Town and Village Housing Schemes, (7) Residences for councillors at Lucknow, (8) Construction of certain Head of Departments' offices at Lucknow.

The Buildings and Roads Branch has recently started Research and Town Planning sections. Research section deals with Soil Stabilization and researches in Cement concrete and low cost houses. Town planning section deals with the development and expansion of the urban areas in the Province.

IRRIGATION BRANCH

The Irrigation branch is administered by three Chief Engineers. The province is divided into circles and divisions.

The Irrigation Branch administers the various Irrigation works in the province as well as the Ganges Canal Hydro-Electric Grid, the Tube-well Irrigation scheme, and the Fyzabad Electricity and Gogra Pumping Schemes. The Ganges, the Eastern Jumna, and the Agra Canals are administered by the Chief Engineer (West) while the Sarda Canal, and Gogra pumping schemes, the Bundelkhand Canals and the Tube-wells are administered by the Chief Engineer (East). The Project Circle, Irrigation Works, the Sarda Power House Construction Circle, the Hydro-circle, the Ganges Canal Hydro-Electric Grid and the Fyzabad Electricity scheme are under the administration of the Chief Engineer (Development).

The Canals and Tube-wells, administered by the Irrigation Branch in the United Provinces irrigate over 59 lakhs acres annually.

The Sarda Canal, was opened in 1928 for introducing irrigation into Oudh. In November 1941 an extension, which includes 350 miles of new irrigating channels, was formally opened, making the total length of the main canal and branches, including distributaries, drainage cuts and escapes at on the system, 7,236 miles. The area irrigated is over 12 lakhs of acres annually including over 2 lakhs acres sugar-cane.

The Ganges Canal—Upper and Lower. The head works of the former are situated at Hardwar in the Saharanpur district and of the latter at Narora in the Bulandshahr district. The Upper Ganges Canal came into operation in the year 1855-56, and its total mileage of channels is 5,958 miles. The area irrigated annually is about 14½ lakhs of acres. The Lower Ganges Canal was opened in 1879-80 and the total mileage of its channels is 5,124 miles. This system irrigates nearly 12 lakhs of acres.

In connection with the Grow More Food Campaign a number of channels have been remodelled and improved, with a view to increasing their water supplies and thereby enabling them to irrigate larger areas. Projects for the construction of about 800 miles of new channels on the Sarda Canal and about 400 miles on the Upper Ganges, Lower Ganges, Eastern Jumna, Betwa, Dhasan and Gogra Canals, have been prepared. Of these new channels

approximately three-fourths have been completed and opened for irrigation. The additional yield of food grains on this account will be about 75,000 tons per annum.

The Ganges Canal Hydro-Electric Grid supplies power for domestic, industrial and agricultural purposes to 14 districts in the west of the province, and to Shahdara in Delhi province. Seven of the ten available falls have been harnessed for generating electric energy and a stand-by steam power station has been constructed at Chandausi and Harduaganj of 9,000 and 8,000 K.W's. respectively, capacity, making a total of 35,900 K.W's. available on the Grid. Besides supplying energy for lights and fans and minor industries to about 93 towns, the Grid provides power for irrigation pumping from rivers, tube-wells and open wells. Another Hydro-power station at Mohammadpur designed to generate about 9,000 K.W's. is at present under construction. Additional boilers for Harduaganj steam station have also been obtained which, when installed, will raise the generating capacity of the station to 15,000 K.W's.

A large project for the construction of Hydro-power station at Pathri which would give an additional output of 5,100 K.W's. to the Ganga Grid is under consideration.

A large project for the extension of the transmission system of the Grid, which will enable the power generated at Mohammadpur power station to be utilised is under consideration. This supply of cheap power from over 2,000 sub-stations in the Grid is already having an important bearing on the economic disposal of crops and the development of industries in the urban and rural areas of the Grid zone.

The steam power station at Sohwal has a capacity of 2,500 Kilowatts. It supplies energy to the towns of Fyzabad and Ajudhia and for pumping 180 cuses of water from the Gogra at Raunahi into a canal system 129 miles long, designed to irrigate 43,000 acres. To increase the generating capacity at Sohwal, two 1,000 K.W's. generating sets have been ordered.

The United Provinces Government have various irrigation and power projects under consideration for the post-war period. Brief details of these projects on which investigations have advanced sufficiently are given below:—

Sarda Canal Hydro-Electric Scheme: It is proposed to reconstruct 12½ miles of the Sarda Main Canal to combine the present falls on the existing channels into one drop of 59 ft. for generating 20,000 K.W's. minimum at one power station with an installed capacity of 41,000 K.W's. The station would, in the first instance, be linked with the Ganges Canal Hydro-thermal system in which it will inject 10,000 K.W's. Transmission lines will also be run into Pilibhit, Bareilly, Naini Tal, Shahjahanpur, Kheri, Sitapur, Lucknow, Barabanki, Unao and Rai Bareilly Districts where energy will be made available for domestic, agricultural and industrial purposes. Investigations with regard to this scheme have been completed. 40 per cent of the work has been completed with excavation of power channel. It is anticipated that power from this power station will be available for consumption

by 1950-51. The total cost of the generation part of the scheme will be Rs. 289.14 lacs and that of transmission system Rs. 2,66,81,000. Hundreds of miles of transmission route have been surveyed.

Nayar Dam Project: It is proposed to impound 1.4 million acre feet gross in the valley of the Nayar, a tributary of the Ganges 50 miles above Hardwar, by building a dam 600 ft. high across the gorge in the river near village Marora in Garhwal district. This Dam will be almost equal in size and height to the Boulder Dam in the U.S.A. so far the highest Dam in the world. Another small Dam 190 ft. high will also be constructed at Byasghat where the Nayar meets the river Ganga. The stored flood waters will irrigate a new area of 2,38,000 acres and will improve irrigation service to 1,068,000 acres of land, at present irrigated by Upper Ganges Canal system. The gross storage capacity of the lake, which will be formed by this Dam, will be 45,000 million Cubic Feet. It is estimated that approximately 23,200 additional maunds of food grains, 150,000 additional maunds of sugar and 60,000 additional maunds of Cotton will be produced. Hydro-electric plant proposed to be installed on the project will have a capacity of 200,000 K.W's. at Marora Dam and 320,000 K.W's. at Byasghat. The scheme will generate 908,700,000 K.W.H. annually at a cost of less than 2 pies per unit. Extensive exploration of the Dam foundations are now complete and the project is ready. The scheme is estimated to cost Rs. 24.0 crores out of which Rs. 16.70 crores will be debited to power generation and Rs. 7.3 crores to irrigation. The project will take some seven years to complete.

Rihand Dam Project: It is proposed to impound 9 million acre feet gross in the Rihand basin in Singrauli Pargana, Mirzapur district by a 280 feet high, 3,000 feet long dam across a gorge near Pipri village. Power will be generated by the artificial head created by the storage dam at the power station situated immediately below it. The power of the installed plant is expected to be 3,00,000 horse power. The United Provinces Government are carrying on the investigation with regard to this site pending formation of the Sone Valley Corporation, the formation of which is under consideration at present. This scheme will also make the river Sone navigable at its confluence with the Rihand river and the Rihand river up to the dam site. The dam will control floods in the Rihand and the Sone, and provide a huge lake for breeding fish for food. The project estimate is ready and work to begin with shortly.

In order to meet the growing demand for irrigation facilities in the Eastern Districts, Government proposed to construct canals from Rapti and Kuana rivers which would serve Domariaganj, Basti, Basti, Khalilabad and the tahsils of Basti District and Bangaon Tehsil of Gorakhpur district, and from the Rohia and Danda rivers which will serve the areas bounded by Dourai Nadi in the east, Rohia Nadi in the west, Lukimpur in the south, and Rohia Nadi and Railway line from Nautanwan to Nal Ket respectively. Nine pumps have also been purchased for installation at various places in Aamgarh District and a pumping scheme is under investigation from Gogra river near Banawa which will serve Barabanki

Fyzabad, Sultanpur, Partabgarh, Jaunpur and Benares. The channels on the existing Gogra canal system are also being extended by 50 miles. It is also proposed to construct 100 tube-wells in the Basti and Gorakhpur districts, which would irrigate 24,000 acres of Rabi, 12,000 acres of sugar-cane and 6,000 acres of rice giving and additional yield of 210,000 maunds of food grains. The project estimate for Gorakhpur 100 tube-wells and Danda canal have since been sanctioned by Government. The work on the former is to begin shortly in right earnest while the construction of the latter is nearing completion.

The following schemes are under investigation by the Development administration:—

Ramganga Dam Scheme: It is proposed to store 96,000 million cubic feet of the flood waters in the valley of the Ramganga by building an earth and rock fill Dam about 340 feet high above the river bed across a gorge about 2 miles upstream from the Kalagarh Forest Rest House in the Garhwal district. The Dam will be one of the highest earth and rocks dams in the world.

During the dry weather the water stored in the lake formed by the Dam, will be released to flow down the river to Bijnor District 15 miles downstream. Here it will be diverted by a river into 50 miles long feeder across the Doab into the Ganga River near Garmukhteshwar. This will supplement the inadequate supplies at present available to Lower Ganges canal. Approximately 800,000 acres of crop will be irrigated.

60,000 K.W's. power will also be available from the scheme during the irrigation period. The scheme is expected to cost Rs. 14.0 Crores. New irrigation canals and extensions of existing channels will cost a further Rs. 8.0 Crores. The project is under detailed investigation.

Kothri Dam Dam: This will impound 7,800 million cubic feet of water and out of this 4,000 million cubic feet will be available for irrigation. It is a dual purpose scheme and will generate 4,000 K.W's. peak power as well. The cost is estimated to be approximately Rs. 3.0 crores. The project is under preparation.

Yamuna Hydro-Electric Scheme: This scheme will utilize for the generation of power, the total drop of approximately 750 ft. available in Rivers, Tons and Yamuna, from the site of the proposed Kishan Dam about 14 miles upstream of the confluence of River Tons with Yamuna, to Proute Sahib on the river Yamuna.

The development will be carried out in two stages and will comprise the construction of 7 miles of limits, 14 miles of concrete lined open channel, two weirs across the River Tons, one weir across River Yamuna at Kalsi bridge and four hydro-electric power stations. This scheme will make available 48 million units (K.W.H.). The two stages of the scheme are expected to cost Rs. 6.49 crores and 7.63 crores respectively and the corresponding power plant installations will be 96,000 K.W's. and 60,000 K.W's. respectively.

Pinder Hydro-Electric Development: The possibility of developing hydro-electric power from Pinder River, a tributary of the Ganga, which it meets at Karanprayag, District Garhwal,

is under investigation. Preliminary reconnaissance indicates that by the construction of two Dams 250 ft. and 500 ft. high, 1½ miles and 10½ miles respectively upstream from Karanprayag, 40,000 K.W's. of firm power and 50,000 K.W's. of seasonal power could be generated. If the construction of these two Dams are found feasible on detailed investigation, it will supply cheap power for the development of Upper Garhwal, Almora and Naini Tal Districts. Preliminary investigations are in progress.

Besides the Eastern districts it is proposed to construct two Dams one on Shahzad river near Lalitpur in Jhansi District and the other on Karamnasa river near Silhot.

These dams are as below:—

Lalitpur Dam: This will give approximately 3,000 million Cubic feet of water to the Betwa Canal System. It is expected that the Dam will be completed during 1948 Monsoon and will cost Rs. 27,30,000. The work on the Dam has already started. It will irrigate 30,000 additional acres of Rabi Crop.

Nagwa Dam: Work on this scheme, which will cost Rs. 32½ lakhs is in progress. The Dam will augment water-supplies in the Garal and Ghagar Canal Systems where nice irrigation is to be developed.

The following two projects are also under consideration:—

Sagar Dam: Government have under consideration a project for the construction of an earthen Dam on Sagar River with a gross capacity of 2,800 million cubic feet at Man Ranipur in Jhansi District. The estimated cost is Rs. 41,05,492. The schemes will help in irrigating 24,800 acres which may produce 6,200 tons additional food annually.

Piprai Dam: The project provides for the construction of earthen Dam 100 ft. high on Narayan River in the border of U.P. and C.P. at the Southern tip of Jhansi District. The storage is 11,600 cu. ft. and estimated cost is Rs. 185,92,000. New irrigating channels 460 miles in length will be constructed in Jhansi Hamirpur and Jalaun Districts. Irrigated area is 77,000 acres in Rabi and 39,000 acres in Kharif. The scheme will help to produce 30,000 tons additional food grains annually.

A project for Power Development on the Betwa river has been prepared and is under the consideration of Government. It provides in the first stage for a power house at Dhukwan with an installed capacity of 10,000 K.W's. It will make electricity available at Orai, Kalpi, Jhansi and a few other towns in Jhansi and Jalaun Districts.

The Ganges Valley State Tube-well Scheme which originally comprised 1,656 tube-wells is now being extended by the construction of 600 more additional tube-wells to help the Grow More Food Campaign. These tube-wells are spread over the districts of Moradabad, Bijnor, Bulandshahr, Aligarh, and parts of Etah and Bareilly introducing irrigation on the volumetric system over approximately an area of 19,80,858 acres, under the ultimate development scheme, hitherto without any source of irrigation.

The Irrigation Branch also maintains a Research Section which deals with problems of flowing water, silting troubles, scouring action below pucca works, channel losses, model experiments of existing and proposed Canal works, etc. The Research organisation is being expanded and Government have sanctioned the establishment of a Research Institute at Roorkee under a Director.

POLICE

The Police Force is administered by an Inspector-General, with six Deputy Inspectors-General, including one Deputy Inspector-General now known as D. I. G., Headquarters and Railways, and two temporary Officers and two Assistants to I. G. of Police, 48 Superintendents including one S. P., Railways and additional Superintendent of Police, 41 Assistant Superintendents and 88 Deputy Superintendents. There is a Police Training College at Moradabad under a Superintendent of Police as Principal. There is a C. I. D. forming a separate department with a Deputy Inspector-General (temporary) in charge and three Superintendents of Police. In place of the Military Police, there is now a Provincial Armed Constabulary which has been reorganised and expanded to constitute 11 battalions. It is under the command of an Assistant Inspector-General, 10 Commandants of the rank of Superintendents of Police, and 21 Assistant Commandants of the rank of Deputy Superintendents of Police. A Superintendent of Police is now in charge of the Anti-Corruption Department and is assisted by two Superintendents of Police and six Deputy Superintendents of Police. The administration of the Jail Department is in charge of an Inspector-General of Prisons, who is a retired member of the Indian Medical Service.

EDUCATION

Education is maintained in part by the State and partly by means of grants-in-aid. There are five Universities, the four residential Universities of Allahabad, Lucknow, Aligarh (Muslim) and Benares (Hindu) and the affiliating University of Agra. The last named was established in 1927 besides eleven affiliated colleges situated outside the United Provinces. Agra University consists of twelve colleges, some of which were formerly associated with the Allahabad University on its external side. These colleges are the Agra and St. John's Colleges at Agra, Christ Church, D.A.V. and Sanatan Dharma Colleges, Cawnpore; the Meerut College, Meerut; the Bareilly College, Bareilly; St. Andrew's College, Gorakhpur; The Balwant Rajput College, and the Agra Medical College, Agra; The Amar Singh K.E.M. Jat College, Lakhnoti; and the Agricultural College, Cawnpore. There are Intermediate Colleges and Anglo-Hindustani high and middle schools which prepare boys for the High School and Intermediate Examinations conducted by the Board of High School and Intermediate Education, which prescribes courses for high school and intermediate education.

There are 49 Government High Schools for boys and 13 for girls and 8 Government Intermediate Colleges for boys and one for girls; the remainder are under private management and are aided by Government.

The Isabella Thoburn College and the Mahila Vidyalya College at Lucknow, and the Women's

College at Aligarh, impart University education to Indian girls. The Basant College for women at Benares, the Gokuldas Hindu Girls' Intermediate College, Moradabad, Balika Vidyalya Intermediate College, Kanpur, Crosthwaite Girls' Intermediate College, Allahabad, Raghunath Girls' Intermediate College, Meerut, Prem Vidyalya Girls' Intermediate College, Dayalbagh, Agra, Karamat Hussain Girls' Intermediate College, Lucknow, Mahadevi Kanya Pathshala, Dehra Dun, Kishori Raman Girls' Inter College, Muttra, Tika Ram Girls' Intermediate College, Aligarh, Seksaria Theosophical Girls' College, Sitapur and Dwarka Prasad Girls' Intermediate College, Allahabad, teach upto the Intermediate stage. In addition to these there are High Schools, English Middle and Hindustani Lower Middle Schools and Primary Schools throughout the Province for the education of Indian girls. The St. George Inter College, Mussoorie, The St. Joseph's College, Naini Tal, Sherwood Inter College, Naini Tal and La Martiniere College, Lucknow, are well known institutions for European and Anglo-Indian children in the province which teach upto the Intermediate stage. All Saints' Diocesan College, Naini Tal has a Teacher's Training Department for Women Teachers and also a Cambridge Higher Certificate Class. Besides these, there are many excellent educational institutions for European boys and girls both in the hills and plains which are attended by students from all over India. Government maintain Training Colleges for Male Teachers in Lucknow, Allahabad and Agra, and a Training Department is attached to the Lucknow Christian College. There are Training Departments attached to the Aligarh Muslim University and the Benares Hindu University. Government also maintains a Training College for Women Teachers at Allahabad. The Allahabad University has started a course leading to the M.Ed. degree but this is confined to those who have already obtained the diploma of L.T. or B.T. elsewhere.

Technical Education.—There is a Department of Mining and Metallurgy in the Benares Hindu University where four years' courses of training are provided, leading to degrees in the two subjects. This is the only University in India where training in these two industrial subjects is available. There is a Technical Institute known as the Harcourt Butler Technological Institute and a Central Textile Institute at Kanpur; a school of Arts and Crafts at Lucknow; three Government Technical Institutes at Lucknow, Gorakhpur and Jhansi respectively; one Polytechnic Institute at Srinagar (Garhwal); five carpentry schools, one known as Central Wood Working Institute, Bareilly; others are at Allahabad, Fyzabad, Naini Tal and Dehra Dun; six weaving schools, one known as Central Weaving Institute at Benares, others at Mau (Azamgarh), Kairabad (Sitapur), Amroha (Moradabad), Muzaffarnagar, and Bulandshahr and one Metal Working School at Aligarh; two Leather Working Schools at Kanpur and Meerut, one Tanning School at Fatehpur; and one Brassware School at Benares known as Batuk Prasad Khatri Industrial Institute. There is also a Technical College and Leather Working School at Dayalbagh, Agra.

There is a Government Engineering College at Roorkee known as Thomason College and a school of Arts and Crafts in Lucknow. There are two Civil Engineering Schools at Lucknow. At the Benares Hindu University there is a five years' course in Electrical and Mechanical Engineering.

There is an Agricultural College at Kanpur and three Agricultural Schools at Gorakhpur, Bulandshahr and Ghazipur. There is also a Non-government Agricultural Institute at Allahabad and a Non-government Degree College in Agriculture at Agra and Lakhaoti (District Bulandshahr) and an Intermediate College in Agriculture at Baraut (District Meerut).

Law, Medical.—Education in Law is given at four residential Universities and at the Agra and Meerut Colleges and at the Dayanand Anglo-Vedic and Sanatan Dharma Colleges at Kanpur, and at the Bareilly College. Instruction in Commerce for the B. Com. degree of the Agra University is given in the Sanatan Dharma and the D.A.V. Colleges at Kanpur and in the St. John's College at Agra, Bareilly College, Bareilly, and Balwant Rajput College, Agra. A Commerce Department for the B.Com. degree is also attached to Allahabad, Benares and Lucknow Universities.

The King George's Medical College, Lucknow, which is managed by the Lucknow University, prepares candidates for the M.B.B.S. and higher degrees of the Lucknow University. There is also a Government Medical College at Agra which is affiliated to the Agra University. There is also a college of Ayurveda attached to the Benares Hindu University and a college of Unani Tib attached to the Muslim University, Aligarh. The Board of Indian Medicine, U.P., established by Government in 1928, prescribes courses and holds examinations for Ayurvedic and Unani Colleges affiliated to it. The Takmillut-Tib College and the State aided Unani Medical College at Lucknow, the Unani Medical College at Allahabad, the Rishikul Ayurvedic College, Hardwar, the Bundelkhand Ayurvedic College, Jhansi, the Kanya Kubja Ayurvedic College and the Mool Chand Rastogi Trust Ayurvedic College, Lucknow, the Darshanand Ayurvedic College, Benares, and the Lalit Hari Ayurvedic College, Pilibhit, are affiliated to it.

MEDICAL

The Medical Department is in charge of an Inspector-General of Civil Hospitals who is assisted by two Deputy Inspectors-General of Civil Hospitals one of whom is specially in charge of women's hospitals and women doctors' services, and one personal assistant. The Deputy Inspector-General of Civil Hospitals (Women) is also the Secretary of the Provincial Committee of the Countess of Dufferin Fund. A Civil Surgeon is in charge and is responsible for the medical work of each district and in a few of the larger stations he has an assistant. In two stations (Ranikhet and Roorkee) Medical Officers in military employ hold collateral civil charge. There are about 100 Provincial Medical Service Officers in charge of important dispensaries and on the reserve list and a large number of Provincial Subordinate Medical Service Officers. Women's hospitals are in

charge of P.M.S. (W.) or P.S.M.S. (W.) Officers. Government have also instituted Provincial Nursing Service and a Sisters' and Nurses' Service which are controlled by a Superintendent of Nursing Services who work under the I.G.C.H. These services have been established with a view to providing trained nurses in the ratio of one nurse to five beds in district headquarters hospitals.

A new 'P.M.S. II', which also has a gazetted status, has been created. This will eventually replace the P.S.M.S. Medical Licentiatees with satisfactory war service are being appointed to it at present and in future only medical graduates will be appointed to this service.

The best equipped hospitals for Indian patients are the Thomason Hospital at Agra, King George's Hospital and the Balrampur Hospital at Lucknow, the newly-constructed Hallett Hospital, Cawnpore, the Prince of Wales Dispensary and the Ursula Horsman Memorial Hospital, Cawnpore, King Edward VII Hospital, Benares, and the Civil Hospital at Allahabad (for Europeans, Anglo-Indians and Indians living in European style). The Kansay Hospital for Europeans at Naini Tal is a first-class institution and there are also the Dufferin and Women's Hospitals at various places for rendering medical aid to women. The King George's Medical College, Lucknow, and the Agra Medical College, Agra, are two of the best equipped colleges in the country, with a staff of highly efficient professors, and the hospitals attached to the colleges are the best equipped hospitals in the Province. The Queen Mary's Hospital for women and children is also attached to the King George's Medical College and provides clinical material for the instruction of students in midwifery and gynaecology. At Agra this is done at the Lady Lyall Hospital. There are sanatoria for British soldiers in the hills. The King Edward VII Sanatorium at Bhowali in the district of Naini Tal is an up-to-date and well-equipped institution for the treatment of European and Indian consumptives. There is also a Government T.B. Clinic at Allahabad. An up-to-date T.B. Clinic is also attached to the King George's Hospital, Lucknow.

Ayurvedic, Unani.—Arrangements have been made for about 232 Ayurvedic and 68 Unani dispensaries to work in villages, under the charge of qualified Vaidas and Hakims under the Rural Development programme. A compounder has been engaged to assist. Forty-eight fixed and sixteen travelling allopathic dispensaries are also working under the Rural Development programme at suitable places in the countryside. The duty of the medical officer appointed to the Rural Development Dispensaries is not only to provide medical aid in villages but also to inculcate habits of cleanliness and carry on propaganda to ensure personal hygiene and health. Government have also appointed two Unani and four Ayurvedic Inspectors to look to the proper working of the indigenous dispensaries. These Inspectors work under the Chief Inspector of Indigenous Dispensaries, U.P.

The aim which has been kept in view in opening rural indigenous and allopathic dispensaries is to make available medical aid in villages situated in the interior of the districts.

Government also sanction every year grants for the treatment of eye diseases at certain centres in rural areas. A good number of patients suffering from cataract and other diseases have received treatment under the scheme.

There were about eighty subsidized dispensaries and thirty subsidized medical practitioners working at the end of December 1945.

Facilities for the training of Indian girls as nurses and midwives have been provided at almost all important hospitals in the Province.

The Government have established a Hospitals Fund to improve medical facilities. A sum of rupees one crore and sixteen lakhs has so far been allotted to this fund. Applications for grants out of this fund are considered and sanctioned by Government from time to time but it is in the main being conserved for post-war developments, when articles of equipment and building materials will be much cheaper.

A systematic campaign has been undertaken and large funds allotted to bring the hospitals at District Headquarters and the Dufferin Hospitals to a direct level.

Drug Factory.—To tide over the difficulty of getting imported drugs a new pharmacopoeia of indigenous drugs was introduced at hospitals and dispensaries and an Indigenous Drugs Factory was started at Agra. The factory is making good progress. Arrangements have also been made with the Director-General, Indian Medical Service, to obtain supplies of medical stores from the Medical Stores Department. A scheme was sanctioned to train 90 compounders every year for hospitals

and dispensaries in the Province and it is in operation now.

A scheme for the provincialisation of district headquarters hospitals (both men's and women's) was started by Government in 1944-45. Almost all hospitals at District Headquarters except Mainpuri, Lucknow and Deoria have now been provincialised. These too will be provincialised soon.

The Board of Indian Medicine, U.P., established by Government in 1926, has been established as a statutory body with the enforcement of the U.P. Indian Medicine Act, 1939 (x—y, 1939), with effect from October 1, 1946 and now functions in accordance with the provisions of that Act. It conducts Ayurvedic and Unani examinations of students studying at its affiliated Ayurvedic and Unani Colleges and awards diplomas to successful candidates and maintains a register of qualified vaidas and hakims. It distributes grants aggregating to Rs. 46,000 to Ayurvedic and Unani dispensaries and practitioners every year. Government give aid to subsidised Ayurvedic and Unani dispensaries and practitioners in rural and urban areas out of an allotment of Rs. 79,000. Government also give grants aggregating to Rs. 1,67,000, every year to Ayurvedic and Unani Colleges. Government's object is to render medical aid through a system in which villagers have confidence.

A Blood Bank scheme has also been started. It is getting quite a good response.

Particular care has been taken in recent years to provide X-rays and cold storage plants at important hospitals at the expense of the Provincial Government.

1948-49 BUDGET

Receipts	Rs. 4,587 lakhs
Expenditure	5,057 lakhs
Deficit	470 lakhs
Sales tax and Agriculture Income-tax estimated to yield	5 crores
Final Surplus	30 lakhs.

The Finance Minister estimated receipts at Rs. 4,587 lakhs and expenditure at Rs. 5,057 lakhs leaving a deficit of Rs. 470 lakhs to be bridged by the above two taxes which are expected to yield Rs. 5 crores.

The Minister explained that to meet this deficit there will be a general sales tax on a turnover of Rs. 12,000 or more per annum and will be levied at the rate of three pies per rupee on all goods except food grains, milk, electrical energy, gur and sugar on which tax will be levied only at the rate of one pie per rupee.

The rates of tax on agricultural income will be the same as the rates of income-tax payable to the Central Government but a super-tax is proposed to be levied at half the Central Government rates.

The Minister attributed this large deficit to increased expenditure on all development activi-

ties of the Government and partly to the general revision of salaries of Government employees.

The main items of expenditure are: National-building activities or economic welfare—Rs. 2,401 lakhs; relief and rehabilitation of refugees—Rs. 216 lakhs; general administration: police, jail and justice—Rs. 1,223 lakhs.

Some of the highlights of the budget are:—

(1) Extension of the Government's prohibition policy by declaring Kanpur and Unao districts also dry (so far seven districts only have been declared dry) and by enhancing excise duties on country spirits, ganja and opium.

(2) Provision for opening of 4,400 primary schools, introduction of military training in schools and colleges and compulsory education in all urban areas.

(3) Opening of 105 Allopathic and 72 Ayurvedic and Unani dispensaries in rural areas and establishment of a tuberculosis sanatorium at Kanpur.

(4) Provision for implementing a jute development scheme, mechanization of cattle-breeding farms and a big tank-digging drive throughout the province.

(5) Provision for constructing more airfields, development of cottage industries and primary surveys of large-scale industries, Harijan uplift and extension of the Government bus services to new routes in the province.

ADMINISTRATION

Governor.—Her Excellency Srimati Sarojini Naidu.

STAFF OF HER EXCELLENCY THE GOVERNOR.

Secretary to the Governor.—Captain C. S. Bhatnagar.

(Also Secretary, Provincial Sailors', Soldiers' and Airmen's Board.)

Assistant Secretary, Office Secretary to the Governor.—Prem Ballabh Pande.

West Bengal

ACCORDING to the Radcliffe Award the newly constituted Province of West Bengal consists of the whole of the Burdwan Division and part of the Presidency Division of old undivided Bengal, District-wise, the whole of Burdwan, Birbhum, Bankura, Hooghly, Howrah, Midnapore, Calcutta 24 Parganas, Murshidabad, and Darjeeling Districts and parts of Nadia, Malda, Jalpaiguri and Dinajpur Districts are in West Bengal. The 24 Parganas District includes the two P. S. of Jessore, Bongaon and Gaighata, that is 10.94 per cent of the area and 7.28 per cent of the population of Jessore. Of Nadia District 47.75 per cent of the population and 52.34 per cent of the area, of Malda 68.50 per cent of the population and 69.41 per cent of the area, of Jalpaiguri 77.62 per cent of the population and 81.57 per cent of the area, and of Dinajpur 30.28 per cent of the population and 35.14 per cent of the area are in West Bengal.

Besides these there are the two States of Cooch Behar and Tripura.

The total population and the relative figures of Hindus, Muslims and others are given by the following table :

	Total	Population			Percentage		
		Hindus	Muslims	Others	Hindus	Muslims	Others
West Bengal ..	21,196,453	14,330,930	5,301,696	1,563,827	67.61	25.01	7.38
States ..	1,153,852	742,700	366,254	44,898	64.37	31.74	3.89
Total ..	22,350,305	15,073,630	5,667,950	1,608,725	67.44	25.36	7.20

According to the Census figures of 1931, Bengal is spoken by about 83 per cent of the population of West Bengal and Hindi and Urdu by about 8.3 per cent.

AGRICULTURE

The great majority of the people are engaged in agriculture, pasture and raising dairy produce. The principal crops are rice and jute. During 1943-44 the area under rice in West Bengal was 8,159,342 acres and the total cropped area nearly 10,300,635 acres, i.e., the area under rice was approximately 79 per cent of the total cropped area. In 1946-47 area under rice was about 9,999,600. The area under jute is given by the following figures :—

	1946-47	1947-48
West Bengal	151,915 acres	229,175 acres
States ..	36,825 "	48,210 "
Total ..	188,740 "	277,385 "

H. E. Kailashnath Katju

Other crops include barley, wheat, pulses and oil-seeds. Sugar is produced both from sugar-cane and date palm and tobacco is grown for local consumption in nearly every district. The area under tea in 1943-44 (the latest available figures) was 195,000 acres, the number of gardens in 1946 was 286 and the picked number of workers attending 223,000

INDUSTRY

Agriculture is the principal industry of West Bengal. In addition to this there are the jute mill industry, the tea industry (confined to the districts of Jalpaiguri including the Dooars and Darjeeling), the coal mining industry and the sugar industry. The jute mills in and around Calcutta and in the riparian tracts of the districts of Howrah and Hooghly constitute the principal manufacturing industry of the Province.

Prior to the outbreak of war raw jute prices showed considerable fluctuation and the demand for jute goods also increased;

EDUCATION

so the Ordinance restricting working hours was withdrawn only to be replaced soon after by a voluntary restriction agreement among the mills as wartime shipping restrictions made themselves felt and first European, and later Far Eastern, markets were lost. Once again raw jute production started to exceed demand, and only a further agreement between the mills and the undivided Bengal Government whereby the former undertook to purchase a stipulated quantity at minimum rates, and a slight increase in demand for Middle East operations during 1941 helped to stave off another difficult situation.

On the whole 1942 was a more prosperous year despite the difficulties of transport and increasing war demands on the industry, but in 1943 two other problems were added to these—food for labour and shortage of coal, while the increasing value of food crops also lead to short sowing of jute. Large orders from America helped to offset the otherwise poor year which might have been expected, but it was apparent that some form of rationalisation or still more agreement would be necessary to restore the balance. The jute industry played a big role in World War II—all mills working to full capacity. Post-war prospects are good, the first quarter of 1946 brought large orders to Bengal.

The following table gives the value of imports and exports of principal articles in the port of Calcutta during pre-war and post-war periods.

Value in (000) Rs. R. C. of			
Pre-War 1938-39	Post-War 1946-47†	Variation	
Imports ..	429,534	668,149	55.55*
Exports ..	708,857	1,850,877	161.11*

* Excluding the values of "other items."

† Compiled from unpublished Records.

Educational institutions in West Bengal are controlled by the Department of Education, the University of Calcutta district boards, municipalities, district school boards and a number of religious and philanthropic societies. The control of general education as also of engineering education is ultimately vested in the Minister of Education, whereas medical education is controlled by the Department of Local Self-Government, and agricultural, technical and industrial education by the Department of Agriculture and Industries.

The Director of Public Instruction is the executive head of the Department, assisted by an Assistant Director, three Special Officers for Primary, Scheduled Caste and Secondary Education and a Reader and Secretary, Text Book Committee. Each division is in charge of a Divisional Inspector assisted by a certain number of Additional or Second Inspectors according to the requirements of the several divisions. Similarly the administrative charge of the primary education of each district is in the hands of a District Inspector assisted by Sub-Divisional Inspectors and Sub-Inspectors of Schools, the latter class of officers being in some instances helped by officers of humbler status called Assistant Sub-Inspectors and Inspecting Pandits and Maulvis.

The University of Calcutta established in 1857 is administered by the Chancellor (the Governor of Bengal), the Vice-Chancellor (appointed by Government) and a number of ex-officio, elected and nominated fellows. The University of Calcutta maintains a Law College, called University Law College, Calcutta. Calcutta University is mainly an examining body, but has now made itself responsible for advanced teaching for which purpose it employs an agency which is mainly distinct from the staffs of the affiliated Colleges.

The Education of Europeans is mainly conducted by private agency, assisted by Government grants. Government however maintain a special Inspector, and also a school for boys and a school for girls (both residential) at Kurseong.

The following table gives some relevant statistics in regard to education :—

Category	Number of Schools			Number of Students							Total Number of Students		
	(1)	(2)		(3)	(4)	Boys Schools		Girls Schools		Total	Boys	Girls	Total

JUSTICE

The administration of justice is entrusted to the High Court of Calcutta. Below the High Court are the District and Additional Judges, the Small Causes Court and Subordinate Judges and Munsifs. Of these officers, the District and Additional Judges and a certain number of Subordinate Judges are also endowed with the powers of a Criminal Court while the remainder have jurisdiction in Civil matters only.

Criminal Justice is administered by the High Court, the Courts of Session and the Courts of that various classes of Magistrates. On its appellate side, the High Court is a source of appeal from the order of a Court of Session, and it also confirms, modifies or annuls sentences of death passed by Sessions Courts. One of the Presidency Magistrates in Calcutta is in charge of the Children's Court and is helped by Hon'y. Women Magistrates. It has also two Municipal Magistrates and it possesses a Court of Small Causes with Judges who dispose of cases of the class that are usually heard in County Courts in England.

In addition a number of Union Benches and Courts have been established in selected rural areas for the disposal by honorary agency of petty criminal cases and civil disputes.

LOCAL SELF-GOVERNMENT

By Bengal Act III of 1884, and its subsequent amendments, which hitherto regulated municipal bodies in the Interior, the powers of Commissioners of municipalities were increased and the elective franchise was extended. Bengal Act III of 1884 was repealed by Act XV of 1932 by which material changes have been introduced, e.g., the franchise of the electors has been further widened, women have been enfranchised, the proportion of elected commissioners has been increased and the term of office of the Commissioners has been extended from three to four years. Municipal expenditure

now comprises a large number of objects, including water-supply, public works, maintenance of hospitals, dispensaries and educational institutions, veterinary institutions, employment of health officers, vaccinators and sanitary inspectors, the training and employment of female medical practitioners, the provision of model dwelling houses for the working classes, the holding of industrial, sanitary and health exhibitions and the improvement of breed of cattle. The Commissioners also have large powers in regard to the water-supply and the regulation of buildings.

The Municipal Government of Calcutta is governed by Act III of 1923. This Act, which replaced Act III of 1899, makes the Corporation paramount in matters relating to municipal administration. The Act provides for the appointment of a Mayor, who replaces the Chairman of the old Act, a Deputy Mayor, an Executive Officer, and two Deputy Executive Officers, all elected by the Corporation. The appointments of the Chief Executive Officer and the six other principal officers of the Corporation are subject to the approval of Government. In order to improve the insanitary and congested areas of the city, the Calcutta Improvement Trust has been created with extensive powers.

In the mofussil, district and local boards exercise considerable powers, with regard to public works, education and medical relief.

Bengal Act V of 1919 introduces the new system of self-government by the creation of village authorities vested with the powers and duties necessary for the management of village affairs and entrusted with powers of self-taxation. The new village authority called the union board, replaces gradually the old chaukidari panchayats and the union committees and deals with the village police, village roads, water-supply, sanitation, primary schools and dispensaries. The Act also empowers Government to create out of the members of the union boards, village benches and courts for the trial of petty criminal and civil cases arising within the union. The Act has been extended to all districts in the Province.

PUBLIC WORKS

The Public Works Department consists of Public Works and Railway Departments and is under the charge of the Secretary to Government in the Department of Communications and Works and Buildings.

The Public Works Department deals with questions regarding the construction and maintenance of public buildings and also regarding roads, bridges, etc.

The Railway Department deals with questions regarding acquisition of lands required by the several Railways, the alignment of new lines of Railways, and with Tramway projects.

There is a Chief Engineer who is the principal professional adviser to Government.

* Most of the Art Colleges include science section.

MARINE

The Marine Department deals with questions connected with the administration of the port of Calcutta and inland navigation, including the control and administration of Government launches except the police launches.

IRRIGATION

The Irrigation Department deals with irrigation, navigation, flood protection by means of embankments and drainage, the latter including relief from congestion of drainage by regulating the available supplies of water to suit the requirements of agriculture combined with the supply of water for irrigation in cases in which a supply is available.

POLICE

The West Bengal Police force comprises the Military Police, the District Police and the Railway Police. The West Bengal Police are under the control of the Inspector-General of Police, the present Inspector-General being a member of the Imperial Police Service. Under him are Deputy Inspectors-General for the Presidency range and the Burdwan range and also one Deputy Inspector-General in Charge of the C.I.D. and the Intelligence Branch.

Each district is in charge of a Superintendent, and some of the more important districts have one or more Additional Superintendents. The Railway Police is divided into three distinct charges, each under a Superintendent. The cadre comprises Assistant Superintendents, Deputy Superintendents, Inspectors, Sub-Inspectors, Sergeants, Assistant Sub-Inspectors, Head Constables and Constables. There is also a Village Police, composed of daffadars and chowkidars, who receive a monthly salary which is collected from the villages or unions by the Panchayat or Union Board. The Calcutta City Police is a separate force maintained by Government under a Commissioner who is responsible direct to Government. The Commissioner has under him Deputy Commissioners, Assistant Commissioners, Inspectors, Sub-Inspectors, Sergeants, Assistant Sub-Inspectors, Head Constables and Constables. A school for the training of recruits for the Calcutta Police force has been established at Calcutta. The annual cost of the Police is over 300 lakhs.

PUBLIC HEALTH

The head of the Medical Directorate is the Director of Health Services Government of West Bengal. In the districts the Civil Surgeons are responsible for medical work. According to the latest statistics available there are 59 hospitals and dispensaries in Calcutta, 11 of which are supported by the Government and 1,514,528 persons were treated at these institutions of whom 174,668 were in-patients. The Governments of West Bengal have sanctioned 48 lakhs for expenditure in connection with Public Health in Budget-estimates for 1948-49.

THE FINANCES

The Government of undivided Bengal had a succession of deficit budgets during the last few years and their budget for the year 1947-48 left an uncovered gap of 6 crores between revenue

and expenditure. The Account of the late Government of Bengal with the Reserve Bank on the date of Partition showed a debit balance of a little over 5 crores. This debit balance, was, by direct negotiation between Pakistan and the Indian Union in Delhi, allocated in equal proportions to East and West Bengal.

The Government of West Bengal accordingly started with a debit balance of 2½ crores in the Reserve Bank partly counterbalanced by the cash balance in Treasuries amounting to about half a crore. In other words, it started with a net negative opening balance of 2 crores. West Bengal's share of the debit balance in the Reserve Bank (viz., 2½ crores), was liquidated with the help of a special advance of an equivalent amount obtained from the Government of India. A further Ways and Means advance of 2 crores was taken by West Bengal from the same source to enable the Province to carry on till sufficient revenue had been collected for the purpose of a reasonable working balance. The Ways and Means advance of 2 crores has since been fully repaid. The terms of repayment of the other advance of 2½ crores have not yet been finally settled.

ESTIMATED REVENUE FOR 1948-49.

(The figures are in Thousands of Rupees.)

Heads of Revenue.	Revised Estimate 15-8-47 to 31-3-48.	Budget Estimate 1948-49.

ADMINISTRATION

The present form of administration in Bengal dates from 15th August, 1947. In 1912 the Government of the Province underwent an important change, when in accordance with the Proclamation of His Majesty the King-Emperor at Delhi, the Province was raised from the status of a Lieutenant-Governor to that of a Governor-in-Council, thus bringing it into line with the Presidencies of Madras and Bombay. In 1921, under the Reform Scheme, the Local Government was reconstituted, certain of the departments being placed under the control of Ministers appointed from among elected members of the legislative Council. There were normally four members of the Executive Council in charge of the "reserved subjects," and three Ministers, who were in charge of the "transferred subjects."

With the enforcement of the Government of India Act of 1935 on April 1, 1937, complete provincial autonomy came into being. The entire administration vested in the Governor assisted by a Council of Ministers holding office during his pleasure but answerable to a wholly elective legislature comprising two houses. Except in regard to his special responsibilities, the Governor corresponded to a constitutional monarch. The services no longer found a place in the legislatures and were subordinate to the Ministers. Dyarchy disappeared and there was complete responsible Government.

As from 15th Aug. 1947 two independent Dominions known as India and Pakistan were set up in India under the provisions of the Indian Independence Act, 1947.

The Province of Bengal, as constituted under the Government of India Act, 1935 ceased to exist from that day and in lieu thereof two new Provinces—East Bengal and West Bengal were constituted of which only the latter came under the Dominion of India. Pending the framing of the new constitution of India by its Constituent Assembly, the Legislature of the new Province of West Bengal was made unicameral by an order of the Governor-General issued under the provisions of the Indian Independence Act, 1947. The administration of this Province is at present carried on under the Government of India Act, 1935 as adapted by orders of the Governor-General issued from time to time under the provisions of the said Independence Act. Under the adapted Government of India Act, the special responsibilities of the Governor as well as his discretionary powers have ceased to exist.

The unit of administration is the District Magistrate and Collector. As Collector he supervises the gathering of the revenue and is the head of all the Departments connected with it, while as District Magistrate he is responsible for the administration of criminal justice in the district. The immediate superior of the District Magistrate is the Divisional Commissioner. Commissioners are the channels of communication between the local officers and the Government. In certain revenue matters they are, in their turn, subject to the Board of Revenue in Calcutta; in other matters they are under the direct control of Government.

PERSONNEL

GOVERNOR.

His Excellency Kailashnath Katju.

MINISTRY.

Prime Minister, The Hon'ble Dr. Bidan Chandra Roy.
Home Minister, The Hon'ble Kiran Sankar Roy (also of *L. Assembly Depts.*)
Finance, Commerce & Industries, The Hon'ble Nalini Ranjan Sarkar.
Civil Supplies, The Hon'ble Prafulla Chandra Sen.
Education Dept., The Hon'ble Rai Harendra Nath Chaudhuri.
Works, Bldgs. and Communications, The Hon'ble Bimal Chandra Sinha.
Judicial & Legislative Depts., The Hon'ble Niharendu Dutt Majumdar.
Land & Land Revenue Dept., The Hon'ble Mohini Mohan Barman.
Labour, The Hon'ble Kalipada Mookherji.
Forests & Fisheries Dept., The Hon'ble Hem-chandra Naskar.
Irrigation & Waterways Dept., The Hon'ble Bhupati Mazumdar.
P.C. & R. Dept., The Hon'ble Nikunja Behary Maity.
Agriculture Dept., The Hon'ble Jadabendra Nath Panja.

NOTE: On May 6 the Cabinet was reconstituted with 9 out of the 12 old members. The new Cabinet is as follows: Dr. B. C. Roy, N. R. Sarkar, K. S. Roy, K. P. Mookherji, Rai I. N. Chaudhuri, P. C. Sen, N. Dutt-Majumdar, N. B. Maity, J. Panja, B. C. Sinha.

H. E. THE GOVERNOR'S PERSONAL STAFF.

Secretary, S. N. Roy, I.C.S.
Assistant Secretary, P. B. Sen Gupta.
Private Secretary, S. Krishna Murti.
Assistant Private Secretary,
Military Secretary, Lt.-Col. B. B. Chatterji.
Physician, Dr. Amal Kumar Roy Choudhuri, M.D.
Physician, Lt. M. Banji, M.S. (Cal.), F.R.C.S. (Eng.)
Ophthalmic Surgeon, T. Ahmed, M.D. (Dors.), F.R.C.S. (Eng.)
Dental Surgeon, Dr. Benkim Mukherji, L.D.S., R.C.S. (Eng.)
Surgeon in Darjeeling, Dr. S. N. Chowdhury, M.B.

AIDE-DE-CAMP.

I. Singaravelu (*Madras Police*), S/Lieut. H. Bhattacharyya, R.I.N.V.R., Lieut. M. L. Devender Singh, I.A.

HONY AIDE-DE-CAMP.

Major and Hony. Captain, Lal Bahadur Sunwar, Sardar Bahadur, M.B.E., O.B. (Late of 10th Gurkha Rifles).

HOME DEPARTMENT.

Chief Secy., S. Sen, I.C.S.

Jt. Secys., M. A. T. Iyengar, I.C.S.; S. S. Ross; K. S. Krishnaswamy I.C.S. (*Ex-Officio and Special Officers, Home Dept.*)

Secy., Home Dept., Ranjit Gupta, I.C.S.

Provincial Transport Commissioner, Ex-Officio, S. Sen, I.C.S.

Deputy Secys., Dharendra Mohan Gupta; S. C. Dutt; Purna Chandra Acharya.

Deputy Provincial Transport Commissioner and Ex-officio, A. K. Ghosh, I.C.S.

Additional Special Officer, S. M. Goswami.

Special Officer, Evacuees Department, Benod Behari Sarkar.

Under Secy., Ranajit Ghosh.

Asst. Secy., Home (Police) Dept., Shyama Chowan Chatterji.

Asst. Secy., Home (Poll.) Dept., Viresh Chandra Dutt.

Asst. Secy., Home (G.T.) Dept., Kiran Chandra Mitra.

Asst. Secy., Home (Jails) Dept., Gadahar Singh Roy.

Asst. Provincial Transport Commissioner and Ex-officio Asst. Secy., Home (Transport) Dept., B. K. Sen.

Registrar, Home Department, L. A. D'Costa.

Asst. Secy., Home (Publicity) Dept., Ekkari Basu.

Asst. Secy., Home (Development) Dept., Brindaban Chandra De.

Asst. Secy., Home (Press) Dept., Nripendra Narayan Seta.

Special Officer, Home (Transfer) Dept., Narendra Krishna Pal.

Organisation and Methods Officers, Sachchidananda Kar and A. C. Banerji.

HEALTH AND LOCAL SELF-GOV'T. AND JAILS DEPT.

Secretary, Sheribal Kumar Gupta, I.C.S.

Deputy Secys., Janab A. Zaman, I.C.S.; B. B. Ghosh; Niranjan Mohan Badhan.

Registrar, Harendra Nath Das Gupta.

Asst., Bisweswar Prasad Basu.

CIVIL SUPPLY DEPARTMENT.

Food and Civil Supply Commissioner, K. C. Basu, I.C.S.

Addl. Commissioner, Ex-officio Secretary, A. D. Khan, I.C.S.

Dy. Secy., E. G. Creek, I.C.S.

Director of Rationing, Bengal, D. K. Ghosh.

Asst. Secy., Sudhansu Ranjan De.

3rd Asst. Secy., Monoranjan Sarkar.

Registrar, Debendra Nath Biswas.

WEST BENGAL LEGISLATIVE ASSEMBLY

Speaker : The Hon'ble Shri Iswar Das Jalan.

Deputy Speaker : Ashutosh Mallick.

Hemanta Kumar Basu (Calcutta North, General); The Hon'ble Shri Kalipada Mookerjee (Calcutta East, General); The Hon'ble Shri Iswar Das Jalan (Calcutta West, General); Basantlal Murarka (Calcutta Central, General); J. C. Gupta (Calcutta South Central, General); Satish Chandra Bose (Calcutta South, General); The Hon'ble Shri Bhupati Majumdar (Hooghly cum Howrah Municipal, General); Nikumja Behari Mahtab (Burdwan Division North Municipal, General); Bepin Behari Ganguli (24-Parganas Municipal, General); Satish Chandra Chakravarty (Northern Districts Municipal, General); Jadabendra Nath Panja (Burdwan Central, General); Anadaprasad Mandal (Burdwan North-west, General); The Hon'ble Dr. P. C. Ghosh (Birbhum, General); Shri Kanai Lal De (Bankura West, General); The Hon'ble Shri Kamal Krishna Ray (Bankura East, General); Charu Chandra Mahanty (Midnapore Central, General); The Hon'ble Shri Annada Prosad Chowdhury (Jhargram cum Ghatol, General); Rajani Kanta Pramanik (Midnapore East, General); Pramatha Nath Bandopadhyaya (Midnapore South-west, General); Iswar Chandra Mal (Midnapore South-east, General); Dharendra Narayan Mukherji (Hooghly North-east, General); Sukumar Dutta (Hooghly South-west, General); Shri Susil Kumar Banerjee (Howrah, General); Bimal Chandra Sinha (24-Parganas South-east, General); The Hon'ble Shri Charu Chandra Bhandari (24-Parganas North-west, General); Shyamapada Bhattacharyya (Murshidabad, General); Khagendra Nath Das Gupta (Jalpaiguri-cum-Siliguri, General); Damber Singh Gurung (Darjeeling, General); Kanailal Dass (Burdwan Central, General); Shri Bankubehari Mandal (Burdwan North-west, General); Nishapati Majhi (Birbhum, General); Ashutosh Mallick (Bankura West, General); Krishna Prasad Mandal (Midnapore Central, General); Harendra Nath Dolul (Jhargram-cum-Ghatol, General); Radha Nath Das (Hooghly North-east, General); Arabinda Gaven (Howrah, General); The Hon'ble Shri Hem Chandra Naskar (24-Parganas South-east, General); Ardendu Sekhar Naskar (24-Parganas North-west, General); Kubar Chand Haldar (Murshidabad, General); The Hon'ble Shri Mohini Mohan Barman (Jalpaiguri-cum-Siliguri, General); Jaineswar Roy (Jalpaiguri-cum-Siliguri, General); Muhammad Rafique, J.P. (Calcutta North, Muhammadan); K. Nooruddin (Calcutta South, Muhammadan); Muhammad Sharif Khan (Hooghly-cum-Howrah Municipal, Muhammadan); Muhammad Qumruddin (Barrackpore Municipal, Muhammadan); Abdul Hashem (Burdwan, Muhammadan); Maulvi Mudassir Hossain (Birbhum Muhammadan); Dr. Syed Muhammad Siddique (Bankura, Muhammadan); Serajuddin Ahammad (Midnapore, Muhammadan); Abdul Wahid Sarkar (Hooghly, Muhammadan); Muhammad Idris (Howrah, Muhammadan); Jasimuddin Ahmed (24-Parganas, South, Muhammadan); Illas Ali Molla (24-Parganas Central, Muhammadan); A. F. M. Abdur Rahman (24-Parganas North-east, Muhammadan); Molla Mohammad Abdul Halim (Navadwip, Muhammadan); Md. Khuda Bukhsh (Berhampore, Muhammadan); Sahibzada Kawan Jah Salyid Kazim Ali Mirza (Murshidabad South-west, Muhammadan); Hassan Ali (West Dinajpur, Muhammadan); Md. Sayeed Mia (Malda, Muhammadan); Nawab Musharruff Hossain Khan Bahadur (Jalpaiguri-cum-Darjeeling, Muhammadan); Miss Iina Das (Calcutta Women, General, Urban); Husan Ara Begum (Calcutta, Muhammadan, Urban); Mrs. Idna May Ricketts (Anglo-Indian); L. R. Pentony (Anglo-Indian); R. E. Patel (Anglo-Indian); G. C. D. Wilks (Anglo-Indian); Daniel Gomes (Calcutta-cum-Presidency Division, Indian Christian); A. K. Ghose (Bengal National Chamber of Commerce); Bimal Comar Ghose (Bengal National Chamber of Commerce); Debi Prosad Khaitan (Indian Chamber of Commerce); Anandilall Poddar (Marwari Association); Abdur Rahman Siddiqi (Muslim Chamber of Commerce); Sir Uday Chand Mahtab, Maharajadhiraj Bahadur of Burdwan (Burdwan Landholders); Jyoti Basu (Railway Trade Union, Labour); The Hon'ble Dr. Suresh Chandra Banerji (i) Calcutta and Suburbs (Registered Factories, Labour); Niharendu Dutt Mazumdar (Barrackpore Registered Factories, Labour); Sibnath Banerjee (Howrah Registered Factories, Labour); A. M. A. Zaman (Hooghly-cum-Serampore Registered Factories, Labour); Devendranath Sen (Colliery (coal mines), Labour); Ratamlal Brahmin (Darjeeling Sadar Tea Garden Labour).

West Punjab

WEST Punjab Province was formed after the partition of August 15, 1947. It comprises the whole of the Rawalpindi and Multan Divisions, the Districts of Gujranwala, Sialkot, Sheikhupura, Lahore minus half the Kasur Tehsil (180 villages out of 353 in this tehsil having been assigned to East Punjab) and the Shakargarh Tehsil of the Gurdaspur District.

There is no authentic record indicating the population figures of West Punjab Province. But here is a rough estimate.

Area: 62,012 sq. miles.
Density: 302.
Population: 18,746,000.
Males: 10,123,000.
Females: 8,623,000.
Muslims: 18,319,000.
Christians: 426,000.
Others: 1,000.

AGRICULTURE

Nearly 50 per cent. of the total area is under arable farming, over 3 per cent. under forests, and 28 per cent. and 19 per cent. respectively, lying as 'culturable' and 'unculturable' wastes. 33 per cent. of the cultivated area depends upon rain and the rest is irrigated from a network of canal system and by surface percolation wells, tube-wells, etc.

The Lower Jhelum, the Lower Chenab, the Sutlej Valley and the Haveli Canals, respectively, command 3.3, 3, 1.3 and 1.3 million acres. A new project, known as the Thal, when completed, will irrigate 2 million acres. Thus, the total canal-irrigated area of the Province will be nearly 11 million acres.

Of the crops grown, wheat, rice, cotton and sugar-cane are the most important and cover about 53.2 per cent. of the total area sown. Improved varieties of long-staple cotton, suitable for different tracts, cover about 1.6 million acres or about 85 per cent. of the area under cotton. Indigenous cotton meant for home-consumption is grown over only a small area. Other crops of the province are the millets, oil-seeds and pulses. A fairly large varieties of fruit cover well over 50,000 acres. The most important fruit crop of the Province is citrus.

Livestock is important from the agricultural as well as food and commercial points of view. The bovine population aggregates to nearly 9 million heads. Large profits are derived from cattle and dairy trades. The productions of hide and skin are also important industries.

INDUSTRIES

The industrial and commercial life of the Province was completely paralysed owing to the partition. It would take a long time to reconstruct the industry so that it can be an asset to the country. The number of factories registered under the Factories Act, 1934 amounts to 830, which can be divided into two categories seasonal and perennial. Cotton ginning and

pressing factories form more than 90 per cent. of the total number of seasonal factories, the remaining are engaged in rice husking, sugar and fruit canning. Among the perennial factories the most important are textile mills, foundries and engineering workshops, cement factories, flour mills, glass and rubber factories, chemicals including turpentine, matches, paints and varnishes, petroleum refineries, sports and surgical goods. The two largest textile mills are situated at Lyallpur and Okara respectively. Sialkot enjoys international fame on account of its sports goods and surgical instruments. Other industrial concerns of note in the Province are a turpentine and rosin factory at Jallo; a factory for the hydrogenation of vegetable oils at Lyallpur; cement factories at Wah and Dandot; tanneries at Wazirabad and Sialkot; factories for the manufacture of electrical apparatus at Lahore and Rawalpindi and for the manufacture of sewing machines at Lahore.

H. E. Sir Francis Mudie

Small scale and cottage industries have also suffered a lot due to communal disturbances. These industries form a heterogeneous group comprising industries of a most varied character and of different sizes and forms of organisation. Some cottage industries are of considerable importance such as the manufacture of iron safes at Gujranwala; veterinary and surgical instruments at Sialkot and Lahore, pottery making at Gujrat; Ivory carving at Chinlot; cutlery at Nizamabad and Wazirabad and utensils at Gujranwala. There is a big factory of footwear near Lahore. The manufacture of cycle parts has been taken up at Lahore and Sialkot. The sericulture industry has to make almost a fresh start as it has only one silkworm rearing station at Murree but a large number of agriculturists in submontane tracts are

taking an increasing interest in silkworm rearing and reeling operations. There is an Arts and Crafts Depot at Lahore which provides a market for artistic wares and helps to secure improvement in design and workmanship.

The oil industry has a big future. The Attock Oil Company is engaged in extracting and refining mineral oils in Rawalpindi District.

COMMUNICATIONS

The P.W.D. Buildings and Roads Branch looks after the communications in the West Punjab. The mileage so far metalled and maintained is as under:—

P.W.D. 2,812 miles.
District Boards 317 miles.

In addition to this, it has been proposed to construct the following categories of roads for the post-war period in the first five-year Programme:—(a) Arterial Roads, 2,361 miles; (b) District Minor Roads, 847 miles; (c) Village Roads (soil stabilized), 1,115 miles.

The Department hopes to complete the above programme by the end of 1951-52 when the mileage available for traffic in the West Punjab will be as follows:—

Metalled roads 6,337 miles.
Village roads (soil stabilized), 1,115 miles.

In addition to the above existing and proposed road mileage, the Department looks after 11,114 miles of unmetalled roads and controls through the District Boards, a mileage of 11,832 of unmetalled roads, thus bringing the total of unmetalled class II and class III roads to 12,946 miles, partly bridged and partly unbridged.

ADMINISTRATION

Prior to the amendment of Government of India Act in 1919 the head of the administration was a Lieutenant-Governor, drawn from the ranks of the Indian Civil Service. Under the Act of 1919 the Province was raised to the status of a Governorship, with an Executive Council and Ministers, the Governor-in-Council being in charge of the Reserved Subjects and the Governor with his Ministers of the Transferred Subjects. With the introduction of part III of the Government of India Act 1935, this Executive Council was substituted by a Council of Ministers and the Legislative Council by an enlarged Legislative Assembly with wide powers of legislation and control. After the establishment of Pakistan, the Provincial Government is carried on according to the provisions of the Government of India Act, 1935, as modified by the Pakistan (Provisional Constitution) Order 1947. The business of Government is carried on through the usual Secretariat which consists of six Secretaries, designated as (1) Chief, (2) Home, (3) Finance, and (4) Industrial and Medical, (5) Civil Supplies, (6) Refugees and Rehabilitation Secretaries, three Deputy Secretaries, one additional Deputy Secretary, three Under-Secretaries, and two Assistant Secretaries. Seven Assistant Directors in the Civil Supplies Department are also Under-Secretaries. In the Public Works Department, there are five Chief Engineers

(Secretaries of Branches), one in the Buildings and Roads Branch, one in the Electricity Branch and three in the Irrigation Branch while the Legal Remembrancer is also the Secretary to Government in the Legislative Department. The two Financial Commissioners are also Secretaries to Government in Revenue and Development Departments. The head of the Police Department is Joint Secretary and of the Education Department a Secretary to Government. The Headquarters of the Government is at Lahore. Under the Governor, the province is administered by three Commissioners (for Lahore, Rawalpindi and Multan) who exercise general control over the Deputy Commissioners—16 in number—each of whom is in charge of a district.

The principal heads of Department in the Province are the two Financial Commissioners (who are the highest Court of Revenue jurisdiction, and heads of the Departments for Land Revenue, Agriculture and the Court of Wards), the two Chief Engineers, the Inspector-General of Police, the Director of Public Instruction, the Inspector-General of Prisons, the Inspector-General of Civil Hospitals, the Director of Public Health, the Chief Conservator of Forests, the Directors of Agriculture and Industries, the Inspector-General of Registration, the Registrar of Co-operative Credit Societies and Joint Stock Companies, the Deputy Commissioner of criminal tribes and the Legal Remembrancer.

JUSTICE

The administration of justice is entrusted to a High Court, which is the final appellate authority in civil and criminal cases, and has powers of original criminal jurisdiction in cases where European British subjects are charged with serious offences and original civil jurisdiction in special cases. The Court sits at Lahore and is composed of a Chief Justice and four Puisne Judges and three additional Judges, (either civilians or barristers). Subordinate to the High Court are the District and Sessions Judges (12 in number) each of whom exercises civil and criminal jurisdiction in a civil and session division comprising one or more districts. In districts in which the Frontier Crimes Regulation is in force the Deputy Commissioner on the finding of a Council of Elders (Jirga) may pass sentence up to seven years' imprisonment.

LOCAL GOVERNMENT

Local Government is secured in certain branches of the administration by the constitution of District Boards, each exercising authority over a district, of a Corporation at Lahore or of Municipal, Town, and Notified Area Committees each exercising authority over an urban area, and of Panchayats, each exercising authority over a revenue estate or a compact group of revenue estates. The funds of District Boards are derived from a cess on the land revenue of the district supplemented by Government grants, profession and other taxes and miscellaneous fees, and those of the Lahore Corporation and Municipal, Town, and Notified Area Committees from octroi or terminal tax and other forms of taxation, from Government grants and from rents and miscellaneous fees. The Panchayat

system is an attempt to revive the traditional village community organisation, the elected committee or Panchayat possessing certain powers in respect of taxation, local opinion, civil and criminal justice, the abatement of nuisances and other matters. In order to modernise the towns of the province, the Punjab Town Improvement Act, 1922, which provides for the constitution of Improvement Trusts, has been extended to five important towns.

POLICE

The Police force is divided into District Police, Railway Police, Criminal Investigation Department, Provincial Additional Police and Border Police. The combined force is under the control of the Inspector-General of Police, who is a member of the gazetted force and has under him four Deputy Inspectors-General three in charge of ranges comprising several districts, one in charge of the Criminal Investigation Department and of the Finger Print Bureau at Lahore. The Railway Police is under an Assistant Inspector-General. The Provincial Additional Police and Border Police are controlled by their commandants. The District Police are controlled by Superintendents each of whom is in charge of a district and has under him one or more Assistant Superintendents or Deputy Superintendents.

The Border Police is a new addition and was raised on account of danger to border.

EDUCATION

Rapid strides have been made in education in West Punjab during the last two decades. The advance has not been confined to any one form of education but is spread over all grades and varieties. In addition to institutions maintained in all parts of the province by private enterprise, Government itself maintains eleven arts colleges (including one for Europeans and two for Women), five normal schools for males, six training classes, and combined institutions for females; one hundred and eight secondary schools for boys and girls and thirty-seven centres for vocational training. Apart from these institutions for general education, Government maintains nine higher grade professional institutions, viz., the King Edward Medical College, the Montmorency College of Dentistry and Veterinary College at Lahore, the Agricultural College at Lyallpur, the College of Engineering and Technology at Moghalpura, the Central Training College, Lahore, the Lady MacLagan Training College for Women, Lahore, and the Chelmsford Training College at Ghoragali and one school, viz., the Engineering School at Rasul.

The Department of Education is in the charge of the Minister for Education who is assisted in the work of administration by the Director of Public Instruction.

MEDICAL

The Medical Department of West Punjab is controlled by the Inspector-General of Civil Hospitals, West Punjab, who is an officer of the Indian Medical Service holding the rank of Colonel. He is assisted by an Assistant

Inspector-General of Civil Hospitals, West Punjab, who is an Officer of the rank of a Civil Surgeon; a Lady Assistant Inspector-General of Civil Hospitals, West Punjab, who is senior Member of the Women's Provincial Medical Service and a Personal Assistant of Gazetted rank.

PUBLIC HEALTH

The following personnel of the West Punjab Public Health Deptt., are responsible for the control of communicable disease and for the carrying out of work designed to improve the health of the people:—

Headquarters staff:—

Director of Public Health; Assistant Director of Public Health, Vaccination; Officer-in-Charge, West Punjab Epidemiological Bureau; Officer-in-Charge, Anti-malaria Operations; Nutrition Officer; Provincial Public Analyst Inspector of Health Centres and two Assistant Inspectresses; the Principal, Punjab Health School; and a Woman Assistant.

Public Health work is organised in 3 "Ranges" each in charge of an Assistant Director of Public Health. The Assistant Director of Public Health, Lahore Range, also acts as Personal Assistant to the Director of Public Health.

Sixteen districts fell to West Punjab and to man the health services the Public Health Department was left with only 8 District Medical Officers of Health. Consequently, one officer had to be placed in charge of two districts.

A Refugee Section has recently been organised in the Department under an Assistant Director of Public Health (Refugees) after the partition of the province. To make up the deficiency in officers on account of the lack of properly qualified District Medical Officers of Health, sanction of Government was obtained for 15 posts of Assistant Medical Officers of Health, one for each district of the Province with the exception of Lahore, and 24 posts of Sub-Assistant Health Officers, so that, sanitary work in general and refugee problem in particular may be properly attended to.

The basic public health staff for each District is:—

- 1 District Medical Officer of Health, 1 Assistant Medical Officer of Health, 1 Sub-Assistant Health Officer, 4 Sanitary Inspectors, 1 Superintendent of Vaccination, 16 Vaccinators.

The basic district staff is reinforced from the following cadres organised for special work:—

A Public Health Corps concerned primarily with the control of epidemic disease and sanitation in rural areas.

There are 16 units in the corps each consisting of:—

- 1 Sub-Assistant Health Officer, 1 Sanitary Inspector, 2 Sanitary Supervisors, 12 Sanitary Patrols (Labourers).

Besides the above, there are 3 additional Public Health Corps Units, one for each Range, meant for work in any district within the Range wherever emergency may arise.

An Anti-malaria Organisation under the Control of the Officer-in-Charge, Anti-malaria Operation, consists of 8 units, each consisting of:—

- 1 Sub-Assistant Health Officer, 1 Entomological Assistant, 5 Anti-malaria Supervisors, 25 Anti-malaria Patrols, 1 Mistry, 2 Laboratory Assistants (Junior Grade).

These units are detailed for duty in the malarious areas of the Province.

Problems relating to nutrition are investigated by specially trained staff which includes:—

- 1 Nutrition Officer, 1 Lady Doctor, 1 Sub-Assistant Health Officer, 2 Sanitary Inspectors.

Increasing effort is being directed towards ensuring that food-stuffs sold throughout the Province are of good quality. 24 Government Food Inspectors are employed, in addition to those appointed by local bodies, who regularly sample wholesale and retail stocks. Samples are examined at the Headquarters Laboratory and also at the two Divisional Laboratories at Multan (functioning for the present at Lahore, and Rawalpindi).

Government has recently expanded maternity & child welfare work. There are now throughout the Province 77 maternity & child welfare centres staffed by fully trained lady health visitors, who supervise the training and work of indigenous dais. Sixty-three additional centres are being added in due course as soon as the arrangements are completed.

A special organisation for the prevention and treatment of hookworm disease is in operation in the areas in which this disease is prevalent.

The following personnel carry out the work:—

- 2 Sanitary Inspectors, and 5 units, each consisting of 1 Sub-Assistant Surgeon and 1 Dispenser.

A field Epidemiological Unit for the investigation of outbreaks of epidemic and other diseases is functioning in the Province and includes the following personnel:—

- 2 Sub-Assistant Health Officers, 6 Sanitary Supervisors, 12 Sanitary Patrols, 1 Laboratory Assistant (Junior Grade).

RURAL DISPENSARIES

The nature of the disease is determined by the collection and examination of pathological material; and the Unit also makes an endeavour to trace the disease to its source and then advice is given regarding appropriate preventive measures.

There is also a Malaria Field Epidemiological Research Station consisting of an Entomological Assistant, a Field Assistant; a Laboratory Attendant and a Clerk. Its main object is to work out biological methods for dealing with the common transmitters of malaria in the Province, especially in the water-logged areas.

The following institutions contribute to the control of disease and the training of health personnel:—

The Epidemiological Bureau—Bacteriological & Pathological Laboratories. Training of Sanitary Inspectors and Sanitary Supervisors.

The West Punjab Vaccine Institute—Training of Sanitary Inspectors, Sanitary Supervisors, Lady Health Visitors, Lady Welfare Workers, Medical Students and Vaccinators, Production of Vaccine Lymph.

The Punjab Health School—Training of lady health visitors.

An altogether new departure in the Public Health Policy has been made in recent years by the taking over by the Public Health Department of a number of rural dispensaries which formerly were under the control of the Medical Department. Eighty-nine dispensaries are working at present under the control of the Public Health Department. The idea that curative and preventive medicine should go hand in hand, has thus been given a practical shape.

In addition to the curative work that these dispensaries are required to perform, such useful Public Health Work has been achieved through the staff of these dispensaries. The doctors in charge of these dispensaries are required to tour within five miles radius of their dispensaries and in addition to attending to the sick in their homes, are now responsible for carrying out preventive health work under the supervision of the Public Health Department.

Whole-time Municipal Medical Officers of Health are employed in the following towns:—

Lahore, Rawalpindi, Multan, Sargodha, Lyallpur, Sialkot and Kasur.

All District & Municipal Medical Officers of Health are Inspectors under the Factory Act and are responsible for ensuring that the rules laid down for safeguarding the health of workers are observed.

There is a Public Health Branch of the Public Works Deptt., which is concerned with the planning and carrying out of work in connection with the provision of water-supplies and drainage and sewerage schemes in towns and villages. The Branch functions under an expert in Sanitary Engineering who has the status of a Superintending Engineer and is assisted by a number of Executive Engineers, Sub-Divisional Officers and Subordinates.

1948-49 BUDGET

The following are the figures of revenue and expenditure:—The Budget year—1948-49. Revenue receipts (estimated) Rs. 1,209 lakhs. Revenue expenditure (estimated) Rs. 1,882 lakhs. Deficit Rs. 673 lakhs.

The Finance Minister, proposed new taxation measures to yield Rs. 383 lakhs which, coupled with an expected rehabilitation grant of Rs. 130 lakhs from the Pakistan Government reduces the deficit for the coming year to Rs. 160 lakhs.

The proposed taxation measures include a new tax on agricultural income on a graduated scale, an increase in the urban immovable property tax from 7½ per cent. to 10 per cent. on annual rental value, the doubling of copying fees in courts and in revenue record rooms, an increase in the tobacco vendor's licence fees, and an increase in the entertainment duty.

ADMINISTRATION

Governor, H. E. Sir Francis Mudie, K.C.S.I., K.C.I.E., O.B.E.

PERSONAL STAFF

Secretary, S. Ghias Uddin Ahmed, I.O.S.
Military Secretary, Lt.-Col. R. F. Craster, O.B.E.
Aide-de-Camp, Captain J. N. B. Baillie-Hamilton.

MEMBERS OF THE COUNCIL OF MINISTERS

The Hon'ble Khan Iftikhar Hussain Khan of Mamdot (Premier).

The Hon'ble Mian Mumtaz Muhammad Khan Daultana (Finance Minister).

The Hon'ble Sardar Shaukat Hyat Khan (Minister of Revenue).

The Hon'ble Sheikh Karamat Ali (Minister of Education).

[Later Mr. Daultana and Mr. Shaukat Hyat Khan resigned and three new Ministers were appointed: Mian Nur Ullah, Sardar Abdul Hameed Dasti and Major Mubarak Ali Shah].

CIVIL SECRETARIAT

Chief Secretary, H. A. Majid, I.O.S.

Secretary, Medical and Industries, S. M. Hassan, I.C.S.

Secretary, Civil Supplies Department, I. U. Khan, I.C.S.

Secretary, Finance Department, H. A. Majid, I.C.S.

Home Secretary, S. F. Hassan, O.B.E., I.C.S.

Financial Commissioners, Akhtar Hussain, O.B.E., I.C.S. (Revenue); J. W. Hearn, C.S.I., C.I.E. (Development).

PUBLIC WORKS DEPARTMENT

Irrigation Branch.

Secretary (Irrigation Branch), K. B. M. A. Hamid.

Secretary (Northern Canals), K. B. A. Karim, I.S.E.

Secretary (Western Canals), E. L. Protheroe, I.S.E.

Buildings and Roads Branch.

Secretary and Chief Engineer, Sheikh Abdul Qadir, I.S.E.

PUBLIC SERVICES COMMISSION

Chairmen, K. B. Mian, M. Afzal Hussain, I.A.S. (Retd.).

Member, Ch. Nazir Hussain, B.A., LL.B.

Member from N.W.F.P., Khan Mohd. Akbar Khan.

Secretary, S. G. Khalil, P.E.S.

MISCELLANEOUS DEPARTMENTS

Director of Agriculture, H. G. Sadik, I.A.S.

Director of Land Records, Nawabzada Fatehullah Khan, P.C.S.

Director of Public Instruction, K. B. S. M. Sharif, M.A.

Inspector-General of Police, Khan Qurban Ali Khan, I.P.

Chief Conservator of Forests, Mian Allah Bux, I.F.S.

Inspector-General of Civil Hospitals, Lt.-Col. S. M. K. Malik, M.B., D.P.H., M.R.C.P., I.M.S.

Director of Public Health, Dr. P. H. K. B. M. Yacob.

Inspector-General of Prisons, Major M. H. Mahmud, I.M.S.

Accountant-General, M. Bashir Ahmad, I.A. & A.S.

Postmaster-General, M. A. Majid, B.A. (Oxon.), Bar-at-Law.

LIEUTENANT-GOVERNORS OF THE PUNJAB

Sir John Lawrence, Bart., G.C.B. 1856

Sir Robert Montgomery, K.C.B. 1859

Donald Friell McLeod, C.B. 1865

Major-General Sir Henry Durand, K.C.S.I., G.C.B., died at Tonk, January 1871.

R. H. Davies, C.S.I. 1871

R. E. Egerton, C.S.I. 1877

Sir Charles U. Aitchison, K.C.S.I., C.I.E. 1882

James Broadwood Lyal 1887

Sir Denness Fitzpatrick, K.C.S.I. 1892

William Macworth Young, C.S.I. 1897

Sir C. M. Ravaz, K.C.S.I. 1902

Sir D. C. J. Ibbetson, K.C.S.I., resigned 22nd January 1908.

T. G. Walker, C.S.I. (Offg.) 1907

Sir Louis W. Dane, K.C.I.E., C.S.I. 1908

James McCrone Douie (Offg.) 1911

Sir M. F. O'Dwyer, K.C.S.I. 1913

Sir Edward MacLagan, K.C.I.E., C.S.I. 1919

GOVERNORS OF THE PUNJAB

Sir Edward MacLagan, K.C.I.E., C.S.I. 1920

Sir Malcolm Hailey, K.C.S.I., C.I.E. 1924

Sir Geoffrey de Montmorency, G.C.I.E., K.C.S.I., K.C.V.O., O.B.E. 1928

Sir Herbert William Emerson, G.C.I.E., K.C.S.I., C.I.E., C.B.E., I.C.S. 1933

Sir Henry Duffield Craik, Bart., G.C.I.E., K.C.S.I., I.C.S. 1938

Sir Bertrand James Glancy, G.C.I.E., K.C.S.I., K.C.I.E. 1941

Sir Ivan Mercedith Jenkins, K.C.S.I., K.C.I.E., I.C.S. 1946

GOVERNORS OF WEST PUNJAB

Sir Francis Mudie, K.C.S.I., K.C.I.E., O.B.E. 1947

WEST PUNJAB LEGISLATIVE ASSEMBLY

Speaker.—The Hon'ble Diwan Bahadur S. P. Singha, M.A., LL.B. (West Central Punjab, Indian Christian).

MINISTERS

The Hon'ble Nawab Iftikhar Hussain Khan of Mamdot (Premier); The Hon'ble Mian Nuri Ullah; The Hon'ble Sardar Abdul Hameed Dasti; The Hon'ble Mubarak Ali Shah; The Hon'ble Sheikh Karamat Ali, B.A., LL.B. (Minister of Education, North East Towns, Muhammadan Urban).

MEMBERS

Chaudhri Abdul Ghafur (Shakargarh, Muhammadan Rural); Mian Abdul Haq (Okara, Muhammadan Rural); Rana Abdul Hamid Khan, B.A., LL.B. (Pakpattan, Muhammadan Rural); Khan Sahib Abdul Hameed Khan (Muzaffargarh Sadar, Muhammadan Rural); Khan Abdul Sattar Khan (Mianwali North, Muhammadan Rural); Sardar Ajit Singh (South West Punjab, Sikh Rural); K. B. Nawab Malik Sir Allah Bakish Khan Tiwana, M.B.E. (Sargodha, Muhammadan Rural); Bai Anwar Khan (Jaranwala, Muhammadan Rural); Khan Sahib Captain Chaudhri Asghar Ali, (Gujrat East, Muhammadan Rural); Syed Ashiq Hussain, (Dipalpur, Muhammadan Rural); Sardar Atta Muhammad Khan, B.A., LL.B. (Dera Ghazi Khan North, Muhammadan Rural); Chaudhri Aziz Din (Lyallpur, Muhammadan Rural); Sardar Bahadur Khan Dreshak, M.B.E. (Dera Ghazi Khan South, Muhammadan Rural); Chaudhri Bahawal Bakhsh (South-East Gujrat, Muhammadan Rural); Sardar Barkat Hyat Khan (North Punjab, Labour); Lala Behari Lal Chanana (South-East Multan Division, General Rural); Blim Sen Sachar, B.A., LL.B. (Lahore City, General Urban); Pir Budhan Shah (Khaneval, Muhammadan Rural); Sardar Dalip Singh Kang (Lyallpur East, Sikh Rural); Dev Raj Sethi (Lyallpur and Jhang, General Rural); Shaikh Faiz Muhammad Khan Bahadur, B.A., LL.B., M.B.E. (Dera Ghazi Khan Central, Muhammadan Rural); Pandit Faqir Chaud (West Lahore Division, General Rural); Sheikh Fazal Haq Piracha Khan Bahadur (Bahawal, Muhammadan Rural); Chaudhri Fazal Iahid (Gujrat North, Muhammadan Rural); Fazal Iahid (East Central Punjab, Indian Christian); Syed Ghulam Muhammad Shah (Jhang East, Muhammadan Rural); Sayed Ghulam Mustafa Shah Jilani, Makhdom (Lodhran, Muhammadan Rural); Chaudhri Ghulam Rasul (South-West Gujrat, Muhammadan Rural); Sardar Gurbachan Singh Bajwa, B.A., LL.B. (Sialkot, Sikh Rural); Chaudhri Harbhaj Ram (Lyallpur and Jhang, Reserved Seat); Chaudhri Jahan Khan (North-West Gujrat, Muhammadan Rural); Begum Jahan Ara Shah Nawaz, M.B.E. (Outer Lahore, Muhammadan Women Urban); Sardar Jaswant Singh Dugal (North-West Punjab, Sikh Rural); Sardar Joginder Singh Mann, M.B.E. (Gujranwala and Shahdara, Sikh Rural); Raja Kale Khan (Rawalpindi East, Muhammadan Rural); Sardar Kartar Singh (Lyallpur West, Sikh Rural); Raja Khair Mehdi Khan (Jhelum, Muhammadan Rural); Mehr Khan Muhammad Khan Khattia (Montgomery, Muhammadan Rural); Malik Sir Khizar Hayat, K.C.S.I., O.B.E. (Khushab, Muhammadan Rural); Chaudhri Krishna Copal Dutt (North-Eastern Towns, General Urban); Dr. Lehna Singh Sethi (North-Western Towns, General Urban); Sardar Man Singh Jathedar (Sheikhpura West, Sikh Rural); Rai Mir Muhammad Khan (Samundri, Muhammadan Rural); Khan Sahib Mir Muhammad Abdullah Khan (Mianwali South, Muhammadan Rural); Khan Muhammad Arif Khan (Jhang West, Muhammadan Rural); Malik Sir Muhammad Feroz Khan Noon (Rawalpindi Division Towns, Muhammadan Urban); Mian Mohammad Ghulam Jilani Gurmani (Muzaffargarh North, Muhammadan Rural); Mian Muhammad Hayat Khan Nanjiana (Rawalpindi Division, Land holders); Sardar Muhammad Hussain (Chunian, Muhammadan Rural); Chaudhri Muhammad Hussain, Chhatha, B.A., LL.B. (Sheikhpura, Muhammadan Rural); Mian Muhammad Ibrahim Basq (Atipure, Muhammadan Rural); Mian Muhammad Iftikharud-Din, B.A., (Oxon.) (Kasur, Muhammadan Rural); Sir Muhammad Jamal Khan Leghari, Khan Bahadur Nawab (Tumardars); Lt.-Col. Sir Sardar Muhammad Nawaz Khan, K.C.I.E. (Attock Central, Muhammadan Rural); Mian Muhammad Nur Ullah (Toba Tek Singh, Muhammadan Rural); Mian Muhammad Rafiq (Outer Lahore, Muhammadan Urban); Syed Muhammad Raza; Shah, Jeelani Haji Makhdomzada (Shujabad, Muhammadan Rural); Chaudhri Muhammad Sarfraz Khan (Sialkot Central, Muhammadan Rural); Raja Muhammad Sarfraz Ali Khan (Chakwal, Muhammadan Rural); Sayed Moiy-ud-Din Lal Badshahi (Attock South, Muhammadan Rural); Major Sayed Mubarak Ali Shah (Jhang Central, Muhammadan Rural); Sardar Mumtaz Ali Khan, B.A., LL.B. (Attock North, Muhammadan Rural); Nawab Sir Muzaffar Ali Khan Qizilbash (Lahore, Muhammadan Rural); Sant Narinder Singh (Montgomery East, Sikh Rural); Chaudhri Nasir Din, B.A., LL.B. (Sialkot North, Muhammadan Rural); Syed Nau Bahar Shah (Kabirwala, Muhammadan Rural); Malik Nazar Hussain (Pind Dadan Khan); Mahant Prem Singh (Gujrat and Shakpur, Sikh Rural); Chaudhri Raj Muhammad Khan Tarrar (Hafizabad, Muhammadan Rural); Chaudhri Roshan Din, Khan Bahadur (Shahdara, Muhammadan Rural); Sejjan Singh, Sardar Margindipuri (Kasur, Sikh Rural); Chaudhri Salah-ud-din (Gujranwala North, Muhammadan Rural); Sardar Sardul Singh (Lahore West, Sikh Rural); Raja Saib Akbar Khan, B.A., LL.B. (Gujrat Khan, Muhammadan Rural); Rai Shahadat Khan (Nankana Sahib, Muhammadan Rural); Shrimati Sita Devi (Lahore City, General Women Urban); Mian K.B. Sultan Ali Nankana, (Shakpur, Muhammadan Rural); Chaudhri Sundar Singh (West Lahore Division General Reserved Seat) Begum Tasdaq Hussain (Inner Lahore, Muhammadan Women Urban); Professor Tilak Raj Chadha M.A. (Rawalpindi Division, General Rural); Sardar Ujjal Singh (Western Towns, Sikh Urban); Mr. Virendra (West Multan Division, General Rural); Malik Wazir Muhammad (Inner Lahore, Muhammadan Urban); Chaudhri Zafar-ul-Haq (Rawalpindi Sadar, Muhammadan Rural); Chaudhri Zafarullah Khan (Gujranwala East, Muhammadan Rural).

Chief Commissioners' Provinces

Delhi

THE transfer of the capital of India from Calcutta to Delhi was announced at the Delhi Durbar on December 12, 1911. It had long been recognised as necessary, in the interests of the whole of India, to de-provincialise the Government of India, but this ideal was unattainable as long as the Government of India were located in one Province, and in the capital of that Province—the seat of the pre-partition Bengal Government—for several months in every year. It was also desirable to free the Bengal Government from the close proximity of the Government of India which had been to the constant disadvantage of that Province. To achieve these two objects the removal of the capital from Calcutta was essential: its disadvantages had been recognised as long ago as 1868, when Sir Henry Maine advocated the change.

Various places had been discussed as possible Capitals, but Delhi was by common consent the best of them all. Its central position and situation as a railway junction, added to its historical associations, told in its favour; and, as Lord Creve said in his despatch on the subject, "to the races of India, for whom the legends and records of the past are charged with so intense a meaning, this resumption by the Paramount Power of the seat of venerable Empire should at once enforce the continuity and promise the permanency of British sovereign rule over the length and breadth of the country."

The foundation stone of the new capital was laid by the King Emperor on December 15, 1911, the finally selected site being on the eastern slopes of the hills to the south of Delhi on the fringe of the tract occupied by the Delhi of the past. The land chosen is free from liability to flood, has a natural drainage, and is not manworm. It is not cluttered with monuments and tombs needing reverent treatment, and the site is near the present centre of the town of Delhi. A Committee consisting of Surgn-General Sir C. P. Lukis, Mr. H. T. Keeling, C.S.I., A.M.I.C.E., and Major J. O. Robertson, I.M.S. was appointed to consider the comparative healthiness of the site, and of an alternative one to the north of the existing city. Their report, dated 4th March 1913, stated that "the Committee, after giving full consideration to the various points discussed in the above note, is bound to advise the Government of India that no doubt can exist as to the superior healthiness of the southern site, the medical and sanitary advantages of which are overwhelming when compared with those of the northern site."

Town Plan and Architecture.—A Town-Planning Committee, appointed to advise Government, submitted its report in March, 1913, in accordance with that Report. The central point of interest in the lay out, which gives the motif of the whole, is Government House and two large blocks of Secretariats. This Government centre was given a position at Raisina

hill near the centre of the new city. Sir Edwin Lutyens is the architect for Government House and Sir Edward Baker for the Secretariats. The former building was estimated to cost approximately Rs. 140 lakhs and the latter groups were originally estimated to some Rs. 124 lakhs. The provision made in the design of the Secretariats for extensions in case it used has already partly been utilised. The Secretariat personnel has largely increased in the past few years and numerous additional rooms had to be provided to make room for Army Headquarters, which moved into the new capital at the end of the Simla season, 1920.

To the east of the forum, and below it, is a spacious forecourt defined by an ornamental wall and linked on to the great main avenue or parkway which leads to Indraprast. Across this main axis runs an avenue to the shopping centre. Other roads run in different directions from the entrance to the forum. The axis running north-east towards the Juma Masjid forms the principal approach to the new Legislative Chambers. They are officially described as the Council House and the road is named Parliament-street. The railway station for the new city finds its place about half way between the old and new cities off the road through Pahargunj, which lies to the west of Old Delhi in the direction of The Ridge.

The main roads or avenues range from 76 feet to 150 feet in width with the exception of the main avenue east of the Secretariat buildings where a parkway width of 1,175 feet has been allowed. The principal avenues in addition to the main avenues are those running at right angles to the main east to west axis.

Enclave.—In October, 1912, by proclamation, there was constituted an administrative enclave of Delhi under a Chief Commissioner. This enclave was entirely taken from the Delhi district of the Punjab and its total area is 573 square miles. On the basis of the Census of 1911, the population of the area originally included in the Province was 398,269 and of the new area 14,552, or a total of 412,821. The population of the Municipal town of Delhi was 2,29,144.

The plans of the New Capital allow for a population within it of 70,000. Sites have been allotted for forty Ruling Princes and Chiefs to build houses for their own occupation during their visits to the Capital and several of these habitations have been erected.

There was, as regards architecture, a prolonged "battle of the styles" over Delhi. Finally, to use the language of the architect, it has been the aim "to express within the limit of the medium and of the powers of its users, the ideal and the fact of British rule in India, of which the New Delhi must ever be the monument." The inspiration of the designs is manifestly Western, as is that of British rule, but they combine with it distinctive Indian

features without abandoning the architect's aim to avoid doing violence to the principles of structural fitness and artistic unity.

Cost of Scheme.—It was at first tentatively estimated that the cost of the new capital would be four million sterling and that sum was given in the original despatch of the Government of India on the subject. Various factors afterwards increased the amount, the chief of these being the immense rise in prices after the war, and the Legislative Assembly were informed by Government on 23rd March 1921, that the revised estimates then amounted to 1,307 lakhs of rupees. This amount included allowances for building new Legislative Chambers and Hostels for Members of the Indian Legislature, which were not allowed for in the earlier estimates.

The New Capital Enquiry Committee, in its report published in January, 1923, estimated the total expenditure at Rs. 1,292 lakhs including Rs. 42 lakhs for loss by Exchange. Actual expenditure upto approximately the end of 1920 was Rs. 14 crores. This may be taken as the figure for the completion of the main project.

The Project Estimate contains certain items such as land, residences, water supply, electric light and power, and irrigation on which recoveries in the form of rate or taxes will, in addition to meeting current expenditure, partially at any rate cover the interest on the capital outlay, whilst there are other items on which some return on account of the sale of leases, general taxes and indirect receipts is secured.

The project, after being completed and closed, was re-opened in 1933-34. This became necessary owing to the need to increase residential accommodation for officers and staff and was facilitated by a period of cheap money. Government utilised the occasion for extending the residential accommodation for visiting member of the Indian Legislature. The expenditure on the construction of New Delhi is Rs. 21,91,15,501 upto the end of 1945-46. The population of the new City is 93,733 according to the 1941 Census. Practically all the building sites within it (except in a small area where shortcomings in drainage are a handicap) are taken up and the time for extending the layout has almost arrived.

Progress of Work.—The construction of New Delhi was made at satisfactory speed, having regard to the curtailment of the Budget allotment in consequence of the First World War and the absence of officers and other establishments at the war. The Secretariats were so far advanced that there were transferred to them from Calcutta in October, 1924, the offices of the Accountant-General, Central Revenues, and the headquarters of the Royal Air Force in India were also housed in them in the winters of 1924-25 and 1925-26. The original programme of residential buildings for Government officers and staff of various grades were then nearly completed. The whole of the civil side of Government moved from Old Delhi into their quarters in the new Secretariats on coming down from Simla in November, 1926. All Government Depart-

ments, including the Army Departments and Army Headquarters and R. A. F. Headquarters, have their offices in the new Secretariats, of which the buildings have already had to carry out the first section of the extension provided for in the architects' plans. The Viceroy took up his residence in the new Government House on December 23, 1920. The Viceroy until then had resided during the Delhi season at Viceregal Lodge in Old Delhi. The Government of India in 1927 devoted special consideration to the question whether their ordinary annual 5 months residence in Delhi should be extended each year to 7 months and early in 1928 decided in consultation with the India Office to endeavour to stay in Delhi for half of each year, the new order being introduced for trial in 1928 by keeping the Secretariat in New Delhi till mid-April and bringing it down from Simla again in mid-October. The experiment was not very successful and was not repeated till 1932-33, when Retrenchment Committees had strongly recommended a longer stay in Delhi in order to extract rent for a longer period from the seasonal official occupants of its residential buildings, the rents in Delhi being higher than those for residences in Simla. An early descent from Simla was postponed in the autumn of 1934 on account of a report by the Public Health Commissioner on the general unhealthiness of the Winter Capital in October. But various factors, including especially the increase in personnel in the Secretariat and consequential congestion of office and residential accommodation in Simla, are making the extension of the Delhi season unavoidable.

The provision of considerable further housing accommodation both for offices and residences has become imperative. The only question is whether this should be undertaken both in Delhi and in Simla or in Delhi only. Pressed by sharp financial stringency, arising partly out of the emergency created by the institution of the Constitutional Reforms, the Government of India appear decisively moving in the direction of making Delhi an all-the-year-round Capital. Certain Departments are already now kept in Delhi throughout the year. The office personnel of others are kept in Delhi throughout the year.

Anti-Malaria Measures.—There was in recent years an increase in malaria bearing mosquitoes and consequential fever in New Delhi. This led to a special inquiry in 1936. The inquiry showed that both Old and New Delhi were ringed about with prolific mosquito breeding places, one of the worst being the area utilized for sewage outfall. The water borne sewage of both Old and New cities is dealt with in a farm which, when the new city was built, was placed immediately outside its southern boundary. The Government of India after the 1926 inquiry were forced to adopt a new scheme for the removal of the farm to a more distant site and chose one some four miles further away from the city. Anti-malaria operations on a large scale, scientifically directed, were simultaneously undertaken, the estimate of their cost being Rs. 14 lakhs. Improvements in the water-supply of the new Capital with a view to a larger population being retained in it during the summer has also been effected.

When the residential buildings in New Delhi were, in the course of the original construction of the new city, about to be designed, the Government of India issued orders that they were to be "for cold weather occupation only." This rule was followed. The general principle embodied in the design of the houses was that of planning them to capture as much warmth from the sun as possible. Secretariat, residential bungalows and staff quarters are largely inappropriate for hot weather occupation.

Art Decorations.—The Government of India in 1927 approved a scheme for the encouragement of Indian artists by providing facilities for the decoration of certain buildings in New Delhi. The outlines of the scheme are briefly as follows. A certain number of domes and ceilings in the New Secretariat Buildings at Delhi suitable for decoration were selected. The various schools of art in India, as well as individual artists, were invited through local Governments, to send in by the beginning of March 1928 small scale designs for approval by a Committee. After approval by the Committee both as regards the design and colour the pictures were to be drawn out and painted to full size on canvas, and, if finally approved by the Committee, fixed according to the marouflage process *in situ*. Other techniques, such as fresco or tempera, were optional. Artists or schools of art, who sent in small scale drawings, had to bear the initial expense of preparing them. When these were approved by the Committee, the out-of-pocket expenses paid in addition to a suitable honorarium Government undertook to pay for the finished pictures done from approved sketches but give no guarantee that the finished paintings will permanently be preserved. Government intimated that historical or allegorical subjects would be given preference over religious ones and English artists living in India were barred from competition, the work being strictly reserved to Indian artists. Numerous artists submitted designs, especially those of Western India, and with such satisfactory results that the specially appointed Expert Committee approved of nearly all. A great deal of painting has now been completed and the work was continually progressing until the world-wide depression in recent years dried up funds.

All-India War Memorial.—H. R. H. the Duke of Connaught on 10th February, 1921, laid the foundation stone of an All-India War Memorial at the southern end of the Central Vista. The place chosen is a fine position in the centre of the circular Princes' Park and the construction of the building was for economy's sake proceeded with slowly. The memorial was formally inaugurated by Lord Irwin in February, 1931, in the presence of representatives of every unit of the army in India, of the Royal Air Force and of a large concourse of official and other spectators.

It was decided in 1936 to erect a memorial statue to the King-Emperor George V, in Princes' place, the large park-like area lying between the All-India War Memorial and the Purana Qila. The origin of this proposal was a movement start-

ed among the Ruling Princes, some time previously, to erect a white memorial statue to the King in the new city and this scheme had made considerable progress when he died. The matter was then considered in a broader light and in consultation between the Princes and the Earl of Willingdon, the Princes agreed to merge their scheme in a larger one for an All-India memorial to the King. The Viceroy issued an appeal for subscriptions to the major scheme and he and the Countess of Willingdon opened the general subscription list with a donation of Rs. 5,000. Sir Edwin Lutyens was invited to submit a design for a memorial and the statue was eventually unveiled by the then Viceroy, Lord Linlithgow, on November 14, 1939.

Public Institutions.—It was proposed during 1914 that a higher college for Chiefs should be established at Delhi and in this connection a conference of Chiefs and Political Officers was held at Delhi at which the Viceroy presided. The proposal is still "under consideration." To implement it would require an estimated capital outlay of Rs. 12½ lakhs.

The Government of India further in 1922 introduced and carried a Bill for the establishment of a unitary, teaching and residential University of Delhi, the buildings for which would be erected in the new capital. The plan was to provide a local university on the model recommended for Dacca University by the Calcutta University Commission. The provision of funds for the complete realisation of the university being a matter of time it was decided to commence work with the existing colleges in their present buildings and to permit them gradually to modify their organisation. The initial work of organisation was quickly effected by the Executive Council. Unfortunately the inability of the Government of India to allot considerable funds was a severe handicap. It was hoped that the Viceroy would be able to lay the foundation stone of the university buildings in November, 1922, but this proved impracticable. The general question of the finances of the University was in 1927 the subject of inquiry by a special committee appointed by Government. For the time being the University was housed in the temporary buildings in old Delhi occupied by the Civil Secretariat until 1929 and in 1931 the old Viceregal Lodge was allocated to it for its future home. The Government of India have also allotted freeland to various colleges in Old Delhi.

H. H. the Maharaja of Bhavnagar having offered Rs. 5,00,000 for the provision of some amenity in the new city, the Government of India decided to utilize the sum for the provision of a Stadium. The ground which they took for this was a large area lying immediately below the western walls of the Purana Qila, i.e., between them and Princes' place. This area was originally marked by Sir Edward Lutyens, in his plan, to be an ornamental lake. Practical consideration led to its abandonment for that purpose and the area was laid out as a park. A large proportion of the Maharaja's Rs. 5,00,000 was utilized for the provision of a huge brick grandstand overlooking the central portion of the park taken for the Stadium.

Inaugural Ceremony.—The New City was the scene of notable and elaborate inauguration ceremonies in February, 1931. The first of these was the unveiling of four "Dominion Columns" suitably placed about the great place between the two Secretariat blocks. The columns are of red stone, surmounted each by a gilded merchantman of the old style in full sail. The columns are designed to resemble the historic ones erected in various parts of the land by Asoka and were presented by Canada, Australia, New Zealand and South Africa. The first two and fourth of these Dominions sent their own representatives to perform the ceremony of unveiling. New Zealand nominated a Member of the Government of India to act in her behalf for the same purpose.

City Extension.—The main direction for the future extension of the new city is southward, where for some three miles beyond the limits of present development, Government have land in their possession and have placed it at the disposal of the City administration. The New Delhi Civil Aerodrome lies immediately southward of the existing new City boundary on the southern side and the Earl of Willingdon in February 1936, opened alongside the high road there a fine new Willingdon Air Station, which is furnished with the most modern equipment for day and night flying. Building has already taken place in the same neighbourhood.

A New Delhi Municipal Committee with its own permanent official Chairman and Secretariat was established in 1932.

The Improvement Trust was instituted in 1937, its duties being to provide for the expansion of the new capital, including both old and new cities and urgently to deal with the insanitary overcrowding of the old city, a problem arising from the rapid increase of population there since Delhi again became capital of India.

Chief Commissioner.—Sahibzada Khurshid, C.I.E., I.C.S.

Financial Adviser.—P. K. Basu.

Registrar to the Chief Commissioner.—P. H. B. Wilkins.

MAGISTERIAL AND EXECUTIVE

Deputy Commissioner.—M. S. Randhawa, I.C.S.

Addl. District Magistrates.—F. H. D. Teal and Rai Sahib Shantilal Ahuja

City Magistrate and Secretary, Notified Area Committee.—Kanwar Mohinder Singh Bedi.

JUDICIAL

District and Sessions Judge.—S. S. Dulat, I.C.S.

Senior Sub-Judge.—Des Raj Pahwa.

POLICE

G. of Police.—T. G. Sanjevi, M.B.E., I.P.

I.G. of Police.—Div Mehra, M.B.E., I.P.

S. P. C.I.D. Delhi.—L. Rikhi Kesh.

Addl. S. P.—S. G. Button.

S. P. New Delhi.—L. Amar Nath Bhatia.

Superintendent of Police, New Delhi.—S. C. Terry.

JAIL

Supdt. of Jail.—K. K. Muttoo.

MEDICAL

Director of Health Services.—Lt.-Col. Barkat Narain.

Chief Medical Officer and Civil Surgeon, Delhi.—Lt.-Col. P. A. Dargan.

Civil Surgeon New Delhi.—Lt.-Col. D. P. Bhargava.

Medical Superintendent Irwin Hospital, New Delhi.—Lt.-Col. B. L. Taneja.

Deputy Medical Superintendent, Irwin Hospital.—Major D. R. Mendiratta.

Additional Civil Surgeon, Irwin Hospital, New Delhi.—Dr. S. K. Sen, F.R.C.S.E.

EDUCATION.

Superintendent of Education.—J. R. Sethi, M.A.

Deputy Superintendent of Education.—Dr. A. N. Banerji, M.A., Ph.D.

Assistant Superintendent of Education.—Rai Sahib Niamat Rai.

Assistant Superintendent of Female Education.—Mrs. I. H. Kumar.

DELHI IMPROVEMENT TRUST.

Chairman, Delhi Improvement Trust.—Sir Arthur Dean, C.I.E., M.C., F.D.

Executive Officer.—Rao Bahadur Chaudhri Ghazi Ram, F.C.S.

Lands Officer.—A. R. Melhotra, F.C.S.

Tahsildar.—Gosain Anand Sarup.

AJMER-MERWARA

Ajmer-Merwara is an isolated Province in Rajputana, administered by a Chief Commissioner under the Government of India. The Province is divided into the Sub-divisions of Ajmer and Kekri and Beawar with a total area of 2,400 square miles and a population of 5,83,693. At the close of the Pindari War Daulat Rao Scindia, by a treaty, dated June 25, 1818, ceded the district to the British. Sixty-two per cent. of the population are supported by agriculture, the industrial population being principally employed in the cotton, hosiery, soap and goat industries. The principal crops are maize, millet, barley, cotton, oilseeds, wheat, bajara, jeera, sugar-cane, chillies and onions. Mining of mica, beryl-ore, felspar, limestone, and soapstone is also carried on. The chief imports include cotton and woollen cloth, sugar, gur, foodgrains, pulses, toiletries, machinery, cotton seeds and brass pots; and the

exports mica, beryl-ore, felspar, quartz, jeera, cattle, goats, sheep and wool.

Chief Commissioner.—Shankar Prasad, I.C.S.

COORG

Coorg is a small Province in Southern India, west of the State of Mysore. Area 1,593 square miles; population 168,726. Coorg came under the direct protection of the British Government during the war with Tippu. In May 1834, owing to misgovernment, it was annexed. The Province is directly under the Government of India and administered by a Chief Commissioner, whose headquarters is at Mercara. A Legislative Council consisting of 15 elected members and five nominated members was created in 1924. The chief wealth of the country is agriculture and especially the cultivation of coffee.

Chief Commissioner, Coorg.—Dewan Bahadur K. Chengappa, C.I.E.

ANDAMAN AND NICOBAR ISLANDS

The Andaman Islands lie in the Bay of Bengal, 120 miles from Cape Negrais in Burma, and 780 and 740 miles from Calcutta and Madras respectively. Five of the larger Islands are closely grouped together and are called the Great Andaman; and to the south is another Island called Little Andaman. There are some 204 islets in all, the two principal groups being the Ritchie Archipelago and the Labyrinth Islands.

The total area is about 2,508 square miles. The Great Andaman group is about 219 miles long and, at the widest, 32 miles broad.

The group, densely wooded, contains many valuable trees, the best known of which is, Padauk or Andaman Redwood. The Islands also possess a number of harbours and safe anchorage, notably Port Blair, Port Cornwallis and Bonington. The aborigines 62 (25 males and 37 females) in number according to the 1941 census, live in small groups over the Islands; some of them are savages of low Negro type.

The total population of the Andaman Islands (excluding the aborigines) is 16,000 (11,450 males and 4,550 females). Communication with the mainland is through wireless telegraphs and a Mail Steamer plying between Port Blair and Calcutta and Madras.

The Islands were used as a penal settlement for life and long term convicts from 1858 to 1945 when the penal settlement was abolished. They were occupied by the Japanese in March 1942 and reoccupied by the Allied Forces in October 1945; and plans are now being prepared for the development of the Island's resources.

The chief produce of the Islands are timber and coconut which are exported to the mainland. The mineral resources of the Islands are unknown as no survey has yet been held. Foodstuffs, machinery and consumer goods are imported from the Indian mainland.

The Andaman Islands are administered by the Governor-General acting through a Chief Commissioner.

The Nicobar Islands are situated to the south of the Andamans, 75 miles from Little Andaman. There are 19 Islands in all, 7 of which are uninhabited. The total area is 635 square miles. The Islands are usually divided into 3 groups (Southern, Central and Northern), the chief Islands in each being respectively, Great Nicobar, Camotra with Nankauri and Car Nicobar. There is a fine land locked harbour between the Islands of Camotra and Nankauri, known as Nankauri Harbour. The Nicobarese inhabitants number 11,000.

The Islanders are known to have pursued the coconut trade for at least 150 years. The coconut is exported to the mainland after being converted into copra.

The Government is represented by an Assistant Commissioner at Car Nicobar. The Islands are attached to the Chief Commissionership of the Andamans and Nicobars.

Chief Commissioner.—I. Majid.

Baluchistan

Baluchistan is an oblong stretch of country occupying the extreme western corner of Pakistan. It is divided into three main divisions: (1) British Baluchistan with an area of 9,476 square miles consisting of tracts assigned to the British Government by a treaty signed in 1879; (2) Baluchistan Leased and Tribal areas with an area of 44,345 square miles composed of tracts which have, from time to time, been acquired by lease or otherwise brought under control and placed directly under British officers; and (3) the States of Kalat, Las Bela and Kharan with an area of 79,540 square miles.

The whole Province embraces an area of 137,002 square miles and according to the census of 1941 it contains 857,835 inhabitants.

The country, which is almost wholly mountainous, lies on a great belt of ranges connecting the Safed Koh with the hill system of Southern Iran. It thus forms a watershed the drainage of which enters the Indus on the east and the Arabian Sea on the south while on the

north and west it makes its way to the inland lakes which form so large a feature of Central Asia. Rugged, barren sun-burnt mountains, rent by high chasms and gorges, alternate with arid deserts and stony plains, the prevailing colour of which is a monotonous sight. But this is redeemed in places by level valleys of considerable size in which irrigation enables much cultivation to be carried on and rich crops of all kinds to be raised.

The political connection of the British Government with Baluchistan commenced from the outbreak of the First Afghan War in 1839; it was traversed by the Army of the Indus and was afterwards occupied until 1842 to protect the British lines of communication. The districts of Kachhi, Quetta and Mastung were handed over to the Amir of Afghanistan and Political Officers were appointed to administer the country. After the First Afghan War, the British withdrew and these districts were assigned to the Khan of Kalat.

The founder of the Baluchistan Province as it now exists was Sir Robert Sandeman who broke down the close border system and welded the Baluch and Brahui Chiefs into a close confederacy. In the Afghan War of 1879 Pishin, Shorapur, Sibi, Zawara Valley and Thal-Chotiali were handed over by Yakub Khan to the British Government and retained at Sir Robert Sandeman's strenuous insistence.

INDUSTRIES

Baluchistan lies outside the monsoon area and its rainfall is exceedingly irregular and scanty. Shahrigh, which has the heaviest rainfall, records no more than 14.72 inches in a year. In the highlands few places receive more than 10 inches and in the plains the average rainfall is about 5 inches, decreasing in some cases to 3.

The majority of the indigenous population are dependent for their livelihood on agriculture, care of animals and provision of transport. The majority of the Afghan and the Baluch, as a rule, cultivate their own lands. The Brahuis dislike agriculture and prefer a pastoral life. Previous to the advent of the British, life and property were so insecure that the cultivator was fortunate if he reaped his harvest. The establishment of peace and security has been accompanied by a marked extension of agriculture which accounts for the increase in the numbers of the purely cultivating classes.

The Mekran Coast is famous for the quantity and quality of its fish and the industry is constantly developing. Fruit is extensively grown in the highlands and the export is increasing.

Coal is mined at Sharigh and Harnai on the Sind-Pishin Railway and in the Bolan Pass also in Sur Range in Quetta-Pishin District. Chromite is extracted in the Zhob District near Hindubagh. Limestone is quarried in small quantities. Gypsum is mined in the Silei District near Spintangi Railway Station.

Education is imparted in public schools of all kinds. There is a widespread desire for education amongst the more enlightened headmen round about Quetta and other centres; but on the whole education or the desire of it has made little or no advance in the outlying districts.

ADMINISTRATION

The head of the local administration is the officer styled Agent to the Governor-General, and Chief Commissioner. Next, in rank comes the Revenue Commissioner who controls the revenue administration and exercises the functions of a High Court as Judicial Commissioner of the Province.

The keynote of administration in Baluchistan is self-government by the tribesmen, as far as may be, by means of their Jirgas or Councils of Elders along the ancient customary lines of tribal law, the essence of which is the satisfaction of the aggrieved and the settlement of the feud, not retaliation against the aggressor or the vindictive punishment of a crime. The district levies play an unobtrusive but invaluable part in the work of the

civil administration not only in watch and ward and the investigation of crime, but also in the carrying of the mails, the serving of processes and other miscellaneous work. In addition to these district levies there are ordinarily three Irregular Corps in the Province; the Zhob Militia, the Mekran Levy Corps and the Chagal Levy Corps. Fundamentally the Province is not self-supporting, the deficit being met from Central funds.

BALUCHISTAN AGENCY

Agent to the Governor-General and Chief Commissioner in Baluchistan.—The Hon'ble Mr. A. D. F. Dundas, C.S.I., C.I.E., I.C.S.

Revenue and Judicial Commissioner.—C. A. G. Savidge, M.B.E., I.C.S.

Secretary to the Agent to the Governor-General, Resident and Chief Commissioner.—Major R. C. Murphy.

Under-Secretary to the Agent to the Governor-General, Resident and Chief Commissioner.—Khan Bahadur Malik Bashir Ahmed Khan.

Secretary to the Agent to the Governor-General in the Public Works Department.—Colonel N. Boddington, O.B.E.

Director of Food Supplies and Dy. Secy., Revenue, to the Baluchistan Administration.—Major G. W. Woolridge, I.P.S.

Dy. Director of Food Supplies.—R. S. Pandit Churanjir Lal.

Political Agent and Deputy Commissioner in Quetta-Pishin.—A. R. Khan, I.C.S.

Assistant Political Agent and Assistant Commissioner in Quetta-Pishin.—Lt.-Col. Philip Edwards, I.P.S.

Political Agent in Chagai.—K. B. Sher Zaman Khan.

Political Agent and Deputy Commissioner, Sibi.—B. M. Bacon, I.C.S.

Assistant Political Agent and Colonization Officer, Nasirabad.—K. S. Said Alikhan.

Political Agent in Loralai.—K. B. Shah Zaman Khan, I.P.S.

Political Agent in Zhob.—Major D. G. Thornburgh.

Chief Medical Officer and Inspector-General of Prisons in Baluchistan.—Major H. A. Ledgerd, I.M.S.

Civil Surgeon, Quetta-Pishin.—Vacant.

Director of Agriculture in Baluchistan.—R. Zarbakut Khan, B.Sc. Agri. (Edin.), C.D.A. (Wye).

Mining Engineer and Assistant Regional Coal Controller in Baluchistan.—Mold. Tayab.

ADVISORY COUNCIL

The two latest developments in regard to Baluchistan are the appointment of an Advisory Council by the Governor-General of Pakistan and the Governor-General's effort to persuade the Khan of Kalat along with the States of Las Bela and Kharan to accede to Pakistan.

The appointment of the Advisory Council for Baluchistan was made by the Governor-General at a meeting of the Shahi Durbar held at Sibi on February 14.

Explaining the functions of the Advisory Council, he said: "The members of the Council will, of course, be nominated, but let me assure you that it will not be a nominal body. It will have the power to advise the Governor-General on any matter which in its opinion is connected with the good of the province. Similarly, the Governor-General will refer any matter which may come before him through the Chief Commissioner for the opinion and advice of the Council. The budget of the province, for instance, will be checked and scrutinised first by the Advisory Council in all its details and it will be free to submit its recommendations to the Governor-General. All plans for the future political, economic, social and educational development will be prepared and submitted through the Advisory Council and it is for the Governor-General to see that these plans are implemented with consultation and advice of the Council. Thus in some ways you will be better off than other provinces of Pakistan."

It will contain people's representatives of the Administered Areas which used to be known as British Baluchistan and leased areas. It will also include representatives of tribal areas. It will also reflect the considered opinion of the members of the Shahi *Jirga* and the municipality of Quetta.

The setting up of the Advisory Council will not in any way detract from the status of these areas nor from the freedom of the inhabitants of these areas to mould their future constitution and to form administration in accordance with their own customs and traditions.

The Durbar was followed by a press conference at Sibi the following day. The Governor-General explained that he thought that Baluchistan would be better off as a Governor-General's Province for two reasons, first, he wanted to help Baluchistan in every possible way he could. Second, things would be done far more quickly than in the usual process of full-fledged parliamentary discussions. Further other provinces in Pakistan had gone through all the preliminary stages of parliamentary reforms and were now able to run parliamentary Governments. But for Baluchistan there was no other way in the present circumstances but to throw the whole burden on the Governor-General.

KALAT AFFAIR

Kalat acceded to Pakistan after some deliberation.

One of the reasons for the Governor-General's visit to Sibi was to settle the issue of Kalat's accession to Pakistan. At a meeting between the Khan of Kalat and the Governor-General the former was reported to have told the latter that he wanted the issue of accession to be settled by his legislature composed of Sardars, and that a definite reply would be sent before the end of February. Actually no reply was sent for a long time.

The Kalat Upper House decided to defer the issue for three months, while the Lower House expressed preference for some form of treaty covering defence, communications and foreign affairs to full-fledged accession. The Nationalists led by Khan Abdul Samad Khan who have a majority in the Lower House were prepared only for a treaty of alliance and friendship with Pakistan.

The Kalat affair was of course complicated with two side issues. Two smaller neighbouring States of Las Bela and Kharan refused to recognise Kalat's suzerainty and acceded to Pakistan independently. This was not to the liking of the Kalat ruler. The other question was about the future of territories like Quetta and the Bolan Pass, formerly leased to the British by the Khan of Kalat. But then the talks held both at Karachi and at Sibi between Pakistan's Governor-General and the Khan of Kalat brought about some understanding on all these issues except that of accession, which, as has been mentioned, the ruler wanted his legislature of Sardars to decide.

Obviously many forces are at work in and around Kalat State, including Afghan and Russian influences. In this connection attention is sometimes drawn to Afghanistan's transparent sympathy for the Pathans of the N.-W.F.P. some of whom aspire to full autonomy within Pakistan. It is because of Kalat's strategic position with common boundaries with Afghanistan and Persia that the Government of Pakistan was so very anxious for Kalat's accession, though Quaide-Azam Jinnah has often declared that the States are free to accede or not to accede.

Local Self-Government

THE entire aspect of local self-government in India has changed with the advent of national freedom. Much, of course, depends on the final shape of the Central and provincial constitutions as they emerge from the Constituent Assembly. In the meantime, however, many of the Provinces have already enacted legislation transferring quite a large measure of administrative power to local bodies after reconstituting them.

There is no quarrel with the idea as such, but many doubt the wisdom of entrusting the onerous functions of government to the care of a people who, for decades, have been accustomed to "spoon-feeding" in every walk of life. The introduction of adult franchise may, it is feared, lead to some confusion until the stage is reached when the electorate is in a position to exercise that franchise with knowledge and wisdom. This is a natural concomitant of education, which is still at a low percentage in India and Pakistan and a fuller realisation of civic responsibilities the lack of which has in the past resulted generally in many local bodies being reduced to the position of battlefields where petty personal and party feuds overshadowed primary responsibilities, and public interest suffered. A gross negligence of such duties or the incapacity to get together for the common good of the community has led to hundreds of local bodies being superseded. Moderate and Liberal schools of political thought have, therefore, been advocating the process of hastening slowly. Proponents of the idea of decentralization of power, on the other hand, have held the view that unless a beginning is made to set the people on the road to full democracy they would never get started.

VILLAGE AUTONOMY

The idea of reviving the village panchayats was popularised by the Indian National Congress under Mahatma Gandhi's leadership, and he has strongly advocated the establishment of village republics from which the central administration will derive its power. There are 7,00,000 villages in the country which up to now have fallen under the following two groups: (1) the "severalty" or raiyatwari village where revenue is assessed on individual cultivators with no joint responsibility among the villagers. (2) the joint or landlord village of the type prevalent in the United Provinces, East and West Punjab and the Frontier Province. Here the revenue was formerly assessed on the village as a whole, its incidence being distributed by a body of superior proprietors. The proprietary body allowed residences to the tenantry, artisans, traders and others. The village government was originally by the panchayat or a group of heads of the wealthier families. Later, representatives of the whole community were added on to the panchayats.

A radical change in the character of the latter type of village is inevitable with the abolition of the zamindari and malguzari systems, the need for which has already been accepted, at least in principle, in most Provinces where they obtain. There will thus be a uniform type of village throughout the Indian Dominion,

with the cultivator becoming master of himself free from the burden of sharing the yield of the land with the proprietor. The fact that he has now a stake in the country will naturally make the villager interested in the general welfare and administration of the village and eventually of the country as a whole.

VILLAGE PANCHAYATS

Most provinces have adopted village Panchayat Acts, under which local autonomy of different degrees has been conferred on the villages. The U.P. enactment, known as the Gram Mukumat Act, is claimed to be a model. The C.P. and Berar and Bombay Measures also go a long way in bestowing a large share of administrative responsibility on the villagers. Some of the compulsory functions so bestowed include village sanitation, medical relief and first aid, water-supply, street lighting, registration of births, deaths and marriages, measures to prevent the outbreak, spread or recurrence of infectious diseases, the construction and maintenance of roads, conducting crop experiments, the formation of multi-purpose co-operative societies, the imparting of education and the maintenance of law and order. Their optional duties include the relief of the destitute and the sick, improvement of agriculture, marketing of agricultural produce, cattle breeding, the establishment of granaries, promotion of agricultural credit and measures to relieve rural indebtedness and poverty generally.

The village judiciary or Nyaya Panchayat, formed by groups of four or five village panchayats will have power to try certain types of civil and criminal cases.

MUNICIPALITIES

The Presidency towns had some form of Municipal administration, first under Royal Charters and later under statute, from comparatively early times, but outside of them there was practically no attempt at municipal legislation before 1842. An Act passed in that year for Bengal, which was practically inoperative, was followed in 1850 by an Act applying to the whole of India. Under this Act and subsequent Provincial Acts a large number of municipalities was formed in all Provinces. The Acts provided for the appointment of commissioners to manage municipal affairs, and authorised the levy of various taxes, but in most Provinces the commissioners were all nominated, and from the point of view of self-government, these Acts did not go far. It was not until after 1870 that much progress was made. Lord Mayo's Government, in their Resolution of that year introducing the system of provincial finance, referred to the necessity of taking further steps to bring local interest and supervision to bear on the management of funds devoted to education, sanitation, medical relief, charity, and local public works. New municipal Acts were passed for the various Provinces between 1871 and 1874, which, among other things, extended the elective principle, but only in the Central Provinces was popular representation generally and successfully introduced.

Laws and Administration of Justice

In 1881-2 Lord Ripon's Government issued orders which had the effect of greatly extending the principle of local self-government. Acts were passed in 1883-4 that greatly altered the constitution, powers, and functions of municipal bodies, a wide extension being given to the elective system, while independence and responsibility were conferred on the committees of many towns by permitting them to elect a non-official as chairman. Arrangements were made also to increase municipal resources and financial responsibility, some items of provincial revenue suited to and capable of development under local management being transferred, with a proportionate amount of provincial expenditure, for local objects.

The general principles laid down in the Ripon Acts have continued to govern the administration of municipalities down to the present day. As the population of most of the towns rises, so does the number of municipalities increase. For the most part they display a lively interest in civic affairs and are actively engaged in improving the conditions under which their fellow-citizens live.

The status of the municipalities of Bombay, Calcutta, Madras, and Karachi were raised to that of Corporations and the Presidents of these bodies were designated Mayors. Nagpur and Jubbulpore are soon to be added to this list.

DISTRICT BOARDS

The duties and functions assigned to the municipalities in urban areas are in rural areas entrusted to district and local Boards. In almost every district of India and Pakistan save in the province of Assam, there is a board subordinate to which are two or more sub-district boards; while in East Bengal, West Bengal, Madras, Bihar and Orissa, there are also Union Committees.

As in the case of municipalities the tendency has been throughout India and Pakistan to increase the number of elected members at the expense of the nominated and the official members.

The most important item of revenue is provincial rates. The principal objects of expenditure are education which has come remarkably to the front in recent years and civil works such as roads and bridges. Medical relief also shares with education, though in a less degree, a big share of the available revenue.

The annual audit reports on the working of local self-government institutions in the various Provinces reveal on the whole a disappointing record. There is a general reluctance to increase local taxation and several municipalities are conspicuous for their negligence in recovering arrears. There are, of course, some honourable exceptions; in the Bombay Presidency, Ahmedabad and Sholapur furnish encouraging examples. In 1939 a Local Self-Government Committee was appointed by the Bombay Government under the chairmanship of Professor V. G. Kale. The Committee made several recommendations. To overcome the general reluctance to impose additional taxation the Committee suggested that taxation by local authorities was likely to be better appreciated if it were associated with specific services rendered to the people; the idea was to earmark yields of certain taxes for definite purposes. The Committee also laid down the principle that amenities can be provided only if they are paid for; thus a compulsory education cess was suggested to finance ambitious educational schemes.

A revolutionary measure in local self-government, which will almost completely transfer the district administrations to what are called Janapada Sabas is about to be introduced in the Central Provinces and Berar. The present District Councils will then disappear and the newly elected bodies will be autonomous institutions with wide powers.

IMPROVEMENT TRUSTS

A notable feature in the recent sanitary history of India is the activity displayed by some of the great cities in the direction of social improvements. In Bombay, Calcutta, Lucknow, Allahabad, Lahore and Cawnpore the Improvement Trusts developed important activities. (In Bombay the work of the Improvement Trust is carried on by the Bombay Municipality). Other cities are beginning to follow the example of these great cities. The Government of India established an Improvement Trust in 1937 to attend to slum clearance in old Delhi City and to the general expansion of their winter capital. This body undertook an ambitious scheme, costing many lakhs of rupees, for the abolition of slums and the re-housing of dispossessed workers.

THE indigenous law of India and Pakistan is personal and divisible with reference to the two great classes of the population, Hindu and Muslim. Both systems claim divine origin and are inextricably interwoven with religion, and each exists in combination with a law based on custom. At first the tendency of the British was to make their law public and territorial, and on the establishment of the Supreme Court at Calcutta in 1773 and the advent of English lawyers as judges, they proceeded to apply it to Europeans and Indians alike. This error was rectified by the Declaratory Act of 1780, by which Parliament declared that as against a Hindu the Hindu law and usage, and as against a Muslim the laws and customs of Islam should be applied. The rules of the Shastras and the Koran have been in some cases altered and relaxed. Instances can be found in the Bengal Sati Regulation Act of 1829, the Indian Slavery Act, 1843, the Caste Disabilities Removal Act of 1850, the Hindu Widows' Remarriage Act, 1856, and some other Acts and Codes. To quote the Imperial Gazetteer, "A certain number of the older English statutes and the English common law are to a limited extent still in force in the Presidency Towns as applicable to Europeans, while much of the old Hindu and Muslim law is everywhere personal to their native fellow-subjects; but apart from these, and from the customary law, which is as far as possible recognised by the Courts, the law of British India is the creation of statutory enactments made for it either at Westminster or by the authorities in India to whom the necessary law-giving functions have from time to time been delegated.

CODIFICATION

Before the transfer of India to the Crown the law was in a state of great confusion. Sir Henry Cunningham described it as "hopelessly unwieldy, entangled and confusing." The first steps toward general codification were taken in 1833, when a Commission was appointed, of which Lord Macaulay was the moving spirit, to prepare a penal code. Twenty-two years elapsed before it became law, during which period it underwent revision from his successors in the Law Membership, and especially from Sir Barnes Peacock, the last Chief Justice of the Supreme Court of Calcutta. The Penal Code, which became law in 1860, was followed in 1861 by Code of Criminal Procedure. Substantially the whole criminal law of India and Pakistan is contained in these two Codes. One of the most eminent lawyers who ever came to India, Sir James Stephen, said "The Indian penal code may be described as the criminal law of England freed from all technicalities and superfluities, systematically arranged and modified in some few particulars (they are surprisingly few) to suit the circumstances of British India. It is practically impossible to misunderstand the Code."

The Indian Penal Code has from time to time been amended. The rules of Civil Procedure have been embodied in the Code of Civil Procedure. The Code of Civil Procedure was remodelled in 1908 and the Code of Criminal Procedure

in 1898. These Codes as amended from time to time are now in force. The years between 1870 and 1885 saw a great deal of legislative activity in British India, and important branches of the law, like Evidence, Contract, Transfer of Property, Trusts, Negotiable Instruments, etc., were codified in the form of Acts of the Indian Legislature applicable to the whole of British India. These, amended from time to time and supplemented by rules derived from English decisions, constitute the bulk of the law administered in India and Pakistan today.

EUROPEAN BRITISH SUBJECTS

Whilst the substantive criminal law is the same for all classes, certain distinctions of procedure have always been maintained in regard to criminal charges against European British subjects. Until 1872 European British subjects could only be tried or punished by one of the High Courts. It was then enacted that European British subjects should be liable to be tried for any offences by magistrates of the highest class, who were also Justices of the Peace, and by Judges of the Sessions Courts; but it was necessary in both cases that the magistrate or judge should himself be a European British subject. In 1883 the Government of India announced that they had decided "to settle the question of jurisdiction over European subjects in such a way as to remove from the Code at once and completely every judicial disqualification which is based merely on race distinctions."

This decision, embodied in the Ilbert Bill aroused a storm of indignation which is still remembered. The controversy ended in a compromise which is thus summarised by Mr. John Strachey ("India"). "The controversy ended with the virtual, though not avowed, abandonment of the measure proposed by the Government Act III of 1884; by which the law previously in force was amended cannot be said to have diminished the privileges of European British subjects charged with offences, and it left their position as exceptional as before. The general disqualification of native judges and magistrates remains; but if a native of India be appointed to the post of district magistrate or sessions judge, his powers in regard to jurisdiction over European British subjects are the same as those of an Englishman holding the same office. This provision, however, is subject to the condition that every European British subject brought for trial before the district magistrate or sessions judge has the right, however trivial be the charge, to claim to be tried by a jury of which not less than half the number shall be Europeans or Americans. . . . Whilst this change was made in the powers of district magistrates, the law in regard to other magistrates remained unaltered."

After a discussion on this subject in the Legislative Assembly in September, 1921, the following motion was adopted:—"That in order to remove all racial distinctions between Indians and Europeans in the matter of criminal trial and punishment for offences, a committee be appointed to consider what amendments should be made in the provisions of the Code

12-9-07
E.C.N. 12-9-07

of Criminal Procedure, 1898, which differentiates between Indians and European British subjects and Americans and Europeans who are not British subjects in criminal trials and proceedings and to report on the best methods of giving effect to their proposals." As a result of the recommendations of the Racial Distinctions Committee the law on the subject was further modified, and by the Criminal Law Amendment Act XII of 1923 in the place of the old Chapter XXXIII (sections 443-463) the new Chapter XXXIII (sections 443-449) with certain supplementary provisions were substituted. This has in some measure reduced the differences between the trials of European and of Indians under the Code. Since 1886 no distinction of race has been recognised in the civil courts throughout the sub-continent.

THE FEDERAL COURT

A Federal Court is, according to the Joint Parliamentary Committee's Report, a necessary element of any Federal Constitution. It is at once the guardian and interpreter of the Constitution, and arbiter of the disputes between the Federal Units. The Government of India Act of 1935 accordingly provided (Sections 200-218) for the Constitution of a Federal Court.

As a result of the Indian Independence Act of 1947 and the orders passed under that Act, India is now split up into two Dominions and provisions are made for the establishment of two separate Federal Courts for the two Dominions.

The Federal Court under The Government of India Act of 1935 continues to be the Federal Court of the Dominion of India. The Federal Court of the Dominion of Pakistan has not yet been established but will no doubt come into being very soon. The provisions for the two Federal Courts are on the same lines, the existing provisions of the Government of India Act of 1935 being adopted for this purpose with suitable modifications.

The Federal Court of India consists of the Chief Justice of India and such number of other Judges as the Governor-General may deem necessary; but the number of puisne judges is not to exceed six unless and until a resolution is passed by the Legislature of the Indian Dominion for an increase. Every judge of the Federal Court is to be appointed by the order of the Governor-General and is to hold office until he attains the age of 65 years. A Judge of the Federal Court is liable to be removed from office by an order of the Governor-General on the ground of misbehaviour or of infirmity of mind or body, if the Judicial Committee of the Privy Council on a reference reports that the Judge ought on any such grounds to be removed. The Federal Court is a Court of Record. The Federal Court of India is to sit in Delhi and at such other place or places as the Chief Justice of India with the approval of the Governor-General, may from time to time appoint.

The Federal Court has exclusive original jurisdiction in any dispute between any two or more of the following parties, that is to say, the Dominion of India, any of the Provinces of India, or any of the Aceding States, if and in so far as the dispute involves any question (of law or of fact) on which the existence or extent of a legal right depends.

Certain restrictions are placed upon the Court's jurisdiction over disputes to which an Aceding State is a party. In the exercise of its original jurisdiction, the Court can pronounce only a declaratory judgment. The Court is invested with appellate jurisdiction over any judgment, decree or final order of a High Court, if the High Court certifies that the case involves a substantial question of law as to the interpretation of the Government of India Act or any Order-in-Council or Order passed thereunder, or as to the interpretation of the Indian Independence Act of 1947, or of any Order made thereunder. No direct appeal in such a case lies to His Majesty in Council either with or without special leave.

APPEALS

The Dominion Legislature is empowered to enlarge the appellate jurisdiction of the Federal Court in civil cases. And a Bill to provide for its enlargement to the fullest extent permissible under Section 206 of the Government of India Act 1935, as now in force and for the abolition *pro tanto* as from February 1, 1948 of all direct appeals in such cases from High Courts to His Majesty in Council either with or without special leave was passed by the Dominion Legislature on December 11, 1947. Although appeals to the Privy Council cannot altogether be excluded by means of this Bill it will have the effect of stopping the further flow of direct appeals to the Privy Council in civil cases and prepare the way for the abolition in due course of all appeals to that body. The Bill however, does not interfere with appeals which are pending before the Privy Council and the records of which have been transmitted to England by the High Court concerned, nor with appeals to the bringing of which special leave may have been granted by the Privy Council before the coming into force of this law.

An appeal also lies to the Federal Court from a High Court in an Aceding State on the ground that a question of law has been wrongly decided concerning the interpretation of the Government of India Act or of an Order-in-Council or Order made thereunder or concerning the interpretation of the Indian Independence Act of 1947 or of an Order made thereunder or concerning the extent of the legislative or executive authority vested in the Dominion by virtue of the Instrument of Accession of that State, or arising under an agreement made under Part VI of the Government of India Act in relation to the administration in that State of a law of the Dominion Legislature.

An appeal may be brought as of right to His Majesty in Council from a decision of the Federal Court in its original jurisdiction in any dispute which concerns the interpretation of the Government of India Act or of an Order-in-Council or Order made thereunder or which concerns the interpretation of the Indian Independence Act of 1947 or of an Order made thereunder or which concerns the extent of the legislative or the executive authority vested in the Dominion by virtue of the Instrument of Accession of a State or which arises under an agreement made under Part VI of the Government of India Act in relation to the administration in any State of a law of the Dominion Legislature. In other cases, an appeal may be brought to the Privy Council

where special leave is granted either by the Federal Court or by the Privy Council. All authorities civil and judicial throughout the Dominion are enjoined to act in aid of the Federal Court. All proceedings in the Federal Court are to be in the English Language and judgment must be pronounced in the open Court with the concurrence of the majority of the judges.

The provisions for the constitution of the Federal Court of Pakistan are as already stated, on the same lines. The seat of the Federal Court of Pakistan will be in Karachi.

The Federal Court was first established and commenced to function on 1st October 1937. The Court in the first instance consisted of a Chief Justice and two puisne judges. The Chief Justice receives a salary of Rs. 7,000 and each of the puisne judges Rs. 5,500 per month.

Sir Maurice Gwyer, K.C. was appointed to be the first Chief Justice of India, and Sir Shah Mahomed Sulaiman and Mr. M. K. Jayakar to be judges of the Federal Court.

Sir Maurice Gwyer, K.C. retired on 25-4-1943. Sir Srinivasa Vardachariar acted as Chief Justice from 25-4-1943 to 7-6-1943 when Sir Patrick Spens was appointed the Chief Justice. His two colleagues were Sir Mahomed Zafrulla Khan and Sir Harilal Kania.

On the 14th August 1947, Sir Patrick Spens resigned his office of the Chief Justice of India in order to take up the duty of the Chairman of the Arbitral Tribunal set up for the purpose of deciding questions arising out of the partition of India. On his resignation Sir Harilal Kania was appointed the Chief Justice of India and his two colleagues at present are Sir Syed Fazl Ali, Kt. and Mr. M. Patanjali Sastril.

HIGH COURTS

High Courts of Judicature were constituted by the Indian High Courts Act of 1861 for Bengal, Bombay and Madras, and later for the United Provinces and the Punjab superseding the old supreme and Sudder Courts. At present all the Provinces have High Courts except Orissa, Assam and Baluchistan. It now appears as if it was only a question of time before Orissa and Assam too had their own High Courts. The High Courts for Oudh and Sind are called Chief Courts. The principal legal tribunal in the N.-W.F.P. is known as the Court of the Judicial Commissioner.

The Judges are appointed by the Crown; they hold office until they attain the age of 60 years; formerly one-third of their number were barristers, one third were recruited from the remaining branch of the Indian Civil Service, the remaining places being available for persons who have held certain Judicial Offices in the sub-continent or are lawyers qualified in the sub-continent. This fixed proportion of Barrister and Civilian Judges has now been abolished by the Government of India Act, 1935. Trial by jury is the rule in original criminal cases before the High Courts, but juries are never employed in civil suits.

The High Courts are the Courts of appeal from the superior courts in the districts, criminal and civil, and their decisions are final

except in cases in which an appeal lies to the Federal Court or to His Majesty in Council the latter being heard by the Judicial Committee of the Privy Council in England. The High Courts exercise supervision over all the subordinate Courts. Returns are regularly sent to them at short intervals and the High Courts are able, by examining the returns, by sending for proceedings, and by calling for explanations, as well as from the cases that come before them in appeal to keep themselves to some extent acquainted with the manner in which the Courts generally are discharging their duties.

LOWER COURTS

The Code of Criminal Procedure provides for the constitution of inferior criminal courts styled courts of session and courts of magistrates. Every Province, outside the Presidency towns, is divided into sessions divisions consisting of one or more districts, and every sessions division has a court of session and a sessions judge, with assistants if need be. These stationary sessions courts take the place of the English Assizes, and are competent to try all accused persons duly committed, and to inflict any punishment authorised by law; but sentences of death are subject to confirmation by the highest court of criminal appeal in the Province.

Magistrates' courts are of three classes with descending powers. Provision is made and largely utilised in the towns, for the appointment of honorary magistrates; in the Presidency towns Presidency magistrates deal with magisterial cases and benches of Justices of the Peace or honorary magistrates dispose of the less important cases.

Trials before courts of session are either with assessors or juries. Assessors assist, but do not bind the judge by their opinions; nor juries the opinion of the majority prevails if accepted by the presiding Judge. The Indian law allows considerable latitude of appeal. But there is no Court of Criminal Appeal, and as the Judicial Committee of the Privy Council has repeatedly disclaimed all jurisdiction as a Court of Criminal Appeal, there is no adequate machinery for appeal or revision available to persons convicted of serious and even capital offences and sentenced by the High Courts in their original or appellate Criminal Jurisdictions. The prerogative of mercy was exercised by the Governor-General-in-Council and is now exercised by the Governor-General of India or Pakistan and the local Government concerned without prejudice to the superior power of the Crown.

The constitution and jurisdiction of the inferior civil courts varies. Broadly speaking one district and sessions judge is appointed for each district. As District Judge he presides in its principal civil court of original jurisdiction. His functions as Sessions Judge have been described. For these posts members of the Indian Civil Service are made from the Provincial Service. Next come the Subordinate Judges and Magistrates, the extent of whose original jurisdiction varies in different parts of India and Pakistan.

There are in addition a number of Courts of Small Causes, with jurisdiction to try money suits up to Rs. 500. In the Presidency towns, where the Chartered High Courts have original jurisdiction, Small Causes Courts dispose of money suits up to Rs. 2,000. As Insolvency, Courts the Chartered High Courts of Calcutta Bombay and Madras have jurisdiction in the Presidency towns. In the mofussil similar powers were conferred on the District Courts by the Provincial Insolvency Act of 1920.

Coroners are appointed only for the Presidency Towns of Calcutta and Bombay. Elsewhere their duties are discharged by the ordinary staff of magistrates and police officers unaided by jurors.

LEGAL PRACTITIONERS

Legal practitioners in India and Pakistan are divided into Barristers-at-Law, Advocates of the Federal and the High Courts, Vakils and Attorneys (Solicitors) of High Courts and Pleaders, Mukhtars and revenue agents. Advocates of the Federal Court are divided into two classes, senior Advocates and Advocates. The Federal Court maintains Rolls of senior Advocates and Advocates. All Advocates in the Federal Court must be instructed by Agents on the Rolls of the Federal Court Agents and no Senior can appear without a Junior. Barristers and Advocates are admitted by each High Court to practise in it and its subordinate courts; and they alone are admitted to practise on the original side of some of the Chartered High Courts. Vakils are persons duly qualified who are admitted to practise on the appellate side of the chartered High Courts and in the Courts subordinate to the High Courts. Attorneys are required to qualify before admission to practise in much the same way as in England. The rule that a solicitor must instruct counsel prevails only on the original side of the Bombay and Calcutta High Courts. Pleaders practise in the subordinate courts in accordance with rules framed by the High Courts. The Bar Councils Act of 1926 aims at abolishing the various grades of practitioners, and under it each of the High Courts maintains a roll of advocates entitled to practise within its jurisdiction.

The Government of India and Pakistan have their own law colleague in the Legal Member of the Cabinets of the two Dominions. All Government measures are drafted in this department after their substance is decided upon by the administrative departments concerned. Outside the Cabinet the principal law officer of the Government of India and of Pakistan are the Advocate General of India and Pakistan who are appointed by the Governor-General of India and Pakistan under section 16 of the Government of India Act, 1935 as applied to the two Dominions. At Bombay and Calcutta the Government of India have their own solicitors. Each of the Provincial Governments has its own Advocate-General appointed under Section 55 of the Government of India Act, 1935.

The Provincial Governments have usually their own Legal Remembrancers and professional lawyers as Government Advocates and Assistant Government Advocates.

Sheriffs are attached to the High Court of Calcutta, Madras and Bombay. They are appointed by Government, selected from non-officials of standing, the detailed work being done by deputy sheriffs, who are officers of Court.

LAW REPORTS

The official Provincial Law Reports are now as published in eight series—Calcutta, Madras Bombay, Allahabad, Patna, Lahore Nagpur and Karachi under the authority of the Provincial Governments concerned. They contain cases determined by the High Court and by the Federal Court and the Judicial Committee on appeal from the High Courts. These appeals raise questions of very great importance and the Council of Law Reporting for England and Wales show their appreciation by printing the Indian Appeals in a separate volume and have also compiled a digest of Indian Appeals covering the period 1874-1923. The other provinces and States have series of reports issued under the authority either of the Judiciary or the State.

In addition to these reports a separate series is published under the authority of the Federal Court of India containing reports of the decision of that Court and of the Judicial Committee on appeal from the Federal Court.

Assam Judicial Department

Fakaruddin Ahmed, Ali., Bar-at-Law	Advocate-General, Assam and Secretary to Government in the Judicial and Legislative Departments and Secretary to the Assam Legislative Council, Superintendent and Remembrancer of Legal Affairs, Administrator-General and Official Trustee, Assam.

Jiwatram, Ramchand, B.A., LL.B.	Official Commissioner.

Laws of 1946

1. Workmen's Compensation (Amendment) Act, 1946.—Under the Workmen's Compensation Act, 1923, workmen earning wages exceeding Rs. 300 a month are not entitled to compensation. The term "wages" includes dearness allowances. As a result, persons who would have ordinarily been entitled to the relief under the Act are being deprived of it when the total wages exceed Rs. 300 due to the addition of dearness allowances. To remedy this, Sec. 2 of Act VIII of 1923 has been amended by substituting therein the word "four" instead of the word "three" in sub-clause (ii) of clause (n) and introducing necessary amendments in Schedule 4 so as to mean that persons earning over Rs. 400 only shall not be entitled to compensation.

2. Indian Mines (Amendment) Act, 1946.—This Act introduces a sub-clause (bbb) in Sec. 30 of Act IV of 1923 by which a rule-making power is conferred upon the Central Government to require colliery owners to erect in their mines separate bathing places with shower-baths and separate locker-rooms, for men and women employed in the mines on a scale to be laid down by the rules and to maintain them at prescribed standards.

3. Code of Criminal Procedure (Amendment) Act, 1946.—The inability of a Sessions Judge to recall a case or appeal which he has once made over to an Additional Sessions Judge for hearing has been a frequent cause of delay in the disposal of criminal work. Hence after sub-sec. (1) of Sec. 528 of the Criminal Procedure Code, 1898, a new sub-sec. (1A) has been inserted providing that at any time before the trial of the case or the hearing of the appeal has commenced before the Additional Sessions Judge, any Sessions Judge may recall any case or appeal which he has made over to any Additional Sessions Judge. It is further provided that the Sessions Judge may after the case or appeal is recalled, either try or hear the same himself or make it over for trial or hearing, in accordance with the provisions of the Criminal Procedure Code to another Court.

4. Code of Criminal Procedure (Second Amendment) Act, 1946.—In a case before the Privy Council, it was held that a High Court possesses no power to grant bail to a person who has been sentenced to imprisonment and who has been granted special leave to appeal to His Majesty in Council. Their Lordships however expressed the opinion that it would be a proper and useful power to vest in a High Court of granting bail in such a case. As this could only be done by legislation, this Act introduces sub-sec. (21) of Sec. 426 of the Criminal Procedure Code, 1898 to the effect that where a High Court is satisfied that a convicted person has been granted special leave to appeal to His Majesty in Council it may if it thinks fit order that pending the appeal, the sentence or order appealed against, be suspended and also if the said person is in confinement that he be released on bail.

5. Professions Tax Limitation (Amendment) Act, 1946.—When the Professions Tax Limitation Act (XX of 1941) was enacted, the

Intention of the Legislature was that the limitation of Rs. 50 prescribed under it should not be applicable to the tax on companies imposed by the Corporation of Madras under Sec. 110 of the Madras City Municipal Act. Doubts having arisen whether such tax would also apply to companies, this Act amends the Schedule to Act XX of 1941 by adding to it item No. 5 excluding the tax on companies imposed under Sec. 110 above. The amendment has been given retrospective effect.

6. The Insurance (Amendment) Act, 1946.—This Act makes several amendments to the Insurance Act IV of 1938 with the object of remedying certain undesirable features in the administration of insurance companies.

In Sec. 2 a "policy-holder" is described as including a person to whom the whole of the interest of the policy-holder in the policy is assigned once and for all but not as including an assignee whose interest is defeasible or limited.

Sub-sec. 4 of Sec. 3 provides for cancellation of the registration of an insurer if the insurer has failed to have the registration renewed or if the Superintendent of Insurance has reason to believe that any claim upon the insurer arising in India under any policy of insurance remains unpaid for three months after final judgment in regular course of law, or if the insurer fails to comply with an order under Sec. 3B. A new sub-sec. 7 is added to Sec. 3 empowering the Superintendent of Insurance on payment of a prescribed fee not exceeding Rs. 25 to issue a duplicate certificate of registration to replace a certificate lost, destroyed or mutilated or in any other case where he is of opinion that the issue of a duplicate certificate is necessary.

A new Sec. 3B has been added to Act IV of 1938 empowering the Superintendent of Insurance when it appears to him while considering an application for registration that the assurer's rates, advantages, terms, and conditions, offered in connection with life insurance business are not workable or sound, to require the insurer to submit a statement to an actuary for a report as regards the soundness of the terms. Sec. 4 has been amended by raising the minimum limit for annuities and other benefits secured by policies of life insurance from Rs. 50 to Rs. 100 and from a gross sum of Rs. 500 to Rs. 1,000 and this provision is also made applicable to a provident society or a mutual insurance company.

To Sec. 9, a sub-clause is added in connection with the refund of deposits where an insurer has ceased to carry on in British India any class of insurance business in respect of which a deposit has been made in the case where any insurance business is being carried on in an Indian State. In such a case the Court is empowered not to order the return of any deposits unless it is satisfied after giving notice to the Chief Insurance Authority of the particular State that the liabilities of the insurer to that State have been satisfied.

In Sec. 10 a new sub-sec. (2A) is added providing that no insurer carrying on life insurance business shall be entitled to be registered for any class of insurance business in addition to class or classes for which he has been registered, unless the Superintendent of Insurance is satisfied that the assets of the life insurance fund are adequate to meet all the liabilities on life insurance policies.

In Sec. 22 a provision is made empowering the Superintendent of Insurance while making an investigation or valuation to call upon the insurer to place at the disposal of the actuary approved by the Superintendent all the materials required by the actuary. A new sub-sec. (2A) has been added to Sec. 27 for increasing the amount of the investments where an insurer accepts reinsurance in respect of any policies of life insurance issued by another insurer and maturing for payment in India and for decreasing the investments where the insurer cedes reinsurance to another insurer.

In Sec. 29 a proviso is added for repayment of loans within 3 months granted in contravention of this section and in case of default provides that the director, manager, auditor or actuary shall cease to hold office.

In Sec. 31 a new sub-sec. is added that no insurer incorporated or domiciled in British India shall hold any of his assets kept in an Indian State otherwise than in the name approved by the State.

In Sec. 33 a further power is given to the Superintendent of Insurance while ordering inspection, to utilise the services of an auditor or actuary.

To sub-sec. 7 of Sec. 39 a proviso is added that where a nomination made in favour of the wife of the person who has insured his life or of his wife and children, is expressed as being made under this section, then Sec. 6 shall be deemed not to apply to the policy.

An amendment is introduced in Sec. 40 providing that references to an insurance agent shall be construed as including an individual soliciting or procuring insurance business exclusively in an Indian State and holding a valid licence as an insurance agent. To the same section a new sub-sec. (2A) is added providing that no insurance agent shall be paid a commission or remuneration in any form in respect of any policy not effected through him provided however that where a policy of life insurance has lapsed and another insurance agent effects the revival of the lapsed policy he may be paid commission for the same.

A new Sec. 48A is added prohibiting an insurance agent who solicits or procures life insurance business or any other person acting on behalf of an insurer who for the purpose of life insurance business employs insurance agents from becoming or remaining a director of any life insurance company.

A new Sec. 53A is added whereby it is provided that no account shall be taken of any assets of an insurer consisting of unpaid-up share capital.

To Sec. 58 a new sub-sec. (5) is added empowering the Court when making an order confirming a scheme for partial winding up of

an insurance company to make such orders as it considers necessary for the disposal of a portion of the deposit of the company.

Sec. 65 is amended by raising the amount of Rs. 50 to 100 and the amount of Rs. 500 to 900 in connection with the business of a provident society.

An amendment is introduced in Sec. 70 empowering the Superintendent of Insurance to cancel the registration of a provident society if he has reason to believe that any claim upon the society under any policy of insurance remains unpaid for 3 months after final judgment. A further sub-sec. in Sec. 70 empowers the Superintendent of Insurance to issue a duplicate certificate of registration.

A new Sec. 71 is substituted for old Sec. 71 making the provisions of Secs. 20, 32, 46 and 53A applicable to a provident society as they are applicable to insurers.

A new Sec. 73A is added which prohibits a provident society from registering a name identical with that of an insurer or another provident society.

Sec. 85 which provides for investment of the funds of a provident society allows by a proviso to sub-sec. 3, loans to be made by a provident society to a banking company.

A new sub-sec. 5 is added to Sec. 87 empowering the Superintendent of Insurance by a notice in writing requiring a provident society to comply within a certain time with any directions he may issue to remedy defects disclosed by an inquiry into the insolvency of such society and if the society fails to comply with such directions the Superintendent of Insurance may apply to the Court for the winding up of the society.

A new Sec. 87A is added for the amalgamation and transfer of insurance business of a provident society with the insurance business of any other provident society in accordance with a scheme sanctioned by the Superintendent of Insurance.

A new sub-sec. (2) is substituted for the old sub-sec. (2) of Sec. 88 providing for further grounds for winding up a provident society in cases where registration of the society has been cancelled or where the society is found to be insolvent or where the continuance of the society is prejudicial to the interest of the policy-holders.

A new Sec. 98A is added which prohibits granting of loans by co-operative life insurance societies in the same way as loans are prohibited by Sec. 29 of the Act in the case of other insurers.

An amendment has been introduced in the Third Schedule to the Insurance Act of 1938 for keeping proper accounts of gross premium received and expenses of management.

7. Indian Finance Act, 1946.—This Act by Sec. 2 continues for one year the duty on salt manufactured in or imported by land into British India at the rate of one rupee and nine annas per standard maund.

Sec. 3 continues the existing rates of inland postage; Sec. 5 continues the additional duties of customs on certain goods chargeable with a duty of customs under the First Schedule to the Indian Tariff Act, 1934 (XXXII of 1934) or under the said Schedule read with any notification of the Central Government for the time being in force, imposed by Sec. 6 of the Indian Finance Act, 1942, except in the case of wines in Item 22 (3) in the First Schedule of the Indian Tariff Act in which case additional duty of one-half instead of one-fifth of the amount of customs duty is imposed. By the same section all additional duty on betelnuts, cinematograph films not exposed and exposed, raw cotton, silver bullion and silver sheets and plates and gold bullion and gold sheets and plates which have undergone no process of manufacture subsequent to rolling, and silver and gold coins. Instead of the additional duty, Sec. 6 provides for the imposition and alteration of certain customs duty on the above mentioned articles.

Sec. 7 alters the duty of customs on kerosene and mineral oils in regard to which nine pices are taken off.

The duty of excise on motor spirit is changed by the substitution of the word "twelve" in place of the word "fifteen".

Sec. 9 alters the excise duty on betelnuts by reducing the duty from two annas to one anna.

Sec. 10 repeals Ordinance VIII of 1942 (The Cotton Fund Ordinance) whereby the duty of custom on raw cotton is withdrawn.

Sec. 11 deals with the imposition of income-tax and super-tax at the rates specified in the Schedule Parts I and II. No income-tax is payable on the first Rs. 1,500 income and no tax on a total income which does not exceed Rs. 2,000.

On the next Rs. 3,500 the income-tax is charged at one anna in the rupee.

On the next Rs. 5,000 of total income, the income-tax is charged at two annas in the rupee.

On the next Rs. 5,000 of total income, the rate is three and a half annas in the rupee while on the balance of the total income beyond Rs. 5,000 the rate is five annas in the rupee.

In the case of companies and local authorities the rate on the whole of the total income is fixed at five annas in the rupee.

As regards the rates of super-tax, they range after the first Rs. 25,000 from two annas in the rupee to ten and a half annas in the rupee; while in the case of wholly unearned incomes the rate of super-tax ranges from three annas in the rupee to ten and a half annas in the rupee.

In the case of every local authority and certain societies the super-tax rate is only one anna in the rupee on the whole of total income.

In the case of companies the super-tax rate is also one anna in the rupee on the whole total income but in addition to that further tax is charged ranging from two annas in the rupee upto seven annas in the rupee where in respect of that part of the total income which does not exceed the amount of dividends, on the amount by which such part exceeds from 30 per cent to 60 per cent of the total income as so reduced.

8. The Indian Income-Tax (Amendment) Act, 1946.—Sub-sec. (3) of Sec. 4 of the Income-tax Act XI of 1922 provides for certain exemptions from the total income of a person. The present Act inserts clause (xii) to sub-sec. (3) of Sec. 4 of the Act of 1922 whereby the income received in respect of a building the erection of which is begun and completed between the "day of April 1946 and 31st March 1948, is exempted for a period of two years from the date of its completion from income-tax under the head "Income from Property".

Sec. 10 of the Income-Tax Act XI of 1922 provides for allowances in certain cases in regard to newly erected buildings and machinery or plant and also in the case of any building or machinery or plant which has been sold or discarded or demolished or destroyed.

It now further provides in newly added clauses (xii), (xiii) and (xiv) for allowances in respect of expenditure (not being in the nature of capital expenditure) laid out or expended on scientific research relating to a business or any sum paid to a scientific research association or any sum paid to a university, college or other institution used for scientific research.

9. Indian Oilseeds Committee Act, 1946.—India is one of the World's principal producers of oilseeds. In view of the importance of oilseeds in the national economy it became necessary to put oilseeds research, development and technology on a more permanent basis. This Act therefore sets up a committee on the lines of other committees in respect of similar commodity such as the Indian Central Cotton Committee. This Committee has representatives of all the important interests on it and is empowered to deal with problems connected with the production and marketing of oilseeds.

Sec. 3 of this Act imposes a cess on all oils extracted from oilseeds and on all oilseeds exported out of British India.

Sec. 4 provides for the constitution of the Indian Oilseeds Committee.

Sec. 5 makes the committee a body corporate. Sec. 6 provides for filling vacancies in the appointments of the members.

Sec. 9 empowers the committee to apply the fund in the manner laid down.

Sec. 11 provides for the collection of duty of excise duty.

Sec. 13 provides for inspection of mills for oilseeds and taking copies of records and accounts.

Sec. 16 empowers the Central Government to dissolve the committee.

Sec. 17 empowers the Central Government to make rules for carrying out the objects of the Act.

Sec. 18 empowers the committee to make regulations.

10. The Factories (Amendment) Act, 1946.—Sec. 34 of the Factories Act, 1934 has been amended by providing for decrease of working hours in that no adult worker shall be allowed to work in a factory for more than 48 hours instead of 54 hours as originally fixed or where the factory is a seasonal one for more than 50 hours instead of 60 hours in any week.

Sec. 36 is also amended by restricting the hours of work per day in a factory for adult workers to 9 and 10 hours a day instead of 10 and 11 hours a day in a factory and in a seasonal factory respectively.

Sec. 38 is also amended providing that the periods of work of an adult worker in a factory shall be so arranged that along with his intervals for rest they shall not spread over more than ten and half hours or where the factory is a seasonal one eleven and half hours in any day.

Sub-sec. 4 of Sec. 44 of the Act of 1934 is amended so that the exemption given by the Provincial Government or the Chief Inspector exempting any or all adult workers in any factory from the limitation of working hours shall remain in force for a period not exceeding two months from the date of the notice given to the Manager of the factory provided however that the Provincial Government may extend the operation of such order for a period not exceeding six months at any one time. Sec. 45 is also amended by imposing restrictions on the employment of women and limiting the working hours to ten and a half hours or where the factory is a seasonal one, eleven and half hours between 6 a.m. and 7 p.m.

Sec. 47 which deals with extra scales for overtime is also amended by providing this where a worker in a non-seasonal factory works for more than nine hours in any day or for more than forty-eight hours in any week or in a seasonal factory works for more than nine hours in any day or for more than fifty hours in a week, he shall be entitled in respect of the overtime to be paid at the rate of twice his ordinary rate of pay.

11. The Provident Funds (Amendment) Act, 1946.—Certain judicial decisions have cast doubts on the status of nominees under certain Provident Fund Rules. Hence this Act is passed to clarify the rights of a person duly nominated under the Rules to receive a subscriber's Provident Fund Deposits.

Sec. 5, sub-sec. (1) of the Provident Funds Act, 1925 is amended as follows:—

Notwithstanding anything contained in any law for the time being in force or in any disposition whether testamentary or otherwise by a subscriber to or depositor in a Government or Railway Provident Fund of the sum standing to his credit, the person who has been duly nominated in accordance with the rules of the Fund shall become entitled to the exclusion of all other persons to receive the subscriber's deposits provided that such subscriber dies before the sum becomes payable. But if such nomination is cancelled and another nomination is made by the depositor in his life-time or if such nomination becomes invalid for any reason then in that case such person nominated does not receive the amount of the Provident Fund.

It is also provided that if a nominee dies before the subscriber then his nomination ceases to subsist.

12. Trade-Marks (Amendment) Act, 1946.—The Trade Marks Act, 1940 is only effective in British India and not in Indian States some of which have their own Trade Marks Acts. The commercial community

complained that separate registrations in a number of territories in India have imposed a great financial burden on them apart from the embarrassment and confusion that arose as a result of conflicting trade marks being registered in various territories in India. It is with a view to avoiding conflict of registrations in various Indian States and also to make trade marks registered in any territory effective in all territories in India in which trade marks legislation has been enacted that this Amending Act has been passed.

Sec. 4 of the Trade Marks Act of 1940 is amended by this Act so as to empower the Central Government to appoint two or more deputy registrars of trade marks to discharge certain functions of the registrar.

Sec. 10 is amended for extending the protection to trade marks which are registered in Indian States.

Sec. 19 is also made applicable to trade marks in any Indian State.

A new sub-sec. (2) is added to Sec. 21 which provides that a person who is registered in any Indian State to which Sec. 82A of the Act of 1940 for the time being applies, as proprietor of a trade mark shall have the same rights in respect thereof as are conferred by Sec. 21 on a person registered under this Act as proprietor of a trade mark.

Sec. 22 is also amended by extending its provisions to any Indian State.

In Sec. 23 the words "registered trade mark" are changed into "trade mark registered under this Act or registered in any Indian State."

An explanation is added to Sec. 46 to include a person who is registered in an Indian State as also a person aggrieved so that he is also entitled to oppose registration of a trade mark which conflicts with a trade mark registered by him in an Indian State.

A new sub-sec. is added to Sec. 57 providing that a person registered in any Indian State as proprietor of a certification trade mark shall have the same rights as a person registered under this Act.

A new Sec. 82A is added empowering the Central Government to enter into reciprocal arrangements with any Indian State whereby trade marks registered under this Act shall have the same protection as if they are registered in that State.

13. Indian Companies (Amendment) Act, 1946.—Sec. 282B of the Indian Companies Act, 1913 lays down that moneys belonging to a provident fund constituted by a company for its employees shall be invested in trust securities or deposited in a post office savings bank. The limit of the amount allowed to be kept in the post office savings bank is only Rs. 5,000 which has been found to be insufficient to meet the running expenses of provident funds of big concerns. Consequently a proviso is added to sub-sec. (2) of Sec. 282B of the Companies Act, 1913 empowering a company to deposit the excess over Rs. 5,000 in a special account which may be opened in a scheduled bank.

14. Railway Companies (Substitution of Parties in Civil Proceedings) Act, 1946.—The Central Government acquired the Bengal-

Nagpur Railway on 1st October 1944 and assumed responsibility for the contractual obligation of the railway company. There are a number of suits pending in law courts to which the railway is a party, and difficulty has arisen by reason of the Central Government having become the owners of the railway. Similar difficulty has also arisen in respect of Bengal and North-Western and Rohilkund and Kumaon Railways, the liability in respect of which has also been accepted by the Central Government. There are liquidators appointed to complete the liquidation but owing to the change of ownership much delay is being caused in the completion of the liquidation.

Hence this Act provides that in every civil proceeding pending, to which the Bengal-Nagpur Railway, the Bengal and the North-Western Railway or the Rohilkund and Kumaon Railway is a party and which proceeding is founded on any right or liability assumed by the Central Government, the Governor-General in Council shall notwithstanding anything to the contrary in the Code of Civil Procedure, 1908, be deemed to be substituted in the place of the railway company and such proceeding may be continued by or against the Governor-General in Council and the railway company shall be discharged from all liability in connection with the proceedings.

15. Indian Coconut Committee (Amendment) Act, 1946.—The Indian Coconut Committee Act, 1944 which provides for the levy of an excise duty at a rate not exceeding annas four per cwt. on copra consumed in mills and which amount is to be utilised by the committee for improving the cultivation and marketing of coconuts in India, was passed as emergency legislation which remained in force only for a temporary period hence this Act is passed to continue the Indian Coconut Committee Act of 1944 on a permanent basis. Consequently Sec. 9 of the Act is amended providing for the permanent creation of a Coconut Improvement Fund, and for the application of the fund for the purpose of cultivation and marketing of coconuts.

16. Protective Duties Continuation Act, 1946.—This Act continues for a further period of one year after 31st March 1947, the protective duties on sugar, woodpulp, paper, cotton, silk manufactures, iron and steel manufactures, magnesium chloride and wheat and wheat flour.

The Act also extends for one year more the Sugar Industry Protection Act, 1932.

17. Protective Duties Act.—Pending the recommendations of the Tariff Board for giving protection to industries this Act has been passed to empower Government to impose by executive action additional duties to restrict the inflow of goods from abroad.

Sec. 2 empowers the Central Government to impose on any goods produced or manufactured in any country outside India and imported into British India, a duty of customs which is to be deemed to be a duty leviable under the Indian Tariff Act, 1934.

Sec. 3 provides that a Bill shall be introduced in the Central Legislature to give effect to the proposals of the Central Government in regard to the continuance of a protective duty of customs on foreign goods.

18. Indian Soldiers (Litigation) Amendment Act, 1946.—This Act restricts the benefit of the extended limitation conferred by the exception to the proviso to Sec. 11 of the Indian Soldiers (Litigation) Act, 1925 to suits in which the right of pre-emption which a soldier wishes to enforce on his return in respect of agricultural land.

19. The Hindu Married Women's Right to Separate Residence and Maintenance Act, 1946.—Even with regard to elementary rights of human beings, the position of a Hindu married woman is deplorable. This Act intends to give her the right of separate residence and maintenance in case of her living under unbearable conditions.

Sec. 2 provides that notwithstanding any custom or law to the contrary a Hindu married woman shall be entitled to separate residence and maintenance from her husband on one or more of the following grounds:—

- (1) if he is suffering from any loathsome disease not contracted from her,
- (2) if he is guilty of such cruelty towards her as renders it unsafe or undesirable for her to live with him,
- (3) if he is guilty of desertion that is to say of abandoning her without her consent or against her wish,
- (4) if he marries again,
- (5) if he ceases to be a Hindu by conversion to another religion,
- (6) if he keeps a concubine in the house or habitually resides with a concubine,
- (7) for any other justifiable cause, provided that she shall not be entitled to separate residence and maintenance if she is unchaste or ceases to be a Hindu, or fails without sufficient cause to comply with a decree for restitution of conjugal rights.

Sec. 3 says that the Court shall in determining the amount to be paid to the wife shall have regard to the social standing of the parties and the husband's means.

20. The Industrial Employment (Standing Orders) Act, 1946.—This Act seeks to provide for the framing of "Standing Orders" in all industrial establishments employing one hundred or more workers.

Experience has shown that "Standing Orders" defining the conditions of recruitment, discharge, disciplinary action, holidays, leave, etc., go a long way towards minimising friction between the management and workers in industrial undertakings.

This Act is made applicable to every industrial establishment wherein one hundred or more workmen are employed and to such class or classes of other industrial establishments as the appropriate Government may from time to time by notification specify.

Sec. 3 enacts that within six months from the date on which this Act becomes applicable, every employer or owner of an industrial establishment shall submit to the Certifying Officer five copies of the draft Standing Orders proposed by him for adoption in his industrial establishment.

Sec. 5 enacts that on receipt of the draft Standing Orders, the Certifying Officer shall forward a copy thereof to the trade union of the workmen together with a notice in the prescribed form requiring objections if any which the workmen may desire to make to the draft Standing Orders. The Certifying Officer shall after hearing the objections of both the employer and workmen and after making such modifications as he may think fit, shall then certify the draft Standing Orders.

Sec. 6 gives the right of appeal to the employer and the workmen from the order of the Certifying Officer.

Sec. 7 provides that Standing Orders as certified by the Certifying Officer shall unless an appeal is preferred, come into operation on the expiry of 30 days from the date on which authenticated copies thereof are sent to the employer and to the trade union or other prescribed representatives of the workmen.

The Act further provides for registration of the Standing Orders and for posting them in a prominent place in the language understood by the workmen near the entrance of the establishment. The Standing Orders as certified shall not be liable unless by agreement of parties to any modification until after expiry of six months.

Sec. 13 provides for penalties where an employer fails to comply with the provisions of the Act.

Sec. 15 empowers the appropriate Government to make rules for carrying out the purposes of the Act. A Schedule is annexed to the Act which states what matters should be provided in the Standing Orders.

21. Merchant Seamen (Litigation) Act, 1946.—This Act is intended for special protection in respect of civil and revenue litigation of serving merchant seamen.

The Act defines "Seaman" as a person other than a person subject to naval law, who is employed or engaged under an agreement on board any seagoing ship in any capacity.

Sec. 3 enjoins every party who files a suit by presenting a plaint or who makes an application or appeal to any Court and who has reason to believe that any adverse party is a serving seaman, to make a statement to that effect in the plaint, application or appeal.

Sec. 4 empowers the Collector to intervene in a case on behalf of a seaman whom he has reason to believe is serving as a seaman and is unable to appear at the hearing by certifying the facts in the prescribed manner to the Court and the Courts shall suspend the proceeding and give notice to the Shipping Master.

Sec. 7 empowers the Court to set aside decrees and orders against a serving seaman if such decree and order are passed against him while he is serving.

Sec. 8 modifies the law of limitation in the case of a seaman who is a party by providing that the time that he has been serving as a seaman shall be excluded from computation.

Sec. 9 provides that if any Court is in doubt as to whether a seaman is serving or not it may refer the question to the Shipping Master.

Sec. 10 empowers the Central Government to make rules.

22. The Mica Mines Labour Welfare Fund Act, 1946.—The object of this Act is to constitute a fund for the financing of activities and to promote the welfare of labour employed in the mica mining industry.

Sec. 2 empowers the Central Government to levy and collect as a cess, on all mica in whatever state exported from British India a duty of customs at such rate not exceeding six and one-quarter per centum *ad valorem* as the Central Government may fix.

The amounts so received shall then be credited to a fund to be called the Mica Mines Labour Welfare Fund.

Sec. 3 provides that this fund shall be applied by the Central Government to meet expenditure in connection with measures in the opinion of the Central Government necessary or expedient to promote the welfare of labour employed in the mica mining industry, towards the improvement of public health and sanitation, prevention of disease, medical facilities, improvement of educational facilities, water supplies and standard of living including housing and nutrition, etc.

Sec. 4 empowers the Central Government to constitute two Advisory Committees one for the Province of Madras and one for the Province of Bihar, to advise Government on any matters arising out of the administration of this Act or this Fund.

Sec. 5 empowers the Central Government to appoint inspectors, Welfare Administrators and such other officers as it thinks necessary to administer and supervise the fund.

Sec. 6 empowers the Central Government to make rules to carry into effect the purposes of this Act.

23. The Reserve Bank of India (Amendment) Act, 1946.—Section 31 of the Reserve Bank of India Act, 1934 prohibits the issue of bills of exchange payable to bearer on demand. It does not however prevent the issue of promissory notes payable to bearer after a fixed period. The issue of such promissory notes not only enabled anonymous holdings and thereby facilitating tax evasion but such promissory notes also became in effect after the expiry of the period, bearer bonds payable on demand. Such issue was therefore found to be undesirable. Besides, it was apprehended that the circulation of large quantities of such bank papers which might be issued by some banks without adequate cover, might well prejudice the credit of Government's own paper currency. It was therefore decided to prohibit such issue and on 18 May 1946 an Ordinance was promulgated making it illegal for banks to issue promissory notes payable to bearer.

This Act therefore now provides that notwithstanding anything contained in the Negotiable Instruments Act, 1881, no person in British India other than the Reserve Bank or the Central Government, shall make or issue any promissory note expressed to be payable to the bearer of the instrument.

Sec. 3 repeals the Bearer Promissory Notes (Prohibition Issue) Ordinance, 1946.

24. The Essential Supplies (Temporary Powers) Act, 1946.—Controls in respect of certain essential commodities (such as food-stuffs, cotton and woollen textiles, paper, petroleum and petroleum products, spare parts of mechanically propelled vehicles, coal, iron and steel and mica) have been continued since 1st October 1946 through the Essential Supplies (Temporary Powers) Ordinance, 1946. This Ordinance is now converted into this Act making the duration of the Act to be the period provided in Sec. 4 of the India (Central Government and Legislature) Act, 1946. This Act by Sec. 2 defines the essential commodities into eight classes as stated above.

Sec. 3 empowers the Central Government where it appears to be necessary or expedient for maintaining or increasing supplies of any essential commodity or for securing their equitable distribution and availability at fair prices, to pass orders providing for regulating or prohibiting the production, supply and distribution thereof and trade and commerce therein.

Sec. 4 empowers the Central Government to delegate its powers to pass orders upon such officer or authority subordinate to the Central Government or such Provincial Government or such officer or authority subordinate to a Provincial Government as may be specified.

Sec. 5 empowers the Central Government to give directions to any Provincial Government as to the carrying into execution in the Province of any order made under Sec. 3.

Sec. 6 enacts that any orders passed under Sec. 3 above shall be valid and effective notwithstanding anything inconsistent therewith contained in any other enactment.

Sec. 7 provides for penalties for contravention of any order made under Sec. 3.

Sec. 8 makes an attempt to contravene an order punishable.

Sec. 9 provides that where a company or other corporate body contravenes an order, every director, manager, secretary or other officer or agent thereof shall be deemed to be guilty of such contravention, unless he proves that the contravention took place without his knowledge or that he exercised all due diligence to prevent such contravention.

Sec. 10 provides for punishments for making false statements or returns; with imprisonment for a term which may extend to three years or with fine or with both.

Sec. 11 provides that no Court shall take cognizance of any offence under this Act except on a report in writing of the facts constituting such offence, made by a person who is a public servant.

Sec. 12 gives powers to Magistrates to try the offences in a summary way.

Sec. 13 enacts a special provision empowering First Class Magistrates and Presidency Magistrates to pass a sentence of fine exceeding rupees one thousand on any person convicted of contravening an order made under the Act.

Sec. 15 enacts that where any person is prosecuted for contravening any order which prohibits him from doing an act or being in possession

of a thing without lawful authority or without a permit, licence or other document, the burden of proving that he has such authority, permit licence or other document shall be on him.

Sec. 17 repeals the Essential Supplies (Temporary Powers) Ordinance, 1946.

25. The Delhi Special Police Establishment Act, 1946.—In 1943 the Government of India, set up a Police Staff called Special Police Establishment (War Department) under the Special Police Establishment (War Department) Ordinance, 1943 for the purpose of investigating offences of bribery and corruption connected with the Departments of the Central Government. This Organisation did useful work in the investigation of cases in which employees and the contractors of the Central Government were involved and in bringing offenders to book.

The above Ordinance lapsed on 30th Sept. 1946. Accordingly this Act was passed with the object of making provision for the constitution of a special police force for the Chief Commissioner's Province of Delhi for the investigation of certain offences committed in connection with matters concerning Departments of the Central Government, for the Superintendence and Administration of the said force and for the extension to other areas in British India of the powers and jurisdiction of members of the said force in regard to the investigation of the said offences.

This Act extends to the whole of British India.

Sec. 2 provides that notwithstanding anything in the Police Act, 1861 the Central Government may constitute a special police force to be called the Delhi Special Police Establishment for the Chief Commissioner's Province of Delhi for investigation into the offences notified under Sec. 3 below. This police force is given all the powers, duties, privileges and liabilities which police officers of the Delhi Province possess.

Sec. 3 empowers the Central Government to specify by notification the offences or classes of offences committed in connection with matters concerning Departments of the Central Government which are to be investigated by the Delhi Special Police Establishment.

Sec. 4 vests the Superintendence of the Delhi Special Police Establishment in the Central Government which may appoint an officer for its administration giving him the powers of an Inspector-General of Police.

Sec. 5 empowers the Central Government to extend the operation of this Act to any area including Railway areas in British India and extend the powers and jurisdiction of members of the Delhi Special Police Establishment for the investigation of the offences specified in Sec. 3 above outside Delhi.

Sec. 6 provides that in case any investigation is conducted by a member of Delhi Special Police Establishment in a Governor's Province the consent of the Government of that Province shall be obtained.

Sec. 7 repeals the Delhi Special Police Establishment Ordinance.

26. The Special Tribunals (Supplementary Provisions) Act, 1946.—The Criminal Law Amendment Ordinance, 1943 provided for the constitution of Special Tribunals for the trial of specified cases allotted to them by the Central Government. Two of these tribunals ceased to exist on 1st Oct. 1946. As questions were bound to arise as to the Courts which should be regarded as their successors for the purposes of the Code of Criminal Procedure this Act has been passed replacing the Special Tribunals (Supplementary Provisions) Ordinance, 1946 and providing that where any special tribunal ceases to function, the sentences or orders passed by it shall be deemed for the purposes of the Code of Criminal Procedure to have been passed by the Court of Session, within the local limits of whose jurisdiction the offences charged in the case were committed and where the offences charged in the case are alleged to have taken place in a Presidency Town, they shall be deemed to have been passed by the Chief Presidency Magistrate.

27. The Banking Companies (Restriction of Branches) Act, 1946.—There has been in recent years a rapid increase in new branches of banks mostly at places where adequate banking facilities are already available.

Complaints have been received regarding failure of some of the banks to repay deposits received at new branches. In several cases new branches have worked to the detriment of the interest of the depositors by involving heavy capitalised expenditure out of proportion to the resources of the bank, payment of high rates of interest, speculative activities, manipulation of accounts, employment of untrained and untrustworthy managers, etc. These developments were considered to be dangerous to the banking structure of the country and hence this Act has been passed to control banking branches.

Sec. 3 enacts that no banking company shall open a new branch or change the location of its existing branch without obtaining prior permission in writing from the Reserve Bank.

Before giving the permission the Reserve Bank is authorised to make an investigation into the affairs and financial position of the banking company.

Sec. 4 provides that if any bank opens a branch or changes the location in contravention of Sec. 3 above, every director or other officer who is knowingly and wilfully a party to such contravention shall be liable to a fine which may extend to one hundred rupees for every day during which that branch remains open for business.

28. The Hindu Marriages Disabilities Removal Act, 1946.—Under the Hindu law, a man cannot marry a girl of the same *gotra* or *pravar*. This rule is not against eugenics but it is an archaic rule prohibiting marriages between persons of the same *gotra* or *pravar* or between persons belonging to different sub-castes of the same caste.

This rule does not prevail among sudras and even among certain sections of the Brahmins and Kshatriyas it has been modified by custom.

This rule of marriage has often been a barrier which is tried to be surmounted by some persons by following the procedure of getting the girl adopted by a stranger of a different *gotra*. There can however be no legal adoption of a girl under the Hindu Law. Public opinion in favour of the modification of this archaic rule has necessitated legislation in the Baroda and Indore States. But the general belief prevails that such marriages which are rare are not lawful.

The Act therefore provides that notwithstanding any text, rule or interpretation of the Hindu Law or any custom or usage, a marriage between Hindus which is otherwise valid, shall not be void by reason only of the fact that the parties thereto belong to the same *gotra* or *pravar* or belong to different divisions of the same caste.

29. The Indian Tea Control (Amendment) Act, 1946.—At the beginning of each year, special export licences under the Indian Tea Control Act, 1938 are issued to cover shipping of the balance of quotas for tea outstanding for export at the end of the previous year. These licences were originally valid only upto 31st May of the year in which they were issued but owing to the shipping and freight difficulties during the War, the Act was amended in 1943 so as to extend their period of validity from two to twelve months. Now that conditions have returned to normal, this Act provides for the period of validity originally fixed for these licences.

Sec. 17 of the Indian Tea Control Act, 1938 is amended so as to provide in sub-sec. (2A) for applying to the Committee for a special export licence covering the further quantity and the Committee unless prevented by the operation of any other provision of the Act shall grant such licence. It is further provided that a special export licence issued before 1st April 1947 shall be valid upto 31st March 1947.

30. The Registration of Transferred Companies (Amendment) Act, 1946.—The Registration of Transferred Companies Ordinance, 1942 was passed with the object of enabling companies evacuated from various parts of the British Empire owing to circumstances arising out of the war, to register themselves and operate in and from British India. With the termination of the war some of the companies registered under the Ordinance are desirous of going back to the countries of their original incorporation. With a view to facilitate their return, this Act has been passed.

Sec. 2 inserts a new Sec. (2A) after Sec. 2 of the Registration of Transferred Companies Ordinance 1942 whereby the Central Government is empowered by order to cancel the registration of any company under this Ordinance on such terms and conditions as may be specified in the order to safeguard the interests of all concerns.

31. The Foreigners Act, 1946.—At present the only permanent measures governing foreigners specifically are the Registration of Foreigners Act of 1939 and the Foreigners Act, 1864. The Act of 1939 provides for the making of rules to regulate registration of all foreigners and formalities connected therewith,

their movement in, or departure from, India. The Act of 1864 provides for the expulsion of foreigners and their apprehension and detention pending removal and for a ban on their entry into India after removal; the rest of the Act which provides for report on arrival, travel under a licence and certain incidental measures can be enforced only on the declaration of an emergency. The needs of the war emergency were met by the enactment of the Foreigners Ordinance in 1939 and the promulgation under it of the Foreigners Order and the Enemy Foreigners Order. Even at that time the need for more satisfactory permanent legislation was recognised. The Foreigners Ordinance was therefore replaced by the Foreigners Act, 1940, the life of which expired on 30th September 1946, but was extended by the Foreigners Act (Amendment) Ordinance, 1946 upto 25th March 1947. This Act therefore has been passed to place the legislation on foreigners on a permanent basis and it provides for the exercise by the Central Government of certain powers in respect of the entry of foreigners into British India, their presence in British India and their departures from British India.

Sec. 2 defines a foreigner as meaning a person who is not a natural-born British Subject as defined in the British Nationality and Status of Aliens Act, 1914 or one who has not been granted a certificate of naturalization as a British Subject or who is not a ruler or subject of an Indian State or who is not a native of the tribal areas. It is however provided that any British Subject who ceases to be a British Subject shall be deemed to be a foreigner.

Sec. 3 empowers the Central Government to make orders and provisions with respect to all foreigners or with respect to any particular foreigner or any class of foreigners for prohibiting, regulating or restricting the entry into or departure from British India of such foreigners.

Sec. 4 provides for the detention and confinement of foreigner internees.

Sec. 5 prohibits a foreigner from changing his name by which he ordinarily is known and also prohibits him from carrying on any trade or

business under any changed name or style and the Act is made applicable to a foreigner who enters British India after this Act has come into force.

Sec. 6 imposes obligations on masters of a vessels landing or embarking at a port in British India passengers, to furnish returns giving particulars as prescribed with respect to passengers or members of the crew who are foreigners. The same obligations are also imposed on pilots of aircrafts.

Sec. 7 imposes similar obligations on hotel keepers and keepers of furnished or unfurnished lodgings or sleeping accommodation to submit information in respect of foreigners accommodated in such premises.

Sec. 8 empowers the prescribed authority to decide questions as regards the true nationality of a foreigner and his decision is made final.

Sec. 10 empowers the Central Government to exempt the application of this Act or any of the provisions of this Act with such modifications or conditions as may be specified, in the case of any individual foreigner or any class or description of foreigner.

Sec. 12 empowers the prescribed authority to delegate its powers to any subordinate authority.

Sec. 14 imposes penalties for contravening the provisions of this Act or of any order made thereunder and any person who is found guilty of contravening any order or direction or provision of this Act is liable to be punished with imprisonment which may extend to five years and also liable to fine.

Sec. 16 enacts that the provisions of this Act are in addition to and not in derogation of the provisions of the Registration of Foreigners Act, 1939, the Indian Passport Act, 1920 and of any other enactments for the time being in force.

Sec. 17 repeals the Foreigners Act of 1864, the Foreigners Act of 1910 and the Foreigners Act (Amendment) Ordinance of 1946.

Laws of 1947

1. The Criminal Tribes (Amendment) Act, 1947.—This Act amends S. 23 of the Criminal Tribes Act of 1924 by prescribing lesser punishment than what was prescribed for second offender's third offence which punishment under the Act of 1924 was found to be oppressive.

2. The Prevention of Corruption Act, 1947.—The object of this Act is to make provisions for the more effective prevention of bribery and corruption. The Act extends to the whole of British India and applies to all British subjects and servants of the Crown in any part of India.

S. 3 makes the offence under S. 162 of the Indian Penal Code of taking gratification to influence public servants and the offence under S. 165 of the Indian Penal Code of obtaining valuable thing by public servant without consideration cognizable offences.

S. 4 provides that where a public servant accepts gratification or other valuable thing from any person other than legal remuneration he shall be presumed to have accepted that gratification or valuable thing as a reward.

S. 5 makes it an offence punishable with imprisonment for a term which may extend to 7 years or with fine if a public servant commits criminal misconduct in the discharge of his duty and defines criminal misconduct as habitual acceptance of gratification or valuable thing without consideration as a reward or as obtaining some advantage by illegal or corrupt means by abusing his position.

S. 6 requires previous sanction for prosecution under S. 161 or S. 165 of the Indian Penal Code or under sub-sec. (2) of S. 5 of this Act.

S. 7 enables a person charged with an offence under the abovementioned sections to be a competent witness and to give evidence on oath a disproof of the charge or charges made against him if he so chooses to do.

3. The Indian Extradition (Amendment) Act, 1947.—By this Act a new sub-section 2 is added to s. 8A of the Indian Extradition Act, 1903 conferring powers on the District Magistrate and the Chief Presidency Magistrate a relation to the taking of a deposit in lieu of making a bond as required by s. 8A and providing for forfeiture of bonds and discharge of sureties.

4. The Coffee Market Expansion (Amendment) Act, 1947.—S. 3 amends s. 4 of the Coffee Market Expansion Act, 1942 providing that the Marketing Board shall consist of representatives of the Central Government, Madras Government, Mysore State, Travancore State, Cochin State, of the Coffee trade interest including certain Coffee Planters Associations and certain representatives of the Labour Organisation.

By s. 4 the Indian Coffee Cess Act, 1935 is repealed.

By s. 5 the expressions "Controller of coffee" and "Deputy Controller of Coffee" are changed into "Chief Coffee Marketing Officer" and "Deputy Chief Coffee Marketing Officer."

5. The Factories (Amendment) Act, 1947.—This Act inserts a new section 33A in Chapter III of the Factories Act, 1934 and it empowers the Provincial Government to make rules requiring a factory employing more than two hundred workmen to provide a canteen for the workers and to make rules as regards the accommodation therein and the food to be supplied to the workers and charges for the food.

6. The Indian Railways (Amendment) Act, 1947.—This Act by s. 2 increases the figure of Rs. 100 to Rs. 300 in s. 75 (1) of the Indian Railways Act, 1890. S. 75 (1) provides that the Railway Administration shall not be responsible for the loss, destruction or deterioration of any articles mentioned in the Second Schedule of the value of over Rs. 100 and handed over to the Railway for carriage unless, the value of such goods is declared. Now the value of the articles is raised to Rs. 300 by this amendment.

7. The Foreign Exchange Regulation Act, 1947.—This Act is intended to regulate and control payments and dealings in foreign exchange and securities and the import and export of currency and bullion.

This Act applies to British subjects and servants of the Crown in any part of India and is to remain in force for five years only with power to the Central Government to extend it for a further period not exceeding three years.

S. 4 deals with restrictions on dealings in foreign exchange and provides that no person other than an authorised dealer shall except with the previous permission of the Reserve Bank in British India buy or borrow from or sell or lend to or exchange with any person not being an authorised dealer in any foreign exchange. It further provides that no person even though an authorised dealer shall enter into any transaction for the conversion of Indian currency into foreign currency or *vice versa* without the permission of the Reserve Bank at rates of exchange other than those fixed by the Reserve Bank.

This restriction however does not prevent a person from buying from any post office any foreign exchange in the form of postal orders or money orders.

An authorised dealer is defined as a person whom the Reserve Bank authorises to deal in foreign exchange, and he has to abide by all directions as the Reserve Bank may from time to time think fit to give.

S. 5 provides that no person in or resident in British India shall make any payment to any person resident outside India or draw, issue or negotiate any bill of exchange or promissory note so as to transfer any payment to any person resident outside India or place any sum to the credit of any person resident outside India without the permission of the Reserve Bank. In short this section imposes restrictions on payments in any manner to a person resident outside British India without the permission of the Reserve Bank.

S. 6 provides for keeping a blocked account where the Reserve Bank gives permission to make payment to any person resident outside British India.

S. 7 provides for maintaining special accounts in the case of persons resident in any territory to whom payments are to be made.

S. 8 imposes restrictions on import or export of gold or silver or currency notes and bank notes or coins without the permission of the Reserve Bank.

S. 9 empowers the Central Government to acquire foreign exchange from any person who owns such foreign exchange.

S. 10 deals with the duty of persons entitled to receive foreign exchange or make payment of rupees.

S. 11 gives power to the Central Government to impose conditions on the use or disposal of or dealings in gold and silver prior to their import into British India.

S. 12 empowers the Central Government to prohibit the export of any goods from British India unless the declaration is made by the exporter that the amount representing the export value will be paid in the prescribed manner.

S. 13 prohibits export and transfer of securities outside India.

S. 14 empowers the Central Government to order any security belonging to any person to be held in the custody of an authorised depository.

S. 16 deals with the acquisition by the Central Government of foreign securities.

S. 17 places restriction on persons resident in British India from making settlements and trusts otherwise than by will in favour of persons resident outside India in certain territories.

S. 18 provides that no person resident in British India shall except with the permission of the Reserve Bank do any act whereby a company which is controlled by persons resident in India or the United Kingdom ceases to be so controlled and no person shall lend any money to any company which is controlled by persons resident outside India elsewhere than in the United Kingdom or certain notified territories.

S. 19 empowers the Central Government to take search and call for information from owners of foreign exchange and foreign securities.

S. 21 deals with agreements and contracts entered into for evading the provisions of this Act.

S. 23 provides for punishment for contravening the provisions of this Act.

S. 25 empowers the Central Government to give directions to the Reserve Bank for the purposes of this Act.

S. 27 empowers the Central Government to make rules for carrying into effect the provisions of this Act.

8. The Indian Navy (Discipline) (Amendment) Act, 1947.—This Act amends s. 50 of the Naval Discipline Act as set forth in the First Schedule to the Indian Navy (Discipline) Act, 1934 and makes provisions respecting discipline of persons under engagement to serve His Majesty.

For the old s. 90 a new s. 90 is substituted providing that if any person enters into an agreement with the Central Government to serve His Majesty in a particular ship and agrees to become subject to this Act such person shall so long as the engagement remains in force and although he may not be actually serving in any ship be subject to this Act as if he belongs to His Majesty's Navy. It further empowers the Central Government by order to direct that any such person while subject to this Act be deemed to be officer or petty officer for the purposes of this Act.

9. The Sugar (Temporary Excise Duty) Act, 1947.—The ex-factory price of sugar was raised by Rs. 4-4-0 a maund with effect from 23rd October 1946 and an Ordinance called the Sugar (Temporary Excise Duty) Ordinance, 1946 was issued to recover the excess price of Rs. 4-4-0 on existing stocks held at the old price. The time of expiry of this Ordinance was in June 1947. As it was necessary to continue the provisions of this Ordinance in as much as it was considered that the assessment and recovery of the duty from the various stock-holders would take some time more, this Act has been passed to give effect to the provisions of the Ordinance.

S. 2 provides that the expiry of this Ordinance shall not affect the liability to pay the duty levied under that Ordinance or the liability to any penalty thereunder and for the purposes of enforcing the recovery of the duty.

S. 3 provides for giving power to the factory owners and wholesale dealers to recover the duty on sugar from their buyers in respect of sales made at the old price.

10. The Explosives (Temporary Provisions) Act, 1947.—This Act continues for a limited period the powers of the Central Government to exempt the loading, unloading, handling, storage and conveyance of ammunition, explosives and inflammable substances from certain restrictions and provides in the interest of safety for the regulation of such operations.

The Act is made to remain in force for two years only.

S. 2 empowers the Central Government to declare that certain restrictions which are imposed under any law shall not apply to the loading, unloading, handling, storage or conveyance of ammunition explosives and inflammable substances.

Such order or declaration under s. 2 shall apply only to the ports of Karachi and Vizagapatam and to railways over which such substances are carried to or from those ports. It further provides for regulating the loading, unloading and handling of such substances.

S. 4 provides for punishment for contravention of any order made under the Act.

11. The Reserve Bank of India (Amendment) Act, 1947.—The Government of Burma has decided to entrust the currency and coinage of Burma to a Currency Board of its own and has given notice to the Government of India under India and Burma (Burma Monetary Arrangement) Order, 1937 for the termination of the joint monetary arrangements governing India and Burma with effect from 1st April 1947. As a

result the Reserve Bank ceased from that date to function as banker to the Government of Burma or to manage its note issue. Hence this Act enables the Reserve Bank to wind up its affairs in that country by deleting from the Reserve Bank of India Act 1934 all references to Burma.

Provision has also been made in the Act to abolish the Rangoon share register of the Bank and to transfer the elective directorship from the Rangoon to the Madras area.

The amendments in this Act are therefore all formal for abolishing all references to Burma.

12. The Railways (Transport of Goods) Act, 1947.—During the war railway priority was exercised under Rule 85A of the Defence of India Rules in respect of certain essential commodities. The continuance of such control is necessary so long as the present shortage of the essential commodities continue and some form of priority control is essential for the movement of essential commodities by rail without delay and in preference to less important movements. This Act therefore seeks to empower the Central Government to exercise preference in respect of certain essential commodities for a period of one year.

S. 3 empowers the Central Government or any person authorised on their behalf to direct any railway administration to give special facilities or preference for the transport of any of the goods mentioned in the schedule or to refuse to carry such goods.

S. 4 provides that inspite of any provision contained in the Indian Railways Act 1890 to the contrary every railway administration shall be bound to carry out such directions.

13. The Delhi Muslim Wakfs (Amendment) Act, 1947.—The Delhi Muslim Wakfs Act XIII of 1943 does not contain any provision as to the authority which is competent to accept the resignation of a member of the Majlis-i-Awkal or of the Sadr of the Majlis.

Accordingly ss. 7 and 8 of the Act of 1943 are amended empowering the Majlis to accept the resignation of any of its members and the vacancies so caused to be filled in the manner provided by section 10 and also to accept the resignation of a Sadr and to elect another Sadr.

From the experience gained of the actual working of the Act of 1943 it has been found that Mutawallis of Wakfs do not co-operate with the Majlis in supplying the necessary information about the Wakfs which are in their charge with the result that the Majlis has found itself helpless in work. Under the circumstances power is given by this Act by new ss. 72 and 73 to the Majlis or the Nazir to summon and enforce the attendance of witnesses and to compel the production of documents.

S. 73 provides for penalties where a Mutawalli fails to apply for registration of a Wakf or to furnish information as required by the Majlis or the Nazir or to carry out the directions of the Majlis or the Nazir or to do any other act which he is lawfully required to do by this Act.

14. The Industrial Disputes Act, 1947.—This Act is intended to promote industrial peace in the country and it makes provision for the investigation and settlement of industrial disputes and for certain other purposes. It extends to the whole of British India.

It defines "industry" as meaning any business, trade, undertaking or manufacture and includes any service employment handicraft or industrial occupation and "workman" means any person employed in any industry to do skilled or unskilled manual or clerical work for reward.

S. 3 requires every industrial establishment employing one hundred or more workmen to constitute a Works Committee consisting of representatives of employers and workmen and it is provided that it shall be the duty of the Works Committee to promote measures for securing and preserving amity and good relations between the employer and workmen.

S. 4 provides for the appointment of conciliation officer charged with the duty of mediating in and promoting the settlement of industrial disputes.

S. 5 provides for the appointment of Boards of Conciliation consisting of an Independent Chairman and equal number of persons to represent the parties to the dispute.

S. 6 empowers the appropriate Government to constitute a Court of Inquiry.

S. 7 empowers the appropriate Government to constitute one or more Industrial Tribunals for the adjudication of industrial disputes in accordance with the provisions of this Act.

S. 10 provides for reference of disputes to Boards, Courts or Tribunals.

S. 11 lays down the procedure for conciliation.

S. 12 provides for duties of conciliation officers.

S. 13 provides for duties of the Boards.

S. 14 provides for duties of Courts.

S. 15 provides for duties of Tribunals.

S. 18 says that awards made by the Board or the Court or the Tribunal shall be binding.

Ss. 22 and 23 deal with strikes and lockouts and they prohibit sudden strikes and lockouts without due notice and prohibit a workman from going on strike.

S. 25 prohibits financial aid to illegal strikes and lockouts.

Ss. 26 to 31 provide for penalties for illegal strikes for instigation to illegal strikes, for breach of settlement or award and for disclosing confidential information, etc.

S. 32 provides for punishing every director, manager, secretary or agent in the case of an offence committed by a company.

S. 33 provides that during the pendency of proceedings or dispute the conditions of service etc., shall remain unchanged.

S. 35 protects every person who refuses to take part in an illegal strike or lock-out from being expelled by any trade union or society or deprived of any right or benefit.

S. 36 allows a party to an industrial dispute to be represented by an officer of a registered trade union but not by a legal practitioner except when the dispute is being heard before a Court or Tribunal.

S. 38 empowers the appropriate Government to make rules for giving effect to the provisions of this Act.

S. 40 repeals the Trade Disputes Act, 1929.

There is a schedule annexed to this Act describing industries which may be declared to be public utility services, viz:—

- 1) Transport for the carriage of passengers or goods by land, water or air (other than railways).
- 2) Coal.
- 3) Cotton textiles.
- 4) Food stuffs.
- 5) Iron and Steel.

15. Armed Forces (Emergency Duties) Act, 1947.—During the war, Defence of India Rule 18(3) empowered the Central Government to direct the employment of persons subject to the Indian Army Act or Indian Air Force Act in any undertaking essential to the life of the community. The Defence of India Rules having now expired such an undertaking cannot be lawfully ordered and so with a view to empower Government to maintain services vital to the community and to make use of troops or naval or air force personnel for the purposes, this Act has been passed.

S. 2 provides that the Central Government may at any time declare any specified service to be a service of vital importance to the community and upon such declaration it shall be the duty of every person in the Army, or the Air Force to obey any command given by any superior officer in relation to employment upon or in connection with the service specified in the declaration.

16. The Trading with the Enemy (Continuance of Emergency Provision) Act, 1947.—This Act provides for the continuance of the special powers enjoyed by the Government of India under the Defence of India Rules and the Emergency Powers (Continuance) Ordinance 1946. Although hostilities ceased long ago it is obligatory on the Government of India to maintain the general prohibition against trading with enemies until peace Treaties are signed. Similarly it is their responsibility to continue to look after enemy property until it is liquidated or released.

S. 2 provides that notwithstanding the expiry of the Defence of India Act 1939 and the Emergency Provisions (Continuance) Ordinance 1946, certain provisions of the Defence of India Rules mentioned in the schedule to this Act shall continue in force.

S. 3 says that the provisions of the Defence of India Rules as continued in force by s. 2 and all orders made therein shall have effect.

S. 4 empowers the Central Government to delegate its powers under the Act to any officer or authority.

S. 5 provides that no order made under the provisions of this Act shall be called in question in any Court.

17. The Requisitioned Land (Continuance of Power) Act, 1947.—This Act provides for the continuance of certain emergency powers in relation to land which has been requisitioned under the Defence of India Act, 1939.

S. 3 provides that notwithstanding the expiration of the Defence of India Act 1939 and the rules made thereunder and the repeal of the Requisitioned Land (Continuance of Powers) Ordinance 1946, all requisitioned lands shall continue to be subject to requisition until the

expiry of this Act and the appropriate Government may use or deal with any requisitioned land in such manner as it thinks fit.

S. 4 provides for giving possession of requisitioned land to the person entitled to the same when the Government decides to release such land from requisition.

S. 5 empowers the appropriate Government to acquire requisitioned land and such decision shall not be called in question in any court.

S. 6 provides for payment of compensation for land in respect of which the requisition is continued and for compensation for acquisition of requisitioned land.

S. 8 provides for delegation of the powers given under the Act to the Central and Provincial Governments.

18. Imports and Exports (Control) Act, 1947.—The control over imports and exports was imposed under Rule 85 of the Defence of India Rules and under the Emergency Provisions (Continuance) Ordinance 1946. The Continuance of such control is necessary to avoid any disturbance to the economy of the country during the transition from war time to peace time conditions and hence this Act has been passed extending its operation to the whole of British India.

S. 3 empowers the Central Government to make provision for prohibiting, restricting or otherwise controlling in all cases or in specified class of cases and subject to such exceptions as may be imposed, the import or export of goods, and for this purpose to impose conditions on the clearance of any goods imported into British India.

S. 5 provides for punishment with imprisonment for a term which may extend to one year or with fine or with both for contravening any order made under this Act.

S. 6 requires a complaint in writing from the Customs Collector or an officer specified in that behalf before the case is tried.

19. The Delhi and Ajmer-Merwara Rent Control Act, 1947.—The object of the Act is to control the rents of premises in certain areas in the Provinces of Delhi and Ajmer-Merwara and also to control evictions.

The Act is not made applicable to any premises the construction of which is not completed and which are not let to a tenant before the commencement of this Act or to any premises belonging to the Government.

S. 3 provides that no tenant shall be liable to pay any rent in excess of the standard rent except in the case of a lease entered into before 1st January 1939. This Act expressly provides that no agreement for payment of rent in excess of the standard rent shall be valid if such agreement is made after 1st January 1939.

S. 4 provides for certain lawful increases of standard rent.

S. 5 makes it unlawful for the landlord or his agent or the tenant to receive any premium in addition to the standard rent.

S. 7 provides that all disputes regarding the standard rent shall be determined by the Court and also to fix the standard rent in specified cases.

S. 8 provides that the landlord shall give notice of any increase in rent whenever it is permissible.

S. 9 provides that no tenant shall be evicted unless he has not paid nor tendered the arrears of rent within one month of the service of a notice of demand or unless the premises are used by the tenant for a purpose other than that for which they are let out or if he assigns or sublets without the consent of the landlord or if the premises being let for residence neither the tenant nor any member of his family comes to reside therein for a period of six months prior to the date of the filing of the suit or where the landlord bona fide requires purely residential premises for his own use and occupation or where the tenant being in the employment of the landlord ceases to be in service or where a tenant is guilty of nuisance or causes substantial damage.

S. 10 gives right to the landlord to take possession of his vacant ground for purposes of erecting buildings.

S. 11 empowers Government to require possession of premises the standard rent of which is not less than two thousand four hundred Rupees per year whenever they become vacant.

S. 12 provides for keeping the premises in good repair by the landlord.

S. 13 provides for penalties for failing to comply with the provisions of the Acts.

S. 14 provides that any question arising under this Act shall be determined by the Court.

S. 15 repeals Delhi Rent Control Ordinance 1944, New Delhi House Rent Control Order 1939 and the Ajmer-Merwara Control of Rent and Eviction Order 1946.

20. The Indian Finance Act, 1947.—S. 2 for the first time in history discontinues for the year beginning from 1st April 1947 duty which used to be formerly levied on Salt manufactured in or imported by sea or by land into British India.

S. 3 continues subject to certain modifications for a further period of one year inland postage rates.

S. 4 continues the additional duties of customs imposed by s. 6 of the Indian Finance Act 1942 read with the Indian Tariff Act 1934 and as modified by s. 5 of the Indian Finance Act 1946.

S. 5 continues the temporary export duty on raw cotton and the enhanced rates of export duties on raw jute. It further enhances the export duty on tea and fixes the same rates of income-tax and super-tax and makes certain provisions relating to income-tax and super-tax and Excess Profits Act.

21. The Business Profits Tax Act, 1947.—The object of this Act is to impose a special income-tax on the profits exceeding one lakh of rupees of business professions and vocations.

The word business is defined by s. 2(3) as including any trade, commerce or manufacture or any profession or vocation the profits of which are chargeable under s. 10 of the Income-tax Act but, excluding the profits of a professional man working for a salary.

Sub-cl. 17 defines "taxable profits" as meaning the excess of profits over one lakh of rupees a year.

S. 4 provides for levying a tax of sixteen and two-thirds per cent on the business profits.

S. 6 provides for relief when there is deficiency of profits.

S. 8 deals with payment of the tax by companies and the subsidiary companies and the section follows the corresponding Excess Profits Tax provision.

S. 9 provides for the aggregation of profits made by individuals earning more than one lakh of rupees from various businesses with the object of counteracting the possible loss of revenue.

S. 10 allows reduction of business profits in computing income for income-tax and super-tax purposes.

S. 12 deals with the assessment of tax.

S. 13 empowers the levy of provisional assessments.

The rest of the sections ending with s. 24 seek to make applicable the same machinery of assessment, appeal, etc. as applies to Excess Profits Tax. There is a schedule annexed at the end containing rules for computation of profits.

22. The Income-tax and Excess Profits Tax (Amendment) Act, 1947.—The main object of this Act is to include in the Indian Income-tax Act, 1929, provisions enabling income-tax to be levied on a profit or gain arising from the sale, exchange or transfer of a capital asset. For this purpose several amendments have been introduced to the Income-tax Act. In addition the Act amends the Excess Profits Tax mainly by making provision for terminal losses occurring after the excess profits tax has ceased.

A new clause (4A) is added to section 2 of the Income-tax Act of 1922 defining "capital assets" as meaning property of any kind excluding agricultural land whether connected or not connected with any business but not including personal effects such as jewellery and furniture.

The charging section 4 of the Act of 1922 is amended by including therein capital gains arising from the sale exchanged or transfer of securities.

A similar amendment is made to section 6 by adding an additional head of income namely "Capital gains" and a new section (12B) is added providing for assessing tax on capital gains.

The Act introduces consequential amendments to certain other sections of the Act of 1922.

s. 16, 17 and 18 of this Act introduces amendments to the Excess Profits Tax Act, 1940 in order to prevent escape of excess profits made by certain businesses to which the Excess Profits Tax had not applied.

23. The Reserve Bank of India (Second Amendment) Act, 1947.—The external value of the rupee is regulated by ss. 40 and 41 of the Reserve Bank of India Act 1934 which oblige the Reserve Bank to buy and sell sterling without limit between certain specified rates above and below one shilling six pence to the rupee. Under the Articles of Agreement of the International Monetary Fund, the countries which are members thereof are required to fix the par values of their currencies in terms of gold and exchange

rates are determined by the ratios which par values bear to each other. As a result of India becoming a member of the International Monetary Fund and the fixing of par values, sterling has ceased to be the sole determining factor of the external value of the rupee.

This Act therefore by s. 4 repeals ss. 40 and 41 of the Act of 1934 and substitutes a new s. 40 requiring the Reserve Bank to buy and sell foreign exchange at such rates and on such terms and conditions as the Central Government may from time to time determine in conformity with its obligations as a member of the International Monetary Fund.

The Reserve Bank may also be required in future to buy and sell foreign exchange other than sterling. The Act therefore by s. 3 introduces certain consequential amendments in s. 17 of the Act of 1934 defining foreign exchange and permitting the Reserve Bank to buy and sell foreign exchange both on its own account and on account of Government.

24. The Rubber (Production and Marketing) Act, 1947.—During the years immediately preceding the war the rubber industry had to face difficult problems arising out of overproduction. With the occupation of the Dutch East Indies and Malaya by Japan however, rubber became scarce and the Indian Rubber Production Board was set up in 1942 with the object of increasing the production of rubber in India. It became necessary therefore to set up a statutory organisation to look after the interests of the rubber producers in India and for this object this Act has been passed.

By s. 2 of the Act it is declared that in the public interest the Central Government should take under its control the development of the rubber industry.

The rubber is defined as including crude rubber and rubber prepared from the leaves, bark or latex of any rubber plant.

S. 4 constitutes a board called the Indian Rubber Board.

S. 10 requires registration by the owner of estate on land planted with rubber.

S. 11 empowers Central Government to prohibit, restrict or control the import and export of rubber.

S. 12 imposes a cess on all rubber produced in British India.

S. 13 empowers the Central Government to fix the maximum and minimum prices for sale of rubber after consulting the Rubber Price Advisory Committee and it further provides for punishing any person who buys or sells rubber at more than the maximum price or at less than the minimum price.

S. 14 requires a general or special license for sale or purchase of rubber.

S. 16 prohibits the possession of rubber without a license.

S. 17 provides that no person shall plant rubber without a license.

S. 18 requires every holder of a license to furnish a report specifying the areas newly planted or replanted with rubber.

S. 19 prescribes levy of license fees.

S. 20 provides for submitting returns to the Board and maintenance of accounts.

S. 21 authorises the Board to appoint inspectors to inspect lands and premises or factories where rubber is manufactured.

S. 22 empowers the Central Government to supervise all acts of the Board.

S. 23 allows appeal from an order of the Board.

S. 25 empowers the Central Government to make rules to carry out the purposes of this Act.

S. 26 provides for penalties for contravention of the provisions of this Act.

S. 27 requires the previous consent of the Central Government or the Board for prosecuting any person under this Act.

25. The Indian Tariff (Amendment) Act, 1947.—This Act amends the First Schedule to the Indian Tariff Act 1934 by giving protection to the industries of sodium compounds, phosphates, calcium-chloride, coated abrasives, hurricane lanterns, cocoa powder and chocolate, sewing machines, wood screws, antimony and cycles in accordance with the recommendations of the Tariff Board.

The Act continues protection for a further period of one year on manufactures of iron and steel, artificial silk, cotton and artificial silk fabrics, silk, sugar, silver thread and wire and magnesium chloride.

The Act imposes revenue duties on wheat, wheat flour, wood pulp, paper, cotton textiles and certain iron and steel manufactures.

26. The Control of Shipping Act, 1947.—By ordinance No. XX of 1946 provision was made for the continuance of control over trade by sea. This ordinance ceased to be valid from 25th March 1947. Owing to abnormal conditions still prevailing it became necessary to place control to ensure priority by sea of the carriage of coal, food-stuff and other essential cargoes.

This Act therefore provides for a system of licensing with regard to ships registered in British India to enable the shipping authority to specify the trades in which ships may engage and the voyages which they may undertake and to issue directions for carrying passengers and cargo on priority to others.

S. 3 requires every ship registered in British India to obtain a license from the Shipping Authority and s. 4 provides that no officer of Customs shall grant a port-clearance to a ship until a license is produced.

S. 5 empowers the Shipping Authority to give directions to shippers to carry passengers or cargo in the order of priority and for this purpose the Central Government may also give directions to the shipping Authority.

S. 6 empowers the Central Government to fix the rates at which a ship registered in British India may be hired and to fix rates at which passengers and cargo may be carried.

S. 7 empowers the Shipping Authority to give information as may be required.

S. 8 provides for penalties.

27. The Motor Vehicles (Amendment) Act, 1947.—This Act includes several important amendments to the Motor Vehicles Act, 1939.

S. 2 amends various sections in Chapter VIII of the Act of 1939 relating to the insurance of motor vehicles against third party risks.

In section 93 of the Act of 1939 the definition of "authorised insurer" has been further expanded to include the Central or Provincial Government or Government of a reciprocating Indian State when such Government carries on the business of insuring motor vehicles against third party risks. "Reciprocating territory" is given the meaning as such Indian States or such area administered by the Crown Representative as may be notified as such by the Central Government.

S. 3 substitutes a sub-section (2) to section 94 giving exemption from insuring vehicles in the case of any vehicle owned by the Central Government, the Crown Representative, any Provincial Government, the Government of any Indian State, the Government of the French or Portuguese Settlements, any local authority in British India, any local authority established by the Crown Representative and any local authority in an Indian State.

S. 4 introduces various amendments in section 95 of the Motor Vehicles Act, 1939 relating to compulsory insurance. One amendment in sub-section (1) of S. 95 makes clear that insurance with a Co-operative Society allowed under section 108 to transact such business is sufficient compliance with Chapter VIII. Another amendment empowers Provincial Governments to bring within the scope of the Act a limited class of liability arising under the Workmen's Compensation Act, so as to cover liability to pay compensation in respect of drivers, conductors and other employees.

S. 8 makes certain amendments in section 108 of the Act of 1939 relating to insurance business done by Co-operative Society.

28. Indian Coinage (Amendment) Act, 1947.—The Indian Coinage Act of 1906 provides at present for the coinage of silver coins of the denomination of a rupee, half rupee and quarter rupee with fifty per cent silver content. Besides the coinage of coins higher than an eight anna piece is not permitted to be coined in any metal; so that the rupee coin is not permitted to be coined except as a silver coin. Half and quarter rupee coins are already issued in pure nickel. Under modern conditions when the nature of coins as tokens of value is well understood it is unnecessary and wasteful to use a metal of high value like silver for coinage. Most advanced countries including the United Kingdom have now ceased to use silver for their main coins. The Act therefore seeks to authorize Government to issue all coins including the rupee coin in any metal. Accordingly sections 4 and 5 of the Act of 1906 are deleted while a new section 6 is substituted for the old section 6 under the heading "Coinage". This new section 6 provides that coins may be coined at the mint for issue under the authority of the Central Government of such denominations not higher than one rupee of such dimensions and designs and of such metals or of mixed metals of such composition as the Central Government may determine.

Sections 10, 11, and 12 of the Act of 1906 are also omitted while a new section 13 is substituted for the old section 13 providing that all new coins issued under section 6 shall be a legal tender in payment or on account provided that the coin has not been defaced or has not lost certain weight. It also provides that all silver coins shall continue to be a legal tender and all nickel, copper and bronze coins shall also continue to be a legal tender.

29. Capital Issues (Continuance of Control) Act, 1947.—The object of this Act is to keep in existence for five years more the control over capital issues which was imposed by Rule 94A of the Defence of India Rules in May 1943. In the lights of experience gained this control is still necessary to secure a balanced investment of the country's resources in industry, agriculture and the social services.

S. 3 provides that no company incorporated in British India shall except with the consent of the Central Government make an issue of capital outside British India and no company shall except with the consent of the Central Government make an issue of capital in British India or make in British India any public offer of securities for sale or renew or postpone the date of maturity or repayment of any security maturing for payment in British India. The same section empowers the Central Government to make an order giving recognition to an issue of capital made or to be made outside British India by a company not incorporated in British India.

S. 4 provides that no person shall issue in British India any prospectus or other documents offering for subscription or offering for sale any securities without a statement that the consent of the Central Government has been obtained.

S. 5 prohibits any person from accepting or giving any consideration for any securities unless the consent of the Central Government has been accorded or from selling or purchasing any securities issued by a company after 17th of May 1943 in British India or elsewhere without the consent of the Central Government.

S. 6 gives to the Central Government power of exemption from any of the provisions of the Act and to condone contraventions.

S. 7 empowers the Central Government to require a company to give information as may be required and to give inspection of books and documents. Such information is to be kept a secret.

S. 10 empowers the Central Government to delegate its functions.

S. 11 provides that the Central Government shall constitute an Advisory Committee to advise on matters arising out of the administration of this Act.

S. 13 provides for penalties for contravening the provisions of this Act.

30. Taxation on Income (Investigation Commission) Act, 1947.—It has been established that recently businesses and properties have changed hands for very large sums of money. Governments are anxious to know how in spite of very high rates of taxation large fortunes have been accumulated. The Act therefore proposes to appoint and empower a Special Commission

to investigate both the actual incidence of taxation with particular reference to individual cases and the extent to which the existing law is adequate to prevent evasion.

S. 3 empowers the Central Government to constitute a Commission to be called the Income-tax Investigation Commission whose duties are to investigate and report to the Central Government on all matters relating to taxation on income and relating to the assessment and collection if such taxation with a view to prevent evasion thereof and further to investigate any case referred to it by the Central Government.

S. 5 empowers the Central Government to refer a case to the Commission for investigation in which the Central Government has *prima facie* reasons for believing that a person has to a substantial extent evaded payment of taxation on income.

S. 6 deals with the powers of the Commission.

S. 7 lays down the procedure to be followed by the Commission.

S. 8 empowers the Central Government to reopen assessments of income of any period after 31st December 1938.

S. 10 empowers the Central Government to make rules.

31. The Antiquities (Export Control) Act, 1947.—The object of this Act is to control the export of articles and other things of antiquarian or historical interest or significance.

S. 2 defines the word "antiquity" as including coin sculpture, manuscript, epigraph or other work of art, any article or object detached from a building or a cave or any article, object or thing illustrative of science, art, crafts, literature, religion, customs, morals or politics in bygone ages which have been in existence for not less than one hundred years.

S. 3 provides that no person shall export any antiquity except under a license granted by the Central Government. Such antiquities are deemed to be goods which are prohibited under section 19 of the Sea Customs Act, of 1878.

S. 5 provides for penalties for exporting an antiquity without a license including the confiscation of the article.

S. 6 provides for the determination of all questions as to whether an article is an antiquity or not by the Director General of Archaeology in India.

S. 9 provides that this Act supplements the Ancient Monuments Preservation Act 1904 or any other law for the time being in force.

32. The Coal Mines Labour Welfare Fund Act, 1947.—This Act is intended to make better provision for financing measures for promoting the welfare of labour employed in the coalmining industry including housing and dispensary services.

S. 3 provides for the imposition and collection of a duty of excise as a cess on all coal and coke despatched from collieries in British India at the rate of not less than four annas and not more than eight annas per ton.

S. 4 provides that the proceeds of the duty shall be paid into the Reserve Bank of India at Calcutta and shall be credited to a fund called the Coal Mines Labour Housing and General Welfare fund.

S. 5 provides for the expenditure for carrying out the objects of the fund to be defrayed out of the Fund. It also provides for giving grants-in-aid to colliery owners who maintain dispensary services. The above Fund is divided into two accounts one called the housing account for erecting and maintaining housing accommodation for labour employed in the coal mining industry and the other called the general welfare account for providing facilities for education, nutrition, recreation and sanitation.

S. 6 empowers the Central Government to constitute a Coal Mines Labour Housing Board to carry out the provisions for suitable housing accommodation.

S. 8 empowers Central Government to constitute an Advisory Committee to advise on matters arising out of the administration of this Act.

S. 9 empowers the Central Government to appoint a Coal Mines Labour Welfare Commissioner, Inspectors and Welfare Officers to supervise and carry out the measures financed from the Fund with power to such officers to enter any place for the purpose of the proper discharge of his duties.

S. 10 empowers the Central Government to make rules to carry out the purposes of the Act.

S. 11 repeals the Coal Mines Labour Welfare Fund Ordinance 1944.

33. The Negotiable Instruments (Amendment) Act, 1947.—The Bombay High Court has held recently in a case that the protection afforded to bankers under section 131 of the Negotiable Instruments Act 1881 absolving them from liability in respect of payments received in good faith for cheques is not available to them in respect of bank drafts. This Act accordingly inserts a new section 131A to the effect that the provisions in Chapter XIV of the Act of 1881 shall also apply to a draft as if the draft were a cheque.

34. The Indian Boilers (Amendment) Act, 1947.—This Act has been passed with the object of including "economiser" as part of a boiler under the Indian Boilers Act, 1932.

Accordingly in section 2 of the Indian Boilers Act, 1932 which deals with definitions two new sub-sections (cc) and (ccc) are added.

Sub-section (cc) defines "economiser" as meaning any part of a feed-pipe which is wholly or partially exposed to the action of flue gases for the purpose of recovery of waste heat.

Sub-section (ccc) defines "feed-pipe" as meaning any pipe or connected fitting under pressure through which feed water passes directly to a boiler.

A new section 2B is added after 2A providing that every reference in the Act of 1932 to a boiler, shall include a reference to an economiser.

A proviso is added to sub-section (5) of section 7 of the Act of 1932 to the effect that where the Chief Inspectors on registering a boiler, issues a certificate in respect of an economiser, he may authorise its use for a period not exceeding twenty-four months.

Similar provisos are added in sub-sections (3), (4) and (5) of section 8 relating to the renewal of the certificate for economiser.

35. The Panth Piploda Law (Amendment) Act, 1947.—This Act amends the Panth Piploda Laws Regulation 1929 and makes the Co-operative Societies Act, 1912 applicable to that Province and in this way provides facilities for granting loans for seed and other agricultural purposes with a view to help the Province to increase the food supply.

36. The Indian Medical Council (Amendment) Act, 1947.—Under the Indian Medical Council Act, 1933 it is provided that one member from each British Indian University should be elected to the Medical Council by the Members of the Senate of the University. The Lucknow University has no Senate but has a Court which corresponds to the Senate of most other Universities. Hence in the Indian Medical Council Act, 1933 it has been specifically provided that in the case of the University of Lucknow its member to the Council should be elected by the Lucknow University Court.

Recently the Nagpur University has constituted a medical faculty and has applied for representation to the Medical Council of India. Like the University of Lucknow the Nagpur University has no Senate but has a Court. Hence this Act inserts an amendment in section 3 (1)(b) by inserting words to the effect that in case any University has no Senate but a Court then the election to the Council shall be made by the Court.

37. The Indian Patents and Designs (Extension of Time) Amendment Act, 1947.—The Indian Patents and Designs (Extension of Time) Act, 1942 was passed to enable the Controller of Patents and Designs to grant extended time to applicants and patentees in India for doing certain acts which could not be done in the prescribed time on account of circumstances arising out of the war. The International Industrial Property Union Conference held at Neuchatel agreed that delays due to war were sufficient to justify emergency extensions of time limit and an agreement was signed by 25 countries whereby time for doing certain acts under the Patents and Designs Act was extended to 30th June 1948. This Act therefore amends section 1 of Act of 1942 by stating that that Act shall be in force upto 30th June 1948.

38. The Foreigners (Amendment) Act, 1947.—The Foreigners Act, 1946 has in certain respects been found inadequate for the effective control of foreigners in India. This Act therefore has been passed to give adequate powers for proper control over foreigners.

S. 5 of this Act amends section 6 of Act of 1946 by insertion of two new sub-sections. One such sub-section provides that if any foreigner enters India in contravention of the Act of 1946 or in contravention of any order made thereunder, the prescribed authority may direct the master of the vessel or the pilot of the aircraft on which

such entry was effected to provide accommodation on a vessel or an aircraft for the purpose of removing the said foreigner from India. The other sub-section provides that the master of any vessel or the pilot of any aircraft which is about to carry passengers from a port or place in India to any destination outside India shall if so directed by the Central Government take a foreigner and his dependants who have been ordered to leave India to the place where the vessel or aircraft is destined.

S. 7 of the Act of 1946 is also amended giving power to the prescribed authority to direct a person occupying or having under his control any residential premises to submit all information required in respect of foreigners accommodated in such premises.

A new section 7A is added to the Act of 1946 empowering the prescribed authority to direct the owner or person having control of a restaurant or a place of public resort or entertainment or a club and frequented by foreigners to close such premises entirely or during specified periods and to use such premises only under certain conditions and to refuse admission to such premises to all foreigners or to any specified foreigner or class of foreigner.

39. The Press (Special Powers) Act, 1947.—The experience of recent communal riots has shown that inflammatory writings and speeches and their dissemination by the Press have contributed to the creation and maintenance of tension between the communities and have hampered the return of normal conditions in riot-stricken areas. Publication of false or exaggerated reports about riots and ill-informed or violent comments thereon have spread this tension to or resulted in the outbreak of rioting even in distant areas. The permanent law as it stands has been found inadequate to deal with this problem. This Act therefore has been passed to remedy the dissemination of undesirable matter.

This Act applies to all Chief Commissioners' Provinces.

S. 4 empowers the Provincial Government or the Chief Commissioner by an order to a printer, publisher or editor or generally to all printers, publishers or editors to prohibit or to regulate the printing or publication in any document either absolutely or for a specified period or in a particular issue of a newspaper or periodical of any matter which tends directly or indirectly to promote feelings of enmity or hatred between different classes of His Majesty's subjects. The Provincial Government may also require that any document or any matter relating to a particular subject shall before publication be submitted for scrutiny to a specified officer and on such scrutiny the Officer may prohibit its publication or allow it to be published with certain modifications.

A "document" is defined as including gramophone records, sound tracks, and any other articles on which sounds have been recorded with a view to their subsequent reproduction.

Power is also given to the Provincial Government to delegate its authority conferred by this Act to a District Magistrate.

S. 5 empowers the Provincial Government to prohibit or regulate the entry into or sale or distribution or circulation or publication or

possession within the Province of any document or of any matter tending to promote feelings of enmity or hatred between different classes of subjects.

S. 6 empowers the Provincial Government to seize and forfeit documents, books and newspapers containing prohibited matters.

S. 7 empowers the Provincial Government to prevent the printing or publication of a newspaper, book or other document containing prohibited matter.

S. 8 provides for the punishment of any person with imprisonment or fine or with both, who disseminates prohibited matter.

S. 9 provides for prohibition and seizure of all documents published in contravention of Government's orders including the seizure of printing press and other apparatus.

S. 10 provides for penalties for contravention of any provision of this Act.

S. 12 empowers the issue of search warrants for the purpose of the Act.

S. 14 makes every declaration of forfeiture conclusive and bars any Court from calling such order into question.

S. 15 provides that any order made under this Act shall have effect notwithstanding anything inconsistent therewith contained in any other law.

40. The Foreign Exchange Regulation (Amendment) Act, 1947.—A doubt has been arisen whether the power under section 8(1) of the Foreign Exchange Regulation Act, 1947 to prohibit the import of bullion into India extends to bullion brought into a port or place in India but intended to be taken elsewhere without being removed from the ship or conveyance in which it is carried. Accordingly this Act amends section 8 of Act of 1947 by adding an Explanation to the effect that the bullion carried under the above circumstances shall also be deemed to be a bringing or sending into British India.

41. The Indian Merchant Shipping (Amendment) Act, 1947.—In view of the policy of rapid expansion of the Indian Mercantile Marine to which the Government of India are now committed and in view of the difficulties of acquiring additional tonnage, this Act has been passed with a view to take steps to conserve the small tonnage on the Indian Register and to confer on the Central Government powers for the same. This Act is also intended to enable Government to exercise control over the transfer or acquisition by any person of any ship registered in India.

Accordingly three new sections 289(A), 289(B) and 289(C) have been added to the Indian Merchant Shipping Act.

S. 289A prohibits any person from transferring or acquiring any ship registered in any port of registry in India or any share therein without the previous approval of the Central Government and makes such transfer or acquisition void and unenforceable.

S. 289B prohibits the transfer of the registry of a ship from a port of registry in India to a port of registry outside India without the previous approval of the Central Government.

S. 289C empowers the Central Government to exempt any ship from any specified requirement prescribed in this Act or other Merchant Shipping Act.

42. The India Finance (Supplementary) Act, 1947.—This Act is intended to levy an enhanced duty of customs on the export of cotton, cloth and yarn.

S. 2 of this Act introduces two items in the second schedule to the Indian Tariff Act, 1934 after item No. 5. The first item being item No. 6 is for levying a duty of four annas a square yard on all cloth manufactured either wholly from cotton or partly from cotton and any other substance and containing not less than ten per cent of cotton by weight.

The other item being item No. 7 is for levying a duty of six annas a lb. on cotton yarn manufactured either wholly or partly from cotton and containing not less than ten per cent of cotton by weight.

S. 3 provides that Central Government may from time to time make such contributions to the Cotton Textiles Funds as it thinks fit.

43. The United Nations (Security Council) Act, 1947.—This Act aims at giving power to the Central Government to give effect to any decision of the United Nations Security Council.

S. 2 enacts that if under Article 41 of the Charter of the United Nations signed at San Francisco on 26th June 1945, the Security Council of the United Nations calls upon the Central Government to apply any measures not involving the use of armed forces to give effect to any decision of that Council, the Central Government may by order make such provisions (including provisions having extra-territorial operation) as appears to it necessary.

44. The Income-tax and Business Profits Tax (Amendment) Act, 1947.—This Act clarifies the Indian Income-tax Act, 1922 and the Business Profits Tax Act of 1947.

Capital assets is defined as property of any kind other than agricultural land. As the definition stands capital gains arising from the sale, exchange or transfer of any agricultural land would not be liable to capital gains tax. Under the Income-tax Act agricultural income is exempt only if it is derived from land assessed to land revenue.

S. 2 therefore amends the Income-tax Act so as to secure that the capital gains arising from the sale, exchange or transfer of any land would be exempt only if the agricultural income derived from that land is exempt from tax under the Income-tax Act.

S. 3 amends the Business Profits Tax Act, 1947 by introducing a second proviso to the effect that where the profits of a part only of a business carried on by a person who is not resident in British India accrue or arise in British India then this Act shall apply only to such part of the business and such parts shall be deemed to be a separate business.

In the schedule of the Business Profits Tax Act, 1947, a new rule 2A is added to the effect that where only a part of the profits of a company is chargeable under the provisions of this Act, its capital shall be the sum ascertained in accordance with rule 2 diminished by an amount which bears to that sum the same proportion as the amount of its profits not so chargeable bears to its total profits.

45. The Indian Trade Unions (Amendment) Act, 1947.—This Act introduces several amendments to the Indian Trade Unions Act of 1926 and provides for Government recognition of Trade Unions.

A new Chapter IIIA is added under the heading Recognition of Trade Unions.

A new section 28A is added providing that the Central Government shall be deemed to be the appropriate Government in respect of Trade Unions consisting of workmen employed by the Central Government or by a Federal Railway or in a Major Port, Mine or Oilfield.

S. 28B empowers the appropriate Government to appoint Labour Courts with powers of a Civil Court.

S. 28C provides for registration of a memorandum of agreement between an employer who agrees to recognise the Trade Union and the officers of the Trade Union and while the agreement is in force the Trade Union shall in its relations with the employer have all the rights of a recognised Trade Union under this Act.

S. 28D provides that a Trade Union shall not be entitled to recognition by order of a Labour Court under section 28E unless it fulfils certain specified conditions.

S. 28F provides for applying by a Trade Union which does not obtain recognition from an employer to the Labour Court for recognition by that employer, and the Labour Court may call for information for the purpose of ascertaining whether the Trade Union is entitled to recognition by the employer, and after making all investigations the Labour Court shall make an order.

S. 28F provides for giving certain rights to recognised Trade Unions.

S. 28G provides for withdrawal of recognition of a Trade Union under certain circumstances.

S. 28H allows a fresh application to be made by a Trade Union for recognition.

S. 28I says that every Trade Union recognised under s. 28E shall submit to the Registrar the prescribed returns.

Sections 28J and 28K describe what practices on the part of Trade Unions and on the part of the employer shall be considered as unfair practices.

A new section 32A is added to the Act of 1926 imposing penalties for unfair practices.

46. The United Nations (Privileges and Immunities) Act, 1947.—This Act gives effect to the convention on the Privileges and Immunities of the United Nations and further provides for giving similar privileges and immunities to other International Organisations and their representatives and officials.

S. 2 provides that the provisions set out in the Schedule to this Act of the Convention and Privileges and Immunities adopted by the General Assembly of the United Nations on 13th February 1946 shall have the force of law in India. The same section empowers the Central Government to amend the Schedule in conformity with any amendments made in the provisions of the said conventions.

S. 3 empowers the Central Government in pursuance of any international agreement, convention or other instrument to confer privileges and immunities to other international organisations and their representatives and officers.

The Schedule to this Act contains eight Articles the first Article says that the United Nations shall have juridical personality and shall have the capacity to contract and to acquire and dispose of immovable and movable property and to institute legal proceedings.

Article II makes the Property, Funds and Assets of the United Nations wherever located immune from every form of legal process, search or confiscation and are made inviolable.

Article III gives facilities in respect of communications.

Article IV provides for giving privileges and immunities to the representatives of members of the United Nations.

Article V provides for giving immunities to officials of the United Nations.

Article VI provides for privileges and immunities to experts on missions for and on behalf of the United Nations.

Article VII provides for recognition of *Laissez-Passer* issued by the United Nations to its officials for purposes of travel, etc.

Article VIII provides for settlement of disputes arising out of the convention of the United Nations by the International Court of Justice.

47. The Extra-Provincial Jurisdiction Act, 1947.—The Central Government have acquired by agreement, treaty, usage, certain powers and jurisdiction in the Non-judicial and Semi-judicial States and Talukas on Western India and Gujrat, Manipur, etc.

The Central Government have in consequence assumed certain functions in relation to the administration of these areas. In order to provide legal machinery for the exercise of these functions the Extra-Provincial Jurisdiction Ordinance was promulgated. This Act replaces the ordinance.

S. 2 defines extra-provincial jurisdiction as meaning jurisdiction which by treaty, grant, usage, sufferance or other lawful means, the Central Government has for the time being in relation to any area outside the province.

S. 3 empowers the Central Government to exercise extra-provincial jurisdiction in such manner as it thinks fit and further empowers the Central Government to delegate its powers to any officer or authority.

S. 4 empowers the Central Government to make such orders as may seem to it expedient for the effective exercise of any extra-provincial jurisdiction of the Central Government.

S. 6 provides that if in any proceeding civil or criminal any question arises about the extent of any extra-provincial jurisdiction of the Central Government, the Secretary to the Government of India shall on the application of the Court send to the Court, the decision of the Central Government on the point which shall be binding upon the Court.

48. The Indian Nursing Council Act, 1947.—This Act enacted for constituting an Indian Nursing Council in order to establish a uniform standard of training for nurses, midwives and health visitors.

S. 3 gives power to the Central Government to constitute a Council consisting of nurses and midwives from various Provinces.

S. 7 provides for holding meetings of the Council.
S. 8 provides for appointment of officers, committees and servants of the Council.

S. 10 provides for the recognition of qualifications mentioned in the Schedule.

S. 11 deals with the effect of recognition.

S. 13 provides for appointing inspectors to inspect any training institution.

S. 16 gives power to the Council to make regulations to carry out the provisions of this Act.

49. The Delhi Premises (Requisition and Eviction) Act, 1947.—Owing to the shortage of accommodation in the Province of Delhi an emergency arose which made it necessary to confer powers to requisition premises and to evict from Government premises persons continuing without authority to occupy those premises and for this purpose this Act has been passed. This Act is made to remain in force till 31st December 1949 but power is given to the Central Government to extend the time for one year more.

S. 3 provides that whenever it appears to the competent authority, i.e., the Estate Officer to the Government of India, that any premises are needed for any public purpose it shall be lawful after due notice to enter upon and inspect such premises or to require any person to furnish such information in his possession relating to the premises as may be required or direct the landlord or occupier of the premises not to dispose of or alter the premises and if necessary to requisition the premises provided however that where a landlord or a tenant is using any premises for himself or his family the competent authority shall as far as possible provide alternative accommodation for him or them.

S. 4 exempts all premises exclusively used for religious worship or for school, orphanage or hospital from the operation of this Act.

S. 6 provides that where any premises are requisitioned the tenant or occupier may by notice in writing be ordered to vacate the premises within ten days of the receipt of the notice. If any person fails to comply with the order of eviction he shall be deemed to be a trespasser.

S. 7 provides for compensation for requisition of premises.

S. 8 provides for rights and liabilities of the Central Government in respect of the premises requisitioned.

S. 9 provides for releasing premises from requisition.

S. 11 provides for evicting persons unauthorisedly in occupation of any premises belonging to or requisitioned by the Central Government or to call upon a person in occupation of such premises to vacate the same in case he sublets without permission or acts in contravention of the terms under which he occupies the premises from the Government.

S. 12 empowers the Central Government to make rules for carrying out the purposes of the Act.

S. 13 provides that no order made under the Act shall be called in question in any Court.

S. 14 protects all persons acting in good faith in pursuance of this Act from any suit or prosecution.

50. The Delhi and Ajmer-Merwara Rent Control (Amendment) Act, 1947.—This Act amends the Delhi and Ajmer-Merwara Rent Control Act of 1947 by including new houses in Delhi within the jurisdiction of the Ajmer-Merwara Rent Control Act. For this purpose new section 7(A) is added.

A further amendment is made to the Act of 1947 by the addition of the fourth schedule to the Act. By this fourth schedule the Central Government is given power to appoint a Rent Controller to fix the standard rent of newly constructed premises. In fixing the standard rent the Rent Controller is required to give his reasons in writing. Right is given to any person aggrieved by an order of the Rent Controller to appeal to the District Judge, Delhi within thirty days from the date of the order.

51. The Indian Cotton Cess (Amendment) Act, 1947.—The Act is designed to prevent the loss of income to Indian Central Cotton Committee consequent on the creation of the Dominion of Pakistan. Under the Indian Cotton Cess Act 1923 cotton produced in India and either consumed by the mills in India or exported is subject to the levy of a cess, the proceeds of which are utilised in financing the Indian Central Cotton Committee. As cotton produced in Pakistan is no longer cotton produced in India this Act provides with retrospective effect for the levy of the cess or cotton produced in Pakistan and consumed in Indian mills.

52. The Ajmer-Merwara (Extension of Laws) Act, 1947.—In the Legislative field the Province of Ajmer-Merwara is governed mainly by some old Bengal Regulations and by Regulations made before 1937 by the Governor General under the old Government of India Acts. The Province does not have a Legislative Council of its own, and the Central Legislative Assembly can scarcely be considered to be a suitable forum for the enactment of competent legislation on provincial subjects for the Province.

This Act therefore empowers the Central Government by a notification to extend or apply to the Province of Ajmer-Merwara with such restrictions and modifications as it thinks fit any enactment which is in force in any other Province.

53. The Salaries of Ministers Act, 1947.—By reasons of the provisions of section 10(3) of the Government of India Act, 1935 as adapted by the India (Provisional Constitution) Order, 1947, it is necessary to fix the salaries of Ministers of the Dominion of India.

S. 3 provides that with effect from the date on which this Act comes into force there shall be paid to each Minister of the Dominion of India a salary of Rs. 3,000 a month and a sumptuary allowance of Rs. 500 a month.

S. 4 provides that each Minister shall be entitled without payment of rent to the use of a fully furnished residence in New Delhi throughout his term of office and for fifteen days more and a fully furnished residence in Simla during the summer season of each year as the Governor-General may determine and no charge shall fall on the Minister personally in respect of the maintenance of either residence.

The Fighting Forces

THE present army of India originated in the small establishments of guards, known as peons, enrolled for the protection of the factories of the East India Company; but sepoys were first enlisted and disciplined by the French, who appeared in India in 1605. Before this detachments of soldiers were sent from England to Bombay, and as early as 1665 the first fortified position was occupied by the East India Company at Armagon, near Masulipatam. Madras was acquired in 1640, but in 1654 the garrison of Fort St. George consisted of only ten men. In 1661 Bombay was occupied by 400 soldiers, and in 1683 the number was only 255 of whom 93 were English and the rest French, Portuguese and Indians.

After the declaration of war with France in 1744 the forces were considerably increased, but this did not prevent the French capturing Madras in 1746. Following the French example, the English raised considerable sepoy forces and largely increased the military establishments. In 1748 Major Stringer Lawrence landed at Fort St. David to command the forces of the Company. The English foothold in India was then precarious and the French under Duplex were contemplating fresh attacks. It became necessary for the English Company to form a larger military establishment. The new commandant at once set about the organisation and discipline of his small force, and the garrison was given a company formation. This was the beginning of the regular Indian Army of which Lawrence subsequently became Commander-in-Chief. In Madras the European companies were developed into the Madras Fusiliers; similar companies in Bengal and Bombay became the 1st Bengal and 1st Bombay Fusiliers. The native infantry were similarly organised by Lawrence and Clive. By degrees Royal Regiments were sent to India, the first being the 39th Foot, which arrived in 1754.

Struggle with the French.—From this time for a century or more the army in India was engaged in constant war. After a prolonged war with the French, whom Duplex had by 1750 raised to the position of the leading power in India, the efforts of Stringer Lawrence, Clive, and Eyre Coote completed the downfall of their rivals, and the power of England was established by the battle of Plassey in Bengal; and at Wandewash in Southern India, where the French were finally defeated in 1761. A number of independent States, owing nominal allegiance to the Emperor at Delhi, had risen on the decline of the Mughal Empire, some ruled by Mahratta Princes and others by Muslim adventurers such as Hyder Ali of Mysore. A prolonged struggle ensued with the latter and his son and successor Tipu Sultan, which ended only with the defeat and death of Tipu and the capture of Seringapatam in 1799.

Reorganisation of 1796.—In 1796 the Indian armies, which had been organised on the Presidency system, were reorganised.

The European troops were 13,000 strong and the Indians numbered some 57,000, the infantry being generally formed into 75 regiments of two battalions each. In Bengal, regiments were formed by linking existing battalions of ten companies each with large establishments of English officers. The Madras and Bombay armies were at the same time reorganised on similar lines, and cavalry and artillery companies were raised.

In 1798, the Marquis of Wellesley arrived as Governor-General, firmly imbued with the necessity of destroying the last vestiges of French influence. In pursuance of this policy he reduced Mysore, where Tipu was intriguing with the French, and then turned his attention to the Mahratta States, in which Sindhia had established power over the Mughal Emperor at Delhi by means of a large regular army offered by Europeans under the French adventurer Perron. In campaigns against Sindhia in Hindustan by a British Army under General Lake, and in the Deccan against that prince and the Raja of Berar by an army under General Wellesley, afterwards Duke of Wellington, the power of these Chiefs was broken in the battles of Laswari and Assaye. French influence was finally destroyed. Subsequently Holkar also was reduced, and British power established on a firm footing.

Mutiny at Vellore.—The British Indian Army had been from time to time subject to incidents of mutiny which were the precursors of the great cataclysm of 1857. The most serious of these outbreaks occurred at the fort of Vellore in 1806 when Indian troops suddenly rebelled and killed the majority of the European officers and soldiers quartered in the fort, while the striped flag of the Sultan of Mysore, whose sons were confined there, was raised upon the ramparts. The mutiny was suppressed by Colonel Gillespie, who galloped over from Arcot at the head of the 19th Light Dragoons, blew in the gate of the fort, and destroyed the mutineers. This retribution put a stop to any further outbreaks in the army.

OVERSEAS EXPEDITIONS

Several important overseas expeditions were undertaken in the early part of this nineteenth century. Bourbon was taken from the French; Ceylon and the Spice Islands were wrested from the Dutch, and Java was conquered in 1811 by a force largely composed of Bengal troops which had volunteered this service.

In 1814, the Nepal War took place in which Gillespie, who had distinguished himself in Java, was killed when leading the assault on the fort of Kalunga. The Gurkhas were overcome in this war after stout resistance.

In 1817, hostilities again broke out with the Mahrattas, who rose against the British during the progress of operations against the Pindaris. Practically the whole army took the field and all India was turned into a vast camp. The

Mahratta Chiefs of Poona, Nagpur, and Indore, rose in succession, and were beaten, respectively, at Kirkee, Sitabaldi, and Mehidpur. This was the last war in Southern India. The tide of war rolled to the north never to return. In the Punjab, to which the frontier now extended, the army came into touch with the great military community of the Sikhs.

In 1824, the armies were reorganised, the double-battalion regiments being separated, and the battalions numbered according to the dates they were raised. The Bengal Army was organised in three brigades of horse artillery, five battalions of foot artillery, two regiments of European and 68 of Indian Infantry, 8 regiments of regular and 5 of irregular cavalry. The Madras and Bombay armies were constituted on similar lines, though of lesser strength.

Afghan and Sikh Wars.—In 1839, a British Army advanced into Afghanistan and occupied Kabul. There followed the murder of the British Envoys and the disastrous retreat in which the army perished. This disaster was in some measure retrieved by subsequent operations, but it had far-reaching effects on British prestige. The people of the Punjab had witnessed these unfortunate operations, they had seen the lost legions which never returned, and although they saw also the avenging armies they no longer regarded them with their former awe. Hostilities broke out in 1845-46, when a large portion of the Bengal Army took the field under Sir Hugh Gough. The Sikhs were defeated after stubborn fights at Mudki and Ferozeshahr, the opening battles, but did not surrender until they had been overthrown at the battles of Aliwal and Sohraon. Two years later an outbreak at Multan caused the Second Sikh War when, after an indecisive action at Chillianwala, the Sikhs were finally overcome at Gujrat, and the Punjab was annexed. Other campaigns of this period were the conquest of Sind by Sir Charles Napier, and the Second Burmese War, the first having taken place in 1824.

The conquest of the Punjab extended over the frontier to the country inhabited by turbulent tribes. To keep order on this border the Punjab Frontier Force was established, and was constantly engaged in small expeditions which, while they involved little bloodshed, kept the force employed and involved much arduous work.

1857 UPHEAVAL

On the eve of the upheaval in 1857 there were in the Bengal Army 21,000 British and 137,000 Indian troops; in the Madras Army 8,000 British and 49,000 Indian troops; and in Bombay 9,000 British and 45,000 Indian troops.

Disaffection culminated in mutiny at Barrackpore where Sepoy Mangal Pande attacked a European officer. The next most serious manifestation was the refusal of men of the 3rd Bengal Cavalry at Meerut to take the obnoxious cartridge. These men were tried and sentenced to long terms of imprisonment, their fetters being rivet-

ed on parade on the 9th May. Next day the troops in Meerut rose, and, aided by the populace, burned the houses of the Europeans and murdered many. The troops then went off to Delhi.

Delhi is the historic capital of India. On its time-worn walls brooded the prestige of a thousand years of Empire. It contained a great magazine of ammunition. At the time Delhi was held only by a few Indian battalions, who joined the rebels. The Europeans who did not succeed in escaping were massacred and the Delhi Emperor was proclaimed supreme in India. The capital constituted a nucleus to which the troops who rebelled in many places flocked to the standard of the Mughal. An army was assembled for the recovery of Delhi but the city was not captured until the middle of September. In the meantime mutiny had spread. The massacres of Cawnpore and Jhansi took place, and Lucknow was besieged until its relief on the 27th September. The rebellion spread throughout Central India and the territory that now forms the Central Provinces, which were not recovered until Sir Hugh Rose's operations in 1858 ended in the defeat of the Rani of Jhansi.

Minor Campaigns.—During the period until 1879, when the Second Afghan War began, there were many minor campaigns including the China War of 1860, the Amoy Campaign, and the Abyssinian War. Then followed the Afghan War in which the leading figure was Lord Roberts. There were expeditions to Egypt and China, and Frontier Campaigns of which the most important was the Tirah Campaign of 1897. There were also the prolonged operations which led up to or ensued upon the annexation of Burma, several campaigns in Africa, and the expeditions to Lhasa.

But until 1914, since the Afghan War, the army of India, except that portion of the British garrison which was sent to South Africa in 1899, had little severe fighting, although engaged in many arduous enterprises.

Reorganisation after 1857.—In 1857 the East India Company ceased to exist and their army was taken over by the Crown. At this time the army was organised into three armies, viz., Bengal, Bombay and Madras, the total strength being 65,000 British and 140,000 Indian troops.

Several minor re-organisations took place during the following years, such as the linking of three Regiments together and the raising of Class Regiments and Companies. In 1895 another large reorganisation took place. This was the abolition of the three Armies and the introduction of the command system. Four Commands were formed, viz., Punjab, Bengal, Madras and Bombay.

Lord Kitchener's Scheme.—This system lasted until 1904 when under Lord Kitchener's re-organisation the Madras Command was abolished and the Army divided into three Commands—the Northern, Eastern and Western, corresponding to the Punjab, Bombay and Bengal Commands.

In 1907, Lord Kitchener considered that consequent on the delegation of administrative powers to Divisional Commanders, retention of such powers by Lieutenant-Generals of Commands led to delay in the dispatch of business. The Command system was therefore abolished and India was divided into two Armies—the Northern and Southern—each under a General Officer who was responsible for the command, inspection and training of the troops, but was given no administrative responsibilities.

Early in the First Great War both Army Commanders took the field and were not replaced until 1916 and 1917, when both had practically the same functions as their predecessors. It was then realised that administration was being unduly centralised at Army Headquarters and the machinery was becoming clogged with unnecessary details. To secure efficiency at A. H. Q., therefore, a certain measure of decentralisation was carried out in 1918. With the alteration of the designation "Army" to "Command" at this time, a considerable increase was made in the administrative staffs of the two Commands, and the General Officers Commanding were given powers to deal with all administrative questions other than those dealing with matters of policy, and new principles of war.

The commands were increased to four in 1920, each under a General Officer Commanding-in-Chief. One of these, namely Western Command, was abolished on the 1st November, 1938, and replaced by an Independent District.

The Chatfield Committee.—In September, 1938, an announcement was made on behalf of the British Government, that the outcome of the discussions regarding the role of land and air forces in India in relation to the defence problems of India, and the Empire which had been authorised in March of that year, had been considered by the British Government.

The need for early action to place the defence organisation of India on a more satisfactory basis was accepted, and, at the suggestion of the Government of India, an expert body of inquiry known as the Chatfield Committee was appointed by the British Government to visit India.

In the meantime and in the light of the progress made during the discussions that were held in the summer of 1938, the British Government in September, 1938, made certain offers of assistance, subject to approval of Parliament. These were an increase of £500,000 to the annual grant of £1,500,000 which had been paid to the Government of India, since 1933, in aid of India defence expenditure, a capital grant up to £5,000,000 for the re-equipment of certain British and Indian units in India, and the provision of aircraft for the re-equipment of certain squadrons of the Royal Air Force. It was further agreed that four British battalions should be transferred from the Indian to the Imperial establishment.

The following is the substance of the main recommendations of the Chatfield Committee Report:

Modernised Re-equipment.—The Committee reported that in the interests of Indian defence the whole of the army forces in India should be modernised with only such minor variations as would not affect the general level of efficiency.

The types of modernised units were to be as follows:—

British and Indian Cavalry light tank regiments equipped with light tanks and armoured carriers for reconnaissance;
Indian cavalry armoured regiments equipped with light tanks and armoured cars;
Indian cavalry motor regiments—provided with motor transport for conveyance of the personnel who would be normally on foot;

British and Indian field artillery regiments—all regiments were to be mechanised and in due course equipped with 25 pounder guns;

Sappers and Miners units—with mechanised first line transport and mechanical power tools; British and Indian infantry battalions—armed with rifles, Brens and 2 in. mortars and fully mechanised first line transport;

Units on the North-Western Frontier would retain a certain proportion of pack mules.

It therefore recommended a thorough-going scheme for re-equipment of all branches of the service. One of the most important features of the modernisation proposals was the mechanisation of the bulk of the cavalry and of the first line transport of a large portion of the infantry with the object of greatly increasing the mobility of the units.

With this end in view the Chatfield Committee recommended that the basis of distribution of the Army in India should be (A) Frontier Defence, (B) Internal Security, (C) Coast Defence, (D) External Defence Troops.

The total reduction of British troops as measured with the establishment on July 1, 1938, was approximately 25 per cent. A reduction in the number of units was also involved.

Supply of Munitions.—The principle that India should as far as possible be made in all major respects self-sufficient in munitions in time of war was accepted, and a scheme for re-organising, and, where necessary, expanding the Ordnance Factories in India was recommended.

Defence Gift To India.—The British Government took full account of the heavy capital cost involved which was estimated at some £34,330,000, or Rs. 45 crores. Accepting that this capital expenditure could not be found out of the resources available in India, the British Government offered to provide it from the British Exchequer. The sole condition attached was that India should bring her defence forces up to the standard of equipment necessitated by modern warfare and adjust her strategic plans to the conditions now obtaining in the world.

It was estimated that a period of five years would be required for the completion of the modernisation plan and the provision of the total capital sum would accordingly be spread over this period. Of the total amount three-quarters would be provided as a free gift while one-quarter would be advanced by way of a loan. The interest on this portion, however, would be entirely remitted for the first five years; thereafter interest would become payable together with instalments of capital.

India's Defence Liabilities.—In estimating India's defence requirements, the Committee had to consider how far the prevailing conceptions as regards India's liability for defence could be held

valid in the light of modern conditions. Till then the principle had been accepted that India should be responsible for the "minor danger" of the maintenance of internal security and for the defence of her land frontiers, while Great Britain should be responsible for the "major danger" of an attack by a great Power upon India, or upon the Empire through India.

Modern developments have, however, clearly shown how vulnerable India is to attack in other forms than those that were envisaged when the principle was first laid down. Such attacks, if they should ever mature, would so vitally affect India's own well-being that they would demand her immediate co-operation in effective measures for her defence. In such cases India's defence would clearly be most effectively and economically assured by co-operation in the defence of points outside India strategically essential to her security.

Thus the Committee recommended as a general principle that the forces maintained by India should be adequate not merely for the narrower purposes of purely local defence, but also to assist in maintaining what they described as "India's external security," and further that India should acknowledge that her responsibility could not in her own interests be safely limited to the local defence of her land frontiers and coasts.

It was fully appreciated that the forces maintained by India could only bear a small share in those wider responsibilities, and that she could not necessarily bear in full the cost of such forces as were maintained in India. The committee recommended therefore that the contribution hitherto paid by the British Government should be continued at the higher level of £2,000,000 a year to which it had been provisionally raised by Government.

On this basis it was estimated that it should be possible for India, without enlarging the annual provisions for defence expenditure, to meet the whole maintenance costs of the forces organised and equipped on the scale proposed. From this main principle the conclusion was drawn that if forces held in India for the purposes covered by the joint responsibility were used outside India in an emergency affecting India's external security, their ordinary maintenance charges to be borne by India.

The margin for external defence suggested is one-tenth of the forces maintained in India in the case of the Army.

THE PARTITION

The year 1947 is a landmark in the history of the Armed Forces of India. Consequent on the division of the country into the two Dominions of India and Pakistan, it was decided that each Dominion should establish its own Armed Forces. The Royal Indian Navy, the Indian Army and the Royal Indian Air Force were accordingly divided between the two Dominions on communal-cum-optional basis which worked out to the approximate proportion of one-third to Pakistan and two-thirds to the Union of India. A scheme was then evolved by which those units which were predominantly Hindu or Muslim should belong to India and Pakistan respectively; individuals

of the other community serving in such units were given the choice as to which Dominion they wished to serve.

Thus each Dominion was allotted its own Sea, Land and Air Forces. India retained the title of Royal Indian Navy, Indian Army and the Royal Indian Air Force for these particular arms; while the titles of the Pakistan Forces became Royal Pakistan Navy, Pakistan Army and the Royal Pakistan Air Force.

Such a division and re-organisation of the Armed Forces needed a co-ordinating authority which was provided by the Supreme Commander's Headquarters. Field Marshal Sir Claude Auchinleck, former Commander-in-Chief, was appointed as Supreme Commander with the specific purpose of reconstituting the Armed Forces for the two Dominions under the directional control of the Joint Defence Council, which consisted of representatives from both Dominions, the Governor-General of India Viscount Mountbatten being the Independent Chairman.

Since the bulk of the work of reconstitution was completed sooner than it was anticipated, the Supreme Commander's Headquarters closed at the end of November, 1947, and the Joint Defence Council on April 1, 1948. A communique explained that as nearly all the functions for which the Joint Defence Council was set up had been completed there was no need for such a body. The Executive Committee of the Joint Defence Council, however, which will be renamed the Inter-Dominion Defence Secretaries' Committee will continue in existence in order to carry out the remaining functions of the Joint Defence Council of which the chief is the movement of stores from India to Pakistan and vice versa.

As for the ordnance factories, no physical division has taken place. India has assumed full liability for their book value, and has agreed to make available to Pakistan a sum of rupees six crores to be drawn as and when required by way of assistance towards the setting up of ordnance factories and other institutions.

As regards the ten regiments of Gurkhas recruited from Nepal (an independent country), six were retained by the Indian Union and four were transferred to the British Government to form a part of the British Army by mutual agreement between the Governments of Nepal, India and the United Kingdom.

WITHDRAWAL OF BRITISH FORCES

An agreement was reached between the Government of India and His Majesty's Government that all British Forces in India would be withdrawn soon after the transfer of power. Accordingly the first detachment of the British Troops—Army and Royal Air Force—approximately 1,500 strong left India on August 17, 1947 and the withdrawal was completed on February 28, 1948, when the last British Unit—First Battalion, the Somerset Light Infantry, sailed from India.

NATIONALISATION

The Armed Forces of India used to contain a very large British element but the Government of the new India decided to completely

nationalise her Armed Forces at the earliest date possible. As a result of the division of the Armed Forces and the policy of nationalisation the Armed Forces of the new India are very different from what they used to be before. Only a small number of British officers, mostly in technical branches, have been retained on contractual basis for a short period to fill the gap and they will be used wholly for training and never for field operation.

Demobilisation.—From V-J Day to the end of August 1947, the net reduction in the strength of the Indian and Pakistan Armies amounted to 1,648,772 men and women. Of these 32,677 were British and Indian/Pakistan officers, 12,177 were officers and auxiliaries of the WAC(I), 49,024 were British. Other Ranks serving with Indian and Pakistan Armies and, 1,533,570 were Indian and Pakistan Ranks including 64,321 civilians attached to Indian/Pakistan armies.

MINISTRY OF DEFENCE

The Defence Organization of India consisting of the Ministry of Defence and the Armed Forces Headquarters is as follows:—

CABINET

DEFENCE COMMITTEE OF THE CABINET

THE HON'BLE THE DEFENCE MINISTER

MINISTRY OF DEFENCE

ARMED FORCES HEADQUARTERS

NAVAL HEADQUARTERS

The Army is commanded by the Chief of the Army Staff and the Commander-in-Chief of Indian Army; the Navy is commanded by the Chief of the Naval Staff and Flag Officer Commanding, R.I.N.; and the Air Force is commanded by the Chief of the Air Staff and Air Marshal Commanding, R.I.A.F. They are responsible to the Defence Minister, through the Ministry of Defence, for the administration of the Army, the Navy and the Air Force respectively.

THE INDIAN ARMY

The Indian Army is divided into numerous Arms of the service, in just the same way as the British Army.

The Indian Armoured Corps.—This was formed from the Indian Cavalry Regiments, and many new Regiments have been raised. The first unit was mechanised in January 1940 and general mechanisation began between October 1940 and January 1941. The Regiments are organised in a variety of ways, depending on their role, and are divided into Indian Armoured Regiments, Indian Armoured Car Regiments, Divisional Reconnaissance Regiments, Indian Motorised Regiments and Frontier Armoured Regiments. The majority of the tank and armoured car crews of the Indian Armoured Corps are now Indians. The men are drawn from every community and they are provided with heavy, medium and light tanks, armoured cars and carriers and trucks.

The Indian Artillery.—Is divided into a number of branches, the most famous of which is the Mountain Artillery. There is also Field Artillery, Anti-Tank Artillery, light and heavy Anti-Aircraft Artillery and Coast Defence Artillery. During the Second World War, the Royal Indian Artillery increased to nearly 84,000 all ranks, serving, among other units, in 12 Mountain, 11 Field, 7 Anti-Tank, 2 Medium and 29 Anti-Aircraft regiments.

ARMY HEADQUARTERS

AIR HEADQUARTERS

The Corps of Indian Engineers.—Is normally divided into the Sapper and Miner Groups and the Military Engineer Service. There are now many other branches, such as Bridging Units and Bomb Disposal Units, Works Service (Construction) and Works Service (E. & M.) Groups, Railway and Inland Waterways Transportation Groups. There are three Sapper and Miner Groups: Queen Victoria's Own Madras Sappers and Miners, King George V's Own Bengal Sappers and Miners, The Royal Bombay Sappers and Miners.

The Corps of Indian Mechanical and Electrical Engineers.—Counterpart of the Royal Mechanical and Electrical Engineers in the British Service, this was formed in May 1943, to take over the engineering functions and the technical personnel hitherto controlled by the I.A.O.C. The Corps was responsible for the repair, recovery and maintenance of the complete technical equipment of the Army, which includes guns of all descriptions, mechanical transport, small arms, tanks, radar, tele-communication equipment, instrument and other machinery.

The Indian Signal Corps.—The Corps is organised on the same lines as a Sapper and Miner Corps, with headquarters for recruiting and training personnel, and detached field units

for the various army formations. The head of the corps is the Signal Officer-in-Chief in the General Staff Branch at G. H. Q. He acts as a technical adviser on questions connected with signals, and is also responsible for the technical inspection of all signal units. A chief signal officer with similar functions is attached to the headquarters of each Army Command. The British portion of the Corps has now been amalgamated with the Royal Corps of Signals.

The Indian Infantry.—During 1945 several changes took place in the designation and titles of Indian regiments, the most important being the change in title of the 4th Bombay Grenadiers which became the Indian Grenadiers and the 19th Hyderabad Regiment which was renamed the Kumaon Regiment. All other Indian regiments with the exception of the Punjab Regiments dropped their numerical designations.

The number of Battalions in each Regiment varies. Parachute Battalions were raised in the early part of 1942 and are organised on similar lines to the Indian Infantry.

Royal Indian Army Service Corps.—The Royal Indian Army Service Corps is the counterpart of the Royal Army Service Corps of the British Army. It has developed from the Commissariat Department of an earlier period, and its immediate predecessor was the Supply and Transport Corps, by which name the service was known up to 1923. The Royal Indian Army Service Corps which is under the control of the Quartermaster-General, is constituted in three main branches, namely: (a) Supply, (b) Animal transport, and (c) Mechanical Transport.

Apart from units and vehicles employed in the conveyance of military stores, the mechanical transport service also provides motor ambulance convoys for hospitals, animal transport ambulance sections and field medical units and vehicles for other miscellaneous purposes.

The mechanical transport was taken over by the Royal Indian Army Service Corps in 1927. The Officers for the service were mainly drawn from the Royal Army Service Corps, and by transfers from both British and Indian units.

The war years witnessed considerable expansion in R.I.A.S.C. transport services. From 36 A. T. Coys. and 29 M. T. Units of various types, they were increased to 80 A. T. Coys. and 304 M. T. Units.

The elephant was for the first time taken in the service and was found to be very useful in Burma.

Our additions to the service were Tank Transporters, Amphibians and Water Tpt. Coys. There has also been a very great expansion in air supplies which at one time was the main service of supply in Burma.

Medical Services.—The military medical services in India are composed of the following categories of personnel and subordinate organisations:—

(a) Officers and other ranks of the Royal Army Medical Corps serving in India.

(b) Officers and other Dental Corps.

(c) Officers of the Indian Army Medical Corps. This Corps came into existence on April 3rd, 1943 and is organised on the lines of the R.A.M.C. It embodies all members of the I. M. S., the I. M. D. & I. H. C.

(d) I. M. S.

(e) Queen Alexandra's Imperial Military Nursing Service.

(f) The Queen Alexandra's Military Nursing Service for India.

(g) The Indian Military Nursing Service.

(h) The Auxiliary Nursing Service.

Of these categories, the officers and men of the Royal Army Medical Corps and the Army Dental Corps, the assistant surgeons of the Indian Medical Department (B.C.) and the Queen Alexandra's Imperial Military Nursing Service and the Queen Alexandra's Military Nursing Service for India are primarily concerned with the medical care of British troops; while the Indian Army Medical Corps and the Indian Military Nursing Service are concerned, primarily, with the medical care of Indian troops.

Indian Army Ordnance Corps.—This Corps is the equivalent of the Royal Army Ordnance Corps in the British Army. It is divided into two sections, Stores and Workshops. The former deals with the issue and repair of equipment, arms and ammunition, while the latter is responsible for the repair and maintenance of mechanical transport.

INDIAN ARMY CORPS OF CLERKS

For the efficient administration of the Indian Army, much depends on the Indian Army Corps of Clerks, who form in the main the clerical staffs of Army Commands, Districts and various military establishments in India.

With the outbreak of World War II a vast expansion took place, when the peace-time strength of 800 all ranks, equally divided into two wings, British and Indian, was increased.

Wherever the Indian Army fought, men of this Corps were with them.

Veterinary Services in India.—The Veterinary services are responsible for the veterinary care, in peace and war, of animals of British troops, Indian cavalry and artillery, R.I.A.S.C. units, the remount department (excluding horse-dreeding operations), etc. The veterinary services include: The establishment of Royal Army Veterinary Corps officers, serving on a tour of duty in India and those of the continuous service cadre. The establishment of warrant and non-commissioned officers, India Unattached List, and veterinary assistant surgeons of the Indian Army Veterinary Corps.

Educational Services.—The education of the army is under the control of the Army Educational Corps and of Indian officers borne supernumerary to the establishment of units of the Indian Army.

Farms Department.—This department, which is under the control of the Quartermaster-General consists of two branches:—

(i) The military grass farms, which provide fodder for the army.

(ii) The military dairy farms, for the provision of dairy produce for hospitals, troops and families.

Frontier Militia and Levy Corps.—These forces are "Civil" troops, i.e., they are administered and paid by the Civil authorities and not by the Army. They are, however, offered by Officers of the Regular Indian Army. These forces were raised for duty on the North-West Frontier.

AIR FORCE IN INDIA

The Air Force in India is controlled by the Minister of Defence as part of the defence services of the British Commonwealth. The Air Force budget is incorporated in the Defence Services estimates. The Officer Commanding the Air Force in India is an Air Marshal whose rank corresponds to that of a Lieutenant-General in the Army.

The Royal Indian Air Force had its origin in the recommendations of the Skeene Committee in 1926. Six years later the Indian Air Force Act was passed by the Indian Legislature and the first flight was formed in April, 1933. From that first flight, with its three aeroplanes and six pilots trained at the R.A.F. College, Cranwell, has grown a Service which, by 1946 had eight Fighter and two Transport squadrons and anti-aircraft co-operation unit, a force equivalent in aircraft strength to thirteen squadrons.

Consequent on the division of the country into two Dominions, the Dominion of India received one Transport and seven Fighter squadrons as its share of allotment.

Training Facilities.—These have expanded throughout the length and breadth of the sub-continent covering all phases of instruction for flying and ground personnel. The expansion during the last few years has been phenomenal. Training is of the same high standard as in the R.A.F. Provided with some of the latest equipment and under the able guidance of highly skilled instructors, technical schools are turning out first-class mechanics.

During the training, candidates not only receive instruction on ground subjects such as theory of flight, aircraft recognition, aero engines, etc., but also experience of at least three hours flying, approaching more closely to service conditions.

Trained originally for Army Co-operation work, Indian pilots had their first operational experience over the difficult flying country of the North-West Frontier. They shared with the R.A.F. the duty of policing tribal territory until the summer of 1941 when they took over the work completely.

On the outbreak of war in 1939 the Indian Air Force Volunteer Reserve, together with a number of R.A.F.V.R. officers resident in India, was formed for the purpose of guarding India's coasts and keeping the shipping lanes

open. It did this with conspicuous success until the end of 1942 when it was embodied in the R.I.A.F.

During the Burma campaign in 1942 the R.I.A.F. had its first experience of operations against a major power, No. 1 Squadron earning a special message of congratulation from the Commander-in-Chief, Field-Marshal Lord Wavell. Its commanding officer won the D.P.C. Nos. 3 & 6 Coast Defence Flights also operated with success in Burma.

R.I.A.F. Squadrons.—From November 1943 upto the end of the Burma campaign full use was made, for the first time of R.I.A.F. squadrons in offensive operations. The main weight of the battle effort was felt by the Japanese on the Arakan front. The R.I.A.F. also distinguished itself during the Imphal siege and supported the eventual victorious advance into Burma.

Equipped with Spitfires and Hurricanes, squadrons of the R.I.A.F. were operating continuously on the Burma front. Their particular duties included the attack on enemy troops and supply dumps and lines of communication, tactical and photographic reconnaissance, close support to the army, and fighter and escort work with supply-dropping aircraft.

Besides operating as complete squadrons and units with Eastern Air Command in Burma thousands of ground crews, technicians and airmen of all trades worked with R.A.F. units all over India.

On March 12, 1945 His Majesty the King approved the designation of "Royal" as a prefix to the Indian Air Force in recognition of the work done during the short history of India's own Air Force.

The present strength of the R.I.A.F. is 1 Transport and 7 Fighter Squadrons. Plans are under consideration for the expansion of the R.I.A.F.

Women's Auxiliary Corps (India).—The Women's Auxiliary Corps (India) was formed in April 1942 with the object of releasing men for work in forward areas. British, Indian and Anglo-Indian women undertook a variety of work ranging from staff and administrative appointments to technical work with all three fighting Services. In February 1944, a Naval Wing was formed for personnel serving with the R.I.N. Training of recruits was carried out in three large training centres and officers received their instruction at O.C.T.U., Officers' School and Staff College. Service was entirely voluntary and for the duration of the war or for as long as service was required. The Corps was disbanded on 1st April 1947.

WAR PRODUCTION

The development of equipment position was phenomenal, and the war production capacity was so far developed that it was able to supply the sub-continent's armies with a large part of their weapons and equipment, as well as contingents overseas. Up to V-J day, approximately 2,48,000 chassis of nearly 30 different types were assembled in 5 plants in the sub-continent. About 2,02,000 bodies of 50 different types were built mainly with Indian or

Pakistani material and Indian or Pakistani labour. Over 7,000 armoured bodies were produced in various railway workshops. Progress was made in the manufacture of armoured plate and armoured fighting vehicles were satisfactorily produced. Various new types of small arms ammunition and artillery ammunition came from the ordnance factories and about 620 million rounds of small arms ammunition were repacked for U.S. Army Forces during the 5th and 6th years of war.

Probably the greatest advances were made in the supply of clothing and equipment. In the first four years of the war, the output of tailored items rose to a peak of over 12 million items. Nearly 49 million boots, chappals and canvas rubber shoes were produced up to the end of 1945. A considerable quantity of these were sent overseas both to the Middle East and other theatres of war. Over 13½ million blankets, 48 million pairs of woollen socks, 28½ million cotton shirts, 12½ million pairs of drill trousers were produced. The production of rifles during the war was nearly 574,000. Over 50 items of ammunitions including light machine-guns, bayonets, guns and carriages were produced in Indian and Pakistani factories. Among other important items of armament stores which were produced in quantity was Bren gun tripods, anti-aircraft, gun sights, binoculars, stereoscopes, clinometers and telescopes. Mention must also be made of the production of trawlers and assault crafts which played a great part during the Burma campaign.

INDIAN OFFICERS PAY

The Post-war Pay Committee constituted by the Government of India to formulate the new Pay Code of officers and men of the Indian Armed Forces completed its task early in June 1947. The rates of pay which apply to officers and men in the three Services from July 1, 1947, are designed to provide a level of remuneration comparable with those granted to the Civil Services of the Government of India. The new rates of pay represent a very substantial simplification of the old pay structure. Officers receive the same dearness allowance as civilian officers, but other ranks, who are housed, fed and clothed at the public expense will get half the civil rates. The numerous allowances for special duties which were a feature of the old Pay Code have been abolished, as the new pay covers the full range of duties of officers and other ranks. The general effect of the new Pay Code is to improve the remuneration of Other Ranks and to reduce that of senior officers.

INDIAN TERRITORIAL FORCE

The Territorial Force was one of the several aspects of the Indianisation of the military services. The force was intended to cater, amongst other things, for the military aspirations of those classes of the population to whom military service was not hitherto been a hereditary profession. It was intended, at the same time, to be a second line to and a source of reinforcement for the regular Indian army. Membership of the force for this latter reason carried with it a liability for something more than

purely local service or home defence. It involved in certain circumstances, service overseas. The force was the direct successor of the Indian section of the Indian Defence Force created during the Great War of 1914-18. It was modelled on the old militia in England. The essence of its scheme of organisation consisted in training men by means of annual embodiment for a short period in successive years. By this means Indian Territorial Force units were given sufficient preliminary training in peace to enable them, after a comparatively short period of intensive training, to take their place by the side of regular units in war.

THE STATES FORCES

The States Forces, formerly designated "Imperial Service Troops," consist of the military forces raised and maintained by the Rulers of Indian States at their own expense and for State service. It has been the custom in emergency for State troops to be lent to the Government of India, and the Government of India have on many occasions received military assistance of great value from this source. But the rendering of such aid is entirely at the discretion of the Ruling Princes and Chiefs.

The war year witnessed an enormous expansion in the State Forces. In August 1945, there were 130,000 officers and men serving in the States Forces, of whom 44,000 were serving outside the States in theatres of war and (what was then) British India.

The Government of India appointed in November 1947 a Military Adviser, Indian States Forces, to co-ordinate the training and administration of these forces.

OFFICERS

Before the war there were three main categories of officers in the Indian Army: those holding the King's Commission, those holding Indian Commissions and those holding the Viceroy's Commission. The latter are all Indians, apart from the Gurkha officers of Gurkha battalions, and have a limited status and power of command, both of which are regulated by the Indian Army Act and the rules made thereunder.

King's Commissioned Officers were obtained either from the Military Colleges or the Universities in England. Up till 1932 these commissions were open to either Englishmen or Indians.

In 1932 the Indian Military Academy at Dehra Dun was opened to undertake the training of Indian Officers. They were granted Indian Commissions and have identical powers to those of King's Commissioned Officers within the Indian Army.

During the late war, no regular commissions were granted except to those cadets who were already under training when the war began. Instead, Emergency Commissions were given to British candidates and Indian Emergency Commissions to Indians. The Commissions had the same status as Regular Commissions but were limited to the duration of the war and a period thereafter. Grants of Emergency Commission ceased in July 1946.

Now that the war has ended, Regular Commissions have been re-started. The sources of supply are the Indian Military Academy and selected officers from among those holding Emergency Commissions. It is also expected that the Universities will provide some candidates for Regular Commissions. Only subjects of Indian nationality are eligible for these commissions.

Plans are under way for the establishment of a National War Academy at Poona, at which all future officers of the three services will be trained.

As an interim measure a limited number of Short Term Commissions are being given to suitable candidates most of whom will be Indian Emergency Commissions Officers. These Commissions are granted for a limited period and are designed to fill the gap between demobilisation of the war commissioned officers and the re-establishment of a full intake of Regular officers from the Military Academy.

Opportunities for promotion to officer status from the ranks continue to be available.

In conformity with the policy of nationalising the service, which assumed prominence in 1946 no more commissions were granted to British officers and those holding regular commissions, with less than 20 years, service on 1st January 1947, were given the chance of transferring to British service.

The King's Indian Orderly Officers.—Since the earliest times Indian officers have been a link between Indian ranks and British officers. These Indian officers hold Viceroy's Commissions, as distinct from the King's Commissions held by British officers and Dehra Dun graduates. They are for the greater part promoted from the ranks. The highest rank is subedar-major in the infantry and artillery regiments, risaldar-major in the cavalry.

The first Indian officers associated with the Sovereign were in command of detachments sent to London for Queen Victoria's Jubilees in 1887 and 1897. It was then realised that some personal link should be maintained between the King-Emperor and the Indian Army.

On January 1st, 1903, the Viceroy issued a General Order announcing certain favours and concessions to the Army in India in connection with Edward VII's Coronation, among them the annual appointment of Indian Orderly Officers.

Six Indian Orderly Officers were appointed in 1903, a number reduced to four in 1904. These four were appointed each year for the London season, from April to August. They attended the King at Courts and Levees, standing near the throne, at all reviews and at such ceremonies as Trooping the Colour. Upon these occasions they appeared in full dress. For garden parties and similar engagements they were dressed in grey coats of knee length.

For their services in London, the Orderly Officers receive the Royal Victorian Medal, a souvenir of their supreme honour.

Reserve of Officers.—Previous to the War of 1914-18 there existed what was called the Indian Army Reserve of Officers, a body of trained officers available to replace casu-

alties in the Indian Army. The First World War proved that for many reasons this reserve did not fully meet requirements and in 1922 the Army in India Reserve of Officers was constituted.

The revised Regulations for the A. I. R. O. published in 1934 provide that the following gentlemen may be granted commissions in the Reserve:—

(1) Ex-Officers who, having held King's commission in any Branch of His Majesty's British, Indian or Dominion Forces, either naval, military (including the Auxiliary Force (India) and Indian Territorial Force) Marine or Air, have retired therefrom and are no longer liable for service therein, and who are resident in India, Burma or Ceylon.

(2) Civil officials of gazetted status serving under the Government of India or a local Government, whose services can be spared in the event of general mobilisation being ordered.

(3) Private gentlemen who are resident in India, Burma or Ceylon.

Ceylon Government officials are not eligible for appointment to the Army in India Reserve of Officers.

NATIONAL CADET CORPS

Far-reaching proposals for the formation of a 200,000-strong National Cadet Corps and a Territorial Force were announced by India's Defence Minister, Sardar Baldev Singh, in the Central Legislature on March 13, 1948. He said that one of the steps by which Government propose to impart military training to Indian youth was to implement immediately the report of the National Cadet Corps Committee.

This committee had been appointed by the Government of India in July, 1946, under the chairmanship of Pandit Hriday Nath Kunzru, the veteran Liberal leader.

Simultaneously with the Defence Minister's announcement the 44-page report of the Kunzru Committee was released to the press.

To begin with the corps would consist of a senior division with 32,500 members, a junior division with 135,000 members and a girls' division.

When the corps is raised, the present University Officers' Training Corps and the Indian Air Training Corps would cease to exist and be re-formed as the Senior Division, Army Wing, and the Senior Division Air Force Wing. A Senior Division, Naval Wing, would also be raised.

It has been decided that the enrolment in the National Cadet Corps should be entirely voluntary, and without any liability for service in the armed forces—"Government being confident that the enthusiasm of youth in general for serving the country is sufficient guarantee that the response in colleges and schools will be satisfactory."

The Government of India have also accepted the suggestion for the formation of a National Territorial Force "in principle. A detailed scheme was being drawn up, and when completed would be examined by the Cabinet."

INDIA IN GREAT WAR I

In a despatch by the Commander-in-Chief published in July, 1919, the whole operations of the Indian Army during the war were reviewed. The following figures show the extent of India's contribution in terms of men. On the outbreak of war, the combatant strength of the Indian Army, including reservists, was 194,000 Indian ranks; enlistments during the war for all branches of the service amounted to 791,000, making a total combatant contribution of 985,000. Of this number, 552,000 were sent overseas. As regards non-combatants, the pre-war strength was 45,000; an additional 427,000 were enrolled during the war and 391,000 were sent overseas. The total contribution of Indian personnel has thus been 1,457,000, of whom 943,000 have served overseas. Casualties amounted to 106,594, which include 36,694 deaths from all causes. The number of animals sent overseas was 175,000.

IN GREAT WAR II

The sub-continent's magnificent contribution in the late war was both substantial and valuable. Units of the R.I.A.S.C. went to France in 1939 and gained particular praise for their courage and bravery in adversity. Indian formations were in action in Syria, Iraq, Iran, British and Italian Somaliland, the Sudan, Eritrea, Hong Kong, Borneo, Malaya and Burma and Italy. The total of her fighting forces reached the peak strength of 2.25 million. The Indian Army, won more than 7,000 awards including 31 Victoria Crosses—an Empire record surpassed only by the United Kingdom.

Africa.—Here in 1940, assembled an Allied army of which the Fourth and Fifth Indian Divisions were destined to play a leading role.

Against Marshal Graziani's Libyan army of more than 300,000 men, this Allied force under the command of Field-Marshal Wavell marched into the Western Desert. In the great clash at Nibeiwa they captured the Italian camp, thousands of prisoners and vast quantities of stores. Then came the Italian disaster at Sidi Barrani where, in December, 1940, 20,000 Italians capitulated and Wavell's men swept on to Sollum, Bardia, Tobruk, Derna and Benghazi.

In the meanwhile the Fifth Indian Division was busy with the Italians in East Africa. Early in 1941 this division drove the enemy from Gallabat, Gedaref and Butana Bridge and then, with the Fourth, continued the pursuit deep into Eritrea.

Victories at Barentu and Ad Teclusan paved the way for the triumph at Karen where, after two weeks of bitter fighting, the Italians hoisted the white flag. The Fifth went on to Asmara, Massawa fell and in May, 1941, the Viceroy of Abyssinia surrendered at Amba Alagi.

Back again to the Western Desert went the Fourth and Fifth in June to meet a new menace—Rommel's panzers. Under the command of Field-Marshal Sir Claude Auchinleck Indian forces fought hard but were slowly pushed back to Mersa Matruh. Benghazi was cut off and Tobruk fell.

Many weary months of disappointment followed but at El Alamein in June, 1942, came the turn of the tide. In this, the Fifth's last action before leaving for Iran en route to India, the division, on the Ruweisat Ridge, captured about 2,000 prisoners. In October the Allies passed to the offensive at El Alamein. The avalanche had started to come to a halt only on the other side of Africa.

The Germans were rolled back from Egypt, then across Cyrenaica and towards Tripolitania. The new year came and still the retreat continued at the Mareth Line, the enemy's defences crumbled and he retreated still further west. There followed the Fourth's brilliant action in the Wadi Akarit area and the pursuit went on.

Sfax was by-passed, Sousse was occupied in the middle of April, 1943, and at Garci the Germans turned once more to fight—and lost. Soon the Eighth Army linked up with the British First Army and together they burst open the gates of Tunis in May. The Fourth Indian Division played a prominent part in this final action and—a fitting climax to the whole campaign—Gen. Von Arnim, who had taken over from Rommel as commander of Axis forces in Africa, was compelled to surrender to the famous Indian formation.

ITALIAN CAMPAIGN

In the liberation of Europe, Indian troops played a worthy part. By their exploits in Italy they proved to the world that the valour of India's arms was second to none. Three famous Indian divisions were concerned in the hard-fought campaign that ended in the capitulation of the Germans.

The Eighth Indian Division came into the line in October, 1943. Before the end of that year it had crossed three rivers—the Biferno, Trigno and Sangro—in the face of severe opposition and after breaking the German winter line, got past the Moro river. The Fourth Indian Division entered the arena in December, 1943, and after a short spell on the Orsogna and Mafella sectors arrived on the Cassino front in February, 1944. Spearheading the American Fifth Army's offensives against Cassino the division fought one of the fiercest battles of the war. In April, 1944, the third of the trio, the Tenth Indian Division took up positions on the Adriatic sector.

When the great offensive against Cassino started in May, 1944, the Eighth was assigned the most vital role—that of crossing the Rapido river, south of the town. After a tremendous effort our forces outflanked Cassino and the enemy stronghold fell. After the capture of Rome the Tenth moved to the Perugia-Tiber area, the Eighth took over the Certaldo-Foglibonzi sector and the Fourth, after clearing Pescara and Chieti, began a drive along the Upper Tiber and Arno valleys in conjunction with the 10th.

The Eighth crossed the Arno river, entered Florence and fought its way to the Sieve valley, the Tenth pushed along the upper reaches of the Tiber and the Fourth moved across to the Adriatic to spearhead the Eighth Army's all-out attack on the Gothic Line, striking the first blow at these redoubtable positions on

the Foglia river, capturing Monte Calvo and fighting north, forced a bridgehead through the Marano to enter the citadel of San Marino.

UNCONDITIONAL SURRENDER

In the breaking of the Gothic Line the remaining two Indian divisions also played a decisive part. In the 5th Army sector the Eighth Division went through Mount Giovi, crossed the Sieve, captured Mount Verucchi and occupied the fortress feature of Femma Morta. While in the mountains overlooking Bologna the Eighth was called upon to help repel the German offensive in the Serchio valley and earned the praise of the Commanding General for their stout-hearted defence.

Meanwhile the Tenth kept moving against stubborn resistance and, going past Pietrolunga and Alpe di Catania, captured M. Filleteo. Prior to taking part in the final phases of the campaign the division also captured Farneto.

Early in April, 1945, the Eighth Army crossed the Santerno. By the middle of the month they had smashed through the Argenta gap. Bologna was liberated on April 21 and major elements struck north after crossing the Po. By the end of April the Eighth Army was consolidating on the Piave. Twenty-five German divisions had been smashed and prisoners totalled 120,000.

On the afternoon of April 29, the enemy estimated at nearly one million under the command of Gen. Vietinghoff surrendered unconditionally. The Italian campaign was over.

Victory in Burma.—The virtual end of the Burma campaign was heralded by the capture of Rangoon in May, 1945.

The road to victory was no easy one. In the spring of 1942 the Indian troops faced annihilation when the Jap hordes swarmed into Burma and forced them, fighting every foot of the way, into Assam itself where they turned at bay and let the enemy's effort spend itself.

There followed weary months of relentless patrolling during which our little army used every dodge to keep the enemy guessing until we had built up sufficient strength to strike back. Early in 1943 came our counter-blow when the first Wingate expedition penetrated into Burma as far as the Irrawaddy.

In the meantime great preparations were afoot in India for the coming offensive. In March, 1943, the blow fell and Wingate's men struck once again—this time by air—in the heart of enemy occupied territory. Simultaneously the Japs launched what proved to be their last serious attempts to invade the sub-continent when they attacked the Seventh Indian Division in the Arakan.

At the Ngakyedauk Pass the Seventh first held the Japs and then, with the aid of the Fifth Indian Division, who came to their help, systematically isolated and cut up the enemy. Foiled in the south the Japs turned north and struck at the Dimapur road but the gallant defence of Kohima proved to be the turning point of the campaign and the enemy began a retreat which ended in his final defeat.

The year 1944 was one of further victories—Myitkyina, Mogaung, Tamu, Sittang, Tiddim, Fort White, Kalemyo.

By the end of 1944 a desperate situation faced the Japs. The 14th Army had crossed the Chindwin and was advancing into Central Burma towards Mandalay.

It was in this phase that Gen. Sir William J. Slim, then commanding 14th Army, sent an entire corps secretly on a 320 miles march down the Gangaw valley to approach Mandalay from the rear. Meiktila was captured, and, unable to cope with this double threat, the enemy were forced to surrender Mandalay to the 19th Indian Division on March 20. The pursuit continued on to Yenanguang, Toungoo, Prome and Pegu.

AMPHIBIOUS ASSAULTS

Meanwhile, seven major amphibious assaults, Myebon, Akyab, Ponnagyun, Ramree Island, Leptan, Taungup and Ru-Ywa, had carried Fifteenth Indian Corps far down the Arakan coast.

Finally an amphibious assault was mounted against Rangoon in conjunction with 14th Army's rapid approach from the North. The 26th Indian Division had left Ramree Island and sailed to the Gulf of Martaban. The advance on Rangoon developed into a race between this force and their comrades in arms pushing South on the capital from Pegu. The latter lost by a narrow margin for, with the dropping of paratroops South of Rangoon, assault craft brought 28th Indian Division up the Rangoon river to the greatest prize of the war.

Rangoon was occupied on May 3rd and the link-up between our two forces took place a fortnight later.

Thousands of Japs, stranded by our rapid push towards the capital, made desperate attempts to cross the Sittang and outwit our encircling forces. A few did escape, but without supplies, ill-armed and in unfriendly country they perished in the fever-laden swamps and jungles in which they sought refuge. More than 10,000 of the enemy were killed in this phase, the last of the war.

The debacle of the Japanese was complete. Indian Army troops fanned out over South-East Asia, occupying territory that had awaited liberation for more than three years.

The end of the long road came at Singapore on September 12, 1945, when the entire Japanese Expeditionary Forces, Southern Regions, were formally surrendered to Admiral Lord Louis Mountbatten, Supreme Allied Commander, South-East Asia, by Field-Marshal Count Terachi.

WAR SUPPLIES

The sub-continent's contribution in the economic sphere has been no less important. The utmost use was made of the sub-continent's agricultural, industrial and mineral resources. The value of war orders handled by the Supply Department alone came to over Rs. 841 crores from 1939 to end of 1945.

Bodies for armoured fighting vehicles mine-sweeping trawlers, new types of weapons and ammunition and various items of personal and other equipment were produced. It was during this war that the sub-continent began to make a number of special steels. Machine tools were also made and supplied in large quantities. Her ancient silk industry was revived to meet the demands for parachutes. Rubber production was increased and went hand in hand with developments in the use of substitutes and planting of new and novel rubber yielding plants. During the war, the sub-continent made notable gains in munition production. In 1943-44, gun and mortar ammunition increased to 35 times the pre-war output, guns and carriages and bayonets 20 times the pre-war quantity and small arms ammunition more than 4 times their pre-war output. Grenades, mines, bombs and pyrotechnic stores, most of which were not made in the sub-continent before the war were now manufactured, and in the last year of war the output steadily increased. A feature of special significance during the war was the manufacture of radar development equipment.

For the 2½ years of the North African war, the sub-continent was responsible for supplying the bulk of stores for the theatre of operations. Allied troops in the Mid-East wore clothes made in India, to a considerable extent, and walked in boots supplied by Indian or Pakistani factories. Nearly 90 per cent of the tents which protected the troops from the torrid heat, the canvas ground sheets which kept away the sands of the deserts from tanks, planes, motors and vehicles and nearly all the timber came from the sub-continent. India and Pakistan sent over 1,500,000 tons of stores in a steady stream. Other vital supplies to the Mid-East included assault craft, camouflage paints, nets and bemp, medical stores and equipment for the comfort of troops. Important supplies were also sent to Russia.

GALLANTRY AWARDS

The following awards for gallantry were won by the three fighting Services from 3rd Sept. 1939 to 1st April 1947:—

Gallantry Awards.	R.I.N.	Indian Army.	R.I.A.F.
V.C.	..	31	..

ARMY'S AID TO REFUGEES

Unprecedented disturbances broke out in the Punjab in the weeks following the partition of the country, resulting in large scale movement of population. The Army, whose aid was sought for tackling the problem set up in September, 1947, a Military Evacuation Organisation on which fell the responsibility for rescue and movement of hundreds of thousands of refugees between the two new Dominions. Muslims in East Punjab and non-Muslims in West Punjab were rescued to refugee camps and later escorted to Pakistan and Indian territories respectively, by road, rail and air. Within six weeks the Organisation had moved 15 lakhs of Muslims to West Punjab and a larger number of non-Muslims from Pakistan to India. Foot convoys, which were the means of movement for the largest number of refugees were provided with military escort all along the route. The refugee trains were also escorted by the Military.

Unprecedented floods in East Punjab in October rendered the refugee routes unserviceable and Army Engineers worked hard and got them going within a week.

Speaking of the effort on the Indian side accommodation to refugees was provided in 56 camps. The Army placed 40,000 tents at the disposal of the provinces. The largest of the camps is the one at Kurukshetra which was organised by the Army. The camp accommodated at one time nearly 300,000 refugees and can normally house 250,000 in separate towns of 50,000 each. At its peak 20 major Indian Army units were employed. The camp has a hospital of its own with up-to-date arrangements for vaccination and inoculation. Accommodation stores such as camp kettles for use in the camp were also made available by the Army.

Field Ambulance, surgicals units and almost all other medical services of the Army were provided for the use of refugees. Mass inoculations and vaccinations were carried out and ambulance cars accompanied foot convoys. The Army made available 1,300 beds for refugees in the Combined Military Hospitals in Jullundur, Ambala and Delhi. Medical

officers were detailed for work in East Punjab. Medical stores and equipment amounting to about 250 tons were supplied to the refugees.

The Army placed at the disposal of the Military Evacuation Organisation six Transport Companies and supervisory staff for five civilian transport companies. The M.E.O. used in one month alone over 1,000,000 gallons of petrol in the East Punjab area. At the peak period about 600,000 gallons of aviation spirit a month were used.

INDIAN SAILORS', SOLDIERS' AND AIRMEN'S BOARD

These Boards are probably the most important and valuable non-official institutions connected with the Armed Forces. They were constituted in 1919, in place of which was fulfilled with the end of the First World War. The object was at the outset to deal with a number of post-war problems—the finding of employment for soldiers released from the colours, the relief of the dependents of those who had lost their lives in the war and of those who were incapacitated for further service, the education of soldiers' children and the safeguarding of the general interests of soldiers and their dependents. As years passed, the Board had gradually to adjust itself to normal peace conditions and it was decided to maintain it permanently for a series of duties which have from time to time expanded and developed.

The Board on 31 December 1922 had the residue of the war fund, known as the Imperial Indian War Relief Fund, handed over to it. This formed the nucleus of its finances. The latter have since been husbanded with great care. The face value of the securities constituting the fund amounted on 31 March 1941 to Rs. 17,11,200, bearing an annual interest of Rs. 59,892.

The Board has its seat at New Delhi and co-ordinates the activities of Provincial Boards which exist in each province. Under the control of these Provincial Boards there exists throughout the country a network of District Boards reinforced in some cases by Tehsil or Taluka Committees and other kindred bodies.

Meetings of Indian S.S. and A. Board are normally held twice a year. The composition of the Board is as follows:

President: The Hon'ble the Minister for Defence.

Members: the Hon'ble the Ministers for Finance, Education and Labour, the Secretary, Ministry of Defence, the Secretary, Ministry for States, the Director-General of Health Services, the Adjutant-General in India, the Flag Officer Commanding, R.I.N., the Financial Adviser, Defence and Supply, Mrs. Hannah Sen (unofficial) and the Air Marshal Commanding, R.I.A.F. An Under-Secretary of the Defence Ministry is the Secretary of the Board.

The Provincial Board is at the head of the provincial organisation and is normally located at the capital of the province. The Patron of the Board is H.E. the Governor and the

President is the Premier (or a Minister nominated by the Patron). The Secretary is a civilian officer in the Provincial Secretariat.

The working unit is the District S. O. S. and A. Board, normally located adjacent to the Deputy Commissioner's or the Collector's office. These Boards are established in all districts from which recruits have been obtained in sufficient numbers. The President of the Board is the Collector or the Deputy Commissioner. Each Board has a paid Secretary, usually an ex-V.C.O.

In the more heavily-recruited districts, Tehsil or Zail Sub-committees are formed with the Tehsildar, Zaildar or Mamlatdar as President and an honorary Secretary, where necessary. These sub-committees are represented on the District S.S. and A.

In the Indian States also, there are Boards corresponding to the provincial and district S.S. and A. Boards.

In May 1940, Army Headquarters appointed regimental officers as whole-time Deputy Military Vice-Presidents with the express object of frequently touring areas covered by a fixed number of District Soldiers' Boards. Three such officers were appointed for the Punjab and the North-West Frontier Province. These were subsequently replaced by Civil Liaison Officers.

From 79 District Soldiers' Boards in British India when war broke out, the number has risen to 166, besides 36 State Soldiers' Boards.

OBJECTS

The following are the objects and duties of the District Soldiers' Boards:—

- Constantly to endeavour to promote and maintain a feeling of good-will between the civilian and military classes;
- To give all possible assistance to the President of the Board in his capacity as head of the district in all administrative matters connected with the ex-soldier or his family;
- To demonstrate the benefit of and so promote the desire for mutual co-operation between ex-soldiers and civilian officials;
- To represent and explain to the civil authorities all matters of particular moment to ex-soldiers that require the attention of the local administration;
- Generally to watch over the welfare of the ex-soldier and his family, and the interests of serving soldiers absent with their units.

As regards item (e), quoted above, the function of the Board and corresponding organisations cover a wide range. Their main tasks are enumerated below:—

- To ascertain and intimate the whereabouts of an absent soldier to his dependents and to communicate to him news of all important matters affecting his family's welfare.

- (b) To procure legal advice in the case of a law-suit against an absent soldier where there is no male member of his family capable of protecting his interests;
- (c) To assist an absent soldier's family in the event of disease or famine;
- (d) To assist ex-soldiers and their dependants in securing medals, pensions, arrears of pay, etc.;
- (e) To investigate cases of ex-soldiers invalided out of the Indian Army for chronic diseases such as tuberculosis, leprosy, diabetes, etc., and to report them to the Provincial Branch of the

Indian Red Cross Society for medical assistance;

- (f) To investigate applications for relief from the various military charitable funds;

Another leading development has been the institution of welfare workers and 'sevadarsins'. They are in fact the touring representatives of Boards, the latter being particularly concerned with investigation of the troubles of the serving man's womenfolk.

Boards, which have become the recognised centre to which the man comes when in trouble, have also attached to them information bureaux which are linked to the regional exchange organisation set up by the Labour Deptt. to find employment for ex-Servicemen.

ROYAL INDIAN NAVY

The Royal Indian Navy traces its origin so far back as 1612 when the East India Company stationed at Surat found that it was necessary to provide themselves with armed vessels to protect their commerce and settlements from the Dutch or the Portuguese and from the pirates who infested the Indian coasts. The first two ships, the *Dragon* and *Hoscander*, were despatched from England in 1612 under Captain Best, and since those days under slightly varying titles and of various strengths the Government in India have always maintained a sea service.

The periods and titles have been as follows:—

Hon. E. I. Co.'s Marine	.. 1612-1686
Bombay	.. 1686-1830
Indian Navy	.. 1830-1863
Bombay Marine	.. 1863-1877
H.M. Indian Marine	.. 1877-1892
Royal Indian Marine	.. 1892-1934
Royal Indian Navy	.. 1934

India's Naval Force has always been closely connected with Bombay, and in 1668 when the M. India Company took over Bombay, Captain Young of the Marine was appointed Deputy Governor. From then until 1877, the Marine was under the Government of Bombay, and although from that date all the Marine Establishments were amalgamated into an Imperial Marine under the Government of India, Bombay continued to be the principal centre of Indian Naval Training and to a large extent of administration. In the winter of 1940-41, the Naval Headquarters moved to New Delhi.

During the war 1914-1918, Royal Indian Marine Officers were employed on many and various duties. Royal Indian Marine Ships served as Auxiliary Cruisers. Officers also served in the Royal Navy.

RE-ORGANISATION SCHEMES

After the war the Esher Committee, who came to India to report on the Indian Armed Forces, strongly recommended that the R.I.M. should be re-organised as a combatant service.

But the times were hard; money was scarce. The report of the Inchcape Committee necessitated drastic retrenchments, and the working of the Montagu-Chelmsford reforms resulted in the Local Governments having to defray the cost of the work of R.I.M. Ships on their various stations, on light-house duties, transport work, carrying of officials, etc.

Happily for the Service, however, the Government of India in 1925 appointed a Departmental Committee under the Chairmanship of General Lord Rawlinson. This Committee recommended that the R.I.M. should be re-organised as a purely combatant Naval Service with the title of Royal Indian Navy, in the first instance to be commanded by a Rear Admiral on the active list in the Royal Navy. The scheme was accepted by the H.M.G. and the Government of India.

Accordingly on 2nd October 1934, the Royal Indian Navy was inaugurated, the historic ceremony taking place in Bombay.

The Chatfield Committee's Report, presented in 1939, made far-reaching recommendations in regard to the Royal Indian Navy.

EXPANSION DURING THE WAR

Shortly before the War, permission was given for the establishment of the Royal Indian Naval Reserve and the Royal Indian Naval Volunteer Reserve and during the war the increase in the number of ships, training establishments and personnel was most rapid. At the end of the hostilities the Royal Indian Navy Fleet comprised 6 modern sloops, 3 old sloops, 4 corvettes, 16 minesweepers (Bangors/Bathurst class), 16 trawlers, 4 gunboats, 6 motor minesweepers, one coastal force depot ship, one landing ship, infantry, one salvage vessel, 22 auxiliary M/S and patrol vessels, 27 fairmile M.L.'s, 23 harbour defence M.L.'s and 21 flotillas of minor landing craft and L.C.T.'s.

Four frigates namely "SHAMSHER", "DHANUSH", "TIR" and "KUKRI" were acquired from the Royal Navy after the hostilities. During the war, the personnel in the Service increased to 3,031 officers and 27,651 ratings. Normally the ratings in the Service

are recruited as boys and they sign an engagement for 12 years. During the War as a result of expansion, a large number of ratings were recruited for active service for 5 years. These ratings were trained in newly set up establishments near Bombay. Officers of the R.I.N. are generally trained in U.K. but during the hostilities, officers of the Naval and Volunteer Reserve, were trained in a Shore Establishment called H.M.I.S. FERROZE. Officers in the Executive Branch were given short but intensive courses in seamanship, gunnery, signals and other subjects. About 160 of these Reserve Officers have now been granted regular and short service commissions.

ACTIVITIES DURING WAR

Throughout the war R.I.N. ships were engaged in operations and in November 1942 one of the H.M. Indian ships, "*Bengal*", won world-wide renown by engaging in the Indian Ocean two Japanese raiders which were far more heavily armed and were ten times her size. One of the raiders was sunk, the other made off, and H.M.I.S. BENGAL reached port safely. In the early months of 1943 vessels of the R.I.N.'s Coastal Forces did good work in support of our troops on the Arakan Coast. Our vessels intercepted Japanese coastal craft conveying troops and supplies and took part in the raid on Myebon.

In 1944, ships of the Royal Indian Navy again co-operated with the land forces engaging the enemy on the Arakan Front. Support was afforded by bombarding enemy shore positions and by harassing the enemy's water-borne supplies. In four months these ships steamed more than 30,000 operational miles on 43 separate missions in enemy waters.

The Royal Indian Navy was well represented in the eight amphibious operations by which the 15th Indian Corps advanced down the Arakan Coast from the Indian frontier to Rangoon in the spring of 1945.

In Burma.—Men of the R.I.N. Landing Craft Wing, who had been trained secretly for more than two years, established their reputation on the beaches of Akyab, Myebon, Kyaukpyn, Kangaw, Ru-Ywa and Letpan. They formed the spearhead of each of these six assaults, carrying troops to the beaches and keeping them supplied during critical phases of the ensuing battles.

The Indian sloops NARBADA, JUMNA, KISTNA and CAUVERY fired tens of thousands of shells in support of the Army's coastal advance in Arakan, penetrating up inland waters as far as thirty miles from the open sea to increase the effective range of their bombardments.

A flotilla of nine fleet mine-sweepers of the Royal Indian Navy cleared the approaches to the Rangoon River estuary before the arrival of the invasion convoy, whose escort included two Indian sloops—SUTLEJ and CAUVERY.

The period, July to December 1945, brought to the R.I.N. the opportunity of operating in waters from Rangoon to Hongkong. R.I.N. fleet mine-sweepers played a prominent part in the operations around Malaya and two sloops were serving with the British Pacific Fleet.

Throughout July 1945, H.M.I. ships NARBADA, GODAVARI and KISTNA maintained patrols in the Mergui Archipelago, the Forrest Straits, and off the Tavoy and Tennasserim coasts. Many of the islands in the Archipelago were visited and landing parties went ashore to interrogate the inhabitants.

Malay Pacific.—In July H.M.I.S. PUNJAB and H.M.I.S. DECCAN took part as danlanes to the 7th (R.N.) mine-sweeping flotilla in the mine-sweeping operations off Phuket Island, at the northern end of the Malacca Straits. The two ships assisted in fighting the fire in H.M.S. VESTAL after a suicide bomber had crashed on her deck and H.M.I.S. PUNJAB later rescued the survivors. Both the ships were complimented by the Captain, East Indies Escort Forces, for their work in this operation.

H.M.I. sloops NARBADA, GODAVARI and KISTNA, the fleet mine-sweepers of the 37th Mine-sweeping Flotilla, H.M.I.S. BARRACUDA and the 56th M.L. flotilla took part in the general move eastwards to Malaya and the Netherlands East Indies. H.M.I.S. KISTNA arrived at Penang on 1st September 1945 in company with the 3rd Battle Squadron, and remained there giving assistance to the occupation forces till the middle of the month.

The 37th mine-sweeping flotilla played a prominent part in company with the 6th and 7th mine-sweeping flotillas in operations to clear British and Japanese mine-fields in the Singapore Roads and the Malacca Straits, and visited most of the ports in southern Malaya. H.M.I.S. BENGAL arrived in Singapore on 3rd September in company with the cruiser H.M.S. CLEOPATRA (wearing the flag of the Commander-in-Chief, East Indies Station) and the 6th mine-sweeping flotilla, these being the first British warships to return to Singapore.

On 26th September 1945 H.M.I.S. NARBADA arrived at Port Blair with the Naval Force Commander for the re-occupation of the Andamans and Nicobar Islands. The official surrender of the Japanese Forces in these islands was made to this Force.

H.M.I. Ships GODAVARI, CAUVERY and SUTLEJ operated till recently with the British Pacific Fleet since the recapture of Singapore and steamed many miles in Far Eastern Waters on the various duties required of occupation forces.

MUTINY

On 18th Feb. 1946 mutiny broke-out in H.M. I.S. TALWAR spreading to other ships and Naval establishments in Bombay. After a day or two, ships in other ports also joined. There was an exchange of fire between the mutineers in Castle Barracks, Bombay, and the Military guards. In Karachi H.M.I.S. HINDUSTAN also exchanged fire with the Military. The mutineers however surrendered on 23rd February. The Government of India appointed a Committee to inquire into the causes and origin of the mutiny.

The Committee's report revealed the existence of certain grievances. And the Government in their conclusion said that the lessons of the

mutiny were two: officers must consider the welfare of the men before their own comfort or safety and, two too rapid an expansion without proper provision for the training of officers was unwise and the aim of the service in peace must be to prepare for service in war.

Among the other points which the committee made were the following: 1. casualties 9 officers and 1 rating killed; 41 ratings including 2 B.R.O.s and one officer wounded, 2. Politics and political influence had great effect in unsettling the men's minds, 3. Extremely rosy picture was held out by recruiting authorities, 4. There was lack of contact between officers and men and a feeling of discrimination, 5. There was lack of patient and sympathetic attitude to genuine grievances, 6. Ratings were denied certain concessions and privileges enjoyed by ratings of the Royal Navy, 7. Indian officers were regarded as inferiors.

PARTITION OF R.I.N.

On 14th August, 1947 before the partition, the R.I.N. had six modern sloops, four frigates, 16 fleet mine-sweepers and other mine craft beside 997 Officers and 10,061 ratings. As a result of partition the sloops NARBADA, GODAVARI, the frigates SHAMSHER and DHANUSH, four mine-sweepers and some minor craft were allocated to Pakistan. In addition to this the R.I.N. lost three of its shore establishments to Pakistan, H.M.I.S. BILAWAR, BAHADUR and HIMALAYA. The first two are boys' training establishments and the last one a gunnery and radar school. The following has been allocated to India:

SLOOPS:—SUTLEJ, JAMNA, KISTNA, CAUVERY.

FRIGATES:—TIR, KUKRI.

MINESWEEPERS:—ORISSA, DECCAN, BIHAR, KUMAON, KHYBER, ROHIL-KHAND, CARNATIC, RAJPUTANA, KONKAN, BOMBAY, BENGAL, MADRAS.

CORVETTES:—ASSAM.

SURVEY VESSEL:—INVESTIGATOR

TRAWLERS:—NASIK, CALCUTTA, COCHIN, AMRITSAR.

MOTOR MINE-SWEEPERS:—FOUR IN NUMBER.

CN HARBOUR DEFENCE MOTOR LAUNCHES.—FOUR IN NUMBER.

All existing landing craft.

A new Boy's Training Establishment is being put up at Vizagapatam. Till the 14th August the R.I.N. had the following training establishments for ratings:

- (a) Communication School.
- (b) Torpedo and Electrical School.
- (c) Physical Training School.
- (d) Seamanship, Damage Control and Disciplinary School.
- (e) Anti-Submarine School.
- (f) Cookery School.

The Communication and the Anti-submarine Schools which were at H.M.I.S. TALWAR and H.M.I.S. MACILIMAR were transferred to Cochin in September, 1946. These schools are now in the process of establishment on a permanent basis at Cochin. The Physical Training Seaman School is now being transferred to Cochin. The original Torpedo and Electrical schools at Jamnagar are also to move to Cochin as soon as the buildings are ready. Plans are also complete for a new Gunnery Navigational and Radar school.

EXPANSION

Now that India and Pakistan are independent the responsibility for defending a long coast line rests on their shoulders. With a view to achieving this object, it is the policy of the National Government of India (and of Pakistan too) to launch a comprehensive programme of expansion of the Navy within the next 10 years and to build up an effective naval task force. Accordingly it is intended to acquire British types of modern war vessels during this period.

The first phase of this expansion is the acquisition of a Leander class Cruiser H.M.S. ACHILLES and three Destroyers. A large number of officers and ratings have already been sent to U.K. for intensive training in R.N. ships and establishments and to man the cruiser which is expected to arrive in India about August 1948. Meanwhile it is the Government's policy to accelerate the pace of recruitment of boys, cadets and special entry officers to meet the commitments of the future.

The Co-operative Movement

THE outstanding feature of the rural economy of India and Pakistan is the appalling poverty of the rural population. The various estimates, official and non-official, that have been made of the income per head of population at various times leaves the matter absolutely in no doubt. The Central Banking Enquiry Committee estimates that the average income of an agriculturist does not work out at a higher figure than Rs. 42 a year. The extent of an average holding, which is about 6 acres, for an agricultural family of 5 persons is too inadequate to maintain it in ordinary comfort even with the low standard of living which is so characteristic of the rural population. Moreover, cultivation is in a large measure exposed to the vagaries of the monsoon. In every 5 years there is but one good year, one bad year and three indifferent years. These unfavourable conditions might be mitigated to some extent by a well conceived policy of irrigation by the States; but so far, of the total cultivated area in the countries, about 16 per cent. only has irrigation facilities from rivers, tanks or wells while the remaining 84 per cent. depends wholly on rainfall. Thus the frequency of failure of crops, owing to drought and floods, frost and pests, coupled with the low vitality and high mortality of the live-stock, render the economic position of the cultivator worse still. The inadequacy of the subsidiary occupation to supplement the slender income from agriculture contributes further to his extreme economic weakness. He has sufficient spare time on his hands to devote himself to subsidiary occupations but he has been exposed to the full blast of the competition of forces from the rest of the world and many of the industries on which he relied in the past have suffered largely from, or been wiped out by the competition of machine-made articles. He is now being drawn steadily into the sphere of influence of markets both national and international and he has neither the organisation nor the credit facilities to help him as in countries like the United States of America or Canada or some of the European countries. Though the recent rise in the prices of agricultural products has benefited him, his position remains essentially weak. In addition to these numerous difficulties, the agriculturist has another serious handicap in that he is largely illiterate. The percentage of literacy in India and Pakistan is still very low being only 13 per cent. and any progress in agriculture is well-nigh impossible without the background of general education. All these factors lead to what is the most outstanding feature of the rural economy of India and Pakistan—the chronic and almost hopeless indebtedness of the cultivator.

RURAL INDEBTEDNESS

The Central Banking Enquiry Committee has estimated that the total rural indebtedness of India and Pakistan is about Rs. 900 crores. Though indebtedness of the agricultural population has continued from old times, it is acknowledged that it has risen considerably during the last century and more especially during the last 50 years. This colossal burden of debt

is the root problem which has got to be faced in any attempt towards the economic regeneration of the masses. A peculiar feature of this indebtedness is that the debt which remains unpaid during the lifetime of the cultivator who contracts it passes on as a burden to his heirs, so that many agriculturists start their career with a heavy burden of ancestral debt which they in their turn pass on with some further increase to their successors. Ignorance and improvidence, extravagance and conservatism have further been held as the reasons for the continued growth of this heavy load. A marriage festival in the family tempts the cultivator to launch out into extravagance while funeral ceremonies prove no less costly. All these factors—the uneconomic nature of the agricultural industry, the chronic and heavy indebtedness and illiteracy all form a thoroughly depressing background for the rural economy of India and Pakistan.

GENESIS OF THE MOVEMENT

It is no wonder that under the circumstances detailed above the agriculturist has constant recourse to borrowing and that too not only for any permanent improvement that he may contemplate but for his current agricultural needs as also for periodical unproductive purposes such as weddings and funeral ceremonies. The absence of any banking organisation in the country-side has driven him into the arms of the *sowcar* or the *mahajan* who, while proving a very accommodating person, has acquired a grip on him from which the cultivator has found it impossible to extricate himself. The usurious rates of interest charged, coupled with various devices which increase still further the actual rate of interest, and the numerous services which the *sowcar* performs as a retail tradesman and the buyer of the cultivator's produce, make the *sowcar* the dominant force in the village, reducing the agriculturist to a position of absolute serfdom.

In 1883 the Land Improvements Loans Act was passed and this was followed in the next year by the Agriculturists Loan Act enabling Government to advance loans repayable by easy instalments and at low rates of interest for improvements and also for current agricultural needs. In 1892 Sir Frederick Nicholson submitted a report to the Madras Government on the possibility of introducing land and agricultural banks and the discussion thus initiated by him was continued by Mr. Dupernex of the U.P. in his "Peoples Banks for Northern India". The caste system of the Hindus and the ideas of common brotherhood among the Moslems were evidences of the peoples' natural aptitude for co-operation and the *midis* of Southern India furnished a practical proof of this aptitude. In 1901 the Government of the day appointed a committee to consider the question of the establishment of agricultural banks and the report of this committee resulted in the passing of the Co-operative Credit Societies' Act of 1904. The co-operative movement was thus launched in the country on the

25th March, 1904. The Act aimed at encouraging thrift, self-help and co-operation amongst agriculturists, artisans and persons of limited means and the societies that were to be started were intended to be small simple credit societies for small and simple folks with simple needs and requiring small sums only. Knowledge of and confidence in their fellow members which are the keynote of success were ensured by providing that a society should consist of persons residing in the same town or village or group of villages and should be members of the same tribe, class or caste. In order to provide facilities in urban areas for the small man, urban societies were also permitted. The Act introduced the principle of unlimited liability for rural societies. The local Governments were empowered to appoint special officers called Registrars of Co-operative Societies, whose duty it would be to register societies formed under the Act, to get the accounts of such societies audited by a member of their staff and in general to see that the societies worked well. The seed thus sown has grown in the course of 40 years into a fine tree with twigs and branches, spread out in many directions. In spite of several weaknesses in the co-operative movement in the two countries, it is beyond dispute that the movement has been a powerful instrument towards the awakening of the country-side and has led to a steady improvement in various directions of the life of the cultivator. Moreover, the use of the vote, the elective system, the ideals of self-help, self-reliance, compromise, give and take, the habit of working on an organised plan, the rounding of angularities are all great items in the training of a citizen and the co-operative societies have been great schools for political and civic education. Since the launching of the movement in 1904, there have been amendments of the co-operative law and committees and commissions of enquiry to remedy defects and to suggest further lines of action.

GROWTH OF CO-OPERATION

In the first few years of the movement the number of societies grew very slowly but the growth was considerably accelerated from 1910 and the average number of societies from 1910 to 1915 was about 12,000. The pace of growth still further quickened after 1915 and now there are 138,647 agricultural societies and 21,941 non-agricultural ones. Table 1 shows the distribution of these societies by Provinces in India and Pakistan. It will appear from the table that progress in different parts has not been uniform. The Bengals, the Punjabs, the United Provinces, and Madras have the largest number of societies while other major provinces like Bombay, Bihar, the Central Provinces and Assam show smaller figures. The two Punjabs with 26,438 societies come first in the number of societies (89.3 per one lakh inhabitants, while the Bengals which have a larger number of societies than the Punjabs come second in that respect with 68.1. The progress in smaller areas, like Coorg and Ajmer-Merwara, must be regarded as very satisfactory in view of their small population, since the number of societies per one lakh inhabitants works out in their case at 168.0 and 134.0 respectively. It is satisfactory to note that the co-operative move-

ment has spread not only in the Provinces but also in the States; and compared with the total population, Kashmir, Gwalior and Indore lead in this matter though the premier States of Mysore, Baroda, Hyderabad and Travancore have also made considerable progress. Even more instructive are the figures in Table 2. The total number of members of primary societies stands on the 30th of June 1945 at 84 lakhs. Taking the normal family at a little under 5, it is clear, that about 4½ crores of people in India and Pakistan are being served by this movement. There is no single movement rural or urban fraught with such tremendous possibilities for the uplift of the masses as the co-operative movement and there is no other movement which affects such a large percentage of the population. Bombay leads in the number of members of societies, 45.0 per one thousand inhabitants, the Punjabs come next with 36.8, Madras, the Bengals, and Sind rank thereafter. This shows that the size of societies varies in different Provinces and that Bombay, while having a smaller number of societies, has a larger average of membership per society as compared with the other Provinces of India and Pakistan. Of the smaller areas, Coorg takes a leading place with 159.9 members per one thousand inhabitants, while Travancore has an average of 30.9. Membership is a much better test in many respects of progress than the number of societies, and from this point of view, the progress in the two Punjabs, Bombay, Coorg, Travancore and Ajmer-Merwara must be regarded as quite satisfactory. There is also a third aspect of the growth of the movement. The number of societies, or the membership in the societies alone is not an index of the work that is being done and of the benefits which are being conferred by the movement. The societies are predominantly credit organisations or rather small banking institutions and the part that they play can be better appreciated from their working capital than from the number of members. In this direction the marvellous progress so far achieved by the movement should also be noted. From about Rs. 68 lakhs, which was the average up to 1910, the working capital has advanced very rapidly and stands in 1945 at more than Rs. 1,47 crores. It is gratifying to note from Table 3 that this large sum has been derived mostly from non-Government sources. The share capital, reserve fund and deposits from members together constitute about Rs. 62 crores and this is really owned capital, that is to say members' own money. The provincial or central banks and other societies contribute a little less—34 crores while the non-members or the outside public contribute about 42 crores. This latter item shows to a remarkable extent the growth of public confidence in co-operative institutions and speaks well in general of the management of the societies and the very useful purpose they serve in the banking organisation of the country. The distribution of the working capital by Provinces and States gives us a further insight into the progress made in this direction by the co-operative movement in different parts of India and Pakistan. Bombay and Sind lead in this respect with 215 and 918 annas per head of population respectively. The two Punjabs and Madras come next with 112 and 105 while the Bengals fall behind

with 58. Among the smaller areas, Coorg comes out first with 257 annas per head of population while Ajmer-Merwara comes second with 162. Of the States, Baroda takes the first place with 96, while Indore, Mysore and Cochin follow with 81, 69, and 59 respectively. Bombay is easily first in the matter of deposits from members which amount to about 6 crores out of a total working capital of 29 crores and this is one of the best tests of the success of a co-operative society. It is obvious from a glance at the figures in the tables that there has been very rapid progress in the number of societies, in their membership and in the working capital of these societies. Bombay, the Punjabs and Madras lead in many respects, U.P. showing a spurt in recent years. The smaller areas and the States have also achieved considerable progress though the movement there started comparatively later. The agricultural societies predominate in all the Provinces and States while non-agricultural, that is, urban societies show a much slower development. But before we proceed, we must explain the chief component parts of the structure, as it has now been built up.

FINANCIAL STRUCTURE OF THE MOVEMENT

Apart from the comparatively few co-operative societies at present working for non-credit purposes, whether in urban or rural areas, a co-operative society largely means a small bank or a credit institution for providing financial accommodation to its members on a co-operative basis. Of these credit institutions, by far the greater proportion is rural. The rural credit society has, for its main purpose, the financing of the agriculturist and as such it needs funds. The original idea of co-operative credit lies in making available to the needy the surplus of the well-to-do brethren through the medium of the society but in the villages, the well-to-do and the needy rather form distinct groups, the former playing or trying to play the *soucar*. Thus instead of comprising more or less all sections of the population of the village, a society is very largely made up of the needy section. Even if it was not the slender savings of the well-to-do would not be enough to meet the wants of the needy and a village society cannot, therefore, be self-sufficient, making available the deposits of its well-to-do members as loans for the needy ones. The heavy load of unproductive debt of the average farmer, his habit of investing his savings, if any, in lands and ornaments, his illiteracy and consequent lack of the banking habit, soon made it apparent that rural credit societies could not be expected to raise the required funds in deposits either from members or locally. The question of funds for the working of a rural co-operative society thus becomes a vital question indeed. Central banks have therefore been brought into existence at the district headquarters in order to raise money from towns and make them available to the primary rural societies. Following up the idea further, it has been found necessary to have a provincial bank at the provincial headquarters to serve as a balancing centre for the central banks and to make available larger funds for the primary societies through the

central banking institutions. The financial structure of the co-operative movement is thus largely composed of three parts—(i) the Agricultural Credit Society, (ii) the Central Financing Agencies, and (iii) the Provincial Banks. Obviously one more part in the structure seems possible and desirable, namely, an Apex All-India or All-Pakistan Co-operative Bank. So far, however, such a bank has not been started though the provincial banks of India have a Provincial Co-operative Banks' Association.

AGRICULTURAL CREDIT SOCIETIES

The success of these societies is closely related to their very peculiar constitution. In an ordinary joint-stock company, a member is liable only to the extent of the value of his share holding and his liability is therefore limited; but in the case of agricultural credit societies, the liability is unlimited, that is to say, members are jointly and severally liable to the creditors of the society for the full amount of the debts incurred by it. Such a liability would never be acceptable to any person, unless he was imbued with the broader vision of brotherhood between members and unless he himself had an active voice in the management of the society and had a more or less full knowledge of the character and antecedents of his fellow members. Co-operative credit is the capitalisation of character and unlimited liability is the great instrument to secure the admission into a society as members of those persons only, who by their character and antecedents deserve to be taken into that brotherhood which imposes such an obligation as unlimited liability on all, so that they either swim or sink together. To secure success, therefore, the Proper selection of members is of the utmost importance; and it is unfortunate that this has not in practice been as well kept in view as it should be, in the eager desire to promote the formation of more and yet more societies.

Credit is a blessing only if turned to productive account; if used up for unproductive purposes, it is a curse. It would enrich the producer but it would only impoverish the consumer. The agriculturist needs money for productive purposes such as his current agricultural needs, land improvement, purchase of stock and implements, manures and seeds, as also for unproductive purposes, such as repayment of old debts, weddings and funerals. He thus requires credit not only as a producer, but also as a consumer—a producer who hardly makes profits from his industry and a consumer who has no past savings to enable him to tide over a bad period, but who is a perpetual borrower ready to live for today and let tomorrow take care of itself. He is besides ignorant and illiterate, and though sufficiently conversant with the routine of his industry hardly awake to the need or scope for improvements in his methods. In such circumstances, it is imperative for the management of a rural co-operative society very carefully to scrutinise the loan applications and examine the purpose for which loans have been asked and to see that the loan when sanctioned is used for the specific purpose. And yet it is in this very respect that co-operative societies have fallen short in their duty.

THEIR RESOURCES

The funds of an agricultural credit society are raised from entrance fees, share capital, deposits or loans from non-members, loans from the central or provincial banks, loans from Government and the reserve fund. The income from entrance fees and share capital is small compared with the financial requirements of the members. A large source from which funds are derived is deposits and loans. The volume of deposits which a society is able to secure on terms offered by it is an index of the measure of the public confidence it has inspired and the soundness and the stability of its financial position. The ideal placed before these societies is the development of members' deposits to the extent of making the society financially self-sufficient. These deposits by members further serve the purpose of stimulating thrift and saving habit among them, and are, therefore, eminently desirable. Attempts are everywhere made to encourage deposits, but the response has been small, except in the province of Bombay, where they form one-fifth of the total working capital. Loans from central banks therefore furnish the bulk of the working capital of these agricultural credit societies at present.

Low dividends and voluntary services resulting in low cost of management have made it possible to divert a substantial proportion of the profits of these societies to reserve funds, and thereby provide against unforeseen losses, bad debts and losses on the realisation of certain assets such as by investment depreciation. The general practice in regard to the use of the reserve fund in the business of the societies is that it is used as ordinary working capital.

The funds collected by the agricultural societies in India and Pakistan are at present by no means negligible. They aggregate to about 31 crores of rupees. Their financial position as on the 30th of June 1945 stood thus:—

	In thousands of rupees
Share capital	5,20,09
Reserve and other Funds ..	10,08,54
Deposits	2,39,64
Loans	12,84,76
Total Working Capital ..	30,53,03

The figures show that these tiny agricultural societies work with about Rs. 18 crores of their own capital (including members' deposits in this head) as against their outside borrowed capital of about Rs. 13 crores. The owned capital was thus about 58 per cent. of their total working capital, and this proportion is rising steadily as years pass.

CENTRAL FINANCING AGENCIES

The formation of banks in urban areas on co-operative principles, with the sole object of raising funds for advances to societies having been found necessary to place the financial structure of the movement on a sound basis, the Co-operative Act of 1904 was amended in 1912, and the

Co-operative Societies Act II of that year provided for the registration of central banks with the sole object of financing societies.

Then on the number of central financing agencies grew rapidly specially in the Punjab, the Bengals and the United Provinces. The function of these central societies was not only to supply the required capital to the primary societies but also to make the surplus resources of some societies available to other societies suffering from a deficiency of funds and to provide proper guidance to and inspection over them. On 30th June 1945 the number of central banks was 602.

There are four main sources from which a central bank derives its working capital which stood in 1944-45 at 39.8 crores: (a) Share capital, (b) Reserve, (c) Deposits, (d) Loans.

The paid-up share capital and reserves of central banks constitute the owned resources of these banks as distinguished from borrowed resources and provide the guarantee fund against which additional funds are raised by them in the shape of deposits or loans. It is usual to prescribe a suitable proportion between the owned and borrowed resources of central banks in each province. The most usual proportion observed in practice between the borrowed and owned resources is 1 to 8. Deposits from members and non-members constitute the bulk of the borrowed capital of central banks. The total amount of deposits held by central banks in the year 1944-45 from individuals and other sources amounted to Rs. 21 crores and from primary societies to Rs. 6.3 crores. Deposits in central banks are mainly of two kinds, viz., savings and fixed. Current deposits are not universal but confined only to selected central banks in selected areas. The principle usually observed by these banks is not to grant loans to societies for periods longer than those for which deposits are available, and where loans for long periods are advanced the periods of deposits are also comparatively long. In addition to funds obtained by deposits, central banks raise loans from outside banks, from other central banks, from the local provincial bank and from Government. The total amount of loans held by the central banks in 1944-45 from outside banks, from other co-operative banks and from the provincial banks was Rs. 3.3 crores and from Government Rs. 63 lakhs. Central Banks ordinarily do not directly borrow loans from Government, but, in recent years undivided Bengal and Orissa have held Rs. 3 and Rs. 2 lakhs respectively. This practice is more common in the States, where Gwalior, Baroda, Hyderabad, Indore and Bhopal hold from their Governments Rs. 23, 11, 6, 2 and 2 lakhs respectively. Borrowings from outside banks are generally confined to accommodation obtained from the Reserve Bank against Government Securities or Promissory Notes executed by societies in favour of the Central Bank and endorsed by the latter in favour of the Reserve Bank. This accommodation is, however, limited and advances from other joint-stock banks are also now rare. The main source of loans is, therefore, the provincial bank, and where a provincial bank exists, the central

The Co-operative Movement

banks are generally prohibited from having any direct dealings with either the Reserve Bank or any other joint-stock bank or with one another. This rule is, however, not rigidly observed in the Punjab and Madras. Several central banks, because of their long standing, possess sufficient resources to be independent of any outside financial assistance but they all continue credit arrangements mainly with the provincial bank on which they rely for emergencies.

In the initial stages, several central banks developed from ordinary urban societies which granted advances to individual shareholders. A few of such central banks have continued the practice and the amount advanced by central banks to individual members during the year 1944-45 was Rs. 4 crores chiefly in Bombay and the Punjab. Advances are made to individuals on the pledge of agricultural produce, thus combining trading with banking which is against sound banking principles. Besides, such advances encroach upon the domain of marketing finance and hamper the growth of co-operative marketing. The total advances made by central banks to societies at the end of the year 1944-45 amounted to over Rs. 35.3 crores.

After meeting management expenses the profits of central banks are distributed as allocations to reserves and dividends to shareholders. The combined net profits of the 602 central banks of the country during the year 1942-43 amounted to Rs. 55 lakhs on the total working capital of Rs. 40 crores; the rate of dividend paid varied from 3 to 8 per cent. in different parts of the country but the most usual rate paid was 3 per cent. per annum.

PROVINCIAL CO-OPERATIVE BANKS

At present, all the major Provinces except Orissa have apex banks functioning in them. There are apex institutions in two of the States, Mysore and Hyderabad, though in the others also there are institutions corresponding to the apex bank or functioning as such. There are 11 such institutions in all out of which 9 are in India and Pakistan and two in the States. The constitutions of these institutions vary considerably; but the functions of all these institutions are more or less the same, namely, the co-ordination of the work of the central banks and provincialisation of finance in them. It is found that in a large majority of the apex banks the constitution is a mixed one, that is, both in the general body of the banks as well as in the directorate, there are individual shareholders as well as representatives of co-operative societies and central banks.

All apex banks both in the Dominions and in the States depend for their working capital largely on deposits from the affiliated co-operative societies as also from the public. It is, therefore, thought necessary to insist upon the maintenance of fluid resources on a certain scale and in some Provinces the Government of the Province has prescribed definite rules with regard to the maintenance of fluid resources. The period for which deposits are accepted determines the maximum period for

which they can lend out these borrowed funds to their clients, and in every Province the apex bank has fixed for itself a maximum term, beyond which no loans are, in general, sanctioned. The following figures will clearly show the position of the apex banks in 1944-45.

Provincial Banks, 1944-45

	In thousands of rupees
Working Capital—	
Share Capital	90,12
Reserve and other funds ..	1,75,28
Deposits and loans—	
from Individuals	8,83,01
from Provincial and Central banks	5,52,17
from societies	3,21,98
from Government	30,04
Total ..	20,58,58
Loans made during the year to—	
Individuals	6,95,52
Banks and societies	9,39,20
Total ..	16,34,72
Loans due by—	
Individuals	1,80,85
Banks and societies	4,55,79
Total ..	6,36,64

While accepting deposits from co-operative banks and the general public, most of the apex banks have also dealings in current account with the latter. The undivided Punjab apex bank does not encourage such accounts with individual non-members, as it does not wish to enter into competition with central banks. Apex banks also generally carry on ordinary banking business, such as collecting *hundis* and dividends from companies and collecting pay and pensions. The provincial banks of Bombay, Madras and the undivided Punjab have floated long-term debentures. The Bombay bank has so far issued debentures of the value of Rs. 9.8 lakhs and these debentures are recognised as a trustee security. The bank at Madras has floated debentures of the value of 2.18 lakhs on the security of a floating charge of the general assets of the bank, while the Punjab bank has issued debentures of the value of 5 lakhs. As in every banking institution, these banks are also frequently troubled with surpluses and deficits, though at different times in different institutions. There is therefore interlending of surplus funds between these apex banks, and during the period of shortage of funds, deposits are accepted from surplus banks, and some of them call for special season deposits allowing favourable rates of interest to tide over the period of shortage. The All-India Provincial Co-operative Banks' Association enables the member banks to ascertain which of them are surplus in the period and by correspondence to arrange for inter-provincial borrowings.

OVERDUES

Among the most important tests of the success or otherwise of a co-operative credit society is undoubtedly the promptness in repayment of loans by members, and it is in this respect that one has to recognise that the societies have not attained any very great measure of success. On 30th June 1945, the overdue loans in agricultural societies amounted to Rs. 6,79,08,554 as compared with Rs. 7,89,05,293 the year before; the working capital of the agricultural societies was Rs. 30,53,03,307; the loans due by

individuals were Rs. 18,19,68,385. The overdue loans were therefore 22 per cent. of the working capital and 37 per cent. of the total loans due by individuals. The position is, however, rendered more serious when one realises that the figures are considerably obscured by book entries and extensions of the date of repayment and in some cases, by the farmers' borrowing from the *sowcar* to pay the society's dues and that the percentages represent merely an average for the two Dominions. The following table shows the position in different provinces on 30th June 1945.

Overdue Loans in Agricultural Societies, 1944-45
(in lakhs of rupees.)

Province	Working capital	Loans due by individuals	Overdue loans by individuals	Percentage of overdue loans to	
				Working capital	Loans due
Madras	5.75	3.60	86	15	24
Bombay	3.87	2.20	75	19	34
Sind	86	49	28	30	53
Bengal (E. and W.) ..	5.90	3.04	2.59	44	85
Bihar	66	33	18	27	55
Orissa	47	33	21	49	64
United Provinces ..	1.61	1.04	19	12	13
Punjab (E. and W.) ..	5.93	3.17	64	11	20
Central Provinces and Berar	75	53	11	15	21
Assam	14	5	5	36	100
Mysore	50	32	15	30	47
Baroda	61	29	5	8	17
Hyderabad (Dn.) ..	95	58	10	11	17
Gwalior	31	42	21	68	50
Indore	30	27	..	..	..
Kashmir	46	27	11	24	31
Travancore	48	21	13	27	62
Total ..	30.53	18.20	6.79	(average) 22	(average) 37

The position after June 1933 grew more serious, since the fall of prices of agricultural produce and the world crisis and trade depression reduced the repaying capacity of the agricultural borrower considerably and increased the terrible load of overdue loans in rural credit societies. This continued growth of overdue loans is an ominous portent and reflects very badly on the soundness of the Co-operative structure. The loans having been based on the assets of members, the ultimate solvency of the societies is beyond dispute; but severe pressure on members and the consequent wholesale liquidation of societies would have very serious political and economic reactions. The causes that have led to this phenomenon, which menaces the entire existence of the co-operative movement, are chiefly to be found in not basing the loans sanctioned on the repaying capacity of the borrowing member, in sanctioning loans for unproductive though perhaps necessary social or domestic purposes or for the redemption of old debts, and generally in the uneconomic nature of the agricultural

industry. The loose scrutiny of the purposes stated in the loan applications and the absence of a careful watch on the way the loan is spent by the members, which must be the case where almost every member is a borrower or a surety to other borrowers and where the societies are composed almost wholly of the needy section of the village, the remissness in exerting pressure and in taking action against the defaulter, even when he is wilfully defaulting, add considerably to the growth of the menace of excessive overdues. The central financing agencies are more concerned with the assets that in the last resort are the security for their lendings and, with more funds than they could use, are more eager than even the Registrar himself for organising new credit societies.

The position has been eased considerably by the recent rise in the prices of agricultural produce under war conditions; but temporary relief is no solution and care will have to be taken so that the earning capacity of the agriculturist is increased by linking up credit with co-operative marketing and by the development of subsidiary industries or secondary occupations for him in his leisure.

LAND MORTGAGE BANKS

The loans advanced by co-operative societies to their members and by the central financing agencies to their constituent societies are, from the very nature of the source from which they derive the bulk of their finance, for short or intermediate terms only. By concentrating upon the growth and multiplication of rural credit societies and thus upon facilities for short and intermediate term loans, the co-operative movement did not provide for the redemption of old debts or for increasing the earnings of agriculturists which alone would prevent any further increase in their debts and pave the way for the paying off of the old ones. It does not seem to have been adequately realised that the removal or the lightening of the heavy load of indebtedness does not depend so much upon the easy terms on which co-operative finance can be made available, as upon the ascertainment of the amount of individual indebtedness to the *sowcar*, upon so fully financing the agriculturists that they could be prevented from resorting to the *sowcar* any more, and above all on making agriculture an industry sufficiently paying to leave a little saving after all legitimate current expenditure on agriculture and the household has been met, so that this saving could be applied to the liquidation of old debts. The mistaken notion associated with the start of the movement that co-operative credit could serve this purpose and which has lured more or less till now as evidenced by permitting this purpose to be regarded as a legitimate purpose for loans is largely responsible for increasing the load yet further. Short or intermediate term loans can, if judiciously employed, prevent any further increase in the burden, though even that in the present state of uneconomic agriculture seems scarcely possible; but it cannot leave any adequate margin of saving which could be employed to redeem past follies or misfortune. The *sowcar*, it is often forgotten, is the village retailer as also the purchaser of the villagers' produce and what he

cannot recover from the borrower by way of interest or the part payment of the principal of the loans, he can more than make good on the threshing floor or in his shop. The co-operative movement by concentration on the credit side has attacked him on one front only, so that the risks of non-payment are saddled on the society while the profits of the merchant and the retail shopkeeper are still enjoyed by the *sowcar*; the attack ought to have been on all fronts. However, under the circumstances, the clarification of the situation of indebtedness is most desirable as a preliminary towards tackling the important questions of the redemption of old debts. The Indian Central Banking Enquiry Committee has wisely emphasised the need for a vigorous policy of debt conciliation on a voluntary basis and for exploring the possibility of undertaking legislation to secure, if need be, the settlement of debts on a compulsory basis. A simple Rural Insolvency Act as recommended by the Royal Commission on Agriculture and endorsed by the Central Banking Committee would also be an important step towards liberating those who have already given up all their assets, from the incubus of ancestral and old debts, so that at least they and their heirs could start with a clean slate. In any case, the need for long term loans to the agriculturists for land improvement and for the redemption of old debts seems obvious, and it has now been recognised that the time has come for the provision of this facility by the starting of land mortgage banks.

There are three main types of such banks. The strictly co-operative type is an association of borrowers who raise credit by the issue of mortgage bonds bearing interest and made payable to bearer. The commercial type works for profit and declares dividends. The third type—the quasi co-operative—has a mixed membership of borrowers and non-borrowers, operating over fairly large areas and formed with share capital and on a limited liability basis. The banks organised so far in the sub-continent are of the co-operative type, though strictly speaking they belong to the quasi co-operative variety, admitting as they do to the membership a few non-borrowing individuals for attracting initial capital as well as business talent, organising capacity and efficient management.

At present there are 9 co-operative land mortgage banks in the Punjab. Two of these operate over whole districts, the rest confine their operations to a single tehsil. Bombay has 16 land mortgage societies and a Provincial Land Mortgage Bank, which have been successfully carrying on their business. The Bengals have 9, Assam 4, C.P. and Berar 21 while Madras has 119 primary land mortgage banks and a central land mortgage bank. It is too early to pronounce on the success or otherwise of these few banks. Among the objects for which these banks advance loans are the redemption of old debts, improvement of land and method of cultivation and the purchase of land in special cases. The Central Banking Committee think, however, that for a long time to come the resources of these institutions will be mainly required for enabling the cultivator to

redeem his land and his house from mortgage and to pay off his old debts. One feels, however, extremely doubtful whether the emphasis should not be laid on the intensive and extensive development of agriculture, since as pointed out above, unless agriculture becomes a paying industry, the redemption is impracticable and illusory. The bulk of the funds of these banks will have to be raised by debentures and for these purposes there will have to be in the Provinces central land mortgage banks as in Madras and in Bombay. Government will have also to render assistance to these institutions for the success of the debenture issue, and its guaranteeing the interest as in the Punjab ought to meet all reasonable needs, though in special cases there would not be much harm in the Government's purchasing debentures of a certain value. While mutual knowledge and control over one another among members is the insistent feature in the case of the unlimited liability credit society, the insistence in the case of a land mortgage bank with limited liability is on the capacity and business habits of the directorate, in order to ensure sound valuation of security, careful investigation of titles, correct assessment of borrower's credit and repaying capacity and on the efficient management of affairs. The recent rise in the value of agricultural lands has tempted the agriculturist to sell one more of the plots he holds and pay off a large part of his debts to the *sarcar* and to the Land Mortgage Bank from the price realised, so that the business of the land mortgage banks has been decreasing considerably. This factor with the low yield on investments has been causing some anxiety.

The operations of the Land Mortgage Banks and Societies in India and Pakistan during 1944-45 were as under:—

Number of banks or societies	280
Number of members	1,38,709
Share Capital	Rs. 51,28,197
Debentures from the public	3,74,59,432
Debentures from Government	5,99,517
Deposits	17,88,377
Reserve and other funds	28,62,734
Loans	3,01,40,007
Working Capital	7,79,78,264
Loans made to individuals	39,68,037
.. .. Banks and Societies,	38,77,304
Profit	4,98,539

PROPAGANDA, EDUCATION AND TRAINING

In the initial stages of the movement, it fell on the Registrar to carry on propaganda and organise co-operative societies. For this purpose the assistance of non-official honorary workers was imperative and in the various Provinces a band of such workers was brought into existence, who as honorary organisers of the district or talukas actively co-operated with the officials in carrying on propaganda, organising new societies as a result thereof and looking after the societies so started in some measure. With the rapid growth of co-operative societies, however, it was felt that for the further propagation of the movement it was desirable to carry on work by co-operators themselves in a more

organised manner and for that purpose co-operative institutions were started in the various Provinces. In some Provinces, like Bombay, these institutions are mixed institutions with a membership of individual sympathisers and workers and of co-operative societies. In others, like Madras and the United Provinces individuals were not admitted as members and the institutions became provincial unions of co-operative societies. In some Provinces, like Bihar and Orissa, they became federations of co-operative societies, in others, like the Bengals and Assam, they are known as co-operative organisation societies. Whatever the exact form assumed by these provincial institutions, their functions were more or less the same in all Provinces, that is, propaganda and the focussing of co-operative opinion on the various problems that confronted the movement from time to time. These institutions have come to be regarded in an ever increasing measure as the third arm of the movement, the Registrar and his staff representing the administrative side performing more or less the functions assigned to them under the statute, the provincial bank with the central banks and banking unions representing the financial side and as such concerned more with the financing of the movement, and the institutes, unions, federations or organisation societies representing the propagandist side and as such concerned more with educating popular opinion and representing co-operators' views to the authorities. In 1930, the All-India Co-operative Institutes' Association was established to co-ordinate the activities of the provincial institutes, to formulate non-official co-operative opinion on important co-operative problems from time to time and to encourage the growth of co-operative literature.

It was soon perceived that one of the serious handicaps to the successful working of co-operative societies was the ignorance of the members and the absence of trained men as office-bearers of societies. Illiteracy of the rural population, however, has been found too big a problem for these institutes and they have, therefore, attempted only to spread knowledge of co-operation and co-operative principles to the members of societies and to train the office-bearers in various ways. Education has thus developed into an important function of these institutes. In Bombay, the Institute has created a special education board which maintains co-operative schools at different centres and conducts periodically training classes suitable for different types of workers and employees of co-operative societies. It has started this year a Co-operative Training College at Poona for the benefit of employees of the Co-operative Department as also of the Co-operative Banks and other Societies. In the Punjab, however co-operative education has been organised by the Co-operative Department, though the Punjab Co-operative Unions render active assistance therein. In Bihar and Orissa a permanent Co-operative Training Institute had been established at Sabour in the Bhagalpur Division which is controlled by a governing body which includes the Registrar, and a few representatives of the Co-operative Federation. The Training Institute has now been transferred to Pusa. Madras has organised 6 training institutes and has recently started a College

as in Bombay. In the United Provinces, Bengal and the Central Provinces, arrangements for co-operative training and education have not yet been properly made, though there also it is the Department assisted by the provincial union which organises the training classes. The need for proper co-operative training and education has been felt in an increasing degree in recent years and the Central Banking Enquiry Committee has recommended very strongly the establishment of Provincial Co-operative Colleges and a Co-operative College for the whole country for the higher training of the more important officials of the Department, banks or societies. No action apparently has been taken till now on these recommendations, but there is no doubt whatever that any serious attempt at improvement of the co-operative societies in the country must include a proper organisation of co-operative education not only for the office-bearers of societies or the managers and inspectors of central and provincial banks but also for the inspectors, auditors and assistant registrars of the co-operative departments. The undivided Central Government placed in the last few years at the disposal of each of the Provincial Governments about one lakh of rupees which were devoted to a better organisation of co-operative training and education for the staff of the co-operative departments as also of other institutions.

In some Provinces like the Punjab and Bihar and Orissa, the provincial union or federation has been actively associated in discharging the Registrar's statutory function of the audit of societies, but this is a statutory obligation of the Registrar and is generally done by him. The departmental audit or inspection by the central banks cannot dispense with the need for careful supervision, which to be effective must be from within, and the provincial federation or union is obviously the best agency for this friendly and efficient supervision. In recent years, however, the need for tightening official control on the co-operative societies has been felt and supervision, audit and training have been taken up by the Provincial Co-operative Departments more and more, and the Provincial Co-operative Institutes and

Unions have not been functioning as actively or profitably as the well ordered development of such a popular movement as the co-operative movement would require. The Seventh All-India Co-operative Conference held at Lucknow in May, 1947, stressed the need for strengthening these Institutes and of progressive deofficialisation of the co-operative movement.

NON-CREDIT AGRICULTURAL CO-OPERATION

For some years past increasing attention has been directed to other forms of co-operation for the benefit of the rural population. Credit is but one of the needs of the cultivator; its organisation through co-operation touches but the fringe of the problem; and different provinces have been experimenting upon the application of co-operative organisation to meet his various non-credit needs. The problems of irrigation, consolidation of holdings, improved sanitation, fencing, cattle insurance, dairying and supply of agricultural requisites, and above all the marketing of agricultural produce have been therefore engaging the attention of co-operators, and societies for these purposes have been established here and there and have been working with varying success. In a land of ignorant and illiterate agriculturists, it would appear wiser to adopt the rule of one village, one society; but the complexities of the non-credit forms of co-operation have induced the authorities to avoid the multi-purpose or general society and to favour the single purpose society, and we have the curious spectacle of an agriculturist being viewed as a person with a bundle of several needs, each one of which it is proposed to meet separately. A single society trying to meet all the needs of the agriculturist would attack the *sarcar* on all fronts and would become a live force in the village and tend to promote the ideal embodied in the famous phrase: Better living, better farming and better business. However, co-operative opinion is fast coming to accept the wisdom of this and discard the theory of almost water-tight compartments. The agricultural non-credit societies in India and Pakistan on the 30th June 1945 were 20,578 distributed as under:—

Non-Credit Agricultural Societies, 1944-45

Province	Purchase and sale	Production	Production and sale	Other forms of co-operation	Total
Madras	242	...	219	505	966
Bombay	90	19	177	238	524
Sind	1	...	6	1	8
Bengal (E. and W.)	226	1,008	897	1,576	3,706
Bihar	57	...	3,052	...	4,109
Orissa	18	...	20	...	38
United Provinces	13	463	1,974	4,470	6,920
Punjab (E. and W.)	17	747	2,851	297	3,912
Central Provinces and Berar	81	18	3	...	102
Mysore	75	...	31	33	139
Baroda	91	19	64	35	209
Hyderabad	...	...	...	5	5
Total	1,044	2,335	9,500	7,690	20,578

Of these the most important are the marketing societies particularly for the sale of cotton in Bombay, and the consolidation of holdings and better living societies in the two Punjab.

MARKETING SOCIETIES

Marketing of Agricultural produce is the real crux of the whole question of rural prosperity and betterment, and as group marketing is always more effective than individual marketing especially in India and Pakistan where the individual producer is illiterate and constitute a small unit, co-operative marketing has been accepted now as one of the most desirable ideals to work for. It is only the complexity of the working of co-operative marketing finance, the difficulty of providing marketing facilities, the lack of expert knowledge on the part of co-operative officials, and the lack of godown and storage facilities that have prevented the rapid multiplication of sale societies and their efficient working. It is really in the development of this form of co-operative effort that ultimate success must be sought for credit alone could never bring comfort. Where it has been tried with success, the results have been extremely satisfactory. The tremendous headway made in European countries like Denmark and in the United States of America in co-operative marketing organisation and the successful examples of the cotton sale societies in Bombay should arrest attention and invite concentration on the co-operative organisation of agricultural marketing. The jute and paddy sale societies of the two Bengals have not met with success, but the cotton grower in Gujarat and the Bombay Karnatak has reaped considerable benefit from the cotton sale societies. Absence of fraud in weighing, adequate and high prices, insurance of the produce against risks of fire, prompt payment of sale proceeds, financial accommodation till the produce is sold, information of daily price fluctuations in the Bombay market, supply of gunnies and genuine and certified seed, bonus and dividends are no small gains to the agriculturist, who was otherwise at the mercy of the *adatyas* or worse still of his village *soucar*. The cotton sale societies of Surat have recently combined in a federation which has taken over the co-operative ginning factory already started by the members. A few societies for the sale of other articles have also been organised in Bombay, such as for the sale of jaggery, tobacco, chillies, paddy, onions and arcanut. The Bengalis have several jute sale societies with a Jute Wholesale at Calcutta and paddy sale societies with a sale depot in Calcutta. The Punjabs have several commission shops to provide storage facilities so that the grower could wait for better prices, but which sell to local merchants yet, rather than to the merchants at the port. Madras has a number of sale societies, but their transaction are small and they have not yet made much progress. The United Provinces have organised the sale of sugar-cane very effectively through Sugar-cane Societies and the Marketing Union. Recently provincial co-operative marketing societies have been started with Government encouragement and assistance. In Madras and Bombay the results of the working of which will be watched with great interest by co-operators all over the country. Both these Societies have been rendering useful service to the country by undertaking on behalf of Government work in connection with the distribution of manures, and other agricultural requisites, and rationing.

It is indeed high time that Government gave to marketing societies consistent patronage in a fuller measure and linked up Co-operative Credit effectively with marketing. Separate statistics are not available for marketing societies and it is to be hoped that the Reserve Bank will publish them in its statements.

CONSOLIDATION OF HOLDINGS

The law of primogeniture, by which the eldest son alone succeeds to the property of his ancestor and which is in force in some European countries does not obtain in India or Pakistan. Each heir is given a proportionate share of each item of the inherited property and not a share of the whole, equivalent to his portion. The result is that successive generations descending from a common ancestor inherit not only smaller and smaller shares of his land but inherit that land broken up into smaller and smaller plots.

The disadvantages of fragmentation are obvious. A part of land is wasted owing to fragmentation being so excessive as to prevent any agricultural operations, and another part is lost in boundaries. The economic loss due to this system can be easily imagined, and the only solution is consolidation of holdings. This most difficult, important and interesting experiment originated in the undivided Punjab in 1920. The procedure adopted in establishing a Co-operative Consolidation of Holdings Society is to call together all persons directly interested in land in a given village, persuade them to accept the bye-laws whereby a majority in a general meeting might approve a method of repartition, and then carry out actual adjustment of fields and holdings in such a manner that no single individual might have any grievance. As the result of patient work which has now extended over 20 years, some very striking results have been achieved and the movement for consolidation in the Punjab has assumed the dimensions of an important agricultural reform. It is steadily gaining in popularity, and, as more staff is trained and the people become better educated to the advantages of the system, the figures for the area consolidated would mount up year by year. This work began in 1920-21 and in 10 years since then, 263,462 acres were consolidated by the end of July 1930, out of the whole cultivable area of about 30 millions, at an average cost of Rs. 2.5 per acre.

In the Central Provinces some success in consolidation has been achieved in the Chattisgarh Division where scattered holdings are particularly common and it is not rare to see 10 acres broken into 40 plots. The Local Government found it desirable to resort to legislation and passed the Central Provinces Consolidation of Holdings Act in 1928. Any two or more permanent holders in a village holding together not less than a certain minimum prescribed area of land, may apply for the consolidation of their holdings, but the outstanding feature of the Act is that it gives power to a proportion, not less than one-half of the permanent right-holders, holding not less than two-thirds of the occupied

area in a village, to agree to the preparation of a scheme of consolidation, which scheme, when confirmed, becomes binding on all the permanent right-holders in the village and their successors in interest.

In Bombay a Bill was introduced in the Legislative Council in 1928 to deal with certain features of the problem. When this Bill was introduced, it encountered a good deal of opposition, and so the Bill had to be ultimately dropped. Very recently, however, the Bombay Legislature has passed a Bill for the prevention of further fragmentation of holdings and for consolidation.

There are 11 societies for the consolidation of holdings in the United Provinces, and 11 in the Baroda State based on the Punjab model.

RURAL RECONSTRUCTION

One of the main reasons why the achievements of the co-operative movement fall so short of the expectations of the promoters and workers is the extreme backwardness of the rural population, and so the ultimate success or otherwise of the co-operative movement is bound up with general rural development and progress. The co-operative movement itself is a great experiment in rural reconstruction aiming to protect the agriculturist from exploitation by the usurer, the middleman—*dalal* and the merchant. Rural reconstruction has, however, of late years claimed an increasing amount of attention; but so far attempts on a mass scale have not been made; what has been done has been individual effort. The best known of such centres is at Gurgaon in East Punjab. The work done there covers education, sanitation, medical relief, improvement of agriculture, female education and maternity welfare.

In the Central Provinces and Berar the local Government started similar work in November 1925. The latter part of 1933 saw a considerable impetus imparted to the cause of rural reconstruction. His Excellency Sir Frederick Sykes, the then Governor of Bombay, concentrated on village uplift and carried on an intensive propaganda in that behalf which has led to the formulation of a scheme whereby the work can be carried on by District Committees under the guidance of District Collectors, the work being co-ordinated by Divisional Officers. The old Punjab appointed Brayne of Gurgaon fame as Commissioner, Rural Reconstruction and old Bengal made a similar appointment. It appears that all Provincial Governments are devoting considerable thought to this very important work. Since the accession to power of the National Governments in Delhi, Karachi and the Provinces, earnest efforts are being made for village betterment through Provincial and District Rural Development Committees and long-range plans are being formed to that end.

The old Punjab was responsible for introducing this very desirable type of co-operative society to promote better living among the members. There are now more than 300 such societies. The societies do not collect any levy from their members, except a

small entrance fee and they lay down a programme of work and make rules for carrying it out from year to year, violation of which is punishable with fine under the by-laws. Though these societies in the first instance have for their object the curtailment of ruinous expenditure on marriages and other social occasions, they have also helped in various other matters. Some of these societies have levelled and paved and swept the village lands, some have promoted sanitation, some have induced the villagers to improve ventilation in their houses, some have repaired and roofed the village drinking well, some have arranged that all manure should be pitted, some have discouraged expenditure on jewellery, and some have stopped waste on farms. Thus in a variety of ways these societies generally have been great factors in the improvement of conditions in the life of the village.

URBAN CREDIT SOCIETIES

While the chief objective of the co-operative movement was from the first to do service to the rural population, it must be remembered that the Act of 1904 permitted two classes of societies,—rural and urban, recognising thus the suitability of the co-operative method for solving the problems of urban population also. At present there are in all 21,924 non-agricultural societies with a membership of 3,130,590. Of these, 7,472 are credit societies, the rest being societies for other purposes.

An important class of the urban population is that of the merchants and traders, and though the joint-stock banking system that has so far developed is quite well suited in many respects for them, from the point of view of the small trader, it is co-operative banking that is obviously wanted. The importance of People's Co-operative Banks promoted for the benefit of urban people without any distinction of caste or creed is, therefore, very great, for the financing of small merchants, artisans and craftsmen, and for the stimulation of trade and industries in and around district and taluka towns. The principal business of these banks is short-term credit and in this respect they resemble the ordinary commercial banks. In the absence of any industrial co-operative bank, it is also for the peoples' bank to finance small industrialists and help the development of cottage industries which still play a very considerable part in industrial economy. Another very important function which falls to peoples' banks is the financing of the marketing of the produce of the land from the field to the port or to the principal market centres; and thus assist in the development of the internal trade of the country. It is only, however, in Bombay and East and West Bengal that we meet with some good institutions functioning as peoples' banks. In Madras there are 1,184 non-agricultural credit societies but most of these are not real peoples' banks. The two Punjabs have 1,009 unlimited liability societies and 235 with limited liability. Even here we hardly find any development of real peoples' banks. In East and West Bengal the limited liability societies number 584 and though these societies seem to have won public confidence the more important of them are salary earners' credit societies. Some of the divisions especially the Chittagong Division

have several big concerns, however, working on sound lines. The question of starting peoples' banks in Bihar and Orissa has not yet been seriously taken in hand. In the Bombay Presidency, institutions with a working capital of Rs. 20,000 and more are classed as urban banks. Since 1922 co-operators in this Presidency have been very keen on having a full-fledged peoples' bank in every taluka town, for it has been realised that with the proper development of urban co-operative banking, there is no doubt that the various units will come into touch with one another and that mutual settlement of terms and co-ordinated and harmonious work will greatly assist the development of inland trading agencies. Peoples' banks are a repository of peoples' savings, a nucleus for co-operative activity and an institution giving facilities for internal remittance, and it is quite necessary therefore that their share capital must be pretty large.

SAVINGS

In the Bombay Province on the 30th June 1940 there were 181 urban banks most of which are fairly successful. The total membership was 210,460, the working capital was Rs. 5,07,51,125 and the reserve fund amounted to Rs. 59,25,640. It can be said without exaggeration that the development of urban banking has been a distinct contribution of Bombay to the co-operative movement, and other Provinces might well follow Bombay's example in this direction. Urban banking has now been found so successful that decentralisation and relaxation of departmental control will probably first be introduced with regard to them, supervision and guidance being made available from their own federations.

An important variant of the urban co-operative society is the Thrift Society. The system adopted is to collect regular savings every month for a continuous period of two to four years, invest the collected amount to the best advantage and pay back to the subscriber his amount at the end of the term with interest. In many societies, loans are advanced also but not exceeding a certain fixed proportion, usually $\frac{1}{2}$ of the deposits. B. and W. Punjab have more than 1,000 societies and the bulk of the members are school masters. There are over 125 thrift societies for women only having a membership of more than 2,000. Madras has also more than 100 thrift societies and Bombay has a few also. Recently however Life Insurance Societies have been started in Bombay, Bengal and Madras. The Bombay society was started in July 1930 largely through the efforts of Dewan Bahadur H. L. Kaji and for a few months it worked as a provident society only, issuing policies of Rs. 150 to Rs. 500 and that too without medical examination, the idea being to bring life insurance within easy reach of the small man in the village as in the town. It has no share capital and works on a mutual basis. It has now, however, widened its scope and has been writing policies for larger amounts under its ordinary branch. It has by now written a business of over four crores. The Bengal Society has had to seek amalgamation with a joint-stock insurance company, while the Madras Society—the South India Co-operative Insurance

Society—started vigorously as a full fledged life insurance society with share capital and comparatively low rates of premia, and has already written a large business of over Rs. 54 crores. In the absence of statistics, it is not possible to review the progress of industrial societies, housing societies and such other types. But they are important and claim attention.

REVIEW

The Co-operative Societies Act of 1904 had limitations which were soon recognised and at a conference of the Registrars, a Bill was drawn up which became the Co-operative Societies Act of 1912. This Act remedied the defects of its predecessor, authorized the registration of societies for purposes other than credit, substituted a scientific classification based on the nature of the liability for the arbitrary one into rural and urban and legalised the registration of Unions and Central Banks.

In 1914 the then Government of India reviewed the situation in a comprehensive resolution and recommended a change in the policy regarding the grant of loans to members, so that they might lend money for domestic purposes as well as for agricultural ones in order that the members might confine their dealings with the Co-operative Societies and be weaned from the *soucaris*. In 1914, the MacLagan Committee on co-operation was appointed and its report in 1915 led to the reorganisation and overhauling of the whole administration of co-operation. Punctual repayment of loans was insisted upon, and all those societies that failed to live up to the ideal of co-operation were sought to be eliminated. From this time onwards the share of co-operators in the movement assumed increasing importance and it came to be realized that for the success of the movement, decentralising was necessary. The Government of India Act of 1919 made co-operation a provincial transferred subject and the local Governments were left free to adapt the 1912 Act to their own requirements.

The steady growth of the Central Financing Agencies relieved the Registrars partly of the need for attending to this very important matter in the development of co-operation; but propaganda still remained the function of the Registrar and his staff, paid or honorary, and it was perceived that non-official institutions should be established to take over this function from official hands. Accordingly Co-operative Institutes were started in various Provinces, in some cases as unitary societies reaching down to the village through their branches in the divisions and the district, in other cases as a federation or union more or less complete of the primary societies. The part these non-official bodies began to play henceforth became increasingly important, some adding to the primary function of propaganda, others such as co-operative education, supervision over societies and even audit.

ENQUIRY COMMITTEES

The steady progress of the movement—sometimes even too rapid—for nearly 20 years, however, was found hardly to lessen the colossal

burden of indebtedness of the ryot, for co-operative credit necessarily confined itself to short-term loans. It was in the undivided Punjab that the first Co-operative Land Mortgage Bank was started at Jhang in 1920. Soon after other provinces followed suit.

While the movement was developing at a rapid pace it was found that financially the situation was worsening. Defaults in repayment were becoming increasingly common and Co-operative Committees of Enquiry were instituted in various Provinces. The Central Provinces thought it necessary to have such a committee in 1922, while Bihar and Orissa followed with a similar committee in 1923. A few years after, the Oakden Committee made similar inquiries for the U.P., the Townsend Committee for Madras and the Calvert Committee for Burma. These Committees have carefully analysed the position in their respective provinces and have made recommendations for the consolidation and rectification of the co-operative credit organisation and the extension of the non-credit side of agricultural co-operation. The powers conferred upon the Local Government by the Act of 1919 to modify the Act of 1912 have been exercised by almost all Provinces, except the Punjab and the U.P. Bombay passed the Co-operative Societies Act of 1925 making the object of the movement still wider than that of its predecessor and its preamble refers to "better living, better business and better methods of production" as the aim of the movement. The chief features of the Bombay Act of 1925 are the adoption of a scientific system of classification of societies, the improvement of the procedure for liquidation of cancelled societies, the extension of summary powers of recovery to the awards of arbitrators and the provision of penalties against specified offences. The Madras Act came into force in July 1932. East and West Bengal, Bihar and Orissa have also similar Co-operative Acts of their own. The progress of the movement in forms other than credit has not been very remarkable and credit societies still predominate, especially the Agricultural Credit Societies.

There are a number of housing societies especially in Bombay, Madras and Mysore, and artisans' societies and unskilled labour societies in Madras. It may be noted that on the agricultural side co-operative farming has hardly been touched and on the non-credit side the consumers' movement has made but meagre progress. It is true that the extraordinary circumstances created by the Second World War have led to the problem of food distribution and systems of rationing and to the consequent formation of a large number of consumers' store societies. But it is very doubtful how far these Societies will continue their work when normal times return, unless they amalgamate into larger units and function more as general stores than as food and groceries stores.

In 1926, the Royal Commission on Agriculture was appointed and co-operation formed only a part—though an important one—of its extensive enquiry. Since then, in consequence of the appointment of the provincial committees under

the Indian Central Banking Inquiry Committee the co-operative movement in the different provinces has been further surveyed. But the provincial committees, for obvious reasons, confined their inquiries to banking in relation to agriculture, small industries and trade. Thus only those aspects of the co-operative movement which have an intimate bearing on the credit needs of the population and the development of banking facilities have been examined.

A few years back, the Government of Bombay appointed a small committee to inquire into the co-operative movement and to suggest how effective action could be taken to improve, extend and strengthen the movement. The report has been submitted and one welcome feature of the suggestions is the adoption of the multi-purpose society as the primary unit in villages advocated strongly by the Agricultural Credit Department of the Reserve Bank.

The growing difficulties of the co-operative movement in times of unprecedented depression led the undivided Government of India to hold a Co-operative Conference at New Delhi on the 29th January 1934. In December 1936 and 1939, other Conferences of Registrars met at Delhi and discussed the situation further.

As a result, consolidation, rectification and rehabilitation of the credit societies were accepted as the policy, whereas expansion and diversification were severely restrained. Official control was strengthened and the movement which was being passed on to the co-operators themselves in the twenties became more officialised than ever before.

It may also be mentioned that the States were not slow in introducing the co-operative movement within their limits, and the movement in some of the more important of the States, such as Hyderabad (Deccan), Mysore, Baroda, Gwalior, Indore, Kashmir, and Travancore has made considerable progress, more or less on the same lines as those followed in the neighbouring Provinces. Statistics are now available for some of the smaller States like Bharatpur, Simur, Kotah, Patiala, Kolahpur and Bahawalpur which show how rulers of the States have accepted Co-operation as their best lever for rural betterment.

LANDMARKS

The landmarks in the history of the co-operative movement are: the Co-operative Credit Societies Act of 1904; the Co-operative Societies Act of 1912; the MacLagan Committee Report, 1915; the provincialisation of co-operation, 1919; the establishment of Institutes, unions and federations for propaganda; the Committees of Enquiry into the co-operative movement in several provinces; provincial legislation; the Report of the Royal Commission on Agriculture, 1928; Reports of the Indian Central and Provincial Banking Enquiry Committees, 1931; greater official control; marketing surveys, debt conciliation schemes, land mortgage banking and organisation of provincial marketing societies; Report of the Co-operative Planning Committee.

The movement has thus developed rapidly and the stages of its evolution may be briefly summarised as—agricultural credit; urban credit; central credit organisations; apex co-operative banks; propaganda by co-operators themselves; beginnings of non-credit agricultural co-operation; urban co-operative banking; land mortgage banks; co-operative education; rectification and consolidation of the credit movement; organisation of supervision over primary societies and rural reconstruction; multi-purpose societies, co-operative marketing and industrial co-operatives.

In recent years, Provincial Governments have been seriously undertaking programmes in the interests of the agriculturists. Money-lenders' bills have been passed to restrict the evils of usury and debt legislation has been or is being passed in Madras, Central Provinces, Bombay and a few other provinces so as to reduce agricultural debt and to bring it within the repaying capacity of the debtor. The strengthening and reorientation of the co-operative movement has also been taken earnestly in hand, which would by the conversion of the credit primaries into multi-purpose societies, by or-

ganising co-operative sale of agricultural produce and by promoting secondary occupations for the agriculturists on a co-operative basis, change the whole emphasis of the movement from one of merely supplying credit to supplying the entire needs of the rural population. Active mass-scale efforts at rural reconstruction and at increasing the earnings of agriculturists represent the keynote of the present-day trend of the co-operative movement.

An Important landmark in the history of the Co-operative Movement is the report of the Co-operative Planning Committee issued towards the end of 1946. The Report which is very comprehensive lays down the lines and principles of co-operative development for the next few decades. But the Report gives no indication as to the relative importance of different types of co-operative effort. So it is up to the Provincial Governments now to lay down the priorities and start working quickly towards the goal. What was India has now been partitioned, but it is hoped that so far as co-operation is concerned the old unity will remain.

Labour

THE Indian sub-continent is and always has been a predominantly agricultural area. It is necessary, therefore, for both the smaller cultivators and the agricultural labourers to migrate frequently to the towns and cities in search of additional work in order to keep the wolf from the door; but, the migration is generally of a temporary character, and the agriculturist's contact with his land is seldom, if ever, permanently broken.

Up to almost the end of the nineteenth century there was no State control over conditions of employment in any industry in the sub-continent. Hours of labour were inordinately long, rates of wages unduly low and other conditions of work not too satisfactory. There was no regulation of the age at which children could be employed; there were no periodical or weekly holidays; and there was no legislation to safeguard factory workers from injury through accident.

With the growth of factory organisation and the rapid development of her industries, the minds of certain men, notably Sorabjee Shapurjee Bengali, however, began to be awakened to the existence of evils which by the standards of today would be considered intolerable, and unceasing efforts at securing some improvement in conditions of work in factories resulted, notwithstanding strenuous and universal opposition at the time from all employers, in the passing of the first Indian Factories Act of 1881.

The Act contained no restrictions in connection with the employment of adult labour but provision was made for the fencing of such parts of machinery as would be dangerous if left unfenced and for the reporting of accidents. Owing to an almost complete lack of adequate inspection, the 1881 Act remained a dead letter in most provinces.

First Factory Act.—A Factories' Commission was appointed in 1890 and on the basis of its recommendations, a new Factories' Act was passed in 1891. The qualification for registration was the employment of 50 workers as against 100 in the 1881 Act and local Governments were empowered to notify concerns employing as few as twenty. The main features of this Act were: (1) a compulsory rest interval of half an hour; (2) a weekly holiday; (3) non-employment of a child under nine and a 7-hour day for children between nine and fourteen; (4) a 11-hour day for women with a 1½-hour interval if they were required to work for the permissible maximum hours; and (5) restriction in the employment of women during 8 p.m. and 5 a.m.

The last decade of the nineteenth century saw the advent of two new factors in the field of industrial labour in the sub-continent which were destined, for the time being at any rate, to worsen conditions in the various factories. The first was the introduction of electricity for purposes of factory lighting and the second was plague. The immediate effect of these two was a considerable increase in working hours. Many of the larger textile mills resorted to day and night working and evidence is not wanting that some mills worked their operatives

continuously for stretches of fifteen to twenty hours per day. In Bombay City there were actually auctions for labourers at street corners. The weaker cotton and the jute mills, however, began to be alarmed at the competition from the mills which worked day and night and many millowners were not unwilling that Government should step in and prohibit night working altogether.

One could also notice the first awakenings of a sense of class consciousness among industrial workmen. They were less ready to submit to the old conditions; and wherever the employers tried to force those conditions upon their workmen they were met by opposition. Early successes led to disputes of a more widespread and concerted character—disputes which resulted in a general all-round improvement in wages.

Reduction in Hours.—Conditions of work in factories in the sub-continent during the period were inquired into by the Freer Smith Committee which was appointed in 1906 and by the Factory Labour Commission, a body appointed by the British Government in 1907. The Commission endorsed the abuses and the evasions of the 1881 and 1891 Acts in connection with the employment of children but were unanimously of opinion that some limitation in hours of work was essential but the majority were opposed to any direct limitation. As far as women's hours were concerned, they proposed that the statutory maximum should be increased from 11 to 12. A new Factories' Bill was introduced in the Governor-General's Legislative Council and passed into law in 1911.

The 1911 Act sought to make a beginning in the restriction of the hours of work of adult males by prescribing that men's hours in textile factories should not exceed twelve per day. The provisions of the 1891 Act in connection with women's hours were maintained but with the difference that the rest interval of an hour and a half prescribed for women who were made to work for the full permissible hours was reduced. This was done in order to limit the spreadover. Children's hours in textile factories were reduced to six per day and more stringent measures were provided for inspection and certification. A compulsory rest interval of half an hour in the middle of the day was provided for all operatives except for those employed in continuous process factories. A number of provisions were made for the health and safety of the operatives and several changes designed to make inspection more effective and to prevent and punish breaches of the Act were incorporated; but, at the same time, wide powers were given to local Governments to grant exemptions. The 1911 Act was brought into force with effect on the 1st of July 1912.

Owing to the restriction on imports resulting from conditions prevailing during the World War of 1914-18, there was considerable expansion of Indian industries resulting in greater employment. Labour, however, still remained very inarticulate and unorganized and it did not reap the benefits of the War to the same extent as industrialists, traders and manufacturers did. Although prices were soaring, wages did not

keep pace with prices and there was considerable discontent among labour. Owing to the influx of large bodies of persons into the towns, housing became hopelessly inadequate and rents soared to heights which forced several local Governments to pass legislation to control them.

Then came the influenza epidemic which left large gaps in the ranks of available labour especially as the age groups between 20 and 40 suffered most heavily. A situation very similar to that which followed the great plague of the 'nineties was again created.

I. L. O.—As is well known, the International Labour Organisation owes its creation to the Treaty of Versailles. India joined this organisation at the very start and since 1922 has been one of the eight leading industrial countries in the world and as such has been allotted a permanent seat on the Governing Body of the Organisation. India also contributes liberally towards the finances of the Organisation and stands fourth in the list of contributors. India's share in the appointments of the office is, however, somewhat inadequate. This is a matter which has been discussed from time to time and was also prominently raised in the recent session of the Asian Regional Labour Conference.

The International Labour Office and its various annual conferences have been a source of inspiration and guidance to India in the enactment of labour legislation and framing of labour policies. India has so far ratified 15 out of the 67 Conventions adopted by the International Labour Organisation but has in addition incorporated into its national legislation the essential features of many other Conventions. Since the International Labour Organisation is essentially a Tripartite Organisation, India's membership of it has resulted in the formation of powerful central organisations both of employers and of labour for purposes of representation, etc., at the conferences.

The last ten years have marked a new development in the policy of the International Labour Organisation, namely, the holding of Regional Labour Conferences of Member States. The first and second such Conferences were held in Santiago de Chile and Havana respectively in 1936 and 1939. The Philadelphia Conference of 1944 passed a resolution recommending that an Asian Regional Conference should be held at an early date. Accordingly, the Government of India invited the International Labour Organisation to hold an Asian Regional Conference in India and the invitation was accepted. The session of the Conference in India started on the 27th of October 1947 and lasted for over a week. More than 200 delegates from various countries, including America and some of the European countries, were represented at the Conference. It was opened by the Chairman of the Governing Body and its opening session was attended by the Prime Minister of India, the Hon'ble Pandit Jawaharlal Nehru who in an inspiring address reiterated some of the statements contained in the Philadelphia Charter and declared that India was most anxious to co-operate with the International Labour Organisation in carrying out a policy of amelioration of the conditions of labour. The problems dealt with by the Conference were incorporated by the

International Labour Organisation in a series of Reports which were circulated to those attending the Conference. The following were the subject matters of the Reports:—

- (i) Problems of social security,
- (ii) Labour policy in general including the enforcement of labour measures,
- (iii) Programme of action for the enforcement of social standards embodied in Conventions and recommendations not yet ratified or accepted,
- (iv) The General economic background of social policy, including problems of industrialisation, and
- (v) Director-General's Report dealing with the question of the co-ordination of regional activities of the International Labour Organisation.

The Act of 1922.—The winter of 1919-20 saw the recrudescence of industrial strife of a greater intensity than that of the year before. The principal cause again was the fact that cash wages were lagging far behind the continued rise in prices and that real wages were again falling. On this occasion, however, the workmen did not limit their demands to increases in wage rates alone and their leaders everywhere demanded both increases in wages and reduction in hours of work. Concerted strikes in the cotton mills of Bombay, Ahmedabad and Cawnpore resulted in the employers conceding a 10-hour day in addition to the granting of higher wages.

In March 1920, the Millowners' Association of Bombay presented a memorial to the Viceroy asking for a statutory reduction of hours of work in all textile factories in the Indian sub-continent from twelve to ten. The rapid sequence of events in favour of a 10-hour day broke the back of all opposition to reduced hours of work in the factories and an easy passage for the necessary legislation was assured.

The law relating to factories was amended and consolidated by the Act of 1922. The main provisions of factory legislation as it now stood were as follows: (1) the qualification for registration was the employment of 20 persons—factories employing not less than ten workers could be notified; (2) non-employment of a child under 12, a 4-hour day for children between twelve and fifteen, a half-hour rest interval after four hours work and prohibition of the employment of a child in two factories on the same day; (3) restriction in the hours of work of adults to eleven per day and sixty per week; (4) prohibition of the employment of women between 7 p.m. and 5-30 a.m. except in the fish curing and canning industry; (5) compulsory rest intervals and a weekly holiday; and (6) measures for controlling excessive artificial humidification and for the health and safety of operatives.

Exemptions on well defined principles were to be permitted. The Amending Acts of 1923, 1926 and 1931 effected minor improvements but the general principles remained unaltered until the Act was again overhauled in 1934.

New Labour Laws.—Up to the end of the year 1922, the only important law relating to labour in the sub-continent was that regulating the conditions of employment in factories. The influence of the International Labour Organisation was, however, soon felt and industrial strife too was on the increase.

Little attempt had so far been made for the peaceful and amicable settlement of trade disputes. Such attempts as were made were hampered by the absence of reliable and accurate data regarding wages and conditions of employment.

Acting on a private resolution adopted in the Provincial Legislative Council, the Government of Bombay appointed an Industrial Disputes Committee in 1922 under the Chairmanship of Sir Stanley Reed, M.P., then Editor-in-Chief of *The Times of India*, "to consider and report on the practicability or otherwise of creating machinery for the prevention and early settlement of trade disputes." This Committee submitted a comprehensive report on the subject of industrial strife and made various recommendations for the prevention of disputes and their settlement when they arose. Among its main recommendations was one for the setting up of an Industrial Court.

The Government of Bombay drew up a Bill on the subject and this was introduced in the local Legislative Council in the winter of 1923-24. This Bill was subsequently withdrawn on the Government of India formulating proposals for Central Legislation on the subject; but it was not until 1929 that the Trade Disputes Act was placed on the Statute Book.

Much headway had, however, been made in the meanwhile in the framing of new labour laws. Among the more important of these were the Workmen's Compensation Act and the Indian Mines Act which were passed in 1923 and the Indian Trade Unions Act which was passed in 1926.

Industrial Strife.—The post-war depression which set in 1922 continued for several years and the millowners in Bombay announced a cut of 12½ per cent. in wages. This announcement was followed by a general strike. Both sides were adamant but the millowners gave an undertaking to Government to drop the proposal for a wage cut if the excise duty on cotton manufactures was abolished. The strike, therefore, ended as soon as the Viceroy's Special Ordinance announcing the suspension of the excise duty was published at the end of November 1925.

The year 1928 witnessed another outbreak of industrial strife of great intensity. Two causes were directly responsible for this. The Indian Tariff Board (Cotton Textile Industry) constituted by the Government of India in 1926 had made a number of recommendations aiming at a more efficient conduct and management of cotton textile mills in the sub-continent. A group of these recommendations concerned the introduction, by the mills, of "rationalised" methods of work by which is meant the asking of workers to mind more machines.

The second was the formation of the Workers' and Peasants' Party the members of which secured influential positions on the executives of many trade unions in the country.

The industrial strike was the chief weapon in their armoury. Early in the year 1928, a few groups of mills announced their intention of securing greater efficiency. The strike of cotton textile mill operatives of 1923 in Bombay City which followed was the most disastrous that had yet taken place in the sub-continent. All the mills in the city were affected and there was complete stoppage of work for over six months. Both parties put up irreconcilable sets of demands. Various discussions were held but to no avail. Finally the Joint Strike Committee agreed to call off the strike on Government assuring the parties that they would appoint an impartial committee to inquire into and report on all the points in dispute.

The report of this Committee was more favourable to the workers than to the employers and it still continues to be one of the standard works of reference on conditions of employment in cotton textile mills in Bombay City.

Other important strikes during the year 1928 occurred in the Tata Iron and Steel Company's Works at Jamshedpur, on the East Indian and South Indian Railways, in the Fort Gloster Jute Mills and in the textile mills at Sholapur and Cawnpore.

In the middle of the year 1929 the Government of India announced the appointment of a Royal Commission on Indian Labour "to enquire into and report on existing conditions of labour in industrial undertakings and plantations in British India; on the health, efficiency and standard of living of the workers; and on the relations between the employers and the employed; and to make recommendations." The Commission was presided over by J. H. Whitley. Most of the recommendations of this Commission which was presided over by J. H. Whitley merely related to the expansion of the scope and the improvement of the existing Acts. They have been implemented by fresh amending or consolidating Acts.

Wage Reductions.—The first attempt at reduction of wages in organized industry was made in cotton textile mills in Bombay. The Millowners' Association, Bombay, gave a free hand to its member mills in the matter. Many mills closed down for a few months and reopened with offers of reduced rates of wages. There was little night working and there was a considerable volume of unemployment. Workers had no option but to accept employment on the reduced rates. Other mills taking advantage of the situation, effected reductions either in basic rates or in the dearness allowances or imposed percentage cuts on earnings. Not satisfied with one cut some mills imposed another within the short space of a few months.

Employers in many other industries all over the sub-continent also began to reduce wages. Many representations and memorials were submitted to Government on behalf of Labour but no Provincial Government, except Bombay, took any action in the matter. In March 1934, the Government of Bombay instructed its Labour Office to institute a Departmental Inquiry into the extent to which wages had been reduced during the year 1933-34 in the various centres of the cotton textile industry in the Province and also to ascertain the extent of unemployment

prevailing in the industry. Bombay and Sholapur were again the scenes of prolonged strikes in most cotton mills in these centres.

The publication of the report of the Departmental Enquiry in June 1934 was followed by the Millowners' Association's Bombay, adopting a simple scheme of standard minimum rates for unrationised occupations on time rates of wages for affiliated mills in Bombay City. They also agreed, in cases where the dearness allowance for weavers had fallen to less than 40 per cent. to raise this allowance to that figure after the coming into effect of the 54-hour week on the 1st January 1935.

Towards the end of the year 1933, the Ahmedabad Millowners' Association, attempting to profit as a result of the successful experience of the Bombay mills in the matter, decided to reduce wages in the cotton mills in Ahmedabad by 25 per cent. and an agreement was concluded early in January 1935 on the basis of a uniform cut of 6½ per cent. subject to the proviso that the earnings of a two loom weaver should not be reduced below Rs. 41-4-0 for 26 working days.

Trade Disputes Act.—By far the most important result of the report of the Bombay Departmental Enquiry was the passing by the Government of Bombay of a Trade Disputes Conciliation Act in August, 1934. This Act made provision (1) for the appointment of a Labour Officer to look after the interests of cotton mill workers in Bombay City, to represent their individual grievances to their employers and to secure redress of such grievances whenever and wherever possible; and (2) for the appointment of the Commissioner of Labour as an ex-officio Chief Conciliator to whom the Labour Officer could bring all cases in which he could not succeed. Although the functions of the Chief Conciliator were to bring about an agreement between two opposing parties, he came to be regarded almost as an industrial judge whose decision was mostly accepted by both the parties to a dispute.

This Act was superseded with effect from the 1st August 1939, when the Bombay Industrial Disputes Act, 1938, which we describe lower down, was brought into operation for the cotton textile industry in the Province of Bombay.

During the period of nearly four years for which the 1934 Act was in operation considerable progress was achieved and there was much less industrial strife in the cotton mill industry in Bombay City than there was prior to that year.

The Government of Bombay, Bihar, the Central Provinces and Berar and the United Provinces appointed Committees of Inquiry to examine existing levels of wages and conditions of employment, and to make recommendations. In Bombay and in the C.P. these enquiries were to relate to labour employed in cotton textile mills. In the United Provinces and in Bihar, labour in all industries was covered. The Government of Madras, following a prolonged strike of cotton mill workers in Coimbatore, appointed a Court of Inquiry under the Indian Trade Disputes Act. Fortunately for labour all these various enquiries were conducted during a period when the textile industries

in India were, after a fairly prolonged period of depression, showing signs of revival owing mainly to the Sino-Japanese War. Many of the recommendations, particularly those relating to wages, made by these Committees were accepted by the respective Governments.

Earlier, the Government of India had appointed a Labour Investigation Committee. As this was a fact finding committee and one of its important terms of reference was an enquiry into the wages and earnings of workers employed in industries, the Committee during their investigations made intensive enquiries into this subject. For some of the industries, e.g., Cotton, Jute, Cement, Paper, Matches, Coal-mines, etc., they conducted wage censuses on a sample basis. All these data have been incorporated in the Reports issued by members of the Committee. For the first time, therefore, now we have more or less a complete picture of wages and earnings in the principal industries in the sub-continent.

Legislative Activity.—During the year 1938 the Government of Bombay put through the Bombay Legislative Assembly their Bombay Industrial Disputes Act. They also issued to the various interests concerned for opinion draft proposals for the conditions to be fulfilled for the recognition by employers of unions of their workers; for the grant of holidays with pay during periods of sickness; and for the regulation of hours of work, rest periods and the grant of holidays in commercial offices, shops, hotels, theatres, cinemas, etc. As far as the last is concerned, a Shops and Establishments Act was passed on the 31st October 1939.

There were any number of legislative measures for the amelioration of labour conditions in other provinces as well. Both the United Provinces and old undivided Bengal enacted legislation during the year 1938 for the payment of maternity benefits and the Sind Legislative Assembly passed an Act in June 1939 to amend the Bombay Maternity Benefit Act, 1929, in its application to the Province of Sind. In the Central Provinces and Berar Bills were drawn up for (1) the collection of statistics; (2) for amending the Indian Factories Act, 1934, to provide for the registration of all factories and for the payment of registration fees in a manner to be prescribed by Government; and (3) to make provision for relief or benefits to workers in industrial occupations who are rendered unemployed and consequently destitute. The first has been passed into law. The second was enacted in 1939 and brought into force with effect from 1st April 1940. Scales of registration fees depending upon the maximum number of persons employed in any one day in the year have been prescribed.

The Governments of old undivided Bengal, and the Punjab and the Government of Sind adopted legislation for the control of hours of work in shops and commercial establishments. The Punjab Trade Employees Act was enforced in Punjab with effect from 1st March 1941, the Bengal Shops and Establishments Act was brought into effect from the 1st April 1941 and the Sind Act was brought into force from the 20th November 1941. The Government of the United

Provinces published, on the 21st October 1939, the draft of a Bill to regulate the hours of employment and certain conditions of employment in shops and commercial establishments.

As far as Madras is concerned, the Minister for Labour was successful as a result of his personal efforts in the matter, to secure recognition by the employers of all unions which had been registered under the Indian Trade Unions Act.

Strikes Prohibited.—The tempo of industrial strife in the Indian sub-continent which was slowing down for seven years after the catastrophic strikes of 1928 and 1929 began to show a rapid quickening after the advent of Provincial Autonomy. Both Labour and its leaders believed that popular Governments in the Provinces would do all they could to improve the standard of life and the conditions of employment of the workers.

The strikes of 1937 and 1938 may have brought about a large amount of beneficial concessions to Labour, but they were also responsible, in a large measure to the passing by a popular Congress Government of the Bombay Industrial Disputes Act, 1938, by virtue of which all strikes are prohibited in the industries to which the Act is applied unless the formalities laid down by the Act have been observed.

Among the more important events that occurred in the world of Indian Labour during the years 1937 to 1939 must be mentioned the visit paid by Mr. Harold Butler, Director of the International Labour Office, to India, Ceylon, Malaya and the Netherland Indies during the winter of 1937-38. Mr. Butler has recorded the impressions gained as a result of his tours in his report entitled "Problems of Industry in the East"—International Labour Office, Geneva, 1938, Studies and Reports, Series B (Economic Conditions) No. 29.

A short time before the outbreak of the Second World War, the main Indian industries—especially the Textiles—were beginning to feel the effects of a slump. The outbreak of the war, however, resulted in considerable demand for the products of Indian industries and industrial activity in the country began to look up.

The year 1942 witnessed in the principal cities of India evacuations on an unprecedented scale owing to the panic created by the apprehension of bombardments. This, for the time being, caused tremendous dislocation of industry.

Special Privileges.—The war period, notably the period 1942-45 witnessed stoppages and unavailability of different types of supplies and this has affected the community and labour in diverse directions. For instance, owing to the acute shortage of coal and in some cases of electric power, factories had to be intermittently closed down and this led to considerable voluntary unemployment and reduction in earnings. Industries taken as a whole did not compensate their workers for such voluntary idleness although a notable exception has been the Jute Mill Industry which agreed to give to its workers what is known as "khoraki" amounting to Rs. 4-6-0 a week during such weeks as the workers had to remain compulsorily idle owing to shortage of raw material or fuel.

Old, undivided Bengal having been in the war theatre, its principal industry, namely, the Jute Mill Industry, was affected by war conditions in a peculiar way. While there was an insistent cry for more production, many of the Jute mills were commandeered by the military authorities and the industry was forced to make some mills, known as "Foster Mills," work double shifts in order to keep up production and find employment for workers employed in mills which had been commandeered for the army.

The unavailability and short supplies of daily articles of consumption affected labour like other members of the general community but one war-time development has been that most large employers in the country have made arrangements for the supply of such articles to their employees with the result that labour on the whole has been placed in a more favourable position in this respect than the members of the general community. Even during the dark and dangerous days of the Bengal famine of 1943, the Jute mill workers in Bengal, for instance, were fairly well provided for with daily articles of consumption at reasonable prices. The loss on account of supply of such grains has been made good by the employers.

DEARNESS ALLOWANCE

The enormous expansion of credit and currency which took place during the war resulted, as will be seen from another section of the Chapter, into a tremendous rise in prices and the index numbers went up in some cases upto 300 as compared to the pre-war period. The usual method followed for compensating the workers for the increase in the cost of living has been the grant of what is known as dearness allowance. There has, however, been no uniformity as between industry and industry and even between the same industry in different centres as regards the scale of relief granted. The highest scale of relief granted has been in the Cotton Mill Industry in Ahmedabad where, at one time, the workers were compensated upto about 100 per cent. of the rise in the cost of living.

Generally speaking, the scale of dearness allowance granted has been in the neighbourhood of only about 50 per cent. of the increase in the cost of living. One notable feature of the relief granted has, however, been that those on the margin of subsistence have been granted, a much larger quantum of relief than those in receipt of higher wages. Speaking generally, however, although money incomes of the workers have gone up considerably, barring a few exceptions like workers in Ahmedabad and Karachi, on the whole, the working classes have not benefited much as a result of the conditions created by the war. Apart from the fact that wages and earnings have not kept pace with the increase in the cost of living, the working classes in the country generally have had to undergo many sacrifices resulting from short supplies, unavailability of supplies, etc., along with the rest of the community.

But to compensate for all this employment during the war years increased considerably and in most factories it went up by about 50 per cent.

Sliding Scale.—One of the most vexed questions in Indian industry since the advent of the Second World War has been the maintenance of the workers' pre-war standard of life. During the earlier stages of price control, prices varied within narrow margins. The official cost of living index for Bombay City with prices in 1933-34 as the base stood at 105 for August, 1939. The limit of variation in the monthly index numbers in this series during the whole of the year 1940 was within six points only.

Organised demands for dearness allowances in Indian industry were first made in Bombay in December 1939 and then in other centres. The demand made by cotton mill workers in the City of Bombay was referred by the Government of Bombay to a Board of Conciliation appointed under the Bombay Industrial Disputes Act, 1938 presided over by Sir Sajha Karsnekar. Conciliation failed but the Millowners' Association, Bombay, accepted the recommendations made by the Board and sanctioned the payment of a dearness allowance at a flat rate of two annas per day of attendance, with retrospective effect from 1st December 1939, to every worker whose earnings did not amount to more than Rs. 150 per month. Dearness allowance at this rate was to be paid so long as the official cost of living index for Bombay City remained between the limits of 105 and 123. It was reckoned that an allowance at this rate would compensate the workers to the extent of an average of 76.9 per cent. of the actual rise in the cost of living so long as the official index remained between these limits.

The demand for dearness allowance made by cotton mill workers in Ahmedabad was referred to conciliation. As in Bombay, conciliation failed in Ahmedabad but in the latter centre an agreement was reached between the Ahmedabad Millowners' Association and the Textile Labour Association, Ahmedabad, to refer the dispute to the arbitration of the Bombay Industrial Court. The Industrial Court in its award on this dispute laid down a sliding scale of allowances varying with the fluctuations in the official cost of living index for Ahmedabad on the basis of a grant of an allowance equivalent to one-eleventh of Rs. 3-8-0 per month for every rise of one point in the index, as compared with the figure for August 1939, in the month two months prior to the one for which the allowance is to be paid. It was calculated that this would compensate the workers to the extent of 66.67 per cent. of the actual rise in the cost of living at any particular date. A part of the balance was to be made up by opening cost price grain shops. This was the first beginning in the sub-continent of the payment of dearness allowances on a sliding scale linked up with fluctuations in the cost of living index.

The position in the principal industries in the sub-continent is somewhat as follows:—

In Different Centres.—The scale of dearness allowance differs from centre to centre in the cotton textile industry. Except in the Bengal area, and in the other important centres, the dearness allowance is generally linked with the cost of living index numbers. The Bombay and

Ahmedabad cotton textile workers are compensated as a result of the award of the Industrial Court to the extent of 76.5 per cent. of the rise in their cost of living. Before August 1945, however, the workers in Ahmedabad were compensated to the extent of 96.66 per cent. In 1946, dearness allowance amounted to Rs. 36-10-0 in Bombay and Rs. 48-10-0 in Ahmedabad. In Madras, the dearness allowance amounted to Rs. 18-6-0 in June 1944 and in Madras to Rs. 24. In Coimbatore, the rate has been fixed at Rs. 8 for every 5 points. The Industrial Tribunal appointed in 1946 recommended the payment of dearness allowance at 3 annas and 2½ annas per point of index number according to localities. According to the Tribunal's award, the position regarding dearness allowance in December 1946 was as follows:—

Monthly Income Group	Relief Rs.
Less than Rs. 15	12
Income Rs. 16	10
Rs. 17 to Rs. 50	8
Rs. 51 to Rs. 100	6

The scale of dearness allowance in the Bengal area varies very considerably from as. 4 per rupee of wages to about Rs. 25 per month. In Cawnpore, in August 1945, workers in the lowest wage group were given an allowance of as. 14 per rupee of wages. In Nagpur, the dearness allowance was Rs. 27-8-0 in January 1944 to workers attending full time. The Delhi cloth mills pay a dearness allowance of Rs. 32 per month. In Indore, the dearness allowance is linked with the three monthly average of the cost of living index numbers for Bombay, Ahmedabad and Sholapur and the allowance amounted to Rs. 30-9-0 in September 1944.

Jute Industry.—In the jute mill industry no dearness allowance as such is paid but an allowance known as 'amenity allowance' is given. It was Rs. 2 per week in 1944 but was subsequently raised to Rs. 3 per week. In the jute industry, however, in addition to the amenity allowance, the mills issue foodstuffs at concession rate and this concession worked out to Rs. 1-4-4 during 1944.

Metals.—Among minerals and metals, the Tata Iron and Steel Co. at Jamshedpur are the principal employers. In their concerns those getting less than Rs. 100 were in receipt of Rs. 15 per month. In addition to the dearness allowance, however, employees drawing less than Rs. 500 are paid emergency bonus equivalent to 10 per cent of their basic wages subject to a minimum of Rs. 5. Employees are allowed foodgrain rebate which comes to Rs. 4-14-0 and Rs. 3-9-5 for married persons and bachelors respectively, drawing above Rs. 150, while it is Rs. 6-14-0 and Rs. 4-13-6 in the case of married persons and bachelors respectively drawing less than Rs. 150.

Cement.—In the cement industry, there is no uniformity as regards either the policy or the scale for the payment of dearness allowance. In most of the factories the amount of dearness allowance comes to 5 to 8 annas per rupee of basic wages.

In the match industry, the WIMCO unit at Ambernath, Bombay, pays a dearness allowance of Rs. 30 per month to all operatives. There are wide variations in regard to the allowance paid by other match factories.

Railways.—The recommendations of the Central Pay Commission apply to the railways. According to these recommendations, dearness allowance would be payable at the rate of Rs. 30 per month for persons drawing below Rs. 50 when the all-India cost of living index is 280. Government have also continued to give the railway workers the food concessions which they were receiving formerly.

Mining Industry.—In the coal mining industry, dearness allowance was being paid at the rate of 2½ per cent. of total earnings in 1943. This was raised to 50 per cent. in December 1943 and subsequently to 100 per cent. The Board of Conciliation which published its Report early in 1947 have raised the scale of dearness allowance to 150 per cent. of the basic wage. Before the Board's Report, the dearness allowance in the railway collieries used to be Rs. 14 per month.

Plantations.—In the plantations, there have been changes recently in the basic wage rates. In addition, however, dearness allowance at the rate of 2 annas for adults and 1 anna for children per day is given in the Assam tea plantations. In March 1946, the United Planters' Association of Southern India decided to recommend a dearness allowance of Re. 0-1-6 for adults and Re. 0-0-9 for children per day. Recently, the United Planters' Association are paying a consolidated rate for re-imbursing the workers for the rise in the cost of living and this is known as district allowance. In the principal centres of the tea and coffee plantations it comes to about Re. 0-8-0 for men, Re. 0-5-6 for women and Re. 0-4-0 for children.

Bonus.—During the General Strike in cotton textile mills in Bombay in 1940, the Government of Bombay enquired of the Millowners' Association, Bombay, whether it was willing to give an undertaking to Government that the millowners would be prepared to give a war bonus to their workers if increased profits were made by the industry as a result of war conditions as soon as the extent of these profits had been determined. The Government of Bombay were aware of the increasing desire of textile workers to be given an adequate share in the improved trading conditions of the industry resulting from the war and they, therefore, took up the matter again with the Millowners' Association, Bombay, towards the end of the year 1941. As a result of these discussions, the Association decided that its Cotton Mill Members in the City and Island of Bombay should grant to their workers a cash bonus equivalent to 12½ per cent. of, or two annas in the rupee on, their actual earnings (exclusive of dearness allowances) for the period 1st January to 31st December 1941.

As will be seen, the cotton mill industry in Bombay was the first one in the country to grant a profit bonus amounting to about eight days' wages to its operatives. As a result of the grant of profit bonus in Bombay City, industrial workers all over the sub-continent started clamouring for a similar bonus. Among the large organised industries the jute mill industry is the only one

in the sub-continent which is not granting profit bonus. Speaking generally, the amount of profit bonus granted varies from two months' wages to about four months' wages in the cotton mill industry.

Some of the small industries, such as, the wool and silk industries, do not appear to grant any profit bonus. It is worthy of note, however, that although in the coal mining industry the employers were until recently opposed to the grant of any profit bonus, recently they have as a result of the recommendations of a Board of Conciliation appointed in Bihar and Bengal, agreed to do so and actually in the coal mines it has been decided to grant a profit bonus equivalent to four months' wages. This bonus is partly linked with production and partly with attendance. Quite recently it has been decided also to grant a similar bonus in the coalfields in C.P. and Berar.

TECHNICAL TRAINING

With the object of taking power to require industrial undertakings, including mines, in the sub-continent to release technical personnel for employment in factories under the Crown or declared to be engaged on work of national importance, the Governor-General promulgated the National Service (Technical Personnel) Ordinance, 1940, on the 28th June 1940. This Ordinance was amended by three further Amending Ordinances issued in September 1940, in January 1942 and in July 1943.

About the end of the year 1940, the Government of India instituted a Technical Training Scheme designed to provide for the intensive training of a large number of skilled technicians required for the technical branches of the Defence Services and for ordnance and munitions factories. When the scheme was first initiated the number of persons to be trained was fixed at 15,000. This was increased to 44,600. The total number of training centres in the sub-continent as on 30th April, 1945, was 163.

Not only was training in all centres given free of charge, but during their training all candidates received generous stipends which vary according to whether they are matriculates or not and which also vary from time to time according to dearness allowance plus free medical treatment. The trainees were also entitled to the benefits provided under the Workmen's Compensation Acts. On selection a trainee was posted to a Civil or a Civ.-Mil. (Civil-Military) Centre. After a period of two months, trainees in a Civil Centre as were willing to enrol in the Defence Services were enrolled and transferred to a Civ.-Mil. Centre where they remained until they passed certain trade tests. They were then drafted into one of the services on a minimum salary which varies from service to service.

Hindustani was taught with the object of universalising training in this language throughout the sub-continent. Recruitment of a better type of trainee was being effected by requiring candidates seeking admission to training centres to pass intelligence tests on the lines of the psychology tests given in other countries. A measure adopted to improve the physical standard of the trainees was to give shark oil at the rate of two teaspoons a day to underdeveloped men.

A new Instrument Mechanics Training Centre was started at Hindupur near Bangalore with 275 seats in the year 1944 for training boys in the manufacture of precision tools which at one time was considered unsuitable for the sub-continent. The trade is open to young men who have reached Matriculation Standard and are between the ages of 17 and 30. They are trained under the guidance of a British expert. Trainees get a scholarship of Rs. 59-4-0 per month with free food, lodging and clothes.

The Technical Training Scheme has demonstrated that, with intensive training semi-skilled men can be trained for all industries and that the standard of such men, after from six to eight months' training, is at least up to, if not above, the standard reached under ordinary peace-time apprenticeship schemes of two to three years' duration. The Government of India felt that if the training imparted under the Technical Training Scheme is supplemented by further 'biased' training the final product would be more acceptable to employers.

The number of technicians trained under the scheme and supplied to the Defence Services up to 31st October 1945 was 83,867. More than 100,000 trained men have passed through the Training Centres during the five years of the operation of the scheme. With the termination of the war, however, the recruitment of trainees under the Scheme ceased.

Meanwhile the Government of India appointed a Special Committee with N.R. Sarkar as Chairman to consider the question of the establishment of a high grade technological institute in India possibly on the lines of the M.T.T. to provide advanced instruction and training in technology to meet the demands of industry.

Essential Services.—As a consequence of the entry of Japan into the War, the danger had arisen of persons in India abandoning their employment or leaving certain areas. In order to avoid such a danger, the Governor-General, in exercise of the powers conferred on him by Section 72 of the Government of India Act, 1935, promulgated in 1941 an Ordinance called the Essential Services (Maintenance) Ordinance.

Provincial Governments in India under the above ordinance "declaring" as essential such services as railways, oil and fuel installations, port trusts and dockyards, municipalities, gas and electricity producing plants, telephone systems, certain banks, *et cetera*, to which the Ordinance was to apply. When once any employment in any particular area was 'declared' no person engaged in that employment could depart from that area without the permission of the authority making that order, nor could any employer discontinue the employment of such person without reasonable cause, and so on. A number of Provincial Governments followed suit.

We refer elsewhere in this publication to the widespread disturbances which occurred in the sub-continent in August 1942 following the arrest of Mahatma Gandhi and the leaders of the Indian National Congress as a result of the All-India Congress Committee deciding, at its historic Session of 6th/8th August in Bombay to empower Mahatma Gandhi to launch a Civil Disobedience Movement. These disturbances included *hartals* or stoppages of work for pro-

longed periods in many industrial units in several centres in the sub-continent. All the cotton textile mills in Ahmedabad remained totally closed for nearly four months. A number of other factories and large engineering workshops in Bombay, Cawnpore, Nagpur and in many other places were also affected and essential war production was considerably interfered with. In order to prevent a repetition of similar trouble in the future, the Government of India, by a notification dated the 17th April 1943, amended the Defence of India Rules by adding a new rule—Rule 56A—for the Prevention of *Hartals* in places of Employment.

Early in 1943 the Government of India also promulgated Rule 78A of the Defence of India Rules conferring powers on both the Central and the Provincial Governments to compel certain persons to do work. This Rule empowered any Officer of Government authorised in this behalf by a general or special order to require any male person within such area as may be specified in the order to assist in the doing of work on land for such period and in such manner as the officer may direct, being work the doing of which is in the opinion of the officer necessary to meet an actual or apprehended attack, or to repair or to reduce the damage resulting therefrom or to facilitate offensive or defensive operations in the area. Refusal by any person to comply with any lawful direction given to him under this order rendered him liable to imprisonment which might extend to six months or with fine or both. The Officer giving a direction under this order had the right to determine the remuneration to be paid for the work.

Employment Exchanges.—When the National Service Labour Tribunals were established under the National Service (Technical Personnel) Ordinance, it was the intention that they should gradually assume the role of employment exchanges for technical personnel. This they had been doing but the statutory powers given to Tribunals to fix wages and terms of service and to compel an employer to give up an employee and an employee to take up employment in the national service have distinguished them from the voluntary employment exchanges commonly met with in other countries. The exacting needs of war made it necessary for the Tribunals to have these statutory powers and they served their purpose.

As the war progressed it was felt necessary to look ahead and to build up an employment organisation which would be in a position to deal with the registration and voluntary placement of the many skilled and semi-skilled workmen who would be thrown out of employment on the termination of hostilities. The Tribunals had gained much experience of the requirements of employers and the placement of labour and it was therefore decided to use these organisations in the first instance for the setting up of voluntary employment exchanges for skilled and semi-skilled personnel.

The Directorate-General of Resettlement and Employment was set up in July 1945 consequent on the Government of India's decision that the resettlement of ex-service personnel should be a civilian and not a military responsibility. The object of the organisation is the resettlement and

employment in civil life of demobilised ex-servicemen and women and discharged war-workers.

The organisation is in the charge of a Directorate-General. There are three Directorates namely, (1) Directorate of Employment Exchanges, (2) Directorate of training, and (3) Directorate of Publicity. The country is divided into eight regions (as against 9 before the partition) each under the administrative control of a Regional Director of Resettlement and Employment.

There are now 53 Employment Exchanges consisting of a Central Exchange in New Delhi, 7 Regional Exchanges and 45 sub-regional Exchanges. Before the partition of the country there were 70 Exchanges of which 17 have gone to Pakistan.

The Central Employment Exchange acts as an Inter-Provincial Clearing House to balance the supply of and demand for labour within the various regions.

In addition to the Exchanges, there are 132 Employment Information Bureaux with a view to establishing a personal contact with ex-Servicemen in widely scattered rural areas. It is proposed to attach a Mobile Section to each Exchange. It would appear that the employers in the country are beginning to appreciate the advantages of employment exchanges. The number of employers using the Exchanges has risen from 2,500 in July 1946 to 3,500 in July 1947.

The method adopted to save members of the Defence Services unnecessary travelling to the Exchange is to register them at the time of release and to forward their particulars to the Exchange covering the area in which they intend to reside. Each demobilised person thus registered is given a card which he is asked to post to the Exchange when he is in need of help in obtaining work.

Each Exchange maintains full details of the qualifications, experience, etc., of persons registered and classifies them by occupations according to a special classification system, which has been evolved for this purpose. Vacancies notified by employers are classified according to the same system. This facilitates speedy identification of suitable workers for available vacancies.

The Employment Service was primarily intended for ex-Servicemen and discharged war-workers but its scope is being extended to meet the needs of individual Provinces. Thus, the Governments of West Bengal and U.P. have decided to expand the scope of their Exchanges to cover all categories of employment seekers. In other Provinces also, specific categories of civilian employment seekers have been added.

The following table contains the latest available information regarding registrations and placements by Employment Exchanges.

Month.	Total Registrations.	Placings during the month.	Vacancies cancelled.	Vacancies outstanding at the end of the month.
August 1946 ..	50,931	7,601	16,236	96,217
October " ..	48,309	9,484	22,157	94,344
December " ..	44,837	10,570	15,402	90,917

MINES WELFARE FUND

With a view to meeting expenditure incurred in connection with measures which in the opinion of the Government of India are necessary or expedient to promote the welfare of labour employed in the coal-mining industry, the Government of India, under the powers conferred by Section 72 of the Government of India Act, promulgated the Coal Mines Labour Welfare Fund Ordinance 1944. This Ordinance has now been replaced by Coal Mines Labour Welfare Fund Act of 1947 which places the Fund on a permanent footing. The principal objects for which this fund will be utilised are defined in the Act. These are: (1) the improvement of standards of living including housing and nutrition, the amelioration of social conditions and the provision of recreational facilities for the benefit of the labour employed in the coal mining industry; (2) the provision of transport to and from work; (3) the provision of improvement of educational facilities; (4) the provision of improvement of supplies of water; and (5) the improvement of public health and sanitation, the prevention of disease, the provision of medi-

cal facilities and the improvement of existing medical facilities. The Act makes provision for the appointment of an Advisory Committee consisting of Government Officers and an equal number of members representing colliery owners and workers employed in the coal mining industry of whom one has to be a woman.

The Act also contemplates the appointment of Welfare Administrators, Inspectors and other officers to supervise or carry out the activities financed by the fund. The functions of the Advisory Committee are to advise the Central Govt. on all matters which the Act requires Government to consult it and on any other matters arising out of the administration of the Act and the fund. Both the cost of administration of the fund and the salaries and allowances of the officers appointed in connection therewith are to be defrayed from the fund itself.

The Rules framed under the Coal Mines Labour Welfare Fund Act were published in the Gazette of India dated the 15th October, 1944. These make provision for the composition of

the Advisory Committee, the collection of the excise duty or cess levied under the Act and its administration.

The Rules provide for the appointment of a number of Sub-Committees which include (1) a finance Sub-Committee to frame schemes of expenditure and to advise generally on the budget and all expenditure debitable to the Fund; (2) a Works Sub-Committee to consider all major projects and (3) separate Coalfields Sub-Committees for each of the main Coalfields in W. Bengal, Bihar, the Central Provinces and Berar and Assam to consider and advise on all matters relating to expenditure from the Fund in their respective Coalfields.

The Rules further empower the Central Government to impose certain conditions on Provincial Governments, local authorities or Owners, Agents or Managers of Coal-mines to whom grants are made from the Fund in aid of any schemes approved by the Central Government.

At the Second Meeting of the Advisory Committee held at Dhanbad in 1944, the Committee decided to recommend to the Government of India that a cess of four annas per ton should be levied on all coal and coke despatched from collieries in the Dominion with effect from 1st November, 1944. In deciding on the maximum amount of cess permissible under the Ordinance, the Committee felt that it might not be possible to maintain this figure in periods of slump and they recommended that Government should accept, as a general principle, the building up of a reserve fund in those periods in which the maximum was levied so as to ensure that welfare measures could be maintained in periods of slump.

Some of the welfare schemes so far recommended by the Board are as follows: (1) Anti-Malaria Campaign with a recurring annual expenditure of Rs. 7 lakhs and a non-recurring expenditure of 3 lakhs; (2) the provision of two regional hospitals in the Jharia Coalfields at an estimated capital cost of Rs. 3,00,000 and two hospitals for Raniganj Coalfields at an estimated cost of Rs. 1,34,000; (3) part provision of grants of Rs. 3,00,000 each towards the capital costs of Central hospitals in Jharia and Raniganj; (4) a token grant of Rs. 5 lakhs for a water-supply scheme; (5) a token grant of Rs. 10 lakhs for a housing scheme; (6) grants for propaganda measures and for growing vegetables; and (7) a sum of Rs. 27 lakhs to be spent immediately to build for coal-miners a township of two roomed tenements on the outskirts of coal areas in the Raniganj Coalfields.

SOCIAL SECURITY

One of the resolutions unanimously passed by the Tripartite Labour Conference of 1943 asked for the setting up of machinery to investigate questions of wages and earnings, employment and housing and social conditions generally, and that as soon as possible after receipt of the required statistics and other data the Central Government should appoint a mixed committee to formulate plans of social security.

In pursuance of this resolution, the Governor-General-in-Council appointed, early in 1944, a

Committee of Enquiry to be known as the Labour Investigation Committee. The Committee was composed of Mr. D. V. Rege, I.C.S., as Chairman and Mr. S. R. Deshpande, Dr. Ahmad Mukhtar and Mr. B. P. Adarkar as Members.

The terms of reference of the Committee were as follows: (a) to collect data relating *inter alia* to wages and earnings, employment, housing and social conditions of labour and in particular of industrial labour in the sub-continent; and (b) to investigate and report *inter alia* on: (i) the risks which bring about insecurity; (ii) the needs of labour, by various classes, to meet such risks; (iii) the methods most suitable for meeting such risks; and (iv) housing and factory conditions. The Headquarters of the Committee were at Simla.

The Committee made exhaustive fact-finding surveys in some 36 industries including major industries like cotton, jute, coal, etc. Part of this survey work was done by the employment of field staff consisting of Supervisors and Investigators. For some of these surveys the Committee undertook a wage census on a sample basis. Unlike other Committees the reports of the Committee have been published under the responsibility of individual members while the Committee as a whole has prepared a document known as the Main Report of the Labour Investigation Committee. Since this was a fact-finding Committee, it has not made any recommendations as such although its findings now serve as a basis for the formulation of future policy.

A special branch entitled the Social Security Branch of the Labour Department of the Government of India was opened towards the beginning of 1945. The following three distinct schemes were under preparation in this Branch:

(1) A Unified Scheme of insurance against sickness, accident and maternity for factory workers, to replace the original health insurance scheme was drafted by Mr. Adarkar. In the year 1944 Prof. B. P. Adarkar's Report on Health Insurance for Industrial workers was published. The Government of India invited the International Labour Organisation to depute two experts to advise them on matters contained in Prof. Adarkar's Report. These two experts were Messrs. Stack and Rao of the I.L.O. After certain amount of touring in the country and consultations with Prof. Adarkar and certain interests concerned, Messrs. Stack and Rao suggested certain alterations to the findings of Prof. Adarkar. These were published by the Government of India.

(2) A unified scheme of insurance against sickness, accident and maternity for coal-miners. And,

(3) A scheme of sickness insurance and old age pensions for Indian seamen serving on Indian and foreign ships.

The last has now been published (See "Indian Labour Gazette," May 1947 issue). As regards the Health Insurance Scheme, a bill incorporating the scheme was introduced in November 1947 in the Dominion Parliament by the Hon'ble Mr. Jagjivan Ram and at the time of writing this section, had been referred to a Select Committee of the Legislature.

War Injuries Compensation.—Incidentally a War Injuries (Compensation Insurance) Scheme was enacted by the Central Government under the War Industries (Compensation Insurance) Act, 1943, and was brought into force on the 16th November 1943.

Another point which might be mentioned in passing is the establishment of labour supply boards. During the earlier stages of the War the supply of unskilled labour had been satisfactory, requiring no measures for its control or allotment. By the end of the year 1942, however, there were indications that the problem of supply of such labour was assuming importance in a few areas. The Government of India therefore decided to set up both Provincial and Regional Labour Supply Committees for areas where serious shortages were being experienced or were likely to be anticipated and a beginning was made by the setting up of such a Committee at Jubbulpore where the needs of the Central Government establishments predominate. The Committees had no statutory powers. They were generally, under the chairmanship of the Chairmen of the National Service Labour Tri-

bunals of the Provinces in which they were established. The Committees were dissolved in October 1945.

The direction of labour was carried a step further when by a notification published in the "Gazette of India" dated the 9th June 1944, the Government of India directed that Rule 81 of the Defence of India Rules was applicable for controlling the recruitment and employment of labour in such areas as may be specified in the order, with a view to securing that sufficient workers are available for essential undertakings.

The Labour Recruitment Control Order was brought into force with effect from the 18th December, 1944 and was designed to regulate the recruitment of labour from certain controlled Districts in Bengal, Bihar and the Central Provinces and Berar. The order required contractors and employers of labour to obtain licenses for recruiting labour from controlled districts for work outside the controlled districts. All works or employments within the controlled districts were exempted from taking out licenses. This order was rescinded with effect from October 1945.

LABOUR LEGISLATION

The Central co-ordinating authority in India for questions connected with labour legislation is the Department of Labour (styled Ministry of Labour since October 1947) of the Government of India with the Labour Minister in charge. The administration of matters connected with the English and Indian Merchant Shipping Acts, the Mercantile Marine Department and Indian Seamen is with the Ministry of Commerce. In respect of all the Railways, the Labour Minister is responsible for the administration of the Payment of Wages Act, 1936, Trade Disputes, Hours of Work for employees not covered by the Factories Act and regulation of employment of children. He is also responsible for Regulation of Labour and Safety in respect of mines and oilfields; trade disputes in industries, businesses or undertakings carried on by the Central Government; and Inter-Provincial Migration.

In the field of Concurrent Legislation, the Labour Minister is responsible for (1) Factories; (2) Welfare of labour, conditions of labour, provident funds and workmen's compensation, health insurance including invalidity pensions and old age pensions; (3) unemployment insurance; (4) trade unions and industrial and labour disputes; (5) electricity; and (6) boilers.

As the permanent ex-officio Chairman of the Tripartite Labour Conference, all matters connected with the Conference and its Standing Labour Committee are dealt with by the Labour Minister. He is also responsible for the administration of the National Service (Technical Personnel) Ordinance; recruitment of unskilled labour throughout India for employment on defence works, the administration of the Technical and the Bevin Training Schemes; the

Cost of Living Index Scheme, the Essential Services (Maintenance) Ordinance, and air raid precautions in factories.

CENTRAL OR PROVINCIAL ?

Under the Devolution Rules made under the Government of India Act, 1919, 'Regulation of Mines' and 'Inter-Provincial Migration' were Central subjects whereas industrial matters included under the head 'factories' and 'welfare of labour' fell within the scope of the provincial legislatures. Although the Government of India has passed central legislation in connection with most questions affecting the welfare of labour—in order to secure uniformity of treatment in all provinces—the administration of the various Acts connected with factories, workmen's compensation, trade unions, payment of wages, the pledging of child labour, etc., falls on the entire Provincial Governments who have to bear the entire cost of administration as it is not permissible under the constitution for the Central Government to incur any expenditure from Central revenues on the administration of provincial subjects.

The Central Government in the Ministry of Labour, however, maintains control in connection with the Indian Mines Act and the Mines Maternity Benefit Act.

The Royal Commission on Indian Labour recommended that the possibility of making labour legislation both a federal and a provincial subject should receive adequate consideration; and that, if federal legislation were not practicable, efforts should be directed to securing that, as early as possible, the whole of India should participate in making progress in labour matters.

For the States in which there was appreciable industrial development, the Commission thought that the Industrial Council which they recommended should be set up would offer a suitable channel for co-operation. (It may be mentioned here that the States have been given six seats in the Tripartite Labour Conference). The Government of India Act, 1935, lays down that the following subjects may be legislated for concurrently both by the Federal Legislature and by the Provincial Legislatures:—

- (1) Factories; regulation of the working of mines, but not including mineral development;
- (2) Welfare of labour; provident funds; employers' liability and workmen's compensation;
- (3) Trade Unions; industrial and labour disputes.

Since the institution of the Annual Conference of Labour Ministers, the First Session of which was held at New Delhi in January, 1940, the trend has been towards Central rather than Provincial Labour Legislation—with this difference, that, whereas all the Central Acts passed prior to 1941 automatically applied to the whole of India, some of the recent labour legislation has been permissive, that is to say, it is open to any particular Province to extend such legislation to its territory or not as it pleases.

PRESENT LAW

In the Chapter on the historical survey of the growth of the labour problem in the sub-continent we have traced the development of factories' legislation in the country since 1881 when the first Factories Act was passed and we gave the main features of that Act and the 1891 and the 1911 Acts as amended by the Amending Acts of 1922, 1923, 1926 and 1931.

Factory law in the sub-continent was completely overhauled in 1934 as the result of the acceptance by Government of most of the recommendations made for its improvement by the Royal Commission on Indian Labour. A new consolidating and amending Act was passed by the Central Legislature in 1934 and "The Factories Act, 1934" was brought into operation with effect from 1st January 1935. This Act has been amended on five occasions in 1936, 1940, 1941, 1944 and 1945. The amendment of the Act which was effected in 1945 deals with holidays with pay for all workers employed in perennial factories. The main revisions of the law relating to factories as it stands today are as follows:

(a) *Classification of Factories.*—A distinction drawn between 'seasonal' and 'perennial' factories. A factory which is exclusively engaged in cotton ginning, cotton or jute pressing, decortication of ground-nuts, or the manufacture of coffee, indigo, lac, rubber, sugar (including gur) or tea is to be a seasonal factory, provided that a Provincial Government may, by notification in the official gazette, declare any such factory in which manufacturing processes are ordinarily carried on for more than 30 working days in the year, not to be a seasonal factory for the purposes of the Act. The Provincial Government may also, by notification,

declare any seasonal factory in which manufacturing processes are ordinarily carried on for not more than 180 working days in the year and which cannot be carried on except during particular seasons or at times dependent on the irregular action of natural forces, to be a seasonal factory for the purposes of this Act.

By virtue of the Factories (Amendment) Act, 1940, the provisions of the 1934 Act relating to health, safety, regulation of child labour and registration may be applied to power factories employing from 10 to 19 workers and in which children are employed. It was felt that this amendment would lead to the complete non-employment of children in small factories because rather than be compelled to register under the Act, the owners concerned would prefer not to employ children at all.

There has been an increasing tendency in most Provinces in the sub-continent during recent years especially in Bombay, to take advantage of Section 5 of the Factories Act, 1934, by notifying all factories employing ten or more persons as "factories" for the purposes of the Act. In this connection it is of interest to record that Dr. K. N. Katju, at present Governor of Orissa conducted a detailed inquiry into alleged sweated labour in small factories for a period of over two years. He found that in over 300 factories employing 4,000 workers labour was sweated, there were no fixed hours of work and health and sanitary conditions were deplorable. The Government of the United Provinces thereupon took immediate action by declaring all such factories as employed 10 or more persons as factories for the purposes of the Act. The Second Conference of Labour Ministers held in January 1941 decided that the Factories Act should be so amended as to make registration of all factories employing 10 or more persons compulsory but this recommendation has not yet been given effect to.

(b) *Age and Sex Groups.*—Factory operatives are divided into four age and sex groups. (1) adult males, (2) adult females, (3) children of both sexes, i.e., persons over 12 and under 15 years of age, and (4) 'adolescents' defined as persons of both sexes who are over the age of 15 years and under the age of 17 years but who have not been certified as fit for employment as adults. Such adolescents as have not been so certified are to be deemed to be children.

(c) *Hours of Work.*—The maximum limits of eleven hours per day and sixty hours per week laid down by the 1922 Act for both adult males and females are permitted only in the case of seasonal factories. The maximum hours permitted for perennial factories have been reduced to ten per day and 54 per week subject to the proviso that persons employed on work necessitating continuous production for technical reasons and persons whose work is required for the manufacture or supply of articles of prime necessity which must be made or supplied every day may be employed for not more than 56 hours in any one week. The maximum hours of work permitted for both uncertified adolescents and children have been limited to five per day both in seasonal and in perennial factories.

(d) *Spreadover.*—By "spreadover" is meant the limitation of the period of consecutive hours during which the daily limits of hours of work

may be availed of by the owner or occupier of a factory. This principle was introduced in factory legislation for the first time in 1934. The spreadover in the case of adults is limited to thirteen consecutive hours and in the case of children to seven and a half continuous hours; but the continuous period of eleven free hours in every twenty-four hours in the case of adults and of sixteen and a half free hours in the case of children must include the hours between 7 p.m. and 6 a.m. for both women and children. The effect of the Amending Act of 1944 on this question has been dealt with below. The power to grant exemptions in the case of women where technical reasons require that work should be done at night, e.g., in the fish curing industry, continues to be allowed.

(e) *Artificial Cooling and Humidification.*—Power has been given to Provincial Governments to authorise Factory Inspectors to call upon managers of factories to carry out specific measures for increasing the cooling power of the air if they are of opinion that it is at times insufficient to secure operatives against danger to health or serious discomfort; provided, however, that the cooling power can be appreciably increased without involving an amount of expense which would be unreasonable under the circumstances.

(f) *Welfare.*—Provision is made for four matters in connection with workers' welfare: (1) for the maintenance of a suitable and sufficient supply of water for washing for the use of persons employed in processes involving contact with obnoxious or poisonous substances; (2) for adequate shelter for rest in factories employing more than 150 persons; (3) for the reservation of suitable rooms for the use of children of women employed in factories employing more than fifty women; and (4) for the maintenance of adequate first aid appliances.

(g) *Rest Intervals and Holidays.*—The provisions of the 1911 and the 1922 Acts with regard to rest intervals and the weekly holiday were maintained subject only to verbal modifications of a minor character.

(h) *Holidays with Pay.*—The Factories (Amendment) Act, 1945 which comes into force with effect from the 1st January 1946 provides for compensatory holidays and holidays with pay. In cases where, as a result of the passing of an order or the making of a rule exempting a factory or the workers therein from the provisions of the Act relating to a compulsory weekly holiday, a worker is deprived of any of such holidays, he must be allowed, as soon as circumstances permit, compensatory holidays of equal number to the holidays so lost. The provisions with regard to holidays with pay will enforce, in all perennial factories, an annual paid holiday of 10 days for adults and 14 days for children. These holidays can be accumulated over a period of two years. Half of the wages payable for these holidays are to be paid before the worker proceeds on leave and the balance on his return. A more liberal provision will not be affected by this law and factories providing benefits substantially similar to those laid down in the amending Act can be exempted from its provisions.

(i) *Overtime.*—The old Acts contained no limitations with regard to the overtime hours which could be worked by 'exempted' workers. The new Act places a limitation of hours on the amount of overtime that can be worked by virtue of any exemptions granted under the Act. With regard to overtime rates of pay, the Act lays down that a time and a half should be paid in all cases where a worker in a seasonal factory is required to work for more than sixty hours in any one week or where a worker in a factory other than a seasonal factory is required to work for more than ten hours in any one day. But where a worker in a factory other than a seasonal factory is required to work for more than fifty-four hours in any one week, he is to be entitled, in respect of the overtime worked less any overtime in respect of which he is entitled to extra pay under the preceding sentence, to pay at the rate of one and a quarter times his ordinary rate of pay.

(j) *Certificate of Fitness for Children.*—Provincial Governments have been given powers to make rules prescribing the degree of fitness to be attained by children and it has been prescribed that whenever such a standard has been laid down, no child failing to attain it can be certified for employment in a factory. Similarly, adolescents cannot work as adults unless certified 'fit to work as an adult'. If they are not so certified they are considered children.

(k) *Security of Factory Structures.*—Factory inspectors have been given powers to call upon managers to carry out such tests as may be necessary to determine the strength or quality of any specified parts of the structure of factories if they are of opinion that, on account of any defect or inadequacy in the construction of any factory, the factory or any part thereof is dangerous to human life or safety. Provincial Governments are further empowered to make rules for the furnishing, by factories, of certificates of stability.

(l) *Exemptions.*—A frequent cause of complaint against the older Factory Acts was that they gave local Governments very wide powers to exempt certain classes of workmen from all or any of the restrictive provisions of the Act. The new Act limits these powers and prescribes further that no exemptions are to be granted in respect of the provisions for spreadover, prohibition of night-work and the limitations of weekly hours for women and persons under the age of sixteen years.

Act of 1944.—The Factories (Amendment) Act, 1944 was passed to remedy certain defects and meet some difficulties in the administration of the main Act. Washing facilities were required to be provided only in places where workers come in contact with injurious or obnoxious substances. By removing the restrictive clause, all factory owners are required to provide washing facilities for their workers. Bombay was the only Province, which had framed draft Rules in connexion with this matter.

A recent judgment of the Bombay High Court held that orders passed by an Inspector of Factories regarding "means of escape" were *ultra vires*. In order to validate the rules made

by Provincial Govts. In the matter of 'Precautions against fire,' Section 23 of the Act has been suitably amended. Under the provisions of Sections 45 and 54 no woman or child was allowed to work in a factory except between the hours of 6 a.m. and 7 p.m. but the limiting hours could be varied by a Provincial Government to cover a span of 13 hours between 5 a.m. and 7-30 p.m. Owing to the change in Indian Standard Time practical difficulties were felt in this respect in western Provinces. The evening limit has therefore been extended from 7-30 p.m. to 8-30 p.m. This amendment, however, was to have effect only for the duration of the War.

A new rule has been promulgated under the Defence of India Act which enables the Central Government to require that the lighting of any factory or class of factories shall reach a certain standard. This has been done to remedy defective lighting arising from one or the other of the following two causes: (1) many factories planned their interior lighting under peace-time conditions on the assumption that night-work would rarely be necessary; (2) compliance with black-out or other A.R.P. regulations requiring the prevention of the emergence of beams of light from a building has actually reduced lighting of the interior below the standard required for efficient work.

Latest Position.—The latest position in regard to the regulation of conditions of work by the Factories Act of 1934 as amended in 1946 is as follows:—

The daily hours of work are reduced from 9 to 8 and the weekly hours from 54 to 48 in the case of perennial factories and from 10 to 9 and from 60 to 54 in the case of seasonal factories.

The rate of overtime pay has also been appreciably increased.

In conformity with the new Government's policy of giving a fair deal to the common man, the Indian Factories Act is being almost completely overhauled. A Bill on the subject was introduced in the Dominion Parliament in 1947. The main features of this Bill are as follows:—

(1) The age of employment which is at present 12 is being raised to 13, and their working hours reduced from 5 to 4 and a half.

(2) At present the Act applies to work places which employ 20 or more persons and in which a manufacturing process is carried on with the aid of mechanical power. It is proposed to make the Act applicable to small places with only a bare minimum of requirements under the Factories Act. This will enable the workers in small works at once to get the benefit of other Acts, such as, the Maternity Benefit Act, Holidays with Pay Act, etc. The distinction between seasonal and perennial factories is removed.

(3) The general provisions of the Bill for the larger factories have been extended to bring the standards of safety and of the safe working of plant up to the accepted standards in Western countries. Every factory should be registered and should take a license for working to be renewed at periodical intervals.

(4) In view of the anticipated industrial expansion in the country it is necessary that the layout, etc. of the new concerns should be as

safe and comfortable as possible from the point of view of the workers. A provision has, therefore, been made for the supervision of all new factory buildings by requiring that the plans of all such buildings should be submitted for approval either to the Inspectorate or to the appropriate authority nominated by the Provincial Governments.

(5) Provision has been made for the disposal of trade wastes to be approved by the Health Authorities.

(6) In regard to industrial diseases, provision has been made for a more adequate examination of young persons before they can be employed. Workers in certain specified dangerous trades are to be protected by periodical medical examination, etc.

(7) The sections in the present Act dealing with welfare have been strengthened. It has been suggested that drinking water should be cooled during the hot season. Definite requirements regarding sanitary accommodation, washing facilities, canteens and rest places have been laid down and a higher standard suggested. Creches will be compulsory where the number of women employed makes such provision necessary.

(8) Hours of employment, holidays with pay, etc., have been more specifically stated, with the penalty clauses being presented in a simpler form.

C. P. Act.—The Legislative Council of the Central Provinces and Berar passed an Unregulated Factories Act early in 1937. This Act was intended to regulate the labour of women and children and to make provision for the welfare of labour in factories to which the Factories Act, 1934, does not apply. "Unregulated Factory" has been defined as "any place wherein fifty or more workers are employed or were employed on any one day of the preceding twelve months and to which the Factories Act, 1934, does not apply and wherein the following industries are carried on:— (i) bidi making, (ii) shellac manufacture, and (iii) leather tanning." A "child" has been defined as a person who has not completed his fourteenth year.

The provisions with regard to health and safety, notices and registers, penalties and procedure closely follow the similar provisions in the Factories Act. Children's hours are restricted to seven in any one day and no child can be employed in any unregulated factory except between 8 a.m. and noon, and 1 p.m. and 5 p.m. The double employment of children is prohibited and a child who has worked in any unregulated factory on any one day is prevented from working overtime or taking work home. The hours of work of adult males are limited to ten per day and provision has been made for the grant of a holiday after every period of six consecutive days. Women's hours are restricted to nine per day and they are prohibited from working in any unregulated factory before sunrise or after sunset.

FACTORY STATISTICS

Up to and including the Report for the year 1939, statistics regarding the numbers of factories and of factory workers used to be given in the

annual reports on the administration of the Factories Act published by all the Provincial Governments. The Government of India published a Summary of the Provincial Reports every year. These summaries contained statistics in eight different statements in regard to the following matters: (1) totals of the number of working factories, classified by Provinces according to types of factories; (2) average daily numbers of workers employed classified in the same way and by age and sex groups; (3) intervals, holidays and hours of work separately for perennial and seasonal factories; (4) accidents; and (5) convictions in respect of offences under the Act. A table containing the figures for numbers of working factories and the average daily number of workers employed therein classified by age and sex groups, between the years 1894 and 1939 was published at page 479 of the 1942-43 edition of this publication.

Owing to the shortage of paper, both the Provincial Governments and the Government of India discontinued the publication of the Annual Reports on the administration of the

Factories Act and the Annual "Statistics of Factories" with effect from the publication of the Reports for the year 1940. In view, however, of the fact that information relating particularly to employment figures would be widely used, the figures for the years 1938 to 1942 were published in the August, 1943 and in the January, 1944 issues of the *Indian Labour Gazette*.

No corresponding information was given in the published tables for numbers of factories but from figures recently published by the Government of India it would appear that the total number of factories registered in old undivided India under the Factories Act, 1934 was 13,209 in the year 1943 as against 11,868 in the year 1941 and 12,527 in the year 1942.

The following table sets out the statistics of the average daily numbers of persons employed in all factories in India for the years 1939 to 1944 classified according to main industry groups and according to their employment in perennial and seasonal factories.

Classes of Factories	Average Daily Number of Persons employed in the years				
	1941	1942	1943	1944	1945
<i>Government and Local Fund</i>					
Perennial Factories	219,233	299,273	355,878	420,435	456,000
Seasonal Factories	853	620	507	484	700
Total	220,086	299,893	356,385	420,919	456,700
<i>All Other Perennial Factories</i>					
Textiles	953,320	965,459	1,001,893	993,269	1,014,309
Engineering	204,056	223,820	253,947	265,392	314,688
Minerals and Metals	76,162	82,493	92,694	91,126	125,457
Food, Drink and Tobacco	119,888	121,311	124,736	132,384	309,686
Chemicals and Dyes	71,150	72,626	82,765	88,813	101,687
Paper and Printing	48,245	48,501	50,534	52,696	72,271
Wood, Stone and Glass	77,627	82,334	89,824	96,189	106,857
Gins and Presses	21,538	17,020	15,408	14,860	129,467
Silks and Hides	23,516	29,608	33,669	34,624	36,301
Miscellaneous	35,346	38,465	37,091	35,477	107,253
Total	1,630,848	1,681,646	1,782,551	1,804,820	2,317,976
All Other Seasonal Factories	305,443	300,698	297,883	294,996	276,000
Grand Total : All Factories	2,156,377	2,282,237	2,436,819	2,520,251	3,050,676

A table published at pages 160-1 of the November 1944 issue of the *Indian Labour Gazette* gives the composition of the average daily number of workers employed in registered factories in the different Provinces by age and sex groups for the years 1942 and 1943 but not by industries. The figures for the year 1943 show that of the total number of workers in all factories in British India, 2,133,023 were men, 262,744 were women, 38,069 were children and 13,484 were adolescents.

THE INDIAN MINES ACT, 1923

The conditions of employment of labour in Indian Mines are governed by the Indian Mines Act, 1923, as amended by the Amending Acts of 1928 and 1935. The Act of 1923 which came into force from the 1st July 1924 replaced the earlier enactment of 1901.

The Amending Act of 1928 made some minor changes concerning daily limits of the hours of work and regulation of shifts. As a result of the recommendations of the Royal Commission on Labour and the adoption of the Draft International Labour Convention on Hours of Work in Coal Mines the Act was further amended in 1935. Further minor changes were made by the Amending Acts of 1936, 1937 and 1946 and in Ordinance of 1945.

The 1923 Act for the first time prescribed maximum limits of 54 hours per week for underground and 60 hours per week for above-ground workers. No limits were prescribed for daily hours. A daily limit of 12 hours was imposed for the first time by the Amending Act of 1928 which was brought into effect from 1st April 1930. As a result of the recommendations made in the matter by the Royal Commission on Indian Labour and the adoption of the Draft Convention on Hours of Work in Coal Mines by the Fifteenth Session of the International Labour Conference in 1931, the Government of India passed the Indian Mines (Amendment) Act, 1935, which was brought into effect from 1st October 1935.

The main provisions of the law regarding hours and conditions of work in Indian Mines as it now stands, are as follows:—

(a) No person is to be employed in a mine for more than six days in any one week.

(b) No person employed above-ground in a mine is to be permitted to work for more than 54 hours in any one week or for more than ten hours in any one day; and the periods of work of any such person are to be so arranged that along with any intervals of rest they shall not on any one day spread over more than twelve hours.

(c) The periods of work of a person employed below-ground in a mine are to be reckoned from the time he leaves the surface to the time he returns to the surface and are not in any one day to spread over more than nine hours. No persons is to be allowed to remain below-ground except during his periods of work and where work below-ground is carried on by a system of relays,

the periods of work of all persons employed in the same relay are to be the same and are to be reckoned from the time the first person of the relay leaves the surface to the time the last person of the relay returns to the surface.

(d) The employment in any mine of children under fifteen years of age is prohibited and those below the age of 17 are not permitted to work in mines unless certified medically fit.

(e) Accidents which cause bodily injury resulting in the enforced absence from work for more than seven days are to be recorded in the prescribed manner.

The Government of India promulgated regulations under Section 29(f) of the Indian Mines Act, 1923, on the 7th March 1929 prohibiting the employment of any woman underground in the coal mines in Bengal, Bihar and Orissa and the Central Provinces and the salt mines in the Punjab with effect from the 1st July 1939 and in all other mines with effect from the 1st July 1929. In order to prevent undue hardship a principle of gradualness in the number of women to be reduced every year was laid down. Women are not prohibited from accepting employment in open workings and on the surface of mines.

In view, however, of an acute shortage of labour in coal mining areas this policy was temporarily reversed. By two notifications dated the 24th November and the 4th December, 1943 respectively, the Government of India exempted, until further orders, all coal mines in the Provinces of Bengal, Bihar, Central Provinces and Berar and Orissa from the provisions of clause (j) of Section 29 of the Indian Mines Act, 1923 to the extent to which regulations made thereunder prohibit the entry of women into underground working, for the purpose of employment subject to the following two conditions: (1) no woman was to be employed underground in galleries which were less than six feet in height; and (2) every woman employed underground was to be paid wages at the same rate as a man employed underground on similar work. Milk was to be supplied to women working underground. There was considerable agitation both in India and abroad against the lifting of the ban on the employment of women underground. So the Government of India re-imposed the ban with effect from 1st February 1946, and there is now no employment of women underground in coal mines.

MINING STATISTICS

The collection of full statistics with regard to the numbers of mines and of the persons employed therein dates from 1924. These statistics used to be published in the Annual Reports of The Chief Inspector of Mines in India. Commencing from the year 1940, the Government of India have been publishing abridged reports which contain no figures for numbers employed. Statistics for the 16 years from 1923 to 1939 were given in a table at page 480 of the 1942-43 edition of this publication. The Government

of India have, however, published figures in India in the issues of the *Indian Labour Gazette*. We set out the available figures in the employed in all mines in the various Provinces following table:—

Province	1939	1940	1941	1942	1943	1944
Assam	2,463	2,704	2,732	2,325	2,539	3,038
Baluchistan	617	707	834	1,131	2,518	3,112

THE PAYMENT OF WAGES ACT

The Payment of Wages Act was passed by the Central Legislature early in 1936 and amended in a minor particular by an Amending Act in 1937. A detailed note on the history of this piece of legislation will be found at pages 503 and 504 of the 1938-39 Edition of this publication. The more important provisions of this Act which were brought into operation with effect from the 20th May 1937 are as follows:—

(a) *Scope of Application.*—The Act in the first instance applies to factories and railways but Provincial Governments are empowered to extend it to tramway or motor omnibus services; docks, wharves or jetties; inland steamer vessels; mines, quarries or oil-fields; plantations; and any other class of workshops or establishments in which articles are produced, adapted or manufactured with a view to their use, transport or sale.

(b) *Wages.*—'Wages' for purposes of the Act means all remuneration, capable of being expressed in terms of money, which would, if the terms of the contract of employment, express or implied, were fulfilled, be payable, whether conditionally upon the regular attendance, good work or conduct or other behaviour of the person employed, or otherwise, to a person employed in respect of his employment or of work done in such employment, and includes any bonus or other additional remuneration of the nature aforesaid which would be so payable and any sum payable to such person by reason of the termination of his employment but does not include travelling allowances, employees' contributions to provident funds, gratuities payable on discharge, or the value of any housing accommodation or services rendered to the worker by his employer.

Many industrial establishments, especially cotton textile mills in the sub-continent, grant good attendance and efficiency bonuses in addition to wages. These bonuses operate as fines in cases where the standards for earning them are not attained. The Government of India, while framing the Act, included such

bonuses within the ambit of "wages" but the definition of this term as far as bonuses are concerned has been widely interpreted.

The Government of Bombay held that existing good attendance and efficiency bonuses wherever they obtained must be paid without conditions and notified all factories accordingly. As a test case, the Arvind Mills in Ahmedabad were prosecuted in the City Magistrate's Court for non-payment of these bonuses in cases where the conditions for earning them were not fulfilled. The Magistrate held that bonuses were wages and directed that the deductions made should be refunded to the workers. The matter was taken in appeal in the Court of the Assistant Judge, Ahmedabad, where the decision of the Magistrate was upheld. The Mills thereupon filed a further appeal in the High Court, Bombay, which reversed the Ahmedabad judgments and held that all bonuses must be earned. The Government of India intend introducing a Bill in the Central Legislative Assembly to amend this Act with a view to clarifying the position of 'bonuses.'

(c) *Wage Periods.*—No wage period is to exceed one month and all wages are to be paid in coin and/or currency notes.

(d) *Time of Payment.*—The wages of all persons employed in concerns employing less than one thousand persons are to be paid before the expiry of the seventh day after the last day of the wage period in respect of which the wages are payable and in establishments employing more than one thousand persons before the expiry of the tenth day. Where employment is terminated by the employer, all due wages are required to be paid before the expiry of the second working day following that on which the employment is terminated.

(e) *Permissible Deductions.*—Deductions from wages are permitted only in respect of fines, absence from duty, damage to or loss of goods expressly entrusted to an employed person for custody, housing accommodation supplied by an employer, for recovery of advances or for adjustment of over-payments of wages, for income-tax, for contributions to or repayment of advances from provident funds, for schemes of postal insurance, for dues to co-operative societies and,

on orders made by courts of law. Deductions are also permitted in respect of such amenities and services supplied by the employer as the Governor-General in Council or a Provincial Government may, by general or special order, authorise. The Central Government promulgated a Payment of Wages Amendment Ordinance in 1940 amending the Act to enable deductions being made from wages with written authorisation of the employed person for investment in any War Savings Scheme approved by a Provincial Government. The Act does not permit an employer to make deductions from wages in respect of the value of material damaged in the process of manufacture and to hand over the same to the employee concerned. Such a system was widely prevalent in certain centres of the textile industry in India and particularly in Ahmedabad where it was estimated that a total sum of nearly fifteen lakhs of rupees was deducted annually from the wages of about 25,000 weavers in respect of weaving fines and the value of damaged cloth handed over to them.

Fines—(f) Fines.—No fines are to be imposed on children, i.e., persons below the age of fifteen years. No fines can be imposed save in respect of such acts or omissions as have been exhibited in notices which have received the approval of the Provincial Government or of an authority which a Provincial Government may prescribe in the matter and unless the person who is fined has been given an opportunity of showing cause against the fine. The total amount of fines which may be imposed on any person during any wage period is not to exceed half an anna in the rupee of wages for that wage period and no fine can be recovered in instalments or after the expiry of 60 days from the day on which it was imposed. All fines are to be recorded in prescribed registers and all realisations from fines are to be expended on objects beneficial to the workers. Provincial Governments have been empowered to make rules in connection with most of these matters.

In December 1937, the North-Western Railway reduced the monthly rate of pay of an engine driver by Rs. 7 for unsatisfactory work. The employee filed an application against the Railway in the Small Causes Court at Karachi for illegal deductions. The application was dismissed and the case was taken in appeal to the Chief Court of Sind. Mr. Justice Weston held that a reduction in an employee's wages by way of punishment was in contravention of the Payment of Wages Act and ordered a refund to the applicant of the amounts deducted from his wages.

(g) Deductions for Absence from Duty.—Deductions from wages for periods of absence from duty should be *pro rata* and should not bear a larger proportion than the period of absence bears to the period of duty (i.e., if the wage is Rs. 27 for 27 working days the deductions for 7 days absence must not be more than Rs. 7); provided that "subject to any rules made in this behalf by the Provincial Government if ten or more employed persons acting in concert absent themselves without due notice (that is to say without giving the notice which they are required to give either expressly by their contracts of employment or impliedly by the terms of their service) and without reasonable cause, such deduction from any such person may include

such amount not exceeding his wages for eight days as may by any such contract or terms be due to the employer in lieu of due notice." By the amending Act of 1937 an explanation was added to the Section dealing with this matter which provides that "an employed person shall be deemed to be absent from the place where he is required to work if although present in such place, he refuses to carry out his work."

(h) Deductions for Recovery of Advances.—Recovery of an advance of money given before employment began is to be made from the first payment of wages in respect of a complete wage period, but no recovery is to be made on advances given for travelling expenses; and recovery of advances of wages not already earned are to be subject to rules to be made by Provincial Governments.

(i) Contracting-Out.—No contracting-out is permitted.

Procedure—(j) Procedure.—Provincial Governments are empowered to appoint Commissioners for Workmen's Compensation or any other persons with judicial experience as the authority to hear and decide all claims arising out of deductions from or non-payment of wages. Penalties have been laid down for malicious or vexatious claims. Appeals to courts of small causes are permitted and an elaborate procedure has been laid down with regard to trials for offences under the Act. Since the passing of the Act it has been found that the procedure laid down in Section 15 of the Act in connection with claims arising out of deductions from wages is a very dilatory one. The action is a civil one and it takes a long time before the case is brought to a decision. In many cases where applications are filed for non-payment of wages the employer is let off if he has paid wages to the workers concerned after the filing of the complaint and the Courts ignore the fact that even in such cases delay in making payments had occurred.

(k) Administration.—Inspectors of factories are made responsible for the administration of the Act as far as factories are concerned and powers are reserved to the Governor-General in Council and to Provincial Governments to appoint such other persons as they think fit to be inspectors for the purposes of this Act for railways.

The present position is that in the case of persons employed on Railways the responsibility of administering the Act rests upon the Chief Labour Commissioner (Central).

By an amendment in the Payment of Wages (Federal Railways) Rules the application of the Act has been extended to cover workers employed by railway contractors employing on an average 20 or more persons.

It is now proposed to amend the Act in the light of experience gained and in conformity with the new policy of Government to give a fair deal to labour. The principal proposed amendments are (a) to extend the scope of the Act to those drawing up to Rs. 400 per month and (b) to empower Government to extend the provisions of the Act to workers in industrial establishments under their control including

contract labour. The amendment also seeks to provide for the supply of pay dockets to the workers containing a full account of their wages.

Recently plantation workers in Madras have been brought within the purview of the Act. The Government of India have also decided to extend the Act to Coal and Salt Mines.

WORKMEN'S COMPENSATION ACT

In its main principles, the Indian Act which was brought into operation with effect from 1st July 1924, follows the British model but its precision and rigidity and the special machinery set up for its administration are some of the features which distinguish it from the British Act. In its scope—type and classes of workers covered—the original Act of 1923 fell far short of the British Act but it was necessary for the Government of India to adopt a policy of gradualness in the matter so as to secure the support of all interests to the original measure. The original limitations of scope were to a large extent removed by amending Acts passed in 1926, 1929, 1931 and 1933.

Under the Act, payment of compensation has been made obligatory on all employers whose employees come within its scope, even in cases where there has been no negligence; and injured workmen or the dependents of those killed can obtain compensation in all cases where personal injury has been caused by accident arising out of and in the course of employment and where the accident is not directly attributable to the workman having been at the time of the accident under the influence of drink or drugs or to wilful disobedience of rules or orders or wilful disregard of safety devices.

Besides bodily injuries the contracting of certain occupational diseases such as anthrax and lead and phosphorus poisoning were deemed and treated for the purposes of compensation, as injuries caused by accident, provided however, that the worker concerned was in the service of the same employer for more than six months. Mercury poisoning was added to the list of original occupational diseases in 1926 in order to bring the Indian law into conformity with a Draft Convention adopted by the International Labour Conference in 1925.

This list was further expanded in 1933 and again in 1938 by the addition of (1) poisoning by benzene and its homologues or the sequelae of such poisoning; (2) chrome ulceration or its sequelae; (3) compressed air illness (Caisson Disease) or its sequelae; (4) arsenical poisoning or its sequelae; (5) pathological manifestations due to (a) radium and other radio-active substances, and (b) X-Rays; and (6) Primary epitheliomatous cancer of the skin.

Main Provisions.—The main provisions of the Workmen's Compensation Act as it stands today are as follows:

Classes of Workmen Covered by the Act.—These have been specified in the definition of the term "workman" contained in section 2(1) h) and in Schedule II. In all cases persons employed in an administrative or clerical capacity and those whose monthly earnings

exceed Rs. 300 (except Railway Servants) are excluded. According to the Amended Act passed in 1946, the upper income limit has been extended to Rs. 400 per month.

Speaking broadly, the Act covers railways; factories; mines; seamen; docks; persons employed in the construction, repair or demolition of buildings designed to be or which are of more than one storey or of twenty feet in height or of dams and embankments, roads, bridges or tunnels; or wharves, quays, sea walls or other marine work; the setting up, repairing, maintaining or taking down any telegraph or telephone line or overhead electric lines or cables; aerial ropeways, canals, pipe lines or sewers; the fire-brigade; railway mail service; persons employed in outdoor work in the postal and telegraphic services; operations for winning natural petroleum or natural gas; blasting operations and excavations; ferry boat services; cinchona, coffee, rubber or tea plantations; electricity or gas generating stations; light-houses; cinematograph picture producing and exhibiting; divers; elephant and wild animal trainers and keepers and salaried motor drivers and cleaners. Recently persons employed in warehouses in markets employing ten or more persons have also been brought within the scope of the Act. Persons employed through sub-contractors by a person fulfilling a contract with a railway are also covered. The Government of Madras have recently brought persons employed in plucking cocoanuts within the scope of the Act.

As far as seamen are concerned, those employed on ships registered in the sub-continent are covered. But accidents take place within the three-mile limit of the territorial waters the Act applies even to those employed on ships not registered in the sub-continent. But with a view to facilitating the settlement of claims in respect of seamen on ships not registered in the sub-continent and to avoid litigation, provision has been made in the Lascar's Agreement for the settlement of claims for compensation on the lines of the Indian Act and in default of agreement the Commissioner of the Port where the agreements are signed has been accepted as the final authority to whom these matters should be referred for decision.

Not only workmen employed within the precincts of a factory or a mine but also men engaged in any kind of work incidental to or connected with a factory or any mining operation are entitled to the benefits of the Act. As far as factories are concerned, those using mechanical power and employing more than ten persons or those not using mechanical power and employing more than fifty persons are covered.

The Provincial Governments are empowered to bring within the scope of the Act other classes of workmen whose occupations are considered to be of a hazardous nature. In pursuance of that power the Government of Bombay have extended the scope of the Act to persons employed on motors or other mechanically propelled vehicles engaged in loading, unloading, handling or transport of goods and to all employees of Municipalities and District Local Boards engaged in occupations ordinarily requiring outdoor work.

Amount of Compensation.—The amount of compensation payable depends, in the case of death, on the average monthly wages of the deceased workman and in the case of an injured workman both on the average monthly wages and the extent of disablement. The term 'wages' includes overtime pay and the value of any concessions or benefits in the form of food, clothing, free quarters, etc. After the monthly wages of a worker are calculated the amount of compensation due is decided by a reference to Schedule IV which gives in a tabular form the amounts of compensation for death, permanent total and temporary disablement in respect of each of seventeen wage classes.

The amounts of compensation payable in the case of an injured workman whose monthly wages are not more than Rs. 10 are Rs. 500 for death, Rs. 700 for permanent total and half the monthly wages for temporary disablement. For a workman whose monthly wages are between Rs. 50 and Rs. 60, the corresponding figures are Rs. 1,800, Rs. 2,520 and Rs. 15 respectively. The maxima for persons earning over Rs. 200 per month are Rs. 4,000, Rs. 5,600 and Rs. 30 per month respectively. In the case of minors the amounts of compensation for death and for permanent total disablement are at a uniform rate of Rs. 200 and Rs. 1,200 respectively, and half the monthly wage for temporary disablement.

No compensation is payable in respect of a 'waiting period' of seven days following that on which the injury was caused; but many large firms such as General Motors (India), Ltd., Messrs. Lever Brothers (India), Ltd., and others pay compensation in lieu of wages with effect from the date of injury.

(NOTE: Permanent total disablement means such disablement which permanently incapacitates a workman for all work which he was capable of performing at the time of his accident. Any combination of injuries totalling 100 per cent. loss in earning capacity is regarded as permanent total disablement even if the combination of injuries does not arise in one accident.)

Dependents.—These are defined in two categories: firstly, those who are in practically all cases actually dependents; and secondly, those who may or may not be in that position. The first includes a widow, a minor legitimate son, unmarried legitimate daughter and a widowed mother. The second includes a widower, a parent other than a widowed mother, a minor illegitimate son, an unmarried illegitimate daughter, a minor legitimate or illegitimate daughter if married or widowed, a minor brother, an unmarried or widowed sister, a widowed daughter-in-law, a minor child of a deceased son and a paternal grandparent.

The interests of dependents in cases of fatal accidents have been safeguarded by ensuring that (1) all cases of fatal accidents should be brought to the notice of the Commissioner; (2) in all cases where an employer admits liability the amount of compensation payable is to be promptly deposited with the Commissioner; and (3) in cases where the employer disclaims liability and there are good grounds for believing compensation to be pay-

able, the dependents get the information necessary to enable them to judge if they should make a claim or not.

A contractor has been given the right to be indemnified by his sub-contractor if he has had to pay compensation either to a principal or to a workman.

An employer is permitted to make to any dependent advances on account of compensation not exceeding an aggregate of one hundred rupees and so much of such aggregate as does not exceed the compensation payable to that dependent is to be deducted by the Commissioner from such compensation and repaid to the employer. Further, the Commissioner may deduct a sum up to Rs. 25 from the amount of compensation for the funeral expenses of a deceased workman and pay the same to the person by whom such expenses were incurred.

Administration.—The Act is administered entirely on a provincial basis by Commissioners to be appointed by Provincial Governments. The Provinces of West Bengal and Madras have one Commissioner each for the whole province. The Province of Bombay has one Commissioner for the more important industrial areas and for the other areas sub-judges have been appointed as ex-officio Commissioners for Workmen's Compensation. In the other provinces, the District Magistrate or the District and Sessions Judge or the Senior or Sub-Judge is the Commissioner within his jurisdiction.

Under the common law of England, in civil suits for damages for injuries sustained by workmen it is open to the employer to plead: (1) the doctrine of common employment, by which the employer is not normally liable to pay damages to a workman for an injury resulting from the default of another workman; (2) the doctrine of assumed risk, by which an employee is presumed to have accepted a risk if it is such that he ought to have known it to be part of the risks of his occupation.

The Royal Commission on labour regarded both these doctrines as inequitable and recommended by a majority that a measure should be enacted abrogating these defences. Provincial governments were consulted in 1932 and were almost unanimously in favour of legislation for the purpose. In the meantime judicial decisions in British India while generally agreeing as to the inequity of the doctrines were such as to leave it open to employers in most Provinces to have recourse to them. The Government of India passed the Employers' Liability Act, 1933, through the Central Legislature declaring that these defences shall not be raised in suits for damages in British India in respect of injuries sustained by workmen.

Amendments.—During the year 1939, two amendments were made in the Workmen's Compensation Act, one in Section 5 and the other in Section 15. The first clarifies the meaning of the expression 'monthly wages' which has now been defined to mean the amount of wages deemed to be payable for a month's service irrespective of whether the wages are payable by the month or by whatever other period or at piece rates. The amendment thus resolves a doubt as to whether a workman employed on wages payable otherwise than by the month or on a monthly

basis is or is not a workman within the meaning of the Act. The Personal Injuries (Emergency Provisions) 2 and 3 Geo. 6, C. 82) Act, 1939, provides for certain payments to be made in respect of personal injuries to seamen. The Workmen's Compensation Act had, therefore, to be amended in order to avoid double payment, both under this Act and under the Personal Injuries Act.

The second amendment referred to above provides that failure to give notice or make a claim or commence proceedings within the time limit required by the Act shall not be a bar to the maintenance of the proceedings provided that the Commissioner is satisfied that an application was made in the reasonable belief that the injury was such that a payment could be made under the said Act and that the Provincial Government certifies that the application was rejected.

The Government of India in the Ministry of Commerce, formulated a Lascars War Risk Compensation Scheme in August 1940 in respect of death or disablement directly attributable to war injuries sustained by lascars employed on ships registered in the United Kingdom. The scheme provides for widow's pensions, children's allowances and generous disablement allowances.

It often happens, in cases before Commissioners for Workmen's Compensation, that there is a dispute between the parties on medical questions. In such cases the usual practice is to call in private medical practitioners to give verbal evidence on the points in dispute. This not only

increases the cost of the proceedings but tends to delay settlements. With a view to preventing this unsatisfactory, dilatory and expensive procedure, the government of old undivided Bengal passed the Workmen's Compensation (Bengal Amendment) Act, 1942 for the appointment of medical referees whose report would be binding on both the parties. This Act also provides for the creation of a permanent panel of qualified medical practitioners who may be appointed as medical referees.

STATISTICS

All Provincial Governments in the sub-continent used to publish Annual Administration Reports on the working of the Workmen's Compensation Act. The Government of India summarised these Reports and published an annual survey under the title "Statistics of Workmen's Compensation". The Government of India have stopped the publication of these summaries since 1939, but an annual note on the working of the Act is being published regularly in the Indian Labour Gazette which is being issued by the Labour Bureau of the Government of India.

At page 585 of the 1941-42 edition of this publication we gave a table showing the figures of fatal and non-fatal cases in respect of which compensation was paid from the year 1924 when the Act was first brought into effect up to the end of the year 1938 together with the figures for the total amount of compensation paid. The latest available statistics on the subject will be found in the following table:—

Year	Total number of cases	Total compensation paid	Year	Total number of cases	Total compensation paid
		Rs.			Rs.
1925	11,371	6,44,120	1941	39,045	15,84,293
1935	22,999	11,61,465	1942	44,443	18,69,359
1938	35,065*	14,32,723*	1943 †	44,826	22,83,991
1939	38,081	15,09,327	1944 †	31,581	16,96,494
1940	41,015	19,38,476	1945	67,890	42,25,330

One Comprehensive Law.—Facilities for accident insurance are now being provided by a number of leading insurance companies in the country and the most important of these are the Claims Bureau in Calcutta and Madras. The Calcutta Claims Bureau which represents many of the leading insurance companies operating in the sub-continent deals with a large number of claims and offers valuable co-operation to the authorities in settling compensation claims. In Bombay, insurance companies are now concerned with half the number of cases that come up before the Commissioner. Insurance companies as a rule contest only cases involving questions of law or principle and are of benefit to all concerned. In these provinces insurance is widely resorted

to by the employers especially in the textile industry.

The Millowners' Mutual Insurance Association, Ltd., Bombay, is an organisation of employers one of whose objects is the mutual insurance of members against liability to pay compensation or damages to workmen employed by them or their dependants for injuries or accidents, fatal or otherwise, arising out of or in the course of employment.

The Government of India have now on the legislative anvil one comprehensive scheme which will cover sickness insurance, maternity benefits and compensation for accidents. When the Health Insurance Bill becomes law, there will be no separate Workmen's Compensation Law.

MATERNITY BENEFIT

A Bill introduced by Mr. N. M. Joshi in the Central Legislative Assembly in 1924 to provide for the payment of maternity benefits to women employed in certain industries was not passed. The Government of Bombay, however, took up the question a few years later and the Bombay Maternity Benefit Act was passed in 1929. This was substantially amended by an Amending Act passed in 1935. A similar Act was passed in the Central Provinces in 1931. These were the first Acts of their kind in the sub-continent. Since then, Maternity Benefit Acts have also been passed in the Provinces of Madras, old undivided Bengal, Sind, Assam, old undivided Punjab, and the United Provinces and in Ajmer-Merwara and Delhi. In the year 1941, the Bengal Legislature passed a second Maternity Benefit Act for women employed in tea plantations under the title of the Bengal Maternity Benefit (Tea Estates) Act, 1941. Except for the Assam Maternity Benefit Act which covers women employed in both factories and on plantations and the last Act, all the other Maternity Benefit Acts are applicable to women employed in factories only.

The subject of extending the benefits of such legislation to women employed in Mines was discussed at the Second Conference of Labour Ministers held in January 1941 and as the result of those discussions the Central Legislature passed The Mines Maternity Benefit Act, 1941, in the same year. This Act was amended in 1943 in such a way as to prevent a woman from being debarred from drawing benefit for a day on which the mine is closed and a further amendment of the Act was made in 1945.

The main principles in all Maternity Benefit Legislation are the same: provision for the payment of a cash benefit to women for specified periods before and after childbirth, a compulsory period of rest after delivery and also before delivery if notice is given; but, in the latter case, the period for which an employer has to pay cash benefit is strictly limited. All Acts specify a qualifying period for the earning of the benefit: this varies from six months to a year. Women are prohibited, under penalty, from accepting employment under another employer during periods for which they are in receipt of cash benefit from the employer with whom this liability rests.

In the Central Act for women employed in Mines and in the U.P. Act additional bonuses of Rs. 3 and Rs. 5 respectively are provided for if the services of a qualified midwife are availed of; but, if such assistance is provided for by or in an institution of an employer, this bonus is not to be paid.

Assam Act.—The Assam Act has certain provisions which are not met with in the other Provincial Acts and the Central Governments Mines Maternity Benefit Act. One such provision is that no employer shall knowingly employ a woman in any job during the four weeks immediately preceding the day of her delivery save upon such suitable light work as may be recommended by a medical practitioner. The other Acts prohibit only the employment of women during the four weeks immediately following childbirth.

By another provision an employer is required either himself to provide upon the premises to which the Act applies free medical treatment and attendance for every woman entitled to maternity benefit, or to make such arrangements with a medical practitioner to provide such treatment and attendance during pregnancy, and at, and after confinement. If a woman declines to accept this free medical attendance and treatment provided by the employer or leaves the service of the employer, she forfeits the maternity benefit which is admissible to her under the Act.

Another interesting feature of the Act is that the qualifying period of employment entitling a woman to the maternity benefit is 150 days, which period is the lowest as compared with the periods prescribed in the other provinces and the mines where the period range between 6 and 9 months. No qualifying period is required in the case of an immigrant woman who was pregnant when she first arrived in Assam.

The Act provides for the payment of maternity benefit at weekly rates unlike the daily rates found in the other Act. It provides for payment—(i) on plantations at the rate of Re. 1 per week during the period preceding the day of delivery and Rs. 1-4-0 per week during the period following the day of delivery, provided that the total cash payment which the employer shall be required to make on this account shall be Rs. 14; and (ii) in employments other than plantations Rs. 2 per week or the average weekly wage or salary subject to a minimum of Rs. 2 per week.

The qualifying period in the Central and in the U.P. Acts is six months and in the Ajmer-Merwara Act twelve months. In all the remaining Acts it is nine months. The maximum period for which maternity benefits can be paid is six weeks under the Ajmer-Merwara Act, seven weeks under the Madras Act, six days under the Punjab Act and eight weeks under all the other Acts. The rate of benefit used to be eight annas per day or the average daily wage whichever was less in most Acts but many Acts are now adopting a uniform eight anna a day. The Punjab Act gives average daily earnings or twelve annas per day whichever is greater.

THE TRADE UNIONS ACT, 1926

The origin of the passing of a Trade Unions Act in the sub-continent was the historic Buckingham Mill Case of 1920 in which the Madras High Court granted an Interim Injunction against the Strik Committee of the Madras Labour Union forbidding them to induce certain workers to break the contract of employment by refusing to return to work. Trade Union leaders found that they were liable to prosecution and imprisonment *bona fide* union activities and it was felt that some legislation for the protection of trade unions was necessary.

In March, 1921, Mr. N. M. Joshi, successfully moved a resolution in the Central Legislative Assembly recommending that government should introduce legislation for the registration and protection of trade unions. Opposition from employers to the adoption of such a measure was, however, so great that it was not until 1926 that the Indian Trade Unions Act was passed. The Act was brought into operation with effect from

1st June 1927 and was slightly amended in 1928 to facilitate the procedure of appeal against the decision of the Registrar refusing or cancelling the certificate of registration of trade unions by employers.

Apart from the necessary provisions for administration and penalties, the Indian Trade Unions Act, 1926, makes provision for three groups of matters: (1) conditions governing the registration of trade unions; (2) the obligations to which a trade union is subject after registration; and (3) the rights and privileges accorded to registered unions. 'Trade Union' has been defined in such a way as to cover both combinations of workers and of employers but not of workers and employers. Persons under the age of 15 are debarred from membership of any registered union.

Registration.—The administration of the Indian Trade Unions Act is entirely on a provincial basis and each Provincial Government is required to appoint a Registrar of Trade Unions. A union is to be registered in the province in which its head office is situated and if this is transferred to another province, the registration has to be transferred to that province. Any seven or more members of a union can apply for registration but no union can be registered unless (1) its rules provide for certain statutory matters which have been laid down in Section 6; and (2) its executive is constituted in accordance with the requirements of Section 22 which lays down that at least fifty per cent. of the executive must consist of members actually engaged in the unit or group of units which the union proposes to cover. The Government of Sind enacted legislation in the year 1944 to amend the Indian Trade Unions Act in such a way as to require that two-thirds of the members of the executive of a Union must be workers and also to prevent one individual person from being an Officer of more than one Union.

The registration of a union may be cancelled or withdrawn at any time by the Registrar on the application of the union itself, or if the Registrar is satisfied that the certificate has been obtained by fraud or mistake, or that the union has ceased to exist or has wilfully and after notice contravened any provision of the Act, or if it has allowed any rule which is inconsistent with the Act to continue in force or has rescinded any rule which is required by the Act. Any union aggrieved by the refusal of a Registrar to register it or by the cancellation of its registration may prefer an appeal to a judge appointed by the Provincial Government for the purpose; and, in the event of the dismissal of such an appeal, the aggrieved party has the right of a further appeal to the High Court.

Obligations, Rights.—The general funds of registered trade unions cannot be spent on objects other than those specified in Section 15 of the Act nor on political objects; but the Act makes provision for the creation of a separate political fund, subscription to which may be collected from such members as voluntarily desire to contribute to it. All registered unions are required to submit annually to the Registrar duly audited statements of accounts in prescribed forms together with changes in officers and the executive and a copy of the rules corrected up to date. Notices

of all changes in the rules or of the registered name or the registered address of the office of the union, or of amalgamations with other unions or of dissolution must be submitted to the Registrar in prescribed forms within prescribed periods of their occurrence.

Failure to carry out these obligations may result either in the cancellation of a union's registration or by the imposition of a fine. The Act further requires that the rules of every registered union should make adequate provision for the inspection of books of accounts and lists of members by the officers and members of the union. The Govt. of Madras have recently tightened up their regulations in connexion with the maintenance, by registered unions of their registers. Among other things, all unions will now be required to maintain files of vouchers and machine-numbered subscription receipt books.

The Act confers on registered unions the right to corporate existence and of perpetual succession with power to acquire and hold both movable and immovable property and to enter into contracts. A registered trade union is immune from prosecution for criminal conspiracy in respect of an agreement, unless it is one to commit an offence, made between its members for the furtherance of a trade dispute or for restraint of trade and from any legal difficulties arising therefrom. It also enjoys immunity from civil suits in certain cases.

Registered unions are empowered under the Indian Trade Unions Act to carry on any form of insurance activity without being under any obligation to secure professional advice as to the actuarial soundness of such business. By virtue of Section 118 of the Insurance Act, 1938, insurance business carried on by a trade union is not subject to the provisions of that Act.

One of the most vexed questions in connexion with trade unions in the sub-continent is that of their recognition by the employers. We are dealing with this question more fully under the heading Trade Unionism in the sub-continent. Many Bills aimed at compelling employers to recognise unions of their workers have been introduced by private members in Provincial Legislatures but these failed to carry the support of the Governments concerned. The subject was discussed at the Second Session of the Labour Ministers Conference and, as a result of the decisions then reached, the Government of India drafted a Bill intended to add a New Chapter dealing with the Recognition of Trade Unions and Rights and Liabilities of Recognised Trade Unions to the Indian Trade Unions Act. This was circulated to all Provincial Governments for opinion after consultation with the interests concerned. In the light of the criticisms received, the Government of India drafted a new Bill on the subject and this was introduced in the Central Legislative Assembly by the Hon'ble the Labour Member on the 13th November 1943, and became law in November 1947.

Besides providing for compulsory recognition of representative trade unions by the employers the Act specifies certain acts as unfair practices on the part of employers and recognised trade unions and provides for punishment of a fine in the case of employers and withdrawal of recognition in the case of trade unions.

Statistics.—As far as statistics of registrations are concerned, tables showing the numbers of registered unions on all the provincial registers in India and Pakistan at the end of each financial year together with the membership and income of those which furnished returns, have been incorporated in this section in some previous issues of this publication. A table giving this information for the years 1927-28 up to 1939-40 was published at page 487 of the Edition for 1942-43. As we have pointed out in the opening paragraphs of this Chapter, the Government of India and the Provincial Governments have stopped the publication of annual reports on the administration of Labour Laws for the duration of the War.

The Government of India have, however, commenced publishing short and abridged reports containing the more important statistics in the *Indian Labour Gazette*. The latest year for which information of an All-India character is available is for the year ending 31st March 1943 and this has been given in an article appearing in the June, 1945 issue of that publication. The statistics relating to registered trade unions for that year are reproduced below:

Province	Number of Registered Trade Unions	Number of Unions making returns of Membership	Membership of the Unions making returns
Ajmer-Merwara ..	3	3	946
Assam ..	9	9	2,486
Bengal (E. and W.)	330	184	286,255
Bihar ..	49	31	73,423
Bombay ..	93	79	172,679
C. P. & Berar ..	53	27	13,748
Delhi ..	40	19	30,501
Madras ..	154	141	88,270
N.-W. Frontier Province ..	4	2	328
Orissa ..	4	4	1,494
Punjab (E. and W.)	22	21	8,308
Sind ..	30	39	12,431
United Provinces ..	34	34	36,734
Trade Unions whose objects were not confined to one Province ..	31	30	161,774
Total ..	865	573	889,385

INDUSTRIAL DISPUTES BILL

Recent years have witnessed a great deal of activity both on the part of the Central Government and of the Provincial Governments and the States in considering and enacting measures for the prevention and settlement of industrial disputes. Till the year 1929 the only law relating to the settlement of trade disputes was the Employers and Workmen (Disputes) Act of 1860. The Royal Commission on Indian Labour referred to the necessity of establishing a permanent statutory machinery to deal with labour disputes. The Government of India in a Bill which they introduced in 1934 to make the 1929 Act permanent included in it some of the suggestions made by the Commission. This Bill was passed in April 1934. In 1936 an amending Bill was introduced which was passed

into law in 1938. This new legislation provided for the appointment of Conciliation Officers, extended the scope of the Act to cover certain other trade disputes and some other public utility services.

The war showed certain inherent defects in this legislation and made it necessary for Government to supplement the Law by enforcement of Rule 81 (A) of the Defence of India Rules. According to this Rule, the Government could refer any dispute for arbitration and enforce the award. The enforcement of this Rule in the large number of cases proved of great benefit both for labour, industry and the community as it considerably assisted in diminishing industrial strife. The enforcement of this rule was, however, a temporary measure and it was decided therefore, in 1946 to introduce the Industrial Disputes Bill in the Legislative Assembly which was passed into an Act in March 1947.

The Act provides for setting up of two types of organisations, namely, (1) Works Committees and (2) Industrial Tribunals for the prevention and settlement of disputes. It makes conciliation compulsory in all disputes in public utility services and optional in other cases.

Section 22 of the Act declares any strike or lock-out in a public utility service to be illegal if it is commenced or declared (i) without giving to the employer or employees, as the case may be, a notice of strike or lock-out in a prescribed manner, within six weeks before striking or declaring a lock-out, or (ii) within 14 days of giving such notice, or (iii) before the expiry of the date of strike specified in any such notice, or (iv) during the pendency of any conciliation proceedings before a conciliation officer and 7 days after the conclusion of such proceedings, etc. The Act also prohibits certain other strikes and lock-outs and declares them illegal if commenced or declared during the pendency of (i) conciliation proceedings before a Board and 7 days after the conclusion of such proceedings; (ii) proceedings before a Tribunal and 2 months after the conclusion of such proceedings, or (iii) during any period in which a settlement or award is in operation, in respect of any of the matters covered by the settlement or award.

Provinces and States.—Following upon the publication of Bombay Departmental Enquiry Committee's Report in 1934, the Bombay Government enacted the Trade Disputes Conciliator Act in 1934. This was a simple measure which provided for the appointment of Labour Officer and for instituting conciliation machinery. When the Congress came into power, this measure was replaced by a more radical one, known as the Bombay Trade Disputes Act of 1938.

During the War, most of the Provinces made a liberal use of Rule 81 (A) under the Defence of India Rules. With the cessation of hostilities, however, many Provinces introduced Bills to enact legislation for prevention and settlement of industrial disputes. In 1946, Bills were introduced in the Provincial Legislatures by the Governments of C.P. and Berar, Sind and Bombay. The C.P. and Berar Industrial Disputes Settlement Act was passed in May 1947 and the Sind Industrial Relations Act in June 1947. The Bombay Industrial Relations Bill received the assent of the Governor-General in April 1947.

The new Bombay Act is an advanced piece of legislation and covers a number of matters apart from those relating to the Prevention and Settlement of Disputes. For the first time, it provides for the establishment of Labour Codes and increases the powers of Government to make arbitration compulsory. It also provides for setting up of Joint Committees and for maintenance of records of labour conditions in each undertaking.

Indore, Cochin, Travancore and Baroda are some of the States which have passed legislation for the prevention and settlement of industrial disputes more or less on the model of the Indian Trade Disputes Act of 1929. There are, however, slight variations from the Indian Act and these relate to certain categories like public utility workers, appointment of conciliation officers, etc. The Baroda Act provides for a permanent Board of Conciliation consisting of a chairman and two persons appointed by the Government. It also requires one month's notice for strikes and lock-outs in public utility services as against 14 days' notice in the Indian Act. Under the Indore Act, picketing of any kind in furtherance of any illegal strike or lock-out, or any meeting convened with a view to calling into question the Government orders on the report of the officer or the Board is also illegal and liable to punishment.

Statistics

Statistics of industrial disputes in the sub-continent have been collected only since 1921. The following table sets out the number of disputes in some of the years since 1921, the number of persons affected by these disputes and the total time lost in man-days:

Year.	Number of disputes.	Number of workpeople involved.	Number of working days lost.
1921 ..	396	600,351	6,984,426
1926 ..	128	186,811	1,037,478
1931 ..	166	203,008	2,408,123
1936 ..	157	169,029	2,358,062
1939 ..	406	409,189	4,092,795
1940 ..	322	452,539	7,577,281
1941 ..	350	291,054	3,330,503
1942 ..	694	772,653	5,779,965
1943 ..	710	625,088	2,342,287
1944* ..	658*	550,015	3,447,306
1945 ..	820†	747,530	4,054,499

* Results not known in 5 cases and demand of known in 1 case. † Result not known in case and demand not known in 6 cases.

Employment of Children.—The Government of India passed an Act in the Central Legislature in 1938 for the prevention of the employment of children who have not completed their tenth year in any occupation connected with the transport of passengers, goods or mails by railway or in any occupation involving the handling of goods within the limits of any port which for the time being any of the provisions of the Indian Ports Act, 1908, are applicable.

By an Amending Act passed in 1939 the employment of any child who has not completed a twelfth year is prohibited in any workshop connected with bidi making; carpet

weaving; cement manufacture including bagging of cement; cloth printing, dyeing and weaving; manufacture of matches, explosives and fireworks; mica-cutting and splitting; shellac manufacture; tanning and wool cleaning.

The prohibition, however, does not extend to any workshop wherein any process is carried on by the occupier with the aid of his family only and without employing hired labour or to any school established by or receiving assistance or recognition from a Provincial Government.

Provincial Governments are empowered by the Amending Act to add any description of process to the industries already scheduled in which the employment of children under twelve years of age should be prohibited.

TEA EMIGRANT LABOUR ACT

One of the earliest pieces of labour legislation in the Indian sub-continent was the Assam Labour and Emigration Act of 1901 which was designed mainly to regulate the recruitment and engagement of indentured labour for the tea plantations in that province. Owing to altering conditions, it had not been possible for many years to subject plantation workers to penal contracts and although several attempts had been made to improve the law by amendments of the main Act in 1908, 1915 and 1927 and by the issue of rules and regulations, these proved to be abortive and ineffective and the law on the subject became extremely confused. The whole question was subjected to a thorough examination by the Government of India and the Provincial Governments in 1923-28 and by the Royal Commission on Indian Labour in 1929-30.

The Commission recommended that the existing legislation should be replaced by a new enactment which should provide: (a) that no assisted emigrants from controlled areas should be forwarded to the Assam tea gardens except through a depot maintained either by the tea industry or by suitable groups of employers and approved by the Provincial Government; (b) that the Government of India should have power to frame rules regarding transit arrangements, in particular for the laying down of certain prescribed routes to Assam and for the maintenance of depots at necessary intervals; (c) that the power conferred by section 3 of the 1901 Act to prohibit recruitment for Assam in particular localities should be withdrawn immediately; (d) that the existing Assam Labour Board should be abolished and that in its place a Controller of Immigrants in Assam should be appointed to look after the interests of emigrants from other Provinces; (e) that every future assisted emigrant to an Assam tea garden should have the right after the first three years to be repatriated at his employer's expense, and that the Controller should be empowered to repatriate a garden worker at the expense of the employer within one year of his arrival if it is found necessary on the grounds of health, unsuitability of the work to his personal capacity or for other sufficient reason; and (f) that in the event of the recurrence of abuses, Government should have power to reintroduce in any area the prohibition of recruitment otherwise than by means of licensed garden-stirars and licensed recruiters.

The Government of India implemented these recommendations in the Tea Districts Emigrant Labour Act, 1932, which was brought into effect from the 1st October 1933.

The first object of this Act is to make it possible, on the one hand, to exercise all the control over the recruitment and forwarding of assisted emigrants to the Assam tea gardens as may be justified and required by the interests of actual and potential emigrants; and, on the other hand, to ensure that no restrictions are imposed which are not justified. Provincial Governments are empowered, subject to the control of the Government of India, to impose control over the forwarding of assisted emigrants (chapter III) or over both their recruitment and their forwarding as occasion may dictate (chapters III and IV).

No license is required for recruiters but the forwarding of recruits to Assam must be made through the prescribed routes where arrangements for feeding, rest and medical treatment have been made and by authorised forwarding agents. It is made unlawful to assist persons under 16 to migrate unless they are accompanied by their parents or guardians. A married woman who is living with her husband may only be assisted to emigrate with the consent of the husband.

Repatriation.—Full effect was given to the Royal Commission's recommendations regarding repatriation (sections 7 to 11) and it is further provided that where an employer fails to make all the necessary arrangements for the repatriation of a worker within fifteen days from the date on which a right of repatriation arises to an emigrant labourer, the Controller may direct the employer to despatch such labourer and his family or to pay him such compensation as may be prescribed within such period as the Controller may fix (sections 13 and 16).

Section 3 of the Act makes provision for the appointment of a Controller of Emigrant Labour with some staff and possibly one or more Deputy Controllers for supervising the general administration of the system which the Act seeks to establish. The charges for this establishment are to be met from an annual cess called the Emigrants Labour Cess which is to be levied at such rate not exceeding Rs. 9 per emigrant as the Central Government may determine for each year of levy.

The cess is collected by the Controller by the sale of certificates of emigration. Every assisted emigrant has to be provided by the employing interest on whose behalf he was recruited with such a certificate. All particulars about the emigrant together with a running record of the details of his employment in Assam are given on it. Failure to provide a certificate is punishable with a fine which may extend to Rs. 500. The rate of cess was reduced by the Government of India from Rs. 6 to Rs. 3 from 1st October 1933. It was subsequently raised to Rs. 4 for the year commencing 1st October 1939 which rate continues for the current year.

The provisions of this Act were intended, in the first instance, to apply only to emigration for work on tea plantations in eight specified

districts in Assam, but power is retained to extend its application to other industries and to other districts in Assam if necessary.

The following details taken from the latest available Administration Report of the Controller of Emigrant Labour would be of interest:—

During the year 1945-46, the number of assisted emigrants was 42,939. There were also 9,154 non-assisted emigrants. The *per capita* cost of recruitment was Rs. 90-4-6 and showed an increase of Re. 1 over the previous year. The repatriation charges remained the same as in the previous year being Rs. 23-12-0.

The number of adults and children living on tea estates in Assam was 5,81,222 and 5,60,217 respectively making the total of 11,41,439.

During the course of the year the Indian Tea Association created a Labour Department to look after the welfare of labour.

SHOPS LEGISLATION

The first Province in the sub-continent to enact legislation for the regulation of hours of work and conditions of employment, in shops and commercial establishments was Bombay where the Legislative Assembly passed the Bombay Shops and Establishments Act on the 30th October 1939. Three other Provinces in India—Bengal, the Punjab and Sind—enacted similar laws during the year 1940. The Punjab Act was extensively amended by virtue of the Punjab Trade Employees (Amendment) Act, 1943. The Sind Act was amended in 1944. The Bombay Act was brought into effect from 15th November 1940. The Punjab Trade Employees' Act came into force with effect from 1st March 1941, the Bengal Shops and Establishment Act from 1st April 1941 and the Sind Act from 20th November 1941.

The question of framing Central legislation for the grant of a weekly holiday to shop workers in those Provinces which have no legislation on this subject was discussed at the Second Session of the Labour Ministers' Conference and the Conference decided that such legislation was necessary. The Government of India drew up a Bill on the subject and this was passed by the Central Legislature with the title of the Weekly Holidays Act, 1942, early in that year. The option for the application of this Act in any Province which has no Shops' Legislation rests with the Government of that Province.

We shall first proceed to describe the Bombay Shops and Establishments Act in some detail and we shall then give a brief outline of the manner in which the Bengal, the Punjab and the Sind Acts differ from the Bombay prototype.

The Bombay Act deals with three main types of establishments: shops; commercial establishments; and restaurants, eating houses, theatres and other places of amusement or entertainment.

In Bombay City in 1945 there were 42,432 shops, 7,088 commercial establishments and 3,775 restaurants and theatres, etc., employing 82,822, 37,075 and 26,423 workers respectively to which the Act applied.

Application.—This Act covers commercial establishments, shops, theatres or any other places of public amusement or entertainment, restaurants or eating houses, government Offices and offices of Local Authorities; clubs and residential hotels; bazaars or fairs for the sale of work for charitable or other purposes from which no profit is derived; hospitals, nursing homes and dispensaries; stalls and refreshment rooms at wharves and docks; chemists' and druggists' shops as are approved by the Provincial Government by a general or special order; and persons exclusively employed in the collection, delivery or conveyance of goods are excluded from the operation of the Act.

The Act does not apply to persons occupying positions of management or employed in a confidential capacity; persons whose work is inherently intermittent such as that of travellers, canvassers, watchmen and caretakers; and persons exclusively engaged in preparatory or complementary work, such as clearing or forwarding clerks or messengers.

Shops.—Section 7 of the Act prescribes the maximum hours of work of persons employed in shops at 9½ per day. Every person employed in a shop is to be given at least one day in a week as a holiday with pay and no person can be employed for more than five continuous hours unless he has had an interval of rest for at least half an hour. The Act makes it compulsory that every shop shall be closed not later than 9 p.m. Power has been given to the Provincial Government to grant exemptions in the case of certain types of shops, such as chemists' and druggists' shops, etc.

In order, however, that compulsory closure may not affect adversely the interests of shop-keepers it is necessary to prevent street trading after the shop closing hour, and provision has therefore been made to prevent any person from carrying on the sale of any goods after 9 p.m. in or adjacent to a street or public place. This does not, however, apply to the sale of newspapers.

The maximum spreadover has been fixed at 12 hours a day, but in order to cover the cases of shops which deal in perishable goods and whose busiest periods are early in the morning and late at night provision has been made for the extension of the spreadover to 14 hours, provided such shops close for not less than three hours between the opening and the closing time.

Commercial Establishments. In the case of these establishments the Act provides that the total number of hours that can be worked in any one month should be restricted to 208. Taking 26 as the number of working days in any one month, this works out at an average of 8 hours per day. No overtime is permitted in the case of shops, but in commercial establishments overtime to the extent of 120 hours per year is permitted.

The provision for holidays is on the same basis as in shops, but the periods of work and intervals of rest of persons employed in commercial establishments are so arranged that they shall not together be spread over more than 18 hours

in a day. The Provincial Government is, however, empowered to grant exemptions from this requirement for not more than six days in every calendar year for each person who may be required to work on account of stock-taking, making of accounts, settlements or on other prescribed occasions.

Restaurants and Places of Amusement.—For these establishments, a ten-hour day has been prescribed with a spreadover of 14 hours. No closing is prescribed for these places because they are already subject to regulation by the police or excise departments.

Miscellaneous Provisions.—No special provision has been made in the Act for the hours of work of women employees, and as the Act stands, there is nothing to prevent the employment of women in the types of establishments to be covered by it at night. But, no child who has not completed his twelfth year is allowed to work at all in the establishments covered by the Act.

The hours of work in the case of young persons between the ages of thirteen and seventeen years are restricted to 42 per week and to 8 per day and no young person is permitted to work in any establishment covered by the Act between the hours of seven in the evening and six in the morning.

All overtime work is to be paid for at the rate of a time and a quarter.

Enforcement of the Act is in the hands of the local authorities subject to such supervision of the Provincial Government as may be prescribed. Employers who contravene any of the provisions of the Act are liable, on conviction, to a fine which may extend to Rs. 25 for the first offence and upto Rs. 250 for every subsequent offence.

The Act in the first instance was made applicable to the City of Bombay, the Ahmedabad Municipal Borough and Cantonment, the Poona City and Suburban Municipal Borough and Cantonment, and the Sholapur and Hubli Municipal Boroughs. The Act was extended to Barsi in 1943.

Other Acts.—The Sind Act is applicable to almost the same classes of establishments as are covered by the Bombay Act. The Bengal Act grants exemption from the provisions of the Act relating to restrictions in hours of sale, viz., those for the closing of shops for one and a half days in the week and after 8 o'clock each night to shops dealing in perishable commodities like meat, vegetable, flowers, etc.; shops dealing in articles required for obsequial ceremonies; and to shops dealing in tobacco, pan, newspapers, etc. and such seasonal commercial establishments and the clerical establishments of such seasonal factories as may be exempted by Government.

The Punjab Act, has a somewhat wider application than any of the three other Acts; but, shops dealing in perishables, medicines and newspapers; all places of public entertainment; clubs and residential hotels; barbers and hair-dressers; stalls at railway stations; and caretakers, porters, travellers, canvassers, domestic servants, etc., are exempted only from the operation of the sections

dealing with opening and closing hours and the 'close day'. By virtue of the amending Act of 1943, all Government and Railway Offices, essential services, refreshment rooms and stalls at railway stations and dining cars, offices of lawyers, auditors or registered accountants, hospitals and dispensaries and factories are exempted from the operation of any of the provisions of the Punjab Act.

Whereas the Bombay Act prescribes 9 p.m. as the closing hour for shops, the Bengal Act prescribes 8 p.m., while in the Punjab this varies with the seasons of the year—not later than 10 p.m. in the summer, and 9-30 p.m. in the winter. In Sind, the 1944 Amending Act altered the closing hour of shops from 9 p.m. to 10 p.m. In actual practice, however, this is made effective only during the summer months, viz., from March to October. During the winter months of November to February the closing hour is altered to 9 p.m. by Government notification.

The Punjab is the only area which provides for opening hours—6 a.m. in summer and 9-30 a.m. in winter and the Punjab Act, therefore makes no provision for limiting the spreadover as the other Acts do.

As far as hours of work are concerned the Bombay Act places a daily limit in respect of shops and places of amusement and a monthly limit in respect of commercial establishments. In contradistinction to this, the Sind Act prescribes a maximum of 54 hours per week for persons employed in commercial establishments, the Bengal Act 56 hours a week for shops and the Punjab Act 54 hours a week for shops and commercial establishments.

The Bengal Act does not place any limitations on hours of work—daily, weekly or monthly—in commercial establishments but places a maximum limit of ten hours per day for work in shops and in places of amusement. The Punjab Act prescribes a uniform ten hour day as the maximum that may be worked in any establishment covered by it.

The Punjab Act endeavours to restrict dual employment by providing that the hours worked by an individual employee with two or more employers should all be taken into account for purposes of recording. Whereas payment for overtime beyond the permissible daily hours is to be made at a time and a quarter in Bombay, Bengal and Sind, the Punjab Act requires overtime in excess of daily hours to be paid for at double rates.

Leave with Pay.—While the Bombay, Punjab and Sind Acts provide that all the employees covered by these Acts should get one holiday every week; the Bengal Act goes much further and prescribes that all employees should get one and a half holidays in each week. The Bengal and the Punjab Acts, moreover, prescribe that every shop shall also be closed for at least one and a half days and one day respectively in each week.

As far as employment of children is concerned the Bombay and the Sind Acts provide that no child below the age of twelve years shall be employed in any establishment covered by the Act. The Bengal Act has no provisions with

regard to the non-employment of children whereas the Punjab Act prescribes a minimum age limit of fourteen years. The Punjab Act also prohibits the employment of any young person in any shop or commercial establishment to which the Act applies before 8 a.m. or after 7 p.m. Hours of work are not to exceed seven per day or 42 per week and no young person is to be asked to work for more than 3½ hours at one stretch without an interval for rest.

Whereas the Bombay and the Sind Acts make no provision for the prompt payment of wages, the Bengal Act prescribes that all wages must be paid within ten days of the end of the period for which they are due and the Punjab Act prescribes a fortnight for this purpose.

The Bombay Act makes no provision for leave with pay: all the three other Acts do. Sind—15 days' leave with pay during every year of service to lapse if not availed of within two months at the end of the year; Bengal—14 days' privilege leave with full pay after every twelve months continuous employment with right to accumulate up to 28 days and, in addition, casual leave on half pay for ten days in every year; and Punjab—14 days for a year's or 7 days for six months' continuous employment.

Fines.—Two provisions which are to be found in the Punjab Act but not in the Bombay, Bengal and Sind Acts deserve special mention: (1) no employer may fine any employee to an extent greater than three pices in the rupee of his monthly wages; and (2) One month's notice or one month's pay in lieu of notice to be given by the employer for termination of service.

The Central Weekly Holidays Act is a very simple measure as compared with the four Provincial prototypes. As its title implies it is merely confined to making provision for the grant of a weekly holiday in certain classes of establishments. Every shop must remain entirely closed on one day of the week. All persons employed otherwise than in a confidential capacity or in a position of management in any shop, restaurant or theatre must be allowed a holiday of one whole day in each week. Provincial Governments are empowered, if they so desire, to close shops for an additional half-day in the week or to permit employees in theatres and restaurants to enjoy an additional half-day holiday in every week. No deduction or abatement is to be made from wages in respect of any holiday that may be granted under this Act. No provision is made in the Central Act for employees in banks and offices.

The Act contains the usual provisions for inspection, penalties, rule-making power and enforcement. The Weekly Holidays Act was brought into operation in the N.-W. F. Province, Bihar, Baluchistan, Ajmer-Merwara and Madras during the year 1943, while the Govt. of Orissa is contemplating extension of the Act to that Province.

The U. P. has also now enacted legislation for the regulation of hours and conditions of work in shops and commercial establishments, the Act having received the assent of the Governor-General in August, 1947. The general set up is similar to that of the Punjab Act of 1940.

The Sind and the Bombay Acts have placed the duty of enforcement of these acts on the Local Authorities, whereas the Bengal and the Punjab Acts leave enforcement with the Provincial Governments.

The Bombay Municipality has appointed one Chief Inspector and five senior and eleven junior Inspectors for the inspection work in the Municipal limits of the City.

The Government of India have published a review on the working of Shops Legislation in India at pages 293 to 301 of the March 1945 issue of the *Indian Labour Gazette*.

Committee Report.—The report of the Committee appointed by the Government of Bombay to review the working of the shops Act has now been published. Among the more important recommendations are:

Leave with pay for employees, compulsory weekly closures of shops and commercial establishments, a substantial reduction in the normal working hours in all establishments, except commercial establishments, and the application of the Act to the areas with a population of 25,000 and more.

The Committee has suggested material and substantive changes in the Act. It recommends that the scope of the Act should be extended by including in its operation residential hotels and clubs and widening the definitions of "commercial establishment" and "shop." The Act should be applicable to local areas with a population of 25,000 and more.

The total exemptions from the provisions of the Act should be severely curtailed and partial exemptions should be provided. Similarly registration of establishments should be provided and the opening and closing hours of establishments should be fixed.

Weekly hours for shops, daily and weekly instead of existing provisions for monthly) hours for commercial establishments should be fixed. A substantial reduction in the normal working hours in all establishments, except the commercial establishments should be effected.

Provision for identity cards for employees in residential hotels, restaurants and eating houses be made. Women should be prohibited from work before 7 a.m. and after 7 p.m. and the age-limit of a child should be raised from 2 to 14. Fourteen days' leave with pay with freedom to accumulate upto 28 days should be provided.

The Factories Act should be amended, so that the employees in clerical establishments and factories may be governed by it.

These are tentative suggestions which will be taken into account when drafting a Bill or amending the existing law on the subject, after Government have considered the committee's report in detail.

INDUSTRIAL STATISTICS ACT

The collection of statistics regarding wages, conditions of employment and other matters relating to industry in the sub-continent had thereto been effected through the goodwill and voluntary effort of the industrial units concerned. This method was not considered satisfactory. As a matter of fact, the Government of Bombay had introduced a Bill for the

collection of statistics in the local Legislative Council as early as in 1924 but that Bill was dropped owing to the strong opposition put up by employers' interests against the adoption of such a measure.

Practically every Commission and Committee appointed in connection with matters relating directly or indirectly to industry in the sub-continent has stressed the necessity for the passing of a Statistics Act. The subject was discussed at the Eleventh Session of the Industries Conference held in 1939 and again at the Second Conference of Labour Ministers held in 1941 and it was decided that such a measure should be adopted. The Government of India introduced a Bill on the subject in the Central Legislative Assembly on the 27th February 1942 and this was passed into law at the same session with the title of The Industrial Statistics Act, 1942.

The Act permits the collection of statistics with regard to any of the following matters: (1) prices of commodities; (2) attendance; (3) living conditions including housing, water-supply and sanitation; (4) indebtedness; (5) rents; (6) wages and earnings; (7) provident and other funds provided for labour; (8) benefits and amenities provided for labour; (9) hours of work; (10) employment and unemployment; and (11) industrial and labour disputes. Penalties are provided for persons refusing to supply information or failing to furnish the required returns. Provincial Governments are empowered to appoint an officer to be the Statistics Authority for the purposes of the collection of any statistics under the Act and that Authority, when once appointed, has the power to call upon employers to furnish the information required. Penalties are also provided for in the Act for improper disclosure of information or returns by persons engaged in the collection of the information or the tabulation of the data.

The Industrial Statistics Act was brought into force in Bombay with effect from the 1st March 1943 and in old undivided Bengal with effect from the 15th March 1943. In Bengal the Labour Commissioner was also appointed the Statistics Authority.

The Government of the Central Provinces and Berar have published Rules in connexion with the introduction of this Act in the Province.

DEMAND FOR UNIFORMITY

The impetus towards enacting measures to improve the lot of the working classes, diffused in intensity from one Province to another and there were wide gaps between labour amenities in different parts of the sub-continent during the regime of the first Congress Governments (1937-39). These disparities, it was recognised must inevitably tend to weaken the competing power of those Provinces where labour laws placed greater restrictions and imposed heavier financial burdens on the employers.

With a view to achieving some uniformity in Labour legislation the Government of India convened a Conference of Labour Ministers from the Provincial and the State Administrations at New Delhi in January 1940. The agenda consisted of an examination of the shortcomings of the existing labour laws and also of

proposals for new legislation. A Second Labour Ministers' Conference which was held at New Delhi in January 1941 was preceded by separate Conferences between the Labour Member of the Government of India and the representatives of the two Federations of Employers' Associations and the All-India Trade Union Congress at Calcutta at the beginning of the year. A similar procedure of separate conversations with the representatives of Capital and Labour was followed prior to the third session of the Conference of Labour Ministers which was held at New Delhi on the 30th and 31st January, 1942.

At the Third Conference of Labour Ministers, Mr. Firoz Khan Noon who was then the Labour Minister in the Government of India said that it was for the consideration of the Conference whether for the future it would not be healthier to develop the practice of having joint meetings of employers, workmen and representatives of Governments leading to the establishment of an Industrial Council which the Royal Commission on Labour had suggested.

TRIPARTITE CONFERENCE

So a plenary conference of the representatives of workers, employers and Governments met on August 7, 1942 at New Delhi and decided that a collaborative machinery composed of the representatives of Governments, employers and workers in the sub-continent should be established forthwith for the consideration of all questions relating to the conditions of labour and that the constitution of the Plenary Conference should be as follows: Chairman—The Labour Member of the Government of India; Members—(1) Three representatives of the Government of India including one representative to represent Minor Administrations; (2) Eleven representatives of Provinces; (3) Six representatives of industrially important States; (4) Two representatives of the Chamber of Princes to represent other States; (5) Eleven representatives of employers to be nominated by Government, four each in agreement with the Employers Federation of India and the All-India Organization of Industrial Employers respectively and the remaining three to represent other classes of employers; and (6) Eleven representatives of employees to be nominated by Government, four each in agreement with the All-India Trade Union Congress and the Indian Federation of Labour respectively and the remaining three to represent other employees' interests.

It also decided that a Standing Labour Committee composed of the following members should be constituted: (1) Two representatives of the Government of India of whom one—the Labour member—would be the Chairman; (2) One representative each of the Governments of Bengal (now W. Bengal), Bombay and the United Provinces to be selected by the Governments of these Provinces; (3) Three representatives of the remaining Provinces, one each to represent (a) Madras and the Central Provinces and Berar, (b) Assam, Bihar and Orissa, and (c) Punjab (now E. Punjab), Sind and the North-West Frontier Provinces (now in Pakistan) to be selected by agreement between the Governments of these Provinces preferably by a system of rotation; (4)

Three representatives of Indian States including one representing the Chamber of Princes; and (5) Five representatives each of Employers and Employees, four from each group being nominated by the Government of India in agreement with the two leading All-India Associations of Employers and the two main Associations of Employees, the fifth Member in each group being nominated by the Labour Member.

The second and the third sessions of the Tripartite Labour Conference were held at New Delhi on the 6th and 7th September, 1943 and on the 27th and 28th October, 1944, respectively.

The main function of the Standing Labour Committee is to consider and examine such questions as might be referred to it by the Plenary Conference or by the Central Government taking also into account suggestions made by Provincial Governments, States, and representative organizations of Employers and Workers. Whereas the Plenary Conference is to meet at least once in every year, the Standing Labour Committee is to meet as often as it might be convened by the Central Government for the consideration of questions that may be before it.

Industrial Committees.—In the light of the experience it was found that the subjects for the Conference or the Committee should be divided into (1) those dealing with general problems and (2) those covering all concrete questions relating to labour welfare and administration of labour laws. The former to be assigned to the Plenary Conference and the latter to be dealt with by a new body called the Labour Welfare Committee. The Standing Committee should cease to be a deliberative body and should act as the agent of the Conference.

It has now been decided to set up Industrial Committees for important industries. A Committee for Plantation Labour has already been constituted and similar Committees are being organised for coal mines, cotton textiles, jute mill industry, etc.

The question of re-constituting the tripartite machinery was again placed on the agenda of the eighth Labour Conference held in April 1947. In view of the establishment of Industrial Committees, proposals were also made for the abolition of the Standing Committee but the workers' representatives were opposed to this change.

As there was imperative need after the advent of the Interim Government in September 1946 for a co-ordinated and uniform labour policy throughout the sub-continent, it was felt that the co-operation of the Provincial and State Governments was necessary before giving a final effect to Government's programme of amelioration of labour conditions. Separate conferences first with the Provincial Labour Ministers and then with the States Labour Ministers were, therefore, organised. Government's labour programme was discussed in detail at both these Conferences. This Conference was followed by a joint Conference of Provincial and States Labour Ministers. At the end of the year 1946 a special Conference of employers and workers was also held to consider the five-year programme.

WAGES, HOURS OF WORK AND CONDITIONS OF EMPLOYMENT

Although some associations of employers such as the Indian Jute Mills Association and the Millowners' Association, Bombay, have made efforts during the last few years to secure a certain measure of standardisation in wage rates and conditions in the concerns controlled by their members, conditions of work and employment in Indian industry vary widely not only between industry and industry and centre and centre but also between unit and unit in the same industry and in the same centre. At the best, therefore, it can only be possible to give broad generalisations for the more important industries and indications as to where further information can be found. As far as conditions in factories are concerned, the various provincial annual factory administration reports and the summaries compiled by the Government of India on the basis of these reports, when published, used to give valuable information on hours of work, etc. Information on conditions in Indian mines used to be similarly contained in the annual all-India mines administration reports. The four Reports on a Wage Census in the perennial factories in the Bombay Presidency issued by the Bombay Labour Office and the 36 Reports issued by the Labour Investigation Committee, however, contain detailed and comprehensive information relating to wages and earnings in principal industries in the sub-continent.

WAGE RATES

Except where wages are fixed as a result of awards of tribunals appointed by various Governments, there is as yet no wage fixing machinery in the sub-continent although the question of setting up such machinery has recently been under the consideration of the Government of India and the Minimum Wages Act has already been passed; and with a few exceptions, there are no trade agreements or union rates. One important exception is the cotton textile industry in Ahmedabad where the Textile Labour Association and the Ahmedabad Millowners' Association have been able to reach agreements regarding certain wage rates.

Except in the case of a very few firms like General Motors (India), Ltd., time rates of wages are not hourly rates, as in the West, but are daily or monthly rates or, where wages are paid weekly or fortnightly, daily and weekly or fortnightly rates.

The skilled engineering trades like fitting, machining, etc., are often divided into several grades and sub-grades. Each individual Administration or unit has its own arbitrary method of grading but railway workshops and Government Ordnance factories lay down standards for each grade and for the trade tests the passing of which alone entitles an individual workman to promotion. The Government of India have been recently engaged in standardising sub-occupations in the principal engineering trades and Committees with the Chairmen of the National Service Labour Tribunals as Chairmen have been appointed for this purpose.

In their five-year programme for the amelioration of labour conditions, the Government of India have decided to proceed with the question of the standardisation of occupations and wages. Already during the year considerable progress in the matter of standardisation of wages in the cotton textile industry has been brought about as a result of an award of the Industrial Court in Bombay. Similarly in Madras, as a result of a recent award, a minimum wage of Rs. 26 per month has been laid down for the cotton mills in Madras City both for men and women.

Personal competence and efficiency, supply and demand and bargaining power are the main factors which determine the wage an individual should get in the vast majority of concerns where no grades have been fixed. Where monthly rates of wages are paid the "month" has a widely varying meaning. It may be the calendar month or the number of working days in the month, or a month of 26 or 27 working days, or the Hindu month or a "book" month—a month of so many complete weeks, or a month of so many hours, as in the case of the G. I. P. Railway where monthly rates are for a month of 208 hours.

Section 9 of the Payment of Wages Act prescribes that the amount of deduction made from a monthly rate for absence from duty shall in no case bear to the wages payable a larger proportion than that which the period of absence bears to the number of working days in the wage period.

Allowances.—Practically no industrial unit in the sub-continent today pays a consolidated rate. During the World War of 1914-18 and for a few years later, dearness or war or grain allowances were given in addition to a "basic" wage. "Basic" did not mean some fixed or prearranged amount universally paid at any particular moment; it applied to the amount of wage an individual received at the time when the allowance was given to him. A newcomer to industry would not necessarily get the same "basic" wage and allowance given to his predecessor: he might get the same but he would generally get a lower "basic" wage and the allowance or a consolidated rate. The dearness allowances granted to industrial workers in the sub-continent during the First World War were never completely taken away.

The few years preceding the commencement of the Second World War were characterised by insistent demands by Labour for the consolidation of these allowances with "basic" rates of pay. With the advent of the Second World War, however, dearness allowances were again reintroduced in almost all industries in the sub-continent as a separate item except in the Jute Mill industry where an increase in the basic wage was granted and subsequently an allowance called "amenity allowance" given.

The payment of wages in tea plantations in Assam and Bengal is on the *hazira* and *ticca* system. In October 1946, basic wage rates were slightly increased. Foodgrain concessions.

captious to be paid. A dearness allowance of two annas per day for adults and one anna for children was also given as from February 1947.

In South Indian tea, coffee and rubber plantations, payment is on a daily basis. From February 1947, the dearness allowance paid, foodgrain concessions given etc., were consolidated into a district allowance paid in cash.

It would be of interest to observe that certain industrial concerns in the sub-continent have adopted the Halsey Weir or Bedaux point systems of wage payment. The International Bedaux Company of New York and Amsterdam which is the largest organisation of industrial consultants in the world extended its activities to the Indian sub-continent in 1936. The Indian branch of the Company is known as the Eastern Bedaux Company and its address, Construction House, Ballard Estate, Bombay.

RATES OF WAGES

In view of what has been stated above it must be obvious that the rates of wages paid in Indian industries must vary widely. Wage data relating to agricultural labour are contained in a series of reports of quinquennial census conducted in certain provinces of agricultural wages. The latest report on this subject is the one for Madras relating to the year 1946. The reports of Courts of Inquiry appointed under the Indian Trade Disputes Act and the reports of Provincial Committees appointed by certain Provincial Governments to enquire into wages and conditions of employment of workers in certain industries also contain information relating to wages.

The collection of satisfactory wage statistics is always an exceedingly difficult matter and more particularly so in the sub-continent where conditions vary so markedly and widely. The necessary preliminaries to the conduct of any satisfactory enquiry into wages in sub-continent therefore, must be (1) the establishment of a uniformity of method, (2) the standardisation of occupational terms (as pointed out above, this is now being attempted) and (3) the thorough education and instruction of the clerical staffs

of the units to be covered in the proper use of the standardised designations and in the accurate filling up of the required returns.

Since its establishment in 1921, the Labour Office of the Government of Bombay has conducted five enquiries in the years 1921, 1923, 1926, 1933 and 1937 into the wages of cotton textile mill workers in the Province of Bombay, an enquiry into agricultural wages covering a period of twenty-three years from 1900 to 1922; an enquiry into the wages of peons in Government and commercial offices in 1922; enquiries into the wages of all municipal employees in the Province in 1924, of clerical employees in Railway and Commercial offices in Bombay City in 1925, of printing press workers in Bombay City in 1929, of workers employed in the building trade in Bombay City in 1935, and of all employees in the retail trade in various important towns in the Province in the same year.

In 1934 the Labour Office conducted a general wage census covering all workers in all working perennial factories in the Province including cotton mill operatives. The second part of this census covering seasonal factories was conducted in the winter of 1935-36. The results of the special enquiry which that Office conducted into wages in cotton textile mills in 1937 expressly for the Bombay Textile Labour Inquiry Committee have been published in the Committee's Report. The results of all the other enquiries have been published either in special reports or in articles in the *Labour Gazette*.

It may also be noted that one of the functions of the Labour Bureau appointed by the Government of India is to collect comprehensive and up-to-date statistics regarding wages.

EARNINGS

Whilst full and accurate information with regard to wage rates may be of great value for purposes of wage fixation, statistics of earnings alone are of value for the proper assessment and appreciation of the well-being of the workers.

The only data on the subject of earnings in factory industries in the sub-continent are those available in the *Indian Labour Gazette*. The average earnings are reproduced below.

Industries	Average annual earnings during (in rupees)		
	1939	1945	1946
Textiles	293.5	618.7	633.6
Engineering	263.5	653.1	589.8
Minerals and Metals	457.2	601.9	578.6
Chemicals and Dyes	244.8	445.2	484.0
Paper and Printing	332.7	565.8	474.1
Wood, Glass and Stone	194.2	413.6	368.4
Skins and Hides	285.8	536.7	532.1
Ordnance Factories	361.9	642.8	540.8
Mints	367.4	667.0	695.2
Miscellaneous	281.2	508.2	518.8

Pay Periods.—There is a complete absence of uniformity as regards the periods for which payments of wages are made in the various branches of industry in the sub-continent. In scarcely any industry is there a single period of payment. If generalisations may be attempted, the jute industry in Bengal, coal-mines, tea plantations, seasonal factories, oil mills, rice and flour mills and certain classes and groups of workers in Government establishments such as the Security Printing Press at Nasik pay wages for periods of a week.

Payments on a fortnightly basis range between payments for *haptas* or wage periods of fourteen and sixteen days for weavers and spinners respectively in the cotton mills in Ahmedabad to bimonthly payments for periods from the 1st to the 15th and from the 16th to the end of the month in textile mills in Broach and various other centres.

The month is the accepted wage period for the railways (including railway workshops), cotton textile mills in Bombay, Sholapur and several other centres, engineering workshops, dockyards, printing presses and for the persons employed in the mechanical and maintenance departments of almost all concerns which pay wages to process operatives weekly or fortnightly.

Wages are calculated on both the monthly and the fortnightly basis in sugar mills and tanneries.

In the Tata Iron and Steel Works at Tata-nagar where over 50,000 workers are employed wages are paid weekly to men on daily rates and monthly to those on monthly rates.

The most general system of payment in the case of casual labour is that of daily payment. Supervisory and clerical staffs in all industrial establishments are paid on a monthly basis.

The question of shortening the wage period universally in the sub-continent by law to a week or a fortnight has been considered by the Government of India, in consultation with the Provincial Governments and interested persons and bodies, on three different occasions within the last twenty years. Attempts were also made to amend the Payment of Wages Act in such a way as to achieve this object. The position, however, has still remained unchanged.

Hours of Work.—The existing restrictions on hours of work in factories and mines subject to the Indian Factories and Mines Acts have been described in the sections dealing with those Acts. The most important happening last year in regard to hours of work in factories was the reduction of the weekly hours of work from 54 to 48 in perennial factories and from 60 to 54 in seasonal factories. This reduction was effected because of two considerations: (1) It was felt that 9 hours of work in a factory per day was somewhat too long; and (2) the reduction of hours of work might lead to employment of more persons.

Actually, in many industries in this country during the war when three shifts were being worked, the hours of work were not in excess of 8 per day. In the coal-mines in Bihar and Bengal the workers seldom work for more than five to six hours in the day or for more than four to five days in the week. According to a recent investigation the average weekly

attendance of a coalminer was 4.56 days. The cotton textile industry in almost all centres normally works a uniform 8-hour day. A recent development in the cotton textile industry is to work shifts on the basis of what is known as *The Relay System*. By this system a unit does not stop work during the noon recess and continues working throughout a whole shift, different batches of workers being given rest intervals by turns and the remainder being asked to do double substitute work for the time being.

One group of mills in Bombay City have been working three shifts of seven hours each for the last seven or eight years; but here the whole system is highly rationalised. In jute mills which are members of the Indian Jute Mills Association the hours of work are regulated according to the recommendation of the Association.

All the dockyards, many of the larger engineering and almost all the railway workshops work a 48-hour week but the daily hours vary according to the number of hours worked on a short Saturday. The hours in many of the mechanic shops of textile mills and in the larger non-engineering factories are usually half an hour to an hour less than those for process workers and approximately more closely to those in large engineering plants. Factories engaged in the production of metalware, however, work the full number of hours permissible under the Factories Act as also do oil and sugar mills.

Almost all seasonal factories work a uniform 10-hour day for all the days in the week except on the compulsory rest day which is not always on a Sunday especially in the districts where factory owners endeavour, as far as possible to close on the local bazaar day.

In all cases where continuous production is necessary such as in electricity generating plants and certain water pumping stations, cement factories, etc., work is arranged on a system of three shifts—the different shifts changing over every week or fortnight. The change-over is so arranged that every workman gets a rest period of at least twenty-four continuous hours once in one week. A system of change-over of shifts has been widely adopted in cotton textile mills in the City of Bombay but very little progress in this matter has been made in other centres of the industry owing mainly to the opposition of the day shift workers whose services had been engaged prior to the introduction of night work.

As far as railways are concerned, hours of work in railway workshops are controlled by the Indian Factories Act. Most of the larger running sheds have also recently been classified as factories and work in these large sheds is arranged on the basis of three shifts of 8 hours each. In the smaller sheds where work is of a fairly intermittent character, systems of two shifts of 12 hours each obtain but the work of the individual is so arranged as not to work each operative for more than 8 hours.

The question of the hours of work of railway servants was submitted for adjudication to Mr. Justice Rajadhyaksha of the Bombay High Court and his report is now published.

Speaking generally, in the dry docks and workshops attached to Ports two to three shifts of 8 hours each are worked. Only in the Madras Port is there a system of weekly change-over of shifts among dock workers. During the war, overtime was a regular feature in the major ports due to increased activities created by war conditions.

In the major municipalities in the sub-continent the hours of work vary from department to department but are generally 8 to 10 per day. In the Water Works Department, the Pumping Station and Distribution Department in Madras, there is a regular system of change-over of shifts but such a system is not to be found in other municipalities. Speaking generally, municipal workers get a weekly holiday. Although those in the conservancy department get only half a day off per week, there is a certain amount of discontent among the conservancy staff for not getting a weekly holiday but since they are engaged on essential work most of the municipalities find it difficult to grant such a holiday.

As far as the industries not specifically dealt with here are concerned, the hours of work in the case of certain individual units may, by the standards of to-day, be considered excessive but the existing regulation of the hours of a large percentage of industrial labour in the sub-continent had a very salutary effect in bringing about a general reduction to more normal standards in the case of the non-regulated industries and concerns.

RECRUITMENT

Until recently, recruitment of labour in almost all industrial undertakings in the sub-continent, with the possible exception of Railway workshops, was effected through the medium of a recruiting agent, a *Sardar*, a *Mukadlam*, a *Mistri* or a jobber. As a result, however, of the recommendations made on the subject by various Committees—notably the Royal Commission on Indian Labour and the Bombay Textile Labour Inquiry Committee which have condemned this method of recruitment owing to the abuses which have come to be associated with it—many of the larger and more progressive concerns have appointed Labour Officers who are directly responsible for all new recruitment. The old method is, however, still largely prevalent in the majority of the industrial concerns in the sub-continent.

There are various forms in which a recruiting agent is remunerated. He may be a salaried employee with a commission for every recruit he brings in as in the mines and plantations or he may receive a lump sum payment for each recruit or a gang of recruits, or he may be paid a recurring sum for each man he places in employment as long as that man continues in service. Whatever be the method by which an employer remunerates the recruiting agent, it is fairly well known that the agent keeps a continuous hold on the recruit he places in employment and extracts from him recurring sums of money whilst he continues in that employment under pain of losing his job.

The evils in connection with recruitment were most marked in the case of casual or substitute labour. The Millowners' Association, Bombay, have dealt with the problem by establishing what is known as the "Badli Control System." Daily casual vacancies are filled only from card holders and whenever there is a permanent vacancy it is filled from these card holders. The evil influence of the jobber is thus eliminated. The system has been highly commended by the Textile Labour Inquiry Committee and the Government of Bombay have recommended its adoption by all mills in the other centres of the cotton textile industry of the Province.

Labour Officers.—No reference to the appointment of Labour Officers in industrial concerns in India would be complete without mentioning the lead given in this matter by the Millowners' Association, Bombay. The Association, conducts special classes for the training of Mill Labour Officers and actively supervises and controls the work done by all such Officers where they have been appointed through the Association. Following the example of the Millowners' Association, Bombay, the University of Calcutta, in co-operation with the Indian Jute Mills Association, has recently inaugurated a special course of social work for giving suitable training to Labour Welfare Officers engaged in jute mills. The course covers both theoretical training and intensive practical work in the field, i.e., the jute mills themselves. The Indore Christian College has also recently started a course for the training of Labour Officers.

The Indian Jute Mills Association which has appointed a large number of Labour Officers, created a special post of a Senior Labour Officer in 1944 and they have been successful in procuring the services of Mr. John Lee, who has had a large experience of personnel management in the United Kingdom.

In this connection mention might also be made of the Employment Exchange started by the Northern India Employers' Association in Cawnpore. Some of the progressive cotton mills in the South have also opened special Labour offices through which only recruitment is made.

Some of the worst evils in regard to the recruitment of labour are to be found in Indian Coal Mines. More detailed information will be found in Mr. S. R. Deshpande's Report on the Conditions of Labour in Indian Coal Mines.

Absenteeism.—One of the most usual complaints of Indian industrialists has been the high percentage of absenteeism and the large turnover in Indian factories, mines, etc. From the available information it is clear that the percentage of absenteeism in Indian industries and particularly in mines and plantations, is very high. It amounts to about 10 to 15 per cent. in factories, and to about 25 to 30 per cent. in mines and plantations. The high percentage of absenteeism in mines is due largely to the fact that there is a periodical exodus of miners to their villages for purposes of cultivation. The high percentage of absenteeism in plantations can be attributed to the large amount of sickness which prevails, particularly in the tea plantations in Assam

ad the Bengal area. It is noteworthy that in incidence of absenteeism is not so high as in other cases. The available statistical data on absenteeism in certain types of factories are satisfactory and also where there is a system of granting leave with pay apart from the statutory holidays with pay, the concerns is given in the tabular statement below:—

	Cotton Mill Industry			Woollen Industry, Cawnpore (c)	Leather Industry, Cawnpore (c)	Ordnance Factories (a)	Cement Factories (a)	Match Factories (a)

PENSIONS, GRATUITIES

The subjects which we deal with under this section are pensions, gratuities, profit sharing, provident funds, co-operative societies, grain and cloth shops, advances and loans.

Pensions.—All monthly and time-rated workmen in the industrial establishments of Government are entitled to pensions on retirement provided that a minimum of ten years' service has been put in. Commutation up to 50 per cent. of the amount of the monthly pension is permitted in certain cases. Outside Government concerns, pensions on retirement are almost non-existent although some concerns give small pensions to old employees who have put in long periods of trusted and faithful service but these are mostly *ex gratia* and cannot be claimed as of right.

Gratuities.—All railway employees and the employees of local and public bodies and a few of the larger public companies receive gratuities on retirement. Gratuities are also paid to non-pensionable workers who have put in not less than thirty years' service in Government concerns.

In all cases specified periods of qualifying service have to be put in before gratuities can be earned. The rules of individual administrations vary widely but the most generally accepted principle is half a month's pay for each year of service limited to fifteen months' pay in all. Permanent Government servants

who have put in less than ten years' active service are entitled to gratuity if they are compelled to retire on medical certificate.

A few large industrial establishments in India such as Messrs. Laver Bros. (India), Ltd. and others have started Retirement Benefit schemes where an account is opened for every individual worker to which a fortnight's or 13 days' pay is credited every year; interest is allowed and the amount standing at a worker's credit is paid to him on retirement.

The Tata Iron and Steel Company has instituted a gratuity scheme under which every permanent employee who has put in 20 years' service and whose salary does not exceed Rs. 500 per month is eligible for gratuity equal to half a month's pay for every completed year of service subject to a maximum of 12 months' pay. In certain specified cases, employees with less than 20 years' service also become eligible for gratuity.

Provident Funds.—These are of two kinds: (1) contributory, where both the employer and the employee subscribe to them; and (2) non-contributory where the employee alone subscribes to them. The Provident Fund Rules of different Provincial Governments in the sub-continent are by no means uniform. The Government of Bombay, by a notification dated 20th March 1941, made it compulsory for all Government servants in receipt of a monthly income of Rs. 50 per month who joined Government service before that date or of Rs. 25 per month

who joined after that date to subscribe to the Government Provident Fund. Pensionable Government servants can only join the non-contributory section of the Fund.

State Railways and Ordnance factories have their own rules. Whereas it is obligatory for most categories of permanent non-workshop railway staffs with monthly pay over specified limits to join the provident fund, workshop employees with monthly and daily rates over specified limits are permitted to exercise an option. Once the option to join has been exercised, no withdrawal is permitted.

Compulsory Schemes.—Compulsory contributory schemes are provided for all permanent workmen in the factories owned by certain public bodies such as the Bombay Port Trust; whilst both compulsory and optional non-contributory and contributory schemes obtain for permanent workmen in the factories owned by most municipalities. Most of the larger public utility companies and corporations such as the Tata electricity generating and distributing plants, the Bombay Electric Supply and Tramways Company, Ltd., and the Burma Shell Corporation, to mention only a few of many, provide contributory schemes for the benefit of the majority of their workmen. Several others have schemes for their supervisory and clerical establishments but not for their workmen.

The most usual amount of deduction from pay is one-twelfth of the monthly pay but the amount contributed by employers varies from 50 per cent. to 100 per cent. of the amount put in by the employee. The rate of interest may be fixed or it may fluctuate with the rate at which Government or the employer borrows money.

All provident fund rules make provision for loans to subscribers from the balances standing at the credit of their accounts in respect of their own subscriptions, and for the compulsory repayment of these loans. Subscribers are entitled to withdraw their own subscriptions at any time on retirement or on relinquishing their posts but the payment of that share of a contributory provident fund account which represents the employer's subscriptions depends on the putting in of specified periods of qualifying service—periods which show considerable variation.

The Government of India have drawn up a set of Model Rules for Provident Funds for industrial employees in India. These Rules were considered at the Fourth Meeting of the Standing Labour Committee of the Tripartite Conference held at Lucknow in January, 1944.

During the year in many cases submitted to Adjudicators and Boards of Conciliation, one of the demands of the workers has been that they should be entitled to a contributory provident fund. In several cases this main demand has been met by the Adjudicators. The notable example in this connection is that of coal mines in India in which, as a result of the recommendations of the Board of Conciliation appointed by the Government of India, workers in coal mines are now entitled to a contributory provident fund.

Profit Sharing.—Profit sharing had so far been unknown in the sub-continent but some concerns are adopting this in their plants. The Tata Iron and Steel Company has adopted a scheme which provides that when the amount

paid to the shareholders as dividend exceeds Rs. 1 crore during a financial year, every employee who had been in the continuous employ of the Company throughout the year is to receive a half month's pay, plus an additional half a month's pay for every 25 lakhs in excess of Rs. 1 crore paid as dividend.

Some cotton mills in South India have linked up bonuses with the dividends declared by them and this really amounts to a profit bonus. Here again a notable event which occurred during the year has been the payment of a bonus which has been introduced in the coal mining industry as a result of the recommendations of the Board of Conciliation appointed by the Government of India. The details regarding the profit bonus are as follows:—

The Board have recommended the grant of an annual bonus equal to four months' basic wages and that it should be split up into two methods of calculation:—

(a) two months' basic wages as bonus dependent on attendance, the qualifying periods being 190 days per year in the case of underground workers and 205 days per year in the case of weekly, or monthly rated employees or surface workers, and

(b) a bonus on the basis of two months' basic wages of those qualifying under (a) above and related to raisings during the year which the Board have termed as 'Production Bonus.'

These bonuses should be admissible only to those who have not taken part in any illegal strike during the qualifying period.

Co-operative Societies.—The co-operative movement has made considerable progress in industrial establishments all over the sub-continent notably in the south during recent years. Almost all railway systems have co-operative banks and savings banks in addition to credit societies.

Cheap Grain and Cloth Shops.—Employers' grain and cloth shops were very common during the period of the first world war, but with the subsequent fall in prices, the majority of these shops disappeared. The Payment of Wages Act, 1936, prohibits employers from making deductions from wages or from receiving payments from their employees for purchases from employers' shops.

Most Provincial Governments had, however, notified cheap grain and cloth shops as "amenities" in respect of purchases from which employers may make deductions from wages. In all such cases both the qualities of the articles sold in such shops and the prices charged for them are controlled by a 'prescribed authority' who is generally the Chief Inspector of Factories.

As a result of the outbreak of the Second World War, all Provincial Governments have not only notified cheap grain and cloth shops as "amenities" for the purposes of the Payment of Wages Act but have opened such shops of their own and have also encouraged employers to do likewise. The articles sold at these shops are bought at wholesale prices and are sold without any profit except for a small addition to cover working expenses of the shops.

With the introduction of Rationing of certain food-grains in Bombay in May, 1943 and with the extension of rationing to other cities and areas in the sub-continent arrangements

have been made between Government Rationing Departments and large employers of labour for the establishment of Government controlled grain shops in hundreds of industrial plants in the country. Sales from these shops are largely on credit, recoveries being effected from pay.

Loans and Advances.—Speaking generally most industrial concerns do not grant loans to their workers except during periods of an acute shortage of labour when recruiting agents are empowered to liquidate debts in order to attract the required workers to join industry. But, all workers who subscribe to provident fund schemes in such concerns as have them or who are members of co-operative credit societies can secure loans on easy terms both as to interest and to repayment. A few concerns, however, have set apart special funds for the purpose. 'Advances'—applying the term to the small sums of money advanced against earned wages—on the other hand, are more widely prevalent. The Payment of Wages Act empowers Provincial Governments to frame rules for the regulation of these advances but no interest on such advances is now permitted.

The system of giving advances is fairly common in the tea plantations of Assam and in the Bengal area. The average amount of advance, however, is nominal.

INDUSTRIAL SAFETY

All railways have undertaken extensive schemes of safety-first propaganda including the putting up of safety posters and safeguards both in English and in the vernaculars at all prominent points and places; the free issue of illustrated booklets on accident prevention; publication of special articles with photographs in railway magazines; addresses and magic lantern lectures; and the organisation of special safety-first committees in the larger workshops.

The Millowners' Association, Bombay, has done a considerable amount of good work of a pioneering character in connection with safety-first measures. Working in conjunction with the Safety-first Association of India, the Association drew up a Safety Code for the Cotton Textile Industry and this Code was published and put into operation from August 1940.

It is of interest to note that most cotton mills in Ahmedabad had also established safety-first committees by the end of the year 1939. Factory Departments in all Provinces do all they possibly can in improving safety measures in factories. Since the beginning of the Second World War of 1939 special attention has been paid to ordnance works consequent on the employment of workers not ordinarily used to machine shop hazards.

Accidents.—The Indian Factories Act requires the manager to report all accidents which cause death or bodily injury whereby the

person injured is prevented from returning to his work in the factory during the 48 hours next after the occurrence of the accident. All classes of accidents namely, fatal, serious (i.e., accidents which prevent a person returning to work for 21 days or more) and minor are to be reported to the Inspector of Factories and to the District Magistrate and in cases of any accident resulting in death to the officer in charge of the police station in addition.

It is the duty of the Inspector of Factories to make an investigation as soon as possible into the causes of and the responsibility for a fatal or serious accident, and to take steps for the prosecution of the person concerned if it is found that the death or serious injury resulted from any infringement of the provisions of the Act or of the rules framed under the Act. The Act also requires notice to be given of an accident which is due to any cause that has been notified in this behalf by a Provincial Government, even though no injury may have resulted therefrom to any person.

The provisions contained in the Indian Mines Act with regard to the reporting of accidents are somewhat similar to those contained in the Factories Act but with the difference that every accident which occurs in a mine has to be recorded in a special register to be kept for the purpose.

Section 32 (b) of the Factories Act, 1934 makes it obligatory on all factory owners to maintain stores of first aid appliances and to provide for their custody in accordance with rules to be framed by Provincial Governments in the matter.

In recent years the Government of India have been evincing a very great deal of interest in industrial safety. Two years back Sir Wilfrid Garrett, Chief Inspector of Factories in the United Kingdom, was officially invited here to look into the many questions dealing with factory administration and industrial safety. A new office called the Office of the Chief Adviser, Factories has been started at Delhi and this office issues from time to time valuable literature on the subject of industrial safety.

In regard to mines also much more attention is being paid to the question of safety. Provision has been made for the training of miners in first-aid and according to the latest Report of the Chief Inspector of Mines, in the year 1944, certificates in first-aid were awarded to 92 persons. There are also in the mining areas two rescue training centres where training has been given for fighting fires, etc. in coal mines. The table below shows the number of minor and fatal accidents in Indian factories and mines in the years 1939, 1943, 1944 and 1945:—

Year	FACTORIES		MINES	
	Minor	Fatal	Minor	Fatal
1939	29,948	221	10,584	286
1943	48,799	361	9,000	328
1944	56,336	348	8,946	365
1945	58,775	342	8,724	307

AMENITIES

The general policy adopted by Government in providing quarters for the labour employed in their industrial establishments is to do so when funds permit but usually only where conditions are such that private enterprise does not adequately meet the demand for housing, or where it is necessary for special reasons to provide quarters for certain classes of staff near to their work places.

These principles appear to be generally followed by private companies and concerns as well, especially by coal-mine owners in Bihar and Orissa, and sugar-cane growers and tea planters in Assam. The collieries in the Jharia coalfield are amply and efficiently equipped with approved types of houses whose design, construction, ventilation and general amenities are controlled by the Jharia Mines Board of Health. Every house in the coalfields has to be licensed and licenses are not granted unless the standards are complied with. If labourers are found in occupation of unlicensed houses the management is liable to prosecution. Even so, however, according to a recent *ad hoc* investigation, it was found that a considerable proportion of the mining community had not been provided with housing and that there was large congestion in the houses already provided by the mines. The general consensus of opinion also now is that one of the reasons for the migratory habits of the miners and their unwillingness to put in long spells of work in the mines. Accordingly, the Coal Mines Labour Housing and General Welfare Fund, has decided to give a higher priority to schemes for housing the miners according to new and improved designs. Thus, a target for building 50,000 houses for the miners has been laid down of which about 1,000 houses are already under construction. In Assam, all residential employees on tea estates are provided with rent-free quarters in barracks or 'lines' as they are called. Almost all sugar factories provide housing for their employees because the factories are located near large sugar-cane plantations.

Pioneers in Housing.—The pioneer work in the field of industrial housing has been done by the railways which have spent nearly 50 crores of rupees to date in providing adequate residential quarters for different classes of their employees, and by the Government of Bombay who have built 207 chawls with nearly 17,000 tenements for industrial labour in Bombay City. The rents of the tenements in these chawls vary from Rs. 5 to Rs. 8 per month. The chawls are situated at Naigaum, Worli, Sewri and at DeLisle Road. The Municipalities of Calcutta, Bombay, Cawnpore, Madras and Karachi, the Calcutta and Bombay Port Trusts and the Improvement Trust in Bombay have done much to house their own labour and also to supply low-rented tenements for other classes of industrial workers.

Perhaps the most outstanding schemes of industrial housing conceived in the sub-continent by private employers are those launched by the Tata Iron and Steel Company, Ltd. at Jamshedpur, the Empress Mills under the agency of Messrs. Tata Sons Limited at Nagpur and the Co-operative Housing Scheme of the Madura

Mills. The Tata Iron and Steel Company has laid out the town of Jamshedpur on Garden City lines, and had, up to June, 1945 constructed 8,428 houses of different types for its employees and has now a further extensive programme of housing construction in hand as soon as the difficult conditions created by the war are removed.

Many of the jute mills in the Bengal area and cotton mills in Bombay City and other centre have provided housing for a percentage of their total staffs but the majority of textile workers in the sub-continent are not housed by their employers.

It is of interest to observe that the Government of India, following the recommendation made by the Royal Commission on Indian Labour in the matter, amended the Land Acquisition Act in such a way as to enable owners of industrial concerns to acquire land for the erection of workers' dwellings.

The Government of Bombay, finding it desirable to take powers to control labour housing and sanitation in areas outside municipal and cantonment limits, enacted the Bombay Non-urban Labour Housing Sanitation and Provision Shops Act, 1944 in the month of April, 1944.

Under the above Act, Government have the power to make regulations in respect of any non-municipal or non-cantonment area or any employer in respect of housing and sanitation. It is also proposed to levy a small tax on the employers to finance industrial housing.

Despite all the efforts made by Governments, co-operative societies, however, industrial housing, in the sub-continent continues to be most unsatisfactory, particularly in the large urban areas such as Bombay, Calcutta, Cawnpore, Ahmedabad, etc. This has been referred to in detail in the Main Report of the Labour Investigation Committee and certain suggestions have been made for tackling the problem. The Committee have come to the conclusion that industrial housing cannot be regarded as the responsibility of the employer and must be regarded as a responsibility of the State just as education and medical relief are responsibilities of Government.

The Government of India are seriously tackling the question of housing of miners and already a fair start has been made in this direction.

Shelters, Canteens.—Section 33 (1) of the Indian Factories Act, 1934, makes it obligatory for all factories employing more than 150 workers to provide adequate shelters for the use of workers during periods of rest. Apart from this almost all large industrial establishments did provide tiffin rooms and rest shelters for their workmen. Most concerns had also permitted the establishment of tea stalls on the premises but apart from this, little effort had been made to run co-operative canteens on the lines of those which are associated with most of the large factories in the West.

Pioneer work in this direction had been done by Messrs. E. D. Sassoon & Co. in Bombay. This Company had established large canteens

in all their mills. The management in each case bore the salaries of staff and the on-cost for equipment; and hot meals were supplied to the workmen at actual cost. The Company had also established a hostel for boarding and lodging its poor women workers.

In May, 1939, the Millowners' Association, Bombay, recommended to all its member mills that they should establish canteens with the help of the Indian Tea Market Expansion Board. The suggestion was adopted by a number of mills and permission to make deductions from the wages of workers on account of canteen coupons sold to them was granted by the Chief Inspector of Factories, Bombay, on the understanding that the canteens were run on a non-profit basis.

The Tata Iron and Steel Company maintain a number of restaurants inside their works at Jamshedpur which ensure wholesome meals and refreshments to the workmen at cost price. A Women's Rest House has also been provided where women employees can wash and change and leave their babies to be looked after in their absence, these babies being served with milk and biscuits free of charge.

About the middle of the year 1943 the Government of India recommended to all employers, through the Employers' Federation of India and the All-India Organisation of Industrial Employers, the opening up of more canteens for workers. In October 1943, the Central Board of Revenue issued instructions to all Income-Tax authorities stating that any loss incurred by employers in running canteens for workers should be allowed as a revenue loss in assessing income and excess profits tax while cost of building and equipment of canteens would be chargeable as capital expenditure.

An article on 'Canteens for Industrial Workers' published at pages 219 and 220 of the March, 1944 issue of the *Indian Labour Gazette* gives the available statistics on the subject.

The Indian Tea Market Expansion Board which maintains five working centres in India and Pakistan at Bombay, Calcutta, Madras, Lahore and Cawnpore organises new canteens in industrial establishments. It has a large trained staff for this purpose.

The war witnessed a very large expansion in the provision of canteens in Indian industry from north to south. By an amendment of the Indian Factories Act it has been made compulsory for all factories employing more than 250 persons to set up canteens in conformity with prescribed standards and conditions as regards construction, accommodation, equipment, foodstuffs to be served and the prices to be charged, representation of the workmen in the canteen, etc.

INDUSTRIAL HEALTH

Such statistics of health and mortality as are collected and published in the sub-continent relate to the whole community and no statistics are compiled separately for industrial workers alone. In the absence of such data it is not possible to generalise about these matters.

The War witnessed a tremendous drive against the scourge of malaria especially in the coalfields of W. Bengal and Bihar. For a time

the whole organisation for fighting malaria by the use of D. D. T. was taken over by the army and deaths from malaria went down to a considerable extent in a couple of years' time. The Labour Welfare Fund which has been started in the collieries is also spending large amounts for fighting the scourge of malaria.

In the tea plantations of Assam and the Bengal area the Indian Tea Association is spending large sums of money in order to reduce the incidence of malaria. Even so, however, in many of the industrial towns and in the tea plantations, there is still a large amount of illness resulting in absenteeism and loss of production.

Although there is not much evidence of the existence of occupational diseases notified under the Workmen's Compensation Act in the mining and factory industries of India, this may partly be due to the defective arrangements which exist for detecting such diseases. Silicosis on a considerable scale is, however, to be found in the gold mines in Kolar.

As in most things connected with the welfare of labour, the railways are in the forefront in the matter of the provision made for medical aid and relief. All railways maintain fully equipped hospitals with qualified surgeons, physicians and nursing staffs at suitable centres in addition to fully equipped dispensaries in charge of qualified medical officers at all places where there are sufficient numbers of workers to justify them.

The Government of India have provided adequate medical facilities in most of their own establishments such as Indian Naval Dockyard and the various Ordnance and Ammunition Factories. Several of the larger municipalities and public bodies such as the Port Trusts also maintain their own hospitals and dispensaries for the benefit of their workers. Following the lead of Government and public and local bodies in the matter, almost all the large labour employing establishments—cotton and jute mills, mines, engineering workshops, tea plantations, etc.—maintain dispensaries. The Tata Iron and Steel Company conducts a large hospital with special surgical, maternity and gynaecological wards in addition to six dispensaries and two first aid stations at Jamshedpur both for its own employees and for the public. All employees of the Company and their families receive free treatment.

It has been stated already that Government have now introduced in the Assembly a bill for health insurance. The bill provides for both medical and monetary relief. When it becomes an Act and the necessary organisation is set up for its implementation, it is to be hoped that disease and death among industrial workers will be reduced to a considerable extent.

HOLIDAYS WITH PAY

In the sub-continent, holidays with pay have hitherto been enjoyed by a very small percentage of the population and most leave, wherever it has been granted, has been without pay. Exceptions were: workmen in Government and railway factories and in the industrial establishments of local bodies, public utility companies and in the factories of petroleum and

kerosene installations and a few other concerns like General Motors (India), Ltd., Ford Motors (India), Ltd., Messrs. Lever Bros. (India), Ltd., and Godrej and Boyce Manufacturing Co., Ltd.

All permanent monthly rated employees in Government factories in all industries are entitled to leave with pay—in the case of the concerns under the Government of India, according to the Fundamental Rules; and for the factories owned and controlled by the Provincial Governments according to the Civil Service Regulations in force at the time in the different provinces.

Daily rated employees and certain categories of menials and piece rated workers are governed by special orders suited to each case. According to the rules which are in operation at present, the minimum period of leave with pay which can be earned by all permanent Government servants is about a month for every eleven months of duty plus ten to twenty days casual leave in every calendar year.

The leave rules for railway workshop men who joined before the 1st September 1928 vary not only between railway and railway but also according to the dates when the men were first engaged; but all leave rules of State owned Railways have now been standardised on the basis of those laid down by the Army Department. Leave rules for those employees who joined before the date mentioned are more liberal.

Perhaps the most liberal leave rules in any private industrial undertaking in the sub-continent are those to be found in the Tata Iron and Steel Works in Jamshedpur where all monthly rated workers receive one month's leave with full pay for every year of service with the right to accumulate leave up to three months and five days' casual leave and two days' festival leave with pay. In addition, monthly rated employees drawing Rs. 30 and over get six months' furlough on half pay or three months' furlough with full pay after every seven years' service. Daily rated workers paid monthly get two festival days leave and fourteen days' privilege leave with pay for every year of service which can be accumulated up to a maximum of six weeks; and daily rated workers paid weekly get five days' casual leave with pay. One day off with full pay is given to all workers on Founder's Day.

Under the Holidays with Pay Act of 1945, the factory employees are entitled to holidays with pay not exceeding 10 days in the year. However recently the tendency for many units particularly in South India, has been to allow holidays with pay in excess of this limit. In many of the recent awards of Adjudicators, leave with pay up to 14 days has been awarded. It is noticed generally that in the south the provision of holidays with pay is much more generous than in Bombay and in the north.

WELFARE ACTIVITIES

The Reports of the Labour Investigation Committee on labour conditions in 36 odd industries as also their Main Report contain detailed and comprehensive information regarding labour welfare undertaken in various Provinces and Industries and it is unnecessary,

therefore, to go over the ground again except briefly to refer to the most salient features of welfare work that is being done in the country.

Until recently the Government of India had not undertaken any activities to promote the welfare of industrial labour employed in Central concerns. Recently, however, they have done a great deal in this respect. Reference has already been made to the institution of the Coal Mines Labour Welfare Fund. Proposals for levying a cess to create a welfare fund for tea plantations is also under consideration.

The Provincial Governments have also given up their policy of *laissez faire* in regard to welfare work. The first big step in this direction was taken during the regime of the Popular Ministries during the years 1937-39 when the Bombay Government instituted a large Welfare Department and undertook welfare activities themselves for all industrial workers in the principal industrial towns in Bombay. During wartime the Bombay Government and the U. P. Government have directly embarked on a policy of providing welfare measures and Bengal and Sind followed suit. We may reproduce below from the Labour Investigation Committee's Main Report, the welfare activities of the various Provincial Governments:—

Provinces.—In 1939, the Bombay Government first organised model welfare centres. The expenditure sanctioned in that year was Rs. 1,20,000 but it has gone up to Rs. 2,50,000 during 1944-45. In all, there are now 27 centres classified under four classes—'A', 'B', 'C', and 'D'. At Bombay there are 3 'A' class, 9 'C' class and 4 'D' class centres, located in various parts of the city; at Ahmedabad, 1 'A' class and 4 'C' class; at Sholapur, there are 5 'C' class centres; at Itanagar only 1 'C' class centre. No 'B' class centre has yet been opened. 'A' Class centres have a full time nursery school for children; a women's section providing literacy, sewing and embroidery classes and suitable games; outdoor games and gymnasium with all facilities for men; and separate arrangements for water-taps and shower baths for both men and women. Static as well as circulating libraries are attached to these centres; radio sets are provided; monthly cinema shows are arranged; and well equipped dispensaries are attached. 'B' class centres are intended to be a replica of 'A' class centres but on a very much smaller scale. 'C' class centres provide indoor recreation and educational facilities, static and circulating libraries and dispensaries. 'D' class centres provide only outdoor recreation, such as games and sports. The centres have been very popular and the response from workers has been quite encouraging.

In the United Provinces a new Department of Labour was created in 1937, with a Labour Commissioner and a Labour Officer whose duties were mainly to keep in constant touch with the labour situation in Cawnpore and adopt conciliation measures when necessary. A Welfare Department under an experienced Superintendent has now been created to provide healthy recreation and wholesome amenities of life to workers. Recently, a Labour Welfare Superintendent also was appointed to carry on welfare work among women and children. Three types of Welfare Centres—'A', 'B',

and 'C'—at present numbering 28 in all have been opened. Thus, in Cawnpore, 3 'A' class, 4 'B' class and 5 'C' class centres have been opened; in Agra, 1 'A' class centre; in Lucknow, 3 'B' class centres; in Aligarh, Bareilly, Hathras, Firozabad and Saharanpur, 1 'B' class and 1 'C' class centre each; and in Allahabad and Mirzapur, 1 'B' class centre each.

The total budget for the first year (1937) was only Rs. 10,000 but in 1945-46 Rs. 1,57,000 has been sanctioned. 'A' class centres provide medical aid, recreation, education, maternity and child welfare, sports and games and physical training. 'B' class centres provide all the above, though on a smaller scale. 'C' class centres are of the nature of workmen's clubs, with a reading room, a library, and indoor and outdoor games. Dispensaries are attached to both 'A' and 'B' class centres; and a trained midwife or *ayah* attends at each centre to wash, bathe and massage the workers' children, to entertain them with interesting games and to serve them hot milk—all free of charge. Moreover, industrial and instructional classes are held for women and girls of the working class. Sewing, knitting, embroidery and other useful domestic arts are also taught. Debates and lectures are arranged; a number of night schools are run for mass literacy; and books and stationery are provided free of cost. Cinema shows are arranged for workers and their families, and dramatic clubs have been successfully organised at some centres. Occasionally, baby shows, music parties, and *mushkiras* are also arranged. These Welfare Centres have been very popular.

Till 1940, the Government of old undivided Bengal gave grants to private organisations for the benefit of labour but the total amounts were very small (Rs. 3,005 only in 1939-40). In 1940, however, besides these grants, Government made a start with ten Welfare Centres. In 1944-45, there were in all 41 Centres. The activities of the Centres consist of educational classes, indoor and outdoor games, gymnasiums and recreational facilities like radio, gramophone and cinema shows. Considering that Bengal is industrially a very advanced area with a large working class population, the paltry sum of Rs. 34,720 spent on welfare measures in 1944-45 appears hardly adequate.

The Sind Government have started two Welfare Centres in Karachi with provision for a gymnasium, indoor and outdoor games, a reading room and a library. The centres, however, have not been a success for want of adequate funds and supervision.

Other Provincial Governments have done next to nothing in the direction of welfare amenities for workers and have mainly contented themselves with suggesting to employers the desirability of doing certain things to improve the living conditions of their employees. Under instructions from the Central Government, Provincial Governments have taken steps to encourage the starting of cost-price grain shops and co-operative societies in industrial establishments for supplying the necessities of life to workers at cost or concessional prices.

Coming to the States, one finds that apart from a few exceptions, the State Administrations have done little by way of labour welfare work. The Mysore Government have opened two

Recreation Centres in working class areas in Bangalore City with provision for indoor games, a reading room, a library and weekly *bhujanas*. Between 300 and 400 labourers visit each centre daily.

During wartime, the Baroda Government started a movement for establishing co-operative credit and thrift societies with a view to encouraging the saving habit amongst workers. So far, 20 societies with a membership of 24,511 have been established. The scheme was at first voluntary but has recently been made compulsory. The deposited money was to be returned after the war. This was part of a programme of anti-inflationary measures, but is likely to continue during peace-time as well.

Employers' Activities.—During recent years, there was considerable extension in the welfare activities done by employers which generally take the form of provision of dispensary, rest shelter, institution of creches, provision of canteens, etc. Most of the ground has been covered elsewhere but it may be helpful to bring it all together in a brief summary.

The Tata Iron and Steel Co. provide an up-to-date and well-equipped hospital with 168 beds and a qualified medical staff, a network of primary and secondary schools, gymnasiums, clubs with facilities for indoor and outdoor games, canteens, creches, co-operative stores, etc. The Delhi Cloth and General Mills have constituted an Employees' Benefit Fund to finance welfare measures, which include Gratuities, Pensions, Provident Fund, Sickness Insurance, educational facilities for workers' children, night schools for adults, a vocational school, libraries and reading rooms, hospitals, gymnasiums, creches, sports clubs, swimming pools, dramatic clubs, theatres, facilities for excursion, canteens, messes and grainshops. The Buckingham and Carnatic Mills of Madras have an excellent system of welfare work, including schools, mess rooms, a co-operative society, workmen's stores, an ambulance corps, athletic associations, etc. The British India Corporation of Cawnpore provide schools for boys and girls, sports, dispensaries, maternity and child welfare centres, club-rooms, a hospital, a Widows' Home, etc. The Begg Sutherland Group of Mills, Cawnpore, has provided Schools for adults and children, play grounds, indoor and outdoor games, radio and well-equipped creches. The J. K. Industries of Cawnpore, have created a Trust with Rs. 3,00,000 for providing several schools, a swimming pool and other amenities for their workmen. The Empress Mills of Nagpur have provided 4 well-equipped dispensaries, a central primary school, Kindergarten classes, a co-operative society, a sickness benefit fund, a pensions scheme, etc. The Madura Mills provide a well-equipped dispensary, a co-operative store, a thrift society, a workers' saving fund, a child welfare centre and creches, and a tea canteen. Besides, they have contributed a sum of Rs. 25,000 for operating an association called "The Madura Labour Union Welfare Association", to which they are also paying a monthly contribution of Rs. 1,000. The association conducts schools for adults and children, indoor and outdoor games, a reading room and a library. The Calico Mills of Ahmedabad have provided

Average prices for five years are also the base for cost of living indexes for Lahore, Sialkot, Multan, Ludhiana and Rohtak in the old undivided Punjab but the base period in the Punjab is the quinquennium ending December 1935.

The Government of Orissa compiles a cost with average prices during the year 1939-40 as they are not strictly comparable, but the table of living series for its headquarters town of base for Berhampur. Cutback on the same method and base as those Index Figures.—Owing to the variations in index numbers in selected centres for the year adopted by the Government of Bihar and another the method of compilation of these indices, 1946.—

The Royal Commission on Indian Labour for industrial workers. The Government of 1942 and has now been completed. Over had commented on the unsatisfactory character of India, therefore, in consultation with the Pro- 27,000 family budgets have been collected. Enquiry was also greatly handicapped in their maintenance of working class cost of living investigation have now been tabulated and the Re- data in regard to the cost of living index numbers in the sub-continent. This scheme was started in the year 1946.

STANDARD OF LIFE

The Bombay Labour Office carried out two family budget enquiries for working classes in Bombay City one in 1921-22 and the other in 1932-33 and the results were published in the years 1923 and 1935 respectively. As has already been mentioned, similar enquiries were also conducted in Ahmedabad and Sholapur cities and the results of both these enquiries were published in the indexes.

In Madras, the Director of Industries published in 1938 the results of an inquiry into the family budgets of industrial workers in organized and unorganized industries in Madras City conducted under the direction of the Commissioner of Labour. A number of family budgets were also collected at Cawnpore in the United Provinces and at Nagpur and Jubbulpore in the Central Provinces with the object of compiling cost of living indexes.

The following table gives the percentage distribution of expenditure:—

Groups	Bombay (1932-33)	Ahmedabad (1933-35)	Sholapur (1925)	Nagpur (1927)	Jubbulpore (1927)	Madras (1938)
Food	46.60	49.31	49.25	64.10	68.00	52.63
Fuel and light	7.11	6.65	9.60	9.02	7.95	6.67
Clothing	7.75	9.12	11.86	10.70	10.86	4.50
House rent	12.81	10.97	6.27	1.92	1.44	11.14
Miscellaneous	25.73	23.95	23.02	13.66	13.76	25.06
Total	100.00	100.00	100.00	100.00	100.00	100.00

NOTE.—The figures are not strictly comparable due to differences in the items included in the different groups.

The standard of life is more often than not conditioned by the size of the family and its income. The following figures are of interest in this connection:—

	Bombay	Ahmedabad	Sholapur	Nagpur	Jubbulpore	Madras
Average size (of the family in persons) ..	3.70	4.05	4.57	4.33	3.76	6.03
	Rs. a. p.	Rs. a. p.	Rs. a. p.	Rs. a. p.	Rs. a. p.	Rs. a. p.
Average monthly income ..	50 1 7	46 5 0	39 14 10	..	..	37 5 11

THE TRADE UNION MOVEMENT

The earliest known trade unions were (1) the Bombay Millhands' Association, a loose organisation formed in 1890 for the purpose of memorialising Government for improvements in factory law and which soon became moribund after the passing of the 1891 Act; (2) the Amalgamated Society of Railway Servants of India and Burma formed in 1897 by Anglo-Indians and Domiciled Europeans employed on railways, more as a friendly society than a combination for securing concessions; (3) a Printers' Union started in Calcutta in 1905; and (4) the Bombay Postal Union which was formed in 1907.

The Kamgar Hiltwardhak Sabha, Bombay, which came into existence in 1910, was a

body of social workers who were interested in questions connected with the general welfare of labour and was an association rather for the workers than of the workers. Apart from the cases cited, the trade union movement, as this is known in the West, did not begin in the sub-continent till almost after the end of the first World War.

The decade following the end of that War witnessed rapid developments in the field of trade unionism in the sub-continent but it must be regretfully admitted that even today organised association of the workers in the sub-continent is far below the stage of development which it has reached in Great Britain and in many other countries of the world.

Whenever an industrial dispute was apprehended or whenever it occurred, there was a tendency on the part of some leaders and workers to form strike committees. Many of these committees secured a considerable measure of success in so far as concessions in wage rates were concerned; but, whereas most of them fell into a state of inanition on the conclusion of a dispute, a good few of them, emboldened with the success they had met with, set themselves to the task of creating permanent associations or trade unions of the workers. These were the beginnings of the trade union movement in the sub-continent and within a period of five years (1919 to 1923) scores of unions were formed in all parts of the country.

Federations.—The pressing need for a co-ordination of the activities of the individual unions was recognised at a very early stage of the movement and both central and provincial federations were formed. A central organisation at the apex was also necessary because only such a body could make recommendations with regard to the personnel of the labour representation on Indian delegations to the Annual Sessions of the International Labour Conference. Thus, the All-India Trade Union Congress was formed in 1920 on a national basis. The Central Labour Board, Bombay, and the Bengal Trades Union Federation were formed in 1922. The All-India Railwaymen's Federation, co-ordinating all unions of railwaymen on an industrial basis, was formed in the same year and this was closely followed by the creation of both provincial and central federations of unions of postal and telegraph employees. The latter bodies received a very generous measure of recognition both from the Railway Board and the Director-General of Posts and Telegraphs in India. In the former case, half-yearly conferences are held between the representatives of the Railway Board and the Railwaymen's Federation and at these conferences all the more important questions connected with railway establishments are discussed and as great a measure as possible of agreed solutions are arrived at.

The Treaty of Versailles in providing for the creation of an International Labour Organisation and the holding of periodical International Conferences had laid down that the delegates representing labour from the States Members should be chosen by national labour organisations. Representatives of Indian labour had attended the earliest of these conferences and had had an opportunity of studying the growth and the powerful position of workmen's associations in the West, and on their return to India they had set themselves to the task of forming trade unions in the country.

This was an entirely new development in the eyes of the Indian employer. One powerful group of employers who had hitherto not organised set themselves to form an association whose primary object was to combat trade unionism. It is unfortunately too true that many employers, in the sub-continent have looked and even today look askance at the growth of organisation among their workers and that employees who take part in trade union activities are victimised. The trade union movement, therefore, instead of getting its most

important support from within the ranks of labour itself, was thrown by Indian employers into the waiting hands of outsiders. In Ahmedabad, however, a strong trade union had been formed of the workers in cotton textile mills under the leadership of Mahatma Gandhi and also of certain sections of railways which were manned by a more intelligent and literate type of persons. These unions, however, were hardly representative of the workmen in the organisations concerned owing to the smallness of their membership as compared with the total number of workers employed.

Obstacles.—As far as recognition by the employers was concerned, trade unions were faced with three main difficulties. First, workmen taking interest in trade union activities were victimised; secondly the majority of the employers refused to recognise unions whose executives were composed of outsiders and the third, an amendment passed in the Indian Penal Code in 1913 for the purpose of dealing with criminal conspiracies was such as to make trade unions doing the only kind of work for which they are generally formed illegal bodies in the eyes of the law.

We have already dealt with the first two of these three questions. As far as the third is concerned, the matter was brought to a head by the historic Buckingham Mill case of 1920 in which the Madras High Court granted an interim injunction against the strike committee of the Madras Labour Union forbidding them to induce certain workers to break their contracts of employment by refusing to return to work. This was a bolt from the blue for the trade union movement in the country. Trade union leaders suddenly discovered that they were liable to prosecution and imprisonment for *bona fide* union activities and it was at once apparent that some legislation for the protection of trade unions was necessary.
