Recently, however, they have become alarmed. They had thought, for example, that Mr Eisenhower was able to take care of defence; but then their representatives on the interlocking committees, which looked into the state of American security, gasped and came up with sensationally critical findings. The Eisenhower Republicans also thought that Mr Eisenhower's prestige would enable him to win over the country once and for all to an enlightened foreign economic policy. Instead of this, the issues of aid and trade have been so fumbled that this week the Democrats were called in to help stage an extravaganza, in which Mr Eisenhower, Mr Truman and Bishop Fulton Sheen headed an all-star cast, in a final desperate effort to rescue these policies from utter collapse.

But the eastern Republicans have one compensation: the emergence and moulding of Vice President Nixon as their man. Those weekend pilgrimages to Pawling, the country estate of Governor Dewey and the gathering place of his government in exile, those earnest bull sessions with one study group after another in Washington and New York, were surely milestones in the transformation of the political juvenile delinquent into the grave, articulate and inspiring statesman. The Dewey Republicans have solved the age-old philosophical problem of how to educate the crown prince. But they fear that the current monarch is so handling matters, or rather not handling them, that by 1960 there will be precious little chance of the crown prince stepping into the regal shoes.

Moreover, Mr Eisenhower has chosen at last to hoist his full conservative colours. Although the President has been accustomed to talk the language of conservatives, he did not in fact act like one during his first Administration. But this year's Budget message suggests that the post-sputnik accounts should be balanced by cuts or transfers to the states of programmes that would antagonise every known political interest—ex-servicemen, farmers, rural co-

operatives, those interested in vocational education and land conservation, recipients of old-age assistance, and all communities that need help with their schools because they have been invaded by federal workers and their families. Finally the Budget proposed that no new public works projects should be started. These are the meat and drink of the local Congressmen struggling for re-election every second year; furthermore to economise on them at the onset of what might prove a serious recession seems singularly short-sighted.

The preaching of such genuinely conservative doctrine in areas where it would hurt them most has not endeared the Administration to Republican conservatives; instead, it has contributed to the general collapse of Republican morale. A major by-election setback last week in Minnesota, where the Republican just scraped home in a normally safe rural constituency, sent thirty Republican Congressmen to Mr Benson, the Secretary of Agriculture, begging him—in vain—to resign. There has been a chorus of reproaches from such unlikely sources as the *New York Herald Tribune* and *Time* magazine at Mr Eisenhower's latest holiday. The general feeling is that next November, if the Republicans are not beaten over sputnik, they will be beaten over a recession or over something else, but that at any rate they will be beaten.

This prospect naturally excites Democratic hopes. Senator Lyndon Johnson tells liberal newspapermen that he is really a liberal at heart and that he will prove it once he can get a Democratic majority in the Senate that is not dependent on such extreme conservatives as Senator Byrd and Senator Eastland. The congressional elections in November may give Mr Johnson his opportunity. But the one requisite that the Democrats most obviously lack to crown their success is a plausible approximation to a presidential candidate. As the aforementioned Mr Jerry Carter told the Congressmen:

> The truth about the matter is that we have never had a Democratic party. The only thing we have had in America is a great and gorgeous banner, emblazoned with the noble deeds of Jefferson, Jackson, Wilson, Roosevelt, Truman and other Democrats, under which all the independent thinkers, the idealists and sentimentalists and patriots and soreheads and the disgruntled get together and fight each other until the common enemy heaves in sight and then there arises from among them one who can attract all these various schools and get them to concentrate on the common enemy, the Republican party.

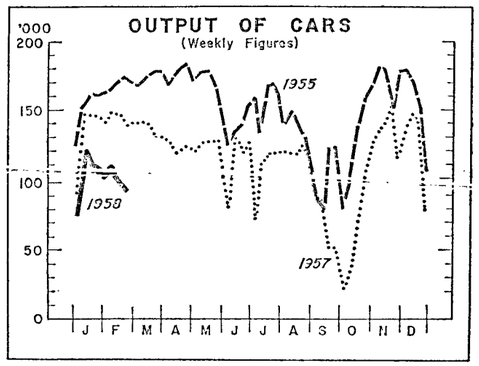
Despite the frequent listing of more than half a dozen "eligible" names, there is not yet any clear sign of such a man.

Calling Up Some Reserves

LAST week the Federal Reserve Board, prodded by the Administration and by its critics in Congress, moved to increase the supply of money for the first time since 1954. It ordered a reduction of ½ of 1 per cent in reserve requirements, the proportion of their deposits which member banks must keep at the Federal Reserve Banks. About $500 million of reserves will be freed, a sum capable of supporting a $3 billion expansion in bank credit.

A special survey made for the board had shown that, while bank credit in general was adequate, individual banks continued to be hard-pressed. All will profit from the relaxation, which is just about enough to cover the normal mid-March increase in loans to business (partly for tax payments) and the needs of the Treasury for new money. Now that the debt ceiling has been raised from $275 billion to $280 billion, the Treasury plans to borrow at least $3 billion in April; already this week, on the very day after lower reserve requirements went into effect for city banks, it has offered investors $1.25 billion worth of 8½-year bonds at 3 per cent. A few weeks ago the Treasury had to pay 3 per cent for six-year money, but interest rates have continued to ease; the Treasury bill rate this week was 1.2 per cent, the lowest in three years.

Many bankers complain that the cut in reserve requirements is too small and came too late to help them. With the falling off in demand for business loans, they have plenty of funds to lend. Even before the reduction, the banks as a whole had free reserves of $439 million. It is true that during the last recession, in 1953 and 1954, reserve requirements were cut first by two and then by one per cent. But then they stood at a higher level. Moreover, a series of small reductions makes for smoother adjustments in the bond market. And finally, the Federal Reserve Board remains free to give or withhold the second half per cent as the economy seems to require.



Mr Martin, the chairman of the board, is not quite as optimistic as the Administration. He does not expect an upturn in business to begin until the late summer, and he is flatly opposed to any so-called rescue operations—such as tax reduction or heavy spending on public works—which would postpone the adjustments which he thinks must be made, particularly in prices, before recovery can get underway. The latest increase in the consumers' price index, which brought it to a new peak in January of 122.3 per cent of the 1947-49 base, is due chiefly to the weather which has ruined many southern fruit and vegetable crops. But even without the blizzards, the looked-for down-turn in prices probably would not have materialised.

Detroit on a Diet

THIS week's temporary shut-down of the American Motors Corporation's assembly lines is the fault of the bad weather, which has interrupted deliveries, and does not apparently mean that the company has been forced on to the same starvation diet as the rest of the automobile industry. This small firm, producing a domestic version of the little foreign cars which doubled their sales and their share of the market in the United States last year, is the one American company which has been doing really well this year. Although it has sold only about 3,000 of its Rambler cars since the beginning of 1958, this is 65 per cent more than in the comparable period of 1957, while the industry as a whole has sold 22 per cent fewer cars this year and average sales, running below 15,000 a day, have been worse than at any time since January, 1954. Spokesmen for the big companies contend that this is because the public, worried by threats of missiles abroad and recession at home, is psychologically inhibited from buying. They obstinately refuse to admit that part of the fault may lie with this year's higher prices and over-large, over-ornamented models, in spite of the contrary evidence provided by the growing taste

for the simple and comparatively cheap Ramblers and foreign makes.

Stocks are piling up in dealers' showrooms—850,000 or so unsold cars, enough for two months instead of the normal one—in spite of the cuts in output which have meant short working hours, closed factories and substantial unemployment. In Michigan, the heart of the motor industry, 11 per cent of the labour force, twice the average for the country as a whole, was out of work early last month and there have been substantial lay-offs since then. But for the manufacturers, at least, there is some comfort, since these unsold stocks of cars put them in a strong position to resist the

automobile workers' coming demands for heavy increases in compensation, even should this mean a strike when the present contract expires at the end of May.

That the employers are ready to be intransigent this year is indicated by the firm stand now being taken by the Chrysler Corporation, which has been doing even worse business than its competitors, in a dispute over production standards and work speeds. But the trade union itself also seems to be thinking of adapting its menu for the bargaining with all five motor companies to current conditions in the industry. There is a possibility that the controversial profit-sharing proposals, which were to have given this year's negotiations a new look, may be abandoned and that the demand may be revived for a shorter work week at the full forty hours' pay, possibly accompanied by some form of compensation when only part-time employment is available. This would push up wages when less than forty hours are being worked, as at present, and would mean greatly increased overtime earnings when the industry picked up again.

Senator Kennedy's Head Start

FROM A CORRESPONDENT IN BOSTON

MR JOHN KENNEDY, the appealing young Senator from Massachusetts who electrified the country in 1956 by nearly nosing Senator Kefauver out of the Democratic vice-presidential nomination, is now out in front in the running for the Democratic presidential nomination in 1960. Polls of the Institute of Public Opinion, published last month, not only showed that Democrats greatly preferred him to Senator Kefauver as their candidate, but also suggested that he would win, if Vice President Nixon were the Republican candidate, and by a bigger margin than the party's twice-defeated candidate, Mr Adlai Stevenson, would win if he ran yet again.

The fact that Senator Kennedy is being seriously discussed for the nomination at this unnaturally early date is due primarily to his own tactics; he has no use for the classic American approach to public office, which is to be coy and to deny interest in it until the last possible moment. Moreover, his father, Mr Joseph Kennedy, a former Ambassador to the United Kingdom, has the financial resources to keep the publicity mills grinding for the next three years, if necessary. The young Senator has made a swing around the country already, giving speeches at carefully chosen places; and in his home state he has enthusiastic support.

The most interesting aspect of the Kennedy boom is his relationship to the South. In 1956, at the Democratic convention, Senator Kennedy became overnight the darling of the southern Democrats in their desperate effort to defeat Senator Kefauver, whom they regard as a renegade. The young Senator from Massachusetts lost by a mere 38½ votes after his courageous stand on farm policy in the Senate caught up with him. This political love affair might have been short-lived. But Mr Kennedy has been as deep into the South as Mississippi in the last few months and at a meeting of politicians and party workers at Jackson, he was given an ovation. Elsewhere in the South the reception has been cordial, even warm.

Many observers believe that Senator Lyndon Johnson, that consummate politician, is encouraging the southern boom for Senator Kennedy with an eye to having him as a running-mate in 1960. Certainly Mr Kennedy is trying hard to accommodate himself to the South. On one of the first important divisions over Negro rights last year the Senator from Massachusetts voted with the South. And in his speeches he has been careful: at Jackson he stood up courageously for "law and order" when questioned about the dispatch of troops to Little Rock, but it was not the more liberal answer he might have given in the North.

The great question is how great a handicap his Roman Catholicism would be in the predominantly Protestant South with its Ku Klux Klan tradition. In 1928 the "solid South" split over Governor Alfred E. Smith, of New York, who was also a Roman Catholic. Southern politicians today are more tolerant; so is the country as a whole. But no one knows whether the average voter in the militantly protestant South would accept a Catholic candidate today.

ON the other hand, in the northern cities where European immigrants settled, the fact that the Senator is a member of a once-persecuted minority would be a real strength—and he has many others. Voters of all kinds tend to see him as the "all-American boy" with his shy smile, handsome profile, educated accent and spectacular record of war heroism. It has been quite evident that he has a special attraction for the "women's vote." Moreover, he has a genuine intellectual appeal; he is well educated and is not afraid to show it or tempted to talk down to the masses. His book "Profiles of Courage" stayed on the best-seller lists for months on end. He is internationally minded and both courageous and clear-thinking on foreign affairs. He has been called a conservative for his opposition to costly farm subsidies and his criticism of trade union leadership, but he is no penny-pincher where defence or aid to the aged is concerned, and he favours revision of the immigration law.

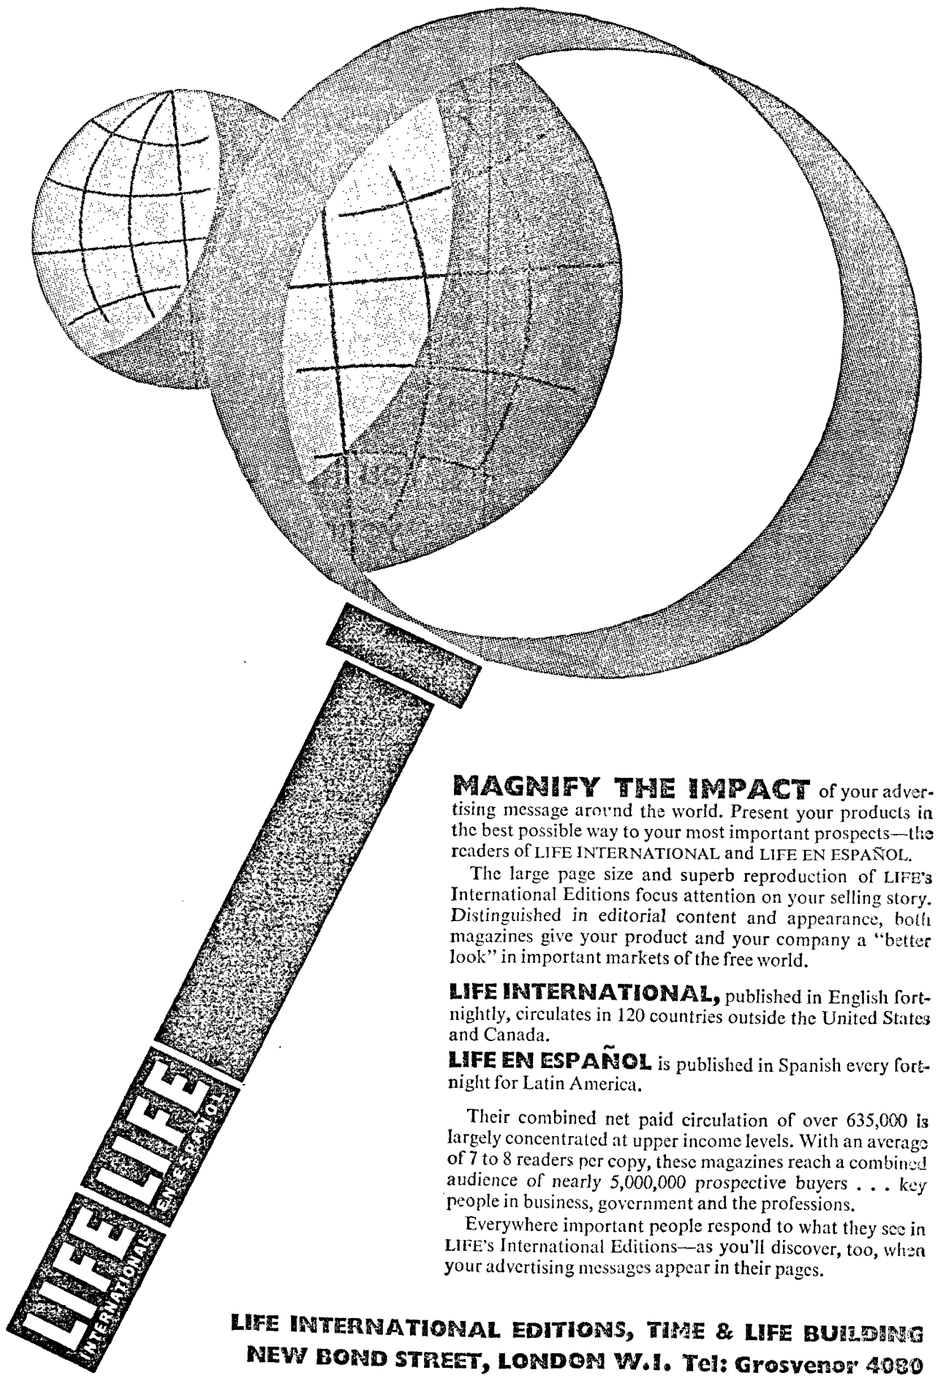
Nevertheless, there are obstacles beside his religion in the way of Mr Kennedy's candidacy. Some shrewd political observers believe that these will eliminate him as a serious contender. One is his youth ; he will be only 43 in 1960. This may not be fatal, as Mr Nixon, the most likely Republican candidate, will be only 47. One real trouble is that the Senator has committed himself so early that it will be difficult for him not to lose momentum, even though his campaign for re-election to the Senate this year will bring his name back into the headlines. But his greatest handicap is that he is a Senator. This means that for the next three years he will be in a completely exposed position ; day in and day out he must stand up and be counted in vote after vote. As he is a man of principle, it will be most difficult for him to avoid unpopular positions. Furthermore, once the party conventions meet, the Representatives and Senators tend to be elbowed aside by the Governors and their state machines. This is the reason why the Republican Senator Knowland, who also has presidential ambitions, is leaving the Senate to run for Governor of California.

Oil Helps Itself

THIS month, exactly a year after the Texas Railroad Commission belatedly recognised the Suez crisis and allowed oil wells in the state to produce at a record high rate of 3.9 million barrels a day, a record low rate of output has been set: 2.5 million barrels a day, a cut of one-sixth from February and the equivalent of only nine days' flow in the month if the wells produced at their full official capacity. This drastic cut in the state which is responsible for over 40 per cent of the domestic output of crude petroleum means that it will be necessary to draw on surplus stocks to keep refineries operating at their present low rate, a rate which many experts think should be reduced still further. With domestic consumption of petroleum products running 5 per cent below a year ago, and with exports also much lower, it is generally agreed that it is essential to get rid of the excess supplies in this way if the price structure of the industry is not to be undermined. Prices of crude oil have already begun to follow the downward example of refined products, but where oil is concerned demand depends not so much upon prices as upon general economic conditions. Since these are not expected to come to the industry's assistance for some months, it has had no choice but to help itself by cutting output.

At the Texas hearings unusual unanimity in advocating this unpleasant remedy was shown by the independent oilmen, who are engaged only in production and not in the refining or marketing branches of the business and who normally oppose cuts in output. They are also the men who have long advocated restrictions on imports of oil and they seem certain to demand that the importing companies share the sacrifice which the rest of the industry is now making for the sake of its future. This will probably bring pressure for further reductions in imports and for these to be made mandatory rather than voluntary as at present. The case for legal restrictions has been strengthened by the discovery that three importing companies have been making no attempt to keep to the voluntary quotas set for them, and that some twenty other companies which have not so far been importing have now asked for quotas to be allotted to them.

No Change in Virginia



LIKE many conservatives, Senator Byrd has come rapidly to the conclusion that neither the Senate nor Virginia would be the same without him ; he has decided after all not to retire and this, in a state ruled by the all-powerful Byrd machine, is equivalent to re-election. He will still be at Virginia's helm, therefore, when the state which leads the South's "massive resistance" to educating Negro and white children together finally exhausts every legal means of delay and faces the inevitable collision with the authority of the federal courts. In all probability this will be next autumn. By then four school boards will be under final court orders to begin admitting Negroes into white schools —if the Supreme Court manages to deal in its present session with the case of Arlington, a suburb of Washington which a fortnight ago lost its appeal to a lower court.

The new Governor, Mr Almond, who was elected last November, has no choice but to embrace the racial policies of Senator Byrd and has been busy shoring up the weak spots in their legal framework. He has asked for, and certainly will be given, power to close any school if federal troops are brought in to enforce a court order, as they were at Little Rock ; he is also seeking authority to make it impossible for local school boards to permit integration, even if they pay for the schools out of local funds. Under the present law, state funds are to be cut off and the school closed if it mingles races. Mr Almond insists that no integration even of a token variety will be permitted, although Mr Dalton, his Republican opponent last November, believes that, unless Virginia makes some concessions, its whole wall against the Negro children will come tumbling down.

Three of the state laws passed in 1956 to hamper the work of the National Association for the Advancement of Coloured People have now been declared unconstitutional, but the legislators in Richmond are busy thinking up new ones and throwing up defences against the NAACP's drive to increase the number of Negro voters in the South. Attempts are being made to refurbish the provisions of the State Constitution adopted in 1902 to prevent Negroes from voting ; they include a rule that, when voters come to register, they must simply be given a blank sheet of paper on which to write, without any help, the nine pieces of information required. As voters already on the register need not register again, whites would not suffer very much. But such practices fly directly in the face of the civil rights law passed by Congress last year and anger many Americans who do not feel so strongly about enforcing integration in the schools.

Splash in RCA's Pool

IN 1954 the Department of Justice, which under the Eisenhower Administration has taken its anti-trust duties seriously, launched a civil suit against the giant Radio Corporation of America, charging it with monopolising patents in the field of radio and television in the United States. That suit has not yet come to trial, but last week Mr Rogers, the new Attorney General, proved his mettle by bringing up bigger guns—a criminal suit under the

MAGNIFY THE IMPACT of your advertising message around the world. Present your products in the best possible way to your most important prospects—the readers of LIFE INTERNATIONAL and LIFE EN ESPAÑOL.

The large page size and superb reproduction of LIFE's International Editions focus attention on your selling story. Distinguished in editorial content and appearance, both magazines give your product and your company a "better look" in important markets of the free world.

LIFE INTERNATIONAL, published in English fortnightly, circulates in 120 countries outside the United States and Canada.

LIFE EN ESPAÑOL is published in Spanish every fortnight for Latin America.

Their combined net paid circulation of over 635,000 is largely concentrated at upper income levels. With an average of 7 to 8 readers per copy, these magazines reach a combined audience of nearly 5,000,000 prospective buyers . . . key people in business, government and the professions.

Everywhere important people respond to what they see in LIFE's International Editions—as you'll discover, too, when your advertising messages appear in their pages.

PLANT LOCATION FACTS

You'll be close to your **components** in New York State

Infinite Variety: New York State has an unequalled variety of component manufacturers, machine shops and sub-contractors qualified to turn out any components or semi-processed goods you need.

Ready Availability: In addition to local sources, supplies of materials from other parts of the country are promptly available through the nation's largest concentration of sales and distribution offices in New York City and upstate.

★

Before you decide on a new plant site, what data on components or other materials do you need?

- Specific sources of supply?
- Specification details?
- Costs?

The New York State Department of Commerce stands ready with a professional, long-experienced staff to give you a tailor-made analysis of the availability of materials at any New York State location.

★

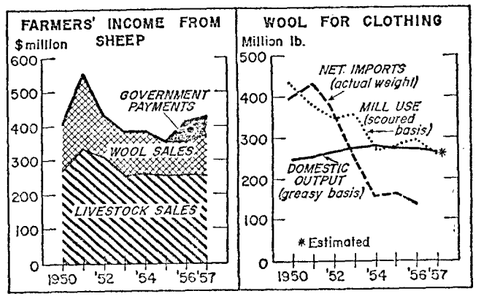
But components are only one of your factors. What about
... labor ... markets and transportation
... sites and buildings ... power ... water
... fuel ... financing?

Let us answer your questions. Write for "Industrial Location Services," a free booklet that tells what we can do for you. Send your request to me at Room 694, 112 State Street, Albany 7, New York.

EDWARD T. DICKINSON
Commissioner of Commerce

Sherman Anti-trust Act which alleged, in addition to the earlier charges, that RCA conspires with foreign cartels to divide up international markets and that it has monopolised patents on electronic devices necessary to American defence, such as radar, sonar and instruments used in guided missiles. RCA is said to have stifled research and development by refusing to license its patents except in packages too large for many licensees; to have kept imports into the United States of radio and television receivers down to a trickle; and to have conspired with other big American firms to end competition in patents. No one can manufacture an electronic device, the indictment charges, without paying tribute to RCA.

RCA's practices have been under investigation since 1932, but no Democratic Attorney General cared to come to grips with a financial giant which also wielded great political influence; the Democrats did not need to prove—as the Republicans do—that they are ready to punish big business if it breaks the law. RCA has assets of $700 million; it owns the National Broadcasting Company, one of the big radio and television networks, manufactures $300 million worth of gramophones, and radio and television sets, and produces about $200 million worth of electronic equipment for the Department of Defence every year.



A civil suit, such as the one brought in 1954, is designed to force a company to abandon illegal practices and can be settled by agreement. A criminal suit is punitive; it is usually brought when the offences are of long standing and the Department of Justice wishes to discourage other firms from similar practices. If RCA is found guilty on all four counts, it can be fined $200,000—not a large sum for a corporation with annual sales of over $1 billion. But a criminal conviction encourages private competitors to bring anti-trust suits for damages, and these can be substantial. It will be worth RCA's while if it can prove what its officials contend—that for years it has "licensed all-comers" and thereby promoted competition.

Following the Sheep?

WITH both the Administration and the sheep farmers united in advocating an extension of the Wool Act of 1954 for another four years, and perhaps indefinitely, and with nearly half the Senate backing the measure, it is unlikely that Congress will refuse to pass it, even though the Act has not achieved its prime purpose. This was to bring production of wool in the United States up to 360 million pounds a year; it seems in fact to have stuck at an annual rate of about 270 million pounds, but at least the rush to get out of sheep-farming entirely seems to have been checked. The Act, a Republican measure, set up a unique method of subsidising wool output, by production or incentive payments, borrowed from the so-called Brannan Plan, first floated by the Democrats in 1949 for all types of farm products and immediately sunk by congressional criticism—although not without trace.

Under the wool scheme farmers sell their output at market prices and the government then makes up the difference between these and the support price. The average support price has been 62 cents a pound, with the average market price falling as low as 43 cents in 1955, the first year of the programme, and recently running at about 50 cents. In order to encourage better grading and preparation of wool at the source and to reward the more progressive farmers, the difference is calculated, not as a flat rate, but as a percentage of the price actually received by the farmer, so that the man who sells his wool at the highest price also gets the highest subsidy. The subsidy is paid out of a special fund into which goes 70 per cent of the receipts from the duty on imported wool.

One of the virtues of the wool programme is that it protects the American producer without interfering with

foreign trade, as would an increase in the tariff, now set at 25.5 cents a pound on raw wool. Such an increase would also make wool and woollen goods more expensive and mean that an even larger share of the market would be lost to the synthetic fibres. It is interesting that a similar type of subsidy has recently been suggested as a possible alternative to the higher tariff now being demanded by American lead and zinc producers.

Orientals Turn West

FROM A CORRESPONDENT IN CALIFORNIA

LAST month San Francisco's Chinatown greeted the new "Year of the Dog" without the squibs which were traditional for Chinese festivals but are now forbidden under the same safety regulations which have long banished such fireworks from most of the national celebrations of Independence Day. This is just one of the many ways in which America's Oriental communities are losing the immunity which they have long enjoyed from the standards of the country as a whole. These Orientals have been the least mixable ingredient in the American melting pot. Their own lack of desire to be absorbed into the general population was encouraged by the hostile racial attitudes of the white community, whose bitter and violent opposition when they first arrived led them to withdraw into "Chinatowns" and "Little Tokyos" in many large cities.

There the Orientals were permitted a remarkable degree of autonomy and independence by the white society, which looked upon them as inscrutable but harmless as long as their bizarre activities were kept within the confines of their ghetto-like settlements, where living and working conditions continued to be scandalously below the standards of the rest of the country. In recent years, however, the common inclination of younger generations to break away from the pattern of their immigrant elders has been powerfully assisted, among the Orientals, by the disruption of their

ties with their homelands, by the relaxation of racial prejudices and restrictions by the white population, and by the withdrawal of their long immunity from outside interference. All of these are eating away at the isolation of America's Oriental enclaves.

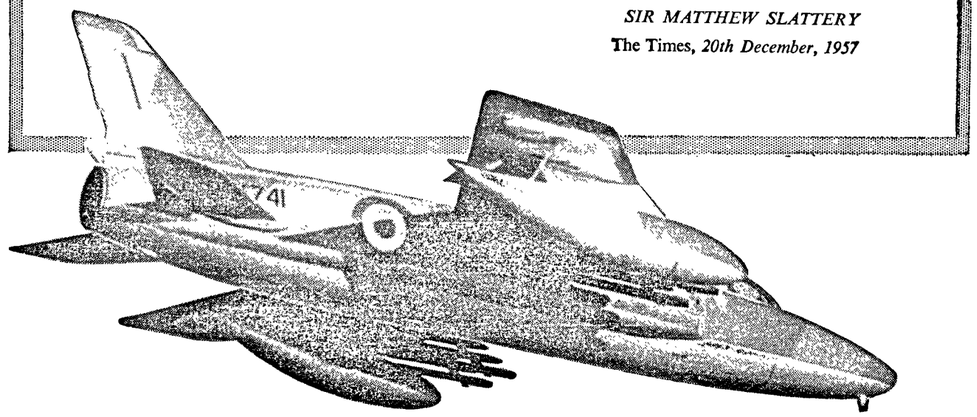
Although there are Chinese and Japanese in most large American cities, more than half of the 142,000 Japanese and 118,000 Chinese counted in the 1950 census lived on the Pacific coast, mainly in California, near their original ports of entry. San Francisco's Chinatown is the largest Oriental settlement in the western hemisphere. Its present population is estimated at 30,000 although it is believed that in it and the other Oriental centres there are many more people than have actually been counted.

THE Chinese first began to arrive in the United States in numbers over a century ago, when they were imported for use as coolie labourers on the building of the transcontinental railways. Within twenty years there were so many of them that white workers began to protest violently against their employment on farms and in mines and factories. The first of a series of Oriental Exclusion Acts, to keep out Chinese immigrants, was passed by Congress in 1882, and the Chinese already in the country retired into closed communities. Their contact with white society was mainly through their curio shops and restaurants and those who ventured out to become domestic servants and launderers still considered Chinatown their domicile, to which they returned whenever possible. Left to itself, San Francisco's Chinatown became a centre for gambling, narcotics and prostitution and the scene of violent wars between rival tongs, or family associations. The fire and earthquake of 1906, which destroyed its labyrinthine buildings, ended the worst of its clandestine activities and the ruling family associations undertook to provide responsible government, with the tacit approval of the city authorities. The police maintained only a special token force in Chinatown and most private litigation was brought before the family associations rather than the appropriate civil courts.

The Japanese, imported in quantity as farm labourers in the eighteen-nineties, also soon encountered hostility and discriminatory legislation, culminating in their total exclusion from immigration and land ownership thirty years later. Like the Chinese, they settled in ghetto-like communities in large cities and also formed many close-knit and very successful agricultural communities specialising in vegetables, fruit and flowers. The settled existence of the Japanese on the Pacific coast was abruptly ended with the attack on Pearl Harbour. After that they were forcibly interned in inland centres until the end of the war, a measure which had an aura of injustice and thus helped to bring about the complete repeal, in a spirit of compensation, of most of the various anti-Oriental laws.

Many interned Japanese did not return to the Pacific coast, however, but went to eastern and midwestern cities. There, as well as in the west, they are entering the general community as office and professional workers and as technicians. The many who did go back to the land in California now tend to engage in the agricultural industry as individuals rather than to belong to closed communities. In the former Japanese quarters of San Francisco and Los Angeles, a few restaurants and shops selling imported Oriental articles are the only relics of the much more populous settlements that once surrounded them. With the exception of intermarriage, which is still uncommon (and illegal in many states), the Japanese are participating in the general community as individuals uninfluenced by their racial heritage. In fact, except as importers, they are remarkably unassociated with two current American fads borrowed from Japan: the craze for Japanese designs among interior decorators and architects, and for Zen Buddhism among the intellectuals.

Even the sale of Japanese curios has been usurped by the canny merchants of Chinatown, who have been robbed by the fortunes of international affairs not only of a homeland but also of a source of merchandise. The Communist triumph in mainland China cut off all intercourse with the United States, and traffic through the Hongkong loophole is heavily policed, so the tourist bazaars have now little but Japanese goods to offer. The residents of Chinatown are genuinely unconcerned with politics, but dutifully they display anti-Communist signs and try to conceal their distaste for Marshal Chiang Kai-shek and his Formosa colleagues, who do not come from the same parts of China as the Chinese-Americans. Most of these are from a small coastal area in South China, with different traditions and speaking different dialects; Madame Chiang, addressing her "countrymen" on visits to Chinatown, must employ an interpreter. Nor is there much contact between the Chinatown Chinese and the several thousand recent refugees from Communism who, wealthier and more cosmopolitan, tend to become a part of the white community.

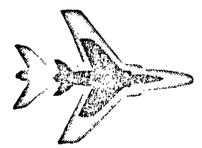


IT is this capacity of the Chinese-Americans to triumph over adversity, however, which may end the long autonomy of Chinatown. Aided by its relative freedom from outside supervision, the Chinese community seems to have been engaged in organising illegal immigration on such a scale that perhaps half of the present Chinese population may have come in in this way. Chief among the fraudulent devices employed was an ingenious "slot" system made possible by the frequent prewar visits of Chinatown merchants to their homeland. Upon his return, the merchant (whose own proof of citizenship, he might claim, had been destroyed in the 1906 fire) would record the birth of one or more children to his wife in China. The children, usually boys, were entitled to American citizenship because of their parentage, and thousands of them subsequently appeared to claim entry. There seems to have been widespread buying and selling of the immigration "slots" corresponding to these many children, and elaborate machinery in Hongkong for the recruitment of would-be immigrants whose age and other qualities (even to the required parental blood-type) could satisfy the increasingly vigilant American authorities. Unable to pay the $2,000 to $3,000 demanded for his "slot," the immigrant often arrived in the United States almost as an indentured servant and was subject to blackmail and extortion because of his illegal status.

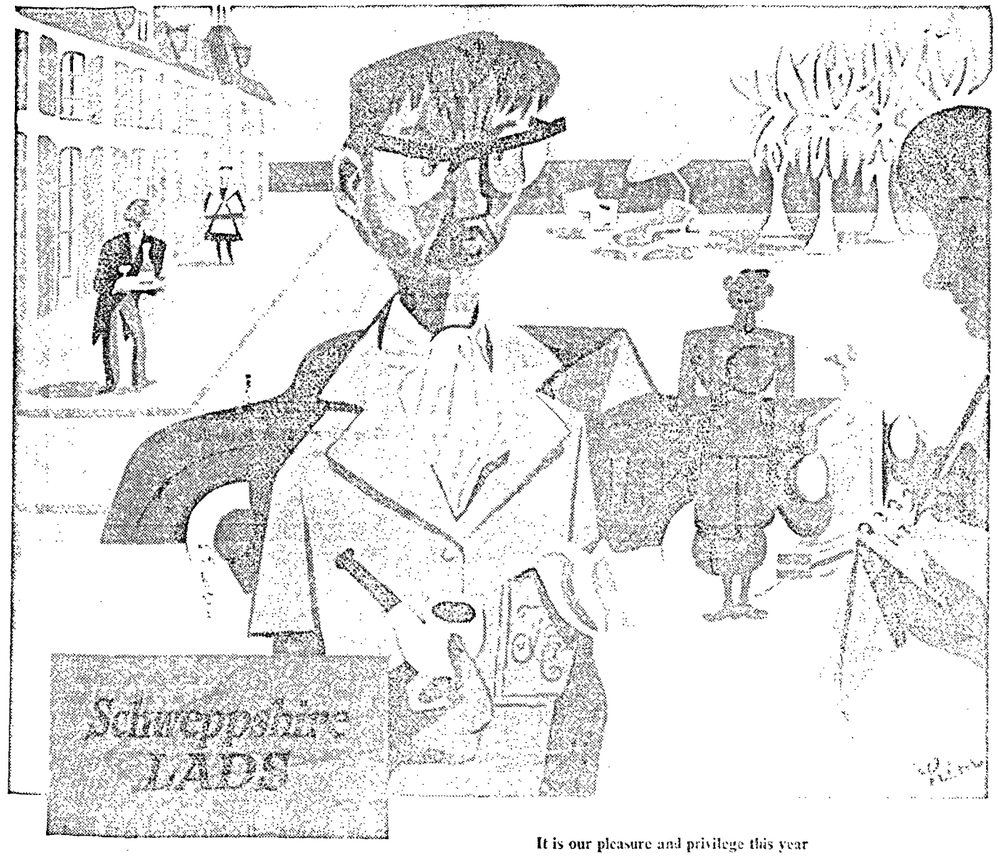
As persistent investigation in the United States and Hongkong began to disclose the magnitude of the traffic and to implicate individuals in the Chinese-American community, more evidence began to emerge voluntarily from Chinatown. This collapse of its internal cohesion, which accompanied the invasion of its mysterious precincts by outside authority, suggests that the Chinatown of the past is unlikely to endure except as a commercial enterprise operated by young Chinese who drive in from the suburbs (as some do now) to sell Japanese goods to the tourists.

THE WEAPON ON THE SPOT . . .

"Few, if any, can be found among knowledgeable and responsible people who really believe that missiles can replace the manned military aircraft as early as is postulated."



SIR MATTHEW SLATTERY
The Times, *20th December, 1957*



The guided missile is indeed the 'ultimate' weapon—the *last* weapon to be used or considered. That is why considered strategic thinking supports the use of more conventional weapons in the first instance; but they must be swift in execution to fulfil their object—the rapid resolution of local conflicts which could so easily spread and bring the ultimate weapon into operation. An Air Force that is flexible as well as effective is the best means of fulfilling that object.

The Folland GNAT, as the fighter component of such an Air Force, is a sound economic proposition. For it has reversed the trend to greater size, complexity and cost in more conventional fighter design. As fast as any conventional fighter, it has better manoeuvrability, a greater operating height and the most advanced armament and equipment; its simplicity makes little demand on skilled maintenance. As a strategic or tactical fighter of the first rank, the GNAT is the right aircraft, for the right job, at the right time.

FOLLAND GNAT
LIGHT JET FIGHTER

FOLLAND AIRCRAFT LIMITED, HAMBLE, SOUTHAMPTON, ENGLAND

It is our pleasure and privilege this year to record certain extracts from the Schweppshire Roll, wherein are recorded the names of Schweppshire Lads who have Made Good

LET us present for a start J. O. Crate. His parents were poor but they were tremendously kind to him. At his School there was not a single unkind master. The weather was mostly good and though he was the youngest child he was never spoilt, nor, alternatively, was he ever in the least bashed. His young parents soon treated him as if he were one of their own generation; and an atmosphere of affectionate friendliness pervaded Bean Hall Quarry Field, the lowly site of their cottage.

After a happy year as a gnome-carver's apprentice, Crate was soon writing books all about pleasant subjects with titles like *Sunset over the Rushes* and *Cotswold Cupid*, which mixed up young people with nature, but in a harmless way. The only sadness in his life was that none of these books sold more than 450 copies.

How did the change come? It may have been the occasion when he became so tremendously nice to his mother that she got fed up and called him sloppy-chops. Then there was the unexpected effectiveness of his reply—"You nasty old hay bag". There was the sensation, leading to quite a big sale, when his "Birdsong and *Dawning*" was misprinted as "*Yawning*," trebling the sales. Anyhow it was about this time that Crate suddenly achieved a successful Angry Young Manhood. He wrote a novel showing up, in exceptionally thin disguise, the rottenness of his prep. school: he created a new philosophy in his *No Go:* he cut his aged Father dead "because", he said "of his unpleasant limp". Everybody loved it, everybody bought his books, and he now lives in luxury, more tremendously angry than ever, although every now and then, behind locked doors, he arranges flowers, pats the head of his Alsatian, and writes secret letters, which he never posts, to his sweet old nurse.

THE WORLD OVERSEAS

Free Trade Area: The French View

FROM A CORRESPONDENT

MARCH looks like being the cruellest month in the wasteland of the free trade area talks: the French memorandum, which has been presented this week to France's common market partners, will, as seemed likely, bring the latent crisis to a head. It expresses very clearly the distaste of French opinion for the free trade area and the awareness of the negotiators that they must coat it thickly with concessions to make the Assembly swallow the pill. On a larger scale still than the common market talks among the Six, the free trade area talks among the seventeen will be a tale of French conditions for avoiding another fiasco like that of the European Defence Community.

The three main new points in the French memorandum seem to be: first, the French government has worked out its ideas sufficiently to commit itself to negotiating; second, imperial preference is, though indirectly, called in question; last, it is proposed that where there are special problems (nearly everywhere), different sectors of industry should be opened to free trade at different rates, corresponding to the difficulties of ironing out "inequalities of competition" in each. The last two, added to old chestnuts such as a time-lag between the opening of the common market and that of the free trade area, show what a chasm must be bridged if anything is to emerge from the talks. To make the new plan acceptable to their home opinion, the French propose to change the title of free trade area to the less bedraggled "European Union for Economic Co-operation."

This title is obviously meant to convey the French distaste for mere free trade compared with political unity, and the determination that wherever the free trade area falls short of the common market's standard of virtue, compensation will be extorted for its sins of omission. This is an old idea, and French experts were peddling it as long ago as September. The demand for a time-lag is one instance of this approach. Another is the notion of clapping "compensatory duties" on "artificially" low-priced goods invading the common market from the outer ring of free trade area countries.

What is new in the French memorandum is the discovery of another and politically more explosive form of compensation: that imperial preference should be partially extended to exports of the Six to the Commonwealth. The argument runs as follows: the French will open their markets to British industry without hope of reciprocity. They might have had some compensation in the British food market; but Britain has shut them out of it in the name of the Commonwealth. They accept that; but in return for this lead of one-sided arrangements they demand that Britain should open wider the door to its export markets in the Commonwealth. The Commonwealth countries will not object—far from it—to European exporters selling goods in competition with British in their shops. So let the continentals have a quota of goods which they can sell, say to Australia, at the imperial tariff. The amount and kind of goods will be a matter for negotiation.

That is the theoretical argument; the practical one is slightly but significantly different. The French have discovered that they are no keener on having agriculture truly in the free trade area than are the British: the risk of letting competitors in on their long-term contracts with Germany would be too great. That leaves room only for minor agreements for selling wine, fruit and vegetables to Britain—a juicy prospect and a consummation much desired, but only a limited harvest. Agriculture, in the wider context, is a secondary question (that the negotiators have argued over little else for weeks is a comment on the enthusiasm with which the talks have been conducted). Industry, in any case, is not directly interested in it, except as an alibi. But it is interested in Commonwealth markets. Cars, for instance: the French, in January, came near to British and German levels of output. They want to extend their outlets for this booming production. Where better than in Australia? French industry generally has been running hard the theme that Britain, at the crossroads of Commonwealth and free trade area, would be able to expand its industries and finally crush all European rivals bar Germany, by its mere size—especially as American investment would gravitate to Britain. There is a good deal in this argument about imperial preference, though not as much as French industry puts into it.

More light is cast on the real motives of French industry by the second innovation of the memorandum: the proposal that in difficult cases free trade should come to hard-pressed industries at different rates, in direct proportion to the speed at which conditions of competition are "harmonised" (this does not quite mean "equalised," but implies that all trade "distortions" be eliminated). The idea behind this employers' demand seems to be that textiles, chemicals, non-ferrous metals and, if steel prices are not "harmonised," some forms of engineering, too, should enjoy a special regime. This is where French protectionism openly rears its head.

The question obviously arises, do the French wish the free trade area to fail? A recent debate in the economic council (where all economic groups, including trade unions and university professors, are represented) showed that there is no French defender of the free trade faith on economic grounds. But there are considerable divergencies of view, nevertheless. On the surface it might seem at the moment that industry would be happy to see the free trade area proposal break down. But this intransigence is not as unanimous and does not go as deep as would appear;

beneath it, there is an undercurrent of disquiet at the idea that there might be no association with Britain at all.

In the Assembly, the prospect for the free trade area is uncertain. Last week the independent conservative ministers in the government pressed for the breaking-off of the free trade area talks. As every French government in this legislature has been overthrown by the independents, their opposition is not to be discounted and already many people are wondering if the free trade area, even rebaptised, can pass unless the Communists abstain. A free trade area on the sufferance of M. Thorez is a bleak as well as an uncertain prospect.

There are still, however, several reasons for hoping that the French Assembly will not reject a free trade area agreement as it did the European Defence Community ; there is perhaps a fifty-fifty chance. One reason is that many leaders, especially the Socialists and Catholics, men like M. Mollet or M. Pflimlin or even the prime minister, M. Gaillard, are anxious to avoid a political breach with Britain. As for the French negotiators, from M. Maurice Faure downwards, they are anxious for the talks to succeed. The second favourable factor is that it is becoming clearer in Paris that all France's common market partners, including Italy (could that be Mr Maudling's hard work ?) are of the same mind. The atmosphere in the new common market bodies at Brussels is animated by a will to produce something positive. This is new, and will certainly influence events, though in the last ditch the other five will probably feel forced to stand by France, on the principle that nothing must undermine the common market.

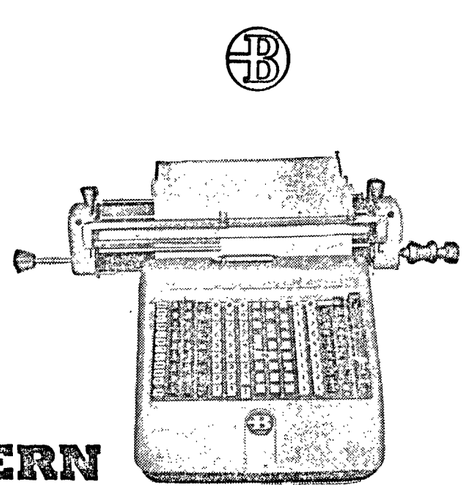
Because of this painfully even balance of forces, the methods of negotiation will be important. M. Maurice Faure, now that he has presented his dossier to France's partners, will " take his pilgrim's staff " and tramp round their capitals to convert them to the French view. He may get some support for the claim to share the benefits of imperial preference. The Italians, under Fiat's influence brought this matter up long before the French. But the five are not likely to be delighted with the sector-by-sector approach or with the idea of the time-lag. If the governments of the six common market countries fail to agree, M. Faure has suggested that they employ the good offices of the executive commission of their community, which will have as its first big task to work out a joint approach. The French memorandum, transformed or not, would then become the joint proposal of the Six. The French government then apparently means to hold a debate in the Assembly on it, in much the way that M. Mollet put the common market draft treaty to the Assembly before the final negotiations. This method, half political wisdom, half negotiatory knout, served them splendidly with the Six, and now they will try it on the Seventeen. So the weeks until March 31, when OEEC is to consider the French draft, will clearly be critical.

Germany's New Soldiers

FROM OUR BONN CORRESPONDENT

SOME 130,000 west Germans are now serving in the federal armed forces, of whom roughly 16,000 are conscripts and 80,000 are in the army. Mindful of the tumble taken by his too-eager-to-please predecessor, the minister of defence refuses to bind himself to dates and figures ; but Herr Strauss probably would not quarrel with the modest estimate that 185,000 men will be in the services by the end of this year. Remarkably unobtrusive in dress and conduct, German soldiers no longer excite attention, as they did not so long ago, by the mere novelty of their reappearance on the daily scene.

Yet their corporate development behind the scenes is still arousing a good deal of healthy public curiosity ; and in recent weeks questioning citizens have observed what they suspect to be three unhappy portents. These are: firstly, the posting of an original-minded and successful staff colonel in the defence ministry at Bonn to regimental duties near the zonal border ; secondly, the debate over the future of the committee appointed by the Bundestag to approve the first senior military appointments ; and thirdly, the unconscionable delay in the appearance of the much-heralded Bundestag defence commissioner.



For five years Colonel Wolf Count von Baudissin (a regular and once a staff officer to Field Marshal Rommel) has been at the head of the defence ministry's sub-department IV-B, whose unique functions are cryptically catalogued as *Innere Führung*. There is no neat and accurate English rendering of this pregnant and mystic label. Colonel von Baudissin, who speaks English pretty well, tentatively recommends " psychological warfare in your own sphere—creative, not destructive." It is probably as near a translation as any. The object of *Innere Führung* is to produce soldiers of value to a democratic state—a fellowship of armed compatriots, who, being equipped morally and politically as well as materially and technically, are in all the better fettle to withstand the totalitarian tendencies that have been Germany's bane in the past and that may yet threaten it again, either from within or from without.

★

The methods of *Innere Führung* are many and various. Directives and instructional literature, including library books and discussion pamphlets (rather like the War Office's publications on current affairs) emanate from department IV-B. *Innere Führung* officers at the defence ministry also have a say in weighting the courses at all Bundeswehr training schools. In the field, full-time *Innere Führung* officers are appointed as far down as brigade and at district commands. In the regiment every officer and nco is supposed to make it his business to see that training and routine conform as far as practicable with the principle nailed gallantly to *Innere Führung's* mast—that the average soldier is all the better for being treated as a thinking human being.

Colonel von Baudissin's special pride and hope is the *Innere Führung* school at Coblenz, which he is doing his utmost to establish as an unskippable stepping-stone to all promotion. Already he has contrived to have it officially laid down that every general shall spend one week a year at Coblenz, brushing up his citizenship and humanity ; that every sergeant-major shall spend seventeen days there at least once in his career ; and that all potential battalion commanders and staff officers shall take the standard six weeks' course. Lectures occupy less than a quarter of the Coblenz curriculum ; the greater part of the time is spent in group discussion.

The first ten days of the six weeks' course are devoted to the study of communist theory and its practice in the people's democracies—" Pankow week," Colonel von Baudissin calls it, the talk naturally turning largely on the German Democratic Republic and its government in east

MODERN ACCOUNTING WITH THE BURROUGHS DIRECTOR 600

For the smaller business or larger concerns with decentralized systems or branches, the Director 600 brings all the advantages of modern machine accounting.

The Burroughs Director 600 can be applied to a wide variety of book keeping operations. Ledgers of all types—for example Sales and Purchase, Stock Records, Hire Purchase; Payroll and Costing; Statements and Remittance Advices.

Its many automatic and protective features not only ensure speed and ease of operation but simplify operator-training. It can be used as a fast adding or listing machine at any time.

A Director 600 in your office would lower costs and increase productivity: and your investment would be protected by Burroughs' unparalleled service. Contact your local Burroughs Office or write direct to Burroughs Adding Machine Ltd., 356-366 Oxford Street, London, W.1.

Berlin. "What would you say," the colonel likes it to be asked of students at this stage, "if you were stationed near the zonal border and some of the men under your command who had happened to pick up an east German television programme exalting the 'people's army' were to say 'Now that's something like! None of that Baudissin nonsense over there'?"

Needless to say they would not be the first to express contempt for *Innere Führung*. Colonel von Baudissin has opponents in high places who still have no fault to find with the orthodox traditions of Potsdam and the Bendlerstrasse. If they have not played a part in bringing it about, some of them at any rate are not regretting his planned transfer from Bonn in May to command a battle group that is being newly formed in the Göttingen area in July. Although Colonel von Baudissin loyally affirms that he is being given a breather at his own wish, and has been promised that he will be allowed to resume his present work, it seems strange to many that a driving force of his unusual kind should be removed from this formative post just as the Bundeswehr is coming into its stride.

Colonel von Baudissin maintains that the survival of the healthier spirit which he is trying to foster in the new armed forces depends in the long run upon the vigilance of parliament. Until now vigil has on the whole been conscientiously kept. But the committee of 38 civilians and ex-officers which the Bundestag set up in 1955 to approve all service appointments carrying the rank of colonel and above has now completed the task originally envisaged. (Out of 600 candidates the committee has accepted 486 without and 14 with reservation, and has rejected 100, including seven former generals and two admirals.) There being now enough aspirants within the Bundeswehr for senior promotion, the committee's future has been in dispute. While a number of deputies have held that it should be kept in existence and its powers so adapted that it may still exercise control over key appointments, the right-wing German Party has urged its dissolution. The Bundestag defence committee reached a tentative compromise this week according to which the adjudicators shall remain on call to weigh any candidates for senior appointments still coming from outside the forces. It will be interesting to see what use, if any, is made of them; interesting, too, to learn the name of the first holder of the office of defence commissioner, whose appointment has been imminent for more than twelve months. It is intended that the defence commissioner shall keep watch for parliament on the workings of *Innere Führung*, that he shall have access to all military establishments and personnel at all times and report to parliament anything which he thinks it his duty to question in the public interest.

Arabs Between Two Unions

FROM OUR CORRESPONDENT IN BEIRUT

DISCUSSION of the Hashemite federation, its good intentions towards the Saudi throne, and its future are the main items on the agenda of the Iraqi and Jordanian foreign ministers now visiting King Saud in Riyadh. Officials both in Baghdad and Amman make no secret of their hope that the visit will mark the first step towards the ultimate adhesion of Saudi Arabia to the federation. Any such decision on the part of King Saud would do much to even the balance of power between the Hashemite federation and the United Arab Republic, formed by the union of Egypt and Syria. The latter, despite many practical difficulties still to be overcome, looks by far the stronger and more lasting political unit, partly by virtue of greater numbers, but mostly because of the appeal of President Nasser to almost all Arabs. The name of Nasser is something to conjure with in both Iraq and Jordan, whereas the standing of the Hashemites in Egypt and Syria is negligible.

The fact that the Iraqi-Jordanian mission to Riyadh is a mission merely of foreign ministers suggests that in the estimation of the federal leaders there is much preparatory work still to be done. There has been no hint from Riyadh that King Saud is prepared to throw in his lot with either new grouping. Indeed, it is possible that, rather than encourage his visitors to think in terms of extending the federation, he may first pose some awkward questions. Now that the armies of Iraq and Jordan are to be unified, will it be necessary for King Saud to maintain any longer a brigade group in the Jordan valley and a battalion in the Aqaba region? Will Jordan still require an annual subsidy of £5 million sterling from Saudi Arabia in view of the claim it can now fairly make on a proportion of Iraq's oil revenues —scarcely less substantial than those of Saudi Arabia itself? Pursuing such trends of thought, some observers here think that the proclamation of Hashemite federation offers King Saud an ideal opportunity for sliding out of his embarrassing commitment to King Hussein—embarrassing both financially and in the sense that it perpetuates a serious issue betwen the Saudis and Egyptians.

★

If King Saud takes such a line it will certainly cause gloom among the Jordanians, perhaps even more among the Iraqis, who in the last resort must now carry their indigent partner. The Jordanian government has just asked for a further $10 million from the United States government for budgetary support. Approval of the request would bring the total amount of American aid received by Jordan in this financial year for budgetary purposes alone (that is, excluding military supplies and Point IV expenditures) to $30 million. Together with the £5 million sterling received from Saudi Arabia, this exceeds the equivalent of £15 million sterling. The British subsidy (excluding the element of interest-free development loans) was running at a rate of some £10 million sterling when the treaty was terminated. King Saud may well inquire where the difference—equal to the £5 million of the Saudi subsidy—has gone.

King Saud's natural caution must be sharpened by the obvious fact that the two new Arab states—the union and the federation—seem to be squaring up to each other with malevolent intent. President Nasser's famous telegram to King Faisal congratulating him on the achievement of federation with Jordan has proved to be nothing more than official courtesy. Almost at once, unofficial reactions breathed mutual hostility and this week President Nasser himself is dubbing it a "false federation" which will "be dispersed like dried leaves in the wind."

Official Iraqis and Jordanians speak of an unnatural union between Egypt and Syria and of "sabotage" of the Fertile Crescent; the Syrians accuse the Hashemite federation of being little more than an imperialist plot designed to perpetuate the western grip on Iraq and Jordan.

The crystallisation of Arab antagonisms produced by the union and the federation is reflected in a painful agitation of feelings in Lebanon, with renewed fears for the maintenance of public order. The Lebanese government hastened to congratulate both of the new units, and the prime minister, Sami Solh, will soon lead an official delegation to all four capitals concerned—Cairo, Damascus, Amman and Baghdad. But that merely takes cognisance of the problem without solving it. On the one hand, President Chamoun and his supporters have to resist a movement towards union with Egypt and Syria. Such a union would swamp the "special identity" of Lebanon, which often means in effect the interests of the powerful Christian churches and communities and the Lebanese economic and cultural ties with the West. On the other hand, they cannot link up with the Hashemites for fear of infuriating the Syrians. At least tolerable relations with Syria are a condition of Lebanon's continued prosperity as an entrepot serving its Arab hinterland. In the present circumstances, the Chamoun regime seems to be doing everything possible to align its policies with those of King Saud—the difficulty sometimes being to discover what the King's intentions are.

★

A policy of neutrality has been made more difficult to uphold by the decision of the Lebanese government early last year to subscribe to the Eisenhower doctrine. It has thereby exacerbated its relations with its powerful opposition, the so-called National Front, which consists mainly of Moslems, but which has also attracted the support of certain Druses and a few independent Christians who doubt the wisdom of the pro-western alignment. Thus part of the complication now embarrassing President Chamoun and his government is due to an effort to reconcile the neutrality of the Arab world with a pro-western attitude in the cold war.

The National Front—always neutralist between the great powers blocks—is now campaigning in favour of the United Arab Republic, which it would like to join on a basis of federation, if not of union. It is planning a determined attack on the regime both in the Chamber and in the country with the object of blocking the re-election of President Chamoun (later this year) for a second term of office. Its minimum demand is for a president who would extricate the country from the Eisenhower doctrine and thus clear the field for more flexible manœuvre. In practice the more moderate elements in the National Front would interpret that as meaning a search for a link with the United Arab Republic which would preserve the "special identity" of Lebanon—that is, for federation with acceptable guarantees for Christians.

So far, the Arab position in the cold war appears unaffected by either the union or the federation. The Soviet commitments to Egypt and Syria stand, as do those of the United States towards Lebanon, Jordan and Iraq. The eclipse of the Syrian Communists can be judged important only by those who once grossly exaggerated their influence. In fact the Soviet agreements were made with the ruling elements in the country, ranging from the left-wing progressives to arch-conservatives such as Khalid al Azm, and it is strongly denied from Damascus that the union has affected them at all.

Swing to the Right in Central America

FROM A CORRESPONDENT

CENTRAL AMERICA'S two recent presidential elections, one in Guatemala and the other in Costa Rica, both resulted in the ousting of relatively liberal forces and the return to power of right-wing elements. In Costa Rica, Sr Mario Echandi, a wealthy lawyer who for the last four years has been opposition leader in the Costa Rican Congress, won the elections, with more than the necessary 40 per cent of the total votes. But he did not win a majority in Congress and to be effective his supporters will have to team up with the followers of Sr Calderon Guardia, an ex-president of extreme right-wing views.

Costa Rica's new president has stated that he will make drastic changes in both domestic and international policies. In the domestic field, the programme of "progressive nationalisation of industry" begun by Sr José Figueres will be reversed. Under Sr Figueres, this programme has affected such concerns as electric power, the telephone system, and local and national transportation, and plans have been laid to nationalise certain industries including the manufacture of cement, milk distribution and aviation. Sr Echandi says he wants such matters to be handled by private enterprise. One other important change that he has promised will be in the banking and insurance field. Under Sr Figueres, both banking and insurance were government operations and no private companies were allowed to operate. Sr Echandi has said that he wishes to open these fields to private enterprise and "if the government agencies cannot compete with private enterprise, they should be abolished."

★

In Guatemala, General Miguel Idígoras Fuentes, also a far-right conservative, has similar views, although on becoming president he is not faced with a similar situation. He is a graduate of the dictator school of the former dictator Jorge Ubico, and spent four years in exile during the presidency of the anti-communist, Colonel Castillo Armas, who was assassinated last July. Castillo attempted to steer a middle-of-the-road policy and encouraged private investment. His death left Guatemalan investors uncertain of the future; but it is generally agreed that the election of General Idígoras will re-establish this confidence.

The only shadow on the forthcoming administration of General Idígoras may be the resurgence of left-wing elements, since the Revolutionary party polled over 100,000 votes out of a total of roughly 350,000; it is managed and dominated by the same elements that were behind the pro-communist regime of Sr Jacobo Arbenz. In spite of "let's forgive" statements by General Idígoras before the elections, it is believed that he will deal severely with the left wing.

All over Central America, there seems to be a swing to the conservative side. In El Salvador, President José Lemus is an acknowledged representative of the wealthy, landowning and coffee-growing elements in that country. In

Nicaragua, the present regime of Sr Luis Somoza and his brother, Sr Anastasio Somoza Jr, represents vested interests, although other propertied interests oppose it violently. In Panama, President Ernesto de la Guardia admittedly represents the famous "thirty families" who have controlled Panama since 1903. The one question mark as yet is the Republic of Honduras. President Villeda Morales is considered left-wing by most conservatives in that country. Sr Morales denies this vigorously, but to little effect.

Balance Sheet After Mundhra

FROM OUR CORRESPONDENT IN INDIA

As parliament told itself in the subsequent debates, the Mundhra inquiry was a triumph for democracy; as the home minister remarked, it was also a success for the Congress party back-benchers. But it has been a disaster for relations between ministers and civil servants, and for almost all those personally implicated it has been a catastrophe.

It was a triumph for democracy because it has now been established that, when there are serious allegations against the behaviour of a minister or his civil servants, there will have to be a public judicial inquiry similar to the Bank Rate inquiry in England. There have been plenty of scandals before, and some have been investigated; but the investigations were private, made by leading members of the Congress party itself, and the conclusions have usually been suspected of whitewash. This is the first time the inquiry has been held by a chief justice, in the open, and with the attorney-general present to assist. Admittedly the inquiry suffered from haste, so that there were tantalising gaps in the evidence; but the lesson has been learnt, and next time the Bank Rate model, with its preliminary investigations, will no doubt be followed.

It was a success for the Congress back-benchers because they asked the original questions, and it was the Congress party, far more than opposition or public, pressure which drove a reluctant and harried minister to accept the need for an inquiry. The party has an overwhelming majority in parliament. Its back-benchers have now tasted blood. They have learnt that their questions are an effective weapon against any minister, however powerful, and whether their own motives are the public good or a desire for fame, they will bring to an end the easy time that ministers have enjoyed in parliament for ten years. The damage done to the relations between ministers and civil servants has been quite unnecessary; it is the result of the lack of courage of one man—Mr T. T. Krishnamachari, the late finance minister.

The transaction under attack, the purchase by the nationalised Life Insurance Corporation, at the finance ministry's suggestion, of £1 million of shares from Mr Mundhra, a speculative industrialist with some of the engaging characteristics of Mr Sidney Stanley, was arguably defensible, even though Mr Justice Chagla found it in various ways improper and unbusinesslike. The shares were a mixed bag, not entirely lacking in quality, and the alternative to buying them might have been serious damage to companies of importance to the economy. The errors were the corporation's somewhat too docile acceptance of advice (under the law the government can only force the corporation's hand if it issues a directive in writing, and then only on a matter of policy); the careless fixing of the prices at which the shares were bought; and the failure to observe some of the corporation's own rules.

The minister could clearly not be held responsible for all these things. But he seems to have been sufficiently alarmed first to conceal the full truth from parliament; then to give highly evasive evidence before the Chagla commission; and finally, to defend himself against the commission's finding that he was responsible factually as well as constitutionally, by casting imputations on his principal secretary, although his elaborate plea of ignorance has now been finally exploded by the bringing to light of records which show that his original disclaimers were made in full knowledge of the facts.

Naturally the civil service is upset. The orders were the minister's. His officials, the principal finance secretary and the chairman of the Life Insurance Corporation, trusted him enough not to ask for anything in writing; and then he took advantage of that fact to try to leave them to carry the blame. How can a secretary ever again give his minister quite the trust which has hitherto been the rule in Delhi? Ministers, too, will be more careful in future. They have been firmly reminded of the constitutional responsibility of a minister for all that goes on in his ministry. That has been sharply established by Mr Nehru's acceptance of Mr Krishnamachari's resignation even though, to the public's annoyance, he said the minister's part in the transaction was "of the smallest." Ministers will, in future, take much more interest in actions by their civil servants which may entail unpleasant consequences for themselves. Red tape will proliferate and the business of government will suffer.

★

For those concerned, the inquiry has been a tragedy. Mr Firoz Gandhi, the main accuser, has lost his job. Mr Mundhra is being pursued on criminal charges. The finance minister, one of the most brilliant, imaginative and forceful India has had, has retired under a cloud he himself had made. The governor of the Reserve Bank, up to now a very successful civil servant, had his evidence so blistered by the attorney-general that his usefulness in his present post has been gravely impaired. The chairman of the Life Insurance Corporation, who has behind him a quarter of a century of admirable public service, was led into confessing that he had not read the rules of his corporation or the balance sheets of the companies whose shares he was buying; its managing director, hitherto one of India's most respected actuaries, gave evidence which was far from impressive for a man carrying his responsibilities. The principal finance secretary, to whom India owes more than to almost any other civil servant, finds himself under fire, and let down both by his minister and by the governor of the Reserve Bank, the latter a colleague of thirty years' standing. The prime minister himself showed less than his usual political virtuosity. He kept his balance among wild allegations of corruption, but many people have been disturbed by the way he hedged over how far he accepted the commission's view on the minister's responsibility. Democracy has indeed been strengthened and confirmed; but India will be paying the bill for months to come.

the things they say!

Germany? Didn't know we exported chemicals there.

Indeed we do — and to America and Arabia, Spain and Siam.
In fact, to almost every country in the world.

But, surely, other industrial countries have their own chemical industries?

So they have, yet they still buy chemicals from us.

Why is that?

Often because it would cost them more to make the chemicals themselves. Also because they need many of the new, specialised chemical products that Britain, with her chemical knowledge and experience, has been able to develop.

Good for us!

Very good for us — *and* for our balance of payments. Last year the British chemical industry sold about £265 million worth of its products abroad. That would be far more than enough to pay for all our imports of wool.

Well, that seems a fair exchange. Soda ash for sheepskins, eh?

And not only soda ash, but synthetic fibres, drugs and dyestuffs, paints and plastics.

Sounds impressive!

It certainly is. Chemicals are the third largest of Britain's exporting industries, and I.C.I. the biggest exporter among Britain's chemical companies.

Australian Industry on the move

Australia's economy moves irresistibly forward along the paths of industrial expansion; for some time the value of manufactures has exceeded that of primary products. The Bank of New South Wales which has been the leading Australian Bank since 1817 has developed and expanded its services to meet the needs of all its many customers in primary production, commerce and industry. Any British industrialist or manufacturer wishing to take advantage of the opportunities in Australia today, would be well advised to write for our booklet "ESTABLISHING A BUSINESS IN AUSTRALIA" to:—

BANK OF NEW SOUTH WALES

ALL OVER AUSTRALIA AND NEW ZEALAND

THE BUSINESS WORLD

Hot Money and the Reserves

FOR some months the margin between short-term interest rates in New York and London has been greater than the corresponding premium on dollars, or discount on sterling, quoted in the forward exchange market. As a consequence, a certain amount of foreign money which had been placed in the New York money market has made its way to London. This movement into London of essentially short-term capital has led to some discussion of the consequential effect that it has on the gold and dollar reserve. If, in fact, the gold and dollar holdings of the Exchange Equalisation Account have been increased by transactions of this sort, which are likely to be essentially transient, the recent reinforcement of the reserves is to that extent illusory.

This itself is a simple proposition, but the mechanics of the exchange market which govern the matter are complicated and do not lead to nearly such an obvious conclusion. The first job is to describe the nature of these interest arbitrage operations. If 6 per cent can be earned on three-month treasury bills in London and 1¼ per cent on US three-month treasury bills (the rates prevailing now), one would expect financial institutions that have to keep a certain proportion of their assets in liquid form to place them in London rather than New York. In the days of the gold standard, any appreciable disparity between short-term rates had this effect and the smallest movements of official discount rates and of the market rates anchored to them therefore acted as powerful instruments in correcting adverse exchange movements and inducing international movements of gold. But that power of small differentials to repel or attract funds rested on the fact that since the gold points were then extremely narrow, it was not necessary for movements of short-term capital to be covered by corresponding transactions in the forward exchange market.

IN the present era of somewhat wider official tolerances of exchange fluctuation and of occasional doubts regarding the parities themselves, straight interest arbitrage of this kind no longer occurs. Movements of short-term money are invariably accompanied by collateral forward exchange operations. Thus if a Canadian bank shifts money invested in bills in New York into treasury bills in London, it will automatically cover its exchange risk by selling sterling three months forward. The cost of such a forward sale this week would be around 3½ per cent per annum, representing the discount at which sterling is quoted against dollars for forward delivery. But this cost on the exchange swap is less than the extra 4¾ per cent per annum which it can earn on bills in London. It would, therefore, pay the Canadian bank to shift at least part of its liquid funds from New York to London and so earn 1¼ per cent more on them without running any exchange risk at all. This is what is meant by "covered arbitrage."

A sizeable movement of funds to London has been stimulated by an advantage in interest rates and the discount on forward sterling has not widened so far as to offset it completely. Such shifts of funds from New York to London involve a demand for spot sterling and so bring immediate and direct benefit to the reserves held by the Exchange Equalisation Account; either they increase the reserves or they mitigate losses through other causes. Then comes the question: How far

does that gain have to be abated by the fact that the sterling which has so been bought is simultaneously sold forward ?

At any given moment, one must assume, the offer and demand for sterling in the forward market is in equilibrium ; it is a perfectly free market, more sensitive than perhaps any other to the slightest change in the equation of demand and supply. It is, however, also a market in which official intervention occurs. Suppose, to take an extreme and unrealistic example, that the Canadian bank, having transferred money from New York to London, selling spot dollars to buy spot sterling, then sold an equivalent amount of sterling forward to the Exchange Equalisation Account against dollars to be provided three months hence. The immediate result would be an apparent increase in the dollar reserve in the EEA because that reserve is counted on a cash basis—that is, the bars of gold it holds and its foreign currencies deposited in other central banks. It excludes from the calculation any future commitments, whether deliveries or receipts of foreign currencies.

This, however, is not how the transaction would be done. The forward sale of sterling would in practice be made in the market, adding one more transaction to the innumerable stream that make up the highly complex, versatile and flexible forward market. This market ranges in the terms for which it deals from a forward sale of dollars three years ahead that might be made by a British electrical company working on a contract for the erection of turbines in the United States to dealings for delivery two or three days ahead. Some of its operations are the typical commercial forward purchases of currencies required to pay for imports—at this moment, for example, three months-forward purchases of sterling are being made to meet credits for the export of cocoa to the United States. Others may be semi-speculative forward sales of sterling—three, six or twelve months ahead—that were being made last autumn by American firms with British subsidiaries as a hedge against their sterling investment —generally known as "Great West Road" selling. Or they may be wholly speculative operations such as the forward sales of sterling against dollars or marks that were made by many German banks acting through Zurich a few months ago.

In such a complex market, it is impossible to trace the course of a specific deal involving the movement of short-term money from New York to London. But it is the exception rather than the rule for the market to be able to match a given forward sale of sterling and purchase of dollars with an exactly balancing forward sale of dollars against sterling. The exchange dealer who buys, say, £1 million of sterling against dollars for delivery three months hence, and who cannot at that precise moment find an exact counterpart, will immediately cover himself by a corresponding spot purchase of dollars. He has undertaken to deliver dollars three months hence at, say, $2.79, this being based on a spot rate of $2.81½ and a discount of 2½ cents on three-month forward sterling. Of these two variables, the spot rate and the forward discount, the spot rate is by far the more potentially unstable element —one that could move by three points in the event of a sudden untoward turn of affairs. It is that element which the dealer, therefore, covers as quickly as possible if he cannot match the whole forward transaction in the forward market. Having purchased the spot dollars he can, at greater leisure, swap these, i.e. sell them spot and buy forward, as his overall exchange position requires, matching his forward sales and purchases. The original spot purchase of dollars made against forward buying of sterling and sale of dollars thereupon gets lost in the maze of the forward market.

The truth is that a precise answer cannot be given to the question whether transfers of short money are self-neutralising. The nature of the answer is to be sought, not in the course that any specific operation takes, but in its wider repercussions on the spot and forward rates. The movement of funds from New York to London will have tended to strengthen the spot rate for sterling and the attendant forward sale of sterling will correspondingly have tended to widen the discount on forward sterling.

All kinds of consequences will flow from these facts. The demand for sterling, spot and forward, is elastic. If the spot rate is driven up, as it has recently been, towards its ceiling of $2.82, many merchants who have payments to make will tend to postpone them, since they can lose nothing and may gain by so doing. The American importer of whisky, for example, who normally buys on cash terms, will tend to postpone payment. In fact, he will be encouraged by the widening discount on forward sterling to shift his payment terms from cash to credit. If he can arrange a three-month acceptance credit in London—which would be a perfectly normal and justifiable operation—he would cover his sterling commitments by a three-month forward purchase of sterling, thus setting off the discount at which he was buying, now equivalent to 3½ per cent per annum, against the cost of his London credit. This would make it relatively cheap borrowing. The wider the forward discount on sterling caused by such operations as the movement of hot money to London, the greater the inducement to foreign merchants to borrow in London.

By its effects on both the spot and forward rates, the movement of hot money to London will, therefore, tend to shift the leads and lags of payments against sterling. This is only a short-term phenomenon. In due course the hot money will leave London and the lags of payments will catch up. But the effect of all these operations on the reserve will have been largely self-cancelling and in their net immediate result far more modest than a great deal of the current discussion of the problem would lead one to believe.

RESTRICTIVE PRACTICES—II

The Commission and the Court

Last week's article showed that in one industry at least—the motor industry—little real change has followed the ban on the collective enforcement of resale price maintenance, imposed in the Restrictive Practices Act of 1956. Legal enforcement of individual price maintenance through the courts, which was made easier by this same act, can effectively achieve the same ends. This, and the weakening of the Monopolies Commission, constituted industry's *quid pro quo* for accepting public registration of restrictive agreements and their examination by a new Restrictive Practices Court. The practical effect of decisions by this court, reinforced by the powers remaining with the Monopolies Commission, will constitute the *quo*, and will determine whether the Act has any net effect in increasing competition in British industry. Neither has yet been put to the test.

Under the original Acts of 1948 and 1953 the Board of Trade was given powers to refer a wide range of industrial matters to the Monopolies Commission ; but in practice the commission inquired mainly into agreements on common pricing and collective discrimination, investigating far more price rings than single-firm monopolies. The 1956 Act was framed chiefly to take over this major concern of the commission, partly perhaps because the practical results of its reports had for various reasons been limited. Collective enforcement of resale price maintenance was made unconditionally illegal, and all other agreements concerned with any form of price ring had to be registered. The task of deciding whether these were in the public interest has passed from the Monopolies Commission to the new Restrictive Practices Court—which begins with the presumption that, until proved otherwise, such agreements are all against the public interest.

There were some—not confined to businessmen—who felt that, once the court had taken over, the commission could serve no further purpose and should be wound up. In the event, it was not. The Board of Trade still has powers of reference to the commission which are very wide—much wider than its present inquiries would suggest. But it is not concerned with judging the public interest of agreements that have been registered as restrictive practices, and the Board cannot now act on the commission's earlier reports (though any action already taken stands), if these were concerned with agreements that became registrable under the Act. The main kind of industrial situation that it is left to consider is the "single firm monopoly," where a single firm, or two or more firms acting together (but not by agreement, for that would be a matter for the court) control a third or more of the market for a particular product. It can also deal with agreements affecting exports, which have been specifically excluded from the purview of the court. Little more work was done, after the Act was published in February 1956, on four inquiries then in hand but not capable of completion before the new Act came into force, and which the Board of Trade considered would then fall outside the commission's restricted scope. One other inquiry, into chemical fertilisers, was continued, but the terms of reference were changed to order investigation of a single firm monopoly, to keep this within the commission's revised powers. To keep the commission occupied it was given three further references, all of the single firm monopoly type: electrical equipment for motor vehicles ; cigarettes and pipe tobacco ; and tobacco machinery. Finally, the commission was asked, under a little-used section of the 1948 Act, to report whether its earlier recommendations about the trade in imported timber had been complied with. The commission's staff is now about 50, roughly half of what it was at the peak of its operations in 1955. Two at least of the five reports it now has in hand are proving exceptionally intricate, but unless the commission's activities are to be further reduced, it will soon have to be given some new work.

The Registrar of Restrictive Practices and his staff, on the other hand, are now extremely busy. By January 31, 1958, a total of 1,867 restrictive agreements had been submitted for registration ; of these, by the same date, 1,574 had reached the public register, and another 200 or so will shortly be added. These agreements are concerned mainly with common prices, level tendering or discriminatory terms of supply. A second batch, concerned mainly with market-sharing or agreements to limit production, have just been called up, but many of these overlap with the first set, and the total number of agreements finally placed on the register may not greatly exceed 2,000. The Board of Trade, in two directives to the Registrar, has so far picked out about 200 of these agreements, covering about 40 different products, for submission to the Restrictive Practices Court. It is now over 10 months since the first directive was made, but nothing is yet ready for submission to the court, and a closer examination of the procedures laid down in the Act suggests that it

would be quite unrealistic to expect the first cases to reach the court before the autumn.

These first cases are like the initial "plug" of oil in a pipeline: it takes a long time to fill the line, but once full the oil emerges in a regular flow. Once started, the Registrar hopes to keep up a regular flow of about forty cases a year. The court, like the old Monopolies Commission, will be able to hear several cases simultaneously, though it may not do so at first. If it can in fact hand down 40 decisions a year, case law will soon cover the most important types of restrictive agreements. To prepare these 40 cases a year for submission to the court the Registrar has a full time administrative and executive staff of about 35; this, too, implies a much more rapid rate of output, though within much narrower terms of reference, than has ever been achieved by the Monopolies Commission.

PROCEEDINGS begin with the issue of Notices of Reference; then a respondent who is party to the agreement in question has to be selected and a Representation Order approving this selection obtained; the respondent is then asked to prepare his case in justification of the agreement, and the Registrar prepares a reply to this; then the company or association is allowed a rejoinder. Obviously, this procedure can become protracted before the case even reaches the court. Most firms and trade associations have co-operated with the Registrar in the collection of facts and in the preparation of an agreed list of documents to be produced in court. Many cases, however, require the production of cost figures, which are not generally available and take time to collect from the individual parties to the agreement. These cases may thus take as long to prepare as any other major civil suit—and if American experience in the preparation of anti-trust cases is any guide, it would be far too early yet to be impatient about delay in bringing the first cases to court.

It is far more important that the first cases to come before the court should be well prepared than that they get there quickly. The Registrar has been able to draw at each stage on the advice of some academic economists—as, no doubt, the respondents have been too. Whether a court that contains no economist will be able to appreciate their arguments is another matter. Success of the procedure laid down in this Act, indeed, depends upon turning complex economic implications of industrial practice, and their relation to the "public interest," into a justiciable issue for the court to decide. In the United States, the questions before the court in anti-trust cases are essentially questions of fact: price rings, for example, are illegal there *per se*, and the court has merely to establish whether they exist or not. But under the British law the issues concern implications, actual or potential, not merely facts. This makes the new court's task harder than that of the American courts—which has been found difficult enough.

The real effect of this legislation in promoting more competition or less in British industry will depend upon whether public opinion becomes thoroughly convinced—as it is certainly not convinced at present—that restrictive agreements are automatically bad. Public opinion as yet has hardly been affected by the publicity given to agreements placed on the public register, and it is not easy to see how in practice it could be: it might be decisively influenced by the first few judgments of the court, before it loses interest. If the first agreements to be considered are found, in spite of the presumptions in the Act, to be in the public interest, the public could easily conclude that all such agreements are a good thing. For the public to accept the same presumption as is written into the Act—that all restrictive practices are likely to be harmful unless proved otherwise—then the Registrar will need to win these first few cases. He cannot determine precisely which cases will be ready first: this does not lie within his power alone. And it could easily occur that cases where an industry has the best case in justification are also those where the legal preliminaries are most likely to be ready first. Upon issues that are obviously harder to justify, industry may take longer to try to assemble its case.

TO speculate further about the effectiveness of the court machinery before it has begun to operate would be foolish. But the mechanics of registration and the preparation of cases for the court have already had some good effects. Many agreements have been abandoned or revised so that they do not have to be registered, or so that, while still registrable, they can be more readily justified as in the public interest. Others—and this must be counted an initial victory for the Act—were abandoned after the signatories heard that the Registrar had decided to start proceedings, or are likely to be abandoned before they reach the court. Last week the Cohen committee suggested that the Government should reopen the whole question of individual price maintenance, thereby drawing upon itself the only criticism that employers' organisations voiced of its report. It may be asking too much to expect a government that has just made individual price maintenance legally enforcable to ask some new committee—or even perhaps the Monopolies Commission—to decide whether such enforcement is in the public interest. But the Act would still give the commission the power to do this, and another government might be more inclined to use it. The campaign against monopolies and restrictive practices in British industry, which was begun in 1948 with the support of all political parties, is therefore not in suspense; new groupings of forces are preparing for action. But it would be foolish to pretend that this regrouping has not involved, during the past two years, some minor retreat; and the whole campaign could fail if the next engagements—the first cases that come before the Restrictive Practices Court—do not turn out to be decisive victories.

BUSINESS NOTES

THE STERLING AREA

Don't Get it Right . . .

IN his regular column in the *New York Herald Tribune* on February 24th, Mr Joseph Alsop, the respected American journalist, gave his impression of Britain's economic problems which led him to describe London as "a city that all but stinks of defeat." Because of the wide currency given to his views in the United States, a close examination of the figures on which he rested his argument seems necessary.

1. *"Approximately 22 per cent of Britain's lifeblood, the hard currency revenue of the sterling area, comes from two highly unstable ex-colonial countries, Ghana and Malaya."*

In 1956, Ghana and Malaya, together with all the UK colonies, accounted for less than eleven per cent of the hard currency earnings (including sales of newly mined gold) of the sterling area. Britain itself earned nearly 57 per cent, and the rest of the Commonwealth 32 per cent. The hard currency earned by Ghana and Malaya is a valuable prop to the sterling area system, but Britain itself had a payments deficit of no more than £23 million with the dollar area on current account in 1956.

2. *"A single individual, the Sheikh of Kuwait, contributes very nearly 10 per cent of the new capital annually available in the sterling area."*

That part of the Sheikh of Kuwait's income that is invested outside Kuwait now amounts to roughly £35 to £40 million a year. If this were ten per cent of the new capital annually available in the sterling area, then the total figure would be only £350 to £400 million. Britain's capital investment in 1956 was itself £3,139 million gross and £1,487 million net; probably at least half as much again should be added for the rest of the sterling area. The great bulk of this capital was provided by savings generated within the countries where it was invested, supplemented by a capital flow from the United States and the international organisations. Kuwait's investment is large only in relation to the total funds generated within the sterling area that are not used in the countries where they are generated. But that sum is made up only of Britain's capital exports and of the funds provided by Ghana, Malaya, Kuwait and other members of the sterling area that are still adding to and not drawing down their sterling balances. Kuwait's share of the total capital generated within the sterling area is less than one per cent.

3. *"The loss of the Middle Eastern oil sources, which are now in ever-greater danger, will* [sic] *add a cruel billion dollars a year to the debit side of Britain's national balance sheet."*

Anything like this figure could be arrived at only by assuming (a) that the entire Middle East oil sources are lost, not only to Britain, but also to the rest of the world, and (b) that sufficient dollar oil could be made available to make good the loss of the Middle East oilfields, which is impossible. Mr Alsop is describing as a loss unique to Britain a risk that concerns the whole of the West—and which could hardly occur in circumstances other than those leading to a third world war.

IN THE MARKET

That Was Shell . . .

THE opening of a new Stock Exchange account on Wednesday served to check, but not to reverse, the downward drag on industrial shares, and in the week to Wednesday, *The Economist* indicator dropped 2.8 to 166.1, its lowest since September 1954. The unexpected decline in the dollar exchange rate halted the rise in the gilt edged market, though the rise was resumed together with a stronger market on Thursday afternoon. The *Financial Times* index of Government securities shows a fractional fall, from 80.89 to 80.78 for the week, but the gilt-edged market does not look as if its itch to rise has gone. From this now familiar pattern of markets two points of interest stand out. The "Shell" Transport issue of £43½ million is proving after all to be a tremendous mouthful. And on the gilt-edged side it is now apparent that recent refinancing issues have left the short end of the market outside an otherwise efficient control.

Jobbers had calculated that the "Shell" Transport new shares to be issued at £5 10s. per share should open at about 26s. premium when dealings started (nil paid) on February 11th. Actually they started at 24s. and fell steadily until at the beginning of this week they were down to 10s. 6d. premium. At that point the sponsors to the issue were getting worried. Was it, as the market suspects, the result of some support that "Shell" (new) then rallied? They have improved to 14s. premium and it certainly looks as though at just above 10s. premium resistance is encountered. The troubles, some observers hope, will be over by Wednesday when the first call of £3 per share has to be paid. But the behaviour of the market shows that there have been no great sums of American money waiting to rush into "Shell" new and that shareholders have been selling their rights for the strongest of all reasons—inability to pay the call.

When the authorities made the issue of 5½ per cent Exchequer stock 1966 they catered for the banks; when they issued the 5½ per cent Funding stock 1982-84 it covered the pension funds and quite a few private investors. Effective control by open market selling was thus secured over a wide range of the gilt edged market, but not for short-dated stocks where the Government broker has little, if anything, to offer. The shorts have risen persistently this week, though the trend of the rest of the gilt-edged market was not upwards. The object of funding is to get rid of the excessive weight of short-dated stocks and to push investors longer. Therefore control cannot be established by the tactic of creating a new short-dated stock and putting it on tap with the Government broker. In the end a natural

solution should be forthcoming; the banks could buy the 1966 stock and release some of their shorter stocks to the money market. But the banks will not do that switch while they still have substantial depreciation on their holdings of the shorter dated stocks.

FOREIGN EXCHANGE

Sterling Dips Below $2.81

STERLING, which was close to its ceiling against the dollar in the official market last week, and was quoted around $2.81\frac{1}{16}$ at the beginning of this week, has declined sharply; on Wednesday it dipped below $2.81. End-of-month closing has been partly responsible. There has also been some substantial buying of dollars for account of oil companies and some postponement of commercial purchases of sterling caused by reports of the hostile reception of the Cohen Report by spokesmen for the TUC and the Labour Party. The weakness ended abruptly on Thursday after it was learned that Bank rate had not been changed. The rate rallied to $2.81\frac{1}{16}$. The weakness of sterling has been largely focused on the dollar market. Against European currencies and in the market for transferable sterling rates though drifting against sterling have not moved as much.

The Royal Dutch issue continues to bring incidental support for sterling against Continental currencies, and especially against Dutch guilders. Subscriptions to the issue from United States holders have brought appreciable receipts of dollars to the Netherlands Bank. Part of these dollars has been converted into sterling as a result of a special switch arrangement between the Bank of England and the Netherlands Bank and, in consequence, the Bank of England has acquired guilders. According to reports from Amsterdam, these guilders have been invested in Dutch Treasury Bills maturing in mid-March to an amount of 200 million guilders. They should help the United Kingdom in the end of March EPU settlement.

MOTORS

Trucks Still in Low Gear

THE recent successes of motor car manufacturers has tended to overshadow what has been happening on the commercial vehicle side of the industry, where recovery from the recession has been much slower and is still far from complete. In January output and exports of cars established new peaks for the month, but truck and van sales in Britain and overseas were still fewer than they were two years ago.

Car production, at 85,639 during January or 4,780 a day, was more than double that of January last year when fuel rationing was at its tightest: but it was also a good fifth more than in January 1955 and 1956. Whether this continued upward progress will be sustained later this year is still anybody's guess. Export shipments, which the manufacturers consider are as good as sold, are rising almost everywhere, apart from a few continental countries. Sales of foreign cars in the United States, whither the industry shipped more than 14,000 in January against 5,580 and 1,620 twelve months and two years ago, are still not showing any signs of being affected by the motor recession there. Shipments to New Zealand, which has set lower import quotas for 1958, also happened to be larger in January. The present very high rate of deliveries to the home market, which took just half of the car makers' production last year, must come from the high hopes the industry has for the spring selling season opening in about a month's time.

Commercial vehicle production in January reached 25,000, or 1,250 a day, which was a little lower than in recent months. This failure to reach pre-recession levels of activity is mainly due to weakness in the home market, where only the heavier types of lorry are selling at all well. Home buying may well not pick up strongly again until road hauliers experience better times but purchases of trucks by industry, for its own use under "C" licences, have been keeping up remarkably well; this must be the main reason for the better market for the heavies. In export markets, on the other hand, the heavier types of lorry and, at the other end of the scale, vans have been selling less well than the lighter grades of lorry. This weakness in exports has been spread across most markets, in Africa, Australia and some continental countries, but the current rate of shipments is higher than early last year.

SUEZ CANAL COMPANY

Capital Reconstruction at Last

THE Suez Canal Company, lips sealed and preparing to continue its negotiations with the Egyptians on March 21st, has produced the long-awaited capital scheme. Reconstruction is inevitable, if the company is to function as a French investment trust, if it is to distribute to shareholders a reasonable amount out of what it hopes to get from the Egyptians, and to distribute in specie the shares of its subsidiary SIM (*Société d'Investissements Mobilières*). The scheme follows closely the lines forecast in these columns three weeks ago. All classes of shares, including the *parts civiles* of the Egyptian Interest Trust, which are not now strictly shares of the Suez Canal Company, are to be exchanged into a single class of ordinary shares of 10,000 francs each. In addition holders of the capital shares will receive a 5 per cent debenture of frs. 28,585 per share ranking behind the company's existing debenture stock but redeemable by annual drawings spread over the next ten years, and calculated to redeem the stock fully in 1968 (the date of expiry original and concession).

THE SUEZ CAPITAL PLAN

Stock	Price £	Share of profits now per cent	Basis of Exchange	Share of new equity per cent	Effective price of New share £
Capital	43	71	Frs. 28,585 of 5 per cent debenture and one for one.	71·46	33 ⅛*
Jouissance	32		One for one.		32
Founders	34¼	10	11 for 10	9·82	31 ⅛
Parts Civiles‡	14,000 frs.	15	37 for 100.	14·72	30 ⅞
Directors	—	2	—	2·00	—
Statutory reserves	—	2	—	2·00	—

* If the new debenture is worth 60 per cent of face value
‡ Paris dealings only

Holders of the capital and jouissance shares are called to a meeting on April 21st; founders shareholders have their adjourned meeting on March 4th and holders of the *parts civiles* will meet on March 10th. All three may well decide to approve the scheme (only a simple majority of each class is required by French law) but some British holders of the capital shares are far from content. The frs 28,585 of 5 per cent debentures represent the exact value of 250 gold francs at the time of nationalisation in 1956. Therefore holders of the capital shares get no gold clause protection against the latest $16\frac{3}{4}$ per cent devaluation of the franc. Certainly the 1956 accounts were drawn in current francs and shareholders at the meeting last June accepted the abandonment of the gold clause, but the company was not gazetted French until December 24th—after the latest devaluation. Whether or not capital shareholders will avoid French tax in the region of 20 per cent on the capital repayment when their bonds are drawn rests on the outcome of current negotiations with the French government. Moreover they fear that they will have to bear the 4 per cent stamp duty on their new debentures though the company is apparently satisfied that this can be avoided.

The provisions of two per cent for directors and two per cent for reserves still need to be revised and will, it is understood, be tackled later. It would be absurd nowadays to limit reserve appropriations to two per cent of profits. And the directors of an investment trust without operational duties would be much over-paid with two per cent. A possible solution would be to allow the directors two per cent but only of the residue after a fixed payment on the capital. The directors have not, it is believed, any intention of claiming their two per cent on capital if a distribution of assets becomes possible. But to deprive them of the right to any payment on such a distribution would be to give them an incentive not to distribute.

ANALYSIS OF INFLATION

Where the Money Went

BITTER political controversy over the Cohen Committee's advice to wage tribunals, its uncompromising support of a continued policy of tight credit restraint, and its blunt acceptance of the fact that this may increase unemployment, have tended to blur the intrinsic interest of the committee's factual analysis of the postwar inflation. For the most part, it relied upon officially published figures: but its use of them was unconventional and effective. Many of its calculations were fresh and thought-provoking.

One of its more dramatic illustrations recorded how the money paid out for all goods and services in Britain rose from £11½ billion in 1946 to £24½ billion in 1956, whereas the actual supplies of goods produced and imported rose only by about a third, which would have cost say only £15½ billion at 1946 prices. Of the £9 billion difference, "extra money paid out for rising prices," the committee estimated that 49 per cent went to wages and salaries, 19 per cent to extra profit incomes, 19 per cent for higher import prices, and 13 per cent into net taxes on expenditure. The share accruing to "incomes from employment" may at first sight look remarkable—until it is realised that this is just about the percentage that these incomes represented of total "final output" in the economy alike in 1946 and 1956, so that there is nothing surprising in their representing the same proportion of the inflationary element in the difference. The absolute share of profits, however, was falling; these did not retain a constant share of the "extra money paid out for rising prices." The calculation appears to be done by applying cost indices to the shares of final output—which is the largest of all versions of the national income, defined in the Blue Book on National Income & Expenditure as "goods and services produced for private and public consumption, investment and export, valued at market prices"—to work out what these would have been at the costs of an earlier year, and showing the difference due to inflation.

This differencing is more illuminating, however, when the committee divides the postwar inflationary period into two stages, before and after 1952; its figures, and the official data upon which it worked, are shown in the table. The division is clearcut. From 1946 until 1952 a disproportionate share of the "extra money paid out for rising prices" went to pay for increasingly expensive imports, to some extent at the expense of employment incomes as well as of profits. From 1952 to 1956 imports, with their prices below 1951-52 levels, dropped out of the inflationary picture, but internal inflation became much more rapid: incomes from employment, gaining their 1946 share of the total, did so by taking nearly three-quarters of the "extra money paid out for rising prices," while the share of profits continued to fall. This could have its controversial implications, political as well as economic (perhaps trade unionists should vote Conservative, and capitalists should vote for neither major party): but here the committee was concerned with where the money went, not why it went.

SHARES IN POSTWAR INCOME—AND INFLATION

	Income from employment	Profits and trading income	Imports of goods and services	Total final output
Actual amounts:				
1946: £ million	5,732	3,011	1,668	11,575

* Difference between actual income and what this would have been at the costs of the earlier year. The 1946-52 and the 1952-56 differences do not add up to the 1946-56 difference; they are not based on the same prices.

Accounting for Investment

THE Cohen committee was not disposed to take a tragic view of the check to investment that it agreed might result from today's tight policy: it noted that the real value of net additions to the stock of fixed capital, houses apart, in the country had been greater in 1949 and every year since than in 1938, and in 1956 was nearly twice the 1938 level of net fixed investment. As a proportion of the gross national product gross fixed investment other than housebuilding was in 1956 nearly 12 per cent, against just over 13 per cent and more than 17 per cent in western Germany. The committee was inclined to expect "a decline in private capital expenditure in the somewhat more distant future" (beyond 1958): but brought out clearly the fact that the main items of "public sector" fixed investment—coal, railways, roads,

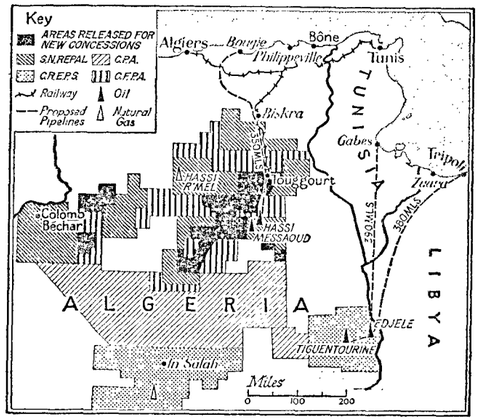
electricity, postal services, educational building and hospitals —far from being reduced by the "two year standstill" decreed in September, are still due to rise beyond their 1957-1958 level. The Thorneycroft axe, as they recall, fell in the public sector mainly on local authority house-building.

In considering public investment, the committee did another statistical exercise—drawing from the ordinary Blue Book figures rather more meaningful estimates of how this is financed. The table shows how up to 1950 current budget surpluses, along with the depreciation provisions of

FINANCING PUBLIC SECTOR INVESTMENT

	Public investment in fixed capital and stocks	Internal sources of the public sector	Net contribution to (+) or from (−) funds in the capital market
1948	594	878	+284
1949	749	1,055	+306
1950	595	935	+340
1951	1,071	833	−238
1952	1,292	744	−548
1953	1,334	642	−692
1954	1,101	641	−460
1955	1,203	803	−400
1956	1,367	758	−609

the nationalised industries, were more than sufficient to cover capital expenditure in the public sector, and further to make a positive contribution to funds available in the capital market. After 1950, demands for public capital expenditure grew, while funds available from internal resources declined. Public investment has become a heavy claimant upon the capital market. The committee showed that it knows which particular "gimmicks" are at present being mooted for the 1958 Budget when it mentions, as a question for the Chancellor, how much capital expenditure in the public sector needs to be covered by a surplus on Government current account: but on this it offered no opinion of its own.



SAHARAN OIL

New Concessions in the Sahara

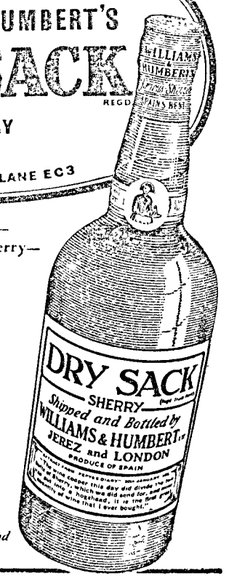
In the first reallocation of oil rights in the Sahara desert, the Royal Dutch-Shell Group, British Petroleum, and three American oil companies (but no American majors) are included in the successful bidders. Under French oil law, exploration concessions are granted for periods of five years; at the end of that period one half of the concession area has to be surrendered to the French government for reallocation, the company being allowed to decide which areas to keep and which to surrender. The first concession area to reach the five-year limit, in September last year, was some 46,000 square miles held by two French companies, *Compagnie Française des Pétroles d'Algérie* (*CFPA*) and *Société Nationale de Recherches et d'Exploitation des Pétroles* (*SNREPAL*). These companies chose the 23,000 square miles they wanted to keep, which included the large oilfield discovered near Hassi Messaoud, and the other 23,000 square miles, part of which was near enough to Hassi Messaoud to offer hopes of a comparable strike, was thrown open for bidding.

About half of this area was not considered promising enough to bid for, but eleven groups put in bids for the remainder, and eight of these have now been granted concessions. Out of about 11,000 square miles reallotted, a group in which British Petroleum, together with its French subsidiary, has a half share, has received a permit covering 1,800 square miles, and *Compagnie des Pétroles d'Algérie* (*CPA*), in which the Royal Dutch-Shell group has a 65 per cent interest, has received one for 1,000 square miles. But the exact locations—how near to Hassi Messaoud for example—have not yet been announced.

This reallocation of oil exploration rights is only the first of several due this year; CFPA and SNREPAL have

another 11,500 square miles to surrender shortly and further to the South over 60,000 square miles of less promising desert is due to be surrendered by CPA and *Compagnie de Recherches et d'Exploitation de Pétrole au Sahara* (*CREPS*). Although the French government has granted exploration concessions to several foreign oil companies working in association with French government and private interests, it is still not clear how free a hand a foreign oil company would be allowed in developing any oilfields found. It is this uncertainty which is still keeping the name of Standard Oil (New Jersey) and other American major oil companies off the list of bidders.

GUIDED WEAPONS



Rocket Bases

The Ministry of Defence is reticent about its £10 million investment in East Anglian bases for American intermediate missiles (Thors) which Mr Sandys still expects to be delivered to schedule towards the end of this year. An unspecified but necessarily small number of RAF airfields are to be made over for these bases; according to the Minister some access roads will have to be built and some married quarters. It takes roughly 12 hours to prepare each Thor for firing, including an hour on the launching pad, so the sites need nearly as many launching pads as missiles. (An American missile squadron consists of 20 missiles with two spares.) These launching pads must be linked, both electrically and electronically, with a central control house. Guidance equipment is needed to set the missile in the first few seconds of flight on the correct ballistic trajectory, and radar monitoring of the missile in flight to discover any fault in operation that would call for its destruction. This basic apparatus has to be backed up by extensive workshop and storage facilities. Preparation of the missile for service is a complex job requiring skilled

London Showrooms: 88 PICCADILLY W.1

engineers with special machine tools, cranes and conveyors. Big supplies of liquid oxygen have to be kept on the site—a difficult material to store and handle at any time—and a substantial supply of independent power is necessary.

All this ground equipment, including much of the instrumentation, is being provided by Britain out of the £10 million total. Since the Army's rocket training site in the Hebrides, which will be used only five months of the year, is costing £5 million, the number of sites is either much fewer than expected, or much of the equipment is going to be improvised on the assumption that within a year or so of Thor's delivery, preparations will have to be made for the underground launching sites of the "improved" British successor to these early American intermediate range missiles, which will probably be ready in 1963-64. The cost of going underground is likely to be extremely heavy.

MANPOWER

200,000 More Workers Found

THE Ministry of Labour has recently completed the annual overhaul of its manpower statistics—and discovered 200,000 more people in jobs than it had realised. This is the result of the annual count carried out in May, 1957; it is only for that one month in each year that an attempt is made to directly account for everybody at work. Monthly figures are derived from changes in employment returned by a large sample of firms. In recent years these have always been slightly wrong, but never before so wrong as to turn an apparent slow decline in employment into an increase.

Even the yearly count of employment, based on the national insurance cards, is by no means a straightforward business. Employers of five or more workers have to inform the Ministry how many cards they hold in May, but the additional numbers in small firms are estimated in a complicated way from the numbers of fully stamped cards exchanged for new ones in the following quarter. Also there are still likely to be employers and people working on their own account who, in spite of the insurance act, have never taken out cards. It is indeed by no means easy to count the 24 million or so men and women in the working population today.

Nevertheless the Ministry of Labour feels reasonably confident that these annual counts are near enough to the mark. Their monthly figures are another matter. These rely on returns from a large number of firms—all manufacturing firms, for instance, employing more than 100 persons and a quarter of those employing between 11 and 100 persons. In some of the service trades, however, the coverage is doubtless poor. These "L" returns show the numbers in employment in the current and previous month and the percentage changes in these numbers are linked to the basic figures for the previous May to provide up-to-date estimates.

Last Year's Changes

SINCE the May count of the insured population is not made available until the following February (after the November statistics have been published) the monthly estimates of employment stretch out unchallenged for eighteen months. When the revisions come, they have to be taken back for this length of time. This time they have been more substantial than usual possibly because, in the interests of economy, the number of firms making "L" returns has been reduced. The original figure for civil employment last November has been bumped up by 205,000—and is subject to further revision after the May, 1958 count. In each of the last five years the revision has been upwards, suggesting some as yet unexplained bias: but never quite so much as now revealed.

Does this make nonsense of the monthly figures? As far as absolute changes go it would seem to: instead of civilian

APPARENT CHANGES IN EMPLOYMENT
(Thousands)

	End Dec., 1956	End Dec., 1957	Change in 1957
Manufacturing	9,298	9,300	+ 2
Agriculture	993	964	−29
Mining	861	868	+ 7
Building and contracting	1,496	1,470	−26
Distribution	2,933	2,981	+48
Transport and communications	1,711	1,710	− 1
Public utilities	379	381	+ 2
Professional, financial etc.	4,142	4,169	+27
Public administration	1,298	1,288	−10
Civil employment	**23,111**	**23,131**	**+20**

employment having fallen by some 100,000 last year we are now asked to believe that it rose by 20,000. Unfortunately the interest in these figures lies in marginal differences between large numbers; and in a period of steady activity, these are likely to be within the practical errors of estimation. The revisions, even this year, are no more than 1 per cent of the total, which is by no means statistically shocking. But even this error casts cold water on the general productivity comparisons of which the Treasury is so fond. However, the relative movements of labour between industries are probably more accurately reflected if only because they are often proportionately a good deal larger, and it is with this in mind that the revised figures of employment are reproduced here. It should be added that unemployment statistics are collected quite separately and are not subject to nearly such large qualifications.

AIR TRANSPORT

Crowded Skies

THE skies over Europe and the Mediterranean are crowded with aeroplanes and criss-crossed with a web of air routes over, under and through which jet aircraft of the Nato forces pick a darting, disturbing course. It is becoming daily more difficult to keep these aircraft from collision. The upper air that the military jets have had to themselves will be invaded this summer by rising numbers of jet airliners. This is the aerial backcloth to the meeting held in Geneva by the International Civil Aviation Organisation to work out a new system of air traffic control for Europe and the Mediterranean. It has ended in something suspiciously like deadlock.

It came on a technical point—which must be unusual in a conference so predominantly technical as this. A sound plan for the co-ordination of air traffic control between the various countries had been agreed upon; the refusal of the Israeli and Arab delegates to speak directly to each other did not prevent them from passing messages through third parties. But the meeting failed to agree on the system of navigation on which control should be based—or rather the

British delegates refused to accept the system proposed by the majority of other countries, with what enthusiasm it is difficult to tell. This is a serious block because the new traffic system now remains on ice until mid-1959, when another technical conference will try to decide between two navigation systems.

British traffic controllers are urging European countries to adopt the Decca system of navigation on the argument that it allows aircraft to fly much closer than at present, and would thus reduce congestion. The Decca "chain" works on groups of four stations, one master and three slaves, which send a continuous grid of radio signals across which the pilot picks his way. Some 4,000 ships are already navigating by a chain of these stations across Western Europe from Scandiavia to France; the same chain could be used as it stands by any aircraft with the necessary equipment. At present only British European Airways and British independent operators use Decca navigation.

The alternative system is the long-established VOR, by which an aircraft navigates not by a grid, but with reference to a single fixed position on which it must converge to get a bearing. This is an American-developed system which the airlines know and understand and much of the equipment already exists. Nevertheless the British spokesmen regard it as obsolete and do not want to be committed to installing an extensive VOR system along air routes for which they are responsible. The Decca system may be capable of further refinement, but prejudice against British navigation equipment is breaking down in face of the successful trials with Decca's long-range navigation system on the North Atlantic. On these routes, where navigation aids are inadequate, aircraft are separated by 30 minutes' flying time for fear of collision, and this leads to delays at least as serious as any in Europe.

LOCAL AUTHORITY BORROWING

PWLB Rates Cut

THE Public Works Loan Board has reduced its rates for loans to local authorities—when it does lend to them. The reduction does not imply that the local authorities are any less under compulsion to raise the money in the market rather than from the board if they can. It does imply that the Treasury has decided that the board's lending rates had become out of line with the market. Since the market is the measure, some observers are a little surprised at the extent of the cut that the Treasury has made. Few will argue about the reduction from 6¾ to 6¼ per cent for loans of over 15 years; the rate of 6½ per cent for medium term loans perhaps looks low compared with 6¾ per cent now being paid in the mortgage market for 10-year money, and the rate of 6½ per cent for loans of not more than five years looks distinctly low. An active demand by the local authorities is being met with temporary (seven day) money at

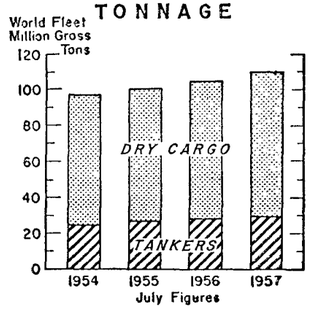
The Baltic Dries Up



THE background to discussions in London this week between British and Greek shipowners, so far separate and inconclusive, of tonnage stabilisation schemes to limit the number of merchant ships sailing the seas is a freight market in which new charters can be fixed only at rates that allow comparatively few vessels to earn their depreciation. Throughout the world a growing tonnage of vessels is being withdrawn from that market, laid up for "accelerated repair" or simply because operating them does not pay; but equally, throughout the world new ships are coming down the slipways in exceptionally large numbers, steadily increasing the size of the world fleet competing for a limited volume of traffic. Shipping shares are coming down almost as steadily.

In British ports there is a larger tonnage of ships laid up than since the early thirties: 141 British and foreign ships, totalling 778,703 gross tons, were unemployed, in addition to another 679,143 tons of ships under repair. Most of the berths privately available are full so the Government has been making available some of its own.

At the other end of the fleet, new ships totalling some 8 million gross tons were launched last year, adding about 5 per cent net to the world fleet. This year's addition to the fleet will almost certainly be larger; cancellations are spreading among the world's shipyards but cannot take effect quickly. The biggest proportionate additions will continue to be to the tanker fleet, which represents about a quarter of the whole. As the chart shows, tanker freight rates have fallen much more sharply after rising far higher during the blockage of the Suez Canal; spot rates are charted (on the base of the 1956 low point) as representing the immediate state of the market better than time charter rates.

SKF

THE SKEFKO BALL BEARING COMPANY LTD.

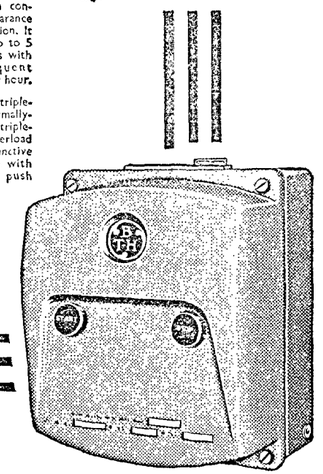
the British manufacturers of the world renowned SKF ball and roller bearings.

STATISTICIAN

A VACANCY OCCURS in this progressive and expanding organisation for a young University Graduate who is interested in Production Control. The post calls for a statistician to assist the Production Controller and the Management generally by assimilating and presenting the important data necessary for economic and efficient production. There are excellent opportunities for progress.

Applications, giving age, education and experience, which will be treated in strictest confidence, should be addressed to:

THE STAFF OFFICER,
LEAGRAVE ROAD,
LUTON, BEDS.



B T-H

A.C. DIRECT-ON-LINE CONTACTOR STARTER

Type DOC71 for three-phase or single-phase non-reversing squirrel-cage induction motors.

This starter is sturdy in construction, elegant in appearance and dependable in operation. It is available for motors up to 5 horsepower, and complies with BS. 587.1957 for "Frequent Duty", i.e. forty starts per hour.

The starter, comprising a triple-pole contactor with normally-open auxiliary switch and triple-pole hand-reset thermal overload relay, is enclosed in a distinctive die-cast aluminium case with integral START-STOP push buttons.

6⅞ per cent to 7 per cent and two-year mortgages have been negotiated this week at 7⅛ per cent. The PWLB, however, does comparatively little of its lending for periods of under five years and market rates have not weakened as a result of the new scale of charges. While hire purchase houses will pay 8½ per cent for slightly longer loans, there is not much scope for reduction.

HIRE PURCHASE

Britain's Instalment Debt

INSTALMENT debt per head in the United Kingdom at the end of 1957 was a shilling or two under £9 10s. The hire purchase and other instalment buying of the British population last year amounted in terms of the retail price of the goods bought to about £14 12s. per man, woman and child. These estimates emerge from the Board of Trade's much improved statistics. This week, for the first time, the *Board of Trade Journal* removes the qualification "at least" from its estimates of the country's instalment debt; it had already revised the figures so as to bring in instalment trading other than hire purchase. The debt is now estimated at £484 million, having risen £80 million in 1957 after falling £90 million in 1956. The total is thus still a little below what it was when the Board of Trade statistics began.

It has also been expanding in every month since July of last year when the Board of Trade started the revision of its calculations. Of the latest total of £484 million, industrial and farm equipment accounted for £25 million, private cars, commercial vehicles and caravans for £204 million and the rest, furniture, hardware, radio, electrical goods, cycles and perambulators, for £246 million. It is also possible from the figures as at last July, when the debt stood at £442 million, to see the size of instalment trading in forms that are not strictly hire purchase. In July such business accounted for £63 million of the total and was therefore comparatively small; as had always been suspected, the Board's old "hire purchase" figures included a large part of it. The figure for the turnover of the goods sold on instalment terms (which naturally is not the same as the amount of credit extended) is calculated to have been "in the region of £750 million" in 1957. Items other than household goods accounted for about £480 million of it.

NORTHERN ASSURANCE PLAN

Pensions and Inflation

SEVERAL insurance companies in more than one country have introduced plans so that savings for old age can be protected against loss of purchasing power through inflation. The practical hedge against inflation—though it is not a perfect one—is investment in industrial ordinary shares and the methods used are various. The with-profits pension policy as offered by the Prudential and the Equity and Law Companies is one example; the investing of a proportion of the funds in equities and skilful investment through a period of inflation should supplement the contractual pensions. But there is no guarantee that all the gains of this kind of fund will be distributed at each valuation, no commitment to invest any particular proportion of the fund in ordinary shares, and no provision to enable a man already drawing a pension to get an increase if inflation proceeds further.

Secondly, there are pension plans tied to particular investment trust units. The London and Manchester has such a plan linked to the value of Investment Trust Units, and the London and Edinburgh has an ordinary endowment insurance plan linked to the units of the Unicorn Trust. The scheme announced this week by Northern Assurance is of a third type not previously tried in this country, though it closely resembles the American College Retirement Equities Fund. In effect, without setting up a trust or entering any formal agreement to invest only in equities, Northern Assurance is creating a fund normally to be invested in leading equities and will sell units of it to prospective annuitants at current prices calculated on the market value of the underlying securities. When the pensioner elects to take his annuity, which he may do at any age between 60 and 70, he may select either a fixed annuity or an annuity varying with the experience of the fund.

The scheme is limited to those eligible for "Millard Tucker" pensions under section 22 of the 1956 Finance Act; the company has decided also to limit it to people who have in force with the Northern an individual retirement annuity carrying a premium of at least £100. The Northern thus regards its new variable annuities as a supplement to a pension provision and does not offer it as a complete pension plan in itself. With that limitation the new fund has obvious attractions. It will be solely for the benefit of annuitants and prospective annuitants, subject to the company's commissions which are 4 per cent of premiums, 5 per cent of the investment income and 2 per cent of variable annuities paid. It will be a tax free fund, with gross dividends and capital appreciation both accumulating to enhance the value of the units.

DURABLE BUYING

The Consumer's Investment

IT is only a convention, and a pretty silly one, to regard a man who is buying a house on hire purchase as a saver, and a credit to the community, and a man who is buying a car on hire purchase as a conspicuous consumer, and a vulgar fellow to boot. The Central Statistical Office has given this habit up in part of its national income

INVESTMENT IN CONSUMER'S DURABLES

	1948	1952	1956
	£m. at current prices		
Furniture and furnishings	250	371	497
Hardware, radio and electrical	229	304	426

Volume (excluding dwellings)	100	119	170

accounting, where repayments on hire purchase count as part of personal saving: but in another it still ranks the purchase of durable household goods as consumption, though any definition of "investment" is largely a matter of the durability of what is bought. It ranks the half of

new private cars that it guesses are bought by business as "investment": but private citizens' purchases of the other are "consumption."

The consideration of purchases of durable household goods and personal transport as investment is more common in the United States than it is here: in the current *Westminster Bank Review* Professor Alec Cairncross draws attention to the size of this kind of spending. If purchases of private houses are included, this "consumer's investment" amounts to about half the total of fixed investment as ordinarily measured (which already includes half of the new cars sold as being bought by business): even if houses are left out, these purchases of durables are a third as high as fixed investment. In spite of hire purchase restrictions and purchase tax, consumers were spending 70 per cent more on these durable goods, in real terms, than in 1948. Whatever one chooses to call this buying, it represents a substantial slice, and one of the fastest growing, of final demand: and it has special characteristics, such as postponeability and possibly of cyclical fluctuation, more akin to investment spending than to items of current, less durable consumption.

WHALE OIL

A Buyer's Market

No clearer indication of a buyer's market in edible oils, as in other commodities, could be given than the decision of the whaling companies to sell now. Without waiting for the outcome of the present Antarctic whaling season now nearing its close, the British expeditions—Hector Whaling and Salvesen and Company—the Norwegian expeditions and the Dutch have sold 150,000 tons of their catch to the Unilever group at £77 10s. a ton. The total catch is not disclosed, nor even known, but 150,000 tons could be more than half of it and the price compares with £90 a ton achieved for a substantial amount a year ago, and with current small deals at around £79 a ton. The amount bought will not enable the Unilever group to stand clear of the market for the rest of the season, but this deal by the biggest buyer will enable it to stand back for some months and relish the fact that the troubles in Indonesia have not so far stopped the flow of vegetable oils from that unhappy country.

SHORTER NOTES

The Capital Issues Committee is to make a minor relaxation. In future bank loans to finance exports on which the bank has already received a guarantee from the ECGD will automatically be approved by the CIC. In announcing this on Thursday the Chancellor emphasised that the CIC would still require all other applications for loans for capital purposes to be met, if possible, from non-bank sources.

* * *

Direct flights between London and Moscow will begin in July or August. The level of fares and the type of aircraft which the Russians will use remain to be settled. This second point concerns the noise made by the Russian Tu 104 jet airliner, on which the Ministry of Transport has been arguing for some time—not, it is thought, because it is unusually deafening but because objections to the noise level of American jet airliners are being used as counters in Anglo-American traffic negotiations that have no connection with noise, jets or Russian aircraft.

* * *

Samuel Montagu, the London banking, bullion and foreign exchange firm has joined "the men of Zurich." A new bank has been established with the name of Zurmont Bank AG, the capital of 6 million Swiss francs being largely held by Samuel Montagu, who will be represented on the board by one of their directors, Mr Paul Jeanty.

* * *

At the annual meeting of the National Discount company, the chairman, Commander Lovel Coke, said: "There appears to be an idea in certain quarters that we have adopted a new method of dealing with our investments. This is not the case. We have used precisely the same method, which we have employed for the past 30 years or more, and we shall continue to use the same method in the future because we believe it to be the most suitable one to our business." It has been apparent however that in 1957 the method resulted in the writing up of investments in the books, whereas previously there was a writing down.

* * *

Following the good interim figures, the trading results of Hoover for the full year to December 31st make an excellent showing. Turnover has risen by 13 per cent, gross profits have risen from £2,790,077 to £3,757,312 and net profits from £1,225,082 to £1,939,310. The ordinary dividend is left unchanged at 50 per cent.

* * *

Mr Geoffrey Eley, Lord Bicester, Sir Cyril Hawker and Sir Alfred Roberts have been reappointed to the Court of the Bank of England.

* * *

By re-shaping its structure, the "Chartered" company will leave the way clear for its British parent to qualify as an Overseas Trade Corporation. Rents and investment income do not qualify for the OTC tax reliefs, but royalties, the big source of Chartered's income, do.

* * *

In 1957 Olds Discount Company increased its gross profit from £760,930 to £836,606. A final payment of 15 per cent on the capital increased by a one for four free scrip issue raises the ordinary dividend to 27½ per cent against the equivalent of 24 per cent.

COMPANY AFFAIRS

PENINSULAR AND ORIENTAL

THE wildest of the dreams of the dabblers in shipping shares running from a crumbling market cannot have conjured up anything approaching what the directors of Peninsular and Oriental announced after hours on Wednesday. Last May the chairman, Sir William Currie, announced that in spite of everything group earnings to date were about the same as in the previous year. The jobbers have been guessing that with freight rates now much lower, profits for the year ended September 30th must be down, but not so badly down, they hoped, that the conservative final dividend of 5 per cent (making 8 per cent for the year) need be cut.

The profit before tax was actually more than £5 million higher. The final

	Years to Sept. 30, 1956 £	1957 £
Consolidated Profits:		
Profit before tax	12,573,047	17,640,269
Depreciation and surveys	11,831,181	12,644,665
Tax	6,306,412	7,224,064
Net profit	6,266,635	10,416,205
Retained profit	4,458,201	8,062,770
Deferred dividend	1,267,534	1,742,860
Deferred dividend (per cent)	8	11

£1 deferred stock at 26s. yields about 8½ per cent.

dividend has been increased by 3 per cent to 8 per cent, making 11 per cent for the year. The year to September 30th carries virtually the whole of the Suez repercussions and only the beginnings of the break of the freight market. So stockholders can see that Colonel Nasser has unwittingly rendered their company no small service. The directors put it like this: "While some constituent members of the group were directly and severely hit by the closing of the Suez Canal, increased world wide activity and high tramp rates substantially outweighed those adverse factors in the results of the group as a whole."

P and O, normally classed in the investor's mind as a liner company, in fact conducts as mixed a bag of well managed shipping activities as the investor will anywhere find. The results reflect world wide, not local, conditions. It follows unfortunately that the excellent results of the year ended September 30th will probably not be immediately repeated. The board makes no bones about that. Of the dividend the directors say that it is "based on the exceptionally satisfactory results of the past year's trading" and that it has "no implication as to the level of dividend that can be maintained in years to come." On the freight market they report: "during the latter part of the year a sudden and sharp recession set in, and its end is not yet in sight." Nevertheless the £1 deferred units jumped 4s. to 26s. when the figures were announced.

BRITISH-AMERICAN TOBACCO

THERE was some disappointment with the ordinary dividend of British-American Tobacco even though the payment was slightly increased. Investors had hopes that, allowing for the one for three free issue, the total payment would be raised from the equivalent of 1s. 6d., tax free, to 1s. 9d., tax free, per 10s. ordinary stock unit. The final dividend, however, is 8d., tax free, per 10s. unit, making the effective payment for the full year to September 30, 1957, 1s. 7½d., tax free. The first interim dividend for 1957-58 is 6d., tax free, so that the yield can be calculated on the basis of 1s. 8d., tax free. On that basis, the 10s. units, now at 37s. 7½d. xd, compared with 40s. 10½d. before the dividend announcement, yield 7.7 per cent gross.

That is not a big yield for a tobacco share, but BAT is not concerned with the home trade; it sells all its cigarettes and tobacco abroad, manufacturing a growing proportion in local markets. It always has to retain a big slice of its earnings where they are earned, but its dividend record is progressive and its ordinary stock has come to be regarded as a steady long term growth stock. Certainly the latest trading results give no immediate reason to reverse that judgment. The group's profit before tax rose by about 10½ per cent, by £5,406,164 to £57,285,037. The tax provision was almost unchanged at just over £28 million and net profits advanced by about 22 per cent, by £4,755,115 to £26,313,749. From these net earnings, the dividend absorbs only £7,622,282, and so is handsomely covered. But not all BAT's earnings can be regarded as freely distributable in this country and it is noteworthy that the appropriation to fixed assets and stock replacement reserves has been stepped up sharply in the latest accounts, from £3,400,000 to £6 million.

MONSANTO CHEMICALS

LAST year Monsanto Chemicals, the British subsidiary of an American parent of the same name, raised about £5 million by a rights issue of ordinary shares and a debenture issue. The new money will help to finance the £8½ million expansion scheme at Fawley, the prospects of which attract investors to the ordinary stock of Monsanto Chemicals. But they will not be disappointed with the latest trading results. The ordinary dividend is 13½ per cent, as forecast at the time of the new issues, and on this dividend the 5s. units at 13s. 1½d. yield 5.1 per cent. The good profit showing of the half yearly report is confirmed in the full year's results. Sales have risen—those of the parent of the English group going up from £14,634,947 to £15,683,272—and profits have advanced in step with the increase in turnover The consolidated trading profit is up from £2,596,773 to £3,093,669 and the net profit from £884,485 to £1,013,719. The chairman, Sir Miles Thomas, says that "the demand for established products is well maintained, both at home and abroad, and new products . . . are meeting with an encouraging response."

LEWIS'S AND HARRODS

THERE is little to gladden sad hearts in the preliminary results of the two big department store groups, **Lewis's Investment Trust** and **Harrods.** Earnings of trades closely in touch with consumers did seem a few months ago to be holding up well under the pressure of rising costs. But in the later months of last year, as the accounts of British Home Stores and Woolworth have shown, the going for the stores was becoming harder. The same judgment can be applied to the department stores, whose profit mark up is bigger but whose stock turnover is lower than the chain stores.

The trading results of both Harrods and Lewis's Investment Trust are disappointing—and not least because the

	Years to end January, 1957 £	1958 £

* Subsidiary company of Lewis's Investment Trust.

big sums of money spent on modernising, developing and opening new stores has yet to produce a bigger profit return. Gross profits of Harrods have risen only fractionally and the ordinary dividend is left unchanged at 17½ per cent. The company's £1 ordinary units were marked down on this result by 3s. 3d. to 59s., to yield 5⅞ per cent. The full year's gross profits of Lewis's Investment Trust have actually fallen slightly, even though in the first half of the year they had been running at a slightly higher level. Here too the ordinary dividend has been left unchanged, at 17 per cent. The Trust's 4s. ordinary units fell by 9d. to 13s. 1½d., to yield 5.2 per cent.

LINEN THREAD

FOR the year to September 30th, the ordinary dividend of Linen Thread was reduced from 8 to 6 per cent, following a fall in gross profits from £643,762 to £448,280. The net profit of £182,478 represents a poor return on net assets worth over £12¾ million. Half of these assets belong to a subsidiary in the United States and the decline in earnings is, says the chairman, Mr George Knox, "attributable almost entirely to the unfavourable results" of that subsidiary.

The directors realise that action now is imperative. The board's policy is first to reduce the number of manufacturing units by closing the smaller mills and concentrating in the larger. The cost will be "considerable" but Mr Knox hopes for "substantial permanent savings." He realises also that concentration is not the whole answer. The directors, who have recently increased the group's shareholding interests in an engineering company, state their longer term policy to be: "diversification in other fields of industry both at home and abroad to broaden our interests so that we are not so dependent on textiles." This is a commendable aim, but diversification has no guarantee of magic in itself, and the successful redeployment of capital by a textile concern outside the range of its earlier experience will leave the management to solve new and unfamiliar problems.

CARRERAS

SIR EDWARD BARON, the chairman of Carreras, describes competition in the cigarette and tobacco trades as "unprecedented." All the manufacturers are spending heavily on advertising, and Sir Edward says the amount spent by Carreras on advertising and sales promotion, which he describes as "exceptional," more than accounts for the decline in the parent company's trading profit from £714,586 to £602,263. The fall in the group's profit from £2,108,014 to £1,794,415 was finally reflected in a reduction in the ordinary dividend from 8¾ to 6 per cent. The group maintained its turnover but costs were rising, squeezing profit margins, and the increase in selling prices in mid-September came too late to make any material contribution to earnings for the year to October 31st. The profit experience of the Canadian subsidiary, fighting to hold its place in a competitive market for filter tipped cigarettes, was worse even than that of the British parent.

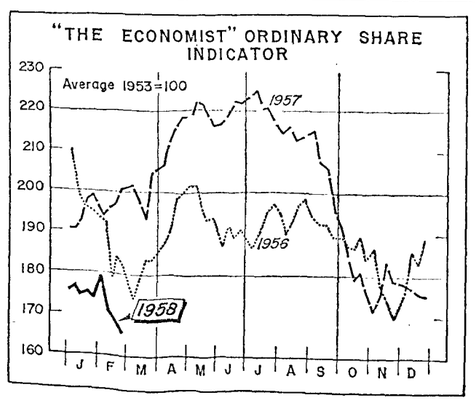
So far in the current financial year the company's trading results are better—inevitably so, it might be added, because of higher prices—but Sir Edward refuses to predict the full year's outturn. Looking towards 1959 and 1960 he does expect the concentration of manufacturing in a new modern factory at Basildon to produce considerable savings in costs. The non-voting "B" shares, standing at 2s. 1¾d., are now quoted below their par value of 2s. 6d. and yield just over 7 per cent. "Imps," it may be remarked, have a wider market and yield 10.8 per cent at 37s.

KNITWEAR PROFITS

WIDELY differing accounts of trading experience in the hosiery and knitwear industry in 1957 were given this week; **Wolsey** reported a fall of £215,853 in gross profits which contracted to £641,445, but **I. and R. Morley** increased its gross earnings by £22,298 to £551,033. Neither company has changed its dividend, Wolsey again paying 20 per cent and Morley a final dividend of 9 per cent, again making 12 per cent for the year.

The reduction in Wolsey's profits is stated to be due "mainly" to the writing down of stocks necessitated by the fall in wool values. Morley's is a creditable performance in a year of increasing competition. Technical developments—the growth of knitted outerwear and the increasing use of knitted fabrics barely distinguishable from woven cloth—must have played into the hands of the manufacturing branches of these businesses. On the results the 10s. units of Wolsey fell 1s. 6d. to 22s. 6d. xd., giving a yield of 8¾ per cent; Morley's 10s. units were firm at 12s. 9d., giving a yield of 9.8 per cent.

London Stock Exchange



FIRST DEALINGS:	Feb. 12	Feb. 26	Mar. 12
LAST DEALINGS:	Feb. 25	Mar. 11	Mar. 25
ACCOUNT DAY:	Mar. 4	Mar. 18	April 1

ALTHOUGH the market remained subdued, gilt-edged stocks staged a recovery on Tuesday, which left a sprinkling of gains of ¼ through the list among several losses of the same order. All the shorts improved; 4½ per cent Conversion 1962 and 2½ per cent Funding 1956-61 both gained ¼ to 97⅛ and 92²⁵⁄₃₂ respectively. The irredeemables were usually lower, but 2½ per cent Consols gained ¼ to 48⅞.

Industrial stocks under the shadow of next week's call on Shell (new) were depressed; a halt was called to the downward slide by a technical rally on the first day of the new account but the overall loss in *The Economist* indicator was 2.8, lowering it to 166.1. Former favourites of American investors suffered violent fluctuations; Borax deferred fell from 17s. to 14s. 10½d. but recovered to 15s. 7½d. and Hudson's Bay fell from 142s. 6d. to 133s. 9d. before recovering to 138s. 9d. The continuing troubles of Gordon Hotels led to a fall of 1s. 9d. to 8s. 1½d. Disappointment with the results caused a fall of 12s. to 117s. 6d. xd in Clarke Chapman, and William Denny weakened on the partial success of the rights issue. With the exception of Hawthorn Leslie, which was helped by an increase in the interim dividend, shipbuilding stocks suffered further severe losses. Shipping shares continued to fall, but the dividend increase by P & O and the jump in the deferred shares from 22s. to 26s. halted the decline.

Weakness in the new Shell shares, which at one time dropped to 10s. 6d. premium, unsettled the market in oil shares, but a sharp recovery followed on Wednesday. Kaffirs made gains consistently from Monday, Daggafontein rising 3s. 1½d. to 29s. 6d. Copper mines improved, Bancroft gaining 1s. 9d. to 13s., but tea plantations turned weak.

(1) This covers mining, manufacturing, electricity and manufactured gas with the following exceptions: Denmark excludes mining; Greece, mining and manufactured gas; Ireland and Sweden, electricity and manufactured gas; and Austria, manufactured gas. Germany excludes West Berlin. (2) Special trade (excluding re-exports) with the exception of Ireland which covers general trade with exports seasonally adjusted. Belgium includes Luxemburg. Italy includes Trieste. (3) New drachma introduced May 1, 1954 (1 new drachma=1,000 old drachmas). (4) Thousand million drachmas. (5) Bizonal area. (6) New series.

Financial Statistics

EXCHEQUER RETURNS

For the week ended February 22, 1958, there was an "above-line" surplus (after allowing for Sinking Funds) of £32,383,000 compared with a surplus of £107,354,000 in the previous week and a surplus of £81,528,000 in the corresponding period of last year. There was a net expenditure "below-line" of £4,580,000, leaving a total deficit from April 1st of £196,941,000 (£221,236,000 in 1956–57).

THE MONEY MARKET

THE Treasury bill rate dropped below 6 per cent at the tender on Friday of last week. The discount market raised its common bid for 91-day bills by 4d., to £98 10s. 2d. per cent. Only 40 per cent of applications were successful, but the market had a full allotment of the 92-day bills offered on Monday to span the Whitsun holiday; it bid for these bills at £98 9s. 11d. per cent. Total applications at the tender fell by £13 million to £411.7 million, the allotment being unchanged at £220 million; at yesterday's tender, the offer was raised to £240 million.

The Treasury bill rate in New York plummeted this week by a full ½ per cent, from 1.73 to 1.20 per cent. At this level it is 1½ per cent below the official discount rate in eleven of the Federal Reserve Districts (San Francisco still holds to 3 per cent); while the margin below the London bill rate has widened to 4¾ per cent. In the absence of any significant widening of the forward exchange premium, the net differential on covered arbitrage rose above 1 per cent.

The discount market was obliged to take loans at Bank rate on three of the six working days to Wednesday, though the amount involved was small. On Monday, half the market was involved, and no special help was given. Marginal supplies of money have commanded rates of 5⅞-6 per cent. May maturities changed hands at 5²⁹/₃₂ per cent.

And the difference?

Maybe £5,000

How?
He spotted a fault in the safe load indicator and an accident has been prevented.

Who?
The Vulcan Engineer-Surveyor during his regular inspection of the crane. His experience gives him almost second sight into accidents that are waiting to happen.

Are his services expensive?
Not at all. Your broker will tell you that, though the Vulcan man is a specialist, his services cost no more than insurance and inspection by general practitioners.

What Vulcan insures, Vulcan inspects—thoroughly and regularly. As a result our clients have made us one of the largest engineering insurance companies in Europe.

FREE

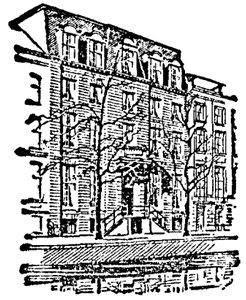
VULCAN INSPECTS—AND PROTECTS

It seems there was an Englishman, a Scotsman and an Australian

The Englishman wanted to make a capital investment in Australian industry. Naturally he wanted some sound market information.

The Scotsman was thinking of expanding his business and opening an Australian branch. He wanted information and a first-class banking service with offices on the spot.



The Australian, having an eye to business with the Scotsman and Englishman, wanted a Bank with a London Office.

They all went to The English, Scottish and Australian Bank and got exactly what they wanted. So will you, if you have any business with Australia.

THE ENGLISH, SCOTTISH & AUSTRALIAN BANK, LTD.

COMPANY MEETINGS

THE WEST INDIES SUGAR COMPANY LIMITED

PROFITS AFFECTED BY BOTH FAVOURABLE AND ADVERSE FACTORS

MR PETER RUNGE ON EXPANSION PLANS

The twenty-first Annual General Meeting of The West Indies Sugar Company Limited, will be held on March 19th at Devonshire House, Mayfair Place, London, W1.

The following is the statement by the Chairman, Mr Peter Runge, which has been circulated with the report and accounts:

The Accounts this year differ from those of previous years because the results of the Ste. Madeleine Sugar Company Limited, in which we acquired a controlling interest last June, have been consolidated with our own. Ste. Madeleine produces sugar in Trinidad. Last year this company had a production of 55,868 tons, and a trading profit of £282,978.

TRADING PROFIT AND ALLOCATIONS

The consolidated trading profit amounted to £1,119,133 and the consolidated net profit, after deducting £85,549 for the proportion of profits attributable to outside holdings in Ste. Madeleine Sugar Company Limited amounted to £735,959. The provisions of the 1957 Finance Act relating to Overseas Trade Corporations have resulted in a saving in the provision for taxation, both on the year's profits and on adjustment of liabilities for the previous year; the latter accounts for more than half the saving and will not of course recur. After setting aside £36,117 for Debenture Stock Redemption, transferring £325,000 to Future Crops Expenditure Reserve and £65,000 to General Reserve, your Directors recommend payment of a final Ordinary dividend at the rate of 1s. 1d. per share, free of tax, which, with the interim dividend of 3d. per share paid on October 31, 1957, makes a total distribution of 1s. 4d. per share, free of tax, compared with 1s. last year.

The results of the Parent Company, compared with previous years, are shown below:—

	1957	1956	5 years' average 1952/56
	£	£	£
Trading profit....	838,510	833,662	830,741
Net profit	650,785	405,766	362,701
	Tons	Tons	Tons
Sugar production:–			
Monymusk	59,431	69,061	64,062
Frome	83,772	69,713	66,233
	143,203	139,674	130,295

FACTORS AFFECTING PROFITS

The factors which affected profits favourably were the increased production at Frome; abnormally high world sugar prices which ruled for most of the period under review; abnormally high molasses prices; and (for the first time) a modest profit on bananas. World prices affect about one-third of our production, the remainder being sold either for export at a price fixed under the Commonwealth Sugar Agreement*, or locally in Jamaica. A proportion only of the benefits of high sugar prices accrues to us as not only is the price of farmers' cane geared to the price of sugar, but in addition a special crop wages bonus, which is also related to world sugar prices, became payable. By the same token we should not suffer the full effect of any fall in prices such as is expected in the current year.

Other factors which affected profits adversely were a very substantial increase in wages additional to the special bonus and also the low production at Monymusk which was the direct result of a strike which began very soon after harvesting had started and lasted for six weeks. The strike involved everybody except banana workers, although the dispute was about the wages of a small section only. It was entirely unconnected with the negotiations between the Sugar Industry as a whole and the Unions for a general increase in wages. Ultimately the dispute was settled by arbitration which had previously been refused by the Union concerned. The arbitrator did not increase the Company's offer. The six weeks which were lost could not be made up because rains stopped harvesting and a period of high sugar prices was irretrievably lost. The Company has suffered, cane farmers have suffered and so have the workpeople whose earnings were less than they would have been if the crop had been a full one. The only feature of this costly and unnecessary strike upon which we can reflect with any satisfaction is the total absence of incidents or expressions of ill-feeling between the strikers and our staff. This speaks very well for the restraint and good sense of our staff, and for the underlying good relationships which have been built up over the years.

CAPITAL PROJECTS AT FROME

In contrast to Monymusk, Frome had an excellent crop which was harvested without incident. The chief interest there lies in the two large capital projects which are being carried out. The first involves the installation of bulk sugar handling equipment at Savannah-la-Mar. It began operating in December, 1957. The introduction of bulk handling has resulted in considerable savings in labour. Wherever possible we have found other jobs for those involved, but in a large number of cases, particularly at the wharf, it has not been possible to do so. We have paid compensation on a generous scale.

In order to segregate all our bulk storage and loading operations, these are now being carried out through a wholly owned subsidiary company, which we have called Wisco Wharves Limited. We have transferred to it all our bulk storage and handling assets, both at Monymusk and at Frome, and this accounts for the item "Capital Loan" appearing under the heading "Interest in Subsidiary Companies" in the Parent Company's Balance Sheet.

A SECOND MILL

The other large project concerns factory capacity. For some years now Frome has been cropping for about six and a half months. This has meant starting early in December when a ton of cane produces less sugar than it does in January. It has also meant that crop has had to be carried on beyond the end of May when the rains begin and this has caused damage to cane roots which would otherwise have ratooned in the following year. These circumstances have affected not only our own canes but also those of farmers who sell their canes to us. We have reached the limit of speeding up our single mill and have therefore considered it necessary to install a second one in order to shorten crop, improve yield and help the farmers. Its installation will be completed for the 1960 crop.

We examined and rejected an alternative method of increasing milling capacity before deciding to enlarge Frome factory. The farmers of Hanover, a parish some ten to twenty miles north of Frome, have often pressed their claim to have a factory within their own parish with a capacity of about 20,000 tons. Our estimate of the cost of such a factory is £1½ million. By our calculations there could not be an adequate return on this capital if the price at present paid to farmers was to be maintained.

ACCELERATED TRAINING SCHEME

No plans for expansion and improvement are of any use unless there is a supply of people who can look after the new machinery which will be installed in field and factory. In common with all sugar estates and many other undertakings in Jamaica, including the Bauxite companies, we have in recent years been much disturbed by the growing shortage of skilled mechanics and other tradesmen which has resulted partly from emigration and partly from the influx of new industries. We have, therefore, had to undertake emergency measures. In association with several other companies, including the three Bauxite companies, we have set up an Accelerated Training Scheme, based at Monymusk and designed to produce trained men by means of six-monthly courses.

The scheme is similar to those which have been run for 40 years or more by the Ministry of Labour in the United Kingdom for ex-service personnel and disabled men, and we have had much valuable advice and assistance from the Ministry of Labour both in preparing the scheme and in selecting the highly specialised instructors required. The scheme, which has already begun, will eventually train some 150 men a year. It has been warmly welcomed by the Jamaica Government and by the public generally. I wish this bold and imaginative venture every success.

RISING CONSUMPTION IN CANADA

Jamaica is a country with a rapidly growing population. To support the increase it must create more wealth. This it is doing by expanding its bauxite mining, extending the tourist industry, encouraging secondary industries and in many other directions. What are the factors which affect an increase in sugar production? The essential one is consumption in those countries which give preference to Commonwealth sugar, that is to say the United Kingdom and Canada. Consumption is rising steadily in Canada. The distance is in our favour because it is a short haul even by comparison with the distance to the United Kingdom.

The refiners in Eastern Canada are now anxious to receive their sugar entirely in bulk and many of the West Indian producers, particularly ourselves, are in a position to supply bulk cheaply and effectively. We also have suitable vessels for carrying bulk. Sugar Line, of which we are 25 per cent shareholders in partnership with Tate & Lyle and United Molasses, and which has completed a profitable year, will be carrying six cargoes to Montreal this year at the express wish of the refiners there.

THE INTERNATIONAL AGREEMENT

There is another factor regulating production in Jamaica. It is the International Sugar Agreement. All members of the Commonwealth Sugar Agreement* are also members of the International Sugar Agreement under the terms of which the Commonwealth is collectively limited to exporting 2,500,000 tons in 1958. The annual consumption of Commonwealth importer members of the Agreement has increased by 800,000 tons since 1952.

The United Kingdom and Commonwealth members, therefore, will be entirely justified when the International Agreement comes up for re-negotiation this Autumn in insisting on an increase of at least 50,000 tons each year, that is to say approximately 2 per cent per annum. An expansion at this rate should be well within the capacity of the industry to maintain. It would secure for the Commonwealth about one-third of the expanding market that it is itself providing and leave two-thirds for other sugar exporting countries of the world.

CHANGES ON THE BOARD

Since my last statement there have been certain changes on the Board. It is with very great regret that I have to announce that Mr W. J. Blanchard, who has reached the age of 70 and who has recently retired from active duty as an Executive Director, for reasons of health, does not wish to offer himself for re-election to the Board. Mr Blanchard is one of the original Directors of the Company which was formed in 1937. He has been intimately concerned with its growth and success for 21 years. It is our earnest wish that his well earned retirement will be long and happy. Mr W. A. Coupland has relinquished his position as Secretary of the Company in order to devote his full attention to his duties as an Executive Director. Mr J. G. Fairrie has been invited to join the Board and has been appointed an Executive Director. He was formerly Chief Engineer at Tate & Lyle's Liverpool refinery, and is a Director of Tate & Lyle Technical Services Limited. His experience and drive will be of great help to the Company. Mr N. A. Birrell, formerly Assistant Secretary, has been appointed Secretary of the Company.

Finally, I am sure that you would wish me to thank our General Managers in Jamaica, Mr Michelin and Mr Cahusac, and

all our staff and employees, both in Jamaica and in London, for all their efforts and to wish them every success in the 1958 crop.

* Note :—

Under the Commonwealth Sugar Agreement, the British Government each year negotiates with the Commonwealth exporting territories a fixed price for a proportion of their sugar exports. This price is arrived at by applying a formula which takes account of cost factors involved in producing sugar. The price so arrived at is known as the "Negotiated Price." It is applied at present to approximately 1,535,000 tons for shipment to the United Kingdom, of which Jamaica's share is 180,000 tons. About half our crop is sold at the negotiated price. The following are the prices which have been negotiated for the past five years:—

	Per Ton £ s. d.
1954	41 0 0
1955	40 15 0
1956	40 15 0
1957	42 3 4
1958	43 16 8

NORTHAMPTON TOWN AND COUNTY BUILDING SOCIETY

The One-Hundred-and-Ninth Annual Meeting of the Northampton Town and County Building Society was held on Monday, February 24th at Northampton.

Mr Douglas H. Jelley, TD, JP, FCA, Chairman, who presided, said that against a disturbed economic background the Society had made sound progress during 1957. Despite changes both up and down in National interest rates the great financial strength of the Society had enabled the Directors to maintain the same rates throughout the year.

Receipts from investing shareholders and depositors had reached the record figure of £5,884,746. A particularly satisfactory feature was that 8,750 investors accounts had been opened during the year. The total number of investors on December 31st was 61,376 and their balances amounted to £29,947,318.

Advances during the year totalled £4,852,000, some £300,000 more than in 1956. 98 per cent of the loans had been made to assist in the purchase of private residential property. On December 31st the Society had 29,146 borrowers whose loans totalled £27,367,702. Investments and cash held amounted to £4,121,000. Throughout the year there had always been available on demand and without depreciation a total of £1 million.

Assets had increased during the year by approximately £3,250,000 and now stood at £31,797,603. Reserve Funds at £1,373,495 represented as a percentage of total assets a slight increase over 1956.

During the year the Society had accepted Transfers of Engagements from the Kingscliffe, Woburn Sands and Wolverton Building Societies. Following these Transfers new Branch Offices had been opened at Brighton, Leighton Buzzard and Wolverton. New offices were also being opened at Wolverhampton and St. Albans. As regards existing offices the Luton Office had been moved to larger and more central premises. Substantial improvements had been carried out at Wellingborough and the rebuilding of a more central Peterborough Office would shortly be completed.

The Report and Accounts were adopted.

THE POWER-GAS CORPORATION LIMITED

CONTINUED SATISFACTORY PROGRESS

The fifty-eighth Annual General Meeting of The Power-Gas Corporation Limited will be held on March 20, 1958, in London, Mr W. R. Brown, DSO (Chairman and Managing Director), presiding.

The following is an extract from the Chairman's circulated statement for the year ended September 30, 1957:

The progress of our Company during 1956-57 may be viewed with sober satisfaction. This year's orders, at £12.3 million, approximate to the record of last year. All Divisions of the Company have been fully engaged; orders booked by the Blast Furnace Division (trading as Ashmore, Benson, Pease and Company) have set up a new record, and include four major contracts for complete plant installations. Trading by the Works Division is rapidly growing in importance, and more and more work is being undertaken for the open market in addition to our own specialities.

The gross trading profit amounts to £1,052,562 compared with £859,714 in 1956. The net value of our Fixed Assets increased by £310,000 during the year. Stock in trade has shown a comparable increase, reflecting the growth of our business. We have recommended to you a final dividend of 10 per cent. This would make the total distribution for the year 15 per cent on the issued capital, which stands at £1,400,000. We have recommended a transfer of £175,000 to General Reserve and we propose to raise the Balance carried forward to £83,855.

Work on the site and buildings for our factory extension is well in hand, and it should come into production towards the close of 1958. A Petroleum Plant Division —a natural sequel to the connections we are developing with the Petroleum Industry—has been established with headquarters in London, and the Division has already booked contracts and is now carrying out negotiations for large overseas jobs.

Rose, Downs & Thompson Limited were faced with a downward trend in business at the commencement of the year, but strenuous efforts to sell the company's products in all parts of the world have restored the position. A novel design of fishmeal plant has been produced, using a gas turbine as a power and heating medium. An improved oil expeller has met with encouraging success and other new products have been added to this company's range, notably high temperature heating boilers and a process for sheet metal cladding cylindrical bodies. Orders are already in hand for these new specialities.

Ashmore, Benson, Pease & Company Africa (Pty) Limited already have large contracts in course of execution. They and their erection company will be busily employed with the new blast furnace and sintering plant at Pretoria until the middle of 1958. In addition they have had considerable success in securing further orders.

The Power-Gas Corporation (Australasia) Pty Limited are campaigning vigorously for work and have several promising prospects in view. The company is also playing an importance part in connection with the parent company's large contracts for Australian Iron & Steel Limited at Port Kembla.

JUTE INDUSTRIES LIMITED

RAW JUTE PRICES AND SUPPLIES

INTERNATIONAL AND POLITICAL PROBLEMS

MR W. G. N. WALKER'S STATEMENT

The thirty-seventh annual general meeting of Jute Industries, Limited, was held on February 24th, at Meadow Place Buildings, Dundee, Mr W. G. N. Walker (chairman and joint managing director) presiding.

The Secretary (Mr W. A. Jeffray, CA) read the notice convening the meeting and the report of the auditors.

Addressing the meeting, the Chairman said: With your permission I will take the accounts and the report of the directors as read. (Agreed.)

A preliminary statement by the Chairman circulated with the Accounts read as follows:

As in previous years, I intend to make an up-to-date statement on general lines at the Annual General Meeting. Meantime, with the publication of accounts showing a material fall in profits, I feel bound to give stockholders some interim information on which the current prospects of the company can be judged.

There are some sections of the company's business which are at the moment operating at a lower level of activity and at a much lower level of profitability than at this time last year. On the other hand, other sections are busy and in addition our Douglasfield Works is, as stated in the Directors' Report, now operating on a full double shift basis.

In my statement at the Annual General Meeting last March, I referred to the announcements made in both Houses of Parliament in February, 1954, and said that the importance of these pledges and their effect on the prosperity of your company and the citizens of Dundee could not be overemphasised.

In July, 1957, the Board of Trade reduced the measure of protection given to the United Kingdom jute manufacturing industry against competition from Asiatic goods in the United Kingdom market. This action, although it has so far had only a small direct effect on the numbers employed by your company, has had a very adverse effect on the profitability of part of our weaving business: the full impact has still to be felt.

The new system adopted by the Board of Trade does not as formerly take into account the variations in relationship between the price levels of raw jute from Pakistan and manufactured goods from India. The price that we have to pay for our raw jute from Pakistan is out of line with the price levels at which finished manufactured goods from India made from Indian raw jute are being sold. Pakistan's raw jute, in short, is too dear if she is to continue to sell it in overseas markets at anything like the volume previously achieved.

The employment and unemployment figures for jute given in the Ministry of Labour Gazette are not a complete guide to the position in the United Kingdom jute industry as a whole, owing to categories other than jute being used for some sections of the industry, but your company is to-day employing in Dundee approximately 475 people less than it did a year ago. The effect of a further decline in employment on the city of Dundee must be obvious when we see from Ministry of Labour figures that unemployment in Dundee has already shown a rise from 2,521 (3 per cent) in November, 1956, to 3,531 (4 per cent) in November, 1957 (the latest figures available).

Taking everything into consideration and barring some quite unforeseen circumstances, it would appear that the profits for the current year may show a further decline.

At the meeting the Chairman said :

"Since our last meeting two directors who had spent their whole working life in the jute industry—Mr W. H. Pilcher and Mr W. Cook—have retired from the Board. Mr Pilcher, who had over 50 years' service with the company, had been vice-chairman for seven years and a director for 23 years. Mr Cook joined the company in 1921 and had been a director since 1948. Your company owes both these gentlemen a deep debt of gratitude, and we hope that they will enjoy their well-earned retirement.

RAW JUTE

Raw jute, as I told you last year, accounts for almost 50 per cent of the final price of our jute products as a whole. Quality, availability and price, therefore, are of prime importance to our business. The closest attention is paid to the purchasing of our requirements, and we are fortunate to have with us in Dundee a director and also a senior executive who have spent many years in the jute baling industry in the Indian sub-continent, and one of whom visits that country annually to assess conditions.

During the financial year under review jute prices followed a similar trend to what they did during the previous year. The Suez crisis brought out considerable buying as consumers were anxious to secure sufficient supplies from the reduced shipments being made. This caused a steady rise in prices up to the end of 1956 when supply needs had for the moment been met. During the first three months of 1957, prices declined, but when reports came out that the crop might be short of world requirements prices rose again, and were at their highest level in June, With the arrival of new seasons imports in July, prices declined rapidly and reached their lowest level in August. In spite of this fall, prices were approximately £10 per ton higher at our balancing date than they had been at the same time the previous year and there was an element of fortuitous profit in this year's figures.

QUALITY AND QUANTITY OF CROP

A partial failure of the late monsoon caused a shortage of steeping water and in consequence the quality of part of the mid and high land crops suffered considerably, with the resultant shortage of the higher grades of jute which are so important to us, and the prices for which are now at a very high level.

In quantity, the crop appears to be about average, but with a possible lower off-take by overseas consumers it may mean a rather larger carry-over into the next season. This larger carry-over will not help us in this market because it will be almost entirely of low grade jute, which is unsuitable for export from Pakistan to European markets.

INTERNATIONAL AND POLITICAL PROBLEMS

The future of the jute industry not only in the this country but in other countries of the world is uncertain. No matter what individual companies in these countries do to help themselves, they are all at the end of the day at the mercy of international politics.

India does not export any raw jute, and being almost self-sufficient in this raw material is naturally anxious to increase the sale of her jute manufactured goods in world markets. Pakistan, on the other hand, with a jute manufacturing industry of a much smaller size which is still experiencing teething troubles, must export raw jute to the maximum possible extent and therefore is anxious that the jute manufacturers throughout the world outside India should continue to use it in large quantities. Pakistan's interests are therefore closely allied to those of the jute manufacturers outside India, but she is not helping them at the moment as her raw jute prices to export markets are higher than equivalent qualities available to manufacturers in India.

The jute manufacturing industries of Europe, like our own, are tied to Pakistan for raw jute, and their survival, like ours, depends primarily on Pakistan's ability to supply raw material at a price which will enable manufacturers to compete not only with goods exported from India but also with alternative materials and methods. This point was made quite clear to Pakistan by the delegates from countries throughout the world at the International Jute Conference held in Dacca last November, and we hope that Pakistan now appreciates, in spite of her internal difficulties, that her long-term interests lie in supplying raw material at a price economic to her customers, particularly as almost half her foreign exchange earnings is derived from this source.

The Governments of European countries, including our own, had to decide if they were to support the manufacturing industries within their own countries or to support the importer of manufactured goods, who cannot offer employment to anything like the same extent.

As you are well aware, our Government in February, 1954, gave a pledge that it would safeguard the manufacturing industry in the United Kingdom against Asiatic imports, and in doing so, fell in line with the general policy of protection that had been afforded for many years by other European Governments to their domestic jute industries. In my preliminary statement I made reference to the immediate effects of the Board of Trade's announcement last July, but what really caused alarm in Dundee and district was the persistent Ministerial refusal to give any assurance that the steps taken were not the first of a series that would result

in the pledges given in 1954 being dishonoured and because of which so much capital has been expended in order to justify the conditions laid down by the Board of Trade at that time and on previous occasions, namely "Efficiency."

With a European Free Trade Area in prospect our future depends on Asiatic, European and UK domestic politics—that is why I said earlier that it was uncertain. The Economist Intelligence Unit in its book "Britain and Europe" has devoted four pages to this problem—its conclusion was that if the UK were to enter the proposed Free Trade Area, "things (in the UK jute trade) would probably be very much as they are now." I hope that this proves to be a correct forecast, but in any event the capital expenditure incurred in modernisation of plant and machinery over previous years will stand us in good stead.

JUTE CARPET YARNS

In my statement two years ago, I referred to our new precision pack which was specifically designed for the carpet industry. I am glad to tell you that production of this pack has increased still further in the year under review and its success continues to exceed our expectations. This is just one facet of our intensive efforts to produce tailor-made jute yarns for the carpet industry in this country and overseas. We produce over 200 different combinations of quality, count and make-up, and cheerfully regard this as part of our service to the carpet manufacturers. Furthermore, we specialise in offering great flexibility to these friends so that if they wish to switch from one type of yarn to another we can do it for them almost overnight. In the calendar year 1957 rather more than a quarter of our total yarn production was supplied to the carpet trade in this country, quite apart from our jute carpet yarn exports which are also increasing satisfactorily. Our production in this field during last year was the highest ever achieved in the company's history. Meanwhile, we continue our research to produce ever better jute carpet yarns at prices attractive to our customers.

EXPORTS

I told you last year that competition in world markets for quality goods was increasing, with the inevitable reduction in margins; this forecast has been only too true and competition is now severe. While there has been a distinct falling off in certain markets we have been encouraged by the results of our intensive selling efforts in others.

MANAGEMENT

It remains as before the policy of your Board to produce quality goods at the lowest possible price, coupled with good service, and I am glad to be able to tell you that our efforts in this connection are being appreciated by our customers as a whole. We are in addition continuing to give close attention to the problem of finding new outlets for the company's resources and to possible means of profitable diversification.

We have been confronted with varied and difficult problems during the year, many of which have been outwith our control. More and more of our management's time is being taken up in combating and overcoming difficulties. Their efforts in this direction have been most praiseworthy. We are fortunate in having such a fine spirit of co-operation and loyalty amongst our executives, management, staff and employees, to whom our most sincere thanks are due for their work throughout the past year.

The report and accounts were adopted.

UNITED KINGDOM PROVIDENT INSTITUTION

AN OUTSTANDING YEAR

IMPACT OF STATE PENSION PROPOSALS

SIR JOHN BENN SUGGESTS A NEW "PLATFORM"

The annual general meeting of the United Kingdom Provident Institution will be held at 33-36 Gracechurch Street, London, E.C.3, on Wednesday, March 26, 1958. The following statement has been circulated to the members by the Chairman and Managing Director, Sir John Benn, Bart:

In presenting the report and accounts for 1957 I am pleased to record that the number of policies issued by the United Kingdom Provident Institution exceeded 10,000 in one year for the first time. We wrote 9,150 policies of life assurance for £11,737,205 net sums assured, an increase of £1,250,000 on the previous year's record figure. In addition we issued 1,473 annuities securing pensions of £466,178 per annum, and if expressed as a capital sum these policies are equivalent to about £5 million of life assurance. Our new premium income from all sources was £788,347, representing an increase over 1956 of more than 30 per cent.

Payments made to members during 1957 in respect of claims totalled £2,302,916. In the case of claims paid at death on with-profit policies the bonus added an average of 63 per cent to the original sum assured. The corresponding addition on endowment policies which became due for payment on the survival of members amounted to 46 per cent, thus giving an overall average of 52 per cent. These results again emphasise our fine bonus record and the great advantage of taking out a with-profit policy with the Institution.

The rate of interest earned on our funds which now exceed £47 million was £6 10s. 5d. per cent per annum before the deduction of income tax.

An outstanding event of the year was the opening of our new Head Office on July 10th by the then Chancellor of the Exchequer, the Right Honourable Peter Thorneycroft, MP, in the presence of the Lord Mayor, the Governor of the Bank of England, and a distinguished audience. The Chancellor used the occasion for the first of several speeches on the Government's intensified measures to counter inflation.

THE STATE: COMPETITOR OR PARTNER?

Life assurance is always sensitive to the overall policy of the Government, but since the war we have also been confronted with specific proposals affecting our future. At one stage, part of the insurance industry was marked out for nationalisation. Last spring the Labour Party issued a plan for State pensions on a half-pay basis and the Government has since announced that it is considering a wider provision for old age. Ever since 1840 the United Kingdom Provident Institution has faced and met successfully many great changes, but as all political parties are now devoting attention to insurance I find myself asking just where we stand. How will these developments affect the business of the Institution? Is the Welfare State to become a competitor or a partner? *What "platform" can a life office best adopt in this new situation?*

Up to now the services provided by the Welfare State have operated side by side with those available through other channels. Under the system known as National Insurance we all have to stamp our cards but are free to make further arrangements to cover sickness and old age. From the immense volume of personal business placed with the life offices and with the industrial insurance companies, which collect millions of shillings every week, it is clear that this liberty is valued by the mass of the people. Public opinion will certainly insist that this liberty must be maintained in the future.

Over seventy years ago Herbert Spencer warned us that the increase in state services means that "each generation is made less familiar with the attainment of desired ends by individual actions." Clearly we are not just concerned with the next few General Elections—we are dealing with a long-term trend which calls for long-term measures, for as in the past the climate of public opinion will be the deciding influence. I believe that the role of the life offices in encouraging people to stand on their own feet has never been more important than it is today. Every insurance policy is a declaration of independence, and a pledge of personal effort. *Independence is therefore our first plank.*

WE CANNOT IGNORE FINANCIAL DISCIPLINE

When Mr Thorneycroft resigned, another Conservative Minister made light of what he termed "Micawber Economics" but the habit of supposing that someone else will find the money is already widespread and dangerous. To think that we can ignore financial discipline because eventually the State will provide is a frame of mind which, because it is scarcely a conscious one, is all the more insidious. But following the latest crisis the people at large are beginning to realise that excessive Government expenditure is inflationary. The climate of opinion is beginning to change, and as sound finance is of crucial importance in the practice of insurance I believe we should help to drive this home by explaining the financial principles of assurance and pensions, and how a life office applies them in its many operations. The United Kingdom Provident Institution is already pursuing this course with some vigour. We have issued supplements dealing with the many aspects of life assurance and we have published press advertisements to illustrate the meaning of profit and loss and other economic factors, but much more publicity of this kind is required. *Sound Finance is therefore the second plank in our platform.*

The immense variety of the services which insurance offices already provide is not always appreciated. Many of the policies are tailored in one way or another to meet particular requirements, and this applies to most pension schemes, which are available in great variety to suit small firms as well as large.

The variations which a modern life office is able to offer are almost unlimited, but changing needs are a challenge. We are proud of our efficiency but must not take it for granted, and therefore *Efficiency is the third plank in our platform.* It has the merit of keeping those of us engaged in insurance up to scratch, while reminding our policyholders and the public that our aim is to fit every policy to a particular need.

ABBEY NATIONAL BUILDING SOCIETY

ANNUAL GENERAL MEETING

SIR HAROLD BELLMAN'S SPEECH

The Annual Meeting of the Abbey National Building Society was held on February 21st at the Wigmore Hall, Wigmore Street, London, W.1.

Sir Harold Bellman, DL, JP, LLD, Chairman of the Society, in moving the adoption of the report and accounts, said:

The year now under review has had its full measure of special problems for all financial institutions. It says much for the standing of your Society that, despite the national economic background, the Directors are able to report a thoroughly satisfactory measure of progress.

I will not review the figures in the accounts in detail, but perhaps I may recapitulate the outstanding points. The Society's total assets increased by £20 million to £278 million. In shares and deposits the Society received nearly £49 million. This is very satisfactory in view of the intensified competition for savings during 1957.

During 1957 the rate of interest on the Society's shares was maintained at 3½ per cent, with income tax paid by the Society, equal to £6 1s. 9d. to those investors subject to the standard rate of income tax.

Turning to the mortgage side, new advances to assist home ownership at £38.6 million showed a slight decline. Nevertheless, the amount is one which requires no apology. The Abbey National figures should dispel the illusion fostered in some quarters that building societies generally had stopped lending in 1957.

Looking at the balance sheet as a whole, its strength is readily apparent. Liquid resources, consisting of cash and Trustee Securities, amounted to no less than £40 million at December 31st and equalled exactly the same proportion of the total assets as a year ago, namely, 14.4 per cent. The Reserves and Carry Forward were increased to £10.6 million.

With Bank Rate at 7 per cent the Society's holding of British Government Securities inevitably reflects the investment conditions associated with such exceptionally high money rates. As a result, the book value of these securities exceeded the market value at the date of the balance sheet. These investments, however, are dated stocks and if held to maturity there would be a surplus accruing to the Society of over one and a half million pounds.

The ratio of management expenses, measured against total assets, has again shown a reduction and now stands at only 9s. 11d. per cent for the year 1957.

I remarked a year ago that periods of high money rates were not favourable to building society operations. At that time Bank Rate had been reduced from 5½ per cent, at which it stood at the beginning of the year, to 5 per cent. If that seemed high, there was nothing to warn us that a rate of 7 per cent was in store by the autumn.

I must re-emphasise, however, that as a building society we are not *directly or immediately* affected by changes in the Bank Rate, whether on the savings side of our activities or on the mortgage side. Nevertheless, since many important money rates are adjusted in accordance with movements in Bank Rate, the repercussions of an exceptionally high rate upon building society funds had to be most carefully assessed. The Building Societies' Association, of which your Society is a member, after reviewing all the facts, recommended—and continues to recommend—that there should be no change in the then existing interest structure, which in general provided shareholders with 3½ per cent, with income tax borne by the societies, and necessitated the mortgage rate of 6 per cent to old and new borrowers. Your directors were of the opinion that this was the proper course and acted accordingly.

Today the investor is receiving a return from the leading building societies which is equivalent to 6 per cent per annum, if he is subject to the standard rate of income tax. Taking into account the high degree of security, combined with the facilities attaching to such investments, we suggest that the present yield is still a fair return.

There is this further fact to mention: without going into elaborate detail, your society could not increase significantly the yield to investors without increasing the mortgage rate by at least 1 per cent. If your society can maintain the mortgage rate so as not to exceed 6 per cent, it will be rendering a service to its borrowers which they may remember with appreciation. We have said again and again that our guiding principle is to hold the scales evenly as between borrowers and investors. For the present at all events, I believe we are achieving this balance with substantial justice all round.

It has been represented that if building societies generally increased the shareholders' rate above 3½ per cent, they would attract more funds and thereby have more to lend, and that this should be their policy. This is surely topsy-turvy logic. Some two million building society borrowers would be made to suffer in the hope that at the most a few thousand would-be borrowers might be accommodated without delay. Where does justice lie in this matter? There is no doubt in our minds as to the answer. The current figures available show that building societies are continuing to advance considerable sums, and if there are difficulties in meeting all applications, those spring largely, as I have previously indicated, from the tidal wave of demand which has descended upon building societies.

A year ago I referred to the profits tax. Subsequently, there was a discussion on the tax in the House of Commons, which was memorable by reason of the unanimity with which members of all political parties joined in condemning the inequitable application of the tax to building societies. Such was the strength of feeling that the Chancellor of the Exchequer was obviously impressed, and we were encouraged to hope that relief might be forthcoming in the next Budget. With that Budget not far away, our hope has not diminished.

I should like to express the appreciation of all members of the Board to the Deputy Chairman, Mr Stanley C. Ramsey, for his valuable advice. The Managing Director, Sir Bruce Wycherley, has had to face another year of change and disequilibrium, but his resource and equanimity have been more than equal to all occasions. The Board is deeply sensible of the great value of his services.

DEPUTY CHAIRMAN'S REMARKS

Mr Stanley C. Ramsey, FRIBA, Deputy Chairman, in seconding the adoption of the report and accounts, said:

The Chairman has set before you in his speech the main points concerning the Society's financial position. I am sure he has convinced you of the Society's great strength.

He has also referred briefly to the mortgage side of our business during 1957, and I should now like to deal more fully with this aspect of our work. Our activity in this field was maintained at a high level throughout the year. The demand for funds was considerably in excess of the supply, and this disequilibrium will no doubt continue so long as the credit squeeze, with its attendant high money rates and scarcity of loanable funds, is enforced.

Our advances were made almost exclusively on dwelling houses. We have always been aware that our essential purpose on the mortgage side is to promote home ownership, and so far as the Abbey National is concerned, there is no ground for the view that it was impossible to obtain an advance on any house unless it was entirely new.

As the Chairman has already pointed out, approximately half the mortgage securities accepted in 1957 were other than newly built. Last year 23 per cent of our advances involved personal stakes of over 30 per cent when measured against purchase price; 17 per cent with a stake of 21 to 30 per cent, and the balance of the advances up to 20 per cent. Over 50 per cent of our advances were made with additional security. At the same time we were able to help a number of our existing borrowers with further advances.

I feel sure these figures will help you to assess the quality of the Society's mortgage asset. With the credit squeeze and the high Bank Rate still with us the outlook for the present year, on the mortgage is somewhat uncertain.

The report and accounts were adopted.

The Society's auditors, Mr Harold Lakeman, FCA, Mr R. T. Walters, TD, MA, FCA, and Mr A. W. White, FCA were re-elected. Mr C. Russell Chiesman, Mr C. Lovett Gill, FRIBA and Mr Montague Peacock were duly re-elected to the Board.

MANAGING DIRECTOR'S REMARKS

Sir Bruce Wycherley, MC, FCIS, managing director of the Society, said:

An important factor in the Society's corporate existence is the 573,000 persons who have entrusted their savings to us or have sought our assistance for the purchase of their homes. If we are conscious of the value of their participation, we hope and believe that they are willing ambassadors on our behalf.

At the present time the Society is in a position to welcome new funds from members. I hope our shareholders, whenever they are able to do so, will increase their accounts with the Society and thus enable us to extend

our services to those who desire to become home-owners. For all that constitutes a safety-first investment, the name of the Abbey National stands high both with existing members and the general public. Money saved with the Abbey National comes into the category of "Thoughtful Savings," and equally induces the reflection, "Well Saved!"

If our reputation is high, we spare no effort to maintain and, if possible, improve it. Our network of branch offices is being steadily extended and we are constantly seeking to improve our service.

METROPOLITAN RAILWAY COUNTRY ESTATES LIMITED

ANOTHER SUCCESSFUL YEAR

SIR BERNARD DOCKER'S STATEMENT

The thirty-eighth annual general meeting of the Metropolitan Railway Country Estates Limited will be held on March 6th at Kensal House, 553-579 Harrow Road, London, W.10.

The following is an extract from the statement of the Chairman, Sir Bernard Docker, KBE, circulated with the Report and Accounts for the year ended October 31, 1957:

I am glad to report that we have had another successful year enabling us for the third consecutive year to recommend payment of a dividend of 15 per cent and to make a small addition to the consolidated balance of undistributed profits carried forward. This at £155,210, subject to provision for additional profits tax on distribution, affords a reserve on which we could rely if need be to maintain the current rate of dividend for a year or so if in any future year earnings were insufficient to do so for reasons which we might consider to be of a temporary character. The consolidated net profit for the year to October 31st last was £75,373, which compares with £64,760 the previous year. Taxation this year takes £42,766 against £31,724 a year ago when we were able to bring in £4,300 from provisions made in previous years no longer required and payment of the same rate of dividend will require £30,187 as before, leaving us £155,210 to carry forward compared with £152,790 brought in.

SUMMARY OF RESULTS

This consolidated summary of results reflects a year of considerable activity and success by the parent company, an almost static year in our St Helena Properties Limited subsidiary and another record year for its small building subsidiary, Vaughan (Builders) Limited. On the other hand, we had a disappointing year, resulting in a loss, by our farming subsidiary, MRCE Farms Limited.

The parent company holds freehold properties with a book value of £640,000 at the date of the balance sheet. These include building estates in various stages of development amounting to about 212 acres, some miscellaneous properties including 31 tenanted modern houses and some 12,000 acres of tenanted agricultural estates which include a few areas of potential building land.

After referring in detail to the affairs of the subsidiary companies with special reference to the record profits of the small building subsidiary Vaughan (Builders) Limited, of Colchester, and a loss by the farming subsidiary MRCE Farms Limited, attributed primarily to seasonal factors, and to a new joint venture in building estates under development in the Midlands and North of England in association with The Metropolitan Railway Surplus Lands Company Limited, and to certain staff changes the statement concludes:

THE OUTLOOK

As to the future, it is always difficult with a trading company to forecast results and you will not expect me to do so. I can, however, point as I did last year to our consolidated balance sheet which shows that we have three quarters of a million pounds at book cost, invested in freehold properties held for resale, including the trading investment which is our investment as at October 31st last in the Whelmar Property Company Limited. It is true that building land in process of development yields no income until sold, that our agricultural land produces a small revenue, less than the money costs us at the Bank, and that in the current year our bank loans will cost us more, but with knowledge of the quality of our property assets and of the experience and enterprise of our management and of the good business we have already done on account of the coming year, I am reasonably confident that in a year's time, given no profound change in the pace of building development or any other factor outside our control, we shall again be able to report satisfactory results.

H. M. HOBSON

The twenty-second annual general meeting of H. M. Hobson Limited was held on February 21st in London.

Mr T. Simpson (chairman and managing director) presided and, in the course of his speech, said: The Accounts have fully justified the policy of the Board during the past years. The business has substantially increased with a proportionate rise in profits. The consolidated net profit after providing £373,925 for Taxation amounts to £373,623 compared with £307,272. Your Directors recommend a dividend of 15 per cent (less tax).

While the Company has had a successful year and the Order Book is satisfactory and well spread, the trend of future prospects is liable to be affected by further changes in defence requirements. Subject to this, your Directors look forward with confidence.

Activities in the Atomic Energy field are developing satisfactorily. Contracts have been received for control systems and other precision equipment.

Further to my statement last year on the contribution your Company had made to the DIDO Research Reactor, I am now able to report that Hobson Control Equipment is operating on the Materials Testing Reactor PLUTO at Harwell. Similar controls have been installed in the Australian Government Research Reactor, near Sydney, and in the Materials Testing Reactor at Dounreay. Recently an order has been received for the supply of controls for a research Reactor to be built by the Danish Government.

The Honeycomb Isotope manufacturing machines are now in production and the first of these is in operation at Harwell.

The report was adopted.

SPIERS & POND LIMITED

INCREASE OF CAPITAL APPROVED

The Annual General Meeting of Spiers & Pond Limited was held on February 26th in London, Mr Thomas N. Matthews (joint managing director) presided in the absence through illness of the chairman, Mr Walter Venables, ACA.

Mr C. U. Mather (Director and Secretary) read the notice convening the meeting, and Mr H. Douglas Bessemer, representing Messrs Kemp, Chatteris & Company, read the auditors' report.

The following are extracts from the Chairman's review circulated with the report and accounts for the year ended September 30, 1957:

Though the past year has witnessed political and economic crises with their inevitable repercussions on our business, your Board is pleased to be able to report results which I trust you will regard as satisfactory.

The Trading Profit of the Group amounts to £247,531 as compared with £238,782 for the previous year, an increase of £8,749.

Expenditure on Repairs and Renewals amounts to £96,111 as against £91,514. For many years it has been your Board's policy to maintain a high standard of decoration and equipment in the hotels of the Group, and today their general condition compares very favourably with any other hotels of similar standing.

The net profit after providing for taxation is £88,342, of which the holding Company's proportion is £86,564.

The dividend on the 6½ per cent Preference Stock has been paid, and your Board recommends a dividend of 10 per cent less tax on the Ordinary Stock. A transfer of £38,559 to General Reserve and £3,500 to the Company's Sickness and Benevolent Fund is also proposed, and the total allocations will, if confirmed, leave a balance of £122,720 to be carried forward to next year.

Current Assets of the Group amount to £402,819, as against £392,775 for the previous year, whilst Current Liabilities amount to £280,631 as against £290,119.

With regard to your subsidiary companies, I am pleased to report that they have contributed satisfactorily to the results before you.

At the last Meeting, I informed you of our intention to rebuild the Southampton Hotel, Surbiton. Detailed plans and costings have been prepared and all necessary planning permissions obtained. Unfortunately, however, our application to the Capital Issues Committee for permission to obtain the necessary finance was refused, and consequently the scheme has had to be abandoned for the time being.

Your Board proposes that the opportunity is now taken of increasing the authorised Ordinary Share Capital of your Company by the creation of an additional 800,000 Ordinary Shares of 10s. each, making the authorised ordinary capital of the Company £1 million. It is not intended to issue any further Shares in the immediate future, but your Board thinks it advisable to have additional unissued capital available.

The report and accounts were adopted and the proposed increase of capital approved.

The hotels operated by the Group are as follows: Baileys Hotel, Gloucester Road, London, S.W.7; Grand Hotel, Brighton; Marsham Court, Bournemouth; Queen's Hotel, Eastbourne; Royal Clarence Hotel, Exeter; Grand Hotel, Scarborough; Warnes Hotel, Worthing; Calverley Hotel, Tunbridge Wells; The Bull's Head Hotel, Aylesbury,

MONTAGUE BURTON LIMITED

ANOTHER SUCCESSFUL YEAR

SATISFACTORY INCREASE IN TURNOVER

MR L. JACOBSON ON IMPORTANCE OF PRICE STABILITY

The Twenty-eighth Ordinary General Meeting of Montague Burton Limited was held on February 25th at the Registered Office of the Company, Leeds.

Mr Lionel Jacobson (the Chairman) presided.

The Secretary (Mr H. V. Evans, ACA) read the notice convening the Meeting and the Report of the Auditors.

The following is the statement by the Chairman circulated with the report and accounts:

You will see from the attached accounts that the Group has enjoyed another successful year, the result of which has been to add £629,523 to revenue reserves after providing for all taxation on profits earned to date, dividends, appropriations amounting to £95,681 for the redemption of Debentures and Preference Shares. All Companies within the Group have made a full contribution towards the final figures and turnover levels have again shown a satisfactory increase over the previous year.

MODERNISATION AND EXPANSION

The modernisation of the Burton Tailoring chain continues, as indeed it must having regard to the number of shops in that Division of the Group. Although the expenditure during the last four years has been heavier than normal, we can anticipate that this will continue at a somewhat lower level as a permanent feature of our accounts. Several new and attractive buildings have been completed during the year on first-class sites and the Group has in hand a comprehensive building programme adequate for its future requirements. The Tailoring Works continue to be well maintained and one Works that has been rebuilt and replanned has recently been successfully reopened.

The Burton chain is fully represented throughout the British Isles and consequently your Directors, apart from the modernisation and rebuilding, have concentrated on the expansion of our main associated companies. Jackson The Tailor opened shops in Southampton, Bristol, Ranelagh Street, Liverpool, Barnsley and Croydon and in addition moved to larger and more central premises at Darlington and Bolton. Peter Robinson opened a new store in Liverpool in January 1958. These new ventures have had a promising start and in both Companies we have a detailed plan for future expansion. It will be appreciated that in the early stages the expenses are considerable but in due course these developments should have a healthy influence on our final results.

We recognise that careful consideration must be given to the European Free Trade Area. It is early yet to form any firm policy, but perhaps it will suffice if I give an assurance that as a Board we are conscious of our responsibility to ensure that we stay at the forefront of our particular trade. If such a policy entails expansion into the Free Trade Area your Directors will not hesitate to take the necessary action.

PROBLEM OF RISING COSTS

The direct expenditure and overheads of the Group have shown a marked increase over the past four years due to reorganisation, expansion and particularly inflationary tendencies. Inflation is a matter of vital concern to the whole nation. It is not for me to enlarge on this particularly difficult subject, except in so far as it may affect this Group of Companies. During recent months the Wholesale Clothing Manufacturers' Federation of Great Britain agreed a wage advance with the National Union of Tailors and Garment Workers. Clothing is an important part of any family budget and we supply a considerable proportion of the national requirements. We are satisfied that this Company must make its contribution to the national economy. In our view this can only be achieved by determining not to recover the increased labour charges from the general public by means of increased retail prices. It could be that such a policy will result in a lower level of profit. It will be so unless we can succeed in obtaining adequate turnover in excess of the year we are considering, to absorb the increased costs. For my part I am firmly behind the decision of my colleagues to continue selling at the prices which we charged last year even though there is a possibility that lower profits might result. I strongly believe that this is the proper policy to be pursued and it represents a firm step along the road towards national recovery, just as I am convinced that such is the strength and resilience of this Group that in the final result the profits will remain adequate for all purposes.

In contrast with the upward trend of costs and overhead expenses there has been a fall in the price of wool, our major item of consumption. Some time will elapse before this is reflected in the finished product but it is our earnest desire that any benefit that is thus obtained shall be passed on to the public and should result in even better value.

ADEQUATE LIQUID RESOURCES

We have carefully examined our capital commitments in view of the credit squeeze. Our liquid resources are adequate for the plans we have in contemplation. It will, however, be borne in mind that ours is a seasonal business and in consequence there is a considerable fluctuation in our resources, our maximum requirements being immediately prior to the Spring season when stocks both of finished goods and cloth in the piece are necessarily at a high level. The date of the preparation of the Balance Sheet coincides with the period when stocks are low, consequently we show a substantial cash balance. Generally however the resources of the Group are adequate for all purposes, and over the past two years we have had little if any reason to seek from the Banks the assistance which they have always made readily available.

Last year I mentioned the setting up of the Clothing Management Centre at Guisborough. I am pleased to report that the Centre completed its first year of operation in August 1957 and that the students who have left the course and returned to industry have completely endorsed our confidence in the Guisborough undertaking.

I often feel that although the Burton shops are well known to you, the details of our other activities tend to be overlooked. These could not be described as an insignificant part of this Enterprise. Jackson The Tailor operate a chain of sixty-six highly successful shops; Peter Robinson, whose Headquarters are at Oxford Circus, six ladies' fashion stores, and in the Manufacturing Division there are fourteen Works. We have on our direct payroll something in excess of 23,000 employees.

CONFIDENCE IN THE FUTURE

Again I have the difficult task of venturing some forecast about the future. Between the end of the financial year and the date of the preparation of these accounts, due to the vigorous policy of our retail executive, turnover has been steadily maintained. I have a feeling that trade will be more difficult to obtain in 1958 but I have confidence in those about me that they will ensure that the Group retains its pre-eminent place in the industry.

In presenting these accounts to you I would at the same time extend grateful thanks and appreciation for the loyal support of my colleagues, staff and personnel of both the retail and manufacturing divisions.

The report and accounts were unanimously adopted. The Directors retiring in accordance with the Articles of Association were re-elected to the Board. The auditors, Messrs Price Waterhouse & Co. and Messrs Volans, Leach & Schofield, continue in office.

The meeting concluded with a vote of thanks to the Chairman.

SOUTH ESSEX WATERWORKS CO.

The annual general meeting of South Essex Waterworks Company was held on February 25th in London, Mr G. Francis Stringer, OBE (the chairman), presiding.

The following is an extract from his circulated statement:

You will observe that there is a net increase in Capital Expenditure during the year of £200,371 of which a further sum of £145,880 has been spent on the Hanningfield Works. These Works have now been in operation for eighteen months and during the year under review an average of just over 5 million gallons per day was supplied, of which your Company took approximately 54 per cent.

The remaining expenditure on Capital Account includes the cost of providing a large trunk main to improve the supply in the Barking area. A new electrically driven pump of a maximum capacity of 7 million gallons per day was brought into use at Langham Works and the water-operated turbine which had been in operation at Herongate Reservoir since 1932 was replaced by a new turbine of considerably increased capacity.

Turning to the Revenue and Expenditure Account, an increase of £104,263 in gross revenue is shown and it is of interest to note that the annual revenue now exceeds £1 million for the first time. The demand for water for domestic purposes continued to increase throughout the year, 5,051 additional services were connected, the total number of supplies for domestic purposes within the Company's area as at December 31, 1957, was 203,733. Industrial demand was severely affected as the result of the Suez Crisis.

The report was adopted.

BROOM AND WADE LIMITED

TURNOVER MAINTAINED

The twenty-third annual general meeting of Broom and Wade Limited was held on February 26th at High Wycombe, Mr Harry S. Broom, MIMechE, chairman and joint managing director, presiding.

The following is an extract from the chairman's circulated statement for the year to September 30, 1957:

The Report and Accounts show that we have had another satisfactory year. The fact that we have been able to make substantial profits despite several adverse factors makes this year in some ways the most successful in the history of the company.

It has been a difficult year both at home and abroad, largely due to conditions which have been beyond the control of your company, but in spite of difficulties the consolidated profit for the year is £566,046 compared with £623,658 for the previous year, a reduction of 9 per cent.

Your directors recommend that the final dividend on the Ordinary shares be 10 per cent, maintaining 12½ per cent for the year.

Your Directors also recommend that £200,000 be transferred to General Reserve, bringing the total of this Reserve to £800,000.

I said last year that we expected there would be a tendency for an increased demand for extended credit throughout the world and for more comprehensive stocks in overseas markets. In fact, this demand has not been experienced to the extent I anticipated; bills receivable are now some £13,000 less at £80,985, but our stocks overseas are somewhat larger.

Whitehall has done little to relieve our burden of taxation which takes almost 50 per cent of our 1957 earnings at £281,059. Over the past five years we have disbursed some £1,445,000 to the Exchequer, and such a drain on our earnings is very alarming when considered in the light of the technical advances that could have been financed with such a sum.

The wage award in May not only increased our wage bill but also the cost of many of our purchases. The easy way to have met this position would have been to raise our selling prices, but we have as far as possible avoided this measure by offsetting the increased costs by increased efficiency in production, and we believe this policy has enabled us to maintain our turnover.

Every effort is being made to increase sales and to this end we have increased both our advertising and our sales staff at home and abroad, and have arranged for personal visits by directors or senior members of the sales staff to our important markets.

Any reduction in manufacturing activity would inevitably bring about the under-recovery of overhead expenses, and our aim has been to avoid this situation. In the face of an enhanced wage bill we have continued to press forward with the introduction of improved methods and so offset increased costs. Our consultant friends whom I mentioned last year are still with us and continue to do excellent work.

I would sum up by saying that our order book is in a healthy state and I am hopeful that from the efforts now being made by all departments, we shall continue to obtain business and make profits at a level consistent with past years.

The report and accounts were adopted.

CARRERAS, LIMITED

TURNOVER WELL MAINTAINED

The fifty-fourth annual general meeting of Carreras, Limited, was held on February 25th in London.

Sir Edward Baron (Chairman and Managing Director) presided and, in the course of his speech, said: I am sorry that the figures before you do not disclose a better result but would ask you to note that the Balance from Trading in the Profit and Loss Account of Carreras, Limited, is arrived at after charging all expenditure on Advertising and Sales Promotion incurred during the year. This was, as forecast by me a year ago, considerably greater than in the previous year and may be regarded as exceptional. Indeed it more than accounts for the decrease in our profits. Furthermore, there was no repetition of the small extra profit which was made in the year before as a result of the increase in duty.

Our turnover was well maintained during the year but, due to rising costs, we had to work on ever reducing margins of profit, and the increase in Home Trade selling prices which took place in mid-September came too late to make any material contribution to our profits for the year.

HOME AND EXPORT MARKETS

In reviewing the events of the past year I must stress the fact that competition has again been unprecedented in its keenness and in maintaining our turnover we had a difficult task in view of the enormous amount expended on Advertising by our competitors. Here I should record that in overseas markets we have not only increased our volume of exports but have once again improved our relative position in this section of the industry.

We are proud of the prestige which our brands enjoy throughout the world.

Our other overseas interests have again proved remunerative and should continue to provide us with a good source of revenue. At the close of the year we launched Craven "A" Filter Tip cigarettes in the Home market in both Standard and Long sizes to retail at 3s. 4d. and 3s. 11d. for 20 respectively. We are encouraged by the pleasing reception given by both the Trade and the smoking public to these two productions.

Referring to the projected removal of manufacturing operations from London to Basildon, the chairman said:

Great advances in mechanisation have been made in recent years, and Arcadia Works is not in fact readily adaptable to the efficient use of our modern machinery and the operation of the most up-to-date manufacturing methods.

We have, as you are aware, acquired a large modern single storey factory at Basildon New Town in Essex with adequate land for immediate extension. We hope to be able to commence production there early in 1959.

The Head Office and General Administration, as well as the Sales and Distribution sections, will remain in London.

When all the changes have taken place we should be able to manufacture our products on a more economical basis and so effect considerable savings in future. I am particularly glad to say that our Accounts show better results for the first three months of this financial year as compared with the corresponding period of last year. I am very hopeful this will continue but, of course, in these uncertain times the unexpected can always happen and I should not like you to take this for granted.

The report and accounts were adopted.

PATALING RUBBER ESTATES

SIR ERIC MILLER'S STATEMENT

The annual general meeting of the Pataling Rubber Estates, Limited, will be held on March 25th in London.

The following is an extract from the circulated statement of the chairman, Sir Eric Miller:

The crop harvested on the Company's estates was 10,852,059 lb compared with 10,511,336 lb in the previous year. A further 308,000 lb were bought in latex form. A portion was processed into sole crepe and the entire crop realised the equivalent of approximately 2s. 5¼d. per lb London landed terms, about 1¼d. per lb less than the average obtained in 1955-56.

WORKING PROFIT

The profit before taxation was £544,202 against £519,264 in 1955-56. Receipts from the Government Replanting Scheme were £40,227 (£9,393) and trade and other investments earned £77,068 (£71,840). The Finance Act 1957 provides a welcome measure of relief to overseas trade corporations and the Company benefits under this legislation. After providing for taxation on the new basis and including the favourable adjustment of £118,656 arising on the 1955-56 results, the profit for the year was £463,487 against £265,857 previously. Including the balance brought forward from last year there is available £642,474 (£427,438). £30,000 have been written off Government securities, £165,099 have been transferred to Cultivation and Replacement Reserve and the directors recommend payment of a final dividend of 25 per cent, making with the interim dividend of 15 per cent already paid 40 per cent for the year exclusive of the special bonus of 20 per cent.

PROPERTY SALES

The purchasers of the balance of Pataling estate took possession in December 1957 on payment of 80 per cent of the agreed sale price; whereupon harvesting on the Company' account ceased. The remaining 20 per cent (about £10,000) is payable on transfer of titles after the areas have been surveyed and existing titles subdivided. Sultan Idris, a detached division of Chumor estate, comprising 292 acres of old rubber, which was a doubtful replanting proposition, was sold in December 1957 at the satisfactory price of approximately £16,000 (net) ex replanting rights and the full sale proceeds have been received.

The capital profit to date on these transactions together with the balance of similar profits at October 31, 1957 (after payment of 2¼d. per 2s. share in March 1957) is £61,583. Out of this the directors are making a distribution of 1¾d. per 2s. share (not taxable in the hands of shareholders) which will be paid with the final dividend for the year ended October 31, 1957.

REPLANTING

During 1957 we successfully replanted 1,366 acres and new-planted 58 acres. Some 940 acres of replantings and new-plantings had been brought into tapping or reached the tapping stage by the end of the year. Nearly all the Company's plantable reserve land is at North Labis, and held under favourable title. Now that security conditions have improved there we intend to develop this land as labour and supervision permit.

We have applied for additional jungle land at Sungkai and although in recent years Government has alienated very little land for rubber we hope that our application may receive favourable consideration. In the calendar years 1958 and 1959 a further 1,700 acres are scheduled for replanting or new-planting.

ESTATES

At all estates good standards of field upkeep have been maintained and our immature areas show satisfactory development.

In agreement with the National Union of Plantation Workers wage levels, based on the rubber price range of 80-100 cents per lb, have remained unchanged since April 1957. In November 1957 notice was given by the Union to terminate the Agreements on March 31, 1958, and we must await the outcome of negotiations in this regard.

STAFF

The year's results reflect competent estate management and a keen endeavour on the part of our senior and junior staff. They are also a measure of the quality of our labour forces with whom excellent relations have been maintained. We also appreciate the consistent care given to our affairs by our Eastern Agents and the expert services of our Visiting Agents.

RUBBER OUTLOOK

The price of rubber in January 1957 was around 30d. but during that year it steadily declined to 24d. and today Spot No. 1 RSS is 23d. This decline has taken place despite the fact that Russia has bought a substantial tonnage. Although conditions in Indonesia have been unsettled the flow of native rubber to Singapore, mainly by the efforts of the Chinese, has been well maintained. How far estate production in Indonesia may be affected is as yet uncertain; any reduction would of course help to offset the lower USA consumption which is now forecast.

The downward trend of the market can be attributed mainly to the slowing down of the USA economy. Whereas car production in Great Britain, France and Germany has exceeded expectations the optimistic forecasts of car sales in USA during 1957 were not realised and the hopes that 1958 models would stimulate public buying have so far proved disappointing. This has resulted in a substantial build-up of automobile stocks to around 800,000 units and although passenger car tyres for replacement show a 6 per cent increase over 1956 the year-end inventories at around 19 million were 20 per cent above the figure recorded in 1956. The percentage use of natural in USA has been steadily declining, the December 1957 figures being approximately 36 natural and 64 synthetic. At its present price natural is much more competitive with synthetic and some improvement in the percentage use of it is a likely possibility. There has been less demand for sole crepe which may be attributed mainly to the high prices ruling a year ago causing the greater use of other types of soleing material. Now that sole crepe is at a keenly competitive level there may be an improved off-take.

Latex consumption continues to increase and the lower price has helped to extend its use in many directions. This is an important outlet for part of the Pataling Company's production.

POLITICAL

In my Address last year I expressed my confidence in the future of Malaya as a self-governing member of the Commonwealth. All that has happened since the transition of power in August 1957 re-enforces that belief. The Merdeka celebrations on our estates, organised by our managers, were thoroughly enjoyed by all, and in the capital, Kuala Lumpur, and other towns they were marked by great good will and geniality. We look forward to the continuance of the same friendly co-operation which since the beginning of the British connection has characterised our relations with the people of Malaya. The country's prosperity depends mainly upon the continued development of its main plantation industries, and assured of equality in the treatment of capital investment we shall, as in the past, hope to play our part in the furtherance of its economic progress.

LEEK & MOORLANDS BUILDING SOCIETY

INCREASED FINANCIAL STRENGTH AND STABILITY

The one hundred and first annual general meeting of Leek & Moorlands Building Society was held on February 24th at Leek, Staffordshire.

In his printed address, the President, Sir Ernest Johnson, JP, reviewed the economic events of the past year, and said: Can we afford, and if so when, some reduction in Bank Rate? We must not repeat the mistake of recent years. Acting as though the crisis had passed, we relaxed our efforts and our monetary discipline, only to find that the crisis was still with us. It is not unreasonable to look forward to some reduction in the near future. The new Chancellor will no doubt recommend a move downwards only when he is satisfied that inflation is no longer threatening our very existence and that any danger of a flight from the pound sterling has been contained and removed.

The Government still has the power to stop inflation, to expand production, to permit capital investment and to rebuild our depleted gold and dollar reserves. Time is fast running out. The whole world is watching Westminster. I share the hope that however unpleasant the remedy, it may be of short but lasting duration and that we can then move forward to a wider, broader based and sounder financial economy bringing with it increased all-round prosperity.

I congratulate the Leek & Moorlands Building Society on its increased financial strength and stability achieved in, what has been for financial institutions in particular, a most difficult year.

CHAIRMAN'S ADDRESS

In the course of his address, Mr Gilbert Tatton (Chairman of the Board of Directors) said: The figures shown in the Balance Sheet reflect great credit on the way the Society is managed.

Turning to the Annual Accounts, Shareholders balances have increased by £1,790,073 to the record sum of £33,304,053. The amount remaining invested by Depositors now stands at £2,376,778. The two sums together total £35,680,831, the largest in the Society's history. This is further proof, if needed, of the continued confidence which

savers and investors place in the Leek & Moorlands Building Society.

Out of a sum £2,114,763 which represented the Society's gross earnings, the following sums were paid out: Interest to Investors £1,176,000; Income Tax and Profits Tax £507,800; Expenses and Management £180,205; Depreciation of Office Premises, Survey Fees, etc. £22,781; Surplus for the year placed to existing Reserves £227,977, increasing the Total Reserves to £1,859,772.

Commenting on certain Societies who seek to excite the public with higher rates of interest than those currently obtainable from most of the Building Societies in membership of the Building Societies Association, Mr Tatton said:

It may well be that Societies offering a rate of interest in excess of 3½ per cent, is an indication to the investing public of the measure of their difficulties and that the rate has to be offered in order to retain funds or to attract them.

The view of the Directors of the Leek & Moorlands Building Society is that a reasonable return today for savings and investments currently withdrawable on demand or at very short notice is reasonable at 3½ per cent, Income Tax paid. Any other Society offering any higher rate can do so only by exploiting borrowers who are compelled to pay a rate in excess of 6 per cent for their mortgage accommodation. If it be true that Building Societies are regarded as a society building movement then it should not be overlooked that fair terms are expected by investors and by borrowers alike. The Directors of the Leek & Moorlands Building Society believe that those fair and reasonable terms are the terms recommended by the Building Societies Association.

The report and accounts were adopted.

MITCHELL COTTS & COMPANY LIMITED

NAME CHANGED TO "MITCHELL COTTS GROUP LIMITED"

INCREASE OF CAPITAL APPROVED

The thirty-eighth ordinary general meeting of Mitchell Cotts & Company Limited was held on February 21st in London.

Mr H. C. Drayton (the Chairman) presided and, after reviewing the financial results for the year, said: As I mentioned at the last meeting, I did not expect our exports from this country to be as high as in the year to June, 1956. The actual figure of exports was £8,352,000 as against £10,800,000 the previous year. Shareholders will bear in mind that this is not the total of our trading activities as we act as agents for people in other countries and our total trading activities are considerably higher than the above figure.

REASONS FOR CHANGE OF NAME

There is a special resolution to change the name of the Company to Mitchell Cotts Group Limited. The reason for this is to divorce trading activities from the parent company, leaving the parent company a holding company responsible for finance and policy matters.

INCREASE OF CAPITAL

We are also taking steps to increase the authorised capital of the Company to £4,250,000 by the creation of 5 million Ordinary shares of 5s. each. To carry on our business we are finding it necessary to put more money into buildings overseas. In addition we are finding it necessary to grant more generous credit terms to enable us to be competitive. I cannot tell you if and when we shall be issuing any additional capital as that depends on whether or not the Capital Issues Committee gives us permission. Our own view is that it is necessary so to do, but the decision today is not in our hands. If permission is not given, then we shall have to go into, very carefully, our trading activities, and see which exports, from a profit angle, justify our giving extended terms of credit. Those that do not will have to be cut down, and this in itself, from the Company's point of view, is not a bad thing as my belief is that we should make more money, but from the country's point of view it would not be helpful. If the increase of authorised capital is agreed, it will enable us to go ahead without delay when and if we decide to make a cash issue, and obtain the consent of the CIC to our so doing.

After reviewing the Group's world-wide activities, the Chairman concluded:

With regard to the current year, of which eight months have passed, I find it extremely difficult to sum up what our profits will be, but subject to the valuation of our stocks and work in progress at the end of the year, which amounted at June, 1957, to approximately £8,260,000, I expect that our profits for the year to June, 1958, should be somewhere in the region of the profits for the year under review. Any variation either way should be of modest dimensions.

The report and accounts were adopted, and the proposed change of name to "Mitchell Cotts Group Limited" and the increase of authorised capital were approved.

R. B. PULLIN

The twenty-first annual general meeting of R. B. Pullin & Company Limited was held on February 27th in London, Mr R. B. Pullin, OBE, chairman, presiding. The following is an extract from his statement.

Tangible fixed assets have increased from £335,330 to £762,271 and the difference between Current Assets and Current Liabilities from £405,820 to £590,660. Capital reserves have increased from £98,130 to £362,790 and there has been a further addition of £24,416 to Revenue Reserves and Surplus.

It has proved possible to maintain the rate of dividend and on an increased ordinary capital. This is particularly pleasing for a year in which assets for which a large part of the additional capital was raised were not profit earning and in which credit for only six months' trading of Aldis Brothers Limited could be taken. Out of the total Group trading profit of £230,116 no less than £162,852 has been absorbed by taxation. Profit margins have again fallen and the curtailment of Government and other spending is increasing the severity of competition.

The latest addition to the Group, Aldis Brothers Limited, is adding significantly to revenue, profits during the period under review being at a higher level than those for the comparable period in the previous year.

The trading conditions and the restrictions on credit which are making themselves felt in varying degrees over our Group of Companies, make it desirable to introduce a note of caution in considering the future. Without being in any way complacent, we believe that there is no need for pessimism.

The report and accounts were adopted.

LIEBIG'S EXTRACT OF MEAT COMPANY

OXO SALES CONTINUE AT A HIGH LEVEL

The ninety-third annual general meeting of Liebig's Extract of Meat Company Limited, will be held on March 20th in London.

The following is an extract from the circulated statement of the chairman, Mr Kenneth M. Carlisle: The year's results are disappointing.

The reduction in profit arises mainly in the United Kingdom and on the Continent of Europe and can broadly be attributed to two principal causes. First, all-round increased costs on a static turnover. Secondly, much increased expenditure on advertising and sales promotion. A further important factor has been a heavy write-down of stocks of products and packing materials as a result of the closure of the Sudan factory.

Against these adverse movements better returns were recorded from South America and there have been no heavy exchange losses to face as was the case in the previous year.

Steps were taken some months ago to improve the overall position by increasing selling prices in the United Kingdom and on the Continent, where such increases could no longer be deferred.

I am, therefore, fairly confident that, in spite of the uncertainties clouding the general economic situation, results for the current year will show improvement.

OXO LIMITED

The Oxo Company has had a year of intense activity on every side of the business. It has also been a year of progress and of consolidation after two years of reorganisation.

It was with reluctance that, on September 1, 1957, the beginning of the new financial year, we increased the price of the Cube to 1¼d. Sales had continued at a high level, but increasing costs of administration, manufacture, selling and distribution were eating into profit margins. In addition, the high cost of replacements and improvements of plant and machinery will have to be met over the coming years. It is worthy of record that the price of the Cube has only been advanced twice in forty-five years.

Sales during the current year are being maintained, although the cold hard winter to which we look for increased consumption has so far failed to appear.

The forward impetus in those sections of the canned foods trade in which we are engaged has also continued.

The "Fray Bentos" range of products has been steadily extended. It is fair to claim that we make products of quality; that these products are sold at reasonable prices; and that the trade on which we rely for support is always ready to take them. There is abundant evidence that the public is conscious of the value of what we have to offer.

After a detailed review of the Group's world-wide activities, the Statement concluded: It is a matter of very keen regret to me that the profits reported to you on the eve of my retirement should be the leanest we have experienced for several years. I am hopeful, however, for the reasons given at the beginning of this statement and provided no adverse circumstances supervene, that it will be the privilege of the new Chairman to lay before you improved results at next year's Annual General Meeting.

SECOND BRITISH ASSETS TRUST

LONG-TERM FUTURE VIEWED WITH CONFIDENCE

MR A. C. BLAIR'S REVIEW

The Seventy-ninth Annual General Meeting of Second British Assets Trust, Limited, will be held on March 20th at the registered office of the Company, 9 Charlotte Square, Edinburgh.

The following is the review by the Chairman, Mr Alastair C. Blair, CVO, WS, which has been circulated with the Report and Accounts for the year ended December 31, 1957.

I am pleased to report that we have secured the services of Mr Roger Inglis as a Director. His appointment falls to be confirmed at the forthcoming Annual General Meeting.

The year under review has been a difficult one. With the rising tide of inflation, Stock Exchange prices rose steeply for the first half of the year, but the increasing productive capacity in the United States at last overtook consumption and resulted in a surplus, whilst at Home the steps taken by the Government to save sterling caused a sharp fall during the last six months. The effect of these movements is shown on page 12 of the Report in the summary of the quarterly figures which we publish at the end of each quarter so that you can have up-to-date information about the figures of your Company. From this table you will notice that the slowing down of the rate of increase in income to which I drew your attention last year has continued, although this year's income is again a record. In fact, in the final quarter of the year the income showed a definite fall when compared with the corresponding quarter of the previous year. This was due partly to a changing pattern of income collections resulting from changes in our investment portfolio but also reflected decreases in dividends from base metal companies due to the great fall in the prices of these commodities.

This year the graph on page 11 of the Report shows the development of our income and investments over the past ten years. You will see from this that while the value of the investments may fluctuate sharply, the income curve has been rising fairly steadily and the yield on the book cost of our investments has also continued to rise.

THE OUTLOOK

The outlook for 1958 is clouded by the present industrial recession in the United States, the efforts being made at home to maintain the value of the pound and the financial difficulties of a number of the underdeveloped countries of the world. But whatever the short-term vicissitudes due to world economic conditions, we have confidence in the long-term growth and financial stability of the companies in which we are interested, and there seems no reason to think that we shall not be able to maintain our dividend for another year.

It is our policy to visit companies in which we have shareholdings, both to see the plant and understand the operations and to get to know the management of those companies. We believe that industry has a great deal to gain from the intelligent support of its shareholders and that this can only be achieved if shareholders are provided with the maximum amount of useful information. I am glad to see signs that industrial management in this country is beginning to follow the example of the United States where visits by shareholders are always welcome and where full information is reported to shareholders at regular intervals. Publication of three monthly reports and turnover figures could be adopted by many more British Companies and would be a welcome improvement which would encourage shareholders to take a greater interest in Company affairs.

KUALA LUMPUR RUBBER COMPANY LIMITED

EXPANSION AND DEVELOPMENT

MR E. B. SKINNER'S STATEMENT

The Annual General Meeting of the Kuala Lumpur Rubber Company Limited was held on February 25th at 53 Eastcheap, London, E.C.3, Mr E. B. Skinner (the Chairman) presiding.

The following is a copy of his circulated statement:

With this report and accounts a circular is enclosed explaining the Directors' reasons for recommending an increase in the authorised share capital of the Company. If the capital is increased, your Directors propose, on behalf of your Company, to make an offer for the minority stockholding in Sungei Chermang Rubber Company Limited upon the lines explained in the circular. Your Directors have good reason to believe that the offer which they will make will be acceptable to the offerees. Your Company already holds nearly 52 per cent of the issued capital of Sungei Chermang and the Directors have no hesitation in recommending the increase of capital of your Company to enable it to acquire the balance of Stock in Sungei Chermang which it does not now own. The acquisition of the whole of the issued share capital of Sungei Chermang will secure 2,978 acres of high-yielding rubber and approximately £150,000 of net current assets. The Sungei Chermang property is high yielding and one of the cheapest producers in Malaya. Each year the surplus of profit augments its financial position even after paying good dividends, all of which would help greatly to cover the cost of upkeeping and bringing to maturity some 3,570 acres of our immature rubber.

You will see from the Profit and Loss Account that our income for the year was £44,210 less than the previous year and that expenditure increased by £17,737, making a difference of £61,947 in the profit on working. Depreciation has been increased by £1,837. To set off this reduced profit we have received refunds and replanting subsidies from the Government amounting to £35,752—£23,273 more than last year. The net surplus before tax is therefore £40,511 less than the previous year.

Taxation is considerably lower, partly due to the reduced profit and partly to its being calculated according to the provisions of the Finance Act, 1957, relating to Overseas Trading Corporations, whereby profits earned abroad are not subject to British tax except that levied on distributed profits.

You will see that your Board recommend the payment of a dividend of 10 per cent free of tax after providing £30,000 for replanting and £15,000 for estate buildings.

PLANTING PROGRAMME

The Company is pressing forward with its planting programme and members will note from the Report that 380 acres of new land were planted up during the year and that a further 100 acres have been planted up

during the current financial year. Furthermore, 210 acres of replanting have been carried out this year.

As new areas come into tapping we shall require to build new lines and other estate buildings to accommodate additional labour. Also, it is becoming necessary to rebuild a considerable number of existing labour lines and staff houses.

We still have difficulty in recruiting sufficient labour for all requirements on Gemas Estate partly through the Emergency regulations and partly through keen competition for available labour in the district, but everything possible is being done to make the estate more attractive.

As regards mining, it will be seen that receipts were once again very low. As in the previous year our income was derived only from the workings of the Kent Estate Dredge. Since the close of the year under review, trial runs have been carried out with new equipment on the Wardieburn Estate Dredge. It is to be hoped that normal working can be resumed shortly thus augmenting our tin mining income.

One of your Directors, Mr H. F. Copeman, is at present in the East and has been visiting the Company's estates.

During the year under review we lost the services through retirement of Mr Longmore, who gave us such devoted service as Manager on Gemas Estate. We wish him a happy retired life.

We wish also to express our appreciation of the work done by all the planting staff during the year, and by our Eastern Agents.

The Report and Accounts were adopted.

As Special Business an Ordinary Resolution was passed increasing the capital of the company from £500,000 to £750,000 and a Special Resolution was also passed altering the Articles of Association of the Company to enable holders of Share Warrants to Bearer to vote by proxy.

BUSINESS AND PERSONAL

CITY TREASURER (C.), COUNCIL HOUSE, COVENTRY.

THE ROYAL COLLEGE OF SCIENCE AND TECHNOLOGY RESIDENTIAL CENTRE FOR MANAGEMENT STUDIES

The following courses for Management are offered during the Summer Term—*commencing* 14.4.58.

1. WORK STUDY AND PRODUCTION ANALYSIS: 10 weeks 14.4.58—20.6.58.
A course designed to train men in the practice and administration of the modern techniques developed to make the most economic use of all production resources.

2. WORK STUDY: 3 weeks 2.6.58—20.6.58.
An appreciation course developing the principles of Work Study for those who may be joining or co-operating with a Work Study Department.

3. PLANNING AND CONTROL: 3 weeks 14.4.58—2.5.58.
A course developing the principles and effective application of Planning and Control as required in Industry and Commerce.

4. COST REDUCTION AND CONTROL: 2 weeks 28.4.58—9.5.58.
A course designed to develop reciprocal understanding and active co-operation between management, supervision and specialists in tackling the twin problems of cost reduction and cost control.

5. EXECUTIVE DEVELOPMENT: 3 weeks 2.6.58—20.6.58.
A course to help senior and potentially senior managers to meet the changing demands on Industry and Commerce; and to develop general administrative competence.

6. SUPERVISORY MANAGEMENT: 2 weeks 19.5.58—30.5.58.
A course to help line supervision to identify, analyse and solve the problems of modern supervision.

7. HUMAN RELATIONS: 1 week 12.5.58—16.5.58.
A course for line management and functional specialists dealing particularly with the problems of human behaviour.

8. COMMUNICATIONS AND DISCIPLINE: 1 week 12.5.58—16.5.58.
A course for line management and functional specialists seeking to promote co-operation and control through verbal and written communications.

During the term, the Department will have the services, as visiting American expert in industrial and general administration, of Professor David Springer Brown of the Department of Business and Public Administration, George Washington University, Washington DC, who will participate fully in instructional and associated activities.

Fees for all courses, including residence, are Twelve Guineas per week.

Further details from: The Head of Department, Department of Industrial Administration, The Royal College of Science & Technology, Chesters, Bearsden, Glasgow.

APPOINTMENTS

MARKETING MANAGER

A progressive career is available to the candidate chosen by *an expanding* West Riding *company to fill the* appointment of Marketing Manager.

This is an excellent opportunity for a man between 30 and 35 years of age, who has acquired marketing research experience in the Marketing Department of either a National Company or an Advertising Agency.

Besides research into existing and potential markets, the responsibilities of this appointment embrace the presentation, maintenance, analysis, and interpretations of all sales records, and assistance to the Board in planning trading policy.

Thus, a sound knowledge of marketing research techniques and statistical methods should be supplemented by an alert and enquiring mind, ability to lead, and a flair for economic investigation.

Although of secondary consideration to practical marketing experience, candidates should possess Higher Certificate of Education with further study at University or Technical School in mathematics, economics, accountancy, or similar subjects.

The appointment is well remunerated and the prospects are excellent.

Applications, which will be treated in strictest confidence, should be mailed to Box 873.

MARKET RESEARCH OFFICER

KENYA

required to study the marketing of a wide range of agricultural products and to advise on *market trends*, prospects and potentialities in relation to production and *marketing costs.*

Candidates, preferably with an Honours Degree in *Economics or Agricultural Economics, must have had* considerable experience in a market research organisation or *similar body and should be 25 years of age*

Appointment on probation to the permanent establishment with pensionable emoluments in range £919—£1,463 per annum. Free passages on appointment and leave for officer, wife and children up to a maximum cost equivalent to three adult passages in all. Furnished Government quarters, when available, at moderate rental.

Apply, giving brief particulars, to Director of Recruitment, Colonial Office, London, S.W.1, quoting *BCD* 63/7/038.

TRAINING Officer. Man with sound commercial experience in education and training from Management level downwards required by manufacturing company's London Head Office. Applications in strictest confidence, quoting Reference T.O to Box 881.

OPPORTUNITY in Public Relations Department of a leading advertising agency for young economics graduate. *Must be fluent and able writer—and ambitious.* Write: Notley Advertising Ltd., 15 and 17 Hill Street, *London, W.1.*

UNIVERSITY OF CAMBRIDGE

DEPARTMENT OF APPLIED ECONOMICS

Applications are invited for appointments from October 1, 1958, in connection with the Department's programme of economic and statistical research. Each appointment will be for a limited period related to the duration of the specific research project to which the applicant is assigned; the projects vary greatly in character, and call for very different types of qualification. Applicants should normally have at least a good second class honours degree in statistics, and experience of research in one of these fields is desirable for appointments in senior grades. The pensionable stipends of these posts are on scales ranging from £650 to £1,750 a year. Non-pensionable allowance of £50 a year is paid for each dependent child who is under the age of sixteen or is in receipt of full-time education.

Applications, giving particulars of academical qualifications, experience, and any special research interests, together with the names of two referees, should be sent to the Director, Department of Applied Economics, 7 West Road, Cambridge, so as to reach him not later than April 5, 1958.

APPOINTMENTS REQUIRED

EXPERIENCED BUSINESS MAN, African, U.S., *European Markets willing invest £5,000-£10,000 In* sound business bearing full investigation. Employment and security required for investment.—Box 882.

SALES MANAGER, M.S.M.A., at present with International Food Company wishes to change for personal reasons. Fully experienced all aspects of National Sales Management, and also Marketing, Sales Promotion, and Advertising. Extensive contacts in Food and allied Trades. for Examinations—University, Law, Accountancy, Costing, Secretarial, Civil Service, Management, Export, Commercial, General Certificate of Education, etc. Also many practical (non-examination) courses in business subjects.—Write today for free prospectus—and/or advice, mentioning examination or subjects in which interested, to the Secretary (G9/2).

METROPOLITAN COLLEGE, ST. ALBANS
or call at 30 Queen Victoria Street, London, E.C.4.

APPOINTMENTS

THE NESTLÉ GROUP OF COMPANIES

invites applications from young men of

INTEGRITY

preferably in the 25-35 age group, who are seeking responsible executive and senior posts at home or abroad, and who possess good potential administrative and sales

ABILITY

A knowledge of languages and a University Degree would be advantageous.

The Nestlé Organisation is world-wide and offers almost unlimited prospects to men of integrity, ability and

ENERGY

as well as first-class conditions, opportunities to travel and live abroad, and the security of employment in a responsible international organisation.

Applications should give full details of education, background and experience, and should be addressed to:

THE SECRETARIAT,
THE NESTLÉ COMPANY LIMITED,
HAYES, MIDDLESEX,

marked "Confidential."

BRITISH COUNCIL requires Assistant in London department dealing with financial administration. Candidates must have a good general education (training in economics would be useful). Starting salary up to £655 (or at age 25, rising to £1,050 a year (women somewhat less but will reach equal pay by 1961). Pension scheme.—Apply, quoting D4(58) and enclosing stamped addressed foolscap envelope, to Personnel Department, 65 Davies Street, London, W.1, for further particulars and application forms, to be returned completed by March 14.

GRANADA TV NETWORK intend to appoint an Advertising Manager responsible for planning and execution of the Company's advertising in all media. We are looking for a man who has an affectionate respect for the English language and is skilled in its use. He needs also to have a good knowledge of typography. The position is an opportunity for a man of intelligence and sensitivity who has not specialised in only one side of advertising, but who has had wide experience of publicity, sales promotion and advertising. The salary, conditions of employment and pension are attractive.—Write, in confidence, to Sidney L. Bernstein, Chairman, Granada TV Network Limited, 36, Golden Square, W.1.

CITY OF LEICESTER requires SENIOR ASSISTANT (ESTABLISHMENT AND ORGANISATION) (CICTR). Salary scale A (£1,060—£1,380 per annum). The post offers prospects and wide scope for initiative and progressive ideas in efficiency studies of administrative, clerical and clerical work including research into the application of an electronic computer installation.—Applications to Town Clerk, Town Hall, Leicester, by March 7th.

LONDON COUNTY COUNCIL

WALHAM AND TOOTING COLLEGE OF COMMERCE.—Head of Professional Studies Department, Grade III, as soon as possible, but not later than September 1, 1958. Department provides full-time, part-time and evening courses in Accounting, Costing, Banking, Secretarial work, Local Government, Public Administration and Management at Intermediate and Final Levels. Graduate preferred with some professional, commercial or industrial experience of teaching and administration in education. Salary Burnham F.E. Scale £1,600 x £50—£1,750 (man), £1,417 3s.—£1,750 (woman) plus London allowance.—Further particulars and application forms, returnable by March 7th, from Secretary at College, Tooting Broadway, S.W.17. (325.)

UNIVERSITY OF KHARTOUM

Applications are invited for (A) Senior Lectureships or (B) Lectureships in:

(i) Agricultural Economics
(ii) Economics

Salary scales (A) £S1,602 x £575 to £S1,977 per annum, (B) £S1,152 x £575 to £S1,677 per annum, entry point according to qualifications and experience. Cost of living allowance approximately £S130 per annum. Outfit allowance £S50. Family allowances: Wife £S60 per annum, first child £S90 per annum, 2nd and 3rd child £S30 per annum each (£S1 = £1 0s. 6d. sterling). Passages for appointee and family on appointment, termination and annual leave. Initial appointment 5 years. Superannuation scheme.

Detailed applications (eight copies), naming three referees, by April 15, 1958, to Secretary, Inter-University Council for Higher Education Overseas, 29 Woburn Square, London, W.C.1, from whom further particulars may be obtained.

COMMERCIAL MANAGER

A progressive and expanding Heavy Engineering concern in North East England requires a Commercial Manager.

The successful applicant will be responsible to the Managing Director for the commercial aspects of important licence agreements and substantial contracts, for investigating estimating methods, for the submission of tenders and for the maintenance and control of all commercial records.

This is a new appointment which will require mature experience and organising ability. The remuneration will be substantial and appropriate to the responsibilities involved.

Applicants should write, in confidence, to Box No. 884.

EXPERIENCED FOREIGN EXCHANGE DEALER required by Merchant Bankers. Appointment is one of responsibility and candidates should be capable of taking full charge and developing the Department.—Write, stating age, experience and salary required, to Box No. 858, Deland Advertising Ltd., 18-20 Regent Street, S.W.1.

NATIONAL COLLEGE OF FOOD TECHNOLOGY

Cranwood Street, City Road, LONDON, E.C.1

Principal: J. D. Mounfield, M.Sc.Tech., Ph.D., F.R.I.C.

Applications are invited from suitably qualified persons for the post of Lecturer in the College to teach Industrial Management subjects and to organise courses in Liberal Studies, chiefly for Postgraduate Courses and for a four-year Associateship Sandwich Course in General Food Technology. Suitable teaching and industrial experience desirable. The post is permanent and pensionable and there would be opportunities for consultative work. A new College, now being built at Weybridge, Surrey, will come into use in 1959 and will provide better facilities for existing courses, and opportunities for the development of new ones.

Salary scale: £1,250 x £30 to £1,400.

Application forms, obtainable for the College, should be sent to the Principal as soon as possible.

MAJOR MIDLANDS MOTOR MANUFACTURER has vacancy for a Graduate to specialise in export market research. Exceptional opportunities are offered to a Graduate in Economics or Commerce with some previous experience in industrial market research. Starting salary will be commensurate with experience.—Applications, giving full details and present salary, to Box No. 886.

WILLIAM M. MERCER LIMITED, Canada's largest firm of consulting actuaries, requires immediately the services of a young qualified Actuary who would be located in either Toronto or Montreal. Prospects are excellent as the business of the firm is increasing very rapidly. The successful applicant would soon assume full responsibility for individual clients. A Fellow of the Institute of Actuaries or a Fellow of the Faculty of Actuaries under the age of 35 would be preferred. Commencing salary is open for discussion. A member of the firm expects to be in the United Kingdom in March to meet all suitable applicants.—Please write, giving details of age, qualifications and experience, to Box No. 887.

STATISTICIANS IN CIVIL SERVICE. About eight pensionable main grade posts (including one in Ministry of Health's new Statistics Branch, concerned particularly with N.H.S. problems) for graduates aged 28 or over on January 1, 1958, with wide statistical experience and (normally) first or second class honours with statistics as main or subsidiary subject.

Salary (men, London) £1,450 to £2,050. Promotion prospects.—Write Civil Service Commission, 6 Burlington Gardens, London, W.1, for application form, quoting No. 4815/58/9. Closing date March 21, 1958.

MAJOR OIL COMPANY requires qualified Accountant/Statistician, aged 25-30, for accounting and economic analysis work in Comptroller's Department. Oil company experience desirable but not essential.—Please send details of educational qualifications and experience to Box No. 888.

UNIVERSITY OF BIRMINGHAM

FACULTY OF COMMERCE AND SOCIAL SCIENCE

DEPARTMENT OF ACCOUNTING AND ADMINISTRATION

Applications are invited for the post of LECTURER IN ACCOUNTING, to begin duties on October 1, 1958, or as soon after that date as possible.

Salary scale: £900 to £1,650, with F.S.S.U. and family allowances. The appointment will be made initially at a point on the scale £900 x £50 to £1,350, depending on qualifications and experience.

Applicants should be graduates, preferably in commerce, economics, or law, and should have a recognised professional qualification in Accounting.

Applications (three copies), with the names of three referees, should be sent on or before April 19, 1958, to the Registrar, The University, Birmingham, 15, from whom further particulars can be obtained.

LONDON COUNTY COUNCIL

ARCHITECT'S DEPARTMENT

Applications invited for position of PLANNING OFFICER, GRADE II, for research work on wide variety of town planning subjects in London. These include planning standards, car parking, survey methods. Experience and qualifications (professional or a good class degree) in this field are desirable. Salary scale £1,037 to £1,305. Application forms, returnable by March 21st, from the Architect (AR/EK/12/58), County Hall, S.E.1. (337)

EXPORT TERRITORY MANAGER

A major manufacturing Company located in the Southern half of England requires a territory manager to administer and develop certain overseas areas in relation to Export sales under the direction of an Export Manager. The Company produces a wide range of domestic and commercial refrigeration products.

Applications are invited from men who have preferably received some basic Engineering training (or who have acquired a general semi-technical background in their experience) and essentially possess a sound administrative and sales experience (desirably in Export selling) with a developed commercial sense. Candidates should be able to deal and negotiate with customers or potential customers at director level.

The successful candidate will be based in England but occasional visits overseas will be necessary. The ability to speak any foreign languages and/or knowledge of any overseas countries will be of value.

Age group 30-40. This is an excellent opportunity for a young virile executive with the qualities outlined above. There is a Pension Scheme for employees.

Applications, which will be treated in strict confidence, should be submitted in writing, giving details of age, experience and salary required, to Urwick, Orr & Partners Ltd., Management Consultants, 29 Hertford Street, London, W.1, quoting reference ETM/1235 on the envelope.

YOUNG ACCOUNTANT required by medium-sized Chemical Manufacturing Company, as assistant to Chief Accountant. Preferably A.C.W.A. Age 22-30. Duties are primarily to assist in the development and operation of a fully integrated system of standard costing and budgetary control. Salary according to age and experience. Prospects are excellent for an alert, accurate and energetic man with real practical ability.—Full details, including salary expected, to Chief Accountant, Lankro Chemicals Ltd., Eccles, Manchester.

JUNIOR RESEARCH ASSISTANTS required for expanding Market Research Department in Manchester.

Applications are invited from men who have already taken good degrees in Economics or Statistics or from those who expect to do so during this year.

Those appointed will start at an appropriate point in a salary range of £550 to £750 per annum, but, for the right people, there are definite prospects of promotion to higher grades.

Applications, which should be as fully detailed as possible, should be sent to the Co-operative Wholesale Society Limited, 1 Balloon Street, Manchester, 4, and endorsed "Market Research."

A LEADING firm of stockbrokers has a vacancy for a Chartered Accountant, preferably a graduate, to undertake investment studies of particular companies. Industrial experience desirable. Age about 30. Prospects for man with suitable personality. Initial salary, according to experience, up to £1,250 per annum with participation in bonus scheme.—Reply Box No. 885.

THE UNIVERSITY OF LEEDS

THE FACULTIES OF ARTS, ECONOMIC AND SOCIAL STUDIES AND LAW.

POSTGRADUATE SCHOLARSHIPS

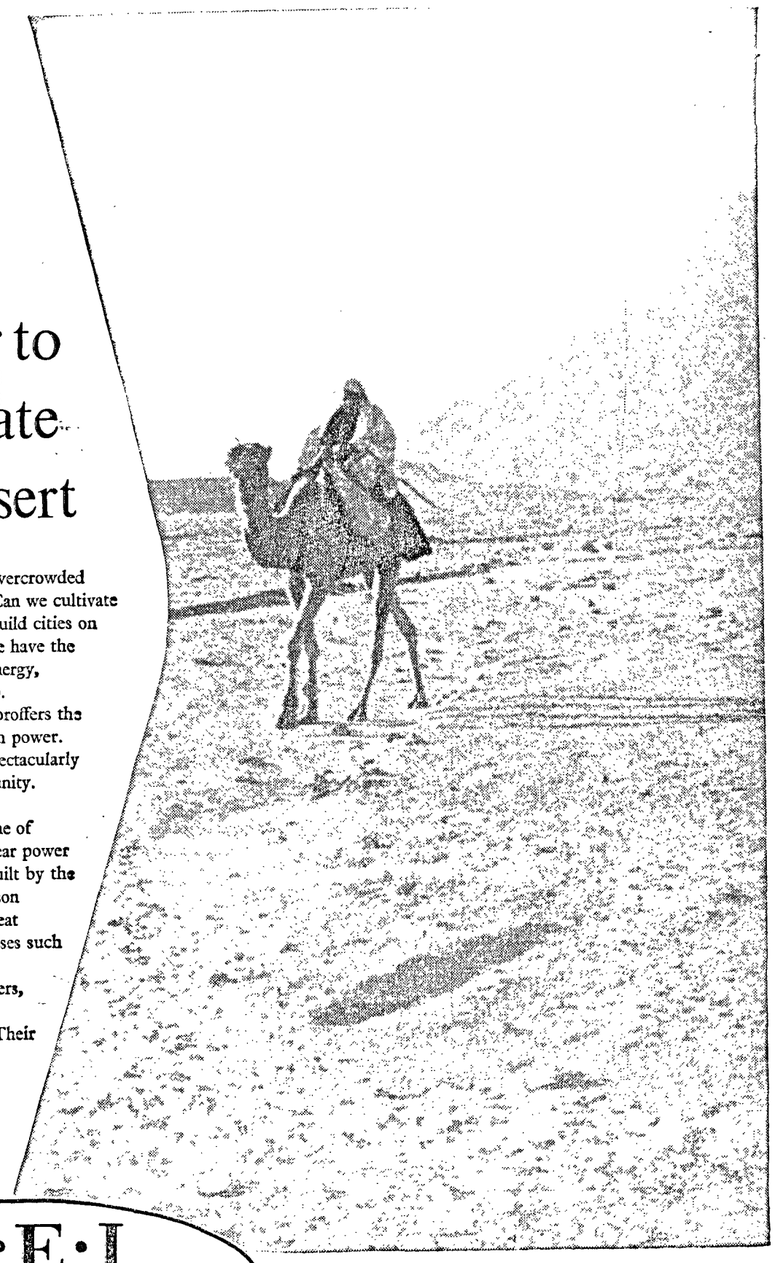
Applications are invited for not more than three Postgraduate Research Scholarships tenable at the University of Leeds by graduates of other Universities. These Scholarships, each of the value of £350 a year plus fees will be tenable from October 1, 1958, for advanced study or research in the Faculties of Arts, Economic and Social Studies and Law, and will be renewable annually. Maximum tenure three years.—Applications (including those of students who will graduate in June, 1958) should be submitted on forms obtainable from The Registrar, The University, Leeds, 2. Closing date May 1, 1958.

UNIVERSITY COLLEGE OF SWANSEA

Applications are invited for a Lectureship in the Department of Economics. Candidates should have special interests in social accounting.

The salary range will be £900 x £50 to £1,350 x £75 to £1,650 per annum. The commencing salary will be at a point on the scale according to age, qualifications and experience. Membership of the F.S.S.U. and children's allowance scheme.

Further particulars may be obtained from the Registrar, University College, Singleton Park, Swansea, to whom applications (six copies) must be sent by March 15, 1958.



AIR SUBSCRIPTION RATES

Subscriptions to many countries can be sent either by direct second-class airmail or in bulk by air freight for onward posting from central distribution points. Airmail is invariably more expensive but usually quicker by about 24/48 hours. Where only one service is shown this is because the alternative is either not available or not recommended.

Power to populate the desert

Vast areas of our overcrowded planet are desert. Can we cultivate the barren lands, build cities on the *sand?* Yes, if we have the power—physical energy, plentiful and cheap.

Nuclear energy proffers the opportunity of such power. And Britain has spectacularly seized that opportunity.

At Berkeley in Gloucestershire, one of Britain's first nuclear power stations is being built by the AEI-John Thompson Company. This great consortium comprises such mighty firms as Metropolitan-Vickers, BTH and John Thompson. Their skill can help to banish the waste lands of the earth.

KAWASAKI DOCKYARD CO., LTD.

KOBE, JAPAN

CABLE ADDRESS: "DOCKYARD KOBE"

NOW PAN AMERICAN OFFERS YOU

A NEW LOW THRIFT FARE

Take your choice of four wonderful ways to the U.S.A. on more flights weekly than any other airline

Economy-class Thrift Fares: This brand-new service for the lowest normal year-'round fare starts April 1st.† Paris to New York, for example, is only $489.60 round trip. Yet Pan American offers you the finest, most modern equipment—like the famous "Super-7" Clippers*, holders of over 20 transatlantic speed records, and the same highly trained, pleasantly courteous crews. Pan American will offer as many as 47 economy-class flights a week to choose from. Full 44-pound luggage allowance—complimentary sandwiches and light beverages served at your seat.

Tourist Service: *The Rainbow*, world's most popular tourist service. Everything you could wish in the way of courteous service, marked by the little extra touches that make Pan American the choice of experienced travelers, *Rainbow* service couples an outstanding cuisine, plus a choice of wine at modest cost, with personal attention that is as unique as Pan American's record of over 65,000 transatlantic flights.

First-class President Service: This is where the fine art of pleasing the passenger reaches a gracious high. Fabulous meals by *Maxim's of Paris* with vintage wines and champagne set the standards for this traditionally fine service—the most popular first-class service of all. Extra-wide, extra-long, foam-soft seats for everyone. Spacious berths, private *President Staterooms* are available at a surcharge.

Deluxe President Service: Pan American has reserved its *all-first-class* double-decked Stratocruisers for this outstanding air service to the U. S. A. Two separate decks—one for the main deck, one for an exclusive cocktail lounge—give you plenty of room to roam around high over the Atlantic. You'll enjoy the comfort of Pan American's original Sleeperette* service or a cloud-soft berth. And for the ultimate in air-borne luxury, ask for *The President Special*—the world's most luxurious air service by far. Sumptuous 7-course meals by *Maxim's* . . . extra cabin attendants . . . limited passenger list.

The priceless advantage of Pan American's unequalled experience is yours on every flight no matter what your choice of service. No other way can offer you the relaxation that comes with knowing you are aboard the only airline with over 65,000 transatlantic crossings. Don't settle for less, call your Travel Agent or Pan American—800 offices around the world.

*Trade-Marks. Reg. U. S. Pat. Off. †Subject to Government approvals

No other airline offers so many flights a week to so many convenient U. S. gateway cities.

PAN AMERICAN

WORLD'S MOST EXPERIENCED AIRLINE

Do you get a kick out of your desk?

A kick of inspiration—
that comes to those who work in
really well-planned offices?
Or a smart crack across the shins—
because you forgot to sit the
special, twisted way in *that* desk?
If all's not well, ring Catesbys
Contracts at Museum 7777
(a letter, if you're abroad).
They'll put things right—make
the office the right shape, decorate
it, put a new carpet here, more
chairs there, and replace *that*
desk with a new one that's almost
a second secretary. Time and cost?
Quick and low! You'll soon make
both up in that spanking new
office, where work's a pleasure
and profits are, somehow,
easier to coax.

DEVELOPING OUR RESOURCES

Inco climbs higher

INTO THE SKY at Copper Cliff, Ontario, climbs a great chimney, 637 feet high. It is a landmark and a symbol: a landmark in metallurgical progress, a symbol of the tremendous effort being made by the Inco-Mond organisation to produce still more nickel at an economic price for those who need it. This chimney is part of Inco's huge new plant for recovering iron from nickel ores not formerly classed as commercial. To obtain nickel from them, large quantities of iron had to be eliminated and nickel smelting capacity was heavily burdened. The iron, moreover, went to waste on the slag heap. Now, after many years of research, Inco have pioneered a new process. The first unit alone will produce 250,000 tons per year of high-grade iron ore for the steel industry, while also recovering the nickel from an ore which can now be worked economically. So, once again, Inco's policy of developing *all* their resources, ensuring maximum utilization of their ores, is giving more nickel to industry. If you are interested in nickel, ask for 'Inco-Mond Magazine', free on request.

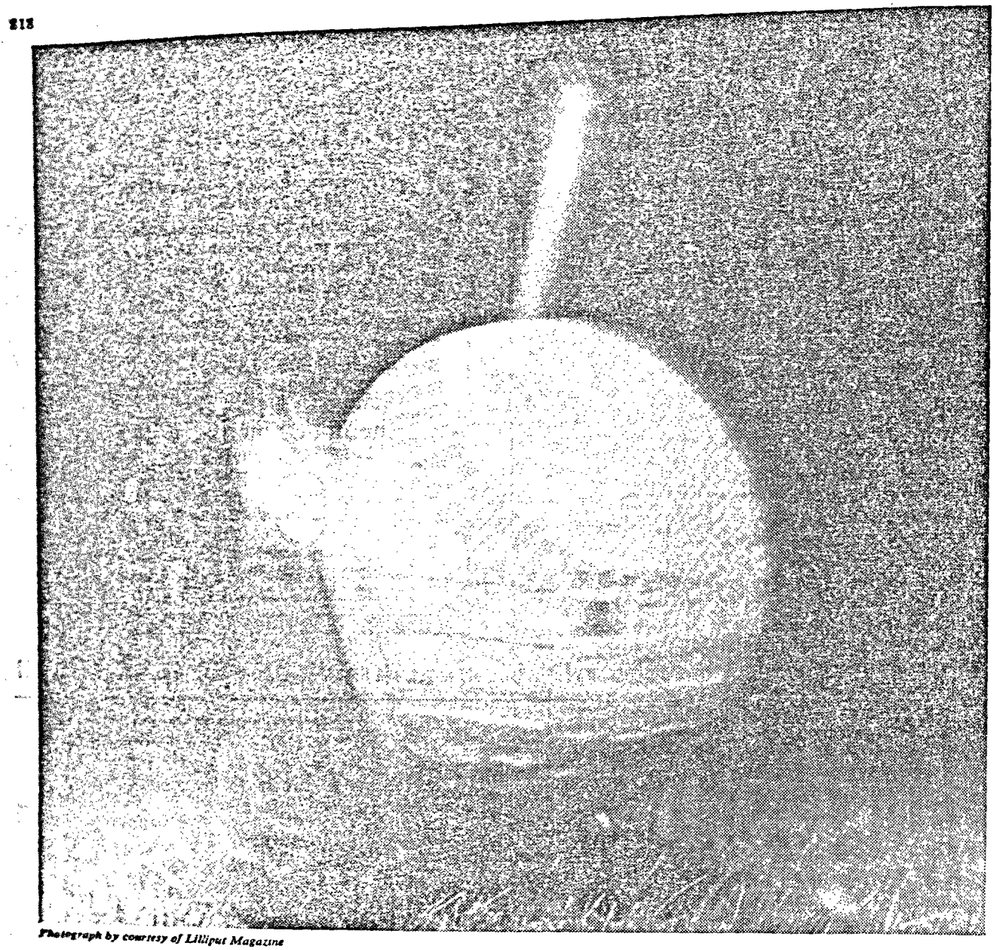
This is

The Monroe AP—the all purpose calculator which meets the figuring needs of most normal businesses. What the camera cannot reveal is the *service* that operates *before, during and after* the installation of your machine. Yet this, when you come to mechanise your business figuring, is clearly of paramount importance. With Monroe you can bank on getting the best advice in choosing and using your machine, and the most efficient and reliable maintenance service that the industry has to offer.



*

Monroe Calculators range from the simple, hand-operated LN 160 to the fully automatic Duplex 88N. Illustrated above is the 'middleweight' of the range—the all-purpose Monroe LA 7-160. Among the eighteen models is one that was specifically designed to meet requirements such as yours.

JUST LIKE THE IMPACT YOU GET WITH ATV

Are you looking for an immediate sales increase?

On television, there's no such thing as a casual glance.

How could there be—when your message has a solus position every time? When you can use all the techniques of sound and vision to bring it to life?

That's why television is the medium for *impact*. You can hear that impact in the jingles the children sing in the street. You can see it when you watch a housewife insist on a TV-advertised brand when she's shopping. You can prove it by the immediately rising sales curves of ATV clients.

When you advertise on ATV, you can reach more than 5 million people in London and 3 million in the Midlands—Britain's two richest areas. And you get *concentrated* audience attention—because of ATV's excellent programming. What is more, with ATV's closely segmented rate card, you can pin-point precisely the audience you need for your product.

You can budget your campaign well ahead, too, because ATV's rates are stabilized, despite the ever-increasing audiences! If you would like to know more details, ring us up and we'd be glad to have a chat.

The first £10,000

SUCCESSFUL men admit that the great problem in becoming rich is to amass the first £10,000. The rest is relatively easy. We are not going to suggest that if you take the Manchester Guardian it will prove a first step towards getting-rich-quick. But it will certainly keep you well-informed on the Money Market and on affairs financial.

Excellent as are the City Page and Industrial Notes in the Manchester Guardian, they are only a part of the reason for reading it. Men of affairs will get from the other columns of the Manchester Guardian a remarkably accurate and clear picture of the whole world-situation.

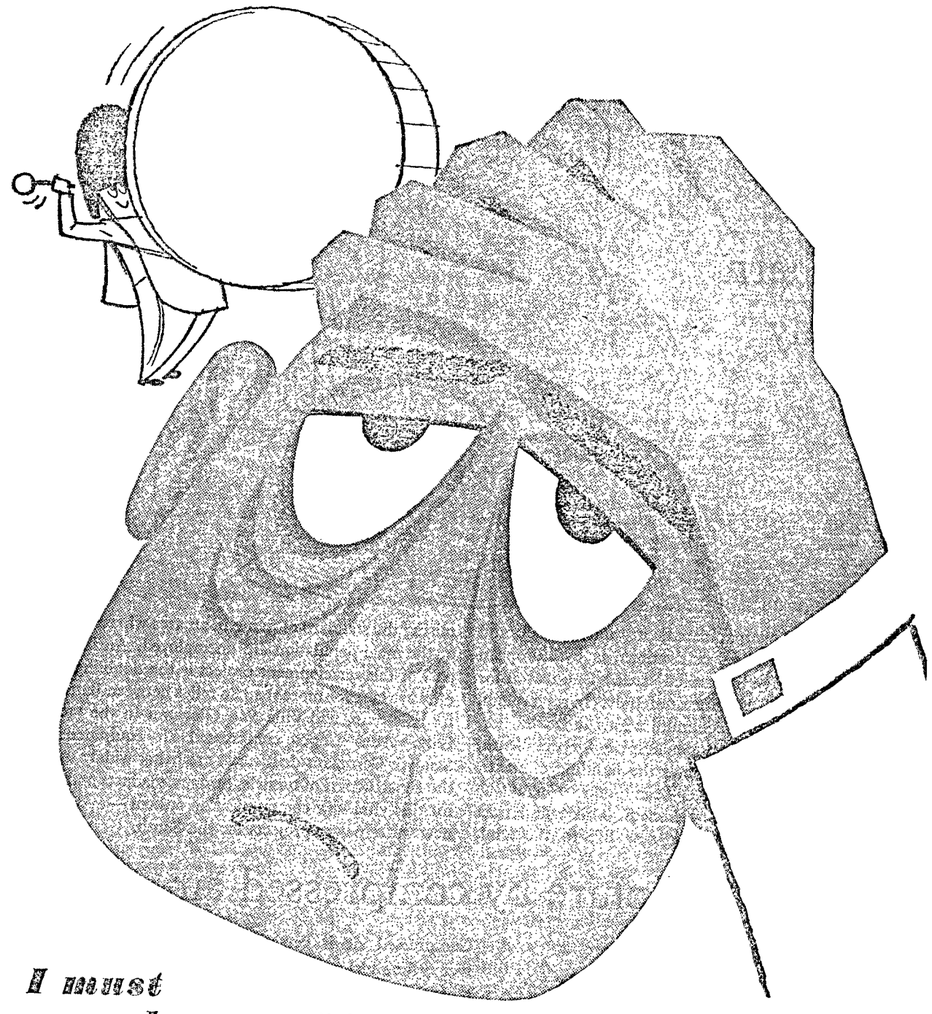
Do not be deceived by a certain homespun appearance of the Manchester Guardian. In its quiet and unassuming way it is becoming increasingly the newspaper which commands the attention of thoughtful people in all countries. It is quoted with respect by many overseas papers. Dwelling somewhat apart from the ruthless race for huge circulation, the Manchester Guardian realises that strength does not lie in numbers alone.

They build durability at Fort Dunlop

DUNLOP TUBELESS

The tyre chosen by the majority of British car manufacturers to give you *more confident motoring.*

with Science, Accuracy and Experience

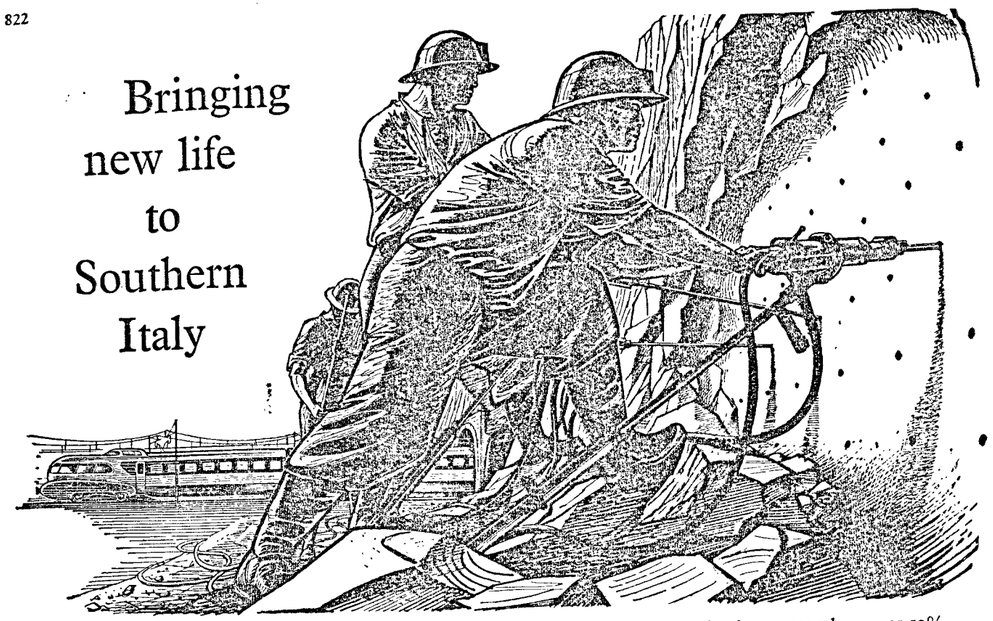


Even though thousands of tyres are made at Fort Dunlop every day, they are not mass produced. Every Dunlop tyre is individually built. It is the work of experts — working as a team and supported by the most modern machinery, materials and methods. Every Dunlop tyre is built to give you a high standard of performance in terms of mileage, safety and comfort, in fact, complete confidence to meet every driving condition.

100,000 times larger than life

This electron microscope gets to the heart of things. A specimen of carbon black for instance, can be magnified a hundred thousand times, so that its part in making tyres wear-resisting can be studied more closely.

DUNLOP *built better to last longer!*



I must do something about this noise!

Rid your office of noise and introduce an atmosphere of quiet efficiency. Stop noise bouncing off hard ceilings and walls. There is no need to tolerate this curse of the modern age, for within the range of Armstrong Acoustical materials lies a solution to your problem.

Bringing new life to Southern Italy

Southern Italy, overpopulated, its soil eroded and impoverished by endless cultivations, is by European standards an acutely 'depressed' area. One reason for this is its isolation from the rest of Italy. In such rough, mountainous country communications are difficult. Recently a ten-year development plan for the South, including land reclamation and the building of roads, railways and aqueducts, has been undertaken at the expense of the Italian Government. This will attract investment capital and bring new life to the land, raising the standard of living in an area where over 50% of the male population are unemployed. An important part of this development project is the doubling of the railway track for more than 80 miles between Battipaglia near Salerno, and Villa San Giovanni in the 'toe' of Italy. Atlas Copco compressed air equipment and Sandvik Coromant drill steels are being widely used in the construction of tunnels, bridges, viaducts and tracks for this vital new communication system — and also in new water power projects for the South.

Sculpture by compressed air

Compressed air is versatile. Atlas Copco provides the means for all its many applications. Atlas Copco pneumatic tools have been designed especially for stone carving and are used with great success by sculptors in Sweden. They enable faster work to be done and facilitate the carving of very hard stone, which would be difficult to work by hand.

The Atlas Copco Group of Companies is responsible for the manufacture of compressed air equipment and its distribution and servicing in 90 countries throughout the world. Group Headquarters: Atlas Copco AB, Stockholm 1, Sweden.

Atlas Copco puts compressed air to work for the world

A Summit for Two?

WHEN Sir Winston Churchill said at Edinburgh in February, 1950, that "it is not easy to see how things could be worsened by a parley at the summit," he was looking back to the wartime relationship between the leaders of the three great belligerent nations. It stuck in his mind (as he has often related) how he had foreseen the consequences for the world if the war alliance fell asunder into hostile camps; what he had predicted to Stalin in a famous telegram in 1945 had come to pass within five years "with horrible exactitude." His surmise then that it would be worth while to bring the great men together again has been a major, if intermittent, theme of world politics in the eight years since he uttered it at Edinburgh. The pretentious fiasco at Geneva in 1955 has not deprived the word "summit" of its magic.

From what is known of it, this week's exchange between Washington and Moscow has not brought a new summit meeting any nearer or enhanced the hopes that it will come to anything if it is held. Moscow has agreed that the foreign ministers should meet first, as the western governments wished, though they did not insist. But at the same time the Russians have proposed to increase the foreign ministers' numbers and restrict their scope to an extent that has made Mr Dulles declare gloomily that the United States government will not take part if the summit meeting is to be a "hoax" or a mere "spectacle."

It appears clearly enough by now that the Russians, though they do want a meeting of heads of government, do not want to go on with the series of meetings of three (Teheran, Yalta, Potsdam) or four (Geneva) that were based—first in reality, later by convention—on the war alliance. Moscow's 1958 model marks a clean break with the four-power system. Soviet client governments and neutral or uncommitted governments are to be brought into the circle, together with one or more additional Nato countries—but not Germany, the next in importance; the Russians are leaving Bonn in no doubt that a west German face at an east-west conference would be matched by an east German face. By themselves proposing Italy for the western team they are reminding Bonn of the veto which they still hold over Germany's re-entry into great power diplomacy in any full sense. Courteously, they concede to the United States a similar veto over Peking. But if great powers are to be omitted, while small powers are brought in as clients and other small powers are brought in at random because they are out of the game, how effective a meeting does this promise to be? The time seems appropriate to remember where the idea of a summit meeting started and what it means.

The meetings of Roosevelt, Stalin and Churchill differed in two ways from the pseudo-summit of today's prospect. Its three members, all wielding extraordinary power in countries mobilised for war, were together able to make their will effective anywhere. Their meetings were held to concert the prosecution of a purpose of overriding importance which they shared. By 1950, when Sir Winston Churchill revived the

idea, it was, as it is still, for a quite different end: the removal or reduction of acute causes of conflict between two groups of powers, each having a single predominantly powerful member, with the hostility between these two being alone sufficient to prevent any easing of the world tension.

Essentially, all the others but these two will be guests at the top table. They can make a real contribution if and when the two hosts have got on terms on which they can talk seriously with each other ; but it is very doubtful whether any of them—even Britain—can make any appreciable contribution before that. If there is to be a meeting—as still seems likely, and it may even be held, as the Russians have suggested, in the United States—is it too late to return to the realities and hold it between Russia and America alone ? This is nowadays the only true "parley at the summit."

To stay away would be a political sacrifice for those prime ministers with enough power or prestige, or well enough placed in the lottery, to have a chance of a ticket. But it might be a sacrifice worth making. If Mr Macmillan were to make it first, by proposing to the Americans that they should meet the Russians alone, then—probably only then—it would become possible to cut through the protocol. Otherwise, politeness threatens to swell the meeting into a new forum of political warfare where artificial topics would be discussed and forms of agreement chosen, as at Geneva, for their lack of meaning. A summit conference of two would have only very narrow and limited chances of success ; but the winning number, if it came up, would at least be worth something.

By Alternative Vote

A simple two-clause Act would enable the people to register their real wishes at the next election. Why do the Conservatives do nothing about it?

THE oddest thing about the furore in the Conservative party over the reviving Liberal vote is that there has been no mention (or hardly any) of the simple and obvious way out of the party's dilemma. The party leaders clearly do not know whether to curse the Liberals or to cozen them. It is an article of faith for every good Conservative that the Liberal voter, if he has to choose between a Tory and a Labour government, will overwhelmingly prefer to "keep the socialists out." But by persisting in voting for his own candidate, the wretch threatens to "split the anti-socialist vote" and install Mr Gaitskell in office on a minority vote. What should the Tories do about it ? Declare war on the Liberals and deprive them of all but one of their remaining seats in the House of Commons ? Or try once again to make a "pact" with them ?

The simple and obvious way out of the dilemma is to enact the Alternative Vote. It must be said at once that the Alternative Vote is not at all the same thing as Proportional Representation (sometimes more technically described as the single transferable vote). PR is what the Liberals themselves want, because it would give all small parties a representation in Parliament exactly proportional to their vote in the country. For exactly the same reason—its encouragement of small parties—most other people in this country regard PR as dangerous and undesirable. In any case, it would be a very complicated system involving a complete redrawing of the constituency map to produce gigantic districts with several members each. PR is not practical politics in Britain.

The Alternative Vote is a much simpler suggestion. Indeed, it could be enacted by a two-clause Act. The first clause would say that, wherever there are more than two candidates, the elector, in marking his ballot-paper, should be invited, not simply to put X against the man of his choice, but to put 1 and 2 against his first and second choices. If he persisted, for old time's sake, in marking a single cross, it should be counted as a first choice. The second clause of the Act would say that the first choices should be counted first, and if any candidate received a clear majority of them, he should be declared elected forthwith. But if nobody had a clear majority, all the candidates save the top two should be eliminated, and their votes should be redistributed according to the second preferences marked on them. This would give somebody a clear majority and he would be duly elected. Those are the only changes that would be necessary.

How would this work ? Let us apply it to the Rochdale figures, which were as follows :

Labour	22,133
Liberal	17,603
Conservative	9,827

The result is that Mr McCann now sits in the House of Commons as the member for Rochdale, although 55 per cent of the electors voting expressed a preference for someone else. But would they have preferred some *one* other person ? That is what nobody knows, under the present system. But suppose that the 9,827 voters who wanted to see the Conservative elected had been able to express a second preference, to be used only in the event (as indeed happened) that Mr Parkinson had no chance. It seems reasonable to suppose that, out of every ten Conservatives in Rochdale, at least seven would, in those circumstances, have preferred Mr Kennedy, the Liberal, to the Labour candidate, while only one would have given his second preference to Labour (the missing two can be assumed to be the party stalwarts who will not give even a second preference to anyone else). Under the Alternative Vote, 6,879 of the Conservative votes would have been transferred to the Liberal and 983 to the Socialist, and the final result would have been:

Liberal	24,482
Labour	23,116

and Mr Kennedy would then have been elected.

The fact that this result would, in this instance, have "dished the socialists" does not prove that it would be a good electoral system. But one may guess that it might have represented the real state of feeling in Rochdale more accurately than the actual result.

WHAT would be the effect if it were applied throughout the country ? The Liberals would be encouraged to put up candidates in a large number of constituencies, and since it could no longer be said that a vote for a Liberal is a vote wasted, it might be that they would attract more votes than they will under the present system. What cannot be calculated, and can only be guessed, is (a) how many of these Liberals would get into the second place (or even the first) on the first round, and therefore be in a position to benefit from the transfer of second preferences, and (b) how the Liberal voters' second preferences, when the Liberal was at the bottom of the poll, would divide between the two larger parties. One may guess, in answer to the first question, that about a couple of dozen Liberals would be elected. It could hardly be more—next time, though the numbers might grow at subsequent general elections. As for the second question, the Tories may be right in thinking that a majority of Liberal voters would prefer a Tory to a Labour government—though the majority might very well be much smaller than they suppose, and the Liberal preference is likely to be different in different parts of the country.

At the next general election, then, the Alternative Vote would probably work against Labour. For this reason, there is no doubt that the Labour party would scream with rage if it were seriously proposed. But the essential fact is this: that it would cheat Labour of office only if there is a majority of the country that would really prefer to keep Labour out. It would not obstruct a real majority, only an accidental result. It would enable the people to express their real wishes, not to have them distorted.

From the abstract point of view, that surely would be an improvement. There are not simply two broad points of view among the British people, however much the electoral system may pretend that there are—and however desirable it is that the House of Commons should be simply divided between Government and Opposition. There is a great block of Conservative opinion and a great block of Labour opinion. And in between there is another great block of opinion (at the moment, by all the signs, larger than for a long time), which may not be positively Liberal—it is so hard nowadays to know what that means—but is certainly neither Conservative nor Labour. To the plea that this middle block should have some way of expressing itself, it is no sort of an answer to talk about the dangers of splinter parties.

But political questions are not decided by the abstract point of view. They depend upon the wishes of organised interests, and there will be no change in the British electoral system until one or other of the two large parties decides to make it. Here we come back to the starting point. How very odd it is that the Conservatives have never paid any attention to the Alternative Vote. It would seem to give them everything they say they want—a mechanism by which the Tory-preferring middle vote would not be "wasted," at the price of a few seats for the Liberals (most of which would otherwise probably go to Labour), and an assurance that thumping Labour majorities in the House of Commons will not again be built on a minority Labour vote in the country. (It should be remembered that Labour at its highest point, in 1945, only received just over 48 per cent of the total vote.)

All this they would have for a single two-clause Act. Why do they show no interest ? Because they really are the stupid party ? Or because they are not really nearly as much interested in saving the country from socialism as in the chance of undeservedly large majorities for themselves every other time ? If it is the latter, then Liberals and other elements of the floating vote will know what to do with appeals to their patriotism.

MARCH 6, 1858

NEW MEN, OLD POLICIES

¶ The Tory party have come into power, but the Tory policy has not come into power with them. While the leaders of the old country party were in Opposition, the old Tory policy still glimmered occasionally, though feebly, in their speeches ; but now it seems wholly to have expired. Lord Derby had, in fact, no "statement" to make on Monday night—he had only to intimate that his Cabinet are quite content to adopt the policy of their predecessors. . . . Seeing a set of statesmen who uniformly object to everything which another set of statesmen attempt, the English people naturally conceive that some deep-rooted difference of principle and divergence of judgment must be at the foundation of this uniform hostility. There is a vague idea that in the Opposition ranks there exists a completely different conception of the politics of the day which has no fair trial. . . . But now it is evident that if there be such a radical difference of principle between any parties in the Houses of Parliament at all, it is not between the Liberals and the Tories . . . the Tory party have now distinctly admitted that all their objections have been the objections of professional critics not of involuntary antagonists—and that when set to organise the administration of public affairs for themselves, they have nothing different to suggest.

Mediterranean Hourglass

A friendly North Africa has hitherto provided Nato with a useful line of communication eastward. Must this asset disappear ?

It is said that the only smile to be seen in Paris or Tunis is worn by Mr Robert Murphy, the American diplomat now on the go between the two capitals, proffering Anglo-American " good offices." All other faces are either defiant or perplexed.

At the Tunisian end, he meets men baulked by the Algerian war of the chance to build the modern showplace they felt capable of creating, and insistent that he must press France on the Algerian question, as well as handling the immediate issues on which Tunisia is at odds with the French government—French bases, the Algerian frontier, the expulsion of Frenchmen. At the French end the main requirement of most of his interlocutors is the other way about. The Gaillard government, beset by critics and rent by fissures, wants him to limit his good offices as narrowly as possible. It seems indeed to shun action of any kind, even in Tunisia ; it is acting as if paralysed by a triple cross fire—that of generals adjuring it to inflict no further withdrawals on a much-tried army, that of ultras exhorting it to send another 80,000 men to Algeria, and that of financiers pointing out that France is now on an international overdraft, granted on conditions which preclude any such military expenditure. To whom ought Mr Murphy to pay more heed ? To M. Bourguiba, saying that Algeria is the hard core of all Tunisia's ills, or to the French Minister of Defence —M. Chaban-Delmas—saying that France will go on strike within Nato if the United States does not keep in step with it in North Africa ?

Who would choose, if he could avoid it, to enter this Franco-Tunisian hotbed of resentment, suspicion, hopes dashed and wounded pride ? The United States and British governments have sent their men in not from any love of intrusion, or out of any wish to usurp functions from France, but because they see international implications that have begun to escape angry French generals and weak French ministers.

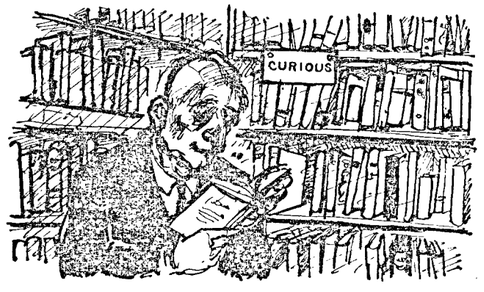
It is important to remember that all Frenchmen see the Mediterranean from an angle of vision that is peculiar to themselves and unshared by the rest of Nato. They look at it down a line that runs north and south. The western basin is seen not as a place of international passage, or even as a frontier, but as a French lake across which French citizens, both European and African, would be shuttling freely on peaceful, mutually profitable avocations if only some of the Africans were not being obstreperous.

The Nato angle of vision is different ; it runs lengthways on an east-west axis. To an American, an Englishman or—to take Nato's extremities—a Turk or Norwegian, the Mediterranean is the shape of an hourglass laid on its side. What is more, at the far end of its eastern basin live two members, Greece and Turkey, who cannot be supplied from month to month, let alone succoured in emergency, unless a long line of communication is kept intact. Some strands of this line run in Europe, others via the classic British line of rocks and islands in mid-sea, but some again are in Africa. The Americans, in particular, have preferred a chain of staging-posts of their own in friendly foreign countries ; hence the air bases that they have negotiated in Spain, Morocco and Libya. Nato would not collapse, but all its southern supply lines would need drastic revision, if it had to allow for a truculent or a " neutral " North Africa.

Yet North African neutrality, if not hostility, has grown more likely since the turn of the year. Before then, the educated Arab of French North Africa had for a generation felt a double pull at his heartstrings. (" *Je suis à cheval,*" he was wont to say in his perfect French, " *entre deux civilisations.*") On the one hand, he was drawn towards Paris by the education, skills, elegance, culture and material advancement it had to offer ; he was also drawn towards its democratic practices. On the other, affinity with the way of life, language and religion of the Moslem world, together with an adolescent longing to paddle his own canoe, caused him to look with warmth towards Cairo—a capital he usually knows only by hearsay and in its more glittering aspects, but which has begun to offer him the lure of status.

Recently, the eastward pull has been greatly enhanced, first by President Nasser's demonstrations of a capacity to assert an Arab personality in world affairs, and, more lately, by his feat of creation: the first Arab union. As never before, Cairo has become a pole of attraction for North Africans—a pole sufficiently magnetic to cause them to brush aside the reflection that the price of unity is Egyptian dictatorship. Unless offered a pole of counter-attraction in the west, Arabs from Libya to Morocco cannot fail to look more often eastward, and to loosen (one by one, rather than by any single petulant gesture) the ties of genuine affection that have hitherto linked them with Paris and the way of life taught in Europe and America.

THERE is, alas, no such counter-attraction to offer. The prominent features perceived by North Africans as they look westward are bombs lately dropped on Sakiet and now falling around Ifni ; one French minister proclaiming that Bizerta is French, not Tunisian, and another calling for reinforcements with which to dispose of the " final quarter of an hour." Yet another source of discouragement is the French habit of referring to Saharan oil discoveries as if these, too, were a preserve for purely European profit. By North African nationalist standards a union of its own—no matter whether linked to France, or the west or to " neutral " Egypt—would be infinitely more attractive than any existence over which France were to go on claiming a hold. In a word, apart from some hopes placed in American ability to mitigate French extremism, repulsion, not attraction, is the present effect of the western world on the northern coast of Africa.



Many Frenchmen are blaming themselves for what they see as the worst consequence of bombing Sakiet—the opportunity afforded to the United States and Britain to intervene now in Tunisia, and perhaps later in Algeria, and to " internationalise " what most of them would have preferred to keep as a purely domestic affair. To reason thus is to neglect home truths which the Sakiet error uncovered, but which existed long before it happened. Of these, the chief is that, just as modern communications have rendered it impossible to isolate an Arab problem, or even to behave in one way in one African dependency without feeling repercussions in the others, so also there are no isolated problems within Nato. The behaviour of any one of its members in an area where all are concerned will affect all the rest. One task before Mr Murphy and his British colleague, Mr Beeley, is to open French eyes, understandably fixed upon the well-being of the European community in Algeria, to the wider view of Nato fortunes along the whole length of the Mediterranean.

Does France want to see Libya and Tunisia join President Nasser's union ? Does it want to turn Turkey into an isolated outpost, even less defensible than it has been up to now ? Does it want the movement of Egyptian transmitters westward and southward across Africa ? Stockades fit for *colons* and bases cannot be built without losing a psychological battle. Algeria and the rest of Africa are going a way that a liberal Europe taught, and cannot now unteach.

The task before the mediators is therefore much broader than they would dream of admitting. It is not the staging of a reconciliation between Paris and Tunis, but the stiffer task of preparing minds to take a wider, and a longer, view.

Prudes' Progress

The next month or so may be decisive in determining whether Britain's bovinely prudish system of literary censorship is to be reformed

JUST under a year ago Lord Lambton presented a private member's bill which set out to draft a new law governing obscene libel. The then undersecretary at the Home Office, Mr J. E. S. Simon, gave it a qualified blessing. He felt that it needed some revision and polishing before it would be workable. The bill was passed to a select committee. At the end of the 1956-57 parliamentary session the select committee had not reported and so, according to procedure, the bill itself was dead. But the select committee, unlike a standing committee, could be and was revived ; it was reappointed at the start of the new session, with one or two changes in its membership, and with the new task of considering " whether it is desirable to amend and consolidate the law relating to obscene publications." The committee's job was now one of general examination, instead of the specific duty of working on Lord Lambton's bill.

In pursuance of this task, the committee has listened to representations from such bodies as the Society of Authors, the Federation of Master Printers, the Church of England Moral Welfare Council, the Public Morality Council (which some might consider as carrying duty unnecessarily far) and from individual witnesses such as T. S. Eliot and E. M. Forster. Its work is now nearing completion, and its report will soon be in the hands of the Home Secretary, who will in turn announce to the House of Commons any decision to legislate. If any pressure of public opinion is to be exerted, in order to

try again to make the British attitude to literature look a little less ridiculous and barbarian in the eyes of the civilised world than it at present does, then that pressure had better be unleashed now.

The current campaign for reform was provoked by the spasm of morality which seized the authorities in 1954. In that year five cases were brought to the Old Bailey, in which authors and publishers were charged with publishing obscene libels. Among them were men and firms of the highest repute; they were put in a very embarrassing position indeed. Every case of alleged obscene libel is tried according to a judgment laid down by Chief Justice Cockburn one hundred years ago. He said that the test of obscenity should be:

> Whether the tendency of the matter charged as obscenity is to deprave and corrupt those whose minds are open to such immoral influences and into whose hands a publication of this sort may fall.

There have been enlightened judges, including the judge in the principal *cause célèbre* of 1954, who have interpreted the Cockburn judgment with liberal mind. They have refused to condemn a book because it might have an undesirable effect upon some gawky schoolgirl or spotty adolescent boy. They have not considered that a book should be judged by the standards of a mentally or emotionally perverted adult. But such judges have been in the minority. More often juries have been directed to regard it as their moral responsibility to condemn any book containing explicit references to matters which are part of their normal adult lives.

It has been held that such books *might* fall into the wrong hands. For publishers and authors, confronted by that kind of direction from the bench, defence has often been futile. There is no way of preventing any book sold in the ordinary commercial market from falling into the hands of anybody at all.

THE vagueness of the law as it stands has made it possible for a book to be called obscene by stressing isolated passages taken out of their context. It has been vain for an author to protest when faced by counsel who says portentously: "Let me recall to you the paragraph at the bottom of page 167. Can you say this is not obscene? I will read it to you...." The author is seen by the jury, by the public at large, in a distorting mirror, as gross, lascivious, possessing an unhealthy and unBritish concern with sex. His protestations about his literary intentions, about the effect of the book as a whole, are waved aside as irrelevant.

An adult, civilised person would think it necessary to consider the quality of the thought and of the writing before deciding whether a book was obscene and likely to corrupt or not. But this is precisely what the law does not allow. No expert evidence as to literary quality is permitted. It is possible to argue that a jury might be thrown into a grand confusion by a conflict of opinion among authors and critics called to testify. But that confusion would be preferable to the present situation in which the jury are left in ignorance about the assessment of the book by fellow-writers. Nor are they asked to make any assessment of that kind for themselves. They are always brought back to the Cockburn judgment, and that judgment is totally unconcerned with literary values. Britain is curious enough in her licensing laws, but at least she does not condemn the distillers of Scotch because it would "deprave and corrupt" if it fell into hands capable of depravity and corruption.

In some ways an even greater evil in the law is that any bumble of magistrates may, by an act of 1857, order the destruction of a book without author or publisher having the right to be heard in its defence. In the worst recent year, 1954, the Swindon magistrates ordered the destruction of Boccaccio's *Decameron*, by which the civilised world, unconscious of the moral dangers to which it was exposing itself, had been entertained for some six hundred years. The destruction of Boccaccio's work can be treated as a joke; the destruction of the work of living authors cannot. Frequently they do not hear of an impounding until the deed has been done and it is too late even to protest. A bookshop can be raided and, if a book of literary merit happens to be on the shelves along with some paperbacked smut, then it has every prospect of being "arrested" and bundled off in the van with the rest.

The effect upon authors and publishers of prosecution for obscenity, even if found not guilty, is injurious. They feel that the stain stays on their names. Less obviously, an author's confidence can be disturbed, and a publisher may well be deterred from showing ever again the kind of courage that may land him in the dock. Printers and booksellers become even more cautious about the work they handle; and when officialdom is convulsed with one of its cyclical fits of morality, the trade runs for safety by exercising an unofficial censorship, damaging to authors and publishers and to literature as a whole.

The case for saying that something must be done is therefore even more urgent than the case for debating what. Nothing, authors are agreed, could be worse than leaving things as they are. Lord Lambton's bill proposed, among other things, that the prosecution should be obliged to show that the producers of a book knew it to be obscene; that expert evidence on its literary quality should be received by the courts; that a book should be judged, not on passages isolated from their context, but on its dominant effect when read as a whole; and that it should no longer be possible for a book to be destroyed by the Customs and Excise without a magistrate's order.

Perhaps the select committee, and the Government, will not feel able to accept all these points. But surely the authorities can support at least some compromise reforms. They might agree, say, that all prosecutions must be subject to the imprimatur of the Attorney-General, thus ensuring a uniformity in the administration of the law which is conspicuously and ridiculously lacking at present; that where a book is the defendant, as it were, no order for its destruction should be possible before the author and publisher have been given the right to be heard; that the dominant effect of a book and not the effect of isolated passages must concern the minds of a jury in reaching a verdict; and that the jury should not have to rely upon the guidance only of a judge or of counsel, but that the evidence of experts should be admitted.

It is unlikely that the Government will find time to introduce any such bill in the present session. If the Conservative Government were to be replaced by a Labour one before a bill had been passed, there would be no reason to expect any important change of attitude towards this subject, either for better or worse. Lord Lambton's bill was supported by members of both parties, but the Labour party has its own strong nonconformist element to balance the reactionaries on the Tory side. It is therefore urgent that, when the Home Secretary gets the committee's findings, he shall do one of two things. Either he should promise that the Government will introduce a bill next session; or he should state specifically which reforms the Home Office would support if they were incorporated in another private member's bill. The one thing he must not do is to keep silent on the fence.

NOTES OF THE WEEK

Politicians and the Bomb

THE course of true love within the Labour party runs about as smoothly as a live rail, but it is a mis-statement of recent events to say that the Victory for Socialism fracas has precipitated its leadership into crisis. On the contrary, Mr Gaitskell is now very nicely engaged in getting the substance, as distinct from the advertised form, of what he wants. That substance is to stop the spread of neutralism in the foreign policy of his party; to do him credit, he has always regarded the prevention of this as one of the principal purposes of his own political existence. A fortnight ago, on the wave of anti-H-bomb emotion that is sweeping the country, the pressures towards such a defection in Labour policy seemed very dangerous indeed; the mass of middle-of-the-road Labour MPs, who do not think very much about much, supposed vaguely that to retreat before emotion was the respectable socialist thing to do. Now they think that it is the unrespectable Swinglerite thing to do; several Labour MPs who recently signed neutralism-favouring letters are intimating, quite truthfully, that they did not understand what they were signing at the time.

Mr Gaitskell has stopped this threat of rot in his party's foreign policy by the device of bringing in personalities. There can be dispute about the liberality of this, about the deliberate advantage he has taken of the secret socialist liking for all blood sports. But to the student of power in politics the events of this last week have been extraordinarily interesting. For the first time in his period of party leadership, Mr Gaitskell, in order to harry those left-wingers whom right and centre Labour MPs most like to see annoyed, has whistled up his trade union bodyguard; it is a matter of great significance that they have immediately rallied, massed like so many Arthur Deakins, with their knobkerries at the ready. And this has happened despite all the talk of supposed de-Deakinisation of the trade union leadership. Mr Cousins has not yet said a word.

Victory for Gaitskellism

IT seems very probable that the reaction of Mr Swingler and his colleagues will now be to get out from under, though with the greatest possible trailing of their coats. Compliance accompanied by maximum insolence to Mr Gaitskell is their best policy. They will probably wind up their proposed organisations in the constituencies, and whisper openly to journalists that they are really going to create them in some other form. But the natural bad grace of their retreat does not matter; they can trail their coats from Trafalgar Square to Aldermaston for all Mr Gaitskell needs to worry. No doubt Labour policy on defence will continue to look somewhat ambiguous. No doubt there will be a noisy debate at the next party conference, after which the angry constituency parties will be duly trampled down by the trade union block vote. But everybody knows that Mr Gaitskell is now in a better position than a fortnight ago to keep injected into Labour's foreign and defence policy the basic principles in which he believes.

There is a moral in this. All considerations of ethics aside, Mr Gaitskell could not really have used the ultimate sanction of expulsion against the forty or so Victory for Socialism MPs—without committing political suicide in the consequent fall out. Yet, by holding in the background the sanction that he could not use, he has gained, not indeed kind words, not indeed an end to the party's cold war, but still an essential element of security for his own policies. The supporters of Victory for Socialism will now surely be a little illogical if they continue to ask how a great deterrent, which could not be used without suicide to the user, could possibly, by deterrence alone, be made to work. *Si monumentum requiris, circumspice.*

Tangled Skein Weavers

HOWEVER great this week's check to anti-bomb fever in the policies of the Labour party, strenuous efforts are being made by a motley band of idealists and others to spread that fever in the country. The confusion that underlies many of the utterances in this campaign cannot be too frequently pointed out. There are two sorts of "anti-bomb view" which it is possible deeply to respect. One is the pacifist view, which says that it always seemed doubtful whether it was Christian to carry a rifle in the first world

war, and that doubts about this have been finally removed by the horrors of modern armoury. The other is the "comparative costs" view, which says that Britain can most economically make its contribution to western defence by increasing its conventional armaments, and that the bomb should therefore be left to the Americans; there is a strong political as well as an increasingly powerful economic argument here, because by deciding not to have its bomb Britain might persuade France and other non-nuclear powers not to insist on having theirs either. Those who hold this latter view should, of course, be more eager than anybody else to hurry up the installation of American missile bases here.

What is not so possible to respect is the intellectual acumen of those who have contrived to form a third anti-bomb view, somewhere between these extremes; and what one ought now to get positively angry about is the attempt now being made by some of the more extreme anti-bomb propagandists to pretend that these two quite different views can be treated (for the purpose of their propaganda) as one and the same. Yet many of Earl Russell's colleagues in the council for abolition of nuclear warfare seem to be guilty of the first sort of intellectual muddle-headedness. Their speeches commonly plug the contradictory arguments that possession of the bomb is useless because nobody will ever dare to use it, that it is dangerous because somebody might some day use it in a fit of pique, and that renunciation of it might in some way persuade the Russians to renounce theirs. And the campaign now being launched in the universities falls straight into the second and more blameworthy (because more than disingenuous) offence. The "seven questions" now being asked at Oxford and other universities seem to be—the epithet is unavoidable—very craftily worded; to four of them supporters of the "comparative cost" argument would be obliged to return the sort of answers that the organisers want. One suspects that it would then be pretended that those answers would show a united desire to renounce the west's deterrent. Oh no, they wouldn't. Muddle and misconception, not clarification of university views, will be the main contributions of this sort of questionnaire.

EUROPE

Atomic Aloofness

"EURATOM" is about the best sales name that the crusaders for unity in Europe have thought up; but it is evident that the European atomic community is still insignificant in the British Government's eyes. Euratom's executive commission is now two months old, and its president, M. Armand, is to visit the United States next month. A joint working party is to be set up which will plan the installation in Europe, to American specifications, of nuclear power reactors with a capacity of 8 thousand megawatts. In the House of Commons last Tuesday, Mr Hynd pertinently asked what the Government was doing to associate Britain with the atomic venture of the Six. The answer, in effect, was "nothing." The Government is content to work through existing bilateral arrangements with European countries, and through the European nuclear agency set up by the Organisation for European Economic Co-operation.

Behind this attitude there are some plausible commercial arguments. The commercial prospects in Europe for reactors developed from the Calder Hall type are good, better perhaps than they seemed a year ago. In Germany, for example, they may play a predominant part in the first phase of the nuclear power programme. American research reactors already in use have not all proved satisfactory; and the quiet bilateral arrangement between Germany and Britain has been working well. The Atomic Energy Authority and several British firms which already have industrial contacts in Europe feel that the best way to sell British reactors and know-how is to develop these existing relationships *à deux*.

In the long run, however, this argument falls down. As Euratom gets under way, the policies and activities of European companies and governments will come more and more under its control and influence; and the commercial price of holding aloof will grow. The political dangers are much greater. Across the Channel, developments in the atomic field as well as in trade and economic policy could bring a real shift in the balance of power in Europe. German, Italian and French scientists may soon be working together on military as well as on peaceful atomic projects. The two are intimately linked. Can Britain afford to remain outside this nucleus of political power?

BY-ELECTIONS

Kelvingrove Statistics

THE Kelvingrove division of Glasgow polls next Thursday. On the face of it, this is a marginal seat. The late Walter Elliot won it for the Tories in 1955 with a majority of only 2,888 (after having lost the seat in 1945); because the population is so small, however, it would take a swing of a full 5.4 per cent, compared with 1955, for Labour to win it in a straight fight. That is just about the swing that Labour was in fact marking up against the Tories before Rochdale; whether Rochdale marked the beginning of a period of still bigger swings against the Tories or whether—as was suggested in these columns—the swing there was mainly due to a defection of Tory votes to the one candidate who had a chance to keep Labour out, would in normal circumstances have been shown at Kelvingrove. But Kelvingrove is now not to be a straight fight. Two complications have intervened—in the shape of an Independent Labour party (which means pacifist) candidate, who will hurt Labour, and an unofficial Liberal Home Ruler, who will presumably hurt the Tories. Our special correspondent has this week been visiting the constituency to report on these local factors.

The Local Colour

Our special correspondent reports: Kelvingrove turns out to mean central Glasgow. The constituency divides fairly neatly into two, with the famous Sauchiehall Street marking the boundary. On one side are streets of predominantly Labour tenements, often of the grimmest squalor, running down to the docks; on the other side are the mainly Tory streets of solid stone houses and apartments circled by neat parks and squares. The immediate Tory disadvantages turn out to be: (*a*) the Rent Act, which affects a lot of houses here and which everybody says is going to be important; and (*b*) the loss of the considerable personal vote that Walter Elliot built up in Kelvingrove over the years. This personal vote is unlikely to be wholly retained by the Tories next week, even though Mrs. Elliot is bravely standing in her husband's place.

The immediate Labour disadvantages are: (*a*) the fact that since 1955 the already under-size register has shrunk by over 4,000, most of them slum-dwellers who have moved out to the perimeter of the city; (*b*) a somewhat colourless candidate in Mrs McAlister; and (*c*) a general feeling, at least at this early stage, that the ILP candidate, Mr William Park, will draw off more votes from Labour than the Liberal Home Ruler will draw from the Tories. Mr Park, indeed, may make support for pacifism look more significant than it is, for he struck your correspondent as easily the most effective personality in the field. He is able to exploit two equivocal chinks in Mrs McAlister's armour—one national, over the H bomb (he claims to be the only candidate completely against it); and one local, over rents (Mrs McAlister is accused of having faced both ways over the Labour-dominated city council's plan to "review"—i.e., raise—the low council house rents).

Despite all this, local opinion still gives Mrs Elliot a no better than even chance of holding the seat. Oddly, if she does lose, that may be a mark of the past greatness of her husband; the result may well depend on how much of the Tory vote was a personal non-party vote for the warmth and humanity of Walter Elliot—and how much of that will be transferred to his brisk but rather chilling widow.

AGRICULTURE

Young Farmers' Charter?

THE Agriculture Bill, published this week, does not by a long chalk introduce a free market in land. But it deserves a welcome for making some advance towards it. The most important parts of the bill concern tenant farmers. The country's interest here, of course, is that people who are farming pieces of land uneconomically should get off them, and that those who could farm them more productively should take their place. To this end landlords' powers of eviction are slightly—very slightly—increased by the bill; it will now be easier, for example, for a landlord to get hold of his own land if he wants to reorganise his estate into more economic units. But, very rightly, the main emphasis is laid on market forces. The bill enjoins farm rent arbitrators—there are some 300 at work up and down the country—to take the open market level of rents as their criterion, instead of the previous and mystic formula "rents properly payable" (which has led to wild differences of rents for very similar farms). In theory, this means that if old Farmer Bloggs appeals to the arbitrators against an increase of rent demanded by his landlord, the arbitrator should be guided by what young Farmer Giles, fresh with scientific ideas from college, is ready to pay, if the land ever becomes available, because he knows he can make money on top of such a rent. How many young Farmer Gileses will really find this bill to be their charter is, however, disputable.

It is also disputable by how much farm rents are really likely to rise. There is scope for a considerable increase; average farm rents are now about 60 per cent above their 1939 level, while farm building and maintenance costs are up by about 300 per cent. To sugar the pill for the tenants, the Government promises that higher rents will be counted as higher costs of production in the annual price reviews for farm products; this treatment of rent as a cost of production should make classical economists turn in their graves. It should make the current generation turn in amazement, too; what it seems to mean is that, because some farmers will be paying more money to other farmers, the taxpayer will compensate the farming industry as a whole for their doing so.

Finally, the bill abolishes state powers of supervision and dispossession over owner occupiers; inefficient owner occupiers will henceforth be driven out by market prices instead of by bureaucratic investigating officials. The National Farmers' Union is opposing this part of the bill: it has seen some advantage in advertising these state powers as a special responsibility which the farming industry has accepted, in return for getting large subsidies from the taxpayer. But that advertisement has recently been a sham, and a peculiarly illiberal sham to boot; there were less than fifty supervision orders in 1956, and "Lady Garbett type" evictions have been very rare indeed. The Government is certainly right to remove this largely meaningless and wholly misleading birch from the cupboard.

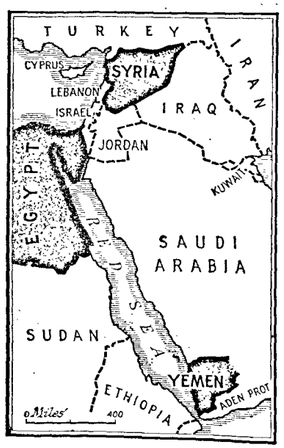
GREECE

Mr Karamanlis Resigns

OUT of a clear blue sky, a bolt has suddenly fallen on the Greek prime minister, Mr Karamanlis. Last week Mr Papaligouras, the minister of commerce, and Mr George Rallis, the minister of public works, resigned in a huff over the tabling of a new electoral law; they disapproved of some of its provisions and maintained that the premier had reached a secret agreement about it with the Liberals, the main opposition party, but had failed to consult his own cabinet adequately. When thirteen more deputies belonging to the governing Radical Union followed the two ministers' example, Mr Karamanlis lost his parliamentary majority and, rather than lead an unstable coalition government, decided to resign. King Paul has followed his outgoing prime minister's advice and formed a caretaker government under Mr Constantine Georgakopoulos; general elections will be held before the end of April.

Mr Karamanlis's motive in not taking his cabinet colleagues fully into his confidence is obscure; it is not the first time that he has annoyed them in such a way. But his object in introducing the new electoral law is easier to see. The draft law represents a return to the system of "reinforced" proportional representation used in the 1951 elections, which favours the larger parties; the Liberals have long advocated its re-introduction, and by meeting their wishes Mr Karamanlis evidently hoped to improve the political atmosphere. Instead, he touched off a political crisis. But his handling of it has increased his credit in the country; his chances of improving his parliamentary position in the elections are, at the moment, thought to be good, especially if the Assembly decides to accept the new electoral law.

Mr Karamanlis's return to power with a stronger majority would be welcome. But it is a pity that Greece should be plunged into the turmoil of a general election when there are such delicate international issues to be settled. The question of missile bases on Greek soil can hardly fail to be exploited by the Left; and the temptation to strike extreme attitudes over Cyprus will be almost irresistible for all



parties. Moreover, the crisis defers for some weeks the "urgent" talks on Cyprus on which Mr Selwyn Lloyd had promised to embark.

ARAB UNION

Nasser's New Recruit

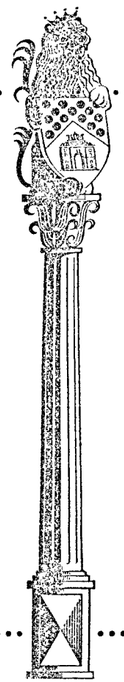
THE Yemeni Crown Prince celebrated his country's federation with the United Arab Republic on Sunday by dutifully denouncing imperialism from a balcony in Damascus. Back home in the Yemen, Taiz is crowded with Russian missions and experts; the Americans there are at a loss for grand projects and services with which to court Yemeni friendship; representatives of a major American oil company have been trying without apparent success to devise some acceptable offer that they could make to King Ahmad.

During the past ten years the Yemenis have looked more often to their neighbours in Saudi Arabia than to Egypt for advice. It was the kings of Saudi Arabia who were called on, in time of trouble, to support the legitimate succession to the Yemeni throne, and the Saudis who were asked for advice on how to attract oil companies. Until three years ago the Saudis helped, but then the Yemeni Crown Prince began the curious friendship with radicals and republicans that has led to Yemen's becoming federated with the United Arab Republic. It has taken Yemen longer than any other Arab state to break out of isolation. Though Yemen did once have a period of precarious Turkish rule, it had not the stimulant of western upbringing that the former mandated territories and Egypt had. Now King Ahmad has joined his country to a republic in what must, for him, be a marriage of inconvenience.

The addition of Yemen does nothing to make the map of the Arab republic more tidy. Saudi Arabia and Jordan lie between Yemen and Syria; the Red Sea, Ethiopia and the Sudan separate it from Egypt. Politically, this union would seem to be suicide for an absolute king. So it may; but Yemen has always been a follower country. King Ahmad presumably intends to keep a tight rein on domestic affairs; apparently he believes that his throne is in less danger from the Russians and Egyptians than from the British and Americans. Perhaps his quarrel with the British on his southern frontier is the most attractive part of the dowry that he brings to the Arab republic. The Aden Protectorates are a convenient target for propaganda, and the remoteness of the area makes it easy to clothe exaggerated charges against the British with the appearance of truth.

Economically, Yemen has little to offer its new partners. The country's agriculture barely supports its population. The Yemenis have long felt neglected by the western countries which failed to send technicians there to produce oil and make Yemen as rich as Saudi Arabia and Kuwait. After tedious negotiations, and some hard work, there has been only failure from the efforts of a German company prospecting for oil and from those of the American company, Yemen Development Corporation, which was privately set up to exploit oil and other minerals. Yemen's greatest military assets, its mountains, are of little use to its distant republican partners.

King Ahmad, on the advice of his only son, has made his choice—perhaps because he recognises the popular attraction of the Egyptian revolution; perhaps because he believes that the politics of the United Arab Republic will help him get his way against the British. Probably only he knows.



PERSIAN GULF

All Done by Arabs

A HINT that Britain may be loosening the leading-strings on its protected sheikhdoms in the Persian Gulf emerged from the signing on February 22nd of an agreement between Saudi Arabia and Bahrain about their offshore boundaries. Although the British are responsible for the foreign relations of Bahrain, and have conducted all such negotiations in the past, they were not represented in this case. They doubtless gave the Bahrainis their blessing; but it may also be deduced that they are trying to reduce the number of matters they handle on behalf of local rulers. If so, this is a sensible modification of policy. Nothing but embarrassment accrues, both for themselves and for the protected rulers, each time they feel constrained to conduct an operation on behalf of their protégés. They should be delighted when a local ruler feels strong enough to do his own policing or conduct his own inter-Arab diplomacy, provided he does so in consonance with British interests.

Between 1935, when Britain unsuccessfully tried to conclude a border settlement on behalf of the sheikhdoms with King Ibn Saud, and 1955, when it had to suffer the embarrassment of the Buraimi tribunal, much time and money have been spent and many feelings bruised by abortive boundary negotiations. That an agreement has now been made without the obvious intervention of foreign diplomats or oil company experts encourages hope that the new approach will lead to further settlements. Perhaps the old-boy approach, between well-briefed oriental potentates, can do more to settle the outstanding problems of offshore and land boundaries than the methods which have failed in the past.

In the new agreement, Saudi Arabia and Bahrain have agreed that the offshore area separating them, and certain islands, will be divided between them. Part of the divided area will go outright to each state; another section, consisting of shoals desired by both, goes to Saudi Arabia, which has promised to give Bahrain half of any commercial profits which may eventually come from it. It is perhaps unfortunate that the most desirable area should go to Saudi Arabia, which is in no particular need of additional oilfields, rather than to Bahrain, whose production is limited. But the two rulers themselves decided on the arrangement that

This Electronic Age

We once saw a cartoon of a row of robots making a row of robots, and the owner of the factory was saying to his friend "I wonder where it will all end!"

We are quite ready to admit that we are not averse to some forms of automation. We do, of course, use mechanical aids for many of our activities, from the handling of cash to book-keeping. This speeds up the work to the advantage of the Bank and the customer.

Although we keep in constant touch with developments of mechanical aids over the whole range of our activities, in the final analysis it is the personal relationship of the Branch Manager and his staff towards the customer that matters. We face the electronic age resolute in this belief.

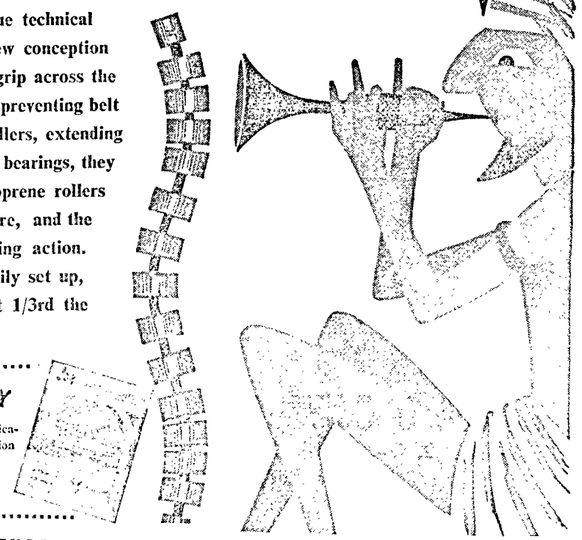
FLEXIBILITY *hath charms too...*



ESPECIALLY WHEN APPLIED TO CONVEYOR IDLERS

F-L-E-X-I-B-I-L-I-T-Y is but one of the unique technical advantages of JOY LIMBEROLLERS—the new conception in conveyor belt support. Exerting a cushioned grip across the full belt width—centralising the load on the belt—preventing belt slip, they give up to 10 times the life of steel idlers, extending belt life 20%. Suspended on two self-lubricating bearings, they need positively no maintenance. Multi-disc Neoprene rollers resist most corrosive chemicals, grease, oil and fire, and the disc flexion under load promotes a self cleaning action. JOY LIMBEROLLERS can be easily and speedily set up, knocked down and re-situated. They weigh but 1/3rd the weight of steel idler sets.

Toshiba

The Name Synonymous With Japan's Electronic Progress

For buyers seeking the highest quality goods at the most nominal prices, Japan's re-vitalized industries provide an excellent opportunity. Modern electronics is an important part of TOSHIBA's business. Our skilled technicians, modern techniques and our wealth of experience are universally recognized.

As the largest manufacturer of electric and electronic products in Japan, TOSHIBA exports a wide variety of electronic products to the leading countries of the world ; for instance, vacuum tubes to England, transistor radios to U.S.A. and TV receivers to Sweden, etc.

Whether your requirements be tiny vacuum tubes or gigantic generators there is a TOSHIBA product to serve you.

suited them, and no cry can be raised that either was forced to do anything by wily foreigners.

ARTIFICIAL INSEMINATION

Sent to Committee

THE Lord Chancellor last week rightly refused to let the Government be stampeded into making artificial insemination illegal. The motion before the House of Lords was that artificial insemination of a married woman by a donor should be tantamount to adultery and grounds for divorce, and that the children so conceived should be illegitimate. The motion was assumed to refer only to cases in which the husband had not given his consent. That he should then have grounds for divorce was recommended by the Morton Commission ; few would dispute the proposal ; and in last week's debate, the Government accepted it in principle.

But the few doctors who undertake artificial insemination in this country always make sure that the husband is both willing and anxious that his wife should undergo the treatment—in the recent divorce suit which started the controversy the wife was living in America. Treatment, in fact, is how these doctors regard artificial insemination. It is one among several means of treating sterility in a married couple ; and the criteria for using it rarely arise. But to judge from the lords who denounced the practice in last week's debate, which ranged far outside the strict terms of the motion, anyone might think that it was submerging the normal process of conception. For these noble lords dealt in absolutes. They spoke as if no one had ever tried to cover up illegitimacy before ; as if all ordinarily illegitimate children were "love children" (the Bishop of Norwich) ; as if all babies born of husband and wife were wanted babies—which artificially conceived babies certainly are ; as if adopted children were always told the whole truth about their parentage. Lord Denning thought it wicked for a child, accepted by a husband as his own and brought up as such, to share in his "father's" estate in an intestacy. The Archbishop of Canterbury gave the impression—which he cannot have intended—of condoning the deaths of some 500 women a year, in this country alone, at the hands of illegal abortionists. One must be thankful that all this emotion, to which the speeches of the Lord Chancellor and one or two others were a welcome contrast, only generated the promise of an interdepartmental committee.

There is indeed scope for a committee that will consider the many legal issues involved and, above all, look at the matter in its proper perspective. Today the crying problem in most parts of the world is how to enable people, or to persuade them, to have sex without having children. It seems odd that such a furore can be caused by a practice that enables a few women to have children without having sex.

BUTTER IMPORTS

Dump or Slump?

LAST month the Ministry of Agriculture refused, in firm but reasonable terms, the request of a delegation from the National Farmers' Union, the Fatstock Marketing Corporation, and the British Bacon Curers' Federation, for "regulation" (i.e., restriction) of bacon imports. This month the Board of Trade is considering applications by the NFU and the Milk Marketing Board—and, incidentally, by the New Zealand Government—for the imposition of anti-dumping duties on Swedish, Finnish, Austrian and Irish butter. Their decision, which will be made under the terms of Customs Duties (Dumping and Subsidies) Act of 1957, will establish something of a precedent, and at a peculiarly delicate time.

The case against unlimited acquiescence in dumping is a respectable one. The trouble is that in the eyes of home producers the epitaph "dumped" often equals simply "offered at a price with which I cannot comfortably compete," and that to pin down any better definition is much less simple in practice than in theory. The 1957 Act had one major and one subsidiary definition of dumping. First, and most important, goods are considered to be dumped if, when all due adjustments have been made for "differences in cost and conditions of sale, differences in taxation or otherwise," their export price is below that at which they are sold in their country of origin. Secondly, it refers to direct or indirect subsidies. Both these definitions open up endless debating possibilities. About "due adjustment" there is scope for plenty of specious restrictionist argument as to fact and interpretation ; and when, as with farm produce, direct and indirect Government subsidies are an almost universal phenomenon, that scope is wider still.

No outsider can sensibly pretend to pass judgment in advance on this particular case. But one general comment should be made. In present circumstances, the Board of Trade should be especially careful to interpret its mandate in a liberal rather than a restrictionist sense. Recessions, whether deep or shallow, characteristically produce an upsurge of protectionist sentiment, breeding retaliation and counter-retaliation ; to use the 1957 Act to start off such a cycle would be a disaster. It was designed to deal with highly specific cases ; it is only in such cases that it should be used. If the peccant butter exports fall into the same class as the United Kingdom egg exports of last summer there is a case for countervailing duties. If not, the NFU, the Milk Marketing Board and the New Zealand Government should be given a polite but dusty answer.

INFLATION

Professor's Prescription

THE Chair of Political Economy at Cambridge, from which Sir Dennis Robertson of the three wise men has lately retired, has been filled by Professor James Meade, who delivered his inaugural lecture this week on that most topical of subjects, "The Control of Inflation." As befits, perhaps, a rather younger generation of economists, Professor Meade is not as certain as Sir Dennis that a complete stop to price increases should be the dominant aim of economic policy, especially if it had to be accomplished by methods which would prevent high and rising production. But if the community votes that stable prices should be the overriding objective of policy, Professor Meade is willing to proffer any number of suggestions about how they might best be achieved.

His first point is that the task would be made much easier if the Government committed itself in advance to take such disinflationary steps as are necessary to prevent "some precisely defined price index from rising above some pre-

closely defined level." If such automaticity became the rule, private purchasers would have an incentive to postpone their purchases as soon as prices edged temporarily above the permitted ceiling, and all the forces of speculation would work on disinflation's side; the problem of excessive foreign speculation against sterling would be simultaneously solved. Such a system, however, would spell a strange submission to the tyranny of figures.

Two of Professor Meade's suggested weapons of control seem more practically interesting. For wages, he would like some equivalent of the Cohen Council to announce at set intervals an estimate of the average rise in wages that would be compatible with stable prices, and he would then leave to arbitrational courts one issue only: that of deciding whether the shortage or redundancy of workers in the industry they were considering meant that the wage rise in that industry should be above or below this average. That would at least give the courts an arbitrable point to decide. Secondly, Professor Meade wants "prompt and frequent variations in some suitable widespread levy on personal incomes." If insurance contributions come to be expressed as a percentage of income, he suggests the authorities could vary them (an additional levy of 1 per cent, at a time of temporary excess demand, would be equivalent to a disinflationary influence of £150 million a year); with variations in this levy and in Bank rate as the main weapons of week-to-week control, the annual budget could become an instrument of social policy rather than a chancy stab at estimating the entire year's desirable level of demand. There are attractions in this idea.

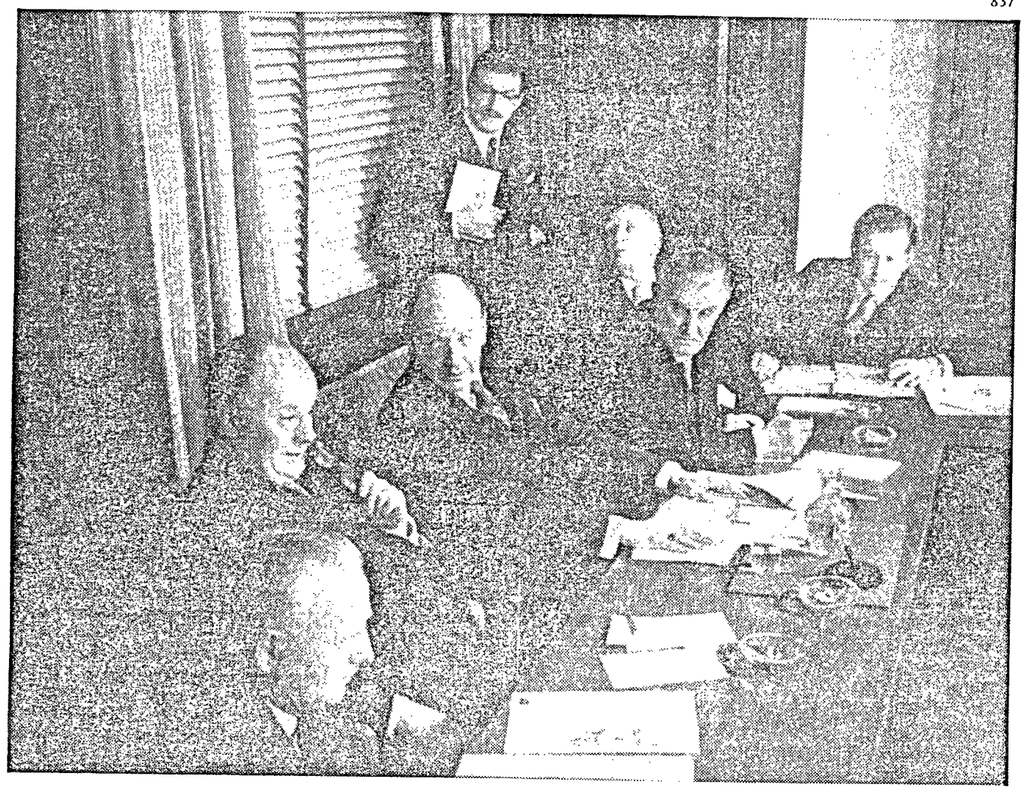
IRAQ

Mixture as Before

NURI PASHA has returned to power in Iraq in circumstances that were familiar during his last term of office—a hail of invective from Cairo and Damascus

Shop Stewards at Standards

Our special correspondent who has been visiting Coventry writes:



THIS week, a month-long ban on overtime by maintenance and boiler room workers at the Standard Motor Company culminated in a one-day strike which put 11,000 men out of work and lost the company £500,000 worth of output. The apparent cause of this dispute was the rejection of a 30s. a week pay claim made by the maintenance men (whose trades range from electricians to lavatory attendants). But although it is true that their rates have recently fallen behind those of the factory pieceworkers, many maintenance men regularly earn over £20 a week with overtime, and all maintenance men at Standards earn £2 a week more than the district rate agreed between the employers and the unions; they thus have little like of, and little need for, militancy. The real cause of their unofficial strike was a familiar one: it was incited, indeed virtually enforced, by the local shop stewards who are engaged in a running fight for their own privileges. But at Standards, as distinct from at the British Motor Corporation (see *The Economist* of February 22), the shop stewards are losing out.

The beginnings of this battle date back to 1956. At that time Standards had a domestic agreement with the Confederation of Shipbuilding and Engineering Unions and the Transport and General Workers Union which, because of the concessions that the company allowed and the colour of the booklet in which they were embodied, was known locally as "the yellow peril." It provided for a 42½ hour week compared with 44 hours for the rest of the industry; it gave holiday pay with bonuses; and it linked all timeworkers' rates, right down to those of barmen, to those of pieceworkers on the assembly lines. Further, sweeping privileges were given at that time to the shop stewards. Overtime was only to be worked with their permission; facilities were provided for their weekly meetings, for which they were paid; complaints from workmen were to be referred to them and not to foremen. They had managed in effect to obtain a stranglehold on the works.

The results are not difficult to imagine. Wages at the works were higher than in other car companies and much higher than in other parts of Coventry. "It was difficult to find a bus," a local man said, "because the men were always going off to queue for work at Standards." To get into this paradise one had to be careful not to annoy the powers that be, and it soon became obvious that among those powers were the shop stewards. It was they who arranged plant meetings, imposed fines, enjoyed freedom from work and kept the paid full-time officials of the unions to heel by (among other things) threats not to collect dues. But after the seven-week stoppage of electrical workers in the autumn of 1956, the management decided that they had had enough. They applied for membership of the British Employers Confederation and withdrew their domestic agreement with the unions.

Since the Employers Confederation does not recognise shop stewards and gives them no privileges whatever, reaction from the stewards was to be expected. There was a rush of lightning stoppages, sudden bans on overtime and the rest. But today, a year later, the self interest of the men who are earning good money at work has turned local feeling generally against the roost-rulers of yesterday. The management has begun to feel its power over them. Information that before was given to the men only through the shop stewards now goes to them direct through hand-outs and the works newspaper. Foremen are being consulted more and stewards less; the latter are beginning to lose their grip.

These are the facts that explain why the stewards have been straining every nerve to call a strike at any opportunity; they also explain, however, why, when a strike was called which some thought would spread through the factory, it immediately and ignominiously collapsed. During the shutdown on Monday, 186 out of the 530 men who do the maintenance were told to report for work. When a shop steward replied that all the men would have to be engaged or none at all, the firm's executives did the work instead. They managed so successfully (and without any complaints of blacklegging from the union officials) that by Tuesday all work was resumed. Because of this, and because of lack of support generally, the stewards gave in, called a meeting (without this time being paid for it), and revoked the overtime ban. The maintenance men, £20 the poorer, will now negotiate in the normal way. It can be taken as certain that the stewards will call another strike when they can, but it is probable that next time there will be even less eager response to it.

"Agreed, then? We shan't expand sitting here—one of us must visit NORTHERN IRELAND!"

If your firm is planning expansion you need a first-hand report on the possibilities in Northern Ireland. Everywhere else in the United Kingdom expansion plans are bedevilled by one or more of three great shortages—not enough money; not enough men; not enough space. Only Northern Ireland can offer you all three.

MONEY—*to cut the need for investment funds*

Outright grants of 25% and/or loans for plant, machinery and buildings are available, also removal and training grants.

MANPOWER—*first-class and plenty of it*

Over 9% of the labour force—over 30,000 of them men—are looking for jobs. They are hard-working and loyal; absenteeism and labour turnover are low; output is high and shift-working is practicable.

PRODUCTION SPACE *in modern factories ready now*

If you employ mostly men you can rent a standard Government factory for about 9d. per sq. ft. p.a.—room for at least 100% expansion. Or the Government might build you a special-purpose factory on amortization terms. Sites of all sizes available.

EXCELLENT SERVICES

Ample water, gas, electricity and housing. Nuclear power station to be built. Excellent sea, air and road ferry transport services.

SUCCESS STORY

Since 1945 over 130 new factories have opened in Northern Ireland, and many have expanded. Courtaulds, British Tabulating Machines, Metal Box, Du Pont, Chemstrand, Hughes Tools and many others will tell you of their experiences.

directed at himself, Iraq, its institutions, its foreign policy and (this time, though not last) a range of Iraqi political personalities.

The chief reason for his summons to power is that the Egyptian revolution has kindled the imagination of all Iraqis who are young, frustrated and resentful of the lid clapped on their political aspirations by the class and age-group of which Nuri is the headpiece. At news of the union of Egypt and Syria all these malcontents went into a twitter of excitement. Their own government's announcement of federation with Jordan was a royal development in a sphere to which they do not feel they belong, and failed to recapture their imagination. So that when President Nasser's original message of congratulation to the royal union was followed by a hail of Egyptian and Syrian abuse, ministers and potential ministers judged that the time had come for sharper retorts and a firmer hold on Iraqi exuberance than the then prime minister was likely to apply. His cabinet was in any case already shaken by an internal quarrel.

Nuri's new cabinet is of the shape of that which kept Iraq on an even keel throughout the Suez crisis ; the same martinet returns to the Ministry of the Interior ; a base broader than before is supplied by the inclusion of two experienced Shi'is to the Ministries of Foreign Affairs and Finance. The advantage of such a body is that it keeps development booming and merchants trading in peace ; its drawback is that it works at the price of repression. Nuri's job this time will tax even his immense experience, for it includes harnessing, or else repressing, the considerable abilities of a Jordanian middle class of would-be politicians, most of them ex-Palestinians.

The ministers who have been attacked from Cairo and Damascus have started answering back to the charges made against them, but counter-propaganda and denial are weak weapons in a war of words. Unless Iraq can think up some positive themes and boom them round the Arab world, the ears at present cocked to hear Nasser will not be recaptured.

FRANCE

Down to Earth

INTRODUCING the third French "plan of modernisation and re-equipment," M. Hirsch has set two main targets for 1961: to improve the foreign trade position so as to show an annual surplus of 100,000 million francs, and to increase national income by a quarter compared with 1956 (agricultural output rising by 20 per cent, industrial by 30 to 35 per cent). This would provide an improvement in living standards of three to four per cent a year—less than in any recent year except 1957, but still quite impressive.

Unfortunately, this rosy prospect is based on quite a few sanguine assumptions. One is that there will not be any major world recession. This may be reasonable as a working hypothesis, particularly as the draftsmen have alternative plans for higher state investment in the event of a world slump. A second assumption, however, is that defence expenditure will be brought back to the level of 1954 and military service reduced to eighteen months. In plain terms, this postulates the ending of the Algerian war ; and there is no sign of a political "plan" to achieve that. Still, M. Hirsch has done a service by thus linking cause and effect, if only hypothetically ; the plan is in direct conflict with the great French illusion that the Algerian war can be waged indefinitely without cost.

This week's debate on the defence estimates showed that the bill is actually rising. M. Chaban-Delmas, the minister of defence, had to ask for new appropriations of 80,000 million francs. This amount presumably allows for the transfer of only 30,000 more troops to North Africa ; the Right is demanding bigger reinforcements. The debate also revealed that the rest of the French armed forces is being sacrificed on the altar of the Algerian war. The secretary for air gave warning that, if the situation is not changed rapidly, the French air force "will be nailed to the ground before the end of the year." Finally, a compromise was patched up. On paper M. Chaban-Delmas has found some new cuts to compensate for new expenses, and M. Pflimlin, the minister of finance, can claim that he has kept the budgetary deficit within the prescribed limit of 600,000 million francs. It is doubtful whether he can in fact maintain this ceiling in the present difficult parliamentary situation. But the pledge to keep the deficit down was given not only to parliament ; it was also one of the preconditions for the international loans granted to France a few weeks ago. Should the promise now be broken, the lenders could claim the right to look into France's accounts and question the government on its handling of Algeria. This might be the thin edge of the wedge.

ITALY

The Bishop Loses

FOR most Italians it is astonishing to see a civil court condemning a bishop for the way in which he has exercised his spiritual power. Yet the Florentine judges who had to try the case against the Bishop of Prato seem to have discharged an invidious task with credit and discretion. By unequivocally condemning the bishop for the defamatory way in which he denounced Signor Bellandi's refusal to get married in church, they upheld the state's duty to safeguard the freedom of conscience of all its citizens, whether they do, or do not, believe in God. But by merely sentencing the bishop to a small suspended fine, they did what they could to soothe the susceptibilities of the Roman Catholic Church.

The Church, however, has so far refused to be mollified. As a sign of his "grief" and "bitterness," the Pope has cancelled the celebration on March 12th of the nineteenth anniversary of his coronation. The Archbishop of Bologna, Cardinal Lercaro, has ordered all the churches in his archdiocese (which includes Prato) to go into mourning until Palm Sunday. The Vatican radio and the bishop himself have gone to the ridiculous length of comparing his treatment with the persecution of the Church in communist China. These theatrical reactions may be attributed to the shock of surprise that the verdict has given to ecclesiastical circles ; but Italian anticlericals will see in them confirmation of their claim that the Church has got above itself. Fortunately there are signs of a more moderate attitude in the Vatican, where apparently it is not intended, as *Osservatore Romano* at first seemed to suggest, summarily to excommunicate all those concerned with bringing the bishop to trial.

If the Vatican does choose moderation none will be more relieved than the Christian Democrats, who, on the eve of an election, find themselves uncomfortably wedged into a

cleft stick. If the Christian Democrat prime minister had failed to uphold the verdict of the civil courts he would have played straight into the hands of the anticlericals. On the other hand, by accepting the verdict he risks alienating the clerical vote—including the three million votes of Catholic Action, the Church's lay organisation—on which his party heavily depends. But the Church cannot afford to undermine the Christian Democrat party; any split in the Catholic vote would benefit most, not the Church, but the extreme Left.

FILMS

Achievement on a Shoestring

A PRIVATELY produced film which had its first showing at the National Film Theatre this week may suggest a moral or two to the crisis-bound cinema industry. The film, a 35-minute animated cartoon, called "The Little Island," in Eastman colour, the last reel of which has been shot in Cinemascope, was made for about £5,000. The makers, a composer aged 32 and a Canadian artist aged 24, reckon it would have cost the biggest commercial organisation some £200,000 to make. "The Little Island" is a satirical fantasy upon the frightening mess in which three men, who believe in Truth, Beauty and Goodness, as representatives of all mankind, find themselves. With a judgment of its entertainment value, *The Economist* is not here concerned; its creators have aimed very high in aesthetic and philosophical terms. But the quality of the production is determinedly professional; the producers seek its commercial distribution on the major circuits or at "art houses" throughout the world; and it rather looks as if they will succeed. The film was seen by prospective buyers this week and will be shown at the Brussels Fair and the Cannes Film Festival.

The film was made with private money. The two young men formed a company and when one bank refused an overdraft they switched their account to a bank which was ready to interpret the credit squeeze less rigidly. Their watchword has always been economy, but it was in the nature of the two producers to wait until they could pay for the best. The production is without dialogue, but is illustrated by music throughout, some of it *concret*. Four orchestras were employed, the largest comprising 30 musicians, all of them necessarily at full union rates. But a great deal of the work normally done by regiments of technicians was done by the two young men themselves. The 32-year-old, an experienced and gainfully employed composer and conductor for first-feature films, is also an electronic engineer. He composed and conducted all the music, supervised all the sound recording and recorded the *concret* effects in his own studio. The 24-year-old, who had worked in film studios in Canada, did most of the laborious dogsbody tasks on his side of the film. The company owes no money—except to the bank. A second production is on the stocks. One has long suspected that one answer the film industry could give to the fall in its receipts would be to re-assess how many people need to be employed in its minor productions, in order to achieve a commensurate cut in its costs. The lesson should not be put too ponderously. This film—in which the makers claim to have cut costs by 97½ per cent—is obviously an extreme and exceptional example. But extreme examples sometimes point out the right trend.

LOCAL GOVERNMENT

Taking In Todmorden's Washing

A NICE story about restrictive practices comes out of Todmorden. Local authorities are required by law to submit their annual abstracts of accounts to the Ministry of Local Government and the Inspectors of Taxes, and to have them available to the public. But their circulation is not normally very great, once the ministry, the local tax office, and council members have had their copies. The cost of printing them therefore tends to equal that of a finely produced presentation edition; in Todmorden it worked out at nearly £4 a copy. The local council, greatly daring, therefore tried the experiment of having them typed in the council offices by a girl, duplicated, and bound with a printed cover by a local firm, at a total cost of about £32—against the usual annual printing bill of about £150 for 40 copies. The result was readable and produced no explosion in Whitehall; and the finance committee began to wonder whether the local *Hansard*—the council minutes—which has a similarly restricted sale, and which normally costs the ratepayers £330 a year, might be duplicated in much the same manner (though the installation of a modern variable typewriter was contemplated).

This must naturally have been a blow to the local printing firm. But it was the Typographical Union which took the matter up, backed by local representatives of other unions, "to protect the principle of trades unionism and the well-being of its members." The printers' spokesman upbraided the local Trades Council for failing to bring the councillors to their senses. He agreed that the duplicated accounts were neatly and cheaply done, but, as the local press reported him, insisted that

> it was still taking away work and he thought that to continue along the lines that they seemed to be taking was not fair in general to the ratepayers.

The question now arises whether the Todmorden council will return obediently to the support of local industries, or brutally press on with technological change. At the trades council meeting referred to one member said that he had been horrified to see a "report that St. Mary's clock was being repaired by a member of the corporation staff," and that the "next news will be that corporation staff are digging the graves next door." Multiply Todmorden by 1,400 small authorities, and they actually might make a contribution to digging a grave for some of the restrictive practices that impede public services at every turn; but even one Todmorden provides a pleasant offering to the Cohen Council for its further cogitations.

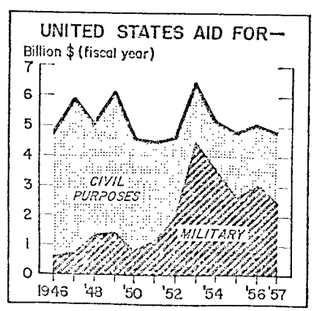
GERMANY

Shamming Sick?

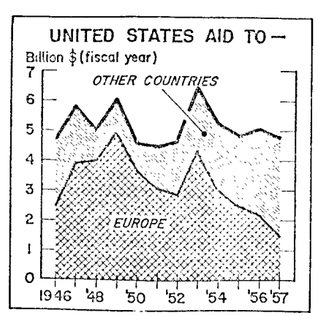
IN Britain, people often ask whether the health service is wasteful and how abuses of it can be prevented. Some west Germans are worried by a more urgent problem; new social security legislation introduced last year has created a situation where it actually pays a man to go sick in certain circumstances. In the remarkable months before last year's elections when so many strides were taken towards the welfare state, the Bundestag passed a law which guaranteed to every employed man the right to sick pay equivalent to 90 per cent of his previous earnings during the first eight weeks of any illness. Since the law was introduced, sickness in industry has soared. Influenza was admittedly the villain of the piece in October and November, when nearly twice as many men fell sick as in the previous year. But ever since last summer sickness has been some 15 per cent higher than in the previous year. The new law seems to have raised industrial labour costs by over 2 per cent—in addition to an increase of 3 to 4 per cent as a result of the other new welfare arrangements made last year. Since sick pay is based on earnings in the previous month, it can now actually pay a man to go sick in Germany if his overtime earnings are falling.

This last anomaly will clearly have to be removed. But the new law has stirred up a broader controversy, already familiar to those large firms in Britain which have introduced similar schemes off their own bat to give manual "workers" the same security in sickness as "staff." Do the higher sickness figures mean that the new security is

The Scale of Aid



SINCE 1945, aid in one form or another has become an assumed buttress of the pattern of international trade and payments. The deficits on current account which tended before the first world war to be bridged by the flow of private capital have been covered to a great extent by grants or credits from governments or international bodies.



The bulk of aid, of course, has come from the United States, which since July, 1945, has helped the rest of the world with some $62 billion of goods, services and net credit. American aid has fluctuated and has changed in form. But its total has shown a remarkable constancy, varying only between $4,400 million and $6,400 million a year in the whole postwar period. The real value has fallen as prices have risen; but in figures the aid to the foreigner which became entrenched in the American budget during the war has remained a remarkably stable element in it since.

The bulk of American aid went to Europe in the first post-war years, at first through emergency aid and credits to countries like Germany, through bodies like Unrra and through the loan to Britain, and then, after 1947, through the mounting European Recovery Programme. Assistance to Europe in these years was most fruitful. It recharged the batteries of economies rich in inherited skills and economic potentialities, yet brought to a halt by war. It made possible the import of essential tools and materials to start up idling factories, financed the recovery of multilateral trade, and bridged the dollar gap in the four difficult years before Europe's own recovery began to replenish its gold and dollar reserves.

The Korean war brought changes in the pattern of American aid. The military share leapt up and in time the weight of aid and credits tended to shift away from Europe to Asia and the Middle East. Military aid obviously does not play the same domestic part in an economy as civil aid, but it remains a valuable source of dollars. American aid is now a major source of capital and reserves for the undeveloped world.

By the side of America's largesse, aid from the rest of the world is small in scale. Britain's direct grants abroad have been of the order of £50 million a year in the last few years, not a great deal more than its receipts of aid from across the Atlantic. International bodies, mainly backed by money raised in the United States, have also played a part. In its ten years of life, members have drawn more than $2,800 million from the International Monetary Fund, while the World Bank has lent some $2,400 million. Both were particularly active last year; the World Bank lent $387 million in the twelve months ending June, 1957, and a further $372 million by the year's end. Like the United States, the World Bank lent at first most heavily to South America and Europe. Now it is taking more initiatives in Asia. In a recent study, the United Nations has concluded that in the three years, 1954-56, western countries gave some $3,700 million to the undeveloped world, and lent a further $1,500 million.

Of late, a new contributor has become prominent, the Soviet block. The State Department lately estimated that the block had committed itself to $1,900 million of aid or credit—$400 million of it being for arms. East Germany, the Czechs and the Chinese seem to be committed to about $400 million of this, Russia to the rest. But only a fifth of the civil part of these commitments has yet been met. Compared with western help to the undeveloped world, Soviet aid is insignificant.

Quantitative figures of aid give no impression of its quality or value. Assistance on a modest scale, if it takes the form of men who can teach backward people new skills, or of seminal capital around which the recipient accumulates his own, can be more valuable than a big dollop squandered by political corruption or spent internally where there are not real resources to meet the new demand.

As yet, however, private capital still plays a relatively small part in bridging the gap between creditor and debtor nations. American subsidiaries abroad ploughed back $974 million in 1956; and there is a considerable transfer of US capital between third countries, particularly by the oil companies. Net American investment abroad, however, does not compare in scale with net aid. It rose from $488 million in 1955 to $980 million in 1956. Britain invested a net total of some £160 million abroad, Switzerland (another leading exporter of capital) some $350 million. These figures do not reveal the large amounts of capital which almost every industrial country has been exporting through export credits, usually backed by some form of state insurance. As the volume of exports grows, the sum of this form of overseas lending is steadily growing—too much, some people feel today. Certainly, like aid, it is one of the bases on which the exports of the industrial west have been built, and whose sudden reduction would be perilous.

being abused? Do cloth-capped employees lack the sense of responsibility of their white-collared colleagues?

Past experience with such schemes does not suggest that they do. After an initial period during which some employees savour the new pleasure of a leisurely dig in the garden at the company's expense, the incidence of sickness has usually fallen off, just as the run on spectacles did when the health service had been running for a while. A new law which makes sickness no longer a financial burden is bound to lead to a quite justified increase in the numbers who stay away from work. The details of this west German advance in welfare are controversial, but it has certainly breached the wall of invidious distinctions between cloth cap and white collar.

ANTARCTICA

Sir Vivian, I Presume

COLD, critics and calendar: Dr Fuchs beat the lot, after all, and the men who welcomed him on the outskirts of Scott Base (and the watchers in the world beyond) can have had little doubt that the Queen's reward of a knighthood would follow hard on his arrival. In the end he was lucky with the weather, for the murderous Antarctic winter has been hesitant in its return this year, and Scott Base was still sparkling with sunshine when he reached it. He also curtailed his daily schedule of scientific work once he had passed the Pole, taking seismic soundings only every 60 miles instead of at 30-mile intervals as he had in the first half of his journey. Nevertheless, he finished the passage with a day to spare of the hundred he had allowed himself when he set out, and he has demonstrated that he was right, and Sir Edmund Hillary was wrong, in the dispute that raised the polar temperature so spectacularly last January. In retrospect, their dispute seems to have been no more than a difference over the degree of risk it was proper to run; events have justified Dr Fuchs's greater adventurousness, and the headlines which must have been so embarrassing to both men last January also served to draw attention to his boldness.

This may prove to have been the last major example of a certain kind of voyage of exploration: the kind in which the primary object is to test man's endurance and courage rather than to produce practical and utilitarian results. It is true that Dr Fuchs has gathered a good deal of scientific knowledge. It has now been established that, under the ice, Antarctica is a single and undivided continent, and no doubt his notebooks will yield a good deal of more esoteric information. But (dare it be said?) this was not the principal purpose for which the expedition spent half a million pounds. The Everests have now been climbed, the deserts crossed and the jungles penetrated. Man is looking outward into space; and although this is going to demand just as much bravery from the explorers who venture out into it, it is doubtful whether the world they set out from will allow them to make their journeys simply for the purpose of saying, "We got there." It seems that the aim will be to put the stars and stripes on the moon before the hammer and sickle gets there, to erect observation posts in the outer void, to claim planets for an ideology. Romantics, looking back to the time when mountains were conquered to prove something about the human spirit, will be entitled to feel a little wistful.

BOOKS

Lerner's America

America as a Civilisation: *Life and Thought in the United States Today*

By Max Lerner.
Cape. 1,036 pages. 50s.

TOCQUEVILLE, Bryce, Lerner? Or Laski, Lerner? The third of a trio of masterpieces or the second of a pair of failures? The question cannot be evaded; the scale and the claims of "America as a Civilisation" demand a verdict. "What I have tried is to grasp—however awkwardly—the pattern and inner meaning of contemporary American civilisation and its relation to the world of today."

A thousand pages and over 470,000 words are by no means excessive for such a theme. (For a smaller United States Tocqueville took 300,000, for a considerably less complex America Bryce exceeded 700,000, while for FDR's USA, Laski ran to nearly 370,000.) But the writer who is going to take so long has one primary obligation; he must be readable. How readable is Lerner? It is typewriter prose. Tocqueville's had a quilled clarity, Bryce's a late Victorian longhanded ease and directness. Laski's, alas, seemed not to have been written at all, but taken down from the lips of an argumentative and repetitive lecturer. Lerner writes fluently and often informally; he is prodigal with words, ready with metaphor, often vivid in his depictions of the actualities of American life. He unfolds his thought more often than he crystallises it; there are aphorisms in the book, but they are infrequent; the paragraph is his unit of thought, the catalogue is more common than the clinching example. There is an engaging honesty about this, a deliberate and welcome eschewing of easy effects. There is sometimes also a consequential rallentando, which incites the reader to judicious skipping. More serious, however, is the intermittent surrender to the lazy-minded jargon of American social science. Too often the nervous strength of American speech, which Mr Lerner so rightly praises, is overlaid with the clogging polysyllables of American academe. "Life goals," "peer groups," "surrogates," "syndromes"—it would be unfair to exaggerate their frequency, but whenever they occur they fall like a film between the object and the comprehension.

Fortunately, Mr Lerner is well aware that America is something more than the subject matter of its social sciences. Indeed the great strength of his book, and the one which most qualifies it for its admission to the trinity, is the obvious breadth and catholicity of its author's interests. Of course, there are limits and limitations. Mr Lerner writes as a Jew, as an urban American, as an East Coast intellectual, as a Democrat. But he has achieved not only a critical awareness of his partialities but also a very impressive transcendence of them. The spirit of the book is large and generous. Even where he disapproves he does not carp—and this despite the fact that he has taken pains, like a good American journalist, to be up to the minute with his coverage of social and political phenomena. It is no longer a mark of distinction for the American intellectual to display a gusto for the interests and entertainments of the masses, and Mr Lerner's expertise in "the lively arts" may be taken for granted as basic equipment for any Tocqueville *de nos jours*. More impressive and important is his success in marrying the intellectual analysis of the various modes of

American experience—business, politics, education, home life and class or race relations—to a graphic re-creation of their concrete diversity and uniqueness. This is one of the many points at which he outshines Laski, while in range he surpasses Bryce. He is not, of course, omnicompetent. The American farmer remains a little remote, the soldier appears rather as an abstraction marching. (No European will forgo a smile at reading of the "Prussian discipline" of the American army.) But no one is very likely to improve on Lerner's three-dimensional rendering of life as Americans actually live it, on his fair balance between thought, experience and emotion. This is no small achievement when it is sustained over such a rich variety of topics.

Laski's vision of America was basically Marxist. Lerner, whose position, *mutatis mutandis*, has so often paralleled Laski's, remains a determined liberal. "American capitalism has been overpraised and overindicted"; the American consumer is acclaimed as the ultimate king; the Big Corporation, with all its faults, is enduring and acceptable. Not that labour is sold short; indeed Beck and Hoffa might fail to recognise themselves in this rosy-tinted group portrait. Nor can the middle classes complain, unless they are going to be hypersensitive at having it demonstrated that they are human too. Indeed the dominant note of the book is an acceptance of America—not merely for its promise, but also here and now for its performance. Sometimes this mood takes the edge off the analysis; too many sections (for instance, Education) end wtih a reassuring, vague and waffing clausula. Rather too much is dusted under the mat. For all that, the general result of this mood of acceptance is a healthy one. It still leaves plenty of scope for criticism, but it is criticism in terms of America's own ideals and values, criticism which permits (indeed requires) a full and balanced delineation of the whole society under discussion.

The "master concept," consequently, in terms of which Mr Lerner organises the enormous mass of phenomena labelled "America" is our old friend "the open society." It is not a sharp tool, and those who find this book unsatisfactory will probably have their dissatisfaction rooted in a distrust of so blunt an instrument. But, like the frontiersman's axe, it is a multi-purpose implement that can clear a lot of ground and open up large areas for further cultivation. What is more, no one who rejects it can ever hope entirely to understand America—as a civilisation, or as anything else.

Soldiers as Governors

Allied Administration of Italy, 1943-45

By C. R. S. Harris.
HM Stationery Office. 479 pages. 42s.

ALLIED Military Government was administering shifting stretches of Italian metropolitan territory from the summer of 1943, when the first of its officers landed in Sicily and quickly established a headquarters in Syracuse, until the last day of December, 1945, when establishments were closed down in Northern Italy. (It continued, however, in the disputed Trieste territory for some ten years longer.) As soon as the invasion of Sicily as a joint Anglo-American operation had been decided on by the Casablanca Conference in January, 1943, General Eisenhower started planning for the military government of conquered territory. Direct rule was considered but excluded as impracticable. Yet only in June was the idea definitely abandoned that General Alexander, as the prospective military governor, should start his reign by dismissing all the prefects and mayors in the island. The Americans were much influenced by the hullabaloo caused by co-operation with Darlan. The British, on the other hand, had an officer well qualified to give an opinion—Lord Rennell, who knew Italy intimately and had behind him the experience of serving as chief political officer for the overrun Italian colonies in East Africa. He seems at all stages to have favoured the minimum of interference with Italian organisation and the exercise of control from outside. These considerations, and the problem of finding suitable officers to exercise the control in an equally balanced Anglo-American operation, open Mr Harris's volume.

It was difficult for AMGOT—the initials first used for the Allied Military Government of Occupied Territory, subsequently giving way to AMG, because, so the rumour went, Amgot was discovered to be an obscenity in a Levantine tongue—to get its purposes and needs taken seriously by the purely military men in the field, and the Sicilian operation found it relying largely on requisitioned private transport. The officers were at once thrown into a welter of tasks, ranging from the dismissal of notorious Fascist officials and vigilance over the insurgent separatist movement in the island, to the all important but very elusive control of civilian food supplies. When, two months later, the south Italian mainland became the objective of the Allied invasion, Amgot had vindicated itself in military eyes.

However, high politics and the war between them caused unforeseen developments in its operation. An Italian government friendly, if only by force of circumstances, to the Allies came on the scene, but so helplessly as to require energetic buttressing. An Allied Control Commission entered into being to prop it up and vitalise it; and as the armies slowly moved forward two tasks of military administration were distinguished: that of controlling the Italian government in the rear, as it gradually assumed responsibility for the back areas, and that of controlling (more directly) the areas closer to the front. The most forward areas of all made up yet another class, and from early 1944 these alone were designated Army AMG territories. In a map of Central Italy as on October 24, 1944, one of the several which adorn this book, a line across Italy about fifty miles north of Rome divides a blue territory to the south, all of which had by then been made over to the Italian government, from a white territory to the north still under Allied military control. Some fifty miles farther to the north this is in turn terminated by a jagged line still farther northwards of which is army AMG territory, stretching up to the "Gothic" front line then running across Italy from Ravenna to La Spezia.

In the first rather static winter of war in Italy, the high-ups sorted out the considerable confusion accompanying the change of emphasis in military administration from the task of military government proper to that of armistice control. General Mason Macfarlane, first head of the Mission to the Royal Government, was withdrawn for reasons of Anglo-American symmetry in favour of the American General Joyce, who became head of what had become the Commission, only to be ousted again shortly by General Mason Macfarlane. He stayed the course until he fell foul of Mr Churchill when he showed sufficient sensitivity to Italian politics to allow Marshal Badoglio to be ejected from headship of the Government. (It is true that at the same time the general became seriously ill.) Leadership of the economic side of the Commission was taken up in almost scandalously fleeting succession by high-powered Americans. Pretty far from all this, though dealing with tangled local politics (for instance, in Sicily with the revival of the Mafia and with separatism) as well as with questions of bread and oil, the Civil Affairs Officers, where they were good, became revered father figures of the communities they were overseeing in such extraordinary circumstances.

One has heard, in postwar Italy, no bitter denunciation of this Allied authority in its various nuances between outright rule and advice that reserve powers could make very cogent. Indeed in Trieste, AMG seems to have left a record of enviable competence and expedition. Probably the most unimpeachable work of all was done by the ten dozen police officers, prevailingly British, who helped each part of Italy in turn to get control of public order on or beyond the edge of breakdown. Their commander is now one of Her Majesty's judges.

The author of this official history, who was himself highly placed in military administration in its first Italian year, has interwoven the story of its changing pattern with that of the Italian politics which set its background. The two themes overlap and they have been dovetailed in a scholarly way. The second obviously yields better material for a flowing pen, and there is rather more of it than one might expect in a volume of military history. But the first is expounded in conscientious detail.

Radar

Three Steps to Victory

By Sir Robert Watson-Watt.
Odhams. 480 pages. 30s.

IN the summer of 1940, the victorious Luftwaffe, advancing to the conquest of Britain, everywhere found the Royal Air Force in the air waiting for them, in spite of its known inferiority in numbers; faced with this bewildering ubiquity, the Germans lost faith in their intelligence, and the heart went out of their attacks. The "eyes" that enabled the exhausted RAF to send its last reserves where they were most needed were provided by the makeshift radar screen erected in the nick of time by Sir Robert Watson-Watt and his small company, aided in the last months by scientists "shanghaied" from the universities. Everyone agrees that it was a damned close-run thing; Sir Robert goes further: "By God! I don't think it would have been done if I had not been there." This book has been written in vindication of this candid view, and as an impassioned plea for recognition (which Sir Robert evidently feels has not been accorded) of the part he and his devoted band played in defeating the invasion of Britain.

The book started as an orthodox autobiography but "turned relentlessly into the biography of a system"; disarmingly terming himself "a very human being," Sir Robert has kept it at an intensely personal level, and has allowed his trumpet full blast. The general reader in this country, only dimly remembering the controversies over the "invention" of radar, will probably view the polemics dispassionately (some of them are devastating) and give the Royal Commission the credit for having settled the matter satisfactorily; but in some countries abroad, they may come as something of a revelation. Trumpet blasts notwithstanding, however, the book gives an absorbing account of the development of radar as seen from the very centre of things, from the days of the first makeshift tests, the race against time to "give them the third best to be going on with," to the later incredibly elegant developments brought out of the "icebox," and the massive mobilisation in support of the invasion. Except incidentally, no description of the working of radar systems is given, and the text abounds, unfortunately, in unexplained initials (ASV, CHL, etc.) designating the various different applications; but the main lines of the story stand out clearly enough, embellished by impish, though sometimes tortuous, wit.

Sir Robert, in his moment of destiny, exhibited the combination, possessed by all true inventors, of expert technical knowledge with intuitive tactical sense. His earliest suggestions made it clear that, to be effective, the technical gadgets would need to be intimately keyed in with an operational network; without this, however perfectly they performed, they would be sterile. This he regards as an essential element in the invention of radar, and underlines it by a devastating analysis of the failure of radar to prevent Pearl Harbour and the escape of the *Scharnhorst* and *Gneisenau*, when technical adequacy was rendered impotent by imperfect human organisation.

Sir Robert baldly claims to be the inventor of radar. Like many another invention, it was in many minds at about the same time. He scrupulously examines all other claims to priority, and puts them all to the test of practical effectiveness. His own two trump cards are, first, his historic memorandum of February, 1935 (here reproduced in full, with a translation into plain words) in which all the basic principles subsequently incorporated in numerous radar systems are enumerated at one stroke; and, second, the fact that the British radar system, developed under his guidance, was the first in effective operation and was the model for all subsequent ones.

Semi-Amateur Sociology

La Nature Sociale

By Alfred Sauvy.
Librairie Armand Colin. 291 pages.

THIS book, subtitled "Introduction à la Psychologie Politique," is the work of a self-confessed amateur whose own considerable expertise lies in the field of statistics and administration. As the author freely admits in a most disarming preface, it observes none of the decencies of scientific specialisation; it is neither comprehensive nor systematic; it is unbuttoned, rambling, often farfetched, deliberately eschewing technicality; a quarry rather than an edifice. Not very surprisingly, it is fearfully uneven. On politics in the widest sense (power, responsibility, liberty, the formation of groups) it is sometimes stimulating, often agreeably epigrammatic, but not especially original and for the most part disappointingly superficial.

So far, so bad; one might write thus, almost interchangeably, of all too many well-intentioned think-pieces. As soon, however, as one reaches the field where M. Sauvy the professional statistician can bring his particular gifts to the aid of M. Sauvy the political psychologist—gifts which can be summed up as a sense of tempo and of orders of magnitude—the picture changes. The central core of "La Nature Sociale," dealing with the psychology of technical innovation and conservatism, with "felt wants" and discontent, with the evolution of living standards, with the mutual interaction of demographic change and psychological climate—is a treasury of excellent things; some obvious (but only as Columbus's egg was obvious), some uncomfortably penetrating, some illuminating by unexpected juxtaposition. On these topics it is hard to think of anyone who has written with more astute, humane and realistic wisdom.

The style throughout is lively and shapely, in that excellent tradition of civilised intercourse—poles removed from "popularisation"—which France has preserved and Britain so largely lost; "La Nature Sociale" genuinely is a book for the intelligent layman. Its scheme of reference is perhaps too specifically French for translation to be justified; but to any reasonably bilingual English reader—especially if he be an economist—it is strongly recommended.

Northern Democracy

A Short History of Norway

By T. K. Derry.
Allen and Unwin. 281 pages. 25s.

THIS is a straightforward, conventional history of Norway—the first one to appear in English. As such, it should be useful to tourists, businessmen and students who want a general introduction to Norwegian history, especially as Norway, like the other Scandinavian states, is usually ignored in school textbooks, except when fighting for, or against, the English. The excellent selective bibliography of English books on Norway should be particularly valuable.

But though he has written a competent and concise account, Mr Derry's book might have been fuller and more interesting if he had not had to compress all the principal events from the Viking raids to postwar rearmament into 250 pages, and had not stuck so strictly to chronological order. This is particularly true of the period up to 1813, to which only half the book is devoted. The material might have been easier to handle if it had been arranged in a series of essays on the factors that created modern Norway so that Mr Derry could have discussed such subjects as the legal and administrative system in the middle ages; the role of the church; the reasons for the bloodless change to Lutheranism; and education under Danish rule. Since there is a chronological table and an excellent index, the time sequence could have been broken up without much prejudice to those who will use the history principally as a reference book.

Much more space is given to the last hundred and fifty years and the treatment is correspondingly broader, particularly on the problems of economic development in the nineteenth century. But there is little on the interwar and postwar period. It is still difficult for those who have grown up since 1945 to piece together, in any detail, what happened to the peripheral parts of Europe in the twenties and thirties, and this history only partly fills the gap.

Survey of Government

The British Political System

By André Mathiot.
Hogarth Press. 352 pages. 30s.

WHEN Professor Mathiot's book appeared in French a couple of years ago, it received a deservedly warm welcome; it proved, for French students, an introduction to the political affairs of this country that was at once up to date and sympathetic. It might be suggested that the chief justification for translating a book of this kind is to give to British

students a specifically French or continental viewpoint on British institutions. On the whole, this book only partially achieves this job, since Professor Mathiot is not so much describing a system that he has observed in operation as summarising and explaining the existing British literature on the subject. He thus tends to adopt the complacency of certain writers on the subject, for instance Sir Ivor Jennings, and the book is indeed recommended in the preface by Professor W. A. Robson for its defence against suggestions that any new major problems exist. Those who are less content with the quality of the House of Commons, the disposition of its working time and the possible consequences of the electoral system may feel that Professor Mathiot's admiration carries him too far. Nevertheless, the book may fulfil a quite different purpose; better than any comparable work by an English author, it provides an introductory survey to the whole field of British government, based on a logical progression from the electorate to parties, and through cabinet and parliament to the judiciary and administration.

The translator has eliminated some minor slips in the French edition and brought some of the statistics and the reading lists up to date. On the other hand, a number of errors remain, and the rather free handling of the text by the translator has actually introduced a few more. The reference to King George V's attitude to the dissolution of Parliament in 1910; the account of the 1867 Reform Act; the reference to the single transferable vote in university constituencies are all incorrect. The reader would wrongly gather that privy councillors sometimes exercise a right to sit in the House of Lords without being peers, and would be wrong if he thought that the presence of General Smuts in the Imperial War Cabinet without being a member of the British House of Commons was equivalent to the temporary retention of Ministers who may have lost their seats at a general election. One must admit to very severe mistrust of a translator who can at one and the same time show ignorance of a fundamental rule of French grammar and of an important individual in the history of politcial studies by translating "du Genevois de Lolme" as "of Genevois de Lolme."

Economics without Prices?

The Structural Interdependence of the Economy: *Proceedings of an International Conference on Input-output Analysis.*

Edited by T. Barna.
John Wiley, New York. London: *Chapman and Hall.* 437 pages. 60s.

KEYNES'S theory of employment focused attention on the level of activity of the economy by means of two sweeping assumptions: first, that production consists of only two commodities, producer goods and consumer goods, and, second, that commodities cannot be substituted for one another. This procedure enabled him to give a clear-cut analysis of the then important problem of "unemployment," but it was apparent that if his analysis was to be applied more generally, these two drastic assumptions would have to be relaxed. Input-output analysis is an attempt to relax the first assumption while maintaining the second. The economy is pictured as producing a large number of commodities; but there is only one, rigidly determined, method of producing each, and no substitution is possible.

The greater part of the present volume is devoted to applications of this theory and to the problems that arise in doing so. Outstanding, perhaps, is the long and very interesting discussion by Dr H. D. Evans of the computational problems of input-output. There are also papers surveying the use of the method in six European countries, and two papers by Professor H. B. Chenery discussing its application to international trade and to economic development plans. One is impressed by the generally high standard of the papers, and by the immense amount of precise, detailed work they embody.

Unfortunately the whole edifice, so carefully constructed, rests on very shaky foundations, for relaxing Keynes's first assumption renders his second quite implausible. The larger the number of commodities considered (that is the more narrowly commodities are defined) the more important does substitution become. Fuel and machinery may not be substitutes, but coal and oil clearly are. One must doubt whether calculations, however elaborate, can give useful results when they are based on so unreal an assumption.

Of course, as Friedman has pointed out, what matters about an economic theory is the validity of its conclusions, not its assumptions. It is thus quite legitimate for economists, if they wish, to devote themselves to testing even the most unlikely hypothesis. But public policy is a different matter. Input-output constitutes a theory of the economy that ignores the price-mechanism, and as such it has a considerable appeal to those who tend to regard the price-mechanism as a mere hobby-horse of the economist. (Its rapid rise to favour with so many civil services is perh. ps evidence of this appeal.) It may therefore have the effect that economic policy-makers will pay even less regard to prices in the future than they do now. The extremes to which such an attitude can lead are illustrated by Mr P. N. Rasmussen's paper, which is devoted to an elaborate analysis of how "to compensate [from the point of view of income] for given changes in the output prices of the other industries." A little learning is a dangerous thing—particularly in the hands of civil servants.

This is not to suggest that all the work reported in this volume is wasted—far from it. While one deprecates its use as the basis of an ambitious theory, the input-output table can justify itself on more modest grounds. As Professor J. R. N. Stone shows in an elegant paper, it provides an alternative and in many ways more interesting way of presenting the national accounts. From this point of view, the table has no particular causal hypothesis attached to it, but merely describes the money flows between sectors in a given year.

In a second paper, Mr Stone sets up a system of linear expenditure functions for consumers which takes explicit account of the price-mechanism, but yet includes the input-output theory as a special case. Such a generalisation of the input-output theory is a step in the right direction, but perhaps more important are the papers by Dr G. Morton and Dr H. Markowitz. They deal with the much less well known methods of analysis called variously activity analysis, linear programming and process analysis. They are not open to the same objections as the input-output theory, as they avoid both of Keynes's assumptions and allow most effectively for substitution and the price mechanism. One can only hope that some of the popularity of input-output will soon be transferred to its more deserving cousins.

OTHER BOOKS

LIEUTENANT IN ALGERIA.
By J. J. Servan-Schreiber. *Hutchinson.* 206 pages. 16s.
The original French edition of this important book, in which the youthful editor of the Paris *L'Express* vividly describes his experiences and impressions during six months of active service in Algeria, was reviewed in a leading article of *The Economist* on July 6, 1957.

ARTIFICIAL INSEMINATION IN THE HUMAN.
By A. Schellen. *Elsevier.* London: *Cleaver-Hume.* 420 pages. 72s.
A great deal of this book is medical; but the layman will be interested in the very full account given by Dr Schellen of public opinion in different countries, in so far as it has expressed itself, on the pros and cons of artificial insemination. He also gives the views of the different churches and the legal position. His survey is certainly wide and thorough; but his outburst against artificial insemination by donor in his epilogue makes one wonder whether his selection of material has been as objective as it appears to be. Moreover, his estimate of the number of artificial insemination cases in England —6,000 a year—is wildly exaggerated.

The Free Trade Area

SIR—It is difficult to see how the French counter-proposals, outlined in your article of March 1st, can expect to be taken as a desirable or workable alternative to the original scheme for a Free Trade Area put forward by the British Government. It would seem that France has put forward two suggestions: firstly, that compensation for opening French markets to industrial goods produced in all the OEEC countries should be obtained from the Commonwealth; and, secondly, that the new framework should be based on individual industries and not upon all industrial goods generally.

There are three obvious objections to the Commonwealth being asked to provide the cushion for French industry:

1. It seems to have been overlooked that the Commonwealth countries are entirely independent in trade as in political matters. Whatever the United Kingdom might recommend (if the French proposals were to be generally accepted), the Commonwealth countries themselves would finally dispose.

2. It is by now pretty well known that the Commonwealth's needs are for capital and not for more industrial goods. The Board of Trade has for some time been acutely aware of this fact, and it is a conditioning factor of the whole Commonwealth attitude to expanding trade with Britain. Under the French scheme the Commonwealth countries would be obliged to open their markets, on the same basis as they are open at present to British goods, not only to the French, but to all the other members of the Free Trade Area. It is hardly conceivable that the Commonwealth countries with their own developing industries would be willing to give preferential treatment to all European countries in the foreseeable future, for at present they are only with difficulty persuaded to continue their preferential treatment of goods from Britain.

3. Over and above these issues is the fact that the "no-new-preference" rule of Gatt would surely prevent the French plan from succeeding. In view of the none too sympathetic attitude of the Extra-European countries to the Common Market in the current negotiations in Gatt, one could hardly expect this much wider scheme to obtain the virtually universal approval needed before the necessary waiver could be obtained.

As respects the sector-by-sector approach, is not the principal objection to this that it runs completely contrary to the general process of liberalisation of trade which has been so successful in Europe ever since the setting-up of OEEC? As your correspondent rightly points out, this proposal is largely due to the traditional protectionism of France, which is so much at variance with the attitude of her other Common Market partners, particularly Germany.

But there must be no doubt of the critical importance of the position of France in the free trade area discussions. I was startled to find on a recent visit to the French National Assembly, when Mr Maudling had the opportunity of addressing a small (but influential) meeting of French Deputies, that the Free Trade Area plan has never even been debated in the French Parliament, and surprisingly few of its members had anything but the vaguest idea of what it was all about. A big task of information and explanation throughout France as to what the Free Trade Area is intended to do, and its political as well as economic mission, is urgently needed.—Yours faithfully,

JOHN HAY

GEORGE ALLEN & UNWIN

The Cost of Algeria

SIR,—In the analysis of the military situation in Algeria which you published in your issue of December 28, 1957, you said that the cost of the Algerian war for France was enormous—£2 million per day, or 2 milliards of our francs—an outlay which in your estimation could not be maintained for long.

There can be no denying that the effort we here are constrained to make is both great and prolonged, but a few figures soon disprove that this effort is more than France can manage.

In spite of claims made by *The Banker* (the arguments of which are being taken up by the protagonists of abandoning Algeria), the pacification campaign is not costing France 700 to 800 billion francs a year. Close and objective study of the budget proves this.

Out of a total military expenditure of 1,001,224 million francs, the figure for North Africa is 362,673 millions. This figure is a long way below that of two billion a day. Moreover—a point too easily forgotten—the expenditure there represents the maintenance of the army stationed in North Africa. Since 1956 all recruits do their military service in Algeria as in France. Whether these effectives are stationed in the home country, in North Africa or in Germany, their maintenance costs the same. Were the pacification of Algeria to come to a stop tomorrow, the budgetary costs would be no less because the state would still have to clothe, lodge and feed the contingents called up, and because for the cost of the actual military campaign would at once be substituted other expenditure arising out of the redeployment of forces which we would have to endow with new arms and new material in order to fulfil our Atlantic obligations.

Moreover, experience has proved to us that a policy of withdrawal is not a policy of economy. The independence granted to Morocco and Tunisia has in no way lightened our expenditure.

Were France to abandon Algeria to the FLN, what would it not have to pay to meet the cost of repatriation and the reinstallation in metropolitan France of 1,100,000 of our countrymen? Even this figure does not take into account the hundreds of thousands of Moslem Algerians who are French citizens and who would likewise have the right to come to France because, having placed their faith in us, they would wish to ward against being massacred.

In the present state of affairs, therefore, the financial effort which the pacification campaign in Algeria is costing France does not exceed the nation's resources, and it can continue to carry the burden for as long as will be necessary. What is more, has France the right to abandon Moslem masses who know that there will be no liberty for them were France to disappear?

In common with numberless Fascist organisations, the Algerian rebellion seeks to conceal its real character by the use of democratic terminology. For proof of the totalitarian character of the FLN one need but recall its systematic refusal to hold free and supervised elections. It is the electoral principle itself that the FLN fears, and not without reason.

France, by contrast, considers that Algeria can speak with but one valid voice—that of the Algerian people which the FLN, despite all its claims, would not represent unless it were to massacre all those who do not submit to its totalitarian ideology.—Yours faithfully,

S. MICHEL GORLIN

Office of the Minister for Algeria, Algiers

The American Economy

SIR—In his letter to *The Economist* of February 22nd, Professor Slichter is quoting correctly the US government statistics on retail trade, but these are apt to be misleading because they are so heavily weighted by food sales. *The Economist* stated correctly on February 8th that, to most retailers interviewed by this correspondent, the customers appear to be "not buying."

In making comparisons with 1957, most retail analysts are inclined to exclude the sales of food, drugs and other necessities that increase every year in line with the population. What they watch for fluctuations are (1) automobiles, (2) home appliances, and (3) department store merchandise. In the first two of these lines, store sales are far below the earlier forecasts based on income or credit conditions. Department store business was better than expected in December and early January, but the economists for some of the large stores believe these gains were due to special factors and are forecasting a further decline for the months just ahead. As a result, very little new merchandise has been ordered by the above categories of retailers in the first quarter, and manufacturing activity has definitely been affected—in textiles and apparel, as well as in durable goods.

It is perfectly true, as Professor Slichter states, that the areas of the US economy affected by the reluctance to buy durable goods and other expensive items are smaller than the areas of necessitous consumer expenditure and government expenditure. *The Economist* article did not state at any point that general business was being dragged down by the consumer sector. But it is being held back from the dynamic recovery that might occur with a strong demand for consumer durables. And there is no sign of recovery in this demand from the fact that families, beset by higher food prices, are continuing to spend a large share of their income in food stores.—Yours faithfully,

YOUR CORRESPONDENT IN NEW YORK

Commodity Reserves

SIR,—Your review of *Utilizing World Abundance* asks: "How could a government . . . permit a body 'as aloof as is the judiciary' to issue government guaranteed stock without limit?" No such leap in the dark is involved in the system I advocate. The precise conditions of issue of "stabilizing bonds" and the commodities in which the proceeds could be invested would be specified in the statutory Price Stabilizing Corporation's charter. Its possible financial needs could be accurately measured in advance, all monies so invested being backed by durable essentials of constant utility-value. You instance copper, suggesting that the corporation might need to finance the holding of several "blocks" each of which, I have suggested, might be one eighth of the nation's average annual usage, or (say) 40,000 tons.

Taking recent prices at (around) £160 per ton as given, and deducting 12½ per cent (as proposed) the initial copper index would be £140; the initial low point (10 per cent below index) would be £126—at which the corporation would stand ready to buy on delivery in units of (say) 500 tons; and the initial high point (effective only when the corporation had acquired reserves at the low point) would be £154 (10 per cent above index) at which it would sell on demand, in the same units of quantity—buyer collecting. Thus, the total to be invested to acquire one "block"—40,000 tons at £126 per ton—would be £5.04 mn. The initial index and points would then fall automatically by 5 per cent, and precisely the same reductions would be automatic at the intake (if any) of each additional "block." In the improbable event of PSC's having to accept (say) four "blocks," the progressive investment would be as now shown (the bracketed figures being the then new low and high points respectively—in effect the then minimum and maximum market prices per ton for units of 500 tons) at each stage of "block"-accumulation: two "blocks," £9.83mn (£119.7-£146.3); three "blocks," £14.36mn (£113.4-£138.6); four "blocks," £18.65mn (£107.1-£130.9); and so on down the scale, with the process going into reverse with any diminution of "blocks" held.

To the extent that the corporation thus established stocks of a wide range of essential basics, the strength of the £ would be enhanced at home and abroad; because it would then be backed by reserves of those commodities whose acquisition from overseas is the prime purpose of our external spending. Continuity of supply of raw materials to secondary industry at realistic and stable prices would be a boon indeed.

If supplies should greatly exceed user industries' physical absorption, with no PSC to take in the slack and maintain basic producers' reciprocal purchasing power, the result could be as disastrous as in the inter-war years.

Your associating of my proposals with America's policy resulting in burdensome surpluses disregards my text; as does your reference to what you term the "risk" that America might unload such surpluses on a British price stabilising corporation. The transfer, with all the safeguards provided under the proposed system, of a portion of the durable commodities from where they have become burdensome accumulations to a country in which they would strengthen internal economy would be demonstrably advantageous—without the word "risk" having any applicability.

L. ST. CLARE GRONDONA

London, S.W.1

Our reviewer states: Mr Grondona argues that if his plan were adopted now when copper is about £160 a ton, PSC might not have to buy much. It is also relevant that if the plan had been adopted a year ago when copper was over £270 a ton, the country might well by now have bought and stored more than half the British annual consumption at a cost for one commodity alone of £57½ million.

★

SIR—Space limits for your reviews, I know, sometimes inhibit full fairness; but let me, please, clarify two things. Mr St Clare Grondona did not have to "persuade" me to support his scheme, other than by the cogency of his book. Secondly, your reviewer's wording does, I think, less than justice to the author's care in meeting, in the scheme, the very objections of your reviewer. For instance, I may have seemed to the latter to make "no reservations" in endorsing the scheme; but neither the author nor I suggested that Britain could, or should, become the only receptacle for all the world's surpluses, against inflationary sterling. The truth, I think, is that most of the world yearns for some kind of price stability; it can only be achieved hardly, due to the complexities of economic dynamics; yet—as your excellent review of Leibenstein's book on economic backwardness and economic growth on p. 751 of your same issue shows—economists themselves still lack reliable measuring instruments. I like Mr St Clare Grondona's scheme simply because it offers us, in my view, the nearest-yet approximation to one.—Yours faithfully,

GRAHAM HUTTON

London, W.1

AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

To the Summit—with Doubts

WASHINGTON, DC

MR DULLES has received unusually strong endorsement from practically all sections of the American press for his carefully reasoned rejection of the latest Soviet essay in "pre-summitry." At his press conference on Tuesday, he underlined the illogicality of Russia's insistence on selecting the agenda from items where the known positions of the governments "indicate a probability of agreement" while refusing preliminary negotiations to develop such positions where they do not at present seem to exist. As is his wont, the President contrived on Wednesday to give a hearty endorsement to Mr Dulles, yet at the same time to present a sunny-side-up view of the American attitude. Apart from an oddly phrased undertaking to start down "any possible avenue no matter how crooked, no matter how narrow," towards the easing of tensions in the world, Mr Eisenhower intrigued his audience by a casual suggestion that a summit meeting might last much longer than a few days, and that in that case he might take advantage of the evident eagerness of the itinerant Russian leaders to come to the United States.

The predominant feeling is that the Russians, by overreaching themselves, have played into the hands of Mr Dulles, although there are only a few voices to suggest that this may be precisely what they had in mind. The misgivings with which American leaders in both parties view the path to the summit stem from their profound lack of faith in the staying power of public opinion in democratic countries. From his long personal experience of negotiating with the Russians Mr Dulles spoke feelingly, in his recent address to the National Press Club, of their "highly legalistic" search for loopholes which will subsequently enable them to escape their obligations, their withholding of concessions until the very last moment, and their readiness to outsit the West in the hope that popular impatience with what appears to be dilatoriness over technicalities may induce western negotiators to greet any "agreement" as a "success, without regard to the contents or dependability." Mr Dulles's abiding dread, as he expressed it on Tuesday, is of a summit agreement which would be a "fraud or a hoax," or merely a spectacle which would diminish the West's readiness to sustain its efforts. Nor does he want a "meeting which would expose differences in an acrimonious way."

Mr Dean Acheson goes even further. In his book, "Power and Diplomacy," which, although taking sharp issue with American military strategy, turns out to be an elegant exegesis of Mr Dulles's policy, the former Democratic Secretary of State writes that:

> It is my conviction that the only agreements which are possible now would be disadvantageous to us and would not diminish the dangers of nuclear war.

Mr Acheson deals especially with various proposals for the "disengagement" of the forces of the great powers in Central Europe, a subject to which he returned with polemical asperity when he practically read Mr George Kennan out of the Democratic party. He is convinced that, if American forces were withdrawn—from continental Europe—Western European opinion would refuse to believe that the United States was still prepared to risk its own survival for the sake of protecting its allies. There would thus be a fatal impulse to neutralism and appeasement in Europe; even if in the end it turned out that communists and Europeans alike had miscalculated American intentions, this would be scant comfort because as a result of the miscalculation the world would have blundered into nuclear war.

Indeed, among those American foreign policy experts who, unlike Mr Acheson, do favour exploring the possibilities of disengagement there are many who visualise it as bringing an additional, but acceptable, risk of war. To them Mr Dulles's policy, like Mr Acheson's, suffers from the defect of accepting the *status quo* in Eastern Europe. Military disengagement would offer the chance of an aggressive but more inspiring opportunity to disrupt Eastern Europe regimes politically and to bring about the "liberation" which Mr Dulles once promised but failed to provide. But for the time being General Norstad has convinced the Administration that the disruption to the strategy of the North Atlantic Treaty Organisation which "disengagement," or even "thinning out," would certainly cause would easily outweigh any political loss the Russians might perhaps suffer in Eastern Europe.

ALTHOUGH the State Department does have to take into account the pressures from Western European public opinion, it is essential to remember that the pressures from American opinion are quite different. The United States has for the first time become a potential front-line target. It has been reliably calculated that, if the Russians get 250 suitably aimed H-bombs through American defences in the first surprise attack, 72 million Americans will be killed and a further 21 million injured. If shelters against radiation were built, at a cost variously estimated at between $20 billion and $40 billion, the fatalities could, it is estimated, be reduced to only 31 million. Yet there is no sign of public support for a shelter programme and very little fundamental questioning of American policy.

Part of the reason for this may lie in numbness at the contemplation of a menace so unusual and so vast; part of it may arise from the extreme weakness of pacifist or near-pacifist elements within the left-wing of American politics; this is to some extent a consequence of the long and bitter battles which American progressives have had to fight to disentangle themselves from the communist embrace. At any rate the opposition Democrats, in contrast to the opposition parties in Western Europe, spend much of their time urging the Republican Administration to greater military expenditure. In the case of some Democrats, such as Senators Symington, Jackson and Douglas, this is because they have a basic conviction that the way to deal with communists is to stress military strength.

In other cases left-wing politicians want to spend more money on defence because they believe that its great wealth enables the United States to escape, if it wants to, the dreadful dilemma confronting the countries of Europe: if they place less reliance on the nuclear deterrent, then they have to put more reliance on conventional weapons—but these they cannot afford. American liberals therefore back the army's propagandists in calling for more emphasis on mobile land forces which could fight a limited war. They thus have a greater motive even than those who would depend exclusively on the H-bomb for avoiding a phoney relaxation of tension which would lead taxpayers to look for a dividend.

Moreover, while America's European allies tend to associate a stepping up of economic aid to underdeveloped countries with relaxation of world tensions, the first casualties of any new "Geneva spirit" would probably be the aid and trade measures now before Congress. Although Mr Adlai Stevenson pleaded, in his masterly address to the bipartisan conference assembled to campaign for these measures, that Americans should not be ashamed of their own best instincts, it is clear that the main argument in the attempts to sell the programme over the next few weeks will be the immediacy of the Russian challenge. The State Department is naturally suspicious of any "peaceful platitudes" that may tend to undermine this effort.

NEVERTHELESS, ever since the last Nato meeting, the Americans have been realistic enough to see that, if their missiles are to be accepted in Europe, they must make a further attempt to come to grips with the Russian leaders. The preparatory moves have been a wry illustration of Mr Dulles's remarks about the Russians' technical skill. The Gromyko memorandum on subjects for the summit rules out German reunification, and includes the temporary suspension of nuclear tests. The State Department does not expect to get anywhere with Germany this time and it does plan a new approach on disarmament which, if agreeable to the members of Nato, would separate the suspension of tests from the production of nuclear weapons.

While the Administration does not agree with Mr Harold Stassen, the President's former disarmament adviser, that the establishment of a limited inspection system in Russia and the United States is alone enough to link up with a suspension of tests, it is thinking of proposing a simplified "package." However, the principal obstacle to such a new approach, as Mr Dulles gently reminded the world press again this week, are the difficulties made by Britain and France, the very countries where the public is now complaining most loudly about nuclear tests. The complexity of the western position arises from the painful adjustment of allied requirements made last year in London. Mr Dulles is unwilling to disturb this arrangement just as he is unwilling to upset Dr Adenauer by dropping Germany from the summit agenda without much more incentive than the Russians are at present offering. The betting in Washington this week is that if western public opinion does not run out on Mr Dulles, his stubbornness will be rewarded with a better offer. Then, in spite of his professional reservations, to the summit all will go.

Acting President

In case of the . . . inability [of the President] to discharge the duties and powers of the said office, the same shall devolve on the Vice President.

THIS deceptively simple provision, which has baffled constitutional experts for a century and a half, now has an official, if temporary, interpretation. The President, who has always been admirably quick to draw the constitutional moral of his three illnesses, last week determined to wait no longer on a dilatory and divided legislature. Instead he announced that he had agreed with the Vice President that, if he should become incapacitated during the remainder of his term, he would ask Mr Nixon to serve as Acting President, exercising all the duties and powers of the office. If Mr Eisenhower were too ill to take the initiative, the Vice President, after consultation with unspecified advisers, would do so himself. In both cases, the President would determine when he was able to resume his full duties.

This informal arrangement, which would apply only to the present office holders, seems to rule out the risk of any dangerous period of paralysis in government if Mr Eisenhower should become incapacitated before his term ends in January, 1961. It also seems to make it less urgent, in theory at least, for Congress to act in haste and destroys one of the objections to the constitutional amendment which the Administration still feels is desirable: the length of time it would take to win the approval of two thirds of both Houses of Congress and the assent of three quarters of the states. In fact, since Mr Nixon is still a controversial figure and since powerful Democratic voices have been raised in protest, it seems more essential than ever that Congress should approve the President's decision to create an Acting President. In the view of Mr Rayburn, the Speaker of the House, Mr Nixon, in order to exercise the powers of the Presidency, would have to take the presidential oath—and this would at once endow him with the office, as well as its powers; Mr Eisenhower could not, constitutionally, ever resume his duties.

A bi-partisan Bill for a constitutional amendment, introduced this week by Senator Kefauver and Senator Dirksen, who stand at opposite ends of the political spectrum, would endorse the President's course, with the addition of two provisions, one for a resort to Congress should a President wish to resume his duties before the Vice President and the Cabinet believe that he is able to do so. This measure has the backing of the Administration and it stands a reasonable chance of passage—in some form and after some time.

Works or Taxes?

LAST week Congress's Joint Economic Committee, in its statutory report on the President's Annual Economic Report, recommended action to deal with the depression on much the same lines as those which the Administration is itself preparing to follow as it becomes more obviously worried about the economic situation. President Eisenhower recently made it clear that, while he regards tax reductions as more than a "last resort" weapon, he intends that spending on existing public works projects should be

accelerated first. The thirteen-member, bipartisan committee advocated such an acceleration for a wide range of projects—among them soil conservation, housing, road-building, flood control and school construction—on a federal, state and local level. It also wanted a start made on some that were only in the planning stage. The committee urged a further easing of the money supply and added that, if these measures fell short of bringing recovery, then "tax reduction would be in order," but "such action is not now recommended."

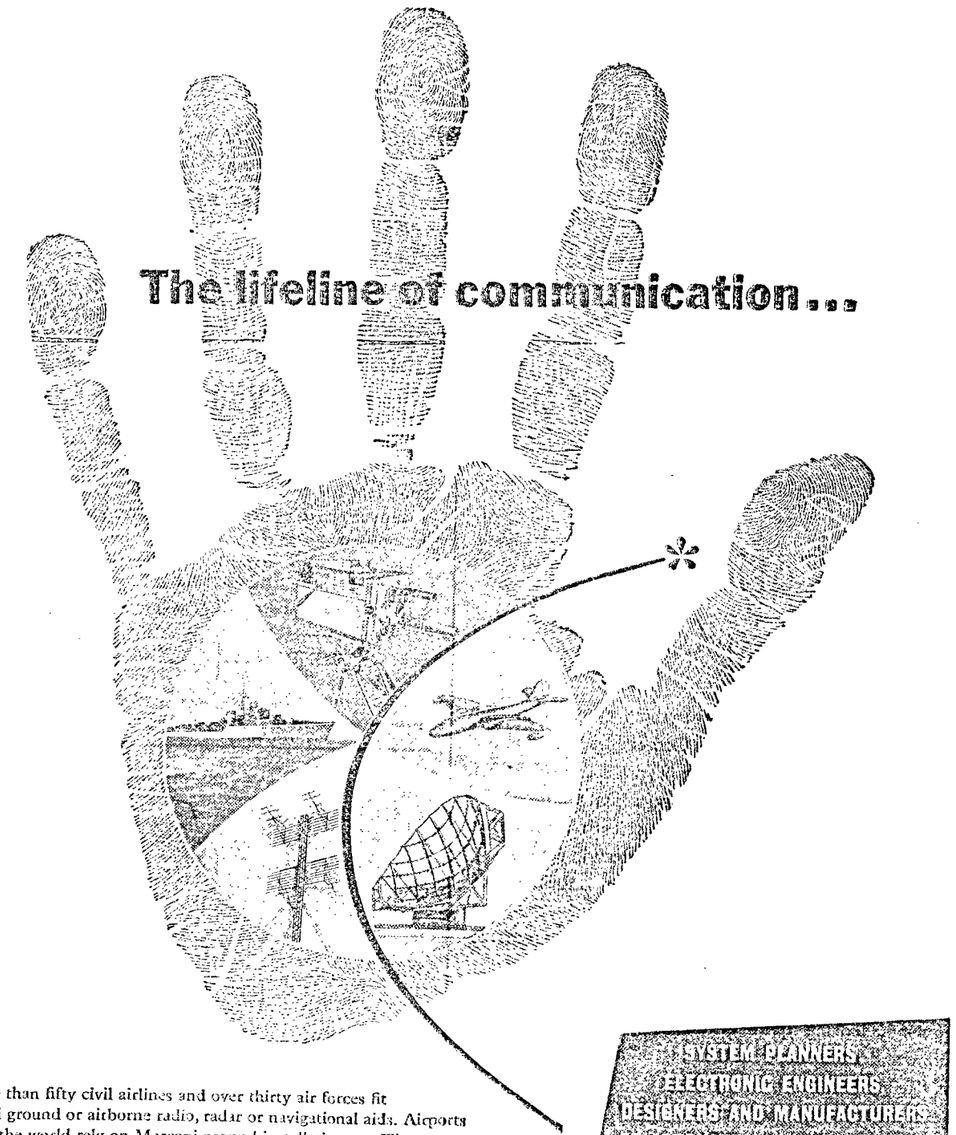
The lone voice of disagreement on the committee was that of Senator Paul Douglas of Illinois, one of the eight Democrats and the only economist in the group. In a separate dissenting statement, in which he argued that "true unemployment" was now 10 per cent of the labour force, not 5.8 per cent as is officially estimated, Mr Douglas advocated immediate cuts in income and excise taxes which would at once add $4.4 billion a year to consumers' purchasing power. He proposes either an increase of $100 in personal exemptions or a reduction of 5 per cent, to 15 per cent, in taxation on the first $1,000 of taxable income. Various other proposals are being prepared in Congress although the Administration has refused to commit itself on the subject.

Mr Douglas's objection to giving priority to public works is that even existing plans for federal spending cannot be accelerated quickly enough to counter the present danger. It is generally agreed that new projects planned now could not be put into effect much before the end of this year—that is, until after next November's congressional election—and Mr Douglas and some of the President's other critics fear that meanwhile the recession will "snowball" into a major capital-goods depression. Nor do such projects necessarily bring help where unemployment is worst.

Whatever action is taken, the most important consideration seems sure to be the speed with which it brings results. It looks as if the President will have to decide by mid-April whether or not to resort to tax cuts. By then the March figures for employment and incomes will be in and his prediction that the recession will flatten out this month will be proved or disproved. If it is disproved, Congress will step in if he does not.

Commissioner in the Bag

THE House subcommittee investigating the independent regulatory agencies has bagged its first commissioner. Mr Richard Mack, a member of the Federal Communications Commission, still protesting his innocence, resigned this week after Mr Sherman Adams, speaking for the President, told him that it was a choice between resigning and being fired. Mr Mack, a Florida Democrat who was appointed by Mr Eisenhower in 1955, became an embarrassment to the Administration when he admitted to the subcommittee that he had received substantial loans and shares in businesses from an old friend who hoped to see the commission award a valuable television facility in prosperous Miami to a subsidiary of National Airlines.



The chairman of the Republican National Committee is now trying to lessen the Administration's responsibility for Mr Mack by pointing out that he is a Democrat and that the Democratic Senators from Florida sponsored his appointment, while the Senate confirmed him. This partisan argument has some validity. Conservative Democrats, in particular, have not been inclined to look too closely at the conservative Democrats—often "Eisenhower" ones—selected by the White House to satisfy the law that the regulatory commissions must be bi-partisan. The liberal Democrats, who protest that this is a travesty of true bi-partisanship, seldom make their views felt when candidates are before the Senate for confirmation. It is worth remembering, however, that some years ago, when the Florida Senators tried to persuade President Truman to appoint Mr Mack to one of the commissions, he refused.

The interesting question now is whether the subcommittee, having drawn blood so easily, will settle down in earnest to an inquiry which Dr Schwartz, the investigator whom it discharged, implied that it was trying to suppress. If so, it will need to find another investigator to take charge and to develop the evidence in an orderly fashion; since Dr Schwartz left, members of the subcommittee have been going off in whatever direction they fancied. Mr Moulder, the first head of the subcommittee, who resigned when Dr Schwartz left, now talks of bringing him back—which is unlikely—and of questioning Mr Sherman Adams, the President's *eminence grise*, about his interference in the affairs of the Civil Aeronautics Board. This would be much more dangerous and difficult game to stalk than a mere commissioner. Already the President, at his press conference, has angrily refused to discuss Mr Adams's letters, in 1953, on behalf of an airline which was losing its licence to operate; in the process Mr Eisenhower displayed a surprising degree of ignorance about the facts.

Air Force on Top

DYNAMIC missile technology and chronic sibling rivalry kept America's armed forces busily in the news last week—and in the end, the Army and Navy were forced to admit sourly that the Air Force had carried off laurels in both fields. Following on the signing of the agreement establishing bases in Britain for the Air Force's Thor missiles, it launched a Thor fitted with a newly designed, flattened nose-cap intended to ensure successful re-entry into the earth's atmosphere. Then it announced that it expects to have Thor combat-ready by June which presumably means that the missile can be supplied to the British bases shortly afterwards. Both dates are well ahead of schedule, and both have been scoffed at by the other services. Next, the Air Force was allowed to embark on a project, dubbed Minute Man, to develop a new missile with a range that could be varied between 500 and 5,500 miles and capable of being launched from underground sites. To this the Navy objected because the Polaris-missile-submarine combination would be put in the shade.

Finally, the Air Force was told to develop solid fuel for its rockets, a decision which put it again in direct competition with the Navy, previously alone in developing this type of propellant. Solid fuels—to be used in the Minute Man and Polaris weapons—are superior in many ways to the liquid fuels now used in Thor and the Army's Jupiter missile. These must be fuelled just before flight in a slow and cumbersome operation; ultimately it is hoped to develop solid fuels to the point where missiles could leave the factory in a "ready-to-fire" condition. And, unlike the present combination of a liquid hydrocarbon—such as

• More than fifty civil airlines and over thirty air forces fit Marconi ground or airborne radio, radar or navigational aids. Airports all over the world rely on Marconi ground installations • The armed services of overseas countries and Great Britain have entrusted radar defence networks to Marconi's • The broadcasting authorities of 75% of the countries of the world operate Marconi broadcasting or television equipment. • 80 countries have Marconi equipped radio telegraph and communication systems • All the radio approach and marker beacons round the coasts of Britain have been supplied by Marconi's.

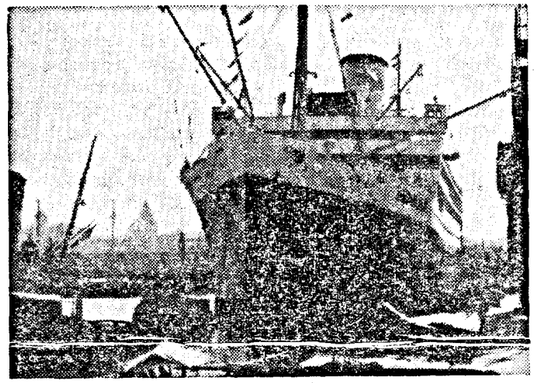
The Curious Affair at Curio Corner

AUBREY CABRIOLE-QUINT loves everything that is old. Old houses—for he has restored Curio Corner (still known in the village as 'the old Rectory') to a more-than-Georgian splendour. Old furniture—for it brings him a more-than-modest income. And old-fashioned business methods—for he drives a ferocious bargain, and always deals in cash.



These amiable characteristics brought him to the notice of "Jelly" Jones, the celebrated safe-breaker. For he too loves old things—untraceable banknotes and all small and portable valuables. So he paid a visit (after dark) to Curio Corner.

No burglar was ever more disappointed. In the cluttered showroom, looking quite at home between a Jacobean armoire and a Regency rent table, stood a very new Chubb safe. "Jelly" Jones crept softly away.

"Not much harm done," said Cabriole-Quint to the police complacently next morning. "I long ago learned that there is nothing so worthless as an antique safe. Now excuse me—I must get some of the latest Chubb window catches."

Incidentally, you too can get Chubb locks and catches from most well-stocked ironmongers. For safes, fire protection equipment and the more specialised products of our art, seek out a Chubb branch office, or write to Chubb & Son's Lock and Safe Co. Ltd., 175-176, Tottenham Court Road, London, W.1. (MUSeum 5822).

kerosene—and liquid oxygen, solid fuels pose no difficulties in storage or handling. Admittedly not all the problems concerning them are solved; as yet they produce a somewhat lower specific thrust than liquid types, and their burning rate—a critical key to accuracy with missiles—is more difficult to control.

While the Air Force's scientists were busy aloft, its publicists below were not far behind. General Putt, the Air Force's research chief, asked Congress to approve a project to send an unmanned rocket to the moon, saying that such a rocket could be launched before the end of the year if approval were given now. He added that the Air Force considered establishing a manned missile base on the moon, from which it could bombard any place on earth. Army scientists, already smarting under his derogation of their anti-missile research, have derived little consolation from launching their second Explorer satellite and—as it appears at the time of writing—promptly losing track of it.

Fair Trade Switched Off

THE General Electric Company's abandonment of its efforts to maintain minimum retail prices for its small electrical appliances, such as toasters and irons, was at once copied by the Sunbeam Corporation and other leading manufacturers and sparked a price war with reductions of from 20 to 50 per cent in the prices of these goods in cities all across the United States. Consumers have been flocking to buy electric mixers at $9.99 instead of $14.88 and electric blankets which have gone down to $9.88 from $34.95. But it is doubtful whether such bargains, confined to a few lines of goods and only temporary, will be enough to galvanise shoppers out of their present caution and into the spring buying spree which the American economy needs.

The big department stores and the large dealers in electrical equipment have seized the opportunity to get rid of articles which have been piling up on shelves at fixed prices while housewives, in an economical frame of mind, have preferred similar products which may not carry a well-known trade-mark but which can be reduced to an attractive price. The falling off in demand for its appliances is apparently one of the reasons why General Electric gave up fair trade, as retail price maintenance is called in the United States, but small shopkeepers, who cannot afford to match the reductions of the cut-throat competitors, feel that they have been let down. Yet it is mainly because it could no longer guarantee these retailers the protection against unfair competition which is a basic part of the retail price maintenance system that General Electric changed its policy.

The essence of fair trade is that the manufacturer inspects all retail outlets, to make sure that no one is selling below the fixed price, and challenges violators in the courts. General Electric is said to have been spending $1 million a year on enforcement. But recently state courts have shown an increasing tendency to declare fair trade unconstitutional or to impose ineffective penalties when the contracts are infringed. As a result it has become easy to buy fair-traded goods at reduced prices. Nevertheless, even though General Electric has in the past been one of the most determined upholders of retail price maintenance, manufacturers of other fair-traded articles such as cosmetics, cigarettes, drugs and books are not prepared to give up so easily. They are pressing Congress to pass a law forcing fair trade on the whole country.

Arizona Growing Up

FROM A CORRESPONDENT IN PHOENIX

ARIZONA, admitted to the union in 1912, is the youngest of the forty-eight states and for a long time it seemed that it never would amount to much. Big though it was in area, its mountains and wide open spaces contained few natural resources. Cattle ranching and copper mining were the first industries; cotton growing followed when the Salt river had been dammed for irrigation, and later tourists became another source of wealth. But as often happens with late developers Arizona, stimulated by the second world war, is now coming along fast. With a climate as near perfect as can be expected, it has more sunshine and less dampness than any other state. In the southern plain, the most populated part, the winters are mild and air-conditioning takes much of the discomfort out of the four scorching summer months. For flying the weather is ideal, and so the Air Force used Arizona as a training base for thousands of young Americans (and many Royal Air Force men) during the war. Many of them liked what they saw and came back as civilians. This influx has been swelled by two other continuing streams of immigrants: people who, having taken holidays in Arizona, return to work or retire, and those who suffer, or whose children suffer, from asthma or other respiratory complaints. The dry, sunny climate has restored many of them to health or has at least made their ills tolerable.

The war brought a few manufacturing plants to Arizona, but the movement of industry to the state did not gather momentum until later. Some firms wanted to be near the

ARIZONA'S GROWTH

Army's electronics proving ground at Fort Huachuca; others were influenced by the federal government's emphasis on industrial dispersal as a civil defence measure. The state seized its opportunity to persuade more to follow by revising its tax laws and conducting a vigorous "Come to Arizona" campaign. It does not cost makers of transistors and other small electrical products, or of electronic systems and aircraft components, much to bring materials into the state or to send the finished goods to market; a million dollar's worth of transistors can be loaded into one lorry and the aircraft industry of California is on the doorstep. Sufficient power and water were available to support this type of industry, and a supply of trained labour was waiting to be tapped among the immigrants who had been obliged to take unskilled jobs in order to make a living in Arizona and who were eager to practise their old trades. Moreover, scarce technicians could be attracted from jobs elsewhere by the pleasures of life in the sunny south-west.

Arizonians proudly point out that in several fields, such as non-agricultural employment, agricultural income, personal income and bank deposits, the state grew faster than the country as a whole over the ten years 1946 to 1956.

While average income a head in 1956, at $1,718, was still $220 below the national average, it was roughly 4 per cent higher than the average for the four south-western states (Arizona, New Mexico, Oklahoma and Texas). The recent recession in the copper market has hit the mining towns, but hardly dented the prosperity of the state as a whole. Agricultural income has become less dependent on livestock and staple crops, thanks to the expansion of citrus fruit farming and market garden produce such as lettuce and tomatoes. Spending by the federal government, which owns or holds in trust for Indians 70 per cent of the land, still provides roughly one-fifth of the state's personal income, largely through the military bases. To remind civilians of the importance of these bases to their welfare, the commanders have at times paid their personnel in silver dollars or two dollar bills, neither of which are normally in circulation.

But statistics are no guide to the flavour of life in Arizona today, or to the excitement of living in these fast-growing communities. The friendliness of people and the informality of manners and dress are exceptional, even by western standards; bankers wear sports clothes to the office. The state's spectacular scenery includes the Grand Canyon, one of the natural wonders of the world, the Painted Desert, a strangely beautiful yet forbidding land of sandstone mountains, and the Petrified Forest, while above Flagstaff, itself nearly 7,000 feet high, soar the San Francisco mountains, a popular resort for winter sports. At Phoenix, the capital, on the southern central plain a thousand feet above sea level and encircled by mountains, a desert has been made to bloom by diverting into canals the waters of the Salt and Verde rivers, as a now vanished Indian tribe did centuries before, and by sinking wells.

Phoenix is a clean, sparkling, booming city of wide streets with palms and orange trees and cacti decorating its avenues and gardens. New office blocks blend fairly happily with the Spanish style of many of the older public buildings. New suburbs are springing up, replete with huge shopping centres, to accommodate a population that has doubled in the last ten years, and lavish new motels with swimming pools line the main roads into town. Tucson, to the south-east of Phoenix, an older and smaller city with a more pronounced Spanish flavour, has experienced an equally rapid rate of growth; half of Arizona's people live in these two cities. Scottsdale, a few miles outside the capital, was little more than a road junction six years ago. Now it is a thriving community and a profitable centre for talented craftsmen, some of them Indians or Europeans, who work with stained glass, pottery and silver, textiles, leather and other fashion goods. Windy Gulch, now called Paradise Valley, has been turned into a wealthy residential district and a fashionable resort that is attracting people who formerly wintered in Florida; it was here that President Eisenhower played golf last week when he brought his wife on her controversial visit to Miss Elisabeth Arden's "beauty farm." The Indian reservations and the ghost towns left by old mining camps, such as Jerome, are other attractions for the tourist.

Among Arizona's inevitable growing pains and blemishes are the need for more school buildings and other public services and amenities, the social problem of migrant farm labourers, many of Mexican origin, and the out-of-date attitudes of political leaders and entrenched business interests. Though nominally a Democratic state—Arizona has elected only three Republican governors in forty-six years—most Democrats in the State Legislature are as conservative as the crustiest Republicans, particularly on economic matters.

But the principal cloud on Arizona's bright horizon is the depletion of the water table. Irrigated farmland requires much more water than do domestic or industrial users and the time may come when manufacturing grows at the expense of, instead of in concert with, agriculture as a result of the competition for water. But even if Arizona loses its suit against California for the right to a larger share of the water from the Colorado river, it is confidently believed that scientists will have found a cheap way of taking the salt out of the ocean in the Gulf of California before the shortage becomes critical.

SHORTER NOTES

Money raised by Texan oil interests seeking Republican support for a Bill to free the price of gas from federal regulation will not, after all, be used to finance the campaigns of Republican candidates for the Senate. On second thoughts, the Senate Republican Campaign Committee has decided to deplore this all too public *quid pro quo*; Senator Margaret Chase Smith resigned from the committee when the chairman at first said he would accept the money.

* * *

Mr Dave Beck, the 63-year-old former president of the teamsters, the lorry-drivers' trade union, has been sentenced to fifteen years in jail, with a recommendation that he should serve only three, for the theft of $1,900 from trade union funds. He lost his job last year for refusing to tell a Senate committee investigating trade union abuses what had happened to $300,000 of his union's money.

* * *

The watch industry, which in 1954 won a 50 per cent increase in the tariff on the grounds that it was essential to American defence, has now been told by the Administration that the present level of imports is no threat to the country's security; the Deparment of Defence does not any longer consider the watch industry essential.

THE WORLD OVERSEAS

The Year of the Dog in China

FROM OUR CORRESPONDENT IN HONGKONG

THIS is the Year of the Dog, in China; it has just begun and it is not traditionally a propitious year, by non-Marxist ideology. The oriental symbol of man's best friend lacks its western connotations; this, indeed, should be a dubious year for new enterprises, a time of anxiety and suspicion, when the prudent householder is wary of strangers at the door and prowlers in the night, of dishonest servants and insincere intruders in the backyard. The indications are that the Peking comrades, presumably by different reasoning, have decided to conform to the calendar superstitions in 1958. They are looking homeward, not abroad. They are reorganising and consolidating rather than launching new ventures. They are even permitting their "volunteer" garrison forces in North Korea to "volunteer" to go home.

On the available evidence, it would be unwise to read too much into Chou En-lai's graceful transfer of the mantle of foreign minister to the squat shoulders of well-nourished Marshal Chen Yi. Since Mao Tse-tung, with the supreme sanction of success, imposed his party heresies in defiance of Stalin and became the Yenan Oracle of Asian communism, the Chinese regime has operated as a loyal and closely knit team. Whatever differences may prickle and fret below the silken surface, the party administration succeeds in presenting and preserving a smooth, purposeful and united front. It is all reason, at a time when the regime has decided, logically and even belatedly, to concentrate on the agricultural foundation of the Chinese economy, to streamline the whole governmental structure, to shake up the party itself, and to transfer literally millions of government cadres and students to "glorious reproductive work in the countryside"—at such a time, it is surely not surprising that the prime minister should, with acclamation, be freed of all other distractions and given the full-time responsibility—and opportunity—of administering and directing this prodigious reorganisation of 600 million people.

Chou En-lai is perhaps the party's most efficient administrator—in a party distinguished certainly more for its theoreticians than for its executives. He may not, as it is whispered, enjoy Mao's freest and heartiest confidence; he has a reputation for gracious opportunism; but his critics never belittle his ability, resource, dexterity and genius for sliding urbanely—right or left—on to the winning side in any party controversy. To quote a bitter Kuomintang critic: "No one can simultaneously slide and bow with the same grace as Chou En-lai."

Did Chou oppose, or himself propose, the discarding of the foreign ministry portfolio? Who could possibly say? A Communist politician—or a democratic politician, for that matter—is seldom pleased when he loses even the trappings of power. But it is difficult, and in fact impossible, to establish that he has lost real power. Communist Chinese foreign policy has never been the product of one man's work; it is not solely a Peking politburo decision; it is now an amalgam of collective Peking and Moscow decisions. Chou's personal power lies in his control of the home front and his continued enjoyment of party support. It may be that he anticipates that in concentration on the home front he will also buttress his party support.

In retrospect, it can be seen that Chen Yi has been sitting on Chou's right hand for the past two years. Chen Yi is mayor of Shanghai—a restless and ungrateful post—and has written many army marching songs. Above all, he has a brave and loyal history as a fighting guerrilla, which must command Mao's affectionate trust, although by itself it may hardly seem sufficient to single him out as an inspired architect of international diplomacy. The point is, of course, that the party has no use for a powerful and independent foreign minister—no matter how inspired.

All the party's propaganda pressure has been turned on to internal reform and hard work on the land for this Year of the Dog. No matter how the regime may seek to disguise it, a major proportion of capital investment in heavy industry is being diverted to projects which will expand primary production, rather than to the traditional Marxist arsenal of an urban proletariat. Armies of peasants, winter sowing completed, are engaged on irrigation, water conservation, reafforestation and road construction, while heavy industry development is largely devoted to hydro-electric and agricultural power and chemical fertiliser production.

The original blueprints of the second five-year plan (1958-62), approved in 1956, have been lost in this upheaval and transformation. Hundreds of thousands of disappointed students are "joyously" working in the fields and the wastelands because there is no room for them in the universities. "Rightist" offenders and suspects are labouring shoulder to shoulder with surplus government officials. A turgid spate of party handouts testifies to the proud and eager delight of this great horde of displaced "volunteers." Thousands of city workers, the party megaphone proclaims, "refused" to take their holidays over the Chinese New Year period—although they are not normally granted any annual vacation. The *Jen Min Jih Pao* reports with deadpan seriousness that more than 16,000 workers who had intended to leave Peking to spend the festivities with their families "spontaneously handed back their tickets at the railway station. They were saying, 'The New Year can be celebrated in many ways but the speed of national construction cannot be slackened for a single minute'." Passionate bridegrooms-to-be in Manchuria and Honan, it is further

alleged, have deferred projected marriages over the New Year period because of the need for expanding industrial and agricultural output.

By western standards, all this may sound amusing. But by Peking standards it sounds both determined and effective. The pressure is on—and mounting. The machine which floundered at the end of the first five-year plan has been overhauled and is plunging doggedly forward again. The regime has changed direction and readjusted speed. Premier Chou En-lai, who leads and represents the sterner, harder and less devious elements in the politburo, now concentrates—appropriately, in the Year of the Dog—on security, sincerity and energy in the backyard rather than distant adventures on the diplomatic horizon.

Thoughts on a Melbourne Occasion

FROM OUR CORRESPONDENT IN AUSTRALIA

At the garden party at Government House, Melbourne, your correspondent did not even glimpse the crown of the Queen Mother's hat, such was the crowd that pressed around her. Nevertheless, all present agreed that it was a much more decorous affair than the corresponding function in Sydney. It was with unconcealed relish that the Melbourne papers had reported the goings-on in the rival city: the stampede across the lawns, the trampling of the newly planted flower beds, the prostrate women in picture hats, and Mr Liberace gate-crashing in the hope of meeting the Queen-Mom. Victorians had also read with much tut-tutting of the fight that almost developed outside St Andrew's Cathedral when a crowd that had waited since dawn found its view blocked at the last minute by a guard of honour of clergymen with cameras slung over their cassocks. "It couldn't happen in Melbourne," they will tell you. "We are more restrained, more . . . well, more English."

The Queen Mother has visited Australia before, so she is familiar with the Englishness of Melbourne. But to a newcomer, even when he has heard about it, it comes as a surprise. The weather is warmer and sunnier, but just as fickle as in England. The trees are mainly deciduous, imported by early settlers to remind them of home and flourishing here as never before. The birds include the thrush, and the man who imported it thought also of its diet and imported the English snail as well. Each house has its own garden and its weekend owner-gardener—although he has an easier task than in England, for peaches and lemons, jacaranda and oleander, bougainvillea and hibiscus grow exuberantly in the warm soil.

Another surprise for the English visitor, although he has read all about the spreading cities, is to find what an urban people the Australians are. The delusion that they are all tall, bronzed, lean and rangy is the fault of the writers, painters and film-men. They have given us Captain Starlight and Voss, the harsh red landscapes and the "dead heart," the overlanders and the bushrangers. But the truth is that the average Australian's knowledge of horses is confined to the racecourse and he would be horrified at the idea of riding one himself. More than half the population of Australia lives in its six capital cities and one-third lives in the two monsters, Melbourne and Sydney.

The urban way of life is so established and the cities so mature that it is hard to believe that the pioneering days are so short a time ago. In central Melbourne, at the intersection of two busy streets lined with business offices, there is a brass tablet with the words, "This will be the place for a village." These were the words of John Batman as he stepped from a boat on the Yarra and surveyed the rolling grassland with its drooping gum trees—only 123 years ago.

It is a handsome, agreeable and very civilised city, and its inhabitants are justly proud of it. Some of them are quite worried about the impression the world will get from "The Summer of the Seventeenth Doll." Anxiously as they follow the fortunes of that Australian play, they are distressed that its setting should be a drab room in the dingy suburb of Carlton—a pity it could not have been green and gracious Toorak. A few people are dismayed by the monstrous growth of Australia's cities, by the way they stunt the growth of population in the country and sometimes turn even immigrant peasants from central Europe into city slickers when they have done their two years' stint on the land. The future of Australia depends on those untapped resources in Queensland and Northern Territory, and on tackling them with something of the old spirit. That spirit is not bred in cities, which tend to transform the adventurous independence of the pioneers into the militance of a class-conscious proletariat.

★

Not that class-consciousness is confined to the proletariat. Another surprise for the visitor from England is that social gradations in the cities are as marked and as complex as they are in Britain. As in Britain, the existence of independent public schools alongside the state schools tends to create class divisions. But up to a point it is easier for the Australian to rise in the social scale because he is not pigeon-holed the moment he opens his mouth. The Australian accent has little to do with class or region, except that a complete absence of it is found only among the educated classes. The announcers of the Australian Broadcasting Commission have the very inflections of the BBC, and many schools have a speech trainer to modify the broad vowels.

Another reason why social mobility is greater than in Britain is that here it depends on wealth, which you can acquire, rather than on birth, which you cannot easily arrange. In Melbourne, however, it is advisable to have both. The highest rungs of the social ladder used to be occupied by the old official class—the justices, lieutenant-governors and the like. But they have been rather ousted by the big graziers from the surrounding countryside, whose claim to aristocracy rests on two qualifications. First, their families have owned their land since the early days. They are descended from the "squatters" (a term of respect by the middle of the last century), who took possession of unoccupied country and, by resisting all efforts to persuade them they were trespassing on Crown land, were finally able to buy it for a song. The second qualification for this aristocracy is great wealth. A large number of station owners have gone broke in the bad years, but the postwar "wool cheques" have amply financed a splendid

Continued on page 857

Continued from page 856

way of life, with town house in Melbourne, the homestead in the country, and a house by the sea.

Jostling them for the highest rungs, and mixing with them a good deal, are the very big businessmen, who often buy a property too—whether for pleasure, profit, social cachet or tax advantage. Then there are those whose social position is partly or wholly *ex officio*. There is no shortage of these in Melbourne, where there are the Parliament of Victoria, a Lord Mayor and City Council, as well as some departments of the Commonwealth government. And of course there are the university and arty circles which are self-contained and never aspire to any other.

At the top of the social pyramid is the Governor of Victoria, Sir Dallas Brooks, representing the Queen. He is an Englishman—the government of Victoria having asked the Crown to suggest an appointment, instead of suggesting one to the Crown, as did the Labour government of New South Wales. He and Lady Brooks have taken a democratic view of their duties and they are held in the highest regard. But they do not always please the snobs, some of whom have been heard to declare that they would not sign the book at Government House for fear of meeting the wrong people. Most people, however, are keen to set foot in that dignified white building—although, of course, there are sensible people who do not bother about such things at all.

Anyway, one does not have to be a snob to want to go to the garden party. Most Australians feel a fierce and fervent loyalty to the Crown. Even at the National University in Canberra, where one might have expected to find the intellectual's indifference to such things, someone tackled your innocent correspondent about "the shocking way you've been treating our Queen over there." In Britain it is easy to take the monarchy for granted. You have to come to the Antipodes to realise its immense importance as the symbol of Commonwealth unity. To judge from her unruffled calm, the Queen Mother is of the opinion that in this context the staring crowds, the sprinting ladies clutching their high-heeled shoes, even the camera-clicking clergymen, are very well worth while.

Three-Legged Parliament

FROM A SPECIAL CORRESPONDENT IN STRASBOURG

A season ticket to Strasbourg will soon be a necessary piece of equipment for many continental parliamentarians. Last week, the 78 members of the European Coal and Steel Community met there to wind up their affairs: on March 19th many of them, with reinforcements, will return to set in motion the parliamentary body which the Rome Treaties have created to serve not only the Coal and Steel Community, but Euratom and the Economic Community as well. The fact that the treaty-makers have forgotten to give the new assembly a name is not likely to deter its 142 members: its affairs will certainly keep them busy shuttling back and forth between Strasbourg and their six national capitals. It may well become the most important assembly yet to have met in the Maison de l'Europe.

Strategically placed at the centre of the three communities, the new *Assemblée Unique* embodies the hopes of many in the six countries for the development of their political unity. And as the Rome treaties allow for eventual direct elections to replace the present method of nomination within national parliaments, there is also the prospect of it engaging—for the first time—the direct participation of the people of the six countries in their new enterprise.

These hopes were expressed last week in a discussion on the powers and prospects of the new assembly during the final meeting of the common assembly of the coal and steel community. In the past five and a half years this body has laid some solid foundations for its success. To judge from the formal powers laid down in the ECSC treaty, the common assembly itself was not intended as more than a timid gesture to parliamentary susceptibilities. But its members had other ideas: like all self-respecting parliamentarians, they have successfully burst out of their legal strait-jacket. Not content with the meagre privilege of having once a year the opportunity of ousting the High Authority, they have asserted the right of permanent control over its activities, and through their committees and questions (both oral and written) have made their views both known and felt. The high authority, for its part, has shown itself more than willing to collaborate with the assembly, not least because on a number of occasions it has been a useful method of bringing pressure to bear on the community's council of ministers. Last week a grateful assembly expressed the hope that the existing ECSC treaty might be modified to give the high authority more power, especially in the field of social policy. The more power that body has, the more effective the assembly's control can be. The reply of the high authority was not, however, encouraging. The tide of opinion in the six countries, it said, had turned against supranational institutions: to embark on a general revision of the treaty might now have some unfortunate consequences.

★

This warning threw into relief one of the major problems which the new assembly will itself have to face. During the drawing up of the Rome treaties its supporters fought a successful battle with the ministers against the original proposal to have a separate assembly for Euratom and the economic community, but the compromise arrived at will leave the new assembly with more powers in the affairs of the ECSC than in either of the other communities. The watering down of the powers of the commissions (which will occupy a position equivalent to that of the high authority in the coal and steel community) means that the council of ministers in the new communities will consequently be more powerful.

The powers of the assembly itself necessarily reflect this shift in emphasis. The ministers have made some concessions to it by making consultation with it obligatory before they arrive at certain decisions, and have extended its powers over the commissions, but they have not given it that financial autonomy which has proved so important in the development of the coal and steel assembly. Nor apparently are they willing to disinterest themselves completely in its choice of president. There is room, therefore, for the fear that they wish it to be no more than a docile consultative body. The new assembly, starting out on its three-legged race with one of its legs longer and more powerful than the others, may well wonder how far it is intended to get.

On the whole, there was optimism in Strasbourg last week—but there was also the realisation that an important

principle is at stake. The creation of the three communities has subtracted powers from national parliaments: it threatens to open a void in that chain of responsible government which has been laboriously forged in the past. Is the new assembly to be allowed to fill that void? Much evidently will depend on the wisdom and skill of its members. There is some danger, inherent in all such assemblies, of an attempt to fill the gap by mere force of words. Already the title "European Parliamentary Assembly" has been proposed. It sounds well, but it may appear to imply that Europe has already shrunk to the size of the Six. The view was expressed last week that Europe has now to be built around the rock of the Six: it would be a pity if instead it turned out to be the sort of rock on which others founder. The sitting tenant at Strasbourg, the Council of Europe, though a sick man, must hope that its guests this month will spare it a thought in the excitement of their new-found unity.

Sects and Parties at the Polls

The elections which began last week over the million square miles of the Sudan are the first to be held since the country gained its independence, and the first to be largely free from extraneous influences such as Egyptian bribery and anti-British sentiment. Results from outlying districts should all be in by tomorrow, and counting begins on Monday.

The campaign preceding the poll has been notable for freedom from disorder—a tribute to the precocious political maturity of the country as well as to sensible security arrangements made in its vast and difficult territory. This calm offers a good chance of trustworthy results by which to measure the political complexion of one of Africa's more stable and prosperous new nations.

A week ago, it would have been logical to calculate that Egypt's ill-advised thrust on the common frontier would lose votes to the parties suspected of pro-Egyptian tendencies; these are the National Unionist (at present in opposition) and the People's Democratic Party (at present in the government coalition). But the news that the Egyptians, by withdrawing their troops, have now tried to retrace a foolish step will probably make this factor unimportant.

The chief element of uncertainty is the degree to which old-fashioned sectarian loyalties will affect the vote. The main antagonists are the Umma party (at present in power in coalition with the PDP) and the NUP. The first retains its strong affiliations with the heterodox Ansar that follows Sayed Abdel Rahman el Mahdi; the NUP, by contrast, has broken its connection with the orthodox Khatmia sect of Sayed Ali el Mirghany; it therefore reflects a left-wing, anti-sectarian tendency and its fortunes in the election will be a measure of the strength that the sects retain in politics.

This summary description applies, of course, only to the Islamic north. South of the twelfth parallel begins the non-Moslem south, where the Liberals are the strongest party and where a wish for a federal constitution affording semi-independence of the north is the strongest discernible political trend. Whatever the outcome of the northern elections, experience suggests that the support of many a southern deputy can be purchased by the winning side.

Mr Nehru's Pedestrian Triumph

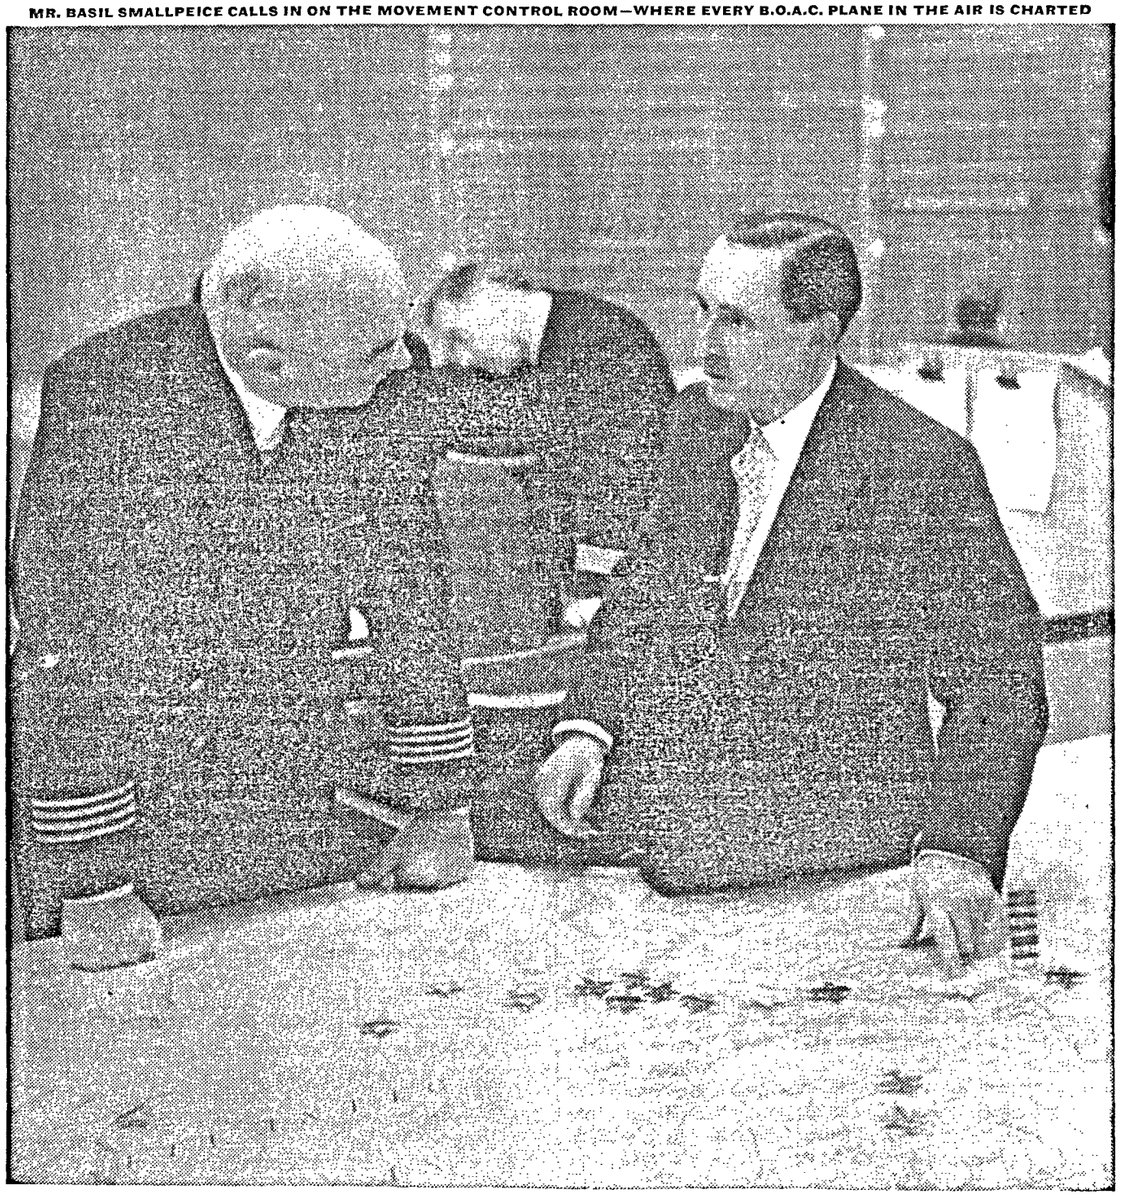
FROM OUR CORRESPONDENT IN INDIA

Mr Nehru can, sometimes, be very apt. "Pedestrian" was the exact word for his budget. But, behind his dull speech and unexciting proposals, there was the drama of crisis averted. Six months ago, nearly everybody thought India would have to mutilate its plan drastically. Today it seems the plan will be carried through, rephased a bit, pruned here and there, but substantially the same old plan so unattainable last summer.

After the burst of taxation and experiment of the last two years, the Indian public is grateful for the chance to breathe that Mr Nehru has somewhat apologetically offered. He has introduced a gifts tax at roughly the same rates as estate duty in order to plug the one hole Mr Krishnamachari had left in the dungeon he had built round the taxpayer. He has reduced the exemption limit for estate duty, increased duty on nylon, and tightened conditions for development rebate. It adds up to £4½ million, where Mr Krishnamachari, last year, took nearly £80 million. A deficit of £21 million has been left where last year's budget had a surplus of £27 million. Partly this arises from the transfer of some £23 million of revenue to the states; partly from the total failure to enforce economy on the ordinary expenditure of the ministries; partly from the steady increase in defence expenditure, now over a third higher than two years ago.

Mr Nehru has continued the policy of oiling the anomalies of the income tax law, especially where they inhibit foreign investment without bringing in much revenue. Companies will no longer be treated as resident in India merely because their Indian income exceeds their foreign income; the wealth tax will not apply to the foreign assets of foreigners; the leave-passage rules are to be withdrawn.

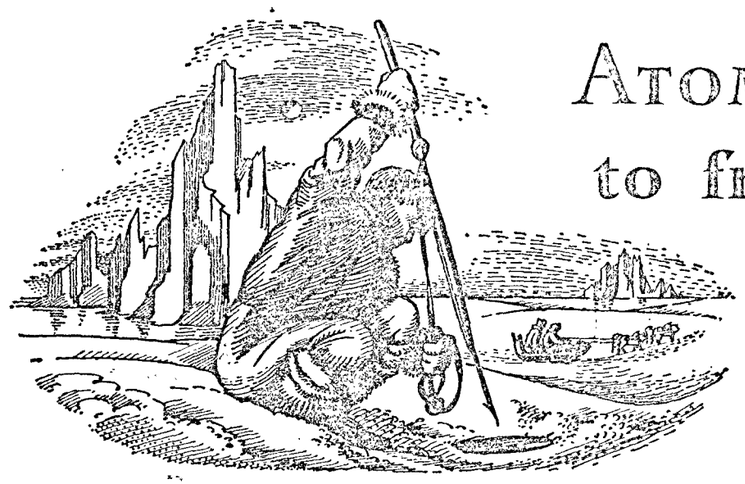
More important than the budget itself is Mr Nehru's policy for the plan. Total expenditure in 1958-59 is to be some £760 million, £125 million up on this year, and £210 million up on last year, which was the first year of the second plan. At the present pace it looks as if the original target of £3,600 million for the five years will be achieved in terms of money, though not in real terms. Some power projects will be late; some irrigation schemes will have to wait till the third plan; some grants, for industrial housing and hand-spinning, for example, will be chopped about. But the core of the plan, the steel plants, the mines and the railways, is now safe. The Germans have agreed to defer payment for Rourkela; Bhilai and Durgapur are provided for; the extensions by the private steel companies, Tata and IISCO, should be finished this year. In this budget, three quarters of the £309 million that the central government expects to spend on capital is for railways and steel. The only snag is coal. Production expanded by 10 per cent last year and the private collieries are still expanding as fast as they can; but Delhi's incompetence has retarded the progress of the state-owned collieries, and even in 1958-59 all that is allotted to them is £3.75 million. The rest of the capital expenditure is merely a scatter of titbits.



The states' only big individual schemes are the multi-

TIME

HOW TO REACH THE HIGHER-UPS



B.O.A.C.'s Managing Director, Basil Smallpeice, reaches higher-ups on a world-wide scale through aggressive international advertising. And it's no coincidence that B.O.A.C. (like so many other leading airlines) regularly uses the advertising pages of TIME, *The Weekly Newsmagazine.*

MR. BASIL SMALLPEICE CALLS IN ON THE MOVEMENT CONTROL ROOM—WHERE EVERY B.O.A.C. PLANE IN THE AIR IS CHARTED

RITCHIE CALDER'S *Signposts to the Atomic Age*

ATOMIC HEAT to freeze the Arctic...

"IN THE FROZEN WASTELANDS OF THE Canadian North, Eskimos and Indians, going off to hunt the caribou or trap for furs, are taught how to prospect for the fuels and metals of The Atomic Age. They are part of that Age and very much aware of it. *Innuit*, the Eskimo of the Barrens, no longer laughs at the eccentric interest which *Kabloona*, the White Man, shows in yellow-stained rocks; he knows what makes a Geiger-counter tick and recognises uranium when he sees it. His Tree-line neighbour, the Cree Indian 'brave' has already grasped the meaning of atomic energy—he calls it *Eskoitik-otchi-Kaochipyik* which is 'Light-ning-which-comes-out-of-Rock'.

Those vast empty spaces, half the size of the United States, are already being systematically surveyed. Geologists, on the ground and from the air, are charting its fabulous mineral wealth. Helicopters, fitted with gravimeters, magnetometers, and scintillometers, can detect the ore-bearing deposits beneath the snow and ice, the pathless forests and the countless lakes. Their charts already speak eloquently of the abundance of the

atomic fuels and "new" metals for which the metallurgists and nuclear engineers are praying; but most of that wealth is locked up in remote parts of the Pre-Cambrian, or Laurentian Shield, so inaccessible to conventional haulage, by road or rail, as to seem unworkable.

Yet the answer could lie in atomic energy itself.

Imagine 'industrial oases', powered and heated by "packaged reactors" and reached only by aircraft. The reactors themselves could be assembled by air-supply (which has already served in the construction of the massive defence installations in the Canadian Arctic). Once the reactors are established and 'critical', fuel-replenishment would be no problem.

Completely civilised townships could be created with adequate heat to counteract the climate, and modern amenities to enliven the Long Night. Again the prototype exists in the Canadian base at Churchill on Hudson Bay and the U.S. base at Thule, in Greenland. With self-sufficient power, independent of coal-trucks, oil-tankers, or pipe-lines, the ores could be mined, milled and processed into small bulk and flown out by air, like the casks of sodium uraninate from the Eldorado mine on Lake Athabasca.

That raises another problem for which atomic energy could have a quaint answer. How to ensure all-the-year-round air-communications? The winter, contrary to popular belief, is the best time; the sea and lake ice can take the heaviest aircraft. The trouble starts with the coming of the sun. Ice thaws. Airstrips heave and toss and melt into mud, while the permafrost, the continuously frozen sub-soil and rocks, remains solid underneath. With sufficient power available, the airstrips and roads could be refrigerated and kept solid, like an ice-skating rink.

Atomic heat to freeze the Arctic! It is like selling refrigerators to the Eskimos." [R.C.]

purpose river projects, several of which are now approaching completion. The Damodar Valley Corporation will finish its last dam this year; the Hirakud will complete its canals soon; even the great Bhakra dam will only have one quarter of its concreting to be done by the end of the year. The new schemes, except for one in Andhra, are smaller; so that the strain of the great projects will now ease.

The great thing is not, however, that the projects are to continue, but that they are going to be paid for. In the current year £285 million, or nearly half, has come from deficit finance. Nevertheless, the wholesale price index, after an initial rise, has dropped back to a point below last year. This is because of a run of good luck. Production has risen. Industrial production was 4 per cent up and the harvest 6 per cent up on last year. Time deposits in the banks went up by £150 million, largely because of the tightening on import licences. Above all, three-quarters of the deficit has been mopped up by the running down of the sterling balances, which dropped by £240 million. The net result is that the money supply with the public has gone up by only £73 million, which has been absorbed by the increase in production.

But it would have been foolhardy to repeat the same amount of deficit financing for 1958-59. The sterling balances cannot be drawn down by more than £75-£100 million; the rice crop has not been good; industrial expansion has been slowed down by restrictions on imports and credit. Mr Nehru has cut his deficit financing down to £153 million. This has been possible because of the sharp increase in foreign assistance. Last year India got £72 million from abroad, this year it is £98 million and next year it will be £245 million. This increase should counterbalance almost exactly the falling off in the rate at which India has been drawing on its sterling balances.

The crucial difficulty now is internal resources. The states are still reluctant to help themselves by increasing taxes, though Bombay and the Punjab are squeezing out a couple of million extra each. Both market loans and small savings have been around half the target this year, though it is hoped that next year they will return to the norm of £90 million net from the market and £75 million from the little man. But if prices rise it will be optimistic to count on all of this £165 million.

There are still plenty of headaches—defence, the loan repayments that will fall due after 1961, the sluggishness of savings, the lethargy of the capital market, the shyness of the foreign investor, the incompetence of the tax machine in some of the states. India is not yet out of the wood; but at least a clearing is in sight.

Italy and the Middle East

FROM A CORRESPONDENT IN ROME

A FLOOD of controversy was created by the recent announcement that President Nasser will pay a State visit to Italy this summer. The controversy is heightened by the doubts which surround President Nasser's personality and intentions and by the mists which shroud the presumed fountain-head of Italian foreign policy. No one knows for certain whence the initiative for this visit came. The invitation extended to President Nasser two years ago—before the Suez affair—had been forgotten. Who was responsible for renewing it? The cabinet seems not to have been informed. Palazzo Chigi belatedly and somewhat sheepishly claimed the merit, but authoritative sources—among them the former deputy prime minister, Signor Saragat—insinuated that the President of the Republic imposed his will on a reluctant foreign ministry and that an unconstitutional pressure was exerted (upon the President?) by the chairman of ENI, Signor Enrico Mattei, whose friendship for President Nasser is well known. Perhaps the most serious criticism of all was levelled by a responsible paper, *Il Messaggero*, which claimed that President Nasser forced the hands of the unwary Italian diplomats.

There are two schools of thought in Italy concerning President Nasser's role in the Middle East. One sees him as the principal means of checking Soviet penetration, the other as a conscious or unconscious tool of Moscow. These views are maintained, partly for subjective reasons, by the groups who oppose each other in the contest for power on the eve of a general election. In favour of President Nasser are the supporters of state enterprise and a wider socialisation of industry. These include all Socialists and Communists and a large fraction of the Christian Democrat party. Against him are the sustainers of the centre coalition which governed Italy until last summer. The common denominator and the principal dynamic of these four parties was a rigidly orthodox anti-communist "Atlantic" and "European" foreign policy. From this quarter comes the bitter onslaught upon the government, the foreign ministry and the presidency of the republic.

*

There is sense in the arguments adduced by Signori Scelba, Saragat, Pacciardi and the other leaders of the former coalition who claim that by flirting with President Nasser the Italian government runs the risk of making its allies doubt Italian loyalty to Nato, and of irritating the French (no one has raised the point that there are at least 750,000 Italian emigrants in France compared to 50,000 in Egypt). They also say that the government's Egyptian policy is likely to strengthen the hands of the Communist and Socialist neutralists at home and will lose the Christian Democrats votes. Signor Pacciardi argues that Italy cannot claim to be consulted at every step by its Nato allies if it violates the principal of collective diplomacy. And Signor Saragat maintains that Italy must not be the manœuvring ground for disputes between the major western powers. On the contrary, it must be the terrain upon which the solidarity of all the western democracies is upheld.

The Palazzo Chigi is neither for nor against President Nasser but it is impelled by tradition towards a policy of Italian prestige in the Mediterranean based on a protective friendship towards the Arabs. Italy must in any event get on with Egypt because of its dependence—more complete than that of any other industrial country in Europe—on the Suez Canal. In Fascist days this policy was developed in opposition to Britain and French interests, and today the swing towards President Nasser is psychologically a response to the irritation aroused when British and French action at Suez exposed Italy to economic and political strain.

The policy of Italian penetration in the Near East is naturally supported by the ecclesiastical hierarchy, which seeks a political backing for Catholic interests in these

countries. President Nasser's announced intention of calling on the Pope makes his visit doubly welcome in Vatican quarters, where it is hoped that the meeting may lead to substantial agreements on the Catholic schools and missions in the new Arab state.

These are the pros and cons of Signor Pella's much criticised "neo-Atlantic" policy. The solid facts of Italian penetration in the Middle East are ENI's oil fields in Sinai and its permits in the Persian Gulf. Its approach in these countries has been enlightened and corresponds both to national and true international interests. There is little doubt that one motive which has inclined the Italians towards President Nasser is the refusal to ENI of the licences it had been virtually promised in Libya. The fall of Ben Halim and the subsequent assignation of these concessions to American companies are attributed here to the concerted pressure of all the great oil companies to keep ENI out of Libya. An intervention of the Italian foreign office had no effect.

Oil interests apart—and the Italians naturally believe that theirs are at least as legitimate as anybody else's—it seems unlikely that President Nasser's visit here will help Italy to "penetrate" with its typewriters and sewing machines more than it is doing already, which is pretty well. The disadvantage of the visit is that its prospect unsettles public opinion just before an important election.

Sr Frondizi's Victory

FROM A CORRESPONDENT IN BUENOS AIRES

AFTER the most honest and orderly election in Argentina's modern history, the 49-year-old lawyer, Sr Arturo Frondizi, has been chosen president-elect. He will assume office on May 1st for a term of six years. To forecast the result of the contest was a baffling problem for the prophets. After Dr Ricardo Balbin, candidate of the older Radicals (better known as the "People's Radicals") had been selected by democratic vote as his party's standard bearer, many people had believed that he would win. He had beaten Sr Frondizi comfortably enough in last July's elections for a constituent assembly and there had been little change in the issues before the electorate.

But late in the day there was a dramatic change. The Communists withdrew their candidate and decided to support Sr Frondizi. The Peronists quickly made up their minds that they too would support Sr Frondizi. Although several political groups had claimed that their supporters had turned in blank papers last July, the general belief was that the great majority of those 2,115,861 spoiled votes belonged to followers of General Perón. As the margin between Sr Balbin and Sr Frondizi in July had been 256,921 the accession of Peronist and Communist votes made the position of Sr Frondizi impregnable.

Sr Balbin increased his July total by over 20 per cent, but was swamped by the Peronist union with Sr Frondizi. The Communist vote was less important. There was a big decline in the Socialist and Christian Democrat totals compared with the constitutent assembly vote in July. The inference from this is that a greater number of Argentines were not prepared to throw away their votes and voted for a candidate with a good prospect of victory.

The immediate sequel to Sr Frondizi's triumph was an outburst of Peronist rejoicing. Processions cheering the new president and the late dictator marched through the streets in the capital and in Mendoza. The old prohibited marching songs were sung; and the so-called tactical command of the outlawed Peronist party held a press conference and outlined its attitude towards the incoming president. Presumably his policy will be watched and the measure of opposition towards him will depend on how he behaves. In any event, he is regarded as little more than a trojan horse for facilitating the return of Peronism to Argentina. At his own press conference, Sr Frondizi said he would declare an amnesty for those allegedly guilty of political and labour crimes. This, of course, means lifting the ban of political outlawry on the Peronists, but the amnesty will not cover those guilty of common crimes. Whether or not General Perón will be allowed to return seems to be in some doubt. The next Congress and presumably the Courts will have to solve the problem of who can and who cannot return to Argentina.

Sr Frondizi also insists that he had no pre-election agreement with the Peronists or the Communists. That they voted for his programme does not, he says, commit him to them. But in practice he may find it extremely difficult to bring about the pacification of the country and the elimination of politically inspired strikes unless he works in close co-operation wtih his army of Peronist supporters. During his election campaign he supported the right to strike, and it is believed that one of his first moves will be to endorse the demand of the workers for higher wages to offset the increased cost of living. The provisional government failed to induce the workers to settle down to produce more; it remains to be seen whether the new president will be any more successful.

*

Sr Frondizi has been too long a student of economic affairs not to appreciate the magnitude of the nation's financial difficulties. But he is opposed to foreign assistance for Argentina's oil industry. He has often said that the country must export more and obtain higher prices for its produce. But he has not explained how the obstacle of established world commodity prices is to be overcome. He has been highly critical of the prices paid for Argentine beef; and when he visited the Minister of Finance last week he was accompanied by Dr Aldo Ferrer, latterly economic adviser to Dr Candiotti, Argentine Ambassador in London. Dr Ferrer caused a sensation here by stating that in his opinion Argentina did not obtain a good enough price for its beef. It looks as if there may be trouble ahead for the packing house industry.

The landed classes, too, are not altogether happy about the new president. He is believed to share far too many of General Perón's ideas about the desirability of breaking up estates and the granting of preferential treatment to industry. Local industrialists, in the main, have welcomed Sr Frondizi's victory. He believes in intensifying industrial development and reducing imports to a minimum. But the manufacturers are apprehensive about the extent to which the new government will go to placate labour.

Meanwhile, Sr Frondizi has been content to say that he will have a full study of Argentina's economic problems made. From this he will probably discover that there are no ready made answers to those problems, and still less that their solution is to be found in economic nationalism.

To any town thinking of drinking sea water—

Mad idea? Not a bit of it. Go mad if you drink it? Nonsense. Not today; not with modern evaporators; certainly not with the newly developed Richardsons Westgarth evaporator. This tidy and compact piece of plant will distill for you—from sea water—anything up to 250 tons of fresh water every hour. And by fresh we mean crystal clear, far purer and softer than good drinking water supplies. Of course, large sea water evaporators are not, in themselves, anything new; Richardsons Westgarth and many other people have been building them for years. But this latest R.W. evaporator is the result of a radically different approach in design. It is indeed something quite new in its simplicity of operation, relatively low first cost, and ability to go on delivering full output—without having to be shut down for cleaning—for months or years on end and with almost negligible attention and maintenance. Fresh water from sea water now becomes feasible economically where cost had hitherto put it out of court.

How a 19-company team puts paper to work for you

Here's modern ingenuity in paper manufacture! These intricate corrugated board fittings—parts of a complete pack which have been literally built around the delicate television tube they protect—have been tailor-made to meet a particular customer's requirements.
This is but one of the 1001 different paper and paper-board products for packaging, printing and building which are made by a "go-ahead" team of 19 major companies—the Reed Paper Group.

Collectively, these companies command unrivalled experience, skill and technical resources. In packaging, for example, they can offer a complete, nation-wide service to industry. But they have something extra to offer their customers—*individuality*. Each Reed company takes the initiative in thinking and acting for itself *and for its customers*. Reed company representatives take pride in their flexible way of working . . . in their close *personal* understanding of each client's requirements.

"YOU profit from the initiative of each Company backed by the resources of the Group"

THE BUSINESS WORLD

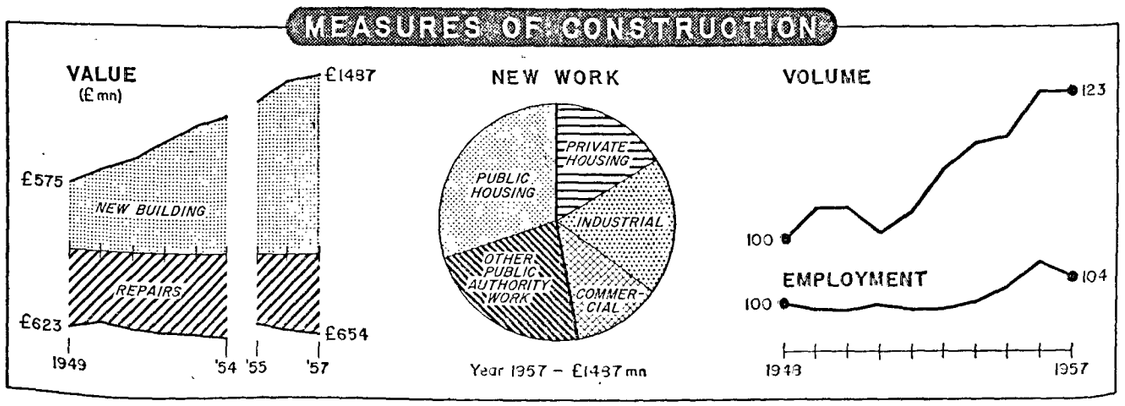
Building after the Boom

NEARLY half the fixed investment going on in Britain at any time is construction, and in any new investment project the buildings are usually finished first. So it is with an investment boom. The surge of industrial investment that began in 1954 coincided with cuts in housebuilding, so it was not until late 1955 that it began to swell the volume of total constructional activity. Throughout 1956 the building industry felt the full stimulus of the boom: but as early as last spring this wave was beginning to recede. The winter of 1956-57 was a much milder one even than this, allowing unusual progress to be made on constructional jobs; but by the second quarter of last year the volume of building and civil engineering output, as indicated by value figures and cost indices calculated by the Ministry of Works, looked to be turning downwards. By the end of the year it was about $3\frac{1}{2}$ per cent lower than a year before. The value of the industry's output in 1957, £2,141 million altogether, was 3 per cent higher than in 1956, but this increase was simply a matter of prices. Though the industry had begun the year at a record level of activity, the total volume of construction in 1957 was no higher than in 1956. This year it will certainly be lower. New orders are not matching the volume of contracts being worked out; unemployment has risen more than seasonally; and demand for building materials has dropped.

In only one sector of the construction industries' market is demand still rising—public investment other than housing, which last year accounted for about £480 million, or nearly a third of the value of new construction. Extra spending on roads—it will be about £50 million this year against just under £40 million last year—goes almost entirely upon civil engineering work. Investment in the nationalised industries and services will be higher this year, but has a far smaller "building content": still, the increase in their total capital expenditure from just under £700 million last year to perhaps £720 million this year—provided the money increase is not swallowed up in higher prices—should mean some slight increase in their demand for building work, which ordinarily represents about a quarter of their total fixed investment. Public expenditure on the building of hospitals, technical colleges and schools—some £130-£140 million last year—is continuing to rise.

Last year, public investment, along with the other massive item, local authority housing, accounted for about half of the building and civil engineering industries' work on new construction. But public housebuilding, which alone represented £306 million, is coming down. In September, when the cuts were announced, it was said that expenditure on public investment would be down by 20 per cent in two years' time: it seems likely that this year, in real terms, it may come down almost 10 per cent. This may rather more than offset the increases in other public demand for building; all in all, it seems that building for the public sector this year may be very slightly below last year's level.

THE other half of these industries' new work is carried out for private customers: here, demand could slip a little more than in the public sector. There are fewer private houses under construction than at this time last year, and the credit squeeze has affected both the prospective householder and the speculative builder. Industrial building levelled off last year, and those manufacturers who reported their investment intentions to the Board of Trade at the end of last year were expecting to spend slightly less on buildings in 1958 than in 1957. There is little evidence of the intentions of the businessmen responsible for commercial building, which has been the fastest-rising element of all new construction work in recent years. From a value of £124 million in 1955, this had risen to £182 million last year, two-thirds as much as was invested in the



building of new factories. New orders for shops and offices are said to have declined since September; but there remains a large amount of work under construction, and total "work done" (i.e. progress and final payments) may not be much different from last year's total.

All this new work takes up about two-thirds of total building and civil engineering activity: the rest, worth some £650 million last year, goes into repairs and maintenance, which is ordinarily more stable in volume. It did rise between 1955 and 1956: last year, in real terms, it does not appear to have changed much. This year it will be subject to conflicting influences. The Rent Act should have stimulated house repair, and craftsmen in the specialist trades may be easier to attract into repair work; but the tightness of credit could affect commercial and industrial maintenance of buildings.

THE volume of total building and civil engineering activity this year, therefore, will be lower than last year. So far as output is concerned, the effects of the investment boom are over. But the boom also had its effects upon productivity, if only by shifting resources to kinds of construction where efficiency may be rising faster. On a rude comparison of output and employment, building productivity probably rose by about 3 to 4 per cent in 1956 and perhaps by 1 to 2 per cent last year. Output per employee was rising fastest in commercial building (though absolute output per head is lower here than in any other kind of new construction) and in public work other than housing. During the boom longer hours were worked, particularly in civil engineering. Moreover, the industry has been investing much more heavily in new plant and equipment. In both 1955 and 1956, it was investing about £50 million, which in real terms was nearly double as much as in 1950. This is still only 5 per cent of the industry's net output, and much more could probably be done. But comparisons with other forms of industry can be misleading so far as capital spending is concerned. Building is an industry that itself needs practically no buildings at all; its production plant is mobile equipment that has to be moved from job to job; and it is also the industry *par excellence* of small firms.

This higher physical output per man has been matched by tighter attention to costs. Time and method study, to make more economical use both of men and of building plant, has been promoted for several years by those seeking ways of making building more efficient. Work study could also assist the building foreman in his job on the site. Progress is slowly being made in selling this idea to builders; but work study courses specially set up for them, apart from the internal ones run by some of the larger firms, are still few. Gradually, however, the lesson is being spread about in the only really effective way, through witnessing actual results. But the main reason why this industry, in spite of recent improvements, has still increased its efficiency less since before the war than most others in Britain, in the opinion of its thinking minority, is the calibre of its largely professionally unqualified management—in large, medium-sized, and small firms.

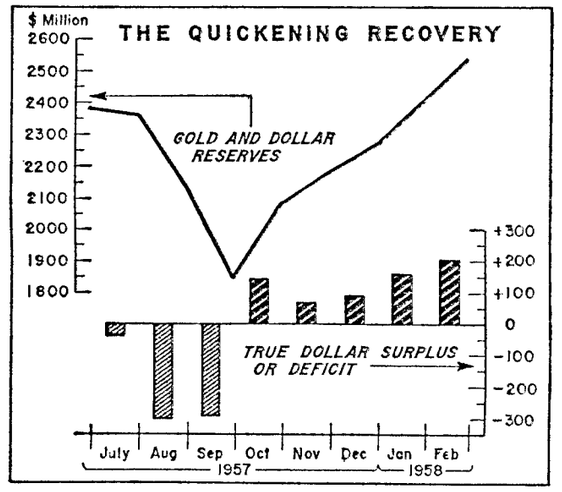
Few builders, as distinct from civil engineering contractors, have undergone any organised vocational training in their youth, yet they employ qualified tradesmen and in the course of day-to-day work have to deal constantly with qualified architects, engineers, and surveyors. This makes for an altogether exaggerated rift between the "practical" builder and the "theoretical" architect, which is accentuated by the convention of the architect as a professional adviser to the client. But it means that the typical builder makes comparatively little use of the growing fund of technical knowledge, research, and advice that the more advanced —and larger—contractors and the Building Research Station have been making available. And it means that few have the training or the breadth of outlook to be able to analyse their own operations and plan their projects properly before starting. Eight years ago, this weakness was instanced by a productivity team from the industry as the main reason why American building was more efficient than British: this week a team from one of the specialist sections of the industry, plastering, had to conclude that in this respect Britain still compared as badly as ever.

BUSINESS NOTES

IN THE MARKETS

The Spread of Yields

THROUGH the early part of last summer the yield on industrial ordinary shares represented in *The Economist* indicator and the yield of 2½ per cent Consols were pegging almost level. There was a time in July when it looked likely that their traditional relationship might be reversed and industrials might actually yield less than gilt-edged though it did not happen. This Wednesday, after a week in which both industrials and gilt edged have risen, *The Economist* indicator at 173.1 yields 6.85 per cent and Consols at 48⅜xd yield 5.14 per cent. The yield spread has thus widened to nearly 1¾ per cent per annum—a third of the current yield on Consols. Some day that unusually wide gap must narrow again and that is why a few investors who can afford to take quite a long view are now turning their eyes back again towards industrials. It explains why Manchester City Council which already has power to invest its pension money in industrial shares has taken the decision to lay out £500,000 a year in equities, and why the London County Council which has not got the necessary powers is seeking them. It explains also why one or two investment trusts are thinking about raising debentures to expand their portfolios even though they may have to pay about 6 per cent for the money.



That lure of the yield spread however is of interest mainly to the investor who can think in terms not of months but of years. For those whose main concern is the short or medium term outlook, the facts most relevant point in the opposite direction. A technical rally in industrials is certainly occurring. It owes something to the fact that Shell Transport's new shares are now £3 paid and that selling pressure from those who could not find money for the call has finished. The gilt-edged market remains strong. It took the new 6 per cent Australian stock in its stride and although, as expected, the issue was oversubscribed with no great margin (cash applicants for over £100,000 receiving 87 per cent of their applications) the initial discount of ½ per cent was soon wiped out.

The bullish tone is naturally most noticeable in the one section of the market where the Government broker cannot at the moment exercise control—in the short-dated stocks that suit the money market's book. The shorts have continued to rise vigorously, a movement that goes strangely with the fact that last week for the first time for many weeks the average discount on the Treasury bills rose. It was £6 os. 3½d. per cent against £5 19s. 5½d. per cent a week earlier, the market having brought down its common bid by 4d. This decision of the discount houses occurred significantly at the one point in the month when sterling was not strong and it may be claimed as a victory for the only discipline that remains—the forcing of the market repeatedly into the Bank. But the hard fact is that, whatever the plans of the authorities may be, most sections of the gilt-edged market already discount some reduction in Bank rate.

GOLD FIGURES

Best Since Korea

BRITAIN'S transactions in gold and dollars and with the European Payments Union last month produced the second best result on record, yielding only to the figures for October, 1950, in which the reserves were benefiting from the feverish Korean boom in commodities and from rumours of an up-valuation of sterling. The actual increase in the reserves in February was $135 million, itself highly satisfactory. But the star performance was the surplus with the European Payments Union, which will not be settled till next week. The February surplus was £45 million ($126 million) of which some $94 million will be paid to Britain in gold.

It is clear that this EPU surplus has been boosted by special capital movements, notably those connected with the capital issues made by the Shell group and these could, of course, be transitory. It is equally clear that the February figures evince a continuing and progressive recovery of sterling's strength. Deducting from February's gold gain the receipt of $22 million from EPU in respect of the January surplus, and adding in this month's $94 million, the "true" dollar surplus is $207 million—this is the eight-year record. It follows surpluses of $166 million for January and of $86 million for December. The exchange inflow reflects commercial dollar earnings in the favourable season, boosted by the covering of sterling commitments extended during last summer, and the replenishment of working balances run down at that time. Bear covering of this kind has been a far more important influence than the modest inflow of funds for interest arbitrage. Sterling's sharp dip last week now appears to have been attributable to temporary end-month factors; this week it has recovered to around $2.78½.

Confidence Makes Its Mark

THE achievement in the five months to end-February should be well noted by the sceptics. With the reserves at $2,539 million, the summer gold loss has been more than made good; and even after allowing for the $250 million drawn from the credit with the Export-Import Bank (the second half of which has now been renewed for another year but not yet used) the reserves are within $100 million of their level on the eve of the crisis. It is an achievement unmatched after any of the previous sterling crises of recent years.

The strengthening of confidence in sterling was indeed an important influence also in the big "special" factor, the Shell money. A small part of this may have represented purchases of sterling by overseas investors wishing to buy the rights to the "Shell" Transport issue; the first £3 per share call on the new shares on Tuesday will not have affected the end-February figures. A considerably bigger influence seems to have been that the Royal Dutch Shell company converted dollars and guilders paid in by investors into sterling. Royal Dutch is an international company with large commitments in the sterling area; and London to-day is the most remunerative centre in which to hold idle funds. Nonetheless, a big switch into sterling by an international company is a remarkable tribute to the change in the currency atmosphere in the past few months. Some measure of the switch out of guilders is seen in Holland's deficit with EPU of $47½ million, which follows a surplus in January of $22½ million.

Another special support for Britain's EPU surplus came from France. The authorities there could claw back fewer foreign balances from French commercial banks than in recent months. By the process of *ratissage*, France's balance in EPU had for many months been bolstered up, and Britain's weakened; now at last the boomerang is in return flight. France's deficit with EPU last month increased from $21 million to $32 million.

PRODUCTION

Plus Equals the Minuses

A YEAR ago, recession in the motor industry was sufficient to offset rising activity in other industries and hold the index of total industrial production level; today the position is almost exactly reversed, with a motor boom equally offset by recession elsewhere in industry. Rapidly produced indicators of production are necessarily approximate: the figure forecast for December which on a seasonally corrected basis was 140-141 (1948 = 100), has now been revised down to 138. Manufacturing output, at the end of the year, was below the levels of the summer and autumn. But the trend of total output is still horizontal: the first indications of output in January suggest that this will have been about 137-138 on the seasonally adjusted basis, which is fractionally higher than in January, 1957, but fractionally lower than the average index for last year.

Motors exert a good deal of pull on intermediate engineering such as drop forgings, light castings and electrical components, as well as on tyres and sheet steel. Some of their component suppliers, however, also work to a considerable extent for aircraft, and have been affected by the rundown of defence contracts. The manufacturers of capital goods such as machine tools are now moderating their rate of output here and there, in accordance with the decline in new orders that they have experienced for months past; another group of investment suppliers, the building materials industries, are recording quite substantial cuts in output below the level of a year ago. Consumption, from the most recent estimates of national expenditure, still seems to be rising slightly in volume; but output by manufacturers

INDEX OF INDUSTRIAL PRODUCTION, SEASONALLY ADJUSTED
(1948—100)

	All industries			Manufacturing	
	1956	1957	1958	1956	1957

November	137	140		140	144
December	136	138		139	141

of durable household goods no longer seems to be rising as much as it was in the autumn, and output of "soft goods" remains stable, with textile and clothing output falling off slightly and food, drink and tobacco production somewhat lower than twelve months ago. The motor industry has switched its sign from a big minus in the economy to an even bigger plus, during the last twelve months; but there are a lot of other minuses appearing.

COAL PRICES

Incentives for Some

IT is economically expedient to "open the concertina" of coal prices, raising the price of large coal and reducing the price of small, when there is not enough large coal in the total tonnage raised from the mines to meet demand for it at present prices—and far too much small. But the Government no doubt considers it politically inexpedient at this moment to raise the price of large coal to the consumers who use most of it, householders and the railways. So the National Coal Board's announcement this week means that it is to use the price mechanism in this perfectly rational way against only one group of consumers—those in private industry. These industrial consumers use just over 20 million tons of coal a year, and have recently been buying, among this, about 4 million tons of large coal. The board's avowed object is to give them a price incentive to buy smaller coals instead. The move will enable the last remaining imports of large coal to be dispensed with: but price discrimination of this kind should certainly not be exploited to make room for an end to domestic fuel rationing.

Prices of industrial coals vary mainly according to quality, size, and where they are produced (there is a separate ranking for carbonisation coals), but selective increases related to the demand for particular coals, as these latest ones are to be, have been made from time to time. The average pithead price of large coals is at present 98s. a ton; prices of these are to be increased by up to £1 a ton, according to quality. The average price of "doubles"—coal in lumps that will go through a two-inch mesh but not through a one-inch mesh—is now 88s. a ton: increases will vary up to 5s. a ton. The reduction in prices of "singles"—coal in sizes

46/-

The intermediate bonus on claims arising during 1958 under with-profits policies has been raised by yet another 2s., from 44s. to 46s. per cent. per annum compound for each premium paid since 31st December, 1953.

A worthy addition to the Unique Record and a good augury for the vested bonus to be declared at the division of profits at the end of 1958.

between an inch and half an inch—is a flat cut of 3s. a ton; at present prices of these coals to average 88s. a ton. If industrial consumers alter their consumption as it hopes, the board will neither gain nor lose in revenue from these changes.

British Railways, as the country's largest individual buyers of large coal, have presumably been getting it below the average price industry was paying and the margin they enjoy through bargaining will now be automatically widened; most domestic consumers have probably been paying more than industry, and this difference will now be reduced. Carbonisation coals are largely outside this price range (though a few coals may be sold in both ranges), so the gas and coke oven and industries are not affected. Most of the coal power stations buy is smaller than these graded sizes, and the Coal Board will presumably be treating more of its small coals to sift out the extra "singles" to which it hopes that general industrial users will turn. Formally, the changes do not affect coal for electricity; the electricity industry this week felt confident enough about its forward fuel costs to promise that its bulk supply tariff would not be altered for a year. So the board's price discrimination here really only affects industry as against householders and the railways—which remain the worst wasters of large coal and are being given no further incentive to mend their particular ways.

AIR TRANSPORT

Safety Margins

CIVIL aviation in this country will be none the better for last Friday's debate on air transport development in which at least two speakers suggested—without providing a whit of evidence—that the safety standards of some airlines were lower than they should be. Mr Mikardo made no bones about it. "For a long time," he said, "I have felt that some of the independent operators, whilst carrying out the statutory rules laid down by the Air Registration Board, did not break their necks to go beyond the minimum required. I believe that, in this matter, the minimum is not good enough. . . ." Mr Beswick was more circumspect. After referring to the long safety record of Silver City, Eagle Aviation and the Ambassador aircraft, all three of which have been involved in recent accidents, he went on to say, "one might well wonder whether it is the very fact of freedom from accidents which has permitted the margin of precaution to be almost imperceptibly whittled away."

No aircraft, not even a privately-owned runabout, can be patched and put into the air like an old lorry. They are subject to stringent licensing regulations which lay down conditions for overhaul, prescribe the time between overhauls and generally take the matter away from the discretion of the operator. Air crews are also licensed and, like the aircraft, their licences have to be constantly renewed and their proficiency checked at stated intervals. These rules are laid down by government airworthiness authorities as specific safety requirements, not as bare minima which operators should "break their necks" to exceed and improve on. If it is necessary to do this, then the regulations, not the operator, are at fault, and the speakers' complaints should have been addressed to the Air Registration Board. It is unlikely that they would have cut much ice there.

The idea that there could be one standard of maintenance for the nationalised air corporations and another for the independent airlines, or one for scheduled public services and another for charter flights, probably has its roots in the British Overseas Airways Corporation's grossly inflated engineering staff. The corporation's engineering and maintenance costs much exceed those of other major international airlines, not because the work is done any more carefully, but because it takes so many more men, and particularly so many more inspectors, to do it. BOAC is steeling itself to a major campaign to get these costs down, for they are the biggest contributory factor to its high operating costs. It might be possible to save several million a year, but when that attempt is made many more, and if possible even wilder and more irresponsible accusations about safety standards, will be heard.

OIL PRICES

The Slide Continues

FURTHER adjustments in world oil prices, all downwards except for kerosene, were made last week. The fall in the prices of refined products in the US Gulf and Caribbean has now spread, with some adjustments to local marketing conditions east of Suez, to the refineries in the Middle and Far East. A further decline in product prices in the United States is being staved off by sharp reductions in the volume of crude oil run in the refinery stills, and to prevent scattered cuts in the prices of US crude oils from becoming general the producers in Texas have accepted the unheard-of restriction to a mere nine days' output in March.

Many refiners are still paying 25 cents a barrel more for their crude oil than they were before the Suez affair began, but any compensating increase in the prices they receive for their refined products—which was significant only in the case of fuel oil—has now virtually disappeared. The price of heavy fuel oil, both in the US Gulf and in the Caribbean, has fallen by a total of 30 cents a barrel during the past month, and is now only 15 cents a barrel higher than it was before supplies were interrupted nearly eighteen months ago.

As some Venezuelan crudes yield an exceptionally high proportion of fuel oil, their prices rose sharply when fuel oil was in short supply and they could not escape a corresponding reduction when it became surplus. Although the posted prices of these crude oils have been reduced by only 15 cents a barrel, some producers, unable to dispose of their output, have been offering discounts of as much as 50 and even 75 cents a barrel off the posted price to contract buyers. This weakness has not been reflected in the prices of crude oils in the Persian Gulf, although prices at the pipeline terminals in the Eastern Mediterranean have been adjusted to allow for the decline in tanker freight rates with which pipeline charges have to compete.

Against this background, and in view of the general slackness in the world demand for oil, reports of the sharp increase in the output of the Iranian oil consortium in January and of a surge in output in Kuwait during the same month make rather curious reading, even if they are due to non-recurring factors; the February output figures will almost certainly be lower. When the pipelines from Iraq to the Mediterranean are restored to their full capacity later this year, the oil companies will be expected to increase their

off-take of Iraq crude oil. If the price is not to collapse, they will have to hold back output elsewhere in the Middle East.

BANK FIGURES

Credit See-Saw

BANK credit in recent months has shown no consistent trend. In the last few weeks of 1957 the expansion of deposits was notably larger than is normal at the season; then the statements for mid-January showed a bigger than usual seasonal decline; and now the reduction shown in the February figures is somewhat smaller than in corresponding periods of 1957 and 1956. The seasonally adjusted index of deposits is carried up by one decimal point, to 109.8 (1948=100); but in the first seven weeks of the year together, the fall of £385 million in net deposits is a little larger than the record fall last year.

The decline in deposits in these early weeks of the year reflects the repayment by the Government of Treasury

LONDON CLEARING BANKS

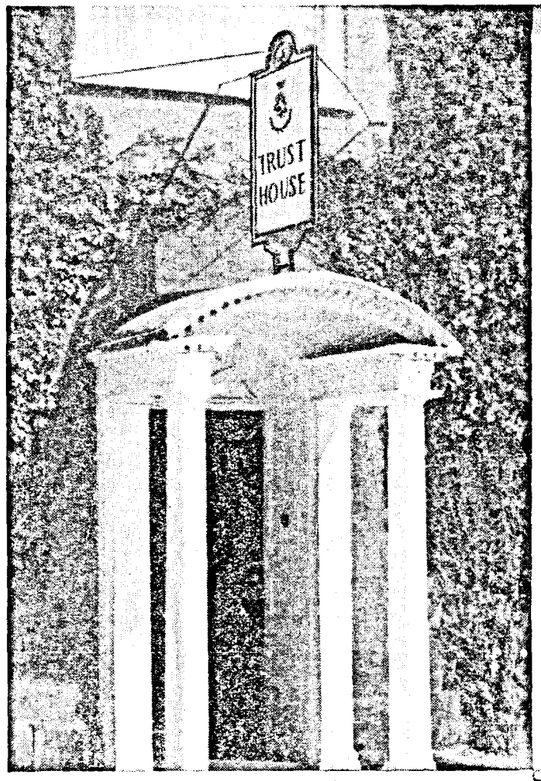
bills from the proceeds of the tax inflow. So far, the banks' liquidity is still comfortable—the ratio is 35.2 per cent, compared with 33.6 per cent in February last. A matching seasonal influence is an increase in advances, to help taxpayers meet their bills. Despite the repayment of £22 million by the state boards—this being attributable to fortuitous influences of the timing of Exchequer advances—total bank advances still rose by £21 million, marking an increase to other borrowers of £43 million. A year ago the increase was £97 million. The banks added virtually nothing to their investment portfolios in February, following the January increase of £33¼ million at the time of the issue of the 5½ per cent 1966's. The banks still show no disposition to increase their stake in the gilt-edged market in a big way, nor until the depreciation on their holdings of shorts has run off will they switch freely into the new 1966 stock.

STERLING NOTES

Import Allowed

A STRONG pound is the right background for the decision to allow the import into this country of sterling bank notes. The British traveller can still take only £10 in notes in his pocket, but in countries where sterling notes have been changing hands below the official rates, foreign banks can now remit them for credit of their accounts in London. In effect therefore the notes pass into a sterling account of the appropriate area—a transferable account if the notes come from the transferable account area and a dollar area account if they come from the dollar area. There has been no rush to repatriate big quantities of British notes; the pound note in Zurich has hardened to 19s. 11¼d.—£1 0s. 1d. against transferable sterling, whereas the rate was formerly 18s. 11d.—19s. One of the Swiss banks has come in as a buyer of sterling notes.



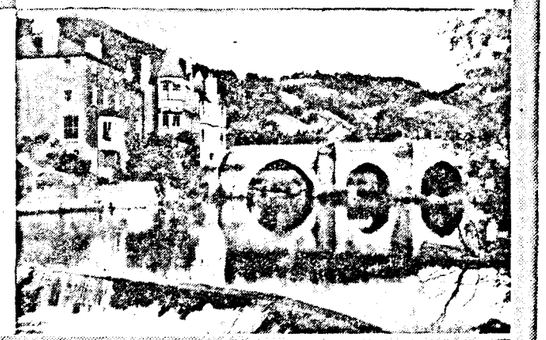
The one centre from which there has been a substantial inflow of pound notes is Tangier, and perhaps because a sizeable quantity of notes was unfrozen, the sterling rate against Spanish peseta notes has also improved. Peseta notes can now be bought in London for 155¼-156¼ against about 158 when the British relaxation was announced. The change naturally will not abolish the wide differentials between bank note rates and telegraphic transfer rates for several foreign currencies. The French franc note rate, for example, is currently quoted in London at 1,304-1,307 to the pound—a range which must be widened for the private tourist by the British bank's commission. The difference between this rate and the official franc quotation of 1,180 to the £ depends on French currency controls, not on those of this country.

ATOMIC ENERGY

Nuclear Power for Export

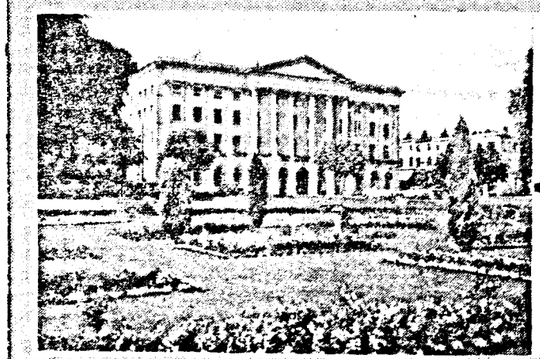
EXPORT prospects for nuclear power stations are brightening. Tenders for a second atomic power station for Italy, to be financed by the World Bank, are open to all-comers by the end of April, and the results are expected by the end of the year. Germany, Belgium and Holland are also expected to invite roughly similar tenders some time this year, although there is still some doubt whether the Dutch government will approve the expenditure. The Italian station, like that for which the Japanese have invited tenders from three British groups, is for a net output of 150 mW, three-quarters of the size of the first Italian atomic station which will be built by the Nuclear Power Plant Company. Like the Japanese, it also calls for some precautions against earthquakes which must be taken into account in the southern half of Italy where this, and at least one other nuclear power station, are expected to be built.

Some British manufacturers think that there will be a tendency to standardise on a capacity of 150 mW, or multiples, for the first European nuclear power stations; that would make tenders very much lighter to prepare. But it is not certain that customers will be so considerate as to order exactly on the scale of one reactor at the Generating Board's first stations. A capacity of 150 mW is big for a small country and small for a big one; and one at least of the five British teams, English Electric, is now building reactors of 250 mW capacity without a proportionate increase in building cost. In those European countries that write off their electrical plant over relatively short periods, such as Belgium and Germany, the high construction cost of the British type of power station involves capital charges of up to 15 per cent per annum, which offsets much of their operating advantage over American reactors. But American estimates of costs have risen very sharply during the past year, while British estimates have continued downward.



Take a Spring Holiday

AT A



TRUST HOUSE HOTEL

Springtime; when there's warmth at last in the sun and Britain's incomparable countryside is bright with new green. There's no better time for a holiday—and especially a Trust House holiday, because many Trust House hotels offer out-of-season rates in the spring of the year.

230 TRUST HOUSE HOTELS TO CHOOSE FROM

You will find them all over the country, large and luxurious, small and picturesque, by the sea, in the town, in the country. The Trust House map shows where they are situated. Wherever you go you can relax and enjoy yourself knowing that a spotless, well-furnished room, good food and every comfort are yours at reasonable cost.

Stay for a night, stay for a week, stay for a weekend or longer but always stay at a Trust House.

One of the most advanced cars you can buy to-day

THE NEW Riley Two-Point-Six

What clean-cut elegance—what smooth, silky running in this new Riley Two-Point-Six. But the new six cylinder engine has another side. Brilliant acceleration makes overtaking swift and sure. The car will cruise at consistent high speeds in safety whilst still running as quietly as in city streets. There's a remarkably efficient suspension system and steering to make fast motoring delightful and safe. Brakes are power assisted.

Choose your transmission. Choose between direct gearbox with short, sports type gear-lever, with or without overdrive, or fully automatic transmission. Automatic Transmission and Overdrive are extras.

Price **£940** *plus £471.7s. P.T.*

There is also the Riley One-Point-Five, a compact four-seater with brilliant performance and low running costs.

Every RILEY carries a 12 MONTHS' WARRANTY and is backed by Europe's most Comprehensive Service—B.M.C.

ATOMIC INSURANCE

Agreement on Principles

AFTER a three-day meeting in London last week, the main insurance markets of Western Europe agreed on the basic principles they will follow when offering cover for atomic risks—or rather, they seem to have accepted without much question those already worked out and practised by the main British insurance companies and Lloyd's whose British Insurance (Atomic Energy) Committee has been in business for more than a year. This group has eighteen different reactor projects before it now—some power stations and some research reactors—and has already quoted cover for half of them. British companies attach great importance to the principle that liability for all risks must be placed squarely on the reactor owner, so that insurers know exactly where they stand, and this principle was also accepted by last week's meeting, together with an undertaking to offer comprehensive cover only and to accept no division of risks. Separate sub-committees are meeting late in April to work out the details of surveying and evaluating the hazards; of bases for premium ratings and of the policy cover to be offered. Since scientists themselves hold differing views on the degree of risk attached to different designs of reactor, insurance companies will need all their traditional skill in weighing experts' opinions to pick their way among the different types and to obtain a broad measure of international agreement on the potential hazard each one carries inside its concrete shell.

Companies are not seriously disturbed by the fact that no Western European government, other than the British, has yet indicated where it will fix the limits to third party liability. They now believe there would have to be a major reactor accident, probably involving the destruction of an installation worth £10 to £15 million, before any question arose of damage to people or property outside the premises and in such a case the bill for the reactor would dwarf third-party claims. When the Windscale fire almost destroyed a reactor worth several million pounds, third party damage came to less than £100,000. It is the cost of the reactors and the difficulty of repairing them rather than nebulous third-party liabilities that have led to general agreement that atomic insurance must be pooled with close links between the pools in different countries.

SPONSORING RESEARCH

Stepmother of Inventions

THE National Research Development Corporation was set up in 1949 with a government grant of £5 million to meet the development cost of promising inventions which were arrived at in government laboratories and of private ideas being ignored by industry. Either the promising inventions were fewer, or industry has sharper eyes, than the corporation's sponsors expected because that £5 million now seems likely to outlast not only the first five years of work for which it was voted, but also the first decade. It is difficult to judge how the corporation's work is going today from its accounts to last June, published this week. They show development expenditure of roughly £250,000 during that financial year on a very wide variety of projects ranging from colour television to the smoking of kippers.

Some of these projects—for example, the development of computers and the pilot trials of prototype machines designed in other government research establishments—are plainly of great value. The rapid development of computers is essential for defence and for scientific research, and since British industry was not capable of doing the work, some government aid was necessary, just as it was necessary in the United States. The NRDC offers a useful alternative to doing this work through the Ministry of Supply and is better fitted in some ways than that Ministry for marketing the results to industry; patent licences are already beginning to bring in a useful revenue, amounting to £122,000 in 1956-57. But when all allowances have been made, the Corporation still appears to be responsible for a mixed flock of swans and lame ducks, some of them recognisable rejects from industry's own laboratories. The oil companies, for example, have their own views about the feasibility of towing oil in flexible containers; these views might be wrong, but if the NRDC developed sufficient evidence to show that they were, there would surely be a case for saying that those same oil companies, rather than the taxpayer, should meet the cost of developing such containers. Housewives would also argue that the art of smoking bacon and kippers was known and practised successfully before the war (though some say it has suffered since) and hardly seems to warrant further scientific investigation at public expense. The Corporation gives no indication at any time of how much it spends in sponsoring different projects; it must not therefore be surprised if some of them are sceptically received.

ROAD HAULAGE

Knight off the Road

TO acquire an "A" licence so that he may legally put his vehicles on the road, a road haulier has to state the class and area of traffic he proposes to cater for. This description of "normal user" allows the licensing authority to decide which objections from other road hauliers and from the railways it must by statute consider and to determine whether there is need, on the haulier's own proof, with any support he can muster from his prospective customers, for this additional haulage capacity to be allowed to ply for business. This would seem simple enough. But a surprising number of hauliers have recently been running foul of the licensing laws on applying for their licences to be renewed after their term of five years. The fault in most cases is largely their own either through understandable ignorance or blatant disregard of the way the rules are applied by the licensing authorities and the Transport Tribunal, which hears appeals.

The decision published by the Tribunal last week dismissing an appeal brought against the West Midlands Licensing Authority by a haulage firm whose application for a renewal of licence had been refused has already created a certain amount of anguish among other hauliers who may find themselves in a similar situation. The bare facts of this case were that the original licences permitted the haulier, a firm called Knight, to remove furniture anywhere in the kingdom and certain other specified goods within a 25-mile radius of its bases at Cheadle and Hanley. But its application for renewal proposed that the firm should be licensed to haul general merchandise between the Midlands and a wide area of England, between the south and

east coasts and Lancashire and Yorkshire, with occasional journeys to other parts of Britain. The application was refused—and that refusal was upheld by the Tribunal—because the haulier had materially changed his "normal user."

This decision was based upon a welter of case law that has held, ever since hauliers were first licensed in 1933, that failure to fulfil a statement of intention in the original application for the licence was a ground for refusing renewal. This rule has since been reinforced by the 1953 Act, which gave the licensing authority power to revoke or suspend licences on the same default. But two parallel developments in the last few years have made these rules operate more onerously for hauliers. First, the lifting of the general 25-mile limit on private haulage operations at the end of 1954 has meant that a great number of hauliers have materially changed their "normal user" by carrying more and perhaps different goods over much longer distances—as Knight had done. And, secondly, the descriptions of "normal user" for original applications for licences have been made much more precise. Rarely do the authorities now allow the sweeping phrase "general merchandise, Great Britain"; proof of that need is not so easy. The licensing system could almost be said to be attempting to ossify the dynamic and fluid operations of the road haulage industry. The legal way out, however, is for hauliers to apply for a new licence each time their business takes on a new complexion: if all hauliers scrupulously observed that rule the licensing authorities would be quickly overwhelmed with work. But hauliers will have to do that if they are not to find themselves denied the renewal of their licences every five years and therefore their right to continue in business uninterrupted.

EGYPTIAN COTTON

A Discount Offered

EGYPT is to offer a discount of 23 per cent on cotton exports against hard currencies (including sterling). The machinery of the concession is a manipulation of exchange rates that looks at first glance distinctly like that of the early stages of last year's devaluation of the French franc. The exporter who offers his cotton at a 23 per cent discount will sell his hard currency to the National Bank of Egypt at 30 per cent premium and thus come out square. In that way Egypt casts its eyes towards the Rome negotiations and towards the hope of more normal trade with the West in terms of money that can be spent freely, and presumably of less barter dealing with Russia where goods are tied to goods. Does the move also imply a devaluation or partial devaluation of the Egyptian pound? Financial opinion in this country is by no means clear that it necessarily does.

The 23 per cent discount on cotton will not of itself facilitate the sale of a single bale of Egyptian cotton to this country. To import Egyptian cotton into Britain is not illegal, but to pay for it, except into a blocked account, is. So imports of Egyptian cotton have stopped since the Suez crisis. Sales to other European countries have been made and on these Egypt has for months been giving discounts that seemed to vary with the need for the currency in which payment was to be made. Occasional sales are believed to have been made at 40 per cent discount, but a more usual figure even for currencies as hard as dollars or D-Marks has been about 20 per cent. Without a payments agreement between Egypt and the United Kingdom the newest concession will not sell much more Egyptian cotton. But if a payments agreement is arranged the moving of last autumn's crop could proceed faster, and incidentally competition between Egyptian and Sudanese cotton could be intensified.

RAILWAY PROGRESS

The Night Freight Express

THE railways have to put many of their freight trains on to regular schedules out of sheer operational necessity; it would seem to the outsider therefore quite a simple step to publish these schedules and keep to them. But except for the "Green Arrow" services for the movement of exports to the ports this has not been the practice of the railways in this country. Recently, however, the general manager of the Southern Region of British Railways argued publicly that this should be done. By raising the reliability of railway freight services, he suggested, this step might help considerably towards reversing the prolonged switch of goods traffic to the road, and it could moreover be done straightaway in advance of the major fruits of modernisation and commercial freedom.

The Southern Region happens to be one of the smaller regions and is predominantly passenger-carrying. But the London Midland Region, which hauls seven times more freight than the Southern and about a third of the total goods traffic of all six regions, has decided to do it. This week it published the first express freight timetable ever to be issued in this country, an innovation of some considerable moment. The new timetable lists some 200 freight expresses departing on the evening of one day and arriving for goods to be delivered early the following morning. Merchandise deposited at Camden depot, London, by about six o'clock in the evening, for instance, will be available for collection at 6.30 the following morning at Birmingham and at 7.30 at Manchester. None of these scheduled expresses will be cancelled because the load is not big enough. Others will be added to the list as the programme of fitting vacuum brakes to the wagon stock proceeds: a further 300 semi-expresses, partly fitted with continuous brakes, are already being run, but they do not at present appear in the published timetable.

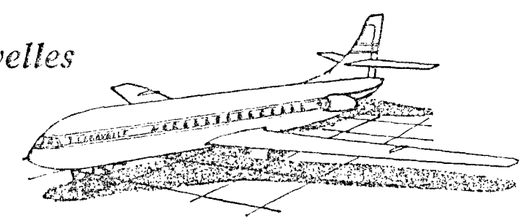
To make the scheme widely known to industry the Region's commercial staff are circulating the timetable to more than 20,000 existing and potential customers, including those it has lost. But its success will depend heavily upon the reliability and punctuality the scheduled runs will be able to attain. During January, admittedly a month of particularly bad weather, only 62 per cent of these 500 freight trains were less than 30 minutes late. Price and speed will also be important. The first will be governed by the suitability of the traffic for rail haulage and the time it will take the region to base the bulk of its charges upon cost; it should be able to offer attractive rates for many traffics once this is done. And the speed of the freight expresses, at present not significantly better over most of their routes than by road haulage at night, should be progressively improved as the region's new works and traction equipment become available. But it is a pity that the railways did not take this step of publishing freight train timetables before now; it will be harder now to gather the advantages.

COTTONS FOR AUSTRALIA

Cut for Lancashire

AUSTRALIA'S suspension of import licences for printed cotton piece-goods has caused disquiet in Lancashire where orders books are looking thin. The move has also brought out a clash of views in Australia's textile and clothing industry. Mr. John McEwen, the trade minister, has stated that no further licences will be issued until the Tariff Board has reported on the Australian printed cotton textile industry and the government has considered its views.

The suspension therefore gives temporary protection to the local printing industry. It is not primarily dictated by balance of payments troubles. In the year to last June Australia imported 38 million square yards of printed cotton piecegoods. In the current period, 70 million square yards have already been imported or licensed. This sharp rise follows the recently concluded Australian-Japanese trade agreement, and has so shaken the Australian government that it has secured an undertaking from the Japanese authorities that exports would be cut by one-third, starting early this year.



The Australian cotton printing industry has grown rapidly since the war, but it still cannot supply even half Australia's domestic requirements. That has not stopped it clamouring for protection not only against Japan, for Czechoslovakia, Hungary and Poland as well as west Germany can undercut it. Duties on printed cotton piecegoods are ½d. a square yard or 5 per cent, whichever is the lower, on British goods and 2d. per square yard for other imported piece goods. The ban affects Lancashire, on last year's basis, to the extent of 20 million square yards worth around £2¼ million; given its price disadvantage against Japan and Eastern Europe, the British industry would be hard hit by any prolonged ban. It seems unlikely that the Australian government will be in a position to reach a firm decision before the late spring.

OIL TANKERS

Tonnage Galore

TRAMP freight rates for oil tankers have slightly improved during the past month, picking up from the rate of scale minus 70 per cent to scale minus 45-50 per cent, but this present rate, which is equivalent to 16s.-16s. 6d. a ton deadweight for the Caribbean round trip, is still uneconomic for most of the large number of tankers built during the war. Time charters are equally low and one of the reasons for this long depression in tanker freights—already six months old—is last year's slower rate of growth in world oil consumption. But another, and equally potent, drag on the tanker market is the record volume of new tanker tonnage that is now leaving the world's shipyards.

A Fleet of Caravelles

WHILE the British aircraft industry has been split into two fiercely partisan groups over the building of a short-range jet airliner for British European Airways, a French-built competitor, the Caravelle, has been making rapid headway among BEA's competitors. The Belgian airline, Sabena, is the latest to open negotiations with Sud-Aviation, who make the Caravelle. Even if Sabena are interested in no more than eight aircraft, that would bring the total number of Caravelles on order or under option to the impressive figure of 68, all but five of them for European services.

An order book of this size shows how far the airlines have swung towards the use of jet airliners on short to medium range routes that they once regarded as the natural preserve of the turbo-prop airliner. British European Airways made such a rapid switch of policy and placed a rush order for six Comets last autumn, and the corporation obviously attaches the greatest importance to the choice of a jet airliner designed specifically for European routes. The order being negotiated now with the de Havilland-Rolls-Royce groups is initially for 24 aircraft, with an option for a further 12. The Corporation reckons that a saving in flying time of as little as 20 minutes would divert passengers from a turbo-prop to the faster jet service; savings of this order can be achieved on journeys of 500 miles.

Who started this pendulum towards the pure jet airliner? Air France is to bring its fleet of 24 Caravelles into service early next year; Aeroflot should be flying Tu 104s into European capitals, London included, from this summer. Several airlines will begin flying the big American jets across the North Atlantic into European terminals next year. The first foreign airline to buy Caravelles, the Scandinavian SAS with 25 on order or under option, operates to Moscow; so does Finnair, with six on order or under option. Air France, however, has made it known that the Caravelle, originally tailored for its services to North Africa, will be used over its whole European network and that it is contemplating a fleet of 50 medium-range jet airliners for the purpose, not all of which will necessarily be Caravelles.

The Caravelle is not a big airliner by current standards. It carries 70-80 passengers. Its performance has been helped substantially by a big increase in the power of its two Rolls-Royce Avons, mounted to the rear, which has been achieved while the Caravelle was under development; this has risen from about 7,500 pounds thrust when the aircraft first flew in 1955 to its present figure of 11,700 lbs. Tooling is for four or five aircraft a month with deliveries to Air France beginning next winter; the manufacturers claim that this could be stepped up to eight a month by 1960. As the first French airliner to break into the world market on any substantial scale since the war, the Caravelle is a competitor that the British industry will have to take seriously. It has already gone some way to skimming the cream off the European jet market and the first sales are always the hardest to make.

Last year, according to the latest analysis by John I. Jacobs, the shipping brokers, tanker completions exceeded 5½ million tons deadweight, which allowing for scrapping and other adjustments meant a record net increase of over 5.1 million tons to bring the total fleet to 49½ million tons deadweight. In terms of carrying capacity this meant an addition of almost 15 per cent.

With nearly 1,000 tankers of 32.9 million tons now under construction or on order, John I. Jacobs calculates that the carrying capacity of the world fleet will be increased by approximately similar amounts each year for the next four years even allowing for the scrapping of all tankers over 25 years old (relatively few tankers, however, were built in the thirties) and the cancellation or postponement of perhaps 10 per cent each year of scheduled deliveries. Already more than 3 million tons of tankers have been laid up.

While the oil companies have laid up some of their own tonnage and are working off the relatively expensive time charters now on their hands by slow running and by some re-routing via the Cape, it is the independent tanker owners who have been hardest hit, especially the Greeks, who had been deliberately concentrating on single voyage charters; they have recently been discussing various plans for withdrawing some of their tonnage from the market. Greek shipowners now operate about 6.9 million tons deadweight of tankers and have a further 4.2 million tons on order. Their fleets run mainly under "flags of convenience," such as the Liberian, which now totals 8.4 million tons, the world's largest; since they chose these flags to escape tax they are now less well off than shipowners in other countries, who can at least set off their present losses against taxable income.

DEFENCE PRODUCTION

Germany Shops for Arms

BY the end of February the German government had placed orders in this country for defence equipment totalling £85 million. Two-thirds are for military vehicles, mainly troop carriers, all ordered from the British Manufacture and Research Company. These are built to an Hispano Suiza design (the company manufactured the Hispano 20 mm aircraft cannon before it was replaced a few years ago by the 30 mm Aden, an adaptation of a German design), and much of the work has been subcontracted to Leyland Motors. The original value of the contract was £34 million, while separate orders worth £8½ million were placed by the German government with Rolls-Royce for engines. The later addition of some light armour and other modifications raised the value of the contract by £15 million to £49 million. Further additions such as gun turrets to anti-aircraft versions of these vehicles are still being discussed.

German orders for aircraft are worth about £13 million, mostly for specialised naval types. The biggest are for 68 semi-obsolete Sea Hawks, 50 Bristol Sycamore helicopters and 30 Pembroke trainers; the balance includes small numbers of anti-submarine Gannets, Skeeter helicopters and Heron transports. The remaining £14 million is accounted for by the cost of refitting seven frigates made over to the Germans by the Royal Navy, and by some specialised electronic equipment. It is not a list that will encourage the British aircraft industry in estimating future export prospects in Germany—except perhaps for airborne guided weapons, such as the de Havilland Firestreak.

CANADIAN AND ENGLISH STORES

Unhappy Disclosures

THE best that shareholders of Canadian and English Stores, that unhappy hire purchase trading company whose shares were brought to the public through the Whitehead Industrial Trust, can feel about the report of the shareholders' committee and the board's comments on it is that action will now follow. The shareholders' committee, of which Mr S. R. Hogg is chairman, has recognised that a scheme of capital reconstruction is needed. In equally forthright terms it has recommended a reorganisation of the board, and is going to get it. Mr Harry Brooks who with his wife owns the deferred shares is, if the committee's recommendations are accepted, to remain a director so long as he has a substantial financial interest, but on a part-time basis with no executive powers. Lord Milner, the chairman, Mr Robert Wilson and Mr John Wilson should, it is suggested, resign. Mr John Wilson, who joined the board in order to help to put matters right, has indeed already gone and Lord Milner now says that he and Mr Robert Wilson will offer their resignations at an early date.

That leaves the way clear for a reconstituted board under Mr Swash, the present vice-chairman and former chairman of Woolworths, to be set up. Mr Hogg will join that board. But this in itself will not solve all the company's problems. In particular the committee feel that Mr Brooks has a duty "to make a very substantial gesture towards meeting the losses of the shareholders." Nor do the shareholders yet know in full what those losses will in the end be. Pooles Central Warehouse, the English subsidiary, lost £1,250,000 in the year ended January 31, 1957; the English parent company made a small loss; Marshall and Aston, the English wholesale company, a small profit; and the Canadian group a disappointing profit of about £250,000. A further loss for the year just ended has been foreshadowed and the foretaste of it from the committee's report is that for the first half of that year Pooles suffered a loss of £400,000 before any writing down of stocks which may be required. The quality of statistical information to the board and the control of debt collection have been most severely criticised by the committee. These matters call for remedy, but no reforms can now fully recover for shareholders the prices they paid for the shares.

MOTOR BUSINESS

The December issue of this quarterly research bulletin for the motor and allied industries is now available. It includes:

THE OUTLOOK FOR 1958
THE ITALIAN MOTOR INDUSTRY
THE MARKET IN THE UNITED STATES FOR EUROPEAN CARS

The Bulletin is fully illustrated by charts, amongst which are:

PRICE INDICES OF USED CARS AND VANS
NEW REGISTRATIONS IN GREAT BRITAIN

For full particulars of this Bulletin apply to:

THE ECONOMIST INTELLIGENCE UNIT LIMITED
22 Ryder Street, St. James's, London, S.W.1.
Whitehall 1511, Ext. 48

BUILDING SOCIETIES

Interest Policy Defended

THE most forthright and most closely reasoned defence of the Building Societies Association's advice to its members to hold the line on interest rates at 6 per cent charged on mortgages and 3½ per cent net paid to shareholders is in Sir Harold Bellman's address to members of the Abbey National. Sir Harold starts from the assumption that a 7 per cent Bank rate marks a condition of financial crisis. He sees no break even point in building society rates that would yield a significant increase to shareholders unless the mortgage rate were raised by at least one per cent; Sir Harold obviously has in mind the fact that as shareholders' interest rises, the income tax that the societies pay rises, too. He says that the shareholders' rate of 3½ per cent net, equal to just over 6 per cent gross to the investor paying the standard rate of tax, has risen 40 per cent in recent years and despite competition at the fringe offers a fair return. He fears that a further increase in mortgage rates would only result in borrowers exercising the right to extend their mortgages. On the argument that the societies should put their rates up and thus attract extra money which might enable them to meet the unsatisfied demand for mortgages, Sir Harold forthrightly says: "Some two million building society borrowers would be made to suffer in the hope that at the most a few thousand would-be borrowers might be accommodated without delay."

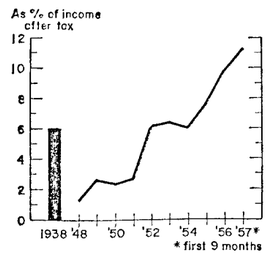
Mr H. L. Score, the president of the Co-operative Permanent Society, takes a more moderate line. He entirely supports the association's recommendation; he thinks of 7 per cent as a crisis Bank rate and therefore that the societies should resist higher interest rates as long as possible. But he does see the force of the argument that "one group of institutions cannot stand out indefinitely against general trends." Neither of these chairmen seems to have faced the argument that the working margin between the societies' lending rates and their borrowing rates is too low to allow reserves to grow much while total assets are growing. A reduction in taxation or a higher lending rate may still be necessary in the end.

KNITTING MACHINERY

Courtaulds-Tilling Deal

THE rapid development of warp knitting has enabled knitted goods to replace (and to look like) many conventional woven fabrics, and similar inroads on lace are now reported. FNF Machinery Manufacturing Company, a Courtaulds subsidiary with Morton Sundour as junior partner, makes a large share of the warp knitting machinery in this country. Its issued capital is £518,000 in £144,000 of redeemable preference shares, all held by Courtaulds, and £374,000 of ordinary shares, of which Courtaulds holds £355,500 and Morton Sundour £18,500. This week brings the announcement that Holbourn Aero Components—a member of the Thomas Tilling group—has bought half the preference and half of each holding of ordinary shares. The purchase consideration is not disclosed, but is understood to be modest and not for immediate payment.

The explanation of the deal lies in the work other than knitting machinery that FNF has been doing. Its Government contracts came to an end with the defence cuts of last August and it is hoped that Holbourn Aero Components, which has apparently been highly successful in obtaining new engineering business, will be able fully to occupy FNF's existing factory space.



AGRICULTURAL TRACTORS

Fergusons in France

DECISIONS taken six years ago to overcome the restrictions on imports of Ferguson tractors into France by manufacturing them locally have now put the Standard Motor Company in a strong competitive position in the emerging common market—for cars as well as tractors. The factory opened this week at Beauvais, some 40 miles north-west of Paris, is the second of two plants operated by Société Standard-Hotchkiss, in which Standard has a 50 per cent holding, the remainder being divided equally between the French Hotchkiss company, which makes the diesel and petrol engines for the tractors, and Massey-Harris-Ferguson, who handle the marketing. Production of Fergusons at the first plant, at St. Denis on the outskirts of Paris, has now reached 100 a day, which puts Standard ahead of Renault, its main competitor in the French market. With the help of components made at Beauvais, output at St. Denis can be raised to about 150 tractors a day. After that, there is no more room for expansion at St. Denis, as the French government wishes to decentralise industry from the already overcrowded Paris suburbs; but at Beauvais, the new plant occupies only one-eighth of the total area available for expansion, and the company could raise its output by installing an assembly line there, to replace that at St. Denis.

At present all of the Fergusons made at St. Denis are sold in France, where the recent farm mechanisation still has a long way to go, but if common market tariffs should begin to discriminate against imports from Britain, French Fergusons could be supplied to Germany and other countries inside the common market. In a fully fledged free trade area, the advantges of supplying continental markets from France instead of achieving greater economies of scale in production at Coventry might be less apparent, but the company is now in a position to adapt itself readily to whatever marketing conditions may emerge.

PERSONAL SAVING

Over the last six years there has been a striking increase in the rate of personal saving. The British people now put aside 11 per cent of their personal disposable income. The rate is lower in America—6 to 7 per cent of disposable income.

The French Ferguson, which is identical to the Coventry model, costs 25 per cent more to produce, but the company attributes this almost entirely to the lower volume of output—only a quarter of that at Banner Lane—both on the assembly line, and in the shops of the French suppliers of component parts. Given equal volume, the company feels, French costs of production should not be appreciably higher than those in Britain. All of these developments concern the Ferguson tractor only, but they also provide a nucleus for the production of cars, particularly the Triumph TR-3 sports car. Plans for this have not yet gone beyond the stage of preliminary costing, but with its cars as well as with its tractors, Standard is now well placed to see how the Common Market cat jumps.

SHORTER NOTES

An offer for sale of 906,500 ordinary 5s. shares of Dorman Long (Africa) at 26s. 6d. per share is announced, and will be made in South Africa on March 19th. It has been underwritten by Union Acceptances, the issuing house sponsored by the Anglo American group. The effect of the offer will be to reduce Dorman Long and Company's holding in the 4,000,000 ordinary shares of the African company from 2,866,500 shares to 1,960,000 shares and thus to reduce the parent company's investment from a controlling interest to one of 49 per cent. The majority of the shares will be held in South Africa and will, it is hoped, be widely spread.

* * *

The International Bank for Reconstruction and Development, with the participation of seven German, one Canadian and fourteen American banks, has made a loan equivalent to $75 million to the Cassa per il Mezzogiorno for the development of industry, agriculture and power in southern Italy and Sicily. Part of the total will be used to develop newly discovered potash deposits in Sicily, with fertiliser and chemical plants. Italian consumption of potash fertilisers has hitherto been extremely low.

* * *

Founders shareholders of the Suez Canal Company this week approved by 51,186 votes to 111 the proposal to convert each ten founders shares of no par value into 11 new capital shares of 10,000 francs nominal.

* * *

Tyre prices are being reduced for the first time in five years. The cuts, of about 5 per cent, are made possible, the manufacturers state, by lower rubber prices and by production economies flowing from bigger outputs.

* * *

National Mutual is the one life assurance office that values its investments at market prices, dealing with appreciation or depreciation by increasing or diminishing the general reserve. Depreciation in 1957 was £857,000 on portfolio of quoted investments of £9,860,000 ; this follows a depreciation in 1956 of £312,000. The office has met the adverse winds by changing the composition of its portfolio. Sterling fixed interest stocks have been raised from 61.0 per cent to 63.2 per cent and dollar fixed interest stocks from 1.2 per cent to 12.2 per cent. Holdings of sterling equities have been reduced from 15.8 per cent to 11.5 per cent and of dollar equities from 22.0 per cent to 13.1 per cent.

* * *

The Minister of Housing has at long last made use of his powers under the 1945 Water Act to compel small water undertakings to pool their activities. The Order compulsorily converting thirteen local authority and one private undertakings in Herefordshire into a single joint board is the first ever to be made. It should not be the last: the several hundred small water undertakings in Britain are being much too dilatory in their efforts to seek voluntary amalgamation.

* * *

The number of hire purchase contracts recorded by HP Information in February was 80,532, against 78,471 in January and 75,380 in February, last year. Outstanding among the February figures was the number of used cars—42,126, against 40,996 in January and 35,754 in February, last year. The number of new cars was 8,648, against 8,882 in January and 5,114 in February, 1957.

COMPANY AFFAIRS

UNILEVER

IT is getting harder to earn the housewife's pennies in many countries. That is the clear moral of the 1957 results of the Unilever diarchy. The ordinary dividends, still covered four times by earnings, have been maintained (at 17½ per cent for Limited and at 15½ per cent for NV under the equalisation agreement), but the Limited £1 units have risen slightly to 74s. 4½d., to offer a yield of 4.7 per cent. The profit figures disappointed Throgmorton Street. Over the year the combined turnover of the group rose slightly, from £1,671 million to £1,720 million, but the combined gross profit fell by 13½ per cent, from £98.8 million to £85.3 million, and the combined net profit by 14½ per cent, from £47.1 million to £40.3 million. Within these totals, NV, whose gross profits fell from £51.7 million to £43.5 million, has fared a little worse than Limited, whose gross profits fell from £47.1 million to £41.8 million.

That is not the end of the story, for the half-yearly figures, reproduced in the accompanying table, show that the rate of increase in sales was slackening in the second half of the year and that profit margins on these sales have continued to drag downwards. In the preliminary statement, the directors do not comment on these trends. But they have not made

COMBINED SALES AND PROFITS
(£ million)

Six months ended	June 30, 1956	Dec. 31, 1956	June 30, 1957	Dec. 31, 1957
Turnover	813	858	846	874
Gross profit	50·6	48·2	43·7	41·6
Taxation	26·5	25·4	23·1	22·0
Net profit	22·4	24·7	19·4	20·9
Gross profit/sales (%)	6·2	5·6	5·2	4·8

any specific transfers from or to stock reserves, such as might have been expected if the fall in commodity prices were the main trouble. The explanation would therefore seem to be that competition in the worldwide markets, particularly for soaps and detergents and perhaps to a lesser extent for margarine, fats and the almost endless list of household products that Unilever produces, has become even keener. Unilever is not the only contestant in this market and practically every household in this country has seen some evidence of the coupon wars.

ASSOCIATED ELECTRICAL INDUSTRIES

NO one had expected Associated Electrical Industries, whose products like those of its rival giants range across the whole field of electrical engineering, to do more than to maintain its ordinary dividend at 15 per cent. And that is what the company has done. But are its 1957 trading results really satisfactory? Last year the group's trading profits before depreciation advanced from £13,248,070 to £13,699,528 and its net profits from £4,372,325 to £4,979,693. But in 1956 profits had been adversely affected not only by the pressure on profit margins but also by the extensive reorganisation of the group and Lord Chandos, the chairman, then said that they were not a "reliable guide to the potential earning capacity of the group when results of capital expansion and reorganisation begin to take effect."

Some advance in earnings in 1957 therefore seemed to be inevitable. Yet, as the accompanying table of half-yearly profits shows, the going has continued

CONSOLIDATED EARNINGS
(£ million)

Six months ended	June 30, 1956	Dec. 31, 1956	June 30, 1957	Dec. 31, 1957
Trading profit	7·32	5·93	6·76	6·94
Depreciation	1·39	1·55	1·76	1·95
Gross profit	5·93	4·38	5·00	4·99

to be hard. Orders cannot be the difficulty for at the beginning of this year Lord Chandos said that in the heavy engineering divisions of the group the order book was heavy and he saw no tailing off in the light engineering divisions so long as employment and wages kept up. So it looks as if it is the old, old story of higher wages and other costs and smaller margins. An improvement in earnings seems to turn on the full and efficient use of the new and re-organised capacity the AEI group now possesses.

ALFRED HERBERT

ON the eve of an announcement which showed that the Board of Alfred Herbert had made a definite break with its conservative past, the £1 ordinary shares of this big machine toolmaker stood at 58s. 6d. They now stand at 65s., for the tax-free ordinary dividend was suddenly raised from 7½ per cent to 12 per cent. The shares thus yield 6.4 per cent. Earnings justify the new dividend, for trading profits in the year to October 31st advanced from £3,480,117 to £3,666,922, and net profits from £1,797,782 to £1,821,311. But to investors it is the change in heart of the Board that is most significant. The new and liberal attitude is summed up in the directors' rider to the preliminary figures: "for the last several months orders have been lower than output, and the backlog has been considerably reduced, but prospects are sufficiently encouraging to warrant the payment of the increased dividend."

DOWTY GROUP

HOWEVER long industrial share prices lie in the doldrums, investors are sure to sit up and to take notice when a company not merely raises its interim ordinary dividend but also indicates a big expansion in currently accruing profits. And that is what an interim report of the Dowty Group reveals. In order of importance, the group makes equipment for the mining, the aircraft, the railway and nuclear engineering industries. In the six months to September 30th its gross profits totalled £475,000 and the growth in profits is continuing, so much so that the directors predict that the full year's profits to March 31st this year will be some 25 per cent higher than the gross profit of £1,650,000 earned in 1956-57. With a "most satisfactory" order book and a forecast of an increase in turnover in 1958-59, the directors have had no hesitation in raising the tax-free interim dividend from 4 to 5 per cent. In 1956-57 the full year's payment was 9 per cent, tax free. This year it cannot be less than 10 per cent, and the announcement was read in Throgmorton Street as implying that it may well be more; the 10s. shares were marked up 4s. 3d. to 34s.

A. W. GAMAGE

LIKE the other department stores, A. W. Gamage has been modernising its shops, but unlike many of its rivals it does a big mail order trade and caters more for the custom of men and boys than of women and girls. These two facets of its trade may help to explain why the trading results for the year to January 31st are better than those recently published by other department stores. Other companies barely maintained their profits, and their margins seem to have been shrinking as the financial year wore on. But A. W. Gamage reports an advance in gross profits from £309,514 to £342,842 and in net profits from £134,989 to £151,038. The stock market was pleased with those figures, but it was even more pleased by the increase in the ordinary dividend from 30 to 35 per cent. The 10s. shares initially gained 3s. and now stand at 43s., and yield 8.1 per cent.

RUGBY PORTLAND CEMENT

IN a year when cement deliveries, especially to export markets, were beginning to fall off, Rugby Portland Cement has achieved satisfactory trading results. The increase in cement prices half way through the year has obviously been of some help. The group's gross profits last year inched up from £1,433,727 to £1,448,409 and its net earnings from £729,436 to £736,385. The dividend on the 5s. ordinary shares is left unchanged at 1s. 1½d. (or 22½ per cent) and the dividend on the "A" 1s. ordinary shares at 1s. 3d. (or 125 per cent). Half of these "A" shares were issued to employees and half to ordinary shareholders. A complicated formula governs their entitlement to dividends. Under it, the amount attributable to these "A" shares last year was £111,277 gross, of which the proposed dividend takes £62,500 gross (or £35,937 net). Thus the amount carried forward to the credit of the "A" shares has again been reinforced and, with £139,947 gross standing to their credit these shares are becoming less vulnerable to a decline in earnings. At 22s. 3d. the 5s. ordinary shares yield just over 5 per cent and at 18s. 9d. the "A" 1s. ordinary shares yield 6¾ per cent.

LEYLAND MOTORS

MUCH of the advance in Leyland Motors' profit from £5,527,775 to £6,065,279 in the year to September 30th came from export sales and the chairman, Sir Henry Spurrier, emphasises that the continuing success of the group depends on its ability to sell more than half its commercial vehicles abroad. He believes that so far as the supply of fleets of new vehicles is concerned the home market has reached "saturation point" and that at home the company must look to the smaller operator and the ancillary user for any increase in business. The future for the group thus depends to an increasing degree on foreign markets, and Sir Henry points out that customers are demanding longer and longer credits, with all their attendant dangers. Nor does he appear to be satisfied that the commercial vehicle industry has got mounting costs under control. An increase in working costs can be offset to some extent by the more intensive use of capital, and Leyland Motors has been spending heavily on capital account, coming to the stock market with a rights issue of ordinary shares to help pay for its development programme. Last year, when the group was adapting the tank factory it bought from the Government to the production of diesel engines, it spent over £7½ million and its outstanding capital commitments have now fallen to £750,000. The ordinary dividend has been maintained at 12½ per cent on the increased capital and the £1 ordinary shares, standing at 41s. xd, yield 6.1 per cent.

BRITISH SOUTH AFRICA COMPANY

SINCE the cut in the total dividend of the "Chartered" company from 35 to 30 per cent—a smaller reduction than some pessimists had feared—the 15s. bearer shares have risen from 44s. 6d. to 49s. 6d. (to yield 9.1 per cent). In the meantime the company has announced its intention of forming an Overseas Trade Corporation, a move which would relieve the undistributed income from

mineral royalties (but not that from rents or from the investment portfolio) from British tax. This relief should have a beneficial effect on the consolidated net income at a time when royalties have fallen heavily with the fall in the price of copper and when investment income from the portfolio of mining shares presumably has some distance still to fall. In the year to September 30th, royalties, rents, etc., yielded about £8¾ million, against £12¾ million, and the yield is likely to be still lower this year.

The formation of the OTC is one item of cheer. Another is that the company's investment income, despite lower copper dividends, actually rose last year—from £2,674,524 to £2,878,947. Such an increase reflects partly the growth of the investment portfolio: quoted securities at book values are up from £14.9 million to £16.8 million, though their market value is down from £32 million to £28.1 million, and unquoted securities are up from £6.6 million to £8.9 million. It also reflects the widening spread of the portfolio. Rhodesian copper companies still represent the principal investment but Chartered has interests in mining finance houses, particularly Anglo-American and Consolidated Gold Fields, and, through Rhodesia Railways Trust, it holds British and American industrial equities. It is well to remember that the dividends on copper shares reflect changes in the price of copper with a greater time lag than do the mining royalties that the same copper companies pay.

BRITISH OXYGEN

CHARTS acompanying the full accounts of British Oxygen for the year to September 30th show that the group's capital expenditure rose to its peak in the last two financial years, and British Oxygen had to come to market with a £10 million debenture issue to finance the expansion. That was inevitable with one of the group's biggest customers, the steel industry, expanding so quickly. Capital expenditure should now come down from the peak of about £9 million a year, the chairman, Mr J. S. Hutchison, estimating that depreciation and profit retentions, amounting together to about £4 million a year, should cover the cost of the current capital programme.

Sales have been rising too; last year they went up from about £37½ million to £42½ million, enabling the group to absorb higher costs. The group's gross profits went up from £5,198,464 to £5,964,085 and net profits from £2,260,906 to £2,440,245 but the ordinary dividend was left unchanged at 10 per cent. That decision was on the cautious side and so too are Mr Hutchison's comments on prospects. His summing up is: "The width of our activity and the influence of new methods and construction, particularly in the steel industry, encourage the view that we shall be able to give a good account to you at our next meeting although the months ahead may prove to lack the buoyancy of some recent years." The yield of 6½ per cent on the £1 ordinary shares at 31s. xd. adequately balances that caution on the one hand and the soundness of the group's earning capacity on the other.

TRIPLEX SAFETY GLASS

IN the full year to June 30, 1957, the Triplex Safety Glass group earned a trading profit of £921,616. In the six months to December 31, 1957, it earned a profit of £663,988. This is a good result, reflecting recovery in the motor industry in a period that is already passed. But the Triplex directors are careful to point out that the full year's figures cannot be calculated by multiplying that profit by two. In the last six months of 1957 the group's safety glass factories were working overtime, but since the turn of the year there has been a slackening in some departments. Moreover, there has recently been an increase in the price of the company's raw material, glass, and another wage increase. This rise in costs is not being passed on in selling prices and the directors hope that the extra burden will be met by an increase in turnover.

London Stock Exchange

FIRST DEALINGS:	Feb. 26	Mar. 12	Mar. 2
LAST DEALINGS:	Mar. 11	Mar. 25	April 15
ACCOUNT DAY:	Mar. 18	April 1	April 22

THE latest rise in the gold and dollar reserves helped to strengthen the advance in gilt-edged stocks; the longest-dated stocks made gains of well over 1 point, irredeemables made gains of about ¾; the shorts rose sharply, 3 per cent Exchequer being outstanding with a rise of 1⅛ to 92⅛ and 4½ per cent Conversion 1952 rose 1½. Dollar stocks were firmer, but German bonds were weaker.

The sharp recovery in industrial stocks was helped by good company results and the completion of the first call on the new Shell shares. Bank and insurance shares strengthened with the rise in gilt-edged; Pearl quoted in the new 5s. form jumped 6s. 3d. to 101s. 3d. over the week. Stores made gains of several shillings. Motor shares were better; Rolls Royce advanced 2s. to 86s. and Ford 2s. 7½d. to 35s. 6d., but Standard fell slightly to 7s. 3d. on the labour dispute. Shipbuilding stocks fell further but a sharp rally brought them off the bottom, Swan Hunter jumping 2s. 1¾d. to 50s. 9d. on Wednesday. Tankers rallied at the same time, London and Overseas Freighters rising to 16s. from Tuesday's low point of 14s. 6d., Reardon Smith dropped 2s. to 12s. on the cut in dividend, but P and O held its advance to 26s. 6d.

Oil stocks went ahead on the meeting of the Shell call; BP rose steadily from 83s. 1½d. to 88s. 9d. and Ultramar jumped 4s. 9d. to 49s. 3d., Shell new shares recovering to 19s. 6d. premium. After rising strongly, Kaffirs eased on Tuesday; on balance gains by the new mines were limited but old mines held somes useful rises, Consolidated Main Reef and City Deep both improving by about 1s. Copper mines were firmer; Rhokana rose 2 to 23 and Rhodesian Anglo-American 4s. 4½d. *in anticipation* of the dividends. They remained steady after the announcements.

THE MONEY MARKET

THE steady decline in the Treasury bill rate was checked at the tender on Friday last; the rate rose by $\frac{1}{16}$ per cent, the only significant rise since the eve of the Bank rate increase. The Bank of England's tough tactics in forcing the discount houses into the Bank and thus keeping up the cost of the market's money have reduced current margins; and it was not unexpected that the market should take a tactical opportunity to move against the trend.

The discount houses reduced their common bid by 4d. to £98 9s. 10d. per cent; the allotment was up by £20 million, to £240 million, and applications were down by £20 million, so that the proportionate allotment for bids at the market's minimum price fell only from last week's average of 44 per cent on 91-day and 92-day bills together to 37 per cent.

Credit in Lombard Street was still scarce before the weekend, the Bank giving special help to the market. On Thursday this reached very large proportions, but one or two houses, nonetheless, had to re-borrow a small amount at Bank rate. In the first three days of this week, however, credit conditions have been transformed; some funds have actually remained unlent. Bills have been in keen demand, and the rate of $5\frac{31}{32}$ per cent established after Friday's tender has weakened at times to $5\frac{15}{16}$ per cent. Outside balances have on occasion been available at down to 4 per cent.

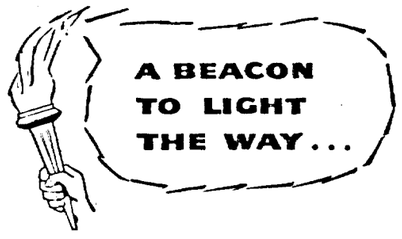
you can't live on gold watches

The 'small token of the Company's appreciation' days are passing. And rightly.

The simple humanity and *straightforward business sense* of Staff Pension and Life Assurance Schemes are becoming widely understood.

Both parties benefit, during employment and after. *The employee* is relieved of much anxiety for the future—particularly if he supports a family. Retirement won't mean scraping. And with Life Assurance, even early death would not leave his dependants unprovided for.

His employer gains from the engendered confidence. More application and stability in his staff. Good people, in fact, expect and look for such schemes today. These are very real benefits, proved time after time in all sorts and sizes of companies.



And the actual cost is slight; Taxation Authorities recognise payments as a business expense.

Legal & General have been handling such matters for years. They can plan to your precise requirements. An enquiry does not commit you in any way. So why not get in touch today?

UNILEVER LIMITED AND UNILEVER N.V.

The Boards of Unilever Limited and Unilever N.V. announce the provisional results for the year ended 31st December, 1957. Although the results are subject to completion of the consolidated accounts and audit, the Boards are satisfied that any difference between the provisional and final figures will be relatively unimportant.

The total value of turnover for LIMITED and N.V. was :—
1957 ... ... £1,720 million 1956 ... ... £1,671 million

Deductions are shown in brackets (All figures are shown in £ millions)

1956				1957		
N.V.	LIMITED	COMBINED		COMBINED	LIMITED	N.V.
51·7	47·1	98·8	Profit before taxation	85·3	41·8	43·5
(27·9)	(24·0)	(51·9)	Taxation on profit incl. foreign taxes	(45·1)	(21·0)	(24·1)
23·8	23·1	46·9	Profit for the year after taxation.....	40·2	20·8	19·4
(0·6)	3·0	2·4	Exceptional items (incl. taxation adjustments previous years).....	2·1	1·1	1·0
(1·3)	(0·9)	(·22)	Amounts attributable to outside shareholders' interests in subsidiaries.....	(2·0)	(0·8)	(1·2)
21·9	25·2	47·1	CONSOLIDATED NET PROFIT.....	40·3	21·1	19·2
8·5	11·6	—	Net Profit of Parent Companies.....	—	10·6	8·0

The N.V. figures have been converted to sterling, as for 1956, at the official parity of Fl. 10·64 = £1.

The Boards, assuming the existing rate of exchange between the £ sterling and the guilder, intend to resolve on 18th March, 1958, to recommend to the Annual General Meetings to be held on 24th April, 1958, final dividends for 1957 on the Ordinary capitals payable in May, 1958, as follows :—

1. In the case of Unilever Limited a dividend of 11¼ per cent. actual (2·3·6d. per £1 of stock) before deducting income tax. (1956—11¼ per cent.), making 17½ per cent. (3·6d. per £1 of stock) for the year ended 31st December, 1957 (1956—17½ per cent.)
2. In the case of Unilever N.V. a dividend of 10¼ per cent. actual (1956—10¼ per cent.) being the equivalent of the Unilever Limited dividend calculated in accordance with the Equalisation Agreement between the two companies, making 15¾ per cent. for the year ended 31st December, 1957 (1956—15¾ per cent.)

It is intended to send the Report and Accounts for 1957 to stockholders on 2nd April, 1958.

27th February, 1958.

COMPANY MEETINGS

THE WHITEHEAD IRON AND STEEL COMPANY

MARKED RECOVERY IN SECOND HALF OF FINANCIAL YEAR

RENATIONALISATION PROPOSAL DIFFICULT TO UNDERSTAND

INDUSTRY'S RECORD OF OUTSTANDING PROGRESS AND EFFICIENCY

MR G. H. LATHAM ON GROUP'S STRONG POSITION

The fifty-first annual general meeting of The Whitehead Iron and Steel Company Limited will be held on March 24th at the Westgate Hotel, Newport, Monmouthshire.

The following is the statement of Mr G. H. Latham, LLD, JP (Chairman and Managing Director), which has been circulated with the report and accounts:

The Annual Report and Statement of Accounts are, I think, self-explanatory and set out in a manner which, I hope, is clear to all shareholders. I consider it unnecessary, therefore, for me to make any additional comments on the form of presentation, which closely follows that of last year.

An examination of the consolidated balance sheet reveals that the value of the fixed assets, before providing for depreciation, has fallen from £3,522,056 in 1956 to £2,788,794, and that the investments at market value have increased from £372,538 for 1956 to £1,059,687 for the current year. Both these changes are a direct consequence of the disposal of our interest in W. A. Baker and Company, Limited.

The increase in the debtors and creditors and stocks is due to the increase in prices and to the higher volume of trade towards the end of the financial year.

TRADING RESULTS

In June last year I reported that the Group profit (before taxation) for the half-year ended March 31, 1957, was £426,948, as compared with £789,760 for the corresponding period of the previous year, a decrease of £362,812. At the same time, I gave the reasons for this fall in profits and indicated that the Company's profits during the second half-year to September 28, 1957, would be adversely affected. I am pleased to be able to say that the improvement in the demand for the products of our Cold Rolling Department for the second half-year's trading proved to be more favourable than was originally anticipated when my cautious forecast was made.

During the year under review the output of the Hot Mills of our parent Company was maintained at a satisfactory level and compares favourably with the maximum output of the preceding year. I have already explained that the profit earned by the parent Company was adversely affected by a serious fall in demand for the products of our Cold Rolling Department, and this resulted in the output for the year being 25 per cent less than that for the year 1955-56.

The Group profit (before taxation) for the year ended September 28, 1957, was £1,004,093. Although this represents a reduction of £341,764 as compared with the previous year, it is actually a little less than for the first half of the year (£362,812), which indicates the marked extent of the recovery during the second half of the year under review. I am also pleased to be able to say that the improvement was maintained during the three months ended December 31, 1957, and the trend continues to be equally satisfactory. Our Order Book is still adequate to maintain full capacity in all departments.

RESERVES

With the allocations this year the total reserves, including the reserve for future taxation, amount to £3,136,806, which I am sure you will agree is a very satisfactory position.

For the last few years I have given you an analysis of our trading results and have also shown you how each £1 of our income was spent. These figures have proved so interesting to shareholders that I am repeating the information this year.

ANALYSIS OF GROUP TRADING RESULTS FOR THE YEAR ENDED 28TH SEPTEMBER, 1957

LIQUID RESOURCES

An examination of the balance sheet of the Group reveals that the investments at market value amount to £1,059,687. On the assumption that profits continue to be earned at the present rate, the Company will be in a position to provide out of its own resources any capital required for future developments over the next two to three years. We are fortunate to be so placed because the uncertainty of ownership of the Industry is making it extremely difficult at the present time to raise new capital for development programmes, but, happily, we can avoid any difficulties in this respect, which makes our position so much stronger.

NATIONALISATION

The Socialists have now definitely reaffirmed their intention to renationalise this great basic industry. It is very difficult to understand why the Steel Industry, which has made such outstanding progress, should be made a political cock-pit for the second time. Surely our record convinces every thinking person that it is not only being managed efficiently, but that our output is increasing adequately to meet the requirements of our home consumers, as well as simultaneously stepping up our exports. We are producing steel at a price which is highly competitive, and the labour in our Industry is happily and contentedly employed. We are told that the largest factor in a disappointing year as regards our nationalised Coal Industry was absenteeism and that, in spite of more mechanisation, production does not improve but still tends to fall. We have never yet had to say that absenteeism in the Steel Industry has had any adverse effect upon output since, apart from genuine illness, it is completely unknown. It may well be that this is largely due to every man having a real interest in his job and accepting responsibility for preserving the standard of efficiency in the Steel Industry which has long been acknowledged.

In a previous Statement I gave a short analysis of our Share Register. In September, 1957, the British Iron and Steel Federation issued an excellent little brochure entitled "Who Owns the Steel Industry?" I am enclosing a copy for your perusal as I am sure you will find it interesting. It will at once be seen that the number of shareholders owning 500 shares or less in a very representative cross-section of our Industry is remarkably high, and it is because so many of these shareholders are actually employees that this sense of responsibility in preserving efficiency is so pronounced. I should have thought that renationalisation of the Steel Industry would only become desirable if the efficiency or the output of the industry could thereby be improved. It has been shown beyond all measure of doubt, however, during the last few years that our great Industry is quite capable of serving the country well.

PENSION SCHEME

For some time we have been considering the introduction of a pension scheme for Work's employees. I am pleased to be able to say that the Board have now approved the idea in principle and that it is proposed to bring into operation a non-contributory pen-

sion scheme on, or before, June 30, 1958. Full details of the scheme will be issued to all employees as soon as possible but, briefly, it will provide for a pension at sixty-five years of age, or alternatively, a capital sum payable to the dependants of an employee who dies whilst in the service of the Company. The cost of the scheme will be substantial but I feel that its introduction will still further improve the excellent relationship at present existing between the management and the employees of our group of companies.

W. A. BAKER AND COMPANY LIMITED

Shareholders will recollect the Press announcement I made on May 10, 1957, which fully explained the position of this Company (which was at that date a wholly-owned Subsidiary) *vis-à-vis* the Black-Clawson Company. I have little to add to that statement except to say that the financial arrangements have been satisfactorily concluded and to reiterate that in my opinion the sale was in the best interests of the shareholders.

GODINS "THE ROLLERS OF STEEL SECTIONS" LIMITED

I am pleased to say that the works of this Subsidiary are operating to capacity and at the present time we have a very satisfactory Order Book. We are taking steps to keep our plant up to date and I am sure we shall be able to meet all competition as a result of efficient management and modernisation of machinery.

WHITEHEAD HILL AND COMPANY LIMITED

This is our wire drawing section which, in common with all other similar plants in the country, is operating reasonably well but not to full capacity. The Company is contributing a satisfactory profit to the Group trading. Our brickworks are also operating satisfactorily.

As you will see from the Directors' Report Mr C. H. G. Millis resigned from the Board on December 31, 1957. I am very sorry indeed that because of his business commitments elsewhere Mr Millis has found it necessary to resign from the Board of our Company. I am deeply appreciative of his help and advice during the short time he has been with us.

The year under review has proved to be somewhat difficult in many respects but I have previously acknowledged the efficiency, adaptability and loyalty of our staff and workpeople upon whom we know we can always rely. I am sure, however, you would wish to join me in paying tribute to them for the part they have played in the satisfactory results and the excellent recovery which I am able to present to you in this Report.

PROGRESS OF BANCA NAZIONALE DEL LAVORO DURING 1957

DEPOSITS rose from Lit.666,685 million to Lit.734,652 million (£gs.419,801,100).
PROFIT rose from Lit.933 million to Lit.1,026 million (£gs.586,300).
RESERVES rose from Lit.7,420 million to Lit.9,540 million and, after approval of the Balance Sheet, to Lit.11,000 million (£gs.6,285,700).
STAFF RETIREMENT FUND AND PROVIDENT FUND rose from Lit.15,197 million to Lit.17,461 million (£gs.9,977,700).
PREMISES, ETC., figure at a value of one Lira after Lit.789 million (£gs.450,900) had been written off during 1957. The real estate gave a rent of Lit.730 million (£gs.417,100). An amount of Lit.793 million (£gs.453,100) spent during the last year for the installation, reconstruction and organisation of the Bank's premises and Branch Offices was also written off.
PARTICIPATIONS in the Autonomous Sections and Sundry Participations stand in the Balance Sheet at a value of one Lira after Lit.771 million (£gs.440,600) had been written off during 1957. Dividends therefrom amounted to 91 million lire (£gs.52,000).
TAXES paid in 1957 amounted to Lit.3,775 million (£gs.2,157,100).
RECOVERIES in 1957 in respect of debts totally written off amounted to Lit.368 million (£gs.210,300)
THE TOTAL OF THE BALANCE SHEET, exclusive of the "Contra Accounts," rose from Lit.931,164 million to Lit.985,476 million (£gs.563,129,100).

AUTONOMOUS SECTIONS

BANCA NAZIONALE DEL LAVORO operates also in various specific spheres of activity through the intermediary of its following Autonomous Sections, the annual accounts of which are shown separately:

— Section for Mortgage Credit
— Section for Hotel and Tourist Credit
— Section for Motion Picture Credit,
— Section for Credit to Co-operatives
— Section for Credit to Medium-sized and Small industries.

The importance of these Sections and of their intervention in their respective spheres of activity during 1957 will appear from the following:
TOTAL RESERVES of the Sections rose from Lit.2,076 million to Lit.2,596 million (£gs.1,483,400) after approval of the Balance Sheets as at 31st December, 1957.
ADVANCES AND LOANS (including half-yearly payments due) which on 31st December, 1956, amounted to Lit.87,445 million, reached a total of Lit.104,556 million (£gs.59,746,300) at the close of 1957.
PROFIT of the Sections rose from Lit.661 million to Lit.780 million (£gs.445,700).
THE TOTAL OF THE BALANCE SHEETS OF THE SECTIONS, exclusive of the "Contra Accounts," rose from Lit.96,546 million to Lit.112,184 million (£gs.64,105,100).

COMBINED CAPITAL AND RESERVES OF BANCA NAZIONALE DEL LAVORO AND ITS AUTONOMOUS SECTIONS, AFTER THE APPROVAL OF THE BALANCE SHEETS AS PER 31st DECEMBER, 1957, AMOUNT TO Lit.23,303,714,632 (£gs. 13,316,408).

BANK OF LONDON & SOUTH AMERICA LIMITED

COMMODITY PRICES AND WORLD ECONOMICS

The annual general meeting of the Bank of London & South America Limited will be held on April 1st at 40-66, Queen Victoria Street, London, E.C.

The following are extracts from the address by the Chairman, Sir George L. F. Bolton, K.C.M.G., including a statement on the ninety-sixth Annual Report of the Directors and Statement of Accounts for the year ended December 31, 1957, which will be submitted at the meeting:

The dominant features of the world economic situation during the past year have been (a) the failure of the United States' economy to resume its expansion; (b) the fall in commodity prices; (c) the reduction of international liquidity following the sterilisation of the inflow of gold and foreign exchange into Germany and the USA, and (d) in general a lessening of the inflationary influences which have been prevalent in the last 20 years. It is against this background that my review of events in the countries where our Bank is established must be set. Disinflationary conditions have unwelcome implications for the primary producing regions of the globe.

My predecessor frequently stressed the importance of commodity prices and foreign capital in the development of Latin America. It is through the operation of these two factors that the economies of the republics are vulnerable to changes in the level of activity in the great industrial centres of the world. The progress in industrialisation in the 20 republics achieved in recent years has altered the nature rather than the degree of their dependence on the outside world and it is the more developed countries such as Argentina and Brazil that face the most difficult problems of adjustment to a stationary or falling foreign exchange income and have the greatest need of an uninterrupted flow of foreign capital.

LOWER COMMODITY PRICES

Commodity prices were, on average, considerably lower in 1957 than during the preceding year, and the effects of the Suez crisis in arresting declines begun in 1956 were in general short-lived. The largest and most sustained falls were recorded in metal prices, particularly copper—which in December 1957 was quoted in the United Kingdom at only half the average price for 1955—tin, lead and zinc. Other commodities have more recently become affected. Brazilian coffee lost during 1957 the gains recorded in the latter part of 1956, while the mild varieties exported by other Latin American countries showed a much sharper fall. Temperate agricultural products were generally weaker and wool prices, previously fairly well sustained, had joined the general decline by the autumn. Sugar prices, which had been remarkably high in late 1956 and early 1957, fell to near the previous level. Of the commodities in which the Latin American countries are primarily interested, cocoa alone experienced a substantial gain over the year.

At their present lower levels many of these commodity prices may still be remunerative to the most efficient producers, but the important point for the exporting countries—and Latin America is not, of course, alone in this respect—is the extent to which they have fallen from the levels to which domestic budgets, foreign exchange reserves and investment programmes were geared. To put into perspective the effect of the Latin American Republics of the fall in commodity prices in 1957 it must be seen against the background of trends in the past seven or eight years. Taken in conjunction with the more persistent advance in the price of manufactured goods over this period, the result has been that the terms of trade for Latin America as a whole have suffered a deterioration of perhaps more than 15 per cent in comparison with 1950.

This generalisation conceals, of course, wide differences between the different countries of the region; but it does help to explain why the problems of many Latin American countries have become more acute in this period, why they have become more aware of the need for foreign capital and why they look with apprehension on any developments in the outside world that may lead to a further deterioration in their trading position. The situation is in marked contrast to the first four years after 1945 when the terms of trade for Latin America generally improved rapidly and this improvement in itself made possible a high rate of domestic investment and rapid economic growth.

FACTORS AFFECTING SITUATION

The fall in commodity prices began at a time when production in the more sophisticated countries was still maintained at a high level, but stringent monetary policies and the uncertain business outlook tend to encourage the running down of stocks and hand-to-mouth buying. It would be wrong, however, to suggest that the overseas payments difficulties now being experienced by a number of Latin American countries are to be ascribed entirely to international factors and the policies adopted by some of the major industrial countries. Other factors have also influenced the situation. On the supply side, investments made earlier at times of high prices have brought about an increased production of some commodities now in declining demand; and there are other factors that are essentially the outcome of the policies pursued by the primary-producing countries themselves. In some cases, current foreign exchange problems must be regarded as basically due to the neglect in earlier years of the export sections of the economy in favour of industrial development, the effects of which could be ignored while the terms of trade were moving favourably. In some cases a heavy burden has been imposed on the balance of payments as the result of over-importing in the past and the accumulation of short and medium-term debts, or by an increasing dependence on imported fuels or foodstuffs that a more far-sighted policy of economic development might have avoided. In such circumstances there is little room for manoeuvre when export income is reduced, and a backlog of commercial and financial debts begins to accumulate.

To point out these factors is not to show a lack of understanding of the problems created by fluctuations in commodity prices for primary producing countries that are eager to press forward with their economic development. But, while these countries are greatly dependent on the outside world and are affected by trends in the centres of economic power, the extent to which the situation is allowed to become critical is to a much greater extent a matter of domestic policy. Some Latin American countries have avoided serious payments difficulties by foresight in building up exchange reserves or by keeping better control over the internal monetary situation.

There is, of course, one major exception to most generalisations about the economic situation in Latin America; that is Venezuela, which again in 1957 increased its output of petroleum and continued to strengthen its foreign exchange reserves to an extent that has put it in a position to become, if only on a modest scale, an exporter of capital to other Latin American Republics. Venezuela is a country favoured with large resources of a commodity for which there has been in recent years a rapidly growing demand, but one whose ability to take advantage of this has been due to the absence of prejudice against foreign capital.

EUROPEAN COMMON MARKET

The future trend of commodity prices and their probable effect on the Latin American countries' capacity to import are matters of concern. The Latin American republics' own preoccupation with this subject was seen at the Economic Conference of the OAS, held in Buenos Aires in 1957, and in the efforts made by the coffee-producing countries to reach a marketing agreement. The Buenos Aires Conference discussed many of the problems of Latin American trade and investment, including those arising from fluctuations in the prices of basic commodities. The field in which some positive action seemed most likely to result from the Conference was the development of trading relations between the republics themselves.

These efforts to establish closer economic ties and the project for a regional common market were given a spur by the conclusion of the Treaty establishing the European Common Market.

In principle, the establishment of a large economic unit with increased possibilities of industrial production does not conflict with Latin American interests. The chief danger is seen in the association of the overseas territories with the Common Market and the high common tariffs fixed against imports of certain tropical agricultural products from outside countries. The result might, it is feared, be the diversion of European trade and investment away from Latin America to Africa. The most decisive factor will be the spirit in which the Common Market Treaty is implemented.

INTEGRAL PART OF WESTERN WORLD

An important consideration for Western Europe is that, while the political future of much of Africa is fraught with uncertainty, Latin America remains, by history, culture and conviction, an integral part of the Western World. There are, also, other important and subtle changes at work which may greatly affect Western European trade and finance. The deterioration in European political influence in the Eastern Mediterranean and the Middle East has left Governments, whose friendship and stability remain uncertain, in control of a strategic trade route. The conflict between Israel and her neighbours remains unresolved with little prospect of a decrease in political friction. In these circumstances traders will probably avoid fresh commitments in this area and investment in both the Middle and Far East may decline. There are all the elements therefore of a shift of economic interest towards Latin America as a whole, and in the long run a greater degree of prosperity will be felt in these countries, especially those who welcome foreign investment.

ILFORD LIMITED

(Manufacturers of Photographic Materials)

RECORD PRODUCTION AND SALES

HIGH PROPORTION OF EXPORTS TO HARD CURRENCY COUNTRIES

DOLLAR SAVING DERIVED FROM HOME PRODUCED FILM BASE

THE HONOURABLE JAMES P. PHILIPPS ON REMEDIES TO COMBAT INFLATION

The Annual General Meeting of Ilford Limited will be held on March 27th at the Ilford Gallery, 106, 107, High Holborn, London, WC.

The following is the statement by the Chairman, The Honourable James P. Philipps, copies of which have been circulated for the convenience of shareholders with the report and accounts for the year ended October 31, 1957:

Ladies and Gentlemen, Since the last Annual General Meeting, Mr Midgley Illingworth, one of our Joint Managing Directors, has retired on pension after very nearly fifty years' service with the Group. Having started as a young man with his father's firm, Thomas Illingworth & Company (the whole of whose share capital was acquired by Ilford Limited in 1919), he had for many years been responsible for the sales organisation of our whole Group of Companies, and had become a well-known and much respected figure in the Photographic Industry both at home and overseas. We are very much indebted to him for his long and faithful service, and wish him many years of happiness in his retirement. Mr Wilfrid Dimsdale is now sole Managing Director.

TURNOVER AGAIN A RECORD

I am glad to be able to report that during the year under review we again increased our turnover to a record figure. While the increase in home sales was only a modest one, exports rose by no less than 17 per cent, and would have been even higher had not sales of some lines still been limited by our film manufacturing capacity.

I have mentioned before that our exports of sensitised materials account for about half the total exports of this nature from this country. Moreover, a high proportion of ours go to dollar and other hard currency countries.

Our subsidiary company in the United States of America, which is only a sales organisation, is making progress and will, we hope, soon be running on a profit-making basis. While our exports to dollar markets are helping the British economy, an even bigger benefit is being derived from the substantial saving in dollar purchases made possible by the production of film base in this country by our associated company, Bexford Limited. As its volume of production is expanding, even more benefit could be derived from this source. For instance, in connection with X-ray film a useful saving in dollars could be effected if Government Departments would recommend the use of film made from home-produced film base. The base is a substantial item in the cost of the finished film. Ilford films of all types are made on base produced in the United Kingdom and so are without the large dollar element of competing products.

THE YEAR'S RESULTS

You will see from the Profit and Loss Account that while the parent company's Aggregate Trading Profit is £292,878 higher than in the previous year, the Consolidated Trading Profits of the whole Group are only £251,384 higher.

If you then look lower down on the same page of the Accounts you will see that, in order to take advantage of the taxation benefits available under the legislation applicable thereto, an amount of £132,000 has been provided for the purpose of making subvention payments to certain subsidiary companies which had made losses.

From the Balance Sheet of the Parent Company you will see that Fixed Assets have increased by £616,758 in spite of a higher figure for depreciation. In fact we have during the year invested a further £800,000 of our liquid resources in new buildings and plant. On the greater part of this capital expenditure we are able to claim either initial allowances, or in the case of the building and equipment of our new Research Laboratories scientific and investment allowances. Thus, while the Aggregate Net Profit before taxation is £114,898 higher, the provision for taxation is only £5,649 greater, and the Net Profit after taxation is £109,249 higher than for the previous year.

Last time, however, we had a windfall to the tune of £150,000 which arose from adjustments of taxation in respect of earlier years. You will remember that out of this sum we distributed a special cash bonus of 2½ per cent which cost the Company about £72,000 taking the Distribution Profits Tax into account. There is no corresponding sum available this year.

In these circumstances, and in view of our large investment programme still outstanding, your Directors have transferred the same amounts to reserve as last year, namely, £500,000 to General Reserve and £50,000 to Contingencies Reserve. They recommend that the special bonus of 2½ per cent shall not be repeated, but that the final dividend be increased by 1 per cent to 11 per cent, making a total of 16 per cent for the year payable on the Issued Ordinary Capital, and that the amount carried forward be increased by £3,260.

ONEROUS BURDEN OF PURCHASE TAX

Costs are still rising, and only our expanding turnover has enabled us to absorb the increases.

Now, in order to help the fight against inflation politicians are asking manufacturers to reduce their prices irrespective of whether, after paying their higher wage bills, they will be able to earn sufficient surplus after taxation (I purposely do not use that much misinterpreted word "profit") to replace their outworn machinery and plant when necessary. Would it not kill inflation far more quickly, and be much better for the country if Government spending were reduced sufficiently to allow purchase tax to be abolished, or at least substantially reduced? Retail prices would then automatically be reduced to such an extent that there could not be any justification for further claims for wage increases.

If, however, it is indeed true that the country cannot carry on without the revenue derived from the purchase tax, as an alternative I would like to remind you that it was not long ago that Mr Butler, while Chancellor of the Exchequer, spoke of the possibility of converting the purchase tax into a sales or turnover tax. I feel it would be an admirable thing if the present Chancellor were to follow this suggestion and at the same time were to make the tax more broadly based on a wider range of goods at a low figure.

The present purchase tax rate of 60 per cent is the most onerous tax on photographic materials in the world. Moreover, the complicated way in which the present tax is assessed and collected makes it more difficult for us to introduce modern methods into offices, and is a cause of unnecessary waste of labour. This disadvantage must be felt generally among industries whose goods are subject to this arbitrary impost and over a large part of industry it must result in considerable loss.

PLANT EXTENSIONS

I am glad to be able to report that work has recently been started on our new site at Basildon which I mentioned last year, and building will commence this Spring. Meanwhile we are pressing on with further extensions to our film-coating plant at Brentwood.

His Royal Highness The Duke of Edinburgh recently did us the honour of visiting our newly completed Research Laboratories at Brentwood. We believe these to be among the best equipped laboratories of their kind in the world.

During the year your Board took the opportunity that occurred of acquiring for cash the whole of the Issued Share Capital of the Pembroke Carton & Printing Company Limited. This is already proving a valuable acquisition in the very able hands of its Managing Director, Mr C. H. Vince. The Pembroke Company has for some years been responsible for producing a large part of our packaging materials.

THE OUTLOOK

He would be a bold man who tried to forecast the trends of world trade during 1958. Falling prices of primary commodities, and the consequent foreign exchange difficulties in which the producing countries such as New Zealand are beginning to find themselves, may unfortunately lead to import restrictions which, if persisted in, could produce a world-wide slump. Our problem, however, up till now has been mainly one of production capacity. Whether this will continue to be so for the remainder of the current year is difficult to predict. Indications are that it will prove a more difficult year than last.

In conclusion, I feel sure you would wish me to thank on your behalf all our staff and employees, both at home and overseas, for the part they have played in making the year under review again a record one both in volume of production and in sales turnover.

BRITANNIC ASSURANCE COMPANY LIMITED

SPECIAL BONUS ALLOCATION TO POLICYHOLDERS

CLAIMS PAID IN 1957 OVER £8,500,000

MR FREDERICK A. POWELL'S STATEMENT

The Ninety-Second Annual General Meeting of the Britannic Assurance Company will be held on March 28, 1958. The following statement by the Chairman, Mr Frederick A. Powell, FCA, has been circulated with the accounts:

The year 1957 was one of considerable disturbance and readjustment in the economic affairs of this country. Whilst the report and accounts now presented to you show that we made progress in all branches, we have made certain changes in the bases of our actuarial valuation and in the accounts which, without explanation, would make comparisons with previous years' figures very difficult.

As a result of the tightening of credit, and particularly the raising of the bank rate to 7 per cent in September last, there has been a big change in security values and yields. Dealing first with the fall in values, it will give you some measure of its magnitude if I quote the *Financial Times* indices:

	Govt. securities	Fixed interest	Industrial ordinary
Dec., 1955.....	90·08	99·35	200·40
,, 1956...	84·74	92·08	178·80
,, 1957.....	79·29	87·62	165·30
Per cent fall over 2 years.....	11·98	11·81	17·51

Applying these percentages to our investments will give you a good idea of the fall in values which we had to take into account. I am proud to be able to report to you now that we have been able to face even these heavy falls without embarrassment.

You will see from the accounts that we have written down investments by a total of £1,850,000. As a result, the balance sheet figures shown against the various classes of securities cannot all be compared with the figures of 1956. For instance, the drop of £2,648,000 in British Government securities does not represent any disinvestment. During the year we carried out certain changes in our portfolio of British Government securities by sales of short-dated securities and reinvestment of the proceeds in longer-dated securities with advantage to our future income. These sales resulted in a net book loss, and although much of this loss will eventually be recovered by the redemption of the longer-dated securities, our internal reserves and the amount we have written off this year are more than sufficient to provide for it. In addition, we have made transfers from surplus of £1,250,000 to our Investment Reserve Funds, which now stand at £8,750,000.

You will also notice in the Ordinary and Industrial Branch Revenue Accounts, items relating to income tax repayments in respect of earlier years. In the past, as we have indicated by a note in the appendix to the accounts, we have not taken full credit for the income tax recoverable in respect of the expenses of the current year of account. In view of the changes we are making this year in the actuarial valuation and of the writing down of investments, we have decided to take full credit in the accounts of this year for the income tax which we shall recover in respect of our expenses of the year.

The higher yields now available have enabled us to invest our new money to greater advantage. When inflation has been halted, it must be expected that rates of interest will fall, although not, I hope, to the level of 1947. In that year, which saw the redemption of 3 per cent Local Loans stock and its replacement by a 2½ per cent stock, we made a change in our actuarial valuation bases by reducing the net rate of interest used from 2½ per cent to 2 per cent. Under the changed circumstances of today a 2 per cent valuation basis is unnecessarily stringent.

We have this year reviewed our bases and have valued our life contracts in both branches at a net rate of 2½ per cent instead of 2 per cent, but it will be appreciated that the margin between 2½ per cent and our current net interest yield on the whole of the funds is larger than the margin which existed in 1947, when we adopted the 2 per cent rate.

GENERAL PROGRESS

I am pleased to report that 1957 was a year of continued progress in all branches. The total income of the company amounted to £18,467,000—an increase of £991,000. In the life branches, premium income at £13,314,000 showed an increase of £543,000, and there was a substantial increase in net interest of £476.000 to £4,345,000. Claim payments, including payments of £6,383,000 to those who survived the term of endowment assurances, amounted to no less than £8,521,000. Policies in force in the life branches assured, with bonuses, £229,768,000. The total funds held for the security of policyholders rose by £4,038,000 to £106,011,000.

ORDINARY BRANCH

In the Ordinary Branch the premium income was £4,345,000—an increase of £127,000. Gross interest amounted to £1,950,000, which shows a gross yield on the funds of £5 6s. 5d. per cent. After deduction of income tax, the net interest was £1,408,000, which showed a net yield of £3 16s. 10d. per cent.

An outstanding feature of the year was the large sum, amounting to £3,936,000, paid in death claims, surrenders and maturities, of which no less than £3,117,000 was paid to survivors under endowment assurances. We have had two abnormally heavy years for maturing policies, but the figures will return to normal this year, and we may hope to expand our premium income and funds more rapidly.

The surplus disclosed, which includes £1,034,484 released as a result of the revaluation, amounts to £2,292,779. Out of this surplus, £1,072,542 has been allocated to policyholders. The directors have declared a reversionary bonus at the rate of £2 2s. per cent on the sum assured under with-profit policies, which compares with a bonus of £2 per cent declared a year ago.

INDUSTRIAL BRANCH

In the Industrial Branch the premium income was £8,969,000—an increase of £415,000, the largest in this branch in the company's history. Sums assured under new policies amounted to £14,724,000—an increase of £1,274,000, compared with 1956.

The trend towards endowment assurances which has prevailed during the last 20 years continued, and over 92½ per cent of the new sums assured and premiums related to this class of business. In view of this very pronounced trend, it is not surprising that endowment assurance maturities totalled no less than £3,265,000.

The expense rate at 27.50 per cent, without taking into account the transfer out of surplus to the Staff Pension Fund, was 1.05 per cent more than in 1956, the difference being partly accounted for by the increase in new business and partly by improvements in salaries. Gross interest amounted to £3,132,000, which shows a gross yield on the funds of £5 10s. 1d. per cent. Net interest amounted to £2,937,000—an increase of £392,000. The net rate rose from £4 14s. 5d. per cent to £5 3s. 2d. per cent.

The surplus disclosed, which includes £1,171,473 released as a result of the revaluation, amounted to £5,176,538. This increased surplus has enabled the directors to take a big step forward in our bonus scheme for Britannic policies in this branch. After the 1956 valuation, the vested bonus additions to sums assured ranged from 8 per cent after 8 years' premiums had been paid up to 37 per cent after 37 years' premiums or more. This year we have decided to commence the declaration of bonuses of a permanent nature after premiums have been paid for only one year. As a result of the declaration now made, bonuses will range from 1 per cent addition to the sum assured after the first year's premiums have been paid, up to a maximum of 38 per cent after 38 or more years' premiums have been paid.

The cost of this great improvement in our bonus scheme has been met by a special allocation this year amounting to £2,500,000, whereas the allocation to Britannic policyholders last year was £1,300,000. Such an allocation has been made possible by the release of reserves, and it follows that such an exceptional allocation cannot be expected in future years.

HOUSE PURCHASE SCHEME

Mortgages increased during the year by £990,000 to £19,889,000. In spite of the increase in the bank rate, we have not raised the rate of interest on existing mortgages, and we have kept our rate of interest to new borrowers at 6 per cent. This rate is a high one, and any higher rate would be too heavy a burden on the type of person we are seeking to help, namely, the owner-occupier, and for this reason we should be reluctant to increase it.

FIRE AND ACCIDENT BRANCH

We had a satisfactory year in this branch; the premium income amounted to £995,000—a record increase of £147,000. We are most grateful to the British General Insurance Company for the efficiency with which they manage this branch for us.

STAFF

The results of the past year could not have been achieved without the wholehearted efforts of the staff. They have, as always, worked loyally and well, and it is a real

pleasure to express our thanks to them. I am sure you will all approve the increased transfer of £275,000 to the Staff Pension and Widows Fund which we are making this year.

ORIENT STEAM NAVIGATION COMPANY LIMITED

SIR AUSTIN I. ANDERSON'S REVIEW

The fifty-eighth Annual General Meeting of Orient Steam Navigation Company, Limited, will be held on April 11th in London.

The Chairman, Sir Austin Anderson, said in his annual review that the operating profit, after providing for depreciation and after making a transfer from Reserve for contingencies, was £141,183. Speaking of what he described as the Company's "1956/57 Suez Disaster" the Chairman pointed out how the diversion of the Company's vessels to the Cape route as a result of the closure of the Suez Canal had made it impossible to bunker at relatively cheap ports like Aden, and deprived the Company of its normal traffic to and from the Mediterranean and Colombo. Furthermore the disturbed world conditions and less attractive route had undoubtedly made many Australians either postpone their voyages to Europe or travel by air.

The result was that the earnings on voyages on the UK/Australia run, 90 per cent of which had sailed via the Cape, barely covered their operating expenses and therefore had contributed virtually nothing towards their share of the fleet's statutory depreciation which should have been £500,000. In effect, therefore, this service which represented 76 per cent of the fleet's activities, had lost this amount.

Sir Austin gave a renewed warning that although the Company's aim was to secure high load factors by keeping fares as low as economically practical, the wasteful overtonnaging of the homeward passenger berth by casual foreign ships chartered by Governments solely for the carriage of outward migrants to Australia could in the long run result in the regular lines having to charge higher fares or even to reduce their passenger services.

In contrast to the Suez voyages, the Trans-Pacific service had continued to develop satisfactorily. The earnings from an increased number of voyages were the highest since the service was inaugurated in 1954. This was in spite of the Matson Line's advent into the first class passenger trade between North America and Australia and it confirmed the view that the potential traffic in the Pacific Area was very large indeed. So far most North American tourists had flowed eastwards to Europe, only 2 per cent having gone to Pacific countries, but the growing interest in Australia and New Zealand encouraged hopes that Pacific tourism and round the world traffic would grow.

In order to ensure the most efficient planning of the passenger services over the vast Pacific area the Orient Company would co-operate even more closely with the P & O whose ships had recently entered the Pacific. To this end a joint service, to be known as Orient and Pacific Lines would be set up, and besides covering the existing service between North America and Australasia would in 1959, operate two exploratory voyages in each direction between North America and the Far East. If these were successful it was hoped that traffic on this new route would be developed rapidly.

EQUITY & LAW LIFE ASSURANCE SOCIETY LIMITED

SATISFACTORY NEW BUSINESS

LIFE ASSURANCE OFFICES & STATE PENSIONS

MR G. GODFREY PHILLIPS'S STATEMENT

The Annual General Meeting of Equity & Law Life Assurance Society Limited will be held at 12.15 p.m. on March 26, 1958, at 29 Lincoln's Inn Fields, London, W.C.2. Policyholders and Agents are welcome to attend but only shareholders are entitled to vote.

The following is the statement by the Chairman, Mr G. Godfrey Phillips, CBE, circulated with the Report and Accounts for 1957:

The first occurrence which it is my sad duty to record is the death on December 23, 1957, of Sir Randle Fynes Wilson Holme, a Director of our Society from 1929 to 1951. Randle Holme gave us of his best during his 22 years on our Board, and after he retired he always joined us for lunch just before Christmas each year—kind, witty, wise, we shall miss him.

During the year we were delighted to welcome back to the board Sir Arthur Sforde, who was a Director from 1941 to 1948; we know him well and appreciate his worth.

NEW BUSINESS

The new business secured by the Society during the year under review was good, and the figures are set out fully in the report. We were well pleased both with the quantity and with the quality of the business. We were particularly pleased to write a number of contracts providing pensions for the self-employed; 355 in the last three months of 1956, and 1,670 during 1957. Our total annual premiums under this class of business now amount to nearly £400,000. Another welcome development in new business was a revival in the demand for immediate annuities; this revival followed the removal by the Finance Act, 1956, of long-standing taxation anomalies.

New business is an indication in broad terms of a Life Office's success in encouraging thrift, and a good measure of the contribution which an Office makes to the nation's savings is the increase in its funds; you will see from the figures in the report that our funds increased during 1957 by about £5 million. I have no wish in this statement to range over the major problems of national finance, but I do wish to emphasise once again the importance for our national well-being of capital development financed by savings—the importance of postponed consumption. It is in this sphere that the Life Assurance Offices—one of the most important channels of personal savings—play a vital role for the well-being of our country and in the preservation of the stability of the pound sterling. The Council on Prices, Productivity and Incomes in their first report in a chapter headed "How do we want the Value of Money to Behave?" conclude, "that alike on internal and external grounds our objective should be to stop inflation, not merely to moderate its course." We would respectfully agree with that conclusion.

STATE PENSIONS

I wish now to refer to a matter which is closely linked with the problems of national finance and which intimately affects Life Assurance Offices. What action will the State take in the next few years regarding National Insurance Pensions? If the Labour Party were to be in a position to proceed with its plans as published last year—would it do so? We sincerely hope that it would not proceed with these plans in their present form. The scheme would seem to us to impose far too big a burden on the finances of the country.

It is right that the State should direct its attention to providing pensions to meet basic needs; whether or not such pensions should be graded according to earnings is not for us to say.

It would, however, be unsound to shut our eyes to the fact that the introduction of a State scheme of graded pensions to meet basic needs would adversely affect existing private schemes. The provision of pensions to meet basic needs must involve a large element of subsidy. The present National Insurance scheme, for instance, is largely financed from general taxation. One idea which the Labour Party appears to entertain is that private schemes can be regarded as alternatives to a State scheme providing graded pensions. We find it difficult to accept this view. How could anyone be recommended to choose an unsubsidised private scheme in preference to a subsidised State scheme? Even if an unsubsidised scheme were to be introduced by the State, how long could it remain unsubsidised, and who, with the prospect of the new scheme becoming subsidised in the future, would prefer a private scheme?

THE SOCIETY'S RESPONSIBILITIES

Our desire in this matter is to help—we take no narrow view of the Society's responsibilities. We pride ourselves on the services which we give in respect of schemes insured with the Society. The structure of all our existing schemes would almost certainly have to be adjusted in order to fit in with any new State scheme.

We do, however, plead most earnestly that any such proposals should be thought about with the utmost clarity—in particular that just as much emphasis should be placed upon the costs as upon the benefits. Above all, clear thinking is essential about the problems of subsidies—of the old by the young, of one generation by another, of the lower paid by the higher paid.

One other matter is much in debate nowadays—should pensions be transferable? It is not for us to determine this. Should transferability be desired, Life Assurance Offices can certainly operate schemes for maintaining pension rights on a change of employment.

I cannot leave this subject without trying to say something about the possible effects of the introduction of a State graded pension scheme upon our Society's business. You will realise that no one can ever forecast the future. Certainly it is not possible to forecast accurately what might happen as a result of the introduction of a State scheme when no one knows what form such a scheme might take. I cannot say more than this. The diminution of our pensions business as the result of the introduction of some form of State scheme would plainly result in checking the growth of our funds. I believe, however, that they would continue to grow. It would be growth in a highly competitive world, but I think we should hold our own.

RESULTS OF YEAR

I come now to the results for the year 1957. The new form of report which we adopted a year ago sets out the results very fully and there are only one or two items to which I would like to direct particular attention. First, the rise in the gross rate of interest earned on the funds, which is now £6 17s. 4d. per cent; secondly, the funds have now passed the £50 million mark and the sums assured in force the £100 million mark. It has been a very satisfactory year; we again earned the high rates of Interim Bonus which we are now paying, and we look forward to the Triennial Valuation which we are due to make as at December 31st next.

During the year the price of 2½ per cent Consols fell from 52 to 46 and the Ordinary Share Index of the *Financial Times* from 179 to 165. It is not surprising, therefore, that the margin by which the market value of our assets exceeds their Balance Sheet value also fell. This margin, however, remains substantial—in fact, very substantial.

We are recommending an increase in our dividend from 2s. 6d. to 2s. 9d.; this follows my remarks to you two years ago when I said that we might depart from our practice of leaving the dividend unchanged during the triennium and revise the dividend in the light of interim results as they became available.

CHARITIES

You will see from the Notice of our Annual General Meeting that we are seeking power to make contributions to charitable objects. These contributions must be modest in amount. It is, however, my belief that all public companies should, like private persons, play their part in assisting good causes.

NEW OFFICE

There is on the back of this report the address of our new High Wycombe office. This office is part of our Head Office organisation, and we moved in just before the end of the year. We have built a modern office block on a small estate of some 25 acres. We believe that it is a very pleasant place where much efficient work will be done.

Year by year I record our thanks to the staff and year by year it gives me real pleasure to do so. Our Society is most faithfully served and its work most efficiently done.

THE OMNIUM INVESTMENT COMPANY, LIMITED

INFORMATION TO THE STOCK EXCHANGE

MR H. C. DRAYTON'S FURTHER VIEWS

The seventy-first annual general meeting of The Omnium Investment Company, Limited, was held on February 25th in London.

Mr H. C. Drayton (the Chairman) presided and, in the course of his speech, said:

About ten days ago I made a reference, when presiding at another Company's meeting, to the Stock Exchange demanding certain undertakings whereby prior information must be given to the Stock Exchange of any circulars before it is given to Shareholders. This morning the Stock Exchange refuted this statement, but, unfortunately, they refuted what I did not say, which is a very easy thing to do.

The Boards of Directors of Companies with which I am connected have already agreed with the Stock Exchange that all documents which are necessary for dealing—that is allotment letters, applications for shares and particulars of any new issues shall be submitted to them for approval and agreement with them before being sent to Stockholders. But Clause 9, sub-section B, is in a different category. That clause says that Directors must send to the Stock Exchange proofs, prior to despatch, of all circulars the Directors may wish to send to their Stockholders or Debenture Holders.

The Stock Exchange in their statement this morning now say that these documents, which have got to be sent to them before the Stockholders receive them, are confidential, but I would like to ask—"confidential to whom?" They ask that four copies be sent. Are those four copies confidential to the Council of the Stock Exchange? Are they confidential to a Committee of the Stock Exchange or just to the Clerks of the Stock Exchange? What worries me is why they say "prior to despatch." Is the Stock Exchange now claiming that Directors can only communicate with their Stockholders in terms, words and methods approved by the Stock Exchange? If that is so, it raises a very big principle. It means the Stock Exchange are claiming that they have authority over the Directors' communications with their Stockholders, and that the Directors have the responsibility without being able to put such communications in words and in terms which they think are right and proper to their Stockholders.

DIRECTORS' DUTY TO STOCKHOLDERS

Why, if the Stock Exchange claim that, do they stop at circulars? After all, when the Directors send out Balance Sheets they also include a Directors' Report, and very often valuable information is given to Stockholders in that Directors' Report. Is the next step going to be that the Stock Exchange will demand that they should have proofs of the Balance Sheet sent to them prior to despatch to Stockholders? My view is that the Directors' first duty is to the Stockholders and no-one, whoever they are, has any right to information, confidential or otherwise, before the Stockholder has it.

I have, on behalf of this Company and other Companies, on behalf of the Boards of Directors where I am Chairman, offered to the Stock Exchange that under Cause 9, sub-section B, they should have copies of all circulars sent to Stockholders by the Directors at the same time as the Stockholders receive them, and I can see no reason to depart from that point of view.

The report was adopted.

CO-OPERATIVE PERMANENT BUILDING SOCIETY

MORTGAGE ADVANCES TOTAL £29,000,000

ASSETS AMOUNT TO £162,000,000

The Seventy-fourth Annual General Meeting of the Co-operative Permanent Building Society was held on March 1st, in London.

Mr H. L. Score, the president, said:

In spite of the unfavourable conditions this society can look back on a most satisfactory year, and one in which further good progress has been made. The inflow of money reflects the greatest possible credit upon our branches and agents. The monthly average intake was just over £3 million, and we have again succeeded in greatly increasing our Share membership.

Withdrawals were somewhat higher than in 1956, but notwithstanding this the investors' balances rose by £18 million.

One of the features of the year which has given most satisfaction to your board, is that the society was able to make mortgage advances totalling £29 million—a figure which was £7 million up on the previous year, and very little short of our record lending in 1955.

DEMAND FOR MORTGAGES

Throughout 1957 we had no difficulty in lending the funds we had available; in fact the reverse was the case.

On the operation of the Rent Act it is becoming clear that whilst rent increases of controlled properties were necessitated by changes in the value of money and the increased cost of repairs, the decontrol of a large number of flats and houses in the London area next October is causing much concern. The adoption of a more gradual form of decontrol would have mitigated the hardship likely to be felt by tenants compelled to find fresh accommodation because they cannot afford the new rent, or alternatively have received notice to quit.

INTEREST RATES

Interest rates have been a constant matter of concern. We believe that we have acted rightly in not seeking to alter our rates, and we believe that we are equally right in being determined to resist an increase as long as possible. We have given our full support to the Building Societies Association's recommendations to maintain rates at their present levels. Our present Share interest rate of 3½ per cent, Tax Paid, provides a return of just over 6 per cent to the member liable to tax at the standard rate. That is a good rate, demonstrably attractive to a great number of savers, and competitive because of the advantages of full security and ease of withdrawal. On the other hand, the 7 per cent Bank rate presumably is a crisis rate, and because of that may not be of long duration. Joined with other measures it has the prime object of building up the gold and dollar reserves of the country. When that has been achieved, and there is a renewal of confidence in sterling, it can be assumed that the rate will be lowered. It is quite conceivable in these circumstances that a Bank rate lower than 7 per cent would assist rather than hinder the fight to achieve financial stability.

The motion was duly seconded and carried.

BTR INDUSTRIES LIMITED

REDEPLOYMENT OF GROUP ACTIVITIES

The thirty-fourth annual general meeting of BTR Industries Limited will be held on March 28th in London.

The following is an extract from the circulated statement of the Chairman, Sir Graham Hayman: During the period covered by the Accounts trading conditions have been difficult throughout, and in addition, there has been considerable redeployment in your Company's business following the discontinuance of the manufacture of tyres towards the end of 1956, the inevitable expense of which has fallen largely within this period.

Although the trading results are disappointing the total sales of the Group—despite our withdrawal from the tyre market—have been substantially maintained. Competitive pressure has become exceedingly strong in the bidding for the available business, particularly in the belting field, and this has depressed selling prices to levels which have adversely affected profit margins. Any easing of the Government's policy of restraint would bring about an improvement in these conditions.

The Group profit for the year, before taxation, amounts to £1,295,804, as compared with £1,752,812 last year. After providing for taxation of £731,660, there remains a net profit for the Group of £564,144, as against £853,774 last year. Your Directors have allocated £250,000 to General Reserve, bringing it up to £2 million, and now recommend a final dividend on the Ordinary stock of 10 per cent which, with the interim dividend of 5 per cent, repeats a total of 15 per cent for the year.

WIDENING OF ACTIVITIES

Despite the setback to our profit position, the past year has been an important milestone in the progress of the Company. There has been a major readjustment in the organisation of our business, and we have directed our activities and our capital resources to a widening of our industrial interests.

Our diverse operations are now being allocated to various divisions, which will facilitate the direction and control of the products coming within these groupings.

In the case of aero products, the activities of this division will be handled by PALMER AERO PRODUCTS LIMITED, a well-known name in the aircraft field, formerly trading as THE PALMER TYRE LIMITED. This division is heavily engaged at present in supplying products to well-established commercial aircraft projects.

The selling activities of our High Pressure Hose Division will be managed by OIL FEED ENGINEERING COMPANY LIMITED, who have already established themselves in hose unit markets. Footwear, on the other hand, will now be handled through the Parent Company.

THE SILVERTOWN COMPANY will remain as a selling company with specific manufacturing operations under its control.

The statement then dealt in detail with the Group's wide range of products and continued:

Our efforts to expand in the export markets have produced encouraging results, and the value of the business secured during the year showed an increase of 60 per cent.

I have every confidence that our present planning and reorganisation will enable the Company to make continued progress in the interests of the Stockholders and the industries it serves.

MANCHESTER SHIP CANAL COMPANY

DIVIDEND MAINTAINED ON LOWER TURNOVER

SIR LESLIE ROBERTS'S REVIEW

The Hundredth Ordinary General Meeting of the Manchester Ship Canal Company was held on February 28th at Manchester. Sir Leslie Roberts, CBE, the chairman, in the course of his speech said:

The net revenue was £1,100,707 compared with £1,134,316 in 1956. To this must be added £31,765 brought forward from the previous year. £587,363 has then to be deducted for Loan and Debenture interest, £40,000 set aside to the Sinking Fund for Redeemable Loan Capital and £50,000 appropriated for Taxation. The balance available for Dividends and Reserve thus amounts to £455,109. From this amount £35,000 has once more been appropriated to the Reserve for Contingencies; and out of the balance of £420,109 it is proposed that the following Dividends, amounting to £387,587 should be paid:

5 per cent on the Preference Shares, 5 per cent on the Ordinary Shares, and that £32,522 should be carried forward to next year's account.

The net revenue was £34,000 less last year than in 1956. In accordance, however, with the form of Accounts prescribed by the Ministry of Transport, the Company's net revenue figure is arrived at after setting aside the necessary provisions for Repairs, Renewals and Depreciation; and I think I should make it plain that the amount of the provisions so set aside from the year's revenue — while very substantial — were £70,000 less than the provisions set aside from the year's revenue for 1956. Broadly speaking, the net results of last year's working were about £104,000 less favourable than those of 1956, which was a record year.

The volume of sea-borne traffic handled declined by 1,656,000 tons, one of the main factors being a reduction of both imports and exports of bulk Petroleum and Petroleum products. This decline of Petroleum traffic was in some measure, a direct consequence of the Suez crisis which extended into the early months of the year.

Receipts from Tolls, Ship Dues, Traffic Rents and Towage, exceeded those of the previous year by £34,000 in spite of the reduction of traffic. This was due to the increased Rates and Charges which came into operation in the course of the year. Dock Labour yielded an operational surplus of £287,000, nearly £48,000 less than in 1956—a decline which was chiefly due to a decrease in the tonnage discharged and loaded.

A still greater decline was experienced in the working of the Company's Railways, the net receipts being £58,000 compared with £164,000 in 1956—a reduction of £106,000.

As regards the future, may I remind you of some remarks I made last year to the effect that the Ordinary Shareholders take the risks and that if the Company should run into leaner times I was sure they would recognise that their dividend must correspond with the year's results. That observation continues to hold good, particularly at a time of some recession in world trade when many ships are laid up. But with a revival of confidence such as might follow upon an easing of international tension, overseas trade would start to flow more easily again and the position could quickly improve.

The report and accounts were adopted.

RALLI BROTHERS LIMITED

FACTORS AFFECTING RESULTS

MR JACK VLASTO ON COMMODITY PRICE FLUCTUATIONS

The annual general meeting of Ralli Brothers Limited will be held on March 26th in London.

The following is the statement by the President, Mr Jack Vlasto, which has been circulated with the report and accounts for the year ended August 31, 1957:

The trading results, now before you, are indeed disappointing. They contrast a considerable loss on the merchanting side of the business, where the year was the worst in our experience, with a best-ever showing by our subsidiaries.

Although our merchanting turnover kept fairly steady at about £55 million, each of our three main commodity departments encountered adversity at some time during the year and, despite almost normal results from the other articles, total merchanting earnings only covered about half the overheads and expenses. Our experience in cotton was particularly poor, but it must be added that of all our articles this was the worst affected by the Suez crisis. In grains, for most of the year our results were shaping satisfactorily and it was only towards the end that the collapse in freight rates brought losses on forward bookings which changed the picture. In jute, we made a very bad start to the season and, although doing well for the second half, were unable to get out of the red.

For this poor showing the Suez crisis was largely responsible, either through increased charges or unexpected movements in commodity prices. In fact, Suez, in some measure, enters into nearly every story. Nevertheless, despite this, and the knowledge that our experiences were shared by many competitors, we recognise that our own tactics were also to blame. We were too often on the wrong side of the market.

SUBSIDIARY COMPANIES

The outstanding contributor to the good results from subsidiaries was The Maritime Shipping & Trading Company Limited, with a record year. They are to be congratulated on having taken the utmost advantage of the high rates which ruled for tramp freights. Their first motor vessel, the 11,000 ton *Loradore* was launched this month.

In Tanganyika, the profits of Ralli Estates were halved by the fall in sisal prices. Their production was 5,550 tons. Dindira Tea Estates were expected to make a loss but drought raised it to £24,200. Development of the garden continues to plan. Production was about 200,000 lb.

In Uganda, Margach & Margach did very well. Owing to its uncertain future, however, it was recently decided to sell the ginnery and the company will be liquidated after the current cotton season.

In South Africa, Berg River Textiles, with production up in all sections, reversed the previous year's loss with an encouraging profit and a resumed dividend.

ASSOCIATED COMPANIES

The accounts of Rallis India Limited have not yet been published.

The same applies to The Crescent Jute Mills Company Limited of East Pakistan. We have, however, considered it advisable to write down the book value of our investment

in the latter by a further £100,000. It was a bad year for all jute mills and labour difficulties and other problems, on which the chairmen of several other Pakistan mill companies have recently commented so bitterly, have been particularly acute in the Khalispur area where Crescent is situated.

THE ACCOUNTS

You will notice that our capital reserves are up by £136,923. The increase arises mainly from the surplus on the sales of property in West Pakistan referred to in the directors' report. We constructed our Karachi head office building in 1920. It had become too large for our reduced requirements and further staff economies called for more compact premises. We also sold our Mirpurkhas ginning factory which had become difficult to operate profitably and had acquired considerable site value over the 50 years we have worked it.

The higher bank liabilities shown in our accounts, are mainly due to increased participation in the internal handling and financing of wheat from lakehead to ocean ports as agents of the Canadian Wheat Board.

THE CURRENT YEAR

We must look for a marked reduction in the profits of subsidiaries. The Maritime will have a good year by normal standards, thanks to a number of voyages at the old high rates, but their earnings cannot be other than considerably reduced. Current tramp rates, of course, are appallingly low. Ralli Estates will suffer from the further drop in sisal prices and, in addition, their production is disappointing because of inadequate cutting labour. Berg River Textiles are still doing well, though the year is proving more difficult.

Our merchanting results are now handicapped by declining commodity prices and falling markets always bring other problems too. While I trust we shall do better than last year, as indeed we must, I fear that the outlook is still far from satisfactory.

PERSONNEL

We all miss Mr Philip Valieri from our board but I am glad to have him in South Africa, on the spot, looking after our affairs there which have always been his particular responsibility.

Our thanks are due, as usual, to all our staff for their loyal and strenuous endeavours to promote the interests of the Company during what has proved a most trying and difficult year.

VOSPER LIMITED

(Shipbuilders & Engineers)

MR OWEN R. GUARD'S REVIEW OF ACTIVITIES

The twenty-first Annual General Meeting of Vosper Limited will be held on March 14th in Portsmouth. The following is an extract from the circulated statement of the chairman, Mr Owen R. Guard:

During the year under review we have earned a net profit of £64,181 compared with £103,199 for 1955-56 and £46,473 for 1954-55.

The figure of net profit would have been somewhat higher had it not been for considerable expenditure on an all-welded prototype trawler built to the special order of the Boston Deep Sea Fishing Company.

We hope to obtain further orders confirming our view that it is necessary to widen the scope of the Company's activities, particularly bearing in mind that the implementation of the Defence White Paper may well have important bearing on our future.

The level of work in our two shipyards is at the moment satisfactory and is likely to be so over the next year, but we would like to see more work ahead of us.

As mentioned last year, we have embarked upon a fairly exhaustive programme of research, more particularly applied to the problems of high speed propulsion. We believe this work will enable us to take a part, admittedly well in the future, in the production of the really fast types of craft which may be expected when the very high powered propulsion units become available as a result of the vast programme of atomic and even fusion reaction research now in progress.

During the current year an Electronics section has been formed which is already proving most useful in many directions, more especially in connection with our research programme.

During the last year we have been enabled to obtain some most valuable data from a series of trials, run at sea, with boats instrumented to keep a running record of accelerations, pressures, etc. Much of this information has been impossible to obtain hitherto and will be most valuable for future designs, which we hope may be required by the Marine section of the Air Ministry.

It is our hope that we may be able to round off the programme of research by carrying out a series of experiments which will give a useful clue to the cause of cavitation-erosion.

SCOTTISH WIDOWS' FUND & LIFE ASSURANCE SOCIETY

A MOST SUCCESSFUL YEAR

RECORD NEW LIFE BUSINESS

MR F. H. N. WALKER ON ENCOURAGING PROGRESS OF CURRENT QUINQUENNIUM

The 144th Stated Annual Meeting of the Society was held in the Society's Head Office, Edinburgh, on Tuesday, March 4, 1958, Mr F. H. N. Walker (Chairman of the Ordinary Court of Directors) presiding.

In moving the adoption of the report and accounts, which were taken as read, the Chairman said:

Once more we have had a most successful year, and our total new life assurance business in 1957 was again higher than ever before, although on this occasion only slightly so.

This new business amounted to the record total of £26,200,000, including ordinary life assurances of £14,400,000, new group insurances of £3¼ million and increases in existing group insurances of nearly £8¼ million. The total group insurance figure of over £11½ million is the largest ever completed by the Society in a single year, and the new group pensions business amounted to £1¼ million per annum. This group pensions business together with the group life insurance business is equivalent to about £20 million of ordinary endowment assurances.

In addition, we have transacted a large amount of the new personal pensions business on the lives of self-employed persons for whose benefit special provision was made in the 1956 Finance Act. We offer two main types of contract—an annual premium contract and what we call a "variable premium" contract, which is particularly suitable for those whose incomes may fluctuate from year to year and who are reluctant to commit themselves to a fixed annual premium. During the year we issued 360 policies with annual premiums of £83,000, providing deferred annuities and widows' annuities of £171,000, but the variable premium contract is proving to be much the more popular. In that type of policy each premium is applied on the terms available at the time to provide a deferred annuity, so that the contract is in effect a series of deferred annuities by single premium. Last year we issued nearly 1,500 policies of this kind under which the first year's premiums amounted to £547,000 which, as single premiums, secured deferred annuities of £109,000.

Perhaps one of the best ways of appreciating the magnitude of our new business figures is to consider the total new premiums we received in the year other than the sums paid to provide immediate annuities which come into a somewhat different category from ordinary life assurance. Looking at the matter in this way, we completed contracts with a record total of new premiums, annual and single, of nearly £2 million as compared with just over £1¼ million in 1956. This represents an important increase in our new business, and is a highly satisfactory result of which our new business staff can feel justly proud.

HIGHER INTEREST INCOME

Our interest income is higher as a result of the growth of the funds and the high rates at which it was possible to invest our new money. The gross rate of interest, before deduction of income tax, on the whole of our assurance and annuity funds was £6 3s. 3d. per cent, an increase of 2s. 6d. per cent over the rate for 1956.

As a result of the operations of the year, our funds increased by almost £10 million, as compared with under £9 million in the previous year, to over £103 million, thus exceeding £100 million for the first time.

During the year there was a general decline in values, and practically all Stock Exchange securities stood at relatively low levels at the year end, British Government securities being very nearly at their lowest levels for all time. Nevertheless, in accordance with our usual custom, each category of investments is entered in the Balance Sheet below its value at market selling prices, that is, the lowest quoted market prices.

CURRENT QUINQUENNIUM

The last matter to which I wish to refer is of particular importance. From the bonus point of view—the point of view of profits for the policyholders—this has been one of the most remarkable quinquennial periods in the Society's history. We started it with an intermediate bonus of 40s. per cent per annum compound, the same rate as the vested bonus declared for the preceding quinquennium. In 1956 we were able not only to raise the ordinary intermediate bonus to 44s. per cent compound—the highest rate of compound bonus ever paid by the Society in its long history—but to introduce a special intermediate bonus for all with-profit policies in force at December 31, 1955. Now we have again been able to raise the ordinary inter-

mediate bonus—this time to 46s. per cent per annum compound. The satisfactory earnings of the past four years which have enabled the Directors to make these successive improvements in the rate of intermediate bonus enable us all to look forward with confidence to a satisfactory outcome of the current quinquennium, the results of which will be announced early in 1959.

The Directors' report and the accounts as audited were adopted unanimously.

TRINIDAD SUGAR ESTATES

The thirty-fifth annual ordinary general meeting of Trinidad Sugar Estates Limited was held on March 4th in London, Mr E. Cassleton Elliott, CBE, FSAA (the chairman), presiding. The following is an extract from his circulated address:

The Crop for the year was again a disappointing one showing a reduction of 397 tons compared with 1956. This was owing to the low yield of canes due to weather conditions and Froghopper damage in the previous year and in 1957.

The average price per ton realised for sugar including by-products after deducting a levy of £2 15s. per ton made under the Trinidad Sugar Industries Special Funds Ordinance was £48 7s. compared with £44 5s. 7d. in 1956. The world price for sugar during 1957 was very high being approximately £8 per ton over the Negotiated Price sugar, but owing to our disappointing production we only had 165 tons to sell at this price. The profit per ton in Trinidad was £1 18s. 10d. compared with £3 0s. 4d. in 1956.

The financial position continues to be satisfactory, the surplus of current assets over current liabilities and provisions being £187,114 compared with £173,500 last year.

As to prospects for the 1958 Crop the Manager only anticipates a Crop of about the same tonnage as last year. There have been very dry weather conditions during the growing season, and as a result the cane yields are expected to be light.

The report was adopted and a dividend of 6 per cent approved.

APPOINTMENTS

WESTERN REGION PRODUCTION DEVELOPMENT BOARD, IBADAN, NIGERIA.

SENIOR ACCOUNTANT

The Western Region Production Development Board has vacancies in its accounting organisation for a Senior Accountant.

Candidates for this post should possess a recognised Accountancy qualification and should have had at least five years' experience in a professional office since qualifying including work on re-organisation, introduction of a new accounting system and budgetary control. It is essential that candidates should have sound knowledge of costing and cost systems. Commencing salary, excluding inducement allowance, will be in the range of £1,360 x 60—£1,540. Inducement allowance is £300.

2. The terms of service include partly furnished accommodation at 8½ per cent. of the basic salary; free medical service, outfit allowance, free passage for wife and also free passages once each way per tour for children up to three in number not over the age of 13. Employees are required to contribute up to 10 per cent. of salary to a Provident Fund. Home leave at full pay at the rate of five days per month on overseas service. Normal length of tour 18-24 months.

3. Applications in *duplicate*, together with details of age, experience and qualification and the names of three personal referees should be sent to:

The London Representative,
Western Region Production Development Board,
178-202 Great Portland Street,
London, W.1.

to reach him not later than March 31, 1958.

THE LONDON SCHOOL OF ECONOMICS AND POLITICAL SCIENCE
(UNIVERSITY OF LONDON).

Applications are invited for an Assistant Lectureship in Social Anthropology. Salary scale £700 x £50—£850 per annum, plus £60 London Allowance; with superannuation benefits and family allowances. In assessing the starting salary due consideration will be given to age and experience.

Applications, with the names of three referees, should be received not later than April 16, 1958, by the Secretary, London School of Economics and Political Science, Houghton Street, London, W.C.2, from whom further particulars may be obtained.

THE REPUBLIC OF THE SUDAN

The Ministry of Education invites applications from suitably qualified candidates for the post of lecturers in the following departments in the Khartoum Technical Institute:— (a) Civil Engineering, (b) Mechanical and Electrical Engineering, (c) Commerce. Qualification for (a) and (b) is a degree in Civil, Mechanical or Electrical Engineering or technical equivalent, e.g. A.M.I.Mech.E., A.M.I.E.E., A.M.I.C.E., A.R.I.B.A., etc. Teaching experience in a similar appointment would be an advantage. For (c) a degree in Economics or Commerce or equivalent qualification in Accountancy is required. Minimum age 25 years. Successful candidates for (a) and (b) will be required to teach their subjects up to Higher National Certificate and will also be required to supervise certain Workshop and Laboratory activities. Candidates for (c) will be required to teach their subjects Accountancy or Economics up to professional standards.

Appointment will be on Short Term Contract with bonus for a period up to five years. Salary scale ranges from £S1,075 to £S1,675 per annum for Lecturers and £S1,075 to £S1,975 for Senior Lecturers. Point of entry into the scale will be determined by age, qualifications and experience. A Cost of Living Allowance which is reviewed every two months is payable. An Outfit Allowance of £S50 is payable on appointment.

Please write, preferably on a postcard, for application forms and further information to the Sudan Embassy, Personnel Section, Cleveland Row, St. James's, London, S.W.1, quoting "Lecturers 4/1027." Closing date March 31, 1958.

APPOINTMENT REQUIRED

FRENCH student, age 22, excellent credentials, graduate in Law, Arts and Political Science, with practical teaching experience, holding driving licence, seeks full time post in England from May to December 1958 salaried, or terms to be arranged.—Apply Box 889.

BUSINESS AND PERSONAL

EUROPEAN COMMON MARKET

ITALY — ITALY

Established Italian agents and distributors, with efficient vending organisation, marketing and sales promotion, in view of coming European Common Market, would willingly act as exclusive agents and distributors for important British manufacturers wishing to introduce their products on the Italian market.

Electric

SPACEMASTER "J".

Where electric powered fork trucks are called for, the Coventry Climax Spacemaster 'J' is the best choice. This is the British version of the renowned Lewis Shepard (USA) design, with a quarter century of 'electric' experience behind it. It lifts loads up to 2000lb. to 11 feet safely, smoothly, quickly.

2 ways to move 2000 lb

Model "TMD" DIESEL

First choice for the tough 2000lb. jobs is the widely proved Coventry Climax TMD —probably the most successful and popular small fork truck in existence. The ultimate in low-cost diesel reliability.

TACK Personal Training Courses

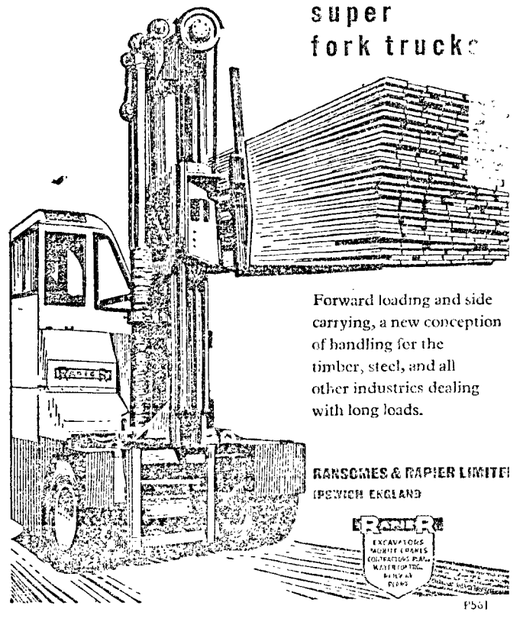
mean more sales at less cost..

Sales managers of large and small companies—marketing every kind of product and service—have found that TACK Sales Training contributes positively to solving their major sales problem: How to increase turnover without raising costs . . .

. . . regardless of product or service!

F. B. Roberts, Grocery Marketing Manager of THE NESTLE COMPANY LTD.—famous producer of quality-food products—has this to say:

"For five years, we have used the TACK Course to augment our own sales training programme. Their commonsense training is considered most suitable for a company which depends upon repeat business."



Each year over 2,500 salesmen and sales executives attend TACK Courses
Tack Course in Salesmanship and Human Relations—3 days
Tack Course in Sales Management—2 days
May we send you details of how we can help YOUR Company?

"You can get a V.H.F. set *cheaper* than this"

—But not better. This is the Grundig Marlborough, designed to meet the most extended frequency limits which V.H.F. Broadcasts can produce. The Marlborough is a four-wave, three-speaker radio which is really two sets in one. It gives you V.H.F. as well as long, medium or short wave reception.

The tuning is linked through a 'Duplex' clutch so that if you are listening on any of the standard wave bands and decide to switch over to V.H.F., the other programme will remain tuned, should you wish to return to it.

The three speakers are acoustically placed to give maximum depth and realism and to provide a balanced dispersal of the treble register as well as the bass. There is a unique frequency response control system covering the whole frequency spectrum; four independent controls which allow of an infinite number of settings and extremely accurate adjustments. A visual indication of these is given. There are many other refinements — press-button wave selection, built-in aerials for both V.H.F. and standard reception, A.V.C. and micro-magic eye tuning.

Ask your radio dealer for a demonstration of the **GRUNDIG** *Marlborough*

Eastman CHEMICALS

are serving European industry

Protective coating

Cellulose Acetate Butyrate, a chemically uniform product of esterification by acetic and butyric acids, is the basis for paper, plastic and metal lacquers, heat sealing adhesives, airplane dopes and melt and peelable coatings. It is available in a number of types of varying acetyl contents and viscosities, including *Half-Second Butyrate*, a new low-viscosity film former with outstanding properties, developed especially for the coating industry. Half-Second Butyrate produces clear, non-yellowing films with remarkable resistance to breakdown by sunlight, plus high strength, flexibility and excellent outdoor weathering properties.

Cellulose Acetate has been used for many years in waterproof wire and cable lacquers, where it provides toughness and abrasion resistance.

Solvents and *Plasticizers* in a broad range. Isobutyl acetate and di-isobutyl phthalate, made from Eastman isobutyl alcohol, are finding rapid acceptance among European lacquer formulators.

Textile

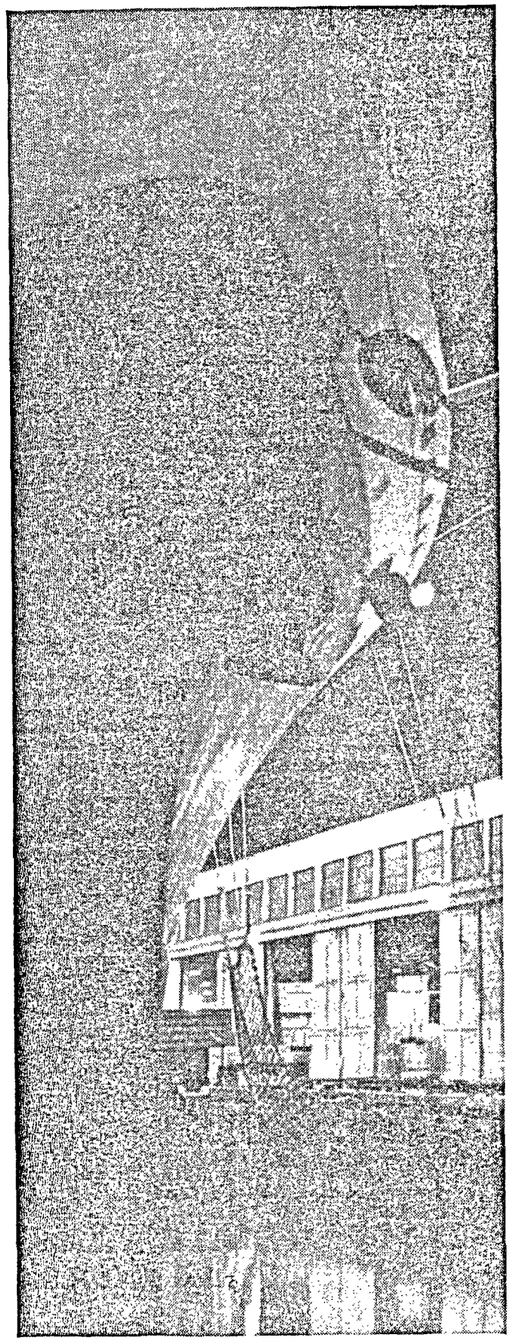
Dyes of outstanding color fastness for synthetic fibers.

Petroleum

Tenamene® 1, 2, 3 and *60* are gum inhibitors and metal deactivators used in motor and aviation fuels to maintain product quality during storage and use.

Rubber

Tenamene® 30 and 31, Eastman antiozonants, safeguard rubber products against the deteriorating effects of atmospheric ozone.



Food and Agriculture

Tenox® antioxidants protect food and animal feed against oxidative deterioration. They are available in a wide range of formulations to meet specific processing conditions. A line of commercial-grade antioxidants are also available to protect a variety of industrial products.

Waxes and Polishes

Epolene, a low molecular weight polyethylene wax, is available in regular and emulsifiable grades for use in paper coatings, polishes and as an upgrading agent for paraffin and other waxes.

Stocks of many of these products are maintained in Europe, assuring quick delivery. If you would like to investigate any of these quality products, call or write Eastman's European Sales Office in the Hague. They will put you in touch with our local representative. He and a member of the Eastman staff will gladly work with you toward obtaining the most effective use of Eastman chemical products in your operation.

tolerance by CLEVELAND

Accuracy of steelwork has helped to make Cleveland's reputation. A 2" shaft may be required to be consistent in diameter to one part in one thousand; a 60ft. girder to 1/32" length. It is in the consistent maintenance of required tolerances that Cleveland excel. Bridges are trial erected in our yards, so that when they reach their destination there may be no doubt of their being correct.

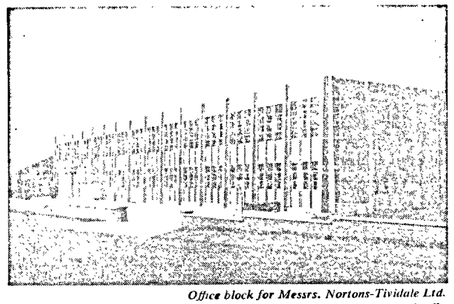
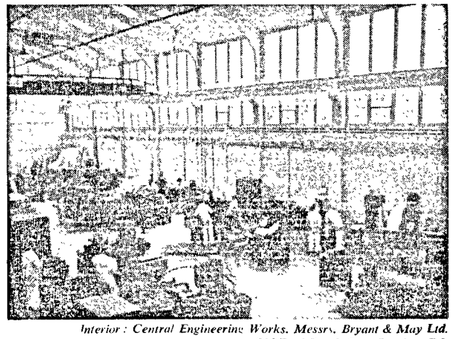
Money is dear but . . . today BEECHAM BUILDINGS cost less



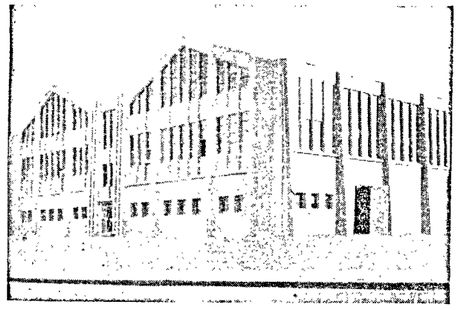
Beecham Buildings construct high-quality commercial and industrial buildings—from office blocks and small factories to large industrial layouts covering many acres at prices which, over the past twelve months, have actually fallen. We accomplish it in these days of 7% by working quickly and eliminating waste.

WE STREAMLINE PRELIMINARIES



We in Beechams have the *complete* building organisation, including departments for every phase of building from first design to final finishing. Consequently we can quote firm prices as soon as sketch designs are agreed, saving much valuable time over the usual procedure when outside contractors must be consulted for quotations, and enabling us to move on to a site months earlier.

WE BUILD BY MODERN METHODS



Because we employ advanced techniques, we are able, without sacrificing quality,* to put up your factory faster, perhaps in only half the time you could have it built by older methods. You will get into production months earlier with a quick return on invested capital. With capital tied up at 7% this saving in time is a heavy saving in money. Every contract is kept under one control. Every operation is timed and its completion dovetailed into the schedule, ensuring maximum efficiency and minimum site delay. The use of planned factory production of precision cast concrete units, served by our own fleet of specialised transport—ensures control of quality, free from the hazards of the weather. Beecham methods mean rationalisation; and rationalisation means economy.

FAST, EASY AUTOMATIC ACCOUNTING

The Burroughs Sensimatic brings unrivalled speed, accuracy and flexibility to modern machine accounting. Whatever your business, whatever your accounting system, a Burroughs Sensimatic can be geared to your special requirements. At one stroke it will streamline your office operations, bringing you increased efficiency and lower costs. The Sensimatic control unit permits each job to be individually programmed and four or more programmes may be incorporated in ONE unit. Maximum automaticity and economy are ensured and varying combinations of memory units are available. Automatic features simplify the operation of the machine, and up-to-date Management reports are provided as a by-product of routine accounting applications.

Contact your local Burroughs office or write direct to:
Burroughs Adding Machine Ltd.,
356-366 Oxford Street,
London, W.1.

BURROUGHS SENSIMATIC

Mirror in the sky

This is the title of a film—one of a number of educational scientific films sponsored by Mullard in the interests of the advancement of science. These films are designed to spread a general knowledge of electronics as widely as possible, and also as an aid to the serious teaching of electronics in universities, technical colleges and schools.

"Mirror in the Sky" was produced in collaboration with the Educational Foundation for Visual Aids for a co-production scheme initiated by the Western European Union. It deals with the ionosphere—one of the major fields of research during the International Geophysical Year—and describes the work of early scientists leading up to the discoveries of Sir Edward Appleton, and culminating with an explanation of the new science of Radio-Astronomy.

Mullard educational films are available on hire or loan to industrial organisations and educational establishments. Full details can be obtained on request from the Mullard Film Service at the address below.

The Confident Recession

ELSEWHERE in this issue of *The Economist*—in a dispatch from our Washington staff on page 937, and in a summary of reports from other correspondents overseas on page 915—we present a gathering of information on the most tremulous economic question of 1958. How great is the danger that the current recession in America may deepen and drag the free world into a slump? This is a matter on which all prudent men will still hedge their bets. But one thing can be said: in one respect, both in the United States and outside it, the recession of 1958 is not yet behaving exactly as the formbook suggests that it should if this really were to be the beginning of another 1930.

This saving grace is that business confidence, which the pessimists had feared might be a tender shoot, is so far proving stoutly evergreen. That, to many people, has seemed to be the most significant feature of this last fortnight's news from America. On the one hand, there has been a continuing decline in almost all the indices of American activity—which show what was happening in the American economy up to last quarter, or to last month, or (more rarely) to last week. On the other, throughout this period of relentless statistical illustration of depression, there has been an almost presumptuous firmness in stock market prices—which show what investors think is going to happen in the American economy in the next month, or the next quarter, or later in the year. The Dow Jones average for industrials has picked up from 437.80 on February 27th to 454.60 on March 12th. In these last two weeks, those Americans who have been backing their forecasts with their money, rather than merely with their political or journalistic reputations, have been forecasting that there will be no real slump.

How far is it wise to pay regard to them, to look at these crystal gazers rather than in the book? There are two reasons why Wall Street's crystal-gazing should not be discounted. First, although the men behind the latest market movement may be either ill-informed or purblind, there is better room for a presumption that they are not. The buying in New York is now very largely institutional, and modern American investing institutions ought to be rather good at assessing what is likely to happen to their economy; they certainly take a lot of trouble about it, employing a lot of economists to study trends in the minutest sectors of the economy and keeping their private ears well down to the Washington ground in order to gauge possible changes in government policy. Secondly, even if the majority of these expert institutions are wrong in their assessment of what should now happen to the American economy, there is likely to be some built-in resistance to their being quickly proved so. For they are in a sense principals, as well as prophets, in the matter. They are of the same stock (indeed sometimes are the same people) as the American businessmen who, it had been feared, might start a great depression by running for shelter in their real investment programmes; it was on them that the

repercussions of confidence were supposed to repercuss. It was through them that the multiplier was supposed to multiply.

Up to this Thursday, it was not doing so. And, so far, the same label of very confident recession applies to Europe as well. The second great apprehension of 1958, side by side with the thesis that American investment might be quickly affected by a serious recession, was that whenever America even sneezed (as it already has done) the rest of the world would catch pneumonia. Moreover, the countries that would catch pneumonia first—especially the sterling area with its heavy dependence on exports of volatile raw materials—were perfectly well known to currency speculators; and it was assumed that quite early in the downturn there would be a large movement of funds across the exchanges. It is true that this did not happen in 1953-54, but in that recession there were said to be a number of special factors that had not been present in 1949: most notably, production was expanding so rapidly in Europe (especially in Germany) that world demand for raw materials was kept up.

The striking thing about the recession of 1958 outside America, as our table on the page opposite shows, is that all the primary consequences of 1949, not the special circumstances of 1953-54, are indeed occurring again. But none of the secondary repercussions on confidence is. Production in most countries of Europe, including Germany, has virtually stopped rising; in some of the marginal high cost industrial countries—such as Belgium—it is quite definitely falling. Commodity prices are down. Sterling has just recovered from a crisis in which many foreigners thought that it would be devalued, and at the worst possible moment of potential new strain a new and inexperienced Chancellor was unwillingly catapulted into the Exchequer. Yet, in these most unpropitious of circumstances, foreign exchange is still flowing wherever the interest it can earn is highest, including most notably into London, without any murmured fear of currency depreciation. If a real American slump was expected, then everybody knows that some devaluation of other currencies against the dollar would again be mooted; the conclusion is inevitable that European bankers, like American investors, do not think that the slump is going to happen.

They may, of course, be wrong. The snowball of lost confidence may one day start rolling all the more dangerously for having been so long suspended above the point of avalanche. But, at the moment, the evidence does not point that way. It seems more sensible to suppose that, for reasons that lie in the obscure borderland between economic analysis and social psychology, the great purveyors of capital may have at this juncture a high degree of resistance to panic. If so, this is not only a singular piece of economic good fortune; it may also be the most important current fact in the free world, for which a major slump would be unmitigated political disaster.

Arbitration for Inflation

THE industrial court's recommendation that central London bus crews should be given an extra 8s. 6d. a week is a considerable national misfortune. It is presumed, as we write, that London Transport will agree to follow this non-compulsory recommendation; that presumption reflects no credit upon the past record of London Transport, because it certainly ought to refuse it. It is possible that the busmen's union will try to keep London Transport on the run, to persuade it to give even more, but surely the very familiarity of these tactics should now breed full resistance. It is certain that if the recommendation goes through in its original form, the authorities will make great play with the fact that increases are going only to a majority of the London busmen, for special reasons, and not to all of them; but that is a misinterpretation of what has happened.

By refusing to recommend any rise for the crews of London's peripheral green buses, or for the garage staffs, the court has admittedly broken with one of the false criteria that have precipitated Britain into inflation through arbitration in these last ten years: it has turned its back on the thesis that all workers ought to be given wage increases to compensate for the price increases that their own wage increases last year have caused. But it has marched face forward into the second false criterion: that increases should be given to skilled workers whose differentials have been narrowed in the past few years—because their own unions have each year demanded (and got) flat rate increases for their less skilled colleagues. (The court has also, incidentally, added a little new fuel to stoke up this same argument next year, by giving the less skilled conductors the same flat rate increase as the more skilled drivers.)

This argument that differentials need to be restored should hold good in one circumstance only: when there is a shortage of the skilled men concerned. Arbitration in this particular case was complicated by the fact that the nationalised employers averred that there was such a shortage: they had not got enough busmen to drive all the buses which they had available. But they have more than enough busmen to drive those of their buses which can be operated at a profit, and that is the only valid economic argument. It is an argument which both London Transport and the court have ignored, and the next few weeks will reveal the sequel.

World Mosaic

This round-up of the effect on eight leading countries of the present world recession has been compiled partly from statistics available in London, and partly from cables from our correspondents on the spot.

Unemployment	Production	Trade & Reserves	Government Policy
UNITED STATES 1958 Feb 7·7%  1957 Feb 4·7%	Industrial production in January 8·9 per cent below a year before.	Has been reabsorbing dollars from the rest of the world. Foreign holdings of gold and liquid dollars, after increasing by $1,000 mn. in 1956, fell by $300 mn. in 1957.	Considerable ease in monetary policy. Treasury bill rate 1·5 per cent in March, 1958, against 3·1 per cent in March, 1957. Some bringing forward of government spending and talk of tax reductions. For other details see page 937.
CANADA 1958 Jan 8·8%  1957 Jan 5·3%	Industrial production in December 6·7 per cent below a year before.	For some years large balance of payments deficit more than counter-balanced by large inflow of US investment capital. Now American investors much more cautious. Exchange reserves $1,857 mn. in January against $1,931 mn. a year ago.	Tax reductions on lower incomes, rise in pensions and unemployment benefits in December. Treasury bill rate 2·85 per cent in February against 3·76 per cent a year ago. Would like to reflate (general election imminent) but feels tied to the USA.
UNITED KINGDOM 1958 Feb 1·3%  1957 Feb 1·8%	Industrial production in January still about 1 per cent above a year ago.	£250 mn. a year balance of payments surplus, still improving. Since September high interest rates have caused large capital inflow: gold reserves risen since then by $689 mn. (to $2,539 mn.), after falling by $531 mn. in previous three months.	Bank rate 7 per cent since September. No reflationary steps yet, but starting to talk about them.
GERMANY 1958 Jan 7·4%  1957 Jan 7·7%	Industrial production at end 1957 5 per cent above a year ago, but long period of over 10 per cent increases a year stopped. Fall in export orders.	Gold and exchange reserves down by $215 mn. (to $5,544 mn.) since end September, after being increased by $1,458 mn. in previous nine months.	Expansionary. Bank rate down to 3½ per cent in January; new welfare state benefits in force.
FRANCE Unemployment: virtually none.	Running at a rate 10 per cent higher than a year ago, but is expected to slow down.	Balance of payments still in large deficit, but securing of $655 mn. foreign credits in January and 20 per cent devaluation in August has stopped flight from franc.	Bank rate 5 per cent compared with 3 per cent a year ago. Government would like to deflate, but military expenditure impeding economy on budget.
BELGIUM 1958 Feb 9%  1957 Feb 7·2%	Production in January estimated 5 per cent below a year ago. General weakness in industry.	Reserves at end 1957 slightly lower than at end 1956, but both current payments and capital inflow improving since September.	Bank rate 4½ per cent against 3½ per cent. a year ago. Reduction considered likely.
JAPAN Unemployment figures small but misleading.	Industrial production in December, 1957, 3 per cent above December, 1956.	Balance of payments improving with $26 mn. surplus in February.	Bank rate at 8·4 per cent since last May, when it went up from 7·67 per cent.
AUSTRALIA 1958 Jan 2·4%  1957 Jan 1·7%	Industrial production generally rising but raw material production (coal, zinc, lead) down—and wheat, wool hard hit by drought.	Reserves still £A590 mn. at end 1957 against £A425 mn. at end 1956, but "they will now fall." Current balance of payments adversely affected by drought and lower world prices.	Credit policy eased in December. General policy "cautiously reflationary at periphery." Minor tax reliefs last autumn with supplementary grants to states to finance public works.

Back to Trotsky?

Stalin saw the Red Army as the vehicle of revolution, and mistrusted local revolutionary movements. In the age of nuclear deterrents, his successors may be changing their minds

FIVE years is a short time. But those who write the history of the Soviet Union will not be able to dismiss lightly the five years since Stalin's death. When on March 9, 1953, Stalin's coffin was ceremoniously borne across the Red Square few were bold enough to suggest that this was, symbolically, the burial of the system associated with his name. Yet just as few now will question the importance of the changes in the Soviet Union which have taken place since 1953—changes that, whatever their eventual upshot, show no sign of coming to an end.

Those of Stalin's lieutenants and heirs who have made these changes were not prompted by any western ideals or democratic aspirations. They were communists aware from experience that only the dead tyrant had been strong enough to postpone the inevitable revision of an obsolete system of government. They sought to strengthen the communist regime, not to weaken it. Over-dependence on slave labour had become a drawback economically as well as politically; so had over-dependence on police terror, and on crudely clumsy censorship. Thus, some of the political techniques developed under Stalin were modified simply because they had either been found superfluous, or had actually turned into liabilities for the communist system.

The change has been neither smooth nor continuous —largely because it has been accompanied by a sharp struggle for power. The removal of the political police from the position of power it held under Stalin and Beria left the Communist party and the army leaning dangerously on one another. Only last October did Mr Khrushchev, alarmed by the growing shadow of Marshal Zhukov, challenge and depose the military leader. And only shortly before that the reorganisation of economic management on more regional lines, rendered indispensable by the strains of an elaborate economy held in a strait-waistcoat of over-centralisation, had set Mr Khrushchev at odds with civil servants and industrial managers; then the marshal's help had been useful. In the end Mr Khrushchev thus emerged victorious from two vital battles. The supremacy of the party is proclaimed more loudly than ever. Since he has also managed to fill the party presidium with colleagues from the secretariat of which he is the head, his personal position seems strong indeed.

And yet one cannot easily see Mr Khrushchev clambering on to Stalin's pedestal. His own professions about the "collective" nature of the present leadership, and his attack on the "cult of the individual" need not be taken at face value; much more important is the general impression of the nature of the change in post-Stalin Russia. The ruling figures seem to be caught in the current of events, not dictating its pace. How little some of them foresaw where events would lead them is shown by the fact that, of the triumvirs who pronounced orations over Stalin's coffin, Beria is dead, while Molotov and Malenkov can ponder the tricks of fate in distant Ulan Bator and Ust-Kamenogorsk. History, as if taking revenge for a period of artificially enforced political inertia, has quickened its tempo—and the end is not in sight. The managerial reform has raised the issue of regional autarky, encouraged centrifugal forces, and brought nearer the major question of tomorrow, raised forty years ago and then lost in the Stalin system: that of workers' participation in management. The need for more food has compelled Mr Khrushchev, once the advocate of "agrotowns," to sponsor now the transfer of state property to collective farms.

The hand of the rulers is all the time being forced. One of the ostensible reasons why Mr Malenkov was dismissed was his emphasis on the need to produce more consumer goods. Yet his once heretical slogans about a rapid improvement in living standards are now orthodox doctrine. The postbags of Soviet journals seem to be filled with awkward questions about equality in a socialist society. With such pressures at work, the current attempt to reimpose total conformity on the writers, the most articulate spokesmen of popular demands, may not easily succeed. The mainspring of change in the last five years, and the chief earnest of further change, is the advent of the new generation of better educated men needed to carry out the technological revolution. The political methods of the Scythians are not suited to the age of the sputnik.

WHAT corresponding changes has Stalin's departure brought about in Moscow's view of the world outside Russia? Policy towards the satellite states, which is considered by the Kremlin to be a semi-domestic matter, conforms to the new pattern of reform for the sake of greater efficiency. The attempt to relax controls within the Soviet block has been accompanied by a series of explosions from the Berlin rising (1953) to the

Polish mutiny and the Hungarian insurrection (1956). It is enough to glance at Poland to realise that Eastern Europe is not what it was in Stalin's time.

In the wider field of diplomacy Stalin's first successors were, not surprisingly, inclined to proceed with caution. The armistices in Korea and Indo-China indicated that they wanted to damp down the risk of world conflagration. But subsequent events, culminating in Moscow's announcement that it has an inter-continental rocket, and the confirmation of this claim by the launching of the sputniks, have altered the balance of power and brought Russia apparently abreast of the West (if not ahead of it) in the capacity for "massive retaliation." The Russians can and do act with less inhibition than before in such dangerous places as the Middle East. At the same time they unceasingly proclaim their desire for negotiations, and have impressed "uncommitted" opinion with the fact that they are dragging unwilling western governments to a summit conference.

Perhaps a summit conference would throw more light on Russia's long-term intentions in at least one important respect. Western advocates of "disengagement" are not simply afraid that close contact between armed adversaries may bring about a fatal incident. They also see in disengagement the only means of freeing Eastern Europe from Soviet control. What of their Russian counterparts, the advocates of disengagement in the Kremlin? What political gain do they hope to derive?

To believe that the withdrawal of troops from central Europe may result in any political advantage at all, these Russians must reject a basic (though never admitted) premise of Stalinism: that communist revolution is an exportable commodity with the Soviet army as its carrier. When the original bolshevik leaders looked to the western proletariat for their salvation, Stalin remained sceptically aloof. When revolutions failed to break out in Western Europe, he erected the doctrine of "socialism in a single country" on that failure. From than he considered foreign communist parties as mere tools of Soviet power, not as independent bodies capable of seizing power themselves. The Chinese revolution—communism's biggest success since 1917—was carried out against his specific advice.

APART from that huge exception it could have been argued that events proved Stalin right. There was no revolution in Western Europe; and he did carry communism up to the Elbe on the bayonets of the Russian army. But one item on the record throws some light on the hopes of the present advocates of disengagement in Moscow. Between 1944 and 1946 a communist attempt to seize power was distinctly possible in France. Communist partisans were reluctant to give up their arms, and they had to be ordered to do so by the party headquarters, prompted from Moscow. Russia's decision at that time was determined by the risks of world war, by the American monopoly of the atom bomb and the presence of allied troops in vast numbers in Western Europe. But those conditions have been altered, and will continue to alter. Disengagement on Russia's present terms means ultimately the evacuation of all American troops from the continent. Then the double deterrent might prevent both super-powers from intervening in any civil war in a European country. Under the umbrella of nuclear balance the conditions for a revolution might then, as these Russians see it, be revived.

This looks like a return to early bolshevik beliefs. The difference is that Russia in the early nineteen-twenties was a starving, backward country pinning its hopes for survival on revolution in Western Europe. Now it is a powerful country which can afford to wait. If no progress is made with its own version of disengagement, it can cultivate its own Soviet garden, hoping that the nationalist storm will in the meantime destroy western positions in Asia and Africa. The long-term aim is so to isolate the United States that, as one historian has said, an American leader will have to proclaim the doctrine of "capitalism in a single country."

It is not possible to assess whether these revolutionary optimists have much influence in Moscow now. They

THE STATE OF TRADE

It is a fact too generally felt to be doubted, that trade recovers but slowly from the shock it received during the late monetary crisis. Capital has become a drug; the money-lender is looking around him in every direction for eligible investments; and the rate of discount, which three months ago was *ten per cent.* is now under *three per cent.* Confidence, moreover, in individual credit is restored. The trial through which the country has passed was so severe, that it is fairly assumed that whatever unsoundness existed, has in the main been exposed, and eradicated from the system. The pause which has outlived the first cause of the check to our commerce may be attributed, first, to the natural reaction which invariably succeeds *periods* of excitement and prosperity; and next, to the caution with which men embark in new enterprises after the severe lesson which they have so recently received. This caution, moreover, is justified by the general state of our markets abroad. . . . All the considerations to which we have referred would point to the fact that we must be prepared for some reduction, probably not an inconsiderable one, in the foreign trade of the country during the present year; and it is not unreasonable to expect that some effect must be felt from that cause upon the home trade also. . . . One of the great advantages of Free Trade is, that our markets become so extensive and so numerous that a greater equality is preserved among them as a whole, the same causes never affecting all at the same time; and to that may be attributed the much less suffering to which the country is now exposed during periods like the present, than it was formerly. But however true this may be, the recent commercial crisis has swept too extensively over the whole of the trading countries of the world not to produce an impression which cannot fail to be felt for some time to come.

were silenced for years, not only by the Stalinist guardians of orthodoxy, but also by the impressive prosperity of the West. Now the possibility of an American slump and major strains, such as that of the Algerian war on France, may embolden them. Who knows whether the proposal to hold free elections in Korea under international supervision is not the forerunner of a new approach, whether the communists are not beginning to think of *reculer pour mieux sauter?* It may be a long time before a clear answer can be given. But if the Russians do drop their dead leader's assumption that the Soviet army is the only vehicle of communist expansion (an empty assumption in the age of nuclear deterrents) the western countries will be faced with a more subtle challenge than the armoured divisions on the Elbe.

Security through Squalor

The Conservatives need to do some rethinking about the real objectives of a welfare state

IT is widely reported that Mr Butler and his backroomsmen are busying themselves with projected reforms of the welfare state, in preparation both for the legislation which the Conservatives will introduce in the last year of this Parliament and for the programme which they will present at the next general election. Some of the preliminary thinking that lies behind these projects, in the shape of seven lectures delivered at last year's summer school of the Conservative Political Centre, was last week republished in booklet form.* It suggests both that the Conservatives have glimpsed the vision of where they ought to be going, and that there is a very great danger that they will run away from it.

The Conservatives do recognise—and it is this that makes their social policy considerably more enlightened than Labour's—that Britain's present social services are wastefully misdirected, and for a very simple reason. The reason is that the doctrine of the safety net, to catch those who fall, has been made meaningless by the doctrine of fair shares in safety nets for those of us who are quite well able to stand. "In delayed reaction to Victorian poverty and inter-war unemployment," writes the thoughtful Conservative official who contributed the preface to last week's booklet, it has not been sufficiently realised that "more and more people of working age . . . can afford to make provision out of their earnings, either directly or through insurance, for the necessities and against the hazards of ordinary life."

The insufficient realisation of this, throughout the formative period of the welfare state, has had two crippling general consequences, in overloading of the economy, disincentive levels of taxation and periodic pressure on the pound. But another, and quite particular, consequence is that social policy is now not doing what it originally set out to do: the "national minimum," so devotedly pursued by the old social reformers, remains a pitifully low national minimum, while the great fields of social investment, which the Victorians would have regarded as the main function of a welfare state to cultivate, lie neglected—indeed often in squalor. The face of Britain is disfigured, writes the director of the Conservative Political Centre in last week's booklet, by slum hospitals, slum schools, slum sanitation, slum prisons, and "slum roads, outdated, choked, defective, dangerous, upon which a quarter of a million people are annually condemned to death or injury." If Britain is to be made a brighter and happier place, there is a great need for social policy to move away from the doctrine of the extended safety net towards the improvement of public utilities that was regarded as being so obviously at the heart of the social services a century ago—towards what Disraeli called "a policy of sewage."

THIS need is now recognised by all parties, but the way of fulfilling it is not. Yet the most economic way ahead is surely not difficult to see, and it is time to throw out some specific suggestions. The short answer for the Conservatives is to remember that the real safety net in a welfare state is provided by one basic service—by need-tested national assistance payments. It is in the five other big social services which they have inherited that re-thinking is required. In three of them the proper presumption for reform seems fairly clear:

(1) In *health*, the proportion of medical expenses that is carried by the taxpayer is now far bigger in Britain than in neighbouring European economies. Clearly, the best principle would be that the insurance contributions paid by people while they are healthy should fully and actuarially cover the costs of attending them while they are sick. But if it is felt that weekly contributions cannot be put up to this extent, because of the burden they would lay upon the poorer worker, then the obvious alternative is to impose new specific charges—e.g. board and lodging charges in hospital—but with need-tested rebates in part or full for the hard-pressed.

(2) In *housing*, this Government has rightly cut down both the current subsidies available for tenants of council houses and the rent restriction that sheltered tenants of private ones. The next Conservative Government ought to go further in this direction.

(3) In *unemployment insurance*, a sensible conservative system today would be one in which contributions were pitched high enough actuarially to cover very liberal benefits (and, quite specifically, reimbursement of removal expenses) during the early weeks of unemployment; after these early weeks had passed, the unemployed man who had not moved to find work should go on need-tested but adequate assistance. Probably, the period without any need tests should be longer for an older man (with a long insurance record).

What, however, is the trend of the Conservatives' new thinking on these three services? In unemployment insurance there is no trend, because there is no new thinking. In housing, there are stories that the Government is considering the grant of special favours to owner-occupiers—by reducing the schedule A income tax (which is already too low), abolishing the stamp duty on houses, and fostering a "remodelled loan procedure." In health, the Government is wondering whether those who have opted to be private patients should be allowed health service drugs and have some hospital costs rebated. Some case could be made in some circumstances for all these changes. But they would sit very oddly beside the main object of policy now: which should be to reduce the subventions in these services that already exist, not to spread them further.

THE other two main social services already have some discriminatory content in them. That is, they do deliberately and rightly seek to redistribute income towards people at a stage of their lives when they carry special burdens: towards parents of children who are still being educated, and towards the aged who have not been able to accumulate real savings in these last inflationary years.

(4) Aid for parents is a matter for *family allowances* and fiscal policy. The allowances are a useful and discriminate social service; they are higher in several countries on the continent than here. General tax discrimination in favour of the family should go further when taxes can be reduced.

(5) The problem of *retirement pensions* is the trickiest social problem of all. It is also the one that Britain is at present handling in the worst possible way. Under the present system of flat rate contributions, the young entrant into employment nominally pays, or has paid for him, a large enough contribution to cover actuarially the pension which he is originally told he will be entitled to receive when he retires. But since pension entitlements rise every few years, as prices rise and general elections approach, his contributions to the fund are very soon left in gaping actuarial deficit. Some of the problems of keeping new entrants' contributions in step with their rising expectations of pension should be solved if—or rather when—contributions are made a proportion of earnings instead of a flat rate (thus ensuring that contributions will rise automatically as earnings rise). But the gap for those already in employment will remain. It had better be recognised frankly that the contributions that can conceivably be secured, under any state scheme, from the mass of workers who will be retiring within the next twenty or thirty years, are most unlikely to cover actuarially what will be regarded as a living pension by the time they come to retire.

There are two ways in which the pensions problem could be met. One would be to say that after a certain period those who retire can demand as of right only the pension that they have actuarially earned, and that a supplement between that and a new (enlarged) national minimum will only be paid on proof of need. That might be the sound and discriminate scheme to adopt. The other course would be to give up the idea of keeping the pensions fund in actuarial balance and aim only to keep it in current surplus, so that we would all be paying for the pensions of our grandfathers in the hope that our grandsons will pay for ours: that is the essence of the Labour party's proposed scheme, and also of the scheme now in force in western Germany. One suggestion which has recently been propounded by, among others, the new Professor of Political Economy at Cambridge, is that, instead of fixing the figures for contributions and the rates of surplus rigidly in advance, the contributions (as a percentage of income) should be deliberately used as an instrument of economic policy. That is, they should be raised whenever the economy seems too inflationary and lowered when it seems too deflationary. There are attractions in this idea, but let the conditions in which it could work be frankly recognised.

These are that the weekly stamp required—which should in normal circumstances cover the full cost of the unemployment services, of the "free" health services, and the current cost of pensions—should not bear so heavily on the poorest workers that it would be impracticable for the Government to raise its price in a time of inflation. At the moment, it plainly would; that is a clear sign that Britain is at present trying to finance more indiscriminate welfare than it can afford. The only escape is to adopt those alternative schemes which would require smaller contributions but give less welfare to those who do not really need it: to say that those who can afford them should, for example, pay hospital boarding charges—or else that supplements above the pension rates actuarially earned should be paid only to those showing proof of need.

ALL this would be very unpopular politically, and not at all the sort of thing that backroomsmen will want to put in an election programme. The essence of Britain's present social system is that welfare benefits in excess of welfare insurance contributions are spread thinly round millions of voters, who would at first object if those contributions went up or if some of those benefits were need-tested away. But the money thus saved could be used to increase the basic national minimum paid on proof of need; to remove some of the grossest disincentive effects of present-day taxation; and to rectify the squalor of our roads, some of our schools and other public capital appurtenances that is the most notable bequest of the first ten years of the new welfare state. How many Labour people, let alone how many Conservatives, really doubt that some such redistribution of effort should now be effected?

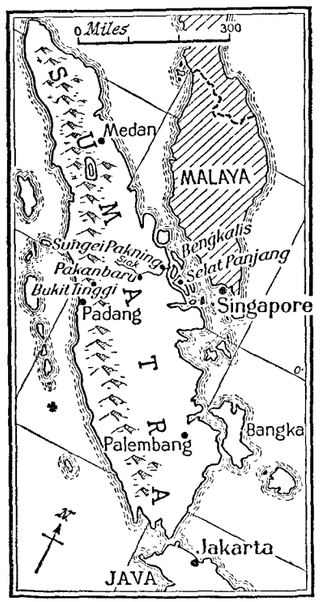
NOTES OF THE WEEK

LABOUR AND THE BOMB

Five Pointlessnesses

LABOUR'S official policy on the bomb is now to support the Government's view on all essential principles, and to try to find as many minutiæ as possible which it will not disturb Mr Gaitskell's conscience to launch a campaign about. The joint official statement issued last week by the party and the Trades Union Congress (why is the TUC's finger needed on this trigger?) contains two bold, if implicit, outfacings of Labour's pacifist wing: the party agrees that the west must have the deterrent as well as the Russians, which is a great relief, and that Britain must have the deterrent as well as the Americans, which is what Mr Gaitskell believes. But the five-point campaign which the Labour executive has decided to start in the country, in order to provide some balm to its emotionalists, is pretty shoddy political stuff.



Two of these five points—although the campaign speakers will no doubt disguise the fact—are Conservative policy as much as Labour; Mr Macmillan is as eager as Mr Gaitskell to get the Russians to agree to a "world disarmament plan by stages," and to investigate the possibilities of a disengagement zone in Europe. A third point in Labour's campaign—that Britain should unilaterally but temporarily suspend H-bomb tests in order to "improve the atmosphere" (no pun apparently intended)—sits very oddly beside its decision that Britain should nevertheless have the bomb; there may be a stage when nuclear powers can suspend tests and still have the bomb, because their research programmes will have progressed far enough and because they seek to avoid the still relatively small risks to health involved in the tests, but no outsider can tell whether Britain is at that stage now. Labour's fourth point—that American aircraft based on Britain should not be allowed to carry nuclear weapons either on patrols or training flights—is another issue which, as the party's leaders know quite well, cannot sensibly be discussed on the hustings; any detailed response to it from the other side would obviously run foul of the security ban. Labour's fifth point—that American missile bases should not be set up in Britain until after summit talks with Russia—is short-term in its effect, but no less carpingly irresponsible on that account; one has only to ponder for a moment what effect the adoption of such a policy by any British Government would have on the Russians' approach to such summit talks.

The advantage of this programme is that no Labour Government would in fact need to put the detailed parts of it into effect; the crafty timing element attached to each point ensures that. The disadvantage is that Mr Gaitskell, having boldly and forcefully overridden the neutralist wing of his party, will impress nobody but the renewedly-captive *Daily Herald* by these gestures, and stands to lose some well deserved respect. He has shown again that he badly needs a backbone to attach his brave teeth to his needlessly flapping tail.

INDONESIA

Civil War

FOR once, Seato has a real problem on its hands. Indonesia was not on the agenda of the Manila session of the council of the south-east Asia treaty, nor was it mentioned in Thursday's communiqué; but under the heading of "other matters affecting the treaty area," it has loomed large in the talks. The limited scale of the invasion of rebel Sumatra by the central government's forces should not lull the world into underestimating the dangers of an explosive situation. Nor should too much be made of the fact that President Sukarno has chosen this moment to inspect his more peaceful territories to the east. A creator of national unity who now looks like the main obstacle to its preservation may well seek relaxation in travel. While the revolutionaries were bracing themselves for the plunge a few weeks ago, the president was signing documents in Egypt and Jugoslavia, or passing his time in the scented gardens of Tokyo.

Some of the latest reports seem contradictory. But the central government claims that its paratroopers have captured Pakanbaru, where the American oil company, Caltex, has its main installations. Earlier, central forces had established themselves on the islands of Bengkalis and Selat Panjang, and at the oil terminal of Sungei Pakning, at the mouth of the Siak river. Caltex has evacuated staff dependants to Singapore. Meanwhile the rebel minister of the interior, Colonel Djambek, appealing to the people to "kill the invaders," has said: "We are bringing up reinforcements and going into guerrilla warfare now."

By choosing to come at the central Sumatra rebels by sea and air, Jakarta has drawn attention to the way the obvious line of approach is blocked by the "neutrality" of Colonel Barlian's administration in south Sumatra. There is no doubt about the central government's military superiority in all departments; but there is plenty of doubt about its economic capacity to conduct a long war and its military capacity to ensure a short one. It found no difficulty in occupying a few key points among the inhospitable mangrove swamps of Sumatra's eastern coast, thereby extending its blockade of the rebels; but to overrun and crush them may prove a very different problem.

Non-Intervention

THE international implications of the Indonesian civil war present a thorny problem for Seato and a real danger to world peace. The Russian press and radio is treating the situation with a disregard for the truth that raises grave doubts about Soviet intentions. The American naval vessels now standing by in case the employees of Caltex need protection are represented by Moscow as loitering with intent to help the rebels. The United States is accused of having sent the rebels "large amounts of heavy weapons"; Seato, of promising them help in return for military bases. It is true, as Moscow asserts, that the revolutionary government sent three emissaries to Manila, but untrue that they participated in the Seato conference. (Rebel emissaries have indeed been seen in Washington and Taipeh during the past few days; journeys in quest of foreign aid are inseparable from up-to-date rebellions.)

At the same time there have been reports of Indonesian pilots being trained in the use of MiGs in Egypt and Soviet "technicians" arriving in Jakarta. These reports have been denied in Jakarta; but whether they are true or false, the tone of the Moscow press would make it easy for the Russians to "justify" the sending of volunteers to Indonesia.

This, of course, is exactly the situation the Seato allies wish to avoid. The studied indifference of London and Washington to rebel appeals for aid is clearly designed to avoid giving Russia a pretext for intervention. For once, the Russians are on the side of the legal angels. By intervening, however, they would draw attention to the fact that the dissidents are rebelling against corruption, inefficiency and creeping communism. It is much to be hoped that they will not confront Seato with a situation of the Indo-China or Korea type.

THE SUMMIT

Not to Command Success

TO the onlooker, the attempts of the Russians and Americans to achieve agreement about a summit meeting look increasingly like a *pas de deux*, in which the dancers are operating with their backs to each other. Have the latest pirouettes brought a conference any closer? Mr Bulganin, by agreeing in his newest Note to hold a foreign ministers' conference before fixing a date for the summit talks, has now bowed to President Eisenhower's insistence that Mr Dulles must take part in the preliminaries. However, as Mr Dulles himself indicated in Manila on Wednesday, the sort of first round the Americans had in mind seems to be different from Mr Bulganin's. They want a preliminary meeting which will yield, in the President's words last week, "a genuine belief that real progress can be accomplished." Mr Bulganin's idea of talks between eleven foreign ministers—four each from Nato and the Warsaw pact and a trinity of neutrals—suggests that those taking part would find it hard to see the wood for the verbiage. If it were followed, as he wished, by a "summit" meeting of up to thirty heads of government, the ones who really have the power to take decisions might have difficulty in finding, let alone talking to, each other.

But it is also necessary for the West to be clear about what sort of evidence it wants that "real progress" will be possible. Is it an agreement by the foreign ministers on some minor issue? But all the issues are so intimately bound up together that a foreign minister would hardly dare to move even a pawn without conferring with his chief to decide whether he was putting the queen in jeopardy. Is it some lesser gesture of geniality, short of actual agreement on the real issues? But the Russians can afford to smile and smile, so long as they are not brought to the point of negotiating on matters of substance. On these, the only real test of Russian sincerity will come when the President faces the Marshal across a table. And there can be no guarantee at all in advance that, even when they meet, their meeting will yield any agreement. Mr Nixon, in a television interview last Sunday, expressed his countrymen's opposition to a meeting that might end in failure. But it is not humanly possible to be certain of success—whether by "success" Mr Nixon means a Russian capitulation to American demands or, more conceivably, a compromise in which both sides would gain something without losing anything vital. The West's task is twofold: before the summit, simply to make sure that it will be the kind of meeting where rational discussion is possible; then, if and when it gets there, to put forward proposals which, with luck—and without jeopardising any vital interest—might produce a reasonable understanding.

MALTA

Oliver Twist

MR MINTOFF is back in London, for another of those bargaining bouts of which most people in this country have grown intolerantly weary. After the final ball is over, one of four outcomes from these long negotiations with Malta is possible; and it is time that the British Government set them down in order of preference. The best outcome would still be if Malta could be integrated into the United Kingdom, on terms no less—but also no more—favourable than is any other development area like South Wales; but Mr Mintoff apparently will not integrate unless he gets more favourable terms than that. Another course would be politely to offer Malta complete independence. This is a possibility that the British Government should regard as its second preference. There is no longer any great value to the Navy in having the base on the island under British political control; if Malta became independent it would still be bound to lease the base facilities to either Britain or Nato, merely in order to buttress its economy. Indeed, blandly to offer independence to Mr Mintoff might be the quickest way to persuade him to accept a fair scheme of integration instead.

The third, and less desirable, course would be to give Mr Mintoff all the money he wants. Even here a distinction should be drawn between the less serious error of merely offering him excessive development loans for a year or two ahead (which he probably could not fully spend anyway), and the much bigger mistake of undertaking to keep a lot of redundant dockyard workers in full and immobile employment in their present jobs. The fourth and worst course would be to do none of these things and to allow Malta to become another Cyprus. That is the outcome

which must at any cost be avoided. In all negotiations with Mr Mintoff exasperation has become the natural attitude. But it remains the worst counsellor.

BY-ELECTIONS

From Kelvingrove to Torrington

GLASGOW (Kelvingrove) polled on Thursday; the result will have been announced by the time this issue is in readers' hands. A week ago it was reported here that local opinion then gave Mrs Walter Elliot a no better than even chance of holding the seat for the Government. Since then the trend of local judgment—for what it is worth—seems to have been towards believing that the Liberal Home Ruler will draw off more votes from Mrs Elliot, and that the pacifist ILP candidate will draw off less votes from Labour, than was previously expected. Glasgow has appeared to be much more worried about unemployment than the H-bomb, and Mrs Elliot will have rendered a considerable rot-stopping service to her party if she has indeed held the seat.

After Kelvingrove, the by-election limelight will move to the Devonshire constituency of Torrington, which votes on March 27th. In a straight fight in 1955 the Conservative won just over 65 per cent of the poll and Labour just under 35 per cent. With a Liberal intervening—in one of the few areas in the country where Liberals have hitherto drawn almost as many votes from the left as from the right—it seems improbable that Labour will get more than 35 per cent now; it follows that the votes for the other two parties would have to be fiendishly evenly split if Labour were to win this seat. This could mean that the "wasted vote" argument might this time react on Labour's head. The way in which the Liberal, Mr Bonham-Carter, might conceivably win election would be if there were a large desertion of Labour votes to him, as the best hope of turning the Tory out—a sort of Rochdale in reverse.

NORTH AFRICA

Good Offices in Poor Weather

THE diplomatic talents of Mr Murphy and Mr Beeley—the American and British "good officers" between France and Tunisia—are going to be stretched to the limit. This week's snag to be surmounted—and the essential preliminary to getting at any other—is the difference between Paris and Tunis over the point that each must concede before going on to direct talks of any kind. Tunis says this preliminary must be agreement in principle to a timetable for evacuation of all French strongpoints, including Bizerta. "Independence," says M. Bourguiba, "must be full and free." Paris (which seems ready to agree, subject to safeguards, to withdraw from all these places except Bizerta), maintains that nothing can be discussed until Tunisia rescinds its closing of consulates and expulsion of Frenchmen.

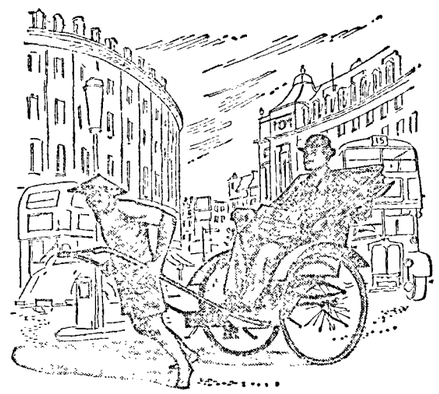
Is this deadlock? With a weak French government at one end, and, at the other, a Tunisian one that has to trim its sails to every fresh piece of news from Algeria, the outlook is not bright for getting at the issues on which compromise is far from hopeless; these include evacuation of French troops from places other than Bizerta, subject to international supervision of the airfields evacuated and of the Algeria-Tunisia frontier.

M. Gaillard's proposal for a Mediterranean economic and defence community—though laudable as an attempt to apply new leaven to a stale mixture—does little to brighten the outlook. For the sake of his French audience, he is obliged to put the stress on the defence aspect of his conception. This, to Tunisian and Moroccan nationalists, looks like a grasping for old bases in new guises; and all have said so. He would have won more ears overseas if he had put his economic plan first, for that—particularly if it were to carry the backing of American as well as French funds—would vitally interest his North African hearers. Yet even then all would want to know, as a preliminary, what status in the new international community was to be given to Algeria. Whether in Tunisia and Morocco, in France (page 945), or even in Madagascar (page 948), the Algerian imbroglio casts sombre shadows.

Morocco Joins the Pressure Group

HITHERTO, Morocco has never been as deeply embroiled as Tunisia in France's Algerian crisis. The heights along its Algerian border are a barrier to close communication, and its need of French capital to exploit its resources and check its unemployment problem has kept it aloof from the *mêlée* next door. But the events of the last month have altered its attitude, and it is now putting pressure on France to settle with the Algerians.

Till the beginning of February, Franco-Moroccan relations seemed as good as could be expected. Prince Moulay Hassan and a succession of Moroccan ministers were visiting Paris, and all was fixed for a return visit by M. Pineau in May. The three events that have chilled the atmosphere are, first, the resumption by the Spaniards of mopping up operations at Ifni, then the bombing of Sakiet and, finally, the news of the two Arab unions formed by Cairo and Baghdad.



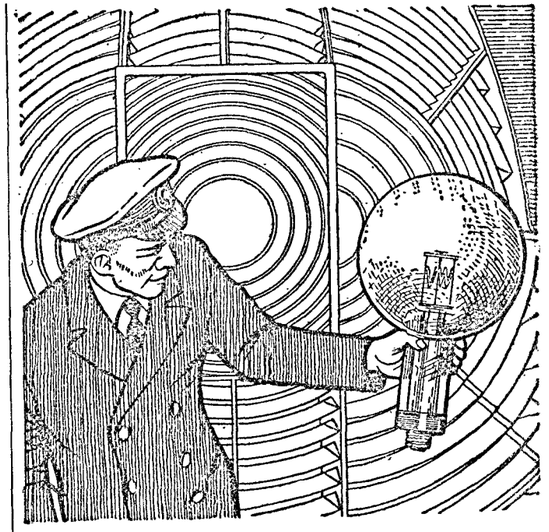
Moroccans have begun officially to raise questions such as French rights to bases in their country, and Moroccan ones to former conquests in the Sahara. Incidents during recent weeks have included accusations that French forces are working in conjunction with the Spaniards (which Paris stoutly denies), the holding of two trains carrying munitions to French bases, and a trip by the King and most of his cabinet to the southern tip of the kingdom to proclaim title to areas beyond the Draa river.

Last weekend King Mohammed seized the opportunity of taking some visiting provincial French journalists to task both for helping the Spaniards and for fighting against Algerian aspirations, and himself publicly advocated a federation of the three north African territories. He sweetened the pill with several references to "substantial co-operation between France and Africa," but added that there was no time to waste because "events are moving fast." The pressure he is beginning to apply will be less temperamental and wayward in form than M. Bourguiba's. His methods are in keeping with the Moroccan character. They are worth watching because he is the best remaining interlocutor between France and Algeria.

ARAB WORLD

A Lesson for King Saud

PRESIDENT NASSER'S dramatic accusation of King Saud may have been made to whip up enthusiasm among wavering Syrians, it may have been a warning to the king



Rickshaw in Regent Street

On your way to the Far East? Then make 9 Gracechurch Street, E.C.3, your first stop. Here you will find a mine of information on matters oriental. Wherever you may be bound – Colombo or Rangoon, Manila or Calcutta – we can give you an up-to-date picture of local conditions. We can brief you on such things as currencies and monetary regulations, and provide you with credit information. As the biggest British bank established by the Far East for the Far East, with branches in thirteen Asian countries, we are in a unique position to advise and help you. You are welcome to draw on our knowledge and services.

However tricky your transport problem, B.R.S. can handle it

Circumstances may be against you. But British Road Services is on your side — always. A telephone call to your local B.R.S. depot quickly brings you a helping hand from a nationwide organisation with a willing and experienced staff and a vast fleet of vehicles of all kinds, regularly maintained, and ready to tackle any job, at any time. Modern methods and equipment ensure careful attention to every load, and the B.R.S. teleprinter network provides the means for rapid transmission of your special instructions.

A B.R.S. vehicle with an insulated container for the carriage of fresh, chilled, and frozen meat, frozen foods and other commodities which have to be kept at an even temperature. This container has a capacity of 735 cubic feet and 6 tons — just one of the many and varied services B.R.S. render to Trade and Industry.

If you find transport something of a problem...

Ring *British Road Services*

— the best link between dispatch and delivery

not to join the Hashemite federation, and it may have been meant to cause unrest in Saudi Arabia and the sheikhdoms beyond. In any case, it did tell the king that there have been some changes in the Arab world, and that success cannot be bought by simply putting the money down and taking away what money could buy. The principles that have been so charmingly adaptable among Arab politicians of the past have largely been replaced by less adaptable ones in which genuine public opinion must be considered. President Nasser has been moulding Arab opinion in his own way for as long as Saud has been king.

King Saud would have dearly loved to be what President Nasser has become—a popular, respected, beloved leader of the Arabs. Though both the king and his supporters worked hard to achieve this, he now stands isolated in the desert of his own policy. The point about the accusation levelled against him is not whether it is true or false that he tried to bring down the United Arab Republic by paying for the assassination of its president, but whether it is believed.

According to the Saudi-subsidised Cairo daily, *Al-Qahirah*, Amir Abdullah, the son of the Saudi Crown

Who Dies of What?

THIS week the Registrar-General published the first full report on occupational mortality that has appeared for twenty years. It provides a nationwide classification of the causes of deaths in 1949-53 in all the different occupations in which the population was registered at the 1951 census. These occupations are then allocated to the Registrar-General's five social classes and tables have been compiled to show how these classes have fared in respect of what is called the standardised mortality ratio. This, for any particular group of people between the ages of 20 and 64, is the percentage ratio between the actual numbers of deaths and those that would have been expected had death rates at each age been the same as in England and Wales as a whole.

The exercise is full of statistical pitfalls. For instance, many people are registered as "company directors" when they die who would be given some more precise employment classification in the census; this has distorted the mortality picture for Class I—to which company directors are allocated. Again, the report is not concerned with morbidity—that is, the incidence of disease—in the different classes, but only with mortality. Certain illnesses—for instance, influenza and pneumonia—to which particular classes seem particularly prone from the mortality statistics, may be just as common to all, but—at ages 20-64—fewer upper-class people die of them.

For all its limitations, however, the report has produced some interesting comparisons. Table I compares the death rates of the different classes in three different periods. The death rate as a whole has fallen in this period, so the apparent worsening of Class V in 1949-53 compared with 1930-32 does not mean that more men in this social group are dying. It does, however, mean that there is still a marked difference in the death rate of unskilled labourers compared with the higher social classes. In 1930-32, the most favourably placed group was Class I. Today, however, Class I's mortality has risen from 90 per cent of the average to 98 per cent. How much of this apparent worsening is due to flaws in the reckoning cannot be known, but there is evidence that to reach the top of the social scale brings its own risks. Table II shows that this risk is to die from coronary disease, a risk which gets markedly less the lower one descends the social scale—except that a pronounced rise in coronary deaths among men aged 25-34 in Class V (owing to sheer hard manual labour perhaps?) puts up that class's total rate. Tuberculosis, as would be expected, is more lethal as one goes from Class I to Class V; but it should be remembered that chronic sufferers from this disease may migrate to this class because they cannot, owing to their poor health, hold a skilled or well-paid job. In some cases it is not so much the occupation that causes a man's death from a particular disease as the disease that determines his occupation. Other diseases that have a marked class bias are poliomyelitis, which (though only a minor killer) occurs much more commonly in people with a high standard of living, and ulcers. Deaths from ulcers, both gastric and duodenal, are again few—especially in relation to their total incidence—but they are much more likely to occur in Class V than Class I. To have a DU is decidedly non-U.

If one wanted to choose a profession that ensured a long life, one would, according to Table III, be a teacher (and be relegated to Class II). Nor can civil servants complain that their arduous work and heavy responsibilities will bring about their early death, though they, like the rest of their class, are extra liable to death from coronary disease.

The last table, which is a sort of postscript to the report, analyses infant mortality by the social classes. All classes show a marked fall in their infant mortality rates. But the differential rates are as pronounced now as they were twenty and thirty years ago. An infant born into Class V is twice as likely to die as one born into Class I. If neonatal deaths (which do not show nearly so pronounced a differential) are excluded, the chances of a Class V infant dying are four times as high as those of an infant in Class I.

I. THE RECORD FOR THE SOCIAL CLASSES

(Death rates among men aged 20–64; all occupations = 100)

Social class	1921 to 1923*	1930 to 1932	1949 to 1953
All classes	100	100	100
I Professional (e.g., doctors, solicitors, higher civil servants)	82	90	98
II Intermediate (e.g., managers, teachers, farmers)	94	94	86
III Skilled (e.g., fitters, clerks, engine-drivers)	95	97	101
IV Semi-skilled (e.g., machine minders)	101	102	94
V Unskilled (e.g., labourers, kitchen hands)	125	111	118

* Civilians only.

II. THREE DISEASES

(Death rates among men aged 20–64)

Social class	Coronary Disease	Cancer	Respiratory Tuberculosis
All classes	100	100	100
I	147	94	58
II	110	86	63
III	105	104	102
IV	79	95	95
V	89	113	143

III. ONE PROFESSION AND ANOTHER

(Death rates among men aged 20–64; all occupations = 100)

Teachers	66	Accountants	77
Senior civil servants and local govt. officers	70	Clergymen	80
		Barristers and solicitors	88
Engineers and surveyors	73	Doctors	89
		Dentists	97

IV. INFANT MORTALITY

(Deaths per thousand legitimate live births)

Social class	1921	1930 to 1932	1949 to 1953
All classes	79·1	61·6	29·5
I	38·4	32·7	18·7
II	55·5	45·0	21·6
III	76·8	57·6	28·6
IV	89·4	66·8	33·3
V	97·0	77·1	40·8

Prince, said when passing through Alexandria that he would denounce this plot and any others like it. He added, hopefully, that a dispute might occur occasionally among members of the Arab family but that it would swiftly disappear.

President Nasser's propagandists have now accused King Saud of giving the Dhahran air base away to the Americans in exchange for $250 million paid into his personal bank account in Germany. They have denied that there have ever been any Saudi acts of charity towards Egypt; and they have warned him to be careful in his dealings with King Hussein of Jordan. The whole series of accusations may well serve a useful purpose. King Saud, if his advisers are kind and brave enough to tell him, will have learned some facts of life that are valuable for a monarch in an area now infected by democratic yearnings. It should not come as too much of a surprise if the whole affair is patched up. President Nasser might even use it as an excuse to get rid of Colonel Sarraj. Whatever happens, it will only make the bargaining hotter if King Saud, seeking the protected status obtained by the Yemeni king, should one day decide to join the United Arab Republic.

SUDAN

Conservatives up the Nile

THE results of the Sudanese elections suggest that there is still some resentment against Egypt, that the old Moslem sectarian loyalties are stronger than expected, and that relations between the Islamic north and the non-Moslem south may continue to be strained.

The success of the *Umma* and the People's Democratic party shows that these two parties, which retain sectarian links, will enjoy a clear majority provided they remain in coalition. The National Unionist party of Sayed Ismail el-Azhary, which favoured a link with Egypt and aimed to divorce politics from sectarianism, makes much less of a showing than it had hoped, with only 45 seats instead of the 80 that the optimists in its ranks thought it might win in the north alone. The recent flurry over the Egyptian border seems to have reminded some Sudanese of more ambitious Egyptian claims in the past and to have influenced voters against the National Unionists. The swing to conservatism comes as a surprise to those who felt that the association of sectarianism and politics would fade once the younger Sudanese became politically active.

It is now the relations between south and north that may give the government the most headaches. All three southern ministers in Dr Abdullah Khalil's cabinet were defeated, and he will have to seek substitutes for them among untried newcomers to parliament. He is bound to employ three southerners by the terms of the constitution.

The Sudanese are receiving well merited congratulations on the manner in which they conducted their first general elections since becoming independent in 1956. The peaceable poll promises well for the future.

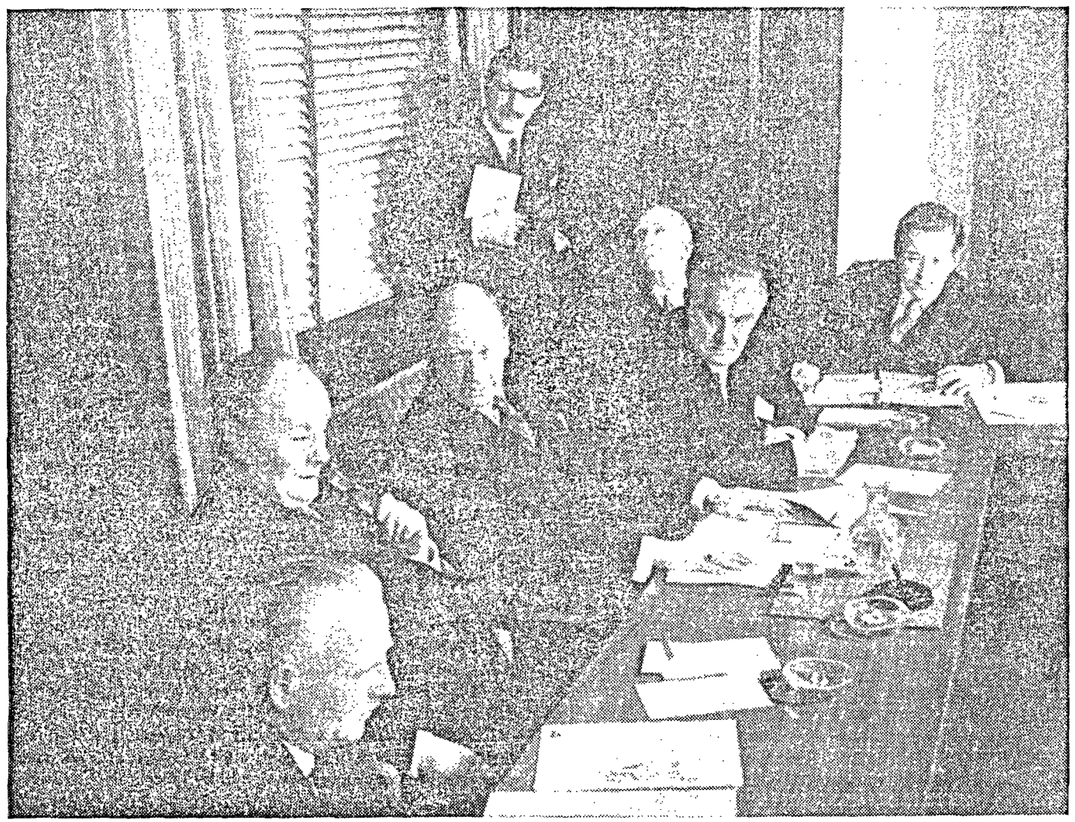
THE CHILDREN BILL

The Rights of Adoption

THE Children Bill, which was given its second reading in the House of Lords this week, has two main parts. The first part consolidates and amends the existing law regarding the protection of "child life." No exception can be taken to the provisions in general; but readers of *The Economist* are hereby warned that if they intend to receive a foreign child into their households for longer than a month (even on an exchange basis) they should, it appears from the debate, write to the local authority to get exemption from the provisions for notification and supervision.

The second main object of the bill is to put into force some, but not all, of the Hurst committee's recommendations on the law of adoption. The chief one that has been accepted and incorporated in the bill provides a new ground for dispensing with the natural parent's consent to adoption. The court may, under the bill, make an adoption order without the parent's consent if he or she has "persistently failed without reasonable cause to discharge the obligations of a parent . . . and . . . the failure is likely to continue if the order is not made."

A recommendation that has not been accepted is that an adopted child should have the right, on reaching the age of 21, to have a copy of his adoption order and find out the names of his natural parents. At present such information can be supplied in England only on an order from the court. Against the Hurst committee's recommendation it has been argued that the sudden appearance of an adopted child might cause distress to his natural mother, and that the knowledge that he will eventually find out the names of his real parents will cause instability in his relationships with his adoptive family—arguments that the Government has accepted. Against this it has been urged that adopted children who know they are adopted have a natural curiosity to learn about their real parents, and that this curiosity can turn into a morbid obsession if they feel that information is being deliberately withheld. To know that he can know the truth when he is grown up is all that the normal child will want and he is unlikely to bother to pursue the matter at all. Certainly in Scotland, where an adopted person has been able since 1930 to find out his origins when he is 17 years old, no objections have been raised and no difficulties have been reported.



LUNACY LAW REFORM

A Question of Definition

IT is possible that a measure to reform the lunacy and mental deficiency laws will be introduced by the Government next session. So much was promised by Mr Butler in his opening address at a conference organised by the National Association of Mental Health last week. The conference showed that though the recommendations of the royal commission have, on the whole, secured wide acceptance, there are likely to be two main points of disagreement.

The first of these concerns community care for the mentally disordered: that is, the provision of social services, whether residential or not, by the local authorities. At last week's conference some scepticism was expressed about whether community care on the scale envisaged by the royal commission will ever, in fact, be provided. It was also pointed out that the existing division of responsibility between the hospitals and the local authorities in the care of the aged often prevents old people from receiving the services they most need, and that there would be a danger of the same thing happening in mental health.

The other point of disagreement was raised by Mr Butler himself—though subsequent speakers supported the royal commission rather than him. He said that he could not

"Agreed, then? We shan't expand sitting here—one of us must visit NORTHERN IRELAND!"

If your firm is planning expansion you need a first-hand report on the possibilities in Northern Ireland. Everywhere else in the United Kingdom expansion plans are bedevilled by one or more of three great shortages—not enough money; not enough men; not enough space. Only Northern Ireland can offer you all three.

MONEY—*to cut the need for investment funds*

Outright grants of 25% and/or loans for plant, machinery and buildings are available, also removal and training grants.

MANPOWER—*first-class and plenty of it*

Over 9% of the labour force—over 30,000 of them men—are looking for jobs. They are hard-working and loyal; absenteeism and labour turnover are low; output is high and shift-working is practicable.

PRODUCTION SPACE *in modern factories ready now*

If you employ mostly men you can rent a standard Government factory for about 9d. per sq. ft. p.a.—room for at least 100% expansion. Or the Government might build you a special-purpose factory on amortization terms. Sites of all sizes available.

EXCELLENT SERVICES

Ample water, gas, electricity and housing. Nuclear power station to be built. Excellent sea, air and road ferry transport services.

SUCCESS STORY

Since 1945 over 130 new factories have opened in Northern Ireland, and many have expanded. Courtaulds, British Tabulating Machines, Metal Box, Du Pont, Chemstrand, Hughes Tools and many others will tell you of their experiences.

YOU CAN BE THERE IN A COUPLE OF HOURS—

get a bill through Parliament that did not define precisely what medical condition justified the compulsory detention of a patient in hospital. Only a precise definition would, he said, ensure the full protection of the law for a patient who felt that compulsion had been wrongly exercised in his case. The royal commission proposed that a patient who fell into one of its three categories of mental disorder—mentally ill, severely subnormal and psychopathic—and who positively objected to going into a hospital could be compelled to if two doctors thought that hospital treatment was necessary "for the patient's own welfare or for the protection of others." Obviously, if the patient's case came before one of the proposed mental health review tribunals, this opinion would have to be supported by a description of his illness—just as a full account now has to be given to the Board of Control about a patient who has been certified, in similarly vague terms, as "of unsound mind and a proper person to be detained under care and treatment." Where Mr Butler has gone astray is in thinking, or appearing to think, that people are certified now, and will be "compelled" in future, because they suffer from a particular form of mental illness. In fact, they are certified because of the sort of symptoms their illness presents, their behaviour or their incapacity to look after themselves unaided. It is difficult to see how a precise definition could help members of a tribunal to decide what amounts to the broad question whether a person is safe or fit to be at large. Definition has certainly not justified itself in the two spheres where it has been tried: in the present mental deficiency laws, and in the McNaghten rules—nor, as Mr Butler must know, is it proving successful in the "diminished responsibility" clause of the Homicide Act.

NORTHERN IRELAND

Where Nobody Floats

It might seem strange that more than half the seats at next week's general election in Northern Ireland, where male unemployment at the moment is over ten per cent, should not be contested. But that was the position after nominations for the fifty-two seats had been received on Saturday. Twenty-seven candidates will be returned unopposed, twenty-five of whom are unionists and two are nationalists. A further fifty-four candidates have been entered for the remaining twenty-five seats; twenty-one are unionists, of whom thirteen (plus the twenty-five unopposed) got in last time and nearly all of whom will almost certainly get in again; sixteen are independents; eight are Northern Ireland Labour; one (the first since 1925) is a Liberal; and the rest are mostly nationalists and other pro-Eire parties, such as Eire Labour, Republican Labour and so on. The splintering of the opposition, if nothing else, would ensure that the unionists retained the very comfortable parliamentary control they have always held.

But the real reason for the constant security of the unionists has been that political allegiance in Northern Ireland is determined by one view and one view only—that on partition. Beside this and the parallel religious question, such other issues as unemployment cease to matter. The recent activities of the IRA have only served to harden this old tribal division. Since there is no floating vote, it follows that there has until now been no way in which a parliamentary seat could change hands except by splitting the nationalist or unionist vote. The one sort of split in the Protestant vote which might bring some flexibility to Ulster politics lies in the challenge of the Northern Ireland Labour party, which is affiliated to the British Labour party; next week it will contest seven of the sixteen seats in Belfast. In a period of growing unemployment it will be interesting to see how it fares.

FREE TRADE AREA

Italian Bridge

Italy has made a notable bid to overcome the chief difference between France and Britain in the free trade area negotiations—the difference being that, while the six-nation common market is to be surrounded by a single tariff wall, the British concept of a larger European free trade area would allow the retention of national tariffs of varying heights against third countries. France fears that this would permit goods imported through low tariff countries to filter past the high common market tariff wall, and that countries with low tariffs would enjoy a competitive advantage through the low cost of imported materials. It has argued that tariffs round the larger area should be levelled up as well. Hitherto Britain has supported two solutions: certificates to show the origin of all goods traded in the area would prevent the re-export of goods from third countries; and where obvious differences in the outer tariff affect production costs, individual tariffs could be discussed. There are doubts, however, about the efficacy of certificates of origin; and Britain naturally remains unwilling to meet the basic French wish that it should raise tariffs on its imports from the Commonwealth.

The Italians have now suggested that outer tariffs be levelled as much as possible in a free trade area, and that where this cannot be done, high tariff countries within the area may introduce an import tax to compensate for the difference. Certificates of origin can be dropped, and there will be an incentive for everyone to bring outer tariffs into line; but Britain and the Scandinavian countries could still keep their low tariffs on raw materials and semi-manufactures, and, in deciding the level of common tariffs against third countries, low as well as high tariff countries will presumably have a say. The experts now have to decide whether the Italian scheme can be made to work; but it offers at least a basis for discussion.

This technical argument may seem a little unreal while the French memorandum, disagreeing with almost every fundamental of the free trade area proposals, overshadows the negotiations. If France does not want the scheme at all, a dangerous political breach will open between the Six and the rest of Western Europe. Italy's new initiative is a further proof of the anxiety of the other common market countries for success.

EUROPEAN PAYMENTS UNION

Dead Duck or Swan?

With the negotiations over a free trade area at a critical and ugly stage, detailed discussions about the future of the European Payments Union may seem a little academic. Some weeks ago, however, before the bomb of the French memorandum on free trade was placed under Mr Maudling's chair, the managing board of EPU was asked to work out what form payments arrangements might take in both the trade schemes. Now it is being asked whether EPU can survive at all. In the past decade this remarkable banking device, linked with the sterling area, has lifted a large part of the world from a prehistoric method of trading—bilateral barter—to a level of convertibility which makes possible many of the benefits of international division of labour. Fears that EPU may collapse are perhaps exaggerated. But a growth of tension between the Six and the rest of Europe would mar and perhaps disrupt its working.

If both the common market and the wider free trade area come off, however, EPU will have a key role to play. Hitherto, it has oiled the wheels of multilateral trade not only by acting as a clearing-house, but by providing a certain quantity of automatic credit to debtor countries. There is much in the view that this automatic largesse makes the crime of inflation pay, and it is widely agreed that in time it must go, so that EPU can act as a banker, lending at its own discretion to countries in deficit and borrowing where it likes from the wealthy. By lending on its own terms, it can seek to put pressure on debtors to deflate, as it has tried to do in the case of the large bilateral loan to France—a new departure in its history.

The time, however, is not ripe for scrapping the automatic element in EPU. The Germans argue that it is; but it has not escaped the attention of other countries that this would place the country with money to lend in a strong political position. It seems wise, in any case, to keep the automatic system ticking in case of a general recession in trade, and it cannot be scrapped while fundamental tensions still exist in the pattern of European payments. Since last September a lot of hot money has turned tail. Germany has now been in deficit in EPU several months in succession. Britain and Belgium, and for a while Holland, have replenished their reserves. But not until the second half of the year, when all the speculative funds have got back home, will it become clear whether Germany is still tending to run a surplus in its normal transactions; and France, weighed down by Algeria, remains heavily in the red.

EDUCATION

A Little More for All

The National Union of Teachers has put very moderate proposals before the Central Advisory Council of Education, which is considering the needs of the 15-18 age-group. Its evidence is marked, naturally enough, by an insistence that the supply of teachers, now and to come, is the critical factor. Given an inelastic supply of teachers, abrupt raising of the school-leaving age would merely mean increasing the size of classes. The union therefore makes what seems a very sensible suggestion: that, to begin with, pupils should be required to leave at the end of the year in which they become fifteen, instead of, as at present, at the end of the term in which their fifteenth birthday falls. They urge that this step, which would add on average a term or two or so to school life, should be taken as soon as the bulge has passed through the oesophagus of the secondary school system. It would mean that the schools would have some chance to make the final year of secondary modern pupils educative rather than unsettling.

The union, furthermore, puts part-time education for those who have already left school (the county college scheme which forms Part III of the 1944 Act) ahead in priority of the further raising of the school-leaving age to 16. It evidently feels that a little more education all round is preferable to lengthier incarceration in school—a view which takes into account both the present attitude of working-class children and their parents, and present trade-union requirements for entry into apprenticeships. Yet it may be questioned whether this choice is so easy. The generation of teachers to staff the county colleges is not yet in existence, and it seems doubtful if schoolteachers could be successfully transferred to the colleges. They will be needed where they are to bring down class sizes, unless a breakdown is to be risked. But a main point of Part III of the 1944 Act was that the county colleges should all start operating at once—for it was the failure to achieve this which caused the failure of a similar scheme in the Fisher Act of 1918. It is hard to see how, even by 1965-70, enough teachers can be recruited and trained to make such an operation possible.

BERLIN

Welcome Realist

Every visitor to this country from West Berlin, that outpost of our world, should be welcome. Herr Brandt, the Social Democrat who became mayor last autumn, deserves to be a particularly honoured guest. He gives promise of combining many of the qualities of Ernst Reuter, his distinguished predecessor—the imagination and personal magnetism needed to command wide loyalty in his party and city, plus a shrewd realism in assessing the communist world not shared by all his party.

Herr Brandt's visit has a special significance at a time when talk of disengagement fills the air. Berliners share the heartfelt wish of east Germans for reunification, and know the strength of the pressures on Russia inside eastern Europe for a shift towards a settlement. But they also recognise the precision with which Russia moves in accordance with the facts of power. The city's freedom depends on the western powers' guarantee to defend it against attack. For Berlin, even more than for the rest of Germany, it seems vital to link any military withdrawal with political developments which ensure that it is not gobbled up by the communist world. Herr Brandt might have been pleased to hear Mr George Wigg explaining to Mr Strachey this week in the House of Commons that today the guarantee is not maintained against twenty Russian divisions by three men and a boy, but by the nuclear weapon behind them.

Berlin Social Democrats, however, have a bone to pick with some other Labour MPs. Since he purged his opponents, Herr Ulbricht has been behaving with particular beastliness in the Soviet zone, rooting out their adherents, and clamping down on those who seek to flee west. The Germans are not particularly pleased that a group of British MPs chose this moment to visit the Leipzig Fair, appear in public with Herr Ulbricht, and apparently give open endorsement to his view that "confederation" is the way to unite Germany. The east German radio has been making merry propaganda use of their remarks. Confederation could take many forms. But Herr Matern, a leading member of the politburo of the Socialist Unity party, made clear last weekend what it means to the East Berlin regime: the prelude to communist supremacy throughout Germany.

LETTERS

The British Economy

SIR—An answer is plainly demanded by the analysis of my figures on the basic position of the sterling area, published in your "Business Notes" of March 1st. Above all, it is urgent to clarify the problem of the Middle Eastern oil sources. Your comment struck me as another symptom, surprising in *The Economist*, of the head-in-sand view that is now dangerously prevalent in London.

In the first place, the very heart of the matter is a single, simple fact, never to my knowledge publicly admitted. *Britain's oil problem is indeed unique, in the sense that Britain alone needs to own the oil.*

The danger in the Middle East is political in origin. The pro-Western regimes in the Arab countries are all precarious. If one falls, all will fall in the end; and if they fall, they will be replaced by new regimes on the Syrian-Egyptian model, not necessarily pro-Communist but at any rate rather strongly anti-Western. The first and most inevitable consequence will be nationalisation of the foreign-owned oil companies. The loss to the United States will be heavy. France, too, will lose her share of the profits of the Iraq Petroleum Company. But these losses will be by no means ruinous; the Middle Eastern oil will still be available to the United States and Western Europe. There is this much truth in the often-parroted catch phrase, "Oh well, the Arabs will want to sell their oil to someone, won't they?"

Britain's case is different, because the profits from the British-owned oil companies can crudely be said to pay for *Britain's current oil consumption. On* the British national balance sheet, in other words, one item cancels out the other. Indeed, I was authoritatively informed in London that what may be called the British oil account currently shows a net surplus of £50 million a year, after payment for all oil consumed. In addition, payments for oil are now made in sterling. Very obviously, the company profits that indirectly pay for the oil will end if the oil companies are nationalised; and payments for oil deliveries will also be demanded in hard currency. If this situation arises, there will of course be fierce haggling, about compensation for the nationalised companies, about continued sales of Middle Eastern oil for sterling, and so on. *But still* speaking very crudely, a billion dollars a year on the debit side of the British balance sheet is a reasonable *measure of the* potential impact of nationalisation of the oil companies plus a demand for hard currency for Middle Eastern oil. *The actual* impact would in part depend upon the results of the haggling (about which one cannot be optimistic); *and in much* greater degree it would depend on the measures adopted by the British government of the day to meet the grave emergency. At any rate, it is clear that the emergency would be desperately grave. And it is also clear that Britain's difficulties would be very much more serious than the difficulties of the other Western countries, for the reasons I have stated.

All this is currently relevant, unhappily, because of the *growing likelihood* that the Kremlin will actively espouse the cause of the Arabs against the Israelis. *I was told in London* that the British government now had information confirming the likelihood of this *Soviet manœuvre*, and I was even given a date for it—"probably in October" and therefore, presumably, in the happy after-glow of the prospective summit conference.

It would take too much of your space to explore the reasons why this particular manœuvre has been called "the ace that takes all the tricks in the Arab pack." It will seem to threaten Israel, but it will be primarily aimed at the Iraqi, Jordanian, Saudi Arabian and other pro-Western and anti-Communist Arab governments. Its secondary target will be Britain, the greatest potential sufferer from replacement of the pro-Western Arab regimes with regimes on the Syrian-Egyptian model. And its real purpose, of course, will be to cripple the Western alliance as a whole, by a crippling attack on Britain's exposed economic flank.

All these grim consequences can quite predictably and easily flow from a simple Kremlin statement that Israel is a "*threat to peace*" *and must be forced* to return to the so-called UN frontiers of 1947. In the present melancholy *state of the Western alliance*, it seems to me nonsensical to speak, as *The Economist* seemed to speak, of such a *Soviet manœuvre* "leading to a third world war." Yet the extreme vulnerability to such a manœuvre of the pro-Western Arab governments is admitted by every realistic observer. The apparent absence of any kind of plan or idea for any kind of effective counter-manœuvre was one of the main reasons why I ended my inquiries in London in a mood of profound distress. I should add that I consider Washington's responsibility to find an effective counter even greater than London's; yet I have no doubt that similar inquiries in Washington would produce similarly barren results.

So much for infinitely the most important point at issue between us. As to the Sheikh of Kuwait's contribution of new capital to the sterling area, you told me yourself, at your own hospitable table, about London's great difficulty in meeting the demand for development capital from the other sterling area countries. I had only this problem in mind when I cited the Sheikh of Kuwait's contribution; and as you admitted in your note "Kuwait's investment is large . . . in relation to the total funds generated within the sterling area that are not used in the countries where they are generated." Surely this is only a remarkably roundabout way of saying that Kuwait is a most vital factor in supplying the capital demands on London, where the Sheikh places his surplus. I am sorry that my lack of experience as a financial journalist led me into language seeming to have a larger application.

I am sorry, too, that I evidently used an out-of-date figure on the proportion of the sterling area's hard currency earnings derived from Malaya and Ghana. There was a time, however, and a time not so long ago, when Malaya alone accounted for a full 16 per cent of the sterling area's hard currency earnings. And I judge from your note that the percentage now derived from Malaya and Ghana, although substantially smaller than in the past, is still an item worthy of comment in the sterling area's closely figured balance sheet.

In conclusion, let me say that in discussing these matters in my column, I was most emphatically not seeking to overpaint the insecurity of Britain's economic position. I was trying, rather, to make the American audience understand the underlying difficulties of our chief ally, which are now very little understood in the United States. Wider American understanding of these difficulties now seems almost as desirable as *wider British* understanding of them.—Yours faithfully, JOSEPH ALSOP

Washington

Shop Stewards

SIR—As a regular reader of *The Economist*, I cannot believe that the majority of your subscribers will accept the article headed "Shop Stewards at Standards" as anything other than an exercise in vilification and detraction of an admirable section of the community, whose efforts are wholly directed towards the amelioration of conditions affecting their workmates.

The author claims as facts that the shop stewards are responsible for inciting strikes, calling strikes, restricting overtime, controlling employment, abusing privileges, intimidating full-time officials and, most heinous crime of all, dodging work. No factual evidence was put forward by him to support these charges however, and it can only be supposed that they are the typical exaggerations and distortions of prejudice and ignorance.

I have always understood that one of the cardinal rules of reporting was the need to verify the "facts" before committing them to print. This makes it all the more surprising that the statement in the article that "the Employers Confederation does not recognise shop stewards and gives them no privileges whatever" should have been allowed to appear. Surely so reputable a publication as *The Economist* must be aware that engineering industry agreements are not struck with the British Employers Confederation, but are the subject of negotiation between the Confederation of Shipbuilding and Engineering Unions and the Engineering and Allied Employers National Federation. Section 3 of the procedure agreement for manual workers, and the provisions for avoiding disputes, provides fully for the appointment and recognition of shop stewards and goes on to define their functions so far as they are concerned with the avoidance of disputes.

So far as Standard shop stewards are concerned, two important changes have undoubtedly resulted in a diminution of their responsibilities though perhaps not their influence. The most important of these changes is in the referring of complaints to the foreman initially, instead of the former procedure of going to the shop steward first. This has had the effect of curbing numerous frivolous complaints, but also of stifling more justified and serious matters for fear of unpleasant repercussions.

Less well known, but almost as important, is the change in the composition of the gangs so far as size is concerned. Prior to 1956 the emphasis was on a one-gang system and as many units of production as possible were embraced within one large gang for purposes of administration, pay, and, of course, representation by shop stewards. This system was observed at all Standard factories. It was, in my opinion, the root or source of the great power and authority wielded by the shop stewards in those days and did undoubtedly lead to abuses by some individuals. Today there are more than 200 gangs within the factories, and it is this, more than any other factor, that has reduced the authority of the shop stewards committees. It is also this very fact that gives the lie to your correspondent's accusation that the stewards enjoy freedom from the necessity to work. A number of stewards have resigned because they have not been able to devote sufficient time to the performance of their legitimate duties, since absence from their machines led to loss of bonus to their gang.

There are many more points in the article that I would like to deal with, but I have perhaps said sufficient for your readers to realise that there is a reverse side to the picture portrayed by your correspondent.

One thing I would like to say is that despite the recent difficulties, which have been given too much prominence in the press, there is quite a good relationship and atmosphere of co-operation between shop floor supervision and shop stewards in each factory, and it would be a pity if mischievous articles, such as the one criticised, should do anything to worsen this.—Yours faithfully,

Coventry R. J. STYNES,
Secretary-Treasurer, Flechamstead Shop Stewards Committee (Standard Motors), Vice-Chairman TGWU District Committee, Coventry.

[We are very glad to get this letter from a shop steward at Standards, and to publish it in full; the more local union officials who will enter into open controversy, the better. In printing it, however, we should make it clear that we see no reason to withdraw any of the judgments contained in our special correspondent's report.—ED.]

Hot Money and the Reserves

SIR—Even if it were true that an individual spot sale of sterling "gets lost in the maze of the forward market," we should not have to lose ourselves, too, in it. Your tour through that maze will have left many of us dizzy and humbly ready to accept any conclusion. Surely, however, the effects of covered arbitrage could have been explained with a little more clarity.

After stressing how complicated it all is, you say that "the answer is to be sought, not in . . . any specific operation, but in its wider repercussions on the spot and forward rates." The reasoning seems to be that the movement of "hot" funds to London raises the spot and lowers the forward rate, and thus makes it profitable for Britain's dollar customers to delay settlements by borrowing in London. While the incoming arbitrageurs strengthen the gold reserve, these covered "laggards" weaken it. Hence to the extent that sales of forward sterling by the former must be married to purchases of same by the latter, the two will, as you say, cancel out. However, as you also state, some official intervention occurs as well. If dealers can marry some forward sales by incoming arbitrageurs to forward purchases by the official hand, the influx of "hot money" will not, to that extent, be self-cancelling. The gold will remain in the reserves so long as intervention keeps the spot and forward rates at levels profitable for covered arbitrage. Or has the spot sale cum forward purchase of sterling by the official hand also "got lost in the maze"?—Yours faithfully,

Nuffield College, Oxford A. E. JASAY

★

SIR—It is gratifying that your first Business Leader of March 1st should have, in effect, endorsed the analysis of covered interest arbitrage in its relation to the gold and dollar reserves which I advanced in the letter you published on February 8th. But what I had in mind as a limiting case, valid only under special conditions, you have now elevated to the position of a standard case.

The issue may be formulated as follows. It is now common ground between us that an inflow of foreign capital engaged in covered arbitrage would not benefit the reserves if, in the absence of official or speculative support for forward sterling, the whole burden of restoring equilibrium in the forward market was placed on the widening of the forward dollar premium to the point at which "leads" and "lags" in current account payments were induced in sufficient quantity to offset such (greatly diminished) inflow of arbitraging capital as might survive the widening of the forward dollar premium. But does it follow that in the case of the recent movement of funds this is what has in fact happened?

As noted in your article, the American importer of British goods who wants to delay ("lag") his sterling payment must obtain credit in London, whilst the British importer of American goods who wishes to accelerate ("lead") his dollar remittance is by implication anxious to give up financing his trade in New York and switch to London. Is there any incentive for them to engage on a large scale switch of this kind when there is a sizeable arbitrage margin in favour of London? Clearly, none. For such a margin means that London is an attractive centre to lend money in, and cannot therefore be at the same time attractive for borrowing in.

The argument that the effect of covered arbitrage on the reserves is self-cancelling is valid only as a limiting case. When, for whatever reason (official support? Sterling bullishness?), the forward dollar premium remains narrow enough to allow a substantial arbitrage margin in favour of London which acts as a magnet for sizeable arbitrage funds, the doctrine of self-cancellation does not hold.

In general, "leads" and "lags" of commercial payments (activated by differentials in the cost of trade financing) and movements of arbitraging capital are far more likely to be cumulative than offsetting in their effect on the reserves. This is surely the painful experience of more than one sterling crisis, when the forward dollar premium was pushed by speculators to such heights that it became extremely profitable for both arbitrageurs and non-speculative, but cost-conscious, traders to join in actions which caused a run on the reserves.—Yours faithfully,

London, N.W.3 JOHN SPRAOS

This subject is referred to in a Business Note on page 964.

Commodity Reserves

SIR—In general I take it to be unwarranted to comment upon a review; but since the statement that Mr Grondona "persuaded" me to write a preface for his book might be thought invidious, may I be allowed to say that it is factually incorrect? I have for many years attached prime importance to plans for commodity reserves, and did much work on the late Lord Keynes's scheme for international buffer stocks, which was submitted and discussed in Washington, but stillborn. I have always admired the writing of Mr Grondona for its lucidity and high quality of workmanship, and I judge that his present book would make an excellent draft for study by any working party appointed by HM Government to consider this problem. If plans had already been made for such a scheme and were ready now for implementation, we could look upon the immediate future with much less anxiety. Accordingly, when Mr Grondona asked me to write a preface, I agreed with alacrity; I did not have to be "persuaded."—Yours faithfully,

Oxford ROY HARROD

BOOKS

Eppur si Muove !

The Crime of Galileo

By Giorgio di Santillana.
Heinemann. 339 pages. 30s.

"NEVERTHELESS it *does* move!" Galileo said this in despairing disbelief in the Church's condemnation of the earth's movement, which with telescope and pendulum he had demonstrated as a fact of divine nature. Can what was wrung from him be said of human society, its authorities and its decreed dogmas? More than three hundred years after Galileo's body was modestly laid away at the foot of a belltower, some of the most "advanced" or "progressive" societies in the world together with their most collective-minded dogma-decreeing authorities are penalising not only scientists but also anyone who challenges traditional views of science, defence, economics or anything else. Dogma, tradition and authority, when collectively and institutionally enforced, are the very devil for holding mankind up and throwing him backwards.

Professor di Santillana, who is a Roman by birth and a teacher at Massachusetts Institute of Technology by vocation, has already (1953) revised, annotated and introduced Galileo's famous "Dialogue on the Great World Systems." Led on by that work, he has now treated the controversy through which Galileo fell foul of the Church authorities as if it were a modern *cause célèbre*. Judiciously he lays out all the evidence, deals fairly with the principals and witnesses, and makes what to many today will seem a surprising—but is nonetheless a well-founded—judgment. The trouble, he shows, was not the Pope or the Church. It was the sanction they put behind society and its organisation, already strained by the Renaissance from its feudal forms. The Church at first, particularly the Jesuits, supported and encouraged Galileo. It was when he, polemic and annoyed, "went to the public"—when he, angered by lesser "scientists" who merely appealed to ancient dogmas, came out in public with an aggressive defence—that the Church, bewildered by the seventeenth century's threats to society, threw its weight behind the conservators of the old order and creeds outworn. What imprisoned—though with kindly treatment—Galileo, what struck him down, was not theology; it was the envy, hatred and all uncharitableness of his fellow (but ignorant) scientists, working through any and every instrument of reaction, whereof the Church was the most awe-inspiring and imposing.

The author's marshalling of the evidence for this—and his excoriating criticisms of earlier authors who made the Church the villain of the peace—are enlightening exercises that support faith in historical criticism as a constructive study. One reader at least, a Protestant, finds it in his heart to pity the Pope and the Cardinals faced with such a tumult of so-called scientists, bent on uprooting even law and order to hold back the most advanced of their kin:

> within the specific frame of Western Christendom the actual conflict reveals Galileo, like all free men, seeking a support in established custom, credit, and tradition, while Urban VIII, like all organisers of power, becomes the unwitting tool of the streamlined, the "efficient" and the new.

And there is the same paradox in our day: the most advanced thinkers (who therefore most threaten vested interests, including the collectivists) appeal to freedom and its safeguards, to the rule of law, to democracy, even to Christianity and the lessons (or philosophy) of history, while the authorities, as powers-that-be, plead *raison d'état* as they pile up faggots round stakes.

Professor di Santillana boldly draws the parallels, while warning us of the dangers of analogy: Oppenheimer *versus* Teller, the AEC, Admiral Strauss, and so on; and many more in many other countries, unnamed. His book is refreshing, stimulating, depressing, but also encouraging. He gives the physics, the literature, the criticisms, the evidence, the facts and the judgments. Galileo comes alive as a troubled man (who would not have been so?), but a brave one, ill-advised in believing in the enlightenment of the public, and unwise to trust all authority even (or especially) when it gives a solemn promise. Yet he had great and noble friends. "The dogs bark, but the caravan passes on." Nothing could hold up the truth for long, though the first to proclaim it—"of whom the world was not worthy"—were dead and buried before it was accepted. This book deserves a wide public, alike for its scholarship, style, and relevance to our own time of troubles.

The Peacemakers

Documents on British Foreign Policy: *First Series, Vol. VII, 1920*

Edited by Rohan Butler and J. P. T. Bury.
HM Stationery Office. 744 pages. 75s.

THIS volume, the first of those to be devoted to the records of the Foreign Office for the year 1920, consists entirely of the minutes of the first Conference of London. The Conference, which was in session from mid-February to mid-April, was a continuation of the Paris Peace Conference, of the Allied Supreme Council, meeting under Lloyd George's presidency. Except for occasional extracts, its proceedings have never previously been published; we are now given them in full and as a continuous record. In this form, though they contain little that is new about any of the individual problems that came up for discussion, they provide valuable insight into the problems and the procedures of the victor powers after the end of the first world war.

The main topic confronting the conference was the necessity of drawing up a peace treaty with Turkey. But so disturbed was the state of Europe, so interlocked the problems of a world that had just witnessed the collapse of the German, the Russian and the Habsburg Empires, as well as of the Ottoman Empire, that a bewildering variety of other issues demanded attention—some of them at almost every session of a conference that was meeting almost twice daily. There were problems arising about the execution of the peace treaties with Germany and Hungary, notably the Dutch refusal to hand over the Kaiser and the German refusal to hand over other war criminals, the French wish to occupy the Ruhr against German defaulting in reparations payments and the German request to occupy it against the danger of Bolshevism. There was the problem of the Adriatic, still unsettled as between Italy and the new Jugoslavia. More serious by far, there were war and widespread unrest in Eastern Europe, the victory of Bolshevism in Russia and the question whether relations could or should be established with the new Russian government. And underlying all these questions lay the problem of restoring Europe's shattered economy and of making the transition from wartime to peacetime finance.

Two impressions remain uppermost, after a study of this continuous record, about the men who bore the brunt of the complex situation—Lloyd George and Curzon, Nitti, Millerand and Cambon. One is of their ability and good sense, not to say urbanity, and of their consequent disposition to compromise and reach agreement. The cogency of their arguments, which must often have been unrehearsed, make impressive reading. Equally pronounced is their readiness to settle their differences, which, especially between France and the other powers, were often serious, without delay or equivocation; and losses of temper, in any case rare, are confined to minor issues. Lloyd George is bitter about leakages of information. Millerand feels bound to repudiate with his last breath some remarks of Lloyd George's about the similarity of the French Revolution to the Russian. The second impression is the gravity of yet another handicap under which they laboured—the refusal of the United States to take part in the conference or even to be represented by an observer. If they had had the help of the United States in dealing with the problems of postwar Europe the western powers might have got nearer to solving them, and might then have avoided some of the subsequent disagreements between themselves that did so much to make these problems insoluble.

The New Genesis

The Origins of Life

By Albert Ducrocq.
Elek. 213 pages. 25s.

THE French title, "Logique de la Vie," is a much better expression of the scope and purpose of this book than the English. M. Ducrocq is a cyberneticist and illuminates his biochemical journey from the beginnings of life onwards to man with concepts derived from his own branch of science. These models—servo-mechanisms (pairs of linked systems so organised that a trifling amount of energy spent in one will release a large amount in the other), feed-back systems, chains of relays, programming on tape, the use of binary systems in electronic computing machines—can all, he shows, be paralleled in the development of living matter. He looks forward to the day when an automatic factory will not only be able to improve its products in the light of returning information but also be programmed to produce a replica of itself.

What he calls bio-cybernetics is a fresh and fruitful way of looking at the events of enzyme and protein chemistry, of genetics and of evolution. Most biological and many other scientists would be richly rewarded by reading these parts of his book.

For the layman and the philosopher, however, the really stimulating chapters are those which describe what may have happened in what has elsewhere been called the "probiotic soup," between 2,500 million and 1,500 million years ago. In those warm mists of water, carbon dioxide, methane and ammonia, lightning and solar radiation produced traces of more complex chemicals, sugars and aminoacids. This process can be repeated in a laboratory today. Later, more complex chemicals appeared—enzymes, proteins and nucleic acids. It is the systems containing these chemicals, systems which were able to reproduce themselves and to organise their environment so as to obtain energy and simpler but necessary chemical compounds, that seem to have constituted the simplest form of living matter—somewhat more complex than present-day viruses, which cannot multiply without gaining access to the energy systems and chemical factories inside living cells.

Although the author does not say so, there are other possible views about the origin of life, which assign a less vital role to the proteins and lay stress on the importance of, for example, polysaccharides in earlier and less successful forms of living matter; nor does he tell us whether he believes the genesis of life to have been a unique event at one point on the earth's surface, whether it was rare or fairly common. M. Ducrocq, whose enthusiasm for his subject is not free from dogmatism, also leaves us uncertain of his views on one important point—the chemical structure of the gene. At one stage he says that it is constituted of an aggregate of molecules of a nucleoprotein, whereas a little later he seems to concur in the current view that genes are determined by the order of paired bases on a short section of the nucleic acid spiral.

Although many traces of the author's rhetorical style remain to set the reader's teeth on edge and though some unfamiliar words appear, the translator has, on the whole, done his work well. Author and translator between them have certainly made the book intelligible and exhilarating to those who are able to bring to it a very limited amount of scientific knowledge—no mean achievement.

Oligarchy in Argentina

Argentina, the United States, and the Inter-American System, 1880-1914

By Thomas F. McGann.
Harvard University Press. London: *Oxford University Press.* 332 pages. 52s.

HISTORY may not repeat itself, but economic geography does. In 1880 a provincial coalition defeated the Buenos Aires army and imagined that the power of the city had been broken. In fact, however, the victorious provincial landowners at once accepted Buenos Aires as the inevitable focal point of the republic's economy. They provided it with a new port on the riverside, and the railways that they extended over the pampas were designed to bring the products of the interior to it. From Buenos Aires they bound Argentina to Great Britain and Europe by commerce and by the loans which they contracted to finance the undertakings that would make them and the city rich. The landowning oligarchy ruled the republic as though it were a family business—which indeed it was. The principal Buenos Aires newspapers were theirs and reflected their interests. Politics were rigged to suit them. When extravagance and speculation caused the downfall of the peso, they were unconcerned, as they received pounds and francs for their meat, hides and grain. The bubble burst in 1890, bringing disaster to the over-optimistic Barings of London; but exports soon revived, and after 1895 foreign funds again began to reach Buenos Aires to promote such services as tramways, gas and electricity. In the first decade of the twentieth century the oligarchs were still all-powerful; still absentees from their *estancias* during most of the year; and still neglectful of their labourers, who continued to live in mud huts on the pampas. The Sáenz Peña law of 1912 established the secret vote for all males over 18 years of age; but the resumption of electoral fraud was not long delayed. A later and less robust generation of the oligarchy was destined to be Perón's favourite target; but that is another story.

This background of a dominant city and class, whose development he describes forcefully and vividly, enables Mr McGann to explain the attitude of Argentina to the United States and the other American republics. Of course the oligarchs controlled Argentine foreign policy, and they leant towards Britain and Europe. (In 1889 it was even decreed that traffic, which until then had gone on the righthand side of the road, should travel on the lefthand side, in the English manner. Perón changed it back again.) The United States had caused indignation by its tariff laws, which discriminated against Argentine wool. The Argentines were proud of their own country's rapid material progress and were suspicious of Washington's ambitions. Gradually, however, as a result of increased trade with the United States and the limiting of the agenda of Inter-American conferences to the less controversial subjects, relations became easier, and by 1914 the basis of the present Organisation of American States had been laid.

A readable and abundantly documented book, this will be recognised as a standard work.

Pulpit and Pew

The Church of England

By Guy Mayfield.
Oxford University Press. 211 pages. 18s.

THE full title of this book is "The Church of England, Its Members and Its Business." That hits off its contents exactly. Archdeacon Mayfield examines the Church of England as an institution, explaining how it is run, how it is financed and who runs it. This is a book for the man (though these days it is more likely to be the woman) in the pew and for the cleric in the pulpit to read, for, however much they indulge in liturgical and doctrinal discussion, they sometimes fail to see the structure of the Church as an organisation devoted to a specific spiritual purpose. "Only bold leadership," Archdeacon Mayfield concludes, "is lacking, and for this clergy and laity will pray, patient in hope." Such leadership is bred from knowledge, of which this book forms a small but essential part.

Bumble's Bloodbath

Peterloo: *The Massacre and its Background*

By Donald Read.
Manchester University Press. 235 pages. 30s.

THIS analysis of local causes and consequences is, however unintentionally, complementary to Mr R. J. White's "Waterloo to Peterloo," which was published in 1957; but the "massacre" is the pivot, not the climax, of Mr Read's argument.

Manchester in 1819, a grimy conglomeration of Salford Hundred, the Parish of Manchester, the villages degenerated into suburbs, was insalubriously crowded with a population swollen from 20,000 to 140,000 in sixty years, most of which, when not unemployed, toiled for wages much lower in amount and in purchasing power than in the war years.

But neither spinners nor weavers, nor most of their employers, were easily

attracted by the political beliefs in which "the middle-class Radicals" of Manchester, through press, pamphlets and nonconformist Sunday schools, tried to interest them. Masters and men alike wanted cheap food; the operatives had vague hopes of a minimum wage; but neither saw that a reformed parliament was an essential preliminary to any other reforms. The workers were, however, vulnerable to the demagogic techniques of those who advocated more inflammatory programmes, and it is not surprising that the "middle-class Radicals" shared the liberal-minded Whig peers' mistrust of Orator Hunt.

So did the Manchester Tories, the self-styled "Loyalists": they stood for "the divine right of things to remain as they are"—including the misgovernment of their fellow-citizens by the rusty machinery of the lord of the manor's court leet and their safeguarding by three constables and a posse of beadles. These relics realised that they could not survive a *journée* without assistance; but it was unfortunate that the Home Office, by its laudable advice against using regular troops as police, should have encouraged the "Loyalists" to attempt the arrest of the Orator and the dispersal of his audience of sixty thousand by volunteer cavalry. It is immaterial whether more casualties were caused by these equestrian clowns or by the regular hussars who had to rescue them: on Mr Read's evidence, the bitter contemporary cartoon "Britons strike Home" could fairly be re-titled "Bumble's Bloodbath."

Mr Read closely investigates the effect of the "massacre" on local opinion: the political disillusionment of the "working-class Radicals" and their withdrawal to the narrower field of argument about hours and wages; the frustration of the "middle-class Radicals," many of them fortunately young enough to keep up the fight till 1832; and the relatively short-lived consolation of the "Loyalists," who were publicly exonerated by a cabinet that despised them but felt it could "not let them down."

Mr Read is, consciously or not, an expert exponent of the "Namier" technique; and the value to students of social history of his dissection is enhanced by the skilful arrangement of his varied collection of specimens. Footnotes, appendices, lists of documents are full and clear.

Where Shall Wisdom Be Found?

Value in Social Theory

By Gunnar Myrdal.
Routledge and Kegan Paul. 269 pages. 32s.

For nearly thirty years Dr Myrdal has grappled, in different contexts, with the problems that give this book its title and central theme: what, in the social sciences, is objectivity? No social science can abstract from value judgments, even provisionally or partially. Value premises are implicit in the very choice of questions to be investigated; consciously or unconsciously the investigator's selection of hypotheses, the inescapably subjective preliminary to all analysis, is directed towards the building of a theory that he will find congenial. Value, again, cannot be assigned to "ends" alone; every step towards the "end" has, besides its merely instrumental significance, an inherent nature of its own demanding valuation. Lastly, since the social sciences, including economics, study human behaviour, and human behaviour is that of whole human beings acting in whole situations in which value judgments constitute data as important as any others, any theory unconcerned with norms will go hopelessly astray. The social scientist's duty, it follows, is to incorporate in his theoretical constructions, explicitly and at every stage, the relevant value premises. These should not be his own: "as we are not poets, our own valuations of reality are not important or interesting if they are extravagant in relation to the society in which we live." The system of value premises must "correspond to the real valuations" (scientifically ascertained by skilled empirical enquiry) "of existing groups in society, large enough or for other reasons powerful enough to make it realistic."

In so far as this means that theory should recognise the facts of human nature and not rest content with—still less tacitly present as desirable—a crude utilitarian pleasure-pain calculus, it is of course unanswerable. In so far, however, as it confuses such recognition with a merely pragmatic notion of value—value is that in which sufficiently powerful groups believe—it is an abdication in favour of mere moral and intellectual anarchy. Few ethical convictions are more profound than that of the bellowing four-year-old who, having bought a lolly, feels self-evidently entitled to keep his threepence too; an attitude which certainly "corresponds to the real valuations of existing groups in society" as expressed, for instance, on the topic of house-rent. Economic policy must take the four-year-old mentality into account; but should economic theory set out to justify it? Again, one large group "having power enough to make its valuations realistic" acted for many years on the value premise that it is a good thing to insult, rob, torture and finally exterminate Jews; should this premise be incorporated, on the same footing as, say, Christian doctrines of brotherhood, in political theory?

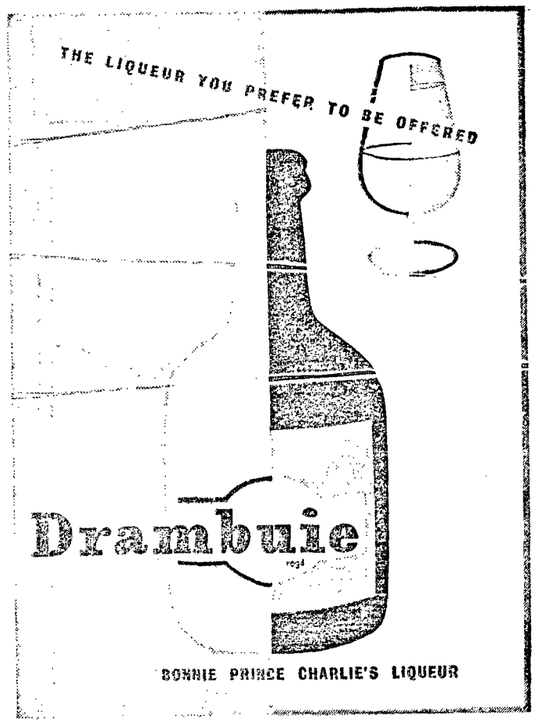
Of course Dr Myrdal believes nothing of the kind. He abides by his own belief in human decency, in liberty, equality and fraternity—with, it is true, equality first and the rest trailing badly—and, given enough good-tempered and skilful confrontation of incongruous attitudes, in human rationality. But his rejection of absolutes, including that absolute of absolutes the freeing of individual choice, leaves him defenceless against any adversary who can point to the contrary valuations of a sufficient number of hate-ridden and lie-fed cretins. In the absence of a consensus inspited by religion or evolved by philosophy, *securus judicat* is a just-barely-possible basis for valuation. *Securi judicant* is not.

The reader should perhaps be warned that "Value in Social Theory" is the product of a large-scale process of autocannibalism, consisting as to more than half its bulk of matter reprinted or summarised from "An American Dilemma; The Negro Problem in Modern Democracy" (1944), "An International Economy: Problems and Prospects" (1956), and "Economic Theory and Underdeveloped Regions" (1957). One essay, however, "Ends and Means in Political Economy," is translated for the first time, and the autobiographical "Postscript" was specially written. Mr Paul Streeten, who edited the volume, contributes a brilliant introduction.

OTHER BOOKS

Natural Resources: The Economics of Conservation. No. 3.

Canadian Studies in Economics.
By Anthony Scott.
Toronto: University Press. London: *Cumberlege.* 193 pages. 26s.

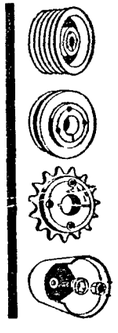


A great deal has been written about conservation, but the problem of what is the economically desirable rate at which stocks of natural resources (such as mineral deposits) should be depleted and of the use and restoration of renewable resources (such as forests) has seldom been the subject of close calculation. This study uses the tools of economic theory to show that natural resources are simply one form of social capital. Essentially the same economic criteria about use, depletion, maintenance and development apply as in the case of man-made capital goods. With rapid technological progress, as Professor Innis has pointed out, there is sometimes a case for using up a natural resource and "going on to something else." "Man will never be resourceless as long as he is resourceful."

Dr Scott's rigorous analysis clears away a number of common confusions among advocates of conservation and concentrates attention on two fundamental problems: ignorance and limitations of property rights. Ignorance, both of technical and of economic possibilities and prospects, may distort the operation of self-interest in the exploitation of natural resources, while limitations on the extent or duration of property rights may so restrict the range of private profits and costs that these fail to reflect important social (and especially national or regional) advantages and losses, particularly in relation to such considerations as defence and scenery. Other problems are not so thoroughly examined; but there is an interesting account of conservation measures in several countries and a useful concluding discussion of possible policies ranging from socialisation to "education for conservation" or a "complicated combination of subsidy and control" and taxation.

Statistics For the Social Sciences. (Second Edition.)
By T. G. Connelly and W. Sluckin.
Cleaver-Hume. 166 pages. 16s.

With a new chapter on the analysis of variance, the second edition of this book provides a well-written introduction to simple statistical methods.



The Directory of Opportunities for Graduates, 1958. *Commarket Press.* 215 pages. 8s. 6d.

Save money—
make TAPER-LOCK your standard method of fixing to shafts

Use a TAPER-LOCK Bush and fix your pulley to its shaft in less than a minute. TAPER-LOCK Bushes are interchangeable too; you can fit them to any diameter shaft. They cut out keyways, save space and have no dangerous projections.
TAPER-LOCK Bushes are off-the-shelf stock at 19 Fenner Branches. Many Distributors at Home and overseas also stock them.

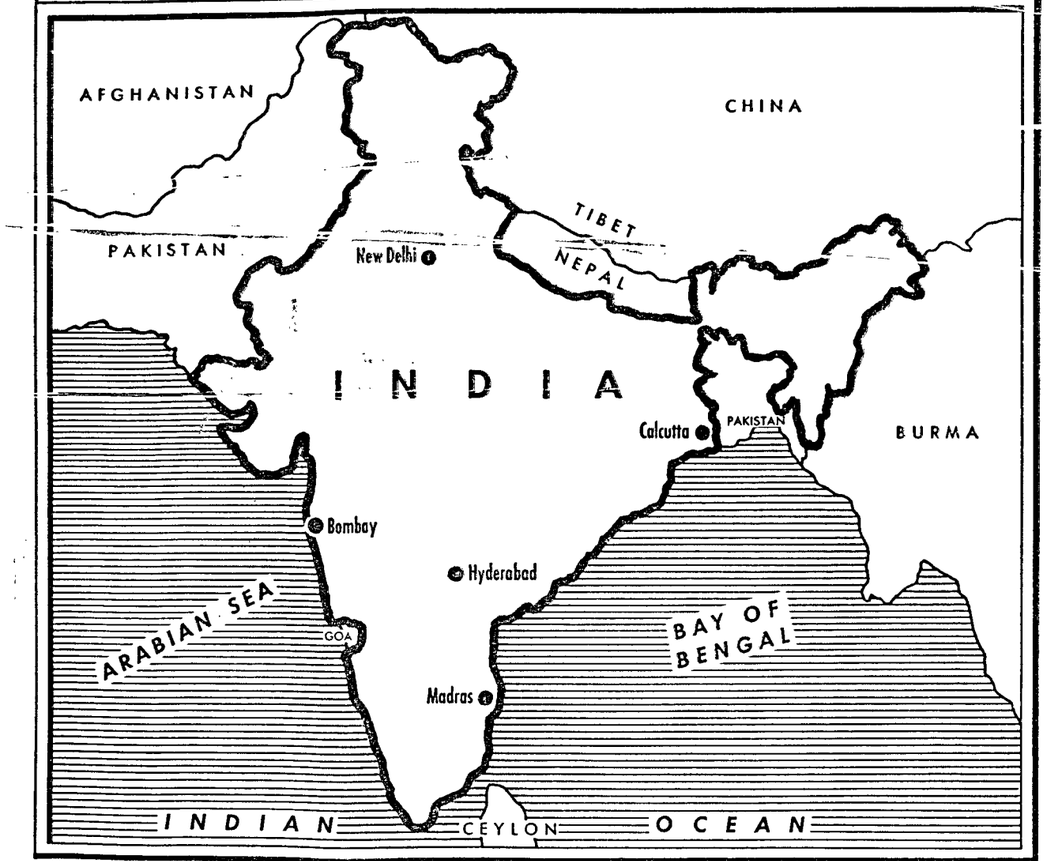
Experience helps



There is a world of difference between business and private hospitality. That is, quite often, not adequately appreciated.

Your own more cultivated taste in wines, spirits and liqueurs is frequently not that of business guests. Some know the best, but others do not. It is important that in the directors' room, at any rate, both should be properly met.

That is where our century old experience can be of real help to you. We choose and supply for many companies' entertainment. We should like you to come to our cellars to taste and select. If you cannot call, we can send a very knowledgeable expert to help you.

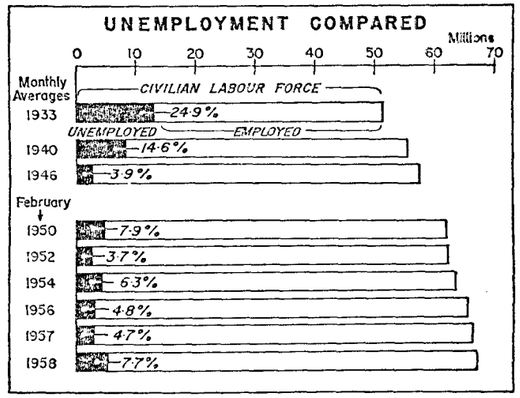
AMERICAN SURVEY



AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

Rivals Against Recession

WASHINGTON, DC

THE economic recession has so dominated the Washington scene in the past two or three weeks that Americans—or at least American politicians—seem to have quite forgotten about sputniks and missiles and the like. It begins to appear almost inevitable that the "massive" government intervention in the economy which Dr Arthur Burns, the former chairman of the President's Council of Economic Advisers, and others now feel is needed to halt the slump, will in fact be undertaken. Before another two months are over it is entirely possible that, on both the spending and revenue sides of the fiscal equation, enough changes will have been made to produce a deficit of as much as $10 billion in the Budget.

The chief reason for the sharply increased political, as well as economic, concern over the recession has been the disquietingly steep rise in unemployment. The number of those without jobs went up by 1,100,000 in January and another 700,000 in February to a record postwar total of 5,200,000. Moreover, though the February figures are not yet available, it seems likely that incomes from wages and salaries fell off by as much or more than the $1.1 billion a month which was the average during the first five months of the recession. And this falling off in incomes is at last beginning to affect retail sales; although bad weather undoubtedly played some part, and although there are signs of a slight increase in savings, the disturbing decline of 3 per cent in retail sales in February from January must be explained mainly by lower incomes.

The great concern of both officials and private economists is lest consumers add their weight to the downward pressures before the natural forces leading to recovery—chiefly the inevitable reversal in the downward trend of business stocks—have a chance to operate. So far the famous built-in stabilisers, of which unemployment compensation is the most important, have worked like clockwork: incomes have fallen far less than output or employment, and consumer buying of practically everything but automobiles held up well during January. But if the February figures signal a trend, the economy may be in for real trouble.

This assessment, of course, leaves out action by the government and it is action by the government that is now becoming the emphatic part of the picture. There is an inevitable competition between the Democratic leaders in Congress and the Republican Administration to "git thar fustest with the mostest." Senator Lyndon Johnson of Texas, the Democratic leader in the Senate, has become a sort of second President, marshalling his committee chairmen as if they were his cabinet members for a carefully worked out series of anti-recession measures to be poured on to the floor for action with almost blinding speed—for the Senate—and with beautiful timing in relation to newspaper headlines. The President, always a step or two behind, has just announced a programme of his own and promises more if necessary. The leading figures in the Administration, including particularly Vice President Nixon, are terrified that a prolonged slump will produce huge and rather left-wing Democratic majorities in November's congressional election and finish off the Republican party for a generation.

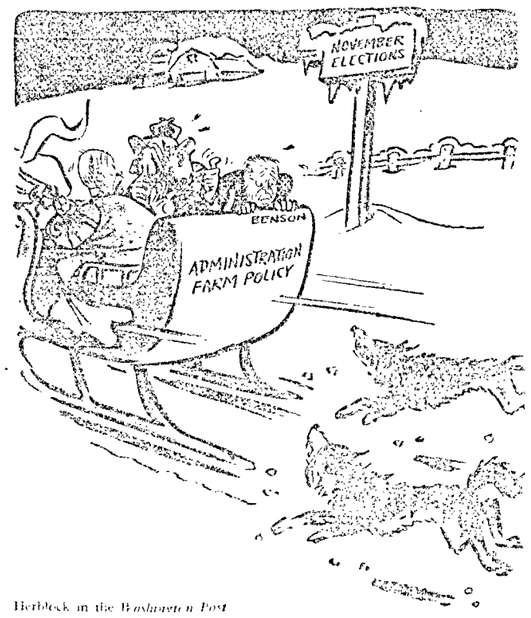
On the Administration's side, to make credit easier and cheaper to obtain the Federal Reserve Board has cut the discount rate three times, from 3½ per cent in early November to 2¼ per cent today; has reduced bank reserve requirements by $500 million (a comparatively minor sum and less than the banking community expected); and has used its open market operations to produce "free" reserves in the banking system of nearly $500 million. Although it appeared for weeks that the central bank was determined to move less aggressively against this recession than against the last, caution now seems to have been thrown, if not to the winds, at least to the breeze. There can be no doubt that bank credit is readily available to the worthy applicant; the difficulty so far has been the lack of such applicants.

On the fiscal side, the most important action has been the President's proposal last Saturday that federal funds should be used to finance an extension of 13 weeks in unemployment benefits for those workers who have drawn all the benefit for which they are eligible under state laws.

The prospect of mass exhaustion of these benefits, reaching a crescendo in April, May and June, has been a spectre at the back of both official and unofficial minds. If Congress does pass this or even perhaps a more liberal proposal, a crucial stabiliser will turn out to be less distressingly temporary than had been feared.

The Administration has also proposed a change in the law to avert a threatened slowdown in the big highway building programme ; this will add perhaps $600 million in contracts this year, but will mean little additional government spending. It has decided to pump $200 million of federal funds into the mortgage market to finance low-cost homes, and has ordered the acceleration of various public works projects worth some $400 million. A three-to-five-year programme of post office modernisation, costing $2 billion, is to be undertaken ; and an increase in defence procurement and construction contracts, amounting to $5 billion more in the first half of this year than in the last half of last year, has been ordered. This increase, however, is just about enough to offset the sharp reduction in defence ordering last year ; even Administration officials are now willing to concede that it may not have the big economic impact that they had once hoped.

Senator Johnson's activities have been, as might be expected, somewhat more bold. He has had the Banking Committee rush through a Bill aimed at pumping nearly $2 billion into the mortgage market to support a large programme of low-cost housing. The Public Works Committee will be next in line with three different proposals: a highway Bill probably going beyond the Administration's request ; a resolution expressing the "sense of the Senate" that $4 billion in public works activities already financed by appropriations should be speeded up ; and a Bill setting up some form of public works administration either to plan or actually to finance state and local projects.

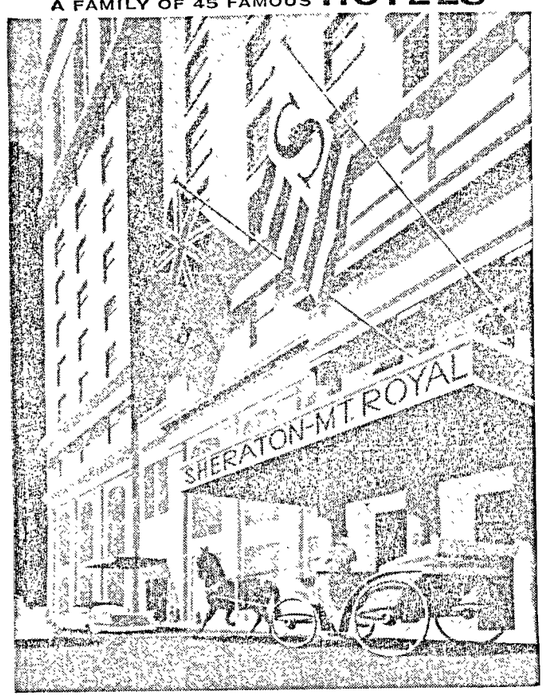


The Labour and Public Welfare Committee will undoubtedly propose an increase in hospital construction ; the Finance Committee will be asked to add something to the President's proposals for unemployment compensation ; and the Appropriations Committee will find ways of providing more funds for various activities. Senator Johnson also seems determined to add at least $2 billion to the Defence Appropriation Bill—an action that, even if the President is willing to use the money, would not affect spending quickly, but could spur defence orders in the last half of the year.

IT is quite impossible at this point to put any total dollar figure on this complicated array of presidential and congressional measures. But the amount in the end will not be small. Even more important, perhaps, is the real possibility, even probability, of a tax cut. The President, it is understood, has decided that, if bolder measures prove necessary, a tax cut will be the ammunition selected. The "trigger" is likely to be the statistics for March. If they show no real improvement, either in the unemployment picture or in some of the key "advance" indicators, a temporary tax cut of some kind will become almost inevitable. So far the congressional Democrats, with the notable exception of Senator Douglas of Illinois, the lone economist in the Senate, have been as cautious as the President about using this drastic measure. But they will presumably have no hesitation about enacting it if he proposes it—and they may even propose it first themselves.

What the March figures will show when they appear in April remains an open question. It is entirely possible that the low point of the recession is now being reached. But some of the major downward pressures remain rather impressive ; for example, an official survey due next week on business plans to invest in new plant and equipment is expected to show a decline for this year of somewhat more than the 7 per cent forecast in private surveys last autumn. What with exports still sluggish and the consumer now apparently acting cautiously, it can be argued that the recession will continue throughout 1958. But it begins to appear increasingly likely that Washington will not allow any such thing to happen.

Presidential Handicaps



LAST week Mr Eisenhower was provoked into turning his guns on the conservative wing of his party but, apart from being long unused, they proved not to be loaded. Senator Schoeppel, the chairman of the Republican Campaign Committee in the Senate, had remarked in a television interview that Republican candidates in some states would only do themselves harm in this autumn's congressional elections by supporting Eisenhower programmes, particularly those on foreign aid and international trade. The President sharply retorted that he would not support any candidate who did not share his views on the "big" issues.

Herblock in the *Washington Post*

But such threats have a hollow sound ; conservative Republicans are turning deaf ears to them and pinning their good ones to the ground in their constituencies. Mr Eisenhower's "coat-tails" did not transport a Republican majority to Congress in 1956, the year of his greatest triumph. Now his authority and influence are undermined because he cannot stand again and, instead of closing their

SHERATON
A FAMILY OF 45 FAMOUS HOTELS

THE SHERATON-MT. ROYAL
WELCOMES YOU TO MONTREAL

When you visit Canada or America you will find that the name standing for gracious hospitality and first-class travel accommodations is Sheraton. In Toronto, in Montreal, in Hamilton, Ont., in Niagara Falls — and clear across the United States from Boston to San Francisco — there are Sheraton Hotels to serve you. These hotels have become first choice of International visitors, as well as Americans, for many reasons. Here are a few:

• Reservations held if ships or planes are delayed
• Facilities for banquets, business meetings and conventions
• Bilingual departments • Sheraton's Family Plan:
No room charge for children under 14 in room with adults
(except in New York, Syracuse, Los Angeles and French Lick)

For reservations see your travel agent, or write Mr. Alberto de Leon, Director, International Department, Sheraton Hotels, Sheraton-McAlpin, Broadway and 34th St., New York 1, N. Y., U. S. A.

KEMSLEY REGIONAL NEWSPAPERS

I'll tell you something else about Shell . . .

Chemicals from petroleum! They're what interest me. Shell are doing wonderful things with petroleum, turning it into solvents, resins and plastics that are essential for so many new building materials. Plastics are becoming more and more interesting to architects and builders . . . mouldings and fittings . . . lightweight panels that never need painting and are more weather-resistant than stone . . . thermoplastic tiles for floors and walls . . . laminated piping and tanks that won't corrode, or burst in a freeze-up! Why, in a few years we'll be calling them traditional! And paints based on Shell's 'Epikote' resins — they make an outstanding success story. I've solved many an 'impossible' problem of structural corrosion simply by specifying an 'Epikote' resin-based system! Today, we have a greater variety of better materials to work with, and it's people like Shell, with their vast research and production capacity, who keep the pot boiling with new ideas.

ranks, the Republicans seem to be flying apart under the blows of adversity: the recession, farm discontent, and the sputnik. Conservative Republicans in the Middle West have always only paid lip service to "Modern Republicanism." They now feel that the White House is unsympathetic and unhelpful in their hour of need and that they must save themselves if they can, even if the resulting split is disastrous for the future of the party as a whole. At the mid-term elections the party which controls the White House almost invariably loses ground; in a recession the swing of the pendulum is exaggerated. The Republicans, who are already in a minority in both chambers, fear a loss of 30 Republican seats or more in the House next November.

Middle-westerners feel that most of these may be lost in the traditionally Republican farm belt, but they got no satisfaction from Mr Eisenhower when they demanded the sacrifice of Mr Benson, the dedicated but unpopular Secretary of Agriculture who is so obstinate an advocate of lower supports for farm prices. In Congress farm spokesmen are moving to block Mr Benson's latest political enormity, the reduction of price supports for dairy products; clearly he has no hope of the new authority he seeks to cut farm subsidies, and his usefulness seems to be at an end. Many powerful Republicans have long felt he was a great political handicap. But Mr Eisenhower, who can also be obstinate, is not so far convinced that Mr Benson should be jettisoned to fill up the widening cracks in the Republican party. The hope of avoiding further Republican losses in Congress may seem too slight to him to be worth a principle.

Sewing Circle Strike

As might be expected of them from the nature of their work, the International Ladies' Garment Workers last week staged as tidy a strike as any in American labour history. It was the union's first walkout in 25 years; of the 105,000 strikers, 65,000 came from New York City's East Side garment district, the rest were scattered throughout seven eastern states. Mostly women, they are responsible for producing 100 million dresses a year, 72 per cent of America's output. They had demanded a "package" raise of 22 per cent, including a wage increase and pension and overtime benefits, and—more important—guarantees of stricter enforcement of contract provisions. It was claimed that some of the industry's 2,300 employers, particularly those outside New York, had evaded paying union rates to cut costs. The manufacturers had offered a 5 per cent raise, and had counter-claimed that the union on its side had also frequently failed to enforce the contract. On March 5th the dressmakers walked out; shortly afterwards 40,000 of them strolled up to a rally at Madison Square Garden, where they heard speeches from their leaders, headed by the president of the ILGWU, Mr David Dubinsky, in English, Yiddish, Spanish, and Italian. Then, dressed in their Sunday best, they set off to picket, most of them for the first time.

The air of a friendly sewing-circle pervaded the subsequent negotiations; Mayor Wagner dutifully cut short a holiday in the Bahamas and flew home to name former Senator Herbert Lehmann and Mr Harry Uviller as mediators. Both were well known to both sides and were received with delighted cordiality; all parties entered the negotiations almost arm-in-arm. Concessions were made willingly and three days later the agreement was virtually sewn up. A compromise was reached on a direct wage increase of 8 per cent with other benefits and a satisfactory solution of the enforcement difficulties seemed likely. The dressmakers began to return to their sewing-machines and cutting-rooms just seven days after they had left.

The effect of the strike was hardly felt, for the country's shops were generally well supplied in preparation for an early Easter, although if the strike had dragged on, retailers would have suffered, particularly those selling lower-priced dresses who normally carry small stocks. Manufacturers in general agreed that they had missed little of the spring and summer demand. Credit for the peacefulness of the dispute is due to all parties, but particularly to Mr Dubinsky, who for twenty-six years has conscientiously promoted peace in an industry which, until his advent, was well-known for its violent strikes.

So Short at the Fair

Officials dealing with the Brussels Fair have been caught on a painful dilemma: how to shame Congress into providing enough money so that the Soviet Union will not sweep the cultural board this summer without putting off visitors by bewailing too loudly the low quality of the American exhibits. Originally Congress only appropriated $12.3 million of the $15 million requested, compared with the $50 or $60 million the Russians are said to be spending. This week, just a month before the fair opens, the Senate has relented and tentatively voted to grant the additional $2 million which Mr Cullman, the Fair Commissioner, says he must have if the delightful circular American pavilion is not to shut every day at six and if the American representation in the performing arts is to give some adequate idea of the richness, vitality and diversity of American cultural life.

Unfortunately it is the House, not the Senate, which is at the root of Mr Cullman's money troubles. Despite all the pressure which has been brought to bear, the House is unlikely to appropriate more than an additional $1 million for such "cultural boondoggling." This may help to strengthen the scientific exhibits which have been weakened for the sake of economy. But it will come too late to save the space originally allotted to the United States which has been snapped up by the Russians to display their achievements, sputniks and all. Probably by now it is also too late to bring over a current Broadway production such as *Look Homeward Angel* to set beside the revival of the musical *Carousel* as rivals to the dazzling array of talent in the Russian showcase. Many American critics are also grumbling that the music and pictures offered are unrepresentative and that the whole exhibit is likely to reinforce the fixed ideas of foreigners about American materialism and *naïveté*. Fortunately private interests are contributing. Mr Benny Goodman is being sponsored by the Westinghouse Broadcasting Company; the *Time-Life* organisation is providing buildings and exhibits dealing frankly with America's great unsolved problems, race relations, juvenile delinquency and the waste of natural resources.

If Americans suffer pangs when they compare their display with the adjoining Russian effort, they should apportion the blame fairly. The government, which only began to par-

ticipate in trade fairs in 1954, did not ask for an appropriation for Brussels until July, 1956; this left little time for planning. Congress has appropriated more than has ever before been spent on an international exhibition. It may be that second place at the first world fair since 1939 is the sputnik needed to bring home to all Americans the fact that the race with the Soviet Union is not confined to science or outer space.

EXPLODING CITIES—IV

Who's Who in Suburbia

FROM A SPECIAL CORRESPONDENT

THE inhabitants of Suburbia, that phenomenal new land which now surrounds every exploding city, seem to be regarded by many commentators as a race apart, addicted to novel and picturesque folkways. "The new breed," as the Suburbanites have been called, live in enormous clusters of cellular structures called "homes," cook their meals over open fires outdoors in the rite of "barbecue," and have relinquished their powers of speech and thought to television. They are a classless society, ruled, according to some authorities, by their children, in an anarchical form of government known as filiarchy, and, according to others, by their automobiles in a new kind of autocracy called autopia. Ideologically, they subscribe to "togetherness," a concept manufactured by advertising agencies to make a virtue out of inconvenient bars to privacy such as small houses and picture windows. As usual, a visitor needs to see for himself what the people are like.

By 1975 Suburbia is expected to have a population of 83.5 million, partly as a result of rising birth rates and partly because most people want to live there. The worker whose income has reached $5,000 a year and who has exchanged his city flat for a house in the suburbs has automatically acquired an entry permit to the middle class. Similarly, the middle class college student looks toward a suburban existence, early marriage and a predictable business career with a corporation as an "organisation man."* When his income permits, probably in six or seven years, each hopes to move to an estate of larger houses and then on again, acquiring as he goes the children, cars and hobbies appropriate to his position. Suburbia is the scene of constant change, with transients often running as high as 40 per cent of the people in a community. The policy in business firms of keeping men moving has made mobility a sign of success. As a counterbalance to the "man on his way up," the mythical "Joneses" maintain the *status quo* and set the standard of life. In suburbs where incomes are often identical and privacy unobtainable, "keeping down with the Joneses" is now reported to be quite as important as keeping up with them. This may hasten the departure of a successful family for a suburb with a more opulent group of Joneses.

How the community is shaped and planned has considerable influence on how the undifferentiated mass of people who first move there form a society. At the outset, no one is "any one"; there is no right or wrong side of town and no common tradition or code of behaviour. But studies of suburban developments have shown that social groups with definite and enduring characteristics soon emerge within a block or around a square; that a house on a corner may subject its inhabitants to quite different social pressures from one in the centre of a block; and that prestige accrues from the purchase of, for example, an "Eldorado" model house rather than a smaller "Cinderella" model. In a horizontal community small differences create large distinctions.

In time wider groups form and leaders emerge through vigorous participation in organisations such as the Parent Teacher Association (PTA) and in militant action designed to wring improvements out of the development company and adequate community services out of the local government—or governments—of which the suburb is a stepchild. Many large building estates come under several jurisdictions, and the resulting diffusion of the suburbanite's allegiance may in part account for his alleged apathy towards broader civic and political issues.

A more immediate preoccupation is "creative homemaking." This involves the suburbanite in an energetic round of interior decoration, landscape gardening, buying appliances, having babies and getting to know the neighbours. Suburban home life includes many new familiar institutions. The "kaffeeklatsch," or gathering of mothers in a neighbour's kitchen or garden to gossip about their children while watching them, helps to alleviate daytime boredom and loneliness; the "barbecue," or meal cooked in the back garden, which gives father a chance to show off his culinary prowess and mother an escape from the kitchen, may be quite simple or very elaborate; television programmes, which are largely designed for suburban audiences, not only make entertainment a home affair and bring in the outside world, but also serve as a guide to "gracious living" and provide inspiration in the search for the good life. The automobile, an even more essential link with the outside world, has now become such an important member of the suburban household, for the sake both of transport and prestige, that two-car garages are in demand for two-bedroom houses.

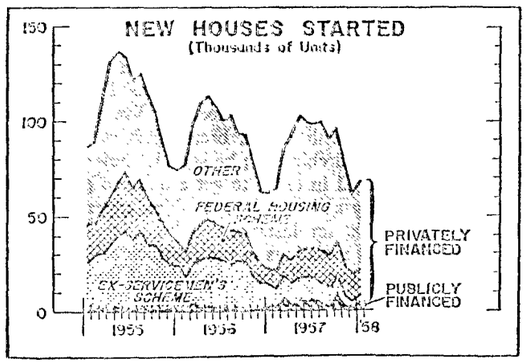
FAMILY relationships are changing. Since the rigours of commuting to the city keep the men away for long periods, women have more authority, and must provide more initiative. But after the office and at weekends husband and wife share the household responsibilities and group activities. In the New York suburban area, 40 per cent of the shoppers in supermarkets are men, who lead expensive delicacies on top of the baby in the marketing cart with a considerably more lavish hand than the housewife, who may well be adding up the accounts at home. Suburban communities are said to be "child-oriented," which is not at all surprising since the majority of residents are usually under the age of 17. One of the prime motives in the move to the suburbs has been the search for advantages for children. But while many young children seem to thrive in Suburbia, the lack of family roots is a drawback not easily overcome. It is thought to be a cause of the often unaccountable outbreaks of juvenile delinquency.

The suburbanite is surprisingly frank about the shortcomings and vicissitudes of his life, which range from mounting taxes to oppressive "togetherness." Nevertheless, he cherishes the suburbs as a land of opportunities for creative leisure. Most of the alarm about Suburbia seems to be felt by people who live somewhere else. Sociologists who are worried about the effect of environment on character are having nightmares over the stultifying consequences of conformity and uniformity, and city planners foresee huge slums in the future. On the aesthetic side, architects and even the relatively unanalytical manufacturers of women's hats complain that the monotony of the suburban landscape makes the inhabitants peculiarly unreceptive to their more original creations.

Occasionally there is a ringing rebuttal from the suburbs, the most recent of which comes from Levittown, Long Island, which a few months ago celebrated its tenth anniversary. Built by the "Henry Ford of the building industry," Mr William Levitt, who managed in five years to convert a potato patch into 17,500 houses for 82,000 people, Levittown has now emerged, it is claimed, as a triumph of "individualisation." Where owners once complained that the only way they could recognise their own house was by the children, they are now boasting that with "do-it-yourself" alterations and enlargements, they can sell a house originally costing $9,000 for $21,000. Children have grown up and older people have moved in to form a more balanced community. The kaffeeklatsch has all but disappeared in the wake of an "urge to non-conformity." There are other signs of a maturing society, possibly even an eccentric one, judging by the popularity of courses for adults in painting from life models and interpretive dancing in the moonlight.

* For a characterisation of this arbiter of suburban life and a comprehensive study of a large suburb, see "The Organization Man," by William H. Whyte, Cape, London, 1957. For other illuminating views, see David Riesman in *The Annals of the American Academy of Political and Social Science*, November, 1957; "The Crack in the Picture Window," by John Keats, Houghton Mifflin; and "America as a Civilization," by Max Lerner, Cape, London, 1958.

Forty Hours or Not at All



THE labour leaders who marched on Washington this week to demand more drastic action against the recession argue that unemployment is much more serious than the statistics show because these do not include people who are only working part time. In the automobile industry, the most recession-ridden of all, the trade union is trying to ensure that in future the statistics shall be more realistic. Abandoning its traditional policy of sharing the work when there is less of it, the union is pressing the companies to lay off entirely all those employees for whom a full forty hours work a week is not available, as a result of the lack of demand for cars.

This changed approach is the result of the agreements negotiated in 1955 under which the amount paid to unemployed automobile workers through the state scheme is supplemented by an additional benefit from a special company fund. This brings total unemployment compensation up to about 65 per cent of normal weekly pay, as much as or more than present part-time earnings. Thus it is better for the union's members to be employed for forty hours or not at all rather than to share the work and be ineligible for unemployment benefits. A good deal is likely to be heard of this scheme from now on if, as seems very possible, the slight improvement in automobile sales which came at the end of the worst February since 1952 proves to be a will-o'-the-wisp rather than the harbinger of the hoped-for spring upturn. So far only the Chrysler Corporation has agreed to fit its operations to the policy of "forty hours or lay-off" and this came as part of the settlement which ended, for the time being at least, a long-standing dispute on work standards between the company and the union.

Chrysler has lagged behind its competitors in the output demanded from its workers but they have been resisting its attempts to insist on more efficient practices. As a result in recent weeks the company has been regularly sending its employees home early on the grounds that there was nothing for them to do because the assembly line had been disrupted by failure to meet the new production standards. The union on its side maintained that the company, which has been doing worse business this year even than the rest of the industry, was using the dispute over standards as an excuse to reduce the output of the cars which it was unable to sell. The practical effect was that Chrysler employees have been earning about $25 a week instead of the $58.50 they would have received in benefits if they had been fully unemployed. This many of them now are, as the company, at the request of the union, is laying off a substantial number. Meanwhile a truce has been called in the dispute over work standards while mutually satisfactory adjustments are worked out.

A Time to Build

ALL Washington now seems convinced that to encourage the building of more houses, by making them easier to buy, is one promising means of turning the economic tide quickly. By the end of last week the Senate Banking Committee had approved a Bill to furnish $1.85 billion of new government funds for housing, and to facilitate borrowing for home buying. The Bill, originally introduced by Senator Sparkman, a Democrat, gives most of the new funds to the Federal National Mortgage Association—Fannie Mae, in the Washington vernacular—a government corporation which buys existing mortgages, chiefly those guaranteed by

the Veterans' Administration and the Federal Housing Administration, from private lenders, thus freeing funds for new loans.

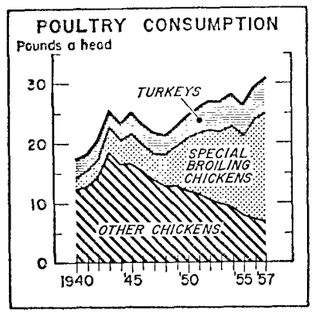
In addition, the Bill extends the power of the Veterans' Administration to guarantee mortgages for ex-servicemen to July, 1960, lowers the down-payments required on new homes, and raises the interest rate on VA-insured loans from 4½ per cent to 4¾ per cent. The Bill reached the

Senate as a compromise in several respects: Mr Sparkman had originally asked for $3 billion for Fannie Mae, and the Administration had hoped to raise the VA interest rate to 5 per cent. The Bill was expected to go through the Senate this week and quick action has been promised in the House of Representatives.

These are moderate measures, but they would probably be effective. Housing construction represents only about 3 per cent of the value of the national output, and building financed through mortgages insured by the VA and FHA is only about one-fourth of that total. But an upturn in housing would have a stimulating effect on other industries —construction equipment, steel, and timber, for example— and would benefit the sagging market in durable goods, chiefly household appliances, which are mortgaged along with the house into which they are built. Additionally, it would take up some unemployment directly; the building industry has plenty of idle capacity. All in all, each dollar spent on housing might mean another dollar spent in related fields. And response could be quick, for with spring weather arriving new houses could be started immediately.

The one thing which seems to be worrying no one is whether demand will materialise for all these new mortgage funds, in the face of the greatest unemployment in America since 1941, a high level of consumer debt, and uncertain prospects for the future in many sections of the economy. But there is a latent demand for housing, based on the 13 million substandard units occupied at present—and the figures for new housing starts have already turned up, without this additional stimulus, against the trend of the rest of the economy.

Assembly Line on the Farm?



FROM A CORRESPONDENT IN IOWA

FARMERS in the Corn Belt are eagerly discussing a form of "integration" which is beginning to spread into the area from the southern states. This is not the mingling of human children of different races in school, but the application to the livestock industry of the economists' "vertical integration", by putting under one management the separate steps in the productive process. For example, an enterprising manufacturer of feed for livestock is now providing farmers with choice breeding stock for meat-type pigs and hybrid chickens; he specifies how they must be fed and managed in order to get a uniform product of the highest quality and of the type which appeals to consumers—lean pork, for instance.

There are many variations in the contracts with farmers, but the integrator generally provides some of the credit and the management, and assumes at least part of the risk of marketing the crop. The farmer supplies the labour, the land and usually the buildings which are needed. In return, he may be entitled to a percentage of the profits, after deducting any loans, or he may be promised a certain price for each pound of the animals or of the gain in weight they made. The price may be fixed in dollars and cents in the contract, or based on prices in an agreed market. Finally, the farmer may simply be paid in cash for his work, with a bonus for extra effort.

Integration of this sort has gone farthest in the production of broilers, the young chickens suitable for grilling, which is how Americans prefer their chickens to be cooked. It started decades ago in Delaware and Georgia and has spread to other parts of the South and Connecticut. Management and credit arrangements of this type are familiar and acceptable in many parts of the South, because they resemble the system of share-cropping in cotton which succeeded slavery and under which tenants paid their landlords in kind. The South's large pool of underemployed farm labour has welcomed the steady income from integration contracts and does not worry about becoming a rural proletariat.

The great growth of integration came at a time when knowledge of the importance of vitamins in chicken raising was relatively new. "Integrators", by insisting upon the latest feeding formulas, could achieve a real competitive advantage. Today some 90 per cent of the commercial production of broilers comes from integrated operations. Meanwhile, both production and consumption have greatly expanded, making this one-time holiday luxury a year-round staple food. In turkey farming, the story is very similar.

Some observers think that the recent advances in scientific feeding of stock, the use of antibiotics, for instance, offer similar opportunities in other livestock industries. Eggs are beginning to be produced by integrated operations and experiments are being undertaken in hog and cattle raising, so far mostly in the South. The integrator who provides the management and some of the capital may be a feed company, a processing company, or a chain of food shops.

Good management is a scarce resource at the best of times. Today, half of the country's 5 million farmers are in a sense surplus, in that they produce little income for themselves or for the nation, while the other half is piling up uneconomic surpluses of farm products. It is not surprising that vertical integration is arousing great interest as a method of spreading good management and credit in order to get more efficient production and marketing. Moreover, making a start in farming requires so much capital nowadays that an integration contract has a real attraction for young men. In areas where efficiency and specialisation are lacking, integrated operations can be expected to grow.

So far contract farming has been too small a part of the whole to seem to threaten the individually managed farm. But last month, when farmers in Iowa met to discuss contract farming, it was clear that many who were attracted by the prospect of a steady income, and who feel that the Middle West must not lose its traditional livestock crop of hogs to eager contract farmers in the South, also feared that control of their farms would slip into the hands of outsiders. Many believe that if integration must come, the farmers should run it themselves through co-operatives; and the Iowa Farm Bureau Federation, which is studying the implications of contract farming, is considering the possibility of organising a $5 million co-operative packing plant.

THE WORLD OVERSEAS

France Fumbles for Leadership

FROM OUR PARIS CORRESPONDENT

IN Paris, opinion, like a man in a condemned cell who thinks he has found a trapdoor, is apt to feel that M. Gaillard's Mediterranean and Saharan plans might offer a way out of the Algerian tragedy. There have been other similar times, when M. Mollet was rumoured to be negotiating with the rebels and hope proved to be illusory. M. Gaillard now, like M. Mollet then, enjoys the benefit of the doubt. But even in Paris, the capital of politics through the looking-glass, people sense the objections to his verbally grandiose schemes. The best sober observer's hope for them is that by some legerdemain they may make it easier to come to terms with M. Bourguiba over Bizerta—with M. Bourguiba all things are possible. If they do so they will at least have served some immediate purpose. But looking only a little farther ahead, people realise also that more than a puddle of good intentions is required to drown the Algerian whale. The King of Morocco, though so much more cautious than M. Bourguiba, has recently sounded warnings on the growing difficulty of not choosing between Algerian "brothers" and French "friends." As for the Sahara, the whole of its proven oil-bearing part is administratively attached to Algeria. The French grafted it on themselves, and the Algerians (the settlers just as much as the rebels) will not acquiesce in a separation now. So the Sahara's future, too, depends on the outcome in Algeria. This is clearly what Morocco and Tunisia think. The French government has already offered them seats on the directing boards of the Saharan organisation, but has never obtained their assent; they refuse to recognise France's political domination of the desert (Morocco even claims vast areas as its own), though they agree easily enough to the principle of joint economic development.

The Americans would like to think M. Gaillard could invigorate the Mediterranean and Saharan communities by ultimately moderating French claims to absolute possession of Algeria and the Sahara. M. Gaillard who, as a good French politician, is nothing if not many sided, is a liberal in one of his selves. Has he not dared, in office, to conceive that Algeria might one day be independent? Does he not insist on speeding up the elections under the outline law in Algeria, despite the obvious and probably insurmountable difficulties of the operation? His new plan shows that he would like to take broader views. But he is in no position to give practical force to this reforming tendency as long as he has one foot rooted amongst the Right in the Assembly—and until further notice neither he nor anyone else shows signs of shaking it free. In fact he is in a particularly weak position to defy the chauvinists. He has ruined his credit in the last month, first by failing to assert control after the Sakiet affair (which was the time to challenge the Right); then by the gesture of internationalisation that followed; and last, but not least, as a result of the rude shock administered by the request for more men and money in Algeria.

Parliament and country, trusting to the press and M. Lacoste, really believed the end was in sight in Algeria. The Right had even tried to scupper, and succeeded in diluting, the outline law on the assumption that if victory was near, liberalism, however weak the dose, had lost its point. Now M. Lacoste talks of massive deliveries of arms to the rebels from Tunisia, thus admitting that the much-vaunted Morice defence line on the frontier was being peppered with holes even as he praised it; the hardest battles yet are being fought with the rebels; and the end seems farther off than ever. Add to this that prices at home are still rising; the parties are still quarrelling; and recent by-elections show that opinion is anxious and increasingly tired of government indecision. M. Gaillard's government is in a state of semi-deliquescence.

In any case, M. Gaillard has to reckon with the complete fantasy world that Paris has become. The kind of illusions that are current have been naïvely expressed by one lyricist in *Combat* (once, but long ago, Albert Camus's paper): "The French proposals are intelligent and generous. Some will no doubt judge them too liberal. . . . Paris cannot offer all, give all and receive nothing in exchange." This is the sort of reaction that has enabled the Right successfully to class M. Bourguiba in the French mind as almost a second Nasser, a blackmailer who must not be allowed to get away with it.

The militant Right's reactions to recent disillusionment is, with men like MM. Bidault, Soustelle, Duchet or Morice, to call for more war; an excellent example of their manner was the letter to *The Times* this week by M. Raymond Lacoste (not the minister). They claim that "history is what virile nations and leaders are making it"; whether the Algerian war lasts two, three or more years, France must impose its will: France's allies have no idea of the real situation or of what France is doing for civilisation, and they must if necessary be defined. At home these militants maintain that critics must be silenced; because the rebels commit atrocities, it has become near criminal to protest against French tortures in Algeria.

The habit of confiscating left-wing weeklies—the only real opposition press—is spreading fast. Till last week, most confiscations affected their Algerian editions: *France Observateur* (left of the *New Statesman*) had already accumulated 53 confiscations by last July. *Témoignage Chrétien*, the left-wing Catholic paper, can now claim 68 confiscations in two years, or more than one in two of its Algerian editions. Even *L'Express*, which sends its copies to Algeria with blanks in place of Algerian articles, has been confiscated ten times. Now the plague is spreading to

France. Last week was the first time that whole issues of two papers, *L'Express* and *France Observateur,* were confiscated in France ; and the government went one step further still by confiscating M. Sartre's pamphlet on the Communist M. Alleg's account of his torture, at the office of the publisher—the highly successful M. Julliard, impresario of both Françoise Sagan and Minou Drouet. Despite the protests of liberal politicians, journalists, professors and scattered citizens, there is no hiding the fact that there is no general French outcry against these methods. There is little legal redress, though confiscation hits the victims' finances hard ; and the French public, in this as in everything else, feels too dissociated from the government to consider itself involved. At such moments the Fourth Republic stands revealed as a centralised, naturally authoritarian administration, hampered by the revolutionary slogans of 1789 and bemused by an anarchic Assembly, but in no full sense a parliamentary democracy.

This regime cannot, however, even claim the strength of arbitrary government. The incipient moral abdication of parliament is displayed in the renewed talk of calling on General de Gaulle as the only man to settle the crisis. The very mention of the general was enough to ensure M. Gaillard a handsome majority last week: the more some deputies talk of him, the more others close their ranks. No one likes to think of the consequences of another crisis. So M. Gaillard may still reign even if he cannot rule. But General de Gaulle's advent, which was fantasy a few weeks ago, is almost moving into the bounds of possibility. A revolt against Nato from this enigmatic quarter is far more likely than the " explosion of popular wrath " within France, with which right-wing Frenchmen, and the government, like to threaten Anglo-Americans if they do not bow to France's " inalienable " rights in Algeria. For all the rowdiness of hooligans, even at political meetings presided over by M. Pinay, there is no real atmosphere of revolt in France at the moment, only a deep, bewildered anxiety. Caesar is more likely to come with Parliament's assent than without ; although the majority, especially the Socialists and Communists, would still like to bury de Gaulle, more and more find themselves praising him.

Bonn in the Foothills

FROM OUR BONN CORRESPONDENT

HAD everything gone according to plan another marathon debate on foreign affairs would have been held in the Bundestag during the latter half of this week. The government's strong men were to have been Dr Adenauer, fresh from a month's cogitation on the Riviera ; Herr Strauss, hauled back specially for the occasion from the United States, where he is coyly reconnoitring a marriage of convenience between the Bundeswehr and the Matador ; and Herr von Brentano, spurred on by the desire to cut a more commanding figure than he did in January's inconclusive wrangle. But, in response to the general demand for time to examine the new feelers for negotiations at the summit about a German peace treaty, the president of the Bundestag decided to postpone the debate. It is to be staged next week, beginning on Thursday and presumably not ending until once again the participants are about to drop from exhaustion.

The respite has been highly welcome to Herr von Brentano for personal reasons. Scarcely back from the Western European Union talks in Rome, the foreign minister would have had insufficient time under the original arrangement either to master his brief or to nurse his shaken prestige. The Christian Democrats were disappointed by his performance in the last debate. They have also been piqued by his neglect of party consultation in appointing state secretaries and ambassadors. The opposition cannot be expected to regret Herr von Brentano's political discomfitures. Nor can they normally claim a say in foreign service postings. Yet, in company with many coalition deputies, they feel that the Bundestag has been slighted by the foreign minister's defiant elevation of Herr Dittman to the rank of under-secretary of state. Herr Dittman is the career diplomat, lately in Hongkong, whose services to the Third Reich the Bundestag pronounced, after investigation, to have permanently disqualified him from holding high office under the Federal Republic.

Herr von Brentano may derive some comfort from the reflection that these days few foreign ministers are being spared severe disparagement. But he has not yet reached the limit of his political ambitions ; and it must have been galling to watch from the doghouse Herr Erhard quietly enhancing his reputation while deputising for the absent Chancellor, and to be reminded by some commentators how willing Herr Strauss would be to occupy the foreign office on his way to greater glory, and how happy some people would be to see the conduct of foreign affairs in Herr Strauss's vigorous hands. And now—to aggravate Herr von Brentano's sense of inadequacy—it is clear that Dr Adenauer will again be largely directing foreign policy himself until the summit has been reached and explored. All in all, the foreign minister has good reason for wanting to make a mark in the next debate.

★

Since the pre-summit exchanges are still so confusingly in motion, and since even the best-prepared debate may at any moment flare out of hand, Herr von Brentano and many other Christian Democrats would have preferred to wait until even later than next week before restating the government's case. Dr Adenauer, who was not consulted about this week's postponement, has insisted upon a debate as soon as possible. The Chancellor believes he can at least dispel the confusion in the minds of the German public, much of which he attributes to various new proposals concerning defence and reunification temerariously advanced by restive lieutenants during his absence. Of these, the one that has attracted the most sympathetic attention is the suggestion of the Bundestag President, Herr Gerstenmaier, that perhaps a new approach could be made to reunification by persuading the wartime allies to begin negotiations for a German peace treaty. Herr Gerstenmaier, it seems, still hopes against hope that there may be some way of circumventing Soviet Russia's implacable opposition to German unity. But, promptly seizing Herr Gerstenmaier's idea, the Russians have proposed that a German peace treaty should be one of the subjects on the summit agenda, and—with grim consistency—that *both* German states should be represented in the relevant discussions, the object of which should at no time be reunification.

To Dr Adenauer, as he reappears upon the scene, the task now to be done is quite straightforward. It is, firstly, to make it unmistakably clear to the Atlantic allies that the terms on which the Russians want to discuss a peace treaty are utterly unacceptable to the Federal Republic ; to impress upon all concerned that unity and freedom are the inviolate prerequisites of a peace treaty ; for the Federal Republic to enter into negotiations in company with the Democratic Republic would be to perpetuate both partition and Germany's present eastern frontiers. Secondly, it is to convince the German public that there is no alternative at present to the government's policy short of capitulation to Soviet communism ; and that, as one of the cheerless consequences of this policy, it will be necessary to accept General Norstad's advice and agree to the establishment of missile bases in western Germany and to the arming of the Bundeswehr with nuclear weapons. Noting the dismay provoked in Britain by local preparations to wage nuclear war, the Chancellor is resolved that the forthcoming Bundestag debate, which will again be broadcast in full from most German stations, shall not leave the German public in the state of suspicion and confusion in which they were left when they switched off their sets in January. But not all his colleagues are sure that he will pull it off.

Campaigning in Canada

FROM OUR OTTAWA CORRESPONDENT

VIGOROUS campaigning for votes on March 31st has been conducted from one end of Canada to the other by the rival leaders, Mr John Diefenbaker, Conservative, and Mr Lester Pearson, Liberal. Yet it has not produced much in the way of new issues. Mr Diefenbaker continues in characteristic style, combining the art of the evangelist with that of a prosecuting lawyer ; the more it is seen, the more his manner seems suitable for an opposition leader rather than for a prime minister. Mr Pearson, who as early as the Liberal convention in January began trying to adopt the style which was thought suitable for an opposition leader, has latterly reverted to one more natural to him, which proclaims him to be a responsible statesman.

Since both leaders have been on the national television networks almost every week, the impression that they make during these appearances is probably more influential in the long run than are their personal visits to scattered constituencies. By this criterion alone, Mr Pearson might be judged to be catching up after a very poor start. His last television appearance on the national network consisted of an unscripted interview with young Anthony Abbott, the undergraduate son of the former finance minister, Mr Douglas Abbott, who is now a judge of the Supreme Court. This enabled Mr Pearson to exploit his decades of experience with press interviews and for the first time in the campaign to present himself as a relaxed, reasonable statesman. If the election were not for another two months and Mr Pearson went on being himself, rather than trying to give a ham actor's performance of what an opposition leader is supposed to be, it seems likely that his popularity would grow, while Mr Diefenbaker's more eloquent and emotional performance would decline in appeal.

But there are not two months—little more than two weeks. From every part of the country political reporters are talking about the Conservatives' chances of winning more seats. The Liberals' chances are discussed mainly in terms of how many of their present seats they can hold. Inevitably, therefore, the leaders' attention tends to be concentrated on individual seats which might be changed by a successful campaign. That is why it is considered so important for each leader to show himself in doubtful ridings. The one " block " vote which defies this rule is the Province of Quebec. It is in many ways the key to the whole campaign. Most of the political reporters who have toured all Canada during the campaign say it is possible that the Conservatives will gain a few seats in all the western provinces, and perhaps even some in the Atlantic provinces. But it is hard to see how they can gain enough in the west and east combined to provide the extra 25 or 30 seats needed for a comfortable overall majority. Yet they could get the whole 25 or more from Quebec if a real change of mind were to take place there.

Quebec is also one of the most uncertain factors. Responsible observers in Quebec city report that Conservative hopes are soaring as high as 35 or more seats out of the province's 75. Some Liberals concede that they might lose 15 or even as many as 20. Prediction is unusually difficult at the present time because Quebec politics are in a state of exceptional disarray. Neither party has a leader in either the federal or the provincial field who really captures the imagination either of the populace or of the intellectual élite. Both are thoroughly afraid of any suggestion that they are getting support from the purely provincial organisation of M. Duplessis's *Union Nationale.* It would be the kiss of death in other parts of Canada, though in fact M. Duplessis's organisation in particular ridings has for many years supported the candidate of one or other of the national parties without too much being said outside the province. Rumour has it that the Conservatives are getting such help in far more ridings this time than they did last year.

But cross-currents of largely leaderless opinion are very hard to judge. As one nationalist university professor put it the other day, most Quebec voters have been brought up on legends about how " English soldiers " came to drag their fathers or brothers or uncles out of bed to fight in the first world war, " all on orders from the Conservatives." On the other hand, many of the Quebec intellectuals feel thoroughly let down by the Liberals' performance under

A NEW SERVICE
OF ECONOMIC AND MARKETING RESEARCH

DURABLE CONSUMER GOODS

A series of continuous comprehensive surveys are now being prepared to assist manufacturers and others to estimate the future market for the following durable consumer goods :

Electric washing machines
Refrigerators
Vacuum cleaners
Electric fires and convector heaters
Gas and electric cookers
Sewing machines
Passenger cars
Tyres
Car heaters
Cycles
Car radios
Radios and radiograms
Record players gramophones
Television sets

These surveys are being prepared jointly by

THE ECONOMIST INTELLIGENCE UNIT LIMITED
and
THE BRITISH MARKET RESEARCH BUREAU LIMITED

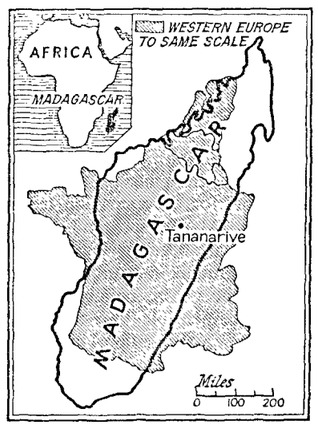
Further information from :

THE ECONOMIST INTELLIGENCE UNIT LTD.,
22 Ryder Street, London, S.W.1. Whitehall 1511, ext. 13

Mr St. Laurent and may be tempted by Mr Diefenbaker's greater stress on provincial rights. Among the most influential voices in Quebec politics are rural curés, who often take a different line from the more enlightened leaders like Cardinal Leger of Montreal and Archbishop Roy of Quebec City, and are finding a far newer leadership in the young French Canadians at the head of the Catholic workers' syndicates. These Labour leaders are growing more and more outspoken in their determination to oust M. Duplessis from provincial power, and where the younger priests have become parish curés the syndicates' somewhat radical tone is often reflected in their attitude.

It is conceivable that these newer forces, taking nothing for granted, and determined to find a place in the modern world by understanding it, may help tip Quebec votes to the Conservatives. A dozen to twenty marginal seats may easily be tipped this way. If the number swells to 30 or 40, Mr Diefenbaker's majority in the new House of Commons could be quite decisive.

Madagascar: Forgotten Island

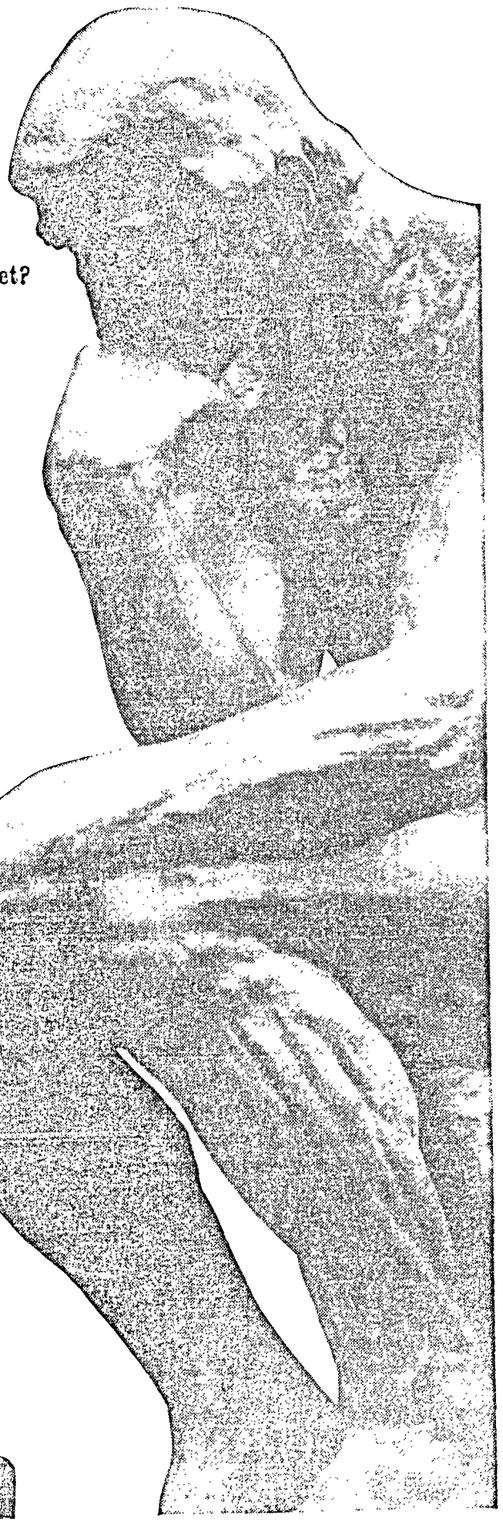


On Tuesday the French Assembly found time for a debate—much overdue—on overseas amnesties, and began it with the case of the men still held for their share in the 1947 rebellion in Madagascar. A vote will not be taken until next week, but deputies seemed impressed by the fact that their Overseas Territories Committee has voted in favour of letting the three Madagascans in question go home. They are at present in forced residence in France—virtually forgotten figures while the nation that detains them battles with its problems in other parts of Africa.

For the huge island of Madagascar seldom occupies French minds. Being on the way to nowhere, few visit it by chance. It is known only to those whose business in coffee or vanilla, graphite or mica takes them all the way to the end of the road, and virtually all who go there are Frenchmen. The high level of French freight rates discourages merchant adventurers, and roughly three-quarters of Madagascar's trade is with France.

Yet this isolation is now only physical. In spirit, its inhabitants (of whom at the present birth rate there will be five million this year) are now at one with all the other French dependencies that want independence, either at once or by stages. During a meeting of the vice-presidents of their provincial assemblies with French officials in Paris last month, some of them seemed nettled—for the first time—at being expected to meet separately from the West African representatives who had held a similar meeting just before. Hitherto the 240 miles of sea that separate them from the African continent have seemed to divide them from, rather than unite them to, their nearest neighbours. For the Madagascans are not an African people. All of them, from the pale, settled Hova of the fertile plateau to the tall darkly-pigmented nomads of the desert south, originally came from Asia—Indonesia, or Polynesia, or Melanesia. All speak dialects of a common and distinctive language and all—even those who have been Christian since the 1860s—have the same attitude to their ancestors, to foreigners, even to their animals. They have a love of conformity which has made them receptive to French influence yet caused them to retain many of their own basic characteristics. After all, the Hovas ran an independent state, with a queen, a flag, and ministers, professed Christianity, and ran their own relations with several European powers before the French protectorate of 1885 and long before the annexation of 1896.

Eleven years ago, an island that was to all appearances peace-loving and docile was decimated by a rising the fierceness of which electrified Frenchmen. It was stamped out by force, but only after fighting and casualties that ran as high as tens of thousands. Resistance was violent and prolonged alike among Hovas and non-Hovas, Christians and pagans. Psychologists have tumbled over themselves to explain the motives for such determined resistance: certainly the grounds were not economic, as in Kenya. There is virtually no rivalry on the economic plane between Madagascans and the Frenchmen who form only 1.4 per cent of the population. The most plausible of the theories seems to be that the Madagascan is easily put out by uncertainty and change, and had been more deeply disturbed than any Frenchmen realised by France's wartime upsets, followed by the Fourth Republic's early and sweeping gestures about self-government.



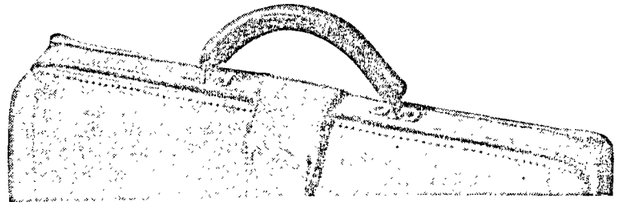
Nationalism is a vigorous growth ; cut down, it reappears as surely as the nettle. In the years since 1947 a new rash of parties has sprung up—all of them nationalist and carrying the word "Madagascan" in their titles. They have thriven on the hesitation with which successive French governments have set about intertwining the two ill-matched strands in French overseas policy: the old tendency to assimilate Africans as part of the *mission civilisatrice* and the new one to give them self-government in order to keep abreast of the times.

In 1956, Madagascar got a *loi cadre* along with everyone else, but many Madagascans disapprove of it because it divides the island into six councils which observe tribal distinctions in a way that was once logical but is no longer popular with any party. "Why saddle us with six assemblies and six budgets and a seventh at the centre ?" grumble young men who are by no means all Hovas. The first elections, held last year, suggested that wherever regions voted parochially they did so for economic, not tribal reasons. The result of the poll produced (after secondary elections) a central legislature containing 27 "moderates," 18 left wing nationalists and 9 Catholic nationalists. Only the first favour independence by stages, of which they regard the *loi cadre* as the first. Catholics, Socialists and some pinkish Communists would like it right away. (The Christian parties tend to take shape on a denominational basis with the Catholics much more regimented than members of the various Protestant missions and strongly backed by their bishops in demanding immediate independence and a mere treaty relationship with France ; the Holy See seems to favour this solution as a bulwark against communism.)

In Paris, anyone who ever pays attention to Madagascar

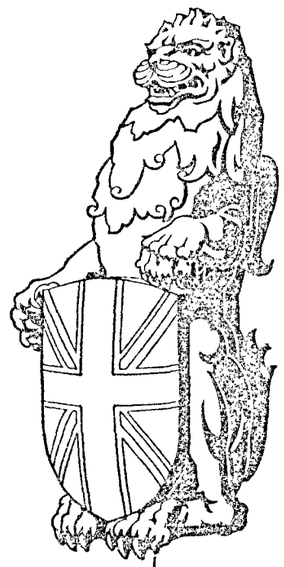
What's the advertiser's outlook in the Common Market?

You may well ask. We did here at Smiths. For in all the mass and morass of international huddle and squabble, we wondered when someone was going to shed a little light on the Common Market from *the advertiser's point of view.*



Then we decided to do it ourselves. Two of our top marketing men went to Europe and other parts of the world, asking some pertinent questions. They met industrial barons and distribution kings. They grilled German government officials and Dutch diplomats. And from Belgium to U.S.A., from Italy to Africa, misconceptions faded as facts grew.

The outcome is a new publication, price 5/-, which you can read without putting your waders on. The advertisers this Agency serves have already got a complimentary copy as one of the sidearms of that service.



If you, too, are interested in the uncommon problems of the Common Market, ask your secretary to drop a line, or scribble a note yourself, to the address below, making your cheque or postal order payable to "Smiths Advertising Agency Ltd." Your copy will be on your desk by return post.

ADVERTISING AGENCY LIMITED
LINCOLN HOUSE · HIGH HOLBORN
LONDON, W.C.1

This is Operation BRITAIN

It is an organisation which exists to tell the world about Britain. It makes no profits and is independent of governments and political parties.

It has been formed by a group of men of wide experience in many different spheres of activity and of many shades of political opinion, who are united in their belief in Britain's future as a great nation. We in Operation Britain believe that to attain that future Britain and all her people need *now* a form of encouragement and guidance which can best be provided by an independent organisation commanding all the resources of modern publicity.

It is our belief that too little is known, either at home or abroad, of Britain's tremendous achievements. At home, the inspiration of the past and our present successes are the best possible source of confidence in our future. Abroad proof of Britain's ability to lead the world in many fields is of inestimable value in increasing our trade with other nations. Proper presentation to the British public and to the world of such achievements will realize for us the prestige that this nation has earned, and the pride that we can justly feel in Britain's strength and in her qualities of greatness.

Operation Britain's function is not to preach, but to inform: not to exhort, but to encourage every member of our close-knit nation, each one of whom has a part to play in shaping our future. That future —if we all build together—is bright with promise.

These are the objects of OPERATION BRITAIN

1 *To make clear the importance of thriving successful industry throughout the country, and, through it, an ever expanding export trade, if our present standard of living is to be maintained and raised still higher.*

2 *Further, to demonstrate the essential interdependence of our people of every type and occupation—men and women, young and old—who, in times of national emergency, have invariably shown their unity and determination.*

3 *To ensure that our own people—while made aware of our shortcomings—shall have the widest possible knowledge of our national achievements in the social, cultural, scientific and industrial fields.*

4 *To publish, from time to time, factual statements regarding our successes in overseas markets, and actively and positively to counter misrepresentations of Britain which are damaging to our national prestige, and thus, to our commercial opportunities.*

5 *To ensure that people throughout the world are no less well-informed than those at home regarding our national achievements in every field of human endeavour: and thereby to heighten the prestige of British products in vital export markets.*

6 *Thus, to reawaken pride in Britain's position in the world as a powerful force working for the good of all peoples and, through this more favourable climate of opinion, to raise further the morale of all engaged in commerce and industry.*

British Achievement Speaks for BRITAIN

THE OPERATION BRITAIN ORGANISATION • 165 FLEET STREET LONDON EC4 • FLEet Street 5011

agrees that France must heed the signs of the times and make some changes. Otherwise it will forgo the attraction it still holds for the many Madagascans who would like commonwealth status, and are advocating some kind of round table conference that would revise Article VIII (the French Union article) of the French constitution. The importance of this week's debate on an amnesty is that it affords a first small indication of a public grasp that changes are called for. The brake on progress is reluctance to go faster, anywhere, than France can go in Algeria.

Meantime, new ideas are pouring into the island with each extra month of French hesitation and delay. The news that is exciting opinion comes not only from Algeria and West Africa but from Indonesia. Poor economic conditions could aggravate matters; at present the plateau is suffering from floods and the south from a serious drought. If the Madagascans have to wait long for fulfilment of some of their aspirations, their ancestral ties with Asia may begin to count. Few, if any, are aware of the danger an overpopulated Asia could hold for an island which has only eight inhabitants to the square kilometre. There is a warning for them, did they but know it, in the Indian wave that has already spilt itself in Mauritius. Were France less taken up with problems nearer home, and better able to pay more attention to its forgotten island, it could almost undoubtedly keep a footing in the Indian Ocean by means of links with the Madagascans; for these are at present drawn as much by Christianity and co-operation with Europe as by any call from Bamako or Bandung.

First Thoughts on an Arab Union

FROM OUR SPECIAL CORRESPONDENT IN CAIRO

THE spy story about King Saud's cheques (which, at first, aroused more laughter than anger here) stole most of the headlines from the simultaneous announcement of President Nasser's new cabinet for the United Arab Republic. Yet the list is worth scrutinising. Numerically speaking, the Syrians do quite well; they have 14 seats to the Egyptians' 24; this is a much bigger proportion than the size of the respective populations would warrant, and is no doubt a sop to Syrian pride. Yet it is not a large one as sops go; eleven of the 14 Syrians hold office for Syria only, two are vice-presidents without portfolio, and the only Syrian holding an office that handles joint matters is Sayed Salah Bitar, covering Arab affairs. The joint ministries of prime significance—defence, foreign affairs, industry, propaganda and education—are all retained by the Egyptians who held them in Egypt's former cabinet. Indeed, there has been only one major change in the Egyptian team; Dr Hassan Zaki, the able financier who has been handling the talks with Britain, goes to the ministry of finance instead of Dr Abdel Moneim Kaissouni (who held office throughout the financial deals with iron curtain countries). The point of chief significance in the Syrian list is the omission of Sayed Khaled el Azm and General Afif el Bizri, the two major architects of Syria's agreements with Russia.

To draw deductions about foreign policy from these changes would be rushing it. The one hard fact at present available is that the Egyptians have got the Russians to agree to amend their agreement with Syria so as to bring it into line with Egypt's own. The significant change entails agreement that the entry of Russian experts shall take place only by mutual consent; the original Syrian agreement left it to Russia to decide what experts to send to inspect a project.

Damascus, whether out of relief or to impress its visiting president, seemed to give the new arrangements a louder welcome than did Cairo. After a week of celebrations there, President Nasser had to tell the Syrians to be done with rejoicing and get down to work again. In Cairo there was less need for a cold douche of this kind. There were demonstrations, of course, but they did not seriously interrupt work. The main response to union seemed to be a mixture of gratification and puzzlement: only among a few is there true enthusiasm for the greater Arab unity which for so long has been a vision and has now suddenly become a not fantastic goal. To most Egyptians it seems perfectly reasonable that all Arabs should want to hitch themselves to President Nasser's chariot. Union with Syria has been accepted graciously, but except among the idealistic and the ambitious, the reasoning is roughly along these lines: "Of course the Syrians—and the people if not the present governments of the other Arab states—should want to join us, and equally certainly as Arab brothers we will accept them—on our terms. We must wait to see what the benefits for us will be." Newspaper reports of celebrations in Damascus are read with pleasure and amusement but without surprise. The president is receiving no more than his due.

★

Even to those who now see dreams of Arab strength materialising, the suggestion of union between Syria and Egypt was at first slightly disconcerting. When the proposal came from the delegation of Syrian officers President Nasser was tempted by the apple that was offered, but afraid that it was too big to bite while Egypt is only at the beginning of the road to solving its own gigantic problems. Syria's unsettled state was also a discouragement to him. He therefore set terms that were sufficiently high to make it unlikely that they would be accepted. When the Syrian officers, after all-night debate, accepted them, he was placed in a gratifying but not unembarrassing position: if he refused union now, there was a risk of losing all influence over Syria. Therefore the union was on. And although the Egyptians at first found the idea strange, they had sufficient faith in their president to believe that he knew what he was about. Once the marriage was announced, the press and radio went to town in praise of Arab unity, which is now presented as the one true goal of every Egyptian.

Outside the ministries, where heads of departments now have to translate union into practical terms, and are slightly overawed by the tasks ahead, there is as yet very little effort to analyse what it means in practical terms; instead the public is told repeatedly that the deep wish of its heart is being fulfilled. One newspaper, *Al-Akhbar*, ran a sort of quiz: after Yemen, who next? Clearly, the heart's desire would be one of the oil-producing states; the violence of the attack on Saudi Arabia therefore surprised people. But they believe the door to union is still not closed on King Saud.

For the moment, the policy is to do no more than make it clear that any Arab state that wishes to join or federate with the United Arab Republic is welcome to do so, but that it must come in on the Republic's terms and not its

own. The openness and even the arrogance of this attitude may be better psychology than trying to inveigle or tempt other states in. The goods are disarmingly on show; if they were hidden behind blandishments, Egypt's neighbours might be more suspicious. The Egyptian government has sore memories of trying to wrap its tentacles round the Sudan; it is determined to try and avoid repeating earlier mistakes.

Both countries—but particularly Syria—will have to make considerable adjustments. For instance, it is thought that most of the capital that wants to leave Egypt has already done so and that liberalising Egyptian currency control is not out of the question; yet the earliest date at which financiers expect to be able to attain a common currency is three years hence. As to customs duties, Syria is expected to be the one to make the alterations. In Cairo, the broadcasting studio has a notice pinned over the microphone, "This is the United Arab Republic broadcasting from Cairo" in order to remind announcers to give Cairo radio its new status. And the Egyptian security chiefs who have been enjoying a relatively quiet life in the last year are not altogether happy at starting all over again in a country as unsettled as Syria. But, all told, Egypt's attitude is almost philanthropic: its duty as an elder brother is to put Syria straight. Syrians are no doubt thinking just the opposite.

Marxist Minister in Ceylon

FROM A CORRESPONDENT IN COLOMBO

MR PHILIP GUNAWARDENA, Ceylon's minister of food and agriculture, and the chief Marxist in Mr Bandaranaike's coalition government, has suffered his first major reverse. A spirited protest by right wing members of the cabinet has forced the withdrawal of an important order that he had made on the purchase price for paddy (unmilled rice) from cultivators. In recent years, Ceylon's rice growers have been receiving a guaranteed price of twelve rupees per bushel of paddy under a government subsidy. The food minister recently issued an order stipulating that only ten rupees would be paid in cash, and that credit notes, on which fertiliser and other requisites could be bought, would be issued for the balance of two rupees. No part of the credit note could be negotiated for cash.

Mr Gunawardena's intention was laudable: he felt that this compulsory use of manure would step up rice yields. But the order was ill-timed. Owing to drought and flood, cultivators in many areas have been having a lean time and were in no mood to accept willingly a cut in their cash receipts. He thus played straight into the hands of the right wing which had been waiting for an opportunity to give him battle. The right wing claimed that the cabinet had authorised the minister to pay ten rupees in cash only to those rice growers who wished to buy fertiliser, and so on, with the balance, and that he had not been empowered to force manure and mammoties down the throats of all the farmers. There were demonstrations in rice-growing areas, some of them perhaps encouraged by right wing critics of the minister, and a few hundred demonstrators who came to Colombo even turned the tables on a group of his dockworker henchmen who came to jeer at the goiyas (farmers).

At a meeting of the cabinet, Mr Gunawardena sat silent and accepted the decision to quash his order. Mrs Wijeyewardene, Ceylon's only woman minister, who had led a march of cultivators, claimed that: "Philip's face is in the mud." Later, in the House of Representatives, Mr Gunawardena made an angry speech, alleging that the demonstrations against his order had been engineered by paddy blackmarketeers, and casting aspersions on some of his cabinet colleagues.

Mr Gunawardena is, however, not the only member of the cabinet guilty of criticising his colleagues. In recent months, it has been the fashion for some ministers to make speeches critical of the actions or statements of others. The Trotskyite Leader of the Opposition, Dr N. M. Perera, who is somewhat paradoxically the leading authority on parliamentary government here, remarked recently that the convention of collective cabinet responsibility had gone by the board.

The paddy price issue brought to a head the conflict of views between Marxist and moderate elements in the government. Key figures in the moderate or right wing group (which is the larger element) have been giving public warnings against the dangers of a totalitarian approach to a socialist state. The reference was obviously to Mr Gunawardena, who appears to have gained some followers from within Mr Bandaranaike's own Freedom Party, the chief group in the coalition.

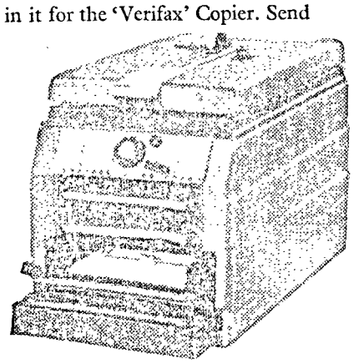
★

The right-left conflict was reflected at the annual conference of the Freedom Party. There was considerable sniping at Marxists. Mr Bandaranaike, whose personal prestige remains high, was able, however, to keep the meeting well-behaved. His role as the leader of a heterogenous team has obviously become more difficult lately, particularly since some of his ministers are not content to confine their differences to the cabinet room but insist on airing them publicly. His precise position in the current conflict is somewhat puzzling. In private conversation, some of the right wing members of the governing party will admit to dissatisfaction that Mr Bandaranaike has not been "tough enough" with Mr Gunawardena.

While the left wing emphasises socialism and the right wing democracy, Mr Bandaranaike is inclined to stress both socialism and democracy equally when he interprets his party's affirmed policy of democratic socialism. He has stated that this is a time of transition, and that many changes, economic and social, are inevitable. His coalition came to power in April, 1956, on a manifesto composed of nationalist and socialist proposals. The initiative for implementing the nationalist segments came from the right wing, while the left has provided the sponsorship for most of the radical measures in the economic sphere.

In the months immediately after the election of this government, the nationalist fervour was predominant, and it was in this mood that the legislation for making Sinhalese the State language in place of English was accepted. Later, the initiative passed to the left, and Mr Gunawardena was able to have his controversial paddy lands bill passed without too drastic amendments. Now he has suffered a reverse, but on an issue on which his stand could not be easily made to appeal to the peasantry, even to the tenant farmers who would gain from his paddy lands legislation. But to judge by the speech he made in parliament a few hours after the cabinet had decided against him, the minister does not seem to have been daunted.

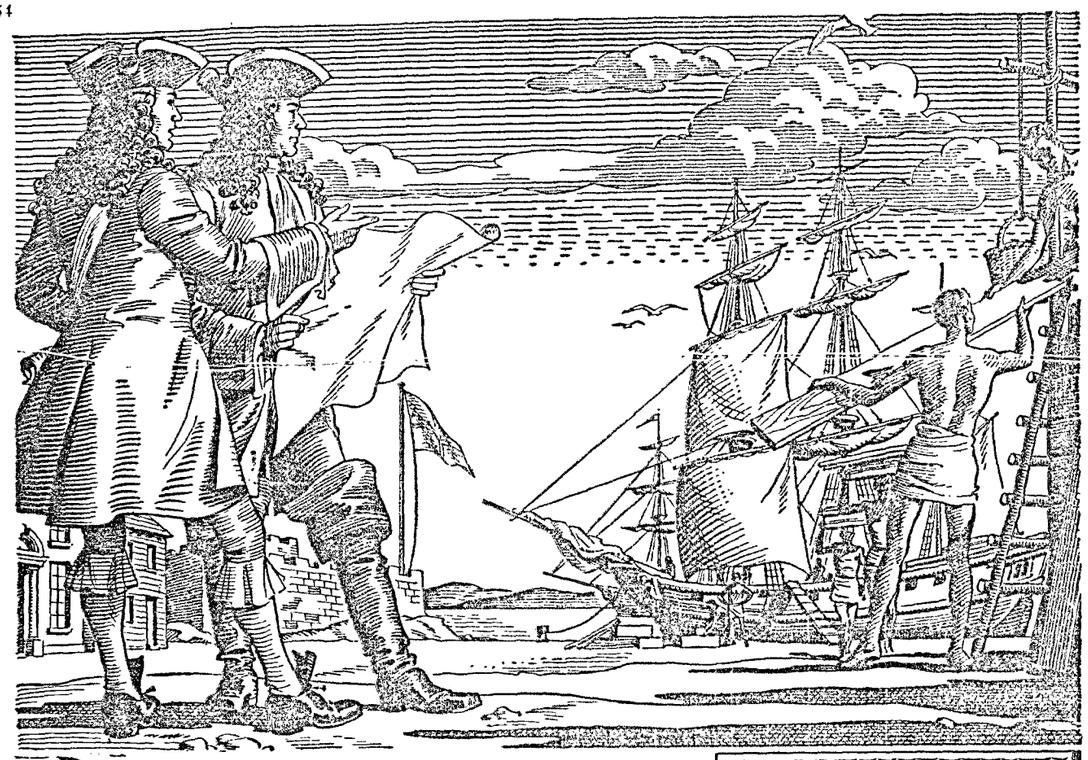
This copy typist never makes a mistake



THE secret of this copy typist is that she never types any straight copy work. She uses the Kodak 'Verifax' Copier. It's not only seven times faster than typing, it is always accurate to the last detail. There's no need for checking.

Copies made with the 'Verifax' are facsimile copies, made on inexpensive paper. In normal use the 'Verifax' can save its cost in as little as two months.

Anyone can learn to use the 'Verifax' in five minutes. It is clean, self-contained and takes up little more desk room than a typewriter.



Whatever your business—no matter how big or small, there's room in it for the 'Verifax' Copier. Send for details today.

KINGSTON: the capital of Jamaica, owes its birth to the earthquake which almost obliterated Port Royal in 1692. The damage was so extensive that a new town was planned and a 200 acre site purchased for £1,000. This town—Kingston—progressed slowly at first, but the fire of 1703, which again ravaged Port Royal so disheartened its inhabitants that they moved in great numbers to Kingston which from that time prospered. By 1716 it was the largest town in Jamaica and a centre for the island's trade, and in 1872 it became the seat of the Jamaican Government. Kingston has had to withstand many disasters, culminating in the earthquake and fire of 1907. But like the phoenix it rose again and again from the ashes, and today, with a population of about 300,000, Kingston remains the chief city and main port of Jamaica, destined by its situation to play a leading part in the island's ever-expanding economy.

Business men who require information on current commercial conditions in Jamaica are invited to get into touch with our Intelligence Department, 54 Lombard Street, London, E.C.3. Up-to-date reports from our branches in Kingston and elsewhere in the island are readily obtainable on request.

BARCLAYS BANK D.C.O.

THE BUSINESS WORLD

Towards Whose Goal?

"Naturally, my purpose will be that this sum for the nationalised industries, with other borrowing by the Government, should be successfully absorbed by the public during the year—that is, draw in real savings and not depend on inflationary finance. But in the end, neither the nationalised industries, nor the Government, can borrow, except on a purely inflationary basis, more than the nation is able and willing to lend."

WHEN Mr Macmillan, in his budget speech of 1956, announced that the long-term capital requirements of the nationalised industries would be met out of the Exchequer, rather than by the issue of Treasury-guaranteed stock on the capital market, he did so as a temporary measure, "only for two years." In practice, his measure has lasted only eighteen months plus : the first advances direct from the Treasury were not made until after the Finance Act of 1956 became law, and powers to do so were due to lapse at the end of this month. A two-clause bill that had its unopposed second reading in the Commons this week will extend these powers until the end of August, completing Mr Macmillan's two years. But it has come as a reminder that the Government is committed to decide, by budget time, how nationalised industries should be financed for the future.

On the surface, this is simply a matter of convenience : the convenience of the authorities in managing their open-market policy, and the convenience of the industries concerned in raising their money on the most advantageous terms. But it also re-opens the vexed question whether any independent economic criteria can practically be applied to the vast capital demands of industries that are by nature partly insulated from ordinary commercial compulsions.

The present two-year expedient was largely a matter of the Treasury's convenience. Growing demands for new capital from the nationalised industries, like those from the local authorities, had been embarrassing the authorities in their ordinary funding operations, and hence hampering their attempts to maintain a taut monetary policy. The local authorities had been diverted from the Public Works Loans Board towards borrowing on the capital market without Treasury support ; the nationalised industries were already in the market, but with a guarantee. They satisfied their requirements in the first place by borrowing from the banks : at a time when other borrowers were under restraint, these industries' overdrafts rose steadily until such time as the Treasury found it convenient to allow a new issue of, say, gas or electricity stock. This was inconvenient for the banks ; the Treasury found it inconvenient to fit these issues into their own programme of borrowing, re-financing, and funding ; and to the extent that the issues were fitted into the Government's whole open-market operations, the actual terms could be inconvenient to the borrower, the nationalised industry concerned. Moreover, the stock was not only officially guaranteed but officially "supported"; the big issues were always under-subscribed by the public, and the departments had to take up large amounts of the stock, financing this by borrowing on Treasury bills. That automatically increased the banks' liquidity ratio and slackened Government control of the credit base, until such time as the slack could be taken up by further funding : as Mr Macmillan put it, "kicking the ball through one's own goal."

His expedient removed most of the inconvenience —at least to the banks and the Treasury. These industries' overdrafts are now limited to their normal requirements of working capital ; their spending on fixed investment is covered monthly by advances from the Treasury, which have to be repaid as 25-year annuities at a rate of interest reckoned by the Treasury to be suitable for long-term borrowing of this kind. The banks are freed from an embarrassment. The Treasury can arrange its terms and time-table of re-

financing and funding as it thinks best. The seven nationalised industries concerned probably find it fairly convenient, too, though enthusiasm differs; they had at least a little influence upon the terms and length of their stock issues, and some regret the complete inflexibility of their present powers to raise money, "only very short or very long."

But the device of bringing the nationalised industries direct to the Exchequer had only a tactical effect upon the Government's control of the credit base; and the extent to which advantage of it was taken depended entirely, as before, upon the vigour and success of official funding policy. Advances to these industries have to be covered, as the official "support" of their stock issues had to be covered, by an increase in the floating debt, until such time as the public can be induced to buy equivalent gilt-edged stock. Mr Macmillan's stated purpose of drawing in enough real savings fully to cover nationalised investment and other public borrowing has not, in practice, been achieved—some people would say not even sought vigorously enough. Many factors have affected the Government's funding operations during the last eighteen months; there are different opinions about how successful it has been and how much more successful, in the circumstances, it could have been. But certainly it is not easy to argue that the change in the method of financing of nationalised industries has greatly affected it one way or the other.

In practice, moreover, this change has had no effect upon the Government's control of the investment programmes of these nationalised industries, or upon the extent to which they are covering their capital expenditure by self-financing. It was never formally meant to; though Mr Macmillan did feel that "if one actually presses the fee oneself into the piper's hand, one has a better chance of influencing the tune." But his successor, last September, chose to influence this tune with the existing, well-worn soft pedal: though he stabilised total public investment in terms of money, Mr Thorneycroft's restrictions on nationalised investment were exerted through the usual departmental restrictions upon the industries' forward investment programmes. The periodic review of these programmes, by the ministries directly concerned and then by the Treasury, was always a "physical" planning exercise; the 1956 change in financing merely "faced the reality."

IN deciding how the nationalised industries should be financed in future, the Government has to consider not merely the method as it is today and as it was before. Are there further alternatives that might apply to the investment claims of these industries something more like the same market criteria that other industries have to satisfy? One has often been advocated: this is to send them back to the capital market to borrow without a Treasury guarantee and, what is more important, without official support. It was put forward by the Herbert Committee, some of whose other suggestions have since been adopted in the reorganisation of the electricity industry; two years ago, Mr Macmillan himself wondered if it ought to be "the ultimate aim . . . perhaps electricity and gas might be the pioneers." Another alternative has sometimes been put forward: this is the issue of some kind of non-voting equity in the nationalised industries, perhaps carrying a guaranteed minimum rate of dividend with the chance of something over and above that, or guaranteed as to repayment with variable interest rates.

Mr Macmillan felt then, however, that the nationalised industries had at that time not "a cat in hell's chance" of raising their money without official guarantee or support. They cannot pledge their undertaking, which is the state's, as security—though, equally, one could not conceive of their being allowed to default, so that some Treasury guarantee, even if formally absent, would still be implied. Moreover, some of the nationalised industries are exceptionally highly capitalised: could their immense demands be privately underwritten and absorbed? The seven industries brought within the budget in 1956 (coal was already financed direct from the Exchequer) were reckoned to need some £700 million within two years: electricity alone, at present, may need to borrow some £150-£200 million a year, and its requirements are rising.

Even more fundamental difficulties, arising from the statutory nature and present circumstances of these industries, confront the project for some form of equity—and indeed to some extent question the whole underlying idea that they can be made to compete for capital resources "on equal terms" with private industry. They are, constitutionally, required to "break even" after covering all relevant costs and interest on their fixed-charge capital, not to make surpluses; and this over "one year with another," not in any particular year. In practice, moreover, some are subject to formal or informal Government control of their prices. It is not easy to see how any "equity" investor could take a chance on his interests being preferred, by public corporation or minister, to those of the consumer-cum-voter—who is the ultimate owner. Given their present operating rules, indeed, it is questionable whether the open capital market could ever assess these nationalised industries realistically and "fairly" beside private industries competing for the country's available capital resources. Those operating rules could be altered. But it is as well to realise that they would need to be, and with them the whole concept of the nationalised public corporation; a financial formula alone would not serve.

The most likely result of sending nationalised industries to the market without official support, indeed, would probably be that some of them would not be able to raise the money. It is arguable, indeed, that this ought to be the object in dealing with some nationalised industries—say the Transport Commission, for whose parlous current finances special arrangements, over and above the ordinary Treasury advances, have had to be made; but the Minister of Transport might not altogether agree. Electricity, alone, is perhaps an industry of such redoubtable progress, nationalised or not, as to attract the investor. But whether the investor's judgment of the investment that nationalised electricity needs would be better than the Government's is another matter.

Failing these more fundamental changes, how does the present system of financing compare with the old? When Mr Simon, in this week's debate, said that it had worked better, he was talking of its convenience to the authorities; this cannot weigh much with the impartial observer. There is something to be said, indeed, for making their job inconvenient; if the need to issue nationalised stock had nudged the authorities into issuing stock before they would have done—and if this had really been sold to the public and not merely taken up by the departments—the old system would have made monetary control the more taut. In practice, however, the authorities in any case create a new stock, whatever its name, when there is a public demand. The industries did, certainly, have a little more say about the terms of their own financing then, as compared with the present system, though some greater flexibility about terms and length of borrowing might not be impossible under the present arrangements. And if one were hoping eventually to move towards the issue of stock without guarantee or support, a return to issuing it with both could be a first step. But there would be very little in the halfway step. The success or failure of the Government's policy of funding has not been affected greatly either way. Neither of the formulas yet tried offers hope of any more competent control of nationalised investment—or much strengthens the possibility of applying "impartial" criteria to this. Nor, incidentally, does the appearance of these borrowings in the Exchequer accounts place any real compulsions on Mr Heathcoat Amory to achieve "overall balance" by a bigger current surplus; his budgeting has to be addressed to the condition of the economy, not to the convention of the figuring.

Shell Kernels

Hermit crabs are soft skinned and creep into the empty shells of crustacea and molluscs for protection; private companies can find immunity from a surtax direction in the shells of public companies.

SHELL companies have nothing to do with oil. They are corporate entities empty of their trading assets; they hold only cash or near cash assets in their balance sheets and otherwise have nothing except a stock exchange quotation—which is essential. Usually shell companies are small; the rubber share market has produced a considerable number of them. But the supply is fairly readily expanded, since vacant possession can be offered by any company that is prepared to sell its trading assets; and there is no sign that the demand for such holes to creep into is slackening. In a specialised but now fashionable market some brokers produce lists of shells for sale while others know of prospective buyers.

What is the object of the exercise? The typical transaction starts with a cash bid by an unnamed principal for the equity of the shell, the principal usually being a director-controlled private company. The offer is of cash for cash—slightly more cash than the shell contains—and is often, but not always, made for 90 per cent of the equity—a proportion, once acquired, that gives the bidder the opportunity to buy the remaining 10 per cent compulsorily. As the bid hinges on the fact that to avoid a surtax direction more than 25 per cent of the voting equity has to be held by the public, the bidder may choose to bid for less than 90 per cent, and leave the minority shareholding in. Or he may buy all the capital and part with the necessary 25 per cent of it later.

The bid price for the shares is necessarily above the break-up value of the cash assets (less non-distribution relief) per share. Otherwise liquidation would be an acceptable alternative. In a recent lecture to the London and District Society of Chartered Accountants, Mr G. H. Middleton put the normal extra payment at between £8,000 and £12,000. This premium would include the cost of stamp duty on the share transfers. The smaller the issued capital of a shell, naturally, the bigger is the net premium. The buyer can afford a premium over break-up values because he avoids having to find the distributed profits tax that would be payable in a liquidation.

Having secured control of the shell, the private company asks for and gets a suspension of its stock exchange quotation. The memorandum and articles of association are revamped, giving the buyer the opportunity to fit his business snugly into the shell. Its name, as well as its board, may well be changed. The shell then buys its new owner's private company at its net asset value (including goodwill). If, as usually happens, the shell has not enough cash to meet that purchase in full, the balance of the price is satisfied by an issue of its shares to the vender, and occasionally, by an

unsecured loan. Then a requotation of the shares of the newly inhabited shell is secured and some shares —enough to establish a market and to provide the necessary minority shareholding—are sold to the public.

In such a transaction, cash is being swapped for cash and scrip for scrip, and there is no need for the promoters of it to seek consent from the Capital Issues Committee. That is a considerable attraction. Recently there have been deals of this kind designed simply to avoid the CIC's gauntlet. The companies recently acquired by Olds Discount and Radio Rentals were not empty shells ; they were shells filled with the juicy nut of much needed cash, which might not have been allowed to the purchasers by the CIC. In effect, these were transactions in which cash was bought at a premium. Mr Heathcoat Amory is now brooding on ways to bring to an end this legal avoidance both of the control of borrowing orders and of the curb on hire purchase financing.

Shells which really are shells with no money inside them are bought for quite different reasons. A few are bid for simply because they provide a convenient way for a company whose assets are tiny, profits small, or record erratic to get a stock exchange quotation. That route is not as attractive as it was, for the Stock Exchange Council now insists on an advertisement of particulars when the nature of a company's business is changed. There is little in such a purchase financially though the quotation fee is saved. Many of the prospectuses so published, though they do not have to be extensively publicised, are full of detail. On the other hand, requotations have been given to shells which have no ten years' record of profits to publish, simply because the shell's money has not been reinvested.

BUT most shell transactions have a more complicated purpose than this. The heart of the matter is that the owner of a director-controlled private company wants to turn it into a public company to ease the burden of surtax and estate duty—and he wants to do it in such a way that he avoids paying large sums in profits tax. Almost without exception, recent shell transactions have secured that not more than 74 per cent of the equity remains in the hands of the controlling interest. Permission to deal and dealings on a recognised stock exchange mean that the Estate Duty Office will value the shares for death duty purposes at the market value and not on the value of the net assets which would be imputed to them if the deceased himself had controlled the company—a method of valuation usually less favourable to the estate and always a matter of argument. A stock exchange quotation, dealings and a public stake of more than 25 per cent of the voting power of the equity ensure that the company's undistributed profits cannot be subject to a surtax direction by the Inland Revenue. Shells have become more fashionable since Mr Thorneycroft last summer rolled up the "Cripps umbrella" which protected controlled companies from such a direction. Controlled companies that seek a public quotation must, however, still secure a surtax clearance on their past earnings.

Under the shelter of the umbrella, many such companies piled up cash. The shell provides the means of getting hold of that cash and capitalising future profits without attracting tax. It is a device that combines fiscal advantage with a considerable aesthetic satisfaction. The assets in the private company are in effect exchanged for shares with a market price in the shell. Part of the purchase price can be met by the vendor making an unsecured loan to the shell company—unsecured for fear of the control of borrowing order. The loan, often non-interest paying, can then be repaid after the lapse of a few years in instalments out of the earnings of the new business, thereby turning its income into capital and avoiding tax on the part of the lender. Unsecured loans of this kind are usually accompanied by the warning to shareholders that, in view of the indebtedness to the vendors of the private company, dividends are likely to be "conservative."

A shell can also be used to float off an entirely new business—usually an investment trust or a small industrial holding company. Its cash can be used to purchase investments, or its unissued shares can be exchanged for shares in other concerns. On requotation, it is possible for such companies to state in their prospectuses that pending the investment of the company's funds the directors can make no forecast about future profits and dividends. Recent experience of some small holding companies, using their share capital to extend their tiny monarchies into unrelated fields, has not been impressive. Not all empire builders are successful.

A shell company must always be left with minority shareholders. The Inland Revenue does not seem to mind whether that 25 per cent minority consists of a few friends of the directors or of a rump of the shareholders of the original shell so long as dealings take place in the shares. A minority shareholder has only himself to blame if the shell company under the new control turns out in a way that does not suit him. So far, most minority shareholders have done reasonably well: most of the businesses that have been put into shells have a genuine profit record, pay dividends and there have usually been fairly active dealings in their shares after requotation. But the shareholder who stays in after the bid not knowing into what his shell company is to be transformed is a gambler clutching at the straw of rumour. He is gambling that his second chance of selling out—after requotation is granted—will be better than the first. And there are those also who take up shares in the company in its new form when they come on offer. That too is their own gamble for they ought to be able to read a prospectus as well as the next man. They must know they are gambling on a management about which they know little and over which they have no real control. They must suspect that the new management, since it would be liable to surtax on any dividends it receives, will run the business in the interests of the majority holders.

BUSINESS NOTES

IN THE MARKETS

New Stock Exchange Year

THE new Stock Exchange account that began this week marks for many firms the start of a new trading year. It happens also to mark a pause in the recent bullish tendencies of the gilt-edged market and bearish tendencies of the industrial share market. Despite the heavy call on the Shell issue industrials have done better than holding their own, *The Economist* indicator this week rising 3.3 to 176.4. The already wide spread between the yields on the two sides of the market has not this week grown any wider. On the gilt-edged side the two outstanding factors have been a pause in the recent substantial buying of the shorts by industrial companies with surplus cash, and the partial failure of the Belfast issue.

Belfast Corporation came to market for £7½ million with a 6 per cent stock 1973-75 at 99½ of which £2¼ million had already been taken firm on underwriting terms. The price seemed approximately in line with the market but underwriters had to take up 8 per cent of their commitments. The stock opened at ½ discount and quickly moved to ¾ discount. There are a number of technical reasons why the market did not take easily to the new stock. But the basic fact seems to be that for the moment at least there is a surplus of these high couponed medium-dated gilt-edged stocks. Few experts really suppose that the "bull market" in gilt-edged is at an end. The consequences of Belfast may indeed be almost the exact opposite of the obvious. The issue may lead to an early departure from the 6 per cent coupon which has in recent months been considered essential for corporation issues.

Nor can anyone suppose that the pressure of issues on the industrial side of the market is at an end now that the Shell stock is £3 paid. South Durham Steel and Iron Company's re-financing is not the only big issue on the stocks. The South Durham terms show what a steel company coming to market now has to concede. The company will offer £8 million of a convertible 6 per cent second debenture (1973-83) at the surprising price of £95. This is 2¼ points below the price at which the similar convertible stock of Colvilles stood at the time when the South Durham terms were announced. As a partial hedge against nationalisation an option is given to convert half the stock on March 31st of any of the five years 1960 to 1964 at par. At the issue price of 95 that amounts to an option on South Durham ordinary shares, now standing at 20s. 3d., at 19s. Apart from that option the yields on the new debenture of 6.3 per cent flat and 6.4 per cent to redemption at the latest date are necessarily high. It can fairly be said that the threat of nationalisation is imposing a substantial burden on those steel companies that have to raise money.

Shell's Achievement

AFTER the anxieties of the £43 million rights issue by Shell Transport and Trading Company—the biggest industrial financing operation that the London capital market has ever handled—and despite whatever anxieties must still be felt by those whose issues are still to come to a market depleted of that large sum, the Shell issue itself was a notable success. For the offer of 8,177,204 £1 ordinary shares at £5 10s. per share subscription rights were exercised over approximately 7,940,000 shares. For the small balance, applications for excess shares came from 75,000 holders and were for 5,250,000 shares. Since the rights never fell to less than 10s. per share, it is not surprising that the number and size of excess applications should have been limited only by the applicants' bank balances. The basis on which the company allotted was, however, strange. Applicants for up to three shares received full allotment, and above that figure three shares, whatever the number applied for. The consequent large numbers of sales of three shares has caused some headaches, and brokers have been doing what they could to amalgamate selling orders into slightly larger blocks. But as the stock is partly paid and free of stamp duty the idea of quoting less favourable prices for these small oddments was not sustained for long.

The even bigger Royal Dutch issue made in New York and Amsterdam had already been a similar success. Holders exercised their rights to the extent of no less than 99.79 per cent of the issue. In that issue there were no excess applications. In the terms of the prospectus the underwriting syndicate headed by Morgan Standley sold the few shares not taken up for the benefit of the company.

PERSONAL SPENDING

Is Consumption Falling Off?

THOUGH the volume of retail trade hardly rose at all during January, this should not necessarily be taken, as the Board of Trade advises, as an indication of any longer-term change in the rate of personal spending. Sales through the shops in January—and in February—are normally quiet, they can be affected by differences in the weather, and the start of the winter clearance sales this year also happened to fall within the recording period for 1957.

PERSONAL SPENDING
(£ million)

	1956			1957		
	April–June	July–Sept.	Oct.–Dec.	April–June	July–Sept.	Oct.–Dec.
Food	1,086	1,084	1,166	1,110	1,146	...
Drink	213	230	265	225	242	268
Tobacco	226	249	246	241	254	255
Housing	287	282	283	306	301	315
Fuel and light	142	117	157	141	121	...
Household equipment	208	224	283	226	246	300
Clothing	336	320	401	354	328	406
Other goods & services	818	879	809	846	918	...
	3,318	3,395	3,609	3,449	3,556	...

But the two per cent rise in the value of retail sales last January, which was mostly accounted for by higher prices, was lower than the 4-5 per cent increase recorded for most of last year, and even allowing for the Board's qualifications would seem to confirm the impression that a general slowing down in the rate of growth in personal spending set in towards the end of last year.

Sales by clothing and footwear shops in January were

down by two per cent in value and nearly four per cent in volume on January last year, and department stores' sales of these articles were down by rather more. Total personal spending on clothing and footwear, after rising by three per cent in volume in the first half of 1957, levelled off during the third quarter, and perceptibly declined in the last three months. Retail sales of household equipment during January, though displaying no minuses except in the returns of the department stores, showed a similar slackening in the growth of spending. Household goods shops reported a two per cent increase in their trade during the month, after a year in which, with prices remaining fairly constant throughout, sales increased by progressively smaller amounts each quarter. The recovery that this trade enjoyed after the easing of hire purchase controls just over a year ago appears to have worked itself out, with sales running about 5 per cent higher than before the recession in 1955.

Food shops and the food counters in department stores, on the other hand, reported no significant change in trade. During January the value of their sales was about three per cent higher than twelve months ago, roughly the same as in 1957. Food consumption is generally a fairly steady element in personal spending, and in the first nine months of last year, when total personal spending was about 4 per cent higher than 1956 in value, and 1½ per cent up in real terms, food consumption rose by not quite 3 per cent in value and only slightly in volume.

. . . and Prices Also?

If personal spending has in fact begun to lose its buoyancy then price cutting, which has so far been only very sporadic, might be taken up more widely. The few reductions that have been made so far have nearly all been intended to stimulate buying. The Marks and Spencer's cuts, which were achieved as the result of economies in manufacture and distribution—without any paring of profit margins—and were only partly the result of lower material costs, have been followed by a quickening of sales. Many car dealers have lately been quietly raising their trade-in values for used cars as an inducement to buyers of new vehicles. And a few furniture and television retailers, who believe their sales are levelling off and are anxious to bring their stocks into line, have begun marking down some of their prices for the same reason.

But most manufacturers of goods bought by the public appear to be setting their hopes no higher at present than at keeping their prices stable. Until the trend of personal spending can be seen more clearly and they are through the present round of wage negotiations they are clearly unlikely to consider revising their pricing policies. The recent fall in basic material prices other than fuel—which has not stopped rising—has been confined in the main to the textiles, electrical machinery, and some food manufacturing industries. The cost of the new capital equipment that industry has been installing in the last two or three years has, moreover, yet to be recouped through larger outputs or increased labour productivity. Only a few firms—tyre manufacturers, for example, and Rootes, for its Commer and Karrier range of trucks—have yet announced price reductions as the direct result of larger production.

The prices of clothing and home equipment appear likely to be the most responsive to changes in the economy. Textile manufacturers have already begun passing on the benefits of lower material costs, but this has not yet spread to clothing manufacturers, whose sales have been falling off since the autumn. Prices of many items of household equipment are perhaps vulnerable because these retailers have always shown themselves most sensitive to changed conditions of trading. Most manufacturers of furniture do not fix resale prices and, while most television, radio, and other electrical appliance makers do, the retailer can usually find another way of killing the cat. If price paring should in fact become quite prevalent, industry's new power of enforcing resale prices through the courts might be put under some welcome strain.

ATOMIC HAZARDS

If it was Plutonium

Tuesday's dropping of a nuclear bomb on a farm house in South Carolina is the third known incident of its kind although there have been rumours of several others. In the first two cases the aircraft itself was involved in an accident; a B 47 bomber crashed in 1950 while carrying an A-bomb and last month another B 47 jettisoned its bomb into the sea after a mid-air collision with a fighter. What happened on Tuesday is reputedly the result of a relatively minor mechanical fault in the bombing mechanism, which places it in rather a different category.

Nuclear weapons do not explode on impact, as conventional high explosive does, as the high explosive parts of this bomb did on this occasion, destroying the farmhouse and injuring six people. But the fissile materials in the warheads are poisonous, handling and machining is always carried out by remote control and the consequences of scattering them around compare with an accidental escape of radium. Of the two nuclear explosives, plutonium is more dangerous than uranium 235. Although its natural radio-activity is less of a hazard than that of radium, the consequences of eating or breathing as little as one microgramme of plutonium dust are alarming. Plutonium does not pass through the body, but gets absorbed like strontium or calcium, into the bones and since it remains radioactive for several thousand years, even its relatively weak radio-activity can do appalling and irreversible damage.

When the high explosive segments of the bomb exploded on Tuesday, they apparently did not break the heavy casing around the charge too badly and there was no serious escape of radioactive material. An exceptionally heavy casing is an integral part of nuclear weapon design, intended to contain the explosion as long as possible in order to get maximum blast effect and in the case of some H-bombs, actually contributing fuel to the explosion. But this casing is not intended to be either fire or fracture proof, and there is no reason to suppose that the fact that in this instance it held was due to anything more than unusual good luck. The steps taken recently in Holland to track down the remains of a radium needle that had broken off in a child's body show the kind of decontamination problem that the authorities would have on their hands if a nuclear weapon was actually broken open in a crash, and particularly if fire broke out to carry plutonium particles downwind from the accident. It is an argument that applies even more strongly against the use of nuclear reactors for aircraft, where the quantity of fissile material is so much greater and the risk of fracture considerably higher.

A BRILLIANT NEW IDEA IN ARCHITECTURAL LIGHTING

More enjoyable working conditions, improved appearance and important economies are provided by a Lumenated Ceiling. Its clean, translucent surface diffuses light free of shadows, glare and high-spots. It also provides an attractive, contemporary ceiling for modernising old interiors. Lamps and fittings being screened don't have to be boxed or recessed, and no special finish is needed to the structural ceiling.

GOOD LOOKS WITH ECONOMY

The Lumenated Ceiling has an attractive appearance whether the light is on or off. It is easy to keep clean, its cost compares favourably with other forms of lighting and it is backed by a nation-wide maintenance service.

Please write for further information and technical details. Recommendations will gladly be made for individual installations.

IN THEIR EYES—THE SEARING GLARE OF RED-HOT STEEL

IN THEIR EARS—THE ENDLESS ROAR OF THE ROLLING MILL

MR. R. MARKS WORKS AT FIRTH-VICKERS, WHERE HIS FATHER ROLLED THE FIRST STAINLESS STEEL SHEET IN BRITAIN. TO-DAY FIRTH-VICKERS MAKE OVER 40 DIFFERENT KINDS OF STAINLESS STEEL.

These men may be changing your life

Scientific journalist J. Stubbs Walker reports from Sheffield on work that could prepare for space travel—or change your shaving habits. Pictures by Ivor Sharp.

TRASH OR TREASURE? Between finger and thumb, a white-coated laboratory assistant holds a grey and grubby lump no bigger than a hazel nut.

It may be valueless. It may be worth an industrial fortune. Almost certainly it is unique – a new kind of steel.

If it is trash the steel men will soon know. In the laboratories here in Sheffield (the home of very special steels for very special jobs) they will stretch it, squeeze it, heat it, freeze it, twist and tear at it, soak it in fuming corrosives. To prove that the grubby grey lump really *is* treasure may take longer. Sometimes years.

But whatever the tests prove, the steel men (a proud and individual race) consider it worth while. It "improves the breed" of steel. The hazel nut of experimentation could make it possible to build more powerful rockets, faster aeroplanes or – who knows? – space-travelling moons. Or it could alter the shaving habits of the world by enabling more bristles to be cut with every blade!

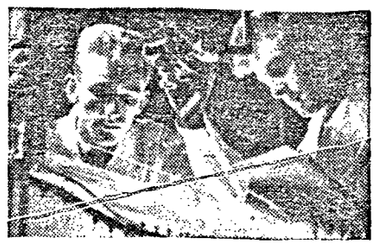
SMALL ORDERS MATTER JUST AS MUCH

Steel is essential for the speeds of tomorrow because conventional aircraft metals soften and crumble as they reach the heat barrier. Aircraft of the immediate future will be all steel – *special* steel. Thanks to the white-coated laboratory men and the sweating experts at the furnace, Sheffield has the metal now.

The striking thing in the steel business is the trouble everyone takes. One Sheffield firm produces 500 different specifications of metal. They have been making some of the world's toughest tool steel for a hundred years. Yet the tapping of a furnace is still an Event.

Each customer is an individual, even though his regular order is for only half-a-hundredweight of "difficult" metal twice a year.

THE ROOM WHERE NO CLEANER IS ALLOWED



The steel men achieve their advances in surprising ways. You may think of steel being tempered by heat; but the laboratories of United Steel are working on a stainless alloy that doubles its tensile strength by being *frozen* to minus 70 degrees C.

The steel laboratories are among the most advanced in Industry. Every new metal must be tested in a dozen ways. Most important is the amount of "creep" or deformation of the metal under load. It calls for tests which may go on literally for years.

Rows of creep-testing instruments are housed in a room where no cleaner is ever allowed. Delicate halfpenny-sized mirrors reflect light beams to measure changes in length in the metal as small as two-millionths of an inch. The careless flick of a duster could disturb the mirrors and ruin a year's work.

The endless roar of the rolling mills, the brain-jerking shock of multi-ton hammers all suggest an industry of brawny violence. But behind it there is a refined understanding of the meaning of milligrams, of the precise control of temperatures. Sheffield has always taken trouble over its steel.

This report was commissioned by the British Iron and Steel Federation, which believes that everyone should know the facts about steel, and the men making it.

Scientists at the Swinden Laboratories of United Steel study the behaviour of air currents in a perspex model of a furnace.

Precautions at Harwell

REPERCUSSIONS of the Windscale fire continue to filter down through the structure of the Atomic Energy Authority. Last weekend it was announced that modifications were to be made to the instrumentation of Harwell's Bepo reactor, which was the scaled-down pilot version of the two Windscale piles and is almost as old as Harwell itself. Like the Windscale reactors, Bepo needs at intervals to be heated up to release accumulated stresses in its graphite structure and its existing instrumentation follows much the same lines as that used at Windscale, with temperature readings concentrated towards the centre of the reactor. This distribution of thermocouples was counted as a contributory factor to the fire that followed one of these annealing operations at Windscale; the greatest heat was applied at the front of the reactor, where there were no thermocouples to measure it.

This is not a difficult matter to put right, nor are the somewhat inadequate arrangements for measuring the neutrons released when the pile is operating. Bepo is therefore not likely to be out of commission for long. But the reopening of the second, undamaged reactor at Windscale is a different matter. This was shut down immediately after the fire, and will not be started up again until the AEA has worked out a new method of tracing bursts in the fuel elements. The original machinery, the only moving part in the entire plant, consisted of a sliding scanner that travelled up and down the face of the reactor. The decision to install it was made only a week before the Windscale reactor was due to start up for the first time and then, according to Sir Christopher Hinton, only with grave misgivings. These proved fully justified. The scanner regularly jammed, especially after an annealing operation, and it was jammed and useless on the day that the fuel slugs in No. 1 reactor burst and caught fire. But it is not proving easy to find any more reliable alternative for a reactor already built and highly radioactive. The far more elaborate detection gear used in all new reactors from Calder Hall upwards are built in to the reactor structure during construction, and it would be impossible to add gear of this kind once the plant has begun working. Bepo may once again find itself being used as a pilot plant to see what is or is not possible at Windscale.

AIRCRAFT EXPORTS

Competition in Credits

THE Export-Import Bank is not a full member of the "Berne Union" of credit insurers because it is not fully in the credit insurance business. It is a friendly associate but it grants insurance only where it also grants credit. Moreover the objectives of "Ex-Im" are not fully and clearly commercial. Is it there in order to make the products of civilisation available to the underdeveloped countries on terms containing an element of charity? Or is the object to make sure that American firms get what business there is? There is a little of both in the bank's make up: and aircraft exports provide an example of the second—the competitive aspect.

A British aircraft manufacturer's ability to grant credit to a foreign buyer is governed by the terms on which the Export Credits Guarantee Department will underwrite the credit and transfer risks (though ECGD itself does not provide the credit), and ECGD terms are governed by the "Berne Union" understandings. Thus ECGD will not stretch beyond 5 years and much prefers 4 years; it will not even co-operate on the basis that the exporter himself carries the risk for a sixth year, for that would be encouraging a length of credit that the Berne Union members think unsound. Nor are special alternative techniques such as chattel mortgages suitable for aircraft that will cross international frontiers. ECGD likes a substantial payment on delivery, so that the amount to be insured and financed is less than the value of the contract. It does not insure in advance of the grant of the airworthiness certificate, and the risk of withdrawal of that certificate is for the exporter's account.

By contrast the Export-Import Bank insists on a 20 per cent payment on delivery and 20 per cent of financing from other sources. It often keeps within the five year period but has given a number of credits up to 7 years. Such exceptional deals as a chartering with option to purchase for two years, a moratorium period of three years and then a repayment period of five years have been used by the Americans and seem to non-Americans to point to distress selling.

Should ECGD Match "Ex-Im"?

SHOULD British finance attempt to match the generous terms granted to exporters of American aircraft by "Ex-Im"? The first-line life of an aircraft is about 8 years and the cost of credit plus insurance that has to be recovered during that life are high: ECGD's premium can be anything from 1 per cent to 7 per cent according to the risk, with perhaps 2½ per cent as a mean. A commitment fee of ¼ per cent to ½ per cent is charged by Air Finance for arranging credit, and for the bank credit granted against the importers' bills the charge is Bank rate plus 1½ per cent or 1¾ per cent per annum, payable of course on a reducing balance. Assuming about 20 per cent of the price to be payable on delivery and the balance over 4 years, these figures point to a total credit cost equal to about 16 per cent of the contract price. For the larger contracts where ECGD gives its insurance direct to the banks, retaining recourse against the exporter, the total cost is only slightly less.

"Ex-Im" charges anything from 5½ per cent to 7 per cent per annum. So on 80 per cent financing at 6 per cent over five years the cost to the buyer would be increased by about 12 per cent. The more important question is whether those smaller buyers of aircraft who demand more than five years' credit should be given it. If the "Berne Union" members are right in thinking that to do so would be bad business, the answer is obviously, No, even though collectively these small buyers make up a large part of the aircraft market, and a high proportion of any manufacturer's business consists of orders for three to six machines. But a production run that will be economic for the manufacturer could well depend on being able to give these small customers the credit terms that they can get elsewhere.

TRADE GAP NARROWS

No Change in Exports

AS is usual in the quiet trading month of February, imports last month fell more than exports. As a result the trade gap (the excess of imports, valued cif, over exports

and re-exports, valued fob) was only £11 million. It was the lowest gap in any month for more than ten years with the single exception of the dock strike month—October, 1954. However satisfactory this result, it is not quite the occasion for jubilation that some people felt at first glance it might be. The trade gap has shrunk since last year as

* Excluding repayments of silver bullion to the United States amounting to £7 million in 1957. † Provisional.

the result of the fall in commodity prices and shipping freights. Imports in the first two months of this year were 12 per cent less in value than in the same months of 1957, almost entirely because of lower prices. And that relief to the British purse must in part at least be offset by lower earnings elsewhere in the sterling area.

On the other hand, exports in these months were practically unchanged in value in the two years and so, too, were export prices. The British export trade seems to be on a dead-even keel with a year ago. But one hopeful figure appears on the export side in these preliminary returns, the highest monthly figure on record for shipments to the United States, if repayments of silver bullion are excluded. At £22.8 million, these shipments were 27 per cent higher than a year ago.

FOREIGN EXCHANGE

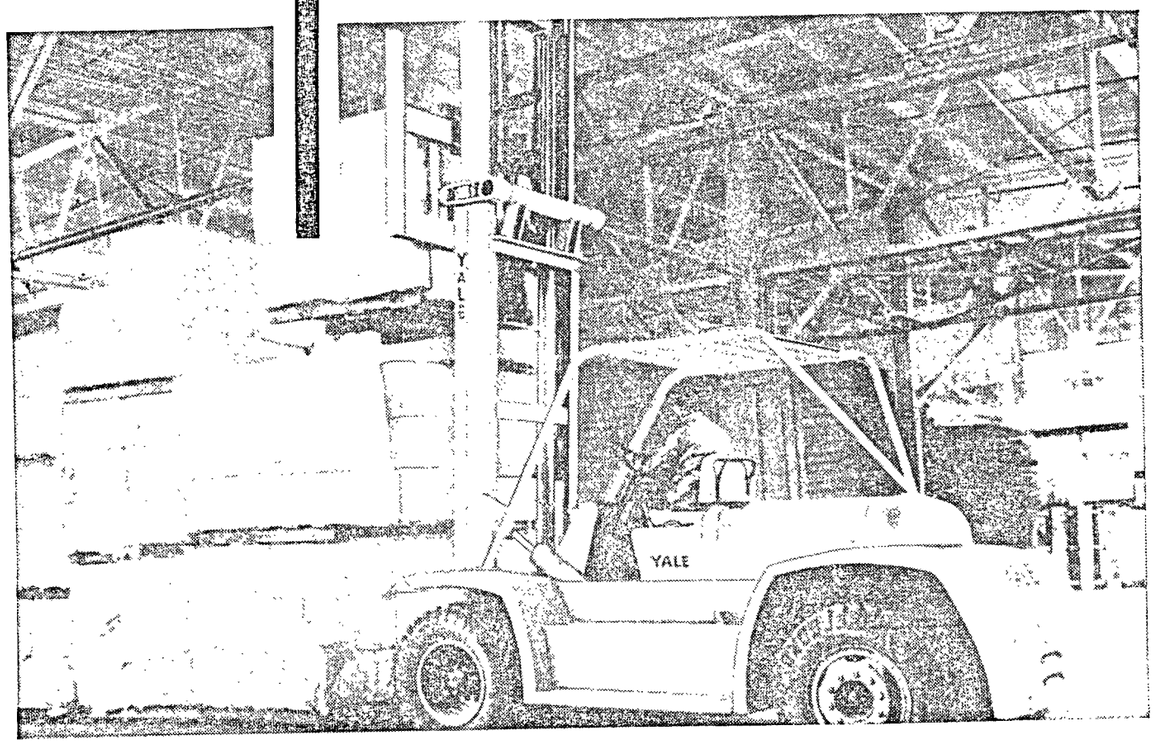
Peak for Transferable Sterling

A PERSISTENT demand for transferable sterling raised its rate this week to $2.7965, the highest rate for transferable since the unification of transferable accounts in March, 1954. The demand has come from the New York and Zurich markets. It has been fed by continuing Russian sales of gold against dollars which have then been converted into sterling in the transferable market. There is some evidence that the British Exchange Account has been intervening in the market in order to prevent the gap between transferable and official sterling disappearing altogether.

In the official market sterling has also been in demand this week and the rate which has been held at around $2.81⅜ would have risen beyond this figure but for official intervention. Security sterling has also been bid at $2.78⅞. The foreign markets in sterling banknotes have settled down after the temporary disturbance caused by the lifting of restrictions on the import of notes. In the most active of them all, Zurich, the rate for pound notes this week has been 11.98-12.03 Swiss francs as against the official market rate of 12.28¼, the difference being accounted for by the cost of remitting notes to Britain.

COVERED ARBITRAGE

Money Both Ways



THE New York Treasury bill rate has risen for the second week in succession, from 1.35 to 1.53 per cent, compared with the low point a fortnight ago of 1.20 per cent. Following this week's move, forward margins in the exchange market narrowed, by ⅛ cent to a discount of 2⅛-2⅜ cents on three months sterling; hence the margin on covered arbitrage in Treasury bills was virtually unchanged at $\frac{0}{16}$-$\frac{5}{8}$ per cent in favour of London. The up-turn in the American Treasury bill rate reflects technical, and possibly temporary influences. Last week, indeed, the Federal Reserve Bank of New York led a further cut in discount rates of ½ per cent; but even after these two opposite movements, the bill rate was still ¾ per cent below the discount rate. Another recent adjustment to cheaper money has been a cut in deposit rates paid by the big New York banks—which were made progressively more attractive as the bill rate fell. The rate on 30 days' money is maintained at the maximum of 1 per cent; that on three months' notice is cut from 2½ to 2 per cent, and on six months' money from 3 to 2½ per cent.

These alternative forms of investment of short-term dollar funds are too often ignored by many observers in the arbitrage calculation; and over-simplification leads to wrong conclusions. In fact the movement of short term funds is not all one way; and this helps to explain why Britain's official gold and dollar reserves are on balance not receiving any large boost from short term capital transactions for interest arbitrage. Thus before the cut in the rate, a movement of funds into three or six months' deposit in New York from London Treasury bills involved a loss of interest that was smaller than the gain from the discount on forward sterling (which will be bought); and even now a switch is profitable from a London deposit account to a New York account. Hence at one and the same time movements of arbitrage funds are profitable in opposite directions according to the form of the short term investment chosen.

Thus many banks in practice will choose to match their forward commitment to supply dollars to the American banks investing in London by a purchase of dollars spot, for short term investment in New York. Whenever the initial forward sale of sterling is matched in this way, rather than in the forward market, the favourable impact on the spot rate and on the British gold reserves of the original investment in London will be neutralised. The banks in practice have considerable leeway for matching operations of this kind, since the authorities allow them special limits of holdings of spot dollars against forward commitments, in addition to the limits on their free working balances of dollars. There may also be independent movements of short term funds abroad; the German banks in recent weeks have been offering attractive rates on foreign deposits.

It is in these ways that, by widening the forward discount on sterling, the inflow of hot money sets up neutralising tendencies. The effect on the leads and lags in commercial payments, on which some observers are seeking to pin the whole issue, is subsidiary; the big leads and lags are prompted by straight speculative considerations, and thus follow the state of confidence rather than interest margins and the forward exchange discount.

PROBLEM: *To meet the demand for more efficient high capacity load handling*

SOLUTION: **Yale High Capacity Petrol Trucks**

Provide more visibility . . . stability . . . and manœuvrability

New Yale High Capacity Petrol Trucks solve the problem of heavy load handling. They solve it safely, too—by offering an exceptionally clear, unobstructed view to the operator. Power steering, power brakes and separate inching control provide fast cycle operation. Low centre of gravity, big pneumatic tyres and broad lifting base assure greater load stability. Yale High Capacity Petrol Trucks are available in capacities of 15,000 to 20,000 lbs. with choice of fully automatic torque transmission, fluid coupling or standard transmission.

All Yale Petrol, Electric, Diesel and Hand Lift Trucks are available in currencies of the Free World. All are built to the same high quality standards, no matter where you buy them. Let your Yale Sales and Service Representative help select the Yale Truck best suited to your requirements.

MINTING GOLD

Profitable Sovereigns

THE announcement at the beginning of this year that new sovereigns would be minted to keep the Royal Mint's "hand in" has had an unexpected sequel; the Bank of England has been selling sovereigns to authorised dealers in the bullion market. Bids have been accepted for mixed parcels of them at a price of around $9.25 per sovereign. Buyers are not entitled to specify the composition of the parcels and most of the parcels recently delivered have included a large proportion of the new coins. These are unpopular with the bullion dealers because they are quoted in the free markets of the world at about 3 per cent below the price that can be secured for old George V sovereigns. The new sovereigns with the effigy of Queen Elizabeth II are also quoted at a discount in the Mahomedan markets where many of these coins find their destination. "Queens" —even Queen Victoria—have always been reluctantly accepted in the East. The new King George V sovereigns are also suspect because buyers in the Middle East markets suspect them of being the Italian copies with which the market was flooded a few years ago.

At the price of $9.25 per sovereign the Bank is selling gold at $39 per ounce, which after allowing for seignorage, gives a profit of about 11 per cent. Before the sales began at the beginning of this year sovereigns were quoted at $9.75 and the premium was around 16 per cent, so additional supplies have quickly affected the price. About two million sovereigns have been minted and it is estimated that about 200,000 have been sold at a profit to the Exchange Equalisation Account in the neighbourhood of £65,000. The authorised dealers handling this traffic to the Middle East and to Greece have themselves made reasonable profits though nothing to compare with the margin that can be made by the mint, which has the privilege of buying gold at the bullion price and turning it into the forms for which hoarders are prepared to pay.

FREIGHT MARKETS

Greeks Bearing Plans

IN any prolonged period of depressed freight rates, tramp shipowners usually start considering what they can do to reduce the surplus of idle ships or enforce a system of minimum freight rates; but the very nature of the tramp shipping industry militates against the success of such proposals. It is true that the International Tanker Owners' Pool before the war was a success, but this was made possible because the number of owners was small and the majority of the tanker fleets were owned by the charterers themselves—the major oil companies. Under this scheme owners of laid-up tankers were compensated out of a fund to which employed ships contributed. It was not found possible to obtain the international co-operation necessary to impose a similar scheme for dry-cargo vessels. Another difficulty is the problem of securing acceptance from owners of single vessels. Owners with several vessels in a fleet might readily agree to lay up a proportion of the total, but a single-ship owner can only lay up 100 per cent of his fleet.

The Chamber of Shipping has had a tonnage stabilisation scheme in cold storage for some time; and this is likely to be the subject of discussion at the forthcoming meeting of the International Chamber of Shipping. But a new post-war development in tramp shipping has been the emergence of huge blocks of tonnage under "flags of convenience," largely under Greek ownership. Even if it were possible for the traditional maritime countries to agree to a tonnage stabilisation scheme, it would be useless without the co-operation of this handful of owners, who control more than half the world tramp fleet. The Greeks themselves, on their own account, are now attempting to secure agreement about the controlled laying up of their ships: Greek owners from New York are due to discuss these plans with their opposite numbers in London next week. By withdrawing a substantial part of their fleets from the market, they might soon force freight rates up. But this would benefit all shipowners, who would bring into service their ships which are at present laid up, so that rates would fall again, and the "Greek" ships would still be laid up. However, control over such large blocks of tramp tonnage must give them power to influence the freight market when there is a surplus of ships over cargoes, and the reserve of tonnage which can be brought out to make high profits when conditions are the reverse.

MIDDLE EAST OIL

Kuwait's Refinery Expansion

NEW installations officially commissioned this week in Kuwait have increased the crude oil processing capacity of the refinery at Mina al Ahmadi more than sixfold to 190,000 barrels a day, or some 9 million tons a year. The expansion is basically a "topping" operation to produce about 4½ to 5½ million tons a year of heavy fuel oils to be used mainly in making Kuwait a major bunkering station for the rapidly increasing number of oil tankers trading in the Persian Gulf, thus leaving the refineries in Europe freer to meet their local industrial demand for fuel oil.

A problem for the British Petroleum Company and the Gulf Oil Corporation who, as joint owners of the Kuwait Oil Company, share the output of the refinery, has been to find markets for all the lighter fractions that have to be produced, even in the simplest distillation process, jointly with the fuel oil. Marine diesel oil will be required for ships' bunkers; there is a local market in Kuwait for standard grade kerosine and gas oil; and export markets both east and west of Suez should be able to absorb the rest of the middle distillates which will be made each year at Mina al Ahmadi. But at present most of some two million tons a year of low grade gasoline made in the refinery there cannot be sold and has to be recycled into the ground in Kuwait.

There is, however, a rapidly growing local market in Kuwait for high octane petrol, which has at present to be imported. Already some 20,000 vehicles are on the road in Kuwait, many of them American models with engines with high compression ratios, and their number is increasing rapidly. To provide for them, a platforming unit is being installed to up-grade the octane rating of the gasoline produced by the ordinary distillation process. Although current consumption of premium grade petrol in Kuwait is running at only about 40,000 tons a year, demand is expected to rise

by about 20 per cent a year, so within four or five years the platformer should be working at a capacity rate of about 100,000 tons a year—which would still leave about 95 per cent of the gasoline output to be recycled underground.

AIRCRAFT

Farmer's Own Aeroplane

SMALL aircraft manufacturers are not necessarily the ones to feel most acutely the cold wind now blowing through the aircraft industry. This week Auster Aircraft, largely known for its small private aircraft and trainers, announced that it was putting into production the first aircraft designed specifically for crop spraying—most of those in use are standard aircraft on to which tanks, booms and sprays have been added wherever they can safely be fastened. The company also claimed, with justifiable pride, to have received the specifications late last year, completed the drawings by the beginning of January, and flown the first complete aircraft on 22nd of February.

Two orders for a total of fourteen aircraft have been placed, nine for Crop Culture, based on the Isle of Wight, and five for a French company with whom it has a working agreement. The cost of the new aircraft, about £5,000 fully fitted with a 100-gallon tank and rotary sprayers on the wing tips, is not much more than that of making over a standard type. The astonishing boom in aerial spraying—particularly in Africa—has made it possible for companies that began in a very small way to become quite substantial customers for new aircraft. Crop Culture went into business in 1955 with two Tiger Moth aircraft ; it now has thirty aircraft in service, in addition to Auster's new Workmaster on order. One of the reasons for success has been the improvement in spraying techniques, making it possible to use highly concentrated chemical and so reduce spraying time ; in some cases Crop Culture, using rotary sprayers, uses as little as ¼ gallon per acre.

LATIN AMERICA

Effects of Falling Prices

THE chairman's statement accompanying the annual report of the Bank of London and South America has long been one of the most notable documents of the year for everyone interested in trade with Latin America. Sir George Bolton, who last year resigned from his executive directorship of the Bank of England (though he remains an ordinary director) in order to succeed Sir Francis Glyn as chairman of the Bank of London and South America, is sustaining the tradition of presenting valuable summaries of current trends in each of the countries in which the bank deals ; and he prefaces these with a broad survey informed by his own special experience in the sphere of international finance. He takes the view that the world is moving into "a position of abundance, smaller profit margins and fierce trade competition," and sees "little in the immediate future to suggest a return to the conditions of the past decade."

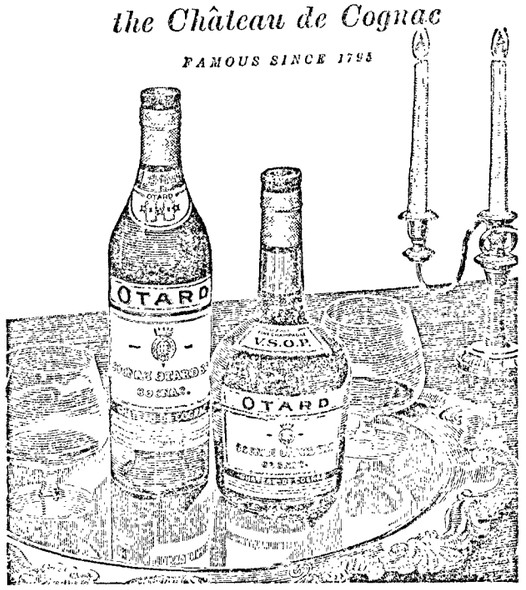
On this rather pessimistic view, some difficult problems must be posed for the countries of Latin America, as for others in which primary production is of key importance. The world price trends of the past seven years, Sir George pointed out, have already caused a worsening of Latin America's terms of trade by some 15 per cent. The major exception to the general trends in Latin America has again been seen in Venezuela—and here Sir George points a moral : Venezuela's ability to take advantage of its fortune in the possession of oil reserves, he emphasises, has been due to the "absence of prejudice against foreign capital, without which its resources could scarcely have been tapped."

In spite of the pressures upon prices, and the further depreciation of most Latin American currencies, the bank has enjoyed an "exceptionally successful" year. Net profit rose from £560,047 to £682,559, but in view of the uncertainties that loom ahead, the increase was ploughed back into contingency reserve, and the dividend maintained at 9 per cent. Thanks to the repeal of the 1947 Banking Law in Argentina, the banks now receive deposits in that country for their own account, instead of merely as agents for the central bank. This explains the rise in the Bank of London's total deposits from £98 million to £114 million, in spite of the exchange depreciation (involving a drop of about £7 million on the conversion of the balances into sterling).

EASTERN BANKS

Bigger Dividends

THE past year has been one of consolidation among the eastern exchange banks. The Chartered Bank, the oldest and largest of these institutions, has acquired the capital of the Eastern Bank, the smallest and youngest of them ; and the National Bank of India formally merged, from January this year, with Grindlays Bank, its subsidiary since 1948. The Chartered, the new National Overseas and Grindlays Bank, and the Mercantile Bank have all reported this week ; the Hongkong and Shanghai is due to do so as this issue goes to press.



Both the National Overseas and the Mercantile show small falls in deposits, and in their holdings of bills. They have plainly been affected by the falls in world commodity prices. But whereas the National shows a slight reduction in profits, Sir Kenneth Mealing of the Mercantile states that the board no longer finds it necessary to build up inner reserves at the same rate as previously, and consequently the profit is shown at £331,243, compared with £236,484. This meets the big increase in the distribution for 1957—£211,312 against £118,335. The interim dividend had been raised to 12½ per cent (against the former interim and final payments of 7 per cent each) and the final dividend, paid on the capital as increased by a 100 per cent scrip issue, was as foreshadowed paid at the equivalent rate, of 6¼ per cent actual.

The Chartered Bank also has made an increase in its distribution, repeating its payment of 15 per cent for the year on the capital increased from £3.5 to £4.4 million—marking an increase in the dividend to an effective rate on the old capital of 18.9 per cent. Profits of the group are up from £804,641 to £1,000,890, and include the earnings of the new acquisitions. These comprise not only the twenty branches of the Eastern Bank (predominantly in the Middle East) but also the six Cyprus branches bought from the Ionian Bank and the two branches in Pakistan acquired with the purchase of the Allahabad Bank. The Chartered

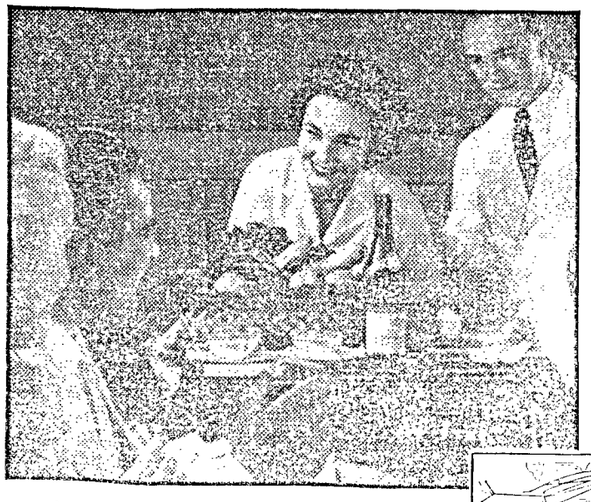
THERMALITE-YTONG

Load bearing insulating building blocks



are safe insulation

Thermalite-Ytong load bearing insulating building blocks give exceptional thermal insulation and fire resistance.
They present no fire hazard being entirely non-combustible. Recommending themselves particularly as an infilling to steel or concrete frame constructions, they provide insulation as an integral part of the structure. More efficient insulation, in fact, than any other of comparable cost.

HALIFAX BUILDING SOCIETY

A Problem of Investment

FIGURES from the Halifax Building Society once again demonstrate what a formidable competitor this strong society can be in the movement, and what a vast amount of progress it can achieve even in a difficult year. The society's year ends on January 31st. In that year its total assets went up from £297.3 million to £344.0 million; it advanced on mortgage £66.7 million, against £46.1 million, and still did not fill the demand; it received from investors net £35.1 million against £23.7 million and it ended up again 17.9 per cent liquid. But as always when growth is rapid and the margin between income and outgoings (what would be called in a trading company the profit) is narrow, reserves have grown more slowly than the balance sheet total. The reserve has been increased by £418,211 to £13.0 million, but the ratio of reserves to total assets has fallen from 4.4 per cent to 3.8 per cent.

The Halifax is strict about investment policy. It does not go beyond the medium dated stocks—say, up to 1969—and it deals with its depreciation as it should—by writing

	Year ended January 31, 1957 £000	1958 £000	Change on year
Mortgage assets	243,282	281,495	+38,213
Liquid assets	53,235	61,594	+ 8,359
Other assets	781	923	+ 141
Total assets	297,298	344,012	+46,713
Reserves	12,594	13,012	+ 418
Ratio reserves/total assets	*4·2*	*3·8*	
Ratio liquid assets/total assets	*17·9*	*17·9*	
Mortgage advances	46,129	66,675	+20,546
Received from investors	70,632	85,375	+14,744
Withdrawals by investors (including interest)	46,884	50,258	+ 3,374

it off. A sum of £343,000 has this year been applied to writing down the quoted investments to their market value, and but for that writing down operation, which other building societies do not do, the reserves would have made a much better showing. That does not seem to be the full answer to the problem of investment depreciation. The president of the society, Mr Algernon Denham, has again made it clear that he regards the investment portfolio, which in one year showed an appreciation of £1 million above book value and in the next a loss of £300,000 below it, as the "risk assets" of the society—much more risky than the mortgage assets.

Mr Denham has not yet revealed the solution, if he sees one. Part of it may be to keep the liquidity ratio within bounds, but they must not in a reputable society be allowed to fall far. The real solution surely must be to keep the liquid assets truly liquid. Those quoted stocks are not being held in order that they may be redeemed on maturity (in which event they will yield the Halifax society about 7¼ per cent because building societies are not liable to tax on capital profits). They are held to support the society's claim that it can repay its shareholders, and more particularly its depositors, at short notice. The yield is quite a subsidiary matter.

MOTOR INDUSTRY

Cross-Country Competition

THE Austin Gipsy is BMC's second and most serious attempt to break into the market for civilian cross-country trucks. This has been shared since the war between two relatively small motor manufacturers, Willys in America, the inventors of the Jeep, and Rover in this country, whose basic Land Rover has been in production with only minor modifications for ten years. This is a lucrative market with a high turnover, totally unaffected by fashion. The surprise is that it has remained the world monopoly of these two manufacturers for so long.

When Austin were building the "Champ" combat vehicle for the Army a half-hearted effort was made to market a civil version at prices nearly £200 more than those being charged by Rover. The Gipsy owes much to experience in building the Champ. Customers expect a dual-purpose truck to handle like a car on the road, but to travel at moderate speed over every variety of soft ground, and to paddle if not actually to wade in shallow water. In practice this means that the manufacturer must provide conventional two-wheel drive when the truck is on a road, facilities for shifting the drive to all four wheels when the going becomes soft, and exceptionally low gear ratios for towing, steep climbing or generally nightmare conditions.

In top speed (about 60 mph), size, carrying capacity and general cross-country agility there is little to choose between the two vehicles; nor is there in price (at £630 the basic Land Rover is £20 cheaper than the Gipsy). But there are some noticeable differences in their engineering. BMC has given the Gipsy the 2,199 cc engine used in London taxis, which is bigger than that used in the Land Rover and has unexpectedly lively performance. But no provision has been made for engaging four wheel drive on any but the four lowest of the eight gears—those that would normally be used only on exceptionally heavy going; in the Land Rover four wheel drive can be used with the top four gears, and frequently is for normal cross-country work. Austin's new suspension, on the other hand, is a striking improvement on that provided so far in Land Rovers. Whether it was wise to give the Gipsy a steel rather than an aluminium body will be shown only by experience.

Rover's longer production experience tells in small details in this comparison, but although the Gipsy's unbelievably draughty and inconvenient doors appear to have been designed by a sadist, the general engineering and design of it fully meets a peculiarly difficult specification. Competition has already had a stimulating effect: Rover's answer to the Gipsy is expected to be announced in a few weeks' time.

VEHICLE INSPECTIONS

Fifteen Bob a Test

THE Minister of Transport will need a great many properly equipped "testing stations" to carry out the system of compulsory and spot vehicle tests provided for in the Road Traffic Act, 1956, and the scale of fees that he has now announced, after 18 months of protracted negotiations with the garage trade on all the many points involved, makes it quite likely that enough garages will volunteer to be put

on the list. Inspection of a two-wheel motor cycle will cost its owner 10s. 6d., and the owner of a car, van, or three-wheeler will have to pay 15s.—which, incurred annually, will effectively add about 6-8 per cent to the cost of the annual Road Fund licence for motorists who choose to run old cars. All but a shilling of this fee, which will go towards the Ministry's own costs, will be pocketed by the "test station"—for what will in most cases be half to three-quarters of an hour's work.

But a charge of this order was probably necessary in order to make co-operation worthwhile for the garages with the requisite workshop facilities, test pits, and qualified staff. The trade is short of skilled mechanics, and not all garages could readily find the space and perhaps the time to set up and operate "test stations" satisfactory to the Minister's examiners otherwise. The Ministry's desire to have a widely spread network of testing stations across the country, so that individual motorists need not travel far to get their certificates, means, too, that many of the stations will hardly be fully occupied solely on inspecting. Tests are to be made compulsory, first of all, for all motor cycles, private cars, and vans of up to 30 cwt. unladen weight that are ten or more years old. This means rather more than 1½ million of the six million or so of these vehicles now on the road. At a minimum of thirty minutes a test, covering the brakes, steering and lighting of a vehicle, the points most likely to be included at first, compulsory testing will initially take nearly a million man hours every twelve months. Spread across several thousand stations—a national network the Ministry is envisaging would probably require more than ten thousand—this does not mean much work. But garages may have hopes of getting some repair business from the owners of these older vehicles, many of whom probably have marginal motoring incomes and in the past have done any maintenance work themselves. If a car is found unsatisfactory the owner can appeal. But can the car be driven away? If not, an unscrupulous garage could easily make operating its "station" well worth while.

But the number of stations that will have been inspected and authorised by the Ministry at the outset of the scheme will be rather fewer, and some staggering of the 1½ million inspections will be necessary. The Ministry hopes to invite applications from prospective testing stations at the end of next month, after further discussions with local authorities and the motoring organisations. Once a reasonable number of applicants have been authorised to operate tests, the full regulations will be published in an order laid before Parliament and, in plain language, in a white paper.

COFFEE

Producers Get Together

CONFUSION in the coffee market is no new phenomenon; nor is over-production. But it has now become so menacing and prospects for equating supply with demand so remote that even some of those coffee traders who normally uphold free markets are beginning to talk and think of concerted action. Some of the producers have already moved down that road. In Brazil there is once again talk of burning the surplus; in Colombia exporters signed a pact last week with their federation not to sell abroad below prices periodically fixed by a special committee. Both these leading South American producers have for some time been buying in their own coffee in an attempt to hold prices.

Last October at a meeting in Mexico City the seven leading western hemisphere producers agreed to retain at least 10 per cent of their current crop and to ration exports over two periods—November to March, the main selling season, and March to November. Effectively they thus cut exports for the peak period by about 20 per cent below the average of the past two years. That was an emergency measure which temporarily helped a sagging market. Another producers' conference took place in Rio de Janeiro in January. And on this occasion all producing countries, including the Africans, were represented, while consuming countries were invited to send observers. It was agreed to set up an International Coffee Organisation—ICO. But hopes among the Latin Americans that Rio would bring the outsiders into an agreement on the lines of their own Mexico City agreement were not realised. The African producers would co-operate to promote sales, but not to restrict exports. The new organisation was the outcome, and to provide funds for it a levy of 25 US cents per bag exported was agreed. The levy is estimated to produce $8 million a year.

The Growing Surplus

SINCE the Rio meeting all Western hemisphere producers except Brazil have agreed to cut exports by about 25 per cent for the April-June period. And Brazil had already agreed to hold back 3½ million out of its estimated 18 million bag crop. Stocks in Brazil had reached over 13 million bags by the end of January. Exports are moving so slowly that it now pays the grower to sell his coffee to the Brazilian Institute rather than on the world market. There are two significant factors in the current coffee glut. First, there is every indication that the world coffee crop is going to increase. The last crop was 38 million bags; the current one is estimated at over 40 million and in a few years it could easily rise to 55 million bags.

Secondly, within the expanding world crop, the African crop is likely to grow faster than the Central American. African countries now produce about 8-9 million bags. Robusta coffee—the cheaper and most important African variety—takes only 3 years for the plant to mature compared with 7 years for an Arabica plant. While the world market has been moving against South and Central American coffees, it has not been unkind to African growths. The price differential between the South American and Robusta has consistently narrowed since the Mexico meeting. In contrast to all other varieties the price of Robusta has hardened. Ivory Coast Robusta stands at 40.35 cents per lb, against 34.50 cents at the end of October, while Colombian coffee has fallen from 57.25 to 54.50 in the same period. The United States, by far the largest coffee consumer, has been looking increasingly to Africa for supplies. Robusta is also favoured for the soluble, "instant" type of coffee, for which there is an increasing demand. Thus the African producers are getting good prices and are planting more trees.

The economic and political implications for Central American countries are significant. A reasonable coffee price is vital to their economies. Coffee now takes third place after oil and steel in international trade turnover. A serious break in the market could have effects of which Washington is duly conscious.

JUTE

Pakistan's Terms

THE London Jute Association has come to heel. At an extraordinary meeting in London this week it was decided to deal in Pakistan raw jute only directly with firms in Pakistan and not via India (principally Calcutta), as had previously been common practice. All members of the London Association are to give an undertaking to this effect. This decision meets the first of the Pakistan government's conditions for reinstating the four London merchants recently "blacklisted" by the Pakistan authorities and banned from handling Pakistan raw jute. No decision has yet been taken on the second condition—that London firms define and declare whether they are principals or shippers on behalf of someone else. The Pakistan government has ruled that if they are principals they must not charge a discount or commission against Pakistan shippers. The Association is awaiting clarification of this directive.

The dispute is basically political—an attempt to make the London houses set up organisations in Pakistan. Most of them have long had branches or subsidiaries in Calcutta, but only some of them moved those offices into Pakistan after partition. Those who did so are unaffected by the new moves. Those without offices in Pakistan are deeply concerned. Whether the cutting out of Calcutta, the traditional jute centre in the East, will prove practicable is seriously questioned by at least one important London house. Pakistan's dictatorial and political attitude is regrettable.

SHORTER NOTES

According to the seasonal correction that the Iron and Steel Board has just introduced into its calculations of "apparent steel consumption" (themselves derived from fairly hard figures of deliveries plus or minus the changes in stock estimated from a census), steel consumption in Britain appears to have been recovering by the third quarter of last year from the dip that began early in 1956. There was no further advance in the fourth quarter of last year, consumption remaining roughly level. Yet consumers' and merchants' stocks continued to rise slightly, reading about 4,580,000 tons of finished steel by the end of the year.

* * *

Manufacturers contributing to the Board of Trade's quarterly survey of capital expenditure invested only 2 per cent more in the final three months of 1957 than twelve months before—after their investment spending had increased by 13, 9 and 5 per cent, respectively, in the three preceding quarters. This makes the total increase for the year 7 per cent—the amount they had forecast. It also suggests that the progressive decline in the rate of manufacturing investment during 1957 resulted in an actual fall in real terms by the closing months, for the price of capital equipment had by then risen by 3¼ per cent over the year before.

* * *

The buffer stock's holding of tin at September 30th has now been disclosed: it was 4,315 tons. Later figures have not been announced, but it is known that before the end of December a total of 15,000 tons had been reached.

* * *

Mr E. R. Lewis, Chairman of Decca record company, foreshadowed at Monday's meeting that results for the year ending March 31, 1958, will disclose a marked increase in profits.

* * *

COMPANY AFFAIRS

FORD MOTOR

AFTER the increase in the interim ordinary dividend of Ford Motor from 2½ to 3 per cent, some investors began to canvass the possibility that the final payment would be 7 per cent making in all 10 per cent, compared with 7½ per cent paid in 1955 and 1956. Recently there has been some speculative buying of the £1 shares, based on such hopes. The final dividend for 1957 is, however, now fixed at 6 per cent, making 9 per cent for the year. That increased dividend is backed by impressive profit figures, but the £1 ordinary shares were marked down, falling 1s. to 35s. 6d., to offer a yield of £5 1s. per cent.

The half-yearly report of Ford Motor had prepared investors for good results in the full year to December 31st. And they are good, impressively so. The number of vehicles sold has risen by 5½ per cent, from 320,742 to 338,421 units; within that total, exports have risen by nearly 20 per cent, from 153,930 to 184,669 vehicles. The value of sales has risen by nearly 14 per cent, from £145.7 million to £165.9 million: it is clear from these statistics that Ford Motor is producing and selling more in the more expensive range of its vehicles. Its trading profits, for a year of recession is being compared with a year of recovery, have more than doubled, jumping from £8,766,045 to £18,042,573, and its net income after tax has nearly doubled, jumping from £5,614,866 to £10,880,809.

The extent of the recovery, however, is best illustrated by the half-yearly figures, reproduced in the accompanying table. As the gross profit shown in that

Six months ended	June 30, 1956 £'000s	Dec. 31, 1956 £'000s	June 30, 1957 £'000s	Dec. 31, 1957 £'000s
Sales.....	77,779	67,900	79,945	85,955
Gross profit	5,629	4,361	9,160	10,039
Net income	3,424	2,191	4,922	5,959
Vehicles sold	*178,379*	*142,363*	*166,234*	*172,187*
Sales value per vehicle	£435	£477	£481	£499
Gross profit per vehicle	£31½	£30½	£55½	£58½
Gross profit/ sales	7·2%	6·4%	11·4%	11·7%

table includes interest received, the sales value and the profit per vehicle are slightly overstated, but the trends are unmistakable. First, as the group has concentrated more on its more expensive vehicles, the sales value of the units it has sold has been steadily rising. Secondly, the really big increase in profits earned per vehicle occurred in the first half of last year though in the latter months there was a further though less spectacular rise in profit margins. The recovery of output must have reduced unit costs of production: quite big savings in costs were achieved through the more efficient use of plant. Thirdly, profit margins are now close to the levels at which they stood at the beginning of 1955, that is on the eve of the recession. Ford Motor, it might be said, is back to normal.

P & O

GREAT shipping companies have to take long views. Stockholders of Peninsular and Oriental have reason to thank the directors for taking a short view with the dividend. They put it up from 8 per cent to 11 per cent on the rise in the consolidated profit from £6.4 million to £10.5 million. They did so knowing that recession in shipping had arrived, that next year's profits will in all probability be lower and that this present dividend has "no implication as to the level of dividend that can be maintained in years to come."

On other matters P & O takes a long view. The directors refer to the cancellation of a number of shipbuilding berth reservations which may check the rise in shipbuilding costs: but the cancellations have not been by the P & O group; nor has the group laid up any ships. Its tanker building programme remains at 18 vessels, of which two should be delivered this year. Its distribution of those vessels between the new Bermudan subsidiary Charter Shipping Company and the other group companies will be 7 under the Bermudan flag and 11 under the "Red Duster." The distribution might, stockholders are left to assume, have been much the same if the Government had not increased the shipping investment allowance to 40 per cent. But what more could the Chancellor have done to hold the mercantile marine in British domicile?

The P & O tanker fleet may perhaps at present prices cost about £45 million, against £37 million previously estimated. It is only half the group's total commitment for new ships. The most interesting item in the consolidated balance sheet is the unexpected balance on ships under construction—£45 million—and new tonnage, ordered but not laid down—£44 million. A total of no less than £89 million of fleet replacement ordered as at September 30th, compared with a mere £39 million a year earlier. And that is not quite the end of the story. Three of the tankers have still to become firm orders and come into the figures. Clearly P & O, with gilt edged and Treasury bill holdings of £48.6 million, against £49.7 million, and net current assets of £45.9 million, against £47.5 million, will have some financing still to do, despite big profit retentions, but it is one of the few companies that can go steadily ahead at a moment when freight markets look barely profitable.

CANADIAN PACIFIC

RECESSION in the North American economy is reflected in each item of the 1957 preliminary figures published by Canadian Pacific Railway. Recession, however, started from a high peak of activity and the president, Mr N. R. Crump, can describe 1957 as "a year of progress for Canada" though "there had been a lessening in the forces of expansion in the economy." Railway revenue, for instance, was the second highest in the company's history, being exceeded only by the figures of 1956.

But, as the accompanying table shows, net revenues from whatever source were down. The return on net investment in railway property was down from 3.15 to 2.8 per cent; earnings on the $25 ordinary shares from $3.76 to $3.11 per share; and the dividend on these shares from $1.75 to $1.50 per share. The real spice in the Canpac equity comes from non-railway earnings. And last year these, too, were falling—earnings from steamships, hotels and even from petroleum rents and royalties. But the biggest item in other income is "dividends" and the essential element in that item is the dividend paid on the company's controlling interest in Consolidated Mining and Smelting. That company has again reduced its dividend but, more significantly, it has recently announced a policy of diversification designed to shift the centre of its activities away from mining towards the chemical industry. Canpacs at $46¼ (London terms) yield 5.8 per cent, a yield which may look slim to British investors not yet sure that recession will not bite deeper into earnings. But the real market in the stock is created by North American investors who seem ready to accept lower dividend yields.

HUDSON'S BAY

NO bigger contrast to the Canadian Pacific report is likely to be found than the preliminary statement of the Governor and Company of Adventurers of England Trading into Hudson's Bay. This, the oldest of the chartered companies, is still domiciled in Britain though almost all its trade—retailing, wholesaling and furs—is done in Canada. Last year its gross trading profit advanced from £4,024,000 to £4,329,000 and its net income from £1,909,000 to £2,312,000. Those earnings were good enough to make investors look again at the Hudson's Bay ordinary shares which, along with other Canadian stocks, have fallen heavily since the summer of last year. Investors then began to take a less sanguine view of the company's minority interest in the developing company, Hudson's Bay Oil and Gas.

The trading dividend on the Hudson's Bay ordinary shares has been raised from 15 to 20 per cent, the tax-free dividend from the land account being left unchanged at 2½ per cent. The total dividend could hardly have been raised from 19.34 to 24.34 per cent gross unless the Governor and the board were reasonably confident about the future. Moreover, as from the end of last year the company has provisionally qualified as an Overseas Trade Corporation and that should mean, at current rates of profits, dividends and taxes, a saving of over £250,000 a year in tax. No wonder then that with all this good news the £1 ordinary shares gained 12s. 6d. to 160s. At that price, however, the yield is only £3 1s. per cent. It is a price which, granted the luxuriance of the latest crop of news, can be justified only on the assumption that the company's interests in oil will pay off handsomely when the Canadian economy begins to expand again.

HOOVER

A TABLE in the annual review and accounts of Hoover, showing a rough breakdown of costs, suggests that last year the turnover of this manufacturer of domestic appliances was of the order of £35 million (including purchase tax) and £27 million (excluding that tax). From these sales, the group earned a gross profit before tax of £3,757,312. That profit was about 34½ per cent up on the 1956 figure of £2,790,077 but the dividend on the ordinary and "A" ordinary units was left unchanged at 50 per cent. But in the first half of last year profits were as much as 64 per cent higher, so that in the latter months, as the directors had foreseen, margins were squeezed between rising costs and stable selling prices. Over the year sales at home rose by about 13 per cent and sales abroad by about 4 per cent but it looks as if the increase in sales became more difficult to achieve as the year wore on.

It will not be so easy to earn profits this year as it was in 1957. That surely must be the inference of the concluding remarks of the chairman, Mr H. W. Hoover, who says: "We know it will be a difficult year, particularly in the export field where competition will be fierce. We know it will be increasingly difficult at home unless we obtain some

easement of Government restrictions." Along with other industrial shares the Hoover units have risen, the 5s. ordinary shares going up to 35s. 3d. xd (to yield £7 2s. per cent) and 5s. "A" ordinary shares to 33s. 3d. xd (to yield £7 10s. per cent).

RADIATION

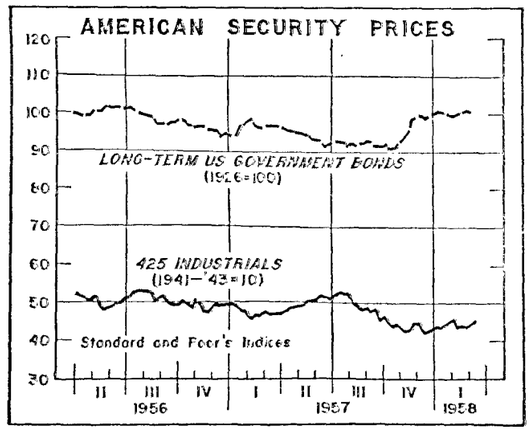
IN 1954 the trading profits of Radiation, manufacturers of gas cookers and gas appliances, reached a peak of £1,673,284. In 1955 the profit fell to £1,223,848 but the ordinary dividend was left effectively unchanged at 11¼ per cent. Profits fell again in 1956—to £745,122 and the dividend was reduced to 7 per cent. The record speaks for itself: the fortunes of Radiation are tied not only to gas but also to credit and hire purchase restrictions. And last year trading profits fell again—to £441,682. Net profits dropped from £233,573 to £48,266 and the ordinary dividend was cut to 5 per cent. Even so, that dividend, absorbing £130,096 net, was not earned and it was met by a transfer of £131,000 from general reserve (built up, the directors say, to meet "such an exceptional contingency"). The stock market was not impressed by this performance, but it was not much surprised, for an interim report, announcing the passing of the interim dividend, emphasised the trading difficulties. The £1 ordinary units were marked down 6d. to 14s. 3d., to yield just over 7 per cent.

The directors refer to "continued trading restrictions which were further increased in September." Hire purchase controls were not altered in September but credit was made dearer and less readily available. The directors also refer to "the intensified development instituted to meet these conditions" involving "heavy preproduction costs." They add that as new products were not in full production last year the results "reflect the full cost but not the full result in income." The new models have had some success, for the directors speak of a recent increase of 16 per cent in sales—an increase sufficient in their view to justify the payment of a dividend.

BRITISH-AMERICAN TOBACCO

THE full accounts of British-American Tobacco, lacking a statement from the chairman, add little to shareholders' knowledge. They do, however, show that the advance in the consolidated trading profit from £49.4 million to £54.1 million and the effective increase in the tax-free dividend from 1s. 6d. to 1s. 7½d. per 10s. ordinary stock unit were backed by yet another growth in assets. The increase in the group's fixed assets by £6¼ million to over £55 million, and the outstanding capital commitments of £4¼ million, the directors note, reflect "the continuing modernisation of existing factories and plant as well as the investment in new factories required by the expansion of the group's business in various parts of the world." Expenditure on this scale seems inevitable when one strand of the company's policy is to switch gradually towards local manufacture in the countries where it sells.

The increase in stocks by £17½ million to over £200½ million relates largely, the directors explain, to leaf tobacco and "reflect not only the additional requirements arising from the continued development of the business of the group, but also increased prices and an accelerated intake towards the end of the financial year made necessary by conditions prevailing in the tobacco markets in the United States." Rising prices explain why the appropriation to fixed assets and stock replacement reserves has been stepped up from £3,400,000 to £6,000,000. A moral can be drawn by investors from these statistics: growth, which there certainly is in British-American Tobacco, always demands finance. British-American Tobacco will continue to finance its development out of its own resources—indeed in a sense it is forced to do so as not all the profits it earns abroad are freely transferable to this country—and the growth of dividends if it is sure is likely to be slow.



London Stock Exchange

FIRST DEALINGS:	Feb. 26	Mar. 12	Mar. 26
LAST DEALINGS:	Mar. 11	Mar. 25	April 15
ACCOUNT DAY:	Mar. 18	April 1	April 22

AFTER last week's rise gilt-edged prices were steady, but the poor start to dealings in the new Belfast loan, which slipped to ¼ discount on Wednesday, was reflected in falls in Dominion stocks. Although all the short-dated issues improved on balance, a sharp reaction on Wednesday cut the earlier gains; the overall rise in 2½ per cent Funding 1956-61 was reduced by ½ to ¾ and 4½ per cent Conversion 1962 was finally only ⅛ higher at 97⅞ after losing ⅜ on Wednesday. Some of the stocks which made large gains last week were again supported; 3 per cent Exchequer 1963-64 rose ½ to 87⅝ and 3½ per cent Funding 1999-2004 improved ⅛ to 68¾.

The rise of 3.3 to 176.4 in *The Economist* indicator was mainly the result of a sharp advance on the Friday before the week end. Industrial stocks were dull on Monday but became firmer on the first day of the new account. Although store shares were usually higher, Army and Navy dropped 1s. 6d. on initial disappointment with the dividend but recovered to 11s. 6d. xd, while the cut in Gorringe's dividend caused a fall of 2s. 3d. to 26s. 3d. House of Fraser "A" recovered to 21s. 9d. after declining in anticipation of dealings in the new shares. Motors showed good gains, BMC rising 6d. to 7s. 5¼d. and Rolls-Royce 4s. to 90s., but disappointment with the dividend led to a fall in Ford on Thursday. Steel shares weakened; South Durham lost 6d. to 20s. 3d. and its issue of a convertible debenture was reflected in a drop of ¾ to 1¾ discount in the new Colvilles debenture.

Oil shares improved on balance after fluctuating throughout the week. There was less interest in Kaffirs despite some good dividend announcements, Daggafontein losing 1s. 1½d. to 28s. 10½d. But copper mines made a further recovery, Bancroft, Rhodesia-Katanga and "Chartered" being outstanding.

(1) Electricity production in New Zealand represents deliveries only and in Canada, prior to 1957, excludes industrial generation for own use. (2) Copper and tin refer to metal production. (3) General trade (including re-exports) except for Canada, which is special trade only. Imports are cif except for Australia, Canada and S. Africa which are fob; exports are fob. Trade for India includes that going by land; annual figures for India are for 12 months beginning April 1st of year stated and for Australia 12 months ended June 30th. (4) Gold and foreign exchange holdings are those of the government and central bank; only figures for Australia include holdings of commercial banks. Cost of living for S. Africa and S. Rhodesia relates to Europeans only and for S. Africa includes direct taxes. (5) Including foreign investments. (6) Including semi-processed gold. Beginning January, 1955, including South-West Africa. (7) In July, 1948, part of holdings was transferred to the State Bank of Pakistan. (8) April, 1948—March, 1949. (9) Including some long-term securities. (10) Average for third quarter.

Financial Statistics

EXCHEQUER RETURNS

For the week ended March 8, 1958, there was an "above-line" surplus (after allowing for Sinking Funds) of £58,945,000 compared with a surplus of £1,668,000 in the previous week and a surplus of £55,822,000 in the corresponding period of last year. There was a net expenditure "below-line" of £19,934,000, leaving a total deficit from April 1st of £164,114,000 (£225,842,000 in 1956–57).

THE MONEY MARKET

Easy credit in Lombard Street was abruptly transformed in the second half of last week. On Thursday and Friday the authorities made no special purchases, and the discount market was forced to take loans at Bank rate. On Friday most of the houses were involved, for a moderate amount. Around the week-end the authorities gave fairly large special help, and credit remained tight in the first half of this week. With the bill rate virtually unchanged at just over 6 per cent, dealings in May maturities have taken place at 5⅞ per cent, and 5¾ per cent has been conceded. Rates on overnight loans have ranged as high as 6 and even 6¼ per cent.

At the Treasury bill tender on Friday last the discount houses reversed engines and raised their bid by 1d., to £98 9s. 11d. per cent, marking a reduction in the discount rate equivalent to 4d. per cent per annum. These tactics appear to have caught outsiders by surprise; for the market's allotment rate rose from 37 to 47 per cent, for an allotment unchanged at £240 million and with total applications down only £3.3 million, to £388.6 million. The result was that the average rate of discount actually rose slightly (by 2d. to £6 6s. 5.10d. per cent), reflecting the higher share taken up at the market's minimum bid.

The Bank return shows a rise in discounts and advances from £12.5 million to £25.9 million.

A RECORD YEAR

Mr. E. R. Lewis on Maintenance of Progress in Current Year

The twenty-eighth annual general meeting of The Decca Record Company Limited was held on March 10th at Winchester House, Old Broad Street, London, E.C.2.

Mr E. R. Lewis (the Chairman), who presided, said:

In the Consolidated Profit and Loss Account the balance from Trading Account which amounts to £2,389,368, shows an increase over that of the previous year of £590,445, and is the highest ever achieved by the Company. Maintenance, Depreciation and interest charges all showed substantial increases. The balance of profit for the year, however, at £1,402,514, shows an increase of £370,321 over that of the previous year. After charging taxation and tax equalisation of £821,308, an increase of £239,409, the net Profit amounts to £581,206, against £450,294.

Consolidated turnover for the year to March 31, 1957, at £17,050,000 was £4,190,000 greater than that for the previous year. The expansion since 1947, the first complete year since the end of the war when the comparable figure was £1,289,000, has been quite remarkable.

We are recommending a Final Dividend on the Ordinary and "A" Ordinary shares of 1s 2d., less tax, making a total for the year of 1s. 9d., less tax, the same as for the previous year though on capital increased by one-fifth.

Exports for the year amounted to £4,530,000, an increase of £1,120,000 over the previous year, including £1,300,000 against £930,000 to the USA and Canada. It is interesting to note that this figure is equivalent to about one day of Britain's total exports to these countries. Corresponding figures for 1947 were £184,000 and £52,000, respectively.

Exports on this scale have only been made possible by great efforts and concentration on this aspect of the group's business. British industry is sometimes accused of not being sufficiently aggressive in its endeavours to secure overseas trade. Such is hardly true in our case.

It is interesting to note that for the year 1957 no fewer than three million miles were travelled overseas by your Directors, executives and other employees in seeking for and carrying out business projects.

Review of Operations

So far as the Record business is concerned, production and sales were greater than in any previous period. Production of records in our two English factories amounted to 30 million out of a total industry production of 70 million. The operations of our subsidiary companies in the USA and Canada and our associated companies in Germany and Italy were at an increased level and direct exports were greater than those for the previous year.

Good progress was made by the Radio and Television Division, the demand for the season being greater than our capacity to supply.

The Decca Navigator made further progress during the year with a considerable extension in hirings. The North Scottish Navigator chain was brought into operation. The long range version of the Decca Navigator, known as "Dectra," was developed and successful trials were carried out with the Mark X receiver, representing a fundamental advance in the techniques of radio-navigation.

On the Radar side the most significant development was the successful introduction of the True Motion Radar, incorporating a principle quite revolutionary in the field. The demand for both the new wind-finding radar and Decca Meteorological equipment was influenced by the fact that 1957 was The International Geophysical year. Defence orders from various overseas countries were obtained, and production contracts executed for the Government of a highly important nature.

Very heavy expenditure on research and development, which particularly concerned the Navigator and Radar companies, was incurred during the year. We must look to the future for a satisfactory return from this expenditure, which is necessary for the continuous improvement of our products in the light of new discoveries and techniques.

The Current Year

Turning to the current year, in the Record business the production of our factories and our sales for the first eleven months are considerably greater than those of any previous period. Sales of our American and Canadian subsidiaries and of our associated companies overseas have likewise been on an increased scale.

We have continued to expend large sums of money in the classical recording field and with most of the leading international operatic singers under contract, we have maintained our leadership in this field which has been so much expanded since the introduction of long-playing records.

In May of last year we launched our first RCA records and have since had many successes, including the largest selling record in this country in the history of the record business. From May this year we shall have the exclusive manufacturing rights to the whole of the RCA catalogue. Our relationship with our other American friends has been maintained on the same basis as hitherto.

The 94,000 square feet extension to our New Malden record factory is now on the verge of completion and will undoubtedly contribute towards increased efficiency in the future.

The Radio and Television Division has made good progress during the year to date, with sales of television receivers greatly in excess of last year despite some falling off in sales for the industry as a whole.

The Navigator

Navigator hirings have continued to increase at the same high level as during the previous year, the cumulative total of hire and sale contracts to January 31st last amounting to 4,500 units.

The "Dectra" System, with its powerful transmitting stations in Newfoundland, was established as a long range navigational aid over the North Atlantic. There can be no doubt of the urgent necessity for an accurate navigational system for the Atlantic airway, and from experience gained so far we are convinced that in "Dectra" we hold the solution of this hitherto intractable problem.

During the period no less than four Decca transmitting chains in Canada have been brought into operation including one of the Newfoundland Chains which has been purchased by the Royal Canadian Navy. The remaining three chains are a joint venture of Decca and Bendix Aviation together with their Canadian licensees—Computing Devices of Canada.

Of the greatest significance has been the recent contract placed by the Airways Modernisation Board in Washington with Bendix Aviation for the erection of a Decca navigator chain covering the New York area for evaluation purposes as an aid to helicopters. It is nearly twelve years since we acquired or leased sites for the erection of a chain in this area and at long last we shall be able to demonstrate the system, to other than military and naval users, on United States territory.

Apart from the specific purposes for which the chain is being erected, it is obvious that it will be used by all the large transatlantic liners and other ships already fitted with the system entering the ports on the North-Eastern US seaboard.

Another most significant development has been the Decca Integrated Airborne Navigation System (DIAN), which comprises Decca, Dectra and Doppler. The latter element, developed by the Decca Radar company, is a self-contained navigational system, which in its simplest form supplies the pilot with continuous information of his ground speed and drift.

It will be realised from what I have said that there has been an exceptional number of achievements full of promise for the future.

Radar

Despite the slump in freights, orders for marine radar have continued at a satisfactory rate, particularly in export markets. The True Motion Radar, to which I have already referred, has been purchased by over 150 shipping companies, its introduction emphasising our leadership in the marine radar field.

Demonstrations were given on the Hudson River last September and contracts have been obtained from a number of leading American and Canadian companies. Sale of coventional marine radar has continued at a satisfactory rate, the total number of ships fitted with Decca radar, or under contract, amounting to over 7,000.

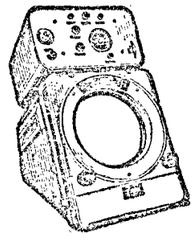
An agreement has been made with the Compagnie Francaise Thamson-Houston, under which French aerial systems will be combined with Decca transmitters and displays.

A substantial number of orders has been obtained for wind-finder and meteorological radars, including a storm warning radar for Le Bourget Airport, in addition to orders from overseas countries for various types of defence radar.

The Southampton Harbour Radar System manufactured and installed by Decca was officially opened by the Right Honourable Harold Watkinson, Minister of Transport, in January.

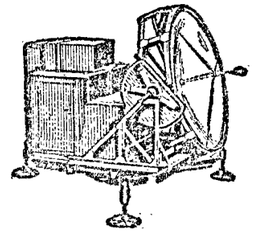
A contract amounting to approximately £500,000 has recently been received from the Federal German Republic for the supply of electronic equipment for their defence forces.

In the civilian field orders have been obtained from leading companies in the computer field for our high-speed computer tape unit, and there are good grounds for the belief that the manufacture of this ancillary will develop into quite a sizeable business.



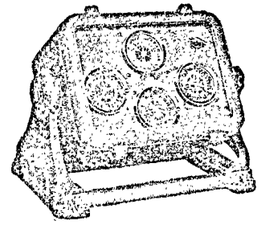
The Radar company has continued its very important work for the Government in connection with research, development and production contracts of a highly important nature.

Marked increase in Profits



Output of the group for the year to date is considerably greater than that of the previous year, an expansion in which all sections of the business have participated.

There is no doubt that the results for the year ending this month, with another substantial increase in turnover, will show a marked increase in profits over those of the previous year and I look forward with confidence to the future of your great enterprise.



The Report was adopted.

COMPANY MEETINGS

THE CHARTERED BANK

IMPROVEMENT IN EARNINGS

ACQUISITION OF EASTERN BANK LIMITED

CONFIDENCE IN THE FUTURE

MR V. A. GRANTHAM'S SURVEY OF ACTIVITIES

The one hundred and fourth annual general meeting of The Chartered Bank will be held on April 2nd at 38, Bishopsgate, London, EC2.

The following is an extract from the statement by the Chairman, Mr V. A. Grantham, which has been circulated with the report and accounts for the year 1957:

THE BANK'S BALANCE SHEET

During the year we acquired, by an exchange of shares, the entire share capital of the Eastern Bank, Limited, and for cash, the business which the Ionian Bank Limited conducted in Cyprus and there are consequential changes both in our Balance Sheet and in the Consolidated Balance Sheet.

Our own Balance Sheet indicates the continued expansion of the Bank's business and reveals a high degree of liquidity. The total at £231,622,655 is the highest we have ever recorded, being some £8,600,000 up on last year's figure.

Current and Other accounts and Fixed Deposits show increases of £2,958,494 and £4,499,423 respectively. Our Acceptances are again in excess of £10 million.

On the assets side Cash in Hand at Call and at Bankers shows the substantial increase of £10,501,948 the ratio to our demand and time liabilities, excluding the notes in circulation against which security has been lodged, being 22.9 per cent against 18.5 per cent last year. Our investments in Government and Other Securities are slightly lower and, you will note, have again been brought in at market value. Advances and Other accounts show a contraction of £6,165,632 which is partially offset by our increased holdings of Bills of Exchange amounting to £4,496,736. Our programme of expansion and modernisation of offices and houses in the East has given rise to an increase in the net figure for Bank Premises and Furniture.

The Consolidated Balance Sheet includes the figures of all our wholly owned subsidiaries and the inclusion of the Eastern Bank Limited's figures brings the total to £271,898,015.

CONSOLIDATED PROFIT AND LOSS ACCOUNT

I am glad to say that our earnings have improved. The results of the Eastern Bank Limited, and of our new acquisitions in Cyprus and Pakistan, are included for the first time in our figures.

The Bank paid an interim dividend in September last of 7½ per cent, less Income Tax, absorbing £189,750, and it is now proposed that out of the balance available a final dividend of 7½ per cent be paid, costing £189,750, making a total distribution of 15 per cent.

The dividends cost more because of the new issue of capital we made last year but are more than compensated for by the increase in profits.

We have allocated £250,000 to Bank Premises and Furniture and £125,000 and £20,000, respectively, to the Pension Fund and Widows' and Orphans' Fund. We have transferred £220,000 to Reserves for Contingencies and the balance carried forward is £438,458.

Transfers to Bank Premises and Contingencies include this year those made in connection with the Eastern Bank Limited.

For us, this year is one of consolidation and in view of the unsettled condition of the world in general it is wise that we should continue to build up the strength of the Bank.

THE COURT OF DIRECTORS

Since my last statement was made there have been a number of changes in the Court of Directors.

With great sorrow I have to record the death in July last of Mr Archibald Orr Lang, our senior director, who joined the Court in 1939 when the P & O Banking Corporation was absorbed.

Early in September we were deeply grieved to learn of the sudden death of Sir William Cockburn, who joined the Court in 1955 on his retirement from the post of Chief General Manager. I have already recorded the gratitude and admiration felt by the Court for the highly distinguished and professionally competent services rendered by Sir William during his tenure of the chief executive office over a period which extended to fifteen years.

In July last Mr Clifford Waite, Chairman of Consolidated Tin Smelters Limited, accepted our invitation to join the Court. His wide knowledge of the tin industry will be of great help to us.

During 1957 The Borneo Company Limited, with which the Bank has always had the happiest of business relations, commemorated the centenary of its incorporation and in September last I had the pleasure of moving the election to the Court of Mr Ian Lilburn MacEwen, a Director of the company.

As part of our plans to co-ordinate the operations of The Chartered Bank and the Eastern Bank Limited, we invited Sir Evan Jenkins, GCIE, KCSI, the Chairman of the Eastern Bank Limited, to join the Court.

Towards the end of the year Sir Kenneth Harper relinquished his directorship upon retiring from business in the City, and to fill the vacancy in the Court we elected Mr W. E. Eadie, CA, who has succeeded Sir Kenneth as Chairman of The Burmah Oil Company Limited.

The Bank's new interest in the commerce and industry of the Middle East is reflected in the election to the Court of Sir Stephen Gibson, CBE, who was, until last year, Managing Director of the Iraq Petroleum Company Limited.

On January 1, 1958, Mr E. J. Pakes, CBE, a Managing Director of British India Steam Navigation Company Limited joined the Court.

At the approaching annual general meeting I shall invite the stockholders to confirm the election to the Court of Mr Clifford Waite, Mr I. L. MacEwen, Sir Evan Jenkins, Mr W. E. Eadie, Sir Stephen Gibson and Mr E. J. Pakes.

For some time past it has been clear that the expansion of the Bank's activities and the growing complexity of its affairs have necessitated an enlargement of the Court. There are now fourteen Directors, three more than a year ago, and it is consequently easier to organise the work delegated by the Court to its committees.

THE GENERAL MANAGEMENT AND STAFF

In June last, Mr L. J. Blanchard, the senior General Manager, retired, and Mr David Beath and Mr Stafford Northcote were promoted to be Joint General Managers. At the same time Mr John Shewan, who has served the Bank with distinction in the Far East, was appointed an Assistant General Manager.

The continued prosperity of the Bank reflects the highest credit upon the General Management at Head Office, the branch managers and the staff at home and abroad.

I take this opportunity of acknowledging with gratitude not only the professional skill displayed by the staff in preserving and extending the prosperity of the Bank, but those personal qualities of toleration, forbearance and helpfulness which contribute so much to the survival of the historic links, forged under conditions very different from those which now exist, between Asia and the West.

THE EASTERN BANK LIMITED

On July 12th last I communicated to the stockholders the terms and conditions of an offer made by The Chartered Bank to acquire the whole of the issued share capital of the Eastern Bank Limited. The response to the

offer was highly satisfactory and the holders of approximately 96 per cent of the share capital of the Eastern Bank Limited accepted our proposals. Early in December we invoked the provisions of Section 209 of the Companies Act, 1948, to acquire the unassented shares, and we now own the whole of the issued capital of the Eastern Bank Limited. To complete the operation we issued, as fully paid, new stock in The Chartered Bank to the extent of £900,000, and thereby increased our paid-up capital to £4,400,000. Since the offer closed on August 21st last the operations of the two banks have been progressively co-ordinated.

NEW BRANCHES

A year ago I stated that The Chartered Bank had acquired by purchase the banking business transacted in Pakistan by the Allahabad Bank Limited. The former offices of the Allahabad Bank Limited at Lahore and Lyallpur have now been fully incorporated within our branch establishment and The Chartered Bank has been enabled thereby to participate to a much fuller extent than was possible previously in financing the up country trade and industry of Western Pakistan.

To our expanding branch organisation in Borneo there was added in April last an office at Sarikei and we are planning to open in the near future branches at Brunei Town and Kuala Belait. In order to enlarge further the services we extend to our numerous customers in Singapore a new branch has been opened at Bukit Timah, a thriving industrial suburb of the city, and we have lately leased premises for a new branch in the residential suburb of Tanglin.

CYPRUS

Stockholders will have learned from the Press that on November 1, 1957, The Chartered Bank acquired the goodwill of the banking business conducted by the Ionian Bank Limited at Nicosia, Famagusta, Kyrenia, Larnaca, Limassol and Paphos in the Colony of Cyprus. The customers of the Ionian Bank Limited readily agreed to entrust their business to us and the transfer was conducted very smoothly indeed. We are grateful for the co-operation and assistance received from the former staff of the Ionian Bank Limited, all of whom seem to have been happy to join our service.

We have succeeded to an excellent business with the merchant community of Cyprus, a form of banking activity with which we have been familiar throughout our history.

A foothold in the Eastern Mediterranean should ultimately prove to be of great value and this move may be regarded as part of the policy which prompted us to widen our sphere by interesting ourselves in the Middle East.

OVERSEA SURVEY

During 1957 there was no important change in what may be called the strategic disposition of the countries served by the Bank. Pakistan and Iraq continued to adhere to the Baghdad Pact while India remained the leader of the neutralist powers. The People's Republic of China pursued a policy of non-intervention in the Far East and its leaders appeared to be preoccupied with domestic affairs, notably in the fields of industrial development and social reform. All the uncommitted Asian countries are clearly anxious to avoid embroilment with either of the two major power blocs based upon Washington and Moscow and it is evident that throughout the continent nationalism remains the most powerful political force.

LEBANON

A five-year development plan has been adopted, including projects for the improvement of agriculture, industry, communications and town planning.

Inflationary conditions persist, with a fairly sharp rise in the cost of living and bank credit running at a high level. The Eastern Bank branch at Beirut is making satisfactory progress in a highly competitive market.

IRAQ

Iraq surmounted the economic difficulties arising from the Suez crisis with great determination. The severance of the pipe-line in Syrian territory halted the pumping of oil from Kirkuk on November 2, 1956. Repairs enabled pumping to be resumed on March 11, 1957, at the reduced flow of 7½ million tons per annum, since increased progressively to about 17½ million tons, against the pre-Suez rate of about 25 million tons. The pre-Suez rate is expected to be restored by April, 1958, and thereafter Kirkuk production will be gradually increased to 34 million tons per annum. Apart from the loss of production in 1956-57 and 1957-58, the stoppage involved a deficit of about ID 10 million in the budget for 1956-57 and a total loss to Iraq which has been officially estimated at as much as ID 56 million. The Iraq government were determined not to interrupt their development programme. The temporary shortfall in oil revenue was made good by an arrangement with the Iraq Petroleum Company.

PERSIAN GULF

BAHRAIN

Bahrain had a quiet year, with no repetition of the disturbances of 1956. The Suez crisis had little effect on business, though the stoppage of Arabian crude oil reduced the output of the refinery. Import restrictions in Saudi Arabia, designed to conserve foreign exchange, caused some overstocking in the bazaar, but business was on the whole quite good.

DOHA

Doha had a peaceful year. Revenue seems buoyant and development continues. Merchant business continues to grow, though more slowly than could be wished. The bazaar recovered quickly from the Suez crisis, but appeared to be somewhat overstocked in the middle of the year. Towards the end of the year there were signs of renewed activity and business on the whole was satisfactory.

SHARJAH

During the year a new office of the Eastern Bank was under construction at Sharjah. This office was opened on January 15, 1958.

ADEN

Our new building at Crater was opened for business in November and during the course of the year we occupied new premises at Steamer Point.

The temporary closing of the Suez Canal subjected the colony to fewer stresses than might have been expected but during the first four months of 1957 foreign trade was drastically curtailed. Later in the year an improvement in trade with the countries surrounding the Red Sea and the running down of stocks restored commercial conditions to a more normal and sounder basis.

INDIA

The Indian exchange reserves fell from Rs.529 crores at the end of 1956 to Rs.297 crores a year later. The latter figure includes a drawing during the year of US$200 million (Rs.95 crores) from the International Monetary Fund, to be repaid within three to five years. When it is remembered that India initiated the second five-year plan in April 1956, with exchange reserves equivalent to some Rs.750 crores and that under the plan it was intended to run these balances down by some Rs.200 crores over a period of five years, it is possible to gauge the extent to which the position has got out of hand.

There is now an awareness of the immediate dangers of the situation. A series of measures designed to arrest the progressive reduction of the exchange reserves have consequently been introduced. Nevertheless, after reducing the plan to more manageable proportions and allowing for the country's normal export earnings of foreign exchange and for promised foreign aid and World Bank loans, the official estimate is that additional external assistance amounting to some Rs.700 crores will be required before 1961 and mostly in 1958-59.

Certainly the completion of the most essential part of the plan will in time effect a saving in the import bill, but despite the assistance which in response to the Indian request for help has been promised by the American and West German governments, India clearly has a difficult road to travel.

PAKISTAN

The past year has been one of difficulty for the Pakistan economy. Unfortunately the balance of payments, which must be regarded as the most reliable indicator of a country's external economic situation, has again been under pressure. This has disappointed the hope that the devaluation of the Pakistan rupee to parity with the Indian rupee in August 1955 followed by an increased payments surplus for the year 1955-56 would have restored a large measure of economic stability enabling Pakistan to begin to enjoy the benefit of the industrial development which had for some years imposed a heavy strain on the country's exchange reserves.

The severe food crisis which developed towards the end of 1956 owing to deficiencies in both the rice and wheat crops necessitated the importation of about 1½ million tons of food grains into East and West Pakistan. Although part of these supplies was financed by assistance from abroad, the balance had to be purchased out of Pakistan's own exchange resources and this unexpected expenditure was a major cause of the payments deficit during the year ended in June 1957, the largest since 1952-53.

BURMA

In the economic sphere 1957 was a disappointing year for Burma. Rice exports according to the latest figures available have been running at much the same level as in 1956 and it seemed reasonable to assume that oversea sales would be sufficient to maintain the exchange reserves at much the same level as a year ago. The reserves have in fact declined substantially despite a loan from the government of India and assistance from the United States and the World Bank. The payments deficit and the loss of reserves appear to have been due to a partial relaxation of import restrictions, for imports, although partly financed under Japanese reparations and United States Public Law 480, have still been substantially higher than in 1956.

CEYLON

The recent disastrous floods have caused widespread distress among the people of Ceylon and have evoked world-wide sympathy and many offers of assistance from within the Commonwealth and elsewhere. It is tragic that in the country's hour of need the landing of food and other essential supplies required in the inundated areas has been seriously impeded by labour disputes in the port of Colombo. Indeed, strikes and go-slow movements in recent months have so deranged the normal working of the port that Ceylon's oversea trade has been badly affected and labour unrest has been by no means confined to the docks.

Under these circumstances and in view of the fall in the price paid for tea at the local auctions and of the rise in imports, particularly of rice and manufactured goods, it was inevitable that the country's balance of trade would be unfavourable.

SINGAPORE

Singapore is to become a self-governing state within the Commonwealth, and a new constitution will come into effect after the beginning of 1958 as soon as new electoral rolls have been prepared. The Citizenship Bill, which was passed by the Legislative Assembly during the latter part of the year, has conferred voting rights on probably as many as 300,000 additional electors. The choice of representatives made by this enlarged body of voters at the General Election to be held next September may well prove crucial for Singapore's future, and it is to be hoped that party controversy will not obscure from the electorate the hard facts of Singapore's unique economic situation. Only by virtue of the prosperity which its international status as an entrepôt and a commercial and financial centre has brought to it has Singapore been able to develop in recent years an impressive range of services and amenities for the benefit of its population, who enjoy standards of housing, medical services and education that compare favourably with any to be found in South-East Asia today.

FEDERATION OF MALAYA

The outstanding event during the past year, and one which has been widely welcomed, was the achievement by the Federation of Malaya of its independence within the Commonwealth on August 31st. Before the formal granting of independence, the Prime Minister and his government had shown a statesmanlike approach to the country's problems and a wise comprehension of their new responsibilities. The Federation is now joining such international organisations as GATT, the World Bank, the International Monetary Fund and the International Finance Corporation.

The Federation embarks on its career as an independent state with substantial external assets and an economy which, though mainly dependent on the rubber and tin industries, is sound and progressive. As the Finance Minister pointed out in his budget speech in December, the general level of wages and the standard of living in the Federation is probably the highest in South-East Asia. On the other hand the emergency which still continues remains a drain on the country's resources. The government is doing all that it prudently can to end the emergency and it is to be hoped that efforts in this direction will prove successful and so enable the country to finance larger expenditure on economic and social development.

NORTH BORNEO

The latest figures available show that North Borneo's oversea trade last year may well have reached a record level, although the trade surplus for the year as a whole is likely to be less than in 1956. The expansion of imports is again to be attributed partly to the purchase abroad of capital equipment required in connection with the colony's development schemes. It is encouraging that on the other side of the account a wider range of export commodities is making a significantly increased contribution to North Borneo's earnings of foreign currency.

SARAWAK

Sarawak is progressing slowly but steadily towards self-government and last May there took place the first meeting of the Council Negri since the introduction of a new constitution providing for an unofficial majority. Following successful municipal elections in Kuching and Sibu, it is the government's intention to hold similar elections at Miri during the course of the coming year.

Again last year two of the colony's principal exports, rubber and pepper, fetched lower prices in the international market, with a consequent fall in export earnings. Although total imports are estimated to have been slightly lower, the reduction in export earnings has increased the trade deficit of the previous year.

INDONESIA

It is difficult to discover in the political crisis which threatens the unity of the country whether the opposing factions are contending for different forms of government or defending incompatible economic interests. Manifestly the situation is one of grave danger to the young republic but it can be resolved only by the Indonesian people and their leaders without interference, however well-meaning or gratuitous advice, from abroad.

The constructive work in which the Indonesian branches of the Bank engage has necessarily been hindered by the political ferment which has now issued in a conjuncture the outcome of which cannot be foreseen. The situation and its uncertainties are causing us a good deal of anxiety but we can do no more than join with other friends of Indonesia in hoping that a peaceful way out of the present impasse may soon be found and that the Indonesian people may attain the higher standards of living that would accrue to all of them from the restoration of political stability, administrative probity and labour responsibility; a state of affairs which is indispensable to the effective development and economic deployment of the enormous natural riches with which the country is endowed.

THAILAND

Although the unsettled political situation has had a disturbing effect on trade, particularly since September, Thailand has again enjoyed a relatively prosperous year. The country enjoys a measure of economic stability, which is denied to many of its neighbours in South-East Asia, because of its self-sufficiency in rice, and of the consequent well-being and contentment of its peasantry. Rice normally accounts for approximately one-half of the country's export earnings; shipments which last year showed a substantial increase over those in 1956 and reached their highest level since 1952, contributed to the rise which took place in the exchange reserves.

VIETNAM

There have been no major political developments in Vietnam during the past year and the country has therefore been able to consolidate to some extent the economic progress which has been made since President Ngo Dinh Diem succeeded in restoring law and order in territory which had been ravaged by many years of war.

The country continues to be largely dependent on American aid to pay for the bulk of its imports. Although there was a modest, but nevertheless welcome, revival of the export trade in rice last year and a higher tonnage of rubber was shipped abroad, export earnings amounted to only 28 per cent of the value of imports.

CAMBODIA

Cambodia is almost unique among the countries of South-East Asia in having a surplus of agricultural land and thus an abundance of staple food-stuffs for the whole population. A good harvest last year allowed of greatly increased exports of rice and other cereals, and since rice accounts for some 42 per cent of the country's total exports, the trade balance, which had been substantially in deficit in 1956, yielded a surplus last year. Most of the country's imports continue to be financed by American Aid and in consequence of an increase in the value of exports and a reduction in imports exchange reserves have risen during the course of the year.

THE PHILIPPINES

The past year has seen a serious reduction of the foreign exchange reserves and an increase in the money supply accompanied by the all too familiar and disturbing symptoms of inflation.

There can be little doubt that the natural resources of the Philippines, if efficiently developed and administered could, within a relatively short period, strengthen the national economy and assure the population of a reasonable standard of living. Although the bulk of the external trade of the Philippines is still conducted with the United States, trade with the United Kingdom and with Western Europe is increasing. Negotiations have been taking place during the course of the year, with a view to facilitating the use of sterling by the Philippines, which, if accompanied would facilitate a further expansion of trade with the United Kingdom and the sterling area.

HONG KONG

Hong Kong's total trade increased last year with imports expanding and exports falling in aggregate value. Rather more than a quarter of Hong Kong's exports are locally manufactured, and the local industries in general have had a fairly good year, their sales overseas having been stimulated as a result of the colony's participation in trade fairs abroad. It is clear, however, in view of trade restrictions and shortage of foreign exchange in South-East Asia particularly, that the future success of Hong Kong's industries will depend to an increasing extent on their ability to sell their products in more distant markets, such as Europe and North America, where competition will be more severe. Efforts in this direction should be assisted by the trend which is apparent in many branches of local industry, towards producing and shipping finished goods, rather than semi-manufactured products.

CHINA

Last year I mentioned that the authorities in Peking evidently considered it useful to have banking connections throughout the world to supplement those afforded by the Bank of China and that with official encouragement The Chartered Bank was again participating, if only to a small extent, in the financing of China's oversea trade. The business suits us very well, and there are good prospects of its continuing.

JAPAN

The economic expansion which made 1956 Japan's most successful postwar year, continued unabated well into last year, but subsequently increased imports began to impose a serious strain on the country's balance of payments. Industrial and mining production continued to rise, but to sustain their expansion it was necessary to purchase increased quantities of raw materials from abroad. The monthly deficit on the country's balance of payments reached its peak in the middle of the year and was on such a scale that it was necessary for the Government to seek assistance from the International Monetary Fund and to introduce measures designed to restrict imports and to curtail domestic credit. By the end of the year it became apparent that equilibrium had been largely restored and in October Japan's balance of payments showed a surplus. The remedies applied have inevitably caused an increase in unemployment, and the problem of expanding exports sufficiently to ensure reasonable living standards for an expanding population persists. Nevertheless Japan is fortunate in possessing an industrious population and in remaining relatively free from labour unrest, despite the growing strength of the trade unions.

NEW YORK

Our New York agency is an important link in our interregional organisation since many of the principal exports of the Asian countries in which we have branches find remunerative markets in the United States. We have many business connections of long standing among exporters and importers in the United States and our relations with the American banks have always been cordial.

THE STERLING AREA AND THE UNITED KINGDOM ECONOMY

The appointment of a committee under the chairmanship of Lord Radcliffe to enquire into the working of the monetary system has evoked a good deal of discussion among economists concerning the merits of the sterling area system and the position of this country as its banker.

Widely divergent estimates have been made of the extent to which foreign currency accrues to the United Kingdom Control from the operations of oversea banks based upon or represented in London and it has been argued that the advantages of those operations to the United Kingdom economy are more apparent than real. The effectiveness of organisations like The Chartered Bank in sustaining the external economic defences of the United Kingdom cannot be in doubt. The Bank finances a very large proportion of the trade in primary products between the eastern countries and the rest of the world and it is a considerable earner of US dollars and other scarce currencies in its own right; moreover the Bank is enabled by means of its already extensive and growing oversea establishment to play an important part in the promotion of the export trade of the United Kingdom.

To impose restraint upon the activities of the British oversea banks would be the last resort of the destitute, and it is reassuring to know that changes in currency management and exchange control which might prejudice the unique position of the City of London in international commerce will not be made without the most searching enquiry.

CONCLUSION

The superficial observer of the contemporary international scene might suppose that few, if any, of the Asian countries hold opportunities for the British banks. There have been reactions against what is loosely and often mistakenly termed "financial imperialism," but most Asian countries realise that an efficient international banking service can play a powerful part in sustaining the economic defences of an undeveloped country struggling to be free and prosperous and that foreigners practising banking in their territories can be trusted by their hosts.

While our primary function is that of an exchange bank, we have during the past twenty years operated to an increasing extent within the domestic economies of the countries to which our organisation extends. These credit operations are financed by local deposits and, where they exist, local money market facilities. In proportion to the extent to which the Bank is permitted to attract deposits it can, of course, engage in the financing of sound business activities, but there are signs in many countries of a disposition to restrict deposit banking to the indigenous banks.

One of the most striking features that has emerged during the year has been the extent to which the holdings of foreign exchange of so many of the Eastern countries have seriously deteriorated. Attention has been focused on India's position because of the extent to which she has drawn on her sterling balances, but it is clear that her problem is common to other Asian countries. In nearly all of them there has been the urge towards rapid industrialisation which has caused excessive imports of capital goods and imposed further strain upon dwindling resources of foreign exchange.

It is too soon to anticipate what may be the consequences to the Bank of the impending liberalisation of trade within the Western European community, but the pursuit of such a policy would widen markets for the agricultural produce and raw materials which are still of vital importance to most of the Asian national economies. The Bank has a thriving agency in Hamburg and it enjoys mutually satisfactory correspondent relations with an extensive range of banks established on the European continent. Our international organisation is well equipped to take advantage of changes in the direction of trade which are likely to result from tariff revision in the United Kingdom and Western Europe.

When addressing the stockholders in past years I have remarked more than once that The Chartered Bank has given many hostages to fortune, but the success with which the affairs of the Bank have been conducted since the end of the war and the way in which the technique of management has been adapted to meet revolutionised economic situations resulting from changes of sovereignty and other political upheavals encourage me to continue to view with confidence the future of British banking in the East.

Copies of the full text of the statement will be sent on application to the Secretary of the Bank at 38, Bishopsgate, London, E.C.2.

THE PRESTIGE GROUP LIMITED

HIGHER TURNOVER AND PROFIT

The Annual General Meeting of The Prestige Group Limited will be held on April 3rd in London.

The following are extracts from the statement by the Chairman, Mr Arthur Keating, and the Managing Director, Mr S. A. Field, which has been circulated with the Report and Accounts for the year to December 31, 1957:

We are glad to report the fulfilment of our expectation a year ago that in 1957 both turnover and profit would rise. Turnover was 24 per cent higher and profit before taxation 32 per cent higher than in 1956.

The net profit achieved would have been greater but for two circumstances: first, the continuing pressure on profit margins from the increased cost of wages and materials and second, a severe epidemic of influenza which caused a serious slow-down in production at our factories at a critical time of the year.

The profit before taxation amounted to £601,668, compared with £456,650 in 1956. Provision of £317,000 has been made for taxation on these earnings, leaving the available net profit of the Group for the year at £284,668, compared with £221,955 in 1956.

An interim dividend of 10 per cent on the Ordinary Shares was paid in August, 1957. Your Directors recommend the payment of a final dividend of 35 per cent on the Ordinary Shares, making a total dividend of 45 per cent for the year, as in 1955 and 1956.

GENERAL

1957 was a year of substantial improvement for your Company and total turnover constituted a record. In the home market the reduction of purchase tax in April from 30 per cent to 15 per cent on a large number of our products was a helpful factor in increasing sales. Restrictions in export markets continued to present many problems, but the temporary fall of 1956 has been halted and as a result of persistent efforts, sales have started to climb again.

In May, 1957, as announced in the Press at the time, your Company purchased the whole of the issued share capital of Albert Arrowsmith Limited, manufacturers of pans for the bakery trade at a small leasehold factory in Salford, Lancashire.

This purchase marks the entry of your Company into the manufacture and servicing of commercial baking tins and utensils. This new field is a natural development in view of the position held by our parent company, Ekco Products Company of Chicago, as the largest and most successful manufacturer of baking tins in the United States.

During the year new lines of housewares —cutlery, kitchen tools, baking tins and bathroom fittings—have been introduced. A new type of moulded wood handle under the name of "Pakkawood," made by one of our associated companies in Germany, has been fitted to an important selection of our cutlery and kitchen tool ranges.

There is no doubt that the noticeable increase in competition for the housewife's pound will continue. We are confident that the Prestige Group will continue to increase its share of the market, aided by growing public awareness of its brand names and their association with quality merchandise.

We are glad to be able to conclude by stating that January and February, 1958, have been satisfactory months in terms of both turnover and profit.

TEMPERANCE PERMANENT BUILDING SOCIETY

MR CYRIL W. BLACK'S REVIEW OF 1957

The One Hundred and Fourth Annual Meeting of the Temperance Permanent Building Society was held on Friday, March 7th, at the Caxton Hall, London.

Mr Cyril W. Black, DL, JP, MP, FRICS, chairman of the Society, in the course of his speech, said: The year which has recently drawn to a close has been in the main a period of consolidation. In the light of the many difficulties and uncertainties of the period it was considered inexpedient to strive after any spectacular expansion in our business but wiser to concentrate on strengthening still further the immensely strong foundations on which your Society is built. The outstanding events of the year for us have undoubtedly been the removal, in the interests of efficiency and economy, of our Administrative Offices to Worthing, and the acquisition of the Worthing Building Society.

The total assets at the close of the year amounted to a record figure of £38,580,434. The amount standing to the credit of Shareholders and Depositors was £35,895,000, an increase in the year of £2,288,580. New advances totalled £4,351,655, it being noteworthy that 94 per cent of the total represented individual advances not exceeding £3,000. The prudence which has always characterised our lending policy is evidenced once again by the almost microscopic figure for "losses on realisation" amounting on this occasion to only £1,769.

RESERVES

The great importance attached by your Board to the strengthening and building up of the reserves of the Society is already well known. During the past year we have made appropriations to Reserve Accounts resulting in the attainment of an all time high record of £2,105,000, representing approximately 6 per cent of our aggregate Share and Deposit capital. This is a ratio considerably better than the average. Cash and Government and Municipal Investments aggregate over £6 million, this impressive figure representing a satisfactory degree of liquidity for a Society of our character and size.

TAXATION

Attention must again be directed to the crippling burden of taxation by which, in common with other Building Societies, we are afflicted. In particular, the Building Society Movement has for a long time past laboured under a burning sense of grievance regarding liability for Profits Tax. It cannot be too often or too strongly emphasised that Building Societies are in no sense normal commercial profit-earning concerns, and that the profit element plays a very minor and subsidiary role in their operations. Building Societies are therefore convinced that an overwhelming case exists for complete exemption from liability for Profits Tax. Building Societies accordingly look to the new Chancellor of the Exchequer for the due performance of his predecessor's promise to consider the introduction of ameliorating provisions in the forthcoming Finance Bill.

INTEREST RATES

During the past year, for reasons with which we are all familiar, the Government took the drastic but necessary action of raising the Bank Rate to the very high level of 7 per cent, at which figure it still remains. In common with other Building Societies we have been anxious to avoid, if possible, imposing any further burden on our borrowers, and this remains our policy. We can only maintain the present position if our investors and the investing public will exercise restraint, and be satisfied with the not ungenerous rates of interest we are paying and offering to investors. I am not unaware that there are some Building Societies offering rates of interest in excess of those paid by us and most other leading Societies. Intending investors will be well advised, before selecting a Society as the depository for their funds, to ascertain whether it is a member of the Building Societies Association, and also to examine carefully its financial position. It has long been a general axiom in the investment world that a higher rate of interest almost invariably goes with a lower degree of security, and Building Societies are by no means exempt from the operation of this general rule.

We are confident of a future of gradually expanding usefulness, and believe that time will show that some financial organisations which have recently made spectacular progress in the achievement of very large figures in a very short period of time have not the staying power nor the stability possessed by a Society such as ours. We are not ashamed to value strength above size, and to be more interested in steady and stable growth than in spectacular but speculative development.

The Report and Statement of Accounts were adopted.

FALCON MINES

The forty-eighth annual general meeting of Falcon Mines, Limited, will be held on March 31st at Bulawayo, Southern Rhodesia.

The following is an extract from the Statement of the Chairman, Mr F. L. Wigley, dated February 21, 1958, circulated with the Report and Accounts for the year ended September 30, 1957:

The Net Profit for the year was £103,685. An amount of £4,000 has been written off unquoted investments and the sum of £20,000 has been appropriated for expenditure on Fixed Assets and Mine Stores. After providing for Dividends Nos. 7 and 8, totalling 10½d. per share (17½ per cent), which absorbed £79,433, there remained a balance unappropriated of £15,941, compared with £15,964 brought forward from last year.

DALNY MINE

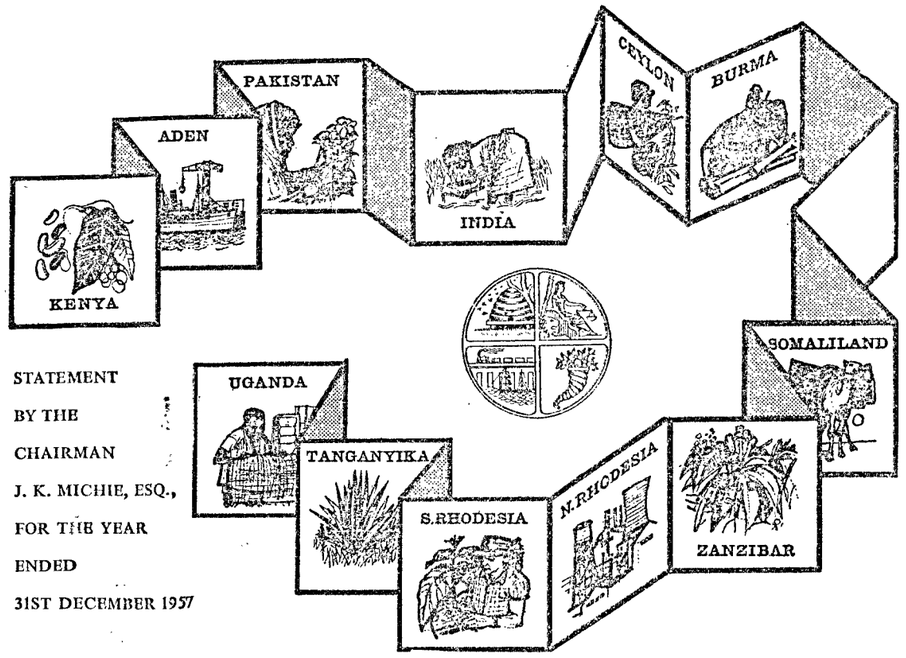
At the Dalny Mine the estimated ore reserve at September 30, 1957, was 536,300 tons valued at 4.32 dwts per ton over a width of 96 inches, an increase of 14,300 tons, but a decrease of .38 dwts per ton in value as compared with the previous year. The drop in ore reserve value is due mainly to the concentration of development effort in the area of 13 level which is being established as the main hauling level. In consequence, less than the normal amount of development has been accomplished in areas of the ore-body which are known to carry values higher than the average.

On the Arlandzer Section at a distance of some 19,500 feet west of the Rix shaft, an incline borehole was drilled to a depth of 587 feet. As announced in the report for the quarter ended September 30, 1957, values were encountered on three horizons and at 304 feet the ore-body assayed 13.3 dwts per ton over a true width of 44 inches. This borehole was drilled mainly for protection purposes as well as for information, and it is not our intention to explore the area further at the present time.

It was mentioned in the Chairman's Review last year that it had been decided to increase the capacity of the reduction plant at the Dalny Mine from about 15,000 tons to 20,000 tons per month and also to introduce certain modifications and additions designed to improve the gold extraction. There were some delays in the delivery of the new plant units and the extensions to the mill were not completed until about the end of the financial year. Since the units were commissioned at the beginning of October, 1957, both mechanical and metallurgical difficulties have been experienced, but these teething troubles are being overcome.

THE SCOTTISH PROVIDENT INSTITUTION

MUTUAL LIFE ASSURANCE



MR C. G. M. PEARSON'S REVIEW OF ANOTHER RECORD YEAR

In presenting the Report and Accounts to the one hundred and twentieth Annual General Meeting, held in Edinburgh on March 11, 1958, the Chairman, Mr C. G. M. Pearson, CA, referred to a further expansion in New Business. Not only were Net New Sums Assured at £11,626,141 the highest in the Institution's history, but for the first time the net new premiums had exceeded £1 million. The rates of interest earned on the Total Funds, including the General Reserve Fund, had increased each year for the past ten years and were now £6 3s. 7d. per cent gross or £4 14s. 10d. per cent after deduction of income tax, but it was proper to sound a warning that such high rates were unlikely to continue indefinitely now that industry was finding it progressively more difficult to earn profits. The market values of Stock Exchange securities had fallen during the year but there was still a very useful margin between the aggregate market value and the figure at which these securities stood in the books. During the year the Institution's Total Funds had increased by more than three and a quarter million pounds to a figure of £44,818,350.

INTERMEDIATE BONUSES INCREASED

Although Intermediate Bonuses had already been increased during the current quinquennium, the continued favourable experience had made it possible to increase the rates still further. Under the Institution's Distinctive System of very low rates of premium for whole-life assurances these were now 25s. per cent per annum (Old Series) and 22s. 6d. per cent per annum (New Series). For with-profit endowment assurances the new rate was 45s. per cent per annum. All these rates of bonus are compound. These latest increases afforded convincing evidence of the continuing profit-earning power of the Institution, and as the next quinquennial valuation of liabilities and distribution of surplus would be made as at December 31, 1958, the Chairman strongly urged everyone thinking of effecting a policy to take out a with-profits assurance without delay and so ensure participation in the profits of the quinquennium.

The Report and Accounts were adopted.

National Overseas and Grindlays Bank Ltd

The physical amalgamation of the National Bank of India Ltd. and Grindlays Bank Ltd. into the National Overseas & Grindlays Bank Ltd. took effect from the 1st January 1958 so while this is the first report to the shareholders under the new name, the accounts for 1957 perforce are presented in the previous form.

Despite the enormous amount of detailed work involved, thanks to the organising ability of those specially seconded to the task and to the co-operation of the staffs of both Banks, the fusion was accomplished with remarkable smoothness and I hope without inconvenience to our customers. In a complex operation of this kind to foresee and anticipate every difficulty would be superhuman but I am satisfied that any outstanding problems will be disposed of with the sympathy and understanding which were the keynotes of the whole operation.

We have established a 54 Parliament Street Committee of five members, all of whom were on the Board of Grindlays Bank Ltd. This Committee will assist the Management to deal expeditiously with the large number of accounts which they hold and so maintain the very high standard of service associated with the name Grindlays.

I have to report a change in your Board since our last meeting. Sir Robert Reid who had been a member since 1943 retired on 31st December last. Sir Robert had a distinguished career in the Indian Civil Service finally as Governor of Assam and his intimate knowledge of the sub-Continent was of great value to us. Incidentally his father was a member of the Board for thirty-one years from 1878 until 1909.

To fill the vacancy we invited Mr. E. H. Owen to join us which he did early in January. Mr. Owen had been a member of the Board of Grindlays Bank Ltd since October 1955 so already had knowledge of our business. He also has wide interests in the City and I recommend him to you with every confidence.

I also have an impending loss to report. Mr. W. H. Miles, who has very special knowledge of Ceylon and who has been on the Board since April 1946, has intimated that he wishes to reduce his business commitments and his resignation will take effect after the Annual General Meeting. We accept his decision with much regret and shall miss his wise advice not only on matters concerning Ceylon but on the wider aspects of our business.

Before leaving the subject of the Board I am sure you would wish to join in congratulating Sir Toby Low, K.C.M.G., C.B.E., D.S.O., M.P., on the honour of Knighthood conferred on him by Her Majesty the Queen in the 1957 Birthday Honours List for his distinguished services as a Minister of the Crown over a period of six years.

Turning to figures, the total of our Consolidated Balance Sheet at £162,105,220 shews a small reduction and our net profit is £5,345 lower at £427,490. As usual this figure is arrived at after full provisions for taxation, for bad and doubtful debts and other necessary reservations. Two interim dividends each of 7½% have been declared making a total unchanged distribution of 15%.

During 1957 Government securities again fell considerably in value—a process which fortunately has recently been reversed—but I am glad to be able to report that these temporary reductions in value as in the past have been provided against internally.

India

1957 was a difficult year and at the moment prospects for 1958 promise little if any alleviation of her financial problems; in fact due to a poor monsoon the food situation is less favourable than in recent years and that means more imports and a greater drain on monetary reserves.

When a country is in process of an industrial expansion at a rate far in excess of its own savings this combined with a fall in the values of its basic exports, *i.e.* Jute products, Tea and Cotton goods, is doubly hurtful. The new investments absorb sterling balances which previously yielded interest; alternatively they are being built with the help of borrowed money on which in some form or another and at some time or other interest will have to be paid. Therefore temporarily there is a large element of inflation in the phase through which India is passing.

Internally money is tight and too cheap and Government have asked Banks to reduce their lendings. This process would be easier if Government itself paid its dues somewhat more promptly and

recognised that money too is a commodity which should only be cheap if it is plentiful.

Another major aggravation of India's difficulties has been the lack of public confidence as evidenced by a continued fall in Stock Exchange values accentuated of course by the Mundhra incident. In view of the wide publicity being given to this affair you will be glad to know that our Bank is involved only to a limited extent and full provision has been made in these accounts for any possible loss. It is most regrettable that the involvement of the Life Insurance Corporation in the Mundhra affair has led to the resignation of India's able Finance Minister, Mr. T. T. Krishnamachari.

At this stage it is impossible to avoid comment on India's immediate economic difficulties but on the other side of the picture there is no question of the energy and realism with which she is now facing them. Imports are being cut, long credit is to some extent being arranged and a certain success is being achieved in raising further loans and aid. Equally there is no doubt of the goodwill towards India of the countries and organisations from which funds and other assistance may be secured and I am certain they will strain themselves to help India over her difficulties.

Pakistan

The economy of Pakistan is also under strain. The year 1957 ended with a deficit of over £19,000,000 in the balance of payments as compared with £675,000 in 1956

There have been falls in both prices and production of tea and jute, the cotton crop yield was about the same as the previous one but exports are running at a much lower level. The food situation in East Pakistan has recently improved considerably and prices have fallen to reasonable levels. In October Mr. Suhrawady resigned the Premiership and after a short period under Mr. Chundrigar was replaced by Malik Firoz Khan Noon who has previously held office in a variety of capacities.

Internally money is in fair supply in Pakistan but as is now much more generally realised it is trade balances and external reserves that really matter and Pakistan has a stern fight ahead of her. Nevertheless prospects for 1958 are more favourable but much depends on food production and the slowing down of purchases of capital goods from overseas. The Sui Gas Scheme is also increasingly helpful by saving imports of fuel.

Ceylon

Last year I was able to report a buoyant economy; good prices for tea and an increased balance of trade, the only clouds being labour relations particularly in the port of Colombo and the continued talk of nationalisation of tea estates.

Since then tea prices have been volatile and generally lower and rubber prices also are lower, while recently conditions in the port of Colombo have been chaotic and have caused a severe and crippling hold up of exports.

It has been stated officially that tea estates in Ceylon would be nationalised only when it became necessary in the interests of the country's economy and that time has not yet arrived.

To add to the troubles there was a disastrous flood upcountry in December which has disrupted communications and slowed down exports even further. The country's most immediate problem is port labour and how it is to be handled. At the moment it seems to be largely out of hand. Other labour is also restless and widespread strikes are threatened. Whatever the causes of this unrest the results are certainly embarrassing and extremely damaging to the economy of the country.

Burma

Last year rice exports reached a post-war record of over 2 million tons, timber exports were maintained and with the coming into operation of the new oil refinery, imports of oil were reduced. There was too, an encouraging improvement in what is called "law and order". In fact portents were distinctly encouraging.

Unfortunately 1957 brought the poorest monsoon since 1920 and Burma's rice crop will thresh out 30% short of the previous year which means the exportable surplus of around 1 million tons only and a loss of foreign exchange of nearly £30 millions. Foreign exchange reserves are already falling and economies will have to be the order of the year. There is a regrettable movement afoot to restrict and even ban internal overdraft facilities to foreign or foreign-controlled companies and firms and this will affect many of our constituents. It is also very doubtful if it will benefit Burma's trade. The difficulties over remittances both personal and of accumulated profits I regret continue.

East Africa

During the past year Branches were opened at River Road, Nairobi and at Gulu in Uganda.

In Kenya, Fort Hall which had formerly been a sub-Branch to Thika became a full-time Branch on 1st July 1957 and on that date a sub-Branch to Fort Hall was opened at Embu. In the same month a sub-Branch to Nyeri was opened at Karatina.

Kenya

Grain crops were reasonably good while the coffee crop reached an unexpectedly high figure of 22,000 tons and fetched quite good prices. Tea production continues to expand although prices were not as good as in 1956.

The resettlement of Kikuyu and Meru tribesmen involved in "Mau Mau" continues, and during a brief visit to Kenya in November, I was able to see a part of what is being done.

From my observations the building boom in Nairobi and elsewhere is over and particularly as the flow of capital into East Africa is declining it would be a good thing if less money were now to be put into bricks and mortar and more devoted to increasing liquidity.

The Government and other public bodies are finding it increasingly difficult to raise loans either in London or locally and this both has an effect on and is a reflection of the availability of money generally.

Uganda

The two main cash crops, cotton and coffee, gave average to good yields last year although neither reached the figures hoped for. Due to a prolonged drought in August/November, prospects for this year are far from good and will mean a great deal less spending power in the Protectorate. The cotton crop which partly because of better agricultural methods was at one time expected to reach a record yield of 450,000 bales is now estimated at 310,000, the one satisfactory feature being that but for the improved methods adopted the yield would have been even lower. There is therefore good hope for future years. The yield of clean coffee is now estimated to be 45,000 tons against 67,000 tons last year. Uganda suffers less variation in her rainfall than do her immediate neighbours and given reasonably peaceful political conditions her economy will undoubtedly continue to expand.

Tanganyika

Sisal prices continue depressed and during 1957 went as low as £69 per ton. A satisfactory feature of the industry and a proof of its vitality is that yield is being maintained in spite of the low price.

Tanganyika's cotton crop in the Mwanza area is steadily growing in importance and value and in 1957 150,000 bales were marketed against 120,000 bales in 1956. In 1951 the crop was 41,000 bales only.

Coffee yields in the Kilimanjaro area continue good and acreage is expanding.

Zanzibar and cloves are automatically associated in one's mind and last year's crop of 21,500 tons was an all time record. Coinciding with the troubles in Indonesia which is one of the major markets this vast crop is proving something of an embarrassment as the carrying of a large part of it is falling on the Clove Growers

(*continued from previous page*)

Association, a quasi-Government body created to assist in the financing, storing and orderly marketing of cloves. Madagascar also has a large crop and is marketing actively with a naturally depressing effect on prices. It is most unlikely that there can be two exceptional crops in succession so it is hoped the situation will be adjusted.

The Federation of Rhodesia and Nyasaland features in our survey for the first time. We now have six Branches in Southern and Northern Rhodesia and one agency in Bulawayo. Two further offices, one in Salisbury, and one in Belmont, Bulawayo are in train.

During 1957 we were well pleased with our progress despite the fact that certain credit restrictions were placed upon Banks when it was seen that copper prices were still on the way down.

Since the close of the year because of a large reduction in the sterling balances of the Federation and the continued depression in the price of copper—the price has fallen by over £100 per ton since 1st January 1957—further restrictions on lending have been imposed on the Banks and generally we must expect a period of relative stagnation.

Tobacco did well in 1957 but because of unseasonable rains, prospects for this crop are not so good.

Last October, accompanied by Sir Toby Low, I made a fairly extensive tour of Southern and Northern Rhodesia to inform ourselves at first-hand about these, to us, new territories and about our business there. In spite of the difficulties I have already mentioned we brought away an impression of a young and virile country which is determined to develop a part of the world in which there is not only plenty of room but also great possibilities of agricultural and industrial expansion.

At time of writing, the Deputy Chairman Mr. Stuart and Mr. Kerr, our General Manager, are visiting our Rhodesian Branches and this additional first-hand experience will be of undoubted benefit to our local Management and to the Board.

On the assumption, which I think is a reasonable one, that the present recession in copper and other prices is temporary and that a somewhat higher plane can be expected, there is no reason to be pessimistic of the economic future of the Federation.

Aden

The reopening of the Suez Canal gave the trade of Aden a very definite fillip and it has remained on a fairly high level of activity although there are now signs of overstocking.

Somaliland Protectorate

Rainfall has been plentiful this season and exports of livestock which is the territory's chief product have been running at a high level.

A considerable expansion of the harbour facilities at the port of Berbera is now under way.

Grindlays Bank Ltd.

The last year of the Bank as a separate unit was a successful one and the volume of deposits again shewed an increase.

Our Finance and Development Corporation

The year's operations again shewed a profit which is being retained in the business.

General

The reduction of the Bank of England rate to 5% in February 1957 proved to be an over-optimistic step and on 19th September last, circumstances demanded that it be again raised, this time drastically to 7%. This unpalatable medicine seems to be working although the Governor of the Bank of England has just warned us against being too complacent about our progress. There is indeed no panacea in monetary policies by themselves. If they have the desired effects of making us as a country not only tighten our belts but also gird up our loins then all will be well—otherwise no.

I have commented in each of my last two statements on the disparity between money rates in countries where it is certainly as scarce as it is here and those prevailing in London.

One result of this disparity is a very natural one—for industries and businesses to endeavour to borrow as largely as possible where money is "cheap" and as little as possible when it is not only considerably more expensive but much harder to come by. This fact is not making our role as overseas bankers any easier particularly as competition for deposits is growing in every sphere of our activities. It is therefore with interested sincerity that I hope for an easier money market in this country and its reopening on a larger scale to overseas borrowers.

It is impossible to foresee other than a difficult year for commerce, industry and their handmaiden banking but that is no justification for pessimism and I look forward albeit not immediately to a resumption of progress.

Staff

As always we are beholden to our Staff and I wish to thank an enthusiastic and able body of men and women for their loyal service.

CABLE AND WIRELESS (HOLDING)

RECORD OF PROGRESS CONTINUED

The twenty-ninth annual general meeting of Cable and Wireless (Holding) Limited, was held on March 7th, in London.

Sir Edward Wilshaw, KCMG, DL, JP, LLD, FCIS (the Governor) in the course of his speech, said :

Earnings have again increased; this year by £73,907 to £1,167,772 before providing for taxation, so that in four years we have succeeded in doubling the earnings. No less a sum than £505,317, or £31,674 more than last year, is required for taxation, so that the net earnings of the Group of Companies are £42,233 higher at £662,455.

Once again a final dividend of three-halfpence is recommended, making a total of sixpence per 5s. unit of stock for the year or 10 per cent.

The successful operation of your Company over the past years must, I feel sure, be a great source of satisfaction to Stockowners as it is to your Directors. Those Stockowners who have been on the Register since July, 1950, less than 8 years ago, have had the value of their capital more than doubled and their income has increased almost to the same extent. Truly no mean achievement.

In the Directors' Report you will see references to the proposed share issues by the Company. The first issue, a scrip issue, necessitates the capitalisation of £605,000 of the undistributed profits now standing in the General Reserve. The second issue, which is being made simultaneously with the issue I have just mentioned, is a separate transaction and is for the purpose of providing the Company with additional funds which the Directors are of opinion can be utilised profitably in furtherance of the business of the Company and with obvious considerable investment advantage at this time.

At our meeting two years ago I mentioned that we had in mind permitting the staff to participate in any future issues of shares. On the occasion of the present Rights issue you might like to know that, in implementation of that proposal, your Directors are arranging for new shares not accepted by stockowners to be offered to the officials and staff at the issue price. By this means it will be possible for the staff to obtain, or add to, a share interest in the Company.

FUTURE PROSPECTS

Subject to no unforeseen circumstances arising, I am confident that we shall be able to maintain the payment of dividends at the same rate for the current year, and I trust for some years, on the capital as increased by the proposed scrip and rights issues.

My firm faith in the future is reflected in my implementing at this time my promise that stockowners should participate in the increasing prosperity of the Company by receiving scrip issues rather than increased dividends. Some may think that by making a scrip issue I am putting in jeopardy the maintenance of the regular quarterly dividends at the present rate. My optimism will not let me accept their view. Furthermore, were I not convinced that there are attractive investment opportunities available I should not choose the present time to ask you to subscribe a further £1,210,000 of capital for the purpose of increasing our investment portfolio. The report was adopted and the Board's capitalisation and scrip issue proposals were sanctioned.

HADFIELDS LIMITED

The seventieth annual general meeting of Hadfields Limited was held on March 7th at Sheffield, Lord Dudley Gordon, DSO, LLD, MIMechE (the chairman), presiding.

In his circulated statement the chairman said that the total volume of commercial orders showed a slight fall, though that did not apply to all products. The export business had been well maintained.

Commenting on the difficulty of raising fresh capital for industrial expansion due to the increased Bank Rate and restriction of credit, the Chairman said that so far as firms listed as belonging to the Steel Industry were concerned, that difficulty had been still further increased by the vigorous and constantly repeated pronouncements by the Labour Party that if returned to power, a Government representing that party would set to work to nationalise the Steel Industry.

Very great disservice was done to the national well-being by the declarations which had artificially debased the market quotations for steel shares. The falsity of the idea that the shares were held by a few rich persons was immediately apparent on examination of their share register. There were over 11,000 shareholders, and the total of those who each owned 500 shares or less was over 10,000.

Lord Dudley Gordon concluded by saying that it was the concern of the shareholders, the employees and the customers to ensure that the Steel Industry, which was basic to so many others, should cease to be a shuttlecock of politics and be allowed to continue unhampered, the progress which was serving the Nation so well.

MERCANTILE BANK LIMITED

CONTINUED PROGRESS

RESTRAINT ESSENTIAL TO COUNTER INFLATIONARY TRENDS

SIR KENNETH W. MEALING'S STATEMENT

The sixty-fifth annual general meeting of the Mercantile Bank Limited will be held on April 1st, in London.

The following is an extract from the statement by the chairman, Sir Kenneth W. Mealing:

Foreign exchange shortages, restrictions on imports and exports in some territories where the Bank operates have tended to restrict business, and made trading conditions difficult, but nevertheless, the trading profit was larger than the previous year. The Balance Sheet total excluding the capitalisation of Reserves mentioned above is unchanged at £75 million. Deposits are lower by £1 million whilst, on the Assets side, there is an increase of over £5 million in cash. Investments are lower by nearly £3 million, Bills Receivable by over £2 million and Loans and Advances are practically unchanged. The Board is satisfied that our Inner Reserves more than cover every likely contingency and that it is no longer necessary to build up these Reserves at the same rate as previously. Consequently, the profit for the year 1957 is shown at £331,243, after making transfers to the Inner Reserves, which permits a larger distribution to Members. In August, 1957, your Directors declared an interim dividend of 12½ per cent on the then paid-up capital and they recommend a final dividend of 6¼ per cent on the increased capital referred to above. From the balance the usual allocation has been made to the Officers' Pension Fund whilst the sum of £100,000 has been transferred to the Reserve Fund which now stands at £2,100,000, leaving the balance carried forward at £231,452 against £224,521 brought forward from the previous year.

In the United Kingdom Mr Harold Macmillan became Prime Minister on January 13, 1957, with a reconstituted Cabinet. Full employment, a high rate of capital investment and a rising wage-spiral continued with its inevitable inflationary effect. Gold and dollar reserves fell at an accelerated speed in the second half of the year and this together with the hardening of the West German mark resulted in speculation against and a serious weakening of the pound sterling. To counter this adverse trend Bank Rate was raised in September to 7 per cent and steps taken further to restrict credit. By the end of the year sterling had regained its position but unless restraint is used in capital investment, Government spending, wage demands and in pressure upon sterling by other members of the sterling area, the permanent solution of the crisis of September 1957 will not readily be found.

INDIA

The outstanding political event in India in 1957 was the General Election which began on February 24th, in which 193 million adult voters chose 494 members of the Lok Sabha (Central Parliament) and 3,102 members of State Legislative Assemblies. The Congress Party was returned with a comfortable majority at the Centre and in the States with the exception of Kerala State in Southern India where a Communist Government was returned with a small majority. In Kerala conditions, particularly law and order, have deteriorated to a degree which inspires the hope that the voters in Kerala will give a different verdict when they get the opportunity.

The year was an important one for India. Progress in the second 5-year Plan was made in many directions, but the vast financial implications, and the difficulty in obtaining overseas aid to fill the gap between India's external financial resources and the necessary expenditure, became evident. Mr Krishnamachari's Budgets on March 19th and May 15th with their steep new taxation, direct and indirect, resulted in heavy falls on the Stock Exchanges, the siphoning off of investment capital and loss of confidence by the private sector and foreign investors in India. The resultant loss of expansion in the private sector may well be greater, and more lasting, than the immediate gain in Revenue towards financing the public sector of the 5-year Plan. It is now generally recognised that the latter must be re-phased as finance will only be available for the "hard core" of the Plan: steel, coal, railway, major ports and ancillary power.

Nevertheless, India is struggling, with and through its high 5-year Plan target, to improve the standard of living of its vast population and there is no doubt this endeavour is meeting with some success. The General Election confirmed India's adherence to democracy for the ensuing five years under the guidance of Prime Minister Pandit Jawaharlal Nehru, and the influence of this throughout the whole of South East Asia is of primary importance to the entire free world.

PAKISTAN

The industrialisation of Pakistan continues to expand; the Industrial Development Corporation provided Rs 12 crores to finance industrial projects, including sugar and jute factories, newsprint, pharmaceutical products and dyestuffs, and fuel and power. The Pakistan Industrial Credit and Investment Corporation was established in October with a capital of Rs 2 crores and loans from Government (Rs 3 crores) and the International Bank (Rs 2 crores) making a total of Rs 7 crores to assist in the expansion and modernisation of industrial enterprises in the private sector, particularly small and medium sized concerns engaged in the processing of indigenous raw materials. On the other hand agricultural development is not receiving the expansion essential to the country and Pakistan continues to be dependent on large food imports; in 1958 it is estimated that 700,000 tons of rice and not less than 600,000 tons of wheat will have to be imported, whilst the adverse balance of trade for the ten months ending October, 1957, was Rs 22.54 crores.

Heavy Governmental expenditure resulting in excessive monetary demand brought about inflationary tendencies during the year, and credit restrictions were accordingly imposed to meet this trend. It is to be hoped that profitable revenue from the many industrial enterprises created in recent years will soon come to the assistance of the economy which at present is so largely dependent on foreign aid.

CEYLON

Economically Ceylon has been adversely affected during 1957 by several factors; and the Balance of Trade for the first eleven months was unfavourable by Rs. 82 million compared with a favourable balance of Rs. 102 million for the same period in 1956 and a favourable balance of Rs. 480 million in 1955. Her Budget estimated for a deficit of Rs. 199.6 million, but this is likely to be greatly exceeded by the great increase in cost of wages in the Public Sector which must throw a considerable strain on the economy. Labour unrest, strikes and delays in clearance of goods in Colombo Harbour are all contributing to a serious economic decline.

BURMA

Early in 1957 the Premier, U Ba Swe, was replaced by his predecessor, U Nu, as I forecast last year. Second thoughts about nationalisation seem to be taking place, and it is believed that a Bill will soon be passed by the Government to provide incentives to foreign investors to introduce capital into the country by reliefs in taxation and customs and guarantees against nationalisation for ten years with guaranteed repatriation of profits, dividends and capital. This welcome change in outlook would, and may, have beneficial effects provided greater progress can be made in dealing with the problem of the insurgents and banditry still unfortunately rife in many districts in spite of the surrenders which have so far taken place.

FEDERATION OF MALAYA

The rubber and tin industries continue to be the main support of the national economy. Rubber cultivation covers 3½ million acres or some 65 per cent of the total cultivated area, the export earnings of rubber produce 60 per cent of total earnings and 25 per cent of the employment of the people. The tin industry provides some 20 per cent to 25 per cent of export earnings. The price of both these products had declined substantially during 1957, and it is important that the development of other industrial and agricultural projects should take place to render the economy more viable. Indeed, many new industries are coming into existence; ten large factories are to be constructed to produce chemicals, cables, rubber-products, tobacco and matches, and many smaller factories are also under consideration.

SINGAPORE

Economically, 1957 was a prosperous year for Singapore, and there appears to be no reason why 1958 should not also be prosperous.

THAILAND

The peaceful and prosperous progress of Thailand was disturbed by political upheaval resulting in the departure of Field Marshal Pibulsonggram and his co-adjutor, General Phao Sriyanond, and eventually the appointment as Prime Minister of Lieutenant General Tanom Kittikachorn, close friend of

Field Marshal Sarit, following elections held on December 15, 1957.

It is to be hoped that Lieutenant General Tanom Kittikachorn's Government will become firmly and satisfactorily established, maintaining the pro-Western foreign policy of its predecessors while securing the goodwill of the people by enlightened internal administration. Should this prove to be so, there seems to be no reason why Thailand's economic progress should not continue.

HONG KONG

The value of imports into Hong Kong increased by 12.8 per cent over 1956, at $5,149 million, of which $1,131 million came from China, $667.3 million from the UK, and $539 million from the USA. From Malaya and Japan imports declined. Exports declined in total by 6 per cent, compared with 1956, and although increases in exports to the UK and USA occurred, they could not counterbalance the serious and continuous fall in exports to Indonesia, Thailand, Japan and South Korea. Exports to China, which have steadily declined since 1951, reached a new low in 1957 at $123.4 million.

Great progress has been made in establishing Hong Kong as a manufacturing centre, both as to quantity and quality of goods, and exports of Hong Kong products reached a value of nearly $794 million in 1957. There has been a boom in building development, with consequent high prices for land, but money has become dear as a result of the raising of Bank Rate, and this has been reflected in depressed prices on the Stock Exchange.

MAURITIUS

Notwithstanding early drought, the sugar crop at 561,800 metric tons was only 10,000 tons lower than the previous year's all-time record. In general, trading conditions in the Island were satisfactory in 1957, but exports and imports show a substantial increase over 1956.

JAPAN

The prosperity and expansion which Japan enjoyed in 1956 received a severe check in 1957. The pace of expansion had become too great and the cost of imports rose out of proportion to the value of exports, so that an adverse balance of trade and shrinkage of foreign exchange began to put a severe strain on the country's economy. In an endeavour to improve matters the Bank of Japan raised its rediscount rate in March and again in May to 8.395 per cent. In addition to this tight-money policy, the Government issued directives to private enterprise to restrict non-urgent investment such as house building, and took steps to curb imports. As a result, cuts in production are the order of the day until the Government considers that the situation justifies an easing of the present tight-money policy. There are indications that these steps are taking effect and improving the balance of payments equilibrium.

The life-line of trade, both national and international, is through the facilities made available by the banking system and the friendly co-operation between those responsible for commerce, industry and trade and the banks through which their financial business is transacted. Fortunately, this is well recognised by the Governments of the countries in which we have branches and, although legislative controls are increasing and thus adding to the burdens of our Managers and Staff, the banking service we are able to provide is of considerable value to the national and international trade of these countries.

HOOVER LIMITED

HIGHLY SUCCESSFUL RESULTS

The Annual General Meeting of Hoover Limited will be held on March 31st at the company's offices at Perivale. Mr S. Roberts, managing director, is to preside.

The following are extracts from the "Annual Review":

In spite of difficulties we have had a most successful year. The turnover of our British companies has increase by 13 per cent and this, coupled with sustained efforts which have been made to improve efficiency in all phases of the business, has increased our net profit, from £2,790,000 to £3,757,000, the third highest in the company's history.

There were reductions in many material prices during the year, notably in copper and rubber, but unfortunately these reductions were more than offset by the higher cost of steel and higher wages, resulting in an increase of overall costs, which was most marked during the latter half of the year.

HIGH QUALITY AT LOWEST PRICES

It has always been our policy to sell high quality products at the lowest possible prices. To illustrate this policy, the price of our major model cleaner, which was sold at £23 2s. before the war and at the same price immediately after the war, is now £30 2s. 6d., an increase of only 30 per cent. During this same period there has been a never-ending rise in the costs of materials and wages, materials having increased by 204 per cent and wages by 194 per cent. We have been able to absorb these greatly increased costs by greater efficiency and increased volume.

In doing this, we believe we have served the best interests of industry and the country. Yet in the midst of our striving to keep prices steady we are assailed from time to time by increases in purchase tax which automatically increase prices and nullify our efforts.

The domestic appliance industry is an expanding one and its growth since the war has been pronounced despite temporary setbacks caused by legislative measures directed towards the restriction of demand. This can only be a reflection of the evident desire of housewives to own labour-saving appliances in face of almost penal legislation against their use. Admittedly, the economy must be geared to available resources, but it does seem absurd that an industry which contributes so much towards easing the burden of housework, especially for married women who go out to work, should always be among the first to bear the brunt of any attack on consumer spending.

DOLLAR EARNINGS

In our export markets we have made great efforts to increase our business, and we have met with reasonable success, considering the extensive competition of home-produced domestic appliances. Our dollar earnings have again been most satisfactory, totalling no less than $3,084,722.

We are still responsible for around 70 per cent of the total United Kingdom exports of vacuum cleaners and washing machines, which is a fair measure of our efforts in this direction.

In our overall organisation we now employ 16,500 people, of whom nearly 5,000 are employed in our subsidiary companies overseas.

The dominating feature of the year has been the introduction of the new Hoovermatic washing machine, a washer and spin-dryer combination, which was launched on the home market in October.

This machine is the outcome of extensive research, and contains a number of exclusive features, both of styling and efficiency, which have considerable appeal.

Although it is early to predict the ultimate effect this will have on the market, the initial reception is most encouraging, and we feel confident that future sales of the machine will be of a high order.

It was anticipated in the early postwar years that the washing machine market would develop at a rapid rate, and this has been borne out. The last 10 years have seen a rise from an ownership of only 2 per cent in 1947 to 23 per cent in 1957, and there is every indication that this upward trend will continue for many years to come.

Sales of cleaners have continued at a very satisfactory level and there is still room for considerable development of the market. It is now some three years since the introduction of steam irons to the British market. Ownershop has been rising steadily and we are sure that sales of steam and dry irons will accelerate as the advantages become more widely known.

NEW PRODUCTION FACILITIES

With the tremendous expansion which has taken place in the Company's activities, both at home and abroad in the past few years, the problem of providing office and factory space has become more and more acute.

We have, therefore, acquired under long lease two factories, one near our main factory at Perivale, of some 110,000 square feet, and the other at Dowlais, close to our washing machine factory at Merthyr, of 108,000 square feet.

The board has given a great deal of consideration to the final dividend and have decided to recommend 40 per cent less tax on each Ordinary and "A" Ordinary share, making a total for the year of 50 per cent. The balance of profit carried forward to 1958 is £2,985,480.

FINANCIAL POLICY

It has always been the Company's policy to plough back a substantial part of its profits and thus expand out of its own resources. This policy is justified more than ever in these days of credit restrictions, when so many companies are finding it extremely difficult to finance current business, let alone expansion. This Company has many new projects under development and will need all its resources to bring them to fruition.

Discussions on the Free Trade Area proposals are still proceeding and it is apparent that there is much disagreement among members of the Common Market on the proposals as they stand. In our own particular case we are of the firm conviction that Hoover Limited would materially benefit from a Free Trade Area, bearing in mind the high import duties at present applicable to our products. This assumes, of course, that the present restrictive legislation against the sale of our products on the home market would be lifted, otherwise an unfettered German home market would provide their manufacturers with volume and an overspill at low cost that we might find difficult to match, unless we in turn had an unfettered home market and the corresponding volume which would result.

BRITISH INDUSTRIAL PLASTICS LIMITED

TURNOVER EXCEEDS £6½M.

The annual general meeting of British Industrial Plastics Limited was held on March 13th in London.

The following is an extract from the circulated statement of the chairman, Mr E. R. Crammond:

The Group Net Profit, before taxation, for the year ended September 30, 1957, is £667,000 as compared with £616,000 for the previous year, and £669,000 for the record year 1954-55. This result, which I feel sure you will consider satisfactory, has been achieved by continuing to build up the turnover of the Group which now exceeds £6,500,000, an increase of 9 per cent over 1955-56.

It has been evident for some months now that industry as a whole will have to work harder for a smaller reward. However, thanks to improved manufacturing methods and a first-class sales force this Company, in 1957, not only increased its turnover but retained the same relationship between profit and turnover as in the previous year.

Although the Group Profit before taxation has increased by just over £50,000, the Group Profit, after taxation of £382,000, is some £400 lower than that of the previous year. In my statement to you last year I referred to the excessive burden of taxation on industry and now, once more, the proportion of profits which has to go to meet this charge is increased.

CAPITAL EXPENDITURE

During the year £415,000 was expended on Fixed Assets, as compared with an average figure of approximately £260,000 per annum for the previous eight years.

At the Balance Sheet date the outstanding commitments amounted to £234,000, as compared with £164,000 at September, 1956. In spite of the large expenditure on new buildings, plant and machinery during the year, the Group's Bank Balances have been reduced by only £32,000. This continuing need for increased capital expenditure, coupled with the present financial stringency, necessitates a policy of conservation and, therefore, it is recommended that the final dividend for the year on the Ordinary Shares be at the rate of 12½ per cent., making, with the interim of 7½ per cent paid last September, a total of 20 per cent.

It is not the intention of your Directors to raise additional finance before it can be profitably employed but when the need arises steps to this end will be taken.

Such capital expenditure as we envisage in the near future will be directed towards consolidating the Group's position in its own field by increased production, improvement in quality and further reduction in cost of our products.

Trading conditions during the past year cannot be considered to have been easy and, under the circumstances, the results achieved are good and have been accomplished without increasing the price of the main products of the Group's chemical factories. Each of the Subsidiary Companies has earned satisfactory profits.

Reference was made in the Interim Report to the acquisition of exclusive rights for the British Commonwealth for the manufacture, by the Filon process, of glass fibre reinforced polyester resin sheeting. The building and plant for this process was erected and installed very expeditiously and I am pleased to report that production has now commenced.

As to the outlook, the Plastics Industry is essentially dynamic; whatever we may think of the international trading outlook generally we must plan for continuing development in our own particular field in which we are among the leaders in the world.

We have a team of able chemists and technicians which is being continually strengthened and our expenditure in this direction is, I believe, adequate without being excessive.

For the first quarter of this financial year sales and profits were satisfactory and were running at a higher level than in the previous year, and the position as regards orders is sound. It is particularly gratifying to be able to report that, as a result of the Company's selling policy, there has been a steady expansion in the Export Sales of the more profitable products of the Group.

The report and accounts were adopted.

OLDS DISCOUNT

Extract from the Circulated Statement of the Chairman, Mr. Wm. A. Olds.

The report and accounts for 1957 present the results of a year of increasing turnover at home and overseas. The amount of business transacted was an all time record. Operating costs have risen considerably, especially the rates at which money had to be borrowed. The rise in the Bank Rate in September being a very important factor which takes time to recoup by increased earnings.

It will be noted that the Group Assets have increased from £13,285,454 to £17,236,215, as a result of the year's operations.

Unearned Finance Charges have increased during the year by £418,945. This reflects the increase in the outstandings at the end of the year and defers part of our revenue until 1958, when a large proportion will be collected.

Our Subsidiary Companies have made good profits. Trinidad and Jamaican Subsidiary Companies are now trading actively in ten islands and British Guiana and can be expected to develop further.

DEPOSITS AND LIQUIDITY

A permanent feature of our operations as Industrial Bankers is the acceptance of increased deposits from a wide range of commercial and private investors. Many of our Stockholders are making good use of our DEPOSIT BANKING DEPARTMENT. Owing to the diversified type of business transacted a position of high liquidity is maintained and our obligation to Depositors could, if this ever became necessary, be met at least as rapidly as notice of repayment became operative.

RECORD OF PROGRESS

in stages during last seven years:

	Profit before taxation	Ordinary dividends paid (net)	Profit retained after taxation
	£	£	£
1951 ...	215,363	37,800	31,488
1953 ...	364,851	55,000	62,201
1955 ...	762,191*	132,825	211,842
1957 ...	809,964*	170,990	164,124

* Reduced by amount for Minority Interests.

BORAX (HOLDINGS) LIMITED

PROMISING PROSPECTS

The sixtieth Annual General Meeting of Borax (Holdings) Limited was held on March 12th in London.

The Chairman, Mr Desmond Abel Smith, MC, commenced his circulated review for the year ended September 30, 1957, by stating that he was retiring from the chair after 20 years in that office. He would remain a Director and would be succeeded as Chairman by Lord Clitheroe.

The following is an extract from his review:

It is interesting to record that net assets totalled approximately £3,700,000 in the 1937 balance sheet as against £19,800,000 in 1957, and the profits after tax in 1937 were £260,907 as against £1,437,462 in 1957. Even allowing for inflation and the revaluation of assets in 1956, it will be appreciated that the growth of the Company has been considerable and that its financial position has been greatly strengthened.

Faced by keen competition, the Group has maintained and even improved its share of expanding world trade in Boron products.

The growth of the Company is still based on the old-established industrial uses of our products, but the horizon has been much widened in recent years by research. Prospects for the new uses, to which I refer later in this statement, are believed to be promising. The Company seems to be on the threshold of a further period of expansion.

As forecast in my statement last year, the interim dividend was raised in relation to the total dividend so as to reduce the difference between the interim and final distributions. There is a small reduction in the final dividend proposed, but nevertheless the total distribution at 5.25 pence gross per 5s. unit of Deferred Ordinary stock is slightly greater than the year before at 5 pence gross.

UNITED KINGDOM AND EXPORT MARKETS

Conditions in the past year were again difficult. The restriction of credit and general shortage of money continued unabated, but despite the many difficulties in the past financial year our total sales in this country reached a new high level. This is due in part to the steadily widening horizon for our products as development work continues in industrial agricultural and domestic applications.

Enamel hollowware manufacture remained somewhat depressed, although more recently there have been signs of improvement in the vitreous enamel industry generally, which is vigorously pursuing new developments in the use of enamel, for example, in architectural applications. Partly as a result of technical developments in glass manufacture our sales to that industry remain at a healthy level. Our new herbicides are likewise finding increased acceptance, particularly for industrial use.

OUTLOOK FOR THE FUTURE

Your Board and your managements continue to feel that the long range outlook for your Group's business is good and that continued growth over the years is to be anticipated.

There certainly will be fluctuations in the tonnage sales of our products and in the profits of our group. Though there are signs of some recession of business throughout the

world, nevertheless, over the years an upward trend of both is to be expected. Boron products display an ever-increasing versatility, and interest in them—both organic and inorganic—is increasing in many directions.

Side by side with the established industrial and agricultural uses, there are a number of new products, many of them resulting from our Group's chemical research, for which there is increasing commercial acceptance. Among the products still in the early development stage are pure boron, a range of metallic borides, boron tribromide and boron phosphate. Behind these is marching a whole range of new organic boron compounds, the future of which is still unpredictable.

As a result of capital expenditures incurred over recent years, your Group's ability to meet a growing demand for boron products is greater than it has ever been.

The report was adopted.

Sir Alan Rae Smith, late senior partner of Messrs Deloitte, Plender, Griffiths & Company, the Company's auditors, and a stockholder, paid tribute to the retiring Chairman for his services to the Company since 1937.

LEICESTER PERMANENT BUILDING SOCIETY

STRONG DEMAND FOR NEW FIXED TERM INVESTMENT

MERGERS WITH SMALLER SOCIETIES A DESIRABLE TREND

The Annual General Meeting of the Leicester Permanent Building Society was held on March 6th at Leicester.

Mr A. D. Carmichael, CBE (the chairman), presided and, in the course of his speech, said:

The total assets of the Society increased during the year by £2,876,753 and now stand at a total of £44,391,556. It is very encouraging to state that shares and deposits increased during the year by £2,800,905, and the total standing to the credit of shareholders and depositors grew to the sum of £41,155,747.

In a year of credit restrictions and financial stringency the total sum advanced was £8,031,018; this sum has been exceeded only once before in the Society's history.

Of the total sum advanced, 44 per cent was on newly erected houses and almost the whole of the balance to owner-occupiers purchasing sound, modern, second-hand houses.

Our investments in British Government and Public Board Securities of over £4 million are shown in the balance sheet at the market price at December 31, 1957. These investments, if held to repayment, will show the Society a profit of over £1 million compared with the present Balance Sheet value.

INTEREST RATES

It has been our policy in the past to increase rates to existing borrowers by the minimum possible margin, and in spite of the increases in the rates over the past few years people who have borrowed from us at an original 4 per cent are now paying no more than 5¼ per cent, and the general body of our borrowers are paying only 5¼ per cent. We shall continue with this policy for so long as possible.

Referring to the position of new borrowers, the chairman said that unless they attracted more money new lending would have to be restricted and they would only be able to make new loans at a considerably reduced rate. Mr Carmichael continued: We have tried to find a solution, and have decided to accept investments for a fixed term of three years at the rate of interest of 4 per cent.

The investor liable to tax at the standard rate will thereby receive a guaranteed rate of nearly 7 per cent for three years even if interest rates generally go down in the meantime.

With the undoubted security offered by a Society of this size and standing, this is proving most attractive, and since the launching of this new scheme in the middle of January the results have proved that there is a very strong public demand for a Fixed Term Investment.

MERGERS WITH SMALLER SOCIETIES

After commenting on requests they had received from the Quorn Building Society and the Lincoln Land and Building Society Limited to accept transfers of their assets and liabilities, the chairman said: Judging by the number of transfers that have taken place, it seems that there is a definite trend for some of the smaller units to seek to merge with larger Societies.

In my opinion, this is a desirable trend and has many advantages both for the members of the Societies concerned and to Building Societies as a whole.

The report and accounts were adopted.

THE STERLING TRUST

INCREASED REVENUE

The forty-first annual general meeting of The Sterling Trust Limited was held on March 11th in London, Mr Michael F. Berry (the Chairman) presiding.

The following is an extract from his circulated statement:

Once again the Report of the Company for the past year shows an increase in income. This increase is actually rather larger than a year ago, although it appeared at that time that the rate of increase was diminishing. There have lately been signs, however, that the long period of inflation has received at any rate a temporary check and it will be surprising if, in the face of determined official efforts to restrict credit, industrial companies can grant more than very rare dividend increases in the near future.

Your Directors recommend for the past year a final dividend of 10 per cent, making 15 per cent, which, allowing for the double tax relief applicable to that year only, involves a distribution of 6¾ per cent of the year's available net revenue, compared with a distribution of 7¼ per cent for 1956 on the same basis.

For the second year in succession, the valuation of the investment funds of the Company shows a decline, although there is still an appreciation of approximately 5¼ per cent against a corresponding appreciation of 6¼ per cent a year ago. This reduced appreciation is not surprising, having regard to the Government's deflationary policy culminating in the raising of the Bank rate to 7 per cent on September 19, 1957.

The report was adopted.

BUSINESS AND PERSONAL

A NEW SERVICE FOR INDUSTRY

To meet the changing requirements of industry in the European Common Market, and free trade zone, a large and well-established engineering group in the London area offers a complete consultancy service to firms who may be faced with increasing development and marketing difficulties. Having ourselves been faced with the necessity of providing facilities for market research, design, development, model shop, tool making, type testing, etc., we are able to offer a complete consultancy service backed by all necessary engineering and marketing facilities to assist firms requiring it, and we work closely with American Associates specialising in placing U.S. patents in this country and can, therefore, help in finding new production items. This offer is primarily directed towards firms requiring it for a limited period in order to find new lines and develop them to pilot production stage. The total available capacity of this service is estimated at £250,000 per annum, of which approximately £100,000 will become available to firms outside the organisation. In whatever amounts are required. Principals please write to Box No. 891. All correspondence will be treated as strictly confidential.

CANADIAN MARKETING

Selling British goods in Canada is our business. We have been established there for this sole purpose for six years. On March 31st our General Manager, Mr. D. Marshall, flies to Montreal to commence an extended tour of the country to further this business.

Manufacturers wishing to sell their products in this most important and expanding market are invited to write or telephone Mr. H. A. Parry, Sales Director, Paramount Concessionnaires (London) Limited Victor House, Norris Road, Staines, Middlesex.—Tel. No. Staines 4151.

CANADIAN AND AMERICAN MARKETS.—Chairman and Managing Director of a Group of Building and Allied Distributing Companies, travelling to Canada and America during October and November, 1958, with letters of introduction to Business Principals in many principal cities, is willing to follow up or make on the spot investigations on behalf of British exporters.—All inquiries to Mr S. C. Gredtrix, Builders and Domestic Suppliers (Midlands) Ltd., 121-125 Church Hill Road, Birmingham, 20.

CANADIAN PACIFIC RAILWAY COMPANY (Incorporated in Canada with Limited Liability). NOTICE TO SHAREHOLDERS. The Seventy-Sixth Annual General Meeting of the Shareholders of the Company, for the election of Directors to take the places of the retiring Directors and for the transaction of business generally, will be held on Wednesday, the seventh day of May next, at the principal office of the Company, at Montreal, at twelve o'clock noon (daylight saving time, if operative). The Ordinary Stock Transfer Books will be closed in Montreal, Toronto, New York and London at 3.30 p.m. on Tuesday, the fifteenth day of April, 1958. The Preference Stock Books will be closed in London at the same time. All books will be reopened on Thursday, the eighth day of May, 1958.—By order of the Board, J. E. TURNER, Secretary. Montreal, March 10, 1958.

APPOINTMENTS

THE GUEST KEEN AND NETTLEFOLDS GROUP OF COMPANIES wish to make the following important Appointments.

(i) INSURANCES. An appointment is to be made at the Head Office of the Group in Birmingham of an appropriately qualified man to deal with the centralised work connected with the Insurances of the Group. Candidates in the 28-38 age bracket must have sound knowledge and experience of all classes of Industrial Insurance.

(ii) A qualified economist is required by a company in Cardiff to carry out MARKET and GENERAL ECONOMIC RESEARCH, particularly in relation to their export trade. The person appointed will be an Economics Graduate, age 28-35, with sound experience of these research techniques and a grasp of business problems, who is able to take full responsibility for his own work. Some knowledge of the steel industry would be useful but not essential.

These appointments are pensionable and the initial salaries will depend upon experience and qualifications.

Applications are invited from appropriately qualified men who consider that they have the relevant experience. They should write, stating full details of age, qualifications, career to date, etc., to the Group Personnel Officer, Shell-Mex House, Strand, London, W.C.2.

FISONS PEST CONTROL LIMITED seeks the services of a first-class Sales Promotion Manager, age early/mid thirties, for their headquarters offices at Felixstowe. A thoroughly experienced man is sought, with proved ability in creating productive sales promotion schemes in similar fields, who is full of creative ideas and who could produce sales results in a highly competitive market—and of £2,000 per annum, with excellent prospects and agricultural fields necessary. Initial salary in neighbourhood experience in advertising and of marketing products working conditions, but long hours and continuous hard work go with them.—Write to Personnel Manager, Fisons (Pest Control) Limited, Harston, Cambridge (quoting No. 53).

STATISTICIAN
(Assistant)

required by the Central London Head Office of a leading Anglo-American Chemical Company.

Candidates, age about 25, should be Graduates in Economics with Statistics, but Non-Graduates with suitable experience would be considered.

This is a permanent and progressive appointment in an expanding organisation; commencing salary £650 to £700 per annum approximately.

Fully detailed applications, which will be acknowledged, should be addressed, in complete confidence, to Box JN 2687, A.K. Advertising, 212a, Shaftesbury Avenue, London, W.C.2.

DEPARTMENT OF SCIENTIFIC AND INDUSTRIAL RESEARCH requires at Road Research Laboratory, Langley, Bucks, PHYSICISTS, MATHEMATICIANS, ECONOMISTS and STATISTICIANS for Traffic and Safety Division. Varied and interesting work on theoretical and practical aspects of traffic movement affecting planning of road programme, design of roads and incidence of accidents; including design of apparatus and application of electronic computers. Qualifications: 1st or 2nd Class Honours degree or equivalent. Salary in ranges (men) £955-£1,050 or £1,130-£1,330. Prospects of promotion to mid-thirties to Principal Scientific Officer (range up to £1,950) with possibilities of higher posts.—Application forms from M.L.N.S., Technical and Scientific Register (S), quoting A.87/8A.

AMES A. JOBLING & Co., Ltd., of Sunderland, Co. Durham, manufacturers of Pyrex brand glassware, require the service of a MARKET RESEARCH MANAGER. The candidates should have suitable training in economics and statistics, and will be responsible for market research problems.

UNIVERSITY OF CANTERBURY
Christchurch, New Zealand

Applications are invited for the position of *LECTURER IN HISTORY* in the Department of History and Political Science. Applicants should have an Honours degree in History. Special qualifications in English and European 16th and 17th century History would be an advantage, but are not essential.

The salary attached to the position will be at the rate of £1,025 per annum, rising by annual increments of £50, to £1,275 per annum. An allowance is made towards travelling expenses.

Further particulars and information as to the method of application may be obtained from the Secretary, Association of Universities of the British Commonwealth, 36 Gordon Square, London, W.C.1.

The closing date for the receipt of applications, in London and New Zealand, is May 15, 1958.

WESTERN REGION PRODUCTION DEVELOPMENT BOARD, IBADAN, NIGERIA.

SENIOR ACCOUNTANT

The Western Region Production Development Board has vacancies in its accounting organisation for a Senior Accountant.

Candidates for this post should possess a recognised Accountancy qualification and should have had at least five years' experience in a professional office since qualifying, including work on re-organisation, introduction of a new accounting system and budgetary control. It is essential that candidates should have sound knowledge of costing and cost systems. Commencing salary, excluding inducement allowance, will be in the range of £1,360 x £60-£1,590. Inducement allowance is £300.

2. The terms of service include partly furnished accommodation at 8¾ per cent of the basic salary; free medical service, outfit allowance, free passage for wife and also free passages once each way per tour for children up to three in number not over the age of 13. Employees are required to contribute up to 10 per cent of salary to a Provident Fund. Home leave at full pay at the rate of five days per month on overseas service. Normal length of tour 18-24 months.

3. Applications in *duplicate*, together with details of age, experience and qualification and the names of three personal referees should be sent to:

The London Representative,
Western Region Production Development Board,
178-202 Great Portland Street,
London, W.1.

to reach him not later than March 31, 1958.

A PROMINENT BRITISH MERCHANT HOUSE in Malaya offers an attractive and progressive appointment to executive, aged 35-42, with successful commercial engineering record, to take charge of all their engineering activities involving the sale, installation and servicing of a wide range of engineering plant and equipment and the representation of many well-known U.K. manufacturers. Some overseas experience probably indispensable. This senior post involves control of technical staff and direct responsibility to the Board for the progress of a major department. Total remuneration would be not less than £4,000 per annum — Apply, with full details, to Box W 1578 Haddon's, Salisbury Square, E.C.4.

INFORMATION.—Lloyd's Register of Shipping have a vacancy at their London Headquarters for a Graduate interested in information work. Duties involve the collection and summarising of information obtained from shipping papers, the daily press and staff abroad; the preparation of articles for publication; and the editing of booklets, reports and staff news. Essential qualifications are an ability to write in an interesting and concise manner, a knowledge of shorthand and typing and experience in a journalistic or similar capacity. Applicants should state experience since graduating. Commencing salary in accordance with qualifications.—Applications to be addressed to The Secretary 71 Fenchurch Street, London, E.C.3.

SOUTH AFRICA.—Mathematics or Physics Graduate required for C.S.I.R. National Telecommunications Research Laboratory, Johannesburg, for ionospheric data compilations and predictions. Salary in range £570-£1,128 per annum. Free passage.—Apply further information: South African Scientific Liaison Officer, Africa House, Kingsway, London, W.C.2.

NUFFIELD COLLEGE STUDENTSHIPS

Applications are invited from graduates (men and women) who wish to undertake research in any branch of economics or politics (including political theory, government and public administration, and international relations); statistics; sociology; constitutional, public and international law; recent social, economic and political history. The College is also interested in the application of these disciplines to the problems of colonial and under-developed societies. Recently the College has received grants to further the study of European politics and government and of trade union policy and industrial relations.

Further particulars and the necessary forms are obtainable from the Warden. Applications should reach him by May 12, 1958.

THE UNIVERSITY OF MANCHESTER

RESEARCH FELLOWSHIP IN ECONOMIC STATISTICS

Applications are invited for the above Fellowship, tenable for one year, with a possible extension to two years. The Fellowship is of a value within the range £1,100-£1,400 per annum, together with approved expenses involved in the Research. Regulations governing the award of the Fellowships and application forms may be obtained from the Registrar, the University, Manchester, 13, to whom all applications should be sent not later than March 31, 1958.

THE UNIVERSITY OF SHEFFIELD

Applications are invited for a post of Lecturer or Assistant Lecturer in Economic Statistics, to begin duties on October 1, 1958. An application from a candidate who expects to graduate in 1958 or from an economic theorist prepared to make economic statistics his main interest will be considered. Salary scales: Lecturer, £900 x £50-£1,350 x £75-£1,650; Assistant Lecturer, £700 x £50-£850, with F.S.S.U. provision and family allowance. Initial salary on either scale according to qualifications and experience. Further particulars may be obtained from the Registrar, to whom applications (four copies), including the names and addresses of three referees should be sent by April 9, 1958.

IBM UNITED KINGDOM Limited require the following staff for the Data Processing Centre:—

MATHEMATICIANS (two). Honours graduates in engineering or science with preferably two-three years' post-graduate industrial or academic experience and some knowledge of computers. Those selected will be required to specialise in either atomic energy, statistics, operational research, or civil engineering.

PROGRAMMERS (two). Graduates in mathematics, science, and engineering. Wide scientific interests are desirable since the opportunity to specialise will occur after a year or 18 months with IBM. Postgraduate experience not essential.

Would applicants please give full particulars, quoting Ref. DPC.58/1, to Personnel Manager, 101 Wigmore Street, London, W.1

ADMINISTRATOR

to work under the Managing Director and control manufacturing and all commercial activities of Shoe Manufacturing Company in Midlands. Applicant need not have shoe experience, but qualifications must include:—

A practical (preferably engineering) training; thorough work study training and its practical application throughout the manufacturing field; the development and control of modern systems and methods, both for manufacturing, commercial and marketing; a successful record of labour and staff leadership, and the ability to get the best out of all grades of workers and executives; an understanding of modern management accountancy and cost control; knowledge of sales, marketing and advertising, both for home and export business.

Commencing salary approximately £3,000 per annum, together with participation in profits, giving a high return for results achieved.

Write, giving fullest details, to Box 892.

BEECHAM GROUP LIMITED, Consumer Research Division, requires a Senior Research Officer, who should have experience in planning and interpreting consumer research surveys. The department is expanding and offers excellent opportunities. The company has a non-contributory pension fund and a profit-sharing scheme. Candidates should be aged 25-35, and should apply in writing, giving details of age, education and experience, to the Personnel Controller, Beecham Group Ltd., Beecham House, Great West Road, Brentford, Middlesex.

MASS-OBSERVATION is looking for

(i) an executive who would undertake final responsibility for a continuous consumer survey (including client contact).

(ii) a research officer or a research assistant.

Write, giving age and qualifications, to 148 Cromwell Road, S.W.7.

ACTUARY.—Resident Actuary required by The National Mutual of Australasia, for one of its largest branches (New South Wales—New Sums Assured £A14 million per annum and rising), after one year's experience at its Head Office in Melbourne. Generous salary, according to age and experience, with excellent prospects. Association will pay transfer costs to Australia. Applicants should either be Fellows or Senior students who have completed three-quarters of examinations.—Apply to Manager for United Kingdom, 5 Cheapside, London, E.C.2.

APPOINTMENT REQUIRED

A SALES EXECUTIVE (30), B.Sc. (Econ.), A.S.M.A., Asst. Sales Manager large plastics company, seeks change with greater opportunity for drive and initiative.—Box 893.

EDUCATIONAL

B.SC.(ECON.) LONDON UNIVERSITY

UNIVERSITY CORRESPONDENCE COLLEGE provides postal tuition for the above Degree (obtainable without residence), which is a valuable qualification for those seeking executive appointments in commerce or industry, government or municipal posts. The College, established 1887, is an Educational Trust. Highly qualified Tutors. Low fees: instalments.—Prospectus of U.C.C. Courses for London Degrees and Diplomas, G.C.E., Law, free from the Registrar, 60 Burlington House, Cambridge.

SUCCESSFUL TUITION FOR THE B.SC.(ECON.) DEGREE

Wolsey Hall (Est. 1894) provides Postal Courses in a wide range of subjects for the two examinations for Lond. Univ. B.Sc.Econ. (three if Entrance is included). Moderate fees, instalments. Over 800 Wolsey Hall students passed Lond. Univ. B.Sc.Econ. exams. 1951-56. Prospectus from C. D. PARKER, M.A., LL.D., Director of Studies Dept. P.16, WOLSEY HALL, OXFORD.

SECRETARIAL TRAINING, specially for university graduates and older students. Six-month and intensive 14-week courses.—Write Organising Secretary DAVIES'S 2 Addison Road, W.14. PARK 8392.

EXPERT POSTAL TUITION

Have you thought about BJ AIR FREIGHTING to and from Europe?

FOR EXAMPLE - GERMANY

London and	Berlin, Cologne, Dusseldorf, Frankfurt, Hamburg, Hanover, Munich	49 flights per week
Birmingham and	Dusseldorf	4 flights per week
Manchester and	Dusseldorf	4 flights per week.

In addition there are FIFTEEN ALL-FREIGHT FLIGHTS *each week to and from*

DUSSELDORF, FRANKFURT, HAMBURG, STUTTGART

BEA operate daily direct flights to all main commercial centres in Europe

HERE ARE EIGHT REASONS WHY YOU SHOULD

Transit time cut from days to hours

Packing costs cut by up to 95%

Lower insurance rates

Special cheap rates for many products

No warehousing or stock piling

Negligible losses through breakage, theft or exposure

More markets within easy reach

A quicker return on your capital

Some or all of these reasons apply to your overseas trading. For detailed information on how to make the best use of BEA Air Freight Services, consult your Forwarding Agent, or nearest BEA office. Or write to this address: BEA Air Cargo Depot, 14 Dilke St., Chelsea Embankment, London, S.W.3.

FLY FREIGHT BEA ALL OVER EUROPE

BRITISH EUROPEAN AIRWAYS

AN EXPORT OPPORTUNITY

AUSTRALASIA

British imports quadrupled in ten years

THE BOOM DOWN UNDER

Not only British immigrants are flocking to Australia and New Zealand—British goods are going there also. In ten years Australia's imports from the United Kingdom have risen from £A74,573,189 to £A296,253,000 (a steady third of the total imports). New Zealand's imports from Britain have risen from £31,079,000 to £126,249,000 (approximately half of the total). The Australasian countries shop in Britain.

And these figures must be seen in the context of a steadily rising standard of living. The average weekly wage of an Australian man is £A18.23. In New Zealand, average wages have almost doubled in ten years. Australians and New Zealanders are forward-looking, proud of their prosperity, keen for more. They are the sort of people who read The Reader's Digest, which has a circulation of 450,000 in Australia, 75,000 in New Zealand, and a readership many times greater.

Their own editions

In each of the Dominions, The Reader's Digest has all the advantages of local media. The two editions, one for Australia and one for New Zealand, are special to those countries — specially edited, specially distributed. The Digest has international stature, yet keeps the local touch.

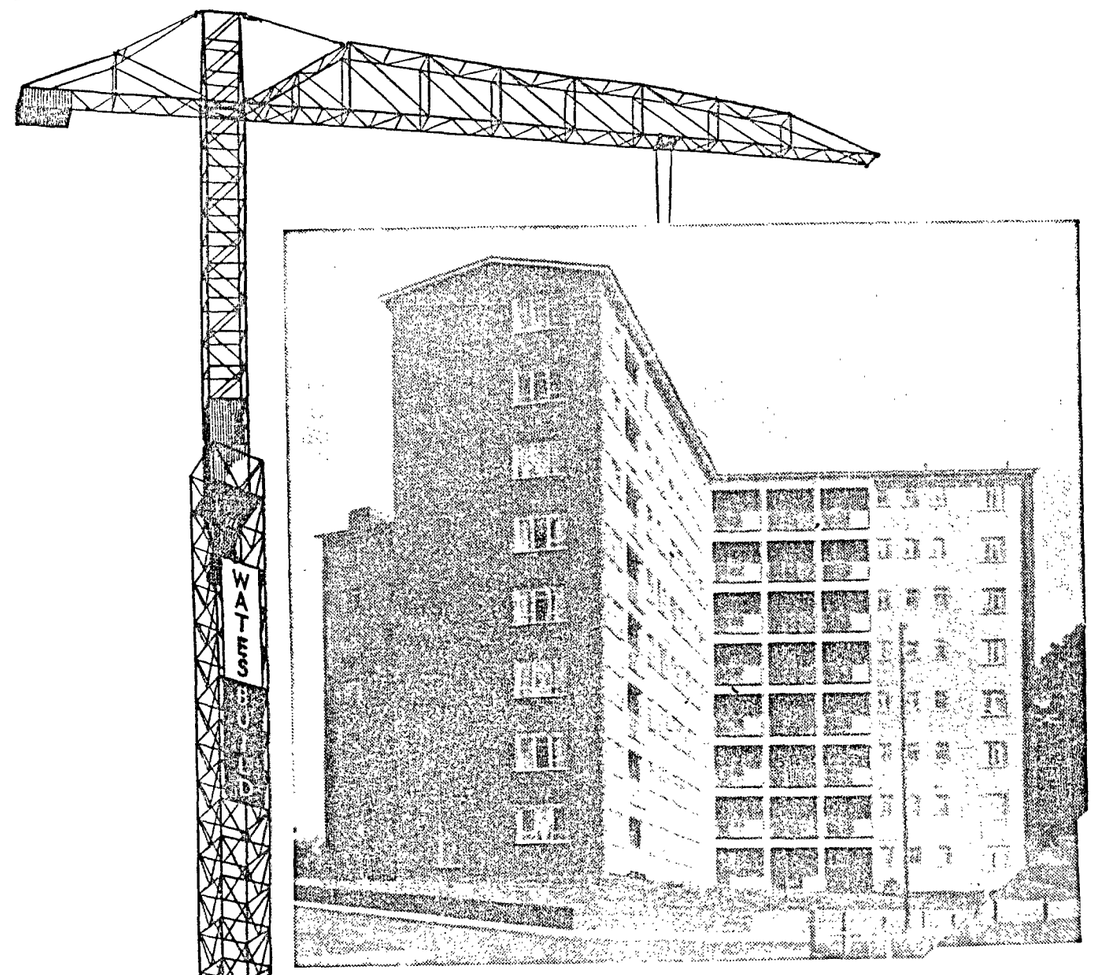
Who are the Digest readers? The leaders of each community, the leaders in business, in politics and in society. *They are the people who buy*—both consumer goods and the tools of industry.

All over the free world, such people read the Digest in its various overseas editions. In most countries, the Digest reaches the most people *and* the best prospects, at far lower cost than other magazines. *Everywhere, The Reader's Digest speaks to your customers in their own languages.*

We can help you plan—here in London

If you consider advertising in New Zealand or Australia—or elsewhere overseas—we shall be glad to help with facts, figures and information.

Here in London you can book space in one or any combination of our 30 editions, to cover your best markets without waste circulation. You can avoid the uncertainties of remote control, and be sure of full advertising value for what you spend. A further convenience: in most cases you can pay in sterling.



If you'd like to know how The Reader's Digest covers *your* areas of interest, just write or telephone: The Advertisement Director, Reader's Digest, 25 Berkeley Square, W.1 (MAYfair 8144).

30 Editions . . . 13 Languages
20 million copies sold every month

The Reader's Digest has separate editions covering the following markets in their own languages. (Monthly circulation in brackets.) **U.S.A.** (*11,500,000—including West Coast edition, 2,600,000*). **Commonwealth:** U.K. (*1,100,000*); Canada (*English and French editions—925,000*); Australia (*450,000*); New Zealand (*75,000*); South Africa (*140,000*); India (*in English—60,000*). **Latin America:** Brazil (*460,000*); Spanish-speaking countries (*4 separate editions—1,175,000*). **Western Europe:** France (*1,050,000*); Belgium (*100,000*); Switzerland (*German and French editions—105,000*); Holland (*130,000*); Germany (*800,000*); Austria (*100,000*); Italy (*500,000*); Spain (*150,000*); Sweden (*300,000*); Denmark (*235,000*); Norway (*185,000*); Finland (*135,000*). **Middle East** (*in Arabic—50,000*). **Japan** (*450,000*).

Space for Ships in East Africa

. . . at Mombasa, Dar-es-Salaam, Tanga and Mtwara. The modern port installations tell at a glance how far the development of the three mainland territories of East Africa—Kenya, Tanganyika and Uganda—has progressed in the last 50 years.

East Africa is as big as Western Europe. Transport is therefore a vital factor in all this development, and this is the responsibility of the East African Railways and Harbours Administration. The Administration has been engaged on its own development programme, in which special attention has been paid to the provision of adequate and up-to-date port facilities.

Today the trading figures amount to an annual total of £254,600,000, and a new stage of development is beginning in the exploitation of the territories' mineral resources and in the establishment of local industries to manufacture consumer goods, particularly to supply the demands of the 20 million African population which is earning an increasing share of the territories' income.

For details of current opportunities in East Africa, particularly for investment and the establishment of local industries, write to the Commissioner, East African Office, Grand Buildings, Trafalgar Square, London, W.C.2.

Car hire boom

AMONG Britain's many booming industries none has a more impressive record of expansion than the car hire business. The number of motorists who want the advantages of having a car at their disposal without the responsibilities of ownership is multiplying fast. And so are the fleets of those firms which meet this demand.

"Since 19[illegible] many

Cause for optimism

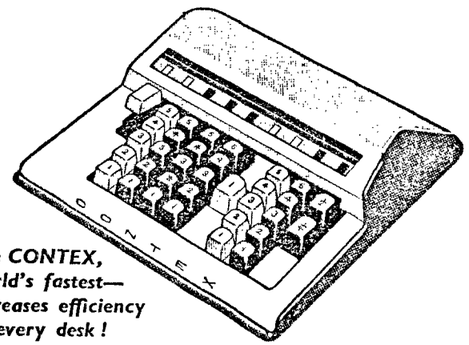
Another cause for optimism is the continued expansion in what, so far, has been the most rapidly growing part of the business: hiring cars out by the year on a contract basis. Many commercial and industrial firms find it more advantageous to hire rather than buy cars for their executives and travellers. They do not have to invest any capital. They save on tax. And they do not have to worry about repairs or servicing.

Businessmen, foreign tourists and British holiday-makers are among those who increasingly look to the car hire firms. The variety of this demand is a tribute to the efficiency of the service. And it is also the best possible guarantee that the boom will go on.

Reprinted from the Evening Standard Feb. 26th.

VEHICLE CONTRACTS LIMITED

Britain's largest Contract Hire Organisation



CONTRACT HIRE is the modern convenient way of obtaining a new car — or a fleet of new cars — without disturbing capital. Cars are delivered fitted with heaters and number-plates, with Road Fund Tax paid for the entire period of hire. No deposit is required; and cars are guaranteed for 12 months. Any vehicle which breaks down can be replaced within 48 hours. Choice of one-year and two-year Contract Hire periods.

He found business where he least expected it

HIS run of luck started the first night out when he found himself sitting next to an American businessman at dinner. Later, over a nightcap, they were *still talking*—talking business almost without realizing it. The Englishman had already made a valuable contact, with the sort of man he wanted to meet. He might have been *in* America from the moment he stepped aboard.

Like so many others, this man has now found just how much it pays him to travel by United States Lines. The Blue Riband held by the "United States" means that her standard of punctuality is unsurpassed, a boon to people with closely planned appointment schedules. On board, in superbly comfortable surroundings, the businessman can still continue his work, if necessary, with ship-to-shore telephone, Dictaphone, stenographic and typewriting services at hand. When he wants to relax, there's no better way than aboard the "United States" or her running-mate the "America." Wonderful food and wine, top-grade orchestras, CinemaScope, well-stocked libraries, "keep-fit" facilities—whether he travels FIRST, CABIN or TOURIST CLASS all these are readily available. In addition there's 25 cubic feet or 275 lb. FREE baggage allowance.

A "FIRST CLASS" HOLIDAY

whichever class you choose

Now that the travel allowance has been extended to cover the U.S.A. and Canada, holidaymakers and businessmen's wives and families can go to these countries. Remember—*your £100 is spendable entirely in America.* If you travel by United States Lines your holiday starts as soon as you arrive on board ship; by the time you land in America you're thoroughly rested and relaxed, ready for *another* exciting holiday.

If you're travelling on a budget but still want the best that money can buy, CABIN and TOURIST CLASS, with their gay informality, offer a perfect solution.

Fares to destination and on-board expenses payable in sterling.

Six Per Cent

THE authorities have been quick to put forward what may be called purely mechanistic explanations for Thursday's reduction in Bank rate. This is not, it is being explained, a sign that the time has come to start reflation. It is merely a recognition of the undeniable fact that the speculative crisis of last September is no longer with us. Seven per cent was a crisis rate. To maintain it now would invite a further inflow of hot money. Hot money is an embarrassment—not so much while it is hot as when speculative fever turns cold, because it may then serve as a nucleus for a snowball movement out of the reserves. It seems administratively wise to the authorities to stop it coming in, and to make an orthodox market reduction in the rate. It is just the sort of reduction which the Bank would have made, in similar circumstances, in the nineteenth century.

These arguments are familiar and understandable. They are nevertheless, on balance, wrong. They suggest that the authorities have not imbibed the real lesson of the disastrous experience of last September, and, still more, of the quite remarkably successful experience of the economy since then. The great difference in our position as a banking nation, compared with that in the nineteenth century or even before the war, is that we are now one from which too many foreigners have an encouragement to borrow in times of emergency, and to which too few have an incentive to lend. The way to meet this state of affairs is to revise our ideas about what are crisis interest rates, and even about what is hot money. What Britain needs, as a long-term feature of its policy, is a determination to keep its interest rates higher than the rates ruling in other banking centres—and the more considerably higher, the better.

This does not mean that anybody has supposed that the 7 per cent rate should stay for ever. It does mean, however, that, as soon as relaxations became possible, it would have been better to concentrate them, to begin with, on other things. Above all, it would have been better to concentrate them on reductions in taxation next month.

It may be, of course, that there are going to be such reductions. Thursday's decision, for all the present official protestations, may not be a sign solely of the authorities' familiar aversion to hot money, but also that they regard industrial recession as something more than one danger in sight. They may already regard it as something to start fighting against now. But that is not what the authorities claim. And, whatever their view of the prevailing climate, the budget that they will be able to bring forward under a regime of 6 per cent Bank rate cannot, in prudence, involve quite as many tax reliefs as the budget they would have been able to bring forward under a regime of 7 per cent. The conclusion is inescapable, on the basis of their own arguments, that the authorities have put last things first.

The Great Confusion

Britain's renunciation of nuclear bombs would not diminish the risk of global war. The current ill thought out agitation is increasing that risk.

ONE of the features of old-fashioned education was that children were made to chant their multiplication tables long after they had become sufficiently accustomed to them to go on to more complicated forms of arithmetic. Something of the same sort now seems to be advisable in the great debate about the hydrogen bomb, if only because some of the cleverest people in the country are chanting that twice two are five. The argument about whether Britain should continue to develop its own nuclear weapons is being most dangerously muddled by Bertrand Russell and other campaigners for the "abolition of nuclear warfare." What they are saying is that Britain should renounce not only the bomb, but (apparently as a point of British honour) co-operation with the Americans about missile bases and other defence agreements with our friends and allies as well. What they are muddling is the quite separate argument about whether Britain could more effectively and economically make its contribution to the prevention of war by leaving the deterrent to the Americans and concentrating its own armament programme on conventional weapons. But, for peace's sake, let attention be paid first, at Oxford and elsewhere, to the basic fallacy of the assumption that the way to abolish nuclear war is for Britain to contract out of the alliance.

THE starting point of most current speeches made by the nuclear disarmers is that a hydrogen bomb war would be an unspeakably terrible thing. There is no dispute about that. It would be the biggest massacre of mankind since the bubonic plague in the middle ages; it might be even worse, and spell the end of life on this planet. The first objective of everybody is to see that there is no outbreak of a war in which the bomb would be used.

The next question, then, is: in what sort of a war would the bomb be used? The answer to this is quite simple; and it is an answer that will not be determined by the peacetime decision of any country or group of countries to "ban the bomb." Instead it is already determined by the quite unavoidable fact that knowledge of how to make these frightful things exists. The bomb will be used, eventually or at the outset, in any war in which one of the great power blocks thinks either that the other side may be about to bomb it or that defeat would spell the end of its way of life. To put this last point at its lowest: the bomb would be used against a war of domination when the leaders of any nuclear power thought that it represented the last hope of turning the tables on the enemy, and thus possibly saving themselves and their families from the fate that Mussolini met at Milan. Hitler in his bunker would certainly have used the bomb (even if he had signed a thousand Geneva protocols banning it), and so would all other dictators and most democratic politicians in the same trap.

AT first sight, this human certainty that the bomb would be used in or against a war of domination might seem an inexorably terrible prospect for humanity. But, paradoxically, it contains an element of dramatic gain. For it means that, in present circumstances, it is very unlikely that a war of domination will be deliberately launched. (Even a totally mad dictator like Hitler would not have started a war in the stalemate conditions of 1958, because his colleagues or generals would have stopped him). If an H-bomb war comes, it will almost certainly be because a military adventure, after having been launched on the assumption that it would be much less than thermonuclear, becomes a major conflict through the aggressor's miscalculation. What is needed, therefore, is not a pronouncement about abolishing the manufacture of the bomb (which, at least in war, would be impossible to enforce), but a policy to minimise the chance of such a miscalculation.

In these circumstances, there are two questions that should be asked of those who, while proclaiming their wish to ban the bomb, in effect want to overthrow the American alliance. They are questions that should be asked of them again and again, wherever they appear. Here, not in the deliberately confusing questions circulated at Oxford, is the real questionnaire for the abolitionists.

(1) *Do they think that the policies they propound would diminish the incidence of border scares, and thus the risk of nuclear war through miscalculation? Can they not see that the effect of their own campaign so far has been to increase it?* Already Mr Macmillan has been inveigled into making the imprudent statement that if two hundred Russian divisions marched across Europe, the bomb would fall—with the implication that if they make any lesser attack it may not fall. The immediate danger is that this may provide a splendid incentive for the communists (who since 1955 have shown that they will not willingly cross the datum line that would bring thermonuclear retaliation) to start experimenting again, to see how far the datum line can be made to stretch—up to Formosas, Indo-Chinas, Jugoslavias, West Berlins? The ultimate danger is that such operations might roll to the stage either when the West would think that it faced the threat of a war of domination, or when the Russians would think that the West might be about to think this—and so hurry to get their bombs in first.

This prospect also has relevance, in so far as anything has relevance, to the Priestleyites' favourite bugbear—the war started through a private bomb-throwing by some Russian or American drunk or neurotic or stupid junior officer without orders. If Britain were outside the western alliance, and gaps were thereby opened for more communist infiltration round the perimeter of the free world, do the abolitionists think that in the new atmosphere the danger of such an accident would become smaller? If so, why?

(2) *Do they think that a unilateral British renunciation of both bombs and bases would speed the advance towards agreed international disarmament? Can they not see that their activities so far have already slowed this down?* Why should Mr Khrushchev accept the less desirable (to him) alternative of controlled disarmament when he sees all these new pressures towards unilateral disarmament on the democratic side? Mr Khrushchev is hardly fool enough to contemplate accepting a controlled form of disarmament that would weigh equally on all parties, if he thinks he sees a chance of the effective strength of his opponents disintegrating in a (for him) splendid state of disarray. And does anybody really think that there is an improved prospect that the United States will take the big jump into an active pressure for controlled disarmament while it feels the ground so shaking beneath its feet?

THIS is the gravamen of the charges against the marchers to Aldermaston and their fellow travellers in the campaign. By feeding the illusions of ordinary men and women who long for peace and security, they are making a positive contribution to pushing these very people nearer the abyss. Beside this, it is a minor peccadillo that they are also muddling one of the most crucial problems of British defence policy; what is peculiarly annoying, however, is that some of them are doing this muddling deliberately, because they want to claim as allies for their side people who support a second—and totally different—"nuclear disarmament" point of view.

This second, and quite separate, school is composed of those who believe that Britain should either abandon or cocoon its H-bomb, not as a gesture of moral and military disassociation from the western alliance, but as a means towards greater integration of effort with it. The starting point for argument by this school is not the undoubted horror of the bomb, but the obvious insufficiency of western conventional forces: not morals, but hard military facts and economics. Any cuts in our military establishment on the continent, made to compensate for the expense of maintaining ourselves as a nuclear power, are likely to harm the West by much more than would removal of the marginal British contribution to the American nuclear deterrent. There are two questions to ponder in considering this school of thought:

(1) *If Britain did abandon development of its bomb, would our vital interests be harmed by the fact that we then could not threaten to start a third world war if we ever wanted to utter that threat?* This, of course—together with considerations of prestige—is the real reason why the present British Government insists on keeping its finger on the bomb: the fear that America may in the future breed its own Lord Russells. When America can rest on its own inter-continental missiles, instead of on East Anglian Thors, there is some danger that neutralism will spread there: some future American government may say that, although the Russians are very inconvenient people, it is hardly worth blowing the world to pieces to prevent them having, say, the Isle of Wight. But if such a default ever did occur in the strongest shield of the western alliance, then the whole of British foreign policy would have failed, and an agonising reappraisal would be needed indeed.

(2) *If Britain were to abandon development of its bomb, might it help to persuade third countries—other than Russia and America—to abandon developing theirs?* If the suggestion is that a British announcement to this effect would in some way "give a moral lead," then it is almost certainly another piece of nuclear disarmament nonsense. It is a habit of the British grossly to over-estimate their moral influence in the world. (It seems to be only the cynics who remember that France, when M. Faure was prime minister, announced that it would never have anything to do with nuclear weapons, but now seems to be well advanced in developing them; most of the unilateral disarmers who profess to believe that the fate of mankind could be changed by a single bold prime ministerial pronouncement probably have not even heard that poor M. Faure once tried it.)

But one possibility does emerge from recent developments. It is not inconceivable (if not yet exactly likely) that at some future summit conference, provided the West enters it from a position of sufficient strength, Russia and America might agree to take steps, subject to inspection, to prevent the spread of nuclear weapons among those over whom they have influence (China, the Communist satellites, Egypt on the one hand? The secondary western powers on the other?). If so, and if the British cessation of bomb development would help this, it would surely be worth treating it as the deciding factor in an argument which seems already to be very evenly balanced.

THE last part of this article has been concerned with hopes for the future. The first part was concerned with the dangers of the present, on which all else depends. It is to this that comment must again at the

end return. The genuine pacifists who say that it would be Christianly preferable, in the present sad state of the world, if the whole of the American and the west European peoples would renounce armed resistance, deserve respect for their moral judgment. (But even they pose a false alternative when they say that today's choice is between some risk of enslavement and the certainty of extinction; it is the other way round.) Given, however, that all western peoples are not going to become pacifist, what the nuclear disarmament campaigners are really calling for is something quite different: their argument is not that Britain should or could renounce knowledge of how to make the bomb (which it already has), but that it should renounce the western alliance. They say, first, that this would "break the deadlock"; so it might, but it is on that deadlock that the avoidance of war at present depends. They say, secondly, that this would "give a lead" that would speed disarmament and security; the British people have learned nothing from this past thirteen years if they do not see that it would do precisely the reverse.

Critical Months for Free Trade

Political issues are at stake in the negotiations on a free trade area. Will France accept any reasonable price for it?

THE French memorandum on the European free trade area has rudely awakened Whitehall and the British public to the fact that France dislikes the whole business and may destroy it as it destroyed the European defence community in 1954. The free trade area plan was designed to ensure that, when the six common market countries reduce their tariffs in each other's favour during the next twelve years, the larger western Europe round them shall reduce its tariffs in parallel. The French proposals, with their demand for delay and for endless exceptions for uncompetitive industries, seem calculated to prevent this happening. Unless France's objections can be overcome within the next three months or so, there is grave danger that when the Six take the plunge next New Year's day they will move alone.

The "nation of shopkeepers" has, sensibly enough, looked upon this complicated matter as a business proposition. Community, after all, can only begin with the recognition of a common interest. British industry first saw the common market as a threat to British exports; it accepted the scheme for a European free trade area as a remedy against that threat; and it has since discovered surprising possibilities in the creation of a larger European market. The dangers involved in the failure of the free trade area are still seen in this country mainly in economic terms—loss of exports, growing tariff discrimination both in and outside Europe, and reversion to primitive bilateral methods of trade.

There is nothing to be ashamed of in this attitude. These dangers are real enough. But there are also pressing political necessities. After 1945 a great shift became evident in the balance of world power. The former "great powers" of western Europe came to look like frail, peripheral states, surviving only under the American shield. The European Economic Community is an ambitious attempt to bring six of them more closely together than ever before, and thus to restore a measure of stability to the old world. The free trade area plan offers a means of bringing Britain and the other democracies of western Europe into this group, strengthening it and preserving its ties with the rest of the western world across the seas. Talk of strengthening western Europe may not sound fashionable when forms of "disengagement" which might open the door upon the imprisoned other half of Europe are much in people's minds. Yet the premise for any military disengagement, and for any revival of the real Europe that is incomplete without its central heart land, is a politically strong and united western Europe.

Wait a little, some Frenchmen say, and see how the common market works. But already the gulf between Britain and the Continent is dangerously wide. Even since the free trade area talks began, the solidarity of the Six in defence, in atomic matters, and in policy generally, has tended to tighten. Their institutions have leapt into active life. In many respects, all this is admirable. But their tendency to forget that half western Europe is still outside their club—as well as, unavoidably, all central Europe—is alarming.

WHAT can Britain do at this late stage to bridge the widening gap? There are two ways of not bridging it. One is to accept France's more protectionist conditions, which would make nonsense of the free trade project. Another, equally important, thing not to do is to threaten that, if the exasperating common market starts to discriminate, then we can do so too—in the Commonwealth, or in northern Europe. The illusion that Britain can retreat into a cosy Commonwealth walled garden is even more absurd than the myth of "little Europe"; and to use this futile threat merely exacerbates continental suspicions of British sincerity.

There are, however, two constructive notes that Britain can, and should, strike. First, it can openly and frankly recognise that the scheme for freer European trade has a fundamental political, as well as economic, significance. True, last year's white paper conceded

that the principle of unanimity in the council of ministers might have to be abandoned; but not until the meeting last week did some of the continental members of the Organisation for European Economic Co-operation begin to appreciate that Britain is prepared to take a political plunge and to accept institutions for a "big Europe" in some respects as strong as those of the Six. It is time this was shouted from the housetops. At least the ludicrous confusion of thought that has led some people across the Channel to oppose the free trade area in the name of European unity would be dispelled. Mr Maudling himself will no doubt be delighted to accept the new and more appropriate name, "European Union for Economic Co-operation," which France has proposed for the largely political project he is struggling to bring to birth—provided that the change of name does not mean that the greater freedom of trade, which remains its nub, has been jettisoned.

The second constructive note that Britain should strike is strictly economic. The question is whether there is any economic price which France is prepared to accept in return for ceasing to obstruct this union of a larger Europe. It is not surprising, no doubt, that France, with its inflated price-structure and Algerian burden, is reluctant to take on new commitments to open tariff frontiers. With exports marginal to its almost self-sufficient economy, France in this century has never really cared a button for free trade. It has used tariff concessions primarily to bargain for other benefits, as it did, successfully, in the common market negotiations. What reasonable inducement can France now be offered?

Possibly compromises may be reached on many of the detailed issues that once seemed intractable, such as the level of the free trade area's outer tariff (about which Italy made useful proposals last week) and, in so far as it is meaningful, the "harmonisation" of labour costs. But this does not go to the heart of the matter. There is one chink of light in the thicket of the French memorandum. This is the request to share in Britain's liberal trade system with the Commonwealth. It is put in an extreme form: a request to have a share in Commonwealth markets without giving anything in return. But at least it does suggest a constructive possibility. In the next few years, there will inevitably be closer economic ties between the continent of Europe and the Commonwealth. By a British offer to seek concessions now from the Commonwealth for European trade, the door to the creation of a broad European trading area might possibly be unlocked after all.

It is, of course, precisely this point that is most liable to stick in a British Government's, or Parliament's, throat. Even Mr Macmillan, who can scarcely be accused of imperial insularity, told a Conservative conference two years ago that "if we have to choose between Europe and the Commonwealth, our choice is made. We choose the Commonwealth." The trouble about this sort of rhetoric is that it has no meaning. Reading it, one might have thought that to "choose Europe" would somehow mean to banish the Commonwealth beneath the waves of the sea. In fact, however, it would mean trying, in so far as we have any influence in the matter, to get cheaper entry for Commonwealth exports into continental Europe, and arranging for Commonwealth countries to get European goods as cheaply as they now get British goods. In the short run this would be of some competitive disadvantage to some British industries. But a price may have to be paid to avert a dangerous rift in the western world; and to pretend that it is imperial magnanimity which holds us back is the sheerest insular hypocrisy.

Mr Khrushchev and the Peasants

The Soviet Union is preparing for the biggest transfer of ownership since the days of collectivisation. What is the meaning of this move?

RUSSIANS are not all watching peace doves flying to foreign destinations. More than half the Soviet population still lives in the countryside, and it has a more pressing problem on its mind: the biggest transfer of property since the days of collectivisation is now being prepared. The transfer is of particular interest to the 80 million *kolkhozniki*. Their collective farms are to be allowed to purchase the equipment hitherto belonging to the state-owned machine and tractor stations (MTS). Mr Khrushchev's "theses" outlining this project are being discussed at mass meetings throughout the countryside. One of the first acts of the newly "elected" Supreme Soviet will be to endorse the programme.

The MTS have become a part of the landscape since collectivisation. There are some 8,000 stations, employing about 2 million drivers, mechanics and agricultural experts. They operate the bulk of heavy agricultural equipment, including over 1.2 million tractors (in 15 h.p. units), combines and lorries. Until now the 78,000 collective farms have had to turn to these stations to get their ploughing and harvesting done. Payment in grain and other products for these services was an important source of state revenue. The MTS had a political function as well. With their higher proportion of party members, they could watch the mood of the less reliable rural areas. But the new scheme provides for the transfer of most of their equipment and staff to the collective farms themselves. Some of the stations will disappear; others will be re-

duced to the rank of servicing stations, used also as distributing points for new machinery. Why should Moscow now deprive itself of such bastions of state power ?

The Soviet rulers have always been faced with a double task in the countryside. They have sought to increase production and supplies ; but they have also had to fit the peasantry into the country's social system. It is through these twin lenses that the new move must be viewed.

The fact that agricultural output has lagged behind industrial expansion is plain. Stalin's successors admitted a state of crisis in agriculture and set about trying to relieve it. It was under Mr Malenkov's premiership that the first steps in a policy of incentives were introduced : tax reliefs, lower compulsory deliveries and higher prices. Mr Khrushchev, eager for quick results, coupled this in 1954 with a drive to bring virgin land in Kazakhstan and Siberia under cultivation. Both measures were combined with a larger supply of agricultural machinery. There have been tangible results in better output and larger supplies of livestock and dairy produce. Mr Khrushchev's gamble on the virgin lands brought a first dividend in the form of a bumper crop in 1956. Last year, however, nature turned against him. The new farming areas were devastated by drought. How much the total crop was affected is shown by the fact that grain supplies to the state were nearly a third lower than in 1956.

This setback, however, does not explain the latest scheme. (Mr Khrushchev is still fascinated by virgin land ; some more is to be brought under cultivation in the Far East.) The general state of Soviet agriculture in itself requires the introduction of reforms. Though the slogan about catching up the United States in output per head of milk, butter and meat may now be heard on every occasion, it is in agriculture that the Russian lag is most striking. Even if the Soviet Union were to reach the American level of agricultural production rapidly, it would do so with an agricultural labour force as much as five times as large.

THE existence of vast peasant masses is a permanent difficulty for planners in particular and the leadership in general. The ruthless collectivisation had left too many scars to permit further reforms in the 1930s. Yet it was regarded by the communists as only the first step towards the goal of industrialising rural production and eliminating differences between town and countryside. The next step was taken in 1951-52 ; collective farms were amalgamated into larger units (the average farm now has about 5,000 acres and employs some 350 able-bodied workers). Flushed with success, Mr Khrushchev (who at that time, curiously enough, was the apostle of urbanisation) advocated a move towards the next stage ; instead of scattered farms the countryside was to be filled with " agro-towns." The scheme had to be shelved because of the outcry it provoked among the peasants. But the idea of further transformation was never abandoned. Stalin had it in mind when resisting, shortly before his death, a proposal for the transfer of equipment from the MTS to collective farms —which was almost identical to the one now being introduced. This, he argued, would be a move backwards, because it would reduce the scope of state property in favour of collective ownership.

How does Mr Khrushchev's new scheme fit into this context ? Its primary practical objective is undoubtedly to encourage production and supplies. Its author deals with criticism by arguing that most collective farms are now rich enough to purchase the equipment and large enough to use it efficiently. The smaller and poorer farms will be given a few years to make the transition, which should be an inducement to larger scale and better management. The state will lose the agricultural supplies hitherto delivered to the MTS in exchange for their services, but this loss should be recouped by payments made for machinery old and new (the MTS, after all, were subsidised). Moscow hopes that the collective farmers will be pleased with the abolition of dual control, and that control of their own equipment will enable them to do a better job, while the desire to buy new machinery will prompt them to increase their supplies.

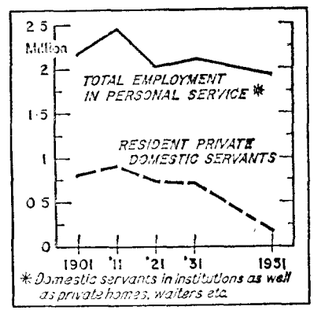
BUT the ultimate social objective has not been forgotten either. Mr Khrushchev and his assistants are busy denying charges made by Soviet economists who, using quotations from Engels, have insisted on the contradictions between state and collective property, seeing in the encouragement of the latter a movement away from communism. Mr Khrushchev replies that the inducement to amalgamation will be strengthened ; that the state will keep its hold on the supply of industrial machinery and other industrial goods ; and finally, that the communist leadership inside the farms will be reinforced by the large-scale intake of party members from the MTS.

The campaign in the virgin lands has provided the Soviet rulers with yet another instrument. In these almost uninhabited areas it was natural to set up state farms rather than collectives. The number of state farms has risen to 5,800. They now account for a quarter of the total sown acreage and for nearly a third of the area under grain. The growing proportion of supplies coming from this source strengthens the government's hand in its dealings with the collectives. By this double pressure, from within and from without, Moscow may be able to drive the farmers on until all differences between state and collective property vanish. This is, at any rate, the official hope. Yet one cannot help wondering whether, prompted by the wish for quick results, Mr Khrushchev, though himself born in the village of Kalinovka, has not this time underestimated the property instinct (even if only collective) of the Russian peasantry. Having decided in haste, will he repent at leisure ?

The Servant Problem—1

The Homes with Help

Most of our readers will be washing up tonight. Is the decline in paid help in the home a matter of middle-class impoverishment, working class high wages, or aversion from service as such ?



THE most obvious outward and visible sign of the decline in middle-class fortunes since 1939 is the dearth of servants in suburbia. It is this that makes professional people feel they have had to trim their way of life to social change more than anybody else. The class which used to put its girls out to service, suburbia complains bitterly, today benefits not only from full employment, high wages and social services, but also has reserved to it, at subsidised rents, almost the whole output of modern, labour-saving council houses and flats. The middle classes, by and large, are left with the houses which Victorian, Edwardian, and even interwar speculative builders designed on the assumption that there would always be a large market in domestic service, of every variety and at prices which almost any middle-class budget could afford. That market, it is said, has disappeared, taking with it a great deal of middle-class leisure and culture, in a welter of husbands washing up and wives scrubbing children and floors.

How much truth is there in this picture, or how far has the market merely changed (as markets will) rather than declined ? Just where in middle-class life, and on whom, does real, definable hardship fall ? Is the situation likely to get better or worse—whether in terms of more domestic service, or more and cheaper mechanical substitutes for it ? Is any intervention called for by the state—for example, in encouraging the recruitment of more foreign workers ? In these two articles, it is proposed briefly to attempt some answers to these questions.

THE first problem is to get the statistics straight. Between the censuses of 1931 and 1951 the total number employed full-time in personal service, including domestic servants both in institutions (hospitals, hotels and the like) and in families, fell by less than many people may suppose—from 2.1 million to 1.9 million. The real blow for suburbia was the fall in the proportion of these domestic servants who were working for private families—from 33 per cent in 1931 to 9 per cent in 1951. As a consequence, by 1951, 178,000 full-time domestics were in private employment in 157,000 families ; in 1931, 706,000 had been in private employment in 500,000 families. This was a large absolute drop, but it is worth re-emphasising that the proportion of families employing full-time servants was always small. Even in 1931, only about 5 per cent of all households had one or more full-time servants ; in 1951 only just over 1 per cent had them.

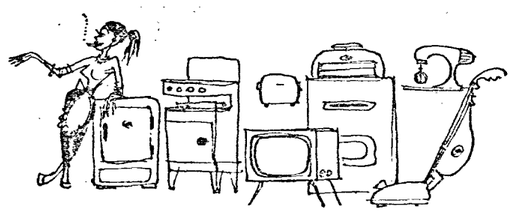
The fall that has occurred reflects two simple economic facts : the rise in the price of domestic service; and, more important, the decline in the amount of disposable income available now to buy them for former servant-employing homes. The price is now mainly settled by what the institutions offer in competition with other industries, both in cash and amenities ; the private employer's bid no longer affects the price to the extent it did in the thirties, and still less than in Victorian times, when private employment represented the greater part of total demand. The wages position will be examined in more detail later ; but roughly the price of domestic service has risen fivefold since 1931, against an average price increase of nearly three times, and a rise in professional earnings (before tax) of two-and-a-half times.

In these figures lies the key to present middle-class servantlessness. In 1931, there were 500,000 incomes of £700 or more ; the disposable income left to a married man earning £700 with two children after tax was then £650. This figure seems to be—very roughly—the point at which a middle-class family could then afford a whole-time resident servant. (Mrs Beeton, in the 1880s, thought that on £200 a year one could afford a general servant, or slavey.) In 1951, the top 157,000 incomes ranged from £2,500 upwards. For a married man with two children this income represents, after tax and in terms of 1931 prices, £780. The difference seems just about enough to absorb the additional cost of a servant, over and above the average price increase ; so that it seems reasonable to suggest that in fact pretty well all those who could afford a full-time servant in 1951 eventually got one—and *per contra,* that as much disposable income was set aside for a servant in 1951 as in 1931, taking price increases into account. The reduction in employment of full-time servants is seen quite simply as a reduction in the number of families who could afford to employ them.

That is the middle-class picture. To peep, for a moment, at the upper class area : at what levels of income can two or more servants be afforded nowadays ? Mrs Beeton, about 1880, thought that both a cook and a housemaid were possible on £300 a year, and

at £1,000 one owed it to oneself and to the lower orders to have a manservant, a cook and two housemaids. Today, only two per cent of resident-servant-employing households (which means one in 4,000 households as a whole) have three servants or over; this corresponds with the proportion of income earners getting upwards of £18,500 a year. A further 9 per cent (or just over one in a thousand households as a whole) have two servants, corresponding to incomes ranging from £9,000 to £18,500 a year. In 1931, 76 per cent of the employers of resident servants had but one; in 1951 this proportion had risen to 89 per cent.

THE conclusion that the drop in the number of full-time servants is a consequence of the squeeze on middle-class incomes, more than of anything else, is strengthened by another consideration. It might be expected that there would, in the middle classes, be some correlation of employment of servants with need, as expressed in the presence of children. Even with incomes below £2,500, people can choose between a mother's help and a car, for example. But young families with children are precisely the ones that now often cannot afford to enter the market. Against the average of 1.24 per cent of privileged households containing one or more resident servants (i.e. 157,000), the proportion of households of child-encumbered married people under 40 which had a whole-time servant was only 0.73 per cent—or not much more than half the average.



The other type of household which needs full-time domestic service is of course that which contains either the elderly or the lone worker; and in the middle classes it is now often the lone professional man who can afford to have one. This is reflected in the figures, for among those aged over 40, 5.4 per cent of widowed or divorced males, and bachelors, have servants, though only 2.4 per cent of spinsters and 1.3 per cent of widows have resident servants. It is noteworthy that younger widowers and bachelors more frequently employ servants—4.4 per cent of the first and 3.5 per cent of the second. Clearly money, not need, determines the pattern of employment of servants by the middle classes.

So far, this article has been concerned only with whole-time, resident servants; but part-time non-resident service is in fact the main recourse of the modern middle classes. Figures for this less organised market are a little less detailed. An official household survey suggests that about 6 per cent of all families (or 900,000) probably have chars or daily helps, including between a third and a half of families with over £1,500 a year. There is a big difference, however, between the char who drops in twice a week to do some rough cleaning and the bustling daily help who comes in at 9 every weekday, cleans up, gives the children their lunch and tea, and departs at 4.30, leaving the supper ready to be cooked: the virtual equivalent of a resident maid. To judge from the sample survey, some 260,000 families had a char for no more than 4 hours a week; 380,000 for 5 to 12 hours a week; another 260,000 for over 12 —more, that is, than two hours per weekday.

Even in the income bracket of £2,500 a year and over, according to the Ministry of Labour's report on household expenditure in 1953-54, only an average of 43s. 6d. a week was spent on outside domestic help (which includes nursery schooling); this is the equivalent, at current prices, of about 14 char-hours per week per family. Even at £2,500 a year, clearly many families do without domestic help. In all, calculating from the census, only the equivalent of 6 or 7 million char-hours per week was being purchased by the 15 million households of the country in 1956; and this included obviously a substantial item for baby-sitting, as well as something for jobbing gardeners and sewing-ladies.

While the number of people who can afford a resident help has declined, the number of those who ought to be able to afford some daily help for their wives has increased. There is every reason to think that at 3 shillings per char-hour or more in London, the potential demand for char-hours is totally unsatisfied, even taking into account the enormous char-hour equivalent contributed nowadays by washing or washing-up machines, vacuum cleaners, electric irons, mixers and sewing machines, as well as the char-hours economy represented by electric or gas fires, gas pokers, and oil or the new solid fuel boilers. There were in 1951 7.2 million households with one or more children, and not one of these devices will blow a child's nose, change a nappy, answer the doorbell or telephone, run out to the post, attend a sick-bed, or do the shopping. Despite the advances in household mechanisation, the Victorian housewife, with her battery of cheap, multi-purpose, self-propelled domestic machines, often had the better of it. Domestic service cannot—yet—be entirely mechanised; how far the need for it remains, and the prospects that that need can be economically satisfied, will be discussed in a second article.

NOTES OF THE WEEK

WAGES

The Busmen's Response

LONDON TRANSPORT has accepted, without demur, but also without offering any additional increase, the industrial court's recommendation that it should pay 8s. 6d. a week more to its 34,000 central London ("red bus") crews, but keep unchanged the wages of its 14,000 "green bus" and maintenance staff. The question now is what the Transport and General Workers' Union is going to do about this. Last week, the union leaders were secretly pleased with the size of the award for the central London workers; but since it stood no chance of being accepted by the necessary two-thirds majority of militant garage delegates, they were bound to go through the motions of refusing it. This they did, saying that the terms of the award were discriminatory and would prejudice the chances of the provincial busmen's claim which Mr Cousins expects to put forward in the near future. Early next week a meeting is being held to decide on the union's next step.

Broadly, there are three courses of action open to the union. The first, and from their point of view the worst, would be for the delegates to call for immediate protest action in the form of a strike or ban on overtime. This course will no doubt be favoured by many of the delegates next week, but it is likely to find less favour with many of the men—particularly the three-quarters of them who would be asked to stop work just to get a rise for the other quarter. An immediate strike would therefore be very likely to fail. A ban on overtime would probably be less effective still, particularly as (see below) some overtime on London buses may be about to disappear anyway.

The second, and mildest, possibility is that Mr Cousins, who has flown back from Greece specially for the meeting, may make a temporising announcement: that, say, last week's award "introduces new problems of differentials into the passenger transport industry which should be considered by a national conference of busmen." He would thus free himself to re-open the case for London's green bus men when he goes forward, in the normal way, with the now prejudiced provincial busmen's claim; but he would in effect be contracting out of immediate battle.

To Face a Showdown?

THERE remains the third, and most militant, possibility. This week, the railwaymen's claim has been argued before the Railway Staffs National Tribunal (with Sir John Forster, chairman of last week's industrial court, again in the chair). It has become apparent that what the railwaymen are really arguing for is a rise to compensate them for the increase in the cost of living since their last award. Originally this was 4½ per cent, approximately the same as the central busmen's award; but, almost as Mr Greene was getting to his feet to put his case, last month's index was published—to record a ½ per cent drop, to bring the total rise to only 4 per cent. It also seems apparent, however, that if Sir John Forster follows his own logic, as shown in the case of the green bus crews, he will have to join with the employers' representative on the tribunal in recommending no award for the railwaymen. The question is whether the new leaders of the railway unions would then feel obliged to call a strike—and whether Mr Cousins, next week, may in effect bid his busmen to play for time in order to join forces with the railwaymen in any action they might take. If he does this, Mr Cousins would not necessarily try to mobilise the provincial busmen, whose pay claim would be barely three weeks old—and who have not got the reputation of being one of his guards divisions in responding to any strike call. But a strike of railwaymen, London underground workers (who are mostly in the National Union of Railwaymen) and the London busmen would certainly hit the public and the Government hard. It would be the major showdown on the wages front, which has been so long forecast but also so long averted.

Would it be a bad thing? Possibly, if wage inflation is ever to be stopped, the showdown has got to be faced some time; if it has to be faced, it is of desperate importance for the future standard of life in this country that the unions should lose it. The disadvantages of the battle taking place in this particular way would be the junction of union forces, and the fact that the ill-judged 4½ per cent award to the central London busmen may have led some members of the public to think that it is only "fair" that the other transport workers should get 4½ per cent too. The advantages would be that the economy could more easily absorb even a total transport strike in present conditions of slack, and that three-quarters of the London busmen would be likely to be discouraged by the feeling that they were fighting for other people's *beaux yeux*.

Different people, weighing these different factors, will come to different conclusions about whether the unions would win such a fight. The important immediate point, however, is what conclusions one man reaches in this exercise of estimation. All that is known of Mr Cousins suggests that the one thing which will influence him in deciding whether to call for the showdown will be whether he thinks that he would win it. He has the advantage that he can wait until the railway decision before he finally shows his hand; it is not impossible that he might spend the intervening two to three weeks rumbling the vague suggestion—but not hard-and-fast commitment—that he is about to break out the flag of war.

The Award that Partly Isn't

WITH all this excitement in prospect, sight may be lost of the internal consequences of last week's award to the men who were actually given it. But those consequences are revealing. The announcement by the Minister of Transport, Mr Harold Watkinson, that the £1,000,000 cost of the industrial court's award to central London busmen must not be met either by higher fares or a widening of the bus services' deficit has put London Transport in a difficult position. If it is to live up to the Minister's formula, it

seems to have no alternative but to get the £1,000,000 by cutting unprofitable services. Economically, there is plenty of room for that; many of London's unprofitable bus schedules should have been discontinued long ago. But when an unprofitable bus is taken off the road, only a small part of the saving is in fuel and maintenance charges; the greater part has to be a saving in the earnings of the crews. Either these can be got by running down the number of men employed, which would be the wise course but which London Transport is unlikely to adopt; or they can be got by so arranging the cut in schedules that the men have reduced scope for profitable overtime and rest-day earnings. In either case, the men's £1,000,000 will be largely paid for by themselves, or rather will be taken out in extra leisure—which was not what they were asking for. Moreover, the incidence will be quite unfair. Some of the harder working men—often those with family responsibilities—have hitherto been earning £4 a week or more above basic rates by overtime working. Now they may be required to give a lot of that up, in order that 8s. 6d. more a week may go to men who have never taken on extra work.

What, however—unless London Transport takes the bold step of running down surplus staff—is the alternative? The alternative is insidiously obvious: that the minister's formula may not be fully achieved, that the economies planned on paper may never be made in practice. The present position is a familiar one: a pay award, followed by a promise that it will be met by greater efficiency, and talk between the management and unions which in the end comes to nothing. After several recent railway wage awards, it has been suggested that economies would be effected in railway staff, but they have not been. Both the railway and shipbuilding awards last year were linked to a promise to end restrictive practices, which has only *de minimis* been fulfilled. More recently, technical civil servants were told that increased wages would have to be met by reductions in staff; but these reductions have so far been negligible. This is not to say that London Transport's present efforts are bound to fail. But it is to say that its activities in the coming year will deserve to be closely watched.

DISENGAGEMENT

But, Eastward, Look . . .

One battleground where it is indisputably a good thing for the contestants to get as close as possible to the whites of each other's eyes is the present discussion about disengagement. This week brings two additions to the array of booklets and essays levelled at each other across the lines of embattled debaters. In a pamphlet which performs a counter-battery action against Mr Denis Healey's recent Fabian tract,* Mr Peregrine Worsthorne sets out the arguments of those who find more to alarm than to attract them in the idea of disengagement.† In the same direction comes an intercontinental rocket in the shape of an article by Dr Henry Kissinger, the American champion of the theory of graduated deterrents, who expresses similar fears in the April issue of *Foreign Affairs*. The war remains a decently civil one; indeed, in both content and tone, the current debate is a model illustration of the virtues of letting things be argued out by an informed public opinion rather than in a locked committee room of the Kremlin.

Those who have been looking on disengagement with a sympathetic eye need not be discouraged by the shot and shell whistling about their ears this week. Mr Worsthorne's and Dr Kissinger's objections are basically the same. They believe that disengagement would not work, in the sense that the hopes which it raises of a gradual liberalisation in eastern Europe would be frustrated by the Soviet armies, poised like vultures just across the Russian border, whose re-entry into the zone of disengagement the West would have become too weak to prevent.

Three things can be said in comment. First, disengagement does not necessarily mean so sweeping a withdrawal from central Europe that it would strip the West of its deterrent power or lead to an immediate and total evacuation of American forces across the Atlantic. It must be repeated that the only workable kind of disengagement is the kind that is enforceable by western forces patently strong enough—though based outside the centre of Europe—to discourage a new Soviet irruption westwards. Secondly, the critics' argument is not so much a reason for rejecting disengagement as an argument in favour of pressing on to reinforce it with a measure of disarmament, so that the threat of Russia's conventional armies can be cut down to size. Third, and most important, only a hopelessly barren diplomacy will say simply that "nothing can be done" about eastern Europe. Ever since the events of 1956 in Hungary and Poland, one of the West's first tasks has been to search for measures that would encourage a process of liberalisation in the Soviet half of Europe. As Dr Kissinger quite rightly says, disengagement is a policy that calls for a certain amount of daring. But is it likely that west Europeans will rest content indefinitely with a policy which, in the name of caution, calls on them to rule out any chance of extending a degree of freedom to their neighbours in the east?

FRANCE

Seven Days to Go

There are occasions when the word confidence should not be taken too literally. On Tuesday M. Gaillard's government obtained a vote of confidence by 282 votes to 196. The vote was ostensibly taken on the bill for constitutional reform which, even in its highly amended form, should somewhat strengthen the government's hand and its powers of dissolution. But, as one deputy pointed out, the bill has to come back for a second reading.

For some weeks now, deputies have been living in fear that, if they precipitate any prolonged crisis, General de Gaulle will in the end be called on to clear up the mess. The general's silence has more impact on them than the eloquence of any minister. Last week's extraordinary march of rioting policemen on the Palais Bourbon was a fresh warning to them that the present position of parliamentary democracy in France is not impregnable.

The fact that M. Gaillard's coalition is held together only by external threats was clearly shown during the party meetings over the weekend, at which socialists and conservatives spent most of the time vilifying one another. This may prove a crucial week for Franco-Tunisian relations. M. Gaillard does not want to commit himself to any preconditions which would make a settlement practically impossible. The conservatives, on the other hand,

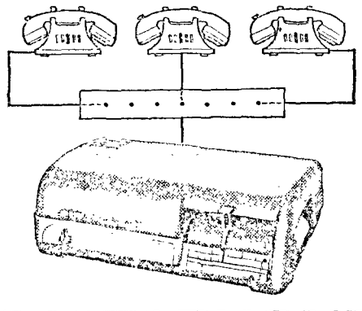
Dictaphone Telecord is the answer!



THE TELECORD SYSTEM gives any number of people the advantages of a personal secretary—*with no increase in staff!* They simply share a centrally located Dictaphone Time-Master dictating machine.

All you have to do is lift a phone, press a switch, and talk. Your words are recorded on a Dictabelt—exclusive, inexpensive recording medium of the Dictaphone Time-Master—and are typed out with no fuss and bother.

The Telecord set is simple—a telephone receiver with switches to give you complete control of every phase of dictation.

The system is simplicity itself to operate, and allows everybody to have, in effect, a personal secretary. *And very economically too.*

The Dictaphone Time-Master is the world's most modern dictating machine. The Dictaphone Telecord System allows *everybody to make full use of it.*

threaten to resign if the government does not make a public pledge that it will refuse neutral control of Tunisian airports and that it will stick to French sovereignty over Bizerta. They are insisting on this pledge because on March 29th parliament goes into recess for a month and M. Gaillard will have a freer hand. If M. Gaillard sticks to his position and still remains at the helm next weekend, the Anglo-American good offices may yet win through.

In the meantime it is not easy to judge the mood of the country. The four recent by-elections—in Marseilles, the rural Nièvre, the industrial north, and a district of Paris—do not fall into any single pattern on which conclusions can be based. One deduction, however, is obvious: the communists have gained everywhere, particularly in the industrial north. This is not surprising, since, according to the latest calculations, real wages have dropped five per cent over the last two years. The Algerian war and its economic consequences have effaced memories of the Hungarian insurrection. Deputies of the centre have good reason therefore to feel hemmed in between the Gaullist menace to the right of them and the spectre of a popular front to the left. But anxiety, unfortunately, is seldom a sufficient spring for action.

The Pen is Guilty

"DON'T break the mirror if the mug is ugly" urges Gogol in his prologue to "The Government Inspector." Successive French governments, on the other hand, have come to the conclusion that, to render the reality of the Algerian war more attractive, it is enough to seize recalcitrant newspapers. "Intellectual masochists"—the new euphemism for independent writers—must take the blame for all the reverses, and if unpleasant news items could only be prevented from appearing they would certainly become un-facts. The spread of this custom of seizing newspapers is causing concern in France and abroad. The International Press Institute has joined in the chorus of protest.

The French committee of the institute has published a statement which is no less disturbing for being measured in tone. After repeating the decision of its members not to write anything that might aggravate troubles in Algeria, the statement goes on to express its alarm over the reintroduction of the principle that opinions are punishable, a principle rejected by all democratic countries. The committee felt bound to raise its voice from fear that such arbitrary action should become an accepted custom.

Warnings are growing louder because the weapon of confiscation, hitherto reserved mainly for the Algerian editions, is now being used against French issues as well. The recent seizure of four Paris weeklies in one go was a striking illustration. The government has an easy task with the press. It impounds the undesirable issue under an antiquated law and then shows no hurry to prosecute. The newspaper has no real redress. Even if it should finally win the case in court, it can only, as one editor pointed out, distribute the three-year-old copies free to its subscribers. But the cost of an edition entirely lost is prohibitive. Does the government really want to face the French press with the choice between docility and bankruptcy? The *ancien régime* collapsed when it tried to refuse its rights to the Third Estate. In modern times, any tampering with the rights of the Fourth Estate is a sign that democracy in a country is in serious danger.

AGRICULTURE

Full Marks for Mr Hare

THE annual review of agricultural prices [Cmnd. 390] appeared as *The Economist* goes to press this week. In making the cuts in bacon, eggs, milk and wheat, Mr Hare has taken the right action. He had first to consider the effect of cuts on the balance of supply and demand in the economy as a whole; and secondly to discourage production of the more grossly over-produced items and to encourage efficient production of the more competitive and more in demand.

Under the Agricultural Act of 1957 the Minister is statutorily barred from cutting prices by more than an average of 2½ per cent, but he has taken to within £2 million, the maximum of £32 million that can come off the guarantee-and-production-grant bill and, consequently, off the budget. There is a limit, too, to the cuts that can be made in respect of any one particular commodity; here the maximum is 4 per cent. Within these narrow limits of manœuvre he has tackled the products in which the guaranteed value and market value diverges most. Eggs are the most obvious example; 37 per cent of the farmer's receipts for eggs in 1957-58 consisted in subsidy. The corresponding proportion for wheat is 29 per cent and for fat pigs 23 per cent. For milk, thanks to the two-tier price system by which the guaranteed price is payable only for a fixed quantity, the proportion of subsidy is very much lower—only just over 4 per cent; but the torrential overflow into the manufacturing market, with its disconcerting effect on the world trade in butter and cheese, made milk a strong candidate for a cut. If the maximum deduction were made for these four commodities, over £27 million out of the permissible total would have been accounted for; by putting the whole of his cut on these items (and giving his only increase to fat cattle), Mr Hare has done almost all he should.

There is, of course, a third standard by which the Price Review can be, and will be, judged; the political standard. Any cut whatever in any commodity whatever is bound to seem outrageous to a farming community already aggrieved, demanding full recoupment for the increased costs of the last year, and moreover far from happy about the effect on the general level of rents of the new Agriculture Act. Here the standard is that of courage and a calculated willingness to be hung for a sheep rather than a lamb. Mr Hare has realised that what matters is not how Torrington votes next week under the immediate impact of policy but how the country as a whole votes, next year or the year after, on its fruition.

BY-ELECTIONS

The Real Lesson of Kelvingrove

THE result of the Kelvingrove by-election does not need very complex political analysis. Everyone who followed the campaign on the spot is agreed that in the minds of the majority of voters the issues were simple: rents first, unemployment a poor second and the rest nowhere. *Pace* the young enthusiasts of Oxford, the H-bomb barely existed for the average Kelvingrove voter, as was shown very clearly in the tiny (587) poll of the ILP (pacifist) candidate. The main explanation of the 6,000 slump in the Tory vote

was almost certainly that a fairly large number of former Tories were personally affected by the Rent Act and refused to vote for Mrs Elliot. Some of these missing 6,000 made up the 1,622 vote for the unofficial Liberal Home Ruler (who, however, still lost his deposit); some abstained; and there was even some evidence of that rare phenomenon in current by-elections—a direct swing from Tory to Labour. The Labour vote was 1,756 down from 1955, but more than 3,000 slum dwellers (presumably Labour supporters) had left the constituency during the intervening three years.

In a careful analysis after the election, the local Labour agent suggested, indeed, that there was a bigger swing and fewer abstentions than the low (60 per cent) poll suggested. Kelvingrove, he explained, is a constituency in which there are an extraordinary number of elderly people, and the register was probably only "80 per cent live" on polling day. How many people saw the social significance of this statement? This is a constituency in central Glasgow (it includes Sauchiehall Street), with an extraordinarily high proportion of elderly people, and with the Rent Act the dominant issue. All these things are interrelated. In any other age it would be recognised as social nonsense that most of the people living round the main centre of work in Glasgow should be people who have themselves retired from work. The main reason why they have stayed in the great smoke, instead of moving out into suburbia or the country, is that they have enjoyed 'squatters' rights under rent restriction. The facts of the Kelvingrove election—and the facts of the age structure of the population round the centre of other big towns—provide the best social case there is for rent de-restriction. But it is not surprising that the old people of Kelvingrove did not appreciate this.

A Liberal Victory?

Our special correspondent in Devon writes: The Torington constituency covers a 600 square mile slice of north-west Devon. It runs from just south of Barnstaple, takes in a stretch of coast, skirts Dartmoor at Okehampton and reaches down to within a few miles of Exeter. The local betting is that next Thursday, this previously rock-solid Conservative seat may provide a political sensation by returning a Liberal to Parliament. A special *News Chronicle* Gallup poll, published on Wednesday, suggested that, among those voters who had by then made up their minds, about 40 per cent were inclined to support Mr Bonham Carter, compared with about 33 per cent for the Tory and 27 per cent for Labour. If this is indeed the pattern of voting, then, compared with the straight Tory-Labour fight in 1955, Mr Bonham Carter will have gathered support from almost exactly half of those who previously voted Tory and just under a quarter of those who previously voted Labour. Between cup and lip, Mr Bonham Carter may have one main danger of slip: his organisation, at least at the start of the campaign, looked like the worst of the three. In so widely scattered a constituency, personal contact and the sheer mechanics of rounding up the voters are bound to be important.

By contrast Mr Royle, the Government candidate rather archly labelled "National Liberal-Conservative," has a first-class organisation behind him. He is personally attractive, he has worked energetically in the constituency for two and a half years, and, even if there is a certain brashness about his approach, this may not be particularly irritating on a chance street corner acquaintance. Mr Royle has, in fact, only one clear political disadvantage, but this is all-embracing—he has to defend a Government at the nadir of its popularity; even in charming Devon, this is no easy matter. If Mr Royle is not facing farmers worried about their prices, he is having to run the gamut of workers who, in Bideford for instance, face nearly 6 per cent unemployment. (The relatively sharp growth of unemployment in the south-west has been one of the less expected features of the 1958 recession.)

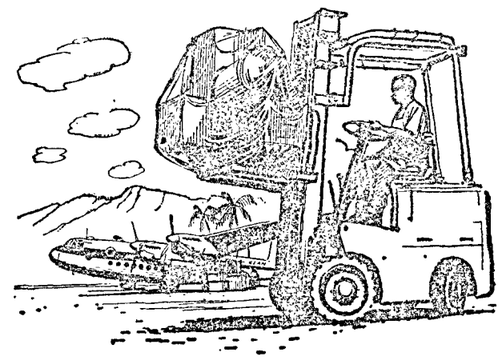
The Labour candidate, Mr Lamb, is personally no match for his two opponents, but he is not quite so ineffective as some newspaper critics have made out: he is, for instance, much better than the successful Labour candidate at Kelvingrove, and his organisation, while not nearly up to the Tory's, is above the Labour average for normally safe Tory seats. (The improvement of Labour organisation in the hitherto neglected south-west has been one of the lessons of the last few years' local elections.) But Mr Lamb's slim chances of winning have probably been made slimmer still by the public opinion polls showing Mr Bonham Carter in the lead, for this could encourage an important trend of which there are already signs—former Labour voters switching to Liberal as the best hope (on present odds probably successful hope) of turning out the Tories.

H-BOMB PATROLS

Shot Down

When the smoke cleared after Tuesday's barrage of parliamentary questions and answers on flights over Britain by aircraft carrying nuclear bombs, one point stood out. The Prime Minister said categorically that

> There is no permanent or standing patrol. If I used those words at one time, I did not mean a permanent, standing, routine patrol, like a policeman on a beat. There is nothing of that kind.



Several of the thirteen questions put by Opposition members had referred specifically to patrol flights; and the ending of all such patrols was demanded in the statement issued jointly by the Labour Party and the TUC on March 6th. Mr Macmillan's assurance that no patrolling is going on was, therefore decidedly enlightening, if somewhat belated. He made it clear that bombs are carried only on the training exercises which the Government regards as essential. The Opposition, of course, has declared itself opposed to these training activities too. But a good part of the alarm lately voiced in Britain has arisen from the notion that aircraft carrying nuclear weapons are circling the skies above this crowded country without interruption—a notion which has now been shot down.

GAZA STRIP

Too Late for Palestine?

President Nasser, who has a taste for anniversaries, was expected to celebrate one at Gaza last weekend. It is exactly a year since the Israelis left the strip, and prophets had whispered that he might declare a Palestinian republic there. Instead he made only a weak gesture; perhaps he is not sufficiently sure of his strength in the refugee areas not under his control to claim the allegiance of Palestinians everywhere. He gave Gaza a legislative council dominated by Egyptians and Egyptian-appointed members, and an executive council appointed by the Egyptian minister of war. This is far short of the independent status which

AFRICARGO *pays off*

Just think what rapid, reliable delivery means to customers in the fast-expanding Africa market. They don't need to tie up capital in stock, they save on storage and insurance, don't risk stocks becoming out-of-date—and can give their clients much more efficient service.
So, naturally, they prefer to order from firms who ship by air—by Africargo for preference. For Africargo is the only all-cargo air service to Africa—so we can guarantee absolutely firm bookings, expert advice on cheap, effective packaging, *specialist handling* for your cargo. And our aircraft can carry cargoes whose bulk or tonnage would otherwise make air transport impracticable.
Expensive? Not at all. Packaging is usually much cheaper than with sea transport—often a dust-cover alone is quite enough. Insurance, too, is cheaper—because there's much less risk of damage or pilfering. So *total* air freighting costs compare very favourably with those of sea shipment.

X-ray picture

(which came out better than expected)

Twelve years ago the National Health Service Act was passed. And there was a crisis in the photographic industry. The two were not connected, but the second might well have been disastrous to the first.

Since the NHS began, radiography in this country has nearly doubled. In 1948-9 (the first year for which accurate nation-wide figures are available), 7,870,984 people were X-rayed in British hospitals. By 1956, the figure had increased to over 13,000,000. What these figures mean—in lives saved and suffering relieved—every doctor knows.

Yet in 1946, Britain faced a crippling shortage of X-ray film.

Up to that date, all the film base used over here had been imported—mostly from the dollar area. The base (cellulose triacetate to the chemist) is the most expensive ingredient, amounting to 20 per cent. of the cost of each X-ray film. And what with our dollar shortage and America's own needs increasing, the prognosis for our hospitals was gloomy.

We stopped this dollar leak. Ilford Limited, in conjunction with BX Plastics Limited and encouraged by the Ministry of Health, set up a plant at Brantham, Essex, to make film base. We had little 'know-how', but we set out to acquire it—quickly.

We had no subsidy, either. The capital cost of the plant was over £2,500,000—but in sterling. The saving in 'hard' currency, on X-ray film alone, has been something of the order of two million dollars a year.

Today, we are the only British firm making X-ray film. Ilford X-ray material is being used all over the world. There is plenty for our own hospitals, and for industry. It doesn't cost the country a dollar—contrariwise, it has begun to earn quite a few.

AMATEUR & PROFESSIONAL PHOTOGRAPHY

he might have used to rally all dispersed Palestinians.

What held him back? Even within the narrow confines of the Gaza strip, he has to contend with a struggle between the indigenous land-owning families and the refugees. The Gaza families have a way of keeping on both sides of the fence, and the refugees have produced no real leaders. The former Mufti of Jerusalem can no longer be dusted down and brought forward as the leader of all Palestinians; he is now heard from only when it suits his Egyptian hosts. He has recently said that his "All Palestine Government" should be allowed to join the United Arab Republic, but too many refugees are aware of the complete ineffectiveness of that "government," which, it is said in Gaza, withdrew to a coffee-house in Heliopolis, near Cairo, immediately its founding speeches had been made in 1948. The only lingering evidence of its existence is its passports, issued by the Egyptian authorities to any Palestinian, and valid only in Egypt and Saudi Arabia.

There may be another reason for hesitation over proclaiming a Palestinian state. All refugees of real competence have by now scattered far and wide, from Libya to the Persian Gulf sheikhdoms, where they have made new homes and new lives. They do not, on the whole, any longer expect to go back to Palestine. They simply like from time to time to recall that there are Arab families in North Africa who have kept the keys to their houses in Spain for hundreds of years.

President Nasser may, of course, be saving the proclamation of a Palestinian state until he feels his citizens need another celebration. Outside Gaza, he can hope to gain support for a Palestine government only among the refugees in Jordan, where his agents are said to be hard at work. Until now, Jordan has been able to do very little for these refugees; but the new federation of Iraq and Jordan has more to offer them. If Iraq can cope with them simply by allowing them to be absorbed, without a publicised plan, without compulsion, and without foreign aid, any appeal to them to join a back-to-Palestine movement will fail. Iraq has only to offer them jobs, and the buses on the road to Baghdad will be crowded. What remains to be seen is whether it can make the best use of its opportunity before President Nasser stirs up the refugees by making promises which he would find hard to keep.

SOVIET BLOCK

Birth of a Journal

An air of mystery surrounds the brief announcement in *Pravda* last week that a new international communist monthly magazine is to be started. The decision was taken at a meeting in Prague, in response, it is said, to the desire for a successor to the Cominform journal that was expressed at the mammoth communist gathering in Moscow last November. But *Pravda* does not divulge which communist parties were represented in Prague; it merely says, in an uncharacteristically ingratiating way, that those not represented would be able to associate themselves with the periodical "with equal rights" or participate in it "in any other manner which would suit them."

The muted and diffident announcement of this new venture is probably due to divisions within the communist world over its nature and aims. For some time discreet hints have been dropped, notably by east German, Czech, Hungarian and French communists, that a revival of the Cominform itself might be a good thing. But the Poles, the Italians and the Jugoslavs have disapproved strongly; in Moscow, last November, they also stood out against the proposal for a new communist journal. Determined to travel their own "roads to socialism," they presumably feared that it would be too exact a replica of the old Cominform journal; *For a Lasting Peace, for a People's Democracy* (will its successor have a snappier title?), published in nineteen languages and distributed, it was said, in sixty countries, handed out instructions and guidance to communist parties both inside and outside the Soviet block. According to reports from Warsaw, the Poles and the Italians (but not the Jugoslavs) have now been persuaded to co-operate in the new journal on the understanding that it is only to be, in *Pravda's* words, a "theoretical and informational" magazine. The Russians evidently hope that even a magazine innocuous enough to win the Poles' acceptance, and flexible enough, it seems, to accept occasional contributions from non-founder members, will still do a useful job of rooting out revisionist tendencies and papering over the cracks in communism's ideological façade. But the editors may have to be pretty adroit if what is designed as an instrument for greater unity does not end by accentuating the divisions within the communist movement.

TRIBUNALS BILL

Crichel Downs for Ever?

The Government is in danger of missing the main point in its approach to the Franks reforms; and, as the Opposition will never recognise that the point exists, the struggle for individual freedom against bureaucracy is going to need some new outside ginger put into it. In its Tribunals and Inquiries Bill, published last week and shortly to be considered by the House of Lords, the Government seems to be concerned merely with what might be called legal tidying-up; since all the untidiness in this field has hitherto operated against the individual and in favour of authority, the bias of the bill is, of course, libertarian. The individual will have a general right to appeal from a tribunal to a court on a point of law, formal inquiries are to be conducted under less blatantly Pooh Bah procedures, and so on.

So far as they go, these reforms are welcome. But they go about as far as a centipede's footstep. What the private citizen requires is not legal tidying up; what he requires is the creation of a sounding board, into which he can shout if any public servant anywhere takes a decision which offends against what the ordinary man would regard as natural justice. The public interest is not the same thing as the public service's convenience; and we, the people, want to be able to put the fear of God—and of publicity—into any public servant who acts as if it is. With so many administrative and planning decisions being taken nowadays, parliamentary question time is not a sufficient safety net—particularly as many MPs are regarded as belonging to "them" not "us" in this matter.

It had been hoped that the new council of tribunals, which the bill sets up, would fulfil some of this function as a sounding board, as a custodian of the custodians. The council is indeed to keep the constitution and working of the formal administrative tribunals under review, but it is not in these formal tribunals that most natural injustice is done. Formal—and informal—administrative inquiries are a much greater menace. But in its overseeing of admini-

strative inquiries the council is to have considerably less power than the Franks committee had recommended; its scrutiny is blandly limited to matters referred to it by the Lord Chancellor or the Scottish Office. Over informal civil service inquiries—as in the Crichel Down affair—the council will, so far as the outsider can see, have no powers of scrutiny at all. Even for the formal administrative tribunals, it is not to have the duty of appointing members as the Franks committee recommended. The bill is so complicated that there is a danger that Parliament will pass it through on the nod; but it is a fundamentally insufficient measure, which needs to be either withdrawn or drastically re-written in committee.

JUGOSLAVIA

Marshal Tito's Spring-Cleaning

At meetings all over Jugoslavia an admonitory letter from the communist central committee has sparked off a grand inquest into the "serious negative manifestations" that have been appearing in the management of the country's affairs. It appears that the success of the experiment of decentralising the economy, to which the Jugoslav communists attach great importance, is jeopardised by the tendency of local bosses to kick up their heels once they have shuffled off Belgrade's leading-strings. Similar complaints have been heard before: they are the growing pains of the Jugoslav experiment, but not necessarily portents of its failure. To some extent they justify Mr Djilas's strictures about the "new class," and his prophecy that decentralisation will enrich not the workers but the bureaucrats.

Yet the Jugoslav leaders are clearly making a determined effort to cut the local bosses and the ostentatious technocrats down to size. They are stimulated, no doubt, by rumbles of discontent among the workers: by tomorrow's federal elections which are intended to give the people the illusion if not the substance of power; and, above all, by next month's party congress at which the real machinery of power will be overhauled.

The congress will be the first since the sixth congress in November, 1952, when Marshal Tito announced that in future the party must endeavour to lead the country by persuasion rather than by intimidation. This novel idea has not developed into a tendency to let the party wither away (as some Jugoslav theoreticians have said it eventually will), but it has helped to upset the morale of many party members who are reproached for their opportunism, lax discipline, irresponsibility and neglect of party work. This is a serious matter for the party leaders in Belgrade, who can only continue the process of relaxing central state control if the party provides a firm foundation of power for their regime throughout the country. There will no doubt be some plain speaking at the congress, but its lengthy programme, published last week, does not seem to provide any new solutions for the paradoxes of Titoism.

SOUTH AFRICA

Election Tactics

The stakes in the South African election are small; the campaign that began last week is concerned only with the wresting of marginal points by one party from the other. But the moral importance of small gains is not inconsiderable. It is almost inconceivable that the United Party should win; but it is not unimportant that it should gain a larger proportion of the total poll, and thus be able to claim that even more than in the previous parliament it represents the majority of white voters even though it can only win a minority of the seats. The nationalists, with no very convincing defence of their juggling of boundaries and sizes of constituency, are the more anxious to win an extra seat or two, in order to be able to claim that they are returned with a stronger mandate for their post-Tomlinson policy of segregation "wherever practicable and desirable": they will lose face if the loss of both votes and seats shows that their old supporters are suffering from doubt—and that, in the great battle in the schools for the allegiance of the rising generation, Afrikanerdom is not bringing in the electoral bacon.

The policies which the parties are placing before the electorate are, therefore, less important than electoral tactics. The United Party must as usual protest that it will uphold segregation and white supremacy, while reversing the fatal policy of driving the majority of black and Coloured helots to desperation; the Nationalists must pitch their ideal of a republic well in the future, lest a sharp, if small, electoral setback should seem a rebuff to their cherished long-term policy. In terms of policy, indeed, the Nationalists are on the defensive; but tactically they have the initiative so far. The decision to give Dr Verwoerd power to ban the African National Congress in the reserves is designed to bring the racial problem successfully back into the centre of the arena. If the Congress reacts by calling strikes and demonstrations in the towns under the white electors' noses it will have risen to the occasion in a manner deserving well of Dr Verwoerd. A little African obstreperousness is the Nationalists' unfailing answer to the United Party argument that "you are driving them too far"; it would be optimistic to expect the average white South African, obsessed by the growing crime wave and drenched in propaganda, coolly to see through it. Yet there are indications that some will not be diverted from their dissatisfaction with the present government on other counts.

DEFENCE

Mr Sandys Mends Some Fences

Mr Sandys's current visits to Rome and Bonn are a welcome demonstration of awareness that Britain's defence partnership with Europe badly needs repair. For a long time he seemed to turn a pretty blind eye to the division between Britain and the continental members of Nato which, quite plainly to other onlookers, followed the publication of his first defence white paper in 1956 and its results. The reductions in Rhine army have annoyed the continental allies. Britain's private sharing of secrets with the United States has inevitably meant a certain estrangement from them. The recent arms agreement between France, west Germany and Italy was a disquieting sign that in defence, as in politics, some of the continental nations are in reaction, developing an inner partnership which excludes the Anglo-Saxon powers. A personal effort by Mr Sandys to strengthen the fraying ties between his ministry and its counterparts was badly needed.

The trip to Bonn, however, may not do much to revive flagging German orders for arms in Britain. Herr Strauss

Mariposa · Monterey

Matson Lines THE OCEANIC STEAMSHIP COMPANY

120/121 Pall Mall, London, S.W.1. TRAfalgar 4932-3

has just returned from a trip to the United States. His experiences confirmed the simple economic fact that the scale and variety of America's production and its willingness to provide financial and technical aid make it the most economic supplier of most sorts of arms for Germany. In a press conference after his return, Herr Strauss did mention one European aircraft as being of interest to the Luftwaffe—the French "Mirage." But the French, too, may well be disappointed at the scale of actual German orders.

America has now offered the medium-range "Matador" missiles to the Bundeswehr for training purposes. They would have conventional warheads; Herr Strauss emphasised that any decision on the arming of German forces with atomic weapons would have to be taken by Nato. The cost of the missiles, however, implies an atomic warhead if the weapon is to be used in war; and the German opposition fairly argues that the coming of the Matador would prejudice any discussions on nuclear disengagement in Central Europe. The Matador overshadows the debate in the Bundestag on foreign policy which is taking place this week.

OVERTIME

Towards a Shorter Week?

In face of the employers' rejection of their claim for a 40-hour week, the Confederation of Shipbuilding and Engineering Unions decided last week to seek a more gradual reduction in working hours for the three million workers it represents. The original claim received little sympathy from employers, who saw it merely as a bare-faced attempt by which the unions hoped to get round the year's wage standstill that they had agreed to last May: the workers were not going to get a general rise, but just a rise for the last few hours they worked, which would amount to the same thing. But the implications of the present and more moderate claim, made at a time when small pockets of unemployment are beginning to appear in engineering as elsewhere, are interesting.

Although nobody can confidently forecast what will be the outlook on the wages front when this year's engineering bargaining begins in May, it is at least possible that the 1958 pattern will be for employers to look around for some concessions, but not on the 1957 scale. If the American recession deepens, there may be a growing feeling among employers that to shorten the working week this summer would not immediately be too costly. Where it would be costly, however, would be when industrial expansion starts again. In Britain, as opposed to Germany, all theoretical reductions in hours during the postwar boom have been taken out in more hours worked at overtime rates; this has led to a growing margin of high cost output which is one of the banes of British industry. Many employers have already found that the slight fall in activity in the last few months has led to a disproportionate fall in wage costs per unit of output; when re-expansion starts, there will presumably be a disproportionate rise in those costs. (Overhead costs, of course, move the opposite way.)

Would one possible way out of this dilemma be to effect a gentler graduation of overtime rates: only time and a fifth for the first half hour, time and two-fifths for the second half hour and so on? That might lessen the workers' present incentive to spin a job out from normal working time to overtime. Obviously such a graduation could only be brought into effect at a time when the obligatory "working week" was being reduced, so that its introduction would bring the workers rather more money, not less. The confederation's claim last week seems to make this an appropriate moment to proffer this suggestion.

EDUCATION

9½d from each Pound

The Chancellor of the Exchequer will have to find just over £24 million more for education in 1958-59, and local authorities about £19½ million more out of rates. The total bill for education, both central and local, will rise, according to the education estimates issued this week, by nearly 8 per cent: from £569.5 million in last year's estimates to £613.2 million in this year's. (These figures exclude universities and Scottish education, which amount to another £49 million and £53 million respectively.)

This is an increase of over 40 per cent in four years. It is, moreover, only the beginning of a further period of increase, since this year the "bulge" of wartime births is entering the secondary system; as the memorandum accompanying the estimates shows, the average cost of educating a secondary school pupil per year is more than half as much again as that of educating a primary school pupil—£78 a year in 1958-59 as against £49. The children who did the 11-plus this year, moreover, will probably stay longer at school; and, in addition to the raising of the leaving age, other educational improvements, including the expansion of the universities, are on the way. It looks as if the educational bill will be—as it ought to be—a steadily rising proportion of the national income in years ahead. In 1958-59 it will be nearly four per cent of gross national product, or ninepence ha'penny from each pound.

EDUCATION COSTS
(£ million)

	1943-49	1957-58	1958-59 Estimates
Expenditure by LEAs from Ministry of Education grants and rates :—			
Primary schools	77·4	178·0	191·3
Secondary schools	53·9	150·0	165·6
Special schools	2·6	9·2	10·2
Further education	11·4	39·1	44·2
Meals, milk, health	28·6	62·0	64·1
Loan charges	7·0	33·1	47·0
Aids to pupils	6·6	23·0	27·6
Other expenditure*	30·6	50·3	54·6
Direct expenditure by Ministry of Education :—			
Net amount	27·6	19·8	18·6
Total expenditure by Ministry and LEAs	245·7	559·5	613·2

* Administration, teachers' training, inspection, etc.

Only a proportion of the increased cost, of course, represents a growth or improvement in the educational service. The cost of teachers' salaries, for example, which accounts for nearly half of the total cost of education, is expected to rise by £12 million between 1957-58 and 1958-59, but of this, £5.4 million is due to higher pay and prices, while £6.6 million is for more teachers. The departure of the bulge from the primary system should lead to smaller classes and better teaching, not to proportionate economies; its arrival in the secondary system will require more teachers and classrooms.

PAKISTAN

Sallies and Allies

BRITAIN and America have not been as alarmed as some Pakistanis hoped by Malik Firoz Khan Noon's speech on the eve of the Seato meeting in Manila. Some of the prime minister's wilder remarks can doubtless be ascribed simply to the fact that he was replying to a parliamentary debate on Kashmir, and was understandably anxious to rebut charges of failure to secure his country's national aspirations. Allies are obvious Aunt Sallies on such occasions, as witness the anti-American diatribes in Britain after Suez. But it seems that Mr Noon really believed that Pakistan's allies could be made to feel guilty about Kashmir, and could be frightened by his threat to turn to Russia.

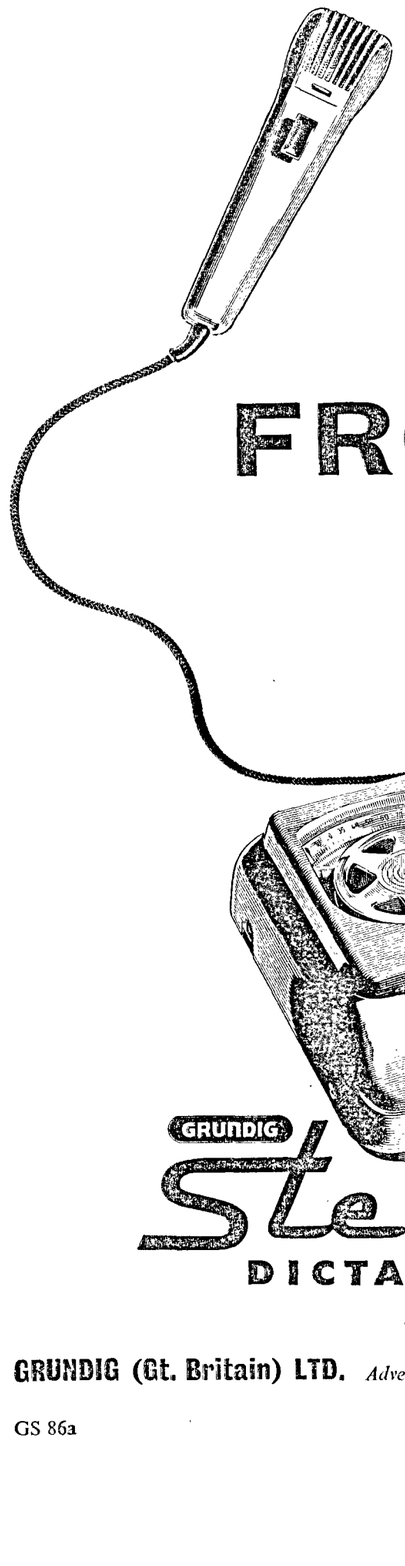
The actual effects of his speech have been as different as they were predictable. Moscow is naturally delighted. The India press has hailed, with a suicidal exultation worthy of the Gadarene swine, this confirmation of its belief that Pakistan's only reason for joining the Baghdad and Manila alliances was to improve its chances of breaking India's hold on Kashmir. In the West, similar suspicions have been exacerbated. Inevitably, it is recalled how Mr Noon declared in 1946 that the Indian Muslims would turn to Russia if Britain would not give them Pakistan; and it is asked, just as inevitably, what sort of partner in joint defence against the communist threat is this?

There is naught for India's comfort in this fresh reminder of the poisonous effect of the Kashmir problem on Pakistani politics. India's most essential interest is a friendly and stable Pakistan. It cannot secure that goal as long as it denies the Kashmiris self-determination and plays with Sheikh Abdullah the losing game that Britain used to play with Gandhi. But at present it is evidently Pakistan that most urgently needs to see its own way clearly. Do Pakistanis really regard their allies, and their fellow members of the Commonwealth, as being bound to side wholly with them over Kashmir, instead of judging the problem on its merits? (Do they, incidentally, see that this ill-founded reasoning would oblige Pakistan to side with its Seato ally, France, over Algeria?) If so, it is high time they faced up to two facts: first, that no such obligations are involved either in Commonwealth membership or in membership of defensive alliances; second, that they are free whenever they please to throw away their membership of free associations of states which they, like others, entered voluntarily.

OFFICE DISPERSAL

Evacuation to the Clerks

NEITHER the efforts of the London County Council to inveigle offices out of central London nor the eager efforts of the new towns to attract them have borne much fruit. Industry has gone where the workers can be housed; but commercial firms have not chased out to where the shorthand typists live. They have cited all the possible losses in prestige and efficiency that might ensue. Yet a most convincing case for this evacuation to the clerks was made at the Housing Centre last week by the very people who have firsthand experience—firms that have already evacuated office staffs to Hemel Hempstead, Weybridge, Dorking, Reigate, Caterham and Surbiton. The initiative for the conference came from the managing director of a ventilation company, which moved its offices to Surbiton during the war. He had recruited in support representatives of more than half-a-dozen firms, who had also moved and had similar experiences—two insurance offices, a contracting organisation, the office departments of a large canning concern, and so on. To complete the picture, evidence was also given by two firms that wished to return to London.



The unanimity of most of the firms on the advantages of evacuation was impressive: lower office rents, better conditions of work, shorter travel, better health and timekeeping—and, above all, easier recruitment with even a waiting list of applicants and a wider choice of better qualified clerical staff. Most firms kept a prestige address in London. Some had evacuated only departments with routine work; others were more thoroughgoing. Some disadvantages were admitted: more travelling by executives during instead of outside office hours, more files, more difficulty in training junior executive staff. But these were considered much less significant than the advantages. The two dissident firms admitted that if their original choice of office on evacuation had been more fortunate they might have wished to stay. One of them—a firm of consulting engineers—wished to be near to possible clients. But these particular arguments do not invalidate the general case that, given the right kind of office organisation and a suitable location, many offices can make the move with benefit.

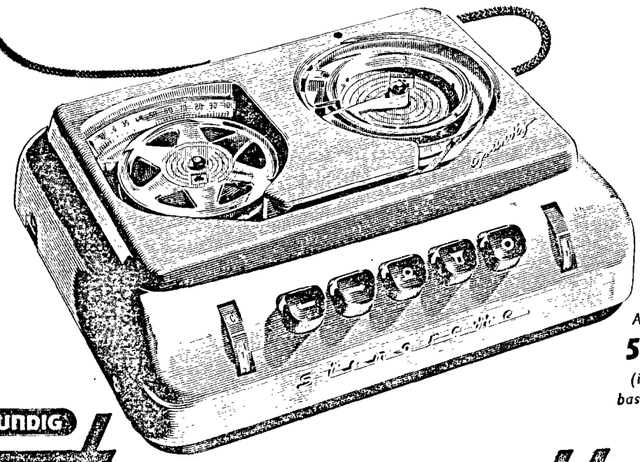
THE LIMITS OF FORBEARANCE



¶ We entirely acquiesce in the doctrine that powerful States in dealing with feeble ones ought to push generosity and forbearance to the utmost limits compatible with dignity and justice. Strength owes a certain respect to weakness, so long at least as weakness is decent in behaviour and not arrogant in language. Nay, more; we fully admit that great nations may in some cases tolerate incivilities from small ones, which prudence and self-respect would forbid them to pass over in the case of equals. But there are bounds where this magnanimous endurance degenerates into maudlin and unworthy tenderness, and where forbearance towards foreign Sovereigns becomes injustice to our own people. *Impertinence* may be put up with and forgiven—*wrong*, never. And when a Government, which has long been the disgrace of Europe and the opprobrium even of despotic rulers, at last by some flagrant misbehaviour puts itself in the power of the civilised and the free; when a Government which, by perpetrating *its iniquities* under cover of the law of nations, has hitherto defied interference, at last in the insanity of its presumption violates that law and so brings itself within the reach of punishment and vengeance; . . . then surely it would be weak and culpable not to seize the golden opportunity, and exact the severest retribution which equity and precedent will permit. The King of Naples, who has *so long sinned within* the law, has at length, in the case of the English engineers seized on board the Cagliari, gone *beyond* the law, and laid himself open to the heaviest penalties which it may please us to inflict. Happily, too, it is a case in which the facts are undisputed and the law notorious and clear.

TAPE IT FROM HERE

The Stenorette is produced by the world's largest manufacturers of tape recording instruments. Designed to meet the pace of modern business, it has all the features anyone could want in a dictating machine *at a fraction of the cost.*

The Stenorette takes 25 minutes' dictation for each spool of tape. It has instantaneous playback, automatic erase and back-space facilities, will record conferences, memos or incoming telephone calls and provide clear, balanced reproduction for transcription.

Average cost **52 gns** *(including the basic accessories)*

LETTERS

The Bus Dispute

SIR—Since the beginning of this year *The Economist's* comments on the progress of the London busmen's claim for an increase in wages have repeated two particular contentions: first, that London Transport "may be more willing to be jostled into making some wage increase than other nationalised employers," whereas they should have said, in advance of negotiation, that they rejected the claim, and later that they would not accept the Industrial Court's award; second, that they should drop their "nonsense economics," with a "superfluity of buses" running at a loss, and should run only those buses which are profitable.

The Executive have not thought it right to enter into controversy while the claim was under negotiation or before the Court, but now that the award has been published, your readers are entitled to another point of view.

As to the first criticism, opinions as to how a case ought to be handled will differ, but the progress of the negotiations and the hearing before the Industrial Court are on the record in the daily press. The fact is that at no time since the claim was made last October has London Transport made any offer at all. To have rejected negotiations or to have stated in advance that the award of the Industrial Court would not be accepted appears to the Executive to be provocative, and even irresponsible.

On the second criticism there is no room for difference of opinion, because here *The Economist* seems, for once, to be disregarding facts. The basic fact here is that Parliament has laid an obligation on London Transport (through the British Transport Commission) by statute "to provide or secure the provision of an adequate and properly co-ordinated system of passenger transport for the London passenger transport area, due regard being had to efficiency, economy, and safety of operation and to the needs of the public, agriculture, commerce, and industry." (Transport Act, 1953, section 25.) Parliament did not define "adequacy"; it is left to London Transport. Let me say that far from being what you call "something very cosy," it is the exact reverse. Patterns of travel alter as factories and offices are moved and new houses and towns are built, and the schedules must take account of all this, based on long operating experience and commercial judgment.

The problem of putting on the right service exists not because London Transport "regards" it as an obligation (to use your word), but because the obligation is statutory: it means that public transport must be provided, so far as is practicable, on a basis which is, overall, economical and efficient, at the times and places where most people need to use it; and this means provision for peak-hour business and industrial traffic which taken by themselves are often most unprofitable. It is not the half-empty bus in slack hours that loses money—marginally it is earning some; it is the heavily-loaded bus that gets in only one journey in the morning and one in the evening that is unprofitable.

As a whole, the "red" London buses operate at a surplus, not a deficit, and the surplus is used, as it has been since the statutory "Common Fund" of the Underground Group of Companies began in 1915, to offset the unavoidable deficit on the operation of the Underground railways: There would be no tubes in London without it; and no road transport system could by itself carry the great load.

The obligation imposed on London Transport to provide adequate services was thoroughly thrashed out by the Chambers Committee of Inquiry, which reported in 1955. They reported that London Transport's decisions about provision of unremunerative services were reasonable; and they specially dealt with the suggestion that *The Economist* has been pressing in the last few weeks as a cure for the whole difficulty. The Report says (paragraph 403): "The sight of partly filled buses in central London during the off-peak periods between the morning and evening rush periods is not necessarily (as is commonly supposed) a sign of inefficiency. As those buses and crews have to be provided for the morning and evening peak periods it is more profitable to employ them for the relatively light off-peak traffics than to keep them idle." That is the answer to your question of January 11th about cutting the number of daytime buses by half; it would barely save any expenditure beyond the cost of fuel and tyres, and it would throw away revenue. It would also cause a lot of people to abandon public transport altogether.—Yours faithfully,

London Transport R. M. ROBBINS

The Free Trade Area

SIR—If the French demand for a share in the benefits of imperial preference is simply regarded as part of a deal between Britain and the other potential members of a European free trade area, it is undoubtedly open to Mr Hay's objection that the Commonwealth countries are independent in their trade policies and need not accept such a bargain. But this does mean that the idea of a broad preference area including most of Europe and those parts of the Commonwealth willing to participate in such a scheme is either undesirable or unworkable. At the Gatt meeting last October, a number of Commonwealth countries plainly showed their alarm at the prospective effects of the common market duty on their export trade, while the common market countries did not hold out any hope of effective relief. A scheme which would ensure Commonwealth countries of a share in the European market on terms equal to those of the associated overseas territories would surely be of interest to all or some of them—particularly in view of the fact that the essential *quid pro quo* in the form of a partial extension of imperial preference would be supplied not by them but by British industry.

Before rejecting such an arrangement out of hand, would it not be wise to face the fact that occasional rumblings about the serious consequences of a breakdown in the free trade area negotiations will not do the trick and that concessions of real substance will be required, if this result is to be prevented? It would be a mistake to think that French opposition can be overcome by public relations experts. France went into the common market with the greatest misgivings and insisted at every step on special treatment and more or less valuable consideration. In particular, it was plainly and justly afraid of German industrial superiority and for this reason the German government showed itself most patient and conciliatory, because it was fully aware of the tremendous long-term benefits of the scheme for Germany. In opposing the British free trade area plan, France is motivated by the genuine fear that it would be dominated by Germany and Britain—and, perhaps, by second thoughts about the common market treaty itself. The proposal to broaden the area of co-operation by giving the European member countries of the "Free Trade" Area some share in imperial preference in exchange for Commonwealth exports on preferential terms would have a number of intrinsic advantages, apart from being a device for breaking a deadlock which can only do harm to Britain and to Europe as a whole.

Such a proposal would, of course, be incompatible with Gatt—but surely the same applies to the common market, the British plan for an *industrial* free trade area and most other worth-while schemes of international economic co-operation?—Yours faithfully,

Thames Ditton E. STRAUSS

The Universities

SIR—Your article on the type of education that should be provided by the universities for a high proportion of the additional 50,000 undergraduates whom they will accommodate in 1970 is most timely. For some years past I have been interested in the comments made by industrial leaders on the virtues and failings of the men and women whom industry recruits from the universities and from the public schools and the grammar schools and, as the headmaster of a school that sends about half of its boys to universities, I have watched with concern a serious educational problem developing.

In order to qualify for admission to a university many boys in public and grammar schools are compelled to select their sixth form course and embark upon a restricted course of specialised study a year before they are really mature enough to do so. This early specialisation, combined with the present method of university selection which is based primarily on high marks in two or three closely related advanced level subjects (or on high marks in a scholarship or some other form of competitive entrance examination on a similar curriculum), has forced the schools to follow a curriculum which is becoming increasingly suspect by those who are concerned with the direct entry of schoolboys to industry and commerce. This criticism is no doubt partly prompted by the educational deficiencies of many of the graduates with low-class honours degrees entering industry and commerce, who would have been better prepared by following a broader curriculum at the university. If the universities will accept the views put forward in your article, it may help to relieve the present tension in our sixth forms and to establish a satisfactory compromise between the demands of university entrance requirements and the real educational needs of boys in their last two or three years at school. One sometimes feels that those in industry have a better understanding of these deeper needs than those concerned with university selection. I hope that my many good friends in the university on whose doorstep I have lived for so long will not regard this as an unkind parting shot, but I write because I know that my feelings are shared by a good many other headmasters.—Yours faithfully, W. G. HUMPHREY

Leys School, Cambridge

★

SIR—Your article on university expansion invites two comments. Firstly, the need for reform is much less than the figures of prospective expansion might imply: although few applicants "of academic quality" seem now to be refused entrance to any university, the increase in the school population and greater success in getting promising pupils into the sixth form could still provide many more.

Secondly, an advocate of more pass degrees ought surely not to forget all about the Scottish universities, which are not simply Redbricks founded, by some historical fluke, four hundred years early, but have their own, more democratic, tradition, and the kind of emphasis you desire. The proportion of Scots receiving university education is already as high as that hoped for in Great Britain as a result of the new building programme, and a little more than two-thirds of them take an ordinary degree in a minimum of seven subjects. (I personally think it would be an improvement to choose these subjects from related fields instead of insisting on a wide spread: the result would surely be a very useful degree.) These students are certainly not left "to shift as best they can": their courses are designed for their needs and the lectures are almost always given by the head of the department. The Scottish universities and their ordinary degrees seem to meet your demands very well: how did you manage to forget them?—Yours faithfully,

BRIAN J. LOASBY

University of Aberdeen

★

SIR—Your article on University Expansion overlooks one important point. The older universities' teaching method is to provide full facilities for obtaining knowledge (lectures, libraries and laboratories) and for answering the students' questions (supervisions and tutorials); but there is very litle direct teaching or compulsion to work. This is clearly a good system for the honours student as it does not tie him to too rigid a course of study but allows him to pursue those aspects of his subject which interest him most.

An influx of "sow's ears" would make more direct teaching and supervision necessary, firstly because the ordinary degree student needs to be "taught" rather than "left to learn," and secondly because there would almost certainly be an increase in the striving after letters rather than in the striving after knowledge; a tendency which is already too widespread. This very necessity for the ordinary degree student would, if inflicted upon those "of academic quality," deprive them of the benefits they derive by fending for themselves in the academic sphere.

To make each university comprehensive, running courses for different grades of students, is unnecessary and would certainly be expensive. Clearly a unified approach is necessary from all the universities and technical colleges so that each provides a different type of course aimed at a different type of student.—Yours faithfully,

Pembroke College, Cambridge P. G. STOKES

The Budget

SIR—Allow me to disagree entirely with your suggestions to the Chancellor. Long ago Adam Smith laid down the principles of taxation in his famous first canon: "The subjects of every State should contribute in proportion to their respective abilities." No tax complies with this rule except a graduated income tax; hence a finance minister should rely for his revenue mainly on an income tax.

It follows that all persons above the poverty line should pay the tax, small incomes at a low rate in the pound, large incomes at a high rate. Add allowances for marriage and dependants, and possibly for age. Every able-bodied citizen should make a *direct* contribution to the cost of national defence, since without it he might have no income. No householder is excused rates because he has a small house; he does not even pay a lower rate in the pound.

Purchase tax is a silly device, which could only be justified in time of war, except, perhaps, on obvious luxuries. Income tax rates have been high because so much income, and so many persons, escape tax. Indirect remuneration, such as board and lodging (which may be worth £5 a week) should be included in assessments. The present exemptions are a reason against "differentiation"; nearly all earners get supplementaries of different kinds, which escape assessment, e.g. free meals, cars, petrol, gratuities.

Moreover, wages and salaries have been raised repeatedly to make up for the rise in the cost of living, and the higher income tax, while the income from savings remains at the prewar figures. I maintain that a net dividend of one per cent in 1914 had as much buying power as a net dividend of five per cent now.

If the Chancellor wants fresh sources of revenue, let him revise the licence duties upward, e.g. dogs, now 7s. 6d., guns, now 10s., and tobacconists, now 5s. 3d.! Then motor lorries should be taxed on a graduated scale according to weight; nearly all road wear is due to these heavy vehicles.—Yours faithfully,

Cambridge J. E. ALLEN

Civil Service History

SIR—Your reviewer's doubts, expressed in your issue of March 1st, about the justification for the existence of the New Whitehall series of books on the departments of state brings its parents to its defence. As the books are written by civil servants they cannot pretend to discuss highly political matters, although as Lord Strang pointed out "the steamroller of official conformity" has not obliterated all controversial issues. This limitation on the serving or recently retired civil servant was apparent when the series was initiated, and your reviewer has a perfectly fair point when he underlines it.

However, it was also apparent that the aim of the series—to print accurate and full accounts of the present work and methods of departments—stood no practical hope of being achieved unless the books were written inside the civil service. Books of this kind are part of the documentation of democracy, and provide the only reliable basis for the kind of administrative criticism which your critic rightly thinks desirable. They are in no sense intended as a substitute for it.

Where your reviewer perhaps goes wrong is in thinking that the information they contain is readily available elsewhere. It was just because no such range of books was available for those interested in public administration that the series was undertaken. The simplest proof lies in its sales. We have already had to produce two substantial printings of the first book, and three of the second, and the total print of five books so far published is about 22,500 copies.—Yours faithfully, CHARLES FURTH

George Allen and Unwin

BOOKS

Prolegomena to Churchill

A History of the English-Speaking Peoples: *Vol. IV: The Great Democracies*

By Winston S. Churchill.
Cassell. 322 pages. 30s.

Soldier, Novelist, War Correspondent, Politician, Minister, Lord of Admiralty, Administrator, Journalist, Orator, Author, Historian, Painter; this latter-day admirable Crichton is more versatile but less of a dilettante than any other portent in our history.

So wrote the first Lord Birkenhead, thirty years ago, of Winston Churchill; it is a good enough description of the author of the four volumes of this remarkable narration. Lord Birkenhead went on to deliver a hastier and less well-aimed judgment: "It is however as an Author that he must take his stand before posterity." But the famous evening of a crowded life had still to come: the country, and the world, had still to meet the great captain-general of the war years and afterwards, in Opposition and in office, the most imaginative and magnanimous of Tory leaders.

The truth is that the distinction cannot be drawn between Churchill, the writer, and Churchill, the doer. This so-called history of the English-speaking peoples is really autobiography. Here, in these four volumes, is the stuff of his own statesmanship: here are the men, the events, the great issues, the conflicts and the challenges and the aspirations that nourished him, through fortune and misfortune, until his hour struck on that May day in 1940. This is the prolegomena to his own career; the tale ends at the start of the century just when, in his late twenties, he was himself poised to take, or tumble over, the first fences in his unique point-to-point to greatness.

It is absurd to criticise Sir Winston Churchill, as some have done, for not writing a different sort of history. This is his history, and it is remarkably revealing. Earlier political leaders, like Peel and Gladstone, started with the classics and mathematics, and went on to economics; newer ones have begun with economics or politics and gone on, far too few of them, to science. Sir Winston had, and has, none of these disciplines; he began and he ends with history, his sort of history, and he has divided his life between making it and writing it. Here in these volumes, as in all the rest that he has written, is what makes him tick.

Much is left out, most of all, except for swift glimpses, the people themselves, their livelihood, their techniques, their education and culture, and their ideas. Sir Winston's agenda is different. "We must now return," he announces at one point, "across the Atlantic from the dazzling prospects that lay before the United States [at the end of the nineteenth century] to the English party scene at Westminster." These are the two real strands in his reflections: English politics and the growth of America. They come together, prophetically, only at the end, when Sir Winston speaks of the "closer concert between the two peoples in facing the problems of the world," and of his hopes for "ultimate union."

Readers will not go to this book, or its predecessors, for new or three-dimensional history. But they will go to this, as to them, for a terse and vivid tale, lit up by lightning flashes of wisdom, a practical sagacity and a full humour. Sir Winston no longer writes, nor indeed does he speak now, in rolling rounded periods. Here, in the final volume, is a lean dramatic *précis* of famous events, set out in spare, sometimes almost staccato, sentences, decorated only by his own apt adjectives and clinching phrases: at its best, great journalism on the scale of literature. Always he is writing about what he knows or the sort of things he has done, whether in peacetime politics or in waging wars. Sometimes, perhaps, there is a direct echo of his own personal experience: Palmerston, who "seemed to his fellow countrymen the embodiment of their own healthy hopes"; Gladstone, whom, although he was "admired as an administrator and a orator, his contemporaries considered wanting in judgment and principle"; Lincoln, whose "political foes, gazing upon him, did not know vigour when they saw it."

The keystone of the book is America —"the great Republic." The cradling of American democracy in the valley of the Mississippi, the cleavage of East and West and of North and South, the march across the continent, the fight for the Union: all this is brilliantly, shrewdly, set out; it ranks with, if it cannot equal, the great Elizabethan passages in his second volume. And, although there are no portraits in this fourth volume quite to match his roll of kings in the first, it is perhaps in the American chapters—Lee and Jackson certainly, though not, oddly, Lincoln—that he comes nearest.

"It was," Sir Winston says of North and South in the Civil War, "the contrast between the nineteenth century and the seventeenth century"; and the Civil War itself was "the noblest and least avoidable of all the great mass conflicts of which until then there was record." He is on the side of the generals:

> If these two Presidents had let McLellan and Lee fight the quarrel out between them as they thought best, the end would have been the same, but the war would have been less muddled, much shorter and less bloody.

All the wars, of course, are bravely and expertly retold—except, perhaps, the Crimean War, in which "neither side was inspired by large strategic views." But this is not the book of a warmonger. Its judgments are tolerant, humane, magnanimous; Sir Winston's aim was, and is, a proper peace. In early South Africa it was British methods of government that "created among the Boers a more bitter antagonism than in any other imperial country except Ireland." In India, though the Mutiny was not at all a patriotic struggle for freedom, the British must share the blame for it; "terrible atrocities were committed by both sides." Of slavery in the United States he says, again prophetically, that "the Black Men presented a problem, moral, social, economic and political, the like of which had never before been known."

For all the knowledge he has got of new thoughts and new researches, Sir Winston's history, and his verdicts, stay stoutly old-fashioned. He makes no bones about the "intense, brilliant, and unscrupulous diplomatic activity of Bismarck"; General Gordon he calls "as gallant and noble as one of King Arthur's Knights." History is an affair of men, good, bad or indifferent. There is no philosophy in all this, just excitement, sometimes glad and sometimes apocalyptic, in the march of events as they happened, and the belief that experience can teach the wise. Sir Winston writes history as he has lived his life.

At the end of his story "nearly a hundred years of peace and progress had carried Britain to the leadership of the world." But the threshold had been reached of a new and more barbaric age of strife, which is not yet over; and the leadership has gone. Sir Winston, who has seen it all so far, is not downcast. "The future is unknowable, but the past should give us hope."

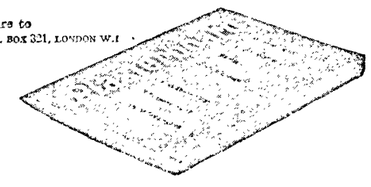
Paying for Education

The Cost of Education

By John Vaizey.
Allen and Unwin. 256 pages. 30s.

The research which Mr Vaizey has undertaken into the real costs of education, and in particular its relation to the national income will, it seems safe to say, be constantly used and quoted in the educational controversies that lie ahead. Too little has, in fact, been known about the cost of education in the past, for the estimates cover only a part of it; the system of private education lies outside state provision for one thing, and, for another, the actual definition of what is an educational service is not an easy one. Mr Vaizey has adopted his own definitions of what education is, as well as relying upon a variety of sources for estimating its cost, ranging from the relatively exact figures of the estimates for primary and secondary state education to a good deal of skilled inference for the costs of private and specialised education. The results of his researches, when put together, are illuminating and in some respects spectacular.

Plasterboard and Premiums



Ask your Insurance Company to quote the premium they will charge if your building is lined with plasterboard, and for comparison—the premium if you decided to use a combustible lining material.

Your premium should be less if you use plasterboard. Plain plasterboard only costs about 4d. per sq. ft. It is inexpensive as well as attracting a low fire insurance premium. Readily available throughout the country, it is strong, easy to handle and erect, and very easily decorated.

SAFE, LOW COST THERMAL INSULATION
Insulating Gypsum Plasterboard provides a high degree of thermal insulation without constituting a fire hazard. At approximately 5d. per sq. ft. for fire protection AND thermal insulation it saves money. Insulating Gypsum Plasterboard conforms to B.S.476, Class I, *and does not require any additional treatment involving further cost.*

It's the core that counts . . .
THE INCOMBUSTIBLE GYPSUM CORE OF PLASTERBOARD

FORD -Nationally Grand!

FORD MOTORING, even in the luxury Zodiac class, is supremely economical. You save more from start to finish with a Ford than with any other car. Let's look at the facts. PRICE—Ford cars with their lower prices give greater value for money. INSURANCE—there are specially low rates for Ford owners. RUNNING COSTS—Ford Service, with its national Dealer network, has low, *fixed* prices. RESALE—a Ford fetches a higher price on resale or trade-in. And have you noticed that all Ford cars are continually enjoying improvements (the fine new seating in the Consul, Zephyr and Zodiac is an outstanding example)?
Ask any Ford Dealer today for a free demonstration of the Ford of your choice—they're all winners!

THE ZODIAC
High performance six-seater with every luxury . . . power top . . . air conditioning . . . a fine car.

CONVERTIBLES—
available also for Consul and Zephyr models.

OVERDRIVE—
available on Zodiac and Zephyr saloons, convertibles and estate cars.

FORD fine cars-
and World-wide Ford Service, too!

Ford Motor Company Limited • Dagenham

Mr Vaizey calculates that, if social expenditure like school meals is excluded, expenditure on education in 1955 was a smaller proportion of the national income than in 1931-35. This is another way of saying that only these social and health services raise the real cost of the education budget above its prewar level. Inevitably education, as a fixed overhead, becomes a larger item in national outlay at a time of shrinking economic activity than in boom; even so this may be called a "melancholy" conclusion considering the big expansion of educational services, primary, secondary and further, public and private, which have been undertaken at a time when the bulge of wartime births is passing through the educational system. Mr Vaizey further calculates that by 1968 current expenditure will increase by about 18 per cent (in terms of 1955 prices) while capital expenditure will be halved; and this might mean that whereas the cost of education will rise by another 10-12 per cent, national income may well rise by 30 per cent—from which it would follow that education will become a still smaller part of national income in the years ahead. On Mr Vaizey's assumptions, including both capital expenditure and social services only, 2.7 per cent of the national income was spent on education in 1930 and 3.4 per cent in 1955. Of the total expenditure, in 1920—to go back farther still—meals and health accounted for only 2.4 per cent, but in 1955, 12.7 per cent. The proportion taken by salaries of teachers fell from 69 per cent in 1920 to 52 per cent in 1955.

There have, of course, been many changes over the years in the spread of educational expenditure. Yet the great increase in secondary schooling appears in Mr Vaizey's figures only as a rise from 17.2 per cent of the total in 1920 to 22.3 per cent in 1955, and in universities as a rise from 5.2 to 9.2 per cent. The source of educational spending has also altered; but, again, the proportion put up by the local authorities has fallen only from 42 to 36 per cent between 1920 and 1955, while that of the central government has risen only from 50 to 58 per cent; private spending continues to provide nearly the same proportion of educational revenue as in 1920—it has fallen from 8 to 6 per cent. In 1955 expenditure on private education reached £30.9 million, according to Mr Vaizey's calculations, compared with £8.4 million in 1920. He makes the valuable point, however, that private education carries a subsidy element; the prices charged for it do not represent the full cost of providing the service, both because of the buying of places by local authorities in independent schools and because of the element of subsidy in "privately purchased" higher education. Taking the "middle social classes" as a whole (the £500-£1999 income group), Mr Vaizey shows that they benefited by £30 million in terms of tax payments and educational benefits received, though the classes above this group paid out £85 million more than they received back. But even for the lower classes education is not "free." In tax they paid £155 million for benefits worth £209 million.

This book provides some fresh background for discussion of the major themes in educational policy today—the future of the £30 million "private sector," the great variations between localities, the prospects of further education, the absurdities of an actuarial scheme of teachers' pensions, and above all the question of what the nation ought to spend. Mr Vaizey, behind his rampart of figures, skilfully implies that we can spend much more. But there is no necessary relation between gross national product and educational outlay; and it is a demerit in a book that claims to be quite objective that it is somehow suggested that there is, and that, on the figures, educational spending is egregiously low. Cost does not measure quality or need so simply.

Greater Deterrent?

Defence in the Nuclear Age

By Stephen King-Hall.
Gollancz. 223 pages. 18s.

COMMANDER Sir Stephen King-Hall is not a conscientious objector. In some unimaginable Erewhonian world which had stopped short at TNT he would defend democracy rifle in hand—though with a far larger discharge of political warfare than Allied governments were prepared to direct at Hitler or Mussolini on his suggestion in former days. But nuclear warfare would, of course, destroy the very thing in whose defence nuclear armaments are being piled up, and, to such an aggressive believer in parliamentary democracy and western justice and culture this lunacy is intolerable. In this book he sets forth his plan for an even greater deterrent to Russian ambition: an almost totally disarmed Britain, which has broken up both Nato and the American alliance, simply waiting to be occupied by Russian forces in order to perform a trick of moral ju-jitsu which would not only save the world from becoming a radio-active charnel-house, but would probably bring the communist house of cards crashing round the ears of the Kremlin.

Trained to non-violent resistance (in three stages to be completed by 1968), a resolute people, led by its devoted MPs, newspaper editors and BBC governors, would flatly refuse, constituency by constituency, headline by headline, news bulletin by news bulletin, to do the invaders' will; would continue to govern itself in its own way, maintaining unbroken discipline and perfect dignity, accepting martyrdom as a battle-casualty, maintaining non-co-operation no matter how low the rations fell for the masses, or how skilled the torture of the individual, never ratting, never producing a quisling (even from King Street) . . . until the communist aggressors (even if they called themselves liberators) quitted, unable to look either the British or world opinion in the face. It would be tough; but large dollar loans would follow (and there would be a saving of £800 million or more on the defence budget); more than that, like a true deterrent, the prospect alone might deter.

It is not, of course, a fair criticism of Sir Stephen King-Hall's proposals to assert that it would be quite impossible to train the British people to total psychological warfare of this kind; his point is that *if* they could be so trained, non-violent resistance would be victorious, where nuclear "defence" is self-defeating. Logically it is similar to the point, made by defence ministers, that *if* the west maintains its nuclear deterrent with resolution and vigilance, the nuclear stalemate will go on "almost indefinitely" without war. Commander King-Hall thinks that an inherent instability in the system of deterrents may cause the Russians, or someone else, to miscalculate, overstep the mark, and incinerate both democracy and communism in the ensuing exchange of nuclear bombs; equally it is possible to ask if Sir Stephen's model of the non-violent deterrent covers all the eventualities.

In point of fact, Sir Stephen is far too good a student of strategy not to throw up, in the course of a book on the nuclear problem, some of the reasons why Britain is rather a poor subject for this kind of imperialistic passive aggression (as it might come to be called). Britain can be blockaded, for instance. Sir Stephen does not think that would work, because of world opinion; which means that he postulates that world opinion would be active and effective. But how long would it be active and effective when Europe was at Russia's mercy, and communism evidently the winning side in the abandoned areas beyond Europe? This idea, in fact, postulates that America would maintain the nuclear stalemate with its own bombs and ICBMs—though the loss of British bases might lead to the loss of so many more that America might be put at a tempting thermonuclear disadvantage which would again introduce a dangerous instability into the system—with the possibility of world holocaust. But, in any event, British non-violence (and the vast campaign of political warfare which Sir Stephen envisages but does not describe) would be unleashed against the people's democracies under the American nuclear umbrella. Sir Stephen is entitled to say that no plea of dishonesty can be pressed against this: his object is somehow to defend the western "idea" with the available resources but without blowing us all up. Yet the reader cannot help noticing that though stern moral principle must put backbone into the non-violent resisters, Sir Stephen does not plead strongly that America should join in this system of defence. Perhaps Sir Stephen realises that he who had all the bombs could later decide whether or not they had disciplinary value, used in moderation for police purposes, in a world state—just as he would decide at

leisure how much western culture should be left after a period of re-education. And he would write the history of the period for subsequent generations to read.

Unless the reaction to these lightly outlined possibilities is "they wouldn't have the diabolism to do it," it is hard to believe that Sir Stephen's scheme has been thought out to its conclusion. Yet he believes that the Russians wish to abolish the western "idea," which rivals theirs. Why to weaken ourselves and to strengthen them throughout the world should wean them of this ambition is hard to understand. Sir Stephen capably proves that the H-bomb abolishes war as mankind has known it, without as yet abolishing all the human institutions which might produce a war ending in nuclear suicide. But the fact remains that the nuclear deterrent has proved so far an effective defence of the west against communist attack. Admittedly, this leaves us with the problem of the "grey area," where the Russians may probe with superior conventional forces in the belief that the west will not be able to retaliate with the H-bomb. Sir Stephen assumes that they will so probe undeterred and further that no graduated retaliation, nuclear or conventional, would fend off disaster. But this is still an assumption—like his assumption that the west is moral enough to resist non-violently but not moral enough to pay for adequate shield forces. To those who try to pin down such assumptions Sir Stephen has his answer ready: they have not penetrated the "thought barrier" between the nuclear Blimps and the nuclear Gandhis. But the book is so stimulating that this claim to infallibility should not deter the critic; it is a book to be read carefully and refuted constructively.

Changing Land

Geography and Planning

T. W. Freeman.
Hutchinson University Library. 197 pages. 10s. 6d.

THIS realistic, terse little study of the relationship between geography, economics and change in both town and countryside should be the more useful to planners inasmuch as its main burden seems to be, first, that all pretentious planning is likely to be overwhelmed by irresistible forces now in motion; and, secondly, that all sound planning can be no more than the guidance of these forces into comely housing schemes, the conversion of existing structures and forms of social capital into new ones, and the wise control of land use.

Mr Freeman is no opponent of urban sprawl; he sees it as inevitable simply on the statistics of population, housing and slum clearance; he accepts the view of Messrs Best and Ward that the value of suburban horticulture offsets to a considerable extent the loss of farm output; and he accepts changes in the appearance of a countryside that is already completely artificial. He does not specifically discuss subtopia, but evidently hopes it may tone down, as so many raw Victorian suburbs have become gracious with the maturing of trees. It is sound sense; set against his hopes is the irretrievable ugliness of such a vast quantity of modern building. But unless planning is based firmly on the realities which he reviews, it cannot hope to make the best of what yet remains of space and aesthetic heritage in this small country.

A German Europe?

Common Sense About the Common Market: *Germany and Britain in Post-war Europe*

By E. Strauss.
Allen and Unwin. 168 pages. 15s.

IT is time that someone looked at the common market with the eyes of Hobbes instead of those of Grotius and Professor Meade. Mr Strauss analyses the community of six, and the problem which its creation poses for Britain in terms not of prosperity or federalist aspirations but of power. His theme is simple: the common market, if not broadened to bring in Britain and the rest of Europe, will enhance west Germany's economic and in time political pre-eminence in west Europe.

The argument is elaborated with some suggestive material. One chapter describes the part played by the *zollverein* idea in the creation of Germany itself and in the subsequent ambitions of German expansionists. He describes Germany's postwar economic recovery and shows how, bit by bit, it recovered equality of status with other western countries, throwing off, one by one, the shackles—allied control, the Ruhr authority, with which France hoped to limit its industrial power—and finding, after initial doubts, that the coal and steel community was much to its advantage. He argues that the common market treaty, with its ambiguous rules to preserve fair competition and its high external tariff would enhance that power still more. And he compares West Germany within the common market to Prussia within the *zollvercin*, and Britain to Austro-Hungary left outside.

The argument that West Germany, as the leading industrial power upon the continent, can be expected to benefit most from the common market is hard to challenge, but as the theme progresses, a tendentious note creeps into it. In political terms, it is difficult for the reader to reconcile the state of affairs today, when France is obstructing the creation of a free trade area, with the picture Mr Strauss paints. There is much to suggest that he has picked the wrong country as villain of his piece. Europe's problem child may well remain, not Germany, but an economically dynamic and politically unstable France. Within the common market France is certainly not to western Germany as Saxe-Coburg was to Prussia within the *zollverein*. The new union contains two large powers, not one, and it is as much in differences between them as in plain West German hegemony that its political dangers lie.

Mr Strauss gives some false impressions, too, as he rides another hobby-horse—that the common market treaty "is dominated by the purpose of preserving the rule of private business interests," particularly German ones. The protectionist elements in the Rome treaty were inspired not by the liberal-minded Professor Erhard but by France. The over-simplifications in this terse selective book are dangerous in a sense, for they are difficult for a layman to spot.

Mr Strauss's attempt, however, to bring to the subject "the dimension of power" as he would put it, is well worth while and many of his conclusions badly needed saying: that the new political power which the common market might bring to its members contains dangerous as well as fruitful potentialities, unless it is broadened to bring in the outsiders; that it could bring an ugly division between its members and the rest of western Europe; that movement towards a broader European settlement might be jeopardised, unless there is some complementary scheme open to neutrals and countries further east. His final comments on the posture which Britain should adopt in negotiations are particularly pertinent today. A letter from him appears on page 1028 of this issue.

Independence

Washington and the American Revolution

By Esmond Wright.
English Universities Press. 192 pages. 8s. 6d.

PROFESSOR WRIGHT makes a notable contribution to the "Teach Yourself History" series, which is designed to open up great themes through the lives of famous men and to put academic writing of distinction into the hands of the general reader. It is no easy job to deal with Washington's life, the Revolutionary War, and the first years of the Republic in fewer than 200 small pages. But Mr Wright does it with great skill and freshness. His scholarship is impeccable without being arid, his sympathies are broad, and he writes well. Inevitably, many characters who are little more than names flit across the stage, and some of the war passages may be heavy going for readers who are new to the period. But if this is a flaw, it is one to which such a series is prone.

Nothing, unfortunately, can make Washington himself a stimulating or fascinating study; he was born to be frozen in marble, a natural monument. Jefferson's exquisitely balanced assessment with which the book ends is the best portrait there is of the father of the legend. But Professor Knight is to be congratulated for contriving for the general public a life which is so brief, so scholarly, and so readable. His next volume, on Benjamin Franklin, will be eagerly awaited.

How much of your profit...

GOES IN HERE?

Too often the w.p.b. can be a p.d.b. (profit-draining basket): crammed with proof of office inefficiency.

It is quite simple to empty *your* waste-paper basket of such evidence. Ask Remington Rand to make a survey of your entire office operation. If they cannot help you to save time, man-power and money, they will say so. If, however, they can, they will suggest how their profit-increasing proposals can be adopted without disrupting the office or disconcerting the staff.

Remington Rand's claim to be able to help increase the efficiency of business is based on two unique qualifications:

1 ***They provide the widest range of Office Equipment in the world.***

2 ***They alone have the knowledge developed by over 80 years of technical research and practical experience in 41 countries.***

The world's most comprehensive range of Office Equipment includes: ACCOUNTING, ADDING, CALCULATING, DICTATING, DUPLICATING AND PHOTO-COPYING MACHINES · UNIVAC ELECTRONIC COMPUTING SYSTEMS · FILING, VISIBLE RECORD AND CHARTING SYSTEMS · FIRE RESISTANT EQUIPMENT TYPEWRITERS (Electric, Noiseless, Standard) · OFFICE FURNITURE AND SUPPLIES

U.S.News & World Report

"U.S.NEWS & WORLD REPORT" IS THE NEWS MAGAZINE OF

The Important Million in America

THE IMPORTANT business and professional people of America, and their families, read "U.S.NEWS & WORLD REPORT" every week.

These people hold the responsible positions in American business and industry, in finance, in government, and in the professions. They make the decisions and initiate the actions that stimulate the whole course of the American economy.

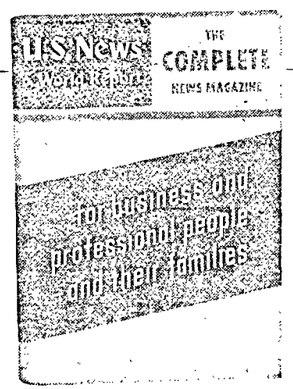
The circulation of "U.S.NEWS & WORLD REPORT" is now more than 1,000,000.

"U.S.NEWS & WORLD REPORT" gives the complete news of the national life of America, including the effects of world affairs. More of this news appears in "U.S.NEWS & WORLD REPORT" than in any other American news magazine.

Three out of four "U.S.NEWS & WORLD REPORT" subscribers hold managerial positions. This is the highest managerial concentration of all American news magazines. More pages of advertising directed to business and industry appear in "U.S.NEWS & WORLD REPORT" than in any other American news magazine.

The family incomes of "U.S.NEWS & WORLD REPORT" subscribers reflect their managerial positions and are the highest of all American news magazines; in fact, the highest of *all* American magazines that have 1,000,000 or more circulation.

"U.S.NEWS & WORLD REPORT," with its audience of the most important million in America, is ideal for business and industrial advertising. It is equally ideal for advertising automobiles, travel, apparel, and other goods that have their best American prospects among these high-income, managerial people.



For more information, write or telephone to Mr. Edgar Wihl, European Advertising Director, "U.S.NEWS & WORLD REPORT," 72 New Bond St., London W. 1 (Hyde Park 4643).

"Most useful to me—the magazine in which I place the most confidence"

America's important people are regularly surveyed as to the news magazines and management magazines most useful to them, and those in which they place the most confidence. "U.S.NEWS & WORLD REPORT" consistently earns first place ranking. The studies are conducted among the people listed in the standard directories and rosters of America's important people, such as:

WHO'S WHO IN AMERICA
WHO'S WHO IN COMMERCE & INDUSTRY
POOR'S REGISTER OF DIRECTORS AND EXECUTIVES
CONGRESSIONAL DIRECTORY OF THE U. S.
EDITOR & PUBLISHER INTERNATIONAL YEARBOOK
POLK'S BANK DIRECTORY
THE OFFICIAL GUIDE OF THE RAILWAYS
NATIONAL INDUSTRIAL CONFERENCE BOARD
WARD'S AUTOMOTIVE DIRECTORY
AMERICAN AVIATION DIRECTORY
...AND OTHERS

Complimentary copies of the research reports are available to advertisers and advertising agencies on request.

Circulation now more than 1,000,000 weekly

U.S.NEWS & WORLD REPORT Published at 24th & N Streets, N. W., Washington 7, D.C., U.S.A. • Subscription price in British Isles: $8.00 per year.

AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

Breathing Space for Disarmament?

WASHINGTON, D.C.

WITH Mr Dulles back from Manila, work is forging ahead on a revised American approach to disarmament, although agreement has by no means yet been reached between the warring elements within the Administration. The central question is whether the idea of a two-to-three-year suspension of nuclear tests, to be checked by inspection inside the Soviet Union and the United States, should be prised loose from the rest of the western "package" of disarmament proposals. This seems the most promising subject for a first step agreement with the Russians. Other possibilities for a summit agenda in which the West is interested are being linked by the Kremlin, one after another, to unacceptable concessions—a German peace treaty to a policy of leaving German unity to the "two Germanies," the neutralisation of outer space to the liquidation of the American bases overseas, and so on. But during last year's disarmament negotiations the Russians did accept at any rate the idea of control posts in Soviet territory to monitor the suspension of nuclear tests. In the opinion of Mr Harold Stassen, who was then the President's special adviser on disarmament, and of a substantial body of officials who remain in the government, the chance of negotiating such an agreement should have been sought at once. Instead, the West stipulated that various other agreements, particularly one on the cessation of the production of nuclear materials for military use, should be reached simultaneously.

It would be a wild exaggeration to suggest that there is any great public discussion of these questions comparable to that which is going on in Britain. But the uneasy silence has recently been broken by a few voices. Mr Stassen himself is calling for a summit meeting at the headquarters of the United Nations in New York, with the East and West each represented by three heads of government and Mr Hammarskjöld acting as moderator and general caretaker for the interests of the other members of the United Nations. At this meeting the United States, in Mr Stassen's opinion, should propose a four-point treaty setting up a UN Disarmament Authority, suspending American and Russian nuclear tests for two years, providing for control posts manned by United Nations inspectors, and committing the great powers to use the two years as a breathing space in which to negotiate further agreements. Some support for these ideas was displayed in the Senate, which would have to ratify any such treaty by a two-thirds majority, during a recent general debate on foreign affairs launched by Senator Humphrey, the chairman of the subcommittee on disarmament.

About one matter there seems now to be fairly general agreement. The proposal for a "cut off" of the production of fissionable materials for military use would, as Mr Stassen indicated in his testimony before the Humphrey subcommittee, require an inspection system so cumbersome that it would take three or four years to instal and so far-reaching that the Russians would be most unlikely to accept it. Hence it is coming to be recognised that anyone who insists on tying this item to the suspension of tests is in fact seeking to sink a disarmament agreement altogether. Some Americans say in private that, since the only safe first step would be a combination of at least these two measures and since this is clearly impracticable, the road to disarmament is closed and ought to be abandoned. But there is substantial support, voiced for example even by Senator Symington, who often appears to speak for the more truculent factions in the Department of Defence, for dropping the demand for a "cut off" from the western conditions for an agreement.

However, as the President and Mr Dulles have both been perhaps a little too eager to point out, it was at British and French insistence that this proposal was adopted in the first place. This of course is true, but it is also true that, when the British and French made the point, those elements in the Administration which wanted to undermine Mr Stassen's efforts last year seized on it with almost indecent haste as a means of bringing the disarmament negotiations to an untimely end. To call the bluff both of America's allies and of his own domestic opponents, Mr Stassen has proposed that the United States should suggest to Russia a purely bilateral suspension of tests, leaving it open to Britain and France to go on testing should they wish to do so. Once such a proposal was officially published, British and French public opinion presumably would make it impossible for their governments to take advantage of this dispensation.

MR STASSEN'S brusque tactics have been rejected. But the Administration is approaching its allies to find out how much importance they really attach to taking a first step toward disarmament and what sacrifices of their own interests they are prepared to make. The French are considered to be the main obstacle. The British position last year is thought to have been very largely a bargaining counter to help to ensure that, if Britain conducted no more tests, it could count on generous benefits from the proposed relaxation of curbs on the exchange of scientific information. These should materialise soon.

There remain, however, in Washington very substantial divergences of opinion about the proposals to suspend nuclear testing. These differences revolve round three inter-

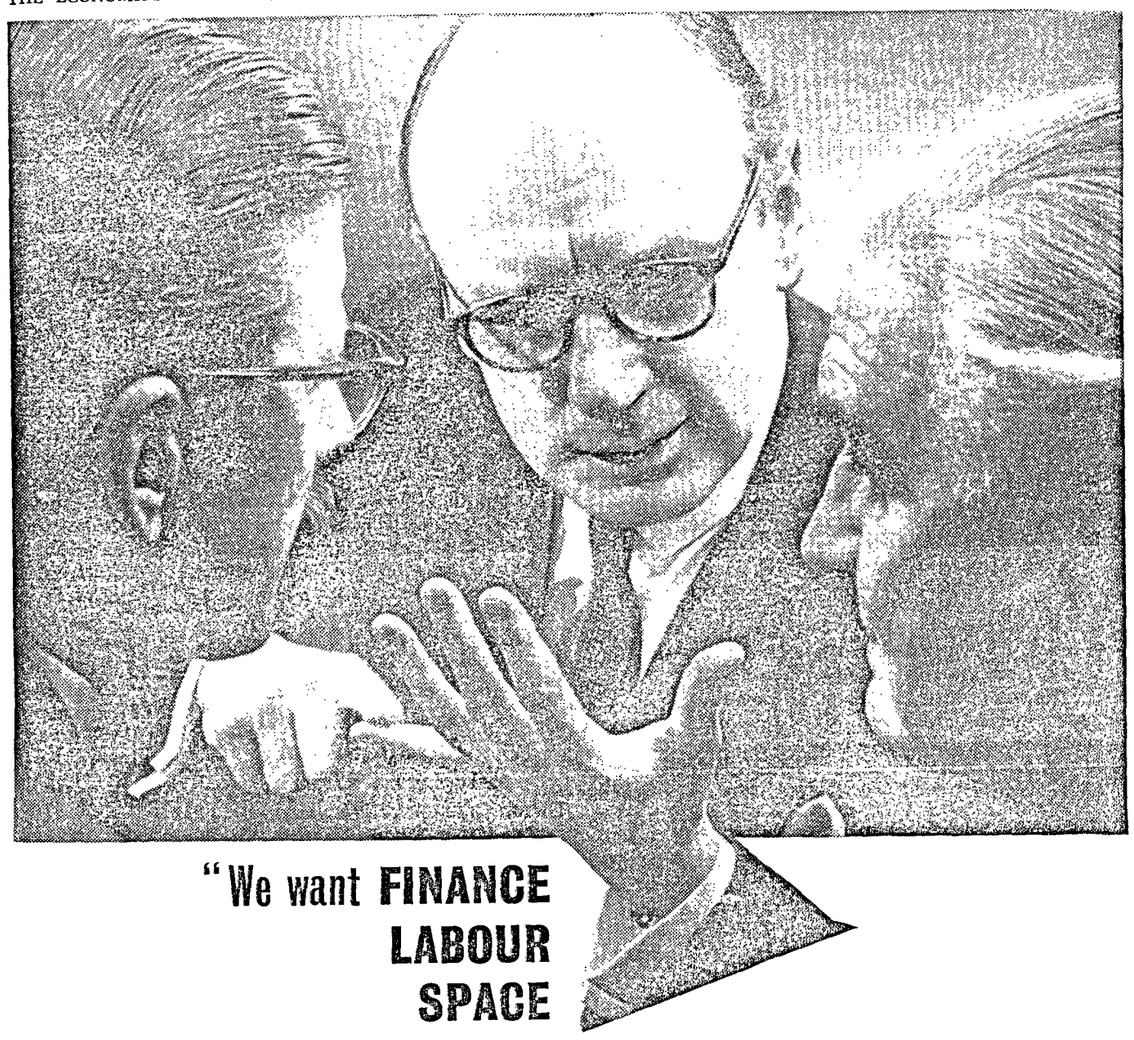
related questions: whether the Russians could evade detection if they chose, whether even if the Russians behaved honourably they might not gain more than the West from continuing to produce existing weapons without testing new ones, and whether the suspension of tests is a worthwhile first step anyway.

On the first of these three questions, the most downright challenge has come from Dr Edward Teller, the so-called father of the H-bomb, who has said that "disarmament is a lost cause" because the Russians could conduct explosions underground as well as very small explosions above ground which could not be detected. This statement has been attacked with great bitterness by Professor Harrison Brown of the California Institute of Technology and more temperately by others of his fellow-scientists. Mr Stassen, who has access to a series of technical studies, argues that eleven or twelve stations in Russia, and the same number in the United States, armed with suitable instruments, would be able to detect and locate any clandestine test. In the case of an underground explosion, where there would be no radio-activity to record, the seismological instruments would show that there had been either a nuclear test or an earthquake, and a team sent to the spot would be able to find out which. Just as this controversy was reaching print the Atomic Energy Commission had shamefacedly to withdraw a statement that it had been impossible to detect its own recent underground test in Nevada more than 250 miles away. In fact, instruments had picked it up 2,300 miles away in Alaska.

On the question whether the suspension of tests without a "cut-off" of production would penalise the West, the principal point being made is that the weapons now possessed by both sides are primarily for offensive and strategic use. The weapons which the United States is planning to test are small, low-yield bombs to be employed in limited wars and warheads for defensive missiles. Therefore, since only the Russians would strike a first blow, a freezing of invention now would favour the aggressor, especially one launching a limited war with conventional forces. However, some experts are arguing that after the next series of tests, which the Atomic Energy Commission is planning for the spring, these objections will lose much of their force.

Finally, there is the rather disconcerting despair of some of the "scientists with a conscience" who have been in the forefront of past proposals for disarmament. For instance, Dr Eugene Rabinowitch, the editor of the *Bulletin for Atomic Scientists*, declares that, now that the Russians have successfully tested intercontinental ballistic missiles, the suspension of tests would accomplish nothing and lead nowhere. And Dr Oppenheimer says in *Look* magazine that "I have felt about stopping weapons tests that it was a good sentence if you could think of the next one."

Even so, there remains a substantial body of official and unofficial opinion which believes that a suspension would help to stem the "fourth nation" danger, would quiet the world's fears about genetic damage, and might create the atmosphere for a further diplomatic advance. Mr Dulles is not insensitive to such advice, simply because, if he has to go to the summit in order to accommodate friendly governments which are under pressure at home, he cannot go with a briefcase that is either empty or stocked only with formulas for failure.



Waiting for the Tax Cut

WASHINGTON is marking the twenty-fifth anniversary of the New Deal's famous "hundred days" with another rush of legislative and executive activity. This time, however, it is a matter, not of setting up the governmental machinery to cope with a desperate economic situation, but of making more use of existing machinery to save a deteriorating economic situation from becoming worse. And this time the President is not in the lead but is under constant prodding from the experts, whether in or out of his Administration, and from the legislators of both parties. Nowhere has the change of atmosphere in the last two months been as sharp as where the Budget is concerned. The Republican belief in balancing the Budget at almost any cost has been discredited almost as completely as have the calculations on which last January's balanced Budget was based. It is hardly surprising that Mr Brundage, who was so closely associated with the efforts to keep spending down, should have decided that it was time for him to retire from directing the Bureau of the Budget.

The big deficit that is coming will be the result not only of the increased outlays which are being announced daily by the White House—more are being pressed upon it by Congress—but also of the tax reductions which are now almost certainly only a question of time. The congressional leaders of the two parties have agreed to warn each other before introducing tax Bills, so as to avoid competition to get in first. But it is doubtful how long either of them will be held back by the President's policy of waiting to see what the March statistics, to be released in April, bring before deciding finally on a tax cut. For there is little hope left that these figures will show any genuine improvement. There has been no decline in the rate at which new claims for unemployment pay have been coming in during March and not enough improvement in such key sectors as the steel or motor industries to suggest any upturn in the industrial production index; this has now fallen as much as it did in the recession of 1953-54 and more sharply. Therefore it is being argued more and more that, since a tax cut is coming, it should come quickly; it will be cheaper, so it is said, to prevent a slump than to cure one, particularly as the psychological impact of lower taxes will be greater now than it would be later when ordinary people may have realised, as few of them yet have, that the recession is real.

Will it Work?

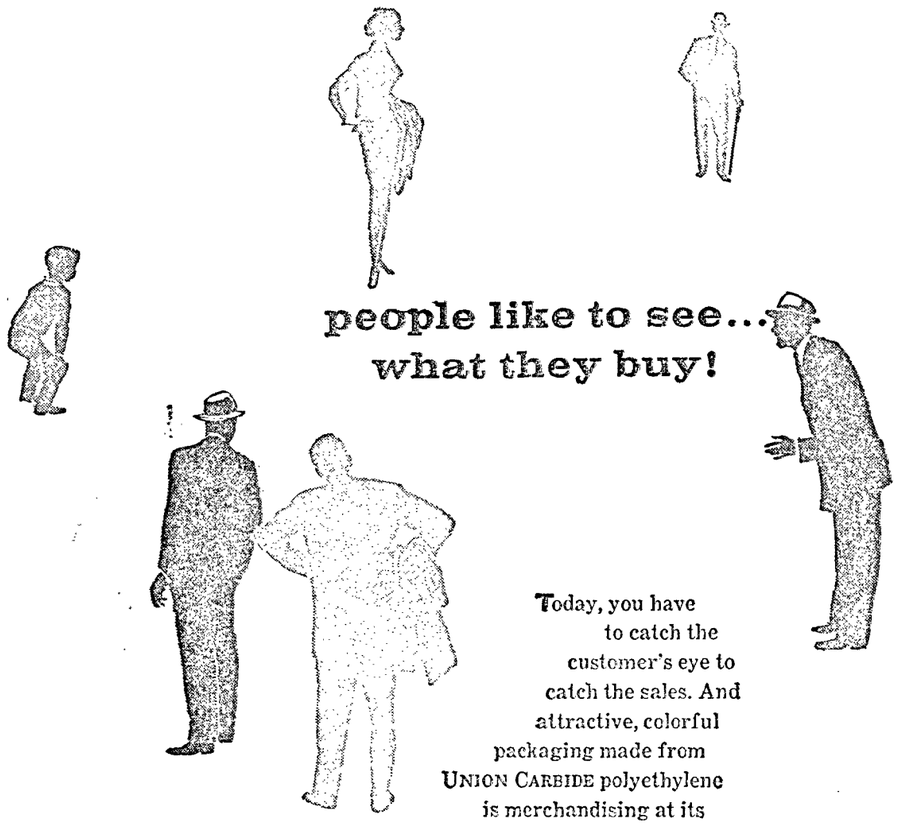
ORIGINALLY it was planned that the tax reduction, which will probably affect both personal and corporate income taxes, and perhaps excise taxes as well, would last only for a year or so, in order that once the recession had receded higher taxes might return automatically to counteract renewed inflationary pressures. But now it has been decided that a temporary cut would be ineffective; it is thought that the beneficiaries would save a windfall of this kind while they would spend an addition to their incomes which appeared to be permanent. But in fact there are signs that the tendency to save is growing, as might be expected in a time of uncertainty, and it is therefore far from sure that a tax cut will stimulate consumer buying or capital spend-

... I've found the lot in NORTHERN IRELAND"

Everywhere else in the United Kingdom expansion plans are bedevilled by one or more of these great shortages—not enough money; not enough men; not enough space. Only Northern Ireland can offer you all three.

MONEY—*to cut the need for investment funds*
Outright grants of 25% and/or loans for plant, machinery and buildings are available, also removal and training grants.

MANPOWER—*first-class and plenty of it*
Over 9% of the labour force—over 30,000 of them men—are looking for jobs. They are hard-working and loyal; absenteeism and labour turnover are low: output is high and shift-working is practicable.



PRODUCTION SPACE *in modern factories ready now*
If you employ mostly men you can rent a standard Government factory for about 9d. per sq. ft. p.a.—room for at least 100% expansion. Or the Government might build you a special-purpose factory on amortization terms. Sites of all sizes are available.

EXCELLENT SERVICES
Ample water, gas, electricity and housing. Nuclear power station to be built. Excellent sea, air and road ferry transport services.

SUCCESS STORY
Since 1945 over 130 new factories have opened in Northern Ireland, and many have expanded. Courtaulds, British Tabulating Machines, Metal Box, Du Pont, Chemstrand, Hughes Tools and many others will tell you of their experiences.

You can be there in a couple of hours

Get in touch with THE NORTHERN IRELAND DEVELOPMENT COUNCIL (*Chairman: Lord Chandos*)

ing by businessmen as much as is hoped. Reductions in taxation had this effect in 1954 and thus had much to do with ending the recession then, but they did not help in 1930.

That consumer buying—particularly of cars and other durable goods—and capital spending, the two foundations of the recent boom, need stimulating now was confirmed last week by two official reports which forecast that both were likely to decline even more than had been expected during the rest of this year. As a result there have been a number of prophecies that an economic recovery is not now coming until well into 1959. The first test of the accuracy of these prophecies will be provided by reactions to the new availability of credit.

The Housing Bill which has just been rushed through Congress could mean that 200,000 extra houses would be built this year—if people are ready to take up the additional mortgages on easier terms that the Bill allows. And the Federal Reserve Board has now not only permitted the discount rate to go down another ½ per cent—to 2¼ per cent with even the San Francisco Bank giving in at last—but has also lowered, by another ½ per cent, the amount of reserves banks are required to keep; this may put some $3 billion of new credit into the money market and may mean lower interest rates on bank loans. But whether businessmen will feel confident enough to borrow this money and expand their activities is far from certain. If they do not, fresh weight will be given to the argument, already frequently heard, that the Federal Reserve Board, like the President, blinded by fear of inflation, left it until too late to do too little.

Civil Rights Adrift

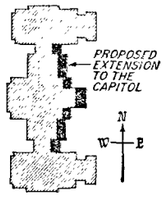
THE history of the Civil Rights Commission, which completed its first six months last week, has so far been marked by lassitude, harassment and confusion. It was created last summer to examine complaints that voting rights had been denied on racial or religious grounds and to make recommendations on laws and policies. But the President took a leisurely two months to appoint its members; they were approved by the Senate only two weeks ago, and the later appointment of Mr Gordon Tiffany as staff director has yet to be confirmed. Much of the delay in the Senate has been caused by Southerners; similar pressures in a subcommittee of the House have held up the appropriation of $750,000 requested by the Administration to finance the commission's work. Thus hampered, the commission has been able to accomplish very little and it will have to work hard to make up for lost time if its final report to the President and Congress is not to be as blank as the Bellman's map.

Meanwhile, the Administration's battle to break down the colour bar at the Central High School in Little Rock, Arkansas, has collapsed into a weary stalemate. Technically, integration has been accepted; but the nine Negro children attending classes do so in an atmosphere of tension heightened by the continued presence of troops at the school and by repeated outbreaks of minor violence. One Negro girl has been expelled (for breaking her promise not to retaliate against white children) and three white students have been suspended. The beleaguered school board of Little Rock, which alone has supported a plan of gradual integration, succumbed last month to its difficulties in and outside the school; in a petition to a federal district court it asked that integration be abandoned in Little Rock until the federal government provides legal support which will ensure that it can be effectively carried out.

This week, lawyers for Governor Orval Faubus opened attacks in a federal court on the Administration's actions in the Little Rock dispute. They contended that the President's use of troops was unconstitutional; and they defended the right of Mr Faubus to use the state militia to prevent Negroes from entering the school. It is doubtful whether Mr Faubus will win these legal battles; it is doubtful whether he cares. Last year it was widely suspected that his chief motive in defying the federal court was his desire to whip up support for a third term as Governor, something that Arkansas, up to now, has only granted to Jefferson Davis. Mr Faubus has just announced that he means to stand again. It will do him no harm with the voters if, during the campaign for the nomination, which in Democratic Arkansas decides the election, he is also appearing in the courts as a champion of states' rights.

Mustard for Kress

THERE are in America some 6,000 non-profit foundations and trusts, with total assets conservatively estimated at more than $7.5 billion. They are endowed from private fortunes or by corporations and they use their wealth for a variety of cultural, scientific, educational, religious, charitable, and artistic purposes, being accordingly exempt from income taxes. In recent months the activities of one of the largest—the Samuel H. Kress Foundation—have raised questions which could affect them all deeply.



Formed in 1929 to dispose of its founder's vast art collection and to make grants from his fortune, primarily for medical education, the Kress Foundation lists assets of $11.4 million, of which $4.9 million consists of shares in S. H. Kress & Company, a chain of "variety" shops similar to Woolworth's. Though this holding (with a present market value of nearly $23 million) is 42 per cent of the outstanding shares of S. H. Kress & Company, the foundation has not in the past interfered in the company's affairs. Last year, however, after a cut of one-third in Kress's dividend had hit the foundation's income severely, several of its trustees privately criticised the company's management for being too conservative and lacking in zest for competition. Then in January a group of the trustees, among them Mr Keith Funston, president of the New York Stock Exchange, announced that at the annual meeting in May they would try to secure four seats on the company's seven-member board in order to protect the foundation's investment.

This brought the angry retort from Mr Rush Kress, the 80-year-old chairman of the board, that the trustees were trying to "take over" the company. Mr Kress (Samuel's brother and the sole surviving founder of both trust and company) demanded the resignation of several of the trustees and an unpleasant struggle for control of the company seemed probable. But last week, faced with sure defeat in a vote, Mr Kress backed down. An agreement was reached by which four representatives of the foundation became members of the board, and both the fight for control and a threatened court battle were averted.

This left two big questions unanswered: Does a charitable

non-profit foundation, existing primarily to disburse money, have a right to influence, through its trustees, the companies whose shares provide its income? And—more important—if it does control the source of its income, is it still entitled to tax exemption?

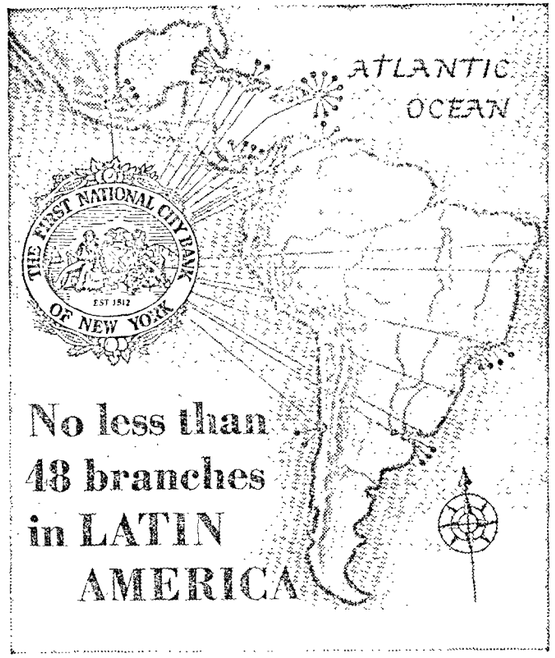
Barbarians at the Capitol

If geese were kept at the Capitol in Washington, where Congress meets, they could hardly be blamed for not giving the alarm when today's barbarians approached. For the moving spirit behind the threat to remodel the historic East Front is Mr Rayburn, the obstinate and powerful Speaker of the House, and the Senators who today are up in arms against this "vandalism" have only themselves to reproach. No one, except Mr Rayburn's Commission to Extend the Capitol, seems to have noticed that an appropriation Bill hastily passed in 1955 ordered that the East Front should be brought forward 32 feet to make it level with the wings on either side and that its ancient local sandstone should be faced in marble. No hearings were held at that time on the plan, which had been turned down forty years earlier.

The East Front, where Presidents have been inaugurated for over a century, is the aspect of the Capitol familiar to every American school child; it is, moreover, the only surviving glimpse of the original work of three noted American architects, and Washington himself laid the corner-stone in 1793. As the Union grew, and congressional staffs multiplied, new wings were added. The demand for space is once more the excuse for tampering with the building; the proposed extension would provide some fifty new offices, two new dining-rooms, and a corridor. This is little enough for $10 million, and Mr Stewart, the Architect of the Capitol, who is not a professional architect at all, but a contractor and a political appointee, goes on to argue that the East Front is in such a bad state of repair that it would cost as much to put it right as to rebuild, and that in any case the dome—which Lincoln insisted on completing during the Civil War as a sign of the country's faith in its future—is a major architectural error. Bringing the portico forward would, in Mr Stewart's view, make the dome conform to the classical canons. Unfortunately it would also destroy the graceful courtyard.

Historical societies, professional architects, and newspapers have exploded with wrath. Before a hastily summoned Senate subcommittee the opposition has had its day to protest, noting that the space obtained would cost $200 a square foot, compared with $20 for other buildings, while Senators and Representatives will have all the space they need when the new (and second) Senate Office Building is ready in a few months and when the new (and third) House Office Building is finished. Heroic efforts to halt operations are now being made in the Senate, while outside workmen have begun matching the marble for the new front; authority to issue contracts has already been granted. Whatever the Senate does, the House is not likely to defy Mr Rayburn. But conceivably he might be swayed by Mr Nixon and Senator Knowland, both of whom are members of the commission, both of whom have hopes of being themselves inaugurated at the Capitol in 1961 and both of whom are consequently more tender of the voters' feelings than a man who has served 45 years in the House.

"Can't Be Spending Money Foolishly, You Know"



Herblock in the Washington Post

Friends of the Consumer

FROM A SPECIAL CORRESPONDENT

A number of institutions exist in the United States to aid consumers, who are often misguided, sometimes misled and occasionally mistreated in the country which proclaims that "the customer is always right." Much of the protection is official. State and local governments restrain businessmen who take too light an attitude toward weights and measures; the Postmaster-General attends to mail frauds; the Food and Drug Administration keeps watch on the purveyors of medical nostrums, adulterated foods and products, such as cosmetics, which may be positively harmful. Inspectors of the Department of Agriculture are stationed at meat-packing plants to condemn diseased animals or tainted carcases. The Federal Trade Commission combats deceptive acts and practices.

Such agencies prevent the exploitation of the consumer. Others co-operate with producers to standardise quality. Meat packers, for instance, by paying a fee, can have the grade stamped on carcases in indelible ink; the official sorting of fruit and vegetables helps to assure quality to purchasers and to raise prices to producers by keeping low grades off the market. The National Bureau of Standards is important indirectly to the consumer. Among other things it certifies measurements (few Americans would believe that their country is legally on the metric system, with the bureau certifying conversion standards to the familiar yard, gallon and pound).

A banking service that covers the trading centres of an entire continent

Whenever you have business in Latin America, First National City can be of real assistance to you.

For in addition to the 48 major branches covering South America and the Caribbean area, First National City has, in every important centre of commerce, correspondents on the spot who can help see your business through. Language, local customs or import regulations are no problem to them. Their specialized experience and knowledge of local conditions may save you a journey—or render it more profitable if you take the trip there.

You'll find this expert service ready and waiting at either of our two London branches. Pay us a call and let us show you how we can help.

The Victor estate car . . . finest of them all

Toil door, balanced by torsion springs, stays open without supports.

LOW AND BEHOLD the fresh new look of the future. Here's an eye-catching, dual purpose estate car, with crisp, low lines, unequalled visibility and superb road-holding. Here's four-figure elegance in a wonderfully practical car with all these features:—

FULL PANORAMIC VISION FOUR DOOR COMFORT
FOLD AWAY REAR SEAT COUNTERBALANCED TAIL DOOR
SUPERBLY ENGINEERED ALL-STEEL INTEGRAL BODY
with heavy-duty rear axle, springs and tyres.

Change at will from a 4/5 seater with extra-large luggage capacity to a 2/3 seater with 5′ 4″ of flat-floored load space behind the driver. Ask your Vauxhall dealer for full details and for a demonstration.

TOP VALUE FOR MONEY AT **£620** PLUS £311.7.0d. P.T.

With Victor performance, roadability and economy, *plus* the extra luxury features of the Victor Super model.

Two-pedal control now available on all Victors

Vauxhall *two-pedal control* with Vauxhall *all-synchro gears* — simplest and smoothest of all. Effortless starting . . . expertly slick and silent gear changes . . . easier and safer in traffic. Available as a factory fitted option on all Victors at an extra charge of *£17 plus £8.10.0d.* P.T.

IT'S VAUXHALL FOR VALUE—VICTOR £498 PLUS £250.7.0d. P.T.; VICTOR SUPER £520 PLUS £261.7.0d. P.T.

The protection of the consumer is not confined to the government. Self-policing by trade associations is common; in addition, about a hundred Better Business Bureaus handle every year some 400,000 complaints which seem reasonable enough to justify an attempt to get satisfaction from the seller. The average buyer, however, is largely oblivious of all this solicitude; he is much more interested in tips about which, of a wide variety of goods that have some merit, is the best. In many cases he relies on branded goods. The mobility of Americans being what it is, the nationally advertised make has the great advantage of providing a familiar name from Maine to California; on the road, the motoring family is likely to select its night's lodging at a motel with the sign of a country-wide association.

Trade groups maintain special testing laboratories which give seals of approval to products which pass their tests: "certified washable—American Institute of Laundering," for instance. Many large shops and mail-order houses, such as the Sears Roebuck company and Macy's, have their own testing services. Because of the prevalence of self-service, the housewife without a shop assistant to consult may find considerable assurance in such seals and also in the endorsements supplied by various magazines in the field of home-making. These maintain testing services which may be used by firms advertising in their columns. Many consumers want nothing more. But it is possible to question the objectivity of tests carried out under the auspices of a seller or his trade association, or by an organisation receiving income from producers. Moreover, a seal of approval offers no comparison with other similar products.

To provide purists and cynics with guidance in their buying, an organisation was established at the end of the nineteen-twenties to give subscribers information based on independent tests and to assign ratings which make comparison easy. Its income was to be derived solely from the sale of its publications; findings were copyright and were not to be used in any form of advertising. Since 1928 Consumers Research has published *Consumers Bulletin*, which gives potential purchasers 40 pages of names of makers, prices, specifications and ratings; these range from Recommended through Intermediate to Not Recommended on goods as diverse as household glues and automatic dishwashers. In the nineteen-thirties this organisation split, after an internal rift over trade union organisation of its employees. Consumers Union, which operates under the same rules, was established in 1936 and produces a monthly, *Consumer Reports*, as well as an annual buying guide.

Both of these publications provide solid information for the reader of precise mind as well as household hints for the homebody. In rating dishwashers, for instance, Consumers Research offers quickly grasped columns of answers to the questions a family is likely to raise. The husband can see how many gallons of hot water will be used and how much the electricity bill will go up; his wife can tell whether the washer will hold all the dishes from a dinner for eight, how soon they will be dry and whether the washer will fit into her diagram for remodelling the kitchen. Each spring the new cars are treated in even greater detail, while both organisations issue ratings for moving pictures.

Feature articles supplement the bare facts. Discussing European motor scooters, Consumers Research notes their convenience for the commuter who must get to and from the station, and their manoeuvrability in heavy traffic, points out that their use on icy surfaces is dangerous and encourages the purchaser by telling him that it is easy to learn to ride a scooter even if he did not ride a bicycle when he was young. The prospective remodeller of a kitchen is warned by Consumers Union that his do-it-yourself zeal may not be equal to the rigidities of ceramic tile or plastic laminates.

By no means all of the readers of these publications have a definite purchase in mind and Consumers Union, with a monthly circulation of 850,000, caters for such subscribers with articles of general interest. An amazing number of readers fill out annual questionnaires which not only guide the editorial policy of Consumers Union, but also provide economic insights of considerable interest into a substantial number of American homes. The earning capacity of Consumers Union has made possible grants to other non-profit-making groups in the same field; among these gifts was $6,000 to help start the British Association for Consumer Research on its way. This arrangement contemplates, on occasion, the testing by Consumers Union of goods, such as foreign cars, which are sold in both countries. But protection of the consumer has its headaches, and Consumers Union is not eager to enter unfamiliar legal territory.

For government agencies, the most vivid recent instance of trouble was the furore in 1953 over the additive AD-X2 which the Bureau of Standards tested and found of no value in prolonging the life of batteries; after a congressional storm which involved private as well as many public agencies, the bureau's conclusions were upheld, but charges of fraud against the producer were withdrawn. Such trials have their counterparts in the offices of the Better Business Bureaus. Usually manufacturers given an unfavourable rating do not carry out their threats to sue, but at times efforts are made to collect substantial damages.

Consumers Union has never been brought to court. Protests have been made against its ratings, but the engineers of the aggrieved companies are always invited to observe a re-testing of the original sample, and so far this procedure has worked. Occasionally, moreover, the organisation has been able to turn the tables on the manufacturers.

A recent case involving Consumers Union arose in a very controversial field. Widely conflicting results have been published of tests made under all kinds of auspices—industrial, governmental and independent—concerning the risk smokers run of contracting lung cancer. Consumers Union compared a variety of filter tips and found that the one used by Philip Morris on its Parliament cigarettes was outstandingly effective. The public relations firm which handles the Parliament account lost no time in calling a press conference at which it planned to distribute copies of the issue which reached this welcome conclusion. The organisation heard about this and persuaded the firm to abandon the idea of using its findings for publicity purposes.

Meanwhile, the advertising agency of Benton and Bowles, which acts for Philip Morris, was busy on its own campaign. Neatly avoiding copyright infringement, full-page advertisements appeared in 86 newspapers carrying these 17 words: "For the latest report on filter cigarettes see page 24 of the January Issue of Consumer Reports" signed "Parliament Cigarettes." But five days later, after protests from Consumers Union, the same 86 newspapers carried advertisements admitting that the reference to Consumers Union in advertising copy was an error.

Monsanto Ltd.

Through creative chemistry, Monsanto turn yesterday's dreams into present-day realities

Red hot chemicals reduce fire risks

Alec Guinness on the set of the Knightsbridge production "THE HORSE'S MOUTH" for United Artists release. Produced by John Ryan and directed by Ronald Neame.

THANKS TO MONSANTO, electrical transformers need no longer be a source of fires. They once had to be sited in bunkers far from the film-sets or factory-floors or offices where the power was needed. Now, Monsanto's Pyroclor — a transformer coolant made by condensing chemicals at over 1000°F—makes transformers completely fire-proof.

Pyroclor's safety brings flexibility and economy. Flexibility—because Pyroclor transformers can be placed anywhere convenient. Economy — because long, complicated low tension wirings, and consequent voltage losses, are eliminated, along with the costly fire precautions necessary for ordinary transformers.

Together with Aroclors (Monsanto's top quality capacitor impregnants), Pyroclor makes modern transformer installations safer, less costly and more convenient. It's another way Monsanto brings a better future closer.

If you, as a manufacturer, are interested in chemicals, it will pay you to get in touch with Monsanto.

THE WORLD OVERSEAS

African Nationalism in Kenya

FROM OUR SPECIAL CORRESPONDENT

KENYA is in a political stalemate. The Lennox-Boyd constitution which was intended to inaugurate a long period of evolutionary politics has been flatly rejected by the African leaders. Further, Mr Tom Mboya, Kenya's self-styled Kwame Nkrumah, has opposed the new deal in terms that leave little doubt as to his future tactics. Mr Mboya makes no bones about his wish to see Kenya a second Ghana, and subscribes fully to his teacher's simple dictum: "It is far better to be free to govern, or misgovern yourself, than to be governed by anybody else." At the same time, Mr Mboya obviously believes that the existence of 3,500 European farms in the White Highlands and the presence of some 60,000 Europeans in the colony make it very unlikely that any British Government will from choice hand over power during this century to an African majority elected by universal suffrage. Mr Mboya and the seven other elected African members who vote with him on the Legislative Council seem, therefore, to have chosen the path of systematic anti-gradualism.

After the elections that begin this weekend the Council will have 14 African elected members as well as 14 Europeans, six Asians and two Arabs. In addition, however, to these constituency seats and to the government's nominated official members, there are also to be twelve new unofficial seats, to be filled, four to each race, by the votes of the Council itself sitting as an electoral college. This innovation has attracted the special hatred of the African members, who have refused to sit in the college at all. "There is no doubt," runs their communiqué, "that the selective seats are designed as a first step in the move to introduce a common roll on qualitative franchise, the very nature of which must be so restricted that the African will be its biggest victim. Here we smell the beginnings of a Central African and later a South African pattern. . . ." This illuminating comment ignores the fact that a qualitative franchise would soon inevitably give an African majority of unofficial seats in the Council if gradualism were given a chance. It shows plainly the determination of the African politicians to smash the incipient common roll and lay the foundations now of a naked African power. The government is faced with the cheerless prospect of a boycott of the selective seats, of the council of ministers and of the two portfolios—housing and community development—that are expressly intended for Africans.

Of the African leaders, the Kikuyu, Mr Eliud Mathu is in some respects a bigger gun than the *Wunderkind*, Mr Mboya. In 1957 he was defeated for Central Province because of the disenfranchisement of many Kikuyus. The Merus, with their superiority in loyalty-certificates, brought in Mr Bernard Maté. This time Mr Mathu is standing in a new constituency. In any event, the fourteen constituency members will follow the tone of Mr M. Muliro, the sitting member for Nyanza North, who says of the proposed constitution: "No African should accept a ministerial post as he would be the enemy of the people, and in the event of his visiting his constituency he should be stoned and beaten with sticks." With the demagogues in this mood, everything will depend on whether other Africans will care or dare to stand forward in their place, both for "selective election" and for nomination to ministerial positions. One favourable omen is the willingness of a member of the Kenya (Capricorn) Party to stand. But Kenya has now entered a period of political intimidation, and only very courageous Africans will take the course of moderation.

The African nationalists have taken full advantage of a number of discontents. The return of detainees to the Kikuyu reserve has caused un- and under-employment, especially in the Kiambu area close to Nairobi. Housing and education are still embryonic despite very large outlays (it would take two-thirds of the present revenue to send all Kenyan children to school). Land consolidation, the one boon of the Emergency, is a long-term business, and neither this nor other agricultural measures have yet gone far to transform African lives. Mr Mboya can speak plausibly of the "frustration" of the African population, and, by doing so, of course, greatly increase it. This he was taunted with in the recent debate on his own no confidence motion; but he can comfortably maintain his broad position that the real trouble is "the absence among the African community of a sense of belonging to this government." For those who maintain that few Africans are yet fit to govern, there is his statement of last October: "The Africans have been number three in Kenya for many years, but now if other races wish to stay in the country, they must realise that the African is number one. If they are not prepared to accept that, they . . . can have a one-way ticket." Mr Tom Mboya has been in Ghana celebrating its first anniversary and conferring with the African nationalist leaders from other colonial territories—Nyasaland, Northern Rhodesia and Tanganyika.

As yet there are no grave signs of unrest in Nairobi, Mombasa or the countryside. In January the government proscribed a secret society called *Kiama Kia Mwingi*, forbade the carrying of pangas after dark and ordered curfews in certain places. The society derived from the passive wing of the Mau Mau, and its most serious aspect was the intimidation of Africans who had been loyal to the government. About 150 Mau Mau terrorists proper are still at large, but are being steadily caught. There are a fair number of crimes of violence. A recrudescence of Mau Mau is considered unlikely, if only because the security police would crush it. What is feasible and expected by many is the organisation of strikes and passive resistance on the Indian model. But this, if very hard to deal with, would be by no means easy to sustain. Kenyan Africans have little trade union discipline and no financial reserves. The government, on the other hand, has several powerful cards. Not the least of them is the power to send one or more chess partners to Mr Jomo Kenyatta in the Northern Frontier District.

Among the Europeans there is naturally a growing sense of crisis, although the mood is calm. Only about 10,000 Europeans have a landed interest in Kenya: the rest are officials, technicians or tradesmen. The 10,000 who are real Kenyan nationals hold very definite views and could, if provoked by insipid official equanimity towards "Mboya's Kenya" play some very rough games such as the "mining" of their land. Nairobi on the other hand seems to have few ideas about how to deal with "the trouble to come." Its uncertainty is without doubt partly due to London's silence on the future status of Kenya, which at present is the only Crown Colony in East Africa. Crown colonies are supposed by Commonwealth philosophers eventually to become self-governing, that is, separate nations. How is Kenya to become a nation? All that is remembered to have been said precisely is that no British Government would hand over power to *one* of the races alone. This does not dispose of the problem of how to hand over to all.

At the same time the Colonial Office is pledged to grant independence to both the Trust Territory of Tanganyika and the Protectorate of Uganda, which will become African countries. This point is well taken by the editor of *Rock*, a paper published by the Christian Council of Kenya: "We believe that the time has come for the British Government to give a firm guarantee that this colony will develop along normal democratic lines towards a society of equal individual rights. This will inevitably mean an African majority." Some of the Europeans on the legislative council were foolish enough to hail the Lennox-Boyd constitution of last October as a guarantee *against* an African majority. But it is probable that a firm imposition of stages on the road to full democracy would, if well publicised, be accepted by a majority of the Europeans. What will prove demoralising to them, and intolerable to the African politicians, is the lack of a declared goal. It is only in the preparation for the eventual African majority that the three races have a ground for co-operation.

Warnings to German Workers

FROM OUR BONN CORRESPONDENT

ALL this week it has been touch and go whether 180,000 German iron and steel workers will strike in the near future for the 8 per cent rise against which the employers are offering 2 per cent. Simultaneously some 350,000 municipal and public transport workers are threatening to strike because their demand for another sixpence per hour is being resisted. They gave the country a taste of their power in a warning 24-hour strike on Wednesday, when trams and buses stayed all day in their depots, and lowered gas pressure and unemptied dustbins disorganised kitchens in several towns. Some 170,000 post office workers are planning to revoke their existing wage agreements on March 31st in order to claim an additional 6 to 8 per cent. Within the next seven days 1,200,000 building workers and their employers are due to make up their minds whether they will accept an arbitrated compromise proposal for a rise of just under twopence an hour. In Bremen and Lower Saxony, textile workers are also negotiating for higher pay.

The decision to renew the drive for higher pay has been taken by some of the bigger unions at rather a ticklish moment when government and employers are giving their minds to the apparently imminent problem of keeping everyone at work. While Dr Adenauer is pre-occupied as usual with foreign policy, two members of his economic cabinet have been at pains to rub in the elementary lesson that living conditions in the Federal Republic are not of themselves bound every day and in every way to get better and better; that indeed they may soon grow worse unless more than lip service is paid to the cultivator's maxim that in the long run you do not get out more than you put in.

★

In his maiden speech in the Bundestag as minister of finance, Herr Etzel has called for a halt to the light-hearted spending of public funds. With a Khrushchev-like touch, Herr Etzel warned the administration at all levels that the state was not a cow fed in heaven and milked on earth. Citing his own good example at the top, he claimed that in his current budget he had cut departmental requests for increased spending from a total of DM6.5 milliard down to DM1.8 milliard (approximately £552.5 million to £137 million), and thus hoped to prevent this year's total federal outlay rising beyond DM39.2 milliard (£3,332 million) from last year's total of DM37.4 milliard (£3,183 million). Herr Etzel surmised that for western Germany the "seven fat years" might be ending; but, as in duty bound, he hastened to add that, should they now be followed by the lean, the government would be ready with measures to limit the economic and social consequences. His sobering reflections have since been reinforced by yet another call from Herr Erhard for harder work. The minister for economics and chairman of the cabinet economics committee has not only spoken out against any extension of shorter working hours but has also maintained that Germany's chances of not catching an economic crisis would be much improved if most workers would put in an extra hour a day.

The two ministers have sound reasons for competing with the Chancellor for the public ear. Almost everybody in western Germany understands that exports have expanded steadily during the last six years, engendering the rewards of an impressively favourable balance of payments, ample gold and dollar reserves, flourishing businesses of all sorts and sizes, full employment, and crowded shops. But by no means everybody seems to have appreciated the threat in the approaching cloud in the economic sky. Although exports increased last year and, so far, are still going up this year, the rate of increase is markedly slowing. Since January the American recession has gained momentum, and the fall in prices of primary commodities has continued to diminish the buying power of their producers. Already in January western Germany's foreign orders were eight per cent less than they were a year ago.

The men responsible for the German economy are naturally pondering whether the adverse process will continue; and, if it should continue, how it will affect the ten major exporting industries, of whose 4,300,000 workers about 1,100,000 are engaged in supplying foreign demand. Herr Erhard thinks that Germany's export trade may continue to shrink for the time being. Yet he does not expect unemployment—now running at a winter flood of 1,300,000—to spread so long as the economy as a whole efficiently handles the task of keeping export prices competitively low, and of making good at home the orders lost abroad. The home market, he reckons, could absorb much of the anticipated surplus production, and greater home consumption should help to keep prices stable. But there may not be all that much time left to make the necessary readjustments: no shifts were worked in some Ruhr collieries last weekend, and stocks of coal and coke accumulating at the pitheads totalled over 2½ million tons.

In the circumstances, it is not surprising that Herr Erhard and Herr Etzel are sounding urgent notes. But they have not yet pulled out all their stops, and there seems to be confidence in the government that, angry as he sounds, the German worker will once again be finally persuaded that it is in his own interest to exercise restraint.

Nasser's One-man Show

FROM OUR SPECIAL CORRESPONDENT

WHILE President Nasser was exploring his northern region, affairs of state stood still in Cairo. No important decisions on economic, agricultural or social planning could be taken; no ambassadors nor undersecretaries of state appointed; even a British journalist had to languish in Beirut for his entry visa. All waited upon word from the president. Will affairs in Damascus have to come to a stop now that the president has returned to Cairo?

President Nasser has no advisers to whom he pays much attention. His ministers, with one or two notable exceptions, are not much more than able secretaries. To try and understand what is going on in the country, a visiting journalist has to search out not the heads of the most important ministries but those few men who are believed to be closest to the president and who understand something of his hopes, prejudices and tempers. While the ministers left behind in Cairo were talking of co-existence between the two Arab unions and of going slow while Syria was digested, President Nasser took them by surprise by launching from Damascus a new attack on Iraq and Jordan. He may have been angered by insults from the other side; he may be bitten with the idea of quick expansion since the first steps with Syria proved so easy. The president's own weaknesses are his quick temper and his lack of patience. The vital thing for the other Arab states to watch is how much of this personal control he insists on having in Syria.

Since no minister can safely go ahead on his own initiative, few departments have a settled policy. One of the obvious examples of mismanagement in the last few months was the policy over export licences which fell awkwardly between Mr Kaissuny, the minister of finance, and Mr Abu Noseir, the minister of commerce. Mr Kaissuny favoured a westernised, liberal policy; Mr Abu Noseir, a strong nationalist with some near-communist views, insisted on tight control. In the new ministry, this confusion has been sorted out, since Mr Kaissuny now controls both economics and trade and Mr Abu Noseir has been down-graded. But already many opportunities and much money have been lost.

The top ranks in business and government earn very good money—income tax rackets are as prevalent here as anywhere else—and there is less rottenness at the top than in King Farouk's day. But the middle ranks, discouraged by the army leaders inserted above them, collaborate at the best unenthusiastically with the regime. And further down the scale, the officials living on a monthly salary of about £10, have the same excuse as all other Middle Eastern civil servants for trying to add to their incomes. The administration limps as badly as ever it did; paralysis could come if in his search for money, the president overburdened it with the task of running more nationalised industries.

The need for funds is pressing. All the calls on Egypt's budget have claims to priority. The Russians are financing a large share of the industrial plan, but there is still £60 million to be found from somewhere else. And not everyone is happy about the prospect of Russian machines and equipment: there are sore memories of other Russian deals. To quote one example: Russian equipment was ordered for a porcelain factory and private shareholders were invited to join in the enterprise; when the equipment arrived it was found to be for pottery not for porcelain. And looming above the industrial plan, are the hopes for the high dam. The project has been put off for a few years, but no one will admit to indefinite postponement: the dam is still seen as the only way of alleviating Egypt's intractable problem of too many people in its narrow strip of watered land. The programmes for schools, for hospitals, for desert reclamation all need more money than Egypt can raise. And while the western powers remain obdurate, President Nasser can only repeat his favourite ploy: turning away from Egypt's hopeless internal problems to fresh adventures outside.

★

But the west's obduracy is also the president's greatest strength. Every mistake made by the British, French and Americans has added to his stature. The British and French attack on Egypt, and their inglorious retreat, left him doubly a hero. He survived while Eden fell: to the Egyptians this is a simple tale of valour, of a David knocking out a Goliath. The president's refusal to compromise with American policy, his determination not to climb down over the financial talks: these facts are his glory. He is the hero of the Middle East because he is the one man who has refused to be bossed by the great powers.

President Nasser's first strength is that he has this glory; his second is that he is able to publicise it. His control over the vast machinery of Egypt's press and radio gives him power that no other ruler can emulate. Egyptian newspapers and journals are best sellers all over the area; the Voice of the Arabs is on the air for nine hours a day. His name, his face, his commemorative medals are sold ceaselessly to a vast and receptive audience.

Once a month nearly every Arab who owns or has access to a radio stays at home to listen to Um Kalthum. She sings from 10 p.m. to 3 a.m. and people who can hear her in no other way lie all night in the streets outside the cafés. Elderly, not good-looking, her fame after twenty years of singing is second only to the president's. In the Cairo concert hall, plump business men rock in ecstasy; Alexandrian spivs hold out their arms in supplication; visitors from Saudi Arabia, Syria and the Sudan sit drugged with music and with words. Triumphantly, Um Kalthum moulds their emotions—and she sings of the glories of President Nasser. She sang during the invasion; she sang when the canal was nationalised; she sang of unity with Syria: "By your efforts Gamal you have fulfilled our hopes, by your presidency Gamal, by your two hands Gamal, by you Gamal." In a period when Egypt is selling itself to the other Arab states—yet not trying to run their affairs—Um Kalthum is worth more than an efficient administration to the president.

What does all this add up to? President Nasser is entrenched by western ineptness, by the power of his personality and by his weapons for advertisement. His strength can prop up his administrative house of cards. But it might collapse if ambition carries him too far and too fast towards an Arab empire that he has not the machinery to administer.

Election Fever in Italy

FROM A CORRESPONDENT IN ROME

BOTH houses of the Italian parliament were dissolved last Monday and May 25th has been fixed as the date for the general election. Up till the last moment it was uncertain whether President Gronchi would dissolve the Senate, which legally had one more year to run, as well as the Chamber. But all the political parties have been acting as though the dissolution of both Chambers was certain. Election fever seized the parties well before Chistmas, and during the last three months the preparation of the lists of candidates has been the dominant care of the politicians. Nerves are snapping under the strain, for it is reckoned that not more than half of the outgoing deputies and senators will get party preference.

A change is coming over the Italian parliament. In the first two legislatures of the Republic the leading figures of pre-fascist and anti-fascist politics had a dominant place in both Chambers. Signor de Gasperi called the senior members of his party "the notables." He tried to build the Christian Democrat party upon the prestige of individuals, using this as a counter-weight to the party bureaucracy. The other two so-called mass parties, the Communist and the Socialist, also gave pride of place to their notables, many of whom had suffered persecution and exile. Today, in all three parties, the bureaucrats have got the upper hand and the notables are tending to disappear. The Christian Democrats, being in power, can remove them painlessly by appointing them to places of honour in the new higher international bureaucracy. The other parties cannot do this and the Communists have been particularly ruthless in dropping some of their oldest militants in favour of the young conformists to the Khrushchev-Togliatti line. In all three parties the old warriors are free to stand if they wish, but they do not head the party lists and the local organisers have instructions not to canvass for them.

The exclusion of personalities is not the only sign of change. There is also a deliberate elimination of ideas. The process stems from the Christian Democrat party whose secretary, Signor Fanfani, purposely avoids committing the party before the election to any given economic or political line. His object is to garner as many votes as possible from the right and left centres before committing the party to the choice of a partner in government. But until this choice is made, neither the Socialists nor the Social Democrats can plot their course with any certainty, and all the other parties hang in some degree upon the Christian Democrats' choice.

Apart from this there is a fundamental reluctance on the part of all the political parties to adopt a simple platform. The Liberals are the only exception. They stand for free enterprise versus state intervention and whoever votes for them knows exactly what policy he is voting for. This cannot be said of any other party. Not one of them has a slogan. The Christian Democrats have appointed a commission of eighty to draft a programme which will run to 400 pages of print. The Communists and Socialists are almost equally longwinded and vague. Signor Olivetti has given his new party a programme which reads like an outline for Utopia. The Radicals and Republicans have a lay platform which they dare not call anticlerical and cannot tread too hard lest they should be called on to form a government with the Christian Democrats. The Social Democrats are inhibited by the fact that they do not know whether to stand for government with the Christian Democrats or for opposition to them.

★

In a country like Italy which has ten political parties and various sub-parties and where the lack of productive employment makes patronage a great political force, the effect of proportional representation is to create conditions very much like those of an eighteenth century British parliament. There are no rotten boroughs but there are plenty of safe seats, in a numerical rather than a topographical sense, and the disposal of these is in the hands of the party managers and of private or semi-private "patrons." In place of the "Treasury boroughs" we have the electoral influence of such government dependencies as the Cassa per il Mezzogiorno (Southern Development Fund) and the various Land Reform organisations. Another "Treasury" group is the Agip interest at San Donato, near Milan, which disposes of enormous patronage, and the new group at Ravenna where Anic, another ENI derivative, has jobs for nearly 3,000 people in its new synthetic rubber factory planted in the heart of an agricultural depressed area. In addition there are various non-government groups.

Most of the parties are open to some degree of outside interference in the choice of candidates. The Liberals have to make room for the nominees of the Confederation of Industries which finances the party. The Social Democrats also have to accept the consequences of a certain amount of industrial support. The Communists must give preference to Soviet protégés. It is surely no coincidence that a delegation of the Soviet Communist party has toured Italy for three weeks this spring visiting every important Communist federation in the country. The Socialists have to mind communist preferences and dislikes. In Piedmont, for instance, they dare not run the former communist rebel Signor Giolitti, who has a local following, because Signor Togliatti has said he would take that as an unfriendly act and the signal for a show-down.

More than any other party, the Christian Democrats are subject to outside control—first and foremost from Catholic Action and its subsidiary movements. This extremely powerful organisation counts over three million adherents and wields perhaps twice as many votes. Its support is

absolutely indispensable to Christian Democrat success. Since Signor Fanfani set about reorganising his party machine the relations between the party and Catholic Action have become more and more strained. So much so that certain members of the ecclesiastical hierarchy have thought seriously of breaking with the Christian Democrats and founding a new Catholic party. For the moment this idea has been dropped, but Signor Fanfani has had to pay a heavy price. He must not only accept a large quota of Catholic Action candidates in his lists but must submit the lists themselves to be vetted by the spiritual leaders of Catholic Action. A less irksome relationship is that between the Christian Democrat party and the very powerful and wealthy Papal Assistance Organisation, which disposes of a vast quantity of succour, that is, patronage.

The result of these outside controls is to limit the power of the party bureaucracies; but it is in no sense a democratic limitation. The ascendency of the party "apparats" and the general tendency towards complete centralisation is also a non-democratic phenomenon. These appear to be inherent disadvantages of the proportional system. The only consolation is that they tend in some degree to neutralise each other and that, in Italy, at all events, the alternative is something even less democratic, the absolute domination of a communist or a clerical regime.

Eoka's Dual Campaign

FROM OUR CORRESPONDENT IN NICOSIA

A SUDDEN spasm of sabotage in the past week at carefully selected military targets has already overshadowed Eoka's much trumpeted "passive resistance" campaign, and effectively jolted the incipient complacency of those who were beginning to question Eoka's striking power. Although it is hazardous to predict the terrorists' tactics, it seems clear that Eoka, and the whole Greek nationalist movement which supports it, have been placed in a dilemma. They have come to realise that violence does not pay—and here the full fury of Turkish wrath so devastatingly displayed in the Nicosia riots has had an inhibiting effect; yet after their flamboyant, bloodcurdling threats of December and January they are obviously committed to some bold course of action, in order to fulfil their "pledge" that, if no satisfactory policy statement emerged from Whitehall, they would smite the enemy hip and thigh.

From this farrago of threat and propaganda, there has emerged what looks like a dual campaign of passive resistance and selective sabotage (although at the moment of writing certain recent incidents have not yet been *officially* attributed to Eoka). The latter technique is fairly conventional terrorist tactics; the former new as far as the Greeks are concerned. To what extent it will appeal to the volatile Greek temperament is perhaps open to question, for the forms of passive resistance which have on the whole been effective against colonial administration in the East do not seem so readily applicable in Cyprus. (It is hard, for example, to envisage the smooth, prosperous Greeks of Nicosia lying down in the middle of Ledra Street.)

In as far as it has been applied, passive resistance is taking roughly two forms: an economic boycott of British goods (in particular of cigarettes, tobacco, beer, shoes, confectionery and football pools); and a policy of civil disobedience by the representatives of the government in the villages, particularly the mukhtars and members of local water boards. While the economic "blackmail" has aroused considerable interest, it has hardly yet reached serious proportions. In certain ultra-nationalist pockets, notably in Famagusta, the boycott is reported to be reasonably tight, but on balance over the whole island the economic campaign has hardly as yet caused alarm or despondency amongst the British community or in the administration.

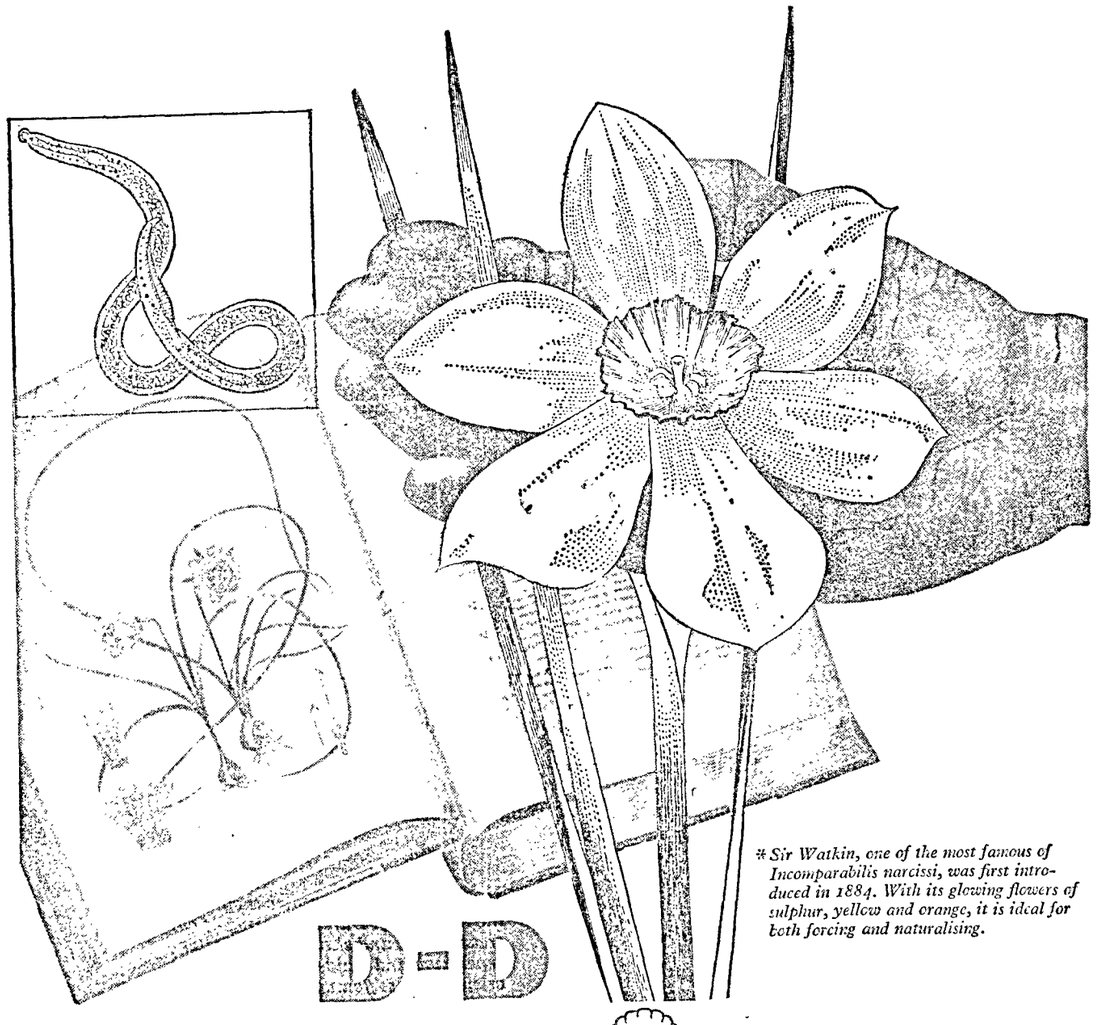
The non-co-operation of the village officials is, however, a more serious development and has brought belated limelight to the important role of the village mukhtar: for example, his certification of villagers' pleas for free health treatment, or his authorisation of their applications for passports, or for the sale of their cattle. Since the mukhtars relinquished their duties, sizeable queues of villagers have already appeared at the offices of the assistant commissioners in the towns; and it is the *reductio ad absurdum* of the British colonial system that at this stage in the island's history its administrators should be bogged down over the documentary technicalities for the sale of a cow. On the whole, however, the government is contriving to cope with these pettifogging harassments, which—as Sir Hugh Foot wisely emphasised in a broadcast—are likely to cause the villagers more suffering than the government.

★

It has been insufficiently emphasised, too, that the attitude of the mukhtars is not a wholly new phenomenon. For a long time they have been a special target for Eoka's wrath, and long before passive resistance was announced many of them had been intimidated into quitting their jobs (though the government refused to accept their resignations, and tried hard to induce them to carry on). Eoka's drive for passive resistance has merely confirmed their resolve.

But though it is the Greeks who, through the variations in their tactics and policy, usually capture the headlines, on present form it is the Turks who are more likely to cause sleepless nights to the administration. The Turkish riots in January made on officialdom, not a deep impression, but a dent; and the attitude is deeply entrenched that, at all costs, no action must be taken that might spark off a repeat performance. (All of this, of course, is interpreted by the Greeks as simply meaning that Her Majesty's Government is allowing itself to be "blackmailed" by the Turks.) Senior intelligence circles strongly hold the view that if Turkish riots break out again, many Greeks would be killed. Rightly or wrongly this contingency overshadows even the threats of Eoka—and one suspects it is not lost either on Archbishop Makarios or on Grivas.

In short, though full scale violence has not broken out, the situation in the island politically is still about as bad as it can possibly be. It has been complicated, too, by political developments outside the island—the forthcoming general election in Greece, the apparent feebleness of the Macmillan government, and the behaviour of the British Labour party, whose "pledge" on self-determination at Brighton and subsequent "back-pedalling" has perhaps done more to bedevil the situation than anything else in the past twelve months. Today the most that sensible people hope for is that somehow the threats and pressures of one side may cancel out the threats and pressure of the other, and that in this strange, tense equilibrium a glimmer of common sense and goodwill may possibly penetrate the protagonists on each side.

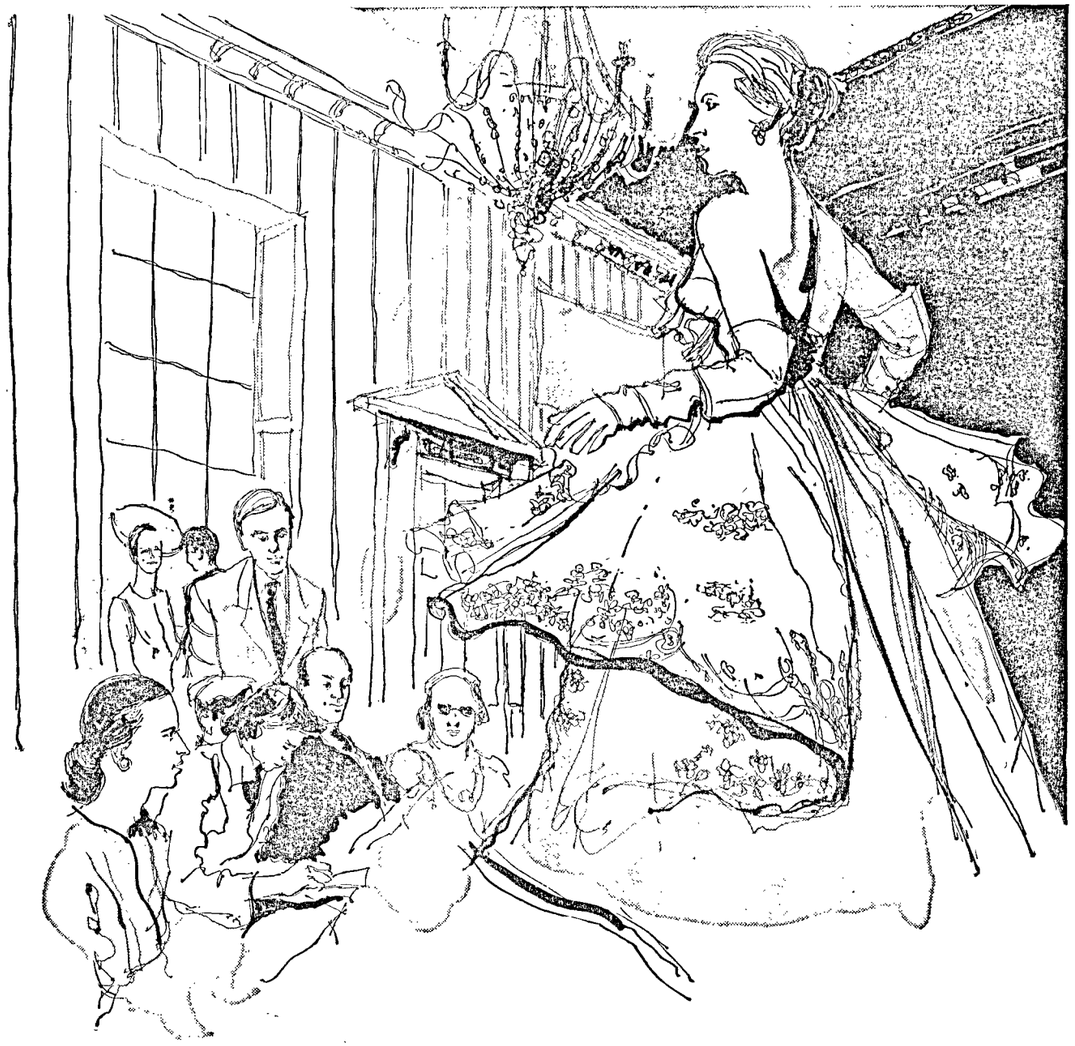


Arise, Sir Watkin!

Long before the dykes were built, in the days when the cold tide rolled greyly to the very doors of Amsterdam and half of Holland still lay beneath the sea, narcissus was already a well-loved flower. Through many centuries and across half the world, narcissi brought sweetness and beauty to the young days of the year. To-day, brought to full splendour in the lands stolen from sea and fen, there are over seven hundred named varieties . . . *Incomparabilis, Triandrus, Barri, Poetaz* . . . a vast flood of white and gold, yellow and sulphur, nodding fragrant heads to the North Sea winds. A billion bulbs—and every one in jeopardy.

For bulbs are much to the taste of destructive *nematodes*, and it has been estimated that in areas where infestation by these microscopic but voracious soil pests is high, the yield may be increased *by as much as* 100% when control is achieved. And events are now showing clearly that control *can* be achieved, not only in Holland, but in many lands—for nematodes attack virtually every important crop.

In the narcissus fields, control is being secured with D-D, developed by Shell. This advanced soil fumigant is applied at the rate of 38 Imperial gallons per acre, and although the greatest benefits—up to 100% plus increase in crop value—are gained by using D-D on heavily infested land, increases in yield and value of 50-75% are common on only lightly infested land. Even in the absence of nematodes the growth of narcissi is stimulated by D-D to give up to 10% increase in yield.



Arise, a stronger, healthier and more valuable Sir Watkin! *

* *Sir Watkin, one of the most famous of Incomparabilis narcissi, was first introduced in 1884. With its glowing flowers of sulphur, yellow and orange, it is ideal for both forcing and naturalising.*

D-D, NEMAGON, ENDRIN, ALDRIN AND DIELDRIN ARE SHELL PESTICIDES FOR WORLD-WIDE USE

THE BUSINESS WORLD

Commodities on the Defensive

SOME Americans call the present recession "the raw material recession." It did not, they imply, arise from over-optimistic planning in industry nor from over-speculation in security markets, but from the trend in commodities and from commodities coming in the main from overseas. But all slumps, and all booms, are chain reactions, and to give one of them a name is not to foretell either where it will end or what set it off. It just spotlights one of its features.

The movement has carried *The Economist's* index of commodity prices down from 95 to 85 in just a year, a fall of 11 per cent. If that was steep it was far less so than the fall that followed the Korean scramble. The present fall follows the unnatural rise that the closing of the Suez Canal produced, but in retrospect it can be seen that a decline was under way when Suez suddenly and temporarily put commodities into forward gear again. The origins of the raw material recession were much earlier. Important among them was the progressive withdrawal of the United States strategic stockpile from the markets. The stockpile has now (except for goods already under contract) almost stopped buying commodities of foreign origin. It still does a little for American produced lead, zinc and aluminium ; the world market for zinc might be even lower if that support were withdrawn. Stockpile contracting —it is the placing of orders far more than the delivery of goods that affects the market —reached $2,075 million in the fiscal year ended June 30, 1951 ; last year contracting was down to $190 million, this year it should be less again and next year perhaps almost nothing.

Great productive facilities that had been brought into being to supply the US stockpile have swung into full production at the very moment when the stockpile that brought them into being was losing interest. And the British stockpile has added its mite to the confusion, appearing as a seller of the metals, of timber and of wool at a moment when markets were least able to absorb current production. The retreat of the stockpiles is naturally not the sole cause of the recession. There is disinflation in America and in Britain ; there is lack of confidence, tempting consumers to buy less and run down stocks. But those who take the simple and sensible view that the raw material recession will last until American business expands again must not forget that a check to commodity prices was likely even apart from the dose of disinflation, because the stockpile objectives had in the main been achieved and productive capacity had been expanded. It will take time to fill the gap of overproduction that these causes have now opened, though the time to be taken will vary from commodity to commodity. But if circumstances differ, something approaching a common peril seems to the primary producing countries to be confronting them. An array of support schemes, restriction schemes and single seller arrangements, scarcely less formidable than that with which primary producers fought their rearguard action against the burdensome surpluses of the 1930s, is their reply.

Most of the control schemes (copper and coffee are exceptions) were not hurriedly devised to counter recession after it had started. It takes years to obtain international ratification of a commodity control scheme complying broadly with the provisions of the Havana Charter for consumer representation. But it will be surprising if recession does not bring more producing countries together. Tea, rubber and coffee are commodities in which that might happen. What, then, are the lessons to be learned about the types of support schemes, their weaknesses and their possibilities?

They run from the almost complete monopoly, through the copybook international cartel down to support funds operated by one country alone representing a minority of the producers. They include those who can dig their heels in firmly at the "floor" price and hold it, as the International Tin Council is trying to do, and those apparently much weaker arrangements, like the New Zealand wool commission which with no help from its much larger neighbour, Australia, can never hope to do more by skilful and selective buying than to cover the retreat for New Zealand farmers.

The monopoly has great strength: its decisions are easy to take and enforce. For International Nickel, which has just announced a ten per cent cut in production, it must have been fairly easy to decide between less production and lower prices. Moreover monopolies in general do not exploit rising markets to the last cent,

Commodity Schemes Summarised

Full international schemes

Tin: Quota restriction for the six main producing countries plus buffer stock of 23,500 tons operating between £880 a ton and £730 a ton plus a further unpublished fund. Present restriction 40 per cent. Consumer representation complies with the Havana Charter.

Wheat: Importing countries underwrite the purchase of 295 million bushels a year (about one-third of world trade) at minimum price of $1.50 per bushel and the four main exporters guarantee to supply that quantity at not more than $2.00 per bushel. Scheme has no production control, but the American farm support policy and American subsidised exports provide an effective cushion. Largest importer—Britain—is not a member.

Sugar: Scheme only covers the "free market" amounting to about 10 per cent of world crop, the balance being covered by long-term contracts, such as the US/Cuban agreement and the UK/Commonwealth agreement. Price stabilisation zone between 3.25 cents and 3.45 cents per lb. Maximum restriction 20 per cent below 3.15 cents per lb. Scheme has no buffer, but Cuba, the largest producer, independently withholds certain tonnages from the market.

Partial restriction schemes

Copper: No formal agreement, but leading producers in US, Canada, Chile, Rhodesia and the Congo have recently arranged to cut back this year's production by 10 per cent.

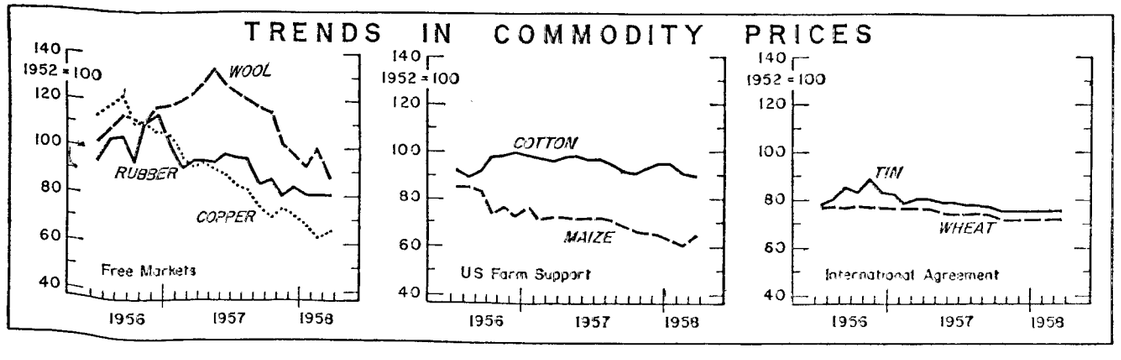
Coffee: The seven Central and South American producing countries have agreed to retain 10 per cent of their crops and ration exports reducing availability by about 20 per cent at the peak period, and certain of them are not to sell below published prices. African producers are not co-operating.

Aluminium: Aluminum Company of Canada has cut back production by 20 per cent, and several American producers have made cuts. To combat Russian competition Aluminium Limited is offering "loyalty discounts" of two per cent to British consumers who pledge themselves to continue to buy Canadian aluminium.

Monopoly selling arrangements

Nickel: International Nickel Company of Canada is the dominant seller in the western world and has cut production by 10 per cent.

Diamonds: The Diamond Syndicate handles about 80 per cent of the world's newly mined diamonds and has about £20 million available to hold stocks off the market if necessary.



Limited support schemes

Tobacco, Wheat, Maize, Cotton: All supported in the United States by the Commodity Credit Corporation which has a total of $7,200 million invested in the US farm commodities. World prices are vitally affected by the prices (sometimes subsidised) at which CCC sells for export and by its barter deals.

Lead, Zinc: US domestic producers of lead and zinc are supported by the strategic stockpile (not the CCC) which until last year was also taking foreign lead in barter against wheat. Limited support has not prevented a sharp fall in prices.

Cocoa: The exception to the downward trend—has doubled in price in the last year, owing to a low West African crop. Selling is stiffened by the fact that the West African crop is handled by marketing boards. International study group is now meeting in London.

Wool: Only one of the major wool producing territories has any support arrangement. New Zealand operates a fund of £29 million to support, if necessary, New Zealand type wools.

so that when markets are weakening the fall may also be less. Such schemes have a great weakness, too, as the diamond syndicate found. It occurs as often as not on a rising market, when supplies at the controlled prices do not cover the demand and outside production is swelled by premium prices.

The weakness of the international quota scheme, with or without a buffer stock to help it, is caused mainly by the presence of the outside producer. This weakness has reached an absurd length in the sugar scheme. The so called "free market" in sugar, which alone the scheme regulates, comprises only about 10 per cent of world crop, large tonnages being covered by private international bargains like the UK-Commonwealth deal. In that marginal tonnage of "free sugar" price fluctuations despite control have been wide. But the weakness is present also in the tin scheme which provides an umbrella for Russian and other outside producers. That weakness can naturally be reduced by fixing the "floor" price low—so low that the outsiders gain little from being outside. It might have been wiser to fix the tin support price at £640 a ton as originally intended instead of at £730; that would have given the outsider less incentive to increase his output. But whatever the figure, the outsider who can produce at the floor price at a profit is always better placed than the member of a scheme whose production has been restricted, for the outsider can spread his costs over full production.

The wheat agreement—something of a special case—has great weaknesses too. It is an import and export agreement with no powers to regulate production either in the exporting countries or in the importing countries, most of which are also producers. Moreover the largest importer—Britain—is not a member. But the scheme rests on the massive shoulders of the United States farm support policy. If farm loans had not been available, if the Commodity Credit Corporation had not mopped up the surpluses, if the combined United States and Canadian carryover had not been allowed to rise to over 1,500 million bushels (more than the whole harvest of those countries for last year) the wheat scheme would by now have fallen apart.

If those international cartels and those monopoly selling arrangements have great weaknesses, how much weaker must be the less formal producer's agreements, such as the understanding between most of the copper producers to cut back production 10 per cent this year, and the less comprehensive arrangements between the south and central American coffee producers to hold 10 per cent of their crops off the market this year. Less rigid they certainly are, and the coffee scheme looks weak without either African co-operation or effective control of production among the member countries. But the objectives are less ambitious too. The aim is not usually to hold a price firm at all costs but to smooth out movements—to cover a retreat or to minimise weak selling. And that limited aim may be easier to attain. That would seem true of copper, where one at least of the groups, Rhodesian Anglo American, has been able to concentrate its whole cut on one mine, close it and run the others at full economic output.

The ideal commodity scheme has not yet been invented. Prolonged and severe bear markets could reveal weaknesses in all the schemes that now exist. But if this recession is a modest one there are likely to be more commodity support plans in operation at the end of it than there were when it began. Those of them that will come through it best are not necessarily the most rigid, nor those that were designed to help the underdeveloped tropical countries. The almost bottomless American purse is still the best support a commodity can have. The Commodity Credit Corporation, despite efforts to cut down its farm support expenditure, is still estimated to spend over $3,000 million on commodity support this year; and how steady are the price charts for wheat, maize and cotton compared with those of other commodities. Producers less favoured by the American fairy godmother will still have to stick it out until confidence returns to American consumers.

DECENTRALISED POWER—I

New Pattern for Electricity

It is one thing to pass a bill through Parliament; another to reorganise an industry. The Electricity Act that became law last July neatly separated the functions of generation and bulk transmission of nationalised electricity in Britain from that of its retail distribution. It could not as neatly define the working relationships between the different bodies which it charged with responsibilities regarding "an efficient, co-ordinated and economical system of electricity supply" under this new dispensation. These are new groupings, composed for the most part of people who were already busily engaged in conducting a big existing industry efficiently. The *modus vivendi* between them can only be worked out in practice.

The Act divided executive responsibility for the industry between:

- a new **Central Electricity Generating Board,** which is a business making electricity and selling it wholesale to retailers. It is at present selling about 85 billion kilowatt-hours a year, for a yearly turnover of about £300 million. It employs some 52,000 people, on power stations and a transmission grid today worth, at

written-down historical cost, some £1,300 million. To these fixed assets it is adding new fixed assets at a rate of about £150 million a year;

and the 12 existing Area Electricity Boards, which buy this electricity wholesale and retail it for something over £400 million a year to the public. They do so through a distribution system which with offices, showrooms and ancillary plant is worth about £950 million; their combined fixed investment is now about £90 million a year. They employ about 130,000 people.

The Act moreover set up an Electricity Council upon which the chairman and two members of the generating board, and the chairmen of the area boards, will serve, along with five members appointed directly to the council—a chairman, two deputy chairmen, and two other members. This council has the duty of advising the Minister of Power on electricity, and of "promoting and assisting the maintenance and development by electricity boards" of the supply system. Specifically, it has the job of raising new loan capital for the industry, whether as at present by means of advances from the Exchequer or as formerly by the issue of British Electricity Stock; it is instructed to see that a general programme of research is carried out in the industry; and to arrange for the establishment of machinery to settle terms and conditions of service in the industry. And it has power, "if so authorised by all the Electricity Boards," to perform services of common interest to the boards. Its executive functions are therefore few, though as the body issuing stock it is classed in the Act as a trading organisation: it has retained some of the former Central Electricity offices in the West End of London, and has a staff of about 500.

The jobs of the generating board and the area boards are thus clear and commercial; each is given the familiar financial duty of securing that its revenues are not less than sufficient to meet current outgoings "taking one year with another." The role of the Council and its relations with the executive boards have not yet fully emerged. So far, the Council has taken over ownership of the industry's research laboratories, but the people working in these, almost entirely on projects concerning generation or bulk transmission, are employed by the generating board. When that board completes new laboratories that are already being built, and if the council should find it necessary to undertake research itself for the area boards, it could do so there—though a good deal of research in the distribution and consumer field is already undertaken by the Electrical Research Association and the Electrical Development Association. As to terms and conditions of employment, the existing joint consultative and negotiating bodies are being carried on under the ægis of the council (though this would not be the only possible interpretation of the provisions of the Act).

The only indication of the relative importance attached to these different bodies by the Government came last year in the fixing of salaries for their respective chairmen: Sir Henry Self, chairman of the Council, receives £10,000 a year, as does Sir Christopher Hinton, chairman of the Generation Board, while chairmen of the Area Boards receive £6,500 apiece. In Whitehall jargon, this rates the advisory council as "a major board" along with the big bulk supply business. But these may have been rates for the gentlemen rather than rates for the jobs. It would be foolish to ignore the fact, as formal relationships within the new organisation of the electricity industry begin to crystallise into practice, that the former chairman and two deputy-chairmen of the Central Electricity Authority which this new organisation has replaced are the core of the directly appointed membership of the Council.

BE that as it may become, decentralisation within this nationalised industry has not ended with the specific provisions of the Act. As the Herbert Committee suggested in 1956 and as Mr Aubrey Jones, the minister responsible for this Act, intended in introducing it, the generating board is devolving responsibility for the day-to-day operations of the generation system outward into the existing divisional organisation of power supply. The 11 generating divisions are being given greater managerial responsibility, comparable perhaps to that of an ICI operating division; five regional directors have been appointed; these again could be compared with ICI "group directors." These five directors, with the assistance of three "engineering project offices," will be responsible for development and plant construction within their regions, as well as for general administration "within broad policy rulings laid down by the Generating Board."

Only a small section at the generating board's headquarters, under Mr C. R. King, the deputy chairman, will therefore be concerned with day-to-day electricity supply: though the national control of the grid system, which transfers blocks of power around the country from the marginally least expensive points of generation to the areas where it is in demand, must continue to be operated from the top floor of the generating board's headquarters at Bankside. Devolution of operating responsibility in a nationally integrated power supply network, in the last analysis, is limited by the nature of the technology. Even today, the power station superintendent is a highly trained engineer and executive who operates his stations in accordance with precise instructions delivered from remote regional or national grid control centres, using coal bought centrally and paying his labour rates determined centrally. Quite inevitably, the industry can see the time approaching when remote control will be used to switch in the power stations from the control centre, instead of ordering them in by teleprinter. Yet the skilled engineers will still be required in attendance at these automatically controlled plant that will make practically no demands upon them for 99.8 per cent. of the time; because on the other two occasions in a thousand automatic control may be unable to deal with some unexpected

disturbance that will need all their experience. Keeping good men satisfied in such circumstances will certainly become one of the great managerial preoccupations of the Central Electricity Generating Board, as of top management in other process industries. Immediately, however, its first preoccupation must be with the introduction of nuclear power into the British electricity system.

This nuclear programme, as increased last year and as slightly cut back last autumn, will make the next decade a testing time for the reorganised electricity supply industry, and not merely for the one board upon which the main responsibility falls. The revision of plant location that it must bring, countering the trend towards generation on the Midlands coalfields with a centrifugal movement towards coastal sites, has already caused revision of plans for the 275,000 volts "supergrid"; it must, moreover, sooner or later affect the bulk supply tariff at which power is sold to the area boards. Pushed far enough, perfectly justifiable revisions of the bulk tariff could have the fortuitous effect of greatly benefiting certain area boards and throwing others into deficit. These boards, newly independent and newly required to make ends meet, will have something to say about that—in the Electricity Council? Certainly the extent to which different boards will themselves be prepared to take risks with really effective differential tariffs for off-peak distribution will vary according to circumstances. Tariff principles offer a good example of the kind of subject in which two or more boards have a common interest, upon which the council might conveniently "promote and assist co-ordination." But most of the problems attending the development of nuclear generation fall in the area where the Generating Board has a clear and complete responsibility—shared technically, perhaps, only with the Atomic Energy Authority. And on the most important of these, which will be discussed in an article next week, co-ordination can be of no assistance. They are questions of economics, technique—and time.

BUSINESS NOTES

Down One Per Cent

THE Bank of England has announced a reduction in Bank rate from the crisis figure of 7 per cent to the merely high one of 6 per cent and in timing the announcement has sprung, once again, a tactical surprise for the markets. In accordance with tradition in adjusting very high rates, the reduction was by a full point, instead of the ½ per cent step that is more usual when rates are not abnormally high. This is indeed the key to this first easing of any of the measures taken at the moment of sterling's extreme peril last September. The psychological *volte-face* that occurred in the exchange market six months ago has been followed by a healthy rebuilding of confidence in sterling and the impressive increase in the gold reserves shown by the end-February statement. Recently, indeed, there have been some signs of a speculative inflow of funds, making it still clearer that the special rate had achieved its special purpose in the exchange market.

Thus this reduction is not intended to imply any change in the Government's domestic economic policy as a whole. It is not designed as a "reflationary" move like the action by the central banking authorities in the United States, nor is it intended as a "green light" that signals the lifting of restraints. All the other measures of last September—and notably, in this context, the direct restraint on bank advances—continue in full force.

The City and the Date

IN the city the issue has long been not whether but when the seven per cent rate should be dropped. The date chosen falls roughly mid-way between the views of those who thought that seven per cent should go as soon as the sterling crisis was over and those who would have preferred to see the budget and the wage arbitrations disposed of first. It now appears that the Bank and the Treasury feel, rightly or wrongly, that Bank rate is neither directly a pointer to the budget nor a decisive influence in the wages argument. There are other reasons beyond credit restriction that will make wage increases now hard to get.

* Ex dividend

The Bank chose a quiet period when the inflow of foreign money that had been substantial at the beginning of the month had died down and when the buoyant gilt-edged market was temporarily surfeited with new issues and it produced a technical surprise. The table shows the impact

of that surprise on Thursday's stock exchange prices. Industrials rose sharply, but without any great volume of business. The movements reflect largely closing of "bear" accounts, largely by jobbers. Gilt-edged rose sharply all along the list. They rose particularly sharply at the short end of it. The discount houses were buyers of short-dated stocks, replenishing perhaps portfolios that they had allowed to run down a week or two ago when some industrial companies were big buyers of shorts.

Two features of the reaction give particular satisfaction to the authorities. Recent issues not yet fully absorbed found a ready demand, the Australian scrip rising from one point discount to par and the Belfast stock from 1¼ discount to ⅝ discount. This seems to clear the way for at least one more gilt-edged issue before the close season of about three weeks that occur and cover both Easter and the budget. It also clears the way for moving away from the 6 per cent interest coupon. The Government broker also experienced a heavy demand for the 5½ per cent stock of 1966. Government funding through the market is intended to continue as forcefully as ever and the Government broker has only raised his selling price on both the 5½ per cent stock of 1966 and on the 5½ per cent stock 1982-84 by approximately the amount that he would in any event have allowed for accumulated interest.

Hopes in the Market

THE authorities may fear that a difficult period must develop in the autumn, when seasonal pressures turn against sterling. It may also be an open question in which direction Bank rate will next be moved, but the Bank of England obviously does not believe either that the bull market in gilt-edged has been killed by the reduction in Bank rate or that sterling has been seriously weakened. There is support for that view in the fact that the difference between the Bank rate of 6 per cent and the Federal Reserve rediscount rate of 2¼ per cent is wider now than it was at the end of last September when the re-discount rate was 3½ per cent and the Bank rate 7 per cent. It is not as wide naturally as it has been in recent weeks and in anticipation of a smaller inflow of funds on covered arbitrage the premium on three months' dollars narrowed from 2⅛c-2⅜c to 2⅛c-2⅛c. But sterling stood up well. The spot rate against the dollar was $2.81⅛ on Wednesday night; it dipped to $2.81 5/16 immediately after the Bank rate announcement, but had largely recovered to $2.81⅛ by Thursday's close.

Impact on Money Rates

FIXED rates quoted by the clearing banks and in the money market are all being reduced by a clean one per cent; the big question mark on Thursday was over the Treasury bill rate at Friday's tender. The rate paid by the banks, and the discount houses, on their deposit accounts comes down from 5 to 4 per cent. The cut of one per cent in the rate on bank advances means that the state boards will now pay 6 per cent, "blue chip" companies 6½ per cent, good "average" borrowers—including some personal borrowers—7 per cent, and marginal borrowers 7½ and even 8 per cent. Lending rates at the Scottish banks also came down one per cent, to 7½-8 per cent. The banks previously had been finding that their task of fending off would-be borrowers had been eased by the deterrent of the high rates; the effect of the one per cent reduction remains to be seen.

The banks' minimum rate on call loans to the discount market comes down to 4¼ per cent; this is paid only on "good" money, which may represent about half of the total. Rates on the remainder will remain flexible, and the average rate on clearing bank money is expected to be about 4½ per cent, compared with 5½ per cent. With the bill rate in the past few weeks hard on 6 per cent—the absence of a further reduction and the decline in total applications at the tenders is evidence of the market's surprise at the Bank rate reduction—there is now plainly scope for a substantial fall in the rate. The capital appreciation on bills held in portfolio will give the discount houses a much-needed relief, a partial offset to the hard knock of last September.

Several hire purchase finance houses paying a fixed percentage over bank rate for deposits, such as 1½ per cent over Bank rate for six months' money and one per cent over Bank rate for three months, are expected now to make the appropriate reduction.

COAL

Signs of Panic

THERE seems little doubt that the National Union of Mineworkers will accept the suspension of Saturday working in the mines this summer, and the continued suspension of recruitment in mining, which have been proposed to it by the National Coal Board as economy measures in view of the falling demand for coal. It seems possible, however, that they will carry on in public their opposition to further switching over to oil: that of the Coal Board has been pressed in private. There is little that the union can do but accept the closing of uneconomic pits that are becoming worked out, which has been going on for years; on the other hand it is rather doubtful whether the Board should think of closing high cost pits other than these.

One would expect panic restrictionism from the miners who see their employment threatened. More disturbingly, there are slight signs of it in the Coal Board, too, in the face of the continued fall in coal consumption. The Board managed to rationalise last year's fall as due to warmer weather, the lack of any increase in industrial output, and, only third, to the effects of industry's switching to oil. But the fact that consumption has gone on down this year has really alarmed Hobart House. Certainly its coal stocks are costly, and it is not at present earning enough to cover its interest payments—though this is not exactly a new experience. For the moment it might be best advised to summon up some of the phlegm with which it was prepared to regard coal shortage to deal with what will probably still be only a temporary surplus, vanishing when recession ends; but it may be more worried about the length of the recession than other people.

PLANNING

Steel in the Long Run

NO long-term programme of capital investment in Britain has ever been explained more fully in public than the current 1957-62 steel programme was last year in the Iron and Steel Board's special report on development. But this week, in a paper on "Industrial Production and Steel Consumption" to the Royal Statistical Society, Sir Robert Shone, executive member of the board, and Mr H. R. Fisher, its chief statistician, described in greater detail the way in which estimates of future steel demand had been prepared—in association with an official working party considering possible long-term development of the British economy. There are two major steps in such an exercise: calculating from the examination of past data the relationship that existed and may exist in future between steel consumption and various other indices recording the performance of the economy: and then deducing what kind of a rate of expansion is possible in the economy over the period in question. This second is essentially an exercise in circular reasoning with the best information available; assessing the implications of various rates of expansion, and choosing the highest that can be achieved without running into limiting factors that cannot be overcome. In Britain, the key limiting factor is usually the balance of payments.

The board's statistical analysis of the relation of steel consumption to economic growth in this country has been taken to a considerable degree of refinement. The broader estimates to which it was applied must contain a considerable element of official policy as well as of economic and statistical calculation. There can be no alternative to such forecasting so long as it takes four or five years to commission a new steelworks (and the same applies to power stations, oil refineries or chemical works, while the periods for coal mines or railway electrification tend to be longer). Any prudent statistician, ideally, would shrink from chancing his arm quite so far. But the only way to avoid it would be to have proportionately much bigger capital goods industries in the economy, which would be able to do these vast jobs more quickly; and that in itself might give the circular reasoning one more twist.

Lifting the Limits

AT the heart of such exercises in guessing at the rate of growth that might be practicable for the British economy, as Sir Robert Shone and Mr Fisher pointed out, "is the belief—or fear—that too rapid a growth in industrial production may itself aggravate the balance of payments problem." Higher production involves higher imports: "with the country on a knife edge of this sort, there are clearly difficulties in pushing up the rate of investment and the rate of industrial progress." The authors had, however, some tentative suggestions to canvass that would moderate the claims of consumption:

> larger current contributions from the public to the Welfare State, such as the Labour Party's plan for an extension of superannuation. "This plan has at its core the proposal to cut current consumption . . . [and] . . . to divert the surpluses coming into the fund in the early years into investment";
>
> collection of a greater proportion of the cost of welfare services through employers' contributions, and of less through the budget, increasing the direct cost of labour to industry and allowing adjustments in tax that might possibly "reduce some of the elements involved in capital costs";
>
> reversing the apparent tendency of publicly-owned industries (e.g., gas, electricity and the railways) to increase their charges to industry more than to the domestic consumer.

If such changes were made, the authors realise, the cost of living would rise, followed by wage claims.

"If these claims were met," they say, "to the extent of leaving real incomes in Britain as before, the wage level in Britain would be higher, but the final price of manufactured goods should not be altered." The object of the exercise would be to raise labour costs in relation to the cost of manufactured goods generally, but particularly to the cost of plant and equipment. This kind of disinterested advice may not commend itself particularly to either side of wage negotiations—or even to more orthodox critics on the sidelines such as the Council on Prices Productivity and Incomes. But it is worth noting that they are not plucked out of the air: they come from comparisons with other Western economies such as Germany, where these greater incentives to employers to invest do exist—and where investment is in fact higher.

RESTRICTIVE PRACTICES

More Cases for the Court

RESTRICTIVE trading agreements concerning over 20 different trades are included in the Board of Trade's third priority list of agreements to be referred by the Registrar of Restrictive Trading Agreements to the Restrictive Practices Court. Eventually, all of the 2,000 or so restrictive agreements on the register are to be examined by the court, which will decide whether they are in the public interest or not. Priority has now been given to about 60 different trades, whose agreements account for nearly a quarter of the total register, but in bringing the first cases before the court the Registrar selects, in each trade, only those agreements that appear to him to be most important or typical. Motor cars, commercial vehicles and tyres are included in the latest list; so is paper, and the distribution of newspapers and periodicals—but not books; agreements between suppliers of material and equipment to the building and contracting industries are well represented; others concern more homely products like baths and bedsteads—and even dustbins.

The Registrar has already had his initial victories. Nineteen of the agreements included in the Board of Trade's two previous directives were abandoned, or had all registrable restrictions removed, after the signatories heard that the Registrar was about to open proceedings; three more were abandoned after proceedings had started but before the case reached the court, and parties to some other agreements have informed the Registrar that they intend to abandon theirs. This leaves, out of the first two directives, a hard core of 43 cases that are now being prepared for the court, and these will be augmented shortly by the cases arising out of the third directive. In 28 of the 43 cases now proceeding, the respondents have needed an extension of time for the delivery of their statement of case; in most of the remainder the period provided for in the rules is still running. In all 28 cases an extension was agreed by the Registrar, and for eleven of them a further extension was granted by the court. Statements of case have now been filed by the respondents in 14 cases and are expected shortly in 17 more. The Registrar has so far formally "replied" to only three of the 14 statements of case he has received; here also an extension of time beyond the six weeks provided for in the rules is generally required. The company or association is then allowed a rejoinder, and when this is received the issues for the decision of the court are considered to be defined. This stage has not yet been reached for any trade.

STEEL ISSUE

South Durham Failure

SOUTH DURHAM Iron and Steel Company's issue of £8 million 6 per cent convertible debenture has been a failure—a failure that portends difficulty for future steel financing operations. City institutions responsible for the issue took the job of finding necessary finance for the steel industry while it is threatened with nationalisation seriously and pitched the terms of the £8 million debenture issue as attractively as they could—a 6 per cent stock at £95, half of it convertible into ordinary shares on terms that were calculated to offer investors reasonable protection against the financial risks of nationalisation. Yet investors fancied little of it and it is disclosed that 93 per cent of the total has been left with the underwriters. In bidding for investors' support the issuing authorities knowingly accepted the unpleasant consequence of forcing down substantially the price of the similar stock of Colvilles.

Lists had been closed before the Bank rate decision and it is possible that on the basis of a 6 per cent Bank rate the result might have been less disappointing. But for the steel industry, committed to plans and therefore needing money now, the outlook is not encouraging. What hope for example has Consett of financing its plans? There remain two possibilities for steel companies needing money. The Iron and Steel Holding and Realisation Agency has power, if it gets Treasury consent, to make loans, to give guarantees as to principal and interest or to subscribe for securities of those steel companies in which it still holds securities to a substantial extent. The words "substantial extent" have not been defined. Nor has the question whether Treasury consent would be forthcoming been answered. It would obviously be granted only reluctantly for it would to some extent be the reverse of the denationalisation operation which is ISHRA's job. But in the bulk of the denationalised companies the agency still holds some prior charge capital that would probably qualify as a substantial investment within the terms of Section 20 of the Act. The other alternative that might be appropriate for those steel com-

Feeling Industry's Pulse

QUICK assessments of the climate of business by what is known in statistical jargon as the *konjunkturtest* method have become common in Western Europe since the war: the Federation of British Industries has now introduced the method to this country, and published its first findings—covering the views industry recorded in late February and early March—last week.

The main feature of this method is that it is addressed to top management—in the FBI's case, to chairmen or managing directors of 750 companies—and that these managers are not asked for any figures. They are asked for a rapid appreciation of their company's situation in qualitative terms: the questions are couched so as to ask whether on a variety of aspects the company is doing better than it was, about the same, or worse. The key advantage is speed: and also, perhaps, that a fair proportion of the answers, arriving by return, appear to have been given straight off the cuff by men right at the top of business, rather than by subordinates less likely to have a full picture of the firm's fortunes.

The results of the FBI's first experiment with this kind of survey are set out in the table. Where their respondent's answers can be checked against other statistical indices—for example, figures of production, stocks and manufacturing figures collected by the Board of Trade—they appear to be broadly in line, which adds credence to the rest of the data. The sample was not stratified to attempt a precise cross-section of British industry: the 542 replies received (a very good response) came about equally from firms employing from 10-200 workers, those employing 200-700 workers, those with from 700 to 2,000, and the big ones employing more than 2,000 workers each. In effect, these particular firms may represent about a quarter of the output of British industry (allowing for the fact that the vast fringe of workshops with less than 10 workers each include a large number of repair shops and service establishments). The big firms, incidentally, tended to sound rather more pessimistic than the small.

The federation has also classified the replies from firms into four industrial groups: metals engineering and vehicles, building materials, textiles clothing and footwear, and "other industries" (which last includes food, drink and tobacco, though somewhat under representing them, and the chemical trades). Broadly, the different patterns of replies suggest that the first, engineering group, was doing about as well as the whole sample; that the building materials and textiles groups were doing rather worse; and that the "other industries" were doing rather better than average.

All of the questions to which answers have been published—except for those relating to the amount of money business expects to spend on fixed investment this year, and the amount that it expects newly to authorise this year—are based on a comparison of the current business outlook with six months ago. The federation is going to repeat its survey—perhaps quarterly, or at other convenient times—and might later perhaps be able to publish some of its members' specific estimates of the forward course of business. Some pointers to this, incidentally, are given in its figures about how the current rates of new orders compare: it should not be ignored that these are the first indications about new orders that British industry as a whole has ever been prepared to publish.

This unweighted method, by its very nature, requires cautious interpretation: 20 concerns reporting that their business is down could in terms of output value outweigh 40 on the other side saying that business is up. But its speed, its approach to the top men in industry rather than their statistical departments, and the broad coverage of its questions make it a valuable addition to short-term business indicators—the ones that are always most in demand, and most deficient. The FBI is to be congratulated on this expert and successful move into a field in which in this country perhaps only an organisation as trusted by industry as itself could successfully venture: and also, perhaps, upon a solid and sensible advance in communications between industry in general and the public.

Variations on a desk

Concentrate for a moment, if you will, on the accompaniment to the Executive Suite—particularly the wood section, because we have introduced some interesting variations on a desk. Designed by Henry Long, M.S.I.A., this desk is built in three lengths. We've also built a number of drawer units etc. which can be fitted in a variety of ways to each of the three basic sizes, giving you many different arrangements to suit everyone's needs.

The conception of a desk such as this enables you to provide your individually graded executives with individually graded desks, yet retain the similarity in design which is essential to any office furnishing scheme.

The British Petroleum Company is establishing hundreds of service stations, and training local talent to operate them in West Africa, where twice as many motorists are now fuelling at BP stations as three years ago.

West Africa on Wheels

IN AN AREA larger than Europe – where one's next door neighbour may live hundreds of miles away – roads are West Africa's vital arteries, and petrol its life blood. Anyone who helps transport along in West Africa to-day is contributing in a vital way to its economic and cultural future.

Operating in more than twenty West African countries, whose combined area exceeds 5,000,000 square miles, BP is making three great contributions to transport development: by supplying petrol and lubricating oils that withstand the extremes of West African weather; by steadily extending its network of service stations; by training local talent to operate them safely and skilfully.

Oil is helping to raise West Africa's standards of living and will increasingly do so. There, as elsewhere throughout the world, The British Petroleum Company is speeding the wheels of progress.

THE *British Petroleum* COMPANY LIMITED

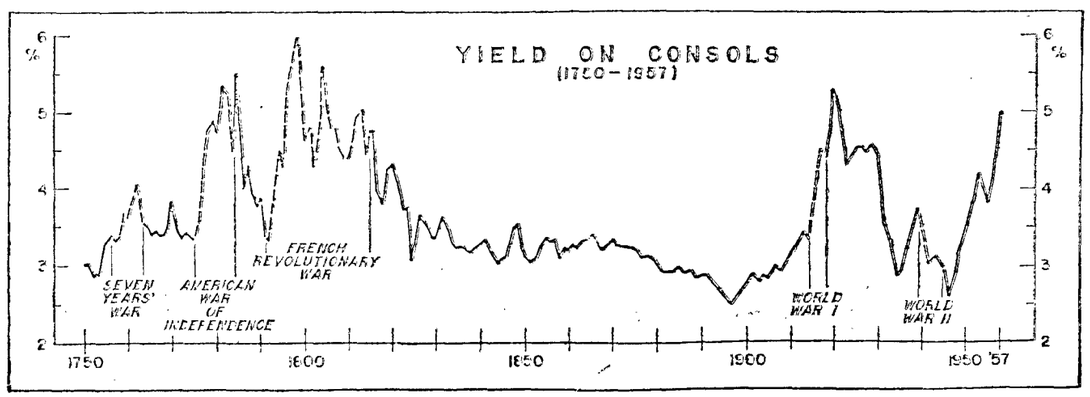
funds that the agency has wholly sold as well as for those in which it still holds prior charges is to turn yet again to the Finance Corporation for Industry.

RHOANGLO ISSUE

Pointless Intervention

THE tug of stock market forces is the best and least arbitrary test of any new capital issue. But the Government has chosen to interpose Treasury consent between the would-be borrower and the market and has appointed the Capital Issues Committee to advise the Treasury. That committee, working on Treasury instructions that are public knowledge but not wielding a rubber stamp, does not explain its decisions. Some of them appear arbitrary and inexplicable. The trimming of the Rhodesian Anglo American issue is one such. Why be tough with that company and not another? Why, as the statistics appear to show, be tougher with overseas than with domestic applicants? Is the development of Commonwealth resources any more or any less precious to the Government than the growth of British industry?



To pay for the further development of Bancroft and other mines in the copperbelt, Rhoanglo proposed to offer to its ordinary shareholders, of which less than half are British residents, £4 million of a 6 per cent loan stock at 95 in the ratio of £3 of loan stock for every 10 ordinary shares held. Subscribers were offered the option at any time up to March 31, 1963, to take up 1,000,000 ordinary shares in Rhoanglo at 80s. a share either by the tender of the loan stock or by cash in the ratio of one share for every £4 of loan stock held. The CIC however decided that only £500,000 of the loan stock could be offered to shareholders in this country and that it could not allow shareholders on the British register to take up the options by offering cash. What prompted the decision? Was it because Anglo American, which is an overseas shareholder

Consols Then and Now

INTERESTING reflections on the historical perspective of the present level of yields in the gilt-edged market were made last week by Professor J. R. Hicks in a paper entitled "The Future of the Rate of Interest" read before the Manchester Statistical Society. Professor Hicks pointed out that the postwar doubling of the yield on Consols, from 2½ to over 5 per cent, was unprecedented, in times of peace, over the whole two hundred years in which Consols have been in existence. Indeed, with the exception of the early 1920s, the yield of 5 per cent has not been seen in peacetime since the late eighteenth century—the aftermath of the American War of Independence. In the long peace of the nineteenth century, the yield was remarkably stable at between 3 and 3¼ per cent, ending the century even lower and enabling Goschen to make the conversion from a 3 per cent to a 2¾ and then 2½ per cent coupon.

After the unprecedented achievement of a cheap money war, the interest rate has sprung to record levels. The underlying reasons are well known—the great demand for capital and the persistent inflation. Professor Hicks now asks: if inflation is ended, can a substantial decline from these peaks be expected? The conditions of the nineteenth century are little guide; the stability then reflected in large degree the absence of financial crises, as we now know them; in the nineteenth century style crisis, a Bank rate of 7 per cent caused no more than a ripple in the Consols yield curve. Today, Professor Hicks points out, "experience of financial crises (with high short-term rates) is itself a factor tending to raise long-term rates for quite a time after each crisis is over."

Why then the contrast with the thirties? Then, exchange stability was discarded as an aim of policy; at a time of pressure, the exchange was let go and interest rates kept down. Since the war there has never been any real choice about whether this system could be restored; for the reserves have not been large enough to assure the world that Britain could keep a floating rate under control. Devaluation or a floating rate have never been an alternative to high interest rates. High rates have reflected not only Britain's inflation and its great demand for capital investment, but also its deficiency of liquid capital. It follows that, to get rates down, it is not enough—though it is, of course, one prerequisite—to end inflation. Britain also needs an injection of more international reserves, perhaps on the lines suggested by Sir Oliver Franks. All this is unexceptionable; though the prospect for interest rates here might surely be altered, too, by a really big change in the climate of the world economy.

in Rhoanglo and which is underwriting the issue, has just raised some new money over here? Were the cash options turned down because if the options were exercised in this way that would in effect amount to a further cash issue?

Whatever the reason, all that the CIC's intervention has done is to drive the ownership of Rhodesian Anglo American still further overseas. British shareholders have now been given the right to apply for £500,000 of the loan stock (so they may not get all they apply for) and

they will be able to exercise their options only by the surrender of stock. The remaining £3½ million of the stock is offered to overseas resident shareholders, who alone in effect will be able to secure excess allotments. This the new money for the copperbelt will be provided either through full application lists from the public or through Anglo American, which can either take up the stock as an underwriter or apply for excess stock as a shareholder in Rhoanglo.

BANK CREDIT

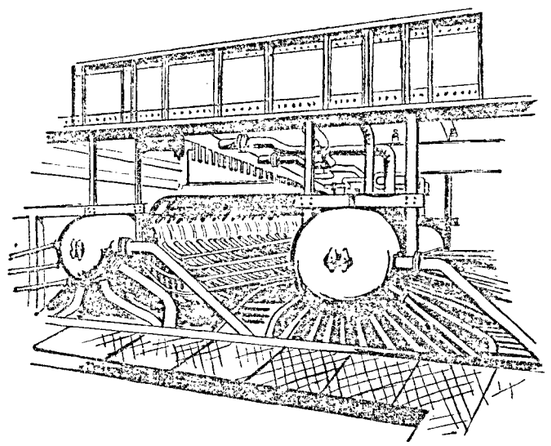
Advances Lose their Buoyancy

A CLEAR indication of the falling pressure on bank advances emerges from the latest quarterly classification published by the British Bankers' Association for the three months to mid-February. This is a quarter in which demands on the banks are seasonally heavy, because money is needed to pay tax bills and carry stocks over the slack period before the spring. This year's increase is much smaller than usual, at £9.6 million. Advances by the clearing banks are up by £17.8 million; the other banks show a reduction, by £8.2 million.

The slackness of advances is fairly evenly spread throughout the classified groups. The only notable increases are for engineering and textiles other than cotton and wool, which have usually shown a strong increase at this season, and for quarrying—up suddenly from £3.7 million to £8.5 million, presumably representing some involuntary stock-building by those who supply the building industry. Agriculture and the food, drink and tobacco group show notable declines, and are also considerably below their levels of a year ago. The nineteen industry and trade groups together show a net rise of £2.9 million, the smallest in recent years; advances to these groups are now a little below their levels of February, 1957. In the financial and miscellaneous sector there are small increases to the personal and professional group, and to the other financial group (which includes the big financial corporations, and which made a big repayment in the preceding quarter).

STOCK EXCHANGE TRENDS

The Folklore of the Market



A FEW academic minds have occasionally been turned towards stock market values; Lord Keynes was no mean prophet and there have been other successes. How should one assess Professor Sargant Florence who, now engaged in a wider study, contributes an article in *The Three Banks Review* on what he calls the "folklore" of the stock exchange? He looks for statistical correlations (if any) between dividend yield and capital gains and between earnings yield and capital gains on ordinary shares over the fifteen years between September, 1936, to September, 1951. It was a period of inflation, beginning and ending with a peak of a stock market boom. Investors in 1936 were not buying equities in anticipation of fifteen years of inflation, of war or of a Labour Government; their short sight was focused on the first effects of Britain's limited prewar rearmament programme. The whole was a period of big changes in taxation, company structures, company law and in the composition of the investing public. Throughout much of it dividend restraint was common doctrine. Would Professor Florence's findings hold good for more recent years when dividends were being pushed up? Perhaps it would be better to look at his survey as a piece of economic history rather than as a representative period. Granted that limitation, how useful or valid are Professor Florence's conclusions?

Statistically, he concludes, there is "partial" confirmation of the "folklore" that in a period of inflation highly geared equities will gain more in capital value than lowly geared ones; that there is little or no evidence that equities with high earnings yields at the beginning of the period will gain more in capital value than those with low earnings yields; and that there is absolutely no statistical evidence that equities with low dividend yields at the beginning of the period will gain more in capital value than equities with high dividend yields at the beginning of the same period. Do these conclusions add up to anything more than a statement that investors do not always make the right pick? Moreover, Professor Florence has treated earnings yield and dividend yield as independent variables. Surely, it is the ratio of earnings yield to dividend yield that matters. Has Professor Florence considered testing the behaviour of equities according to the relationship between, say, earnings and dividends yields through the well worn device of times covered?

The Myth of the Market

BUT Professor Sargant Florence makes the greatest play with a discovery that over a period dividend gains (that is the sum of dividends received) are closely correlated with capital gains. No investor had ever assumed otherwise. Although to different types of taxpayer the two have different weights they are still two sides of the same coin. An investor buys shares in the expectation that earnings and dividends will rise, carrying the price of the shares up. What Professor Florence has sought to destroy is not a criterion of investment policy but an insubstantial myth which does not impinge on any investment decision. His findings, which in effect boil down to the statement that high yielding shares over a long period of time may do

High-pressure Steam

The higher the pressure and temperature the higher the thermal efficiency attainable in a boiler. With thirty years' experience of large power station and industrial steam plant, Simon-Carves have for some years been developing designs for extra-high-pressure forced-circulation boilers capable of steaming at 'super-critical' pressures, with a marked increase in thermal efficiency and many other advantages. They are now building for the Steel Company of Wales the first such plant in Britain, which will generate 240,000 lb per hour of steam at 3,300 lb per square inch and 1060°F with re-heat to 840°F—the most advanced steam conditions ever commercially used in this country.

ENGINEERS, DESIGNERS AND CONTRACTORS TO WORLD INDUSTRY

HS294

SAS fly superbly all over the world

Technical efficiency and reliability second to none . . . such meticulous maintenance, such strict schedule-keeping . . . more care for the comfort of passengers (such as the new Royal Viking lounges for trans-Atlantic travellers at no extra cost) . . . famed Scandinavian hospitality, wonderful cuisine —that's why SAS hold their foremost position in World air travel.

Pioneers and acknowledged leaders in Polar flights, SAS span the World, flying to 84 cities in 42 countries on 5 continents.

ask your Travel Agent— he knows SAS

SCANDINAVIAN AIRLINES SYSTEM

as well as low yielding ones, will not alter the way an investment decision is taken. An investor will continue to look at the relationship between current earnings and dividends, at the management of the company, and at economic and industrial prospects. He will continue to make *ad hoc* decisions; some of his guesses will be right and some wrong.

NICKEL

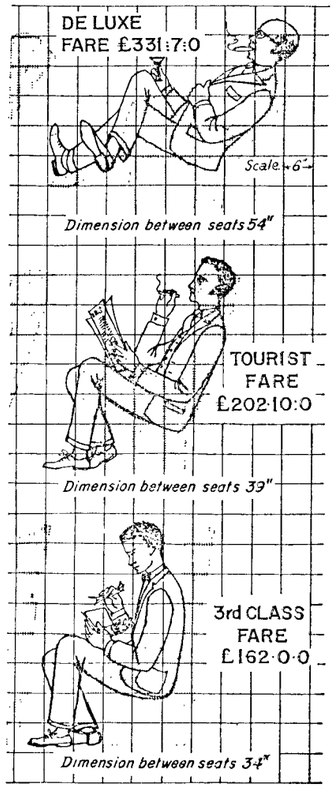
Production Cut Back

COPPER, aluminium and now nickel: one by one the metal producers, seeing demand falling away just at the moment they had new capacity ready to go into production, are being forced to cut back output. International Nickel, producing about 25 million lb of nickel a month out of a free world total of 40 million lb, is cutting its nickel production by 10 per cent, or 2½ million lb a month. The company is still the dominant seller in the western world, though its share in world production has been declining. Current production of this and other producers is now much in excess of market demand as well as of consumption; stocks of unsold nickel in the hands of the company and the United States government are close to 100 million lb, and that excludes stocks held by the American stockpile and by consumers. The 10 per cent cut is described by the company as the minimum required at present. It is accompanied by a similar cut in the output of subsidiary metals refined from nickel ore, including copper and platinum. The surplus has arisen largely because of the depressed state of the US steel industry. Defence needs and stockpiling had accounted for about 40 per cent of world consumption and were responsible for the stepping up of production. The fall in defence requirements freed more nickel for civilian use and the additional supplies were readily absorbed until the recession gathered momentum. The suddenness of the turn round in the market looks surprising. Mr John F. Thompson, the chairman of International Nickel, explains it thus: "Civilian industry, accustomed for eight years to thinking in terms of inadequate supplies of nickel, has not had sufficient time to adjust itself to conditions of plentiful supply."

But there is ample evidence in the full report of International Nickel that the company has not lost faith in the longer term outlook. It is pushing ahead with the development of new sources of supply in Manitoba, due to come into production in 1960. Last year capital expenditures at $44 million were the highest in the company's history. But they will be dwarfed this year when further outlays on the Manitoba project are expected to raise total expenditures to between $60 million and $70 million. This does not suggest that the International Nickel directors are taking a "bearish" view. They have chosen to cut production rather than to reduce prices and British consumers will still have to pay £600 a ton for the metal. It remains to be seen how this cut back in production will affect shareholders in International Nickel, who received a maintained dividend of $3.75 per common share for 1957 despite the decline in earnings from $6.50 to $5.90 per common share.

Procrustes Flies the Atlantic

TEN days from now, on April 1st, the 14 airlines operating on the North Atlantic will introduce their new, third class services at fares 13 per cent below current tourist rates and 20 per cent below the higher tourist fares that will also be brought in then.



For a price concession as high as £40 on a London-New York return ticket, the airlines expect to extract a decent toll of discomfort from their passengers. The scale drawings on the right show very roughly (perhaps not too unkindly) how it is intended to combine this with the packing of an extra number of seats into a given section of cabin.

The most precious commodity on an aircraft is leg room, measured from the back of one seat to the back of the next. The technical term for it is "pitch." Secondarily, it is governed by seat design. The practice among airlines is to provide a lavish allowance of leg-room on de luxe services: the top drawing illustrates the 54-inch pitch used by BOAC. For standard first-class services (not illustrated) the pitch is generally 42 inches although on one or two airlines it is as little as 40 inches. On tourist services, the majority of airlines provide for a 39-inch pitch, but some, such as SAS, Swissair and Iberia, have trimmed this to 37-38 inches.

The new third-class service is, by a definition agreed between the airlines, to have a pitch of no more than 34 inches. Ideally, this would require a rather smaller human race. Practically, it has led to a flurry among seat designers to make it possible for third-class passengers to stretch their feet as far as possible beneath the seat in front, of which the back will otherwise be jammed hard against their knees. The average width of seats, measured between the arms, fluctuates at present around the 18 to 19 inches average; on third-class services this is being trimmed to 17 inches—or in the case of BOAC, 16½ inches, which threatens to be a tight fit for some passengers.

Meals are—again by definition—limited to sandwiches and hot drinks but since the term covers Scandinavian, or one-slice-of-bread sandwiches as well as British, or two-slices-of-bread ones, the real difference is that third-class passengers will get cold meals only. Fear of what might happen were every passenger to board the aircraft with his own lunch-box, has prevented the airlines from imposing more spartan standards.

Aware that they are in fact charging the tourist passenger £8 an inch for each of the 5 extra inches of leg room that he enjoys over the third-class passenger (or more on services where tourist pitch is below 39 inches), many airlines are trimming their tourist services to vanishing point. Both SAS and El Al are abolishing them entirely; Swissair is providing only four tourist to 57 third-class seats on its newest aircraft; bigger operators such as Pan-American and BOAC have reduced their tourist seats to about 20 per cent of the total.

ATOMIC POWER

The Next Stage

SPEAKING on separate occasions in London this week, Sir John Cockcroft and Sir Christopher Hinton (now chairman of the Generating Board) both confirmed that after a period of considerable confusion—lasting several years—a firm decision has been made on the shape of a nuclear power station to succeed Calder Hall. Having experimented with most of the exotic designs popular in America and on the continent, Atomic Energy Authority engineers have come by process of elimination to believe that the economic future of nuclear power lies not with these but with what amounts to a hotted-up version of the classic Calder Hall system. A sharp rise in gas temperatures should lead to an equally sharp drop in capital costs—which at present limit the Calder Hall system to base load operation. The technical difficulties associated with the use of high gas temperatures are severe, but in theory at least well within present engineering technique.

These are matters of acute concern to the four or five consortia in British industry working on big power station design. The managing director of GEC's atomic division said last week that, where eighteen months ago his company submitted tenders for a twin-reactor power station of 375 megawatts of electrical output, they could today offer an output of 800 megawatts from an installation of precisely the same size, with a capital saving of 20 per cent per kilowatt. Other companies are making roughly similar progress and if the Generating Board takes full advantage of these technical improvements, only six more stations will be required to meet the existing nuclear power programme. The shadow of unemployment—or at least under-employment—lies across the consortia's drawing offices; a useful volume of new orders depends on just such a technical break-through to find a reactor suitable for part, and not exclusively for base, load operation.

The AEA's choice of this particular reactor system, after such lengthy examination of more fashionable alternatives, suggests that the research programmes of the European members of the Euratom or OEEC atomic organisations might be advised to take a closer look at their own essentially conventional research programmes before committing themselves to expensive experiment with what—if the British view is correct—are out-dated and discredited concepts. Sir John Cockcroft, who is now the sole arbiter of nuclear research in this country, is a man whose views are strongly held but never lightly arrived at; it would be quite wrong to think that each of the reactor types which Sir John said had been examined and rejected did not at one time have their supporters inside the AEA.

MANUFACTURERS' STOCKS

Not Much Stockbuilding?

MANUFACTURING output rose only slightly last year; over the same period, the prices of some of the raw materials used fell; and the increase in the prices of finished manufactures was much slower than before. So it is not really surprising that the total value of manufacturing stocks increased much less last year than in any year since the Board of Trade's survey of stocks started in 1954. In total value stocks rose by about 8 per cent, compared with increases of 10 per cent in 1956 and 13 per cent in 1955. During the last three months of the year the total value did not change at all, small increases in the value of stocks of raw materials and finished goods about offsetting a decline in the value of work in progress.

(End-1955 = 100)	End-March	End-June	End-September	End-December
1954	...	...	...	88·5
1955	93·5	95·5	98·3	100·0
1956	103·9	107·0	108·4	109·9
1957	114·5	116·2	118·5	118·4*

* Provisional

Among particular groups of industries, the year's increase in stocks—up to last September, that is, as details for the final three months are not yet ready—was smallest in the food, drink, and tobacco trades. Between the autumn of 1956 and 1957 the stocks and work in progress of those industries rose in value by about 6½ per cent. The metal manufacturing, engineering, shipbuilding and vehicles group of industries, on the other hand, increased their stocks by some 11 per cent.

STOCK EXCHANGE STATISTICS

Sizing Up the Market

FOR those who like to know the size of things, the annual publication, "*Interest and Dividends upon Securities Quoted on the Stock Exchange, London*," will have its attractions. Whether it adds a great deal to knowledge about stock market behaviour—especially when there are such unfilled statistical gaps as figures for turnover in the market—is another matter. How big the London Stock Exchange is can be seen in the accompanying table. The compilers of these statistics suggest that out of the gross total of interest and dividends for 1957 of £1,369 million (up by 4 per cent on the 1956 total) not more than £500

	1955 £ million	1956 £ million	1957 £ million
*Nominal capital** :—			
Loan capital	20,546	21,577	21,563
Preference capital	1,224	1,240	1,250
Ordinary capital	3,226	3,492	3,793
Total	**24,997**	**26,309**	**26,605**
*Market value** :—			
Loan capital	17,218	16,831	16,531
Preference capital	1,190	1,059	1,032
Ordinary capital	10,171	9,530	10,880
Total	**28,579**	**27,240**	**28,443**
Gross interest & dividends† :—			
Loan capital	627	676	694
Preference capital	73	73	71
Ordinary capital	524	567	603
Total	**1,224**	**1,316**	**1,369**

* At end June. † Paid during the calendar year.

million can "possibly reach the pool of personal disposable income."

In the year to end-June, 1957, there was an increase in the market value of quoted securities, all of which being accounted for by the rise in the value of ordinary shares. Since June, however, stock market prices have fallen heavily and an additional estimate in the booklet shows that the value of all securities over the year to December 31st last fell by £1,500 million to £23,371 million. Excluding new issues made last year, the fall amounted to £1,200 million, of which £804 million related to fixed interest stocks and £396 million to ordinary stocks.

THE TERMS OF TRADE

A Further Improvement

THE cost of British imports declined still further in February while at the same time the index of export prices moved up a point in contrast to the fall in the previous month. As a result there was, on the conventional reckoning, a favourable movement of two points in the terms of trade (the ratio of the cost of imports to exports).

But these price movements may be a mixed blessing to British trade. With world markets shrinking it is hardly good news that there have been increases in the British export prices of cotton goods, synthetic yarns and fabrics, and many engineering products, even though the total effect is only small.

CHANGES IN TERMS OF TRADE
1954=100

	Import prices			Export prices		Terms of trade
	Total	Food	Basic materials	Total	Engineering products	
1955	103	101	104	102	103	101
1956	105	101	105	106	107	99
1957	107	101	110	111	112	96
1957 :—						
October	103	93	107	111	113	93
November	103	95	107	111	114	93
December	101	96	104	111	115	91
1958 :—						
January	100	95	102	110	114	91
February	99	94	101	111	115	89

On the import side, there were declines in the prices of butter, eggs, potatoes and sugar and, among basic materials, wool, rubber, iron ore and scrap, and copper. Imported fuels also fell in price—the first change recorded in the index since last October. How much more Britain may hope to reduce import costs is doubtful; the downward trend of commodity prices seems to have levelled off in the last few weeks.

MOTOR INDUSTRY

Output Keeping Up

FOR the last four months motor car manufacturers have been producing at the rate of between 4,100 and 4,200 vehicles a day, 75 per cent more than in the same, petrol-rationed months of last winter. February's total of 83,459 cars, some 4,173 a day, was slightly lower than in January but BMC lost some output last month through labour disputes. Almost half of this record, but since November largely level, output has been shipped to overseas markets; exports account for 165,600 of the 344,000 cars produced during the four months. Most of the rest have been going into dealers' stocks at home in anticipation of a really good opening to the main selling season this spring. Another month should show whether these hopes are to materialise.

The current rate of van and lorry production, some 1,300 vehicles a day, is also much better than a year ago, but only 36 per cent more than the really low figures of last winter. Both output and exports of commercial vehicles last month were fractionally better than in January. But this side of the motor industry is still producing 8 per cent fewer vehicles than the rate of 1,410 a day that it was managing two winters ago while production on the passenger car side is now 15-16 per cent higher.

METAL FATIGUE

The Last Straw

UNDERSTANDING of metal fatigue took a big step forward following the Comet inquiry in 1954-55, but not far enough to prevent the British European Airways Viscount, Whisky Echo, from crashing in March last year when fatigue fractured one obscure $\frac{9}{16}$ inch bolt in the wings. The report of the inquiry into this crash, published last weekend, left no doubt that fatigue was the cause.

Whisky Echo was the first of a limited series of Viscounts known as the 701 series. It had been used extensively by Vickers for flight tests and then by BEA for pilot training: by the time of the crash it had done the second highest number of take-offs and landings of any Viscount built. The flap mechanism was modified on this and 21 other Viscounts after they had been built, and a minor part of the work involved enlarging certain bolt holes that held the guide rails on the wings to take a fractionally larger diameter bolt. It was an awkward and inconvenient job to do, and on Whisky Echo the holes in one guide rail got out of alignment in the process. When the aircraft was coming in to land the bolt sitting uneasily in those holes broke as the flaps slid down the guide rails. Air pressure forced up the loosened corners of the flaps, and the aircraft started to bank gently to the right. As it did so broken components inside the wing nipped the control wires running to the ailerons and paralysed the control system of the aircraft, which went on to crash into houses close to the end of the runway. A high proportion of "fatigued" bolts were subsequently found on other Viscounts modified in the same way as Whisky Echo.

A break of this kind would not have been serious had the aileron controls not tangled with the broken metal. Nor would it necessarily have happened at that time if a lug had not broken first and thrown an extra load on the offending bolt (which, however, it was designed to carry). But break it would have done, at some time or another, because of the fatigue stresses to which it was subject. The first lesson of this crash is that single bolts in tension should not be used as the sole support for primary structures (Viscount flap attachments have already been modified to divide the load). The second is that a higher standard of workmanship is needed throughout the entire structure of an aircraft than is always realised. This is a point that the Air Registration Board has been attempting to drive home to the industry for some time.

SHORTER NOTES

Mr S. R. Hogg, a chartered accountant, has been made chairman of Canadian and English Stores, taking the place of Lord Milner. Mr Hogg was the chairman of the shareholders' committee which recently published a critical report of the affairs of the company.

* * *

Hire purchase and other instalments debt rose about £4 million (1 per cent) in January to an estimated figure of £488 million at the end of that month. There was a seasonal reduction of about £1 million in the instalment debt owed directly to household goods shops but debt to the finance houses rose by about £5 million, mainly reflecting increased credit for commercial vehicles and second-hand private cars.

* * *

Appearing before the Railway Staff National Tribunal this week during the hearing on the railway unions' wage claims, Mr A. B. B. Valentine let it be known that the Transport Commission's deficit for 1957 was "some millions higher" than the 1956 loss of £54½ million and that the outlook for 1958 is, at the moment, "no brighter." Accordingly, certain economies in working expenses and services have had to be made.

COMPANY AFFAIRS

GALLAHER

GALLAHER is the exceptional tobacco company. Its profits and dividend last year went up, while those of other tobacco manufacturers went down. The comparison is not entirely fair to Gallaher's biggest rival, whose accounts are drawn up on October 31st and include only about one month of the higher selling prices while Gallaher's year to December 31st included about three months of higher prices. But that price advantage cannot be the only reason why the trading profits of the Gallaher group have risen from £5,060,995 to £6,562,896 and, within that total, the trading profits of the parent company from £4,238,442 to £5,626,022. It is clear that in the home market Gallaher, and especially it may be assumed "Senior Service" cigarettes, gained ground in competition. The biggest trade competition comes from "Players", manufactured by Imperial Tobacco which has always refused either to confirm or deny that it is a big shareholder in Gallaher.

Imperial Tobacco reduced its ordinary dividend from 21 to 20 per cent, even though, as Lord Sinclair made clear at the annual meeting this week, there may be an improvement in "Imps" profits this year. Gallaher has raised its ordinary dividend from 17½ to 20 per cent. Some improvement in Gallaher's net earnings (which have risen from £2,143,494 to £2,887,179) and some increase in the dividend has been anticipated in Throgmorton Street. But after the dividend announcement the £1 ordinary stock units rose from 23s. to 24s. 3d., to yield 8¼ per cent, as compared with nearly 10 per cent offered by "Imps" at 40s. 3d.

AEI and ENGLISH ELECTRIC

THE coincidence in timing of Sir George Nelson's speech to the shareholders of English Electric and the publication of the admirably full accounts of Associated Electrical Industries make a comparison between the experience of these two giants of the electrical manufacturing industry inevitable—and instructive. Do the differences arise simply because the range of goods made by the two groups is not the same? Do they reflect the fact that English Electric manufactures aircraft and AEI does not? Or are there more fundamental causes?

Last year AEI secured the bigger advance in turnover: its sales rose by 12¼ per cent to about £150 million, while English Electric's sales rose by 4 per cent to approximately the same figure. But it is English Electric which possesses the bigger order book; at the end of the year the value of its uncompleted orders was £250 million, against £180 million, while the value of uncompleted orders on AEI's books was £180 million, against £152 million. Both groups are big exporters and both see potentially big markets in the growing demand throughout the world for electric power. Presumably Lord Chandos, the chairman of AEI, will not disagree with Sir George Nelson's summing up of export prospects: "There is as yet no evidence of a serious diminution in the rate of incoming export orders. Nor have we experienced any unusual cancellation of existing orders. Our order book is very satisfactory and, as the situation is today, I think I can say we have no great cause for anxiety. Nevertheless, if the North American recession were to deepen, and to extend beyond, let us say, the end of 1958, cause for anxiety might develop."

The most striking difference between the two groups is to be found in their profit margins. English Electric's sales rose by 4 per cent and its gross income before tax by 2.7 per cent (from £6,735,195 to £6,916,989) but for transitional losses on Vulcan Foundry its margins would have been better still; AEI's sales rose by 12¼ per cent but its gross income before tax fell by 3.1 per cent (from £10,307,614 to £9,988,476). It looks as though AEI was less successful in combating the pressure of higher wages on margins than was English Electric.

Last year English Electric raised about £16½ million by a rights issue of ordinary shares and by a debenture issue and though its working capital commitments have again risen it has no immediate intention of coming to the market for more new money. AEI did not come to the capital market last year. May it be its turn to do so soon? Its net fixed assets have risen from £33.7 million to £41.9 million, its stocks from £64.9 million to £66.9 million and its debtors from £38.1 million to £44.1 million. In the meantime, its holdings of liquid assets have fallen sharply from £10.3 million to £2.1 million and its bank overdrafts have risen from £275,000 to £6.3 million. Both companies last year left their ordinary dividends unchanged (at 14 per cent for English Electric on its increased capital and at 15 per cent for AEI on its unchanged capital). Both companies' £1 ordinary stock units are quoted at the same price—49s. 9d., though the AEI stock is ex-dividend and the English Electric stock is not. Thus the AEI equity offers a bigger yield—just over 6 per cent, against 5⅝ per cent offered by the English Electric units.

J. LYONS

THE steps that the directors of J. Lyons have taken along the road towards more liberal dividends are easily traced. Last year, the ordinary dividend was raised to 25 per cent after ten years of an unchanged payment of 22½ per cent. Then in November the interim dividend was raised from 5 to 10 per cent, accompanied by the conventional warning that higher interim did not necessarily imply an increase in the total distribution. Then a 100 per cent free scrip issue was announced unaccompanied by any statement about dividend policy. It was that significant omission that made investors take notice. The "A" shares were marked up and there was talk of a possible final payment of 10 per cent.

The stock market was not far out in this guess. The directors have now said that, barring unforeseen circumstances, the final dividend on the increased capital will be 1s. 10d. per £1 share (or 9⅛ per cent). Thus the effective increase in the total dividend on the £1 shares will be from 2s. 6d. (or 12½ per cent) to 2s. 10d. (or 14⅛ per cent) on the new capital. The "A" shares still in their old form were marked up on this news from 98s. 9d. to 101s. The projected dividend yield is £5 12s. per cent.

BRADFORD DYERS

IN June, 1956, Bradford Dyers Association sold its controlling interest in Beida Dyers to an Egyptian bank. This company was a big profit earner for the BDA group and in 1956 the omission of its earnings from the consolidated accounts brought profits sharply down—from £2,149,005 to £1,051,093. Bradford Dyers has still not received any dividend on its minority shareholding in Beida Dyers nor any interest accrued on its bank deposits of £1,126,021 in Egypt. Both remain sequestrated.

Thus the accounts both for 1956 and 1957 are ex Beida Dyers. The comparison between them does not inspire optimism. The consolidated trading profit has fallen by £175,406, to £875,687. But within that total, profits of overseas subsidiaries (down by £106,666 to £152,979) have fallen much more sharply than profits of the British parent and its British subsidiaries (down by £68,740 to £722,708). An interim statement last July suggested that the trouble was not a contraction in trade at home but a further reduction of profit margins in competitive markets. The same factors undoubtedly apply to the full year's trading, with the additional possibility that trade may have been contracting in some countries overseas.

The net profit of the group has fallen from £277,231 to £195,754 and, following the cut in the interim ordinary dividend from 4 to 3 per cent, the final payment has been halved, from 6 to 3 per cent. The total dividend is thus cut sharply, from 10 to 6 per cent, and on this announcement the £1 ordinary stock units lost 1s. 4½d. to 12s. 10½d., to yield 9.3 per cent.

DE BEERS

BUYING De Beers deferred shares is the direct route into the heart of the diamond syndicate. Through De Beers, the Oppenheimer interests control a rich group of diamond producers in Southern Africa and De Beers controls through direct and indirect shareholdings the Central Selling Organisation. Unfortunately the preliminary announcement for 1957, leaving the dividend unchanged for the seventh year running at 200 per cent, is as sparse and unsatisfactory as its predecessors. Perhaps soon the directors will see that a preliminary statement which merely records the net profit of the parent company and not the group profit is not in keeping with modern practice. The net profits of the parent company, which last year rose from £9,574,847 to £10,303,500, relate to some of the diamond mines controlled by De Beers in the Union; they are largely gem producers and some increase in their earnings was the inevitable product of bigger sales of gem stones last year. But the net profits as shown in the preliminary statement exclude the earnings of Premier, the big producer in the Union of industrial stones, of Consolidated Diamond Mines of South West Africa, a big money spinner on the gem side, and of the various investment and finance companies which link De Beers to the diamond syndicate.

PRUDENTIAL ASSURANCE

HARD on the heels of a similar scheme by Pearl Assurance, the Prudential Assurance Company announces the subdivision of its shares to make their market prices less "heavy". Its £1 (fully paid) "A" shares are to be sub-divided into five shares of 4s. each and its £1 (4s. paid) "B" shares into four shares of 5s. each (1s. paid). This should improve marketability, but after the announcement the "A" shares were little changed at £38¾ (equivalent to 155s. in the new form) and the "B" shares at 126s. 3d. (equivalent to about 31s. 7½d. in the new form). On Thursday the directors announced that the tax free dividends on the "A" shares (in their old form) was to be raised from 26s. 6d. to 29s. 6d. per share and on the "B" shares (also in their old form) from 3s. 6d. to 3s. 9d. per share.

London Stock Exchange

FIRST DEALINGS:	Mar. 12	Mar. 26	April 16
LAST DEALINGS:	Mar. 25	April 15	April 29
ACCOUNT DAY:	April 1	April 22	May 6

AFTER small losess earlier in the week, gilt-edged stocks turned firmer on Tuesday and remained steady up to the Bank rate announcement. After the reduction in Bank rate, prices moved up—notably in the new Dominion and Corporation stocks.

Cinema shares were bought in the hope of tax concessions in the forthcoming Budget, Rank Organisation gaining 6d. to 6s. 9d. Tobacco shares also rose, BAT gaining 1s. 4½d., to 41s. 4½d., while Imperial Tobacco hardened on the chairman's statement, and a further improvement followed the raising of Gallaher's dividend. Losses predominated in other sections; Hawker Siddeley fell 1s. 3d. to 26s. and Hudson's Bay dropped 6s. 3d. to 153s. 9d. A small rally in steel shares regained earlier losses, but South Durham declined a further 9d. to 19s. 6d. on the issue and Colvilles' convertible debenture was lowered 2½ to a discount of 4. These movements took place before the change in Bank rate. After the Bank rate reduction all sections of the industrial market were firmer though the volume of buying was not large.

Oil stocks were depressed for most of the week and a rally which started on Wednesday left considerable falls on balance; British Petroleum dropped 3s. 1½d. to 88s. 9d. before recovering on Thursday to 92s. 10½d. and Canadian Eagle registered shares fell 2s. 9d. to 48s. 6d. Kaffirs improved, the older mines being especially favoured, City Deep rising 9d. to 14s. 3d. and Consolidated Main Reef 1s. 6d. to 14s. 6d., but Union Corporation fell on the decline in profits. Though movements in base metal shares were mainly downwards, Nchanga falling 3s. 9d. to 181s. 3d. and Tanganyika Concessions 2s. 7½d. to 49s. 3d. xc, Bancroft and Rhodesia-Katanga made a further small recovery.

(1) Employment figures relate to June of each year; other figures are monthly averages. (2) Engineering, shipbuilding, electrical goods, vehicles, metal goods, precision instruments and jewellery. (3) Textiles, leather goods, clothing, food, drink and tobacco, manufactures of wood and cork, paper and printing. (4) Number registered as unemployed expressed as a percentage of the estimated number of employees. (5) From June, 1956, onwards, comparison with earlier figures is affected by the revocation of the Notification of Vacancies Order, 1952. (6) United Kingdom. (7) Figures have been revised back to July, 1956, on the basis of mid-1957 count of National Insurance Cards.

(1) Relates to wholesale prices in Athens and Piraeus only for Greece. Figures for Ireland from 1955 onwards are for home-produced goods only. Figures for Germany, F.R. are producers' prices of industrial products. (2) July-December. (3) Relates to prices in capital cities only for Austria, France, Greece and Turkey. Austria and Belgium exclude rent. Denmark includes direct taxes. Figures for Ireland are based on August, 1953=100. (4) Including direct taxes. (5) Including trade with Faroe Islands. (6) Index numbers of unit value which compare the current average value of trade with its value in 1953; they are influenced by changes in the composition of trade as well as price movements. Export prices in Ireland are adjusted for seasonal variations. (7) Deposit money and notes and coins held by business, individuals and foreigners. Except for Greece, holdings of the issuing authority and other banks are excluded. (8) Holdings of the government and central bank at end of period. Foreign exchange figures for Norway exclude government holdings; Netherlands, Norway and Sweden include foreign investments. Ireland includes some long-term securities. (9) Beginning May, 1954, a new drachma equal to 1,000 old drachmas was introduced. (10) Average for third quarter. (11) Revised series.

Financial Statistics

EXCHEQUER RETURNS

For the week ended March 15, 1958, there was an "above-line" surplus (after allowing for Sinking Funds) of £16,842,000 compared with a surplus of £58,945,000 in the previous week and a surplus of £7,144,000 in the corresponding period of last year. There was a net expenditure "below-line" of £4,980,000, leaving a total deficit from April 1st of £152,252,000 (£240,765,000 in 1956–57).

THE MONEY MARKET

IN Lombard Street, the reduction of Bank rate to 6 per cent came as a surprise; the bill rate had been virtually stable for a month, following the steady decline since the late autumn. The minimum rate on call loans from the clearing banks was reduced by 1 per cent, to 4½ per cent, and the discount houses' deposit rates were cut, in line with bank deposit rates, by 1 per cent to 4 per cent. The new rates on commercial bills were not tested by dealings in the market.

At the bill tender on Friday of last week the average rate rose by 1½d. to £6 os. 6.59d. per cent. The market maintained its minimum bid unchanged at £98 9s. 11d. per cent; the allotment rose by £10 million to £250 million, while total applications fell, by £18.3 million to £370.3 million. The market's allotment at the minimum bid rose again, from 47 to 61 per cent.

The Treasury bill rate in New York has fallen this week from 1.53 to 1.34 per cent without effect on the discount on forward sterling. After the Bank rate reduction, the three months' discount on the US dollar narrowed from 2¾-2⅞ cents to 2½-2⅝ cents, in expectation of a narrowing of the interest differential.

The discount houses were in the Bank on three days out of six in the week preceding the Bank rate change; but the amounts involved were small. On Monday and Tuesday credit was more than adequate.

MR C. BLAKER ON UNRESOLVED POLITICAL PROBLEMS

The Ordinary Yearly General Meeting of The Hongkong and Shanghai Banking Corporation was held on March 14th at the Head Office, 1, Queen's Road, Central, Hong Kong.

Mr C. Blaker, MC, ED, the Chairman, who presided, said:

Ladies and Gentlemen, the hour for which this Meeting was called having now passed, I will call upon the Chief Manager to read the Notice convening the Meeting.

Mr Michael W. Turner, CBE, having read the Notice convening the Meeting and a representative of the auditors having read their report, the Chairman continued:

Ladies and Gentlemen, as you will see from the accounts before you the profit for the year amounts to $21,035,543, which is an increase of $400,000 over last year's figure. In accordance with our normal practice this profit has been arrived at after making transfers to the credit of our inner reserves out of which full provision has been made for the depreciation in value of our investments and all known doubtful debts and contingencies.

It is proposed that a sum of $4 million should again be written off Bank Premises and, after allowing for this transfer and the interim dividend of £2 per share, the directors recommend the payment of a final dividend of £1 12s. 6d. per share, leaving a balance of just over $2 million to be carried forward to next year. As approved by shareholders at the Extraordinary General Meeting held in August, the capital of the Bank was increased from $25 million to $50 million by the distribution to shareholders of 200,000 new shares of $125 each, credited as fully paid up. This final dividend is, of course, payable on the increased capital and the actual amount which it is proposed to distribute by way of dividend is increased by $800,000 over the previous year. The reduction in the carry forward is due to the transfer during the year of $9 million to the Reserve Fund as part of the operation to capitalise part of the Reserve Fund in connection with the new issue of capital.

BALANCE SHEET FEATURES

Turning to the Balance Sheet, the Capital Account shows the increase which I have just mentioned but the Reserve Fund remains unchanged at $128 million due to the transfer of $9 million from the Profit and Loss Account and $16 million from Inner Reserves. Hong Kong currency notes in circulation show an increase of $16 million due to a rise in the Excess Note Issue and this increase is reflected on the other side of the Balance Sheet by a similar increase in Hong Kong Government Certificates of Indebtedness. Current, Deposit and Other Accounts show a rise of $131 million mainly due to higher Fixed Deposits. Acceptances on behalf of Customers show an increase and the total has now exceeded the figure of two years ago.

When we turn to the Assets side of the Balance Sheet, we find the ratio of readily realisable assets to the total liabilities has risen by 4 per cent to just under 49 per cent. Both Cash in Hand and Money at Call and Short Notice are higher than last year, but the main changes are to be observed in the British and Other Government Treasury Bills and Trade Bills Discounted, the former increasing by $204 million, while the latter decreased by $110 million. Advances also show a slight decrease and it can be seen that a large part of our increased deposits have been utilised in Treasury Bills as opposed to the financing of trade. This is unfortunately a sign of the generally lower commodity prices and a slackening of trade in the areas in which we operate.

A SATISFACTORY YEAR, BUT IMMEDIATE OUTLOOK UNCERTAIN

On the whole we can look back on a satisfactory year but as shareholders will see from the printed Statement, economic conditions in many of these eastern territories have been unfavourable and the immediate outlook can only be regarded as uncertain. It remains to be seen whether the coming year will prove as profitable as the last but it would be reasonable to hope that we may not find it necessary to allocate any further sums for the purpose of writing down our British Government securities, which has been such a disturbing feature of the last few years.

Before I leave the Balance Sheet I should like to say how pleased your Directors are that the arrangements for the abolition of the contingent liability of shareholders were satisfactorily concluded during the year. Due to the fact that the Bank is incorporated under a special Hong Kong ordinance and we are responsible for issuing such a large part of the Colony's currency the necessary steps to abolish the contingent liability required authorisation by the Hong Kong Government and the Secretary of State for the Colonies. I should like to thank the various officials who were concerned in these negotiations, for the ready response they gave to our application which resulted in the satisfactory conclusion of the operation, entailing as it did a certain degree of delicate timing.

The Balance Sheet of our Californian Subsidiary which is included in the accounts before you shows signs of steady growth and the new office in Los Angeles got off to a good start.

During the year we opened a new office in Seria, in Brunei, and arrangements are being made to open an office in Kuching, in Sarawak. In view of the disturbed conditions in Indonesia we have decided to close our office in Surabaja. Although this office was opened in 1896 and for a time, previous to the last war, was a valuable connection, business recently has been falling off.

The changes in the Board of Directors during the year are shown in the Report which is in your hands and I will make no further comment on them.

Mr G. R. Roper-Caldbeck joined the London Committee during the year and Mr S. W. P. Perry-Aldworth, Senior London Manager, was appointed Deputy Chairman.

TRIBUTE TO EXECUTIVES AND STAFF

I should like to take this opportunity of congratulating the Chief Manager, Mr Michael W. Turner, on the honour which Her Majesty The Queen recently conferred on him. I am sure you will all agree that this award was richly deserved and was some recognition of the hard work he has put in, not only for the Bank but in the general interests of the Colony. Our thanks are also due to the branch managers and the staff for their continued loyalty and efficient service to the Bank.

Before I close there are two matters of local interest to us here in Hong Kong which I should like to mention. In the first place I should like to say how pleased we all are that Sir Robert Black has returned to the Colony as Governor. Sir Robert is well known to most of us in this room and I am sure you will join with me in wishing him a long and successful period as governor. The second matter I wish to mention is the welcome news that the Murray Barracks area of the military lands is at long last to be surrendered to the government. This is a matter which has been discussed as long as I have been in Hong Kong and in fact turning over

the old Minutes of our Annual Meetings, I notice that in 1923, when the land values were described as being at undreamt of heights, the value of this area to the business community was urged on the government as a reason for its speedy surrender. Thirty-five years is a long time but it looks as if the development of this area will now become an accomplished fact.

Ladies and Gentlemen,

The Report and Statement of Accounts having been in your hands for the required period I will now formally propose their adoption as presented.

After the proposal has been seconded I shall be pleased to answer to the best of my ability any questions which shareholders may wish to ask.

The resolution having been seconded the Report and Accounts were adopted.

CHAIRMAN'S STATEMENT

The following is the statement referred to by the Chairman:

During the past year there was very little improvement in international relations throughout the world. The outstanding problems in the Middle East seemed no nearer solution and in spite of discussion on disarmament and proposals for high level talks, the main issues between the two sides still remained unsolved. In the scientific field, on the other hand, there were two remarkable developments which seem likely to have a major influence on the future progress of the human race—the launching of the Russian earth satellites and the first steps in the control of thermonuclear reactions. Although the latter may prove, in the long run, to be the more important, the immediate impact of the former was very much greater, showing as it did the lead that Russia has now gained in intercontinental missiles. There is no disguising the fact that the West, and the United States in particular, have suffered a severe political reverse due to the strategic consequences of the Russian advances in technology. It would seem doubtful whether the present policies will meet this changed situation and the demand for a more positive approach to break the deadlock seems likely to gain in intensity.

The economic picture has been somewhat mixed and it is not clear whether in 1958 the danger most to be guarded against is rising costs or falling production; whether in fact the inflationary tendencies that have been so much a feature of the postwar era are still growing or whether a period of deflation is about to set in. Whatever the future may hold the present situation, with the increasing cost of manufactured goods and a considerable drop in commodity prices, has pressed heavily on the balance of payments of the Eastern countries in which we operate and this must inevitably slow up their progress. The heavy cost of modern industrial development has intensified the world capital shortage and this, coupled with an overall fall in the dollar reserves, has resulted in a growing use being made of the drawing facilities member countries enjoy with the International Monetary Fund. During the year many currencies suffered a period of considerable strain and in Europe the problem was aggravated by the strength of the Deutsche Mark, the weakness of the French Franc and the rise in wages and prices in the United Kingdom. Sterling once again had to bear the brunt of the speculative pressure and in September the bank rate was raised to 7 per cent, the highest since 1921, with restrictions on both bank advances and expenditure by local authorities. These measures halted the drain on the sterling area reserves and as a result the short-term position has greatly improved, but judgment must be deferred as to whether or not the overriding problem of keeping British costs in line with those of her competitors has been solved.

These recurring currency crises have evoked serious consideration as to whether it is advantageous to the United Kingdom to maintain sterling as an international currency. Those who argue against have drawn support from the fact that the drain last year took place at a time when the country was paying its way, and various estimates have been made to show that the foreign exchange earnings of the City are much less than has been generally supposed. While this is not the place to enter into this interesting discussion, I should like to say this, that from the point of view of a bank such as ours, mainly concerned with the financing of international trade, any suggestion that sterling should abrogate the role it has held for so long, can only be viewed with apprehension. Notwithstanding periods of distrust from time to time in recent years, no currency has yet been found able to take the place of sterling and it is difficult to see how the multitude of transactions which make up the settlement of trade in our particular area alone could be cleared without the facilities sterling and the City of London provide. This applies also to other parts of the world and a return to bilateralism, with all the frustrations this would involve, would seem to be the inevitable result of any serious limitation in the use of these facilities.

The common market, composed of France, Western Germany, Italy and the Benelux countries, officially came into being on January 1, 1958, but the wider free trade area, which is to be established around these countries and which is intended to comprise most of Europe as well, has still many bridges to cross. Progress seems likely to be slow, as, although there is a growing agreement on the general advantages of such an area, when negotiation turns to particular problems the extent of the difficulties is revealed.

ASIA

The political situation in the Far East shows little outward change. Many outstanding problems still remain unsolved but while it would be unwise to be complacent at a state of affairs with so many explosive possibilities, the fact that local disturbances have not spread gives ground for satisfaction. Deterioration in the terms of trade, which has resulted in a general fall in the foreign exchange reserves of most countries in the area, is the most disturbing economic feature. Admittedly these difficulties were aggravated by the increasing pace of development, but administrative weaknesses in several cases have quickened the trend and have delayed the taking of appropriate action to reverse it.

It would be unfair to criticise the various countries concerned unduly, as very few other countries have been free from balance of payment difficulties at one time or another in recent years. Nevertheless, it is unfortunate that this state of affairs should have occurred at a time when most of the various development programmes require outside capital, the demand for which throughout the world is so active. Actually considerable amounts of capital have been granted to the area during the past year through such media as the International Bank, various United States agencies and the Colombo Plan, but there are signs that these supplies are not unlimited. It would therefore seem to be necessary to attract to a greater extent the flow of private capital, but Asian countries should not forget that there is already considerable competition from other areas for what is available. In their annual report the Consultative Committee of the Colombo Plan point out "the advantage of the region in this competition is that it offers potentially large and growing markets," but go on to warn that "the attractions of the region, however, can be counter-balanced by such factors as apprehensions as to the security of investment, difficulties with administrative and financial procedures and restrictions, and uncertainties about the incidence and weight of taxation." I hope that this advice, coming as it does from a gathering of representatives of the governments concerned, will be given careful consideration. Foreign capital has in the past done much to assist the industrialisation of many countries and continues today to increase the productivity of those that are most advanced. It is now being more generally realised that foreign investment is not necessarily tarred with the colonial brush, but recent events in Indonesia have shown the disrupting effects that extreme nationalism can have on a nation's economy.

HONG KONG

On the last day of the year, to the traditional sound of Chinese firecrackers, Sir Alexander and Lady Grantham left Hong Kong after a governorship of over ten years. By 1947 the Colony had repaired the worst of the damage and neglect left over from the occupation and had resumed its pre-war role as an entrepôt for South China, but the development of the local industries, which were to provide employment for the growing number of refugees, still lay ahead. These were not easy years, but, amidst the numerous trials and tribulations which afflicted this part of the world, Sir Alexander stood firm and by his leadership guided the energetic people of Hong Kong along the path to the thriving metropolis we now see today. Greatly assisted by his lady, he instilled members of the community with a feeling of social responsibility, which was not always to be found in earlier days, and the numerous charitable organisations in the Colony today owe much to their interest and encouragement.

The pressure of population continues to be the most serious problem facing the Colony and the concentration of such large numbers of people, in the urban areas of Kowloon, places a heavy burden on all the public services and in particular on the police force. The recent remarks of the Governor and the Financial Secretary on the water situation give some idea of the difficulties that have to be overcome in the provision of this basic requirement. It seems clear that even if the Shek Pik scheme on Lantao Island should prove workable, this will not be sufficient to meet the growing demand of industrial development and improved standards of housing.

The government announced at the end of the year that they had appointed a firm of consulting engineers to survey certain areas in the New Territories with a view to exploring the possibility of building self-contained new towns. This proposed development will naturally take time, but the necessity of housing and finding work for the large number of Chinese refugees is still a major problem. The General Assembly of the United Nations recently considered this question and appealed to member countries to give all possible assistance to alleviate distress. It would, I think, be optimistic to expect any large response to this appeal, but it is naturally a matter for regret that Hong Kong seems likely in the future, as in the past, to be required to tackle this problem from her own resources. I hope, however, that the needs of the refugees will not be forgotten and that there will be some relief from abroad.

All the indications are that the population will continue to grow which will necessitate considerable future industrial development and I sometimes wonder whether this will be forthcoming. We have been fortunate in recent years in the inflow of capital, much of which has built up new industries, but it would be unwise to rely on this continuing indefinitely. In spite of the progress of local industries the adverse balance of trade continues to grow; granted in an entrepôt this is not too reliable a guide, but the fact remains that the time may come when the invisibles will not be sufficient to make up the difference. If this should happen, private enterprise might not be tempted to invest to the extent that it has done in the past and a more positive approach by the Government might be necessary to fill the gap. The economic position in the Colony has been so favourable in recent years, and so much praise has been expressed abroad at the progress that has been made, that it is easy to become complacent. The dangers I have hinted at may not be so far away as people like to think and it would therefore be wise to consider some preliminary planning to avoid being taken unawares.

Business activity remained at a high level throughout the year and although there are signs of a slight contraction there seems no end to the number of new buildings that spring up all over the Colony and in fact the amount spent on private building last year was the highest since the war. Visitors continue to be amazed at the speed with which these are constructed and even residents, after a short absence, comment on the changes that can be seen. The supply of flats for the more well-to-do members of the community has probably now reached saturation point but there is an ever-growing demand for smaller flats for the lower income groups. The recently completed North Point Estate, one of the largest state-aided housing projects in Asia, containing nearly 2,000 flats, will help to supply part of this need. A great deal more, however, will require to be done and it is good to know that plans for further housing estates are already under way.

It was announced in November that the Royal Naval Dockyard would be closed down progressively over a period of two years. This decision has been taken as part of the British Government's recent defence policy which includes the reorganisation of naval forces and their shore support throughout the world. Other dockyards are being closed in the United Kingdom and we must accept this decision. It is nevertheless a matter for regret, as not only has this raised the problem of re-employment of the workers but it must inevitably weaken to a certain extent the close connection which has existed for so long between Hong Kong and the Senior Service.

On the recommendation of Sir Alexander Grantham, a committee has been formed, composed of ten members representing trade and industry, to consider the advisability of setting up a Federation of Hong Kong industries. This organisation, it is hoped, will assist with industry's problems of management, training and overseas trade relations. Technical training is a most important adjunct to modern industrial development and Hong Kong's new technical college was opened at the end of the year. It is hoped that in a few years this will be one of the finest technical colleges in this part of the world.

HONG KONG'S TRADE

Hong Kong's trade in 1957 was higher in total than that of the previous year but this was due to a rise in imports as exports showed a slight decrease. Total trade was around HK$9,000 million with imports at HK$5,600 million and exports at HK$3,400 million. China remained the principal source of the Colony's imports, followed by Japan and the United Kingdom. Exports to Indonesia, Thailand, Japan and South Korea, were much reduced and increases to other areas, including the United Kingdom and the United States, were not sufficient to offset this loss.

Exports of Hong Kong products at nearly HK$794 million represented a small increase over the figure for 1956. The United Kingdom continued to be the largest customer but purchases of local products by the United States increased by almost 100 per cent, a large part of which was due to the efforts of the garment industry. Although the registration of new factories showed a fall, local industry is becoming more diverse and new lines continue to be actively developed.

Business on the Stock Exchange showed a similar trend to last year and decreased by about 30 per cent over the year. Considering the sharp fall in security values that have taken place throughout the world, the market on the whole stood up very well. Land values remained fairly steady although prices in certain parts of Kowloon continued to rise. There are no longer so many first-class sites available in the central district and this has caused buyers to turn to smaller properties, many of which are old and are long overdue for rebuilding.

The bank clearing figures for the year increased by about 11 per cent and reached a total of nearly HK$17,000 million, to come close to the record figure of 1951. Increasing velocity of circulation has been much in the news recently in the United Kingdom. It is interesting to note that in the last two years, here in Hong Kong, a similar trend has been evident.

FINANCES OF HONG KONG

The financial position of the Colony continues to be very satisfactory and a surplus of just over HK$1 million for the current year is now estimated as opposed to the original deficit of HK$54 million. Even this revision seems to be an under-estimate and the Financial Secretary considers it likely that the final result will show a much larger surplus.

For the financial year 1958-59 revenue is expected to remain at about the previous year's level, but expenditure shows a considerable increase and a deficit of HK$87 million is estimated. The provision for public works non-recurrent at HK$183 million is the main reason for this rise, including as it does expenditure on new schools, hospitals, reservoirs and the air port. It is notoriously difficult to estimate accurately expenditure under this heading but, even if all this money is in fact spent, the Financial Secretary considered it perfectly sound to finance this capital expenditure out of reserves, and no increase was made in taxation.

At the meeting of the Legislative Council, at which the Budget was presented, the Governor announced that the Secretary of State for the Colonies had further relaxed the financial control which he exercised over Hong Kong, and that the annual estimates and supplementary provisions would no longer require his approval. "This is a very important and considerable extension of our financial independence," as the Governor pointed out, but I think that when one considers the conservative way in which our finances have been managed over the last few years there should be no cause for anxiety.

CHINA

On looking back over the events in China during the past year it is clear that a number of stresses have developed, both political and economic. Evidence of this is not difficult to obtain and a study confined to official pronouncements could only lead to the same conclusion. Indeed, it would be surprising if all had gone smoothly, when one considers the profound changes that have taken place in the whole Chinese way of life in such a short time, with the collectivisation of the farms and the great strides that have been made in industrial development. A policy of such rapid growth must rely on a considerable degree of austerity in the present for the sake of the future, and is bound to raise doubts among certain sections of the population; the extent of these doubts became evident when the much publicised speech of Chairman Mao Tse-Tung, indicating that a greater degree of freedom of expression was to be allowed, touched off a wave of critical comment. This period did not last very long and soon press reports from Peking were once again full of confessions by counter-revolutionaries, while it became clear that a campaign against "rightists" was actively under way.

The extent of the criticism was no doubt embarrassing to the government, but there is no evidence to suggest that it was more than just that or that it has in any way changed the declared policy of pushing ahead at as rapid a pace as possible with the industrialisation of the country. This remains the aim which will, I am convinced, be carried out resolutely and will be limited much more by the results of the harvest than by the opinions of disaffected groups. It may be that agriculture will not be able to play the part allotted to it as nature will continue, as in the past, to be a dominant influence. If this should prove to be the case, the part of the national cake that is devoted to capital development may require to be smaller, but there seems no doubt that it will still continue to be a sizeable slice.

The higher targets which were decided upon after the bumper harvest of 1955 proved too great a strain on the country's economy when last year's crops did not come up to expectation. The reduction in the allocation for economic construction in the budget was one of the signs that the authorities appreciated that the pace was too swift, while a number of official pronouncements show that it is now realised that many of the targets were too ambitious. The shortage of food has been the subject of much comment in the Chinese press, and in December pork joined grain, vegetable oils and cotton cloth as a rationed commodity. Speculators, laxity of officials and errors of judgment are all blamed for the present state of affairs but the problem of a balanced distribution of food in a country the size of China, particularly subject to the vagaries of the weather, would seem to be almost insoluble. Mistakes in the running of collective farms are now being freely admitted and agricultural development seems likely to be concentrated on improving on the existing model without as yet the introduction of mechanical aids. In an endeavour to raise the standards of rural conditions the movement of government employees from the towns to the countryside is being vigorously directed.

It is against this background that the decision of the United Kingdom and other governments to bring the list of goods which may be exported to China into line with the Russian list must be viewed. In association with British merchants interested in the China trade, we have been urging this relaxation for some time and we are happy to see that action has now been taken. It would,

however, be unwise to expect any great immediate benefit but the visits of both the Parliamentary Secretary to the Board of Trade to China and the Chinese Economic and Technical Mission to the United Kingdom have, I hope, laid the foundations on which a growing exchange of goods may be based. The present volume of British trade with China is not very large and there would seem to be no reason why this should not be materially increased, even if a slowing down of development in China should be found necessary.

The period of the first five-year plan has now ended and it is claimed that industrial output greatly exceeds the original estimate. This is, I think, most likely as considerable strides have been made in the production of steel, coal, electric power and cement, to take a few examples, while the bridge at Wuhan, the first to span the Yangtse, is not only a considerable engineering achievement but will greatly assist communications between north and south. There are, however, signs that the pace has been uneven—too fast in some directions and too slow in others—which has resulted in overall production being slowed down. Action aimed at the elimination of these bottlenecks would seem to deserve high priority in the next five-year plan.

JAPAN

In our review last year I was able to report that Japan had a satisfactory year of economic expansion despite considerable political difficulties. This year the reverse seems to be true, as although the inherent weaknesses in Japan's political structure remain unaltered and factional differences are still as strong as ever, it is economic problems rather than political that have given most cause for concern. The industrial expansion, which had been such a noteworthy feature of 1956, continued during the first half of 1957 with no slackening in investment demand, but although exports increased they were unable to keep pace with the growing volume of imports and this caused a steady deterioration in the balance of payments. The raising of the rediscount rate by the Bank of Japan, an increase in import margins and a reduction of public and private investment programmes were some of the measures taken to reverse this trend, and in October the drain on the foreign exchange reserves was halted after having reached the somewhat alarming total of US$600 millions for the first nine months of the year. Fortunately, with such heavy pressure on the balance of payments for the import of industrial materials, the rice crop turned out to be the second highest in Japan's history. Taking the year as a whole the net deficit was US$533 millions as compared with a surplus of US$293 millions in 1956, with exports higher by 14 per cent and imports by 32 per cent.

It would seem that the tide has been turned and that the deflationary policy has succeeded in slowing down the too rapid expansion which threatened to exhaust the reserves if allowed to continue. Falls in the index of production, increasing stocks of goods in the hands of importers and lower wholesale prices are evidence of this; on the other hand advances by the Bank of Japan to the banking system at the end of December were four times what they were a year previously and it is doubtful whether consumer demand has been seriously reduced. When one looks back on conditions in Japan over the last few years, with the rapid swings of the pendulum from one extreme to the other, it is tempting to speculate whether a way can be found to prevent such quick changes in the economic climate.

This poses a difficult problem, faced as Japan is with a steadily rising population which necessitates a growing increase in her exports to keep her industry running and avoid the dangers of severe unemployment. No wonder there is pressure to increase industrial production particularly as there has been a change in the pattern of the export trade with less demand for consumer goods. This has resulted in activity in markets where there is already strong competition from other suppliers, many with old established connections, which makes the economy particularly vulnerable to any recession abroad. The shipbuilding industry is a case in point. Last year Japan reached the highest peacetime output of any nation, but with the fall in world demand for shipping, particularly tankers, it seems unlikely that this level can continue. Other industries will undoubtedly suffer also, but raw materials are continuing to come forward and it is not so easy to turn off the tap.

It may be that action was not taken in time, but, with the danger of unemployment always present, it is not surprising that the monetary authorities are sparing in the use of the deflationary weapon lest the cure be worse than the disease. Taking everything into account it seems likely that Japan's economy will continue for some time to be subject to considerable variations unless there is renewed and sustained world-economic expansion.

The political situation remained uneventful during the year and very little positive action was taken in internal affairs apart from the financial measures already mentioned. Mr Kishi retained the cabinet he inherited from his predecessor until July but, when the new cabinet was formed, it bore signs of the usual compromise between the different factions, with their varying personal loyalties. The Prime Minister was absent from Japan for a large part of the year making two tours of Asia and visiting the United States and Australasia. During these tours he propounded his plan for a South-East Asian Development Fund, which was given a mixed reception. This plan was somewhat vague in outline but the original intention was to set up a fund in US currency available for the supply of industrial equipment from Japan to South-East Asia; when it became clear that US currency was unlikely to be forthcoming a yen fund was proposed. Time alone will tell how valuable these tours were, but the signing of the peace treaty with Indonesia and the settlement of the reparations issue gave a successful outcome to the last of these.

Japan continues to maintain the most cordial relations with the United States but economic necessity alone would prevent neglect of her large neighbours. A trade pact was successfully concluded with Russia in December, but although the Japanese have followed the United Kingdom in their relaxation of the embargo on trade with China, progress in the negotiations with that country was slow and trade in fact fell off. Arrangements have recently been announced for the sale by Japan of steel products to China in exchange for coal and iron ore and the resumption of this traditional trade must be in the interests of both countries.

Rearmament still remains far from popular and although the Constitution Research Council has been formed the opposition of the Socialists makes it unlikely that the controversial article in the Constitution, relating to rearmament, will be revised in the near future. Japan's election to the Security Council will, however, enable her to press more vigorously her objections to the holding of nuclear tests in the Pacific.

Now that she is once again a member of international organisations, Japan has been feeling her way, searching for a policy which will suit her particular geographical position and satisfy her needs for export markets. For this reason I do not think that the last has been heard of the South-East Asian Development Fund.

PHILIPPINES

The sudden death of President Magsaysay in the early part of the year was a severe blow to the people of the Philippines where he was greatly loved and respected. This tragedy, coming as it did in election year, made the contest more open, but the Nacionalista Party were once again successful in the presidency although they lost the vice-presidency to the Liberal Party. President Carlos P. Garcia and Vice-President Diosdado Macapagal were duly inaugurated on December 30th and they have assumed office at a critical time in the affairs of the young republic.

This is mainly due to the deteriorating economic situation, and the new administration are faced with a number of very grave problems. To quote from the President's recent State of the Nation Address these comprise "food insufficiency, unemployment, rising prices, dwindling international reserves, decreasing revenue collections and increasing budgetary requirements." This is indeed a formidable list and a reduction in consumption would seem to be an essential ingredient for any medicine that is prescribed. Certain steps to this end have already been taken. The rediscount rate was raised in September from 2 per cent to 4½ per cent and in December importers were required to deposit cash margins—in some cases up to 200 per cent—before letters of credit could be opened, and these were restricted to essential commodities. Without the repeal of the "No-Dollar Import Law," which permits barter trade, the monetary authorities are somewhat handicapped in their efforts to impose austerity on the import programme, and it is to be hoped that Congress will follow the President's recommendation and re-examine this legislation at an early date. The measures adopted so far will no doubt result in a slowing down of the immediate drain on the foreign exchange reserves, but they are in no way a lasting cure.

For this reason it is not surprising that the suggestion for a devaluation of the peso is finding a growing number of adherents and it is true that by many standards the currency is overvalued. Nevertheless it does not seem to me that devaluation of itself is the answer to the problem, and in fact there is the danger that once tried there will be the temptation to repeat the experiment. The immediate necessity is the implementation of a strict fiscal and monetary policy to drain the inflation out of the economy and curb unnecessary expenditure. Once the inflationary tendencies begin to weaken then the time might come to reconsider whether the present value of the peso was advantageous to the country as a whole but this should be decided upon as a matter of deliberate policy and not as a rescue operation

VIETNAM

The Republic of Vietnam has now achieved a considerable degree of political stability and what might be described as the first stage in the task of resettlement is almost completed. Great credit for rescuing the country from the disturbed conditions which previously existed is due to the President, Ngo Dinh Diem, and his administration, in which far from easy task American advice and assistance has greatly contributed. Consolidation will be the next step and this may prove more difficult, requiring as it will the stabilisation of the present political structure and the building up of a viable and independent economy.

Imports during the year have continued at a high level and the market is heavily overstocked. There is no doubt that import licences were granted on too lavish a scale but the tight money conditions caused by the delay in utilising counterpart funds has greatly hampered sales. These counterpart funds are obtained by the government from the importers of goods under the American Aid programme and can only be utilised on approved projects. Unfortunately delay in formulating such projects has resulted in a large amount of money still being immobilised with the Banque Nationale du Vietnam at a time when its use would not only improve the country's future productive capacity but by putting purchasing power back into circulation would have the immediate effect of speeding up the disposal of stocks.

More decisive action can be found in the rural areas where the improvements in farming equipment and techniques have produced higher yields, while work is proceeding on clearing highland areas and bringing more land under cultivation. Rice exports were resumed and totalled about 200,000 tons for the year but it is hoped to improve on this figure during 1958. Negotiations on reparations continue with Japan and the gap between the two sides is being narrowed. It seems likely that the building of a hydro-electric system on the Danhim river will be included in the final settlement.

CAMBODIA

The National Assembly has been dissolved and pending the result of the new elections a provisional Cabinet has been formed. On the whole the political situation remains little changed and Cambodia continues to adopt a foreign policy of strict neutrality. Trade increased over last year with imports and exports more in balance due to a substantial rise in exports of rice. Various light industrial projects are under consideration and efforts are being made to develop a deep-sea fishing industry in the Gulf of Siam. Clearing of the jungle to make a road from the capital to the port of Kompong Som proved more difficult than had been expected but it is hoped that this road will be completed sometime during 1959. The opening of this deep water port will lessen Cambodian dependence on communications by the river through Vietnam.

THAILAND

The general elections which were held at the beginning of last year touched off a series of events which have somewhat changed the characters on the political scene. Although the Seri Manangasila party won a comfortable majority, the way in which the elections were run left a feeling of public dissatisfaction which grew more vocal as time went on. In September a bloodless coup d'etat, led by Field Marshal Sarit Thanarat, resulted in a caretaker government being established and the withdrawal from the country of Field Marshal Pibul Songgram and General Phao Sriyanond. Fresh elections were held in December and a government was formed from members of the new National Socialist Party. It remains to be seen how this new party, which is in fact a coalition of three other parties, will fare in internal politics especially as, with Field Marshal Sarit Thanarat's departure for medical treatment to the United States of America, the three personalities who have dominated Thailand's politics for so long are for the present at least absent from the stage.

Although the import market has been somewhat over-stocked, which has resulted in difficult trading conditions with some business failures, the year on the whole has not been unsatisfactory. In spite of the necessity to impose restrictions on the exports of rice during the second half of the year the volume exported during 1957 at one and a half million tons was the highest since the war. This is unlikely to be repeated this year, as the new crop is below average, and the exportable surplus is not expected to exceed one million tons. Teak exports were considerably reduced due to competition from Burma. The budget, which was delayed pending the formation of the new government, is expected to be presented shortly.

A survey mission from the International Bank is at present in Thailand to plan a long term development programme and a loan has been granted by this bank for the first stage of the Yarnhee Hydro-electric project.

FEDERATION OF MALAYA

Malayan independence was proclaimed on August 31st at a colourful ceremony in the new Merdeka Stadium in Kuala Lumpur in the presence of representatives from many nations. The Duke of Gloucester, representing the Queen, handed over a specially bound volume containing the constitutional instrument providing for the withdrawal of British protection over the Malay States and of the Crown's sovereignty over the settlements of Malacca and Penang. The Federation of Malaya thus became the tenth nation in the Commonwealth and subsequently was elected the eighty-second member of the United Nations. The final arrangements for the transfer were completed swiftly in a spirit of goodwill on both sides; while the constitution followed to a great extent the recommendations of the Reid Report and seems to be a workable compromise which provides an opportunity for the development of democratic government. The ruler of Negri Sembilan State was elected by his fellow rulers as the first Constitutional Sovereign of the Federation and at the state opening of the Legislative Assembly outlined the policy of the government. Their first duty would be to safeguard the independence of the Federation and to protect the constitution, the initial threat to which came from the communist terrorists. The government would not dissipate the resources of the country in large armed forces or an elaborate foreign service, but would concentrate on home affairs and aim "to maintain confidence in the financial standing of the Federation as a field for investors at home and overseas." The Anglo-Malayan Defence and Mutual Assistance Treaty, which was signed in October, permitted the United Kingdom forces to be stationed in the Federation to assist in external defence and to provide "for the fulfilment of Commonwealth and international obligations."

The Prime Minister made no alterations in his Cabinet and the Alliance Government which, under his leadership, had done so much to enable the change-over to be completed smoothly, continued to guide the destinies of the country. This was in accordance with the wishes of the majority of the population, as, although ripples of discontent can be deduced from the result of some recent elections, the country as a whole is still strongly behind the present administration. The only disturbing feature has been found in some Chinese schools where the dislike of certain members of that community for some aspects of the government's education policy resulted in outbreaks of indiscipline which in some cases led to violence. It would be unreasonable to expect this honeymoon period in the political arena to last indefinitely and some more vigorous form of opposition is bound to emerge, perhaps before long. Following historical precedents, this would seem likely to come from the left, but there is hope that this may be multi-racial in character and thus avoid issues being decided on a purely racial basis.

In an effort to bring an end to the emergency the government, in September, made a final offer of an amnesty to the terrorists with the option of either remaining in the Federation or returning to China with their families. Over one hundred terrorists took advantage of this offer by the end of the year when it was due to expire and the period was extended to April 30th. There are signs of definite cracks in the terrorists' organisation and there is now more ground for hoping that the ten-year-old emergency may be ending.

A White Paper was issued in the early part of the year setting out the general plan of capital and development expenditure for the period 1956-1960. This envisaged the utilisation of part of the reserves which "will require strict control over the ordinary budget to ensure that revenue is maintained at levels sufficient to protect the reserves so that they can be used to finance part of the capital budget and are not unduly depleted by deficits on the ordinary budget." With revenue dependent to such a large extent on the price of so volatile a commodity as rubber and with future calls of the emergency, so difficult to forecast, it is unlikely to prove easy to maintain a continuing surplus of revenue. For the current year a deficit of M$.119 million is forecast and although estimated deficits have tended not to materialise in recent years, the low price of rubber will make this more difficult this year. A separate capital budget is expected to be introduced shortly and it may be that some of the projects will be slowed down as present high interest rates make either the flotation of a loan or the selling of investments particularly unattractive.

Discussions on the formation of a central bank for the Federation have continued during the year and Mr W. H. Wilcock, of the Commonwealth Bank of Australia, has been appointed banking adviser and is now in Kuala Lumpur. I do not think it would be appropriate to make any comment on this subject until some definite proposals are announced.

TIN AND RUBBER

The test of the effectiveness of the International Tin Agreement came earlier than was expected and judgment must be reserved as to whether this experiment will prove successful. At the meeting of the International Tin Council in March, the price range was raised and due to the decline in the market price, in sympathy with other commodities, the floor price of £730 per ton was reached in October. Both the second and third contributions were subsequently called for from subscribers and restrictions on exports were imposed in December and the period extended in January. The price at which the manager of the buffer stock could sell was lowered and the producing countries recommended the creation of a special fund to be put at the disposal of the buffer stock. These measures will in time reduce the supply, but meanwhile the pipeline has to be cleared and the increased exports from Malaya in January show that this may take longer than was originally expected.

Both production and exports decreased slightly compared with 1956.

The price of rubber declined slowly during the year and the average for 1957 was 88⅛ cents as compared with 97⅛ cents in 1956. In spite of the downward tendency, doubts about the arrival of stocks from Indonesia caused a sharp temporary rise in December, and this factor continues to make its influence felt. Exports were higher than the previous year and exceeded one million tons. The most notable feature was the considerable rise in exports to Japan.

SINGAPORE

The talks in London last year were successfully concluded and the way is now clear for the granting of the new constitution to the State of Singapore and the holding of elections for the fifty-one member Legislative Assembly. Any doubts which existed concerning the attitude of the government of the United Kingdom in this connection should have been allayed by the assurance given by Mr Macmillan on his recent visit. Registration of citizenship under the recently enacted ordinance which provides automatic citizenship for those born in Singapore, with residential qualification for others, has recently been completed and the new electoral rolls are being prepared. The new constitution will provide for full internal self-government with the sole responsibility for maintaining law and order and preventing subversion but the United Kingdom will look after external relations and defence and will have the right to the use of bases in the island. A consultative body, the Singapore Internal Security Council, will be established with certain advisory powers, composed of three members each from Singapore and the United Kingdom and one from the Federation. It is hoped that this body will iron out any difficulties that may arise due to the inter-relation of internal security and external defence.

In view of this impending change in the form of the administration, it is not surprising that disturbances in Chinese schools and strikes in the docks and among the telephone workers have attracted considerable attention abroad. Many shareholders are no doubt wondering what the future course of events will be but although I do not propose to attempt to give any forecast, there are a few significant pointers which I will mention. In August a White Paper was issued showing the extent of Communist activity and penetration in unions and political parties which was becoming a serious threat to the maintenance of law and order. At the same time, a series of arrests of active subversionists was made which was followed a few weeks later by the detention of a number of students. These strong measures had their effect, and conditions in the schools and relations with labour have greatly improved.

The City Council elections were held in December, at which only a third of those eligible recorded their vote, and resulted in a sharp swing to the left. The behaviour of the supporters of some of the delegates in the early sessions certainly hardly augured well for the smooth working of democratic government, but recent meetings have been quieter and there are signs that the Council are now getting down to business. It is not difficult to find cause for misgiving from some of these recent events, but it would, I think, be premature to look only on the dark side, and dangerous to exaggerate the fears for the future. The responsibility of office has usually made politicians in other parts of the world view things in a different light, and there is no reason to suppose that this will not happen in Singapore. Nevertheless, it is not surprising that there is a feeling of uneasiness as the economy of an entrepôt is so vulnerable to outside influences that any lack of confidence abroad would have disastrous consequences.

In what seems likely to be his last budget address, the Financial Secretary, Mr T. M. Hart, looked back on what has been achieved in Singapore since the war. During this period M$600 million have been expended on development by the government and the City Council and recurrent expenditure is now more than four times what is was in 1947. A large part of this increase is due to the ever growing demands of education, public health and social welfare, but the organisation of the police force to its present high state of efficiency has not been achieved without cost.

In spite of all that has been done, development must still go on and it will not be as easy in the future as in the past to obtain the required capital from either surplus revenue or institutional investors. Already the government are relying to a large extent on loans from the Central Provident Fund Board, which are naturally limited in amount, and for this reason the pace of future development is likely to be increasingly governed by financial considerations. This will necessitate a degree of co-ordination and the government have set up a Planning Committee to integrate development plans of the various authorities to the extent of the funds available. The current position is not unsatisfactory and increases in taxation this year were confined to the raising of the petrol duty to the same level as that of the Federation and a few minor adjustments but a rise in taxation must be looked for in the future. In fact, it seems likely that some new forms of taxation may be introduced shortly, and although this is no doubt inevitable, I hope that these will not include any measures which will damage the free port status.

Malayan total external trade showed a rise of 2.7 per cent over 1956 but there was an adverse balance of M$209 million compared with a surplus of M$13 million in 1956. This was caused by an increase in imports of over 5 per cent with exports at about the same level as the previous year. It must of course be remembered that there are a number of invisible items such as British military expenditure not included in these figures which make the position not as bad as it looks.

NORTH BORNEO

The racial problem across the sea is not without its influence on North Borneo, where the administration are moving slowly in the admission of the Chinese labour which could be so beneficial to future development. The Governor, in his annual report to the Legislative Council, made it clear that "there is no intention of sacrificing the future to our present needs." Under existing conditions I should hesitate to criticise such a decision but it will inevitably result in progress being slow, which is naturally disappointing to all interested in trading conditions in this area. In Jesselton the building programme has gathered momentum and projects completed during the year include the new market, new government offices and an up-to-date hospital. In Tawau, development of the Quoin Hill area should in time decrease the dependence of the port on the barter trade while in Sandakan the construction of new buildings and roads is being pushed ahead. In Labuan there is little sign, as yet, of expansion but the new Shell installation has been completed which will be the main distribution depot for North Borneo. Trade continued at about the same level as in 1956, and for the first time timber and copra exports combined exceeded rubber in value.

Both the Governor of North Borneo and the Governor of Sarawak have recently broadcast a suggestion that their two territories together with Brunei should consider some form of closer association. No concrete proposals have been put forward and for the present all that is being attempted is to ascertain whether there exist "bodies of opinion in favour of federation sufficiently substantial to make it workable." It will be interesting to see how the people of these territories react to the proposed federation.

BRUNEI

Draft constitutional proposals were announced by the Sultan providing for the replacement of the State Council by the Privy Council, Executive Council and Legislative Council. Unofficial members of the Legislative Council will be nominated, but the majority of these will be elected by the District Councils. This proposed constitution seems to have received general support but it is strongly opposed by the People's Party.

The State continues to be in a very happy financial position. The surplus for 1958 is expected to be M$68 million, and investments total M$450 million.

A considerable amount of building is in progress and the trunk road connecting the capital with the oilfields is expected to be completed by September of this year.

INDONESIA

Indonesia has passed through troubled times since my last report and, whatever the outcome, it is difficult to see much hope of improved trading conditions in the immediate future. The lack of agreement between influential political figures in the capital steadily weakened the control of the central government over the outer islands where many of the local commanders to a large extent acted independently, merchanting local produce to pay and supply their troops. This not only made the chances of any political settlement more difficult but deprived the central government of the revenue and the foreign exchange which would normally have accrued to them. As a result the economic situation deteriorated rapidly with an increase in the note issue, steadily rising government borrowing from the Bank of Indonesia and a dwindling of the foreign exchange reserves.

These tendencies, which had been evident to a greater or lesser degree during the year, gathered momentum in December when it was decided to expel the Dutch in whose hands so much of the country's trade still remained. The disruption of coastal shipping which followed this move was a particularly serious matter. Many leading personalities in Indonesia expressed doubts about the wisdom of this action, which was in fact less strictly enforced in the outer islands, and relations between Java and the rest of Indonesia continued to deteriorate.

Although political differences played a large part in the growing dissension, the main cause has been economic. Java with its large population has always required more of the country's resources than she has been able to contribute and although this is to a certain extent inevitable, the outer islands have felt that they were not getting their fair share. Whatever the outcome of recent events may be it seems clear that the previous method by which foreign exchange resources were allocated is unlikely to be resumed. Meanwhile barter trade of various types enables necessary supplies to be obtained but the terms of a great deal of this trade are far from favourable and do not benefit the economy of the islands as a whole.

INDIA

In August India completed the first decade as an independent country during which period she has developed a considerable degree of political maturity and now exercises a profound influence on neighbouring Asian countries. The elections resulted in the expected victory of the Congress Party, although they suffered a number of setbacks, particularly in Kerala where a Communist administration took office. This has necessitated certain problems of adjustment at the centre but the Congress supremacy over the country as a whole has not been seriously challenged. Relations with Pakistan unfortunately show no signs of improvement, with the Kashmir problem still outstanding and the dispute over the irrigation rights in the Indus valley no nearer solution. Trouble still continues on the border of Goa but a settlement has been reached in respect of the Naga areas. On the whole, the political scene shows little change.

The most conspicuous feature of the economic scene has been the steady deterioration in the foreign exchange reserves. When the Second Five-year Plan was drawn up it was anticipated that there would be a foreign exchange gap which would develop towards the middle of the period and it was hoped to meet this by borrowing abroad. Due to a large extent to the rise in world industrial prices the drawing down of the sterling balances occurred earlier than was expected and in fact the rapid decrease during the summer was one of the strains which resulted in the weakness of sterling.

In spite of a loan in US currency from the International Monetary Fund of the equivalent of £45 million, the sterling balances dropped from £400 million at the end of 1956 to £220 million at the end of 1957, which by any standards is a sizeable fall. In October it was in fact found necessary to reduce the foreign assets which were required by statute to be held by the Reserve Bank of India. It was India's misfortune that this deterioration in the balance of payments should occur at a time when capital was in short supply and it soon became obvious that assistance would be difficult to obtain. The amount required seems likely to be considerable as, even after paring down the plan to its bare essentials and discarding all the frills, it is still expected that there will be a shortfall on external account of over £500 million. Recently the US Government has announced a loan of approximately £80 million and has promised to provide surplus agricultural products, while other countries will grant credit on a smaller scale. As a result, the immediate outlook is more promising, but the problem of providing sufficient food for internal consumption still gives cause for concern.

It had been hoped that food imports were a thing of the past but the harvests have not come up to expectation nor has production increased fast enough to meet the increased demand and it has been found necessary at times to use valuable foreign exchange for the import of food. Imports of other commodities have been cut to the bone and all types of expenditure requiring the use of foreign exchange are being rigorously curtailed.

It will be seen that active steps have been taken to reduce the foreign exchange drain but this has resulted in the index of industrial production starting to decline, having moved steadily upwards since 1951. This is probably due to a certain extent to a shortage of industrial raw materials and I am glad to see that it has recently been announced that the import of capital goods will not be made at the expense of raw materials. I hope that this policy will be strictly adhered to as, necessary though new industrial investment is, there will be no overall benefit to the economy if existing industries are forced to curtail production.

Last year I pointed out how important it was for the future of parliamentary institutions in Asia that India should succeed in her efforts towards increased industrialisation, and this is as important now as it was then. In spite of the difficulties I mentioned above, a great deal has already been done, and the available capital has on the whole been wisely spent. Progress is being made in the construction of the three new government steel plants and the expansion of the two that are privately owned, while many other projects are completed or nearly so.

The industrial delegation, led by Mr G. D. Birla, which recently visited North America and Europe, found genuine sympathy for India's aspirations and willingness to help as far as possible. The delegation, however, was impressed by the serious misgivings which were felt about some of the country's fiscal and economic policies, and these criticisms are similar to many that have been made from time to time by industrialists, both in India and elsewhere. In particular, the slow growth of domestic savings, which has resulted in a shortage of local capital, could have an unfortunate influence abroad. High taxation is blamed for this shortage, and the recent widening of the taxation net by the inclusion of the wealth and the expenditure tax is unlikely to make the position any easier. "Without profits there can be no savings, without savings there can be no investment, and without domestic investment no seeking of capital abroad," the delegation declare in their report, and these are words which could with advantage be seriously considered not only by India but by many other countries in the world today.

In conclusion, it is clear that the country faces a difficult time in the immediate future with the probability that things will get worse before they get better. The outlook is, however, not entirely black, and if it is possible to surmount the troubles of the next few years the increasing industrial investment should begin to make its influence felt.

BURMA

Burma also recently celebrated the tenth anniversary of the attainment of independence, and this coincided with a growing improvement in the internal situation. It had been clear for some time that the restoration of law and order must take precedence over economic development, and in June the Prime Minister, U Nu, promised that in future this would be his government's policy. The increased expenditure in the budget on the police and defence was practical action along these lines, while the surrender of several regional commanders of the terrorists with their followers was evidence that the more vigorous measures adopted were having their effect. Little progress, however, was made in the border dispute with China over territories in the Kachin State.

The general financial outlook is far from promising. The foreign exchange reserves fell from £40 million to £30 million, notwithstanding a loan from India; while the failure of the rice crop in certain areas will result in the exportable surplus being only a little over half of the two million tons shipped last year—admittedly a postwar record. Teak output, which was running at about 50 per cent over the previous year's figures, is expected to continue to improve, and exports increased by about one fifth. The fall in the world price of non-ferrous metals will, however, result in lower earnings from this source. In view of the deteriorating state of the foreign exchange reserves it is not surprising that action has been taken by the exchange control and import licensing authorities to bring about a reduction in imports.

The semi-government organisations which I mentioned last year now handle a large part of the import trade, and were set up with the intention of reducing the cost of living. In this they have had a limited success as although some prices have fallen they have run into difficulties over distribution and have not always arranged their orders to meet the market demand. In fact faulty procurement has resulted in the arrival of imports being uneven, and this has at times caused delays at the port of Rangoon. Reconstruction of the port is continuing, but a great deal still remains to be done.

Although it has not been found possible to push ahead with industrialisation with as rapid a speed as was once hoped, quite a large number of projects have been completed, and the joint venture arrangements between foreign concerns and the government are working well. Until it is clear that the terrorists' organisation has been broken the pace of future development may be slow but a favourable rice crop this year would alter the economic outlook very rapidly.

CEYLON

During the year the government were able to implement a number of their election promises. The British bases were handed back, a compromise was reached on the language issue and a select committee was set up to examine the question of revising the constitution. Nationalisation, on the other hand, is not being rushed, although the bus transport system came under public ownership on January 1, 1958, and it seems likely that the port of Colombo will follow suit. The tenth anniversary of the attainment of independence, however, finds the political situation uneasy with considerable rivalry between the various groups which make up the People's United Front. This has mitigated against resolute action being taken to deal with some of the outstanding problems, the most important of which is the continuing labour unrest, particularly in the port of Colombo. The movement of exports has naturally been hampered and the delays in the port have caused a number of ships to bypass Colombo.

Ceylon is fortunate in having a comfortable cushion of external assets, but the terms of trade moved against her in 1957, and the reserves fell by Rs.236 million, the first year in which they have declined since 1953. The tea crop was a record, and in spite of the delays in the port of Colombo, exports of tea for the first eleven months increased both in value and volume, as did exports of rubber. Trade as a whole was greater, but as imports showed a larger increase there was an adverse balance of Rs.85 million. A number of measures has already been taken to restrict withdrawal of capital and import duties on luxury goods have increased but it remains to be seen whether or not stricter control of imports will be necessary. The recent floods, although not quite so devastating as had been reported in the press, are bound to increase government expenditure for relief work and repairs; a deficit had already been estimated in this year's budget which seems likely to be increased.

The future economic outlook is somewhat uncertain as is always the case with this country when the price of her export commodities is low. While external events dictate the level of these prices, the other unsatisfactory feature of the economy, namely, the disturbed labour relations, is a problem which must be tackled internally. I hope that action will not be too long delayed.

CONCLUSION

Once again I come to the end of my survey of the eastern scene and I am afraid this year it has not been possible to paint quite such a rosy picture. It may be that the postwar boom is ending and that a period of recession is setting in. On the other hand this may be merely a pause before the advent of a further upward surge of world economic expansion. Time alone will tell but meanwhile I think it would be wise not to count on any rapid improvement in the conditions of the countries which I have been discussing. Commodity prices are still very weak and the resulting adverse reaction has been accentuated by the large development plans most of them have undertaken. Their problems are on the whole similar; growing populations, a large part of which have a comparatively low standard of living, with their economies dependent to a large extent on agricultural commodities subject to severe fluctuations in price.

It is not surprising that there is the urge to expand local industry in order not only to raise the standard of living but also to make the economy less susceptible to the vagaries of world demand. But rapid industrialisation has its own problems, the most difficult of which is to keep inflation under control. As the projects get under way employment rises and with it demand, particularly for food and basic clothing. Prices go up and it is found that the available foreign exchange is earmarked for the imports of machinery and industrial raw materials. Imports of consumer goods which would restore the level of prices have to be limited due to payment difficulties but the internal demand still grows.

It can be seen that striking the proper balance among the conflicting claims on the resources available is by no means easy and to point out what is wrong is easier than to show the way of putting things right. No doubt development can be slowed down but this takes time as it is obviously uneconomic to stop enterprises already half completed. Raw materials must continue to be imported to keep existing industries running and the failure of a harvest or a rise in prices abroad may completely upset even the most conservative calculations. I am not suggesting that errors have not been made nor that administration has not at times fallen down due to inexperience or even more blameworthy causes. Nevertheless any criticisms of the failings of these countries should be tempered with the realisation of the immense difficulties they have to face and if at times they may have aimed too high, surely this is an accusation that could be levelled at many of the most successful examples of human endeavour.

SCOTTISH EQUITABLE LIFE ASSURANCE SOCIETY

GRATIFYING RESULT OF QUINQUENNIAL INVESTIGATION

MR ALASTAIR M. WATSON ON ANOTHER SUCCESSFUL YEAR

Mr Alastair M. Watson, Chairman of the Board of Directors, presided at the One Hundred and Twenty-Seventh Meeting held on March 13th in Edinburgh.

In the course of his remarks Mr Watson said:

Today I have a dual duty to perform because in addition to the year's Accounts, we have before us the Report on the Quinquennial Investigation as at December 31st last.

RECORD NEW BUSINESS

Dealing first with the Society's operations during 1957, it is noteworthy that the year's net new sums assured exceeded £6 million for the first time in our history—the actual total was £6,652,871—and showed an increase of more than £1 million over the corresponding figure for 1956. The above total is made up of ordinary life assurances of £5,338,643 and group life assurances of £1,314,228—in each case a record. In addition new life annuity contracts have been issued for a total of £428,888 per annum. Our outside staff are to be congratulated on the success which has attended their efforts and we are once again much indebted to our Agents for their continuing loyal support.

REVENUE ACCOUNT

The Life Assurance Fund has advanced in the year by the handsome sum of over £1,400,000. The premium income shows a substantial rise of over £160,000; this increase, of course, reflects the higher level of our new business. Our gross interest income once again has increased by over £100,000. A year ago my predecessor drew attention to the fact that the Society's gross rate of interest exceeded 6 per cent for the first time. This year the rate is £6 5s. 1d. per cent against £6 1s. 5d. per cent in 1956. Commission and Expenses both show an increase as compared with last year. So far as Commission is concerned, the larger payment is directly related to our record new business figures. The increase in expenses arises partly from the expansion in our activities and partly from well merited increases in staff salaries; to this extent the higher outlay must be regarded as a necessary factor in the healthy growth of the Society.

EXPANSION OF BUSINESS

While the year under review has obviously been a very successful one I think that a clearer picture of the development of the Society's life business can be obtained if we look at the quinquennium as a whole. Thus in round figures the premium revenue in the Life Assurance Fund was £1,318,000 in 1952, it is now £2,173,000; the gross interest income in 1952 was £731,000, it is now £1,270,000; as a result of the increase in business during the quinquennium the Life Assurance Fund has advanced from £14,721,000 to £21,514,000; in other words the Society shows an expansion of roughly 50 per cent in the last five years.

BALANCE SHEET

The Board have reviewed all the investments and are well satisfied that the assets are worth more than the Balance Sheet figures; the Stock Exchange Securities appear in the Balance Sheet at less than their market value after deducting accrued interest; the Reserve Account of £250,000 remains intact and is available for any purpose for which it may be required in the future. It is interesting to look back on the experience of the last five years. The early years witnessed a steady and substantial rise in the level of investment values. This trend, however, was reversed in 1956 and the downward movement was accentuated in 1957. Despite the fall which has occurred the conservative value placed on our assets in the past and the results of our investment policy have stood us in good stead and have enabled us to meet the present situation not only without any assistance from the Reserve Account but with a comfortable margin in hand.

HIGHEST BONUS RATES

While an analysis of the yearly Accounts is instructive a full appreciation of the progress of a life office can only be achieved by an actuarial valuation of its affairs. The interest and mortality bases adopted for the valuation of the liabilities in respect of life assurances and of general annuities are the same as were used in the previous Investigation as at December 31, 1952. In the case of the valuation of the liabilities under the Pension Annuity Fund, however, the rate of interest adopted on this occasion is 4 per cent in view of the changed taxation basis. Taking the total value of the liabilities from the Life Assurance Fund there emerges a surplus of £2,115,251. This compares with £1,445,368 five years ago and provides further proof not only of the progress of the Society but also of its profit-earning power.

The Directors have decided to declare a Bonus on ordinary participating assurance policies at the rate of 46s. per cent per annum compound, that is, calculated on sums assured and existing bonuses. In the case of the new class of participating deferred annuities the rate of bonus declared is 42s. per cent per annum compound. This bonus is allotted in the form of an addition to the amount of annuity provided by the policy. These allocations cost, in all, £1,688,581, leaving a balance of £426,570 to be carried forward.

As regards claims falling due in the Quinquennium which has just commenced the Intermediate Bonus to be paid in respect of premiums due after December 31, 1957, is a matter for decision by this meeting. The Directors have given very careful consideration to this question and have no hesitation in recommending that until otherwise resolved the intermediate rates be the same as the rates declared.

I am sure you will regard the results of our Investigation as most gratifying. The above rate of 46s. per cent is the highest we have ever declared. The Society's position is eminently sound. We cannot say what the future may bring, but I can say this, that as things stand at present the prospects for future bonuses are good. The Scottish Equitable retains its place in the top grade of Life Offices and I hope that our Members will make a special effort to bring the merits of the Society of their choice to the notice of their relatives and friends and thus help to further our growth to their mutual advantage.

The adoption of the Report and Accounts was carried unanimously.

THE HONGKONG AND SHANGHAI BANKING CORPORATION

(Incorporated in Hong Kong with limited liability)

REPORT OF THE DIRECTORS PRESENTED TO THE MEMBERS AT THE ORDINARY YEARLY GENERAL MEETING HELD AT THE HEAD OFFICE, HONG KONG, ON FRIDAY, 14th MARCH, 1958

The Directors have pleasure in submitting the Balance Sheet at 31st December, 1957, together with the Profit and Loss Account for the year ended at that date.

		Hong Kong Dollars
The Profit for the year, after providing for taxation on profits earned to date and after making transfers to the credit of Reserves for Contingencies, out of which provision for diminution in value of assets has been made, amounts to		$21,035,543
To this must be added the undistributed profit brought forward from the previous year	$11,039,578	
Less: Amount transferred to the Reserve Fund during the year	9,000,000	
		2,039,578
		23,075,121
An Interim Dividend of £2 per share on 200,000 shares was paid on 10th August, 1957, amounting to £400,000 at 1/2–13/16 ..		6,481,013
leaving a balance available for distribution of		16,594,108
This balance the Directors recommend be appropriated as follows:—		
Amount to be written off Bank Premises	$4,000,000	
A Final Dividend of £1 12s. 6d. per share on 400,000 shares £650,000 at 1/2–13/16	10,531,645	
		14,531,645
leaving a balance to be carried forward to next year of		$2,062,463

The above appropriations have been incorporated in the Accounts.

In accordance with a resolution passed at an Extraordinary General Meeting of Members held on 9th August, 1957, the capital of the Corporation was increased to HK$50,000,000 by the creation of 200,000 new shares of HK$125 each and a sum of HK$25,000,000 standing to the credit of the Reserve Fund was capitalised and applied in payment in full of the 200,000 new shares. During the year legislation was passed amending the Bank's Ordinance to cancel the Reserve Liability of Members and to abolish the contingent liability of Members in connection with the Note Issue.

The Board of Directors have authorised the transfer of a sum of HK$16,000,000 from Inner Reserves and a sum of HK$9,000,000 from the balance of undistributed profits to the Reserve Fund. The Reserve Fund accordingly now amounts to HK$128,000,000.

DIRECTORS. During the year Mr. J. A. Blackwood resigned his seat and Mr. G. M. Goldsack and Mr. W. C. G. Knowles joined the Board. Mr. J. F. Macgregor, The Hon. C. Blaker, M.C., E.D., and Mr. L. Kadoorie retire by rotation, but, being eligible, offer themselves for re-election.

AUDITORS. The Accounts have been audited by Messrs. Lowe, Bingham & Matthews and Messrs. Peat, Marwick, Mitchell & Co., who are eligible for re-appointment.

By Order of the Board.
C. BLAKER, Chairman.

Hong Kong, 26th February, 1958.

BALANCE SHEET AT 31st DECEMBER, 1957

		Hong Kong Dollars	Sterling Equivalent
SHARE CAPITAL			
Authorised and Issued			
400,000 Shares of HK$125 each, fully paid		$50,000,000	£3,125,000

REPORT OF THE AUDITORS TO THE MEMBERS OF THE HONGKONG AND SHANGHAI BANKING CORPORATION

We have examined the above Balance Sheet with the books of the Corporation kept in Hong Kong, with the audited Accounts of the London Office and with the Returns received from the other Offices. We have obtained all the information and explanations we have required for the purposes of our examination. The above Balance Sheet gives the information required by the United Kingdom Companies Act, 1948, in the manner prescribed for a Banking Company and on that basis, in our opinion, is a full and fair Balance Sheet properly drawn up so as to exhibit a true and correct view of the state of the Bank's affairs at 31st December, 1957, according to the best of our information and the explanations given to us and as shown by the books kept in Hong Kong and the Returns received from the other Offices.

Hong Kong, 26th February, 1958.

THE HONGKONG AND SHANGHAI BANKING CORPORATION—*continued*

STATEMENT IN CONNECTION WITH SUBSIDIARY COMPANIES

1. The Investments in Subsidiary Companies appearing in the annexed Balance Sheet represent 14,975 Shares of the Capital Stock of The Hongkong and Shanghai Banking Corporation of California and the whole of the Issued Share Capital of three Trustee Companies and four Nominee Companies. The Balance Sheet of The Hongkong and Shanghai Banking Corporation of California at 31st December, 1957, is annexed. The Accounts of the three Trustee Companies and the four Nominee Companies have not been submitted as the Directors are of the opinion that such Accounts would be of no real value to the members of the Bank.
2. No part of the profits earned by the Subsidiary Companies has been dealt with in the Accounts of the Bank. The net aggregate amounts of the Subsidiaries' profits, after deducting the Subsidiaries' losses, so far as they concern the Bank, are as follows:—

	Hong Kong Dollars
(i) For the year ended 31st December, 1957	$70,675
(ii) For previous financial years	401,634
	$472,309

ACCOUNTANTS' REPORT TO THE BOARD OF DIRECTORS OF THE HONGKONG AND SHANGHAI BANKING CORPORATION OF CALIFORNIA

We have examined the balance sheet of The Hongkong and Shanghai Banking Corporation of California as of December 31st, 1957. Our examination was made in accordance with generally accepted auditing standards, and accordingly included such tests of the accounting records and such other auditing procedures as we considered necessary in the circumstances. Our confirmation of the principal assets and liabilities was made as of November 30th, 1957, with subsequent review and selective verifications as of December 31st, 1957.

In our opinion, the accompanying balance sheet presents fairly the financial position of The Hongkong and Shanghai Banking Corporation of California at December 31st, 1957, in conformity with generally accepted accounting principles applied on a basis consistent in all material respects with that of the preceding year.

San Francisco, California.
February 5th, 1958.

LINGGI PLANTATIONS, LIMITED

FINANCIAL STRENGTH AND PROGRESS IN REPLANTING

SIR JOHN HAY ON THE RUBBER OUTLOOK

The sixty-second annual general meeting of Linggi Plantations, Limited will be held on March 27th at 19 Fenchurch Street, London, E.C.3.

The following is the statement by the chairman, Sir John Hay, which has been circulated to Stockholders:

The accounts now under review reflect the change in our capital structure. Issued ordinary stock which previously stood at £615,925 is increased to £927,900. £80,000 was issued in payment for Kombok estate, acquired as from November 1, 1956, and in March 1957 a capital distribution of one unit for three was made, involving the issue of £231,975 additional stock.

PROFITS AND DIVIDEND

Export duty in its lower incidence acted as a set-off against a higher rate of estate expenditure. Despite a substantially greater output to which our latest acquisition, Kombok Estate, made a significant contribution, our net profit shows a slight decline consequent on the fall in the average price of rubber over the period covered by our accounts. I did observe in my statement last year that the issue of bonuses in the form of cash and stock was an exceptional operation and indicated clearly that there could be no reasonable expectation of its repetition. Notwithstanding a fall in profit, albeit a slight one, we are recommending a dividend distribution which will absorb £20,000 more than last year's payment, excluding the special cash bonus. The increase in our issued capital seems to have served to mask the liberality of our proposal. Perhaps it is timely to remind stockholders that the total of the proposed dividend represents a sum four-and-a-half times as great as the amount paid in respect of a period as recent as 1952/53. The taxation relief granted to overseas corporations has, of course, enabled us to pay out to stockholders a larger share of the profit earned, but it is not the sole contributing factor. Past restraints and the cumulative results of a continuing progressive policy are the elements in the building of a position of financial strength, without the support of which we could not confidently pursue our programme of replacement and improvement, with its inseparable future commitments.

VISIT TO MALAYA

I am writing this on my way home from Malaya when the impressions of that visit are clear in my mind. I welcomed the opportunity of once more discussing and settling with those in the East, who are responsible for the administration and management of our estates, many matters affecting the conduct of the Company's operations in Malaya. In the course of my inspection I noted with pleasure the advanced stage reached in the elimination of all old seedling rubber and its substitution with modern stock. I saw Mantin Estate in the process of transmutation from rubber to tea, and was able to give a timely decision in respect of our Sembrong Estate in Johore. This property was our original essay in planting with what was then regarded as high yielding modern stock. It has served us well but is now becoming obsolete and is due for gradual replanting. In this instance we intend to resort to mechanical aid in the initial stages of felling and clearing and we hope by the acquisition of some adjoining land to increase the estate to a more economic unit.

These visits of mine which have extended over a long period of years are valuable not only because they provide an opportunity for renewing one's acquaintance with our estates but, perhaps more importantly, they furnish the occasion for meetings with our officers in the East and for discussing with them, to agreed conclusions, recurring problems. Close and mutual understanding so established, produces a harmony between East and West which might well be otherwise lacking and is an important ingredient in the efficient and successful conduct of the Company's operations.

LABOUR

Technical progress on our estates is well matched by social advancement in the treatment of our workers. Better housing with extended amenities, medical services with maternity benefits, educational and recreational facilities and provisions for retirement, constitute valuable supplementaries to cash earnings. Work on a rubber estate under modern conditions contrasts favourably with other occupations where employment is precarious and earnings are by comparison meagre, with few or no social benefits. Although there may be in certain operations an extended resort to mechanisation, the main reliance continues to be on manual aid. Consequently, labour is still the main item in cost, and wages must be related to the industry's ability to pay, which is determined by the price of rubber. Natural rubber no longer enjoys a monopoly. It must, if it is to survive as a progressive industry offering constant employment, compete successfully with the synthetic product which has already received too much encouragement to extended production. There may, nevertheless, be some scope for higher earnings on the basis of greater output per unit of labour. One of the significant improvements in rubber production has been the continuing increase in output per acre, due primarily to replanting with better stock. This has not yet been matched by tappers' returns. Here is a field for investigation which may result in findings beneficial both to labour and employer.

RUBBER OUTLOOK

It has become customary for me to include in this annual statement a statistical forecast of rubber production and consumption for the year. This has, however, been already provided by others, and since I agree with their general conclusions I do not propose to recapitulate except to repeat that the expectation is that again natural rubber production and consumption should be approximately in balance; the underlying assumption being that by the latter half of the year there will be some recovery from the present trade recession. But what is submitted as a statistical exercise is largely in the nature of a guess. The Communist countries assume an increasing importance as consumers of rubber, but we have no advance information of their probable requirements and are left to make such assessment as we can. Moreover, on this occasion the biggest producing country is now in a state of sad turmoil, and there must be considerable doubt as to whether Indonesian exports will approximate to normal productive capacity.

In this very brief statistical examination, there is one item in last year's rubber trading which, I feel, calls for special mention. The United Kingdom's imports of synthetic rubber amounted to 58,000 tons, less than half of which came from Canada and the rest from the USA. This involved an expenditure of approximately 36 million US and Canadian dollars. As an important contributer to the dollar pool, Malaya is not disposed to regard with favour this depletion of scarce currency in favour of the purchase of a competing product at a time when natural rubber is in adequate supply.

Now that the UK has reached the stage of producing synthetic rubber in considerable quantities and the price of natural is at a competitive level, it would seem that the excuse for a continued dissipation of dollar reserves no longer exists.

STAFF

It is with pleasure that I acknowledge the friendliness and co-operation extended to me by the Agents and officers of the Company and all who serve it. My colleagues join me in recording our thanks to them for their services.

THE MONOTYPE CORPORATION LIMITED

ENCOURAGING START TO CURRENT YEAR

The fiftieth Annual General Meeting of The Monotype Corporation Limited was held on March 18th in London.

Brigadier Sir George Harvie-Watt, Bart, TD, ADC, QC, MP (the chairman), presided and, in the course of his speech, said: This has not been an easy year. The combination of the Import restrictions introduced in some Overseas Markets, and the strong financial measures taken to control credit in the Home Market, caused a drop in sales and a consequential reduction in profits. Nevertheless allowing for these factors I consider the year's results not unsatisfactory. The Group's financial position is encouraging. Net Current Assets, after taking into consideration Minority Interests and Future Taxation, amount to £1,594,161, an increase on the year of £83,862. Your Directors feel justified in proposing a final distribution of 7 per cent, making 9 per cent less tax, which is the same as last year.

The oppressive weight of taxation can be readily appreciated when it is realised that for every £1 paid to shareholders, the Corporation is having to pass £2 15s. to the National Exchequer. The share taken by the Government is disproportionately large. Furthermore when profits are retained in the business for further development, Profits Tax in addition to Income Tax is levied on those retentions. This is a heavy burden for industry to carry, especially having regard to the increasing effects of world competition.

For several years the Corporation has spent large sums on research and development. Of the expenditure involved approximately three-quarters was spent on work aimed at the discovery and development of new products, and the balance was directed towards the improvement of existing products and processes.

Sales in Western and Eastern Europe have been maintained at a steady level. Unfortunately France, one of our best markets was the subject of import restrictions. This adversely affected our trade in that country.

In spite of many and increasing difficulties, sales in the Home Market compared favourably with the previous year. The cumulative effect of increased costs, the restrictions of credit and the Hire Purchase regulations, tended to curtail expansion in this market. Furthermore the volume of printing has fallen considerably and the general pattern of work is changing from reading matter to colour and illustration. Despite all this, however, current prospects are not discouraging.

The restrictions imposed by import licensing in India and Pakistan and the troubles in the Middle East, to which I referred last year, had their effect on our trade in those areas. These setbacks were, however, partially offset by an improvement in sales to the USA, the Union of South Africa and other African territories.

So far the current year's results are quite encouraging, although in many markets trading conditions are tending to become increasingly competitive. In a business such as ours where more than two-thirds of our goods are exported, we are particularly affected by licensing difficulties brought about by a shortage of foreign exchange and more stringent monetary conditions. It is, therefore, impossible to forecast accurately our future results.

The report and accounts were adopted.

MARCONI'S WIRELESS TELEGRAPH COMPANY LIMITED

The Sixtieth Annual General Meeting of Marconi's Wireless Telegraph Company Limited was held on March 13th at Marconi House, Strand.

Sir George Nelson, Bart, Chairman, in the course of his address said: I am pleased to report that our turnover has been well maintained although not reaching last year's record level. The Group profit for 1957 was influenced to some extent by the final settlement of several large contracts executed in previous years and, for this reason, a record Group profit this year does not follow the trend of the turnover. After making provisions and deducting all charges but before providing taxation, the Group profit for the year was £1,075,938 showing an increase of £130,020 over the figure for the previous year.

For 60 years Marconi's have led the world in research into many aspects of radio and electronics and we have recently almost doubled the floor area of our Great Baddow laboratories to give us additional technical facilities.

We have made great progress in many fields, including the "over-the-horizon" techniques known as Tropospheric and Ionospheric Scatter, which promise to revolutionise long-distance radio communication, and in the airborne doppler navigator, a revolutionary device to provide an accurate position anywhere in the world without having to rely on any ground-based aids. Our effort on this problem, in conjunction with the Ministry of Supply, has resulted in the Marconi Doppler Navigator which has been in operational service with the RAF and some Commonwealth air forces now for more than 3 years.

Our Radar Division continues to make its vital contribution to national defence. The last year has also seen the development of a long-range airfield surveillance radar and of new techniques of remote display, making the operation of civil airlines ever more safe.

While the range and variety of telecommunications equipments is very large, we have recently specialised in designing and installing entire multichannel radio communication systems to serve complete territories. There are few countries indeed where Marconi telecommunications equipments are not in daily use.

For well over a quarter of a century your Company has devoted a considerable proportion of its resources to develop the finest transmission equipment for television. Since 1946, we have supplied for both home and overseas customers 70 transmitters, 33 aerial systems, equipment for 51 complete studio installations, 25 outside broadcast units, and over three million pounds worth of associated ancillary equipments. A proud record indeed.

The world demand for sound broadcasting continues to increase, even in countries which now have a large television audience, and there are many Marconi broadcasters in the world which are still giving impeccable service after 25 years of almost continuous operation.

Without efficient electronic instruments for testing and measuring purposes, few of the scientific and industrial achievements of our age could have come to pass. Much of our industrial life would be severely handicapped, if not paralysed. In hospitals and clinics everywhere Marconi electro-medical and X-ray apparatus is helping to speed the progress of medicine.

The report and accounts were adopted.

THE IMPERIAL TOBACCO COMPANY (OF GREAT BRITAIN AND IRELAND), LIMITED

ANNUAL GENERAL MEETING

LORD SINCLAIR OF CLEEVE'S REVIEW

The fifty-sixth Annual General Meeting of The Imperial Tobacco Company (of Great Britain and Ireland), Limited, was held on March 18th at the Recreation Hall of the W. D. & H. O. Wills Branch of the Company, Regent Road, East Street, Bedminster, Bristol.

The Right Honourable Lord Sinclair of Cleeve, KCB, KBE, the chairman, who presided, said:

Ladies and Gentlemen, with your consent we will take the Notice convening the Meeting and the Report and Accounts as read, and I will ask the Secretary to read the Auditors' Report.

Mr W. Sommerville (Director and Secretary) then read the report of the Auditors.

The Chairman continued:

The Directors' Report records the fact that since the last Annual General Meeting Mr T. M. Sowerby and Mr W. D. M. Wills have resigned from the Board. Mr Sowerby joined the Company in our Solicitor's Office forty-seven years ago. In 1919 when I came to the Company he was Acting Secretary. He was appointed Solicitor to the Company in 1926 and became a member of the Board in 1932 and a member of the Executive Committee of the Board in 1939. He retired from active work in 1948 and since then his wide experience and knowledge of our business and his judgment have continued to be of great value to his colleagues on the Board. We retain a lively appreciation of the outstanding contribution which Mr Sowerby made to the Company during his long service, and there are many in the Company today who, like myself, have good cause to remember his kindness and his inspiring example. Mr Wills served with the Company for some years before World War I and he has been a most valued member of the Board for the last sixteen years. I am sure we will all wish to extend to both these gentlemen our very warm regards and good wishes.

The four new Directors—Mr E. G. C. Beckwith, Mr N. M. Bruce, Mr W. S. J. Carter and Mr E. J. I. Whitcroft—who were appointed during the year are all engaged full-time in the Company's business and have considerable service with the Company. They will be most valuable recruits to our Board.

THE YEAR'S RESULTS

The explanatory Statement issued with the Accounts deals with the main features, and I hardly think that the detailed figures require much elaboration.

The broad picture of the year's results is very much in line with the forecast I gave a year ago—firstly, that competition in the trade would be keener than ever and that to meet it we had to expect a considerable increase in our selling expenses; and secondly, that there was no reason to anticipate that manufacturing costs would be lower. Although there was a small decrease in sales for the year—a circumstance which I did not forecast—the decrease in the Trading Profit was mainly due to the fact that our selling expenses and manufacturing costs were higher. The principal items were advertising expenditure, distribution charges, and, last but by no means least, the cost of leaf tobacco. These are not items on which it is wise to economise if we are to maintain, as we must, a sound and vigorous trading policy.

In the first place, quality of manufacture and of packing is the foundation of our goodwill with the smoking public, and I am glad to think that that foundation is as sound as it can be made. Secondly, in these days of keen competition, intensive and effective advertising is a necessity. There is also the fact that the traders who sell our goods have been faced with further increased costs; and, in addition to the increase announced in 1956 in payments under the Company's Bonus Agreements with its distributive trade customers (which in very general terms are deferred payments in consideration of efforts to further the sale of our goods), we felt it right to increase the distributive trade margins last September, when the cumulative effects of our own rising costs had made a slight increase in the prices of our tobaccos and cigarettes no longer avoidable.

STOCK-IN-TRADE

Leaf tobacco, unfortunately, is not one of the commodities of which the world price has fallen. On the contrary, its price has continued to rise—not dramatically but steadily—and, with the relatively long stocks that are necessary for proper maturing and adequate balancing of different grades so as to maintain uniformity of quality, the cumulative effect of continuing increases in cost is considerable. The increase of £2,837,000 shown under the heading of Stock-in-trade understates the effect of the increased cost of leaf. The item is a composite figure of which the principal components are unmanufactured leaf in bond and in transit, leaf cleared from bond and in course of manufacture, and manufactured stocks. At October 31st last, our stocks of manufactured goods were slightly higher than in the previous year, but that was more than offset by a decrease in the stock of duty-paid leaf in course of manufacture, and the main figure, leaf in bond and in transit, while very slightly more in lb weight, was substantially more in cost per lb.

I do not think we should expect any drastic drop in the cost of replenishing our leaf stocks in the current year, but I hope that the general rising tendency will be halted, and that at least in those places where recent prices have been in excess of world average prices it will not be long before there are actual decreases. Tobacco, as you know, is a delicate crop not easy to grow well and, more than most crops, subject to vagaries of climate. In Southern Rhodesia, for example, up to a couple of months ago all the omens predicted for this year a better than average crop both in quantity and quality. Adverse weather conditions, however, have falsified these hopes to some extent and I am afraid the grades required for the United Kingdom market will not be as plentiful as we had hoped. (I will have something more to say about the Central African Federation later.)

This item of Stock-in-trade with which I have been dealing is one of the main factors in the considerable capital commitments we have. That part of it which consists of leaf in course of manufacture and of manufactured stock contains the element of Duty which is also present in the Debtors item. Day in and day out throughout the year, we have some £85 million locked up in Duty. During this last year we have had a full year at the higher rate imposed in the 1956 Budget. The rate of £3 1s. 2d. per lb is really quite fantastic. Eighty per cent of the price we get for our cigarettes is represented by Duty and in that fact lies the reason why the increase in total consumption in this country over the last 20 years has been so much below that of other countries.

EXPENDITURE ON FIXED ASSETS

The next main item on the Capital Account is Land, Buildings, Plant and Machinery. For many years we have had to spend large sums in replacement and modernisation of our productive capacity. This year has been no exception, but the expenditure is vital to the maintenance of the structure of the business. You will observe from the Accounts that in the Parent Company we have spent, under this head, nearly £2½ million, and in the Group as a whole nearly £5½ million. The net addition in the Accounts to the value of Fixed Assets is substantially less by reason of depreciation, but the figures I have given do represent the extent to which the book values of these physical assets have had to be increased before depreciation is taken into account.

It is against that background of increased cost of stocks, of large commitments for Duty, and of considerable obligations by way of expenditure on Fixed Assets that the Directors felt it prudent that the transfer to Reserve from the Parent Company should not be less than £3½ million and from the Group £4½ million. That in turn meant that, with the net profit from Trading and Investment income that then remained, the final dividend would have to be slightly reduced—making 20 per cent for the year against 21 per cent in the previous year.

GIFT TO EMPLOYEES

As you know, it has been the practice for a long time to make a Gift to Employees in recognition of their efforts to promote the Company's interests during the year. The Gift is paid for loyal and willing service to the Company and is a tangible recognition of the good relations which undoubtedly exist among all ranks in the Company's employ. We believe that it is greatly appreciated and that it materially contributes to these good relations. This year the rate of the Gift will be 11½ per cent of earnings in the year ended October 31, 1957, which is one half per cent less than last year.

SUBSIDIARY COMPANIES

I have referred earlier to the substantial amounts that have been spent in replacement and modernisation of our productive capacity. In recent years a considerable part of the Group's expenditure in this field has been devoted to our Subsidiary Companies engaged in the board, paper, and printing and packaging industries. These Companies contribute significantly to the Group's total profits, and I think it is opportune for me to refer briefly to their activities.

The St. Anne's Board Mill Company of Bristol produces the board for our cigarette cartons and boxes, and also coated and uncoated board for use in many other trades. It supplies a very high proportion of the total United Kingdom requirements of coated board, and is one of the largest board mills of its type in the country. To meet its growing trade a substantial expansion programme is in progress. Its research into board and paper making materials and techniques has also been considerably extended and—as you may have seen from Press Reports—the St. Anne's Company was recently able to give the British Paper and Board Research Association assistance in the development of an improved process of pulping straw and esparto grass for use in making high-grade papers.

Mardon, Son and Hall Limited, of Bristol, have long experience of the printing and packaging trade. Using St. Anne's board they supply a very large proportion of the Parent Company's requirements of cartons and other forms of packing material. They also have a substantial trade with many industries outside the Group—their subsidiary Celloglas Limited which specialises in high gloss protective finishes provides one example of this trade. Mardon's have made a very satisfactory recovery from the great damage they suffered in the raids on Bristol during the war, and their nine factories in the Bristol area are now well-equipped with the most modern printing and packaging machinery. The Mardon Company also has expanding interests in Canada and Southern Rhodesia.

Ashton Containers Limited of Bristol produce fibre-board cases not only for our own Branches for use in despatching their goods to their customers but also for a variety of trades outside the Group. The most recent development is a new plant for the manufacture of corrugated cases. This plant came into production this month.

Robert Fletcher and Son, Limited make a very large part of our requirements of cigarette paper. They also make many types of other special papers and fine tissues—such as airmail writing paper, Bible papers, carbonising tissues, insulating paper for electrical equipment, waxed paper for food wrapping, etc.—and in recent years they have developed an appreciable business in their opaque printing paper for the airmail editions of newspapers. Combining the production of their two well-equipped mills at Stoneclough, near Manchester, and Greenfield in Yorkshire the Fletcher Company is the largest manufacturer in the country of cigarette paper and fine tissues.

The importance of these four Companies in supplying a variety of materials essential to our main business needs no further elaboration. They also have in the aggregate a substantial business with customers outside the Group and I believe that the further capital investment that has been made in them in recent years will turn out to be money well spent.

THE COMPANY'S AFRICAN ORGANISATION

The year 1957 marked the jubilee of the Company's organisation in Africa—an event of which we are proud. Fifty years ago—in 1907—the Company set up its leaf handling plant at Limbe in Nyasaland—an action which was described in a Colonial Office Report a good many years later as "a landmark in the development of Empire Tobacco." In 1907 conditions in Nyasaland and the Rhodesias were primitive in the extreme but in the last fifty years the economic and social development there has been truly remarkable. Tobacco has played an important part in that development, and the Company has done much to encourage appreciation by the British consumer of tobacco grown in those territories.

The Company's leaf handling plant in Southern Rhodesia was set up at Msasa near Salisbury in 1927. Nyasaland had by that time established a firm reputation for the production of leaf suitable for pipe tobacco and Rhodesia had become a promising source of cigarette type tobacco. The erection of our factory at Msasa was a clear indication of the Company's confidence in the future of African tobacco—a confidence which as the production figures show has been well justified. In 1925 Rhodesian growers produced a total crop of just under 4 million lb, of which United Kingdom manufacturers purchased rather over 1 million lb. Last year the Rhodesian growers produced 145 million lb, of which the United Kingdom took 82 million lb. The greater part of this expansion has occurred in the last 12 years and it was stimulated and assisted by the Agreement which the leading United Kingdom manufacturers entered into with the Rhodesian Tobacco Marketing Board in 1947. A good deal of the tobacco grown in Rhodesia, however, is not suitable for this country and for a number of years the crops have for one reason or another failed to produce a sufficient quantity of the grades which United Kingdom manufacturers have required. Nevertheless, the last thing I would wish to do would be to appear to minimise the very real progress in growing and curing techniques that has been evolved, and it is a great pity that quite abnormally bad weather at the critical stage seems to have prevented this year's crop from adequately reflecting that progress.

The Company's African Organisation itself has similarly grown from small beginnings until today we have an investment in the Federation of nearly £3 million, and we employ some 170 Europeans and over 5,000 Africans in our leaf handling and packing factories and on our forestry estates where timber is grown for making the casks in which the tobacco is packed and shipped. The welfare of these Africans and their families is a matter in which the Company has always been deeply concerned. At both Msasa and Limbe we have made for our African employees villages of modern brick-built houses and have provided amenities which include hospitals, schools, churches and sports grounds.

CENTRAL AFRICAN FEDERATION

In the light of our experience over the years in Nyasaland and in the Rhodesias, we have faith in the Federation and in its future. I do not myself think that it would be an exaggeration to describe it as the keystone of the Commonwealth arch today. I have no doubt that those who are in charge of affairs in the Federation are sincere and determined in their efforts to achieve real partnership between the Europeans and the Africans and realise that it is only on that basis that the Federation can endure. It is difficult for people in this country to judge the pace at which that development should best proceed, but it is clear that the recent proposals for the enlargement of the electorate, having regard to the conditions and the state of development in Central Africa, constitute a distinct advance.

There are, moreover, encouraging signs of progress—for example in the gradual emergence of a middle-class of African and also in the field of education. In 1955 the University College of Rhodesia and Nyasaland was incorporated by Royal Charter and last year was formally opened by Her Majesty the Queen Mother. The importance of this interracial University in the development of the Federation is clearly very great.

It is not easy to devise an educational system which gives the fullest opportunities to those who can use them, without inducing something like an educational indigestion in the great mass of a people still in the early stages of emergence from centuries of primitive existence. Employers have, I think, a real responsibility and a great opportunity. The way in which they look after their African employees; the amenities and the facilities for education, for sport, and for social life which the larger employers at least can provide; and the simple humanity of their attitude can in both a material and a moral sense contribute to the raising of the general standard of living. The Federation has considerable natural advantages, and with good guidance will surely grow to greatness in the Commonwealth. To attempt to move too quickly and to give responsibilities at a faster rate than that at which those concerned are fit to assume them would be as harmful to its best interests as to go too slowly.

TAXATION

It is an unfortunate symptom of the times in which we live that no review of the position of a Company largely dependent, as we are, upon the economic health of the country can be complete without some reference to taxation. I have already touched briefly upon the fantastic burden which this industry has to bear in the shape of a rate of Duty which exceeds £3 on every pound weight of tobacco cleared from bond for manufacture. The Government and its Departments immediately concerned are in no doubt as to our views on this, and surely no consideration of the ways and means to secure a more equitable distribution of the burden of indirect taxation can fail to recognise that the smoker is made to contribute quite disproportionately to those who wish to spend their money in other ways. There has recently been some discussion about the appropriateness of differential rates of Purchase Tax, and there would seem to be a good case for widening the scope of these discussions to cover the whole field of indirect taxation. The present system has evolved haphazardly and may have become quite unsuitable for the changed conditions of income distribution and spending. In the case of the Tobacco Duty, which is equivalent to a Purchase Tax of over 400 per cent, I believe equity and expediency point in the same direction. The danger that the maintenance of the very high rate of Duty will seriously prejudice the future yield of the tax is very real.

There is one other specific point that I would like to make under this heading, and that is to support with all the emphasis I can command the representations that have already been made in favour of implementing the recommendation of the Royal Commission to replace the existing discriminatory rates of Profits Tax between distributed and undistributed profits by a flat rate, and of making the flat rate 7½ per cent, which would slightly lighten the total burden of tax and give some much needed relief to industry.

IMPORTANCE OF COMBATING INFLATION

Turning to more general issues—to a country which basically has to live on its exports, inflation must always be dangerous. When inflation continues here at a faster rate than elsewhere the dangers become acute. It would therefore seem that the extremely lucid and impartial analysis of the causes and consequences of inflation which is contained in the Report of the Council on Prices, Productivity and Incomes under the Chairmanship of Lord Cohen is a timely and valuable

contribution to a more general comprehension of the position in which we stand. It is too much to expect that any such report would meet with universal approbation. For example, there are some who would regret that virtually nothing is said on the subject of the inflationary effects of excessively high taxation. Up to a point some indirect taxation such as the Tobacco Duty might be said to be disinflationary in the sense that it could reduce the general pressure of excess purchasing power, but we have got beyond that—and not only in Tobacco Duty—and a continuance of very high rates of taxation must make the halting of inflation more difficult. I believe that in our present circumstances, and having regard to what is happening elsewhere, it is a dangerous delusion for us to imagine that a slight or creeping inflation in this country does no harm, and I hope that as a result of the Council's Report there will be a much more general appreciation of why "our objective should be to stop the inflation and not merely to moderate its course." There is no doubt that given the understanding and the will on the part of the people of the country, the fall in the value of our money can be stopped, difficult though some of the steps on the road may seem.

THE OUTLOOK

Since by the time this Meeting takes place more than one-third of the Company's financial year has elapsed, it is perhaps not unreasonable that I should be expected to say something about the financial prospects. Keen competition exists and is likely to continue. And this applies not only to the tobacco trade but also to the paper, board, and printing industries in which our Subsidiary Companies are mainly concerned. I hope and believe that we are well equipped to meet that competition. The physical and financial structure of the Group is sound. Taking a broad view of the whole position so far as it can be seen today, I think that there are good grounds for hoping that the results of the current year will be at least comparable with those now before you, and it may well be that they will show some improvement.

I now have pleasure in moving—

"That the Report and Accounts for the year to October 31, 1957, now presented, be received and adopted"

and I will ask the Deputy Chairman to second the Resolution.

Sir Wilfrid Anson, deputy chairman, seconded the motion, which was carried.

The payments of 5½ per cent on the "A" 5½ per cent Cumulative Preference stock, 6 per cent on the "B" 6 per cent Non-Cumulative Preference stock, 10 per cent on the "C" 10 per cent Non-Cumulative Preference stock, and the interim dividend of 8½ per cent on the Ordinary stock were approved and confirmed, and a final dividend of 11½ per cent on the Ordinary stock for the year to October 31, 1957, was declared.

The retiring directors were re-elected and the other formal business having been transacted, the proceedings terminated with a vote of thanks to the chair, moved by Lord Dulverton and seconded by Mr P. G. Cardew, and the chairman's brief acknowledgment.

ENGLISH ELECTRIC COMPANY

COMBATING INFLATION BY EFFICIENCY

SIR GEORGE NELSON ON VALUABLE INVESTMENT IN RESEARCH AND EDUCATION

Sir George Nelson, Bart (Chairman), presiding at the thirty-ninth Annual General Meeting held on March 13th, in London, said:

The consolidated results for the year once again show an improved position with the balance on trading account up by £765,000 to £10,233,840. After depreciation, loan interest and income from trade investments, the profit before taxation was higher by £181,000 at £6,916,989.

After taxation and after transferring taxation relief to reserve, the profit applicable to the Company's consolidated account is £2,951,285 compared with £2,911,812 a year ago, an increase of £40,000.

In view of these results and of future prospects, your Board recommend a final dividend on the ordinary stock of 10 per cent, less tax, making 14 per cent for the year. As in previous years, I would point out that the 14 per cent dividend is paid on the nominal capital and not on the capital invested by the shareholder. The ordinary dividend is equivalent to 5 per cent before taxation on the shareholders' actual investment, and, as I shall show later, the total return after taxation to ordinary and preference shareholders combined is only 1.01 per cent of the Company's turnover. After appropriating the preference and ordinary dividends and transferring £1 million to general reserve, the carry forward is £1,786,585 in the consolidated accounts. The total of our Capital and Revenue Reserves now stands at £21 million.

TURNOVER

The improved results are wholly due to a further increase in our turnover made possible by additional manufacturing facilities provided from new capital and reserves and by improved operating efficiency. Our trading margins are still very slender as is illustrated by the following breakdown of every £100 of our 1957 turnover:

Materials, including bought and finished articles	£ 47·83
Wages and salaries	33·48
Depreciation, Maintenance, Power, Heat, Light, Rent, Rates, Insurance, etc.	12·69
Interest on Debentures, Bank Overdraft and Bills	1·19
	95·19
Taxation	£ 2·46
Retained in the business	1·34
Net dividend on Preference and Ordinary Stocks	1·01
	4·81
	100·00

COMBATING INFLATION

At the present time there is a determination, more widespread than ever before, that Britain must stop the inflation which has dominated its peace-time economy during the last twelve years.

The workpeople's reaction to constantly increasing prices is to ask for more wages. From time to time we have issued the warning that higher wages without an equivalent increase in output will price us out of the export markets. I am happy to say that other factors have fortunately prevented this happening for the moment, i.e., improvements in design, improvements in production methods and the increase in the volume of our business. Although these remedies have so far enabled us partly to counteract the rise in wage levels, they cannot do so indefinitely at a time when competition is becoming steadily more fierce in the overseas markets. Requests for higher wages where no equivalent increase in output or efficiency is possible must therefore be restrained.

We have been able to retain our position this year by the collaboration of our workpeople and technical staff in achieving improved efficiency. We look to the Government, nationalised industries and industry generally to pursue efficiency with similar energy in the form of deeds and not words. To this end, the Government has stated that both central and local Government expenditure and expenditure by nationalised industries is to be pegged and Government action has been taken to limit unnecessary expansion by private enterprise. By these means it is hoped to arrest inflation while enabling productivity to catch up with the increase in the country's spending power.

Research remains one of the foremost activities of the Group. By deep thought on the most advanced problems supported by immense capital expenditure, new fields are opened and existing ones improved. By such efforts we keep ahead of our competitors over the great range of our products, and just because of their wide range and because of the successful results of our huge research and development effort, we are able to carry out our basic policy of maintaining stability of employment for our staff and workpeople.

PRODUCTION EFFICIENCY

I am proud to announce that we have just received an order from the Central Electricity Generating Board, for two 275,000 kW Turbo Generators for installation in their projected new Generating Station, Blyth "B." The design submitted by the English Electric Company has been selected as the best on a balance of price, efficiency and technical excellence.

The activities of our engineers have contributed to greatly increased efficiency in a number of industries. For example, the tremendous increase in the output of steel in the United Kingdom in the years since the war has been very largely attributable to the developments in electrical control of steel mills in which we have played a very important part.

It is because of the spirit of endeavour that the Company can show increased production and orders. The orders outstanding at the end of the year, for the Group as a whole, now exceed £250 million. Of our total United Kingdom output one-third goes to overseas markets, but I must point out in this connection two special features. These are the inclusion for the first time of our Company's proportion of Atomic Power Station plant and of the substantial order for Canberra Aircraft for India which includes a considerable volume of specialised equipment such as engines and electronic devices as a part of the contract price instead of as a free issue from the Government.

So far as this Company is concerned, there is as yet no evidence of a serious diminution in the rate of incoming export orders. Nor have we experienced any unusual cancellation of existing orders. Our order book is very satisfactory and, as the situation is today, I think I can say that we have no great cause for anxiety. Nevertheless, if the North American recession were to deepen, and to extend beyond, let us say, the end of 1958, cause for anxiety might develop.

EUROPEAN FREE TRADE AREA

The scheme put forward by Her Majesty's Government has encountered a considerable degree of opposition, and it is as yet impossible to see clearly what the outcome will be. It remains true, in my judgment, that the Common Market, having been established, it is important from the point of view of general industry in this country that some kind of European Free Trade Area should be created; otherwise, we shall find ourselves outside a powerful European Customs Union of six countries with tariffs steadily reducing between themselves, but with a common and higher tariff against manufactures from outside the Union, including goods from the United Kingdom. Such a Union could become extremely powerful in the world's export markets.

That being so, it is I think important to examine the problems that will confront each industry if a Free Trade Area should be established, and we have set on foot studies on these problems.

EXPORT

I mentioned in my Speech last year that we had received orders from 137 different countries in the year then under review, and I can say again that orders have been obtained from just as many parts of the world.

In a world which is hungry for the type of plant we manufacture, for the generation and application of electrical energy, the outstanding problem is how to bridge the gap between the sales of primary products from the newly-developing countries and the purchase of high quality machinery to aid in the development and improve the standard of living in these countries. It seems to me that we must do more than has been found possible in postwar years to spread the period over which capital equipment is financed.

We see from the operations of the American Import/Export Bank that where capital projects are undertaken, the term under which loans are repaid can be up to 20 years or even longer. It is clear that long-term financing is a competitive weapon as well as the quality and price of the product. It is also true that it will help the newly-developing country to make the best use of its resources if instalment payments can be spread over sufficient time to allow the newly-acquired plant a period of operation which will itself help to pay for it. This is not a new theory but it is one which requires urgent study with special reference to this country's export of capital goods.

TRAINING AND EDUCATION

In furtherance of our duty to increase our own efficiency, and in view of the continued expansion of our Group, we have brought a large number of young people into our Education and Training schemes. We regard this not so much as additional expenditure but as an increase in a valuable investment. We have never confined our educational and training facilities to young people in the United Kingdom. At all times we have some 150 men from overseas under training with us and at the moment they are from 33 different countries.

The report and accounts were adopted.

BAJOE KIDOEL RUBBER AND PRODUCE COMPANY LIMITED

SIR ERIC MILLER'S STATEMENT

The forty-sixth Annual General Meeting of The Bajoe Kidoel Rubber and Produce Company, Limited, was held on March 13th in London. The following is an extract from the circulated statement of the chairman, Sir Eric Miller:

The rubber crop of 1,752,119 lb from our two estates in East Java was better by some 5 per cent than that of the previous year. The coffee crop of 269,360 kgs was only about two-thirds of that harvested in the year 1955/56. Field conditions generally on the two estates were reported to be reasonably satisfactory. The situation in Celebes continues to cause serious anxiety and throughout 1956/57 bandits operated on and around our estates with increasing boldness. Arrears of upkeep work inevitably accumulated. The Celebes rubber crop of 1,297,557 lb compared favourably with 879,825 lb in the previous year, Balangriri having contributed ten months' crop as against only five months in 1955/56.

The Subsidiary Companies' profits for the year ended March 31, 1957, were Rp.2,636,579 (Rp.4,069,559). The profit for 1956/57 before UK taxation is £4,604. From a taxation point of view, it is better to relate the payment of a dividend to the year 1957/58 and the Directors have declared an interim dividend of 10 per cent, less tax, for the year ending March 31, 1958.

REDUCTION OF CAPITAL

In view of the recent trend of events in Indonesia, the Directors have once again given consideration to the Company's minimum requirements of sterling working capital apart from the local Companies' rupiah balances and they have reached the conclusion that the Company's resources in London permit the repayment to members of 1s. per 2s. share. If the Special Resolutions set out in the notice of the forthcoming Annual General Meeting are duly adopted and subsequently approved by the Court, the issued capital will then be £62,240.

Political developments in Indonesia culminating in the recent drastic actions taken against Netherlands interests are a matter of very grave concern to us.

No remittances of profits from Indonesia have been received in the UK in respect of profits earned by our Subsidiary Companies since April 1, 1955. To obviate a complete breakdown the suggestion has been made, with which we are in full agreement, that the Indonesian Government should modify their regulations so as to enable plantation Companies such as ours to retain a portion of the substantial foreign exchange proceeds of the estate products all of which now have to be surrendered to the Indonesian Exchange Control who, as I have indicated, have suspended the granting of permits.

The report and accounts were adopted and the special resolutions regarding the capital repayment and capital reorganisation were passed.

BRITISH HOME STORES

NEW RECORDS

The thirtieth annual general meeting of British Home Stores, Limited. was held on March 19th in London, Mr Harold Hindley, chairman, presiding.

The following is an extract from his circulated statement:

Your directors were very sorry indeed to know, towards the end of last year, of Mr Horace Moore's wish to resign from the Board on medical advice. I would like on behalf of my colleagues and myself to thank him for all the efforts he constantly made in the company's interests.

The profit for the period before taxation was £1,574,177, an increase of £43,983 on the year. The total provision for taxation is £858,000, an increase of £29,000. £394,684 has been allocated to General Reserve and the final Ordinary dividend recommended is 3d. per unit, the same as a year ago, making a total of 4½d. per stock unit for the year as against 4d. for the previous year. There is £193,779 carried forward against £182,926 brought in.

We achieved for the year as a whole new records both in the money value of turnover and in the number of individual purchases, an indication that we have succeeded in maintaining the growing interest of the general public. It is our policy to pass on to the consumer the advantage of lower raw material prices and increased efficiency of production, but in the early part of the year decreases in raw material prices were offset by higher manufacturing costs. Later in the year, however, many selling prices were reduced, and since Christmas further reductions have been announced.

DEVELOPMENT

Under present conditions with the credit squeeze, combined with the high interest rates prevailing, development has to some extent to be curtailed. While for the time being we are forced to rely more on our own resources it is our intention to continue with our general policy of expansion.

Last May we opened new stores at Blackpool and Swansea and in November our new store at York. We continue to operate both stores in Swansea, but in York the old store has been closed. Our experience in these new stores for the part of the year during which we traded was satisfactory.

Work now proceeds upon stores at New Street, Birmingham, which will be the largest of our chain, opening in May, and at Middlesbrough, where we expect to open in the autumn. Work has commenced upon a store at Crewe which, however, will not be complete until 1959. In 1959 also we shall complete new premises now being built in Liverpool, which will embody part of our existing store. We have so far been unable to complete arrangement for the erection of a new store in Bristol.

During the year we carried out extensions to some of the existing stores and work is proceeding upon extensions in additional cases. We have continued with our policy of modernising some of the older stores of our chain.

It is very difficult to forecast the trading pattern for the current year. Whilst there is no doubt that competition continues to increase, we feel that with hard work backed by knowledge and experience we should continue to get increasing recognition from the shopping public

The report and accounts were adopted.

ENGLISH CHINA CLAYS

INCREASED SALES—PROBLEM OF RISING COSTS

SIR JOHN KEAY'S STATEMENT

The thirty-ninth annual general meeting of English China Clays Limited was held on March 20th at Hyde Park Hotel, London, S.W. In the absence of Sir John Keay, A.C.A. (Chairman and Managing Director), who was indisposed, The Right Honourable Lord Aberconway (Deputy Chairman), presided.

The following is the chairman's statement which had been circulated with the report and accounts for the year ended September 30, 1957, and was taken as read:

The profits of the Group for the year ending September 30, 1957, after providing £1,065,833 for taxation, amount to £1,085,436, £25,000 is provided for Taxation Equalisation Reserves and £650,000 for General Reserve, which now stands at £2,500,000. Your Directors recommend a Final Dividend of 4½ per cent tax free, which, with the Interim payment of 2 per cent tax free, brings the Ordinary Dividend for the year ended September 30, 1957, to 6½ per cent, tax free. This leaves a balance on Profit and Loss Account to be carried forward of £432,346, as against £366,329 in the previous year.

The Consolidated Balance Sheet at September 30, 1957, shows that the Issued Capital and Reserves stand at £9,181,010, of which £8,008,242 represents expenditure on Capital and Fixed Assets, and the balance of £1,172,768 equals the surplus of Current Assets over Current and Deferred Liabilities, an increase of £163,836 compared with the corresponding figure of last year.

REVIEW OF SALES

I am pleased to report that the sales of China Clay during the year under review show a small but encouraging increase over those of the preceding year, which were the highest in the history of the Company. Home Market sales were somewhat lower than last year, but our Export sales increased in spite of the effects of currency, import and other trading restrictions. An easing of overseas freight rates was an extremely helpful factor in the maintenance and expansion of our overseas markets.

Our USA subsidiary, Anglo-American Clays Corporation, is not yet in full production, but steady progress is being made in the development of new methods of production and processing, which are already giving good results by improving qualities and increasing sales.

MOLOCHITE

Sales of Molochite continue to show a marked increase, and a growing interest in this high grade refractory material is being shown in a number of foreign countries, notably the USA. Additional production plant is at present under construction and is scheduled to commence operation in the late Summer of this year.

NEW ACQUISITIONS

On March 29, 1957, the Company acquired all the shares of Hexter and Budge, Limited, of Newton Abbot in Devon, for a cash consideration. Incorporated in 1926, this firm produces Ball Clay from freehold mines near our own in the Newton Abbot area. We have marketed a substantial part of their production for many years, and this acquisition will enable us to develop and consolidate our producing interests in Ball Clay which, like China Clay, has large export associations.

As you will know from the circular distributed to the shareholders in December, and from announcements in the Press, contracts were exchanged on December 19, 1957, by your Company and a group of private companies operating quarries chiefly in Devon and Cornwall. You will also have received a more detailed communication on this subject with the notice of the Annual General Meeting, and I shall refer to it again later.

BUILDING, QUARRYING AND TRANSPORT

The falling-off of profits in the Building section of the Group, to which I referred in my statement last year, has continued throughout the year under review, and has been intensified during the current year following the announcement in September, 1957, of the higher Bank Rate. We are, however, maintaining our share of Local Authority contracts, but, in our view, until there is a reduction in the present high interest rates the immediate future of private enterprise building is somewhat obscure. Accordingly, our plans for the extension of this side of our activities have been deferred and will be reviewed when the position improves.

Our Transport and Quarrying subsidiaries continue to do well and have contributed increased profits to the Group. The Transport fleet is well equipped with modern vehicles, and improved maintenance procedures are having their effect in reducing running costs. With regard to the Road and Limestone Quarries, expenditure on increased mechanisation and modernisation is being undertaken to raise productivity and reduce costs.

The amalgamation of our existing quarry interests with those of the Devon and Cornwall group, to which I referred earlier, will be most advantageous to our general quarrying position in the South West of England.

There are many opportunities that such an amalgamation brings in its wake. In the field of research, we shall look forward to collaboration with many of the industries using the varied products of these quarries, the results of which should, in the years to come, make a valuable contribution to the benefit of the community and to the stability and profitability of the Group as a whole. In production and marketing, likewise, the exchange of experience and techniques must operate to our mutual advantage in terms of increased efficiency and economies.

REVIEW OF MANAGEMENT STRUCTURE

Last year I referred to the reorganisation of the management structure. This was completed early in 1957, and the benefits of the streamlining of the structure are now being felt.

The principle of the re-organisation adopted has been one of de-centralisation into the following groups: China Clay, Ball Clay and sundry Mineral Products; Building; Transport; Limestone and Roadstone Quarries. Each group has its own Board of Management, the financial control of which is administered by the Board of ECC Ltd.

TRAINING

The Apprenticeship and Educational schemes continue to make progress and, apart from the obvious benefits to be expected from such schemes, it is encouraging to note from the number of newly indentured apprentices and trainees that the future manning of the Group, in all its departments, is being provided for.

PRODUCTION

Mounting costs continue to be a feature of the production problems of the extractive industries and, indeed, all Industry. Labour and coal, which form a substantial part of our costs, have risen again during the year, but an improvement in productivity achieved by modernisation, mechanisation and research has helped to keep our prices and quality standards competitive. There is a limit, however, at which the level of costs must so affect the price of our products that employment is endangered.

Today it is more than ever one of the problems of Industry to find a means of satisfying labour, the Tax Collector, investors and potential investors, and, at the same time, to maintain the high standard of efficiency so necessary to achieve success in world markets.

MR W. O. MEADE-KING

Mr W. O. Meade-King retired, on March 31, 1957, after 45 years' service, from his executive positions with the Group. We all realise what we owe to Mr Meade-King for the leading part he has played with such success, particularly in the development of the China Clay interests of the Group, and it is with a sense of reluctance that we record that he has relinquished his executive duties as Works Director. Fortunately we are not losing the benefit of his wisdom and long experience, because he has consented to remain with us as a non-executive Director on the Boards of ECC Limited, and also a number of our subsidiary companies.

CONCLUSION

Despite the penalty of heavy Profits Tax on dividends, your Directors have, in declaring a small increase in the dividend, apart from the normal considerations of dividend policy, had regard to the claims of those of our shareholders who have held their shares for many years, whose incomes are fixed, and who have no means of combating the increases in the cost of living, which are a feature of the present inflationary conditions.

Finally, I should like to express a tribute on your behalf and on behalf of the Board to the workpeople, staff and executives, both at home and abroad, for the loyalty, enthusiasm and energy which they have shown in making possible the satisfactory results which I have reported to you.

The report and accounts were unanimously adopted, the dividend, as recommended, was approved, and the retiring directors, Mr R. W. C. Hobbs and Mr Hart Nicholls, were re-elected. The remuneration of the auditors Messrs Allan, Charlesworth and Co. and Messrs Bourner, Bullock and Co. was fixed.

At a subsequent extraordinary general meeting a resolution was passed that the share capital of the company be increased to £12 million by the creation of 4,000,000 Ordinary shares of £1 each.

APPOINTMENTS

MSL have been retained to advise on the appointment of a

GENERAL SALES MANAGER

for a company employing over 3,000 and manufacturing durable consumer goods for the mass medium market. In order to retain its leadership and to expand in a highly competitive market the company wish to appoint a General Sales Manager to co-ordinate the sales effort. This will include directing subordinate sales, market research and advertising managers and through them a large sales force. The appointment will be based in London.

Candidates must have had considerable experience in marketing and selling consumer goods and in directing a large field force selling to the retail trade. They should also have some knowledge of market research and experience controlling large advertising appropriation. Good general education necessary—a degree an advantage. Preferred age 40 to 47. The position will interest those earning between £3,000-£4,000.

No information will be disclosed to our clients until candidates know their identity and have given permission after personal discussion. Please send brief details in confidence, quoting reference S.451, to P. J. H. Fryer.

MANAGEMENT SELECTION LIMITED
17, Stratton Street, London, W.1.

SCOTTISH INDUSTRIAL ESTATES, LTD.

The Directors of SCOTTISH INDUSTRIAL ESTATES, LIMITED, invite applications from suitably qualified persons for the position of Assistant to the General Manager of the Company.

Applicants, preferably not more than 45 years of age, must have had wide administrative, commercial and/or industrial experience, qualifying them to give effective assistance to the General Manager in the discharge of the managerial responsibilities inherent in a large-scale organisation responsible to a Government department for the erection, maintenance and general administration of industrial property which, at present, includes nearly 400 modern factories in Scotland.

The salary scale appropriate to the appointment is £1,600 to £2,000 per annum. The commencing salary will be determined by the Board. The Company operates a Contributory Superannuation Scheme which the successful applicant will be required to join.

Canvassing of the appointment, either directly or indirectly, will result in disqualification.

Applications, in duplicate, together with five copies of three recent testimonials, should be lodged with the DIRECTOR AND GENERAL MANAGER, 3, WOODSIDE PLACE, GLASGOW, C.3, not later than April 10, 1958.

THE FEDERATION OF THE WEST INDIES

Applications are invited for the post of Economist on the Establishment of the Federal Government of the West Indies. Salary £1,850 per annum.

The post will eventually be pensionable on the Federal Establishment. Selected candidate would be required to serve at Headquarters in Trinidad and in any of the territories forming the Federation. Free passages provided on first appointment and termination for officer and family up to five persons in all. Leave at the rate of 45 days a year. Leave passages up to three adult passages after tour of two and a half years. Accommodation provided at 10 per cent of salary, plus furniture at approximately 5 per cent of cost per annum.

The Economist will work under the direction of the Senior Economist, Economic Planning Division. He will be required to assist in a programme of collating data and of economic assessment of the Federal Area in order that studies can be completed on which economic planning can be formulated.

Qualifications required are an Honours or Research Degree in economics and at least two years' experience in the field of applied economics, i.e. in economic planning organisation or department of finance or trade and production or comparable experience elsewhere in economic research investigation, in particular of field surveys of a practical nature.

Applications, giving age and particulars of qualifications and experience, together with names of two personal referees, should be submitted before April 5, 1958 to the Federal Secretary, "Whitehall," 29, Maraval Road, Port of Spain, Trinidad, the West Indies, from whom further particulars may be obtained. Candidates who have already submitted applications for this appointment need not re-apply.

One copy of application to Director of Recruitment, Colonial Office, Great Smith Street, S.W.1, quoting BCD 123/500/02.

PORTSMOUTH COLLEGE OF TECHNOLOGY

A Lecturer is required in the Commerce Department, to commence duties in September. Ability to lecture in Economics, with Law, History, or Government, up to B.Sc. (Econ.) degree standard is necessary.

Salary: Burnham Technical Scale. Lecturer: £1,200 by £30 to £1,350.

Application forms and further details may be had from the Registrar. Forms should be returned within 14 days of the appearance of this advertisement.

WESTERN REGION PRODUCTION DEVELOPMENT BOARD, IBADAN, NIGERIA.

SENIOR ACCOUNTANT

The Western Region Production Development Board has vacancies in its accounting organisation for a Senior Accountant.

Candidates for this post should possess a recognised Accountancy qualification and should have had at least five years' experience in a professional office since qualifying, including work on re-organisation, introduction of a new accounting system and budgetary control. It is essential that candidates should have sound knowledge of costing and cost systems. Commencing salary, excluding inducement allowance, will be in the range of £1,360 x £60-£1,590. Inducement allowance is £300.

2. The terms of service include partly furnished accommodation at 8⅓ per cent of the basic salary; free medical service, outfit allowance, free passage for wife and also free passages once each way per tour for children up to three in number not over the age of 13. Employees are required to contribute up to 10 per cent of salary to a Provident Fund. Home leave at full pay at the rate of five days per month on overseas service. Normal length of tour 18-24 months.

3. Applications in *duplicate*, together with details of age, experience and qualifications and the names of three personal referees should be sent to:

The London Representative,
Western Region Production Development Board,
178-202, Great Portland Street,
London, W.1.

to reach him not later than March 31, 1958.

ATTRACTIVE OPPORTUNITIES IN

UNILEVER LIMITED

are offered to qualified Accountants up to 30 years of age. These appointments provide a wide experience in progressive management accounting and commercial control techniques. Suitable candidates are eligible for consideration under the Unilever Companies' Management Development Scheme which is designed to train men for responsible management positions. The commencing salary will depend on age, qualifications and experience.

Applications, stating age and accompanied by a brief summary of education and experience, should be sent to: Unilever Limited (P.D. 366), Unilever House, Blackfriars, London, E.C.4.

CONSTRUCTORS JOHN BROWN LIMITED invite applications for a post of an Executive Director. Preference will be given to a man with experience in Chemical and Petroleum Chemical Engineering and Construction who also possesses proven administrative ability. —Applications should be addressed to the Chairman of the Company at 8, The Sanctuary, London, S.W.1, who will deal with them personally and confidentially.

STATISTICIAN (Assistant)

required by the Central London Head Office of a leading Anglo-American Chemical Company.

Candidates, age about 25, should be Graduates in Economics with Statistics, but Non-Graduates with suitable experience would be considered.

This is a permanent and progressive appointment in an expanding organisation; commencing salary £600 to £700 per annum approximately.

Fully detailed applications, which will be acknowledged, should be addressed, in complete confidence, to Box JN 2687, A.K. Advertising, 212a, Shaftesbury Avenue, London, W.C.2.

THE UNIVERSITY OF MANCHESTER

Applications are invited for the post of LECTURER IN SOCIAL ANTHROPOLOGY. Salary on a scale £900 to £1,650 per annum with membership of F.S.S.U. and Children's Allowance Scheme. Initial salary according to qualifications and experience.—Applications should be sent, not later than April 12, 1958, to the Registrar, the University, Manchester 13, from whom further particulars and forms of application may be obtained.

FISONS PEST CONTROL LIMITED seeks the services of a first-class Sales Promotion Manager, age early/mid thirties, for their headquarters offices at Felixstowe. A thoroughly experienced man is sought, with proved ability in creating productive sales promotion schemes in similar fields, who is full of creative ideas and who could produce sales results in a highly competitive market—sound experience in advertising and of marketing products in agricultural fields necessary. Initial salary in neighbourhood of £2,000 per annum, with excellent prospects and working conditions, but long hours and continuous hard work go with them.—Write to Personnel Manager, Fisons Pest Control Limited, Harston, Cambridge (quoting No. 1393).

ASSISTANT SPACE BUYER.—Secretary/Shorthand Typist with minimum twelve months' experience in Advertising Agency Media Dept. is required as Chief Assistant to Space Buyer; London, W.1. Must be quick at figures and interested in statistics. Age 25-35. Commencing £550/£650, according to qualifications.—Box 898.

PETROCHEMICALS

British Hydrocarbon Chemicals Ltd. have recently awarded us the contract for the engineering design, procurement and construction for the Cumene-Phenol plant to be built at Grangemouth, Scotland. This plant employs the cumene process developed by Scientific Design Company and licensed by the Mid-Century Corporation, a subsidiary of Standard Oil Company of Indiana.

The phenol process was developed by The Distillers Company Limited.

We have recently completed a major expansion of British Hydrocarbon Chemicals Ethylene and Ethanol plants and we are currently constructing a Poly-ethylene plant at the same location.

Time-honoured

—or time-worn?

Does the charm of that beautiful old carpet still linger—but only in patches? Do you still enjoy r-e-a-c-h-i-n-g for things, all over that *monument* of a desk? All the time your office has been "growing on you", it's been growing old, too. And to other people it may look it. Catesbys Contracts can sort things out so that your daily business life really is more smooth running–and rewarding. Ring them at Museum 7777 (or send a letter if you're abroad). They can replan and rebuild, decorate the room and furnish it—all specifically for *you*—all in the best of taste, for the smallest of budgets, in the shortest time.

300 MEGAWATTS AT BRADWELL, ESSEX

A Greater Britain through Nuclear Power

A greater Britain because her industry can draw upon hundreds of thousands of kilowatts of productive electrical power without burning a pound of coal or a pint of oil as fuel. A greater Britain because Bradwell, despite the exciting technical advance it represents, is a commercial atomic power station and underlines the remarkable British lead in the practical application of nuclear energy. The Nuclear Power Plant Company is proud to be entrusted with this great contract by the Central Electricity Authority.

N.P.P.C. combines the resources of eight specialist companies whose individual skills are planned and co-ordinated into a unified team capable of undertaking the construction of complete nuclear power stations throughout the world.

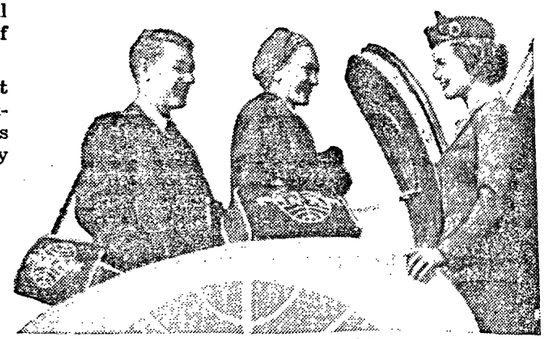
NOW PAN AMERICAN OFFERS YOU

A NEW LOW THRIFT FARE

Take your choice of four wonderful ways to the U.S.A. on more flights weekly than any other airline

Economy-class Thrift Fares: This brand-new service for the lowest normal year-'round fare starts April 1st.† Paris to NewYork, for example, is only $489.60 round trip. Yet PanAmerican offers you the finest, most modern equipment—like the famous "Super-7" Clippers*, holders of over 20 transatlantic speed records, and the same highly trained, pleasantly courteous crews. Pan American will offer as many as 47 economy-class flights a week to chose from. Full 44-pound luggage allowance—complimentary sandwiches and light beverages served at your eat.



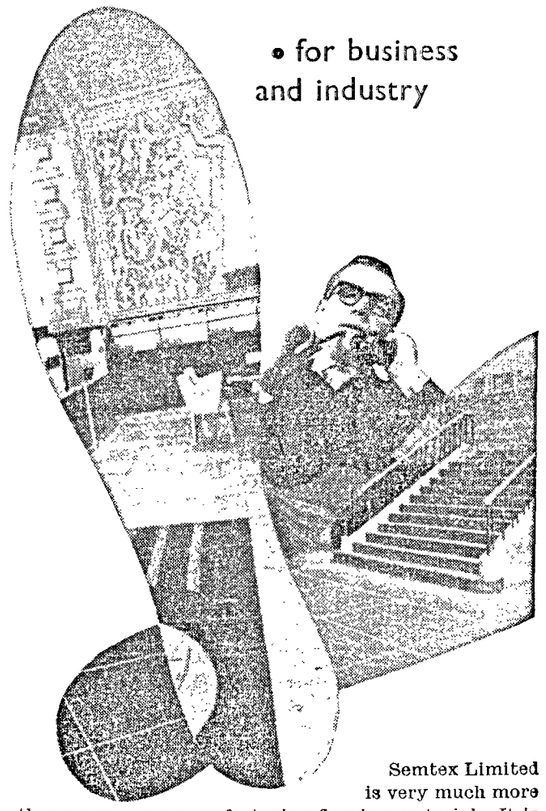
Tourist Service *The Rainbow,* world's most popular tourist service. Everything you could wish in the way of courteous service, marked by the little extra touches that make PanAmerican the choice of experienced travelers, *Rainbow* service couples an outstanding cuisine, plus a choice of wine at modest cost, with personal attention that is unique as Pan American's record of over 65,000 transatlantic flights.

First-class President Service: This is where the fine art of pleasing the passenger reaches a gracious high. Fabulous meals by *Maxim's of Paris* with vintage wines and champagne set the standards for this traditionally fine service—the first popular first-class service of all. Extra wide, extra long, foam-soft seats for everyone. Spacious berths, private *President Staterooms* are available at a surcharge.

Deluxe President Service: Pan American has reserved its *all-first-class* double-decked Stratocruisers for this outstanding new service to the U. S. A. Two separate decks—one for the main deck, one for an exclusive cocktail lounge—give you plenty of room to roam around high over the Atlantic. You'll enjoy the comfort of Pan American's original Sleeperette* service or a *cloud-soft* berth. And for the ultimate in air-borne luxury, ask for *The President Special*—the world's most luxurious air service by far. Sumptuous 7-course meals by *Maxim's* . . . extra cabin attendants . . . limited passenger list.

The priceless advantage of Pan American's unequalled experience is yours on every flight no matter what your choice of service. No other way can offer you the relaxation that comes with knowing you are aboard the only airline with over 65,000 transatlantic crossings. Don't settle for less, call your Travel Agent or Pan American—800 offices around the world.

*Trade-Marks, Reg. U. S. Pat. Off. †Subject to Government approvals



No other airline offers so many flights a week to so many convenient U. S. gateway cities.

PAN AMERICAN

WORLD'S MOST EXPERIENCED AIRLINE

a unique FLOORING SERVICE

• for business and industry

Semtex Limited is very much more than a company manufacturing flooring materials. It is an organisation devoted to the creation of the best type of floor to meet every purpose. You see illustrated the entrance hall of the "Daily Express" offices and the headquarters of Chester County Council, both laid in super-luxurious, super-strong Dunlop Rubber Flooring. But this is just one Semtex product. Others include lovely long-wearing Vinylex Tiles; Semflex, ideal for domestic use; Semastic Decorative Tiles, ideal for a handsome, hard-wearing floor at low cost; jointless Fleximer flooring; decorative linoleum and cork. Each is backed by the comprehensive design, contractual and service facilities operated throughout the United Kingdom through over 20 branches by Semtex. There are also approved laying units in many areas.

For full information write or telephone to the address below:

If you want to move something here and control it from here

Teleflex mechanical remote control systems provide the most simple and inexpensive means of operating remotely placed units. They move in a complex or straight path over short or long distances and have been installed by many well-known *industrial organisations,* the Central Electricity Authority and Atomic Energy Authority. The *control of switchgear, throttles,* clutches, signals, ventilators, governors and variable speed units are *amongst the many applications* for which Teleflex is used.

Rubber Plants are growing in England...

The steady increasing demand for synthetic rubber explains the growth of these relatively new petrochemical plants in England. In recent years leading petrochemical and petroleum firms not only in the United Kingdom but throughout the world have been increasing their production of butadiene. Butadiene is the major constituent of the general purpose rubber called GR-S. The Kellogg organisation has been associated with several of these projects.

The Kellogg organisation has had considerable research and development experience in connection with butadiene plants. Recently, for an internationally recognised producer of synthetic rubber the Kellogg organisation completed a joint research and engineering design development study to improve operating efficiency and reduce the capital investment of butadiene plants.

In the engineering design of both butadiene production plants and butadiene extraction units, the Kellogg organisation can now render exceptionally valuable services. Firms contemplating butadiene expansion are invited to consult with the Kellogg International Corporation.

Can you take it?

THE next time there is some crisis in world affairs—try buying all the national newspapers you can lay hands on. See how differently each one covers the same story. Some will regard it as less important than a front-page bathing beauty. Others will temper it to the wishes and aims of their proprietor. And others will see the facts only through the dark distorting glasses of party prejudice. Finally, read the Manchester Guardian—and you will at once sense its completely candid approach.

To be a Manchester Guardian correspondent is to be free to write what you see. Whether the readers of the Manchester Guardian will welcome the news is irrelevant. If the news is important, in it goes—with no editorial censorship to gloss over unpalatable facts or unpopular truths.

If you are already a reader of the Manchester Guardian, you will know that here is a newspaper which puts sincerity before circulation. If you are coming to it as a new reader, you will find the Guardian a refreshing change from the woolliness and wiles of what is termed 'popular journalism'.

...JUST LIKE THE COVERAGE YOU CAN GET ON ATV

How would you like to see your distribution increase by 500%?

ASSOCIATED TELEVISION LTD
PROGRAMME COMPANY
FOR THE WEEKEND IN LONDON
AND WEEKDAYS IN THE MIDLANDS

Rid your mind of any idea that with television you can't get the mass audience you want.

Advertise your product on ATV and you're sending your message straight and deep into the minds of *millions* of people! Last September it was 8½ millions, making 45% of the people in the two big-money-spending areas, London and the Midlands. By Sept. 1958, it will be over *10* millions.

And you'll make a powerful impression on the retailer. TV has *revolutionized* marketing and distribution. For instance—have you heard what happened to Spix Furniture Polish? After six weeks' advertising on ATV, distribution increased by no less than 500%!

And with ATV you can pinpoint exactly the audience you need for your product. You can budget your campaign a year ahead too, because ATV's rates are *stabilized* for a whole year, despite the ever-increasing audience.

If you would like to hear more about ATV, ring us up and we'll gladly answer any questions.

L or l?

IT looks as if the Liberal party's revival of the last two years may this weekend reach its moment of high festival. Just about the time that this article appears, unless the public opinion polls are more wrong than they have been before, Mr Bonham Carter may be being proclaimed the member of Parliament for Torrington. If he is not, that is, if there has been some last-minute slip between the cup and his lip, the fact that many people have been expecting him to win the seat is of great political significance. It is also a matter on which all liberals need to express an opinion.

Note the word "liberals." This is a time in which to watch one's "Ls" and "ls." The jostling for rightful title to the big "L" has become bitter and boring; it is based mainly on arguments of apostolic succession against any stray candidate's convenience. But the competition for the much more meaningful accolade of the small "l" is not a question of convenience, or of titular inherited right, or of whose grandfather knew Lloyd George (Mr Bonham Carter's did). It is a question of definition: who is standing for liberal principles? Historically, there is nothing vague or ambiguous about liberal principles. The essence of them lies in reformers' zeal; in a willingness—nay, an eagerness—to disturb established interests in order to secure the benefits of change and progress; in a determination to probe down to the roots of every stalk in the national life and to cut and graft (even if this hurts established cotton masters or farmers or sitting tenants) wherever scope can be seen for an improvement and for a long-term increase in the nation's income. For those who ally themselves to liberalism in this sense, as *The Economist* has always done, there are now two questions to ask. Has the recent swing to the Liberal party been due to an increasing belief in these principles by the electorate? And, even if it has not been so due, is voting for the Liberal party the most sensible way to further the sort of Britain that real liberals want?

The first question can be answered straightaway. The swing in the recent by-elections has, quite obviously, been in the main an instinctive manifestation of one half of the most familiar historical phenomenon in British politics. In every British general election since general adult suffrage began—save only that of 1955—there has been a swing from the Government of the day to the principal opposition. There were two reasons why there was a departure from this normal rule in 1955. One was that the Conservative government then in office had not fallen short of their promise at the hustings; through the success of their policy of freedom from controls, and the vision of expansion and peacemaking, they had exceeded it. The second reason was that the Labour party had done nothing to attract floating votes in their periods of either office or opposition; through a mixture of bad luck and bad management in their policy of austerity, through their internal squabbles and their appeals to social spite and through an outdated concept of nationalisation, they had repelled

them. The feature of 1956-58 has been that the usual swing away from the government in office has again set in, but the usual swing to the principal opposition has not. The floated-off votes have been gathered by the Liberals, because they were the only third party there.

Is this a movement in which the true liberal should join? Anybody who votes for a Liberal candidate should not do so out of a vague desire to swing towards the middle. He should have a definite and practical reason in view. One can suggest three alternative reasons which he might have.

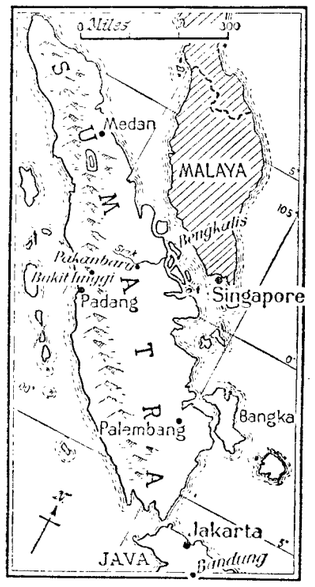
FIRST, he might—indeed should—vote for the Liberal party if he thinks that the policies which their candidates are advocating are preferable to those advocated by either of the other two. It is unhappily difficult to see how any real liberal can think this. For look in the book. The two main policies propounded by recent Liberal candidates seem to have been support for protectionism and for sentimental pacifism; they have called for the cosseting of industries that are important in the particular constituencies being fought and the cutting (according to the Liberal leader in the Lords) of hundreds of millions from the cost of defence. However tarnished the Government's record has become since 1955, there is no real doubt that on the issues most frequently mentioned in recent by-elections—cotton protection at Rochdale, the reduction of agricultural subsidies at Torrington, the Rent Act and defence costs *passim*—the Tories have been broadly and liberally right and their opponents, including the Liberals, broadly and illiberally wrong.

Secondly, a liberal might support the Liberals not because of the policies they advocate—he may say that politicians on the hustings are deceivers ever—but with his eye on one broad and desirable effect. The effect of more Torringtons, he may say, would not be to bring in a Liberal government (nobody is seriously envisaging that), but to get a larger block of independent-minded members in the House of Commons. The main function of independent members, apart from providing refreshing examples of greater freedom from the whip, is to be a fount of original ideas; the best of these can then expect to be taken over by governments of one of the other parties which can get into office. There are considerable attractions in this idea; and a short time ago they almost looked compelling.

But are they compelling any longer? Would not the methods which the Liberals have been using in their recent attempts to become a larger body in the House prevent them from becoming a more effective independent force there? In general, almost the only independent ideas that are worth a button in Parliament are those that would be initially unpopular; good ideas that would be initially popular have mostly been put into effect long ago. In their present mood, however, the Liberals seem to be even less inclined than either of the other parties to foster any ideas that might lose them votes. Perhaps the best way of measuring this disappointment is by considering the particular set of circumstances in which a block of independent or Liberal MPs would assume most importance. Would a Tory government that had to rely on Liberal votes be better for the country than a Tory government with an absolute majority? Sadly, dependence on Liberal votes in the House would now bring more caution into Tory policy, not more radicalism into it. Such a minority Government, for example, would not have continued with the Rent Act in its present form.

There remains a third possible reason for voting Liberal. It is based on the frank recognition that the elector is not usually looking for something to vote for, but for something to vote against. When a Government has not been inspiring—and the Tories since 1955 have not been particularly inspiring—then, on this view, it is highly desirable that there should be the usual swing against it. To register a swing against the Tories under present circumstances is, of course, in effect to put Labour into office; this may be a good thing if it is believed that too long a period in Opposition, even more than too long a period in office, corrupts a party. But, since it seems rather odd to vote for Labour's bad policies in order to ameliorate them, a certain Pontius Pilate satisfaction may perhaps be obtained by voting for Liberals, while electing Labour. That may be deep constitutional thinking, but it can look more like sheer moral cowardice; in any event, it does not carry very glorious implications for the Liberals. It is to treat them, not as a great national party, but as a large waste-paper basket.

THERE is only one thing more painful than kicking an old friend when he is down; and that is to kick him when he is getting up after a long period of being down—and is beginning to stand on his feet, incredulous, delighted and wildly cheering. Moreover, for anybody attracted to old liberal ideals, historical sentiment keeps creeping in. If Mr Bonham Carter has won Torrington, many people will feel the thrill of a party called Liberal arisen from disaster; it will be rather the same feeling as if Manchester United now went on to win this year's Cup. But the serious business of attracting the suffrages of the people is not the same thing as football. And even if it were, it would be a poor sort of support to cheer the old favourites on if they decided, on the ground that they are less likely to be tackled when doing this, to turn round and try to kick hard against their own goal.



The main purpose of the Liberal party should not be to get more Liberal MPs into Parliament by hook or crook, but to inculcate more liberalism into the country. Until it realises that, there still seems, unhappily, to be scant reason for true liberals to support it—however many other floaters do. Mr Grimond and his party would do better to lose a score of Torringtons than to continue to compromise their own soul.

Brush Fire in Indonesia

The conflict in Sumatra carries with it lively dangers for more countries than Indonesia. Can these dangers be averted, or at least be minimised?

A COOL breeze blows up of an evening in Singapore, at *stengah* time, quickening the tropical deadness of the air. It lasts but a few minutes and is called the Sumatra. Lately the Sumatra has borne with it a thickening fog—the fog of a civil war so often postponed that the thought of shots fired in anger by Indonesians at Indonesians had come to seem improbable. A welter of claims and counter-claims has obscured the progress of actions some of which existed only in the minds of radio announcers. "Medan is in rebel hands . . . in government hands . . . Bandung has been bombed . . . not bombed at all. . . ."

Can one now see at least some clear shapes through the steaming mists? In north and central Sumatra, the government's columns, fighting desultory and minuscule battles, have narrowed the ring around the insurgents' capital, Bukit Tinggi—where Dr Sjafruddin, the rebel premier, has disowned President Sukarno (a gesture less empty than it seems, for it closes the door on the last few inches of a gap left open for compromise) and is making "blood and sweat" speeches about fighting in the jungles and in the mountains.

If the rebels are now quickly overrun, or driven into some remote corner, the crushing of their avowedly anti-communist movement could mean that the strong communist current in Java would then flow over the outlying islands. A really communist Indonesia would turn Australia's flank, finish Singapore both as commercial centre and as naval base, expose the tender under-belly of Seato, and perhaps unlock the doors of south-east Asia to communist China's multiplying masses. Potentially, the economic loss to the free world, and the corresponding gain to the land-locked empire of Khrushchev and Mao, could be enormous in terms of tin and rubber alone. On the other hand, if the rebels were to make good their promises of a long drawn out guerilla resistance, an even graver danger would persist—that the great powers might become militarily involved in the struggle; and military involvement, either by proxy as in Indochina, or directly as in Korea, would be infinitely more dangerous now that long-range nuclear missiles are with us.

All these apocalyptic thoughts must have crossed the minds and probably the lips of the Seato foreign ministers when they assembled at Manila. One horn of the dilemma they wrestled with in the darkness of official secrecy was the fear that inaction could lead to a communist triumph; the other, the likelihood that any form of allied action would open up new rifts among non-communist Asians, and between them and the West (here, the position of newly independent Malaya would be one of particularly acute embarrassment)—while outright intervention might end in a nuclear war. The omission of any mention of Indonesia in the Seato communiqué may not have been seriously intended to deceive anybody, for there was never any doubt that Seato, as a body, chose non-intervention as threatening only the lesser of two evil prospects. Various statesmen, including, this week, Mr Casey of Australia, have since confirmed this impression.

In the meantime, Peking has seized on stories of Formosan arms deliveries to the rebels as evidence of American intervention, and Bukit Tinggi has argued that the delivery of Russian ships to Jakarta constitutes Soviet intervention. It may be as well to accept the fact that if the struggle proves a long one, foreign arms are almost bound to reach both sides. It must, on the other hand, be clear to Moscow (and even, one hopes, to Peking) that it shares with Washington a compelling interest in averting the kind of internationalised conflict that would result from unrestrained assistance to either side.

Left to itself, the civil war may still get bogged down in the mountains and the jungles of central Sumatra, with Jakarta holding the upper hand but unable to strike the death blow. The rebels, however, have yet to show whether they could sustain a long guerrilla campaign. Their chances of finding local allies are limited. By openly aligning themselves with the fanatical advocates of a Muslim theocratic state, Darul Islam, they could lose their claims to the sympathy of moderates both within and outside Indonesia. It is still possible—though, as the government troops advance, the possibility presumably recedes—that

Colonel Barlian, the "neutral" commander in south Sumatra, will throw in his lot with the rebels, who evidently expected him to do so when they first proclaimed their revolutionary government.

THE one thing that now looks unlikely, in this land of compromises, is another compromise, so long, at least, as President Sukarno stays in power. The flow of water under many bridges has been great since those days of 1949 when Dr Sjafruddin fled to Sumatra and proclaimed an emergency government with himself as premier, after the Dutch had seized his fellow-ministers in the young Indonesian republic. The Sjafruddin of those days returned to Java in an American aircraft and handed back his mandate to President Sukarno, freed after the failure of the Dutch "police action"; the Sjafruddin of today is unlikely to repeat the history of nine years ago. It was he, secure in the reputation of a former fighter against Dutch colonialism, who last December denounced President Sukarno's anti-Dutch excesses as "a flagrant violation of the provisions of our constitution." When, a few weeks later, he decided to joint the anti-communist National Front set up in Sumatra, he had clearly given up hope of seeing an effective administration, untainted by collaboration with the Communist party, emerge in the corrupting atmosphere of Jakarta. The rebels still hoped that the moderate former vice-president, Dr Hatta, might persuade Dr Sukarno to let him form a government of national unity; but that hope has now been dashed.

It is too early to tell whether the rebel premier has hopelessly misjudged his chances; but it is possible that President Sukarno himself, who was convinced that the fascist powers would win the second world war, has again miscalculated. Certainly his personal responsibility is great. He has divided the country with his "concept" of a guided democracy inspired by communist China; he has ruined its economy by expelling the Dutch; and he dropped the first bombs in a civil war which he, and no one else, could have avoided.

Can Iraq Reply?

Iraq's leaders now have their work cut out to match President Nasser's popular appeal to all Arabs. Can they do it?

WITHIN a matter of weeks the would-be brotherhood of the Arab world has divided into two antagonistic unions, each vociferously competing for the adherence of uncommitted brother-states. President Nasser's United Arab Republic (UAR) on one set of wavelengths, the Iraqi-Jordanian Arab Federation on another, are conducting a slanging match on hackneyed themes: Cairo's that Iraq is a tool of western imperialism or that its army, for lack of orders, lost the Palestine war; Baghdad's that President Nasser is a "balcony dictator" from whom Syria tolerates humiliations to its parties and army; each that the other is planning a deal with Israel.

The split, and the verbal bombardment, are of purely local manufacture. They bring advantage to no one abroad—neither to the west, nor to Russia, nor even to Israel. They waste a power of breath that is badly needed for more constructive local purposes. Why have they arisen between two groups of states to whom peaceful co-existence would bring many advantages? The answer to this question is, probably, a combination of reasons; these include the perennial competition—now temporarily resolved—between Egypt and Iraq for alliance with Syria; the personal antagonism of President Nasser for Prime Minister Nuri Pasha; the pique of the former at Nuri's achievement of union with Jordan without abandoning the Baghdad Pact; and President Nasser's need for targets in order to maintain the pace to which he is accustoming his people. What cannot be doubted is that the hail of insults could be called off as quickly as it was started without altering the fundamental feelings of either party for the other. Between Arabs, a deal is always conceivable even though they may have shouted themselves hoarse on the way to it.

But, so long as the contest lasts in its present shape, Nasser's UAR holds the aces. His showmanship is incomparably better than Iraq's; Baghdad has no spokesman to touch him; last and by no means least he speaks to and, in Arab eyes, for the people. In view of his record for being overbearing, his wordiness falls on deaf ears in Arab countries which choose and like their governments, countries such as the Sudan, or Tunisia. But in countries which do not, it deeply stirs men who are out of power, or who feel oppressed by absolute rulers, or by rigged parliaments. People so stirred include Jordanians, Saudis, Kuwaitis and Iraqis, and a Gallup poll in any of these countries would, at the moment, accord Nasser and his UAR a resounding majority.

This would happen in Iraq, in spite of the relative efficiency and honesty of successive governments in

spending oil revenue on nationwide betterment. It would do so because a whole generation feels thwarted of a say in its own management—thwarted by the travestied elections of 1954 and by Nuri Pasha's subsequent denial of the safety valve of grumbling aloud. This contrast between Iraq and the Sudan—the two best managed of the prosperous Arab states—is worth pondering in Baghdad, if only on account of the difference it makes to local receptiveness to siren-calls from Cairo.

THIS immense handicap apart, the Iraqi-Jordanian Federation has much to offer its citizens. If the excellent federal constitution which the two governments drew up last week in record time, and in harmony, were to be made to mean in practice what it says on paper, they would enjoy a greater measure of equality and representation than do the Syrians under Egyptian management. Yet so great is the popular appeal of the Egyptian revolution that Iraq's only chance of keeping up with the Nassers is to cut the cackle and organise quick proof of its superior assets in the realm of practice, as opposed to theory. Alone among the five states in the two unions, it has the money to do so. Alone, it is in a position to start, in a limited way, the operation that all reflective Arabs and all foreign friends of the Arab world know to be desirable: the investment of the oil revenues of the rich "haves" in the poor, jealous, "have-not" Arab lands. Efficiently run, a campaign to bring this about might even attract into its orbit investment capital from other rich Arab rulers.

Only by deeds can Iraq achieve the feat. And, as soon as deeds are mentioned in a land eager to make up the leeway between underdeveloped Asia and Europe, or America, minds spring to spectacular feats such as dams, power stations and other major capital works that take years to show results. But Iraq has not years to play with. Their Majesties' Opposition is stifled but restive. Particularly in Jordan, the target is tomorrow, and only by promoting schemes which have an immediate impact upon every man can it be hit.

Jordan's population is different from the average unskilled mass of an underdeveloped land; more than two-thirds of it is ex-Palestinian and was once prosperous. It is much better provided than Iraq with able peasant farmers, one-time small entrepreneurs and semi-skilled workers, most of whom only need incentive in order to start afresh. The biggest immediate need is for credit institutions to give these people the fillip of new hope: new markets for their soap or cigarette factories, new lathes for the carpenter, new spanners for the one-time Palestine railway worker, new spades and ploughs, new reason to terrace the stony hills of Arab Palestine.

A host of small credit operations is not easy to organise; it entails, besides mere banking expertise, an inspectorate capable of assessing the entitlement of borrowers to fresh instalments, and of organising loans not as acts of charity, but as the stuff of a revolving fund. In Iraq itself, a government agricultural bank, an industrial bank and a mortgage bank all exist, but have long been floundering for lack of such organisation. Were the federal parliament, as one of its early acts, to tighten up, improve and endow new small credit apparatus for the whole of Iraq and Jordan, it would be on the way to answering the UAR with deeds as opposed to words.

Simpler of execution, because requiring less of the middle-rank public servants of whom both the countries are still so short, would be a parent development bank responsible, on World Bank lines, for financing big, long-term projects in both areas. The idea is not new. Treated as an area plan for an Arab development bank, it has long been advocated by Mr Emile Bustani, the Lebanese entrepreneur, politician and financier. His idea is that oil-producing governments on the one hand and oil companies on the other could with advantage put 5 per cent of their profits into a central fund that would act as a priming pump to development, and a sweetener to relations, in the poorer Arab countries of the Levant through which the oil must pass on its way to market in western Europe. The drawback of Mr Bustani's excellent but ambitious plan is that, for success, it requires a host of mistrustful people to take action simultaneously. Why not an Iraqi-Jordanian plan, conceived on the same lines, to serve as a pilot project for the larger scheme—starting now in the one area in which such a plan could function quickly? It is high time to try a small beginning at a point where all the ingredients are available.

IRAQ and Jordan are married, for better, for worse. The federation has drawbacks. No marriage is easy when one partner has all the worldly goods, when neither government has the confidence of all its people, and when the partner that is the richer in money is the poorer in middle-class aspirants to calling the tune. Yet, given a greater measure of imagination than Baghdad has yet shown, there are chances of producing achievements greater than anything *done* (as opposed to thought of) in Egypt. What is needed, above all, is a touch of the gusto that is, at present, a Nasser monopoly. Cannot King Feisal give a palace for conversion into the kind of technical school that UNRWA has run with success among the refugees, but on far too small a scale for lack of funds? Or the Arab army and the Iraq Petroleum Company comb their technical trainees in order to supply emergency instructors? Or Palestinians return from jobs abroad to posts equally well paid in the new banks and inspectorates? Not only money, but accommodation, and personal drive and verve, are required if attractions more substantial than those of the Egyptian dictatorship are to be offered in the time available. There is still time—but not much time—to give Baghdad and Jerusalem broadcasters a success story to tell in place of their present negative and ineffectual attempts to give President Nasser a bad name.

THE SERVANT PROBLEM—II

The Sources of Help

How can the middle classes get more service? It looks as if professional people must take in a lot of each other's washing up in even more stringent times ahead.

LAST week's article showed that just over one per cent of British households now have resident servants, compared with about five per cent in 1931. The main reason for this drop was discovered to be that only one per cent of households feel that they can afford to pay the present market wages of resident servants; these wages have increased some fivefold since the thirties, while the after-tax incomes of the former servant-owning households have, on an average, increased by much less. The burden bears especially heavily, compared with their prewar counterparts, on young middle-class families with children. Except for those who believe that for anybody to be a servant is degrading—or who believe, as a matter of principle, that young middle-class mothers should not be allowed to opt out of the gruelling life hitherto led by working-class mothers—there is here a problem to be solved.

It can best be faced by asking a series of questions. The first is: granted that the demand of the big institutions (like hospitals and hotels), combined with the catering wages act, now largely determines the price of domestic servants, has that price moved against the private employer by more than in logic it should? There is some evidence that it has, and for a class-conscious reason. The middle classes acquired, from the mid-Victorian years right up to the 1930s, the reputation of being bad employers—inconsiderate, supercilious, patronising, niggardly in granting free time and unreasonably interfering in the private lives of their household employees. Today's mothers are paying for the treatment of servant girls by today's grandmothers. (They may therefore justifiably insist that those grandmothers shall put in a good deal of unpaid time on child-minding and general sewing and mending. The little boy, who, when asked if he did much washing up, replied: "No, we have a granny for the rough," had the root of the matter.) A new attitude towards servants is one essential if the young families of suburbia are to have an easier life.

The second question is: granted that prices have risen so much, is it not rather surprising that suburbanites are not more willing to economise on other things, in order to get home help? One explanation may be the imperfection of the servant market; because old retainers still stay on with their families at relatively very low wages, every potential employer of a servant knows somebody who is getting help at a price which makes the real market level look "ridiculous"—and she waits in the hope that she will be able to get help at a "non-ridiculous" price herself. (By the law of averages, some employers eventually do.)

But some approximations on market prices can be made. A successful demand-price for a cook-housekeeper today would be £4 10s. to £5 10s. a week in most big towns (compared with £52-£60 a year before the war); and she will want a good separate room, a fortnight's paid holiday, one or two half days a week, Sunday or its equivalent, and probably television. Roughly the same is true of a trained nurse who will look after a child but will not expect to have to do any general duties. Middle-class households with a dwelling which contains a basement flat have been taking advantage of the housing shortage to give a roof to married couples in exchange for help—sometimes paid, sometimes not, by the wife. A market price for full-time employment of such a couple is often £7 to £9 all found, and to this must be added the value of the flat; they are for the well-off. Lower down suburbia's scale, the effective market price for daily help by the hour seems to be between 2s. 6d. and 4s. (according to whether there are other employment opportunities for women in the district); this price has been rising in the last six months as dailies have become noticeably scarcer. "Sitters-in" cost between 2s. and 3s. an hour before midnight, and 2s. 6d. to 3s. 6d. an hour afterwards.

Higher up the social scale, the upper classes have been more ready than suburbia to pay the price demanded for their sort of service. There is still a

demand for, and supply of, butlers, valets, and even footmen. Some changes in the structure of this market over the past fifty years are explored in a table below; it sets out the numbers of sits. vacant and wanted, advertised in *The Times* for the month of November, 1907 and 1957. Experienced servants of this old-fashioned breed, however, are (like servants as a whole) an ageing race.

DOMESTIC ADVERTISEMENTS IN *THE TIMES*

ALTHOUGH suburbia might get more servants by adopting a new attitude towards them, and by recognising the true market price, therefore, the number of native Britons willing to enter private employment is likely to decline. This is a normal feature of a country with rising standards of living and of labour productivity; it is a fate that overtakes all *bourgeoisies* in time. In parts of France it is now hard to get *bonnes* and the cost is said to be even higher than in England. America is the advanced case, where a general help commands £17-£18 a week all found, and only one family in 250 has a resident domestic.

The way in which Britain, like America, is trying to get round this shortage is by becoming an importer of domestic labour from a variety of sources which may be itemised.

(1) Several thousand girls now come over from the continent to live for six months *au pair* with British families to learn English—and to perform "light domestic duties." Private arrangements are made about the payment of pocket money, but the Home Office requires an interview, when granting the girl permission to extend her stay, in order to try to ensure that there is no exploitation. In some cases, there may be.

(2) Some 21,000 employers a year are given labour permits to bring over girls from the continent as resident mother's helps, most of them for one year's stay. For a high proportion of these girls a main point is, again, their desire to take lessons in English. The Ministry of Labour sets minimum rates, varying from about £2 10s. to £3 10s. a week, according to the area of employment. The employer also has to pay the girl's fare and the employers' contribution to national insurance. The importing household also carries the risk, first that the girl may be a complete dud, and second that, if she is not, she may at the first opportunity try to take a better paid job elsewhere. She is, however, restricted to private domestic employment; permission to change her household is readily given, but not to take on another type of job—for example, in a cafeteria.

(3) An unknown number of girls comes over yearly for domestic service from Ireland. No labour permits are required for these; the employer often enters into a contract to ensure that she can deduct the fare she has paid for the servant (fare from Dublin to London £3 1s.), at the rate of, say, 10s. a week from a wage of £3 to £4.

(4) A further source is immigrants from the colonies. But of the 400,000 coloured people who are now probably resident in Britain, few are in private domestic service (and those mostly Asians) as opposed to the large numbers in hospitals and hotels. "Js" (short for Jamaicans and the labour exchange nickname for coloured workers) mostly want full-time non-resident jobs at £7-£8 a week; their husbands bring them in the day after they land and offer them for such work—which is readily to be had in institutions. It is tempting to propose some limited officially sponsored scheme to bring in colonial domestics from, say, Jamaica or Malta, whereby the employer could advance the fare (£90 from Jamaica) and subtract it, or part of it, over a period from a minimum weekly wage. But the gradual growth of a settled coloured population seems more likely to add to the general supply of domestic service.

(5) An effort was made immediately after the war to meet the problem by organising a market for well-trained daily helps. The National Institute of Houseworkers was set up in 1946, on the recommendation of the Markham Committee; it supplies skilled houseworkers by the hour (3s. and travelling expenses). But the high standard of training given and the administrative overheads seem to have restricted its service. Such a service, anyway, cannot provide the continuous help that many harassed mothers need.

One comes back at the end, therefore, to self-help among the servant-employing classes themselves. One possibility is that the future generation of houseworkers will be recruited for the middle classes from within the middle classes themselves. The companion-help who suffers no social disabilities is already at a premium; and the retired couple giving service in exchange for a wage, pleasant surroundings and full recognition of status, is also growing. Such arrangements fit into the modern professional domestic routine and decor, and it is not impossible that some housing will be designed, or adapted, increasingly with this sort of amenity in view. The growth of mechanisation in the home, and the fading of class distinctions through educational opportunity, could hasten such a desirable process. But it will always be necessary to pay the market rate, which is likely to be high enough to ensure that employers will, as the Pope recently asked, admit that "in dignity, domestic service is second to none."

NOTES OF THE WEEK

SOVIET UNION

The Collective Leader

THE meeting of the new Supreme Soviet got off to a brisk start with Marshal Bulganin's abrupt dismissal from his post as premier. But, as in the recent "elections," in which 99.6 per cent of the votes were cast for the only candidates, the forms of the parliamentary system were solemnly imitated. The Supreme Soviet was scheduled to endorse the membership of the government and this provided an obvious opportunity for a reshuffle.

The electoral campaign had already provided hints of such changes. The number of nominations offered by different Soviet constituencies is a fair yardstick of an individual's standing. Applying this test, the rise of Mr Kirichenko, the decline of Marshal Bulganin and the eclipse of Mr Pervukhin had been duly noted.

But Mr Khrushchev is now clearly at the very top. He is to become premier himself and retain his post as first secretary of the party, a combination unknown since Stalin's death. All speakers think it proper both to quote him and to associate all new achievements with his name. The highlight of the campaign was an eve-of-the-poll meeting in his constituency, during which Mr Khrushchev, surrounded by the party presidium, spoke at length on home and foreign affairs.

One passage in that speech raised the question whether the session of the Supreme Soviet will not witness an important move in the pre-summit exercises. Mr Khrushchev declared that "we are approaching a state of affairs when the governments . . . even if they fail to reach agreement among themselves, will be forced unilaterally to discontinue the manufacture of atomic and hydrogen weapons." Is Russia's present series of nuclear explosions the prelude to an announcement that it has decided unilaterally to stop its tests? Mr Gromyko is due to speak, later in the session, about nuclear disarmament.

BUS DISPUTE

Pistols for One

MR COUSINS has now laid his pistol on the table and said that, at a time which will suit his own convenience, perhaps next month, he may proceed to fire it. That is the meaning of the bus delegates' decision to reject the Industrial Court's award of 8s. 6d. a week to central London busmen; and of their resolution which has formally freed the union's hand to take direct action to enforce a claim of 10s. 6d. a week for all London Transport busmen.

A strike of London Transport busmen alone at the present time would almost certainly collapse; it will have a chance of success only if it is combined with a more general transport strike, especially on the national and underground railways. Mr Cousins's main need therefore when he met the delegates was to slip in enough procedural delay between the call for action and the strike itself to enable him to await the outcome of the railwaymen's wage claim which is expected soon after Easter. This he has succeeded in doing, first by putting off until next Thursday the meeting of the union executive, who must sanction the strike, and secondly by proposing that London Transport should be given notice of any direct action that will be taken. The demand for an extra 10s. 6d. a week for all workers is meant to persuade the central London busmen, who have already been offered 8s. 6d. a week, into thinking that by supporting their country colleagues they might conceivably get 2s. a week more for themselves. But the claim is not so extravagant that the union would be embarrassed to accept, in the end, a rise of 8s. 6d. for all workers, which is the most that its leaders seriously hope that they might be able to force London Transport into giving.

The most extraordinary part of this whole affair is that while the union has been openly and quite legitimately marshalling its forces, and choosing its favourable moment, next month, to strike, London Transport has done nothing. But it has a pistol, too; and the national interest cries out that if Mr Cousins can bargain, the London Transport Executive should bargain, too. The busmen have turned down a generous award made by an independent body. The employers originally accepted that award, but their hands are now freed. They should say that they will not be bound by their original acceptance of the award for more than one week more, and on condition that the unions will accept it, too. The union would then face the showdown at the moment of London Transport's, not its own, choosing, and it would face it on its own. It is time the one-sided dialogue became a duel in which the two sides fight.

EUROPE

Strasbourg Floor Show

ON his first appearance in an English night club, the powers of the great Danny Kaye were subjected to a harrowing test. A few feet in front of him loomed a broad black back, whose owner imbibed steadily but took absolutely no notice of the performance. The maestro pulled out all the stops in an attempt to capture this reluctant piece of audience; he mimicked, as only he can, everything from Grand Central station to the love song of a parrakeet; at last he was rewarded. "I say, old thing," the dome-like back asked its lissome partner, "what's all that noise going on back there?"

If there are any insular backs still stolidly turned to the European stage and unaware that an out-of-the-ordinary performance is going on there, the noise at Strasbourg last week may at last have stirred their curiosity. The new combined assembly of the six-nation European community met there for the first time in an atmosphere of enthusiasm, looked forward to the early prospect of direct popular elections to its ranks, and was given a magisterial lead by the ambitious head of its executive, Professor Hallstein. Some of the fine talk can be dismissed as federalist mumbo-jumbo; but daily the evidence grows that the new political grouping is acquiring a momentum of its own.

All this rubs in the rightness of Mr Maudling's determination to drive for a decision in the next three months to settle the relationship between Britain, the other outsiders of western Europe, and the Six. Time is not on Britain's side. The more the opponents of a wider free trade area succeed in delaying it, the weaker is the bargaining position of all the countries outside which must find a *modus vivendi* with the common market in their midst.

Five Mediators

THE limelight in the negotiations now falls on Brussels, where France's five partners in the community of six are seeking to modify the French proposals to make them palatable to the other OEEC countries. There are now encouraging signs that, while they expect British concessions, they do appreciate that they must at least introduce into the tangled French proposals one key commitment: that tariffs and quotas in the broader Europe be reduced in step with the reductions to be made by the Six. The Dutch in particular are throwing all their diplomatic resources into the fray. On Saturday Herr van der Beuger, minister of state in the Dutch foreign office, attacked the French suggestion to approach tariff cutting industry by industry, and emphasised the need to start the free trade area next January. His remarks are encouraging, for the bilateral approach has insidious attractions, both for industrialists who like the idea of fixing markets with their chums in each country, and for those people in the new community who are tempted to use the power of their new group to force small countries to join, one by one, on its terms. Such an attempt could disrupt the whole multilateral pattern of European trade and impose grim political choices on countries like Austria and Switzerland.

At this stage of the talks, the attitude of the inscrutable Dr Adenauer may be important. In Germany, while traders and many industrialists share Professor Erhard's liberal view that their trading economy must not be walled in, other industrialists are not wholly averse to queening it in a protected common market. For the sake of the dear political aim of creating a strong political block in western Europe, the Chancellor sacrificed, in the common market talks, many of Professor Erhard's liberal precepts. Last autumn he appeared to be backing him in the free trade area talks. But friendship with France comes high on his list of political priorities.

Professor Erhard has been in Washington this week, and has explained his views on the free trade area to Mr Eisenhower. The voice of America, loudly raised in support of the grouping of the Six, has hitherto been muted on the subject of the broader scheme. There are no personal sympathies, like those between Mr Dulles and his friends, M. Monnet and Dr Adenauer, to inspire American support for it. In February, however, the American delegate did for the first time speak up in its favour in Mr Maudling's committee. American influence could be significant.

ECONOMIC POLICY

Bideford, Bank Rate and Budget

MR HEATHCOAT AMORY'S remarks about the Bank rate reduction, in speeches during the Torrington election campaign last Friday, were of particular interest. Both the timing and the venue of these speeches suggest that he may not have been speaking directly from a departmental brief; the country may have been given one of the first public glimpses of the private economic views that make the new chancellor tick.

In what was presumably a reference to that day's issue of *The Economist*, which he can only have got fairly shortly before he went down to speak, he said that he had

> seen it suggested in an influential publication that a reduction in Bank rate is not the best way to start a policy of relaxation. As this is not what we are in fact doing, this criticism seems to me misjudged.

He then laid great emphasis on the "other measures" taken last September, and said that what we need now is a Bank rate "adequate to support the other measures we have taken to deal with the internal situation." He believed that an extremely high Bank rate "places unnecessary burdens both on the balance of payments and on the budget."

Eyebrows should be raised at some of these *obiter dicta*. To begin with, Mr Amory surely cannot really believe that a continuance of the 7 per cent Bank rate would have made his budgetary task harder; if he is going to draw up that budget by looking at the level of demand (as he should do), not just at the level of Consolidated Fund expenditure (which, economically, is of much less significance), a higher Bank rate would of course have made his budgeting easier. It is a pity to criticise any politician for the content of a high level by-election speech when so many of his opponents were making such very low level ones. But the prospects of Mr Amory getting his budget right will not be improved if he looks too much at the wrong criteria.

Mr Amory and the Ugly Sisters

PERHAPS more puzzlingly, however, the general tone of Mr Amory's remarks suggested that he regarded the Bank rate change of September 19th as a Cinderella, and he came precious near to a declaration of affection for its two ugly sisters. The first of those two "other measures" of September 19th was an attempt to fix the investment programmes of the nationalised industries at a figure equal to their assumed investment expenditure for the then current year, which has since proved to have been misestimated anyway. A side effect of this policy—the warning to the Transport Commission that it must not increase its operating deficit—has proved useful in helping to modify its wages policy; but one had supposed that everybody now realised that the real kernel of the "investment freeze" decision—the assumption that anybody can tell what the economically proper level of interest will be in two years' time—was merely a desire for a convenient gesture of disinflation. It should not now be elevated into a major plank of policy.

The second special measure of September 19th was a freeze on bank advances. There can be dispute about whether this is working or whether it is really the fall in commodity prices following on the Bank rate that is keeping bank advances down; probably the official freeze is having only a marginal—and partly distorting—effect. Now that Bank rate is down to 6 per cent, the demand for advances may increase and the official freeze may have rather more—and more distorting?—work to do. It is odd that a Conservative Chancellor should prefer this: that he should now express his belief in rationing investment by controls

instead of by price. The authorities announced proudly last week that, while Bank rate had been relaxed, all the other measures of last September remained in full force; on every economic as well as political ground, Mr Amory should have wanted them the other way round.

FRANCE AND TUNISIA

Easter Peacemaking?

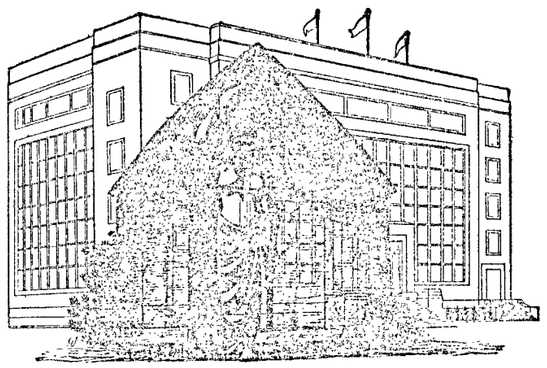
MR MURPHY and Mr Beeley, the travelling mediators, can fairly claim that their Tunisian journey was fruitful. Mr Bourguiba's seven-point proposals, which they have brought to Paris, seem more reasonable than could have been hoped for six weeks ago. At that time, just after the bombing of Sakiet, the Tunisian president would not even consider talking to the French. Now he is willing to discuss with them a provisional statute for the base of Bizerta. He also accepts some form of international supervision of Tunisian airports (the Canadians may once again be asked to show their devotion to international duty). Finally, Tunisia agrees to lift its restrictions on the movement of French troops (who are at present virtually imprisoned) once they begin to withdraw from bases other than Bizerta. It may even accept the return of French citizens expelled when tension was at its highest.

Six weeks ago the French would probably have thought that these proposals offered an honourable retreat from a most awkward situation. But since then M. Gaillard's right-wing supporters have compelled him to grow more intransigent. He now faces the Anglo-American matchmakers with two stiff demands: that they should obtain some form of supervision of the Tunisian frontier, and a Tunisian declaration of neutrality in the Algerian conflict. Since it is quite obvious that Mr Bourguiba cannot make such a statement, a search is now being made in Paris for a different formula. "Non-belligerence," which, incidentally, would have meant admitting a state of war, has been dismissed, and "non-interference" is, for the moment, in fashion. The Easter recess should give M. Gaillard more time for diplomatic manœuvre, but his conservative allies have seen to it that he will not have much scope.

There is logic in the French argument that the Tunisian issues cannot be isolated from the Algerian conflict, but it is an argument that the French should be careful not to push too far. M. Bourguiba would be only too glad to persuade the "good-officers" that the Algerian war is on their agenda. If M. Gaillard fails in his peacemaking over Easter, the French deputies may find on their return that the Algerian question is getting perilously near to the internationalisation which they dread.

PARLIAMENT

Open Disagreement, Openly Arrived At, Please



MEMBERS of Parliament, particularly on the Tory side, have lately been in danger of forgetting that they are sent to Westminster to debate and frame public policy in as public a way as possible. The Tories' irritation about leakages from private party meetings shows a predisposition to caucus rule which ill befits their standard jibes on the way Labour policy is produced. In recent years there has been a growing tendency for both the main parties to argue out their policies in secret and to present the public with a *fait accompli*. With so much of public interest being decided in private meetings, political reporters inevitably have to try to tap leaks from those meetings. They are right to do so, for this is their professional duty. Politicians inconvenienced thereby may retort that the newspapers themselves would not like their private editorial discussions to be aired in the pages of their rivals, but such an analogy breaks down on the unique (and privileged) position of an MP as an elected representative. His constituents send him to Westminster to act for them, but on the clear understanding that they can see what he is doing. The parties may fairly claim some limited right to have purely tactical discussions in private, but on general matters of policy, the proper place to air different points of view is the floor of the House of Commons and not behind the closed doors of some obscure committee room. The Tories, as the party in power and under great stress at the moment, are creating most fuss about it now, but the Labour party showed just as reprehensible an attitude when it was in power—and indeed, during its early, troubled years in opposition. If politicians want to stop leaks from private meetings, the remedy is to be found by a return to open democratic processes.

The same creeping risk of secret covenants, secretly arrived at, is to be detected in the invitation to Mr Gaitskell, statesmanlike on the face of it, to have private talks on defence with Mr Macmillan. As Mr Gaitskell knows as well as any journalist, the gagging of potential critics by off-the-record briefings is a hallowed gambit of governments. There may be aspects of defence which ought to be discussed out of the emotional atmosphere that party exigencies have generated over the bomb; but it would be quite contrary to the public interest, as well as to party mechanics, for the leader of the opposition to find himself saying to his supporters "I now know things which I can't tell you, but which mean, I'm afraid, that we can't go on with the party line on defence." Defence requires public debate, now as always. When as leader of the opposition Sir Winston Churchill was invited to private defence talks with Mr Attlee, he took the precaution of first sending in a memorandum of what he knew and what therefore he would not be gagged on by the meeting. If Mr Gaitskell and Mr Macmillan should meet, it should be on the understanding that Mr Gaitskell is free in public to deploy reasoned arguments against Government policy, backed by such facts as he can get in the ordinary way. It is his duty to give his arguments in public, just as it is the Government's duty to decide just how much they can in the public interest disclose to back up their own.

MALTA

Inside Mr Mintoff

BY November last year Mr Mintoff had extracted from the British Government far more under the non-party agreement to integrate Malta in the United Kingdom than most people imagined he could possibly get when the principle of integration was accepted in 1955, at a time when the naval dockyard seemed a vital British interest. Now that the negotiations have again been brought to deadlock by still larger demands from Mr Mintoff, Mr Lennox-Boyd has told the House of Commons just how much he had already conceded: a guarantee of dockyard employment for three

East Africa's prospects as a *country of development* are far greater than may be supposed. Rich potentialities exist amongst both the African and non-African population. **The National Overseas and Grindlays Bank Limited**—a recent amalgamation between the National Bank of India, and Grindlays Bank—serves Tanganyika, Uganda, Kenya, Zanzibar and Northern and Southern Rhodesia and will gladly give details of commercial conditions in this area which predominantly 'Buys British' already. Enquiries are welcomed at the Head Office or at any branch.

How to give 'the very thing'

—when you don't know what they want

'AND THEY LIVED HAPPILY EVER AFTER'... An auspicious occasion which calls for—and there's the problem. What *does* it call for? The answer is a Midland Bank Gift Cheque. Colourful and gay, it is by far the most permanent, most gracious way of giving money. And it can so easily be converted into 'the very thing' they're looking for. Any branch will cash Midland Bank Gift Cheques on sight up to £10 value. What is more, *anyone*—bank account or no bank account—can buy Gift Cheques at any branch of the Midland Bank. The cost is only 1/- plus, of course, the amount you intend to give. If you're interested in this unique Midland Bank service write or ask for the special descriptive leaflet.

Anyone can give—and cash—

MIDLAND BANK GIFT CHEQUES

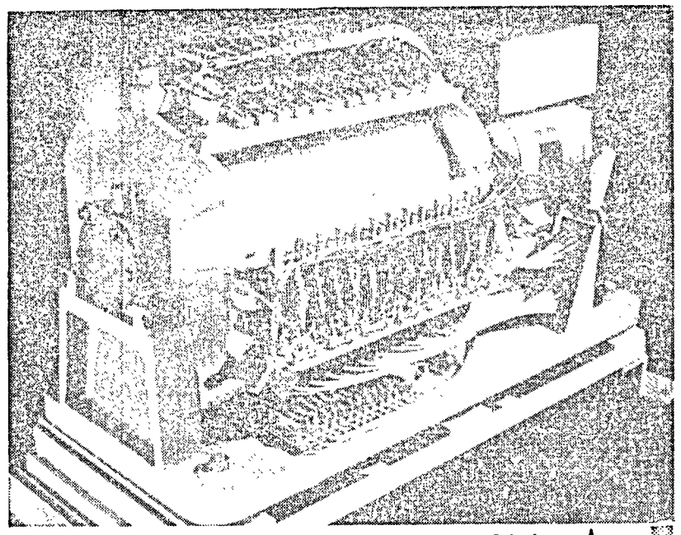
MIDLAND BANK LIMITED · HEAD OFFICE: POULTRY, LONDON, E.C.2

two electronic prodigies



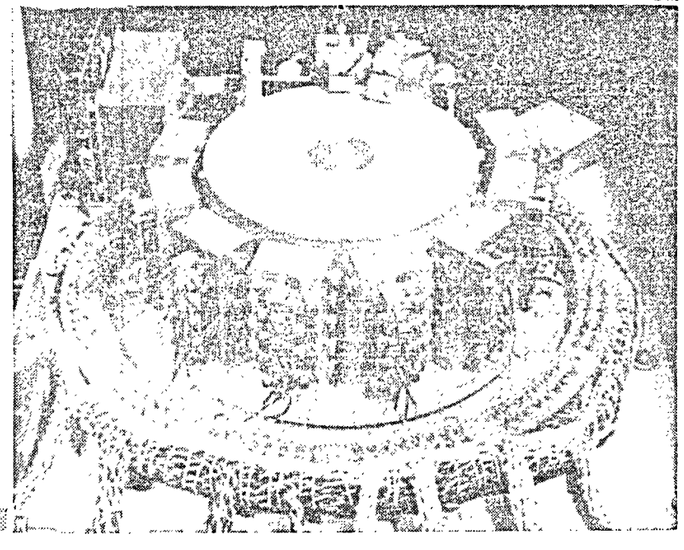
'So these machines,' the visitor asked, 'will not only calculate at fantastic speeds. They have judgment and memory?'

'Once they are instructed,' the Accountant agreed, 'they will combine calculation with memory and they will even make logical decisions.'

'Any moment now you'll be saying they have personality!'

The Accountant shrugged. 'They have some very competitive characteristics,' he said. 'They are extremely flexible. Adaptable and very versatile. The real point is,' he went on emphatically, 'Hec General-Purpose Computers and the new Hollerith Type 555 Electronic Calculators are both ideal for commercial and industrial accounting. Electronic prodigies, I call them.'

THE BRITISH TABULATING MACHINE COMPANY LTD
17 PARK LANE, W.1



'Memory' drum of new Hollerith Type 555 Electronic Calculator

Responsible advice

Do you need either of these electronic prodigies? The way to find out is first to study your own organisation and its needs. Then you would find it rewarding to co-opt the services of Hollerith methods and operations research men, accountants and technicians. Many businesses do this. There is no fee.

years; £25 million to diversify the economy apart from the dockyard's conversion to commercial uses against the time the Navy might withdraw; and large and rising annual subventions to Malta's social services. Mr Mintoff demanded even bigger sums to achieve the "equivalence," which for lack of precise definition can mean anything up to the point at which the British Government is expected to keep Maltese on full wages until jobs are manufactured for them whatever the economic or strategic climate; and he added the right, under integration, to opt out of it, into independence, at any period until "equivalence" was achieved to his satisfaction. When Mr Lennox-Boyd refused to issue both these political and economic blank cheques, together with immediate budgetary aid on the scale demanded, Mr Mintoff asked for the right to hold a general election on immediate independence as an alternative to the inadequacy—as he represents it—of the British interpretation of integration.

It must indeed have been tempting to take Mr Mintoff at his word; it can be argued that, as the dockyard is no longer a vital issue, he should have been told to get on with his election; he can, after all, stage an election on the demand for independence at any time he likes. It can also be argued that, since Malta promises to be an increasing liability, even the blandly absurd demand that the right to contract out at any time should be written into the merger itself should be accepted; Ireland should have trained Britain to take irishisms in its stride. If Malta wants independence of Britain, it will no doubt get it in the end. But does it?

Exasperation with Mr Mintoff should not become exasperation with Malta. The only card left in Mr Mintoff's hand is Britain's moral obligation to the island; the importance of the dockyard, the political goodwill of Britain, the favourable parliamentary climate for a considerable constitutional innovation have all been thrown away by Mr Mintoff's bullyragging and exhibitionism. But, before he is allowed to pull the house down on his own head by the emotional and unveracious type of election campaign of which he is master, some effort should be made to get through to the Maltese people and show them just how fat a slice of cake they are being offered and just how lean the alternatives are: including the fact that independence would not include the right to sell the island, in a fit of pique, to a consortium from the other side of the iron curtain—Malta has its inescapable obligations to the West. The problem in fact is to save Malta from Mr Mintoff—and, if possible (since he has very real qualities if he would but give them a chance), Mr Mintoff from himself.

SAUDI ARABIA

Prince Under Pressure

If one may venture to speak of alcohol in connection with Saudi Arabia, this week's changes in that country look much like old wine in old bottles.

By the processes described by our special correspondent on page 1140, King Saud has delegated absolute control of affairs to his brother, Crown Prince Faisal. Emir Faisal has prepared himself for this new position by making, when abroad, acceptable remarks about Arab unity, Palestine and imperialism. As long as he is the darling of the press in Syria and Egypt, he may be able to overcome the shame of the recent bribery charge against King Saud. President Nasser may agree to forget it for the moment—though it will remain a handy weapon in his locker. Emir Faisal could then get down to a serious consideration of his relations with the two Arab unions.

It is obvious that he intends to join neither union and would dearly love to co-exist with both—though he apparently wants to take Saudi Arabia back to its alignment, so useful to his father, with Egypt and Syria against Iraq and Jordan. The Baghdad Pact serves as a good stick to beat the two Hashemite monarchs without offending them personally. It is unlikely that an Iraqi military mission will actually arrive in Saudi Arabia, though it is almost equally unlikely that the departed Egyptian one will return.

It seems strange that Emir Faisal's new power should be hailed as a sign that the tremendous wastage of the state's revenue is to be stopped. He has been one of the chief offenders. He has spent vast sums on foreign real estate, particularly in Cairo, where he owns blocks of flats that almost dwarf the pyramids. Two years ago a Cairo report that he was building the tallest structure in the Middle East evoked cautious criticism from Saudi contractors and merchants. His palace at Taif, by now fairly bijou by Saudi standards, set off the palace-building competition among the princes in 1949. He assumes responsibility at a time when the country owes more to foreign banks than it has ever done, though the frequent rumours that it has already spent five or more years' oil royalties are not true. Others who have tried to straighten out Saudi finance have felt that their first move should be to borrow. Emir Faisal will have to stop doing so for a while.

He has been Viceroy of the Hijaz since 1926. His administration there, when compared with that in central and eastern Arabia, has been remarkable for its lack of narrow fanaticism. He has a large following among town Arabs, who now are far more important than the bedouin. These townsmen are now demanding much more freedom, and he will do well to yield it to them in some well-planned and orderly fashion.

Egyptian and Syrian propagandists and his brother's bad management have created a special position for him. Now he will have to move forward, and move fast. He cannot hope to put the clock back. To try to do so would mean that the country, and with it the house of Saud, would remain an outcast among the Arab nations—if it survived.

SYRIA

Second Thoughts

President Nasser was so pleased to be given the freedom of Damascus that he proceeded to take it away. In one decree after another and in one speech or another he assumed all the former powers of Syria's president, prime minister, parliament, political parties, and army. In three weeks he made it quite plain that, whatever some Syrians may have hoped, Egypt in the person of Gamal Abd al-Nasser is running the United Arab Republic. Syria, which had developed more independence than most other countries in the Middle East, is relegated to the status of a province. The Syrians cheered more wildly each time some formerly sacred right was taken from them. They did not even stop to think that backward Yemen had bought a place in Nasser's world quite cheaply. (The Imam has not been asked to give up anything, and the Yemenis themselves have nothing to lose.)

It looks as if Syrians trying to protect themselves from other Syrians have left themselves no scope to protect themselves from Egyptians. Khalid al-Azm's ambitions for the presidency of Syria are a dead letter. Khalid Bakdash is safely out of the country, in Prague, they say. Shukri Kuwatli has given up the presidency and presumably retired to his farm. General Bizri, who had just been put in command of the First Army, has been dismissed and posted to far Peking.

It may be possible for President Nasser to rule Syria through an able viceroy. Perhaps he has that viceroy in Colonel Sarraj, who has been appointed minister of the interior for Syria. The lack of a central government in Damascus may not disturb the Syrians for a time. They well know how to tick over without reference to the centre, and Damascus will presumably be allowed to keep its excellent municipal government, which has made the city the cleanest and most orderly in the Middle East for over fifteen years.

It is reported that a hundred or more Syrians are daily going to Cairo. Not many of them are tourists. They are going because they believe their rather special brand of Levantine knowhow will serve them well among the less sophisticated Egyptians. These hard-working Syrians may bring benefit to the valley of the Nile, as did their forebears who travelled the same road in the 1880s to escape the despotism of Sultan Abdul Hamid. But the valley is more crowded today than eighty years ago.

When the Syrians and Egyptians again have to think of food, clothing and shelter, there may be many embarrassing decisions for President Nasser; for Damascus has never really been swallowed up in all its long history, and Egyptians do not like to stray far from Cairo.

KENYA

Six More for Mr Mboya

THE elections for the six additional communal African seats in the Kenya legislative council have now taken place and the result is six more votes for Mr Mboya's policy of not working the constitution which conceded them to him. The heavy defeat of Mr Mathu, the former nominated Kikuyu member, for the second time is a clear indication that no moderate voice will—at least for the time being—be heard on the African side. Mr Mathu is relegated to his seat on the East African High Commission, and Dr Ciano, his successful and able opponent, who was educated in America and has an American coloured wife, seems to owe too much to Mr Mboya to do anything but accept his leadership. Mr Mboya, on his return from Ghana, has unfurled the banner of Dr Nkrumah, and it is now necessary for everyone, in Britain and in Kenya, to face the likelihood that he and his backers see their political tactics in terms of the last years of the Gold Coast.

In this unhappy juncture it is very much a question whether the insertion of the block of twelve special unofficial members, which will now be elected, four from each race, by the legislative council, can save the day for multiracial government. In the present climate of Kenya, where once again intimidation rules African politics and even private life to a growing extent, it is remarkable that eight African moderate men have come forward as candidates. But welcome as the successful four will be in the House, a tough reception awaits them from the African nationalist block. As the elected Africans intend to abstain from voting in the special elections, they will be nominees of the other races, and it may be questioned how much authority they could wield as ministers—though it might be a good thing if they were tough enough to accept the two portfolios which the governor is anxious to put into African hands. The European and Asian special members will likewise be elected only by their own number, and, with non-co-operation in the saddle on the African side, it is doubtful if the most liberal among the candidates (who include Mr Vasey, the Minister of Finance) will be elected. Whether they are or not, part at least of the intentions of the new constitution have been frustrated. What lies immediately ahead is not racial co-operation but the opening of an African nationalist campaign to make a mock of the constitution and to prove that Kenya cannot be ruled without Mr Mboya's goodwill and on his terms.

EDUCATION

Beside the Point

MR MICHAEL STEWART failed both his party and the national interest last Thursday by converting an all-too-rare opportunity for getting down to hard tacks on educational priorities into a motion vaguely censuring the Government on the inadequacies of its policy. There is not enough contrast between the records and general intentions of the parties on education to lend reality to an ideological clash, while the accusation that the Government is being stingy simply because the increase in this year's estimate is less than the increase in last year's estimate breaks down on the fact that the increase last year largely reflected the big Burnham award of 1956. When Mr Lloyd replied for the Government in a speech ingratiating in manner but rather thin in matter, his somewhat cursory defence of his predecessors seemed to go down as well with the opposition as with his own supporters, and it quickly became clear that little that was new or useful would come out of his speech or anyone else's.

A NEW SERVICE
OF ECONOMIC AND MARKETING RESEARCH

DURABLE CONSUMER GOODS

A series of continuous comprehensive surveys are now being prepared to assist manufacturers and others to estimate the future market for the following durable consumer goods:

Electric washing machines	Tyres
Refrigerators	Car heaters
Vacuum cleaners	Cycles
Electric fires and convector heaters	Car radios
Gas and electric cookers	Radios and radiograms
Sewing machines	Record players gramophones
Passenger cars	Television sets

These surveys are being prepared jointly by

THE ECONOMIST INTELLIGENCE UNIT LIMITED
and
THE BRITISH MARKET RESEARCH BUREAU LIMITED

Further information from:

THE ECONOMIST INTELLIGENCE UNIT LTD.,
22 Ryder Street, London, S.W.1. Whitehall 1511, ext. 13

FOR ROAD VEHICLES Dash-board instruments and gauges; car, coach, and truck heating and ventilating equipment; automatic and semi-automatic transmission systems for vehicles; K.L.G. sparking plugs; Bluecol anti-freeze; Radiomobile car radio; car radio aerials; flexible drives; flexible pipes and hoses; car batteries; car clocks; hydraulic hood-operating mechanisms. **FOR AGRICULTURE** Tractor instruments; hydraulic devices for tractors and farm machinery; time switches; machinery gauges; space heaters. **FOR RAILWAYS** Speed and distance indicators; temperature and pressure gauges; revolution indicators; combustion heating equipment for diesel coaches; automatic protection devices; transmission-control equipment. **FOR CIVIL AND MILITARY AIRCRAFT** Automatic pilots; flight systems; navigational instruments; engine instrumentation; fuel-content systems; flight instruments; warning instruments and safety devices. **FOR SHIPPING AND ALL MARINE USES** Navigational and harbour radar; echo depth sounders; echo fish and whale finders; navigational instruments; survey instruments; stress and stability instruments; optical instruments; tank measuring instruments. **FOR INDUSTRY** Counting, measuring, and recording instruments; fast-response control systems; flame-proof remote indicators; ultrasonic inspection equipment; time switches, process timers, and time recorders; Hylumina ceramic insulator seals and thread guides; master clock systems; control and safety devices; small synchronous motors; magnetic couplings; combustion control equipment; process control equipment. **FOR GUIDED PROJECTILES AND SPACE-EXPLORATION VEHICLES** Guidance control systems; sensing instruments; data-recording instruments. **FOR THE HOME** Sectric wall and mantel clocks; hand-wound wall and mantel clocks; striking and chiming clocks; Sectric and hand-wound alarms; kitchen timers; automatic control units for cookers; radio and television clocks; time switches for domestic appliances. **FOR YOU PERSONALLY** Travelling clocks; pocket watches; popular wrist watches at prices from 50 -; high-grade wrist watches at prices up to £80; solid gold presentation watches; stop watches for sportsmen; cine projection and recording equipment.

The only Smiths in this wide world

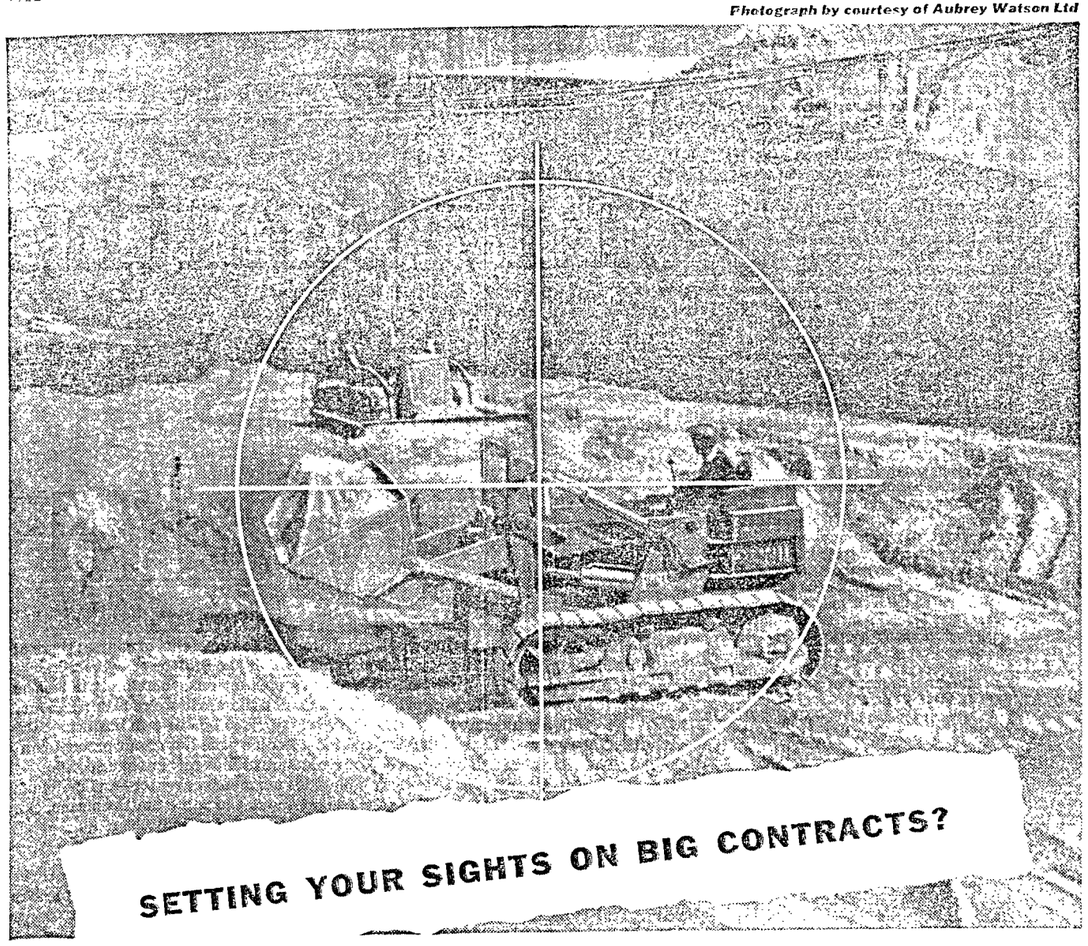
"The *only* Smiths? But . . . there must be millions!" You're right, of course: there are 800,000 in Britain's 51-million population alone—and if the Smiths bear the same proportion to the world's other English-speaking populations, there must in fact be about 2½ million Smiths in the world. But that's not the world we're talking about. We want to talk about our own world—the world covered by our own business activities. A wide world, we called it—and it is. Look at the list of our products on the left. The items in it, as you can see, are product groups rather than specific products. The number of our specific products is enormously greater—and many of them are made in millions. Applied to those products, the name Smiths means, 'A product of S. Smith & Sons (England) Limited'—and of nobody else.
We *are* the *only* Smiths in this wide world.

And there's a wide world of meaning, too, in this name, Smiths. In administrative terms it means the great engineering organization set out below. In terms of bricks and mortar it means 20 superbly equipped factories; and in human terms, 18,000 carefully trained people, including some of the most talented engineers in Britain. Our list shows what our name means in terms of products, but only your own imagination can show you what the products themselves mean, in terms of better living, to you and to millions of other people in every walk of life.
Smiths is, indeed, a name with a world of meaning.

SMITHS a name with a world of meaning

MOTOR ACCESSORY DIVISION
The average British car pedals discusses between six and a dozen different Smiths accessories, which have won their place in it by their combined economy and workmanship. The motor industry's second largest Smiths accessories plant—one of the largest production resources of its kind in Europe—is working at full speed to cope with demands.

CLOCK AND WATCH DIVISION
Clock and Watch Division is the largest producer of whatever the [illegible] and the finest quality and precision, and [illegible] In all the smart pockets in the world, and its supremacy is demonstrated by the supremacy of its products in every [illegible].



INDUSTRIAL INSTRUMENT DIVISION
Industry already has a variety of instruments to indicate or record such matters as speed, time, distance, quantity, pressure, or temperature; and the need grows at an increasing rate as industry becomes more automatic. A notable proportion of Britain's industrial instruments are made by Smiths Industrial Instrument Division.

AVIATION DIVISION
Aviation Division employs some of Britain's finest [illegible] and [illegible] talent, and most potent research facilities. In the development and commercial production of [illegible] instruments of the utmost accuracy and reliability, the auto-pilots and complete flight systems [illegible] the safest possible navigation for pilots in all lines, including [illegible]

KELVIN HUGHES
[illegible] the name 'Kelvin' has been known for over 50 years in the [illegible] and the name 'Hughes' in the [illegible] for over 200 years, the two [illegible] as recently as 1947 in the Kelvin Hughes organization, which became a member of the Smiths Group very soon afterward. In their own fields, which have now widened considerably, Kelvin Hughes products are second to none.

International CONSTRUCTION EQUIPMENT

THE FINEST EQUIPMENT ON TYRES AND TRACKS

INTERNATIONAL HARVESTER COMPANY OF GREAT BRITAIN LIMITED, HARVESTER HOUSE, 259 CITY ROAD, LONDON, E.C.1

The country gains little from a desiccated argument as to whether economy circulars issued by a Conservative government in 1957 were worse or better than those of a Labour government in 1949 (they were in fact uncannily similar). Nor are we much helped by competitive declarations about the desire of both parties to expand education in every direction—more teachers, smaller classes, more new schools, better old schools, more technologists, more youth clubs, more anything according to the interests of the educational specialist who happens to have the floor. A party occasion leading to a division unfortunately stimulates such wishful rhetoric.

Not one member talked statistical sense, for example, on the central question of size of classes. Until 1945 the line defining "overlarge" classes was drawn at 50 for primary schools and 40 for secondary schools. It then was pulled back to 40 and 30. Now that the bulge has nearly passed through the primary schools, it is possible to foresee the time when overlarge classes will have been eliminated. But already voices are raised to cry that 40 is too large for primary classes. In fact to make a reality of the 40 and 30 maxima even after the bulge has passed through the secondary schools by, say, 1962, some 40,000 more teachers would be needed than we now have. But this increase of 15 per cent is cheerfully added to the demand for a much higher leaving age, for county colleges, and for much else. Nobody counted the cost, or the clear institutional impediments. In fact, the educational MPs (there were 40 in the class) just did not do their prep for this debate. In the next one it would be useful if they could get down to a discussion of educational choices and priorities in terms of cost.

SOUTH AFRICA

Dr Verwoerd Sidesteps

DR VERWOERD'S announcement that he wishes to lay down the responsibilities of the portfolio of Native Affairs, to which he was appointed in 1950, probably means two things. For him to resign this ministry was an inevitable preliminary to entering the struggle for the leadership of the National party as Mr Strydom's resignation of the prime ministership becomes imminent. Dr Verwoerd has already decided to abandon the Senate and to stand for the House of Assembly in the elections on April 16th; and as his chosen constituency, Heidelberg, is a fairly safe Nationalist one, he is virtually certain to get in. As a member of the lower house, and one of the most senior leaders of the party, without ministerial office, he thus places himself in line for the highest office of all.

But it is clear that if he is to be successful he has acted only in the nick of time. He has been the architect of apartheid as South Africa now knows it; but his efforts to translate the theory into practical terms have at last brought him into conflict with an influential section, and perhaps the largest section, of his own party—a development discussed by our correspondent on page 1141. He had no great trouble in putting through his main measures, the Group Areas Act, the Bantu Authorities Act, and the Bantu Education Act. But with the Native Laws Amendment Act his troubles have become serious. The growing body of Afrikaner industrialists object to anything which threatens to cut off their supply of native labour, while the politically minded feel that Dr Verwoerd stirred up needless trouble (and bad overseas publicity) in trying to force total apartheid on the universities and the churches. The Afrikaner intellectuals, on the other hand, feel that all-out apartheid must not be betrayed. The National party is therefore divided, and the question is whether Dr Verwoerd is destined to reunite it from the top, or become the scapegoat for its failure to reconcile racial segregation with economic integration—a failure which the United party is waiting to pounce on. The details of the Nationalists' struggle for power are hidden behind the party façade. It is a perennial struggle; it was the extremists, led by Mr Strydom and Dr Verwoerd, who won at the time of Dr Malan's retirement, but it was Dr Malan who beat the extremists in 1943, when the Nationalists had to face hard realities—an allied, not a German victory. But the electors have been given a glimpse of an infirmity of purpose which the United party may be expected to exploit in the election campaign.

GERMANY

How Much Recession?

WHILE London's busmen threaten to break through the wage dam, there are signs that the German worker may not get quite so much this spring as his employers feared. Textile workers in Lower Saxony and Bremen, who have been on strike for nine weeks, have accepted a 4½d. rise; shoe workers have accepted a 5½ per cent increase; and the transport and public service workers who staged a one-day strike last week have accepted a 3d. rise. Many wage disputes are still rumbling, but a pattern of modest increases seems to be established.

Recession has strengthened the employer's hand, though it is still difficult to judge just how much it is affecting west Germany. The huge unemployment figures—1.3 million in February—are in a sense misleading. Seasonal unemployment in building is always large in winter. This year the figures are not very different from last; and, with refugees from east Germany still steadily flowing in, the number employed has risen by about 150,000. In February, industrial output was two per cent higher than a year before; but comparisons with last year are misleading, for throughout last winter output was inflated by panic orders after the Suez conflict. Home orders in the investment industries and home consumption still seem to be running well above last year's level.

Export orders in the investment industries, however, have taken a tumble; in steel, falling orders from abroad have brought spectacular cuts in output—by 20 per cent at Thyssen and 10 per cent at Hösch. Coal stocks, which so swiftly become unmanageable, have been a problem, as they have in Britain; the High Authority of the coal and steel community may help to finance them. For Germany, like other countries, much depends on how long recession lasts in the United States. Professor Erhard is now in Washington trying to find out. For him, more is at stake than simple boom or bust. Prosperity has been the basis for his liberal policies—his war against cartels and his light hand on imports. Recession, at a time when his anti-cartel authority is in its infancy and when the common market with its many protectionist features is about to start, could put all this to a stern test.

JAPAN AND CHINA

Between Two Stools

JAPANESE legs are not yet long enough to straddle the gap between Peking and Taipeh. Their latest attempt to do so has resulted in an embarrassing tumble. Japan, like the United States, officially recognises the Nationalists in Formosa as the government of China; but it is continually tempted to stretch an unofficial toe towards the mainland by the lure of the Chinese market. Two private agreements recently signed in Peking by parties of Japanese business men have made the Formosan government so indignant that it has whipped away its own trade from under the Japanese. Unless it is placated, the flow of commerce between Japan and Formosa will come to a halt. Since the Japanese still do more business with Formosa than with mainland China—they buy large amounts of rice and sugar from the island—this is a serious threat. Their ambassador to Taipeh, who has been in Tokyo, is to return post haste to appease the angry Nationalists.

It is not the size of the two new trade agreements that chiefly annoys the Nationalists. One of them provides for an exchange of goods worth £35 million in each direction in the coming year, an amount little larger than that arranged in the last three years. The other adds another £100 million each way, spread over the next five years, representing an exchange of Japanese steel goods for Chinese ore and coal. Taipeh is angry because the Japanese traders who signed the agreements did not specify that the communists would be forbidden to fly their flag over the trade mission they would establish in Tokyo, and because the Japanese government is being asked to give its "approval" to the private agreements. The Nationalists profess to detect in these small points the first inching along the road to recognition of the Peking government.

Meanwhile the Chinese communists are still chuntering about Mr Kishi's visit to Formosa last year, during which he was reported to have expressed polite sympathy for Chiang Kai-shek's presumably militant "aspirations" in regard to the mainland. It is going to be increasingly difficult for the Japanese to keep a foot in both Mao's door and Chiang's. They are the chief sufferers from the American reluctance to concede that Peking exists; and, as the prospect of trade with China glitters more brightly before their eyes, they are likely to find themselves in the painful position of doing the splits.

ULSTER

A Labour Opposition for Stormont

THE feature of the Northern Ireland elections is the re-emergence of the Labour party, a Protestant party allied to the British Labour party; it won four seats from Lord Brookeborough's Unionists, and will now furnish a new and much-needed opposition block. But the Unionists, on their side, won three seats—one from the Nationalists, one from the Eire Labour party and one from a dissident Unionist member—so that they are only one down on balance. Assuming that the results of the Queen's University election will be the same as previously, with three Unionists and one Independent (anti-border) member returned, Lord Brookeborough will have 37 Unionists compared with his previous 38 in a House of 52 members sporting seven types of party or non-party label. The Labour party is now reaping the benefit of its decision in 1949 to support partition. This decision wiped it out in the 1953 election through the loss of Nationalist and Republican Labour votes—but apparently a few Roman Catholic Ulstermen are now in a mood to vote anti-Unionist Labour, even when it is unequivocally pro-border, while growing unemployment has brought some Unionist voters into the new and respectable Labour fold. It is probable that, with a more efficient organisation, the Labour party could have won another seat or two; in a future election it may well do so.

It is difficult to extract any more definite trends from the voting. Irish politics make the psephologist's job extremely difficult. Twenty-seven of the Unionist members were returned unopposed, despite the Labour challenge, compared with 21 in 1953, and of the remaining 21 seats contested (i.e., excluding the university seats), three were straight fights between two varieties of Unionist candidate, while another three were private fights between two or more Nationalists or Republicans. From the remaining contests the pattern emerges that while the government lost heavily to Labour, and moderately against some Unionist opposition candidates, it gained ground in the border districts. When parties and individuals are grouped broadly into "pro-border" and "anti-border" allegiances, the anti-border vote has risen slightly—from 28 per cent of the higher total poll in 1953 to 32 per cent of the lower poll of 1953. This rather shaky figure may console Mr De Valera—but it leaves Lord Brookeborough firmly in power with unemployment, not the Catholic birth-rate, as his immediate bugaboo.

The Economist

MARCH 27, 1858

THE PURPOSE OF PASSPORTS

"It has been laid down with obvious good sense by the English Government that a British passport simply identifies a man by name as a British citizen, and neither can nor ought to attempt anything further. Even such a passport would not be necessary did not the jealousy of foreign Governments require such an identification before admitting us into their territories; but while this remains so, two great ends should be kept in view by the British Government in granting passports,—to commit the duty of ascertaining the general fact of citizenship to those who are at once most likely to know the applicant and most easily accessible to him; and at the same time to grant the passport under a name and authority which will be known to, and respected by, the various Governments of the Continent. . . . Another question of some interest was raised on Tuesday night as to the cost of passports. It was well observed in the House that the relinquishment by the French Government of the consular passport system as regards British subjects, affords a very excellent opportunity for reducing altogether the cost of passports to a price which would no longer press upon even the working classes. The Government have already done much in this direction. What formerly cost 2*l.* 10*s.*, now costs only 7*s.* 6*d.* . . . A further advance in the same direction is a matter of the greatest importance to English labourers. English machinery is now sent all over the Continent, and where English machinery is adopted, English mechanics may find a useful and profitable market for their services. It has become most desirable that the labour of different countries should mingle freely,—the workmen of all nations mutually learning and teaching by their intercourse and by their competition in the various markets of the world.

AGRICULTURE

A Future for Small Farmers

THE white paper on the agricultural price review (cmnd 390) whose main proposals were examined last week, contained two short paragraphs on the "special problem" of the small farmer hit with discriminatory force by the cuts in milk, pig and egg prices. This problem calls for further comment. It is, as the government knows, social as well as economic, and proposals are being prepared for "additional provision designed to give further assistance to the small full-time farmer." This is as it should be. Whatever the past wisdom or unwisdom of a policy which has kept in being a large number of ill-placed or splinter-sized holdings incapable of yielding their occupiers a living when prices are realistic, nobody should want the community to wash its hands entirely of the small farmer as soon as the cost of keeping him on the strength becomes inconveniently high. What needs to be clearly understood, however, is that the "social problem" is not the problem of preserving as many small farmers as possible, but, on the contrary, that of smoothing and easing their exit and re-establishment in other lines of activity. There are small farmers who can, and should, in a healthy but not hypertrophied agriculture, prosper as small farmers; there are others who could prosper were their holdings larger or their equipment better or the communal services available to them more adequate. For both these classes "assistance" in the generally understood sense is justifiable—the assistance whose aim is to make the holdings concerned economic.

There is nothing to be gained, however, by pretending that all small farmers fall into these classes. The man whose land-hunger makes him willing to accept a far lower-than-normal standard of living and a far tougher-than-normal standard of work is, indeed, in a free country, entitled to do so; but not at the public expense without reservation or limit. A substantial proportion of very small and ill-placed farmers ought, both in Britain and in Northern Ireland, as in other countries, to be leaving the land—for their own sakes for the sake of rational land use, and for the sake of the over-burdened taxpayer. In so far as past policy imposes a public responsibility towards these casualties of economic progress, it should be discharged by helping them to make a fresh start, on or off the land. A small beginning was made with the inclusion, in the improvement grant scheme, of provisions for aid towards the legal expenses of consolidating holdings. There is need for a lot more constructive thinking before the Government's new proposals are published.

LETTERS

The British Economy

SIR—May I be permitted to join issue with Mr Joseph Alsop on a wider front? His benevolence to Britain is not in doubt, but his gloomy presentation of our affairs can do grave injury.

First, he posits that, as a result of certain political developments, the Middle East might require payment for oil, not in sterling, but in "hard currency." Sterling has always been a hard currency in the sterling area, in the sense of being convertible into dollars, and since February, 1955, it has been hard outside also, in the sense of being convertible into dollars at a discount of no more than 1 per cent—and recently at no discount on the lower official rate. We have a sanction against the refusal of sterling in payment for oil. It is inconceivable that, if certain countries refused to accept payment by us in sterling, we should continue to give them the privilege of dollar convertibility for their existing (large) holdings. That should make them pause.

The idea that our overseas investments, which have been substantial since the war, depend in any way on Middle East savings is quite fantastic. The reason why that overseas investment has not been still greater in these years was not financial. It has consisted solely in the fact that our manufacturing capacity has been over-committed for other purposes, notably for the build-up of armaments for the defence of the free world on a scale second only to that of the United States, and, more recently, for very heavy industrial investment in Britain, which has greatly strengthened its economy. From now onwards—for the first time since the war—there will be spare industrial capacity in Britain, and this will render possible overseas investment on a greater scale than before. That will occur, whatever may happen in the Middle East.

If, despite the sanction mentioned above, the political situation should deteriorate so badly there that we were indeed driven to dollar oil, we should not be at our wits' end. We should have to impose new restrictions on other imports, and perhaps have a new bout of austerity, so many of which we have had and borne fairly stoically since 1939.

Our difficulties would at worst be temporary. In the long run we are in a very strong position on our balance of trade, because the rest of the world will increase in population and, we hope, in buying power per head, while our population will remain stationary.

Some sixteen months ago the British took certain steps with a view to stabilising conditions in the Middle East. I am well aware that you, Sir, did not agree with those steps. We knew at the time that our major partner in the defence of freedom would not do so either, but supposed, I imagine, that the United States would acquiesce in the *fait accompli*. We thought it could be assumed that our record in the Commonwealth safeguarded us absolutely against the imputation that our action was a manifestation of "colonialism," or was anything other than an attempt to stabilise the position of our old friends, the Arabs, *in the long run*. But when our major partner reacted so very badly, we thought it the wiser part to desist. That pattern of events must now leave the moral responsibility with the United States for initiating a policy to safeguard the Middle East from communism. That is the central point that Mr Alsop should impress upon his fellow countrymen. His "cry havoc" utterances, like those of many British citizens in the thirties, and of certain shortsighted British financiers before the "leak tribunal," give a misleading impression of weakness. As such, they do Britain nothing but harm.

There are two things which Mr Alsop could most helpfully use his influential advocacy in recommending to Americans; they both not only bear on Britain, but also would be of benefit to the world, and ultimately to the United States itself. One is to double the dollar price of gold; that is almost an honourable obligation upon the United States as its largest holder; having allowed the commodity value of the dollar to slip to half its 1939 level, it is surely its duty to recognise this fact *ex post* by re-adjusting its value in terms of what is still the prime medium in the world of reserve against international settlements.

Secondly the United States might take the initiative, in co-operation with the British and others, in extending on an international scale its policy of support prices and buffer stocks for primary products. Either of these measures, still more both, would be of greater help than anything else it could do in the economic sphere.—Yours faithfully,

Norfolk ROY HARROD

Kenya

SIR—Your special correspondent from Kenya writes: "Mr Mboya makes no bones about his wish to see Kenya a second Ghana . . ." From what I know of Mr Mboya (and I last saw him early in January) this is not a fair description of his attitude. It would be truer to say that he wants to see Kenya another West Indies. I think he is sincere in his desire to make Kenya non-racial: but he stands for a democratic constitution, as any African politician must. If such a constitution were granted now Kenya would evolve peacefully and there would be a good chance—the only chance—that reasonable economic interests would be safeguarded. If it is not granted the future will be black—in both senses.

Your correspondent also says that "it would take two-thirds of the present revenue to send all Kenyan children to school." He does not mention that rates of taxation in Kenya are absurdly low. Europeans try to justify this with the argument that the Kenya Government gives them little in the way of services: roads are bad, there is no national health service, etc. But they forget that they enjoy in Kenya the great advantage of cheap and plentiful labour. This advantage, while it lasts, must surely be paid for.—Yours faithfully, ALTRINCHAM

The National and English Review

The Wage Dispute

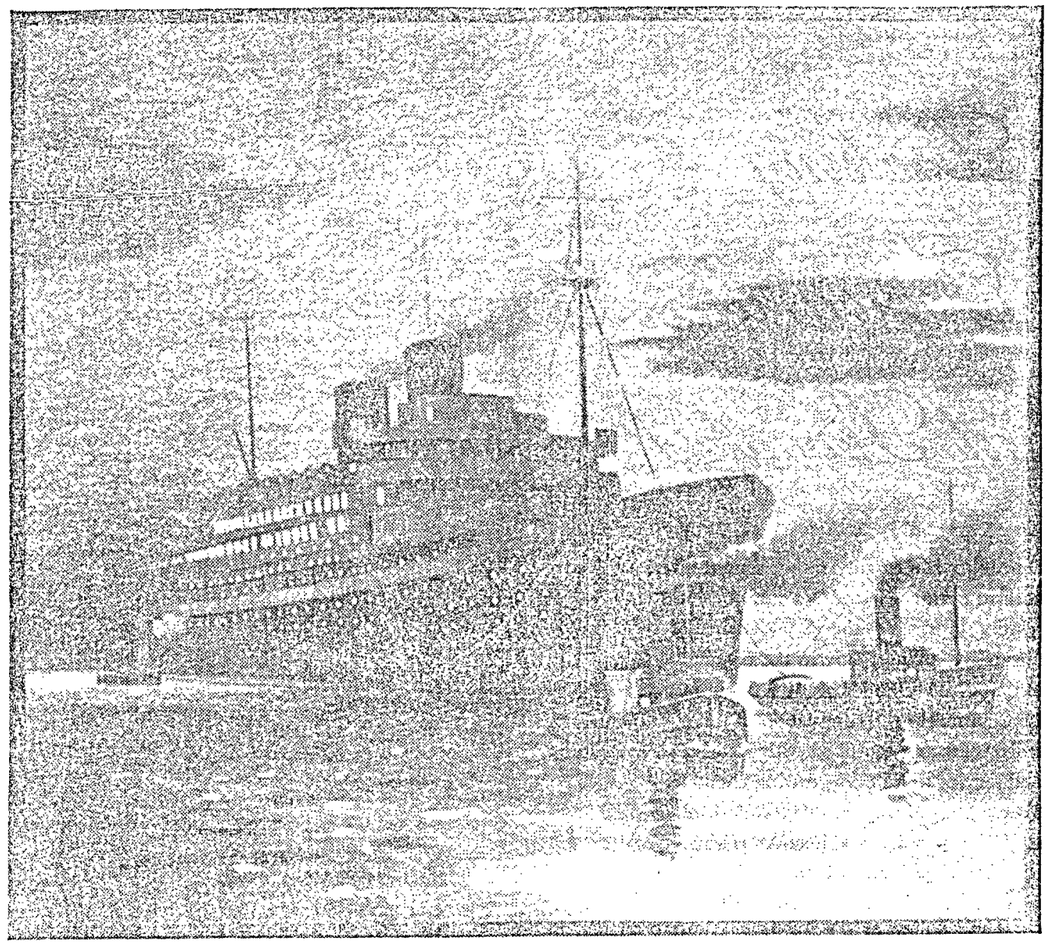
SIR—As a member of one of the railway trade unions, I read with interest the article on the current wages disputes in the transport industry. I would not disagree with the general tenor of the article, inasmuch as no sane member of the community wishes to live in an atmosphere of inflation. Nevertheless, there are certain assumptions, implicit and explicit, which are rather wide of the mark, and I think they should be corrected, so that the whole problem may be seen in its true perspective.

You say "the important immediate point is what conclusions one man reaches in this exercise of estimation (i.e. whether or no the unions would be successful in strike action)." That is to say that it all depends on whether Mr Cousins thinks he could win his strike. This illustrates a fallacy all too common (the pundits should really know better), that the greater the union the greater the power. The two largest unions in this country, the TGWU, and the NUGMW, have between them some two million members, but I suggest that the only real power which Mr Cousins and Sir Thomas Williamson wield is within the Labour Party. There is no doubt that the secretaries of the two general unions have a great deal of influence in this particular sphere, as Mr Gaitskell would gratefully acknowledge. Their importance in the industrial scene is less easy to define. They are essential to the maintenance of order in the field of collective bargaining, but unfortunately for them the unwieldy and hybrid structure of their unions deprives them of a cohesive striking force in any industrial dispute. Mr Cousins knows that, were he to call a strike of his members, he would not get sufficient response to avoid an ignominious defeat. The only possible exception to this would be the London busmen, and even supposing they did support their leader, there is little reason to think that they would win their fight.

I suggest that the only unions who still possess real power of a strike weapon are the industrial unions, such as the ETU and the NUR. It is true that the ETU was finally forced to abandon its series of guerilla strikes, but only after inflicting considerable damage on their opponents. In recent years, the railway management has succeeded in averting real unrest, by taking advantage of the long-standing rivalry between all three railway unions. How else was the footplate men's strike of 1955 broken, except by the action of NUR men in running a skeleton service of trains? You appear to incline to the opinion that on balance, a full railway strike could eventually be broken, and I think you are wrong. It is many years since we have had an effective railway strike, but I have no doubt whatever that if the NUR were to call out its members, the strike would be complete and effective, irrespective of the action of the other two unions. You overlook the fact that these railwaymen have a tradition of solidarity such as never existed in the massive general unions. I suggest that it all depends not on Mr Cousins, but on a much more unknown quantity—the new general secretary of NUR, Mr Greene. He is reputed to be a moderate man, and it may well be that the government will get a breather because of the death of Jim Campbell.

Having settled the issues of whose finger is on the trigger and whether the resultant explosion produces a corpse, let us turn to the final point as to what adverse effects this untimely death would produce. You say "the advantages would be that the economy could more easily absorb even a total transport strike in present conditions of slack." This seems to me to be either a case of tongue in cheek or yet another example of the arrogant ignorance of the economist, which is fast becoming a part of our present society. A total, repeat total, railway strike, which includes the underground system (we can ignore the buses for there are alternatives to them) would most certainly have a very serious and damaging effect on our economy. I cannot comprehend how anyone can argue otherwise.

I have to maintain a dichotomy of approach to this problem, because as a railwayman I am affected by it, and on the other hand I know that ultimately a strike would have far reaching consequences. Of one thing I am certain, that the lot of the railway employee has shamefully deteriorated since prewar days. I concede that we have our share of drones, e.g. the hordes of porters at our London termini; but by and large the railwayman is a valued member of the community and deserves to be so rewarded. If the authorities should decide otherwise, then I should unhesitatingly support my union in any action they demanded. This attitude would no doubt pain you, but I cannot sustain four children by the observation that *The Economist* says that I must tighten my belt.—Yours faithfully,



Surrey A. CURWEN

Kelvingrove

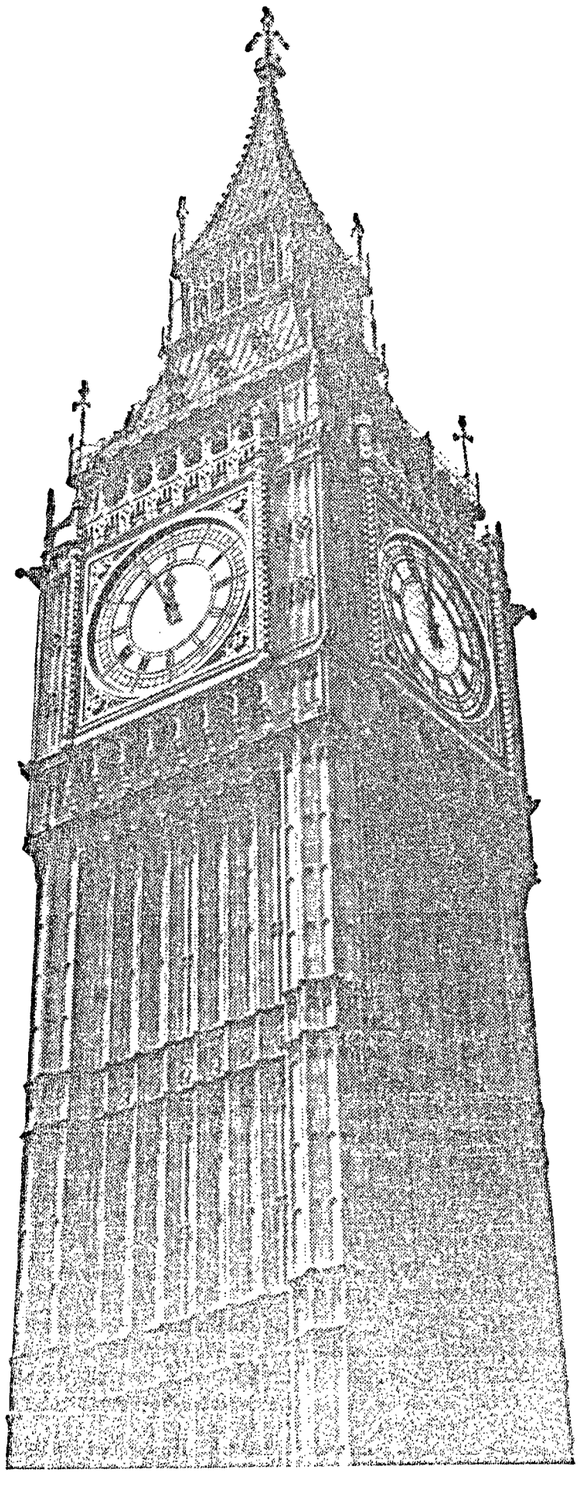
SIR—You say that the main reason why the old folks "have stayed in the great smoke, instead of moving out into suburbia or the country, is that they have enjoyed squatters rights under rent restriction." I fear that you do not know Kelvingrove; the main reason why they stay is because this is the life they have known and they are happy and comfortable there. There is no suburbia for the working class in Glasgow; there are only chilly and lonely housing estates at the end of a long bus route. And where would they live in the country? The one-room and two-room tenement flats in which they live in Anderston and Finneston are compact, easily warmed, and can be let at an economic rent which they can afford, and the old folks have company even if it is only on the way to and from the communal w.c. at the stair head. These buildings were well built of stone when building was good and cheap, there is no great interest to be paid on the capital invested, their plumbing is simple, their upkeep is not great, and if the roof is kept sound they will last for another 100 years or more. They are sub-standard for young married couples with rising families, but these in full employment can afford the rents in the new corporation housing estates where they can start a new life and create a new community. The Kelvingrove tenement flats provide better and much more acceptable accommodation for old age pensioners than any alternative open to them. That, and not your doctrinaire economist's point about what ought to be the effect of the Rent Act, is the social significance of the statement that the Kelvingrove electoral roll is only 80 per cent live.

To me the most distressing sight in Glasgow is the ugly waste of vacant blocks and derelict tenements in or near the centre of the city. The only immediate result that I can foresee of forcing old-age pensioners out of their tenements in Kelvingrove would be to add to the number of derelict and empty buildings. The crying need in Glasgow is to tackle this problem, not to add to it.—Yours faithfully. C. H. LAW

Glasgow C., 3 (Captain RN, Retd.)

Half a million dishes will have been washed by the time this Eastward-sailing liner reaches her destination. The housewife may take five years to reach that tally, but without the advantage of a ship's dishwashing machinery and lime-free water hers is a tougher problem.

Alkyl aryl derivatives in the Marchon range cover all the problems of hard-surface cleaning—including, for example, full fat emulsification, hard water efficiency, absence of streaking and chemical attack, and a foam that is geared to detergency end-point.



Manufacturers of:
Fatty alcohol sulphates (EMPICOLS),
Emulsifiers (EMPILANS),
Self-emulsifying waxes (EMPIWAXES),
Alkyl aryl sulphonates (NANSAS) and other detergent bases in powder, paste and liquid forms.
Fatty alcohols (LAUREX).
Phosphoric acid and complex phosphates. (EMPIPHOS).

Looking Forward... at Seventy!

Durability is a quality rather sought after, both in personal friendships and business relationships. Yet the very evidence of durability is found only in the passing of time. The Bank's 70th birthday in London marks the completion of three score years and ten filled with history, and service to an ever-growing clientele. To match and surpass this standard of service to our many British-American friends and customers is the goal shared by every member of the Chase Manhattan for the years ahead.

If you do business in the United States—or anywhere else in the free world—Why don't you talk to the people at Chase Manhattan?

AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

Strangled Strategy

WASHINGTON, D.C.

THE President's plan to reorganise the Department of Defence is expected shortly. In January, in his message on the State of the Union, he spoke severely about "so-called inter-service rivalry" which, he insisted, had to stop. His Secretary of Defence, Mr McElroy, recently flew to Puerto Rico with seven advisers to indulge in deep thinking away from the distractions of Washington. And since the sputnik many thousands of pages of testimony have been taken by several congressional committees from protesting industrialists, frustrated scientists and irate generals about the impossibility of getting quick action out of the committee-bogged jungle of the Defence Department. Plainly, something must be done. But powerful politicians in both parties have already moved to head Mr Eisenhower off from the drastic solution which, as a military man, he has long favoured: a single chief of staff pioneering the way to a single unified service.

The opposition comes principally from the Navy, which for years has conducted propaganda against what it terms "a Prussianised general staff" and warned Congress against the danger of "a man on a white horse" to civilian control of the government. The Navy has never been without its well-placed friends in Congress, most especially Mr Carl Vinson, who since time immemorial has been chairman, first of the Naval Affairs and then of the Armed Services Committee of the House of Representatives. Mr Vinson, who considers that a unified staff would be both un-American and unappreciative of the needs of the Navy, has swiftly engaged the leading members of his committee from both parties to support a Bill which would leave the present military leadership of the forces very much as it is, but which would abolish fourteen of the twenty-nine civilian positions in the Defence Department with the rank of Assistant Secretary or Under Secretary that are filled by political appointees. It would also reduce the number of people working directly for the Defence Department, as distinguished from the three services, from 2,400 to a mere 600. Among those committed to this course in advance of the battle is the Republican Chief Whip. The President has therefore been warned that the regular channels to his own rank and file will be closed to him should he propose anything more radical.

THE wholesale massacre of the civilians might seem, on the face of it, an odd way to vindicate the principle of civilian control of the military. But the liquidation of the experiments of Mr Charles Wilson, Mr McElroy's predecessor, is the highest common denominator of the would-be reformers. He attempted to get a grip on his vast machine by the methods known to him as an industrialist—principally by proliferating assistant secretaries who are, in effect, "vice-presidents in charge of" research, engineering, and so forth. Congressmen have listened aghast to the horror stories of the endlessly overlapping committees. They are dismayed to find that in the field of new weapons the United States as a country has appeared to lack those qualities most associated with Americans as individuals: it has been slow, hide-bound and over-cautious when Americans think of themselves as fast, enterprising and ready to take a chance. In a new study* of the defence establishment two colonels and a civilian, who have had a wide variety of inside experience, have described in detail the fragmentation of decision-making, especially about whether or not to proceed with highly unorthodox weapons systems that would cost hundreds of millions of dollars and cut right across traditional divisions of service and bureaucratic functions. The research general, accompanied by his scientists, has to plead his case for building some futuristic weapon before several assistant secretaries, each of whom is involved in a different way, each of whom is usually a minor industrialist who has come to Washington for an average stint of a year and a half and departs as soon as he has learned his job, and each of whom is so terrified of making a mistake that he covers himself at every point with advisory committees, each containing two Nobel Prize winners at the very least.

Then when a project has been adopted it has to undergo the budget process. The annual American defence budget takes about eighteen months to prepare and ties up almost permanently a high proportion of the department's most skilled technical staff. Every project has to be justified, not only to the assistant secretaries of the service and then to the corresponding assistant secretaries of the Defence Department itself, but also to the comptrollers of the service and of the Defence Department, to the Bureau of the Budget, and to four committees of Congress. Most of this process has to be gone through again in order to have money which has been voted for a particular project actually released. When there is an economy drive, and more especially when there is danger of exceeding the statutory ceiling on the national debt, as there was last year, money that has been appropriated is withheld by the fiscal authorities. General Schriver, who is in charge of developing ballistic missiles for the Air Force, told Congressmen that, although his headquarters are on the west coast, he had spent over 200 days last year in Washington attending committee meetings or giving testimony. The workings of the American bureaucracy make Russia's shorter lead time on new weapons more understandable; they also explain the American's violent aversion to the idea of socialism in the United States.

With Senator Mansfield, the Democratic Whip in the Senate, introducing a companion measure to that of

* Forging A New Sword. By William R. Kintner in collaboration with Joseph Coffey and Raymond J. Albright. *Harpers*. New York. Price $4.50.

Mr Vinson in the House, the President and Mr McElroy may now be resigned to getting little more in the way of reform than the abolition of civilian jobs. This would be a pity, for if such men as General Gavin, the retiring head of research and development for the Army, Dr Henry Kissinger, who wrote "Nuclear Weapons and Foreign Policy," and the authors of "Forging a New Sword," are to be believed, the present structure of the military establishment has much to do with the alarming confusion over basic strategic doctrine. In the words of Colonel William Kintner, a brilliant young officer who used to be on the staff of the National Security Council,

> each service supports a strategic concept which enables it to claim a decisive role and each seeks to control weapons and elements which will enable it to carry out that role virtually independently of the other services.

The National Security Acts of 1947 and 1949 were armistice lines fixed between fiercely warring factions. The Secretary of Defence was given "direction, authority and control" over the three services, but these were to be "separately administered." Moreover, the Secretary was specifically forbidden to have his own military staff. The Joint Chiefs of Staff, made up of the chiefs of staff of the three services and a non-voting chairman, were made "the principal military advisers to the President, the National Security Council and the Secretary of Defence." But the Secretary of any service or any Chief of Staff has the right to make recommendations to Congress on his own initiative after informing the Secretary of Defence.

The whole system, according to its critics, is guaranteed to produce negotiated compromises between the three services rather than a single coherent strategy. Moreover, until the Secretary of Defence is given his own military staff—perhaps by splitting the Joint Chiefs away from their services—he cannot even make an independent analysis of the interested advice that he receives. According to Colonel Kintner, some such reform is urgent because the lack of clarity at the level of the Joint Chiefs is reflected in the top policy papers prepared for the President's approval at meetings of the National Security Council. As a result these policy decisions are themselves so vague that the real pace of America's defence effort is determined by fiscal officers well down the line. The purpose of any change must clearly be the taking of major strategic decisions that are being evaded at present. But no change of this kind, however procedural in appearance, is likely to be effected without vehement conflict—unless by then everyone is in so non-controversial a mood as to be content with burying the unloved monuments to Mr Charles Wilson.

No Pump-priming on the Farm

THINLY disguised as an anti-recession measure, the Bill to freeze supports for farm prices at their present levels for another year has been passed by Congress and sent to the White House. Every indication is that Mr Eisenhower will veto it; neither the economic argument that farmers' incomes should not be cut in bad times nor the threat of political retaliation in next autumn's congressional elections seems to have persuaded him to abandon his embattled Secretary of Agriculture, Mr Benson, or the effort to reduce agricultural surpluses by lowering the prices guaranteed to farmers by the government. In Congress, Mr Benson has won a negative sort of victory; the votes in both the Senate and the House fell short—substantially so in the House, which is more sensitive to the views of consumers in the cities—of the two-thirds majority needed to over-ride a veto. Unless the climate of congressional opinion changes rapidly, Mr Benson is free to proceed with his planned reductions in the supports of a number of farm commodities; dairy products will suffer on April 1st.

To producers of other crops there will be a rude justice in this. A number of the Senators anxious to protect the dairy farmers represent states such as New York which also have large industrial populations that want to see the cost of living brought down; these Senators tried to have the best of both worlds by voting against the Bill for a general freeze, but sought to pass a separate Bill in the interests of butter, cheese and milk. Other members of the farm block gave them short shrift, but such a strategem, coupled with the failure to muster big majorities for the general freeze, shows that rapid urbanisation is taking its toll of the farmers' political power. In the last seven years some 5 million farmers and farm labourers have left the land. No politician, not even Mr Benson, dare say so, but if this process continues, the problem of agricultural surpluses may become politically manageable; the relatively few big farmers who already are responsible for 90 per cent of the agricultural crops sold for cash do not need high price supports to make a profit and they do not have the political appeal or strength to demand them.

Mr Lyndon Johnson, the Democratic leader in the Senate, has made a dramatic appeal to the President not to "crush" the farmers by a veto, and there is little doubt that the Democrats hope to make political hay in the farm districts next autumn if Mr Eisenhower sticks to his guns. What is surprising, after all the Republican agitation against Mr Benson, is that relatively few Republicans defected—only 44 in the House compared with 141 who voted against the Bill. No doubt the existence of over 5 million unemployed and many more workers on short time is a powerful argument for bringing down the cost of food.

More for the Jobless

THE President's proposals for extending unemployment compensation, unexpectedly delayed until this week, are carefully framed to avoid as many political difficulties as possible, since it is essential that something be done promptly; many workers will shortly have used up all the benefits to which they are entitled under present state laws. Since their inception in 1935, unemployment insurance schemes have been controlled by the states and inevitably there is resentment at any interference from the federal government. But the committee of State Governors who met Mr Eisenhower last week was mainly concerned with avoiding any form of federal loan which the states would have to repay out of their own funds. Under the Administration's plan, the federal government would supplement state funds so that payments to jobless workers could continue for an additional thirteen weeks. So far the money is no problem; there is over $8 million in the states' reserves, though some of the hardest hit, such as Rhode Island, will find themselves short of cash for benefits if conditions do not improve soon. But the President's plan would allow

"Agreed, then? We shan't expand sitting here—one of us must visit NORTHERN IRELAND!"

If your firm is planning expansion you need a first-hand report on the possibilities in Northern Ireland. Everywhere else in the United Kingdom expansion plans are bedevilled by one or more of three great shortages—not enough money; not enough men; not enough space. Only Northern Ireland can offer you all three.

MONEY —*to cut the need for investment funds*

Outright grants of 25% and/or loans for plant, machinery and buildings are available, also removal and training grants.

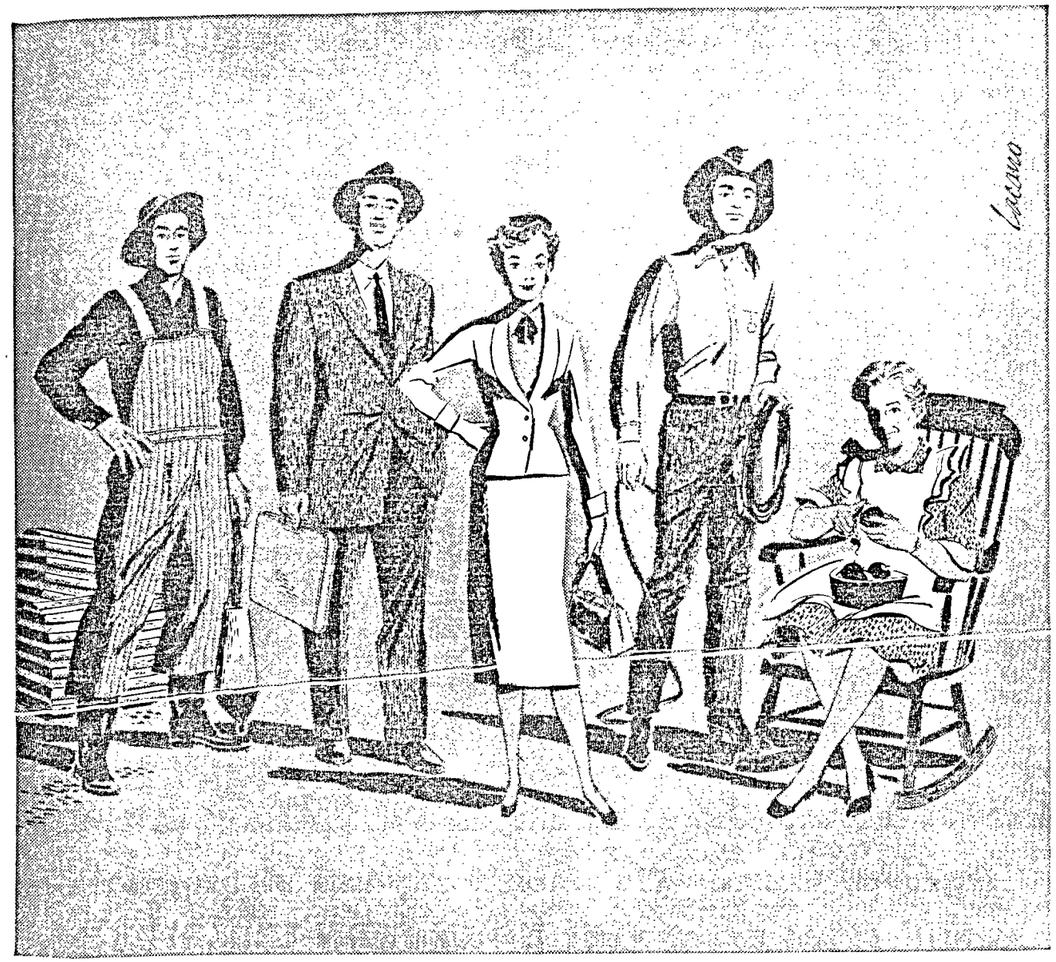
MANPOWER — *first-class and plenty of it*

Over 9% of the labour force—over 30,000 of them men—are looking for jobs. They are hard-working and loyal; absenteeism and labour turnover are low; output is high and shift-working is practicable.

PRODUCTION SPACE *in modern factories ready now*

If you employ mostly men you can rent a standard Government factory for about 9d. per sq. ft. p.a.—room for a 100% expansion. Or the Government might build you a special-purpose factory on amortization terms. Sites of all sizes available.

EXCELLENT SERVICES



Ample water, gas, electricity and housing. Nuclear power station to be built. Excellent sea, air and road ferry transport services.

SUCCESS STORY

Since 1945 over 130 new factories have opened in Northern Ireland, and many have expanded. Courtaulds, British Tabulating Machines, Metal Box, Du Pont, Chemstrand, Hughes Tools and many others will tell you of their experiences.

WHICH OF THESE AMERICANS IS A CUSTOMER FOR EUROPE?

A Texas cowboy, a Maine lobsterman, an Iowa farmer's wife, a Chicago corporation lawyer, a New York department store buyer. These are but a few of the incredibly varied types who are classified as Americans and comprise the American market. They differ radically from each other and other Americans in tastes, desires, needs and ways of life, and, naturally, in the kind of merchandise they buy.

Banks abroad desiring to obtain a favorable position for their customers in U. S. markets are invited to use the facilities of Manufacturers Trust Company. Through our complete branch coverage in New York City and our thousands of correspondent banks throughout the United States, we are exceptionally well equipped to obtain data on local market conditions in the United States and to handle all types of banking transactions.

payments to be extended quickly and simply beyond the statutory period, without necessitating the recall of state legislatures to revise their laws.

Among objections to the Administration's scheme have been fears, expressed in the Treasury and by Republicans and business groups, that the present state-administered scheme might be upset by what looks like a federal dole. Some Democrats, backed by the trade unions, think that the plan might prevent Congress acting on the permanent improvements which they advocate for the unemployment insurance system. Both parties, competing to take credit for whatever is done, have introduced Bills to reform the present programme—something the President has often asked them to do. This reform is needed: only two-thirds of the labour force are now covered. Moreover, the effective maximum duration of payments varies, according to state, from sixteen weeks to thirty ; but since many workers do not qualify for the maximum, benefits are exhausted in an average of sixteen weeks—sometimes as little as five. While the payments were originally supposed to be half of the worker's wage, the average is now considerably less, since state laws also set now outdated upper limits on benefits. In many cases these limits are as low as $20 a week and industrial earnings now average over $80 a week.

But action—even if only temporary—is also needed at once. An extension of unemployment compensation would not cure the recession, but it would help to keep it from getting worse by checking the further fall in purchasing power which would otherwise come when benefits begin to run out on a large scale. In industrial centres such as Michigan, where nearly 15 per cent of the labour force is out of a job and 20,000 workers had exhausted their right to compensation some weeks ago, the number needing emergency help will soon be rising rapidly.

Thinking by Committee

FROM A SPECIAL CORRESPONDENT

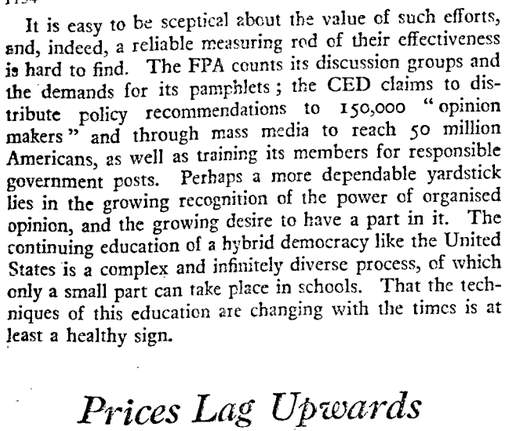
ONE of the things that makes possible the skilful organisation of public opinion in the United States is the American passion for self-education, and particularly for that form of self-education which is carried on in committee. A spectacular example of this process was the meeting called recently in Washington to further the Administration's foreign aid programme. Some twelve hundred men and women who are considered to be leaders of public opinion in various parts of the country conferred for a day and listened to speeches from President Eisenhower, ex-President Truman, Mr Adlai Stevenson and Mr Dewey, the former Governor of New York.

The foreign aid meeting was in large part designed to impress Congressmen, but its educational value was greater for the people who attended, and who then went home and talked to their neighbours or to other committees. This is also likely to be the case with the similar meeting which takes place this week to drum up support for the extension of the Reciprocal Trade Agreements Act. In earlier years the American people were content to sit at the feet of lecturers, but now the public, young and old, wants increasingly to participate. If people are not given two sides of a question in the press, or on the air, where controversy is still shunned, they will do it themselves. Handbooks setting forth the techniques of discussion are easily obtained, and trained leaders are in demand.

This education by committee is blood brother to the team-work dear to President Eisenhower, and first cousin to the " brain-storming " sessions which have created such a stir in advertising circles. In essence not a new process—it was, after all, an eighteenth-century Committee of Correspondence which by lively written debate educated the American colonists for their role as independent citizens of a new nation—its most interesting present manifestation is in the realm of important public policies, and particularly in the field of foreign affairs. Here it is attracting groups that hitherto have shown little interest in matters outside their country.

Small towns in inland Ohio, Michigan, and Wyoming, which feel that their prairies are no longer as untouchable as they used to be, are finding relief for their worries in enlistment in an educational scheme worked out by the Foreign Policy Association in co-operation with educators in Oregon. This is called the Great Decisions Programme ; now in its fourth year, it is designed to focus the attention of the average man on his personal responsibility, as a citizen in a democracy, for helping to solve the eight most important questions of foreign policy which face the United States each year. Educational material bearing on the questions is provocative as well as accurate, and provides a lively background for the group discussions at which decisions on these questions are reached. Then, with a valuable feeling of personal pride, the local groups send their individual recommendations to their Representatives, their Senators and the State Department, where they are partial evidence of the public opinions which public servants disregard at their peril.

AT the other end of the scale come the sessions held by experts on foreign affairs and many other subjects at such centres as Arden House, formerly the luxurious home of the Harriman family and now run by Columbia University for conferences of a high order. Here the participants are chosen because they are skilled in their fields, and their discussions are edited and published as having wide interest and educational value.



The economic conferences held during the year by " prestige groups " of business men belonging to the Committee for Economic Development are designed to influence as well as to educate. The 150 members are divided into groups which meet for study and discussion of problems of national or international importance posed for them by a Research and Policy Committee. An able staff does the spade work, and the aim is to reach agreement in order to sway public opinion and spur public action. The final document is distributed to the press, and sometimes to Congress, as a recommendation of the distinguished businessmen who make up the committee. Last week, for example, they urged a 20 per cent cut in income taxes if the recession continues to deepen.

These high-level conferences, like those at the grass roots, are of course devices for getting information out of heads, as well as into them. Some of the first type have a certain cross-fertilising value if, for example, scientists are called upon to confer with economists, but this is the exception. Most of such conferences take place within groups of the same profession, class or circle, so that their educational effect is in depth rather than in breadth.
