Other active steps were taken by the Government. On the day on which the Bank rate was raised, September 19th, the Chancellor announced that it was the intention to hold down the total of Government investment expenditure instead of allowing it to rise as planned. At the same time, the Chancellor requested the banks to restrict bank lendings to an average level over the following twelve months no higher than that prevailing during the preceding twelve months. Mr Thorneycroft said at the meeting of the International Monetary Fund:

"The purpose of the measures which I announced before leaving London has been to go to what I conceive to be the root of any inflation—namely, the supply of money. Let me repeat what I said: 'There can be no remedy for inflation and the steadily rising prices which go with it which does not include, and indeed is not founded upon, a control of the money supply. So long as it is generally believed that the Government are prepared to see the necessary finance produced to match the upward spiral of costs, inflation will continue and prices will go up.' What is needed to bring it to a halt is for the Government to be prepared to deny the extra cash whatever other painful consequences may follow."

This unequivocal statement of policy clearly impressed responsible opinion at home and abroad: it was undoubtedly an important factor in creating a better sentiment about sterling. In view of this, it is sincerely to be hoped that the recent resignation of Mr Thorneycroft involves no departure from the principles he laid down. Otherwise the slow and difficult process of consolidating the recovery in sterling will be jeopardised.

While foreign markets are not likely to regain full confidence in sterling until there is evidence that the constant increase of wages and costs can be controlled, the recent weakness of sterling was partly the result of capital withdrawals from the sterling balances, especially by India and Pakistan, and to that extent the drawing on credits abroad to meet the strain is not unjustified.

ECONOMIC PRIORITIES

Our domestic problems are complicated by the unsettled state of the international climate, both political and economic. Since the middle of last June there has been a series of shocks to international confidence, and there is no sign as yet of any relaxation of the cold war. As a result, the defence of the free world still entails a burden of expenditure which weighs heavily on the economies of all the democratic countries, and may indeed need to be increased with the constant development of new and costlier types of armament. Defence must clearly have the first claim on our resources. It is, however, the task of Governments to find the finance for this purpose, without inflating their currencies, and, if necessary, to scale down the Budgetary charges devoted to other objects. The maintenance of even the present standard of living depends, first, on the maintenance of peace and, secondly, on the maintenance of a stable currency. After that, the next priority should be the capital required to modernise and expand industrial equipment. The volume of consumption, and the improvement of our standard of life, need to be adjusted to this scale of priorities.

Unfortunately, it is not so easy to arrange priorities in this way. During the past year efforts have been made both in this country and in the United States to curb the inflationary trend. The method adopted in both countries is directed primarily to a restriction of monetary supplies in the private sector of the economy. This has contributed to a fall in international commodity prices and some reduction in investment plans, and it may result in a world-wide recession of business. But this will not necessarily mean the end of inflation—any recession of business will mean a fall in the future yield of taxation, and may cause a demand for further Government expenditure to counter unemployment. Thus the measures adopted to curb inflation may, in the end, lead to further inflation. The inflationary trend is not likely to be overcome unless and until governments are able to cut down the disproportionate share of the national resources which they at present consume, largely for non-productive purposes, and this, in turn, will not be possible until public opinion has been educated to understand that constant demands on the Government for additional expenditure can only end by undermining the economy of the country.

EXPORT BUSINESS

The fall in commodity prices will inevitably tend to make export business with the producing countries more difficult, particularly for capital exports, and will increase the need for medium or longer-term credits for such exports. It is not normally the function of a commercial bank to provide such credits. The Government have, however, agreed that bank credits for this purpose can be guaranteed by the Export Credits Guarantee Department, so that they can be regarded as gilt-edged, so far as the risk of repayment is concerned, up to the amount guaranteed. Moreover, the Government regard such credits as so much in the national interest that they have also agreed that these credits should be excluded from the scope of the credit squeeze. But, however little risk there may be, a commercial bank, with its liability to repay current account balances on demand and deposit account balances at short notice, cannot afford to lock up any but a small proportion of its resources in medium or longer-term credits. Furthermore, it is not easy to justify providing any considerable amount of advances for such purposes when a credit squeeze is being enforced on other customers.

While there are no signs of developments foreshadowing an early end to the credit squeeze, there is little doubt that the measures adopted by the Government in the autumn have brought about a more cautious attitude towards future commitments. It is difficult to be precise in such matters, but

APEX (TRINIDAD) OILFIELDS

The thirty-eighth annual general meeting of Apex (Trinidad) Oilfields, Limited, was held on January 22 in London.

Mr F. R. Cottell (the chairman) said that after provision for development and contingencies and depreciation of fixed assets, net oil revenue was £1,375,000. After providing £690,000 for taxation in Trinidad and the United Kingdom, the net profit for the year was £773,000. The directors recommended a final dividend of 1s. 6d. free of income tax per 5s. unit of stock, making a total dividend of 2s. for the year.

The production for the year was 3,037,000 barrels of crude oil and 3,682,000 gallons of casinghead gasolene. During the year 131,322 feet were drilled. Nineteen wells were drilled in the main field, five in the synclinal area and one in the Cedros area of the south-east peninsula.

The Cedros well was drilled with the deep diesel rig and was carried to a depth of 13,045 feet. The results of testing the sands were disappointing but it was of considerable interest that sands were found in this well within the Lower Cruse Clay which had previously been considered to be without any sand development in this area.

Increases in oil prices and in the company's production for the year were the main reasons for the excellent results, which were achieved despite further additions to its expenses. Some recession in oil prices had however already taken place and if this were accentuated, particularly if accompanied by further substantial increases in costs, it might seriously hamper the company in its operations and in the search to extend the tested areas of the property.

The resolutions before the meeting were carried.

APPOINTMENTS

THE MANUFACTURERS of "CIEL" PREFABRICATED STEEL STRUCTURES and "Middlesex" Prefabricated Timber Buildings require SALES MANAGER (preferably age 35-45), with imagination, initiative and vision, to organise and develop their already established and rapidly expanding home and overseas sales. Successful sales experience in prefabrication or allied industry would be an advantage, as would an extensive knowledge of overseas markets. Remuneration and progress commensurate with the importance of this top appointment awaits the right man with ambition, personality and character.

Applications, in writing, to The Secretary,
J. E. LESSER AND SONS LTD.,
GREEN LANE,
HOUNSLOW, MIDDLESEX.

ORGANISATION & METHODS

Vacancies exist in the Organisation and Methods Department at Guest, Keen and Nettlefolds (Midlands), Ltd. The Department serves both Divisions of the Company; the Screw Division at Heath Street, Birmingham, and the Bolt and Nut Division at Darlaston, 11 miles away.

The intention is to strengthen the team, whose chief work is the review, establishment and maintenance of the administrative procedures which operate throughout the company. The whole object is to ensure that the clerical service continues to be both effective and economic.

Applicants must be able to show a successful experience in organisation and methods work, coupled with a sound educational background. The age bracket is from 28 to 35.

Alternatively, if a younger man with an honours degree can demonstrate a real interest in this work, which qualities for an analytical mind and an ability to work with people, he would be given consideration, and, if successful, training in Organisation and Methods Techniques would be arranged.

I.C.W.A. or similar qualifications could be very useful in either category.

There is more than usual scope for advancement and the salary is attractive.

Applicants should write fully to the Personnel Officer, Guest, Keen and Nettlefolds (Midlands), Ltd., Box 24, Heath Street, Birmingham, 18.

MARKET RESEARCH EXECUTIVE required by well-known London manufacturer of steel factory equipment, to be solely responsible for conduct of research and its interpretation to sales management. Applicants should be aged about 30, and have practical experience of market research. *Starting salary will be in the £800-£1,000 range.*—Apply, with full details, to Company's consultants, who will carry out initial interviews.—Marketing Development Co., Ltd., 12 Grosvenor Place, S.W.1.

MAJOR AMERICAN OIL COMPANY, with world-wide interests, invites applications for the position of SENIOR ECONOMIST in its London organisation. Applicants should have extensive knowledge of economics of European countries. Salary according to experience and qualifications.—Box 852.

STAFF WRITER, under 35, required by London monthly trade journal. Degree in economics and familiarity with international trade desirable. Pension scheme.—Write, giving particulars of languages and writing experience, to Box 836.

LARGE West End Advertising Agency requires Lady Assistant for their Market Research Department. Position involves statistical work on a series of leading accounts. Applicants must be accurate in dealing with figures. Ability to type of value. Previous experience in advertising not essential. A degree or equivalent qualifications in Mathematics or Economics desirable.—Write, stating age, qualifications and salary required, to Box 810.

UNIVERSITY OF LONDON

The Senate invite applications for the Chair of Commerce (with special reference to International Trade), tenable at the London School of Economics and Political Science (salary £2,350 a year, plus £100 London Allowance). Applications (10 copies) must be received not later than February 26, 1958, by the Academic Registrar, University of London, Senate House, W.C.1, from whom further particulars may be obtained.

SINGAPORE: Qualified Accountant wanted for Far Eastern office of world-wide organisation. Vacancy offers interesting experience and wide scope for young and ambitious man seeking employment abroad. Applicant, preferably unmarried and between 25 and 35, would be offered a three-year tour overseas, with option to renew at a salary of $M3,000 per month, plus accommodation.—Applications, stating age, qualifications, experience, present post and salary, to Box 842.

MARKET RESEARCH MANAGER

A Manager is required for Market Information Services Limited. The work involves responsibility, under the Technical Director, for the administration of the company and the technical conduct of the researches which it conducts for its clients. Applicants should have at least four years' practical experience of market research work, mostly consumer field studies. They must possess an academic or professional qualification in statistics, economics or psychology, or any combination of these, and be familiar with the application of these disciplines in their more advanced forms to the solution of marketing problems. They must also be capable of controlling a professional staff and dealing directly with the top management of major clients.

Salary will be commensurate with experience, but will not be less than £1,750 to begin with.

Apply, with full details, to Technical Director, Market Information Services Limited, 24 Brook's Mews, London, W.1.

BRITISH PETROLEUM COMPANY LIMITED has a vacancy for a STATISTICIAN to work at their Research Station at Sunbury-on-Thames, Middlesex. Candidates should have an honours degree in Statistics, or in Mathematics with Statistics as a subject. They should also have a good basic knowledge of Physics and Chemistry (G.C.E. Advanced Level). Work will include the design of experiments connected with research at the small scale and pilot plant levels and also with operations on refinery plants. An electronic computer will be available. Contributory Pension Scheme. Assisted House-Purchase Scheme. Removal expenses and settling-in allowance payable in certain cases. Luncheon Clubs.—Write quoting reference H.S.1, to Box 5662, c/o 191 Gresham House, E.C.2.

THE BRITISH COUNCIL invites applications for: (1) Probation for permanency, open to graduates born after August 30, 1923, ready to serve anywhere. Ref. A 58. (2) English Teaching posts in overseas Universities, Training Colleges and Institutes (mostly in Asia); graduates. Ref. B 58.—Application forms from Personnel Department, 65 Davies Street, London, W.1. (Send stamped addressed label or 9 in. x 6 in. envelope and quote reference.) Closing dates: A 58, March 1st; B 58, February 15th.

BRITISH FILM INSTITUTE. Administrative Assistant required for Secretary's office. Must have both sound knowledge of financial procedures and ability to contribute to the varied activities of the Institute. Salary £400 or £450, by agreement, to start. Applications, marked Personal, to Secretary, 164 Shaftesbury Avenue, W.C.2.

AN INTERNATIONAL ORGANISATION requires a graduate with experience of work on market surveys. The person selected will brief correspondents and prepare surveys for presentation to clients.—Write, with full details of qualifications and experience, to Box 845.

UNIVERSITY OF ABERDEEN

Applications are invited for a Lectureship in Statistics with special interest in Economic Statistics and Econometry. Salary on scale £900 to £1,650 with *appropriate placing*. F.S.S.U. and child allowance.

Applications (eight copies) should be lodged not later than February 24, 1958, with the Secretary, The University, Aberdeen, from whom particulars and forms of application should be obtained.

THE UNIVERSITY OF LEEDS

DEPARTMENT OF SOCIAL STUDIES

Applications are invited from suitably qualified graduates for appointment as Lecturer or Assistant Lecturer in Politics in the Department of Social Studies, at a salary on the scale £900 to £1,650, x £75-£1,650 a year for a Lecturer, or within the range £700-£850 a year for an Assistant Lecturer, according to age, qualifications and experience. Other things being equal, preference will be given to candidates with a special interest in the sociological study of political institutions. —Applications (three copies), stating date of birth, qualifications and experience, together with the names of three referees, should reach the Registrar, The University, Leeds, 2 (from whom further particulars may be obtained), not later than February 24, 1958.

A YOUNG MARKETING EXECUTIVE, aged about 25-27, required by well-known London furniture manufacturer to be solely responsible for research and its interpretation to sales management. Applicants should have economic or statistical background and preferably some practical experience. Starting salary, depending upon qualifications, from £700-£800. Contributory pension scheme.—Apply, with full details, marking envelope "Future," to Marketing Development Co., Ltd., 12 Grosvenor Place, London, S.W.1.

THE MILK MARKETING BOARD requires a young Economist (25 to 30) with a degree and some practical experience in applying economic and statistical concepts to industrial and commercial problems. Good salary and prospects for right man. Contributory pension scheme.—Application forms may be obtained from the Personnel Officer (Ref. 208), Milk Marketing Board, Thames Ditton, Surrey.

ORGANISATION & METHODS

A large industrial organisation has two vacancies (one in London, the other in Lancashire) for men aged 24-30 for O. and M. work in administration. Candidates should have had some experience in this field, but a suitable first-class education and a keen interest in the possibilities of improved industrial efficiency are more important.

Applications should state degree or other qualification, and in particular knowledge of *Economics, Mathematics and Electronics.*

Commencing salary, £750 to £1,250, according to experience and *ability*. All applications will be treated in strict confidence.—Apply to Box 846.

A LARGE GROUP OF ENGINEERING COMPANIES has a vacancy in its Statistical and Market Research Department. The duties of the appointment are concerned with factory sales and production statistics and market research. Applications are invited from men between the age of 25-30 years, with either A.I.S. or B.Sc., Econ., with statistics. Preference will be given to candidates with similar experience in the engineering field.—Applications, giving a summary of experience and qualifications, to Box 848.

HOME OFFICE: RESEARCH OFFICER. Post in London for period of three to five years. The appointment may be renewed.

Duties comprise research on Home Office and Prison Commission subjects, particularly on causes of delinquency and treatment of offenders.

Age normally at least 30 on January 1, 1958, but candidates under that age may be considered exceptionally. Candidates must have had sound, practical experience in organisation of social or psychological research or statistical work. They should be under 25 and interested in the application of statistical techniques to business problems. An appropriate degree qualification would be an advantage.—Please apply to Box 844.

UNIVERSITY OF CAMBRIDGE DEPARTMENT OF ESTATE MANAGEMENT

HAROLD SAMUEL BENEFACTION

The Department of Estate Management proposes to award, from October 1, 1958, grants for research in economic, legal or social matters related to the use, tenure, or development of land.

Essential qualifications: good honours degree in History, Economic History, Economics, Agricultural Economics, or Law, or a degree with a high class in Estate Management, or evidence of likelihood to obtain such a degree not later than July, 1958.

Value of a grant £400 a year, plus University and College fees. Normally tenable for two years.

Particulars from Secretary, Board of Estate Management, 74 Trumpington Street, Cambridge. Completed applications should reach him by February 26th.

THE UNIVERSITY OF MANCHESTER

RESEARCH FELLOWSHIP IN ECONOMIC STATISTICS

Applications are invited for the above Fellowship, tenable for one year, with a possible extension to two years. The Fellowship is of a value within the range £1,160-£1,400 per annum, together with approved expenses involved in the Research. Regulations governing the award of the Fellowships and application forms may be obtained from the Registrar, the University, Manchester, 13, to whom all applications should be sent not later than March 31, 1958.

THE UNIVERSITY OF MANCHESTER

HALLSWORTH RESEARCH FELLOWSHIPS

Applications are invited for the above Research Fellowships for advanced work in the field of Political Economy and Political Science. The value of the Fellowships will normally be within the range of £700-£1,500 per annum, according to experience and qualifications. Regulations governing the award of the Fellowships may be obtained from the Registrar, the University, Manchester, 13, to whom applications should be sent not later than March 1, 1958.

APPOINTMENTS

EXECUTIVE DIRECTOR

Lake & Elliot, Limited, Braintree, Essex, wish to appoint an EXECUTIVE DIRECTOR. The Company employs approximately 1,000 people in Iron and Steel Founding, General and Production Engineering. Many developments are taking place.

Applicants should preferably be between 35 and 45 and possess degree or equivalent qualification in Metallurgy or another branch of Science with Metallurgical experience. Management experience would be an advantage.

A substantial salary will be paid to the successful candidate with suitable qualifications; assistance can be given with housing, and there is a long-established superannuation scheme. The present Board of Directors is small, and it is essential that the new Director should work happily with them.

Applicants should send brief details of themselves in confidence to the Managing Director, who will be glad to supply further particulars.

MINE SECRETARY required for large Iron Ore Mine in BRITISH WEST AFRICA, operated by U.K. Company (private company). Applicants must be Chartered or Incorporated Accountants, aged 30-45, with wide commercial and industrial experience (preferably including wage and labour matters). The duties, which include responsibility for the Accounts, Time-keeping, Wages, Stores and Labour Recruitment Departments, and wide in scope, and the candidate sought is one who is a good organiser and capable of giving expert guidance to subordinates. The post is a senior one and carries a salary of £3,000 per annum, plus minimum bonus of 5 per cent, plus, for married man marriage allowance at the rate of £10 per month and children's allowance at the rate of £5 per month for each child under 18. Free furnished accommodation and medical attention. Contributory Pension Scheme with retirement at age 55. Dependants' Income Scheme and free Life Assurance. Tours of duty approximately 15 months, with liberal leave in U.K. and free outward and homeward passages.—Write, giving full particulars of experience, stating age, married or single, to Box TE. 903, c/o 191 Gresham House, E.C.2.

A large manufacturing company has a

MARKET RESEARCH VACANCY

The post, an important one in an expanding section, will give experience of a wide range of problems and considerable opportunity for original thought and initiative. The work, which is in a new and interesting field, involves the processing of data collected from sales surveys (including planning for I.B.M. tabulating equipment), the design of questionnaires and the engineering field.—Applications, giving a summary of experience and qualifications, to Box 848.

A SUBSTANTIAL COMPANY in the Midlands has a vacancy for an ASSISTANT in its Statistical and Market Research Department. The duties of the appointment are concerned with factory sales and production statistics and market research. Applications are invited from men between the age of 25-30 years, with either A.I.S. or B.Sc., Econ., with statistics. Preference will be given to candidates with similar experience in the engineering field.—Applications, giving a summary of experience and qualifications, to Box 848.

AN ASSISTANT is required in the Research Department of a large London Advertising Agency. Applicants (men or women) should be under 25 and interested in the application of statistical techniques to business problems. An appropriate degree qualification would be an advantage.—Please apply to Box 844.

SPECIALIST OFFICER (STATISTICIAN) FEDERATION OF NIGERIA

Candidates should possess a good Honours Degree in mathematics and have had two years' post-graduate experience in statistics as applied to agricultural research. Duties will include the building up and supervising of a statistics branch in the Department of Agricultural Research.

Appointment on contract/gratuity terms, inclusive salary scale £966-£1,824. Gratuity of £25 to £37 10s. for each completed three months of satisfactory service. Furnished quarters when available, at a rent of 8½ per cent of basic salary, subject to a maximum of £150 a year. Free passages for officer on first appointment, duty and leave; also for wife once each tour of service. Assistance in respect of children's passages or allowance in lieu. Income tax at local rates. Generous home leave.

Apply, giving brief particulars, to Director of Recruitment, Colonial Office, London, S.W.1, quoting BCD/63/14/048.

TELEVISION.—Associated TeleVision Ltd. require a young woman graduate as an assistant to the Audience Research Manager and to specialise in television programme research. A sound statistical background with practical experience in a market research department is essential. This is a really interesting job with excellent prospects.—Write, stating age, qualifications, experience and present salary, to G. V. Stacy, Associated TeleVision Ltd., Television House, Kingsway, London, W.C.2.

MIDDLESEX COUNTY COUNCIL

CITY TREASURER (CHAMBERLAIN), 11, HOUSE, COVENTRY.

UNIVERSITY OF EDINBURGH

RESIDENTIAL COURSE FOR BUSINESS MANAGERS

The fourth RESIDENTIAL COURSE FOR BUSINESS MANAGERS will be held in the University from July 5 to 26, 1958. The aim is to encourage the development of a broader understanding of business problems and of the environment in which business operates, and thus to assist in the transition from specialised to general management.

PROGRAMME OF STUDY

There will be three principal fields of study: (i) Business in a Changing World; (ii) Problems of Business Policy; (iii) Aspects of Internal Administration. In addition to syndicate work and case-studies, seminars will be led by practising business and professional men as well as University teachers drawn from several departments, including Commerce, Political Economy, Accounting and Psychology.

ADMISSION

To encourage the exchange of knowledge and experience among members of the course, the number admitted will be strictly limited. There are no formal educational requirements. The fee for the course, including residence, is 90 guineas.—Further particulars and nomination forms may be obtained from Professor N. C. Hunt, University of Edinburgh. Early application should be made. The closing date is March 15, 1958.

UNIVERSITY COLLEGE, LONDON (Gower Street, W.C.1). Mr Colin Clark (Agricultural Economics Research Institute, Oxford), will give the Newmarch Lectures in Economic Statistics, entitled "World Population," on February 6th, 13th, 20th, and 27th, at 5.30 p.m. Admission free, without ticket.—E. A. L. Queterbock, Secretary.

RITCHIE CALDER'S *Signposts to the Atomic Age...*

A Harvest for the Desert

"IN A CAVE ON MOUNT CARMEL, in the Holy Land, Dr. Dorothy Garrod unearthed flint sickles, set in carved bone handles—proof that eight thousand years ago, men harvested grain. On Mount Hermon, to the north, Aaronsohn found the coarse grasses—wild wheat and barley—which these early men had recognised as food.

All those thousands of years ago, long before Abraham and the Patriarchs, these ancestral men realised the virtues of grain. They nibbled the seeds in the ears. They discovered that from those seeds more grasses and more seeds grew; that if they scratched the ground the seeds grew better, and, then, if they chose well-watered soil, as in the river valleys, the grains were more plentiful.

That, not the domestication of animals for pastoral herding, was the beginning of civilisation. When men tilled the ground, they became settlers. Their primitive homesteads grew into villages, villages into towns, and towns into cities. Agriculture led to culture.

Grain husbandry spread up the Danube into Central and Western Europe. Rye and oats began their careers as the weeds in the Levantine wheat and barley fields. By climatic selection, they prevailed as the hardy crops of Northern Europe.

Bread-grains and rice are the world's staple food. With the world's multiplying population, we shall have to double the yield in the next twenty-five years. There are two ways of doing that—by getting bigger crops from existing acreages or by increasing the acreages. The first means better seeds and the second means overcoming the limiting factors of climate.

Plant breeders have known since the beginning of the century how that could be done. The science of genetics has taught how, by patient selection and breeding for the characteristics required, crops can be produced for what would seem impossible conditions. The wheats of the Prairie Provinces of Canada abound in what, sixty years ago, was regarded as a belt too arid for cereals. The climate has not changed. The cereals have been man-adapted.

Now, with the help of atomic energy, the crop map of the world can be revolutionised. Crops can be "tailor-made" to grow in the Arctic or in the hot deserts and in inhospitable soils.

By putting seeds in atomic reactors, or placing a radioactive source (such as Cobalt 60) in the centre of a field and planting crops in concentric circles round it, plant-breeders can produce in two to five years, the desired qualities which, by normal plant-breeding, might take 25 or even 50 years. The secret lies in the effect of the nuclear rays on what are called 'chromosomes', which are packages of 'genes', or hereditary traits. The packages can be broken up and reassembled by radiation. The changes are random but one in five hundred, will provide the plant-breeder with a particular quality for which he is seeking.

Natural radiations probably produced the changes from grass to grain, which Ancestral Man found food-worthy. Now, with atomic energy, we can decide the types of crops we want and where we want them". [R.C.]

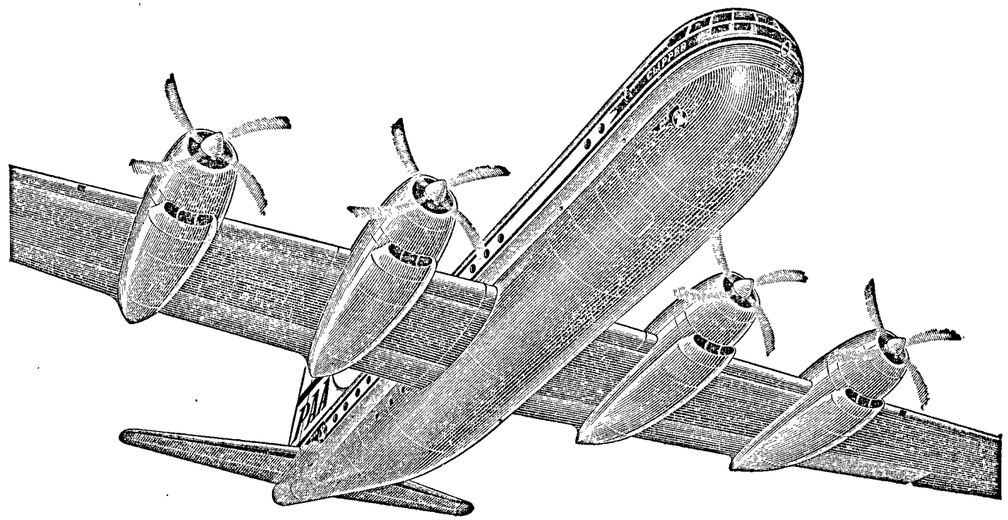
Picturesque and Practical in East Africa

Some of the most important developments in East Africa in recent years have taken place near the great lakes—several hundred miles from the coast and regarded as being amongst the most picturesque inland waters in the world. Cultivation of the land has been intensified and the rich mineral resources exploited to repeat the picture of what is taking place all over the three mainland territories—Kenya, Uganda and Tanganyika. As these developments have increased the country's exports, so have they increased its spending power in the world markets, and today East African trading figures (inclusive of approximately £6½ millions of re-exports) amount to a total of £254,600,000.

Parallel with the development of the export and import trade is the establishment of local industries to meet increasing demands for many types of goods, particularly from the African population, which numbers nearly twenty million. Already factories in East Africa are making a long list of commodities—from cement to cigarettes—and accommodation is being prepared for more factories on expanding industrial sites.



The provision of transport and goods handling services for these industrial sites—and throughout the territories—is the responsibility of the East African Railways and Harbours. Altogether they operate over 12,000 miles of rail, road and inland water services, and four principal sea ports.

For details of the industrial areas now being established in East Africa, and of other business opportunities, write to the Commissioner, East African Office, Grand Buildings, Trafalgar Square, London, W.C.2.

...AT YOUR SERVICE

E.A 102/R

Overnight, every night to New York from London... 4 nights weekly from Paris

Downstairs on a separate deck, a gay cocktail lounge—nothing like it on any other airliner.

Sleeperette* service is exclusive with Pan American. Berths available at a slight surcharge.

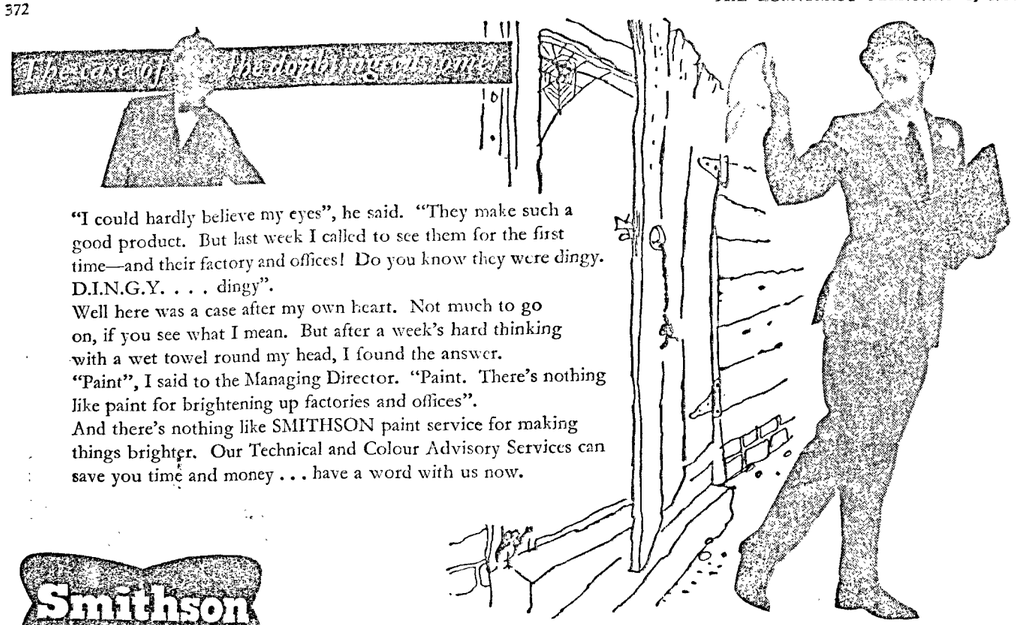
Also regular service from Hamburg, Copenhagen, Düsseldorf, Amsterdam and Brussels

Pan American's double-decked *Super* Stratocruisers were designed to give you the luxury of extra space. There's greater comfort—more room per passenger—wider aisles—and more elbow room between the seats. Even the interior décor and appointments were fashioned to give you the ultimate in air-borne spaciousness, to give you more pleasure per mile.

The *Super* Stratocruisers, the world's most luxurious overocean airliners, have been reserved for Pan American's first-class service—The *President* Special, deluxe *President* and standard *President*—the world's finest living aloft.

Meals served aboard the Clippers* have been recently awarded three international prizes for excellence by a jury of world-famous gourmets.

If you prefer intimate family travel, a business conference en route, or the sheer luxury of complete privacy, choose a *President Stateroom* at a nominal surcharge.



As host to the world, Pan American makes you feel at home whatever your origin. For instance, 36 different languages are spoken by flight personnel on Pan American's transatlantic services; many speak three and four languages.

For reservations, call your Travel Agent or Pan American—600 offices throughout the world.

Can you take it?

THE next time there is some crisis in world affairs—try buying all the national newspapers you can lay hands on. See how differently each one covers the same story. Some will regard it as less important than a front-page bathing beauty. Others will temper it to the wishes and aims of their proprietor. And others will see the facts only through the dark distorting glasses of party prejudice. Finally, read the Manchester Guardian—and you will at once sense its completely candid approach.

To be a Manchester Guardian correspondent is to be free to write what you see. Whether the readers of the Manchester Guardian will welcome the news is irrelevant. If the news is important, in it goes—with no editorial censorship to gloss over unpalatable facts or unpopular truths.

If you are already a reader of the Manchester Guardian, you will know that here is a newspaper which puts sincerity before circulation. If you are coming to it as a new reader, you will find the Guardian a refreshing change from the woolliness and wiles of what is termed 'popular journalism'.

Knowing Where and When to Stop

How much must be invested in a new plant to provide optimum return today and yet hold costs of future expansion to a minimum? How many process units, of what type and capacity, are needed to meet both current requirements and the changing product demands of a few years hence? Should parts of the plant include excess capacity now or can additions be made at a later date without risk of penalty?

These questions can be answered best by an organisation specialising in petroleum refinery and petrochemical plant engineering. Through better engineering, The Kellogg International Corporation can ensure that plant investment and operating expenses are established at the optimum point with an early on-stream date.

Evidence of the economic advantages of working with the Kellogg organisation is found in the plants of leading oil and chemical companies the world over.

Your enquiries on proposed petrochemical plants or oil refineries are cordially invited.

Australia builds power for the future

High in the rugged Australian Alps, south-west of Canberra, one of the world's biggest power and irrigation projects is well under way—the giant Snowy Mountains scheme, a 25-year job estimated at over £A 400 million. By turning the Snowy River *westwards*, once-wasted water will irrigate great tracts of land and double Australia's power supply. Already, after seven years, much has been accomplished. A Norwegian contractor completed the 60 MW Guthega Power Station in 1954. American and French contractors are now constructing the 320 MW T.I. Power Station, comprising a 15 mile long 21 ft. diameter tunnel, an underground power station and a 10 million cu. yd. earth and rock filled dam. Atlas Copco rock drills, fitted with Sandvik Coromant steels and driven by Atlas Copco air compressors, are playing a leading part in this gigantic project.

A stitch in time—under water

Compressed air is versatile. Atlas Copco provide the means for all its many applications. Atlas Copco standard tools are used by Canadian National Railways for running repairs and underwater inspection of their ferry boats. Among these are a rotary air drill and a floodlight, both able to operate efficiently below the surface. This system of checking damage prevents major repairs becoming necessary.

The Atlas Copco Group of Companies is responsible for the manufacture of compressed air equipment and its distribution and servicing in 90 countries throughout the world. Group Headquarters: Atlas Copco AB, Stockholm 1, Sweden.

Atlas Copco puts compressed air to work for the world

Britain's Road Ahead

IT is said that the new Chancellor of the Exchequer has already developed a squint. One eye is still sternly fixed, as it surely must be, on the ground in front of his (and the nation's) feet: on "fortifying the value of the pound at home and abroad" and on keeping wage costs within the bounds set by "the general growth of real wealth"; the foe is still inflation. The other eye turns, as it has to do, upward and forward to the road ahead: to the time when, with commitments and resources brought into balance, the growth of real wealth can be resumed and sustained. This country can make its way in the world, and grasp the prizes of the new industrial revolution, only by expanding its product; and before very long the challenge to us and others may be, not inflation, but deflation. How will we get from here to there? The fundamental dilemma, as Mr Thorneycroft told the Commons frankly last week, goes back at least to V-Day and neither party has found the means, or the will, to resolve it. Are we any nearer, after more than a year of Mr Macmillan's post-Suez Government, to succeeding?

The escapade at Suez proved nothing new. It merely showed again that Britain was still trying to play a bigger part in the world than its resources, political, military and financial, could sustain. Mr Macmillan's brief was really very simple: it was to face the facts. And his opportunity was great; after the shock of what had happened, there was the chance of stripping away the illusions, of prestige, pretence and the soft option, which had bedevilled politicians and people alike since the war ended. The chance was then compared in *The Economist* to the way in which a good rider will "collect" his horse before a jump.

How has the chance to fit the country's commitments to the facts been taken? There are two views on this. Some say that the horse has simply been brought to a standstill and, even so, took another tumble last summer. Others, with Mr Thorneycroft as chief and compelling witness, see last summer's tumble as plain fresh proof that the horse is still ruinously over-loaded. Nobody has any clear notion of when the jump forward will be possible and safe. The ex-Chancellor's testimony, as well as that of other recent witnesses, such as Sir Oliver Franks, deserves a second look—in the light of both the Prime Minister's post-Suez brief and Mr Heathcoat Amory's present squint.

Mr Thorneycroft is quite certain that the queue of accepted claims upon the national resources is still far too long: "there is someone left at the end of the queue and that someone is the pound sterling." Specifically, he has cited two inflated claims: defence and welfare. Our undoing, he declares, is the attempt to be both a nuclear power, "matching missile with missile," and a welfare state, as if our wealth were America's. Few will venture to deny the indictment, though some will no doubt be as airily ready to discard defence altogether as others will be to dismantle the social services—according to their views of what is necessary or desirable.

The test, of course, is what is practically possible; and probably the chief criticism of Mr Thorneycroft's list of two pretenders is that it is not long enough. We have been trying to be a nuclear power and a welfare state, he says, "against the background" of seeking to be a world banker and a major overseas investor as well. But the inexorable rule has to be run over these activities, too. Clearly those who would shorten the queue, airily again, by breaking up the sterling area are like Samson, bringing down the pillars. But, as Mr Thorneycroft insists, nothing is sacrosanct: it will be prudent, where we can do it without loss to ourselves or breach of faith to others, to put a limit to the burdens on the sterling system; and, while we are striving to fortify the reserves and to form the capital for our own essential development, to ask what volume of long-term overseas investment we can, in fact, afford.

This was, in the upshot, the counsel given by Sir Oliver Franks in his impressive analysis last week to Lloyds Bank of the problems, and the indispensable virtues, of the sterling system. Duty begins at home; for this crowded trading island there is no short-cut to solvency (a world banker's first and decisive requirement) through the efforts or the sacrifices of people in other countries; and the duty to rebuild the reserves has to take "clear precedence over other objects of policy." The British standard of living is tied to the British balance of payments. But this is a duty that Britain shares with other sterling countries: there is a need for "the co-ordination of investment plans and general policies"; and

> the internal policies necessary to the accumulation of a reserve must aim at restraining both our imports for current use and the outflow of capital for purposes of physical investment overseas.

It is when these measures of self-help are being purposefully pursued by the sterling countries, singly and together, that they can fairly look for the co-operation of the United States, on the lines suggested by Sir Oliver, in raising the total of the world's monetary reserves, as they should be raised, sufficiently to enable trading nations to ride out transitory disturbances.

The truth is that, whatever the aspect of policy that is surveyed (and whatever the arguments about the causes and consequences of Mr Thorneycroft's resignation), the wholesale stocktaking that seemed so imperative a year ago has still not gone either far enough or deep enough. Defence is, indeed, not expendable—the world is still much too dangerous; nor, indeed, is welfare, the fruit of half a century's social revolution, expendable; nor, certainly, is the pound sterling. (The whole aim, in fact, is to find ways of going forward without devaluing the pound.) But, in all our doings, we need to confine what we do to what is within, and will reinforce, our strength. To cling on, for reasons of prestige, pride or political auctioneering, to commitments that tax us too much will be our ruin. In defence it still has to be shown that the Sandys programme of a year ago, for all its famous logic, may not be a false bill of sale, offering us a prestigious share in the great deterrent that will cost too much and avail us, in fact, too little and an insurance in still essential conventional arms that will not, in fact, be forthcoming. In welfare there is no way of turning back on our tracks; but there is a case, and a necessity, with so much accomplished, for limiting the liability, so that the wherewithal to meet it, in the private pocket or the public purse, can be replenished, in the only possible way—by a fresh productive advance.

TRADE UNIONS—TOO MUCH POWER?

Next week *The Economist* will start a series of articles on the status and problems of British trade unions.

THE challenge is to the nation as much as to its rulers. It is the endemic fault of every section of the community, and of every political party, to will the end, whether it be wealth, welfare, peace or a proud diplomacy, without willing the means. Behind any stocktaking of the sort that Britain still needs to complete there are certain quite simple truths. One is that wealth and welfare alike have to be worked for, saved for, and paid for; savings and reserves are the essential margins, and so the stuff, of sustained progress. When Keynes forecast a generation ago that the economic problem might be solved in a century, he laid down two conditions: technical invention and the accumulation of capital, by abstinence from consumption, to make invention fructify. The invention, the skill, the technical know-how, all are at hand. The task is to set resources free, and to provide the incentives, for the new burst forward that will be possible. First responsibility for putting the new enterprise of Britain on firm foundations is the Government's; but its success will rest upon the willingness of the people, as well as politicians, to recognise today the requirements of tomorrow's expansion, to see that the sole basis for Britain's "greatness" is Britain's output, energy and skill.

It would be churlish indeed to deny to Mr Macmillan's Government, through all its vicissitudes, the great credit of taking, courageously, the first compulsory steps to a policy of solvency. The whole argument over Mr Thorneycroft's resignation has not been about the need to rescue the pound or to hold back the rising tide of incomes. It has been about how far first aid for the nation's currency had to go; and in the aftermath Mr Thorneycroft's own insistence that the Government must on no account weaken, whether in spending or over wages, seems likely to prevail. But much more than this essential first aid is wanted. What is needed now, without weakening a fraction on the immediate necessities, is a policy and an attitude for the future, so that the prudence and the self-denial now obligatory can bring in good time the fulfilment of better hopes. It is by not grasping at the shadow of its future that Britain can achieve the substance.

Pan-Arab Challenge to Ankara

The political union of Syria and Egypt may have little practical value, but the idea gnaws at the position of the west and presents it with a pair of paradoxes

MR SELWYN LLOYD and the other members of the Baghdad Pact council, meeting in Ankara in the shadowy comfort of Mr Dulles's presence, have had the opportunity, which seems to have been deliberately given to them, of considering in advance of any formal announcement the decision of Syria and Egypt to proclaim their political union. What union means between two countries which are divided from each other by the sea and by Israel, and which lack any material reason for integration, is doubtless as baffling to the Baghdad Pact ministers as it is to most people. Indeed, it is so easy to see impediments to the marriage of these two states that there is probably a disposition in Ankara to dismiss the plan as nonsense.

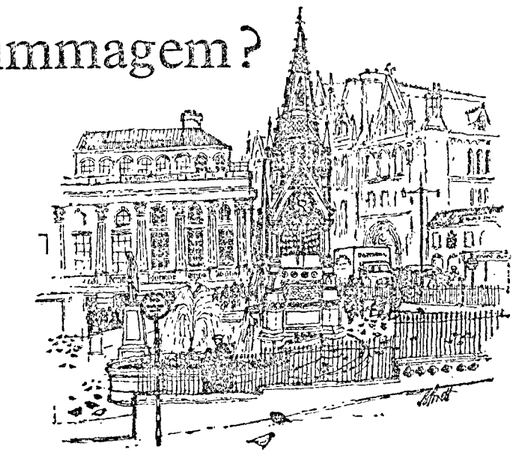
This would be a mistake. The effectiveness of the union is not the first consideration in the minds of its sponsors. Until a very few months ago, President Nasser himself, being a practitioner in the craft of political empiricism, considered the plan to be as unpractical as those other pan-Arab extravagances which he has in the past roundly condemned in the Arab League. The important question for the statesmen in Ankara to ask themselves is why President Nasser has changed his mind.

It is not enough simply to say that he welcomes a larger size in presidential domains. What he seems to have decided is that this is the next appropriate step towards the Arab revolution that should be (as he thinks) the logical extension of Egypt's own. Syria has chosen his way, at least in principle. If it is to fall in with his one-party system, the core of the single Syrian party will be the Baath, now in power, which has always stood for Arab unity. What about the other Arab states? Seen from the platform of a successful Egyptian revolution, they are lands that cannot be liberated until they get rid of their ruling class, just as the Egyptian officers got rid of King Farouk and the dominant landowners. And until they are liberated in this way, the concept goes, there cannot be Arab unity or a great Arab nation. The example of union is, therefore, not aimed directly at the Baghdad Pact; it is rather, on Egypt's part, an essay in subversion.

The powerful element in the new move is the appeal of an idea. President Nasser intends the idea of the union of Syria and Egypt to gnaw at those thrones and presidential palaces which seem to him, first, to stand for the old unequal privileges and, second, to seek to preserve those privileges by cleaving, not to the Arab family, but to the chilly infidel hand of foreign chancelleries. He is saying, in effect, to all Arabs—to Palestinians in Jerusalem and Nablus, to the intelligentsia of Iraq and Jordan, to the reflective few in Saudi Arabia and the Moslem nationalists of Lebanon—that their dream of Arab unity can be fulfilled if the parochial and personal interests of rulers give way before the grandeur of Arabism.

Let there be no doubt about it: the Arabs will listen to him. He is saying exactly what people with new access to education, but not yet to privilege, want to hear. Who would have believed, a little while ago, that President Kuwatly would accept second place in Syria to an Egyptian, or that Damascus, with the aura of the Omayyad Caliphate still gracing its minarets, would bow its head to Cairo? Beside this patriotic concept and the strength of its example, any amount of arms or aid brought fresh from the Ankara meeting will ring hollow in the coffin of the pact idea. Whether in practice the union provokes in Syria some homespun jealousies, or whether Egypt is tactful enough to ward against these, makes no difference. King Feisal, King Hussein, King Saud and President Shamoun will be weakened by an example that they cannot follow except at the risk of their own extinction.

The Iraqi government, represented at Ankara, and the rulers of Lebanon, Jordan and Saudi Arabia who have, in one way or another, linked themselves to the west, can be relied on to see this point; and their reaction will be to ask for more aid to strengthen their respective hands. In this way, the union of Syria and Egypt touches the core of the western problem. Do the United States and Britain believe that the Egyptian revolution, which President Nasser personifies, is a transient development? Do they reckon that in basing their policy on a pride of kings they can, for as long as necessary, preserve their vital interests?



If they do, there are a pair of paradoxes requiring explanation. First, President Nasser was persuaded to accept union by the Baath party of Syria, and it is suggested that both he and it had partly in mind a desire to limit the Soviet-directed Communist Party of the Levant. This is not an absurd supposition, for it is integral to the ideas of President Nasser and the Baath, despite their policies of the past two years, that subservience to Russian influence is as much an offence against the Arab nation as is subjection to western policies. There is the paradox, then, that the Baghdad Pact, a pact intended as a defence against Soviet communism, is threatened by an Arab policy that is itself hostile to Russian penetration.

Second, the only discernible fountain-head of an

appeal to Arab emotions as powerful as Egypt's (or as Egypt-cum-Syria's) would be the educated townsmen of Iraq. This rising middle class is as pan-Arab as anyone else in the region ; at the same time it is too hard-headed, and too wary of Egypt, to be swept away by ideas that are not practical. Yet this very element is at present bottled up by a government which, by silencing it, deprives it of its chance to inject healthy criticism into the whirl of pan-Arab ideas. Here, then, is the second paradox : the prime Arab opponents of President Nasser's policy are muzzling the very elements in the Arab world best able to challenge it. It is reasonable to ask in London and Washington, as well as in Baghdad, whether a policy can be right if it seeks conflict with elements that, otherwise handled, might work in its favour.

Conurbrummagem?

Can Birmingham give a lead to the West Midlands in creating a great new provincial capital? Or will defeatism, parish-pump pettiness, and the preoccupations of the Birmingham business man inhibit civic energies at a decisive moment?

EARLIER this year the City of Birmingham used the democratic, if reactionary, device of a town poll to obtain the yea or nay of the electorate on nine clauses in a bill which the Labour-controlled council wished to promote at Westminster. Among them were clauses giving the council powers to acquire land by summary compulsory purchase, to nominate tenants to private rented houses when vacant, to control the reletting of vacated factories and to operate municipal petrol stations. Just over three per cent of the electorate voted and vetoed the proposals, leaving the Chamber of Commerce, the Conservative-and-Unionist party and *The Birmingham Post* exultant, the Socialists depressed, ninety-seven per cent of the city indifferent, and the sociologists at the University with fresh evidence that the vaunted civic consciousness of Joseph Chamberlain's city is a pious myth.

Behind this municipal interlude lie big issues for Birmingham. They are issues only to be finally thrashed out when Mr Henry Brooke's local government boundary commissioners descend on the West Midlands "special review area" of which Birmingham is the smaller half, the Black Country the larger. It may be confidently predicted that by the time they arrive (the local government bill having duly become law) the traffic jams in the city's undersized, overstrained heart will be still worse ; the housing list will still be 60,000 names long ; industry will still be drawing labour from the surrounding shires, from Wales, from Ireland, from the West Indies ; Tamworth, Lichfield, and Nuneaton will still be refusing to become Birmingham's satellites ; and the dispute about finance for a new town will still embitter relations between the Council House and the Treasury in Whitehall.

It is, of course, true that the commissioners will see visible evidence that Birmingham is wrestling with its problems. The devastation along the route of the new inner ring road will have widened. More of the ten and fifteen storey flats will have gone up in the five great rehabilitation areas which the city opportunely took over under the Town Planning Act, 1947, before this was riddled with safeguards. The rash of "community neighbourhoods" (*alias* council estates) will have spread further over the once-sacrosanct green belt. Edgbaston's stately regency façades will have crumbled further before the inroads of office conversions. For the city is building fast—or as fast as a 24s. 6d. rate (£13 16s. 10d. a head) and a 7 per cent bank rate will allow. The new slums off the Pershore Road, where the coloured people sleep three or more to a room, will have spread, too.

All of which the local government commissioners will find, as the visitor today finds, impressive testimony to the virility of the city. But Birmingham is besieged. On the north and east, it is hemmed in by a hostile region of foundries, mines and slagheaps—and occasional charming towns—inhabited by fierce tribes of Black Country men, speaking lurid Anglo-Saxon dialects which university anthropologists gleefully preserve on tape ; tribes which may war among themselves from Walsall to Dudley, and from West Bromwich Albion to Wolverhampton Wanderers, but are at one in resisting Brummagem imperialism and the inroads of its blue-and-white buses and its pink-and-white planners. They are, too, in unholy alliance with the smug burghers of the Royal Town of Sutton Coldfield. On the south, the stolid ranks of Worcester and Warwickshire county and rural and urban district councillors stand guard ; they mulct the Brummy invaders at every ye olde cafe, but they are determined that there shall be no repetition of the disaster of 1911, when the city's area was enlarged threefold, most of the extra 30,000 acres being captured from them.

THAT area is now, in the opinion of the city planners, virtually full. But the city is not contemplating another grab. Since the war, though its civic motto has remained "Forward" its policy has been "Halt." For ten years Birmingham has sought to stop more industry coming in and attracting population. It has, indeed, encouraged the export of existing industries. One object of the new bill was to give the council the power, when a firm moved, to stop an immigrant firm buying its factory. Another clause was designed to give council tenants first pick of more of the accommodation becoming vacant in the city—so that immigrants would go to the discouragingly far-off end of the waiting list. There is no sorrow at the Broad Street civic centre when a firm upstakes and moves to Belfast, Aycliffe or Weston-super-Mare. What worries the city is, first, the birthrate, which will add 250,000 young people to the population (now 1,180,000) by 1975 or so, and the industrial birthrate—the tendency for 'Erbert Perks, that typical Birmingham mechanic,* to start pressing out buttons on his own account with the Austin Works at Longbridge as about the limit of his ambitions.

To the planners, these tendencies to expansion have reached the limit of a sensible city ; others, who agree that the city is a horrible mess which must be cleared up, feel that the money to do this scientifically can be found only by encouraging, not throttling, industry. This school is far from satisfied that the industrial birthrate is going to be so overwhelming in times of high taxation and of health regulations which prevent a man and his mate setting up a drop-hammer or a few vats in the kitchen. That, they say, was not how Birmingham became great. This school calls for expansion upwards and "sideways," even if it means full industrial rating.

"SIDEWAYS" means into the black as well as the green country and the city politicians of both parties mislike the prospect. They secretly wish to annex Solihull and Sutton Coldfield ; they would accept a slice of Warwickshire. They would also be willing to send delegates to a West Midlands planning board. At a pinch they would set up joint transport and drainage boards with executive powers. But they will not submit to any West Midlands overlordship of the London County Council type—in which they might be outvoted and under which they would be demoted to metropolitan borough status. They have innumerable arguments ready for the local government commissioners when they arrive, of which the best is the undoubted hostility of the sixteen black country authorities to the idea ; indeed they calculate that the energies of the commission will be exhausted in reducing these to four or five.

* 'Erbert Perks, for the record, is a well-known Birmingham mythical character, pronounced AERBUT PAERKS.

But can regional planning in Birmingham and the black country be done adequately by joint boards? Once it is agreed that there is a case for such boards, is not the case conceded for a regional authority with adequate executive powers and finance? Expansion is a regional problem. Now that the bulldozer and the chemical industry have conquered the slagheap, it is clear that the black country's need for rehabilitation dovetails with Birmingham's need for outer suburbs. Any such spread involves better transport, but whether this is to be achieved exclusively by better roads, more buses and car parks (as the Birmingham public works committee and some university experts think) or whether, as many business men and some aldermen think, the area needs an integrated system of road transport and dieselised railways, an adequate programme clearly cannot be planned and financed by any one of the existing authorities. The strait-jacket is administrative, not spatial.

THE politicians, in opposing anything radical, remark disingenuously that the city is already too large, as the three per cent town poll shows ; the icy impersonality of the LCC touch would kill what little civic feeling remains. They shed crocodile tears for the days when a group of public-spirited families, living in the suburbs, led the city. But this is an argument for not letting the city continue in its present form. A series of metropolitan boroughs, under an upper-tier authority, accords far more with the habits of Birmingham people. The lack of night life around Corporation Street is not caused by the difficulty of getting a meal or a drink after 10 p.m. It is hard to get the meal or the drink just because people prefer—when tired of the telly—the local pub, cinema or dance hall to those of the city. Birmingham is probably too near to London to make metropolitan amenities economic. Birmingham's spare brass is spent in the West End.

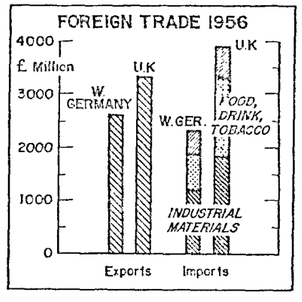
But any such revolution would mean demotion for those politicians and officials who were not promoted to the West Midlands county council ; and since there would be more of the former than the latter, the opposition will be strong. Birmingham socialists feel that the great momentum of municipal socialism would be slowed if the black country were tacked on. Birmingham Tories fear that their chances of recapturing the city would be spoiled if the weight of black country Labour voters were added—whereas if annexations were confined to Sutton, Solihull and strips of Warwickshire, they would be in. Even now they poll as many votes as Labour in municipal and parliamentary elections, and the city's tradition is liberal, independent, unionist, conservative : anything but socialist. They think it would be anything but socialist today but for the "waste" of Tory votes in the suburbs, and the influx of South Welsh who vote against capitalism, Southern Irish who vote against unionism, and West Indians who vote against the British Empire.

The visitor, in short, is told that for many and

excellent reasons, Conurbrummagem is not on. The city's ambitions are social not economic now—static not expansive; Joseph Chamberlain is dead and 1911 will never come again. Maybe; but it seems a pity—and perhaps the visitor can doubt it. He may doubt that Birmingham could ever be beautiful, but doubt still more that it could be backward. All its history denies it. Today Birmingham needs a leader if it is itself to lead the midlands. A city that gave scope for the energies of Boulton, Watt, Murdoch, Burne-Jones, George Cadbury and Oliver Lodge, to mention a few from its roll of fame, should be able to find a leader when it needs one, even if the party caucus was the major legacy of its best-known citizen.

The German Surplus

Cheaper money and rising public spending mark the end of the era of deflationary policies in west Germany. But a payments surplus will probably persist.

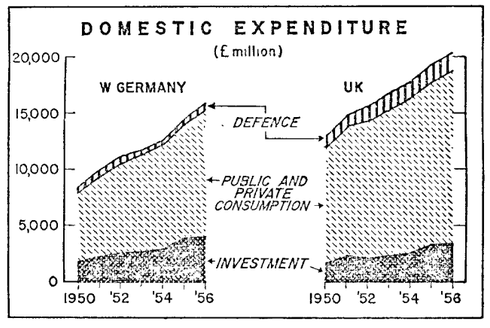


In the fourth quarter of 1957 the pile of gold and foreign assets in the German Bundesbank, which towers so disquietingly over the trade of the non-dollar world, was actually reduced. At the peak of the speculative flow—on September 30th, as the International Monetary Fund met in Washington—the reserves of the Bundesbank, including its credits with the European Payments Union, stood at 23.6 billion marks. By Christmas they had fallen to 22.8 billion marks. In November and December the Federal Republic was in deficit with EPU for the first time since December, 1952. The frightening flood of foreign exchange to Frankfurt, which seemed at one time to threaten the franc, the pound and the whole pattern of European trade, had been reversed. What prospect is there that this reassuring trend will continue in 1958?

The change in the past three months was above all due to the reversal of the avalanche of summer speculation. But capital exports, particularly by public bodies, have also been growing; their volume nearly trebled in 1957, and they may grow further this year. There is little to suggest, however, that the surplus on current account will not continue to grow too; the first marked effect on trade of the modest slackening of the boom described in last week's article has been a sharp dip in prices of material imports, and this will tend to swell the German payments surplus. German exporters of capital goods are certainly meeting checks abroad, but they are responding by redoubled sales efforts in both home and foreign markets. And even if the total payments surplus (5.6 billion marks last year) is halved in 1958, it will still be more than the non-dollar world can bear.

The truth is that some of the basic causes of the surplus persist. In structure, the west German economy is remarkably similar to Britain's, but the excessive protection accorded to an agriculture fostered by past autarkic policies means that Germany is much less dependent than Britain on imports of food—as it is, incidentally, of industrial materials as well. The relative weight in the economy of the investment industries, which have grown with such meteoric speed since 1870, has been accentuated by the division of Germany, giving the western half a strong export position in a developing world.

The investment industries have been stimulated, too, since the war by the high rate of investment which west Germany has achieved and which is rightly cited as the main clue to the German surplus. High investment has brought, in an era of reconstruction, exceptionally rapid gains in productivity, keeping German exporters one jump ahead of their competitors.



A more dubious, though fashionable, explanation for the German surplus is that German prices are lower than other people's; hence the urgency, it was said in the summer, of a revaluation of the mark. In fact, some food prices in Germany, because of protection, are rather higher than in, say, Britain; and with trade in industrial goods widely liberalised, German industrialists have no reason to quote prices that are more than marginally less than other people's. Despite the similarity in price levels, however, German heavy industry—though not by any means many smaller firms in the tighter branches—does seem to have some cost advantage over many of its competitors, an advantage that has carried its produce widely across the world. The reserve of refugee labour in Germany, and, still more, the dread of inflation which the unions have shared with other Germans, have certainly helped to keep labour costs low. The higher profit margins which the major German export industries have enjoyed in consequence have inspired an insatiable demand for capital for new investment.

The German cost advantage was probably most marked immediately after the Korean boom. Before that the mark could not be described as undervalued. The central bank's timely squeeze and the fact that Germany was alone in not rearming meant that it emerged with its competitive position remarkably

improved, its exporters admirably placed to surge out into foreign markets. The Bundesbank has continued its cautious policies since. Currency reform wiped out the cash of businesses and banks. It has been easy, against this bare backcloth, to squeeze credit hard through interest rates and still more, in the early years, through minimum reserve ratios. In recent years the payments surplus, with its attendant influx of foreign exchange, has tended to neutralise the cost advantage, increasing the money supply and thus tending to push up prices. But the central bank has fought back, seeking to sterilise the flood of cash by restrictive credit policies. Herr Schäffer's deflationary budgets had the same effect on the German money supply and on German costs.

Caught between industry's formidable demand for investment capital and the meagre supply of it outside industry—the old wiped out by currency reform, the new lapped up by deflationary budgets—it is not surprising that the German capital market has been the problem child of the economy from a domestic point of view. The cupboard has been bare; interest rates in the years since 1948 have ranged between 8 and 10 per cent, making nonsense of any notion of large-

scale export of private capital. Just as the payments surplus has been the *bête noire* of the foreigner, so the capital market at home has been the point of tension where the difference between cost levels in Germany and outside has made itself felt.

Both government and Bundesbank are now trying to move in directions that should ease the tensions both on the capital market and in foreign payments. Under Herr Etzel, the budget is no longer mopping up liquid resources, and may even, as the defence bill grows, be in deficit. The drop in discount rate on January 16th was the third since January, 1957, when it stood at 5 per cent. These reductions mark the abandonment of the attempt to neutralise the influx of foreign funds. The cash from abroad has made the banks extremely liquid; in consequence, some money market rates have dropped by as much as 3 per cent, and even rates on the capital market seem to be sinking steadily, though more slowly. German money market rates are in the main still higher than elsewhere, but the rate for treasury bills is now lower than in many European countries; and this has led to important short-term investment by German banks in Brussels and Amsterdam. For the foreigner, indeed, the general fall in interest rates is the most encouraging feature of the German scene, reflecting as it does both the easing of the investment boom and the possibility that in time Germany may be able to invest some of its large savings abroad. With the supply of money relatively slack, significant increases in costs are taking place. This winter, wage costs in Germany are plainly rising faster than in Britain.

It is curious that the world outside Germany should be discussing how to get the Germans to misbehave, how to teach them to inflate, to invest less, when they have with such remarkable skill succeeded in achieving the prerequisites of economic growth—high investment and stable prices—and when they have overcome the vices of inflation and erratic economic development that have dogged modern Germany in the past. Two of the men who have been largely responsible for this achievement, Herr Schäffer, the former finance minister, and Herr Vocke, the president of the Bundesbank, have now left their posts. Germany owes a great deal to their rectitude: to Herr Schäffer's parsimonious guard over the public purse, to the little upright figure of Herr Vocke, with his tremendous moral sense of the social duty of a central bank to keep the money stable.

But these simple values have themselves exacerbated the problems of the German surplus; and two new men, Herr Blessing at the central bank, Herr Etzel at the ministry of finance, have taken over, to form, together with Professor Erhard, a new team. Its members have made plain that they intend to follow in the footsteps of their predecessors, preserving the stability of the currency and fighting inflation, but they do show an increased awareness of the problem. Their task, however, will not be easy. The advance, just announced, to EPU for aid to France demonstrates goodwill, but it is only a stopgap; and private capital export will not occur on a large scale until investment yields abroad are plainly higher than at home. Revaluation has been rejected. It seems, therefore that costs in Germany, above all of wages, may well have to rise further, compared to those elsewhere in Europe, paring profit margins, raising consumption and imports.

Plainly the process of adjustment will be easier for Germany if inflation is avoided elsewhere. Until last year, the choice before its economic leaders seemed a grim one. Had they to abandon the precious stability that had done so much for their economy because their neighbours could not manage their affairs? They have been looking with anxious approval at Mr Thorneycroft's efforts in Britain and at M. Gaillard's endeavours to right the state of France. The very discipline, however, which their neighbours are exerting, in a sense places a new onus on Germany's leaders. They alone, with their cushion of foreign exchange, their cost advantage, their reserves of labour, can take the lead in a renewal of economic expansion in Europe.

NOTES OF THE WEEK

THE WAGES FRONT

A Firm Line

THE refusal of the Ministry of Labour to set up a committee to enquire into the wage claim of the London busmen came as a surprise both to the leaders of the men's union and to London Transport. The two sides had assumed earlier from their talks with the chief industrial commissioner that such an inquiry would be held, and the busmen had seen in it a good chance of getting a pay increase without having to resort to an unpopular and probably unsuccessful strike. They were further encouraged by the rumour that London Transport were prepared to consider a selective increase for the large majority of the busmen who operate in Central London. But after discussions in which the whole cabinet took part, it was decided that in this case the Ministry of Labour's duty as an industrial peacemaker would be inconsistent with the Government wages policy. Full agreement was reached that the machinery of conciliation, which had automatically got to work, should be brought to a stop and the request for an inquiry was firmly, if somewhat awkwardly, turned down. There may have been some fumbling, but there was no flinching in the end.

This was the right decision. The busmen, unlike the railwaymen and the miners, have refused to use the established arbitration procedure—which, however, is still open to them—and from the start it had been impossible to see what new facts a special investigation would have unearthed. The facts are already well known. London Transport's passenger receipts fell steadily during 1957; their costs rose; and they are further than ever from being able to provide from their operating profits their full share of the capital costs that must be met by the British Transport Commission. The Commission itself was thus indirectly involved, the more so because it looks as if it is now facing an unprecedented deficit on its railway operations. If the Ministry of Labour had started an investigation knowing this to be the commercial background, it would have amounted to an admission that there was a case for giving more money to workers whose productivity was falling. This would have opened the door to the 5 million other claimants for wage increases this winter.

There was also every reason why an inquiry—if any inquiry is, in fact, called for—should not have considered the London claim alone. Differentials between London and provincial rates are still in dispute between the busmen themselves and any increase in London would have led to an equivalent demand from outside. The union leaders favour a more concerted policy, and it is just conceivable that the ministry's offer to make a general review of wages in road transport may prod them into action. But if the militants at the busmen's delegate conference next Monday reject this offer, and in the event of their continuing to refuse arbitration, Mr Cousins will have no alternative except to call a ban on overtime or a strike. If he does so, the Government is committed to stand firm. This time the way really does seem to be blocked to any such display of cold feet by the Government as occurred last year at the time of the shipbuilding and engineering strike. It can hope that the public may put up with the inconvenience caused, since a strike, undertaken to intimidate London Transport, could not last long at a time when the cost will fall so much more heavily on the busmen's funds than the economy as a whole, and when sympathy for a wage-claim so poorly founded may be minimal.

ECONOMIC DEBATE

After Resignation, Resolution

THE impression that emerges again from last week's economic debate is that, by his resignation, Mr Thorneycroft has succeeded in making the Government more than ever adherent to his policies. To the pressures on Mr Amory to be stern exerted by the watchful foreigners is now added pressure by Tory MPs themselves. As Mr Thorneycroft sat down at the end of his speech it seemed, as though by some strange optical illusion, that the late Sir Stafford Cripps had descended to sit for more than three hundred Conservative back-bench constituencies. Mr Amory's own speech did draw a little more pointed attention than Mr Thorneycroft might have done to the possibility of recession and to the promise that "when we find we have gained a position in which we can safely resume expansion we shall certainly go ahead with relief and zest." But for the perhaps protracted meanwhile, both Mr Amory and Mr Butler positively fell over themselves to insist that the Government will finish stopping inflation before starting to revive it. "When we need to tighten up," said Mr Amory, "we shall do so." That is the order of the day.

But how? Mr Thorneycroft himself confirmed that higher taxation is fortunately not on the Government's programme. It is, therefore, to cuts in Government expenditure that all Conservatives are looking. The debate confirmed the growing impression that the resignation-inspiring estimates for Government expenditure for 1958-59 was scheduled to be of the order of £50 million higher than the total original and supplementary estimates for this year; as Mr Amory implicitly admitted, this could make them more than £50 million higher than actual expenditure this year—because some under-spendings on particular heads have always been expected. In launching the impression of a "mere fifty million" into public debate, Mr Macmillan was choosing a somewhat misleading standard of comparison. Even to get down to the accepted Cabinet target, however—still more, to get down to the Thorneycroft target which Mr Butler suggested might with "patience" be achieved—sharp cuts in real expenditure will be required.

Two intriguing passages in Mr Thorneycroft's speech were, first, what could be taken as a sidekick at the Government's insistence on Britain having the H-bomb ("it is not a mean thing to be independent in nuclear power, although it may be that in the future nobody is really going to be independent"); and, secondly, his comment on proposals for increasing national insurance contributions ("a new method of paying for the social services may well be right, but it is only a new form of taxation in reality"). This remark prompts speculation that Mr Amory might seek by increases in contributions to achieve some of the elbow-room which Mr Thorneycroft had wanted to achieve by direct cuts.

Shadow Chancellor?

POLITICALLY, even more obviously than economically, the immediate honours have clearly gone to Mr Thorneycroft, who almost ostentatiously aided the zealous but anxious whips in getting a majority of 62 for an "unexceptionable" Government motion. The unexceptionable correctness of his behaviour leaves him in the stronger position to speak his mind at a future date if he feels that his old colleagues are weakening. The congratulations which Tory MPs showered on the ex-chancellor after his eleven-minute speech showed how ready many of them are to put the Government's (and their) economic conscience in his keeping; he emerges, accordingly, as a Cato before whose frown the front bench may wince henceforward.

This sketch of an iron chancellor walking out of a papier mâché cabinet, however, is one which the Government is determined to paint over as rapidly as possible. In Government circles it is being insisted that all the members of the cabinet were equally willing to be tough, and the difference was only upon the selection of the terrain on which the battle should be fought. Mr Thorneycroft (this version goes) wanted to fight on the spending front; the rest of the cabinet wanted to dig in on wages and felt that social service economies would outflank them. Ministers are busy proving this thesis by pointing to the stand against the busmen and to Circular No. 4/58 to the local authorities urging them to economise (in the accurate but rather desperate-sounding phrase "most public authorities could make *some* economies without . . . loss of efficiency"). Mr Thorneycroft's supporters may retort that this is yet another case of the Government insisting that others should do what it is not prepared to do itself. In any case, the evident selling-point in the circular is its long quotation from a speech made by Mr Thorneycroft himself while he was still in the Government, when he said that "wages increases unrelated to, and going far beyond, the general growth of real wealth within the country are by far the greatest danger we have to face." In October, ministers are saying, Mr Thorneycroft helped to man the wages line; he has changed front, not they. Certainly they have not told the local authorities that they must not spend even 1 per cent more than the £1,600 million which they do spend; the circular carefully admits that *some* increases may be inevitable. These ingenious *ex post facto* explanations will not necessarily convince sceptics that Mr Thorneycroft was shed in the cause of toughness on wages. But if the result is toughness, as at the moment it looks like being, Mr Thorneycroft will not have lost one of his political lives in vain.

BAGHDAD PACT

Friends though Divided

AT many moments during the Baghdad Pact Council meeting at Ankara this week, it seemed that the organisation must be at the awkward age, or else losing weight, or, indeed, that it might not be sufficiently infused with the organic matter of common purpose to have acquired proper substance.

All the local delegations had arrived full of hope for bigger and better American economic and military aid for their governments. All felt that they would be surer of the prospect if the United States would join the pact as a full member instead of just sitting on some committees. Mr Dulles disappointed them of the second ambition; he did not satisfy the first when, at the end, he promised them $10 million for telecommunications (which, at present leave vast room for improvement). But he also argued that, if western aid were calculated on the same basis as Soviet aid—a basis which in his judgment glosses over the extensive repayment in commodities the Russians seem to be going to require—the Baghdad Pact countries alone can reckon to have had £780 million from the West in 1957. (By chance, this impressive piece of reckoning was next day capped by the news of a further £70 million of Soviet aid for Egypt.)

But in addition to the American question, each delegation but the Iranian one had at the head of its agenda an item peculiar to its own home circumstances. Each Asian member is cumbered with some parochial interest, or is distraught by some outside pressure, that has nothing to do with the pact's main purpose of combating communism. Examples are Turkey's concern over Cyprus, Pakistan's over Kashmir, and Iraq's over Palestine. The limitation placed upon Iraqi membership of the pact by its government's perpetual need to demonstrate Arab solidarity was well illustrated when, a few days before the meeting, the Iraqi premier felt constrained to tell Parliament that "Iraq is exploiting the Baghdad Pact to the utmost in the interests of the Arab cause." Therefore Nuri Pasha (who, though not in office, mysteriously represented Iraq at Ankara) was not to be deterred by Mr Menderes from linking anti-communism with the need for a Palestine settlement. There followed a barter deal for support in one another's good causes.

The scene suggested that the pact is not yet the instrument its champions hoped it would become. For it is neither America's original "northern tier" nor an extension of Nato able to look to Nato powers, nor yet a local pact made of the solid stuff of purely regional interests. So far, it has served as little more than a friendly and stimulating military and economic club. Friendship and stimulus are never to be despised. But they are the raw materials of pact-making, and not the finished article.

CYPRUS

Twelfth Hour in Cyprus

THE storm clouds have again gathered thick over Cyprus. The Turks in the island have followed the Greek lead and turned against the British. Their demonstrations, timed to coincide with Mr Selwyn Lloyd's visit to Ankara, were inspired by a fear that the undisclosed Foot plan goes further to satisfy Greek aspirations than Turkish. Whether or not the Turkish leaders in Cyprus and in Ankara succeed in preventing fresh outbreaks, the bloodshed already perpetrated inevitably raises fresh barriers to compromise. Moreover, as our correspondent in Nicosia points out on page 410, neither Eoka's present inaction nor its new feud with its left-wing brethren justify hopes that it is any readier than before to forswear violence.

In Ankara, the arguments against partition that Mr Selwyn Lloyd and Sir Hugh Foot have presumably been putting forward appear to have fallen on stone-deaf ears. Mr Zorlu, the foreign minister, asserted on Wednesday that Britain was in effect bound to do nothing without Turkish approval. And Mr Menderes seems to have neatly turned the tables on the British Foreign Secretary by making use of his presence in Ankara to demonstrate more forcefully than ever that Turkey insists on partition. The Turks maintain that they made the maximum possible concession when, instead of claiming sovereignty over the whole island if the British left, they agreed that the island should then be partitioned. So long as they believed that the British would stay, they were content to accept the *status quo*. But now that Britain's long-term intentions are doubtful (and the Labour Party is parading its pro-Greekness), Turkish policy inevitably emphasises more and more strongly that partition is the only solution. Ankara appears to be getting ominously close to the point at which it joins with Athens in demanding that the British must go.

Unfortunately, that is the one thing that, in present circumstances, the British cannot do. Nor can the Government procrastinate much longer over its statement of policy. Whatever it proposes will be strongly opposed by either the Greeks or the Turks—or, most probably, by both ; but as long as it hesitates, both sides will be encouraged to strike their most extreme attitudes. Is it too late to draw on what has always been Britain's greatest asset in Cyprus—the desire of the ordinary Cypriot to be left in peace ?

ROCHDALE BY-ELECTION

A Shetland Pony ?

THE Rochdale by-election looks like being a genuine three-cornered fight. It must be expected, of course, that Labour will win it. Last time a Liberal candidate intervened in Rochdale, in the general election of 1950, Labour took this seat by a majority over the Conservatives equal to some 7½ per cent of the poll. That was the general election in which opinion across the country was so evenly divided that Labour won a majority of only seven in the House of Commons. Most people would assume that sentiment is more anti-Conservative now. But there is also a certain proportion of the public which is now more willing to cast a perhaps quixotic vote for the Liberals. In ninety-nine by-elections out of a hundred, the chance of this vote bringing the Liberal to Westminster is negligible. But there is always liable to be the hundredth case, and the Liberals' optimistic arithmetic at Rochdale is worth study.

ROCHDALE IN THE LAST THREE GENERAL ELECTIONS

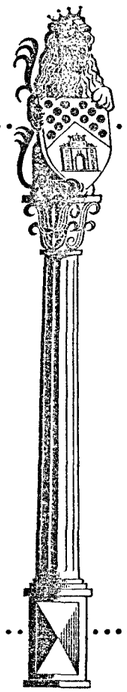
Per cent of Poll

	Conservative	Labour	Liberal
1950	37.4	44.9	17.7
1951	50.4	49.6	No candidate
1955	51.5	48.5	No candidate

At Gloucester and Ipswich the Liberals won some 20 per cent of the poll. They must be expected to do even better this time : first, because the Liberal in Rochdale secured a sizeable vote (as the table shows, some 17¾ per cent of the poll) even in 1950, and secondly because Mr Ludovic Kennedy is what might be called a household face (admittedly, the Liberals' 1950 candidate, Mr Roger Fulford, was also no nonentity). How many votes would Mr Kennedy need to win ? A bare minimum winning figure would be 33.4 per cent of the poll ; that could get him home if the other votes were exactly evenly divided between the other two candidates. But this would be a most unlikely statistical accident. A more orthodox assumption—which, as the table shows, is roughly borne out by comparison between the election results in 1950 and 1951—is that for every three votes the Liberals pick up in this sort of area two will come from the Tories and one from Labour. Estimates compiled on this basis suggest that :

(1) If Mr Kennedy got between 36 and 37 per cent of the vote, he might become Rochdale's MP—just beating the Labour candidate at that level and leaving the Tory trailing.
(2) If Mr Kennedy picked up over 31 per cent of the votes he would, while letting Labour in, be likely to precipitate the Tory from the top of the poll to the bottom.

The odds against either of these things happening are perhaps about as great as against a second division club winning the Cup. But the Liberals' outside chance at Rochdale seems to be of that order—not, as more usually with them, of the order of a Shetland pony winning the Derby.



NEWSPAPERS

Press Trespass

EVERY so often the intrusion of journalists upon the victims of private calamity stimulates an outcry that the Press Council, the journalists' trade unions or Parliament should take preventive action. When this happens, it is important that the facts should be put into proper perspective and the real principles plainly restated. First of all, intrusion is often not intrusion: some of the victims are not victims at all, but are either eager to share their troubles for display or, sometimes, commercially minded themselves. Secondly, a large majority of journalists still make their inquiries in decent fashion. And, thirdly, it is a fact that newspaper reporters, even when they use their elbows, do give indispensable publicity to the plight of victims of officialdom (such as Hungarian refugees) and thus uphold the press as the watchdog of individual liberties.

Even so, the evil exists, and is probably growing, and should be curbed—without curbing proper press freedom. A reporter working in present-day competitive conditions too easily confuses the role of watch-dog and peeping tom. Editors of some papers are too ready to insist, sanctimoniously, that the two roles cannot possibly be disentangled ; declaring that if cases such as that of the Hungarians are to be given publicity, the press must have the right to get the spiciest news where it finds it—even in the private lives of unwilling and sorely afflicted people.

The emphatic point to make in all this is that the right of the press to gather news is really not a right but a duty: to tell the public the truth. The right is the public's—to be told the truth—and the duty of the press is to get the news within the framework of the law and without infringing the other rights of individual members of the public. The first of these other rights is that nobody, not even the police, has the right to demand information from any citizen except in the witness box under *sub pœna ;* the law of trespass should fully cover the case of the reporter who forces his way on to private premises or who, having got in, outstays his welcome ; the law dealing with public order should cover botheration in the street ; and the laws of libel and slander should cover any attempts at press black-

What you Will

The disposition of property, the creation of a family trust, the problems of partnership and private companies — these, and many similar and related matters, arise daily in the faithful discharge of the responsibilities laid upon us as executors and trustees. We are well fitted to act for you for we possess the knowledge and experience to handle your affairs with skill, courtesy and sympathetic understanding. Our care for the best interests of your dependants can do much to alleviate your own care for their future.

OLD MACK'S ALMANACK

(BETTER LATE THAN NEVER)

There will be many occasions when you will be grateful for the comfort and stimulus of Mackenzie's Sherry. Crises, international skulduggery, mayhem, fire, floods, earthquakes and miscellaneous catastrophes will recur with depressing regularity. In March, Venus squares Jupiter, Neptune and the Moon's Nodes, and opposes Uranus. Verb. sap. *Canvey Island will demand home rule and appeal to you-know-who. In June, Venus will be at it again, and the weather will be fine if it doesn't rain. The discovery, by a lady from East Grinstead, of a mountain made out of a molehill in Lower Moravia, will give rise to an ugly political situation, and threaten to throw things into the melting pot. Public agitation for more wine merchants to stock Mackenzie's Sherry will show gratifying results. Mars and Jupiter are in opposition in December, but a good time will be had by all, and the best of luck.*

FLY THE FINEST

Fly TWA
*JETSTREAM**
Equipped with radar and synchrophased (anti-vibration) propellers
non-stop to USA

A transport of delight. For these reasons. Because the TWA Jetstream is the quietest, most comfortable, longest-range airliner in service today. Because you can choose the palmy luxury of TWA Ambassador service or the prudent economy of TWA Golden Banner Tourist flights. Because you can fly TWA Jetstream non-stop to New York or direct to the West Coast of America by the short Polar Route. Because you can fly TWA Jetstream not only to the principal cities within the USA but also through Europe to the Middle East.

Furthermore, you can fly now pay later, and TWA Holiday Fares save you over £34 on the regular tourist return fare to New York. All fine reasons for flying the finest—for flying TWA. Ring your Travel Agent or TWA, for TWA timetables and full details of routes.

mail or revenge if these other laws are—as they should be—invoked to the point of calling in the police.

It would be the worst policy to try to curb press intrusiveness by fresh enactments; there are far too many interests who would use this as a cover to prevent the press from getting news on matters of real public interest. What is essential is for the public to know and enforce its existing legal rights. A few cases in which magistrates mete out stiff punishment to offending reporters and cameramen will do far more to put offending editors and their staffs in a frame of mind to pursue a code of proper behaviour than any amount of agitation for new legal penalties or condemnation by the Press Council, though this body should certainly speak up. The *Daily Mirror*, echoing Queen Victoria, has said loudly and encouragingly, that it will be good.

SOVIET UNION

The Minsk Manifesto

THE Soviet countryside is on the eve of a major reform affecting both the forms of ownership and political control. Addressing an agricultural conference at Minsk, Mr Khrushchev revealed that the Soviet leadership intends to dismantle the bastions of the state in the countryside—the machine and tractor stations or MTS—and to transfer their equipment to the collective farms. Up to now the collective farms in the Soviet Union owned only the buildings, light tools and livestock. The land, in principle, belongs to the state, while for the ploughing and harvesting jobs the farmers had to turn to the MTS. There is about one such station for every ten of the 82,000 collective farms in the Soviet Union. The MTS have some 1,750,000 tractors (in 15 hp units) and 450,000 combine harvesters. They employ nearly three million people: all sorts of agricultural experts in addition to drivers and mechanics. By their composition as well as their key position these bodies have been up to now the outposts of state power and party control in rural areas. If Mr Khrushchev's scheme is carried out, they will be reduced to the role of mere repair and servicing stations. Their equipment and staff will go to the farms.

The project is not new. In his last written work—*Economic Problems*, published in 1952—Stalin took two Soviet economists violently to task for propounding exactly the same idea. He described the scheme which Mr Khrushchev has now revived as "a reversion to old backwardness" and an attempt "to turn back the wheel of history." Stalin argued that the farms were not rich enough to buy the equipment, and that only the state could afford the mechanisation of agriculture dictated by technological change. Yet his chief objection was to the transfer of means of production from state to collective ownership. This, he held, would widen the social gap between town and country and would postpone the coming of a communist society.

Mr Khrushchev did not mention Stalin at Minsk. He maintained that the farms are now sufficiently evolved—politically as well as technically—to take over, and he justified the change on grounds of efficiency. As to the ultimate goal of "bridging the gap" Mr Khrushchev may well think that this will be done one day by the spread of state, as opposed to collective, farming. For the moment the question is to get more food from the farmers. The timing of this indirect appeal to their property instinct may be explained by last year's disastrous harvest. The change, however, will take three years, and before it can start it will first be announced by the central committee, then debated in the country, and finally endorsed by the Supreme Soviet—the procedure that was followed for Mr Khrushchev's managerial reform. But this time Mr Khrushchev can rely on the backing of the farming community. This was probably his chief reason in deciding on a far-reaching rural reform.

FREE TRADE AREA

Double-entendre

THE difficulties before the free trade area have rarely been exposed as starkly as they were by the curious dual version of M. Gaillard's speech at Lille. The advance text issued a few hours before the speech said that the French government was "favourable to the perspective" of a free trade area. Once at Lille, however, when he came to make the speech itself the premier voiced a different view:

> the government does not intend to embark on an adventure that might threaten either the economy of the country or the building of Europe that is going on within the Common Market.

The advance text was couched in a tone that the other negotiators in OEEC have come to expect from their French colleagues; there is sturdy opposition on several fundamentals, but a real wish, it seems, to fight through to a solution. The speech itself, on the other hand, reflected the tone of those sections of French opinion which see the free trade area as a hypocritical British plot to divide, and hence to lead, Europe, and to get the best of the two worlds, Europe and the Commonwealth. There is something in the latter criticism. But it tends to ignore the British Government's considerable steps in the direction of the continental point of view; and it is informed by a frightening amount of irrational prejudice.

The pessimism that followed the last meeting of Mr Maudling's committee has perhaps obscured what it has achieved. By compromise and detailed study, the pattern of a free trade area convention is emerging. Talks between smaller groups of countries specially interested in specific problems are playing a useful part. Even on agriculture, where the last meeting produced such an ugly collision of views, the talks in Brussels between Mr Maudling and countries especially interested, like Holland and Denmark, may at least give further precision to the issues. But M. Gaillard, as his experience at Lille shows, has not escaped from his pressure groups. The question is whether he wants to; for the volume of French opinion hostile to the free trade area is very much the product of the leadership it has had.

VENEZUELA

Good Omens from Caracas

FIRST indications from Caracas since the fall of General Pérez Jiménez are that the armed services are not having things all their own way. The officers who decided that the president had become a liability because of the strength of civilian feeling against him might simply have put a new military regime in his place. Instead Admiral

Larrazabal, the leader of the junta, has deferred to Señor Fabricio Ojeda and the other civilian leaders who organised the strike that sealed the president's fate. When they objected to two military members of the junta, one of whom had suppressed the New Year rising at Maracay, Admiral Larrazabal replaced them by two civilians. By doing this he risked the hostility of the older generation of officers to which these fleeting members of the junta belong.

Pressed by Sr Ojeda and his associates, Admiral Larrazabal has promised presidential elections, but these will have to be preceded by elections for a constituent assembly to rewrite the Pérez Jiménez constitution of 1953. The party leaders have either returned from their exile, or are planning to return soon. They seem to be feeling their way towards some kind of united front in the knowledge that dissension between them could give the army an excuse for retaining power. But if an election becomes a reality, the party leaders may find co-operation irksome. This applies particularly to Dr Betancourt's Democratic Action party, which, although banned the longest from the political scene, would have a respectable chance of winning on its own, as it did in 1948.

Behind this web of political and military manœuvre the flow of oil is uninterrupted, and the prices of oil shares have been little affected by the radical change taking place in Venezuela. The disappearance of the strong man is apparently not so much to be dreaded as some of the commercial interests concerned with Latin American trade have at times tended to suppose.

THE LAW OF HOMICIDE

Diminished Responsibility

It does not look as if the introduction into England of the Scottish doctrine of diminished responsibility is taking the question of mental abnormality in murder cases much further. The Homicide Act lays down that a person shall be convicted of manslaughter, not murder, if he was suffering from such abnormality of mind (whether arising from a condition of arrested or retarded development of mind or any inherent causes or induced by disease or injury) as substantially impaired his mental responsibility for his acts. This clause was believed to be intended to cover all those cases of mental disorder that are outside the scope of the McNaghten rules. If the House of Commons, when the Homicide Bill was before it, had known that John Spriggs would nevertheless be sentenced to death and have his appeal rejected, it might have insisted on removing from the clause the phrase in brackets.

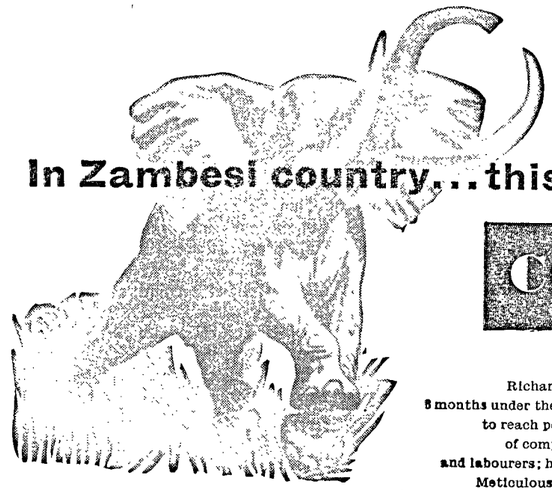
During the committee stage of the Bill the Attorney-General said that the phrase was inserted in order to exclude from the clause murderers who killed in a fit of pure bad temper or jealousy with no other evidence of abnormality. Spriggs certainly seems to have shot the barman because he was annoyed at being turned out of a public house ; but he also had a long history of mental trouble for which he had been invalided out of the air force. The prosecution, however, held that as he was of normal intelligence he could not be suffering from abnormality of mind within the meaning of the Homicide Act.

It is not, of course, known whether the jury rejected the defence because it accepted the prosecution's view of what Parliament intended by the Act or because it held that Spriggs's mental trouble was not serious enough to impair his responsibility. But it certainly looks as if the diminished responsibility clause of the Homicide Act is going to turn out in practice much less inclusive than was originally thought and that cases of psychopathy without evidence of mental defect will not be covered by it. Spriggs has been reprieved ; but it was hoped that the reversal of a jury's verdict by the executive in cases of this sort would virtually come to an end once the doctrine of diminished responsibility had become law.

COMMONWEALTH AID

Too Late and Too Little?

Two long-awaited measures for bridging the gap between colonial and Commonwealth status in emergent dependencies passed their second reading in Parliament within the last ten days. One is the Overseas Service bill, dealing with the colonial service, the other the Overseas Resources Development bill, which extends the operations of the Colonial Development Corporation and increases its borrowing powers by £50 million. Neither bill satisfied the knowledgeable but idealistic group of MPs who press from both sides of the House for a more expansive (and expensive) Commonwealth policy. They felt that the legislation which tries to bring an overseas civil service into being comes too late to save the crumbling colonial service, and the finance given to CDC is minute in relation to the need.



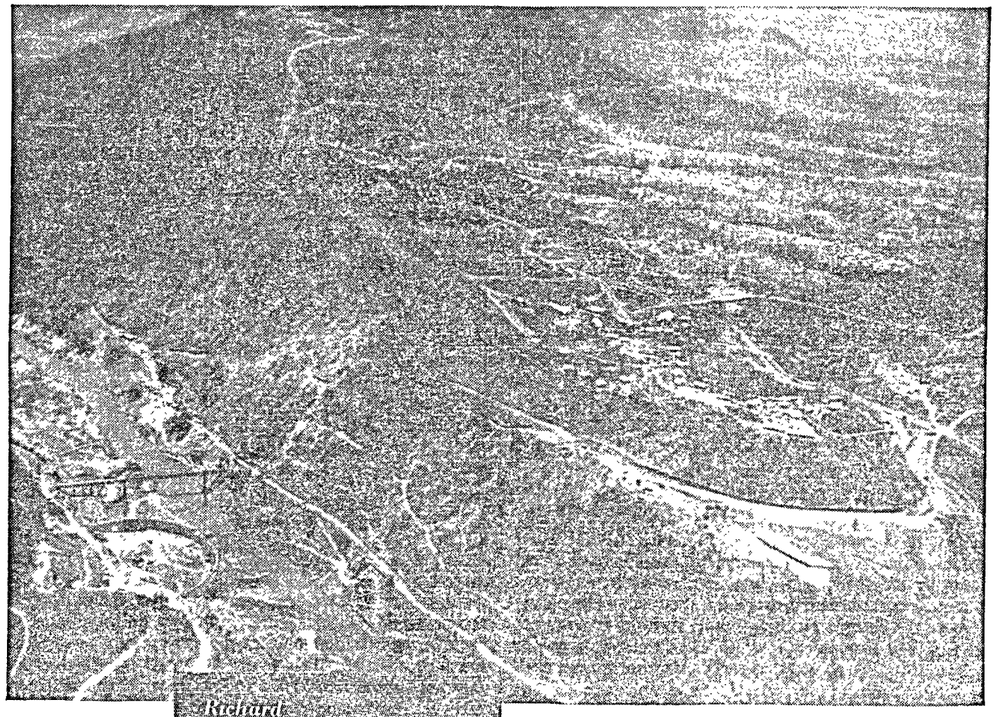
There is truth in both verdicts ; but hard facts are with the Government, which has produced both measures against considerable—and not only Treasury—odds. Of the two measures, the warmest welcome can be given to the Overseas Service bill. Admittedly it does not realise the dreams of a "Commonwealth civil service," first ventilated some years ago in *The Economist*. But it probably took Ghana's hard experience to teach Nigeria the need for the "special list" of British administrators *en disponibilité* ; and until they wanted it, it could not be negotiated. Now that the example has been set, other emergent colonies may follow suit. The trouble however is that very attractive terms of lump-sum compensation are at present inevitably coupled with very uncertain prospects for careers along the only lines that colonial officials have any experience of ; and under these circumstances the recruiting figures which Mr Lennox-Boyd cited were rather better than one might expect.

The shot in the arm for the CDC is a compromise which will probably do little good. The corporation faces the problem of tapering off in countries like Malaya and Ghana, while the needs elsewhere are growing, but the future insecure. Mr Alport was right to emphasise that private external investment was the real mainspring of Commonwealth development. Everything should be done to preach this gospel—with its implications for the policy of newly independent states. Fifty million pounds for CDC's borrowing powers accomplishes little in such terms, but, ironically, it happens to be the sum on which Mr Thorneycroft's resignation is said by the Government to have turned.

SMOKING

How Many Cigarettes?

Smoking is still predominantly a male habit in Britain. About three-quarters of men are smokers but only about two-fifths of women, according to *Statistics of Smoking*, the first of a series of research papers to be published by



In Zambesi country... this 10,000 township is

COSTAIN built...

Richard Costain (Southern Rhodesia) Ltd. built the Kariba Township in 8 months under the specified contract time, enabling work on the Kariba Dam wall to reach peak ahead of schedule. The township called for the construction of complete living facilities for European staff and for African artisans and labourers; housing, roads and services, public buildings and a power station. Meticulous planning made this feat possible—another example of what can be achieved when the Costain combination of technical skill, great material resources and experienced organisation is brought in at an early stage.

Consulting architect: Richard Cathcart.
The contract was awarded by the Federal Power Board of Rhodesia and Nyasaland.
Consulting engineers: Gibb, Coyne, Sogei (Kariba) (Pvt.) Limited.

the Tobacco Manufacturers' Standing Committee. One out of every eight men who smoke is addicted to a pipe only; the rest get through on average about 18 cigarettes a day, with 37 per cent of them smoking 20 or more. (About 13 per cent of these cigarette smokers also smoke a pipe.) Women smokers, on the other hand, average only 10 cigarettes a day, and only 14 per cent smoke 20 or more. This means that 70 per cent of all the cigarettes sold in this country are consumed by men.

Yet, according to this report, the increase in cigarette smoking over the last generation has been among women only. Tobacco consumption has fallen from its postwar peak,

SMOKING AT DIFFERENT AGES

Ages	Percentage of smokers		Weekly consumption of cigarettes per cigarette smoker	
	Men	Women	Men	Women
16 – 19	55	33	101½	58½
20 – 24	67	44		
25 – 29	74	47	117	71½
30 – 34	75	57		
35 – 49	78	48	140	80½
50 – 59	79	37	101½	52½
60 and over..	79	29		
All ages	75	41	124	71

Based on the results of surveys carried out in 1956 by Research Services Ltd.

and the consumption of cigarettes per adult (smokers and non-smokers) is said to have been no higher in 1956 among men than it was in 1939. Among women it had become three times as great. More than two-thirds of women smokers in 1956 had started before the age of 25. It is women in their early thirties who are most likely to be smokers today, while the proportion of men who smoke increases slightly with age. If present-day habits continue, therefore, some further increase in cigarette consumption by women must be expected. Inhaling may also be on the increase; the report suggests that not only is this practice with both men and women found more frequently among the heavier smokers, but also among the younger age groups.

The amount you smoke is obviously influenced by taste, income and the time you can give to it. Building workers come at the top of a list classifying men smokers according to their occupation; they smoked nearly half as much again as workers in the clothing industry and the "unoccupied and retired" who came at the bottom of the list. Above-average smokers include transport workers, painters and decorators, miners, and administrators and directors; below-average, agricultural workers, professional and technical men, and clerks.

HUNGARY

Mr Kadar in the Wings

THE cabinet reshuffle in Budapest this week will not make the Hungarians any more reconciled to their communist regime. In their gloom they will be inclined to ignore the changes on the grounds that one communist boss is as bad as another. Mr Kadar's successor as prime minister is Mr Ferenc Münnich, who was formerly number two in the cabinet; he is rather an unknown quantity, although he is believed to be less extreme than some. Mr Antal Apro, who has moved up into Mr Münnich's former seat as first deputy prime minister, is looked upon as a dyed-in-the-wool Stalinist.

But Mr Kadar himself, although he may be stepping out of the limelight, clearly intends to go on directing the show from the wings. His speech of resignation to the Hungarian parliament did not sound like that of a man dropping the reins of power. He retains a seat in the cabinet; and, far more important, he also keeps his key post as first secretary of the party and will devote himself to party work. From all accounts, the new communist party that was pieced together after the old one had disintegrated in the October rising could do with some attention.

The minister of culture, Mr Kallai, has given up his cabinet post in order to help Mr Kadar; he has been given extra-party status by being appointed president of the ostensibly non-party People's Patriotic Front. Mr Kallai is thought to be about the most intelligent of the present Hungarian communist leaders and he is believed to share Mr Kadar's comparatively moderate views (in spite of the ruthless repression of the October revolutionaries) and his leaning towards national communism. If these two men succeed in maintaining their control of the party apparatus and in imposing their views on it, this week's changes in Budapest may turn out to be a significant episode in the ceaseless struggle over power and politics among the Hungarian Communists.

MIDDLE EAST OIL

Kuwait's Choice

AT least three generous bids—one Japanese, one American, and one by Royal Dutch-Shell—are known to have been made for the oil concessions offshore in Kuwait's "undivided half" of the Kuwait-Saudi Arabian neutral zone. A choice between them has been made urgent by the fact that the Saudi Arabian half-interest in the offshore rights of the zone has already been granted by Saudi Arabia to the Japanese, and prospecting can hardly start there until Kuwait agrees. In practice, this means until Kuwait has accepted one of the bids for its half of the offshore concession rights.

The Japanese are known to have offered the Kuwaitis terms identical to those that the Saudi Arabians have already accepted. At first glance, the attraction of these lies in the 56 per cent share of the profits that the Japanese are willing to concede. But a second look reveals an advantage that is in Kuwaiti eyes more important than money. The Japanese are offering to employ Kuwaitis (or if no Kuwaiti is available, Arabs of other nationalities) in many posts in the new development company, including some of the top jobs. In their agreement with the Saudis, the Japanese have also conceded a principle which the Saudis in particular have long sought to see established—that the profit-sharing arrangements shall apply to a fully integrated operation including the marketing of the oil outside the Middle East.

Oil men think that the seabed off Kuwait may well contain some of the richest plums in the Persian Gulf; thus there is a fair chance that any operator with sufficient capital could find and produce oil in quantity.

The Kuwaitis, however, seem to be aware that their revenue depends as much on prices and markets as it does on production and the share of the profits; they realise that small concerns, without established markets of their own, would be handicapped in disposing of any oil they might find. They might be forced to cut prices, and this might set off a general price reduction for Middle East oil which would affect revenues all round.

Against this, the bid made by the Royal Dutch-Shell group, on an equal profit sharing basis, no doubt sweetened by a fat cash bonus and other frills, provides the attractive security of a fully integrated worldwide distributing network, through which any oil found in the new concession could be profitably marketed. There remains the question whether Kuwait and Saudi Arabia, by using the Japanese (or an American independent) to establish new principles, could subsequently get a revision of the existing major company agreements. They might; but it would be a gamble.

NATO

Pseudo-Deputy

THE appointment of General Sir Richard Gale to succeed Field Marshal Montgomery leaves Britain, despite its dwindling proportion of the forces at Saceur's disposal—the withdrawal of another 8,500 men has been agreed by WEU—with one of the top brass jobs in Shape. It is not, however, as important a post as its title suggests, for though British pride has been reluctant to admit it, the real deputy supreme commander has from the inception of Nato been the supreme commander's chief of staff, invariably an American general, while Lord Montgomery was in fact no more than an inspector-general of the forces. This has been, however, a not inconsiderable job. Lord Montgomery was in charge of training, organisation and tactical exercises, and he was accepted by other governments as capable of giving successive supreme commanders fair if frank—very frank—advice about the morale and efficiency of the various forces at his disposal.

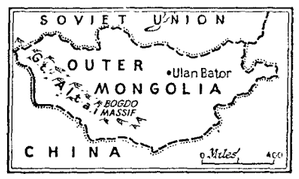
Whether this job is now so important, or so obviously a British assignment, is perhaps another matter. Shape is now far more co-ordinated—as well as far larger—than it was. But problems of standardising the arms and simplifying the infrastructure remain; and so do unsettled questions, such as the tactical roles of nuclear weapons, to which General Gale is well qualified to give useful thought. His predecessor had the vision of unified fighting services; General Gale will have the opportunity to push a little nearer to that ideal. His immediate preoccupation, however, is likely to be his chief's—the scarcity of men on the ground. General Gale was a great believer in making the Rhine Army more efficient while cutting it down. Now he will have to advise how to make everybody's forces more efficient; the process which he was the first commander to advocate has spread.

NATIONALISATION

Soundtrack from the Past

THE old-fashioned Socialist made a curious appearance in Edwardian, even Victorian, costume when last week-end Sir Tom O'Brien demanded heads on a charger because of the decline of the film industry. Losses are being made; production is slowing down; technicians are losing their jobs. Sir Tom is not alone—nor, as reports from across the Atlantic show, is the British film industry in general alone—in suffering this classical decline of an outdated form of production. Television is doing to the cinema exactly what the cinema in its time did to the living theatre. The cinema industry can fight back positively with improved technology (big screens and stereophonic sound), with better films, with a booking system to reduce the squalid queueing which makes so unfestive a start to an evening's entertainment at a popular film show, with amenities to help give the cinemagoer a feeling of occasion with which home viewing cannot compete. It also can—and of course does—demand lower entertainments tax and more Government aid to film-making. And in so far as shrinkage is inevitable, it can conduct that painful process with due concern, expressed in agreed procedure, ample notice, and compensation where appropriate, for those workers who must seek new jobs—jobs to which their special skills ought to be adaptable, just as coachmen once became railway guards.

But whatever constructive proposals Sir Tom may feel capable of making on these different aspects of the industry's plight, he cannot, it seems, resist the built-in reflex twitch of the doctrinaire socialist: when in trouble, nationalise. Rationally, he does not favour public ownership and control of the film industry; but since "they" (the present owners and controllers) are failing to provide security and prosperity for his constituents, then "they" should have the industry "taken away from them." Nationalisation, in fact, is as much punishment as panacea. It is not only the featherbedded refuge from the blasts of economic reality, but also the chastisement from on high to be invoked, Isaiah-like, upon the unrighteous. Such feelings have little to do with practical questions of whether, for instance, entertainment duty might yield the Revenue as much at a lower rate or whether there is room for a bigger and better Crown Films Unit. Essentially irrational, they are useful in throwing diagnostic light on the internal troubles of the Labour party and on some of the infirmities afflicting those industries already nationalised. The emotional expectations of infantile security and satisfied wrath sadly conflict with the needs of public enterprise. Sir Tom should try to live more in the real world.



MONGOLIA

The Better 'Ole

SOVIET earthquakes, like Soviet airliners and hydrogen bombs, are now as big as the world's biggest. The Russian announcement about the shock that cracked the Altai mountains in western Mongolia on December 4th puts its strength at Force 11 on the Mercalli scale, which is next to the maximum force and ranks as "catastrophic." That makes it as violent as the San Francisco earthquake of 1906. A Soviet scientist quoted in *Izvestia* describes a central fissure 150 miles long, the birth of new rivers six and seven miles in length, roads twisted out of true, and a yellow pall rising above the whole scene to a height of 4,000 feet. For comparison, he calls on Dante's inferno and the first days of creation. In fact, the Mongolian earthquake was not quite so much out of this world, though it was probably ferocious enough to earn a mention in the encyclopaedias. However, the Soviet leaders may well feel pleased that this latest example of unrest in their territories chose such an ideal spot to manifest itself. There are few

places in Asia where an earthquake would kill fewer people or cause less damage. A communiqué from Ulan Bator last month put the total casualties, in the whole huge upheaval, at only about thirty.

Earthquakes often turn men's minds to higher things. For Voltaire, the great Lisbon disaster of 1755 finally destroyed the belief that it was possible to justify God's way to man in a plain and simple way. It would do no harm if the Mongolian earthquake caused a little thinking about man's own ways. It comes at a time when scientists, both in Russia and elsewhere, are talking of changing weather and geography by flattening mountains with H-bombs, shifting ocean currents and melting polar ice. The point about the events in Mongolia is not so much that nature can still make better bangs and bigger holes than man; it is that human beings are rapidly approaching the stage where they can rival her effects, and therefore that they had better start looking carefully at the things they are about to do. Experiments conducted too hastily or with too little preparation, for purposes of national pride or interest, could have disastrous consequences. Science alone does not (any more than theology does) provide a guarantee that all will be for the best in the best of all possible worlds. Any Dr Pangloss in the Kremlin, please note.

LAOS

A Premier's Selling Tour

THE prime minister of a small neutral country that pays its way only with outside aid, and survives physically only by implied threats of massive retaliation on its behalf, finds it difficult to adopt policies without reference to its protectors and providers. That has been, in substance, the problem facing the government of Laos. Exercising the sovereignty conferred on this land-locked jungle kingdom by the Geneva agreements of 1954 (which ended the Indo-China war), the Laotian prime minister, Prince Souvanna Phouma, signed an agreement with the communist-led Pathet Lao movement last November. As a result, his government regained formal control over two northern provinces that had been ruled by the Pathet Lao, but admitted two Pathet Lao ministers into its own ranks.

After much lobbying Prince Souvanna Phouma secured the unanimous approval of the Laotian national assembly for the November agreement. But it was not enough to have "sold" the agreement to the deputies; in view of the marked displeasure of the Americans, and of the more guarded misgivings of the British and French, the prince has been abroad on a wider "selling" mission. In Paris, three weeks ago, he exuded confidence and minimised the dangers of integrating the Pathet Lao guerrillas and officials into the general community. In London last week, he saw Mr Butler and the Foreign Secretary in a relaxed atmosphere, then went back to Paris, on his way home, to resume interrupted discussions about the position of Laos in the French Union and French economic aid.

It was in Washington, where Prince Souvanna Phouma went after his first Paris visit, that he had the roughest passage. His argument that Buddhism and royalist traditions shielded the Laotian people from communism was met with polite scepticism. He was also asked to comment on embarrassing allegations that American aid was being squandered in speculative currency deals based on the disparity between the official valuation of the Laotian kip (35 to the dollar) and the black market price (90). The prime minister's visit is being followed by financial talks in Washington with the finance minister, Mr Leuam Insisiengmay, and experts from Vientiane.

It is now expected in Washington that the kip will be drastically devalued and that strong controls will be imposed on import licences and other speculative avenues. There is also some talk of providing economic aid in the form of capital goods—hydro-electric stations and industrial equipment. If this talk is followed by action, it will represent a more serious answer to the challenge of Soviet economic aid in Asia than the stream of consumer goods that has been customary.

MONACO

The Prince

ROULETTE does not rhyme with revolution. The victory of the National Union of Independents in last Sunday's elections for Monaco's National Council is certainly a threat to the absolute power of Prince Rainier. Yet, even after Monaco's nuptial alliance with Hollywood, the boldest script-writer would not venture to make this electoral result the inspiration for a vision of blood-stained revolutionaries storming the gaming tables of Monte Carlo, with Princess Grace seeking shelter in the studios, and a sequel entitled "The Misfortunes of Caroline Chérie." Things are not done in this way in the taxpayers' paradise, which provides a setting more suitable for an operetta by Meyerbeer than for a drama by Schiller.

Rainier III, of the house of Grimaldi, is now Europe's last hereditary prince with virtually absolute power. The extent of it was shown in 1955 when, after the bankruptcy of a bank which swallowed up public revenues, the council tried to force the ruler to change his advisers, and failed. The power of the prince was based not so much on the letter of the constitution as on the law of succession. It is provided by treaty that if Monaco should find itself without a heir, the principality would lose its special status and become a part of France. An heirless Prince Rainier could always threaten to abdicate, and with a dramatic *rien ne va plus* stop the roulette wheels spinning and let the French tax-collectors in.

The clash between prince and council was temporarily forgotten in 1956, when Monaco was the stage of the most advertised wedding of the century. A year ago Princess Caroline was born, a great event for a country so vitally dependent on succession. Yet the 1,116 Monacans with a right to vote do not seem to have forgotten, for on Sunday they gave 11 out of the 18 seats in the council to a coalition that advocates constitutional reforms; one of the issues at stake is control over the state's business activities. Now that Monaco has at least an heiress, Prince Rainier's bargaining position has weakened, and we may yet see a Grimaldi in the role of a really constitutional ruler. When absolutism disappears, however, it will be without any cutting off of heads. People who pay no taxes cannot be expected to make revolutions.

BULGARIA

Writers' War

THE recent dismissal of two prominent Bulgarian journalists is a reminder of the running fight against dissident Communist intellectuals that the Bulgarian regime has been waging since the twentieth Soviet party congress. The two journalists who are believed to have been dismissed for their revisionist views are Mr Stefan Stanchev, editor of the government daily, *Otechestven Front*, and Mr Vladimir Topencharov, a member of his staff. Mr Topencharov was dismissed as editor of *Otechestven Front* in May, 1956, after the paper had become openly critical of Bulgaria's Stalinist leaders and after the party daily, *Rabotnichesko Delo*, had attacked him sharply for his "filthy generalisations." Since then Mr Topencharov has toed the party line in public, but is believed to have expressed more liberal views in private and at party meetings.

As elsewhere in eastern Europe, the twentieth Soviet party congress went to the heads of a number of Bulgarian writers, who proceeded to criticise the methods of "socialist realism" and to press for greater freedom of expression. When attacked for their "unhealthy, alien anti-party views" they either took refuge in silence or answered back. Mr Manov, one of the principal dissidents, declared roundly in the official literary journal: "I am unconvinced about the so-called 'viciousness' of my positions."

After Mr Khrushchev's strictures on revisionist writers last summer, the Bulgarian regime increased its efforts to overcome "the deep and irreconcilable differences" on how to portray "Bulgarian socialism." The extent of its failure was revealed in the recently published report of a meeting of party members belonging to the Writers' Union. It shows that the dissidents stuck firmly to their guns and suggests that their influence among other intellectuals is out of all proportion to their numbers. One communist writer complained that it seemed as if a loyal party attitude was a crime.

All this does not mean that the rebellious writers have any appreciable influence in the country as a whole or represent any danger to the regime. But both their stubbornness and the regime's apparent reluctance to deal severely with them are interesting signs of a changed atmosphere even in a country that has had comparatively little change in its Stalinist leadership. When Mr Chervenkov was undisputed boss of Bulgaria, it is unlikely that two writers could have "become notorious throughout Sofia with their anti-party aphorisms and epigrams." Mr Chervenkov, however, is still there behind the scenes, and it remains to be seen whether the dismissals of Mr Stanchev and Mr Topencharov are the prelude to a tougher policy.

SIERRA LEONE

Penultimate Step

PROPOSALS for constitutional change in Sierra Leone have been embodied in a white paper issued in Freetown, and it may be assumed that they have the prior blessing of the Colonial Office. After being debated by the House of Representatives they will no doubt come into force. The nearest parallel to Sierra Leone's status then is that now enjoyed by Northern Nigeria—and which is to be converted into complete regional independence in 1959. In Sierra Leone, as in Northern Nigeria, the Governor's reserve powers become defence, law and order, police, the public service and external affairs (in Northern Nigeria, relations with the federal authority). The Governor still presides, because of his reserve powers, over the Executive Council; this therefore falls just short of full cabinet status. All officials are, however, to retire from it and in all save reserved matters the Governor will act on his ministers' advice. The final stage is complete independence, which in Sierra Leone will mean the status of a (small) sovereign state. This, in fact, cannot be long deferred, even though the country is faced with economic and administrative difficulties which make British aid imperative for a long time. But when Northern Nigeria becomes independent within the Nigerian Federation in 1959, voices will be raised in Sierra Leone for independence too. It is hard to see Sierra Leone lagging much behind the date for full independence for Nigeria as a whole—which Nigerian leaders still insist will be 1960. Soon there will be not one, but two more independent states in West Africa.

REPRIEVE FOR RED RIDING HOOD

OUR FAVOURITE FAIRY TALES: *with Three Hundred Pictures.*

By Henry W. Dulcken. Ward and Lock, 158 Fleet Street.

¶ This collection of fairy tales will, we have no doubt, fully realise its title, and become a prime favourite in many a little library. The judiciousness of the selection, the quiet fun which pervades the narrative of these thirteen tales, and the spirit, drollery, and great excellence of the designs that illustrate them, will recommend them to both young and old. Only one among them is a stranger to us. This is a story called the Three Bears, which, the concluding note tells us, is not of such ancient origin as its companions. We suspect that its origin is decidedly modern, and that perhaps its editor would not have far to seek for the author. Be that as it may, this story will be very often turned to by its younger readers on account of the irresistible portraits of the large, middle-sized, and little bear, as well as the humorous way in which it is told. Otherwise it has little title to a place in such honourable company as that of Puss in Boots, Tom Thumb, Jack the Giant Killer, and Beauty and the Beast.

With respect to the treatment these last have met with, we have some few faults to find with Mr Dulcken. Why will he be intrusively moral? When, contrary to all tradition, he saves the life of Little Red Riding Hood, was it only to read her a moral lesson from the mouth of her preserver, the wood-cutter, upon loitering on her errands and keeping evil company, viz., the wolf? Then again, he introduces puns into his stories—things no child ever cared for, and which are quite beneath the dignity of his subject; as are also the modern touches he has put in here and there, the allusions to events of the day, and the names of Gunn-Tuer and Swy-ze as the cooks at the wedding feast of Cinderella and the Prince. Such offences as these shock all our reverential feelings for the delightful studies of our youth, and make us fear that the march of modern education will either sweep away these heir-looms of the nursery altogether, or, worse than all, turn them into instructive lessons with all their wonders and mysterious grandeur carefully explained away. Having relieved our mind of the weight of these objections and fears, we can end as we began, by cordial praise of this pretty and enticing volume.

LETTERS

Politicians' Ramp

SIR—Since the publication of the Bank Rate Tribunal Report I have read a number of articles in a certain section of the press suggesting that the "charges" made by Labour MPs, particularly myself, when calling for an enquiry were flimsy, and unworthy of investigation. I have not troubled to reply to these, since the forthcoming Parliamentary debate will provide the appropriate occasion for the discussion of all such questions. But your own article, in your issue of January 25th, so clearly written with the political, if not personal, malice of which you wrongly accuse me, is one that I feel called upon to correct.

Your main theme—the Parliamentary references—is a matter for the debate and I shall deal with it fully then. But you refer also to "the desperately clutching interest which Mr Wilson took in stories from the flimsiest sources," and specify three. Let me comment on them.

First, "Mr Pumphrey on the Woking train." This had been dealt with by the Lord Chancellor, and in my very full memorandum to the tribunal I did not press it.

Secondly, and thirdly, the references to the Japanese banks, and the Ancient Order of Foresters. In the final paragraph of my memorandum to the tribunal, I said that, inevitably, a large number of rumours had reached me—by telephone calls, and by letters, signed or anonymous. I said—as I had told the Lord Chancellor—that most of these I dismissed as fantastic, including a number referring to individual Ministers to which I refused to give currency, even when under examination by the tribunal. But there were two which reached me—after the Lord Chancellor's investigation—which I thought it my duty to pass on, but for which I could take no responsibility whatsoever: I said they should be easy to check, and if found to be without foundation the tribunal would not need to be bothered with them. Since I expected that my memorandum might be published, I felt it wrong to specify the evidence should it prove there was no case even for investigation, but I gave the Treasury Solicitor the necessary information—the telephone number of a Mr Osborne, who had 'phoned me, in the other case a letter. I repeated I could take no responsibility for either.

Mr Osborne having died before the Treasury Solicitor's representative could contact him, I was asked to outline the statement he had made to me. This I did. In the other case, I avoided, even at the hearing, mentioning the name of the organisation concerned, since that would be unnecessary if the Treasury Solicitor's enquiries showed that there was no case for investigation. It was the Attorney General who insisted on naming the Order of Foresters, and they not unnaturally asked that, having been named, they should be cleared. In neither case, therefore, does your charge against me stand.

Had the Tribunal seen fit to publish my memorandum, instead of quotations from my much-outdated statement to the Lord Chancellor, much of which he had dealt with, two things would have been clear:

> First, that we never have said there was a leak, but only a case for enquiry;
>
> Secondly, that at no time did we make any charges except that (i) it was known outside Government circles the Chancellor was going to make a grave statement on the Thursday, a fact which might lead to speculation; (ii) the then Chancellor had shown impropriety in seeing Conservative Party officials and giving them secret information.

It will hardly be contested that the evidence produced before the tribunal, indeed the report itself, confirmed that there was a case for enquiry, and that the Chancellor's intention to make a statement was known outside. On the question of the late Chancellor's "impropriety" or otherwise, the tribunal has referred this matter back to Parliament; together with the other Parliamentary references to the Chancellor's interview with Mr Poole, these will properly be debated in the House next week.—Yours faithfully,

HAROLD WILSON

House of Commons

Summit Talks

SIR—Your article "To the Summit" is unfortunately rather a masterpiece of wishful thinking. It is certainly probable that the leading western statesmen will have to go to the summit—if only to be able to convince once more their own impatient and understandably frightened people that there is no hope of any acceptable compromise with the Soviet. What the Russian leaders want is, as you rightly admit yourself, a guarantee for the *status quo*. It is a complete illusion to believe that the Russians may ever grow "tired of the danger and strain implicit in maintaining by force a division of Europe." Marxism-Leninism is and remains the *raison d'état* of the Soviet state and its aims are best defined in Stalin's "Problems of Leninism." Soviet policy is based on communist dogma and therefore flexibility is admissible only where no retreat from communist conquest is involved (like in Austria, for instance). The resolutions of the last conference of the world's communist leaders give a very clear warning about Soviet aims and should not be dismissed as ritualism. Bulganin's last letter also plainly excludes any loss of control of the communist regimes established by Russia. Therefore I believe it to be of the utmost importance that the western powers prepare for the worst, meaning their reaction to a breakdown of the summit. Once it is clear that the Russians want to destroy the west—if possible only by cold war—then the west must be prepared to retaliate in kind—within cold war limits. The ugliest truth seems preferable to the finest illusions.—Yours faithfully,

ADAM ROMER

Pinner

Building Societies

SIR—May I ask for space in which to correct two errors in the most recent of your usually well-informed articles on building societies?

It is not correct to say that The Building Societies Association "announced there would be no change in borrowing rates." What the council of the association announced was that it had decided not to make any change for the present in its recommendations to members relating to rates of interest. The council has no power to decide, as your article implies, what the rates paid or charged by building societies shall be; this power resides in the board of directors of each building society.

It is also incorrect to say that interest paid by building societies is "tax free." Income tax (though not surtax) is paid by the society on behalf of the investor under special arrangements with the Board of Inland Revenue. The distinction is material.—Yours faithfully,

C. G. GARRATT-HOLDEN,
Secretary

The Building Societies Association

Scholarships for Surtax Payers

SIR—I think there is more to say about the means test for university education than your comment suggests.

To what age is a parent expected to maintain his child? The means test is applied in respect of children up to 25, including married daughters. There may be real competition between the effort to provide full education for children and that to save for immediately impending retirement.

The so-called "parental contribution" is really an over-riding tax. For parents with incomes around £2,000 per annum it reaches 20-30 per cent of marginal gross income, raising the total tax on such income to between 11s. and 14s. 6d. in the £; 16s. 6d. in a few cases. Do you suggest that tax at this level has no disincentive effect?

You are right in saying that parents of two children at the university *simultaneously* pay no more than for one. But in the much more common case that the children concerned are born more than three years apart, the "parental contribution" has to be paid for each separately.

There are three grades of student involved. Firstly, college scholars, who are likely to be outstanding people; secondly, state scholars, who must have reached a fairly high standard; thirdly, county major grant-holders, whose standards are more variable. The cost of abolishing the means test for the first would be negligible; for the first two groups, only two-thirds of the sum already provided from rates and taxes for the further education of Commonwealth students who are not and do not intend to be residents of this country. Are not our own outstanding people entitled to some consideration too?—Yours faithfully,

DOUGLAS W. FRANKLIN

Sevenoaks

Export Insurance

SIR—Mr Patrick's method of dealing with the transfer risk, if I understood him correctly, would encourage exporters to continue trading with any country overseas, in spite of a persistent deterioration in its exchange position, until, almost overnight, ECGD was compelled to withhold further guarantees.

This would be contrary to established practice in insurance and in the field of credit, contrary to the interests of the department and contrary to the wishes of traders, who desire the department, by constant minor changes, to give them guidance and gentle pressure, rather than brusque refusals.

If, however, some means could be found by which it were possible for Lloyd's underwriters and the insurance companies, if they so desired, to associate themselves with ECGD in the practice of export insurance, solutions to technical questions such as this would gradually emerge from the needs of the business.—Yours faithfully,

FRANK H. NIXON

The Athenæum

Syria

SIR—The term "nationalist" as applied today to the Middle East seems to be given an all too restricted meaning. In the Notes of the Week in your last issue, for example, you say that "the British Government, in fact, either had no contact or broke with all the nationalist groups." That is a grotesque statement. Ever since the Arab Revolt over forty years ago the British Government has had close and continual contacts with Arab nationalists. Indeed, all the British Government's contacts with Arabs have been with nationalists, as every politically minded Arab is a nationalist. To apply the term solely to the Baath is to falsify its meaning.

Whether you are correct in saying that the western powers ostracised the Baath I do not know. But it is easy to say that any foreign group which is bitterly anti-British would not have become so if it had been differently handled. The same has been said of the Mufti, Mussolini and many others. No doubt there is sometimes a measure of truth in the accusation, though it must always be a matter of pure speculation. The difficulty is that by wooing your enemies you are liable to lose your friends.—Yours faithfully,

J. M. TROUTBECK

Horsham

BOOKS

History at Large

The Shaping of the Modern World, 1870-1939: *Volume 1. Ends and Beginnings, the World to 1914.*

By Maurice Bruce.
Hutchinson. 970 pages. 42s.

IF it be true that the peoples of the modern world really are interdependent, that important events anywhere help to shape developments everywhere, and that the world is one as never before, then the writer of world history is confronted with certain technical historiographical problems of structure and method. Can the story be intelligibly told country by country or even continent by continent; and have conventional distinctions between national and international history any structural significance? In the more closely knit texture of world affairs, it may be that the inner dynamics of such great events as the complex interplay between industrialised and colonial peoples, the upheavals and aftermaths of the two world wars, the world economic crisis and the spread of communism, elude the historian's grasp if he clings overmuch to older categories, or even to such increasingly unhelpful divisions of his material as the divisions into political, economic, social, cultural, diplomatic and the rest. He must, if he is to match his methods to the needs of his materials, be ever on the alert against outworn concepts and inflexibility.

Mr Maurice Bruce, Director of Extra-mural Studies in the University of Sheffield, has embarked on the formidable yet useful task of expounding world history between 1870 and 1939 for the benefit of the "many who wish to understand the great historical movements going on around them." In the first of two volumes—and the only volume to appear so far—he concentrates on the period before 1914. Little exception can be taken to his initial date for, as he shows, the years around 1870 form a substantial landmark in modern history. It may be argued, however, that 1939 will be a premature end-date if the world of 1958 is to be adequately interpreted: it is the history of the previous two decades that is always liable to be the blind spot of a rising generation.

His main structural divisions are national ones. He deals first with the major countries of Europe (Germany, Austria-Hungary, Italy, France and Britain), then with the peoples of the British Empire and Commonwealth, and the partition of Africa before 1914, and finally with Russia, the United States, China and Japan. He adds a final chapter on diplomatic history from 1870 to 1914. Some omissions from the list are explained by their being held over for consideration in the second volume (the Balkans, the Near and Middle East, Spain, Portugal and Latin America). But other omissions remain unaccounted for—notably all the Scandinavian countries, the Netherlands and its vast empire in the East Indies, Switzerland, and Persia. This untidiness suggests a defect of organisation that becomes more apparent when it is noted how little is said about the First and Second Internationals, or how the massive growth and movements of population in the world are handled in a fragmentary manner that fails to bring out their tremendous general significance, or how astonishingly little is said about science and technology.

This basic defect is that the author, despite all the high qualities of erudition, factual accuracy, and balanced judgment that adorn the volume, has not from the outset reflected carefully enough upon the technical problems of his task, or found the right balance between conventional political history and the economic and social transformations that transcend political frontiers. His approach yields its best results in the chapters on Austria-Hungary, the Commonwealth, and colonial developments. It is least successful in explaining Europe in general, and in revealing the impact of scientific ideas and discoveries, the interaction of cultural and social trends, or the effects of overseas expansion upon the peoples of Europe. Any study of the "shaping of the world" before 1914 which scarcely mentions Darwin or Freud and offers no systematic exposition of Marxism, which so seriously ignores developments in literature, the arts, or social thinking, and whose index lists 13 substantial references to Bosnia-Herzegovina, but none at all to any Scandinavian nation, has clearly got out of focus. Nor is inclusion of any of these matters in a second volume adequate defence, for the general reader of these 900 pages can hardly be expected to integrate with what is here told any such material embedded in a later 900 pages.

It should be added that the chapter on France has been contributed by Dr K. H. Francis, and those on Russia and prewar diplomacy by Dr William Carr, and that both are very competently done. There are six excellent maps. The book is a mine of useful and reliable information about the mainly political and economic developments of the major countries of the world. Its summaries of Chinese and Japanese history are especially useful. But Mr Bruce has missed an opportunity to turn a useful book into a really important book.

Germany's Tentative Democracy

Democracy in Western Germany

By Richard Hiscocks.
Oxford University Press. 324 pages. 30s.

LAST year's general elections focused attention on the strengths and weaknesses of the young democracy that is emerging in western Germany. They are ably analysed in Professor Hiscocks's book, the first serious attempt to depict the purely political features of the new society in the strip of Germany beside the Rhine. He gives a fair picture of the sound incipient political foundations there: the young people with their new realism; the electorate chary of extremes, polling heavily for sound middle-of-the-road solutions; the high quality of Government in the Länder, which justifies so remarkably the federal element introduced by the allies; the good work of the Bundesrat, or upper house, and of many of the committees of the Bundestag. And he has not missed many of the weaknesses at the centre: the absence of a real capital or indeed of a sense of nationhood; the clumsiness of procedure and behaviour in the Bundestag and its remoteness from the public; the shortcomings of Dr Adenauer's cabinet methods; above all the failure of the Social Democrats to discover the men, ideas and organisation that can qualify them to become an alternative Government—a failure that has been in a sense the complement of the emergence, in the person of Dr Adenauer, of a statesman and politician whose greatness has recovered for Germany self-respect, power and influence in the world, but whose limitations inevitably pose great problems for the lesser men around him.

Although much is static in the German political scene, it is remarkable how much evolution there has been since Mr Hiscocks finished his work a year ago. Spurred by electoral defeat, the reformers within the Social Democratic Party are pressing more vigorously than ever before for changes in the personalities and organisation of their party. Even the Chancellor has shown modest new signs of flexibility; he seems to be making genuine efforts to improve the working of his cabinet, though there are no signs at all that he is yet grappling with the need to groom a successor. Yet the problems Mr Hiscocks describes have not been solved; they are fundamental and lasting.

The book is limited in scope. Although Mr Hiscocks sketches in the political background of German life—its lack of parliamentary traditions, the growth to nationhood under Bismarck, the legacies of Weimar and Hitler—and briefly describes Germany's economic development since the war, he does not convey the drama of the destruction and recovery, the economic and social eruptions that have been the theme of west German postwar life. That, it is true, was not the central intention of his work. But in an era when German politics have seemed so much a by-product of these upheavals and of the struggle for power in the world as a whole, the reader finishes this book with a sense that the tale is incomplete. Nor does it convey the more local dramas and ironies of German political life: the strange mixture of elements—clerical, bureaucratical, social, personal—that mingle in the Bonn skin game; the curious juxtaposition in this unreal capital of high purpose and ability with intriguing cliques and pressure groups and squandered bureaucratic effort—there is no chapter on the role of the *Interessenvertreter* in German political life. "Democracy in Western Germany" is not a work fired by imagination; but within its predetermined limits it sets out methodically and readably a fair and sympathetic picture of the new German policy.

Fiat and Blat in Russia

Factory and Manager in the USSR

By J. S. Berliner.
Harvard University Press. London: *Oxford University Press.* 386 pages. 60s.

THIS book arose out of a series of interviews conducted in Germany after the war with former Soviet industrial administrators. They were undertaken under the auspices of the Harvard project on the Soviet social system. It sets out to answer the question: "What is it like to run a Soviet firm?" Not unexpectedly, the answer turns out to be complicated, for the Soviet manager's job is shown to be both rewarding and frustrating, slapdash and exacting, a treadmill and a poker game. He may get away with the most appalling waste of men and materials; yet he may ruin himself if he obeys the commands of the state too readily and too well.

On the whole, the Soviet manager's pay and power vary with the degree to which his firm can overfulfil the output and other targets set by the higher planning organs. "When . . . a single percentage of reported plan fulfilment may mean a difference of up to 100 per cent in the earnings of managerial personnel, . . . a great strain is placed upon honesty in reporting," the more so as Soviet accountancy seems to be rather less competent by western standards than Soviet technology, and this makes falsification of results difficult to detect. However, even if reported results always corresponded to real ones, more fundamental clashes would still remain. The upper planning organs, acting on behalf of the owner-customer government, are interested in absolute output, while the manager is interested in the relation between the target for output and actual fulfilment. He will, therefore, understate capacity so as to get low targets, and overstate costs, and his requirements for labour and materials, so as to make sure that his firm will fulfil the targets he gets. His superior organs, discounting this in advance, will do the opposite. The resulting game of strategy between those on all levels of the industrial hierarchy is, however, only one of the system's "inherent contradictions." Others are bound up with the sheer impossibility, even in a totalitarian state, of providing for everything by *fiat*.

Where the efficacy of *fiat* ends, that of *blat* begins; and Mr Berliner, in the best two chapters of his book, introduces us to the function of *blat*—of wangling an allocation order, an overplan credit or a spare lorry tyre by give and take, tacit bribery and a friendly pat on the back here and there. The *tolkach*, an engaging character specialising in "setting up *blat*" for his firm in a ministry, supply depot or state bank, and particularly the big city *tolkach*, running *blat* for a whole string of provincial firms, seems as responsible for the fact that things do get done and Soviet industry does deliver the goods, as is the power of the government which is driving it forward by ever scaling up the output targets.

With the facilities available to the government for deciding by *fiat* how much of what shall be consumed, how much shall be saved in what form, and for directing resources to predestined uses, it is natural to ask why the Soviet economy does not perform even better than it does? The corollary is to ask why it works even as well as it does. It was not Mr Berliner's aim to answer these larger questions, but he provides much of the atmosphere and "feel" necessary for an answer. His book, though somewhat wordy, is a most fascinating demonstration of the possibility of other worlds than ours.

Navies at War

Victory at Sea

By P. K. Kemp.
Muller. 283 pages. 30s.

AT a time when there is still argument about the role of the Royal Navy, the publication of this book is opportune. The author, with the Admiralty's approval, has had access both to the preparatory work done for an earlier official project and to the documentary evidence in the Admiralty and other ministries; on this basis he has written an admirably concise account of the influence of sea power on the conduct of the second world war for those who do not wish for the more detailed story of naval operations contained in the official history. The facts presented strongly suggest that the side which commands the sea will not, even in this nuclear age, be defeated.

Because of the neglect of the navy in the years between the wars, in itself the result of the politicians' inability to appreciate the importance of command of the sea, the fleet, and its fleet air arm, entered the second world war inadequate to meet its commitments. Indeed, but for the failure of Hitler to appreciate that in his U-boat arm he had a weapon which, properly handled, supported and maintained, might have strangled England, the Royal Navy would not have gained the breathing space that enabled it to win in the end the battle of the Atlantic and give Britain the chance, with American aid, to rebuild its shattered strength. It was again Hitler's inability to appreciate the importance of the Mediterranean, where the ebb and flow of the land battle was directly related to Britain's ability to base ships, submarines and aircraft at Malta, and so disrupt the Axis supply line to North Africa, that enabled the Allies to retain their hold of the Middle East, the loss of which would have had incalculable results. In the Pacific, the Japanese, who to begin with succeeded in achieving complete command of the sea, misconceived its limitations, and tried to hold an area greater than the rapid American recovery permitted. In the end, to use the author's words, "Allied sea power, stretching its long fingers around the world had both held the ring and set the stage for offence."

It was that sea power which enabled the Anglo-American armies to be put back into Europe and maintained there, and caused the surrender of Japan at a time when it had still in its homeland two million soldiers and more aircraft than when the Japanese had started the war.

Lieutentant Commander Kemp has made a notable contribution to the history of sea warfare. His story is always interesting, and is studded with flashes of humour and passages of stirring prose, the latter nowhere better exemplified than when he describes the gallantry of the men of the Royal Navy in their exertions to succour their sister service in the successive withdrawals from Norway, France, Greece and Crete. Above all he has demonstrated that while the weapons of sea power may change, the principles do not, and that the integrity of sea communications should be a cornerstone of allied strategic planning.

Seats of Power

Parliamentary Sovereignty and the Commonwealth

By Geoffrey Marshall.
Oxford University Press. 280 pages. 35s.

IF parliament is sovereign, as our classical writers have long maintained, what is the validity of legislation about the form and manner of making laws? If no parliament can bind its successor what is the use of legislating about the future action of parliaments? This is the dilemma with which Mr Marshall confronts his readers in the opening chapters of his book. But if parliaments cannot bind themselves, neither can they renounce their sovereignty; they can merely delegate powers with an implied right to resume them. To this *reductio ad absurdum* can the Statute of Westminster be brought. A piece of practical lawmaking with a grandiloquent name, this celebrated act merely relaxed powers previously exercised over certain named Dominions of the Crown for some specific purposes. If the Parliament of the United Kingdom really enjoyed that unlimited sovereignty which Austin ascribed to it on principles derived from Hobbes and Bodin, how could it divest itself of that sovereignty?

From these preliminary skirmishes with political theory Mr Marshall turns to the precise nature of the powers that have actually been transferred to the parliaments in the other Commonwealth countries; he examines "the doctrine of legislative supremacy both institutionally and analytically" in each of these constitutions. This is a formidable topic, and it would be disingenuous to assert that "Parliamentary Sovereignty and the Commonwealth" is easy reading, though Mr Marshall is always clear and sometimes spirited. "The dialectic of this struggle is one which deserves detailed examination," he says, "both as a chapter in the development of the Commonwealth system of government and for the juristic importance of the questions which it has made explicit." Here he is writing particularly of the recent South African crisis, a conflict between "two irreconcilable views as to the nature and limits of parliamentary sovereignty." Having displayed the uncertainties of the theory and compared the formulas which the Commonwealth countries have adopted, he devotes the remaining third part of his book to this one case study. Not only is this a book for the political scientist and the constitutional lawyer; it is also valuable to the student of contemporary history. The comments by jurists on the constitutional struggle, which Mr Marshall arranges and presents with scrupulous impartiality, illuminate the South African political scene and give point to his whole argument.

Whitehall Down Under

The Higher Public Service of the Commonwealth of Australia

By Howard A. Scarrow.
Duke University Press. London: *Cambridge University Press.* 180 pages. 26s.

DR SCARROW, a Fulbright scholar, spent 1952-53 in Canberra. His book is redolent of the atmosphere of that extended and isolated Whitehall, and of the public service (the equivalent of Britain's civil service) which makes up most of its population. Nearly all the distinctive elements are here: the intense competition for promotion; the hundreds of pointless appeals; the laboriously acquired accountancy certificates; the sectarian rivalry and suspicion; the obstinate efforts of staff associations to restrict entry to schoolboys and returned servicemen, the strict bar on married women. Only East Block, West Block, Australian Rules football and the *Canberra Times* are missing.

The paradox of the federal public service is that, although its rank and file have been of the most ordinary calibre, and have used every political resource to keep the plums of the service to themselves, the higher posts have in fact been filled increasingly by men of considerable ability and high attainments. Dr. Scarrow shows how this has come about in recent years through the injection of talent from outside and the limited entry of university graduates. The "graduate goats," as one of their opponents called them in Parliament, have now attained such power that the higher ranks of the service seem likely to be filled exclusively from graduates.

This is a useful book, which needed to be written. It is better on the general character of the service than on the particular part played by the permanent head; but that is perhaps another story. It can be recommended to students, and also to British business men and civil servants who want to know about the men they will meet when they go to negotiate agreements either down under, or on the corner of Aldwych and the Strand.

Greek Thought

In the Beginning.

By W. K. C. Guthrie.
Methuen. 151 pages. 18s.

THE sub-title of this book is "Some Greek views on the origins of life and the early state of man"; it is derived from lectures which Professor Guthrie gave to a primarily non-classical audience, and can be read with profit by anyone who is interested in the development of thought. The book brings out the extent to which the early Greek philosophers were indebted to the myths and popular beliefs of their time. These were a natural starting-point, and, to the

and leading booksellers

poetic mind of the Greek, an equally natural way of developing new theories. Fresh ideas were expounded in the form of mythical history or changed versions of existing myths, which the philosopher sometimes believes or more often frankly regards as a parable; and what started as a parable may develop, in later hands, into a myth designed for belief.

This very clear and readable book has one fault for the general reader: Professor Guthrie gives rather too much space to distinguishing between alternative theories, all now demonstrably false, and not enough to analysing the similarities and differences between the Greek modes of thought and our own, or to defining the reasons for their startling progress in this field. But he makes clear, without emphasising, the enormous advantage of the Greek background: a set of imaginative myths, no one of which had any priority of orthodoxy; no tradition of a divine creator; gods who warred with each other, so that a mortal could feel and express a preference—in short, an encouragement to eclecticism and speculation. Every theorist could find some kind of traditional backing for his ideas without greatly twisting the record; and the habit of the time, which allowed each thinker to work out a complete private cosmogony, without rigorous checks at every point in the modern fashion, encouraged that enormous and luxuriant growth of ideas which we are still harvesting.

Rapid Growth

Israel's National Income, 1950-54

By Daniel Creamer and others.
Falk Project for Economic Research in Israel and Central Bureau of Statistics. Special Series No. 57. 115 pages. I£2.000. $2.00.

THIS study of Israel's economic development during the first few years of independence is an outstanding example of the useful results that can be achieved by co-operation between academic economists and government statisticians. The author is an American scholar who directed the Falk Project, an independent research unit operating in Israel with funds provided by a Pennsylvanian Foundation. His collaborators were the staff of the official national income unit. The analytical part of their report accounts for less than half of this slim volume. The remainder is taken up by by the inevitable appendices on the bases of the estimates.

Although it is still too soon to generalise about the broad trends in economic growth in Israel, the record to date is impressive. Real income per head rose appreciably even during 1950-53, when population increased by 30 per cent. It shot up in 1954, when the flow of immigrants slowed to a trickle. Agriculture increased its share in net domestic product to nearly one-seventh by 1954, in spite of the fact that the vast majority of immigrants came from non-agricultural occupations. By the early 1950s Israel occupied a central position on the international scale of average product per head, as calculated by the United Nations Statistical Office, with an average well above that of Italy and more than twice that of Greece or Turkey.

It is an encouraging example for new states to contemplate, but it must be remembered that this is a new country in more than the usual sense of the term. An immigrant population is occupationally more mobile than a settled population and the transformations required of the Israeli population were correspondingly easier than those which economic progress demands of most developing nations. New capital formation was similarly facilitated by the inflow of unrequited transfers (donations from Jewish individuals and communities, immigrants' capital and German reparation), which amounted to more than a quarter of the national income for the quinquennium 1950-54.

This seems to be the beginning of a story of rapid economic growth for a chosen people. But it is too early to be sure.

Giants of Geology

The Earth We Live On

By Ruth Moore.
Cape. 348 pages. 28s.

MISS RUTH MOORE is well known as the author of "Man, Time and Fossils," a bold treatment of modern views on evolution, especially as applied to man. She now turns her skilled attention to an allied but superficially less promising theme, the development of man's knowledge of the origins and composition of the earth beneath his feet. As in the earlier book, there is no attempt to write a detailed history. Instead, the heroes of science, the men who have really changed our ideas on the physical nature of the earth, are singled out, and their lives and scientific achievements presented to the reader in the manner of a good newspaper profile.

The method works best with the earlier stages of science, where there is by now general agreement on who the giants really were. In the stories of men like Werner, Hutton and Cuvier the old battles live again. "Neptunists," who believed that all rocks were deposited in water and that volcanoes were just accidental coal fires, renew their wordy conflicts with "Vulcanists" and "Plutonists," who saw many rocks as originating in the fiery interior of the earth. Lyell once more demolishes the "Diluvialists," who regarded the surface of the earth as the product of the Biblical Flood.

Lyell in particular appears as a turning point of the book. After him, Miss Moore leaves the orthodox history of the science of geology in order to introduce the great geological explorers of North America, and rapidly plunges, by way of the Grand Canyon, into the strange depths of geophysics and geochemistry. It is in these concluding chapters on the contemporary discussion of the origin of the earth and the composition of its interior that Miss Moore's method of organising her material leads to difficulties. The workers are many, and in the midst of active controversy. It is not easy to decide, in a rapidly changing field, who the really significant figures are. Just to carve the present body of knowledge into a number of parcels each labelled with the name of a contemporary (and usually American) scientist is to credit such men with a degree of exclusiveness and originality that they would probably not claim for themselves. Nevertheless, these occasional liberties may be justified, for they help to provide a lively and readable account for the general reader of what might otherwise seem a very dull and obscure subject indeed.

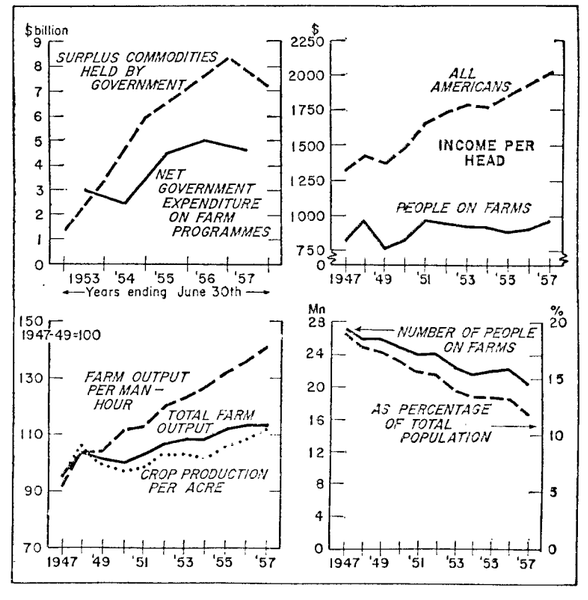
AMERICAN SURVEY



AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

Sterile Plans for Fertile Farms

WASHINGTON, DC

THE new agricultural proposals which the President sent to Congress two weeks ago were instantly denounced by the leaders of both political parties, demonstrating the impasse which American farm policy has now reached. Just before Christmas, in the scholarly atmosphere of the Joint Economic Subcommittee, successive waves of professors gave massive intellectual support to the view that since the war politicians have been tackling the wrong farm problems in the wrong ways. Yet in the bear pit of the Senate Agriculture Committee two Republicans, Senator Milton Young of North Dakota and Senator Thye, who is going to have a hard time retaining his seat in Minnesota next November, have been taking turns with three Democrats, Senators Ellender, Symington and Humphrey, at heckling and contradicting almost every line of testimony presented by the Secretary of Agriculture, Mr Benson, in favour of the new proposals.

Ever since he took office Mr Benson, who is an elder of the sternly self-reliant Mormon church in Utah, has been campaigning vigorously against the laws he is obliged to administer. These laws, put through Congress by a bipartisan alliance of politicians from the main farming areas, attempt to fix the prices of six "basic non-perishable" crops, ranging from wheat and cotton to peanuts, well above the market price. The result has been to shift vast quantities of these commodities into the government's storage bins, to the great loss of the taxpayer, but without any striking progress towards the declared aim of "farmer's parity"—the old ideal that people on farms should have incomes, and thus standards of living, comparable to those of people in cities. It is one thing to harbour this as an aspiration. It is quite another, as Congress is slowly learning the hard way, to try to make it law by perpetuating the price relationships between farm and non-farm goods that existed half a century ago.

Mr Benson's troubles stem partly from the fact that he has had the temerity to challenge this foolish attempt to restrain a dynamic market system, partly from his failure to be brave enough or candid enough. The great debate of 1954, which did lead eventually to a number of refinements in the system, was unfortunately not fought over reforms that were at all commensurate with the amount of noise and effort required to enact them. In an attempt to break the farmer's dependence on fixed levels of price support, Mr Benson advocated a shift towards a free market that was bold enough to bring him intense unpopularity but too timid to demonstrate the advantages of greater freedom. This has permitted his critics in the Senate to argue with some plausibility that lower prices, so far from being a deterrent to greater production, are in fact an incentive to it. They say, pointing to the way in which output still booms, that as price supports move mildly down the short sliding scale, which is all that anyone proposes at present, the farmer will just slave round the clock harder than ever in order to cover his fixed costs.

The truth of the matter is that the agricultural industry is in the midst of so vast a technological revolution that the efforts of the politicians and the economists are far too puny to restrain its increased output. Dr Paarlberg, the Assistant Secretary of Agriculture and a professional economist, recently conceded that his senatorial critics might be right that the farmer would produce more in times of falling prices if his land was only suitable for one crop; but Dr Paarlberg argued that if the farmer could grow others the price drop would be an incentive to switch his land to them. Unfortunately for this theory, however, there is hardly an item in American agriculture of which there is not an actual or threatened surplus. From the viewpoint of future patterns of con-

sumption, with prospective rises both in population and the standard of living, it would seem good economic advice to switch some resources from producing wheat and cotton to producing hogs and cattle. But although this is in accord with the long-run trend of demand, in the short run any such switch would lead to a collapse of meat prices.

The attempts to obtain greater freedom for the market have in fact been so halting that they prove nothing. Mr Benson and his colleagues are having to rely just as much on academic economics to defend their case in their sixth year of office as they did in their first. To begin with, the flexibility which Mr Benson sought and got to vary price supports for the basic crops was insufficient to demonstrate his case, especially since it was not combined with any really strict control over production. It is true that the acreages planted to these basic crops are being cut back

PRESIDENT EISENHOWER has asked Congress to make the following changes in agricultural legislation:—

1. To strengthen the long-term conservation reserve section of the soil bank, under which whole farms can be taken out of production, and to abandon the short-term acreage reserve section, intended to reduce output of individual crops, which for various reasons has never had a fair trial.
2. To authorise the Secretary of Agriculture to increase acreage allotments by as much as 50 per cent for cotton, wheat, rice, peanuts and tobacco.
3. To eliminate acreage allotments for maize; these have always been difficult to enforce.
4. To abolish the escalator clause under which as surpluses go down price support levels automatically go up, thus encouraging another surplus to accumulate.
5. To widen the range within which price supports may move up or down.
6. To base price supports for cotton on the average quality of the crop; at present they are based on a lower grade.
7. To enlarge the board which advises the Secretary of Agriculture on price supports and acreage allotments.
8. To extend the Agricultural Trade Development and Assistance Act, under which surpluses are sold abroad, for one year and to add $1.5 billion to its authority to make foreign sales.
9. To expand research into industrial uses for farm products.

every year under a formula written into the law. But this formula is not applied with full rigour, since sometimes Congress and sometimes the Secretary of Agriculture have responded to political pressure by fixing floors below which the acreage allotments may not fall whatever the state of supply and demand.

The acreage cuts have therefore been sufficient to encourage farmers to invest heavily in fertiliser but insufficient, given the resultant increase in output from the remaining acres, to make any great dent in supplies of commodities. Moreover, the diverted acres have been devoted largely to growing more sorghums and other feed grains that are in direct competition with price-supported maize. Thus, on the one hand, the cheapness of feed is threatening to bring over-production of cattle and hogs and fresh grief for the farmers who breed them. On the other hand, the existence of these inadequate acreage controls is having the undesirable economic result of interfering with the consolidation of small farms into sizes adequate for the new technology. Furthermore, the acreage allotments themselves tend to become capitalised into land values, so raising the price of land to young men entering the farm industry.

The President's new proposals move somewhat farther in the direction of freedom. The Secretary of Agriculture would be given greater discretion to lower price supports and raise acreage allotments. He would thus be able to experiment with the effects on farm income of lower prices, larger volume and greater elbow room for the farmer to respond to the shifts in the world, as well as in the domestic, market. But the chances of either this scheme or a rival one from the "farm block" being passed at this session of Congress are hardly visible to the naked eye.

A major development at last year's session was the breakdown of the bipartisan coalition, when representatives from the maize-producing areas, which are normally Republican, attempted to get through their own special scheme and were defeated by Democrats who were aggrieved that maize had drawn disproportionate benefits from the government just on the eve of the last election. Moreover, many cotton producers, alarmed by the way their foreign markets have been shrinking until recently and by the loss of business at home to synthetics, have turned sour about the high rigid price supports which formed the common ground of the political alliance between representatives from the regions producing the basic crops. City voters meanwhile have been showing signs of restlessness at the mounting costs of a farm programme which appears able to settle nothing.

Even worse for Mr Benson is the fact that not only is this an election year, but that he has also lost two sources of support on which he has hitherto been able to count. Senator Aiken of Vermont, the senior Republican on the Senate Agriculture Committee, has been alienated by Mr Benson's recent handling of the dairy industry; and the American Farm Bureau Federation, the largest farm organisation in the country and one which has always backed Mr Benson's policies, has decided, reasonably enough, that they have not worked, and is pushing a new formula of its own. At this rate Mr Khrushchev's Russia may yet learn how to produce more than the United States before Mr Eisenhower's America finds out how to produce less.

Defence's Days of Grace

THE President's unexpected appearance at the Department of Defence on a Saturday to discuss its reorganisation has done something to retrieve the unfortunate press conference at which he angered Congress by seeming to be in full retreat from his own determination to stamp out inter-service rivalries. This demonstration of personal interest has helped to win sixty days of grace for the department; Senator Lyndon Johnson, in one more statesmanlike gesture, has pledged that if the Administration submits its plan by March, in time to be acted on this session, as the Secretary of Defence has rather reluctantly promised, the Democrats will wait to examine it before they put forth an official scheme of their own.

But the President will have to keep his shoulder to the wheel if a reorganisation Bill, which is bound to

LARGEST MAKERS OF V-BELT DRIVES IN THE COMMONWEALTH

Accessibility to **major markets** in New York State

Greatest Market in the nation is New York State . . . and it is within *hours* of other foremost Seaboard and Central States markets . . . for every conceivable consumer and industrial product.

Unequalled Transportation is available in New York State . . . the world's most extensive network of modern highway, rail, water and air facilities.

☆

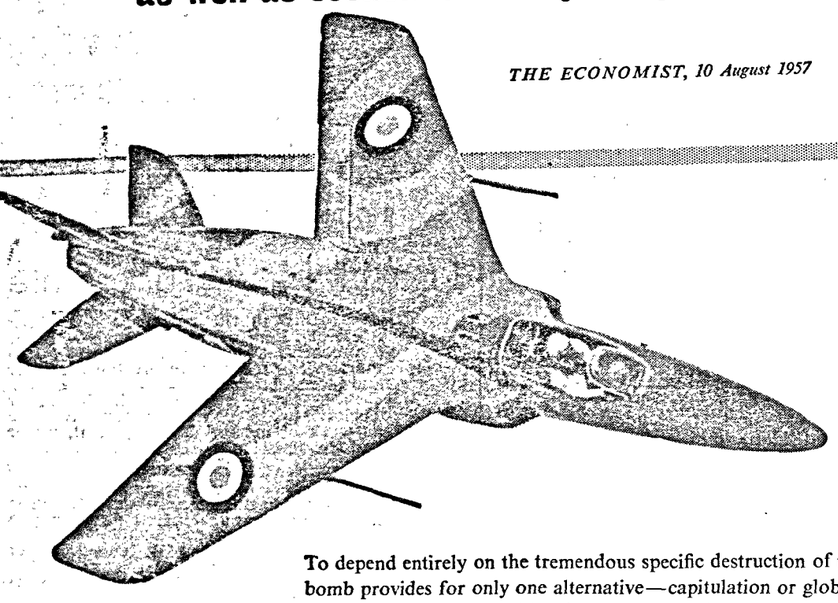
Before you decide on a new plant site, what marketing and transportation data do you need?

- Size and composition of consumer or industrial markets?
- Present and potential consumption of specific products?
- Cost of assembling your components or raw materials . . . and of delivering your products to distribution points throughout the U.S. and overseas?

The New York State Department of Commerce stands ready with a professional, long-experienced staff to give you a tailor-made analysis of any market within competitive reach of any given New York State location . . . plus complete transportation costs and schedules.

☆

But you'll want many other facts, too. What about



. . . labor . . . components and raw materials . . . sites and buildings . . . power . . . water . . . fuel . . . financing?

Let us answer your questions. Write for "Industrial Location Services," a free booklet that tells what we can do for you. Send your request to me at Room 603, 112 State Street, Albany 7, New York.

EDWARD T. DICKINSON
Commissioner of Commerce

"There is certainly no ground at all
for supposing that defence—
WELL BALANCED AND EFFECTIVE—
as well as economical—is yet expendable"

THE ECONOMIST, 10 August 1957

To depend entirely on the tremendous specific destruction of the nuclear bomb provides for only one alternative—capitulation or global war. It does not take into account British commitments in Nato and elsewhere; or the sporadic raids across ill-defined international frontiers which could become the flashpoints of a third world war. Mobility of conventional forces remains the only effective deterrent to local conflicts.

The GNAT light jet fighter heralds a new trend in fighter design. By brilliant and unusual concepts in design and manufacture the GNAT equals and in many respects surpasses the performance of the conventional fighter—yet it can be built and maintained at only a fraction of the cost of the standard fighter, avoiding the penalties of weight and complexity and the necessity for specially prepared runways. As a modern tactical fighter the GNAT is the right aircraft, for the right job at the right time.

FOLLAND

LIGHT JET FIGHTER

FOLLAND AIRCRAFT LIMITED, HAMBLE, SOUTHAMPTON, ENGLAND

roll over many corns, is to be passed. Two powerful Republican conservatives, Senators Knowland and Bridges, have declared their opposition to creating a single Chief of Staff on the "Prussian model"; the idea of greater centralised control is criticised by the Navy as well as by some more disinterested observers who feel that the present system can be made to work and should not be sacrificed to sputnik hysteria. In drawing up a scheme to submit to the President, Mr McElroy, the Secretary of Defence, will have six advisers: the present chairman of the Joint Chiefs of Staff, General Twining, and his two predecessors, Admiral Radford and General Bradley; a former Assistant Secretary of Defence; and two men—Mr Nelson Rockefeller and Mr William Foster—who have been closely associated with recent reports demanding radical changes in the structure of the high command.

Defence reorganisation, to speed the decisions which businessmen say are so hard to pry out of the bureaucracy, is only one of seventeen recommendations reached unanimously by the Senate subcommittee which has just finished investigating the lag in missiles under the astutely non-partisan leadership of Mr Lyndon Johnson. Unlike some of his fellow Democrats, Mr Johnson, the Senate leader, feels that recriminations would make it harder for the Administration, which will be in power for another three years, to catch up with Russia in the "race for survival." But there is a clear hint in the report that Mr Eisenhower will disregard, at his peril, the subcommittee's advice to put forth greater effort on ballistic missiles and defences against them, on strengthening the Strategic Air Command, and on providing more ground and naval forces and more air transport. The unanimous vote in the House to give the Administration the full $1.3 billion it wants as a supplement to this year's defence appropriation shows that Mr Eisenhower has only to ask for the money he needs for ballistic missiles and for the Strategic Air Command.

Money Takes it Easier

WHEN the Federal Reserve Banks began last week to lower their rediscount rates (the amount they charge on loans to other banks) to 2¾ from 3 per cent, the second reduction in just over two months, commercial banks could hardly be expected to cheer. For this change was sure to be reflected in a general fall in other interest rates, and thus to reduce the earnings of banks at a time when their costs have been going up. If the decline in economic activity is to be checked by encouraging business spending, then, according to many bankers, what is needed is not cheaper money, but more money. While it is true that some banks have no spare funds available for additional loans, the broad argument is largely refuted by the latest weekly reports; these show that the volume of business borrowing from banks has been falling more sharply this year than it did in January, 1957, and that supplies of loanable funds are more plentiful than for some time. Moreover, leading banks across the country (although not all of them) were quick to imitate New York's Chase Manhattan Bank, which took the Federal Reserve's hint and at once lowered to 4 per cent the rate which it charges on prime loans—those to the biggest and safest borrowers—and which sets the standard for its other loans. It is significant that, when the Federal Reserve Banks last lowered their rediscount rate, from 3½ to 3 per cent, in November, there was no reduction in the prime rate, then standing at 4½ per cent.

The bankers want the Federal Reserve System to ease the supply of credit, not merely the cost of it, by reducing the reserves which member banks are required to keep with Federal Reserve Banks. Such a move is understood to be coming, although probably not at once. Much more dramatic than a change in the discount rate, it requires careful timing, both because of its practical effect on the money market and because of the psychological impact of such a suggestion from the central bank that the economic situation has taken a sudden serious turn for the worse. Indeed, it may be that fear of accentuating the recession by causing such a chain reaction explains why the rediscount rate is being reduced by only ¼ per cent, instead of the ½ per cent which some experts would have preferred and which, to judge from the downward trend of short-term money rates this week, may come before long. But, however relieved government officials and Congressmen may be that the central bank is at last making money easier, there are still some in the Federal Reserve System who feel that it is moving too fast. The San Francisco Bank has delayed cutting the rediscount rate there to underline its belief that, on the Pacific Coast at least, inflationary pressures are still strong.

Solid Progress

FROM A SPECIAL CORRESPONDENT

ONE of the two technological successes which have now appreciably advanced the expected delivery date of the United States Navy's intermediate range ballistic missile, the 1,500-mile Polaris, was of an importance reaching beyond Polaris itself. This was a real leap forward in the whole field of solid fuels for propelling these missiles, and it thus promises to bring a shift away from the complicated and often unreliable liquid propellants hitherto employed in American planning for IRBMs. This break-through is not in the chemical mixture of the propellant, although there have been very real advances in that respect too, but is a newly found mechanical control for cutting off the supply of fuel at precisely the right time.

The ability to effect such a cut-off simply by the automatic closing of a valve in the supply line was a fundamental and unique virtue of the liquid propellant and was, in fact, the main reason why it was originally decided to develop both the Thor and the Jupiter (the Air Force's and the Army's 1,500-mile missiles) and the Army's 200-mile missile Redstone as users of liquid fuel. The substantial virtues of a solid propellant were not quite enough to outweigh its serious deficiency: because the rate of burning of the entire charge of fuel was not exactly predictable, the time it would take to complete the great ballistic missile's thrust was not absolute. The final impulse might come somewhat earlier or somewhat later than desired and, with even a few seconds' error, the missile with its mighty nuclear warhead might either coast on many miles beyond the target or fall hopelessly short of it.

In the mid-nineteen-fifties the scientific advisers were confident that this problem would be conquered some time, but what was needed was an effective missile as soon as possible; speed was much more important than perfection. In spite of the known defects of the liquid propellant—its

great complexity and hence its unreliability, the need for isolated storage of the fuel (since its leakage and premature mixture could be disastrous), its excessive bulk, the long time it took to prepare the missile for firing—using this fuel would at least provide the Army and the Air Force with a missile fairly soon ; in fact, the Redstone is now at hand, with the Thor and the Jupiter in production and the Atlas and the Titan in sight.

But the United States Navy could not accept the risks which were tolerable for the other services. There is no excessive space on shipboard, and leaking and corroding chemicals are too dangerous to be considered ; quick readiness for firing is necessary, and so are ease of maintenance while at sea and, above all, reliability. The Navy accordingly withdrew from its partnership with the Army in research on the Jupiter and pushed boldly ahead with work on solid propellants to achieve the gratifying results attained with the Polaris in recent months. By 1960 the finished "system" is likely to be ready—a 1,500 mile missile which can be launched from surface or submarine vessel ; a launching device (presumably compressed air) for starting the missile off from under-water ; revolutionary navigational equipment for determining with exactness the submarine's precise position in relation to a distant target ; the nuclear reactor and propulsion ; and a submarine hull in which all these components are wrapped up with due concern for compactness, speed, interior space, ability to dive and change course, and all the other necessities. Even before this "system" is ready, the missile may be available for emergency use with a less perfect combination of facilities.

It is interesting to think what might have been if the American services had not become so bemused after the war with the German scientists' advances with liquid fuel. Had the Navy's scientists, for example, embarked boldly on research into solid propellants a decade earlier, it is conceivable they would have effected their break-through long before 1957, with results that now can only be conjectured. As it is, the Army and the Air Force are beginning to move over into solid fuels. It is not likely that liquid propellants will be abandoned for the very long-range weapons which would in any case operate from fixed locations, but where mobility, to say nothing of simplicity, reliability and speed of operation is of prime importance, the solid fuels are extremely attractive. The Army, seeking a major improvement over the Redstone as a weapon for forces in the field, is at work on a solid-propellant type already christened the Pershing ; it will have a range of perhaps 700 miles and a degree of mobility far exceeding the Redstone's ; this will permit some radical changes in the Army's tactical planning.

Curtain Raiser?

WHILE the summit talks are still wreathed in cloud, some useful work has been accomplished by hard negotiation on the lower slopes during the past three months. Mr Zarubin, the retiring Soviet Ambassador, has crowned his five years in Washington with a two-year agreement on "cultural" exchanges, a term broad enough to cover the Russian wrestlers who lead off the procession, as well as ballet dancers, symphony orchestras, students, professors, doctors, scientists and non-political films and broadcasts. The chief interest of the Russians, however, is in the exchange of industrial and agricultural delegations in technical fields where they have much to learn from America.

The American negotiators had hoped to obtain, in return for the freer flow of peoples sought by the Russians, a freer flow of uncensored news and views, an end to jamming of American broadcasts to Russia, and a removal of restrictions on travel inside the Soviet Union. In this they have failed, although sound and television broadcasts on international political subjects may be exchanged, subject to a veto by either side. But Americans, who have suddenly woken up to what they have been missing through inadequate arrangements for translating Russian scientific papers, now seem to recognise that even one-way traffic may do good if it gives ordinary Russians a first-hand view of the outside world. Last week the President welcomed the idea that private funds should be sought to pay the expenses of large numbers of Russian students in the United States, even if the scheme were not wholly reciprocal. So far, only twenty or thirty graduate students are to be exchanged, the Russian ones going to universities such as Harvard which have departments of Slavonic studies. It is now up to the Russians, who only a few weeks ago suddenly cancelled the visit of two eminent economists, to show that they are not afraid to expose their citizens to capitalist freedom. About five hundred in all may come each year—five times the number of Soviet visitors in 1957.

The popular Mr Zarubin, who is to become a deputy to the Soviet Foreign Minister, created a small stir in Washington by paying two unusual and pointed farewell calls, one on the Vice President, and the other on Mr Nixon's old foe, Mr Stassen. Mr Nixon's political star, unlike Mr Stassen's, is in the ascendant: the Russians may feel he is a man to reckon with if they are to reach agreements, not only on the present exchange programme, which leaves many points to be determined, but in other fields. Mr Stassen, on the other hand, supports the flexible approach to disarmament negotiations which is out of favour in Washington, but which the Russians would like to encourage.

Benefits from Insurance

THE January figures for unemployment are not yet out, but they cannot be far off 4 million ; in the middle of December, there were 3.4 million out of work, 5 per cent of the labour force, and the period of high seasonal unemployment was yet to come. Since then, lay-offs have continued, particularly in the automobile, aircraft, machinery and metal-working industries. One man in thirteen is out of a job in the durable goods industries as a whole. With Easter falling early this year, March will be the test of the economy's powers of recuperation. In the meantime, the Department of Labour has reported that 45 major employment centres, a third of the total, are experiencing the unemployment of 6 per cent or more which makes them "surplus labour" areas and entitles them to special consideration when government contracts are awarded. Foreign businessmen bidding for contracts will also find that in such depressed areas the teeth of the Buy American Act are sharpened ; to be accepted there, foreign offers must be 12 per cent, rather than 6 per cent, lower than the bids of American firms. Unemployment is particularly severe in the Pacific Northwest, in New England, and in important industrial states such as New Jersey, Pennsylvania, and Michigan.

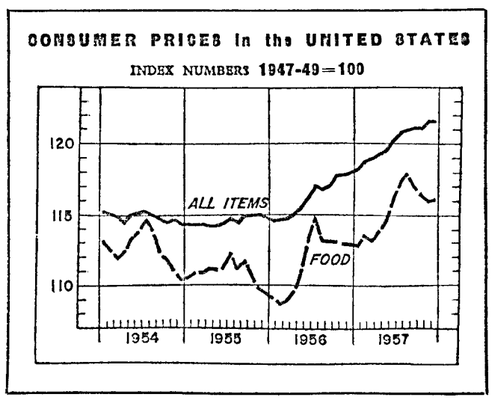
With fewer jobs come shorter working hours and less overtime. Wage and salary payments declined by $2.9 billion, at annual rates, between September and December last year. But the Council of Economic Advisers reports that transfer payments, which include unemployment benefits and assistance allowances, rose by $1.5 billion, also at annual rates, during the same months and thus cushioned the fall in incomes. The states were paying $210 million a month, out of reserves totalling $8.7 billion, to about 2 million workers during December ; early in January the number rose to nearly 3 million.

With the "built-in stabilisers" once more proving their worth, the Administration hopes to make them more effective still. After the last recession, in 1954, Congress admitted 4 million more workers to the system but, even now, only 83 per cent of all non-agricultural wage and salary workers are covered, numbering 43 million out of a total work force of 68 million. Benefits vary widely, from $25 or less a week in Louisiana to $57 in Nevada, but the average is just under $30, compared with average weekly earnings of $83 a week in manufacturing. The Administration feels that benefits should amount to half of weekly earnings and be paid for at least 26 weeks. But as the states foot most of the bill, and as Washington wants them to shoulder a bigger share of other welfare burdens, the hope of better stabilisers may well be deferred.

Labour Marks Time

NEXT week Mr James Hoffa, the notorious head of the teamsters', or lorry drivers', trade union, appears in court once more on charges of having tapped telephone wires ; one juryman refused to agree to his guilt at his first trial last December. Next week also the executive council of the American Federation of Labour and Congress of Industrial Organisations must consider whether to set up a rival trade union for lorry drivers. The present teamsters' union was expelled from the national organisation when it elected Mr Hoffa as its president. That election was challenged by members of the union, but now a settlement has been reached, under which Mr Hoffa's activities as president will be supervised by three monitors. However, this compromise can hardly satisfy the AFL-CIO. The organisation is also going to be forced to consider the cases of several other unions which are being charged, as were the teamsters, with corrupt practices by Senator McClellan's Investigating Committee.

Even if it wished to turn a blind eye to such scandals, which it does not, the AFL-CIO could not afford to do so at this moment, when a number of proposals for stricter regulation of trade unions are before Congress, some of them going much farther than the President's. He wants detailed reports to be published on the financial operations of trade unions, particularly as regards their welfare funds ; this would be welcomed by the AFL-CIO, but it objects to his further proposal, which it argues might lead to the licensing of trade unions, for a special official in the Department of Labour to deal with violations of the reporting requirements. Labour leaders also object to some of the changes—especially tighter restrictions on boycotts and picketing—which the President wants to make in the Taft-Hartley Labour Relations Act.



In practice, the unions have little to fear from Congress this year, unless some new sensation draws public attention back to labour matters from its present international preoccupations. Labour legislation inevitably means bitter controversy and lost votes ; it is therefore something which almost everyone prefers to avoid in an election year.

Uranium on its Own

FROM A CORRESPONDENT IN COLORADO

THE American uranium industry is faced, for the first time in its government-nurtured life, with the need to look for commercial markets. The Atomic Energy Commission, until now the industry's sole customer, has plentiful supplies assured for its own needs for the next ten years and is refusing to enter into any more contracts for buying uranium concentrates. The commission's existing contracts expire in 1962, although it has announced that it will continue to buy processed uranium until 1966. Mineable reserves of uranium within the United States are now estimated at 70 million tons, 65 million tons more than five years ago, with a uranium oxide content of 175,000 tons. Mills for treating uranium, existing or under construction, will be able to process 7 million tons a year so that present reserves will keep them going only until about 1968.

Most of these mills are operated by the large mining companies, which have come to control most of the uranium industry after a period during which it was characterised by wildcat exploration and by wild speculation. It would seem to be in the interest of these companies to step up their exploration for new sources of uranium ; the AEC itself is also pressing for this in order that adequate supplies of uranium may be available for the many peaceful uses of atomic energy which are expected to be developed in due course by private industry. Uranium producers have long been warned that the government cannot continue for ever to be the sole purchaser of the metal, but nevertheless the large mining companies are disgruntedly withdrawing their trained teams from the search for uranium and the small independent prospectors, who made most of the original discoveries, are also giving up. Whether this first reaction to the shock of the AEC's announcement will be sustained remains to be seen ; the present disillusionment may perhaps be exaggerated in the hope of inducing the commission to change its mind about leaving uranium entirely without guarantees in eight years' time.

THE WORLD OVERSEAS

Tragic Twists in Cyprus

FROM OUR CORRESPONDENT IN NICOSIA

Wednesday

In the days since Sir Hugh Foot's return from London, Cyprus seems to have turned itself upside down. Instead of hysterical schoolgirls throwing coca-cola bottles at the troops in a juvenile frenzy for *enosis*, envenomed Turks have been fulminating at "British murderers," and left-wing Greeks accusing their right-wing brethren of being "fascist" tyrants. The island, normally an exasperating conundrum, has become an imbroglio of rivalries and vendettas; and, without indulging in alarm and despondency, it is hard to see how in the months ahead violence from one source or another can be averted.

This weird, tense, topsy-turveydom is almost comically illustrated by a Turkish newspaper which, in its revulsion against the British after the tragic Nicosia riots, has declared that the eyes of the Turks have been opened and they are now obliged to support the atrocity allegations levelled against the security forces by "their Greek compatriots." The enotists have had their thunder stolen; but it would be wrong to regard their relative inaction as a mark of new flexibility on the cardinal issues. Nothing has happened to dispel the impression that if a policy statement in the House of Commons does not contain concrete evidence that Britain intends to satisfy Greek Cypriot aspirations (and that, in brass tacks, means at least the return of Archbishop Makarios and negotiations with him), a new campaign of violence will be launched by Eoka. The terrorists have on the whole given the Governor the "credit of time" that he asked for; it would be unrealistic to expect them to go on behaving rationally very much longer.

But for the moment the limelight is on the Turks. If any doubt lingered about the extent to which a rather pedestrian programme of partition—which in the Greek view is a piece of political artificial insemination by Mr Lennox Boyd—has been worked up into a patriotic cause, it has been dispelled by the events of the past week. Yet with the Turks there is always the hope that if saner counsels can prevail in Ankara, these would quickly have repercussions in Nicosia; which cannot be said in quite the same way of Athens *vis à vis* the Greek Cypriots. There are high hopes in Cyprus that the Ankara talks will at least result in some brake being put on the rabble-rousing activities of the Turkish extremists in Nicosia. It is hard to escape the conclusion, however, that the British Government has gone further than it originally intended in giving the Turks a "pledge" on partition, and the Turk once having gained a point does not lightly cede it.

The other major development in the past fortnight is the first open clash since the emergency between the Communists and the Greek nationalists. This is unlikely to erupt into immediate violence, nor to affect greatly the current plans for a settlement, but it is fraught with significance for the future. Officially the Cyprus Communist party (AKEL) is proscribed, but so strong is the communist control of the Pan-Cyprian Federation of Labour (popularly known as "the old trade union") that it is often the instrument of communist policy. The vast majority of its members are not dedicated, indoctrinated Marxists, but are malleable material in the hands of trained leaders. The role of the Left throughout has been an astute rather than a glorious one: it has been watching in the wings. Then for forty-eight hours last week, its able and vigorous leader, Andreas Zhiartides, took the stage himself and came close to being labelled the first man to challenge, not merely Makarios, but Grivas. But for the present this is a title that he vehemently abjures, and his concordat with the Archbishop has been reaffirmed.

The communist leadership in Cyprus is known to have a three-stage programme which may be baldly summarised thus: for the present, with propaganda emphasis on the "unity of the people," the left wing will staunchly support Archbishop Makarios as the leader, but will stake a strong claim to a share in any negotiations which might take place with the British Government—and will not take part in terrorism of its own volition. Secondly, if a period of self-government is inaugurated, the leftists are then likely to press for the formation of "a national front"—a coalition with the Archbishop and the nationalists dedicated to completing "the struggle for freedom"; but they are significantly vague about the delicate matter of distributing portfolios. Thirdly, when *enosis* is achieved, the break will come; the parallel freely cited is the 1945 dissolution of the Churchill government, with Archbishop Makarios the counterpart of Sir Winston Churchill. Thereafter, it is argued, the future of the workers will lie with "progressive elements" in Greece.

The question of bases is unlikely to be stirred up by the Left as an immediate issue, but if and when a national coalition is set up (and this obviously depends on the Archbishop as well as on the Communists) it is safe to assume that the left-wing agitation against Anglo-American "militarism" will give London and Washington a new Cyprus problem to chew over. Meanwhile it has been announced that Mr Zhiartides is going to Athens to confer with the Archbishop. The prospect of these two men locked in close discussion in the Ethnarchy offices is a fascinating one for conjecture. What emerges from their talks might well be in the long run almost as important for the future of Cyprus as this week's talks in Ankara.

OEEC's Nuclear Agency

FROM OUR PARIS CORRESPONDENT

On February 1st, the Organisation for European Economic Co-operation gives birth to its third offspring, after the European Productivity Agency and European Payments Union: the European Nuclear Energy Agency. The number of its executives during the first half-year will probably be around fifteen, and the budget will amount to some £40,000. These modest figures show that the agency does not expect to be a giant; they also express the promoters' wish to be regarded as men of affairs eschewing red tape.

The agency in its time should play three main parts. The first role is that of company promoter in research projects. Arguments for joint European research have been strong ever since nuclear energy came on to the ambiguous stage where politics and technics meet. The immense variety of possible lines of nuclear advance and the resources required to explore the maximum have made joint effort attractive; this idea underlies Euratom, too. The agency plans to build its first joint plant, "Eurochemic," at Mol in Belgium, to be ready in late 1960. This small plant for chemically treating spent fuel has interested twelve OEEC countries, including the Euratom members, who are majority shareholders (this partly explains the location), but not Britain, which has enough capacity of its own. The agency can also adopt plant which governments offer to pool. Britain has offered the homogeneous research reactor that is to be built at Winfrith Heath; Norway proposes its boiling water reactor at Halden, and talks are under way. The British gesture is partly political, but pooling is useful in helping countries to pursue jointly lines of inquiry that they might otherwise drop. The British "homogeneous aqueous" reactor may be the reactor of the future.

★

The agency's second role will be as lawyer, drafting European nuclear regulations. It wants a free trade convention for nuclear fuels and equipment—a complex point and somewhat theoretical when governments themselves are involved in the trade. It also hopes to sponsor conventions on public health safeguards, the prevention of accidents, and insurance. Plainly it is useful to standardise rules from the start over the widest possible area. One question, third-party liability, is specially important. Atomic accidents, though rare, can be such that the insurance companies dare not underwrite third-party risks. This has hindered development by industry in America, and could do so elsewhere. The solution might be for governments to assume certain risks; but negotiations will be tricky, especially for accidents which involve more than one country.

The third role of the agency will be as censor of the nuclear morals of the member states. A convention on security controls, still to be ratified, empowers the agency's inspectors to see that no fuels under its supervision are put to military uses. This rule is applied also by the UN atomic agency, and was favoured by Euratom before France made a hole in it by insisting on having its own bombs.

The agency's promoters have certainly shown energy and persistence. In the present beautiful Paris weather they are off like the hounds of spring on winter's traces, first in the field, while the free trade area flounders through committee rooms, and Euratom is shackled to the sick bed of its president, the overworked M. Armand. Yet, behind the surface the agency, too, has been troubled by—indeed partly derives from—the competition between the Six and the rest which is now found wherever the federal and intergovernmental roads cross. Moreover, paradoxically, the agency has materialised so soon partly because Britain has not given it the support lavished on the free trade area. The strength as well as difficulties of the latter come of its being the meeting point of Britain and the Six. The agency is not that. At one time, its champions even expected a British-Euratom association that would bypass it. Britain has shown little interest in "Eurochemic," except to sell equipment and lend experts. It has signed the security control convention, but Winfrith Heath will not produce fissile materials, and in practice the agency will have no inspectors in Britain.

Euratom is not keen on having them either. It wants to assert its own control system, hoping that the United States will recognise this as a sufficient guarantee that American fuels will not go to making bombs. The agency will strive to impose its legal right to "delegate" its control, and Euratom its practical one to carry out its own control without any agency spot-checks. Equally, there seems little chance that the United States will use the agency control in dealings with the Six, even were it not to reach agreement with Euratom; and some Euratomists consider that the British could hardly deal with the Six less directly than America does. If they are right, the agency's control system will be marginal.

★

The Euratom countries look mainly to the United States, and to Britain as second producer. They discount smaller European countries, despite respect for achievements like Denmark's Niels Bohr Institute and some Swiss engineering. Not wishing to appear completely uncooperative, they have neither put determined spokes in the agency's wheel nor, certainly, a shoulder behind it. This attitude has strengthened the support for the agency amongst small countries. They fear that bilateral deals with Euratom might turn them into satellites of yet another major atomic power, and in the OEEC's multilateral approach find safety in numbers. Also, neutrals like Sweden, Austria or Switzerland can welcome agency inspectors, where they would baulk at a Euratom badge. And the agency gives countries like Turkey their only chance to participate in nuclear development.

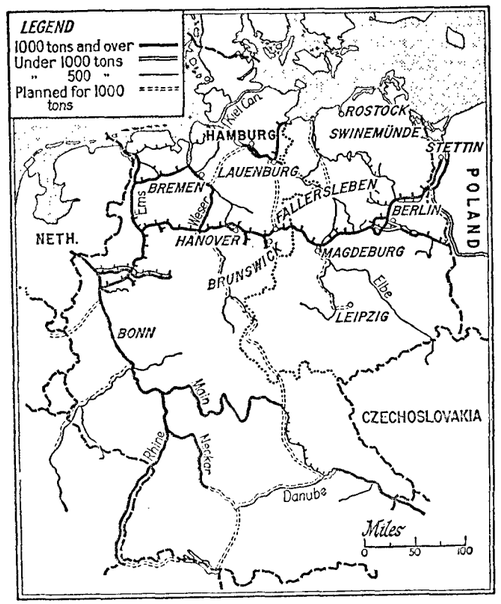
Above all, the agency's champions plead the "eloquence of facts": plant is the thing, and the agency offers some soon. It does not have Euratom's $215 million research dowry over five years ("Eurochemic" and Winfrith Heath will cost $40-$50 million in that time), but has three joint undertakings in view, and perhaps others in the offing. A start on Euratom's ambitious power production programmes will depend on the persuasive power of M. Armand—and American backing; admittedly, both may be great, but Euratom must contend with French budget cuts and the fears of some German power companies about costs. By contrast, the agency has already started, however modestly.

The truth seems to be that the agency, despite gestures about building power stations, is essentially concerned with "infrastructure" and is not really comparable with potentially major producers of nuclear power like Britain, or,

unless it fails to weld the Six, Euratom. Without their backing it may even find it hard to go beyond its beginnings, short-circuited by bilateral deals. But the larger countries cannot consistently refuse the multilateral approach. The extension of research and regulation over the widest area is inherently healthy. There seems room for the agency to play a genuine, if limited, part.

Hamburg Between East and West

FROM OUR BONN CORRESPONDENT



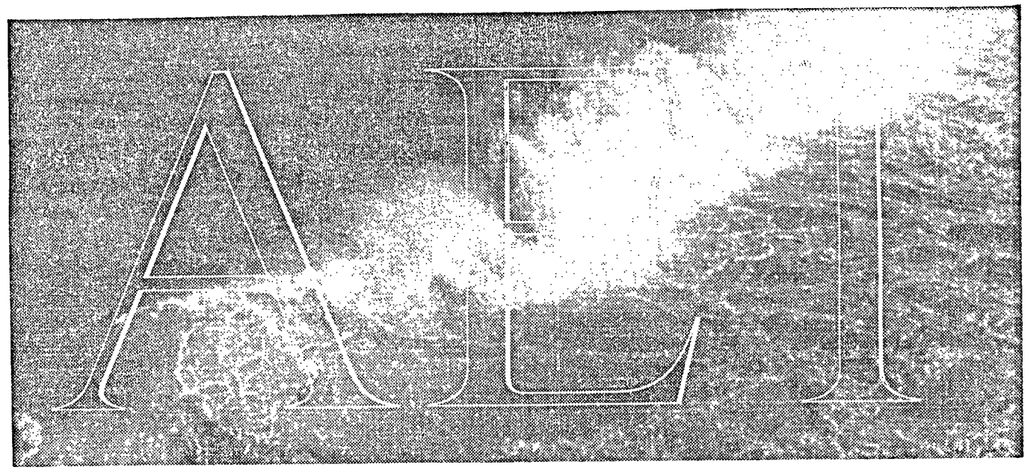
HAMBURG'S natural communications are with central, not western, Europe. The distance from Hamburg to Bonn by road is 270 miles ; to Lauenburg, the nearest crossing point into east Germany, only 27. To Berlin it is 160, to Magdeburg 140, to Leipzig 210, to Poland (which has no direct access to the North Sea) 210, and to Bohemia (altogether coastless) 275 miles. From the port of Hamburg, where distance is measured chiefly by water, it is nicely debatable which, relatively, are the farther away—the mercantile cities of western Germany with which existing links are inadequate, or those of eastern Germany and beyond whose established links with Hamburg, natural and developed, are adequate but at present neglected and obstructed for political reasons.

In the circumstances it is scarcely surprising that in his situation report last month to the newly-elected Hamburg city assembly the usually equable Chief Burgomaster sounded a trifle irked by some of the consequences of the policies pursued in the remote and professedly provisional federal capital. "Bonn"—ever a handy word for impersonal onomatopoeic expostulation—"Bonn," Herr Brauer protested, "should replace its outmodedly rigid foreign policy with new, more malleable and more flexible methods." He urged a "loosening of petrified fronts" and a "dismantling of the iron curtain which robs Hamburg of half its hinterland." Meanwhile the Free and Hansa City would continue to foster an "Elbe policy," aiming at a revival of its traditional traffic with the east and south-east.

Observing the ceaseless movement of cranes and shipping in the port and the many signs of solid wealth within the city, today's visitor cannot but be impressed by Hamburg's recovery and at first slightly puzzled by its cries of alarm. The port's extensive free zone—which provides well-equipped sites for duty-free storage, processing, and transshipment (mainly to Scandinavia and the Baltic)—has never been busier, and seaborne trade has already reached its pre-war volume. Hamburg's regret, it seems, is that things could be better ; its fear, that they may get worse.

Maintaining that proportionately the postwar prosperity of Bremen, Rotterdam, and Antwerp has overtaken its own, Hamburg has disquieting thoughts about its topographical handicap in competing for a share of the European common market's maritime trade. And although traffic with the natural hinterland (except Austria) has slowly revived there are indications that it is beginning to wilt again. The German Democratic Republic, Poland, and Czechoslovakia are running into currency difficulties on account of their trade through Hamburg, and are consequently pressing on all the more determinedly with their plans for developing the east German and Polish ports of Rostock, Swinemunde, and Stettin, by which they hope to be able to avoid dealing with Hamburg almost entirely.

As Herr Brauer recalled, the only really sound solution to Hamburg's problem is to re-open the traditional hinterland. In the names of Hansa, Kennan, and commonsense, he advocated that a beginning to healthier relations between east and west might be made through more active promotion of trade. No one, he pointed out, objected that commerce with Spain implied obeisance to the Falange : no more was the cultivation of east-west trade a profession of sympathy with communism. The government is in a position to reply that the German-Russian trade agreement which has been intermittently in negotiation since last summer is expected to be signed in March or April. Herr Lahr, who leads the German delegation, is about to return



to Moscow to resume the talks. But the volume of trade envisaged—some DM1,000 million each way annually for three years—would bring Hamburg only a fraction of the business it believes it could do once normal trade relations were restored with central and eastern Europe.

Whatever improvements may eventually be brought about, Hamburg's responsible planners must still reckon with the iron curtain remaining implacably where it is, and consequently take the necessary precautions. They are trying to expedite wherever possible all schemes for developing Hamburg's neglected westward communications. The long-projected autobahn to Hanover, connecting Hamburg with the rest of the autobahn system, is at last under construction : some fifteen miles are already in use. Such pressure as can be is being brought to bear on the financially strained federal railways to electrify the main lines to the Ruhr and the south. There is satisfaction that Hamburg, not Frankfurt, has been chosen as the new Lufthansa headquarters.

By far the soundest precaution would be to begin work on the projected North-South Canal, which would link the

H-Power

AEI is helping to harness the power of hydrogen fusion

The Atomic Energy Research Establishment first achieved controlled thermonuclear reactions in an electrical discharge chamber, known as Zeta, at a temperature a thousand times hotter than the sun's surface. AEI is proud that one of its Companies, Metropolitan-Vickers, built and partly designed Zeta. An AEI research team, working for the most part under contract to A.E.R.E. and using a much smaller torus or discharge chamber known as Sceptre III, followed this success with controlled reactions at a temperature of nearly 4 million degrees.

A MILESTONE IN THERMONUCLEAR RESEARCH

The joint statement on thermonuclear research by the U.K. Atomic Energy Authority and the U.S. Atomic Energy Commission does not mean that the goal of electricity generation by this means has been reached: but it does mean that an important milestone has been passed.

The achievement of the teams of scientists at the Atomic Energy Research Establishment, Harwell, and at the Associated Electrical Industries Research Laboratory, Aldermaston Court, has been to fuse pairs of heavy hydrogen atoms together into helium atoms under controlled conditions. During this process energy is emitted in the form of neutrons. This fusion can only take place at immensely high temperatures, and a major problem has been to achieve such temperatures without vaporizing the container in which the reaction occurs.

THERMONUCLEAR 'FUEL' EXTRACTED FROM THE SEA

The high temperatures required were reached by passing an electric current through heavy hydrogen taken from the sea. The hot gas was prevented from coming into contact with the walls of the container by the magnetic field associated with the current, which automatically applied a 'pinch' effect and kept the gas in the centre of the cylinder. To overcome the difficulty of protecting the ends of the cylinder, it was made in the form of a ring or torus. A further problem, that of the instability or 'wriggling' of the discharge in the gas, was solved by applying an external magnetic field parallel to the discharge.

FIRST ZETA, THEN SCEPTRE III

The first apparatus to overcome the various obstacles was the Zero Energy Thermonuclear Assembly (ZETA), constructed and partly designed for the Atomic Energy Research Establishment by Metropolitan-Vickers, an AEI company. A little later a smaller apparatus known as SCEPTRE III was built in the AEI Research Laboratory, and this achieved similar success.

THE CONSTRUCTION OF SCEPTRE III

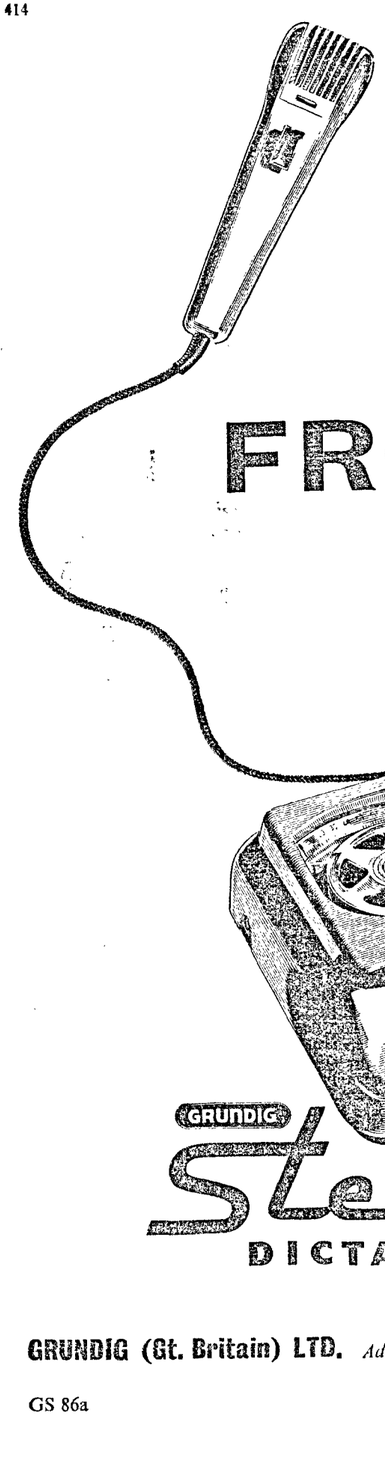
SCEPTRE III is an aluminium torus made of 12" diameter tubing with a mean ring diameter of 45". It is threaded by an iron core weighing 4 tons. Into this apparatus energies of up to 40,000 joules have been discharged, causing currents of up to 200,000 amperes to flow in the heavy hydrogen gas. Temperatures of nearly 4 million degrees have been reached.

AEI AND NUCLEAR POWER

The prospects of using the power of fusion are, however, still distant and nuclear fission stations will clearly be needed for many years. AEI's leadership in the nuclear field is further illustrated by its part in the building of the Berkeley Nuclear Power Station.

AEI AND THERMAL POWER

43% of the major generating plant put into service in England's coal- and oil-fired stations last year was built by AEI.

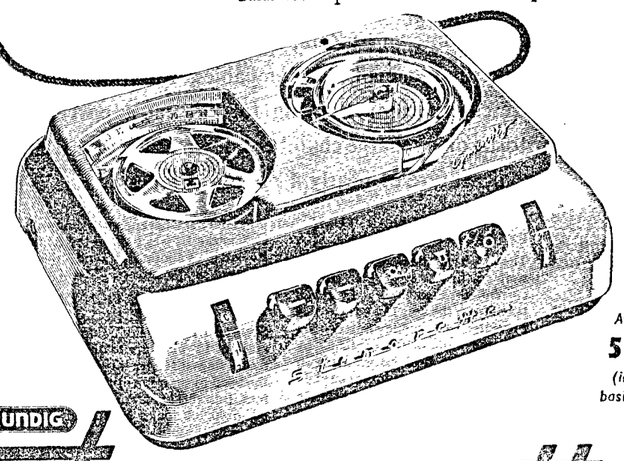


AEI AND WATER POWER

The four most powerful waterwheel generators in the world—at Quebec—were built by AEI. Other important waterwheel generators have been installed at San Esteban and Los Peares in Spain and more have been ordered for Kariba and for the Bakhra Dam in India.

AEI BRINGS POWER INTO YOUR HOME

The chances are that the power which comes into your home is brought there by AEI cables and controlled by AEI switchgear and transformers. And inside your home, have you got a Hotpoint washing machine, Mazda lamps, an Ediswan tube or valves in your TV set? These are all made by AEI: these are all ways in which AEI spells power for everyone.



AEI spells power for everyone

TAPE IT FROM HERE

The Stenorette is produced by the world's largest manufacturers of tape recording instruments. Designed to meet the pace of modern business, it has all the features anyone could want in a dictating machine *at a fraction of the cost.*

The Stenorette takes 25 minutes' dictation for each spool of tape. It has instantaneous playback, automatic erase and back-space facilities, will record conferences, memos or incoming telephone calls and provide clear, balanced reproduction for transcription.

Average cost
52 gns
(including the basic accessories)

Elbe just above Hamburg with the strategic east-west Mittelland Canal at Fallersleben, near Brunswick, and thus with the main network of west Germany's vital inland waterways. It was estimated in 1950 that the 70-mile project would cost some DM400 million, including the purchase of the land. Presumably it would now cost rather more, and Hamburg alone cannot foot the bill. To requests for federal funds Bonn replies that all there is to spare at the moment for public works of this kind is going into the canalisation of the river Mosel as promised in the Saar agreement with France. This inescapable political commitment, involving the construction of thirteen locks and the deepening of more than 120 miles of river, is expected to cost DM520 million. Hamburg, it seems, must wait. Meanwhile, by boldly developing its oil refineries and local manufactures, it has already made itself into west Germany's foremost industrial city.

Mr Macmillan in New Zealand

FROM OUR CORRESPONDENT IN WELLINGTON

MR MACMILLAN may well be more popular in the parts of the Commonwealth that he has so far visited than he was in his own country when he left it. He has at any rate left a most favourable impression in New Zealand and not least with the new Labour government which might have been expected to view the Tory prime minister with reservations. He showed a quick understanding and sympathy for New Zealand's problems—which were put to him frankly—, a belief in the future of the developing Commonwealth which has been held here for some time and therefore found ready acceptance, and an easy informality which quickly corrected any popular misconceptions about the unapproachability of British prime ministers. Even the British newspapermen who were accompanying him were surprised by his willingness to submit to press conferences and remarked ruefully that it was not quite the same at home.

He had, of course, no need to try to convert New Zealand's new Labour prime minister, Mr Walter Nash, to a pro-British attitude. Mr Nash has always had that since he came to New Zealand from Kidderminster many years ago and his cabinet feels the same way. Mr Macmillan had one long meeting with the whole cabinet at which he gave what was described as "a most impressive exposition" of the British approach to various world problems and those of the Commonwealth. Later he had separate meetings with Mr Nash himself and with the ministers responsible for economic affairs and defence.

Mr Macmillan devoted little time to any detailed discussion of New Zealand's defence and overseas commitments; these appear to be satisfactory to the British Government and there is no reason whatever to suppose that they will be changed by the present administration. New Zealand politicians, who necessarily have more limited horizons than their British counterparts, undoubtedly benefited from Mr Macmillan's clear and comprehensive fact reporting on his tour and particularly from his references to his Indian impressions and his estimate of the situation in South East Asia.

Whatever misgivings he may have entertained about the state of Anglo-New Zealand trade relations, Mr Macmillan's visit should have reassured him that the sweeping import restrictions imposed by Mr Nash at the beginning of January were in no sense a retaliation against Britain for any alleged lack of sympathy with New Zealand's desire to protect its British market. The Labour government has in fact been at great pains to prove to the country that it had no option about imposing immediate import restrictions if it were to protect its dwindling London reserves; thoughts of anti-British retaliation did not enter into the matter.

Naturally, however, Mr Nash and his advisers took the opportunity of emphasising all the arguments in favour of helping New Zealand's trade that have already been made in London by two successive trade missions, and of pointing out how dependent New Zealand is on its major market. But Mr Nash is quite realistic enough to understand that Mr Macmillan is as limited by his own domestic policies and problems as New Zealand politicians are by theirs, and that little can really be done except to explain New Zealand's overseas marketing worries at first hand and hope that Britain will give the best treatment it can to one of its main food suppliers. No doubt Mr Macmillan was also told that New Zealand will welcome almost as warmly as Britain anything that can be done to bring down the prices of British exports, for the nine per cent increase in the cost of manufactured imports last year played an important part in running down New Zealand's reserves. There was certainly no element of bargaining in the discussions, but rather a recognition on both sides that when New Zealand is in a position to earn more on the British market it will be in a position to spend more.

New Zealand's arguments for a review of the Ottawa Agreement, which were put in London last year by the trade delegation led by Mr Holyoake, were reiterated to Mr Macmillan by Mr Nash. Just before Mr Macmillan departed, the two prime ministers gave a joint press conference at which they announced that preliminary discussions would be held in London in April and May with a view to re-examining the Ottawa Agreement later this year. When this re-examination is undertaken, New Zealand will undoubtedly seek stronger protection margins for its food exports. It is recognised here, however, that a re-examination of the Ottawa Agreement is one thing—but that, in view of the vastly changed conditions of today, a reffirmation and extension of the agreement is quite another.

Israel's Purse Strings

FROM A CORRESPONDENT

HOW far is Israel economically dependent on the United States? Between 1948 and 1956 Israel financed the absorption of more than 850,000 immigrants by importing foreign capital worth $2,400 million. Of this, more than 60 per cent came from the United States. But official American aid to Israel—in the form of grants, Export-Import bank loans and other credit given with State Department approval—amounted to less than $400 million, barely 16 per cent of capital imports.

The lion's share of American aid is unofficial. More than $1,000 million has been transferred to Israel in the form of donations or investments by the Jewish community in

America. This explains Israel's remarkable resilience under State Department pressure a year or so ago. Israel's army could carry out its retreat from the Gaza strip and the Sinai desert at its own pace; the country's economy was not seriously incommoded by the temporary suspension of the grant-in-aid, the postponement of the Export-Import bank loan and the other pressures designed to induce it to obey the United Nations.

During 1956, Israel received $47 million from the sale of overseas bonds, chiefly in America. This was as much as the entire grant-in-aid and American official loans together. The United Jewish Appeal and other donations, mainly from American Jewry, brought in $88 million. The value of German reparation payments also reached $33 million, and another $26 million was transferred to people living in Israel as personal restitution from the West German authorities. Excluding short-term capital movements, Israel's net capital imports in 1956 amounted to some $315 million. The official American contribution was thus less than 15 per cent. Israel was—and still is—economically dependent not on the State Department or the United States Treasury, but on the goodwill of American Jewry and the continued good faith of west Germany.

★

There are, of course, means by which the American government could interfere with the flow of private American-Jewish money to Israel. The tax exemption granted to United Jewish Appeal contributions (as to other donations for charitable purposes) could be repealed, or the sale of State of Israel bonds forbidden. But in fact, as was proved during the Suez crisis, neither this administration nor any other is likely to embark on so un-American a course in order to force its will on a small country. Moreover, the American dollar is a free currency, and Americans who wish to transfer it abroad can always find ways of doing so.

Israel's trade with the United States is also not large enough for its dislocation to disrupt the economy. In 1956 only 18 per cent of Israeli exports went to the United States compared with nearly 60 per cent to Western Europe. By far the largest single export to America was polished diamonds, the net value of which is small, since the crude diamonds are imported. The European market, which absorbed Israeli citrus fruit and industrial products, was therefore economically even more important than its visibly overwhelming share would indicate.

Western Europe also sent to Israel almost twice the goods supplied by the United States. Britain, west Germany, France and Finland have gradually emerged as Israel's major European suppliers, and each of these countries has shown in the past that its trading policies are not easily influenced by the State Department. The French, in particular, have been making a serious and successful effort to improve their standing in Israel, both by selling arms and by granting a $45 million credit in francs for the purchase of capital goods required for the development of the Negev desert.

A high percentage of Israel's imports from America consist of wheat, meat and other agricultural commodities which—in the limited quantities Israel requires—are readily obtainable elsewhere. At a pinch, therefore, Israel could bear the limitation of its trade with the United States without suffering more than discomfort. What it could not stand without strain is a highly unlikely eventuality—limitation of its imports of American private capital.

West Indian Manœuvres

FROM A SPECIAL CORRESPONDENT

MR NORMAN MANLEY'S recent decision not to enter federal politics has been received less tragically in Jamaica than outside the West Indies. Like Mr Eric Williams in Trinidad, Mr Manley takes the view that his main task is to look after his own island at a critical stage in its development rather than to play for higher stakes on the federal level while incurring the risk that his People's National Party would be defeated in the next Jamaican elections.

When he announced his decision, Mr Manley spoke of the need to fight anti-federalist forces in Jamaica. This was a polite way of saying that he alone can bring Jamaica round to accepting a political complex in which at first it seems that it would have to give more, economically, than it receives. Opposition to federation does exist in Jamaica, but Mr Manley claims too much in presenting himself as the only true federalist. The general Jamaican reaction is favourable, especially since there had been fear that this island would be stripped of its best men. Mr Manley and other PNP leaders express confidence that Jamaica's interests at the federal level will be capably looked after by a team to be selected shortly. The probable leader of the team, Mr Vivian Blake, is a rising young politician who is sometimes mentioned as an eventual successor to Mr Manley himself.

Meanwhile, negotiations with the Americans over the site for the capital, Chaguramas, are running into heavy weather while anti-American feeling mounts. Great prominence is given in the West Indian press to moves in the United States Senate urging the American government to resist efforts to dislodge the navy from Chaguramas. It is possible that this need for a common front on an issue of major importance is helping to unite the disparate units of the federation over the difficult early stages. But the feeling is also growing that the federation is getting off to a bad start, and the fear is commonly expressed that little interest may be taken in the federal elections when they take place in March. Some such calculation may be present in the minds of Mr Manley and Mr Williams: if federation breaks down, they will still hold the political leadership of their own islands, while if federation succeeds, they can still claim credit for it.

MOTOR BUSINESS

The December issue of this quarterly research bulletin for the motor and allied industries is now available. It includes:

THE OUTLOOK FOR 1958
THE ITALIAN MOTOR INDUSTRY
THE MARKET IN THE UNITED STATES FOR EUROPEAN CARS

The Bulletin is fully illustrated by charts, amongst which are:

PRICE INDICES OF USED CARS AND VANS
NEW REGISTRATIONS IN GREAT BRITAIN

For full particulars of this Bulletin apply to:

World-wide direct Shipping services — terminus of 500 miles of inland waterways.
Largest Docks on the North East Coast — Deep-water Jetties.
Splendid opportunities for establishment of new Industries—Sites, Raw Materials, Labour and Services readily available.

For further information write to TOWN CLERK, GUILDHALL, KINGSTON UPON HULL

SALISBURY: On the morning of September 12th, 1890, Lt. Col. Edward Graham Pennefather and his Pioneer Corps reached the plain on which Salisbury now stands. As the site seemed ideal for a town he decided to build a fortress which would form the nucleus of the capital of the territory which Cecil Rhodes had obtained. The name of this fortress was Fort Salisbury.

This decision marked the end of an adventure in which the Pioneer Corps—a mere handful of men—built a wagon road through 300 miles of difficult country in order to occupy and hold the land conceded by Lobengula, Paramount Chief of Mashona. The new town took shape immediately. The first three men to start business in it were a butcher, a baker and a lawyer; and since the butcher had no meat to sell, he was forced to go out with his rifle and bring back game for his shop!

Today, Salisbury, capital of the Federation of Rhodesia and Nyasaland, is a modern city of nearly 200,000 people. Important both administratively and industrially, it is also a collecting and distributing centre covering the principal tobacco, maize and mining areas of Southern Rhodesia.

Business men who require information on commercial conditions in the Federation of Rhodesia and Nyasaland are invited to get in touch with our Intelligence Department, 54 Lombard Street, London, E.C.3.

THE BUSINESS WORLD

TAXATION REFORM—I

Mr Amory's Mantle

MR HEATHCOAT AMORY, one suspects, feels that he has inherited a hair-shirt from his predecessor. But he has also inherited, down a much longer line of descent, a responsibility to continue, so far as he honestly feels able, the reform of the British tax system. This is a slow job, but no matter for despair. A great deal has in fact been done following the reports of the Tucker Committees and of the Royal Commission, and also by the initiative of the Inland Revenue itself.

The part of the Inland Revenue in tax reform has been important. Under the inspiration of the late Lord Waverley, the Revenue produced the 1945 Income Tax Act which refurbished the tax allowances against the using up of capital. They introduced the initial allowances and the balancing allowances and charges to go with them. The Inland Revenue secured the great extension of the arrangements for the granting of relief in respect of overseas taxation. These began with the restricted Dominion income tax relief that held force from 1922 to 1945; the present system offers relief of overseas taxation on a reciprocal basis with individual overseas countries, and since 1953 full credit has been allowed for overseas tax against tax in the United Kingdom. The Revenue must also be given credit for the Consolidation Act of 1952, uniting some fifty enactments into a single Act and reducing the weight of the statutes from six to one and a half pounds.

But in taxation things do not stand still. The patchwork is spreading again and one could wish for a new consolidation every five years. It is nearly ten years since Sir Stafford Cripps set up the first Millard Tucker Committee to guide him on the taxable capacity of industry in a period of rapidly rising prices. Industry then complained that the 20 per cent initial allowance as it existed in 1949 gave insufficient help. If the Tucker Committee had felt able to give a clear lead it is possible that "replacement costs" would have been adopted for both fiscal and commercial accounting purposes. Unfortunately, the committee concluded: "We are unable to agree with the view that a proper system of computing (taxable) profits must necessarily take into account changes in the value of money." Orthodox accountancy practice had never accepted that proposition either, and conservative accountants may be thinking that falling prices now allow this old controversy to be tossed out of the window—though indeed they do not. But the result is that capital allowances have been governed by expediency. The Tucker Committee recommended that the existing system of initial allowances should be continued in an extended and discriminatory form. Alas, a few days after the issue of the report in 1951 Mr Gaitskell suspended them altogether. They have since been reintroduced, melded with investment allowances, and condemned by the Royal Commission; and everybody regards them as a crude and uncertain way of accounting for inflation.

But the first Tucker Committee covered in their terms of reference the whole field of the taxation of trading profits and of the many valuable recommendations they made, a surprising number have got on to the statute book. Trading losses can now be carried forward indefinitely against profits earned in the same trade, and for the current and the next succeeding year against other income. Terminal losses can be carried back for three years. The losses incurred by some members of a group of companies can be offset against the profits earned by others. All in all, the United Kingdom system for giving tax relief for losses is as comprehensive and equitable as any in the world. The second Tucker Committee reported in 1954 on the taxation of pensions and allied subjects. It provided primarily the frame-work for retirement benefits for the self-employed, thus creating equity out of the previous confusion. This reform was substantially adopted in the

1956 Finance Act together with the exemption from tax of the capital content of purchased annuities.

Finally, there is the Royal Commission which began work in January, 1951, and published its third and final report in June, 1955. Its hundred specific recommendations will provide the draftsmen with material for years to come. Patience is always necessary; one of the recommendations of the 1920 Royal Commission, that cemeteries should be treated as wasting assets for tax purposes, eventually found its way into law thirty-four years later. How seriously will the Chancellor and the Revenue take the reports of the Royal Commission? The 1956 Finance Bill was largely pre-empted for the proposals on pensions for the self-employed, though room and time were found for some rationalisation of the basis of assessment of overseas employments. But in the last Budget a start was made along two lines. First, the dilemma resulting from this country's claim to tax all profits arising here, and also profits of undertakings overseas whose control and management are exercised here, was faced by creating the overseas trade corporation. Secondly, a start was made in personal taxation by dismantling the prehistoric barriers of surtax and earned income relief.

TAKEN together, the achievements of twelve years of effort are impressive: capital allowances; double taxation; the extended allowance of losses and a host of detailed improvements in the assessment of trading profits; retirement benefits for the self-employed; some betterment of personal allowances; and the overseas trading corporation. But a staggering programme of reform already mapped still needs to be carried out. The misfortune is that it is beyond the capacity of the Chancellor, the Revenue, Parliament or tax-payers and their advisers to deal with more than one or two major pieces of fiscal legislation each year. What, then, should have priority?

The Royal Commission was asked to give a list of priorities, but could not do so, because fundamental differences of principle led three of its members to submit a separate memorandum of dissent. So the initiative is largely with the Treasury and with the Inland Revenue. As long ago as May, 1956, the Revenue told the Institute of Chartered Accountants that it could help by suggesting an order of priority for the implementation of the Royal Commission's recommendations. The Institute gave a memorandum to the Chancellor nearly a year ago, and this should provide a useful check-list against future progress. The memorandum breaks down the recommendations into five categories: major and minor recommendations to which the highest priority is attached by the Council of the Institute; recommendations which should be implemented as soon as possible; recommendations which are considered desirable; recommendations on which no view is expressed; and those which the Council does not approve. For good value an additional list is given of changes that the Council supports but which were not dealt with by the Royal Commission.

The major items in the first category are obviously those of immediate practical importance. The expense rules, for both Schedule D and Schedule E, lead the way. Some time ago Mr Thorneycroft asked professional bodies to submit to him examples of the notorious limitation of the Schedule E definition of allowable expenses to those "necessarily incurred in the performance of the duties" so that he might consider them before the budget next April. Next comes the proposal that the hardship caused by progressive taxation where incomes accrue with marked irregularity should be mitigated by averaging. On this the chartered accountants regard a 50 per cent range of fluctuation in incomes as too stringent a qualification for averaging, and would prefer a 20 per cent range—which was in fact used in the relief of earned incomes which fell during the war. Thirdly, the council proposes that capital allowances should be given for commercial buildings—a point that the Royal Commission itself did not regard as urgent. On the valuation of stock the council supports the recommendation that no single method should be imposed on a trader; he should be free to adopt any proper method that is suited to his business, subject to safeguards relating to the effect of a change from one method to another.

Unlike the first Tucker Committee, the Royal Commission thought that a change in the method of charging trading profits, from the previous year to the current year basis, was both feasible and desirable. The Institute, speaking with the authority of a body responsible for unravelling the tangles of the existing system, lends its strong support to this proposition. It also recommends—and surely with reason—that the provisions for charging surtax on the undistributed profits of director-controlled companies should be recast so that they cover not the whole of the undistributed profits, but only that part which it would have been reasonable to distribute. It has yet to be seen whether this proposal has been jettisoned by Mr Thorneycroft's folding up of the Cripps umbrella from August 1st last year. Meanwhile the full rigour of Section 245 applies to director-controlled companies. Finally there is the question of replacement allowances to take care of inflation. This matter was not dealt with by the Royal Commission; indeed, it based its report on the hypothesis of a stable price level. But the accountants come back to it in their list of additional matters. Perhaps they can give a more positive lead by recognising that in commercial accounts an amount set aside to cover a replacement allowance, however calculated, is a cost and not an appropriation.

Expenses, fluctuating incomes, stock valuation, the basis of assessment, capital allowances on commercial buildings, replacement allowances—here is a programme to give the Treasury and the draftsmen full employment for several years. But there remains one further reform more urgent and deserving than all the rest: the reform of the profits tax. To most people this has a priority all of its own, and 1958 ought to be a very good year to deal with it. This tax that nobody loves will be examined more closely next week.

A Roof of One's Own

EVERY seeker after a house goes through the same misery—always after *the* house, the paragon that has never yet been built. The "well-kept garden, stocked with fruit trees," turns on inspection into two currant bushes straggling across a mud patch; the newly hung and proudly displayed wallpaper insults the eye; the plumbing system should be the centrepiece of the Parkes Museum. Finally, after incalculable emotional cost, a "house that will do" is found. The financial costs are calculable and, to the capital-less, not consoling.

As estate agents use the adjective "desirable," it has nothing to do with beauty. A "desirable residence" is a house like thousands of others: "desirable" really means mortgageable. That is the key word for almost all house buyers. The estate agent usually provides his services free to them—and often they include a useful contact with a building society. His charges fall on the vendor: 5 per cent on the first £300, 2½ per cent on the next £4,700, and 1½ per cent on the remainder.

If the estate agent's list fails to attract, one can turn to an architect and build a house that is desired instead of merely desirable. Tripping lightly through the gauntlet of planning consent (not always easy, for the man in the district council office sometimes claims to know best) the man who builds for himself will find that architects' fees start at 10 per cent on £500 or less and run down at ½ per cent per £500 to 6 per cent on over £4,000. Such fees and the price of land (which is expensive on a good building site) will be taken account of in the valuation of the property for mortgage. Many recent mortgage advances have been on newly built houses, but most of these are houses designed and erected by a builder (sometimes using money lent him by a building society), conforming to the worthy but dull standards of a mortgagee's valuer. Building societies are not venturous. They thrive on the conventional houses that they and everyone knows, and it is not easy to secure a suitable advance on a house built to nonconformist taste.

This does not prove that they are stuffy. But, to protect themselves, they must feel reasonably confident that the house will secure a ready sale without an undue fall in its value throughout the life of the mortgage. So they prefer the three- or four-bedroomed house built in the suburbs in the late thirties, or in a postwar building estate. That is where the demand clusters. They do not like the exotic or the old fashioned—the crumbling but underpinned cottage or the commodious but tie-barred Victorian mansion. They will not accept short leases (and they will look only at leases with 30 years still to run after the last repayment). Long leases (some run up to 999 years) they will consider. Apart from his other costs, the mortgagor then pays the ground rent, subject to deduction of tax. They do not like flats, offering mortgages only on modern, self-contained, purpose-built maisonettes (though in Scotland, with its tradition of tenements and wynds, the policy is less restrictive). The tighter money is, the greater is their preference for the commonplace. Their lending depends very much upon the personal credit of the borrower. The rule of thumb is that repayment and interest should not take more than about one-fifth of a purchaser's income. For incomes below £750 and for those in the surtax range (where in fact the income rule seldom needs be applied) the proportion may come down to one-sixth. The rules are not inflexible; much is left to the judgment of the local branch manager, so long as he keeps within his quota.

Having made an offer "subject to contract" for a house on which he can obtain a mortgage, the would-be purchaser is faced with a bill for legal and other costs:—

BILL OF COSTS

Purchase price and valuation	£2,000	£3,000	£4,000	£5,000
Mortgage advance 80 per cent	£1,600	£2,400	£3,200	£4,000
	£ s.	£ s.	£ s.	£ s.
Conveyance fee (registered land)	25 0	35 0	40 0	43 15
Land registry fee	5 0	7 10	10 0	12 10
Conveyance stamp duty	10 0	15 0	40 0	75 0
Mortgage stamp duty	4 0	6 0	8 0	10 0
Mortgage fee	10 10	14 10	18 10	22 10
Search fee, etc., say	3 0	3 0	3 0	3 0
Inspection fee (on mortgagee's behalf)	5 0	7 0	9 0	11 0
Survey fee (on purchaser's behalf)	15 15	21 0	26 5	31 10
Total Costs:— Registered Land	78 5	109 0	154 15	209 5
Conveyance fee (unregistered land)	37 10	52 10	60 0	67 10
Other fees (as above)	48 5	66 10	104 15	153 0
Total Costs:— Unregistered land	85 15	119 0	164 15	220 0

The consolidation of these fees, especially through the composite charges arranged by many mortgagees, may sometimes reduce total costs below the scale fees shown above. But a tricky conveyance will swell the bill. None of these costs should be regarded as inescapable. Regrettably mortgagees do not show the purchaser their valuer's report; and for his own protec-

tion he should secure an independent valuation—or even a more costly full structural survey.

Then come the bills for the incidentals : a life insurance cover on the mortgage (though building societies do not normally insist on such a cover); insurance on the house (normally 2s. 3d. per cent on a comprehensive policy with additional premium for flood risks) ; removal expenses ; repairs (which may be mitigated by a maintenance claim in relief of the Schedule "A" tax assessment) and redecoration ; re-equipment and re-furnishing ; the cost of putting the garden in trim, and so on. There may even be road charges, if the road has not been taken over by the local authority, and these can work out between £4 and £5 a foot, but this is unlikely on newly built property.

THE incidentals are formidable, but the purchaser's chief concern is to know what mortgage he can obtain and what it will cost. "As much as can be got" is the motto of most mortgagors. The normal maximum advances on freehold property with vacant possession (based on the valuation or purchase price, whichever is the lower, and that usually means the valuation) are shown in these figures for a building society currently charging 6 per cent :

THE NORMAL MORTGAGE

Age of Property	Valuation	Normal advance	Normal advance	Maximum term of years	Monthly gross payment at 6 per cent
		Per cent			£ s. d.
Pre-1918...	£750	75	£560	20	4 1 8
"	£4,000	75	£3,000	20	21 17 6
1918-39....	£2,500	80	£2,000	25	13 1 8
"	£3,500	80	£2,800	25	18 6 4
Newly built	£2,500	80	£2,000	25	13 1 8
" "	£4,000	80	£3,200	25	20 18 8

These are typical figures, but some building societies are already charging more than 6 per cent. It is occasionally possible, indeed, to secure advances up to 90 or 95 per cent, either by a mortgagor's deposit of additional security, or under the Macmillan Act (with the local authority guaranteeing the excess advance) or through a mortgage guarantee insurance policy (usually requiring a single premium of 7½ per cent on the excess advance). Even 100 per cent advances are possible when an employer puts up a guarantee for his employee. But with money tight, all mortgages have strict quotas ; a good proportion of first-class risks are being turned away ; advances or the life of the loan are often reduced; priorities are given to existing investors or borrowers of the building society or to business introduced through such contacts as estate agents or builders associated with the particular society. And the older the house, the lower down in the queue comes the borrower.

Rates charged by a building society can be and usually are changed over the life of the loan. Normally this alteration in interest rates is accommodated not by a change in the monthly payment, but by lengthening the period over which the payments are made. When mortgage rates are high and the loan period already long, such an extension may be impossible, since the monthly payment would then contain a negligible repayment of capital and consist almost wholly of interest. As the years pass, the interest element in mortgage payments grows smaller and the capital repayment grows larger.

EXAMPLES OF MONTHLY COSTS

BUILDING SOCIETY MORTGAGE at 6 per cent for 25 years

Year	Gross Interest per £100	Principal per £100

40	3,000	11 1 8	9 4 0	15 0 0	8 12 6

* Assuming tax at 8s. 6d in the £

A purchaser can, alternatively, try to secure a fixed interest loan for the full term, with no reduction if rates fall in later years. This he might do through a private lender, or through his local authority, though he will find that its current rate of interest (tied to what the Public Works Loan Board charges) is no less than 7 per cent. Or he can take out an endowment policy with a life office and secure a house purchase loan against it. Neither the endowment premium nor the loan interest will change from one month to another. One life office is currently charging 6 per cent, but will advance only 60 per cent of the valuation ; another offers bigger advances, close to the building societies' limits, but is charging 6½ per cent. The rates, varying from one office to another, are competitive, but endowment premiums increase with the age of the borrower ; the building societies allow for this age factor by limiting either the size or the life of the loan.

COSTS OF THE MORTGAGE

BUILDING SOCIETY

Mortgage Advance	Term years	Rate per cent	Gross Interest	Net Interest*	Total Net Outlays
		£	£	£	£
2,000	25	6	1,895	1,089	3,089
3,000	25	6	2,842	1,634	4,634
2,000	20	6½	1,559	896	2,896
3,000	20	6½	2,338	1,344	4,344

INSURANCE COMPANY

Loan on Endowment Policy (without profits) at 6 per cent for man aged 30 years

Loan	Term years	Net Endowment Premium*	Net Interest*	Total Net Outlays
£		£	£	£
2,000	20	1,437	1,380	2,817
3,000	20	2,129	2,070	4,199
2,000	25	1,383	1,725	3,108
3,000	25	2,043	2,588	4,631

* Assuming tax at 8s. 6d. in £.

Interest on house loans ranks for tax relief. On a building society loan, relief takes the form of a reduction in total taxable income (so that as the interest element in the payment diminishes, the relief and tax coding is adjusted). On loans against an endowment policy (the premiums on which also rank for tax relief under the life assurance rules), tax at the appropriate rate is deducted at source ; that is the borrower pays net interest to the life office. Thus, in comparing costs in the final table, interest and the endowment premium have been shown after tax at 8s. 6d. in the £.

Put in this way, the costs of home ownership, though they do not compare unfavourably with unsubsidised rents, are formidable. But social inertia and rent subsidies are more potent than these costs in explaining why only about one-third of the houses in this country belong to owner-occupiers, compared with nearly two-thirds in North America. Against these costs, the man with capital can set down the interest he loses by using up his capital to make a cash payment for his house. But most house purchasers—mortgages cluster around £2,000 and £2,500—have little capital. They can escape rent only through a mortgage. It is the one and only form of saving—compulsory in a sense—that many people do. But how many of them choose to do so without weighing the full cost of the mortgage, local rates and Schedule A tax ? Yet a growing number think the cost worthwhile to have a roof of their own—or a roof they can truly call their own when the last repayment has been made.

BUSINESS NOTES

IN THE MARKETS

Interest Rates at Work

A STRONG market in sterling and a further rise in gilt-edged, carrying the *Financial Times* index of Government stocks up from 80.26 to 80.58 in the week ended on Wednesday, have been the features of a market in which the widening differential of interest rates between this country and most foreign centres has become an important force. This week's sharp drop in the New York Treasury bill rate has called into being arbitrage business between London and New York. The London bill rate is now 6⅜ per cent and the New York bill rate 2⅞ per cent. The difference of 4 per cent, offset by a premium on the three months' forward dollar equivalent to an interest rate of 3⅝ per cent per annum, leaves a clear margin of about ¼ per cent on covered interest arbitrage between the two centres. This has led to some demand for sterling on American account, and partly explains the firm tone of the official dollar rate at about $2.81½.

Covered arbitrage involves the purchase of British Treasury bills matched by a forward sale of the equivalent sterling. It has little ultimate effect on the British gold and dollar reserves, because the bank which provides the forward dollars covers itself by a purchase of spot dollars. The main factor in the strength of sterling is still the continued commercial demand for sterling from North America, persisting despite the fall of sterling area commodity prices. That demand has been supplemented in the last few days by a little buying of long dated and even undated sterling securities on American account. The combination of these factors would have had a marked effect on the dollar rate, but for the quiet though persistent buying of dollars by the Exchange Equalisation Account, which should find its reflection in the January reserve figures, to be published early next week. Transferable sterling has also been in fair demand, strengthening from $2.7885 to $2.7895.

It is inevitable, as the market begins to see high interest rates in London getting to work and presumably pulling in gold, that people in the City should begin wondering, however prematurely, how long it will be necessary to keep the high interest rates in London pegged. If—the argument runs—the spring and summer are to pass without any relaxation, the tightening, which may become necessary in the autumn, when the seasonal pull is against sterling, could carry London interest rates very high indeed. That kind of thinking helped an industrial share market that seemed sold out to stage a rally with the start of the new account on Wednesday.

THE ECONOMY

A Brighter View of Output

IN the provisional estimates of industrial output for 1957 as a whole that they released this week, the official statisticians have revised upwards their indices for August, October and November, and have forecast a further slight improvement in the level of activity, after making allowance for seasonal factors, in December. These revisions do not significantly affect comparisons between 1956 and 1957—there was an increase, but of only about 1½ per cent, between the averages for the two years. But they tend to contradict the impression given earlier of a possible downward turn in the last few months of the year—a statistical sign which had been in line with the slightly more than seasonal increase in unemployment, the apparently continued shrinkage in the labour force at work, and reports of increased short-time working and redundancy in some industrial areas.

The apparent strength of output in December—seasonally adjusted, it looks at first sight to have been 140-141 per cent of the 1948 level—will have owed much to the remarkable level of production in the motor industry in view of the longer shut-downs than usual during Christmas week. Revisions for the earlier months derive mainly from more favourable assessments of manufacturing output (though not quite as favourable as Mr Butler's in last week's economic debate, when he managed to translate an increase over the first 10 months of about 2 per cent into one of 5 per cent).

Many industries report their output quarterly, not monthly, and some take a long time about it, so that slight revisions of this kind are always liable to be made to the index for several months back. It may be that intermediate engineering activity was being stimulated by demand for motor com-

INDEX OF INDUSTRIAL PRODUCTION
(Seasonally adjusted)
(1948=100)

	All industries 1956	All industries 1957	Manufacturing 1956	Manufacturing 1957

August	134	138	137	142
September	137	140	142	145
October	136	137	139	141
November	137	140	140	...
December	136	140–141	139	...

ponents: and though new orders are now not so easy to come by, the makers of plant and machinery are still delivering investment goods at a rapid rate. This revised record of production, it is worth noting, would seem to show no net result at all, as yet, from the tightening of the credit squeeze in September: it seems surprising that the timelag should be so long.

Rising National Expenditure

NATIONAL output as a whole, according to estimates of the Central Statistical Office based upon expenditure data, was 5 per cent higher in value in the first nine months of 1957 than in the corresponding months of 1956; after allowing for increased costs and prices, it was 1½ per cent higher in real terms. The whole economy, that is to say, moved precisely in line with industrial production, which would seem to imply a similar expansion in the other half of the economy—in agriculture, transport, communications, public administration, distribution and the service trades. However, what direct evidence there is of the increase in non-industrial output suggests that it was under 1½ per cent:

CHANGES IN EXPENDITURE AND OUTPUT

	Jan.–Sept., 1957 £ mn.	Changes between Jan.–Sept., 1956 and Jan.–Sept., 1957 £ mn.	Changes between Jan.–Sept., 1956 and Jan.–Sept., 1957 %	Estimated real change at constant prices %
Consumers' expenditure	10,200	+400	+4	+1½
Public authorities' current expenditure	2,679	+ 83	+3	−2 to −3
Gross fixed capital formation at home	2,465	+191	+8	+4
Value of physical increase in stocks and work in progress	510	+125	...	...
Exports of goods and services	3,445	+168	+5	+1¼
Total final expenditure at market prices	**19,299**	**+957**	**+5**	**+2**
Met by :—				
Gross domestic product	14,053	+702	+5	+1½
Imports of goods and services	3,357	+181	+6	+3
Net taxes on expenditure	1,889	+ 74	+4	+1½
Final output	**19,299**	**+957**	**+5**	**+2**

there still seems to be some discrepancy between estimates based on expenditure and those based on indicators of production.

Taking into account a 3 per cent rise in the volume of imports of goods and services, the CSO reckons that total resources available in the economy were 2 per cent greater in the first nine months of 1957 than in the same period of 1956. Personal consumption, which accounts for just over half of total demand, rose by 1½ per cent and took the largest slice of these extra resources. At the same time there was a real decline of some 2 to 3 per cent in the current expenditure of public authorities (the decline in central government outlay alone was somewhat greater). Exports rose only 1½ per cent in volume and the biggest increase was that of 4 per cent in fixed investment, heavily concentrated on vehicles. Over the nine months the rate of increase in investment rose in the public sector (particularly in transport and communications) but levelled off in the private sector. By the third quarter of the year private manufacturing industries were investing no more, in real terms, than they had been doing twelve months before.

Stockbuilding, according to this reckoning, seems to have continued throughout the first nine months of 1957, at a high rate: it is believed to have absorbed about one-third of the extra resources. Over the last three years the volume of stocks and work in progress has risen by an eighth—considerably more than the increase in industrial or total output during that time.

Rising Incomes—and Costs

FOR some time the Central Statistical Office has been edging towards estimates of personal income, expenditure and saving: these have now been published as a welcome addition to the latest set of quarterly national accounts. Wages and salaries account for two-thirds of personal income and their quarterly estimation is based on the PAYE tax returns made regularly to the Inland Revenue. From a sample survey of how quarterly figures of pay and tax were related in 1954-55, the CSO has translated the changes since then in total tax receipts each quarter into changes in the payroll, after allowing for any alterations in rates or allowances. Movements from one quarter to the next may be questionable—why, for instance, is there a fall in the second quarter of the year? But comparison between similar periods in one year and the next should give a reasonably accurate picture and this may be broadly true too of the estimates of other forms of personal income, although some of these must involve a fair measure of guesswork.

Wages and salaries once again led the way last year. In the first nine months they were 6 per cent higher than in the same period of 1956 but income from self-employment, rent, dividends, and interest rose by only 2 to 3 per cent and welfare payments by 4 to 5 per cent. (Consumer prices went up 2½ per cent between the two periods.) In total, personal income was 5 per cent higher before tax, 4½ per cent higher after tax. Since consumer spending rose only 4 per cent, it is deduced that people continued to save last year. The figure of saving not only embraces a wide definition but is a residual item and consequently a shaky one. Nevertheless the accounts suggest that personal savings in these nine months were some £100 million above the very high level reached in the same months of 1956.

The provision of these quarterly estimates of wages and salaries, prompts, it may seem ungratefully, the question once again as to whether the British statisticians could not provide monthly payroll figures as do the Americans. The trouble would seem to be that PAYE returns do not all

PERSONAL INCOME AND SPENDING
(£ million)

	Wages and salaries	Total personal income	Taxes & national insurance	Consumer expenditure	"Saving"

relate to the same period—some, for instance, will be sent in every four weeks, others every five weeks. It would be a pity, however, if such procedural differences were to kill this idea. But the next step forward from Great George Street seems likely to be the quarterly assessment of company profits which it is hoped will start later this year.

LOMBARD STREET

National Discount Accounts

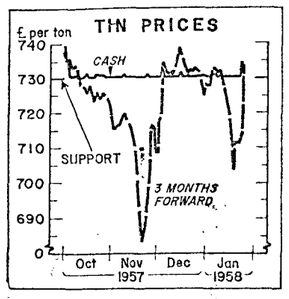
THE balance sheet and chairman's statement of the National Discount Company do not clear up the points raised by the preliminary profits statement. Commander Level Coke states that the balance of profit is "calculated upon the same principles as heretofore, and after making a provision towards securities depreciation." But there are differences in the descriptions of how profits are struck and in the auditors' certificate, that leave many matters obscure. The 1956 accounts stated that the balance of profit had been struck after "making a provision towards securities depreciation"; the 1957 balance, it is stated, includes "the excess of amounts added to the book values of securities for customary amortisation of discounts on short-dated securities purchased below redemption values over a provision made towards securities depreciation."

The argument of the management appears to be that it has always been the company's practice to write up the values of securities bought below par, anticipating part of future redemption profit, just as it has always been the practice to write down securities bought at a premium. But many people will feel that there is a material difference between a net writing down of the portfolio (as in 1956) and a net writing up, as the latest accounts show, when this writing up coincides with a larger uncovered gap between the market value and the book value of the National's portfolio. The auditors draw attention to the increase in disclosed depreciation, from £2.5 million to £3.1 million (on a bond portfolio reduced from a book value of £83.6 million to £67.9 million); they do not draw attention to what is presumably an element in this widening, the change in the definition of the valuation from "at or under cost and below their redemption values" at the end of 1956 to "at cost plus a proportion of discounts on short-dated securities purchased below redemption values" in the latest balance sheet.

The logic of the National's book-keeping over the years seems to be to disregard fluctuations in capital values which are expected to have no ultimate bearing on the profitability of the business. That is the argument that is brought in to justify the anticipation in 1957 of part of the future redemption profit on the bonds—a system that would equally understate the favourable effect of any downward movement of interest rates. The profit as shown brings into the accounts of a particular year the expected share of a future capital profit that will eventually be realised—provided that the bonds are held to final redemption and the company is not forced to make premature realisations. The average life of the bond portfolio is again stated to be just under three years, and the directors may argue that there is no undue risk in booking an instalment of profit on them, as they did last year. But it is still a profit that is contingent on events, and not one that has been earned in any final sense. Moreover, the National does not charge against current profits the losses realised during the year on sales of securities; it is not easy, indeed, to see how this loss was covered. As defined in the National Discount accounts the profits figure means very little to shareholders or the public; and it would be kind to describe the small increase (from £202,103 to £208,117) shown for a year of admitted difficulty, in which the two other leading houses both show lower profits, as a paradox.

"I Am the Market . . ."

BOTH the Union Discount, the giant of the market, and Alexanders, that also makes up its book at the year end, show, like the National, a reduction in their bond portfolios and an increase in bills. Alexanders shows only a fractional reduction in its securities portfolio, at £31.8 million, and an increase in bills of just over £10 million, to £70.6 million. But the Union shows bills up by £21.4 million, to £185 million, and bonds, at less than market value, down by £14.5 million, to £58.2 million. The chairman, Lord Kennet, refers to the company's aim "in these difficult days with their uncertainties about Bank rate, to trim the ship by reducing our holdings of bonds, in length of maturity and in amount, and by promoting business in bills." The contingent liability on commercial bills rediscounted is up from £21.3 million, to £34.5 million, the highest ever.



Impressive new information about the business of the Union Discount was also given by the manager, Mr Arthur Trinder, in his evidence before the Bank rate tribunal. The Union's turnover of bonds, Mr Trinder revealed, averaged in 1956 some £31½ million a week; turnover of bills averaged rather more than £88 million a week. Immediately before the Bank rate increase on September 19th, the bond book was between £80 and £85 million. This clearly implies a substantial run down between then and the end of December, part of which presumably resulted from the encashment in November of the maturing 2½ per cent Serial Funding Stock. But sales of some £12 million, Mr Trinder stated, were made in the week following the increase in Bank rate.

Mr Trinder was asked by the Tribunal why, since he himself expected some increase in Bank rate, he sold after and not before. The answer highlights this company's peculiar limitations: "I am the market in certain short bonds, so therefore I have to sit tight and do nothing. . . . The market is not big enough for a company like the Union Discount to move effectively in one day." Technically, when disposing of large blocks of securities, Mr Trinder does not sell: "you do not offer stock; you say to a broker if he sees a buyer will he bid you."

TIN

Tin Council's Firm Decisions

WITH much needed vigour the International Tin Council has fought back a second crisis of confidence in the metal. The chart shows how forward tin was sold down to a discount of more than £27 a ton below the cash price as last week's meeting of the International Tin Council approached. The assumption of those who were selling must have been that the Council would not, or could not, hold the cash price at £730 a ton. There were some grounds for such scepticism: between the last days of November and the end of December the buffer stock had to buy 5,000 tons of tin. In the market there is little doubt that it has continued to take in tin at about 1,000 tons a week in January, and that upwards of 17,000 tons of its buying capacity of just over 23,000 tons must have been committed. To show its firm intention, the Council made four decisions:

(1) It disclosed that it had called up on December 30th the final contribution to the buffer stock, thereby admitting that the buffer stock then held 15,000 tons.

(2) It extended the present quota period during which 27,000 tons may be produced from March 14th to March 31st. That makes the period 3½ months instead of three for the same quota and makes the rate of restriction 40 per cent (60,000 tons per annum) instead of 28½ per cent (just over 40,000 tons per annum).

(3) Exports were fixed for another quarter—April-June, 1958—at the same rate of restriction, i.e., at 23,000 tons for the three months.

(4) Delegates unanimously agreed to recommend their governments to consider the creation of a special fund to be put at the disposal of the buffer stock manager. That implies an addition of undisclosed amount to the buffer's buying power.

TIN OUTPUT QUOTAS

Country	Percentage	Quota 3½ months Dec. 15–Mar. 31 tons	Quota 3 months Apr. 1–June 30 tons
Congo	8·95	2,416	2,059
Bolivia	20·43	5,516	4,697
Indonesia ..	20·43	5,516	4,697
Malaya	37·50	10,625	8,625
Nigeria....	5·34	1,442	1,283
Thailand ...	7·35	1,985	1,690
Total....	100·00	27,000	23,000

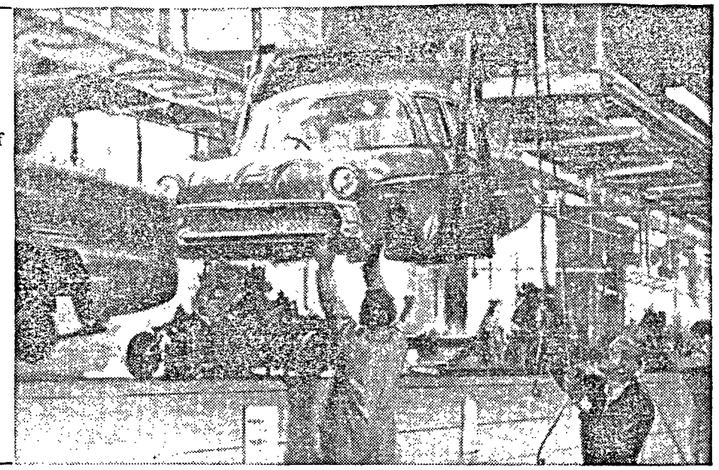
On any sort of arithmetic, though not necessarily on every sort of psychology, the Council has done enough to stop the rot. Calculations of the gap between unrestricted supplies and expected consumption range around 30,000 to 40,000 tons a year. Restriction is to be at the rate of 60,000 tons a year. The tin which is now reaching the buffer stock manager in embarrassing quantities represents the reduction of surplus stocks by consumers and supplies that had reached the pipe line before restriction took effect on December 15th. The pipe line should be drained within a couple of months.

Prospects for the Scheme

THERE are many in the tin industry who doubt the wisdom of the decision to make the floor price £730 a ton instead of £640 as originally proposed. A restriction scheme with a low support point is always stronger than one with a high one; the element of defence for the marginal producer at the expense of his more efficient neighbour is less, and the incentive to producers outside the scheme to increase their output is much smaller. But nearly all the critics now see that a retreat on the support point when the scheme is facing its first serious test would kill it. For the moment those who favour a low price policy must be content with the fact that the buffer stock manager has been given permission to sell in the neutral price range starting at £781 a ton—if he gets there.

Tin restriction is now causing unemployment in the producing countries and must be biting hard into profits. Nevertheless, it appears that it can be made to work on two assumptions. First, it must be supposed that the British Government will continue to refrain from sales from the British stockpile, and at this price level the assumption is believed to be well founded. Secondly, it must be assumed that the American stockpile, with holdings of tin which could easily swamp the buffer, will still maintain a benevolent neutrality. Given those two assumptions, confidence among consumers should be gradually restored, but there is a long way to go. America, much the largest consumer, has drastically curtailed its takings of tin from Europe and from Malaya. Shipments to the United States, normally in the region of 5,000 tons a month, dropped in November to 1,380 tons and in December to 1,104 tons.

MOTORS



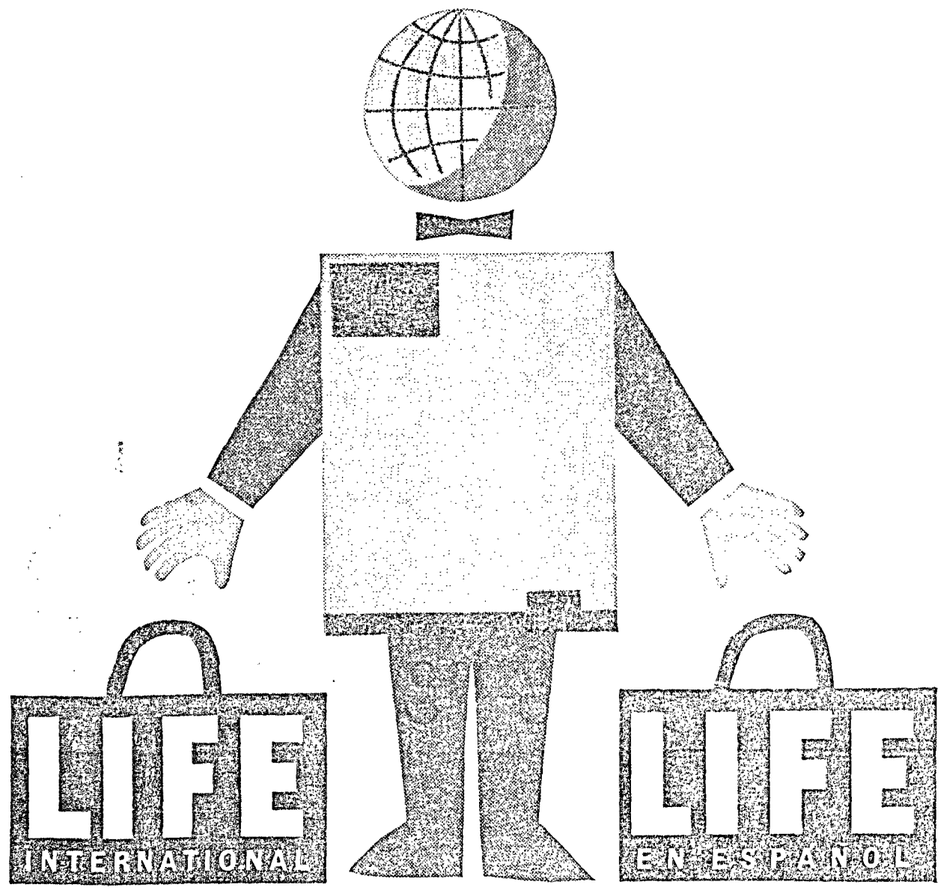
Space for a New Standard

THE only two firm points in the flurry of speculation that has arisen this week over Standard Motor's future plans are that it has rented a factory in Coventry from the Ministry of Supply and that it intends to use it for extra facilities in the further expansion of its car production. Neither is strictly new: in his last annual statement Lord Tedder revealed that the company were negotiating for extra premises for, as he then stated, "the introduction of motor car paint and trim facilities" and that it was working on a new car model programme, for which it had retained the services of the Italian designer Giovanni Michelotti.

What the new factory, which was formerly used by the Daimler organisation and runs to 280,000 square feet, will actually be used for has not yet—so Standard say now—been decided. But the company is up against two major bottlenecks at the moment. The tractor plant at Banner Lane is running virtually at its full capacity of 100,000 a year—actual production has now reached the annual rate of 95,000 tractors—and if that is to be increased significantly more space will have to be found somewhere. And the company's car and commercial vehicle output is now running at the rate of 85,000 a year which is the limit of its own and its sub-contractor's body-making capacity, though well short of Canley's assembly line capacity which could reach 130,000 a year. Whether Standard uses the new plant at Radford to expand its production facilities, or whether it shifts various ancillary departments from Banner Lane and

'ENGLISH ELECTRIC'

A million motor vehicles rolled out of British factories last year, made by machines with the strength of giants, the precision of watchmakers. Only electricity—powerful, adaptable, precisely controlled—could have made this possible. Industry's need for electric power is constantly growing; and ENGLISH ELECTRIC is helping to meet it by equipping many of Britain's new power stations—including Hinkley Point, the world's first 500,000-kilowatt atomic power station.



bringing you

For every British family that had a car ten years ago, nearly two families have cars today—a total of nearly four million cars. Thus electricity, which powers the factories that make the cars, helps to bring the convenience of motoring to more and more people. Serving the motor car manufacturers, and prominent in every type of industrial activity, ENGLISH ELECTRIC supplies a great range of motors and control equipment to harness the mighty power of electricity for everyone's benefit.

Conley to Radford so as to keep production nearer the final assembly lines, remains to be seen. The company intends to spend about £1 million over the next two or three years on the whole scheme, and hopes to bring Radford into operation within twelve months.

Guesses about the new car are heavily in favour of a lightweight model with several new engineering features—automatic transmission and independent suspension have been suggested. But Standard is keeping silent: all it is prepared to say is that "the new model has been evolved after intensive world market research, because it is intended for exactly that—the world market."

THE ESTIMATES

£154 Million of Supplementaries

THE story of the estimates, on which Mr Thorneycroft resigned, was not carried any further by last week's economic debate in Parliament, but in one respect the budget accounts were made to look a little better than they seemed before. The expected supplementary estimates for 1957-58 for agriculture were presented only just before the debate, for an amount of nearly £54 million (of which £45 million was attributable to the additional cost of the domestic price guarantees in consequence of the fall in world prices), and the Chancellor stated in the debate that the further supplementaries for 1957-58 to be presented shortly will total about £100 million. The year's gross addition will thus be about £154 million, which is appreciably less than had previously been rumoured. It is now known that part of the addition will be for defence. The underspendings on other votes to be set against the supplementaries will not be known until the end of the year, but the Chancellor emphasised that they will be "considerable." The totals of the defence and civil estimates for 1958-59 are expected to be published towards the end of February.

BANK FIGURES

The Credit Trend

THE statements of the clearing banks for mid-January, following hard on the heels of their end-year balance sheets, suggest that the steepening in the curve of credit expansion reflected by the end-December figures may have been exaggerated by special temporary influences. The January statements also show the extent of addition to the clearing banks' gilt-edged portfolios occasioned by the issue of the 5½ per cent Exchequer Stock. Bank investments rose in the first fortnight of January by £33¾ million; a larger part of that must have been purchases of the 5½ per cent Exchequer stock. The gross take-up of this new issue was surely notably larger than the net figure, since the Government broker was selling it against the maturing 4 per cent Conversion Stock and other bonds.

The banks' net deposits fell by £124 million in the two weeks, following their rise of £211 million in the last six weeks of 1957. The turn-round in gross deposits was still more marked, owing to the swelling of balances in the clearing at the year-end. The best indicator of the latest credit changes is to compare the January with the November statements. In these eight weeks net deposits rose by £156 million, compared with an increase of £135 million a year before; liquid assets were up £132 million, a little less than a year before; and advances fell by £15 million. Borrowers other than the state boards repaid £34 million,

compared with £25 million in 1956-57. This trend of rising liquidity and falling advances apparent since the rise in Bank rate is likely to be sharply reversed in the current weeks as the big tax payments fall due.

ATOMIC APPOINTMENTS

Strengthening the Board

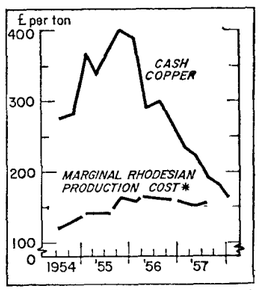
CONSIDERABLE internal reorganisation seems to be going on within the Atomic Energy Authority following fairly sharp criticisms in the first of Sir Alexander Fleck's three reports. The Fleck report, however, merely provided an excuse for making changes which some members at least on the Authority's board believed were long overdue. It was noticeable that when Sir Christopher Hinton left the Authority at the beginning of the winter, his post as director of the industrial group centred at Risley was taken over by his deputy, Sir Leonard Owen, but his seat on the Board was not. Indeed, it remained unfilled until last week, when W. R. J. Cook, the deputy director of the weapons group at Aldermaston, was formally appointed as the director "responsible at Board level for policy questions concerning the Authority's factories and the engineering aspects of the Authority's work."

It was not only Sir Christopher who was carrying out two man-sized jobs. The AEA is divided into three groups—research centred at Harwell, engineering centred at Risley, and weapons at Aldermaston. Both Sir John Cockroft and Sir William Penney, directors of Harwell and Aldermaston respectively, were doubling this executive work with responsibility for policy and planning in these fields. Sir John has now given up the post of director of Harwell to concentrate wholly on research policy, and Sir William Penney will do the same when a replacement can be found for him at Aldermaston. The changes illustrate the transformation that has taken place in atomic energy even since the Authority was formed five years ago. Its plants have completed the metamorphosis from inconsequential, unpredictable adolescence into a middle-aged jog-trot with its occasional bursts of bad temper, as at Windscale. They do not any longer require babying along by the country's foremost scientists, whereas future policy does need their whole-time attention. Particularly difficult questions must be

decided during the next few months about reactor development, and in particular the eventual impact of fusion. Important decisions also need to be taken about the new research centre at Windfrith Heath, how it is to be staffed and what work it should do. Some of these are decisions that should rightly have been taken a year or eighteen months ago. The backlog of work facing the board is considerable.

STEEL

How Not to Get Grabbed



CHAIRMEN of the major steel companies are united in their determination to oppose renationalisation of steel to the last; but somewhat disunited over just how to go about this. Stewarts and Lloyds this week received overwhelming support from their shareholders for the resolution the board had proposed pledging support to a vigorous "Mr Tube" campaign against the Labour party's declared intentions. Dorman Long's board did not itself propose any such resolution, but supplied the wording for one proposed by a shareholder at an informal meeting following upon its annual meeting; and the board of United Steel accepted a similar resolution proposed by one of its shareholders at its annual meeting on Thursday. Sir Walter Benton Jones, in a special statement supplementing his remarks circulated with the company's report and accounts, said "It would be wrong to suppose that companies which have not [asked for a resolution approving of active opposition to nationalisation] will not be equally active. In our case . . . we feel sure we already have the full support of the shareholders for anything we do."

Sir Walter added that the steel companies were going to organise their opposition through "courses which we hope will be co-ordinated." The British Iron & Steel Federation has clearly worked out a broad strategy for propaganda on behalf of private ownership in steel: its current factual prestige advertising, emphasising ambitious plans for expansion, excellent labour relations, and the good impression the industry makes on independent observers, is a model of its non-controversial kind. Clearly there can be more opinions than one about the right places to which one's arguments should be addressed, the tone appropriate at any time, and the time, perhaps, to change one's tone. The federation is clearly disinclined to get into head-on collision too soon with proposals Labour has still never specifically set out: and it is clearly embarrassed about the possibility that "Mr Tube" may believe it essential to do just that and that such views may have more appeal for shareholders than any more fabian tactics in defence of private enterprise in steel. This is strictly a domestic matter for the industry, upon which the sympathetic outsider simply cannot offer useful advice. The predicament is gravely harming the industry's chances of raising capital for expansion, as Labour is well aware; nor will that prevent the party from attacking it for not expanding enough, when the time comes. But it seems doubtful whether Mr Harald Peake's request to the Labour party and the trade unions to decide and disclose their policy soon would necessarily benefit the industry. Labour is committed to the principle of renationalisation, and are unlikely to change that by any decision for the present; the longer it remains uncommitted to any irrevocable pattern, perhaps the better.

COPPER

The Cartel that Never Was

LAST of the important copper groups to agree on a 10 per cent cut in production is Rhodesian Anglo American, which has now decided to reduce its planned output for 1958 by 27,000 tons to 243,000 tons. It will do so in a most ingenious and intelligent way. Its Bancroft mine, which was intended to produce 40,000 tons this year, will cease production for a year. But the other two mines in the group, Nchanga and Rhokana, will not cut output—indeed, they will increase their production by 13,000 tons. By way of compensation to Bancroft they will pay the interest on Bancroft's £3 million of 5 per cent notes and £6½ million of 6 per cent loans; they will also pay the cost of Bancroft's pumping and primary development which will be pushed ahead. Nchanga and Rhokana will thus fare better than they would have done if they had cut production, and Bancroft, which turns out to be a wet mine with a production cost for its first nine months of the order of £400 a ton, will have had a breathing space in which to get its basically valuable property in order. Last year it incurred a loss of £1½ million. It would have had no chance of avoiding a loss this year, and at 10s. 6d. its 5s. shares will become the speculative counters for those who want to take a view of copper cheaply.

* Based on Roan Antelope and excluding replacement.

Concentration of the impact of necessary curtailment on the least efficient producer, an increase in production from those units that can still make profits and preparedness to meet an expanding market when it comes are all features of the Anglo American decision and are all worthy objectives. It remains pertinent to ask: "Ten per cent curtailment below what level?" The Anglo American group restricts 10 per cent below its planned production for 1958. Final figures of actual production for 1957 are not available, but it seems likely that the restricted production for 1958 will exceed by some 10,000 tons the unrestricted production of 1957. Rhodesian Selection Trust, father to the cartel that never was, has virtuously restricted by 10 per cent below actual production for 1956, but has claimed an exception by insisting on a reasonable output for Chibuluma (which was not then producing). It is quite obvious that a total of the voluntary production cuts, from Chile, from the Congo, from most American producers, and from the two Rhodesian groups, mostly nominally of 10 per cent, but all below different datum lines, has no very precise meaning. For what it may be worth, the total seems now to be approaching 250,000 tons. It is significant that producers are trying to close a gap between production and consumption which was calculated to be about 200,000 tons a year ago. That gap must now be wider, and the market still fears that the producers have done too little and too late.

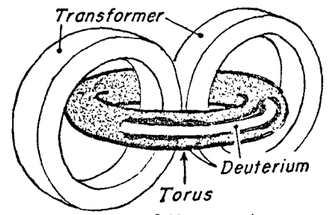
Zero Energy Thermonuclear Apparatus



THE scientific papers released on Friday last week show how Britain and the United States stand in relation to each other in thermonuclear research. British scientists claim, to quote Sir John Cockcroft, to be "90 per cent certain" that they have achieved controlled thermonuclear fusion. The Americans do not.

How British scientists have done this, the physical processes they used and the implications of their success were discussed in an article in *The Economist* of January 4th. In the seven scientific papers, two of them British and five American, that have now been published, the following facts emerge:—

1. Serious research in thermonuclear fusion began in Britain in 1947. No work was started in the United States before 1951, and it was not given serious consideration before 1953.

2. The Zeta apparatus at Harwell consists of a hollow ring of ¼ inch gauge aluminium one yard in bore and three in diameter, linked by the iron core of a vast pulse transformer; fifty scientists have been engaged on it; it took two years to build and cost £300,000. Zeta is much bigger than any similar apparatus in the United States. So even is AEI's Sceptre III, which is one-third the size of Zeta and cost £10,000. Most American equipment for thermonuclear research consists of straight tubes of up to 24 inches long which give only limited results. The one ring-shaped (or torus) apparatus used for this research in the United States is the University of California's Perhapsatron; this is a small glass ring two inches in bore.

3. Size has an important bearing on thermonuclear reactions. Extremely high temperatures are needed and they must be held for a reasonable period, ideally for about a second. The trick is

Concentric magnetic fields squeeze hot gas to a dense column floating in middle of the torus, axial fields keep it smooth

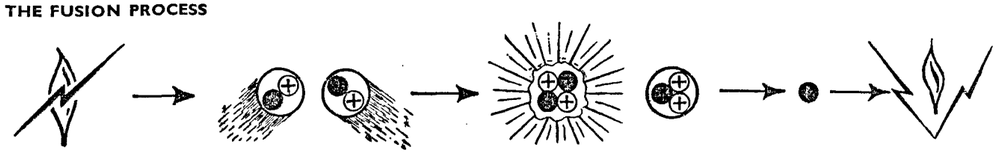
to keep the gas in the torus tube from touching the walls of its containing tube. When that happens, its temperature drops immediately and fusion cannot occur. The bigger the bore of tube, the more room is given for the column of gas to avoid the walls.

4. Both countries have reached high temperatures—5 million degrees C in Zeta, nearly 4 million degrees in Sceptre III, and an estimated 6 million degrees in Perhapsatron. High temperatures have been held much longer in the British experiments—on Zeta five-thousandths of a second; and on Sceptre, one two-thousandth. American workers have not yet sustained such extreme temperatures for more than one or two millionths of a second. The difference between these small times is itself immense. British scientists have achieved a substantial measure of control over the hot surging gas used in the fusion process; without such control no workable system for obtaining power from fusion would be conceivable.

5. The first evidence from Zeta that controlled fusion was possible dates from August 30th last year. Sceptre III followed on November 25th. In the United States Perhapsatron began to get high temperatures for much shorter periods on December 17th. The most interesting difference between the results shown by Zeta and Sceptre is that the latter uses only a fraction of the power that Zeta needs; this difference is explained by sharp differences in working pressures and techniques rather than by Sceptre's smaller size.

THE next step is to get much higher temperatures in Zeta, and to design bigger apparatus with about the same bore of tube, but substantially greater diameter, capable of reaching 100 million degrees temperature. Here, it is hoped, may be the forerunner of an actual fusion power system.

Zeta's temperatures are limited at the moment by the amount of current that can be run in to heat the gas. The condensers now installed cannot give more than 200,000 amperes, and extra condensers are being fitted to raise the current to 500,000 amperes. Temperature rises rapidly as current is increased (proportionately to the square of the rise in current), and by this time next year Zeta should be running at 30 million degrees.



To this, however, there may be one important qualification. One of the most important of the five American papers, a theoretical comment by Professor Spitzer of Princeton on the Zeta results, points out a real discrepancy between what theory says should happen inside Zeta, and the rapid heating that actually takes place. "Some unknown mechanism," he writes, "would appear to be involved," and British scientists are inclined to agree with him. Up till now, this unknown mechanism has been on their side; it may not always be so co-operative.

WHY HEAVY HYDROGEN?

A hydrogen atom has a single positively charged particle balanced by one electron. One in every 3,000 atoms is deuterium or heavy hydrogen. This has a second, uncharged particle in its nucleus. Nuclei repel each other but the presence of the second uncharged particle in the deuterium atom weakens this repulsion and is the starting point for fusion.

THE FUSION PROCESS

Extreme heat causes . . . collisions among deuterons which fuse into . . . helium, release a neutron and three million electron volts of energy.

STOCK EXCHANGE FEES

Refurbishing the "House"

IN Throgmorton Street the shrewd man looks for his hedge against inflation. But the costs of running and improving the services of the Stock Exchange are themselves subject to inflation. Routine costs have risen; provision against the redemption of debentures has to be made; the compensation fund is to be built up to £250,000 in the next six years; publicity demands a growing share of the budget; and in not more than twenty years' time it is hoped to rebuild the London Stock Exchange itself. The Council, therefore, hopes to build up a fund of £1,500,000 which together with a mortgage would finance a building costing £4,500,000.

That is the background to the plans the Council has just announced for increasing the annual income of the Stock Exchange by about £120,000. Two thirds of that sum—£80,000—will be found from members' pockets and the other third—about £40,000—from an increase in quotation fees paid by companies whose securities are quoted on the Stock Exchange. No part of it falls on the main users of the Stock Exchange's facilities—the investing public. The proposed changes are detailed in the accompanying table. They have to be accepted as inevitable for an institution whose business seems likely to be concentrated more and more in the hands of a smaller number of member firms.

Members' Subscription Fees

	Old Rate gns.	New Rate gns.
Active members	40	65
	50	75
	60	80
	85	100
	105	115
Retired members	30	40
	40	50
	50	60
	100	105

Clerks' Subscription Fees

	Old Rate gns.	New Rate gns.
Authorised clerks	30	40
	50	60
	100	110
Unauthorised clerks	15	25
	30	40
Settling room clerks	10	15

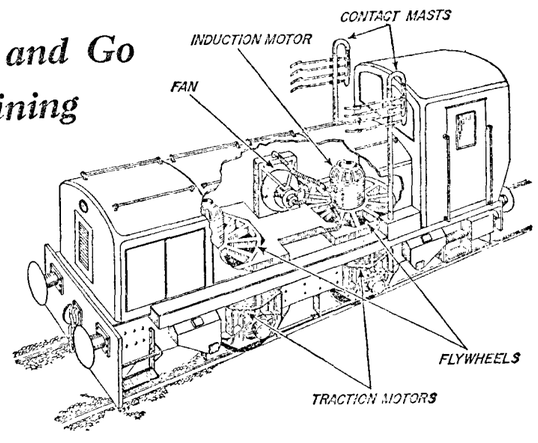
Entrance Fees

A member entering the Stock Exchange with three sureties will continue to pay an entrance fee of 1,000 guineas and a member entering with two sureties one of 500 guineas.

The entrance fee for authorised clerks is to be raised from 50 to 60 guineas and for unauthorised clerks from 15 to 20 guineas.

Quotation Fees

Quotation fees for amounts under £1,000,000 remain unchanged, but the flat rate of 500 guineas for amounts over £1,000,000 has been changed to the following scale:—



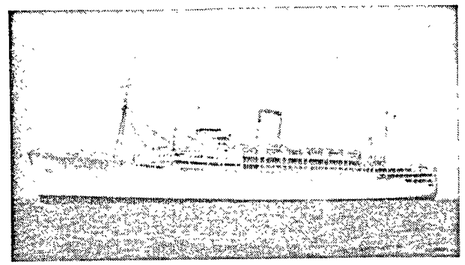
£1 to £2½ mn.	...	750 gns.
£2½ „ £5 „	...	1,000 „
£5 „ £10 „	...	1,500 „
£10 „ £20 „	...	2,000 „
Over £20 mn.	...	2,500 „

SMITHFIELD FIRE

Insurers Count the Cost

THE losses of the fire insurers become news when a great conflagration occurs like the burning out of the poultry section of the Smithfield market. The London insurance market—and the risk is well spread through it—will have to pay the City Corporation, which owns the market, about £1 million; perhaps another £500,000 has been lost in tenants' equipment and stock. This loss may be spectacular,

Push and Go in Mining



THE idea of putting energy into flywheels so as to harness the spin put into them after the initial charge has been stopped is not new. Nor is the idea of storing energy in a vehicle while it is stationary to drive it when it moves off. The "fireless" locomotive that gets its steam from stationary boilers has been used in shunting yards for many years; so have electric battery delivery vehicles, which function on a similar principle. The two notions come together in miniature in the child's "push and go" toy. Now this combination is being studied for full size vehicles: in Italy in suggestions for an electrogyro bus which would run on city transit services, charging its flywheels at convenient halts; and in this country in an electrogyro locomotive developed by the National Coal Board in conjunction with Sentinels and Oerlikon.

To charge the NCB locomotive a contact mast is swung out to connect with the power supply; the electricity drives two induction motors which set the two 1½-ton flywheels (a tenth of the locomotive's total weight) spinning up to their maximum operating speed of 3,000 rpm. The kinetic energy thus stored in the spin is sufficient, on reconversion into electric power and supplied to the two traction motors, to drive the locomotive for 30 minutes at a speed of 15 mph. It takes about 2½ minutes to charge the locomotive, by which time the equivalent of 18 kWh is stored; about 12 kWh is used by the time the flywheels have slowed down to their minimum operating speed of 1,800 rpm. The locomotive has four forward and four reverse speeds, and the gyros are enveloped in hydrogen at reduced pressure which acts as a coolant and reduces loss of gyro rpm.

The prototype is now undergoing surface trials in Northumberland; if proven technically and economically the construction of a fireproof underground locomotive will probably follow. It will be interesting to compare its practical efficiency with electric vehicles that store power by battery: anything that brings electricity into the field of motive power for vehicles independent of any lines is worth watching.

It's good living on board a P&O ship

One of the most pleasant aspects of a P & O cruise is the high standard of comfort in cabin and public rooms. Here you settle down at once. Everything around you says 'welcome, relax and forget the fretted world for a while'. Your cabin becomes a place of slippered comfort when the excitement of the day is over. Sound sleep prepares you for the delights and experiences of the next day. This 'make yourself at home' feeling sets the key for a truly wonderful holiday that will benefit health and outlook long after the cruise is over.

Ask for the full cruising programme from your local Travel Agent or direct from

SUNVIC CONTROLS PROGRESS

More complex industrial processes — increasing need for competitive efficiency—they both make great demands on control methods and we are continuously perfecting more advanced techniques.

We have developed a unique safety monitoring system for Berkeley, the first commercial nuclear power station, in addition to supplying considerable instrumentation for this and three research reactors in Britain and Western Germany.

For industry generally, particularly the fields of oil, chemicals and steel, we can offer comprehensive electronic and pneumatic control systems including automatic data handling equipment.

We are already well-known for a wide range of control and recording equipment used in both industrial and scientific research programmes.

the things they say!

Yes, but is this Profit-Sharing scheme actually doing you I.C.I. people any good?

Judge for yourself! Last year I.C.I. Ordinary Stock worth about £3,500,000 was handed out to more than 50,000 employees.

And one mad rush by everyone to sell their stock for a bit of ready cash, eh?

Far from it. So far, only about a quarter of the stock involved has been sold. Most of our people seem to like the idea of having a personal stake in their own Company.

ICI

AA

but few years pass without some serious fires at home or abroad. As the Smithfield outbreak showed, fires can spread with disconcerting rapidity. Fire prevention in recent years has had to contend with increasing concentration of industrial production and with massive storage in big buildings without adequate fire brakes.

Last year three fires in this country caused damage of more than £1 million. The worst of them—the Jaguar fire at Coventry—cost more than £2 million and exceeded the expected loss on Smithfield. Nevertheless, it is not expected that last year will turn out too badly for fire insurers. Estimated fire damage in Britain and Eire in the first eleven months of 1957 at £24¾ million was slightly less than in the corresponding period of 1956. For each of the previous two years total fire wastage has been about £27½ million.

SCOTTISH BANKS

Charges Raised

SCOTTISH banks have long distinguished themselves from their larger English brethren by maintaining a standardised and published scale of charges to credit customers. From March 1st, in accordance with notice given last May, those charges will be increased. The banks point out that charges have been stable since 1952; meanwhile administrative costs have risen, advances have been held down by official requests, and the rise in interest rates has not been favourable to the Scottish banks, with their high ratio of deposit accounts.

The general increase in charges—which will not apply to the London offices of the Scottish banks—will be rather more than 50 per cent, but the opportunity is being taken of amending the basis of the scale to conform more closely with costs. Current accounts are to be charged at 30s. for each ledger page of 40 entries, debit or credit ; the minimum charge will be 12s. 6d. a half year. As in the past, the charge will be offset by an allowance, increased from 6d. to 9d. for each £100 of the minimum daily credit balance on the account during each calendar month. Accounts that are especially expensive to handle because of unusually large cash transactions or for other reasons will be subject to an additional charge arranged with the customer.

The customer of a Scottish bank may still be slightly better off than many customers of one of the clearing banks. His 9d. an entry compares with a basis of charging that varies considerably, and is often not known to the customer concerned, but is generally believed to average round about 1s. an entry. But by no means all bank accounts in England are charged on ledger entries.

GRAMOPHONE RECORDS

Going Stereophonic

THE BBC's experiments in stereophonic sound can be taken as a curtain raiser for the arrival on the market, probably in about twelve months' time, of the first stereophonic records. "Three-D" tape recordings of the kind used by the BBC have been on the market for several years: these tapes have the sound recorded in two channels rather as a stereoscopic film is photographed from two angles. It takes three pieces of equipment to play them ; a tape deck with a special amplifier and two separate loudspeakers placed at an angle so that their sound meets at a focal point, just as the two images of a 3-D film meet on the screen. This is essentially equipment for the high fidelity enthusiast interested in sound reproduction for its own sake: the tapes cost between £2 and £3 for the equivalent of a long-playing record, and the reproducing equipment runs from £150 to £400. But the record companies have found there is also a prejudice against recordings on tape, which is difficult and delicate to handle. They have devoted considerable ingenuity to finding means of producing a 3-D disc and record players to play it.

The disc itself has not proved difficult. Since the development of plastic materials for long-playing records the limitations associated with the shellac disc have vanished. For stereophonic sound the disc, like the tape, must have two separate sound channels. The stylus now picks up impressions from lateral indentations on the disc ; it is not too difficult to introduce on to the same disc what the companies call "hill and dale" impressions to provide the second sound channel. It is much more complicated to design a pickup head that will operate simultaneously in two directions, laterally and up-and-down, so that it plays both channels at once. This pickup will also have to be able to play conventional records—at each of the three speeds in which they are produced.

EMI have already announced that it might be ready to release limited numbers of stereophonic discs in a year's time, at prices not markedly different from those of stereophonic tapes (of which EMI is almost the only British supplier). Decca is working to roughly the same timetable and expects that records and players for them will already be on sale in the United States this autumn. The most important decision still to be taken is on standardisation of the 3-D system and the pickup heads to play it. This time, the companies hope to avoid the mistakes they made over the introduction of long-playing records where the variety of speeds have resulted in unnecessarily complicated record players. Stereophonic record playing equipment is not going to be bought unless it can handle all makes of stereophonic discs on sale, and all types of conventional "monaural" discs as well. The system must therefore be standardised in advance and accepted by all makers of equipment likely to be used with stereophonic recordings. In an industry where competition of almost primitive ferocity prevails, this could prove the biggest stumbling block of all.

MANPOWER

Recruits from Abroad

AMONG the 188,796 immigrants who took up jobs here last year, and thus started to stamp insurance cards, were two men that the Ministry of Pensions and National Insurance could only classify as having migrated from the Antarctic. They had been there, to further the activities of the International Geophysical Year, for at least the six months that are necessary to break off membership of the National Insurance scheme. Though the Ministry's records of overseas entrants to National Insurance can thus include citizens of this country, formerly employed here, who have been abroad, uninsured by the state, they provide the best estimates available of the accretions to our manpower through overseas immigration.

Last year's total of new overseas card stampers was greater than in 1956, the first year these figures were extracted from the Ministry's files at Newcastle. But this was only because of the arrival of thousands of refugees

from Egypt and Hungary: disregarding these, the additional manpower was rather less than in 1956, 170,769 against 177,272, which is what one would have expected as the news of the easing of Britain's labour shortage began to be noised abroad. There were fewer new arrivals from almost every main parent country—except Eire—and the number of West Indians fell sharply from roughly 29,000 to 18,500. The Irish element continued to flow strongly, probably because the easing of the labour shortage here was

OVERSEAS ENTRANTS TO NATIONAL INSURANCE

	1956	1957
From :—		
Commonwealth countries	28,750	29,900
Colonies, Protectorates, etc.	42,750	29,300
Eire	60,100	63,500
Elsewhere	47,000	61,100
Total	178,600	183,800
Excluding Hungarian and Egyptian refugees	*177,300*	*170,800*

less marked than the worsening of employment chances on the other side of St George's Channel (the Ministry's figures do not include Northern Ireland). The sharp rise in the number of entrants last autumn, for example, was no doubt because they thought there were more potatoes to be picked here last harvest than in Erin. Many of the Irish men and women come here only for the season—the hotel, farming, or building seasons—but some must become permanent members of the labour force, even if only to staunch the decline in the number of domestic servants.

Unfortunately, the Ministry's figures do not show how long these immigrant workers stay here or the industries to which they go. A substantial number of the 93,000 European workers that came here in 1956 and 1957 were admitted for less than twelve months—mainly entertainers and young girls seeking domestic service to learn the language. Others may pass on to other countries, such as at least 6,000 of the 21,000 Hungarians that arrived last winter. Commonwealth immigrants also include many birds of relatively short passage as, for example, young Canadians and Australians seeking experience or husbands and students taking vacation employment. Migration statistics are extremely incomplete; and it is only when, for instance, the closing of the night shift at a Yorkshire textile mill flushed out a hundred Pakistanis and put them on the dole that some of the places immigrants land up in come to official notice. But an impression has been gathered through the various contacts of the official machines with these immigrants that they are not so lacking in skills as is commonly supposed. Numerically, the net balance of manpower migration seems to be outward, and rather more experienced and trained talent may leave than arrives, but the net loss of skill does not appear to be as heavy as is sometimes made out.

HIRE PURCHASE

A New Study

UNDERSTANDING of hire purchase trading will be much assisted by the publication last week of "Hire Purchase in a Free Society,"* a study by the recently formed Institute of Economic Affairs, edited by Mr Ralph Harris and Mr Arthur Seldon. Some of the conclusions are controversial. The authors consider that hire purchase charges are competitive; they doubt whether hire trading is an important independent factor in inflation; they doubt also the efficacy of controls, though they avoid saying explicitly that there should never be any; and they urge that the commercial banks should participate in hire purchase finance. The public will have various views on these matters. But many will be glad that so much relevant information, particularly about the finance houses, their system of charging, and the sources of their funds, has been brought together into a book of reference.

* Hire Purchase in a Free Society, edited by Ralph Harris and Arthur Seldon. Published by the Institute of Economic Affairs 37 pages. 7s. 6d.

SHORTER NOTE

British European Airways estimates that it made a net profit of £1,200,000, after meeting all charges in the calendar year of 1957, the highest it has recorded at this time of the year. The corporation's financial year does not end until March 31st, when there is a good chance that it will show a net profit of at least £1 million, compared with only £216,770 the year before. Much of the improvement is due to the gradual tightening up in organisation that has been going on now for several years.

COMPANY AFFAIRS

CABLE AND WIRELESS (HOLDING)

ONE of the aims of the directors of Cable and Wireless (Holding), now the biggest of the investment trusts, is to attract small investors. They have tried to sustain interest by issuing quarterly earnings reports and by paying quarterly dividends. At the same time they proclaim their intention of leaving the ordinary dividend rate unchanged on the capital to be increased by free scrip issues, thus giving investors a share in growth through a larger nominal holding instead of through a higher rate per cent. The policy has had some success, and the 5s. units are among the least unpopular counters in the neglected investment trust market. For an investment trust, the ordinary dividend is well covered by earnings and the portfolio appears to be well managed.

The trust is not resting on its laurels. It is to raise £1,210,000 by offering as rights 4,840,000 ordinary shares of 5s. each at par in the ratio of one for every five held. This is a big issue for the investment trust market, but currently the shares are quoted at 10s. and at an "ex all" price of 8s. 5½d. the units, on the promise of a maintained dividend of 10 per cent, yield just under 6 per cent. The right time for an investment trust to build up its portfolio is when security prices are depressed.

The new issue is backed by a preliminary statement which shows a growth in gross income last year from £1,093,865 to £1,167,000 and in net earnings from £620,222 to £662,000. The ordinary dividend, absorbing £317,875 net, is left unchanged at 10 per cent. That rate the directors hope to maintain on the new capital although it is to be increased by a 10 per cent free scrip issue as well as by the rights issue.

WHITEHEAD IRON AND STEEL

A COMPARISON of the half yearly statement of Whitehead Iron and Steel Company with the company's preliminary report for the full year to end-September suggests that much of the fall in earnings occurred in the first half of the financial year. Over the full year to September 30th, the group's profits before tax fell from £1,345,857 to £1,004,093—a strikingly good final result seeing that in the six months to March 31st profits had come down from £789,760 to £426,948. In the interim report, the directors attributed the fall in profits to the reduction in demand for cold strip by the motor industry, to a contraction in profit margins and to the sale of a subsidiary, W. A. Baker and Company. Earnings should therefore now be on a more even keel, especially since the increase in steel prices in July, and the directors had no difficulty, in spite of the fall in net profits from £671,593 to £476,633, in maintaining the ordinary dividend at 20 per cent. On that dividend the £1 units at 45s. 6d. yield 8.8 per cent.

HADFIELDS

ESPECIALLY since its acquisition of Millspaugh, the maker of machinery for the paper industry, the business of Hadfields, specialising in castings and forgings, leans more towards heavy engineering than towards steel. Its results for the year to September 29th must be judged as disappointing, for the group's profits before tax have fallen from £1,335,482 to £1,131,734. Yet the gross profits of its subsidiary, Millspaugh, have risen from £411,662 to £536,156. Thus the established casting and forging business seems to have taken a knock. A year ago the chairman showed that the group had a capital financing problem on its hands and, in view of the fall in net profits from £547,532 to £452,486, it comes as no surprise that the ordinary dividend is left unchanged at 9 per cent. The yield on the £1 units at 19s. 3d. is £9 7s. per cent.

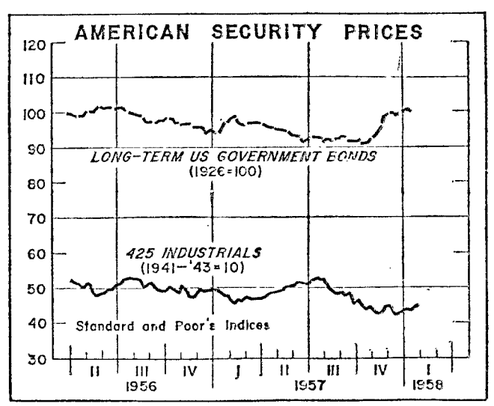
ANGLO AMERICAN

THE Anglo American empire is controlled through management agreements and cross directorships, rather than through voting control. That system is common to gold mining. But at every link of the chain of companies Anglo American Corporation has a substantial—usually minority—shareholding. The outside investor can participate either in a single mine, where his risk and his opportunity are both most intense, or in the top company of the pyramid where his risks are spread over a wide range of companies and of minerals. Or, and this is a popular method, he can choose among the various investment trusts within the empire, taking a spread of risks limited to one particular mineral.

Anglo American Investment Trust is such a route into diamonds and South African industrials. Last year its net income was little changed at £3,051,500 (against £3,013,322), and its dividend is maintained at 20s. per £1 share. This is not an unexpected result, as the dividends declared by companies within the Diamond Syndicate—and these make up the trust's income—were largely unchanged.

Orange Free State Investment Trust is the route into the OFS gold mines. Many of these mines moved into the dividend paying stage last year, and the net income of the trust jumped from £742,810 to £1,399,000. Its dividend is raised from 1s. 6d. to 3s. per 10s. share.

West Rand Investment Trust is the route into gold mines in the West Rand and Klerksdorp areas. There, too, bigger dividends have been paid by the mines, and the trust's net income advanced last year from £994,814 to £1,715,000. The dividend was raised from 2s. to 3s. per 10s. share.



It is instructive to compare the yields offered by these trusts. The yield on the AAIT units, at 15ɪs. 10½d. xd is £13 4s. per cent. That is in line with the high yields on other diamond shares, where there is no expectation of any big increase in income or dividend. The yields offered by the gold investment trust units are much lower, for here there is a firm expectation of better dividends coming from a higher income. The yield of £5 10s. per cent offered by the OFSIT units, at 54s. 6d. xd is lower than the yield of £7 5s. per cent offered by the WRIT units, at 41s. 6d. xd. One reason is that WRIT is participating in the development of Western Ultra Deep, whose potential worth—and, indeed, its full potential cost—is hidden in the future.

London Stock Exchange

FIRST DEALINGS:	Jan. 15	Jan. 29	Feb. 12
LAST DEALINGS:	Jan. 28	Feb. 11	Feb. 25
ACCOUNT DAY:	Feb. 4	Feb. 18	Mar. 4

GOVERNMENT securities made further gains this week, helped by new cuts in foreign interest rates. Among the short dates 3 per cent Exchequer 1960 rose ⅛ to 96⅛, while the new 5½ per cent Exchequer stock improved ⅞ to 100⅛. There was also good investment buying of the longs. War Loan gained ⅜ to 64½ and 3½ per cent Conversion after 1961 rose ¾ to 64⅞. The Funding 3½ per cent (1999-2004) rose ⅜ to 65⅛. The market in industrial stocks, which had been falling persistently, rallied with the new account, under the influence of a sharp rise in gilt-edged prices. Bank and insurance shares rose, Prudential "A" gaining 2 to 40½ over the week. Marks and Spencer's decision to lower certain retail prices caused a fall in store shares, and the report that competitive buying of Mappin and Webb voting shares had ceased led to a fall of 11s. to 27s. 6d. in the ordinary stock, the "A" shares losing 6d. to 18s. De Havilland rose 1s. to 17s. 6d. and Hawker Siddeley improved to 27s. 10½d. on the Swiss order for fighters. Standard Motor made a small gain to 7s. on the report that it will manufacture a new lightweight car. Tobacco shares weakened, following the new report on cancer hazards. Cottons were a poor market on fears of lower sales, Lancashire Cotton losing 2s. 6d. to 32s. 1¾d. Shipping shares declined, Furness Withy falling 1s. 9d. to 27s. 3d.

A steep rise on Friday in Kaffirs, following rumours of an impending change in the American gold price, was quickly reversed on denials. Buffelsfontein weakened 2s. 9d. to 34s. over the week, and Free State Saaiplaas dropped 2s. 10½d. to 12s. on fears of capital requirements. Diamonds held firm, but platinum producers slumped. Reduced quotas for tin exports sent down the prices of tin shares.

[1] This covers mining, manufacturing, electricity and manufactured gas with the following exceptions: Denmark excludes mining; Greece, mining and manufactured gas; Ireland and Sweden, electricity and manufactured gas; and Austria, manufactured gas. Germany excludes West Berlin. [2] Special trade (excluding re-exports) with the exception of Ireland which covers general trade with exports seasonally adjusted. Belgium includes Luxemburg. Italy includes Trieste. [3] New drachma introduced May 1, 1954 (1 new drachma = 1,000 old drachmas). [4] Thousand million drachmas. [5] Bizonal area. [6] Average for second quarter.

Financial Statistics

EXCHEQUER RETURNS

For the week ended January 25th, 1958, there was an "above-line" surplus (after allowing for Sinking Funds) of £124,694,000 compared with a surplus of £105,434,000 in the previous week and a surplus of £151,208,000 in the corresponding period of last year. There was a net surplus "below-line" of £31,698,000, leaving a total deficit from April 1st of £558,859,000 (£576,886,000 in 1956–57).

THE MONEY MARKET

THE allotment of Treasury bills at the tender on Friday last week declined by £10 million, to £230 million, yet total applications rose by £17 million, to £421 million. This follows an increase of £5 million in applications the week before, and may represent in part demand from overseas. The discount market maintained its common bid at £98 8s. 7d. per cent, and the proportion allotted at this price declined from 52 to 24 per cent. The average rate of discount fell by 3·77d. to £6 5s. 6.56d. per cent. On Tuesday the United States Treasury bill rate dropped from 2.587 to 2.202 per cent, its lowest for two years. At yesterday's tender, £210 million of bills will be offered, £60 million in excess of maturities.

The Bank gave fairly large help through purchases of bills on Thursday before last week-end; nonetheless five or six houses had to take small loans at Bank rate. On Friday, when small special help was given, one or two houses were "in" the Bank. This week credit conditions have been transformed, and on Tuesday and Wednesday the Bank mopped up surplus funds by moderate sales of bills.

The dollar price of gold rose by 2c, to $35.03 a fine oz, in the week to Wednesday, while the London price rose by ¼d. to 248s. 9½d. The price of silver declined steadily up to Tuesday, when it reached 76⅛d. an oz spot and 75⅝d. forward.

BEFORE AFTER —*and the difference?*

Maybe £5,000

How?
Faulty water gauges were spotted, and an accident costing £5,000 or more has been prevented.

Spotted by whom?
By a Vulcan Engineer-Surveyor during his regular inspection of the boiler. Experience gives him almost second sight into the accidents that are waiting to happen.

Are his services expensive?
Not at all. Your broker will tell you that, though the Vulcan man is a specialist, his services cost no more than insurance and inspection by general practitioners.

FREE

"Vulcan"—a journal of absorbing interest to all users of plant and machinery, with reports of accidents and safety hints. For a year's subscription—free—write now to Dept. 17.

What Vulcan insures, Vulcan inspects—thoroughly and *regularly*. As a result our clients have made us one of the largest engineering insurance companies in Europe.

BAY HALL TRUST LIMITED

Summary of Directors' Report for the year ended 31st December, 1957 and of the accompanying Statement by the Chairman, Sir Charles Hambro, K.B.E., M.C.

The gross revenue amounted to £228,515 compared with £251,950 in 1956. The decrease results from realising certain investments to redeem £772,400 of Debentures at par on 31st December, 1956. Nevertheless, after providing for Taxation, Directors' Fees and other outgoings amounting to £92,271, there is a net profit of £136,244 as compared with £132,417 in the previous year. Adding £130,144 brought forward, the total available for appropriation is £266,388. The Directors have placed £25,000 to General Reserve and recommend a dividend of 17 per cent., less tax, which will absorb £103,063, leaving £138,325 to be carried forward.

Full provision has been made in the Profit and Loss Account for United Kingdom taxation in respect of all income to 31st December, 1957. Double taxation relief allowable to the Company amounting to 5s. 1d. in the £ has been taken into account in arriving at this provision.

At market prices on 31st December, 1957 (or where no market price existed at valuation by the Directors at that date amounting to £305,348), the Investments had an aggregate value of £2,719,410 as compared with their book value of £1,808,142. There is thus an indicated appreciation of £911,268 over book cost.

At the valuations taken at 31st December last, over 92 per cent. of the Investments are situated in the United Kingdom, Union of South Africa and other parts of the British Commonwealth. About 91 per cent. of the Investments are in ordinary stocks and shares and the balance in fixed-interest bearing securities.

COMPANY MEETINGS

STEWARTS AND LLOYDS, LIMITED

"STATE OWNERSHIP": A STEP TOWARDS TOTALITARIAN GOVERNMENT

SHAREHOLDERS OVERWHELMINGLY SUPPORT BOARD'S PROPOSED CAMPAIGN

MR A. G. STEWART ON COMPANY'S FIGHT AGAINST NATIONALISATION

The sixty-eighth annual general meeting of Stewarts and Lloyds, Limited, was held on January 28th in the Merchants' Hall, 30 George Square, Glasgow.

The Chairman, Mr A. G. Stewart, presided and said:

Ladies and Gentlemen, it gives me much pleasure to address this, the sixty-eighth Annual General Meeting of the Company.

After the Auditors' Report had been read the Chairman continued: A copy of the Directors' Report was contained in the copy of the Accounts sent to each shareholder. For the first time a Statement by me has also been included with the Accounts. This, of course, largely takes the place of a speech and I assume you will take all these as read. (Agreed.)

In my Statement under the heading of Finance I mentioned that application had been made to the Capital Issues Committee to enable us to borrow from our Bankers. Authority to borrow up to £10 million was granted on January 13th, for the Treasury's usual period of six months. The question of financing part of our future expenditure by raising permanent capital in one form or another is very much in mind, but I cannot over-emphasise the extent to which the threat of nationalisation complicates this matter.

The six weeks that have elapsed since the issue of the Report and Accounts have provided no evidence of an improvement in the demand for tubes overall. Indeed, in export markets there has been a general decline in requirements. The short-time working at some of our tube works, to which I referred in my Statement, continues. We have succeeded up till now in taking up part of the slack by selling steel in semi-finished form, but production both of iron and of some qualities of steel has had to be slightly curtailed. I have nothing further to add as to trading prospects in the immediate future.

I am now going to propose the resolution to adopt the Report and Accounts. If you have any questions arising out of the Accounts or what I said in my Statement other than about nationalisation, would you ask these questions immediately after the resolution has been proposed and seconded, but please would you reserve any questions about nationalisation until we reach item 5 on the agenda, that is, the Special Business or the resolution on Nationalisation.

The Report and Accounts having been adopted, the dividend and the usual resolutions approved, the Chairman continued: I now turn to the Resolution about State ownership referred to in item 5 of the Notice of the Meeting. I assume that all of you will have read what I said in my Statement on the subject of nationalisation. We are legally advised that the Directors have every right to resist nationalisation. It is, however, the Board's policy to invite the shareholders to support the Board in matters of such major principle and it is for this reason that the Resolution is submitted.

This statement received a lot of publicity. It is our intention, with your support today, to see that the public is fully informed so that it may make up its mind on the subject. My Board and I have received a great deal of encouragement from many sources in the action that we have taken.

THREE PARTICULAR QUESTIONS ANSWERED

There are three particular questions which have been asked and I think should be answered right away.

The first question is—What steps do we in fact propose to take to counter nationalisation?

The answer to this is that we shall endeavour to present our case in whatever manner seems from time to time to be most effective. If we are going to fight a battle, surely it is questionable tactics to disclose our plan of campaign at this stage.

I think, however, that I might take this opportunity of repeating what I said in the BBC programme "At Home and Abroad" earlier this month, that it is not in any way our intention to attack the Labour Party. All we are fighting against is the policy of nationalisation and we hope by provoking argument and discussion to convince not only the supporters of the Labour Party, but those who frame its policy, that nationalisation is both unnecessary and bad.

As I said last year,

Why should any government, with all its many responsibilities, wish to add one further, extraneous, responsibility—one which in my view Government is not equipped to carry and which would lead to the establishment of a huge, bureaucratic machine? This would seem to be just one further step towards Totalitarian Government to which the country, at the moment, seems to be almost unanimously opposed.

A LONG STRIDE TOWARDS COMMUNISM

Some of you may have thought then that my reference to a step towards Totalitarian Government was an exaggeration. But surely there is now no doubt at all that nationalisation of steel and other industries would mean a long stride towards the establishment of Communism in Great Britain. Everyone in this country should bear that danger in mind most earnestly.

The *Daily Worker* recently commented on this prospect with considerable self-satisfaction. That paper referred to a statement by the chairman of another company that nationalisation is "the beginning of Communism and logically in time it would convert our country into a State as completely Communist as Russia and other Eastern States which are either already Communist or going that way."

The *Daily Worker* said: I wouldn't deny one word of that. What worries me is the speed at which time, here in Britain, is slipping underneath our feet.

The second question is—Are we supported in our view by other steelmakers?

The answer to this is "yes," most certainly! Although we appeared to take the initiative in the matter, it should be appreciated that it so happened that mine was the first Statement to be published. I should say that we have received a large measure of support not only from other steelmakers, but from many other industries which are not connected with the steel industry.

The third question is—What do we expect the campaign will cost the Company?

The answer is that I just cannot tell you. All I can say is that the cost will not be excessive and I feel sure you will agree that it will be money well spent.

THE PROXY POSITION

Before the Resolution is proposed and seconded I should let you know what proxies have been lodged. We have at the present time 18,700 shareholders. It is the general experience that a large percentage of shareholders do not, for one reason or another, complete proxy forms. It does, however, seem remarkable to me that only 20 shareholders have lodged proxies against the Resolution. Of these we know that some, whilst utterly opposed to nationalisation, feel that we are mistaken in spending money on this campaign. This surely is a matter of opinion. 8,157 shareholders have lodged proxies in my favour in favour of the Resolution. The actual number of potential votes covered by these proxies is: 11,793,921 FOR the Resolution and 8,465 AGAINST.

Perhaps I should add that on January 27th—that is, a day late—a further 68 proxies were received, all in favour of the Resolution and representing 214,836 votes. Taking the recent bad weather and postal delays into account, it can, therefore, be said that 8,225 shareholders wished to cast 12,008,757 votes in favour of the Resolution. This is surely a remarkable declaration.

The following Resolution was then submitted to the Meeting:

The Ordinary Shareholders of Stewarts and Lloyds, Limited, being of the firm belief that nationalisation of the Iron and Steel Industry in Great Britain would do harm to the Company, its employees and its customers, confirm the power of the Board of Directors to take, and approved the Board of Directors taking, such steps as they consider necessary or desirable to counter such nationalisation.

The Resolution was carried unanimously and the business terminated with a vote of thanks to the Chairman and the Board for their efforts to preserve British industry from state control.

AVELING-BARFORD, LIMITED

DIFFICULT TRADING CONDITIONS

The sixty-third annual general meeting of Aveling-Barford, Limited, was held on January 27th at Grantham, Mr Edward Barford, MC, chairman of the company, presiding.

The following is an extract from the chairman's circulated statement for the year to September 30, 1957:

A year ago I mentioned that orders for our products were being received at a reduced level. I regret to say that this situation persisted during the greater part of the year and production in most of the Company's plants was necessarily restricted.

SUBSIDIARIES' SUCCESS

That the trading profit of the Group is only slightly lower than last year at £683,951 is some satisfaction, and can only be attributable to increased efficiency in our manufacturing processes.

Our subsidiary companies continue to operate successfully, and their steady improvement and expansion requires additional financing by the parent Company.

Abnormal difficulties have been experienced in adjusting our operations to the new conditions which have arisen in many of our markets overseas. For the most part these have been surmounted, but it has been necessary to intensify our efforts in traditional markets while seeking out new, but often less profitable, outlets for our products.

An intensive campaign in Canada over the past eight years is beginning to show satisfactory results. That we have been successful is the best possible tribute to the quality of our products and service.

The developing countries of South America offer today our best potential markets. That we have not achieved the turnover that our efforts and established reputation deserve is not due to neglect. In fact the contrary applies. The stark fact is that a manufacturer can only do as much export business as his country will finance.

NEED FOR CREDIT FACILITIES

Exhortations from Ministerial circles for increased exports, accompanied by platitudinous instructions as to how they can be accomplished, are useless without credit facilities equivalent to those available to foreign competitors. I say that the British Treasury is not authorising the Export Credits Guarantee Department to grant competitive credit terms, and, unless the Government is prepared to take a more enterprising policy, we have no chance of breaking into new markets or even retaining those where we have been established for three-quarters of a century.

At the opening of the current year, in common with others in our industry, we are finding business increasingly difficult to obtain. This is not due to the quality of our products but rather to an almost world-wide recession in our trade. The back-log of orders cannot be regarded as satisfactory and appropriate measures are already in hand to protect our position. We are continuing our policy of new design and our machines of all types are universally accepted as technically sound and reliable. New projects are under review.

The Directors recommend that the Final Dividend should be 7½ per cent, as last year, making a total of 12½ per cent for the full year.

The report and accounts were adopted.

TANGANYIKA CONCESSIONS LIMITED

CAPTAIN CHARLES WATERHOUSE'S REVIEW

SATISFACTORY PROGRESS MAINTAINED

The Annual General Meeting of Tanganyika Concessions Limited was held on January 23, 1958, at the Head Office of the Company, Tanganyika House, Salisbury, Southern Rhodesia, Captain The Right Honourable Charles Waterhouse, MC, DL, the Chairman, presiding.

The following is an extract from his circulated review :

After observing the record profits that have been reported in recent years, it is very gratifying to be able to draw attention to even better results. The accounts in respect of the year ended July 31, 1957, show a record profit of £4,309,796, and the Directors have consequently been pleased to propose for the consideration of Stockholders at the Annual General Meeting a Final Dividend on the Ordinary Stock of 6s. 6d. per unit, which if approved, will make a total dividend of 9s. 6d. per unit for the year. It must be emphasised, however, that these figures result from the operations of the Union Minière du Haut-Katanga and the Benguela Railway Company for the year ended December 31, 1956, and reflect the much higher copper prices then ruling.

In addition, the Board, for the reasons outlined in their report, have recommended a bonus issue of registered Ordinary Stock on the basis of one new Ordinary Stock Unit of 10s. for each Ordinary Stock Unit held on January 31, 1958.

The main source of the Company's revenue has again been the Union Minière du Haut-Katanga, which, because of its excellent results, was able to distribute a dividend of Belgian Francs 2,300 as compared with Belgian Francs 2,200 for the previous year. The Benguela Railway Company also made a substantial contribution by paying the interest for the year on both series of debentures and distributing a dividend of Escudos 16.50 per share, as compared with Escudos 11.00 per share for the previous year. Moreover, in addition to the redemption payment of £202,480 for the year 1956, a further £409,300 of the 4 per cent Income Debentures were redeemed.

CHAIRMAN'S ADDRESS

The Chairman addressed the Meeting as follows :

Since the General Meeting of last year your Company has suffered two heavy misfortunes in the deaths of Mr Godfrey Hutchinson last March, and of Sir Ernest Oppenheimer only a few weeks ago. Mr Hutchinson had already left your Board and been replaced by his son, Mr Robert Hutchinson. Sir Ulick Alexander has resigned from the Chair, Sir Ellis Robins has left Southern Rhodesia, but fortunately both still retain their places on the Board, and I am glad of this chance of expressing our appreciation of their great services. Mr Arthur Crichton, who has been our guide, philosopher and friend over many years, and Sir Alfred Beit have retired from the Board. We are grateful for the work they have done for the Company. We are glad to welcome today Sir Andrew Strachan, who has replaced Sir Ellis Robins as a member of the Board resident in Southern Rhodesia.

In the financial year we are considering, your Company made a record net profit of £4,309,796, which reflects profits earned in 1956 by the Union Minière and by the Benguela Railway Company, which in both cases exceeded any previous record. I must remind you, if indeed you need any such reminder, that in 1956 the average price of copper on the London Metal Market was £328 per ton, while the similar figure for last year, the year 1957, was only £219 per ton, and since then there have been further falls in the price of the metal.

On January 3rd of this year the Union Minière paid an Interim Dividend after taxation of 750 Belgian Francs. Last year that Company paid two Interim Dividends, each of 700 Francs, but we cannot expect a second Interim Dividend in respect of the year 1957. Those engaged in winning copper and other non-ferrous metals are certainly going through a difficult time, but we have every confidence that the knowledge and experience of those in control of the Union Minière will enable that Company to weather this particular economic disturbance with the minimum of discomfort to its shareholders, of which your Company, with a holding of approximately 14 per cent of the issued shares, is one of the principal.

THE BENGUELA RAILWAY COMPANY

The fall in the price of copper is, of course, directly reflected in the freight rates charged by your subsidiary, the Benguela Railway Company, for the transport of the metal, and the figures for 1957 must on that account show a decrease on those for 1956. I am, however, happy to be able to say that other classes of mineral traffic, and especially iron ore from the Province of Angola, have done much to fill this gap, and to increase the Railway's already large contribution to the development of Angola's economy. Two years ago your Chairman, Sir Ulick Alexander, spoke in forthright terms about the Railway, its functions and its future. We may be sure that his words reached far outside this room, for in the last two years the public has begun to realise that the Benguela Railway is far more than a local line, and is in fact one of the main arteries connecting Central Africa with the rest of the civilised world.

The Board and management of the Railway are to be congratulated on the results achieved. The able Chairman, Dr Pinto Basto, is fortunate in having on the Board a group of Portuguese gentlemen with outstanding qualifications, and it is appropriate that I should mention the high honour done to his colleagues, Dr Manuel Fernandes, in his appointment as a Judge of the International Court of Justice at The Hague, and to Dr Supico Pinto, in his appointment as President of the Corporative Chamber which, with the Chamber of Deputies, constitutes the Portuguese Parliament.

In December 1957 the Portuguese Government authorised an increase in the capital of the Benguela Railway from Escudos 330 million to Escudos 660 million. This increase was obtained by revaluing the assets of the Company by Escudos 220 million and by transferring Escudos 110 million from Reserves. Although this transaction in no way increases the earning capacity of the Railway, we feel that our share of the capital increase is some compensation for the debentures subscribed by us which, because the Railway was not earning sufficient profits in past years, were cancelled without payment.

In this context it is well that we should bear in mind that the proposed Capital readjustment of Tanganyika Concessions itself would be no more than a restoration of the reduction made in 1938.

A MAJOR ACHIEVEMENT

As you are aware, we have, through our associated company, Tanganyika Holdings Limited, been contributing since 1953 to the expenditure incurred by Rio Tinto (Northern Rhodesia) Limited in the exploration of approximately 12,000 square miles of territory.

Since the Report and Accounts were issued to Stockholders, Rio Tinto (Northern Rhodesia) Limited have informed us that the results so far achieved in Northern Rhodesia indicate that the methods being used there are soundly conceived and that, although no ore body of economic grade and tonnage has been established, the exploration methods have succeeded in locating mineralised areas. In particular, they regard the identification of the Lower Roan series, where this had not been previously known to occur, as a major achievement, and they have accordingly put forward proposals for further substantial expenditure to be incurred during the next few years. The Boards of your Company and The Zambesia Exploring Company Limited have agreed to continue to provide Tanganyika Holdings Limited with the necessary finance to maintain their contribution to this project.

Your Company's wholly owned subsidiary, Tanganyika Properties (Rhodesia) Limited, has, as you know, a considerable investment in Border Forests (Rhodesia) Limited, who own large forestry estates in the Eastern Districts. I am glad to be able to report favourably on that Company's progress. The planting of the total afforestable area with pines is nearing completion. A saw-mill is in process of erection on one of the Estates, and in due course will produce sawn timber for the market.

In all these matters your Company, its subsidiaries and its associated companies, owe much to the loyal and devoted work of their staffs, and on behalf of the shareholders I offer them my thanks.

The Report and Accounts were adopted, the payment of the final dividend was approved, and the retiring Directors were re-elected. The two Ordinary Resolutions which provided for a bonus issue of Ordinary Stock from the existing unissued capital to be effected by the capitalisation of reserves, and the Special Resolution for the amendment of Article 13 of the Company's Articles of Association were duly passed.

LLOYD'S PACKING WAREHOUSES (HOLDINGS)

SIR ERIC A. CARPENTER'S REVIEW OF ACTIVITIES

The sixty-second Annual General Meeting of Lloyd's Packing Warehouses (Holdings) Limited was held on January 29th in Manchester, Sir Eric A. Carpenter, OBE (the Chairman), presiding.

The following is an extract from his circulated statement:

The Group Trading Profit is £389,404 as against £406,658 for the previous year. After making provision for Taxation £236,396, as against £234,276 last year, there is an Aggregate Net Profit of £153,008 compared with £172,382 a year ago.

Your Directors recommend a final dividend of 7 per cent less tax on the ordinary stock, making 12 per cent less tax for the year.

Current Assets exceed Current Liabilities by £1,474,450 and combined Capital and Revenue Reserves total £1,388,382 as against £1,377,626 a year ago.

The Consolidated Accounts of Regentone Products Limited show a Trading Profit of £94,536 compared with £34,229 for the previous year. After providing a net sum of £35,194 for Taxation and adding £25,154 the balance brought forward from the previous year, £84,496 is carried forward.

DIVISIONAL ACTIVITIES

Packing Division.—A year ago I referred to the necessity of concentrating textile packing in fewer houses. In the year under review benefits have accrued from this concentration, turnover being maintained on a more profitable basis. During the year premises were acquired and fully equipped to cater for a wide range of machinery packing. This service for which it is anticipated there will be an increasing demand only came into full operation towards the end of the year under review.

Paper and Packaging Division.—In a year in which the general experience of the paper industry has not been so satisfactory, it is gratifying to be able to report that the paper manufacturing unit has fully maintained turnover and profits. The paper merchanting and conversion units on the other hand have experienced reduction in turnover and margins.

Timber Division.—In pursuance of the policy I referred to a year ago considerable re-organisation of this Division has been carried out.

Transport Division.—The Transport fleet increased gross earnings but this increase was slightly more than counterbalanced by higher costs of fuel and maintenance.

The Warehousing and forwarding services have shown healthy expansion providing increased gross earnings.

Towel Division.—Since the close of the year under review an agreement has been entered into whereby the Group will sell its interests in J. Smith Hargreaves & Company Limited. While the sale will involve a capital loss on the book value of the investment of approximately £120,000, completion of the sale will liberate some £360,000 of capital which your Directors have every confidence can be employed to much better advantage and at considerably less risk in other spheres.

Regentone Group.—The trading results for the year under review show a substantial improvement over the previous year. Following extensive research prior to production the "RGD" and "Regentone" television models have had a very favourable reception in the market giving promise of further improvement in the trading results of the current year.

Summary.—The continued decline in the demand for the services provided by the Group in respect of cotton goods exports has necessitated considerable re-organisation of the Group's activities. Such re-organisation is costly in itself and disruptive of production and turnover. Your Directors are, however, confident that the re-organisation carried out will improve efficiency and earning power.

The report was adopted.

WATNEY COMBE REID & CO. LIMITED

INCREASED TRADE

The annual general meeting of this company was held on January 24th in London, Mr S. H. Combe, MC, chairman, presiding.

The following is an extract from his circulated statement for the year ended September 30, 1957: Trade for the year showed an increase of just under 5 per cent, which is better than the national average. The most noteworthy feature was the small increase in draught beer sales for the first time for some years. There can be little doubt that your Company's policy in regard to improved public houses has played a considerable part in the satisfactory results of the year.

It is an interesting fact that in terms of the real value of money the price of beer is lower now than it was six years ago. Brewing costs, on the other hand, are four times what they were 20 years ago. To achieve this result, the brewing industry has had to keep profits down.

Last year brewing profits after deduction of taxation and depreciation amounted to £34 million. Of this, £16 to £18 million was required for rebuilding licensed houses and less than £12 million was distributed to ordinary shareholders. For the first time our Subsidiary, Coca-Cola Southern Bottlers Limited, has shown a profit

Our export sales are a record for this Company and a considerable percentage of these sales has been in canned beer.

LICENSED PROPERTIES

In the course of the year thirteen new public houses have been completed on new sites, seven old ones have been rebuilt and thirty-one have been very substantially improved.

At the end of May "The Dover Stage," was opened. This new venture caters primarily for motor coach parties going to and returning from the Continent. In the 18 weeks to the end of September 124 coach parties stayed the night there on their journeys and 131 other coach parties were specially catered for with meals.

The Board are pleased with the results of the other Motel projects, "The New Forest Motel" near Southampton, and "The Devon Motel" on the Exeter By-pass.

FINANCE

The Group trading profit for the year to September 30th last, amounts to £2,729,310, an increase of £507,882 over that for the previous year, an increase which in the opinion of the Board is satisfactory and compares favourably with other Brewers operating in the trading areas covered by our Group.

The Group profit after taxation and after deducting £38,134 attributable to outside shareholders amounts to £990,208.

The drain on our cash and investments has continued. In addition to repairs, alterations and rebuilding of our public houses we have provided further large sums for the modernisation of our Mortlake Brewery. This project will not be completed for at least eighteen months.

The Board recommends that £150,000 be appropriated to the Properties and Plant and Contingencies Reserve, and that a final dividend of 10 per cent and a bonus dividend of 6 per cent be paid, making 21 per cent for the year.

H. & G. SIMONDS, LIMITED

RECORD SALES

The Annual General Meeting of H. & G. Simonds, Limited, was held on January 29th at Reading. General Sir Miles Dempsey, the Chairman, presided.

The following are extracts from his circulated statement.

FINANCE

The balance from trading during the year showed a further advance to £1,085,036, sales of beers and other commodities reaching record levels both in volume and value.

There has been little or no sign of any lessening in the pressure of rising costs. Wages have again been substantially higher; distribution has been more costly, and builders' charges for the repair and decoration of our properties have shown a marked increase.

The profit for the year before charging taxation amounted to £828,001, an increase of £64,025. Taxation requires £476,763, leaving £351,238, compared with £328,119 for the previous year. The Board recommend that the final ordinary dividend for the year be at the rate of 10 per cent which, together with the interim of 2 per cent paid in June, 1957, makes 12 per cent for the year. The equivalent rate for the previous year was 11 per cent.

TRADE

Our sales of beer attained the highest figure so far recorded by the Company.

Export Trade improved, and in this as in our Home Trade, the sale of "Tavern Ale" in cans played an important part. Wine and Spirit sales again expanded.

Trade in the first few weeks of the current year has been maintained at much the same level as twelve months ago. It would be unwise to make any forecasts, but we are hopeful that this state of affairs at least may continue throughout the year.

In common with most of the Brewing Trade, we have done our utmost to combat inflation by holding down prices of our beers. In spite of all the increased costs during the year our prices have, with small exceptions, remained constant, and the increased price now asked for a pint of our beer is remarkably small in comparison with the 1930s, when all these costs are borne in mind.

The close of the year was distinguished for us by a number of successes gained by our beers at the Brewers' Exhibition held in London. The principal award of a Gold Medal was won by our Tavern Ale for the second time in succession, and other prizes were won by entries of both draught and bottled beer from each of our three Breweries.

LICENSED PROPERTIES

During the year we have opened one new public house, the "Britannia," at Bristol, and work has begun on the construction of six others, all of which should be completed by the end of the current year. Of these, three are at Plymouth and one each at Reading, Slough and Newport.

Our hotels and catering department achieved once again a record turnover, and we re-opened the "Bear Hotel" at Maidenhead, which had been completely destroyed by fire, and also the "Tumble Down Dick Hotel," at Farnborough, following substantial re-modelling of the entire premises.

Further expansion of our retail business, trading under the name of Arthur Cooper, took place, and 48 shops now come under its control.

PLANT

Two important schemes have been put in hand involving the construction of substantial new cold storage for beer in Reading, and the installation of new bottling plant, stock rooms and loading bays at Devonport. These improvements are expensive but necessary, and will take approximately three years to complete.

ASSOCIATED COMPANIES

Dividends and interest from our investments overseas again showed an increase.

STAFF

Our relations with staff and employees have continued to be excellent, and once again I thank them, together with our Tenants and Managers, for all they have done.

The report and accounts were adopted, and the retiring director re-elected.

THE STANDARD TRUST

SATISFACTORY REVENUE IMPROVEMENT

The fifty-fifth Annual General Meeting of The Standard Trust Limited will be held on February 21st in London.

The following is the circulated statement by the Chairman, Mr Basil G. Ivory, CA:

Due to further increases in dividends received and the additional funds employed during the year we are able to report a satisfactory improvement in our gross revenue, which has risen by £31,360, to £325,888.

After Debenture Stock Interest, taxation, and all expenses, net revenue has increased by £19,813 to £157,615, and after deducting the Preference dividend the amount available is £138,641, equivalent to earnings of 24.1 per cent on the increased ordinary capital of £1 million compared with 22.9 per cent on the smaller capital last year.

The Directors have transferred £30,000 to General Reserve bringing this up to £380,000 and now recommend an increase to 12 per cent in the final dividend, making 18 per cent for the year. This will leave the carry forward at £88,543, compared with £79,952 brought in.

Appreciation of 44.4 per cent in the valuation of our investments compares with 61.71 per cent a year ago. This decrease has been occasioned by the unsettled condition of markets, both in the United Kingdom and North America, which has been reflected in lower prices for equity shares generally.

The year 1957 witnessed more difficult conditions for industry on both sides of the Atlantic, with greater competition and increased costs having an adverse influence on profits which may well lead to reduced dividend declarations in some cases during the coming year. Government attempts at home to stem the tide of inflation, culminating in a 7 per cent Bank Rate and a ceiling being placed on the capital investment programme, have clouded the outlook still further and it seems likely that the full repercussions from these measures have yet to be experienced. It may well be that a further decline in share prices could be seen before a recovery takes place but there is a sharp division of opinion as to the intensity and duration of the present set-back.

However, scientific progress and the persistent urge to raise living standards throughout the world provide long-term stimulating influences and few people would question the likelihood of ultimate growth, which could spring from the more solid base which we are now attempting to establish. Despite the many uncertainties with which we are faced your Board remain reasonably confident that the current year's revenue will be such as to justify maintenance of the current rate of dividend.

BROOK MOTORS LIMITED

FURTHER EXPANSION OF TRADING

The Eighth Annual General Meeting of Brook Motors Limited was held on January 25th at Huddersfield. Mr Frank V. Brook, the Chairman and Joint Managing Director, presided.

The following is an extract from his statement circulated with the report and accounts:

The improved position shown briefly in the half-yearly report, issued for the first time in June last, has continued through the remainder of the financial year under review. Increased labour costs through further wage awards were partially offset by reductions in certain material prices and to a larger extent through internal production method changes. The turnover was a further record indicating an increase in the ever-widening circle of customers in addition to the continued loyalty of our customers of long standing.

Our direct export trade showed improvements despite restriction difficulties and keen competition in some countries. Additionally our American Company expanded at a satisfactory rate. Their initial sales target, expected to be reached after a five-year period, has already been achieved in four, and with further agency appointments we expect this improvement to continue.

In order to promote better liaison between the American market and the parent company, one of our senior executives, Mr A. E. Hogton, was appointed to the Board of the Brook Motor Corporation in March last.

The new factory for the manufacture of fractional horse-power motors is now completed, and full production should be attained early in 1958. A building of pleasing design has resulted, which will harmonise with the surrounding countryside and offer all modern amenities for the welfare of employees.

A further recent standardisation in the electric motor field has culminated in the introduction of a new design ventilated motor which will also meet the needs of the North American Continent. Other models are being redesigned to the same style which should enhance our opportunities for sales to both home and export customers.

The future is always difficult to prophesy. The introduction of a European Free Trade Area will be a challenge which I consider your Company is in a position to accept. An expansion of trade with the American Continent is contemplated and the establishment of better distribution facilities should increase these prospects.

Staff and employees of the Company have shown great loyalty and enterprise during the past year in helping to achieve the results obtained.

The report and accounts were adopted.

THE NATIONAL BANK OF KUWAIT LIMITED

Established 1952

Under Charter granted by H.H. Shaikh Sir Abdulla Al Salim Al Subah, K.C.M.G., C.I.E., Ruler of Kuwait

		£522,950

Extract from the Chairman's Address

The Company has 247 shops and a number of repair factories in England, Scotland and Wales. The factory in Kettering maintained full production throughout the year.

The Company's pension fund now exceeds £800,000 and pension and other payments during the year have been over £54,000.

A bonus of £45,000 has been allocated to employees.

FLOWERS BREWERIES

INCREASED OUTPUT AND SALES

The Sixtieth Annual General Meeting of Flowers Breweries Limited was held at Luton on January 27, 1958, Mr Bernard Dixon, Chairman, presiding. The following are points from his statement:

Your Company again shows a very substantial increase in output relative to the national figures.

The sales of Flowers Keg Bitter have exceeded our expectations, but it will be appreciated that a development such as this takes time effectively to consolidate and become fully profitable. Your Board has deliberately pursued a policy in connection with this product which in effect amounts to the return by way of profit being dependent on a considerable volume of output. The trade of the Group in Bottled Beer continues to increase. Brewmaster, in particular, is meeting with outstanding success.

The extremely rapid increase in sales which has taken place has meant that we have had to finance a considerably increased volume of plant, equipment, stocks and debtors.

The brewing industry is a highly competitive one and we must take our opportunities as they present themselves. This means that we have to prepare our organisation to deal with our anticipated forward position, and in this connection current revenue bears a heavy load of expenditure.

At the close of our financial year, work on new depôts at Reading and Southampton was rapidly reaching completion.

There has been a considerable increase in the sales of Wines and Spirits, and the sales of the Group's own brands of Port and Sherry

under the name of J. & J. E. Phillips have increased by leaps and bounds. The new Bond is operating satisfactorily and has proved a worthwhile investment.

Twelve new licensed premises have been opened or are about to be opened. The capital cost involved has been heavy, but we confidently believe that in the long run they will prove a sound investment. Expenditure on our properties generally has been increased in comparison with the previous year by 20 per cent. This, of course, is a direct charge against profits, but one that should lead to better trade in the future.

In continuance of your Company's policy with regard to advertising, the appropriation has been once again substantially increased.

During the year we acquired all the minority interests in our Subsidiary Companies.

The report and accounts were adopted.

APPOINTMENTS

MACHINE ACCOUNTING

Tootal Broadhurst Lee Co., Ltd., invite applications for the post of

MANAGER

of the

I.B.M. DEPARTMENT

at their Manchester Head Office. *The installation* is a large one, consisting of six tabulators and ancillary equipment, and is used at the present time for sales analysis, accounting work, and the *preparation of orders and invoices.* The post therefore offers considerable scope for a man with *organising* experience in punched card systems and the ability to get the best out of a staff numbering over 70. The job carries an attractive starting salary.—Please apply by letter, giving full details of age, qualifications and previous career, to the Personnel Manager, Tootal Broadhurst Lee Co., Ltd., 56, Oxford Street, Manchester, 1.

BRITISH RAILWAYS RESEARCH DEPARTMENT

VACANCIES for TECHNICAL ASSISTANTS in OPERATIONAL RESEARCH DIVISION in London. An interest in investigational work and some mathematical ability

Commencing salary according to age, etc.—maximum for post £741 per annum.

Superannuation and certain free travel facilities.

Medical.

Applications, stating age, qualifications, etc., to :

SUPERINTENDENTS,
OPERATIONAL RESEARCH DIVISION,
20, EUSTON SQUARE, LONDON, N.W.1.

MARKET RESEARCH ASSISTANT

A Senior Assistant to the Research Manager is required by KEN. Applicants should have at least three years' experience—some of it preferably with an advertising agency. Sound statistical background is essential, plus the ability to initiate surveys and carry them through to completion of final report. This *position carries* plenty of scope and excellent prospects for the future. Applications, stating age, *experience and salary required*, should be addressed to :

Research Manager,
Rumble, Crowther and Nicholas, Ltd.,
184, Strand,
London, W.C.2.

AGRICULTURAL ECONOMIST MALTA

Required to act as *Marketing* Adviser to the Maltese Government.

Candidates must have a *university* degree in Agricultural Economics. Agriculture or Economics and should have had *practical experience in the organisation* of the sales of horticultural produce, local marketing and distribution problems.

The appointment is on temporary terms for four years, with a salary of £1,500 per annum. Free passages for officer, wife and children up to a maximum of five passages in all. Contribution by Government of the employee's share of F.S.S.U. premium.

Appl, giving brief particulars, to Director of Recruitment, Colonial Office, London, S.W.1, quoting BCD 63/19/04.

THE UNIVERSITY OF MANCHESTER

Applications are *invited* from graduates for the post of TUTOR IN SOCIAL ADMINISTRATION, in the Department of Social Administration of the Faculty of Economic and Social Studies, in connection with the Selective Recruitment and Training Scheme for Hospital Administrators in England, Wales and Scotland. The *appointment is for* three years, in the first instance, with a possibility of a renewal for a further period. The salary per annum will be on one of the following ranges : £700 to £850; £900 to £1,050; initial salary according to qualifications and experience. Membership of F.S.S.U. and Children's Allowance Scheme.—Applications should be sent not later than February 15, 1958, to the Registrar, the University, Manchester, 13, from whom further particulars and forms of application may be obtained.

TELEVISION.—Associated TeleVision Ltd. require a young woman graduate as an assistant to the Audience Research Manager and to specialise in television programme research. A sound statistical background with practical experience in a market research department is essential. This is a really *interesting* job with excellent prospects.—Write, stating age, qualifications, experience and present salary, to G. V. Stacy, Associated TeleVision Ltd., Television House, Kingsway, London, W.C.2.

COST ACCOUNTANT REQUIRED

A.C.W.A. or Qualifying
Required immediately as Assistant to F.C.W.A. Must be practical, energetic, good disciplinarian. Experienced in Standard Costing in Engineering. Plenty of scope and work for the right man.
GOODMANS INDUSTRIES Limited,
Axiom Works, Lancelot Road,
Tel. Wembley 1200.

A NEW and important post has been created in the London Office of a nationally known and fast growing manufacturing Company. Of senior executive status, the work will involve responsibility (with the support of an adequate staff) for the merchandise development and advisory marketing of the entire range of women's and children's clothing. Suitable candidates will have had wide experience in this sector of the textile trade, be well educated preferably to university degree standard, be able to prove a successful trading record possibly in retail store management and possess administrative ability above average. The post will carry a high starting salary and provide a stimulating career and ample scope for advancement.—Applications, which will be *treated in strict confidence, should include full details* of career and should be addressed to Box 853.

TRADE OFFICER required by UGANDA GOVERNMENT, Trade Department, KAMPALA, on probation for two years for permanent and pensionable employment. Commencing salary according to experience in scale (including inducement pay), £879 rising to £1,617 a year. Outfit allowance up to £30. Free passages. Liberal leave on full salary after tour of 30-36 months. Candidates, under 35, must hold G.C.E. "O" Level in five subjects or equivalent and have experience in commerce. Degree in Economics or secretarial qualification an advantage. Duties include administration of import/export controls, *collation of statistics and commercial information*.—Write to the Crown Agents, 4, Millbank, London, S.W.1. *State age, name in block letters, full qualifications* and experience and quote M3A/44527/EN.

MARKET RESEARCH

Precision engineering company in West London *require* assistant for expanding Market *Research Department*. Preference will be given to graduates *in economics*, with statistics as special subject, and some *industrial* or commercial experience, aged 24 to 30. The post calls for analytical skill in handling statistical material and relating the company's activities to trends in the national economy, and offers an excellent opportunity to build a career in a progressive firm. Pension scheme, excellent sports and social facilities.—Write, giving full details, to Box 854.

RESEARCH FELLOWSHIPS OF THE COUNCIL OF EUROPE

The Council of Europe awards annually a number of Fellowships to encourage research into the following subjects, considered in the light of their present-day importance : (a) political, economic, social, educational and scientific problems connected with European integration ; (b) European civilisation (philosophy, history, literature and the arts).

The Selection Committee will meet in Strasbourg at the end of June to make the next awards. The Fellowships will be each of the value of 500,000 French francs and will be tenable for a period of eight months in 1958-1959.

Candidates must be nationals of a Member State of the Council of Europe. An exception, however, is made in favour of refugees from European countries non-Member States of the Council of Europe, *provided* that they are legally resident in the territory of a Member State.

The British Council assists in publicity and recruitment for these Fellowships *in the United Kingdom*.—Further particulars and forms of application, which must be submitted by March 15, 1958, may be obtained from The Controller, Education Division, The British *Council*, 65, Davies Street, London, W.1.

DIRECTOR, with organising experience, preferably with technical knowledge, required for Association for Consumer Research. Salary around £2,000 per annum according to qualifications.—Application forms from 16, Victoria Park Square, E.2, to be returned before February 17th.

Base story

(which took a turn for the better)

In making photographic film, the most expensive item is the film base, which doubtless sounds extremely simple and logical.

What is (or rather, was) somewhat less logical is that the British film industry, after the war, paid out alarming sums in dollars each year in order to import this film base (" something like celluloid " to you perhaps, but *cellulose triacetate* to the more technically minded).

This formidable drain on our national resources had to be stopped. And it was stopped—at a cost, but thankfully, in sterling.

Briefly, we at Ilford, in conjunction with BX Plastics, undertook to make this base. Apart from a small pilot plant which had been operated in Britain during the war, we had little technical 'know-how'. Certainly not the know-how required for making film base on a large scale and thus creating an important new industry in Britain. We had to work out the processes and design and build the plant ourselves. The job involved a vast technical effort and an investment in our beliefs of something over £2,000,000.

Today at the Bexford plant we are making, still in conjunction with BX Plastics, the whole of the Ilford needs for film base. In fact, we are even selling to the U.S.A.

"Talking of Sound Barriers...."

"The Works Doctor came to see me the other day and put forward a strong case for some form of insulation to protect employees from excessive noise. Apparently most of the absenteeism and nervous illness in the place is due to sound irritation, although I believe he had another word for it. I must admit our re-equipment scheme has increased the noise level considerably—and absenteeism has increased likewise. Anyway I'm recommending to the Board that we call in Newalls to see what can be done about it. It will be a worthwhile investment to get back to something like peak efficiency."*

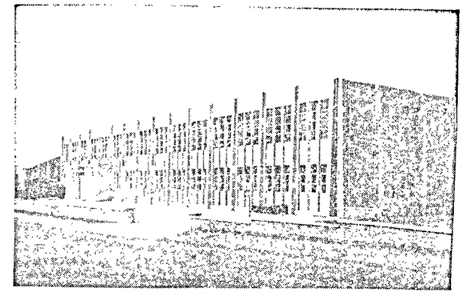
Money is dear but... today BEECHAM BUILDINGS cost less

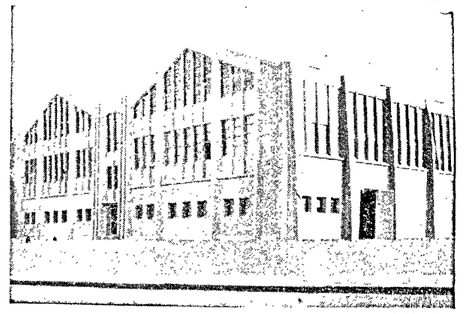


Beecham Buildings construct high-quality commercial and industrial buildings—from office blocks and small factories to large industrial layouts covering many acres at prices which, over the past twelve months, have actually fallen. We accomplish it in these days of 7% by working quickly and eliminating waste.

WE STREAMLINE PRELIMINARIES

We in Beechams have the *complete* building organisation, including departments for every phase of building from first design to final finishing. Consequently we can quote firm prices as soon as sketch designs are agreed, saving much valuable time over the usual procedure when outside contractors must be consulted for quotations, and enabling us to move on to a site months earlier.

WE BUILD BY MODERN METHODS



Because we employ advanced techniques, we are able, without sacrificing quality,* to put up your factory faster, perhaps in only half the time you could have it built by older methods. You will get into production months earlier with a quick return on invested capital. With capital tied up at 7% this saving in time is a heavy saving in money. Every contract is kept under one control. Every operation is timed and its completion dovetailed into the schedule, ensuring maximum efficiency and minimum site delay. The use of planned factory production of precision cast concrete units, served by our own fleet of specialised transport—ensures control of quality, free from the hazards of the weather. Beecham methods mean rationalisation; and rationalisation means economy.

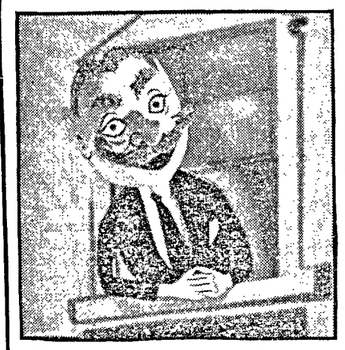
The recruits you need may well be reading this newspaper



The problem of attracting the right kind of recruit besets many organizations including, probably, your own. To help solve this problem the Manchester Guardian initiated its now well-established 'Careers' series—and there is every evidence of its success.

For the fifth year, leading firms are making their personnel requirements known through full-page announcements appearing from Monday to Friday.

The new series began on January 20th. If your company is not represented this year, the names of the organizations taking part in this Manchester Guardian service to industry and commerce will convince you that you are doing less than you might to win your fair share of up-and-coming talent.

MANCHESTER GUARDIAN

"It was all over in a matter of seconds. Attack: theft: escape. My messenger was unhurt. But the takings had gone. It happens quite often, but somehow I never really thought it would happen to me. However, 'The Northern' promptly made good my loss."

This is an ACTUAL CASE taken from our records. For a yearly premium of only £1.0.0. the policy holder was insured against any such losses.

The Bark and the Backbite

LIKE Shaw's Bulgarian, Mr Harold Wilson does not apologise. He is apparently persuaded that, when he referred to Mr Poole's "vast City interests" in his question whether Mr Thorneycroft had or had not seen the vice-chairman of the Conservative party on the day before Bank rate was raised in September, he intended or implied no calumny; he was, presumably, merely indicating which Mr Poole he meant. This and the other innuendoes echoed during the noisy, nasty debate on the Parker report must now be left with Mr Wilson's—and his party's—conscience. (The calmer theme of the Bank's future direction is discussed on page 507.) But the phrase "vast City interests" is significant for another, and deeply important, reason.

The real crux of Mr Wilson's own skilful and doggedly effective apologia (not apology) came at the end :

> Many of those who gave evidence saw the run on sterling not so much as a national danger as a means to make a profit or to hedge against for the purpose of avoiding a loss.

This was the Labour line throughout the debate and the underlying reason why, in the end, the Opposition even voted against accepting the tribunal's report : however clear-cut the acquittal of individuals, the business of the City, with its higgling and haggling, is in itself culpable. Mr Gordon Walker, who seized the chance of Dr Dalton's absence to prove that he is not so right-minded as is sometimes supposed, made this plain : it was the clash between the City and the national interest that had roused Labour's wrath. Almost alone Mr Gaitskell, who confined himself to justifying the pressure for an inquiry and criticising the Government's fumbling, kept clear of this declaration of, in effect, a state of war between Britain's free markets and the Opposition.

This was very sensible of Mr Gaitskell, who presumably still hopes to lead the next Government. The trouble is that, though he did not say the unwise things, he gave no lead by saying the wise ones. He has to face, quite coldly, two big dangers. The first is that the advent of a Labour Government, or even the prospect of it, may cause the pound to collapse for lack of confidence in the world markets where the pound's worth is judged—which would be a calamity for the nation as well as for Labour. The second, and political, danger Mr Gaitskell has to face is that, simply because of this likelihood, the nation may be persuaded not to risk giving his party a majority. He may say, not unreasonably, that this is unfair : that parliamentary democracy depends upon the parties being able to alternate in power; that the electors ought not to be intimidated by partisan tales of impending disaster; that the Labour party cannot be expected to propound a Conservative policy; but, specifically, that the policy which a Labour Government would in fact pursue is based upon the peaceful (and fruitful) coexistence of private enterprise and public management in the mixed economy which all parties now accept, though they dispute

the frontiers. In short, Labour's bite will be much better than its bark.

But it is by its bark (and its backbite) that Labour will be judged—at home and abroad. That is why this week's debate has been so deplorable, both for Labour and the nation. That is why Mr Gaitskell should have been much more positively sensible. What sort of peaceful coexistence does the Opposition really want with those whom Mr Wilson recently described as "the hard-faced men who have done well out of Tory freedom"? It is true that the mistrust, and the vilification, are often reciprocated. It is not uncommon for Mr Gaitskell himself to be described in some business circles as a renegade, therefore a traitor and even a crook; and it is certainly not exclusively Labour's fault that relations between the Shadow Cabinet and the City are disturbingly poor. All this is lamentable. But is it at all surprising after these revelations of Labour's root-and-branch suspicion and censure of the whole business of buying, selling and making (or losing) money? This is an attitude that has spread like a corrosive poison through latter-day Britain; and, atavistically, the Labour party is still spreading it even when, having won its way to power and had its permanent way in shaping our society, it says it wants to work with private business—and depends on doing so.

Some, on both sides of the feud, will say that the conflict merely reflects the facts: that the Labour party is, implacably, the foe of private business and industry, and should be treated as such; or, alternatively, that socialism, as the ordained repository of the national interest, ought to make no bones about bringing all independent economic decisions under direct constraint. If these were the true premises the consequences for this country, for its economy and for its democracy, would be melancholy indeed. Mr Gaitskell, at any rate, would deny them both. So, too, presumably, would Mr Wilson, though no doubt more ingeniously. Both of them surely remember the perilous blind alley up which Professor Laski led their party a generation ago by his prophecy that, when Labour won a majority at the polls, the vested interests would not accept the electors' verdict—a false prophecy which caused even respectable democrats like Lord Attlee to ponder drastic measures against a resistance movement that never came. It is altogether unlikely, and out of the British character, that even the present taunts could turn the "wolf, wolf" of 1945 into a real wolf after another Labour victory. What is more likely, if the taunts and the two-way feud go on, is that there may not be another 1945; or that, if there is (for the animus against moneymakers is widespread), the first fruits of it, even though the taunted may loyally cooperate, will be something like an economic catastrophe.

Other Side of The Summit

Moscow has endorsed the Rapacki plan for an atom-free zone in Europe. Would it accept any variations on it, if the West were to suggest them?

THE placing of the first American earth satellite in its orbit on February 1st has done something to restore American self-confidence and to put the Russian technological achievements of October and November back into their proper proportion. It has certainly not vitally changed the strategic balance between Russia and the West, and fairly certainly it leaves Russia's foreign policy programme unchanged. From Stalin's day, when Sir Winston Churchill spoke of Russian foreign policy as an enigma, the habit has lingered of thinking of the Russian leaders as secretive, unpredictable men whose purposes are wrapped in mystery. But, while it is still possible to differ about the inner motives of Soviet policy or about its ultimate objectives, its immediate outlines are expounded nowadays with tireless loquacity by Mr Khrushchev, Marshal Bulganin, their colleagues and their spokesmen.

The flood of proposals leaves plenty of ground for scepticism but none for ignorance. Mr Bulganin restated nine topics, which the Russians would like to discuss at a summit meeting, in his latest message to President Eisenhower, delivered on Monday. They do not intend the list to be exclusive. Nor are all the points likely to lead to any fruitful negotiation. The four most interesting items, in order of ascending usefulness, are concerned with ways of easing tension in the Middle East; measures to safeguard both sides against surprise attack; a zone free from atomic weapons in central Europe; and the reduction of foreign troops, presumably in the same area. The Russians would like a meeting in the next two or three months.

Some form of disengagement or thinning-out in central Europe is probably the most serious topic for a meeting at the highest level. There seems to be very little chance of a major agreement on the Middle East, while Mr Khrushchev himself has just told the special correspondent of *The Times* that he does not expect a miraculous global agreement on disarmament or Germany. The Rapacki plan, on the other hand—the Polish proposal for a nuclear-free zone covering the two German states, Poland and Czechoslovakia—might serve as the starting point for discussions which could

ultimately lead to some progress at any rate on these two very issues. But what is the Soviet position?

Evidently the Russians would like, if they could, to secure the nuclear sterilisation of a belt of territory on the west of the Soviet Union without any withdrawal of troops that might leave central Europe free to unfold a political life of its own. One common denominator of all recent Soviet pronouncements has been the emphasis on the permanent nature of the "people's democratic" regimes. The position was summed up in the *Myezhdunarodnaya Zhizn* (International Life), a journal sponsored by the Soviet ministry of foreign affairs, which contrasted the Russian policy aimed at maintaining the political *status quo* with western attempts, doomed to failure, to "restore the *status quo ante bellum*," that is, the position of 1939. Mr Khrushchev elaborated the point at Minsk on January 22nd, warning the West against the illusion that the "internal affairs" of eastern Europe can be discussed.

Simultaneously, Moscow is naturally perturbed at the prospect of rocket bases spreading close to its European frontiers. The Polish plan has, in the Russian view, the advantage of tackling the nuclear and missile question in a limited way without involving, at least in the near future, any political concessions. This is why it has been endorsed by the Russians; and Mr Khrushchev has now given his blessing to any scheme of control and inspection needed to implement it.

THE Rapacki plan envisages the banning not only of rocket bases, but of other nuclear weapons as well. Moscow knows well enough that this would require a complete revision of Nato's strategy. Some of the western politicians who think that the Rapacki plan's other merits justify concessions consider that the plan should be extended so as to include the withdrawal of foreign troops. If these troops are merely there for police operations, there might be a political gain for the West if they were withdrawn on both sides: the west German regime does not rest on American bayonets. Though this proposal has never been made officially, the Russians are ready with an answer. Soviet politicians and Russian newspapers have often made it plain that there can be no question of a Soviet withdrawal from central Europe which would leave American bases in the western part of the continent. Mr Khrushchev's counter to any western proposal about evacuation of troops will be his own suggestion, made to an American television audience and repeated since then on several occasions, for a complete (and completely unacceptable) withdrawal of American troops and bases from Europe, or at least from the European continent.

These two conceptions—the limited plan for an "atom-free" zone and the more ambitious plan for a total evacuation of troops—do not represent the lower and upper limits of one plan. They are the Russian alternatives, to be brought out in turn as the western attitude renders it expedient. Should negotiations for any form of military self-denial in Europe start in earnest, it will be up to the western powers to seek some intermediate solution; and it is here that the Russian position ceases to be clear. What would be the political future of central Europe once the Russian troops were out? Would Moscow accept anything short of a complete American withdrawal? Would it be possible to agree to forgo strategic missiles in the "Rapacki belt" without withdrawing the tactical nuclear weapons that are there already? There is no answer to these or similar questions; the questions have not yet been directly put.

AND yet it is very likely that on this issue Moscow stands as divided as the western capitals. The division is not so much between "peace-lovers" and "warmongers" as between the optimists and the pessimists, the bold and the cautious. One group is reluctant to disturb the present uneasy balance from the fear of incalculable consequences. The other is willing to take risks for the sake of potential greater gains; it is willing to play for higher stakes. Stalin's successors were already faced with a similar dilemma when they took over. The view then prevailed that it was worth while to run the risk of reforming the inherited empire, if only for the sake of its future efficiency. Some of the leaders who backed this view may now consider that what will be lost on the eastern swings will be more than regained on the western roundabouts. Such inner conflicts naturally exist though, as might be expected, they find no direct expression in the Soviet press. The failure of western diplomacy to provide any concrete counter-proposals will not contribute to bring such dissensions into the open.

Moscow has no need for the moment to alter its policy. The present diplomatic offensive gives it the appearance of a stubborn, if as yet unsuccessful, champion of peace. Its effect on popular opinion is to make it more difficult for west European governments to accept American launching-sites. Mr Khrushchev's sigh about the resources which could be released by disarmament sounded serious. Not for a moment, however, should it be concluded that internal economic pressures will force the Russian leaders to alter their foreign policy. Nor is the interest in nuclear disengagement one-sided. The putting of rocket bases on both sides of the Iron Curtain will tend to freeze the political division of Europe, and thus runs counter to the avowed aim of western policy.

The main point, however, is that the Soviet leaders are now sitting in a much more comfortable international position than a year or so ago. Within the Soviet block the tremors from the Hungarian earthquake have calmed down. The process of consolidation has gone a fairly long way and any increase in international tension will only strengthen the pressure for uniformity. Even the reluctant Poles will then have to take their appointed place; freedom within the block is also a function of the international situation.

Externally, too, Russia has recovered from the shock.

The Suez campaign and the continuing war in Algeria have had an impact on Afro-Asian minds which the Hungarian repression did not have. The sputniks brought Russia enormous prestige, and also a new measure of self-confidence. Already active in the Middle East, the Russians are now interesting themselves increasingly in Africa and even in Latin America.

All this goes to show that a western refusal of an invitation to the summit will not paralyse Soviet initiative. A deadlock in Europe will not put a stop to Russian proddings on other fronts. And even in Europe the lack of a general agreement on the abolition of rocket bases will not preclude Soviet efforts to tempt or blackmail individual countries into refusing to accept launching sites for American rockets on their soil. Moscow's suggestion to Italy that such a refusal would be rewarded by a parallel dismantling of similar bases in neighbouring Albania may serve as a model for other offers or warnings tailored to each addressee.

If the western side does eventually go to a summit meeting with concrete and useful proposals that the Russians would be well advised to consider, there will still be no guarantee of an agreement. Mr Khrushchev could still block it by raising questions about American bases outside Europe, or by making the Rapacki plan in Europe conditional on the acceptance of an atom-free zone in the Middle East as well. But an effort at least would have been made, and seen to be made. Possibly some agreement of limited scope might be reached. If it were not, the blame for the European deadlock would be seen to lie with the other side. It is, after all, Russia, not the West, that is determined to preserve the *status quo*. The spiritual heirs of Molotov within the Soviet leadership, the rigid men afraid of change, may even be pinning their hopes today on western reluctance to take the risks of discussion, just as Stalin could once be relied on to close the western ranks.

Respite for France

The windfall of dollars may serve to help the struggle for solvency or merely be used to delay the day of reckoning.

FRANCE will be spared a major crisis in 1958. M. Monnet returns to Paris from Washington with the feeling of a mission well accomplished. Credit to the tune of 655 million dollars—this is more than the French dared to hope for and should more than cover this year's expected payments deficit. The biggest immediate threat to the French economy has receded.

There are two interesting aspects of this operation to rescue the franc. In the first place, it is a combined operation involving not only the United States and the International Monetary Fund, but also the Organisation for European Economic Co-operation acting through the European Payments Union. Secondly, the agreement contains, at least in principle, important economic commitments. The French government had submitted to its prospective creditors a memorandum including specific pledges for the future about key elements of economic policy. By these the French government has bound itself to keep public expenditure below 5,300,000 million francs and the total deficit below 600,000 million francs; to restrict credit, particularly by cutting down medium-term loans; and to avoid further borrowing from the Bank of France. At the same time it has promised to try to lower its import restrictions in the near future.

These guarantees certainly played a part in the negotiation of the French credits. But the decisions were not taken on economic grounds alone. Of the various bodies involved, the IMF was nearest in its behaviour to the detachment of a banker: it gave only what it could hardly refuse. Political considerations connected with "European solidarity" weighed heavily on the EPU councils. The Germans, who provide the bulk of the special funds, were particularly concerned about the immediate future of their new partner. A shock to the French economy and to the Fourth Republic at this stage might have thrown the common market into disarray in the first year of its existence. The desire to give a good start to European integration influenced American generosity as well. The fact that these talks coincided with efforts by the American government to get European bases for its rockets may also have strengthened the hand of the French negotiators. Yet the chief factor in the American decision was undoubtedly the fear of the consequences that a French upheaval, and a possible defection, might have on the American alliance.

Through the latter part of 1957 the western envoys in Paris lived in a state of permanent apprehension. The nightmare which kept them awake may be summarised as follows: absence of foreign exchange would force the French to cut imports so severely that production would be paralysed; widespread unemployment would bring about social unrest and, in combination with tensions over Algeria, would create an extremely explosive situation. From there the versions varied. According to some, the Socialists would be forced into a parliamentary alliance with the Communists, thus making it impossible to continue the series of "Republican" coalition governments. Others envisaged a really revolutionary situation with a *coup d'état* by either of the extremes. Whether these stories were realistic is irrelevant; they cannot now be corroborated or disproved, since the first link in the chain has been removed. They created a state of alarm in the embassies and foreign ministries. The fear of a new French "popular front" accounts partly for the favourable terms obtained by a French government based on a coalition extending from conservatives to socialists.

IT is officially stated that the Algerian conflict was not discussed in the Washington negotiations. Does this mean that the American government (or France's European partners) has underwritten the Lacoste policy in Algeria? Probably not. The creditors apparently hope that if they see to the economics, the politics will took after themselves. There is some logic in this argument. If France sticks to its promises of limited expenditure and credit restriction, it will not be possible to dodge the Algerian issue. The government will have to cut war expenditure or keep down spending in other fields. And the choice for the French nation should no longer be obscured by the inflationary veil.

But the argument is not foolproof. It underestimates the interplay of politics and economics. To suggest that France may not stick to its promises is not to question M. Gaillard's honesty. The walls of many banks could be papered with promissory notes of well-intentioned debtors. In France, if governments propose, parliament disposes. The French difficulty of matching promise and fulfilment is well illustrated by the government's current troubles with constitutional and electoral reform. All parties in M. Gaillard's broad coalition agree in principle on the imperative need to strengthen the executive and ensure its stability. Yet when it comes to concrete proposals, sectional interests prevail over this collectively expressed wish. The dollar loans have strengthened M. Gaillard's hand; they have not ensured him security of tenure.

The French premier has accompanied his announcement of the successful conclusion of negotiations with a warning against any letting up. Economic tensions undoubtedly persist. Even allowing for this new windfall of dollars, French experts estimate that their country's industrial production in the current year will run roughly at the level of the last months of 1957. This means that for the first time in years it will not be possible to solve problems by an important increment in output. Food prices have risen, the pressure of wage demands is growing (real wages fell last year after a long period of substantial gains). To tackle the Algerian question will require a great deal of courage. In these circumstances, local political pulls may still prove stronger than commitments to distant bankers; hope of another overdraft never dies. The temptation for the deputies to let France live beyond its means will be great, and leaders who fight against it may pay the price of loss of office.

Will France use this respite? Will the major crisis be averted or has it merely been put off? French views on that question are sharply divided. Men like M. Monnet, looking proudly back on the postwar modernisation of important sectors of their country's economy and on the exceptionally rapid industrial expansion of the last few years, claim that the recent devaluation, budgetary cuts and credit restrictions have set France "on the road towards financial stability"; and that the dollar tonic will speed it on the way. They hope that by next year France should be solvent and the economic pressures of the common market will then make it impossible to look back. The sceptics, on the other hand, point to the backward parts of the French economy that are still sorely in need of structural change. They are concerned by the persistent political instability, and they derive no comfort from last year's inflationary precedent. Above all, they are perturbed by the unending Algerian war which, after all, costs annually not much less than three times as much as the emergency credits now provide. Their conclusion is that the dollars will simply be used to postpone the day of reckoning.

What France Gets

	$ million
From the European Payments Union	**250**
Consisting of:	
A credit raised from Germany and certain other countries and from the reserves of the Union to be used at French discretion, and worth	150
An increase of $400 million in France's "quota"; only 25 per cent of deficits can normally be covered by credit; the rest must be paid in gold, so this amounts to a credit extension of	100
From the International Monetary Fund:	
Half France's remaining quota of $262.5 million	**131.25**
From the United States	**274**
Consisting of:	
Postponement of repayments of Export-Import loans due this year and next ...	96
Postponement until after 1980 of three annual payments of $30 million each under postwar lend-lease settlements	90
Purchase with francs instead of dollars of surplus cotton	43
Purchase with francs instead of dollars of military equipment for forces stationed in Europe, about	45
Total	**655.25**

Not all the assistance will be available at once. In the worst of cases, the French government could use $547 million to cover commitments this year, $78 million next year, and $30 million in 1960.

Bank managers often have to decide whether shock treatment or gentle coaxing are more suitable in a given case. France's international lenders were this time faced with a similar dilemma. In the next few months they will have opportunities to ponder the virtues and the disadvantages of the two methods. But there will not be much that they can do now that the credits have been given; in the next stage, it will be up to France.

THE TRADE UNIONS

1: How Powerful Are They?

The contemporary question to be asked about the great British trade union movement, after half a century's growth and entrenchment, can be simply put. Is it now a responsible estate of the realm or simply another powerful, and specially privileged, vested interest? The interests which it represents are entirely proper and necessary. Like every other powerful vested interest, however, it will earn and deserve its several privileges, at law and in fact, only if it accepts its responsibilities. To say this is, in principle, unexceptionable. But, first of all, what are the real facts? How powerful are the trade unions? What responsibilities should they accept? It is the purpose of these articles to look objectively at these queries.

At the end of 1956 there were nearly ten million persons—7.8 million men and 1.9 million women—organised in trade unions in Great Britain; they represented about 40 per cent of the whole working population, and about 44 per cent of the employees in civilian jobs. One can compare this with just over six million members in 1938, representing probably just under 30 per cent of the working population—or, alternatively, with 8¼ million in 1920, the prewar high tide mark of trade unionism, before the deep slump in membership of the twenties and early thirties. The main recent growth came while the war was establishing full employment in the British economy. Between 1938 and 1948 union membership grew by more than half. Since then, its growth has levelled off; and since 1951, it has grown proportionately rather less than the total number of persons in jobs in Britain.

But the growth in the unions' effective influence in the British economy is not simply a matter of numbers. Their influence has been enhanced, in the first place, by acceptance of the "tripartite principle" in administrative arrangements dating mainly from the war, ranging from local productivity committees up to the Joint Production Advisory Council and to informal discussions between the Trades Union Congress and cabinets, of whatever colour. The unions' actual bargaining power in the labour market has been reinforced by the extension of publicly regulated negotiation through wages councils, labour boards and arbitration machinery. And they have benefited greatly from the spread of government influence in the economy. Wherever it has gone, into nationalised industries, social services, subsidised agriculture, the government has conceded trade union recognition to all its direct and indirect employees as a matter of course. All these influences, moreover, have tended in the same direction as the continued concentration of membership into the largest unions—towards a greater influence for centralised wage bargaining at the headquarters level, and the "annual round" of key wage decisions which, for 1958, will be shortly upon us.

Yet the main factor that has increased the effective bargaining power of the unions is, quite obviously, the establishment of full employment and the disappearance of any significant reserve of unemployed labour in the postwar period of rapid economic expansion. Labour has become perhaps the scarcest factor of production; naturally, its price has gone up. The trade unions have furnished the instrument which has brought about most of the steady and considerable rise in money wages per head relative to salaries per head or other incomes; but they did not supply the power behind their leverage. In comparison with entirely "unorganised" groups of the population which are hardly in short supply, such as say retired middle-class people or male clerks, the organised workers have certainly gained a substantially larger share of the extra money income generated during expansion. But it is not clear that they have necessarily done so much better than largely unorganised people with high scarcity value in the labour market—such as, say, typists or youngish business executives. The real purchasing power of trade unionists in manual operative jobs will certainly have risen faster than those of their bosses (though not necessarily than those of their bosses' secretaries). But that is simply because, being absolutely so much lower, their incomes are less liable to erosion by tax—which is not within the control of the trade unions.

White Collar Workers

It is too easy, moreover, for middle-class people to think of the "organised worker" simply in terms of the horny-handed manual worker. Since the war, partly by accident, perhaps the most important "growth element" in trade unionism's numbers and bargaining power has been in the white-collar unions. These are still weak in the ordinary commercial office, though in some sections dominated by large groups, such as the banks, their influence is now growing. It is in the government office, and the offices over which the government has recently extended its control—the nationalised industries, and the social services—that the managerial and professional associations have had their main increase in bargaining power.

This process has indeed produced extremely hard bargaining by unions of "independent" professional people and independent employers; the doctors, the dentists, the National Farmers' Union, now negotiate for their whole professions' scale of remuneration with the government. National and local government officials, along with teachers, have exercised appreciable bargaining strength for many years; and the expansion of government-controlled research has enlarged the power of certain professional unions. If nuclear energy had been developed in this country by the great private consortiums now working their passage into it, instead of by the Ministry of Supply and later the United Kingdom Atomic Energy Authority, a number of the key men at the top might be earning far larger salaries than they do now. But it is also likely that there would have been far less effective trade union bargaining for the whole range of administrative and scientific white-collar workers in this field than is represented by the huge wage claim presented last month.

Enhanced bargaining power for the various kinds of middle-class trade unions has given them advantages compared with many of their unorganised white-collar brothers and sisters, though not all. Few of them would in fact be prepared to strike, but they have used the implied threat to do so; nor are their restrictions upon entry, where they exist, less stringent. Yet they have been hard put to it to increase their real purchasing power thereby, against rising costs of living and particularly against taxation. In terms of relative real improvement, it is the manual workers' unions that have had the best of the postwar bargain—and which have been gearwheels in the postwar inflation. Their success in keeping wage rates rising during the recent period of disinflation has caused many to see wage inflation as a virtually autonomous process, and to suggest that this can be checked only by undefined national "wage policies" or by some legislative limitation of their bargaining powers.

Elements of Weakness

As yet, however, there is no real evidence that trade union bargaining power has become so overwhelming as to be independent of the normal forces of supply and demand in the economy. During the last two years of disinflation the price of labour, like the prices of other things in which suppliers have a degree of monopoly, has continued to rise. But these, after all, have been years of high if level production, with the proportion of unemployed people never rising above 1½ per cent. The unions, like many businessmen, have been coasting along upon the momentum of postwar inflation, seeking their sectional ends with such monopoly power as they command. To identify them as the prime movers of inflation, whose economic power can be curbed only by political means is—whatever their present responsibilities may be as a recognised estate of the realm—to exaggerate their real strength. To the cooler observer—as indeed quite obviously to some of the colder-blooded trade union leaders—the present substance of trade union strength displays some elements of deep weakness, in spite of the menacing shadows they have consistently cast across bargaining tables throughout the postwar decade of inflation.

The main mass of manœuvre that the unions can deploy, the numbers of men in the trade unions of manual operatives, has grown much less since the war than the numbers of white-collar people and of women in unions. In certain sectors of the economy—distribution and commercial office work are the two big ones—unionism is very weak. While demand for labour is so high and unemployment is negligible, moreover, the worker in small shops and businesses is in little danger of being sweated and the trade union organiser has few advantages to offer him.

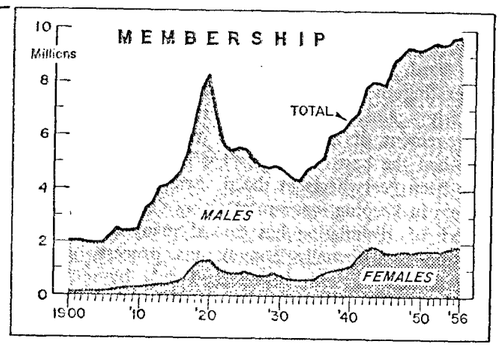
To the fully paid-up union member, such drones are profoundly irritating; so, indeed, is the substantial fringe of his own membership, that is usually in arrear with union dues. If he relates these dues, indeed, to the increase in earning power that workers have enjoyed since before the war, the enthusiast is entitled to argue that union members have had a quite incredibly good bargain. Their average dues per member for unions affiliated to the Trades Union Congress have gone up by only 31 per cent, from £1 16s. 7d. in 1938 to £2 8s. in 1956; in the same period weekly wage rates rose by about 170 per cent and average earnings by 245 per cent, from £3 9s. to £11 17s. 11d. For the price of five or six cigarettes a week, he might say, the worker has been able to count on a steady and considerable rise in money wages and even in real purchasing power, probably without ever once needing to worry about the Joneses or to screw up his nerves to ask for a rise.

The service that trade unions have provided in raising their members' wages, since the war, has thus been cheap at the price: from the point of view of their longer-term interests, indeed, perhaps ridiculously cheap. They have not managed to raise dues in line with actual costs, or to build up reserves against the ultimate sanction of strikes. Those reserves can be counted partly in members' loyalty: they must also be counted in cash. At the end of 1956 on the average, the book value of union funds amounted to about £9 10s. per head of membership, less than a week's earnings for the average man employed in industry. After twenty years of unparalleled success in raising the incomes of their members without strikes, Britain's trade unions find themselves in a position where their

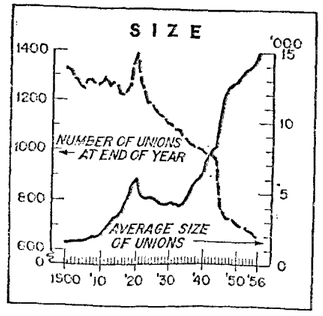
THE ECONOMIST FEBRUARY 8, 1958

apparent strength is quite inadequately backed with the financial sinews of solidarity. It has often been argued in these columns that the real cost of strikes to the British economy can be, and has been, grossly exaggerated ; but it would be difficult to exaggerate the cost of a really widespread major strike to even the biggest British trade unions.

This financial weakness of the unions—which is partly, in terms of "market unionism," the result of inadequate union management during the soft years—is now a source of strength for the employer, the government, the international standing of sterling, and for the British consumer in this winter's wage bargaining. To the extent that since the war trade unionism has been riding the wave of full employment, it has become vulnerable ; its power in a showdown has been eroded by the very inflation of which it has been one of the instruments. It could never have been easy for the unions to consolidate adequate financial reserves for bargaining, even during the past easy years. But the attempt might have left them less vulnerable for the first year of bargaining in which they have faced a government committed to halt wage inflation and employers who are now less confident that demand will soon revive.

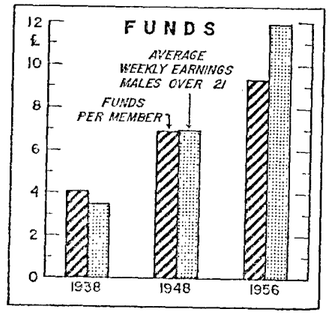


The Reform of Abuses



Trade union bargaining power, then, has grown in completeness and in general acceptance since the war ; it has been the cutting edge of the forces of full employment ; but its real strength in a tussle, when employment may be becoming less full, may turn out to be surprisingly weak. And it is worth reflecting, before propounding new structural reforms for the unions, that some of the weakness and the failure to behave like Economic (Trade Union) Man arises directly from the continuing distrust by trade unionists themselves of aggregations of wealth and power, even their own. Structural reforms might better be sought within the Ministry of Labour or the machinery of wage arbitration with which it is now hoist.

Organised bargaining, solely for sectional interests rather than in those of the whole community, is not, of course, peculiar to what is usually known as the working class ; it is, indeed, one of the most pervasive and essential elements of the free economy. Nor, unfortunately, is the use in that bargaining of restrictive practices of one kind and another peculiar to this vested interest. These practices can be, and are, deeply hurtful to the economy—and to the longer-term interests of workers themselves ; they call for eradication by every resource of persuasion and hard bargaining ; they reflect the privilege of trade unions to restrain trade (and production) unpenalised. But it is difficult to see how any government could hope actually to legislate usefully against the more general of them, at the present time. We are, in fact, at too early a stage of the trade union revolution. In the industrial capitalist revolution, which preceded it, company acts came long before restrictive trade practices acts. The possibility of trade union reform to which succeeding articles in this series will turn is based on the belief that we have now reached the proper stage for the equivalent of company acts in the history of trade unionism : that is acts designed not to check trade unionism itself, but to put a stop to abuses by it, unrestrained by the law, of personal liberty and personal choice. The next article will discuss at which points the most common and conspicuous fields for abuse have appeared.



Trade Union Facts

THE first Trades Union Congress was held in 1868: only 120,000 members were represented. Following the Acts of 1871 and 1876 the movement grew and at the beginning of the century total union membership had reached 1¾ million. Membership, as is seen, reached a peak in 1920 when the movement comprised 1,384 separate unions. After the industrial upheaval of the 1920s and the subsequent decline in the Labour party, both number and membership of unions fell until in the early 1930s it was little more than half its 1920 strength. Then came a period of reconstruction which resulted in the growth of larger and more powerful unions. In 1957 there were 185 unions affiliated to the TUC representing 8.3 million workers or about 86 per cent of total union membership.

With the revival in membership came a rise in the financial status of the unions. In 1938 over 35 per cent of their annual expenditure was paid in unemployment, sickness, accident, and superannuation benefits compared with 16 per cent in 1956. To back these services the unions held large financial reserves, considerably more in relation to the changed value of money and the level of wages, than they do at the present time. This in spite of the fact that at the end of 1956 the trade unions held funds mainly in gilt-edged, with a book value of nearly £80 million.

NOTES OF THE WEEK

MISSILES

Strength Through Joy

AN American satellite has at last penetrated the gremlin barrier into realms where hitherto only Soviet moons have swum. Explorer partly restores the international balance of self-esteem ; but it does not affect the balance of military power. The rocket that pushed it into space was a research rocket for the intermediate-range Jupiter, whereas the much larger Russian satellite had a missile of the intercontinental class behind it. The two extra "stages" of Jupiter-C, and the new fuel used to propel it, give it at least twice the range of the standard medium-range missile. If, hypothetically, it were fired for warlike purposes from the American mainland, however, this means no more than that instead of plopping down half-way across the Atlantic it could probably strain about as far as Shannon. The Americans still lag an indeterminate, but lengthy, period behind the Russians in their attempts to get a really long-range weapon. For a time Russian missiles are still going to be able to hit the United States from Soviet territory, while the Americans can only retaliate from bases overseas, which they have to coax their allies into letting them use.

But, if the thrust behind Explorer is not enough to push an American warhead all the way to Moscow, it may push American diplomats a little closer to a summit conference. So long as the Russians had a monopoly of sputniks, there was a widespread feeling in the United States that the American delegates at a summit meeting would be unable to negotiate from the required "position of strength." Even if the new satellite in fact does nothing to alter the military situation, the joyous relief with which American public opinion has greeted it may well provide the necessary feeling of strength. At his press conference on Wednesday, President Eisenhower continued to cast a chill eye on the summit. But the mechanism of events seems to be rolling towards a summit meeting somewhere, sometime. If their new satellite makes the Americans look forward to it more cheerfully, it will be a fresh spur to the West to work out the combined approach to Moscow that is needed.

WAGES POLICY

Staking Their Claims

ON Monday the London busmen decided by the narrowest possible margin to take their claim for a 25s. a week pay increase to arbitration. The tactical struggle that went on before this decision was reached is discussed by our special correspondent on page 468 ; arbitration was, however, in the best interests of both the busmen and their union's leader, Mr Cousins. Their case now goes to the Industrial Court, whose chairman, Sir John Forster, QC, is also chairman of the Railway Staffs National Tribunal, which will hear the railwaymen's claim later this month. Since the other key claim, that of the miners, will not reach arbitration until it is formally rejected by the National Coal Board on February 19th, there will be a pause of about three weeks for each side to gather its forces.

The union position is outwardly a strong one, as is shown by the table of outstanding claims set out below. Two crucial ones, those of the busmen and railwaymen, have already been referred to arbitration. Among the others, the engineers and shipbuilders are likely to ask for more pay as well as a 40-hour week when their standstill agreement ends in March ; the shopworkers are well placed because of the increases given to co-operative workers in November ; the sub-postmasters will be helped by the award on Tuesday of up to 23s. a week to post office engineers. On the other hand, the position of the builders, who got an increase of 1d. an hour automatically this month from their cost of living sliding scale, is weakened by unemployment in the industry. If the prospective claim on behalf of 100,000 dockers is included in the total, the cost of claims as they stand amounts to about £450 million a year, or nearly 6 per cent of the wages bill in 1957.

Union	Claim	Workers affected
Engineers, Shipbuilders	40 hour week	2,500,000
Building operatives	8d. an hour	1,000,000
Retail shop workers	£1 a week	800,000
Clothing workers	6d. an hour	450,000
Day wage miners	10s. a week	400,000
Railwaymen	Substantial	370,000
Road haulage	3s. in the £	200,000
Wool textiles	Substantial	150,000
Transport engineers	Substantial	130,000
Rail shopmen	Substantial	120,000
Electrical supply	Substantial	120,000
Rail salaried staffs	Cost of living increase	90,000
Engine drivers and firemen	2s. in the £	75,000
Police	2s. in the £	70,000
London busmen	25s. a week	53,000
Electrical contracting	Substantial	50,000
Tobacco workers	10s. a week	40,000
Health Service	1s. in the £	40,000
Print (national newspaper)	12½ to 21 per cent.	25,000
Sub-postmasters	2s. in the £	23,000
Atomic scientists	£2,350 to £275 a year	8,000

This is the dammed up weight of claims behind the Government's wages policy. Such pressure may seem too great for the dam, but none of the unions is looking for a direct clash. On the contrary, they are all hanging back, and some claims have been dropped or deferred. The National Union of Railwaymen, for example, has withdrawn its demand for a 40-hour week and the provincial busmen have postponed the wage claim they were to have made

this week. But the weak point in the Government's defences is arbitration and the unions know it. They must be expected to exploit it, if the first awards go in favour of the busmen or the railwaymen.

ARAB FEDERATION

Nasser Spreads North

THE announcement of the union of Egypt and Syria in a United Arab Republic with one flag, one army, and one people was duly made in Cairo last Saturday. This week, both the Egyptian and the Syrian Chambers have received the Syrian nomination for its first president—to wit, Colonel Nasser. This proposal will be submitted to a referendum of the two peoples on February 21st. The extent of the intended fusion is still, however, open to question in important ways. Will the two states merge their diplomatic representation abroad? Will they relinquish one of their seats at the United Nations or still claim the right to two, naming Byelo-Russia and the Ukraine as precedents? The Syrian Minister of Economy has said that economic union would be "studied" and in the meanwhile the trade and payments agreement with Egypt and the Syrian currency will be retained. There seems, therefore, little likelihood of any immediate progress along the bread line.

President Nasser gave the National Assembly a few details about the Republic's proposed constitution; these give him much wider powers over Syria than most people thought the Syrians would swallow. For instance, he is to select the members of a joint National Assembly, on a pattern which must mean that he dissolves all existing Syrian political parties. If this assumption is correct, the union begins to resemble a coup by the Syrian Baath against its communist associates, for Khaled Bikdash, the Secretary of the Levant Communist Party, commented brusquely on January 28th that "no communist party has voluntarily dissolved . . . there will be no need to dissolve political parties." Moscow radio, apart from reporting the union, seemed to be surprised into silence about it.

★

The Yemen has given a touch of burlesque by sending a delegation headed by the Crown Prince to Cairo to discuss Yemen's adherence. It is not beyond human ingenuity to find a formula whereby a mediaeval monarchy like that of Yemen could federate with a revolutionary republican regime, but this would hardly enhance the union's air of reality. Neither the Baath nor President Nasser have much good to say of the Yemeni throne, which, to their way of thinking, should be swept away with the rest of the Arab dynasties; yet it is possibly because the throne is shaky that the Crown Prince is hurrying to cling to President Nasser's restored prestige.

Impact of Federation

DESPITE the questions it leaves unanswered, the Cairo announcement has deeply stirred Arab opinion outside Egypt, and has brought social divisions sharply into relief. Broadly speaking, those people whose political, social or economic privilege is founded on the old order are against or doubtful of the union, but there is already evidence of pressure on them from below exerted by common opinion, which is in favour of it. King Hussein, who is the ruler most vulnerable to this pressure, is said to be advocating a counter-union of the monarchies of Jordan, Iraq and Saudi Arabia. It is significant that the Jordan press, which is now under the Palace thumb, was silent for a few days, after which the Jerusalem paper *Falastin* came out in favour of the union of Jordan and Iraq. Ardent advocates of Arab unity, such as Sheikh Youssef Yassin and Sayed Gamal Husseini, who do well as advisers to King Saud, and Dr Fadhel Jamali, of Iraq, have found fault with Syro-Egyptian union. Lebanese business men, both Christians and Moslems, equally have no enthusiasm for it, because if it led to the union of Lebanon and Syria, the economic necessities of Syria as a primary producer would do harm to the free trade system by which Beirut lives. Dr Jamali is right, therefore, when he contends that the union will increase certain divisions in the Arab world.

But he would have been more exact if he had spoken of division between governments; there are few signs of popular division. Indeed, the place where the people do not seem particularly enthusiastic about union is Egypt, and that is because the idea of the Arab nation has much weaker roots on the banks of the Nile than elsewhere in the Middle East. The Iraqi press, which has to be cautious when it praises anything Egyptian, has pointed out that union is the hope of every Arab, that this is the time to revive the call for full unity, and that such unions as that of Syria and Egypt "are only steps towards full Arab union, which will one day embrace us all under one flag." Not wishing to carp, *Al Telegraph* of Beirut, usually considered pro-communist, said the one safe thing: that the union would protect the Arabs against Israel. The Lebanese government, sensitive to the tide of opinion, banned demonstrations in favour of the union.

As often happens, *L'Orient* of Beirut was intelligently analytical in a series of comments. The union, it said, had been born without being born. It was, in essence, a gamble against the pashas of Baghdad and Riyadh, comfortably installed within their palace walls. For various geographical, economic and ethnical reasons, the union might not succeed; "but," said *L'Orient*, "the masses do not reason like sociologists. They are moved by ideas." There is little, at this stage, to add to that comment.

TELEVISION

Will You, Won't You?

THE controversy over the role of television in national party politics has been brought to a rather frothy head by the rumpus over turning the camera loose in Rochdale. So long as the BBC enjoyed a TV and radio monopoly, its hierarchy, if not necessarily its production staff, was more than happy to be rid of the difficult responsibilities of political coverage. Thus, during general elections, the BBC's treatment of the lead news story has been about as detailed as its references to a particularly noisome murder in the headlines—being confined to formal announcements of the polling-date. The only election broadcasts were the carefully rationed plugs of the political parties. Independent television blessedly introduced the element of competition which was always the best hope of bringing this system of polite evasions down with a crash. As current affairs programmes proliferated, admittedly in off-peak times, and more and more MPs and political commentators appeared on the screens, the need for a new assessment grew. At last representatives of the two television concerns went into a huddle with the party leaders at Oxford, emerging with hints that the parties would agree to some lifting of the veil on British voters in the indelicate process of political solicitation in the streets and town halls.

But they were in no hurry, and the Rochdale election caught them before heads of a treaty had been drawn up. Granada's proposal for a bye-election series worried the parties ostensibly on two counts. Under the Representation of the People Act, 1949, might not the cost of a television appearance be charged against a winning candidate's election expenses, and sink him? Might not the programmes contravene the section in the Television Act laying the duty of political impartiality on Independent Television? On the first count, it was felt that even if the other two candidates had appeared the election might still be invalidated—all three having broken the law. On the second, might it not be held that catching the smile of one candidate and the frown of another was partiality? Behind such scruples lurked a vague feeling by all parties that they did not know quite where they stood if they unleashed television on politics.

As recourse to legal advice has caused all objections to fall to the ground, they have had at last to give their permission. But now the alarm has been transferred from the parties and the television concerns to the candidates. Mr Kennedy—and his wife—are photogenic on TV; but then they are tyros in the cut and thrust of politics; they can't have one magnified without the other. The other candidates know what to say—but they may look rather ordinary. It is all a matter of nice calculation—and with everyone playing safe, viewing time is cut down. But the issues remain; with Rochdale the TV ogre has arrived for good, and the parties must work out some not too ridiculous agreement on it.

Busmen in Conclave

MORE than wages policy was involved when the London busmen met last Monday to decide whether their claim for 25s. a week should go to arbitration. On the outcome hung the prestige of Mr Cousins as the leader of the 1,300,000-strong Transport and General Workers Union, the balance between the moderates and the militants in the union, and the course of industrial relations in the first year since the war when the unions have not been handed a round of wage increases on a plate. It was a drama to be played out first by the 13 busmen and union officials on the central committee whose job it was to prepare a resolution for the full conference; later by the full conference of 132 garage delegates whose vote might make industrial history. The press, including your correspondent, had gathered in strength in the draughty hall of Transport House to hear what happened.

The issues were clear to everyone. The Ministry of Labour's rejection of a court of inquiry into the dispute had pushed the busmen's claim ahead of schedule. The railwaymen, who might have supported them in a strike, will not have finished with arbitration until the beginning of March; the coal-miners not until later still. Thus Mr Cousins had to play for time and stall on any direct action for at least a month; better still he hoped to get the men to go to arbitration where they stand a good chance of getting their money (eight shillings is reported to be the minimum they will accept) without unpopularity or the depletion of union funds.

Pitted against him were 30 to 40 busmen's delegates from the red left. Arbitration for them meant not good tactics but bad faith. The Ministry of Labour has thrown mud in the busmen's face, they argued; now we must throw some back. Led by Mr Jones, an ex-Communist from Dalston, they demanded union sanction for a strike. Their view had many sympathisers from amongst the 90 or so uncommitted delegates.

The plan followed by Mr Cousins and his personal (and personable) assistant, Mr Nicholas, as it emerged later, was to recommend arbitration first to the negotiating committee, and then to the delegate conference. In the event of their being outvoted on this, they had another card up their sleeves. They succeeded in getting the strike resolution so padded with procedural problems (it finished up in the form "that the union executive should give plenary powers to authorise a strike *and* a national conference") that there would be time to approach the Ministry of Labour again before any action had to be taken.

The morning was spent in a vain endeavour by Mr Cousins to get the other men on the negotiating committee to agree to recommend arbitration to the delegates in the afternoon. Though he has been built up by the press into a national figure, his guile cut no ice with the busmen's committee. By lunch time the two sides had only agreed to differ. Two resolutions were prepared, one for arbitration and one for a strike. Then everybody, including the 120 or so delegates who had been cooling their heels in a waiting room since 11.30, broke off for lunch.

At lunch everyone seemed in very good spirits, especially Mr Cousins. "No," he said with a smile, "there had been no vote of thanks for the Minister of Labour." "Yes, he hoped everything would turn out satisfactorily." In the Marquis of Granby, the pub opposite Transport House, journalists mingled with the busmen, buttonholing those they knew and eavesdropping. From the talk that was going on, Mr Cousins' chances seemed even either way.

After lunch, both sides put their case in the main hall. It was obvious, from the sandwiches many delegates had with them that this was expected to take time. And so it did. In favour of arbitration, there was the need to keep in step with other industries; the chance of a windfall gain such as the provincial busmen got last July from the Terrington Tribunal when they were given 11s. instead of the 7s. 6d. they would have accepted; and the option open to the busmen to turn down any award they might not like. Against it, and for a strike, were the instincts of many delegates that action was necessarily better than words and that arbitrators were only pawns in the hands of the Tories anyhow. Speech followed speech, with the applause going to the fighters on the left, and at 7 o'clock the resolution to get strike powers was moved. 83 of the 132 delegates voted in favour—just five too few for the two-thirds majority that was required.

The two hours after supper saw angry words from the men whose strike motion had been defeated. But the result was now a foregone conclusion. Mr Cousins repeated his arguments for arbitration and at 10 o'clock his motion was carried by 92 votes to 40. The busmen will take their case to the Industrial Court, which they rejected in December. By their grudging decision, they have in fact furthered their own ends, though whether those of the country as well is something that remains to be seen.

PARLIAMENT

Work Study for Westminster

SETTING up a select committee to investigate ways of improving the procedure of the House of Commons is a belated response to the alarm which has been growing over the effect of the drudgery and "bull" in an MP's life on the vitality of Parliament itself. Whatever claims MPs may make, it has long been clear that the House is not making sensible use of its time. This has repelled the able and left the dull, and the silting up of the House with the dull has made it duller still. The inflow of postwar Tories at the general election of 1950 refreshed the house momentarily, but the stream is running stagnant again. Parliament stands or falls on the intelligence of its members. Mr Butler's recent remark that MPs should merely mirror the commonality of the nation, coming from that source particularly, frighteningly suggested that the House had grown so dull and heavy that it had begun to hug its own mediocrity. What is now needed is an invigorating overhaul.

But how is such an overhaul to make the job of being an MP, even a backbench MP, attractive to abler minds and more agile spirits? Pay and working conditions are important; but beyond these there should be opportunities for constructive work—and at the very least an end to the present deadening monotony of days spent loafing around the lobbies waiting to vote on obscure amendments to obscure bills, which may even be bad for the health. Various improvements were discussed last week, many of them centring upon the idea of making voting less of a chore. Proxy voting has been suggested; and some reformers would go so far as to suggest that for those in the House an appropriate system of electric bells should permit them to vote without interrupting their discussions with constituents or researches in the library.

Again, members could be released from the prisonlike atmosphere of machine politics if the rule were established that a government could only fall on a clear and previously advertised vote of confidence. This would force a minister to argue the merits of his case, and to keep the House interested, instead of relying on the whips. The suggestion that MPs might be allowed to put speeches into *Hansard* without having delivered them (as in the American Congress) may appeal to cynical minds; but it has nothing to commend it. There is much more to be said for a time limit on speeches, and certainly for some curtailment of the right of privy councillors to speak whenever they choose. The American practice of setting up standing committees—for defence, foreign affairs and so on—has also been suggested. This appalled Mr Butler as "absolutely opposite to British constitutional development," though it is not easy to see why such committees need interfere more with the executive than the present Public Accounts Committee and Select Committee on Estimates. They might help, too, to inform public opinion. The object of the exercise is clear: to inject new plasma into the political bloodstream.

Picking the Peers

WHILE Commons procedure is being discussed, the House of Lords is pushing along its own very different line of reform. The Life Peerages Bill this week completed its passage through the Lords without major amendment, and although it may have a lively reception in the Commons, there seems every prospect that it will be on the statute book by the summer. The question will then arise of how the new life peers will be selected, and in this week's final debate in the Lords a number of peers tried to get a little Government elucidation on the sheer *mechanics* of the operation.

The Lord Chancellor insisted (as no one had disputed) that constitutionally only the Prime Minister can advise the Queen who should be ennobled. He undertook, however, that in picking peers designed to swell the ranks of the Labour Opposition, the Prime Minister would "consult" with the Leader of the Opposition, and that "there would not be any limitation on the ability of the Prime Minister to invite people completely independent." The selection of Labour peers should work well enough, but in choosing non-party men, the Prime Minister might well consider Lord Samuel's suggestion that a select committee of the Privy Council should be set up, rather on the lines of the Honours Committee, to advise him how to advise the Queen. The life peerages scheme is almost certainly too narrow and too cautious to give the Lords the rejuvenation it needs, but it will certainly fail if the first batch amounts to no more than coroneted aldermen.

CYPRUS

Cyprus Adrift

IN matters of international concern, diplomatic explanation and persuasion are proper preludes to action, but there are times when it is necessary to act first and do the explaining afterwards. Cyprus has become such a case; and the British Government's apparent failure to realise this is largely responsible for the claim made by the Turkish foreign minister last week that Turkey, in effect, possessed a veto over British action in Cyprus. The Foreign Office made a prompt denial. Yet the fact remains that neither Mr Selwyn Lloyd nor Sir Hugh Foot seems to have made any progress in curing the Turks of the partition-wish. In his speech at Nicosia airport, on his return to the island, Sir Hugh went out of his way to be conciliatory to the Turkish Cypriots and to Ankara; he offered the Greeks none of the reassurance that might have been expected from a Governor of Cyprus returning from Turkey. Dr Kutchuk, the Turkish Cypriot leader, has this week declared roundly that it is no longer any good for the British to stay in the island. Dr Kutchuk's pronouncements are not notable for their accuracy, but since he has only just returned from a month in Ankara himself, he is presumably speaking from a Turkish government brief.

In Cyprus itself peace hangs in the balance. The Turkish leaders in the island and the authorities in Ankara have, to their credit, done their best to prevent any more violent demonstrations; Dr Kutchuk's homecoming on Monday was triumphant but orderly. Yet the distribution of leaflets calling for anti-British "passive resistance" by the Turkish underground organisation is a bad portent. And in a broadcast on Sunday night the Governor revealed that Eoka had made detailed plans to resume violence at any time. Sir Hugh, who went to Cyprus with such a genuine and idealistic desire to bring peace to the island, had to give a stern warning that if terrorism did break out again the security forces would take "every possible step" to crush it; any progress, he has said, would become impossible. It is

A matter of form

Do you still have your dividends sent to you direct, or do you save yourself time and trouble, stamps and stationery, by arranging for them to be paid to your Bank? It's simply a matter of signing a form and, if you do this, there is less risk of their going astray. They will be credited to your account sooner, as your statement will shew, and the Bank will hold at your disposal the material required for your Income Tax Return.

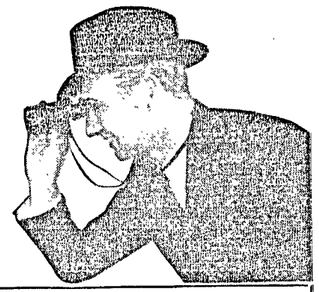
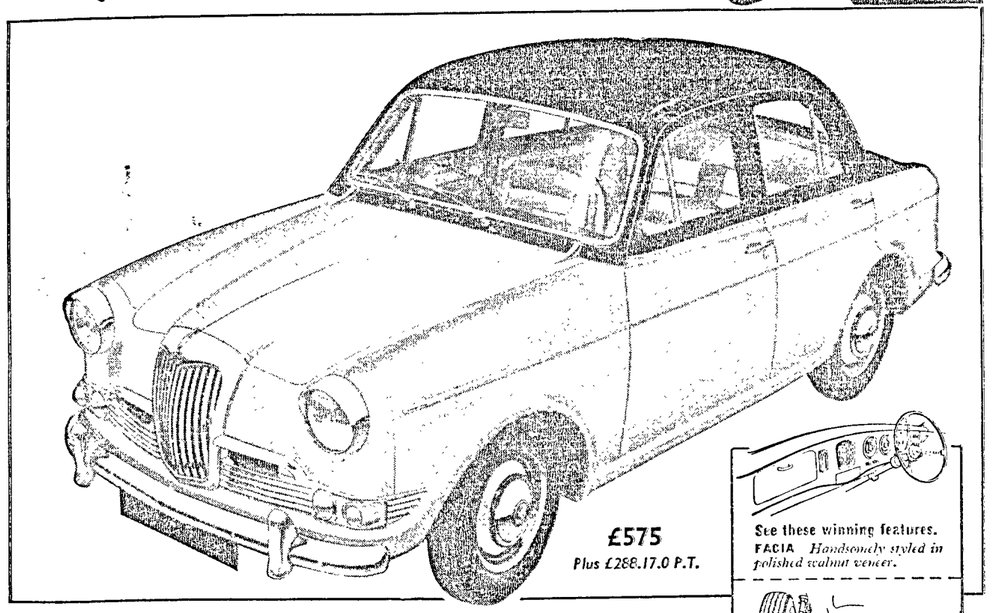
FLEXIBILITY hath charms too...

ESPECIALLY WHEN APPLIED TO CONVEYOR IDLERS

F-L-E-X-I-B-I-L-I-T-Y is but one of the unique technical advantages of JOY LIMBEROLLERS—the new conception in conveyor belt support. Exerting a cushioned grip across the full belt width—centralising the load on the belt—preventing belt slip, they give up to 10 times the life of steel idlers, extending belt life 20%. Suspended on two self-lubricating bearings, they need positively no maintenance. Multi-disc Neoprene rollers resist most corrosive chemicals, grease, oil and fire, and the disc flexion under load promotes a self cleaning action. JOY LIMBEROLLERS can be easily and speedily set up, knocked down and re-situated. They weigh but 1/3rd the weight of steel idler sets.



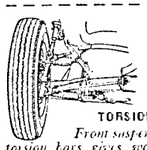
THE FULL STORY



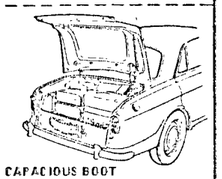
Dimensions, technical specifications and drawings, installation recommendations ... they're all in this JOY Booklet. Ask for Publication No. L 125.

JOY-SULLIVAN LTD. CAPPIELOW · GREENOCK · SCOTLAND. and at: 7 Harley Street · London W.1

You'll like the winning ways of the NEW



Riley One-Point-Five



£575
Plus £288.17.0 P.T.

See these winning features.
FACIA *Handsomely styled in polished walnut veneer.*

TORSION BARS
Front suspension by torsion bars gives wonderful road-holding and cornering.

CAPACIOUS BOOT
Takes stacks of luggage.
WRAP-ROUND REAR WINDOW
For greater visibility.

You'll like its performance. Here's a new, smaller Riley—the exciting, revolutionary One-Point-Five—that gives a truly breathtaking performance. You'll enjoy its flashing acceleration, its effortless cruising in the 80's. You'll give full marks to its excellent steering and road-holding. You'll drive with confidence and pleasure in a car that gives you power with safety.

You'll like its luxury look. Polished walnut veneer facia and door panels, real leather upholstery, heater, windscreen washers—the Riley One-Point-Five is a car with the luxury stamp. It will gratify your pride of ownership—and at a remarkably low running cost.

indeed hard to see how serious disturbances are to be avoided; but at this stage further uncertainty and procrastination in London will only make matters worse.

GERMANY

Herr Etzel's Three Devils

HERR ETZEL, the new west German finance minister, has been working since he took office in October on the approach to three problems—the rise in public spending from rearmament and other causes, the need for fiscal measures to assist the revival of a capital market, and the need for tax reform to simplify the legislative jungle of the tax system generally, through which, in the past, few but the last finance minister himself could find their way. In Herr Etzel's first budget he has sought, with varying success, to tame all three devils.

He has had least success in his efforts to hold back public spending. Ordinary expenditure is expected to rise from 33.8 billion marks in the current fiscal year to 37.7 billion (£3,222 million) in 1958-59, with the defence estimates alone put at £835 million against £750 million this year. In theory, Herr Etzel plans a balanced ordinary budget. But spending this year will be six billion marks more than last year's revenue. Half the gap is supposed to be bridged by rising tax receipts, and the remainder by cash surpluses left over from previous years. A further 1.5 billion marks of extraordinary expenditure—mainly on housing—will have to be covered by loans. In effect Herr Etzel thus expects this year's revenue to fall 4.5 billion marks behind expenditure, a marked change from past surpluses.

A definite start has been made on tax reform. Three main changes have been introduced to help the capital market. Corporation tax on undistributed profits is to be raised, that on distributed profits cut. Facilities for progressive write-offs have been slightly reduced. All this is intended to encourage the distribution to shareholders, instead of the ploughing back, of company profits. There are tax concessions for savers, too. Income tax has been both slashed and simplified. Matrimony will become a really paying proposition, for in future the total income of a married couple will be split in half and each half taxed separately, whether the wife goes out to work or not. Personal and child allowances are raised.

These reliefs will together free some 3 million employed people from tax. Administrative savings—for industry and commerce as well as for the finance offices—will be achieved by the further radical stroke of introducing a uniform rate of tax on incomes below 8,000 marks (£680) a year in place of the progressive graduation which was in force. This will greatly simplify the application of PAYE. There are still some taxes in Germany crying for reform, notably the turnover tax, but Herr Etzel has made a good start in a budget that at last responds to the appeals for expansive policies which international bodies have been levelling at Germany for years.

Support-Cost Fever Again

BRITISH enthusiasm for Herr Etzel's efforts has been somewhat dulled by the absence of any provision for payment of support costs for the British Army of the Rhine. Britain is demanding £50 million for the coming fiscal year, enough to cover the foreign exchange cost of Rhine Army. France is also asking for an unspecified amount of help for the coming fiscal year, and the United States is pressing for £27 million still due to it under this year's arrangements. German ministers, however, have emphatically declared in public that they will not pay a penny in the coming fiscal year. They are willing to help Britain with foreign exchange—indeed, the Bonn government spokesman announced on Wednesday an offer intended to have that effect, for the advance financing of defence purchases, to the tune of £100 million; but they are not willing to help the British budget. Between the stubborn disputants, the position of M. Spaak and of Nato, which is supposed to be arbitrating between them, is not particularly dignified.

Previous bouts of support-cost fever have been accompanied by similar noises off. Each year in the past Herr Schäffer said "never," and each year he paid. But this year the Germans' resistance seems more determined. In the past, with the Bundeswehr far behind schedule, they had no case for refusing. Now, even though the new tax concessions once more give an impression of bulging wealth, defence spending is eating into both budget and national income. The 10 billion marks to be spent on defence in the coming fiscal year will be some 5 per cent of the nation's domestic expenditure. In two years' time the share will rise to 7 per cent, compared with Britain's 8 or 9 per cent today.

The British case is weakened by the fact that reductions in Rhine Army are going steadily forward. 13,500 troops will have left by March; Western European Union has had to accept the fact that a further 8,500 will be gone by mid-1959. At one time this country could argue: pay your money, or the troops go. Now the British Government apparently wants it both ways.

Sooner or later Britain will have to face two realities: that the maintenance of adequate forces in Germany is a British as well as a German interest, and that their cost, once Germany's twelve divisions and air force are in being, will have to be carried by the British budget alone. The price of this annual dispute during the transition is growing ill will and mutual resentment, the effects of which are felt far outside the defence field.

RIGHTS IN LAND

Applying Franks

THE Land Powers (Defence) Bill published last week is a formidable piece of parliamentary draughtsmanship. If it can be taken at its face value, it is one that deserves a warm welcome. It is the first attempt to apply the principles laid down in the Franks report on curbing administrative law. It inserts the right of appeal to the courts at a most sensitive point in the network of administrative power: that is, the power to acquire land for use, temporary or permanent, by the services under the defence regulations, and especially No. 52 of the Defence Regulations, 1939.

At present the services can acquire land under No. 52 without being amenable to any procedure for hearing objections, or to any appeal on matters of law or compensation. In fact, this arbitrary power in peacetime is ameliorated by the practice of the services of holding a public inquiry under the procedure laid down by the Ministry of Housing, as though their proposal were a planning matter. This practice

is, however, extra-statutory and *ex gratia*. In cases which are ruled by the services as either urgent or involving security, they can and do waive it.

The repeal by the new bill of regulations 50, 51, 51-A, 52 and 85 changes this. There is no provision for any summary procedure when service needs are urgent, though if security is involved, the public inquiry may be held in camera. But even now most inquiries are held in private, in order not to draw attention to which of the services' needs for land are regarded as matters of security and which are not. The bill makes it necessary for the services to hold an inquiry if one is demanded, whether they want land for temporary training, or to open up a channel for a pipeline or cable which will be filled in once the pipe or cable is laid, or for permanent uses—such as, presumably, missile bases. Not only must objections be heard ; there is also to be an appeal to the courts if the proper procedure laid down in the bill for acquiring or using land is not observed. The degree of protection which this bill will in fact give the landowner, tenant or citizen will have to be examined very carefully in the committee stages of the bill—for example, with regard to the exceptions made in the schedules to it. But there is a chance that its definition of ministerial powers, and the provision that commissions of inquiry are appointed by the Lord Chancellor, may perhaps mark a turn of the tide of enabling legislation that was fast engulfing individual liberties and the legal defences of private rights.

EAST AFRICA

Damning Mr Davidson

THE Colonial Secretary last week confirmed the decision of the East African governments to refuse entry permits to a well-known political journalist and writer, Mr Basil Davidson, who was on this occasion seeking to enter these territories, under some respectable auspices, for the purposes of an archæological book, commissioned by American publishers. Mr Davidson is already a prohibited immigrant in South Africa, and the Federal government of Rhodesia and Nyasaland has likewise banned him. In the colonial territories themselves the authorities have stuck to their prerogative to give no reasons for barring entry ; there are no facilities for appeal ; and Mr Lennox-Boyd also said "I am not prepared to give any reasons why I have come to my conclusions." Meaningly, he admitted that these were "not because of any association with the party opposite." This seems tantamount to saying that either the Colonial Secretary believes Mr Davidson to be a communist or else that, whether or not that is his view, he is going to uphold the view of the East African officials that Mr Davidson is—at least in South African definitions of the term—an agent of sedition, and that it is inconceivable therefore that such a dangerous agitator should be let loose in East Africa—even to study archæology. These are accusations, or at any rate innuendoes, that should be made explicit—or not made at all.

If Mr Lennox-Boyd himself did not tell the East African governors to keep Mr Davidson out, who did ? It must have been the chief secretaries of the three colonies who deal with immigration and of whom Mr Turnbull, acting governor of Kenya and governor-elect of Tanganyika, is plainly the most influential. These officials are now being backed up by their seniors, the governors, who are now, it is more than surmise to say, finding the affair as distasteful as the Colonial Secretary no doubt does. They know, as he knows, that in Kenya in particular the immigration law under its present arbitrary procedure can be used as a blatantly political instrument—and is indeed deployed against people whose social, no less than political, contacts come under the inevitably censorious eyes of local suburban white society. It is time the Colonial Office pulled up these territories sharply into observing something like the standards of justice, seen to be done as well as done, expected here—which is not asking too much. If Mr Lennox-Boyd is not more forthcoming about his department's supervision of the East African immigration provisions, he should be given a rough time in the debate on the adjournment which is now being sought.

SOUTH AFRICA

Measure for Measure

THE remaining 95 South Africans of all races left in the preliminary investigation of charges of treason after the prosecution dropped its charges against 61, have now been committed for trial. They are now on a capital charge for a crime which is defined with very much less precision than it is in Britain, and even if they are proved not guilty of it, they can still be found guilty of sedition, a lesser crime but also one whose definition is widely drawn, and for which the penalty may be heavy terms of imprisonment. Throughout the hearing their counsel has steadily sought not only to show up the flimsiness of the evidence brought against them, but also to put the law and the government into the dock with them. This is doubtless the best tactic.

South Africans who support the government are enraged at the way in which the trial has been made into a political issue abroad, and even make the absurd accusation that sympathisers outside South Africa who contribute to the defence costs, which are inflated by proceedings dragged out by the prosecution, involve their own governments in an unfriendly act against a Commonwealth state. The fact is that the Union government undertook the trial for political reasons, and still finds that it can use it to serve political ends ; but it may yet, for political reasons, find it worse than an embarrassment. It cannot object if such an exhibition of South African law and legal procedure interests the world. At the same moment the law is thrown into bizarre relief by the sentence of caning on the prime minister's secretary for making overtures to an African woman which might have led to their breaking the first commandment of apartheid as well as the sixth of the older decalogue. Nothing could more vividly illustrate the weird logic of South Africa's "peculiar institution":

> . . . . he arrests him on it,
> And follows close the rigour of the statute,
> To make him an example.

But there is no Duke in disguise in the South African drama to see that justice is not carried to neurotic extremes.

CENTRAL AMERICA

Two Right-wing Victories

ELECTIONS in Costa Rica and Guatemala show Central American democracy at its best and its not so good. President José Figueres, determined to make the Costa Rican elections on Sunday "an example to the Americas," invited the United Nations to send observers. This is the first time that any Latin American republic has opened its polling booths to international supervision. Incomplete returns show that Sr Echandi, the leader of the conservative opposition, has defeated the government candidate, Sr Orlich, but unless he polls 40 per cent of all votes cast there will have to be a run-off vote between the leading two.

The government party lost votes through the overambition of its social and economic programme, which coincided with a run of disastrous floods and crop diseases. If Sr Echandi wins the presidency he will slow down the programme of public works and reverse the policy of nationalisation ; in particular he has promised to allow foreign banks to operate again. He will also play a very different part in Central American affairs. President Figueres was a very frank critic of the less liberal regimes of his neighbours, and San José has become the natural destination of Central American exiles. Sr Echandi, on the other hand, has always criticised the president for "interfering" in the affairs of other states.

★

In Guatemala the government party has been fighting a rearguard battle to avoid handing over power to General Idígoras Fuentes, the leader of the right-wing opposition. There have been two attempts at elections ; the first in October, when the government got its man in, but the public refused to accept results that appeared blatantly rigged. To keep the peace the army declared the elections void and took control. The second elections were held on January 19th, and this time General Idígoras was the acknowledged winner. But since he did not get a clear majority, the Guatemalan congress has to pick the next president from the two leading candidates—who are, officially, the general and the government candidate, Colonel Cruz Salazar, although there is some doubt about the second place.

Congress has been warned that a decision in favour of Colonel Cruz Salazar might precipitate a civil war. The colonel, a sensible young diplomat who can afford to wait for the presidency, has now taken matters into his own hands by agreeing to support General Idígoras in return for a few ministerial posts for his party and an ambassadorship for himself. This compromise, however, is not acceptable to members of the government, who still believe that they can appoint a president against the acknowledged will of the people.

EUROPE

The Pioneers Celebrate

THE two pioneers of customs disarmament in postwar Europe are celebrating this week. After just over a decade together in a tariff union, Holland, Belgium and Luxemburg have solemnised the match in a treaty of economic union to last for fifty years. On February 10th the European Coal and Steel Community comes of age, on its fifth birthday. Gradually, in its first five years of life, tariffs on coal and steel between the member countries have been removed; after February 10th, the treaty will be open to revision as the community faces the new problem of merging into the European Economic Community.

Both the customs union of three small countries and the community of six for coal and steel have taught much to the more ambitious European schemes. But the lessons have been very different. Benelux is a monument to empiricism and to the spirit of free trade—except, notably, in agriculture. It has shown how friendly give and take between the civil servants of member countries, plus a real pulling together of economic policies, can found a partnership. Each new problem—payments difficulties, industries in trouble—has been met either with a practical solution or with a brief protocol. The new treaty largely gives chapter and verse to the working union which already exists.

The coal and steel treaty was far grander at the start, and for those who saw it as the draft constitution of community Europe there have been many disappointments. Still, a common market for coal and steel does now exist and despite all the shortcomings of removing tariffs in two industries alone the economic lessons—in the growth of trade, in the evident stimulus to investment which such growth brings —have been an encouragement to those who seek a more complete European integration. In Luxemburg too there is an invaluable capital of experience on which the European Economic Community can draw.

★

One valuable political lesson has emerged from both experiments. It is that the besetting political peril of such schemes of integration is technocracy ; a bunch of brilliant "European" mandarins whose imaginations leap ahead of their fellow-citizens tends to run the show ; to counter this danger, live parliamentary bodies are needed, deriving political power from the electorate itself. Refreshingly, the parliamentary council, set up in 1955, is taking a more and more active part in Benelux. And of the revisions to the ECSC treaty now on the cards the most important may prove the assembly's demand for greater powers. In the common market, where the technocrats are already settling busily to work and, in time, in a free trade area, the need for an active parliament will be just as great.

FASHION

Discomfort on the Trapeze

EVEN by the frenetic standards normal to the world of *haute couture*, the Dior collection of January, 1958, seems likely to be remembered as quite something. It bowed to a new autocrat of the dressing-table, M. Yves St

MORE OVERSEAS VISITORS

Source: *British Travel and Holidays Association*

Last year, in spite of the difficulties following the Suez crisis, Britain had more overseas visitors than ever before. More than half came from Europe, the largest numbers from France (165,840) and Germany (122,310). Total traffic rose by 6 per cent. between 1956 and 1957, but there were only 3 per cent more visitors from the United States.

Laurent, aged 23 ; it launched a new line, the "trapeze" ; further, as a side effect, it was also the biggest riot to draw publicity ever put on. But will it prove to have re-established the once inexorable dictatorship of high fashion over the female shape ? That the dictatorship has, of late years, almost completely broken down is obvious to any wideawake observer of the contemporary scene. In 1922 any woman who insisted on wearing the skirt lengths and the waistlines of 1918 would have been a self-confessed freak. In 1934 the same description would have applied to anyone still defying, in the tubular kneecap-length garments of 1929, the Gibson Girl revival. Even where handicapped, as in Britain, by clothes rationing, the New Look swept the Old Look out of sight and mind in hardly more than a twelvemonth. Today the repeated and almost united efforts of the *grandes maisons* to abolish waists and busts—efforts which Dior himself initiated, after a false start a year or two earlier, with the "A Line" of 1952—have manifestly failed. The professional and full-time amateur smart sets have indeed enthusiastically continued to play the game according to the seasonally changing rules. But the general run of womankind—and not only the self-consciously unconventional, the unco' serious-minded, and the despairingly dowdy—have with unprecedented obstinacy refused to follow suit.

On the psychology of this refusal Mr James Laver could no doubt say much, though it is hard to link either current high fashion, or its failure to impose itself, with his theory that the waistline moves up and down with Bank rate. Its economic consequences do not yet appear to trouble the serenity (if that is a possible word) of the *grandes maisons ;* but somewhere down the line from creation to mass production some agonising reappraisals are in order. Given a fashion whose ideal wearer is a bosomless, hipless, boneless, stoop-shouldered, chin-poking throwback to 1925, how is it to be interpreted to a feminine public whose aspirations can be reduced to the formula 40-23-36 ? There is one reliable consolation, however, for the popular designer or manufacturer. Rebellious or docile, eager or grudging, his ultimate customer must eventually buy something to wear. His life may be hard, and made harder by sabotage from above. But at least he does not, like that similarly afflicted victim the hat manufacturer, risk losing his market entirely to the producers of home perms.

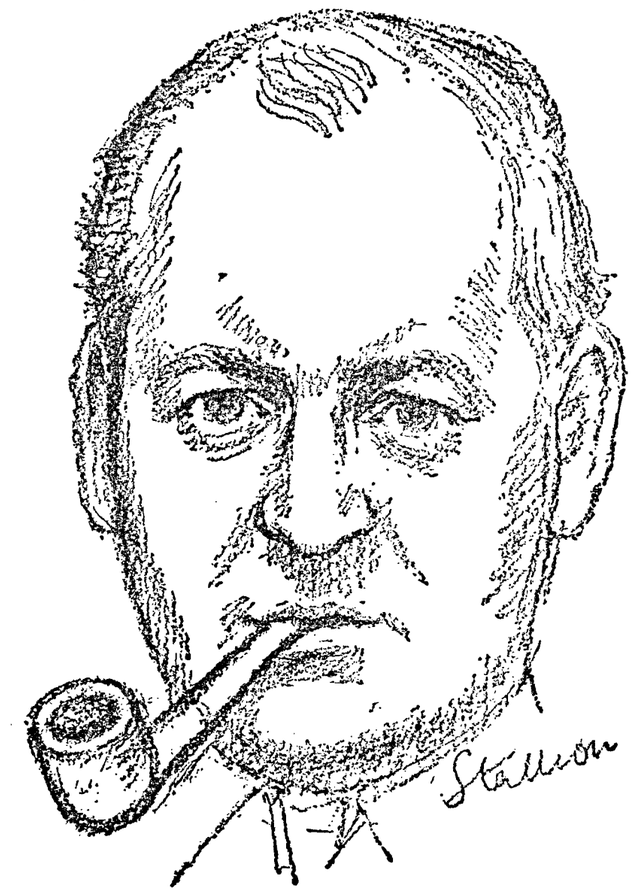
The Economist

FEBRUARY 6, 1858

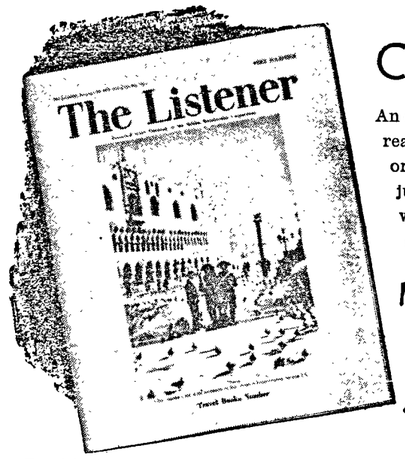
SLAVERY IN AMERICA

The institution of slavery has had two distinct series of effects—the one, physical results of the economy of slavery—the other, moral results of the politics of slavery. On the one hand, that slavery may be remunerative, fresh areas of new and fruitful land must continually be taken into cultivation; and on the other hand, the moral consequence of adopting and defending slavery, is that the doctrine of the *destination* of different races for different social positions supersedes gradually all reasoning as to political right. The Southern States have so long accustomed themselves to believe it their destiny (and *therefore* their right) to be masters of one race, that they begin to apply the same doctrine to other cases to which it is nearly as applicable. In the Spanish half-castes of the Isthmus they have found a population feebler and less sagacious than themselves; and what reasons can be shown for the manifest destiny to whip Africans which do not apply with equal force to prove the manifest destiny to subdue half-caste Spaniards into conformity with their will? Once let political right be discussed as a question of destiny—or, in other words, as a question of *might*, for that is what destiny means—and political morality degrades fast. Superior energy is turned into the *justification* instead of the deepest condemnation of tyranny; the possession of political strength is announced as an obvious and adequate motive for destroying weakness, instead of for assisting and guiding it. The pecuniary interests of the South speak loudly for an extended slave-area; the political morality of the South identifies the law of force with the law of justice. When once a *race* loses all reverence for another race on the ground of its own superior capacity, it is a very easy step to the condition of mind in which a *State* loses all reverence for another State as soon as it sees that the latter will be an easy prey. Habits of mind nurtured by domestic institutions are soon transferred to political institutions.

AUCTIONS



Bargain Hunting



THE report of Knight, Frank and Rutley—the Hanover Square auctioneers—on auction prices in 1957 is an interesting economic document. The prices of top-quality goods—genuine collectors' pieces—are high and still rising. For average-quality goods prices held steady until late summer ; but then, with Bank rate at 7 per cent, dealers began reducing their stocks so that demand and prices fell off sharply. By the end of the year, low-quality goods such as beds, upholstered furniture and large wardrobes—things bought by people who want to furnish their houses rather than by collectors—were at rock-bottom prices. Indeed, they had become virtually unsaleable.

As well as being of interest in themselves, price trends in the saleroom provide a sensitive index of changes in public taste. Secondhand modern furniture has fallen right out of fashion, but small Victorian pieces, and Victoriana in general, attracted more attention in 1957 than for many years. Imitation regency chairs are in vogue. The boom in Georgian and Victorian silver continues, while nineteenth-century genre pictures, "especially ones depicting cardinals in their red dress," fetched good prices. For the prospective buyer or seller, the report gives some prices that were realised for particular items during the year. To choose some at random: price range for mink coats from £100 to £850, for Indian lamb coats £10 to £40 ; Wilton carpet (15 ft by 12 ft) £32, and Kashan carpet (16 ft by 12 ft) £220 ; a Victorian silver tea service of four pieces (80 oz) £62. Prices of unsophisticated goods are now often surprisingly low, and show how many bargains there are open to the collector who buys before the dealers have had a chance to add their large retail margin to the auction price. For this reason, and particularly while Bank rate continues at its present level, anyone who is looking for lower-quality antiques—or who merely wants to furnish his house—would be well advised to attend as many auctions as he can.

* * *

CONURBRUMMAGEM On page 380 of *The Economist*, Birmingham rates were given as "24s. 6d. (£13 16s. 1cd. a head)." This should have read "22s. 6d. (£13 16s. 1cd. a head)."

To any town thinking of drinking sea water—

Mad idea? Not a bit of it. Go mad if you drink it? Nonsense. Not today; not with modern evaporators; certainly not with the newly developed Richardsons Westgarth evaporator. This tidy and compact piece of plant will distill for you—*from sea water*—anything up to 250 tons of fresh water every hour. And by fresh we mean crystal clear, far purer and softer than good drinking water supplies.

Of course, large sea water evaporators are not, in themselves, anything new; Richardsons Westgarth and many other people have been building them for years. But this latest R.W. evaporator is the result of a radically different approach in design. It is indeed something quite new in its simplicity of operation, relatively low first cost, and ability to go on delivering full output—without having to be shut down for cleaning—for months or years on end and with almost negligible attention and maintenance. Fresh water from sea water now becomes feasible economically where cost had hitherto put it out of court.

Summit Talks

SIR—In your article "To the Summit?" on January 18th you state that one of Russia's aims in wanting talks may be to divide public opinion in the West. This seems also to be the reason for the West's marked lack of enthusiasm for barren pilgrimages to the summit. Antipathy to "talks" cannot spring from a fear that Western negotiators might be tricked into paying with Nato deeds for Russian words; agreement on this side about the utter irrelevance of Soviet promises is general enough to prevent that. In fact, no Western statesman can seriously believe in the risk of making a bad bargain when, as at present, the reserve prices of the two major parties are obviously so wide apart as to render any bargain wildly improbable. The maximum concession by either side would still fall short of the minimum demanded by the other. The Western dislike of time-wasting summitry is due not to the risk of a disadvantageous deal at Geneva, but to a feeling that even an inconclusive get-together would fill the democracies with a false sense of security. If a cold war atmosphere is needed to call forth the effort and co-operation essential for keeping the Western alliance strong, then a revival of the Geneva spirit is rightly viewed with apprehension. This, basically, is the consensus in the Atlantic chancelleries.

But whose Geneva spirit is more likely to sap whose determination? Is there any good reason for assuming that the Western body politic is receptive, while the Eastern is immune, to its corrosive effect? For one thing, military disengagement would condemn the satellite hierarchies to political and perhaps physical death. Therefore even a slight shortening of the odds against mutual troop withdrawals must have a profound effect on the loyalty to Russia of the security police and party functionaries in the Warsaw Pact countries. The more they doubt the permanence of the Red Army's presence, the more advisable it should seem to them to emulate Gomulka and Tito rather than Ulbricht and Kadar. For another, hearty doses of the Geneva spirit might deprive Mr Khrushchev of important allies in Soviet society proper. So long as a test of strength between Russia and the West seems imminent to them, patriotism restrains the most virile and progressive elements in the Soviet Empire from weakening the central government by pressing for reform and by seeking release from the tortuous irrationalities of communism. A slackening of tension, even if they, too, recognise its transient nature, might well be the signal for them to act and rid themselves of the worst features of the Soviet system before the Geneva lull is over. Yet it is precisely those features which are the chief threat to "peace," and the West can only pin its hopes of long-run safety and calm on a reform of Soviet society and politics. Nothing should therefore be more welcome to it than Mr Bulganin's rash invitation to a round of co-existentialist make-believe at Geneva.—Yours faithfully,

A. E. DE JASAY

Oxford

Parkinson's Case-book

SIR—Parkinson's Law, according to its author, is a law of growth based upon an analysis of the factors by which that growth is controlled; the validity of this recently discovered law resting mainly on statistical proofs.

Those of your readers who were tempted to draw inferences of over-establishment in the two Army Headquarters in Singapore, from reading the learned Professor's case book in your issue of January 18th, would naturally assume that under the tenets of his Law the statistical proof was in his possession.

In fact the margin of error in your correspondent's statistics varies from 500 per cent upwards to 2,000 per cent.

It is rumoured, he says, that GHQ Far East Land Forces, has an establishment of 56 brigadiers. There are eleven.

The following table shows the difference in other statistics given in the article:—

Parkinson's figures	*War Office figures*
For GHQ	
Colonels—"numerous"	19
Majors—"literally in hundreds"	84
For Singapore Base District	
"Nearly another thousand of its own"	Total 46 officers (incl. 1 brigadier, 3 colonels)

—Yours faithfully, A. C. SHORTT,
Director of Public Relations

War Office, S.W.1

Covered Arbitrage

SIR—In your first business note of February 1st you have expounded the doctrine that a capital inflow, if covered against the exchange risk by a forward deal, does not benefit the reserves. This doctrine was referred to with approval in the city notes of *The Times* of February 3rd. To quote your argument:

> Covered arbitrage involves the purchase of British Treasury Bills matched by a forward sale of the equivalent sterling. It has little ultimate effect on the British gold and dollar reserves, because the bank which provides the forward dollars covers itself by a purchase of spot dollars.

Is this not mistaking the shadow for the substance? The bank's ultimate objective is to "marry" forward sales and purchases, but because the forward market is imperfect, particularly for odd maturities, the spot operation is undertaken as a stop-gap to provide immediate cover. If a bank finds that, on balance, it sells more forward dollars than it purchases at the current forward margin, it would not let this continue indefinitely whilst accumulating a growing volume of spot dollars as cover, if only because it can use these dollars less profitably than sterling when, as now, the interest arbitrage advantage lies with London. Beyond a certain point, buying and selling terms will be adjusted until the forward dollar premium widens sufficiently to eliminate excess demand for forward dollars and relieve the banks from having to make *net* purchases of spot dollars in order to cover their forward commitments. If the widening of the forward dollar premium does not breed any sterling bulls, this balancing of demand and supply in the forward market would come about almost entirely through a redistribution of deals between the spot and forward markets, in effect, that is, through "leads" and "lags" in trade and other payments induced by the widening of the forward dollar premium. These would naturally offset the inflow of arbitraging dollars and there would be no gain for the reserves. Since sterling bulls are hard to breed these days, your conclusion may thus be right though for the wrong reasons. But the reasons matter. For let the authorities act as sterling bulls (if they are not doing so already) and support forward sterling at a point which allows an interest arbitrage margin in favour of London, and the reserves would soon reflect the inflow of arbitraging dollars.—Yours faithfully,

London, N.W.3 JOHN SPRAOS

Monorail to Skyport

SIR—The construction of a monorail line to London Airport may seem an imaginative solution to the problem of providing fast transport for air travellers into the centre of London, but its economic value appears slight compared with that of a motorway exit from London to the west. A monorail would only benefit that already subsidised class, the air travellers; a motorway would not only give them fast travel to the airport, but would speed the considerable volume of goods and passenger traffic which travels west from London and its western suburbs. It would also save lives lost in accidents on the existing archaic roads.

The South Wales motorway is planned to pass near London airport; it could be extended as far as Kensington or Victoria. The cost of doing so would probably exceed that of a monorail, though it could be reduced by following the route of the Cromwell Road extension. The economic gain from such a road would be great, in view of the heavy volume of goods traffic carried on the existing roads to the west, and certainly far greater than that from making London more attractive to air travellers.

If it is considered that a motorway would give both benefits, and the monorail only the smaller of these, the relative merits of these alternatives can be seen. Unless the alternative is digging holes in the ground, such a monorail line is a luxury which a country with road communications like Britain's can ill afford.

—Yours faithfully, DAVID SAWERS

Walton-on-Thames

BOOKS

Time for Lamentation

Art in Crisis.

By Hans Sedlmayr.
Hollis and Carter. 266 pages. 35s.

FROM the history of æsthetics and art criticism one might assemble an anthology of despair: a collection of those books, essays and pronouncements in which critics have, in each successive age, proclaimed the downfall of art, the dissolution of the old values and the unloosening of anarchy upon the world. To this recurrent chorus of lamentation, Professor Sedlmayr has added his emphatic voice. In brief, his thesis is this: from 1700 onwards, western art has entered into decline, into a drift from humanity and the just apprehension of man's relationship to God. This decline, already sensible in the proliferation of styles in eighteenth-century architecture, reaches its predestined and harrowing climax in surrealism. The centre of classical vision has not held; the chaotic forces of the unconscious blur and distort the harmonious image of man that had prevailed from antiquity to the renaissance; art is no longer in organic kinship with reality but, rather, in mutiny against it.

The thesis in itself is not new, but the elements of authority Professor Sedlmayr brings to bear upon it are oddly compounded. The great shadow of Spengler looms over his view of human affairs; he invokes the Russian apocalyptics, Berdiaev and Soloviev in particular, to justify his vision of accelerating decline; he seems to draw heavily on Max Nordau's notions of *analogia morbi*—the idea that æsthetic distortions point to a deeper sickness: "One is therefore tempted to seek—and indeed to find—the cause of the world's present condition, so glaringly illuminated by the symbols of its art, in the same basic condition that accompanies the malady of individuals." Finally, there are in this book significant analogies to the æsthetics of Malraux. Both the author and Malraux perceive in Goya the first thorough master of chaos and in modern museums a symptom of the dissociation between the individual work of art and the historical or architectural setting for which it was intended.

However interesting and well argued, a thesis of this order should square with the facts. In order to appropriate Impressionism to his scheme of decline, Professor Sedlmayr feels compelled to say that "in Cézanne an apple has the same physiognomic values as a face." But if this statement means anything, it signifies quite simply that Cézanne painted both apples and human beings with the same totality of insight and technical mastery. One need only look at the great self-portrait of 1875-1877 (now in Winterthur) to realise how eminently Cézanne belongs to a humanistic tradition, how genuinely he was heir to Rembrandt. "Art in Crisis" goes even more wrong with regard to Picasso. Using an obsolete and fragmentary judgment of Berdiaev's, Professor Sedlmayr suggests that Picasso's art has broken both with the patterns of nature and of antiquity. This doubtless applies to certain phases and experimental techniques in Picasso's majestic career, but it is completely irrelevant to many of his major works and to nearly everything he has done since 1945. Over the past decade, in the suites of drawings and lithographs as well as in his ceramics, Picasso has expressed a serene, limpid and extraordinarily classical image of reality. He is a craftsman of line and movement in the ancient sense.

The very core of Professor Sedlmayr's theory is problematic. He infers that the "decline" of art into non-representation can be related to the decay of an active and responsible religious tradition. But it is in the official art of professedly atheist countries, such as Russia or, of late, China, that many of the virtues to which Professor Sedlmayr looks back nostalgically are most faithfully preserved. It is there that we find "classical" renditions of the human figure and landscape; it is there that we find photographic portraiture and the condemnation of Picasso. In the United States, on the contrary, where religious life does continue to play a wide and sanctioned role, modern art at its most experimental is reaching an ever-increasing audience.

The English publisher of this provocative book tells us that it has sold over 100,000 copies in Germany alone. The reasons for its success there may not be altogether reassuring. A heavy streak of nationalism and prophecy runs through it. The references to German painting are surprisingly complimentary. America is cited as the native ground of philistinism or dehumanisation. We are exhorted, in somewhat Toynbeesque terms, to return to God and "the centre." But of the most catastrophic inhumanity in modern history, of the total collapse of values exemplified in Nazism and the concentration camp state, this work makes no mention.

Neutralist and Peacemaker

Wilson the Diplomatist.

By A. S. Link.
Johns Hopkins University Press. London: *Oxford University Press.* 165 pages. 32s.

ANYONE who has read the incisive account of Woodrow Wilson's Mexican policy that appears in the second volume of Professor Link's massive Wilsonian biography will turn to this little volume of lectures with keen expectancy. Here, turning aside momentarily from the detailed narrative of the biography, Professor Link has so far anticipated the findings of his forthcoming volumes as to give us an analysis and interpretation of Wilson's diplomacy in relation to the European war and the peace settlements. He has embarked on the admittedly perilous experiment of doing this in small compass, presenting conclusions without being able to display his full range of evidence, and summarising from details for which the student or the sceptic will have to go elsewhere.

The result is partly successful, partly doubtful. There is one excellent initial chapter on Wilson's character, equipment and habits as a diplomat. When the book moves on to the complicated and (to Europeans particularly) baffling story of Wilsonian neutralism during the years 1914-17, one feels instantly that the process of simplification abundantly justifies itself; Wilson's motives, difficulties and responses emerge with notable clarity. One may feel that not quite enough, perhaps, is allowed for the insidious appeal to Wilson of the role of mediator—a role which neutrality encouraged and belligerency inevitably destroyed—but in general this is the most convincing and illuminating defence of his policy that is to be found, even though to some British readers it may come as a shock to discover how coolly the administration contemplated war with Britain in 1916.

However, when Mr Link goes on to deal with Wilson's peacemaking, doubts arise. Not, one need hardly say, about his mastery of the material in detail, but certainly about his understanding of the European world into which his story moves and, even more seriously, about his grasp of the truly tragic dimensions of the Wilsonian failure. Here Mr Link appears to have nothing fresh to say; worse still he appears to accept uncritically the useless frame of reference within which, since 1919, the Wilsonophiles have chosen to work. What does it mean to excuse Wilson's failure at Versailles on the ground of his no longer having any "power of coercion over Britain and France"? Were these not allies, in fact if not in name? Can the illusion of American innocence, to which Wilson was such a victim, really survive what we now know of the realities of international life in 1919?

At bottom, the true nature of the Wilsonian tragedy, both at Paris and back home, seems to have eluded Mr Link. It was not that Wilson was a good man representing an idealistic country, who was defeated by bad men and cynics. He was much more than this. He was a Promethean figure who thought he could transcend human and national limitations, taking his country and his world with him; the measure of his fall was pre-eminently the measure of his pride.

On and On and UN

The United Nations and Promotion of the General Welfare

By Robert E. Asher, Walter M. Kotschnig, J. F. Green, Emil J. Sady and others. 1,216 pages. 63s. ($8.75).

The United Nations and the Maintenance of International Peace and Security

By Leland M. Goodrich and Anne P. Symons. 709 pages. 43s. ($6).

Proposals for Changes in the United Nations

By Francis O. Wilcox and Carl M. Marcy. 537 pages. 36s. ($5).

All published by the *Brookings Institution*, Washington. London: *Faber.*

ALREADY well past the 2,500-page mark and swimming strongly, the Brookings series of studies on the United Nations is still a long way from shore. As well as the titles listed here, it is eventually to comprise volumes on the evolution of the Charter, on procedure and organisation, on regional security arrangements, and on the specifically American relationship to the United Nations. And the years roll by like great waves, each leaving behind more sargasso for the swimmers to struggle through. However, when complete, the series will be of obvious value both to serious students and to the lay inquirer seeking a good account of the origins and early experience of, say, Gatt, the trusteeship system, or the technical assistance programmes. Meanwhile, the individual volumes each cover their own field more thoroughly than is possible in the available single-volume studies of the United Nations, and more concisely than the full official records. The series will thus fill a gap as well as a shelf.

The Brookings authors, writing from an independent viewpoint, are able to relate UN activities to the real world better than the official chroniclers, whose style is inhibited by the need to avoid offending any member government. They might nevertheless have crisped up their comments a little more without marring the objectivity of their factual accounts. One is relieved to see here and there a cautiously chiding word about, for instance, Unesco. Some of the authors are obviously concerned to be fair to the point of painful restraint; others have failed to use much discrimination, solemnly recording at length such alarming nonsense as the Ely Culbertson plan to force agreement upon Russia by arms. Perhaps, however, it is a good thing to have placed on record so many of the pious injunctions that have been addressed to member governments by the Assembly and the councils without the least effect. United Nations delegates need to learn from their mistakes quite as much as Napoleon ever did.

When the series was launched in 1951 its sponsors may not have fully realised how difficult it was going to prove to keep abreast of a steadily growing body of experience without yielding to elephantiasis. This is particularly suggested by the first of the volumes listed above, which should be lifted only by healthy young students. The institution is to be commended for having thought of publishing separately, in paper covers (unindexed), three of its main parts. These respectively concern, and are titled, the UN and Economic and Social Co-operation (561 pages, 18s. 6d.), the UN and Dependent Peoples (205 pages, 11s.), and the UN and Human Rights (194 pages, 11s.). The remaining pages of the complete volume are devoted to general exposition, comparison, and evaluation, and to an 84-page index.

All for What?

Cleopatra

By Hans Volkmann.
Elek. 244 pages. 25s.

IT is difficult for an amateur to look afresh at the story of Cleopatra and to disentangle love from politics. Most professionals, being by their calling students of politics, tend to play love down. No one can be certain: it is not that evidence is lacking, but that there is too much of it, nearly all slanted by political bias. Any life of Cleopatra must express a personal view. Professor Volkmann's admirably written book gives as reasonable a view as one could ask for. Its sub-title is "a study in politics and propaganda," but he does not underrate the importance of personal feeling.

Primarily, of course, Cleopatra's story is a political one. No stories are told about her of love for love's sake: her marriages, whether nominal (to her brothers) or real (to Caesar—if one may stretch the word marriage—and to Antony), were political. No Ptolemy, and few Roman politicians of the time, married for any other reason. But love sometimes followed: certainly in Antony's case, and almost certainly in Cleopatra's. Such things happen, as the earlier example of Pompey and Julia shows.

The book's main theme is the opposition between Roman ideas and ways, as shown in Octavian's career, and the life of the Hellenistic East, as shown in Cleopatra and, by infection, in Antony. The story is thrilling, and leads to the conclusion that Octavian's utter victory, and the putting of the East in its place for a long time, was as important as contemporaries thought it. The East came back, underground and by many channels, but not before the great and lasting intellectual tradition of the Roman West had been established. If Antony and Cleopatra had won, the development of Europe might have been very different.

Propaganda is a secondary theme, but a necessary one, since nearly all the sources are examples of it. Professor Volkmann makes fascinating use not only of the literary material, but also of the innumerable coins which were

struck in the ancient world, to stake a claim, to acknowledge a temporary loyalty or to advance a cause.

The book is excellently translated, as the author himself says in his preface; it is well illustrated (the coin bearing an image of Cleopatra at thirty-five is a revelation: beak-nosed, hard-mouthed, strong-jawed); the maps and genealogical tables are useful; but there is no index.

The Middle Kingdom

The German Policy of Revolutionary France, 1792-1797: *2 volumes*

By Sydney Seymour Biro.
Harvard University Press. London: *Oxford University Press.* 480 pages and 1104 pages. £6.

FEW will dispute the importance in European history of the long dispute between France and Germany over what was for a brief moment in the dark ages the Middle Kingdom of Lotharingia, or fail to acknowledge the crucial importance in that dispute of the French revolutionary wars. The present work, which is a first instalment of a study of France's German policy in that period, is the result of some thirty years of archival research and of study of the huge body of literature that has accumulated around it (and which Mr Biro here discusses in a long bibliographical appendix). The modern fashion for brevity has not tempted Mr Biro; where he finds it necessary or interesting to investigate some part of the political background in France itself, or the personalities, French and German, who played their roles in this incredibly tangled tale, he does not hesitate to do so. Nor does Mr Biro's idiosyncratic style come between the reader and the author's own pronounced opinions on many controversial issues.

Mr Biro's main concern is with foreign policy and its making. He investigates in turn the origin and force of the idea of "natural frontiers," the importance of the Rhine as a possible military barrier for France, and the effect of France's historic struggle with the Habsburgs, newly revived as a result of the Revolution. On the other side, he shows us how the rivalries of the German states played into the hands of the French diplomats and soldiers.

He is sufficiently in tune with the contemporary predilection for economic explanations to be willing to examine at some length what besides history and strategy made the Rhineland appear such attractive booty to the men of the Directory, and, above all, how the principle that war should pay for itself, and even yield a profit, made it difficult to evacuate territory that had once been conquered. Thus French policy shifted between outright annexation and the creation of a subordinate republic or republics that might provide a starting-off point for revolution in the rest of Germany.

Mr Biro is aware that the story as he tells it will hardly satisfy the patriotic school of French historians. When he comes to examine the pre-French elements in the Rhineland, he can hardly help finding among them all those psychological misfits whom we in our own day have come to know as the predestined victims of a quisling movement. Mr Biro is not in fact tempted outside his proper subject, and its place in the development of Franco-German diplomatic relations, to consider whether there are not wider implications to his story; and one is even tempted to suspect, remembering the effect of the French occupation on the Rhinelanders of a subsequent generation, that he may have devalued rather too severely a genuine enthusiasm for liberation from centuries of medieval obscurantism. What would Heine have made of this picture of the French on the Rhine?

But for the reader in the middle of the twentieth century the whole thing will be so familiar in another context that he may forget that it is France and Germany that are involved. Foreign intervention against a revolutionary regime and in a civil war followed by the territorial extension of the revolution's power; the creation of "satellites" through ideological penetration and their maintenance as tributaries to a hungry army; an inextricable confusion of ideology and power politics, generous impulses and sordid brutality; traditional goals clothed in new language—surely we, too, have seen all these things. But if Mr Biro is aware of them the professional conscience of an M.A. Harvard and a D.Phil. Oxon. keeps him quiet. If the distinction made by Oxford's new Regius Professor in his inaugural lecture is a valid one, this is history "professional," not "lay."

Cameras in the Air

Evidence in Camera.

By Constance Babington Smith.
Chatto and Windus. 256 pages. 18s.

FLIGHT Officer Babington Smith specialised in German aircraft, in the use of the stereoscope for examining air photographs of them, and in assessing the evidence obtained. She had no superior in any of the services of the Allies in the war; a fact that the Americans recognised when, after VE Day, she was lent to them to continue in the Pacific war the work that she had done in Europe. Much the most interesting chapters in "Evidence in Camera" are those describing her own work, such as the watch that was kept on developments in German aircraft (especially the jet fighters that at one point caused such havoc among the US daylight bombers). The broad outline of the story of the V1 and V2 investigations is fairly familiar, but in Miss Babington Smith's book the piecing together of the multitude of small bits of evidence is described in absorbing detail. The well-worn comparison with a jigsaw puzzle could never be more apt than in this case.

"Evidence in Camera," however, is not a history only of photographic interpretation; in fact much of the book is devoted to how the pictures were obtained, to the men who flew the aircraft, and to the difficulty in establishing air photographs as an essential source of intelligence. By contrast with some of the wartime enthusiasts for air photography, Miss Babington Smith recognises that photographic interpretation is only one source of intelligence and that its results would frequently have been unusable without the often-maligned "ground information."

The part played by air photography in many well-remembered episodes of the war is here recounted in some detail: the finding of the *Bismarck* and the *Prinz Eugen* at Bergen; the covering of Taranto harbour before the Fleet Air Arm attack (including the identification of a new balloon barrage lying across the proposed course of the attacking aircraft); and the recognition of the first V2 rockets before the Peenemünde raid. These are some of the more dramatic features in the story of the interpreters' work. In addition there was the enormous task of meeting the demands of Bomber Command. The author describes how the reports of unsuccessful raids were at first disbelieved, but how, subsequently, they were "no longer unwelcome (as long as they were worded with tact)".

As this book is intended to explain to the general public how air photography was used, it seems a pity that it included so few vertical photographs, which were the basis of the vast majority of interpretation reports. Some "before and after" photographs of bombed targets would have been of interest.

Again at 33 LOMBARD STREET

IN A NEW BUILDING at 33 Lombard Street, the original site of our London office and now our own freehold, we are continuing the banking business we have operated in London for sixty years.

Above and beyond the usual banking services, we offer specialist advice, with particular emphasis on problems that face companies having financial or trading connections with the United States. We have pioneered effectively in broadening overseas investment in British enterprises through American depositary receipts.

In fiduciary matters the services of our subsidiary, Guaranty Executor and Trustee Company Ltd. have been of value to many.

Consultation is welcomed by our staff of experienced officers.

AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

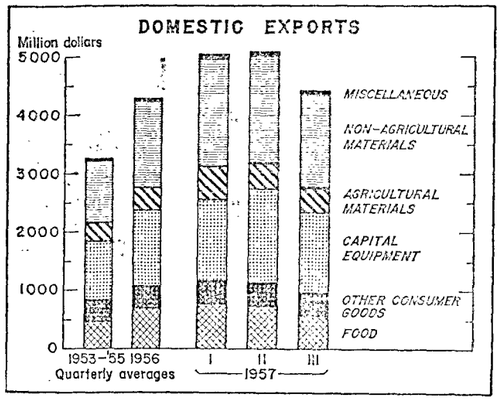
Two Faces on Tariffs

WASHINGTON, DC

THE President's message on tariff legislation faces both ways: forward towards freer trade, backward towards closer protection. By a succession of vigorous statements he and his associates are trying to light a fire under Congress that will extract from it a five-year extension of the Reciprocal Trade Agreements Act, in a form which authorises the President to cut tariffs by 25 per cent. They are founding their case on the need to equip the United States with enough bargaining counters to enable it to adjust its policies both to the Soviet economic offensive and to the creation of the European Common Market. At the President's request Mr Eric Johnston, who has served Democratic and Republican Administrations, is organising a bipartisan assault on the local preoccupations of legislators of both parties. Yet the President has dismayed the habitual advocates of reciprocal trade by offering gratuitous concessions to the protectionist opposition in advance of the tough negotiations that are coming in Congress.

Under the present law, which expires on June 30th, Congress's constitutional right to fix tariffs was delegated to the President for three years. In the first year he was allowed to negotiate cuts of 15 per cent, to be carried out in three annual stages, but in the second year he could only agree to reduce a duty by 10 per cent and in the current and last year by an insignificant 5 per cent. The new law, if it were to follow Mr Eisenhower's outline, would be a substantial improvement in these respects. Not only would the President have these powers for an unprecedented five years, but at any time during that period he could agree to the full reduction of 25 per cent, provided it was spaced out over the following three to five years with no cut in any one year exceeding 10 per cent of the existing tariff. In cases where the tariff is already so low as to make such a change negligible, it might be reduced by 3 per cent of the value of the imported article in three annual instalments.

While these proposals offer a fair prospect of future reductions in duties, they do nothing at all to meet the principal complaint of America's trading partners—the uncertainty of American tariff policy. Instead they aggravate it. Not merely does the Administration propose to offer no improvement in the "escape clause" provisions, which were made more irksome in 1955, but it actually proposes to heighten the risk brought by these provisions to imports on which duties have been reduced under the Trade Agreements Act, if it can be shown that they have damaged a domestic industry. At present, when the President agrees with a finding of the Tariff Commission that such damage has occurred, the duty can be raised 50 per cent above that prevailing on January 1, 1945. At the worst this only means returning to the level of the notorious Smoot-Hawley high tariff, since by 1945 the Administration had used up most of its initial authority under the original Trade Agreements Act to cut tariffs in half. But, under the new gesture of appeasement, the President could raise the duty as high as 50 per cent above the level prevailing on July 1, 1934, when the Smoot-Hawley schedule itself was in force.



It is believed that this new development is mainly designed to fend off the opposition of the plywood and the lead and zinc industries, which have been demanding import quotas on the ground that the greatest permissible increase in the tariff under the present law would not be enough to do them any good. But, because the Anglo-American Trade Agreement of 1939 was one of the major tariff-cutting agreements between 1934 and 1945, this concession could bring a severe threat to the British dollar export drive. To take an extreme and, one must hope, a far-fetched example, the present duty of $1.35 a proof gallon on Scotch whisky could be raised to $7.50, while under the present law the maximum possible tariff is $3.75.

IT must be conceded, of course, that the Administration has a tough fight on its hands. In the House of Representatives a reasonable Bill will probably emerge from the Ways and Means Committee, although it will be fought to the last bell by that committee's senior Republican members. It is on the floor of the House that it will be in the greatest peril, while in the Senate the stickiest wicket will be in the Finance Committee where the liberals, led by Senator Douglas of Illinois, can be certain of only three votes out of fifteen. Other members, such as Senators Malone of Nevada and Kerr of Oklahoma, qualify, because of the economic interests of their states, for Mr Douglas's definition of "blown-in-the-bottle protectionists." The balance will be held by Senators like Mr Anderson of New Mexico and Mr Bennett of Utah, who are bothered by unemployment in the mines, Mr Carlson of Kansas, who is responsive to the independent oil firms (those without foreign interests), and Mr Byrd, the chairman, who keeps a weather eye on textiles.

In face of these dangers the Administration has shown considerable versatility in attempting to clear the major grievances out of the way before the contest begins. Oil imports are now restrained by voluntary quotas, though at a higher level than the independent producers would like. The Japanese "voluntary self-restraints" on imports of cotton textiles are being re-negotiated. On lead and zinc the President has tried to avoid conceding the principle of compulsory quotas by referring an escape clause plea to the Tariff Commission with what amounts to a directed verdict recommending a large rise in duty. Despite the courteous hearing given to British importers of woollen and worsted fabrics the special import quota on these goods,

which is permitted by the terms of a tariff agreement of 1947, is likely to be in full force again by the time the crucial votes on the Bill are cast in Congress. Although in all but nine of the twenty-seven cases in which injury has been found the President has rejected the recommendation of the Tariff Commission that an escape clause be invoked, he has recently bent over backwards to establish a record of compliance—doubling the tariff on clothes-pegs, for example, at the behest of Senator Flanders, who has one of the "swing" votes on the Senate committee. Presumably Mr Eisenhower thinks this price worth paying if the alternative is, as it might be, the ending of his power to over-rule the commission.

Given the entrenched nature of the opposition, the Administration and its Democratic co-belligerents such as Senator Douglas are wise to concentrate on the new, com-

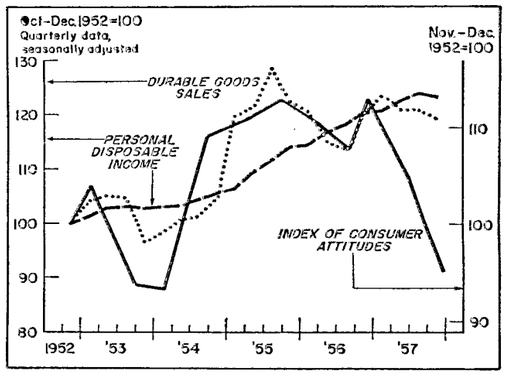
pelling arguments based on American self-interest which point towards a liberal tariff road. No official speech on the subject fails to cite Mr Khrushchev's challenge to Mr William Randolph Hearst: "we declare war on you in the peaceful field of trade." And in a full dress speech to the Senate this week, Senator Douglas, pointing out that every economic commentator has cited the decline in American exports, becoming more marked as 1957 ended, as one of the reasons for the current recession, explained to his colleagues the important stake American business has in influencing the policies of the European Common Market during its crucial formative years through negotiations for lower duties under the General Agreement on Tariffs and Trade. Finally, for the benefit of his midwestern colleagues, the Senator did not forget to throw in some shrewd references to the new significance which international trade will have in the heart of the country once the St Lawrence Seaway is opened. The next few months will show how such arguments of future interest weigh against the complaints of sick industries here and now in this election year.

Exploring Space

WITH its Explorer circling the earth the Army has been transformed overnight from the Cinderella of the services into the Fairy Godmother of the whole country and the United States is no longer a "have-not" nation. But the small size of the American satellite—thirty pounds compared with the second sputnik's half-ton—and the embarrassing four months during which the Russians soared alone in outer space ensure that there will be no self-satisfaction either in the Administration or among the people at large. That will come only if the Americans are the first to reach the moon—the achievement on which the public imagination and also, it seems, much of the country's scientific effort is now concentrating. But the Explorer's success does give the United States a stronger case for insisting that its hopes for some form of international control of outer space deserve serious consideration. In Washington it is widely rumoured that the President will call a special session of the United Nations and there put his plans before the world.

But first he must have definite plans, based on co-ordinated comprehension of the potentialities and implications of space penetration. The present lack of decision in this field is mainly the result of the proliferation of agencies, military and civilian, official, semi-official and unofficial, which have been dabbling in outer space and many of which have now become rival claimants for authority over its development. It was thought that the necessary leadership might be provided when the President appointed Dr Killian as his scientific adviser but he is apparently not concerning himself with the specifically military aspects of the matter. A possible alternative was offered when the new Secretary of Defence, as one of his first moves, set up an Advance Research Projects Agency. But its activities have been delayed and restricted, for the moment at least, by the resentment of all three services, united for once, at the creation of what would in effect be a fourth and superior service, and more recently by the Senate's doubts about giving the military over-riding authority in such a vast and unknown field.

To do this, according to Senator Anderson and others, would suggest that the United States is more interested in the use of outer space for the destruction than for the benefit of humanity and would make nonsense of American proposals that space should be demilitarised and reserved for peaceful purposes by international agreement. The argument is reminiscent of that which led to the establishment of the independent Atomic Energy Commission after the war; another similar agency may well be recommended by the special Senate committee which is now to explore all aspects of public policy in relation to outer space.



Consumers Wait and See

FROM A CORRESPONDENT IN NEW YORK

THE volume of retail trade has increased so steadily—almost without interruption since the last months of 1954—that it is a shock to shopkeepers when sales do not exceed the corresponding months of the previous year. But this is a shock which they are now facing. Christmas trade, it is true, squeezed ahead of the 1956 record as the result of a buying rush on the last day. But the figures for January will show little, if any, gain over 1957 and sales of durable goods have been especially weak. On a month-to-month comparison retail sales have been declining since August. Clearly the reason for this is not an absolute lack of purchasing power since, although personal incomes have also been falling since August, the total is still higher than

it was a year ago. And even after allowing for price rises, the average family income will buy about as much today as it would have in early 1957. Hire purchase credit is widely available, although the lenders continue to examine the financial status of borrowers carefully and to refuse funds to those regarded as poor risks. Moreover, this year there will be a large increase in the number of families who will finish their payments on existing instalment contracts, and so be eligible for new loans.

Why, therefore, are consumers not buying? There are some who even think that people have literally been frightened out of their normal behaviour by the threats of destruction accompanying the dawn of the space age; certainly it seems to have brought a period of effort and austerity in which many may feel that it is not "the thing" to spend freely. Experts in intellectual circles such as government offices and universities put the blame on industries and advertising agencies for attempting to dress women in unpleasing "sacks" and to sell over-large, over-equipped cars. But, apart from missiles and declining standards of taste, there is also an economic recession, bringing a decline in employment, particularly in factories, which can hardly

fail to have a depressing effect on the outlook of consumers in general, even though the great majority of them are still in work and earning good money.

That this is the real explanation of the falling off in retail trade is largely confirmed by the latest report from the Survey Research Centre at the University of Michigan; its periodic samplings of consumer opinion provide many answers about why people spend more or less than might be expected, and most of the answers have very little to do with styles or sputniks. The Michigan researchers have constructed an index, giving appropriate weight to the replies consumers make when asked general questions about their own financial situation, about their views on the business outlook and on prices of goods, about their plans to buy houses, cars or other durable items. The procedure is under constant attack by purists in economics and statistics. But the fact remains that each time the index of consumer attitudes has made a substantial swing, the sales of consumer durable goods have made a similar swing, above or below the close long-term relationship to incomes.

The survey taken last December showed a drop in consumers' plans for buying so precipitous that it not only explains the poor sales in the fourth quarter of 1957, but also forecasts the likelihood of a bad first quarter for 1958. In addition to a falling-off in the number of persons actually planning to make purchases, there was a sharp increase in the number who said they were "worse off" than a year ago, that now was "a bad time to buy" and that prices were "too high." Concern about the business situation showed up in a surprising number of interviews, and the centre thinks that this explains much of the reluctance to incur new debts by buying houses on mortgage or cars on hire purchase. There has been no significant decline over recent years in the proportion of families who say that they want "new things," but this survey found a decided caution about buying them at this moment.

A very large number of those questioned feel that prices are too high and are likely to remain so for the present; they are evidently postponing their plans for making purchases in the hope that eventually these prices will come down. Here at least most of the economists and marketing experts agree with the consumers. As the President's economic advisers have suggested cautiously, and a good many shopkeepers not so cautiously, what is really needed to move consumer goods today is a drop, or at least a levelling off, in manufacturers' costs and prices. Given this start, competition among retail traders would probably lead to better bargains for consumers, as it did in 1954. Some of the devices begun then are still being tried, but with diminishing effect—discount sales at below published prices, for example. But credit terms, which first became easier in 1954, have now been stretched to the safe maximum. So now there are few ways left by which the retail trader can reduce his effective price unless the manufacturer's price comes down.

There have already been some hints that Detroit may cut car prices before negotiating a new wage agreement with the automobile workers. If cars do become cheaper, other durable goods are likely to follow. Since consumers' incomes are still high, price reductions would not have to be large to stimulate consumer spending. If employment in heavy industry is stabilised during the spring months, if at the same time there are some substantial wage increases, as seems likely, and if on top of all this the consumer finds that prices are not in fact higher but a little lower, then he may think better of 1958 as a "time to buy."

Legislative Oversight

THE operations of the independent regulatory commissions, created by Congress and endowed with legislative, administrative and some judicial powers, are of great public concern; these agencies have immense economic authority over such industries as the railways, air transport, broadcasting, the sale of securities, gas and electric power, and business practices in general. There was everything to be said for the proposal of Mr Rayburn, the Speaker of the House, for an investigation to determine whether, in the twenty years or so since most of these commissions were created, they have carried out the intention of Congress and used their regulatory powers in the public interest. Some fear that the independent agencies have fallen under the sway of the White House; others, including Mr Rayburn, dislike many of Mr Eisenhower's appointments to the commissions and suspect that they are becoming the creatures of the industries they were set up to control.

Unfortunately, the job was placed in the not very

energetic hands of Mr Moulder, the chairman of the ambiguously named Subcommittee on Legislative Oversight, who promptly delegated it to a vigorous, but perhaps over-enthusiastic and inexperienced investigator, Dr Schwartz, who is Professor of Law at New York University. Dr Schwartz's long list of charges of personal misconduct against members of the Federal Communications Commission, which, with some justification, he considered to be the most vulnerable of all, angered the Republican members of the subcommittee and brought Mr Harris, chairman of the parent committee, in at a trot to take control of the investigation. Mr Harris, however, is the author of a Bill—once vetoed by the President—to exempt the producers of natural gas from federal regulation and rumours were soon flying that he had agreed to spike the subcommittee's guns in return for Republican support for his Bill.

In the meantime Dr Schwartz's confidential report had leaked to the press, without the members of the FCC being able to defend themselves against charges that they had accepted favours from firms in the broadcasting industry, fraternised with litigants before the commission and charged the government for expenses which the industry had already paid—a criminal offence if proved. The subcommittee has had no choice but to hear the evidence this week. But it is now very doubtful whether the important matters—the rules which the agencies have drawn up for themselves, the adequacy of the statutes creating them, and the pressures they work under—will receive the impartial and extended treatment they deserve.

Drive It and Leave It

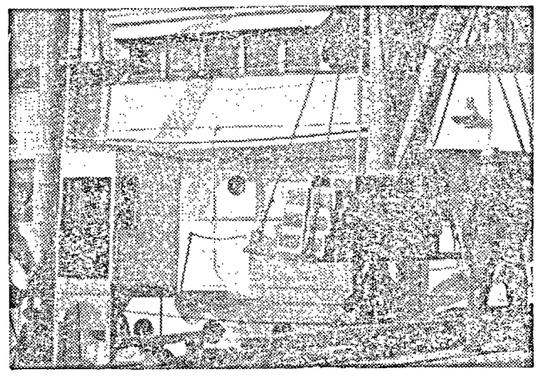
AMERICA'S airmindedness is largely responsible for the current boom in a branch of terrestrial transport—drive-yourself car hire—and the biggest firm in the business, the Hertz Rent-A-Car System, is now coming to Britain so that the increased number of tourists to be brought by cheaper transatlantic flights may enjoy the facilities to which they have become accustomed at home. Many motor-bound Americans prefer to travel by train or air instead of driving themselves hundreds of tedious miles across the country to business appointments or holiday resorts. But an important factor in this preference is that nowadays they can count on finding a hired car waiting at airport or station when they arrive for them to drive as long and as far as they like. It need not even be returned to the place where it was first hired, but can be turned in at the company's office in another city.

Last year about 1,000 new centres were opened, making nearly 4,000 altogether where the 175,000 drive-yourself cars could be hired. Normally advance booking is not necessary and no deposit is required ; charges average about $8 a day with an additional 9 cents a mile. The Hertz System now provides service in over 900 cities, with facilities at 274 railway stations and 360 airports ; the latter place is where about 60 per cent of the car hire business originates. The company has 30,000 cars and 19,000 lorries, some of them leased on a long-term basis ; but over five million rentals a year of passenger cars are made for an hour, a day or a week. Nowadays these hired cars are the latest models and Hertz's purchases for 1958, said to be the largest single order ever given, have provided the flagging car market with some needed encouragement. Altogether from October to April the company is spending $93.5 million on about 20,000 replacements and additions to its fleet ; it is buying mainly the cheaper Fords, Plymouths and Chevrolets but is including a number of more luxurious models—Chryslers, Buicks and even Jaguars. Recently Hertz began to hire out "fly-yourself" aircraft, at 15 cents a mile and $1 an hour.

For some time Hertz facilities have been available in France, Hawaii and various Latin American and Caribbean cities. But the company recently set up an international subsidiary jointly with the world-wide travel agency, the American Express Company, in order to expand its business abroad, already valued at about $4 million a year. Last week's purchase of Daimler Hire Ltd seems to be the first outcome of this new venture.

Shivers in Florida

FROM A CORRESPONDENT IN MIAMI



AS a recipe for success "accentuate the positive" is so much a part of life in Florida that it is accentuated even when it takes the form of a failure. The big frost last December brought an estimated loss of $100 million to the citrus fruit crop : the big freeze in January was hailed with the same round figure. Anything less might have suggested that progress was not the official attitude and that Florida was going backward : anything more might have aroused suspicion, even in Florida, since the total citrus fruit crop is commonly valued at $200 million. But with February coming in with the third cold spell of the winter, the weather is becoming even more exaggerated than Florida's estimates. As a matter of fact, the state does stand to lose more than its citrus crop this year for, in spite of continuing efforts to provide a solid under-pinning of industry, Florida's economy still rests chiefly on its climate. It is a precarious base. When the weather is kind, the crops, the Brahma cattle, the tourist trade and the related network of commerce and industry flourish down the length of the long peninsula. When the weather is harsh, as it was late in 1957 and has continued to be during the first weeks of 1958, the whole structure shivers ; everything begins to recede except the adjectives of the state's publicists.

Freezing weather in the fruit groves of the north and floods in the market gardens of the tropical south that rotted the vegetables where they grew were only the beginning. Such news was inevitably followed by the cancelling of reservations in the 379 hotels along Miami Beach and a sharp fall in the number of passengers coming by air, train and road from the chilly north and middle west. A feeling of disaster crept into the service trades and the clothing industry, while the determinedly optimistic local newspapers began to warn their readers that Florida was no longer isolated and that predictions for 1958 were somewhat bearish all over the country.

It is too early to know how lasting the damage of this

IMPORTANT BANKING ADVANTAGES

The long experience of The Hanover Bank offers important advantages to firms that engage in trade with the United States and other countries throughout the world.

THE HANOVER BANK

(Incorporated with Limited Liability in U. S. A.)

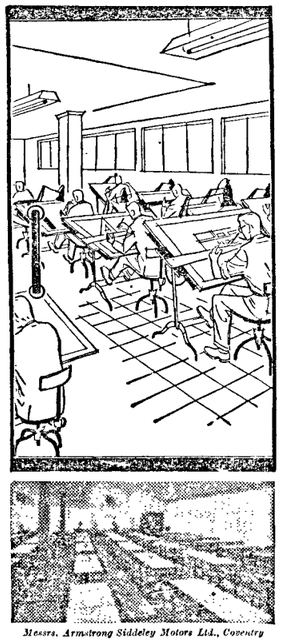
The layout of your canteen will be planned behind this door

The best decision you'll ever make is when you call in Shepherd's.



They're experts in planning canteens from start to finish, and they do it entirely free—without obligation.

Starting with a blueprint, everything is taken into consideration—nothing is overlooked—every single piece of furniture is carefully selected for a reason: that reason is the ultimate efficiency, convenience and working ability of your canteen.

Shepherd's manufacture tubular furniture that's really made to last; delivering direct to customer's addresses.

Take a close look at this illustrated example, it explains more clearly than words how Shepherd's can plan for *your* canteen too.

An enquiry costs nothing. Our technical representative in your area will be pleased to give you the benefit of his experience.

Northern Sales Division: 274 DEANSGATE, MANCHESTER 3. *Telephone: Deansgate 7545*

The Bankers' Dilemma

WHEN the Metropolitan & Suburban Bank decided to open a branch in Harvenage New Town, they were confronted with a grave architectural dilemma.

A normal Met. & Sub. branch office, with its Grecian pillars, rusticated stonework and brass-studded doors epitomizing security, was out of the question. And what sort of bank could be built with plain yellow bricks and armoured glass?

The result, something between an exhibition stand and a welfare centre, was surprisingly effective. The Man from Chubb, consulted at the blueprint stage about strongrooms, safes and fire-resisting equipment, had the idea of making the strongroom door visible from the street.

"A more up-to-date symbol of strength than stone pillars," he said, "and stronger, too."

And so it was. The one professional burglar who had moved to Harvenage for easy pickings took a quick look and caught the next train for London.

"These Chubb people are getting in everywhere," he was heard to say. "It's downright dishonest."

If these Chubb people have not yet got into your place of business, perhaps it is time, in the interests of all-round security, that you invited them. Write or telephone Chubb & Son's Lock and Safe Co. Ltd., 175-176 Tottenham Court Road, London, W.1. (MUSeum 5822).

DON'T LEAVE IT TO CHANCE—
LEAVE IT TO CHUBB

winter's double freeze may be to the citrus industry but, after the first cold wave, the smaller growers asked the federal government to purchase ten million boxes of injured fruit at a dollar each ; they were being offered at ten cents a box, containing 90 lb of oranges, in the open market. The Florida Citrus Commission, fearing that the state's good name would be injured if blighted fruit reached northern markets, clapped a two-weeks' embargo on shipments of fruit out of the state and on local sales of any fruit not already in the shops. The crippling effect of such measures was felt not only in terms of undelivered Christmas orders, but more sharply in the appearance of Californian oranges in Miami fruit shops, offered for retail sale at more than ten cents each. This is not the first time that Florida's traditional rival has profited from such a disaster, but the form of the triumph was hard to bear. Nationally, the price of fresh vegetables has soared. Green peppers are reported to sell at 25 cents each in the New York market and green beans at 65 cents a pound.

Serious as this weather has been, it does not mean that Florida is ruined or that the tourist tide on which its life so largely depends is more than temporarily diverted from its hotels, motels and beaches. Extremes and extravagances are a part of the state's history and are accepted as the price of living there. Growth of population, as of vegetation, has become the normal way of life and soon wipes out the memory of disasters such as frost or hurricane. So spectacular is this power of recovery that it telescopes the normal pace of time and turns yesterday into the distant past. By virtue of the fact that Florida was explored and claimed by Spain a full century before the English settled in Massachusetts, the state has the right to call itself old, but in fact it prides itself on being very young. Annexed to the United States in 1821, its mainland reaches flowered with those of its neighbours in Georgia and Alabama, but its long peninsular leg remained mostly in the possession of Indians and alligators until this century. As late as 1902 the small and fever-ridden villages on the east coast got their mail by kindness of the "barefoot postmen" who walked the sands between towns now called Palm Beach and Miami. In that year Flagler's then rickety railway was pushed south and Florida's modern era began.

How that era bloomed into an orgy of real estate speculation in the nineteen-twenties, and how the collapse of that speculation foreshadowed the great stock market crash of 1929, is a tale that is being revived in the present uneasy period. What surprises the visitor coming three decades later is the degree to which the dreams of dead land agents have become the working reality. Coral Gables, which was one of the most flamboyant building estates, is now absorbed into the sprawling giant called Greater Miami, while Miami itself has gained the legal right to become coterminous with the surrounding agricultural boundaries of Dade County, and shows every sign of intending to spread its low houses to the very edge of the swampy Everglades.

Part of this growth represents Miami's share of the swelling tide of winter tourism, but more important is the alleged fact that its permanent population is growing almost twice as fast as its tourist business. The result is a bursting at its more expensive seams—schools and paved streets, sewers, water supply are over-taxed, while the money to pay for more of these facilities gathers less quickly than the people who use them. Because tourist industries and the service trades do not furnish sufficient employment even in good weather, the lavish resort city is engaged in an earnest effort to attract other industries. The important Western Electric and International Paper companies were among "almost two hundred new manufacturing firms" that established bases in Miami in 1957. The local press hails them as "the spark which is necessary to keep the flame of Miami's industrial leadership burning." Meanwhile residential construction dropped 2 per cent from 1956, but non-residential building rose by 53 per cent.

This ferment taxes the through roads as well as the local ones. Partial relief for traffic crowding on the long thin shoestring of US1 was furnished a year ago when the Sunshine State Parkway was opened for 110 miles from Miami to Fort Pierce, which is a third of the way up the coast. Now the demand is heavy for completing the road up to the Georgia state line—a project which would cost $185 million more than the $62 million already spent.

Miami takes little note of Cape Canaveral, where the guided missiles flower or fail to. One of the marked characteristics of the state is an intense and competitive parochialism, and the local press shows less interest in news of missiles than in reports of bitter weather in Chicago or Kansas City. The former may start a temporary business boom near Orlando, but the latter will send the shivering middle westerners down to the sands of Miami Beach, which are carefully cultivated to match the colour of Miami's favourite beverage, pink champagne.

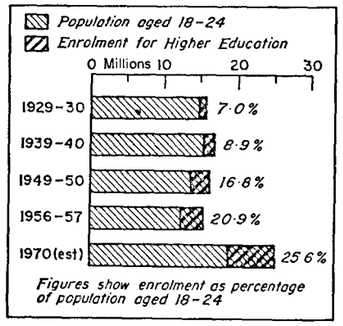
Writing on the Screen

Last month owners of cinemas heard their worst fears confirmed. A report prepared for them by a private research firm, which they failed to keep secret, showed that in the past year and a half the average number of hours Americans spent each week in moving picture theatres had dropped from nearly 400 million to just over 100 million, while the number of hours they spent watching films on television had risen from 86 million to 426 million in the eighteen months ending last December. It was in the autumn of 1956 that hard-pressed producers in Hollywood, to keep themselves afloat, agreed to sell their back-logs of pre-1948 films to television interests, and people began to stay in, rather than go out, to the movies. The value of these "lost admissions"—7 million of them a week—is already put at $10 million a week ; if the recession continues, still more people may economise at the cinemas' expense.

The question now is whether the producers will succumb to offers from television for pictures made since 1948. According to the report, this would constitute a "death blow to the theatres and to production." But Hollywood may not agree. Already the Republic Pictures Corporation has arranged to release 218 of its post-1948 films to television stations affiliated with the National Broadcasting Company for a sum of more than $2 million. Film producers have learned, moreover, that a single super-film often makes profits ten or fifteen times greater than those of the ordinary successful feature. And, although their audience in cinemas may be only 42 million a week, half of what it was ten years ago, there are more than four times as many—204 million—watching films on television every week.

Help for Students—or Colleges?

OF the 43 million Americans receiving formal schooling, approximately 3.4 million are in institutions of higher education. But among the gaps and defects of the educational system brought to the attention of the public by Russian scientific achievements is the fact that every year 200,000 of the ablest high school graduates do not go on to college, many for financial reasons or lack of adequate guidance. To reduce this waste of talent, the Administration has proposed, in its emergency and temporary scheme for education, to award 10,000 college scholarships a year for four years; in Congress Democrats sympathetic to federal aid for education (a good many in both parties still are not) are proposing to increase the number to 40,000 a year for six years. This reflects the American belief that higher education should be available to all who can benefit from it, though not necessarily at four-year liberal arts colleges.



Costs of Going to College

Expenses have doubled since 1940. A recent survey for the Office of Education, covering 15,316 students at 110 of the country's 1,886 colleges and universities, concluded that on the average they spent about $1,493 last year in institutions controlled by the states, compared with an estimate of $747 in 1940, and in private colleges, $2,047 compared with $1,023. The cost of living accounts for five-sixths of the budget at state universities and two-thirds at private colleges, but tuition fees also virtually doubled at both between 1940 and 1950. About half the students surveyed came from families with less than $5,000 a year (about £1,780). In 1953 60 per cent of American families had incomes before federal tax of less than $4,000 a year.

Scholarship aid in the group surveyed covered only about 5 per cent of expenses, student earnings 26 per cent, and loans 1 per cent. For all colleges, scholarship funds amount to about $60 million a year; half of this is concentrated at 50 institutions. While more scholarships are urgently needed, a special presidential committee recently urged federal help to provide work for needy students and strongly endorsed the growing view that, in a society so tolerant of instalment buying, much more use might be made of loans to students. Fees might also be allowed as a tax deduction for poorer families.

The Rising Tide

Heavy as college charges are to many parents, students only pay in fees 47 per cent of the costs of their instruction at private colleges and 18 per cent at the state universities. The colleges, most of which are already overcrowded, are understandably critical of large scholarship programmes unless they are accompanied by grants to cover the colleges' additional costs. Their chief concern is not to increase the student body, but to stop the deterioration in the quality of college education which has begun and which will become much worse unless the institutions are helped to meet the overwhelming demand for higher education expected in the next twelve years or so. Enrolments, which have been rising steadily for six years, are at peak levels although the number of young people aged 18 to 24 is lower than it has been for a generation, because of the low birthrate in the nineteen-thirties. When the war and postwar rise in births reaches the colleges, enrolments will mount steeply, doubling or perhaps even trebling by 1970, when from 6 to 9 million students are expected.

Teachers—the First Priority

The biggest problem today and for the future is to find and keep enough well-qualified teachers. Low pay and competition for graduates from industry is already forcing the colleges to accept teachers with lower academic qualifications. In 1953-54 the median salary of instructors, the beginning teachers, was $4,000, less than the average industrial wage, while the median salary of full professors was $7,000, less than many foremen received. To compete on an equal basis with industry, the colleges need, it is estimated, to pay about $800 million more a year in salaries; this is some measure of the teachers' forced subsidy to higher education. Yet at least 180,000 new teachers will be needed by 1970 to cope with larger enrolments, in addition to the 18,000 needed each year to replace those who die, retire, or leave teaching. The Administration's proposals include grants for graduate schools to expand their facilities and 5,500 graduate fellowships over the next four years, but

without much higher salaries there is n guarantee that even this small drop wi find its way into the bucket. In addition, the President's committee estimates that present facilities, plus foreseeable expansion, will accommodate only 70 per cent of the students expected in 1970; a good deal of money will have to be spent on buildings.

Finding the Money

Some $3 billion is being spent today on higher education, excluding the cost of food and lodging; the table shows where it came from in 1953-54:

	All institutions	Publicly controlled	Privately controlled
	Percentages of Total Current Income		
Student Fees	20·17	10·03	32·94
Federal Government*	12·65	12·09	13·36
State and Local Governments	28·31	49·41	1·79
Endowment Income	4·30	·89	8·58
Gifts	6·45	2·33	11·61
Auxiliary Enterprises	19·45	17·33	22·10
Other	8·67	7·92	9·62
Total Current Income	$2·966 billion	$1·651 billion	$1·315 billion

* Mostly for research.

This total is about ¾ of one per cent of the gross national product of about $360 billion in 1953-54. The same proportion of a gross national product which is expected to reach about $650 billion in 1970 will produce less than $5 billion a year, while the President's committee estimates that about $7 billion will be needed. This amounts to just over one per cent of the expected national product at that time.

Direct federal aid for higher education would be even more difficult to justify to Congress than federal aid for state schools (which Congress has yet to approve), since about 43 per cent of all students attend private colleges and universities. The President's committee only recommended federal aid in certain marginal areas: providing better educational statistics, which are badly needed; the work-study project; slum-clearance funds and low-cost loans for building; payments to cover the whole cost of research undertaken for the government, and larger tax allowances for corporate and individual donors. Such giving, which amounted to over $200 million in 1956, is an unstable source of income but, apart from raising fees, it is the chief hope of private institutions; the public ones will have to rely in the main on much larger contributions from the states. Yet it is noticeable that the Association of American Colleges, representing most of the liberal arts schools, which in the past has always opposed federal aid except in the form of scholarships, was seriously split when it met last month, and some college presidents are saying openly that a direct subsidy for higher education is essential.

THE WORLD OVERSEAS

Britain and the Arabs

FROM OUR SPECIAL CORRESPONDENT

THE efforts of Britain and Egypt to reach a settlement of claims arising from the Suez intervention are a subject of profound interest to the educated public of the Arab Middle East, most of whom are anxious to see a settlement. To anyone who knew at first hand the passion aroused in the Arab countries by the bombing and the Port Said landings, this is one of the most surprising aspects of the region at the moment. The willingness to see British relations with Egypt and Syria restored is common, though in varying degrees, to all sections of political opinion. The Syrian nationalists, holding out on Egypt's behalf for the best terms Egypt can get, may not be impatient for the end of the affair but they want it all the same.

Most British people have found the milder political climate reflected in their personal relations, although, in fact, at the time of the intervention most people who had strong and friendly associations with Arabs or Egyptians found that these survived to a surprising extent the anger provoked by the Anglo-French action. Not a few British people broke bread with their Egyptian friends even as the RAF was bombing the airfields on the outskirts of Cairo. Such occasions were tinged most of all with regret—regret that the British were finished in the Middle East, regret that Egypt and the Arabs *must* finish with a country that could behave like that. This pessimism was excessive. It was hardly likely that the British connection would be finished. But it was clear that a large part of British interests in Egypt would be wiped out and it is still true that the attack on Egypt is neither forgotten nor forgiven anywhere from Alexandria to Baghdad. Yet whatever Britain stands for has survived behind the curtain of wordy abuse that hides the mind of the Arab, perhaps because—in spite of the view of many that Arabs only understand a show of strength—the very fact that the Suez intervention failed has deflated the hate nurtured by Arab political opinion.

The Americans in the Middle East, who have inherited not so much the British position in the region as the animosity which it left behind, have remarked the change with chagrin. An American diplomat, on returning to Beirut to contemplate in tranquillity his visit to Cairo, exclaimed "Anyway, who *did* invade Egypt!" That was some months ago, but ever since the reports from Egypt have revealed a courteous and even friendly attitude to the British residents or visitors, in so far as the British do not collide with the administrative difficulties created for them by the legislation which followed the Suez conflict.

Why should the intolerable offence of military intervention be dulled so soon? In the first place because a lot of water has flowed under the bridges of Thames and Nile since the offence was committed. Secondly, the intelligent Arab, often as he falls into the maw of muddled dictatorships, has a deep respect for the principles of democracy which seem endlessly denied him, either by subservience to the foreigners, as in the past, or by domestic political perversions, as at the present time; he remembers too, with a sidelong glint of admiration, that a substantial section of British opinion opposed the Egyptian policy of the Eden government. Thus, by a curious twist, the affair deposited somewhere at the back of the Arab's cranium one of his few predilections in favour of the British way of life. The most intelligent of all among the Arabs are ready to believe that "imperialism", which they can divine in the most unlikely soil, is now functional rather than fundamental in Britain, a kind of automatic twitch of the muscles in the tired, mature lion.

The passage of time and philosophical wonderment are not in themselves enough to explain the change. They have, at most, rubbed away the sharp edge of Arab anger. Of more importance is the fact that Britain has relinquished primary influence. To some extent the modesty on Britain's part is due to the lack of diplomatic posts in Cairo, Damascus and Riyadh, for it is difficult to be energetic by proxy. But the courteous termination of the treaty with Jordan last spring counted in favour of masterly inactivity. The Arabs have always said, "Take away the bauble of your power position, trust to the hand of friendship." The British were, in their fashion, doing so, although without any confidence in the handclasp. The seizure of Port Said, no matter how Mr Selwyn Lloyd may explain the good intention of it, was not, it is true, a particularly friendly act, but one result of it happened to be a further reduction of power. From the point of view of the Arab nationalist, Britain could nearly qualify for Nirvana, there to await its entry into the heaven inhabited by Indians and Jugoslavs—if Britain were to drop the Baghdad Pact.

Nearly, but not quite. There is still the unforgivable sin of friendship for Israel. And the average Arab feels that Britain is at least holding Mr Dulles's hat while he throws stones at the icon of Nikita Khrushchev, which hangs at the left-hand corner of the nationalist wall. Britain has, on balance, gained as a separate nation (not as a part of the West versus the East) by the comparison made with the conduct of American policy in the Middle East during 1957. While Britain stood aside, the Americans were encouraged to overconfidence by transient approbation of their Suez policy, and they bustled about the region in a manner utterly displeasing to most Arabs, who had no desire to join President Eisenhower in a crusade against communism, disliked the American actions in Jordan, detested the Sixth Fleet's

arrival at Beirut, and were intensely suspicious of the Turkish show of strength on the Syrian border, which they firmly believe to have been instigated by Washington. Of course, Britain usually supported American policy, but the support was mumbled rather than trumpeted, and did not therefore destroy entirely the impression of aloofness.

The measure of good opinion that Britain has salvaged from the Suez wreck is in some ways ephemeral. It could not long survive an active support for American policy in its present untidy form. However unpleasant it may be, the fact is that the Arabs can more easily accept Britain now because they believe that it has not the cash to buy support, the power to enforce obedience, or the urge to subvert. They would turn even more violently than formerly against Britain if they felt that its government was continuing to conduct power politics from a position subservient to America. It would be dangerous to assume that inactivity was in itself masterly and, without taking any initiative, to support from loyalty to an ally all American policies in the Middle East. To the Arabs, love and hate are not mutually exclusive; they can sometimes pity the abject; but they have no use for a second fiddle. There are few things in the world as uncharitable as Arab derision.

The Arab assumes that Britain would like to have a Middle East policy enjoying a degree of goodwill. Of necessity such a policy will be inactive compared with British Middle East policies in the old days. But many intelligent Arabs believe the present situation offers Britain some promise, and that Britain need not, because it is second to America, be subservient. They hope—they do not go so far as to expect—that the British will lead from their position of relative weakness, by bringing some restrain to American policy and introducing benevolent toleration of idiosyncratic arabism.

Mr Diefenbaker Takes a Risk

FROM OUR CORRESPONDENT IN OTTAWA

MR DIEFENBAKER took a calculated risk when he set March 31st as election day. Canada's inevitable winter unemployment, exaggerated this year by slack export industries and declining orders in manufacturing, usually reaches its peak about mid-March. It is almost inevitable that the latest information on employment conditions available on polling day will show more unemployment than at any time since the war, both absolutely and as a proportion of the growing labour force. If it is true that the government in power always gets blamed, whether responsible or not, the Conservatives might have done better to hold off the election until June.

But the desire for an early election gained ascendancy on January 20th when Mr Lester Pearson took over Mr St. Laurent's desk as leader of the Opposition. When his first attempt at a no-confidence motion gave Mr Diefenbaker such an easy debating triumph, two new factors began to dominate Conservative thought. All government members realised, first, that the Liberals did not intend to join the two small parties, the Co-operative Commonwealth Federation (CCF) and the Social Credit party to defeat the government; if Mr Diefenbaker wanted the twenty-third parliament to be dissolved, he would have to advise the Governor-General himself. Secondly, the Conservatives concluded that Mr Pearson's opening appearance discouraged his followers and that the Liberal fighting strength could only grow as the months passed. Mr Diefenbaker kept everybody in a state of suspense until last Saturday, but throughout the two intervening weeks it became increasingly clear that the government's supporters were eager to get back on to the hustings.

The Opposition parties maintain, of course, that Mr Diefenbaker should have carried on, since he could carry the House of Commons unless there was a tactical slip by somebody. Yet both in Parliament and outside, the government's position was increasingly difficult: Mr Diefenbaker called it "intolerable." A house in which the Liberals plus the CCF commanded one less vote than the Conservatives plus the Social Crediters, with two Quebec Independents left over, did not encourage a bold legislative programme—which does not necessarily imply that the Conservatives had one anyway. But even worse was the government's vulnerability to pressure groups, whose clamour seemed to be growing as more and more people realised the government's need to consider policy mainly in terms of votes. For most of the Conservative ministers, if for no one else, an escape from this situation is probably the greatest relief that a dissolution provides.

★

Complaints are also being made that during its seven months' life the government has never produced any kind of budget. When Mr Fleming announced tax cuts in November, he said he expected a surplus of $80 million in the fiscal year ending on election day. In the closing days of parliament he admitted that the budget for 1958-59 will involve a deficit. With increases in expenditure on many fronts and tax revenues declining with the present business slack, this has long been obvious. Next year's deficit, on present plans alone, must be about $500 million. Ironically, past pronouncements by the Conservatives give them alone the right to complain about deficit financing. Most Liberals, taking an orthodox anti-cyclical line, admit that free spending is exactly the right response to the current economic slackness.

The Liberals have announced that their main criticisms will be based on unemployment and foreign trade. Mr Pearson has wisely and honestly said that unemployment would have occurred whichever government had been in power; but he claims that the Liberals would have acted more efficiently to counter it. Complaint about trade starts with the easy task of ridiculing Mr Diefenbaker's talk of a 15 per cent diversion of imports from the United States to Britain when the government had no idea how it was to be done and recoiled in shocked horror from a British proposal for Anglo-Canadian free trade. It continues, on less solid ground, to accuse the Conservatives of disrupting trade with the United States, and even of bringing on American restrictions on oil imports. The Conservatives' reply to all this is that the present employment troubles really stem from the Liberals' failure to understand that the boom was ending a year ago, and the present trade difficulties from their failure to keep Canada's overseas markets.

All this sounds very turgid election material, and no doubt in every constituency livelier issues will be devised. Certainly, Quebec politicians will discover more exciting and intimate things to talk about—and Quebec is vital. The Liberals at the dissolution held 65 out of Quebec's 75 seats and only 41 seats out of 190 in other provinces. The Conservatives had 105 out of 190, but only eight in Quebec. To gain an overall majority they must win at least 20 seats in Quebec, and they hope for at least 30. With Mr St. Laurent no longer leading the Liberals, and with Quebec's natural desire to be on the winning side, they may get that many. But they have no outstanding figure in Quebec. Neither, it is true, have the Liberals, but this may be more serious for the Conservatives, who must break down a tradition of hostility originating from recollections of conscription and ancient imperialism. Most Canadians' fervent wish is to end the parliamentary stalemate, which clearly does not make for good government.

Summit Seen from the Rhine

FROM OUR BONN CORRESPONDENT

BEFORE leaving Bonn for the south of France, where he plans to spend almost the whole of February, Dr Adenauer made it his last business to give his assent to a series of foreign service postings and to broadcast once again to the nation about the aims and the methods of his foreign policy. Both acts, he doubtless hoped, would persuade a mildly radio-drunk electorate that the Federal Republic's relations with this not best of all possible worlds were at any rate safely in the best of possible hands. Both indicated more or less the course which the government expects foreign policy will have to take during the next decade or so. The prospect is frustrating for all patriotic Germans; for those east of the Elbe, it is positively daunting.

The German press and radio are, on the whole, appreciably more serious than their British counterparts. It was possible for the German citizen with sufficient leisure and interest to listen for sixteen consecutive hours to a radio relay of the last Bundestag debate on foreign policy. In a series of hefty instalments most of the dailies thereafter reported all the speeches in full. Both radio and press have since been recording indefatigably the angry afterthoughts of, so far, Dr Adenauer and the two opposition leaders, Herr Ollenhauer and Herr Mende. Thus nobody has an excuse for not being acquainted with the issues presented. Their common impotence in the face of partition is chiefly to blame for the animosity of the professional politicians; remembrance of their democratic obligations—quickened by January reflections on the twenty-fifth anniversary of Hitler's accession to the chancellorship—partly accounts for the patient curiosity of the public. But what have Fritz Meyer and Lieschen Müller made of it all? The Chief Burgomaster of Berlin, Herr Brandt, who is more closely engaged in east-west problems than most Germans, has recorded his surprise that so many persons have been able to express themselves so confidently on affairs of such political and technical complexity.

As usual the clearest, because simplest, assessment of the situation has come from Dr Adenauer. Several times in the course of this protracted parliamentary and extra-parliamentary debate the Chancellor, using on each occasion almost precisely the same words, has surmised that the Soviet Union requires "a pause of ten, twenty, or thirty years" to carry out its own internal tasks. It is the business of the West, Dr Adenauer has reiterated, to confirm this supposition; and, in the meantime, to pursue policies directed towards controlled disarmament and co-existence, hoping that the Soviet leaders will eventually modify their idea that communism must conquer the world. The government's immediate task must be to examine Mr Bulganin's proposals for a summit conference, with the stipulation that preparation must be thoroughgoing.

These are modest expectations. To Dr Adenauer's critics they are defeatist. But, recommending them to come down to earth, he observed in the Bundestag:

> We Germans should not let ourselves suppose that the destiny of the world is in our hands. Unfortunately it is in the hands of the Soviet Union and the United States.

In Dr Adenauer's unshakable opinion—and it must be remembered that he has a mandate from more than half the electorate—Germany's salvation will continue to rest in unwavering adherence to the western alliance. To flirt with the Rapacki plan for including Germany in a stretch of Europe clear of nuclear weapons would be to jeopardise the alliance; for why, he has asked, should America be expected to expose its soldiers stationed in Germany to the fire of nuclear weapons sited in Russia to which they would be powerless to reply? All the evidence suggests that this view is going to prevail. The defence minister, Herr Franz-Josef Strauss, is trying to sugar the distasteful nuclear pill with soothing reassurances: by unhesitatingly fulfilling the requirements of the Atlantic security system, he has argued, and by joining wholeheartedly in west European economic integration, Germany "will not for a third time make the ghastly mistake of taking up a wrong position in world politics" through overestimating its own strength.

Once again the Social Democrats have not been able to put forward any convincing alternative solution to Germany's predicament, and their tentative proposals have been quickly punctured by Mr Khrushchev's and Mr Bulganin's announcements that there would be no place for the German problem on the agenda of a summit conference. But in the Bundestag debate Professor Carlo Schmid to some extent took the Russian leaders' mood into account. "Because they are unimaginative," he protested, "there is no reason why we should be." He urged the promotion of whatever negotiations were possible. Although the alchemists of old had failed to find the gold they sought, they had made some useful discoveries in the process. Why dismiss the Rapacki plan so abruptly out of hand? "It may be," Professor Schmid conjectured, "that we have more in common with Poland than we suppose. We might at least have an ambassador there to try to find out."

Perhaps the government will take some of these proddings to heart. But the new postings in the foreign service, necessitated mainly by the staffing of the common market and Euratom, promise rather consolidation of present policy than experimentation. Herr van Scherpenberg, who succeeds Professor Hallstein as State Secretary, is outstandingly qualified through his experience in the foreign trade department to watch over Germany's deep interest in the common market. Professor Grewe, who is to be ambassador to Washington, has become a diplomatic heavyweight by virtue of his own talents and his closeness to the Chancellor. The emphasis of west German diplomacy, it seems, is to fall still more heavily upon its western functions. Dr Adenauer is unfalteringly confident that he is doing the right thing. So confident, indeed, that in the general post he has not objected to the promotion of two career diplomats (Dr Dittmann to under-secretary of state and Herr Bräutigam to the consulate-generalship at Hongkong) who have come under heavy parliamentary fire in the past for the parts they played in the foreign service of the Third Reich.

Perks from the Pact

BY A CORRESPONDENT

On the whole, the Asian delegates to last week's Baghdad Pact meeting in Ankara could be described as hungry but cheerful—cheerful because the meetings were so amicable and civilised, but hungry for more material benefits. They could be heard commenting, for instance, that Mr Dulles had arrived in Ankara with little to declare but himself. By their standards, his attendance in person at a meeting of a body to which America does not fully belong was a big fuss to make for a small offer ; his down payment of $10 million and the deputy director of the new military planning staff amounted to no more than this. Pakistanis were not the only people to set the figure against the amount of aid India is getting from the West: "Aid without strings," as they remarked, "whereas we are getting strings without aid."

But such strictures are unfair. Pakistan had $84 million worth of American economic aid in 1957, and Iran $63 million. Yet the implied argument remained: "We could have had this as neutrals. What do we get out of membership of this exclusive club to compensate for the political criticism it brings about our ears ?" Turkey is probably the only member state for whom the Pact is a shield against a perennial enemy—Russia.

All that the Baghdad Pact members get, exclusively, are certain organisational benefits, since from the standpoint of individual defence, meaning resistance to Soviet aggression, the Eisenhower Doctrine seems to cover them more fully than does the pact itself. Yet the organisational benefits that are now beginning to develop under the Pact are not negligible, and are about to show results not only in the military but in the economic field.

★

Top priority is being given to telecommunications, with their military value in mind, but anyone who has tried to do commercial business on the present network between country and country, or even between city and city, will realise what a boon a proper service will be to the merchant and business communities all along the line. In an area that has throughout history been proverbial for the volume and value of its transit traffic, this development will be of advantage not only to governments but to the private individual.

But, telecommunications apart, the economic planners have been limited in their scope by the sheer physical configuration of the region. There is little natural unity in the vast area that stretches from Bulgaria to the Burmese border, and it is questionable whether the Pact can do much that bilateral aid could not do. The second best opening is in the field of roads and railways. Better land routes from Turkey into Iran, and from Turkey into Iraq, are the most important of the possibilities ; although the ranges that either road or railway must cross, or burrow through, on the way into Iran are no picnic in winter, they are no more impassable than natural obstacles already conquered inside Iran. A highway from Basra to the southern ports that the Iranians so often talk of developing is another attainable end, but would not carry an economic payload if extended to Karachi. Some construction work on Pact road and rail projects will begin this spring. Another benefit already materialising is the convenient machinery, available at the Pact headquarters, for arranging the exchange of specialists between member states. But the lack of any real movement towards economic union was clearly demonstrated when a Turkish proposal for a Middle East OEEC was not even discussed in committee.

Apart from aid under other schemes to individual countries, the Americans have put up, for joint projects directly connected with the pact, about $22,600,000. Of this sum, $18 million is being used for the survey and construction of the telecommunication links already mentioned. Money put up by Britain amounts to £2 million, of which £400,000 will go for improving telephone and radio links between London and the four Asian capitals, and of which £1 million is being spread over five years for technical assistance. Turkey, Iran and Pakistan are providing the rough equivalents of £100,000, £47,000 and £38,000 each.

The practical and humanitarian nature of the British technical assistance programme is impressive. Here are some details: £38,000 for the manufacture of animal vaccines ; £19,000 for developing artificial insemination at cattle-breeding centres in Pakistan ; £35,000 worth of X-ray equipment for tuberculosis centres in the Baghdad Pact countries ; equipment for soil fertility surveys for Pakistan. The Baghdad Nuclear Centre, the first of the economic results of the Pact, is training students in the practical application of nuclear research in such diverse fields as medical diagnosis, oil prospecting, water conservation, plant improvements and—curious but useful in a cradle of civilisation—the dating of antiquities. In collaboration with Iraq and Iran, radio-isotope departments are being set up in the Royal Hospital in Baghdad and the University of Shiraz for the diagnosis and treatment of disease.

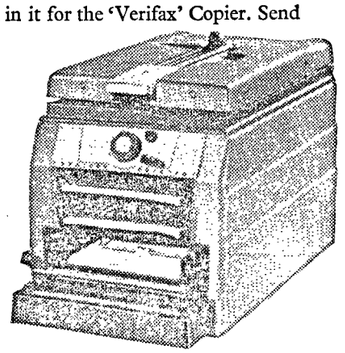
In their search for money to carry out the many things they would like to do, the pact members were referred by Mr Dulles to the new Development Loan Fund, which was started last July in the United States with the object of providing money for undeveloped countries on a longer-term basis than normal grant aid. The fund has $300 million at its disposal for the current financial year, and it is expected that Congress will appropriate about $625 million for next. The fund is available for all "less developed friendly countries." It is a good idea in itself. But, looked at from the view of the Baghdad Pact countries who expect privileges, to have to compete with all the other underdeveloped nations of the non-communist world for a share of this limited fund is not quite the same as a direct grant of dollars.

Last Act for Chinese Puppets

Mao Tse-tung has his own brand of "salami tactics"—the process, aptly given its name in communist Hungary, of removing potential trouble-makers slice by slice. In the thrifty Chinese cuisine the luckless trimmings are made to serve over and over again in a whole series of stews. Such has been the fate of the forty-odd ministers and high officials whose formal removal was announced last weekend.

They were mostly leaders of the "bourgeois democratic parties" which since 1950 have been preserved in aspic, applauding the communists' every move and obtaining in return a quota of senior posts. Last May Mao evidently

This copy typist never makes a mistake



THE secret of this copy typist is that she never types any straight copy work. She uses the Kodak 'Verifax' Copier. It's not only seven times faster than typing, it is always accurate to the last detail. There's no need for checking.

Copies made with the 'Verifax' are facsimile copies, made on inexpensive paper. In normal use the 'Verifax' can save its cost in as little as two months.

Anyone can learn to use the 'Verifax' in five minutes. It is clean, self-contained and takes up little more desk room than a typewriter.

Whatever your business—no matter how big or small, there's room in it for the 'Verifax' Copier. Send for details today.

decided that he no longer needed them. They were made to launch a congress to be devoted to publicly criticising their masters. When their first hesitant sallies provoked no retort (the communists later revealed that they deliberately held their fire to allow the critics to "enmesh themselves in the net spread for them") the bolder mice began to play. Then the cat pounced.

The "anti-Rightist" witch hunt then launched has successfully overlaid the damning criticisms previously aimed at the communists. Individual victims have been systematically "isolated," haled up again and again before meetings of their own cowed colleagues, who fell over each other to denounce them. Their actual offences have long since been lost to sight. What they in fact said was that non-communist ministers and officials ought to be allowed a little real authority, that editors should be allowed to edit, writers to write, and judges to judge—notions which the communists acknowledged to be attractive to many young Chinese. This was not enough, so the victims had to make more and more lurid confessions. (Lo Lung-chi, the minister of forestry, was made to declare: "I studied under the reactionary Professor Laski. I marketed his corrupt theories"). Now, at last, the confessions seem to have been made to match the crime, which the communists defined last July as a plot to "create chaos and seize power."

Lo and his fellow "Rightists" have thus served for seven months as object lessons to all other malcontents, and the muttering has been satisfactorily stilled. The "anti-Rightist" drive has also provided timely scapegoats and diversions during a period of economic strain; the coal shortage is acute, and food and cloth rations are still being trimmed.

Moreover, this looks like the end of the road for the puppet "democratic parties." Their fervent mud-slinging at the "Rightists" in their midst has earned them no respite. As early as August they were warned that only a "drastic transformation" could save them. They redoubled their purgative efforts, only to be told that they were still under Rightist influence, and that as their "economic basis," the vestigial capitalism that survived during the transition years, has now almost vanished, their reason for existence is vanishing too. Pale ghosts bearing such labels as Democratic League or Chiu San Society may linger for a while; but as these "parties" have themselves helped to eliminate those of their leaders who showed any trace of guts, they could now be finally dissolved at any moment by a stroke or two of Mao's brush.

A Cyprus in the Pacific?

FROM OUR SPECIAL CORRESPONDENT LATELY IN OKINAWA

TYPHOONS blowing out of the Pacific periodically inflict severe damage on Okinawa, a scenic tropical island in which Japan has "residual sovereignty" and which is at present administered by the United States. But a recent mayoral election in the island's principal city bruised American prestige more severely than any typhoon could have done. Both candidates strongly criticised the United States, and within a week of the victory of the more anti-American of the two, the island's only pro-American indigenous newspaper closed down.

The election was peaceful, even somnolent. Enviously watched by American Negro soldiers from Alabama, the voters trooped freely to the polls to register their disapproval of the Americans who had introduced democracy as well as military bases. The outcome indicated that, as has happened in some British colonies, the political power thus freely conferred was promptly being transferred by the voters from the American donors in their trim concrete headquarters to hitherto obscure agitators living in back alleys above bicycle shops. As a result, there is now renewed uneasy muttering about Okinawa becoming a "Pacific Cyprus."

It is not as bad as all that, at any rate not yet. The voters, it is true, showed distressingly little sense of responsibility, for in order to express their disapproval of certain American policies, it was scarcely necessary to go out of their way to elect the more stridently anti-American (and communist-supported) of the two candidates. The defeated candidate, Mr Taira, was as anti-American as any reasonably anti-American voter could have wished, and is a Socialist as well, but he did draw the line at standing on a platform that was communist in all but name. His opponent, Mr Kaneshi, drew no such line, and won by a narrow margin. Nevertheless the people of Okinawa are peaceable, amiable, and not really communist-inclined. The American military rulers of Okinawa are equally amiable, and anxious to prove that the island can have democracy and be a Far Eastern Gibraltar as well. Unfortunately they have hitherto proved no match, politically, for their less inhibited antagonists, whose simpler aim is eventually to rid the island of them.

★

The High Commissioner, General Moore, is a man of considerable charm and tact, whose position has not been made easier by the apparent inability of his advisers to gauge with any degree of accuracy the consequence of any step they recommend him to take. General Moore precipitated the mayoral election by facilitating the removal of the former Mayor, Mr Senaga, a pro-communist who was opposed by the majority of city assemblymen but who resolutely refused either to compromise with them or get out. Finally turned out, Mr Senaga chose Mr Kaneshi to run in his place, reserving for himself the position of *éminence grise*. General Moore's advisers cunningly calculated that if, just before the election, the city of Naha were enlarged to include a sister town called Mawashi, Mr Kaneshi—and Mr Senaga—could not win. They calculated quite wrongly, for, as it turned out, Mr Kaneshi would have gone down in defeat in Naha alone but picked up more than enough votes in Mawashi to win. For the unsolicited gift of Mawashi, and through it control of the capital city of Naha, Mr Kaneshi and Mr Senaga are duly grateful to the General's inept advisers.

The Americans' position is further complicated by some inevitable confusion, in the new sputnik age, about Okinawa's purely military role. The United States has invested some $600 million in military installations on Okinawa, and is busily building more. Now doubts are creeping in about the island's real usefulness as a base. But the recent transfer from Japan to Okinawa of some thousands of Marines—to make a total American population, including military dependents, of some 55,000—indicates that the island is expected to continue as a base for some time. This is one reason why the island's peasants are resisting proposed "lump-sum" payments for their land. With one-quarter of Okinawa's arable land already in American possession, and with a very high density of

population constantly being increased by the islanders' fecundity, the value of land is bound to rise in proportion to the American's length of stay.

The land problem is of course not the only one. A vast majority, perhaps 80 or 90 per cent, of Okinawans strongly want reversion to Japanese administration. This could be awkward for the United States, but perhaps not as awkward as continued communist burrowing and undermining from within. The remedy, thought well of by General Moore, of a firm declaration by Washington that in no circumstances will Okinawa revert to Japan for at least another generation, would at best be only half a solution, and might even prove worse than none. Perhaps the initial mistake was to try to combine holding a military base with introducing democratic procedures. But if so, the mistake has been made, democracy in Okinawa is on the march, and the feet of the voters are unmistakably straying into communist-oriented paths.

The best answer seems to be a deliberately phased transfer of civil administration from the United States to Japan, beginning now. The island's economy is entirely dependent on American military spending and an unplanned American withdrawal would certainly produce complete economic chaos. Reversion, even by stages, would greatly diminish the appeal of the pro-communists; and it is not improbable that the Japanese government would find more effective ways and means of dealing with them than the Americans have so far been able to do.

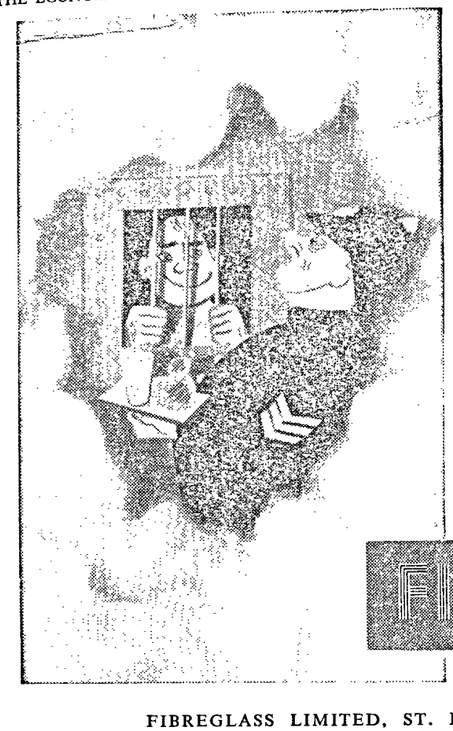
Mr Macmillan Down Under

FROM OUR CORRESPONDENT IN AUSTRALIA

SOME had wondered whether the Australians would like the last of the Edwardians, but the answer seems to be that they do. British as they mostly are in origin and affections, they enjoy Mr Macmillan's almost stage version of an English gentleman, but they acknowledge his intellect too.

In this country of sensitive national pride, it was bad luck that when Mr Macmillan's plane landed on an Australian airfield merely to refuel on the way to New Zealand, he slept on unaware that the Minister of Air was there to greet him. He had passed exhausting days in unaccustomed heat and had gone short of sleep because when the day's engagements were over and his hosts had gone to bed he had to start on the papers from London. But some Australian newspapers shrieked national insult. All, however, is now forgotten; he has handled journalists adroitly, with only a mild crack about their courtesy and kindness now that he was out of bed, and he remained good humoured even when they seemed to expect him to compel British migrants and capital to come to Australia. He has made a conscious effort to please. The weary mannerisms of the old world have given place to bouts of handshaking, waving and studied informality. The official party waiting to welcome him at Government House in Canberra were surprised to see him shoot across the lawn to greet a policeman whose wife came from Lady Dorothy's village. At a Queensland barbecue he handed round chops and steaks and at airports he chats with onlookers.

All this is not to be despised, since his impact on the Australian people is an important part of the visit. Fervent royalists, they will be more interested in the arrival of the Queen Mother, but they are gratified that Mr Macmillan was prepared to leave his preoccupations in London. As to the value of the talks, the contacts between officials in London and Canberra are already of the closest. In the Australian Cabinet too, Mr Macmillan keeps in touch with his friends, Mr Menzies and Mr Casey. Nevertheless Australian ministers think it was high time that British premiers had firsthand experience of Australia and of the turbulent Far East, which from the Australian point of view is the near north.



The subjects of Mr Macmillan's talks, therefore, are familiar and the views expressed are known. Mr Menzies and Mr Casey want Mr Macmillan to understand that although Australia, in its search for survival, draws close to America, the British tie is firm. Mr Macmillan, for his part, duly declared that nothing made him angrier than people who say that Australia must choose in its allegiance between Britain and America. The ministers also discussed the situation in south-east Asia, which has been an Australian preoccupation since Singapore fell, and is so more than ever now that several countries might fall into the wrong hands—Singapore, Malaya, Dutch New Guinea, Java. Australia's policy in south-east Asia is to win friends and influence people. An initiator of, and contributor to, the Colombo Plan, it has opened its universities to Asians, thereby atoning somewhat for its insistence on a white Australia.

But although Australia's policy is friendship and economic aid, it is glad of Mr Macmillan's assurance that no economy reductions in British strength in the area are contemplated. In a speech in Melbourne on Wednesday, he said that the British naval force east of Suez would be a task force consisting of one carrier with supporting forces based on Singapore. British manpower might be reduced in south-east Asia but this streamlining would make the force more effective. The conventional forces on the ground would encourage our friends in those countries which "have not been able to establish any strong internal stability". Mr Macmillan also defended India's neutralism as a means of preventing the uncommitted countries from joining the wrong camp.

★

Economic affairs have been hardly touched so far. Here Australia is anxious about the repercussions of unilateral British actions. Even the Bank rate makes difficulties for Australian export and investment and Australians want to know what else to expect. They also want to find out what Britain intends to do about the free trade area. They approve of it if agriculture is excluded and they can take the loss of preferences on a few manufactures for the sake of an economically stronger Britain and Europe. But they fear the possible loss of important European markets and the last straw would be the dumping of British farm surpluses in Europe. British subsidies are a sore point already. Australians doubted from the beginning, however, whether Britain could stand firm. In the immediate future, export earnings cause anxiety. Mr Macmillan will be warned that lower wool prices are devouring the export surplus and that this year's level of imports may not be maintained.

These problems await Mr Macmillan when he returns next week to the green boulevards of Canberra, but after a heavy social programme in the state capitals they will be a rest cure.

Five years before railways came to Uruguay

The building of the first railway system in Uruguay was started in 1863 — five years after the Bank of London and South America opened its doors in Montevideo. Since then, commerce with Latin America has increased enormously, and with it have grown the influence and interests of the Bank. Today, the Bank holds a unique position as the *only* British bank in Latin America. It has Branches in most of the important trading centres of that vast continent. Up-to-date reports on local markets, trading regulations and general economic conditions are received regularly from Branches overseas and are summarized in the Bank's *Fortnightly Review*, which is distributed to customers and made available to those who have business in Latin America, Portugal or Spain.

TAXATION REFORM—II

The Tax That Nobody Loves

LAST week's article showed that the achievement of taxation reform since the war has been impressive in many ways. But a very great deal remains to be done, and time has become a critical factor. It is quite possible that after the next election the direction of reform will take a new course along lines suggested by that grey eminence of left-wing fiscal thought, Mr Nicholas Kaldor. Gifts taxes, wealth taxes, capital gains taxes, expenditure taxes—the titles alone will send shivers of apprehension down many spines; the reality could be much less terrifying than the prospect, especially if it succeeded in broadening the tax base and reducing the high marginal rates that now have to be levied on the attenuated sources of traditional taxable capacity. But before embarking on these fresh ventures a further effort should be made to exorcise the devils we know and the profits tax certainly comes first.

Twenty-one years old this year, the profits tax is a prize example of untidy expediency and fiscal muddle. It shows pretty well every kind of contradiction: it was a temporary tax which became permanent; it was introduced as a revenue-raiser but became in other hands an economic weapon, the success of which was to be judged by how little, and not by how much, it yielded; it is a tax intended to encourage the building up of reserves, yet its incidence falls directly on those reserves.

But the main objection to profits tax in its present form—a basic tax of 3 per cent on all corporate profits with an additional 27 per cent payable on distributions—is that it is a discriminatory tax on dividends. This element of discrimination was introduced in order to discourage a rise in dividend payments and was designed to counterbalance the plea for wage restraint, the two measures in Sir Stafford Cripps's recipe for countering inflation.

The existence of the differential profits tax has undoubtedly been one of the causes of the relatively modest increase in dividends in the past decade compared with the general rise in earnings—though even the minority members of the Royal Commission doubted whether the absence of higher dividends had made any real difference to inflationary pressure. Indeed, they agreed with their colleagues that the artificial encouragement of the retention of profits by companies was not necessarily an economic advantage and that it would better serve the public interest if companies distributed profits which they could not put to fruitful use so that they could be more effectively invested elsewhere. How many millions of under-used funds lie in the hands of companies whose directors are not prepared to meet the penalty of 27 per cent profits tax if they were distributed as dividends or in liquidation? The take-over bidders are doing something to get these funds put to more fruitful uses. But the crux of the objections to the present form of profits tax still remains. In the words of the minority report: "It makes it more difficult for fast expanding firms to raise funds in the capital market; it strengthens the monopolistic tendencies in the economy; and it encourages wasteful expenditure on behalf of those firms who have more money than they can use."

THERE are many other objections. The burden of profits tax falls on a company's reserves—that is on the equity shareholders. But the weight of the burden is governed quite arbitrarily by the financial structure of a company. It is much heavier if a substantial part of the capital is in the form of preference shares than if it is provided by mortgages or unsecured loans. Hence the moves, of which the Home and Colonial plan is the latest example, to repay preference shares and to replace them with loan stocks. Similarly profits tax dictates to an undesirable extent the methods of raising capital and

the form of capital structures. When the real cost of dividends on ordinary or preference capital is 127 per cent of their nominal gross amount, new financing is bound to be channelled into loans rather than to ordinary or preference shares—and industry is now finding out that the high gearing that is so encouraged becomes more burdensome when profits are falling.

The arrangements for clawing back non-distribution relief are another blot on the profits tax. These complicated and obscure provisions have the general purpose of preventing profits that have been taxed only at the preferential rate from reaching the hands of shareholders until they are charged to the additional tax representing the non-distribution relief previously given. With the present structure and purpose of profits tax these arrangements may indeed be necessary ; but the result is that year by year companies are accumulating heavy potential charges that are uncertain in amount and in operation. Non-distribution relief must amount to some hundreds of millions of pounds. In many cases it will never be clawed back, but remains a clot on the equity, as the lawyers might call it, which cannot be ignored and which bedevils countless legitimate business transactions, such as valuations, liquidations, reconstructions, and security for borrowings. The inequity resulting from the exemption from the differential charge of dividends paid to overseas parent companies is of less general importance, but it cannot be right that when two companies work side by side it should cost one £127 to pay £100 of dividend, and the other only £100 because it is owned by an overseas corporation.

So far as private controlled companies are concerned, the removal of the Chancellor's umbrella has put them right back into the contradiction of 1947, when Sir Stafford Cripps recognised that he could not reasonably bludgeon them into keeping down dividends by use of the profits tax and at the same time bully them into paying out a reasonable amount by threats of surtax directions. Is it possible that Mr Thorneycroft was fully aware that he was recreating this dilemma, and was content to do so because he already had in mind to reform the profits tax next April ? He has not survived the question, but Mr Amory may like to be reminded of it. If all these objections are not already enough, let us throw in for good measure the complexity of the tax and of its computation. Endless complications and a good deal of inequity result from the flow of franked and unfranked investment income from one pocket to another ; avoidance devices are multiplying and against them new counteravoidance laws ; there is increasing difficulty in comparing yields on investments ; and the effects on double taxation relief are a headache.

THIS adds up to a substantial indictment and one that is widely accepted—by the majority and minority of the Royal Commission, by industry and its advisers and, almost certainly, by Somerset House itself. If therefore the Chancellor were able to abolish the differential profits tax in his first budget he would establish his place in fiscal history. He would not, of course, be expected to do so without setting up something to replace it. The present yield of the profits tax is of the order of £250 million a year, and of this much the greater part must flow from the 27 per cent charged on distributions—one more reminder of how fruitful "deterrent" taxes turn out to be. This is not a sum that the Chancellor could be expected to give up just because he had decided that the deterrent was no longer necessary. And the quest for an alternative leads straight to the consideration of the proper relation between corporate and personal taxation which is being increasingly discussed.

This country, unlike most others, has clung to the idea that a company is really a quasi-partnership, paying tax on its profits not so much as a principal but as an agent for the individual shareholders. When the greater part of the profits was distributed as dividends, this concept was convenient enough, and the withholding of tax at the standard rate from the dividends paid was a good example of the principle of deduction at source which is the pride of British fiscal arrangements. Individual shareholders were left to adjust their liabilities in line with their personal circumstances—some paying extra as surtax and others claiming a repayment. In such circumstances it was profitless to discuss whether the standard rate of income tax—that one step on a ladder that stretches from the lowest reduced rate to the highest combined rate of income tax and surtax—was equally appropriate for companies as for individuals.

Now that undistributed corporate profits form the greater part of the whole, this convenient conception no longer holds. A company has profits which do not, either in fact or in law, form part of the individual incomes of its shareholders. Such profits ought to be taxed. The question is how, and at what rate. Mr Kaldor would start afresh and charge them to a corporation profits tax, unrelated to income tax. The majority of the Royal Commission were not prepared to go so far—they examined fully a single-tier tax, and were clearly impressed by its attractions, but they were also concerned about the practical administrative difficulties. In the end, they accepted the necessity of subjecting company profits to a special tax regime representing something more than a mere attempt to collect personal income tax in advance. They recommended that there should be no alteration in the present incidence of income tax, but that the existing profits tax should be simplified by converting it into a flat rate tax on total profits. What this flat rate should be they did not specify, but they presumed that it would be a good deal nearer the lower than the higher of the existing rates. Would a rate in the range of 7½ per cent to 10 per cent be a good guess ?

It would be childlike to suppose that everyone would be equally pleased if the new Chancellor were to accept these recommendations. Companies which have in the past been parsimonious in their dividend policies would pay more ; companies which have created debentures rather than preference capital would still have an advantage, though not nearly such a big one as before. The left wing could be expected to protest against the unlocking of the flood gates of higher dividends, and would demand a capital gains tax to redress the balance. But allowing for all this, it is hard to conceive a more favourable time than 1958 for making this worthwhile reform. There will be plenty of restraint on dividends this year, even without a differential profits tax.

Who Operates Lorries Best?

Business has been enlarging its own fleet of lorries and vans even more rapidly in the last three years. With industrial output level, this has made life more difficult for road haulage contractors.

A YEAR ago the road haulage industry was labouring under the enforced restrictions of fuel rationing, offering the railways, for a few weeks, a brief respite from the long, depressing decline in their freight carryings. Fuel consumption by goods vehicles was cut by a quarter ; many road hauliers operating long trunk routes and some businesses with their own "C" licence fleets got little more than the basic ration of half of normal consumption for petrol-driven lorries and a third of normal for diesel vehicles. But the transfer of goods from road to rail was never as large as the cut in fuel supplies. At the peak of the switch, in February, 1957, ton mileage on British Road Services—since denationalisation heavily concentrated in long distance operations—was only about a quarter less than in the previous February. For the same month the railways reported an increase in total freight ton mileage of only eight per cent on the year before—though this windfall of extra business was probably more important than comparison shows, since their traffic up to the time of Suez had been on a steadily downward trend.

Since before Easter last year that downward trend has been resumed. The latest returns of railway freight ton-mileage, for November last year, show a decline of seven per cent on November, 1956. It is impossible to tell exactly how much of this renewed decline has been due to the recapture of traffic by road transport and how much is because industry has had less goods traffic to offer. For three years now industrial output has remained virtually stationary, with manufacturing production at times somewhat reduced, so one would not expect any significant growth in industry's demand for transport.

In December, however, British Road Services were still carrying rather fewer ton miles than a year before and it is possible that total demand for long-distance freight movement was a little lower. Rate cutting broke out between road hauliers on several trunk routes about eighteen months ago, and the restoration of fuel supplies has not led to any diminution in such competition. Since then there has been no outbreak of bankruptcy among the thousands of small road hauliers—most of whom operate only two or three lorries apiece, and are able to endure economic stringency by cutting down on maintenance and the owners' own "income from self-employment." But there has been quite an outburst about the pressure of rising costs on current freight rates, some of which are described as "hardly any higher than in 1947." Reports of amalgamations among private hauliers have become more frequent. Random reports from hauliers scattered across the country tend to give the impression that business has been less easy to get during the last year. The auguries for industrial activity in 1958 suggest that the present slackness in total goods traffic may continue.

THE fastest growing element in transport of goods as well as of people since the war has been in entirely private transport—in the vehicles owned by individuals and by companies. There has been no slackening in the total amount of goods transport capacity being put on the road by industry itself. In the two years to last summer the total number of licensed goods vehicles rose from nearly 1.1 million to almost 1¼ million ; more than a million of these belonged to manufacturers' and traders' own "C" licensed fleets, which have been growing even more rapidly in the last few years than before. The increase has been fastest in the heavier types of lorry : industry now owns nearly a quarter more "C" licensed lorries with an unladen weight of three tons or more than in mid-1955. Haulage contractors, including the state concern, have been buying these big vehicles too : they run over a quarter more of them than 2-2½ years ago. In the smaller types of lorry and vans the combined state and private haulage fleets have, however, barely increased at all since 1955, while the number of "C" licensed vehicles has grown by about 15 per cent.

This continued preference by industry to move its own goods in its own transport can no longer be ascribed to the faults of nationalisation. British Road Services has been cut down to between a third and a half of its former size and deprived of any limited monopoly on road goods transport that it ever possessed : the transport customer can easily go elsewhere. In practice, there is some evidence that the quality of BRS service, and its economic efficiency, have been improving progressively since it was created. The question is now how far industry wants to use any commercial transport, rail or

road, publicly or privately owned. Industry's own transport facilities have, moreover, been growing quite as fast in the United States (where the system of state control of the activities of private hauliers is at least as restrictive as in Britain). The direct control, flexibility and convenience that a firm gets from its own fleet of lorries, and the presumed reduction in time required to move goods when they have to be moved, have to be weighed against the cost of running a transport department which may well be bigger than the average private hauliers' business, but in which the vehicles will ordinarily have difficulty in securing return loads. But the number of industrialists who think this advantageous on balance continues to grow. A few have even been putting their transport departments into the general haulage business as well—to spread the overheads and fill the idle time of their own fleets.

Many commercial hauliers, accepting the trend towards industry's own transport as inevitable, are making the best of it by hiring out their lorries to manufacturers with or without drivers. Under "A" contract

* Operated under "C" licences

licences they are permitted to operate lorries exclusively on contract to a particular firm : under "C" hire arrangements they supply the lorry, but the firm employs the driver. The number of "A" contract licences has grown from 13,000 in 1952 to nearly 19,000 in 1955, and to nearly 24,000 last year. Another major element in the growth of the "C" licence fleet has been the development of bulk transport in specialised vehicles : many other industries are following oil with its specialised road tankers, as others have done at sea.

Most of this growth in private, as against commercial transport, has clearly been at the railways' expense ; in the absence of statistics one can only assume that it has also been partly to blame for the greater difficulties which commercial hauliers have lately been experiencing. The consequent squeezing of hauliers' charges on the main trunk routes must, conversely, make the economies of running one's own transport departments less easy to demonstrate, and may put more strain upon the imponderables of convenience and control which in many firms must tip the scale towards carrying one's own goods. When and if the railways start to make significant use of commercial freedom and, more important still, to improve the reliability of their freight services both transport managers and road hauliers may have to do more hard thinking.

Road haulage can at least be thankful that since industrial activity began to level off it has been free of the unsettling effects of political changes. Disposals of the state fleet came to an end in 1955 : British Road Services was left with some 9,500 vehicles in its trunk and general haulage fleets, and another 6,000 in the parcels and other specialist services. Despite this truncation and the effects of fuel rationing last year it is still probably earning enough operating profit to cover its share of the Transport Commission's central charges, and has again been able to use its size to take the lead in technical and operating innovation in the haulage industry. This is still probably the largest road haulage organisation under single control in the world ; in this country its largest competitor possesses not much more than 500 vehicles, and only a handful run more than 200 lorries. But it owns less than 10 per cent of the total number of road goods vehicles plying for hire (though a bigger share of carrying capacity, because its vehicles are generally larger) ; and if the huge number of "C" licensed vehicles is counted in, little more than one per cent of the whole fleet of lorries on British roads

NOBODY knows how big a share of the transport of goods in Britain is handled by each of these competitors—the railways, BRS, commercial haulage operators, and their self-propelled ex-customers. The last official survey, in 1952, is long out of date : one can safely guess that the share carried in industry's own transport, then representing about half the long-distance road transport and 60 per cent of the short, has continued to increase apace. It would be salutary for the three services whose business is transport for hire or reward, if not necessarily encouraging, to know how things look now : and there is certainly a case for the Ministry of Transport to repeat its survey, if not indeed to establish some periodical sample census. When industry is booming, the commercial hauliers, publicly owned or private, can record absolute increases in their business even if their share is dropping : this year, that comfort may be denied them. They will certainly be under economic pressure to tighten up their efficiency. In one prominent aspect of it they are signally failing. Last May, after it had taken more than a decade for the hauliers and their drivers' trades unions to agree how it should be done, the speed limit for commercial vehicles was raised. Neither BRS nor the commercial haulage operators have yet been able to agree to amend their schedules and get any economic benefit from this : the only van and lorry owners who have succeeded seem, once again, to be a few of industry's own transport departments.

BUSINESS NOTES

BANK OF ENGLAND

The Bank's Directors

OUT of this week's rowdy debate on the report of the Parker Tribunal, at least one sound decision emerged—to seek the views of the Radcliffe Committee, which is now enquiring into the working of the monetary and credit system, on the constitution and activities of the Bank of England. That course, as was argued here a fortnight ago, is infinitely wiser than taking what Mr Butler called "snap decisions" about future arrangements at the Bank. Indeed, to attempt any such decision in the present political temperature would be bound to make matters for the Bank worse and not better. The calm and deep thought that this question demands can only come from such a body as the Radcliffe Committee, and it is earnestly to be hoped that its conclusions, taken out of politics, will not be made an occasion for future politicking of the kind that brought no credit to the House of Commons this week.

The direction that ought to be pursued in any revision of the Bank's constitution and activities was briefly sketched in these pages on January 25th. The object ought to be, not a Bank wielding any kind of ultimate power, but a Bank that can contribute as a respected and uncommitted assessor to the Government's responsibilities for economic policy. The aim is neither a "creature" nor an absolute body that is unanswerable to public opinion. Neither extreme would serve democratic ends and effective economic policy ; and neither of the political parties, if they are sensible, would choose one or the other. The lesson of recent years, stretching back long before the disclosures about last September, is that the Bank of England has failed to convey to the public what it was doing and has inevitably suffered in authority and public support. That has not been true of central banks in a number of other countries, where they have been able to play a more effective part in economic decisions arrived at within a democratic framework and in a spirit of more direct accountability to the public. And it seems that there, too, the abilities and sense of public service of "independent" or "uncommitted" directors have been allowed to make a more effective contribution than in this country.

IN THE MARKET

Damp Squib into Skyrocket

OFFICIAL open market policy now shouts for a damper on gilt edged prices. The rally in industrials this week that has carried *The Economist* indicator up by 5.2 to 178.8 was probably technical. The demand for gilt edged is welcome but the rise supported by good investment buying which has carried prices to near to their pre-Bank-rate levels in conjunction with a fall in bill rates to nearly ½ per cent below its post-Bank-rate level, is forcing the authorities to take action to prevent the market from getting beyond their control. The 3½ per cent Funding stock 1999-2004 rose ¼ in the week ended on Wednesday and War loan at 65 shows a rise of ½ per cent. The policy now is to apply a damper, so that the widening disparity between interest rates in this country and in most foreign centres is not allowed to hustle the authorities into relaxing dearer money policy—until they consider the time is suitable.

The damper chosen for the long dated end of the market is the £20 million issue for the London County Council—a 6 per cent stock dated 1975-78 at £99½ giving a gross redemption yield of £6 os. 10d. per cent. This is the largest corporation loan on record, patently brought forward out of turn, and a big loan for Australia is expected shortly to follow it. The authorities calculated that the LCC issue would only just go ; if a little stock was left with the underwriters, it would not on that view have greatly mattered. As this edition of *The Economist* goes to press the result is not known, but it is clear that as an issue it is a great success, and as a damper a dismal failure. Encouraged by a rumour, which proved incorrect, that the Government broker had exhausted his supply of the 3½ per cent 1999-2004 stock, the loan was heavily applied for. Already the cry that the socialist LCC has had to pay too much for its money has been raised. It is an ironical tribute to the acumen of the City experts that the possibility that they calculated wrong has never occurred to the critics.

At the short end of the market, too, the authorities are resisting the downward influence imposed by the widening disparity of interest rates between London and overseas centres, in the knowledge that this influence has been strong psychologically but that the weight of foreign money flowing in is still modest. The flow, however, encourages domestic "stagging" of the bill tender. On Friday of last week the discount market countered this competition by raising its bid by 10d. to £98 9s. 5d. per cent, representing a cut in its discount rate of nearly $\frac{3}{16}$ per cent, and the steepest change other than on the morrow of a Bank rate move since last May. The average bill rate thus fell to 6⅛ per cent.

The Bank of England has countered this movement by a tug at the reins at the traditional point. No special help was given to the discount market in the week ended on Wednesday, and on Monday most of the houses found themselves "in the Bank," paying 7 per cent on a moderate amount. The Bank return shows a rise in discounts and advances of £20 million of which perhaps more than half represents discount market borrowing. On Thursday the market was "in the Bank" for the fourth time in eight days, and for a fairly large amount. It is too early to say whether such pressure will be sufficient to check the decline in the bill rate. The task was not eased this week by the fall of a full ½ per cent in the New York Treasury bill rate to 1.58 per cent—compared with 2.86 per cent a month ago, and 3.66 per cent at the autumn peak. This slide brought the margin below London to fully 4½ per cent ; and as the premium on the forward dollar in the exchange market rose only slightly, to $2\frac{9}{16}$–$\frac{7}{16}$ cents, the net margin

on interest arbitrage covered by a sale of sterling three months forward widened to over ¾ per cent. If sustained, this margin could attract a fair volume of money; so far, it has not done so.

THE RESERVES

Gold Inflow Quickens

THE small inflow of funds for interest arbitrage certainly played no large part in the gratifying accretion in Britain's official gold reserves in January. Temporary overseas investment of this kind in Treasury bills is almost invariably covered in the forward market against the exchange risk, and thus has little net effect on the reserves. Such transactions must not be confused with the inflow of funds both to replenish working balances that were drawn down in the summer and again for year-end window dressing, and to cover extended sterling commitments. The present inflow is not an inrush of "hot money" but merely the restoration of a reasonably comfortable working balance. And, comprising a straight switch back into sterling, the funds coming in do of course strengthen the gold reserves.

The short accounts in sterling are still far from covered; it is much harder to restore confidence than to lose it. But, despite the temporary shock of Mr Thorneycroft's departure (which necessitated a momentary swing by the Exchange Account to the support of sterling) the process was quickening last month. Together with favourable seasonal influences, this combined to produce the best gold figures since the early summer of 1954—when hot money really was coming in, uncovered, supported by speculation that sterling would be allowed to float above $2.82.

* Adjusting for one month lag in settlement of EPU balance, for known special payments (but not regular quarterly or monthly ones) and credits from IMF, Export-Import Bank, etc.; no adjustment is made for Germany's deposit of £75 million in the summer months.

The reserves rose by $131 million in January; and after the disappointing deficits of the two previous months, the balance with the European Payments Union was in surplus to the tune of £10½ million. The performance was thus even better than the straight figures suggest. In January the reserves were burdened by the payment of $13 million to EPU in settlement of the December deficit; while the $22 million to be paid in respect of the January transactions accrues only this month. The "true" dollar balance shown in the first column of the table—which adds back the EPU settlement to the month in which the transactions took place—thus reached $166 million, following surpluses of $86 million in December, $71 million in November and $141 million in October.

At $2,404 million, the reserves are higher than on the eve of the summer crisis—but only thanks to the $250 million drawn from the Export-Import Bank. And since mid-1956, when the reserves last stood at their present level, a drawing of $561 million has also been made from the International Monetary Fund, and the American loan payments have been twice deferred. Many more months like January will be needed before even the latest inroads on sterling's backing are made good.

PRODUCTION

Manufacturing Costs and Prices

MANUFACTURING output last year may turn out to have been 2-3 per cent higher than in 1956, back to roughly the 1955 level; and though the manufacturing labour force rose somewhat during 1957, over the year as a whole it will have been perhaps one per cent lower than in 1956. So output per head, crudely measured, may have risen 3-4 per cent in manufacturing between the last two years, and in 1957 will probably have been somewhat slightly higher than in 1955. Over a period of so little change in total output, that is probably as much as could have been expected. During the last two years an increasing amount of new plant, machinery, and factory space will have come into commission. Total production has not been rising as much as the manufacturers who put this in expected; but presumably they will have been shifting as much work as possible to the new, generally more efficient and certainly more costly machinery, which makes its additions to overheads even if the whole expanded capacity of the factory is not as fully employed as was expected. As the new equipment is worked up to full efficiency and geared into the production process, such transfers of work must tend to improve average efficiency in manufacturing; but in trading conditions such as the present, in particular, this takes time.

Wages and salaries throughout the economy in the first nine months of last year rose by about 6 per cent. Up to 1956, wages and salaries in manufacturing tended to rise faster than elsewhere; in 1956 they rose rather less. If in 1957 they rose at about the same rate, labour costs in manufacturing will still have gone on rising, though not so sharply as in 1956, when pay went up while output fell. Other prime costs have been falling in the factories; in December the prices of basic materials, excluding fuel, used in manufacturing, were on average 10 per cent lower than in April. Overhead costs will have risen as new plant and equipment was commissioned, and will not have been spread over as large a volume of output as companies had hoped.

Across the whole wide variety of manufacturing, which comprises a vast variety of firms and industries selling a large proportion of their output one to another, purchases of materials and semi-manufactures may account for about 65 per cent of gross turnover, wages and salaries for about 20 per cent, overheads and gross profits for about 15 per cent. Basic materials are only part of what any individual manufacturer buys; it is taking some time for the drop in their prices to be reflected even in the semi-manufactures and components that make up the balance of his purchases. Even so, the drop in basic materials prices could well already have reduced total costs more than recent increases in labour costs and overheads can have offset. The Treasury is already appealing for manufacturers to begin cutting their prices at home, as some have had to do to meet competition abroad. Whether they will, however, depends upon their reading of economic prospects, particularly in the international commodity markets and on the internal wage front.

BULLION AND DOLLARS

New Deal for Gold?

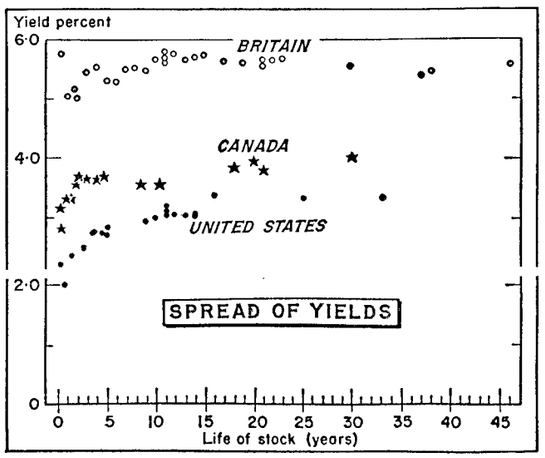
STERLING has continued to rise against the dollar, but the sterling price of gold in London has risen too. That is the anomaly of the bullion and foreign exchange markets during the past week. Helped by a persistent commercial demand for sterling from New York and by some reflux of short-term funds to the London market, the official sterling rate headed $2.81¾ though it fell back a little on Thursday; the transferable rate meanwhile has risen to $2.79. Normally such a move would reduce the sterling price of gold, but gold at the daily fixing has risen from 248s. 9½d. to 249s. 1d. per fine ounce in the week ended on Wednesday. The present price is equal at the current dollar rate to $35.08 an ounce and thus above the American parity price of $35.

The explanation of the divergence between the movements in the dollar rate and the sterling price of gold, presumably, follows from the fact that the authorities have been extremely reticent in their offerings of gold at the daily fixing. They have kept the market on short rations probably because they have been acquiring dollars at a generous rate, and have found that it paid better to keep the bulk of the arrivals of newly mined South African gold for their own account rather than go through the more expensive procedure of converting their dollars into gold in New York and either keeping it earmarked there or shipping it to London.

There may, however, be another explanation of these contrasting movements between gold and dollars. It could also arise if there were a new arrangement under which the South Africans would take payment for part of their gold at the transferable rate for sterling. Rhodesian gold is given the benefit of the transferable rate in respect of one half of the sales made in London, the other half being accounted for at the official rate. When the Russians sell gold they naturally get the advantage of the transferable rate for the whole of their sales, whether these are made on the Continent or in London. If South African gold were given the same exchange advantages as, for example, Rhodesian, gold at 249s. 1d. an ounce would correspond to an average dollar price for gold of about $34.90. Some official light on what has happened would be helpful.

BEA'S JETS

Time for a Decision



JUST before Christmas the first hitch appeared in what until then had seemed to be reasonably smooth three-sided negotiations between British European Airways, Rolls-Royce and the de Havilland Aircraft Company about the design and purchase of 24 jet airliners. It then became apparent that the Hawker Siddeley Group (whose interests had been extended to represent 70 per cent in industry and 30 per cent in aircraft) might reduce its aircraft side materially unless prospects improved. The Ministry of Supply remained anxious to reduce the size of the aircraft

THE Bank rate move of last September made Britain a high interest country. Reductions in the United States and Germany since have accentuated the divergence. But the table extending beyond the central banks' lending rates shows that comparison of interest rate structures as a whole is much less simple. Most countries with balance of payments difficulties have become dearer and the others cheaper.

industry, but had not gone so far as to spell out the effects of the possible closure of some of the biggest and best equipped factories, in most of which it had in the past made considerable investments.

Two new orders for aircraft, and two only, are likely to be placed in the coming year. One is for a reconnaissance and general purpose military aircraft to replace the Canberra. The other, far more attractive order, is for BEA's jet airliner. Hawker Siddeley put in a design for this order which BEA did not choose. Then followed the agreement between Hawker and the Bristol Aeroplane Company which had submitted a scheme more to BEA's liking but still not so attractive as BEA had found the de Havilland design. The mooted combination of Hawker and Bristol found powerful support in certain government departments that saw Hawker Siddeley as the possible nucleus of one among a few big, rationalised groups in the aircraft industry; the combination might in time also integrate the smaller makers of jet engines into an undertaking more capable of challenging Rolls-Royce. So strong pressure was put on BEA to switch its order from the de Havilland-Rolls-Royce group to the Bristol-Hawker Siddeley team, and on the Ministry of Transport to withhold its decision until more is known about the outcome of talks that Pan-American World Airways is having with both groups. On this latter point, there is an important distinction between an airline's interest in a new design on a drawing board and a copper-bottomed contract to buy.

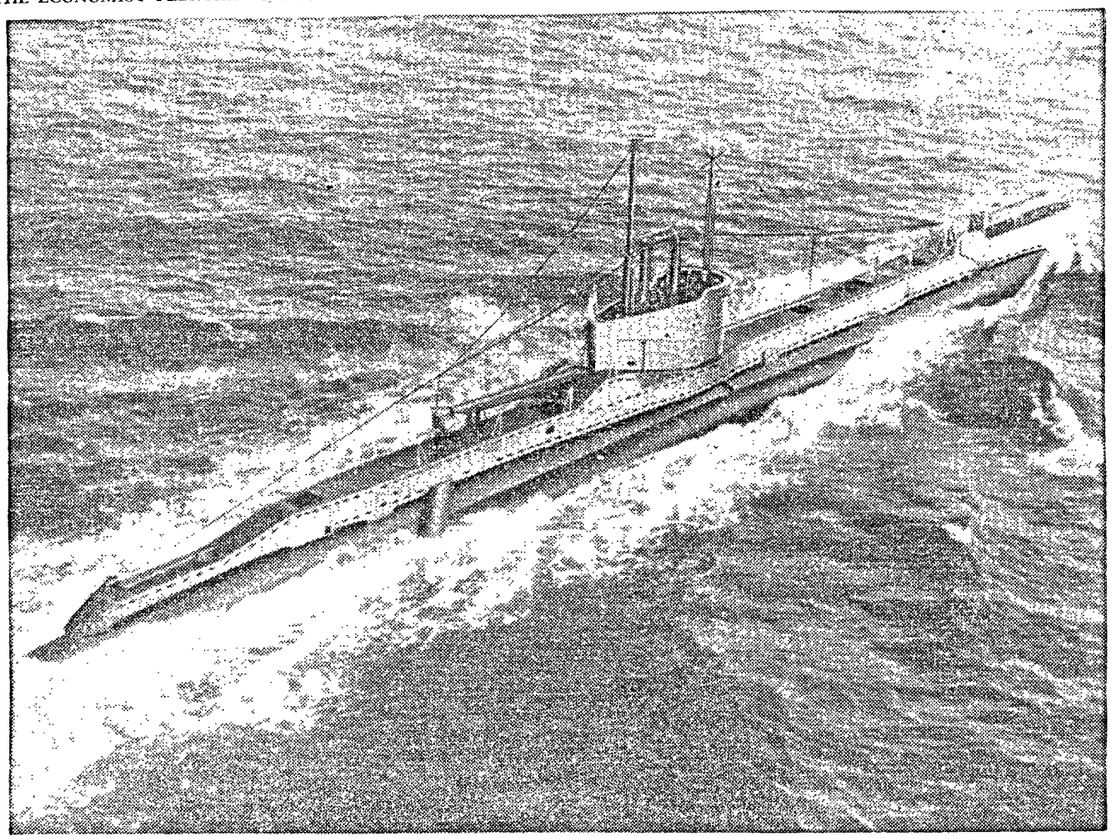
Last week-end the chairman of British European Airways stated clearly that the corporation intended to place its order with de Havilland (and, he implied, nowhere else) and was simply waiting the Minister of Transport's permission to do so. Mr Watkinson would find it difficult to tell the corporation that he cannot find the money for new aircraft, but unless he does so there seems no other ground for withholding a decision any longer. The scheme which de Havilland put forward last week for a new company formed with the Hunting and Fairey groups would go no effective way towards the integration in the aircraft industry that is needed. But nor would the Hawker-Bristol Aeroplane arrangement do so. It is easy to sympathise with the difficulties which the Ministry of Supply is meeting in rationalising the aircraft industry, which increase as the number of contracts at its disposal diminishes. But BEA, too, has its worries and should not be asked to shoulder those of the Ministry of Supply as well.

CINEMAS

Desperate Measures

THE concerted threat that cinemas will cease to show films made by producers who sell their old feature films to television, backed by a fund to buy up and sterilise television rights of producers' existing backlogs of old films and of newer ones as they exhaust their cinema rentability, is entirely understandable. The plan originates from a group that happens to provide leadership in intellect and acumen in both cinemas and commercial television; it is supported by the two major cinema groups, of which one is already in commercial television and the other is going in; and it now appears likely to secure the backing of all the organised interests in producing, distributing, and showing films in cinemas. It also appears on the face of it to be about as tight a way of sewing up a market as any British trade has cared to publicise since the passing of the Restrictive Practices Act. The reason why the same interests in the United States have not done the same, though they might dearly like to, is probably mainly a matter of anti-trust—though the importance of American television as a customer for programmes made on film may also play its part.

Restrictive or not, this agreement is one that the cinema business is vehemently prepared to justify; and certainly few other industries since the war have had so parlous a position to plead as fair cause for trying to prevent the accession of extra strength to an already triumphant competitor. Old feature films—film producers are seldom willing to sell television rights of anything less than about five years old—are cheap programme material for television, incorporating production values that the smaller screen has never been able to afford for itself. Their competition against new films shown in cinemas at the same time is limited only by fashion and viewers' desire to see something new. It is formidable, as some particular films on television have recently proved. The relative success of repertory cinemas, which also get their product cheap, might in any case have suggested this; moreover, television skims the cream of past production, which is certainly better than the average of new films that cinemas can hope to be showing at the same time.



The catastrophic drop of nearly a fifth in cinema attendance last year has left the industry rather more inclined towards the desperate measures some of its leaders were pressing upon it a year ago—though still hoping that the first of these will come from the Chancellor of the Exchequer. Its joint tax committee has this week submitted a case to the Treasury for complete abolition of Entertainments Duty, which the cinema alone is now paying (at a rate of about 30 per cent of turnover). This argues that as a whole the industry has recently been barely able to cover its depreciation, and suggests that this year it will be operating at a loss even before providing rent or a return on the capital invested. Even the abolition of duty, the industry argues, would not provide a reasonable commercial return on its declining assets: but it might give the cinema another lease of life—and competition.

SUEZ CANAL COMPANY

Piecemeal Reconstruction

BRITISH shareholders in the Suez Canal Company must now get used to the idea that the company is French and that French company law does not impose the standards to which they are accustomed. Many of them may still feel that the latest move is exceedingly odd. Holders of the 100,000 founders' shares of no par value are summoned to a meeting in Paris on February 12th. At that meeting the necessary 50 per cent quorum will not be obtained and a month's adjournment and a second if not a third meeting will be needed. When the meeting does get to grips, its business will be to approve the exchange of the present founders' shares into ordinary shares (*actions de capital*) of 10,000 francs nominal on the basis of eleven such shares for each ten founders' shares held.

Clearly that is part of the scheme to streamline all the company's shares into a single class to which M. Georges-Picot recently referred. It would be unreasonable to ask the founders' shareholders to vote on it until they see the whole scheme and can judge whether their proportion of the equity is correctly sustained. The explanation, it is believed,

BRITISH ALUMINIUM

IN H.M. SUBMARINES

British Aluminium is being used in some of H.M. Submarines for the casing as well as for certain minor bulkheads, hatches in the casing, escape trunks, and indicator buoys. The weight saved appreciably improves stability, while the use of sea-water-resistant aluminium alloys reduces maintenance to a minimum.

(Electronics Division, Gas Purification & Chemical Co. Ltd.)

GS 82b

is that the full scheme will be available before the adjourned meeting in March. Already it is possible to make a guess at the shape of the capital reorganisation. The division of the equity between the classes is:—

Capital and Jouissance shares together ...	71 per cent
Egyptian Interest Trust	15 per cent
Founders' shares	10 per cent
Directors	2 per cent
Reserve for staff	2 per cent

If the new unit is to be the 10,000 franc capital share, the founders' shares as a class receiving 110,000 of them, then it would fit the proportions if the holders of the capital and jouissance shares together received 800,000 of them (that is, one for one), plus for the capital shares alone a fixed interest stock repayable by drawings and representing their preferential right to 250 gold francs per share. Whether that preferential right ought to be assessed at 28,500 francs representing the value of the gold franc when the company became French or about 34,000 francs representing its present value, is open to argument. The Egyptian Interest Trust seems entitled to 165,000 new shares, or roughly one new share for every 2¾ *parts civiles* now held. That may be what the board has in mind. It does not intend to deny any class the opportunity to study the whole scheme before voting.

It may have been good tactics, though it was strange, to produce a fraction of the scheme in advance, so as to make the first moves before compensation negotiations with the Egyptians start. It was surely good tactics on Colonel Nasser's part to get the maximum draft of ships that may use the canal up from 28 feet to 34 feet in advance of the conference, though the permitted draft is still two feet less

Keeping Up with Explorer

THERE are more lessons to be learnt from the launching of Explorer than those which its transmitters and instruments can teach. The unexpectedly heavy Sputnik 1 demonstrated beyond doubt that Russia could build ballistic missiles of intercontinental range—that is, up to 5,000 miles; no smaller rocket could have accelerated so big a "hunk of iron" to the speed necessary for it to take up an orbit round the earth. So the much lighter Explorer has demonstrated that at least one team in the United States can build an intermediate range ballistic weapon—that is, capable of 1,500 mile flight.

To this, there is one qualification. The rocket that launched Explorer was not the standard Jupiter missile, but a research rocket used in Jupiter investigations and known as Jupiter "C" which has already flown distances of 3,300 miles. The extra range and power comes from two additional rocket stages mounted on Jupiter's small brother, Redstone, the last of these carried Explorer's eleven pounds of instruments, batteries and transmitters in a container directly in front of its motors.

The lessons that emerge are important to Western Europe, which expects deliveries of American ballistic rockets towards the end of next year; and doubly important to Britain which is providing bases for American missiles and is also devoting a high and growing proportion of a shrinking defence budget to designing a similar weapon.

(1) Rocket Design.

Jupiter-Explorer provides another demonstration of the advantages, in rocket design no less than aircraft engineering, of evolution by stages, as compared with brave leaps in the dark. The rivals that Jupiter has left ignominously fuming on their launching sites—the US Navy's broken-backed Vanguard satellite and the US Air Force's intermediate range Thor missile—are both new concepts. Jupiter has evolved in the Army's Redstone Arsenal in a series of conservative steps from the V-2 of 200-mile range to the ballistic weapon of 1,500-mile range and the research rocket of 3,300 mile range, and the same designer, Dr Wernher von Braun, has been occupied on them throughout.

(2) Fuel.

Even though Explorer is only one quarter the weight of Sputnik 1, Jupiter could not have accelerated it fast enough to establish an orbit (in which the speed of the satellite precisely balances the downward pull of gravity as if it were whirling on an invisible piece of elastic) without the extra propulsive force of fuels with much greater calorific value than the standard kerosene rocket mixtures. These fuels, which consist of boron, hydrazine or blends of the two, are expensive but they provide the same force with a saving of up to 40 per cent in the fuel weight. That leads to much bigger savings in the total size of the rocket and in rocketry, weight means money. This point does not appear to have been taken in Britain; despite strong service pressure, no research is being done into these advanced fuels, in liquid or solid form, either for jet engines or for rocket motors.

(3) Spacemanship.

From a scientific point of view, Explorer and Sputnik 1 are of approximately equal value. The Americans have shown greater skill in scaling down the electronic equipment and instruments to fit a container 6 inches in diameter and one sixth of the weight of Sputnik 1. This cannot conceal America's inability, so far, to launch a satellite weighing as much as Sputnik 1 (184 pounds) still less of matching Sputnik 11 (half a ton). In rocket technology, Dr von Braun estimates the Americans are five years behind Russian engineers, although in electronics and guidance Explorer suggests the two are level.

(4) Scientific Lessons.

In the race for space, the immediate purpose of the satellites—which is the contribution they are intended to make to the International Geophysical Year—tends to get overlooked. Sputnik 1 and Explorer are small-scale prototypes designed to establish whether a satellite was workable, to test radio links with the ground and provide some data on the shape of the earth, the density of the atmosphere and the hazards facing an object in space. Sputnik 11 and the promised bigger version of Explorer, are fully-instrumented floating laboratories. They are designed both to look downwards—to study the shape of the earth, its magnetism, its atmosphere, its clouds and storms—and to look outwards—to study the sun and stars, the dust, cosmic rays, meteors, micrometeors and interplanetary gases of outer space free from distortions imposed by the atmosphere.

Fascinating though such information may be to geophysicists, it is no longer the driving force behind the breakneck effort to plant American and Russian spheres of influence among the planets. The imagination of politicians and military alike has been stirred by unnerving possibilities of robot reconnaissance and communications satellites, manned space bombing platforms and the like. Intensive paper studies of such projects are already in hand. Explorer and Sputnik represent the first tentative probing to find out how much of this is within the realms of engineering possibility and how much should properly be left to space fiction.

than was possible before the canal was closed. For the negotiations Suez Canal Company shareholders this week approved the appointment of a strong team of negotiators—M. Georges-Picot, the chairman and managing director, with Mr John Foster, the company's British legal adviser, and Mr Charles Spofford, its American legal adviser.

SHIPPING

More Idle Ships

TRAMP shipping prospects are at their bleakest since the prewar years of depression, and in the last three months or so there has been a marked increase in the number of ships laid up or otherwise idle in port in the United Kingdom. According to the Chamber of Shipping 108 vessels, totalling 537,814 tons gross, were laid up in UK ports for reasons other than repair on January 1st, compared with 68 of 243,646 tons on October 1st and only 21 of 81,917 tons on July 1st. A year ago the total was down to 16 ships of 32,160 tons, almost an irreducible minimum. A further 108 vessels, totalling 775,596 tons, were awaiting or undergoing repairs, many of which had been deferred during the times of opportunity to earn high freights during the previous winter. The January figures include 20 tankers (167,556 tons gross) laid up and 30 tankers (248,898 tons) under repair. These totals are likely to be even higher by now, since it is estimated that during the last month about a million tons deadweight of tankers have been withdrawn from service throughout the world, bringing the laid-up total to nearly 3 million tons, all of which have been taken out of service in the last three months or so. Last month tanker freight rates reached the lowest levels since the war, and if they have recovered slightly it is not through any revival in demand but because owners are unwilling to trade any longer at such hopelessly unremunerative rates.

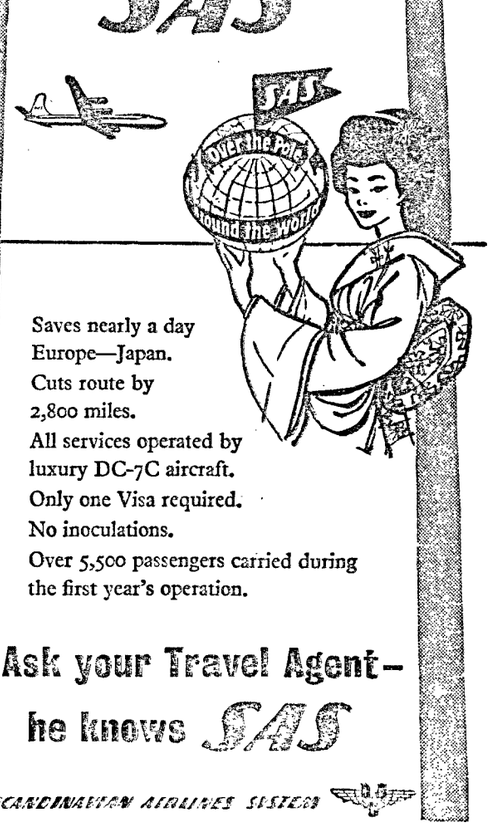
Many time-charters arranged twelve months or more ago at the then current high rates will be concluding during the next few weeks, and some of these ships coming off these will probably go straight to the laying-up berths. In fact, British owners have found it necessary to seek permission to use Government-owned mooring berths. More than one vessel delivered new from the shipyards has been unable to find employment. Not only has the flow of new orders practically dried up, but throughout the world existing orders for 36 tankers of about 856,000 tons deadweight and 29 cargo vessels of 184,000 tons dw are known to have been cancelled. It will take the tramp shipping industry much longer to bring freight rates up to more profitable levels again, so long as a large cushion of laid-up tonnage exists. On the other hand, the Baltic is not expecting the depression to last too long, since some fixtures have recently been made at rates about 50 per cent higher than current levels for five-years trading starting next year.

OIL PRICES

Crude Oil Prices under Pressure

CLEMENT weather and a slackening of industrial activity, especially in the United States, have finally forced the price of heavy fuel oil off the perch on which it had been held ever since the most acute phase of last winter's oil shortage. A reduction of 20 cents a barrel in the fob price has now been made at all major export points, in the US Gulf, Caribbean, Middle East and Far East, at a time of year when fuel oil prices usually rise. It has been reflected in a cut of ten shillings a ton in the price of marine fuel oil at UK ports, but it is less clear whether consumers on land can count on similar benefits. The fall of 20 cents a barrel in the Caribbean price was the first since Suez: but fuel oil prices in Britain had already been cut in the autumn by the equivalent of 25 cents a barrel.

Of wider interest in the oil industry, and to the consumers of petrol and other products, is the effect of the fuel oil surplus on the price of crude oil. Even before prices of fuel oil fell, the American refiner's profit margin was being very tightly squeezed; it was only the relatively high price received for fuel oil that made it possible for many refiners to pay the price of Texas crude oil after it rose last winter. That prop is now being whittled away—and gasoline prices in the US Gulf have also fallen by ¼ cent a gallon—so the refiners' reluctance to take crude oil at existing posted prices is becoming more marked. So far the US price has been held up by turning the screw of production control, particularly in Texas and Louisiana, but it is now doubtful whether it could be turned much tighter. Producers in Texas have already accepted a drastic limit of 12 days' production a month during the last five months (11 days out of 28 in February). Imports of foreign crude are already restricted, and for the past three months have been within the quotas that the importing companies reluctantly accepted.



Now that the American market is effectively insulated against additional imports of foreign crude oil, the link between crude oil prices in the United States and those in Venezuela or the Middle East has become more tenuous. But the prices of heavy Venezuelan crudes, which have a high yield of fuel oil, are linked closely to the price of fuel oil and therefore are likely to weaken. In the Middle East, crude oil prices rose last winter less than they did in the Western Hemisphere; they might therefore not reflect an initial fall in Caribbean prices now. But with productive capacity rising faster than the demand for crude oil throughout the world no existing crude oil price level can be guaranteed. At present prices and spot tanker rates the price of Venezuelan crude oil would have to be reduced by some 75 cents a barrel before it could compete with Persian Gulf crude delivered to the United Kingdom. But taking the average freight costs in fact still being paid, including company-owned and time chartered vessels, the discrepancy between the two delivered prices would be much less.

THE STOCK EXCHANGE

Rebels in the House

ADVERSITY breeds rebellion. Business in Throgmorton Street is now at a low ebb and some brokers are not covering expenses. Good times will come again, but meanwhile some members of the House are grumbling about the increase in subscription fees and some are pressing for an increase in commissions on small bargains. A petition is circulating in the "House" against the Stock Exchange Council's plan eventually to rebuild the Stock Exchange and to cover part of the cost by an increase in subscription and entrance fees. Some of the more elderly of the members set this petition on its way; but the Council's decision to raise the subscriptions of retired members merely recognises the fact that these elderly gentlemen enjoy a

SCANDINAVIAN AIRLINES SYSTEM

The end to a perfect dinner—as decreed by French Law

French Law controls the naming of the finest brandy with extreme severity. It decrees that only brandy originating from the Grande and Petite Champagne districts of Cognac may bear the proud title of *Fine Champagne*. Remy Martin produce Fine Champagne V.S.O.P. Cognac justly called the "Pride of Cognac". And it is important to you that Remy Martin make *nothing* less good. This means that when you insist on Remy Martin, you are sure to get a really fine brandy . . . genuine Fine Champagne Cognac.

PRIDE OF COGNAC

REMY MARTIN

Power to enrich the nations

Where the standard of life is primitive, there unrest ferments. To transform these backward places, power is needed—electric power, plentiful and cheap.

Nuclear power holds out the promise of unlimited electrical power for the world. Britain has made that promise a reality.

The AEI-John Thompson Company is building one of Britain's first nuclear power stations at Berkeley in Gloucestershire. Such mighty firms as John Thompson, Metropolitan-Vickers and BTH have pooled their skills for one of the outstanding enterprises of our time. The experience of this great consortium can bring new prosperity to many nations.

A·E·I JOHN THOMPSON

worthwhile privilege of dealing free of commission on their own accounts. But the Council had declared its intentions about re-building and its methods of finding the extra money well in advance of these proposals. Did the members who elected the Council not intend to give it necessary support? The petition has come very late in the day.

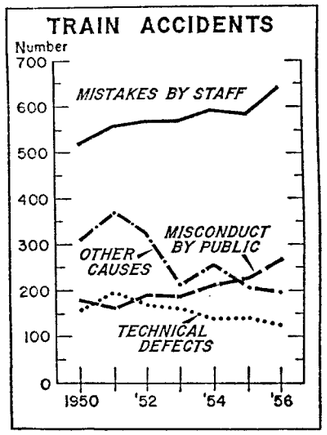
Representations have also been made to the Stock Exchange Council suggesting that the commission fees on bargains of less than £100 should be raised. Certainly the small bargain costs just as much to put through as the big one, though some dubious arithmetic about average costs lies behind the argument. Any bargain that contributes something to the brokers' revenue is better had than missed. The scale of commission fees moreover is a minimum one; anyone who is prepared to let his clients go elsewhere is at liberty to charge more. A step which would penalise the small investor is directly counter to the policy (actively supported by the Council) of encouraging just that type of investment.

BUILDING SOCIETIES

The Squeeze on Liquidity

BUILDING societies are now producing results for 1957 and some of them are good ones, snatched from the jaws of a difficult year. Mr Herbert Ashworth, the general manager of the Co-operative Permanent, this week gave a personal guess of how far mortgage demand exceeds the funds available for lending. Total mortgage lending last year he puts at £380 million, against £339 million actually advanced in 1956 and little short of the record figure of £394 million for 1950 a figure in line with the estimate just made by the Building Societies Gazette. Lending at that level, Mr Ashworth suggested, falls short of satisfying the effective demand for mortgages by about £100 million.

The Co-operative Permanent Society expected to advance £30 million on mortgage in 1957; its actual total was about £29 million, against £21½ million in 1956. Its total assets have jumped from £143.7 million to £162.6 million. Among the middle-sized societies, the Burnley passed the £50 million mark last year when its assets rose from £48.8 million to £51.4 million. Money continued to flow in well into the Co-operative Society. Share subscriptions last year jumped from £32.6 million to £35.4 million, and last month was a record, with £3½ million of new money. Whatever the intake of new money, withdrawals in the Co-operative always approximate to half its size. In 1956 share subscriptions plus interest amounted to £36.2 million while withdrawals plus interest were £17.7 million; in 1957 when share subscriptions plus interest were £40 million withdrawals were £20.7 million. In the record month of January withdrawals were £1.85 million.



The credit squeeze has hit building society investments hard. The Co-operative Permanent now shows a depreciation of £2 million on its quoted securities of £16.6 million, against £1.2 million on a portfolio of £11.3 million a year ago. This makes the true liquidity ratio 13.3 per cent, against 13.7 per cent. But the Co-operative has carried out a big switch in investments during the year, with much emphasis on short and medium dated stocks with dates up to 1971. That process must have had something to do with the depreciation on the portfolio, but it also yielded the society a profit on realisation of investments of £262,120, against £31,299. In contrast the Burnley society has a different investment policy. Out of its investment portfolio of £6.8 million (against £6.5 million), £5.1 million (against £4.9 million) is in loans, presumably unquoted, to local authorities. Visible depreciation is therefore small at £0.3 million, against £0.2 million, and the true liquidity ratio was 14.8 per cent, against 15.8 per cent. That leaves aside the question of how far such local authority loans are quickly realisable and at what price in case of need.

RAILWAY SAFETY

The Human Element

THIS winter's spate of train collisions in fog does not by itself argue a sudden deterioration in the standards of care on the railways. For some unknown reason, railway accidents have happened "in threes" before and this latest batch may all have different causes—in any case the investigations into why they happened are still proceeding. But the previous fog disaster at Lewisham, as the Minister of Transport said last week, "undoubtedly had a grave element of human error in it," and the proportion of train accidents in which the human element played some role has been rising noticeably and continuously in the last few years.

Since the war the number of train accidents has kept fairly close to the average of 1,200 each year—not all of which of course lead to casualties—but mistakes by railway staff and foolish acts by the public accounted for 75 per cent of the total in 1956 against only 60 per cent in 1950. With the renewal of war-worn equipment and the beginnings of modernisation, the steady decline in accidents caused by technical failure was to be hoped for; but increased human failing has wholly offset this improvement. Happily accidents through train crews disregarding signals have become fewer, but those caused by lack of care in other directions have not. And the passenger, whose misconduct—such as carelessly opening doors—may not normally lead to such serious consequences to human life, nevertheless bears some responsibility for the disturbing trend in the more superficial kind of railway accident.

Possibly the fact of these recent accidents and the renewed injunctions British Railways have given to their staff may lead to a better observance of rules and regulations. The Transport Commission is also pushing ahead more rapidly with its longer-term plans for improved signalling and communications, including automatic train control, and for steel coaches, which will reduce the room for human error and limit its consequences. But technical improvements will never preclude it entirely.

CAPITAL ISSUES CONTROL

Closing Loopholes

IT was long odds that the ingenuity of Olds Discount Company which succeeded in adding £240,000 to its cash resources without having to go to the Capital Issues Committee for permission would attract the attention of the politicians, and it did. It was equally probable that the Chancellor knew that the particular "company shell" technique that Olds Discount used was not the only way of raising capital without asking leave. His answer to a Parliamentary question this week is comprehensive: "There are several methods by which capital may lawfully be raised without the consent of the Treasury, and I am considering the possibility of bringing these under control."

Olds Discount as a hire purchase finance house of standing would probably have had little hope of getting permission for a new issue. What it did was to acquire the capital of H. Challen and Son, whose assets consisted wholly of £245,000 in cash, for 230,000 Olds 5s. shares plus a cash adjustment of £5,000. As nearly all the new shares of Olds were placed by a leading firm of stockbrokers there was even a market side to this "ex CIC" transaction. In effect Olds paid a premium of a little over £30,000 for the use of the Challen "shell."

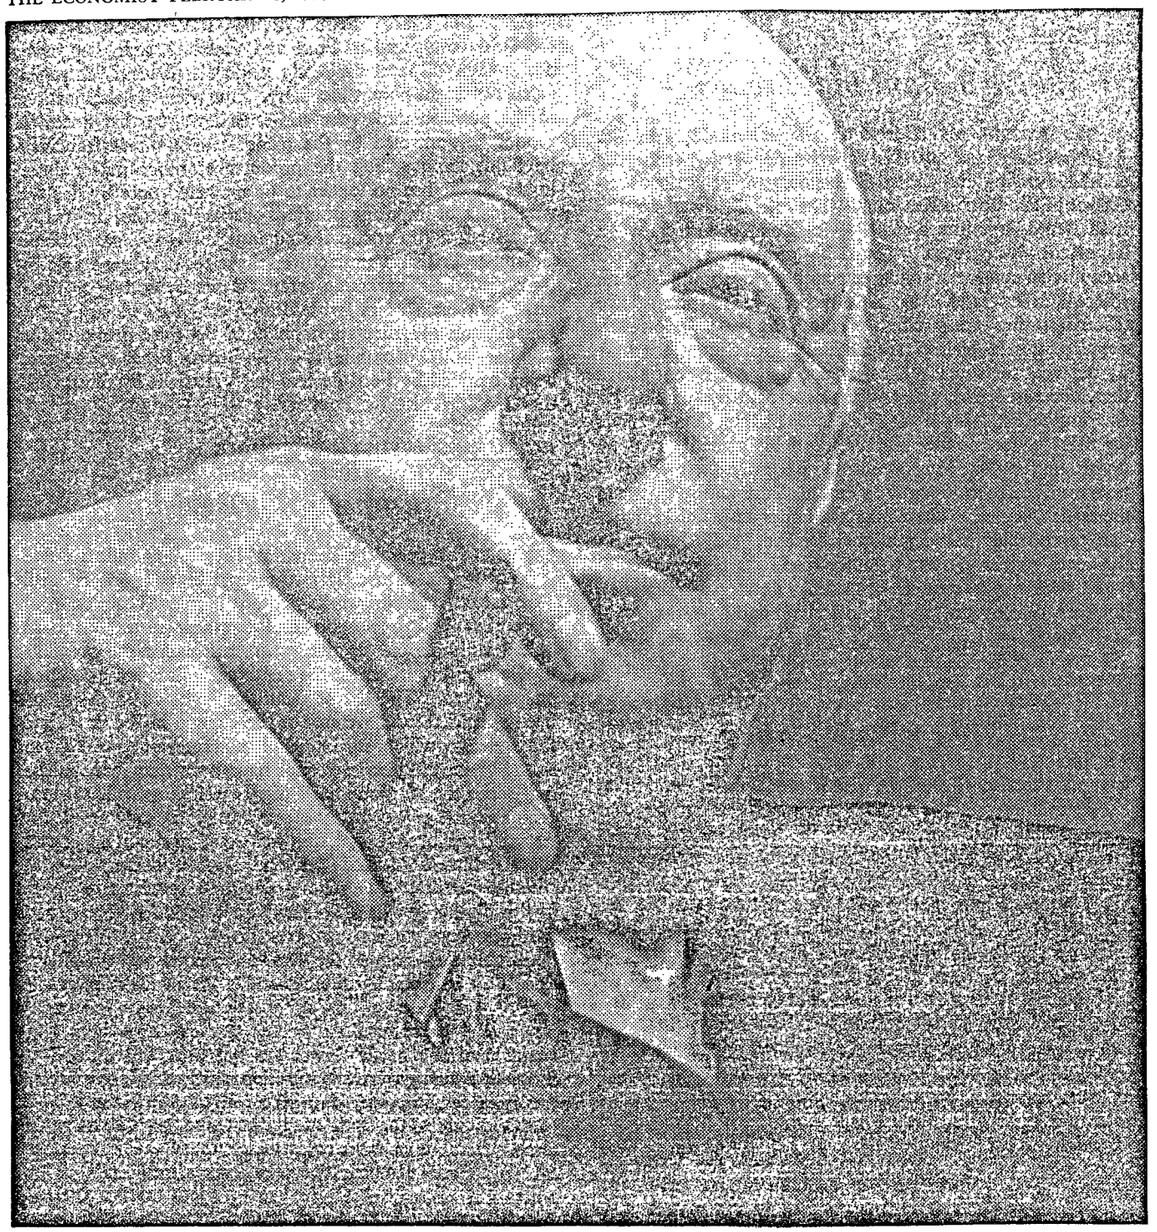
Mr Amory sees clearly that other options would have been open to Olds Discount if that particular loophole had been closed. It might, for instance, have simply advertised for deposits, as so many other hire purchase companies do. It might also have passed investments over to a subsidiary in exchange for shares and debentures in that subsidiary, retaining the shares and selling the debentures. The difficulty about the controls that the CIC exercises is that, quite apart from questions about their merits, they can so often be side-stepped by well thought out evasive action.

ZINC

Pause in Stockpile Selling

THE decision of the Board of Trade to stop selling zinc from the British strategic stock was well received in the market. The price rallied from £63 17s. 6d. a ton on Tuesday to £65 on Wednesday. But at that figure the price remains quite low enough to discourage production and there are reports from several directions of output being curtailed. The price compares with around £103 a ton a year ago and about £72 a ton early last August, when the Board of Trade announced that the British stockpile would sell at the rate of 3,000 tons a month. But the 18,000 tons of zinc that the Board of Trade has sold over the past six months is not the major factor in the decline in the price; industrial recession and the expectation, confirmed this week, that the United States stockpile was at the end of its buying have been the main influences.

The Board of Trade has nevertheless done no more than it should. The very fact that the vastly more powerful American stockpile could depress the market by selling quite a small proportion of what it holds should impress the British stockpile authorities with the need to observe an exemplary policy. British stockpile selling is not finished for good; it is merely suspended—with the promise that a further announcement will be made when it is decided to resume selling.



GAS

Methane by Sea

A CONTRACT signed this week between the Gas Council and the Constock Liquid Methane Corporation of America provides for the first experimental shipment of natural gas from the US Gulf to Britain in about a year's time. The temperature of the gas will first be brought down to minus 258 degrees Fahrenheit at atmospheric pressure, at which point it becomes liquid and takes up only one-600th of the space it occupies as a gas. The refrigerated gas will then be pumped into five aluminium tanks insulated with balsa wood fitted into a steel-bottomed ship; this should enable the very low temperature to be maintained for the duration of the two-weeks' voyage across the Atlantic—though perhaps 7 per cent of the cargo will be lost through "boil off" during the voyage. On arrival at Canvey Island in the Thames Estuary, the refrigerated gas will be transferred to insulated land storage at the same low temperature, and subsequently re-gasified and converted to town gas. The cost of acquiring and converting the first ship, which will carry 2,000 tons of liquid methane, is put at £1,430,000, of which the Gas Council will bear half; a further £400,000 is being spent on two 1,000-ton insulated storage tanks on Canvey Island; to this must be added the cost of pre-treating and liquefying the gas in the United States, storage there, and regasifying and conversion to town gas in Britain—and the original well-head cost of the gas.

★

The average net cost of the gas produced by the North Thames Gas Board, the furthest from the coalfields, was 12.25 pence a therm during the year which ended last March. But imported methane would have to compete either with a new coal carbonisation plant—which, with high capital charges, might show little improvement on the average—or with a new oil gasification plant. In the London area, where oil has its greatest advantage over coal in transport costs, gas could probably be made from oil today for 10d. a therm: so if natural gas could be brought in for, say, 8d. or 9d. a therm it would be an attractive proposition. In the United States, where there is a strong demand for natural gas, well-head costs are about 15 cents a thousand cubic feet (of 1,000 B.Th.U. gas), or roughly 1½d. a therm. In Venezuela, where there is less demand for natural gas, and the oil companies are forced to re-cycle it underground, it should be possible to obtain large quantities at a penny a therm; in the Middle East, which could supply all of Britain's gas needs, the well-head price might be even lower, though the ocean voyage (and consequent gas losses) would be longer. On this basis, the project would be economic if it costs less than 7d. or 8d. a therm to pre-treat, liquefy, store, transport, store again, regasify and convert the gas—and the losses that are inevitable at different stages. Engineers of the North Thames Gas Board, in a paper read to the Institution of Gas Engineers eighteen months ago, put the aggregate of these costs as low as 4d. a therm, assuming tankers of 15,000 tons capacity and storage capacity for liquid methane totalling 25,000 tons in Britain. Next year's experiment, with a tanker of only 2,000 tons capacity, and storage tanks holding 1,000 tons each, is bound to be much more costly, but it is the only way to put to the test the more attractive estimates of the cost of large-scale operation.

THIS MAN SELLS "WEE DRAMS OF POETRY"!

Sir Henry Ross, Chairman of the Scotch Whisky Association, knows that international advertising is an absolute must for a spirited export sales programme. It's no wonder Scotch whisky is one of Britain's leading dollar earners.

NATIONAL BANK

Irish Banking Trends

LORD PAKENHAM'S address to the shareholders of the National Bank provides a valuable survey each year of Irish banking and the Irish economy to set against conditions in the United Kingdom. The financial system of the Irish Republic is linked closely with London, but there are important divergences. Thus the proportion of deposit accounts to current accounts is roughly two to one in Eire, whereas in England it has usually been nearer one to two (though it has lately risen to three to five). However, deposit rates in Ireland are notably lower—they are now 2½ per cent for sums under £25,000 and 4 per cent above that, compared with a flat 5 per cent paid by the English clearing banks. Hence the Irish banks, which deploy funds on the London money market, normally benefit from an upturn in English interest rates. Recently their external reserves have been rising, as a result of the improvement in the trade balance. The banks are under no official injunction to restrain their lending in Ireland, and advances in the years 1956 and 1957 together rose by 4 per cent, compared with 3 per cent in England. Total bank deposits, however, rose by 5.2 per cent in Ireland and by 7.2 per cent in England.

CARS

Sharp New Rapier

WITH total output of the motor car factories continuing to increase, the smaller manufacturer has an ever more difficult problem to offset the disadvantage of his inevitably higher costs. Rootes have always been responsive to the situation by exploiting to the full their greater flexibility by adding to the "bread and butter" line of the Hillman Minx, variants which can command a higher price in pence per lb. The new Rapier is an excellent fruit of this policy. By increasing the bore from 3 inches to 3.11 inches, the capacity of the Minx engine is enlarged from 1390 cc to 1494 cc, and with two carburetters the new engine gives an increase of about 5 bhp and, more important, a valuable increase in the torque of the engine at lower speeds. The back axle ratio is reduced from 5.22 to 1 to 4.55 to 1, so that, to achieve the full performance of which the car is capable, the gear-box will be used more. The gear-lever is now mounted on the floor instead of the steering column—a change which will surely be to the taste of the driver to whom the Rapier makes its strongest appeal. With a new steering box and other modifications to the steering arrangements, criticisms which could justly be made of the handling of the old Rapier will, it is to be expected, be eliminated; and the car as a whole has very pleasing looks.

The new car is priced at £695 (plus PT) in the home market, without overdrive, the same price applying to the old Rapier with overdrive. In the American market the price is likely to be about $2,500; the appearance of the car is likely to be found to approach as closely to American ideas of modernity as any British manufacturer ever has. With the appeal of a smaller fuel bill enhanced by current economic tendencies, the Rapier should add appreciably to the volume of Rootes' sales in the US.

Rootes, of course, share with BMC the disadvantage in the USA, compared to Ford and Vauxhall, that they have not at their disposal the ready made distribution channels of an American parent company. But with the clarification of the position under the anti-trust laws, so that a dealer cannot be restricted by the manufacturer whose franchise he holds from selling the products of other makers, the imported car has no longer to be marketed only by dealers whose lack of imposing premises or other facilities disqualify them from a dealership for an indigenous maker. Rootes and other British manufacturers have recently been able to transform their marketing arrangements by adding to their retail outlets dealers with franchises, for example, for Lincoln and Mercury automobiles of the Ford group or for Cadillac and Oldsmobile of GM—British Fords, of course, being handled by Ford dealers and Vauxhalls by those with the GM franchise for Pontiacs.

ACTUARIES' INVESTMENT INDEX

Quinquennial Revision

EVERY five years the Actuaries' Investment Index, a tool designed for use by institutional investors, is revised. The latest revision works from the new base date of December 31, 1957=100, and the new series has been linked with the old to give a comparison for the previous twelve months. Some of the resulting indices are published on page 522. The list of securities included in them has been amended. As a result of the change in the base date the weights (which are based on market valuations) given to the various industrial groups have been changed. In the new series the oil group has a bigger weight and the tobacco group a smaller weight than previously. A new group for "steel" has been added, the industrial group "boots and shoes" eliminated, and "rayon" has been merged with "cotton textiles." The sub-grouping of preference shares by dividend rates has produced no distinctive results and has been abandoned.

Complete revision of the lists of securities and the alteration in the industrial groupings and in their weighting means that the link back to the original series either for a specific group or for the resultant general indices is rough. The occasion of the partial break has not been seized to alter the rules which govern the selection of a particular security: the rule, for instance, that an ordinary stock must have paid a dividend for each of the last five years remains in force. Because of such rules and because the indices are calculated on geometric averages, this series tends in its portrait of stock market prices to even out market fluctuations.

SHORTER NOTES

The government proposes to introduce a bill to prolong until August its powers to make advances direct to the nationalised industries to finance their capital development. These powers, for state industries other than coal, were introduced in the Finance Act of 1956, for two years only: the National Coal Board has always raised its capital "on tap" under a similar system.

* * *

The first scheme enabling people building or buying a house to borrow money at a variable rate of interest from a local authority has been approved by the Ministry of Housing. The scheme was submitted by the Hampstead Borough Council, which will now be able to vary the rates at three months' notice to borrowers; normally local authorities relend at ¼ per cent above the rate at which they borrow from the PWLB.

* * *

A new storage plant to hold 7.5 million gallons of oil products for distribution throughout the Midlands is being built for the Esso Petroleum Company near Birmingham. The cost, estimated at £1 million, works out at just under £37 a ton of petroleum products.

* * *

A strengthening of the P & O and Orient Line Pacific services has been announced. In particular the two United Kingdom lines will be operated across the North Pacific linking the west coast of the United States, Canada and Honolulu with Japan, Hongkong and the Philippines.

COMPANY AFFAIRS

IMPERIAL TOBACCO

SHAREHOLDERS of Imperial Tobacco had been well prepared for a small reduction in the dividend, and on the actual cut from 21 to 20 per cent for the year to October 31st the £1 units held steady at 40s., at which they yield 10 per cent.

The directors had already drawn attention to narrowing profit margins in a market where the giants of the tobacco industry are competing vigorously and where the smaller concerns are finding it difficult—if not impossible—to hold their own. The group's trading profit has fallen by £1,809,278 to £21,554,565—not a shattering decline, but nearly all of it occurred in the profits of the parent company (the tobacco side of the concern), whose trading profits have dropped by £1,692,960 to £18,202,474. The investment income of the group (including the bigger distributions from British-American Tobacco) has risen from £4,401,404 to £5,252,375.

That increase, together with a smaller tax charge, has kept the fall in the group's net profits down to £362,853. Net profits of £12,006,911 provide comfortable cover for the dividend, which absorbs £6,911,602 net. Traditionally Imperial Tobacco pursues a reasonably generous distribution policy. Have the directors been too cautious this time in reducing the dividend? That question has been asked, but it must be assumed that in addition to weighing in the balance immediate capital and stock commitments and the high cost of bank overdrafts the directors have taken a view of trading prospects.

GENERAL ELECTRIC

THE cut in the interim ordinary dividend of General Electric from 4½ to 3½ per cent came as a shock to the market. GEC's £1 units were marked down from 38s. 9d. to 33s. 6d. and other leading electrical manufacturing equities were easier in sympathy. They recovered later, but not GEC. There were no reasons why it should. The total payment for the year to March 31, 1957, was reduced from 14 to 12½ per cent following the rights issue in 1956. The final payment now is anyone's guess and the directors' comment does nothing to dispel doubts. They say with commendable frankness that while "turnover has shown an increase, the pressure on profit margins, envisaged in last year's directors' report, has continued. The provisional results for the first nine months' trading, together with an estimate for the remainder of the financial year, indicate a marked decline in the profits for the year ending March, 1958." GEC and its competitors in the electrical industry are struggling for orders and for greater efficiency and their skills in management are being put to a strenuous test.

WATNEY COMBE REID

THE proposed merger between Watney Combe Reid and Mann Crossman and Paulin—the biggest of its kind for several years—is a brewery amalgamation with a difference. Its real point is that Watney's brewery site in Pimlico is likely to produce a better return if it is redeveloped and used for a different purpose. The sale or redevelopment of this site has been in mind for years. The dilemma was that if the site were sold or redeveloped, Watney's other brewery at Mortlake could not be enlarged sufficiently to maintain the volume of production and it was too costly to build a new brewery elsewhere.

The solution now devised is to amalgamate with Mann Crossman and Paulin and to enlarge both Watney's Mortlake brewery and Mann's Whitechapel brewery to make good the loss of production from the Pimlico brewery. That will mean heavy capital expenditure. So, too, will the redevelopment of the Pimlico site where an hotel, offices and buildings will be built allowing for the construction of a new road. The straightforward sale of that site might have resulted in a capital distribution to Watney shareholders. Whether or not the redevelopment and eventual control of the site will be under the ægis of the new merged concern, Watney Mann Limited, is not yet clear. Until that point is cleared up and until much more is known about the redevelopment scheme, shareholders should put the possibility of a capital distribution aside.

The terms of the merger are closely in line with market prices. Both companies pay ordinary dividends of 21 per cent and on the eve of the offer Watney ordinary stood at 64s. and Mann at 60s. Eleven Watney deferred ordinary of £1 each are offered for every ten Mann ordinary of £1 each and ten Watney 5¼ per cent £1 second preference shares for every Mann 5 per cent £10 preference share. The scheme has the blessing of the boards of both companies.

MONTAGUE BURTON

THE logic of Mr Lionel Jacobson's statement to the shareholders of Montague Burton is that the profits of this multiple tailoring group will fall this year. He says that so far in the current financial year, which ends on August 31st, turnover has been maintained, but "trade will be more difficult to obtain" in the immediate future. Earlier he states that profits will be lower unless turnover expands sufficiently to absorb increased costs. Reorganisation (including the modernisation of many shops), expansion (including the opening of new shops) and inflation have added to the group's direct expenditures and overhead costs. Its working costs, too, have been pushed up; recently there has been another wage award in the clothing industry and Montague Burton has decided not to pass this extra cost on in higher retail prices. Mr Jacobson equates this decision to the "national interest." But is it possible for any multiple tailor in a competitive market to raise prices? A reduction in profits from their 1956-57 level of £2,519,107 need not put the 10 per cent ordinary dividend in danger. That dividend has plenty of earnings to cover it, but that does not altogether justify the low yield offered by the Montague Burton equity.

JUTE INDUSTRIES

MR W. G. N. WALKER, the chairman of Jute Industries, promises a full statement on the present state of the company and the jute industry at the annual general meeting. In the full accounts he makes some preliminary comments on the fall in profit. In the year to September 30th, consolidated gross profits fell from £1,024,225 to £778,132; net profits declined from £477,333 to £342,923, but the directors

left the 20 per cent dividend, which absorbs only £120,750 net, unchanged.

On this dividend, the 10s. units at 11s. 4½d. xd. yield over 17½ per cent—unmistakable evidence that shareholders are worried, as they must be while unemployment in the Dundee jute industry is rising. Some sections of the business are still busy, but Mr Walker has this to say about prospects: first, the reduction in the measure of protection given to the domestic jute industry from Asiatic competition has had a "very adverse effect" on weaving profits, and the full impact has "still to be felt." Secondly, the price of Pakistan raw jute is "too dear" and is out of line with the prices at which finished Indian jute manufactures made from Indian jute are being sold. Thirdly, profits for the current year "may show a further decline."

CHARTERHOUSE INVESTMENT TRUST

At the top of the pyramid of the Charterhouse Investment Trust comes the parent company, the investment trust proper. It draws its income from its own portfolio and from dividends on its majority interest in Charterhouse Industrial Development. That company draws its income from its own small portfolio, from its activities in financing and nursing small and medium sized industrial concerns, from the issuing house business done by Charterhouse Finance Corporation, and from the merchant banking and acceptance business of S. Japhet and Company (which last year acquired the insurance broking firm of Glanvill, Enthoven and Company). In the year to November 11th, the net income of Charterhouse Industrial Development rose from £202,124 to £228,831; the net income of Charterhouse Investment Trust rose from £105,461 to £116,853 and its ordinary dividend was raised from 10 to 11 per cent, even though the directors calculate that this year there may be some small reduction in investment revenue. The chairman, Sir Nutcombe Hume, makes these comments on the various activities of the group:

Charterhouse Investment Trust

Early in 1957 and late in 1956, the trust ran down its cash balances by buying British and North American securities, but in view of the fall later in the year in stock market prices the trust would have been "better advised" to have kept the cash on deposit. About 16 per cent of the quoted investments are in North America, where "the long-term prospects for the leading companies are good—better perhaps than in this country because, in America, there is not the same continuous and uninformed attack on the capitalistic system and on profits."

Charterhouse Industrial Developmeat

The credit squeeze is "putting a severe check on the volume of new business the development company is able to make." The opportunity is being taken for "some internal stocktaking" and to give more attention to "strengthening and improving the condition of the several industrial companies" in which substantial interests are held.

Charterhouse Finance Corporation

This subsidiary has had "quite an active year" and has "a fair volume of business in hand." But it is not regarded as "a regular contributor" to the profits of the group.

PEARL ASSURANCE

Some of the "heaviest" of ordinary share prices are found in the insurance share market. The 1,200,000 of £1 units of Pearl Assurance are in this category, though they are not so "heavy" in price as Prudential "A." The directors of Pearl Assurance have now decided to split the stock into 5s. units. This should improve their marketability but after the announcement, they remained unchanged at 19¼ (which suggests a price of 4¼ for the 5s. sub units). The directors also propose to modernise the articles of association; their proposals include raising their permitted borrowing powers from £10 million to £20 million.

London Stock Exchange

FIRST DEALINGS:	Jan. 29	Feb. 12	Feb. 25
LAST DEALINGS:	Feb. 11	Feb. 25	Mar. 11
ACCOUNT DAY:	Feb. 18	Mar. 4	Mar. 18

Business in gilt-edged stocks expanded this week under the influence of sharp falls in Treasury bill rates at home and in the United States, and the further recovery in the gold and dollar reserves. The terms of the new LCC loan later restrained activity in high coupon corporation and Dominion stocks. A gain of 1/2 to 94⅛ was made by 2 per cent Exchequer 1960, and among the medium-dated stocks, which continued to attract support, 2½ per cent Exchequer 1963-64 rose ¾ to 86¼ and 3 per cent Funding 1966-68 ⅞ to 79⅝. War Loan held a rise of ½ to 65 but 3 per cent British Gas 1990-95 was only ⅛ higher at 62¾. Although corporation stocks recovered after their sharp fall, 5½ per cent LCC 1977-81 lost ⅛ to 100 over the week.

Industrial stocks followed the lead of gilt-edged despite some disappointing dividends, *The Economist* indicator rising 5.2 to 178.8. Bank shares improved and discount houses gained ground; Union Discount "B" rose 2s. 6d. to 43s. 6d. xd. Insurance stocks also rose, Prudential "B" gaining 12s. 6d. to 135s. Watney deferred and Mann, Crossman "A" rose 1s. 6d. on the merger proposals in a firm market for brewery shares. GEC fell 4s. 9d. to 33s. 6d. on the unexpected cut in the interim payment, but other electricals showed gains on balance, AEI rising 2s. to 50s. 6d. Rio de Janeiro Flour Mills lost 4s. 3d. to 27s. 9d. on the passing of the final dividend.

Although Shell improved, oil stocks were uncertain on the possibility of lower prices for the product; British Petroleum fell 1s. 3d. to 90s. 7½d. on the political moves in the Middle East. A good rise in OFS gold mines before the week end was reversed later.

(1) 1939 figures calculated on the basis of a smaller sample. From January, 1957, as a result of a change in definition some 200,000 to 300,000 persons temporarily laid off or waiting to start new jobs formerly classed as employed are subsequently classed as unemployed. (2) 1939 figures not strictly comparable with rest of series; stocks are at end of period. (3) All commercial banks. (4) Annual figures are total for the fiscal year ended June 30th. (5) Figure for third quarter. (6) Bonds due or callable from 10 to 20 years.

Financial Statistics

EXCHEQUER RETURNS

For the week ended February 1st, 1958, there was an "above-line" surplus (after allowing for Sinking Funds) of £136,499,000 compared with a surplus of £124,694,000 in the previous week and a surplus of £119,510,000 in the corresponding period of last year. There was a net expenditure "below-line" of £9,873,000, leaving a total deficit from April 1st of £432,233,000 (£463,068,000 in 1956–57).

THE MONEY MARKET

THE Treasury Bill rate fell exceptionally steeply at the tender on Friday of last week. The discount houses raised their common bid by 10d., to £98 9s. 5d. per cent, marking a reduction in the discount rate of 3s. 4d. per cent. The move was larger than had been expected by outside applicants; so that although applications were unchanged at £421 million for an allotment cut by £20 million to £210 million, the allotted portion of bids at the common price rose from 24 to 44 per cent. The average rate of discount on the whole allotment fell by just 3s. per cent, to £6 2s. 6.5d. per cent.

At yesterday's tender the offer was restored to £230 million; if this is fully allotted, it will fall short of next week's maturities by £40 million; this week the excess of maturities has been £60 million.

The discount market was in the Bank on three days in the week to Wednesday. On Thursday of last week the amount of penal borrowing was small, by dint of fairly large special help given to the market, and on Friday, when small repayments were due, the loans at Bank rate were smaller still. But on Monday the Bank gave no special help and nearly the whole market was forced into the Bank, for a moderate amount. Wednesday's Bank return shows a rise of discounts and advances on the week by £20.6 million, to £45.9 million; probably rather more than half of this represents net borrowing by the discount houses.

From all corners of the earth people come to LAUSANNE

the delightful city which, during recent decades, has become so favoured by Royalty that it has been nicknamed the "City of Kings." Lausanne situated on the lovely Lake of Geneva and surrounded by vineyards and emerald green slopes, is well known for its University, Schools and medical establishments. It is also an important railroad centre, from which many of the most beautiful parts of Switzerland can be quickly reached. Naturally, many visitors call at the local branch of the **Union Bank of Switzerland,** knowing that they are sure to receive prompt and efficient attention.

SIR ANDREW McCANCE ON DISSERVICE TO THE INDUSTRY OF NATIONALISATION THREATS

The twenty-seventh annual general meeting of Colvilles Limited was held on February 7th at Glasgow.

The following is the circulated statement by Sir Andrew McCance, DL, DSc, LLD, FRS, chairman and managing director, for the year to September 30, 1957:

INTRODUCTION

The first stage of the new integrated steelworks at Ravenscraig has been completed and production commenced during the financial year under review.

At the beginning of 1954 the detailed schedules for the construction of this scheme were prepared and it was our hope that production at the coke ovens and blast furnace would commence in July, 1957, and that steel production would follow a short time later. In fact, the coke ovens produced their first charge of coke in July, the blast furnace made its first tap of molten iron on August 2nd and the melting shop its first cast of steel on September 6th.

Looking back on all the difficulties which had to be faced and surmounted during the construction period of thirty-four months, the record is one of remarkable performance and achievement. The necessities of a closely scheduled plan of construction made demands on everyone associated with the scheme which were often arduous, but enthusiasm and goodwill have been maintained throughout in the most gratifying manner. The Board has already recorded its appreciation of the way in which the engineering directors and staff in charge of operations at Ravenscraig have designed and planned these works and the manner in which the major contractors have co-operated with us in ensuring this excellent result.

I am glad to state that production has proceeded smoothly and effectively and only minor adjustments have been found necessary. It is clear that outputs from the blast furnace and melting shop have been conservatively rated since the targets set for these units have already been exceeded.

Since the Directors' Report was written, agreement was reached after prolonged negotiations extending over ten months with regard to the manning and wage rates for the ore unloading plant at General Terminus and the plant went into operation on January 7, 1958. Without this expansion of the facilities at Glasgow Docks, the discharge of the increased tonnage of iron ore required for additional blast furnaces at Ravenscraig would not have been possible.

The other works of the Parent Company are actively employed. Demand for our products continues and while in the main this is based on standard qualities, there has been a significant increase in deliveries of special steels in the development of which we continue to hold a leading position. We are making a notable contribution to the nuclear power plant programme in the supply of special steel plates of large dimensions, for the production of which we have unique facilities.

ACCOUNTS

The share and debenture capital of the Company previously issued is now fully paid, the outstanding balances of £3 million on the 5½ per cent cumulative preference shares and of £9 million on the 4½ per cent debenture stock having been received from the Iron and Steel Holding and Realisation Agency during the financial year under review.

As the first stage of the development programme came into production this year, the accrued expenditure on additions to our productive capacity amounting to £22,381,244 has been transferred in the balance sheet from the category of development expenditure and work in progress to fixed assets.

To enable the new plant at Ravenscraig to make a start, adequate initial stocks of coal, iron ore, and scrap had to be provided. The need for this provision and the increases in the prices of all raw materials which occurred during the period account for the increase of £5,976,751 in the value of the stocks held by the Group to £19,654,767. The greater output of steel this year has also required somewhat larger stocks than were necessary in former years.

The additional blast furnace with its coke ovens will bring about a beneficial change in the position of raw material supplies to the Company. It will reduce the dependence on outside supplies of pig iron and will substantially lessen the dependence on supplies of imported scrap—a market which has always been subjected to unpredictable fluctuations. The by-product gases, both from the blast furnace and coke ovens, will be usefully employed in the steel works effecting a desirable saving in fuel. As a consequence of this changed position, steps are being taken to reduce stocks to obtain the advantage of a reduction in the finance required as working capital.

Following the commencement of active production at Ravenscraig, provision must be made for depreciation on the new plant and this has increased the allowance for depreciation in the accounts to £2,092,102. In addition the Board has thought it desirable to write off certain expenditure incurred in the course of our development schemes not now represented by productive assets. Such items as temporary staging to facilitate construction, temporary roads, etc., have therefore been written off as additional depreciation, the sum involved amounting to £750,075.

As most of the contracts for our new plant were placed before the withdrawal of investment allowances, the provision for income tax this year, in spite of the improved trading results, only exceeds the amount provided last year by £317,847.

As a contribution to the replacement of assets, the cost of which cannot be recovered from a system of depreciation allowances based on historical cost, the Board has transferred £2 million to capital reserve which will now stand at £8,076,034. It is also proposed that the general reserve be increased by £2 million from the unappropriated balance leaving £1,545,268 to be carried forward by the Parent Company.

The statement contained in the appendix shows that sales, which exclude inter-works transfers, increased by £9,015,000, while costs increased by £7,738,000. Of that increase in costs, raw materials and purchased services accounted for £3,368,000, fuel for £1,481,000 and wages and other costs of employment for £1,134,000.

The increase in the net profits, which I am glad to report, has enabled the Board to recommend that the final dividend be continued at 8 per cent, making with the increased interim dividend of 5 per cent a total of 13 per cent, as compared with 11 per cent for the previous year.

SUBSIDIARY COMPANIES

The activity of the subsidiary companies has been satisfactory throughout the year. New records have been achieved in production and earnings.

As finance for development is provided by the Parent Company, the greater part of the earnings of subsidiaries has been transferred by way of dividend, but small balances have been retained in each case and added to the unappropriated balance carried forward.

Continued progress has been made in the scheme for improving the general works facilities and equipment at The Lanarkshire Steel Company Limited. The electrification of the mills has been completed with marked economy in operating costs. The extension and re-arrangement of the cooling banks to cope with larger outputs will be completed in 1958. These changes have been carried through without interfering with the normal production of the mills.

In the early part of the year some recession took place in the demand for alloy steels, particularly from the motor car industry. A substantial recovery has since taken place and production at The Clyde Alloy Steel Com-

pany, Limited, is again normal. The demand for light castings continues unabated and work is fortunately well advanced with the extension to the light foundry which is expected to go into production in 1958. Good progress is also being made with the conversion of Hallside Works of The Steel Company of Scotland, Limited, for the manufacture of alloy steels and with the billet mill for this scheme, which is being constructed at our Mossend Engineering Works.

The demand for light plates and sheets has been maintained but some weakness has been evident in the enquiries for galvanised sheets. Galvanising work for other purposes has remained steady.

As the output of steel increases so also does the demand for ingot moulds. Improved new equipment and an extension to the dressing shop have enabled the Fullwood Foundry Company, Limited, to keep pace with the increase in the number of ingot moulds required within the Group. In recent years the replacement of iron castings by welded fabrication has left its impact on the production of such castings and there is little doubt that this trend in the substitution of one type of manufacture by another will continue. A compensating factor, however, is the constantly increasing demand for iron castings of special and alloy composition and the Fullwood Foundry Company is steadily expanding in this field with marked success.

The facilities of the Colville Constructional Company, Limited, proved a real asset in the design, construction and erection at Ravenscraig of the large new melting shop in which each of the main girders had a weight of 110 tons. It is certainly one of the largest and most massive steel structures erected in Scotland. Other substantial contracts for structural steelwork have been completed for outside clients and this year both the turnover and the profit have achieved new records. The order book is satisfactory and includes, in addition to contracts for structural steel, orders for a number of fabricated stern frames and rudders for the shipbuilding industry and a substantial contract for intricate welded parts for one of the atomic energy power station projects.

Satisfactory trading results have been obtained at the other subsidiary companies with the exception of Carnlough Lime Company, Limited, which has made a small loss. At Carnlough increased transport costs have more than offset the economies of the improved equipment recently installed.

May I at this stage record how sincerely the Board has appreciated the splendid assistance and co-operation which they have received from everyone within the Colville organisation in a year of notable development. The help of the staff and employees in promoting the successful achievements of the Company deserves our profound gratitude and thanks.

PRODUCTION AND COSTS

The production of coke, pig iron and steel during the year under view, already reported, was as follows:

Coke	753,921	tons
Pig iron	789,377	„
Steel	2,095,274	„

This output of steel is a record in the history of the Company and it was achieved with no material assistance from the new melting shop at Ravenscraig which came into production only during the last few weeks of the financial year. The benefit of the additional steelmaking capacity should make its full contribution in the coming year.

As previously forecast, some of the older open hearth furnaces at Dalzell Works, where the equipment is no longer in keeping with modern standards and which are expensive to operate, will now be closed down. The transfer of skilled men from these older plants to the new works was an important matter to which the management gave much attention in order that it should be carried through smoothly and with the minimum dislocation. During the past twelve months the Iron and Steel Board have found it necessary to adjust the prices of all steel products following continued increases in the cost of raw materials, fuel, transport and wages.

From the records of the Company, the cost of the raw materials required in the manufacture of steel are set out expressed as a ratio of similar costs in 1946. The basic steelmaking materials are coking coal, iron ore and scrap and the relative price ratios in 1957 over the 1946 prices taken as 100 were:

Coking Coal	*Imported Ore*	*Scrap*
266	296	397

The base prices for heavy sections and steel plates have advanced within the same period as follows:

Heavy Sections	*Steel Plates*
256	259

Steel prices have been restrained from rising to the same extent as raw material prices by the increase in productivity per man employed. Furnaces of greater capacity, improved mechanical equipment and better technical processes of steelmaking have all made their contribution to this increase. In the Colville steelworks, the ingot output of open hearth steel has risen from 1,410,824 tons in 1946 to 2,006,256 tons in 1956, with an increase in the number of men employed of 325. This greater productivity has enabled all employees to earn substantial increases in their weekly wage.

During that period of ten years the steel industry compares well with other industries in this country in the matter of improved production. Nevertheless in spite of all the efforts which have been made in Britain, other countries have also been advancing so that it is only with difficulty that we have avoided being put in an adverse position in the contest for international markets. The Government have at last and somewhat tardily taken active steps to combat further degeneration in the competitive power of British industries brought about by increasing costs and high taxation. It is earnestly to be hoped that they will persevere in their effort with ultimate success.

DEVELOPMENT

The first stage of the development plan has now been completed and approval has been given to the second stage, which includes the construction at Ravenscraig of a duplicate battery of coke ovens and by-product plant, a second blast furnace, additional steelmaking capacity and a modern slabbing mill. To avoid any interruption in the present output of plates, the construction has been planned in sections, each section replacing existing production units which will be demolished and removed to make way in turn for the next. The new slabbing mill is being erected adjacent to the Ravenscraig melting shop and when this mill is in production the present slabbing mill at Dalzell Works will make way for greatly improved heating and handling facilities to serve the existing plate mill which will be modernised. In addition, at Clydebridge Works a new four-high mill will be erected on a parallel site and go into production before the present mill ceases work. When this second stage is completed plate production will rise from 600,000 to 800,000 tons per annum.

Alterations to the open-hearth furnaces at Clydebridge and the construction of a second blast furnace and an additional steel melting furnace at Ravenscraig will bring the ingot capacity of the Group to 2,500,000 tons per annum. On the Ravenscraig site there is ample ground for even further expansion of pig iron production when the development of coking coal supplies in Scotland makes a further expansion possible.

FINANCE

The estimated cost of the developments which constitute the second stage, including some allowance for increases in the cost of wages and materials, is £33,500,000. In the normal course of construction it is considered that six years would be required for the completion of the whole plan.

As indicated above, however, the plan is divided into several separate sections each of which is distinct in itself and can be dealt with in isolation without impairing the effectiveness of the other parts of the scheme. Your Board has thought that this was a desirable precaution in the light of the circumstances of today.

From the nature of the second stage already outlined, it will be seen to consist partly of replacement of existing facilities and partly of additions to these facilities. Finance for replacement should come from the accumulated reserves of the Company or from the ploughing back of some portion of current profits. Additions to the fixed assets may require additional capital resources.

Your Board decided that the Company should raise further long-term capital in order to meet part of the cost of the second stage of development referred to above. In addition, banking facilities have been arranged to assist in financing the peak requirement which will arise before the new plant becomes revenue earning.

As you are aware, the long-term capital requirements were met by the issue of £6 million 6 per cent Convertible Debenture Stock 1978/81, thus raising the total issued loan and share capital of Colvilles from £24 million to £30 million. This issue was offered at £99 with rights of conversion into ordinary shares in stated proportions during the years from 1959 to 1963. I am glad to advise you that this issue was fully subscribed.

The threat of the Socialist Party to renationalise the steel industry if they were returned to power at the next election has made it more expensive for steel companies to raise the new finance required for expansion. That is one aspect of the disservice to the steel industry and to the country which this threat has caused. It is disturbing to think that in the minds of the Labour leaders this great industry is regarded merely as a pawn in an internal struggle for political leadership.

The events of the last few months have brought home to everyone the delicate balance of our financial and trade position in its relation to that of the rest of the world and how seriously that delicate balance can be affected by a change in world sentiment. Renationalisation can no longer be regarded in isolation as a matter which is solely the concern of the United Kingdom. Other countries have interests and associations with British industry and their relations with us, though cordial and friendly, are bound by no obligation or commitment. A policy of further nationalisation might so turn their sentiment against us that grave financial disturbance could be caused. The financial disturbances of the early 1930s and the mass unemployment to which they gave rise were too profound and devastating to be readily forgotten. We cannot afford to contemplate

policies which carry the risk of bringing back again such conditions.

Let us bear in mind that since the coal industry was nationalised the net export of coal has been practically wiped out and the adverse effect of this has contributed its own weakness to the financial difficulties of our external national balance. That these difficulties were not even greater has been due to the steady improvement in our exports of machinery and engineering goods, all of which depend almost entirely on supplies of iron and steel. In a country like Britain in which only 4 per cent to 5 per cent of the population is engaged in agricultural production, the exchange of exports to provide the food we consume and raw materials required by industry is vital to the standard of living of the working population.

There is no economic argument which justifies nationalisation. The argument based on the need for public supervision has now lost its force. The Iron and Steel Board with its broadly based membership appointed by the Government has shown by its work that it is an effective instrument for the public supervision of the steel industry.

Any arguments for nationalisation are based on the political theories of one Party. Now that the costly consequences of the experiment in nationalisation have been experienced, it would have been thought that even the political justification had become seriously diminished. But, as has been pointed out by many critics, such policies once started force their own continuance because they contain within themselves the elements of dictatorship. I see no difference between such policies and the practice of communism in Soviet Russia where even the trade unions have been nationalised. It is sincerely to be hoped that the politicians who are journeying towards communism, while claiming to oppose it, will pause and reflect before they reach in their journey the point of no return.

APPENDIX

ANALYSIS OF INCOME AND EXPENDITURE

	1957 (£'000)	1956 (£'000)
Income from sales, interest, etc.	77,100	68,085
Cost of materials, trade expenses and services bought	38,126	34,758
Cost of fuel	13,941	12,460
Depreciation	2,842	1,087
Debenture interest ...	166	45
	55,075	48,350
Balance available for wages, salaries, taxation, dividends and re-investment by way of reserves ...	22,025	19,735
Distributed as follows:		
Wages, salaries, national insurance and superannuation contributions	13,148	12,014
Taxation	3,016	2,850
Dividends—Gross ...	1,511	1,155
Reserves	4,350	3,716
	22,025	19,735

NOTE.—Since wages and salaries are paid before deduction of tax, dividends have been treated on the same basis and the amount of taxation has been adjusted accordingly.

Number of Employees, 18,500. Number of Shareholders, 41,000.

THOS. FIRTH & JOHN BROWN LIMITED

SIR JOHN GREEN'S STATEMENT

The seventy-seventh annual general meeting of Thos. Firth & John Brown Limited was held on January 31st at Atlas Works, Sheffield, Sir John Green, JP (the Chairman), presiding.

The following is an extract from his circulated statement:

The Gross Surplus after providing for Directors' remuneration, but before providing for Debenture Interest (£132,075), Depreciation (£568,012), and Additional Depreciation (£601,000) towards the increased cost of replacing Fixed Assets, amounts to £4,838,103. Taxation amounts to £2,113,392.

Your Directors propose to transfer £1,215,000 to General Reserve and to pay a final dividend of 6 per cent on the increased Share Capital (an interim dividend of 4 per cent was paid in July last on the smaller Share Capital), absorbing £392,150.

The Current Assets of the Group now amount to £17,562,731 as compared with Current Liabilities of £6,164,036, giving a cover for the latter of 2.8 times.

CAPITAL EXPENDITURE

During the year £1,688,210 has been spent on Land, Buildings, Plant and Machinery by the Group.

Outstanding Capital commitments already entered into amount to £1,582,000 for the Group.

New major projects which are expected to be authorised during the coming year include additional heat treatment facilities at Thos. Firth & John Brown Limited and William Beardmore & Co. Limited, involving an approximate expenditure of £1 million.

Good progress is being made in the installation of the new Bar Mills at Firth-Vickers Stainless Steels Limited, and the new Continuous Hot Rolling Mill at Shepcote Lane Rolling Mills Limited, is at present undergoing trials.

TRADING CONDITIONS

Throughout the year the Company and its subsidiaries operated practically the whole of the plant at full capacity, and it is satisfactory to report that the turnover of the Group was in excess of the previous year. At the present time the Company's Order Book is still satisfactory.

The year has in many respects been a difficult one. The dislocation and upheaval in trade brought about by the crisis in the Middle East had serious repercussions. The Company had to meet increases in freight and transport charges and raw materials. This was followed by a dispute in the Engineering trade. Although the Strike was not on a national scale, the whole of the works within the Group were affected and were for the most part out of production for two weeks.

The settlement of the dispute was followed by a substantial increase in wages, and whilst certain adjustments in the selling price of some of the Company's products have been made, it has not been possible by any means to recover the increased cost arising from wages and materials.

These mounting costs not only adversely affect the competitive capacity of the Company, but involve a substantial increase in the working capital required to finance Work-in-Progress and the purchase of raw materials.

Although the Company's works have been fully occupied during the year under review, and the Order Book at the moment is satisfactory, there is a distinct slowing down in the pace of new business, the pressure of demand which had been so strongly felt in the economy during the preceding three years having been retarded.

In the export field trading is more difficult and new orders harder to secure, irrespective of selling prices.

NEED FOR PERIOD OF STABILITY

Last year I stressed the need that every effort should be made to bring about a degree of stability in wages and prices as soon as possible. This was not achieved, and the financial measures which the Government have been compelled to take emphasise the gravity of the position. In my view, it is vital that all sections of the community should unitedly endeavour to bring about a prolonged period of stability. Success in such a policy would bring a rich reward. It is only during a period of stability and sustained effort can we ascertain the extent to which increased efficiency at home will off-set the growing competition from abroad and the many other difficulties and problems which have to be met both in the home market and internationally.

Looking ahead, it is necessary for us to keep in mind the fact that all Political Parties in this country are committed to the European Free Trade Area proposals on the broad general ground "that we cannot afford to keep out." The inevitable consequence will be that serious competition will quickly emerge, and this will strain our national economy and tax our capacity to compete effectively both at home and abroad.

It stands out clearly that the high standard of living already achieved and enjoyed in this country, together with the growing burden of Social services of all kinds which is reflected in the high level of taxation, will require a sustained effort on the part of those whose job it is to produce and keep the wheels of industry moving.

The report and accounts were adopted.

THE ROYAL BANK OF SCOTLAND

HIGHLY LIQUID AND STRONG POSITION

CHANCELLOR'S EFFORTS TO RESTORE CONFIDENCE IN STERLING

DETERMINATION TO COMBAT INFLATION AND MAINTAIN POUND VALUE

IMPORTANCE OF HIGH LEVEL OF CAPITAL INVESTMENT

THE DUKE OF BUCCLEUCH ON EUROPEAN COMMON MARKET OPPORTUNITIES

The Annual General Court of Proprietors of The Royal Bank of Scotland will be held on February 25th in Edinburgh.

The following is the circulated statement of the Governor of the Bank, His Grace the Duke of Buccleuch and Queensberry, KT, PC, GCVO, LLD:

I desire in the first place to refer to changes which took place during 1957 in the Court of Directors. Mr Kenneth Murray, who had been an Ordinary Director since 1935 and Chairman of the Court from 1946 until 1955, resigned in June. I would take this opportunity to congratulate Mr Murray on the honour of Knighthood recently conferred upon him by Her Majesty the Queen. Sir William Young Darling, CBE, MC, DL, LLD, has also resigned from the Court of Ordinary Directors. I am glad to say, however, that he has agreed to serve as an Extraordinary Director.

Accompanying this Statement is a copy of our Annual Report and Accounts, incorporating a Consolidated Profit and Loss Account and Balance Sheet of the Group, but before dealing with our own affairs I propose to comment briefly on matters of wider significance.

A RATHER CONFUSED SCENE

The scene confronting us today is rather confused, and looking back it is difficult to reconcile the happening of the first half of the year with the events which followed in September. Bank Rate, which stood at 5½ per cent at this time last year, was reduced to 5 per cent on February 7th, a movement described at the time by the Authorities as "a technical adjustment" to bring it into line with the reduction in money market rates which had taken place earlier. The dislocation caused by the Suez crisis did not affect our overseas trading results as much as might have been expected and our balance of payments position weathered the storm reasonably well. Generally, there appeared to be no lack of confidence in the country's overall financial position despite the fact that the internal price level, principally as a result of wage increases, continued on its upward course. The Government successfully carried through funding operations on a considerable scale by sales of gilt-edged securities in the open market. A measure of tax relief was granted in the Budget, and there was a fairly widespread belief that some relaxation of the restrictions on credit might be forthcoming.

CHANCELLOR'S ACTIONS A SHOCK

The drastic nature of the measures taken by the Chancellor of the Exchequer in September came as a shock to us all. Sterling had, it is true, come under strong speculative pressure in the late summer but with our current payments accounts still running in our favour the real seriousness of the position was not widely appreciated. It had perhaps been forgotten that the inadequacy of the country's reserves places us, as bankers to the Sterling Area, in the position of being dependent on the maintenance of confidence abroad in our currency and that confidence can be undermined by doubts about our economic policies as well as by adverse trade and balance of payments figures. That is precisely what happened last year. The continued upward movement in the general level of our prices and the possibility of further wage increases gave rise to fears that we were not carrying on the fight against inflation resolutely enough and that this might bring about a devaluation of sterling.

The aim of the Chancellor was, therefore, to restore confidence in sterling by demonstrating the Government's determination to combat inflation and maintain the value of the pound. Our inflation has been fed by increases in the money supply and the Chancellor decided that this must stop. As he said, "There can be no remedy for inflation and the steadily rising prices which go with it which does not include, and indeed is not founded upon, a control of the money supply." He based his policy on four main measures: (1) A rise in the Bank Rate from 5 to 7 per cent, the highest level at which it has stood since 1921; (2) a new directive to the Capital Issues Committee to take up a more restrictive and critical attitude towards applications to borrow and in particular towards applications for large amounts; (3) a further intensification of the quantitative restriction on bank advances by requesting the Banks to hold their advances over the following year at the average level of the previous twelve months; and (4) a limitation of Government spending and a reduction in the capital investment programmes of Local Authorities and the Nationalised Industries.

The raising of the Bank Rate is an expensive part of the policy. Last year I referred to the cost to the Exchequer of a high Bank Rate and the strain which it places on our external payments account. My remarks then apply even more forcibly to a Bank Rate at today's level.

BANK ADVANCES

We are directly concerned with the new directive on bank advances and, along with the other Banks, we have assured the Chancellor that we shall do our best to keep our advances within the target. This may not be easy to achieve for the extent to which overdraft limits granted for trading purposes are utilised at any particular time depends largely on the requirements of customers, and accordingly a bank's total advances cannot be maintained at any particular level merely by turning away requests for new advances.

While the Banks have readily co-operated in giving effect in their lending to official policy and, while they have promised their co-operation in giving effect to the new directive, they cannot but have a sense of frustration in that they have again been singled out as an instrument of official policy. This feeling is accentuated by the fact that the gap created by their consequent inability to lend for certain purposes is being filled by other financial institutions not subject to similar restrictions and which in the main draw funds from the same sources as the Banks. Deposits are attracted away from the Banks by the generous rates of interest which such other financial institutions can offer by reason of the high rates they are able to charge for the loans they grant. Is it surprising, therefore, that Bankers feel aggrieved when they learn of consents being granted by the Capital Issues Committee "to borrow from a source other than a bank"? Why, they ask, should so much lending, traditionally undertaken by the Banks in the past, now be channelled by official policy to other institutions?

FREE TRADE AREA

I did not comment last year on the probable effect on our industries of the establishment of the European Common Market or of the proposal that this country should become a member of a European Free Trade Area. I realised then that the proposals would require detailed study before I would be justified in expressing an opinion. The Common Market Treaty, laying down the conditions under which the European Economic Community consisting of France, Western Germany, Italy and the Benelux Countries is to be established, came into force on January 1, 1958. The first tariff reductions are to take place in January 1959 and eventually all tariff barriers and import restrictions among the six countries will be abolished. This will be accompanied by the establishment by the six countries of a common tariff wall in respect of imports from outside the Community. It is against this background that the proposals to set up the Free Trade Area must be viewed. I think there can be little doubt that, even although some of our industries may be adversely affected, we cannot afford to isolate ourselves from the European Community by refusing to become part of the Free Trade Area. During 1957 several detailed investigations of the proposals have been made by bodies in this country and, as a result, it is now possible to assess to some extent the probable effects on our economy. *The Economist* Intelligence Unit undertook a comprehensive study of the proposals, and their report, "Britain and Europe," has now been issued. The authors have reached the conclusion that "the greater part of manufacturing industry in the United Kingdom would benefit from British membership of a Free Trade Area," and they are firmly convinced that "the United Kingdom's interests would be damaged if it remained outside." The evolution of the Free Trade Area must of necessity be a gradual process and it will call for some considerable adjustments in our

industrial structure. New opportunities will be presented for an expansion of our trade and we must make a determined effort to grasp them. The Report refers to our low rate of investment and economic growth and attributes this largely to our high rate of private consumption and an inadequacy of savings. It discusses this problem very fully and suggests that "some politically acceptable way" must be found "of controlling consumption," because "whether or no there is a Free Trade Area, Britain must invest more." I have previously referred to the inadequacy of our savings for investment and it is disappointing to observe, despite the promising start, the poor results shown by National Savings figures during the past year. In my view, the great disincentives to a satisfactory level of savings are the present high level of taxation and the steady depreciation in the purchasing power of our currency.

WAGE INCREASES v. INCREASED PRODUCTION

I have referred in previous years to the importance of a high level of capital investment, for our future prosperity seems to me to depend on a continued increase in the productive capacity and efficiency of industry. A criticism of our monetary policy of recent years is that it has been instrumental in severely curtailing the capital investment programme of the private sector of industry and yet has failed in achieving its primary objective of halting inflation. One of the main causes of this failure is that the increase in production has not kept pace with the growth in the spending power in the hands of the public, by reason of the simple fact that wage increases have not been offset by increased productivity. To some extent our troubles in this respect have arisen not only from increases in basic wage rates but also from the fact that, in a situation where the demand for labour has been in excess of the supply, employers have been very ready to pay special and overtime rates to attract and retain labour. It has been possible for industry to cover these inflated wage costs by increasing the prices of their products because of the high level of consumer spending power.

SCOTTISH INDUSTRY—A FAIRLY SATISFACTORY YEAR

Scottish industry in general has had a fairly satisfactory year. It was not greatly affected by the dislocation of maritime trade and resulting shortage of oil supplies caused by the closure of the Suez Canal during the early part of the year, and the loss of production in engineering and shipbuilding due to the strike in the spring has been at least partially made good. Although orders for new ships fell in the second half of the year, Scottish shipbuilders still have work on hand for many years ahead, unless the present depression in freight rates leads to further cancellation of orders. Scotland is to have a fair stake in the development of atomic energy. There are the fast breeder and materials-testing reactors at Dounreay, the plant being constructed at Chapelcross near Annan for the production of plutonium and the nuclear power station to be constructed by the South of Scotland Electricity Board at Hunterston. There is every prospect that Scotland will share in any further expansion of this industry, and it is gratifying to see that the first atomic-powered oil tanker in the world may be constructed on the Clyde. Coal production in Scotland increased in the first half of the year by about 150,000 tons, but unfortunately this improvement was not maintained and the final results for the year were disappointing. Steel output continued to increase in the early months of 1957 but towards the end of the year demand eased and some unused capacity became apparent. Important steel expansion schemes are now in progress which should help to maintain our prices at competitive levels and meet any expansion of demand. The modernisation plans of British Railways may open up new opportunities for the locomotive building industry which has not been faring too well recently.

The whisky industry has again had a good year in the export field and 1957 saw a new record being achieved in overseas earnings; in fact, these have risen from around £10 million in 1946 to over five times that amount. The prospects for the woollen industry, which has in the past had a large overseas trade, are, however, being affected by the new import quota arrangements imposed by the United States of America.

DEVELOPMENT PROJECTS

This year I feel I should pay a special tribute to the Scottish Council (Development and Industry) for its efforts to advance Scotland's claim to be chosen as the site of the proposed new Steel Strip Mill. The matter is of importance to us all. As the Council Record says, "With diminishing employment opportunity, Scotland has great need of an industry on the scale of the projected new Steel Strip Mill." The claim, however, is not being pressed on any narrow nationalistic grounds for it is considered by the Council that, looking at the United Kingdom economy as a whole, the balance of economic advantage would lie in the Mill being located in Scotland. Another matter in which the Scottish Council has taken a very active interest is the proposed new Graving Dock for the Clyde and there is every possibility that this project will be brought to fruition.

Other major projects in hand are an extension to the Oil Terminal at Finnart on Loch Long and the erection of a new plant at Grangemouth by British Hydrocarbon Chemicals Limited for the manufacture of phenol. The developments at Grangemouth are, as I have said before, of great value to the economy of Scotland.

Our farmers are dependent on the weather which, on the whole, was somewhat unkind to them last year. The winter was mild with very little frost or snow, and abnormally dry weather in June, which affected some crops, was followed in the remaining months of the summer by heavy rain and high winds, spoiling many crops, especially in the north-east of Scotland. Notwithstanding these setbacks, the harvest was at least average for the country as a whole and it was a good year for stock breeders. The latest official estimate of the gross output of Scottish farming for the year ended May, 1957, places on it a value of around £160 million, more than four times the prewar figure, but a truer comparison is obtained by taking the volume of production which was 57 per cent greater than prewar. In agriculture, as in other industries, production costs have continued to rise, but these have been partially offset by improved farming methods, a higher degree of efficiency of production and the greater use of machinery. In spite of all the difficulties with which they have had to contend, our farmers have lessened the country's dependence on imported foodstuffs. Some uncertainty exists as to how the industry will be affected by the establishment of a European Free Trade Area. Now that the detailed arrangements for the Free Trade Area are being worked out, I sincerely hope that consideration will be given to the particular circumstances of the industry to ensure that it will not suffer, for its maintenance at the highest possible level of production is of the greatest importance to our economy.

RESULT OF YEAR'S OPERATIONS

Turning now to our own affairs, the net profit for the year amounts to £637,253, after making the usual allocations to the Staff Pension and Widows' Funds and providing for all taxation. Transfers have been made to Reserve for Contingencies, out of which provision has been made for all bad and doubtful debts, fluctuations in the value of Investments and other contingencies. The resources available to us during the year were maintained on a slightly higher average level than in 1956, but the resulting increased income has been more than fully absorbed by increased costs of administration. Practically all items of expenditure rose in 1957, but the major increases were in salaries and Pension Fund contributions. It is this burden of steadily rising costs which has made it necessary for the Scottish Banks to decide to increase the charges to customers. The existing charges have remained substantially unchanged since 1952, and while the new scale of charges will still leave customers of the Scottish Banks with a cheap banking service, the decision to make the increase was taken very reluctantly and only after the most careful consideration.

Deposits at just over £121 million are nearly £1 million above the figure at the end of 1956. During the year, as I have already mentioned, we continued to face strong competition for deposits from other financial institutions, and in addition the high Treasury Bill Rate continued to attract deposits away from us, particularly in the later months of the year.

Our Advances at the end of the year totalled £42.7 million, a decrease £2.2 million on the figure at December 31, 1956.

We again show our Investments at or under the market value at the end of the year. The only other Balance Sheet figure which calls for comment, and only because of the large increase as compared with 1956, is that under the heading "Acceptances, Confirmed Credits and Other Obligations on account of customers" and the contra total for the corresponding liability of our customers to the Bank. The increase here is due to a number of large current transactions in our Overseas Departments.

These results, which I regard as not unsatisfactory, have been achieved against a background of considerable difficulty. The highly liquid and strong position of the Bank's affairs as shown in the Balance Sheet will, I am sure, give satisfaction to our customers and stockholders alike.

A final dividend at the rate of 7 per cent actual, making 14 per cent for the year, is recommended and it is also proposed that a sum of £150,000 of the balance remaining available be added to Reserve for Contingencies. If these recommendations are approved a sum of £151,631 will be carried forward to 1958.

The experience of our Associated Banks during the year has been largely the same as our own. Both show strong liquid positions. The benefit of increased resources has in each case been insufficient to cover higher costs and both report slightly lower profits this year. The consolidated profit of the Group amounts to £894,560, a decrease of £6,119 as compared with 1956. The Deposits of the Group amount to £316 million, an increase of over £5 million, while Advances at over £107 million show a contraction of almost £8 million.

Opportunities for further expansion in Scotland are very limited but the Group as a whole has continued its policy of expanding its business in England. In 1957 Williams Deacon's Bank opened a new Branch at Leicester and during the current year it is proposed to open new Branches at Bristol, Cardiff, Chester, Leeds, Southampton and Warrington, thus widening still further the field of the Group's activities. We ourselves have opened two new Branches in London —at Mincing Lane in July last and at Knightsbridge on January 7th of this year, bringing the number of our Offices in London up to seven.

TRIBUTE TO EXECUTIVES AND STAFF

In conclusion, I would like, on behalf of the Court, to pay a tribute to our Staff. The results shown by the Bank during the past difficult year could not have been achieved without hard work and keenness in all grades at Head Office and throughout our organisation. I would like, therefore, to express our thanks to Mr Ballantyne, our General Manager, and all those who serve so loyally under him.

KOLOK MANUFACTURING COMPANY

(Carbon Paper and Typewriter Ribbon Makers)

The forty-ninth annual general meeting of Kolok Manufacturing Company Limited was held on January 31st in London, Mr E. S. Dumont (chairman and managing director) presiding.

The following is an extract from his circulated statement:

The Net Profit of the Company for the year under review is £174,377 and the Net Profit of the Group is £196,997 as compared with £169,430 and £195,363 for the previous year.

I should point out, however, that of the Net Profit for the year under review approximately £9,000 is represented by taking into account a provision no longer required.

The Accounts are generally self-explanatory, but I would like to draw your attention to the following:

(a) the additional Investment of £20,000 we have made in an Associated Company which should bear good fruit in the future;

(b) the further provision of £10,000 for General Contingencies which now stands at £34,000.

The financial strength of the Group has further improved, the surplus Current Assets over Current Liabilities amounting to £441,509 as compared with £420,266 for the preceding year.

Your Directors propose to recommend the payment of the same total dividend as was paid last year, that is 30 per cent, of which 7½ per cent has been paid as an Interim Dividend.

The effect of the Government's measures to curb inflation and of continued increased costs which are reducing our margins make it impossible to forecast the results of the current year. Nevertheless, I am able to state that, in so far as turnover and the rate of incoming orders are concerned, the position is satisfactory.

The report was adopted.

THE UNION DISCOUNT COMPANY OF LONDON, LIMITED

DIFFICULT CONDITIONS LARGELY SURMOUNTED

THE RIGHT HONOURABLE LORD KENNET'S STATEMENT

The annual general meeting of The Union Discount Company of London, Limited, will be held on February 20th, at the offices of the company, 39, Cornhill, London, E.C.3.

The following is the statement by the chairman, the Right Honourable Lord Kennet of the Dene, PC, GBE, DSO, which has been circulated with the report and accounts:

I can conveniently make use of a marine metaphor to tell the story of our Company's year. In 1955, when the Bank Rate rose from 3 per cent to 4½ per cent in the first quarter of the year, we learned that we were sailing in stormy seas, and that we must expect more squalls ahead. So we re-stowed the freight and shortened sail. We foresaw squalls; but no more than others did we foresee a squall so far ahead and so fierce as that on September 19th last when the Bank Rate rose by 2 per cent to 7 per cent. However, the ship in her new trim proved wholly stable and seaworthy; and when the squall had blown over she sailed on at her usual steady rate.

In other words, our total profits for the year at £415,253 were about 1 per cent only less than those of £420,769 in the preceding and less stormy year; and our dividend is unchanged at 12½ per cent.

BOARD'S POLICY

As I reported to you in 1956, the policy of your Board was, and is, in these difficult days with their uncertainties about Bank Rate, to "trim the ship" by reducing our holding of bonds, in length of maturity and in amount, and by promoting business in bills. Our balance-sheet figures illustrate our continuance of this policy. Bills discounted stand at £185,052,018, compared with £163,612,481 the year before; and British Government Bonds (and some other securities) at £58,154,071 in comparison with £72,676,508. These have been written down to less than market value.

Consequentially, contingent liability on bills re-discounted (excluding Treasury Bills) is £34,523,989, compared with £21,344,758. That is higher than ever before. Another "record high" is the figure for cash at Bankers, at £6,031,000.

UTILITY OF THE DISCOUNT MARKET

At a time when the machinery of the London Money Market and that of the market in Government securities are under discussion, it seems relevant to emphasise the utility of the discount-market in furthering the purposes of national monetary policy. It has been illustrated by the story of those markets in the last few years, and last year in particular. We may claim for the discount-*market that the story shows that, however* unusual or abrupt the changes in monetary conditions, the discount-market provides an accurate, efficient and reliable mechanism for bringing into effect whatever tendency is required by public policy as to monetary supply and rates, and for maintaining the market both for Government and other short-term securities. It has shown, too, that this can be done without loss of shareholders' capital, or of a fair return to them for the use of it.

To return to my marine metaphor, we must all wish to thank our management and our staff for the skill and energy with which they have steered and handled our ship through the recent spell of bad weather. They have achieved a good result in a bad year. We thank also our friends and customers for the continuance of their support.

THE CHARTERHOUSE GROUP

FALL IN PRICES MORE VALUABLE THAN WAGE INCREASES

"Approximately 16 per cent of our quoted investments are in North America and we believe the long term prospects for the leading companies there are good—better perhaps than in this country because, in America, there is not the same continuous and uninformed attack on the capitalistic system and on 'profits,'" states Sir Nutcombe Hume, KBE, MC (Chairman), in his Review to Stockholders of The Charterhouse Group.

"The American working man and his leaders," he continued, "seem to have learnt faster than ours that it is from profits that all growth and development spring; and that profits can only be made under the leadership of good and experienced managers in both privately and State owned enterprises.

"It is no more than a simple truth that if every employed person, be he a Managing Director or the last joined apprentice, would put a little more into his work and refrain, until increased productivity warrants it, from trying to take more out of it, we could see an improvement in output and a fall in prices which is worth much more than a rise in wages. The enormous capital expenditure of the past few years is now being translated into increased manufacturing facilities and we now only need to apply the human effort to put this country in the forefront in world markets.

"The Trust has enjoyed a satisfactory year. The outstanding event in the Charterhouse Industrial Development Company during the year was the inclusion in the Group of the old-established reputable and successful Insurance Broking firm of Glanvill, Enthoven & Co., Ltd. The whole of its share capital, except £70,000 Redeemable Preference Shares, has been purchased by S. Japhet & Co., Limited, of which the whole issued capital is in turn owned by the Development Company.

"Charterhouse Finance Corporation which undertakes public issues and placings had quite an active year and has a fair volume of business in hand.

"Charterhouse Canada Limited did well again last year and at December 31st had $1,931,810 invested in ten companies, all of which are showing progress.

"Charterhouse Australia Limited is still in the doldrums and the process of readjustment is still going on. I think it is fair to claim that its situation is steadily improving.

"S. Japhet & Co., Limited had another successful year."

Referring to the policy adopted by the Government to combat uncontrolled inflation, Sir Nutcombe Hume said that one must express doubt as to its lasting success unless a reduction, as opposed to a mere maintenance, of Government expenditure was achieved and unless the Nationalised Industries were subjected to the same conditions as the private sector of the economy and made to pay their way.

The Union Discount Company of London, Ltd.

The Rt. Hon. LORD KENNET OF THE DENE, P.C., G.B.E., D.S.O. (Chairman)
ERIC O. FAULKNER, M.B.E. (Deputy Chairman)
The Hon. Sir GEOFFREY C. GIBBS, K.C.M.G. J. IVAN SPENS, O.B.E.
DAVID JOHN ROBARTS MARK R. NORMAN, O.B.E. Sir ARCHIBALD JAMIESON, K.B.E.

RADIO RENTALS LIMITED

RECORD RESULTS IN 21st YEAR

MR P. PERRING-THOMS ON A YEAR OF PROGRESS AND EXPANSION

The twenty-first annual general meeting of Radio Rentals Limited was held on February 4th at Grosvenor House, Park Lane, London, W.1, Mr P. Perring-Thoms (chairman and managing director) presiding.

The Secretary (Mr A. O. B. Wall, CA) read the notice convening the meeting and the report of the auditors.

The following is the statement by the chairman which had been circulated with the report and accounts:

The attached Accounts are for the twenty-first year since the incorporation of Radio Rentals Limited as a Public Company. It is therefore especially pleasing for me to present to you the Directors' Report and Accounts of the Group for the year to August 31, 1957 and to report on the continued growth of your business.

The trading profit of the Group after meeting all charges other than taxation amounted to £1,322,900—a record in the history of the Organisation—compared with £1,028,586 for the previous year. After providing £717,181 for taxation, the net profit of the Group amounted to £613,410, an increase of £35,556. The burden of taxation which we have to bear is extremely heavy as the above figures show. Indeed, whilst dividends are paid under deduction of income tax at the rate of 8s. 6d. in the £, we have to provide profits tax, which, on the proposed scale of distribution, gives rise to an additional liability of approximately 5s. 6d. for every £ paid by way of dividends.

The increase in profit is due primarily to expansion and improved efficiency and not to any increase in profit margins. I am pleased to tell you that our rental charges and sale prices continue to be keenly competitive and we are doing our best to assist in the national effort to defeat inflation by our endeavours to reduce and stabilise prices wherever possible.

EFFECTS OF SEVERE CREDIT RESTRICTIONS

31st August, 1957 completed a full year of trading under severe credit restrictions. The impact of the Control of Hiring Order is continuing to restrict the Radio side of our business very severely, but this handicap is not so apparent with Television because a larger percentage of the public prefer to rent Television sets than was the case with Radio during its years of expansion, due no doubt to the general recognition that Television sets can be very expensive to maintain by individuals.

The sale of our interests in Burgot Rentals Limited to the minority shareholders resulted in a surplus of £7,691 as shown in the Consolidated Profit and Loss Account. All the subsidiary companies in the Group are now wholly owned. I am glad to be able to report that they have all operated at a profit, with the exception of Rentevision Limited, which has not commenced trading.

Our manufacturing company, Mains Radio Gramophones Limited, which was established in 1929, and which became a subsidiary of the Company in 1945, has again raised its output to a new record level. The increased supply of first class receivers, all of which were manufactured by our subsidiary and which were designed not only for ease of maintenance but also for superior performance, has contributed in no small measure to the business done by the Parent Company.

Our service departments have been geared to meet an increased demand as we appreciate that the ability to service our receivers must keep pace with the ever-growing number of subscribers. I have every confidence in our technical development and field staff and I am more than satisfied that our long-held reputation for service is being fully maintained.

APPROPRIATIONS

Turning now to the matter of appropriation, your Directors recommend the transfer of £405,119 to General Reserve which will increase this Reserve in the Balance Sheet of the Parent Company to £1,500,000, more than £150,000 in excess of the total issued capital of Radio Rentals Limited.

Your Directors recommend the payment of a final dividend at the rate of 22½ per cent on the Ordinary Capital of the Company, making with the Interim Dividend of 7½ per cent already paid, a total distribution for the year of 30 per cent. The aforementioned dividends, together with the dividends already paid on the Preference Capital, absorb net £169,174, leaving a balance of £313,027 to be carried forward in the Balance Sheet of the Parent Company. The amount carried forward in the Accounts of the subsidiary companies is £115,351, a total for the Group of £428,378.

In future it is the intention of your Directors to equate to a greater degree the amount distributed in the Interim and Final Dividends.

FUTURE VIEWED WITH CONFIDENCE

Trading during the three months ended December 31, 1957, has, I am glad to say, continued to be satisfactory and your Directors look to the future with confidence. It will be readily understood, however, that profits must depend largely upon the economic state of the country. Our operating costs, in common with those of practically all other industries, continue to rise. Increases in remuneration have recently been granted to managerial, engineering and clerical grades throughout the Group. It will be the continued endeavour of your Directors to increase efficiency of operation and production thereby to obviate the necessity of passing on increases in costs to our subscribers.

My vote of thanks to the staff is not to me a yearly formality for I have worked side by side with many of them for a considerable length of time and it is giving me great pleasure to make suitable presentations to staff for long service. The thanks of the Directors and the Shareholders to the staff will, I am sure, be as well received as they are merited.

The report and accounts were adopted, and the retiring director, Mr A. P. B. Renshaw, MIEE, was re-elected.

THE AVON INDIA RUBBER COMPANY

The sixty-eighth ordinary general meeting of The Avon India Rubber Company Limited was held on January 31st at Melksham, Wiltshire, Mr C. M. Floyd, OBE (the Chairman), presiding.

The following are extracts from his circulated Statement:

The group profit, after providing for taxation of £325,245, amounted to £371,448, compared with £287,561. These results are very encouraging, especially when the difficulties which the Motor Industry suffered through petrol rationing early in the year are taken into account.

In general tyre production your Company has maintained its position, while in Motor Cycle tyres we have gained special success. Export sales again made an important contribution, and this is very welcome when it is remembered that your Company is wholly British. Progress has been made in many products other than tyres, and the results of George Spencer, Moulton & Co., Ltd., have fully justified our confidence. Avon Footwear Sales Ltd., shows a higher profit than last year.

Your Company acquired on December 31, 1957, the entire Share Capital of Henley's Tyre & Rubber Co. Ltd., who will continue to market Henley tyres, which will be made in your factory at Melksham, using plant already available.

Your Directors have every confidence in the Company's ability to continue its progress.

The Report was adopted.

BRITISH TABULATING MACHINE

RECORD RESULTS IN JUBILEE YEAR

The fifty-first annual general meeting was held on January 31st, in London, Sir Cecil M. Weir, KCMG, KBE, MC (the chairman) presiding. The following is an extract from his circulated statement: We are celebrating the Fiftieth Anniversary of our Company's existence. The accounts contain record figures in every relevant section; in revenue, in employment, in capital employed, and in profit earned.

The financial year has been marked by expansion both in our development effort and in the Authorised Capital and capital raised and employed in the business.

We continue to enjoy a favourable position in the market for orthodox punched card equipment. Sustained effort continues to be applied to the development of new mechanical and electro-mechanical machines and devices which can be used as conventional punched card machinery or as auxiliary apparatus for computers. We fully realise the impact of the application of electronic techniques to existing types of orthodox equipment and in the adoption, wherever practicable and economic to the user, of digital computers as addition to, or in substitution for, orthodox punched card equipment.

The range of electronic apparatus now being delivered or in an advanced state of development extends from moderately priced computers of the well-established Hec General Purpose Computer, Types 1201 and 1202, to computers in the medium price range.

As in previous years, our business overseas has continued to expand parallel with our business at home. The report was adopted.

BARCLAYS BANK LIMITED

ANNUAL MEETING OF STOCKHOLDERS

The Annual General Meeting for the year 1958 of the stockholders of Barclays Bank Limited was held on February 5th at the Head Office of the Bank, 54 Lombard Street, London, E.C.3.

Mr A. W. Tuke (the Chairman) presided.

The Secretary read the Notice convening the Meeting and the Report of the Auditors.

The Chairman moved:

That the Report of the Directors of the Company now produced, together with the Accounts annexed as at December 31, 1957, duly audited, be received, approved and adopted, and that there be declared, payable on February 20, 1958, to the stockholders registered in the books of the Company on January 12, 1958, a Final Dividend of 6 per cent, making 12 per cent for the year, on the Ordinary stock, and a Final Dividend of 10 per cent, making 20 per cent for the year, on the Staff stock, less income tax at the standard rate in each case.

Sir F. Cecil Ellerton, Deputy Chairman, seconded the Motion which was carried.

Field-Marshal the Right Honourable the Earl Alexander of Tunis, KG, PC, GCB, GCMG, CSI, DSO, MC, Mr David Martyn Evans Bevan, Mr Willoughby Guy Bryan, Sir Matthew Watt Drysdale, Mr Thomas Calderwood Dundas, MBE, Mr Francis William Alfred Fairfax-Cholmeley, Mr Adam Denzil Marris, CMG, Mr Roger Henry Parker, MC, Sir Edward Walter Thompson and Mr Anthony William Tuke, retiring Directors, were re-elected Directors of the Company, and other ordinary business was transacted.

A Vote of Thanks to the Staff and a Vote of Thanks to the Chairman for presiding at the Meeting were unanimously accorded.

APPOINTMENTS

SALES ENGINEER

METROPOLITAN-VICKERS ELECTRICAL COMPANY LIMITED

require, for their Scientific Apparatus Sales Department, a man to deal with enquiries from Academic and Industrial Research Laboratories in all parts of the world. Eventually, the man appointed would have to visit customers and prospective customers and appropriate exhibitions.

The desired qualifications for the post are: University Degree or equivalent. Research or Analytical Laboratory experience and an additional recommendation would be a knowledge of analytical, electronic or vacuum techniques.

Candidates are invited to apply, quoting reference 0.10, to:

PERSONNEL MANAGER, METROPOLITAN-VICKERS, ELECTRICAL CO., LTD., TRAFFORD PARK, MANCHESTER, 17.

WORKS MANAGER for up-to-date medium-sized old-established Liverpool manufacturers. Departments include Hardware, Lithographic Printing on metal and paper, Composite Boxes, Plastic Housewares. Able to control through departments heads in firm commercial manner. High salary will be paid to the man who can convince us that he has ambitious optimistic outlook and can hold senior executive status. Superannuation plan.—Write full details personal experience, present position and salary to Local Director, Paton, Calvert & Co., Ltd., 429, Old Kent Road, London, S.E.1.

STATISTICAL ECONOMIST

The J. Walter Thompson Company requires a Statistical Economist whose main function will be to study the practical application and application of statistical and economic data in relation to business problems. Completely objective outlook essential.

Some years' experience in the Marketing and Distribution of Consumer Goods and in the employment and interpretation of Marketing Research Statistics is desirable though not essential.

This is an important appointment, and has scope for growth in influencing the development of the Company. Remuneration according to age and experience.

Write Personnel Secretary, J. Walter Thompson Company, Limited, 40, Berkeley Square, London, W.1. Please mark *Strictly Confidential*.

THE SCIENCE AND INDUSTRY COMMITTEE invites applications for the post of Research Officer to take part in its research into technical change and the structure and methods of management. The appointment will be for one year, with a possibility of renewal, at a salary of £900. Applications should be made by February 22nd, to Professor R. R. Williams., Department of Economics, University College of North Staffordshire, Keele, Staffordshire, from whom further particulars may be obtained.

Tea Research Institute of Ceylon

DIRECTOR

Applications are invited for the post of Director of the Tea Research Institute of Ceylon. Age preferably between 35-45. High academic qualifications and extensive research experience required. An initial salary of not less than £3,500 p.a. is offered together with certain allowances in kind, including a furnished house rent free, the use of a car and provision for education in the United Kingdom of children between ages 8-18. Home leave of three months every two years will be allowed on full pay with free passages. Medical fund and provident fund based on contributions of 15 per cent. of the salary by both Institute and Director.

The Institute is situated 4,500 ft. above sea level in a very pleasant climate. It is well equipped and the post should prove attractive to biologists of adequate personality and experience.

Applications, with full details of education and subsequent experience, together with the names of three referees, should be forwarded to The Chairman, T.R.I., Lynwood, 50, Edinburgh Crescent, Colombo 7, as quickly as possible, *but not later than April 1*. Copies to be sent in full to Dr F. R. Tubbs, Director, East Malling Research Station, East Malling, near Maidstone, Kent.

A large manufacturing company has a

Market Research Vacancy

The post, an important one in an expanding section, will give experience of a wide range of problems and considerable opportunity for original thought and initiative. The work, which is in a new and interesting field, involves the processing of data collected from sample surveys (including planning for I.B.M. tabulating equipment), the design of both surveys and samples, report writing, and liaison with research agencies.

The post would particularly suit a young male graduate up to, say, 30 years of age, who has a degree in Economics or Sociology (statistics to have been a main or subsidiary subject). The holder of this appointment will have every chance to contribute to, and gain experience of, the section's work.—Box 860.

FISONS, LTD., require a SENIOR EXECUTIVE for Fertiliser Division. The work will consist principally of co-ordinating planning for the demand and supply of both finished products and raw materials and in the preparation of surveys and forecasts in the light of:

a. The general economic situation of the country both short and longer term.
b. The availability of raw materials.
c. Price trends in the fertiliser industry at home and abroad.

Applicants should preferably be under 40 years of age and have a first-class Honours Degree in Economics. A man of exceptional and outstanding ability is being sought. Applications to the Personnel Officer (GH12), Fisons, Ltd., Harvest House, Felixstowe, Suffolk.

EXPORT Division of Industrial Group has a vacancy in its London office for a woman as Market Research Assistant. The successful applicant will have had some experience in the techniques of market research or academic training in a branch of applied economics, together with a knowledge of at least one European language and the ability to type the necessary correspondence and reports. This is a new appointment having scope for original thought and initiative, and carries an interesting salary and pension rights.—Write, giving full details of experience and academic record, to Box 863.

THE British Iron and Steel Federation invites applications for a post in the Economics Department from men with a good degree in economics and post graduate experience in academic or industrial research work. Ability to write clearly is essential but no specialised knowledge of the steel industry required. Salary according to qualifications and experience.—Write, giving full particulars, to the Staff Officer, Steel House, Tothill Street, London, S.W.1.

EDUCATED WOMAN

required to assist Company Economist

The work involves the analysis and presentation of Company Statistics and offers an opportunity for an Arts Graduate or other well-educated woman to obtain first-hand experiences of the central administration of a large industrial concern.

This is a responsible appointment and will carry an appropriate salary.—Applications, giving full particulars, should be addressed to Personnel Manager (Women).

FERRANTI LIMITED
Hollinwood, Lancs.

MIDLANDS ELECTRICITY BOARD

Applications are invited for the appointment of an ORGANISATION AND METHODS OFFICER in the Audit and Organisation Section of the Chief Accountant's Department at Board H.Q.

Applicants should preferably be qualified accountants or University graduates and have had considerable experience in office methods and procedures. The Board has an extensive programme of mechanisation in operation; knowledge of the application of machines and office appliances will, therefore, be an advantage.

The appointment will be subject to the conditions of the National Joint Managerial and Higher Executives Grades Committee of the Electricity Supply Industry, and the salary will be within Grade 4 Class C, £1,700-£1,900 per annum.

The successful candidate will be required to contribute to the Board's Superannuation Scheme, if eligible.

Applications, giving full details of qualifications, age, experience and present salary, should be forwarded within fourteen days to the Secretary (Ref. FWC), Midlands Electricity Board, Mucklow Hill, Halesowen, Nr. Birmingham.

A. STEPHENS, Secretary.

CHARTERED Secretary (aged 25-29) required as Secretarial Assistant in large established printing and publishing company (public) in City of London. An interesting and progressive position. Pension and Life Assurance Schemes. Salary by arrangement, but not less than £800 p.a.

Applications, giving full details of education and career to date, to Box No. 862.

A vacancy exists for a man or woman trained in agricultural economics and interested in problems of farm equipment and mechanisation. The person appointed will be required to reside in the Midlands, but the work involved has world-wide application.

Applicants aged 22 to 28 years should write in confidence with full details of experience and salary required to Box Number 865.

AIR SUBSCRIPTION RATES

Subscriptions to many countries can be sent either by direct second-class airmail or in bulk by air freight for onward posting from central distribution points. Airmail is invariably more expensive but usually quicker by about 24/48 hours. Where only one service is shown this is because the alternative is either not available or not recommended.

COMPANY NOTICE

POTGIETERSRUST PLATINUMS LIMITED
UNION PLATINUM MINING COMPANY LIMITED
WATERVAL (RUSTENBURG) PLATINUM MINING COMPANY, LIMITED

(Each Incorporated in the Union of South Africa.)

The Boards of Directors of the above-named companies draw attention to a statement made by the Chairman of Rustenburg Platinum Mines Limited at the annual general meeting of that company held at Johannesburg on Thursday, January 30, 1958.

A copy of the statement, which is supplementary to the statement issued to members on January 22, 1958, is published below.

Johannesburg.
January 30, 1958.

RUSTENBURG PLATINUM MINES LIMITED

(Incorporated in the Union of South Africa.)

Supplemental statement to members by the Chairman, Mr D. A. B. Watson, at the annual general meeting held at Johannesburg on Thursday, January 30, 1958.

It may be helpful to members if I take this opportunity of adding some comments further to those made in my recent statement which was prepared on January 5th and issued to members on January 22nd.

DEMAND

The demand from industrial users, other than from oil companies, appears to be reasonably steady, and I expect that the gradual increase in industrial consumption which has taken place during recent years will continue. Sales to the jewellery trade are not of great significance to the general situation in which the present reduced demand arises almost entirely from the changed requirements of the oil industry.

Whereas in 1956 and during the first half of 1957 the oil industry's requirements for platinum could not be satisfied, the position has now completely altered and orders have been materially reduced.

Platinum is used in the oil industry for the manufacture of high octane fuel, which the modern automobile requires for its best performance. An examination of the current position indicates with reasonable certainty that world demand for, and the production of, high octane fuel will continue to increase. This is particularly the case in Europe, where the building of refineries is proceeding rapidly and where the installation of the platinum catalyst reforming process used to produce high octane fuels is proceeding at an even faster rate.

Although it is not possible to be dogmatic about the emergence of any new process in future years, there is no evidence at the present time of any process for the production of high octane fuel which will supersede that using a platinum catalyst and it appears reasonably certain that this catalyst will continue to be used by the oil industry. There has, however, within the last year been a considerable reduction in the installed weight of platinum per barrel capacity of the reforming plants. This has resulted both from a reduction in the quantity of platinum used in some catalysts and also from the fact that, as has been the case in many new processes, techniques have improved, with a resultant longer life of the catalyst employed. These developments are of very recent origin.

It appears possible that a demand may well arise for even higher octane ratings than those now produced. Whether the production of such fuel would entail an increase in the percentage of platinum is not yet known. There is at present therefore considerable uncertainty as to the quantity of platinum which may be required in the future to produce a given quantity and quality of fuel.

When a few years ago it became clear that the platinum catalyst reforming process was the best, technically and economically, for the production of high octane automobile fuel, the various oil companies took steps to obtain their estimated requirements from any source available to protect themselves against shortages of this catalyst and to ensure their ability to meet competition in the supply of high octane fuel. Considerable quantities of platinum were bought at that time on the basis of the higher rate of platinum required per barrel of reforming capacity.

As a result of the subsequent reduction in this rate of usage these quantities proved, however, to be considerably in excess of requirements and certain oil refining companies, which up to six months ago were buyers, now hold stocks sufficient for their immediate needs. Buying by some refineries is continuing but in general it has been drastically curtailed and is likely to remain so until stocks are depleted.

SUPPLY

During the years 1955 and 1956 and the early part of 1957 when there was an acute shortage of platinum, the quantities offered by Russia were considerably in excess of the amounts normally made available from that source. It is difficult to obtain accurate figures but sales during those years were materially above the level of sales in 1953 and 1954 while there has in all probability been a falling off in 1957. I cannot say what relationship exists between the quantities actually supplied by Russia during the last three years and the amount annually produced by that country, as it is not known to what extent previously accumulated stocks were disposed of during that period. Offerings from Canadian producers have remained reasonably constant over recent years and it is considered unlikely that they will vary significantly during the next few years.

RUSTENBURG

It may well be asked why, in the face of the possibility of over-supply of platinum, Rustenburg increased its capacity to a level which at present is far from fully employed.

The answer lies in the incorrect assessment in respect of the years 1958, 1959 and 1960 of the requirements of the oil industry. It was, however, as recently as only ten months ago that Rustenburg was arranging for the supply of platinum to cover requirements during those years.

In my opinion, present world requirements for platinum could not have been satisfied solely by the joint production of International Nickel and Rustenburg Platinum Mines on the basis of the capacity of the latter prior to the 1955-56 expansion scheme. Users of platinum in industry would have been dependent on supplies being available from Russia. To a company such as Rustenburg Platinum Mines, the fortunes of which are dependent on the growth of the use of platinum in industry, this would have been an undesirable situation subjecting the platinum market to the danger of periodical shortages and famine prices which have been a characteristic of this market in past years. In my opinion, the decision to proceed with the 1955-56 scheme was correct, not only in the light of the estimates made at the time the decision was taken, but also in the light of present facts.

The further expansion known as the 1956-57 scheme has proved to have been unnecessary to meet present demands. Had the requirements of the oil industry continued at the levels indicated by the usage in 1956 and the beginning of 1957, these requirements might well have employed the full capacity of Rustenburg during the years 1958, 1959 and 1960. During that period it was expected that the cost of the scheme would have been recouped, that an adequate return would have been earned on the new investment, that the market would have been stabilised and that in about 1960, when demand was expected to slacken, your company would have been in a position to utilise what might then have been spare capacity for the purpose of taking advantage of future markets. As a result of the altered assessment by the oil companies of their requirements, Rustenburg has been faced several years earlier than was expected with a reduced demand and simultaneously with the necessity to meet the balance of the cost of the expansion scheme.

FUTURE ACTION

The position is being dealt with as follows: Pipeline and refined stocks of platinum are excessive in relation to prevent indicated market requirements and production is being curtailed to levels which will ultimately result in a reduction in these stocks and a release of the funds represented by this reduction in quantity.

Curtailment of operations of necessity takes some time, and, furthermore, the successive cuts in production which have recently been made have in each case proved to be insufficient because of subsequent reductions in the estimates of sales on which the cuts were based. Members have been informed that present estimates place the level of sales for the current year at about 50 per cent of the figure for the previous financial year. I consider it unlikely that there will be a further reduction in this estimate. In order to align production to this level of sales, a further reduction in the scale of operations will be made and will become effective during February and March. As part of the present programme, milling at the Union Section will be reduced to negligible proportions. Because of the 1956 and 1957 expansions to the capacity of the Rustenburg Mine, increases in the demand for platinum over and above present levels can for some time be more economically met by again expanding the rate of milling at that mine rather than at the Union Section. The Rustenburg Section could, if so desired, produce sufficient platinum to meet sales at the 1957 level without recourse to the facilities at the Union Section. It is unlikely that this Section will be required to supply any significant quantities of platinum in the near future and, in order to avoid deterioration, certain items of equipment installed underground at the Union Section will therefore be removed and either utilised at Rustenburg or sold.

The gap between production and sales is therefore being closed and during the balance of the year it may be possible to reduce the present level of stocks, although the overall increase for the year may still be considerable as a result of over-production in the early months of the financial year.

Consideration has been given to the question of obtaining loans to provide funds until such time as stocks of metals on hand are reduced, or the overall rate of sales increases, or both. The objective in mind is to meet over a period to be determined by future events, but not to exceed five years, the deficit in funds which arose during the financial year ended August 31, 1957, which, together with the balance of capital expenditure during the current year, will amount to about £2 million. Such an arrangement, which is being actively explored, would afford some relief to the extent of the appropriations necessary from current profits pending the realisation of some of the funds tied up in stocks.

This company faces difficult times at the present moment and it has been necessary to plan its policy in such a way as best to meet the circumstances which have so rapidly and materially changed over the past six months. These circumstances have resulted in hardships to employees and to shareholders and to the districts in which the two mines are situated, but the line of action which is being followed is unfortunately unavoidable.

APPOINTMENTS

THE METAL INDUSTRIES GROUP OF COMPANIES

FERROUS CASTINGS LIMITED

a subsidiary company of the Group requires a

CHIEF ACCOUNTANT

to take full control of all financial and factory administration.

Candidates should be between the ages of 30 and 35 and must have practical industrial experience in applications of budgetary control and standard costs.

SALARY, £1,250.

The successful applicant will be required to contribute to the company's pension scheme.

Ferrous Castings is a developing concern with, at present, 150 employees. The position is a responsible one, calling for initiative and drive.

Applications should be addressed to the Managing Director, Ferrous Castings, Limited, Leushers Lane, Warrington, Lancashire.

COUNTY COUNCIL OF ESSEX
COUNTY PLANNING DEPARTMENT

Applications invited for post of Survey and Research Officer, A.P.T. Grade V (£1,175-£1,325) at Broomfield. Candidates should possess a University Degree in either Geography or Economics with subsidiary subjects, one of which should be Geology. An additional professional qualification will be an advantage. They should have had experience in the analysis and review of the Survey; investigation and analysis of population trends and records of industrial location and development; the location and working of mineral deposits and restoration of worked-out areas. They should also be skilled in the writing and presentation of reports on the above matters.
Medical examination. Post superannuated.
Application forms from County Planning Adviser, Broomfield Place, Broomfield, Chelmsford, to whom they should be returned by February 20, 1958.

LARGE MANUFACTURING AND SELLING COMPANY in Brazil has a vacancy in its Personnel Department in Rio de Janeiro. Previous experience of Personnel work and knowledge of Portuguese or Spanish desirable but not essential, age 28-30 years. The appointment offers a permanent interesting career with excellent prospects for the future. United Kingdom leave initially every three years, but every 2½ years in third and subsequent tours. Generous non-contributory Pensions Scheme.—Apply, in writing, with full particulars of career to date, to Box L.438, Willing's, 362, Gray's Inn Road, London, W.C.1.

CHIEF ACCOUNTANT

Tile and Pottery Manufacturing and Contracting Group requires, at Poole, Chartered or Incorporated Accountant with industrial experience who would be responsible for all aspects of Financial Management, Supervision of Accounts, Standard Costs and Budgetary Control. VOLUME CLXXXVI · NUMBER 5973

"You can get a V.H.F. set *cheaper* than this"

—But not better. This is the Grundig Marlborough, designed to meet the most extended frequency limits which V.H.F. Broadcasts can produce. The Marlborough is a four-wave, three-speaker radio which is really two sets in one. It gives you V.H.F. as well as long, medium or short wave reception.

The tuning is linked through a 'Duplex' clutch so that if you are listening on any of the standard wave bands and decide to switch over to V.H.F., the other programme will remain tuned, should you wish to return to it.

The three speakers are acoustically placed to give maximum depth and realism and to provide a balanced dispersal of the treble register as well as the bass. There is a unique frequency response control sysem covering the whole frequency spectrum; four independent controls which allow of an infinite number of settings and extremely accurate adjustments. A visual indication of these is given. There are many other refinements — press-button wave selection, built-in aerials for both V.H.F. and standard reception, A.V.C. and micro-magic eye tuning.

Ask your radio dealer for a demonstration of the

He found business where he least expected it

HIS run of luck started the first night out when he found himself sitting next to an American businessman at dinner. Later, over a nightcap, they were still talking—talking business almost without realizing it. The Englishman had already made a valuable contact, with the sort of man he wanted to meet. He might have been *in* America from the moment he stepped aboard.

Like so many others, this man has now found just how much it pays him to travel by United States Lines. The Blue Riband held by the "United States" means that her standard of punctuality is unsurpassed, a boon to people with closely planned appointment schedules. On board, in superbly comfortable surroundings, the businessman can still continue his work, if necessary, with ship-to-shore telephone, dictaphone, stenographic and typewriting services at hand. When he wants to relax, there's no better way than aboard the "United States" or her running-mate the "America." Wonderful food and wine, top-grade orchestras, CinemaScope, well-stocked libraries, "keep-fit" facilities—whether he travels FIRST, CABIN or TOURIST CLASS all these are readily available. In addition there's 25 cubic feet or 275 lb. FREE baggage allowance.

A "FIRST CLASS" HOLIDAY
whichever class you choose

Now that the travel allowance has been extended to cover the U.S.A. and Canada, holidaymakers and businessmen's wives and families can go to these countries. Remember—*your £100 is spendable entirely in America.* If you travel by United States Lines your holiday starts as soon as you arrive on board ship; by the time you land in America you're thoroughly rested and relaxed, ready for *another* exciting holiday.

If you're travelling on a budget but still want the best that money can buy, CABIN and TOURIST CLASS, with their gay informality, offer a perfect solution.

Fares to destination and on-board expenses payable in sterling.

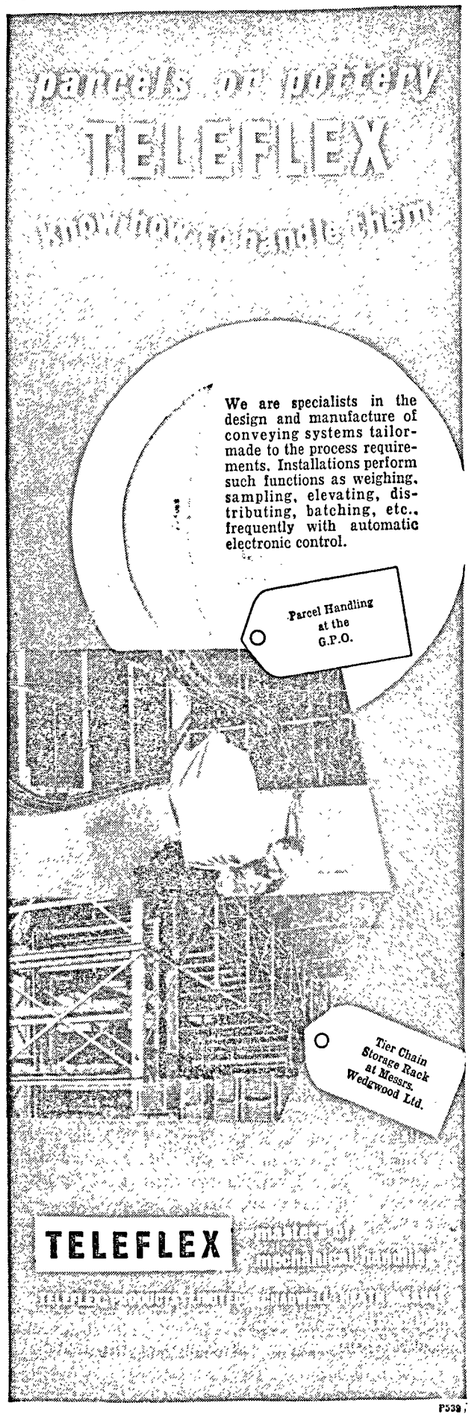
. . . JUST LIKE THE SERVICE YOU GET WITH ATV

ATV do more than provide you with a hard-hitting advertising medium . . . much more!

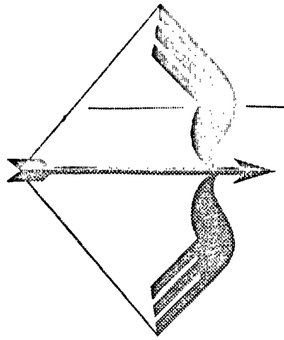
Associated TeleVision Limited
Programme company
for the weekend in London and
weekdays in the Midlands

There's nothing particularly complicated about launching a campaign on television—especially when it's an ATV campaign.

Because ATV make things easy for you all the way. You can draw on the experience of trained executives, who know all about the problems of the small advertiser as well as the big spender. You can use ATV's Research Information Service, whose advice will help you reach the right audience in the right mood at the right time.



If you want a live commercial or magazine participation, ATV will be glad to work with your advertising agents, or, if you have none, handle all production problems for you.



Also, as you know, it is essential to make sure that distribution is satisfactory before you begin advertising. This is just one of the many marketing problems which the ATV Merchandising Service can help you with. Many advertisers have discovered how effective ATV merchandising can be.

When required, ATV can provide such facilities as closed-circuit showings of commercials; presentations to clients and agencies can be arranged as well as visits to a studio.

If you would like to know more about the service we offer, why not get in touch with us? We will be glad to talk things over.

Eastman CHEMICALS are serving European industry

Waxes and Polishes

Epolene® E is a hard, tough, emulsifiable polyethylene wax. Epolene E is the basis for floor polishes that exhibit outstanding durability, high gloss and excellent slip resistance. *Epolene N*, a non-emulsifiable polyethylene wax, is used to upgrade paraffin for paper coatings, textile finishes and paste polishes. Compatible with many other waxes, Epolene N can often be used to increase hardness, flexibility and toughness.

Protective Coatings

Cellulose Acetate makes tough, durable water-resistant wire and cable coatings. *Cellulose Acetate Butyrate* produces lacquers, adhesives, airplane dopes and melt and peelable coatings possessing high strength, flexibility and excellent weathering properties. *Solvents* and *Plasticisers* in a broad range, including economical isobutyl acetate, are available.

Textiles

Dyes of outstanding fastness for synthetic fibers. *Cellulose Acetate* flake is available for producing acetate fibre spinning solutions.

Petroleum

Tenamene® 1,2,3,60 and *MD 50* are gum inhibitors and metal deactivators used in motor and aviation fuels to maintain quality during storage and use.

Rubber

Eastozone® 30, 31 and *32* antiozonants protect rubber products against the deteriorating effects of atmospheric ozone.

Food and Agriculture

Tenox® antioxidants guard food and animal feed against oxidative deterioration. They are supplied in a wide range of formulations to meet specific processing conditions. A line of commercial-grade antioxidants is also available for protecting industrial products.

New... Epolene C

Epolene C, a new form of polyethylene, has many of the properties generally associated with plastic grade polyethylene, yet handles much like a moderate to high melting point wax. It can be applied from a hot melt directly to paper, and promises new product opportunities in slush or rotational moulding and casting.

Stocks of many of these products are maintained in Europe, assuring quick delivery. If you would like to investigate any of these quality products, call or write Eastman's European Sales Office in The Hague. They will put you in touch with our local representative. He and a member of the Eastman organisation will gladly work with you toward obtaining the most effective use of Eastman chemical products in your operation.

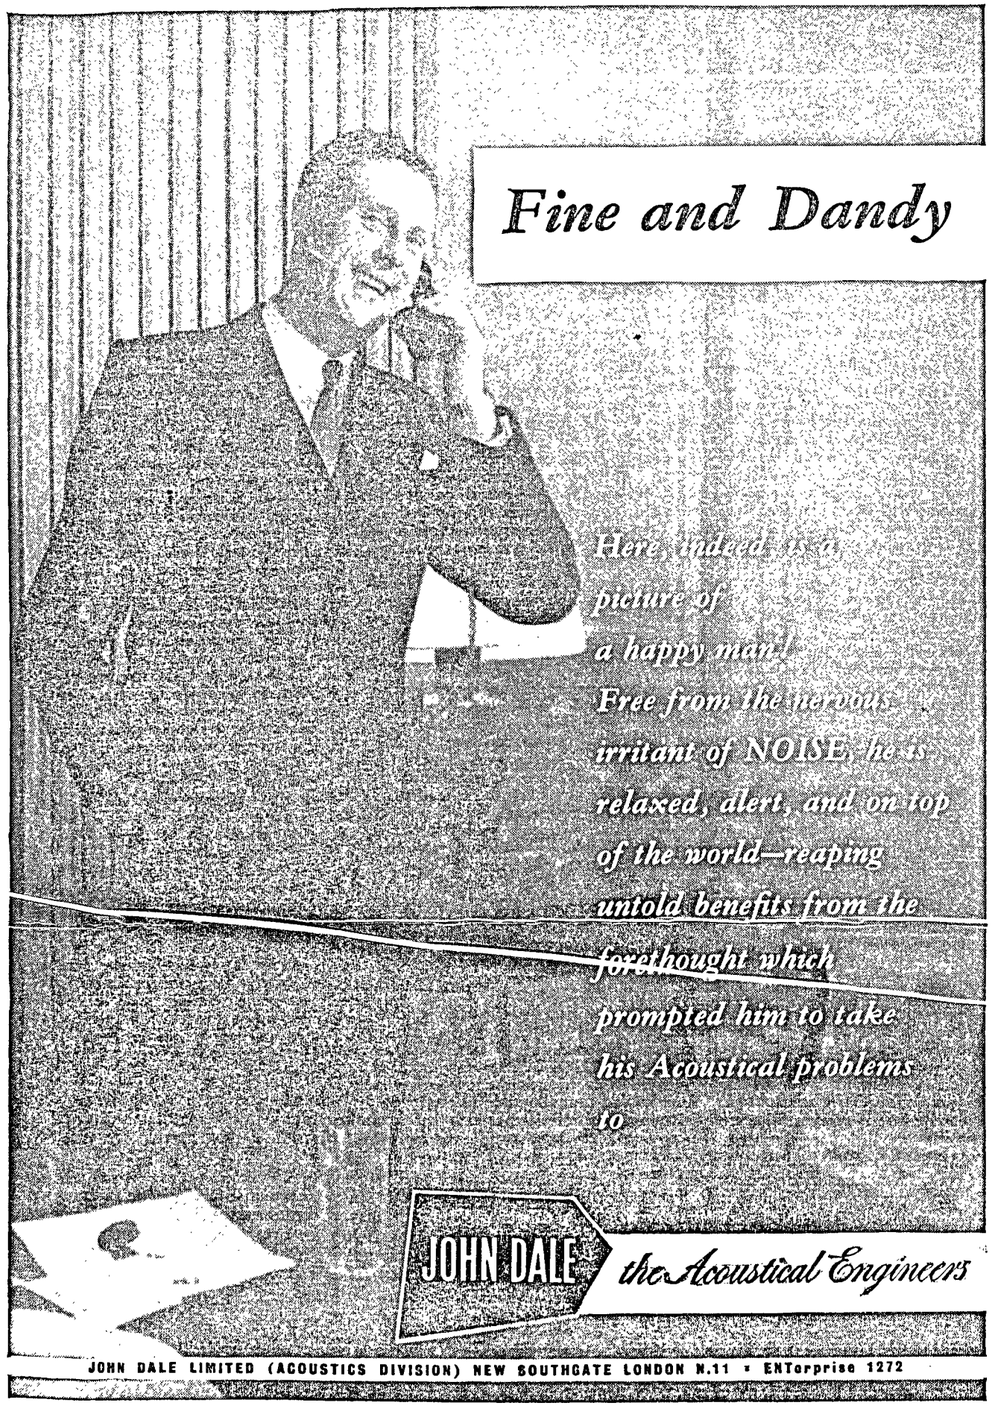
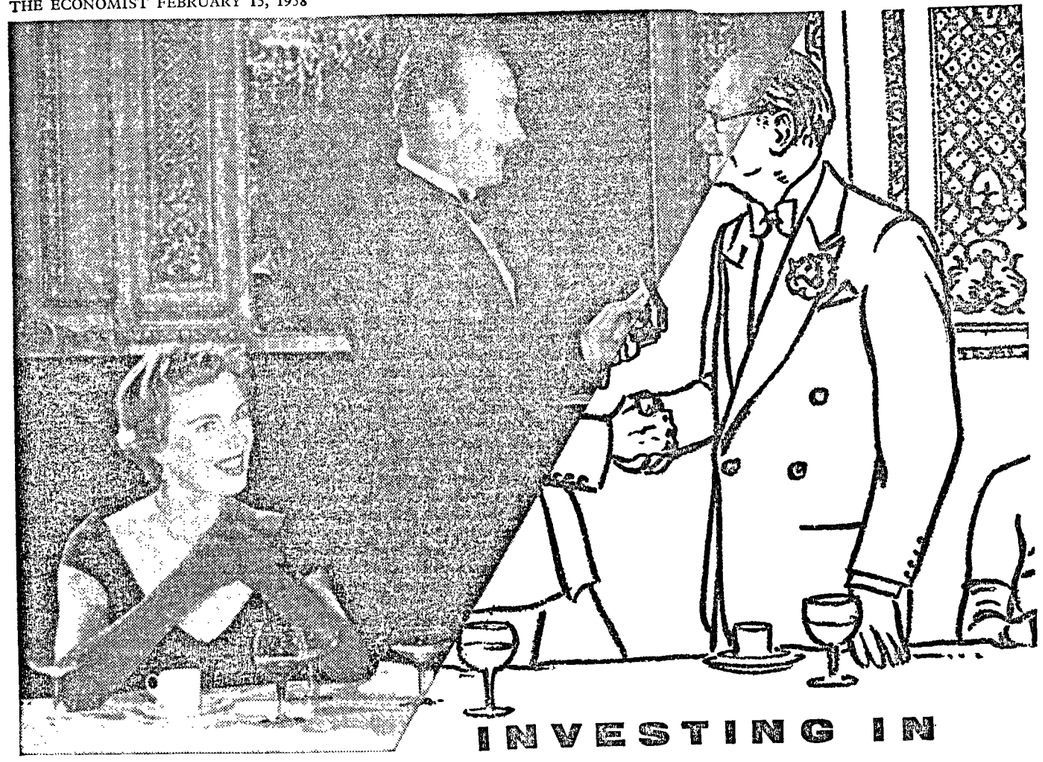
"You mean I get a choice of wine on tourist service?"

Travelers who choose Pan American's famous tourist-fare *Rainbow* service are often pleasantly surprised at the little special touches that reflect the World's Most Experienced Airline. A choice of fine wines, for instance, at modest extra cost, is always available to complement the outstanding tourist cuisine.

Service that makes the "extras" routine is part of the difference that makes Pan American famous. You'll notice this in the many little things that make flying by Clipper* the international standard of air travel. The efficient, thoughtful courtesy that begins before you step aboard—and extends right through to that extra cup of after-dinner coffee that rounds out a perfect meal. This is the sign of experience no other airline can match.



You'll be glad you didn't settle for less when you choose Pan American's tourist-fare *Rainbow* service—service that has satisfied the most discriminating international travelers for over 30 years—on more than 65,000 transatlantic crossings.



Call your Travel Agent or Pan American. 800 offices throughout the world.

Defender of Faith?

MR SANDYS'S first defence white paper, published ten months ago, was meant to be a major restatement of defence objectives on the full tide of thermonuclear development. It was supposed to portray him as only one-tenth a politician and nine-tenths Napoleon; the trouble was that most of Britain's allies decided that it showed the mixture of elements in him to be precisely the other way round. The question that awaited his second white paper, published this week, was whether it was going to be a progress report on the plan he then formulated, or a tactical withdrawal from it. The answer seems to be that it is a bit of both. It contains some verbal reassurances to Britain's allies (who may not very readily accept them), and a small measure of further good cheer for the taxpayer at home; this may prove to be the main trouble about it.

Last year Mr Sandys made a marriage of convenience between Britain's possession of the nuclear deterrent and his impulsion to economy. From that union he produced two electoral assets: the promised abolition of conscription, and over £100 million of cuts in his estimates. But he achieved these by making a number of assumptions which raised doubts from the first at home and then a swelling tide of criticism from abroad. He assumed that any limited wars on the Korean model could be practically excluded from calculations; that a nuclear war would be so short and decisive that no succeeding "broken-backed" phase of hostilities need be planned for; that the services would get the 375,000 regulars which his more optimistic advisers promised and which would enable him to reap the full economies of abolishing national service. Finally, he assumed that this plan would be greeted by Britain's allies as fitting into the western recipe for interdependence. It wasn't.

This year Mr Sandys makes two concessions to the indignant Europeans and uneasy Americans. He has introduced early into Cmnd. 363 kind words about interdependence and the collective nature of the western deterrent, conventional and unconventional. If these had been included in last year's white paper, they might have taken some of the irritant out of it. Now they are rather late; the evidence of very limited progress in the co-ordination of weapons is eloquent and disquieting testimony of this. Moreover, against the reference to various co-ordinating committees must now be set the threat, if Germany fails to pay up to the tune of £47 million, to reduce British troops in Germany below 55,000, reluctantly agreed by Western European Union; this does not spell interdependence, but growing disunity. The white paper dwells again on the benefit that the West, and by implication Europe especially, derives from Britain's sacrifices in contributing to the nuclear deterrent; the argument is familiar on the continent and is not accepted. Britain's independent commitments outside Europe are firmly mentioned. The white paper announces that, sensibly enough, the operational plans for Britain's nuclear bombers are to be co-ordinated

with America's. But the fact remains that, for all the talk of interdependence, Germany, France and Italy are now toying with the idea of a non-Anglo-Saxon block within Nato—and one with, like Britain, its own nuclear deterrent. Mr Sandys can never have wished for such an outcome from his last year's defence plan; yet, in a sense, an outcome it certainly is.

This year's white paper has also modified the rigid doctrine of a year ago on limited war. True, it states that a major Russian attack in Europe, even if confined to conventional forces, would be met by strategic nuclear bombing of Russia; this is current Nato doctrine, though it does not lack critics even at Shape. But outside Europe, the trip-wire laid before the Russians is not so specifically and deadlily charged; the white paper seems to admit—as the Europeans have long assumed—that Korean type wars might still be possible there. The significance of this admission, of course, is that it vastly extends the eventualities which the services might have to meet. The first fruits of this reassessment may be seen in a new lease of life for the navy, which is to be fitted to fight small wars—for example, by the introduction of the commando carrier. The white paper has also discovered the Russian submarine menace, and the navy is to be fitted to deal with it—certainly in small wars, though whether also in the broken-backed aftermath of a global war is not made clear. Plainly, however, if the possibility of Korean-type wars is taken seriously, not only the navy is involved in this reassessment. It should also affect the size of the army, the size of its central reserve, its mobility, and its overseas bases; to a lesser extent it affects the air force. It reopens the whole question of the adequacy of conventional forces—the question which produced most gnawing doubts last April.

Having made these concessions in strategic utterance, however, the white paper then digs in upon the 1957 line. The importance of the home-grown nuclear deterrent is reiterated, though perhaps defensively now rather than boastfully. The critics will ask why, if the thermonuclear stalemate is complete, if no technological break-through by either side is expected, and if defence is essentially collective, the delivery of British H-bombs in penny-numbers to the RAF is of any practical, as distinct from prestigious, significance. The only evident significance it can have for collective security is in helping to plug the gap while the Americans develop their inter-continental missile. But the white paper does not say this; at this stage indeed it turns to address the domestic voter. The reassurance is offered that the British nuclear deterrent costs less than a fifth of the defence budget, and is thus, it is suggested, in terms of reinforcing the American deterrent, not bad value for money.

Clearly, however, a great deal will have to be extracted from the remaining 80 per cent, or say £1,100 million. At the heart of the calculation lies the substitution of all-regular for largely conscript forces; and this year—as he clutches for this political prize—Mr Sandys throws caution to the winds. The saving clause about covering any gap by national service does not appear. He insists that recruiting is going well, and to clinch the matter service pay is to be increased and coupled with a start on large (and overdue) expenditure on improving service conditions and quarters. More is to be spent on the navy; the development of the atomic submarine is (with American help) to continue—a decision, in fact, as inevitable as changing from wooden ships to ironclads. The creation of the mobile central reserve is again emphasised: again an extremely expensive, however necessary, project. Transport command is to have more planes; dumps of heavy equipment are to be dispersed in Aden, Malaya, Kenya and so on. No mention is made of projects to be cut.

Yet, the taxpayer is assured, there are to be some cuts. Mr Sandys has modestly made good his promise last year to lighten further the burden on the economy. The estimates, at £1,465 million, before taking account of American and German aid, are some £18 million less than this year's original estimates; after allowing for the recent supplementaries, but also for the rundown in American aid, the figures presented to Parliament will be £44 million below this year's original and supplementary estimates combined. Taking the rise in prices into account, this would seem to imply a real cut of up to perhaps £100 million, and that is the figure that would normally matter to the taxpayer.

WHERE are these economies expected? In part, no doubt, from the rundown in forces (by some 65,000, to an estimated 570,000, by April, 1959). Economies are also promised in dockyards (Does this mean Malta? If so, no details embarrassing to the Colonial office are given). There will be some cuts in reserve ship and forces, and in fighter command. But can these be all the items in the sum? The white paper studiously refrains from any comment on the new equipment being introduced into the conventional forces. Does this mean that unpublished—and surely unwise—economies are anticipated here? Or is it possible that Germany's refusal to pay support costs might be as welcome to the Ministry of Defence as it would be upsetting to the Foreign Office—on the grounds that it would permit a big reinforcement of the central reserve from troops withdrawn from Germany, and a faster rundown of national servicemen? Any such outcome would make still further nonsense of the concept of collective defence.

For all these reasons, the white paper must be regarded as a greyly obscure document. Politically, Mr Sandys has clearly deserved well of his colleagues. He has made, on white paper, more economies. He has stated again that national service is to go (this may be troublesome later, but no matter). He has put up pay. He has kept the nuclear deterrent in stoutly British hands—but at the same time made every obeisance to interdependence. He has promised atomic submarines and underground missile bases, and a lot more. He has said there will be no world war, and put the record straight on disarmament. Of his devotion and faith in himself, of his energy and independent, assiduous thought, there is no doubt. But just because foreign military experts are so dubious, and the rumblings in Whitehall have been so audible, and the pressure to show lower original estimates (never mind subsequent supplementaries) has this year been so great, Cmnd 363 is a paper that Parliament ought to make run the gauntlet of many questions. The marriage between the proper defence of the realm and national economy has not yet been consummated.

Frenchmen's Folly

The French parliament's endorsement of a bombing raid on Tunisia may squander such credit as the western world possesses not merely in North Africa but in all Africa and Asia

ONE immediate and melancholy deduction that can be drawn from the events of the week in French North Africa is that it is no longer possible for France to pursue a policy of repression in Algeria and of friendship with Tunisia and Morocco; the two aims have become irreconcilable. Is France, then, to plump for repression and throw old friendships to the winds? The answer "yes" could be deduced from the insensitive speech which M. Gaillard made to the French parliament on Tuesday. Briefly, M. Gaillard justified the bombing by 25 French aircraft of the village of Sakiet Sidi Yussef in Tunisia on grounds of military necessity; to the nature of the attack, and to its international consequences, he appeared oblivious. He won the Assembly's endorsement by 339 votes to 179. The vote may bolster morale in an officer corps at present in the throes of a scandal about the political bias of promotions, but it makes France's western allies, and many Frenchmen, despair of the future of France in Africa.

Sakiet Sidi Yussef had been in the news before as a point inside Tunisia from which assistance was undoubtedly being given to the Algerian rebels. It was the place at which 15 French soldiers were killed and four taken prisoner on January 11th; its occupants had also fired at French aircraft with the weapons described by our special correspondent on page 588. On the morning of the raid it happened to be crowded, both for market day and because an International Red Cross convoy had arrived to distribute clothing to refugees. Therefore the price of the operation which GHQ Algiers claims to have been the silencing of a rebel stronghold, and which Tunisia calls the murder of civilians in a sovereign state with which France is not at war, was 75 dead and 83 wounded, including women and children. The eyewitness reports of the Red Cross representatives and of many reputable journalists do not bear out the claim made from Algiers that the casualties were mostly rebel Algerians.

Admittedly Tunisia has been giving both help and comfort to the Algerian rebels. They rest on the Tunisian side of the border; they fire from across it at French aircraft. There is an organised line of communication along which even foreign visitors can pass to rebel areas in Algeria, and the Algerian rebel committee of co-ordination and execution has had its headquarters in Tunis for about a year (M. Bourguiba has often argued that it was easier to modulate there than if it were to repair to Cairo). Yet, if a method of retaliation had to be devised, why choose one so indiscriminate as to alienate both African and world opinion? Why not a punitive expedition with ground forces? Who ordered this flat-footed step, if compromise, and not reconquest, is France's goal in Africa?

There are three hypothetical answers to this question. The first is that the order was given by a local commander—nerves frayed by rebel techniques and by years of suffering Chinese help from beyond the frontier in Indo-China. This looks unlikely after M. Gaillard's speech; no punishment or reprimand is, it seems, being thought of. The second possibility is that it was ordered by GHQ Algiers, on the basis of a far too vague directive from the French cabinet about the permissibility of the *droit de poursuite* across the frontier. On the strength of this vagueness, encouragement may well have been forthcoming from colonialist extremists, including, perhaps, certain diehard cabinet ministers who think compromise with M. Bourguiba a worse menace than continuing, or even than extending, the Algerian war. The third hypothesis is that the French cabinet agreed to give Tunisia a lesson; this can probably be discarded. There is little reason to doubt that M. Pineau, its foreign minister, was not consulted, and that—as happened when the Sultan of Morocco was deposed in 1953 and when the Ben Bella aeroplane was diverted in 1956—leaders in Paris have had to give their endorsement to an accomplished fact. The second—which puts the responsibility upon GHQ Algiers and those in Paris who encouraged it—is the probable explanation of a disastrous affair.

For disaster it is. Whoever took the decision obtained no military asset except a "victory" that cannot be consolidated; in fact, if M. Bourguiba pursues his threat to obtain a French military withdrawal from Tunisia, including a base—Bizerta—that he has so far been ready to accept, then the military balance, too, shows a loss. From the standpoint of France's international relations, the decision is pure liability.

The Sakiet affair cuts the ground from beneath the feet of all Tunisians who prefer a link with Paris to a link with Cairo. Take the following quotation from this week's *l'Action*—a serious Tunis weekly published in French :

> One thing is clear—to win respect in 1958, one can no longer be a friend of the West. To be courted, one has to become a Nehru, a Tito or a Nasser. The day Bourguiba decides to follow the road the latter has travelled since 1952, Tunisia will no longer be browbeaten, but sought after.

Displays of force such as this tempt North Africans to turn, as President Nasser turned, to Russia for defensive weapons. To make matters worse, the timing was as if calculated to drive Algerians, Tunisians and Moroccans into the united front they have never yet formed. It happened just after the Cairo-Damascus axis had announced the United Arab Republic and had excited Arab nationalist opinion everywhere; it happened just after M. Bourguiba, in a conciliatory speech and an interview with the *New York Times*, had betrayed his nervousness lest the FLN should in its disillusionment with the west "slide on to the tempting slope of Arab independence, to be followed, perhaps, by the rest of French Africa." Lastly, a French decision to inflict this indiscriminate local punishment, taken so quickly after the granting of the American credit of $655 million had won France a respite from economic disaster, lends colour to the Arab thesis that all the western powers are party to a fight against Arab neutralism and independence.

France's allies in Nato are entitled to feel deep concern. All Nato powers have an interest in the preservation of an asset for which there is plenty of evidence—the pro-western inclinations of many Tunisians, Moroccans and Algerians, provided they are enabled to be pro-western within a framework of independence. Norway is raising the matter in the Nato Council; the Tunisians are bringing it before the Security Council. If an eastward swing of North African opinion is to be arrested, not merely France, but France's allies, now need to accept the irreconcilability between war in Algeria and peace with Tunisia and Morocco. They need to uphold, in Paris—and if needs must, by their votes at UN—the truth that if a cabinet allows public servants to give and execute disastrous orders, which it cannot later gainsay, it is on the way to squandering the credit of all western nations in Asia and Africa. One has only to read Gibbon to realise what happens to an empire that allows pro-consuls and centurions to shape its policy.

THE TRADE UNIONS

2: Where the Danger Lies

The first article in this series concluded that the legislative changes needed now should not be designed to curb the economic power of trade unions. Given politically courageous policies at the Treasury and the Ministry of Labour, that power need not be nearly so dangerous, even with full employment, as many suppose. Where legislation is needed, however, is in "acts designed not to check trade unionism itself, but to put a stop to abuses of it, unrestrained by law, of personal liberty and personal choice." It is to the local activities of trade unions, not to the powers of leaders at head office, that attention most needs to be turned.

One of the great difficulties about any rational discussion of libertarian changes in trade union law is that many Labour people foster a completely false pretence about what the local activities of trade unions now are. It is a pretence based on a fine, but now largely departed, tradition. At the beginning of this century, the trade union branch was often the local nucleus for general self-improvement in an educational and cultural, as well as an economic and political, sense. As an extreme example, the miners' lodge, linked with chapel and idealism, was often the main positive social centre of a coal mining village; it was also the centre of the ordinary miners'—not just their leaders'—political self expression.

Here and there, because of the geographical isolation of mining, miners' lodges still perform these functions. But, much more generally, the concept of the local trade union branch as a social or cultural centre has faded to vanishing point. The provident benefits it used to provide have become a government responsibility; trade union MPs are often merely superannuated officials put out to grass; the worker no longer bases his social education on the lodge, but reads the newspapers and looks at television instead.

The result is that—at this all important local level—a sea change has come over the purposes of the local branches, the attitude of ordinary members towards them, and the ways in which local leaders are recruited. The purposes of the local branches of the unions can be parodied by saying that they have got into the position of a firm without a manufacturing division; with their social, educational and provident aspects becoming moribund, their only gain comes through restrictive sales of their product. The other two changes deserve study in more detail.

Just for the Job

The basic trend among trade union membership today is that, in many industries, a man now belongs to a union just as he belongs to a firm; he pays his dues to some collector at the workbench, and that is the end of his concern. This is shown in the voting figures. Although the union movement is almost entirely socialist in its official political persuasion, and although ballots in the names of most of its mass membership are regularly cast at Labour party conferences, it is clear that about 30 per cent of union members usually vote Conservative at parliamentary elections; at union elections it is not uncommon for over 90 per cent of them not to vote at all.

This does not mean that union members are intrinsically disloyal to trade unionism. What it does mean, however, is that it is absurd to say—as some commentators on trade union affairs often do say—that "the trade union rank and file is more militant than its leadership." As a general rule, the genuine rank and file is the sleepiest and least militant part of the movement; the middle tier trade union officers and NCOs—especially those who do union work in their spare time—are the most militant; the whole-time professional officers of the unions fall somewhere in between.

Where Power Corrupts

It is in the forces operating in the part-time and full-time leadership that the key to many present problems of unionism lies. For here, too, attitudes and motives have changed. In the old days, to take up work in a union offered the individual not only scope for social service, but also an alternative ladder of opportunity for climbing upward from the factory floor. Advancement in the union did not bring the same higher pay or security that the very difficult progress to chargehand or foreman did; but it offered far greater esteem from one's fellows, a recognised status, some elbow-room for organising or negotiating abilities, and the satisfaction of a desire to help one's fellow men or express resentment at other people's privileges. It also provided one of the few means of escape from the industrial treadmill open to honest working men.

Middle-class people have always had many escape routes of this kind; and a large number have always taken them even at some financial sacrifice (cf. entry into the civil service, the clergy, becoming a don if bright enough, many vague administrative posts in charities, and so forth). Because organisational work in the unions offered somewhat similar attractions to manual workers, old-style union officialdom did regularly attract new recruits of something better than average ability, honesty and idealism.

Most of the respected leaders of the general council of the present Trades Union Congress have sprung, in greater or in less degree, from this sort of tradition. Perhaps most of the really top trade union leaders of Britain will long continue to do so; although some of the best potential young officer material for the trade union movement no doubt now stays on longer at school and then drifts away from the unions into the universities, the drain on this account should not be exaggerated. The universities still take only five per cent of each new year's crop of the nation's young men. But the place where the canker of changed circumstances has begun to appear in the labour movement is among those local organisers who are only spare-time officials, and whose sole livelihood is gained (or is supposed to be gained) by full-time working on the factory floor. Comment on recent trends among these men will need to be frank enough to risk resentment. A change in the composition and motivation of some of these bodies of spare-time officials has occurred in recent years; spare-time officials—call them shop stewards or what you will—are now divided into two types.

One type, the old type—which too many journalists and union historians still politely pretend is the only type—consists of people who are spare-time officers solely because they are disinterestedly ready to give quite a lot of that spare time to the organisation and representation of their fellows, or to the furtherance in the country of their own political beliefs. This is still almost invariably true of spare-time officers of unions which have scattered memberships—a dozen members here, two dozen there—in small places of work. These people are properly regarded by the full-time officials and leaders of their unions with very great favour; it is from them that appointed vacancies in the whole-time ranks of union officialdom tend, in a large proportion of cases, to be filled. The tradition of disinterested service often also holds with spare-time officials even in medium-sized or large factories. This is still a familiar type of head of a shop stewards' committee: the straight-as-a-die zealot who has been impelled into spare-time union work by a sincere social service itch, or orthodox Labour party views, or perfectly honest communist views, or (in a surprisingly large minority of cases) by Moral Rearmament or some other religiosity.

But what should not be disregarded—although there seems to be a polite conspiracy to disregard it—is that a second type of spare-time official has sprung up

under modern conditions. In some workplaces, especially in some large factories and other assembly points, the relevant committee of spare-time union officials is not at all of this old social service (even left-wing social service) type. Instead it has become a virtually self-perpetuating body—which can make a very good thing out of that self-perpetuation.

The spare-time union officials concerned do not only make a good thing for themselves in terms of power over their fellows, although this power is a considerable social satisfaction to many of them. They do not only make a good thing in terms of not having to do hard work, because they know that timid employers will not dare to sack them. In some cases—especially where organised factory floor lotteries or football pools to finance local union activities have grown up—there is reason to suppose that they have occasionally begun to make a good thing in terms of creature comforts, if not of hard cash. This view is disputed by some who write about the unions; it is said that even where the nominally spare-time official is allowed by the employer effectively to skimp whole-time work, he will draw only a basic wage and miss the higher income he would derive from piece-work earnings. But the check on the powers, orders and finances of these local groups is not always tight; the descent from a partly politically inspired movement into a plain and powerful racket can be made in easy stages, especially when the words "union solidarity" can be used as a holy cloak; and it is in this section of activities that a Royal Commission into trade unionism would most probably dredge up some elements of the sort of irregularity which congressional enquiries have uncovered in America.

The Remedies

MANY union leaders know this, which is one reason why they oppose the appointment of a Royal Commission into trade unionism. They say that if any group of local workers' rights are abused in this way, it is for that group alone to put matters right. Many employers know quite well when this sort of thing is going on under their noses; but they, too, say that it is the factory floor-workers' concern, not theirs, to stop it. And factory floor-workers know it, but it is very difficult for the few interested individuals concerned to break into, prior to breaking up, the self-perpetuating committees.

Moreover, it is worth sitting back at this stage and asking why they should. If an ideal system of trade unionism were being built up from scratch in Britain today, some functions would certainly be delegated to local union representatives, elected by their workmates, and operating still on the factory floor; it would be regarded as quite proper that the men thus picked out for the job of representation should be given a higher standard of living as a reward. Many of the troubles of today arise from the fact that union rules pretend that these local groups should have less power than they are in fact bound to accumulate. The next stage is that, when these local groups have secured power, the union leaders in London prefer to pretend they have not got it, and will not look down into the nasty things that are sometimes going on in the woodshed; and whenever authority pretends that special groups do not exist, simply because they should not exist (cf. bootleggers under prohibition, street bookmakers under Britain's present gambling laws) the groups concerned tend to develop the most undesirable proclivities.

It is here that the real danger of trade unionism as a new estate of the realm arises—not in the spectacle of TUC leaders walking in and out of 10 Downing Street (to give advice to which both Labour and Conservative governments often only pretend to pay attention). It is almost always when overmighty local groups of this sort have sprung up, often not directly responsible to anyone, that the worst trade union offences against individual liberty occur.

It is then, for example, that work-spreading rules forbidding anybody to earn more than a certain amount become most common. It is then that most cases arise of individuals being deprived of their livelihood because they have offended the local group in some way. It is then that the principle of the closed shop is usually most rigidly enforced. It is then that such appalling stories are heard as the case of the boy a union clique tried to frame on suspicion of theft from his employers after he had refused to join a strike (typically, the nationalised employer concerned took no effective action against the framers); of men hounded from their jobs and home towns and even home countries because they have broken some local union rules; of personal threats and ostracisms and sending to Coventry and the like. It is also usually after these local groups have become most powerful that communism moves into a position of predominant influence, in a way which most union members in the area do not really want. It is beside the point to dispute whether these abuses are now common or still very rare; the principle on which every liberal should take his stand is that it is quite intolerable, in a free country, that these things should be going on at all.

THREE remedies suggest themselves. One is the old expedient of enquiry and publicity: a Royal Commission to investigate what is going on down among the grass-roots of the trade unions. A second is legislation to forbid the closed shop, which is the life-and-death weapon through which local intimidation of the individual is most usually enforced. A third is to leave the unions with their present legal privileges, but in some way statutorily to guide a codification of their own rules so that these local groups should come more under the control, not of their union leaders in London (for that would be dictatorship), but of their own members whom they are supposed to represent—with very specific safeguards for the rights of minorities. Which of these remedies—or which amalgam of them—would be best? It is with this question that next week's article will start.

NOTES OF THE WEEK

MR MACMILLAN'S RETURN

Taking Baby Back

THE Rochdale election notwithstanding, Mr Macmillan should find on his return to the Commons that the rather sickly political baby he dumped in Mr Butler's lap six weeks ago has perked up quite a lot. The Prime Minister flew off, it will be remembered, only twenty-four hours after Mr Thorneycroft had resigned, and to some appearances he left behind a Government and party on the verge of disintegration. To say that he returns to a Government in flourishing health would be to go altogether too far, but certain improvements can be chalked up. The Bank Rate tribunal has left mud sticking only to the Labour party, which is now in one of those aberrational stages when it seems to be intent on losing the votes of reasonable people every time its principal spokesmen open their mouths (*vide* its abuse of parliamentary procedure over the Rent Act, Mr Robens's remarks on steel). Mr Thorneycroft, after leaving an array of time bombs ticking under the Treasury bench, has nobly refused to set them off. Mr Macleod's handling of the bus dispute suggested that the Government has at last found the right deflationary target; the Cabinet's refusal to set up that committee of inquiry may yet prove to have been one of the turning points of postwar economic policy, and it is interesting to speculate whether the decision would have been taken if Mr Macmillan himself had not been away. Mr Butler has handled a series of question-time barrages with consummate aplomb. Mr Amory has ended his first month as Chancellor with sterling well above parity and the gold reserves rising. There are still plenty of troubles facing the Government—not least the unrest among some of its backbenchers over such crucial issues as defence and Cyprus—but, by and large, these six weeks of Mr Macmillan's absence will be regarded by many as the period of the best Prime Minister we haven't had.

If Mr Macmillan will now want to know what has happened in his absence, the curiosity will be mutual. MPs are anxious to see what effect his journey has had on the Prime Minister. Some press reports have led them to expect to see some modern reincarnation of Teddy Roosevelt. Nowhere is the new, uninhibited Macmillan more eagerly awaited than in the Tory Central Office, which has been getting increasingly baffled by the problem of trying to project in 1958 a Prime Minister obstinately determined to reflect 1908. Now that Mr Macmillan has been willing to cuddle koala bears in Australia, new prospects are opened up.

BY-ELECTIONS

The Rochdale Hornet

LABOUR took the former Conservative seat at Rochdale, but the Liberal took the honours. So, if one believes in eager participation in a democracy, did those television cameras that followed the candidates round the streets. The total poll of over 80 per cent, in a February by-election fought on the oldest possible register, must be almost unprecedented. In effect, if one allows for deaths and untraceable removals in the twelve months since the register was drawn up, for a normal crop of winter illnesses and other unavoidable absences on a by-election date, it means that, as near as makes no difference, almost every eligible man and woman in the town must have turned out to vote.

Of this mass army, 35½ per cent voted for Mr Kennedy. Compared with 1955, Labour's share of the vote fell by nearly 4 per cent and the Conservative's share by nearly 32 per cent. The absolute number of votes drawn off from Labour was just about what one would expect as a result of a Liberal intervention in an area such as Rochdale, at a time when Labour is making no progress in the country; in fact Labour's share of the total poll was just decimally lower than its share last time a Liberal intervened here, at the general election of 1950 when Labour was winning an overall majority of only seven seats in the House of Commons. But the number of votes Mr Kennedy drew off from the Conservatives represented a stampede; nearly two out of every three people who voted Tory last time came over to his flag. A considerable contributory cause of this must have been that the doctrine of the wasted vote now rebounded on the Tories' head. It had become clear early in the by-election that the Conservative could not win, and that the Liberal was the only man who might keep Labour out; the mass vote that is anti-socialist but not rigidly pro-conservative drew the logical conclusion. Because of this, hard-and-fast estimates cannot be drawn from Rochdale about how the Conservatives would fare in the majority of straight constituency fights with Labour that would characterise any early general election. But it is the implication of this result for future three-cornered fights that the Tories must regard as the real sting in the Rochdale hornet. A majority of anti-socialists in Rochdale suspected, and a majority elsewhere has now been shown, that to vote Liberal in certain circumstances is the logical, not the quixotic, thing to do.

THE SUMMIT

Wading through Paper

IF diplomacy has to be conducted by means of inter-continental missives (and Moscow's repeated salvoes of verbiage make that inevitable at present), then Mr Macmillan's latest letter to Marshal Bulganin is a model of how it should be done. Briefly but politely, the Prime Minister reminds the Soviet rulers that 1955 showed the folly of bringing heads of government together without clearing the ground through discussion at lower levels. He indicates his own preferences but takes pains not to rule out any alternative in regard to either procedure or agenda.

Mr Macmillan specifically suggests getting the ambassadors to work "without delay" on arrangements for a meeting of the American, British, French and Russian foreign ministers. Noting the Russians' dislike of this idea,

however, he offers to proceed summitwards by way of other diplomatic contacts. This offer seems to have irked the French, who had stipulated a foreign ministers' meeting; but it appears consistent with the position Mr Dulles took up at his press conference on Tuesday, when the Secretary of State said in so many words that a foreign ministers' meeting before a summit conference would not be essential.

It is noteworthy that Moscow is taking its time not only over commenting on Mr Macmillan's letter, but even over releasing it to the Russian public. Sweet reasonableness from the West provides no grist for the Soviet propaganda mills whose task it is to depict other powers as stubbornly unwilling to negotiate. This is not easy. After all, it is the Russians who have refused all discussion of disarmament since September (despite the enlargement of the United Nations commission to meet what they had indicated to be their wishes); it is the Russians who now spurn the idea of a foreign ministers' meeting even as a mere preliminary to summit talks; and it is the Russians who refuse to have on the agenda the most obviously dangerous problems in Europe. Even in the neutralist world, many people may be tempted to go along with the Jugoslav broadcaster who last week daringly pointed out that

> the multiplicity of Soviet proposals, which the public is unable to digest, might give the impression that priority is being given less to the suggested conference than to a wish to obtain a propaganda success.

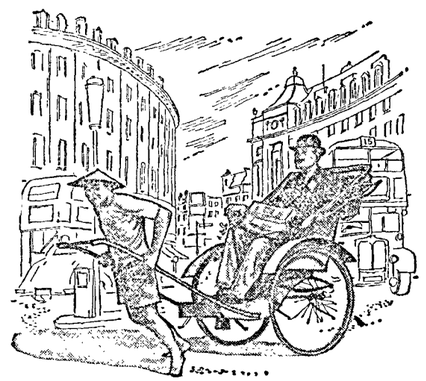
One almost begins to visualise the western governments wading patiently onward through a Red Sea of Bulganin letters and arriving under Moscow's battlements only to have still more tons of paper dropped on their heads, like the molten pitch of the Middle Ages, by an alarmed Mr Khrushchev who, as in 1955, recoils from the idea of actually having to get to grips over the real issues at close quarters.

CYPRUS

Mr Lloyd in Athens

Mr Selwyn Lloyd's visit to Athens was necessary after his protracted explanations in Ankara, and it probably prevented the emotions of the Cypriots from spilling over into fresh violence. But the question now uppermost is whether the virtual failure of the Athenian talks will upset the very precariously poised peace of the island. The one thing that is certain in a confused and depressing situation is that the Prime Minister will have to give his urgent attention to Cyprus as soon as he is back in Downing Street.

Mr Lloyd went to Athens armed with various proposals through which he believed progress might be made. But none of them apparently appealed to the Greeks. In a joint statement issued on Thursday, Mr Lloyd and Mr Averefi, the Greek foreign minister, announced that although their talks were of "mutual benefit" (and this phrase was apparently not merely a piece of diplomatic politeness), "their views did not coincide on some basic points"; presumably these points were concerned with British efforts to reconcile the opposing Greek and Turkish views on the ultimate fate of the island. Mr Lloyd could not even persuade the Greeks to overcome their reluctance to meet the Turks round a conference table. Agreement on such a conference would at least have indicated that the door to compromise was being kept ajar; on the other hand, another tripartite conference that failed, and thereby put paid to further diplomatic exchanges, would be disastrous. One encouraging outcome of the talks was the meeting between Sir Hugh Foot (who joined the Foreign Secretary in Athens) and Archbishop Makarios. Although solutions were not discussed at the meeting, it has broken the ice and may strengthen the Governor's hand when he returns to Cyprus.



WAGE BARGAINING

Not for Commission . . .

What induced Mr Macleod to raise so profitless a hare in last week's parliamentary debate, with his hinted desire to set up a royal commission to inquire into the country's wage bargaining and arbitration system? There may be some aspects of British labour relations which could usefully be investigated by a commission, but the system of wage bargaining and arbitration is not one of these. This is a matter for policy decisions instead. There can be dispute about which are the right policy decisions, but it is high time that politicians tried to get the possible alternatives straight.

As Mr Macleod himself pointed out in the debate, the great majority of wage bargains in this country are still struck after direct negotiation or consultation—the employers freely deciding how big an increase they can commercially afford to stand, and the unions deciding how much they can commercially afford to stand out for. This is what the system of free collective bargaining within a managed economy means. The impediments upon the proper working of the system in the last ten years have been, first, that governments have not generally followed sufficiently disinflationary policies to make the grant of large wage increases commercially unprofitable and resistance to strikes worthwhile; and, secondly, that certain institutional awkwardnesses have arisen out of that minority of settlements that are reached, not through direct bargaining, but only after arbitration.

There are in practice two criteria—and two criteria only—that arbitrators can adopt in making wage awards. One is to recommend the minimum wage increase that they think will serve to avoid a strike. This is the aim that arbitrators (and nationalised industries) have in fact almost invariably adopted in recent years; it is also the aim which the Labour party specifically supports, although it accompanies this support by a claim that a Labour government would manage to ogle the unions into agreeing that the minimum increases they would accept without a strike should be set rather lower than now. The other possible aim for arbitrators would be to recommend the amount that it is commercially sensible for the nationalised or other employers to give away, bearing in mind their need to attract sufficient workers to their employment and to keep their services running at full efficiency; a cold assessment of the losses that they would suffer if they had to face strikes should properly play a part in deciding what wage increases are commercially sensible, but the desire to avoid strikes would not then be the overriding consideration. Although Mr Macleod insisted in last week's debate that he has given no formal or informal instructions to arbitrators, it is obvious that the Government now wants arbitrators to move over from the first criterion to the second. A lot of parliamentary shadow-boxing would have been avoided if it had admitted this.

Rickshaw in Regent Street

On your way to the Far East? Then make 9 Gracechurch Street, E.C.3, your first stop. Here you will find a mine of information on matters oriental. Wherever you may be bound – Colombo or Rangoon, Manila or Calcutta – we can give you an up-to-date picture of local conditions. We can brief you on such things as currencies and monetary regulations, and provide you with credit information. As the biggest British bank established by the Far East for the Far East, with branches in thirteen Asian countries, we are in a unique position to advise and help you. You are welcome to draw on our knowledge and services.

Informed opinion for the active investor

The most recent oversea orders for Marconi television and sound equipment include complete stations for Poland and Venezuela, sound and vision transmitters for three new Danish stations, a sound transmitter for Venezuela, telerecording equipment for Czechoslovakia, outside broadcasting vehicles for Yugoslavia and Venezuela and the complete reorganisation of the Turkish long wave broadcasting station at Ankara. These orders follow closely on the completion of very big contracts indeed in Australia and extensive projects in Britain for the B.B.C., the I.T.A. and the independent programme contractors. The broadcasting and television authorities of more than 80 countries today rely upon Marconi equipment.

. . . but for Decision

THE obscurantism that has clouded this debate on wages policy has also affected the debate on wage bargaining machinery. Last week, Government spokesmen made some play with the complexity of the arbitrational or pseudo-arbitrational devices now available in this country—courts of inquiry, committees of investigation, the industrial court and so on. But this wide field of choice is not a handicap ; with one proviso it is a flexible advantage. The proviso is that, if the minister thinks that settlement through one of these bodies is likely to do more damage to the economy than a strike, then he should be free to decide not to set such a body to work in any particular case.

Hitherto, two things have hampered his freedom of action. One has been the custom that the minister sets up any committee when asked. That custom has been broken in the bus dispute, and this is a great advance. (It is still arguable, however, that the minister and London Transport should have followed up this show of resolution by refusing to refer the dispute even to the industrial court.) The second impediment is that there is one arbitrational body—the industrial disputes tribunal (which differs from the industrial court in that its recommendations are supposed to be binding)—to which the minister is statutorily obliged to refer any dispute if one party asks him to. Because of this, and because compulsory arbitration is rarely enforceable on a union, an arguable case has emerged for abolishing the industrial disputes tribunal altogether ; the case is being debated behind the scenes at the moment. But the matter is clearly one for political decision ; it is not the sort of matter which can profitably be referred to a royal commission, whose members would inevitably have to represent different interests and thus hold diametrically different and irreconcilable views about the basic aims of industrial relations policy.

CHINA

Iron Pants in a Knapsack?

HAVING beheaded the "hundred flowers" of frank discussion that bloomed all too vigorously last year, China's communist rulers have moved on, pruning-knife in hand, to another part of the garden. The dense growth of overlapping ministries and commissions badly needed thinning out ; their number had grown from 35 to 48 in three years. The merger of some and abolition of others has also facilitated the quiet removal of several more ministers—presumably owing to their inefficiency rather than to any political deviation, for these men have not been publicly branded like the disgraced "Rightists." At the same time, the scale of the purge of Rightists has been revealed by the news that the National People's Congress has already unseated 54 of its own members, who were accused of expressing anti-communist views.

Chou En-lai's relinquishment of the foreign ministry is a very different matter. Mr Chou remains prime minister, and he played a star role at the congress session that ended on Tuesday. One can hardly accept the notion that this supple personality would have to be removed from the international stage to allow China to alter its diplomatic tactics ; Mr Chou has shown himself amply capable of changing course smoothly. Admittedly his successor as foreign minister is a marshal, Chen Yi ; admittedly Peking's tone has lately sounded tougher, particularly towards Britain. But Chen Yi is a marshal almost in Chou's image : high-born, at one time a student in France, a veteran communist and guerrilla leader, with special connections with Shanghai, where he has presided both as mayor and as satrap for the whole eastern coastal region.

What westerners often forget is that foreign and even prime ministers are usually relatively small fry in communist states today. In Russia, Mr Gromyko is a mere gramophone repeating his dynamic master's voice, while Marshal Bulganin, that tireless titular letter-writer, shows no more independent volition than an ouija board. The talented and versatile Chou En-lai is undoubtedly needed for more important tasks than sitting through lengthy international conferences. With the air full of projects for conferences, China's rulers, who are insistent on their right to take part in any global gathering, may well wish to have as nominal foreign minister a man who could be spared for full-time duty at the green table. The devaluation of the title of foreign minister would be a logical preliminary to a season of competitive outsitting. Marshal Chen's knapsack, in fact, may prove to contain a pair of the iron pants made famous by Mr Molotov.

INDONESIA

Shall We, Shan't We?

IF the Indonesian colonels had thumbed through their manuals of military tactics before they opened their present attack on the Jakarta government they would have been reminded that the essentials of success are decisiveness and co-ordination. They have shown neither very notably. Their aim has been to secure the resignation of the ministry headed by Dr Djuanda, which they regard as far too exposed to communist influence, and its replacement by a government under Dr Hatta or the Sultan of Jogjakarta. This would wield provisional power until the country had been extricated from the perilous by-ways of President Sukarno's "guided democracy."

Their methods have included a barrage of broadcasts from Padang and Bukit Tinghi radios in Sumatra, calling on Dr Djuanda to go, and the despatch of an ambush party to Tokyo to waylay the President, now visiting Japan on his world tour. Unfortunately, they have not been able to say with clarity and vigour what they propose to do if their demands are not met. They have made it clear that they have no intention of setting up an independent state in Sumatra, partly because they are as jealous as anyone else of Indonesia's unity, and partly because if the communist problem is to be solved anywhere it has to be solved in Java too. Nor, so far, have they been able to overcome Dr Hatta's reported opposition to the idea of setting up a rival administration based on Sumatra but claiming the allegiance of the whole country.

Their task was not made easier by the premature announcement from the Tokyo detachment last week that such a rival government had in fact been set up—an announcement explained away next day by the soldier-spokesmen's "difficulties with the English language." The resemblance of the whole dispute to a boxing match conducted at ten yards' range is heightened by the fact that the Jakarta government finds it almost equally difficult to give force to its words. Dr Djuanda has promised "firm steps"

against the rebellious islands, and the stroke of an armchair strategist's pen in Jakarta has nominally transferred the troops in central Sumatra to the command of the loyalist chief of staff. But the colonels are being pushed on by their own momentum: on Monday one of them spoke of a five-day deadline, and another has been talking of a "holy war." If it comes to fighting, it is difficult to see how the government forces would be strong enough to subdue the rebels quickly or how the rebels, without a navy, could impose their authority on Java. And yet so long as the rebels simply go on saying, "Resign or else . . ." the Jakarta government will go on replying, ". . . or else what?" The alternative for the colonels is an ignominious retreat or a risky step towards open revolt; having gone so far, they may well be forced to set up their own claimant ministry.

ARAB FEDERATION

The Three Kings

NOTHING is more indicative of the importance to Arab opinion of the union of Egypt and Syria than the haste with which King Feisal of Iraq has foregathered with King Hussein in Amman to discuss the federation of their two countries. A little quiet thought on this matter might have been more to the point at this moment. Is King Hussein willing to step down, as President Shukry el-Kuwatly is doing, in favour of the senior partner? Is the Iraqi treasury willing to accept the economic problems of the Jordan state, and the Iraqi Army prepared to take over the defence of the frontier with Israel? It has always been difficult to find politicians of importance in Baghdad who were willing to shoulder the burden of Jordan and it will be surprising if the need for a riposte to Egypt has changed their minds. They have always had good reason to hesitate; ever since the death of King Abdullah, Jordan has been a poor risk. It has an unstable throne, a beggared treasury, a divided people and an energetic enemy on its long and straggling frontier. Close connection with it could only weaken the up-and-coming Iraq, which has so much still to do for itself. There is reason to suppose that the two cabinet ministers King Feisal has taken with him are well aware of these drawbacks; they are his ministers of foreign affairs and of finance, and both belong to the younger group of Iraq's men of experience.

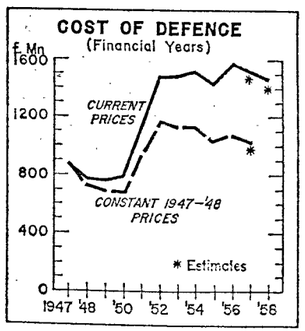
King Saud, who has also been asked to join the royal federation, is showing a natural caution. If he were to join a Hashemite federation, it can be assumed that it would have little real substance, for he would not sacrifice a jot of his autocracy or of his freedom to manœuvre skilfully between the two Arab camps. He is not like the impecunious Imam of Yemen, begging to be camp-follower to the United Arab Republic, but a wealthy monarch who feels—mistakenly, perhaps—that his desert spaces will insulate him for a long time to come against the passions of urban nationalism that seethe elsewhere.

To believe that the word union in itself will conjure content in the minds of the Arabs is to misunderstand the importance of the Egypt-Syria union as an idea. The present situation in both these countries derives from their internal revolts against their old ruling classes: Their union is therefore radical in intent; kings, by the very nature of their position, cannot copy it. A piece of federal window-dressing by them would be worse than useless.

If the western powers are thinking of giving private blessing to the Amman talks they should think twice. In the first place, it would do them no good if Iraq were dragged into the whirlpool of Jordanian troubles at this stage of its steady development. But even more important is the fact that a federation *against* Syria and Egypt is bound to be less attractive to Arab opinion than is the United Arab Republic. The western powers therefore derive no benefit from an Arab world split into two unequal camps; to encourage such a division is to drive the radical one to lean on Russia. The object of western diplomacy, therefore, should be to bridge the gap between Egypt and Iraq, not to widen it.

DEFENCE

Saving on the Estimates



THE defence estimates for 1958-59 come to £1,465 million; this is £18 million less than the original estimates for 1957-58, and (on this method of accounting) £60 million less than the original and supplementary estimates

THE DEFENCE BUDGET
(£ million)

	1952–53	Estimates 1957–58*	Estimates 1958–59
Total Cost of Defence	1,483	1,483	1,465
Of which: Receipts from US and Germany	65	63	47
Who Spends It			
Admiralty	361	316	339
War Office	552	446	441
Air Ministry	446	506	475
Supply and Defence	124	215	210
As Percentage of Total			
Admiralty	24·3	21·3	23·1
War Office	37·2	30·1	30·1
Air Ministry	30·1	34·1	32·4
Supply and Defence	8·4	14·5	14·3
What Expenditure Goes On			
Pay of Service and Civilian Personnel	418	531	540
Movement and Supplies	211	198	195
Production and Research	818	704	657
Other	36	50	73

*Original estimates excluding supplementary estimates of £42 million.

combined. All these figures are given before deducting receipts from Germany and the United States, which will amount to £63 million in 1957-58 and should amount to £47 million in 1958-59 if Germany pays up. The signs are that Germany will not pay up; but, if it does not, the white paper intimates that the accounts will, if necessary, be evened up by withdrawals of troops from the British Army on the Rhine. Mr Sandys is therefore aiming, possibly somewhat hopefully, at another significant cut in the defence burden in the coming year. The projected rise in total government expenditure above the 1957-58 original and supplementary estimates combined—the rise which caused Mr Thorneycroft to resign—must therefore be more than wholly accounted for by increases in the civil estimates, which are yet to be presented.

The navy is scheduled to get £23 million more in 1958-59 than under its original estimates for 1957-58, and the Royal Air Force £31 million less; taking the services together, however, pay is becoming a steadily larger proportion of the total, while the cost of production and research is still falling sharply. The new year's estimates for production and research are £47 million less than the original estimates for 1957-58.

CENTRAL AFRICA

Unfair Franchise?

THE Labour party will no doubt seek time shortly to debate the Rhodesia and Nyasaland franchise bill which has been judged by the African Affairs Board to be a discriminatory measure. Unlike the constitutional amendment bill to which it is linked, it is not automatically placed before the House of Commons when so judged; but the Government has already agreed that it may be debated before a final decision is taken on it. The African Affairs Board has done what it can by sending spokesmen to Britain to enlighten British opinion on the iniquity of the measure, which they hold to be no less, and perhaps more, than that of the previous bill; while the defeat of Mr Todd in Southern Rhodesia, even though he has not been succeeded by a reactionary, will increase British doubts over Central African professions of liberal intent.

But the constitutional amendment bill has now gone through, and Parliament should consider what purpose would be served by vetoing the franchise bill. It might force the federal government to hold elections on the old franchise, which would meet the wishes of the African Affairs Board, but even this is not certain; the constitutional position is confused, but possibly the federal government could arrange some sort of emergency voting, and this might be less liberal even than the proposed system, whereby, though Europeans will vote for Africans, very few Africans will vote for Europeans. Nobody can have much regard for this bill, which is clearly a mean, if not actually a discriminatory, measure; but it would seem better to make this fact the occasion for passing the bill—with the clear and announced reservation that it in no way commits the British government when the time comes to review the constitution in 1960 or later.

Two things should, in fact, be made clear. The first is that when the constitution is reviewed the British Government will not grant independence unless both the franchise and the representation of Africans in all four Central African parliaments is liberalised and entrenched. The second is that the African Affairs Board is still regarded by the British Government as an essential organ through which British responsibilities to Africans are invoked. Twice the board has been overruled—but independence may be further off than Rhodesians think; and on the next occasion the Board may be upheld. Two decisions against it do not mean that it is a dead letter.

INDUSTRIAL RELATIONS

New Model Employers

FIFTEEN thousand employers in Great Britain received this week a booklet from the Ministry of Labour called "Positive Employment Policies." Its aims, no doubt, are sound enough; some of the specific examples it gives about manpower planning and systems of consultation in certain private firms and nationalised industries will be useful. But the same cannot be said of the pamphlet's treatment of one of its central themes: what to do about workers who become redundant. Now, when the unions are revising their attitudes on the subject after the easy postwar years, was the moment for a forthright statement. On the one hand, there should be no dismissals without adequate notice and reasonable severance pay, such as the dismissals that caused the strike at the British Motor Corporation last year; on the other hand, when it becomes obvious that a firm's business is not going to pick up quickly, workers should be given good compensation and told to find another job at once. What need to be avoided are long periods of short-time working, which are favoured by the unions but which stop workers moving where they are needed and have played an important part in keeping productivity today at the same level as at the end of 1955.

It is just these latter policies, however, that parts of the pamphlet appear to commend (largely, one suspects, because the permanent officials at the ministry had more to say in drafting it than the minister himself). Firms with too much labour, it implies, should first stop overtime and recruitment; they should transfer workers where possible to other parts of the firm; and they should organise short-time working, which "though too costly on a large scale and for a long time, can be used to tide over a temporary recession." This middle-of-the-road formula is designed to be acceptable to both sides of industry, who have so far been unable to reach any general agreement on redundancy. But even in the unlikely event of its succeeding in this, it will improve industrial relations only at the cost of lowering industrial efficiency. On balance, this pamphlet has not been one of Mr Macleod's brighter ideas.

FREE TRADE AREA

The Neutrals

IN Vienna and Berne, Mr Maudling has been probing the views of two of the three neutral countries, Sweden, Switzerland and Austria, which are interested in the free trade area. He has encountered a sympathetic atmosphere. Without a free trade area Austria, which is highly dependent on trade with Germany, would be isolated, pinned between a high-tariff common market and the Soviet block. Switzerland would be a lonely island at the heart of the community of six. Both countries have useful ideas to contribute to the negotiations. The Austrian finance minister, Dr Kamitz, for example, believes that regular meetings between finance ministers may have a vital part to play in the harmonisation of economic policies which is so essential to both European schemes. But the Austrians were certainly unaware, until Mr Maudling's visit, of the grave political obstacles which have still to be overcome; they may now throw their weight more vigorously into the fray.

The two countries, however, also have special problems which may complicate negotiations. The Austrians are seeking special protective arrangements for a wide range of industries. And for all the neutrals, the free trade area poses a political problem. The Russians have already made it clear that they consider the common market a political

alliance; and they have told Austria that membership would infringe its neutrality. As yet there has been no such Soviet objection to the free trade area; the politically looser concept seems rather more compatible with neutrality, and indeed the free trade area has aroused interest in Jugoslavia, Finland and Poland as well. In Paris, however, Mr Maudling is under pressure from the six common market countries to give the free trade area a stronger political core, and it is clear that the closer economic ties would tend towards a greater political unity. The framers of the free trade area will have the delicate task of giving expression to this and yet devising a framework which can embrace underdeveloped countries like Greece and Turkey, neutrals like Austria and Switzerland, and perhaps even, in time, other members further east.

A Mediator Wanted

MR MAUDLING'S race to get a free trade area agreement by the end of the year will be carried a stage further on Monday when his Ministerial Committee meets once more. The four months since it started work have not been wholly wasted. Detailed study is going forward on the technical problems of tariff reduction, on certificates of origin, on the future of EPU and on coal and steel. Solutions have been formulated on the movement of labour and the harmonisation of labour costs.

It is plain, however, that little headway has been made on the crucial differences which divide Britain from the other parties: agriculture, and the French wish for harmonisation of the external tariff of a free trade area, which so flatly contradicts the basic British conception of the scheme. On agriculture, a difficult reconciliation has still to be achieved between Denmark's need for markets and the protectionism of most other countries. Mr Maudling's talks in Brussels with the Danes and the Six do not appear to have achieved much. The tone of the British memorandum on agriculture was extremely irritating to some other countries. Though in British eyes it opened several doors to negotiation, any sort of precise commitment was carefully avoided. Here, as in the negotiations as a whole, there is a basic problem of political trust to be overcome.

If Mr Maudling is to have any hope of reaching his goal, new initiatives have got to be taken to bridge the gap between Britain and its partners. When the French government has put its view on paper there will be a better chance of progress. It will be even more helpful if Professor Hallstein, who is now to take part in the OEEC committee's work, can succeed in formulating a view that satisfies all six common market countries. Hitherto the commission and council of the common market have been busy with their own affairs. But more is needed than a mere confrontation of the different initial points of view. Somebody has got to put pressure on the delegations to compromise, or it will never be discovered how much ground they are willing to give up in the last resort. The common market treaty was driven safely home by Mr Spaak, a powerful chairman who stood between the two main combatants, France and Germany, formulating compromises and banging their heads together from time to time. In the free trade area negotiations the roles of chairman and advocate of the British case are combined in Mr Maudling's person. It is not easy for him to put forward compromises; for he has to argue the British brief.

POLAND

From East and West

POLAND seems to succeed in improving its relations with western countries without breaking its eastern ties in the process. The fact that an agreement, involving American credits to Poland worth about $95 million, is ready for signature in Washington, has not prevented Polish negotiators from doing a good deal in Moscow. The trade agreement signed there last week is considered favourable by the Poles.

The American agreement breaks no new ground; in value and pattern it is similar to the one signed last June. Once again the bulk of the credits—about $70 million—is earmarked for the purchase of surplus farm produce, chiefly grain, and is to be repaid in zlotys. The rest of the money is expected to come from the President's emergency fund. This second dose of economic aid to Poland is significant as proof that, despite the changes in the international situation, the American government still considers economic assistance to the Gomulka regime as a worthwhile political investment. Once again, however, the Poles have been partly disappointed. They hoped for more wheat than 400,000 tons (on this score American reluctance was probably due to Canadian pressure) and for more credits.

Mr Gomulka, when he met Mr Khrushchev in a Polish hunting-lodge last month, must have explained to him that serious economic difficulties lay behind the Polish search for American credits. Those conversations probably strengthened the hand of the Polish trade mission in Moscow. The new agreement foresees a 36 per cent increase in Russo-Polish exchanges over the next three years. The Russians will step up mainly their exports of raw materials, including iron ore, oil and products, cotton, aluminium and manganese ore; they will continue to supply grain. Most welcome for the Poles is the acceptance by the Soviet Union of a growing proportion of machinery and other equipment in its imports from Poland. No new credits have been announced, but the Poles should be able to use those granted in 1956 to balance the accounts.

BULGARIA

Murder in a Sofia Tram

COMPLAINTS about the growth of hooliganism are common in the communist press throughout eastern Europe. In Bulgaria, the regime has been trying to deal with the problem by strong-arm methods. According to reliable estimates, about 3,000 people were arrested towards the end of last month; many of them were packed off to forced labour camps without, as far as can be gathered, any preliminary trial. Those arrested included not only young roughs but also speculators, prostitutes, homosexuals and anyone, apparently, of whose morals or habits the police disapproved. Every effort is being made to link immorality and violence with bourgeois western influences. Girls wearing duffle coats have been arrested and only released after signing an undertaking that they would give up such decadent clothing. For some time the Communists had been trying to stamp out the addiction of Bulgarian youth to rock and roll. On this occasion communist agents substituted rock and roll records for ordinary dance records in some Sofia restaurants, and proceeded to arrest all who began to dance in the appropriate style.

The arrests were preceded and accompanied by articles in the Bulgarian press demanding the forceful eradication of hooliganism and the bourgeois western influences that are alleged to inspire the young delinquents. The press campaign seems to have been sparked off by a particularly lurid incident in which a young man was stabbed to death in a Sofia tram. The newspapers were righteously indignant that the other passengers made no move either to help the victim or to stop his assailants from escaping. Naturally enough, the press did not point out that after thirteen years of communist rule the ordinary citizen tends to mind his own business and to avoid contact with the police at all costs. But there are complaints in the Bulgarian press that the man in the street sometimes supports the culprit and protests at his arrest—not, presumably, from a liking for crime, but from dislike of the police. In either case, the police are regarded less as the guardians of law and order than as the indispensable props of a hated government. As for the hooligans, without condoning their aberrations, it is relevant to point out that many of them are moved to violence by the same frustrations and despair that made the Hungarian students so handy with home-made bombs.

EAST GERMANY

The Monolith Cracks

THE purge of three members of the east German Socialist Unity party has for the moment rid Herr Ulbricht of awkward opponents. Whether it will serve him well in the long run is another question. Popular dislike of the east Berlin government has been kept silent and passive since 1953, but it is now clear to all that there is a strong opposition within the party itself, and there is no longer any difficulty in identifying its leaders. Herr Oellsner, a leading ideologist now removed from the politburo, and Herr Wollweber, who lost his post as Minister of State Security last October and who has now left the central committee of the party, were both rigorous communists. Herr Schirdewan, who has been ousted from both central committee and politburo, has long been regarded as the possible heir. He is a figure whom loyal communists and, still more important, the Russians could accept as an alternative head of the regime, if it suited them to make a change. At long last the paper face of the apparently monolithic Ulbricht regime has cracked open.

The grave differences between Herr Ulbricht and his three colleagues date from the autumn of 1956, after the Hungarian revolt. The three apparently did not quarrel fundamentally with Herr Ulbricht's parrot-like repetition of the Russian line. They dissented on tactics—in particular from his harsh method of dealing with student discontent. They have been observing developments in Poland appreciatively, too. And more recently there have been differences on economic policy. Herr Ulbricht is determined to press on with collectivisation on the land; and he seeks to resolve the zone's industrial difficulties by the old-fashioned method of pushing up production "norms." Herr Schirdewan, for his part, evidently feels that such an extreme approach may boomerang, as it did in 1953. He and many industrial leaders of the zone feel, too, that Herr Ulbricht's wish for a radical decentralisation of management will produce industrial chaos. Here is a miniature version of the conflict between Mr Khrushchev and Russia's technocrats.

Herr Ulbricht, like his master in Moscow, has won a round. The purge is being followed by a campaign to decentralise and there are suggestions of higher working norms. Attacks on the evangelical church may be intensified. But how much all this suits the Russian book is not clear. Herr Ulbricht's inflexible methods—which are almost peculiarly unattractive, at once extreme and lacking in dynamic appeal—and the steady deterioration in the quality of the zone's leadership as he surrounds himself with yes-men, will hardly help resolve its economic problems. Yet the zone has an important place in the economic plans of the Soviet block as a whole.

FOREIGN WORKERS

Farm Dogs in the Manger

TRADE union resistance to the recruitment of foreign labour for grossly undermanned industries is notorious and virtually unbreakable in coalmining; sporadic and ineffective in transport (where the incomers are, in any case, not "foreign" but colonial); and a source of chronic friction and inadequate service in the catering trade. It has recently appeared in a new field: that of agriculture. Two county conferences of the National Union of Agricultural Workers, those of Bedfordshire and Hertfordshire, have deplored the "influx" of Italian farm and horticultural workers and urged the union's central executive to do all in its power to stop their entry entirely. The union's arguments, as stated at the Hertfordshire conference, are worth scrutiny. They do not rest on the danger—always painfully present, understandably though irrationally, in the emotions of the miner—of unemployment for British workers ousted from their jobs by newcomers. Nor, given the existence and enforcement of the minimum wage, is actual undercutting feared. The objection is that the availability of Italian workers could make it unnecessary for farmers to "compete in the wages field"—that is, to bid up the price of labour, in accordance with the battered old laws of supply and demand and without reference to official minima, so as to maintain the working force they need.

This is to let the cat out of the bag with a vengeance. It makes nonsense, to begin with, of the general, ingrained trade union and socialist belief that legislation and collective bargaining are alone responsible for keeping wages above starvation level. It displays agricultural trade unionism as no less restrictive in spirit and intention than the most hidebound of craft organisations; given that newcomers ease the labour market from the employers' point of view, it does not, after all, matter whether they are British or foreign—the main thing is to keep them out. The total agricultural working force is, in fact, continuing to fall. During 1957 there was, among whole-time workers, a net efflux of 11,000 men (or 2½ per cent of the previous labour force) and 3,000 women (or 8 per cent); and these figures only mark the continuation of a long-established trend. Set in this perspective a few hundred Italians, allowed in to fill the most urgent gaps, only after strict official inquiry has revealed that no British worker is available, are neither here nor there. The farm worker has every right to ask for more money and, if the farmer cannot afford to give it him, to better himself—as, in his thousands, he is doing—by seeking an industrial job. That is how standards are raised. But the role of dog in the manger suits him even less well than it does the miner.

EDUCATION

Teachers for the Techs

THE Ministry of Education has now made known its proposals for finding the greatly increased teaching staffs that are going to be required by the technical colleges over the next few years. This always promised to be a very difficult problem. If industry competes with the schools for scientists, how much more strongly does it compete for exactly the sort of people who teach technical school subjects ; in the past this has been at once a drain on the vitality of the technical colleges and a reason—though a bad one—for the low regard in which many technical colleges were held by business men. The Minister of Education is undoubtedly right, in his proposals, to make the proper staffing of the technical colleges, from which industry stands first to gain, a joint responsibility of industry, local authorities and the ministry.

The circular on technical college staff which he has issued this week to local education authorities follows closely the recommendation of the Willis Jackson report on the subject. Salaries were very substantially raised in 1956, and last year the recruitment of teachers just reached the target of 1,400 a year which the Wallis Jackson committee set for the five years to 1961. But the problem of raising the quality of the teaching remains. The shortage of teachers means that the full-time teachers are often sub-standard—and even so do too much teaching, and too little reading and practical work of their own. By providing better amenities, more leisure, and more clerical, workshop and laboratory assistants, the Ministry hopes to free the teachers from some of their chores. This, however, will depend in part on whether industry will give teachers facilities to refresh their knowledge on firms' training courses, and whether it will release its own staff more generously to teach part-time. The Wallis Jackson committee rightly called for much more intimate relations between industry and the technical colleges. The bigger firms already do much ; it is now for the medium-size and smaller ones to realise that unless they put something into the drive for more technologists they cannot expect to get what they want out of it.

VATICAN

What's in a Name?

A SPELLING can mean a great deal, to judge by the reaction of the German foreign office to the latest issue of the Vatican Directory. In it the dioceses in the former German territories have for the first time been called by their Polish instead of their German names. Bonn saw in this innovation a shift of position by the Vatican on the bitter question of the Oder-Neisse frontier.

The emergence of communist states has created a most awkward problem for the Vatican. After the victory of the Russian revolution there was an obvious clash between the Church's repugnance for the new atheistic regime and its century-old dream of bringing the Russians to the Catholic fold. The imposition of communism on areas of Eastern Europe inhabited by many millions of Roman Catholics complicated the dilemma further. The persecution of the Church by the regimes of these countries made the Vatican's choice somewhat simpler. In the particular case of the former German territories now held by Poland, the interests of the German clergy were also at stake and so the Vatican decided not to appoint any bishops to Breslau, Oppeln, Danzig and two other sees. The empty seats were a sign of papal refusal to accept the new frontiers as juridically settled ; naturally this led to friction with the Polish government.

Mr Gomulka's victory, followed by a more tolerant attitude towards the Church, once again changed the issue. The Vatican's first reaction was to appoint Poles as capitular vicars (administrative heads) in the controversial bishoprics. Nevertheless, when the Polish primate, Cardinal Wyszynski, visited the Vatican last May after his release from jail, the Pope showed apparently little enthusiasm for the cardinal's compact with the new regime. An encyclical letter at the time warned the faithful against communism. The Vatican's policy now seems to switch back towards compromise ; this, at least, is the conclusion sorrowfully drawn at Bonn.

SOVIET UNION

David and Goliath

ALL those who engage in trade with the Soviet Union have an interest in a case now proceeding in Moscow between two Israeli companies and the Soviet oil export corporation *Sojuz Neftexport*. The two companies have a three-year contract for the supply of oil which, upon the Israeli invasion of Egypt in November, 1956, the Soviet corporation refused to fulfil. At the time Neftexport said that it had been denied export licences ; it has since produced a letter from the ministry of foreign trade forbidding it to perform the contract. When making the contract the Israeli companies accepted the provision—normal, though not invariable, in dealings with the Soviet Union—requiring all disputes to be referred to the foreign trade arbitration tribunal established in Moscow in 1932. The tribunal is most often invoked in disputes concerning the quality of goods or delivery dates, and in these matters its reputation is good. In cases involving high policy, the foreign applicant appeals to it with less confidence.

To Neftexport's plea of *force majeure*, the Israelis reply that the corporation is to all intents and purposes a department of the ministry of foreign trade, and a body cannot exercise *force majeure* against itself. If this line of argument fails the Israeli lawyers in Moscow have two others: Soviet law does not give the ministry power to cancel contracts, although it does require contracts to be submitted to the ministry before signature ; and secondly, that in the absence of special provision, the possibility of government intervention is a seller's risk and not a buyer's.

Neftexport's action in cutting off supplies to Israel appears to be the first example of a breach of a commercial contract for which nothing but a political reason is adduced. The Israelis, refusing to accept political discrimination in a business arrangement, are challenging the Russians in their own court with the slings and arrows of outraged rights. One consideration may work in their favour and put the Russians in a dilemma: the Soviet tribunal may feel some reluctance to damage its own standing with foreign traders by giving an obviously political judgment.

Colonel Blimpov in Retreat

PROBLEMS of military deportment are not usually thought to loom large in socialist ethics. Stalin, however, transformed the Red Army into a disciplined and stratified body that could impress even a Prussian. His successors, particularly since Marshal Zhukov's dismissal, have been trying to break this caste system in order to undermine the army's special position. As a result, human voices can now be heard coming from under the officer's uniform, voices recalling complaints that other countries know well. Thus a worried lieutenant puts a pertinent question to the *Red Star*, the army's newspaper:

> It is known that an officer cannot carry food parcels or other bags. But what should I do when I am with my wife on the market or in a shop and we have bought many goods ? My wife carries the lot and I walk beside, "relaxing." Admittedly I must have my right hand free to salute . . . but could I not carry the bag in the left and help my wife ?

The voice is new in Russia ; it is not isolated. In the same issue of the paper a colonel's wife is criticised for insisting on being served out of turn in a shop. When challenged by other wives she replied: "When your husband has served 20 years and has reached a high rank, you will be served without queueing." Not so long ago officers' privileges were taken for granted and any attack on them was rebuffed as an attack on the army's prestige. The taboo is losing its magic.

Naturally brass-hats are putting up what resistance they can to encroachments on their privileges. At one meeting a superior officer under verbal fire snapped back at his critics: "You have learnt to grumble at meetings, but you have not learnt to shoot." There was a time when this would have put an end to argument, but today *Red Star* dismisses it as an intolerable way to react to healthy criticism. An important social struggle, not unconnected with Marshal Zhukov's fall, is revealed by these apparently trivial snippets from the correspondence columns of the army paper. In this battle, Colonel Blimpov is in retreat.

RIGHTS IN LAND

The State as Landlord

LAND nationalisation is not at present a live issue. But the relation between land ownership and management and the public interest is, as the Land Powers (Defence) Bill shows, a very live issue indeed. The old problems disguise themselves as a question of individual liberties (as in cases of compulsory purchase for the services) or of the farmer's proper income (as at each annual price review). It is thus altogether in keeping with its job that the Fabian Society should sponsor a pamphlet* which inquires, by way of pro and con argument, whether outright State ownership of land would not make that relation more harmonious. On the positive side are all the arguments resting on the need for large-scale capital investment, nationalisation of holdings, and raising of management standards, which were evoked in the case of coal and which can be respected by non-socialists as well as by socialists. Mr John Mackie, putting the nationalisers' case, adds to these a curious rag-bag of unsupported and sometimes contradictory assertions. Tenant farmers suffer on page 4 from the fact that ownership of their land may change hands ; on page 7 they have too secure a tenure. Land administered on behalf of absentee owners is "invariably badly managed." Differential rents for good and bad land cannot be applied unless farms are let by the state. "We must farm our land to the full. We cannot do this if we have no say in who occupies it."

It is discouraging, in this day and age, to find still surviving in educated minds the picture of an omniscient and progressive central expertise, infallibly seized both of the national interest and of the detailed means of serving it, contrasted with a private selfishness and whim out of which no public benefit can, except coincidentally, arise. It is equally disconcerting to rediscover the parallel dream of a bottomless source of investment funds to be tapped by any industry governed by a national board. Compared with these, even the experience-proof idealism which advocates at once full responsibility to Parliament and a local and decentralised organisation free of bureaucratic red tape or the emotional doctrine that "we must farm our land to the full" is unimportant. Mr Walston, arguing the negative case, has very little difficulty in demolishing his colleague ; he suggests a "functional" and experimental public ownership of "such areas as can be shown to be producing less than they should because of their present ownership"—which might be a promising idea were any criterion for choosing such areas reliably available.

* "Land Nationalisation, For and Against." By John Mackie and Harry Walston. Fabian Society. 19 pages. 1s. 6d.

The Economist

FEBRUARY 13, 1858

WHO SHOULD VOTE?

The great bugbear of the Conservative party in all ages and States has been what is vulgarly called "Mob-rule,"—that is to say, the predominance of the unreflecting and transient prejudices and passions of masses of men, whose minds have not been educated to entertain more than one idea at a time; and who have no notion of the comparative proportions or relative bearings of different questions. Against committing the vessel of the State to such rash and inexperienced navigators, Conservatism has justly protested in the interests of common-sense. The protest has been admitted by the most sagacious of the Liberal party, and the question has virtually resolved itself into one as to the grade of society at which the individual appellation of citizen ceases to be applicable, and the generic epithet "mob" commences. The *mobile*, untrained classes have been usually identified with the uneducated, and we accordingly hear every now and then of the educational test as the golden rule for separating the wheat from the chaff, and giving us a true citizen constituency. It has, however, unfortunately, been also discovered that education is a word of many significations, and that more than one of these are scarcely better calculated to secure the desired result of a reflecting citizen than the old state of things. On the other hand, should a more rigid interpretation of the term "education" be adopted, we are afraid that our constituent body will not merely receive few accessions, but will be subjected to a very considerable abstraction from the number of its existing members. . . . The "untrained" classes, then, have already part possession of the sacred precincts of the Constitution,—and the question is not whether we can thrust them out, but whether we can render them more worthy of the position they occupy, and whether others, who have not been fortunate enough to obtain admission, may not already or very speedily be able to advance equal or even better claims to such a distinction. It may soon become an important question whether the spirit rising up among the artisans in our great cities is not more akin to the old *Conservative* definition of a citizen, than that which animates some of those to whom social position and customary courtesy attribute a superiority.

How economical is YOUR transport?

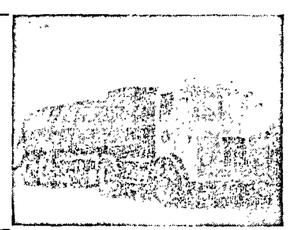
With co-operation, wise planning and reliable, efficient transport, BRITISH ROAD SERVICES help you to keep down costs.

TRANSPORT TODAY — with all its ramifications— can form a very important item in a company's costs. B.R.S. realise this and strive to see that you receive real value for the money you spend with them. Real value is service and reliability, which they set out to provide through their unrivalled nationwide facilities. They co-operate fully to obtain for you your full money's worth, *for they believe in service.*

Economical advantages

Planning: Economical transport begins at the planning stage and B.R.S. have enthusiastic, experienced men eager to co-operate with you in devising the most efficient means of moving your particular goods. They will advise on palletisation, mechanical handling and other modern techniques, and with their up-to-date knowledge they can often suggest very real economies for you.

Vehicles: B.R.S., with their vast resources and their huge fleet of many different types of vehicle, are able to provide the most suitable and economical vehicles for your load, or, if need be, they will adapt existing ones, or build new ones to suit your particular purposes.



Precautions: No practical security measure is overlooked, and careful precautions are taken to safeguard perishable or valuable goods. The 24-hour engineering service — on call all over Britain — ensures that all equipment is kept in tip-top condition by planned preventive maintenance. B.R.S. aim at reliable services for you and safety for the public.

Behind the scenes: A teleprinter network links all B.R.S. depots throughout Britain and speeds communications. Special instructions are passed over it to ensure that your needs — and those of your customers — are properly cared for. B.R.S. realise how valuable customers are — to you and to them.

All these advantages, and many more, enable B.R.S. to provide you with reliable, fast, economical transport, transport that *really* justifies its cost.

Just telephone your local man — action will follow immediately.

Most suitable vehicle. This articulated vehicle carries a load of 15/16 tons. Whilst the trailer is loading or unloading, the tractor can be busy elsewhere, helping B.R.S. to give good service at reasonable cost.

British Road Services

LETTERS

The Labour Party

SIR—Harold Laski did not prophesy that "when Labour won a majority at the polls, the vested interests would not accept the electors' verdict." What he said was that such acceptance was exceedingly unlikely should Labour seek to effect those fundamental changes in the economic and social system to which it is pledged by its constitution.

None of the legislative measures of the post-1945 Labour Governments involved such fundamental changes. The possible exception was the nationalisation of steel, to which the British Iron and Steel Federation opposed bitter resistance and an uncompromising refusal to co-operate with the Government, even after the measure had become law. The current pronouncements of the leaders of the industry and your own prediction that the first fruits of a Labour victory at the next election "will be something like economic catastrophe" suggest that to call Laski a false "prophet" may be somewhat premature.—Yours faithfully,

London, N.W.3 RALPH MILIBAND

Atomic Risks

SIR—The statement in your article "OEEC's Nuclear Agency" of February 1, 1958, that "atomic accidents, though rare, can be such that the insurance companies dare not underwrite third party risks," is entirely without foundation. In fact, the insurance markets, both here and abroad, have made special arrangements for the insurance of third party risks of nuclear reactors and are in a position to offer cover up to substantial amounts. In accordance with their usual practice the markets have to set limits to the amount of cover they offer, and it may be that this caused confusion in the mind of your correspondent. The British Insurance (Atomic Energy) Committee, comprising both companies and Lloyd's, was formed in July, 1956, to underwrite both material damage and third party risks in respect of atomic reactors in this country and overseas, and is in close collaboration with similar organisations in North America and in most of the countries of Europe.

It may interest your readers to know that quotations for third party and other risks have been submitted by the British Insurance (Atomic Energy) Committee in connection with the OEEC Halden reactor to which your correspondent refers.—Yours faithfully,

British Insurance (Atomic Energy) Committee H. T. SILVERSIDES Chairman

[A Business Note discusses the latest developments in atomic insurance.—EDITOR.]

Profits Tax

SIR—When you write "the real cost of dividends on ordinary or preference capital is 127 per cent of their nominal gross amount" you understate your case against the profits tax as "a prize example of untidy expediency and fiscal muddle." You ought also to take into account the fact that profits tax is not allowed as a charge in computing liability for income tax.

The full costs of various kinds of expenses, each of £100, as charges against profits before tax, are:—

	£
An ordinary business expense, allowable as a charge against profits	100 exactly
A special expense, not so allowable (to be exact £$\frac{200}{1\cdot09}$)	183
A preference or ordinary dividend (to be exact £$\frac{169}{1\cdot09}$)	155

The £155 is absorbed thus:—	£
Income tax on £155 at 8/6d.	65·9
"Undistributed" profits tax on £155 at 3 per cent.	4·6
"Distributed" profits tax on £100 at 27 per cent.	27·0
The net dividend	57·5
	155·0

The absurdity is that, though the company has paid out the whole £155—£97 10s. of it to the tax collector—the company is deemed to have enjoyed non-distribution relief on £55.—Yours faithfully, S. A. WETHERFIELD

London, W.1

London, E.C.2

[The clot apologises for not writing clog.—EDITOR.]

Road Haulage

SIR—In your informative article on lorries, you omit one point which seems to me important—what is the real cost of road transport? What with subsidies, exemptions, and allowances, it is difficult, I admit, to find the real cost of any service. But one must explain how road hauliers, driving their rubber-tyred vehicles up and down hill, can compete in price with a railway train running along level tracks with steel tyres.

No doubt door-to-door service is a great convenience and well worth an extra charge. But in fact, I contend, road transport is carried on at the expense of the public. In all forms of transport the governing factor is the "permanent way"; this explains the cheapness of ocean transport—nature has provided the permanent way. For the haulier the ratepayers repair, light, police, and signal his permanent way—the road; all the motor-owner has to do is to provide the lorry. If you send goods by railway, the main cost is not the train (as most people imagine) but the track, depots, and so on; private capital bought the land over which the railway works.

Since "nationalisation" the taxpayer owns the railways; so we all lose the money paid to hauliers for long-distance transport, while as ratepayers we lose the extra rate contribution from railway receipts, since our railways are rated, unlike other property, on their actual profits.

Note, finally, the cost of road casualties, estimated by Lord Mancroft at £110 million in 1956. Is there any good reason why our roads should be cluttered up with these huge long-distance lorries? The West German Government is trying to move goods traffic back to the railways by announcing that no new licences will be issued for lorries with a laden weight of 24 tons, or with a length, trailer included, of more than 46 feet.—Yours faithfully, J. E. ALLEN

Cambridge

Export Insurance

SIR—In your issue of January 18th Mr Frank Nixon refers to the vital problem of credit risks assumed by the Export Credits Guarantee Department and suggests that co-operation between it and the insurance world would greatly benefit the country. Having had many years' experience with the credit and financial aspects of American and Canadian markets, I would say that his suggestion is not the best solution. In fact, I believe that the ECGD and the insurance companies both realise the difficulty of guaranteeing the credit of customers thousands of miles away, particularly in the United States and Canada, whose economies are so dynamic and volatile.

I discussed this question with British insurance representatives in 1956 and 1955 when I was located in New York. They appreciated their lack of familiarity with American markets and the need for specialised knowledge and techniques to arrive at correct evaluations of credit risks. They knew that close proximity to these markets was essential if sales were to be promoted through sound credit-checking methods and substantial losses avoided. About the same time, the firm with which I was associated carried on negotiations with the ECGD for an arrangement between them whereby my firm would contract to do the actual checking of the credits to American customers of British companies and assume part of the risks. We would have also collected the accounts and remitted the monies, visited the customers, advised them on their affairs, attended creditors' meetings in the event of insolvencies or other troubles, and helped in reorganisations when necessary.

These are the kind of services rendered by specialised bankers or factors in the United States. A tentative

agreement was drawn up and forwarded to the ECGD finally for its consideration, and due thought given to the need for reconciling differences in the British and American laws. However, time dragged on, and the matter seems to have been lost sight of.

Nevertheless, I think that interest in this subject should be directed into the channel that I have tried to outline, particularly in these troublous times.—Yours faithfully,

Andover RAYMOND V. MCNALLY

The Summit

SIR—Your article "Other Side of the Summit" gave a timely reminder that if the West does eventually go to a summit meeting with concrete and useful proposals that the Russians would be well advised to consider, there will be no guarantee of an agreement. The article then suggests that "some agreement of limited scope might be reached. If it were not, the blame for the European deadlock would be seen to lie with the other side." Permit me to limit my comments to this last proposition.

Surely, blame-fixing is not a novelty in Soviet-Western relations. Ever since the sterile negotiations at the Palais Rose our statesmen and political commentators have been confidently predicting that if the next round of negotiations are wrecked, Russia will stand condemned for ever in the eyes of world opinion. This was said before the summit meeting at Geneva, on the eve of the Foreign Ministers' meeting which followed and throughout the protracted disarmament talks which took place last year at Lancaster House.

And yet each time the exercise in blame-fixing misfired. After the collapse of each meeting the pro-Western section of world opinion denounced Soviet duplicity, the fellow-travellers thundered against Western intransigence, while those in two minds persisted in their belief that both sides were to be blamed.

In the circumstances, what makes you think that the failure of another summit meeting will offer a sceptical and ill-informed public opinion a clear indication that the Soviet leaders are the only villains?—Yours faithfully,

LIONEL BLOCH

London, W.8

Canadian Liberals

SIR—Your Ottawa correspondent lassoed the wrong maverick in his report on the Canadian Liberal convention (in your issue of January 25th). The bucking bronco who opposed Messrs Pearson and Martin for the liberal leadership, and whose name threw your correspondent, was Mayor H. Lloyd Henderson, MP for Portage La Prairie.—Yours faithfully,

London, W.8 J. DOUGLAS TURNER

[Misreading of a cable was the cause of this lapse, for which an apology is due to Mr Lloyd Henderson. Our correspondent is still on horseback.—EDITOR.]

BOOKS

Too Serious a Business

Soldiers and Goverments

Edited by Michael Howard.
Eyre and Spottiswoode. 192 pages. 21s.

Armies and Men

By Walter Millis.
Cape. 382 pages. 25s.

"AT MR 843958 Lieutenant L. E. Fusil in command of B Platoon (less one section) of A Company, the 3rd Blankshires. . . ." "To dominate the psychological will of the enemy, Waritania that year had to adopt either the offensive or the defensive." Between these poles of absurdity military history swings freely and uneasily. The regimental tie school of military history finds most favour with the public. In this country the reader is bombarded with the eye-witness account of this or that commando raid; in the United States he is being instructed on which brigadiers were drunk at Chickamauga and which were sober. Men, of whatever rank, in action on the battlefield is the theme; impressionism is the method. It is as well to be reminded of the courage, self-sacrifice, brutality and cowardice of men in uniform; but politics, strategy, policy and criticism go by default.

The high Clausewitz school has always had fewer practitioners, not least because it has required more critical, more intelligent pens. But some of its predictions went sadly awry in the last war and, with present day debates on nuclear deterrents and the like to occupy their attention, writers of this school find the past less inspiring, though they draw upon it to provide the occasionally apt—and sometimes the misleading—analogy. Much of the most attractive work on military history has thus recently come from the middle-of-the-roaders. The single battle or the single campaign—Gallipoli and Cassino are excellent examples—are critically narrated and appraised. And within that category can be placed many of this or that general's memoirs, though their worth can often be tarnished by the air of apologia.

The difficulty of portraying the single campaign or battle will always confront the military historian, but his task, of avoiding the too particular without straying into the easy, meaningless generalisation, should be made easier by the growing influence of another school of historians. They see military policy as a continuing development, related to political, economic and social history and undivorceable from it. In his three recent volumes of the decisive battles of the western world, Major General Fuller tried to bind the marriage knot and, however one may dispute some of his conclusions, the attempt deserves applause—and emulation. But the need and usefulness of seeing military history in this light has perhaps been best expressed recently by Mr Michael Howard in his introduction to the volume edited by him, "Soldiers and Governments." The theme of this symposium was the relationship of the military and civil powers; much of the discussion in this admirable series of lectures—in which those on Britain, France and the United States were particularly stimulating—was confined to the army as a weapon directly interfering with the civil power or threatening it. All the lectures, ranging over a large number of countries, have something fresh to say upon this theme. But in his contribution Mr Michael Howard goes deeper, enlarging his argument to touch upon the indirect pressures the brass hats can bring on the frocks and the frocks on the brass hats. The questions of liberty and security, he says in effect, can no longer be put in terms of a tiny standing army as it was put at inordinate length by the Whigs in the eighteenth century. The nation in arms presents different questions and demands different answers.

That too is one of the themes that concerns Mr Walter Millis in his "Armies and Men." In this thoughtful study of American military history he traces the development of military policy from the American Revolution up to the present day. It is refreshing to find a book which gives far more space to Mahan and Elihu Root than to Grant or Pershing, and a book, moreover, which does not get lost in details of weapons, men and battles. Mr Millis emphasises, in line with most military studies published since the invention of the H-bomb, the importance of technical and industrial developments in military weapons—just as, under the influence of the Napoleonic campaigns, it was once the fashion to dwell on strategic and tactical manœuvres on the ground.

In the American Revolution, Mr Millis sees the emergence of the problems of the nation in arms—problems that re-emerged in the Civil War, when in addition both the civil and military powers had to adjust their thinking to the industrialisation of war. To those problems, he then suggests, were added the influences of a managerial revolution (war had become so big that it demanded the skills, misapplied though they often were, of the specialist general staffs) and of a scientific revolution, where the application of research and technology to the killing of a man or a country may, in Mr Millis's opinion, have led to the hypertrophy of war. Neither Mr Millis or Mr Howard would expect complete acceptance of their theses, but it is from the stimulus of such books as theirs that military history may lose its stigma as a narrow and arid study.

Soviet Expansion

Soviet Statistics

By A. Yezhov. Translated from the Russian by V. Shneerson.
Foreign Languages Publishing House, Moscow. London: *Central Books.* 132 pages. 3s. 6d.

The Soviet Statistical Handbook, 1956. *A Commentary*

By Naum Jasny.
Michigan State University Press. London: *Angus and Robertson.* 212 pages. 35s. ($4.95).

THE first postwar Soviet statistical handbook was published in Moscow in 1956 and an English translation from it appeared last year. Welcoming it in these columns, the reviewer paid tribute to the output statistics of individual materials and goods, but declared that "much of the figuring is of dubious value in Western eyes—particularly that which should give the best indication of the growth in activity." More recently, Mr Khrushchev's claim of a 33-fold increase in Soviet industrial production since 1913 provoked an argument over the validity of Russian statistics in the correspondence columns of *The Times,* in which the last space, although hardly the last word, was given to the Russian academecian, Dr Ostrovityanov. The heavy shadow of doubt remains.

The reluctance of Soviet statisticians to disclose details of their calculations has persisted: the notes in the English translation of the handbook are of the barest. The first of these two new books about, rather than of, Soviet statistics is prepared by the USSR Central Statistical Board and might have been expected to fill the gap. It helps, but it is a tantalising little book. One-third of it is given over to a history of the collection of statistics from the tsarist days when they were "superlatively irregular, slovenly and primitive" to the perfect system of today which produces "*authentic* and *timely* statistical data." The rest of the book makes some attempt to describe the statistics, but in what a tortured and incomplete way. The reader searching for details of the controversial index of industrial production will discover its broad outline by picking his way carefully through the stilted sentences. He will deduce that it is formed by summing the gross output of all industrial enterprises, valued in constant prices of a fixed base year. But he will learn nothing about the value of Soviet production today, its composition or the methods of repricing. Throughout this book there is never a whisper of the difficulties in defining economic data, of the inadequacies in practice, of the errors involved.

Mr Jasny, on the other hand, sets out with the greatest mistrust of all Soviet statistics. He may feel he has just cause: he has spent some considerable time studying them. Yet sometimes this seems to have made him unduly waspish, and he will blame the Soviet statisticians for not publishing statistics (such as the number of dependants of farmworkers) that more sophisticated workers in other countries might be hard put to it to provide.

Mr Jasny produces enough evidence to show that inflation has crept into the long-range estimates of the growth of industrial production and national income and usefully assembles various private estimates that have been made, although he omits those of Mr Seton of Oxford. But he does not argue his case well. He does not adequately discuss the conceptual differences between a "gross-value" index like the Soviet one and the "net value" Western indices. His book, in fact, consists of a series of comments in note-form on a selection of the statistics, rushed into print to follow the handbook as soon as possible. It is, however, a very useful cautionary notebook for those who want to study the handbook in detail. As to the general indicators of economic activity—national income and industrial production—he shares the view of most research workers that they grossly exaggerate the growth between 1913 and 1950; since then he is less sure. Indeed, Mr Jasny's only complaint of the current index of output is that the pricing excludes turnover taxes. In this instance he is more kindly than some other Western commentators.

A Geophysical Giant

Nansen: *A Family Portrait*

By Liv Nansen Høyer.
Longmans. 269 pages. 30s.

WHEN Fridtjof Nansen was elected Lord Rector of St. Andrew's University in 1926, he told his student audience:

> My friend Roald Amundsen said to me the other day that he was glad not to have been born any later, for there would have been nothing for him to discover but the moon.

Nansen himself begged to differ. For him there would be—and was—always something new beckoning. Surely he would somehow manage to be the first human being to girdle the earth in a sputnik if he were alive and young today. He was a scientist before he won fame as an explorer, and he remained a scientist to the end; at the age of sixty-eight he was bent on making a flight to the North Pole in the Graf Zeppelin to resume the Arctic investigations that he had begun in 1882, and this was no romantic dream but a carefully planned operation, frustrated only by death. Nor were the horizons of science and exploration wide enough for the men whom the "Nansen passport" has immortalised as the world's great champion of the stateless refugee, and whose famine relief work in Russia is almost equally well known. Outside Norway, however, few people remember his part in his own country's successful campaign for independence, his service as the first Norwegian envoy in London, his delicate negotiations in the United States during the first world war—or the fact that somewhere, somehow, along the way he fitted in lecture tours, travels and a wealth of good works.

Such a man might be expected to have scarcely any family life at all. As his daughter's account shows, his long absences imposed an inevitable strain. (She herself was six months old when he set out for the North Pole in 1893, not to return for three years). Yet the family bond was strong. The letters and diary entries quoted in this intimate biography reveal a different Nansen from the man who strode, lonely and dedicated, across the polar ice and the international scene. Nansen was not always austere, withdrawn and hungering for the wilderness. He was also capable both of warm and lasting love and of flirtation. Once, indeed, his weakness for gaiety and feminine charm led him into a situation that endangered his first marriage (Mrs Høyer tells us nothing of his second). His relationship, as a widower, with his five children was a difficult and sometimes a harsh one. It is described here with a touching affection and directness, which Mr Maurice Michael's translation captures with complete success.

Mr. Kennan

Russia, the Atom, and the West
BBC Reith Lectures 1957

By George F. Kennan.
Oxford University Press. 120 pages. 10s. 6d.

MR KENNAN'S Reith Lectures delivered in November and December have probably stimulated more discussion than any other piece of political writing since the war. The manner in which he questioned some of the assumptions of Nato policy has naturally caused embarrassment and resentment, particularly to the politicians and diplomatists who have to conduct Nato policy from day to day. The lectures have also been a good deal criticised on grounds of detail, particularly when Mr Kennan turned aside to outline possible alternative courses of action. Alternative courses are not easy to see in specific form and it is never possible to guarantee their success. It was, however, reasonably clear from the general tenor and structure of the lectures that Mr Kennan was not offering a "plan"; he was appealing for a reconsideration of the assumptions on which plans and policies are based. This fact has not saved him from being both praised and attacked as the author of a Kennan Plan. He can only protest that that was not his purpose, as indeed he does in the foreword to this book:

> Least of all would I think of recommending these reflections to governments as a finished programme for action. What I have tried to suggest here is not what governments should do but what they should think about.

Mr Kennan's ideas have already been extensively discussed in *The Economist,* and they are not, therefore, reviewed again here. One of the lectures now published was never delivered: its theme is Anglo-American relations, and Mr Kennan decided when the time for its delivery came—the week of the Nato meeting of heads of governments in Paris—that it

British Pressure Groups

THEIR ROLE IN RELATION TO THE HOUSE OF COMMONS

J. D. Stewart

This is the first serious book on the subject to appear in this country. It discusses the parliamentary activities of groups since 1939 and is based on facts as recorded both in Hansard and in the reports and journals of the groups themselves. 30s. *net*

British Transport Policy

J. R. Sargent

The author examines the whole problem of public transport in the light of the 1953 Transport Act, a piece of legislation described as 'potentially revolutionary', and ends with some proposals of his own. 15s. *net*

The Chemical Industry during the 19th Century

A STUDY OF THE ECONOMIC ASPECT OF APPLIED CHEMISTRY IN EUROPE AND NORTH AMERICA

L. F. Haber

This book fills a gap in the economic history of the nineteenth century by describing the origins and rapid growth of one of the modern world's key industries. The author is the son of the distinguished German chemist who discovered the Haber process for the fixation of atmospheric nitrogen. 45s. *net*

George F. Kennan's
RUSSIA the ATOM and the WEST

The 1957 *B.B.C. Reith Lectures*

echoed round the world—they have even been a talking point in Moscow, where Professor Kennan was U.S. Ambassador in 1952-3. The 'jettisoned' lecture is printed here, in addition to the six that were broadcast. 10s. 6*d. net*

OXFORD
UNIVERSITY PRESS

had become more urgent to talk about the purpose for which Nato exists, in the hope of turning the attention of the Nato governments to wider matters than their purely military association. When the lectures are re-read, their moral consistency and intellectual content fully justify the stir they have made.

Why Business Invests

The Investment Decision: *An Empirical Study*

By John R. Meyer and Edwin Kuh.
Harvard University Press. London: *Oxford University Press.* 292 pages. 48s.

ONE of America's leading economists once remarked of the celebrated prewar Oxford inquiry into business behaviour that it showed "marks of the gentleman-amateur," and added that he would like to see "one of our high-powered fact-factories, armed with modern statistical equipment, a staff of inquisitive ex-social workers and a grain or two of common sense, set off in pursuit of the elusive policy-maker." It is greatly to the credit of the authors of "The Investment Decision" that they have not merely accepted the spirit of such a challenge but have also improved upon the suggested *modus operandi*. Their application of multivariate analysis to the study of American corporate investment is skilfully tempered with more than a grain or two of common sense; and, eschewing any ungentlemanly harrying of elusive executives, Messrs. Meyer and Kuh have instead relied for their data upon the co-operation of the United States Securities and Exchange Commission. A sample of some 3,750 observations is drawn from reported capital expenditures by over six hundred American registered corporations, spread over the quinquennium 1946-1950. The independent, or explanatory, variables are narrowed down by careful selection to seven: sales, profits, depreciation expense, current sales times the 1946-1949 peak ratio of gross fixed assets to sales, current change in sales, depreciation reserves and, lastly, net quick liquidity. Of these, the depreciation and liquidity variables are suitably lagged.

The broad conclusion which the authors arrive at after putting their statistical models through their paces is that no one "theory of investment" will stand up in all economic circumstances. It appears that in the short run the most important single determinant of investment decisions is the ready and abundant supply of funds within the control of the corporation. In other words, the dividend policy is very conservative, even when sales are booming. In the long run, however, the authors conclude from their calculations that firms try to maintain their shares of an imperfectly competitive market by behaving, consciously or unconsciously, in accordance with certain capital/output ratio formulations of the acceleration theory of investment. Besides these main findings there are several very interesting subsidiary results. One of these is that in the sample they have chosen, representative of large, medium and small American corporations, smaller firms seemed to grow quite as rapidly as large companies during the postwar boom. But with the recession of 1949, the larger firms maintained their trend whereas the smaller ones lost ground relatively. This point is of particular interest in view of the recent British studies of companies' financial experience between 1949 and 1953. On the question whether a more lenient fiscal attitude towards depreciation allowances tends to promote a more rapid rate of investment, the calculations themselves are inconclusive and the authors are a model of academic restraint.

Midland Life and Landscape

The Midland Peasant

By W. G. Hoskins.
Macmillan. 322 pages. 30s.

Leicestershire: *An Illustrated Essay on the History of the Landscape*

By W. G. Hoskins.
Hodder and Stoughton. 138 pages. 25s.

LEICESTERSHIRE has been fortunate in its historians. John Nichols gave it one of the greatest of all county histories a hundred and fifty years ago; Mary Bateson's "Records of the Borough of Leicester" set a fine example to other ancient towns at the end of the Victorian age; the six volumes of George Farnham's "Leicestershire Medieval Village Notes" are a monument of dedicated labour. Dr Hoskins has worthily carried on a distinguished tradition. He has concerned himself for more than twenty years past with the history of rural life and society in Leicestershire; and these two books represent, each in its own way, his considered statement of all that he has read and observed on the subject.

"The Midland Peasant" is a study of the economic and social history of Wigston Magna, a large village lying on the outskirts of Leicester: physically attached to the city, yet administratively and in spirit outside it. Even a casual motorist, driving through it on A50, will notice something odd in the double right-angled bend that the road takes through the chief streets and, if he has an eye for such things, in the presence of two medieval churches. For all its prosaic appearance, of scarcely relieved red brick, the village has a long and interesting history behind it. Dr Hoskins has mastered that history; and the result, in this book, is a leisurely, thorough account of it, based on wide-ranging research, informed with human sympathy and a knowledge of every backyard and hedge in the place. It is in this combination that the book's special merit lies. Manorial history, based solely on documents and with its emphasis on ownership, is sadly dull. Treated as it is here, with close attention to the tenants and small farmers who

actually worked the land, it is consistently rewarding.

The other book is a general sketch: a volume in a most admirable series (edited by Dr Hoskins himself), which has done much to increase our understanding of the physical appearance of England. The Leicestershire landscape is nowhere spectacular; but it includes a unique tract of country in Charnwood Forest, and in the east and south a series of rolling pastures of an unexpected beauty—even grandeur. Dr Hoskins dissects the history of this landscape in terms of settlement, agriculture, communications, industry, with close attention to the society of the county and the successive changes it has gone through.

These two books are not, however, merely descriptive. In both of them the author expresses, consistently and repeatedly, a point of view. His sympathies lie at all times with the peasantry and with the rural society of the past, against the mechanised world of the nineteenth and twentieth centuries. Some readers will find these opinions irritating—so many King Charles's heads. But they are genuine opinions, tenaciously held and worthy of respect. They impart a unity to these two books, a point and a purpose that most local history, whatever its charm or its scholarship, has lacked.

Explaining South Africa

South Africa: *Economic and Political Aspects*

By H. M. Robertson.
Duke University Press. London agents *Cambridge University Press.* 191 pages. 26s.

Race Attitudes in South Africa

By I. D. MacCrone.
Witwatersrand University Press (previously published by *Oxford University Press*). 328 pages. 25s.

The Cape Coloured People: 1652-1937.

By J. S. Marais.
Witwatersrand University Press (previously published by *Oxford University Press*). 296 pages. 22s. 6d.

REPRINTS of Professor Marais's "The Cape Coloured People" and of Professor MacCrone's "Race Attitudes in South Africa" will be welcome to all students of South African affairs. Both are invaluable; one's only regrets are that Professor Marais has not brought his book up to date with an account of events since 1937 and that Professor MacCrone has not continued his admirable juxtaposition of history and psychology in another volume.

Professor Robertson's "South Africa" consists of three lectures delivered at Duke University, and it is intended as a guide to an educated but non-specialist audience. It is admirably compressed; the historical background is dealt with in one lecture, apartheid in a second, and recent constitutional development in a third. Mr Robertson is always clear and avoids technical jargon; but recent constitutional development cannot be stated without complexity and this is probably the least interesting lecture to the non-specialist. His first lecture on the historical background, admirable as an introduction, is also of value as a refreshing bird's-eye view. In so compressed a statement individual judgment plays an important part, and one finds oneself in constant agreement, questioning only the statement that Mr Joseph Chamberlain "engineered the Jameson Raid" and the implication, on page 29, that those of South Africa's practices at which the rest of the world raises an eyebrow owe their origin to "colonial exploitation"; to most historians it would seem that they are of native growth and that the imperial power, so long as it had any influence in South Africa, was a restraining factor. The most valuable of the three lectures deals with apartheid. Mr Robertson rightly lays stress on the sincerity of the members of the Tomlinson Commission and of many believers in apartheid; his restraint and reluctance to draw conclusions give the more weight to his facts, which are that the government has so far rejected the constructive and accepted the restrictive parts of the recommendations made by the commission for the implementation of apartheid. Most observers would agree with him that the commission's estimate of the capital necessary for the development of the reserves is optimistic; most would consider understated his cautious appraisal of the difficulties of obtaining from the present electorate even so much as the commission considered necessary.

These are useful lectures for explaining in the United States, or for that matter in Britain, a highly complicated problem in a compressed space; in particular one applauds the similarities and contrasts drawn between the position of Great Britain as world policeman in the nineteenth century and that of the United Nations today, and between the Uitlanders in the Transvaal and the Texans in Mexico.

Europe Out of Date

Europe and its Borderlands

By Alan G. Ogilvie.
Nelson. 340 pages. 42s.

WHEN we were young, we were told that Europe stretched eastwards to the Urals, but today the Europe of everyday experience ends at the frontier of Russia, if not somewhere this side of Berlin. Professor Ogilvie's posthumously published book recalls us to a more ancient and more spacious conception. Here writes a geographer whose pioneer researches were made in a Europe before Hitler, a Europe which retained some claim to economic and cultural unity and spilled out its influence over the "borderlands" of the Caucasus, Asia Minor and Africa north of the desert.

Within this broad frame, Professor Ogilvie has left us a scholarly summary of the physical background of European civilisation. This is something that can be read with profit by any student of the geography of Europe, as can the brief studies, almost "profiles" in the newspaper sense, of the various countries and regions with which the book ends. Unfortunately the intervening chapters, on social and economic geography, show all too clearly the effects of the inevitably long delay between the writing of the book and its appearance under the guidance of Dr C. J. Robertson. It is to be regretted that a work published in 1957, more than ten years after the end of the war, should contain no real treatment of the immense postwar changes in European agriculture, so fully described in the publications of the Economic Commission for Europe and other official bodies. There is scant recognition that over all eastern Europe the whole economic and social order is being recast. Even where western Europe is concerned, the information given has been overtaken by events; it is really rather disconcerting, two years after West Germany's steel output had overtaken Britain's, to be assured that the Ruhr industries will one day rise from their ruins. The book, in fact, reaches us too late, for reasons that are obvious and understandable. Inevitably it will be overshadowed by far less worthy but more recently compiled publications.

Hitler Comes to Power

Documents on German Foreign Policy 1918-1945. *Series C, Vol. I.*

The Third Reich: *First Phase.*

Her Majesty's Stationery Office. 962 pages. 47s. 6d.

THESE documents begin a new series with the coming of Hitler to power twenty-five years ago; this first volume in series C takes the reader to the German break with the League of Nations in October, 1933. Certain details are filled in for well-known events, such, for instance, as the negotiation of the Concordat between Papen and the Vatican; it is seen that the Vatican consciously accepted the Concordat as compensation for the dissolution of the German Centre Party in July.

Disarmament fills a good many dreary pages. But probably the most interesting material in the new volume is that which is concerned with the repercussions in eastern Europe of a National-Socialist Germany. Poland was most immediately and most seriously alarmed, and it seems clear that its first reaction was to prepare to strike at Hitler quickly while Germany was still weak. As Moltke, the German Minister in Warsaw, wrote to Berlin on April 23rd, "There can hardly be any doubt that in military circles, particularly, passive waiting is considered a crime against the nation." As ever, Moltke's reports on Poland are efficient and moderate; on April 26th, he characteristically remarked that he could see no object in violent propaganda on the German wireless since "the anti-Polish temper of the German population is after all already more than adequate for present needs." It is interesting that Beck was at first regarded as an anti-German chauvinist, and that the reinforcement of the *Westerplatte* garrison was in fact described by Moltke in March as "typical Beck"; on May 8th Pilsudski himself remarked to the German military attaché in Warsaw that Germany "had done much against Poland in the last few years." Already, on May 20th, however, it became evident that Beck had begun that reversal of his policy which was to lead to the Polish-German Agreement of January, 1934. Meanwhile the Russians had been seriously agitated by the Nazi regime, and had put an abrupt end to the co-operation of their military authorities with the *Reichswehr*; unfortunately, the German Foreign Office file containing papers on this subject was damaged by fire, so that the evidence is scanty.

Hitler in power automatically made the Austrian question critical, since he regarded Austria as an indisputable portion of Germany. This volume, therefore, provides plenty of material about Austria. On the whole, members of the German foreign service, while demonstrating a cynically *grossdeutsch* attitude in what they wrote, advised some restraint on the part of the Nazi extremists; on one occasion Bülow quoted a foreign ambassador as remarking that, if Germany treated a weak state like this while it itself was still weak, it was easy to deduce its future behaviour towards others when it should have become strong. In his report to the Reich Government on April 7th, Neurath stated that "The Anschluss . . . cannot be actively promoted for the time being owing to Italy's opposition." Most of this report was cautious, but it included the words "An understanding with Poland is neither possible nor desirable"; this understanding was precisely what Hitler was to achieve within nine months from then.

The translation of these documents is occasionally a shade obscure for the English reader owing to American usage; doubtless we must accept this on the principle of the greatest happiness of the greatest number.

SHORTER NOTICES

Britain: *An Official Handbook. 1958 Edition*

Prepared by the Central Office of Information.
HM Stationery Office. 530 pages. 21s.

The Commonwealth Relations Office List. *1958 Edition*

HM Stationery Office. 279 pages. 21s.

The first of these two reference books keeps up the high standard of its earlier editions. It is now intended to revise it annually and publish at the end of each year. The amount of information it contains expands gently with each edition and some new charts and maps have appeared. For those unacquainted with this handbook, it was first launched to answer the queries of overseas readers about Britain: it now contains a wealth of well-written information about population, government, housing, national income, industry, transport, labour, finance, trade, and social conditions.

The second book is largely a directory. It lists, for instance, with some biographical notes, the present staff of the Commonwealth Relations Office, the United Kingdom representatives in Commonwealth countries and the Commonwealth High Commissioners. But it also contains short notes about the different countries, mainly about their history and constitution although the coverage here is uneven: Swaziland, for example, gets seven pages of description, Ceylon only two.

Britain's Nature Reserves

By E. M. Nicholson.
Country Life. 175 pages. 30s.

Although the Nature Conservancy was created only in 1949, it now manages over 50 national nature reserves, and many more are planned. These reserves are an addition to those already managed by other bodies—the National Trust, the Royal Society for the Protection of Birds, and other national or local organisations. They range in size from the 40,000 acres of the Cairngorms Reserve to others of less than 100 acres, and include most of the more important habitat types in Britain. They are preserved with many different ends in view: some as examples of undisturbed habitats which are protected from human interference, others which are deliberately treated to maintain a certain set of conditions; some primarily as public open spaces, others as research areas for scientists; some for their geological and others for their biological interest. The management of these reserves raises many complex problems, many of which Mr Nicholson, Director-General of the Nature Conservancy, discusses in the introduction to this book. The major part of the book, however, is devoted to descriptions of nature reserves in England, Wales and Scotland. In each case details of locality and access are given, and the history, principal points of interest and aims of the reserve discussed. The book is illustrated by 65 photographs, most of which are of a very high standard.

BOOKS RECEIVED

YOUR BUSINESS MATTERS.
By Frederick A. J. Couldery and Allen J. G. Sheppard. *John Murray.* 236 pages. 12s. 6d.
Written for the small trader by an accountant and an economist, this book is concerned with all the practical aspects of running a business. There are also chapters on the problems of growth and the dangers of failure and an appendix on minimum-wage legislation.

THE STORY OF PEPTIC ULCER.
By Richard Tonkin. *W. B. Saunders.* 71 pages 16s.
Dr Tonkin has managed to give authoritative medical advice on how to live with your ulcer—and still enjoy life—in a way that cannot fail to amuse even the most depressed dyspeptic. He also describes the causes of ulcers, putting the problem of "acid" in its proper place. His text is delightfully illustrated on every page by Mr R. K. Hellier.

ATHENIAN DEMOCRACY.
By A. H. M. Jones. *Blackwell.* 198 pages. 21s.
Studies of the working of politics in fourth-century Athens, designed to show that its democratic system was more efficient than its contemporary critics allowed, and more representative of the population than is usually believed nowadays.

RUBBER DEVELOPMENTS IN LATIN AMERICA.
By D. M. Phelps. *University of Michigan, Ann Arbor.* 174 pages. $5.00.
This is No. 3 of Volume XIII in Michigan Business Studies. It has chapters on competition in natural rubber production and competition between natural and synthetic rubber, as well as chapters, tables and diagrams on supply and demand.

A SHORT HISTORY OF NEW YORK STATE.
By David M. Ellis, James A. Frost, Harold C. Syrett and Harry J. Carman. *Cornell University Press.* London: *Oxford University Press.* 705 pages. 63s.

YEAR BOOK AND GUIDE TO SOUTHERN AFRICA, 1958.
Edited by A. Gordon-Brown. *Robert Hale.* 750 pages of text, 48 maps. 10s. 6d.

YEAR BOOK AND GUIDE TO EAST AFRICA, 1958.
Edited by A. Gordon-Brown. *Robert Hale.* 350 pages of text, 16 maps. 8s. 6d.

SELECTED PAPERS ON ECONOMIC THEORY.
By Knut Wicksell. *Allen and Unwin.* 292 pages. 30s.

THE LAW OF COPYRIGHT SUPPLEMENT.
By J. P. Eddy and E. Roydhouse. Reprinted from *Butterworths'*; Annotated Legislation Service. 46 pages. Supplement only 7s. Complete edition £2.

YEAR BOOK OF LABOUR STATISTICS, 1957. *International Labour Office.* 536 pages. £1 10s.

Men who carry the responsibility for new construction schemes are entitled to an assurance that the scheduled cost and completion date will not be exceeded.

Building to a Budget

THE BUILDING OWNER who makes use of the Laing Target Contract has this assurance. The final cost of the job is based on a target figure agreed between his architects or consultants and the Company at the planning stage. Working together as a team from the start, and calling on the Company's practical experience of construction methods, building costs and new materials, the building owner can have a realistic estimate and a reliable building programme.

Preliminary work can be started and materials ordered while design details are being finalised. Preplanning the entire project ensures smooth continuity of operations and speedy completion.

Building together from the beginning with John Laing and Son Limited means building to a budget.

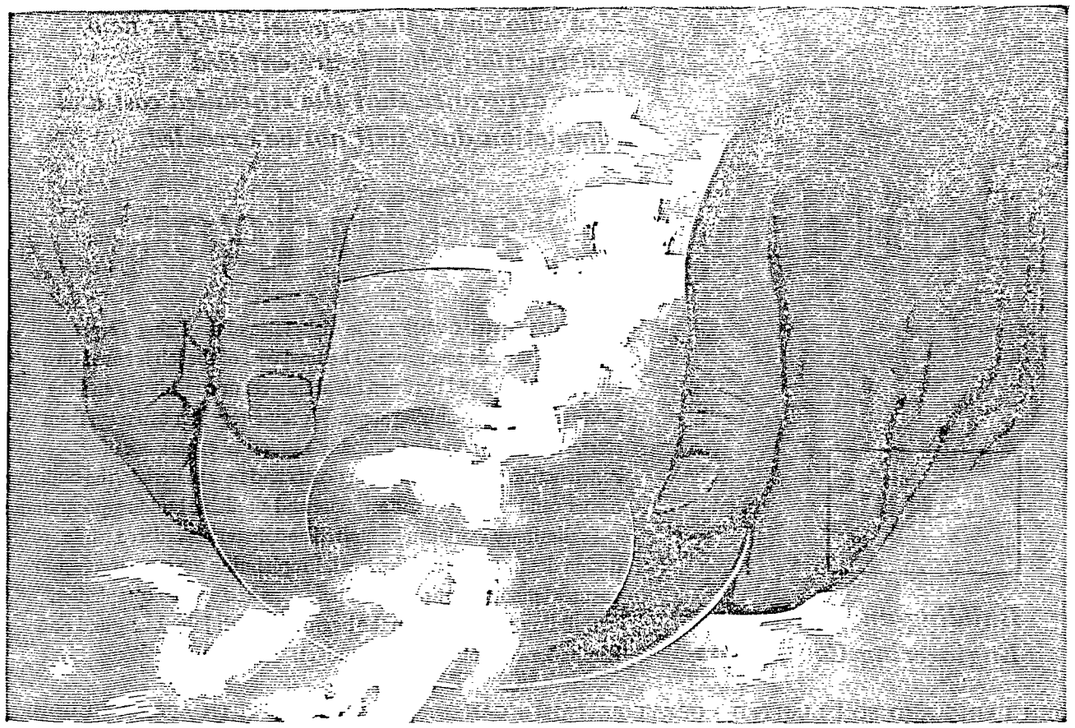
YEARBOOK OF INTERNATIONAL TRADE STATISTICS, 1956

Volume I: Trade data for 115 countries, including data for each country on commodity composition and/or provenance and destination. Global and regional summaries are included. 629 pp., paper.

50/- (52/- incl. postage)

Volume II: Provides data covering more than 90% of the world total, on the provenance and destination of trade in each of the seven major commodity classes chosen for their importance in the world economy. Summary data from Vol. I are included. 155 pp., paper.

11/- (12/- incl. postage)



YEARBOOK OF THE UNITED NATIONS, 1956

For public officials, scholars, teachers and others concerned with international affairs, this tenth issue of the **Yearbook of the United Nations** provides the most comprehensive account and documented review of the work of the United Nations and its specialised agencies during 1956 and early 1957.

It covers political, economic, social, legal, administrative and budgetary questions, non-self-governing territories, and the international trusteeship system. The Middle East crisis, the Hungarian problem, and a statute for the International Atomic Energy Agency are among the many subjects covered. 586 pp., cloth.

£4.10.0 (£4.12.0 incl. postage)

Mining the skies

Nitrogen from the air has become a key to a plentiful supply of stainless steel

BEAUTIFUL, enduring stainless steel owes its rust-free life to the alloying metal called chromium. Other alloying metals . . . manganese and nickel . . . are vital for added strength and endurance.

EVER-INCREASING DEMANDS for nickel have threatened the supply of stainless steel. But the people of Union Carbide have provided an answer. Nitrogen from the air —combined with chromium or manganese through metallurgy and added to the molten steel—helps nickel go twice as far . . . making it possible, with the same amount of nickel, to greatly expand the chromium-nickel stainless steel output.

THIS IS ONLY ONE in a long line of contributions from Union Carbide's metallurgists during a half century of alloy making. Fifty years ago there were only a few types of steel. Today, through the use of such alloys as chromium and manganese, there are tailor-made steels to meet every need.

THE FUTURE PROMISES even greater developments. The people of Union Carbide are constantly at work on new and improved alloys to make better metal products for all of us.

FREE: *Learn how Union Carbide products and research help satisfy basic human needs. Write for the latest edition of "Products and Processes." Ask for booklet 1E-2.*

AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

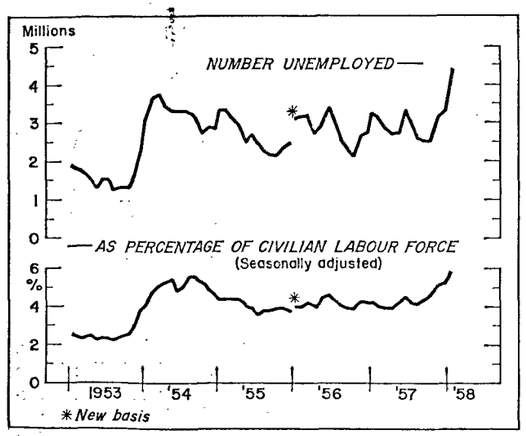
Tax Cut for Recovery?

WASHINGTON, DC

EVEN before the depressing figures for employment in January had driven the President to issue a special, reassuring statement about the business outlook, a distinct note of caution had appeared in discussions of the subject as a result of the evidence given by economists with a wide variety of views at the recent hearings held by Congress's Joint Economic Committee. The theme running through all the testimony—and specifically mentioned by no less a figure than Mr Martin, the chairman of the Federal Reserve Board—was that the current recession has some of the earmarks of a classical capital goods slump, a feature that did not characterise either of the two previous postwar declines in economic activity. Together with a mild falling off in exports and a temporary decline in defence orders, the drop in business investment in plant and equipment clearly initiated the recession. What is worse, no one believes that this downward movement, which began in this crucial sector of demand in the fourth quarter of 1957 and has gained momentum in the current quarter, will be reversed before 1959 at the earliest.

The figures are still somewhat indistinct, but are impressive nevertheless. A new statistical series on "appropriations" for investment by large corporations showed a 31 per cent decline in the third quarter of last year from the same period a year earlier. This is expected to show up in expenditures toward the middle of this year. New orders for machinery in the fourth quarter were off 21 per cent from the third quarter. The economist who had to report on investment gave it as his opinion that the decline "will last into 1959," will produce a drop of 10 to 15 per cent from the fourth quarter of 1957 to the fourth quarter of 1958, and will drop altogether by 15 to 20 per cent from peak to trough. He stressed that this would still leave investment this year higher than in any other year except 1956 and 1957. But this is not much comfort when the calculations show that a 20 per cent decline by, say, mid-1959 would reduce total demand by the impressive sum of $7.5 billion, or considerably more than defence expenditures can be expected to rise in the same period. The figure for capital "appropriations" in the fourth quarter is being eagerly awaited, as is the official government survey of business intentions to spend for the year 1958 as a whole. Neither, at the moment, is expected to provide much change in the generally depressing picture.

Meanwhile, the hearings produced some second thoughts on the stimulating effects of the big upsurge in defence orders expected during the first six months of this year. No one denied that this increase of some $5 billion would help, but there were several reservations. First, this bulge in orders is only enough to make up for the near-halt in ordering last summer, so that total orders during the fiscal year ending next June will in the end be no higher than in the previous 1957 fiscal year. Secondly, the rate of ordering will relapse to a more normal pace after June, little higher than in the past two fiscal years. Finally, as a result of both these factors, actual spending on defence will rise at a disquietingly slow pace.



Moreover, the hearings produced some doubts about the likelihood of substantial help coming from house building or from spending by state and local governments. It was pointed out, for example, that the steady rise in state and local expenditures may be undermined this year by the sluggishness which the recession has induced in the revenues of these governments, though all sides concede that the highway programme will be a plus factor this year. Furthermore, the consumer cannot be counted upon for assistance. The annual survey from the University of Michigan's Research Centre showed only a slight change in his outlook and plans for buying, but it was a change for the worse.

IN the face of all this the government maintains its calm. The central bank has allowed a massive decline in the demand for credit to produce a dramatic easing in short-term interest rates (Treasury bills fell from 3.6 per cent in early November to 1.6 per cent in early February), but it has still not produced the degree of monetary ease that prevailed at this stage of the recession of 1953 to 1954. The prime rate of interest charged by the big banks to their best customers is still 4 per cent, for example, down only slightly from the modern peak of 4½ per cent reached last year. The Secretary of the Treasury, Mr Anderson, insisting that "some of the adjustment has already taken place," points to various long-term factors for growth in the economy and sticks to his belief that a turn-around in activity will occur by mid-year. However, he is clearly a more flexible man than his predecessor, Mr Humphrey, and, most important, is on record that a tax cut is desirable as a weapon for recovery if things get bad enough. While Mr Humphrey had stated with pre-Keynesian firmness that he would never recommend a tax cut when the Budget was showing a deficit, Mr Anderson does not rule out that possibility—including a deficit as high as $8 or $10 billion a year.

This, of course, is slowly becoming the crucial issue of policy. So far only one or two of the economists who testified before the Joint Committee feel that things have got to the point where it is necessary to use such a major weapon, although several have urged higher government expenditures as a remedy for recession. Each day that passes brings the question closer to a decision—for either the Administration or the Democratic leaders in Congress. The irony of the situation is that the American government has nothing like the fiscal flexibility of a European parliamentary government. A change in tax, or for that matter a change in spending, is not something in the hands of a

Chancellor of the Exchequer, but something to be fought over between executive and legislature. One of the main obstacles to an early tax cut "just to be safe" is that the President would have such difficulty in getting Congress to raise taxes again once recovery began. Fortunately, there is more and more discussion in Congress of a tax cut terminating automatically on a fixed date, after which rates would go up again to their present levels.

As concern mounts but panic remains well out in the wings, the statistics are mixed. Unemployment rose in January, as expected, to 4,494,000, and the figures for income and industrial production are almost certain to show another decline for that month. But the optimists take some comfort from the fact that many of the more sensitive indicators have at least stopped drifting downward. Commodity prices have, if anything, moved up slightly; steel

production and rail freight loadings have levelled off on a low plateau; department store sales in January were about as high as in the same month a year ago; the stock market has actually risen rather persistently for most of this year; and even the weekly figures on unemployment among workers covered by the unemployment compensation system —more up-to-date than figures for total joblessness— have nearly stopped their rise. Much will depend, of course, on business stocks and, judging from recent ratios of stocks to both sales and new orders, the present prospect is for some further liquidation. Also on the glum side is the motor industry, which is producing at a rate 25 per cent below last year at this time and yet still seems unable to avoid some build-up in dealers' stocks.

The Democrats in Congress, who have now seized upon the recession as the main political issue for this election year, seem certain to make strong efforts to increase federal spending on both the defence and domestic sides of the Budget (though not, unfortunately, on foreign aid). They will try to liberalise even further the government's already liberal regulations for encouraging credit for housing, will approve some new public works projects, and will probably give the President more than he has asked for defence. On the Administration's side steps are already being taken to get in first with similar moves, as the President's statement on Wednesday made clear. But all of these things take time to produce any economic impact. A tax cut thus remains the key weapon in reserve, and few people doubt that a cut of sufficient size would turn the tide.

Mr Dulles's Other Cheek

MR DULLES could well afford the pleasing Christian gesture of turning the other cheek this week when he announced that the United States did not insist on a Foreign Ministers' meeting before any ascent to the summit, provided that satisfactory progress toward agreement can be made by other means. Mr Bulganin, by hinting in his last letter to the President that Mr Dulles's "biased" presence would impede negotiations, has done the Secretary of State a good turn. His severest Democratic critics in the Senate cannot allow the Russians to dictate who shall speak for the United States and leaders of both parties have publicly approved the Administration's insistence on adequate preparation for any meeting of Heads of State. Mr Dulles may look lonely to the *New Statesman*, but it is some time since he has been so warmly defended in the Senate.

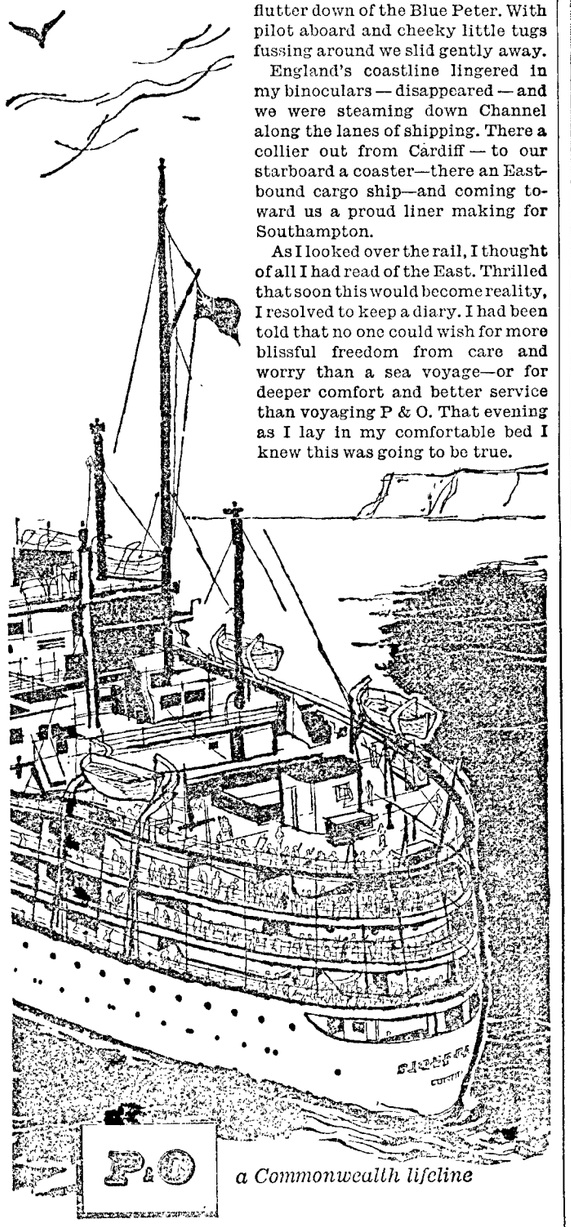
In fact, as Mr Dulles pointed out at his press conference, the President's reply last month to the first Bulganin missive spoke only of "work in advance through diplomatic channels and by our Foreign Ministers"—and Foreign Ministers do not work only at public meetings. Mr Dulles may well be thankful to be spared several weeks' personal ordeal at the conference table with the Russians; he estimates he has spent a year and a half there out of the last twelve. But whenever and wherever negotiations are held Mr Dulles will be present in spirit if not in the flesh; his influence with the President has never been stronger.

His authority is attested by all the evidence that Mr Harold Stassen, who has dared to differ with Mr Dulles over the flexibility needed to reach an accommodation with the Russians on disarmament, is now reaching the end of one more road; Mr Dulles has convinced the President that the United States cannot have two disarmament policies. Mr Stassen is being sedulously encouraged by the Administration in his project of running for the Governorship of Pennsylvania and must make up his mind by March 17th, the last day for entering his name. So far he has hesitated to take the rather chilly plunge, waiting, perhaps, to see what other consolation prize the Administration has in mind.

Although Mr Stassen himself has been worsted, his ideas have made some mark. Senator Humphrey's four-hour speech asking that the President be more realistic and cease trying to force the Russians to swallow at one gulp a whole unwieldly package of American demands reflects Mr Stassen's views. So do hints that the Administration may be prepared to negotiate separately on one element in the American "package"—the prevention of a surprise attack through a zone of mutual aerial inspection—on which the Russians have not specifically frowned.

Building Union Unity

LAST week's Miami meeting of the executive council of the American Federation of Labour and Congress of Industrial Organisations added some solid bricks to the foundations of trade union unity which had been laid just three years before. And it did not go on with the demoli-

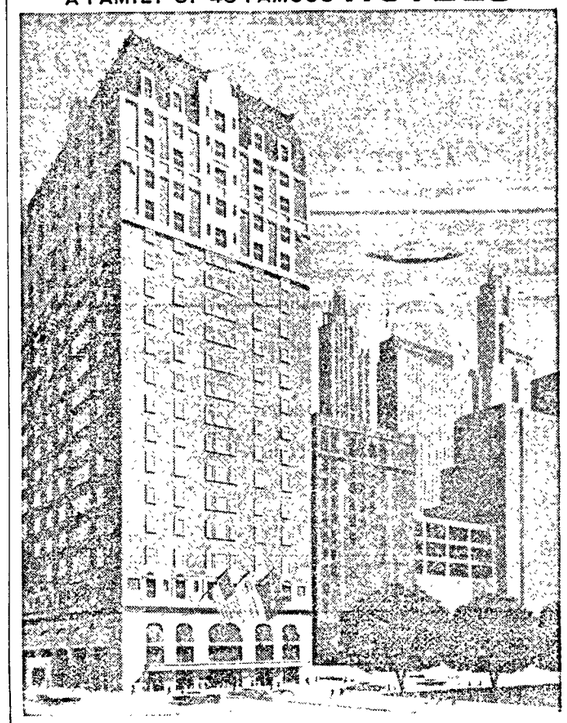


DIARY OF A VOYAGER

My Voyage Begins

Luggage aboard. A quick satisfied glance round my cabin. Then back to the ship rails to witness my parting from England. Cranes and locos throbbed and rattled. Last visitors ashore — hawsers away — and the flutter down of the Blue Peter. With pilot aboard and cheeky little tugs fussing around we slid gently away.

England's coastline lingered in my binoculars — disappeared — and we were steaming down Channel along the lanes of shipping. There a collier out from Cardiff — to our starboard a coaster—there an Eastbound cargo ship—and coming toward us a proud liner making for Southampton.



As I looked over the rail, I thought of all I had read of the East. Thrilled that soon this would become reality, I resolved to keep a diary. I had been told that no one could wish for more blissful freedom from care and worry than a sea voyage—or for deeper comfort and better service than voyaging P & O. That evening as I lay in my comfortable bed I knew this was going to be true.

P&O a Commonwealth lifeline

SHERATON

A FAMILY OF 45 FAMOUS HOTELS

THE SHERATON-BLACKSTONE WELCOMES YOU TO CHICAGO

If there's a "typically American" city — it is certainly Chicago. And if there's such a thing as a "typically American" welcome — you'll find it at Sheraton Hotels. There are two Sheraton Hotels in Chicago: the Sheraton-Blackstone and the Sheraton Hotel. Other Sheraton Hotels are located in major cities throughout the United States and Canada. They represent the very best in American hospitality. Here are a few of the reasons why international visitors have made Sheraton their first choice in hotels:

• Reservations held if ships or planes are delayed
• Facilities for banquets, business meetings and conventions
• Bilingual departments • Sheraton's Family Plan:
No room charge for children under 14 in room with adults (except in New York, Syracuse and French Lick)

For reservations see your travel agent, or write Mr. Albert de Leon, Director, International Department, Sheraton Hotels, Sheraton-McAlpin, Broadway and 34th St., New York 1, N. Y., U. S. A.

FAMOUS SINCE 1795

tion work begun last autumn when the huge International Brotherhood of Teamsters (the lorry-drivers' union) was expelled for corrupt practices. The executive council unexpectedly decided that after all it would not allow dissatisfied local branches of the teamsters, who wanted to secede from the IBT, to affiliate directly with the AFL-CIO, nor would it require other unions to break their useful mutual assistance pacts with the lorry-drivers. For the present at least an uneasy, watchful peace is to prevail between the national labour organisation and the rebel teamsters.

But with the trouble-making, divisively-minded IBT out of the way, the council decided that the time had come to consolidate the unity which remained. The old AFL and CIO unions in Michigan, which have failed to apply in the state the merger achieved at the national level, are being made an example of in the hope of hurrying up such mergers in the twelve other states where there have been similar failures. The charters of the Michigan groups have been revoked and a new, joint organisation is to be set up for the state later this month. The council dealt with other local civil wars between old rivals by forbidding boycotts by one union of products made by another and by establishing machinery for compulsory arbitration of all inter-union disputes. More important, a settlement was announced of the most dangerous of these disputes, that between the AFL's building unions and the CIO's industrial unions over which should have the right to do maintenance and repair work in factories. The compromise was very similar to one which the building unions had rejected earlier and is therefore regarded as a face-saving defeat for them.

But this was not the only concession to the new industrial age made last week by the building unions, the stronghold of the traditional craftsman's approach to labour relations. Their leaders also announced an agreement with representatives of employers in the construction industry, intended to achieve more output at less cost by the fullest use of labour-saving machinery and to eliminate wasteful practices upon which the unions had been insisting in recent years. Among the clauses was one promising that the unions would not set a limit on the amount of work a man might do in a day or on the tools he might use. But it still remains for these provisions against featherbedding to be accepted by the union's local branches.

Tragedy at School

LAST week about 650 children were suspended from New York City's schools as the Board of Education struggled to end a wave of serious crimes committed on school property—rapes, lye-throwing, and assaults on teachers and other pupils. Even in the short run this move does not solve the dilemma of the school authorities; it underlines it, perhaps intentionally. The board is legally, as well as morally, responsible for the protection of the well-behaved 99 per cent of the 950,000 children in its care. But it also has a legal responsibility to instruct all children, bad and good, under the age of 17—and there is nowhere to send these trouble-makers. The city's five special schools for disturbed boys are packed; so are the remand homes and reformatories in the state. The circle, as usual, is a vicious one; teen-agers convicted of crimes are paroled if possible and sent back to school because there is nowhere else to send them.

The authorities could not wait to act until the six new special schools which they now propose are available to rehabilitate young offenders. Since November a grand jury has been investigating crime in the schools, egged on by Judge Leibowitz, long a harsh critic of the "laxity" of the Board of Education. The jury's only concrete suggestion so far—that a policeman should be stationed in every school—has been hotly resisted by the school authorities and by parents' and teachers' organisations. But a fortnight ago the principal of a junior high school in Brooklyn committed suicide rather than face the grand jury a third time; the strain on school staffs of attempting to cope with young hooligans, alarmed parents, and an exacting investigation was becoming intolerable.

Only about fifty schools out of the city's 942 are badly affected; for the most part, these are in parts of New York which are being taken over by Negroes coming up from the South and Puerto Ricans seeking work. A new melting-pot of poor, ignorant immigrants is on the boil in overcrowded slum neighbourhoods; given the relaxation of family cohesion and discipline which has produced an increase in teen-age crime in all big cities, New York's troubles are not surprising. About 75 per cent of the boys in the special schools are Negroes or Puerto Ricans, although a benevolent conspiracy on the part of the newspapers tends to soft-pedal this racial aspect of the city's troubles. It is to the credit of New York's parents and teachers that they recognise the great need for more remedial teachers and more child guidance and rehabilitation; and that they are critical of the haste with which young offenders are being swept on to the streets. But this drastic move may drive home to the state and the city the need for more money for costly special schools and services.

Northwest's Rainy Days

FROM A CORRESPONDENT IN PORTLAND

MORE than 4 million Americans, who live in the states of Oregon and Washington in the Pacific Northwest, have had some advance experience of the present recession. No part of the country fared worse in 1957 than this far corner, partly for reasons special to the area. It is the home of the last big virgin stands of timber, and the fortunes of the lumber industry play a large part in determining the economic climate. Last year was the worst for lumber since the depressed nineteen-thirties. Moreover, the region's single biggest employer, the Boeing Airplane Company of Seattle, Washington, which has concentrated on producing the B-52, the intercontinental bomber which is the mainstay of the Strategic Air Force, has had to retrench because of the growing emphasis on missiles.

There have been many soft spots in the economy of the Northwest. Department store sales in 1957 were generally 10 per cent below the level of 1956. The new model automobiles are not selling well, nor is there the demand that was expected for other durable goods, including household appliances. Metal markets have been weak, adversely affecting the area's mining industry and the many metallurgical plants which have sprung up to take advantage of the cheap hydro-electric power generated on the Columbia River and its tributaries.

But most of these developments are due, at least in some

part, to the over-riding economic influence of cut-backs at the Boeing works and to the state of the lumber industry. In Seattle, a city of about 500,000, with approximately 200,000 wage and salary earners, Boeing employs more than 50,000 men and women. Their wages, in turn, support much of the city's retail trade. Now that the days of the B-52 are numbered, the company and the community pin their hopes on Boeing's ability to secure contracts for the weapons of the future. These hopes received a severe setback in late December when the Air Force announced that the North American Aviation Company of Los Angeles had beaten Boeing in a competition to design an intercontinental bomber capable of speeds greater than 2,000 miles an hour.

Boeing had gambled huge sums and its technical resources on the project, hoping to keep its production lines busy after the fade-out of the B-52 early in 1959. At present, the firm's best prospect among the new weapons appears to be the Bomarc supersonic interceptor missile. The first production model came off the assembly line in Seattle on December 30th. But building these pilotless interceptors for bases along the northern perimeter of the continental United States employs only about 6,000 workers, a small fraction of the normal Boeing work force.

The firm began discharging people last summer after its payroll reached a postwar peak of about 70,000. Early in 1959 it may be employing only 45,000 workers. This is a decline sharp enough to distress any community. However the company, which recently opened a new $25 million research and planning building, hopes that its lead in jet transports may in time enable these aircraft to take the place of military planes on the Boeing assembly line.

DEPRESSION in the lumber market is also a factor in the economy of Washington State, although a smaller one than it is in Oregon. The loggers have moved southward through the towering fir and pine stands of the coastal and Cascade mountains, and Oregon has far surpassed Washington, both in the production of lumber and in auxiliary woodworking industries. As a result, the fluctuations in Oregon's prosperity have come to follow those in the lumber market, which in 1957 reached a 20-year low. Of the record 50,000 unemployed counted in Oregon in December, many thousands were sawmill workers, loggers, and others whose jobs are directly connected with the lumber industry. *Crow's Lumber Digest*, published in Portland, reported that over a quarter of the state's lumber producers planned to close for an indefinite period early in 1958.

Lumbermen blame their troubles on the decline in residential building; in 1957, for the first time in ten years, work was started on fewer than a million new private dwellings. Even if there is an improvement in 1958, much of the building will take the form of blocks of flats and other multiple dwellings, which use comparatively little wood. Moreover, where wood was once required, builders are turning to plastics, metals, and new materials. The lumber industry is trying, through research, to find new uses for wood and to limit the inroads made by competitive materials. As a result, there has been a continued growth in the manufacture of pulp and paper, hardboard and plywood. But in the Douglas fir region of western Oregon and Washington, which supplies a big part of the country's lumber for construction, production dropped 7 per cent in 1957. The wholesale price index of Douglas fir fell 14 per cent during the year, while many other prices remained at their previous high levels.

Nevertheless, Oregon's immediate economic future has its bright side, largely because projects long in the planning stage are at last materialising—the largest single construction project in Portland's history, the $52 million Lloyd Centre, a modern, diversified shopping area on the city's residential east side, a new $7 million exhibition and sports pavilion, at least two new hotels and several downtown office buildings. It is estimated that building activity in Portland this year will reach the $100 million mark, nearly twice the 1957 level. And even spokesmen for the lumber industry see grounds for hope in what they believe is the "pent-up demand for new homes," the continuing construction of schools, churches and commercial buildings, and the long-term vitality of the American economy.

Disunited Fruit

RATHER than spend years fighting an anti-trust suit which it might well lose in the end, the United Fruit Company has agreed not only to welcome competition, but even to create it inside its great banana monopoly. It has promised to see that an independent firm is set up capable of importing 9 million stems of bananas a year into the United States; this is roughly a third of the company's present imports, which in turn represent two-thirds of the bananas which the United States fries, mashes for sandwiches or glorifies with ice cream and nuts in the confection prophetically named a split.

The anti-trust suit was brought in 1954 on the grounds that United Fruit, through its ownership of most of the land suitable for growing bananas in Central and South America, was in a position to dictate prices to consumers in the United States and to drive any competitors out of business. Under the agreement with the Department of Justice the company now is barred from the marketing end of the business and confined to importing; it must liquidate its Banana Selling Corporation at once and sell its interest in the International Railways of Central America by 1966. By 1970 it also engages to endow its future competitor with banana-growing lands, transport facilities, liquid capital and even management and other personnel. This new banana kingdom is to be carved out of the old banana empire either by the sale of assets to outside interests or by their transfer to a new firm and the distribution of its shares to the stockholders of United Fruit, or by a combination of the two methods. Exactly how this will be achieved is something of a mystery, since the small firm already in the field is forbidden to have anything to do with the new concern.

The Department of Justice professes to be well pleased at having exacted a settlement which promises the housewife cheaper bananas eventually without penalising the shareholders of the company; the Department of State welcomes the prospect of satisfaction of the long-standing complaints of the "banana republics" against this powerful corporation, richer and stronger than many of their governments and far more stable. As for United Fruit, although the agreement includes measures for preventing "future undue increments" in its power, its directors are convinced that no real bars to its growth have been created. And the shadowy rival need not materialise until 1970; United Fruit still has the bananas today—and tomorrow.

Hard Lines for Airlines

THIS week the leading airlines put up their fares by the 6½ per cent which the Civil Aeronautics Board had suddenly offered them. But they accepted this temporary increase grudgingly, not because they did not need it, but because they feared that it would prejudice their chances of being given permanent increases of from 12 to 20 per cent; the cases for these have been under investigation by the CAB since November and the inquiry is likely to go on for the rest of this year. The emergency increase now allowed is actually 4 per cent plus $1 on every ticket, which means that more than the average 6½ per cent will be obtained by companies which concentrate on short services. One of these is Capitol Airlines, whose financial difficulties have recently been much in the news. The emergency increase has enabled this company to withdraw its request to the CAB for a renewal of its subsidy, something which no other domestic airline is now receiving. This request may have shocked the board into offering the emergency increase which only last August it had refused to grant. But it must also have been influenced by the year-end accounts of all the airlines, which proved with cold figures that their profits are falling disastrously—from 7 per cent on gross income in 1952 to 1.6 per cent in 1957—in spite of rising revenues.

Costs of all kinds—for wages, equipment, supplies—have been going up, and will go up even more if taxes on aviation fuel are increased as the President has asked. Yet passengers now pay slightly less for every mile they fly than they did twenty years ago, although flights are far faster and more frequent. Low fares and better services have, of course, meant an enormous and once profitable rise in traffic, but recently this rise has been slowed. Moreover, the CAB's policy of encouraging competition by allowing additional airlines to serve the most popular routes has meant that many aircraft have been flying with an uneconomic number of empty seats. The airlines claim that they have reached the limit of possible economies by better use of equipment, more efficient operations and so on. But according to the companies the main reason why higher fares are needed is to strengthen their financial position and credit rating so that they can borrow money for the new and very expensive jet aircraft which are essential if they are to provide satisfactory service for a vastly increased number of passengers; last year's total of 45 million is expected to double by 1966.

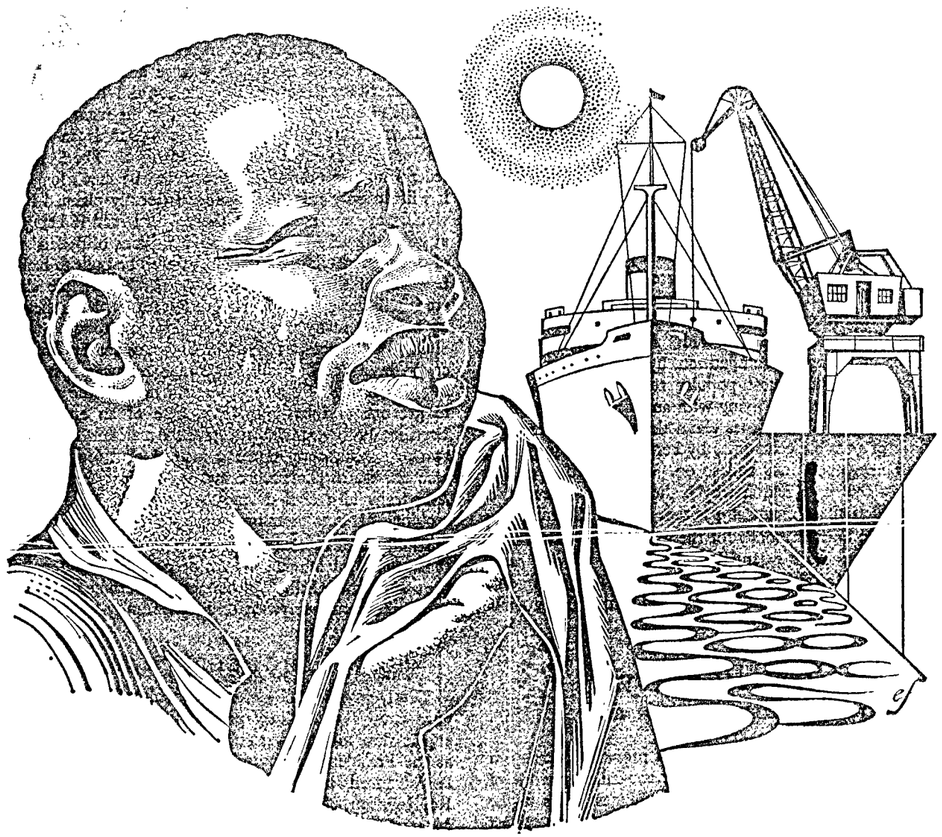
Gift Highways

FROM A CORRESPONDENT IN IOWA

IN 1956, when Congress decided to provide 90 per cent of the money to complete a 41,000-mile network of multi-lane highways connecting all the biggest cities in the United States, the estimated cost was $27.6 billion. Last month, however, the Secretary of Commerce told Congress that the cost is now estimated at $37.6 billion. But it is the 48 state highway departments which will supervise the actual construction and prepare the state by state estimates and, as Mr Weeks was talking, the Iowa State Highway Commission announced yet another increase in the cost of building its 710-mile share.

Businessmen in Des Moines, the state capital, have prophesied all along that the project would cost more than the first estimates. But since Congress is going to pay, they have done everything to get as much federal spending as possible for Des Moines. As the city is lucky enough to be near both the north-south and the east-west inter-state highways, they have secured a $55 million branch connecting the two with the centre of the town. Nevertheless, local businessmen are convinced that, if their state or city were making the decisions, they could do much better for less money, and that, in any case, the local authorities would never build such expensive roads—although the design is patterned on what has been done already, on a smaller scale, in all the biggest centres of population.

Des Moines had planned for years to build a broad highway just skirting the northern edge of the downtown business district and had bought a good deal of the land for it. The original scheme for a ground-level roadway would have cost from $3 to $5 million. Later plans involved elevating some parts of it, depressing others, and limiting access to a few points. This would have raised the cost to an estimated $13 million, an amount so staggering to Des Moines that it seemed feasible only with a large amount of state help. But the State Highway Department did not dare to put so much of its $38 million a year for the main "primary" roads into the state's capital city, which is an object of jealousy and mistrust to the rest of Iowa. The $55 million federal highway through the city will be much longer, but it will do only part of the job this locally planned by-pass would have done. Part of the original road is being built at ground level now anyway, and millions of dollars' worth of other connecting streets will have to be built to make the best use of the federal highway. Even then the chances are it will increase traffic congestion rather than relieve it—by bringing many more vehicles into the towns.



One of the reasons given in Congress for building these costly branches from the interstate highway system right into the hearts of major cities was to help the population to get out of them rapidly in case of an enemy attack. Even in the pre-missile era, when Americans could expect two or three hours' warning instead of a few minutes or seconds, that explanation drew derisive laughter. Very few Americans take civil defence seriously, in spite of all the scoldings given to them by officials, scientists and study commissions. But ordinary citizens do know a great deal about the logistics of moving masses of people by automobile at the same time. Still, if the federal government is going to spend the money anyway, each community wants its share.

SHORTER NOTE

The Department of Defence, to which Congress last week gave control of military projects in space and temporary supervision, for one year only, of such non-military activities as the President proposes, has lost no time in establishing its Advanced Research Projects Agency and appointing Mr Roy Johnson, of the General Electric Company, to direct it. Meanwhile, a special Senate committee on space has been created, manned almost entirely by the chairmen and senior Republican members of the six committees most concerned. Under the chairmanship of Mr Lyndon Johnson, this authoritative, but not very lively body will hear the views of Dr Killian, the President's science adviser, and then reach its own conclusions on the best permanent method of controlling activities in space.

Cargoes sweat too

And when they do, rust, staining and other damage may be the result. "Cargo sweat" occurs when ships pass from cold to warm climates. A change from warm to cold can cause condensation on the ship's structure, known as "ship sweat". Shipowners have found the answer to both problems is Thermotank Drihold equipment. This maintains close control of ventilation and drying to ensure that condensation cannot occur. Control of the atmosphere for comfort or industrial processes is the business of Thermotank—on land, sea and in the air. The Company pioneered the first air conditioning of ships more than fifty years ago. Today Thermotank maintain an unequalled service covering every major shipping route throughout the world.

THE WORLD OVERSEAS

Herr Ulbricht's Lonely Road

FROM OUR BONN CORRESPONDENT

WERE today's Soviet leaders honestly wanting to rattle the Adenauer regime they could do so quite easily by making arrangements in the Democratic Republic that suggested their readiness to acknowledge the feasibility of a German road to socialism. Humiliated by partition, sick of the cold war, and apprehensive of the future, the German people as a whole are prepared to pay a stiff price for reunification. A little less vituperation from east Berlin, a lick and a promise of more liberal ways—and possibly west Germany might be coaxed into kissing Nato goodbye, whatever fits granny Adenauer and the more distant relations might have to throw.

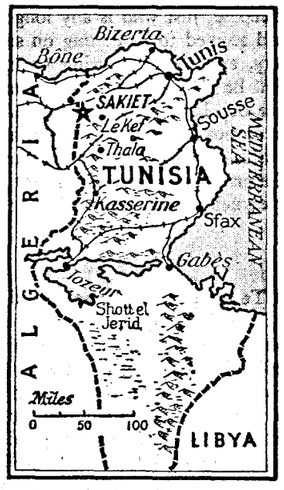
The personification of the Soviet roadblock squarely confronting German socialism is Herr Walter Ulbricht, the east German deputy premier and secretary of the Socialist Unity Party. And at the very moment last week when one of west Germany's angry young men was publicly protesting that maintenance of the *status quo* was the only all-German interest which the governments in Bonn and east Berlin had in common, Herr Ulbricht was triumphantly announcing the degradation of three hitherto powerful associates who had been putting it about among the comrades that a little less close adherence to the Moscow itinerary, a little more head for the intelligentsia and beer and skittles for the boys, might be a good thing for Germany in general and for the Socialist Unity Party in particular. With more timeliness than he knew, the angry young man, Herr Wolfgang Doering of the Free Democrats, went on to upbraid the east German Communists with living off the division of Germany just as the Christian Democrats did in the west.

Having no illusions about Her Ulbricht, the east Germans tried to rid themselves of him by force as long ago as June 17, 1953. With Russian help he won the day, and promptly dug himself more carefully in. He replaced the "easy-going" minister for state security, Herr Wilhelm Zaisser, with the legendary communist stop-at-nothing Herr Ernst Wollweber. Simultaneously he promoted to his right hand, as chief party organiser, Herr Karl Schirdewan, who differs from most of the east German communist hierarchy in that he spent the twelve years of Hitler's reign not in exile but in German concentration camps. In league with these two, Herr Ulbricht contrived three years later to withstand the threatening currents set up in east Germany by the upheavals in Poland and Hungary. But even these veteran trusties have latterly turned against him. In his well-informed position, Herr Wollweber apparently became so assailed by misgivings concerning the unrelenting Ulbricht-Stalin course that last November he resigned, or was quietly sacked, ostensibly for reasons of health. Along with Herr Schirdewan he now loses his place on the central committee for having openly persisted in his doubts. From the official indictment it seems that shortly before Christmas, comrades Wollweber and Schirdewan were overheard in their cups, probably at a Wismuth AG canteen, gravely questioning "party decisions." It must be extremely unsettling for the doubt-ridden and conscience-smitten lesser fry. Herr Ulbricht excepted, just who is any longer who? Herr Schirdewan had seemed to be getting on so well with the party secretary, and to be showing so much administrative ability, that he was generally tipped as the man who would step one day into Herr Ulbricht's shoes. Perhaps he still will. It cannot have advanced him any farther into his master's graces to have been so frequently labelled abroad as the German Gomulka; but it may help him when Ulbricht eventually goes. Herr Ulbricht is 64, Herr Schirdewan 50.

★

To the general public, outside party strife and no longer surprised by it, the dismissal of Fred Oelssner from the central committee's Politburo (not from the committee itself) is more immediately significant. A deputy premier, Herr Oelssner was promisingly made chairman in 1955 of the cabinet committee for questions concerning the production of consumer goods and the distribution of supplies of all kinds. Herr Oelssner, whom everybody supposed to be a comrade of unquestionable loyalty, has, it seems, been mildly agreeing with Wollweber and Schirdewan that Ulbricht is heading for further trouble in the Democratic Republic and unnecessarily alienating potential friends among the Germans in the west. He, too, has been humbled.

Lonely and disliked, but still greatly feared, Herr Ulbricht remains in power. He could not have struck at his three prominent associates without Russian foreknowledge and the assurance of Soviet support. More and more he emerges as the embodiment of Russia's determination to hold firmly on to the Democratic Republic, presumably to forestall the dangers that would unavoidably arise for Soviet communism not only out of German unity but also out of the development of some sort of Titoism or Gomulkaism in the Democratic Republic. Cheerfully and confidently, well knowing that neither will ever agree to pay the other's price, Mr Khrushchev continues to invite Dr Adenauer and Herr Ulbricht to get together and reunite their country.



The Bombing of Sakiet

FROM OUR SPECIAL CORRESPONDENT IN TUNIS

February 10th

PRESIDENT BOURGUIBA'S pro-western policy lies in ashes in the ruins of Sakiet Sidi Youssef. This was the dominant feeling in Tunis when the first waves of shock and unbelief were subsiding and Tunisians took to measuring the political consequences of an action that seems to bear little relation to military requirements. The political conclusion is perhaps premature, though there is much to support it. The shock and the belief are undeniable. The wife of a diplomat found her maid-servant in tears. "Now," she said, "our Habib ('beloved') will have to stop telling us that we must work with the French. Otherwise, the people will rise against him, even though they love him."

A few hours after twenty-five French bombers from Algeria had dropped their bombs on the frontier village, President Bourguiba, interrupting a week-end in the country, protested to the French chargé d'affaires, M. Bénard, about the bombing. By that time, the death roll was about 70; it soon rose higher; many were women and children, for it was market day and the streets were crowded. An extraordinary cabinet meeting was called; all the ambassadors were asked to call; the President gave a press conference. At the information department, distressed young officials translated a tape recording of Mr Bourguiba's Arabic for waiting reporters: "Evacuation of French forces . . . appeal for calm . . . possible resort to the United Nations." Then a sentence that could be prophetic: "We are certain that (this aggression) will serve the national cause, that it will help solve the Algerian problem and that it will hasten the advent of north African unity."

Some facts are missing in the story of Sakiet Sidi Youssef; those that are known suggest that the motives mentioned in French official statements are fanciful. It has been claimed in Algiers that the raid was ordered in retaliation for the anti-aircraft fire from the village and that it was necessary to destroy the anti-aircraft position at the customs house. In Paris, the defence minister, M. Chaban-Delmas, described the raid as "legitimate self-defence" and added: "It is necessary, once again, to insist on the fact that Tunisia has become a highly developed operational and logistic base and that without its unceasing intervention the Algerian operations would already have been brought to an end."

It is difficult to take these allegations seriously. There is not a single anti-aircraft gun in the country that is not under French control. The humble customs house, made of stones joined by clay, sheltered three Tunisian privates under a sergeant. They were armed with two French carbines of the first world war, one second world war tommy-gun and one other automatic gun—a French version of the Bren gun. It is not impossible that French aircraft received bursts of fire from the two modern weapons in the customs house; it is equally possible that the fire came from the Algerian side of the frontier, which is not indicated by any obvious physical feature in this rocky and mountainous region.

The allegation that Tunisia is the main base of the Algerian rebels of the National Liberation Front (FLN) has been made so often in Paris and Algiers that it has come to be widely accepted. But even if the French intelligence version of the facts is accepted, it makes little sense. The French credit the FLN with between 30,000 and 40,000 men under arms, and claim that 4,000 to 6,000 guerrillas are in the frontier regions of Tunisia, receiving arms that come overland from Libya and undergoing training. The regions usually named are Le Kef and Thala. It is difficult to accept uncritically the suggestion that the FLN, with anything between four-fifths and nine-tenths of its forces in Algeria, could be defeated if its Tunisian "base" were destroyed.

But even the French version of the facts is open to serious doubt. Your correspondent has not found a single independent observer in Tunis who accepts it. The FLN claim that it has arms in plenty for 100,000 men is probably true, though it is not certain that 100,000 men are actually using them. It is true that some of these arms come through Tunisia, though with the other supply lines that are open it is doubtful that they constitute more than five to ten per cent of the total. It is highly doubtful, on the other hand, that the FLN has an operation base on Tunisian soil. The frontier regions are open to snoopers and sightseers alike; the provincial governors are in evident control, and there is no record of anyone seeing an armed Algerian. This common experience is not, of course, conclusive.

More relevant, perhaps, is the evidence that the FLN's need for a Tunisian base is slight. Its forces, known as the ALN (Army of National Liberation) evidently control certain areas of Algeria, and have set up their administration in them. When M. de Preux, of the International Red Cross, visited the four French prisoners captured near Sakiet Sidi Youssef, he went into Algeria by permission of the FLN and without reference to the French authorities. A number of journalists have gone deeper into Algerian territory under the same auspices. While there seems little need, from the FLN's point of view, of a major base in Tunisia, nobody contests that the FLN sends its men to Tunisia for rest and recuperation. The Tunisian authorities say that these men are allowed into Tunisia only if unarmed (though the FLN military leaders who come to Tunis for consultations are allowed to carry arms for self-defence).

Whatever the ultimate consequences of the bombing of Sakiet Sidi Youssef, it is certain that it has provoked a revulsion against Mr Bourguiba's policy of attempting to keep friendly with France. And it is clear that his immense authority over the Tunisian people will be shaken if he does not adequately respond to this understandable feeling.

FREER TRADE IN EUROPE

1 **"BRITAIN AND EUROPE"** the E.I.U.'s handbook on British industry with special reference to the likely impact of the Common Market and a Free Trade Area.
15/- from bookshops, 16/- from E.I.U. packing and post included.

2 **"E.I.U. SPOTLIGHT."** This four page bulletin each week devotes a full page to European trade developments.

3 **THREE-MONTHLY REPORTS** on business conditions and prospects in the Common Market and Free Trade Area countries at reduced rates when taken as part of one or two special regional subscriptions.

Behind Syria's Decision

FROM OUR MIDDLE EAST CORRESPONDENT

THE main Syrian contribution to the politics of the United Arab Republic will be of Baath-Socialist inspiration. Throughout the manœuvres that plague the Arab world, the Baath-Socialist party has remained consistently faithful to the Egyptian alliance. Its fidelity rests on a firm basis, in that the principles of the Egyptian revolution and those of Syrian Baath-Socialism have much in common. Both movements are externally nationalist, internally radical; both aspire to Arab unity and to the maintenance of neutrality between East and West; both are alike in uncompromising hostility towards Israel; both are suspicious of the western links and monarchical structures of Jordan and Iraq. In addition, the Baath-Socialists have long regarded President Nasser as the only possible leader of the larger Arab union at which they aim. They have thereby spared themselves the difficulty of squaring their personal ambitions with his overwhelming appeal to the Arab masses.

It is a foregone conclusion that the three leading Syrian Baath-Socialists—Akram Haurani, the Speaker of the Chamber of Deputies, Salaheddin Bitar, the foreign minister, and Khalil Kallas, the minister of national economy, will succeed to leading posts in the new republic. Of no other Syrian politician can the same be said with any certainty. Their futures will be decided in discussion of the appointments to the central government, the regional executive councils and the national assembly, which are being conducted, on the Syrian side, primarily by the Baath-Socialists and their allies in the army. Those that are disappointed will scarcely say so.

The union of Egypt and Syria was, in fact, a triumph for the Syrian Baath-Socialists—the climax of a year of steady progress. One by one, their enemies and rivals were outmanœuvred. The first to be silenced were the right-wing People's Party, formerly the chief supporters of union with Iraq. Their representatives were edged from the government shortly after the Suez crisis, with the discovery in the Jebel Druze of a plot against the regime, organised by pro-Iraqi elements. The right-centre National Party, impressed by that display of Baath-Socialist power, preserved their posts in the government by sliding into the status of pliant allies. That left the Baath-Socialists with only two rivals of consequence. On the right was Khalid al Azm with a group of independent conservatives. For his support of Baath-Socialist action against the People's Party, Khalid al Azm was rewarded with the post of acting minister of defence, which he proceeded to exploit with characteristic energy—his eyes fixed, as ever, on the Presidency. On the left stood the Communists, under the able leadership of Khalid Bikdash. In general, they supported the Baath-Socialists, but with Lenin's dictum in mind: "as the rope supports the condemned man."

Khalid al Azm procured substantial deliveries of Soviet arms for the Syrian forces, and negotiated the spectacular economic agreement which envisaged a Soviet loan of some $500 million for development purposes. He exploited the arms deliveries to establish his position with the Syrian officers corps, and the economic agreement to win favour with the masses. In doing so, he fell into uneasy alliance with Khalid Bikdash, who was also making the most of Soviet aid on behalf of the Communist party.

When winter came, the Baath-Socialists found themselves in a tempting, but dangerous, position. They stood on the threshold of power; well entrenched in the army and the civil service; well organised as a party among the people; knit together by a coherent popular ideology which their rivals (except the Communists) lacked. Yet they were beset by dangers from both flanks. On the left, the Communists presented a serious threat, particularly in the electoral sense. Baath-Socialist representation in the Chamber of Deputies (12 seats out of 142) is puny in comparison with their positions of power in the administration and in the army. Any further Communist advance, splitting the left wing vote, might have reduced it to absurd proportions. On the right, Khalid al Azm embodied a more incalculable threat. He has changed sides more than once in his stormy career; with his driving ambition and flexibility of principle, he is a leader rather than an ally. As matters stood before the Union, he could have adopted any one (or more than one) of several courses unwelcome to the Baath-Socialists. Without going into the myriad possible combinations of the Syrian situation, he could, for instance, have helped the Communists to encroach on Baath-Socialist positions from the left, while trying at the same time to breathe new life into the decaying body of the People's Party.

★

The coalition government that has ruled Syria for the past year is probably the strongest the country has had since independence was won from the French. Yet, in view of the strains described above, it lacked the finality for which the Baath-Socialists were striving. Events outside the country were also causing anxiety, some of it well-founded. The attack on Egypt, the pro-Iraqi plot, the Jordanian airlift, Turkish concentrations, and movements of the American Sixth Fleet: all were live memories. While the Syrian government could congratulate itself on having survived past perils, it could not dismiss the possibility of their recurrence. At the same time, the field for manœuvre had been reduced. The Baath-Socialists themselves had discarded the idea of union with Iraq, both because of its monarchical structure and its links with the West. Union with Jordan, which seemed so imminent a year ago, had been blocked by the April *coup d'état* that re-established the authority of King Hussein. Only Egypt remained. For the Baath-Socialists that meant no sacrifice of principle; on the contrary, it was simply a case of pushing their policies to a logical conclusion.

Judging that the moment had come, Akram Haurani, the Baath-Socialist leader, struck. Brushing aside most of the politicians, he went straight to the army. High officers began making the pilgrimage to Cairo, under the guidance of Salaheddin Bitar, the Baath-Socialist foreign minister, who, after Akram Haurani himself, did most to bring about the union. As soon as the army found satisfaction, the statements to the press began, and the movement gathered irresistible strength. Useless for Khalid al Azm to protest—though he did so for a time. Sensing the strength of the prevailing wind, he finally gave his vote for the Union. Even Khalid Bikdash lent grudging support, though he hedged on some of the implications, for example, the dissolution of the Communist party. After that, little else mattered, except to put the finishing touches to the proclamation of Union, and to arrange for its ceremonial delivery.

Mr Todd's Defeat

FROM A CORRESPONDENT IN SOUTHERN RHODESIA

THE election of Sir Edgar Whitehead, the minister representing the Central African Federation in Washington, as leader of the Southern Rhodesian division of the governing United Federal party, has been widely but by no means universally welcomed in the colony. It has been becoming increasingly plain during the past three weeks, and glaringly so at last Saturday's Federal party congress, that the election of either Mr. Garfield Todd or Sir Patrick Fletcher or any of the cabinet "rebels" who parted company with Mr Todd would permanently split the party. The split could be avoided only by the election of a man not committed to either faction, and perhaps no one connected with Southern Rhodesian politics could have been less committed than Sir Edgar, half a world away in Washington. Sir Edgar's election has therefore been welcomed as possibly the only result that could have avoided a split that would have benefited only the opposition Dominion party which is in favour of racial segregation.

Sir Edgar's election has also been welcomed in Southern Rhodesia because of the prevailing impression locally that the change has been well received in Britain and the United States. The greatest fear of those politicians in the Federation who can see further than their noses, was that the rejection of Mr Todd would be interpreted overseas as the death of liberalism in Central Africa and as a move in the direction of South African policies. They have been relieved to learn that Sir Edgar's reputation outside his country stands high enough to prevent this interpretation being placed on events except, perhaps, by professional critics of the Federation. So far as financial policies are concerned the banks and financial houses in Southern Rhodesia are not generally hostile to Sir Edgar, who talks the kind of language they understand. In this he is in sharp contrast to one of his most determined critics in earlier political encounters, the Federal government's finance minister, Mr Donald MacIntyre, whose knowledge of economic theory is rudimentary and who, in such matters, leans heavily on his senior civil servants.

The chief opponents of Sir Edgar's financial policies have been the industrialists and businessmen (Mr MacIntyre out of office was one of them) who claim that he is altogether too harsh a taxman. When Sir Edgar was finance minister in Southern Rhodesia's lean pre-Federation days, the colony's government was finding it difficult to meet even some of its day-to-day running expenses. Mr MacIntyre at the federal treasury has known only the boom years since Federation, with high copper tax revenues solving most problems before they have arisen. Now that the depressed world copper price makes a new lean period inevitable, the country may be given the opportunity of seeing whether the policy of the man at the head of the Southern Rhodesian government or that of the man in the federal treasury is the right one in less prosperous times. Interesting though this comparison may be, most Rhodesians would be happy not to have to make it. They would prefer to feel that some coordination of economic policy between the Federation and Southern Rhodesian governments is likely.

The other big unanswered question in Salisbury this week is whether Mr Todd will be offered a seat in Sir Edgar's new cabinet and, if he is, whether he will accept it. It is thought likely that Sir Edgar's new cabinet will include at least two of the former cabinet rebels (probably Mr Geoffrey Ellman Brown and Mr Cyril Hatty) and at least two members of the pro-Todd group (possibly Mr Todd himself and either Sir George Davenport or Mr A. D. H. Lloyd). Mr Todd has made it clear that he intends to retain his seat in parliament and that he will remain within the United Federal party. He has already firmly rejected attempts by some of his more extreme supporters to break away from the United Federal party and revive the old United Rhodesia party which went out of existence when it merged with Sir Roy Welensky's Federal party. He has also firmly resisted the temptation to precipitate an immediate general election, a course which many expected him to adopt. This indicates that he regards the continued unity of the United Federal party as the most important priority; but whether he will carry this belief to the extent of agreeing to serve in Sir Edgar's cabinet remains to be seen.

★

One political reputation which has probably been irretrievably ruined is that of Sir Patrick Fletcher, leader of the cabinet rebels. His reply to Mr Todd at last Saturday's congress was so disjointed that it almost certainly lost him a great deal of support and resulted in his finishing a poor third in the first ballot between himself, Sir Edgar and Mr Todd. Far from accepting his defeat in the manner in which Mr Todd accepted his, Sir Patrick issued a statement to the press, on the day after the congress, demanding that Mr Todd should resign forthwith and hand over the government to Sir George Davenport for a brief period until Sir Edgar could form his new cabinet. This statement came as a considerable shock to the other three cabinet rebels who promptly dissociated themselves from it.

The ending of the month-old crisis and the solution it has produced have clearly been a great relief to the Federal prime minister, Sir Roy Welensky. Not only has a split in his party been avoided and an immediate general election averted, but Sir Edgar, who in some circles is regarded as Sir Roy's only possible rival in the politics of the Federation, is now firmly removed from the Federal sphere. The probability is that, notwithstanding Mr MacIntyre, the Federal and Southern Rhodesian governments will now work in closer harmony than in the past. The political crisis was decided shortly before midnight on Saturday. Bright and early on the Sunday morning, Sir Roy took train for the coast and is now sailing—presumably peacefully and well content—somewhere between Beira and Capetown.

A Much-Tried Portuguese

FROM A CORRESPONDENT IN LISBON

AMONG the 75 political prisoners held in Portugal, according to a statement by the minister of the interior before the parliamentary elections last November, Henrique Galvão, a former Army captain aged 63, may be considered the prime specimen and—except that, pleading sickness, he has seldom if ever appeared on trial in public since he was jailed on charges of treason five years ago—almost a show piece. The current hearing of his perennial case, adjourned on January 8th of this year, was continued a fortnight later, when one of his three accomplices charged with distributing subversive and defamatory leaflets was absent also through illness. The proceedings then were conducted in secret, the court being cleared by order of the judge on security grounds. The hearing was resumed and adjourned again this week.

For obvious reasons, after more than a quarter of a century of strict political impassivity under the New State, the man in the street knows very little and cares next to nothing about Henrique Galvão or his kind. Yet the lean, mysterious figure of this prisoner in the tower is an unforgotten symbol. He stands for stubborn resistance to Dr Salazar's inwardly stable and outwardly impersonal regime no less evidently but perhaps more effectively, in his way, than any ideologist of the frustrated opposition at large. After all, it is the government which seems to take him seriously.

He was its man, a supporter of what the Portuguese call the *situação* who served with distinction as a colonial administrator in Africa, a soldier, and a member of the hand-picked National Assembly. The precise nature of the alleged activities that led to his imprisonment in 1953 is not publicly known. Some plotting, which was probably more theoretical than practical, and a copious flow of subversive writings from his cell have earned the much tried Galvão a martyr's halo, shabby perhaps but worn with determined dignity. Many would regard his obdurate expression of revolutionary ideals as, in the circumstances, a purely self-assertive symptom of some literary mania. He is generally dismissed as a mere pamphleteer, and it is quite likely that this caged lone wolf, if released from captivity, might prove as great a nuisance to his more tactful co-religionists as to Portugal's disciplinarian Prime Minister, the headmaster himself.

The Hungry Stream from Italy's South

FROM A CORRESPONDENT IN ROME

OPINION in north Italy is harsh on the "parasites," the "criminals," the "lazy Southerners," meaning people from the South who have come North to look for a living. Southern mayors are believed to pay the price of a railway ticket as encouragement for their surplus citizens to seek their fortunes in Milan, Turin or some other industrial city. The newcomers are bitterly resented; the police have been investigating cases of threatening letters sent by a group calling itself a "Committee for Liberation from the Southerners" in the province of Imperia where many Calabrians have settled. It is as if they were a race of Calibans, sub-human, fit only to serve a Milanese and best left styed in their own hard rock. Some of this feeling is traditional, unreasoning prejudice and some, worth rather more respect, exasperation that after years of ambitious government schemes for improving the South, so many of its inhabitants still bring themselves and their troubles northward in a hungry stream.

If north Italy is the country's industrial heart, development of the South is at the heart of any solution to the essential weaknesses of the nation's economy as a whole. When Signor Vanoni drew up his sketch for a ten-year economic plan in 1954 he included three main aims: full employment, a satisfactory balance of payments and a closing of the gap between the economies of the industrialised North and the mainly agricultural South. The first and third points are closely related. It is hard to imagine any success with the first without solving the other. After the first three years of applying the plan, the one aspect on which results have been substantially worse than expected was the problem of breaking down the disparity between North and South. Total income in the South is estimated to have grown in these three years at about the same rate or a little less than in the North; comparatively, this is getting the southerner nowhere. The figures aimed at by the planners were an increase of four per cent for the North and 8.1 for the South.

The problem of the division has existed since the country was unified and has paradoxically grown since the proclamation of the kingdom. The circumstance in which Italy became a united country emphasised the historic distinction; the kingdom of Piedmont was the agent of unification, not the kingdom of the Two Sicilies, which, at the time, was filling its prisons with fuel for Mr Gladstone's wrath. The demands of security stimulated the growth of communications in the North which were later the basis for industrial growth. And so it has gone on with the North increasing its lead, a disparity which continues to grow. The North is recognisably of western Europe; the South is Mediterranean with Moslem and Greek touches, rich orange orchards on the few stretches of fertile soil and the rest barren, mostly mountainous and regularly punished by the weather. Nature from the start is against improvement. The North is planning its first nuclear power station; Franchetti's account of the South written in 1875 describing the "tortured, cut, eroded" soil and "almost savage agriculture" is still true today for many areas. Re-afforestation, the sinking of wells, the building of aqueducts and mountain river conservancy are being undertaken, but it is a slow business.

The greatest difficulty facing the reformers is neglect in the past. Where there had been earlier attempts at improvements they failed. This means that not only is there a conglomeration of problems, but there is also a psychological issue in the reluctance of the inhabitants to accept the idea that the central authority genuinely intends their benefit. The size of families is daunting; natural multiplication and chronic over-population threaten the collapse of some existing schemes. A new farm-house provided under the agrarian reform would accommodate the first generation. Some other kind of work away from the family's plot of land will in many cases be urgently necessary and of this there is barely a sign. Much of the government's expenditure in the South through the *Cassa per il Mezzogiorno*, the special fund for the purpose, has been on projects called "pre-industrialisation" for the promised expansion of industry

southward. In spite of incentives and the offer of easy loans the promise is unfulfilled ; the money is spent and industry goes on expanding where it stands, in the North.

Agrarian reform was the first measure undertaken by the government. The two agencies working on the Southern mainland have so far settled nearly 50,000 families, and those in the islands about 19,000 families. If it were simply a matter of reallocating the land there would be little difficulty now that the legislation is in force. Beyond this stage is first the ignorance of the peasants in knowing how best to make use of their opportunities ; there is no denying this immense ignorance, though there is equally no good reason for writing it off as incurable stupidity. When the number of holdings available is limited there is sure to be dissatisfaction among those who are passed over. This is the kind of bitterness that gives the Communists a useful weapon, especially where the belief exists that a man must show sympathy with the Christian Democrats for his preferment.

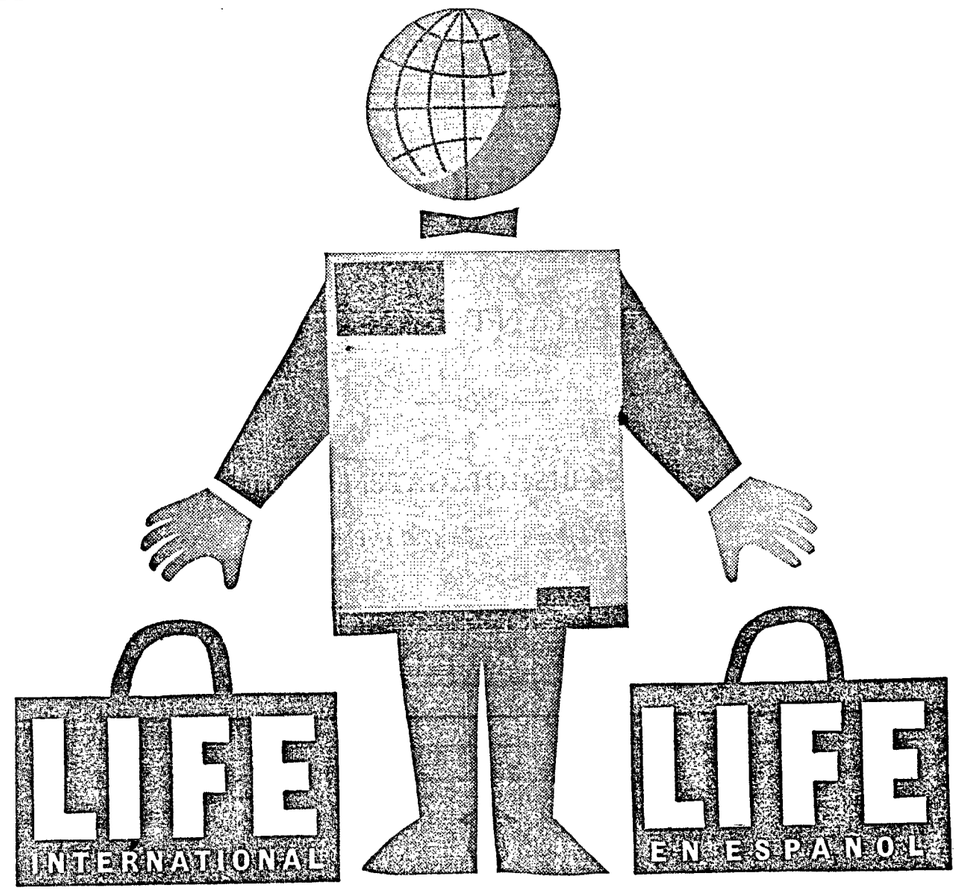
The political element is important. The fear of communist agitation was a strong incentive to the government to take action in the South. According to the reports of an interview Mr Khrushchev gave recently to the correspondent of a Rome newspaper, and which has not been published, he is showing a personal awareness of the value to the Italian Communists in the coming general election of southern poverty. Even more valuable to them might be a situation of rising hope and disappointing achievement on the familiar principle that the thought of something more to gain is a more telling incentive to radicalism than despair. A fresh look at the South and its troubles may follow Signor Campilli's departure from the chairmanship of the ministerial committee administering the fund for the South. He was recently appointed president of the European Investment Bank.

Grotius at Geneva

FROM A SPECIAL CORRESPONDENT

A MAMMOTH United Nations conference on the law of the sea will open in Geneva for a nine-week session on February 24th. The ghosts and survivors of the ill-fated 1930 conference will doubtless be there, wondering whether this one, too, will founder on the rocks that abound in territorial waters. However, this time the delegates will have as a basis for discussion 73 draft articles compiled by the International Law Commission after several years' hard labour. The tidy legal minds of these fifteen legal experts have overcome many geographical niceties.

The objective is a broad one: to draw up an international convention on any topic upon which agreement can be reached. If territorial waters, the continental shelf, radioactive pollution, or fishing rights should prove intractable issues, the delegates will thus be able to fall back on subjects like slave trading and piracy. Actually, if tempers rise, "pirates" is likely to prove a popular term of abuse. The Indonesians, defending their extravagant claims to sovereignty over the high seas between their three thousand islands, may well apply it to the Dutch. The Chileans and Peruvians, trying to justify their 200-mile extension of territorial waters under the guise of an application of the continental shelf concept (which applies only to "offshore oil" and other resources in the sea-bed and subsoil), may use it to describe would-be whalers. The Icelanders, having excluded foreign fishermen from large areas around their coasts, might apply it (though mainly in the past tense) to intrusive British trawlers. The Russians, conveniently forgetting that they recently closed Vladivostock Bay—which is 120 miles across—to protect two of their missile bases, will no doubt apply it to the Americans and British for warning shipping away from huge "danger zones" in the Pacific ; the Arabs, to ships sailing through the Strait of Tiran to Israel's port of Eilat.



All this would have appalled Grotius. He would have expected better progress in the 349 years since the publication of his *Mare liberum*. He could hardly have foreseen the twentieth century extension of his concept of freedom of the high seas, which meant navigation, to include the laying of cables and pipelines beneath the water and flying above it. He would have been even more astounded at the general acceptance of the idea of the contiguous zone—a part of the high seas (not extending more than 12 miles from the coast) in which customs, fiscal and sanitary controls may be exercised by the coastal state. This idea is popular with the Americans—can they be thinking ahead to the possibility of prohibition returning, and wishing to secure their right to prevent rum-running within sight of their coasts ?

Grotius would have admired Britain's staunch advocacy, in this age of long-range missiles that can be fired from submarines, of the traditional three-mile cannon-shot rule for territorial waters, and he would have thought it bad manners were any delegate to recall that barely 150 years ago Britain was still demanding the salute due to its flag within the "British seas." He would have wondered at the proposal for a United Nations registration entitling a ship to fly the UN flag and to the special protection of the organisation. He might have asked what kind of protection was to be provided, by and against whom, and whether the UN was planning to compete with the fashionable flags of convenience of Liberia and Panama, and divert part of the funds so earned to the Suez Canal surcharge account. Canals, incidentally, are not on the agenda.

★

But coastlines certainly are. Concerning the limits of territorial waters, it has first to be debated whether they should be fixed at three, four, or at any rate not more than 12 miles (the commission is at least agreed that 12 should be the maximum), or unilaterally determined as the Russians and certain Latin Americans would prefer. Then there arises the question of how to measure the limits, involving matters such as straight baselines for jagged coasts like Norway's or Iceland's, artificial islands, drying shoals, and "historic" bays (Russia claims that this last doctrine applies to Vladivostock).

Most of the participating states proudly possess coastlines and are therefore directly interested in these questions. But, for the benefit of the land-locked states, the Geneva conference has now been overloaded with the additional problem of their free access to the sea. The land-locked states—Afghanistan, Austria, Bolivia, Czechoslovakia, Hungary, Laos, Luxemburg, Nepal, Paraguay and Switzerland—have been in a private huddle at the UN for months, and have created a new block that cuts across all the familiar regional and ideological alignments. They are expected to press for a special convention—and, as the Swiss have local naval supremacy, one could scarcely blame them if they backed up their pressure by sending a gunboat.

CARRY YOUR MESSAGE in LIFE's International Editions to your best prospects the world over—key people in business, government and the professions. These are the magazines where unique page size and outstanding reproduction reflect the quality of your product and deliver your company's message with maximum impact.

LIFE INTERNATIONAL published in English fortnightly, circulates in 120 countries outside the United States and Canada.

LIFE EN ESPAÑOL is published in Spanish every fortnight for Latin America.

Their combined net paid circulation of over 635,000 is concentrated at upper income levels. Join other leading companies the world over who have invested in advertising in these international magazines.

THE BUSINESS WORLD

Funding Comes First

JUST a year after the Government made the issue of £300 million 3½ per cent Funding stock 1999-2004 at £80, it finally got rid of it. On the same day, last Tuesday, it announced a new issue to fill the gap in its supply of long dated stocks. This is of £300 million Funding Stock 5½ per cent 1982-84, at £98½ for which lists opened and closed yesterday and it takes over on the Government broker's shelves the space that the "never never" stock vacates. It will be on sale during the coming months.

Thus seen, the new funding issue is certainly not a turning point in financial policy; it can almost be represented as a matter of routine. It was as necessary this week that the Bank of England should put some new long dated scrip into the Government broker's hands as it was essential a month ago to issue £500 million of 5½ per cent Exchequer stock 1966 to cater for the needs of the banks. Given only that the authorities were determined to continue the policy of funding by open market selling and to keep control, the creation of two new stocks—one a short medium and the other a long medium—could not have been avoided, nor even delayed, whatever their intentions about Bank rate in the future and the degree of monetary stringency that they consider desirable.

The Government never does really make its issues at a single price on a single day. It started selling the "never never" stock at 80 a year ago; it sold it down to 63 and up again to 66⅛. The average effective price of issue will never be known (that is one of the gaps in public knowledge on which the conclusions of the Radcliffe Committee will be of importance). But it is reasonable to hope that the new stock will sell in quicker time, and at prices less humiliating compared with the original intention, than its predecessor did.

There are three essential differences between the policies of February, 1957, and those of this month. The issue of a year ago was deliberately planned to take the steam out of the gilt edged market: at the outset it did not look attractive and it was not meant to. That issue followed hot on the heels of the ill-starred reduction in the Bank rate from 5½ per cent to 5 per cent so that the donkey had already been allowed to eat the carrot. Thirdly it was made when the Government broker had not run out of stock. This time the Government broker had run right out of "longs" and the donkey has not had all his carrot. Moreover the terms of the new issue—a gross redemption yield of £5 12s. 3d. per cent to final redemption in George Orwell's 1984—fits neatly into the existing pattern of yields. The stock should suit some of the pension funds and insurance companies. It is a damper only to the extent that any big block of stock in the hands of the Government is.

YET there is a little more behind what has been done this week than a mere routine replacement. There is first a good solid achievement; confidence in the gilt edged market has continued to grow with hardly a break since Bank rate was raised to 7 per cent on September 19th. Long dated gilt edged are now back to the prices at which they stood just before that event, despite massive funding sales by the Government broker in the meantime. And demand is still strong. The succession of smaller issues that had been planned to satisfy it has been proving quite insufficient. London County Council's £20 million 6 per cent issue, more than 15 times subscribed, was one such. Applications for £100 were cut out, applications for between £200 and £2,300 received £100 of stock and the big applicants received between 5 per cent and 6 per cent of their needs; a premium of 1½ points was established in early dealings. There seems no reason to doubt that an Australian issue, if made without a big Government loan first, would have been a similarly embarrassing success. The

danger of loss of control by the authorities over so eager a market had become real.

Secondly the issue makes provision to accommodate the inflow of foreign funds attracted to London from abroad by high interest rates. Funding 5½ per cent 1982-84 is tax free to residents abroad. The importance of the concession should not be overstated; there are only a few of these privileged stocks (shown in the table) and the number with over five years to run to their first optional redemption dates, and therefore available to holders of security sterling, is smaller still. The policy

STOCKS TAX FREE TO RESIDENTS ABROAD

	Price	Yields Per Cent			
		Flat	Redemption		
	£		Gross	Net grossed at 7s. 6d.	Net grossed at 8s. 6d.

* If redeemed by Sinking Fund in 1975. † Average life about 9¼ years.

is to provide a few stocks through which *bona fide* foreign residents can be paid their interest gross, even though many would get total or partial relief in their home countries through double tax agreements if they bought tax deducted stocks. If the tax exemption and the terms of the new stock itself prove attractive enough to encourage some of those foreign investors to go long, and if it draws into long term investment some part of the overseas sterling balances not expected to be required for some considerable time—a trail that was blazed by Sir Oliver Franks in his address to Lloyds Bank's shareholders—so much the better.

The first big lesson of modern flexible monetary control has now been learned. It is that the short range advantage of the Exchequer must be subordinated to the objective of co-ordinating the Government's borrowing policy with the control of the whole economy. Narrow advantage would suggest borrowing on short dated stocks when interest rates are high. But this is a 24-26 year stock with a 5½ per cent coupon—an expensive loan to be used to fund shorter stocks. That is one practical application of the Chancellor's statement to the National Production Advisory Council last week that "tight control on money and credit at home must continue for the present."

A second lesson about open market policy perhaps remains to be learned. It is that what can be achieved by market tactics, however useful, is limited. The Government broker can delay a rise or temporarily check a fall. He cannot create a bull market. Now he is presented with one and his task is to channel it into purchases of stock and to curb and delay the rise in prices. Therefore the new stock can act as a peg on long term interest rates. If, for example, Bank rate were to be reduced the new stock could still be on sale at much the same prices as before. Events at the moment are working for him. Demand for gilt edged (prices of which dipped only slightly when the issue was announced) remains strong. The most touching tribute to the gilt edged market for many a long day comes from the hapless sponsors to the Shell issue. Limited supplies of security sterling, they have been complaining, will be diverted from Shell new to Funding 5½ per cent. How many foreign residents a year ago would have preferred a British Government "long" to a leading oil equity?

Who are the Innovators?

The prestige of research institutions today must not overshadow the real contributions still made by the individual inventor

BRITAIN and America are today employing about 1½ per cent of their national incomes and up to a third of their technically trained people in research and development. Most people would agree that they ought to be employing more. This investment of men and money is generally accepted as the price of technological innovation in an industrial economy; and, as such, is willingly paid. New products and processes are assumed to flow systematically if not automatically from industrial research departments, which sift out what will benefit industry from the advances in fundamental science achieved in institutions for "pure" or "basic" research. It follows—comfortably—that to provide more trained people with yet more resources in research institutions of both kinds will guarantee the continuance, if not the acceleration, of a pace of technological upsurge which we take to be already faster than ever before.

It is as well to be reminded that these are assumptions, not axioms. The present state of knowledge of how technical progress occurs is too rudimentary to prove or disprove them—or, indeed, any other plausible generalisation about the matter. No way has yet been devised of comparing the significance of different technical advances; there is no measurable meaning in a "rate of innovation" and nothing to show whether technical progress is faster today, or just better publicised. Even if innovations could be ranked or "scored," it would seem practically impossible to identify them all, or their precise origins. Today's reliance on institutionalised research as the modern channel of science into industrial innovation—a flow that can be increased in volume by widening or deepening the channel—is one of the few acts of faith that materialists of both East and West seem prepared to make.

This faith in the research institution as a guaranteed and broadly sufficient source of technical progress is difficult to test directly. But it is usually, and logically, associated with the assumption that comparatively little is contributed today by that older agent of innovation: the individual inventor. His role as originator, and as a vital link between scientific possibility and industrial application, is assumed to have been largely taken over by the research institutions, which can gather together the original minds, equip them with the information, contacts and equipment that they lacked alone, and establish direct contact between science and industry. And this corollary assumption is susceptible of a rather more practical test. It has recently been challenged.

FOUR years ago, in the University of Chicago, Professor John Jewkes, Mr David Sawers, and Mr Richard Stillerman began to examine the origins of some sixty inventions of this century. They were concerned to establish how many came from individual inventors or individuals working with complete freedom in research institutions such as university departments, and how many from the research departments of industry or other institutions where research is guided towards defined ends. Their findings, set out with 50 of the most interesting of the case histories in a new book *The Sources of Invention*,* are impressive—and incidentally fascinating.

Professor Jewkes and his colleagues found that they could classify more than half of these modern innovations as "individual invention"—i.e. originated by men working on their own or with complete freedom of initiative:

> air conditioning; automatic transmission; Bakelite; ballpoint pen; catalytic cracking of petroleum; "Cellophane"; chromium plating; "Cinerama"; cotton picker; cyclotron; domestic gas refrigerator; electric precipitation; electron microscope; gyro-compass; hardening of liquid fats; helicopter; insulin; jet propulsion; "Kodachrome"; magnetic recording; penicillin; "Polaroid" camera; power steering; quick freezing; radio; safety razor; self-winding wristwatch; "Streptomycin"; Sulzer loom; synthetic light polariser; titanium; xerography; zip fastener.

Those inventions which had originated largely in the research laboratories of manufacturing companies were:

> acrylic fibres; "Cellophane" tape; continuous hot-strip rolling; crease resisting fabrics; DDT; diesel-electric locomotive; Duco lacquers; fluorescent lighting; "Freon" refrigerants; "Krilium"; methyl methylacrylate polymers; modern artificial lighting; "Neoprene"; nylon; polyethylene; silicones; synthetic detergents; television; "Terylene"; tetraethyl lead; transistor.

Out of 61 inventions studied, 33 came from individuals and only 21 from companies; the rest were of such mixed technological parentage as to defy the authors' classification.

Such evidence, as the authors recognise, "must necessarily be qualitative, selective and impressionistic, more historical than scientific." Any such selection of examples must be arbitrary: it would not be difficult to add more items to either side of this balance of responsibility for modern invention. The authors have not pretended to measure how significant either source of innovation is, to rank their examples in any way, or to be exhaustive or necessarily balanced in their coverage of different industrial fields. They have deliberately left out nuclear energy, which has done more than any other single development to fix in the public mind the stereotype of research successfully directed towards chosen ends. They feel, understandably, that too little is known publicly about this whole development process: and that in any case, having been wholly free of normal economic limitations, it can hardly be taken as a pattern. But on their chosen question—whether the individual inventor is still of any significance in industrial innovation—their evidence seems conclusive: in the last 50 years, he has been. And there is no question that their list of recent contributions from individual inventors includes many of great importance.

Industrial research departments were certainly established here and there by 1900 in chemicals and electrical engineering in particular, equally certainly their number and range of work have since grown greatly. The array of contributions from individuals since 1900 would not preclude the possibility that today, at the end of the nineteen-fifties, research departments may be contributing the broad bulk of successful innovation. Moreover, much of their contribution will be less separately identifiable than the examples quoted above, though not in the aggregate necessarily less important. It has been said that

> For every radical innovation which thus rises to fame, there are tens of thousands of minor improvements in products and processes, which (though individually not a complete break with the past) may over a period of years create something quite new.

And a large proportion of the work of research departments in industry consists of just such steady improvement or systematic search among possibilities. In the chemical industry, indeed, this seems to be the ruling pattern of progress; in comparison with other industries, the modern chemical industry seems to have had rather few contributions from the gifted outsider.

* Macmillan. 428 pages. 31s. 6d.

Professor Jewkes and his colleagues would presumably not deny this. They were concerned, in the first place, with inventions, distinct leaps in knowledge and technique, the contribution of originality rather than assiduity. What their study does establish is that a substantial proportion of these original contributions have recently come, and are still coming, from sources other than the research departments of industry, and that such departments continue to rely heavily upon other sources of original thinking. Moreover, research departments have on occasion impeded the acceptance of new ideas from outside. The authors do not doubt that today "a larger proportion of inventive individuals than formerly now find their way into organised institutions where inevitably some restrictions must be placed upon their activities." They are concerned to inquire whether this is an unmixed blessing—quoting the remark of one research director that "there are probably just as many frustrated inventors within industrial research laboratories as outside them."

If "the industrial laboratory does not appear to be a particularly favourable environment for inducing invention," is it nevertheless vital for the development of original ideas, whatever their sources, into successful industrial products or processes? Here the evidence of this book could not hope to be conclusive. Many of the examples of successful innovation deriving from individual inventors that it mentions were in fact assisted at some stage by the development departments of companies, large or small; nevertheless, some were carried right through by individuals or the small firms they founded. In many cases large-scale organisation for development has paid off; and clearly companies generally play a bigger part in this stage of innovation than they may do in the generation of new ideas. Even so, it is impossible to show that any particular institutional form is necessary or ideal for the development of ideas into ironmongery.

THIS deliberately provocative argument, and its evidence that the individual inventor is still an active and far from moribund contributor to technical progress should at least puncture public confidence that mere proliferation of trained personnel in larger and larger laboratories can guarantee technological progress for any country. It does not argue against increasing the quantity, but for more attention to quality. The argument does not affect Britain's need to widen scientific and technical education: training can do the inventive mind no harm, wherever it chooses to employ its talents. But it does perhaps underline the point that competition to duplicate the massed battalions of scientists and technologists arrayed in American research institutions may not inevitably be Britain's wisest deployment of trained intelligence—still less the emulation of the methods of organisation of research sometimes pursued in Russia. It suggests that public policy should be directed towards encouraging the widest possible variety of types of institution concerned with research and development (the United States is notably better off in this respect than Britain); and should lean over backwards, in spite of temptation, from drawing centres of comparatively autonomous research, such as university departments, too closely into the web of "applied research." The recital of ideas originating outside, and of the inherent difficulties in managing originality, makes this book essential if chastening reading for every research director. Its cold shower of facts, moreover, should combat any tendency for scientists inside research institutions to develop into a kind of priesthood of technique, scorning the impious intruder into their temples.

How to encourage the kind of individualist outsider who appears and might best remain outside, indeed, is the second problem of policy raised by this book. Could he be offered greater assistance or rewards than the monopoly of a patent now grants him? The patent system is admittedly imperfect: suggestions that it could be replaced by some modified system of public rewards graded according to independent assessment by technical panels, which might be more logical and no more difficult to adminster, have never found official favour. Professor Jewkes and his colleagues do not rule out the possibility of some institute providing research facilities at public expense for the inventive individual: one occasional success, in their view, would counterbalance many half-baked failures, and technical originality seems surely as deserving of subsidy as, say, the ballet. And they attach some importance to the possibility of honest brokers between industry and inventors; commercial agencies that might bypass industry's ignorance of what inventors offer and, more important, inventors' ignorance of what industry could really commercially use. However much reliance may be placed on organised research, this potential leavening cannot be dispensed with. There are far too few minds capable of genuine originality, at any level, for any country to afford to waste; and, still, a fair number of them are always likely to work best out of harness, on their own.

MOTOR BUSINESS

The December issue of this quarterly research bulletin for the motor and allied industries is now available. It includes:

THE OUTLOOK FOR 1958
THE ITALIAN MOTOR INDUSTRY
THE MARKET IN THE UNITED STATES FOR EUROPEAN CARS

The Bulletin is fully illustrated by charts, amongst which are:

PRICE INDICES OF USED CARS AND VANS
NEW REGISTRATIONS IN GREAT BRITAIN

For full particulars of this Bulletin apply to:

THE ECONOMIST INTELLIGENCE UNIT LIMITED
22 Ryder Street, St. James's, London, S.W.1.
Whitehall 1511, Ext. 48

BUSINESS NOTES

IN THE MARKETS

Knocking at the Gate

LIKE the porter at Glamis, the stock market had in the end to obey the summons at the gate. First came the taps—speeches by Mr Heathcoat Amory and by Mr Alfred Robens, the further fall in commodity prices, and the cut in oil prices. They were loud enough to arrest the technical rally in industrial share prices that occurred in the first week of this month. Then came the bangs—the growth in unemployment in the United States and the Rochdale by-election. They could not be ignored. Was the recession worse than the market had been anticipating during the long slide in equity prices last summer and autumn? Investors could not be sure, but prices on Wednesday had to come down. On Wednesday the *Financial Times* ordinary share index fell by 2.5 points to 158.8, which broke through the "Guy Fawkes low" of 159.0 on November 5th; it was also the lowest point recorded since July 24, 1954. On Thursday earlier falls were reversed in part when Wall Street opened a little steadier. Over the week to Wednesday's close *The Economist* Indicator fell 8.1 points to 170.7, also breaking through the November "low" of 171.2. Few were selling but fewer were buying. Money available for investment is largely pre-empted for new issues, especially of fixed interest stocks, and stagging seems to have developed into a new technique of combining liquidity with a gamble. Investors were prepared to stag as the response to the LCC loan and to the Babcock and Wilcox £2 million issue of a 6 per cent debenture (1980-83) at 97 showed. The latter attracted £43 million of subscriptions, but investors had taken their decision to apply before this week's break in the market.

With these knockings echoing ominously through the "House," the new "Shell" stock went away to a bad start. "Shell" Transport had offered by rights, in the ratio of one for ten, 8,177,204 ordinary shares of £1 each at 110s. On the eve of dealings there were hopes of a premium of 26s. 3d. on the issue price in an active market. The market was indeed active, but it was dominated by small sellers. Dealings began at 25s. premium, came down to 22s. premium and then recovered to 23s. 6d. premium. The story was repeated on Wednesday when the price was lowered to 20s. premium before recovering to 20s. 3d. and on Thursday it slipped to 20s. 1½d. Institutions were not taking up the stock as it came on offer at these prices, and buying from the United States was modest. It was not a good week for "Shell," but it was not a good week anywhere in the equity market.

Mr Robens Depresses Steel Shares

THREE weeks ago Mr Harald Peake of the Steel Company of Wales appealed to the labour movement to say clearly whether it intended to re-nationalise the steel industry or not; on Sunday Mr Robens gave him the only answer that anybody (except just possibly Mr Peake) would have expected. It was a firm enough "Yes" quite to halt buying of steel shares on the Stock Exchange, and to reverse a mild rise in share prices. Selling pressure after the speech was fairly strong, but share prices were marked down even more, because jobbers were unwilling to take stock on to their books and accordingly widened their prices.

Mr Robens was at least less shocked than Mr Morgan Phillips at the idea that this industry should prepare to defend itself against the threat. He agreed that Mr Andrew Stewart and his fellow chairmen in steel were "perfectly free to express their own views and take whatever actions they are entitled to take within the law to frustrate what we in the Labour party propose to do." He added:

> No one, in fact, is making a case for the public ownership on the basis that it is an inefficient industry. We have never said that. The public ownership of the iron and steel industry is vital to the economic planning of the nation's affairs.

Clearly, somebody has been impressed by the prestige advertising of the British Iron and Steel Federation.

But Mr Robens was significantly unspecific about just how Labour would propose to re-nationalise steel; if the party has any coherent plan, it is clearly not going to be prematurely disclosed. The probability is that it has not. If one accepts as inevitable the fact that the threat will remain until an election, and will continue both to depress share prices and to make it hard for steel companies to raise money from the market for capital development, that lack of Labour commitment to any cut-and-dried plan might still, on balance, be counted an advantage for the industry's future.

DEFENCE PRODUCTION

The Paper and the Cracks

THE manner in which the Defence White Paper lists the arms ordered for the services suggests—perhaps deliberately—that few changes have been made since last year. Two comparatively woolly sentences in last year's white paper about the future of bomber and fighter production in this country caused an outbreak of passions in the defence ministries; this year there seems to be a good deal of white papering over the cracks. Work is going ahead on atomic submarines; anti-aircraft and airborne guided weapons; on Britain's 2,000-mile range ballistic weapon; on the V-bombers and their guided bombs; and on a small, fast bomber for the Navy which the RAF is being pressed to adopt as a replacement for the Canberra. This is a formidable list and the former Chancellor of the Exchequer will not be the only person who believed it should be drastically pruned.

But whereas Mr Thorneycroft was for outright cancellations, present policy appears to be based on the more negative, though not less effective, approach of not re-ordering. The Defence White Paper shows that existing production has been left intact; what it does not show is the likelihood that development of those manned aircraft that are now in production—the Hunter and P.1 fighters and the V-bombers—is likely to be cut off at a relatively early stage, *certainly much sooner than would normally be expected.* There were eleven versions of the Meteor and at least nine of the Canberra bomber, but it would be surprising if there were more than two marks of English Electric P.1 fighter—or of any of the V-bombers. These aircraft are all capable of further development, but the same money put into guided missiles ought to give bigger returns by the same date in terms of fire power, technological investment and potential service life.

★

Pressure to continue the development of existing types of manned aircraft will no doubt be considerable—indeed it is the main threat to the effectiveness of the switch in policy. Nevertheless the fact is being faced in the defence ministries that work on manned aircraft is taking far too big a share of the limited resources available for development. The consequences for the aircraft industry now that the divorce between military and civil production is complete are serious. There are signs that the United States ultimately intends to leave the development of intermediate range ballistic missiles entirely in British hands, but this will not provide work for all aircraft companies. To develop new outlets for the aircraft industry's spare capacity will take time and may not go smoothly. Rolls-Royce, for example, has developed a specialised nuclear engineering department that is building the reactor for this country's first atomic submarine. But there are signs that the Government has had several changes of mind about this particular project. The Defence White Paper skates over any reference to the source from which atomic submarines will be obtained. This omission, coupled with recent American offers to provide detailed blueprints to selected allies, suggests that either American reactors, or at least their blueprints, might be used in this country to get these new submarines quickly into service.

BRITISH TRADE

A Shaky Start

THE first trade figures for 1958 offer little comfort. Provisional figures for January show another small decline in the value of exports and a slight expansion in imports. As a result the trade deficit rose from the exceptionally low figure of £19 million in December to £35 million last month. This gap is respectably small but the import bill is getting considerable help from prices at present, and the rise in the trade deficit is unwelcome.

Exports in January usually compare favourably with the average for the fourth quarter; last month they did not.

* Excluding repayments of silver bullion to the United States amounting to £7 million in 1957. † Provisional.

Shipments to Canada, and to a lesser extent to the United States, are however, seasonally low in January. But even allowing for that fact the performance in these markets was *disappointing. Exports* to the United States were 8 per cent less than the monthly rate in the last quarter of 1957 and lower than in any month last year except August, while exports to Canada were the lowest for two years.

The Coal Nobody Wants

SUBSTANTIAL cuts in export prices from the beginning of this year have not enabled the National Coal Board to increase its exports: in the first few weeks of the year these were markedly lower than at the beginning of 1957. Nobody in Europe seems short of the kinds of coal, such as power station smalls, that the board most wants to sell: indeed, mounting pithead and opencast stocks in Britain can be matched in Germany and Belgium, and the low level of transatlantic freight rates makes American coal sharply competitive in price for such orders as are going. Most of the coal actually being imported from the United States into Europe, however, is under long-term contracts: little is currently being ordered.

Britain's own stocks are very slowly declining, because consumption is seasonally exceeding production. The level of output, indeed, would in ordinary circumstances seem alarmingly low: over the first six weeks of the year, a million tons down on the first six weeks of 1957, mainly as a result of greater absenteeism. The Coal Board is diverting the emphasis a little from quantity to quality—which in coal today means size. Whether the Government will soon feel ready to end domestic solid fuel rationing at the beginning of the coal summer—probably with an opening of the price "concertina" to make large coal dearer—remains to be seen.

OIL PRICES

Oil Prices and Taxes

PRICES of petrol and other products from the refineries in the US Gulf and Caribbean, together with the cost of shipping them to Britain, set a ceiling to the price at which virtually identical products can be sold in Britain—even when most of the petrol used in Britain is refined here from imported Middle East crude oil. Petrol prices at the pump in Britain are invariably held up very close to that ceiling, but when the ceiling is lowered, as it was when the prices of almost all petroleum products in the Caribbean fell last week, prices have to be cut in Britain, sooner or later, by a roughly corresponding amount. The only major exception this week has been fuel oil, where the recent fall in the Caribbean price has not been fully reflected in Britain; but British prices had already fallen more than Caribbean prices last autumn, and may not fall further until —as seems probable—the price of fuel oil in the Caribbean weakens still more.

This week's reduction of ¾d. a gallon in the price of petrol at the pump puts wholesale prices a halfpenny a gallon below those prevailing sixteen months ago before the Suez canal was blocked, but as the dealer's profit margin is now a penny a gallon higher than it was then, the retail price is still a halfpenny a gallon higher. A cut of ¾d. a gallon on premium grade petrol priced in the inner zones at 5s. 0¼d. (now 4s. 11½d.) is a reduction of not much more than one per cent. But the retail price includes a tax of 2s. 6d. a gallon, which is now fractionally higher than the entire cost of producing, refining, storing, transporting and distributing a gallon of petrol (including the oil companies' and dealers' profit). If that tax is excluded, ¾d. a gallon is a reduction of 2½ per cent on a premium grade petrol, and not far short of 4 per cent on a standard grade. If the Government should ever need to stimulate consumer spending, rather than restrict it, it might do worse than to experiment with a cut in the petrol tax. While the tax more than doubles the cost of petrol to the motorist the oil companies cannot do much to test the elasticity of demand for petrol by cutting prices—but the Government could.

BEA'S JETS

Green Light at Last

ON Wednesday afternoon the Minister of Transport called an end to the dispute that has harassed the attempts of British European Airways to order a small fleet of 24 jet airliners and announced that talks would begin within the week between the corporation and the group headed by de Havilland and Rolls-Royce. This was the permission that BEA has been seeking since early December. It had been blocked by the Ministry of Supply on the grounds that the de Havilland group, as originally constituted, did not have resources behind it which looked as good on paper as those of the competing Bristol-Hawker Siddeley group. Little has changed since then, except that the de Havilland proposals have been tardily spelled out in rather more detail and with somewhat greater precision, and the part of Rolls-Royce in the partnership has been clarified. It is not clear therefore whether Mr Watkinson made his decision with or without the grudging approval of the Ministry of Supply, which during the weeks of suspense has not concealed its belief that the future of the aircraft industry would have been better served by channelling work in the direction of the Hawker Siddeley Group rather than that of de Havilland.

What the Minister of Transport was called on to decide was not, however, what was good for the British aircraft industry, but what was good for British European Airways, an issue that tended to get kicked more and more to one side in the unedifying scrimmage that followed. It is not the first time that the interests of the nationalised air corporations have clashed with government policy for the aircraft industry; it is to Mr Watkinson's great credit that this time he kept the two firmly apart and gave approval to BEA's request for negotiations with de Havilland—although not until there was no possible excuse, real or imaginary, for any further delay. Both sides were playing for high stakes. The BEA order may not be large enough for the manufacturer to show a profit, but it is big enough to justifying tooling up to put a new aircraft and its engines into production. It may, moreover, be the last new aircraft, military or civil, to go into production in this country for many years. It is therefore understandable that all sides involved should fight for it with every means at hand. The general opinion will be that Mr Watkinson was a fair referee in a rough maul.

FOREIGN EXCHANGE

Sterling Near the Ceiling

STERLING has again been in good commercial demand this week. Against the dollar it has been firm at around $2.81¼ in the official market. This is almost the effective ceiling and the control has been taking in dollars on most days. These purchases were necessary to prevent the rate rising beyond the nominal ceiling of $2.82. There has also been exceptionally good demand for transferable sterling, which has strengthened this week to over $2.79. The recent rise in the transferable rate follows substantial purchases on the Continent, some of them on account of the Russians, who have been buying rubber. The movement, however, merely restores the relation between official and transferable sterling roughly as it was two months ago. Last November the margin between transferable and official sterling was as narrow as ½ per cent. It then widened to nearly 1 per cent, partly as a result of Japanese sales of transferable sterling. Now that those sales have stopped, the margin is back again to about 0.8 per cent.

There has been little evidence of further covering of speculative accounts against sterling. The forward premium on dollars has been inclined to widen again this week, but this is the natural reflection of the gap separating interest rates in New York and London. The forward premium on dollars, however, still leaves about ¾ per cent of the interest rate differential, a figure which should encourage continued movement of short-term money to the London market. There has been evidence of a further movement of Canadian and American money in this direction; that flow was probably one of the factors encouraging the London discount market to bid last week's Treasury bills down to a lower rate.

Against Continental currencies, sterling has put up a mixed performance, but it has been strong against the guilder. This currency has been on offer against sterling

162853

as one of the by-products of the "Shell" Transport issue. That issue has played some part in the strength of security sterling which over the past week has appreciated from $2.75¼ to $2.76½. The new £300 million Government loan, with its tax concession to non-residents, may do likewise.

ATOMIC INSURANCE

£5 Million Liability

THE first privately owned atomic reactor built in this country, Associated Electrical Industries' Merlin research reactor, will be operating this spring long before the government's legislation covering the inspection and insurance of non-government nuclear plants can come into effect. In this matter, the insurance market has moved a good deal faster than the authorities. A committee consisting of the leading insurance companies and Lloyds formed an atomic insurance pool early last year and this is now negotiating to provide cover for at least seven different projects, including Merlin and some foreign plants.

Three big atomic power stations are already under construction for the Generating Board in England, and one in Scotland, while a public inquiry is being held at this moment about a fifth site in Wales. The legislation outlined in the House of Commons on Monday by Sir Ian Horobin would provide for the inspection and licensing of all such privately owned atomic plants—presumably by inspectors reporting to the Ministry of Power. It would also make the owners liable for any damage to third parties caused by those plants up to a limit of £5 million; the risks carried on the plants themselves are a good deal greater and will be fully covered. This £5 million limit is exactly half the rule of thumb figure of £10 million which the insurance committee had themselves used as a rough yardstick for the maximum third party claims that they estimated might follow a major accident at an atomic plant. But any figure is bound to be notional; on the evidence of the Windscale accident, where third party claims are put somewhere near £100,000, a £5 million limit ought to provide comfortable cover. If third party damage were to exceed that, the government would have a national disaster on its hands and would presumably have to come to the rescue of the victims.

These arrangements refer only to the relatively fool-proof natural uranium reactors being built for British power stations. The atomic plants that the insurance pool may be asked to cover abroad will not necessarily be of this basically safe Calder Hall type, and while £5 million ought to cover the maximum conceivable damage to third parties that could be caused by a reactor of this kind, that might not be true of other types of atomic plants either in this country or overseas.

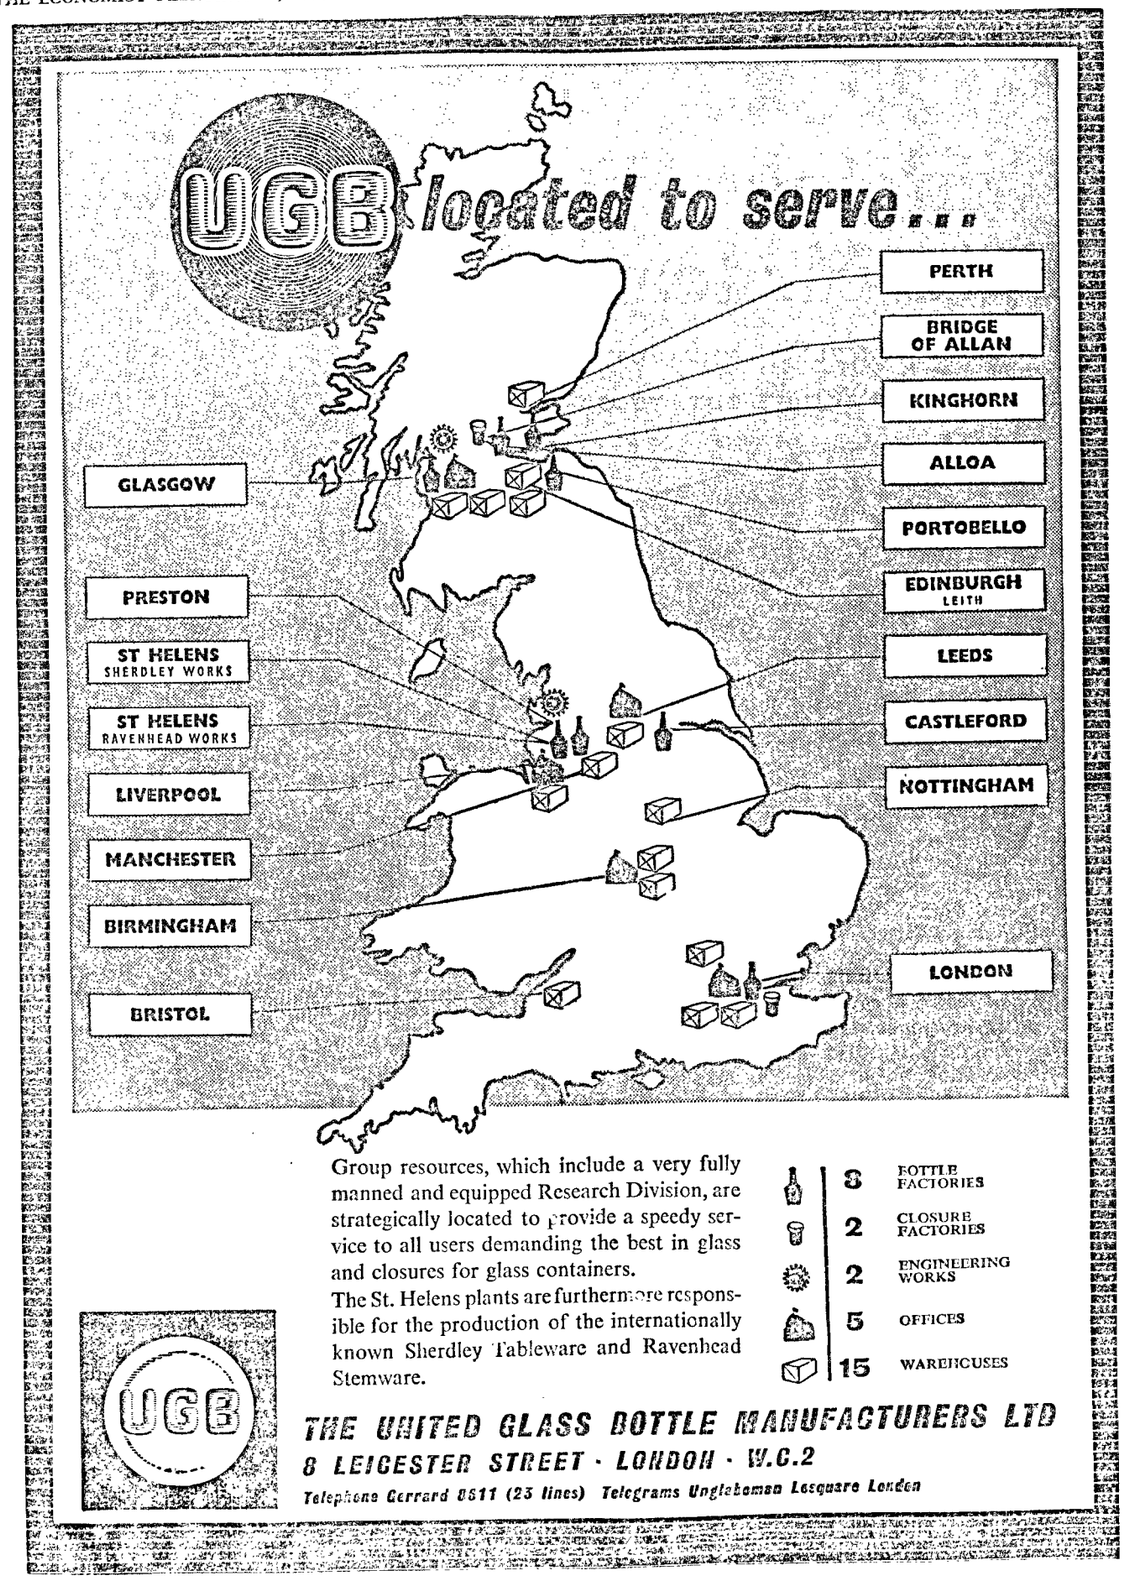
AFTER THE CHEQUES ACT

Receipts Going Out

LORD LANSDOWNE, answering a question in the House of Lords on Tuesday, estimated that twopenny stamps on receipts brought about £5 million into the revenue in 1956-57. Some portion of that will now be lost, as the Cheques Act has significantly discouraged the giving of receipts for payments made by cheque. It did so, as the discussion in the House of Lords made clear, by drawing attention to the existing law on receipts, rather than by changing it. A paid unendorsed cheque is now good prima facie evidence of payment; a paid endorsed cheque has always been such and the intention was presumably merely to ensure that absence of endorsement would not deprive the cheque of this ancillary attribute. But public discussion of this provision, the banks' pressure on their customers to abandon the use of receipts printed on the backs of cheques, and no doubt the rise in postal charges at about the same time, caught the imagination of accounts departments and set them asking whether their own receipts were really necessary.

The idea of not issuing receipts is older than the Cheques Act, which has done no more than accelerate an economy which has been slowly gaining ground for years. Since the war a number of firms have unilaterally given up asking for receipts. A few have gone further, by ceasing to issue receipts for payments made to them by cheque, unless customers expressly ask for them; in practice few have stood on their right to a receipt. Some speakers in the House of Lords discussion were troubled by instances of unstamped receipts, but the customer's right to a receipt is itself curiously limited. Its only legal support is that the Stamp Act makes it an offence to refuse a stamped receipt for a payment of £2 or over and there is no simple method of enforcing the £10 penalty for infringement.

Receipts are not to disappear in complete silence: there has been a certain amount of criticism of the tendency to do without them. For example, it is not always easy to link a paid cheque with the bill to which it refers, and the preparation of the accounts of small businesses, already a difficult task, will be made even harder if there are no receipts to help the accountant. The difficulty might be met, Lord Conesford suggested in the discussion, by presenting the account in two parts—one to be returned to the trader and the other retained by the customer.



Medallions Replace Stamps

FOLLOWING lengthy negotiations with the Inland Revenue, a number of banks will shortly be issuing their cheques with a printed medallion in place of the embossed oval blue 2d stamp. This change, empowered by a provision in the 1956 Finance Act, will give useful financial and administrative relief to the banks and also to the Inland Revenue. Hitherto, the banks' printers have had to interrupt their work and send the cheques to the Stamp Office to be embossed with the 2d stamp; and the banks have had to pay for stamping the whole batch of cheques in advance. Under the new arrangements, cheque printers can be licensed to include the medallion as part of the printing process; and the banks will pay the equivalent of the stamp duty when cheque books are issued to customers. The customer is unaffected; the nostalgic may regret the ironing out of their cheque surfaces, but others may prefer a flat cheque book.

RUBBER

The Russian Enigma

sion in America ; it has held spot rubber steady at just under 23d. per lb, against 25d. at the end of September. It has also hoisted the price of No. 1 sheet, which the Russians usually buy, to more than its usual premium above the secondary grades that American and British manufacturers are able to use. A close balance between production and consumption of rubber in 1958 in the face of recession in America must depend upon a maintained demand from the communist countries and particularly from Russia. In each of the last three years world production of natural rubber has been about 1.9 million tons. Despite the troubles in Indonesia it could be maintained at near that figure in 1958—indeed lack of proper estate control might temporarily increase the flow of Indonesian rubber at the expense of the future. Of the world production the communist block took just over 300,000 tons in 1956 and just under 300,000 tons last year. If rubber is not to run into surplus, they will have to buy something over 300,000 tons this year.

Russian purchases, the largest element in the demand of communist countries, have always been spasmodic. At the beginning of 1957 Russia was well bought and stood almost out of the market until the autumn. Then the need for rubber seems to have become so urgent that the Russians concentrated on consignments already afloat and were prepared to take some No. 2 grade rubber. The buying spread into this year and still continues ; since insufficient rubber for February shipment is available March-April rubber is also being bought. The bulk of the supplies bought late in 1957 can only reach Russia during 1958, so the calculated imports into Russia for 1957 will show a decline at about 77,000 tons against 126,000 tons in 1956. But Russia starts 1958 again well bought. January shipments are expected to exceed 10,000 tons and a high proportion of the modest United Kingdom warehouse stock of 24,000 tons in fact belongs to Russia ; their rubber comes here for sampling, arbitration and onward shipment in Russian vessels. It is quite arguable that Russian potential consumption exceeds the recent average imports of around 100,000 tons a year and that the buying is limited only by the availability of sterling. But whatever the cause, that buying has dried up often in the past and if that happens again rubber will be in surplus.

TIN

Malaya's High Exports

EXPORTS of tin from Malaya were running at about 6,000 tons a month before restriction began on December 15th. They should average nearly 3,000 tons a month out of Malaya's present quota of 10,125 tons for the 3½ months ending on March 31st and the same rate out of the April-June quota. Actually exports of tin metal were 4,766 tons in December, which was considered reasonable for a month of which only half fell within the control period. But in January Malaya's exports were no less than 6,547 tons, a figure that caused consternation in the market. Did it mean that Malaya was producing all its quota in the first half of the quota period—which it would be quite entitled to do ? Or was Malaya simply failing to abide by the rules ? Forward tin on Monday fell £4 below £730, at which the buffer is holding the cash price. Here was a sure sign of loss of confidence.

Neither explanation, however, seems to be correct. Exports from Malaya are indeed being rigidly controlled. But "export" is deemed to take place at the point where duty is levied, and that is when tin concentrates are delivered to the smelters. In other words, control is not exercised on exports of tin metal from Malaya, and the additional exports of tin which are now coming out appear to arise from three sources: stocks held by the smelters when restriction came on ; stocks of concentrates coming from the mines to the smelters between December 4th, when restriction was announced, to December 15th, when it became effective ; and working stocks of concentrates held at the mines but hurriedly shifted to the smelters just before restriction became effective. End-November stocks at the smelters were 2,100 tons and end-November stocks of concentrates held at the mines were 4,070 tons, a high proportion of which will no doubt have been delivered to the smelters before restriction comes into force. This extra tin is part of the pipeline supply that has to be drained out before tin control can work properly, and the buffer has to absorb most of it.

DRUG PRICES

No Tranquillisers for Sir Frank

THE Exchequer and Audit Department has shown signs of drug addiction during the past eight years. It has been irresistibly drawn to the pharmaceutical industry, whose main customer is the National Health Service and whose costing methods do not conform to the rules prescribed for government contracts. After nearly a year of uneasy truce over the prices charged for drugs prescribed through the NHS, the department has resumed the attack, this time for drugs supplied to the Ministry of Health on bulk contract. Sir Frank Tribe, the Comptroller and Auditor-General, noted coldly in a recent report that "although there appears to be little effective price competition in connection with these central contracts, none contains any provision for investigation of the manufacturer's costs." This is almost precisely the same complaint that he first made eight years ago.

Sir Frank had two specific complaints. First, identical tenders were being received for some specialised antibiotic and cortisone preparations—in one instance, identical prices quoted for 43 out of 59 items and single bids only for the remaining 16. Secondly, prices of specialised antibiotics for which there was only one British supplier, were not subject to cost investigation. The value of the contracts under scrutiny came to nearly £2 million a year.

The pharmaceutical industry argues that its prices are based on two principles. One is that a manufacturer fortunate enough to develop an important new drug and to hold patents on it must earn a profit that will cover the losses he has incurred on unsuccessful research. The second argument, which applies to products that are supplied to precise technical specifications, is that the market for identical preparations is governed by the lowest price. If one manufacturer lowers prices, the rest must follow suit

or cease production. This is the explanation that the industry and the Ministry of Health give for identical tenders. The explanation of the absence of cost investigation is even simpler—the manufacturers refuse to allow it. Faced as it is in the case of two important antibiotics with only one British supplier, the Ministry of Health could presumably import supplies from abroad if it felt British prices were excessive. The industry's case against official criticism and for its own price system will be spelled out in evidence to the committees on prescribing and it will deserve attention. Sir Frank, after all, has not directly accused them of over-charging; he merely asked what evidence existed to the contrary.

BUILDING SOCIETIES

Abbey National Marks Time

BUILDING societies large and small had to hold themselves on a tight rein last year; the Abbey National, the second biggest, could not escape the curb. Its total assets rose last year by £20 million to just over £278 million. Borrowing rates were unchanged at 3½ per cent net on shares and 3 per cent net on deposits and the net inflow of new funds at £18½ million was slightly lower than the 1956 figure of £19½ million. Its new advances on mortgage at £38.6 million were smaller than the total of £40.3 million in 1956 and £39.3 million in 1955.

The Abbey National last year seems to have been eager at least to preserve and if possible to build up its liquidity ratio. In fact, it remained unchanged—at 14.4 per cent of assets, taking investments at book values and at 13.9 per cent taking investments at market values. In the autumn withdrawals by shareholders and depositors quickened. Then a mild winter enabled builders to get more work done than is usual in the winter months and thus hastened the progress payments that had been prearranged. As a result, new mortgage advances were larger than had been foreseen. It is not therefore surprising that Abbey National succeeded only in maintaining its liquidity ratio. The element of investment depreciation in that ratio is small, because Abbey National deploys a high proportion of its liquid assets (£15.8 million out of £40.1 million) in unquoted loans to local authorities. These are arranged with maturity dates carefully spaced out in sequence and all within ten years. As with the Co-operative Society the inflow of new money is now higher than it was twelve months ago. But no society at present dare build any big hopes on this improvement; it might easily be temporary.

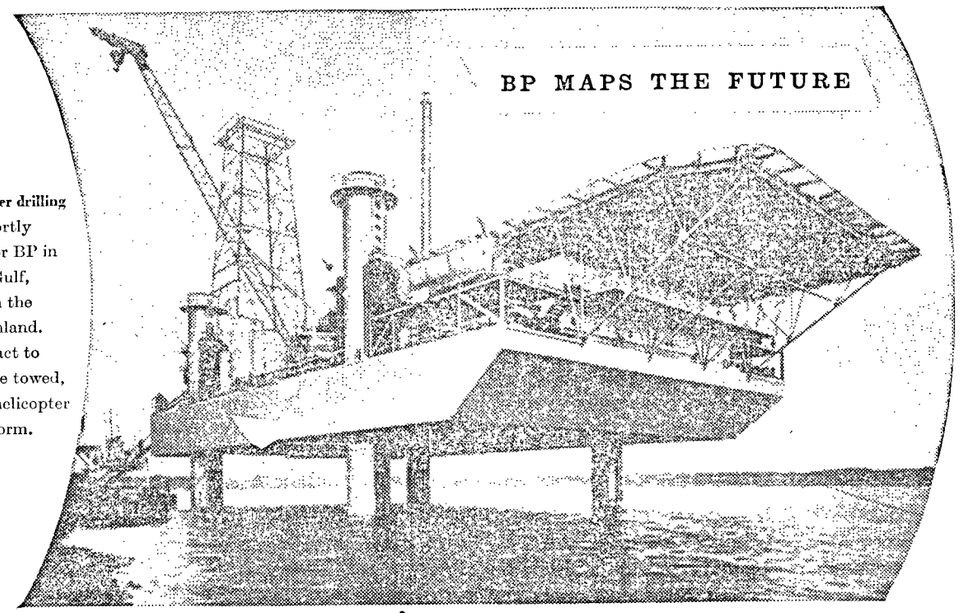
CAR HIRE

Hertz in Britain

THE entry of Hertz, the American car hire firm, into the British car rental business through its acquisition of Daimler Hire could well cause quite a shake up in this rapidly growing part of the motor trade. Daimler formerly held the agency of Avis, the other leading car hire firm in the United States, and that valuable contract is now open for bidding by Daimler's main competitors here. Hiring cars out to overseas visitors, especially North American tourists, accounts for the bulk of the summer turnover in this business and provides the jam to go with the steady but smallish bread-and-butter business from British businessmen and motorists all the year round. Most American and Canadian bookings are placed through travel agents there (such as American Express, which has a joint interest with Hertz in the latter's overseas operations), or through hotels in this country. So far only Daimler and Rootes (which uses its American dealers) of the larger car hire firms have a footing across the Atlantic for direct bookings.

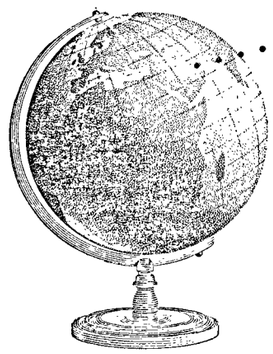
But Hertz, with its wide experience of car rental in the United States, also has plans to develop the Daimler organisation into something more like the American network of car hiring facilities, with its own centres in strategically placed cities and booking arrangements with the local car hire firms it licences. Godfrey Davis, which is one of the largest firms in the business, operating about 1,000 cars in the summer, has quickly announced that it, too, is hoping to develop a national network of booking centres through selected car dealers. Car hire is still very much a business of small firms; it is believed that there are over 5,000 separate firms—including the village taxi-owner-cum-motor-repairer—operating some 30,000 cars between them. The new American element could well lead to a process of concentration of these separate interests.

But the tourist provides only part of the rental business. The practice of leasing cars for six months, a year, or even longer has been growing rapidly, especially since the Board of Trade dropped, during petrol rationing, its regulation requiring advance payment of nine months' rental. This way a company does not have to spend capital buying the new cars it wants to put its directors or travellers in, nor does it have to maintain or replace them itself. It can still charge the cost against tax, as can the car hire firm charge its own costs including depreciation—thus the revenue doubly loses. More car dealers are coming into this profitable line of business, once they have got the capital; vans and, to a very limited extent so far, lorries can also be leased on similar contracts.



BEER

Competition in a Can



LESS than one per cent of the beer drunk in Britain last year was bought in cans: nevertheless, this was more than twice as much as the year before. Out of total sales of 891 million gallons, about 540 million gallons was sold on draught: of the 351 million gallons (nearly 40 per cent) "packaged," about 7½ million gallons was in cans and the rest bottled. The Metal Box Company, which supplies the cans, found from a recent market survey that two-thirds of a sample of beer drinkers throughout the country had heard of canned beer, and about a third had tasted it: in Scotland, however, three-quarters of the customers had drunk it, and 92 per cent of Scottish off-licence shops stocked it, against a national average of 35 per cent last summer.

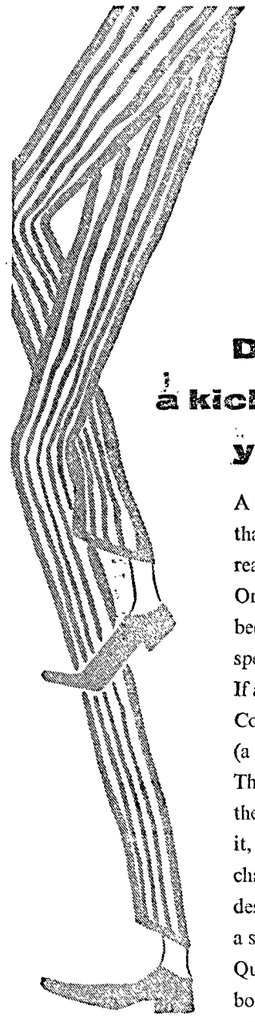
The buyer is offered cans either in pint or half-pint sizes, or to fill one or two "glasses." It costs usually about 3d a pint more than roughly corresponding pale ales in bottle. This is inevitable with a non-returnable container, whereas the cost of a beer bottle can be spread over the 25-30 times it is likely to be re-used, which even with the costs of collecting empties makes it a very small addition to the cost of the beer inside. For his extra pence the customer gets a container that is rather easier to carry and doesn't break or clutter-up cupboards: the beer inside is "stabilised" to have a much longer shelf or cupboard life than similar beers

BP MAPS THE FUTURE

This underwater drilling barge will shortly be at work for BP in the Persian Gulf, 80 miles from the Arabian mainland. The legs retract to enable it to be towed, and it has a helicopter landing platform.

Can oil supplies be doubled in the next ten years?

TODAY THE WORLD is using twice as much oil as in 1946. So far, production has kept pace with demand. At its expected rate of increase, by 1966 demand may well have doubled again. What is being done to meet this situation?



The answer is that exploration in known and suspected oil-bearing areas is proceeding on a colossal scale. In this world-wide operation the BP Group of Companies and its Associates are engaged, in some twenty countries, at an investment cost running into millions of pounds.

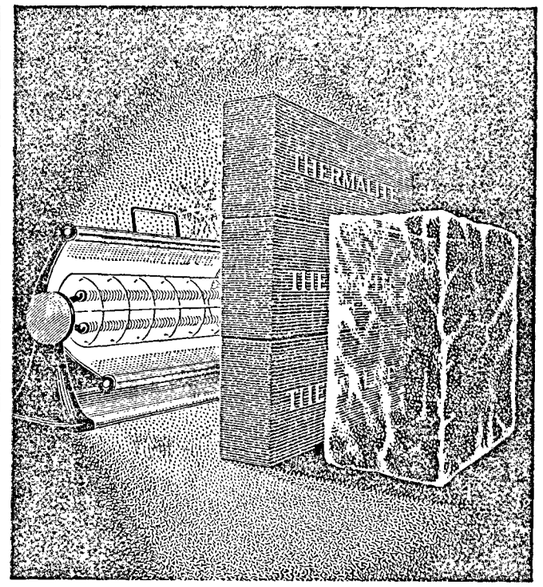
BP is also increasing the capacity of its fourteen refineries; adding new vessels to its 2,000,000-ton tanker fleet; expanding its marketing system, which already covers a great sweep of the globe, from Canada through Europe to Asia, to New Zealand.

In 1946 the world used some twenty million tons of BP products; in 1956 fifty-three million.

The ever-increasing demand for oil must be met: no organisation in the world is working harder to meet it than The British Petroleum Company.

THE British Petroleum COMPANY LIMITED

Do you get a kick out of your desk?



A kick of inspiration—
that comes to those who work in
really well-planned offices?
Or a smart crack across the shins—
because you forgot to sit the
special, twisted way in *that* desk?
If all's not well, ring Catesbys
Contracts at Museum 7777
(a letter, if you're abroad).
They'll put things right—make
the office the right shape, decorate
it, put a new carpet here, more
chairs there, and replace *that*
desk with a new one that's almost
a second secretary. Time and cost?
Quick and low! You'll soon make
both up in that spanking new
office, where work's a pleasure
and profits are, somehow,
easier to coax.

Interior building and furnishing by

in bottle. In the United States, where about 80 per cent of all beer is "packaged," cans account for nearly 40 per cent. The refrigerator is ubiquitous there, and one significant advantage of the can is that it is physically smaller and shaped to fit into refrigerators: though in the United States, unlike this country, bottlers have been ready to make bottles without the long neck that disqualify most British bottles from standing up in most British refrigerators. It may be a long time before bottlers here become worried about this currently tiny competitor in packaged beer; but the can is steadily stacking up extra business.

COMPUTERS

Plant Designer's Mate

EARLY interest in computers concentrated on the digital variety, "electronic brains" that were nothing more or less than giant calculating machines. Industry—the defence industries always excepted—awoke rather later to the possibilities of the other type of computer, the analogue, that operates by electronic simulation of an actual plant or process in operation. Now a tool that was once used exclusively in research for such problems as the study of flutter phenomena and the behaviour of guided missiles in flight is coming into more general use as an aid to plant design and control. The electronics division of Electric and Musical Industries has recently completed what is believed to be the biggest analogue computer of its kind, an electronic replica of one of the factories of Laporte Chemicals.

In designing a computer of this kind, the first stage is the worst. It entails devising a mathematical model for each physical unit of plant, for example, a tank, the liquid level in the tank, the rate of flow and so on right along the flow-sheet. Once this mathematical operation is completed, it is relatively easy to convert the mathematics into electronics, so that the figures become voltages whose movements can be translated back with relative ease into liquid levels, flow rates, tanks and tank sizes, etc. The analogue computers themselves are built up out of standard units linked together in a pattern that is dictated only by the type of problem studied. A small computer bought to simulate the operation of one particular process, can grow by the addition of more and more units until it is capable of providing a picture of the entire plant. Digital computers cannot be built up in this way; if the computer proves too small for the work, it has to be scrapped and replaced by one of larger capacity.

Analogue computers can be a useful aid to production planning in a complex plant producing a large number of interrelated products, such as a chemical factory, an oil refinery or a nuclear power station, but may prove even more important in plant design. Using data from a pilot plant, an analogue computer can give engineers a good working idea of how a scaled-up plant is likely to behave, what would be the best rate of flow in the different units, how big and how strong tanks and pipes should be to contain it. The design of more than one big plant in the United States has been changed as a result of studies of this kind. The analogue computer does not, however, provide more than an approximation. It has not the pedantic accuracy of a digital computer; it is rather a sound and reliable guide that points the way and leaves the last ten per cent of decision in the hands of the manager, the plant engineer, or the designer.

WATER POLLUTION

Indestructible Detergents

AN uneasy feeling that synthetic washing powders might become a potential source of water pollution led to the setting up four years ago of a committee to inquire into the possibility. That committee reported, in June, 1956, that indeed synthetic detergents might—by reducing the efficiency with which sewage works clean the effluents they discharge into rivers. It could suggest no immediately adequate correctives: but its report led to the appointment last year of a 12-men technical standing committee to supervise further research into this possible pollution. A proportion of the chemicals in most popular household powders, which varies from 20 to 50 per cent, is escaping with the effluent from the country's hard-worked sewage plants into the streams and rivers that feed most of Britain's water supply. Here the surviving detergent foams in turbulent water, reduces quite appreciably the self-purifying properties of slow-moving streams, and is liable to pass through the waterworks which purify water from the streams back into drinking water.

Last October this committee in its turn sent a gloomy interim report to the Minister of Housing, which was published last week. The best it can say is that probably that total consumption of synthetic detergents has stopped rising, so that their effect on the sewage plants may not get any worse. Since consumption had bounded from 13,000 tons of active agent to 41,000 tons between 1949 and 1956, this is a forecast of some importance.

It is, however, the only hopeful sign that the committee can report. The Docks and Inland Waterways Commission complain that foam on its waterways is so deep in places "as to reduce very materially the chances of rescuing anyone falling into the water. At such places anti-foaming agents are a necessary concomitant of lifebelts, but recent trials by the commission suggest their value is limited." The committee is still unable to hold out any hope of a formula for a modified alkyl benzene sulphonate (the active agent in most powders) that would satisfy the conflicting interests of manufacturers attempting to protect their investment in existing plant, shoppers unwilling to pay more than current prices, and sewage engineers asking for a chemical which will break down under normal purification treatment. There are some synthetic detergents which do, but these are not as popular for household use as the recalcitrant alkyl sulphonates. Just how much damage these do to rivers is still under investigation, but the strong feeling runs through the report that anything short of a new formula will be, like the steps taken to keep down the foam nuisance, "palliatives rather than cures."

CHEMICALS

Plastics Growth Unchecked

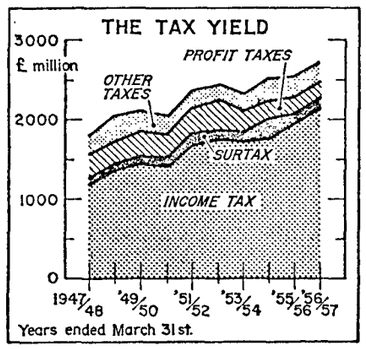
OUTPUT of plastics materials rose faster in 1957 than in either of the two preceding years, and has now reached an annual rate of well over 400,000 tons. Exports of plastics raw materials, excluding all plastics used in packaging, machinery and finished consumer goods, rose from 98,000 tons in 1956 to over 110,000 tons last year. Nearly half of these went to Europe and over 20 per cent to the six

Common Market countries. But the main rise in sales was on the home market, which took some 320,000 tons of plastics materials last year compared with 265,000 tons in 1956. Imports of plastics materials also rose quite sharply from 23,000 tons in 1956 to 33,000 tons in 1957.

Most of the rise in output was accounted for by the newer materials in the thermoplastic group—those that become soft when heated and rigid on cooling. Of these polyethylene, polyvinyl chloride (PVC) and polystyrene, all of which lend themselves readily to injection moulding, account for the bulk of the output. Polythene production rose by 40 per cent last year to 55,000 tons, and a further increase in ICI's capacity to 60-65,000 tons is expected before the end of 1958. This will be augmented by the 10,000-ton Union Carbide plant at Grangemouth, but the Monsanto plant at Fawley and the Distillers' plant at Grangemouth will not be in production before 1959, and Shell at Partington is still at the pilot plant stage with the Ziegler process for the production of high density polyethylene. The output of PVC rose by nearly 30 per cent last year, and to meet a sharp increase in demand the three producers—ICI, British Geon and Bakelite—achieved an annual rate of 80,000 tons by the end of the year. PVC capacity in 1958 is likely to be about 10 per cent more than this. Demand for polystyrene, after a slack period, also rose sharply last year, and output rose by a quarter to nearly 30,000 tons. Plans provide for a further 15 to 20 per cent increase in capacity. Despite credit restrictions on the home market, the industry appears confident that all of this new capacity will soon be needed.

DISCOUNT HOUSES

Gillett Confirms the Trend



GILLETT BROTHERS, a middle ranking discount house which makes up its accounts on January 31st, shows in its preliminary statement a small fall in profits, from £87,515 to £85,777. The dividend for 1957 is maintained at 11¼ per cent. This year, moreover, the company is able to show its investments below market value; in 1957 they were in the books at market value, and two years ago at above market value, with depreciation disclosed marginally. Like the Union Discount and Alexanders (but not the National Discount) in the calendar year 1957, Gillett seems to have experienced less favourable margins on current trading (because of the impact of 7 per cent Bank rate), but to have improved its capital strength. The bond portfolio will have been helped by the rise in prices during January—though it may be recalled that a similar improvement took place in January, 1957. At the beginning of both years, too, the running margin on bills narrowed, as the bill rate fell. At present as the money market report on page 617 describes this influence on the discount market is particularly marked, as the Bank of England's firm market tactics are keeping up the average cost of the market's money.

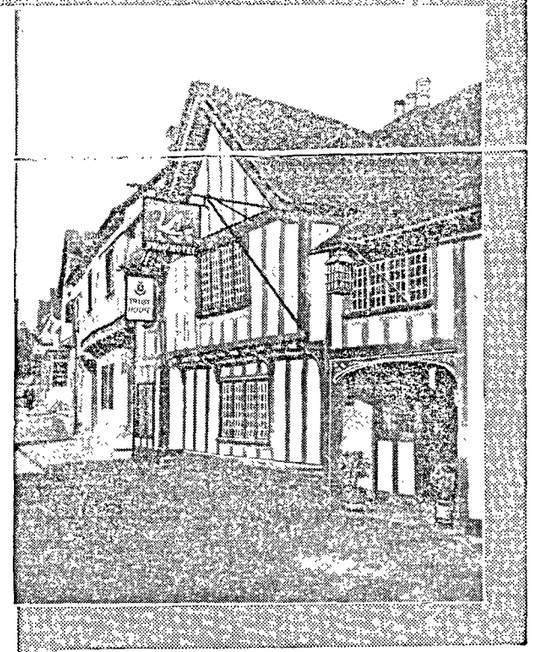
REVENUE STATISTICS

A Century of Taxation

THE Commissioners of the Inland Revenue have recently published their hundredth report (Cmd 341)—a long record of public, though not of popular, service. The report relates to the year ended on March 31, 1957, and many of its statistics refer to still earlier years. It is a mine of statistical information. But the explorer of that mine will find there have been other miners before him—notably the National Income statisticians who, having picked over the ore, have left him only a few tailings to sample.

The report is an indispensable book of reference for those interested in the tax structure and in the details of tax yields. But it is on matters of detail that it is most useful to the layman. It contains, for example, a table classifying houses by rateable value, and another classifying incomes by counties. Intriguing facts come to light that in 1955-56 there were only 2,500 people securing an income before tax of more than £20,000 a year; that there were only 600 people securing a net income after tax of more than £6,000; and that there were 45 people having an annual income before tax of over £100,000.

The Commissioners of Customs and Excise have not had such a long statistical innings as the Inland Revenue Commissioners: the latest Customs and Excise report is merely the 48th. Unlike the Inland Revenue report, it does not go much beyond the tabulation (and in some cases the diagrammatic treatment) of the yields of the many customs and excise duties. It, too, yields odd facts. For instance, on gambling it shows that while the duty receipts on playing cards were only £61,273 in 1956-57, the pool betting duty yielded £21.3 million on football and similar pools and £6.1 million on dog track totalisators. In that year over £71 million was staked on the pools (against about £69 million in 1955-56) and over £61 million on the dog track "totes" (against £59 million). The dog track "bookies," incidentally, paid over £1.6 million for their licences.



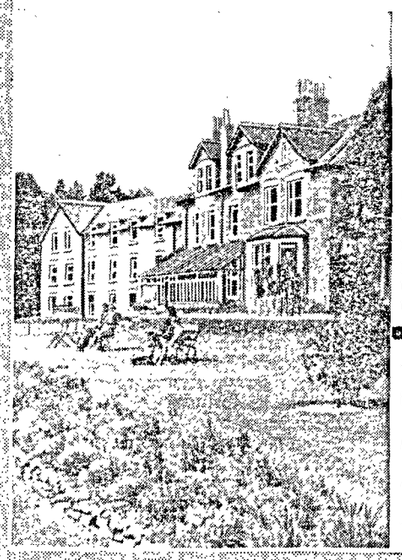
SHORTER NOTES

Total applications for new capital issue made to the CIC in the fourth quarter of 1957 showed an understandable decline. They were for a total of £331.5 million, against £377.4 million in the previous quarter and £302.3 million in the fourth quarter of 1956. The amount refused was also less than it was in the third quarter of 1957 but was markedly higher than in the fourth quarter of 1956. Amounts refused were £43.9 million in the fourth quarter of last year, £48.9 million in the third quarter and £6.7 million in the last quarter of 1956.

* * *

Steel output in January was at the rate of 407,100 ingot tons a week, against 415,900 tons a week in January 1957; the decline was due mainly to a slabbing mill breakdown at the Steel Company of Wales and to the incidence of New Year holidays in Scotland. Demand for strip mill sheet and for plate is still very strong: for heavy sections it has eased somewhat, allowing more rapid delivery: and it

Give yourself a real holiday this year



STAY AT A TRUST HOUSE HOTEL—
THERE ARE OVER 230 TO CHOOSE FROM

230 good hotels where you can be sure of enjoying every moment of your holiday free from worries about comfort, meals or what it's going to cost. Whatever your taste, Trust Houses can provide the right hotel, in the right place, and at the right price. You will find them all over the country, large and luxurious, small and picturesque, by the sea, in the town, in the country. Two things are common to all of them—the Trust House sign and the Trust House standard which is your surety.

Stay for a night, stay for a week, stay for a week-end or longer, but always stay at a Trust House.

has fallen further for light sections, bars, and reinforcing rods. Orders for drop forgings and for steel strip have improved. But there has been no strengthening of demand for tinplate, and the tube makers' business remains as patchy as before, with demand very strong for "oil country goods," but at a low level for most ordinary kinds of steel tubing.

* * *

The expansion programme at the Kent Oil Refinery on the Isle of Grain, which is now nearing completion, will raise the British Petroleum Company's total refinery capacity in the United Kingdom to over 13 million tons a year. The additional plant includes a 90,000 barrels-a-day distillation unit, which will come on stream next week, and a score of further processing units for all major products, including aviation spirit. No additions are being made at present to the existing lubricating oil plant.

* * *

After the closing of the "Kuwait Gap" last summer a sharp change occurred in the flow of securities between United Kingdom and United States ownership. According to Federal Reserve Bulletin figures, British residents bought net $151 million of United States securities in the first six months of 1957. In the following four months they sold back to Americans a net $82 million of American long-term stocks.

* * *

English Electric this week announced a scheme under which it will provide up to twenty scholarships a year, each with an annual value of £450, for students to read for an honours degree in engineering, applied science, mathematics or any subject allied to advanced technology. The awards will not be restricted in any way according to parents' incomes or other financial resources, and candidates already holding open university or state awards will be eligible. Following study at university, the holders will go through industrial training on the graduate apprentice pattern at £600 a year, and will then be offered a salaried staff appointment, where they will be expected to stay at least two years.

COMPANY AFFAIRS

J. LYONS

FOR ten long years the directors of J. Lyons left the ordinary dividend unchanged at 22½ per cent. This was the height of conservatism and was severely criticised, though the criticism was powerless as the bulk of the ordinary capital is in voteless "A" shares. But last June the dividend was raised to 25 per cent, and in November the interim payment was doubled from 5 to 10 per cent, though with a warning that the decision did not foreshadow an increase in the total distribution.

Now the directors propose to make a 100 per cent free scrip issue and in announcing it they say nothing about future dividends. The stock market reads into this series of moves some alteration in the company's dividend policy and the "A" shares jumped 4s. 9d. to 98s. 9d. before easing to 96s. 6d. If the distribution were simply to be left effectively unchanged, the final dividend on the increased capital would be 7½ per cent. But some shareholders are already considering the possibility of a final of 10 per cent, and that would represent an effective increase in the full year's distribution from 12½ to 15 per cent on the doubled capital. On a 12½ per cent distribution the indicated yield would be only £5 3s. per cent and on a 15 per cent distribution, £6 4s. per cent. The sights of the market are clearly aimed at the bigger target.

F. W. WOOLWORTH

APART from the 52.7 per cent holding by the American parent company in the equity of F. W. Woolworth, there are over 93,000 stockholders, and now, for the first time, the directors have broken away from a rather bald presentation of the yearly accounts, producing an illustrated report, clearly designed to attract and hold their interest. This is an occasion for pleasure, but one criticism still must be put: the directors do not reveal the stores' total sales.

Last year sales again rose to a new record, partly as a result of the opening of new shops. But costs rose faster than sales and though the chairman, Mr Reginald Berridge, can describe trade in the first few months of last year as "satisfactory," he has to report that it "progressively faded so that in the last quarter conditions were difficult." The end product was an advance in trading profits from £23,649,863 to £24,966,899; in net profits from £11,006,117 to £11,233,201; and an effectively unchanged ordinary dividend of 40 per cent. The inference which can be made from Mr Berridge's remarks is that profits may fall this year. He says that the tendency for costs to rise faster than sales is likely to continue and he draws attention to expected increases in overheads, in wages and insurance contributions. And he concludes with the comment that "the extent to which it will be possible for the company to maintain or increase profits must depend on the degree to which sales can be increased."

BRITISH SOUTH AFRICA COMPANY

THE five per cent cut in the total dividend of the "Chartered" company, reducing the rate to 30 per cent, which was the rate paid for the year to September 30, 1955, was less severe than some investors had feared, and the 15s. units were marked up 9d. At 45s. 3d. ex dividend they yield nearly 10 per cent. Most of the company's income comes from royalties on Rhodesian minerals, especially copper. Last March the chairman said that if copper averaged £240 a ton for the remainder of the year to September 30th, "Chartered's" net profit would be about £4½ million, compared with £7 million in 1955-56. By the end of September, copper had fallen below £200 a ton, compared with £300 a ton at the beginning of the financial year and £240 a ton half way through it.

The preliminary statement shows net profits of £4,830,496, compared with £7,010,460 in 1955-56. It seems possible that royalties have come down from about £12¼ million to about £9½ million and interest on investments from about £2¼ million to about £2 million. The company is building up its investment portfolio against the expiry of its rights to mineral royalties in Rhodesia. Much of that portfolio is made up of shares in Rhodesian copper companies but its spread is being widened to include other mining holdings, notably gold. "Chartered" is beginning to look like a finance house at one remove. But at present its fortunes are bound up with the price of copper, and it faces another fall in royalty income this year and, with further reductions in copper company dividends in prospect, in its investment income too. But, if the price of copper were showing signs of recovery a year from now, would a repeated dividend of 30 per cent, absorbing about £2¼ million net, be an impossibility?

COPPER PROFITS

THE Rhodesian Selection Trust group of copper companies has cut back production by 10 per cent. The quarterly reports of Roan Antelope and Mufulira show a drop in production in the last six months of 1957:

Six months to Dec. 31:	1956 tons	1957 tons
Mufulira	49,685	47,052
Roan Antelope	42,548	39,815

But in the second half of last year the companies did not build up stocks as they did in 1956, so that sales show a small increase:

Six months to Dec. 31:	1956 tons	1957 tons
Mufulira	43,737	45,059
Roan Antelope	38,368	38,793

The price of copper continued to fall in the last six months of 1957 and with it gross sales revenue and gross profits:

Six months to Dec. 31:	1956 £'000	1957 £'000
Sales Revenue—		
Mufulira	12,260	8,944
Roan Antelope	10,485	7,283
Gross Profit—		
Mufulira	5,479	2,160
Roan Antelope	3,967	1,155

The fall in profits is proportionately steeper for Roan than for Mufulira, for Roan produces at higher cost. The year to June 30, 1957, was bad enough for the copper companies; the year to June 30, 1958, will be worse. But that was apparent many months ago and investors should by now have discounted it.

LINEN THREAD

IN the preliminary statement for the year to September 30th, the directors of Linen Thread Company list three reasons why the consolidated trading profit has fallen from £643,762 to £448,280. They are:

1. "The decline in the profits of the United States subsidiary on account of reduced turnover."

2. "Unsatisfactory results from trading in fish netting and twines on accounts of Japanese competition in many markets."

3. "The continued squeeze on profit margins by increasing costs."

Which is the most important reason? The details of the preliminary statement provide a clue to the answer: while the provision for British tax is only a few pounds down at £244,381, the provision for foreign tax has dropped from £206,169 to £73,910. That suggests that the experience of the American mills (which account for about a half of the group's assets) was at the root of the trouble.

The decline in the total tax provision from £450,647 to £318,291 has cushioned the fall in earnings. Net earnings after tax have fallen from £232,033 to £182,478; but to the latest figure is added £96,427 (against £32,035) of profit from the sale of fixed assets and investments. The total ordinary distribution is reduced from 8 to 6 per cent by omitting the 2 per cent bonus paid for 1955-56. The dividend absorbs £113,850 and the £1 ordinary units, which have been marked down from 20s. 4½d. to 15s. 9d. xd., yield 7.6 per cent.

BRITISH HOME STORES

IMMEDIATELY after the publication of the preliminary statement of British Home Stores for the year to January 4th, the company's 1s. ordinary units (which now form a single class of voting stock) were marked down 7¾d. to 6s. 8¼d. (to yield 5.6 per cent). Yet over the year the company had held its own; its trading profits were slightly up from £1,652,455 to £1,686,997 and its net profits from £842,694 to £879,877, and the ordinary dividend has been raised from 4d. to 4½d. per 1s. unit, that is from 33⅓ per cent to 37½ per cent.

What disturbed investors was the directors' rider indicating that "trading conditions during the last few months of the year became increasingly difficult with the result that the progress made in the earlier months was not maintained." With Marks and Spencer announcing cuts in retail prices it is clear that the smaller chain stores such as British Home Stores are in for a competitive passage this year.

FIRST DEALINGS:	Jan. 29	Feb. 12	Feb. 26
LAST DEALINGS:	Feb. 11	Feb. 25	Mar. 11
ACCOUNT DAY:	Feb. 18	Mar. 4	Mar. 18

A SUDDEN reversal of last week's rally in industrial shares lowered *The Economist* indicator by 8.1 to 170.7 in the week to Wednesday's close; it left prices at their lowest since the Suez crisis of 1956. Rising unemployment in America caused heavy falls on Wednesday and in early trading on Thursday further losses occurred.

The terms of the new Government issue, following the large LCC issue, set back the prices of long-dated gilt-edged, but the short dates were firmer on the reduction in the Treasury bill rate and the prospect that the 4 per cent Conversion Stock would not be replaced by a "short." Dominion and corporation stocks fell heavily; the new 6 per cent LCC loan established a premium of 1⅛ in a large turnover, but the 5½ per cent LCC issue receded 1¼ further to 98¾.

Especially weak features in a general marking down of equities were cottons, on the dividend cuts, and steels on the renewed threat of nationalisation, though falls following the Rochdale by-election result were limited. Lyons "A" improved 3s. 6d. to 96s. 6d. on the scrip issue but Gordon Hotels dropped 10½d. to 10s. 1½d. Folland Aircraft fell 1s. to 6s. on the passing of the interim, and on the fall in machine tool orders Alfred Herbert lost 2s. 7½d. to 58s. Tobacco shares remained firm on the upward trend of consumption.

Oil shares dropped on the price reductions for petroleum products; striking losses were suffered by Trinidad issues, Shell Trinidad losing 15s. to 87s. 6d., while Ultramar fell 12s. 6d. to 45s. Shell Transport new shares which started on Tuesday at 25s. premium slipped to 21s. 1½d. premium, the old shares losing 13s. 9d. over the week to 127s. 6d. ex rights. Base metals weakened but rubbers held steady.

(1) Electricity production in New Zealand represents deliveries only and in Canada, prior to 1957, excludes industrial generation by own users. (2) Copper and tin refer to metal production. (3) General trade (including re-exports) except for Canada, which is special trade only. Imports are cif except for Australia, Canada and S. Africa which are fob; exports are fob. Trade for India includes that going by land; annual figures for India are for 12 months beginning April 1st of year stated and for Australia 12 months ended June 30th. (4) Gold and foreign exchange holdings are those of the government and central bank; only figures for Australia include holdings of commercial banks. Cost of living for S. Africa and S. Rhodesia relates to European only and for S. Africa includes direct taxes. (5) Including foreign investments. (6) Including semi-processed gold. Beginning January, 1955, including South-West Africa. (7) In July, 1948, part of holdings was transferred to the State Bank of Pakistan. (8) April, 1948—March, 1949. (9) Including some long-term securities. (10) Average for third quarter.

Financial Statistics

EXCHEQUER RETURNS

For the week ended February 8, 1958, there was an "above-line" surplus (after allowing for Sinking Funds) of £138,627,000 compared with a surplus of £136,499,000 in the previous week and a surplus of £144,859,000 in the corresponding period of last year. There was a net expenditure "below-line" of £12,145,000, leaving a total deficit from April 1st of £305,751,000 (£339,753,000 in 1956-57).

THE MONEY MARKET

CREDIT conditions have continued to be extremely stringent in the past week, partly as a result of the attempt by the Bank of England to check the fall in the Treasury bill rate. At the tender on Friday last week the rate fell by a further $\frac{1}{16}$ per cent to 6$\frac{1}{16}$ per cent. The discount houses raised their common bid by 4d. to £98 9s. 9d. per cent; and the proportion allotted at the minimum price rose from 44 to 65 per cent.

But the fall in the rate in conjunction with the Bank's tight rein on credit is seriously squeezing the discount houses' margins on the bills. The average cost of money may actually have risen in recent weeks, and at 5$\frac{7}{8}$ per cent or so offers a margin of only just over $\frac{1}{4}$ per cent, against $\frac{7}{8}$ per cent in the early autumn.

Credit has been very scarce on every day in the week to Wednesday; the huge inflow of applications for the LCC loan and the seasonal tax transfers have played their part. On each day, the Bank has given special assistance to the market through purchases of bills, and these have mostly been large. Nonetheless, for the second week in succession, the market was "in" the Bank on three days out of six. On Thursday before the weekend, moreover, the borrowing was fairly large, as it was again on Monday—a little larger, then, than the repayments of seven-day loans due on that day. The market's borrowing is reflected in part in the further increase of £20 million, in discounts and advances shown in the Bank return.

People like Jack and Doris
save millions every year

Since the war £500 million has been added to the nation's net savings through industrial life assurance—in other words, through the joint efforts of people like Jack and Doris and The Home Service Insurance Offices.

The Home Service Insurance Man calls regularly on ten million families. His visit makes these families partners in a great thrift movement that helps people to help themselves—and to help the nation too.

COMPANY MEETINGS

THE LANCASHIRE STEEL CORPORATION LIMITED

NEED FOR NEW APPROACH TO PRICE-FIXING PRINCIPLES

SIR JOHN JAMES—RE-NATIONALISATION WOULD ENDANGER PRESENT HIGH STATE OF EFFICIENCY AND IS "PLAYING WITH FIRE"

The twenty-eighth Annual General Meeting of The Lancashire Steel Corporation Limited was held on February 11th at the Masonic Hall, Winmarleigh Street, Warrington.

Sir John James, Chairman and Managing Director, who presided, said: Gentlemen, I have great pleasure in presenting to you the Directors' Report and Accounts for the year ended September 28, 1957, and, in moving their adoption, of taking the opportunity of giving you my review of the year's working and the present position and prospects of the Company and Industry.

For two reasons to which I shall refer, the total income of the Group unfortunately shows a sharp fall from £2,986,000 in 1955-56 to £1,902,000 in the year under review. This is a reduction of £1,084,000, but, as you will have noted, is after charging an extra £100,000 for Depreciation. The real fall in trading profit is, therefore, just under £1 million. This increase in Depreciation is due to the expenditure on Fixed Assets which came into operation during the financial year, and on which Depreciation is now being provided for the first time.

APPALLINGLY HIGH RATE OF TAXATION

After providing for Taxation of £1 million (a fall of £520,000 compared with the year before, due, of course, to the reduction in trading profit) the net income of the Group amounted to £902,000 compared with a similar figure for 1956 of £1,466,000. The fall in the net income is, therefore, reduced to £564,000 by the reduction in Taxation. It is interesting to note the buffer which the appallingly high rate of Taxation, from which this country's industry suffers, provides when results are adverse. In effect, the Government, which takes over 50 per cent of our profits, also bears over 50 per cent of their reduction. Nevertheless, although this buffer does "temper the wind," the crushing weight of Taxation, which the Government seem entirely unable to reduce and which we seem destined to have to bear for the foreseeable future, does constitute a very grave handicap to the industry of this country.

The net income, although so considerably reduced, has, however, sufficed for your Directors to recommend an allocation to General Reserve of £400,000 compared with £1 million for the previous year and still recommend an increase of 1 per cent in the Dividend on the Ordinary Shares, making a total for the year of 12 per cent.

POSITION OF GREAT FINANCIAL STRENGTH

The Consolidated Balance Sheet of the Corporation and its Subsidiary Companies still shows a very strong financial position. Current Assets amount to £10,635,000 compared with Current Liabilities and Provisions of £5,051,000, a surplus of £5,584,000. This represents a decrease of approximately £1 million compared with the surplus of £6,580,000 a year ago, but it is after absorbing Capital Expenditure during the year amounting to £2,265,770. The fact that this large sum should have been spent without reducing the surplus of Current Assets by more than £1 million, in a year in which the trading profits have suffered so considerable a reduction, emphasises the great financial strength of the Company and is a source of great satisfaction.

Capital commitments to complete our present Development Programme amount to £1,585,000, and, with the current rate of profits now being earned, I am confident that we shall be able to meet these obligations from our existing resources.

CAUSES OF PROFIT REDUCTION

The production and profit of the year under review suffered most seriously from two causes beyond our control and which I sincerely hope will never occur again.

The first of these, the unsatisfactory award of the Iron and Steel Board in December, 1956, I drew attention to in my speech last year as to its adverse effect on the margins of profit on billets, wire rods, bars and sections which comprise 90 per cent of our products. As I then pointed out, that award allowed only the most meagre return and one which could not possibly be regarded as an economic return on the replacement cost of the Plant. Despite representations to the Board, it was not until July, 1957, that the prices of these products (in common with other products of the Industry) were revised and the margins placed upon a more realistic basis. The result was that for seven months of the financial year the Company's earnings were most seriously affected.

Last year I stated that "in my opinion the time is overdue for a complete review and new thinking over the principles on which price-fixing in the Steel Industry is based." The unfortunate experience to which I have just referred seems to suggest one way in which the present system could be improved. When changes take place in steel prices we, as steel makers, learn about them for the first time from a notice in the Press. I suggest that before any public announcement of changes in prices is made by the Iron and Steel Board the makers of the products concerned should be advised and given an opportunity of making representations through the Federation to the Board as to any adverse effects or anomalies of their Determinations.

VITAL IMPORTANCE OF PRICE STABILITY

Surely, as the Price Awards of the Board, are, as our own results demonstrate, of such vital importance to a company's profits and to the Industry as a whole, such a suggestion would accord well with the spirit of co-operation between the Government and the Industry. It would also, I believe, lead to greater stability in the prices of the Industry's products, a point of vital importance now that increasing competition makes it so necessary for us to offer contracts at firm prices not only in the home but, in particular, in the export market. From both points of view, therefore, I believe such a system as I suggest would be in the best interests of the country.

The second handicap from which the Company suffered during the year was the lightning strike of the Company's skilled maintenance men who were brought out, in many cases I believe against their own wishes, in support of the general strike of engineering employees in April and May. We alone of the Steel Companies were affected in this way by reason of our membership of the Manchester District Engineering Employers' Association. The result was that, although we had no association directly or indirectly with the engineering dispute, we suffered a complete interruption just as if we had been directly involved. Not only did this result in a complete cessation at our Irlam and Warrington Works, but, of course, it also extended over a longer period before the Works were back into full production, as restarting a Steel Works is a slow and lengthy operation.

So far as the strike is concerned, I cannot help thinking that with wiser counsel at the top the whole of our trouble could have been avoided.

DEVELOPMENTS IN RHODESIA

As you will have seen from the Directors' Report, your Company has undertaken to subscribe £500,000 in Ordinary Shares of the Rhodesian Iron & Steel Company, which has been formed to take over and develop the Iron and Steel Industry in Rhodesia.

In conjunction with Stewarts and Lloyds Limited, we have undertaken the responsibility of advising the Board on the technical development necessary to increase the Rhodesian steel output to a tonnage sufficient to meet that country's main requirements. It is a source of great satisfaction to me and to your Directors that The Lancashire Steel Corporation should have been given the opportunity of playing such a leading part in the development of the Federation of Rhodesia and Nyasaland.

At the same time, we ourselves have formed a Subsidiary Company in Rhodesia with the object of producing wire and wire products, for which, I am sure, there is a keen and increasing demand. It is our intention that this Company should ultimately obtain its steel requirements from the Rhodesian Iron & Steel Company and so give considerable help to the lead required

by that Company for efficient working. We anticipate that our new factory will commence operations in a small way during the first half of this year, and I have every hope that in due course it will prove a profitable venture.

As regards the Wire Industry (in which we have large direct interests through Rylands Brothers and the Whitecross Company) we have constantly before us the development of those products which require the highest qualities of carbon steel. This demands from us as steel makers and as wire producers, constant research and the most exact techniques of manufacture. It is only in this way that we can hope to keep abreast of modern requirements and meet the ever-increasing demand for higher qualities and performance.

BENEFITS FROM DEVELOPMENT EXPENDITURE

In all directions we are now beginning to feel the benefit of our development expenditure. Not only have the new Blast Furnace and the new Steel Plant come into operation, but our new sidings came into use in July, 1957, and give us much greater ease of handling raw and finished materials with great benefit to British Railways and ourselves as partners in this installation. Our new wharf facilities are practically complete, and we look forward to this providing us with highly efficient and quick handling of imported materials. We are also just completing the rebuilding of the first portion of our Coke Ovens with its attendant increase in coke production. Both these latter items will be in operation in the Spring.

It is this position of increasing output, coupled with the improved profit margins under the Iron and Steel Board's Price Award of July, 1957, which has resulted in the profits for recent months running at least at the same level as those achieved in the comparable months of 1955-56. You will remember that the profits for that year constituted a record in the history of the Company to date. This position outweighed, in the opinion of the Directors, the disappointing results for 1957, so that they felt, after the most careful consideration, that they were fully justified in recommending for your acceptance an increase of 1 per cent in the Dividend on the Ordinary Shares, bringing the total for the year to 12 per cent. This decision was favourably received by the Financial Press, and I trust today will meet with your approval.

At the same time, I do not wish to give you the impression that the horizon is entirely free from possible difficulties. As you will have read in the newspapers and many of you may have experienced in your own business, there is undoubtedly a weakening in world demand, and there are signs of some recession in trade. So far, I am happy to say, this Company has only been slightly affected, and I have every hope that during the coming months demand will again revive. But, as you will appreciate, working to full or near-full capacity is so important to the Company and its profits that I should perhaps emphasise that the confidence I feel in 1958 and the future is largely dependent upon the maintenance of our present load.

THE FUTURE

Turning to the future, your Directors are of the opinion that with the experience of 1957 before them our aim should be to spread the products arising from our increased output of ingots over a wider field. This can readily be done when the continuous billet mill comes into production later this year, as this will increase our rolling capacity by allowing our existing mills where billets are now being produced to turn out a greater tonnage of sections. Your Directors are keenly aware of the local demand in Lancashire and the surrounding district for light plates, which are always in short supply. A modern light plate mill attached to the Irlam Works would, therefore, give a spread of our products that would help considerably in finding full employment, whilst our position in relation to both Liverpool and Manchester affords the most favourable conditions for export.

To carry out such a development it would be necessary to increase our ingot capacity to 16,000 tons per week against our present level of some 13,000 tons. Such an increase would enable us to devote 3,000 tons of ingots per week to the production of light plates without interfering with our present production of wire rods and small sections, and, therefore, without interfering in any way with the supply of those products to our customers whose goodwill we value so highly.

So far as a light plate mill is concerned, I would confidently anticipate that, assuming our present output and margins are maintained, we should be able, over a period of years, to finance the capital outlay required from the Group and its Associated Companies.

RE-NATIONALISATION

So much has already been said by prominent members of the Industry on re-nationalisation that it is difficult to draw attention to any new reason why re-nationalisation of the Iron and Steel Industry would be a sad day to contemplate. I can only endorse fully what has already been said. The Industry, since being handed back to private enterprise some four years ago, has left no stone unturned to take its place alongside any industry in any country. To me the over-riding criterion is that this Industry is so entirely different from those already Government-owned—coal, electricity and railways—each of which is a complete monopoly dependent upon competitive industry to keep it alive, and in each case without the fear of foreign competition. Iron and Steel, on the other hand, is not only a basic industry supplying the vital requirements of the home market, but also exports an increasingly large part of its products against the keenest foreign competition. In other words, it cannot be stressed too much what an important part Iron and Steel plays, both directly and indirectly, in the country's standard of living. Its main concern and the only measure by which it can continue to live is to give its users at home and abroad quality and service to their entire satisfaction.

The Iron and Steel industry as at present constituted is giving the greatest service to the nation, and I cannot help regarding as most unfortunate these threats which, if carried out, could not in my view improve that service, but carry with them the very real danger that they would lower the Industry's present high state of efficiency. It therefore seems to me that the threat of re-nationalisation is in every sense of the word "playing with fire."

In conclusion, I must again pay my own and the Directors' tribute to the efforts of all employees of the Companies in the Group. Last year I stated that 1956 was in many respects a most difficult year, but 1957 has been even more difficult. It is due largely to their efforts that results have been even so satisfactory

The Report and Accounts were adopted.

ILLINGWORTH, MORRIS & COMPANY

(Worsted Spinners)

DEMAND CONTINUES AT A HIGH LEVEL

LORD WILMOT'S STATEMENT

The thirty-eighth annual general meeting of Illingworth, Morris & Company, Limited was held on February 6th in Bradford, The Right Honourable Lord Wilmot of Selmeston, PC, JP (the chairman), presiding.

The following are extracts from his circulated statement :

Some time ago your Directors reached the conclusion that not less than £1 million of the Company's reserves must be considered as capital permanently employed in the business. Accordingly, Treasury consent having been granted, resolutions were submitted to and passed at an Extraordinary General Meeting of the Company held on December 19, 1957, whereby the Ordinary Capital of the Company was increased from £1 million to £2 million by an allotment of one unit of 4s. Stock, credited as fully paid up, for each 4s. in nominal amount of Ordinary Stock.

The net profit of the Group for the year, after taxation, is £269,981 and, after adding the balance of £543,175 brought forward from last year, there is a group total available for appropriation of £813,156. Your Directors recommend a final dividend of 5 per cent, less Income Tax, on the increased Ordinary Stock, which, together with the interim dividend, will represent a total dividend for the year on the former amount of Ordinary Stock of 15 per cent, or 7½ per cent on the increased Ordinary Capital as it now is. This leaves £652,156, of which £325,125 is being transferred to General Reserve and £327,031 carried forward.

The Group Current Assets now amount to £5,977,390 showing an excess over Current Liabilities and Dividend of £3,319,042 and the Group Revenue Reserves are now shown at £1,427,031.

FACTORS AFFECTING RESULTS

The reduction in the amount of net profit, £270,000 for this year as compared with £345,000 last year, is due in the main to three causes :

1. The disastrous influenza epidemic which for several weeks caused such excessive absences as to dislocate production at all our factories.

2. The writing-down in the value of unsold wool stocks as the result of the substantial fall in wool prices.

3. The continuing expense arising from the reorganisation of our James Tankard Branch, where we have built and equipped a large new mill.

But for these exceptional features the profits of this year would not have been substantially different from those of a year ago. We hope that the influenza epidemic will not recur and the reorganisation expenses of the James Tankard mill should be considerably reduced from now on, and indeed we should look forward to a higher rate of production and profit from this Branch in the future. Wool prices have continued to fall since the close of our financial year and it is not possible to forecast the future trend.

Our factories have continued to work at

the fullest possible pressure ; much overtime and evening work has been and is still being done.

The tightening of credit and the raising of the Bank Rate have undoubtedly somewhat restricted trade and the continuance of the United States tariff quota on imports of wool cloth has had undesirable effects on the dollar-earning branches of our industry. Nevertheless the demand for wool clothing on the part of the consuming public is continuing at a high level and, although competition is keener, our sales have been maintained at a level which already ensures the full working of our Branches for some months to come.

The report was adopted.

WEBSTERS PUBLICATIONS (HOLDINGS)

The third annual general meeting of Websters Publications (Holdings) Limited was held on February 6th, at the Waldorf Hotel, Aldwych, London, W.C.2, Lieutenant Colonel W. D. Gibbs (the chairman) presiding.

The following is his circulated statement :

Throughout the year the turnover figures were in advance of the previous year, and the Directors are pleased to report an increase in profits. This increase was foreshadowed when the interim dividend was declared on April 15th last and, since the improvement has continued, the Board feels justified in now recommending a final dividend of 30 per cent, making a total for the year of 40 per cent, compared with 30 per cent for the previous year.

CAPITAL REPAYMENT

When your Company was formed in 1954, it was hoped that further publications would be acquired. However, during the last three years the Board has investigated a number of propositions, but has not felt justified in making any acquisitions. In these circumstances, and in view of the uncertainties governing the present investment policy of any Company, the Board has decided that monies surplus to normal trading requirements shall be refunded to shareholders. Accordingly, it is anticipated that a return of 6d. per share will be made to shareholders as soon as the necessary legal and other steps have been carried out.

The repayment will involve the voluntary liquidation of the present Operating Company, viz., Websters Publications Limited, a final offer to exchange the holdings of the minority shareholders of that Company into shares or cash, the changing of the name of your Company to Websters Publications Limited, and the payment of profits tax on distributions to minority shareholders not accepting either of the offers. It is believed that the funds to be absorbed by these operations will not exceed £125,000.

In conclusion, I am glad to report that the business of your Company continues at the same satisfactory level as last year.

The report and accounts were adopted.

At a subsequent extraordinary general meeting, resolutions were passed for the alteration of the Company's Articles of Association, sanctioning the repayment of 6d. per 1s. Ordinary share, providing for the subsequent consolidation of the 6d. shares into shares of 1s. each and capital increase by the creation of 1,734,918 ordinary shares of 1s. each. The proposed change of the Company's name to "Websters Publications Limited" was also approved.

THE NATIONAL BANK LIMITED

A YEAR OF FURTHER EXPANSION

LORD PAKENHAM SEES GREAT FUTURE FOR GREAT BRITAIN AND IRELAND IN THE EUROPEAN FREE TRADE AREA

The one hundred and twenty-third annual general meeting of the proprietors was held at 13, Old Broad Street, London, on February 6th. Lord Pakenham, Chairman of the Bank, referred to the death of Mr Hubert Briscoe, a Director for many years, and the appointment of Mr Patrick A. Duggan to the Board.

ACCOUNTS AND PROFIT

After commenting upon the balance sheet figures, which constituted a new record, the Chairman indicated that further growth was planned. The profit was £2,000 larger than in 1956, and the distributable sum £457,000, out of which a dividend of 12 per cent for the year would be paid.

ENGLAND AND IRELAND COMPARED

Lord Pakenham reviewed the credit policies of the countries and explained how the business of this bank, as the only bank operating at all extensively both in Ireland and England, had been affected. As regards Irish agricultural and industrial activities, results for 1957 were very favourable, and would most likely lead to a surplus for Ireland in the balance of payments ; the first for a decade. The battle of inflation did not seem to be making large headway, except in the sense that the dangers of deflation might be waiting round the corner with a heavy fall in world prices of leading commodities. Much might be said about savings, but everything came back to production and investment directed to productive purposes. The community could not hope to maintain for any length of time a higher standard of living than the output of goods or services would support. There was an all-round determination to go to great lengths to maintain the British £ at $2.80 and the Irish £ at parity with that of Britain and to increase the all-important reserves.

Lord Pakenham said that two years ago he called for a fundamental reappraisal of financial ideas and policy, and he was glad that a Committee under Lord Radcliffe was now considering these matters. The present version of credit restriction involved not only a political directive, but a self-denying ordinance impairing free competition between the banks. He hoped that this would be regarded as intolerable as a long-term arrangement. Some whose economics were learnt in the 1920s and saw them applied or mis-applied with painful results had hoped that the Keynesian revolution had solved in principle the problem of how to employ a country's human and material resources to the full without jeopardising its currency. That is to say without producing a run on the £ or allowing a cruel internal inflation or both. Pending the findings of the Radcliffe Committee and further reports from the Capital Investment Committee in Ireland under the Chairmanship of our Dublin Chairman, Mr Leydon, Lord Pakenham said that the essentials were surely that sterling must be defended at all costs, but so must full employment as an ideal, with maximum output of goods and services and an honest £.

THE EUROPEAN VISION

The Chairman said that in his view the coming into force of a common market in the Free Trade area between six countries in Europe, and the progress being made to join other European countries including the United Kingdom and the Republic of Ireland in this association, were constructive and enlightened attempts by gradual abolition of tariffs and quotas to create the basis of a genuine economic union and later, perhaps of a political union. The amount of trade in Europe should not be regarded as static, but competition would be keener.

The Irish point of view was that any adverse effects on the industrial side should be made good on the agricultural side. Ireland had the potential for a large increase in agricultural output—large in terms of present output, but in terms of the market small. For the mutual benefit of Ireland and the Free Trade area means must be found for the entry of increased agricultural exports from Ireland as a member country into the wide European Market. Here was a field where Ireland could make a contribution and find a fulfilment out of all proportion to her statistical strength.

If the participation of the United Kingdom in the Free Trade area were likely to weaken the ties of Commonwealth Lord Pakenham said he would reject it *ab initio*. As he was convinced that no such conflicts were inherent, indeed that the Commonwealth would benefit from the stronger Britain emerging, he hoped and believed that our participation would be cordial and wholehearted.

BANK'S OPERATIONS AND STAFF

Lord Pakenham said: "There is no doubt in my mind that the Bank is performing valuable service to the economy of Ireland by reason of its activities in the Republic and by its associations in England. Our relative position is very different in the two countries. In Ireland we can fairly regard ourselves as one of the national institutions. In England, judged by the standards of the largest British Banks, we are quite small. It is the intention to encourage expansion on sound lines by opening branches in suitable places ; the first for 36 years.

On behalf of the Directors I would like to pay a tribute of sincere thanks to the Staff. I realise that they are proud to be regarded as servants of the Bank, but in the eyes of the Board they are not servants, but friends."

The Report and Accounts were adopted. The retiring Directors, Mr William A. Acton, Mr Arthur J. Jenkins, Sir Basil Goulding, Baronet, and Mr Patrick A. Duggan were re-elected.

F. W. WOOLWORTH AND COMPANY LIMITED

RECORD TURNOVER

MR R. J. BERRIDGE'S STATEMENT

The Annual General Meeting of F. W. Woolworth and Company Limited will be held on March 7th, in London.

The following is an extract from the statement by Mr R. J. Berridge, the Chairman, which has been circulated to stockholders:

Generally speaking trading during the year commenced satisfactorily but progressively faded so that in the last quarter conditions were difficult, especially in October when the so-called Asian 'flu claimed so many victims, staff and shopping public alike.

The Christmas trade did not commence in earnest until much later compared with 1956 and earlier years, and the ten business days prior to Christmas were busy ones indeed. This change is akin to the pre-war pattern of Christmas shopping and the public as a whole seemed to be more practical and selective in their buying.

As portrayed by the Accounts, the Company made further progress during 1957. Turnover increased to a new high record and though this was assisted by the new and extended stores, I am glad to state that stores entirely unchanged as a whole (they constitute 789 of the total of 989 stores in operation at the end of 1957) showed a modest increase in sales volume and in profits.

Expenses again increased at a greater rate than sales—wages and salaries in particular—and there seems no likelihood of any change in this trend.

STORE EXPANSION

The highlight of the year was the opening in October last of our most modern new store in the city of Oxford. The total number of stores operating at the end of the year was 989, without taking into account the three British West Indian stores to which I refer below.

Self Service Stores.—Seventeen stores of this type were opened during the year, either in entirely new areas or by converting conventional service stores, so that the total number now in operation is raised to 46 stores.

Losses due to pilferage in certain of these stores are still causing concern and in this connection there has been some suggestion in certain quarters that more supervision is necessary to prevent temptation.

Your Directors are satisfied that the existing arrangements are adequate and that a surfeit of supervisors would rightly be resented by the overwhelming majority of the shopping public. It seems a sad commentary that the lapses of the few should be suggested to be due to a lack of supervision of the stores' counters.

SUBSIDIARY COMPANIES

The three stores operating in the British West Indies contributed a total profit of £97,794 before taxation, compared with £44,057 (Jamaica full year, Trinidad part year) in 1956. Three further stores are in process of erection in these islands and two of them are expected to open for business before the end of 1958.

Good progress is being made in building the store at Salisbury, Southern Rhodesia.

The thorough understanding between our suppliers and buyers, which has existed for so many years, continued last year with an even higher degree of success. This resulted in a further advance in providing quality goods for the stores' counters at very competitive prices—in fact amazingly so in many cases. This is the type of contribution the Company has always made to keep down the cost of living and will continue to make in response to the Chancellor's request for lower prices.

APPROPRIATION ACCOUNT

The trading profit for 1956 was shown at £23,649,863. The 1957 increase is 5.57 per cent or £1,317,036. Net Profit before Taxation amounted to £24,071,753 compared with £23,319,355 for 1956, an increase of £752,398 or 3.23 per cent.

The FINAL DIVIDEND proposed on Ordinary Stock of 1s. 4d. per unit, plus 8d. per unit Interim Dividend paid in August last, gives a total distribution of 2s. per unit on the Ordinary Capital which was increased by the Scrip Issue early in 1957. This is the equivalent of 3s. total distribution for 1956 paid on a smaller capital. Balance carried forward, or surplus, at £5,073,518 compares with £4,013,611, an increase of £1,059,907.

Revenue Reserves.—The adjustments to General Reserve are given in a note on the Accounts. This note explains the utilisation of General Reserve to the extent of £6,250,000 for purposes of the Scrip Issue, the addition to this Reserve of the Provision for Obsolescence and Depreciation of Freehold and Leasehold Buildings of £2 million and the proposed appropriation of a like amount from 1957 profits. The resulting balance as at December 31, 1957, totals £7,250,000. Together with the Profit and Loss Account balance, after proposed appropriations, at £5,073,518, Revenue Reserves amount to £12,323,518, a reduction of £1,190,093 compared with £13,513,611 for 1956.

THE YEAR 1958

At this time last year the outlook for 1957 seemed dependent on the steps about to be taken to strengthen the country's economy. Unfortunately by mid-September even more stringent and restrictive monetary steps were necessary and they appear likely to continue. The effect of these latest moves is not clear yet and consequently prospects in the field of retail trade are obscure.

The trend of overheads will undoubtedly be upward, with the seeming certainty of higher wage rates. The higher National Insurance contributions, commencing at the beginning of February, will cost your Company an additional amount of approximately £230,000 in 1958 or £250,000 in a full year.

The conclusion to be drawn from all these circumstances is that the extent to which it will be possible for your Company to maintain or increase profits must depend on the degree to which sales can be increased.

However, I take comfort in the conviction that the team work of our organisation, however much it is put to the test, will produce a result for 1953 which will be creditable according to the conditions experienced.

MILLS & ROCKLEYS LIMITED

(Outdoor Advertising in more than 200 towns throughout the Midlands, South West, East and North East England.)

VITAL COG IN NATIONAL DISTRIBUTION

The 29th annual general meeting will be held on March 5th in Nottingham, Mr George T. Mills, presiding.

The following is an extract from the Chairman's Statement:

There is satisfaction in the progress recorded. The profits have increased, after taxation, from £64,115 to £90,931. The Directors have transferred an additional sum of £10,000 to the reserve for renewal of fixed assets. They propose a transfer of £30,000 to the General Reserve and payment of dividends as in recent years.

The need to finance the commitments which are in view in the near future make the conservation of the Company's liquid resources imperative.

The total expenditure on television advertising is still increasing, and we must expect there to be some temporary drop in our volume of sales. We are also affected by the National financial crisis and credit squeeze. These factors have had the effect of making some reduction in the volume of sales since October 1957. However, we have every reason to expect that this period of adjustment will be a reasonably short one. The inherent advantages of our medium are always getting better understood and our own research into the effectiveness of poster advertising is contributing. A growing realisation is becoming apparent among our customers that the poster advertising medium is as necessary a complement to television as it is to the Press.

With the exception of the cost of local rates, a most serious and increasing burden, we have been successful in keeping our costs remarkably stable during the last year.

ADVERTISING REGULATIONS

I have referred on previous occasions to the problem, which is always with us, of the control of advertisements under the Town and Country Planning Act. The working of these Regulations is extremely arbitrary and haphazard. However, we have been and are successful in maintaining the earning power of the business. I cannot see that the capricious and contradictory decisions of some hundreds of Local Authorities are ever likely to give satisfaction to the trading community as a means of controlling an industry which is a vital cog in the national scheme of distribution.

In August last the Ministry of Housing and Local Government issued a proposed new set of Regulations for the control of outdoor advertising. The new proposals are niggling in the extreme, and, in the opinion of the outdoor advertising industry, are unworkable by both the trading community of the Country and the Planning Authorities.

A revaluation of the whole of the Company's Freehold and Leasehold properties, involving over 600 separate pieces of land and buildings, is to be made.

The Chairman concluded his statement with an expression of satisfaction for the future.

CASTLEFIELD (KLANG) RUBBER ESTATE, LIMITED

MR ADDINSELL'S STATEMENT

The fifty-first annual general meeting of this company was held on February 10th in London, Mr Jack Addinsell, chairman, presiding. The following is an extract from his circulated statement:

The year's crop of 2,324,000 lb was slightly better than that for 1955/56, but fell short of the estimate. The influenza epidemic during May and June, 1957, lost us some crop and poor weather affected the Johore estate during August and November. During the financial year, 152 acres of replantings at Castlefield estate were brought into tapping and are yielding up to expectation.

The average net price received for our crop was about 2¼d. per lb less than was realised for the previous year, but the decline in price affected export duty and cess by nearly 2¼d. per lb in our favour. The cost of production increased very slightly over the period reviewed. We received a welcome addition to profits of £4,036 tribute from a small area sub-leased for tin mining and there were increased receipts in respect of replanting grants and cess, and interest from investments. The profit, before tax, was £108,417 compared with £100,838 for the previous year.

As a result of concessions granted in the last Finance Act to Overseas Trade Corporations, tax will henceforth take a smaller share of our earnings. Moreover, you will see from the profit and loss account that £17,768 has been released from past tax provisions, as being no longer required. This latter benefit is, of course, non-recurring.

DIVIDEND AND BONUS

After providing £32,667 for taxation, transferring £30,062 to Replanting Reserves and £20,000 to Capital General Reserves, there remains £51,559. Your directors are recommending a final dividend of 35 per cent, making 50 per cent for the year and in view of the tax saving referred to above we are also proposing a bonus dividend of 30 per cent.

The balance-sheet figures now reflect the sale of about 600 acres of tin bearing land, involving a transfer of £161,376 to Capital General Reserve together with £3,000 received from Klang Prospecting Syndicate, Ltd. This latter sum represents the company's share in the profits of the Syndicate, which was formed many years ago for the purpose of test boring for tin, and is likely to be the final payment from that source. The Sundry Debtors' figure of £89,105 includes the balance of the sale proceeds, £80,000, which is coming in by instalments over a period of years, the first £20,000 having been received since the end of the period under review.

Crops for the current financial year are showing better figures to date than those for the same period last year but the present tendency of rubber prices does not encourage us to look for higher profits on the next accounts. Both estates continue to dispose of their crop as field latex, a convenient and advantageous arrangement.

I am glad to record that the Puchong district, in which our Castlefield estate is situated, has been declared "white" and improvement in security conditions is reported from our Johore estate, Bukit Benut.

The report and accounts were adopted.

WEST RIDING WORSTED AND WOOLLEN MILLS

OPERATING SUBSIDIARIES WELL EMPLOYED

SIR JOHN KEELING'S REVIEW

The twenty-ninth annual general meeting of West Riding Worsted and Woollen Mills Limited was held on February 12th at Bradford, Sir John Keeling (the chairman) presiding.

The following is an extract from his circulated statement:

At this time a year ago I referred to the quite substantial advance in Wool prices which, with occasional setbacks, had been going on since April, 1956. This hardening tendency continued until May, 1957. Between then and the end of our financial year there was quite a recession. Although it is always difficult to pass on advancing raw material prices to customers, and then only after a considerable time lag, we derived some benefit from the general course of Wool values during the first nine months of our year. This went some way to offset the otherwise narrowing margins of profit obtainable in the face of continued increases in production costs of every kind and severe competition for the business available, largely due, I think, to the generally accepted policy of keeping plants running.

Otherwise, two things in particular adversely affected the past year's result. They were, first, the fall in values between the end of the Merino Wool buying season and our stocktaking date, and, second, the Suez Crisis, which involved us in substantial additional charges for transport, power and other items in addition to difficulties and losses

arising from delays in the shipment of Wool from Australia and New Zealand.

The trading profit of the Group for the year amounted, before taxation, to £925,432. The previous year's figure was £1,184,468.

After making provision for Taxation, the net available surplus of the Group is £397,270 as against £549,616 for the previous year. A further and final allocation of £27,700 has been made to extinguish the initial cost of back service under our Works Pension Scheme. Dividends, comprising the Preference Dividend already paid, an Interim Dividend of 7 per cent paid to Ordinary Shareholders, and the Final Dividend of 10 per cent now recommended on the Issued Ordinary Share Capital, together absorb net £221,976. The net remaining surplus of the year, added to the carry-forward, is £148,494.

The Consolidated Balance Sheet shows the growing strength of the Group. Capital and Reserves at £5,607,186 exceed the corresponding figure a year ago by £148,494. The book value of the Fixed Assets, after providing for depreciation, has increased by £46,507 during the year. Current Assets total £6,392,272 against Current Liabilities of £2,061,934.

During the year under review we spent over £200,000 on new plant and capital improvements.

Our Fixed Assets are not only well written down but are in first class condition and include a considerable proportion of the latest machinery.

Wool values have continued to fall since August 31st last. From May, 1957, Merino Wool prices have now receded by something like 25 per cent and Crossbred Wool prices by around 20 per cent. Some loss naturally arises on unsold stock under such conditions: also, buyers lose confidence and orders tend to be reduced to a minimum, with increased competition to secure them.

The turnover of the Group during the past four months has been well maintained, but, due to the fall in Wool values and narrow margins, our profits to date are not so good as usual. However, given reasonable stability in the price of Wool and in the absence of other unforeseen factors, the outlook encourages me to hope that you will not be dissatisfied with the results which I will place before you a year hence.

My personal view about trade generally and about the industry in which we are engaged in particular, is that when we recover from the malaise from which world trade is suffering, conditions will be much healthier than they have been in recent years.

The report and accounts were adopted.

Binding Cases

Binding cases for THE ECONOMIST *are available from* EASIBIND LTD. *The cases are in stiff, dark blue cloth covers, and are gilt-lettered on the spine; they provide an extremely effective and firm binding and will hold 13 issues of the normal edition together with the quarterly Index, or 26 issues of the air edition with two quarterly Indexes. The year can be stamped on the spine. The cost per case, post free throughout the world, is 12/6. Orders, stating requirements clearly and enclosing a remittance, should be sent,* **not** *to* THE ECONOMIST, *but to—*

Market Research Field Supervisor. Woman, 35 or under. Preferably with a degree in economics or sociology. Experience of recruiting, training and supervising a field force. Able to assist in planning of surveys and the writing of reports.

Trainee Marketing Executive. Male, under 25. Preferably with a degree in economics, statistics or sociology. Previous experience not essential.

Please write, stating position applied for and your qualifications, to the

MARKETING AND RESEARCH MANAGER
FOOTE, CONE & BELDING LIMITED,
27 HILL STREET, LONDON, W.1.

LAUNDRY SERVICES NEGOTIATOR

An aggressively progressive and expanding Laundry Group seeks experienced marketing man who can negotiate, at top levels in industry, contracts for laundering and hygienic equipment and service. Preferably aged between 30 and 35, the successful candidate will have proven record of good educational background, successful marketing ability (not necessarily in the same industry) and knowledge of handling industrial executives. Above all, he will be in the "four figures plus" earned income bracket.

Applications, fully detailing age, education, experience, salary, should be sent, in confidence, to Laundering Services, c/o R. Anderson (Advertising) Co. Ltd., 14 William IV Street, Strand, W.C.2.

A vacancy occurs in an International industrial company with headquarters in Birmingham for a high calibre

DEPUTY MANAGING DIRECTOR

This appointment can offer a high salary and excellent prospects to an outstanding candidate, 35 to 50 years of age.

For further information, please contact the Technical Advisory Service, Birmingham Productivity Association, 95 New Street, Birmingham, who have been asked to advise in this appointment. MID 0912

MARKET RESEARCH STATISTICIAN.—Applications are invited for the post of Statistician in the Market Research Department of a well-known consumer goods manufacturer with factory and offices near South West London. Duties will be concerned with the application of statistical theory to market research problems and will include responsibility for the drawing of samples for consumer surveys, product tests and consumer and trade panels. Candidates should preferably be between 25 and 35 years of age and either possess a good degree in statistics or have had several years' practical experience in this field. The salary offered will be assessed according to qualifications and experience within the range of £1,000 to £1,500 p.a. Applications, which will be treated in the strictest confidence, should include details of age, education, experience and present salary. All applications will be answered. Please quote Ref. M.R.S. on envelope and letter.—Box 869.

ACCOUNTANTS required by UGANDA GOVERNMENT on two years' probation for pensionable employment. Commencing salary according to experience in scale (including Inducement Pay), £879 rising to £1,617 a year. Outfit allowance £30. Free passages. Liberal leave on full salary. Candidates, between 24 and 34, must have experience in Government, Municipal, Commercial or Bank accounting. Membership of a recognised body of professional accountants an advantage.—Write to the Crown Agents, 4 Millbank, London, S.W.1. State age, name in block letters, full qualifications and experience and quote M3A/44025/EN.

ECONOMIST/STATISTICIAN

Leading Manufacturer with world-wide export trade requires Economist/Statistician. The commencing salary range will be £1,000-£1,500 according to experience. Bonus and Pension Scheme. The person appointed will be required to develop an Information Service for the purchasing and sales sections of the Organisation. Opportunities for travel may occur when the Service is fully developed. Applications will be treated in strict confidence.—Box 872.

WOOLWICH POLYTECHNIC LONDON, S.E.18

Applications invited for an Assistant Grade B from Honours Graduates to teach History up to final degree standard with Economics and/or Geography to G.C.E. Advanced Level.

Salary within £650-£1,200 according to qualifications and experience, plus London Allowance of £36-£48.

Particulars and application form from Clerk to Governors, to be returned by March 1, 1958.

ECONOMIST

REQUIRED TO TAKE COMPLETE EXECUTIVE CONTROL OF A SPECIALIST UNIT ENGAGED UPON MARKET INVESTIGATIONS

Centred upon the London Head Office of a substantial manufacturing Company, the work will involve important responsibilities covering all investigations and short term and long term market forecasts related to consumer goods. The activities of this unit will match with the Company's expanding interests and will continually embrace problems both absorbing and stimulating in character. It is an attractive position for a man of considerable intellectual stature combined with executive ability.

The starting salary will be £2,000 per annum, or more, with good career prospects beyond this. Selection will be confined within a field of Graduates in Economics (or related subjects) with industrial experience, who have already achieved a senior position in similar work. Some preference will be given to candidates with a knowledge of French and German and much importance will be attached to evidence showing ability to lead a team of graduates. Practical experience of consumer research will be an advantage and age in the range 30-45 would be most appropriate.

Applications will be treated in strict confidence and will be looked at in competition with existing staff already under consideration —Box 868.

HOLLERITH—LEADING MANUFACTURERS OF PUNCHED CARD ACCOUNTING MACHINES AND ELECTRONIC COMPUTERS —REQUIRE

ADMINISTRATIVE ASSISTANT

for Secretarial Division of the Company. The post will suit an intelligent man between the ages of 23 and 26, with a sound basic education. Preferably he should be studying for (or has passed) C.I.S. or C.C.S. examinations. He should have had some experience in Company Secretary work.

This is an opening with a stable company of steady growth and high repute. It offers excellent prospects, and promotion can be won by the exercise of personable and industrious qualities. If it interests you, write, with details about yourself (and quoting Ref. No. A.A.3), to the Manager, Training and Personnel Division, The British Tabulating Machine Co. Ltd., 17 Park Lane, London, W.1.

BIRMINGHAM CHAMBER OF COMMERCE (INC.)

Applications are invited for the SECRETARYSHIP of the Chamber which will shortly become vacant. Applicants should preferably be between 35 and 45 years of age and have had wide administrative, commercial and legal experience. Salary according to age and experience but commencing at not less than £2,000 per annum. Contributory Pension Fund and non-contributory Widows' Fund.—Applications, accompanied by the names and addresses of three referees, should be addressed to the President, Birmingham Chamber of Commerce (Inc.), 95 New Street, Birmingham, 2.

FORD MOTOR COMPANY LIMITED have vacancies on finance work which is not restricted to accounting for the past. The positions involve analysing and reporting to top management on the financial implications of all aspects of the Company's business. Subjects covered include export and domestic vehicle pricing, long-term and short-term forecasting, capital projects, budgetary control, and widely varied commercial and economic problems. Qualifications required are an outlook and intelligence sufficient to understand the role of management and either a university degree or professional training of a financial nature. Only men of the highest calibre up to the age of 40 will be accepted for these positions; salary and prospects will be offered accordingly and there is a generous non-contributory pension scheme.

Please send full details to Training and Recruitment Department (012A), Ford Motor Company Ltd., Dagenham, Essex, and quote reference CFA.

AN opportunity occurs for a man of experience and initiative to take charge, reorganise and develop old-established manufacturing business in London. Engineering and commercial background essential. Knowledge of building trades and metal window manufacturing an advantage. —Write fullest particulars to Managing Director, Box 873.

THE UNIVERSITY OF MANCHESTER

HALLSWORTH RESEARCH FELLOWSHIPS

Applications are invited for the above Research Fellowships for advanced work in the field of Political Economy and Political Science. The value of the Fellowships will normally be within the range of £700-£1,500 per annum, according to experience and qualifications. Regulations governing the award of the Fellowships may be obtained from the Registrar, the University, Manchester 13, to whom applications should be sent not later than March 1, 1958.

THE UNIVERSITY OF MANCHESTER

RESEARCH FELLOWSHIP IN ECONOMIC STATISTICS

Applications are invited for the above Fellowship, tenable for one year, with a possible extension to two years. The Fellowship is of a value within the range £1,100-£1,400 per annum, together with approved expenses involved in the Research. Regulations governing the award of the Fellowships and application forms may be obtained from the Registrar, the University, Manchester, 13, to whom all applications should be sent not later than March 31, 1958.

ORDERS for advertisements in *The Economist* are accepted on condition that they are liable to rejection at the discretion of the Editor; that while every effort will be made to publish an advertisement on a specified date, no guarantee is given; and that white on black, reverse blocks or large sizes of black-faced type may be stippled or lined at the Editor's discretion.

APPOINTMENTS

HEAD WRIGHTSON & COMPANY LIMITED

Head of Legal Department/ Assistant Secretary

Applications are invited from Solicitors or Barristers with industrial experience, approximately between 35 and 50 years of age, to form a new Legal Department, and to assist the Secretary, at the Group Head Office, Thornaby-on-Tees.

The successful candidate would be considered for appointment as Secretary to the Head Wrightson Group of Companies within the next few years.

Letter of application, marked "Personal," giving full details, including indication of salary expected, to be made to:

THE MANAGING DIRECTOR,
HEAD WRIGHTSON & COMPANY LIMITED,
TEESDALE IRON WORKS,
THORNABY-ON-TEES.

COMMERCIAL MANAGER

READS LTD.—manufacturers of tin boxes, metal containers and steel drums—invite applications for a senior executive post as Commercial Manager at their headquarters at Liverpool.

The duties of the post—which is a newly created one, arising from expansion of the Company's activities—will cover all aspects of Sales Management, including Market Research.

Candidates should be men between 35 and 47, of good general education—minimum Matriculation and preferably University graduates—and must have had at least three years' experience in a responsible managerial appointment covering similar functions in a field similar to the metal container industry—i.e. mass production for industrial consumers.

Initial salary will be in the range £1,800-£2,400.

Further details and the standard form of application are available from: The Secretary (COMUS), 14 Welbeck Street, London, W.1

MARKET RESEARCH.—A vacancy exists in the Market Research Department of a well-known manufacturing Company in Middlesex for a FEMALE FIELD FORCE TRAVELLING SUPERVISOR. This is a senior post carrying responsibility for the general supervision and training of part-time Investigators and ensuring that a high standard of field work is maintained at all times. Applicants should preferably be between 27 and 40 years of age, have good health, and have had experience as a full time Investigator. They must be prepared to travel throughout the U.K. and to stay away from home for periods of up to a fortnight at short notice. A University degree would be helpful but is not essential. The starting salary envisaged is between £500 and £600 per annum according to experience and qualifications. Applicants should give details of age, education, background and positions held with dates and salaries. Please quote Ref. F.F.F. on envelope and letter.—Box 870.

A CHARTERED ACCOUNTANT

is required by

KUWAIT OIL COMPANY

for service in KUWAIT

The Company invites applications from Chartered Accountants to fill a vacancy on their Staff in Kuwait. Applicants should be between 25 and 30 years of age and preferably with two years' experience after qualifying.

Total pay including local allowance will be not less than £2,150 p.a. and a kit allowance of £85 is payable. Leave every two years. Pension scheme.

Write for application form, sending brief details and quoting K.2409 to Box Y.79, c/o 191 Gresham House, E.C.2.

ECONOMISTS, SOCIOLOGISTS with some knowledge of statistics.

A leading manufacturing company has a vacancy in its Market Research organisation for a man aged between 27 and 30. The job in an expanding section offers scope and a wide range of experience. A good academic background and some acquaintance with commercial problems and the research methods available for their solution will be essential.—Box 866.

ECONOMIC RESEARCH.—Man aged 25-30, who wishes to apply mathematical and statistical techniques to economic problems required for London head office of large industrial and commercial organisation. Will probably be Mathematician, who has specialised in statistics or Economist with good mathematical knowledge. Commercial or industrial experience or post-graduate study of every-day problems an advantage. Must be able to work largely on his own and get results from problems with considerable number of variables and unknowns. Clear self-expression in writing and speech essential. Good opportunities for right man.—Apply Box 867.

CENTRAL ELECTRICITY GENERATING BOARD

ELECTRONIC DIGITAL COMPUTING STAFF —SYSTEM PLANNING BRANCH

Applications are invited for the following appointments for the electronic digital computing service within the System Planning Branch of the Chief Engineer's Department, Headquarters, Bankside House, London, S.E.1.

ANALYTICAL and STATISTICAL MATHEMATICIANS—E/46.

This Section will provide a consultant service to the Computer Programming Staff and carry out statistical and analytical investigations into problems associated with long term forecasts including the growth of electricity demand and the related requirements in terms of new generating and transmission plant to provide for the optimum growth of the System as a whole. A high degree of mathematical ability is required and applicants should possess a good degree in mathematics or statistics with subsequent experience in industry. The successful applicant for the senior post (Grade 1) will be expected to co-ordinate the work of the Section and carry out mathematical research and to develop new techniques for dealing with System Planning problems.

Salaries—Grade 1, £1,435-£1,795 per annum; Grade 2, £1,210-£1,570.

PROGRAMMERS—E/47.

To deal with the solution by digital computer of a variety of problems mainly associated with the Electricity Supply Industry. Previous experience in numerical analysis and the use of electronic digital computers would be considered an advantage, but is not essential. Applicants should hold a University Degree in Mathematics or its equivalent and be interested in the study of engineering systems.

Salaries £1,210-£1,570 or £1,105-£1,315 according to qualifications and experience.

Applications, stating age, qualifications, experience, present position and salary, and also quoting specific vacancy number, should be forwarded under confidential cover to I. G. Ellis, Personnel Officer, 24-30 Holborn, London, E.C.1, by February 26th.

ADMINISTRATIVE EXECUTIVE (48) with experience in INDIA and TRINIDAD as assistant to General Manager seeks similar post in industry with opportunity for advancement in London or the Tropics.—Box 859.

BUSINESS TRAVEL

Dear Sir:

I would like to place on record my appreciation of the first-rate service your Company has given me on my recent complicated tour of the Far East.

Every flight, every hotel and every rail connection matched your itinerary.

Your staff were tireless in their efforts to make my tour run as smoothly as possible and I greatly appreciate their work.

Thank you again for such a personal service and I hope it will not be long before I again Travel by Davell.

Yours sincerely,

Davell & Co., Ltd. can offer you all the services that a travel agent can provide but there can be no point in our praising ourselves—we would far prefer to be praised by you. May we ask you to put our 24 hours-a-day 7 days-a-week Business Travel Department to the test in the hope that our service will one day move you to write us a letter like the above. Telephone or write to

BUSINESS TRAVEL DEPARTMENT.

Chemicals basic to industry . . .

DOW

brings grass control to the world's farmers with

DOWPON

In sugar cane, sugar beets, cotton, citrus groves, vineyards, coffee plantations, irrigation and drainage ditches throughout the world, you'll find Dowpon* actively in use.

This remarkable Dow chemical is a grass killer capable of controlling a wider range of grass weeds than any other product available.

Farmers like it because it effectively kills all kinds of grasses—without the need for cultivating, chopping, oiling. Does away with these expensive—and only temporary—measures. Sprayed on leaves, it works its way inside tough weed grasses right into the roots, killing the entire plant.

Complete information on Dowpon—the systemic grass killer—is available through your local Dow representative, or contact the Dow branch office in your area.

YOU CAN DEPEND ON DOW

AN EXPORT OPPORTUNITY

In HOLLAND

60% of the population under 35

A YOUNG PEOPLE'S MARKET

About 60% of the population of the Netherlands is under 35 years old. Think what that means in terms of consumption—leisure goods, children's clothing, school requisites and toys, all the furniture and household goods needed for young married couples with growing families. Holland's population is youthful, and it is growing.

The pattern of population increase is matched by that for industrial expansion. Taking the 1938 figure for industrial production as 100, the index for 1946 was 74: for 1956, it was 195. And statistics of the number of days lost through strikes have become so pointless that they are no longer published.

Speaking their language

Dutch import duties are very moderate. Holland offers an open market. It is easy for British manufacturers to advertise in this market—by using the magazine that assures top readership.

The Dutch edition of The Reader's Digest is edited and published in Holland. It speaks to its readers *in their own language*—yet keeps the stature and authority of an international publication. What is more, the Digest readers, in Holland as everywhere else, are the people who direct opinion, the leaders in commerce, industry and politics—*the people who buy.*

All over the free world, such people read the Digest in its overseas editions. Everywhere, it wins their interest and confidence. *Everywhere, it enables you to speak to your customers in their own language.*

We can help you plan—here in London

If you consider advertising in Holland—or elsewhere overseas—we shall be glad to help with facts, figures and information.

Here in London you can book space in one or any combination of our 30 editions, to cover your best markets without waste circulation. You can avoid the uncertainties of remote control, and be sure of full advertising value for what you spend. A further convenience: in most cases you can pay in sterling.

If you'd like an analysis of how The Reader's Digest covers *your* areas of interest, just write or telephone:

The Advertisement Director, Reader's Digest, 25 Berkeley Sq., London, W.1. (MAYfair 8144.)

30 Editions . . . 13 Languages . . .

jointly introduce CieL Structures, a new technique in prefabricated steel buildings involving the use of cold rolled sections of high tensile steel. These lightweight sections have an effective strength at least 50% greater than that of hot rolled mild steel and a resistance to atmospheric corrosion from four to six times as great. The full range of the CieL System, spanning from 12 to 96 feet, is covered by three distinct sections:—Medium Span, Monospan and Industrial Span Structures. The many applications of these easily transported, quickly erected, low-cost buildings are described in a new illustrated brochure now available on request.

Folding timber doors both ends open to the full width of this asbestos-clad building supplied to the Road Research Laboratory at Harmondsworth, Middlesex

TACK Personal Training Courses

mean more sales at less cost..

Sales managers of large and small companies—marketing every kind of product and service—have found that TACK Sales Training contributes positively to solving their major sales problem: How to increase turnover without raising costs...

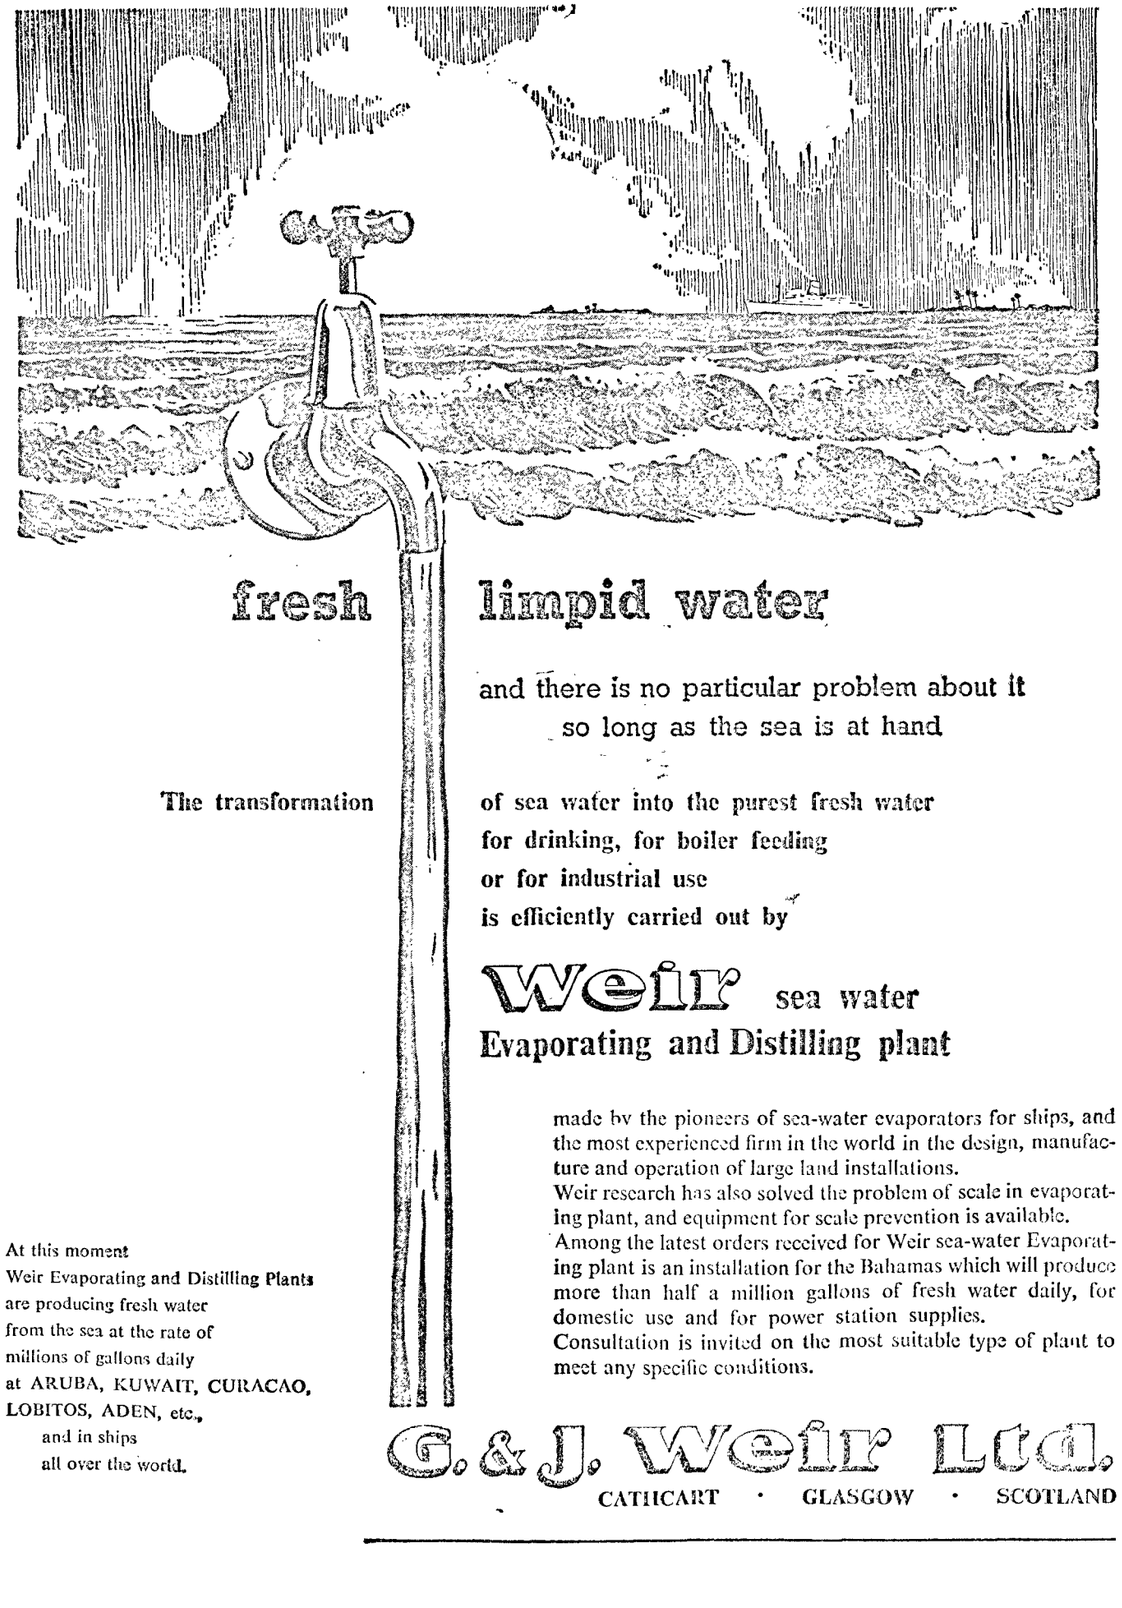
. . . regardless of product or service!

From Smiths Clocks & Watches Ltd. —famous manufacturers of horological products, comes this statement by Marketing Manager, L. J. H. Parker:

"Our representatives attended your course just over a year ago. As last year was an excellent one for this Company, there is no doubt that the refreshing and invigorating ideas you gave us played an important part."

Each year over 2,500 salesmen and sales executives attend TACK Courses

Tack Course in Salesmanship and Human Relations—3 days



Tack Course in Sales Management—2 days

May we send you details of how we can help YOUR Company?

fresh limpid water

and there is no particular problem about it so long as the sea is at hand

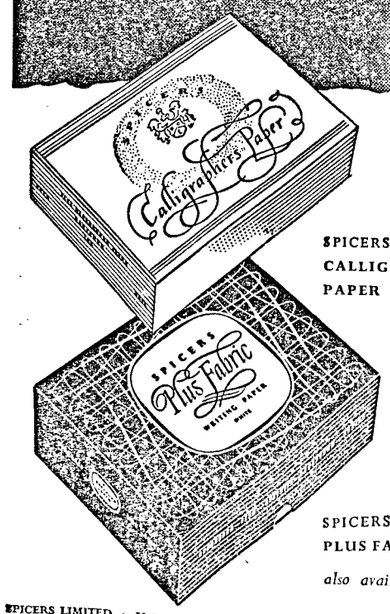
The transformation of sea water into the purest fresh water for drinking, for boiler feeding or for industrial use is efficiently carried out by

Weir sea water Evaporating and Distilling plant

made by the pioneers of sea-water evaporators for ships, and the most experienced firm in the world in the design, manufacture and operation of large land installations.

Weir research has also solved the problem of scale in evaporating plant, and equipment for scale prevention is available.

Among the latest orders received for Weir sea-water Evaporating plant is an installation for the Bahamas which will produce more than half a million gallons of fresh water daily, for domestic use and for power station supplies.



Consultation is invited on the most suitable type of plant to meet any specific conditions.

At this moment
Weir Evaporating and Distilling Plants
are producing fresh water
from the sea at the rate of
millions of gallons daily
at ARUBA, KUWAIT, CURACAO,
LOBITOS, ADEN, etc.,
and in ships
all over the world.

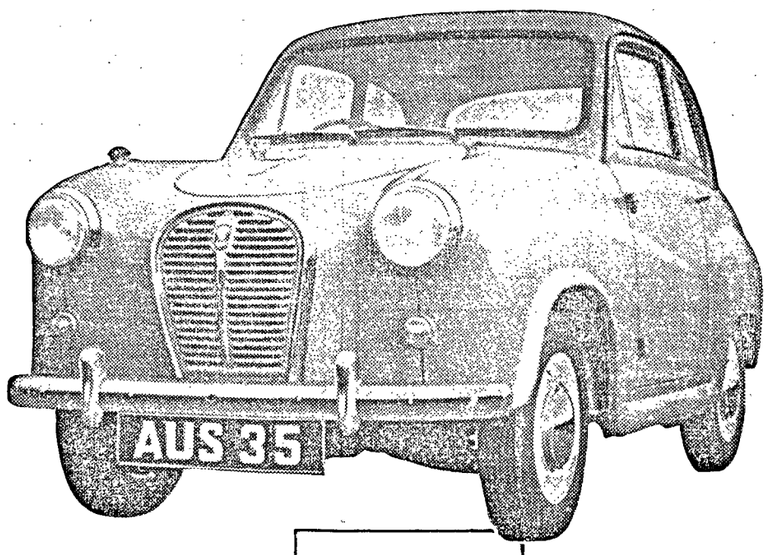
A guide to your character



WHAT newspaper do you read? As much as your gait, your expression, your clothes—the newspaper which you take reveals you. The silly man reads a silly newspaper. The solemn man reads a solemn newspaper. The prejudiced man reads the newspaper whose prejudices coincide with his own.

What kind of person reads the Manchester Guardian? The typical reader is intelligent. He has a sense of values—otherwise he would not bother with a newspaper which is so singularly free from vulgar 'journalism'. He is fair-minded—prepared to read a non-party paper. He is literate—he likes a well-turned phrase, a wry remark, a penetrating point of view.

Do we give too flattering a picture of readers of the Manchester Guardian? Not at all. We simply credit them with sufficient strength of intellectual character to know the good from the bad; the false from the true; the sincere opinion from the party line.

You can't beat an Austin A.35

By Appointment to Her Majesty The Queen Motor Car Manufacturers The Austin Motor Company Limited

1 *A.35 comfort is top class. Ample room for four adults – foam rubber seats give restful travel.*

2 *The A.35 gets you there quickly, and puts in up to fifty miles to a gallon of petrol. Plenty of room for luggage, too.*

3 *Four forward gears on the A.35 mean complete flexibility in the heaviest traffic. Compact wheel base and tight turning circle give ideal manoeuvrability.*

4 *The famous A.35 engine more than holds its own on the open road. You get a top speed of over 70 mph, and high cruising speeds to match.*

A.35 *From £569. 17. 0 tax paid. Backed by BMC's 12-month warranty and BMC service*

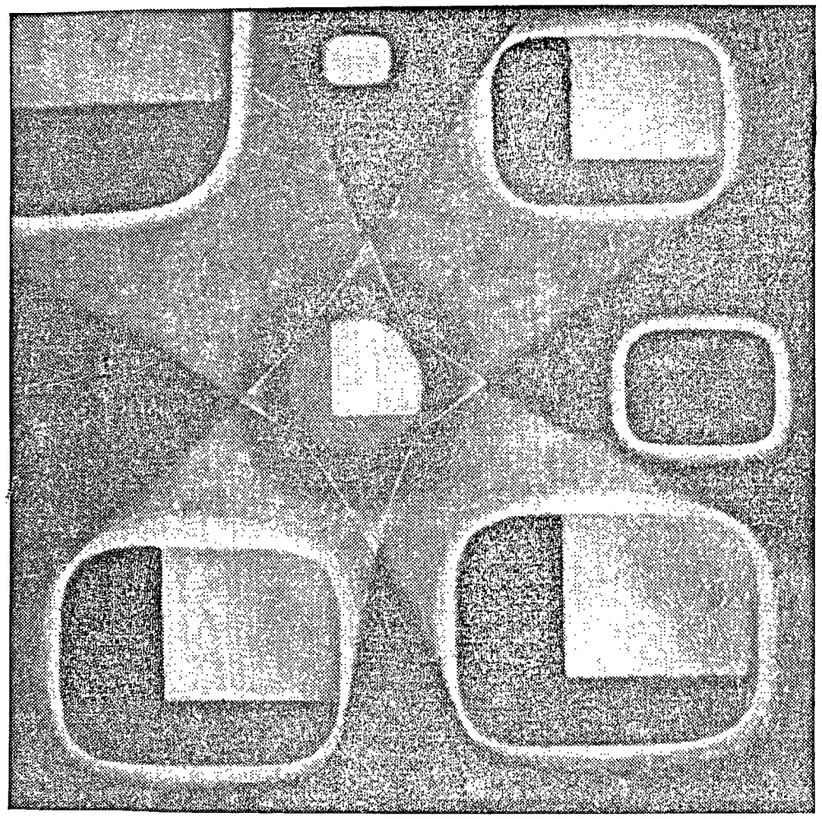
"You mean I get a choice of wine on tourist service?"

Travelers who choose Pan American's famous tourist-fare *Rainbow* service are often pleasantly surprised at the little special touches that reflect the World's Most Experienced Airline. A choice of fine wines, for instance, at modest extra cost, is always available to complement the outstanding tourist cuisine.

Service that makes the "extras" routine is part of the difference that makes Pan American famous. You'll notice this in the many little things that make flying by Clipper* the international standard of air travel. The efficient, thoughtful courtesy that begins before you step aboard—and extends right through to that extra cup of after-dinner coffee that rounds out a perfect meal. This is the sign of experience no other airline can match.



You'll be glad you didn't settle for less when you choose Pan American's tourist-fare *Rainbow* service—service that has satisfied the most discriminating international travelers for over 30 years—on more than 65,000 transatlantic crossings.

Call your Travel Agent or Pan American. 800 offices throughout the world.

WORLD'S MOST EXPERIENCED AIRLINE

"Television" by Roy Nockolds

Looking back to tomorrow

One of the greatest tragedies that can befall man is the destruction of recorded knowledge. Throughout the ages men have looked back to seek in the traces of earlier civilisation, the foundations on which new knowledge could be built.

In modern times, all knowledge is recorded, to be studied and adapted for the purpose of progress in new, uncharted regions. Television today owes much to pioneers whose names are almost household words, and much to unknown scientists without whose recorded work in other fields there could be little development.

The designers of modern television receivers use electronic tubes, valves and components which have gained in performance and efficiency from knowledge and experience gleaned in other branches of electronics. That is why Britain's leading manufacturers of television receivers use Mullard products so extensively. Mullard products are used in almost every electronic application—from radar to radio, from telemetry to television—providing a great wealth of know-how on which you, as a designer or a user of electronic equipment, are free to draw.

Mullard

Legislation for Freedom

THERE are two streams of thought which influence current criticism, or probing, of British trade unions. They need to be very sharply differentiated. The first is what might be called the stream of resentment occasioned by the unions' economic successes in an inflationary age. The organised workers of this country have got a much larger share of rising national purchasing power than the unorganised in the last twenty years; this, complain the spokesmen of this first school, is most unfair, and something ought to be done to help the unorganised to redress the balance. With those who believe that legislation should or could be invoked to satisfy this sort of complaint, *The Economist*, in the series of three articles which we conclude this week, has shown and will show no sympathy.

There is indeed a problem in the fact that the unremitting annual cycle of trade union wage demands has caused a redistribution of income of a sort that no government originally intended: the wage-inspired, as distinct from the tax-inspired, redistribution of income has been much more at the expense of the retired than of the rich. There is also a pressing national problem of preventing these wage demands from saddling the country with recurring economic crises and chronic inflation —as there is a problem in preventing income demands by anybody else from doing so. But these are problems to be tackled, not by discriminatory changes in the law against trade unions, but by non-discriminatory application of sounder economic and administrative policies. It is to them that the report of the Cohen Council, which was published just as we went to press and is briefly discussed on page 647, attracts attention.

The second stream of criticism against the unions is quite different. It is concerned not with their successful use of power, but with their abuse of it. In part, the trouble here lies in their restrictive practices. It is odd that mid-twentieth century Britain should still accord special legal privileges to what are not merely unproductive, but often actively anti-productive, organisations. Probably legal reform on this crucial score lies some way off. Where new legislation is plainly needed already, however, is in that other abuse of union power which is committed by local potentates within the unions against an increasing number of people inside, or on the fringes of, their own membership. What many will regard as the latest example is reported by our special correspondent from Birmingham on page 651 of this issue. These doings have now become a standing national scandal. Everybody with any direct individual experience knows that a process of personal victimisation and private aggrandisement goes on, and that it is growing. Everybody—including every Labour and Tory MP—knows that he cannot really approve of it. But everybody also knows why Parliament takes no legislative action. It is because legislative action is deemed to be politically too awkward.

The stage has now been reached when that awkardness has got to be overridden. Indeed, if next year is assumed to be possibly the Conserva-

tives' last year of power for a quinquennium, next year might be the essential year in which to take the first steps. The following article, which carries the conclusions of our series, is concerned with discussing, and then making specific recommendations about, how this might be done.

A Code for Trade Unions

LAST week's article ended by mentioning, but not advocating, three possible steps towards defending individual freedom from abuse by trade unions. These were : to set up a royal commission ; to ban the closed shop ; or to bring in legislation to guide a codification of the unions' own rules. Of these three suggestions, a wide-ranging royal commission to look into general trade union law would not be likely to be very effective. The commission would have to be composed partly of trade unionists and partly of people who would be regarded by Labour as anti-trade unionists ; it would no doubt spend a long time deliberating, and would then split up—with the trade union members writing a pre-determined minority report, formally denying any criticism of present-day trade unionism put forward by the others. Whichever government was in power when the report was published would then have a great temptation to leave the whole problem on the shelf.

At first sight, the second suggestion—a statutory ban on the closed shop—is more appealing. It has recently been put into effect in several states of America. But it would cause the bitterest sort of fight here, and—although this is no complete argument of principle against it—it would be better to try other things first. Moreover, reformers should be careful to get their aim straight. Freedom not to join a trade union, which is the freedom forbidden by a closed shop, means two very different things. First, it may mean freedom not to pay union dues, while obtaining the benefits gained by union bargaining ; union leaders get very annoyed at suggestions that this free ride is a basic human right, and other people need not feel obliged to go to the stake in arguing with them about this. Secondly, however, freedom not to join a trade union may mean freedom not to have one's working habits (and one's opportunities for earning money—and producing goods) restricted by rules with which one may not agree—particularly when the rules can be interpreted in such a way that they spell subjection to a bullying local tyranny.

PROTECTION against local bullying is the most immediately important aim. It should also, as it happens, be legislatively the easiest to secure. For there are the beginnings of a charter here in the case of *Huntley v. Thornton and Others* (1957). To recall the facts briefly. Mr Huntley was an engineer who had annoyed the Hartlepool district committee of his union by not joining a strike, and when he was summoned before that committee he called its members (impolitely but perhaps not inaccurately) a "shower." The indignant Hartlepool committee asked the central executive council of the union to expel Mr Huntley ; the executive council very sensibly refused ; the Hartlepool officials, by the usual method of sendings to Coventry and threats of strikes against employer after employer, nevertheless got Mr Huntley hounded out of all available jobs near his home—and later in neighbouring Stockton as well. Mr Huntley initiated an action for damages and for an injunction for civil conspiracy against individual members of the Hartlepool district committee. He won his case, and got £500 damages from them ; he did not, incidentally, get damages from the shop stewards at Stockton, who had taken action to get him sacked because they were asked to by the Hartlepool people and not because they themselves had any personal scores to settle with him.

Mr Huntley's action, so far as it went, succeeded. But a consideration of the circumstances in which his action would have failed shows the first change that is needed in the law. His claim for damages against members of the Hartlepool committee would have failed if they had been able to show either (a) that their predominant motive was to defend their own trade interests (a plea which failed largely, but not wholly, because the executive council itself had said that it was unnecessary to uphold the prestige of the union by expelling Mr Huntley) ; or (b) that they were acting in furtherance of a trade dispute (a plea which failed because there was no dispute in being when they got Mr Huntley sacked, but merely a desire for revenge). Obviously, many local acts of victimisation could still be successfully defended against claims for damages on one of these pleas.

What is needed now, quite frankly, is to take away most of these opportunities for a successful defence. Under a reformed law, all future Huntley-type claims against local officials' victimisation—whether of the Hartlepool or the Stockton sort—should be effective, except where the local officials could show that they were acting on their own head office's behalf: that the man concerned had been orthodoxly expelled by the central authority of his union. Apart from closed shop action following official and judicially-controlled union expulsion, anybody who takes steps to get a man sacked, when the employer does not want to sack him, should know that he will have no defence against actions for damages and conspiracy.

The next step for those who want to draw up a Companies Act for trade unionism should then be to examine the checks that can legitimately be imposed higher up. There are three obvious checks needed : checks to ensure that the elections of union officials (at every level) are conducted in a way that is always above suspicion and in accord with members' wishes ; checks upon the formal procedure to be used when union head offices do officially expel members ; and (perhaps most difficult) the check that should be imposed by opening the door to greater competition for membership between unions, so that members who think that the local organisation of a union is acting merely in the local organisers' interests can vote with their feet by joining some other union instead.

Elections of Officials

THE great majority of trade unions already register their rules with the Chief Registrar of Friendly Societies. There are a few minor legal advantages—and no disadvantages—in doing so. If any Companies Act for trade unions is to work effectively, however, this registration would have to be made virtually universal. The easiest way to do this would be to enact that the main special legal privileges now accorded to trade unions—especially their freedom from being sued for actions in restraint of trade (and output)—should be enjoyed only by registered unions. The registrar's sanction of striking an offending union off his list would then be a very powerful one indeed.

Moreover, the registrar should certainly have the power to investigate cases where the management of local union affairs does not seem to be in accordance with what registered union rules would or could state ; and to threaten to de-register any union which, after investigation and request, does not bring a locally offending clique to order. He would, of course, be responsible to some department of state ; probably, although not certainly, it should be the Ministry of Labour. Questions would then be asked of the minister in Parliament when a case for investigation appeared to have arisen.

MORE generally, however, the registrar would be concerned, not with scrutiny of the activities of existing union officials, but with ensuring absolute honesty in the election of new ones. The two ramps that occur in the election of trade union officials are (a) the less frequent one of the direct fiddling of results by the clique presently in office, in favour of their friends ; and (b) the more frequent one of so arranging matters that only a minority of zealots or (from the union's point of view) properly "instructed" people turn up to vote. The first ramp could obviously be stopped by giving more power of scrutiny of the ballots to the registrar (armed with his new weapon to deregister offending unions). When a case calls out for inquiry—as the recent ETU election did, and as some elections of minor officials in other unions quite frequently do—the registrar should be called in to recount the votes.

To tackle the second problem would be harder. Every union operator knows that, by arranging that ballots should be put into the box personally at an inconvenient time, a union can ensure an under 10 per cent poll ; while, by getting ballot papers handed round at the work benches, it can usually ensure an over 50 per cent one. The ideal solution, perhaps, would be for the registrar to take over the role of returning officer directly ; if this were practicable, he should be charged to follow such rules as are likely to get the biggest possible ballot in each particular case. Alternatively, he could perhaps call for a new ballot whenever the total poll in a union-conducted election is below a certain percentage. In any event he should certainly refuse to accept registration of a union's rules unless those rules provide for electoral arrangements that are reasonably democratic. For one thing, candidates for office must, if they wish, be allowed to issue circulars explaining the policies for which they stand, and those they stand against ; rules that effectively forbid candidates to cast aspersions on the politics of "brothers" in office are a direct derogation from free speech.

Checks on Expulsion

IF the unions are still to be able to expel members for any offence other than the obviously punishable one of falling behind with their dues, and if the existence of the closed shop in so many industries means that expulsion is the same as deprivation of livelihood, then it is clear that powers of expulsion must be kept under close legislative watch. One essential, as already suggested, is that expulsion should have to be authorised by the central authority of a union, and should never be left as a weapon in the hands of some local Pooh Bah with a grudge. This rule might seem undemocratic—on the ground that local people know local conditions best—but it is a safeguard for the individual that has now been made indispensable as a result of local abuses of union rights and power. At the same time, those who take local action to hound an unexpelled union member out of his job should be laid wide open to legal action for damages and civil conspiracy against the individual.

Given this, rules for procedure in expelling members should probably be formalised, rather than fundamentally changed. At the moment an expelled member can sue his union in the courts for breach of contract if his expulsion has not been in accordance with the union's own rules, or if it has offended against the principles of natural justice. There is dispute about what natural justice means, but the general trend of legal decisions in this century seems to be fairly clear. To simplify, a union, with properly drawn-up rules,

can usually legitimately expel a member if he is doing something which is weakening its bargaining power or is in other ways harming its members' interests ; but it probably cannot expel him because he is doing something which is not hurting his fellow members in any way, but of which the union potentates themselves merely happen to disapprove. In addition, the courts have been more ready to regard expulsions as legitimate where the member concerned has been given every chance to redeem his so-called fault, and more inclined to regard peremptory expulsions as unjust.

If the law were codified so that these principles were made quite clear, the unions really would not have grounds for complaint. Indeed, a juster complaint would be that reform would not then go far enough. But, in any first Companies Act for trade unionism, it might be sensible to accept the above framework, while adding four other safeguards. First, a sentence of expulsion from a union should not become effective —and a man should not be hounded out of his job— until he has had the chance to run the full gamut of appeals procedure. Secondly, the registrar should demand that the procedure of any registered union for appeals against expulsion should include permission to appeal to some impartial tribunal—perhaps, though not certainly, the tribunal should usually be composed of retired or outside trade union officials. Thirdly, if the member wishes to appeal past this tribunal to the courts, his road there should be expedited (Proceedings would be quicker, and cheaper, if the Commercial Court of the Queen's Bench Division could hear these cases, instead of leaving them in the long queue for the High Court. And, as the state has given unions special legal privileges in their own right, would it be so very improper if it gave members suing them discriminatorily favourable treatment in access to the legal aid scheme ?). Fourthly, even if the court finds an expulsion to be legally correct, it might well be given discretion to say that the expulsion should not take effect if, on balance, the injury to the man concerned would seem to be very much greater than the collective injury to his fellows that would be caused by having to continue to accept him as a colleague. In this latter case, of course, no award of costs or damages against the union would lie.*

Competition Between Unions

If these reforms could be implemented—so that those fellow workers who play any part in driving a man out of a job before he has been judicially expelled from his union would know they were wide open to action for damages ; so that the elections of union leaders had all elements of rigging and electoral manipulation taken out of them ; and so that judicial checks were imposed upon peremptory expulsions that cause more individual misery than collective benefit —then a long step would have been taken towards restoring individual freedom in trade unions in Britain. But one major problem would remain.

A worker today often does not only suffer a deprivation of freedom by not being allowed to decide whether he will belong to a union or not. Generally, he also has no say in deciding which particular union he will join. The bitter hostility of the TUC to "poaching" and "breakaway unions" is sometimes understandable ; there have been some breakaway unions, of both left and right, whose origins and methods of management would stand up to independent scrutiny even less well than recent operations at Birmingham and Briggs. But, given facilities for such scrutiny, and a cleaned-up system of trade union law, active poaching by trade unions—which means active competition among them—would not be a bad thing. It would, as in all other fields of endeavour, be a very good one.

The question is, how to encourage it. A main requirement, of course, is for more courage by employers. Examples of the need for this abound. Two years ago a court said that butchers could carry their own meat out of Smithfield market, the porters' union said they couldn't, and they didn't ; this is a standing disgrace to the employing authorities concerned. Similarly, in recent demarcation disputes between unions in the shipyards, employers have traditionally stood aside in a posture of abject non-intervention. The TUC has lately taken it upon itself to adjudicate in these inter-union disputes. It is the worst body to do so. In disputes between two big unions, its tendency will always be to reach the compromise that seems most convenient, never to recommend the division of labour that would be most productive ; and, in disputes between a big and small union, to favour the big one.

The Government has in recent years been very ready, perhaps too ready, to bring courts of inquiry into action in wage disputes. It ought to be much more ready to set up courts of inquiry into demarcation and "poaching" disputes instead. Sometimes, the findings of these inquiries would be carried into effect through moral suasion. Sometimes, however, the registrar would be shown that one union on his books was deliberately and by industrial *force majeure* restricting the growth of another union on his books, to which he should owe an equal duty. If there is to be a healthy growth of new bodies in trade unionism, as substantial minorities of union members may from time to time wish, then the registrar should have some weapons to protect the little fellows from big brother oppression of this sort. The weapon of threatening to deregister a big offender —and thus remove from it the legal privileges of successive trade unions acts—should not be brandished incontinently. But, for cases where negotiations fail and patience is exhausted, it should be held in reserve.

This article has presented a layman's cockshy at a possible scheme of trade union law reform. Lawyers may object to parts of it as being legally untidy. Those who rightly champion individual liberty—and the urgent need to root out all restrictive practices—may well complain that it does not go far enough. The unions may stigmatise parts of it as discriminatory and unfair.

This last criticism, however, is one of which there is no reason to be afraid. Nor, certainly, need one accept any claim that such reforms would be a retreat into reaction. The nearest historical parallel to the unions' present estate is not, in progressive eyes, very respectable. The last instance of a powerful, decentralised, and in some areas locally irresponsible, vested interest —claiming certain privileges above the law, and considering itself answerable only to its own peers—was the French nobility under the *ancien régime*. If the trade union movement will not be responsible to anyone but its own members, and not very effectively to them, then it cannot have its privileges—freedom from legal action for restraint of trade, and so on. The better course, clearly, is to make trade unions responsible. This series of articles has been a contribution to suggesting how this could be done.

* Some, though not all, of these suggestions in this section would be acceptable to many Labour thinkers. See, for example, the very interesting Fabian Research Pamphlet No. 193, "Trade Unions and the Individual," by Cyril Grunfeld. 33 pages. 3s.

Untimely Cloud over India

The resignation of India's finance minister should draw attention to the damaging and dangerous consequences of the Mundhra affair

Just how large a hole has been blown in the economic and political prospects for India, and for all of free Asia, by the wretched Mundhra affair ? Clearly one cannot yet tot up all the damage ; events are still unfolding. On Tuesday Mr Haridas Mundhra, the lone-wolf Marwari business man whose speculative activities set off the whole chain reaction, was arrested and charged with forgery in respect of share certificates ; and the resigning finance minister, Mr T. T. Krishnamachari, made his personal statement. On Wednesday Mr Nehru was hard pressed in a sharp parliamentary debate. Now that Mr Justice Chagla's public inquiry is over and its findings published, battle is joined in earnest. Politicians of both the left and the right have acquired fresh ammunition ; indignant civil servants are in a mood to fight all comers ; there are hints of more revelations to come, some of which can be expected when Mr Mundhra appears in court. And if the Indian elephant, already stumbling as it thrusts through the jungle along its chosen track of democratic progress, is now seized with internal spasms, the smaller animals of Asia will once more compare its tribulations with the roars of triumph which are all they hear from the red dragon in Peking, and draw their own conclusions.

For the second time in two years, India has lost an able finance minister in unhappy circumstances. In 1956 Mr Deshmukh left because his Mahratta emotions were stirred by the controversy over linguistic state boundaries. Now a judicial inquiry has fixed upon Mr Krishnamachari the constitutional responsibility for improper use of public funds, and a reluctant prime minister has accepted his resignation. It is a serious loss. Throughout a difficult year and a half, "TTK" had carried a great part of the strain imposed by India's struggle for development. He introduced unpopular taxes and defended unpopular retrenchments. He contrived not quite to frighten the business men to death, not quite to lose ground to the doctrinaires whose pie-in-the-sky eloquence naturally has more popular appeal than the harsh reality of a planed-down Plan. He banged into other politicians' heads the fact that India needs the foreign investor. He induced America, and even western Germany, to come to the rescue of India's "socialist-pattern" programme.

A very large share of the same burden has been borne by the overworked men who head the civil service. None of them has been under more strain than Mr H. M. Patel, the principal secretary of the finance ministry, who has now been enmeshed in the Mundhra affair together with his minister. One deduction widely drawn from the facts brought out in the Chagla inquiry is that these top civil servants are wont to exercise more initiative than the general public realised. But, if that has been so in the past, it now seems unlikely to continue. Mr Patel's evidence was that his minister had approved the purchase by the state-controlled Life Insurance Corporation of a million pounds' worth of shares in the largely speculative Mundhra companies, the avowed purpose being to relieve a depressed stock market. Mr Krishnamachari denies having given any such explicit authority ; and the Chagla inquiry provided the unedifying spectacle of a clash of evidence between the minister and his chief permanent official.

Will India's senior civil servants from now on abjure initiative and responsibility in any important matter ? That is a sadly familiar pattern in many Asian and other countries where, because of a universal horror of responsibility, public administration is sickeningly sluggish. One doubts whether such procedures would meet the needs of the world's largest democracy in these years of urgency. And how long can the Indian

civil service retain its present quality if its best men, already so inadequate in numbers, must face this additional strain on their spirit ?

All in all, there is a formidable bill to be paid for Mundhra's million. Mr Nehru has once again had to take the finance portfolio temporarily into his already overfull hands, on the eve of a budget and at a time of severe economic strain. The ruling Congress party is spattered with the mud of scandal ; and if it tries to shake it off on to the civil servants, that will merely increase their resentment and reduce their value. The public has been made uneasy about the conduct of those in high places just when it had been brought to accept some painful belt-tightening on the strength of its faith in their integrity. And the problem of replacing Mr Krishnamachari may prove a baffling one.

What successor could snatch up the threads of his negotiations for further financial help in Washington and Bonn ? A more doctrinaire finance minister could very easily lose India its present prospects of foreign aid, and, indeed, panic foreign investors in general. A "sound" minister who lacked TTK's political skill, vigor and status could equally easily lose all grip on an impatient public opinion ; for public opinion has been led to expect near-miracles from the Plan, and has lately been squirming under the impact of new taxes, cuts in imports, and cutbacks in development projects. It would not seem easy either to bring Mr Deshmukh back or to call Mr S. K. Patil forward ; and who else could fill the bill ?

The prospect of an intensified foreign exchange crisis, a disenchanted public, a queasy Congress and a bruised and resentful civil service is a gloomy one indeed—and not only for India. A great part of the Asian world looks to India for proof that poverty can be successfully assailed without recourse to the communist techniques of slave labour, political dragooning, and the drowning out of sufferers' cries with fanfares of trumpets. And the democratic West needs a democratic Asia—just as Asia needs the West—if either is to survive in freedom.

MERCIFULLY, there is one substantial item on the credit side of the ledger. Even among Indians who have been fascinated by the Mundhra affair in much the same spirit as British newspaper readers relished the Parker and Lynskey tribunals, there has been justified pride in this evidence of the underlying integrity of their country's institutions. The pressure of a free parliament and press has led a senior minister to subject himself to a humiliating public inquiry. Mr Krishnamachari has not been accused of acting for personal profit ; he is merely held responsible for ill-advisedly and improperly permitting the use, for an arguably constructive purpose, of funds which by definition should have been deployed solely for the benefit of insurance policy holders. The Mundhra affair may be a blot in India's copybook ; but how many of India's neighbours could show a copybook clean enough for such a blot to be noticeable ?

Britons, in particular, are apt to pay India the stiff compliment of judging events there by higher standards than they apply to other newly independent countries. To point this out is not to condone laxity or impropriety. But it usually takes an exception to prove a rule ; one recalls how strong an impact on general opinion was made by Mr Dalton's relinquishment of the Exchequer in 1947. The damage done by this whole sorry affair to the cause of democratic progress in India and elsewhere should not be underestimated. But it should also be recorded that Indians and foreign observers alike have seen a classic example of how the fierce play of the searchlights of a free parliament, a free press, and a free judiciary can reveal what even the most powerful politician or official would prefer to hide. A high price has had to be paid ; bitterness will linger in the mouth as well as pride. But the respect for truth which is the bedrock of a free society can seldom be established without bitterness and tribulation. An episode that may do India grievous harm can also do it credit.

FEBRUARY 20, 1858

REPULSIVE ARMY LIFE

The masterly Report on the Sanitary Condition of the Army has startled the public greatly. Nobody appears to have known that we were treating our soldiers in every respect much less justly as well as much less kindly than we treat paupers and criminals. . . . If ever there were an occupation that needed anxious precautionary measures to counteract its dangerous tendencies, physical and mental, it is that of a soldier in time of peace; and yet no class of the community has received treatment so disgracefully negligent and even cruel. In the first place, the soldier is of no immediate use,—he . . . has none of the interests of successful work. . . . Now we all know the depressing effect of robbing any man of the interest of his customary occupation. Idleness is only possible to those who are educated enough to be idle,—in other words, to those who have a great variety of small but pleasurably interesting occupations which fill up the intellect and demand attention. . . . How many men die simply because they have "retired from business" without having previously learnt the business of amusing themselves. . . . Now the uneducated soldier is almost always a man previously accustomed to constant daily work. He enters on an occupation where his days are but half-occupied. . . . The only resource is such coarse extraneous excitement as his means allow him. The excitement reacts and increases the ennui, which again increases the excitement. Both alike affect the health, and hence, at least in some measure, it happens that the infantry and Foot Guards, though men picked out for their health, die more than twice as rapidly as the ordinary agricultural labourers, and almost twice as rapidly as miners. A great deal might easily be done to prevent this result. Besides the ordinary sanitary measures, which are fearfully neglected, for making their homes attractive and comfortable, inducements to employ themselves in various ways might be presented to them. But the extraordinary facts of this Report reveal that the very opposite course is pursued.

Meet the Rebels

What kind of men form the two sides in the Algerian war, and what are their attitudes ? Our special correspondent just back from Tunisia and Algeria describes, in the first of two articles, the Algerian rebel movement.

A BLANK, anonymous door in a mean back street of Tunis conceals the nerve centre of the Algerian rebellion. One presses the bell, and the door opens by remote control, as do the doors of apartment houses in France. After scaling two flights of dingy stairs, the visitor is confronted by a resolute-looking young man, who asks him his purpose. Names are mentioned, credentials presented. One is ushered into the headquarters of the National Liberation Front (FLN).

The contrast between the humble and makeshift appointments of this building and the imposing ferro-concrete structure of the Ministry in Algiers, the headquarters of the French administration there, is glaring and perhaps symbolic. In Tunis, a handful of men are working in conditions that border on the primitive. The floors are bare, there are old tables in lieu of desks, unpainted wooden shelves along the walls, easy chairs and couches of respectable antiquity, but

whose condition would disqualify them for sale in the Portobello Road, and—incongruously—a crystal chandelier. In Algiers, the enormous mass of the Ministry dominates the bay, housing thousands of employees and quietly humming with administrative efficiency.

In the field, or rather in the rugged outback of the *bled*, the contrast repeats itself. On the French side, hundreds of thousands of troops, equipped with all sub-nuclear devices of destruction ; on the Algerian side, tens of thousands, well armed now, but with nothing beyond the calibre of bazookas or mortars. One is insidiously reminded of the little men in rubber shoes, with weapon-laden bicycles, trudging single file through the jungles of Vietnam, then winning the battle of Dien Bien Phu.

The value of the comparison, and of the symbolism, is descriptive. Neither should be pushed too far. Unlike the Viet Minh, the FLN does not enjoy the benefit of proximity to a friendly great power ready to arm and supply it. The French, on the other hand, are near their main base, instead of thousands of miles away in Indo-China. Moreover, they are fighting a war which millions of Frenchmen believe to be just, and in which, moreover, the future of the million "Frenchmen" who have never known a home outside Algeria is at stake. That a high proportion of these Algerian Frenchmen are of Spanish, Italian or other descent does not affect the issue, for just as Americans of German or Scandinavian extraction feel American, so do these people feel French.

SHORT of foreign intervention, a second Dien Bien Phu in Algeria seems impossible. Yet the French forces seem no closer to victory today than during any of the previous last quarters of an hour proclaimed by M. Lacoste, the French Minister for Algeria. Indeed, on a long-term view, the rebels have some undeniable advantages : an almost limitless supply of manpower, from Algeria's predominantly youthful population ; ready access to arms across Algeria's enormous frontiers ; the support of the Afro-Asian block, including financial aid from the oil-rich Arab countries ; the probability that world opinion is moving in their favour (how many months has the bombing of Sakiet Sidi Youssef been worth to the FLN ?) ; not least, the gradual financial exhaustion of the French state.

The spokesmen of the FLN are aware of these advantages, though they are disinclined, in their present mood, to attach much importance to the last two. Even the "moderates"—men like M. Ferhat Abbas, former deputy in the French Assembly—are disillusioned and bitter men. It is because they are disillusioned that they have joined the FLN ; some of them have believed in "assimilation," "integration," or some equival..t formula, but have now ceased to hope for anything from the French. This, in turn, has made them bitter, and their bitterness has been increased a hundredfold by the American credits granted to the Monnet mission.

President Bourguiba quoted to your correspondent this remark of one of the Algerian military leaders : "The Americans have done everything for the French. Now the only thing left is to send American soldiers." The bitterness extends in other directions and colours the entire thinking of reasonable men who have become desperate. "We have two special reasons to expect support from the British government," Ferhat Abbas told your correspondent in Montreux.

> One is that you British stood alone and saved France during the war ; this gives you a moral right to put pressure on the French. The other reason is that Britain has

freed its former colonies. Yet you continue to support France at the United Nations.

When France is under discussion, the bitterness knows no bounds. The principal spokesman of the FLN in Tunis began his "briefing" by recounting the story of the Emir Khaled, a descendant of Abdel Kader. A graduate of the French military academy of St. Cyr and a captain in the first world war, the Emir Khaled was demobilised in 1922. Politically minded, he proposed that Algeria should send three deputies to Paris. He was exiled to Syria with all his family. The conversation inevitably goes on to refer to the many French intellectuals who have condemned the policies of their governments and denounced the excesses of the repression. The spokesman—in his impeccable French—exclaims :

The intellectuals carry no weight. Worse, they provide an alibi for France. People read what they write and say : "This is the real France." Later, the historians will dig up their writings and the legend will be preserved for posterity.

To quote these words is not to agree with them. But without knowing the expressions these men use, one cannot begin to understand their attitude, or to realise why they now feel that negotiations with France are useless unless the French first concede the principle of Algerian independence. Yet these men are the "moderates," those who tell the visitor that they are western-minded, that they cannot do without French help, that their vision of the future is a north African federation linked with France.

THE views of the extremists, "les durs" as they are known—the military leaders, like Krim Belkacem or Ouamrane—are difficult to ascertain, for they refuse, at present, to see journalists. But the militant wing is not only, by definition, less accommodating than the moderates ; it is, unhappily, more durable also. The moderates are "Johnny come latelys"; the militants have the authority that springs from long service in the *maquis* and their prestige grows as the war lengthens.

Article 3 of the decisions taken by the FLN on August 20, 1956, lays down that the political wing of the movement has authority over the military. But this should not be read as meaning that the moderates are granted authority over the militants ; it means, specifically, that the FLN gives orders to the ALN (Army of National Liberation). In fact, both moderates and militants belong to the FLN's policy-making body, the Committee of Co-ordination and Execution, in which the militants hold a majority of five to four. This body has been meeting during the past few days in Cairo, but reports that it has transferred its headquarters there from Tunis appear to be premature.

Thus there is among the moderates a sense of insecurity which they scarcely attempt to hide—and indeed exploit in a subtle political blackmail directed at every western journalist. Both Mr Abbas and the men of Tunis spoke of the pressure from below in favour of accepting military aid from the communist countries. The argument takes this form :

We believe in a future Franco-Maghrebin community or federation and we need the West. That is why we have not accepted communist aid and why we don't buy arms of communist origin. But the West helps France and we are under pressure to accept communist aid. Sooner or later we may be forced to give in to this pressure. If this happens, don't make any mistake about it, we moderates will be swept aside.

This point of view seems to have passed into Algerian folklore. In Algiers, your correspondent was told by a non-FLN Moslem that he had heard villagers sing this ditty in Arabic:

Dârhâ bû-barnûs
W eddaha er-rûs

(approximately : The man with the burnous made the war, but the Russian will win it.)

Because the militants are so elusive it was not possible to form a personal impression of them. Those who know them well seem agreed that the dominant personality among them is Krim Belkacem, the chief of staff, both for his energy and his intelligence. It is usually thought that he and the better known Ben Bella (one of the leaders held by the French) will emerge as the leading men in the Algeria of tomorrow—if it is an independent Algeria.

The French lay great stress on the fact that the militants are all men wanted for common law crimes. Without entering into a discussion about the point at which a common law crime becomes a heroic deed of "resistance," one cannot for a moment overlook the ghastliness and ruthlessness of FLN methods. Blackmail, murder and mutilation have been used to gain the "support" of the population and eliminate "traitors," among whom are numbered all members of the smaller rival nationalist organisation, the National Algerian Movement (MNA) of the ageing leader Messali Hadj.

The anarchic violence and revolutionary fervour of the FLN are a source of anxiety to the Tunisians and Moroccans, whose path to independence was less arduous. As it stands, the FLN is a movement without a leader (not in itself a bad thing) and without a programme beyond victory. Common desperation has created unity, but the members of the executive committee have either not thought, or have failed to agree, about the kind of state they would like to create in place of the legal extension of France that they seek to destroy.

NOTES OF THE WEEK

THE COHEN COUNCIL

Trumpet Voluntary

FEARS that the Council on Prices, Productivity and Incomes appointed last August might see itself as something approaching President Eisenhower's Council of Economic Advisers, rather than as a comparatively independent trumpeter for the Government's policy of wage restraint, were expressed in these columns when these three wise gentlemen issued a questionnaire upon rather a wide range of aspects of economic policy three and a half months ago. The substantial first report that Lord Cohen, Sir Harold Howitt and Sir Dennis Robertson signed and published this week does not completely allay those fears. The council has ignored few current issues of internal economic policy: it touches upon.

the demand inflation or cost inflation arguments ; the relevance of the supply of money in postwar inflation ; the general justification of the "September measures" and their particular effect upon investment plans ; the change in the world economic climate since last autumn ; how increases in direct and indirect taxation may be disinflationary or inflationary ; and the question whether when the time for reflation comes exports rather than home demand should be stimulated.

It has even found space (in an appendix) to meet the Harrod-Hawtrey arguments that the pound is undervalued. This does not leave a lot out.

It would be unfair to suggest that any of these matters are wholly irrelevant to the "changes in prices, productivity and the level of incomes" upon which the council was appointed to report from time to time ; fairer, perhaps, to say that its members have taken the whole postwar inflation as their subject, right up to the minute, and have felt themselves entitled to offer counsel upon all aspects of that inflation and of policies directed towards controlling it. Moreover, their counsel should not, for the moment, embarrass the Government : it provides indeed a more effectively argued justification of the policy of the last Chancellor of the Exchequer than he or its inheritor ever has done. The council dismisses the idea that to make the rise of prices a very slow one could be a sufficient economic objective ; concludes that "alike on internal and external grounds our objective should be to stop the inflation, not merely to moderate its course"; and toys approvingly with the argument that stability in prices is not enough, and that prices ought rather gently to fall—though without quite committing itself to that one. It is firmly against "premature reflation" ; and it is not impressed by "the most discouraging possible pictures" of the check to production that must follow from a continued damping down of demand. "We think it important to be candid about the fact that such a check is to be expected and tolerated, as indeed it was in 1956."

Upon the issue that was presumably in the Government's mind in appointing it, the council offers the required right advice. A rise in wage rates in the current year sufficient fully to offset last year's rise of 4.6 per cent in retail prices would be much bigger than the increase in productivity in 1955, 1956 or 1957 ; it would therefore be more than the country can afford. "We hope that if any wage increases are granted in 1958 they will be substantially below the average of the last few years."

THE BUDGET

With Least Offence

THE major point that emerged from Mr Amory's statement on next year's Government expenditure is, of course, that he himself has swung his axe by the least that he was politically obliged to do. He has fulfilled the Government's implied previous promise that expenditure next year will be "less than £50 million above this year's total estimates"—but with only £4 million to spare. He has done this by clawing in £24 million from an increase in health service insurance contributions, but it is an increase that has been imposed in what is politically the least offensive way. The Opposition on Tuesday sounded almost thwarted ; it had been settling down to roar its delighted anger at what it had expected would be heavier impositions on the sick or the children or the subsidised. For the first time for some months a British Chancellor was making a statement without feeling that he had to go out of his way still further to tighten the economy in order to impress the foreign speculators.

GOVERNMENT EXPENDITURES§
(£ million)

	Estimated expenditure 1957–58*	Estimated expenditure 1958–59	Increase or decrease
Social Services			
Education (including universities)	447	484	+37
Health Service	545	531	−14
National Insurance (including family allowances)	232	277	+45
National Assistance	139	137	− 2
Housing	79	82	+ 3
Defence	1,462	1,418	−44
Roads	68	81	+13
Other expenditure†	1,242	1,250	+ 8
Total†	4,214	4,260	+46

* Including supplementaries. † Excluding Post Office and Consolidated Fund charges. § Central Government expenditure only, excluding expenditure met by local authorities, or out of national insurance fund, or by patient's payments, etc.

This does not necessarily reflect a change in government policy ; to some extent, after last month's good gold figures, it may reflect a change in conditions. Moreover, the economies Mr Thorneycroft had already made in the estimates before his departure, by determined pruning, were not inconsiderable. The rise in the total estimates is less than the rise in prices, and probably therefore also less than the rise in revenue that is to be expected on the basis of present tax rates for 1958-59 ; the above-line surplus to which Mr Amory will look forward as he opens his budget might therefore well be higher than that to which Mr Thorneycroft originally thought he could look forward for this year. Indeed, if lending to the nationalised industries

is hived on to the market out of the below-line budget accounts—a gimmick which would make little difference to the real employment of resources, but which the Government is known to be considering—Tory backbenchers feel that Mr Amory might even be able to show a somewhat bogus budget surplus overall. The nascent attitude among them is hastily to assure the new Chancellor that they would not regard him as a traitor to Thorneycroftism should he, come budget day, feel inclined to give some of the surplus away.

THE SUMMIT

New Files for Old Problems

THERE was never much hope of Marshal Bulganin and President Eisenhower working out arrangements for a summit conference so long as their method of exchanging views was to bawl themselves hoarse from the rooftops of Moscow and Washington. Mr Eisenhower's letter to the Marshal this week, in which he pleads for a truce in the bombardment of letters and a return to "less formal and less publicised contacts," will earn a warm *amen* from spectators whose ears are still ringing. This long series of Notes and personal messages, all written for public consumption with an eye on the nearest debating point, is about as efficient a way of conducting diplomacy as a Sunday afternoon at Hyde Park Corner. Even the President's latest letter, though it makes some worth-while points, spends more than three-quarters of its length in regretting that Russians know so little about life in the United States and in tidying up some Soviet misconceptions about American views on outer space and the United Nations veto. Since Marshal Bulganin has already accepted the idea of preliminary discussions about a summit conference, it may now be possible to get down to the duller but more relevant points immediately at issue: who is going to talk about what, and where, if and when the summit is ever reached.

However, simply to transfer the discussions from the rooftop to the quiet of the library is no guarantee that they will make progress. Such normally routine problems as agenda and representation are here studded with booby-traps. Marshal Bulganin's last Note made it plain that the Russians do not want Mr Dulles to take part in the preliminary talks. Although the President does not insist on the preliminaries being held at foreign ministers' level (thus leaving the French, whose Note went to Moscow shortly before, isolated on their pinnacle of defiance about this point) he is adamant that Mr Dulles must take part in them, presumably disguised in attaché's clothing if necessary.

Nor is there any sign that either side has come an inch nearer to accepting the other's agenda. Perhaps, if any progress is to be made, both sides will have to change the mental filing systems in which all these problems have lain gathering dust for so many years. A mention of the word "Germany" is enough to send both American and Soviet hands groping into pigeon-holes, the one to pull out a plan for immediate unification through free elections, the other to counter it with a demand for permanent acceptance of the Ulbricht regime and the withdrawal of all foreign troops from Europe. By contrast, the concept of a limited disengagement in central Europe, which might conceivably be worked out in conjunction with the Rapacki proposals, has the advantage that being nobody's ideal plan it is also nobody's ultimate nightmare. Such a compromise, if it could be combined with the preservation of enough bases in the rest of Europe to satisfy the West's necessary safety requirements, would also offer at least some hope of a political amelioration in the eastern countries. Is it not worth a little labour in Washington's filing cabinets?

KOREA

Thaw in Midwinter?

AN unseasonable gleam of light has broken across the wintry Korean landscape, long frozen solid into its political divisions under the international ice. The Chinese government's decision to withdraw all its remaining troops from North Korea is the first major improvement for several years in a situation which, as the terms of the armistice were broken first in the north and then in the south, seemed to be growing gradually bleaker. In Arctic conditions, however, it is notoriously difficult to be sure whether a glow on the horizon means the return of the sun or just a display of northern lights.

The Chinese can be congratulated, without any reservations, on their withdrawal. The West ought to feel nothing but pleasure at the sight of the troops of a great communist power marching out of the territory of a small neighbour. It would have cause to be happy if Mr Chou's action in northern Korea were to be imitated by Mr Khrushchev in east Germany. However, it is not yet safe to conclude that the comparatively few American troops still in Korea can imitate the Chinese and sail away as the Soviet Government has lost no time in urging them to do. It might be that if the Americans still had bases for ground forces in Japan, as they had in 1950, they might be willing to fall back to those. But their army has evacuated Japan; its nearest base is 500 miles away on Okinawa, and a renewed outbreak of fighting between north and south Koreans, with the Chinese next door on the Yalu, would then catch the Americans at a serious disadvantage. Besides, President Rhee has never formerly retracted his threat to march north and "finish the war." If the restraining presence of the Americans were removed, and if he regained control over his army's petrol and ammunition supplies, the risks of an outbreak might increase.

In brief, Korea is not Germany. In Germany there are reasons to hope that a military pulling-back by both sides would lead to a political softening in the communist zone. In Korea there must be some permanent solution to the political problem before the military dangers disappear. For this reason it is worth the West's while at least to consider the communist proposal made earlier this month of an all-Korean election supervised by observers from neutral countries. This offer still falls well short of the demands of the South Koreans, who want the election to be held under their own constitutional law and to be supervised by the United Nations. But it is a considerable advance on the old communist suggestions of "collaboration" on some ill-defined confederate basis between the two halves of the country. If the supervisory commission were genuinely neutral—India, Poland and Sweden might fit the bill—and if it could move about the country freely, it is difficult to believe that the north's fifth of the population could return a communist government or even a very large block of communist deputies. So long as the two halves of the country stay divided, glaring at each other with throat-slitting gestures, the hopes of a lasting peace remain dim.

AFTER ROCHDALE

The Tories . . .

THE most significant thing about the Rochdale election is that the politicians and the general public have regarded it as so significant of the Government's decline. In this they may not get full agreement from that traditionally cautious animal, the professional electoral statistician. Even before Rochdale, Liberal candidates had lately been attracting about 20 per cent of the poll at by-elections, most of it from the Conservatives; in a by-election where the Liberal plainly had a better chance than the Tory of beating Labour, it was always possible that a polarisation of the anti-Labour vote to the stronger alternative candidate might double the Liberals' customary proportion. The precedents abound. A similar polarisation of the anti-Labour to the Tories, in the vast majority of constituencies where they have seemed to have the better chance of winning, has, after all, caused most of the Liberals' own woes in the last thirteen years; and, to take a significant example from the other side, in North Cornwall in 1955 the swing of Labour votes to Liberal (in order to try to keep the rascal Tories out) was much bigger than the real swing from Labour in the country. So Rochdale, says the statistician cautiously, may not necessarily indicate a major increase in the admittedly large dissatisfaction of the British voter with his Government. But the politicians and the public are reading the bold headlines, not the cautious precedents; they are reacting as if the Rochdale swing is very important, and this by itself may make it more important indeed.

For the Conservatives' immediate reaction has been that they must now resolutely fight the Liberals, in order to "teach them a lesson." In so far as this means that they may now enter candidates in the four constituencies where Liberal MPs have hitherto had a clear run against Labour, it is of relatively marginal significance (except for the Liberals); such tactics would certainly give Bolton West to Labour, and would probably make Montgomery, Cardigan and Huddersfield West into anybody's fight. Much more important, however, could be the disastrous effect for the Conservatives if they now proceed to spread the impression in the country that they are fighting liberalism, instead of trying to pinch liberalism's clothes. A Tory party that was regarded as really being Tory would invite another 1945. Lord Hailsham last weekend did in fact attempt to distinguish between liberalism, which he claims his party now embodies, and the Grimond Liberals against whom he was sounding the assault; but the danger for him is that some of his supporters, and many of his potential opponents, may not have been listening—and may think that the Tory declaration of war on liberalism should be taken at its word.

. . . the Liberals

THE Liberals' reaction to Rochdale has, of course, been to revive their itch to present more electoral candidates all across the country. In the growing minority of constituencies which they have some chance of winning, this

Rapacki Plan

A POLISH memorandum delivered to nine foreign envoys in Warsaw on February 14th contains the most detailed version so far of the proposal for a zone free of nuclear weapons in central Europe. Since this proposal—the Rapacki Plan, as it is called after the Polish foreign minister—may be at the centre of international discussion for some time to come, its main features are summarised here.

1. **Area:** the zone is to cover the territories of Germany (west and east), Poland and Czechoslovakia.

2. **Obligations:** (*a*) the four states in the area bind themselves not to produce or import nuclear weapons of any kind or to allow the stationing of such weapons, or of any equipment to service them, on their territories.

(*b*) the four powers (France, Britain, the United States and the Soviet Union) undertake not to maintain nuclear weapons in the armaments of their forces stationed in the area; not to keep there any installations designed for servicing nuclear weapons, including missile launching equipment; not to transfer such weapons or equipment to governments or other bodies there.

(*c*) other states having forces stationed in the area (i.e., Canada, Belgium and Holland) undertake the same obligations.

(*d*) all states possessing nuclear weapons pledge themselves not to use them against any target in the zone.

3. **Control:** an effective system could include both aerial and ground inspection. Staffs of control posts could be given sufficient powers to carry out the job of inspection. In drafting the system the various proposals suggested in disarmament negotiations could be applied whenever suitable. The machinery of control would be run and supervised by representatives of the Nato and Warsaw Treaty powers as well as of other states if desired.

4. The **provisions** of an agreement could be embodied, at will, either in an international convention or in a series of unilateral declarations. (The second method would make it possible to dodge the issue of recognition of east Berlin.)

The memorandum ends with a plea to the addressees to start negotiations to elaborate the plan in detail, and with the assertion that the Polish government "has reasons to state" that acceptance of such a plan "will facilitate the reaching of an agreement relating to an adequate reduction of conventional armaments and of foreign armed forces stationed on the territory of the states included in the zone."

Mr Gomulka told the special correspondent of *The Times* last weekend that the Rapacki plan had originated with the Poles, although (as no one doubts) it was made public only after consultations with other members of the Soviet block. At a press conference in Moscow on Wednesday the Soviet Government once again declared its backing for the plan. The Polish proposal was first mentioned in the United Nations General Assembly in October, 1957, and was repeated, through diplomatic channels, in December. The new memorandum provides a fuller version.

From the western point of view the chief objection remains that the elimination of all nuclear weapons from this area (and not merely a pledge not to set up missile bases) will jeopardise Nato's defence plans in Europe without any compensating political gain; and that it will leave Soviet conventional troops with an advantage. But the suggestion in the memorandum that the plan might lead to a reduction of foreign forces in the area may be worth further inquiry and might form the basis of a counter-proposal. The Rapacki Plan is presented as a basis for discussion, not as a completely drafted agreement.

revival of activity is very welcome. Few backbench members of Parliament can be of such usefulness to the country, and to their constituents, as a small band of Liberal MPs under present conditions. It so happens that, in the week after Rochdale, the death of a ninety-one year old peer, and the consequent ennoblement of his son who is a Tory MP in rural Devon, has opened a contest in one of the constituencies where the Liberals do have an outside chance of adding to this small band; there will be great interest in the effect of their participation in the coming by-election at Torrington.

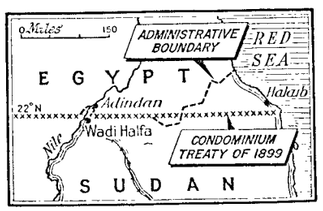
In the greater number of constituencies which they have no chance of winning, the Liberals have of course a perfect right to put up candidates. But a word of caution can legitimately be entered here by their friends—a word, let it be hastily said, that has nothing to do with the probability that their intervention will annoy the Tories. Liberals are most useful to the country when they are trying to spread liberalism; they are least useful when they are merely scrambling for votes, and forgetting some of their principles in the process. Lord Hailsham had a purple passage:

> Today the Liberal has a number of inconsistent policies, tailor-made to suit every constituency. He wants . . . to be all things to all men. An independent Liberal is for free trade in Huddersfield, protectionist in Lancashire and the agricultural areas, for Suez in Carmarthen when it is wooing Conservative votes, against Suez whenever it thinks a few votes are to be gained by attack; against higher taxation in the House of Lords, against unpopular cuts in the House of Commons.

Precisely because they are bigger boys on the political scene now, Liberals must not mind being told by liberals that, at those times when they are sacrificing too much to electioneering, this particular quiverful of Lord Hailsham's shafts does strike fairly home.

. . . and the Privy Paw

ECHOING Milton, the Conservatives' main complaint about Liberal interventions is that, as a result of them, "the grim wolf with privy paw daily devours apace." But the Labour wolf has its troubles too. One of them is precisely that it is not devouring apace; for Labour, the only blight on the Rochdale result was that Mr McCann polled fewer votes than he did at the general election of 1955. If an early end to this Parliament were in sight, Labour might not be unduly worried about this. Although Mr Gaitskell has publicly urged his party to win the next election, not merely through Tory abstentions, but by gaining new Labour supporters, he would no doubt reconcile himself to reaching Downing Street in any way available. But unless there should be signs of a world slump—in which case the Tories might be eager to get out, but Labour perhaps a little less eager to get in—most people still expect that the general election will be delayed until towards the end of next year. That would give Mr Gaitskell another eighteen months in which he must prevent his own extremists from scaring dissident Tory voters right back under Lord Hailsham's wing.



In this contest for becoming the less feared and disliked of the major parties the Tories have just acquired a useful ally in "Victory for Socialism," a left wing body which is being revitalised in order, as it thinks, to act as a ginger group on Mr Gaitskell's flank. The list of "Victory for Socialism's" chief sponsors is the familiar roll call of those Labour MPs who would still be called Bevanites if Mr Bevan had not become a non-Bevanite himself. There are already signs of an indignant reaction against this revival from the trade union wing of the Labour party. Probably, this reaction will be held within bounds; presumably the Labour leaders will exert themselves to avoid a split in their forces now that they feel they are so near to storming the citadel of power. In one respect, however, "Victory for Socialism" could prove a real embarrassment: a major plank in its platform is outright opposition to the H bomb, and a revival on his left of emotional pacifism and noisy neutralism could involve considerable personal awkwardness for Mr Gaitskell just now.

EGYPT AND SUDAN

Nasser's Southern Frontier

LEAVING aside earlier Turkish rulings on the southern frontier of Egypt, the only frontier that has treaty authority is the line of the twenty-second parallel, specified in the Condominium Agreement of 1899 between Britain and Egypt. The Governor General of the Sudan altered this frontier by decree in 1902 for reasons of administrative convenience. This arrangement was possible because Egypt had a degree of sovereignty, complete in its own territory and jointly with Britain in the Sudan, over the entire region; and it was easy to make because Britain was at the time the effective power in both countries. For 51 years the administrative line was unquestioned as the *de facto* frontier, to some extent because Egypt claimed the whole Sudan. In 1953, however, Egypt reached agreement with Britain to allow the Sudan the right of self-determination within existing frontiers, and until three weeks ago this was assumed to mean the entire area administered from Khartoum. Moreover, the international commission, of which two Egyptians were members, subsequently included the disputed areas in the first Sudanese elections and President Nasser did not include them in any Egyptian election or plebiscite.

President Nasser is now claiming the 1899 frontier, which would mean the restoration to Egypt of a triangle of land extending roughly to the twenty-first parallel on the Red Sea shore and a small section of the Nile and its banks contained within a loop north of Wadi Halfa. It is evident that the 1899 Condominium Agreement gives him a legal basis on which to put a case.

The manner of President Nasser's challenge is another matter. He no doubt argues that if the referendum on the presidency of the United Arab Republic is not held in the disputed territory and the Sudan elections are, he has given further tacit consent to the administrative frontier; but any legal rights he may have could have been preserved more pacifically. His brusque method of sending his agents and police to Halaib on the Red Sea coast gives rise to suspicions either that he is now temperamentally accustomed to the dictatorial method of behaviour, or that he desires to disturb the Sudan during its critical election period. Whatever the reason, it is certain that his rough behaviour towards the Sudan will not win him the credit with the Arabs that he has often got by similar manners towards "the wicked imperialists"; and in the Sudan it will do him and Egypt much harm. The Sudan has lodged a complaint with the Security Council and even if he wins his frontier, he will lose by his behaviour. It is, for example, hardly likely to win Sudanese co-operation over the Nile waters, which is much more vital to Egypt than these two pieces of land.

INDONESIA

Advance and Be Recognised

AFTER marking time on its banks for a fortnight, Indonesia's rebel colonels have now crossed the Rubicon. Their proclamation last weekend of a rival government, located in central Sumatra but claiming to represent the

The Strike at Birmingham

Our special correspondent who has been visiting Birmingham reports:

LAST week, 45,000 people at the plants of the British Motor Corporation were put out of work because engineering shop stewards in a single manufacturing block in Birmingham objected to three men from another union repairing their machines. Such sudden and costly strikes are nothing new at the corporation's works; recently there were seven going on simultaneously, and sectional demands for pay increases are made at the rate of about one a week. But this latest stoppage was not for pay; it was the climax of a long series of attempts by local dignitaries of the Amalgamated Engineering Union, the National Union of Vehicle Builders and others to put pressure on some of their fellow workers.

The story goes back to the autumn of 1956 when, during the strike over redundancy at BMC, only half the engineers stopped work. When work was resumed, reprisals were taken against, and fines and sentences of expulsion imposed upon, some of those who had not supported the strike. There does not seem to have been an effective mechanism of appeals against these decisions: the complaint made to your correspondent was that some appeals were referred back to the same local committees as decided on the punishment in the first place.

Some workmen did not like this sort of pressure and a few had the courage to set up a union of their own, the National Association of Toolmakers—generally known as "Nats." The members of Nats are skilled men, earning around £18 a week, £1 a week more than the factory piecework average. Nats made a slow start, since by this time the established unions were (quite justifiably) stepping up their recruiting campaign and importing speakers to address meetings. But as it became clear that the Amalgamated Engineering Union was watering down its craft standards in its drive for membership (girl canteen workers are the latest addition), more and more skilled men began to leave. By this month, membership was between 600 and 700; and, among toolmakers at BMC, just over half were Nats.

Until last week, members of unofficial and official unions were working together quite happily. But some workers in the transmission works, which is a closed shop, were then said to have decided that the toolmakers' action might impair union "solidarity." The corporation's stocks are kept low for reasons of economy—and also to stop widespread pilfering—so there was some prospect that a small group in the transmission department could hold the whole corporation to ransom. When the toolmakers were sent to repair the machines, a strike was called.

Most of the men at the factory did not know what the strike was for; according to those to whom your correspondent talked, 95 per cent did not want to stop. Even if this is an exaggeration, it is clear that many workers did not want action to be taken. Since they got neither work pay nor strike pay, but just hung around their machines for three days because of a rumour that anyone who stayed away would be sacked by the management, this was understandable. On Monday, although nothing had been achieved except a shop stewards demonstration, the men went back on the same terms as before. "But I shouldn't think it will be for long," said one family man bitterly. "The work is there, and we are not allowed to do it."

Who stops them? The answer is always the same, the shop stewards. Strike decisions are taken at their meetings but by no means all workers are told when and where these take place. Decisions are generally unanimous; those who are not in favour fear they might have their names taken and feel that this might jeopardise their chances of holding on to a job. Because of this, the more cautious men now do not want to go to meetings even if they could. Five to seven per cent attendance by members is normal; exceptionally, it reaches 12 per cent.

The local financial arrangements include independent shop funds, upon which shop stewards are able to draw to compensate themselves for not working full time (indeed sometimes much less than half time). Into them flows money from sales of tickets for football lotteries, raffled pay packets and some other payments. Moreover, the shop stewards want the principle to be accepted that they should get favourable treatment in the event of redundancy; the management is not yet willing to give it to them.

Who controls these stewards? Not their fellow workmen, who try to mind their own business as much as possible. Not the management, who presumably feel they dare not support those who oppose the shop stewards when strikes cost them £500,000 a day, and who would be accused of victimisation if they sacked the trouble makers. Certainly not the district union officials who as often as not are told about a strike only after it has started. If they are told, their official policy is often to urge the men to return to work; but they dislike doing this because a shop steward can then threaten to take his men into a competitive union. Thus officials try to be "out" or "away at a meeting" so as not to have to say anything at all.

Yet someone will have to act soon to remedy a state of affairs that must make any casual visitor blazingly angry. The management, who are not known locally as particularly tactful employers, is thinking of starting a works paper to keep men informed about what is going on in the factories. That this has not been done already is one of several facts that seems to indicate a strange lack of interest in labour relations, with consequent understaffing in the personnel division. But the main move to remove the restrictions on individual liberty now operating in Birmingham must come either from the executives of the unions themselves—or, if they will take no action, from Parliament.

whole country, was the only course left to them—apart from an embarrassing retreat—once Dr Djuanda's cabinet in Jakarta had rejected their repeated invitations to resign. However, it is not the solution they would have preferred, and their long hesitation in taking the final step is probably explained by their lingering hopes that the Djuanda administration would yield to pressure before it became unavoidable. A good many people in Indonesia, who have little enthusiasm for either the efficiency or the political leanings of the Jakarta government, will be dismayed at what looks like the beginning of national disintegration. The rebels' task is now to put some substance into their claim to represent the whole country. The northern parts of Celebes have declared for them, and the armed forces in the northern and southern extremities of Sumatra itself have announced that they will not help Dr Djuanda to put the rebellion down. The colonels' strongest weapon lies in the concentration of economic resources in the outer islands. If they can persuade the men who control these to withhold their benefits from Java—not least the revenues of the south Sumatran oil—the Jakarta government may be forced to give way before either fighting breaks out or the country is ruptured beyond repair.

A difficult decision also faces the governments of the western powers. They will be asked to give diplomatic recognition to the rebels, even if only *de facto* recognition for the areas they actually hold. The ghosts of the old Chinese warlords and the memories of colonels' *coups* in Latin America must be haunting the chancelleries of the West. In fact, the rebels have on their side, in men like Dr Sumitro and Dr Sjafruddin, some of the most competent economists in Indonesia, and they could doubtless give the country a more efficient government than Dr Djuanda's as well as one far less vulnerable to communist influence.

But the essential thing is to prevent an Indonesian quarrel from degenerating into an international one. If, by encouraging the rebels, the West also stimulated the communist powers to aid the Jakarta regime—if Russian technicians and Chinese "volunteers" in Migs landed in Java—the thing that both the West and the rebels want to avoid would have come to pass. There would be little joy in having a friendly government in Sumatra and the outer islands if Java, with its vast and already red-tinted population, were transformed into a core of disaffection and a centre of Chinese communist influence in the south Pacific. It will be best not to hurry with recognition.

LIFE PEERS

Labour's Dilemma

THE Life Peerages Bill got a lukewarm reception in the House of Commons last week. The Labour party voted against it and a number of Tory backbenchers looked down their noses at it. These attitudes, however, are less important than the action which will now be taken by the Labour party. Two questions arise: will Mr Gaitskell agree to nominate Labour life peers, and will he, if and when he becomes Prime Minister, bring in a more drastic scheme of reform? The answer to the second question is probably the more certain, for it seems inconceivable that the next Labour government will have time to worry about the Lords, except in the unlikely event of the Lords inviting destruction by opposing Labour's policies. The fact that there is a strong body of opinion in the Labour party which favours a single chamber Parliament—although he himself does not—makes it even more likely that Mr Gaitskell would shy as far away as he can from grappling with this problem, at any rate during his first four or five years in Downing Street.

What is not so clear is his attitude to the immediate life peerages scheme. Labour last week put down an amendment which was not unfairly labelled "hysterical," and there were a number of speeches to match. The amendment complained that the bill "leaves the House of Lords overwhelmingly hereditary in character and with unimpaired powers to frustrate and obstruct the will of the elected representatives of the people"; Mr Bevan called the whole life peers operation a "slimy trick." Admittedly, this amendment and this oratory were largely smoke-screens to obscure Labour's inability to agree on a policy of its own; but Mr Gaitskell will now look rather odd if, as soon as the bill becomes law, he decides that he can gracefully forget them and co-operate in naming the first batch of life peers. What, however, is his alternative? To stand by and watch Labour's already pitifully inadequate representation in the Lords erode further, as time takes its toll of the elderly Labour peers? Or to lay down an edict that his supporters must, in their socialist conscience bound, accept hereditary peerages only?

CENTRAL AFRICA

How Liberal a Rhodesia?

SIR ROY WELENSKY, the prime minister of the Federation of Rhodesia and Nyasaland, has good reason to feel that he has come well out of the events of the last few weeks. The defeat of Mr Todd, the ex-prime minister of Southern Rhodesia, has not caused a split of the federal party in Southern Rhodesia, a split which would have spread to Sir Roy's own supporters. The lobbying of the emissaries of the African Affairs Board in London has not led to the rejection of the federal franchise bill by the Commons; and on implementation of this bill turn all Sir Roy's plans to achieve a degree of African participation in government, which, without frightening his followers, will yet enable him to claim that he has fulfilled the charter of the federal bond. On the basis of this claim, he will plan his appeal for the grant of "higher status," if not independence, in 1960.

How liberal, in fact, do these events leave policy in Rhodesia? In Southern Rhodesia, Sir Patrick Fletcher, who engineered Mr Todd's downfall, has been rejected; he is out of the cabinet, but Mr Todd is still in it though not, as one would have wished, with the portfolio of native affairs, which would have best demonstrated to Africans that his policies go marching on. Mr Todd has, however, impressively demonstrated that he regards the unity of the federal party, and therefore the survival of Sir Roy's government, as being of supreme importance for the country—and for the Africans themselves. The new prime minister of Southern Rhodesia, Sir Edgar Whitehead, has shown that he is just as determined to heal the incipient split in the centre party, and to lead it, united and in a condition to fight, in the next elections.

If this is not the happiest possible outcome, it is probably the happiest that was to be expected in the hard practicalities of politics. But now the problem for Sir Roy and Sir Edgar is, with Mr Todd's help, to prove to Africans that they are not the losers. If this is not done, the story will nevertheless end unhappily ever after. They can begin to

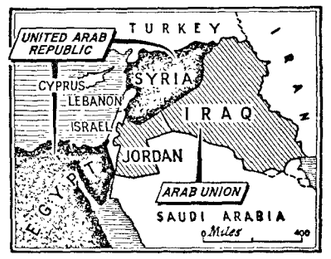
solve the problem in two ways. First, they should not gloat over the failure of the African Affairs Board's plea to London—but uphold its dignity and propriety. Secondly, now that Sir Roy has his franchise bill, he should, poor thing that it is, ensure that he carries through its provisions with scrupulous fairness. Above all, he should do all he can to encourage Africans to register, and he should lean over backwards to apply the literacy test liberally. The white rulers of Rhodesia got no blank cheque in the House of Commons this week.

FRENCH NORTH AFRICA

Home Truths for France

IN the fortnight since the French bombing of the village of Sakiet on the Tunisian frontier, the barometer of Franco-Tunisian relations has veered a point or two—but only from stormy back towards unsettled. Both states have lodged complaints with the Security Council—Tunisia about French aggression and threats to its security, France about frontier violations by units helping the Algerian rebels from Tunisian soil. The Security Council has adjourned the matter, thanks to acceptance by both parties of Mr Hammarskjöld's proposal that American and British "good offices" shall be used to promote a settlement. The offer will be pointless if France remains determined to handle its quarrel with Tunis as an issue unconnected with its need for a settlement in Algeria. The two matters are indissolubly linked, and it is time its Nato allies pressed this truth home.

Unless they do so, Incidents must occur and North Africans who are at present still inclined to look westward for helpers and mediators are bound to turn into Titos, if not into Nassers. How else is one to read the omens of the fortnight? First there were the French garrisons in Tunisia besieged, French consulates ordered to close, Tunisian demands for French evacuation of Bizerta. Then came a sensible mellowing of the Tunisian attitude as a result of western sympathy, followed by a renewal of supplies to the garrisons and a hint that a Nato base at Bizerta might be acceptable. Next, the French government announces that its consulates must stay open, that Bizerta must remain a French port, and that, in battle in Algeria, it has captured "irrefutable evidence" of the use of Sakiet as a rebel base. It has also said that it will evacuate and mine a strip of dead-man's-land along the length of the Algero-Tunisian frontier. This procedure would have two merits: it would lessen the FLN's capacity to call on outside help; it would also explode the argument often advanced in Paris that Algeria, but for Tunisian aid, would have been subdued by now.



Nothing but trouble lies ahead if matters slither along in the gait they have assumed, which stems from France's false conception that Algeria can be conquered without losing the diplomatic battle in the rest of Africa.

ARAB UNION

A Second Merger

HARD on the heels of Egypt's and Syria's united republic, the kingdoms of Iraq and Jordan have federated into an Arab Union. The motive behind both moves is the same—a desire to capitalise the yearning of all Arabs for the fulfilment of a dream: the making of a single Arab state that will count in the world as Arabs have not counted since the Crusades. Hence the cheering crowds in all four capitals. Whether in the long run the two unions fuse, or whether they become rivals, depends only on themselves. The problem which the two unions create for King Saud is discussed on page 676.)

The outlook seemed bright enough when President Nasser sent King Feisal of Iraq a congratulatory telegram on a move which he called "a mere stage in the long struggle for total Arab unity," but since then semi-official Egyptian mouthpieces have switched from the lyrical to the critical and say the arrangement between Baghdad and Amman was made with the blessing not only of the west but of Israel. This classic way of damning an unwanted development will be swallowed by many gullible Arabs.

Yet it is nonsense; the western powers derive no benefit whatsoever from a division of the Arab world into two hostile camps in which they (as supporters of the Baghdad Pact) appear to back the less radical, and therefore the less popular. The best they can now hope for is a neutral Middle East that stops talking, patches its own internal quarrels, and gets on—whether in one group or two—with the developments that will increase the standard of living of its poorer inhabitants. The poorest, be it noted, inhabit both unions; they are the Arab refugees in Jordan and the peasant population of upper Egypt. Dazzled by the lights of Cairo, few Asian Arabs know this last hard fact.

The Unions Compared

IN their agreement to federate, King Hussein and King Feisal have clearly set out to show that they can equal the union of Syria and Egypt. The two units are alike in that each wishes to unify flags, foreign policies, armies, diplomatic representation abroad, customs and education. The real test, as far as the Arabs are concerned, is the extent to which these intentions are fulfilled, and to which the egotism of states and rulers is submerged in the movement towards unity.

The kings may well have the more difficult task, for although by temperament Damascus is the least biddable of the four capitals, the authoritarian arrangement made by Cairo is the more clear-cut of the two. The Baathist apostles of unity have submitted Syria to Egypt much more than Jordan has lost its identity in Iraq. Whereas President Nasser is all-powerful in the Republic, both monarchs are to retain their thrones in the Federation; and whereas Syria is to have only 25 per cent of the seats in a joint assembly nominated by President Nasser, Jordan is to have 50 per cent of the seats in the federal assembly—an unusual proportion, since Iraq not only has nearly four times Jordan's population but will be financing the union. Indeed, the opening paragraph of the agreement between King Hussein and King Feisal emphasises the continuing separateness of Iraq and Jordan and the second, with a backward glance no doubt at the Baghdad Pact, emphasises that only treaties and commit-

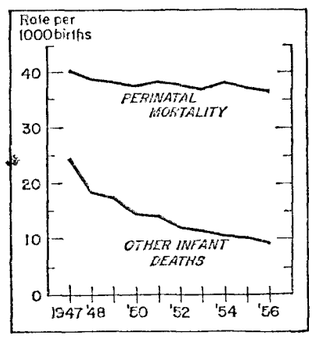
ments entered into *after* federation are binding on both countries. The very choice of the banner of the Arab Revolt of 1917 emphasises the old order rather than the new, whereas the Republic, with its Egyptian Revolution-Baathist background, is the essence of the new.

There is, in short, evidence that the conservative approach to unity will make it difficult for the kings and their governments to convince the Arab world that their union is real. Yet, if they seriously desire to make it so, there are factors very much on their side. The assets of the royal union are less dramatic, no doubt, but they are more practical: Iraq and Jordan have a common frontier, currency based on the same standard and the revenue from Iraqi oil. If these assets were used to real purpose, if, for example, Iraqi money were used to remove Jordan's dependence on American aid, the real value of their union would count considerably, by Arab standards, against the prestige of President Nasser as the man who cut the painter with western imperialism. Even so, the Arabs would expect Jordan to lose its identity altogether and Iraq to cut its other western ties by leaving the Baghdad Pact.

The problem belongs essentially to Iraq, Jordan having nothing to lose except a throne that it cares little about. Whichever way the decisions go, Iraq will have to shoulder the responsibility for them, and acquire in the process little credit for those that go right and much opprobrium for those that go wrong.

ROYAL NAVY

Agonising Reappraisal



THIS week's naval reorganisation deserves a warm welcome. It will release 7,000 seamen now ashore for sea-going duties, return 13,000 civilians to productive industry, take 10,000 workmen abroad off the navy's payroll, and save £15 million a year from the naval budget. There has been an outcry in the axed dockyard towns, but the only real criticism is whether the knife has cut quickly enough or deeply enough. There may be a case for more generous severance pay for the unestablished dockyard workers; but there is none for the demands made by the trade unions that the reduced work should be spread. The object of a cut in Government expenditure is to release resources; the naval vote is not part of the country's social services.

The way in which the economies have been made seem broadly right: to cut whole dockyards and establishments right out, to amalgamate establishments doing allied types of research, to concentrate on the most up-to-date facilities and abandon those which would be expensive to modernise —all this irrespective of local social claims. Pruning all round would have been the worst way to dock the sea-dog's tail, and, despite political pressures, the navy seems to have avoided this. It is significant, however, what a small seagoing fleet is being maintained out of the Admiralty's £330 million a year: 4 aircraft carriers, 6 cruisers, 24 destroyers, and some 30 frigates, 39 submarines and a fringe of minor craft seem a small mouthful of teeth. The reason for this is not only the tremendous cost of modern ships, and the uncertainty of the navy's role even as redefined, but also the fact that the navy is in the throes of a technological revolution: nuclear propulsion, nuclear submarines, guided missile ships, and infinitely more complicated weapons are coming in as the era of visual firing passes out. The navy does well to skimp on new building until it can embody these new devices, but meanwhile, even as decked this week, the long tail on land continues to wag an absurdly small dog at sea.

INFANT MORTALITY

The Perinatal Risk

IT has long been realised that the spectacular drop in infant mortality since 1939 has occurred mainly among the older babies. So once the total infant mortality rate (that is, the deaths per 1,000 live births of all babies under a year old) fell to below 30, attention began to be concentrated on the deaths of babies in the first four weeks of life (the neonatal deaths), which were accounting for more than half of the total. Yet, since 1950—the year it first fell below 30—the infant mortality rate in England and Wales has fallen to 23.7 (in 1956), and it is still the drop in postnatal deaths (of babies aged 1-12 months) that is responsible for most of the improvement. The neonatal rate was 16.8 in 1956, compared with 18.5 in 1950. The postnatal rate, on the other hand, was only 6.8, compared with 11.1. The postnatal rate for all babies had thus fallen to below the prewar rate (8) for the Registrar-General's social class I—a measure of the astonishing levelling up of the standard of infant care, and of the standard of living in general, since the war. Closer attention to neonatal deaths, on the other hand, has shown, first, that they are mainly due to prematurity or to faulty development or to something going wrong at the birth or to a combination of these factors, all of which are less influenced by environment and the new drugs than are the infections, the main cause of postnatal deaths. Secondly, it has been realised that most of these neonatal deaths occur in the first week of life and should be grouped with stillbirths, which have also remained comparatively high and which have the same causes.

Thus, the phrase perinatal mortality has been coined to describe the combined death rate of babies born dead and those who die in the first week of life. The accompanying diagram shows how the perinatal rate (per 1,000 live and stillbirths) has fallen only a little in the last ten years, whereas once the first week has been safely passed, the death rate has been more than halved. A close study is therefore being made of perinatal deaths to see how many are preventable. Recently, the National Birthday Trust Fund announced that it is carrying out a nationwide inquiry, which will cover all births in the first week of March and all stillbirths and neonatal deaths in the three months March, April and May. It is an investigation that has not been undertaken before, at least for this purpose and on this scale, and it is to be hoped that the organisers will have the co-operation of all the mothers, doctors and midwives concerned. It is not often that form-filling can be regarded as potentially life-saving.

Trade with the East

From Cyprus and the Lebanon to Japan,
THE CHARTERED BANK
and its wholly-owned subsidiary, The Eastern Bank Limited, link East and West through a system of one hundred branches extending to most centres of commercial importance in the Middle East, South and South-East Asia and the Far East. Those branches provide complete and up-to-date banking services, sustained by wide knowledge and long experience of Eastern trade, finance and industry. In particular an effective credit information service and skilled assistance and advice are available to merchants and manufacturers seeking new business connections in Asian markets.

LETTERS

The American Economy

SIR—Your New York correspondent in his piece entitled "Consumers Wait and See" in your issue of February 8th makes serious errors in describing the behaviour of American consumers and the effect of their behaviour upon the current recession in the United States.

It is not accurate to describe American consumers as "not buying." It is true that there has been a drop in the purchases of automobiles and durable consumer goods—a drastic drop in the purchases of cars in January. But smaller purchases of durables have been more than offset by larger purchases of non-durables. Retail sales of durables in January were 1.5 per cent below January, 1957, but sales of non-durables were 7.2 per cent more than a year ago. Total retail sales in January (adjusted for seasonal factors) were 4.2 per cent above January, 1957, when the country was threatened by inflation and when there was widespread belief that people were spending too much. Your New York correspondent made a bad guess when he said "the figures for January will show little, if any, change over 1957." Furthermore, January sales were only four-tenths of one per cent below the all-time high of last July.

Your New York correspondent misstated the facts when he said that "on a month to month comparison retail sales have been declining since August." Retail sales declined from July to November, but they increased in both December and January, and in January (after correction for seasonal factors) were higher than in any month since August. A remarkable fact about retail sales in January is that an increase of 0.7 per cent over December occurred in the face of the largest month-to-month increase in unemployment since the monthly labour force survey was started in 1941. Rising retail sales in the face of a big increase in unemployment does not look like lack of confidence on the part of consumers.

One final observation. The contraction in the United States is confined to a limited part of the economy—the production and sale of consumer durables, industrial equipment, and industrial building. These contracting parts of the economy are less than half as large, measured by expenditures, as the expanding parts—the service industries, residential building, and government purchases of goods and services. The concentrated and limited nature of the recession is indicated by the fact that 64 per cent of the drop in the non-agricultural employment of wage and salaried workers since August has occurred in the manufacture of durable goods, which accounts for less than one-fifth of all wage and salary employment outside of agriculture. In the three large fields of wholesale and retail trade, government, and services, which together provide more than three-fifths of all non-agricultural wage and salaried employment, the drop in employment between August and January was less than one-tenth of one per cent.—Yours faithfully,

SUMNER H. SLICHTER

Harvard University

Central Africa

SIR—Have not things come to a pretty pass when you advise Parliament to approve a bill—the Rhodesian franchise bill—which you yourself describe as "clearly a mean . . . measure"? All are ostensibly agreed that the prime issue in the Federation is better race relations. A mean measure will hardly help.

May I also quarrel with your two conclusions? You stress the need to liberalise and entrench the franchise. But this bypasses the fact that Africans have no use for paper entrenchments. You also argue that the African Affairs Board is not killed by two adverse rulings. In African eyes and in the existing context? This strikes me as an insensitively facile judgment.—Yours faithfully,

PETER CALVOCORESSI

Bletchley

East Africa

SIR—In your note entitled "Damning Mr Davidson" you have certainly very roundly damned the East African governments for exercising their right of refusing entry permits to individuals.

As one who was a minister of the Kenya government during the Mau Mau rebellion and very deeply concerned with security, perhaps you will allow me to give the other side to this question. In doing so I am only interested in the principle and not the individual, of whom I have no knowledge whatever.

East Africa is a territory containing many millions of people still living in the very earliest stages of civilisation and who can very easily be roused to violence by the words and writings of quite well meaning people who judge them to have the balance and restraint that many years of evolution have given to the British. The real responsibility for these simple people and the maintenance of peace must rest with the governments of the East African territories and not as you suggest with the Colonial Office; were it otherwise the inhabitants would lose confidence in their immediate government with unfortunate results, both economic and political.

The right to refuse entry to an individual visitor is very sparingly exercised and to anyone less biased than *The Economist* against colonial governments it should be clear that when three governments in East Africa, as well as the Federation of Central Africa, are in agreement in a particular case they must have very considerable justification. We in Kenya have just passed through an emergency where many thousands of Africans lost their lives, often in circumstances of peculiar horror, and the Kenya government was certainly not helped at that difficult time by the unwise expressions of sympathy with Mau Mau aims published in certain newspapers in England and elsewhere. It is for these reasons that governments in African territories have on occasion to sacrifice the liberal principles of free speech and free entry to the overriding need for maintaining law and order, without which there can be no hope of African progress.

As usual you seize the opportunity to attack Europeans in Africa and imply that the immigration law is being used by the Kenya government against individuals in order to placate what, with a curious use of terminology, is referred to as "suburban white society."

This is an entirely unjustifiable attack on a government, the majority of whom are colonial civil servants imbued with the high traditions of that service, and is unworthy of the brilliant impartiality which distinguishes *The Economist* articles on political and economic affairs in Great Britain.—Yours faithfully,

Kenya. L. R. MACONOCHIE WELWOOD

The Labour Party

SIR—One convincing retort to Mr Miliband's version of Laski's view is to ask him to look at Laski's "The State in Theory and Practice," pp. 274-5. "In the choice between peaceful transformation and the maintenance of privilege at the cost of conflict," wrote Laski, "the owners of property now [1935] as in an earlier day, are prepared rather to fight for their legal privileges than to give way. That attitude is shown not merely by the barbaric overthrow of democratic institutions in Fascist countries. It is shown *even more clearly* (my italics) by the resistance to social reform in the United States and Great Britain."

However, Mr Miliband's private interpretation has its own interest. According to him, "vested interests" are "exceedingly unlikely to accept the electors' verdict should Labour seek to effect those fundamental changes in the economic and social system to which it is pledged by its constitution."

I should like to know, first of all, what "fundamental" means. What evidence can Mr Miliband produce for saying that "none of the legislative measures of the post 1945 period (except possibly iron and steel nationalisation) involved such fundamental changes"; and what evidence he can produce for saying that the nationalisation of iron and steel *did* involve such fundamental changes? He seems to come precious near to arguing that a "fundamental change" can be identified as any change that provokes

its victims to resistance. If that is so, his statement is a mere tautology.

Mr Miliband is right in saying that the British Iron and Steel Federation refused to "co-operate with the Government even after the measure (the Iron and Steel Nationalisation Act) became law." Is he inferring from this that the Federation was breaking the law? If so, perhaps he will produce evidence for this? I know of none.

Even more strange, however, is Mr Miliband's argument that "the current pronouncements of the leaders of the [iron and steel] industry" bear out his view that they "are exceedingly unlikely to accept the electors' verdict." Their pronouncements give no colour whatsoever to this suggestion, and are as constitutional as Mr Miliband's own pronouncement (54th Annual Conference of the Labour party, 1955) that "we want this party to state that it stands unequivocally behind the social ownership and control of the means of production, distribution and exchange. . . ."

Finally, Sir, what is one to make of Mr Miliband's last suggestion—that *The Economist* itself, in saying that the first fruits of a Labour victory "will be something like economic catastrophe," thereby indicates its intent "not to accept the electors' verdict"? I suppose that when sterling declined in New York after the Rochdale election result announcement, Mr Miliband attributed it to a bankers' ramp?—Yours faithfully,

S. E. FINER
University College of North Staffordshire, Keele

Educational Statistics

SIR—Most organisations endeavour to collect statistics which relate to the salient aspects of their responsibilities and to the not too distant past. But not the Ministry of Education, the extent of whose ignorance about the current facts with regard to the educational system is astounding.

The White Paper on Technical Education announced steps rapidly to increase the number of students in science, engineering and technology, particularly in technical colleges. A number of questions were asked in the House of Commons on October 31st, November 28th, December 3rd and December 5, 1957, seeking information on progress in a number of respects. The answers by the Minister and Parliamentary Secretary stated that 1955-56 was the latest year for which information was available on the number of students enrolled, or the number of courses in advanced science and technology being conducted, in technical colleges. No information could be supplied on whether students at colleges of advanced technology were receiving financial aid from public funds or private industry.

But it is not only that the facts, when available, are out of date: they are also all too often available only in unhelpful categories.

Whether the cause is unsufficient staff at the ministry or an archaic system of reporting the information, the minister must put it right. To decide policy on any rational basis and to see how far policies are bearing the right sort of fruit, up to date facts are essential.

A thorough overhaul of the whole statistical system regarding education is urgent and cannot be deferred.—Yours faithfully,

R. G. FORRESTER, Hon. Secretary
Joint Parliamentary Scientific Advisory Committee

Covered Arbitrage

SIR—Mr John Spraos, in his letter published in your issue of February 8th, agrees with your view, though for different reasons, that an inflow of dollars matched by forward dollar purchases does not lead to an increase of Britain's gold and dollar reserves. Both views are, in my opinion, mistaken.

In your issue of February 1st you argue that when a bank making a spot purchase of sterling is asked to make a forward sale it finds it is difficult to effect and so to cover itself has to buy spot dollars and keep them until the forward contract matures. The City's foreign exchange market is a much more efficient mechanism than seems to be realised, and the forward dollar market is particularly well developed so that a bank can buy forward dollars for any reasonable amount and date with the greatest of ease. Thus spot purchases to cover forward deals are never needed, and are certainly not the usual practice as you imply.

Mr Spraos reluctantly recognises this, but puts forward a sophisticated argument that if the widening of the forward dollar premium created by the forward purchases of dollars as cover for funds for the time being in London, "does not breed any sterling bulls, this balancing of demand and supply in the forward market would come about almost entirely through a redistribution of deals between spot and forward markets, in effect, that is, through 'leads' and 'lags' in trade induced by a widening of the forward dollar premium."

This also is based on a lack of knowledge of the foreign exchange market. Many of the deals are speculative or of a speculative nature. The decision to buy forward dollars instead of waiting to buy spot, or vice versa, is itself speculative. If this speculation is successful it helps to make the market and gives the trader a choice of alternatives which represent the view of the market as a whole, as well as providing him with fairly steady rates. One cannot speak about the forward market being determined by "leads" and "lags," which can only refer to leads and lags of trade. Trade is certainly not going to be affected by the small fluctuations in the rates as they exist at present; all that may be influenced is the method of payment and that is itself speculative.

Normally the forward premium will be determined by the relative interest rate structures in the two centres; if interest rates are higher in London than in New York this will create a demand for forward dollars as cover and thus result in a dollar premium. Sterling bulls are not as rare as Mr Spraos believes, and to the extent to which they keep the premium down to a level which makes interest arbitrage possible, to that extent they encourage a dollar inflow. The Bank of England may encourage this by selling dollars forward, or alternatively they may act in the opposite direction to discourage the flow of funds to London if they consider that they are liable to be withdrawn suddenly.

Thus a capital inflow, even if it is covered by a forward sale, does benefit the reserves. This seems self-evident, for if the dollars have flown in they must be inside. As soon as the disparity in interest rates lessens, however, this is liable to become a capital outflow and thus a drain on the reserves.

So far all the arguments have assumed that changes in reserves published each month only take spot transactions into account; and it is believed that the Bank of England's figures do not in fact include forward deals. If they were included then some allowance could be made in the current reserve figure for funds likely to be withdrawn in future months in cases when the Bank has been selling dollars forward. In the present bullish atmosphere for sterling, however, it is probable that the Bank has in fact been buying forward dollars. It thus is perhaps best if the present practice remains unchanged, otherwise the situation will be even more confused.—Yours faithfully,

MICHAEL CONOLLY
Reform Club, SW1

Polish Bishoprics

SIR—The fact that, in the latest edition of the Vatican Directory, the dioceses in the German/Polish disputed territories are called by their Polish names has indeed caused some sorrow at Bonn; but the change is not quite so demonstrative as your note on the subject would suggest. In previous issues of the Directory proper names, both local and personal, have been printed not in the vernacular, nor even in Latin, but in Italian: this has had some curious and confusing results (Munich, for example, being called Monaco), but it at least saved the Holy See from appearing involuntarily to express an opinion on disputes of this sort.—Yours faithfully,

BRIAN BRINDLEY
Junior Carlton Club, SW1

The Political Economy of Growth

SIR—The "review" of my book that appeared in your issue of January 4th is a predictable piece of fair, unprejudiced criticism giving the characteristic impression of having been written *sine ira et studio*—in the best tradition of objective, "classless" scholarship.—Yours faithfully,

PAUL A. BARAN
Stanford University, California

BOOKS

The Pressure Process

British Pressure Groups

By J. D. Stewart.
Oxford University Press. 273 pages. 30s.

THE illusion that pressure groups were a purely American phenomenon with no place in the British system of government was abandoned only slowly and reluctantly; even after their existence was admitted, no effort was made to assess the nature or magnitude of their operations. Mr Stewart's inquiry into the role of pressure groups in relation to the House of Commons is the first book devoted to the subject, and it will be seized on eagerly by all students of British government. They will find much to interest them, both in the general categories into which he divides the activities of pressure groups and in his specific illustrations of their work. The style is gawky and the presentation uneven; the perspective of the picture is sometimes marred by too much reliance on limited documentary evidence, and many questions are left unanswered, or even unasked. How much is the Chancellor swayed by the memoranda that flood in on him from all sides as he prepares his budget? How far-reaching is the influence of the National Farmers' Union over agricultural policy? Was lobbying really effective in the equal pay campaign? How do MPs react to constituency pressures? And, though this is only on the borderline of Mr Stewart's territory, how much do groups with an interest operate indirectly through party machinery? The reader is constantly tantalised by stories that are necessarily incomplete and problems that are passed over. He will turn eagerly to the few case studies of individual pressure groups that have been published and to those that are on their way—notably Professor Finer's inquiry into lobbying by the transport industry. In due course, such monographs will provide the basis for a still more comprehensive examination of the function of pressure groups. Meanwhile Mr Stewart has provided a book of major importance, throwing a flood of light on an unexplored area of public affairs.

It is, in fact, not pressure but advice that constitutes the most important activity of pressure groups—whether they be chambers of commerce or trade associations, trade unions or "do-gooders." Mr Stewart emphasises how extensive is the access of such bodies to government departments and how much consultation with interested bodies goes on before the presentation of any bill or draft regulation to the House of Commons. The right of petition is indeed being exercised so constantly in this way that grave fears have been expressed about the by-passing of Parliament. Mr Stewart does not deal explicitly with these fears, but he makes it plain that pressure groups themselves still consider it worth while to bother a great deal about Parliament. They strive to get seats for their sympathisers and they persuade MPs to introduce bills or, much more important, to propose amendments to government bills; they circularise all members and give expert briefings to their friends; at times they attempt to whip up constituency pressure on individual members, and they consistently operate as though they believed that public opinion acting through the House of Commons was a major force in policy making on specific issues.

However, after reading Mr Stewart's book, one may doubt whether on most issues unselective lobbying has much effect. On a few subjects, such as Sunday opening and the prohibition of field sports, the conduct of MPs—left to a free vote—seems to have been swayed, but there are no clear instances of the government giving way on a major issue to backbench demands that have been inspired by lobbying from pressure groups. Most British pressure groups in fact lack the control over popular votes or campaign funds that in America are among the main weapons for influencing individual politicians.

There is, of course, the special case of sponsored MPs. There are over a hundred of these in the present Parliament, almost all of them Labour (although the National Union of Teachers has found it possible to contribute to the support of members on both sides of the House). The trade unions that finance these MPs plainly consider it worth while to have their avowed spokesmen in the House and, although the Committee of Privileges described the relationship between member and sponsor as "one of great difficulty and delicacy," there is surprisingly little evidence of its abuse; a similarly favourable verdict can be passed on the conduct of MPs on both sides of the House who have business connections.

Mr Stewart's conclusion in this, the first considered study of British pressure groups, is an optimistic one. Their operation seems to him healthy. The sillier groups and the more objectionable tactics meet with little success. Those with influential support and with something to say are assured of a hearing, but seldom a decisive influence on the shaping of policy. The national interest may occasionally be forgotten in the busy press of group demands, but, on the whole, Mr Stewart's exposure of an unfamiliar segment of the process of government does not turn out to be an *exposé*

The Nature of Economic Decision

Time in Economics

By G. L. S. Shackle.
North Holland Publishing Co.
111 pages. 650 guilders.

PROFESSOR SHACKLE is one of the backroom boys of economic theory. He writes not at all for the general public, very rarely indeed for the intelligent-layman-with-a-smattering, and there is evidence that even his academic peers—or those of them who do not inhabit the same suite of back rooms—find his work forbiddingly stiff. In this small book, which reproduces a series of lectures delivered last year at Rotterdam University, he succinctly reports on that work in frontroom language; and thus gives a chance to a wider audience to find out—at the cost of considerable but not unpleasurable mental effort—what he is driving at.

What he is driving at turns out to be revolutionary: an attack on the metaphysical underpinnings of analysis. Economics, he argues, has looked far too slavishly to the physical sciences for its model. The physical sciences are essentially timeless; or rather time, to them, is a dimension indistinguishable from other dimensions. In the study of human behaviour it is essential to accept the fact that the past is past, water over the dam, and the future is future, essentially unknowable. Human decisions are the stuff of economics; and except in the heroic abstraction of static analysis, uncertain expectations accordingly hold—or should hold—an absolutely central, not a peripheral, place in economic theory. Decisions are made at a moment of time, concerning actions to be taken, and consequences to be enjoyed or endured, at future moments. Some outcomes, when imaginatively envisaged at this moment of decision, look more possible—are less "potentially surprising"—than others; some have more power than others to "focus" attention by reason of their outstanding attractiveness or undesirability. Past experience influences both the degree of potential surprise attaching to different imagined outcomes and the subjective attitude to these of decision-takers; it does not determine in any exact or predictable way what the decisions will be.

The range of humanly probable decisions can be theoretically and indeed mathematically studied, and a lively controversy in the learned periodicals is concerned with the criteria according to which they are made. (In the current *Economic Journal* one aspect of this controversy is taken a stage further than in "Time in Economics.") But the mechanistic picture of economic causation, of determinable response to changes in data, would be shattered even were Mr Shackle's major assertion of free will to be rejected; decisions may be essentially determinate in the sense that the human will is, like everything else, subject to ironclad causal law, but they are assuredly not determinable from economic evidence.

All this may seem highly abstract and non-operational, and so indeed it is when considered in isolation. But the approach through uncertainty and expectation can illuminate problems highly resistant to mechanistic theory. Mr Shackle briefly sketches three examples —the momentum of investment, the multiplier, and the rate of interest—warning the reader that each sketch is simplified, a "ceteris paribus" exercise. The most important upshot of his argument, however, should be a distrust of macroeconomic models, with their impersonal interacting magnitudes, as accurate forecasting instruments. Economic policy, shown as concerned with the essentially unpredictable, can never be a matter of the scientifically accurate manipulation of taps and sluices according to indications read off statistical gauges; it must be, with whatever aid such readings and mechanisms may give, a political art. The conclusion is nonetheless valuable for being negative.

Too Long a Lusiad

Portugal

By J. B. Trend.
Benn. 218 pages. 27s.

A SMALL country can have altogether too much history to bear; and this is probably more true of Portugal than of any other state. Professor Trend speaks of the nineteenth-century Portuguese as "bent beneath the weight of a past which had left them in a moth-infected wardrobe of historical costumes." He hopes and believes that that is now all over, though he is not uncritical of the discreet dictatorship of Dr Salazar. Other observers may not feel so sure. There are many symptoms of vigour in Portugal today, but even a tradition-loving Englishman is apt to find the hand of history weighing too heavily on him when he goes there. And Professor Trend himself seems to bow to it. This volume in the series, "The Nations of the Modern World," unlike most of its companions, is almost exclusively historical. It enters the twentieth century with barely ten pages to go.

Once accepted as a pageant of history, however, it is an excellent blend of liveliness and learning. Heroic and fantastic figures crowd the scene: the Moors who have left their mark for ever in the south; the Burgundian counts and crusaders who drove them back; Nun Alvares and the Master of Avis, who saved Portugal from absorption into Spain; Sebastian, the chivalrous maniac whose fatal adventuring let Spain in again; and, of course, the men of the great oceans, Henry the Navigator, Gama, Albuquerque, and Camoens, who in "The Lusiads" wrote both Portugal's epic and, as Oliveira Martins remarked, its epitaph.

Mr Trend deals deftly and vigorously with these and all the other *dramatis personæ*, from Dom Denis, the poet-king who planted the trees by which so much of Portugal still lives, to the eighteenth-century dynamo Pombal, and the great novelist Eça de Queiroz. But always in the background he shows us the eternal Portuguese people, so sharply different from their passionately polemical Castilian neighbours; dreamers and men of practical talents alike reflecting the countryman's instinctive dislike of futile controversy and avoidable unpleasantness. The Portuguese likes to have a cosy family relationship, even with God. That may be the main reason why Dr Salazar's sometimes draconian paternalism excites surprisingly little resentment.

Battle of Battleships

Jutland

By Captain Donald Macintyre.
Evans. 210 pages. 18s.

JUTLAND and controversy are inseparable. Much, perhaps too much, has been written about it. Why did the British fleet fail to exert its preponderance? How far was Jellicoe, the man who could have lost the war in an afternoon, at fault? Was Beatty too headstrong? Did Scheer, given the tactical brilliance of his turn-away, really quite know what a trap he was in? The merit of this, the latest book on the battle, is that it not only describes the battle (almost ship by ship, shell by shell), but also analyses it dispassionately. Captain Macintyre does not grind an axe (which is a welcome relief) and he does expose faults in both fleets.

According to this book, Jellicoe's principal error appears to have been that, having got between the German fleet and its home ports, he failed to anticipate adequately enough the possibility of the German fleet crossing his wake in the night and failed to realise the true significance of the flashes and sounds of the night action fought as he steamed south. Yet in the earlier actions, the British Grand Fleet failed to live up to Fisher's dictum: "hit first, hit hard and keep hitting." And that cannot simply be put down to defective shells. Could it possibly be that the British Navy at the height of its power had grown a shade too confident?

Indian Growing Pain

Trade Union Movement in India

By A. S. and J. S. Mathur.
Chaitanya Publishing House, Allahabad. 303 pages. 10 rupees.

THE future orientation of uncommitted nations is of such importance that a serious study, such as the Mathur brothers have produced, of one of India's major democratic institutions must command attention. This scholarly and balanced picture of Indian trade unionism, moreover, reflects the positive influence of the British connection in both method and content: despite stylistic flaws, it promises to become a classical textbook in the best traditions of British pragmatic research.

Although the second world war and India's subsequent independence have unleashed forces favourable to its growth and consolidation, the progress of trade unionism is uncertain. Less than 3 per cent of the working population and only one-quarter of town workers are union members; yet there is a growing proliferation of small unions. There are many reasons for this paradox. Despite industrialisation, agriculture and the cottage industry predominate; many workers are still hired out by "jobbers"; indifference, especially among women, is reinforced by poverty; religion acts as a brake; States and political parties have their own unions, which serves to fragment, not to unite them; the advanced character of union legislation, partially inherited from the Raj, and not fought for as in Britain, has delayed the movement's maturity, for union rights remain in advance of the members' ability to make use of them.

Clearly, trade unions cannot meet their social and political responsibilities unless they first effectively discharge their industrial functions. Unhappily, corruption, illiteracy and predilection for class warfare mar much of the leadership—ills which statutory interference, such as compulsory arbitration and resulting litigiousness only exacerbate.

These growing pains point a moral. To secure, in a plural society, proper balance between unions, employers, government and community is difficult enough. Without a healthy trade union structure it is barely possible. India's trade unions should prepare to meet this challenge.

Reforming Germany

The United States in Germany 1944-55

By Harold Zink.
D. Van Nostrand Co. 374 pages. 56s.

THE American attempt to make over Germany according to the United States pattern was a grandiose do-it-yourself undertaking. Though the outlines were planned far in advance, the victors did not envisage that there would be no German government of any kind to apply their reforms. There were other handicaps. The first few years were wasted, as far as democracy was concerned, because American military government was operating the punitive directive which emanated by way of the Joint Chiefs of Staff from a President who was influenced by the White-Morgenthau Plan for turning Germany into a land fit for cowherds. Moreover, the whole period of ten years during which power was progressively handed over to the Germans was short for so great a task. It is, all in all, a wonder that so much was achieved.

Professor Zink is well qualified to describe and assess the American task. He took part in the occupation, and is now professor of political science in Ohio University. He is a middle-of-the-road critic, who admits that the quality of many of the occupation officials was low largely because they were often recruited from army misfits. Occasionally the author understates the case for the Americans, as when he writes that

"the very real misery resulting from the shortages . . . during 1945-47 was the result of many factors, but the Nazi misdeeds and the disastrous defeat in war bulk large as causes. The American economic policy of revenge, punishment, quarantine and inaction intensified the shortages and consequent suffering, it is true, but were not the primary factors." This is too mild a defence against German critics. In point of fact, the American Zone was on the Lucky Strike standard before currency reform, and benefited largely from the black market which spread from the PX stores, CARE parcels and UNRRA camps.

However, Professor Zink sums up the result of American activities very fairly:

> There is evidence that the denazification programme for one was ill-conceived and literally impossible of execution, though, of course, some steps were required in this field. The programme involving a reconstruction of the German education system and curriculum along American lines may be cited as another instance beyond the limits of common sense, despite the weaknesses exhibited by the German schools. The dismantling programme, though never implemented in the American Zone as it was in the Russian and British Zones, represents another activity which in retrospect seems definitely unjustifiable. . . . At the same time it is only fair to note the valuable work done on a limited scale in curtailing the power of the guilds, promoting the activity of women in public affairs, and scheduling adult education groups to study local affairs, as well as the personal influence exercised by American officials in HICOG.

When all is said and done, Federal Germany is a working democracy today, because it is prosperous, and prosperity would be unthinkable if it were not for $3½ billion of American economic aid in the crucial years. For the time being, this amounts to success.

London on Law

Current Legal Problems, 1957

Edited by G. W. Keeton and G. Schwarzenberger.

Stevens. 313 pages. 35s.

THE most radical proposal in last year's collection of current legal thoughts from London University is in the closing sentences of Mr D. J. Payne's essay on compensation for industrial injuries. Mr Payne devotes a large part of his space to history and for some reason digresses in order to criticise the abolition of the doctrine of common employment; but he finishes by suggesting that the liability of employers at common law should be confined to cases of serious personal fault and that the sums now paid in insurance premiums on employers' liability policies be used to augment the industrial injuries fund. Compliance by employers with statutory provisions would be secured by the criminal law and not by both the civil and the criminal law. Few who have been concerned with litigation arising out of industrial accidents can deny that a thin, sometimes almost artificial, line separates failure from success. The chief difficulty about Mr Payne's idea, which deserves a further essay in the next volume, is that it would place employers in the unusual position of not being liable in tort to their employees, though everyone else is.

The centenary of judicial divorce is celebrated by two essays, neither of which take us much further towards a solution of the problem (which is not surprising), and three contributors deal with constitutional subjects, including constitutions in Cyprus and Singapore. For some reason there is an essay on the reform of the Settled Land Act, a subject which not only seems unsuitable for London University but which must also be very low on the list of possible reforms.

Dr George J. Webber contributes a most useful though mostly uncritical account of recent trends in criminal justice. There are two matters among others which perturb those who are regularly engaged in the administration of the criminal law. One is the need for an overhaul of much of it; the other is the need to review the methods used by the police for the questioning of suspects and the alleged obstacles placed in the way of the police by the judges' rules.

We are used to finding in this volume legal problems and sometimes suggested solutions: this is not a vintage year.

International Economic Papers: *Volume 7*

Macmillan. 274 pages. 15s.

The International Economic Association provides, in its latest set of translations, an even more mixed bag than usual. Two essays on demand, by Sismondi, date back to 1824; there is an interesting topicality about his treatment, which recognisably although unconsciously reflects the problems of the "economic take-off." An elegant essay by Einaudi exemplifies the traditional Italian concern with the high theory of public finance. There is a peculiarly esoteric paper by Professor Gibrat on the lognormal distribution, comprising part of his book "Les Inégalités Economiques." From Sweden come Professor Lindahl's paper on "Basic Concepts of National Accounting" and Dr Kragh's "Basic National Budgeting Model," the former a refinement on the system used by the Economic Research Institute in Sweden, the latter an essay in single-period statics, based on Dutch practice. More interesting to the less specialised reader are the two papers from Poland by Dr Brus and Dr Oskar Lange. The one, picking his way with Agag-like delicacy among Marxist shibboleths, pleads for a pricing system which should bear some recognisable relationship to economic realities; the other, writing only a few weeks before the "October Revolution" and presenting an "Outline for a Reconversion Plan for the Polish Economy," almost entirely eschews jargon, grimly describes an appalling economic mess, and proposes reforms which have since proved inadequate. The last paper in the collection, from the German of Dr Herbert Giersch, is an independent venture on to Mr James Meade's territory, that of trade.

POLYETHYLENE PLASTIC

at home

in EVERY HOME!

Products extruded from UNION CARBIDE polyethylene plastics are invading households everywhere to such an extent that they're quickly becoming part of the natural surroundings.

UNION CARBIDE polyethylene extrusion materials combine lightness, high flexibility, colorability and corrosion-moisture resistance. Quality is controlled to meet the most rigid specifications for every product from squeezable deodorant packages to flexible tubing. The skill and industry of UNION CARBIDE is an integral part of these truly outstanding plastics—plastics which are filling more and more of man's everyday needs.

Versatile UNION CARBIDE polyethylene is your key to greater profits. Get complete information by writing for booklet "UNION CARBIDE Polyethylene" PLE-2

UNION CARBIDE *has distributors in principal cities throughout the world.*

AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

Investigators Fall Out

WASHINGTON, DC

THE House of Representatives' aptly named Subcommittee on Legislative Oversight has been tying itself into sensational knots over its much heralded grand review of what are called the regulatory agencies. At the end of last week and again on Monday it got into the absurd position of cross-examining the chief counsel whom it had dismissed about the half-developed investigatory leads contained in its own files. Dr Bernard Schwartz, one of the half dozen leading authorities on administrative law in the United States and the only American witness before Sir Oliver Franks's Royal Commission on the subject, had been engaged by the subcommittee to direct the staff work in preparation for hearings and then to examine the witnesses. He had quarrelled vitriolically with the majority of the Congressmen of both parties on the subcommittee about the shape and tone of the hearings, had passed to the press information which he had accused the politicians of wanting to suppress, and to cap it all had, when finally dismissed, made off with a selection of the files to Senator Morse, who, he clearly implied, had the public interest more robustly at heart than did his late employers. As a parting shot the fighting professor handed around to journalists a list of charges against the subcommittee and of insinuations about leading public personalities.

"A Thousand Apologies, Gentlemen. He's a New Man"

Herblock in the *Washington Post*

Given this background, Dr Schwartz's performance on the witness stand was a remarkable *tour de force*. The swarthy little professor switched with unfailing resourcefulness between the three parts that were forced on him: that of expert pronouncing on administrative law; that of retiring investigator helpfully passing on uncompleted work; and that of dismissed employee answering for alleged misconduct. Some members of the subcommittee were genuinely trying to seek guidance on the principles of public administration; some were trying to use his answers to condemn him for "smearing" individuals and absconding with files; and Mr Harris, the chairman, was attempting to do both and look dignified at the same time. That task was made no easier by the accidents of seniority and party membership which placed Mr Moss, a beefy Californian Democrat who was Dr Schwartz's most heated supporter, in the seat next to Mr Flynt, an acid-tongued Democrat from Georgia and the professor's most relentless tormentor. Whenever Dr Schwartz was at his most lofty Mr Flynt pounced, Mr Moss lashed out, Mr Harris called order, and the two neighbours glared at each other.

Consequently, specific abuses, all with a common theme of improper influence by powerful persons on the supposedly judicial decisions of the administrative agencies, have been brought out, not in a complete, orderly fashion, but as incidental to the subcommittee's efforts to clear itself of Dr Schwartz's charge of wilful suppression of the evidence. Nevertheless the spice of personal drama has focused public attention on a subject that stood in dire need of daylight. The regulatory agencies are the instruments by which in the United States public control is exercised over private enterprise. As such they are the forums in which the real struggles for power take place as opposed to the relatively anæmic and even fictitious struggles between political parties.

Some of these commissions—especially the Federal Communications Commission, which allots radio and television channels, the Civil Aeronautics Board, which certifies scheduled airlines and hands out air routes, and to a lesser degree the Interstate Commerce Commission, which regulates railways and road hauliers—have scarce and extremely lucrative prizes to award. Moreover, the political and economic stakes in such struggles may be even higher than the prize itself. For example, a bitterly contested and questionably decided battle over a major television channel in Boston was directly related to an old-fashioned war of extermination that is being fought between two of Boston's daily newspapers.

The whole purpose of the regulatory commissions is supposed to be to put such decisions "outside politics." But even their supposed independence suffers from ambiguity. Congress claims that the agencies are an arm of the legislative branch, but their members are appointed by the President and their functions are part administrative,

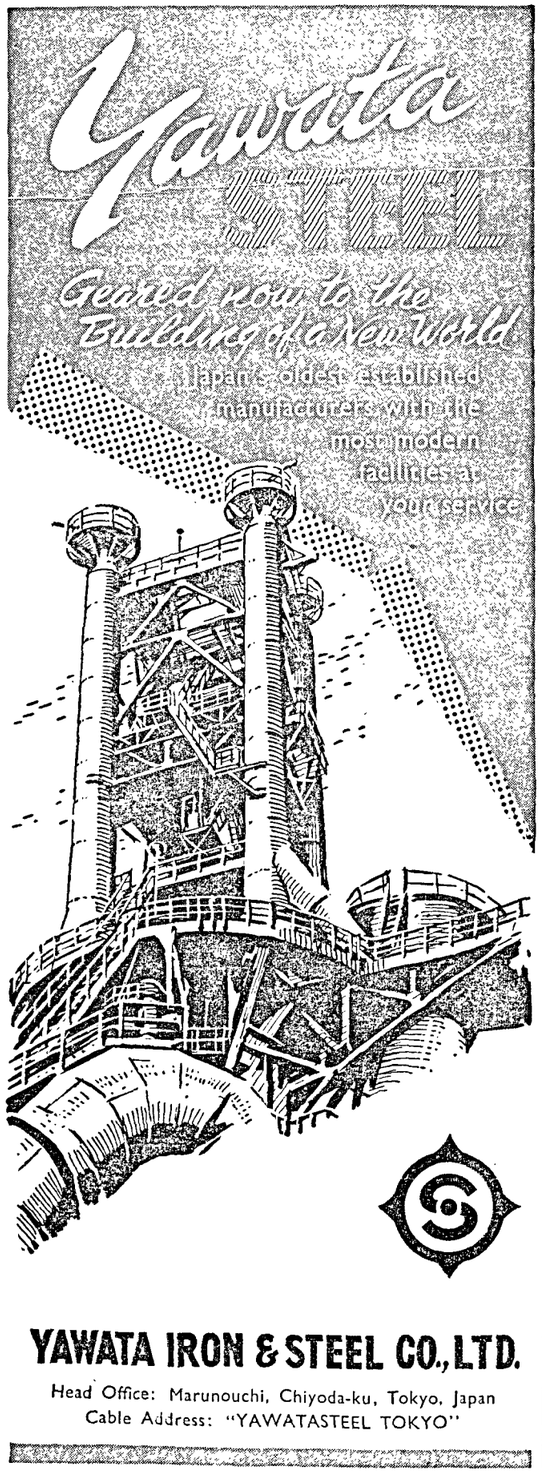
part judicial. Furthermore, in setting up the agencies Congress has often been extremely vague about the standards that they were to follow. In allotting television channels the FCC—which is the agency currently under the narrowest scrutiny—is supposed to be guided by "public interest, convenience or necessity," but the commission itself has been left to develop a number of "objective criteria" for sorting out the applicants. In practice some of these criteria cancel each other out. The commission may be faced with as many as seven applicants for one valuable channel, each having some of the desirable qualifications but lacking others. The initial decision is made by a professional examiner, who "tries" the case as between all the contestants. The lengthy record, often largely taken up with mud-slinging intended to reflect on the personal character of rival candidates, then goes to the commission, which frequently sits on it for two years before reaching a final decision that the professional staff then undertakes to explain by relating it to the criteria.

THE inconsistencies of many of these justifications have aroused the curiosity of earlier investigators than Dr Schwartz. In many locally sensitive cases the finding seems to have come first and the criteria to have been attached afterwards. Moreover, it is a matter of common observation that many members of these commissions hobnob very freely with officials of the industries which they are regulating. The same is known to be true of the congressional committees which supervise the commissions, including the parent body of the subcommittee which employed Dr Schwartz. Finally, it was the unanimous finding of an earlier and quite differently constituted subcommittee that

> an air of informality . . . permeated the commission's administrative process to a point where various members of the commission have repeatedly discussed with one or more parties the merits of pending cases—even going so far as to indicate how particular commissioners would vote.

Indeed, one of the curiosities of the whole affair is that practically all that Dr Schwartz has dug out about the cordial relationship between commissioners and their industry, and about political intervention between the examiner's report and the commissioners' findings, has repeatedly appeared in print over the years, much of it in Mr Drew Pearson's famous column. Unfortunately, although Mr Pearson is very often right in his highly defamatory exposures (for which he seldom seems to be sued) he has been wrong on a sufficient number of well-publicised occasions for him to forfeit something of his impact, so that the target of one of his stories can shrug off exposure with a gay remark that this is "just a rehash of a Pearson smear."

Since his break with the subcommittee Dr Schwartz has been heavily belaboured in the press both for his intemperateness in turning on his employers before he had properly tested their sincerity and for publicising unproven assertions to justify his break. While the professor does seem to have been prickly and truculent towards his political masters, it can be said in his defence that many a promising investigation has disappeared without trace in Washington because an idealistic counsel has crept away quietly after encountering the obstacles that confronted Dr Schwartz, most notably the inflicting on him of assistants who were the minions and even the relatives of key Congressmen with special interests to protect.



As for the "smearing" and the resort to "guilt by association" which prompted the *New York Herald Tribune* to print photographs of the professor and Senator McCarthy side by side, Dr Schwartz ought not perhaps to have abandoned his normally involved prose style in favour of the racier idiom of Mr Pearson. But in one eloquent passage from the witness stand Dr Schwartz did strike at the heart of the matter—the failure of public life in Washington to attract men of such stature that they know without being told what distances to keep from litigants whose suits they must decide.

Prosperity on the Way?

THE President cannot afford to be anything but optimistic in public about the prospects of weathering the recession, lest he undermine public confidence. But Mr Eisenhower's advisers have already regretted that in his message last week he led Americans to expect an upturn next month. March may "commence to see a pick-up in job opportunities" as he said—in addition, presumably, to the seasonal return of farmers and construction workers to their tasks. But even if it does, the figures to be published in March will not show it; they will be based on conditions early in February, the seasonal low for employment.

Many economists, moreover, including, it appeared this week, Mr Hauge, the President's personal economic assistant, are far from certain that, even if the recession has now nearly reached bottom, it will bounce right back. By January, industrial production had fallen nearly 10 per cent from the 1956 peak, the extent of the fall during 1953-54. But only one of the five independent economists who wound up the hearings of the Joint Congressional Economic Committee believed that recovery would be on the way by next autumn unless the government took vigorous steps to stimulate it. The Administration's plan is to hold its hand at least until April to see whether the economy is righting itself or whether stronger measures are needed than the further relaxation of credit, through lowering the reserve requirements of commercial banks, which the Federal Reserve Board authorised this week. At the same time the Administration cannot seem to be standing idly by while Democratic Governors and Senators ride off with what may be the decisive issue of the autumn's congressional elections.

Much is therefore being made of hopeful developments in housebuilding, and in his message last week the President scraped together a long list of "anti-recession" activities. But this contained nothing new of any substance except the proposal for modernising the Post Office, a scheme drawn up before the clamour for public works broke out. The Joint Economic Committee has sharply demanded an outline of other spending projects, apart from defence, which the Administration has ready for countering recession. It has been thought that the Administration would prefer to try tax reduction, primarily for individuals, in this period of industrial over-capacity before embarking on a big public works programme. But Senator Knowland, the Republican leader in the Senate, this week showed a clear preference for public works; they may be more rewarding politically for embattled Republican candidates. In any case, it would be useful to have Congress authorise such projects; one of the main arguments against public works is that it takes so long to get them under way.

SHERATON

A FAMILY OF 45 FAMOUS HOTELS

THE SHERATON-BROCK WELCOMES YOU TO NIAGARA FALLS

When you visit Canada or America you will find that the name standing for gracious hospitality and first-class travel accommodations is Sheraton. In Toronto, in Montreal, in Hamilton, Ont., in Niagara Falls — and clear across the United States from Boston to San Francisco — there are Sheraton Hotels to serve you. These hotels have become first choice of International visitors, as well as Americans, for many reasons. Here are a few:

- Reservations held if ships or planes are delayed
- Facilities for banquets, business meetings and conventions
- Bilingual departments • Sheraton's Family Plan
- No room charge for children under 14 in room with adults (except in New York, Syracuse, Los Angeles and French Lick)

For reservations see your travel agent, or write Mr. Alberto de Leon, Director, International Department, Sheraton Hotels, Sheraton-McAlpin, Broadway and 34th St., New York 1, N. Y., U. S. A.

TAPE IT FROM HERE

The Stenorette is produced by the world's largest manufacturers of tape recording instruments. Designed to meet the pace of modern business, it has all the features anyone could want in a dictating machine *at a fraction of the cost.*

The Stenorette takes 25 minutes' dictation for each spool of tape. It has instantaneous playback, automatic erase and back-space facilities, will record conferences, memos or incoming telephone calls and provide clear, balanced reproduction for transcription.

Average cost **52 gns** *(including the basic accessories)*

Running for a Future

To no one's surprise Mr Harold Stassen has resigned as President Eisenhower's special adviser on disarmament in order to seek the Republican nomination for Governor of Pennsylvania in the primary election next May. Ostensibly Mr Stassen is running so that he may put before the American people "the issues and problems of the task of building peace and safeguarding against war," a subject on which he has disagreed with Mr Dulles while he has been in Washington. But this is not the sort of argument that appeals to voters in a state election. They are much more interested in local matters—jobs, schools, taxes, state administration—as Mr Stassen himself recognises.

His real reason, it is generally believed, for wanting to become Governor of Pennsylvania next November is to give himself a fresh start toward achieving the ambition which he has been doggedly pursuing for fifteen years—to become President of the United States. As Governor of one of the three most populous states in the country, he would control one of the largest blocks of votes at the Republican nominating convention in 1960 and, as the man who had brought Pennsylvania back to its Republican allegiance, he would have a valuable aura of confidence and success. But there is no reason to suppose that this would enable him to eclipse Mr Nixon any more effectively than he did in 1956 when he backed Mr Herter as an alternative Republican candidate for Vice President, a spectacular failure which confirmed the Republican party organisation in its determination never to have anything to do with Mr Stassen.

That the conservative local party organisation in Pennsylvania shares this determination may not do the liberal Mr Stassen much harm in the primary election, for Republicans in the state are far from united and he is an experienced and expert digger at the grass roots of public opinion. But this time he will have to overcome the stigma, unusual in American politics, of being a political carpet-bagger. Three times Governor, and four times presidential "favourite son," of Minnesota, he first came to Pennsylvania to head the leading university in the state from 1948 to 1953, only to leave again for administrative office in Washington. He has now re-established residence in Pennsylvania by buying a house at Valley Forge, where the Revolutionary Army spent the winter of 1777 when its fortunes were at their lowest ebb. It is doubtful whether Mr Stassen's time there will be followed by an equally spectacular triumph. It is more likely to bring a bitter fight to Pennsylvania next May and to divide the Republicans so sharply that the Democrats may win easily in November.

Cold War at Kohler

FROM A SPECIAL CORRESPONDENT

The strike of the United Automobile Workers' Union against the Kohler Company of Sheboygan, Wisconsin, the longest continuous strike ever conducted in the United States, is coming back into the national news as it approaches its fourth year; Senator McClellan's investigating committee is scheduled to hold hearings on it next week.

Like participants in a nightmare from which there seems no escape, the protagonists at Kohler continue playing and replaying their parts, the company bitterly determined not to yield anything to the union and the union equally determined not to end the strike on the employers' terms. The original issues over which the strike was called have almost been forgotten. Only 300 of the original 2,700 strikers are still being carried on the union's assistance rolls. More than a thousand of the strikers have returned to work in the plant and hundreds of others have left Sheboygan or are working elsewhere in the area. The strike has cost the union at least $11 million and the employer an unknown sum. Ten attempts by outside parties to settle it have failed; the countrywide boycott of Kohler products organised by the union still continues; and Sheboygan has been torn apart by the bitter conflict.

Last October, after a hearing which lasted fifteen months, an examiner for the National Labour Relations Board found both the company and the union guilty of "illegal conduct." But because the company had not "bargained in good faith" with the union, it was ordered to reinstate most of the strikers if they applied for work. An exception was made for leaders of the strike committee, whom the examiner thought had been legitimately dismissed because they organised mass picketing on a scale which prevented anyone entering or leaving the plant. With his usual flair for public relations Mr Reuther, the head of the automobile workers and the trade union leader most disliked by conservative Republicans, promptly accepted all the findings if the company would do likewise. But the Kohler management has refused and means to appeal.

The strike has now also brought to the surface a smouldering political feud between the Republican and Democratic members of Senator McClellan's committee which is examining improper practices by labour and management. The Republican members of the committee, undoubtedly somewhat distressed because the inquiry so far has involved mainly labour leaders associated with the Republican party, like Mr Beck and Mr Hoffa, arranged to have the Kohler strike investigated by their own lawyer, Mr McGovern, rather than by the committee's chief official, Mr Kennedy, who is a Democrat. But during the investigation Mr McGovern was accused by the union of "obvious anti-labour bias" and Senator McClellan himself took charge.

The Kohler Company, the second largest manufacturer of plumbing equipment in the country, is a family concern, traditionally committed to the principle of paternalism in its relations with its employees. Before the first world war the company had built a "model" village for them, named Kohler Village, but this was completely dominated by the firm. It introduced a pension plan early in its history, but it is said that payments were tiny. Working hours were long and wages rather low, but for years the company was able to keep the trade unions out. In 1934, when the first attempt to organise the plant was made, tear gas was fired by company officials at pickets, two strikers were killed by bullets and forty-seven men, women and children wounded by gunfire.

The strike failed and an "independent" union, allegedly dominated by the company, was founded. In 1946 another attempt to organise the plant was made, this time by the UAW. It too failed, but in 1952 the members of the "independent" union voted to affiliate with the automobile workers. The company refused to recognise the new union

and an NLRB election was held which was won by the UAW. When its first contract expired in 1954, the union attempted to negotiate a new and better one, but the company refused almost all of its demands, rejecting with especial vigour the ones requiring arbitration and compulsory union membership. A month after the contract expired members of the union struck. Mass picketing was carried on until a court injunction prohibited it, fights took place on the picket lines, the company purchased tear gas projectiles which were later confiscated by the police, the union charged the company with keeping machine guns in the Kohler Village police hall, and the company charged the union with persistent vandalism.

The violence aroused by the strike spread throughout the community. Local demonstrations were held by strikers outside the homes of non-strikers, fights broke out between strikers and non-strikers in bars, bowling alleys and private houses. Strikers and non-strikers were arrested for a variety of offences, including slashing of tyres and throwing paint against the walls and windows of houses. Company officials were arrested for driving cars through picket lines and union representatives for disorderly conduct. The president of the company, Mr Herbert Kohler, has bitterly attacked the union and its officers as being "marxist" and "socialist" and attempting to promote "class hatred and class warfare." Another high official of the company has admitted that the firm would "not grieve to see" the local union "broken in this struggle." Mr Kohler has made speeches throughout the country, urging other employers to resist the trade unions.

For its part, the union is equally determined not to give in. Although work is going on at the plant, it is uncertain how much is being produced or sold. The union's boycott is carried on by special members of the UAW, working in sixteen districts, parallel to the company's sales territories; they urge architects, builders, contractors and householders not to use Kohler products. The plumbers' union and other building groups assist the boycott by requesting master plumbers and others to co-operate, although trade union members must install Kohler products if they are purchased, lest they violate the secondary boycott provisions of the Taft-Hartley Act.

It is impossible to determine the effectiveness of the boycott, since the company does not publish a financial statement. But it is clear that the union will attempt to pursue the boycott for as long as the company refuses to settle the strike on the minimum basis of reinstatement for the strikers. Any other course would be a major defeat for the UAW, which does not want to encourage other employers to follow the Kohler example. There seems to be no end in sight to this bitter and costly dispute, which is a survival from a more troubled period of labour relations when American trade unions had to battle for recognition.

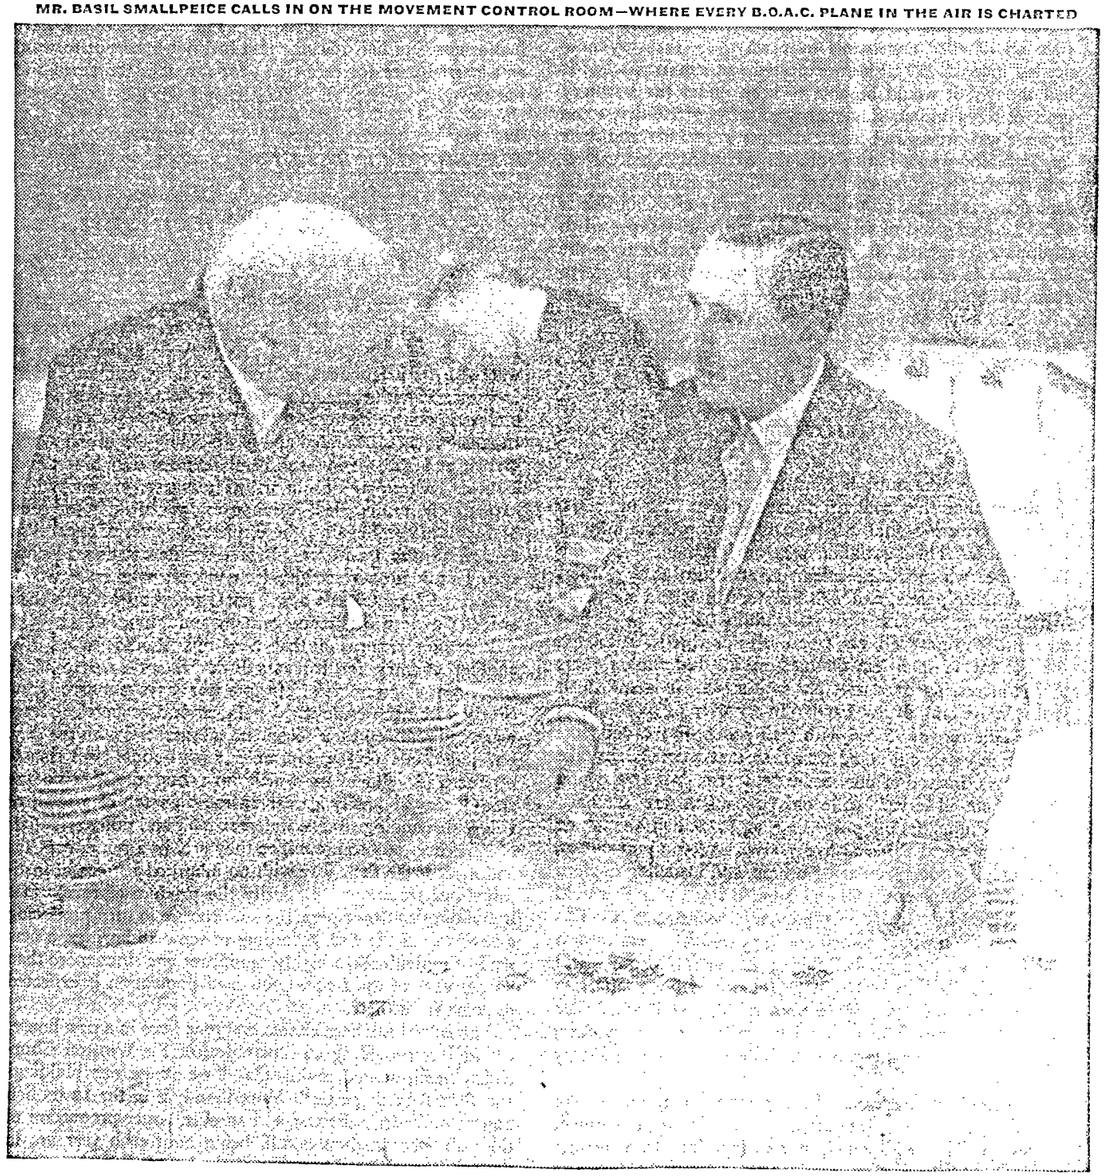
Trade, Aid and Recession

THIS week committees of the House of Representatives began to pull to pieces the two Administration programmes which are expected to be the most contentious before Congress this year—the renewal of the Reciprocal Trade Agreements Act and the Mutual Assistance Bill for 1959. Next week a bipartisan conference to rally support for both of them will be held in New York, to be addressed by such influential advocates as Mr Truman and Mr Stevenson, as well as Vice President Nixon and Mr Dulles. The case for both measures is, as always, based on American self-interest, on the contribution which they make to peace and freedom by strengthening the economic and military defences of non-communist countries against Soviet penetration. But such accomplishments, great as they may be, have little direct impact on the American people and this year, with economic recession a domestic fact of life, they will be contrasted even more sharply than of old with the immediate needs of voters at home.

This will not necessarily be entirely to the disadvantage of the Reciprocal Trade Act. For when it has been up for renewal in times of economic boom the effective attacks upon it have come from industries, many of them relatively small, which have been depressed in spite of the general prosperity and which blame their troubles upon increased competition from imports as a result of the Act. But now, with domestic demand declining, exports are becoming of greater interest to other, more important businesses. Congressmen were reminded this week that over 4,500,000 Americans are dependent on world trade for their jobs while only about 100,000 are employed in industries which claim to have been injured by tariff reductions. Some of the many people who believe that the President's trade proposals are doomed this year may perhaps have forgotten that the Act was originally passed in 1934 as an anti-recession move.

Unfortunately, it will be much more difficult to apply such arguments to foreign aid for, while it also encourages trade by increasing the supply of dollars abroad, Americans would appreciate those dollars much more if they were spent at home: Congressmen are very conscious that a dam built in California brings votes, while one in the Middle East may not even bring thanks. Moreover since the beginning of this year three countries—France, India and Poland—have all been promised emergency injections of dollars through such agencies as the Export-Import Bank, the Commodity Credit Corporation and the international funds, almost without resort to the official American foreign aid programme. Congress thus seems bound to ask more searchingly than ever whether the President's latest request for $3.9 billion for that programme is necessary and to answer as parsimoniously as usual. A cut of about $1 billion is forecast and it would probably be greater were it not for the present deep concern about the Soviet danger.

Byrd's Last Stand



THE announcement that Senator Byrd of Virginia has decided not to run for re-election next November means that the Senate Finance Committee will lose the last of the bipartisan quadrumvirate—the others were Senators George, Taft and Millikin—who fought so obstinately for balanced budgets, lower taxes and conservative spending in the post-war years. Senator Byrd's successor as chairman, provided that the Democrats keep their majority in the Senate, will be Senator Kerr of Oklahoma, also a millionaire—from oil instead of apples—but an unorthodox one where the national finances are concerned. At the moment he is quite ready to raise the debt limit by $5 billion, to $280 billion, as the Administration has asked, since he believes that, under present conditions, the government should be spending far more than it is and that in any case

TIME

HOW TO REACH THE HIGHER-UPS

B.O.A.C.'s Managing Director, Basil Smallpeice, reaches higher-ups on a world-wide scale through aggressive international advertising. And it's no coincidence that B.O.A.C. (like so many other leading airlines) regularly uses the advertising pages of TIME, *The Weekly Newsmagazine.*

MR. BASIL SMALLPEICE CALLS IN ON THE MOVEMENT CONTROL ROOM—WHERE EVERY B.O.A.C. PLANE IN THE AIR IS CHARTED

British Services... sold around the world... *advertised in TIME!*

its financial calculations for the coming year are unrealistically optimistic.

So perhaps this is the last time that a Secretary of the Treasury will have to plead desperately for a higher debt limit, scraping the bottom of his financial barrel as he does so to pay the government's unpostponable bills. Last week, with only $1.5 billion in hand, enough for five days, instead of the $3.5 billion which is considered "comfortable," the Treasury had to draw $100 million from the free gold balance. This is now down to $400 million from the $2.8 billion which the government made when the dollar was devalued in 1934; the basic gold reserve of $23 billion backs the currency and is inviolable. The Secretary was driven to this final resort by Senator Byrd's delaying insistence on detailed arguments over why the Treasury now needed more than had been expected last summer, when it had thought it would be able to keep under the statutory limit of $275 billion this year, and why, given that some increase was necessary because receipts were down and costs up, $3 billion would not be enough. Mr Byrd's obstructiveness springs from his belief that the Administration must be forced to economise and that the only way of doing this is to take a firm stand of this kind. But he is now expected to capitulate very soon. In any case temporary relief is on the way since in March substantial tax payments will begin to come in.

Public Works—Private Money

If public works must be undertaken, the Administration hopes that they will be projects useful in themselves, and that private capital can be induced to provide most of the money. The $2 billion scheme for modernising the Post Office which the President unveiled last week satisfies on both these points, although Senator Knowland is already insisting that the first new post offices should go up not where they are needed, but where men need jobs. Although the volume of mail has doubled in the last fifteen years and is increasing by 4 or 5 per cent a year, it is still dealt with almost entirely by hand. Every evening post offices in big cities are swamped with mail which they cannot sort in time to catch out-going trains, so that letters often take three days, instead of one, to be delivered. Many growing suburbs are ill-served while old post offices are idle.

The Administration proposes that $2 billion should be spent in the next three to five years on 14,500 post offices, rehabilitating some, replacing others, and installing modern electronic equipment. Of this sum, private sources would be expected to provide $1.5 billion for construction. The Administration would contribute $175 million a year toward re-equipping the new buildings; it hopes Congress will authorise a fifth cent on postage for out of town letters to produce the money. Mr Summerfield, the Post Master General, says the scheme could be underway in sixty days, an important virtue in a proposal clothed in anti-recessionary garments.

This undertaking would be the broadest application of the lease-purchase idea, under which the government borrows the money for new public buildings from private sources and repays them over ten to thirty years, just as a householder pays off a mortgage. The great attraction is that such borrowing falls outside the limit on the public debt. Unfortunately, past experience suggests that speed is not a virtue of lease-purchase. Of 98 projects authorised in 1956, only one had been completed by the beginning of this year, and early in 1957 the whole ingenious idea had to be suspended because private investors were not interested in projects paying only 4 per cent interest. Now more private credit is available and it has been made easier for banks and insurance companies to participate in the plan. But no rush to do so has yet been noticeable. Many Congressmen do not mind who pays for public works, as long as their constituencies benefit, but others look askance at this partnership with private capital; last summer the basic law was allowed to lapse. The scheme might have had a more cordial welcome if it had not been put forward as a partial cure for recession; for this it is too small and too slow.

EXPLODING CITIES—III

At Home in Suburbia

FROM A SPECIAL CORRESPONDENT

From the literature on the subject the prospective visitor to suburbia might deduce that he was leaving the United States for a new and predatory land, constantly at war with its neighbours, inhabited by 42.5 million Suburbanites. These belong to a prolific tribe which is expected almost to double its numbers by 1975. Already its dynamic expansion has surrounded and is strangling the near-by city, Urbia, and threatening the rural metropolitan hinterland, Exurbia, where well-to-do urban refugees, entrenched in expensively remodelled farmhouses, are making an embattled last stand against the ultimate weapon of surburban aggression, the bulldozer. Behind its devastating advance spring up almost overnight, from potato patches or woodlands or old estates, the new "package suburbs" with their swirling pattern of streets, gardens and "homes."

It is not surprising that Suburbia should sound like another country for it bears little resemblance to older American communities. In pre-war days suburbs grew slowly within an established political and economic framework and retained their social and cultural ties with the city, but today one of the enormous new, middle-class, mass-produced developments which now ring the "exploding cities" may suddenly appear on the doorstep of a town or village demanding streets, water, schools and other essentials of existence. As communities they are, in a sense, orphans and must make their way with no inherited pattern of institutions or traditions. Basically the product of revolutions in building and transport, the suburbs are in turn producing a new way of life and, according to some authorities, a new kind of individual—a highly significant one since more than 80 per cent of the future growth of population is expected to come from there.

The suburbs, where almost everyone lives in a new house, are in fact providing an illustration of Sir Winston Churchill's much-quoted saying that "we shape our buildings and then they shape us." More than half of the 12 million houses built since the war and an even larger proportion of the million or so houses still being built each year are in the suburbs. Eighty per cent of the houses have been produced by a few large building firms operating on a mass scale, sure of being able to sell their houses once they are ready because of the pent up demand for shelter and because the government's policy of insuring mortgages has eliminated most of the risk. New financing practices have made it possible to buy a house for a negligible down payment and a 20- to 30-year mortgage on which the monthly payment is less than the rent on a flat. Twenty-seven million families (60 per cent of the total) now own their homes, more than twice as many as in 1940, and the government and the builders are both out to increase the figure this year even though demand is at last falling off.

Every weekend, the real estate supplements of metropolitan newspapers provide tempting glimpses of the "wonderland of suburbia" and thousands of families go "shopping" for a home through endless "planned communities" or housing estates. This search for paradise may lead the prospective home-owner through Murmuring Pines to look at a house called The Country Squire which enticingly enough "basks in the shade of its own trees," or he may find more to his taste the Houses that Jack Builds, which include a Royal Chateau, boasting three bedrooms and a "slightly formal living room with vaulted cathedral-type ceiling."

Underneath all this eloquence are several basic designs which can be produced at prices ranging from $10-50,000. The average single family house built in 1956 was a one-storey "rambler," with three bedrooms, 1½-2 bathrooms, 1,230 square feet of floor space, costing $14,500—considerably larger and more expensive than the average in 1950. Gaining fast in popularity, however, is the "split level," with bedrooms usually half a flight of stairs up from the living room and kitchen, and the recreation or family room half a flight down. It has the practical advantage of taking much less space in crowded suburbs than the rambler and involves less stair-climbing for the housewife than the old-fashioned two-storey "colonial" style. But the uninitiated in split-level living often experience a complete loss of direction and elevation, particularly if they find themselves in one of the variations, such as a "side-split" or a "fore-and-aft split."

The average home buyer, however, is adaptable. He is about thirty-five, married, an ex-serviceman, has two children and an income of just over $5,000 (roughly £1,800) a year. He has occupied his present house less than three years and moves every few years, usually to a larger house in a more expensive neighbourhood. After a year of hunting, he finally finds his house through a newspaper advertisement or by just happening upon it. The deciding factor in his family's choice is likely to be the size and equipment of the kitchen.

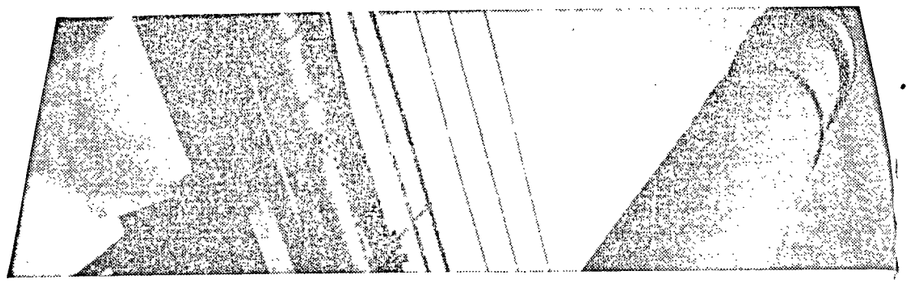
Though types of dwellings and of inhabitants vary widely between different housing estates, there is relatively little diversity within any one, since each will have houses of the same general accommodation and price range which attract families of similar age, income and sometimes even occupation. These horizontal communities are planned by a builder or estate agent who tries to fit a piece of land and anywhere from several hundred to many thousands of almost identical dwellings into some sort of Utopian pattern. He attempts to alleviate or disguise the uniformity of the landscape with curving streets and the repetitiousness of the houses with different colours and materials and by turning them almost every way but upside down. The largest communities often include shopping centres, electricity plants and recreational clubs.

The layout and buildings must observe local ordinances which may, if the tract lies in several jurisdictions, vary from street to street. Furthermore, in order to secure mortgage insurance from the government, the planner has to conform to many other detailed standards such as the provision of a tree in the southwest corner of every building plot. If, with all this, he can put into modern dress something approaching the suburbanite's nostalgic dream of an intimate green New England village, crossed with a spacious western ranch, behind a colonial portico, with an "old swimming hole," he has accomplished quite a feat. But if he fails the inhabitants "do it themselves," as they have had to do in the earlier suburbs where orchards, fences and swimming pools are now being installed at a great rate.

SHORTER NOTES

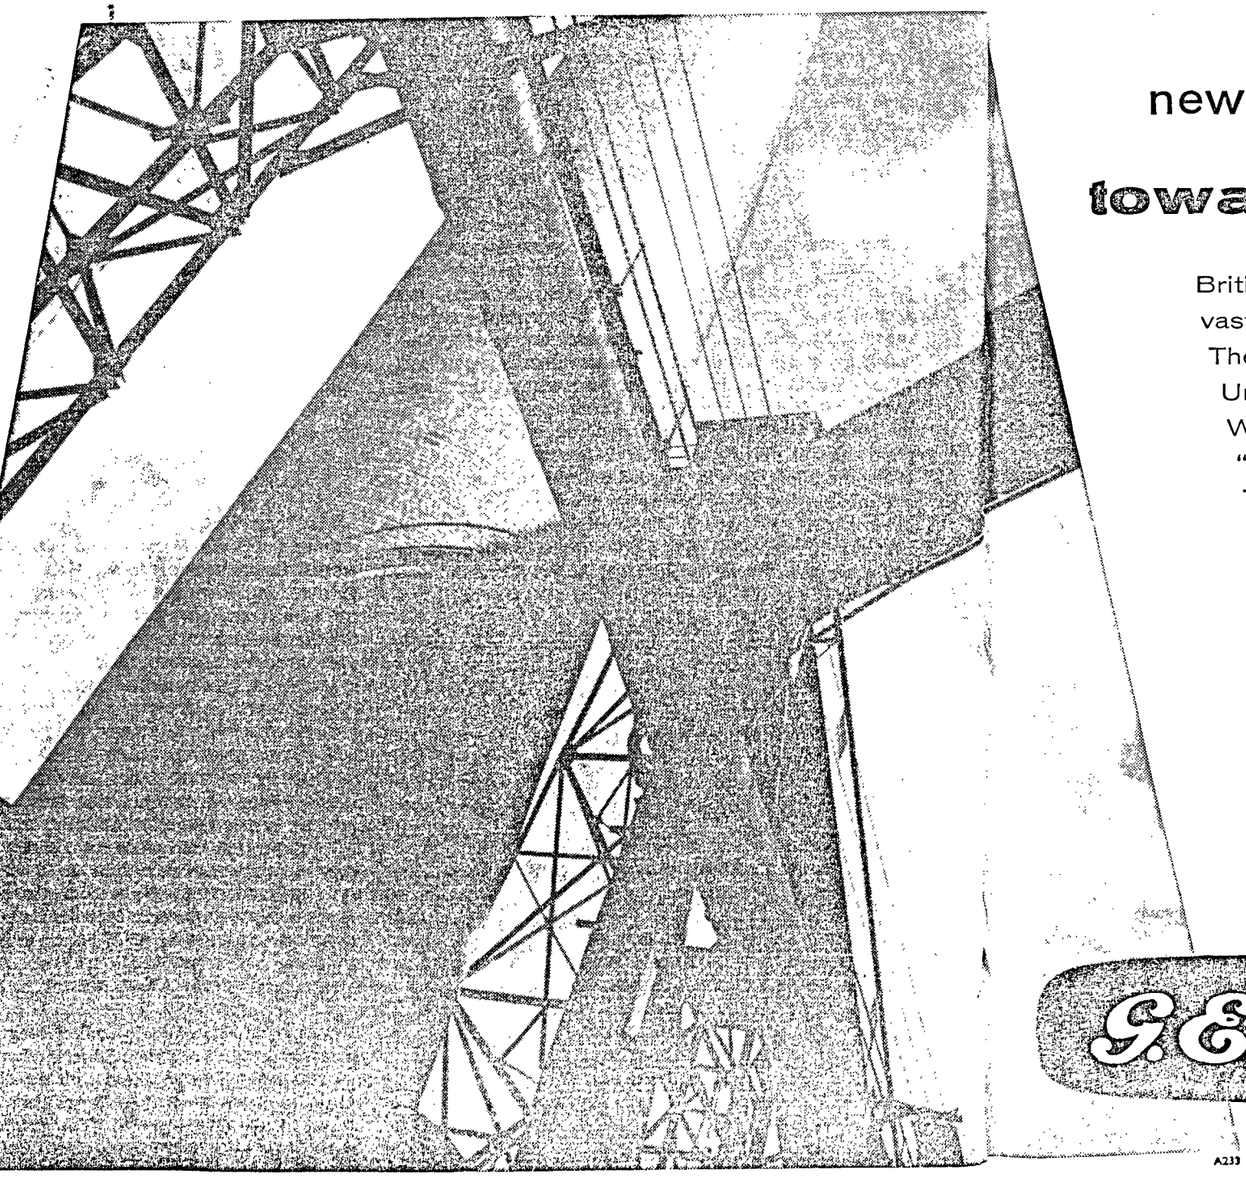
Over-zealous friends of the natural gas Bill have only themselves to blame if this twice vetoed scheme to exempt producers from effective federal price regulation has gone down for the third and last time. Few expect the Bill to survive the revelation that Texan oil and gas men recently gave Mr Martin, the Republican leader of the House of Representatives, a $100 a plate dinner on the brutally frank grounds that they expected him to round up Republican votes for the Bill this year as he has twice done in the past. The money was raised to help Republican congressional candidates. The President and the chairman of the Republican National Committee have refused to touch it, but the House and the Senate campaign committees have not been so fussy; consumers of natural gas will draw their own conclusions.

* * *



Mr Thomas Morgan, a Democrat from Pennsylvania, is assuming the active chairmanship of the House Foreign Affairs Committee which Mr Gordon, also a Democrat, must relinquish because of ill health. Mr Morgan stands for a bipartisan approach to foreign policy and voted for the North Atlantic Treaty and the Marshall Plan. This does not mean, however, that he has never supported reductions in foreign aid.

* * *



The report of the special advisory committee on the strategic stockpile confirms that American buying for this purpose is practically finished. But there is no immediate danger that the stockpile's surplus raw materials will be thrown on the market. While the committee recommends that these should be disposed of, the final decision rests with the Office of Defence Mobilisation and, after that, with Congress which can be relied on not to act quickly in such a matter.

* * *

At last, after seemingly endless congressional and legal delays, the New York State Power Authority has been given final permission to go ahead with the development of the hydro-electricity from the Niagara Falls which the United States shares with Canada. The generating plant, to be finished in 1961, will have a capacity of 1,800,000 kW.

Atoms for the Power Hungry Industries

new atomic advance

towards cheaper electricity

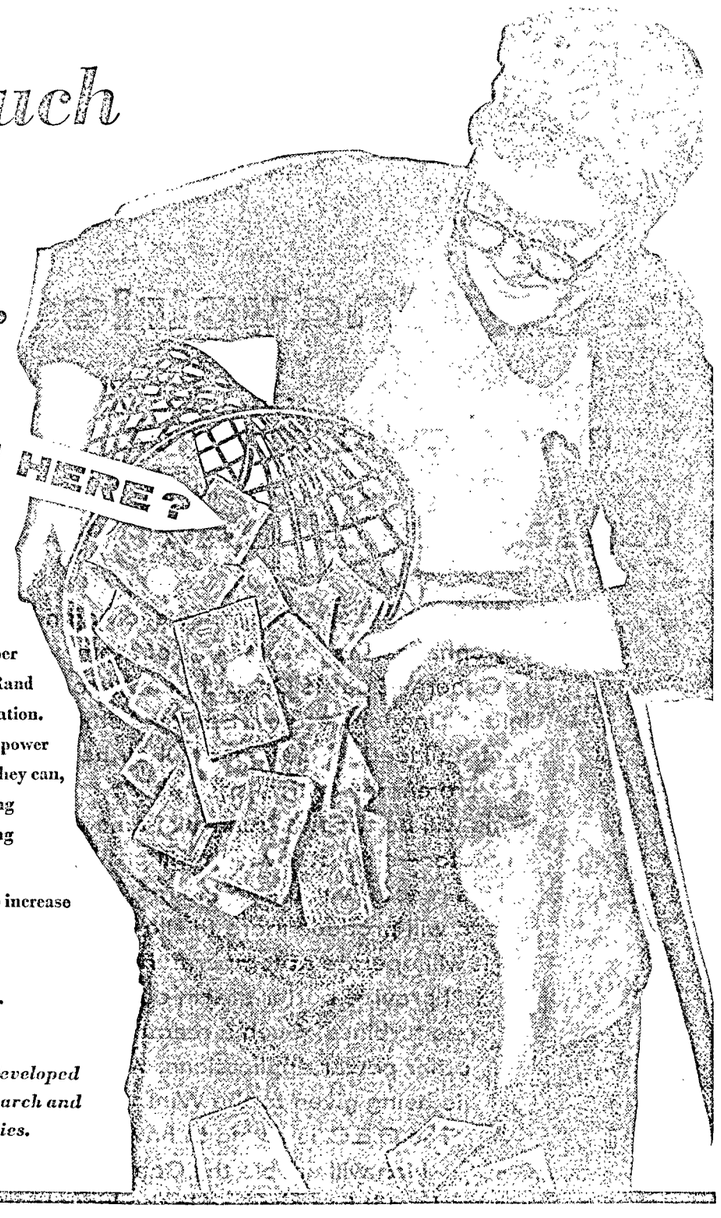
British scientists are constantly evolving new techniques which vastly enhance the possibilities of atomic power.

The General Electric Co. Ltd. is now co-operating with the United Kingdom Atomic Energy Authority in the construction at Winfrith Heath in Dorset, of what the scientists call "a zero energy critical assembly".

This will be the fore-runner of a new type of high temperature reactor—a reactor which will provide cheaper atomic power.

This reactor will utilise the more plentiful thorium as fuel and will produce more fissile material than it consumes.

It will operate at temperatures of the order of 1470°F, which will provide better steam conditions and may even be used for gas turbines. Such a reactor may also prove adaptable to other power applications. Accordingly the highest priority is being given to the Winfrith Heath project.



The G.E.C. is proud to have been selected to assist in this work which will enable the Company to maintain in the future the lead it has secured in the industrial atomic energy field today.

How much of your profit...

Too often the w.p.b. can be a p.d.b. (profit-draining basket): crammed with proof of office inefficiency.

It is quite simple to empty *your* waste-paper basket of such evidence. Ask Remington Rand to make a survey of your entire office operation. If they cannot help you to save time, man-power and money, they will say so. If, however, they can, they will suggest how their profit-increasing proposals can be adopted without disrupting the office or disconcerting the staff.

Remington Rand's claim to be able to help increase the efficiency of business is based on two unique qualifications:

1 ***They provide the widest range of Office Equipment in the world.***

2 ***They alone have the knowledge developed by over 80 years of technical research and practical experience in 41 countries.***

The world's most comprehensive range of Office Equipment includes: ACCOUNTING, ADDING, CALCULATING, DICTATING, DUPLICATING AND PHOTO-COPYING MACHINES · UNIVAC ELECTRONIC COMPUTING SYSTEMS · FILING, VISIBLE RECORD AND CHARTING SYSTEMS · FIRE RESISTANT EQUIPMENT TYPEWRITERS (Electric, Noiseless, Standard) · OFFICE FURNITURE AND SUPPLIES

THE WORLD OVERSEAS

France's Frustrated Army

FROM OUR PARIS CORRESPONDENT

THE government apparently decided not to punish the culprits in the Sakiet bombing in order "not to undermine the morale of the army." It is not clear whether another motive may have been a wish to avoid a show-down with the defence minister, M. Chaban-Delmas, who seemed remarkably well informed all along and who has the support of the chauvinists in the Assembly. But, even as an excuse, this concern for the army, lavished by supposed policy-makers on executants who forced their hand, is another of the Fourth Republic's confessions of weakness. Parliamentarians themselves have tacitly registered it as a warning; Catholics and Socialists have both asked the government to define its instructions "more closely" in future. Many people are beginning to wonder whether the army, or its officer corps, is a servant or a Frankenstein in Algeria. Originally, fear of the army's reactions to failure or a "sell-out" was probably an alibi for deputies hesitating to commit themselves. Is it now more than that? *La Grande Muette*—the Silent, or Forgotten, Service—does not wear its thoughts on its sleeve. It probably has no clear collective thought. But its latent anger at least can hardly be denied.

No people as proud as the French can suffer reverses for twenty years unscathed, still less an army embodying that pride. The hollow victory of the Liberation in no way compensated for 1940, which the army has tried ever since to live down. But in Indo-china its veterans were baffled by guerrillas—and returned home to find their countrymen gratefully rid of an episode which to the soldiers had been ten years of danger and the death of comrades. Meanwhile, in Europe, the army was painfully chrysalising into a modern force for atomic war. At one time it was faced with complete metamorphosis in a European Defence Community which was anathema to the traditional officer. A sense of neglect capped a sense of failure. Then, in 1956, when the new style fighting formations were hardly ready, the army was rudely dislocated to chase after more guerrillas in Algeria and to retreat, after victory, from Egypt. It feels it has suffered a series of unjust defeats. The best French troops, after seventeen years of continuous fighting, are today some of the finest in the world. They feel they proved this at Port Said next to a rusty British army. But the finest hour of the finest force, the parachutists, was the hopeless stand at Dien Bien Phu, France's worst defeat since 1940. The army suspects that it has been betrayed, and has naturally looked for scapegoats.

It has found one in "Paris": Paris, with its politicians who play at crises, who ill-used the army in Indo-china, who failed to stop the rot in Tunisia or Morocco or in Algeria, who, even when they are tough like M. Lacoste, proclaim the "last quarter of an hour" when the army knows how long it must last. Paris, also, with its intellectuals who spread defeatism and prepared the sell-out in Tonkin, and who now moralise on tortures without having to break flesh and blood rebels or to do the despised dirty work of the police in destroying terrorist cells: the intellectuals seem to many officers to be mere traitors.

To judge by the few periodicals, like the *Message aux Forces Armées* in which officers explain themselves, many have come to terms with colonial wars of independence by seeing them as mere incidents of the "permanent revolutionary war" more or less led by Moscow. The need for Christian civilisation's "counter-revolution" allows them to explain why they have to work unfamiliarly as administrators converting villages or as policemen terrifying towns. Being honest, they are prepared to admit the size of the task. France must make a heroic effort in men and money, it must carry out a social revolution in Algeria—and only the disinterested army is capable of playing this last card of *la grandeur française*. What they do not see is the fantastic disparity between their epic dreams and the moral and material resources of any modern, medium-sized democracy; or that the universal belief in progress which makes Moslems yearn for independence makes Frenchmen only half-inclined to the struggle for domination. It fatally predestines them to disappointment.

Doubtless, the view of the average officer or soldier is less coherent and explicit than this. Dissatisfaction has not broken the dykes of a long tradition of public service. Ministers agree that the generals are not rebellious: their postwar unpopularity for being involved with Vichy has discouraged them more than ever from taking matters into their own hands. But as Jean Planchais, the military correspondent of *Le Monde*, points out in his recent essay, "*Le Malaise de l'Armée*," today's coups are apt to be made by colonels. The fighting echelons consider that their commanders have too often failed (the commander-in-chief in Algeria, General Salan, was not a roaring success in Indo-china), and that they are tainted by "the regime." Two weeks ago a lamentable debate in the Assembly probably heightened this impression by making the nomination of generals seem merely a point at issue between rival socialist and conservative parties.

In general, the recent break-up of executive authority has made the government incapable of even holding the generals. "Discipline for the generals" has become synonymous with indiscipline. Marshal Juin was a prime offender as pro-consul in Morocco and during his anti-EDC campaign. One general, Faure, had to be imprisoned (only 30 days) for noisy association with right-wing extremists in Algeria. Another, Dufourt, the inspector-general of artillery, seems to have orchestrated the recent Assembly attack on the promotion system. A third sided with him publicly.

Several generals, like Bollardière, have resigned their posts in protest against the official conception of "pacifying" Algeria, or like Guillaume or Zeller, against the disruption of the new-model French divisions in 1956 to meet the needs of the Algerian war. A score of personal cases underline the rift between governments and soldiers.

Nobody supposes that a generals' or even a colonels' coup is in the offing, though the essence of conspiracy is to be unexpected. But what if a "sell-out" in Algeria put a match to the army's bitterness? It might soon spread to France. There are 70,000 ex-parachutists in France, some already supporting semi-farcical but unpleasant gangs of right-wing toughs like Biaggi's. As to the ordinary conscripts, many of them, including Communists, return with their anti-Moslem prejudices strengthened.

Fear that the army may become the arbiter in a crisis is another of the many reasons for thinking the Fourth Republic is unlikely to change its blind-alley policy in Algeria. Yet the frustration of the army itself is mainly a result of the failure of political authority of which prevarication in Algeria is one aspect. As party divisions weaken authority, every corps of public servants seems to gain in independent power, but not of its own volition, for each knows that anarchy will finally recoil on itself. Determination by a republican government could probably still save France very easily from Latin-American abysses. But that determination is just what seems to be lacking; and the government, by failing to command, undermines the army's morale more insidiously than would any punishment.

King Saud on the Fence

BY A CORRESPONDENT

FOR nearly six years the regime in Saudi Arabia has chosen to live with the Egyptian revolution. King Farouk was not popular with the Saudis, and treated them as country bumpkins when they came on spending sprees to Cairo. It was easy enough for the Saudis to regard the Egyptian king as un-Arab, and on his departure they shared in the general rejoicing. The leaders of the Egyptian revolution promptly made what appeared to be dutiful pilgrimages to Mecca and Riyadh, and platoons of Saudi princelings sat in Cairo reviewing-stands applauding the achievements of the revolution. Not until October, 1956, when President Nasser appeared in triumph before the largest crowd ever gathered in eastern Saudi Arabia, was there any sign that King Saud might understand what the Egyptian revolution meant for him. The crowd was for Nasser; King Saud was ignored until President Nasser himself took the king by the hand and waved.

Now the union of Egypt and Syria and the federation of Iraq and Jordan demand that King Saud must declare his intentions more clearly than in the past. The usual Saudi way out is to temporise. It is the way things have been working in Saudi Arabia for a long time. King Saud may still hope to become the counsellor and arbiter that his friends have tried to make of him during the recent past. So far, he has not had much success. He is too vulnerable, as an absolute monarch, to the principles of the Egyptian revolution; his armed forces are of little account; and he is physically handicapped by near-blindness. The time has come when his considerable prestige as keeper of the Moslem holy places and his steady income are not enough to assure him a special position in the Arab world.

King Saud may, as reported, plan to join the Arab Federation of Iraq and Jordan. This should not violently upset his domestic affairs, and it should not cost him more money than he already gives Jordan, if support for the weaker member of the federation were his membership fee. Saudi troops have been in Jordan since the Suez crisis, though it has never been very clear just what they are meant to be doing there. Real ties between Saudi Arabia and Iraq, however, hardly exist. Each has oil, and they share a long land border; but for over thirty years the greatest fear of the Saud family has been of the Hashemites to the north. The Saudi kings have spent millions to keep Syria out of the clutches of Hashemite kings and politicians. Since King 'Abd al-'Aziz established himself as Lord of Arabia, hundreds of Syrians and Egyptians have taught, doctored, engineered, advised and represented the Saudis. Few Iraqis have gone to Saudi Arabia. For some years after the last war, Rashid 'Ali al-Gailani, with an Iraqi price on his head, found prosperous refuge in Riyadh, but he quarrelled with King Saud and has been in Egypt for over three years. In 1953, King Saud, as Crown Prince of Saudi Arabia, attended the coronation ceremonies of King Faisal in Baghdad, but he was displeased by the protocol arrangements and Iraqi-Saudi relations remained strained until Dr Damluji and Amir Zaid visited Riyadh to prepare the way for King Faisal's visit to Dammam in October, 1956.

Or King Saud can, if it will have him, join the new United Arab Republic in some way. This would satisfy Arab opinion outside Saudi Arabia. It would be a popular movement in Saudi Arabia. It would make safe the passage of Saudi oil through the Suez Canal and through the pipeline across Syria. The price demanded by Syria and Egypt for accepting King Saud as even a limited partner would probably be a share of his oil revenues far in excess of the present canal and pipeline tolls. King Saud and his vast family would have to cut down on ostentation and—once allied to radicals—would have to be content to see that more money was spent locally on public works, education and health services. Saudi Arabia would still be a barren country, but if its revenues were invested instead of consumed, it would be a safer place for King Saud and for his friends. The money spent for even an associate membership in the new republic would assure him of toleration in the Arab world.

*

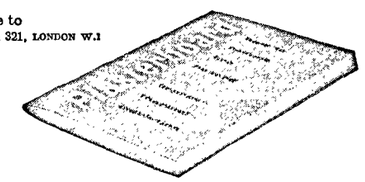
Through an association with the United Arab Republic, King Saud could disembarrass his American friends, who, for all their coddling of him, are fully aware of the lack of popular support for any regime based on what has become so definitely the past. As an accepted associate of Egypt and Syria, King Saud could renew his broken relations with Britain and France without being branded a tool of the west. With the approval of Egypt and Syria, he could become an instrument for bringing about understanding between them and the Moslem powers of the Baghdad Pact. By accepting the association of King Saud, the leaders of the new republic could show the world, and the Arabs, that they are as independent as they claim to be.

Egypt and Syria have united without seeming to have worried too much about the details. They have united in

Thermal insulation WITH fire protection

THE THERMAL INSULATION (*Industrial Buildings*) ACT emphasizes the vital importance of thermal insulation. Insulating Gypsum Plasterboard is one of the best and cheapest methods of lining a building *safely* and efficiently.

At 5d.* per sq. ft.



INSULATING GYPSUM PLASTERBOARD has aluminium foil applied to one face and this, plus an air space, ensures thermal insulation values comparable with any other lining material even remotely similar in price. The core of all plasterboard is gypsum and gypsum contains about 20% combined water—an inherent protection in the event of fire. Readily available, easy to handle, strong, safe, simple to decorate, Insulating Gypsum Plasterboard means real economies *and it's British throughout.*

* *Approximate price of Insulating Plasterboard*

It's the core that counts . . .

THE INCOMBUSTIBLE GYPSUM CORE OF PLASTERBOARD

spirit, leaving the practical problems of geography, policies and economics to fall into place. There is no reason why Saudi Arabia could not join them in the same spirit. To expect the king who has everything to give up something is expecting a lot. There would even be the danger that the something might become everything. Yet the longer King Saud avoids a decision, the less will be his chances of surviving in an Arab world grown tired of kings. The facts are plain enough for him to see; but it is unlikely that he grasps them.

Cyprus on Tenterhooks

FROM OUR CORRESPONDENT IN NICOSIA

February 19th.

POLITICS in Cyprus always recall Alice in Wonderland and these days they get curiouser and curiouser. For some eight weeks the island has been on tenterhooks, waiting for a British policy statement—that distant far-off event to which the whole political creation seemed to be moving. When at last an announcement—albeit only an interim one—was made this week by the Foreign Secretary, the great majority of the people took it, not with indifference, but with unusual passivity.

The explanation of this phenomenon lay not in any satisfaction that Mr Lloyd's pronouncement gave, but in the fact that the cumulative effect of the events of the past month—the two-day "revolt" of the Greek left wing against the right, the Turkish riots, and the unsuccessful talks in Ankara and then in Athens—has been to create a deep sense of bewilderment and scepticism in people's minds. The Greeks especially were psychologically prepared for a negative statement—probably indeed for something worse than they have got. But the mood and reactions of the terrorist cadres in the mountain villages and hideouts are another question on which it is too early to pronounce.

Amid all the flurry of diplomatic and other activity in recent weeks two factors have helped to tranquillise the situation, or at least to maintain an uneasy equipoise between the three communities. One is the simple fact that the Greeks are being made to face the full strength of Turkish feeling—and to realise that violence is a game that two can play. A month ago there was not a Greek in the island who would not have dismissed Turkish agitation as a spurious, artificial bogey created by the British. Today, after the full fury of the Turkish riots, some of them are not quite so sure (though they would never admit their doubts). The truth is that the current campaign for partition is essentially artificial and politically contrived, but the prospect of some day living under Greek rule causes a deep apprehension, real and elemental, in the hearts of many ordinary Turks.

Another helpful factor has been Sir Hugh Foot's visit to Archbishop Makarios during last week's Athens talks. In the view of many people in the island, this action alone prevented the Athens meetings from being a complete disaster. Little has been released officially about the discussions between the two men, but in "frank" exchanges lasting about half an hour it may be assumed that some pertinent points about the island's security were gone into—and Cyprus may benefit considerably as a result. The Governor is to be commended for taking this step, the more so because he pulled it off without incurring any protest from the Turks, who since the talks in Ankara have been very confident. Indeed, some of the recent utterances of Dr Kuchuk have been inflammatory beyond belief—notably his "even if the world is plunged into conflict over it, we shall have partition." In the nonstop war of nerves that is going on in Cyprus, this kind of utterance may not be taken at its face value; but the Greeks are much more deeply disturbed by repeated reports that, as part of a settlement, some sort of Turkish base in the island is proposed. If this project, which from the long-range perspective of Whitehall has perhaps much to commend it, should be carried out, it will arouse the strongest resistance from the Greeks.

Meanwhile, both communities have their eyes closely glued on the calendar. The long shadow of Rochdale has stretched as far as Nicosia; and the Greeks feel that time is in their favour. Within two years, it is argued, a Labour government will be in power—and the promised land in sight. This factor might conceivably serve to restrain Eoka's hand, for there are Greeks who consider a modified campaign of passive resistance would pay greater dividends than violence—until the British elections. (The mass resignation recently of mukhtars, or village headmen, may perhaps be construed as a development along these lines.) But the prospect of a Labour government is certainly unlikely to make the chances of early agreement with Archbishop Makarios any easier. Meanwhile, almost as these words are written, the island is getting on tenterhooks again—waiting for the next expected statement from the Archbishop.

Neapolitan Scandals

FROM A CORRESPONDENT IN ROME

ABOUT three months before a general election, the Christian Democrat government has dissolved the municipal council of Naples on the gravest charges of mal-administration. The executive junta of the council is the creature of Signor Lauro, leader of the Popular Monarchist party, who was himself mayor of Naples until he resigned a few weeks ago to stand for parliament. Now, in addition to the collective charges against the junta, the ex-mayor, his successor, and a number of councillors are separately accused of peculation and of systematically abusing their office. A prefect-commissioner has been put in charge and the Procurator of the Republic is holding an inquiry. Here is an unexpected promise of sport in the forthcoming elections, for a race has been engaged between the Christian Democrats and the Popular Monarchists which can only end in the discomfiture of one or the other—to the probable benefit of the Communists, whose chances in the South are brighter since the scandal broke in Naples. Meanwhile most Italians give Signor Lauro the odds.

Ex-Senator Achille Lauro is a septuagenarian millionaire shipowner who has given Naples the best football team that money can buy. He has also built a fine square in Naples for which the city is heavily in debt. One of the charges brought against him by the Home Secretary, Signor Tambroni, is grave irregularity in the free distribution of medicines to the poor. (Another irregularity for which Signor Lauro is famous at election times is the free distribution of macaroni and shoes; one shoe before the election, the other after.)

It is no coincidence that the most picturesque figures in Italian public life since the war are the mayors of some historic cities—Florence, Bologna, Naples—for municipal life still retains the flavour of by-gone independence. But Signor Lauro is the only one who has raised municipal politics to the national level. Out of the ashes of a dry-as-dust monarchist cause he has raised a new Qualunquist movement for the South. "The rebirth of the South is my mission," he proclaimed in his first public utterance after the government's attack. Southern Qualunquism may not be any more consistent than the original brand invented by Guglielmo Giannini in 1945, which played itself out in three years.

For the moment, however, the wind is in Signor Lauro's sails. At the Sardinian regional elections last year he won new ground by drawing off votes both from the original Monarchist party and from the Christian Democrats. Naples is his stronghold with a basis of 300,000 votes, but the whole of southern Italy is his hunting ground. The Christian Democrats will have to make haste if they wish to destroy him before the election. Nothing short of arrest on a penal charge is likely to do that. The mere fact that the municipal council defied the Prefect and the central committee for local finance by budgeting for a deficit of 33 milliard lire (£20 million) is no crime in Neapolitan eyes. Naples has always been in debt, like the Neapolitans, and if the mayor was cunning enough to get the central government to pay its debts, then so much more credit to him.

The government's action is universally interpreted as a declaration of war by the Christian Democrats upon the Popular Monarchists, but the reasons for this and its timing are hard to understand. Signor Fanfani has evidently determined to make a bold bid for the conquest of the South. The fact that Cardinal Mimmi has been replaced as Archbishop of Naples by Bishop Castaldo is thought to have influenced the new policy. Hitherto the local clergy supported Signor Lauro, and this was the only area in the country where the Christian Democrats could not count on the electoral support of the parish priests.

★

The political aspect of the government's intervention distracts attention from its merits. It may be true, as the Communists and the "Laurini" say, that worse things happen in other big towns where the Christian Democrats control the juntas, but the fact remains that in Naples things had come to a pretty pass. The corporation tram company was so heavily in debt that the service was about to cease. Eight specific charges and six subsidiary accusations are levelled by the Home Secretary against the council. These include unbounded prodigality in accepting financial commitments, enormous expenses for personnel (the corporation employed 14,000 people), irregularities in the election service, arbitrary distribution of funds obtained by forced contributions from contractors, and so forth.

There is little doubt that Signor Lauro spent public money—but he also spent his own—on the most unorthodox system of welfare by largesse ever tried out in a modern state. The political reasons for which the scandal broke conceal its administrative essence. Naples is an extreme example of the crisis of local government in Italy, where the old Napoleonic prefectural system has never been adapted to the requirements of modern administration. Controlled by the prefects and by the central committee for local finance, the municipal councils failed to develop a full sense of responsibility. Their sources of income are inadequate to the new standards of welfare. The central government reproves the great cities for getting inextricably into debt, but no one seems to notice that one reason for this is inflation and the fictitious value of the lira whose solidity is like the Emperor's new suit.

The cost of living rises and local governments feel the strain at first hand, but for the central government all is well so long as the budget can be balanced. A few weeks ago the government announced with pride an enormous drop in the national deficit, which is down to 134 milliard lire (£80 million). Yet there is something odd about an economy in which the national deficit stands at 134 milliard and the deficits of the city of Naples at 33 milliard lire. Signor Lauro may have over-budgeted—he had 200,000 unemployed to think of, which is nearly a tenth of the city's population. But it looks as though the Treasury has under-budgeted. Someone will have to find the answer soon.

Caring for Israel's Youth

FROM OUR CORRESPONDENT IN TEL AVIV

IN 1934, a year after Hitler's rise to power in Germany, there arrived in Eyn Harod (a collective settlement in the valley of Jezreel) a group of teenage sons and daughters of German Jews, mostly members of the middle class. They brought with them plenty of personal belongings, even bicycles and tennis-rackets, which caused awe and astonishment among the Kibbutz children who, although well fed and clothed, were used to an austere life. The newcomers, all fifteen years of age, were put to work for four hours each day; for a further four hours they were given lessons. They remained in the settlement for two years and thus by work, study and community-activities were fitted for life in Jewish Palestine.

This venture was initiated by Henrietta Szold, an American Zionist who came to Israel in the early twenties and combined a humanitarian outlook with exceptional organising ability. She called the organisation which was to look after the children "Youth Aliyah" (Aliyah being Hebrew for immigration) and she soon discovered that by taking Jewish children out of Hitler's Germany she had saved their lives. Many Jewish parents who lingered on in Germany in the hope that the nightmare would vanish were ready to give their children the chance offered by Youth Aliyah.

Since the arrival of this first group, Youth Aliyah has taken care of 85,000 children. Today the organisation has a yearly budget of roughly I£11 million and clamours for more money to meet its needs. It looks after children in more than 280 institutions, of which 92 are schools of various kinds. It maintains two seminaries, one of them for students who are to work in orthodox religious institutions. After the establishment of the Jewish state, mass immigration confronted Youth Aliyah with an entirely new problem. It then found itself called on to look after the children of oriental Jews who came from Yemen, Iraq, Persia and India, North Africa and Egypt. Parents, who were themselves unable to make a transition from an eastern way of

life to a western industrialised society, were also unable to educate their children. Under the stress, family ties grew tenuous and the children found themselves without proper guidance. Youth Aliyah sent its agents to North Africa and set up screening camps in southern France to give the children medical checks and a short preparatory training before sending them on to Israel. Roughly threequarters of the 14,500 children now under the care of the organisation in Israel come from oriental communities.

In the central reception camp the director—a graduate of the first Youth Aliyah group—tells how he and his colleagues taught their wards that beds should be slept in and not under; that daily washing was necessary and by no means dangerous; that knives and forks were for daily use. The teachers had to learn to understand the habits and beliefs of their wards; that it would be dangerous to destroy at a blow the world the children lived in; and that they had to combine understanding and respect for the oriental way of life with the teaching of new ways. The onslaught on old values led many children into a wilderness of doubts and fears. At this critical stage the advice of the psychologist and anthropologist was indispensable.

*

At first Youth Aliyah accepted children from abroad who were orphans, or who could not travel with their families, and children who were already in Israel but without homes. But even the best of care is no substitute for family affection; a few years ago, therefore, the organisation decided to open day centres where teenagers could be cared for without leaving their families. These day centres not only provide education—many of these children of fourteen and fifteen cannot read and write properly—but try at the same time to find work for them. Social research in the poorer immigrant centres showed that the majority of the teenagers who caused anxiety to the social worker were unable to find and keep a steady job, and that the parents were either unable or unwilling to allow their children further training once they had finished elementary school. Youth Aliyah decided to offer manual training and to pay the boys and girls while they were being taught. Thus the teenagers had an incentive to come to the centres and do their work properly and the parents were content to leave them there since they brought back a pay-check at the end of the week. For instance, in rural areas the day centres teach the children how to service and mend machinery, look after the livestock and take over gradually responsibility for their parents' small farm. In the process endless new problems crop up. The children have to learn how life is lived in a modern society; yet care must be taken not to estrange them from parents who still cling to old customs.

This last year, children from eastern Europe have also been handled. These are generally quite well taught, although they do not know Hebrew. But many of them have lived in their country of origin without knowing that they were Jews, and when they learned this just before leaving—or even only on the boat to Israel—the revelation came as a shock. Neither children nor parents know much about Zionist ideas; they have been educated according to Marxist principles and are bewildered by a world that appears to them topsy-turvy. Having seen values which they were taught to regard as eternal vanish into thin air, they are troubled and suspicious and apt to tell the teacher that they do not believe a word he says. To a certain extent, but in another form, this is a repetition of the behaviour of children from the DP camps.

Today, much of the work of Youth Aliyah is being done in co-operation with government departments and various voluntary organisations. Many of the Youth Aliyah people welcome this development, since their successes and bold innovations have made them especially alive to the danger that the government's mass immigration arrangements might leave behind them a residue of under-privileged children.

European Standards of Living

WESTERN EUROPE'S standard of living has been creeping up only very slowly on that of the United States and is still a long way behind. A new comparison by Mr Milton Gilbert and associates of the Organisation for European Economic Co-operation* suggests that the average national product per head in OEEC countries was around 42 per cent of that in the United States in 1955 and 38 per cent in 1950.

Such comparisons cannot rely on official exchange rates to convert national expenditures into a common currency because European currencies have a larger purchasing power than their dollar equivalent would indicate. As in an earlier study, Mr Gilbert compares the quantities of goods and services produced in a European country with those produced in America in terms of a common set of prices. But what set of prices should be chosen? Some goods are relatively cheaper in one country than another and price structures vary considerably. In 1955 the output of goods and services per head in the United Kingdom was calculated to be 64 per cent of that in the United States when both were valued at American prices, but only 51 per cent at British prices. American pricing consistently gave a more favourable comparison for European countries than domestic pricing.

REAL NATIONAL PRODUCT PER HEAD
(1955 Comparisons; United States = 100)

United Kingdom	57	Germany	51
Norway	55	France	49
Belgium	53	Netherlands	47
Denmark	51	Italy	29

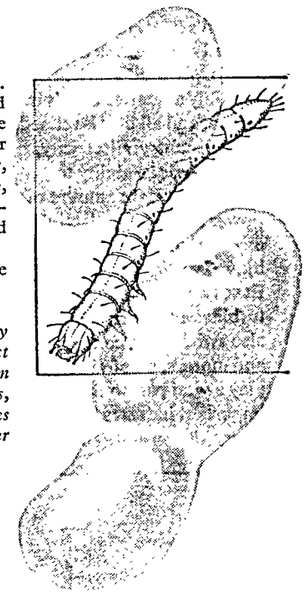
Although the complexities and uncertainties of measurement are much magnified in international comparisons, a choice arises in much the same way in weighting an index of national output or prices. There is no unique answer. In this study, a compromise has been struck by using the statistical device of a geometric mean to blend the two answers. Results on this basis for eight European countries are shown in the table.

Although the United Kingdom leads the list with the highest national product per head in 1955, it made a poorer showing in investment in 1955 than other countries except France and Italy; the rate per head was only 46 per cent of the American level. On the other hand, Britain was the only country in which defence expenditure per head (at American prices) was over half that of the United States.

* Comparative National Products and Price Levels. By Milton Gilbert and associates. OEEC. (Available at HMSO. 24s.)

Brass on the wall

"There used to be a dozen and more horses on this farm when I was a youngster, and every one had a name beginning with T. *Toledo, Tarquin, Topsy, Tuscan* . . . I remember them all. Suffolk Punches they were mainly, and a team of Clydesdales to haul the heaviest waggons. You wouldn't have found finer anywhere in England. Coats sleeked till they shone like marble, manes and tails ribboned and braided, brasses swinging and jingling and flashing in the sun . . .



"Now the only T in the stables stands for Tractor, fodder comes in metal drums and the old brasses for ever need polishing . . .

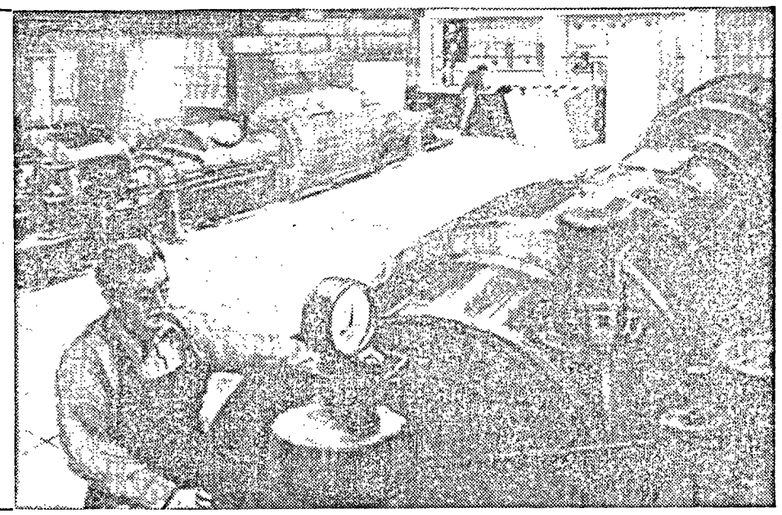
"Not that I'd go back, mind you, any more than our ancestors, who worked these fields with wooden ploughs centuries ago, would have gone back to oxen, once the horse collar had been invented and given them four times the pulling power. You can't stand still on a farm . . .

"Take soil insecticides and fertilisers, now. It's not so long since feeding the potato crop and protecting it from wireworm meant two separate operations. To-day—well, we halve the labour costs by applying the fertiliser and aldrin *together*, and no extra machinery is needed. What's more, giving the crop food *and* protection at once encourages more rapid growth, and yields are increased all round.

"Strange to think that Shell speeds both the plough *and* the crop."

Aldrin/fertiliser mixtures may be used on any crop throughout the world where there is a soil insect problem. Ready-mixed products can be obtained from leading fertiliser manufacturers in many countries, or the mixing can be done on the farm. Aldrin does not cause caking of the fertiliser and is stable under acid or alkaline conditions.

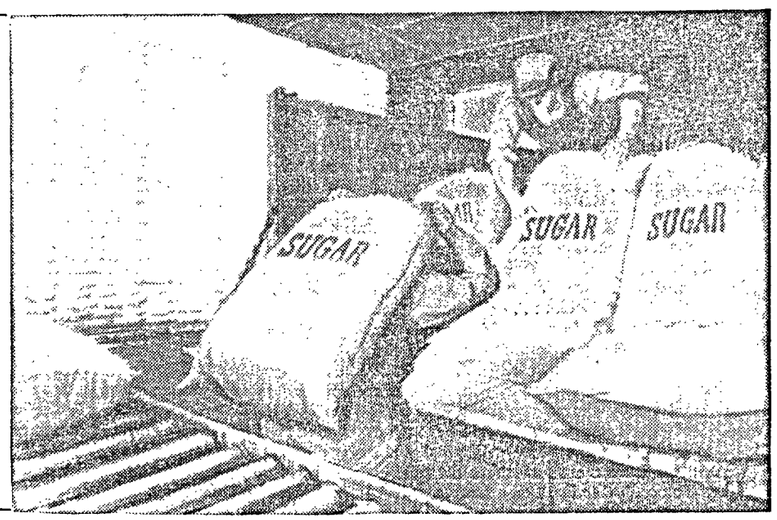
aldrin



ALDRIN, DIELDRIN, ENDRIN, D-D AND HEMAGON ARE SHELL PESTICIDES FOR WORLD-WIDE USE

For further information apply to your Shell Company.

Issued by The Shell Petroleum Company Limited, London, E.C.3, England



'ENGLISH ELECTRIC'

Half Britain's electricity is consumed by industry—and industry almost doubles its demands every ten years. ENGLISH ELECTRIC is helping to meet this demand by supplying equipment not only for the great new power stations—including the world's first 500,000-kilowatt atomic power station at Hinkley Point—but also for organizations generating their own electric power, like the sugar factory whose power house is shown here.

bringing you

Britain's consumption of refined sugar is well over 100 lb. per head yearly. Roughly a quarter of this is grown, and all of it is refined, in this country. Electricity, with its unique ability to provide the right amount of power at the right place, is essential to the sugar industry; and ENGLISH ELECTRIC supplies not only turbines and generators, but also switchgear, control gear and motors, all of which play a vital part in this important industry.

THE BUSINESS WORLD

RESTRICTIONS AND THE ACT—I

More Competition or Less?

WHEN the Restrictive Trade Practices Act came into force eighteen months ago, it was welcomed here as a spur towards more effective competition and greater flexibility within British industry. Some of its flaws were recognised from the start. It made individual price maintenance legally enforceable for the first time, and it curtailed the powers and activities of the Monopolies Commission. So the Government gave industry an admitted *quid pro quo*. What industry accepted in return—the outright banning of collective price maintenance; the open registration of a wide range of restrictive trade practices; and the presumption that these practices were against the public interest and, unless justified before a new Restrictive Practices Court, would have to be abandoned—all these changes seemed likely to leave something over as a net encouragement to competition. It is still too soon to confirm or reverse that judgment; no agreement has yet come before the court. But it is not too soon to look at certain changes in form and in practice that have already taken place in industry as a direct result of the Act.

One of the first effects of the Act was the welcome disappearance of the stop lists and secret courts associated with collective price maintenance through which recalcitrant price cutters could be made to toe the line or be forced out of business. The Act made collective price maintenance quite unconditionally illegal: manufacturers operating such agreements—among whom the tobacco and motor car firms were conspicuous—had no option but to abandon their joint agreements with wholesalers and retailers. But in the case of other restrictive trade practices the manufacturers, wholesalers and retailers were given, in effect, a three-way option. They could register their agreements as they stood, and prepare to defend them as being in the public interest; they could amend them before registration, leaving out some of the less defensible conditions, and then defend the agreement as revised; or they could abandon their agreements or put them in a form in which they would not need to be registered at all. Some 1,800 agreements have now been submitted for registration, of which a large number are dated between December, 1956, and February, 1957, which suggests that they were revised before submission. Total registrations are fewer than was originally expected; this, too, is officially thought to show that quite a large number of agreements have been either abandoned or amended in some way to avoid registration. It is also possible that agreements between three parties (which have to be registered) have been converted to two-party agreements (which do not) by a merger of two of the parties to the original agreement. Finally, some manufacturers have already begun to take advantage of their new legal powers to maintain the resale prices of their own goods; the motor industry is prominent here, and other industries much less so.

It would be practically impossible to summarise all the changes that have been made in the form of several hundred different types of restrictive agreements between firms; and quite impossible as yet to discover whether a change in the form of an agreement represents a real change in practice, or is merely a more readily justifiable way of describing the same restriction. But it may be worth taking one industry or group of industries, and examining in detail how its agreements and practices have altered. Our choice of the motor industry and its accessory trades for this role does not imply that the changes in methods of distribution and price maintenance there are necessarily

typical of the changes made in other industries. But it is the fact that the motor industry has made exceptionally forthright use of its new power to enforce individual price maintenance through the courts ; it has had to abandon one of the most comprehensive systems that formerly existed for the collective enforcement of price maintenance ; and because it is so convinced of the public virtues of resale price maintenance, it has been franker than most other industries in explaining and documenting its reactions to the Act.

UNTIL last year, the motor industry enforced collectively, through the British Motor Trade Association (BMTA), a most rigorous form of resale price maintenance on motor vehicles, tyres, plugs and other accessories. Complaints of price-cutting were investigated by the association ; evidence was acquired through test purchases by members of its staff ; and where the threat of further action was not deterrent enough, the offender was hauled before one of the association's price protection committees. These sat in secret : the price cutter could either be fined or, in the last resort, put on the association's " stop list " and denied all supplies. These enforcement activities were financed by the association, to which all dealers and wholesalers were in practice compelled to belong and to which they paid fees. With the new Act, compulsory membership of the BMTA, price protection committees and stop lists all disappeared. But the BMTA remained ; though shorn of its powers of enforcement, it kept some 80 per cent of its members on a voluntary basis. The need to register restrictive agreements called into being a new body, a Distribution Scheme Committee of the vehicle manufacturers, which drew up a comprehensive distribution scheme, to which dealers and wholesalers were admitted. This scheme is registered as a restrictive trade practice. All other agreements between manufacturers and their wholesalers and dealers have been converted into a host of separate two-party agreements which the High Court has held, in a test case brought by the Austin Motor Company, to be exempt from registration.

The new distribution scheme specifically permits a dealer to sell—but not to stock—any make of car, whether he has a franchise from the manufacturer of that make of car or not. The change is more apparent than real. An Austin dealer, for example, could always have sold, say, a Ford to a customer who asked for one. But if he has a franchise to stock and sell Austins he still cannot stock Fords ; in taking delivery from a Ford main distributor he still has to accept a lower trade discount than a Ford dealer would get ; and the customer still invariably obtains much quicker delivery by going direct to the Ford dealer. The compulsory membership of the BMTA has gone, but a dealer cannot obtain a franchise from a manufacturer unless he is admitted to the new distribution scheme ; and the price of admission is a fee of three guineas (nine guineas if he is a wholesaler), and an undertaking to observe all the conditions of sale, including the retail price, set by any manufacturer whose products he may handle.

The distribution scheme itself provides no means of enforcing these conditions, but the manufacturer is not unaided in bringing his case before the courts. The BMTA, though shorn of its secret courts and stop lists, still retains its powerful apparatus of investigation and test buying to secure the evidence and prepare a case for the courts. In practice, of the several hundred complaints that have been investigated by the association since the new Act came into force, all but seven have been settled without going to court. In most cases, a " friendly " warning from the association, backed by the implied threat of court action, suffices to show the offender the error of his ways. But in six cases, and one other now *sub judice*, the price cutter has been taken to court by the manufacturer, acting on the evidence supplied and a brief prepared by the association. In each case—two concerning motor cars, two tyres, and two plugs—the manufacturer won. And in each case the manufacturer asked for and obtained an injunction to bring a speedy end to the price cutting. Costs were awarded against the price cutter, although the heavier cost of investigating and preparing the manufacturers' case is still borne by the BMTA. The association, now dependent on voluntary membership, is not as rich as it was. On the other hand the entrance fee to the new distribution scheme is much larger than would seem to be required by the present cost of administering the scheme and publishing a register of traders.

WHENEVER the abolition of collective price maintenance was suggested before the Act was passed, retailers—who usually provide the main impetus behind resale price maintenance—invariably maintained that individual price maintenance would be too slow, cumbersome, expensive, and ineffective for their purpose. In practice, in the opinion of the BMTA, a court injunction, which can be speedily obtained, is a far stronger deterrent to price cutting than the old stop list, which was never completely proof against the wiles of the smaller dealers. And with an association to investigate and prepare the cases for the court for submission by the manufacturer—at the dealers' and wholesalers' expense—the manufacturer is relieved of much of the burden of enforcement.

Yet there remains one form of price cutting, at times quite widespread, which the manufacturer is powerless to prevent. When a new car is sold for cash, the dealer's profit margin is rigidly fixed ; but the great majority of new cars are sold, not entirely for cash, but against a secondhand car which the dealer buys in part exchange. The dealer does not know his profit on the sale of the new car until he has valued the used car—and frequently not until he has completed a whole

series of similar transactions. This introduces a welcome element of flexibility into the price structure, for it is not uncommon for a dealer to cut his profit margin by as much as a third, by paying more for a used car than he thinks he can get for it, in order to make the sale of the new model. The manufacturer of the new car now has the legal right to prescribe the price that may be paid by the dealer for the car he takes in part exchange ; but he has never tried to do this, even before the Act.

In sum, the motor industry, for all its apparent changes, is still organised on broadly the same lines as it was before the Act came into force. Open price competition is still mainly confined to that between manufacturers, and the Act has brought no new flexibility to wholesalers' and dealers' profit margins. This applies also to tyres, a trade in which a majority of the Monopolies Commission felt that price competition could be induced only by abolishing individual as well as collective resale price maintenance.

The Act of 1955 indeed gave specific legal sanction to practices that the Monopolies Commission had advised should be made illegal. The motor industry may have more arguments to wield in favour of resale price maintenance than could be adduced by other industries. But its reorganisation since the Restrictive Trade Practices Act was passed shows, in one industry at least, how little real change has followed the ban on collective price maintenance, and how effective its legal successor, individual price maintenance, can be in achieving the same ends. If this Act is still to prove itself on balance a force making for more price competition, rather than less, it will rest with the Registrar, the Restrictive Trade Practices Court and the rump of the Monopolies Commission to show how this can be done. The preparations that they have made so far, and some of the problems they have encountered, will be discussed in a second article.

The Crown Agents

A department without a Minister and without a vote, run by public servants who are not civil servants, the Crown Agents have sprung into the news, but not in the way they would wish

RECENTLY that most retiring of public bodies—the Crown Agents—has come under fire. The Finance Minister of Ghana has been talking about " better management " of his country's assets. Mr Mintoff too has been grumbling that Malta's funds have suffered depreciation. The funds that have been invested on behalf of their countries by the Crown Agents should be sharply distinguished from the sterling balances that they hold. Rather less than half of Ghana's total funds are managed by the Crown Agents. But the fact that overseas governments are being critical—as they have every right to be—is a reminder that, as the ties that hold the British Commonwealth become more tenuous, its newer self-governing members may not avail themselves of the services of the Crown Agents without question. Since the Crown Agents hope to continue to act for the new countries they must justify the efficiency and the cost of the services they offer.

No one answers for the Crown Agents in Parliament ; no blue book is laid, and no estimate debated. The accounts for 1956 show a thriving multiple business that makes no call on British revenue. The Crown Agents bought goods and stores on behalf of their clients totalling £73 million in that year ; they run agencies for the inspection of goods ; they will select candidates for appointments ; a philatelic department arranges stamp issues and sells to dealers ; and the loan and investment department supervises separate funds aggregating £962 million. A revenue of just over £2 million from their activities enabled the Crown Agents to pay their way and to carry £144,000 to reserve.

The Crown Agents are thus self-supporting. They are also independent. The Agents—Sir George Seel and Sir Alfred Savage—are appointed by the Colonial Secretary and the non-technical staff they employ are recruited through Civil Service examinations. At that point the link with British machinery of government ends. The Crown Agents work here on behalf of overseas governments and administrations, not as agents of the British Government. When they make a surplus, it is passed to their clients as a refund of charges—like any co-op store. And the charges are competitive. The rate of commission for buying stores is normally 1½ per cent ; the basic charge for inspecting goods is 1 per cent ; the fee for acting as an employment agency is 2½ per cent on the first year's salary with a maximum of £25 ; postage stamp issues are controlled at 4d. per 1,000 stamps ; the charge for issuing loans is £1,000 on the first £2½ million and £750 per million on the balance plus brokerage, and the loan management charge is 14s. per stockholders' account per year. At these scales of charging, the gentlemen of Millbank can claim some notable victories in competition. After Ceylon had gained independence it opened its buying to world-wide competition but the Crown Agents continue to handle most of it. They continue to act for Iraq and a plaque adorns the Millbank office, presented by the Jordan Arab Army long after the dismissal of Glubb Pasha.

The buying and servicing business of the Crown Agents needs a staff of engineers up and down the

country, on the Continent and a subsidiary agency in America ; it is successful and one of the largest of such businesses in the world. Buying is in no way restricted to sterling goods, for the interest of the client comes first ; but in practice over 90 per cent of the orders are placed in this country. The Crown Agents do not act for the "white" Dominions or for India, nor for the East African and West African currency boards. Even so, their customers number over 150 and include most of the other governments and principal public authorities of the overseas sterling area, together with a few outside the Commonwealth, such as the United Nations Reconstruction Agency in Korea and the United Nations Emergency force in Gaza. Their official style "Crown Agents for Overseas Governments and Administrations" well describes the customers.

It is on the financial side—the management of the £962 million invested in the London market and of the £220 million of funded debt borrowed through that market—that the impact of changes in the shape of the British Commonwealth is most likely to be felt. Unfortunately information on that side of the business is thin, for the Crown Agents take the understandable view that investment instructions from their principals are confidential. Accordingly, they do not disclose how they have invested nor even on which funds they have accepted instructions and on which used their own discretion. They invest almost wholly within the Trustee list and therefore almost wholly in fixed interest stocks and wholly within the sterling area. They hold substantial balances on loan to local authorities and in Treasury bills. Their portfolios include big blocks of their own colonial issues as well as United Kingdom gilt-edged stocks.

Most colonial government prospectuses of recent years have contained a statement that part of the total to be raised would be subscribed with colonial government funds. Thus in effect part of the money borrowed by colonial government X is provided from sinking funds, reserves or pension funds that are being built up by governments Y and Z. How far this interlocking goes is not revealed, but the total of the Crown Agents' loans in issue is £230 million nominal (of which about £220 million is quoted), so that obviously the great bulk of the £962 million is in United Kingdom stocks. There is no breakdown of the investments between long and short, nor are the holdings of individual countries given.

From the standpoint of the Crown Agents' customers one doubt has to be allayed. If overseas government X wants its money, can it get it without loss ? The chances that X will want some of its money in the next few years are high : the exuberance of newly won autonomy, the pressure of falling commodity prices and the ambitions of capital development will see to that. X will not be much concerned that some of its funds also form part of the central reserve of a Commonwealth whose benefits it has chosen to continue to enjoy ; nor are the Crown Agents inclined to raise that argument. Some of the overseas governments are becoming less conscious of a sense of membership of a financial system run from London and more conscious of their rights as creditors of it.

There is emphatically no evidence that X would have done better with a different investment adviser, but unfortunately the Crown Agents do not produce evidence to show that they have done better than anyone else could do. To provide the necessary reassurance the Crown Agents really need to illuminate their financial policy and, without revealing the affairs of individual customers, to show how it has worked as a whole. If they have foreseen the inevitable drawing down of funds, and hold liquid funds to meet further withdrawals, as it is believed they do, would it not be wise to say so ?

The financial service that the Crown Agents offer includes a fair measure of independence from the financial discipline of the London market. The only comparable authority that deals in its own stocks regularly is the British Government itself and the Crown Agents have never been asked to use their buying and selling as an instrument of financial policy in the way that the British Government does. The Crown Agents need consult only the interests of their principals and hitherto they have been fairly persistent buyers and only occasional sellers. If they had to become persistent sellers, their customers would naturally suffer. But the Crown Agents take the view that the regular investment of the sinking funds which they manage should ensure that they do not become net sellers of their own stocks on the market.

In the making of new issues the Crown Agents naturally accept the full discipline of the capital market, including CIC consent and arranging their operations in consultation with the Bank of England. But when issues are difficult to arrange—as they have been in the past twelve months—the Crown Agents offer an additional service. Two long standing funds, the Joint Consolidated Fund and the Joint Miscellaneous Fund, amounting together to some tens of millions of pounds, are invested short and can be drawn upon for temporary advances. That is another example of self-help among the members of the overseas sterling area through the Crown Agents. It is not clear why the size of those funds and how they are invested cannot be disclosed.

Customers of the Crown Agents may well consider that the facilities they enjoy in the London capital market are worth preserving. They enjoy trustee status for their loans, and while this advantage does not spring from using the Crown Agents, the Crown Agents have long experience of such financing. Their task, therefore, should be, first, to convince the overseas administrations that they are their agents and not the agents of the British Government, as they are doing ; and secondly, to convince them that the expert financial service they offer is at least as good as could be obtained elsewhere, and that may compel them to reveal a good deal more about themselves.

BUSINESS NOTES

IN THE MARKETS

Australia Follows On

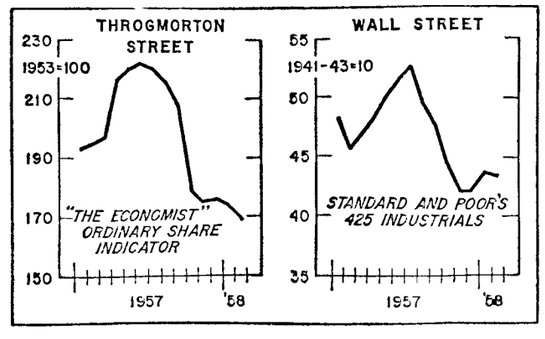
As was anticipated the Australian loan follows hot on the heels of the British Government's 5½ per cent Funding issue. The market that it finds is therefore largely the result of the response to that issue. It was a response neither bad nor distinguished. The cryptic announcement that applicants for up to £1 million received full allotment and larger applicants about 82 per cent of the amounts applied for, is obviously intended to be neutral ; there were some applicants, apart from the Government departments, but the talk of vast sums of American money pouring in has proved to be the moonshine that the authorities always supposed it to be. The new loan has nevertheless proved attractive since allotment. A demand now exists for it at about 98 $\frac{9}{16}$ at which the market can get supplies. The issue has therefore had the desired effect: the ebullience of the market in long-dated gilt-edged has been damped down, but the strength of the market on Wednesday and Thursday suggests that the bulls are still in charge.

How does Australia's offer of £16 million 6 per cent registered stock 1974-1976 at £99½ appear against that background ? The loan seems attractive because of its yield—£6 os. 7d. per cent flat and £6 os. 11d. to redemption in 1976. The market likes the loan and likes the fact that the amount of it is £4 million less than the amount of the maturing stock—the Commonwealth 3 per cent registered stock 1955-58. Holders of that stock are offered conversion into the new issue plus a cash payment of 10s. per cent representing the discount in the issue price of the new stock. Conversion from a 3 per cent issue to a 6 per cent one below par is obviously attractive. But the maturing stock may not be heavily converted ; it is to be paid off at the end of its natural life on April 15th, and is therefore now largely held as a short bill.

Success for the Australian issue seems highly probable. The only fly in the ointment—as with all combined cash and conversion issues—is the length of time between application and allotment. Cash lists open and close on Monday ; conversion lists remain open until February 28th. Therefore, if the issue has to depend to any extent on the stags it may be significant that they will not be getting their 10 per cent application money back with the recent speed.

Woe from Wall Street

The bulls have been in the ascendent in gold shares as well as in gilt-edged, but among industrials the price movement has been downwards. *The Economist* indicator at 168.9 shows a fall of 1.8 on the week ended on Wednesday, and stands at its lowest point since September, 1954. Most sections of the market shared in the decline ; shipping shares fell heavily and Shell new shares touched 17s. premium over the issue price of 110s. After recovering to 18s. 9d. they show a fall of 6s. 3d. since dealings began. Some market experts have blamed Colonel Nasser's Sudan frontier activities for the state of industrial markets, but the more potent cause was undoubtedly the persistent weakness of Wall Street. The decline in the dollar premium—the premium over parity with American and Canadian markets that United Kingdom residents have to pay for the privilege of dealing in dollar stocks—gives the measure of Wall Street's influence. The premium dropped on Tuesday to just under 4 per cent (over parity of $2.80) and it rallied to 4¾ per cent on Wednesday, and to about 5½ per cent on Thursday. By contrast it reached 20 per cent when sterling was under pressure last autumn.



British residents can perhaps be excused a little boredom with their dollar securities, and a little general selling with that feeling behind it has taken place. There are also clearly some repercussions from the Shell financing transactions in the movement. British residents selling Royal Dutch new in Amsterdam or New York, to buy Shell new in London would release premium dollars. The volume has been small, and the suspicion that Continental sales of Royal Dutch have been presented as though emanating from London cannot be substantiated. Theoretically the dollar premium market represents the transactions in dollar securities of United Kingdom residents and is not now tied to the market in security sterling which represents the transactions of foreign residents in sterling securities.

So big an international financing operation as the com-

* Adjusted for rights issue.

bined Royal Dutch and Shell issues could hardly be made without running into some complications. One difficulty did develop and brought arbitrage between London and New York in Shell new shares temporarily to a standstill. It arose out of the "pink" forms for the subscription of excess shares. The British vendor often does not surrender his "pink" form; in this issue it happens to bear a distinctive number so that it cannot be used by anyone other than the shareholder to whom it was issued. The American rule is that provisional allotment letters to be good delivery should be accompanied by their appropriate "pink" forms and that those "pink" forms should even be splitable. A temporary solution of the *impasse* was found by borrowing a block of "pink" forms from a group of shareholders, believed to include the Burmah Oil Company, and making them available to buyers in America.

STERLING

All within the Gold Points

FOR the first time the three types of non-resident sterling —American account, transferable and security—have all moved into the range of exchange fluctuations permitted under the International Monetary Fund code, $2.78-$2.82. Official or American account sterling is still in steady commercial demand and its rate has strengthened to 2.81\frac{15}{16}$-$\frac{7}{8}$. For all practical purposes this is its ceiling and the Exchange Equalisation Account must have been gathering a sizeable amount of dollars through its intervention in the market. But the sharpest appreciation has occurred in security sterling rate which, over the past week, has strengthened from $2.77 to 2.79\frac{1}{4}$. This appreciation in a narrow market is principally due to non-resident shareholders in Paris and New York taking up their "rights" to the "Shell" issue, while there has also been some French and American investment in gold shares.

Transferable sterling continues to be in strong demand in Zurich and New York and has risen to 2.79\frac{1}{4}$. The recent demand for it owes something to the persistent sales of gold by the USSR, invariably made against transferable sterling. According to an estimate by Samuel Montagu and Company, Russian gold sales rose from 4,300,000 ounces in 1956 to 7,500,000 in 1957. Samuel Montagu estimate that gold production in Soviet Russia last year was 17 million ounces, practically equalling South Africa's output of 17,030,000 ounces. The increase in Russian gold sales partly explains the exceptional expansion—of the order of 25 per cent—in the turnover of the London bullion market, but central bank operations in that market also become more important and these accounted for well over half the turnover. There was a marked decrease in the demand for gold for hoarding purposes. Of the total of about 37 million ounces of new gold sold in 1957, some 24 million ounces went into central bank reserves, 9 million ounces to hoarders, and some 4 million ounces to industrial consumers.

THE BANK OF ENGLAND

The Bank and the Public

MR COBBOLD'S speech last Monday was important for two things. First, the Governor stated the Bank of England's present view on the general economic situation—the battle against inflation only half won and the need for maintaining the general lines of policy laid down last September until it is fully won. To this, however, he added a significant rider; the perpetuity of boom is today much less taken for granted, but whether the "patches of recession" around the world are destined to fade away or go deeper, the immediate task is still to keep costs and prices stable and so be able to counter either renewed inflation or the strains of any deepening recession. This surely puts policy in the right order.

On the findings of the Parker Tribunal, the Governor commented with an urbanity and good humour that betrayed little sign of the extreme pressures to which he and his colleagues have lately been subjected. "It has," he declared, "become a popular national pastime to suggest how the Bank of England ought to be run." And he added, "For a few minutes perhaps I can play, too." On the composition of the Court of the Bank, he doubted whether the suggestion that the clearing banks should be directly represented would be fruitful. There is regular discussion, negotiation "and sometimes argument" between the Bank and the clearing banks, and for the latter to be represented on the Court might lead to the particular embarrassment of sitting on both sides of the table. To this comment by the Governor one might add that to introduce any representational quality into appointments to the Court would be a questionable move, and even more questionable if such representational appointments were made merely *ex officio*, as presumably they might have to be.

Mr Cobbold's remarks on the job of part-time directors—"no sinecure"—and the threat to the whole principle of first-class people giving part-time service in British public life unless "some discretion is used in treating them as a political football" were moderate and wise. But the more significant passages concerned the Bank's conception of its task and its relations with the public. It must be "a Bank and not a study group . . . the only thing that matters is that the Bank should be in the best position possible to perform its duties as the servant of the public and as banker and adviser to the Government." Both points are fair, but it must also be a Bank not afraid of expertise, of occasional controversy, or of projecting its activities far more effectively in the public mind. It is particularly welcome that the Governor should be commenting so freely and fairly on these matters, for the radical changes in attitudes that they imply cannot be a matter of simple transition from old ways. The Bank, like every modern institution, has to go into the business of public relations; this, it may think, is odious, but it is inescapable.

COAL

Stocks into the Bargain

PLENTY of coal in the yard is a no less potent argument in mining wage negotiations today than it was between the wars. On neither side of the table across which the National Union of Mineworkers heard their wage claim rejected by the National Coal Board this week was there any doubt that for the present, at any rate, wage bargaining power in the coal industry is a good deal more balanced than it has ever been since the war. Only a year ago, though the country's coal stocks had already begun to grow, the possibility of ending Saturday working, for example, was a potential threat in the hands of the miners against the time

SCANDINAVIAN AIRLINES SYSTEM

Nothing rivals the 1958 Vauxhalls for value!

Make a date to see and try them

Never before have such exciting value-for-money cars been available. In style, ride, performance and safety these 1958 Vauxhalls are years ahead. Here are the advanced features others may have later . . . they are yours *today* on a Vauxhall.

Advanced styling

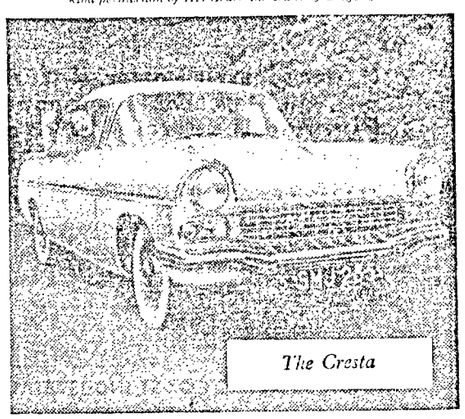
Longer and lower, this is the sleek, functional line of the future. Full 6-seater roominess in the new Velox and Cresta, 4/5-seater comfort in the Victor.

Smoother ride

Special Vauxhall 'flat-ride' suspension. Lower centre of gravity gives phenomenal roadholding.

Superb performance

6-cylinder flexibility on the Velox and Cresta. Effortless high cruising speeds. Sports car acceleration. Remarkably low fuel consumption. With the 4-cylinder Victor, the smooth top-gear glide you expect only on expensive cars.



Greater safety

Precise steering, powerful brakes, panoramic vision. Easier gear changing with all synchromesh gears.

Try them now

Make a date *now* with your Vauxhall dealer to see the most exciting value-for-money cars on the market. The Victor £498 (+ PT £250.7s.). The Victor Super £520 (+ PT £261.7s.). The Velox £655 (+ PT £328.17s.), and the luxurious Cresta £715 (+ PT £358.17s.). There is no finer value.

The Cresta was photographed in Woburn Park by kind permission of His Grace the Duke of Bedford

Vauxhall Motors Limited, Luton, Beds.

when the agreement to work on Saturday mornings came up for its annual renewal. Today it is no longer so clear that the Coal Board absolutely needs this extra shift. Saturday shifts are not worked universally throughout the mines; they are not ordinarily very productive shifts, but they can still be profitable, since a large proportion of the overhead costs they incur have to be paid anyway during the week. Saturday coal, therefore, is not an unmixedly bad bargain; but there are pits where the attendance is so poor as to make them hardly worth opening, and at a time when quite a proportion of all output may pile up in expensive stocks Saturday coal must obviously be considered among the industry's marginal production.

This is obviously not the board's only marginal coal: there are some pits that remain steadily in the highest-cost range, and there is opencast coal—which is cheap, but involves considerable semi-political trouble with the landowners concerned, and which can be regarded as the only quickly available reserve of extra coal that the country possesses. Continuing slackness in demand has given the Coal Board a breathing-space to review all these, and other aspects of its day-to-day management that have derived from the "production at any cost" motto that has reigned in mining during most of the postwar period. Nevertheless, it must be perplexing the board as well as the miners, who are planning a special conference to discuss future prospects for the industry. These are peak weeks of any year for fuel consumption, and during the first six weeks temperatures were well below those of the very mild 1957 winter. Even so, coal consumption in the home market so far is below that of a year ago, and exports are also down. This slackening in demand seems to be fairly general across the whole of the market: gas, the railways, industry in general, and domestic consumers have all used rather less. The power stations are almost alone in buying steadily larger tonnages: demand from coke ovens, which for the last couple of years has been steadily increasing, has now levelled off along with steel output.

MANUFACTURING INVESTMENT

Confidence Unchanged?

THE Board of Trade's first survey of manufacturing industry's investment intentions for 1958 conducted last May, showed that manufacturers were thinking of spending about one per cent more on capital equipment than they had planned to spend in 1957 at a corresponding time in 1956. As their estimates of expenditure during 1957 had meanwhile been revised upwards to an increase of 7 per cent, this first survey suggested that actual manufacturing investment in 1958 might be about 5 per cent lower than in 1957. This week a second survey, made last December, was published. This time the sample of manufacturers concerned was planning to invest in 1958 only fractionally more than they had thought of doing in May. Their plans for 1958 were now 2 per cent higher than their plans for 1957 had been: against what they may actually have spent in 1957, it would still suggest a decline though a rather smaller one. What is important is that internal restraint and some signs of American recession last autumn seem thus to have had no significant effect upon manufacturers' confidence about the levels of their future capital expenditures. So far as this goes, it is encouraging.

The figures are not easy to interpret: it is never easy to know which ones to compare. Since this regular survey of investment intentions began three years ago, the first forecasts of future spending—all of them increases—have always been subsequently revised upwards. The first forecasts of a one per cent increase in spending in 1957, for instance, were raised during the year to 7 per cent, which may not be far from what actually happened last year. By the end of September capital spending by manufacturing industry was running at about 9 per cent higher than in the same months of 1956, with increases of 13 per cent, 9 per cent and 5 per cent in each of the three quarters. Whether the present forecast of investment spending during 1958—which the Board of Trade takes as broadly indicating little change in investment between this year and last—will prove to have been a similar under-estimate remains to be seen. This year is the first since the survey began that the preliminary forecasts have suggested a levelling off of manufacturing industry's investment spending.

MIDDLE EAST

A Council for Exports

THE setting up of the Advisory Council on Middle East Trade announced by the President of the Board of Trade this week is a logical step simply because the Middle East market for British exports though already good should be expanded. Total British exports to the area actually increased a little last year despite the close down on British trade with Egypt, and if trade with Egypt be excluded British exports to the rest of the Middle East showed a big increase. It is necessary, however, particularly when these countries are growing in self-reliance and when European political influence is waning, that trade should be both fully competitive and mutually advantageous. That doubtless was the thought behind the decision of Lazard Frères of New York in association with Chase International Investment Corporation recently to set up a finance and development company which will employ American and European money in association with Iranian government funds on industrial development in that country. It also justifies the decision of the Board of Trade to set up the new advisory council.

The council is on roughly the model of the Dollar Export Council—a body of business men and civil servants with the Minister of State at the Board of Trade, Mr J. K. Vaughan-Morgan, as chairman, and Mr W. H. McFadzean, chairman of British Insulated Callenders Cables, as vice-chairman. It includes a strong team of industrialists as well as of representatives of the Board of Trade, the Treasury and the Foreign Office. Its duties are necessarily elastic and its composition, too, may be changed in the light of events. Its usefulness, for example, must partly depend on how far business men are aware of its existence and make use of it. For example the repeated complaints of inadequate stocks of spare parts of British goods in the Middle East and of consumer goods arriving damaged because of insufficient supervision of their transport after unloading at the seaport, could be carried to the new body. In practice it seems likely that the oil states with their heavy sterling balances will be the most fruitful markets on which to concentrate, but the whole area from Libya to Iran comes within the scope of the new council.

BUDGET-SHAPING

Next Year's Expenditure

ONE at least of the Government's efforts to toe the Thorneycroft line has been disclosed to the world this week—in the shape of a decision to increase, as from July 1st, the National Health Service contribution. The Chancellor, in a statement accompanying the Vote on Account, which summarises the estimates of civil expenditure in the coming year, pointed to the "further material increases" in social expenditures, notably on education, the health service and National Insurance. The gross cost of the health service was expected to rise to no less than £740 million, with the Exchequer share at £555 million—almost three times as much, in real terms, as the amount envisaged at the inception of the scheme. The increase in the weekly contribution, which should bring in £32 million in a full year and £24 million in 1958-59, is thus expected to keep the burden on the Exchequer down to £531 million, or a shade less than was originally estimated for 1957-58 after allowing for the increase in the contribution proposed twelve months ago.

(£ mn.)

	1957–58 Original Estimate	1957–58 Total Net Estimate	1958–59 Original Estimate
Supply Services :—			
Civil Expenditure (excluding Post Office but including Revenue Depts.)	2,660†	2,760	2,841
Defence Expenditure.....	1,420	1,455	1,418*
	4,080†	4,215	4,259
Consolidated Fund Services :—			
Debt Service	640	...	?
Other.....	117	...	?
	4,837	...	...

* Assumes £47 million local cost of BAOR will be reimbursed by Germany.
† Before taking credit for 1957–58 increase in NHS contribution.

Thanks to this step, the increase in the estimates for supply services as a whole over the revised estimates for the current year (including supplementaries) has been kept below the £50 million figure much publicised at the time of Mr Thorneycroft's resignation. But it is only just below it. Though the defence estimates (including the portion borne on the Ministry of Supply vote) show an appreciable decline, the Civil votes are up by £83 million, and the total, at nearly £4,260 million, is £46 million beyond the total revised estimate for 1957-58 of £4,215 million. This comparison, however, does not measure the actual increase in spending that may be expected between the two years. On the one hand, the "revised" estimate for this year almost certainly overstates the sum that will in fact be spent (because it includes supplementary votes but necessarily excludes any savings on votes). On the other hand, the estimate for 1958-59 makes no provision for supplementary needs. In particular, it excludes the local costs of British forces in Germany (£47 million), in the hope that these will be covered by a German contribution. The only fair comparison is between the "original" estimates of the two years: and on this footing the increase is around £200 million (after taking credit, in both cases, for the increase in NHS contributions).

With the publication of these estimates, the picture of next year's expenditure is as complete as it can be before Budget Day. It is evident that total prospective expenditure then will exceed £5,000 million—if the provision for Consolidated Fund Services, including the debt charge, were to be the same as in 1957-58, the aggregate would be £5,017 million. Up to date, the Exchequer accounts are running very close to original estimate—with expenditure showing slightly more than the budgeted decline for the full year and revenue showing very nearly the budgeted increase. The cumulative above-line surplus is £344 million, or £174 million better than at the corresponding date last year.

ATOMIC ENERGY

Japan Invites Tenders

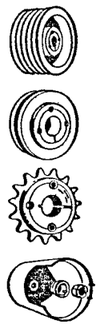
ON Wednesday the Japanese Atomic Power Company took a decisive step and asked three of the five British atomic design teams to submit bids for the construction of a 150 mW atomic power station on the sea shore about 60 miles north-east of Tokyo. So two years' uncertainty about Japan's intentions appears to be ended. The Japanese buying mission declared this week that in opening the door to British salesmen they were closing it to Americans. Some of its members are going home via the United States; but they say they have no plan for inviting similar American bids either now or in the future.

Japan is the second country overseas to adopt the British-designed Calder Hall system as the starting point of an atomic power programme. The Nuclear Power Plant Company is now working on a contract to supply much the same type of power station to Agip Nucleare in Italy and appears to have had its hands too full to bid for the Japanese order as well. It is not in the list of those invited to tender, which includes the groups headed by Associated Electrical Industries, English Electric, and the General Electric Company. They will be invited to build an installation consisting of a single reactor, with its associated boilers and generating plant—as it were, one-half of the power stations now being constructed for the Central Generating Board. The vital part of the installation, the reactor and boilers, will have to be mounted on a floating concrete raft as a precaution against earthquake, and the graphite structure inside the reactor will need a special mounting.

APPRENTICESHIPS

Training for Skill

IN a report published this week* the Carr committee on the Recruitment and Training of Young Workers in Industry concludes that existing facilities for apprenticeship training are inadequate in quantity and, in some cases, in quality as well. In the Committee's view, the emerging "bulge" of school-leavers—929,000 boys and girls reach the age of 15 in 1962, compared with only 680,000 last year and 750,000 again after the bulge will have passed—should have no difficulty in finding employment. But unless something is done quickly to improve training facilities, particularly for the craft apprentices with whom the committee is mainly concerned, this once-and-for-all opportunity to secure the skilled workers industry urgently needs will be lost.



Few industries were able to tell the committee with any precision how many craftsmen and apprentices they had.

A clean stack

means to the plant engineer a chimney emitting little or none of the smoke and fumes which lead to smog, illness, and letters to the press.
For many years Simon-Carves research and development engineers have been working intensively (and are still at it) on advanced techniques of electro-precipitation and flue gas washing. At many power stations and industrial plants these methods nowadays remove—and sometimes recover in usable form—the dust, grit, tar, fog, sulphur and other undesirable elements which darken the sky, damage buildings and property, and give the citizen his winter cough.

New Typing Sensimatic

INCREASES OFFICE PRODUCTIVITY

Full narrative description and automatic accounting in one operation

Here is an entirely new typing accounting machine —the Burroughs Typing Sensimatic providing increased office productivity over a wide variety of accounting work for all types of business.

The Burroughs Typing Sensimatic has unmatched flexibility. The control unit permits each job to be individually programmed and four or more programmes may be incorporated in ONE unit. Maximum automaticity and economy are ensured and varying combinations of memory units are available.

Automatic features simplify the operation of the machine, and up-to-date Management reports are provided as a by-product of routine accounting applications.

Contact your local Burroughs office or write direct to: Burroughs Adding Machine Limited, 356-366 Oxford Street, London, W.1.

Burroughs

TYPING SENSIMATIC

The first task, therefore, is for each industry to determine the number of skilled workers it is likely to need, after allowing for normal wastage of skilled men to other industries. This would, in effect, determine for each industry an optimum ratio of apprentices to skilled workers ; but the members of the committee, including the representatives from the Trades Union Congress, were unanimous in opposing the application of any uniform ratios to individual firms. The number of apprentices trained by any one firm, they felt, should be determined by the training facilities it can make available ; firms unable to train their share of apprentices should contribute (in some undefined way) to costs incurred elsewhere. This comes close to giving every firm official approval for going on doing what it is doing—enough, more than its share, or too little. In general, the committee is against the shortening of the apprenticeship period, though it believes that it should be possible for youngsters who change their minds to start at a later age than sixteen. Its members would prefer the widening of the scope of the training now provided, so that skilled workers may become more adaptable in the circumstances of technological change.

These recommendations are unexceptionable in principle for the long run, but they avoid any special action to meet the special problems that a short-term surge of young people presents. Throughout its report the committee adopts the attitudes of its parent body, the National Joint Advisory Council—that is, it leaves the implementing of its broad recommendations to industry and the trade unions and steers well clear of any suspicion of government directives. Whether these tactics will make any significant difference to current practice seems doubtful: nor can much be expected from the National Apprenticeship Council, "with the specific function of keeping apprenticeship and training arrangements under continuous review"—but "no executive powers"—that the committee inevitably suggests. Industry's chance to train these extra young people will be fleeting: if the facilities for training are not there when these potential skilled recruits leave school, there will be no second opportunity.

THE TERMS OF TRADE

Cheaper Imports and Exports

THE index of the cost of British imports declined a further point in January and came down to its average level in 1954. At the same time the index of export prices also fell a point so that the terms of trade (the ratio of the cost of imports to exports) remained unchanged.

Import prices fell owing to a partly seasonal decline in the prices of foodstuffs and to a decline in basic materials (particularly cotton and woodpulp) and manufactured goods.

CHANGES IN TERMS OF TRADE
(1954 = 100)

	Import prices		Export prices		Terms of trade
	Total	*Food*	Total	*Engineering products*	
1955	103	*101*	102	*103*	101
1956	105	*101*	106	*107*	99
1957	107	*101*	111	*112*	96
1957 :—					
October	103	*98*	111	*113*	93
November	103	*96*	111	*114*	93
December	101	*96*	111	*115*	91
1958 :—					
January	100	*95*	110	*114*	91

Imported fuels, however, have remained unchanged in price since last October. On the export side, there was a rise in metal prices but this was offset in the manufacturing group by a fall in the prices of some engineering products and miscellaneous manufactures, notably cars, dyestuffs, tyres and books. The fall in export prices came, for the second time in four months, from non-manufactures, leaving the average level only 1 per cent higher than a year ago.

The general trend of commodity prices is still very gently downwards so that Britain may hope to reduce import costs still further. But while prices of imported manufactures have been falling, British manufactures have remained stubbornly unchanged in price since last August.

BUILDING SOCIETIES

More Money Lent

THE Building Societies Association this month reaffirmed its intention not to recommend any change in interest rates ; it had superficially a stronger ground for so doing than in the last few months. The fall in gilt-edged interest rates, coupled with the favourable 1957 figures for the societies, together encourage "no change." If in total less money was lent on house mortgages in 1957 than in 1956, it was because insurance companies and local authorities cut down ; building societies advanced more.

THE FLOW OF MONEY

	1955	1956	1957
Shares and deposits received	391·4	373·9	393·3
Shares and deposits withdrawn	259·4	286·0	282·4
Net inflow	132·0	87·9	110·9
Advances made	257·2	294·8	341·5
Advances repaid plus interest	269·8	275·1	306·1
Liquid assets	277·1	307·1	328·9
Total assets	1,886·2	2,018·0	2,207·0

Source : Building Societies Association sample, adjusted for the figures of the Halifax Society.

Despite a rise in withdrawals in the last quarter of 1957, the net inflow of money was greater than in 1956 and advances on mortgage were much greater. Total assets of the movement have also continued to grow. The estimates shown above cover about 90 per cent of the movement's activities and included at December 31st returns from the Provincial Building Society, whose resignation from the association is now effective. It should conform closely to the trends of the movement as a whole, which will be shown in the Registrar's figures in May.

That the final outcome for 1957 has been so good does not dispose of the whole problem of interest rates, especially as pressure of withdrawals by shareholders seemed to be developing at the end of the year. The societies have lent large sums on mortgage but they have not met the whole demand. And if they succeed in holding out on mortgage rates until Bank rate is reduced will they have left themselves with an adequate working margin ? That depends to some extent on the Government's decision about profits tax.

TRUSTEE SAVINGS BANKS

Managed Funds

FUNDS entrusted to the Trustee Savings Banks make up about one-fifth of the National Savings movement's total. Deposits in their ordinary departments rose in the year to November 30th by £11¾ million to £823¾ million,

and in their special investment departments by £34 million to £317 million. In the ordinary department there is no problem of investment or liquidity, the money being passed straight on to the Treasury. The question for the Trustees Savings Banks is the margin above the 2½ per cent interest paid to depositors that the Treasury will allow for their costs of administration. The new Trustee Savings Banks Bill permits the Treasury to increase the current allowance of 7s. 6d. per cent up to a maximum of 12s. 6d. per cent Some increase must be made, but the banks are wondering whether they are not a little optimistic in hoping for 10s. per cent. At an all-in rate of 3 per cent, money placed in the ordinary departments of the trustee savings banks must still be about the cheapest that the National Debt Commissioners receive, and even at that rate young and growing banks may not break even.

In the special investment departments the investment problem rests with the trustee banks. Depositors who already have £50 in the ordinary department can invest in the special department in the hope of a growing return, reflecting what the bank earns on its portfolio. Rates paid on special department deposits vary from bank to bank, but they have been rising, and one bank at least pays 4½ per cent on three months' deposits. The National Debt Commissioners have to approve all investments made by these departments, and their scope is governed by the Trustee Savings Banks Acts; the new bill will widen the field to include Dominion and Colonial gilt-edged securities. The aim is to keep 5 per cent of special deposits in cash or call money, another 5 per cent in quoted trustee securities repayable within five years, and a further 10 per cent in securities repayable within ten years or in local authority mortgages maturing within a year. In practice, about 70 per cent of the total funds of the special investment departments is invested in unquoted local authority mortgages, all with six months' stress clauses—which for obvious reasons a bank would be most reluctant to invoke. But these holdings are not so illiquid as might appear, since in general the mortgages are so phased that a part matures each year.

LOCAL AUTHORITY LOANS

Foreign Money Arrives

A RECENT development that is surprising, if not disconcerting, has been the placing of small quantities of foreign, believed to be French, money on exceedingly short loan with the local authorities. The local authorities are still substantial borrowers in the temporary money market as well as in the mortgage market and they are having to bid vigorously against the hire purchase finance houses for funds. It is not entirely new for them to borrow for very

SHORT LOAN AND MORTGAGE RATES

	Pre-Bank Rate Per cent.	End–1957 Per cent.	Now Per cent.
2 day money	...	...	6½—6⅝
7 day money	5½	6½—7	6½—7
10 year Mortgages	6½	6½—6⅝	6½
15 year Mortgages	6¾	6¾	6¾

short periods. This foreign money is, however, lent at two days' notice, instead of the more usual 7 days and carries a rate of interest of 6½ per cent to 6⅝ per cent, compared with 6⅝ per cent to 7 per cent on 7 day loans. To a purist this must seem the hottest of hot money. Obviously only a big authority with its obligations well spread can afford to take it and then only in small amounts. From the lender's point of view the reason for the shortness of the notice is believed to be the *ratissage* under which the French commercial banks are required to hand in their foreign currency balances to the Bank of France for its end-month make up.

Demand by the local authorities in the longer dated mortgage market also remains strong. The London County Council has just arranged for £3 million repayable in 15, 20, and 25 years' time, the rates being 6½ per cent for 15 years, 6⅝ per cent for 20 years, and 6¾ per cent for 25 years.

TIN

A Russian Blunder

THE Committee of the London Metal Exchange decided on Tuesday to suspend the recent rule under which Russian tin is good delivery on the exchange. Partly because of this but more because of the coincidence that supplies coming from the East are at last believed to be responding to restriction, the price rallied. Cash tin came up from just over the buffer stock's buying price of £730 a ton on Tuesday to £735 on Wednesday and three months' tin from £731 5s. to £737. The object of the change in rule is not, however, to relieve the buffer stock of any large quantity of tin it might otherwise have had to buy. The buffer has not bought much Russian tin, most of which has been sold forward and delivered direct to consumers. There will be no less tin available to industry as a result of the change.

The Russians produce tin under the mark "HO3" in two qualities. The best—a small quantity—is 99.9 per cent purity and well exceeds the minimum of 99.75 per cent required to satisfy the London contract; the second quality—the larger amount—is of 99.56 per cent purity and though useful to some users does not qualify as good delivery in the market. The Russians, who are fairly new to the tin export business, have made the incredible blunder of making the two grades in the same moulds and with approximately the same markings. When they have rectified that error and when there is no danger of tin of the wrong quality being tendered, the market status of Russian tin will presumably be restored.

DIESELISATION

Large Scale Experiment

THE shining new 2,000 hp diesel-hydraulic locomotive that pulled nine carriages out of Paddington last Monday on a special trip to Bristol and back was in a sense an earnest of the new traction equipment British Railways are at last able to begin equipping themselves with. The new locomotive itself did not, nor was it intended to, set up any startling new performance. Hauling a load slightly under average, it completed its outward run of 119 miles in two minutes under the scheduled time of 121 minutes, and on one stretch where the track is fast and the line ahead was clear it was able to hold 93 mph. But that is not uncommonly fast for the line that Brunel laid.

The main significance of Monday's special journey, however, lay more perhaps in the way it marked the variety in the railways' present development of new forms of

Something wonderful's happened to this office—
TIME-MASTER

You wouldn't believe how difficult life was before we got our Time-Master.

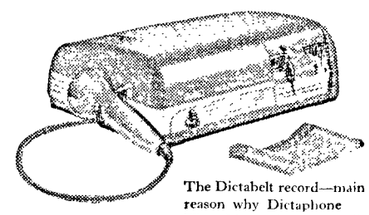
He'd start to dictate—the phone would ring. That'd be that. Or he'd hand me a sheaf of scrawled notes and—"Memo please, Miss Fox." Awful!

Time-Master's changed all that. Now he dictates on to those wonderful little Dictabelts. Letters—memos—notes—everything. I type them out at my own speed, in my own time, and I'm *never* rushed.

He says he thinks Time-Master is the best investment he's ever made.

I should know!

THE DICTAPHONE TIME-MASTER
the world's greatest dictating machine



★ Made to an unequalled standard of precision engineering.
★ Fingertip control.
★ Perfect recording, playback, and correction.
★ Fast, efficient service—everywhere.

DICTABELT—the world's most modern dictation record—exclusive to the Dictaphone Time-Master

★ Light, handy, but virtually indestructible.
★ A permanent, visible recording. Can be posted or filed.
★ Crystal-clear recording at extremely low cost.

You cannot know *all* the advantages of owning a Dictaphone Time-Master until you've lived with it for a week. Try it—free!

The words DICTAPHONE, TIME-MASTER, and DICTABELT are registered trade marks

The Dictabelt record—main reason why Dictaphone Time-Master far outsells all other dictating machines

NOTHING CAN COMPARE WITH
DICTAPHONE
TIME-MASTER

DICTAPHONE CO. LTD.

traction. The western region does not have a high priority for straight electrification—it may be at least another twenty years before all-electric trains appear in that area—so the region has gone full-bloodedly for dieselisation. And while the other regions are planning to use main line diesel locomotives with electric systems of transmission, the west has plumped for diesel hydraulics. It is using two German designs. The 63 locomotives it has ordered from North British (including the one used this week) will incorporate the MAN engine and the Voith system of hydraulic transmission, while at least the first few of the 33 to be built at its Swindon workshops will use the Maybach engine and that firm's Mekydro hydraulic transmission. Both systems have proved themselves on German railways, but cost and operating results in British working conditions will be awaited before orders are placed for the remaining 34 diesel locomotives needed to replace more than 200 of the west region's steam locomotives.

Whether hydraulic is better than electric transmission in actual practice can, at this stage, only be a matter for debate between railway engineers; and the choice of the western region may have arisen as much from the personal preference of its top engineers as for any other reason. Diesel-hydraulics are cheaper to build, and the absence of electrical parts should simplify and cheapen maintenance. It is a lighter vehicle (the Swindon-Maybach design particularly so), and its proponents argue that since this means it has to develop less power to haul its own weight this should offset the lower power conversion factor of hydraulic systems of transmission.

OVERSEAS TRADE FAIRS

Where to Spend Public Funds

In its first report to the President of the Board of Trade, the Exhibitions Advisory Committee, which was appointed by Mr Thorneycroft in 1956, gives its view of the Government's role in assisting British industry to take part in overseas trade fairs. At general trade fairs, which are held mainly in Europe and North America, the Board of Trade should organise and pay for special displays of British goods, each based on a single industry, with more emphasis than in the past on capital equipment if the manufacturers can be persuaded to co-operate. But on the principle that a limited number of really good displays is better than a large number of mediocre ones, the fairs chosen should vary from year to year. At specialised fairs, which are devoted to a single industry, the Board should continue to assist British exhibitors by booking space and erecting the shells of stands, leaving industry to meet the cost only of preparing and staffing its own exhibits. Where fairs are organised on the basis of national pavilions, as they usually are in Africa and Asia, the entire cost of the construction and management of the British pavilion should rest with the Board of Trade, and the rentals should be fixed sufficiently low to fill the pavilion with a representative selection of British goods, even if this means that costs are not covered.

The plans now announced by the Board of Trade for the rest of 1958 show that it is already working on the lines of the Advisory Committee's recommendations. But the committee does not say how the £160,000 of public funds now available each year should be divided between the different types of fair. General fairs, in the past, have cost between £30 and £400 for each serious trade enquiry; specialised fairs have produced a better result, and at the highly successful scientific instruments fair at Düsseldorf last year cost as little as £2 per enquiry. For the fiscal year beginning in April, 1958, the general, specialised and national pavilion-type fairs will each receive about a third of the total budget, and almost all of the last third—about £50,000—will be spent on the one national pavilion at Johannesburg. With limited funds it is probably best to concentrate on one really outstanding building (which will be a semi-permanent structure available for subsequent fairs). But in years when several fairs with national pavilions are held there would be a strong case for a higher total allocation.

SUGAR

A Surcharge Imposed

As from Thursday, the Sugar Board began to levy a charge on imported and home produced raw sugar equivalent to 1¼d. a pound, with proportionate charges on imports of goods that contain sugar and with drawbacks on exports of sugar and sugar containing manufactures. At the same time, the distribution of ¼d. per lb., which has been handed out since July 15th of last year, came to an end. The outlook therefore is for an increase of approximately 1¼d. in the first-hand selling price of refined sugar for the home trade, though, since the retail trade is competitive and there are fair stocks in the pipeline, the time when this charge will begin to be passed on to consumers is anybody's guess.

The Sugar Board is charged with a duty of equalising the price of the 1½ million tons of Commonwealth sugar that Britain buys on agreed terms with the price of the home produced sugar and the other imported sugars that make up Britain's supply. In effect, its job is to buy these contractual Commonwealth sugars and sell if need be at a loss, recouping the loss by the surcharge. But high prices in the first half of last year actually resulted in the negotiated price sugar from the Commonwealth being imported at a lower price than the free market sugar, so that the Sugar Board made a profit instead of the expected loss. The Board, which had started with a nominal surcharge of ¼d. a pound, switched over to a distribution payment in July. Almost immediately, however, the sugar market broke, the price came down from 62s. per hundredweight in April of last year to 50s. in mid-July, 38s. 9d. at the beginning of August and is now approximately 31s. 3d. The break-even point is approximately 43s., and over the last two months the Sugar Board has been operating at a loss. It does not desire a profit, for strangely this statutory body is subject to income tax and profits tax, but it is required to balance its accounts, taking one year with another.

WINDSCALE

Sir Christopher behind the Scenes

Sir Christopher Hinton wrote the text of the lecture that he gave to the Institute of Fuel on Wednesday before he had left the Atomic Energy Authority to become chairman of the Central Electricity Generating Board and before fire destroyed one of the two plutonium-producing reactors at Windscale. But his description of how those reactors came to be designed shows more clearly perhaps than the official report on the accident how they also

"TCA puts Canadian markets right on our doorstep"

If *you* intend to go out for your share of new business in Canada, then the way to go is by TCA. TCA offers you convenient same-airline connections *right to the business heart of Canada.* Overnight—any night of the week—you, your executives, and key technical advisers can relax aboard a long range Super-G Constellation and arrive refreshed, alert and ready to do business next morning. But, don't be surprised if you find yourself making a few useful business contacts on the way over. Canadian business men feature regularly among the 2,300,000 passengers who fly TCA every year. *A 'phone call from your secretary to your regular Travel Agent will put you in possession of all you want to know.*

* **Overnight to and from Canada — any night of the week.**
* **Convenient same-airline connections to *all* Canada.**
* **To and beyond the Montreal 'gateway' to Ottawa, Toronto, Winnipeg, Edmonton, Vancouver and to key U.S. cities.**
* **Non-stop flights to Toronto from U.K.**
* **8 flights from London, 4 from Glasgow weekly.**

TO CANADA—ACROSS CANADA AND TO KEY U.S. CITIES

Your Travel Agent is the man to see.

The man with fire in his hair

ABOUT THE BEGINNING of the 18th century many sailors along the Spanish Main had an awesome experience. On dark nights their ships were boarded by pirates led by a man who had fusematches fizzing and burning in his ears and hair. His name was Captain Teach—alias Blackbeard—the most prosperous pirate of his time. Nervous sailors seeing him afire jumped overboard shouting that they were fighting the devil. Blackbeard's career ended in 1718 when a Lieutenant Maynard, from the Royal Navy, boarded his ship and shot him dead.

Now pirates are as out of date as the galleons they once manned. People safely sail the seven seas but goods are still often manhandled on their voyages across the world. Nevertheless they travel comfortably and arrive safely in cartons made from 'Thames Board' and in 'Fibetite' cases made from solid or corrugated fibreboard.

came to carry certain built-in weaknesses that needed only a mistake in the course of operation to wake the sleeping tiger in every nuclear plant. Sir Christopher himself never forgets the tiger; far too often while Windscale was under construction he glimpsed its disappearing whiskers or the tip of its tail and one more hurried change had to be made to the blueprints.

Windscale was designed in a series of broad brush strokes to meet a deadline imposed by the dictates of the programme for developing atomic weapons for which it was to provide the plutonium. The passing of the American McMahon Act, cutting off information between Britain and the United States, forced British engineers to start construction work before there had been time to paint in the details. As gaps in their knowledge were filled, so changes were hurriedly made, usually in the middle of construction, to the design of the chimneys, the graphite core, the fuel elements; they were still being made up to the last week before the first reactor was started up.

The remarkable aspect of the Windscale installations, which include a complex chemical plant, is that once built they gave no further trouble for so long. The improvisations, the hurried alterations and above all the pressure to meet a deadline whatever the cost, slipped into past history and were glossed over in official accounts of the building of the atomic factories until they induced a sense of security about what it would have been wiser to look on as a rudimentary, and therefore not necessarily well-behaved, experimental prototype. Had Sir Christopher described what went on behind the scenes when Windscale was built six months ago rather than this week, he might have jolted the corporate complacency that was behind the immediate causes of the Windscale fire.

RADIO RENTALS

Season in Shells

WHAT will Mr Heathcoat Amory do about deals in "shell" companies? With CIC restrictions looming large, it seems that no hire purchase company can now afford to be without one. Radio Rentals does a thriving hire purchase business as well as letting radio and television sets out on rent and it needs money for both. It has taken the obvious step of buying a "shell." The company it has bought is Hyman Lazarus Cabinets, whose net assets made up of cash and quoted investments amount to £810,000 and whose ordinary capital is held privately. For that ordinary capital Radio Rentals has paid £820,481, made up as to £488,992 16s. by the issue to the vendors of 407,494 ordinary shares of 5s. each in Radio Rentals (that is, at a price of 24s.) and, since this completely exhausts Radio Rentals unissued ordinary capital, by a cash payment of £331,488 4s. Thus to gain the use of an extra £478,500 or so in cash or near cash assets, Radio Rentals has paid a premium of about £10,000 over the book value of the cash assets.

The vendors obviously want cash, for they in turn have sold the Radio Rental shares they have received to Investment Registry at 24s. a share. This is a big block of shares and if the shares were sold through the market, the current price of 28s. for the Radio Rental shares could hardly have been maintained. Investment Registry is, in turn, offering these shares, again at 24s. each, to existing shareholders in Radio Rentals in the proportion of one for every nine held. The circle is completed, with the CIC outside it, and the Chancellor looking in.

WOOL

Japan Supports the Market

THE firm close to the London January wool auctions surprised many people in the trade; the subsequent rise in the primary markets of Australia surprised them more. But events at opening of the London February auctions on Wednesday go some way towards removing the apparent contradiction of a declining output in the Yorkshire wool textile industry and in the textile industries of some other countries concurrently with a strong market for raw wool. The picture in London after Wednesday's trading was of keen competition for Australian merinos with prices about 2½ per cent up on the close of the January auctions and therefore almost in parity with the higher current prices in Australia, flanked by a sharp fall of 5 per cent to 7½ per cent in New Zealand crossbred wools, more than matching the recent drop of 5 per cent at Invercargill.

The Bradford industry has much reduced its activity and is busy emptying its supply pipe line. The latest figures of consumption per working day from the Wool Industry Bureau of Statistics show a drop of 7 per cent compared with November and of nearly 13 per cent compared with December last year, though the statisticians offer a warning that they may have exaggerated the number of working days (taken at 20) and therefore the rate of decline. Clearly the British Government in attempting to sell its 500,000 bale stockpile, however skilfully, at the rate of 100,000 bales a year is not helping the wool market. Even in the January sale prices had reached a level at which the New Zealand Wool Commission intervened as a buyer a few times in a small way. That £29 million fund is not however being used to hold prices high enough to encourage more production.

China has been recently a buyer of wool tops in this country. But the factor that is holding the prices of Australian merinos so much firmer than was generally expected has been the amount of Japanese buying in the Australian markets. It much exceeds the quantities for which it was generally supposed the Japanese importers held currency licences.

SHORTER NOTES

The ordinary dividend of British Oxygen has been left unchanged at 10 per cent. But before depreciation the group's trading profit in the year to September 30th advanced from £7,808,763 to £9,181,548, an increase in sales offsetting the rise in costs.

* * *

The directors of Canadian and English Stores say that their comments on the report of the Shareholders' Committee are now substantially complete and will be delivered in the next few days. The accounts for the year to January 31st will again show a "considerable loss." A complete reorganisation has taken place, and the Board, of which Lord Milner is chairman, has been strengthened—

steps which the directors believe will "lead to encouraging results in the future."

* * *

The Royal Canadian Air Force has decided to fit ten new Convair troop transports with Eland turbo-prop engines built by the Napier division of English Electric in place of the American-built piston engines normally used. These aircraft are being built under licence by Canadair in Canada, and thirty engines will be shipped from England for them.

* * *

The proposed one for one free scrip issue in J. Lyons and Company's two classes of ordinary stocks and two classes of proportional profit stocks will now be made entirely in "A" non-voting stock. The directors say that they regret their oversight in not realising that they were precluded from making the issue in the separate classes of stock; holders of £5 of proportional profit stock or five "B" proportional profit shares will receive one £1 "A" ordinary share as will holders of £1 of ordinary or "A" ordinary stock.

* * *

At the Universal and International Exhibition, which will open at Brussels in April, an exhibit showing the London Stock Exchange as the centre of the world's stock exchanges, will, the *Stock Exchange Journal* announces, form part of the City of London section of the FBI pavilion.

COMPANY AFFAIRS

ENGLISH ELECTRIC

COMPARISONS between the trading experience of English Electric and General Electric are unavoidable. GEC has cut its interim ordinary dividend and its profits are falling. English Electric has maintained its total ordinary dividend at 14 per cent, as forecast, on the increased capital and its profits in 1957 continued to rise. But there, on a matter of arithmetic, the comparison should end. The products of the two companies are different although they overlap.

Yet if GEC's results must be judged as disappointing, those of English Electric must be described as reassuring. The most significant and most promising item in the English Electric accounts is

Years to end–December	1956 £	1957 £
Consolidated earnings:—		
Trading profit	9,468,796	10,233,840
Depreciation	2,291,417	2,775,985
Taxation	3,521,309	3,590,866
Net profit	*2,879,715*	*2,830,123*
Ordinary dividend ..	1,225,349	1,470,418
Ord. dividend (per cent.)	*14*	*14*
Retained profits	2,020,667	2,091,497
Consol. balance sheet:—

Stocks	43,924,515	48,657,942
Debtors	40,623,595	44,083,233
Net bank indebtedness.	*19,567,393*	*12,044,486*
Net current assets....	*32,768,581*	*47,203,549*
Loan capital	8,930,181	17,524,146
Reserves	27,429,357	33,603,992
Ordinary capital	15,221,721	18,266,065

£1 ordinary unit at 46s. 9d. yields £5 12s. per cent.

that last year the total of unexecuted orders rose from £180 million to £250 million (including a nuclear power contract of £30 million). The turnover of the group rose by about 4 per cent and that of the parent company by even more. Before all charges, the consolidated trading profit rose by 8 per cent, from £9,468,796 to £10,233,840. That does not give the impression that margins were squeezed. But if depreciation and loan interest are deducted from profits (and these items reflect the utilisation of more capital) gross profits before tax have risen by only 2.7 per cent, from £6,735,195 to £6,916,989. In that sense, where the cost of new capital is properly taken into account, profit margins have been squeezed. Moreover, the experience of the various subsidiaries and divisions of the group has been patchy. The profit of Vulcan Foundry has been turned into a loss—a transitional loss but bigger than was envisaged. The Marconi companies in this country have done well, but Canadian Marconi has continued to do badly. And it is probable that the pressure on margins has been especially noticeable in the consumer durable goods divisions.

Last year the English Electric group raised about £16½ million by a rights issue of ordinary shares and by a debenture issue. That only temporarily eliminated the bank overdraft (standing at the end of 1956 at £16 million). By the end of 1957 a bank overdraft of £8¾ million (against a cash balance of £1 million) had reappeared, for the growth in turnover was inevitably followed by a rise in stocks (from £43.9 million to £48.7 million) and in debtors (from £40.6 million to £44.1 million); moreover, the bank overdraft of Canadian subsidiaries remained unchanged at £4½ million. But there is no early intention of coming to the capital market again. Working capital requirements are not the whole story: the capital development programme has not been slowed down. Over £5¼ million was spent on fixed assets last year and immediate capital commitments are of the order of £5 million. Whatever the current prospects (and these must be assumed to be increasingly competitive) the management of English Electric still keeps its eyes on the more distant and more entrancing prospect that the world will need more power and cannot have it without buying the products of the electrical industry.

IMPERIAL TOBACCO

BECAUSE the duty element represents about 80 per cent of the tobacco manufacturers' own selling prices, the turnover of Imperial Tobacco is colossal compared with its trading profits. It must be of the order of 30 times the consolidated profit and 35 times of the parent company's profit. The margin on sales is thus small, and Imperial Tobacco seems to have suffered a slight decline in turnover in a slightly growing market, losing ground for the second year in succession. The directors put the emphasis more on the rise in manufacturing and selling costs than on the slight decrease in the weight of sales in explaining why in the year to October 31st the consolidated trading profit came down from £23.4 million to £21.6 million and the parent company's trading profit from £19.9 million to £18.2 million. Some part of that increase in selling costs no doubt reflects the stepping up of advertising needed to counter the competition of Gallaher's Senior Service. The failure to increase sales is reflected in the stability of stock commitments (where the increase of £3 million to £158 million can be attributed to higher leaf tobacco prices). Competitive conditions are reflected in the fall in debtors from £63 million to £59½ million. These working capital movements cancelled each other out, and bank overdrafts have been slightly reduced, from £29 million to £26½ million.

Imperial Tobacco enjoyed the benefit of higher selling prices only in the last few weeks of the financial year. In the current year it will have the full benefit of these price increases and, though it will have to fight and to spend to hold all its market, profits should turn up this year. But against bigger gross profits have to be set the high interest charges on bank overdrafts and, ultimately, higher interest charges on the group's loan capital. The company's £10 million issue of 3½ per cent notes (1953-58) falls due for repayment on October 1st, which is near the end of the company's financial year, and the directors must obviously be prepared to pay more than 3½ per cent for the money that replaces that issue. But clearly the prospect for profits is such that the repetition of a 20 per cent ordinary dividend (to which this year it was reduced from 21 per cent) is probable. On that assumption, the £1 units at 38s. 6d. yield £10 8s. per cent.

BORAX (HOLDINGS)

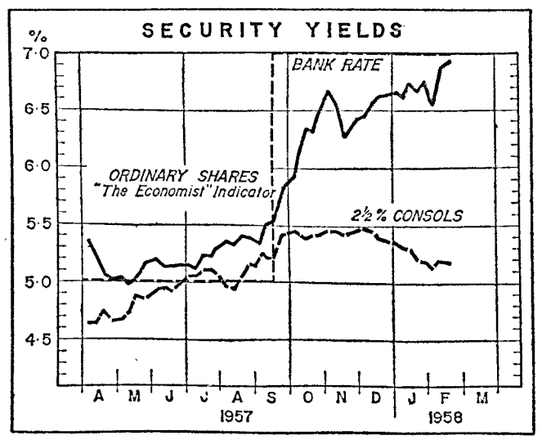
AFTER twenty years as chairman of Borax, Mr Desmond Abel Smith is handing over to Lord Clitheroe. Mr Abel Smith, who will remain a director of the company, guided the Borax group through its major and far-reaching reorganisation scheme, which, in 1955 and 1956, turned a staid equity into a heady growth stock. Some of the financial implications of this reorganisation were discussed in these columns on January 18th. Now the chairman's valedictory statement enables shareholders to put the scheme into perspective.

The group, he says, "seems to be on the threshold of a further period of expansion." That comment is based on the completion of the developments in California and on a strong belief in the new industrial and agricultural uses to which boron can be put. It is the use of boron in fuels for guided missiles which has caught the investor's eye, but Mr Abel Smith emphasises the "versatility" of the chemical. The prospects for the group's other principal product, potash, are less spectacular; the market in it is competitive, but Mr Smith describes the future as "promising."

The price of the Borax 5s. units has fallen sharply in recent days, but even at 17s. the 5s. units on a 8¼ per cent dividend (paid out of the parent company's accumulated reserves) yield only £2 12s. per cent. The growth prospects remain heavily discounted. And it is clear from the chairman's statement that growth for Borax may not be a steady upward progression. Last year earnings were falling quarter by quarter, and now in the quarter to December 31st the results have been "influenced to a certain extent by the recession in trade which is being felt in many countries and the inevitable difficulties of bringing the great new plants in California into operation." Last year the profits of the American subsidiary, United States Borax and Chemical, were lower: "higher production costs without compensating price increases for borax and with lower volume and with lower prices for potash, start up expenses late in the year of a non-recurring nature for the new Boron operations, increased expenditure for research, and a material increase in interest on borrowed money" caused the decline. The boom in the Borax equity was overdone as investors seem at last to have realised.

LEYLAND MOTORS

LEYLAND MOTORS more than held its own in a difficult market last year. That much is obvious: first, from the reports made in the autumn of an increase in output and, in some lines of commercial vehicles, of exports; secondly, from the preliminary statement of results for the year to September 30th. In that year the group's trading profit advanced from £5,527,775 to the record figure of £6,065,279.



But net profits declined from £2,327,796 to £2,171,025. That result was due to a bigger tax bill (up from £2,469,026 to £2,632,340) and, to a much bigger provision for depreciation (up from £698,452 to £1,164,204). At the beginning of the financial year the group still had a big development programme before it and the increase in depreciation must reflect the installation of new capacity. That capacity should stand the group in good stead now that production throughout the whole of the commercial vehicle industry has turned up again. In the meanwhile, Leyland's ordinary dividend has been left unchanged at 12½ per cent and on this dividend the £1 units at 44s. yield 5⅔ per cent.

London Stock Exchange

FIRST DEALINGS:	Feb. 12	Feb. 26	Mar. 12
LAST DEALINGS:	Feb. 25	Mar. 11	Mar. 25
ACCOUNT DAY:	Mar. 4	Mar. 18	April 1

THE market was steadier this week following last week's heavy losses. Falls in industrial stocks were limited, but, with the American recession and the Egyptian-Sudanese dispute in the background, they were sufficient to bring *The Economist* indicator down by 1.8 to 168.9—its lowest point since September, 1954. Gilt-edged recovered on Wednesday after suffering fairly extensive losses on Tuesday; the *Financial Times* index of Government securities rose slightly over the week from 80.80 to 80.89. Short-dated stocks were supported and some switching into longer dated stock developed. The Australian cash and conversion operation had little effect upon prices. During the week the premium on dollar stocks over the rate for the day declined from 7 to 4 per cent, before recovering to over 5 per cent.

English Electric's full accounts prompted a small recovery in electrical shares against the prevailing tone in other sections; English Electric gained 2s. 3d. to 46s. 9d. but BICC fell 1s. 6d. to 39s. 9d.; after its subsidiary Thomas Bolton had announced a reduction in its dividend. Boots rose 1s. 6d. to 20s. 6d. on consideration of the revaluation of properties. Steel shares suffered small losses, United Steel falling 9d. to 18s. The weakest section of the market was in shipping and shipbuilding; lower freight rates and fear of building cancellations caused widespread falls. William Doxford lost 2s. 9d. to 60s. and Swan Hunter 1s. 9d. to 51s. 3d., while Stanhope Steamship fell 2s. 3d. to 13s. 6d. and P & O deferred the same amount to 22s. Gold mines rose on some American and Continental as well as British buying. Copper mines rose on Wednesday and Australian lead and zinc producers also made substantial gains. A statement on nationalisation lowered Ceylon tea shares.

(1) Annual figures are for June of each year. (2) Engineering, shipbuilding, electrical goods, vehicles, metal goods, precision instruments and jewellery. (3) Textiles, leather goods, clothing, food, drink and tobacco, manufactures of wood and cork, paper and printing. (4) Number registered as unemployed expressed as a percentage of the estimated number of employees. (5) From June, 1956, onwards comparison with earlier figures is affected by the revocation of the Notification of Vacancies Order, 1952. (6) United Kingdom. (7) Figures have been revised back to July, 1956, on the basis of mid-1957 count of National Insurance Cards but the complete series is not available; it will be published at a later date.

(1) Relates to wholesale prices of industrial products, except for Greece. Figures for [illegible] (2) Relates to prices in capital cities only for Austria, Italy, Greece and Turkey. Austria and Belgium exclude rent. Denmark includes direct taxes. Figures for Ireland are based on August, 1953=100. (4) Including direct taxes. (5) Including trade with Faroe Islands. (6) Index numbers of unit value which compare the current average value of trade with its value in 1953; they are influenced by changes in the composition of trade as well as price movements. Export prices in Ireland are adjusted for seasonal variations. (7) Deposit money and notes and coins held by business, individuals and foreigners. Except for Greece, holdings of the issuing authority and other banks are excluded. (8) Holdings of the government and central bank at end of period. Foreign exchange figures for Norway exclude government holdings; Netherlands, Norway and Sweden include foreign investments. Ireland includes some long-term securities. (9) Beginning May, 1954, a new drachma equal to 1,000 old drachmas was introduced. (10) Average for third quarter. (11) Revised series.

Financial Statistics

EXCHEQUER RETURNS

For the week ended February 15, 1958, there was an "above-line" surplus (after allowing for Sinking Funds) of £107,354,000 compared with a surplus of £138,627,000 in the previous week and a surplus of £39,156,000 in the corresponding period of last year. There was a net expenditure "below-line" of £26,347,000, leaving a total deficit from April 1st of £224,744,000 (£307,050,000 in 1956–57).

THE MONEY MARKET

THE recent stringency in Lombard Street has abated in the past week; this is attributable not to any change in the Bank's tactics but to regular official disbursements. On Saturday and on Monday the market was able to repay its fairly large seven day loans at the Bank without further borrowing or special help and again on Tuesday. On these days, the clearing banks' rates on their "floating" money were down to the minimum of 5¼ per cent, and money from outside banks was available at down to 4½ per cent. But on Wednesday, the monthly make-up day of the clearing banks, credit supplies tightened, and one or two houses had to take very small penal loans. Before the week-end, three or four houses were "in" the Bank on Thursday, despite fairly large official purchases; but the amount involved was much smaller than the repayments.

The Treasury bill rate fell again at the tender on Friday last week; but the pace of the decline is decelerating. The discount houses raised their common bid by 1d., to £98 9s. 8d. per cent, following the increases of 4d. the previous week and of 10d. the week before that. The offer of £230 million was under-allotted by £10 million; and as total applications rose sharply, by £37.2 million to £424.7 million, the allotted portion of bids at the minimum price dropped from 65 to 44 per cent. At yesterday's tender, the offer was £220 million.

COMPANY MEETINGS

ALEXANDERS DISCOUNT COMPANY

EFFECTS OF PENAL BANK RATE

SIR ERIC GORE BROWNE'S VIEWS

The ninetieth Annual General Meeting of Alexanders Discount Company Limited was held on February 13th in London.

Sir Eric Gore Browne, DSO, OBE, TD (the Chairman), who presided, said:

My statement which was attached to the Accounts for 1957 was designed to paint for you, the Shareholders, a true and accurate picture of the position of your company for the time being, and I emphasised what is, I hope, the temporary nature of our ill fortune. Your company has in some degree been the victim of circumstances. For myself, I find it difficult to understand what good purpose—apart possibly from a psychological effect—is served by a penal bank rate under existing conditions. It is well known that last year this country exported £3,326 million of goods; whilst our international trading account shows a credit surplus of only between £250 and £300 million.

In view of the first of these facts, can it be said that sterling is overvalued? But in view of the second and the fact that nearly half the world's trading is financed through our currency, can we wonder that doubts may sometimes rise in some quarters as to our international solvency? There is the rub. And it must be the earnest hope of all of us that the combined efforts of the Radcliffe Committee and of the Three Wise Men will find the solution. Does a 7 per cent Bank Rate which is unfair in its incidence restore the confidence of the world in British character and credit worthiness on which, in the absence of an exchange standard, the value of the £ sterling must ultimately depend? I have my doubts. And is it generally realised that a difference of 2 per cent interest on the floating debt is equivalent to an addition of £100 million a year in the cost to the taxpayer of the service of that debt? Not to mention the cost of funding operations. And, as the Chancellor of the Exchequer told us last year, each 1 per cent extra costs our balance in our international trading account not less than £15 million.

You may say that these are academic questions and have little or nothing to do with the finances of a great Discount House, but our figures for 1957 and for the two preceding years show you all too clearly the extent to which the fortunes of your company are at the mercy of a system which seeks by a firm hand on the reins to drive the economic coach in which we are all passengers along a road which it hopes may be in the right direction. On the solution of the problem of how to perpetuate a Welfare State in a small island which cannot maintain itself, and which seeks to preserve its position as the greatest international banker in history, not only the fortunes of your company, but the future standard of the lives of British men and women may well depend.

Since our accounts have been published, I have had two or three letters from shareholders with which I thoroughly sympathise, and I am just going to try and answer the questions which are raised in these letters.

As I said in my statement, the prospect of future dividends is very much bound up with the future level of bank rate, and until it is reduced from the present rate of 7 per cent we shall continue to suffer serious losses on our short-dated securities carrying a low rate of interest.

It is not the custom of this company or, I think, of any other Discount Company to disclose the individual holdings of Government Securities, but I would say that 70 per cent of our portfolio is redeemable in three years' time. To give any further information as to the life of our holdings would make it difficult for the management to deal and would not, I think, be to the advantage of the company.

In the case of the Corporation and Dominion Government Securities, the book value is taken at the market price on December 31, 1957. The directors' remuneration is unchanged for 1957, but will show a reduction in 1958.

In comparing our results with those of the Union and National Discount Companies it is clear that the Union has benefited greatly by their very much larger reserves, but it is impossible to compare our results with those of the National Discount Company as they have adopted a different method of valuation.

The report and accounts were adopted.

J. SAMUEL WHITE AND COMPANY

(Shipbuilders and Engineers)

IMPROVED ORDER BOOK

The sixtieth ordinary general meeting of J. Samuel White and Company, Limited was held on February 19th at Grosvenor House, Park Lane, London, W.1, Mr J. A. Milne, CBE (Chairman and Managing Director) presiding.

The following is an extract from his circulated Address:

Your Directors' Report gives a résumé of orders received, work completed and work in hand during the year under review. Since then we have received an order for two Cross Channel Steamers for the British Transport Commission for use on the Channel Island Service. The vessels are turbine driven and, therefore, fit well into the balance of work between the Engine and Shipbuilding Works and will help to provide employment until mid 1961.

After referring to the activities of the Company's subsidiaries the statement continued:

Turning to the Consolidated Profit and Loss Account, trading profit, after deducting Directors' remuneration, depreciation, etc., is lower by £84,000 and if you also take into account profits relating to previous years the actual current profit is down by £131,000 when compared with last year. This trading profit is after making subvention payments of £22,020 to the subsidiaries. In addition, our Works suffered from the Shipbuilding and Engineering Strike in March 1957 resulting in the loss of thirteen working days' production.

WAGES AND PRICE FACTOR

Although your Company's present order book is larger in general than it has ever been in the past, it is perhaps prudent to look a little further into the future.

There is ample evidence to suggest that the seller's market in shipbuilding may be disappearing, particularly for companies such as ours where building berths do not permit the construction of very large vessels, particularly tankers. Most of you will recall that in May, 1957, skilled workers were awarded a wage increase of 11s. a week and amongst other things, it was also agreed there would be no further wage claims for twelve months and there should be goodwill on the part of employer and employee alike. It is recognised that no wage claims, as such, have been made. There has, however, been a request to reduce the standard working week from 44 hours to 40 hours without loss of pay. This alone is equal to an increase of 10 per cent in hourly wages, but after allowing for an average of 8 hours overtime, the increase in manufacturing costs would be approximately 12½ per cent which must be passed on to the customer.

The development of a European free trade area will permit opportunities of expanding markets for this country provided we keep our costs competitive. Many countries of Western Europe have a longer basic working week. None of them has the immediate objective of a reduction below the level of 44 hours which workers in the United Kingdom shipbuilding industry have enjoyed for some ten years. I am all in favour of high wages provided they are properly earned but it is tragic self deception not to realise we can price ourselves out of world markets.

The report was adopted and the total dividend of 20 per cent was approved.

MICHAEL NAIRN AND GREENWICH

SATISFACTORY SALES

The thirty-sixth annual general meeting of Michael Nairn & Greenwich Limited, was held on February 14th at Kirkcaldy, Sir M. George Nairn, Baronet, chairman, presiding.

The following is an extract from his circulated statement for the 52 yeeks ended September 29, 1957:

The total earnings of the group, after providing £357,657 to meet taxation, amount to £259,988 and show a decrease of £60,353 from the results of the previous year.

The Board recommend a final dividend of 5 per cent, less income tax, on the issued Ordinary Stock which makes a total distribution of 6¼ per cent for the period.

The adverse trading conditions mentioned by Sir Robert Spencer-Nairn last year which have to some extent persisted, a reduction in the return from overseas investment and an appreciable loss in exchange following upon the devaluation of the French franc, partially account for the reduction in net earnings. The results were, however, more seriously affected by losses incurred by Petmar Industries, Limited. Financial results are now showing improvement.

British Congoleum has had a less fortunate year. Improved manufacturing technique and other developments should lead to better results.

Our sales during the first quarter of the current year have continued at a satisfactory level, while the works at Kirkcaldy, in France and in Australia remain fully employed.

The report and accounts were adopted.

KILLINGHALL (RUBBER) DEVELOPMENT

MR ADDINSELL'S STATEMENT

The annual general meeting of the Killinghall (Rubber) Development Syndicate, Limited, was held on February 14th, in London, Mr J. Addinsell, chairman, presiding.

The following is an extract from his circulated statement:

Although, compared with the previous year, the average price we received for our rubber was just over 2d. per lb lower, net proceeds at £39,254 were only slightly reduced owing to the increased crop harvested.

Cost of production, including export duty and cess, amounted to £26,778 against £28,234 for 1956, a reduction of 1½d. per lb as a result of a smaller charge for duty following the lower prices received for our rubber. Tribute from tin mining was down by £3,889 owing to lower outputs from the Killinghall Tin dredge. Net profit before tax shows a slight reduction of £1,089 compared with 1956.

After providing £15,771 for taxation, there is an amount of £24,326 available for consideration. Your Board have decided to recommend a final dividend of 60 per cent, making a total of 80 per cent for the year, and have also recommended a bonus dividend of 25 per cent, thus making a total distribution of 105 per cent.

Our rubber is making an ever increasing contribution to our income and the position in this respect should continue to improve as more of our young rubber comes into bearing.

The report and accounts were adopted.

THE PROVINCIAL BUILDING SOCIETY

INCREASE IN CASH LIQUIDITY

The one hundred and eighth Annual General Meeting of the Provincial Building Society was held on February 18th at Provincial House, Bradford. Lieutenant Colonel F. W. Moore, DSO, MC (President of the Society), who presided, in the course of his speech said:

Whilst Building Society interest rates are not in any way tied to the bank rate, we cannot help but feel some of the effects of such changes, particularly when they are of a steep or violent nature. A really high bank rate interferes with our inflow of investment, as it tends to make money more scarce. This results in increased competition for available money by the offering of higher rates for short term money requirements by financial institutions requiring it for such short term use. Our lending, being of a long term nature, does not permit us to be so flexible in the investment rates we can operate during such periods. That the effect of this on our Society has been relatively slight when viewed against the background of this national crisis, shows very clearly the high degree of confidence which our investors have in the Society.

The investment rate of 3½ per cent (income tax paid) which we are now paying in our Paid Up Share Department must be considered attractive when the advantages of complete security and ready withdrawal are taken into comparative reckoning. Allowing for tax at the standard rate it provides a gross return of £6 1s. 9d. per cent. 3½ per cent is the Paid Up Share rate we had operated for some months prior to the raising of the bank rate to 7 per cent. How long it will be possible to maintain our rates should this high bank rate continue, I would not care to speculate. It is the hope of your Board that the bank rate may be reduced in the near future, as a further raising of our own rates would cause difficulty, and we sincerely hope it can be avoided.

If due allowance is made for the effects of the abnormally high money rates and for the credit squeeze, our inflow of money must be considered satisfactory. It must be appreciated that these same factors have increased the withdrawal rate, although so far this increase has been less than might have been expected; again, I think, reflecting the measure of public confidence in us.

I have probably now said sufficient about the conditions and factors under which we have operated during the year, and I therefore propose to turn to the results.

The features of significance that will interest most of you are the following:

ACCOUNTS FOR THE YEAR ENDED 31st DECEMBER, 1957

	1957 £	£
Total assets	71,030,274	+ 3,847,792
Mortgage assets	59,230,678	+ 2,397,224
Amount advanced during year	8,409,476	— 1,121,965
Total deposits	6,921,485	— 536,582
Total shares	58,313,989	+ 3,878,442
Investments in trustee securities	8,905,833	+ 666,329
Total net liquidity	10,195,741	+ 1,154,536
Reserve funds	4,586,048	+ 286,398
Income tax and profits tax	1,200,000	+ 218,000
Number of mortgage accounts	66,584	+ 666
Number of share accounts	66,349	+ 4,106
Number of deposit accounts	18,107	— 578
Percentage of total net liquidity to shares and deposits		15.63
Percentage of reserve funds to total assets		6.46
Percentage of reserve funds to mortgage assets		7.74

The substantial increase in our cash liquidity is the point I might be thought to explain to you specially wish that the amount of this is unduly high. To any such suggestion I would reply that it is no more than strict prudence demands in the uncertain times I have indicated to you.

It is in times of strain, such as the present, that the reserves and total liquidity of a Society become of greater than normal importance, and I would remind you that your Society is outstanding on both these counts. Our total liquidity is twice the amount recognised as a minimum standard, and you will be glad to note that our previously outstandingly strong reserve strength has been augmented this year by a substantial amount, resulting in our percentage of reserves to assets figure being fractionally increased.

Mortgage business has had to be rationed in accordance with the inflow of money throughout the year, but we have never ceased to maintain a good flow, as the figure of new mortgage business for the year demonstrates, Mortgage demands have been on a very large scale, largely owing to rationing being usual throughout the movement.

During the year the extensive internal alterations to our Bradford Head Office have been completed, with a result which I believe to be satisfactory to both our customers and staff.

The alterations were forced upon us by the restriction the old premises placed on our growing business, and our present and immediate future needs necessitated taking in so much extra space as to demand a thorough reconstruction. This has provided us with a much enlarged Banking Hall and public space, and an appreciable enlargement to all our staff departments, together with the provision of a large up-to-date staff canteen in which we are now holding this Meeting. It is already obvious to your Board that the considerable benefits of this expense are now being reaped and also that they are appreciated by all who use them.

The greatest confidence I feel for the future is my unfailing belief that our Society will not be found wanting, whatever the future holds for us. Maybe 1958 will provide the pleasant surprise I feel to be overdue but is not now in sight.

The report and accounts were adopted.

ALBION STREET, LEEDS.

ABRIDGED PROSPECTUS

Consent of Her Majesty's Treasury has been obtained to this issue in compliance with the Order made under Section 1 of the Borrowing (Control and Guarantees) Act, 1946.

Issue of £16,000,000

GOVERNMENT OF THE COMMONWEALTH OF AUSTRALIA
6 PER CENT. REGISTERED STOCK, 1974-1976

at the rate £99 10s. per cent.

Interest payable 15th April and 15th October.

The Government of the Commonwealth of Australia will comply with the requirements of the Colonial Stock Act, 1900, in order that Trustees may invest in the Stock, subject to the provisions set forth in the Trustee Act, 1925.

OFFER OF CONVERSION TO HOLDERS OF
£19,988,200 COMMONWEALTH OF AUSTRALIA 3% REGISTERED STOCK, 1955-1958,

maturing 15th April, 1958

This offer of conversion is limited to a total amount of £16,000,000 and the list will be closed when conversion applications totalling that amount of stock have been accepted. In any case the list will be closed not later than 3 p.m. on 28th February, 1958. The balance of £3,383,200 will be paid off out of Sinking Fund moneys which have been accumulated for this purpose.

Commonwealth Bank of Australia is authorised by the Government of the Commonwealth of Australia to offer to holders of Commonwealth of Australia 3 per cent. Registered Stock, 1955-58, Conversion of their holdings, in whole or in part, into an equal nominal amount of Government of the Commonwealth of Australia 6 per cent. Registered Stock, 1974-1976, on the terms set forth in the full prospectus.

Principal of the new Loan will be repaid in London at par on 15th October, 1976, the Government of the Commonwealth of Australia having the option to redeem the Stock at par, in whole or in part, on or after 15th October, 1974, on giving three months' notice by public advertisement.

Holders, whose applications for conversion are accepted will receive on 15th April, 1958, a cash payment of 10s. per cent. representing the difference between the issue price of the new Stock and the redemption at par of the old Loan. They will also receive the usual six months' interest payable on that date.

Applications for conversion must be lodged on the appropriate forms accompanied by the relative Stock Certificates, at the COMMONWEALTH BANK OF AUSTRALIA, Stock Department, 8, Old Jewry, London, E.C.2. These forms have been posted to the Stockholders or, in the case of joint accounts, to the Stockholder first named in such accounts.

Any Commonwealth of Australia 3 per cent. Registered Stock, 1955-1958, not converted will be paid off at par on 15th April, 1958, together with the six months' interest then due.

The Stock now offered will be registered and transferable in any amount by deed, at the COMMONWEALTH BANK OF AUSTRALIA, Stock Department, 8, Old Jewry, London, E.C.2. Stamp duty on all transfers will be paid by the Government of the Commonwealth of Australia.

Commonwealth Bank of Australia is further authorised to offer for subscription in cash Government of the Commonwealth of Australia 6 per cent. Registered Stock, 1974-1976, to such an amount as may be required to make up the total of £16,000,000 in the event of conversion acceptances not reaching that total.

PRICE OF ISSUE £93 10s. per cent.

Payable as follows:—

On Application	£10 0 0	per cent.
On 13th March, 1958	£20 0 0	" "
On 15th April, 1958	£30 0 0	" "
On 12th May, 1958	£33 10 0	" "
	£93 10 0	per cent.

A first Interest payment of $3 (less Income Tax) per £100 Stock will be made by warrant on 15th October, 1958.

Cash applications on the prescribed forms will be received at the COMMONWEALTH BANK OF AUSTRALIA, Stock Department, 8, Old Jewry, London, E.C.2.

The revenues of the Commonwealth of Australia alone are liable in respect of this Stock and the Dividends thereon, and the Consolidated Fund of the United Kingdom and the Commissioners of Her Majesty's Treasury are not directly or indirectly liable or responsible for the payment of the Stock or of the Dividends thereon, or for any matter relating thereto.—40 and 41 Vict., cap. 59, sec. 19.

A commission of 5s. per £100 Stock will be paid to Bankers and Stockbrokers on allotments made in respect of conversion acceptances and cash applications bearing their stamp.

Full Prospectuses, with Statistical Statement relating to the Commonwealth of Australia, may be obtained from the Commonwealth Bank of Australia, Stock Department, 8, Old Jewry, London, E.C.2; from Messrs. R. Nivison & Co., 25, Austin Friars, London, E.C.2; and at the Offices of the Government of the Commonwealth of Australia, Australia House, Strand, London, W.C.2.

COMMONWEALTH BANK OF AUSTRALIA,
8, Old Jewry, London, E.C.2.

18th February, 1958.

The List for Cash Applications will open and close on Monday, 24th February, 1958.
The List for Conversions will be closed on or before 3 p.m. on Friday, 28th February, 1958.

THIS FORM MAY BE USED.

Authorised Depositaries are listed in Appendix I to the Bank of England's Notice E.C. Securities 8 and include banks, stockbrokers and solicitors in the United Kingdom.

† The Scheduled Territories comprise the British Commonwealth (except Canada), the Irish Republic, British Trust Territories, British Protectorates and Protected States, Burma, Iraq, Iceland, the Hashemite Kingdom of the Jordan, Libya.

‡ The definition of "nominee" is given in the Bank of England's Notice E.C. Securities 8.

N.B.—Applications must be for amounts of £100 of Stock or multiples thereof.

Cheques should be made payable to "COMMONWEALTH BANK OF AUSTRALIA" and crossed "AUSTRALIAN LOAN."

TEACHER *(DISTILLERS)* LIMITED

CONTINUED DEMAND FOR "HIGHLAND CREAM" AT HOME AND ABROAD

The Ninth Annual General Meeting of Teacher (Distillers) Limited was held on February 18th in Glasgow.

Mr R. M. Teacher, the Chairman, presided and, in the course of his speech, said:

The gross profit earned amounted to £688,826 as against £728,288 last year. With rising costs and continued building up of stocks and production it is not surprising that this year there should be some falling off in the relation of profit to turnover.

Deductions, due to a reduction in reconstruction expenditure at £54,367 and slightly less tax on the reduced profit at £351,471, amount to £405,838 leaving a net profit attributable to the Group of £282,988, a reduction on last year of only £8,427. As estimated, it is proposed that the Dividend be maintained at 15 per cent for the year.

As has been the pattern of past years sales of our HIGHLAND CREAM, both at home and abroad, continue to be limited in the free markets only by the stocks of matured whisky available, and while these stocks have been steadily increasing, the demand for our Brand still exceeds supply. The continued rise in the export of Scotch Whisky last year indicates that the greater quantities becoming available are still being readily taken up and the over-all demand and popularity of Scotch Whisky continues its high place in the struggle of our present economy to improve and maintain exports.

In the United States, in spite of growing competition, mild recession, and a general guarded pessimism, our Brand is maintaining its position as a leader and representative of high quality Scotch Whisky. Our sales in Canada have improved throughout the Provinces where during the year adjustment had been made in the difference in price between domestic and Scotch Whiskies. The slight easing of imports to Australia, it is hoped, will continue to allow this important market to be built up especially in view of the recently announced cuts in imports to New Zealand which include Scotch Whisky.

HOME TRADE

Turning to the Home Trade, here again proportionate increases in supplies were made and absorbed, but in the face of rising costs, which culminate, no matter how reluctantly, in an inevitable increase in price, the effects of this and the curtailment of spending power will remain to be seen. The contribution to the Revenue which accrues from our industry must again be stressed.

At Ardmore Distillery we found it necessary to increase further the production capacity and work was started early last year. This is proceeding and the buildings are well advanced.

In spite of the economic difficulties, with the value of our exports of a product, which can only be made in Scotland, we can for the present be confident that our Company and our industry have satisfactory prospects and scope for development and our plans for expansion are not deterred by these conditions, which for the time being may give us less reward.

The report was adopted.

NATIONAL MORTGAGE & AGENCY COMPANY OF NEW ZEALAND

SUCCESSFUL TRADING

The eighty-second annual general meeting of this company was held on February 18th, in London. The Right Honourable Lord Glenconner, chairman, presiding.

The following is an extract from his circulated statement for the year ended September 30, 1957:

It is with pleasure that I report the results of another successful year of trading by your company. Climatic conditions in New Zealand were favourable, and markets for both meat and wool were buoyant throughout the season. Once again our general merchandising activities over a wide field of trading have been successful and turnover has increased. So far as prospects for our farmer clients in the current season are concerned, conditions generally have been favourable. We cannot look forward to 1958 with the same optimism as was justified in recent years, and the control of imports will add to the difficulties of trading. So far as we are concerned, however, it is not expected that trading stocks will be greatly affected.

The record gross profit of £593,820 is the measure of a most successful year's trading, and we have also benefited from the excellent results of our associated companies, in the form of increased dividends. The profit, before taxation, is £324,726, compared with £310,890 last year. Your directors recommend a final dividend of 5 per cent on the paid up capital of £1,160,000, making the total distribution for the year £88,000.

The report and accounts were adopted.

THE ATLAS STONE COMPANY

RECORD TRADING RESULTS

The twenty-seventh ordinary general meeting of The Atlas Stone Company Limited was held on February 18th in London, Mr Bernard Davis (Chairman and Managing Director) presiding.

The following is an extract from his circulated statement:

Trading profit for the year amounted to £116,164 which compares with £92,251 for the previous year. Your Directors recommend a Dividend on the Ordinary Shares of 12 per cent less tax.

The trading results for the year under review are once again the best so far recorded, with a consequential increase in taxation payable. The effects of the Suez crisis were less than at one time seemed probable and weather conditions helped towards a well maintained volume of turnover.

Costs of labour, fuel, raw materials, transport and salaries continue to rise and it has therefore been necessary to increase some selling prices. Too much emphasis cannot be laid upon the absolute necessity for the Government, through the Nationalised Industries, to give the lead in the process of price stabilisation.

Towards the end of our financial year the Bank Rate was raised to 7 per cent. The effect on our business of this bold step will take time to become apparent because of the backlog of contracts to be completed.

We are confident, however, that we shall continue to receive our share of available orders and every effort will be made with this in view. The report was adopted.

LLOYDS BANK LIMITED

ANNUAL GENERAL MEETING

THE ANNUAL GENERAL MEETING of Lloyds Bank Limited, was held on February 14th, at the Head Office, 71 Lombard Street, London, EC.

The RIGHT HONOURABLE SIR OLIVER FRANKS, GCMG, KCB, CBE, the Chairman, presided.

With the concurrence of the members present the report and accounts and the statement by the Chairman, all of which had been previously circulated, were taken as read.

The report and accounts were adopted and the other ordinary business was transacted.

Votes of thanks were passed to the Chairman and Directors and to the staff.

BUSINESS TRAVEL

Dear Sir:
I would like to place on record my appreciation of the first-rate service your Company has given me on my recent complicated tour of the Far East.
Every flight, every hotel and every rail connection matched your itinerary.
Your staff were tireless in their efforts to make my tour run as smoothly as possible and I really appreciate their work.
Thank you again for such a personal service and I hope it will not be long before I again Travel by Davell.
Yours sincerely,

Davell & Co., Ltd. can offer you all the services that a travel agent can provide but there can be no point in our praising ourselves—we would far prefer to be praised by you. May we ask you to give us 24 hours-a-day 7 days-a-week Business Travel Department to the test in the hope that our service will ons day move you to write us a letter like the above. Telephone or write to

UNIVERSITY OF ST. ANDREWS

MANAGEMENT COURSE

The University will hold a residential course for executives in St. Andrews from August 29th to September 17, 1958. The course will concentrate on one sector of management, namely, Industrial Relations, with due regard in three parts: (1) the evolution of the British economy and of the functions and policies of management, trade unions, and the State; (2) a study of the problems and methods of Industrial Relations; (3) an enquiry into current trends and probable future developments. The number of students will be limited to 40. The inclusive fee is 70 guineas, and the closing date for enrolment is April 30th. Copies of the explanatory brochure and application forms may be obtained from
The Secretary,
Summer School of Management Studies,
Queen's College,
February, 1958. DUNDEE.

ORDERS for advertisements in *The Economist* are accepted on condition that they are liable to rejection at the discretion of the Editor; that while every effort will be made to publish an advertisement on a specified date, no guarantee is given; and that white on black, reverse blocks or large sizes of black-faced type may be stopped or lined at the Editor's discretion.

APPOINTMENTS

ADVERTISING AND MERCHANDISING MANAGER

An experienced and versatile manager required to take over the Advertising Department of this progressive paint company. Candidates must understand thoroughly the techniques of advertising, printing, and marketing. They should know how to prepare budgets and control expenditure. They will be experienced in media selection, sales promotion, and public relations.

The job will entail travelling and contact with the Company's agents and representatives. A liking for and interest in colour is essential.

Applications, giving details of experience and salary required, should be sent to the Sales Director.

JOHN HALL & SONS (Bristol and London) Ltd., Hengrove, Bristol 4.

MANAGEMENT AND INDUSTRIAL CONSULTANCY.—Norcross and Partners Ltd., require additional CONSULTANTS. The work involves advising clients in one or more of the following fields: (a) Management Accounting, (b) Clerical Methods, (c) Production Control, (d) Work Study. The posts would appeal to either: (i) Qualified Engineers with good experience of factory administration, or (ii) qualified Cost Accountants with some experience in production control or work study. Applicants should be between 28 and 40 years of age.—Write in the first instance for an application form to Reference 154, Norcross & Partners Ltd., The White House, 111 New Street, Birmingham, 2.

ASSISTANT SECRETARY to take charge of legal and taxation department at Association of British Chambers of Commerce. Age 25 to 35. Post requires extensive reading of Bills and Statutes affecting business also serving Finance and Taxation Committee. Candidates should have legal background, knowledge of company and taxation principles, and have initiative for research. Ability to prepare memoranda essential. Commencing salary about £1,000 according to qualifications offered. Pension scheme. —Applications to Secretary, 14 Queen Anne's Gate, London, S.W.1, marked *Confidential*.

FORD MOTOR COMPANY LTD. have vacancies for young economists, men and women, for work on sales analysis and market research and in related fields. A high standard of ability and a good university degree in economics or statistics and mathematics are required. Experience in industry or public service, though not essential, is desirable. Salary will depend on ability, and there are excellent prospects.—Please write to Training and Recruitment Department (012A) Ford Motor Company Ltd., Dagenham, Essex, giving full details and quoting reference REC.

MARKETING STATISTICS MANAGER required by the makers of Stork Margarine to work in London. Needs knowledge of economics and ability to analyse and interpret statistics and market research figures in terms of the need for action they indicate. Starting salary £1,100 to £1,200 a year, also Pension Fund. Considerable prospects for improvement. Applications from men not more than 27 years old considered.—Apply Van den Berghs Limited, Kildare House London, E.C.4. State age, diplomas or degrees and commercial experience.

MARKET RESEARCH

McCann-Erickson Advertising Limited have vacancies for at least two more Assistants in their Research Department. Graduates in one of the Social Sciences are preferred. Research experience would be an asset, but is not essential. Salaries will be according to qualifications and experience, but initially not less than £550 per annum. Those selected will have the opportunity to assist in all types of market and motivation research. Applicants should write, giving full information about themselves, to the Director of Research, McCann-Erickson Advertising Ltd., Fetter Lane, London, E.C.4.

MARKET RESEARCH

Precision engineering company in West London require SENIOR RESEARCH OFFICER for expanding Market Research Department. Preference will be given to graduates in economics, with statistics as special subject, and some industrial or commercial experience, aged 25 to 35. The post calls for analytical skill in handling statistical material and relating the company's activities to trends in the national economy, and offers an excellent opportunity to build a career in a progressive firm. Pension scheme, excellent sports and social facilities.—Write, giving full details to Box 880.

MAJOR PETROLEUM COMPANY has a vacancy for an economics graduate or qualified statistician between 28 and 35 years of age. The chief requirement is for an analytical mind with the ability to marshal facts and draw logical conclusions, and applicants should be prepared to make a positive contribution to an existing team. Good starting salary in line with experience and qualifications. Excellent pensions scheme.—Apply, in writing, giving full details of age, qualifications and experience to Box 879. Replies can only be sent to those selected for interview.

WORCESTER COLLEGE, OXFORD

The College proposes to appoint a Domestic Bursar, if a suitable candidate presents himself, to take up his duties, if possible, not later than September 1, 1958.
Applications, giving an account of the candidate's career and qualifications and the names of three referees, should be sent by April 15th to J. R. Sargent, Esq., Worcester College, Oxford, from whom further particulars may be obtained.

UNIVERSITY COLLEGE OF SWANSEA

Applications are invited for a Lectureship in the Department of Economics. Candidates should have special interests in social accounting.
The salary range will be £900 x £50 to £1,350 x £75 to £1,650 per annum. The commencing salary will be at a point on the scale according to age, qualifications and experience. Membership of the F.S.S.U. and children's allowance scheme.
Further particulars may be obtained from the Registrar, University College, Singleton Park, Swansea, to whom applications (six copies) must be sent by March 15, 1958.

MARKET RESEARCH

KODAK LIMITED has a vacancy in the Economics and Statistics Department and invites applications from men up to the age of 30 who have a degree in Economics or Sociology.

The responsibility in this post is for that section of the department's work concerned with research into retail markets but the man appointed may be later considered for control of all market research activities.

The job offers ample scope for exercising initiative and involves the control of sample surveys from the design stage up to and including the analysis and report.

Candidates with previous experience in this kind of work and who are conversant with the necessary statistical techniques will receive first consideration. Every opportunity will be afforded for initial familiarisation with the Company's products and marketing organisation. Letters should be addressed to the Personnel Manager, Kodak House, Kingsway, W.C.2.

SAVILLE (TRACTORS) LIMITED have vacancies in their Sales Organisation both in London and the Provinces. Applications invited from men preferably in the 35-40 age group. Previous experience in the Earth Moving Industry desirable. Good education and ability to negotiate at Director's level essential. Ex-Service Officers considered. Applications, in writing only, giving full personal details, to the "Industrial Sales Manager."
SAVILLE (TRACTORS) LIMITED, Harvester House, Stratford-on-Avon.

FISONS LIMITED require a SENIOR EXECUTIVE for their Fertilizer Division. The work will consist principally of co-ordinating planning for the demand and supply of both finished products and raw materials and in the preparation of surveys and forecasts in the light of:

(a) The general economic situation of the country both short and long term.
(b) The availability of raw materials.
(c) Price trends in the fertilizer industry at home and abroad.

Applicants should preferably be under 40 years of age and have a first-class Honours Degree in Economics. A man of exceptional and outstanding ability is being sought.
Applications to the Personnel Officer (GI12), Fisons Limited, Harvest House, Felixstowe, Suffolk.

MARKET RESEARCH.—A Senior Market Research Officer is required in the Market Research Department of a nationally known manufacturer of consumer goods with headquarters near West London. This appointment within an expanding department offers the possibility of excellent prospects. Duties will be concerned primarily with toiletries and cosmetics but may extend to other fields. Candidates must have at least three to four years' experience in market research and should preferably be between 25 and 35 years of age. Wide practical experience in organising and operating consumer surveys, consumer product tests and projects designed to measure or assess the success of special sales and other promotional activities is essential. Some knowledge and experience of research methods as applied to advertising problems (e.g., motivation, research copy testing) is desirable. The salary paid will be assessed according to age, qualifications and experience but it is expected to be within the range of £1,250 to £1,800 per annum.—Applications, which will be treated in the strictest confidence, should give full details of age, qualifications, experience and present salary. All applications will be answered. Please quote Ref. M.R.O on envelope and letter.—Box 871.

C. & J. CLARK LIMITED, Shoemakers, Street, Somerset, wish to appoint a statistician for statistical and activity sampling in their Time Study and Quality Control Departments.
This is a permanent position carrying generous salary with considerable opportunity for development and for the practical application of statistical research.
Applicants, male or female, should write in confidence stating age, qualifications and experience, to the Personnel Director by March 1, 1958.

ECONOMISTS SOCIOLOGISTS with some knowledge of statistics.
A leading manufacturing company has a vacancy in its Market Research organisation for a man aged between 23 and 30. The job in an expanding section offers scope and a wide range of experience. A good academic background and some acquaintance with commercial problems and the research methods available for their solution will be assets.—Box 866.

ASSISTANT STATISTICIAN required for Research Department of International Bank; duties involve extraction, compilation and checking statistics, chiefly connected with trade, banking and finance in Latin America. Young graduate (man or woman) in economics preferred with some specialisation in banking; knowledge of Spanish and/or Portuguese would be an advantage.—Box 876.

CROYDON TECHNICAL COLLLGE

FAIRFIELD, CROYDON

Principal: H. Falkner, M.Sc.(Wales), B.Sc.(Lond.), A.Inst.P.

Applications are invited for the post of LECTURER in the COMMERCE DEPARTMENT.

Candidates should be qualified to teach Accountancy and Management subjects to final professional standard.

Salary in accordance with the Burnham Technical Scale plus London Allowance.

Duties to commence on September 1, 1958.

Further particulars and form of application may be obtained from the undersigned on receipt of a stamped, addressed envelope, and completed forms should be returned to the Principal.

R. WEARING KING,
Chief Education Officer.
Education Office, Katharine Street, Croydon.

THE UNIVERSITY OF SHEFFIELD

Applications are invited from Honours Graduates in Economics, or other appropriate subjects, experienced in adult education, preferably in the field of Industrial Relations, for the post of STAFF TUTOR and DEPUTY to the DIRECTOR of EXTRAMURAL STUDIES, with classes to take up duties on September 1, 1958. Salary in the upper part of the Lecturer scale £1,150 x £50—£1,350 x £75—£1,650 according to qualifications and experience, with F.S.S.U. and family allowance.—Further particulars may be obtained from the Registrar to whom applications (12 copies) should be sent by March 22, 1958.

APPOINTMENTS

ASSISTANT ECONOMIST

The person appointed to this position will be engaged in obtaining information and presenting reports on trends in Economic conditions in the U.K. and overseas, and their possible influence on activity in the constructional industry.

Apart from publications, it will be necessary to obtain data by means of surveys and personal interviews, which could involve a certain amount of travelling in the U.K.

Applications for this post are invited from women aged 23-28 with at least a second class honours degree in Economics and preferably 2 years' experience since graduating. The commencing salary will be in the range of £650-£800 per annum.

Letters should be addressed to:

SENIOR PERSONNEL OFFICER,
RICHARD COSTAIN LIMITED
111 WESTMINSTER BRIDGE ROAD,
LONDON, S.E.1.

MARKETING MANAGER

A progressive career is available to the candidate chosen by an expanding West Riding company to fill the appointment of Marketing Manager.

This is an excellent opportunity for a man between 30 and 35 years of age, who has acquired marketing research experience in the Marketing Department of either a National Company or an Advertising Agency.

Besides research into existing and potential markets, the responsibilities of this appointment embrace the preparation, maintenance, analysis, and interpretation of all sales records, and assistance to the Board in planning trading policy.

Thus, a sound knowledge of marketing research techniques and statistical methods should be supplemented by an alert and enquiring mind, ability to lead, and a flair for economic investigation.

Although of secondary consideration to practical marketing experience, candidates should possess Higher Certificate of Education with further study at University or Technical School in mathematics, economics, accountancy, or similar subjects.

The appointment is well remunerated and the prospects are excellent.

Applications, which will be treated in strictest confidence, should be mailed to Box 878.

SENIOR PROGRAMMER

ELECTRONIC COMPUTER (ELLIOTT 405)

Littlewoods Mail Order Stores Ltd. wish to appoint a senior Senior Programmer for their Head Office Computer Department at Liverpool.
Applicants should have an Honours degree in Mathematics and previous experience in numerical analysis and use of electronic digital computers would be an advantage.
Commencing salary will be on a scale (£1,200-£1,500) depending upon qualifications and experience. Successful candidate must be prepared to live in the Liverpool area. Permanent appointment, offering really good scope, with Life Assurance and Pension Scheme. Five-day week.
Letters of application, giving age and full particulars to the Personnel Manager (E.C./3), Littlewoods Mail Order Stores Ltd., Kershaw Avenue, Crosby, Liverpool X.

EDUCATION AND TRAINING OFFICER.—A medium-sized manufacturing group in West London invites applications for a man aged between 30 and 40 for the above post. The successful candidate will be responsible to the Personnel Manager for designing, initiating and controlling vocational and educational training schemes for all categories of staff—with emphasis on the agricultural and pharmaceutical sales force. This post calls for a high degree of organisational ability and candidates must have had experience of such work previously. The commencing salary will be according to age, qualifications and experience and will be reviewed annually. Contributory superannuation and life assurance scheme in operation. —Applications, giving brief outline of training and experience to date, should be addressed to the Personnel Manager, THE VITAMINS GROUP, Upper Mall, Hammersmith, W.6.

UNIVERSITY COLLEGE OF GHANA

Applications are invited for a Senior Lectureship in Sociology. Interest in Social Psychology an advantage. Salary scale: £1,700 x £75—£2,150 p.a., entry point according to qualifications and experience. F.S.S.U. Outfit and Family allowances. Passages for appointee and family on appointment, annual leave and normal termination. Part-furnished accommodation at a charge not exceeding 7.5 per cent. of salary.
Detailed applications (6 copies) naming three referees by March 13, 1958, to Secretary, Inter-University Council for Higher Education Overseas, 29 Woburn Square, London, W.C.1 from whom further particulars may be obtained.

APPOINTMENTS REQUIRED

ROME.—Ex-JWT (Eastern) executive (36), experienced USA, Italy, East, Italian-speaking, seeks negotiating, agency or other assignments.—Box 877.
SENIOR SALES EXECUTIVE (Food) seeks change. Top-level contacts Nationally with multiple, Co-op, wholesale trade.—Box 874.

BUSINESS AND PERSONAL

NOTICE TO INDUSTRIALISTS, FINANCIAL ADVISERS, INVESTMENT AND BANKING HOUSES

IN YOUR COMPANY'S ECONOMY AND THE NATIONAL INTEREST

why attempt to do your own Research and Development when there is a scarcity of good Development Engineers on the labour market and when your Development Programme is achieved you have a labour surplus which is not used efficiently—Why not use the facilities of this British Company whose prime function is *Project Consultancy* from "inception of thought" to guarantee of "end product" incorporating:

World Market Research
Project Development and Design
Work and Methods Study
Production Planning and Cost Analysis

We also give a conversion service of American and Foreign Drawings to British Standard Specification and Production Practice and vice versa.

Our Principal is looking forward to meeting you for a general discussion of your problems.—Principals only please write.—Box 857.

WELL-KNOWN ENGINEERING CONCERN

wishes to acquire minimum of 51 per cent. of equity of established MANUFACTURING BUSINESS: preferably in West Surrey or West Middlesex; maximum distance from London 60-70 miles. TURNOVER FROM £200,000 TO £500,000 with up-to-date Plant for FINE LIMITED ENGINEERING OR INDUSTRIAL ELECTRONICS or both; some Board changes but executive management to remain; good technical staff desired. This business would be run autonomously in association with advertisers' business of high repute having overseas subsidiaries.—Replies to Box T1639/3, c/o Foster Turner & Everetts Ltd., 11 Old Jewry, London, E.C.2.

Invest in CITY OF COVENTRY Mortgage Loans

(TRUSTEE SECURITIES)

SIX PER CENT FOR TEN YEARS

Special terms will be quoted for loans of £10,000 and over.

For further particulars apply:

CITY TREASURER (C.), COUNCIL HOUSE, COVENTRY.

CANADIAN TRADE MISSION

Sales campaigns in Canada would be promoted effectively through the services of our Associated Company in Montreal. Our Managing Director will be in North America in April and would deal with all requirements personally.

IF you simply ask for sherry, then you deserve whatever you get. If you ask for El Cid, then you get the sherry you deserve. Quite a different thing.

EDUCATIONAL

UNIVERSITY OF CAMBRIDGE DEPARTMENT OF ENGINEERING

POST-GRADUATE COURSE IN STRUCTURES AND MATERIALS

The 1958-59 Post-Graduate Course in Theory of Structures and Strength of Materials will be held in the Department of Engineering, Cambridge University, beginning on October 7, 1958, and finishing in June, 1959.
The latest advances made in the understanding of the behaviour of metallic structures under static, repeated or fatigue loading will be the principal subject of the course, with particular emphasis on welding as a method of fabrication. No attempt will be made to teach conventional methods of design, but present-day practice and possible future developments will form the subject of critical study.
The object of the course is not to train research workers, but to help engineers to apply the latest advances in knowledge. The course will include lectures, colloquia and laboratory work, and each student will be encouraged to make a detailed study of some problem of particular interest to him.
The course is open to university graduates with industrial experience, and to others with suitable equivalent qualifications and of sufficient experience to obtain full benefit from a post-graduate course.
Further details and forms of application for admission may be obtained from the Secretary, Cambridge University Engineering Laboratory, Trumpington Street, Cambridge. The completed forms of application should be returned to the Secretary not later than May 31, 1958.

THE BRITISH ASSOCIATION OF ACCOUNTANTS AND AUDITORS, LTD. (Incorporated 1923).—The next Examinations will be held on Tuesday, Wednesday, Thursday and Friday, the 20th, 21st, 22nd and 23rd May, have passed Membership can only be obtained by those who Syllabus and the prescribed Examinations.—Copies of the Syllabus can be obtained from the Secretary, 2 Clareville Grove, South Kensington, London, S.W.7.

UNIVERSITY OF CAMBRIDGE DEPARTMENT OF ENGINEERING

POST-GRADUATE COURSE IN CONTROL ENGINEERING

The 1958-59 Post-Graduate Course in Control Engineering will begin on October 7, 1958, and will last approximately nine months. This is the fourth course of a series which has been established in order to meet the need of Industry for men trained to a high standard in the theoretical principles and practical application of automatic control and to afford opportunity for study of advanced techniques and modern development in the general field of Control Engineering.
The number of students will be limited and applications must reach the Secretary of the Department not later than July 1, 1958. Candidates should hold a degree in Engineering or a suitable alternative qualification and have had some practical training and experience. They will be required to attend for interview in Cambridge on or before August 15, 1958.
Further details and forms of application for admission may be obtained from the Secretary, Cambridge University Department of Engineering, Trumpington Street, Cambridge.

SUCCESSFUL TUITION FOR THE B.SC.(ECON.) DEGREE

Wolsey Hall (Est. 1894) provides Postal Courses in a wide range of subjects for the two examinations for Lond. Univ. B.Sc.Econ. (three if Entrance is included). Moderate fees, instalments. Over 800 Wolsey Hall students passed Lond. Univ. B.Sc.Econ. exams. 1951-56. Prospectus from C. D. PARKER, M.A., LL.D., Director of Studies, Dept. P.16, WOLSEY HALL, OXFORD.

SECRETARIAL TRAINING, especially for university graduates and older students. Six-month and intensive 14-week courses.—Miss Organising Secretary, DAVIES'S, 2 Addison Road, W.14. PARK 8392.

EXPERT POSTAL TUITION

for Examinations—University, Law, Accountancy, Costing, Secretarial, Civil Service, Management, Export, Commercial, General Certificate of Education, etc. Also many practical (non-examination) courses in business subjects.—Write today for free prospectus—and/or advice, mentioning examination or subjects in which interested, to the Secretary (G9/2),
METROPOLITAN COLLEGE, ST. ALBANS
or call at 30 Queen Victoria Street, London, E.C.4.

AIR SUBSCRIPTION RATES

Subscriptions to many countries can be sent either by direct second-class airmail or in bulk by air freight for onward posting from central distribution points. Airmail is invariably more expensive but usually quicker by about 24/48 hours. Where only one service is shown this is because the alternative is either not available or not recommended.

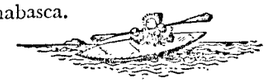
RITCHIE CALDER'S *Signposts to the Atomic Age*

ATOMIC HEAT to freeze the Arctic...

"IN THE FROZEN WASTELANDS OF THE Canadian North, Eskimos and Indians, going off to hunt the caribou or trap for furs, are taught how to prospect for the fuels and metals of The Atomic Age. They are part of that Age and very much aware of it. *Innuit*, the Eskimo of the Barrens, no longer laughs at the eccentric interest which *Kabloona*, the White Man, shows in yellow-stained rocks; he knows what makes a Geiger-counter tick and recognises uranium when he sees it. His Tree-line neighbour, the Cree Indian 'brave' has already grasped the meaning of atomic energy—he calls it *Eskoitik-otchi-Kaochipyik* which is 'Lightning-which-comes-out-of-Rock'.

Those vast empty spaces, half the size of the United States, are already being systematically surveyed. Geologists, on the ground and from the air, are charting its fabulous mineral wealth. Helicopters, fitted with gravimeters, magnetometers, and scintillometers, can detect the ore-bearing deposits beneath the snow and ice, the pathless forests and the countless lakes. Their charts already speak eloquently of the abundance of the



atomic fuels and "new" metals for which the metallurgists and nuclear engineers are praying; but most of that wealth is locked up in remote parts of the Pre-Cambrian, or Laurentian Shield, so inaccessible to conventional haulage, by road or rail, as to seem unworkable.

Yet the answer could lie in atomic energy itself.

Imagine 'industrial oases', powered and heated by "packaged reactors" and reached only by aircraft. The reactors themselves could be assembled by air-supply (which has already served in the construction of the massive defence installations in the Canadian Arctic). Once the reactors are established and 'critical', fuel-replenishment would be no problem.

Completely civilised townships could be created with adequate heat to counteract the climate, and modern amenities to enliven the Long Night. Again the prototype exists in the Canadian base at Churchill on Hudon Bay and the U.S. base at Thule, in Greenland. With self-sufficient power, independent of coal-trucks, oil-tankers, or pipe-lines, the ores could be mined, milled and processed into small bulk and flown out by air, like the casks of sodium uraninate from the Eldorado mine on Lake Athabasca.

That raises another problem for which atomic energy could have a quaint answer. How to ensure all-the-year-round air-communications? The winter, contrary to popular belief, is the best time; the sea and lake ice can take the heaviest aircraft. The trouble starts with the coming of the sun. Ice thaws. Airstrips heave and toss and melt into mud, while the permafrost, the continuously frozen sub-soil and rock, remains solid underneath. With sufficient power available, the airstrips and roads could be refrigerated and kept solid, like an ice-skating rink.

Atomic heat to freeze the Arctic! It is like selling refrigerators to the Eskimos." [R.C.]

SENIOR APPOINTMENT

THE UNITED KINGDOM ATOMIC ENERGY AUTHORITY

INDUSTRIAL GROUP, RISLEY, LANCASHIRE

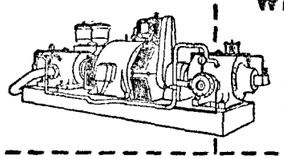
Invite Application for
One of the Posts of

DEPUTY TO THE MANAGING DIRECTOR

referred to in the Report of the Committee appointed by the Prime Minister to examine certain parts of the Authority's organisation. The Deputy Managing Directors will be primarily required to act as Deputies to the *Industrial Group's Managing Director* at its Group Headquarters, and will therefore share in the top management of the Group. In addition, they will be given specific responsibility for particular aspects of the Group's activities; these allotted duties will vary from time to time.

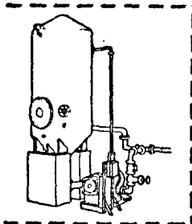
Applications will be considered from professional engineers, chemists, physicists or chemical engineers who must have had first rate experience in the organisation and administration of large industrial concerns and particularly those where there is a high research, development and design content in support of a large construction programme.

Salary will be in the range of



£5,000 to £5,500 per annum.

Suitably qualified persons should apply in writing, in strict confidence, to



Sir Leonard Owen, C.B.E., Managing Director,
United Kingdom Atomic Energy Authority,
Industrial Group Headquarters, Risley, Warrington,
Lancashire.

NEWALLS ADVISORY SERVICE is available to anyone interested in increasing productivity and working efficiency by better insulation.

"Lock, Stock and Barrel"

"Go over the whole place," I said to Newalls "lock, stock and barrel. If better heat insulation will save me money on fuel, then I'll listen to your proposals. They examined every part of the factory—looked at the boiler, measured the pipe work, climbed on the roof, and asked quite a lot of questions. When the proposals came through, they even suggested a way of cutting down the infernal din which comes at me with two barrels whenever my office door is opened. Now that the work is completed, and it didn't take all that long, I can enjoy working with the peace of mind which only lower fuel costs—and a quiet office—can generate."

Rubber Plants are growing in England...

The steady increasing demand for synthetic rubber explains the growth of these relatively new petrochemical plants in England. In recent years leading petrochemical and petroleum firms not only in the United Kingdom but throughout the world have been increasing their production of butadiene. Butadiene is the major constituent of the general purpose rubber called GR-S. The Kellogg organisation has been associated with several of these projects.

The Kellogg organisation has had considerable research and development experience in connection with butadiene plants. Recently, for an internationally recognised producer of synthetic rubber the Kellogg organisation completed a joint research and engineering design development study to improve operating efficiency and reduce the capital investment of butadiene plants.

In the engineering design of both butadiene production plants and butadiene extraction units, the Kellogg organisation can now render exceptionally valuable services. Firms contemplating butadiene expansion are invited to consult with the Kellogg International Corporation.

A vision of the future

To know what is happening in the world is necessary and useful. But to know what is *likely* to happen—to look ahead—is vision. The Manchester Guardian, although strict in its accuracy of today's news, does sense its relationship to the probabilities of tomorrow.

It is this faculty which makes the Manchester Guardian attractive not only to the idealist but also to the man of affairs. Vision is an essential part of everyday business.

Vision not only looks ahead, it looks all round. It relates local happenings to the world situation. The Manchester Guardian understands that willy-nilly the world is one.

For a newspaper with so relatively small a circulation, the influence which the Manchester Guardian exerts everywhere is remarkably strong. The politician, the picket man, the Company Director, the dreamer, the doer — intelligent men of all kinds, classes and incomes need the daily stimulus, the foresight, of the Manchester Guardian

A NEW LOW THRIFT FARE

Take your choice of four wonderful ways to the U.S.A. on more flights weekly than any other airline

Economy-class Thrift Fares: This brand-new service for the lowest normal year-'round fare starts April 1st.† Paris to New York, for example, is only $489.60 round trip. Yet Pan American offers you the finest, most modern equipment—like the famous "Super-7" Clippers*, holders of over 20 transatlantic speed records, and the same highly trained, pleasantly courteous crews. Pan American will offer as many as 47 economy-class flights a week to choose from. Full 44-pound luggage allowance—complimentary sandwiches and light beverages served at your seat.

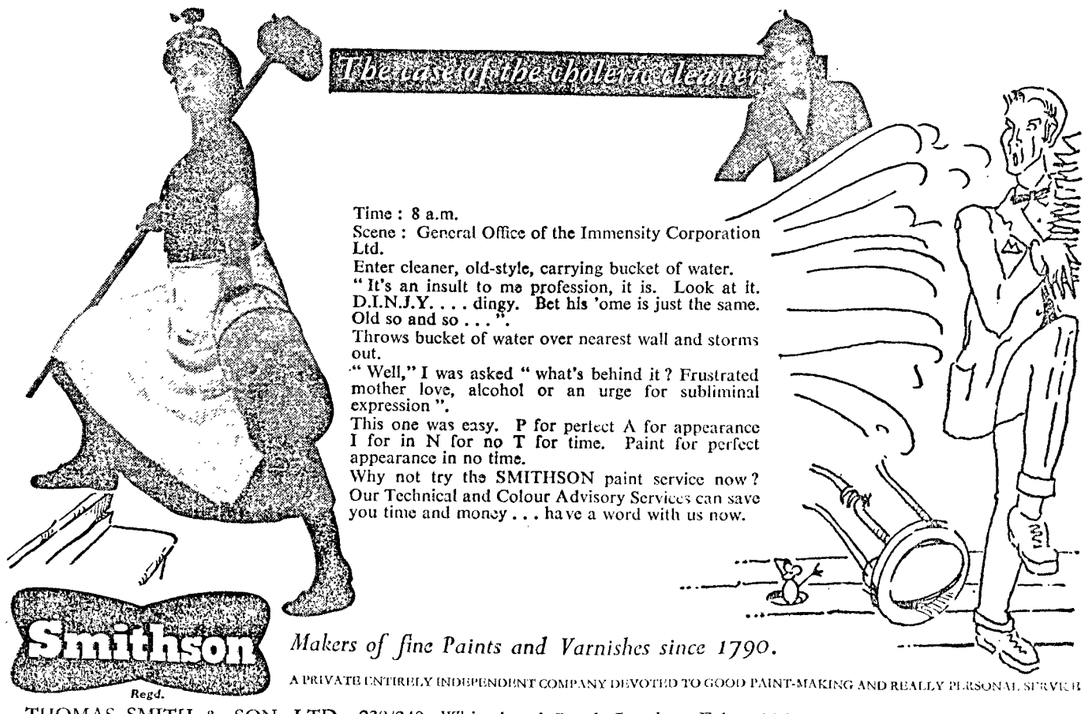
Tourist Service: *The Rainbow*, world's most popular tourist service. Everything you could wish in the way of courteous service, marked by the little extra touches that make Pan American the choice of experienced travelers, *Rainbow* service couples an outstanding cuisine, plus a choice of wine at modest cost, with personal attention that is as unique as Pan American's record of over 65,000 transatlantic flights.

First-class President Service: This is where the fine art of pleasing the passenger reaches a gracious high. Fabulous meals by *Maxim's of Paris* with vintage wines and champagne set the standards for this traditionally fine service—the most popular first-class service of all. Extra-wide, extra-long, foam-soft seats for everyone. Spacious berths, private *President Staterooms* are available at a surcharge.

Deluxe President Service: Pan American has reserved its *all-first-class* double-decked Stratocruisers for this outstanding air service to the U. S. A. Two separate decks—one for the main deck, one for an exclusive cocktail lounge—give you plenty of room to roam around high over the Atlantic. You'll enjoy the comfort of Pan American's original Sleeperette* service or a cloud-soft berth. And for the ultimate in air-borne luxury, ask for *The President Special*—the world's most luxurious air service by far. Sumptuous 7-course meals by *Maxim's* . . . extra cabin attendants . . . limited passenger list.

The priceless advantage of Pan American's unequalled experience is yours on every flight no matter what your choice of service. No other way can offer you the relaxation that comes with knowing you are aboard the only airline with over 65,000 transatlantic crossings. Don't settle for less, call your Travel Agent or Pan American—800 offices around the world.

*Trade-Marks, Reg. U. S. Pat. Off. †Subject to Government approvals



No other airline offers so many flights a week to so many convenient U. S. gateway cities.

Designers, manufacturers and erectors of heavy capital equipment

This expanding group of companies, employing over 6,000 people provides engineering services for the chemical, gas, iron-making, nuclear energy, petroleum and oils and fats industries.

In the last decade, 30 blast furnaces have been ordered, the largest fertiliser factory in Asia has been built and the largest cyclic catalytic oil gas plant in the world is at present under construction.

Since 1951, new works have been built on an unrestricted site and by the end of this year these fully integrated and efficient workshops will have increased capacity for the manufacture of high quality, heavy welded fabrications and for machining up to 100 tons.

Success at home has encouraged expansion abroad and the establishment of subsidiaries in Europe, America, Africa and Australasia, has extended the group's activities in these important markets.

£195 order leads to £65,000 export business!

When a chance enquiry from overseas was followed by a £195 order, a firm producing woollen yarn suddenly saw the possibilities of a profitable export trade. They talked over their ideas with the E.C.G.D. man. Once E.C.G.D. credit insurance had been arranged, they had the necessary financial security for a *full-scale* export drive. In 1955, a year after that first small order, they shipped nearly £30,000 worth of goods abroad. Last year the figure had risen to over £65,000!
For every £100 insured with E.C.G.D. they paid only 11/3d.
Could *you* be missing a similar opportunity overseas? With E.C.G.D. taking a lion's share of the risk, there's certainly no reason why credit worries should stop you from trying. With information on 100,000 buyers in 168 export markets, E.C.G.D. can soon discover whether your customer is good for credit. More important, they'll see you get your money when your buyer doesn't pay.
Have a talk with your E.C.G.D. man.
There's no telling what it could lead to.

★ This is a true story, but because business between E.C.G.D. and exporters is strictly confidential any details which could identify the exporter have been left out.

What Sort of Budget?

THIS is the most difficult beginning of March one can remember at which to launch a preliminary discussion of the budget. Nobody knows whether by mid-April the main danger before Britain will be the recurrence of inflation (as it could be if there were a failure to hold back wage increases in the nationalised industries) or the quite opposite danger of the import from America of a slump. By the normally appointed period for the budget, the riddle may still not be resolved. Yet, in spite of this persisting uncertainty, some reasonably precise suggestions can be put forward for Mr Amory to weigh.

The first piece of advice is that he should delay budget day for as long as is parliamentarily possible. It is a peculiarity of this winter that, although all the pessimists are saying that Britain's economic situation is going to get worse (in one of two quite opposite ways), the current situation is precisely the one that successive Chancellors of the Exchequer have long been planning for, praying for, but not usually achieving: gold is flowing in, external payments are in surplus, there is a greater hope of achieving stability in wages and prices than at any time since the war, production is being reasonably well maintained, employment is still (in spite of local difficulties) by any sensible definition full. These are the halcyon days, even though by-election voters do not seem to have appreciated it. For the next six or seven weeks—and one suspects for rather longer—it would be wiser for the Treasury to take no new reflationary or disinflationary steps than to risk plunging into wrong ones.

The second piece of advice partly follows from this: between now and the budget the Government should not allow Bank rate to be reduced, unless there is some dramatic change in the economic situation at home or abroad. This is not only because restimulation of the economy should be avoided until restimulation becomes quite clearly safe and desirable; it is also because, if and when reflation does become desirable, it will in general be better for Britain to continue to rely on relatively high interest rates (this does not necessarily or indefinitely mean 7 per cent), but to move towards lower taxes. At present, short-term funds are being attracted to London because they earn a higher yield here (the mechanism of this process is discussed in an article on page 775); and if Britain wants to maintain sterling as an international currency, it will probably be wise to regard an interest rate differential over New York as a regular feature of its economy. The higher that differential, the less need to rely on restriction of internal demand by other means.

If the Chancellor accepts this principle of lower taxes rather than cheaper money, the question which he should face in his budget is how much could he conceivably give away. The range one is at present inclined to suggest from the outside, as a first sighting shot, is "between nothing and £150 million a year." If internal inflation reappears, as a result of a failure to control London busmen's wages or of some other

misfortune, then the answer should clearly be nothing. The ground for suggesting £150 million as the conceivable upper limit for tax reliefs is admittedly quite unscientific. But, after the publication of his expenditure estimates, it seems probable that the budget outturn to which Mr Amory will be able to look forward in 1958-59 should not be worse than the outturn to which Mr Thorneycroft originally looked forward for 1957-58; this was an above-line surplus of £462 million and an overall deficit of £125 million, on the present system of accounting. If, as he is apparently contemplating, Mr Amory takes government lending to the nationalised industries out of the below-line accounts and puts it on to the market—a step which would have little effect on the real employment of resources (and indeed, some would say, would give a bogus impression)—it looks as if his overall accounts, on the basis of present tax rates, might be some £150 million in surplus. If the figures are in fact doctored in this way, and with this sort of result, it would not be surprising if £150 million came to be regarded as the upper limit for tax reliefs.

Moreover, there would be some economic advantages in regarding this sort of figure, doctored or not, as the highest conceivable ceiling. Certainly, if by budget day there were still only the threat, but not the fact, of more deflation and unemployment, few economists would be happy to see Mr Amory give away more; while if by then an American slump really had begun to spread infection here, the best additional external and internal defences might not be of the sort that would affect Mr Amory's budget accounting. Externally, the great need would be to inject more credit into the present system of international trade; some interesting signs of an apparent stirring by the Government in this regard are discussed on page 737. Internally, the best additional measures might be a restoration of the investment allowances (which would stimulate demand this year, but would not materially affect the actual budget accounts for two years or more) and lifting of the hire purchase restrictions.

FOR next month's budget, then, the most plausible present assumption—which can be adopted as a wide framework for discussion—is that Mr Amory may feel able to give between nothing and £150 million away, according to the economic temperature at the time. The next question is how should any such reliefs be distributed. The biggest political temptation, particularly if the total remission can be only small, may be to reduce purchase tax on so-called essential household goods—especially those with the largest weighting in the cost of living index. Politicians may tell Mr Amory that this would be a useful talking point to the unions, and even by budget day he will still be in the middle of the wages struggle; under the terms of last year's settlement, the engineering wage claim cannot be presented until May.

This is a temptation that Mr Amory should resist, for two reasons. One is that most of these so-called essential household goods are in the lower ranges of purchase tax, and to cut the tax on them would be to intensify the worst feature of the purchase tax system: the distortion of production caused by the gap between their price and the price of goods that have been placed in a higher tax bracket, often as a result of some hair-line administrative decision. Indeed, if there is to be any cut in purchase tax this year, it should be concentrated instead on the so-called inessential goods in these higher tax ranges. The second reason, however, is that a net reduction in indirect taxation is much less desirable than a net reduction in direct taxation in present-day Britain. The proper tax principle for this country cannot be too frequently restated. The earning of money is a good thing, and is already too much discouraged; it is the spending of money that puts a strain upon the economy, and that ought to be taxed.

WHICH cuts in direct taxes would be the most appropriate candidates? The oldest-established candidate, which a Conservative Chancellor stated as his aim as long as five years ago, is an increase in the earned income allowance from two-ninths to one quarter; this, however, would now cost around £100 million a year, and probably could only be afforded if by budget-time Mr Amory felt he really was fighting a deflation. If he cannot be so expansive, one set of figures at which the Chancellor should look is that for the total number of income taxpayers. By his remissions in 1952, Mr Butler temporarily brought the number of income taxpayers down from 16.2 million to 15.4 million, but since then they have steadily risen again, to 17.4 million in 1956-57. In spite of last year's increased allowances for older children and for the retired, the number may well be higher now. This is far too many, and a lot of marginal people are now brought into the taxpaying net in order to yield very little money; the bottom six million taxpayers probably pay an average of under £20 a year each. The money taken from some of them can be barely worth the costs of collection—especially if those costs are measured, as they should be, not merely by the amounts that fall on the inland revenue, but also by those that fall on Paye form-filling employers.

To declare a straight tax holiday for all those paying under, say, £10 a year in tax might not be the best solution; it would benefit too many young single taxpayers who are already better off than their married brothers and sisters. But a revival of the old-fashioned exemption limit for family men—whereby, for example, a couple with two children under 11 might start paying tax at £720 a year instead of £620, but the £2,000 a year couple with the same family responsibilities would still pay tax on all income after £620—would not cost the Exchequer very much; and it would lead to a useful clearing of the lists. A rough principle the Chancellor might usefully ask his advisers to implement would be "Try to give back to each of, say, the six million lowest paid family taxpayers £10 a year, or their total tax payments if these are less, and suggest alternative rearrangements of tax allowances which could approximately achieve this aim."

These are a few specific, though not dogmatic, suggestions for the new Chancellor. In fixing his budget date, procrastination would seem to be the best policy. In choosing his weapons of control, high interest rates are the best regulators and lower taxes the best reflaters. In any tax concessions, he should have a bias towards concentrating reliefs on direct taxpayers, and probably principally on the worst off among them. Surtax payers got their whack last year; if wage restraint should succeed in 1958, there might be some social and economic—as well as political—advantages in being more generous this year to those lower down. These suggestions are not proffered as a detailed scheme for controlling inflation or a slump; it is still too uncertain which problem Mr Amory will have to tackle. The new Chancellor's peculiar misfortune is that this uncertainty may persist up to and beyond budget day; it is a misfortune that he will need to confront with flexibility.

Escape from the Aid Maze

Rivalry, friction and disenchantment beset the whole question of aid for under-developed countries. But a way out may soon present itself

ONE interesting omission catches the eye in the various lists of topics for discussion between the powers that have lately been proposed. This is the problem of aid for under-developed countries, and the economic rivalry of the powers in those areas. At the summit conference in 1955, M. Edgar Faure introduced the idea of tempering that rivalry by pooling resources in a joint aid programme: a programme also intended to inhibit further expenditure on arms by pledging the powers each to contribute a sizeable proportion of its revenue to the new fund. Since 1955 alarm at the gigantic diversion of resources to arms has increased. So has alarm at the sharpened economic contest in under-developed countries; and those countries have stepped up their demands that aid should be multilateral and stringless. Moreover, Mr Dulles pointed out on Tuesday how aid programmes can mitigate economic recession in the West. Yet, oddly enough, there now seems little enthusiasm for tackling the question in talks at any level.

No labyrinth has ever engulfed its victims more mercilessly than this question of aid for under-developed areas. At the entrance, all seems temptingly straightforward. The poor nation sees aid as a short cut to prosperity. The donor hopes to emerge at the far side in a friendlier, more stable world. In they go; and soon they are blundering about, colliding with each other, ripping their illusions on unsuspected snags, losing all sense of direction and despairing of ever getting out of the maze.

Yet this kind of aid has done unquestionable wonders. True, there have been notorious follies and scandals; but most of the £6,000 million worth of economic aid received by under-developed countries in the past decade has taken effect. All the same, what catch the eye are the widespread symptoms of discontent.

Among the recipients of aid, some dislike the political strings attached to it; some rely on those strings too heavily, and are miffed when wealthy allies fail to meet all their demands; some have come to assume a moral right to larger benefits than they are getting. Among the donors, too, there is disenchantment: the feeling that some recipients are not merely ungrateful but insatiable; that some of them are unscrupulously playing both sides of the street; and that others' professions of friendship are mere cupboard love.

The United States and other western donor countries have now particular reasons for dissatisfaction. Western economic aid—mainly American—has been on a far larger scale than that offered by the communist powers. This is true even in regard to the "uncommitted" countries—India, Indonesia, Cambodia and others—on which Soviet and Chinese benevolence has been focused. (The State Department, understandably anxious to buttress Mr Eisenhower's new appeal for foreign aid funds, has publicised a figure of $1,900 million for total communist aid to uncommitted nations since 1955. But a quarter of this represents credits to Jugoslavia; nearly another quarter, arms for Egypt, Syria and Afghanistan; and of the remainder—which includes some items of questionable relevance, such as Ceylon's profits from rubber sales to China—only a fraction has actually reached the recipients). Yet the communist powers, being late starters, can reap a rich propaganda harvest even from their more hollow gestures, while western aid is apt to make headlines only when it does not measure up to expectations. Small wonder that even the mild Mr Kennan is said to have suggested leaving it to Russia to "disappoint the Asians for a while."

It is at United Nations meetings that this distortion emerges most clearly. For several years, Asian and other delegates have pressed for the creation of "Sunfed"—a large-scale UN fund for economic devel-

opment. Nominally this would be a world-wide pool; in practice, it is generally assumed that the United States and other western countries would foot most of the bill, as they have already done in other UN enterprises such as the World Bank, the International Finance Corporation and the technical aid programme. This assumption has enabled Russia, which at first denounced the Sunfed plan, to swing round and champion it. It is a good stick to beat the West with; and nobody ever embarrasses the Russians by asking why, if their economic system has proved so successful that they can fire off costly sputniks into outer space, they do not give a lead by pledging definite sums for Sunfed, or definite proportions of its funds.

So, while even the vaguest Soviet promises of aid, such as those recently made at the Cairo conference, are welcomed admiringly despite their bilateral character, western countries are permanently under pressure to switch from bilateral aid to a large-scale multilateral programme—to which they would still make the main contribution, but which they could not direct as Russia directs its offers. And when, as at the last United Nations Assembly, they offer a more modest increase in their contribution to multilateral aid, in the form of the new UN special projects fund, this offer is only grudgingly pouched by the prospective beneficiaries, who regard this new bonanza (to be known as "Sprojfund"?) merely as a curtain-raiser for the much more ambitious Sunfed.

It may be argued that, unsatisfactory though this seems both to the West and to the under-developed countries, there is one satisfied party: the communists. Mr Khrushchev, for one, shows little desire to take politics out of the aid problem. On the contrary, he has explicitly challenged America to a "competition"; and his confidence is scarcely surprising, when the cards are stacked so well in his favour. But a time may come soon when Russia, too, will be looking for a way out of the labyrinth.

Already the first signs are appearing that the novelty of Soviet aid is wearing off, and that the recipients are learning to scrutinise it more cautiously. The West, too, is learning—the case of the high dam at Aswan was painfully educative—not to let mere gestures from Moscow panic it into making unwise commitments whose net result is that Russia gets the kudos while the West gets the bill. And the Russian and satellite peoples will also learn in time that any genuine aid to Asia must come out of their own pockets, not out of some Kremlin conjurer's hat. Hence, presumably, the Soviet rulers' reluctance to let their own subjects hear of such sweeping promises of aid as they lately made at Cairo.

In short, Mr Khrushchev may soon realise that his dexterously rigged contest has turned into a fair one; that the political dividends are falling off, the price steadily rising; that the way out of the maze has escaped him, too. In time, the communist rulers will face the dilemmas with which the West is already familiar. Unable to meet the mounting demands of clients who have come to take their aid for granted, they may also find their own allies yearning for alien flesh-pots, their own peoples at last restive under the burden of "give-away" programmes.

If, then, dissatisfaction with the present scheme of things is soon likely to be practically universal, it is time to seek a formula that might enable all the unfortunates trapped in the aid maze to escape in a body. An obvious formula would be the reshaping of the Sunfed concept on the basis of parity of contributions as between the two big power blocks. An aid fund provided by matching contributions would be truly, not just nominally, multilateral. This ought to give great satisfaction to recipients anxious to keep their uncommittedness pure. The rival powers would still be free to give further aid to their special friends; but as the scale of the basic non-partisan fund grew, it would progressively restrict the field of their rivalry. Only a casuist would object that this means introducing the cold war into a United Nations programme. Its real effect, on the contrary, would be to push the cold war out of the field of aid.

Donor countries would be freed from the fear that diversion of resources to a multilateral fund would place them at a military disadvantage vis-a-vis their rivals. Potential recipients, instead of badgering one donor group, to the glee of the other, would badger both. If either group welshed, the other's contribution would automatically be cut back, and the odium would fall where it should—on the welsher.

Such a plan might be more effectively pressed upon American politicians, and taxpayers, than the Sunfed idea in its present lopsided form. It would enable Britain and other nations which can no longer play a spectacular role in the field of aid to play an honourable one. It ought to gratify those Asians and Africans who by now are aware that they are unlikely ever to get Sunfed any other way. If it were proposed to the Russians, and they turned it down, then the Russians would be exposing as a complete fraud all their talk of willingness to provide large-scale aid without strings; and that exposure would do no great harm.

But it is to be very sincerely hoped that Russia would not turn it down. More than just another propaganda contest is at stake; more, even, than a chance of escaping from the aid labyrinth. As was vainly suggested in 1955, the progressive growth of an aid programme based on parity would put steadily increasing pressure on both power groups to restrict their expenditure on arms. This would not be a complete substitute for the control and supervision of disarmament; but it would bear fairly upon both sides. Does it not deserve a high place on the agenda of any conference this year may yield? And might not the West be wise to start thinking now about putting up the idea—before it occurs to Mr Khrushchev that he might put it up himself, and collect the credit?

Missile Sanity

Critics who talk of "missile madness" should realise that the greatest folly would be to jeopardise the West's deterrent

Mr Sandys, as he prepares to plant his missile sites in the plains of eastern England, must be wondering like the sower in the parable whether they will fall on stony ground. Tuesday's announcement of the Anglo-American agreement on intermediate-range missiles was made against a background surge of vocal criticism. Some of the criticism—about the efficiency of the particular missile the Americans are providing, and the right time to begin work on the sites—is at least constructive, whether it is right or wrong. Some of the critics, however, find the prospect of having missiles at the bottom of their garden so alarming that they would like to exclude these weapons from Britain altogether. They should realise that, if they succeeded, they would not merely be keeping one weapon out of the armoury; they would be endangering the whole basis of western defence.

Some of the people who now talk of "missile madness" wish to abandon the concept of the nuclear deterrent altogether. Their argument is that it has now become so terrible that no statesman, conscious of the fact that the other side also possesses it, will ever be able to steel himself to give the order for nuclear obliteration. This may well be an argument against depending on the deterrent alone—against skimping on conventional arms, and in favour of defining (as Mr George Brown urged in this week's defence debate in the Commons) the "major" aggressions that would call for its use. But it is not an argument for giving up the deterrent unilaterally.

So long as the West possesses these bombs and the ability to get at least some of them through Russian defences, they are bound to impose an element of restraint on Soviet calculations. If they were jettisoned, the great inhibition would be removed, and the overwhelming weight of Russian conventional arms could be leaned against western doors at any time Mr Khrushchev wished. The old argument still stays valid: that it is better to run a remote risk of nuclear war—and it remains remote so long as the terror in the deterrent is plain to both sides—than to face the consequences, certainly unpleasant and probably bloody as well, of stripping ourselves of our main protection.

But, if the West is to be able to rely for the next few years on its power of nuclear retaliation, there are strong reasons for believing that part of this power will have to be embodied in relatively short-range missiles stationed in Europe. The experts differ on just how long a lead the Russians enjoy in intercontinental missiles. However, the military planners can reasonably work on the more pessimistic assumption, and this suggests that in perhaps a year's time the Russians will be in a position to launch a missile onslaught on the home bases of Strategic Air Command. Even this would not necessarily be decisive, if the West could be confident (and the Russians afraid) that it could still get enough planes off the ground and through the Russian defences with H-bombs in their racks. But the Russians have also been improving their anti-aircraft missiles. If these have really been improved enough, Strategic Air Command faces a double threat which makes it doubtful whether the deterrent can any longer be safely entrusted to aeroplanes alone.

In this situation Britain's responsibility ought to be plain. Whether or not the missile sites will enhance the beauties of the English landscape, this is the most sensible place for them to be deployed. Placed here, they do not involve any addition to the list of nuclear-armed powers, which it ought to be the aim of western statesmen to keep as short as possible. Putting them in Britain does not do the political harm that will be done if they are put in Germany, as General Norstad this week appeared to suggest. Strategic missile sites in Germany would make a major political problem more difficult to solve, and would obstruct any possible future attempt to separate the forces facing each other in central Europe. Indeed, since they help the West to wield an effective deterrent from bases outside the centre of Europe, they may make it easier for the soldiers to contemplate changes there.

Above all, the missile sites do not materially add to the risks that the British accepted ten years ago when they gave a home to atomic bomb bases. Britain is already a principal target of Russian bombs and missiles, should the deterrent fail to deter; to the extent that they make the deterrent more effective, Mr Sandys's new sites decrease the risk. One of the oddities of the anti-missile campaign is that some of its supporters are people who did not demur when the bomb was carried by aircraft with men in them; it is the automatic vehicle that they cannot stomach.

Yet the strategists have to bear two points in mind. One is that these intermediate-range missiles are principally a stop-gap weapon until the Americans can get the long-range Atlas and its kin into operation. Once they are in service on sites in the United States, the need to keep these junior missiles close up against the front line may well become much less urgent. Meanwhile, we have to make do with the best that is available, and although the Thor is slow to launch and its

sites are vulnerable to attack it has the decisive advantage, over manned aircraft, of still being impervious to Russian defences.

The second point is that the start of work on the sites should be neither hastened nor retarded by considerations of politics or propaganda. The only relevant factor is the need to have the sites ready when the missiles become available. It may be suspected that the Americans are anxious to get work visibly and energetically under way in order to revive the flagging morale of their own public. But the purpose of the deterrent is to deter the other side, not to give Dutch courage to one's own; and it would be folly to begin work too soon if another brand of missile, requiring a different kind of site, might become available afterwards. This condition aside, there is no evident ground for supposing that the chances of success of a summit conference, if and when one proves possible, would be improved by holding up the work on these bases, or damaged by pressing on with it. Mr Gaitskell has urged the Government to wait until after a summit conference. It is hard to see why.

There are two opposite kinds of "missile madness." One is to scatter these weapons and their sites broadcast, without reference to military considerations, simply in order to create an illusion of power; the other, equally dangerous, is to flinch away from them and thus forgo the necessary reality of power. Both must be avoided if the West's security is to be preserved.

Not Dons' Delight

The logic of university expansion demands a big change in the present "academic idea of a university" and one which many university authorities will resist

IT is good news that between now and 1964 something like £84 million is to be spent on university building, almost three times as much as in the last six years. This programme, according to Mr Amory last week, should permit the universities to accommodate nearly 140,000 students by 1970, compared with 84,000 in 1955-56. But such an expansion cannot leave the universities unchanged. Now is the time to raise urgent questions about the educational principles which should govern that change.

The attitude of many sceptical dons, as the programme proceeds, will be to welcome the prospect of getting more money, but to deplore that of getting more pupils. Their argument will be that the promised expansion to 140,000 will bring into the universities a great many students—some will say truthfully enough, and significantly, a great many *more* students—whose intellectual endowments will not really amount to what the universities would describe as "of academic quality." This argument should not only be accepted; it is surely time that it was positively welcomed, and the proper deductions drawn from it. The phrase "of academic quality" pinpoints the crucial issue in university development in this country.

Are the universities—Redbrick obediently following Oxford and Cambridge—going to continue to regard themselves as existing only to turn out an elite of highly trained, urbanely specialised race of men and women, and to gear their whole approach and teaching methods to endlessly reproducing dons and higher civil servants? Or are they going to accept the logic of expanding higher education—which is not only to fill the quota of dons and permanent secretaries, as indeed it must be filled, but also to make the mass of people now just below "university standard" more educated than they are? When the present programme of expansion is completed, the universities and technical colleges together should be engaged in training the talents and broadening the lives of the top tenth of the nation's intelligence, not just the top four or five per cent—and thereafter the whole first quartile should be regarded as collegeworthy. When that happens it cannot possibly be maintained that the methods evolved for dealing with the top five per cent should be applied to everyone. Everything must change—the varieties of degree, the methods of selection, and, above all, the idea that ordinary degree (or sub-standard honours degree) graduates are merely a menial by-product of the universities' main task of producing firsts in arts and science for the top jobs.

ANY suave suggestion that there is no need to change, no issue to argue about, must be resisted. The universities have been allowed to get away with their innate opposition to the idea of making Britain an educated mass democracy for far too long. They have continuously raised standards for the purpose of keeping people *out* of universities in recent years; and the reason why they have done so—which is also at the root of many of the failings of the present British system of higher education—is obvious to anybody who compares the state of affairs here with that abroad. This root reason is the fierce competition for a limited number of places at Oxford and Cambridge. The desire to emulate the older universities runs down the line, with every Redbrick fighting for "the best of what's left," every provincial faculty and department—whether in chemistry or history or what-have-you—desperately trying to jack its standards up "to look the faculty of so-and-so at Oxbridge squarely in the face."

This has warped the whole educational system. It rivets the demands of Oxford and Cambridge on to the grammar schools, for Redbrick insists on almost as much specialisation in the children as they do; and then, once the children have become students, it concentrates the universities' relatively scarce teaching resources on the promising men and women, and leaves the rest to shift as best they can. The next stage, unless there is a change, will be to carry the fight to impose, indiscriminately on all, the high standards appropriate only to a few into the Colleges of Technology. As the failure of this approach to a student body of 140,000 becomes obvious, the danger is that the dons will oppose expansion more strongly, and concentrate on honours students still more exclusively.

Let the battle be joined on this by using the new building programme as a convenient battering-ram to breach the dons' defences at their most crucial and sensitive point. To state the first need of the new programme will be to raise a chorus of protest, and thus to show how progress to a complete change of outlook can best be attained. That first need is to provide Oxford and Cambridge each with at least one big new college, to break the needle's eye through which at present only those "of academic quality" can now go (it was not always so). When Oxford and Cambridge find more space and time for ordinary pass degree men—and design some degrees, lectures and tutors for them—the position will ease at Redbrick. The money can be used to develop accommodation and build up staffs capable of producing a grade of higher education for students, both of academic and sub-academic quality. Redbrick will then perhaps cease always to emulate Oxbridge, and not despoil the technical colleges of any cream of technical aptitude which they attract. When the universities as a whole find themselves, one is tempted to say, with really large stocks of sows' ears on their hands—they have a lot already—they may be induced to stop feeding them into silk-purse-making machines, and then sending them out branded as academic rejects; they will be compelled to find serviceable uses for them, or rather to accept that the jobs in which they can be put need educated people too.

This does not imply, by any manner of means, that the output of firsts in ever more specialised science, or ever more abstract arts, is expendable. It merely shows that more higher education for more young people will require more grades of it. The universities' favourite task of producing a new generation of top dons and administrative civil servants will go on, as it must. But, side-by-side with it, will now be the great adventure of making the new generation of British sales managers, primary schoolteachers, commercial travellers, and middle grade technicians at least as educated as their counterparts in America. That is what the £84 million of taxpayers' money for university building means. Those are the strings attached.

Meet the Ultras

Predominant among Frenchmen in Algeria are those who believe that the war must and can be fought to a finish. Our special correspondent from North Africa examines in his concluding article the assumptions that underlie their belief

A POSTER printed on red, white and blue paper is pasted at every twist and turn of the mountainous city of Algiers. It says: "The new Algeria shall remain French"—but with a subtle emphasis that the translation misses (*L'Algérie nouvelle vivra française*). Another poster proclaims: "Uno has said Algeria is French." These posters, the work of the psychological warfare experts of the French army, are a beginner's introduction to the "ultras" of French Algeria.

To isolate, and thereafter dissect, the ultras is less easy than one expects. There are two main groups: the relatively small group of the extreme right, who are given expression by USRAF (Union for the Salvation and Renewal of French Algeria), the league created by the former governor-general and ex-Gaullist, M. Soustelle; and the rowdy youths, many of them students, who throw tomatoes at visiting politicians and who rough-house Arabs or Berbers in a spirit of counter-terrorism.

It is the ultras who write, or cause to be written, in the press of Algiers, passages like the one your correspondent read two days after the bombing of Sakiet:

> May this tragedy serve at least to help Frenchmen to realise that this Algerian rebellion is not an exercise of democratic liberation but, in reality, an offensive plotted against us by those who proclaim themselves our enemies . . . and by others.

But it is the search for non-ultras that demonstrates the difficulty of isolating the ultras. For it is hard to find any Frenchmen in Algiers who are less unyielding than the rest. The taxi-driver of Spanish origin (as are some 400,000 of the Frenchmen of Algeria) and the university professor have in common the conviction that Algeria can be lived in only if France controls it. The taxi driver's reasoning stops there. The professor goes on to explain that Frenchmen are not interested in a north African federation in which Algeria would be an equal and independent member; that if France did not retain control of Algeria, there would be a mass exodus of Frenchmen, and north Africa would sink back into anarchy and a poverty more abject than ever; and that, *therefore,* the war will be won. He is unmoved by pessi-

mistic arguments based on the examples of Indo-China (which was lost) and Malaya (where the terrorists were defeated, but only at the price of independence for the Malayans). He confesses—but it is hardly a confession—that he was among those who gathered in the streets to shout at M. Mollet on the sixth of February, 1956. If there are still Frenchmen who are not ultras in Algeria, they seem to have been silenced.

CERTAINLY the army is predominantly ultra, from top to bottom of its 380,000 "effectives"—the official figure. The young captain who briefed your correspondent about the state of the rebellion was perhaps typical; he quoted South Africa as an example of how a hegemony could be maintained. The most typical ultra of all is M. Lacoste, the minister-resident, who governs by personal dictatorship in a regime in which all personal rights and liberties can be dispensed with. It is not surprising that in these conditions the FLN has no monopoly of terrorism in Algeria. The nationalists, who began it, murder and mutilate; the Département de Sécurité Territoriale tortures with the civilised refinement of electric current. The population, between two kinds of terror, collaborates with the kind that is strongest in a given area and at a given time.

It is against this background that the much debated loi-cadre—the project for electoral reform in Algeria—is being introduced. In Algiers, the administrative watchword is "loyal application of the loi-cadre." There is no reason to doubt the sincerity of those who quote it. But neither the insurrection nor external events stand still while the attempt is being made. The question therefore is: will the loi-cadre ever be applied? Its provisional stages will probably be reached; the odds against ever reaching the final stage seem high. Nobody in M. Lacoste's administration claims that free elections are possible, or that they are conceivable while the rebellion lasts.

The loi-cadre implicitly recognises this; it provides as a "transitional measure" that the new territorial assemblies may be nominated by the municipal councils, and the community councils by the minister himself. The new territorial divisions are now being made and it is intended to set up the first councils within a few weeks. The territorial assemblies should be functioning by the end of the year. Since, however, the federative organs (federative assembly and federative council) are not to be formed for another two years, it seems clear that the final stage of the loi-cadre will be reached only if the French army maintains its position, and if it is possible to prevent the war from becoming internationalised. The remark of one official, when faced with these doubts, is illuminating: "One must believe in something, otherwise how could one keep on working?"

The loi-cadre specifically recognises the "equality of political rights" for Moslems. In the transitional stage therefore much depends on whether Moslems can be found who will take part in the work of the community councils. Most French officials say that this will present no difficulties. Much space was given in the local press to a gathering of the mayors of Grande Kabylie who received an official visit from M. Lacoste as they were forming an association.

The impression of willing collaboration such visits are intended to create is not sustained if one moves outside the narrow circle of French officials. One detached observer told your correspondent that the mayors, whose districts had been denied food by the French army, were acting under duress and that, in any case, they had obtained permission from the FLN before receiving M. Lacoste. It is not easy in Algiers today to find Moslems who will express any political opinions at all. But those whom your correspondent did find agreed in expressing the view that the loi-cadre might have been effective if it had been introduced in 1945, just after the world war. One of them remarked that Moslem collaborators would be found but they would be regarded as "dummies" by the population.

No one in the Ministry denies that one of the main purposes of the loi-cadre is to avoid negotiating with the FLN. M. Lacoste himself is freely credited with this view, which he is said to support by arguing that the FLN does not represent the population, or even the "independence" movement, since it has a rival in the National Algerian Movement (MNA). It is not easy, however, to see how the purposes of representative government will be served by creating nominated assemblies and by ignoring the section of the population that supports the FLN's basic demand for independence. (Article 1 of the loi-cadre states, in any case, that Algeria *is an integral part of the French republic.*)

It is not easy, on the other hand, to form any precise idea of the support the FLN really has. Much of it undoubtedly does derive from terrorist intimidation. But it is difficult to see how a movement that began with three thousand rifles could spread to wide areas of the country, and tie down a much larger army than the French ever used in Indo-China, unless it enjoyed substantial spontaneous support. The most credible assessments seem to be those that divide the Moslem population into two parts: those over forty, who are either passive or supporters of the *status quo;* and the youth of the country, which is enthusiastically pro-FLN. In a country like Algeria, with its bounding birthrate and a high proportion of under 25s, youth could, in the long run, be the decisive factor.

The French claim that the war would have been won by now were it not for Tunisian help to the rebels has to be seen in the light of the basic French assumption that the population is overwhelmingly pro-French and collaborates with the FLN only to the extent that it is terrorised. If the population is pro-French, and the French army is overwhelmingly stronger than that of the FLN, then external factors must account for the failure to suppress the insurrection. A year ago, President Nasser was the culprit; now it is President Bourguiba. Help certainly comes from these quarters. But your correspondent found no evidence to support the view that Tunisian help is of decisive importance.

NOTES OF THE WEEK

AMERICAN SLUMP

Knights' Moves

THE Prime Minister let fall two extraordinarily interesting remarks last week. At a private meeting of Conservative backbenchers he is reported to have said that an American slump would raise two problems for the Government: what to do about internal economic policy, and "how to use the resources of the world to stimulate international trade." In a television interview he returned to this second point and said that, in preparing defences against a possible slump, a main question is whether it would be possible to secure an expansion in "supplies of international credit." Meanwhile, Sir David Eccles has been saying that, if and when the time does come to take action against a slump, there "will be general agreement that the first relaxations should be concentrated on strengthening our power to earn more abroad." Presumably Sir David cannot be envisaging export subsidies, although he might be thinking of measures dangerously on the border of them (perhaps a selective restoration of investment allowances for export industries only?). The best way of strengthening Britain's exports, however, would obviously be to see that there are international funds available for buying them.

In the pregnant pause for thought following these utterances, it has suddenly been realised that a trio of Britain's top economists in the civil service has recently been visiting Washington. No doubt Sir Robert Hall, head of the Economic Section of the Treasury, has been there on one of his periodic visits to judge whether or not there is going to be a slump; analyses of trends in demand and national income are his job. But Sir Leslie Rowan and Sir Paul Gore-Booth, who were also in the United States last week, might well be regarded as preliminary negotiators rather than students of trends. The official explanation in Washington is that Sir Leslie and Sir Paul usually do visit America some time in the year (though not usually at this season), and that this time they just decided to come together; but it would be disappointing if, while there, they did not ask some questions about what the International Monetary Fund will do if the recession should deepen.

Significant Journeymen?

IT is this question of increasing international supplies of credit, through the IMF or by other means, that will be the really important one if an American slump does set in. The direct impact of lower American demand on British production and employment should be relatively small; its impact on international trade, in a world starved of exchange reserves, could be uncomfortably large. When there has been a world shortage of dollars in the recent past, the main burden has fallen on sterling, which forms the second-line exchange reserve—and is also the most borrowable international currency—for so many countries. So far sterling has stood up to the American recession of this winter almost incredibly well; but the British Government must be well aware that, if that recession did suddenly deepen, Britain's attempts to protect employment here would be gravely impeded by a renewed run on its currency by a hungry world.

A root reason for the present inadequacy of world exchange reserves is that many of them are held in gold, which still retains its prewar dollar price, although the dollar price of many other commodities has trebled; but, even in slump-time, the Americans would presumably be very unwilling to treble the dollar price of gold, or to increase it at all, especially now they think that this would be greatly to the benefit of the gold-producing Russians. An obvious alternative slump-time device would be for the International Monetary Fund, acting as a sort of international central bank following a deliberately easy money policy, temporarily to flood credit into international exchange reserves. But the amount which the IMF would have to be ready to lend in a real slump would be very large, probably much larger than the Americans have hitherto been willing to envisage.

If a slump did come, and if the Americans were still unwilling to allow the IMF to be used in this way, which would be much the best course, Europe and the sterling area should certainly proceed to increase the supplies of credit available for financing their own trade. This should not be done by heftier lending of sterling, even if it were sterling more effectively barred than now from back-door convertibility into dollars. It would be better, for example, temporarily to set up some sort of free eastern hemisphere clearing union, with larger and more widely available lines of credit than at present obtain in the European Payments Union. Obviously, however, any such device would involve greater discrimination in trade against America. Before drawing up even paper proposals for such a scheme (or for anything like it), it would be better politely to ask the Americans what their attitude towards the IMF would be if they did relapse into a real slump. For some time one has been watching to see whether any move of this sort would be made. The only signs that such an approach might be afoot are the Prime Minister's remarks and the knights' moves of the last two weeks; if these do mean what they could mean, then—however remote the contingency of an American slump is taken to be—they should be very loudly welcomed.

PARLIAMENT

Two Up, Two Down

BOTH Mr Macmillan and Mr Gaitskell came well out of last week's foreign affairs debate, and under fairly testing conditions; both their principal supporting speakers failed. In the post-Rochdale mood of the Labour party, Mr Macmillan would have had to strike only the faintest false note of partisanship or pomposity to bring Opposition jeers bouncing round his head. The fact that his opening speech was heard with attentive respect throughout is the measure of the authority which he achieved. How badly the Tory party needs this sort of leadership was revealed

the next day. Mr Selwyn Lloyd's speech caused so much Labour indignation and Tory dismay that Mr Macmillan felt he had to speak again, and make a last-minute bid to restore the note of command which he had achieved on the first day. The background to this performance was surprising. In its matter, Mr Lloyd's speech was no better and no worse than many others he has made ; and, in manner, he merely struck his usual insensitive norm. That Labour should guy him was natural enough ; that Mr Lloyd should this time attract such complete lack of support from his own back benches, and then provoke such a violently adverse reaction from them, was clear evidence of the frayed state of the Tory party's nerves.

The extraordinary thing is that, if only the Tories had kept cool, the newspaper headlines next morning would have told not of Mr Macmillan's embarrassing rescue operation, but of the fiasco of Mr Bevan's speech. On the first day Mr Gaitskell had firmly delineated the basis of Labour's foreign policy—including its support of Nato and the American alliance—and faced up to his increasingly restive pacifist wing very boldly indeed.

Mr Bevan provided a complete contrast. He tried to pull back at least partially from the stand he had taken at Brighton over the H-bomb, but without too openly torpedoing his new reputation for sober statesmanship. The effort had him floundering in a way which the Tories should surely have striven to keep front-page news. Instead, by insisting on Mr Macmillan picking up Mr Selwyn Lloyd's broken crockery, they helped to bring it about that the newspapers next day contained the most bitterly combined denigration of any British Foreign Secretary that one can remember.

Cool judgment can now be passed on the two failures of this debate. Mr Bevan showed again that he has not got that stuff of leadership which Mr Gaitskell at least intermittently evinces ; in a pinch Mr Bevan's instinct is not to lead policy, but to want to be loved by those whom he thinks ought to love him. Mr Lloyd's failings on Thursday were more venial. His performance did not disprove that he may be a quite competent statesman within the Foreign Office, although there is dispute whether he is ; what it did show was his lack of parliamentary finesse. This may not be as important for the country as parliamentary correspondents tend to think. Where one suspects it must be important, however, is in gradually sapping the confidence of, even more than in, the man himself.

FRANCE AND TUNISIA

No Putting the Clock Back

Who would have predicted, a month ago, that February would find M. Bourguiba, President of Tunisia, closeted with the British and American ambassadors discussing France, leaving their French colleague awaiting developments in another part of the town? Yet this has happened. Of all the unwanted results of dropping French bombs on the Tunisian village of Sakiet, the most distasteful to the Gaillard government is the conversion of France's "dialogue" with Tunisia into an international affair. That government (which has only itself to blame for the change) is now applying every effort to keep Algerian affairs from tumbling likewise into international clutches.

Its method of doing so is to try and limit the points on which it accepts British and American "good offices" to the narrowest possible range of French differences with Tunisia: to restoring freedom of movement to France's troops in Tunisian bases, to securing the safety of French residents and immunity of French consuls, to sealing the frontier against Algerian entrants, to promoting a resumption of bilateral negotiations. In a word, the French accept Anglo-American help only in order to wipe the word "Sakiet" off the slate and put the clock back to before the raid.

If so, they have failed to grasp the effect the Sakiet incident has had in Tunisia. It has weakened M. Bourguiba's hold on his people. As a long-standing advocate of ties with France, and opponent of ties with Egypt, he lost face, and public support, when French bombs proved him wrong. The New Destour party, for which he has usually been sole mouthpiece, has started to divide into factions which criticise him. The most reflective are a trade union and economically-minded group which points to 500,000 unemployed and the wisdom of leaning on America, not Paris, and the ex-Francophile young intellectuals who write in the weekly *Action*, who contend that neutrality *à la* Tito is the way to be wooed, and to win respect and endowment.

M. Bourguiba cannot discount these critics ; his leadership would be in jeopardy were he to do so. Hence his stiff retorts to every French proposal—his answers that Bizerta is Tunisian, not French ; that, much as he favours the West, he could not brook a Nato umbrella beneath which France remained *in situ ;* that Tunisia's Algerian brothers must be free to move across its border. Unlike France, he does hope to extend the Anglo-American good offices to the Algerian dispute. For he sees a point that Frenchmen will not admit—that there can be no peace in Tunisia while Algeria is at war. And since the bombing of Sakiet he has given up hope of peace in Algeria without international help.

Trail without End

With Paris and Tunis working on different wavelengths, the task that confronts the Anglo-American mediators is unenviable. The renewal of heavy fighting in Algeria will add to its difficulty. Mr Murphy, shuttling between capitals, and Mr Beeley, his British colleague operating from London, will need time and tact as well as skill if they are to produce results. M. Gaillard appears to be mesmerised by his right-wing supporters. President Bourguiba is similarly sensitive to the reactions of a suspicious home public. If the mediators manage to get the two on speaking terms, they will be entitled to claim an achievement.

At the outset, the difficulty is likely to lie in Tunis. President Bourguiba is incensed not merely by the Sakiet bombing, but by the report that M. Gaillard had asked his military advisers how much it would cost to reoccupy Tunisia—although such an inquiry might as well arise from a pacific purpose as from a bellicose one. Yet, in the long run, the biggest obstacle is bound to be France's categorical refusal to admit that the Algerian war is relevant to the Tunisian context. Even if mediation miraculously succeeds in patching immediate points at issue, the agreement is bound to be precarious.

For no one now denies the fact that Franco-Tunisian tension is a by-product of the Algerian war. Therefore, so long as that war continues, Mr Murphy and Mr Beeley will never be out of a job ; but for how long is the pretence to be kept up that they can do good in Tunisia without trying to force the pace of compromise in Algeria ?

RENT ACT

Much Ado

There may be one small crumb of justification for Mr Brooke's portentous big-brother-is-watching-you warning to those "unscrupulous" landlords who he thinks are abusing the Rent Act. In the peculiar situation when, after decades in abeyance, a free market is re-establishing itself for medium-priced rented property, a certain amount of scope exists for bluff, bullying, and skilful Jacob-and-Esau work: for bargaining techniques designed to panic the more innocent-minded sort of sitting tenant into paying not the market price—which, as agents know, will be quick to settle at a reasonably determinate level—but a good deal more. The device of issuing eviction orders before naming a price is one of the more obvious and aggravating of these techniques. If threatening noises discourage this sort of thing—and threatening noises are all that Mr Brooke probably really intends to make—one need not begrudge him his counter-ploy on Esau's behalf.

This having been said, it is really time to remind Mr Brooke—and, more important, his indignant critics—what the Rent Act is for. Its purpose is to do just what the critics complain that it sometimes is going to do: to loosen up the market in rented accommodation ; to promote mobility ; to send the over-housed into smaller quarters so that the under-housed or un-housed may move in ; to get retired people to move out of the centre of the cities, so that others can come in nearer their work ; in fact, to generate vacancies. The more vacancies that are created, the better the act will have succeeded. Last week produced an estimate, from the London Tenants' Protection Association, that ten thousand families would shortly be homeless as the result of the act: for all the world as if Mr Brooke had unleashed a soundless blitz and, immediately on the departure of a tenant, his dwelling vanished. If the association's estimate were correct, it would be equally true to say that ten thousand families would, thanks to the Act, find vacant accommodation where previously there was none.

Little Evidence

All the evidence suggests, however, that the tenants' association's estimate is not correct. Most of the "property company" landlords, who intend to stay in the business and who have made some estimate of what the free market level of rents is really likely to be, are almost falling over themselves to appear "reasonable." Most of the few "exorbitant" demands have come from the smaller private landlords, whose ideas are influenced by the inflated prices that unfortunate tenants of furnished accommodation have had to pay in the bad days of their isolation that are now ending. More commonly, some of these smaller landlords, with their eyes on Labour's threat to repeal the Act, are bent on getting out of the renting business while the going is good, and are saying that their property will therefore be available only to buyers and not to tenants. Sale, however, may look less attractive when a large amount of newly freed accommodation comes simultaneously on to the property market, there to confront an inadequate supply of ready money and a continuing credit squeeze ; and a good many would-be sellers are accordingly likely to think again. Originally, it was said that the main hardship under the Rent Act would occur when working class tenants started paying higher rents last October, but that stage was passed with much less upheaval than was anticipated. Something of the same sort is likely to occur when D-day for the middle-class accommodation arrives this October. Watch and see.

WAGES

Test Case

Our special correspondent who attended the Industrial Court this week writes : Sir John Forster, QC, adjusted his hearing aid and, with the retired leader of the railway clerks' union on his one hand, an engineering employer on the other, leant forward to hear the wage claim that may decide the course of inflation this winter—some would say, even decide the fate of sterling. The three arbiters sat at the head of the long room in Great College Street in which the Industrial Court regularly meets. Mr Nicholas, assistant secretary of the Transport and General Workers Union, put the workmen's case ; Mr Antony Bull, labour relations member of the London Transport Executive, that of the employers.

The arguments were just what one had expected. Mr Nicholas spoke first. He said that the London busmen's position had deteriorated since before the war compared with workers in other industries ; that London Transport now had 2,915 busmen too few ; and that if London Transport were losing money (their accumulated deficit at the end of 1956 was in fact £16 million) they should raise their fares to cover the cost of his £4 million a year wage demand. Mr Bull replied by denying that London Transport's small minority of country (green) buses, or any of its maintenance garages, are understaffed. Its central (red) buses might be short of men, he went on, but any award given to one group would automatically spread to all other workers. Neither London Transport nor the country could afford this. The court heard these arguments for two days, then withdrew to consider its decision, which it is likely to hand down in about ten days.

The frightening thing is that, if the three arbiters have listened only to the arguments put forward in the court, they may well recommend a selective increase for the drivers and conductors of London's red buses, and thus open the flood gates to inflation. If London Transport were indeed short of nearly 3,000 men, then of course there would be a case for granting a wage increase ; shortage of men in an industry that needs to expand is the one valid ground for a wage rise this winter. But by the only sensible measure—by the number of men available to drive those of its buses that can run at a real profit—London Transport is not short of workers ; it is merely short of the men needed to drive some of the superfluity of its buses that are running at a loss. London Transport, however, does not feel obliged to accept that the only buses it should run are those that are profitable ; it regards its obligation as being to provide an "adequate service," which is something very cosy and economically impossible to define. Perhaps the court will refuse an increase on the strength of Mr Bull's other arguments. But if an increase is recommended, and if inflation follows after, the public should clearly understand what will have happened. What will have happened is that the nonsense economics of a nationalised industry will once again have made nonsense of the economic management of this country as a whole.

LABOUR PARTY

No Victory for Socialism

It looks as if Mr Gaitskell and the Labour executive are going to take a tough line with the left wing "Victory for Socialism" group. Morally, one should regret this—as one should regret any steamrolling tactics by party leaders or whips. But politically, Mr Gaitskell's tactics are not necessarily unwise. He will remove a lot of future trouble for himself if he adopts a stern attitude towards his pacifist left, just as it is coming up to blow again. He may see a chance to show what will be called "masterful leadership," at a moment when Mr Bevan is ill-placed to challenge it. He will please the trade union leaders, who are as illiberal in their attitude to splinter groups in their own party as they are to splinter groups anywhere else. He may even please some floating voters, who would otherwise be scared by the extreme views on nationalisation held by Mr Mikardo and his colleagues in the erring group. The only circumstance in which sternness might be bad tactics for Mr Gaitskell might be if many of the ex-Bevanites in high places in the party vociferously object; and, amid the scramble for potential offices in his potential government, some objections to any actions on his part are liable to be carefully muted just now.

INDONESIA

Over the Brink

Hopes that civil war would be avoided in Indonesia seem to have been dashed by the events of the past week. Dr Hatta, the former vice-president and at one time the rebels' choice as prime minister, conferred with President Sukarno for two hours. But if, as may be supposed, he offered moderating advice, it was not heeded, for Dr Sukarno's next act was a speech in which he declared that he would take all measures in his power to restore the authority of the central government. The Indonesian air

force then bombed Padang, one of the rebel strongholds in central Sumatra, Bukit Tinggi, the rebel capital, Menado, in the rebel territory of North Celebes, and Djambi, in Sumatra. The attacks on Padang and Menado accomplished their apparent purpose by silencing two rebel radio stations.

The air attacks were all preceded by warnings to the population and were on the small scale expected of a small air force. They are nevertheless an earnest of the central government's intention to meet the challenge to its authority with force. The revolutionary government, lacking both an air force and a navy, is in no position to retaliate, though it would doubtless fight on the ground if its territory were invaded. In the meantime, it is reported to have taken refuge in the western mountains of Sumatra and to have taken the "final step" of disowning Dr Sukarno as President of Indonesia. A statement to that effect would have been broadcast early this week if its radio facilities had not been put out of action.

Since the military resources of the central government are themselves limited, a prolonged mutual siege seems inevitable. Diverse factors will play a part in this struggle. One is the availability of aviation spirit to the central government's air force; the "neutral" commander of South Sumatra has refused to allow Jakarta's aircraft to refuel in his territory; equally neutral, Singapore has banned the export of high-octane spirit to either government. Neutrality is, indeed, at this stage the only prudent course.

ARGENTINA

To Praise Caesar, or Bury Him?

An honest soldier has given the 20 million Argentines their best chance of expressing their political wishes freely for thirty years. As a sorely tried provisional president, General Aramburu had been under strong pressure to postpone, cancel or rig the elections which were held on Sunday. While some of this pressure came from the same die-hard conservatives who have detested free elections ever since they were instituted in 1912, some came from those who not unreasonably feared that Argentina would vote itself back into the totalitarianism imposed by General Perón. The provisional president courageously overbore all these fears. He and his country merit congratulations on a unique feat. No other nation has freed itself from a full-blown totalitarian system and struggled back to the path of democracy.

Yet Argentina is in no position to live happily ever after. The effects of General Perón's disastrous economic policies are still working themselves out; and, as their full impact had not been felt when the dictator was ousted in 1955, the blame for present hardships will be widely imputed to the next government, as it has already been to the provisional government. And it is not yet clear what the next government will turn out to be. The election results themselves are clear enough. Sr Frondizi, the left-wing ("Intransigent") Radical leader, has triumphed over his only serious rival, the moderate Radical Sr Balbín, piling up four million votes out of some nine million cast, against Sr Balbín's 2½ million. But General Perón is claiming, from his Dominican refuge, that he virtually presented Sr Frondizi with the presidency; and the evidence supports this claim. Not only had the new president-elect openly solicited *Peronista* votes; the number of votes now cast in his favour corresponds, with ominous exactness, to the sum of the Intransigent Radical poll in last year's elections for the constituent assembly plus the two million blank ballots which the loyal *Peronistas* then cast on their exiled leader's instructions.

This does not necessarily mean that Sr Frondizi must now docilely serve General Perón, whom he has little cause to love. He may have out-manœuvred the exiled dictator, using his support as a ladder up which to climb to power, rather as General Perón himself once posed as the spiritual

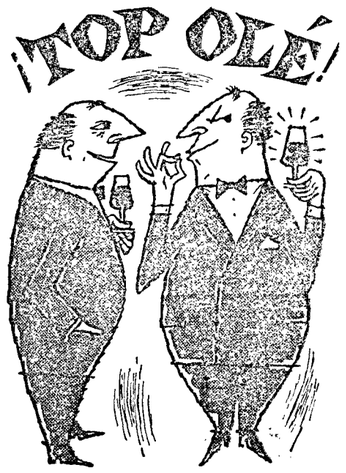
Base story

(which took a turn for the better)

In making photographic film, the most expensive item is the film base, which doubtless sounds extremely simple and logical.

What is (or rather, was) somewhat less logical is that the British film industry, after the war, paid out alarming sums in dollars each year in order to import this film base ("something like celluloid" to you perhaps, but *cellulose triacetate* to the more technically minded).

This formidable drain on our national resources had to be stopped. And it was stopped—at a cost, but thankfully, in sterling.



Briefly, we at Ilford, in conjunction with BX Plastics, undertook to make this base. Apart from a small pilot plant which had been operated in Britain during the war, we had little technical 'know-how'. Certainly not the know-how required for making film base on a large scale and thus creating an important new industry in Britain.

We had to work out the processes, and design and build the plant ourselves. The job involved a vast technical effort and an investment of something over £2,500,000.

Today at the Bexford plant we are making, still in conjunction with BX Plastics, the whole of the Ilford needs for film base. In fact, we are even selling to the U.S.A.

ILFORD FOR PHOTOGRAPHY

RADIOGRAPHY · MICROFILMING · CINEMATOGRAPHY

AMATEUR & PROFESSIONAL PHOTOGRAPHY

Have you ever been lost for words when a host presses you for an opinion about his wine? To many wine lovers the well-turned phrase, the apt literary allusion, the revelation of wine-wisdom, gives as much pleasure as the wine itself—and if you want to land another glassful you've got to have the right bait.

I've got it. It's a little book entitled "Oenophilia", full of periphrastic pleonasms for people who are anxious to camouflage their ignorance of zymase, must, the solera system and other oenological mysteries. For example, it advocates the use of "O for a beaker full of the warm south" as an alternative to "Phew, I could do with a drink". Again, it suggests that a wine is more winningly described as having a "purple robe just hemmed by Time with autumn leaves' tints, but showing no creases nor any sign of wear", rather than when it is prosaically labelled "A drop of all right".

"Oenophilia" abounds with such gems, guaranteed to warm any connoisseur's cockles, and no doubt it would be invaluable to authors of wine lists. But do these lyric phrases whet the palate for wine as effectively as they tickle the fancy? Frankly, no. There's no substitute for a glass of the wine itself. That is why I forbear to wax lyrical about Mackenzie's Sherry. Unless you've tasted it, anything I could say about Mackenzie's Sherry might sound like rodomontade. It's superb, it's delicious, it's—oh, it's 'top olé'. Do try a bottle and see if you agree with me.

THE SOUTH AFRICAN TREASON TRIAL

WE, representing the sponsors, urgently appeal on behalf of the Defence and Aid Fund, established by Christian Action to provide for the legal defence of the accused in South Africa's Treason Trial and to aid their families and dependants. The money subscribed is being distributed through and in conjunction with the committee raising a similar fund in South Africa, the trustees of which include the Bishop of Johannesburg and Dr. Alan Paton.

Reports from South Africa continue to emphasise the urgent need. Costs for legal defence grow heavier as the case drags on: But it is the desperate plight of the families and dependants of the accused, and particularly the African accused, that must compel the very maximum contribution from every imaginative citizen of these islands. For every one of the 156 accused and their families the trial has raised cruel problems: Material hardships, separations among families—including mothers from their young children—loss of employment, interrupted studies, broken homes, wrecked hopes. So long as their ordeal lasts, even those who may have a job to return to are unable to provide for themselves or their dependants. And the release without compensation of 64 of the accused is now making an immediate and urgent call upon the Fund for their rehabilitation.

People in this country see in Apartheid a shocking disregard for Christian and liberal principles in human relationships, but feel impotent. What can we do? they ask. Here, then, is an opportunity for doing something practical, immediate, and of healing import.

We have raised in Britain more than £40,000 to date; but we are advised that £150,000 in all will be required. Will you please send your maximum contribution (cheques payable to Christian Action) to The Secretary, S.A. Defence and Aid Fund, 2 Amen Court, London, E.C.4.

heir of the Radical hero Irigoyen. And the president-elect, whose ideas of social justice appeal to much the same elements that gave General Perón his power, is exceptionally well placed to steal the ex-dictator's trousers—if he wants to. His next actions will be anxiously watched. Has he come to praise the fallen Caesar—or to bury him once and for all, by giving the masses the same protection against exploitation that General Perón offered them, while maintaining the freedom that the dictator destroyed?

UNEMPLOYMENT

Work Study

THE 28,000 rise in unemployment between January and February, which the Minister of Labour admits was a "real and not a seasonal increase," is a sign that the world recession is beginning to spread to Britain—but much more slowly than it is spreading abroad. Even in February, only 1.9 per cent of the working population of Great Britain were unemployed, compared with January figures of 8 per cent in Canada, 6.3 per cent in Western Germany and 5.8 per cent in the United States. In all these countries the recent rate of increase in unemployment has been greater than here. Indeed the absorption of most laid-off workers into expanding industries in Britain continues to be surprisingly swift. Three quarters of those who have recently permanently left the troubled tinplate industry have found other jobs; three weeks after the latest batch of much-publicised lay-offs at Saunders Roe aircraft works, only 153 are still registered as unemployed.

But what rightly worried the House of Commons this week is that the worst unemployment is concentrated into

relatively few districts. The blackest spot is Northern Ireland, where the rate of unemployment is 9.3 per cent on average and reaches as high as 17 per cent in Londonderry. This situation should improve when work on the Dupont and British Oxygen plants gets into its stride, but there is no real hope of getting unemployment there down to anything near the British level. The unemployed workers of South Wales should be able to move to work on the construction of docks at Milford Haven, and two atomic plants are going to be built in North Wales. Only in Scotland, where unemployment rose by 6,000 last month, do there not seem to be investment plans on a scale sufficient to give employment to most of those out of work.

Sir David Eccles promised to help the harder hit localities both by use of the £2¼ million available to him in 1958-59 under the Development Areas Act (indeed by use of more money if necessary), and by utilising the system of development certificates to discriminate in favour of those building in development areas. There must be some question mark over the latter policy. Discrimination of this sort was all very well when manufacturers were prepared to build at any cost and when they were easily persuaded to set up in the development areas because only there was the labour they needed available. But the tighter use of these certificates now might delay the building of factories rather than divert them; and, with building one of the slackest trades everywhere, the Government should not want that. Much more sensible is Sir David's suggestion that since some of the development areas (such as the North East Coast) are in much less need of help than some newer problem districts (such as parts of Cornwall?) the areas qualifying for special help should be re-classified. This would enable Government aid to be deployed where there is unemployment now rather than where it used to be between the wars.

COMPULSORY PURCHASE

Compensation and Confiscation

FEW private members' bills can have aimed so high as that moved last week by Captain Corfield and given the empty victory of a second reading without the promise of the necessary money resolution—which means, of course, that this particular bill will go no further. In the words of a supporter, Captain Corfield "charged with lance aloft" (sic) "into one of the deepest and darkest legislative thickets that exists," namely, that which has grown up over the question of compulsory purchase, land values, and town and country planning. His aim was broadly to ensure that compensation for compulsory acquisition shall be payable at market price and not, as specified by the present law, the generally much lower price represented by current use value plus a fixed factor based on 1947 prices. He had no difficulty in producing a formidable list of instances in which acquisition on these terms had amounted to a confiscation of anything up to nine-tenths of the value of the property concerned—value which was quite as likely to have been paid for in full by the owner as to have accrued to him by way of potential speculative profit. The absurd situation has more than once arisen in which a local authority, conscientiously unwilling to ruin the owner of a site which it wished to acquire, but legally prohibited from paying more than a ruinously low price, has had to make expensive and inconvenient changes in its plans.

The bill got sympathy from the Government but no support, on the grounds that its provisions cut right across postwar planning legislation and that no amendment would make it workable. A Government measure was promised, though with no fixed date. That measure will have a very difficult problem to solve. It is easy (except on the crudest socialist assumption that any property owner is fair game for any public authority) to say that any enforced sale should yield to the seller what his property is worth. The public's pocket, no less than the public purse, needs to be protected. But "worth" is an elusive quantity when it

depends overwhelmingly on the actions of the buyer—the typical situation where public development is going on.

Surely the basic problem boils down to this. The present formula for settling "worth," on Captain Corfield's showing, will not do. Some formula, however, there must be—and the principle that most people would regard as fair is that a man should not lose when it is decided to drive a road through the present site of his house or land, but that he should not gain an excess profit from such a decision (although he should get some profit as compensation for the inconvenience). To establish a formula of this sort will be a difficult job of draftsmanship (probably there should be ample provision for special arbitration bodies and the like), and one suspects that any new bill should recognise fully that, as circumstances change, the formula will have to change, too. This is an untidy prospect; but perhaps the first thought barrier that needs to be pierced is to recognise that untidiness will be preferable to tidy petrification in obstruction and injustice.

GERMANY

Summit Worries

FROM Bonn, the clouded summit ridge looks perilous. Mr Bulganin and Mr Khrushchev have both made plain that they do not want Germany on the *al fresco* bill of fare. Disarmament, culture, the Middle East, yes; the German question, no. The fear that east and west will come to terms over Germany's head, agreeing on some broad disarmament or disengagement that accepts the partition of Germany, once more haunts the west German government. It is bending its efforts to impress upon the western powers that the German question must not be passed over: progress on disarmament, or on anything else, must be conditional on progress towards German unity.

This priority accorded to the German national problem has tended to damn the Rapacki plan in German eyes. Bonn sees in it a double danger: that the west might surrender its chief military asset in Germany—nuclear armaments—without getting in return any advance towards German unity, and without diminishing the preponderance in conventional weapons which Russia enjoys. German television viewers on Tuesday saw General Norstad, Nato's supreme commander in Europe, give a vigorous endorsement to this second doubt. The Bonn government is not taking up the Polish suggestion for direct Polish-German talks on the Rapacki plan; it continues to avoid diplomatic relations with Poland.

This approach, so hard and clear at Bonn, does not wholly reflect opinion in west Germany. Not all Germans are content with the prospect of a concentration of atomic weapons in their country; some feel that the Rapacki plan might be made to lead to a reduction of conventional forces which could in turn loosen Russia's grip on eastern Europe and open the door to reunification itself. What is not clear is whether some members of the Bonn government—for instance, Herr Strauss, who has been airing his personal views on the Rapacki plan in Dr Adenauer's absence—share these feelings in any serious degree.

The Russians, however, are offering no encouragement to German hopes. Mr Khrushchev, in an interview with *Die Welt*, has sat firmly on the notion that a peace treaty for Germany might be discussed at the summit. Peace treaties, he said, like other German affairs, had to be discussed between the two German states; in other words, with east Berlin.

EAST BERLIN

Diplomatic Purgatory

SOVIET career diplomats must feel that they are being squeezed out of their jobs; so many posts have been filled in the post-Stalin era by politicians out of favour. For some of the politicians appointment abroad is a mark of disgrace; Mr Molotov in Ulan Bator provides a striking example. In other cases the change of fortune is not so obvious. Mr Puzanov, Soviet envoy to Korea, was once the premier of the Russian Soviet Republic. Mr Tevossyan, now ambassador in Tokyo, is a former deputy prime minister of the all-Union government, while Mr Ponomarenko, who has recently taken up his appointment in New Delhi, is an ex-minister of supply and was once a prominent figure in the party.

Mikhail Georgevich Pervukhin now joins the ranks of great men in diplomatic exile. The post of ambassador in east Berlin is small beer to a man who not so long ago was at the very centre of power in Moscow. Mr Pervukhin rose to that position by the managerial path. During the war he was already deputy prime minister, an important technocrat and fairly high up on the party ladder. A year ago, at the age of 52, he was near the top as chief planner and a full member of the presidium, the highest body in the party.

But in the controversy over managerial reform he apparently took sides against Mr Khrushchev. He paid the penalty, but not as heavily as Messrs Malenkov, Molotov, Kaganovich and Shepilov—who were stripped of all their offices—or as his fellow-planner Saburov, who was kicked out of the presidium. Pervukhin was only down-graded to the rank of candidate member. He was also reduced from head of *Gosplan* (the state planning commission) to minister of medium engineering. His appointment to east Berlin puts him under Mr Gromyko, in theory still his inferior in the party hierarchy. This may be just a step on the way out, or it may be a chance to serve his passage back. It may have been decided in Moscow that the situation in east Germany was sufficiently critical to call for an important Soviet emissary on the spot. Even in disfavour, Mr Pervukhin has the stature for the job.

His arrival may be a relief to Herr Ulbricht. Through Mr Pushkin, the last Soviet ambassador in Berlin, Herr Ulbricht had close contact with Russian policy. Mr Pushkin was recalled to Russia in January, just when Herr Ulbricht's struggle with his opponents in the party was reaching a critical phase. Now, after the purge, Herr Ulbricht and his men are stumping the country whipping up support among the party cadres. The appointment of a new ambassador lends an air of Russian recognition to his victory.

SOVIET UNION

Sic Transit ...

THE vanity of circumstantial flattery is well illustrated by the case of Russia's fallen idol. Next week will see only the fifth anniversary of Stalin's death, but in these five years the Byzantine cult surrounding his person has vanished. The contrast is striking when his official biography in volume 40 of the latest edition of the Great Soviet Encyclopedia is compared with that in the previous edition, issued in his lifetime. Then Stalin was given forty-five pages and thirteen pictures; now he gets six pages (including the picture), and in those, compliments are balanced by criticism.

This does not mean that the new version is final or undistorted. Soviet compilers of biographical dictionaries have not had an easy life for years. In Stalin's time their labours of revision could seldom keep up with the death roll of his illustrious victims. Even when he was dead the owners of the volume of the new Encyclopaedia containing the letter B had to be sent substitute pages to replace the entry on Beria. And the fortieth volume now comes out two years behind schedule. The delay has probably worked in Stalin's favour. The disarray in the communist ranks after the Hungarian insurrection has compelled Mr Khrushchev to revise somewhat the grim version contained in his famous "secret" indictment of February, 1956.

The new profile attributes to Stalin both great achievements and grave mistakes. He gets the credit for rapid industrialisation and for the general economic development which enabled Russia to withstand the German invasion. But he is also blamed for having underestimated the German threat. He is praised for his struggle against "the enemies of bolshevism," yet he is also blamed for the ruthless extermination of his defeated opponents. The warning against Stalin's character contained in Lenin's "testament" is included, though it is argued that his worse features came to the surface towards the end of his life, when he thought himself infallible and ignored the central committee. This played into the hands of the chiefs of the security police (not only Beria, but Yezhov and Yagoda, his two predecessors, as well). Yet can all the crimes be blamed on the police? And where were Mr Khrushchev, Mr Bulganin and their colleagues? Further changes will have to take place in Russia before an objective epitaph can be carved on Stalin's tomb in Moscow.

DEFENCE

Men for the Careers

IF Mr Sandys gets his 375,000 volunteers to man the all-regular forces by 1962, when the last national service man is due to leave the army, the doubters will have to eat mud; but it will be very good mud to eat. Had they better start acquiring the taste? Not yet; but the recruiting figures for January, announced on Tuesday, are surprisingly good. The number of men attracted by the army six-year regular engagement (and to a lesser extent by the RAF nine-year engagement) is going up. It is now possible to take an average of four months since the six-year engagement was introduced: on the basis of the calculations made for all types of service by *The Economist* on December 7, 1957, the prospect for the army is now for a regular force of 103,000 other ranks by 1960-61. Jack that up to 110,000 to allow for net recruiting between then and the beginning of 1962, add the officers, and you get, on present trends, an army of 130,000 against a requirement of 165,000. Mr Sandys, in the defence debate, reactivated last year's proviso that the gap might have to be met by selective service.

Meanwhile, however, pay increases and promises of better accommodation have been made in the white paper, which (combined with rather slacker conditions in the civilian job market) may further improve recruiting in the months ahead. Then, in the summer, will come the report of the Grigg committee with, it is hoped, hints on how to make service life more attractive. All in all—if the trend is not reversed in the next six months—Mr Sandys may well calculate that he is going to get an army by 1962 that, if not quite up to target strength, is steadily rising and "will do"; the last call-up papers may then be sent out as planned at end-1959, and statistical evidence that they *are* the last will be very handy as general election time may then just have come round. But Mr Sandys is not there yet; and nobody, of course, knows how big an army Britain will need in two years' time.

It will, however, be in many ways a different army; the memorandum on the Army Estimates (Cmnd 372) announces that the brigade group formation is now definitely to replace the divisional. It also lays great stress on the central reserve which the RAF—as shown in its memorandum (Cmnd 373)—will apparently have aircraft to fly anywhere at short notice. Both services will be busy with missiles of various types; if electronics are a draw, recruits for all three services should continue to roll to the colours.

WEST AFRICA

French Africans Unite

THE French government, already embroiled in Algeria and Tunisia, will have yet another African problem on its hands unless it becomes unwontedly flexible over the lois-cadre which it has promulgated in black Africa. Last month representatives of the main political parties in French West and Equatorial Africa held meetings in Paris, as did, on a separate occasion, those from Madagascar. The ultimate objective of each meeting was to settle a platform from which to press by stages for something which much more nearly ressembles Commonwealth status than the structure of the present French Union. The main black African parties have announced that they intend to unite to pursue the very extensive transfers of power to African hands which this programme requires. It has been clear since the Bamako conference of the African parties last September that the Africans were no longer satisfied with the degree of territorial self-government they obtained under the new laws; but there seemed to be forces which might delay fresh demands. But with the growth of M. Sékou Touré's influence in the councils of the *Rassemblement Démocratique Africaine*, the biggest party, whose leader, M. Houphouet-Boigny, has stood for partnership with France, the pace has increased. The bombing of Sakiet has given it new impetus. M. Sékou Touré is a man of the left, a keen nationalist and powerful in the African trade unions.

On paper the programme of the combined parties looks complicated—not only African control at Dakar and Brazzaville, the federal capitals of French western and equatorial Africa, but also a federation of these two federations, to be African-controlled too; above that, a federation of this new semi-state into the French Union, and above that again some sort of "union" with the North African states. These complicated schemes may reflect the fact that French black Africa is dependent on French subsidies but fearful of encroach-

ments from North Africa. The sting in them is that, if the French do not accept this—rather ill-tied—package deal, the African states are to have the right to opt for independence. The first implication for the French government is the prospect of a solid block of 20 French black votes in the National Assembly.

CPP Triumphs in Ghana

FOR Ghana and Nigeria, the implications of the emergence of a vast new African sovereign state, surrounding them and stretching from the southern frontiers of Morocco to the Middle Congo, are obviously immense; M. Sékou Touré is just as strong a pan-African as Dr Nkrumah, and has shown himself just as keen to be the leader. But the plans of the French African leaders are still only on paper, while Dr Nkrumah is actually convening a conference of free African states at Accra in April. Moreover, Dr Nkrumah has the satisfaction of knowing that while the unification of other areas—French or Nigerian—is still to be done, he has undoubtedly consolidated his own power and the cohesion of Ghana; this, as the first anniversary of independence approaches, is a solid achievement.

The outward and visible sign of the undisputed supremacy of Dr Nkrumah's Convention People's Party and the collapse of the opposition—so vociferous until last autumn—is what is happening now in Ashanti, the opposition's citadel. The government has won the Kumasi municipal elections—unthinkable not long ago—and is conducting a juridical enquiry into the affairs of the Asanteman council of chiefs, an encroachment on the prerogatives of the Asantehene which, it was always predicted, would precipitate civil war. In fact the chiefs, after demonstrating and struggling to no avail, are clearly to have their wings sharply clipped; while the Asantehene pays ostentatious court to the regional commissioner, who is a CPP official.

It is perhaps, therefore, no wonder that Kumasi voters decided to vote for the winning side—thus proving that Mr Krobo Edusei was right when he said that he would capture Ashanti in the end. This means that when the regional councils are set up, the CPP can expect to win in Ashanti; and this will give them enough power to alter the constitution quite legally. The opposition in Ghana has proved to have pathetically little stamina. The deportations of last summer disheartened it—and single party rule is clearly the pattern for a long time to come.

Zik and the Mothers

SINGLE party domination has hitherto seemed as much a feature of the Nigerian regions as of any other part of Africa. Dr Azikiwe's party, the National Council of Nigeria and the Cameroons, has been in unchallenged control of the Eastern Region since 1950, and his personal power, anchored to the dominance of the Ibo tribe, seemed unbreakable. The opposition party, Chief Awolowo's Action Group, certainly had small hopes of winning a general election. But the riots in Eastern Nigeria in recent weeks suggest that Dr Azikiwe may now not be invulnerable, for most of the opposition has come from Ibo districts—and it was the more formidable for being led by the women.

The revolt was against the government's decision to impose a local contribution for education. Like Chief Awolowo, the premier in the west, Dr Azikiwe's government decided that universal free education was the strongest single wish of the electorate. The trouble arose from making it universal but not free. Neither the budget of the west nor the east can possibly run to free education, but Chief Awolowo faced this early on, and forced the districts in his region not only to build schools but to pay for the schooling. There were riots then—and as a result he lost the first federal elections in 1954 to the NCNC. But he is now in the clear, and it is Zik's turn. The cost of free education in the east would be £6½ million, or about £2½ million more than estimated revenue. Clearly the choice is between free education and universal education. The probable result will be a limited amount of education and the people will have to pay for it. But it is a heavy setback to Dr Azikiwe. No longer the hero of his people, he is bluntly telling them that they evade taxation and cheat the government: and he did not hesitate to call in the police to suppress them. Even before full independence the realities of power obtrude themselves.

STAG HUNTING

Parliamentary Mort

SIR FREDERICK MESSER'S bill to legislate stag-hunting out of existence was "talked out" in Parliament last Friday. Was this a denial of the nation's will? A Gallup poll in this overwhelmingly urban country has just revealed, as one had expected, a clear majority disapproval of stag-hunting; there was a smaller majority in favour of banning fox-hunting, though its decorativeness as a Christmas-card and calendar subject tells somewhat in its favour. "Blood sports" have, literally, a bad name. But—all considerations of morality aside—everybody knows that if the people in the towns who mildly support abolition were to live in the country, they would mostly violently oppose Sir Frederick's "interference." The stag-hunting controversy, indeed, illustrates in miniature the saving impurity of democracy. In theory, the most lukewarm preference of the narrowest majority can override the most passionate objection of the largest minority; in practice the sheer difficulty of mobilising majority opinion for action, sufficiently to get an anti-hunting bill to the top of the private members' ballot and then to force it through the Commons on successive Friday afternoons, safeguards the vigorously recalcitrant against the mass weight of the only mildly concerned.

The ethics of this particular case have been argued virtually to a standstill. Whether a sticky end at the hands of the local hunt is any worse than the other sticky ends to which—nature being what she is—all wild animals come sooner or later, is a question which stags and foxes unfortunately cannot answer; and it invites the further question whether, in a civilised era, it is worse to cultivate for pleasure the once highly desirable primitive hunting instinct than to profit, as a comfortably remote final consumer, from the certainly no less "cruel" procedures of, say, whaling—let alone fur-trapping. The relation of mankind to the rest of the animal creation is not, and is never likely to be, governed by United Nations principles. Possibly the general level of sensitiveness may one day rise to the point when the taking of animal life will be regarded as at best an abhorrent necessity and its association with sport as unthinkable. But that day is not likely to be brought nearer by the mixture of worthy idealism, uneasily vicarious conscience, and flicker of censorious Phariseeism which provided the backing for last week's bill.

ITALY

Bishop and Grocer

GUELPH and Ghibelline reappear in the legal case (described in detail in *The Economist* of January 18th) of the Bishop of Prato and Signor Mauro Bellandi, the grocer, who in October, 1956, married Signorina Loriana Nunziati in the town hall at Prato. The bridegroom refused a religious ceremony because, though he had had Catholic baptism, he was an atheist. In a pastoral letter to which the couple's parish priest gave all possible publicity, the Bishop of Prato, Monsignor Fiordelli, denounced them as "public sinners" living in "scandalous concubinage." Signor Bellandi thereupon sued the bishop and the priest for defamation and slander.

The Bishop of Prato is implicitly denying the validity of a civil marriage. But in the Lateran pacts of 1929 the Italian state merely acknowledged the validity of religious marriage; it did not intend the validity of civil marriage to be weakened. When the trial opened in Florence on Monday, Monsignor Fiordelli (who is the first bishop to be summoned before a civil court since 1929) refused to appear (although he is legally represented) on the ground that he did not recognise the civil competence in a case that he considered to be exclusively within his own spiritual jurisdiction. The plaintiffs do not, in fact, dispute the bishop's right to invoke spiritual sanctions. But they do maintain that by his manner of doing this he has strayed over the border between things spiritual and temporal and committed a criminal libel. The bishop's refusal to appear in court looks like a direct defiance of the state's rights, although the public prosecutor contrived both to assert these rights and to ask for the bishop's acquittal.

The controversy recalls the debates that raged after the war over the inclusion—denounced by Benedetto Croce as a "legal monstrosity"—of the Lateran pacts in the new Italian constitution. If the bishop refuses to retreat, it could even lead to a demand for the revision of the Concordat. The sensitivity of Italian opinion to the position and activities of the Church was illustrated last month by the reaction to an article by Cardinal Ottaviani criticising Catholic politicians who use the Church but do not serve it. The Christian Democrats could be seriously embarrassed on the eve of a general election. The government has already been accused, rightly or wrongly, of delaying the bishop's trial and of making changes among the Florentine legal officers calculated to help the bishop. It may well lose votes if it does not show itself a more enthusiastic champion of the state's rights than it has done so far.

FARMING

From Milk Cheque to Beef Cheque

THE Fatstock Marketing Corporation and the National Farmers' Union Development Company deserve congratulations for their joint venture announced last week: a credit scheme which will provide for beef producers an equivalent to that sheet-anchor of the dairy herd owner's finances, the monthly milk cheque. It is a matter of common agreement that a switch from milk to beef production is desirable. Price changes can—and should—be used to exert their influence; but whatever happens to the respective prices of milk and beef, there is a great difference between a regular month-by-month income and a return which must be awaited for a matter of half a year or more. This difference, moreover, is most forbidding to precisely those high-cost dairy producers who ought to make the switch, since their working capital is the most likely to have been eroded into inadequacy.

Fatstock Finance Ltd., the company jointly formed by the FMC and NFU, will operate two plans. One will be an ordinary short-term credit scheme to finance the buying of store cattle; the other will provide advances of up to 60 per cent, paid in equal monthly instalments, towards the cost of fattening them. These advances, together with interest and administrative costs, will be deducted from the final purchase price when the farmer sells to the fatstock corporation. The effect should be to even out the peaks and troughs of the beef producer's income, and thus to make beef production more attractive—especially to the small man. Both from the point of view of land utilisation and that of the taxpayer (not to mention the New Zealand butter producer and other parties aggrieved by Britain's overproduction of milk) this is a welcome move—and one that has been advocated before in these columns.

CUBA

How to Make Headlines

NEW political techniques are not often invented. Have the Cuban rebels originated one by kidnapping the motor racing champion, Sr Fangio? Aggrieved or rebellious factions have often seized political figures, to hold them as hostages, or to sow terror and confusion among their opponents. But it is a different matter to kidnap a famous sportsman. The Cuban guerrillas claim that they wanted to show their disapproval of the way President Batista was wasting money on high-speed circuses when the people needed bread. But they doubtless also foresaw

The Paper Bulletin

The latest issue of this quarterly bulletin contains two Special Reports:—

WORLD WOOD PULP—A CHANGING MARKET—an exhaustive analysis of world supply and demand.

THE TREND OF BRITISH PAPER OUTPUT—latest trends and future outlook.

In addition there are the usual features which provide a

COMPREHENSIVE AND CONTINUOUS SERVICE

for those whose business is paper:

Guide for Paper Users—all uses of paper are surveyed

Raw Material Notes—market intelligence

Reports on Paper Using Industries—useful guide in reaching current decisions.

25-page Statistical Appendix—production, exports, imports, prices, stocks, consumption in United Kingdom, North America and Scandinavia.

THE ECONOMIST INTELLIGENCE UNIT LTD.

22 Ryder Street, London, S.W.1. Whitehall 1511, Extension 148

the crop of banner headlines in the world press that their coup secured. If they had kidnapped the president himself, they would not have put themselves across to the non-political world "admass" half so effectively.

Whose turn next? Not only Mr Stirling Moss, but also Messrs Zatopek, Hoad, Kuts, Bannister and others may henceforth have to stay well away from any resistance movement with a flair for public relations. Not only sportsmen, but other big "names" in modern folklore—Sir Edmund Hillary, Miss Marilyn Monroe, Mr and Mrs Michael Todd, Liberace and Picasso—would be wise to keep clear of Indonesia, Okinawa, Ulster, Arkansas and any other areas where they might find themselves unwillingly advertising somebody's grievances. Group Captain Townsend was fortunate in that this headline-grabbing technique had not been dreamt up when he made his overland journey through Asia. From now on, discontented and enterprising Kurds, Kashmiris, Keralans and Karens will be lying in wait for unwary front-page personalities, and the UN Children's Fund may no longer be able to use Mr Danny Kaye as a "roving ambassador" in far-away places.

In Cuba this week, Sr Fangio's courteous kidnappers were also suspected of causing the race track accident in which several people were killed; but an official report seems to have cleared them of that charge. It would certainly seem foolish for rebels seeking popular support to endanger lives in a crowd of 300,000 spectators. Were they even wise to kidnap Sr Fangio *before* the big race? If they had waited until it was over, they could still have got their publicity and shown their power without irritating all those who had flocked to see the world champion race. However, the "Cuban snatch" technique is only in its infancy. Smoother practitioners will soon perceive that the kidnapping of certain film stars is "news" at any time. It can therefore be timed not to interfere with production schedules or world premières; indeed, the victims may well prove quite helpfully co-operative when they are, as they say in the trade, "resting."

The Economist

FEBRUARY 27, 1858

THE CHANGE OF GOVERNMENT

¶ Less than a year ago, the country was appealed to by a dissolution of Parliament and returned a House of Commons with a Liberal majority of *two hundred*. But, notwithstanding that fact, a Tory Government, *pure and simple*, has now the direction of the affairs of the country. . . . The new Government may be considered as identical with that of 1852. It cannot be said that the very slight changes which have been made have added any weight to it. They had a fair trial in that year;—they had an election in their hands under favourable circumstances. The result we need not state. The same men have acted together in opposition since. Have they shown more than before, any progress in those qualities which command public respect and confidence? The result of the general election last year is the best answer to that question. . . . The same *role* that was enacted in 1852 will be played over again in 1858, but under great disadvantages. In the former year, the Ministers were all new to public office, and a strong feeling existed that they should have a fair trial. Does any one beyond their immediate adherents now think a further trial necessary to come to a conclusion upon their administrative capacity? In another respect they will labour under a great disadvantage *now* as compared with 1852. The embers of monopoly were not then quite extinguished. Protection was still a good cry for the counties, though Free Trade alone went down in the boroughs. But both were used as they best suited the constituency. That game, however, has been played out, and there is none other in its place. At the moment there is no excuse for a dissolution. In 1852 it was otherwise. The Parliament was *then* within a year of its natural death: *now* it is within a year of its birth. *Then* there were at least new men in power, adhering to an antiquated policy which had a certain support in the country: *now*, the party is not new, and their policy is repudiated as well by themselves as their former adherents. They have, in point of fact, no issue to place before the country but their personal claims to confidence, as against the whole Liberal party.

KENYA

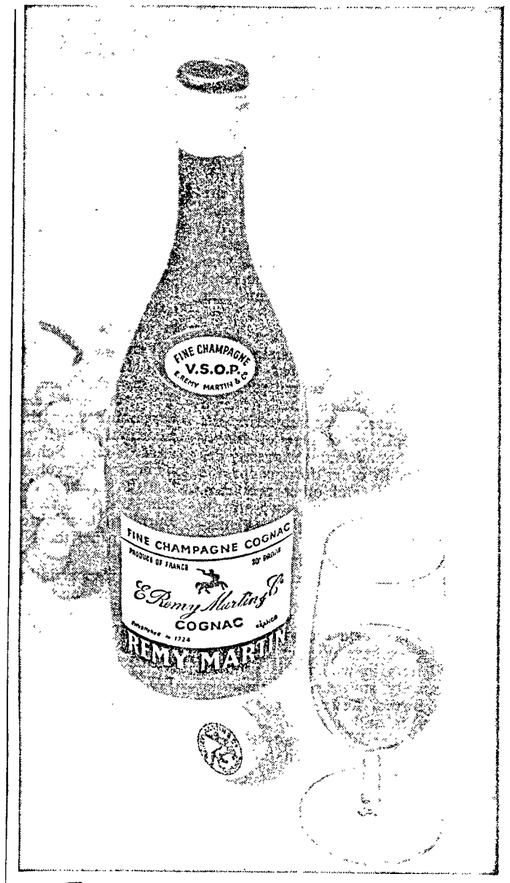
Multiracial Affairs Board

MR LENNOX BOYD'S scheme for Kenya's ten-man Council of State, which is to accompany the expansion of the Kenya legislative council and the increase in the number of elected African members, has not held out to white Kenyans all the safeguards for racial minorities and their privileges which many of them had expected. The new council is in no sense to be a second chamber. Appointed by the Governor, presumably from members of all races, its task will be to vet bills introduced into the Kenya legislature; if it holds that any bill is discriminatory against any racial or religious community, then that bill must be reserved for signification of the Secretary of State's pleasure. The council will thus only be able to hold up bills for a few months; although it will have the power, before the third reading of a bill, to suggest amendments that would render the bill innocuous from the racial point of view.

In as colour-conscious and argumentative a country as Kenya, with a heavy legacy of racial antipathy and suspicion, this new organ of government will produce plenty of controversy; but clearly it belongs to the colonial period, in which, in any event, the Governor and Secretary of State have ample powers to curb discriminatory legislation. It is doubtful how far it can be intended to satisfy the non-African communities that they can eventually safely hand over their lives and fortunes to African political control. But though it may be of limited use in Kenya, it is clearly a far stronger check on the government than the African Affairs Board, which operates in Central Africa. A board of this sort in Rhodesia, with its limited powers to suggest revision of obnoxious legislation, might have greatly improved Rhodesian constitutional bills to which the House of Commons can now only say yea or nay.

In Kenya, the Africans are unlikely to be made much more co-operative by the Secretary of State's proposals, though speakers on both sides of the House of Commons last week urged them to give the scheme a fair trial. The outlook in the colony is now undeniably depressing, with the African politicians determined to win the additional elected seats this month on a ticket of straight non-co-operation, neo-Mau Mau movements re-festering in the reserves, and the government still restricting every outlet for African political organisation of a more healthy above-board kind. The Kenyan constitutional gimmicks, now so freely disposed, will have to perform prodigies if they are to stop political antagonisms in Kenya from settling hard and finally along the lines of machine-organised black nationalism.

FLY THE FINEST



Fly TWA
JETSTREAM*
Equipped with radar and synchrophased (anti-vibration) propellers
non-stop to USA

A transport of delight. For these reasons. Because the TWA Jetstream is the quietest, most comfortable, longest-range airliner in service today. Because you can choose the palmy luxury of TWA Ambassador service or the prudent economy of TWA Golden Banner Tourist flights. Because you can fly TWA Jetstream non-stop to New York or direct to the West Coast of America by the short Polar Route. Because you can fly TWA Jetstream not only to the principal cities within the USA but also through Europe to the Middle East.

Furthermore, you can fly now pay later, and TWA Holiday Fares save you over £34 on the regular tourist return fare to New York. All fine reasons for flying the finest–for flying TWA. Ring your Travel Agent or TWA, for TWA timetables and full details of routes.

FLY TWA TO USA

The end to a perfect dinner—
as decreed by French Law

French Law controls the naming of the finest brandy with extreme severity. It decrees that only brandy originating from the Grande and Petite Champagne districts of Cognac may bear the proud title of *Fine Champagne*. Remy Martin produce Fine Champagne V.S.O.P. Cognac justly called the "Pride of Cognac". And it is important to you that Remy Martin make *nothing* less good. This means that when you insist on Remy Martin, you are sure to get a really fine brandy . . . genuine Fine Champagne Cognac.

PRIDE OF COGNAC

REMY MARTIN

LETTERS

The Summit

SIR—I find your note of February 15th curious. You say: "After all, it is the Russians who have refused all discussion of disarmament since September . . . who now spurn the idea of a foreign ministers' meeting . . . and . . . who refuse to have on the agenda the most obviously dangerous problems in Europe."

It is true that the Russians have, without any adequate justification, refused to continue discussions on disarmament in the UN commission and sub-commission. Since that decision they have, however, been subjecting the West to a positive barrage of highly publicised communications expressly demanding talks in other forums for the discussion of this and other problems. To them the Western governments have only recently, with apparent reluctance and at the insistent pressure of such organs of public opinion as *The Economist*, given any signs of responding.

The Russians have not yet formally rejected the idea of a foreign ministers' meeting. They have not yet replied to the two letters in which this proposal was tentatively suggested to them (at present a further letter from President Eisenhower is still awaited). It now appears that the Western governments themselves no longer attach much importance to the idea.

The Russians have not so far refused to have any item on the agenda. In their various letters they have put forward their own suggestions. They have not yet replied to the letters of President Eisenhower and Mr Macmillan in which various additional subjects were put forward. You do not make clear what are the dangerous problems you mean. One of them is presumably German reunification; and many may feel inclined to doubt whether the inclusion of this item on the agenda would add much to the meeting's prospects of success.

Your comment seems to me dangerous in suggesting that from the propaganda point of view the present Western position is a favourable one. The Russians have succeeded in making it appear in the eyes of the uncommitted that it is they who, eager for negotiation, have finally succeeded in dragging the Western powers unwillingly to the conference table. Whether they are themselves, as you suggest, more interested in travelling than arriving can only be tested by time. If they are not, and the Western powers, as is now rumoured, are to show themselves opposed to all the proposals for an inspected thinning-out on the East-West border that have recently been aired, the effect on uncommitted opinion will be even more disastrous to the West.—Yours faithfully,

D. E. T. LUARD

St Antony's College, Oxford

Teachers' Unions

SIR—In your article "The Trade Unions" you state that "National and local government officials, along with teachers, have exercised appreciable bargaining strength for many years. . . ."

This statement is somewhat misleading. It would be more accurate, I feel, to say that the National Union of Teachers has exercised appreciable bargaining strength. You may not be aware of the fact that the National Association of Schoolmasters, which had a membership of 16,950 schoolmasters in 1957, has been denied *any* representation on the teachers' panel of the Burnham Committee. Of the 26 seats on the panel the NUT and its affiliates have 20.

The responsibility for representation on the teachers' panel rests with the Minister of Education. The previous minister refused to grant representation to the NAS because one of the principles of the association (opposition to "equal pay") went against government policy.

The structure of the NUT membership underlines the fact that the NUT is only qualified to express the views of women teachers, while the largest organisation of schoolmasters (the NAS) is denied the fundamental right to bargain at all.—Yours faithfully,

Bletchley J. VINCE

Egypt and the Sudan

SIR—In 1919 I served in the Egyptian Government's Frontier Districts Administration. I commanded a company of Camel Corps which operated in the Eastern and Southern Deserts Province. (This ran from Suez to the 22nd parallel, which maps of the period showed as the boundary with the Sudan.)

My patrols operated in the now disputed area on the Red Sea and I kept a detachment at Mersa Halaib. This arrangement was continuing when I left Egypt in 1922.

I am forced therefore to disagree with your statement that "for 51 years the administrative line was unquestioned as the *de facto* frontier.—Yours faithfully,

Scarborough. S. H. STREETER

Covered Arbitrage

SIR—If Mr Michael Conolly had not misquoted me in his letter published in your issue of February 22nd, it could have been seen that the "leads" and "lags" to which I was referring related to trade *payments* and not, as it was made to appear, to the physical movements of traded goods. The latter are not significantly affected by small variations in the forward dollar premium, and to have asserted the contrary would have indeed been "based on a lack of knowledge of the foreign exchange market."

For the rest, the real difference between Mr Conolly and myself is over *policy* on forward sterling, whereas my difference with *The Economist* (ventilated in my earlier letter) was over the *analysis* of covered interest arbitrage and its effects on the gold and dollar reserves.—Yours faithfully,

JOHN SPRAOS

University College, London

[This complicated matter is discussed in a leading article on page 775.—EDITOR.]

Technical Education

Sir—You point out in your note of February 15th, that the benefit which industry derives from technological education depends in considerable measure on its own contribution. One factor leads to a steady drain on the staffs of technical institutes: superannuation. In this heavily taxed economy individual saving from income is necessarily small, and a pension is of almost decisive importance in an individual's plans. A person leaving an educational institution for industry usually retains his accumulated benefits; a person leaving industry for an educational institution does not. For industries dependent on technological education to make their pensions benefits transferable to government pensions systems, although a serious step, would seem no more than a reasonable contribution to technological education.—Yours faithfully,

R. A. HYMAN

London, NW8

Local Government Bill

SIR—As we have now reached the committee stage of the Local Government Bill, I write to draw attention to the fact that neither the accounts of the standing joint committees of any of the authorities (which, outside the Metropolitan Police District, controls the police force for the county) nor those of the magistrates' courts committee are audited by the district auditor. The standing joint committee is appointed by the justices in the quarter sessions of the county council under Section 30 of the Local Government Act of 1888. Its function is to control the police for the county. The Metropolitan Police Force is under the jurisdiction of the Home Office and is not under the standing joint committee.

Accordingly, these committees are able to issue a precept of the county councils for payment of large sums of money and if the county council agrees the payments cannot be challenged by the district auditor.—Yours faithfully,

London, NW11 EDWARD F. IWI

BOOKS

Chronicle of Fanny

The History of Fanny Burney

By Joyce Hemlow.
Oxford University Press. 528 pages. 35s.

THE great Dr Burney's children were clever, high-spirited and not wholly reliable. Charles abstracted some books from the university library at Cambridge and thus early appeared "lost for ever"; happily the scandal was lived down and he achieved a doctorate in divinity. James deserted his wife to elope with his half-sister Sarah; but he was not prevented by this impropriety from becoming a rear-admiral and one of the first navigators of the age. Fanny committed an indiscretion even more hazardous. At twenty-five, abetted by other members of this lively family, she contrived the anonymous publication of "Evelina." The truth came out, and Fanny found herself famous.

By good fortune she had judiciously toned down the first draft. "Mr Brown pulling Polly towards him sd. she must sit on his Lap," for instance, had become "seated on a window, with Mr Brown at her side, sat Miss Polly." Still, the publication of a romance was not quite consonant with delicacy in a young woman. Much depended on how Fanny would comport herself. Luckily she had all the right feelings. "I would a thousand times rather forfeit my character as a writer," she declared, "than risk ridicule or censure as a female."

So Fanny's story, too, ends well. Her later publications, although they have less claim than "Evelina" to be minor classics, show a progressive concern for edification. She became second keeper of the robes to Queen Charlotte; and from this dire but fascinating servitude she escaped, at the age of forty-one, to marry the Comte Peuchard d'Arblay, a penniless but agreeable *emigré* aristocrat. Again it was rash, but Madame d'Arblay came triumphantly through to her fame. She bore and reared a clever son, and as a consequence of her courage in facing a dreadful surgical operation lived on into an extreme old age. She had known the author of "Rasselas"; she outlived Shelley, Byron and Coleridge; she may have read "Pickwick Papers" and the early poetry of Mrs Browning.

The posthumous publication of her diaries and correspondence gave her a new reputation, and indeed perhaps displayed her genius in its most natural light. But she wrote so much, and all the other Burneys wrote so much, that a hundred years of editorial and biographical activity—sometimes on a generous scale—has failed to exhaust all the material. Professor Hemlow, in her long and learned yet extremely readable book, gives us much that is new. She has examined suppressed portions of the diaries, sifted some 8,000 unpublished letters, and equipped herself to offer an exposition and critical discussion of her heroine's unpublished plays.

The fuller picture thus obtained is something to be grateful for—yet it is still the familiar chronicler of Poland Street and the author of "Evelina" who will retain most of our attention. The social position of the Burneys was equivocal; their father could have been disparagingly described as a new sort of gentleman music-master; they had both low connections and the entrée to polite society. So Evelina, upon her "Entrance into the World," is a young woman embarrassed, rather as some of Miss Austen's heroines are to be embarrassed, by the existence of vulgar relations. But Miss Burney, with almost nothing of Miss Austen's artistry, contrives to render her young woman's distresses with altogether superior vivacity and even poignancy. Moreover, writing in the first instance entirely for fun, she mingles the observed with the guessed or conjectured in a manner indeed inartistic in one sense, yet with a verve perfectly in key with what was thoroughly "artistic" in the temperament of her family.

Freedom in reading and theatre-going, the society of Garrick, the near-Bohemianism which the Burneys contrived to unite with an unintermitted emphasis upon correct morals and sentiments: all this helped Fanny Burney to that appearance of a widely ranging knowledge of society which so astonished the first readers of "Evelina." Yet her true talent was circumscribed and domestic, and the mingled acclaim and admonition which her writing immediately evoked were not altogether favourable to its further development.

What the young Burneys chiefly possessed—Miss Hemlow accurately remarks—was a "perception of and delight in the ludicrous." It was a reflection alike of their family solidarity and their social insecurity—and Fanny might have taken it far. But she lived in a man-dominated world: one not minded to be too effectively mocked by Charles Burney's girl. "The Bishop of Winchester, Dr Willis, Mr Owen Cambridge, Mr Burke, and Sir Joshua Reynolds confessed their fear of her in half-jesting, half-serious gallantries." And when her first play showed some inclination towards personal satire she was promptly hauled over the coals by elderly family friends. She might have gained stature as a creative writer if she had dug her pretty heels in.

The Pure Theory of the Take-off

Economic Backwardness and Economic Growth

By Harvey Leibenstein.
John Wiley. London: *Chapman and Hall.* 295 pages. 54s.

IN the rapidly accumulating literature of economic growth, this book takes an intellectually distinguished place. Its central thesis is not indeed unfamiliar. "Backward" economies are economies in quasi-equilibrium, with the forces of progress (accumulation of knowledge and capital equipment) setting in action counter-forces which tend to re-establish the *status quo*; and the problem of the "take-off" is that of the rupture of equilibrium, and the setting in motion of cumulative dynamic processes, by a sufficient stimulus applied at a number of critical points.

With varying presuppositions and varying degrees of realism, writers on this theme have identified a number of critical points: the fund of entrepreneurial ability, technical skills, the supply of capital; the infrastructure of transport, communications and administration; land tenure; social and ethical attitudes; demographic trends; particular technical problems varying from region to region. Dr Liebenstein does likewise, with less realism as he deliberately leaves out of account both foreign trade and the monetary mechanism. But his handling of the material is—in this field—a novelty. With a succession of simplifications, at once ingenious and heroic—if Professor W. A. Lewis, for instance, were Adam Smith, Dr Liebenstein would be Ricardo—he presents in diagrammatic or arithmetical form the balance of growth-producing and stagnation-preserving forces and isolates in each field the crucial point, or set of hypothetical values for the variables concerned, at which a break-through becomes possible. There emerges from these simplifications the notion of a "critical minimum effort": below that minimum (for instance, of net investment with a given rate of population growth) the counter-balancing forces restore the stagnant equilibrium; above the minimum a "virtuous circle" is established.

Obviously, many of these critical values cannot be empirically identified. How can one measure, in practice, the "quantity" of entrepreneurial ability available? Even as a concept it is elusive enough; and other quantities remain as much in the air or more so. Obviously, too, the method has its dangers, the same dangers indeed that have beset economics from its beginnings; there is a fatal tendency to believe that when phenomena have been named and classified they have been understood and explained. Dr Liebenstein is, however, himself aware of these dangers, and does not claim for his quasi-mathematics more than an expository usefulness. Within their limitations they are magnificent aids to the clarifying of thought.

Applied to policy, the notion of the critical minimum spotlights a dilemma. On the one hand, there must be, in a dozen different fields, a major forward surge. Time is of the essence; applied in driblets, the effort merely sets the familiar equilibrating forces in motion again. On the other hand, another critical, and contrary, time-factor asserts itself. This is the time needed for subjective adaptation by millions of tradition-bound individuals to whom the breaking of habits, the abandonment of pieties, the impact of the unfamiliar, and the general pulling up of roots, initially appear more painful than poverty itself; the time, too, for an organic, grass-roots growth of the necessary economic qualities, from respect for contracts to dynamic initiative. When the minimum necessary tempo of effort exceeds the maximum possible tempo of spontaneous adaptation, what is to be done? The question, evidently, is one of politics; of the quality of persuasive and inspiring leadership, of the choice of not too ethically revolting coercive pressures. Not for the first time, the economist must bow out and leave the field—even his own field—to the statesman.

Citizen of Nowhere

Veblenism: *A New Critique*

By Lev E. Dobriansky. Introduction by James Burnham.
Public Affairs Press, Washington. 409 pages. $6.00.

APART from the England of Henry VIII when the Church's capital was looted, private capitalism has never known a tougher time and place than the America of the latter half of last century. Not for nothing did the vengeful prophets of doom arise beside the tycoons who were riding high, wide and handsome at the public's expense. Not for nothing did "the shame of the cities" obtrude against the superficial splendour of "the American dream." What Thoreau and Emerson suspected as that century flowered, a galaxy of minatory stars confirmed as it decayed. For the Marx and Engels of European capitalism, American capitalism could show Thorstein Veblen, Henry George, William Jennings Bryan (the silver-voiced advocate of "free silver" fulminating against "the cross of gold"), Lincoln Steffens, and many another.

Of all these, Veblen was the oddest, the least charming, but the most influential. He alone in America today has intellectual progeny. His lapidary phrases—"the leisure class" and "conspicuous waste" are commonplaces still—conveyed a wealth of learning (he knew 20 languages); and his view that modern man is but a shade removed from primitive barbarians showed uncanny perspicacity and foresight. American business was a jungle. All business, all "the economics of everyday life" was impelled by savage emotions. This Norwegian, American-born peasant saw "Nature red in tooth and claw" and included Man in. Sarcastic, witty, amoral, irreverent, he approximated Rousseau's noble savage; so he was no optimist about man's future. He was the forerunner of H. G. Wells, Spengler, "technocracy" and (to that extent) of Mr James Burnham in seeing not hope, but resignation, in the advent of a "managerial revolution," wherein engineers and bureaucrats ruled the roost. First also—if we except Britain's Charles Babbage of the 1830s—with "automation," Veblen antedated Mr. Charles Chaplin in seeing an assembly-line society dominated by the machines. That was the future of America in his eyes; and it goes far to explain that excoriating attack on American universities "The Higher Learning in America," which he said should be sub-titled "A Study in Total Depravity." Two generations later, the ex-president of Veblen's University of Chicago, Dr Robert Maynard Hutchins, has been saying much more politely much the same. Veblen died a month or two before the Wall Street crash of 1929.

All this explains why there has been a natural revival of Veblenism in his homeland. Two years ago Dr Bernard Rosenberg gave us "The Values of Veblen": a scholarly, clear assessment, with a neat foreword by Dr Max Lerner. Now, from the same publishers, comes an altogether different book. Of its author's scholarly equipment there is no question. Of his ability to convey its achievements, alas, there is nothing but question. It would be hard deliberately to write such obscure language:

> Erumpent matter was in revolt against form—state versus Church, economics versus politics, body versus mind. For example, the problem of the separation of mind and body evolved in the very development of the Philosophia Perennis only to flare up so that it became one of the most fundamental problems for Descartes, who in this respect continued the tradition initiated by Augustine.

That is a fair sample. Descartes, Augustine, Veblen himself, would have driven Dr Dobriansky from their classes if he had so expressed himself there. And there is a lot worse than that:

> In contrast to instincts, habits, as learned reflexive activities, change cumulatively to precipitate a proliferous growth of institutions. As such, habit patterns condition the operation of instinctive proclivities which involve a less determinate sequence of action.

The author is obviously well equipped scholastically to deal in the ideas Veblen mopped up and refurbished. He does so with critical acumen. But his book should have been edited or rewritten in smaller compass. As it is, it will find its due place on library shelves for researchers. It is a pity; for Veblen was in many ways a perceptive scholar, a student of society admirably free of cant, and an able assessor of trends. He was also, as a person, prickly, biased, irresponsible and arrogant. But so were many artists and geniuses. If Dr Dobriansky had covered a smaller canvas, and given us, say, the inwardness of difference between Marx and Veblen, or expanded his section on Veblen and economic value, we should have gained more.

Creditable Account

Business Looks at Banks

By George Katona, with Albert Lauterbach and Stanley Steinkamp.
University of Michigan Press. 184 pages. 37s. 6d

IN view of the freedom with which English banks are criticised left, right and centre, there is some interest for English readers, on both sides of the bank counter, in this American study of the views of medium and large businesses about their banks. It is the result of "a nationwide sample interview survey," conducted by the University of Michigan, and financed by "one of the country's largest banks." The statistical detail is well and carefully presented; the questions were well chosen; the sample was reasonably balanced; and the answers are objectively discussed, with plentiful direct quotation to make the dry bones live. It is inevitable with work of this kind that many of the findings are obvious; its value to the sponsoring bank (and its competitors) lies both in confirmation of the obvious and disclosure of some things not quite so self-evident.

The general picture is one of satisfaction with the banks. Within that picture there is some interesting detail. Far more businesses value the advice they can obtain from their banks than actually act on it; there are wide differences between firms in their borrowing habits, from those who use bank credit regularly to those (a small minority) who regard all borrowing as fundamentally unsound; there is some criticism of banks' reluctance to lend long; an eloquent minority (30 per cent of medium-sized firms, 17 per cent of large) regard the periodical visits of bank representatives as time-wasting and useless. This visiting is obviously an American institution; there are other more important differences from the British pattern, especially, of course, those that result from the multiplicity of banks in the United States; there are, for instance, distinctions drawn between New York banks and the others. Only 15 per cent of medium-sized, and no large, businesses used only one bank; of firms using ten or more banks the percentages were 22 for medium-sized businesses and 74 for large. The distinction thus had to be drawn between "primary" and "secondary" banking connections: the secondary banks, in fact, act as other branches of the single bank act in this country.

In matters that conform to the English shape of things as well, the survey reports a weighty majority of business customers who regard stability of banking connections as extremely important (although inertia is the reason for more of this stability than the banks would wish). And after some analysis of the reasons for preferring one bank to another the overwhelming impression among these United States customers is that the personality of the management and staff is far and away the most important single factor. In the unlikely event of an English bank sponsoring a similar survey, would it be worth it? It might well do marginal good among the bankers; it would certainly make interesting reading for the rest of us.

Whitehall in Edinburgh

The Scottish Office

By David Milne.
Allen and Unwin. 232 pages. 21s.

THIS is the fifth volume to appear in the New Whitehall series, and four more are in preparation. It is appropriate to consider where the series is going.

These books are written by civil servants. The name on the title page is usually that of the permanent head of the department but, as in this case, the preface makes it clear that the book is the product of team work in the department. This procedure means that any discussion of controversial matters is muted and that the bulk of the written matter is a description of what the departments do.

For whose benefit is this intended? The new entrant to the department? There are not so many of these. The existing member of the department? He thinks he knows it all already. The student of public administration? Perhaps—but he can find elsewhere what departments do, and more discussion of why they do it would make the books more valuable to him.

Here there is a clear, competent and thorough description of the work of the four main Scottish departments with notes on some minor departments and a chapter on the Scottish law officers. There is a brief description of the growth of the Scottish Office and of the departments dependent upon it. The book points out that it is because of the individual history, background and institutions of Scotland that over a considerable area of domestic administration Scotland has its own departments. But the reader would need some knowledge of Scotland to understand from this book why the work of the Scottish Home and Health Departments, which depends so much upon the idiosyncrasies of the Scottish legal system and the individual development of Scottish local government, should be undertaken by separate Scottish departments. Even the reader with this knowledge will not find it easy to understand why Scottish agriculture and education need separate treatment, partly because the chapters on those departments do not really bring out the differences between Scottish and English practice. It is not at all easy to understand why the administration of electricity and roads should have been transferred to Scottish departments.

Reference is made here and there to the special position of the Secretary of State as "Scotland's Minister." But there is no discussion of the recent Royal Commission on Scottish Affairs, why it was set up and what it did—it is referred to merely in passing. There is no consideration of the reasons why certain work, until recently carried out by United Kingdom departments, has been transferred to Scottish departments, and there is no discussion of the Scottish work of United Kingdom departments—for this the reader is referred to other volumes in the series.

The book confines itself to a well written description of part of the Scottish administration. It is not a discussion of Scottish administration as a whole. It studiously avoids touching on controversial matters—those weighted words "Scottish Nationalism" do not appear once between its covers. Would it not have much more value for the student of public administration if these more ambitious tasks had been attempted at the expense of pruning the descriptions of the work of the Scottish departments? But how can civil servants discuss highly political matters such as these? And does not this call into question the whole basis and purpose of this New Whitehall series?

Politics and Polls

French Electoral Systems and Elections, 1789-1957

By Peter Campbell.
Faber. 144 pages. 21s.

IT is often believed that the notorious instability of French politics is to be explained by the French use of propor-

tional representation. In his foreword to Mr Campbell's excellent and very useful little monograph, Sir Douglas Savory argues that this is not so and that the reason really lies in the absence of a proper power of dissolution. Mr Campbell knows his French politics too well to believe this, and the foreword is, on this point, elegantly contradicted in the text. At a time when the French are once again trying both to alter their constitution and to change the electoral system, it is well to be reminded that in France (as elsewhere) both constitutions and electoral systems are the product, not the cause, of political divisions and reflect the intentions of particular parties to secure certain results congenial to themselves.

Just as in Britain an unrepresentative electoral system is maintained in being because the Labour-Conservative monopoly is well satisfied by the results it gives, so in France more and deeper political divisions, and some general sense that representative institutions ought to be representative, have given rise to an enormous number of electoral systems, with proportional representation on the "list system" only coming into its own (and perhaps only briefly) under the Fourth Republic. Curiously enough genuine proportional representation, by the single alternative vote, is one system that has never been tried at all. This is not to say, as readers of Mr Campbell's book will soon find, that the French have fought shy of systems requiring mathematical ingenuity to understand them. Indeed, in 1919, it took the presence in a Paris constituency of Monsieur P. Painlevé, who was a mathematician as well as a politician, to show that two allied parties representing separate incomplete lists would get twice as many seats as if they had combined to present one complete list. It is true that the 1919 system did not last very long.

In the period since the Revolution, France has had well over twenty different electoral laws, and it is a tribute to Mr Campbell's expository powers that he has found room to give the essential features of all of them and to set them against the general political background. If there is another change, it will be away from PR and back to the "second ballot"; but even if the British system were introduced, so Mr Campbell assures us, it "would probably have hardly any effect upon the party system and its consequences." For the foundations, we must look deeper.

Stocks and Blocks

Utilising World Abundance

By L. St. Clare Grondona. *Allen and Unwin.* 190 pages. 21s.

FOR more than thirty years Mr Grondona has preached his doctrine —the advantages of carrying a big stock of basic commodities. If he is a crank, —and some "cranks" have added much to economic thinking—he is sincere, persistent and single minded, and he has persuaded two prominent economists to share his aberration. To be fair to Mr Harrod, he supports the basic principles only with a reservation on the detail; Mr Hutton makes no reservations. This is the Grondona plan:

> A British Price Stabilising Corporation (PSC) would be set up under a charter that would make it "as aloof from interference as the judiciary." It would establish buying points and selling points for a wide range of basic commodities—grain, textile raw materials, rubber, the metals and others.
>
> For each of the accepted commodities a price index would be established 12½ per cent below the lowest of (a) the price on the day before valorisation, (b) the average price over the previous year, or (c) the average over the previous two years.
>
> PSC would then stand ready to buy at index less 10 per cent—"the low point"—or, if it had the goods, to sell at index plus 10 per cent—"the high point," but when it had acquired a "block" of a commodity amounting to one eighth of Britain's average annual consumption, there would be an automatic fall in the high and low points and again for each subsequent block.
>
> PSC would also accept custody of commercially owned stocks and its warrant would be security for a bank loan up to the value of this deposited stock at the current low point.
>
> PSC would finance itself by the issue of Government Guaranteed Stock.

The scheme has superficial attractions for both producers and consumers of primary commodities. It would iron out the wider price fluctuations without abolishing free markets. If Britain decided to do it alone—and Mr Grondona is happy that Britain should, though he believes that others would follow—then Britain might become the repository of a large part of the world's surplus commodity stocks.

Mr Grondona is at his weakest on the finance of his project. How could any government, let alone a government straining hard to defend its currency, permit a body "as aloof from interference as the judiciary" to issue government guaranteed stock without limit?

Suppose that a British PSC had been in operation last year when commodity prices crashed. Mr Grondona calculates the cost of one block of each of the commodities he thinks suitable for valorisation at £153¼ million. PSC would not have acquired a whole block of every one of them, but for some—for example copper—it would have acquired several blocks. But even if the amount of government stock issued had been no more than £150 million, it could only have been issued to the Government itself. In effect big additional imports would have been financed by an increase in the floating debt—and during a period of financial crisis. Traders and consumers would have deposited their stocks with PSC against warrants carrying the guarantee of a bank overdraft and would thus have contracted out from the credit ceiling.

The hard truth is that Britain's purse is not bottomless, and that even the Americans, whose purse by comparison almost is, seem to have had enough of stock building. Mr Grondona recognises the risk that America might unload surplus farm commodities on the British PSC and makes a special proviso for delayed payment in sterling in such an event. But the time when Britain could afford expensive experiments, if it ever existed, has gone.

OTHER BOOKS

THE CANADIAN OXFORD ATLAS OF THE WORLD: *2nd Edition. Oxford University Press.* 90s.

The arrangement of this atlas is an improvement on the first edition published in 1951. It is now divided into two parts: the first section contains twenty pages of maps of Canada; the second section covers the world and is exactly the same as the ordinary Oxford Atlas of the World. Most of the Canadian maps are entirely new. About half of them consist of special topics, such as population, transport, economic development (which is not quite up to date on northern development) and geology. The rest are large-scale regional maps with special attention paid to important development areas such as the St. Lawrence Seaway and the connecting waterways of the Great Lakes. This is a first-class atlas for Canadians or for students of Canada.

OVERSEAS TRADE CORPORATIONS. By David R. Stanford. *Sweet and Maxwell.* 339 pages. 35s.

Last year's Finance Act produced a piece of complicated tax law, under which an "Overseas Trade Corporation" could secure relief from British tax on the profits it earned overseas, so long as those profits were not distributed. So far this law has not been tested either in practice or in the courts. Discussion of it is therefore, as Mr Stanford disarmingly admits, still in the theoretical stage. But a textbook was needed to spell out the provisions of the law, the other relevant tax law—as on double tax relief—pertaining to the Overseas Trade Corporation and the detailed discussion of the provisions in the debate on the Finance Act. This Mr Stanford successfully and clearly does.

If it's a question of mixing . . .

Do you make Dyes, Drugs, Detergents or Drinks — Oils, Ointments, Emulsions or Inks?

Do you produce Paints, Polish, Plastics or Petrol Products — Lotions, Lacquers or Liqueurs — Cereals or Soaps?

Do you manufacture Food, Fodder, Pharmaceuticals or Fertilizers?

Whatever your final product, it will be composed of ingredients that must be mixed in certain proportions.
There may be a thousand and one ways of choosing these percentages, all consistent with your customer's requirements.
But only one of these mixtures will satisfy YOU: the one that costs less to make than any of the thousand others.

How can you determine the exact composition of this LEAST COST MIX?

The answer is:
By using a modern mathematical method, suitable for electronic computation.

There is such a method.
The economists have a word for it: LINEAR PROGRAMMING.
Ferranti have a computer for it: The PEGASUS at Portland Place.
It will find your Least Cost Mix quickly — accurately — unfailingly.

Phone or write to us for details of our Computing Service. You may find, as others have, that your investment in Least Cost Mix Computations gives you a hundredfold return.

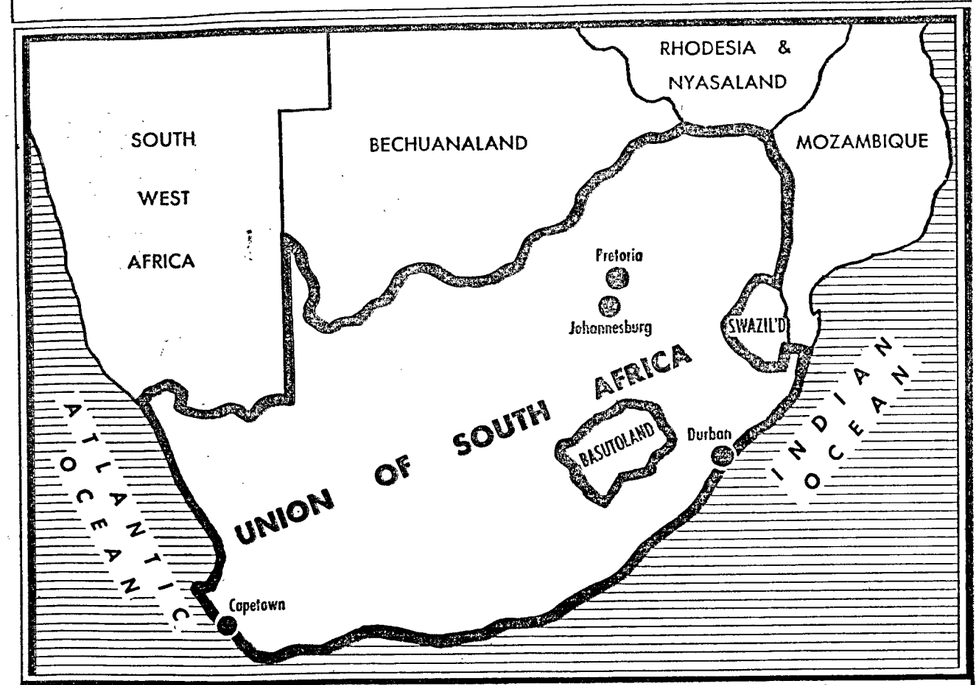
The dream of saving while you work, of seeing those savings grow by investment, and then in the leisure of retirement of doing all you've ever wanted to: this dream belongs to everyone.

Cecil Chisholm's new book, *The End of Retirement*, tells you how to make the dream come true on pension or not. Like his successful earlier book, *Retire and Enjoy It*, it is based on prolonged research, including an analysis of widely differing budgets submitted by members of the public. Chisholm, himself retired, is a well known business man and City editor and his book gets down to solving one of the big personal problems of the day.



Will my pension be enough?
How much do I need in retirement?
How can I save while at work?
Which are the safest investments for growth and income?
How can I beat inflation?
How can I make every pound stretch further?

AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

Two Party Circles

WASHINGTON, DC

LAST Saturday, to celebrate George Washington's birthday, the country heard from those two promising young politicians, Mr Harry Truman and Mr Herbert Hoover. In Washington where the chieftains, the hopefuls and the hangers-on of the "party of the little man" were dining at $100 a plate, Mr Truman was denouncing "the Republican depression" and accusing the Administration of behaving like "an overbearing banker with a glass eye." Meanwhile at Valley Forge Mr Hoover was engaged, incredibly enough, in repeating almost word for word the speech he had made on the same spot twenty-seven years ago, when he was President in the middle of the great depression, about the need to rely on private initiative to overcome economic difficulties. Taking the two speeches together, it was as if nothing had happened in American politics for a quarter of a century.

Indeed, except for the unpredictable course of the economy between now and November, the script for the next congressional election could really be written here and now. Mr Truman has said that after every episode of Republican rule there has been a financial panic. The Republicans complain that this is unfair and unpatriotic because it destroys confidence. The Republicans then proclaim that every Democratic President has led the country into war. The Democrats howl that this is below the belt and unpatriotic because it is making a party plaything of American heroism. If President Eisenhower is propelled by public opinion, mainly in other countries, to a summit meeting, the Republicans will claim to have invented it. If there is a serious depression the Democrats will give the Republicans the credit for inventing that.

Americans generally regard the two-party system as a necessary but regrettable part of their democracy and so tolerate, with some disdain, the sordid but exhilarating business of keeping it going. They can laugh appreciatively at a superb character named Mr Jerry Carter, the Democratic National Committeeman from Florida, who turned up in Washington last week and told a congressional committee that he was "a cheap politician," because where he came from the voters could not afford an expensive one. But nowadays, the American people expect candidates for at least the important offices to assume a nonpartisan air.

THE two dominant personalities of Washington's politics, Vice President Nixon and Senator Lyndon Johnson, have both been displaying themselves in this fashionable mode—the political equivalent of the sack style. But neither, for opposite reasons, seems likely to be chosen for the highest office in 1960. Being a Democrat, Senator Johnson could probably be elected even though he is in weak health, and his speeches, while often cast in fine presidential mould, fall flat. But it is very doubtful if he could be nominated, because he is a Southerner and the party cannot afford to be represented by someone sympathetic to racial segregation.

Mr Nixon's problem is that he will almost certainly be nominated, but if things go on as they are now no Republican will be able to get elected. This is exceptionally frustrating to that group of Republican big businessmen, intellectuals and members of the east coast "establishment" surrounding the former Governor of New York, Mr Thomas Dewey, who were largely responsible for Mr Eisenhower's entry into politics. Unfortunately these Eisenhower Republicans are weak in Congress; moreover they seem to work hard at politics only once every four years, at the presidential election season, and do relatively little in the meantime to sustain the Administration which they have established.
